13. Germall 115	0.3
14. Water	59.4

Procedure:

Weigh 1-9 and heat to 85C with slow agitation. The blend has a cloud point of approximately 80C. Above the cloud point all waxes will eventually dissolve in the blend. If a higher solvating temperature is used, solvation can be much faster. Hold the wax blend at 85C. Heat 10-14 to 85-90C and stir gently until all has dissolved. Hold at 85C.

Place wax blend in mixing container, add aqueous phase to it and shear with homomixer or colloid mill. At 67C the crude dispersion inverts and a thick creamy emulsion forms. Continue shearing while scraping the sides of the container to make sure the whole content is properly sheared. Add perfume, de-aerate and package.

SUNSCREEN FACIAL CREME WITH A SUN PROTECTION FACTOR (SPF) OF 4

INGREDIENTS	% By Weight
Part A:	
Water, deionized	70.7
KELTROL T xanthan gum	0.3
Magnesium aluminum silicate	0.2
Methyl Parasept methylparaben	0.2
Perfume	0.1
Part B:	
White Protopet #1S petrolatum	10.3
Promulgen D cetearyl alcohol and ceteareth 20	7.0
Arlacel 165 glyceryl stearate and PEG 100 stearate	5.0
Parsol MCX octyl methoxycinnamate	4.0
Glucamate SSE-20 methyl gluceth-20 sesquistearate	2.0
L-45 Silicone dimethylpolysiloxane	0.5

Procedure:

Part A:

1. Pre-mix KELTROL T magnesium aluminum silicate and methyl parasept.
2. Dissolve pre-mix thoroughly in water, agitating with a Lightnin'-type mixer.
3. Heat the solution to 65-70C (149-158F) with continued agitation.

Part B:

4. Combine all Part B ingredients and heat to 65-70C (149-158F).
5. When both solutions have reached 65-70C, add Part B to Part A while mixing.
6. Cool to 30C (86F) and add the perfume.
7. Continue cooling until the desired filling temperature is reached.

This light-bodied sunscreen creme applies and absorbs easily. KELTROL T xanthan gum provides smooth spreadability and excellent heat stability at 49C (120F).

WATER RESISTANT SUNSCREEN MOUSSE

RAW MATERIALS	% By Weight
Oil Phase:	
CRILL 6	1.4
Mineral Oil 70 csk	16.8
LIQUID BASE TYPE T	6.0
Stearic Acid XXX	1.7
POLAWAX	0.9
CRODAMOL PMP	5.0
Parsol MCX	1.5
Water Phase:	
Deionized water	64.92
Glycerin	0.9
Triethanolamine	0.88
Perfume, preservatives	qs

Procedure:

Heat oil phase to 75C. Heat water phase to 75C. Add water phase to oil phase with agitation. Cool to room temperature and fill.

This mousse provides a sunscreen film that resists wash off. CRILL 6, a mild but powerful low HLB emulsifier, balances the emulsifying power of the stearic acid soap to produce this unique effect.

SUNSCREEN GEL

RAW MATERIALS	% By Weight
Phase A:	
Water, Deionized	10.80
Carbopol 940 (2% Aq. Sol.)	55.00
SD Alcohol 39-C	5.00
Propylene Glycol	5.00
Cremogen Aloe Vera	2.00
Germaben II	1.00
Phase B:	
Water, Deionized	10.00
Triethanolamine 99%	2.20
DL-Phanthenol	0.50
Phase C:	
NEO HELIOPAN HYDRO 30% TEA Salt	6.70
Phase D:	
Fragrance	0.30
Sandoxylate SX-424	1.50

Procedure:

- 1). In a suitable vessel able to contain the entire batch, weigh Phase A and mix until uniform.
- 2). Slowly add Phase B and mix until uniform.
- 3). Add Phase C and mix until uniform.
- 4). Add Phase D, (slightly heated) mix until uniform and package.

Viscosity: 70,200 cps pH: 7.7

This clear gel contains NEO HELIOPAN HYDRO as the water soluble UV-B sunscreen. Minimal amounts (2.0% solids) of sunscreen were used to obtain an SPF of six. This formulation is not water-proof, but is an excellent product when waterproofing is not a consideration.

Formula #H100-32-2

SILKY SUNTAN OIL

Slowly add Phase A to Phase B, mix for 10 minutes and add Phase C. Mix until uniform and start cooling with continuous agitation. Cool to 40C and add Phases D and E. Continue cooling with agitation to 28-25C and package.

pH: 7.6

Viscosity: 121,000 cps

PABA/Oxybenzone/Free

Tested SPF 18.25

This white lotion combines three sunscreens to achieve excellent UVA/UVB protection. Attaining an SPF of 18.25 without the use of Oxybenzone, PABA Derivatives or Titanium Dioxide demonstrates the synergism of the three sunscreens: NEO HELIOPAN AV, NEO HELIOPAN HYDRO and NEO HELIOPAN MA.

Source: Haarman & Reimer Corp.: Formula #H100-46-4

Slowly add Phase A to Phase B, mix for 10 minutes and add Phase C. Mix until uniform and start cooling with continuous agitation. Cool to 40C and add Phase D, continue cooling with agitation to 28-25C and package.

pH: 6.8

Viscosity: 168,000 cps

Offering a high degree of UVB/UVA protection, this white lotion accomplishes this with menthyl anthranilate without the use of PABA or oxybenzone. The use of a waterproof resin along with minimum emulsifier levels insure no rewetting on the skin. This formulation has been tested and produced an SPF value of 15. It is anticipated that this product will be waterproof.

SUNSCREEN LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
AMERSIL ME-358	9.0
Cyclomethicone Pentamer	2.0
AMERCHOL L-101	3.0
GLUCAM P-20 Distearate	1.0
Octyldodecyl Stearoyl Stearate	0.5
GLUCATE DO	0.4
AMERSCOL U.S.P.	4.0
Water Phase:	
Glycerin	5.0
CELLOSIZATE HEC QP-40	1.4
NaCl	0.8
Deionized water	72.9
Preservative and perfume	q.s.

Procedure:

Combine oil phase ingredients and heat gently to 40C. Combine water phase ingredients with mixing at room temperature. When oil phase solids have melted, remove from heat and begin adding water phase. Water phase should be added in 10, 40, 40 and 10% increments. Mix between 500 and 1,000 RPMs. Allow formula to obtain a uniform consistency after each incremental addition, before next increment is added.

Description:

Flowing, glossy, white lotion with moderate sun protection provided by UV absorber AMERSCOL U.S.P. AMERSIL ME-358 imparts a luxurious, velvety, nongreasy feel to the skin while also contributing to the emulsification of the cyclomethicone pentamer. Emolliency is enhanced by GLUCAM P-20 Distearate. The combination of w/o emulsifiers GLUCATE DO and AMERCHOL L-101 provides good stability and contributes to the smooth appearance of the lotion.

Sticks containing Copherol 1250 (D-alpha-tocopherol) are storage stable and colour fast for 3 months at room temperature, +40C, +45C, -5C. Sticks containing free D-alpha tocopherol (Copherol F 1300) also show good storage stability in lipsticks housings over a period of 3 months at room temperature, +40C, +45C, -5C. The sticks are colour fast at room temperature and -5C.; slight but acceptable colour changes occur at +40C and +45C.

TANNING ACCELERATOR

RAW MATERIALS	Parts by Weight
Part A:	
Water	500.0
Carbomer 934	2.0
Part B:	
Rosswax 1824	15.0
Rosswax 2540	6.0
GMS-SE	6.0
Ross Jojoba Oil	4.0
Escalol 507	12.0
Coconut Oil #76	25.0
Unipertan P-24	3.0
Part C:	
Germaben II	6.0
Part D:	
Fragrance	q.s.
Part E:	
Triethanolamine	4.5

Procedure:

In a steam jacketed kettle heat the water and add the Carbomer 934 until fully dispersed under agitation. In a separate steam jacketed kettle melt the Oil Phase. When fully melted, add the Oil Phase to the Water Phase under agitation. Then add the Germaben II, then the fragrance and finally add the TEA with high agitation, until smooth. Cool to 130F and package.

SOLAR TANNING OIL MOUSSE

RAW MATERIALS	% By Weight
Part (A):	
Ross Base Oil 2539	62.3
Escalol 507	5.0
Arlacel 60	3.0
Tween 60	4.0
Part (B):	
Water	24.7
Germaben II	1.0
Fragrance	q.s.

Procedure:

Heat Part (A) and Part (B) in separate stainless steel vessels under gentle agitation to 170F. When temperature is reached and both are clear, add Part (B) to Part (A), cool to 120F. Fragrance and package.

Aerosil Fill:

90% of above concentrate 10% of A-46 Propellant

Note: Pack in Epon lined cans with Precision Valve Systems.

ULTRA VIOLET ABSORBING SUNSCREEN

INGREDIENT	% By Weight
A VEEGUM Ultra	1.50
Deionized Water	70.50
Glycerin	5.50
B PEG-150 Distearate	3.00
Dioctyl Malate (Ceraphyl 45)	2.00
Mineral Oil	4.00
Cetyl Alcohol	0.50
Benzophenone-3	3.00
Octyl Dimethyl PABA	7.00
Steareth-2	0.90
Steareth-20	2.10
C Preservative, Fragrance	q.s.

Procedure:

Heat the water to 55C. Slowly add VEEGUM Ultra to the water while stirring with a propeller mixer at 500 rpm. Increase the mixer speed to 1500-1700 rpm and mix for 30 minutes, maintaining temperature at 55C. Add glycerin and mix for 5 minutes. Mix B ingredients and heat to 60C. Add B to A while mixing at 1500-1700 rpm. Continue mixing for 30 minutes. Avoid air entrapment. Slow mixing speed to 1000 rpm and continue mixing while cooling to 35C. Add C and mix until uniform. Package.

Product Characteristics: Viscosity: 5500 cps

pH: 5.0

Features:

VEEGUM Ultra is used to thicken and stabilize this sunscreen emulsion. Two ultra violet absorbers are used to achieve an estimated SPF (Sun Protection Factor) of approximately 15. This smooth, flowable lotion spreads easily and dries quickly, leaving a non-tacky after-feel.

Deionized Water	53.60
Carbopol 941	0.20
Triethanolamine 99%	1.50
Phase C:	
Germaben IIE	1.00
Phase D:	
Fragrance	0.20

Substantivity (In vivo waterproof test) - 95.5%

Procedure:

Disperse Carbopol 941 into water and heat to 80C, add Triethanolamine slowly to prepare Phase B. Combine Phase A ingredients except DERMACRYL-79 and heat to 80C. Sift DERMACRYL-79 in the oil phase with constant stirring until dissolved. Add Phase A to Phase B at 80C and mix for 15 minutes. Cool to room temperature and package.

Description:

This high SPF moisturizing, waterproof sunscreen provides protection against UV radiation. The polymer DERMACRYL-79 adds the waterproofing properties.

CLEAR GEL TOOTHPASTE

INGREDIENT	% By Weight
Sorbitol (70% solids)	68.14
Hydrated silica abrasive Sylodent 700	14.00
Hydrated silica thickener Sylodent 15	7.00
Polyethylene glycol (PEG-32)	4.00
Distilled water	to 100.00
Sodium lauryl sulfate (SLS)	1.40
SD alcohol 38B	1.10
Flavor	1.00
Sodium monofluorophosphate	0.76
AQUALON CMC-9M31XF	0.30
Sodium saccharin	0.20
Sodium benzoate	0.10
FD&C Blue No. 1 (1.0 wt% solution)	0.20
D&C Yellow No. 10 (1.0 wt% solution)	0.09

Procedure:

1. Combine all of the sodium saccharin, sodium benzoate, and sodium monofluorophosphate with all the available distilled water and 10% of the sorbitol. Add the FD&C Blue No. 1 and D&C Yellow No. 10 solutions. Mix and heat to 45 to 50C. Cool to room temperature.
2. In a separate vessel, add the sodium lauryl sulfate to a portion of the sorbitol, using the following weight ratio: 1 part SLS to 4 parts sorbitol. Mix, using mild agitation. Heat to 60C to deaerate.
3. In another vessel, combine the flavor and SD alcohol 38D.
4. Combine all the remaining sorbitol with the PEG-32. Heat to 50C. While mixing vigorously with an electric stirrer, sift in the CMC. Mix for 30 min or until the CMC is fully dissolved and no polymer gels remain.
5. Add the polymer mixture to a Ross double planetary toothpaste mixer. The cooling water in the jacket should be set to 20C.
6. Add the salt solution to the toothpaste mixer. Mix at speed 6 for 25 min.
7. Add one-third of the hydrated silica. Mix at speed 2 until the ingredients are combined. Repeat until all the hydrated silica is added.
8. Increase to speed 6 (highest) and mix for 25 min at a vacuum of 27 to 28 in Hg or until homogeneous and transparent.
9. Add the flavor and SLS solutions. Mix at speed 1 at a vacuum of 27 to 28 in Hg for 5 min or until combined and homogeneous.

Tetrasodium pyrophosphate	3.40
Disodium pyrophosphate	1.37
Sodium lauryl sulfate (SLS)	1.35
Flavor oil	1.33
PEG-6	1.00
AQUALON CMC-9M31XF	0.50
Sodium fluoride	0.25
Carbomer 940	0.20
Sodium saccharin	0.20
Titanium dioxide	0.16
FD&C Blue No. 1 (1% solution)	0.03

Toothpaste Appearance: Midway between an opacified gel and a cream paste. Add more TiO₂ for a cream appearance, less for an opacified gel.

Procedure:

1. Add FD&C Blue No. 1 (1.0 wt% solution) to a 28.0% solution of sodium lauryl sulfate. Heat to 60C to deaerate.
2. Prepare a solution of sodium fluoride, tetrasodium pyrophosphate, disodium pyrophosphate, and sodium saccharin in 220 g distilled water at 50C.
3. Combine carbomer and CMC-9M31XF. Slurry the polymer mixture in glycerin, using a propeller blade agitator at high speed, and heat to 50C. Mix in the sorbitol, the PEG-6, and the remaining distilled water. Mix for 30 min or until fully hydrated.
4. Add the polymer solution to the Ross mixer, set to 20C. Mix at speed 6 (highest) for 30 min.
5. Add the salt solution to the Ross mixer. Mix at speed 6 for 15 min or until the salts are thoroughly dissolved.
6. Add the hydrated silica and titanium dioxide. Mix at speed 2 for 5 min or until combined. Increase to speed 6 and mix for 15 min at a vacuum of 27 to 28 in Hg or until homogeneous and deaerated.
7. Add the surfactant solution and flavor. Mix at speed 1 at a vacuum of 27 to 28 in Hg for 5 min or just until thoroughly combined.

TOOTHGEL

COMPOSITION	% By Weight
Cellulose Gum 7 MF (5% solution)	10.0
Sodium fluoride	0.1
Sodium benzoate	0.2
Saccharin sodium	0.1
Sodium monofluorophosphate	0.76
Peppermint oil 77526-34	1.0
Sorbitol 70%	65.29
Dye solution 1%	q.s.
Sident 12	10.0
Sipernat 22 S	9.0
Pearl pigment*	0.05
Water, demineralized	ad 100
Texapon K 1296	

* Sparkle Types are recommended

Manufacturing Process:

Preparation of the Blanose-Cellulose Gum 7 MF solution:

Blanose is added to water under stirring and preserved (e.g. 0.2% Sodium benzoate) and heated to 80C for about half an hour.

CALBRITE SM dicalcium phosphate dihydrate	45.0-50.0
ALBRITE dicalcium phosphate anhydrous	0- 5.0
EMPICOL LZ	1.5
Glycerol (humectant)	25.0
Sodium carboxymethyl cellulose	1.0
Sodium benzoate	0.5
Sweetener	qs
Flavour	qs
Water	Balance

CALBRITE SM dicalcium phosphate dihydrate is stabilised for use in dentrifice formulations, and passes stability test TGA46 of the Board of Standards of the US Toilet Goods Association Inc.

CALBRITE DM dicalcium phosphate dihydrate is stabilised to give improved compatibility with sodium monofluorophosphate for use in therapeutic toothpaste manufacture. A typical therapeutic toothpaste could be made by adding 0.8% ALBRITE sodium monofluorophosphate to the formulation given above, with CALBRITE DM replacing the CALBRITE SM.

A denture adhesive is a device applied to the base of a denture before the denture is inserted into the user's mouth. The device is used to improve denture retention and comfort. Although this definition describes the adhesive as a device, it is supplied as a powder, cream, or liquid.

Many products on the market include POLYOX Resins as described in U.S. Patents 2978812 and 4280936. POLYOX has the unique property of being wetted rapidly by water, resulting in a soft, resilient gel between the plate and the jaw. Its tackiness also helps prevent undesirable slippage of the dental plate. The low toxicity, resistance to attack by salivary enzymes, low odor and tastelessness make these resins ideal for denture adhesives.

8. MACKSTAT DM	Q.S.
9. Fragrance	Q.S.
10. Deionized Water	Q.S.
11. Diluted Hydrochloric Acid 20% to pH 8.8	

Procedure:

1. Heat water #10 to 140F (60C). Add #3, #1, #2, #4. Mix well until everything is completely dissolved.
2. Add #5, #6. Start cooling while mixing.
3. At 35C (95F) add fragrance #9, then add #8.
4. Mix, then check pH. Adjust down with small amounts of #11 and mix after each addition.
5. Once correct pH is obtained, start addition of #7 to obtain desired viscosity.

pH: 8.6-9.0

Viscosity: 700-1200 cps

50% SILICONE DC200/350 EMULSION

RAW MATERIALS	% By Weight
DC Silicone 200/350	50.00
MACKANATE DOS-70N	12.50
Polysorbate 80	12.50
Deionized Water	25.00

Procedure:

1. Blend #1, #2, #3 together at room temperature.
2. Warm to 30C. and slowly with mixing add #4 at same temperature.

The result is an almost transparent viscous gel which may separate on standing.

HIGH-WATER-CONTENT GEL

INGREDIENTS	% By Weight
Glycerin	20.00
Sorbitol (70% solids)	33.00
Distilled water	To 100.00
Hydrated silica abrasive Syldent 700	17.10
Hydrated silica thickener Syldent 15	1.37
PEG-12	3.00
CMC-7MXF	0.55
CMC-9M8XF	0.45
Sodium lauryl sulfate (SLS)	1.00
Sodium monofluorophosphate	0.76
Sodium benzoate	0.50
Flavor	0.50
FD&C Blue No. 1 (1.0 wt % solution)	0.023

Procedure:

1. Add the sodium benzoate and sodium monofluorophosphate to a portion of the distilled water, using the following weight ratio: 1 part salt to 10 parts water. Mix until dissolved.
2. Add the sodium lauryl sulfate to a portion of the sorbitol, using the following weight ratio: 1 part SLS to 4 parts sorbitol. Mix, using mild agitation. Heat to 60C to deaerate.
3. Slurry all the CMC in the glycerin. While mixing vigorously with an electric stirrer, add all the remaining distilled water, sorbitol, and PEG-12. Mix for 30 min or until the CMC is fully dissolved and no polymer gels remain.
4. Add the polymer mixture to the toothpaste mixer (Ross double planetary mixer, model 130 LDM-2). The temperature of the mixer jacket should have been preset to 20C.
5. Add the FD&C Blue No. 1 solution to the polymer mixture and mix until homogeneous.
6. Add the salt solution to the polymer mixture and mix until the salt is fully dissolved.
7. Add one-third of the hydrated silica. Mix at speed 2 (low) until just combined. Repeat until all the hydrated silica is added.
8. Increase to speed 6 (highest) and mix for 25 min at a vacuum of 27 to 28 in Hg or until homogeneous and deaerated.
9. Add the flavor and SLS solution. Mix at speed 1 at a vacuum of 27 to 28 in Hg for 5 min or until combined and homogeneous. Note: If refrigeration is not available, a temperature of 25C maximum is acceptable. Temperature control is desirable to: (1) avoid batch-to-batch variation, and (2) prevent loss of water and flavor during deaeration.

The typical silica gel formulations contain less than 20% water. This high-water-content gel contains just over 30% water. The CMC-7MXF is necessary to provide sufficient gel structure in the high-water formulation.

Butyl Stearate	90	
Isopropyl Stearate		88
Isopropyl Palmitate		88
Isopropyl Myristate		88

Gel Stability: Excellent Compatibility, No Separation

A-C 617 MINERAL OIL GEL

RAW MATERIALS	% By Weight
1. A-C 617	10.0
2. Mineral Oil	90.0

Procedure:

With simple agitation, gradually heat the mixture above its cloud point (81C). If faster solvation is preferred, the mixture may be heated slightly above 102C until the wax is completely dissolved and a homogeneous solution is produced.

For stable gels, the solution is fast cooled with simple agitation or slowly cooled with good shear. Homomixer or colloid mill could be used to generate shear. Objective is to create a fine particle size gel where the fine polyethylene particles interlock to create this thixotropic body. At 10C below its cloud point, simple agitation is again used and the gel is agitated to a temperature where it is still packageable without causing air entrapment.

EMOLLIENT TRANSPARENT GEL

INGREDIENTS:	% By Weight
Part A:	
EUMULGIN B-3	13.00
CETIOL HE	25.00
CETIOL V	5.00
Part B:	
Water, Deionized	56.75
Dyes	q.s.
Part C:	
Fragrance	q.s.
Preservative	q.s.
Procedure:	

Heat Part A to 70-75C. Heat Part B to 70-75C. Add Part B to Part A under agitation. Continue stirring and at 55-60C add individual components of Part C. Once the product is homogeneous, fill off.

Comments:

EUMULGIN B-3 is utilized in the manufacture of clear, transparent ringing gels. This microemulsion is an excellent emollient base. The ethoxylated cocoate and fatty acid ester provide protective dermal properties that may be useful for treatment products and makeup items where moisturization is required.

O/W EMULSION

RAW MATERIALS	% By Weight
I. Lamecreme DGE 18	10.0
Cutina E 24	3.0
Paraffin oil, subl.	8.0
Myritol 318	8.0
II. Glycerol 86%	5.0
Deionized water, perfume, preservative	ad 100.0

Viscosity 24 hours after manufacture: 120000 mPas

Formula no. 89/213/32

O/W CREAM

RAW MATERIALS	% By Weight
I. Lamecreme DGE 18	7.0
Eumulgin B 1	1.4
Cetiol SN	10.0
II. Glycerol 86%	5.0
Deionized water, perfume, preservative	ad 100.0

Viscosity 24 hours after manufacture: 38000 mPas

Formula no. 89/213/59

The consistency of o/w emulsions can be adjusted at will over the whole spectrum from lotions to soft, pleasant creams by incorporating 7-10% Lamecreme DGE 18 in combination with 1-3% of a nonionic emulsifier. Suggested formulations for emulsions incorporating Lamecreme DGE 18 are given.

O/W EMULSION OINTMENT

RAW MATERIALS	% By Weight
A. SOFTISAN 601	10.0
MIGLYOL 812	8.0
Paraffin	3.0
Cetyl Alcohol	2.5
B. Glycerin	5.0
Preservative	q.s.
Water	up to 100.0

Preparation:

(A) is heated to ca. 75C.; (B) is mixed together, and heated up to the same temperature and emulsified into (A).

Formula 1.1.12B

W/O EMULSION OINTMENT

RAW MATERIALS	% By Weight
A. Petrolatum	16.0
Paraffin	2.5
Alugel DF 30	1.0
B. IMWITOR 780K	5.0
SOFTISAN 100	5.0
Lanolin Alcohol	1.5
C. Magnesium Sulfate	1.0
Preservative	q.s.
Water	up to 100.0

Preparation:

At about 90C., (A) is heated until it is a gel. (B) is melted and slowly added to (A). (C) is brought to 75-80C. and emulsified into (A+B).

Formula 1.2E

SOURCE: Huls America Inc.: Formulas

QUICK EMULSIFYING BASE-A

RAW MATERIALS	% By Weight
ABIL B8852	10.0
TAGAT TO	18.0
Avocado Oil	20.0
Calendula Oil	10.0
Caprylic/Capric Triglycerides	42.0
Color, Fragrance	QS

QUICK EMULSIFYING BASE-B

RAW MATERIALS	% By Weight
ABIL B8852	10.0
TAGAT TO	13.0
Avocado Oil	20.0
Mineral Oil	50.0
Isopropyl Myristate	7.0
Color, Fragrance	QS

QUICK EMULSIFYING BASE-C

RAW MATERIALS	% By Weight
ABIL B8852	10.0
TAGAT TO	10.0
Avocado Oil	15.0
Mineral Oil	25.0
Isopropyl Myristate	30.0
Caprylic/Capric Triglycerides	10.0
Color, Fragrance	QS

Procedure:

Add the ingredients in order mixing well between additions. Bases are clear with a honey-like viscosity.

Uses:

Blooming bath oils, instant lotions for after bath. After sun emollient lotions.

When these formulas are added to water or to wet skin, emollient and nonsticky emulsions are formed.

SOURCE: Goldschmidt Chemical Co.: Formulas

SOFT SET CONDITIONING MOUSSE

RAW MATERIALS	% By Weight
A. Water	82.20
Stearamidopropyl PG-dimonium chloride Phosphate	3.00
B. Isopropyl Alcohol	10.00
ABIL S-201	0.50
Aminomethyl Propanol	0.30
Butyl Ester of PVM/MA copolymer	2.00
C. ABIL B 8851	2.00
D. Fragrance, Preservatives	QS
Fill:	
Concentrate	83.30
Isobutane	16.70

Mix (A). Heat to 65C and continue to mix until homogeneous. Cool to 40C. Separately mix (B) at 25C until homogeneous. Add (A) and (B) with stirring. Add (C)(D), mix until homogeneous. Add fragrance, coloring and preservative as required. Cool to 25C. Charge into aerosol container. Add propellant.

This conditioning mousse formulation provides for both a soft, nontacky hold to a hair set and a conditioning effect on the hair fibers. The Sodium Poly PG-propyl Dimethicone Thiosulfate contributes gloss and hydrophobicity to the hair.

CLEAR GEL ACTIVATOR/CONDITIONER

RAW MATERIALS	% By Weight
A Water	57.65
Carbomer 940	0.50
B Triethanolamine	2.25
Glycerine	32.20
Propylene Glycol	5.00
ABIL B 88183	1.00
C ABIL B 8851	1.00
ABIL Quat 3272	0.40
Color, Fragrance, Preservative	QS

Disperse the Carbomer into the water and mix until completely clear. Add the Triethanolamine and mix well. Mix phase B and add slowly to phase A while mixing. Add phase C while mixing.

This is a clear rinsing curl activator used to bring out the natural curl of the hair. It also contains humectants, detackifiers and conditioners.

SSOURCE: Goldschmidt Chemical Corp.: Formulas

SPORT BODY COOLER

INGREDIENTS	% By Weight
A Demineralized Water	82,900
Phenonip	0,500
Trilon B liquid	0,100
Tween 80	0,400
1,2-Propylene glycol	2,000
B Abil B 8839	6,000
Finsolv TN	2,000
Pemulen TR-1	0,300
Carbopol 954	0,100
C Triethanolamine	0,500
D Frescolat Type ML 620105	1,000
Perfume Oil	0,200
Isopropyl myristate	2,000
E Cremogen Hamamelis Water 739023	2,000

Manufacturing Process:

Part A: Weigh all ingredients.

Part B: Disperse Carbopol and Pemulen in the mixture of Abil and Finsolv very carefully with high speed agitation. Then add part B to part A while stirring. Stir 45 minutes.

Part C: Add triethanolamine while stirring.

Part D: Dissolve Frescolat and Fragrance in isopropyl myristate (if necessary heat to max. 40C). Then add part D to part A/B/C and stir.

Part E: Add the Cremogen and stir until homogenous.

The pH value of the finished emulsion should be approx. 7 and has to be controlled.

SUPER HOT OIL

RAW MATERIALS % By Weight

Part A:

1. MACKALENE 426	4.40
2. MACKAMIDE AME-75	4.40
3. Polyglycol 400	4.40
4. Polysorbate 80	1.76
5. Benzyl Alcohol	0.26
6. DC 193	0.22
7. Natrosol 250HHR	0.50
8. Tetrasodium EDTA 40%	0.15
9. Deionized Water	70.00

Part B:

10. MACKERNIUM SDC-25	6.0
11. Glycerin	3.6
12. Isopropyl Alcohol	1.5
13. Butoxyethanol	0.6

Part C:

14. MACKSTAT DM	qs
15. Fragrance	qs
16. Color	qs
17. Deionized Water	qs

Procedure:

Part A:

1. Disperse #7 into water #9.
2. Heat to 120 degrees F. (50 degrees C.) and add #1, #2, #3, #5, #6, #8. Blend together with appropriate mixing.

Part B:

1. In a separate vessel blend #10, #11, #12, #13, warm slightly (110 degrees F.) to dissolve completely and clearly.
2. Then add part B while mixing to the large manufacturing tank.

Part C:

1. Blend #4 with fragrance #15 and add to tank.
2. Then add #14, #16 and the remainder of water #17.

Appearance: Clear Liquid

pH (Adjust up with Triethanolamine): 4.4-4.8

G 1702	Beeswax derivative	ICI
G 4909	Lanolin substitute	ICI
Gafquat 734	Quaternary polyvinylpyrrolidone copolymer	GAF
Gafquat 755N	Polyquaternium-10	GAF
Ganex V-216	PVP/Eicosene copolymer	GAF
Ganex V-220	PVP/Eicosene copolymer	GAF

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Gantrez ES225	Ethyl ester of PVM/MA copolymer	GAF
Gantrez ES425	Butyl ester of PVM/MA copolymer	GAF
Geleol	Glyceryl stearate	Gattefosse
Gelitta Sol. C.C. 35% IG		Gel.-Fabrik
Gelwhite GP	Rheological control additive	South. Clay
Genagen CA 050		Hoechst
Genapol AMG		Hoechst
Genapol ARO Liquid		Hoechst
Genapol CRT40	DEA lauryl sulfate	Hoechst
Genapol LRO Liquid	Sodium lauryl ether sulphate	Hoechst
Generol 122	Soya sterol	Henkel
Generol 122E-10	PEG-10 soya sterol	Henkel
Generol 122E-16	PEG-16 soya sterol	Henkel
Germaben IIE	Propylene glycol and diazolid- inyl urea and methylparaben and propylparaben	Sutton
Germall 115	Imidazolidinyl urea	Sutton
Gingko Biloba HS	Gingko extract	Tri-K
Gingko Biloba Phytosome		Lipo
Ginseng Extract		Cosmetochem
Gludin AGP	Wheat protein hydrolysate	Henkel
Glucam E-10	Methyl gluceth-10	Amerchol
Glucam E-20	Methyl gluceth-20	Amerchol
Glucam E-20 Distearate	Methyl gluceth-20 distearate	Amerchol

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Glucam P-10	PPG-10 Methyl glucose ether	Amerchol
Glucam P-20	PPG-20 Methyl glucose ether	Amerchol
Glucam P-20 Distearate	PPG-20 Methyl glucose ether distearate	Amerchol
Glucamate DOE-120	PEG-120 Methyl glucose dioleate	Amerchol
Glucamate SSE-20	Methyl gluceth-20 sesquistearate	Amerchol
Glucate DO	Methyl glucose dioleate	Amerchol
Glucate SS	Methyl glucose sesquistearate	Amerchol
Glucose Tyrosinate	Glucose tyrosinate	Tri-K
Glucquat 100	Lauryl methyl gluceth-10 hydroxypropyl dimonium chloride	Amerchol
Glycereth 26		Heterene
Glycerine 96%	Glycerine	Lipo
Glyceryl Monostearate	Glycerol stearate	Givaudan
Glyceryl Monostearate	Glycerol stearate	Scher
Glyceryl Thioglycolate		Grace
GlycoCer HA	Sodium hyaluronate and glyco-ceramide	Tri-K
GlycoCer HALA	Glycoceramide	Tri-K
Glycoderm	Liposomal active ingredient combining lipids with glycosaminoglycans as water binding polysaccharides	CLR/Richter
Glydant	DMDM hydantoin	Glyco
GMS SE		Stepan
Green Clay		Tri-K
Ground Ivy Glycolic 5:1PG		Lipo
GS Ointment Wax H-43	Emulsifying aid	Schutz
Guar C-261	Guar hydroxypropyl trimonium Cl	Henkel

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Hair Complex Aquosum	Herb/vitamin combination	CLR/Richter
Hair Complex FCa	Complex of a weakly oestrogenic compound and vitamin F	CLR/Richter
Hair Complex 20/70N	Placenta/vitamin/amino acid combination	CLR/Richter
Hairspray Additive S	Rosin acrylate	BASF
Hamamelis Extract	Witch hazel	Dragoco
Hamamelis Special	Witch hazel	Dragoco
Hamp-ene Na2	Disodium EDTA	Grace
Hamp-ene Na4	Tetrasodium EDTA	Grace
Hamp-ex 80	Pentasodium pentetate	Grace
Hamp-ol 120		Grace
Hamposyl C	Cocoyl sarcosine	Grace
Hamposyl L-30	Sodium lauroyl sarcosinate	Grace
Hartolan Super	Lanolin alcohol	Croda
Hayflower Extract 5:1PG		Lipo
Hazelnut Oil	Hazelnut oil	Tri-K
HDK H15	Fumed silica. Surface area: 120	Wacker
HDK H20	Fumed silica. Surface area: 170	Wacker
HDK N20	Fumed silica. Surface area: 200	Wacker
HDK N20P	Fumed silica. Surface area: 200	Wacker

Texapon K14S Special	Sodium myreth sulfate	Henkel
Texapon K1296	Sodium lauryl sulfate	Henkel
Texapon L100	Sodium lauryl sulfate	Henkel
Texapon MLS	MEA lauryl sulfate	Henkel
Texapon N25	Sodium laureth sulfate	Henkel
Texapon N40	Sodium laureth sulfate	Henkel
Texapon N70	Sodium laureth sulfate	Henkel
Texapon NA	Ammonium laureth sulfate	Henkel
Texapon NSO	Sodium laureth sulfate	Henkel
Texapon SBN	Fatty alcohol ether sulfate/sulfosuccinate	Henkel
Texapon SB3	Disodium laureth sulfosuccinate	Henkel
Texapon SG	Sodium laureth sulfate and cocamide MEA and glycol distearate	Henkel
Texapon ST40	Alkyl sulfate	Henkel
Texapon TH	Triethanolamine lauryl sulfate	Henkel

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Texapon WW	Alkyl ether sulphate + non-ionic fatty acid	Henkel
Texapon WW99	MIPA-Laureth sulfate and cocamide DEA	Henkel
THAM	Tris (hydroxymethyl) amino-methane	Angus
Theophyllisilane	Methylsilanol carboxymethyl theophylline	Tri-K
Timiron MP-10	Pearl pigment	Rona
Timiron MP-115	Pearl lustre pigment	Rona
Timiron MP-149	Pearl pigment	Rona
Timiron MP-1001	Mica and titanium dioxide	Rona
Timiron MP-1005	Titanium dioxide, mica	Rona
Timiron Starlight Colors	Pearl pigment	Rona
Timiron Starluster MP-115	Mica and titanium dioxide	Rona
Timiron Supersilk MP1005	Mica and titanium dioxide	Rona
Timiron Super Violet	Pearl pigment	Rona
Titanium Dioxide 3328	Titanium dioxide. 0.3 microns	Whittaker
Titriplex 111	Disodium EDTA	E. Merck
Tocopherol Oil CLR	Vitamin E-enriched soya oil	CLR/Richter
Tri-Allantoin	Allantoin	Tri-K
Tri-K HKP	Hydrolyzed hair keratin	Tri-K
Tri-K HMF Complex	Chemical complex	Tri-K
Tri-K HMP	Hydrolyzed mucopolysaccharides	Tri-K
Trilane	Squalane	Tri-K

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Tri-Lastin 10F	Hydrolyzed elastin	Tri-K
Trilon B Liquid	Tetrasodium EDTA	BASF
Trisept M	Methylparaben	Tri-K
Trisept P	Propylparaben	Tri-K
Tri-Sil FVC	Cyclomethicone	Tri-K
Tri-Sil HGC-5000	Dimethiconol and cyclomethicone	Tri-K
Tri-Sil PF	Phenyl dimethicone	Tri-K
Tristat IU	Imidazolidinyl urea	Tri-K
Tritaine PB	Cetyl betaine	Tri-K
Tritein CAA	Collagen amino acids	Tri-K
Tritein Milk Poly-peptide	Hydrolyzed casein	Tri-K
Tritein Milk PP	Hydrolyzed milk protein	Tri-K
Tritein Silk AA	Silk amino acids	Tri-K
Triton X-100	Octoxynol-9	Rohm
Trivent NP-13	Tridecyl neopentanoate	Trivent
Trivent OC-16	Cetyl octanoate	Trivent
T-Wax	Emulsifying wax NF	Tri-K
Tween 20	Polysorbate 20	ICI
Tween 60	Polysorbate 60	ICI
Tween 80	Polysorbate 80	ICI
Tween 85	Polysorbate 85	ICI
Tylose CB 200	Sodium carboxymethyl cellulose	Hoechst
Tylose CB 30 000	Sodium carboxymethyl cellulose	Hoechst
Tylose H20	Hydroxyethyl cellulose	Hoechst
Tylose H4000P	Hydroxyethyl cellulose	Hoechst

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Ucare Polymer JR-30M	Polyquaternium-10	Amerchol
Ucare Polymer JR-125	Polyquaternium-10	Amerchol
Ucare Polymer JR-400	Polyquaternium-10	Amerchol
Ucare Polymer LR-30M	Polyquaternium-10	Amerchol
Ucare Polymer LR-400	Polyquaternium-10	Amerchol
Ucare Polymer SR-10	Polyquaternium-10	Amerchol
Ucon LB-1715	PEG-40 Butyl ether	Union Carb.
Ucon Propellant 12	Propellant	Union Carb.
Ultra Anhydrous Lanolin HP-2060	Lanolin	Henkel
Ultra Lantrol HP-2074	Lanolin oil	Henkel
Ultra White	Petrolatum	Penreco
Uvinul D50	Benzophenone-2	BASF
Uvinul M40	Benzophenone-3	BASF
Uvinul MS40	Benzophenone-4	BASF
Uvinul T150	Octyl triazone	BASF
Vanox PCX	BHT	Vanderbilt
Vanseal CS	Cocoylsarcosine and potassium cocoate	Vanderbilt
Vanseal NACS-30	Sodium cocoylsarcosinate	Vanderbilt
Vanseal NALS-30	Sodium lauroyl sarcosinate	Vanderbilt
Vaseline	Petrolatum white	Wintershall
Veegum	Magnesium aluminum silicate	Vanderbilt
Veegum F	Magnesium aluminum silicate	Vanderbilt
Veegum HV	Magnesium aluminum silicate	Vanderbilt

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Veegum Pro	Magnesium aluminum silicate	Vanderbilt
Veegum R	Magnesium aluminum silicate	Vanderbilt
Veegum Ultra	Magnesium aluminum silicate	Vanderbilt
Vegetol Huileux Cal- endula WL 1072	Mineral oil and apricot kernel oil and calendula extract	Gattefosse
Vegetol Hydro Bardane MCF 77	Propylene glycol and water and burdock root extract	Gattefosse
Vegetol Hydro Matri- care MCF 793	Propylene glycol and water and matricaria extract	Gattefosse
Velsan D8P3	Isopropyl PPG-2 isodeceth-7- carboxylate	Sandoz
Velsan P8-3	Isopropyl C12-15 pareth-9 carboxylate	Sandoz
Velsan P8-16	Cetyl C12-15 pareth-9 carboxy- late	Sandoz
Velvetex AB45	Coco betaine	Henkel
Velvetex BA-35	Cocamidopropyl betaine	Henkel
Velvetex BK-35	Cocamidopropyl betaine	Henkel
Velvetex CDC	Cocoamphodiacetate	Henkel
Veragel Liquid	Aloe vera gel	Dr. Madis
Vernalane AFC		McIntyre
Vernam 35		McIntyre
Vernate OP		McIntyre
Versatyl-42	Octylacrylamide/acrylates copolymer	Nat. Starch
Versene Na2	Disodium EDTA	Dow
Vinol	Polyvinyl alcohol resin	Air Prod.
Viscontran HEC (30,000 PR)	Hydroxy ethyl cellulose	Henkel

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Vitamin A Palmitate	Retinyl palmitate	Hoffman
Vitamin (A+D3) Conc.	Molecular distillate of cod-liver oil	CLR/Richter
Vitamin B Complex	Yeast extract with natural B-vitamins	CLR/Richter
Vitamin CLR Oil-Soluble	Animal skin/herb combination	CLR/Richter
Vitamin D	Ergocalciferol	Tri-K
Vitamin E	Tocopherol	Hoffman
Vitamin E Acetate	Tocopherol acetate	BASF
Vitamin E Acetate	Tocopherol acetate	Tri-K
Vitamin F Alcohol-Soluble	Complex of essential free fatty acids	CLR/Richter
Vitamin F Ethyl Ester CLR	Complex of essential esterified fatty acids	CLR/Richter
Vitamin F Forte CLR	Complex of essential free fatty acids	CLR/Richter
Vitamin F Glyceryl Ester CLR	Complex of essential esterified fatty acids	CLR/Richter
Vitamin F Water-Soluble CLR	Complex of essential free fatty acids	CLR/Richter
Vitamin H	p-aminobenzoic acid	E.Merck
Vitaplant CLR Oil-Soluble	Animal skin/herb combination	CLR/Richter
Vitaplant CLR	Herb combination	CLR/Richter
Volatile Silicone 344	Cyclomethicone	Dow Corning
Volpo S-2	Steareth-2	Croda

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Waxenol 821 S.B.	Synthetic beeswax	Wickhen
Wheat Germ Oil CLR	Fatty oil of wheat germs	CLR/Richter
White Perfecta	Petrolatum	Witco
White Protopet #1S	Petrolatum	Witco
Wickenol 171	Octyl hydroxystearate	CasChem
Witcamide 511	Oleamide DEA	Witco
Witcolate SL-1	Sodium laureth sulfate	Witco
Witconate AOS	Sodium C14-16 olefin sulfonate	Witco
Witconol SE-40	Sorbeth-40	Witco
Witconol 14	Polyglyceryl-4 oleate	Witco
Yeast Extract AMI	Yeast extract	Tri-K
Yellow Iron Oxide		Color Tech.
Zetesol SE35 Conc.	Fatty alcohol ether sulphate	Zschimmer
Zetesol NV	Sodium lauryl ether sulphate	Zschimmer
Zetesol 856T	Fatty alcohol ether sulphate	Zschimmer
Zinc Omadine	Zinc pyrithione, 48% dispersion	Olin
Zincum N29		Fabrik Mu

COSMETIC AND TOILETRY FORMULATIONS

Second Edition — Volume 2

by

Ernest W. Flick

More than 1900 cosmetic and toiletry formulations are detailed in this volume, based on information received from numerous industrial companies and other organizations. This is Volume 2 of the Second Edition of this popular work, Volume 1 having been published in 1989. No formulations have been repeated.

The data represent selections from manufacturers' descriptions made at no cost to, nor influence from, the makers or distributors of these materials. Only the most recent formulas have been included. It is believed that all of the trademarked raw materials listed are currently available, which will be of interest to readers concerned with raw material discontinuances.

The 1989 market for cosmetic and toiletry raw materials was \$1.6 billion. That market is projected to increase to about \$1.8 billion by 1994, thus making the information in the book particularly interesting to anyone considering

new products or process variations.

Each formulation in the book is identified by a description of end use. The formulations include the following as available, in the manufacturer's own words: a listing of each raw material contained; the percent by weight of each raw material; suggested formulation procedure; and the formula source, which is the company or organization that supplied the formula.

The formulations in the book are divided into fifteen categories as shown below. In addition, a valuable section on **Trade-Named Raw Materials** is included, which lists trade-names, a brief chemical description, and the supplier's name. The final section contains **Suppliers' Addresses** and will no doubt be a useful tool to the reader.

Section titles are listed below. Parenthetic numbers indicate the number of formulations per topic.

- 1. Antiperspirants and Deodorants (53)**
- 2. Baby Products (52)**
- 3. Bath and Shower Products (136)**
- 4. Beauty Aids (205)**
- 5. Creams (315)**
- 6. Fragrances and Perfumes (7)**
- 7. Hair Care Products (302)**
- 8. Lipsticks (45)**
- 9. Lotions (164)**
- 10. Shampoos (341)**
- 11. Shaving Products (39)**
- 12. Soaps (35)**
- 13. Sun Care Products (160)**
- 14. Toothpastes (32)**
- 15. Miscellaneous (83)**
- 16. Trade-Named and Other
Raw Materials Descriptions**
- 17. Suppliers' Addresses**

COSMETIC AND TOILETRY FORMULATIONS

Second Edition — Volume 1

by

Ernest W. Flick

More than 1800 cosmetic and toiletry formulations are described in the Second Edition of this well-received and useful book. The book is based on information obtained from industrial companies and other organizations. The data represent selections from manufacturers' descriptions, in their own words, made at no cost to, nor influence from, the makers or distributors of these materials.

Only the most recent formulas have been included. It is believed that all of the trade-named raw materials listed are currently available, which will be of utmost interest to readers concerned with raw material discontinuances.

Spurred by a strong economy, cosmetic and toiletry sales, a multibillion dollar market, have been increasing at 6 to 7% annually, thus making the information in the book particularly interesting to anyone considering new products

or process variations.

Each formulation in the book is categorized by a description of its end use. The formulations include the following: a list of each suggested raw material; the percent by weight of each raw material; a recommended formulation procedure; and the formula source, which is the company or organization that supplied the formula.

The formulations in the book are divided into fourteen categories as shown below. In addition a valuable section on **Trade-Named Raw Materials** is included, which lists trade-names, a brief chemical description, and the supplier's name. The final section contains **Suppliers' Addresses** and will no doubt be a useful tool to the reader.

Section titles are listed below. Parenthetical numbers indicate the number of formulations per topic.

1. **Antiperspirants and Deodorants (44)**
2. **Baby Products (64)**
3. **Bath and Shower Products (138)**
4. **Beauty Aids (189)**
5. **Creams (230)**
6. **Fragrances and Perfumes (12)**
7. **Hair Care Products (381)**
8. **Insect Repellents (11)**
9. **Lotions (157)**
10. **Shampoos (206)**
11. **Shaving Products (52)**
12. **Soaps (91)**
13. **Sun Care Products (180)**
14. **Miscellaneous (82)**
15. **Trade-Named Raw Materials**
16. **Suppliers' Addresses**

Contents and Subject Index

SECTION I: ANTIPERSPIRANTS AND DEODORANTS	1
Antiperspirant Lotion	2
Roll-On Antiperspirant	2

SECTION XIV: TRADE-NAMED RAW MATERIALS	418
SECTION XV: SUPPLIERS' ADDRESSES	458

Preface

This book contains 775 cosmetic and toiletry formulations, based on information received from numerous industrial companies and other organizations. This is Volume 3 of the Second Edition of this work; Volume 1 was published in 1989. Volume 2 was published in 1992. There are no duplications in any of these volumes.

The data represent selections from manufacturers' descriptions made at no cost to, nor influence from, the makers or distributors of these materials. Only the most recent formulas have been included. It is believed that all of the trademarked raw materials listed are currently available, which will be of interest to readers concerned with raw material discontinuances.

The 1989 market for cosmetic and toiletry raw materials was \$1.6 billion. That market is projected to increase to close to \$2.0 billion by 1995, thus making the information in the book particularly interesting to anyone considering new products or process variations.

Each formulation in the book is identified by a description of end use. The formulations include the following as available, in the manufacturer's own words: a listing of each raw material contained; the percent by weight of each raw material; suggested formulation procedure; and the formula source, which is the company or organization that supplied the formula. The book is divided into the following 13 sections:

- I. Antiperspirants and Deodorants
- II. Baby Products
- III. Bath and Shower Products
- IV. Beauty Aids
- V. Creams
- VI. Hair Care Products
- VII. Insect Repellents
- VIII. Lotions
- IX. Shampoos
- X. Shaving Products
- XI. Soaps and Hand Cleaners
- XII. Sun Care Products
- XIII. Miscellaneous

Each formula is indexed in the section which is most applicable. The reader seeking a formula for a specific end use should check each section which could possibly apply.

In addition to the above, there are two other sections that will be helpful to the reader:

- XIV. **Traded–Named Raw Materials.** Each raw material is listed with a brief chemical description and the name of the raw material supplier.
- XV. **Suppliers' Addresses.** Addresses of suppliers of trade–named raw materials and/or formulations, some of which are not available in the usual reference books.

It should be noted that some formulations in the book are translations. The manufacturer's exact wording has been used in these cases. Occasionally different companies have listed the same raw material differently; it is hoped that the reader will be able to identify the same or similar raw materials by consulting the Trade–Named Raw Materials section.

The table of contents of the book is organized in such a way as to serve as a subject index.

My fullest appreciation is expressed to the companies and organizations which supplied the information included in this book.

September 1994

Ernest W. Flick

Notice

To the best of our knowledge the information in this publication is accurate; however, the Publisher does not assume any responsibility or liability for the accuracy or completeness of, or consequences arising from, such information. This book does not purport to contain detailed user instructions, and by its range and scope could not possibly do so. Mention of trade names or commercial products does not constitute endorsement or recommendation for use by the Author or Publisher.

Cosmetic and toiletry raw materials could be toxic or cause allergies in some circumstances, and, therefore, due caution should always be exercised in the use of potentially hazardous materials and the manufacturing processes involved. Final determination of the suitability of any information or product for use contemplated by any user, and the manner of that use, is the sole responsibility of the user. We strongly recommend that users seek and adhere to a manufacturer's or supplier's current instructions for handling each material they use.

The Author and Publisher have used their best efforts to include only the most recent data available. The reader is cautioned to consult the supplier in case of questions regarding current availability.

Section I

Antiperspirants and Deodorants

Antiperspirant Lotion

This formulation is designed for "roll-on" containers.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	+ -42.50
2. Veegum	1.25
3. Ritapro 165	7.50
4. Ritachol	2.00
5. Laneto 100	1.00
6. Propylene Glycol	3.75
7. Ritachlor (50%)	42.00
8. Fragrance	QS

Compounding Procedure:

Weigh and add item 1 into a container and begin stirring. A variable speed propeller-type stirrer is recommended. Add item 2 and stir until dispersion is complete. Weigh and add items 3, 4 and 5 into another container. Begin stirring and heating this blend to 70-73C. Heat the water-containing blend to 70-73C. When both blends are at 70-73C, add the Laneto 100-containing blend to the water blend. Continue stirring with an agitator similar to the one described above. When all the Laneto 100-containing blend has been added begin cooling the batch. Cool to 40-43C and add the remaining ingredients. Package at 25-30C.
Formulation HB-89-L-30

Roll-On Antiperspirant

<u>Ingredients:</u>	<u>% W/W</u>
1. Hydroxypropyl Methylcellulose	0.65
2. SD Alcohol 40	20.00
3. Laneto 50	4.00
4. Pationic ISL	2.00
5. Distilled Water	+ -53.35
6. Ritachlor	20.00
7. Color, Fragrance, Preservatives	QS

Compounding Procedure:

Disperse item 1 into 2; add item 4. Combine items 3 and 5. Add the alcohol solution to the water solution slowly with gentle stirring. Add remaining ingredients slowly with gentle stirring.

Formulation HB-89-L-31

SOURCE; R.I.T.A. Corp.; Suggested Formulations

Antiperspirant Stick

<u>Ingredient:</u>		<u>Wt. %</u>
Methyl Stearoxy Dimethicone	Masilwax 135	3.0
Cyclomethicone	Masil SF-V	45.5
POE 6000 Distearate	Mapeg 6000DS	3.0
PEG-32	Macol E1450	2.0
Stearyl Alcohol	CO-1895	24.0
Talc	Supra	2.0
Al Zr Tetrachlorhydrex Gly	Rezal 36GP	20.0
Fragrance		0.5

Appearance: White, uniform stick. Excellent application properties.

Melt Point: 52C

Observation: Significantly less syneresis vs. similar sticks without Masilwax.

Procedure:

Heat Masilwax, Masil SF-V, Macol E1450 and Mapeg 6000DS to 65C (150F). Keep batch covered to avoid Silicone loss. Add Stearyl Alcohol. When uniform, add talc and Rezal 36GP. Mix with good shear until the solids are uniformly dispersed. Cool to 55C (130F), add fragrance, and fill. Chill sticks at 5C (40-45F) to speed solidification.

SOURCE: PPG Industries, Inc.: Formulation Q-101

Antiperspirant Gel

This product in gel form will serve as a moisturizer for the skin with effective antiperspirant action. It will help to ensure that the active ingredient stays in uniform suspension during processing and cooling.

	<u>% (w/w)</u>
Lexquat AMG-0	35.00
Lipocol O-20	35.00
AZG-368 Solution	30.00

Procedure:

Charge batch vessel with Lexquat AMG-0. Begin mixing and heating to 65C. Slowly add the AZG-368 with slow mixing. When completely mixed, add the Lipocol O-20 (previously melted). Mix until uniform. Cool to 40C. Pour into container and cool to 25C.

SOURCE: Inolex Chemical Co.: Formulation AD-100

Clear Roll-On Antiperspirant

This aqueous system contains sufficient ethanol to dry quickly on the skin; once dry, it is non-tacky. The use of Laneto 100 reduces the usual tackiness of the aluminum antiperspirant active ingredients.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Cellosize QP 4400	0.20
2. Distilled Water	29.70
Part B:	
3. Benzethonium chloride	0.10
4. Distilled Water	8.00
5. Alcohol SD 40	20.00
6. Laneto 50	7.00
Part C:	
7. Ritachlor 50%	35.00

Compounding Procedures:

Prepare Part A in advance, to allow the gum to hydrate fully before incorporation into the product. Slowly add Part B to Part A at room temperature with high speed propeller agitation. Finally, slowly add Phase C with high speed stirring. Perfume, if any, is added to Part B.

Formulation 101-132/HB-89-1-19

Antiperspirant Lotion

The lotion antiperspirant has been an attractive formula over the years, due to its versatility and various applications.

<u>Ingredients:</u>	<u>% W/W</u>
1. Ritapro 200	4.60
2. Laneto 50	8.80
3. Mineral Oil (65/75 Viscosity)	9.00
4. Ritachlor 50%	40.00
5. Distilled Water	37.60

Compounding Procedures:

Melt Ritapro 200 and mineral oil at 75C. Add preheated water and Laneto 50 and mix to form emulsion. When cool, add Ritachlor 50% slowly. Continue mixing until complete.

Formulation 101-131/HB-89-L-20

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Deodorant Cologne

<u>Ingredients:</u>	<u>% W/W</u>
1. SD Alcohol 40	60.00
2. Propylene Glycol	3.00
3. Laneto 50	2.00
4. Grillocin HY-77	3.00
5. Methylparaben	0.15
6. Perfume	QS
7. Distilled Water	31.85

Compounding Procedure:

Weigh and add the Alcohol into a container and begin stirring and warming. Warm the Alcohol to 50-55C and add all of the ingredients WITH THE EXCEPTION OF THE PERFUME. Stir until a homogeneous blend results. Begin cooling the blend, while stirring continuously. Cool to 40-43C and add the remaining ingredients. Cool to 25-30C while stirring continuously. Package fill into suitable containers.

NOTE: Explosion proof mixing and handling equipment should be used.

Formulation H-89-G-4

Deodorant Spray (Pump Dispensing)

This formulation combines deodorant, anti-microbial effects and a pleasant fragrance. Grillocin HY-77 has good deodorant properties that eliminate the presence and perception of unpleasant odor. This product is designed for packaging into a container fitted with a pump.

<u>Ingredients:</u>	<u>% W/W</u>
1. SD Alcohol 40	92.90
2. Grillocin HY-77	5.00
3. Laneto 50	2.00
4. Triclosan	0.10
5. Fragrance	QS
6. Color	QS

Compounding Procedure:

Weigh and add all ingredients into a suitable container. All mixing equipment should be equipped so that it is "explosion proof". Stir until a uniform dispersion results. Package fill into suitable containers.

Formulation H-89-G-5

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Deodorant Stick Without Alcohol

A stick formula which combats odor and inhibits odor development.

<u>Ingredients:</u>	<u>% W/W</u>
1. Disorbene	2.50
2. Dehydrol LS 3	4.00
3. PEG 200	20.00
4. Dipropyleneglycol	50.00
5. 1,2 Propyleneglycol	10.00
6. Grillocin CW 90	1.50
7. FD&C Blue #1 (1% in H ₂ O)	0.05
8. Perfume	QS
9. Distilled Water	11.95

Compounding Procedures:

Dissolve Disorbene in PEG 200, Dipropyleneglycol and Propyleneglycol by heating and mixing (about 85C). Add Grillocin CW 90 and Dehydrol LS 3. Stop heating. Add water and cool to about 70C. Add perfume and coloring agent. Pour in final packaging and cool down until room temperature.

SOURCE: R.I.T.A. Corp.: Formulation 111-185

Antiperspirant Cream

Mineral oil)	10.0%
Ionol C.P. antioxidant) Part A	0.1%
Monamid 150-IS)	2.0%
Chlorhydrol 50%)	40.0%
Monawet SNO-35) Part B	1.4%
Water, deionized)	46.5%

Mix Part A and Part B separately, in the order listed, then add Part B to Part A with rapid mechanical stirring. This cream is a heavy, water-in-oil emulsion which has excellent stability.

SOURCE: Mona Industries, Inc.: Suggested Formulation

Antiperspirant Gel

This product in gel form will serve as a moisturizer for the skin with effective antiperspirant action. It will help to ensure that the active ingredient stays in uniform suspension during processing and cooling.

	<u>% (w/w)</u>
Lexquat AMG-0	35.0
Lipocol O-20	35.0
AZG-368 Solution	30.0

Procedure:

Charge batch vessel with Lexquat AMG-0. Begin mixing and heating to 65C. Slowly add the AZG-368 with slow mixing. When completely mixed, add the Lipocol O-20 (previously melted). Mix until uniform. Cool to 40C. Pour into container and cool to 25C.

SOURCE: Inolex Chemical Co.: Formulation AD-100

Deodorant Stick

The deodorant stick is designed to be dispensed by pushing up a movable bottom plate or by rotating a screw-like mechanism. The formulation which can be pleasantly scented, creates a cooling sensation due to the evaporation of volatile solvent.

<u>Ingredients:</u>	<u>% W/W</u>
1. SD Alcohol 40	62.25
2. Propylene Glycol	15.00
3. Grillocin HY-77	3.00
4. Pationic ISL	1.75
5. Sodium Stearate C-7	8.00
6. Distilled Water	10.00
7. Color, Fragrance	QS

Compounding Procedure:

Combine ingredients 1,2,4 and 5; then heat to 70C. Add ingredients 6 and 3. Mix until uniform. Cool to 60C. Add remaining ingredients. Fill at 55C.

Formulation H-89-G-8

Deodorant Cream

Grillocin PY-88 has good deodorant properties that eliminate the presence and perception of unpleasant odors.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Rita GMS	4.00
2. Isopropyl Myristate	4.00
3. Rita CA	2.70
4. Ritacet-20	2.00
5. Grillocin PY 88 Pellets	2.00
6. Beeswax	1.00
Part B:	
7. Distilled Water (90C)	83.75
Part C:	
8. Patlac LA	0.20
9. Perfume	0.20
10. Euxyl K 400	0.15

Compounding Procedures:

Heat Part A up to 80C. Stir hot water into Part A. Add the other ingredients at 35C.

Formulation 111-162

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Deodorant Stick

This product is a solid stick deodorant for use in a cylindrical dispensing container. It applies easily and smoothly, dries quickly and offers excellent deodorant characteristics. Grillocin HY-77 has been included because of its unique odor-removing ability.

<u>Ingredients:</u>	<u>% W/W</u>
1. SD Alcohol 40	70.90
2. PEG-8	10.00
3. Triclosan	0.10
4. Grillocin HY-77	3.50
5. Sodium Stearate C-7	7.50
6. Distilled Water	8.00
7. Color	QS
8. Fragrance	QS

Compounding Procedure:

Weigh and add ingredient 1 into a container and begin stirring and heating. All heating and stirring equipment should be equipped so that it is "explosion proof." A variable speed agitator equipped with a propeller-type stirrer is recommended. Weigh and add ingredient 5 (Sodium Stearate C-7), stirring continuously while continuing to heat. Weigh and add ingredients 2, 3, 4 and 6 and continue stirring and heating. Heat to approximately 55-60C until all the Sodium Stearate C-7 is melted. After the Stearate is melted and the product is uniform, begin cooling the batch. Cool to about 55-60C. Package into suitable containers. The containers will have to be placed in molds to accommodate sufficient stick mass to allow for shrinkage.

Formulation H-89-G-6

Glycerin-Based Deodorant Gel

<u>Ingredients:</u>	<u>% W/W</u>
1. Pationic SSL	10.00
2. Glycerin	73.10
3. Grillocin HY-77	0.80
4. Stearic Acid	+8.40
5. Sodium Hydroxide (18% Solution)	+ -1.20
6. Distilled Water	6.50
7. Color, Fragrance, Preservatives	QS

Compounding Procedure:

Combine ingredients 1 and 2 and heat with mixing to 65C; add ingredient 3. Heat to 65C. Add ingredient 4. Maintain 65C. Combine both phases with mixing. Cool with stirring to 50C and add remaining ingredients. Fill into proper containers. Mix while filling.

Formulation H-89-G-7

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Liquid Antiperspirant Emulsion

Liquid antiperspirants have been attractive formulas over the years, due to their versatility and various applications.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Ritapro 165	13.00
Part B:	
2. Laneto 50	4.00
3. Ritachlor 50%	40.00
4. Distilled Water	43.00
Part C:	
5. Perfume	QS

Compounding Procedures:

Heat Part A to 70C. Heat Part B to 72C. With mixing, slowly add water phase to oil phase. Cool to 45C. Add perfume.

Formulation 101-133

Stick Deodorant

A sodium stearate stick which combats odor and inhibits odor development with propylene glycol, Grillocin and perfume.

<u>Ingredients:</u>	<u>% W/W</u>
1. Stearic Acid XXX	7.00
2. SD Alcohol 40	41.00
3. Sodium Hydroxide USP (20% solution in distilled water)	15.00
4. Propylene Glycol	35.00
5. Grillocin HY-77	2.00
6. Perfume	QS

Compounding Procedure:

Weigh and add ingredients 1-2 into a container and begin stirring and heating. Heat to 75-78C. Weigh and add ingredients 4 and 5 into another container and begin stirring and heating. Heat the blend of ingredients 4 and 5 to 75-78C. When the 1-2 ingredient blend and the 4 and 5 ingredient blend are both at 75-78C, add the 4 and 5 ingredient blend to the 1-2 ingredient blend. Add ingredient 3. Mix until uniform. Begin cooling while stirring continuously. At 60C, add ingredient 6. Package at approximately 55C.

Note: Explosive proof mixing and handling equipment should be used.

Formulation H-89-G-3

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Dry Roll-On Antiperspirant-A

<u>Ingredients:</u>	<u>% W/W</u>
Phase A:	
Cetyl Dimethicone (Abil Wax 9801)	0.50
Isopropyl Myristate (Tegosoft M)	5.00
Cyclomethicone (Abil B 8839/DC 344)	40.00
Quaternium 18 Hectorite (Bentone 38 Powder)	2.00
Ethanol - 200 proof or Ethanol - 190 proof	2.00
Phase B:	
Isopropyl Myristate (Tegosoft M)	5.00
Cyclomethicone (Abil B 8839/DC 344)	20.50
Phase C:	
Aluminum Chlorohydrate	25.00
Phase D:	
Perfume	QS

Dry Roll-On Antiperspirant-B

<u>Ingredients:</u>	<u>% W/W</u>
Phase A:	
Cetyl Dimethicone (Abil Wax 9801)	0.50
Isopropyl Myristate (Tegosoft M)	5.00
Cyclomethicone (Abil B 8839/DC 344)	40.00
Quaternium 18 Hectorite (Bentone 38 powder)	2.00
Ethanol - 200 proof or Ethanol - 190 proof	2.00
Phase B:	
Hexyl Laurate (Henkel - Standamul CTA or Cetrol A)	3.00
Cyclomethicone (Abil B 8839/DC 344)	22.50
Phase C:	
Aluminum Chlorohydrate	25.00
Phase D:	
Perfume	Q.S.

Procedure:

- Blend Abil Wax 9801, Abil B 8839 and Isopropyl Myristate. Sprinkle in Bentone 38 powder, avoiding lumps, while using a high speed mixer.
- Add Ethanol. 190 proof is preferred. Mix. Process through homogenizer with shear until a clear soft gel or clear medium viscosity liquid is formed.
- Mix Phase B. Add Aluminum Chlorohydrate. Mix until uniform. Add to Phase A gel. Mix/homogenize until well dispersed.
- Add perfume. Mix.

SOURCE: Goldschmidt Chemical Corp.: Suggested Formulations

Nonwhitening Antiperspirant Solid

A cyclomethicone/stearyl alcohol suspensoid solid with nonoily application and nonwhitening properties provided by Masil 756.

<u>Part:</u>	<u>Ingredients:</u>		<u>Wt. %</u>
A	Stearyl Alcohol	CO-1895	22.0
	Hydrogenated Castor Oil	Castorwax	1.0
	Glyceryl Stearate (and)		
	PEG-100 Stearate	Mazol 165C	1.0
	Tetrabutoxypropyl Methicone	Masil 756	5.0
B	Al Zr Tetrachlorhydrax Gly	Rezal 36GP	20.0
	Talc	Olympic Talc	2.0
C	Cyclomethicone	Masil SF-V	49.0
	Fragrance		Q.S.

Procedure:

Blend and heat the part A ingredients to 65C. When molten and uniform, add the part B ingredients with good agitation to disperse. Add the cyclomethicone, maintaining the temperature at 60-65C. When uniform, cool to 55C and add fragrance if desired, and fill. Chill the sticks at approximately 5C to speed solidification.

Formulation Q-102

Nonwhitening Antiperspirant Solid

A firm, uniform suspensoid solid with smooth application, nongreasy afterfeel, and less white residue.

<u>Part:</u>	<u>Ingredient:</u>		<u>Wt.</u>
A	Cyclomethicone	Masil SF-V	43.0
	PPG-10 Butanediol	Macol 57	12.0
	Benzyl Laurate	Mazon EE-1	3.0
B	Stearyl Alcohol	CO-1895	20.0
	Hydrogenated Castor Oil	Castorwax	2.0
C	Al Zr Tetrachlorhydrax GLY	Rezal 36GP	20.0
	Fragrance		QS

Procedure:

Blend and heat the part A ingredients to 65C. When molten and uniform, add the part B ingredients, maintaining the temperature and mixing until dissolved. Add the antiperspirant salt with good mixing to wet out and suspend the powder. Cool to 55C, add fragrance if desired, and fill. Chill the sticks at 5C to speed solidification.

Formulation Q-103

SOURCE: PPG Industries, Inc.: Suggested Formulations

Nonwhitening Antiperspirant Solid

A firm, uniform suspensoid solid with smooth application, nongreasy afterfeel, and less white residue.

<u>Part:</u>	<u>Ingredient:</u>		<u>Wt.%</u>
A	Cyclomethicone	Masil SF-V	43.0
	PPG-10 Butanediol	Macol 57	12.0
	Benzyl Laurate	Mazon EE-1	3.0
B	Stearyl Alcohol	CO-1895	20.0
	Hydrogenated Castor Oil	Castorwax	2.0
C	Al Zr Tetrachlorohydrax GLY	Rezal 36GP	20.0
	Fragrance		QS

Procedure:

Blend and heat the part A ingredients to 65C. When molten and uniform, add the part B ingredients, maintaining the temperature and mixing until dissolved. Add the antiperspirant salt with good mixing to wet out and suspend the powder. Cool to 55C, add fragrance if desired, and fill. Chill the sticks at 5C to speed solidification.

SOURCE: PPG Industries, Inc.: Formulation Q-103

Antiperspirant Solid

<u>Materials:</u>	<u>Part/Wt(%)</u>
SF-1202	45.0
SF-96-100	5.0
Stearyl Alcohol	19.0
Castor Wax 70	3.0
Talc	4.0
Arlacel 165	2.0
Aluminum Zirconium Tetrachlorohydrax-Gly (ZAG)	22.0

Procedure:

- 1) Mix SF1202 and stearyl alcohol.
- 2) Add ZAG, talc and Arlacel 165.
- 3) Heat to 75C and stir with moderate agitation until all wax is melted.
- 4) Pre-melt caster wax and add to mixture as a liquid and stir for 15 minutes.
- 5) Cool mixture to 55C with continued mixing and pour into container. Cool (avoid air entrapment due to excessive mixing speeds).

SOURCE: GE Silicones: Formulation AP100A

"Roll-On" Deodorant Antiperspirant

A roll-on formula which does not dry tacky and does not contain gums.

<u>Ingredients:</u>	<u>% W/W</u>
1. Ritachol 1000	5.00
2. Isopropyl Myristate	5.00
3. Grillocin HY-77	1.00
4. Ritachlor (Aluminum Chlorohydrate 50%)	50.00
5. Sorbitol	5.00
6. Distilled Water	34.00
7. Perfume	QS

Compounding Procedure:

Weigh and add ingredients 1-3 into a container. Begin stirring and heating the blend. Heat to 70-73C. Weigh and add ingredients 4-6 into another container and begin stirring and heating. Heat the 4-6 ingredient blend to 70-73C. Add the 4-6 ingredient blend to the 1-3 ingredient blend while continuously stirring to ensure good emulsification. Cool to 30-35C and add ingredient 7. Package at 25-28C.

Formulation H-89-G-1

Deodorant Antiperspirant Stick

A tri-function product which utilizes sodium stearate made in situ. Prevents perspiration, delivers fragrance, controls objectionable odor.

<u>Ingredients:</u>	<u>% W/W</u>
1. Grillocin HY-77	2.00
2. Ritachlor (Aluminum Chlorohydrate 50%)	50.00
3. Stearic Acid XXX	7.00
4. Propylene Glycol	24.00
5. Distilled Water	5.00
6. Sodium Hydroxide USP (15% solution in distilled water)	12.00
7. Perfume	QS

Compounding Procedure:

Weigh and add ingredients 4, 5 and 6 into a container. Commence stirring and heating this blend. Heat the blend to 70-73C and maintain this temperature. Combine 1-3, mix thoroughly and add this to the batch. Continue stirring and maintaining the temperature at 70-73C. Cool to 55-60C. Add perfume and package.

Formulation H-89-G2

Solid Stick Antiperspirant-A

<u>Ingredients:</u>	<u>% w/w</u>
Lanette 18 DEO	15.00
Castorwax MP-80	4.00
Fluid AP	1.50
Cyclomethicone (Abil B 8839)	51.50
Cetyl Dimethicone (Abil Wax 9801)	0.50
Talc	5.00
Aluminum Zirconium Tetrachlorohydrate-Gly	22.00
Fragrance	0.50

Solid Stick Antiperspirant-B

<u>Ingredients:</u>	<u>% w/w</u>
Lanette 18 DEO	15.00
Castorwax MP-80	4.00
Fluid AP	1.50
Cyclomethicone (Abil B 8839)	51.50
Stearoxy Dimethicone (Abil Wax 2434)	0.50
Talc	5.00
Aluminum Zirconium Tetrachlorohydrate-Gly	22.00
Fragrance	0.50

Solid Stick Antiperspirant-C

<u>Ingredient:</u>	<u>% w/w</u>
Lanette 18 DEO	15.00
Castorwax MP-80	4.00
Fluid AP	1.50
Cyclomethicone (Abil B 8839)	51.50
Cetyl Dimethicone (Abil B 9801)	0.25
Stearoxy Dimethicone (Abil Wax 2434)	0.25
Talc	5.00
Aluminum Zirconium Tetrachlorohydrate-Gly	22.00
Fragrance	0.50

Procedure:

1. Add the Cyclomethicone to a covered mixing tank equipped with a turbine propeller. Begin heating.
2. Add the Fluid AP, Lanette, Castorwax and Abil waxes. Bring temperature to 85-87C. Hold 30 minutes at temperature while mixing.
3. Add the Talc. Do not allow the temperature to drop below 75C during addition. Maintain temperature at 80-85C while mixing for 10-15 minutes.
4. Add the Aluminum-Zirconium Complex. Do not allow the temperature to drop below 70C during addition. Mix for 15-20 minutes at 175-180C.
5. Cool while mixing to 60-62C. Add fragrance.
6. Dispense to containers at 58-61C.

Baby Products

Baby Bath

<u>Part:</u>	<u>Ingredient:</u>		<u>Wt. %</u>
A	Deionized Water		50.0
	Lauramine Oxide	Mazox LDA	1.5
	Na4EDTA		0.2
	Methyl Paraben		0.2
	Sodium Cocoyl Isethionate	Jordapon CI Dispersion	11.0
B	Cocamidopropyl Hydroxysultaine	Mafo CSB-50	12.0
	Cocamidopropyl Betaine	Mafo CAB	5.7
	Deionized Water		19.3
	Fragrance		0.1
	Citric Acid		Q.S.

pH: 6.0-6.5

Viscosity: 9,800 cps

Appearance: Clear, straw-colored liquid

Procedure:

Mix Part A ingredients together and heat to 45C (110F). When uniform, add the Part B ingredients in the given order, cooling the batch. Adjust the pH.

Formulation F-102

Baby Bath

A clear, mild, quick-foaming system

<u>Ingredient:</u>		<u>Wt. %</u>
Deionized Water		63.63
Ammonium Lauryl Sulfate	Sipon L-22	16.50
Sodium C12-15 Pareth-15 Sulfonate	Avanel S-150	8.00
Sodium Cocoyl Isethionate	Jordapon CI Prill	2.40
PEG 150 Distearate	Mapeg 6000DS	1.00
Cocamidopropyl Hydroxysultaine	Mafo CSB-50	6.00
Cocamide DEA	Mazamide JT-128	2.00
Fragrance, Preservative		0.40
Citric Acid		0.07

pH: 6.0-6.5

Viscosity: 4600 cps

Appearance: Clear, very light straw-colored liquid

Procedure:

Blend the first five ingredients, heating to 65C (150F). When uniform, add the Mafo CSB and Mazamide JT-128, cooling to 45C (110F). Add the fragrance, preservative, and citric acid.

Formulation F-103

SOURCE: PPG Industries, Inc.: Suggested Formulations

Baby Lotion

The lotion is a smooth, creamy textured oil/water emulsion with a somewhat acidic pH.

<u>Ingredients:</u>	<u>% W/W</u>
1. Ritachol 1000	3.30
2. Ritalan C	1.00
3. Propylparaben	0.10
4. BHA	0.10
5. Mineral Oil (65/75 saybolt)	4.00
6. Ritachol	2.00
7. Sorbic Acid	0.10
8. Distilled Water	84.00
9. Acritamer 941	0.10
10. Triethanolamine (50%)	0.20
11. Propylene Glycol	5.00
12. Methylparaben	0.10
13. Color, Fragrance	QS

Weigh and add items 1 through 7 ("oil" phase) into a container and begin heating and stirring. Heat while stirring continuously, to 78-80C. Weigh and add item 8 into another container with stirring. Use a variable speed agitator equipped with a stirrer capable of imparting relatively high shearing stress (propeller type). Slowly sprinkle in item 9 and stir until the Acritamer 941 is completely dispersed and no lumps can be seen or felt. Add items 10, 11 and 12 and begin heating. Continue stirring and heat the water containing blend to 78-80C. When the "oil" phase and the water containing blend are both at 78-80C, add the water containing blend to the "oil" phase. Begin cooling, after completing the addition; cool to 40-43C and add the remaining ingredients. Cool to 25-30C and package fill into suitable containers.

Baby Lotion

<u>Ingredients:</u>	<u>% W/W</u>
<u>Part A:</u>	
1. Distilled Water	30.00
2. Pationic CSL	7.00
3. Patlac IL	1.00
4. Ritahydrox	0.50
5. Propylparaben	0.05
6. Ritalan	1.00
<u>Part B:</u>	
7. Distilled Water	53.60
8. Pationic 122A	2.50
9. Propylene Glycol	3.00
10. Patlac NAL	1.00
11. Methylparaben	0.10
12. Patlac LA (44% Solution)	0.25

Heat Part A and Part B to 165F. Add Part A to Part B with agitation. Maintain heat 10 minutes. Cool to room temperature. Adjust pH to 5.5-6.5 with Patlac LA (44% solution).

Note: It is recommended that the required amount of Patlac LA solution be determined in advance and incorporated into the batch as part of Phase B.

Baby Oil

Ritalan C and Patlac IL add lubricity and emollience to baby products. This baby oil formulation makes use of Ritalan C's inherent attributes to provide an oil gentle to the skin with excellent cleansing and lubricating properties. Patlac IL improves the emollience and makes the product less oily.

<u>Ingredients:</u>	<u>% W/W</u>
1. Mineral Oil	96.90
2. Ritalan C	1.00
3. Patlac IL	2.00
4. Fragrance	QS
5. Propylparaben	0.10

Compounding Procedure:

Weigh and add item 1 into a container and begin stirring. Add remaining ingredients and mix until a homogeneous dispersion occurs. Filter, if necessary, and package fill into suitable containers.

Formulation HB-89-L-4

Baby Oil

This preparation provides excellent emollience for the infant's tender skin, leaving the skin soft and smooth. Ritalan imparts lubricity, and Ritacetyl provides conditioning and moisturizing benefits.

<u>Ingredients:</u>	<u>% W/W</u>
1. Mineral Oil (65/75) saybolt	92.40
2. Ritalan	5.00
3. Ritacetyl	2.50
4. Propylparaben	0.10
5. Fragrance	QS

Compounding Procedure:

Weigh and add ingredients 1-4 into a container and begin stirring while warming, until all ingredients are liquid (approximately 55C). Stir until completely homogeneous and begin cooling. Stir continuously. At 43C add perfume. Continue stirring and cooling. Cool to 25C and allow to remain undisturbed for 24 hours. Filter.

Baby Skin Treatment Ointment

This preparation for infants has good water resistance, excellent moisturizing and lubricating attributes. It applies smoothly and does not aggravate existing skin irritation. Ritaderm is included to impart lipids, as well as natural moisturizing factor properties that aid in protecting and moisturizing the baby's tender skin.

<u>Ingredients:</u>	<u>% W/W</u>
1. Ritaderm	10.00
2. Imidazolidinyl Urea	0.10
3. Distilled Water	2.50
4. Petrolatum	72.15
5. Ozokerite	15.00
6. Allantoin	0.25

Compounding Procedure:

Weigh and add the distilled water into an auxiliary tank and begin heating and stirring. Heat to 70-73C and add the Allantoin and Imidazolidinyl Urea. Stir until these materials have completely dispersed. In a mixing tank weigh and add the remaining ingredients and begin heating and stirring. Heat to 78-80C while stirring continuously. When the blend containing the Ritaderm is at 78-80C, and the water-containing blend is at 70-73C, add the water-containing blend to the Ritaderm-containing blend. When all the water-containing blend has been added, begin cooling the batch. Cool to 45-50C, and package fill into suitable containers.

Formulation HB-89-L-6

Pearlized Baby Wash Emulsion

A gentle, viscous lotion cleanser with reduced defatting.

<u>Ingredients:</u>	<u>% W/W</u>
1. Grilloten LSE 65K Soft	5.00
2. Distilled Water	50.80
3. Ritasynt IP	2.00
4. Sodium Laureth Sulfate	20.00
5. Sodium Laureth Sulfate (and) Disodium Laureth Sulfosuccinate	20.00
6. PEG 55 Propylene Glycol Oleate	1.00
7. Disodium EDTA	0.20
8. Sodium Chloride (25% solution)	1.00
9. Preservative, Perfume	QS

Compounding Procedures:

Combine ingredients 1, 2, 4, and 5 in a main mixing tank. Begin heating to 170F with agitation. At 170F, add Ritasynt IP. Mix until Ritasynt IP is melted and the batch is uniform. Add PEG 55 Propylene Glycol Oleate and EDTA. Maintain temperature. Mix until uniform. Begin cooling. Cool to 120F. Add perfume and preservative. Cool to 95F with mixing. Adjust viscosity with sodium chloride solution. Fill.

Skin Cream for Babies

This oil/water emulsion type skin cream for infants rubs in quickly and leaves the baby's skin soft and smooth to the touch without a greasy, oily after-feel. Ritachol and Ritalan "C" impart these attributes, and the Ritachol also imparts emulsion stabilizing properties improving the shelf life of the product. Ritalan C imparts moisturization and emollient benefits. Ritachol 1000, a non-ionic emulsifier, serves as the primary means of assuring stability.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	58.90
2. Acritamer 941	0.10
3. Glycerin	5.00
4. Methylparaben	0.10
5. Ritachol 1000	12.50
6. Mineral Oil (65/75 saybolt)	18.00
7. Ritalan C	2.50
8. Ritachol	2.50
9. Propylparaben	0.10
10. Morpholine	0.10
11. Imidazolidinyl Urea	0.20
12. Fragrance	QS

Compounding Procedure:

Weigh and add the water into a container and begin stirring. Stir by means of a variable speed agitator equipped with a stirrer (propeller type) capable of imparting relatively high shear. Add items 2, 3, and 4. When all the Acritamer has been thoroughly dispersed and no lumps can be seen nor felt, add the Glycerin and Methylparaben. Add the remaining ingredients with the exception of the imidazolidinyl urea, morpholine and perfume into another container and begin heating and stirring. Heat the water-containing blend while stirring continuously to 70-73C. Heat the Ritachol 1000 blend while stirring continuously to 70-73C. When both blends are at 70-73C, add the water containing blend to that containing the Ritachol 1000. When all the water-containing blend has been added, begin cooling. Cool to 25-30C and add items 10, 11 and 12 with mixing between additions. Mix 30 minutes after the last addition. Package fill into suitable containers.

SOURCE: R.I.T.A. Corp.; Formulation H-89-A-3

Skin Cream for Babies

This oil/water emulsion type skin cream for infants rubs in quickly and leaves the baby's skin soft and smooth without a greasy, oily after-feel. Ritachol and Ritalan C impart these attributes, and Ritachol also imparts emulsion stabilizing properties, resulting in good shelf life for the product. Ritalan C imparts moisturizing as well as emollience.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	58.80
2. Acritamer 941	0.10
3. Glycerin	5.00
4. Methylparaben	0.10
5. Ritachol 1000	12.50
6. Mineral Oil (90 saybolt)	18.00
7. Ritalan C	2.50
8. Ritachol	2.50
8. Propylparaben	0.10
9. Triethanolamine (50%)	0.20
10. Imidazoliny] Urea	0.20
12. Fragrance	QS

Compounding Procedure:

Weigh and add the water into an auxiliary tank and begin stirring. Stir by means of a variable speed agitator (propeller type) capable of imparting relatively high shearing stress. Add items 2, 3, and 4. When all the Acritamer has been thoroughly dispersed and no lumps can be seen or felt, add the Glycerin and Methylparaben. Add the remaining ingredients with the exception of the Triethanolamine 50% and Perfume into the main mixing tank and begin heating and stirring. Heat the water phase while stirring continuously to 70-73C. Heat the Ritachol 1000 phase while stirring continuously to 70-73C. When both phases are at 70-73C, add the water phase to that containing the Ritachol 1000. When all the water phase has been added, begin cooling. Cool to 55-60C and add the Triethanolamine. Cool to 25-30C and add the Imidazolidiny] Urea and Perfume. Mix 30 minutes. Package fill into suitable containers.

Section III

**Bath and
Shower Products**

After Bath Freshener

This clear gel freshener liquefies rapidly upon application, leaving the skin cool, refreshed and tingling. It removes residues such as dust, dirt, oil and makeup from facial areas either by itself or in conjunction with a cleansing lotion. This product is also beneficial when applied after bathing to the hands, legs and other body areas, helping to soften, smooth and condition the skin.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	70.19
2. Acritamer 941	0.15
3. Methylparaben	0.10
4. Propylene Glycol	5.00
5. Quaternium-15	0.10
6. SD Alcohol-40	23.00
7. Laneto 50	1.00
8. Color, Fragrance	QS
9. Triethanolamine (50%)	0.30
10. EDTA	0.08
11. Benzophenone-2	0.08

Compounding Procedure:

Weight item 1 into a container and start the mixer. A stirrer capable of imparting high shear is recommended. Add item 2 and stir until the Acritamer is thoroughly dispersed and hydrated (no visible lumps should be present). Add items 3-11. Stir until resultant Gel is clear and smooth.

Formulation H-89-A-4

After Bath Splash

An emollient, non-drying, after bath splash which refreshes while it moisturizes. Pationic ISL supplies excellent after-feel and perfume solubilization.

<u>Ingredients:</u>	<u>% W/W</u>
<u>Part A:</u>	
1. Alcohol SD 40	70.00

Blooming Bath Oil

This bath oil will prevent dry skin. Added unique moisturizing and skin conditioning effect is due to the Pationic ISL. Patlac IL gives extra smoothness to the product. Both the Patlac IL and Pationic ISL make this product feel non-greasy. Does not leave a bathtub residue.

<u>Ingredients:</u>	<u>% W/W</u>
1. Mineral Oil (light)	+69.50
2. PEG-8 Laurate	16.00
3. Pationic ISL	7.00
4. Patlac IL	4.00
5. Ritoleth 2	2.50
6. Sorbitan Sesquioleate	1.00
7. Color, Fragrance, Preservative	QS

Compounding Procedure:

Combine ingredients and stir until clear. No heat needed.
Formulation H-89-P-3

Blooming Bath Oil

This bath oil contains a high level of mineral oil but because of the use of Ritawax ALA, Patlac IL, and Pationic ISL, the product does not feel greasy. The Pationic ISL will give long lasting substantive moisturization and soft feel to the skin. This product will also reduce the winter drying of the skin.

<u>Ingredients:</u>	<u>% W/W</u>
1. Mineral Oil 70 (Carnation)	+76.00
2. Pationic ISL	5.00
3. Ritoleth 2	10.00
4. Ritawax ALA	5.00
5. Patlac IL	4.00
6. Color, Fragrance, Preservative	QS

Compounding Procedure:

Combine with mixing until clear. No heat needed.
Formulation H-89-P-6

Blooming Bath Oil

This bath oil is fast blooming with a non-greasy feel and an emollient after-feel. It leaves no residue. Leaves the skin silky smooth due to the Pationic ISL and Pationic CSL.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Mineral Oil	67.35
2. PEG 8 Monolaurate	16.00
3. Pationic ISL	9.50
4. Pationic CSL	4.00
5. Triethanolamine (99% Solution)	0.60
6. Propylparaben	0.05
Part B:	
7. Perfume	2.50

Compounding Procedure:

Heat Part A to 165F, mix. Cool to 120F. Add B, cool to room temperature.

Formulation 109-45

Floating Bath Oil

The Pationic ISL reduces the greasiness of the mineral oil and leaves a talc-like feel on the skin. The Pationic ISL is substantive to the skin and will help moisturize the skin. Ritawax ALA and Ritachol will add elegance to the finished product.

<u>Ingredients:</u>	<u>% W/W</u>
1. Mineral Oil	78.00
2. Ritachol	5.00
3. Pationic ISL	4.00
4. Ritawax ALA	5.00
5. Patlac IL	7.00
6. Fragrance	1.00

Compounding Procedure:

Prewrite chemicals and blend until clear.

Formulation 109-42

6. Triethanolamine (99%)	0.30
7. Propylparaben	0.05
<u>Part B:</u>	
8. Perfume	2.50

Compounding Procedure:

Heat Part A to 165F, mix. Cool to 120F. Add B, cool to room temperature.

Formulation 103-184

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Blooming Bath Oil

This clear formula blooms into a white cloud upon addition to the bath, and provides all-over moisturization. The Mazon EE-1 reduces the greasiness of the mineral oil to give a silky, nonoily feel. The formula is a water in oil microemulsion, which means that production and filling equipment need not be perfectly dry. The system will remain transparent even with the addition of incidental moisture.

<u>Ingredient:</u>		<u>Wt. %</u>
Deionized Water		1.0
Polysorbate 80		7.0
Sorbitan Laurate	S-Maz 80	7.0
Benzyl Laurate	Mazon EE-1	20.0
Fragrance		Q.S.
Mineral Oil	Drakeol 9	65.0
Appearance: Clear, vary pale yellow liquid		

Procedure:

Blend all ingredients except the mineral oil. When uniform, add the mineral oil with mixing. The batch will become clear at about the halfway point of the addition.

Formulation G-103

Mild Bath Foam

Water	58.4
Jordapon CI Dispersion	10.0
Sodium Lauryl Ether Sulfate 60%	15.0
Cocamidopropyl Hydroxysultaine	12.0
Cocamide DEA	3.0
Preservative, EDTA	0.6
Fragrance	1.0

Procedure:

Blend the water, Jordapon CI Dispersion, sodium lauryl ether sulfate, preservative, and EDTA, and heat to 45C. Add the Mafo CSB-50 and Mazamide 80, cooling the batch to 35C. Blend in the fragrance, and adjust the pH to 6.5-7.0 with citric acid.

Final Viscosity: 3,200 cps.

SOURCE: PPG Industries, Inc.: Suggested Formulations

Body Shampoo

<u>Ingredients:</u>	<u>% by Wt.</u>
Water, D.I.	23.27
Bio-Terge AS-40	15.54

pH: 6.0-6.5

Appearance: Clear, water-white

Performance: A cooling, refreshing body splash which also provides light, non-oily mositurization

Procedure:

Blend the alcohol, Macol P-500, and Masil 1066C. Add the fragrance. When uniform, add the deionized water and adjust the pH with citric acid.

Formulation H-101

SOURCE: PPG Industries, Inc.: Suggested Formulations

Bubble Bath Powder

When added to the bath water, this formulation offers excellent foaming and cleansing attributes. Ritalan has been included to impart emolliency and lubricating properties...helps to keep the skin soft and smooth. This formulation has chelating qualities that help prevent so-called "hard water scum" from forming on the bath tub surface. Sodium Bicarbonate has been included because of its soothing qualities in various dermatological-related conditions. Sodium Bicarbonate also has deodorant properties.

<u>Ingredients:</u>	<u>% W/W</u>
1. Sodium Lauryl Sulfate (powder)	18.00
2. Sodium Bicarbonate	20.00
3. Sodium Sesquicarbonate	46.00
4. Methylparaben	0.20
5. Tetra Sodium EDTA	1.50
6. Ritalan	4.00
7. Quaternium-15	0.30
8. Sodium Lauryl Sulfoacetate	10.00
9. Fragrance	QS

Compounding Procedure:

Weigh and add all ingredients (except perfume) in order into a suitable blender equipped with an intensifier and mix until the powder is completely homogeneous. Add perfume using suitable atomizer device. Mix until uniform. Fill into suitable containers
Formulation HB-89-L-9

Bubble Bath Powder

This high-foaming bath product has a luxurious after-feel and long lasting foam. It is formulated without harsh ingredients.

<u>Ingredients:</u>	<u>% W/W</u>
<u>Part A:</u>	
1. Sodium Lauryl Sulfate (dry)	18.00
2. Sodium Bicarbonate	20.00
3. Sodium Sesquicarbonate	42.85
4. Sodium Lauryl Sulfoacetate	10.00
5. Pationic SSL	5.00
6. Propylparaben	0.15
<u>Part B:</u>	
7. Laneto AWS	3.00
8. Fragrance	1.00

Compounding Procedure:

Combine Part A in a blender and mix until uniform. Mix Part B in a suitable container until uniform. Slowly add Part B to Part A and mix after each addition. An atomizer or intensifier device is suggested for the addition of Part B.

Formulation 109-87

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Deodorant Foaming Bath Oil

A bubbling product for the bath with Grillothen to reduce irritation and de-fatting and Grillocin HY-77 to combat odor.

<u>Ingredients:</u>	<u>% W/W</u>
1. Grillocin HY-77	2.00
2. Ritamid C	2.00
3. PEG-8	2.00
4. Sodium Laureth Sulfate	88.00
5. Trilaureth-4 Phosphate	4.50
6. Grillothen LSE 87 K	1.50
7. Perfume	QS
8. Preservative	QS

Compounding Procedure:

Weigh and add ingredient 4 into a container and begin stirring and heating. Heat to 70-73C and add all the ingredients with the exception of perfume and preservative. Be careful to avoid air entrapment while stirring the batch. Cool to 40-43C and add perfume and preservative. Continue cooling to 25-30C and package.

Formulation H-89-G-10

Foam Bath

A viscous bath foam product which moisturizes and leaves a good after feel. Grillothen is used to prevent drying. Pationic ISL and Panthenol are used for moisturization and after feel.

<u>Ingredients:</u>	<u>% W/W</u>
1. Grillothen LSE 87 Soft	4.00
2. Distilled Water	40.50
3. dl-Panthenol	1.00
4. Sodium Laureth Sulfate (2 Mole)	46.00
5. Pationic ISL	3.50
6. Euperlan PK 900	3.00
7. Sodium Chloride (25% solution)	+2.00
8. Preservative, Perfume	QS

Compounding Procedure:

Stir items 1 and 2 thoroughly. Add other ingredients through item 6 in given order, stirring after each addition. After addition of item 6, mix until uniform. Add perfume and preservative. Mix until uniform. Add salt solution to thicken.

	Imidazolidinyl Urea	Germa11 115	0.2
	Methyl Paraben		0.2
	Ammonium Laureth Sulfate, 60%	Alfonic 1412-A	22.5
B	Cocamidopropyl Hydroxysultaine	Mafo CSB-50	17.0
	Benzyl Laurate	Mazon EE-1	0.5
	Fragrance		0.7
C	Cocamide DEA	Mazamide JT-128	1.0
	Citric Acid, 10%		0.2

pH: 5.5-6.0

Viscosity: 16,000-18,000 cps

Appearance: Clear, pale yellow viscous liquid

Procedure:

Blend the Part A ingredients at 40-45C until dissolved. Discontinue heating, and add the part B ingredients in order, mixing until dissolved. Add the Mazamide JT-128 and adjust the pH.

SOURCE: PPG Industries, Inc.: Formulation F-106

Moisturizing Bath Foam

<u>Ingredient:</u>		<u>Wt. %</u>
Deionized Water		54.7
Cocamidopropyl Hydroxysultaine	Mafo CSB-50	12.0
Sodium Lauryl Ether Sulfate	Mazon ES-60	20.0
Sodium Cocoyl Isethionate	Jordapon CI Dispersion	8.0
PEG 7 Glyceryl Cocoate	Mazol 159	1.0
Methyl Paraben		0.2
EDTA		0.2
Cocamide DEA	Mazamide JT-128	1.5
Cocamide MEA	Mazamide CMEA	1.5
Fragrance		0.7
Citric Acid		0.2

pH: 6.0-6.5

Viscosity: 4,000 cps

Appearance: Clear, straw-colored liquid

Procedure:

Blend the first seven ingredients and heat to 50C (120F). Add the Mazamide 80 and CMEA. Cool to 40C (105F) and add fragrance. Adjust pH with citric acid.

Formulation E-101

Floating Bath Oil

<u>Ingredient:</u>		<u>Wt. %</u>
Isopropyl Palmitate	Propal	39.0
Oleth-2	Macol OA-2	1.0
Capric/Caprylic Triglyceride	Mazol 1400	15.0
Fragrance		1.0
Mineral Oil	Drakeol 9	44.0

Appearance: Clear, water-white oil

Performance: Spreads spontaneously on warm (105F) water.

Leaves a light, non-greasy, non-tacky film on the skin

Procedure:

Blend all ingredients except the mineral oil. When uniform, add the mineral oil.

Formulation G-101

Silky Bubble Bath

This clear, viscous liquid develops high, stable foam even in hard water.

<u>Part:</u>	<u>Ingredient:</u>	<u>Wt. %</u>	
A	Demineralized Water	55.6	
	Na4EDTA	0.2	
	Imidazolidinyl Urea	Germall 115	0.2
	Ammonium Cocoyl Isethionate	Jordaon ACI-30	11.7
	Methyl Paraben		0.2
B	Ammonium Laureth Sulfate	Alfonic 1412-A	25.8
	Cocamide DEA	Mazamide 80	3.0
	Cocamide MEA	Mazamide CMEA	1.0
C	Fragrance		1.0
	Citric Acid		0.1
	Ammonium Chloride		1.2

pH: 6.5-7.0

Viscosity: 4500-5000 cps

Appearance: Clear, straw-colored liquid

Procedure:

Mix the part A ingredients in the main vessel. In a separate vessel premix part B, warming to 40C to dissolve the Mazamide CMEA. Add B to A, mixing until clear and uniform. Adjust pH and viscosity.

SOURCE: PPG Industries, Inc.: Formulation E-102

Shower Bath "A"

A viscous shower product without gums. Does not dry the skin and leaves a smooth feel.

<u>Ingredients:</u>	<u>% W/W</u>
1. Grilloten LSE 87	2.50
2. Grilloten LSE 87K	0.50
3. Glycol Distearate	0.50
4. Pationic 138C	2.50
5. PEG-55 Propylene Glycol Oleate	1.00
6. Distilled Water	35.30
7. Sodium Laureth Sulfate	51.00
8. Potassium Coco-Hydrolyzed Animal Protein	6.50
9. Citric Acid (25% Solution)	0.20

Compounding Procedure:

Combine ingredients 1,2,4,6,7, and 8. Mix and begin heating to 160F. Combine ingredients 3 and 5. Heat to 160F and add to batch. Cool to 95F. Adjust pH to 6.0 to 6.5 with Citric Acid solution. Package.

Formulation H-89-G-13

Shower Bath "B"

A viscous shower cleanser. Contains no gums. Cleans without stripping and leaves a smooth feel.

<u>Ingredients:</u>	<u>% W/W</u>
1. Grilloten LSE 65K	2.00
2. Pationic 138C	1.80
3. Distilled Water	10.00
4. Sodium Laureth Sulfate	45.00
5. Cocamidopropyl Betaine	8.00
6. Distilled Water	31.20
7. Sodium Chloride (25% Solution)	2.00

Compounding Procedure:

Combine ingredients 1,2 and 3. Mix until uniform (gentle warming will facilitate solution). Combine ingredients 4,5 and 6. Mix until uniform. Add Grilloten premix (ingredients 1,2 and 3) to Lauryl Ether Sulfate premix. Mix until uniform. Adjust viscosity with Sodium Chloride solution.

Formulation H-89-G-14

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Shower Bath "C"

A viscous shower bath cleanser without gums. Leaves a smooth feel. Grillotens assist in the prevention of irritation.

<u>Ingredients:</u>	<u>% W/W</u>
1. Grilloten LSE 87	2.00
2. Grilloten LSE 87K	2.00
3. PEG-55 Propylene Glycol Oleate	2.00
4. Distilled Water	10.00
5. Sodium Laureth Sulfate	57.96
6. Distilled Water	25.84
7. Citric Acid (25% Solution)	0.20

Compounding Procedure:

Combine ingredients 1,2,3, and 4 and mix until uniform. Combine ingredients 5 and 6. Mix until uniform. Add ingredients 1,2,3 and 4; premix to Ether Sulfate premix. Mix until uniform. Add Citric Acid as 25% solution to adjust pH (6.0 to 6.5 is recommended).

Formulation H-89-G-15

Shower Bath

A viscous shower product which leaves a smooth feel and does not dry the skin.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Grilloten LSE 87 Soft	2.00
2. Grilloten LSE 87K Soft	2.00
3. Distilled Water	10.00
Part B:	
4. Sodium Laureth Sulfate-40 Mole	44.00
5. Cocamphoglycinate	8.00
6. PEG-55 Propylene Glycol Oleate	1.50
7. Ritasynt IP	3.00
8. Citric Acid (25% Solution)	0.20
9. Distilled Water	29.30
Part C:	
10. Perfume, Preservative	QS

Compounding Procedure:

Combine ingredients in Part A. Mix and begin heating. Heat to 175F. Combine ingredients in Part B (except Citric Acid). Mix and begin heating. Heat to 175F. Add Part A to Part B while mixing. Begin cooling. Cool to 120F. Add perfume and preservative. Cool to 95F. Add Citric Acid solution to adjust pH to 5.5 to 6.0.

Skin Treatment Bath Oil

This spreading bath oil, when added to bath water, imparts excellent skin lubricating and emollient qualities, and does not deposit a residual ring on the tub surface. Ritalan C has been added for skin moisturizing and conditioning effects. Ritachol has been incorporated to improve the spreading properties of this bath oil, as well as impart moisturizing benefits.

<u>Ingredients:</u>	<u>% W/W</u>
1. Mineral Oil	69.80
2. PEG-8 Dilaurate	6.50
3. Cottonseed Oil	3.50
4. Wheat Germ Oil	5.00
5. Ritalan C	5.00
6. Ritachol	10.00
7. Propylparaben	0.10
8. BHA	0.10
9. Fragrance	QS

Compounding Procedure:

Weigh item 2 into a container and begin heating and stirring. Add the Propylparaben and BHA into ingredient 2 and continue heating and stirring to about 55C. Mix until both have dissolved. Add the remaining ingredients in order and stir until homogeneous. Cool to 25-30C.

7. Patlac LA (44%)	+0.10
8. Glydant (40-700)	0.20
9. Perfume	0.20
10. Color (D&C Brown #1)	0.10

Compounding Procedure:

Heat Part A to 65C with agitation. Mix and cool to 40C. Add Part B. Mix and cool to room temperature. Adjust pH to 6.0 with Patlac LA.

Specifications:

Viscosity after 24 hours: 8,000-10,000 cps.*

* The viscosity will equilibrate to approximately 18,000 cps within 2 or 3 weeks

Formulation 103-175

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Alcoholic Splash Toner

<u>Ingredients:</u>	<u>Percent by Weight</u>
Deionized water	71.60
Isopropyl alcohol	20.00
Propylene glycol	2.00
Methylparaben	0.15
Ginseng extract	2.00
Horse chestnut extract	2.00
Methocel 40-202	0.20
Sodium PCA	1.00
Procetyl AWS	0.10
Dowicil 200 preservative	0.05
Polysorbate 20	1.00
Perfume oil (floral)	0.10
D&C red 40	q.s.

Procedure:

1. Add deionized water and alcohol to a vessel and begin mixing.
2. Dissolve methylparaben in warm propylene glycol--add to batch.
3. Add remaining ingredients one at a time mixing well between each addition.
4. Add perfume oil to the Polysorbate 20 and warm while mixing to dissolve perfume--add to batch.
5. Add color and mix well.

Some ideas you can try:

1. Consider substituting other natural herbal ingredients for the Ginseng extract or the Horse chestnut extract.
2. To reduce the alcohol odor, substitute ethyl alcohol for the isopropyl alcohol.

Non-Alcoholic Splash Toner

<u>Ingredients:</u>	<u>Percent by Weight</u>
Deionized water	91.35
Propylene glycol	2.00
Methylparaben	0.15
Ginseng extract	2.00
Horse chestnut extract	2.00
Methocel 40-202	0.20
NaPCA	1.00
Procetyl AWS	0.10
Dowicil 200 preservative	0.10
Polysorbate 20	1.00
Perfume oil (floral)	0.10

Procedure:

1. Meter deionized water into a mixing vessel.
2. Dissolve methylparaben in warm propylene glycol--add to batch.
3. Add remaining ingredients one at a time mixing well between each addition.
4. Add perfume oil to Polysorbate 20 and warm while mixing to dissolve perfume--add to batch.

Some ideas you can try:

1. Try replacing the Ginseng extract or Horse chestnut extract with other herbal extracts.
2. Consider expanding the marketing potential of this product by including an ingredient for those sensitive skin, such as aloe vera gel.

 Actuator: Foam Spout
 Formulation MU 503

Nail Conditioner with Panthenol

<u>Ingredients:</u>	<u>% by Wt.</u>
Part I:	
Deionized Water	50.00
Carbopol 934	0.15
Part II:	
Deionized Water	27.15
Triethanolamine, 98%	0.05
1,3-Butylene Glycol	2.50
Part III:	
d1-Panthenol, Cosmetic Grade (Code 63920)	5.00
SD Alcohol #40, 95%	15.00
Triton N-101	0.10
Perfume Oil	0.05

Procedure:

Sift the Carbopol into the water with rapid agitation. Heat to 75C and mix until all the Carbopol has dissolved. Add premixed Part II. Cool to room temperature, then add premixed Part III.
 Formulation NC 701

Concealer

A highly opaque cream concealer suitable for use under the eye or anywhere on the face. The Mearlmica CF aids in a smooth after-feel while maintaining a desirable matte effect.

<u>Phase:</u>	<u>Ingredients:</u>	<u>% wt.</u>
A.	Water (q.s. to 100%)	53.50
	Magnesium Aluminum Silicate (Veegum)	2.00
B.	Propylene Glycol	8.00
	Triethanolamine (TEA 99%)	1.50
	Cellulose Gum (CMC-7LF)	1.00
	Antimicrobial (water soluble)	q.s.
C.	Titanium Dioxide	12.00
	Iron Oxide (C33-8073 Cosmetic Yellow)	1.00
	Iron Oxide (C33-8075 Cosmetic Russet)	0.50
	Iron Oxide (C33-115 Cosmetic Brown)	0.50
D.	Mearlmica CF	6.00
	Boron Nitride	5.00
E.	Stearic Acid (Emersol 120)	3.00
	Glyceryl Stearate S.E. (Aldo MSD)	2.00
	Mineral Oil (Carnation)	2.00
	Isopropyl Lanolate (Amerlate P)	1.50
	Isostearic Acid (Emersol 871)	0.50
	Antimicrobial (oil soluble)	q.s.

Procedure:

- I. Disperse Veegum into water using high shear mixing until smooth. II. Add Phase B slurry to Phase A and mix until smooth. III. Pulverize Phase C and add to Phase A-B using high shear mixing until smooth. IV. Add Phase D to Phase A-B-C while heating to 75+-5C and mix until smooth.
- V. In a support vessel heat Phase E ingredients to 75+-5C.
- VI. Add Phase E to Phase A-B-C-D with gentle agitation, maintaining temperature at 75+-5C.
- VII. Maintain constant agitation and cool batch to 35+-5C; store or fill into appropriate containers.

Face Bronzer Pressed Powder

This pressed powder formulation imparts a warm glow to the skin. It can be used to mimic a suntan or enhance it.

<u>Phase:</u>	<u>Ingredients:</u>	<u>% wt.</u>
A.	Talc (q.s. to 100%)	38.70
	Zinc Stearate	6.00
	Iron Oxides (C33-8074 Cosmetic Russet)	8.80
	Iron Oxides (C33-5136 Cosmetic Brown)	6.50
	Iron Oxides (C33-8073 Cosmetic Yellow)	3.50
	Iron Oxides (C33-134 Cosmetic Black)	0.90
	Iron Oxides (C33-5138 Cosmetic Russet)	0.90
	Cloisonne' Super Gold 232Z	1.00
	Flamenco Velvet 120V	6.50
	Shinju 100T	21.20
	Antimicrobials	q.s.
B.	Fragrance	q.s.
	Antioxidant	q.s.
	Mineral Oil	3.50
	Octyl Methoxycinnamate (Parsol MCX)	2.50

SOURCE: The Mearl Corp.: Formulations CLE-910982 & CLF-921235

Conditioning Skin Mousse

An emollient moisturizing skin cream with Panthenol.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Polyquaternium 4	0.50
2. Distilled Water	88.00
3. Propylene Glycol	2.00
4. Triethanolamine (50%)	1.00
5. Preservative	QS
6. Ritapan DL	0.50
Part B:	
7. Mineral Oil	2.00
8. Ritawax ALA	0.50
9. Ritachol	1.50
10. Glyceryl Stearate S.E.	0.75
11. Rita CA	0.25
12. Stearic Acid	1.00
13. Isopropyl Myristate	2.00
Part C:	
14. Fragrance	QS

Compounding Procedure:

Dissolve Polyquaternium 4 in water. Add remaining ingredients of Part A while mixing. Heat to 75C. Prepare Part B and heat to 75C. When each is uniform, add Part B to Part A. Cool. Add Part C when 25C. Fill.

Formulation HB-89-PA-6

Penetrating Moisturizer (Pump)

A liquid moisturizer suitable for use with a pump. May be used as an after sun or during exposure moisturizer.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	80.90
2. Glycerin	10.00
3. Propylene Glycol	5.00
4. Hydrolyzed Animal Protein	1.00
5. dl-Panthenol	1.00
6. Laneto 50	1.00
7. Quaternium 18	0.70
8. Methylparaben	0.15
9. Propylparaben	0.05
10. Imidazolidinyl Urea	0.20
11. Color and Fragrance	QS

Compounding Procedure:

Combine all ingredients, mix until uniform.

Formulation HB-89-PA-1

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Crayon Eyeshadow

This formulation is non-greasy, glides on evenly and easily, and gives lustrous highlights.

<u>Phase:</u>	<u>Ingredients:</u>	<u>%wt.</u>
A.	Castor Oil (q.s. to 100%)	31.50
	Beeswax (White Bleached Beeswax)	4.50
	Candelilla Wax (Candelilla Wax Refined Flakes)	4.50
	Myristyl Myristate (Crodamol MM)	4.50
	Octyl Palmitate	4.50
	Isopropyl Palmitate (and) Lanolin Oil (Isopropylan 33)	4.50
	Ozokerite Wax (Ozokerite Wax 77W)	5.00
	Shea Butter (Shebu Refined)	6.00
	Isopropyl Myristate	3.00
	Antioxidant	q.s.
	Antimicrobial	q.s.
B.	Gemtone Sapphire G0011	32.00

Procedure:

1. Weigh all the ingredients in Phase A into a heated vessel and raise temperature to 85+-3C, stirring until melted and uniform. II. Add in phase B and mix until all the pearl pigment is well dispersed. III. Pour at 75+-5C

Note: If iron oxide or organic pigments are used, they should first be dispersed in castor oil; this mixture should then be milled in either a colloid or roller mill.

Typical Properties:

Droop Point (44C): Passes
Capillary Point: 50C+-3C
Formulation CLE-92009

Emulsion Cream Eyeshadow

This product is a rich cream with coconut oil emollient, which is customarily packaged in an automatic dispenser. It displays excellent application, coverage and luster characteristics.

<u>Phase:</u>	<u>Ingredients:</u>	<u>%wt.</u>
A.	Sucrose Distearate (Crodesta F-10)	1.10
	Glycerol Monostearate (Pure)	5.30
	Hydrogenated Coconut Oil	5.30
	PPG-5 Lanolin Wax (Propoxyol-5)	1.40
	Oleth-20 (Brij 98)	1.40
	Antimicrobial (oil soluble)	q.s.
B.	Methyl Gluceth-20 (Glucam E-20)	3.50
	Lauramine Oxide (Ammonyx LO)	0.70
	Distilled Water (qs to 100%)	51.30
	Antimicrobial (water soluble)	q.s.
	Cloisonne' Rouge Flambe' 440X	15.00
	Duochrome YR (Gold/Red) 422C	15.00

Procedure:

- I. Add Phase B ingredients to a heated vessel and stir bringing temperature to 75+-3C. II. Add Phase A ingredient to the primary vessel and heat to 75+-3C, mixing until uniform. III. Add Phase B to Phase A with constant sweep agitation. IV. Cool gradually to 35+-5C and fill.

Cream Eye Shadow

<u>Phase:</u>	<u>Ingredients:</u>	<u>Percent by Weight</u>
1	Stearic acid	3.00
	Lexemul 515	2.00
	Promulgen D	1.00
	Candelilla wax	1.00
	Cerephyl 424	1.00
	DC 200 fluid	0.50
	Propylparaben	0.10
2	Deionized water	34.30
	Ultramarine blue	6.00
	TiO ₂	1.50
3	Timica pearlwhite	5.00
4	Deionized water	30.00
	PVP	4.00
5	Propylene glycol	5.00
	Methocel 40-202	0.20
	Veegum	0.50
6	Deionized water	2.00
	TEA	1.20
	Phenoxyethanol	0.50
	Versene 100 (EDTA)	0.10
	Antifoam AF emulsion	0.05
7	Deionized water	1.00
	Dowicil 200 preservative	0.05

Procedure:

1. Weigh ingredients in oil phase (Phase 1) into a clean auxiliary compounding kettle equipped with a mixer. Heat to 82C.
2. Weigh water (Phase 2) into main compounding kettle equipped with a colloid mill. Slowly add pigments and mill until all pigments are completely dispersed.
3. Add Phase 5 (which has been previously blended) and mill until smooth.
4. Add Phase 6 and previously dispersed Phase 4. Mill for 5 minutes and turn off mill. Heat water phase to 80C with mixing.
5. With water phase at 80C, add oil phase at 82C and mix 10 minutes. Start to cool batch.
6. When batch reaches 60C, slowly add Phase 3 (Timica Pearlwhite). Continue mixing.
7. When batch reaches 45C, add Phase 7 (dissolved Dowicil 200). Continue mixing batch to room temperature. Allow batch to reach proper viscosity by sitting several hours before filling.

Cream Eyeshadow

A cream eyeshadow formula that goes on smooth, sets quickly, and delivers long-wearing performance.

Phase:	Ingredients:	%wt.
A.	Water (q.s. to 100%)	63.9
	Magnesium Aluminium Silicate (Veegum)	1.5
B.	Cloisonne' Green 828C	12.5
	Cloisonne' Nu-Antique Green 828CB	2.0
	Mearlmica SVA	5.5
C.	Propylene Glycol	8.0
	Cellulose Gum (CMC-7LF)	1.0
D.	Triethanolamine (TEA 99%)	0.8
	Antimicrobial (water soluble)	q.s.
E.	Stearic Acid	3.5
	Glyceryl Stearate (Aldo MSC)	0.8
	Oleyl Alcohol (Novol)	0.5
	Antimicrobial (oil soluble)	q.s.

Procedure:

- I. Disperse Veegum into Water using high shear mixing until smooth.
- II. Blend Phase B and add to Phase A, mixing until thoroughly dispersed.
- III. Add Phase C slurry to Phase A-B and mix until smooth.
- IV. Add Phase D to Phase A-B-C with gentle agitation and heat to 75+-5C.
- V. In a support vessel heat Phase E ingredients to 75+-5C with gentle agitation.
- VI. Add Phase E to Phase A-B-C-D with gentle agitation, maintaining temperature at 75+-5C.
- VII. Maintain constant agitation and cool batch to 35+-5C; store or fill into appropriate containers.

Typical Properties:

Identity: Oil/Water Emulsion
 Viscosity: 5100+-500 cps
 pH: 7.30+-0.5
 Formulation CLE-920003

Velvety Pressed Powder Eyeshadow

Pressed powder eyeshadow formulation having a smooth feel and a velvety look when applied to the skin.

Phase:	Ingredients:	%wt.
A.	Talc (qs. to 100%)	32.00
	Zinc Stearate	3.00
	Chromium Oxide Green (C61-1245 Cosmetic Green)	3.00
	Timica Sparkle 110P	11.20
	Antimicrobial	q.s.
	Mearlmica SVA	38.80
B.	Antioxidant	q.s.
	Squalane	5.00
	Mineral oil	7.00

- I. Thoroughly blend and disperse Phase A in appropriate dry blending/dispersing equipment. II. Add Phase B ingredients into a support vessel. Heat and mix until uniform. III. Spray Phase B into premixed Phase A and continue blending until uniform. IV. Pulverize and press.

Cream Make-up

<u>Phase:</u>	<u>Ingredients:</u>	<u>Percent by Weight</u>
1	Stearic acid	3.50
	Lexemul P	2.00
	Promulgen D	1.00
	Cerephyl 424	1.50
	Carnation oil	10.00
	Dow Corning 200	0.50
	Cetyl alcohol	0.50
2	Deionized water	59.15
	Titanium dioxide	9.00
	Mapico yellow	1.60
	Red 3098	0.60
	Blade iron oxide	0.30
3	Propylene glycol	5.00
	Methylparaben	0.20
	Ethylparaben	0.10
	Veegum	0.50
	Methocel 40-202	0.20
4	Deionized water	2.00
	Triethanolamine	1.20
	Dow Corning antifoam AF emulsion	0.05
5	Deionized water	1.00
	Dowicil 200 preservative	0.05
	Versene 100 (EDTA)	0.05

Procedure:

1. Weigh all materials in Phase 1 into a clean auxiliary compounding kettle equipped with mixer. Heat to 82C with mixing.
2. Weigh water in Phase 2 into main compounding kettle equipped with a colloid mill. Slowly add pigments and mill until completely dispersed.
3. Blend the ingredients in Phase 3 completely. Add Phase 3 to the dispersed pigment phase (Phase 2) and mix until smooth. Add Phase 4 and mix until smooth. Mill for 5 minutes.
4. Heat aqueous phase to 80C with mixing.
5. When water phase reaches 80C, start adding oil at 82C slowly to water phase. When all the oil phase has been added to water phase, continue mixing maintaining 80C temperature. Mix ten minutes.
6. Begin to cool batch.
7. At 45C add Phase 5 which has been previously blended.
8. Cool batch to room temperature with mixing. Allow batch to sit several hours to reach proper viscosity before filling.

Creamy Blusher

<u>Phase:</u>	<u>Ingredients:</u>	<u>Percent by Weight</u>
1	Stearic acid	3.00
	Lexemul P	2.00
	Lexemul 515	1.50
	Candelilla wax	1.00
	Ozokerite	1.00
	Beeswax	1.00
	Dow Corning 200	0.50
	Carnation oil	6.00
	Myristyl Myristate	2.00
	Propylparaben	0.10
2	Deionized water	63.35
	Titanium dioxide	5.00
	Mapico yellow	2.00
	Red iron oxide 3098	1.50
3	Deionized water	2.00
	Triethanolamine	1.50
	Versene 100 (EDTA)	0.10
	Antifoam AF emulsion	0.05
4	Propylene glycol	5.00
	Methocel 40-202	0.20
	Veegum	0.50
	Phenoxyethanol	0.50
	Methylparaben	0.20

Procedure:

1. Weigh all materials in Phase 1 into a clean auxiliary compounding kettle equipped with a mixer. Heat to 82C with mixing.
2. Weigh water (Phase 2) into main compounding kettle equipped with a colloid mill. Slowly add pigments, milling until completely dispersed. Start adding Phase 4 dispersion which has been previously mixed. Mill until smooth. Add Phase 3 mixture and mill for 5 minutes. Turn off mill and drain into batch.
3. Start heating milled water phase to 80C. With oil phase at 82C and water phase at 80C, slowly add oil to water with moderate mixing.
4. Mix batch at 80C until a homogeneous emulsion is formed. Mix ten minutes more then start to cool.
5. Mix to room temperature.

Note:

When mixing frosted shades, add Phase 5 (Timica Pearlwhite) to batch during cooling phase in step 3 when batch is between 60-65C.

C.	Timica Golden Bronze 240A	10.00

- I. Thoroughly blend and disperse Phase A in appropriate dry blending/dispersing equipment. II. Add Phase B ingredients into a support vessel. Heat and mix until uniform. III. Spray Phase B into premixed Phase A and continue blending. IV. Pulverize and return to blender. V. Add Phase C to Phase A-B and mix until uniform.

SOURCE: The Mearl Corp.; Formulation CLF-910155

Cuticle Conditioner

This cuticle conditioner leaves the cuticle soft and smooth to the touch. Ritachol and Ritalan have been added for lanolin-related skin conditioning attributes. The emulsion is oil/water and smooth-textured. It applies easily and resists removal by water.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Rita GMS	2.00
2. Stearic Acid	2.00
3. Ritachol 1000	5.00
4. Ritachol	3.00
5. Ritalan	2.00
6. Dimethicone	1.00
7. Propylparaben	0.15
8. Rita CA	4.00
9. Mineral Oil	2.00
Part B:	
10. Distilled Water	69.20
11. Propylene Glycol	3.00
12. Methylparaben	0.05
13. Sodium Lauryl Sulfate	1.25
14. Acrylic/Acrylate Copolymer	5.00
15. Fragrance	QS
16. Imidazolidinyl Urea	0.35

Add item 14 into item 10 and stir until thoroughly dispersed, then add items 11, 12, 13 and 16. Weigh Part A into another container and begin stirring and heating. Begin heating Part B. When Part A and B are at 70-73C, add Part A to Part B and continue stirring. When all of Part B has been added, begin cooling. Cool the batch to 40-43C and add the fragrance, Cool to 25-30C and package into suitable containers.

Formula HB-89-R-35

Cuticle Conditioner

This is a cuticle conditioner which leaves the cuticle soft and smooth to the touch. Ritachol and Ritaderm have been added for lanolin-related skin conditioning and natural moisturizing factor properties. The Pationic ISL conditions and moisturizes the skin. The emulsion is oil/water and smooth-textured to the touch. It applies easily and resists removal by water.

<u>Ingredients:</u>	<u>% W/W</u>
1. Glyceryl Stearate	2.00
2. Stearic Acid	2.00
3. Ritachol 1000	6.00
4. Ritachol	3.00
5. Ritaderm	2.00
6. Dimethicone	1.00
7. Pationic ISL	2.50
8. Distilled Water	76.50
9. Propylene Glycol	5.00
10. Color, Fragrance and Preservatives	QS

Combine items 1-7 and heat to 70-75C. Combine items 8 and 9 and heat to 70-75C. Combine both phases, cool with stirring to 45C. Add remaining ingredients.

Propylene Glycol	5.000
Lecithin	1.000
Allantoin	0.050
Methylparaben	0.200
Triethanolamine, 85%	1.620
Phase B:	
Titanium Dioxide	9.660
Kaolin	2.250
Talc	1.026
Iron Oxide (Brown Oxide 7061)	0.360
Iron Oxide (Red Oxide 7067)	0.300
Iron Oxide (Red Oxide 7060)	0.684
Iron Oxide (Yellow Oxide 7055)	0.600
Ultramarine Blue	0.120
Phase C:	
Lanolin Alcohol	1.500
Glyceryl Stearate	0.800
Isopropyl Palmitate	4.000
Stearic Acid	0.500
Caprylic/Capric Triglyceride	6.000
Isoeicosane (and) Isohexacontane (Permethyl 102A, 75% (and) Permethyl 104A, 25%)	12.000
Isostearic Acid (Emersol 871)	2.400
Propylparaben	0.100
Phase D:	
Gerhall 115	0.200
Phase E:	
Fragrance	0.100

Procedure:

In a suitable kettle equipped with a Lightnin-type mixer, charge water, and slowly sprinkle in Veegum R. Hydrate well. Sprinkle in cellulose gum and mix for 15-20 minutes, depending upon the size of the batch and equipment used. Start heating kettle to 65-70C and add balance of Phase A excluding triethanolamine. Bring temperature up to 70-72C and add Phase B in order given. Pass entire batch through homomixer, or if possible, use homomixer in tank and circulate batch through colloid mill (in line). Check pigment dispersion and continue mixing until no visible color streaks show on draw down.

In a separate vessel equipped with a Lightnin-type agitation, combine Phase C and heat until a clear, uniform solution is achieved. Maintain temperature at 72-75C. When both phases are at proper temperature, add the triethanolamine to batch. Add Phase C to batch. Mix slowly to avoid aeration. After mixing for 15-20 minutes, cool batch to 50C and add Phase D, then add Phase E. Continue cooling to 40C. Submit sample to lab for color evaluation. Adjust batch with small portions and grind pigment well. After color is approved, cool to room temperature and pour.

B.	Flamenco Twilight Gold 230ZB	12.00
C.	Candelilla Wax (Refined, Candelilla Wax)	12.00
	Stearic Acid (Emersol 120)	4.50
	Isostearic Acid (Emersol 871)	4.50
	Antimicrobials (oil soluble)	q.s.
D.	Demineralized Water	2.50
	Antimicrobials (water soluble)	q.s.

Procedure:

- I. Add Phase A ingredients to the main vessel.
- II. Add Phase B to Phase A with agitation, and raise the temperature to 75+-3C.
- III. Add Phase C to the support vessel and mix while raising temperature to 80+-3C.
- IV. When the water and oil phases are both at 75+-3C, add Phase C to Phase A-B and maintain sweep agitation.
- V. With constant agitation cool batch to 50C and add pre-mixed Phase D solution to Phase A-B-C.
- VI. Continue stirring and cooling to 40C; batch may be filled below this temperature.

Formulation CLE-920012

Waterproof Mascara

This formulation offers a high viscosity waterproof mascara, suitable for use while swimming. It is extremely long-wearing and can be removed with baby oil.

Phase:	Ingredients:	%wt.
A.	C11-12 Isoparaffin (Isopar H) (q.s. to 100%)	45.70
	Petroleum Distillate (Shell-Sol-71)	10.00
	Tall Oil Glycerides (Zonester 85)	10.00
	Carnauba Wax (#1 Yellow Carnauba Wax)	3.00
	Polyethylene (A-C Polyethylene)	2.00
B.	Talc	3.00
	Kaolin	3.00
	Flamenco Twilight Blue 620CB	10.00
	Antimicrobials	q.s.
C.	Quaternium-18 Hectorite (Bentonite 38)	10.00
D.	Propylene Carbonate	3.30

Procedure:

- I. Add Phase A ingredients to a vessel equipped with a high shear agitator; heat to 95+-2C with gentle agitation until a clear solution is obtained. II. Add Phase B to Phase A and mix until uniform. Note: Care should be taken to avoid loss of volatile solvents. III. Add Phase C to Phase A-B and mix vigorously until smooth. IV. Add Phase D to Phase A-B-C with slow agitation; a heavy gel will form. V. Cool batch to 60C and fill or pump into storage drums.

Facial Cleanser

This cleansing formulation is light, non-greasy and water-rinsable. It provides thorough cleansing without drying the skin.

<u>Ingredients:</u>	<u>% by weight</u>
Part A:	
Deionized Water	89.55
Cocoamphodiacetate	1.00
Quaternium-15	0.10
Methylparaben	0.10
Propylparaben	0.05
Part B:	
Isostearyl Benzoate	4.00
Dioctyl Maleate	2.00
Caprylic/Capric Triglyceride	1.00
Octyl Hydroxystearate	1.00
Pemulen TR-2	0.20
Carbopol 980	0.60
Part C:	
AMP-95	0.40

Formulation PF-0164 suggested by B.F. Goodrich Chemical Group

Face Gel with Sulfur
(for use on oily skin)

<u>Ingredients:</u>	<u>% by weight</u>
A. Ethanol, 96%	
Water, distilled	30.0
Carbomer 980	50.1
	4.0
B. Glycerol	
Sulfur	4.0
	1.0
C. Water, distilled	
Tris Amino	12.7
Vitamin B Complex CLR	0.8
	0.5

Procedure:

- Part A: Mix the alcohol and water. Disperse the Carbomer 980 in this mixture.
- Part B: Grind sulfur with glycerol (possibly in a salve mill). Stir A slowly into B.
- Part C: Dissolve Tris Amino in the water and stir into A + B. Work vitamin B complex into the finished gel.

Formulation PF-0190E

SOURCE: Angus Chemical Co.: Suggested Formulations

Facial Cleanser

<u>Ingredients:</u>	<u>% by weight</u>
Part A:	
Deionized Water	89.55
Cocoamphodiacetate	1.00
Quaternium-15	0.10
Methylparaben	0.10
Propylparaben	0.05
Part B:	
Isostearyl Benzoate	4.00
Dioctyl Maleate	2.00
Caprylic/Capric Triglyceride	1.00
Octyl Hydroxystearate	1.00
Pemulen TR-2	0.20
Carbopol 980	0.60
Part C:	
AMP-95	0.40

Procedure:

Combine A ingredients in a vessel which will contain the entire formulation. Mix to dissolve parabens. Combine B ingredients in a separate vessel. Mix to disrupt any soft lumps of Pemulen and Carbopol. With moderate agitation, add the B slurry to A. Mix for 10-20 minutes to allow resins to swell. Add C and mix vigorously to produce a smooth, white cream.

Formulation PF-0226 suggested by B.F. Goodrich

Nail Strengthening Composition

<u>Ingredients:</u>	<u>% by weight</u>
Mimosa extract	0.5
Sodium lauroyl sarcosinate	1.6
Sodium polyacrylate	1.0
Bronopol	0.1
Water	q.s. to 100.00
Sodium hydroxide - adjust pH to 8.0	

This preparation for strengthening the fingernails is described in German Patent DE 3,403,476. The patent claims that the strength of the fingernails may be improved by treating them with Quebracho extract (especially Schinopsis balansae and S. lorentzii) and/or Mimosa extract (Acacia mearnsii). These extracts contain condensed and hydrolyzable tannins that are said to be bound rapidly to nail keratins.

Formulation PF-0124 from Cosmetics and Toiletries, Vol. 101, January 1986

SOURCE: Angus Chemical Co.: Suggested Formulations

Facial Cleanser

A clear facial cleanser which has good cleaning properties, yet is proven to have no irritation.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Distilled Water	63.33
2. Sodium Laureth Sulfate (2 Mole)	16.67
3. Pationic 138C	10.00
4. Ritamid C	4.00
5. Methylparaben	0.10
Part B:	
6. Triethanolamine (50%)	2.00
Part C:	
7. Perfume	0.20
8. Glydant 40-700	0.20
Part D:	
9. Sodium Chloride (25% Solution)	3.50

Compounding Procedure:

Heat Part A to 165F. While mixing, neutralize to 7.5 with Part B. Cool to 120F. Add Part C. Adjust viscosity with Sodium Chloride (25% solution).

Initial pH: 7.0 - adjusted to 7.5. After 24 hours: 7.8
Formulation 102-13

Temporary Wrinkle Remover

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Acritamer 941	0.20
2. Distilled Water	73.15
3. Glycerin	4.00
4. Methylparaben	0.10
Part B:	
5. Ritachol	2.50
6. Ritawax ALA	1.00
7. Glyceryl Stearate	1.00
8. Stearic Acid	2.00
9. Ritalan	4.50
10. Propylparaben	0.05
Part C:	
11. Triethanolamine (50% Solution)	2.00
Part D:	
12. Bovinal 30	7.50
Part E:	
13. 2-Phenoxyethanol	1.00
14. Benzyl Alcohol	1.00

Compounding Procedure:

Disperse Acritamer in water and glycerin with rapid agitation. When uniform, heat to 75C. Combine part B and heat to 75C. Add part B to part A with agitation, avoid aeration. Mix until uniform. Add part C and mix until uniform. Cool to 30C. Add part D and mix until uniform. Add part E.

Formulation 108-3D

SOURCE: R.I.T.A. Corp.; Suggested Formulations

Foot Cooling Gel

An easily applied gel which soothes and cools feet.

<u>Ingredients:</u>	% W/W
Part A:	
1. Distilled Water	45.85
2. Glycerin	1.50
3. Ucon 50 HB-660	1.00
Part B:	
4. Isopropyl Alcohol	50.00
5. Acritamer 940	1.00
6. Menthol	0.15
Part C:	
7. Isopropylamine/Distilled Water	+ -0.50

Compounding Procedure:

Combine materials in Part A with agitation and mix until uniform. In Part B add Menthol to the Isopropyl Alcohol. Mix until uniform, sprinkle in Acritamer and mix until a thin, cloudy dispersion without lumps is attained. Prepare Part C and mix.

Slowly add Part A to Part B with moderate agitation. Continue mixing for 30 minutes to ensure a uniform solution. Slowly add Part C with agitation until the pH of the solution is 6.0 to 6.2 and a clear gel is formed. (Sweep agitation is recommended).

Properties:

Initial Viscosity: Brookfield: 40,000 cps.

48 Hour pH: 6.0 48 Hour Viscosity: Brookfield: 57,000 cps

Formulation: H-89-A-10

Foot Cooling Gel

An easily applied gel which soothes and cools feet.

<u>Ingredients:</u>	% W/W
Part A:	
1. Distilled Water	45.85
2. Glycerin	1.50
3. Ucon 50 HB-660	1.00
Part B:	
4. Alcohol SD40	50.00
5. Acritamer 940	1.00
6. Menthol	0.15
Part C:	
7. Isopropanolamine/Distilled Water (50/50)	0.50

Compounding Procedure:

Part A: Combine materials with agitation until thoroughly mixed. Part B: Add Menthol to the Alcohol SD40 and mix until dissolved. Sift Acritamer 940 into the Alcohol SD40 with rapid agitation and mix until a thin, cloudy dispersion without lumps is attained. Part C: Combine isopropanolamine and distilled water and mix until thoroughly blended.

Slowly add Part A to Part B with moderate agitation. Continue mixing for 30 minutes to insure a uniform solution. Slowly add Part C with agitation until the pH of the solution is 6.0 to 6.2 and a clear gel is formed. (Sweep agitation is preferred).

Initial Viscosity: Brookfield: 60,500 cps Initial pH: 5.9

Gel-Blush Frost

This easy to prepare luxurious gel blush possesses a remarkable velvety feel, excellent spreadability, and a warm frost glow

Phase:	Ingredients:	%wt.
A.	Ethylene/Vinyl Acetate Copolymer (A-C Copolymer 400)	9.50
	Acetylated Lanolin Alcohols (Acetulan)	10.00
	Mineral Oil (Light) 125/135 SUS	10.60
	Lanolin Oil (Lanogene)	2.50
	Cyclomethicone (Silicone Fluid 344)	5.00
	Cyclomethicone (Silicone Fluid 345)	2.50
	Isopropyl Lanolate (Amerlate P)	4.50
	Ozokerite 170-D	2.00
	Beeswax (Synthetic)	2.00
	Isopropyl Myristate	13.10
	Lanolin Alcohol (Super Anatol)	8.00
	Antioxidant	q.s.
	B.	Gemtone Tan Opal G005
Gemtone Ruby G0010		10.00
Gemtone Garnet G009		15.00
C.	Antimicrobials	q.s.
	Fragrance	q.s.

Procedure:

- I. Heat combined Phase A to 83+-3C with stirring until a clear solution is obtained. II. Add Phase B to Phase A and stir until uniform. III. Cool to 62+-3C and add Phase C. IV. Continue mixing and fill at 50+-5C.
Formulation CLF-920023

Blush Stick

An easy to prepare stick blusher formulation which gives a natural radiance to the cheeks.

Phase:	Ingredients:	%wt.
A.	Isostearyl Neopentanoate (Schercemol 185)	33.70
	Talc (Cyprus Supra - qs. to 100%)	15.30
	Ozokerite Wax	13.00
	Castor Oil	11.00
	Candelilla Wax	4.00
	Octyl Methoxycinnamate (Parsol MCX)	3.00
	Antioxidant	q.s.
	Antimicrobial	q.s.
B.	Duochrome RY (Red/Gold) 224C	15.00
	Mattina Red 424F	5.00
C.	Fragrance	q.s.

Procedure:

- I. Weigh all the ingredients in Phase A into a heated vessel. Heat and stir until melted and uniform (75+-3C). II. Add Phase B maintaining temperature at 75+-3C and mix until all the pigment is well dispersed. III. Add Phase C and mix with constant stirring. IV. Mold into sticks. Note: If iron oxide or organic pigments are used, they should first be dispersed in castor oil; this mixture should then be milled in either a colloid or roller mill.
Formulation CLF-920024

SOURCE: The Mearl Corp.; Suggested Formulations

Gentle Beauty Wash

<u>Ingredients:</u>	<u>% by weight</u>
Deionized Water	46.20
Propylene Glycol	8.00
50% Sodium Hydroxide	0.60
Bentone EW	0.40
Stearic Acid, Triple Pressed	8.00
Igepon AC78	11.00
Sipon ESY	11.00
Siponate DDB-40	5.00
Alconate SBR-3	2.50
Sodium Isethionate 55	6.50
Oxaban-A Preservative	0.05
Fragrance KU 70	0.75

Procedure:

Disperse the Bentone EW in the deionized water, sodium hydroxide and propylene glycol with rapid agitation. Start heating. Decrease agitation and add the stearic acid and Igepon AC78. Continue heating until the Igepon AC78 has dissolved (70C). Add the Sipon ESY, Siponate DDB-40, Alconate SBR-3 and Sodium Isethionate 55. Start cooling. Add the preservative and fragrance at 35C. The viscosity and pearl will develop upon standing.

Formulation PF-0170 from Personal Care Perspectives, Rhone-Poulenc, Vol. 1, Issue 2 August 1991

Moisturizing Gel

<u>Ingredients:</u>	<u>% by weight</u>
A. Water	89.20
Glycerin	7.00
Sorbitol (70%)	3.00
Oxaban-A	0.10
B. Carbomer 980	0.50
C. AMP-95	0.20

Procedure:

1. Combine the A ingredients and, with rapid agitation, slowly add Carbomer 980. Mix until a uniform dispersion is obtained—usually about 20 minutes.
2. Add AMP.

Formulation PF-0188

Glossy Lipstick

This "glossy" pearl lipstick formulation provides very high luster, even before flaming. In addition, halogenated fluoresceins (e.g. D&C Red #27) can be added to the formula to obtain a more long lasting effect.

<u>Phase:</u>	<u>Ingredients:</u>	<u>%wt.</u>
A.	Candelilla Wax	8.00
	Ozokerite Wax	1.60
	Microcrystalline Wax (Multiwax 180W)	1.60
	Octyl Palmitate (Wickenol 155)	6.00
	Cetyl Palmitate (Cutina CP)	3.00
	Lanolin Oil (Lanogene)	18.00
	Shea Butter (Shebu Butter)	2.50
	Castor Oil (q.s. to 100%)	44.30
	Antioxidant	q.s.
	Antimicrobials	q.s.
B.	Cloisonne' Super Red 434Z	5.00
	Gemtone Sunstone G0012	10.00
C.	Fragrance	q.s.

Procedure:

- I. Weigh all the ingredients in Phase A into a heated vessel and raise temperature to 85+3C, stirring until melted and uniform
 - II. Add in Phase B and mix until all the pearl pigment is well dispersed. III. Add in Phase C and mix with constant stirring.
 - IV. Pour at 75+5C. V. Mold, cool and flame the lipsticks. Note: If iron oxide or organic pigments are used, they should first be dispersed in Castor oil, this mixture should then be milled in either a colloid or roller mill.
- Formulation CLL-921944

Soft Lipstick

<u>Phase:</u>	<u>Ingredients:</u>	<u>%wt.</u>
A.	Carnauba Wax	12.00
	Hydrogenated Lanolin (Lipolan)	13.00
	Stearyl Heptanoate (Crodamol W)	15.00
	Lauryl Lactate (Schercemol LL)	16.00
	Decyl Oleate (Cetiol V)	15.00
	Butyl Stearate	14.00
	Antioxidant	q.s.
B.	Antimicrobial	q.s.
	Flamenco Super Red 430Z	7.00
	Gemtone Garnet G009	2.00
C.	Gemtone Tan Opal G005	6.00
	Fragrance	q.s.

Procedure:

- I. Weigh all the ingredients in Phase A into a heated vessel and raise temperature to 85+3C, stirring until melted and uniform
 - II. Add in Phase B and mix until all the pearl pigment is well dispersed. III. Add in Phase C and mix with constant stirring.
 - IV. Pour at 75+5C. V. Mold, cool and flame the lipsticks.
- Formulation CLL-921968

Ice Gel

<u>Ingredients:</u>	<u>% by weight</u>
A. Carbopol 1382	1.00
Water, Distilled	50.00
EDTA Acid	0.10
B. Tris Amino	1.20
Water, distilled	10.00
C. Menthol	0.05
Perfume oil	2.00
Cremophor RH 40	3.00
Ethanol	25.00
Water, distilled	to 100.00

Procedure:

Part A: Disperse Carbomer 980 and EDTA homogeneously in water.

Part B: Dissolve Tris Amino in water.

Part C: Dissolve menthol in ethanol and add the mixture of perfume oil and Cremophor. Mix C thoroughly with part A. Add part B.

Preservation: 0.1% Euxyl K 400

Protection against light: Uvino1 400

Formulation PF-0193E

Liposome Gel

<u>Ingredients:</u>	<u>% by weight</u>
A. Epikuron SH 200	0.5
Phosphate buffer	38.0
B. Carbomer 980	0.5
Tris Amino	0.5
EDTA	0.1
Water	80.4

Procedure:

Part A: Combine Epikuron and phosphate buffer, mix slowly at 70C for 30 minutes (Stephan Mixer UMC, 300 rpm), homogenize at high speed (1500 rpm) for 30 minutes and then cool to -25C while stirring for 5 minutes at 1500 rpm. Stir under vacuum (about 0.2 bar).

Part B: Disperse Carbomer 980 into water. Add EDTA. Add Tris Amino and continue to stir for 5 minutes. Stir under vacuum (about 0.2 bar) until homogeneous.

Part C: Mix A and B for 5 minutes at 300 rpm. Stir under vacuum (0.2 bar).

Formulation PF-0195E

SOURCE: Angus Chemical Corp.: Suggested Formulations

Lip Balm I (514122)

Drakeol 7, Light Mineral Oil USP	41.0 wt%
Ozokerite Wax	20.0
White Beeswax	15.9
Cetyl Alcohol	9.2
Candelilla Wax	7.2
Penreco Ultima, White Petrolatum USP	3.8
Butyl Stearate	2.9

Heat ingredients at 70C until completely melted, with stirring, to ensure homogeneity. Pour into molds and cool. BHT also may be added to the hot mixture if desired.

Lip Balm II (514133)

Penreco Ultima, White Petrolatum USP	48.99 wt%
Yellow Beeswax	10.05
Isopropyl Palmitate	9.00
Castor Oil	8.70
Candelilla Wax	6.00
Stearyl Alcohol	4.75
Ozokerite Wax	4.10
Carnauba Wax	4.10
Isopropyl Lanolate	3.20
Dimethicone	1.10
Vitamin E Acetate	0.01

Heat all ingredients together at 70C until melted. When the blend is completely uniform, pour into molds and cool. If desired, fragrance may be added just above the solidification point, prior to molding.

Creamy Lipstick Base (514157)

Castor Oil	40.0 wt%
Drakeol 7, Light Mineral Oil USP	17.0
Penreco Snow, White Petrolatum USP	8.0
Yellow Beeswax	7.0
Candelilla Wax	7.0
Isopropyl Myristate	5.0
Carnauba Wax	3.0
Ozokerite Wax	3.0

Heat all ingredients together with gentle stirring until melted. Once the blend is homogeneous, pour into molds and cool. Fragrance and antioxidants may be added just above the solidification point, prior to molding. Some of the castor oil may be substituted with a castor oil dispersion of lipstick pigments to give a final product.

- I. Weigh all the ingredients in Phase A into a heated vessel and raise temperature to 85+-3C, stirring until melted and uniform. II. Add in Phase B and mix until all the pearl pigment is well dispersed. III. Add in Phase C and mix with constant stirring. IV. Pour at 75+-5C. V. Mold, cool and flame the lipsticks.

Note: If iron oxide or organic pigments are used, they should first be dispersed in Castor oil; this mixture should then be milled in either a colloid or roller mill.

SOURCE: The Mearl Corp.: Formulation CLL-921945

Lip Gloss

This lip gloss imparts a rich, supple and moist appearance to the lips. Ritalan C contributes excellent lubricating and emollient qualities, as well as facilitating pigment dispersion.

<u>Ingredients:</u>	<u>% W/W</u>
1. Lanolin	46.60
2. Distilled Water	20.00
3. Ritalan C	10.00
4. Ozokerite	+4.00
5. Pigment	2.00
6. Propylparaben	0.10
7. Methylparaben	0.10
8. Allantoin	0.20
9. Pearl	12.00
10. Octyl Palmitate	5.00
11. Fragrance	QS

Compounding Procedure:

Add item 1 into a container and heat to 70-75C. Begin stirring and add item 2. Mix until the water is thoroughly dispersed and add the remaining ingredients with the exception of the fragrance, while stirring continuously. Maintain the temperature at 70-75C until the blend is completely homogeneous. Cool to 50-55C and add the fragrance. Package fill into suitable containers while stirring continuously.

Formulation HB-89-L-22

Lip Balm with Shebu

This formulation applies smoothly and evenly, without leaving a greasy residual feel. Shebu has been included for its natural factor-related lubricating and conditioning properties. The formulation assists in the alleviation of rough, dry, chapped lips.

<u>Ingredients:</u>	<u>% W/W</u>
1. Petrolatum	67.00
2. Mineral Oil	10.00
3. Paraffin Wax	5.00
4. Carnauba Wax	9.00
5. Ritaderm	4.00
6. Shebu	5.00
7. Color, Fragrance and Preservatives	QS

Compounding Procedure:

Combine items 1-6 and heat to 83C. Mix until uniform. Cool to 45C and add remaining ingredients.

Formulation HB-89-S-7

Detergent Cleansing Gel

<u>Ingredients:</u>	<u>% by weight</u>
Carbomer 1342	2.00
Homogeneous 30 (cocoamidoproyl betaine)	20.00
Coconut diethanolamide	2.00
Crovol PK70 (palm kernel oil PEG-45 complex)	2.00
Tris Amino [Tris(hydroxymethyl)aminomethane]	to pH 6.0
Water, deionized	to 100.00
Preservatives, perfume, color	q.s.

Procedure:

Hydrate Carbopol in hot water (65-70C). Neutralize pH to 6.0. Add remaining ingredients (perfume predissolved in Crovol) and stir until homogeneous.

Formulation PF-0155 suggested by B.F. Goodrich

SOURCE: Angus Chemical Co.: Suggested Formulations

Lipstick

This smooth, creamy-textured lipstick applies easily and uniformly, providing excellent coverage. It helps to keep the lips lubricated and supple.

<u>Ingredients:</u>	<u>% W/W</u>
1. Ozokerite	4.00
2. Carnauba Wax	3.70
3. Candelilla Wax	4.80
4. Shebu	8.00
5. Ritalan	35.00
6. Propylparaben	0.05
7. Supersat	10.00
8. BHA	0.10
9. Forlan L	2.00
10. Ritaderm	1.00
11. Color Pigments	2.50
12. Titanium Dioxide	0.50
13. Castor Oil	17.35
14. Ritasol	2.00
15. Pearl	9.00

Compounding Procedure:

Weigh and add items 1-10 into a container and begin stirring and heating the blend to 75-78C while continuing to stir. (An agitator equipped with a stirrer capable of imparting relatively high shear stress is recommended.) In another container weigh and add items 11-14. Pass the blend twice through a 3 roll mill and add to the Forlan L - Ritaderm - containing mixture. Bring temperature to 75-78C, and add the remaining ingredients. Cool to 68-70C while stirring continuously. Pour into suitable molds.

Formulation HB-89-S-4

Lip Moisturizer Stick

This formulation applies easily and smoothly and leaves the lips soft, smooth and supple. Ritaderm has been added for its lipid layer and natural moisturizing factor contributions.

<u>Ingredients:</u>	<u>% W/W</u>
1. Ozokerite	4.50
2. Carnauba Wax	9.50
3. Shebu	9.00
4. Ritalan	30.00
5. Ritaderm	10.00
6. Octyl Palmitate	14.55
7. Castor Oil	10.00
8. Supersat	10.00
9. Fragrance	2.30
10. Propylparaben	0.10
11. BHA	0.05
12. Color	QS

Compounding Procedure:

Weigh all ingredients into a suitable container, omitting the fragrance, and heat while stirring to approximately 85C. When all ingredients have melted, begin cooling the batch. Cool to approximately 55C, add the fragrance, stir continuously and pour into suitable molds.

Formulation HB-89-S-3

Lipstick "E lance" With Sunscreen

This lipstick formulation is suitable for use in a slender-swivel up case. The lipstick has a chisel shape and allows fine outlining of the lips as well as coating of the entire lip.

<u>Phase:</u>	<u>Ingredients:</u>	<u>%wt.</u>
A.	Candelilla Wax	8.90
	Beeswax	12.40
	Diisopropyl Adipate (Schercemol DIA)	13.50
	Isopropyl Lanolate (Amerlate P)	13.50
	Isostearyl Alcohol (Adol 66)	14.00
	Castor Oil (q.s. to 100%)	14.73
	Octyl Methoxycinnamate (Parsol MCX)	3.00
	Ozokerite Wax	5.10
	Iron Oxide (Brown C33-115)	0.37
	Antioxidant	q.s.
	Antimicrobials	q.s.
B.	Cloissone' Super Copper 350Z	8.00
	Gemtone Tan Opal G005	6.50
C.	Fragrance	q.s.

Procedure:

I. Weigh all the ingredients in Phase A into heated vessel. Heat to 85+-5C and stir until melted and uniform. II. Stir in Phase B and mix slowly until all the pearl pigment is well dispersed and no air bubbles form on the surface. III. Add Phase C and mix with constant stirring. IV. Mold, cool and flame the lipsticks.

Note: If iron oxide or organic pigments are used, they should first be dispersed in Castor oil; this mixture should then be milled in either a colloid or roller mill.

Formulation CLL-910152

Firm Lipstick

<u>Phase:</u>	<u>Ingredients:</u>	<u>%wt</u>
A.	Candelilla Wax	11.50
	Beeswax	15.00
	Isopropyl Lanolate (Amerlate P)	15.00
	Isostearyl Alcohol (Adol 66)	14.00
	Diisopropyl Adipate (Schercemol DIA)	13.50
	Castor Oil (q.s. to 100%)	16.00
	Antioxidant	q.s.
	Antimicrobials	q.s.
B.	Cloisone' Super Copper 350Z	6.00
	Cloisone' Cerise Flambe' 550Z	9.00
C.	Fragrance	q.s.

Procedure:

I. Weigh all the ingredients in Phase A into a heated vessel and raise temperature to 85+-3C, stirring until melted and uniform. II. Add in Phase B and mix until all the pearl pigment is well dispersed. III. Add in Phase C and mix with constant stirring. IV. Pour at 75+-5C. V. Mold, cool and flame the lipsticks. Note: If iron oxide or organic pigments are used, they should first be dispersed in Castor oil; this mixture should then be milled in either a colloid or roller mill.

Liquid Eye Liner

<u>Phase:</u>	<u>Ingredients:</u>	<u>Percent by Weight</u>
1	Oleic acid	1.25
	Stearic acid	1.25
	Tween 20	0.20
	Arlacel 20	0.20
	Lexemul P	2.50
2	Lexemul 515	2.50
	Deionized water	36.65
	Antifoam AF emulsion	0.05
	Methylparaben	0.20
	Ethylparaben	0.15
3	Phanoxlyethanol	0.50
	Versene 100 (EDTA)	0.10
	Deionized water	29.00
	PVP	4.00
	4	Propylene glycol
5	Veegum	0.50
	Methocel 40-202	0.20
5	Ultramarine blue	10.00
6	Deionized water	1.00
	TEA	0.70
7	Timica pearlwhite	3.00
8	Deionized water	1.00
	Dowicil 200 preservative	0.05

Procedure:

1. Weigh ingredients in oil phase (Phase 1) into a clean auxiliary compounding kettle equipped with a mixer. Heat to 82C.
2. Weigh water (Phase 2) into main compounding kettle equipped with a colloid mill. Slowly add pigment (Phase 5) and mill until all pigments are completely dispersed.
3. Add Phase 4 (which has been previously dispersed) and mill until smooth.
4. Add Phase 6 and previously dispersed Phase 3. Mill for 5 minutes and turn off mill. Heat water phase to 80C with mixing.
5. With water phase at 80C, add oil phase at 82C and mix 10 minutes. Start to cool.
6. When batch reaches 60C, slowly add Phase 7 and continue mixing.
7. When batch reaches 45C, add Phase 8 and mix batch to room temperature.

Liquid Eyeliner

This fluid emulsion eyeliner uses Mearl's Flamenco Twilight Green to impart a subtle, smokey effect to the eyelid. It is suitable for filling into automatic containers.

<u>Phase:</u>	<u>Ingredients:</u>	<u>%wt.</u>
A.	Water (q.s. to 100%)	65.20
	Magnesium Aluminum Silicate (Veegum)	1.00
B.	Triethanolamine (TEA 99%)	1.40
	Propylene Glycol	8.00
C.	Xanthan Gum (Keltrol T)	0.30
	Antimicrobial (water soluble)	q.s.
D.	Flamenco Twilight Green 820CB	15.00
	Mearlmica CF	5.00
E.	Stearic Acid	2.80
	Glyceryl Stearate (Aldo MSC)	0.80
	Oleyl Alcohol (Novol)	0.50
	Antimicrobial (oil soluble)	q.s.
I.	Disperse Veegum into Water using high shear mixing until smooth. II. Add Phase B to Phase A, mixing until thoroughly dispersed. III. Add Phase C to Phase A-B and mix until smooth.	
IV.	Blend Phase D and add to Phase A-B-C with gentle agitation and heat to 75+-5C. V. In a support vessel heat Phase E ingredients to 75+-5C with gentle agitation. VI. Add Phase E to Phase A-B-C-D with gentle agitation, maintaining temperature at 75+-5C. VII. Maintain constant agitation and cool to 35+-5C; store or fill into appropriate containers.	
	Formulation CLR-92119	

Sheer Satin Pressed Powder Eyeshadow

An eye shadow of exceptional softness and subtle iridescence.

<u>Phase:</u>	<u>Ingredients:</u>	<u>%wt.</u>
A.	Mearltalc TCA (q.s. to 100%)	18.00
	Mearlmica SVA	20.00
	Magnesium Myristate	5.00
	Silica (Spherica P-1500)	2.00
	Cloisonne' Super Red 434Z	20.00
	Cloisonne' Violet 525C	13.00
	Cloisonne' Nu-Antique Blue 626CB	2.00
	Cloisonne' Cerise Flambe' 550Z	2.00
	Antimicrobials	q.s.
B.	Octyl Palmitate (Ceraphyl 368)	7.00
	Isostearyl Neopentanoate (Ceraphyl 375)	1.00
	Antioxidant	q.s.
C.	Cloisonne' Super Red 434Z	5.00
	Cloisonne' Violet 525C	5.00
I.	Thoroughly blend and disperse Phase A in appropriate dry blending/dispersing equipment. II. Add Phase B ingredients into a support vessel. Heat and mix until uniform. III. Spray Phase B into premixed Phase A and continue blending. IV. Pulverize and return to blender. V. Add Phase C to Phase A-B and mix until uniform.

Liquid Frosted Blusher

<u>Phase:</u>	<u>Ingredients:</u>	<u>Percent by Weight</u>
1	Stearic acid	3.00
	Lexemul P	2.00
	Lexemul 515	1.00
	Candelilla wax	1.00
	Dow Corning 200	0.50
	Carnation oil	6.00
	Myristyl Myristate	2.00
	Propylparaben	0.10
2	Deionized water	62.05
	Titanium dioxide	6.00
	Red iron oxide 3098	1.30
3	Deionized water	2.00
	Triethanolamine	1.50
	Versene 100 (EDTA)	0.10
	Antifoam AF emulsion	0.05
4	Propylene glycol	5.00
	Methocel 40-202	0.20
	Veegum	0.50
	Phenoxyethanol	0.50
	Methylparaben	0.20
5	Timica Pearlwhite	5.00

Procedure:

1. Weigh all materials in Phase 1 into a clean auxiliary compounding kettle equipped with a mixer. Heat to 82C with mixing.
2. Weigh water (Phase 2) into main compounding kettle equipped with a colloid mill. Slowly add pigments, milling until completely dispersed. Start adding Phase 4 dispersion which has been previously mixed. Mill until smooth. Add Phase 3 mixture and mill for 5 minutes. Turn off mill and drain into batch.
3. Start heating milled water phase to 80C. With oil phase at 82C and water phase at 80C, slowly add oil to water with moderate mixing.
4. Mix batch at 80C until a homogeneous emulsion is formed. Mix ten minutes more then start to cool.
5. Mix to room temperature.

Note:

When mixing frosted shades, add Phase 5 (Timica Pearlwhite) to batch during cooling phase in step 3 when batch is between 60-65C.

4	Deionized water	1.00
	Triethanolamine	1.00
5	Deionized water	1.00
	Dowicil 200 preservative	0.05
	Versene 100 (EDTA)	0.05

Procedure:

1. Weigh all materials in Phase 1 into a clean auxiliary compounding kettle equipped with mixer. Heat to 82C with mixing.
2. Weigh water in Phase 2 into main compounding kettle equipped with a colloid mill. Slowly add pigments and mill until completely dispersed.
3. Blend the ingredients in Phase 3 completely. Add Phase 3 to the dispersed pigment phase (Phase 2) and mix until smooth. Add Phase 4 and mix until smooth. Mill for 5 minutes.
4. Heat aqueous phase to 80C with mixing.
5. When water phase reaches 80C, start adding oil at 82C slowly to water phase. When all the oil phase has been added to water phase, continue mixing maintaining 80C temperature. Mix ten minutes.
6. Begin to cool batch.
7. At 45C add Phase 5 which has been previously blended.
8. Cool batch to room temperature with mixing. Allow batch to sit several hours to reach proper viscosity before filling.

Liquid Make-up

A light, sheer foundation with excellent "play-time" and smooth after-feel. The Mearlmaid AA imparts a subtle opalescent look to both skin and bottle tones.

<u>Phase:</u>	<u>Ingredients:</u>	<u>%wt.</u>
A.	Mineral Oil (Carnation White Mineral Oil)	4.50
	Mineral Oil (and) Lanolin Alcohol (Amerchol L-101)	4.50
	Stearic Acid (Emersol 120)	2.20
	Glyceryl Stearate (Arlacel 129)	1.80
	Isopropyl Lanolate (Amerlate P)	0.90
	Isostearic Acid (Emersol 871)	0.50
	Antimicrobial (oil soluble)	q.s.
B.	Water (q.s. to 100%)	50.20
	Propylene Glycol	4.50
	Triethanolamine (TEA 99%)	0.90
	Antimicrobial (water soluble)	q.s.
C.	Titanium Dioxide	2.00
	Iron Oxide (C33-115 Cosmetic Brown)	0.20
	Talc (Supra A Talc)	7.80
D.	Mearlmaid AA	10.00
	Water	10.00

Procedure:

- I. Heat Phase A to 85C+-3C while mixing until completely uniform.
 - II. Heat Phase B to 85C+-3C while mixing. III. Pulverize Phase C and add to Phase B using high shear mixing until smooth.
 - IV. Add Phase C-B to Phase A maintaining constant agitation and cool batch to 35+-5C. V. Add pre-mixed Phase D to Phase A-B-C with gentle agitation while mixing until completely uniform. VI. Store or fill into appropriate containers.
- Formulation CLF-921084

Earthtone Make-up Powder

This reddish-brown "earthtone" powder has a subtle luster, smooth feel, good coverage, and is intended for a wide variety of make-up applications.

<u>Phase:</u>	<u>Ingredients:</u>	<u>%wt.</u>
A.	Talc (Cyprus Supra) (q.s. to 100%)	27.30
	Iron Oxide (C33-5138 Cosmetic Russet)	27.30
	Antimicrobial	q.s.
	Shinju White 100T	27.30
	Cloisonne' Imperial Gold 222X	9.10
B.	Mineral Oil (Ervol-125/135 SUS)	4.50
	Isopropyl Myristate	4.50
	Fragrance	q.s.

Procedure:

- I. Thoroughly blend and disperse Phase A in appropriate dry blending/dispersing equipment. II. Blend Phase B ingredients until uniform. III. Spray Phase B into pre-mixed Phase A and continue blending. IV. Pulverize and store.
- Formulation CLF-920026

Lipstick Base

<u>Ingredient:</u>		<u>Wt.%</u>
Methyl Stearoyl Dimethicone	Masilwax 135	4.75
Candelilla Wax	Synthetic Candelilla	11.80
Beeswax	White Beeswax, NF	3.60
Ozokerite	White Ozokerite Wax 77W	2.80
Paraffin	Refined Paraffin 130/135	2.20
Carnauba Wax	#1 Yellow Carnauba	1.00
Isopropyl Myristate	Lexol IPM	10.30
Lanolin	Deodorized AAA Lanolin	4.80
Castor Oil	AA USP	58.60
Propyl Paraben		0.10
BHT		0.05

Procedure:

With gentle mixing, heat the above mixture to 80C. When uniform, fill into preheated molds.

Note: Pigments should be thoroughly milled into castor oil prior to blending the final lipstick.

SOURCE: PPG Industries, Inc.: Formulation S-101

Long Wearing Pressed Eyeshadow

The long wearing properties of this eye shadow are enhanced by the pigment dispersion.

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Talc, USP	48.50
Mica	15.00
Sericite	15.00
Zinc Stearate	1.50
Pigments (FD&C, D&C, Iron Oxides, Ultramarines, Titanium Dioxide)	15.00
Phase B:	
Cetearyl Isononanoate (Tegosoft CI)	0.40
Cetyl Dimethicone (Abil Wax 9801)	0.30
Stearoxy Dimethicone (Abil Wax 2434)	0.30
Mineral Oil	4.00
Fragrance, Preservatives	Q.S.

Procedure:

Mix all ingredients of Phase A in a blender. Combine the ingredients of Phase B and spray or slowly add to Phase A using a blender. Pulverize through a screen. Press into godets.

Gel Eye Makeup Remover

Firmer or softer gels can be made by adjusting the level of polyethylene.

<u>Ingredients:</u>	<u>% w/w</u>
Mineral Oil	82.0
Cetyl Dimethicone (Abil Wax 9801)	2.0
C24-28 Alkyl Methicone (Abil Wax 9810)	10.0
Polyethylene	6.0

Procedure:

Heat the Mineral Oil and Polyethylene to 70C. Mix until uniform. Add the Cetyl Dimethicone and C24-28 Alkyl Methicone. Cool to 50-55C and dispense into tubes or jars. Oil soluble colors can be added if desired.

Low Alcohol Moisturizing Lotion

A moisturizing, low-alcohol, opaque lotion aftershave, which has a cooling, soothing skin-tightening feel with a substantive after-feel from the Patlac IL and Pationic ISL.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Acritamer 941 (2% Solution)	37.50
2. Distilled Water	44.86
Part B:	
3. Patlac IL	1.00
4. Ritapro 165	0.50
5. Pationic ISL	1.00
6. Cetyl Alcohol	0.50
7. Myristyl Lactate	1.00
Part C:	
8. Triethanolamine (50%)	0.64
9. Alcohol SD 40	12.00
Part D:	
10. Perfume, A.S. Type	1.00

Compounding Procedure:

NOTE: A sweep agitator is recommended for this product.

Weigh ingredients of Part A and Part B and heat to 165F.

Slowly add Part B to Part A, taking care not to entrap air.

Cool to 140F. Add Part C. Cool to 110F and add Part D. Adjust

pH to 5.3. Pour into containers.

Viscosity: Brookfield RVF Heliopath TA @ 10 rpm @ 27C:6460 cps

Formulation H-89-P-21

Shave Gel

This viscous shave gel has good foam, with low irritancy characteristics.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Distilled Water	63.68
2. Sodium Laureth Sulfate	16.67
3. Pationic 138C	10.00
4. Ritamid C	4.00
5. Ritapeg 150 DS	2.00
6. Titanium Dioxide	0.50
7. Polyox WSR 10	0.15
8. Methylparaben	0.10
Part B:	
9. Perfume	0.20
10. Glydant 40-700	0.20
Part C:	
11. Triethanolamine 50%	+2.00
12. Sodium Chloride (25% solution)	+0.50

Compounding Procedures:

Heat Part A to 165F while mixing. Neutralize to pH 7.5 with Triethanolamine. Cool to 120F, add Part B. Adjust viscosity with Sodium Chloride solution.

Formulation 103-176

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Make-up Base

<u>Materials:</u>	<u>Part/Wt(%)</u>
Part A:	
Lanaetex 75	3.00
Myristyl Myristate	2.20
Dioctyl Sebacate	2.00
Dispersen G	2.00
Brij 56	0.10
Butyl Paraben	0.10
Part B:	
Water	68.25
Veegum HV	0.50
Keltrol	0.15
Glycerin	3.00
Citric Acid	0.30
Germaben II	0.60
Methyl Paraben	0.10
Part C:	
SS4267	3.00
SF1214	1.00
Talc	5.00
Titanium Dioxide	5.00
Iron Oxide	3.70

Procedure:

- 1) Heat Part A and Part B to 75C.
- 2) Add Part B to Part A with high shear mixing.
- 3) Cool to 55C and add Part C with good mixing.
- 4) Continue mixing until cooled to 25C.

Formulation CC100

Glitter Gel

<u>Materials:</u>	<u>Part/Wt(%)</u>
Part A:	(1) (2)
Klucel HF	2.0 2.0
SF1188	2.0 ---
SF-96-5	--- 5.0
SD Alcohol 40B (200Pr)	94.0 90.0
Pale Gold Glitter (.004x.004x.001)	2.0 3.0

Procedure:

- 1) Add SD alcohol to tank, add Klucel HF and hydrate with mixing for one hour.
- 2) Set overnight for complete hydration.
- 3) Add remaining ingredients in order listed.

Comments:

Meadowbrok has a variety of textures of glitter.

For slower drying time, replace 10% of the SD alcohol with SF1202.

SOURCE: GE Silicones: Formulation SP105

"Matte-Finished" Make-Up

	<u>% Weight</u>
Phase A:	
Cetyl Octanoate (Schercemol CO)	7.00
Diisopropyl Dimerate (Schercemol DID)	1.00
Sorbitan Stearate (Arlacel 60)	3.00
Methyl Gluceth-20 Sesquistearate (Glucamate SSE 20)	3.00
Glyceryl Stearate (Schercemol GMS)	0.50
Dimethicone, 350 cps. (Dow Corning 200 Fluid)	1.00
Octyl Dimethyl PABA (Escalol 507)	1.00
Phase B:	
Magnesium Aluminum Silicate (Veegum Regular)	15.00
Water	55.00
Glycerin	2.00
Phase C:	
Pigments:	
Talc 141 BC	2.10
Titanium Dioxide 328	6.40
7055 Iron Oxide Yellow	0.45
7061 Iron Oxide Brown	0.80
7054 Iron Oxide Red	0.25
Phase D:	
Cucumber Extract	0.50
Germaben II	1.00

Procedure:

Disperse Veegum slurry in water and uniform. Add rest of water phase mixing well. Mix Phase C. Add Phase C to Phase B and mix for 5 minutes or until fully dispersed. In main beaker mix ingredients of Phase A. Heat both Phase A and Phases B & C to 70C. Add Phase B & C to Phase A with moderate agitation. Cool batch to room temperature with continuous mixing, then add Phase D..

Deep-Penetrating, Conditioning Mascara

	<u>% Weight</u>
Water	87.95
Acrylates/C 10-30 Alkyl Acrylate Crosspolymer (Carbopol 1342)	1.00
Aminomethylpropanol	1.00
Quaternized Acetamide MEA (Quamectant AM-50)	2.50
Germaben II	1.00
Hydrolyzed Animal Protein (Hydrocoll EN-55)	1.00
Fragrance	0.05
Polysorbate-20	0.50
Panthenol (and) Soy Lecithin	5.00

Procedure:

Disperse the Carbopol in 80% of batch water at room temperature. Neutralize with aminomethylpropanol. Dissolve Quamectant in remainder of water and add slowly to batch with slow sweeping agitation to avoid aeration. Add the Germaben and Hydrocoll with slow agitation. Pre-blend the fragrance and polysorbate-20 and add to batch. With slowest agitation, add the panthenol (and) soy lecithin.

Lexgard AMG-0	6.30
Phase B:	
Lexol PG-900	15.00
Lexemul 55G	2.00
Myristyl Myristate	1.00
Stearyl Alcohol	2.00
Cetyl Alcohol	1.00
Lexgard P	0.10
Phase C:	
Fragrance	0.20

Procedure:

Charge batch vessel with water and begin mixing and heating to 78C+2C. Dust in cellosize. When completely hydrated add remainder of phase A materials. Combine phase B and heat to 78C+2C. When uniform slowly add phase B to phase A maintaining mixing and temperature. Allow to mix 15 min. at 78C. Cool to 40C and add phase C to batch. Cool to room temperature.

Observations:

pH (direct): 3.2-3.8
Viscosity @ 25C: 30,000 cps

Moisturizing Gel

<u>Ingredients:</u>	<u>% by weight</u>
A. Water	89.20
Glycerin	7.00
Sorbitol, 70%	3.00
Oxaban-A	0.10
B. Carbomer 980 (Carbopol 980)	0.50
C. AMP-95	0.20

Procedure:

Combine A. With rapid agitation, slowly add B. Mix until a uniform dispersion is obtained - usually about 20 minutes. Add C.

SOURCE: Angus Chemical Co.: Formulation PF-0220

Moisturizer with Sun Screen

This general-purpose skin care product is for daily use.

<u>Materials:</u>	<u>Part/Wt(%)</u>
Part A:	
Petrolatum	0.88
Cetyl Alcohol	0.88
Stearic Acid	0.88
PEG-8 Stearate	0.88
Arlacel 165	0.44
SF-96-100	0.29
Finesolv TN	1.54
Lecithin	0.88
Tenox-6	Q.S.
Part B:	
Water	82.42
Carbopol 940	0.23
Disodium EDTA	0.05
Methyl Paraben	0.22
Part C:	
Octyl Methoxy Cinnamate	3.60
SS4267	2.22
SF1204	4.50
Part D:	
Sodium Hydroxide	0.09

Procedure:

- 1) Heat Part A and Part B to 80C.
- 2) Add Part A to Part B with mixing.
- 3) Continue to agitate while cooling to 50C.
- 4) In a separate vessel, slurry Part C.
- 5) Add Part C to the main batch.
- 6) Homogenize in a colloid mill or homogenizer at 5000 psi.
Cool to 30C with agitation.
- 7) Add Part D to adjust pH (target pH 5.3) and homogenize.
Force cool if needed to 25C.

Comments:

Part D may be added at 60C or below before the addition of Part C.

If the SPF is increased with benzophenone-3, slurry it separately with SS4267. This procedure increases the water resistance of the sunscreen in the formulation.

Preservative effect may be increased by using 0.8% Germaben II-E (and target pH at 4.9)

Multi-Protective Skin Moisturizer (Cationic)

	<u>% Weight</u>
Phase A:	
Cetyl Alcohol	2.00
Mineral Oil (Drakeol 7)	3.00
Petrolatum	1.00
Tridecyl Neopentanoate (Trivent NP-13)	2.50
Dimethicone Copolyol (Abil B8852)	1.00
Glyceryl Stearate (and) Laureth-23 (Cerasynt 945)	1.00
Dimethicone, 350 cps. (Dow Corning 200 Fluid)	0.20
Tocopheryl Acetate (Vitamin E Acetate)	0.20
Steareth-21 (Brij 721)	1.00
Phase B:	
Water	70.90
Stearamidopropyl PG-Dimonium Chloride Phosphate (Monoquat P-TS)	2.00
Allantoin	0.50
Aloe Vera Gel 1:1	5.00
Polyquaternium-10 (Celquat SC-240)	0.50
Propylene Glycol	4.00
Aluminum Starch Octenylsuccinate (Dry Flo-C)	4.00
Phase C:	
Germaben II-E	1.00
Phase D:	
Fragrance	0.20

Procedure:

Heat water, Monoquat and Allantoin to 50C. Add Celquat SC-240, disperse thoroughly and heat to 80C. Prepare propylene glycol and Dry Flo-C slurry and add to water phase. Mix Phase B and heat to 80C. Add Phase B to Phase A at 80C and mix for 15 minutes. Cool to 35C and add Phase C and Phase D to it. Cool to room temperature and homogenize.

Conditioning Facial Cleanser

	<u>% Weight</u>
Water	43.50
Citric Acid, 50% Solution	0.30
Sodium Laureth Sulfate (1 Mole, 25%)	35.00
Diammonium Lauryl Sulfosuccinate (Monamate LNT-40)	5.00
Trisodium Lauroampho PG Acetate Phosphate Chloride (Phosphoteric QL-38)	8.00
Cocamphopropyl Betaine (Monamate CAB-LC)	8.00
Germaben II	0.20

Procedure:

Blend ingredients in order listed, readjusting pH if necessary to 5.5-6.0.

Natural Cleanser

An all natural, low foaming cleanser with excellent after-feel

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Distilled Water	75.70
2. Patlac NAL	0.50
3. Pationic 138C	8.00
4. Pationic 122A	2.00
5. Corn Oil	8.00
6. Ritapag 150 DS	0.50
7. Rita EGDS	3.00
8. Methylparaben	0.20
9. Propylparaben	0.10
10. Supersat AWS 4	2.00
Part B:	
11. Perfume	QS
12. Parlac LA (44%)	QS
13. Sodium Chloride (25% Solution)	QS

Compounding Procedure:

Heat Part A to 165F with mixing. Mix until uniform. Begin cooling. Cool to 120F. Add perfume. Mix until uniform, avoid aeration. Cool to 90F. Adjust pH with Patlac LA (44%) to 5.70+/-0.2. Adjust viscosity with sodium chloride 25% solution. Formulation 105-46

Water-in-Oil Emulsion Base

This water-in-oil emulsion is smooth and non-greasy.

<u>Ingredients:</u>	<u>% W/W</u>
Part A-Oil Phase:	
1. Mineral Oil 80/90	21.00
2. Pationic CSL	7.20
3. Pationic ISL	0.80
4. Ritahydrox	0.50
5. Methylparaben	0.10

Nongreasy Body Oil

A light, nongreasy, yet very effective body oil for very dry skin. It spreads easily, and absorbs quickly, leaving skin smooth and soft.

<u>Ingredient:</u>		<u>Wt. %</u>
Tetrabutoxypropyl Methicone	Masil 756	4.0
PPG-10 Butanediol	Macol 57	6.0
Cyclomethicone	Masil SF-V	80.0
SD Alcohol 40B		10.0
Fragrance		Q.S.

Appearance: Clear, water-white fluid

Properties:

Blend all ingredients together at room temperature.

Formulation L-103

Emollient Body Oil

<u>Ingredient:</u>		<u>Wt. %</u>
Isopropyl Palmitate	Propal	45.0
Cyclomethicone	Masil SF-V	5.0
PEG 7 Glyceryl Cocoate	Macol 159	25.0
SD Alcohol 40B		24.5
Fragrance		0.5

Appearance: Clear, straw-colored liquid

Performance: A light, quick-spreading emollient which leaves a smooth, non-greasy skin after-feel.

Procedure:

Blend all ingredients at room temperature.

Formulation L-101

SOURCE: PPG Industries, Inc.: Suggested Formulations

Perfume Gel

<u>Ingredients:</u>	<u>% by weight</u>
A. Carbomer 980	1.00
Water, distilled	51.00
B. Tris Amino	1.40
Water, distilled	12.55
Disodium EDTA	0.05
C. Cremophor RH 40	5.00
Perfume oil	4.00
Ethanol 96%	25.00

Procedure:

Part A: Disperse Carbomer 980 in water.

Part B: Dissolve Tris Amino and EDTA in water.

Part C: Dissolve Cremophor and perfume oil in ethanol. Add C to A. Add B to C and A.

Formulation PF-0192E

Placenta Gel

(For use on aging skin)

<u>Ingredients:</u>	<u>% by weight</u>
A. Ethanol, 96%	15.00
Water, distilled	50.00
Carbomer 1382	1.00
B. Water, distilled	18.15
Glycerol or 1,2-propylene glycol	10.00
Tris Amino	0.80
Disodium EDTA	0.05
C. Placenta liquid	5.00
Perfume oil	q.s.

Procedure:

Part A: Disperse Carbomer 1382 in water. Add the alcohol.

Part B: Dissolve Tris Amino and EDTA in water and mix with glycerol. Stir B slowly into A.

Part C: Stir placenta liquid slowly into the finished gel. Add fragrance.

Formulation PF-0191E

Poured Eyeshadow

A hot pour eye shadow formulation suitable for direct filling into compacts. The product has a unique powdery feel when applied on the skin.

<u>Phase:</u>	<u>Ingredients:</u>	<u>% wt.</u>	
A.	Isopropyl Myristate (q.s. to 100%)	20.40	
	Mineral Oil (Carnation)	10.00	
	Lauryl Lactate	10.00	
	Ozokerite Wax	8.00	
	Carnauba Wax	4.00	
	Dimethicone (Dow Corning 200 Fluid-350 cs.)	4.00	
	Antimicrobials	q.s.	
	Antioxidants	q.s.	
	B.	Mearlmica SVA	14.60
		Timica Silkwhite 110W	2.00
Cloisonne' Supergreen 827C		6.00	
Silica (Spherica P-1500)		15.00	
Corn Starch		2.00	
Ferric Ammonium Ferrocyanide (C38-5410 Cosmetic Blue F)		2.70	
Iron Oxide (C33-5410 Cosmetic Yellow)		1.30	

Procedure:

- I. Add Phase A ingredients to a heated vessel and stir bringing temperature to 80+-3C.
- II. Pulverize Phase B ingredients and add to Phase A with thorough agitation.
- III. Pour into holding kettles or appropriate compacts.

Typical Properties:

Color: Green to match standard
 Appearance: Pearly to match standard
 Capillary Point: 67+-3C
 Formulation CLE-911016B

Frosted Pressed Powder Eyeshadow

This formulation provides a pressed powder eyeshadow that has a very smooth feel, excellent pay-off and wear, and is quite resistant to breakage.

<u>Phase:</u>	<u>Ingredients:</u>	<u>% wt.</u>
A.	Talc (q.s. to 100%)	17.00
	Zinc Stearate	8.00
	Kaolin	8.00
	Gemtone Tan Opal G005	10.00
	Timica Sparkle 110P	30.00
	Antimicrobials	q.s.
B.	Antioxidants	q.s.
	Mineral Oil (Ervol)	7.00
C.	Gemtone Tan Opal G005	20.00

Procedure:

- I. Thoroughly blend and disperse Phase A in appropriate dry blending/dispersing equipment. II. Add Phase B ingredients into a support vessel. Heat and mix until uniform. III. Spray Phase B into premixed Phase A and continue blending. IV. Pulverize and return to blender. V. Add Phase C to Phase A-B and mix until uniform.

SOURCE: The Mearl Corp.: Formulation CLE-911036

Pressed Lip Powder

This formulation produces a lip powder cake which applies easily, blends well and has excellent luster and wear characteristics. No drying out of the lips was experienced in normal use.

Phase:	Ingredients:	%wt.
A.	Talc (q.s. to 100%)	34.30-44.30
	D & C Red #30, Al Lake (C37-038 Permanent Pink)	2.17
	Titanium Dioxide (Cosmetic White C47-056)	2.17
	Nylon-12 (Orgasol 2002 Natural Cos)	0.50
	Antimicrobials	q.s.
	Fragrance	q.s.
B.	Duochrome RY (Red/Gold) 224C	15.00
	Flamenco Ultra Silk	10.55
	Cloisonne' Monarch Gold 233X	5.43
C.	Liquid Binder*	20.00-30.00

*Liquid Binder:

Hydrogenated Lanolin (Ohlan)	21.00
Isopropyl Myristate	21.00
Petrolatum (Penreco Snow White)	20.90
Isopropyl Lanolate (Amerlate P)	20.90
Dimethicone (Dow Corning 200 Fluid)	2.70
Octyl Stearate	8.50
Octyldodecanol (Standamul G)	5.00
Antioxidant	q.s.

- I. Blend ingredients in Phase A, pulverize and return to blender. II. Add ingredients in Phase B to Phase A and blend until uniform. III. Melt, add and disperse pre-mixed Phase C to pre-mixed Phase A-B. IV. Pulverize entire batch without screen and store.
Formulation CLL-921971

Lip Gloss with Sunscreen

This highly pigmented lip gloss yields a shiny, smooth, creamy product that is easy to apply, wears well and helps protect the lips.

Phase:	Ingredients:	% wt.
A.	Castor oil (q.s. to 100%)	64.80
	C18-36 Acid Glycol Ester (Syncrowax ERLC)	3.70
	Cetyl Alcohol (Adol 52)	1.60
	Octyl Methoxycinnamate (Parsol MCX)	3.00
	D&C Red #30 (Al Lake C37-038)	1.20
	Iron Oxide (C33-8073 Cosmetic Yellow)	0.30
	Antioxidant	q.s.
	Antimicrobials	q.s.
B.	Flamenco Ultra Silk	10.40
	Flamenco Super Red 430Z	15.00
C.	Fragrance	q.s.

I. Weigh all the ingredients in Phase A into a heated vessel and raise temperature to 75+-5C, stirring until melted and uniform
II. Add Phase B ingredients to Phase A maintaining temperature at 75+-5C. III. Add Phase C and mix with constant stirring.
Note: If iron oxide or organic pigments are used, they should first be dispersed in castor oil; this mixture should then be milled in either a colloid or roller mill.

SOURCE: The Mearl Corp.: Formulation CLL-921972

Shebu Lip Moisturizer

The formulation given here is in the form of a solid "stick". The product applies easily and smoothly, leaving the lips soft, smooth and supple.

<u>Ingredients:</u>	<u>% W/W</u>
1. Ozokerite	6.00
2. Carnauba Wax	10.00
3. Shebu	9.00
4. Ritalan	55.00
5. Ritaderm	10.00
6. Supersat	10.00
7. Color, Fragrance and Preservatives	QS

Compounding Procedure:

Weigh all ingredients into a suitable container, omitting the perfume and heat, while stirring, to approximately 83C. Stir until all ingredients which are solids melt. When all ingredients have melted, begin cooling the batch. Cool to approximately 55C, add the perfume. Stir continuously and pour into suitable molds.

Formulation HB-89-S-8

Moisturizing Lip Pot

This formulation applies smoothly and evenly and imparts a rich, supple and moist appearance to the lips.

<u>Ingredients:</u>	<u>% W/W</u>
<u>Part A:</u>	
1. White Petrolatum	73.80
2. Lanolin, Extra Deodorized	9.20
3. Pationic CSL	7.00
<u>Part B:</u>	
4. Distilled Water	10.00
5. Preservatives	QS

Compounding Procedure:

Heat Petrolatum and Lanolin to 180F. Add CSL with mixing. Add water at 180F. Mix until uniform. Cool to 160F. Fill.

Formulation 103-66

Skin Guardian

	<u>% Weight</u>
Phase A:	
Water	77.50
Carbomer-941 (Carbopol 941)	0.30
Trisodium EDTA (Hampene Na3T)	0.30
Triethanolamine, 99%	0.50
Phase B:	
PEG-75 (Carbowax 3350)	2.00
Glycereth-26 (Liponic EG-1)	1.50
Oleth-20 (Volpo 20)	3.50
PEG-6 Almond Glycerides (Crovol A-70)	0.50
Sucrose Stearate (Crodesta F-160)	1.30
Allantoin	0.50
Germaben II	1.00
Phase C:	
Dimethicone Copolyol (Dow Corning 190)	2.00
Butylene Glycol	2.00
Panthenol (Dexpanthenol)	0.10
Retinyl Palmitate (Vitamin A Palmitate)	0.10
Squalane	0.20
BHT	0.20
Oleth-10 (Volpo 10)	2.00
Octyl Methoxycinnamate	0.10
Glycoceramides (and) Phospholipids (and) Cholesterol (Glycosomes)	0.10
Phase D:	
Hydrolyzed Animal Protein (and) Hyaluronic Acid (Cromoist HYA)	1.00
Hydrolyzed Animal Protein (Crotein SPA)	3.00
Phase E:	
Triethanolamine, 99%	0.25
Phase F:	
FD&C Red #4, 1% Solution	0.025
FD&C Yellow #5, 1% Solution	0.025

Procedure:

Dust Carbopol 941 into cold water under moderate agitation. Let mix until completely hydrated (30 minutes). Add Hampene Na3T. Mix until clear. Neutralize Carbopol with triethanolamine. Add the ingredients from Phase B to Phase A in the order listed, mixing after each addition until the batch is uniform. Warm batch to 60C to mix in Crodesta F-160, Allantoin, and Germaben II. Maintain 60C for addition of Phase C. While warming Phase B, prepare Phase C in a separate vessel. Add ingredients sequentially, mixing after each addition and warm mixture to 63C. When clear and at 63C, add Phase C to batch slowly with mixing. Mix until uniform. Let cool with mixing to 40C. Add Phase D ingredients sequentially. Add Phase E and Phase F at room temperature. Adjust pH to 7.2.

Skin Toner

This skin toner refreshingly tightens the skin and leaves a smooth after-feel. Contains substantive moisturizing, due to the Pationic ISL, Patlac NAL and Patlac IL.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Alcohol SD 40	70.00
2. Patlac NAL	5.00
3. Patlac IL	3.00
4. Perfume	2.70
5. Pationic ISL	2.00
6. Witch Hazel	2.00
Part B:	
7. Distilled Water	15.30

Compounding Procedure:

Combine A and mix until clear. Slowly add B with agitation. Filter if desirable.
Formulation 101-77

Toner

A smooth freshener that tones up and firms pores. Alcohol free.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	82.60
2. Witch Hazel	16.00
3. Pationic 122A	1.00
4. Peppermint	0.10
5. Dowicil 200	0.20
6. Methylparaben	0.10

Compounding Procedure:

Add peppermint to Pationic 122A, mix. Add to remaining materials and mix.

Formulation 103-174

SOURCE: R.I.T.A. Corp.: Suggested Formulations

"Slender" Stick Eyeshadow

This easy to prepare formulation produces a non-greasy stick which can be easily applied. Excellent pay-off and long-wearing characteristics.

<u>Phase:</u>	<u>Ingredients:</u>	<u>% wt.</u>	
A.	Castor Oil (q.s. to 100%)	30.90	
	Shea Butter (Shebu Refined)	6.10	
	Caprylic/Capric Triglyceride (Neobee M5)	6.10	
	Beeswax	4.60	
	Candellila Wax	4.60	
	Ozokerite Wax	5.00	
	Isopropyl Myristate	3.00	
	Isopropyl Lanolate (Amerlate P)	4.60	
	Talc	2.10	
	Octyl Methoxycinnamate (Parsol MCX)	3.00	
	Antioxidant	q.s.	
	Antimicrobial	q.s.	
	B.	Flamenco Twilight Blue 620CB	15.00
		Gemtone Moonstone G004	15.00

Procedure:

I. Weigh all the ingredients in Phase A into a vessel and heat to 85+-3C, stirring until melted and uniform. II. Add pre-mixed Phase B to Phase A, maintaining temperature at 85+-3C for 30 minutes with gentle agitation (This will allow for de-aeration if vacuum is not available). III. Pour at 75+-3C.

Note: If iron oxide or organic pigments are used, they should first be dispersed in Castor oil; this mixture should then be milled in either a colloid or roller mill.

Typical Properties:

Droop Point (44C): Passes
 Capillary Point: 56C+-3C
 Formulation CLE-92008

Loose Powder Eyeshadow

A highly pearlescent powder eyeshadow suitable for filling into pots or automatic containers.

<u>Phase:</u>	<u>Ingredients:</u>	<u>%wt.</u>
A.	Talc (q.s. to 100%)	6.00
	Zinc Stearate	3.00
	Silica	1.00
	Mearlite LBU	5.00
	Gemtone Amber G001	55.00
	Antimicrobials	q.s.
B.	Mineral Oil (Carnation White Mineral Oil)	10.00
C.	Gemtone Amber G001	20.00

Procedure:

I. Thoroughly blend and disperse Phase A in appropriate dry blending/dispersing equipment. II. Spray Phase B into pre-mixed Phase A and continue blending. III. Pulverize and return to blender. IV. Add Phase C to Phase A-B and mix until uniform

Typical Properties:

Bulk Density: 13.30+-0.5 lbs/ft. 3 Texture: Soft
 Formulation CLE-920010

Sprayable Moisturizer

<u>Ingredients:</u>	<u>% by weight</u>
Part A:	
Deionized Water	79.65
Glycerin	6.00
DMDM Hydantoin	0.30
Methylparaben	0.10
Propylparaben	0.05
Part B:	
Mineral Oil	10.00
Octyldodecyl Stearoylstearate	3.00
Oleth-10	0.40
Pemulen TR-1	0.30
Part C:	
AMP-95	0.10
Part D:	
Disodium EDTA	0.10

Procedure:

Combine A ingredients in a vessel which will contain the entire formulation. Parabens may be predispersed in glycerin to accelerate dissolution. Mix until parabens have dissolved. Combine B ingredients in a separate vessel. Mix to disrupt any soft agglomerates of Pemulen. With moderate agitation, add B to A. Mix for 10-15 minutes to allow resin to swell. Add C and use vigorous mixing to produce a smooth, white emulsion. Add D incrementally until a viscosity of 600-900 cps is obtained.

Formulation PF-0225 suggested by B.F. Goodrich

Moisturizing Gelee with Pseudocollagen

<u>Ingredients:</u>	<u>% by weight</u>
Carbopol 1342, 2% aq.	50.00
AMP-95	1.00
Suttocide A	1.00
Quamectant AM-50	5.00
Demineralized Water	q.s.
Fomblin HC04 Emulsion	0.25
Pseudocollagen	5.00
Fragrance FR-30	0.10
Polysorbate-20	1.00

Procedure:

1. Disperse Carbopol premix in water at room temperature using sweep agitation.
 2. Add AMP and mix slowly until a clear, uniform gel.
 3. Add Suttocide A and mix thoroughly.
 4. Add Quamectant and mix thoroughly.
 5. Disperse fragrance in Polysorbate and add. Mix well.
- Formulation PF-0207 suggested by Brooks Inds.

Temporary Wrinkle Remover

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Acritamer 941	0.20
2. Distilled Water	71.15
3. Glycerin	4.00
4. Methylparaben	0.10
Part B:	
5. Ritachol	2.50
6. Ritawax ALA	1.00
7. Glyceryl Stearate	1.00
8. Stearic Acid	2.00
9. Ritalan	4.50
10. Propylparaben	0.05
Part C:	
11. Triethanolamine (50%)	2.00
Part D:	
12. Bovinal 30	7.50
Part E:	
13. 2-Phenoxyethanol	2.00
14. Benzyl Alcohol	2.00

Compounding Procedure:

Disperse Acritamer in water and glycerin with rapid agitation. When uniform, heat to 75C. Combine part B and heat to 75C. Add part B to part A with agitation, avoid aeration. Mix until uniform. Add part C and mix until uniform. Cool to 30C. Add part D and mix until uniform. Add part E.

Formulation 108-3B

Temporary Wrinkle Remover

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Ritachol	2.50
2. Ritawax ALA	1.00
3. Glyceryl Stearate	1.00
4. Stearic Acid	2.00
5. Ritalan C	5.00
6. Pationic ISL	1.25
Part B:	
7. Acritamer 941	0.20
8. Distilled Water	70.55
9. Propylene Glycol	4.50
Part C:	
10. Triethanolamine (50%)	2.00
Part D:	
11. Bovinal 30	6.00
12. Phenoxyethanol	2.00
13. Benzyl Alcohol	2.00

Compounding Procedure:

Preweigh part A and heat to 70C. Premix part B and heat to 70C. When both are at temperature, combine part A and part B and mix until uniform. Cool with mixing to 40C. During cooling add part C. At 40C, add part D.

Formulation 108-3C

Temporary Wrinkle Remover

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Acritamer 941	0.20
2. Distilled Water	75.30
3. Glycerin	4.00
Part B:	
4. Ritachol	2.50
5. Ritawax ALA	1.00
6. Glyceryl Stearate	1.00
7. Stearic Acid	2.00
8. Ritalan	4.50
Part C:	
9. Triethanolamine (50%)	2.00
Part D:	
10. Bovinal 30	7.50
Part E:	
11. Color, Fragrance, Preservatives	QS

Compounding Procedure:

Disperse the Acritamer in water and Glycerin with rapid agitation. When uniform, heat to 75C. Combine the ingredients of Part B and heat to 75C. Add Part B to Part A with agitation-avoid aeration. Mix until uniform. Add Part C and mix until uniform. Cool to 30C. Add Part D and mix until uniform. Add color, fragrances and preservatives.

Formulation HB-89-A-14

Cuticle Remover

This formulation contains 2.00% by weight of sodium hydroxide. The composition also contains Ritachol to help ameliorate skin-related problems due to sodium hydroxide. The emulsion is a smooth, creamy-textured oil/water type.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Petrolatum USP White	8.00
2. Ritachol	2.00
3. Rita CA	13.00
4. Propylparaben	0.05
Part B:	
5. Laureth-12	2.50
6. Rita GMS	2.50
7. Distilled Water	69.55
8. Sodium Hydroxide	2.00
9. Methylparaben	0.15
10. Quaternium 15	0.25

Compounding Procedure:

Combine Part A and begin heating with mixing to 70-73C. Add items 5, 6, 7 and 9 into another container and begin heating with mixing to 70-73C. When both Part A and Part B are at 70-73C, add Part A to Part B while mixing. Mix for 15 minutes. Begin cooling to 25-30C and add item 8 when at 30C. Mix until uniform. Add item 10. Mix until uniform. Package.

Vitamin A Eye Gel

<u>Phase:</u>	<u>Ingredients:</u>	<u>Percent by Weight</u>
1	Deionized water	63.65
	Aloe vera	1.00
	Methocel 40-101	0.10
	Triethanolamine	0.01
2	Glycerin	2.00
	Dow Corning 193	2.00
3	Polysorbate 20	0.50
	Retinol	0.05
4	Propylene glycol	3.00
	Methylparaben	0.18
5	Deionized water	1.00
	Dowicil 200 preservative	0.10
	Versene 100 (EDTA)	0.01
6	Carbopol 940 2% solution	25.00
7	Deionized water	1.00
	Triethanolamine	0.40

Procedure:

1. Add water to primary compounding vessel. With rapid agitation, add Aloe vera gel. Sprinkle in Methocel 40-101 and mix 5 minutes. Add TEA and mix until Methocel is completely hydrated.
2. In a separate vessel, blend ingredients from Phase 2. Add to batch and mix 5 minutes.
3. In a separate vessel, blend ingredients from Phase 3. Add to batch and mix 5 minutes.
4. In a separate vessel, blend ingredients from Phase 4. Heat to 60C and mix until Methylparaben is dissolved. Cool to 30-35C and add to batch. Mix until batch is clear.
5. In a separate vessel, blend ingredients from Phase 5. Add to batch.
6. Add Phase 6 (2% Carbopol 940 which has been previously prepared) to batch and mix for 15 minutes.
7. In a separate vessel, blend ingredients from Phase 7. Add to batch and mix until batch has gelled and is crystal clear.

Cuticle Coating

An excellent product for shine, split ends or leave-on conditioner.

Materials:

	<u>Part/Wt(%)</u>
SF1214	65.0
Isohexadecane	33.0
Parsol MCX	2.0
Propylparaben	q.s.

Procedure:

- 1) Predissolve Parsol MCX and propylparaben in Isohexadecane or Isohexadecane/SF1173 blend.
- 2) Slowly add SF1214 to the step (1) mixture until homogeneous.

Comments:

For faster drying, some of the Isohexadecane can be replaced with SF1173 (cyclomethicone-tetramer).

SOURCE: GE Silicones: Formulation HP303

Water Resistant Mascara

<u>Phase:</u>	<u>Ingredients:</u>	<u>Percent by Weight</u>
1	Deionized water	15.70
	Antifoam AF emulsion	0.05
2	Propylene glycol	4.00
	Veegum	0.50
	Methocel 40-202	0.20
3	Deionized water	30.00
	PVP	4.00
4	Black iron oxide	10.00
5	Deionized water	2.00
	TEA	1.50
6	Silicone 345	6.00
7	Propylene glycol	1.00
	Phenoxyethanol	0.50
	Ethylparaben	0.10
	Methylparaben	0.20
8	Carnauba wax flakes	5.50
	Beeswax	9.00
	Stearic acid	2.00
	Oleic acid	1.00
	Lexemul P	2.30
	Lexemul 515	2.30
	Propylparaben	0.10
	Indapol	1.00
9	Deionized water	1.00
	Dowicil 200 preservative	0.05

Procedure:

1. Weigh all ingredients in Phase 8 into an auxiliary compounding kettle equipped with a mixer. Heat to 82C.
2. Weigh materials in Phase 1 into the main kettle equipped with a colloid mill. Turn on mill.
3. Slowly add Phase 4 to the main kettle and pass through colloid mill until all pigments are completely dispersed.
4. Add Phase 2 (which has been previously dispersed) to the main kettle and mill until smooth.
5. Add Phase 3 (which has been previously dispersed) to the main kettle. Mix 5 minutes and turn off mill.
6. Add Phase 5 with mixing to the main kettle. Start to heat batch to 80C.
7. At 80C, add Phase 6. Mix 5 minutes and then add Phase 7 which has been previously heated to 60-80C and mixed to dissolve the parabens.
8. Slowly add the oil phase (phase 8) at 82C to the water phase at 80C. Mix for 10 minutes and start to cool.
9. At 40-45C, add Phase 9. Mix batch down to 30C.

SOURCE: Dow Chemical Co.: Suggested Formulation

W/O Liquid Makeup

A W/O emulsion based liquid makeup with improved pigment grinds.

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Polyglyceryl-4 Isostearate (and) Cetyl Dimethicone Copolyol (and) Hexyl Laurate (Abil WE-09)	4.50
Cyclomethicone (Abil B 8839)	5.00
Cetyl Dimethicone (Abil Wax 9801)	1.00
Caprylic/Capric Triglycerides (Tegosoft CT)	1.00
Synthetic Wax	0.45
Hydrogenated Castor Oil	0.45
Mineral Oil	4.50
Phase B:	
Talc, USP	5.00
Titanium Dioxide	5.00
Iron Oxides	3.70
Phase C:	
Water	68.90
Sodium Chloride	0.50
Preservatives, Fragrance	Q.S.

Procedure:

Mix the ingredients of Phase A together, heat to 70C. When uniform, cool to 50C. Add Phase B. Mill. Heat water to 50C. Add the sodium chloride. Mix. Gently stream into phase A/B with lightning mixer. Cool to 35C, add preservatives and fragrance. Homogenize. A very stable soft creamy lotion results with a good pigment dispersion.

W/O Liquid Makeup
(Cold Mix Formula)

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Cetyl Dimethicone Copolyol (and) Polyglyceryl-4 Isostearate (and) Hexyl Laurate (Abil WE-09)	5.0
Stearoxy Dimethicone (Abil Wax 2434)	3.0
Cyclomethicone (Abil B 8839)	9.0
Caprylic/Capric Triglyceride (Tegosoft CT)	6.0
Titanium Dioxide	4.0
Iron Oxides	1.0
Phase B:	
Propylene Glycol	3.0
Sodium Chloride	0.8
Water	68.2
Phase C:	
Fragrance	Q.S.
Preservatives	Q.S.

Procedure:

1. In a vessel, grind the Titanium Dioxide and pigments into the rest of the ingredients of Phase A.
2. In a separate vessel, blend the ingredients of Phase B.
3. Slowly with agitation, add Phase B to Phase A. Mix until uniform.
4. Add the ingredients of Phase C with agitation.
5. Homogenize and dispense.

W/O Liquid Makeup - Oil Free

A W/O emulsion based liquid makeup with improved pigment grinds.

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Polyglyceryl-4 Isostearate (and) Cetyl Dimethicone Copolyol (and) Hexyl Laurate (Abil WE-09)	4.50
Cyclomethicone (Abil B 8839)	10.50
Cetyl Dimethicone (Abil Wax 9801)	1.00
Synthetic Wax	0.45
Hydrogenated Castor Oil	0.45
Phase B:	
Talc, USP	5.00
Titanium Dioxide	5.00
Iron Oxides	3.70
Phase C:	
Water	68.90
Sodium Chloride	0.50
Preservatives, Fragrance	Q.S.

Procedure:

Mix the ingredients of Phase A together, heat to 70C. When uniform, cool to 50C. Add Phase B. Mill. Heat water to 50C. Add the sodium chloride. Mix. Gently stream into Phase A/B with lightning mixer. Cool to 35C, add preservatives and fragrance. Homogenize. A very stable soft creamy lotion results with a good pigment dispersion.

Liquid Hand and Facial Cleanser

<u>Ingredients:</u>	<u>% w/w</u>
Water	51.0
Sodium C12-15 Alkyl Sulfate	25.0
Sodium Laureth Sulfate	15.0
PEG-7 Glyceryl Cocoate (Tegosoft GC)	2.0
Cocamidopropyl Betaine (Tego-Betaine L-7)	5.5
Dimethicone Copolyol (Abil B88183)	0.5
Citric Acid	to pH 6.5
Color	Q.S.
Preservatives	Q.S.
Fragrance	Q.S.
PEG-18 Glyceryl Oleate/Cocoate (Antil 171)	1.0
Sodium Chloride-25% solution to adjust viscosity	Q.S.

Procedure:

1. Dissolve the Tetrasodium EDTA in the water.
2. Add ingredients in order, mixing between additions. Avoid air entrapment.
3. Slowly mix in the PEG-18 Glyceryl Oleate/Cocoate.
4. Adjust viscosity with the 25% solution of Ammonium Chloride.

Section V

Creams

All Purpose Cream

<u>Ingredients:</u>	<u>% by Weight</u>
Part A:	
Mineral oil 125/135	10.00
Kessco Isopropyl Palmitate	9.00
Kessco Cetyl Alcohol	5.00
Polowax	5.00
Stearic acid, triple pressed	3.00
Part B:	
Propylene glycol	2.50
Triethanolamine 85%	1.00
Methyl paraben	0.15
Propyl paraben	0.05
Fragrance	Q.S.
D.I. Water	Q.S. to 100

Mixing Procedure:

Heat D.I. water to 65-70C. Add components of Part B with mixing until completely dissolved. Mix the components of Part A until homogeneous and heat to 60-75C. Add Part A to Part B with mixing. Cool to 40-45C and add fragrance, if desired. Cool to 30-35C and package. Consistency develops fully after 24 hours at room temperature.

Physical Attributes:

White, creamy paste
 pH (as is): 7-9
 Freeze thaw stable
 Stable at 50C for two weeks

Comment:

Excellent for dry skin. Very thick and creamy.
 Formulation No. 442

Foundation Cream

<u>Ingredients:</u>	<u>% by Weight</u>
Part A:	
Stearic acid, triple pressed	19.8
Kessco Glycerol Monostearate SEAS	3.0
Kessco Isopropyl Myristate	3.0
Propylene glycol, USP	3.0
Lanolin oil	1.0
Propyl paraben	0.2
Part B:	
D.I. water	69.2
Triethanolamine	0.6
Methyl paraben	0.2

Mixing Procedure:

Blend the components of Part A and heat to 75C with mixing. Blend the components of Part B with mixing and heat to 75C. With constant agitation, add Part A to Part B. Cool with mixing to room temperature.

Physical Properties:

Pearly, white cream
 Viscosity at 25C: 2000 cps
 pH (as is): 7-8

Product was freeze thaw stable, stable at 50C for two weeks

Comment: This foundation cream has a dry feel

SOURCE: Stepan Co.; Formulation No. 436

All-Purpose Dry Skin Cream

Glucquat 125 provides skin conditioning while acting together with the Glucam P-20 Distearate to maintain moisture in the skin. Glucate DO (w/o) and Promulgen D (o/w) act as a nonionic emulsifier pair. Acetulan imparts a smooth, velvety afterfeel while improving rub-in.

Formula:**Water Phase:**

Glucquat 125 (Lauryl Methyl Gluceth-10 Hydroxypropyl-dimonium Chloride)	4.0%
Deionized Water	80.0

Oil Phase:

Glucam P-20 Distearate (PPG-20 Methyl Glucose Ether Distearate)	2.0
Glucate DO (Methyl Glucose Dioleate)	0.5
Promulgen D (Cetearyl Alcohol and Ceteareth-20)	4.5
Acetulan (Cetyl Acetate and Acetylated Lanolin Alcohol)	2.0
Cetal (Cetyl Alcohol)	1.0
Mineral Oil, 70 vis.	5.0
Cetyl Palmitate	1.0
Perfume and Preservative	q.s.

Procedure:

Add Glucquat 125 to deionized water, and heat to 80C with adequate agitation. Combine oil phase ingredients, and heat to 80C with propeller mixing. Slowly add water phase to oil phase, and mix until uniform. When material starts to thicken during cooling, change to slow sweep agitation.

SOURCE: Amerchol Corp.: Formulation T62-126-3

Therapeutic Humectant Creme

This high-powered moisturizer is designed to help heal chapped or cracked skin rapidly. It contains a high concentration of glycerin and is easily prepared at a skin compatible pH of 6. Phospholipid PTS helps create the smoothing properties which are readily perceived.

Part A:

	<u>%</u>
Phospholipid PTS	3.00
Steareth-20	0.20
Glycerin	10.00
Methyl Paraben	0.20
Water	72.60

Part B:

Steareth-2	1.30
Cetyl Alcohol	2.50
Myristyl Myristate	3.50
Finsolv TN	3.00
Hexyl Laurate	2.50
Dimethicone (100 cS)	1.00
Propyl Paraben	0.20

Heat both phases to 65C, and homogenize the oil phase into the water phase. Stir-cool to 40C and add fragrance, coloring or preservative as required. Fill.

Propylene Glycol	2.00
Methyl Parasept	0.25
Allantoin	0.10
Veragel Liquid, 1:10	0.50
d1-Panthenol, Cosmetic Grade (Code 63920)	0.50
Sequestrene Na2	0.20
Ster-O-Pro	1.00
Part II:	
Parso1 1789	1.50
Parso1 MCX	2.00
Emerest 2400	1.50
Brij 72	0.90
Brij 78	3.60
Lexol PG 865	2.00
Finsolv TN	2.00
Propyl Parasept	0.10
Cetyl Alcohol	3.25
Silicone 200 Fluid	0.20
Part III:	
Triethanolamine, 98%	0.28
Vitamin E Acetate, USP-FCC (Code 60526)	0.50
Part IV:	
Collaso1	2.00
Perfume Oil	0.20

Procedure:

Disperse Carbopol in the water with rapid agitation. Add the rest of ingredients in Part I, heat to 75C. Separately heat ingredients in Part II to 75C. When both phases reach 75C, add Part II to Part I, with good mixing. Follow with addition of Triethanolamine and Vitamin E Acetate, each added separately. Remove heat and begin cooling. Continue mixing. When temperature reaches 40C add Collagen and Perfume Oil separately. Continue mixing and allow the batch to cool to room temperature.

Barrier Cream

An elegant water in oil emulsion which resists chemicals and oils better than silicone systems. It has excellent treatment properties contributed by Lanolin and good protection from Ritaplast. For use around grease, oil, dust, chemicals, permanent wave, relaxer and dyes. Easy to manufacture.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Mineral Oil	24.50
2. Ritaplast	20.00
3. Beeswax, Natural	13.00
4. Lanolin USP Extra-Deodorized	10.00
5. Ritalan C	2.00
6. Propylparaben	0.10
7. Ritahydrox	0.30
Part B:	
8. Distilled Water	28.50
9. Borax	1.30
10. Methylparaben	0.10
Part C:	
11. Perfume	0.20

Compounding Procedure:

Heat Part A and Part B to 165F. Add Part A to Part B with mixing. Cool to 120F. Add Part C.

Caution: Do not exceed 168F for compounding. Texture will be affected. Brookfield RVF: Initial Viscosity: 2,800 cps
24 Hour: 10,500 cps

Formula HB-89-L-32/Ref. 106-3

Barrier Cream

An elegant water and oil emulsion with good rub-out, with excellent treatment properties contributed by Lanolin and good protection from Ritaplast. For use around grease, oil, chemicals, permanent waves, relaxer, and dyes. Easy to manufacture.

Barrier Cream
Cold Mix Formula

<u>Ingredients:</u>	<u>%w/w</u>
<u>Phase A:</u>	
Polyglyceryl-4 Isostearate (and) Cetyl Dimethicone Copolyol (and) Hexyl Laurate (Abil WE-09)	5.0
Cetyl Oleate (Tegosoft DO)	5.0
Caprylic/Capric Triglycerides (Tegosoft CT)	5.0
Isopropyl Myristate (Tegosoft M)	5.0
Silica	0.5
<u>Phase B:</u>	
Sodium Citrate (solution)*	20.0
Water	58.7
Hydroxyethylcellulose	0.8
<u>Phase C:</u>	
Fragrance	Q.S.
Preservatives	Q.S.
* 100 G Sodium Citrate/1 liter water. pH adjusted to 5.0 with Citric Acid.	

Procedure:

1. In a vessel, blend together the ingredients of Phase A until uniform.
2. In a separate vessel, disperse the Hydroxyethylcellulose into the water.
3. Add the Phase B slowly to Phase A with agitation.
4. Add Phase C, mix until dispersed
5. Homogenize and dispense.

Emollient Cream
(W/O Emulsion)

<u>Ingredients:</u>	<u>% w/w</u>
<u>Oil Phase:</u>	
Polyglyceryl-4 Isostearate (and) Cetyl Dimethicone Copolyol (and) Hexyl Laurate (Abil WE-09)	5.0
Hydrogenated Castor Oil	0.5
Synthetic Wax	0.5
Mineral Oil (70 SUS)	8.0
Cetyl Dimethicone (Abil Wax 9801)	2.0
Isopropyl Myristate (Tegosoft M)	4.0
<u>Water Phase:</u>	
Water	79.2
NaCl	0.8
Preservatives, Color, Fragrance	Q.S.

Procedure:

1. Add the components of the oil phase together. Heat to melt and disperse the waxes. When dispersed, maintain temperature of 50-60C.
2. Mix the water and sodium chloride. Heat to 50-60C.
3. With lightning mixing, stream the water phase into the oil phase.
4. With sweep agitation, cool to 35C. Add color, fragrance and preservatives.
6. Homogenize with a roto-stator homogenizer.

Cocoa Butter Skin Cream (514145)

Microcrystalline Wax	32.0 wt%
Drakeol 9, Light Mineral Oil USP	29.6
Cocoa butter	28.0
Penreco Snow, White Petrolatum USP	10.0
Vitamin E Acetate	0.2
Allantoin	0.2

Melt the ingredients together with gentle stirring at 75C. When uniform, allow to cool and fill containers just prior to solidification. This cream can be made softer by decreasing the wax or cocoa butter by a few percent and by increasing the Drakeol 9. Alternatively, air can be whipped into the product as it cools for a softer consistency. Drakeol 7 can be substituted for Drakeol 9 with no noticeable difference in product texture or performance.

Moisturizing Cream (514140)

Part A:	
Drakeol 7, Light Mineral Oil USP	47.00 wt%
Laneth-25 (and) Ceteth-25 (and) Oleth-25 (and) Steareth-25	4.00
Glycol Stearate	4.00
Oleth-2	3.00
Cetyl Alcohol	3.00
Part B:	
Deionized water	38.80
Part C:	
Preservatives	0.20

Heat Part A to 70C. Heat Part B to 75C. Add Part B to Part A with stirring. Cool mixture to room temperature with stirring. Add Part C to the mixture below 60C, and add fragrance (if desired) below 45C.

SOURCE: Penreco: Penreco Cosmetic Formulary

Cold Cream (514021)

D Ideal for removing makeup, this glossy white cream goes on smoothly and leaves a silky, nongreasy afterfeel. Also, this cream can be used as a moisturizer all over the body.

Deionized water	49.6wt%
Drakeol 9, Light Mineral Oil USP	33.0
White Beeswax	16.5
Sodium borate	0.9
Preservatives	q.s.

Mix all ingredients together and heat to 70C with stirring. Agitate while cooling to room temperature. Add fragrance at 45C if desired.

Dry Skin Cream (514105)

This cream is opaque, white, and fluffy and goes on smoothly and leaves the skin feeling smooth and moisturized.

Part A:

Penreco Snow, White Petrolatum USP	35.00wt%
Sorbitan Sesquioleate	3.00
Mineral Oil (and) Lanolin Alcohol	2.00

Part B:

Deionized water	59.46
Carbopol 934	0.27
Triethanolamine	0.27

Part C:

Fragrance and preservatives	q.s.
-----------------------------	------

Disperse the Carbopol in the water at 70C. Add the triethanolamine. Heat Part A separately to 70C. Add Part A to Part B with stirring, and stir while cooling to 25C. At 45C, add preservatives and fragrance.

Emollient Cream (514124)

Part A:

Deionized water	70.50wt%
Glycerin	5.00
Triethanolamine	0.25
Carbopol 934	0.20

Part B:

Isopropyl myristate	7.00
Drakeol 7, Light Mineral Oil USP	5.60
Stearic Acid	3.50
Cetyl Alcohol	1.00
Laneth-16 (and) Ceteth-16 (and) Oleth-16 and Steareth-16	0.75
PEG-20 Glyceryl Stearate	0.75
Lanolin Alcohol	0.50
Polysorbate 80	0.50
Dimethicone, 200 cSt	0.50
Preservatives	0.35
Cellulose Gum	0.10

Heat Part A to 60C with stirring. Separately, heat Part B to 70C with stirring. Add Part B to Part A slowly with stirring. Let stir until room temperature is reached. Any desired fragrance may be added when the mixture temperature is below 45C.

SOURCE: Penreco; Penreco Cosmetic Formulary

Collagen Cleansing Cream

A collagen cleansing cream with Ritachol emollients and glycerin as a humectant.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Glyceryl Stearate	3.00
2. Ritachol	4.00
3. Mineral Oil (Light)	20.00
4. Ritachol 2000	3.00
Part B:	
5. Distilled Water	63.00
6. Glycerin	5.00
Part C:	
7. Ritacollagen BA-1	2.00
8. Preservative	QS
9. Fragrance	QS

Compounding Procedure:

Combine ingredients in Part A in mixing tank and heat to 70C. Combine ingredients in Part B and heat to 70C with agitation. Add Part A to Part B with mixing and cool to 40C. Add C, cool and package.

Formulation HB-89-R-21

Collagen Facial Washing Cream

A superfatted cleansing cream which can be tissueed off or washed away. Contains Ritachol as an emollient with glycerin and Pationic ISL to prevent drying.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Ritachol	2.00
2. Mineral Oil	2.00
3. Stearic Acid XXX	13.40
4. Propylene Glycol (and) Potassium Stearate	3.50
5. Propylparaben	0.05
Part B:	
6. Pationic ISL	2.00
7. Potassium Coco-Hydrolyzed Animal Protein	5.00
8. Glycerin	1.70
9. Triethanolamine (50%)	1.50
10. Distilled Water	66.22
11. Methylparaben	0.10
Part C:	
12. Kathon CG	0.03
13. Perfume	QS
Part D:	
14. Ritacollagen BA-1	2.50

Compounding Procedure:

Heat Parts A and B separately to 70-75C until dissolved. Add Part A to Part B with agitation. Mix and cool batch to 50C and add Part C. Cool batch with agitation to 29C, add Part D and fill.

Formulation HB-89-R-27

Cream

To diminish visible signs of aging; help restore and maintain a younger look.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	59.30
2. dl-Panthenol	1.00
3. Magnesium Aluminum Silicate	2.00
4. Montmorrillonite	3.00
5. Methylparaben	0.40
6. Propylparaben	0.40
7. Ritaderm	0.50
8. Corn Starch	4.00
9. Bovinal 30	20.00
10. Sorbitol	5.00
11. Selastin EL 30	3.00
12. Vitamin E	1.00
13. Quaternium-15	0.20
14. Ritasilk	0.20

Compounding Procedure:

Weigh and add distilled water into a container and begin stirring. Add Magnesium aluminum silicate and stir until the material is completely hydrated and no lumps of the material are visible. Add the Montmorrillonite and continue stirring until no lumps can be seen or felt. Begin heating this blend. Heat the blend to 70-73C, and add Methylparaben and Propylparaben. Continue heating, while continuing to stir. (An agitator capable of imparting relatively high shearing stress should be used, i.e. a variable speed agitator equipped with a propeller stirrer is recommended). Add the Ritaderm and Corn Starch and continue stirring until the blend is thoroughly smooth and free of lumps which can be seen or felt. Begin cooling the batch. Cool to 40-43C and add the remaining ingredients, while continuing to stir. Cool the batch to 25-30C and package into suitable containers.

Dry Skin Treatment Cream

An oil/water emollient emulsion with Glycerin as a moisturizer.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Distilled Water	64.55
2. Acritamer 941	0.15
3. Glycerin	5.00
Part B:	
4. Ritachol 1000	12.50
5. Patlac IL	1.00
6. Mineral Oil	10.00
7. Ritalan C	2.50
8. Ritachol	4.00
Part C:	
9. Triethanolamine (50%)	0.30
Part D:	
10. Color, Fragrance, Preservatives	QS

Compounding Procedure:

Disperse the Acritamer in water and Glycerin and heat to 70C. Combine ingredients in Part B and heat to 70C. Add Part B to Part A with agitation. Avoid aeration. Add Part C to Parts A and B and begin cooling. Cool to 30C. Add color, fragrance and preservatives. Package.

Formulation H-89-A-15

Dry Skin Night Cream

This is a smooth, creamy textured emulsion especially helpful for people with excessively dry skin. Ritalan C and lotion have been included for emulsion stabilization, as well as the amelioration of dry skin.

<u>Ingredients:</u>	<u>% W/W</u>
1. Beeswax	13.00
2. Paraffin Wax	1.50
3. Mineral Oil	30.00
4. Petrolatum	13.00
5. Ritalan C	2.00
6. Lanolin	10.00
7. Propylparaben	0.10
8. Distilled Water	+29.00
9. Sodium Borate	1.30
10. Fragrance	QS
11. Methylparaben	0.10
12. Color	QS

Compounding Procedure:

Weigh and add item 1 through item 7 into a sweep-mixer and begin heating and stirring. Heat to 70-73C. Weigh and add items 8, 9 and 11 into a side container and begin heating and stirring. When both the Ritalan C- and water-containing blends are at 70-73C, add the Ritalan C- containing blend to the water containing blend while continuing to stir. When all the Ritalan C- containing blend has been added, begin cooling the batch. Cool to 40-43C and add the remaining ingredients. Continue to stir and cool. Cool to 25-30C and package fill into suitable containers.

Formulation HB-89-L-28

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Emollient Vanishing Cream

This gentle, non-ionic oil/water emulsion formulation can be used to help soften and smooth skin in the area of the eye. Ritachol and Ritasol impart emollient and lubricating properties that assist in keeping the skin soft and supple. Ritapro is used as the primary emulsifying agent. Forlan L contributes additional emulsifying benefits while offering lanolin related conditioning qualities.

<u>Ingredients:</u>	<u>% W/W</u>
1. Ritapro 100	7.50
2. Stearyl Alcohol	2.50
3. Mineral Oil (65/75 saybolt)	6.00
4. Ritachol	5.00
5. Ritasol	2.00
6. Forlan L	1.00
7. BHA	0.10
8. Sorbic Acid	0.20
9. Propylparaben	0.10
10. Distilled Water	70.20
11. Acritamer 941	0.10
12. Glycerin	5.00
13. Methylparaben	0.20
14. Triethanolamine (50%)	0.20

Compounding Procedure:

Weigh and add items 1 through 9 into a container and heat to 70-73C. Weigh and add item 10 into another container and slowly sprinkle in item 11 while stirring with a variable speed agitator capable of imparting relatively high shearing stress. Stir until the Acritamer 941 has thoroughly dispersed and hydrated and no lumps can be seen or felt.

Add the remaining ingredients and heat to 70-73C. When the blend containing Ritapro 100 and the blend containing water are both at 70-73C, add the water-containing blend to the blend containing the Ritapro 100 while stirring continuously to ensure adequate emulsification. Begin cooling. Cool to 25-30C and package.

Extra Body Conditioning Cream

<u>Ingredients:</u>	<u>% w/w</u>
Water	90.05
Stearamidopropyl Dimethylamine (Tegamine 18)	1.50
Citric Acid-Monohydrate	0.60
Glyceryl Stearate S.E. (Tegin)	3.00
Ceteth-2	1.50
Cetyl Alcohol	0.50
Sodium Chloride	0.60
Behenoxy Dimethicone (Abil Wax 2440)	0.35
Propylene Glycol	1.00
Quaternium-80 (Abil Quat 3272)	0.50
Dimethicone Copolyol (Abil B 8851)	0.40
Color, Preservatives, Fragrance	Q.S.

Procedure:

1. Heat the water to 70-75C. Add the Tegamine 18. Disperse well. Add the Citric Acid. Mix well. NOTE: To facilitate mixing, some water can be held from the batch to dissolve the Citric Acid prior to adding to the batch.
2. Add the Ceteth-2 Cetyl Alcohol, Sodium Chloride and Abil Wax 2440. Mix.
3. Begin cooling. Cool to 45-50C while mixing. Mix the Propylene Glycol and the Abil Quat 3272 together and add to the batch. Mix.
4. Switch to sweep mixer. Cool to 35-40C. Add the Abil B 8851, Color, Preservatives, and Fragrance. Mix.
5. Continue cooling. Fill.

Greaseless Hand Cream

This non-mineral oil cream leaves the skin soft and smooth without being oily or greasy. It is pH balanced to match the pH of the skin with Patlac LA.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Cetyl Alcohol	6.00
2. Glyceryl Stearate	5.00
3. Patlac IL	3.50
4. Supersat AWS 4	1.50
5. Propylparaben	0.05
Part B:	
6. Distilled Water	80.06
7. Glycerin	3.50
8. Methylparaben	0.10
9. Sodium Hydroxide (20% Solution)	0.29

Compounding Procedure:

Heat Parts A and B to 165F. Add Part A to Part B with mixing. Maintain temperature and mixing for 10 minutes. Cool with mixing. Adjust pH to 5.5 with Sodium Hydroxide. Adjust pH to 5.5.
Formulation HB-89-L-13

W/O Night Creme

A rich water in oil emulsion to be used as a night treatment. This is also an excellent w/o vehicle for additives.

<u>Ingredients:</u>	<u>% W/W</u>
1. Ritachol	20.00
2. Pationic CSL	7.20
3. Grilloten LSE 87K	1.00
4. Shebu	1.50
5. Glycerin	5.00
6. Distilled Water	65.30
7. Color, Perfume, Preservative	QS

Compounding Procedure:

Combine items 1-4 and heat to 70C. Combine items 5 and 6 and heat to 70C. Combine both phases and cool with mixing to 45C, add perfume, preservative and color.

Formulation HB-89-S-5

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Hand Cream

<u>Ingredients:</u>	<u>% by Weight</u>
Deionized Water	90.60
Neobee M-5	3.75
Kessco Cetyl Alcohol	2.00
Stearyl Alcohol	1.25
Petrolatum	1.15
Drewpol 3-1-0	0.50
Sodium Stearate	0.40
Propyl Paraben	0.20
Methyl Paraben	0.15
Fragrance	Q.S.

Mixing Procedure:

Phase A:

Add D.I Water to a suitable mixing vessel and heat to 50C. Begin agitation and disperse Sodium Stearate. Continue heating until temperature reaches 65C then add Methyl Paraben. Maintain temperature at 65C then continue mixing.

Phase B:

Add Kessco Cetyl Alcohol, Stearyl Alcohol, Drewpol 3-1-0, Petrolatum, Neobee M-5 and Propyl Paraben to a suitable mixing vessel. Begin agitation and heat to 70C.

Add Phase B to Phase A with quick agitation. Continue quick agitation for 10-15 min., making sure temperature doesn't exceed 70C. Slow agitation to moderate speed and begin cooling until temperature reaches 40C. Add Fragrance, and color if desired. Cool to 25C and fill.

Typical Properties:

Appearance: White, viscous cream

Viscosity @ 77F: 4000-5500 cps

pH (as is): 6-7

Passed three cycles of freeze thaw

Passed two weeks of stability testing at 50C

Comment:

Silky, dry feeling cream

SOURCE: Stepan Co.: Formulation No. 591

Hand and Nail Cream

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Polyglyceryl-4 Isostearate (and) Cetyl Dimethicone Copolyol (and) Hexyl Laurate (Abil WE-09)	5.00
Mineral Oil	6.00
Beeswax	0.80
Hydrogenated Castor Oil	0.80
Cetyl Dimethicone (Abil Wax 9801)	0.50
Behenoxy Dimethicone (Abil Wax 2440)	0.20
Cyclomethicone (Abil B 8839)	4.50
Cetyl Octanoate (Tegosoft CO)	2.50
Cetearyl Octanoate (Tegosoft Liquid)	2.50
Phase B:	
Water	70.20
Sodium Chloride	0.50
Quaternium-80 (Abil Quat 3272)	0.50
Propylene Glycol	5.00
Urea	0.50
Preservatives	Q.S.
Phase C:	
Fragrance	Q.S.

Procedure:

1. Add the components of Phase A. Heat while mixing to 80C to incorporate the waxes. Cool to 50C.
2. Heat Phase B to 50C. Add B to A slowly with a low energy mixer. Maintain a smooth milky appearance at all times.
3. Cool to 35C with sweep mixer. Add fragrance.
4. Homogenize.

SOURCE: Goldschmidt Chemical Corp.: Suggested Formulation

Hand Cream

Oil Phase:	
Amersil VS-7158 (Cyclomethicone)	4.00%
Amersil L-45/1000 (Dimethicone)	1.50
PEG-20	2.00
Glucate IS (Methyl Glucose Sesquiosostearate)	3.00
Promulgen D (Cetearyl Alcohol and Cetareth-20)	3.00
Cetal (Cetyl Alcohol)	3.00
Caprylic/Capric Triglyceride	2.00
Water Phase:	
Glucam E-20 Distearate (Methyl Gluceth-20 Distearate)	3.00
Glucam E-20 (Methyl Gluceth-20)	3.00
Amercell Polymer HM-1500 (Nonoxynyl Hydroxycellulose)	0.90
Deionized Water	74.60
Perfume and Preservative	q.s.

Procedure:

Prepare an aqueous solution of Amercell Polymer HM-1500 by adding it to water at room temperature with rapid stirring. When well dispersed, heat to 75C and mix until uniform. Use this solution as part of the water phase. Add remaining water phase ingredients. Heat the oil phase to 75C. Add water phase to oil phase with agitation. Continue to mix and cool to room temperature.

Hydroquinone Bleach Cream

This formulation is well designed to be applied morning and night to discolored areas of the skin and rubbed in well. It may be used under makeup. However, if no improvement is noticed after a time interval of two months, the product should be discontinued. This formulation contains a sun screen agent, which helps prevent the recurrence of the discolored spots when exposed to sunlight. The product should not be used on broken or irritated skin and contact with the eyes should be avoided. Sensitivity to the active ingredient, which may be experienced by some individuals, should be treated with discontinuance. The formulation contains Ritalan, which is 100% pure lanolin oil. Ritalan has been incorporated for its lubricating and emolliency attributes, as well as the fact that it is an excellent moisturizing agent for those persons with dry skin. Ritachol has also been added for emolliency, as well as auxiliary emulsification properties.

<u>Ingredients:</u>	<u>% W/W</u>
1. Glyceryl Monostearate (self-emulsifying)	6.15
2. Ritapro 165	4.75
3. Ritachol	5.00
4. Ritalan	1.00
5. Methylparaben	0.10
6. Propylparaben	0.05
7. Distilled Water	78.05
8. Sodium Bisulfate	0.20
9. Sodium Metabisulfite	0.20
10. Forlan C-24	0.50
11. Citric Acid (to pH of 3.5 to 4.0)	QS
12. Hydroquinone	2.00
13. Octyl Dimethyl Paba	2.00
14. Perfume	QS

Compounding Procedure:

Weigh items 1-4, 6 and 13 into a container and heat mixture to 70-73C with agitation. Weigh items 7-10 into a container and heat mixture to 70-73C with agitation. Add phase 2 to phase 1 with agitation. Cool mixture to 45C. Add remaining ingredients (5, 11, 12 and 14) to batch*. Cool to 25-30C with agitation. Pour into containers.

***NOTE:**

It may be desirable to pass material through ointment mill or equivalent at this point.

SOURCE: R.I.T.A. Corp.: Formulation HB-89-R-19

Moisturizing Cream

The moisturizing cream formulation given here forms a smooth, creamy textured product. Ritaderm has been added to help alleviate skin dryness, roughness and chapping by imparting the qualities at both the lipid layer of the skin and the natural moisturizing factors. The product leaves skin soft, smooth, dry and dewy fresh.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Ritachol 1000	3.00
2. Rita CA	3.00
3. Rita GMS	1.50
4. Stearic Acid (triple pressed)	2.25
5. Ritachol	2.00
6. Ritaderm	10.00
7. Mineral Oil, 70 wt.	4.00
8. BHA	0.10
9. Propylparaben	0.10
Part B:	
10. Distilled Water	68.55
11. Acritamer 940	0.10
12. Glycerin	5.00
13. Methylparaben	0.10
14. Triethanolamine (50%)	0.20
15. Quaternium 15	0.10
16. Perfume	QS

Compounding Procedure:

Weigh and add items 1-9 into a container and begin stirring and heating. Heat to 70-73C while stirring continuously. Weigh and add item 10 into a container and begin stirring. The use of an agitator equipped with a stirrer capable of imparting relatively high shearing stress is recommended. Add item 11 and stir until a homogeneous lump-free dispersion results. Add items 12, 13 and 14 and begin heating, heat to 70-73C. When both Parts A and B are at 70-73C, add Part B to Part A while stirring continuously. When all of Part B has been added, begin cooling. Cool to 40-43C and add the remaining ingredients. Continue stirring and cooling to 35C. Package.

Moisturizing Cream with Aloe Vera

This formula is a soft, creamy-textured oil in water emulsion containing Ritalan C for emolliency and lubricating properties. This formulation contains Ritaderm and Ritaloe 200 for skin conditioning and moisturizing.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	68.20
2. Acritamer 941	0.10
3. Methylparaben	0.10
4. Ritachol 1000	12.00
5. Ritalan C	1.00
6. Mineral Oil 65/70	10.00
7. Ritachol	3.00
8. Ritaderm	5.00
9. Propylparaben	0.10
10. BHA	0.10
11. Triethanolamine (50%)	0.20
12. Ritaloe 200	0.05
13. Perfume	QS
14. Color	QS
15. Quaternium 15	0.15

Compounding Procedure:

Weigh and add the distilled water into a container and begin mixing. A variable speed agitator equipped with a stirrer capable of imparting relatively high shearing stress is recommended. Sprinkle in the Acritamer 941, while stirring continuously. Begin heating, while continuing to stir. Heat to 70-73C and add item 3 (Methylparaben). Stir until the Acritamer 941 has been dispersed, so that no lumps can be seen or felt. Add items 11 and 12 into container and begin stirring and heating to 70-73C. When both blends are at 70-73C, add the water-containing blend to the blend containing the Ritaderm. When all the water-containing blend has been added, begin cooling the batch. Cool to 40-43C and add the remaining ingredients. Cool to 25-30C and package into suitable containers.

	Isopropyl Lanolate (Amerlate P)	5.50
	Acetylated Lanolin Alcohol (Acetulan)	5.30
	Glyceryl Stearate SE (Tegin)	3.50
	Stearic Acid	2.70
	Antimicrobials (oil soluble)	q.s.
	Antioxidants	q.s.
B	Propylene Glycol	5.00
	Triethanolamine	1.00
	Water (q.s. to 100%)	64.00
	Antimicrobials (water soluble)	q.s.
	Fragrance	q.s.
C	Flamenco Ultra Silk	9.00
	Cloisone' Super Bronze 240Z	1.00

Procedure:

- I. Heat Phases A and B in separate vessels to 80+-3C.
- II. Mix Phase B into Phase A. Then cool to 40+-3C. At this point add Phase C and mix until the pigment is well dispersed.
- III. Continue mixing and fill.

Protective Day Cream for Normal Skin

<u>Ingredients:</u>	<u>% by Wt.</u>
Part I:	
Parsol 1789	1.50
Parsol MCX	2.00
Robane	1.00
Emersol 132	2.50
Cetyl Alcohol, NF	1.00
Stearyl Alcohol, NF	0.50
Klearol Mineral Oil	8.00
Lipovol ALM	5.00
Myverol 18-00	2.50
Spermwax	2.00
Delyl Extra	4.00
Tenox BHA	0.05
Propyl Parasept	0.10
Part II:	
Deionized Water	58.55
Propylene Glycol	4.00
Methyl Parasept	0.25
Carbopol 940	0.25
Miranol CM Conc. N.P.	0.50
d1-Panthenol, Cosmetic Grade (Code 63920)	0.50
Ajidew N-50	1.00
Sequestrene Na2	0.20
Part III:	
Triethanolamine, 98%	0.80
Part IV:	
Collasol	2.00
Part V:	
Vitamin E Acetate, USP-FCC (Code 60526)	1.50
Perfume Oil	0.30

Procedure:

Mix together all ingredients in Part II except the Carbopol. Heat to 85C. Sift in Carbopol mixing with an Eppenbach homomixer until uniform. Heat Part I to 85C and Part I to Part II. Follow with addition of Triethanolamine while still using the Eppenbach. Stir with a paddle mixer until temperature reaches 40C. Add Part IV and Part V. Continue mixing until homogeneous.

SOURCE: Roche Chemical Division: Formula SC 412

Skin Conditioning Cream

White, glossy, heavy viscosity cream. Humectancy and smooth, silky afterfeel attributed to Kytamer PC and Glucam E-10. Amerlate P helps rub-in of cream onto skin by providing lubricity properties. Primary emulsification of system due to highly efficient, mild, nonionic emulsifier pair of Glucamate SSE-20 (o/w) and Glucate SS (w/o).

Water Phase:

Kytamer PC (Chitosan PCA)	0.5%
Glucam E-10 (Methyl Gluceth-10)	5.0
Glucamate SSE-20 (PEG-20 Methyl Glucose Sesquistearate)	1.0
Deionized Water	65.5

Oil Phase:

Promulgen G (Stearyl Alcohol and Cetareth-20)	5.0
Amerchol L-101 (Mineral Oil and Lanolin Alcohol)	4.0
Amerlate P (Isopropyl Lanolate)	3.0
Glucate SS (Methyl Glucose Sesquistearate)	1.0
Mineral Oil	15.0
Perfume and Preservative	q.s.

Procedure:

Disperse Kytamer PC in water with highspeed agitation. When completely dispersed heat to 75C with continuous mixing until clear and uniform. Add Glucamate SSE-20 while maintaining temperature of water phase at 75C. Heat oil phase to 75C. Add water phase at 75C to oil phase at 75C with good agitation. Continue mixing while slowly cooling to room temperature. Add perfume below 50C.

Formula T60-28-1

Greaseless Night Cream

This luxurious w/o night cream provides long-lasting moisturization in a simple and basic vehicle which leaves the skin feeling soft, smooth and silky without the greasy aesthetics often encountered in night cream formulations. Glucate IS is a powerful w/o emulsifier which combines the large internal water phase into the much smaller external oil phase. Glucam E-10 is well known as a efficient humectant and emollient.

Phase A:

Water	78.3%
Glucam E-10 (Methyl Gluceth-10)	1.0

Phase B:

Mineral Oil, 70 vis.	15.0
Magnesium Sulfate Trihydrate	0.7
Glucate IS (Methyl Glucose Sesquistearate)	5.0

Phase C: Preservative

q.s.

Phase D: Fragrance

q.s.

Procedure: Heat phase A to 80-82C with mixing. Heat phase B to 80-82C with mixing. When both phases are homogeneous at 80-82C, increase the mixing speed and slowly add phase A to phase B. Continue mixing until the combined phases have cooled to 40-42C. Add phase C followed by phase D. Cool further to 28-32C. Homogenize completed formula until a uniform glossy appearance is developed.

	Germaben II	0.1
	Citric Acid, 50%	0.1

pH: 6.0-6.5

Viscosity: 600,000-620,000 cps (Brookfield TD @ 0.3 rpm)
38,000- 43,000 cps (Brookfield #4 @ 3 rpm)

Appearance: Firm, glossy white cream

Procedure:

Disperse the hydroxypropyl methylcellulose in the part A water, mixing for at least 10 minutes. Add the Na₄EDTA and triethanolamine to initiate hydration. Begin heating part A to 65C. Blend the part B ingredients in a separate vessel, heating to 65C. Add part B to part A with good agitation to form the emulsion. Maintain agitation while cooling the batch to 40-45C. Dissolve the quaternium-15 in the part C water, and add to the batch. Add the Germaben II, and adjust pH with citric acid solution.

Throat and Neck Cream

	<u>% Weight</u>
Phase A:	
Hexyl Laurate (Cetiol A)	12.50
Glyceryl Stearate (Cutina GMS)	3.00
PEG-40 Stearate (Emerest 2715)	3.00
Dimethicone, 100 cps. (Dow Corning 200 Fluid)	0.10
Cetearyl Alcohol (Lanette O)	2.80
PEG-6000 Distearate	0.30
Phase B:	
Propylene Glycol	6.00
Xanthan Gum	0.20
Magnesium Aluminum Silicate (Veegum)	0.40
Trisodium EDTA	0.05
Water	65.50
Phase C:	
Hydrolyzed Animal Elastin (Elastin CLR)	5.00
Germaben II	1.00
Fragrance	0.15

Procedure:

Mix and heat phase A to 70-75C. Preblend Veegum and xanthan gum. Slowly add to water while agitating at maximum available shear. Mix until smooth. Add the trisodium EDTA and the propylene glycol and heat to 70-75C. Add Phase A to Phase B at 70-75C, stir at temperature for 15 minutes. Mix while cooling to 40C, add Phase C. Cool to 30C and package.

Night Time Moisturizing Cream

	<u>% Weight</u>
Phase A:	
Mineral Oil	10.00
Octyl Palmitate (Ceraphyl 368)	2.00
Stearic Acid (Emersol 132)	4.00
Glyceryl Stearate SE (Cerasynt Q)	3.00
PEG-40 Stearate (Myrj 52S)	1.00
Dimethicone Copolyol (Abil B8852)	1.00
Lanolin Oil	0.50
Phase B:	
Water	74.75
Triethanolamine, 99%	1.30
Acrylates/Octylpropenamide Copolymer (Dermacryl-79)	1.00
Phase C:	
Carbomer-934 (Carbopol 934)	0.25
Phase D:	
Germaben II-E	1.00
Phase E:	
Fragrance	0.20

Procedure:

Heat water and triethanolamine to 80C. Slowly sift in Dermacryl-79 and mix until completely dissolved. Slowly sift in Carbopol 934. In separate vessel, combine phase A and heat to 80C until clear with mixing. Add Phase A to Phase B and mix thoroughly at 80C for 30 minutes. Cool to 40C, add Phase D and Phase E.

Under Make-Up Cream Base

An oil/water emulsion with Cetyl Alcohol and Lactylate to soften and moisturize the skin.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Distilled Water	84.80
2. Propylene Glycol	5.00
3. Acritamer 934	0.20
Part B:	
4. Ritachol 2000	3.00
5. Cetyl Alcohol	2.00
6. Patlac IL	2.00
7. Pationic ISL	2.00
8. Pationic 138C	0.60
Part C:	
9. Triethanolamine (50%)	0.40
Part D:	
10. Color, Fragrance, Preservatives	QS

Compounding Procedure:

Disperse the Acritamer in water and Propylene Glycol. Heat to 70C. Combine ingredients in Part B and heat to 70C. Add Part B to Part A. Mix until uniform. Add Part C and begin cooling. Cool to 30C. Add color, fragrance and preservatives. Package.

Formulation H-89-A-16

Cleansing Cream

A non-soap cleansing cream with Ritachol emollients and Lactylates for surfactancy, cleansing and moisturizing.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Mineral Oil, 65/70	15.00
2. Ritachol 1000	5.00
3. Ritachol	3.00
4. Patlac IL	3.00
5. Pationic CSL	2.00
6. Pationic 138C	1.00
7. Shebu Refined	1.00
Part B:	
8. Distilled Water	65.00
9. Glycerin	5.00
Part C:	
10. Preservatives	QS
11. Fragrance	QS

Compounding Procedure:

Heat Parts A and B to 70C. Add Part A to Part B with agitation. Mix 15 minutes. Begin cooling with agitation. Cool to 45C. Add Part C. Cool to 27C and package.

Vitamin Replenishing Cream

<u>Ingredients:</u>	<u>% by Wt.</u>
Part I:	
Deionized Water	60.00
Carbopol 940	0.25
Propylene Glycol, USP	4.40
Methyl Parasept	0.25
Biotin, FCC (Code 63344)	0.05
dl-Panthenol, Cosmetic Grade (Code 63920)	1.00
Part II:	
Cetal	1.50
Super Hartolan	1.00
Carnation Mineral Oil	9.00
Emersol 132	2.40
Witcamide MAS	1.00
Sesame Oil, NF	4.20
Propyl Parasept	0.10
Silicone 200 Fluid	2.00
Butylated Hydroxytoluene	0.06
Vitamin E Acetate, USP-FCC (Code 60526)	1.00
Part III:	
Triethanolamine, 98%	0.90
Part IV:	
Germall 115	0.25
Vitamin A & D3 Blend (5:1 Ratio) (Code 63857)	1.00
Part V:	
Perfume Oil (PA 62053)	0.30
Part VI:	
Deionized Water	9.34

Procedure:

- A. Sift Carbopol 940 into water and dissolve using Eppenbach homomixer. Add remaining ingredients of Part I stirring well after each addition. Heat to 75C.
- B. Weigh Part II ingredients into separate kettle. Heat to 75C. Stir until completely homogeneous.
- C. Add Part II into Part I using the Eppenbach homomixer. Stir for 5 minutes.
- D. Add Part III and stir vigorously.
- E. Cool to 35C while stirring with a paddle mixer. Add Part IV. Stir slowly to avoid aeration.
- F. Add Part V. Stir for 5 minutes.
- G. Q.S. with water.
- H. Transfer to suitable containers. Protect from light.

Water/Oil Moisturizing Night Cream with a High Oil Content

This relatively high oil content moisturizing night cream is a w/o emulsion offering superior lubricating and moisturizing attributes. Forlan L serves as an auxiliary water/oil emulsifier to assist in emulsion stabilization. Forlan L also contributes to the lubricating and moisturizing qualities usually associated with lanolin. This product should be especially beneficial to individuals with excessively dry skin.

Ingredients:

	<u>% W/W</u>
1. Beeswax	3.00
2. Forlan L	20.00
3. Sorbitan Sesquioleate	2.50
4. Rita SA	0.34
5. Propylparaben	0.10
6. Petrolatum	26.85
7. Distilled Water	+-47.01
8. Methylparaben	0.10
9. Fragrance	QS
10. Quaternium-15	0.10

Compounding Procedure:

Weigh and add items 1 through 6 into a container and begin heating and stirring. While stirring continuously, heat the blend to 70-73C. Weigh and add items 7 and 8 into another container and begin heating and stirring. Heat this blend to 70-73C. When both blends are at 70-73C, add items 1 through 6 to the premix of items 7 and 8. Stir continuously. Mix until uniform. Cool with mixing to 35-40C and add items 9 and 10. Cool to 25-30C and package fill into suitable containers.

Note: 1 to 2% of Patlac IL (Isostearyl lactate) may be added to improve rub out.

Formulation HB-89-L-29

Night Creme

This oil-in-water night creme uses Pationics as its primary emulsifiers. They are also substantive humectants. The product is smooth and creamy because of the addition of Ritawax, Ritachol and Ritachol 1000 as emollients.

Ingredients:

	<u>% W/W</u>
1. Mineral Oil	8.00
2. Ritachol	4.00
3. Ritachol 1000	8.00
4. Pationic SSL	6.00
5. Glycol Stearate	5.00
6. Pationic ISL	2.00
7. Ritawax	1.00
8. Distilled Water	61.00
9. Propylene Glycol	5.00
10. Color, Fragrance and Preservative	QS

Compounding Procedure:

Combine items 1-7 and heat to 70C. Combine items 8 and 9 and heat to 70C. Combine both ingredient phases with mixing. Cool with mixing to 45C. Add remaining ingredients. Cool to 35C.

b) Alkalizing agent in the form of a gel

Carboxylic vinyl polymer	0.7g
Water, completely desalted	97.6g
Ammonia solution (25%)	1.7g

c) Alkalizing agent in the form of an emulsion

Oleylcetylalcohol, oxyethylated with 7 to 8 moles of ethylene oxide	5.0g
Paraffinum liquidum	15.0g
Water, completely desalted	78.5g
Monoethanolamine	1.5g

d) Alkalizing agent in the form of an emulsion

Cetylstearylalcohol	5.0g
Cetyltrimethylammoniumchloride (50% aqueous-alcohol solution)	2.0g
Water, completely desalted	91.5g
Trisodium phosphate	1.5g

All percentages used in this application are intended to refer to percentages by weight.

Containing a Chitosan Derivative

Clear Conditioner

This uncommon, oil-free clear conditioner is especially designed for hair that needs good conditioning and extra body. Lexquat AMG-WC furnished excellent wet and dry combability and adds softness to the hair without the typical heavy film associated with many conditioners. Although Lexquat AMG-WC is highly substantive it will not build up through repeated applications. This product leaves even limp, fine hair manageable, clean and lively.

Part A:	<u>%(w/w)</u>
Deionized water	80.65
Methocel E4M (Hydroxypropylmethylcellulose)	0.75
Part B:	
Myristamine Oxide	10.00
Lexquat AMG-WC (Cocamidopropyl Dihydroxypropyl Dimonium Chloride)	5.00
Propylene Glycol USP	3.00
Lexgard M (Methylparaben)	0.30
Lexgard P (Propylparaben)	0.10
Fragrance	0.20
Citric Acid	qs to pH

Procedure:

Charge batch vessel with water and begin mixing and heating to 75C. Dust in Methocel. When completely hydrated, cool to 35C and add part B to batch. Cool to room temperature.

Adjusted pH (direct): 4.5-0.2

Formulation CD-100

Clear Conditioner

This clear conditioner is formulated for hair that requires good conditioning. It makes the hair fluffy, gives softness and shine, and hides damaged, split ends.

Part A:	<u>%(w/w)</u>
Deionized Water	79.20
Methocel E4M (Hydroxypropylmethylcellulose)	0.80
Part B:	
Myristamine Oxide	10.00
Lexquat AMG-BEO (Behenamidopropyl Dihydroxypropyl Dimonium Chloride)	4.50
Propylene Glycol USP	5.00
Lexgard M (Methylparaben)	0.20
Lexgard P (Propylparaben)	0.10
Fragrance	0.20
Citric Acid	qs to pH

Procedure:

Charge the batch vessel with water and begin mixing and heating to 78C+-2C. Dust Methocel slowly into water with agitation. When completely hydrated, cool to 35C and add part B to batch. Adjust pH to 4.5+-0.2 then cool to room temperature.

Observation:

Viscosity @ 25C: 4000 cps

SOURCE: Inolex Chemical Co.: Formulation CD-103

Clear Conditioner

This oil-free, clear conditioner is designed for hair that needs good conditioning and extra body. It leaves even limp, fine hair manageable, clean and lively.

Part A:	<u>%(w/w)</u>
Deionized water	79.80
Methocel E4M (Hydroxypropylmethylcellulose)	0.70
Part B:	
Myristamine Oxide	10.00
Lexquat AMG-IS (Isostearylamidopropyl Dihydroxypropyl Dimonium Chloride)	4.00
Propylene Glycol USP	5.00
Lexgard M (Methylparaben)	0.20
Lexgard P (Propylparaben)	0.10
Fragrance	0.20
Citric Acid (pH=7.0+-0.2)	0.20

Procedure:

Charge batch vessel with water and begin mixing and heating to 78+-2C. Dust Methocel slowly into water with agitation. When completely hydrated, cool to 35C. Add part B to batch. Adjust pH. Cool to room temperature.

Observations:

pH (direct): 7.0(7.2-6.8)

Viscosity @ 25C: 1550 cps

Formulation CD-102

Clear Conditioner

This clear conditioner is formulated for hair that requires good conditioning. It makes the hair fluffy, gives softness and shine, and hides damaged, split ends.

Part A:	<u>%(w/w)</u>
Deionized water	79.20
Methocel E4M (Hydroxypropylmethylcellulose)	0.80
Part B:	
Myristamine Oxide	10.00

Clear Conditioner

A viscous, clear conditioner which repairs, reduces static, moisturizes and adds luster.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Propylene Glycol	5.00
2. HEC QP 5200	0.80
3. Methylparaben	0.10
Part B:	
4. Distilled Water	51.15
5. EDTA	0.10
Part C:	
6. Ammonyx KP	6.00
7. Ammonyx LO	1.00
8. Laneto 50	0.75
9. dl-Panthenol	1.00
10. Simchin WS	0.75
11. Distilled Water	32.15
12. Glydant 40-700	0.20
Part D:	
13. Ritabate 20	0.80
14. Perfume	0.20
Part E:	
15. Patlac LA (44%)	QS

NOTE: 1-2% Pationic ISL may be used in Part A, but effect on viscosity has to be determined.

Compounding Procedures:

Part A: Dissolve Methylparaben in Propylene Glycol. Sprinkle in HEC and mix without aeration until uniformly dispersed. Part B: Dissolve EDTA in water. Add HEC slurry to EDTA mixture. Part C: Premix, mixing between additions, until uniform. Add Part C to main mixer. Mix until uniform. Avoid aeration. Part D: Add slowly with agitation to main mixing tank. Adjust pH with Patlac LA (44%) to 4.5-5.0.

Viscosity: 1800-2000 cps pH: 4.5-5.0

Clear Conditioner

<u>Ingredient:</u>		<u>Wt. %</u>
Deionized Water		89.1
Hydroxyethyl Cellulose	Natrosol 250 HR	0.8
Triethanolamine		0.1
Stearamine Oxide	Mazox SDA	1.2
Soya Ethyldimonium Ethosulfate	M-Quat 1033	2.5
Olealkonium Chloride	M-Quat JO-50	1.0
Propylene Glycol		5.0
Benzoic Acid		0.2
Fragrance		0.2
Citric Acid		Q.S.

pH: 4.5-5.0

Viscosity: 5000 cps

Appearance: Water-white, slightly hazy liquid

Procedure:

Disperse the hydroxyethyl cellulose in the water, and add the triethanolamine with good mixing to expedite hydration. Pre-mix the Mazox SDA, M-Quat 1033, M-Quat JO-50, propylene glycol, and benzoic acid; add to batch. Add the fragrance and adjust the pH.

Formulation B-101

Cream Rinse Conditioner

<u>Ingredient:</u>		<u>Wt. %</u>
Deionized Water		89.75
Hydroxyethyl Cellulose	Natrosol 250 HR	0.50
Triethanolamine		0.10
Benzoic Acid		0.20

Clear Conditioning Rinse

Clear, conditioning hair rinse which can be used after shampooing. Kytamer PC is a substantive humectant which helps retain moisture in hair leaving it soft and full in appearance. Kytamer PC's film forming properties give the hair shine.

Formula:

Kytamer PC (Chitosan PCA)	1.00%
Olealkonium Chloride (55% Aqueous)	3.64
Water	95.36
Perfume and Preservative	q.s.

Procedure:

Disperse Kytamer PC in water with high speed agitation. When completely dispersed, heat to 75C with continued mixing until solution is clear and uniform. Add Olealkonium Chloride and mix until uniform. Dissolve preservative into batch. Cool to room temperature.

Formulation No. T54-272-1

Conditioning Mousse for Hair

Glucquat 125 conditions the hair by maintaining moisture and reducing the drying effects of the alcohol. The mousse is formed by the combination of the non-ionic emulsifier, Ameroxol OE-20, with Glucquat 125.

Formula:

Glucquat 125 (Lauryl Methyl Gluceth-10 Hydroxypropyl Dimonium Chloride)	1.00%
Ameroxol OE-20 (Oleth-20)	1.00
SD Alcohol 40	15.00
Deionized water	83.00
Perfume and preservative	q.s.

Procedure:

Heat deionized water to 60C and add Glucquat 125, Ameroxol OE-20 and preservative into it. Cool to 40C. Add SD Alcohol 40 to water phase and mix until uniform.

Aerosol Fill Procedure:

Fill into aluminum mousse cans and charge with A-46 hydrocarbon propellant using 95% product and 5% propellant.

Formulation T62-88-6

Clear Gel Activator/Conditioner

This is a clear rinsing curl activator used to bring out the natural curl of the hair. It also contains humectants, detackifiers and conditioners.

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Water	57.65
Carbomer 940	0.50
Triethanolamine	2.25
Phase B:	
Glycerine	32.20
Propylene Glycol	5.00
Dimethicone Copolyol (Abil B 88183)	1.00
Dimethicone Copolyol (Abil B 8851)	1.00
Quaternium-80 (Abil Quat 3272)	0.40
Phase C:	
Color, Fragrance, Preservative	Q.S.

Procedure:

Disperse the Carbomer into the water and mix until completely clear. Add the Triethanolamine and mix well. Mix Phase B and add slowly to Phase A while mixing. Add Phase C with mixing.

Gel Activator

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Water	57.65
Carbomer 940 (Acrylic Polymer)	0.50
Triethanolamine	2.25
Phase B:	
Glycerine	32.20
Propylene Glycol	5.00
Quaternium-80 (Abil Quat 3272)	1.00
PEG-20 Glyceryl Laurate (Tagat L-2)	1.40
Phase C:	
Color, Fragrance, Preservative	Q.S.

Procedure:

1. Disperse the Carbomer into the water with high shear lightning agitation.
2. Mix the material of Phase B, separately until dispersed. Slowly add Phase B to Phase A with agitation.
3. Add Phase C to the final product.

SOURCE: Goldschmidt Chemical Corp.: Suggested Formulations

Clear Hair Reparative and Conditioner

A clear liquid conditioner in which the Pationic ISL repairs and conditions and the polypeptide salt adds body and ease of combing with reduced fly-away. May be used as a "leave-in" or "rinse-out" product.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Quaternary Ammonium Polypeptide Salt	25.00
2. Ritoleth 20	3.00
3. Pationic ISL	2.00
Part B:	
4. Distilled Water	+--69.80
Part C:	
5. Glydant 40-700	0.20
6. Perfume	QS

Compounding Procedure:

Combine ingredients of Part A and heat to 45C. Add Part B mix while cooling to room temperature, add Part C. Adjust pH to 6.5-6.9.

Viscosity: 100 cps

Formulation H-89-P-8

Hot Oil Treatment

A clear, penetrating hot oil treatment to moisturize, impart luster and ameliorate damaged hair.

<u>Ingredients:</u>	<u>% W/W</u>
1. Mineral Oil 65/70	88.35
2. Pationic ISL	5.00
3. Lauryl Myristyl Alcohol	2.00
4. 2-Phenoxyethanol	2.00
5. Shebu Refined	0.50
6. Lanolin, Extra Deodorized	2.00
7. Perfume	+--0.15

Compounding Procedure:

Combine items 1-6. Heat to 165F, and cool to 100F. Add perfume. Mix until uniform.

Formulation HB-89-L-18/Ref.103-10

OSOURCE: R.I.T.A. Corp.: Suggested Formulations

Clear Oil-Free Hair Conditioner Gel

This is a cold process recipe featuring mild substantive conditioners and hair shaft moisturizers. The benefit of being free of waxes and fatty oils is in the results. This light, yet lubricious gel massages in the actives to leave the hair with shine and body, naturally! Since there's no oily residue, you can even use it as a "leave-on" for extra conditioning and body.

<u>Ingredient:</u>	<u>Percent by Weight</u>
Incroquat BA-85 babassamidopropyl dimethyl benzyl ammonium chloride	1.50
Croquat M cocodimonium hydrolyzed protein	3.00
Incromectant LAMEA acetamide MEA and lactamide MEA	2.50
Glycerin (moisturizer)	2.00
Dowicil 200 (preservative)	0.10
Methocel 40-202 (hydroxypropyl methylcellulose, thickener)	2.00
Versene 100 (tetrasodium EDTA)	0.10
Dimethicone Copolyol	2.00
Citric acid (for pH balance)	0.20
Deionized water (<35C)	86.60

Procedure:

1. Disperse and dissolve the first five ingredients into the water followed by addition of Methocel 40-202, a high clarity grade of surface treated hydroxypropyl methylcellulose.
 2. After it has dispersed and wetted out, the Methocel 40-202 can be solubilized by addition of a small amount of 20% NaOH (a few drops for 200 g of this formula). Maintain constant agitation as the alkali promotes polymer thickening.
 3. At this point, the Versene 100 chelant (for clarity) can be added followed by addition of the dimethicone copolyol.
 4. The formulation is then acid balanced to a pH of 4-5 by use of citric acid.
 5. A fragrance of your choice may be added for heightened appeal.

Conditioning Spritz

This leave-on conditioning spritz aids in combing, quickens drying time and imparts shine and softness to hair. This conditioner also provides body and activates curls.

<u>Materials:</u>	<u>Parts/Wt.(%)</u>
Part A:	
Incropol CS-20 (cetereth 20)	1.0
Stearyl Alcohol	1.0
SF1202 (cyclomethicone)	3.0
Part B:	
Water	93.6
Quat-Pro S (steartrimonium hydrolyzed animal protein)	0.5
Part C:	
SM2115 (trimethylsilylamodimethicone)	0.8
Kathon	0.1

Procedure:

- 1) Preheat Part A and Part B to 75C.
- 2) Add Part B to Part A with agitation.
- 3) Cool with mixing to 40 to 50C.
- 4) Blend in SM2115 and then the Kathon.
- 5) Cool to room temperature. Place in pump container.

Comments:

Use less stearyl alcohol for a thinner formulation.
Formula HP103

Hair Conditioner

This formulation is particularly good on damaged hair and improves softness.

<u>Materials:</u>	<u>Parts/Wt(%)</u>
Part A:	
Varisoft CRC	5.00
Citric Acid	0.05
Dowicil 200	0.10
Water	89.85
Part B:	
SM2115-D1	5.00
Citric Acid	q.s.

Procedure:

- 1) Heat water, citric acid & Dowicil 200 to 65C. Slowly add Varisoft CRC until completely melted and emulsion forms.
- 2) Cool to 45-50C and add SM2115-D1. Adjust pH to 4.5 with citric acid.
3. Cool and package.

SOURCE: GE Silicones; Formula HP104

Cream Conditioner for Permanent-Waved Hair

<u>Ingredients:</u>	<u>% by Weight</u>
Ammonyx 4	5.00
Glycerine	1.50
Panthenol	0.50
Citric acid	Q.S.
D.I. water	Q.S. to 100
Kessco Cetyl Alcohol	2.50
PPG-Ceteth 20	1.25
Stearyl alcohol	0.75
Preservative	Q.S.
Fragrance	Q.S.
Dye	Q.S.

Mixing Procedure:

Add ingredients and mix while heating to 75C. Mix until well blended. Cool with mixing to 30C and add fragrance, preservative, and dye if desired. Adjust pH with citric acid to 3-4.

Physical Properties:

Opaque, white liquid
 pH (as is): 3-4
 Viscosity at 25C: 2,000 cps
 Stable for two weeks at 50C
 Passed three freeze thaw cycles

Formulation No. 315

Dry & Damaged Hair Conditioner

<u>Ingredients:</u>	<u>% by Weight</u>
Ammonyx 4	3.50
Sodium PCA	1.25
Propylene glycol	0.75
Amphosol CA	0.50
Lactic acid	Q.S.
Kessco Cetyl Alcohol	2.70
Stearyl alcohol	0.70
Kessco Glycerol Monostearate SE AS	0.50

Mixing Procedure:

Combine ingredients. Adjust pH with lactic acid to 3-4. Heat to 70-75C with stirring. Allow to cool to room temperature and add fragrance, dye and preservative, if desired.

Physical Properties:

White, opaque liquid
 pH (as is): 3.0-4.0
 Viscosity @ 25C: 3,500 cps
 Passed three freeze/thaw cycles
 Stable at 50C for two weeks

Cream Curl Activator

An emulsion hair groom with Masil 756 to provide gloss, softness, and combability to permed, bleached or color-treated hair.

<u>Part:</u>	<u>Ingredient:</u>	<u>Wt. %</u>
A	Deionized Water	80.43
	Hydroxypropyl Methylcellulose	Methocel 40-100 0.20
	Triethanolamine	0.02
	Panthenol	DL Panthenol TK 1.00
	Hydrolyzed Silk Protein	Silk-Pro CM-1000 1.00
	Quaternium-15	Dowicil 200 0.30
B	Cetearyl Alcohol (and) Poly-	
	sorbate 60 (and) PEG-150	
	Stearate (and) Steareth-20	Macol CPS 6.00
	Laneth-16 (and) Ceteth-16	
	(and) Oleth-16 (and)	
	Steareth-16	Solulan 16 1.00
	Mineral Oil	Drakeol 9 2.00
	Tetrabutoxypropyl Methicone	Masil 756 3.00
Cyclomethicone	Masil SF-V 3.00	
Dimethicone Copolyol	Masil 280 2.00	
C	Citric Acid, 50%	0.05
	Fragrance	Q.S.

pH: 5.0-6.0

Viscosity: 160,000-200,000 cps (Brookfield TD @ 0.6 rpm)
10,000- 12,000 cps (Brookfield #3 @ 6 rpm)

Appearance: Soft white cream

Procedure:

Disperse hydroxypropyl methylcellulose in the water, then add the triethanolamine to initiate hydration. When hydration is complete (about 20 minutes), add the remaining part A ingredients, heat to 55C and stir until uniform. In a separate vessel, blend the part B ingredients and heat to 55C. Add part B to part A with good agitation, forming the emulsion. Maintain agitation while cooling the batch to 40C, then adjust the pH and add fragrance.

SOURCE: PPG Industries, Inc.: Formulation D-105

Cream Rinse

	<u>% Weight</u>
Hydroxyethylcellulose (Cellosize Polymer PCG-10)	0.50
Polyquaternium-10 (Ucare Polymer JR-30M)	0.50
Glycol Distearate	0.50
Cetearyl Alcohol	2.00
Cetyl Alcohol (Cetal)	0.50
PEG-100 Stearate	1.00
Stearalkonium Chloride	1.70
Citric Acid	0.05
Water	92.25
Germaben II	1.00

Procedure:

Dispense Ucare Polymer JR-30M and Cellosize Polymer PCG-10 in room temperature water with agitation. Heat to 70-75C. In a separate container add glycol distearate, cetearyl alcohol, cetyl alcohol and PEG-100 stearate and heat to 70C. When premix is at 70C and mixed to uniformity, slowly add it to the polymer solution. Mix until uniform. Add stearamonium chloride and citric acid and mix until uniform. Cool to 50C and add Germaben II. Cool to room temperature with proper mixing.

Replenishing Cream Rinse

	<u>% Weight</u>
Water	87.60
Hydroxyethylcellulose (Natrosol 250 HHR)	0.70
Glycol Distearate (Kessco Ethylene Glycol Distearate)	2.00
Cetearyl Alcohol (Lanette O)	2.50
Bishydroxyethyl Dihydroxypropyl Stearaminium Chloride (Monoquat TG)	6.70
Linoleamidopropyl PG-Dimonium Chloride Phosphate (Phospholipid EFA)	0.30
Germaben II	0.20

Procedure:

Charge water; carefully add Natrosol 250 HHR with good agitation. Heat to 50-60C. Add next 4 ingredients and continue heating to 70C. Cool to 45C and adjust pH to 4.5 to 5.0. Add Germaben II. Continue cooling and agitation until pearl develops.

Curl Activator Gel

This gel activator contains conditioners and humectants to leave the hair healthy, maintain curl and add shine.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Acritamer 940	1.00
2. Distilled Water	45.00
Part B:	
3. Distilled Water	37.10
4. Glycerin	10.00
5. Oleyl Dimethyl Benzyl Ammonium Chloride	1.00
6. Shebu Natural	0.50
7. Simchin Natural	0.50
8. Pationic SSL	3.00
9. Grilloten LSE 87K	1.00
Part C:	
10. Color, Fragrance and Preservatives	QS
Part D:	
11. Triethanolamine (50%)	0.90

Compounding Procedure:

Slowly add Acritamer 940 to rapidly stirring water of Part A. Mix until uniform. Combine Part B and heat to 140F. Mix and add to Part A with mixing. When uniform, add Part C. Then neutralize with Part D.

Formulation 104-147

Penetrating Gel Base for Hair Products

A hair gel designed to penetrate the hair to transport oils and humectants.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Propylene Glycol	5.00
2. Ritoleth 10	3.00
3. 2-Phenoxyethanol	2.00
4. Methylparaben	0.10
5. Propylparaben	0.05
Part B:	
6. Distilled Water	87.35
7. dl-Panthenol	0.50
Part C:	
8. Acritamer 940	1.00
Part D:	
9. Triethanolamine (50%)	1.00

Compounding Procedure:

Add 2-Phenoxyethanol to Propylene Glycol, mix. Add Ritoleth 10, mix. Add Parabens, mix. Combine Part B. Slowly add Part A to Part B, mix. Add Part C, mix until fully dissolved. Neutralize with Part D.

Formulation 103-148

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Deep Hair Conditioner with Cholesterol

This formulation contains Cholesterol for its superior hair conditioning attributes. In addition, the formulation also contains Ritachol 1000 as a primary emulsifying agent. The formulation is a smooth, creamy-textured oil/water emulsion cream which applies easily and "rubs-in" quickly, leaving the hair and scalp soft and smooth to the touch. Supersat AWS-4 has been incorporated as an auxiliary emulsifier, which supplements the cholesterol related conditioning effect. The product should be liberally applied, allowed to remain about 30 minutes and then rinsed from the hair. Heat delivered by means of a hair drier is advised, to enhance the conditioning effect.

Ingredients:

	<u>% W/W</u>
1. Ritachol	2.00
2. Quaternium 18	2.00
3. Cholesterol N.F.	1.00
4. Ritachol 1000	10.00
5. Petrolatum	5.00
6. Supersat AWS-4	2.00
7. Sorbic Acid	0.20
8. Propylparaben	0.10
9. Methylparaben	0.20
10. BHA	0.20
11. Distilled Water	74.30
12. Propylene Glycol	3.00
13. Perfume	QS

Compounding Procedure:

Weigh and add items 1-5, 8 and 10 into an auxiliary mixing kettle and begin heating and stirring. In the main mixing tank, add the remaining ingredients, with the exception of the perfume. Heat the water phase to 70-73C. Heat the oil phase to 75-78C. When the oil phase is at 75-78C and the water phase is at 70-73C, add the oil phase to the water phase. Begin cooling the batch; cool to 40-45C and add the perfume. Cool to 35-40C and pass through a colloid mill. Package at 30-35C.
Formulation HB-89-R-23

Sheen Type Hair Conditioner

A petrolatum based hair dressing with moisturizer.

Ingredients:

	<u>% W/W</u>
1. Eskar Wax R-25	10.68
2. Petrolatum USP	49.17
3. Mineral Oil (Carnation Light)	30.00
4. BHA	0.10
5. Propylparaben	0.05
6. Forlan L	5.00
7. Color (oil soluble)	QS
8. Ritachol	3.00
9. Pationic ISL	2.00
10. Perfume	QS

Weigh all ingredients, except perfume. Heat to 60-65C while stirring. Cool to 50C and add perfume. Package fluid at 42-43C. Mix while filling.

SOURCE: R.I.T.A Corp.: Formulation HB-89-R-25

Detangling Sheen Conditioner (Pump-Spray)

<u>Ingredients:</u>	<u>% by Weight</u>
Ammonyx KP	3.00
PPG Methyl Gluceth-20	1.25
Propylene glycol	0.75
Lanolin	0.45
Polysorbate 20	0.25
Panthenol	0.25
Fragrance	Q.S.
Imidazolidinyl urea	0.50
Diazolidinyl urea	0.50
D.I. water	Q.S. to 100

Mixing Procedure:

Heat deionized water in a mixing vessel to 50C. Add the first six ingredients, mixing well after each addition. Cool to 30C with mixing. Add ureas, for preservative, and fragrance, if desired.

Physical Properties:

Cloudy, white liquid
 Viscosity @ 25C is water thin
 pH (as is): 5-6
 Passed three freeze thaw cycles and one week at 50C

Formulation No. 334

Clear Hair Rinse and Conditioner

<u>Ingredients:</u>	<u>% by Weight</u>
Hydroxypropyl methylcellulose (3.0% Aq. Solution W/W)	40.0
Ammonyx KP (50%)	4.0
Solulan 98	0.5
D.I. Water	Q.S. to 100

Mixing Procedure:

Add Ammonyx KP to water with agitation until homogeneous. Follow with the addition of the methylcellulose solution, per manufacturer's instructions, mixing until uniform. Add Solulan and mix until dissolved.

Physical Properties:

Clear liquid
 pH (as is): 4.5-5.5
 Viscosity @ 25C: 5090 cps
 Passed three freeze/thaw cycles
 Stable at 50C for two weeks

SOURCE: Stepan Co.: Formulation No. 396

Elastic Curl Activator/Conditioner

This curl activator has Ritachol 1000 and Laneto 50 for stability. Glycerin and propylene glycol are good moisturizers for curl activation. The Ritalastin EL-30 will aid in repair of hair damage, leave a more manageable hair style and will help prevent future damage.

<u>Ingredients:</u>	<u>% W/W</u>
1. Ritachol 1000	4.00
2. Glyceryl Stearate	4.50
3. Petrolatum	2.00
4. Mineral Oil	6.00
5. Hydroxyethylcellulose	0.55
6. Propylene Glycol	2.00
7. Glycerin	7.00
8. Laneto 50	1.00
9. Preservatives and Color	QS
10. Distilled Water	70.95
11. Ritalastin EL-30	2.00
12. Fragrance	QS

Compounding Procedure:

Disperse cellulose gum (item 5) in water with agitation. Heat to 70C. Add items 6-11 and heat to 70C. Heat oil phase (items 1-4) to 70C and add to hot water phase with agitation. Mix well, cool to 40C, add fragrance. Cool to 35C. Fill into proper container.

Formulation HB-89-R-22

Spray Curl Activator

A glycerin based spray curl activator with a quat quaternium compound to reduce static charge and fly away. Pationic SSL helps with moisturization and Shebu and Simchin are emollients which contribute luster.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	84.50
2. Glycerin	10.00
3. Stearyl Dimethyl Benzyl Ammonium Chloride	0.50
4. Shebu	0.50
5. Simchin	0.50
6. Pationic SSL	3.00
7. Grilloten LSE 87K	1.00
8. Color, Fragrance and Preservative	QS

Compounding Procedure:

Combine items 1 through 7 and heat to 60C. Mix until uniform. Cool with mixing to 40C. Add remaining ingredients. Cool to 35C. Package.

Formulation H-89-S-13

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Enriched Cream Conditioner

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Water	89.75
Stearamidopropyl Dimethylamine (Tegamine 18)	1.50
Citric Acid Monohydrate	0.60
Methyl Paraben	0.20
Phase B:	
Glyceryl Stearate S.E. (Tegin)	3.00
Ceteth-2	1.50
Cetyl Alcohol	0.50
Phase C:	
Propylene Glycol	1.00
Quaternium-80 (Abil Quat 3270)	0.50
Dimethicone Copolyol (Abil B 8851)	0.40
Behenoxy Dimethicone (Abil Wax 2440)	0.35
Phase D:	
Propyl Paraben	0.10
Sodium Chloride (35% Sodium)	0.60
Perfume	Q.S.
Color	Q.S.

Procedure:

1. Add ingredients of Phase A in descending order. Mix and heat material at 70C until dispersed.
2. Melt and mix solids of Phase B separately. Disperse Phase B into A with agitation.
3. Begin ambient cooling of batch. Add pre-mixed materials of Phase C to reactor.
4. Add material of Phase D at 40C. Homogenize. Dispense at 35C.

Pump Spray Conditioner

A combable pump spray conditioner that provides gloss and sheen to the hair.

<u>Ingredients:</u>	<u>% w/w</u>
Stearamidopropyl Dimethylamine (Tegamine 18)	1.00
Glycerin	10.00
Propylene Glycol	10.00
Preservatives	Q.S.
Phosphoric Acid	to pH 5.0
Water	77.60
Dimethicone Copolyol (Abil B 88183)	1.00
Sodium Chloride	0.40

Procedure:

Heat the water to 65C. Add the Glycerin, Propylene Glycol, Dimethicone Copolyol, Sodium Chloride and preservatives. Mix until clear. Add the Stearamidopropyl Dimethylamine and adjust the pH. Cool and fill into pump spray units.

SOURCE: Goldschmidt Chemical Corp.: Suggested Formulations

Glossing Hair Conditioner

This conditioner provides exceptional hair control, wet and dry combability, and gives a soft gloss to the hair.

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Water	91.25
Citric Acid	0.50
Phase B:	
Stearamidopropyl Dimethylamine (Tegamine 18)	1.25
Glyceryl Stearate S.E. (Tegin)	3.00
Ceteth-2	1.50
Behenoxy Dimethicone (Abil Wax 2440)	0.35
Phase C :	
Propylene Glycol	0.90
Quaternium-80 (Abil Quat 3272)	0.40
Phase D:	
Dimethicone Copolyol (Abil B 8851)	0.25
Sodium Chloride-25% aqueous solution	0.60
Phase E:	
Color, Fragrance, Preservatives	Q.S.

Procedure

1. Heat the water to 70C. Add and disperse the Citric Acid.
2. Add the ingredients of Phase B to Phase A. One at a time, mixing between additions. After all additions are made mix until homogeneous.
3. Cool batch to 40C. Mix Phase C and add to A/B. Use sweep mixer.
4. Add remaining ingredients. Mix until uniform using sweep mixer.

Cream Hair Conditioner

<u>Ingredients:</u>	<u>% w/w</u>
Water	90.8
Glyceryl Stearate S.E. (Tegin)	3.0
Behenoxy Dimethicone (Abil Wax 2440)	0.3
Cetyl Alcohol	2.0
Propylene Glycol	3.0
Quaternium-80 (Abil Quat 3272)	0.5
Dimethicone Copolyol (Abil B 8851)	0.4
Color, Preservatives, Fragrance	Q.S.

Procedure:

1. Heat the water to 70-75C. Disperse the Tegin, Abil Wax 2440 and Cetyl Alcohol. Mix well.
2. Begin cooling. Cool to 45-50C. while mixing. Mix the Propylene Glycol and the Abil Quat 3272 together and add to the batch. Mix.
3. Switch to sweep mixer. Cool to 35-40C. Add the Abil B 8851, Color, Preservatives, and Fragrance. Mix.
4. Continue cooling. Fill.

Guanidine No Base Relaxer

A cream/actuator system for no base relaxer. Contains emollients and moisturizers to prevent drying.

I. Activator Solution

<u>Ingredients:</u>	<u>% W/W</u>
1. Guanidine Carbonate	30.00
2. Distilled Water	70.00
3. Color, Preservative	QS

Compounding Procedure:

Combine ingredients at 20C or higher.

II. No Base Cream

<u>Ingredients:</u>	<u>% W/W</u>
1. Ritachol 2000	12.00
2. Ritaderm	4.00
3. Petrolatum	10.00
4. Mineral Oil	16.00
5. Supersat AWS 4	2.00
6. Calcium Hydroxide (dry)	7.00
7. Propylene Glycol	5.00
8. Distilled Water	44.00
9. Fragrance, Preservative	QS

Compounding Procedure:

Combine ingredients 1-5 and heat to 70C. Combine ingredients 6-8 and heat to 70C. Combine both phases, mix well and cool with mixing to 45C, add remaining ingredients and cool with mixing to 40C. Package I at 1.75 fl. oz. Package II at 7.50 av. oz.

Directions:

Mix I in II, stir well with wooden stick until color is completely dispersed. Use as per normal relaxer instructions.

Formulation HB-89-R-15

Hair Relaxer

Super strength sodium hydroxide based hair relaxer.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Ritachol 2000	15.00
2. Mineral Oil	17.00
3. Ritachol	2.00
4. Petrolatum	17.50
5. Ritahydrox	0.50
6. Propylparaben	0.13
7. Rita SA	2.00
Part B:	
8. Propylene Glycol	6.00
9. Distilled Water	29.67
10. Methylparaben	0.20
Part C:	
11. Sodium Hydroxide (25% Solution)	10.00

Weigh Part A and heat to 78 to 82C. Weigh Part B and heat to 50C; add 25% Sodium Hydroxide Solution and raise the temperature to 75C. Add Part B to Part A slowly, avoiding aeration. Cool to 25C. Mill if required.

Formulation 106-78

Hair Conditioner

<u>Part:</u>	<u>Ingredient:</u>	<u>Wt. %</u>
A	Deionized Water	67.8
	Xanthan Gum	Kelzan 0.5
B	Stearalkonium Chloride	M-Quat JS-25 6.0
C	Stearyl Alcohol (and) Ceteareth 20	Macol 125 3.5
	Isopropyl Palmitate	Lexol IPP 1.0
	Dimethicone	Masil SF-20 0.5
D	Deionized Water	20.0
	Hydrolyzed Animal Protein	Chempro 100C 0.2
	Quaternium 15	Dowicil 200 0.2
E	Fragrance	0.3
	Citric Acid	Q.S.

pH: 4.5-5.0

Viscosity: 6,500 cps

Appearance: White, opaque cream

Procedure:

Disperse the xanthan gum in th Part A water, heating to 65C (150F). When uniform, add the M-Quat JS-25. Pre-mix the Part C ingredients, heating to 65C (150F). Add Part C to the batch and cool to 45C (110F). Pre-mix Part D and add it to the batch. When uniform, blend in fragrance and adjust the pH.
Formula B-103

Cold-Mix Hair Conditioner

A clear, nearly water-white product containing three conditioning agents.

<u>Part:</u>	<u>Ingredient:</u>	<u>Wt. %</u>
A	Deionized Water	83.3
	Stearamine Oxide	Mazox SDA 1.2
	Soya Ethyldimonium Ethosulfate	M-Quat 1033 2.5
	Oleaikonium Chloride	M-Quat JO-50 1.0
	Hydroxyethyl Cellulose	Natrosol 250R 1.5
	Triethanolamine	0.5
B	Propylene Glycol	10.0
	Preservative	QS
	Citric Acid	QS

pH: 5.0-5.5

Viscosity: 8000-8,500 cps

Appearance: Clear, very pale yellow, viscous liquid

Procedure:

Blend in the first four ingredients. When clear and uniform, add the hydroxyethyl cellulose and allow to disperse. Add the triethanolamine to increase the batch pH and initiate hydration of the cellulose. When hydration is complete, add the Part B ingredients. No heating is required.

Note:

If desired, the product can be pearlized by the addition of a pearl premix at 3-5%.

Hair Conditioner with Protein

Phase A:	
Water	<u>% Weight</u> 82.05
Phase B:	
Stearyl Alcohol	1.80
Glyceryl Stearate	0.90
Petrolatum, USP	1.80
Phase C:	
Cetrimonium Chloride	1.25
Water	10.00
Hydrolyzed Animal Protein (Crotein SPA)	2.00
Phase D:	
Suttocide A, 50% Solution	0.20

Procedure:

Heat water to 80C. Combine Phase B and heat to 80C with mixing until all ingredients are melted. Add Phase B to water at 80C and continue mixing for 10 minutes. Cool to 40-45C, add Phase C and allow to mix for 5 minutes. Combine Phase D and add to batch. Add Phase E. Cool to room temperature and adjust pH to 5.0.

Clear Crothix Conditioner

	<u>% Weight</u>
Minkamidopropalkonium Chloride (Incroquat Mink-85)	2.00
Acetamidopropyl Trimonium Chloride (Incroemectant AQ)	3.00
Oleth-20 (Volpo 20)	4.80
Polyol Alkoxy Ester (Crothix)	2.10
Water	87.10
Germaben II	1.00

Procedure:

Combine the water and the Volpo 20 and heat to 65C while mixing. Add the Crothix and continue mixing until homogeneous. Continue mixing and cool to 40C. Then add the remaining ingredients and mix until homogeneous.

SOURCE: Sutton Laboratories: Suggested Formulations

Hair Conditioner and Set
(For Use With Hot Air Dryer)

This formulation is designed for application to the hair after shampooing, and prior to drying. A quantity of polymer is included to provide a texturizing effect and some setting properties to the hair. Hair conditioning is accomplished by means of the lanolin-related attributes of Laneto 50. The completed product is a clear, water-thin liquid which can be applied by means of a mechanical sprayer.

<u>Ingredients:</u>	<u>% W/W</u>
1. SD Alcohol 40	30.00
2. Triethanolamine (50%)	0.06
3. Butyl Ester of PVM/MA Copolymer	1.50
4. dl-Panthenol	0.50
5. Benzophenone-2	0.05
6. Fragrance	QS
7. Laneto 50	2.00
8. Color	QS
9. Distilled Water	65.89

Compounding Procedure:

Weigh and add all ingredients in order into a container and begin stirring. Stir until a homogeneous dispersion results. Fill into suitable containers.

Note: Use an "explosion proof" mixer.

Formulation HB-89-PA-3

Conditioning-Styling Mousse

A low solids mousse with Celquat as the holding agent.

dl-Panthenol and Supersat AWS 4 are humectants and plasticizers.

<u>Ingredients:</u>	<u>% W/W</u>
1. dl-Panthenol	0.50
2. Celquat L-200	1.00
3. Distilled Water	72.75
4. SD Alcohol 40	15.00
5. Supersat AWS 4	0.50
6. Ritabate 20	0.15
7. Stearic Acid	0.10
8. Preservative and Fragrance	QS
9. Propellant A-46	+-10.00

Compounding Procedure:

Slowly sift Celquat into distilled water while mixing. When homogeneous, add remaining ingredients, filter and fill aerosols. Charge propellant.

Directions:

Shampoo, rinse and towel dry hair. Shake can well, invert and press button to dispense egg-sized amount of foam into palm of hand. Adjust amount, depending on hair length and amount of control desired. Massage evenly through hair. Do not rinse out. Style hair as desired.

Note: Use explosion proof equipment.

Formulation HB-89-PA-13

Hair Conditioning Creme Rinse

Glucquat 125, the cationic substantive conditioning agent in this formula, provides good wet combing, manageability, shine and feel properties. Promulgen D acts as an o/w emulsifier. Cellosize Polymer PCG-10 helps build viscosity.

Glucquat 125 (Lauryl Methyl Gluceth-10 Hydroxypropylidimonium Chloride)	12.0%
Cellosize Polymer PCG-10 (Hydroxyethylcellulose)	0.6
Promulgen D (Cetearyl Alcohol and Cetareth-20)	4.5
Cetal (Cetyl Alcohol)	1.2
Hydrolyzed Protein	0.3
Deionized Water	81.4
Perfume and Preservative	q.s.

Procedure:

Add Cellosize Polymer PCG-10 to room temperature water with propeller agitation. Heat to 75C. When polymer is fully hydrated, add Glucquat 125, hydrolyzed protein and preservative, in that order, waiting for each ingredient to dissolve before adding the next. In a separate container, heat Promulgen D and Cetal to 75C, mix, and add to batch. Mix until uniform, and cool to room temperature with adequate mixing.

Formulation T60-150-4

Curl Activator

Clear product applied via pump spray. Glucquat 125 helps in curl activation by maintaining moisture while it conditions the hair, leaving it more manageable. In addition, it contributes to sheen along with the Ucon LB-1715.

Glucquat 125 (Lauryl Methyl Gluceth-10 Hydroxypropyl Dimonium Chloride)	12.00%
Deionized water	23.00
Ucon LB-1715 (PPG-40 Butyl Ether)	15.00
SD Alcohol 40	50.00

Procedure:

Add Glucquat 125 to deionized water. Separately dissolve Ucon LB-1715 into SD Alcohol 40. Combine phases and mix until uniform. Package in a pump sprayer.

Formulation T62-76-4

SOURCE: Amerchol Corp.; Suggested Formulations

Hair Finishing Mist

Designed for pump-spray application, this non-VOC and oil-free formula provides moisturization, gloss, and detangling benefits to treated or damaged hair.

<u>Ingredient:</u>		<u>Wt. %</u>
Propylene Glycol		23.0
Methyl Paraben		0.2
PPG-10 Butanediol	Macol 57	21.0
Dimethicone Copolyol	Masil 280	1.0
Fragrance		Q.S.
Deionized Water		54.0
Imidazolidinyl Urea	Germall 115	0.2
Silk Amino Acids	Crosilk Liquid	0.5
Triethanolamine, 50%		0.1

pH: 6.0-6.5

Appearance: Clear, water-white liquid

Procedure:

Dissolve the methyl paraben in the propylene glycol. Add the Macol 57, Masil 280, and fragrance, and mix until uniform. Add the remaining ingredients in order, mixing until uniform.

SOURCE: PPG Industries, Inc.: Formulation D-107

Comb Through Glosser

<u>Ingredients:</u>	<u>% w/w</u>
Cyclomethicone (and) Dimethiconol (and) Dimethicone (Abil OSW-12)	68.0
Phenyl Dimethicone (Abil AV-20)	20.0
Dimethicone (Abil 500)	2.0
Dimethicone (Abil 1000)	10.0
Fragrance	Q.S.

Combine ingredients in order - mixing well.

Caution - Traces of water will cause turbidity.

Hair Pomade

This hair pomade contains Simchin brand Jojoba Oil for increased gloss. The substantive Pationic SSL provides moisturizing and conditioning. Added elegance and moisturization for healthier looking hair are achieved by the use of Panthenol which thickens the fiber and repairs damage.

<u>Ingredients:</u>	<u>% W/W</u>
1. Mineral Oil	5.00
2. Simchin	2.00
3. Petrolatum	88.00
4. Lanolin	2.00
5. dl-Panthenol	0.50
6. Pationic SSL	2.50
7. Color, Fragrance and Preservatives	QS

Compounding Procedure:

Blend ingredients 1-6 and heat to 160F. Stir until uniform. Cool to 135F, add fragrance, preservatives and color. Fill into proper containers.

Formulation HB-89-PA-2

Hair Pomade

This hair pomade contains Simchin brand Jojoba Oil and Shebu brand Shea Butter for increased gloss. The Pationic SSL provides emulsification, moisturization and conditioning. Added elegance and moisturization for healthier looking hair are achieved by the use of dl-Panthenol.

<u>Ingredients:</u>	<u>% W/W</u>
1. Mineral Oil	5.00
2. Simchin	2.00
3. Petrolatum	86.10
4. Shebu	2.00
5. Lanolin USP	2.00
6. dl-Panthenol	0.50
7. Pationic SSL	2.40
8. Color, Fragrance, Preservative	QS

Compounding Procedure:

Blend items 1 through 7 and heat to 70C. Stir until uniform. Cool to 40C. Add remaining ingredients. Fill into proper containers.

Formulation H-89-S-6

SOURCE: R.I.T.A. Corp.; Suggested Formulations

Hair Pomade

A quality hair pomade which gives excellent luster and feel from the Simchin and Shebu. Easy spreadability, conditioning and moisturizing are obtained from Pationic ISL, with the benefits of lanolin coming from the Ritawax and Ritalan.

<u>Ingredients:</u>	<u>% W/W</u>
1. Ritawax	1.50
2. Mineral Oil	5.00
3. Simchin	2.00
4. Shebu	1.00
5. Petrolatum	85.00
6. Ritalan	3.00
7. Pationic ISL	2.50
8. Color, Fragrance and Preservatives	QS

Compounding Procedure:

Blend items 1 through 7 and heat until clear. Cool with mixing to 50C. Add color, perfume and preservative. Fill hot. Mix during filling.

Formulation H-89-S-8

Hair Pomade

A high quality pomade with good luster contributed by Simchin and Shebu. Conditioning and moisturizing are obtained with Pationic ISL. Ritalan adds the benefits derived from lanolin.

<u>Ingredients:</u>	<u>% W/W</u>
1. Mineral Oil	5.00
2. Simchin	2.00
3. Shebu	1.00
4. Petrolatum	86.50
5. Ritalan	3.00
6. Pationic ISL	2.50
7. Color, Fragrance and Preservatives	QS

Compounding Procedure:

Combine items 1 through 6 and heat until clear. Cool with mixing to 50C. Add color, perfume and preservatives. Fill hot. Mix while filling.

Formulation H-89-S-9

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Hair Relaxer

Super strength sodium hydroxide based hair relaxer.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Ritachol 2000	15.00
2. Mineral Oil	17.00
3. Ritachol	2.00
4. Petrolatum	17.50
5. Ritahydrox	0.50
6. Propylparaben	0.13
7. Rita SA	2.00
Part B:	
8. Glycerin	6.00
9. Distilled Water	29.67
10. Methylparaben	0.20
Part C:	
11. Sodium Hydroxide (25% Solution)	10.00

Compounding Procedure:

Weigh Part A and heat to 78 to 82C. Weigh Part B and heat to 50C and add 25% Sodium Hydroxide solution and raise temperature to 75C. When both parts are at temperature, add Part B to Part A slowly, avoiding aeration. Cool to 25C.

Formulation 106-95A

Hair Relaxer

Super strength sodium hydroxide based hair relaxer.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Ritachol 2000	15.00
2. Mineral Oil	17.00
3. Ritachol	2.00
4. Petrolatum	17.50
5. Ritahydrox	0.50
6. Propylparaben	0.13
7. Rita SA	2.00
Part B:	
8. Propylene Glycol	9.00
9. Distilled Water	26.67
10. Methylparaben	0.20
Part C:	
11. Sodium Hydroxide (25% Solution)	10.00

Compounding Procedure:

Weigh Part A and heat to 78 to 82C. Weigh Part B and heat to 78 to 82C. When both parts are at temperature, slowly add Part B to Part A. Avoid aeration. Cool to 65C, avoiding aeration. Add 25% Sodium Hydroxide solution, avoiding aeration. Cool to 25C with cold water bath.

Formulation 106-80

SOURCE: R.I.T.A. Corp.; Suggested Formulations

Hair Repair and Conditioner

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Water	88.10
Glyceryl Stearate S.E. (Tegin)	4.00
Mineral Oil	1.00
Cetyl Alcohol	2.00
Phenyl Trimethicone (Abil AV-20)	0.50
Ceteth-2	1.00
Phase B:	
Glycerin	1.00
Propylene Glycol	1.00
Dimethicone/Sodium Poly PG-Propyl Dimethicone Thiosulfate Copolymer (Abil S 201)	1.00
Quaternium-80 (Abil Quat 3272)	0.40
Phase C:	
Color	Q.S.
Preservatives	Q.S.
Fragrance	Q.S.
Citric Acid (25% Solution)	to pH 6.5

Procedure:

1. Heat the ingredients of A together with mixing to 70C.
2. Cool to 45-50C. Switch to sweep mixer.
3. Blend B. Add to A. Sweep mix. Cool to 35-40C.
4. Adjust pH. Add Color, Fragrance and Preservatives.

Soft Set Conditioning Mousse

This conditioning mousse formulation provides for both a soft, nontacky hold to a hair set and a conditioning effect on the hair fibers. The Dimethicone/Sodium Poly PG-propyl Dimethicone Thio-sulfate Copolymer contributes gloss and hydrophobicity to the hair.

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Water	82.20
Stearamidopropyl PG-Dimonium Chloride Phosphate	3.00
Phase B:	
Isopropyl Alcohol	10.00
Dimethicone/Sodium Poly PG-propyl Dimethicone Thiosulfate Copolymer (Abil S-201)	0.50
Aminomethyl Propanol	0.30
Butyl Ester of PVP/MA copolymer	2.00
Phase C:	
Dimethicone Copolyol (Abil B 8851)	2.00
Phase D:	
Fragrance, Preservatives	Q.S.
Fill: Concentrate	83.30
Isobutane	16.70

Procedure:

Mix (A). Heat to 65C and continue to mix until homogeneous. Cool to 40C. Separately mix (B) at 25C until homogeneous. Add (A) to (B) with stirring. Add (C), (D), mix until homogeneous. Add fragrance, coloring and preservative as required. Cool to 25C. Charge into aerosol container. Add propellant.

Hair and Scalp Conditioner

The formulation given here is a smooth, creamy-textured dispersion. The product contains a quantity of paraffin wax, which is used to adjust the melting point of the composition so that it approximates the temperature of the surface of the scalp. The formulation contains Ritachol, which provides lanolin alcohol related conditioning attributes, sheen, and lubricity to the hair fiber, as well as to the scalp. Forlan L has been added to improve the homogeneity of the dispersion and for its conditioning and lubricity characteristics. Forlan L also improves the reversion resistance of straightened hair in high humidity.

<u>Ingredients:</u>	<u>% W/W</u>
1. Mineral Oil	+35.75
2. Petrolatum	45.00
3. Paraffin Wax	9.00
4. Ritachol	3.00
5. Forlan L	5.00
6. Patlac IL	2.00
7. Perfume	QS
8. BHA	0.10
9. Propylparaben	0.15

Compounding Procedures:

Mix all ingredients, except perfume. Heat with stirring to 60-65C. Cool to 50-55C, add perfume. Cool to 48-50C and package into suitable containers.

Formulation HB-89-R-9

Light Hair Conditioner

A pomade type hair conditioner with good grooming properties which improves combability.

<u>Ingredients:</u>	<u>% W/W</u>
1. Paraffin	10.70
2. Petrolatum	+49.15
3. Mineral Oil 90	30.00
4. BHA	0.10
5. Propylparaben	0.05
6. Forlan L	5.00
7. Ritachol	3.00
8. Patlac IL	2.00
9. Perfume and Color	QS

Compounding Procedure:

Mix all ingredients, except perfume and color. Heat with stirring to 60-65C. Cool to 43C, add perfume and color. Package fluid at 42-43C.

Formulation HB-89-R-8

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Hair Setting Gel

A water based setting gel with Simchin WS and Shebu WS for luster and conditioning. The setting agent is plasticized with Supersat AWS 4. dl-Panthenol provides humectant benefits.

<u>Ingredient:</u>	<u>% W/W</u>
Part A:	
1. Distilled Water	50.00
2. Acritamer 940	0.70
Part B:	
3. Distilled Water	36.50
4. Glycerin	4.00
5. Simchin WS	2.00
6. Shebu WS	2.00
7. Supersat AWS 4	1.00
8. PVP K-30	2.00
9. Methylparaben	0.20
10. dl-Panthenol	0.20
11. Triethanolamine (50%)	1.40
Part C:	
12. Color, Fragrance	QS

Compounding Procedure:

Weigh water and slowly sprinkle in Acritamer while stirring with a variable speed agitator capable of imparting relatively high shear. Stir until the Acritamer 940 has thoroughly dispersed and hydrated and no lumps can be seen or felt. In a separate container, combine Part B and heat slightly until solids dissolve completely. Mix thoroughly. Mix thoroughly. Add Part B to the Acritamer solution, stirring slowly until homogeneous. Add color and fragrance.

Note: A fragrance with good water solubility should be used, or add a solubilizer, such as Ritoleth 5 or Ritabate 20 into fragrance.

Formulation H-89-S-10

Hair Gel

A clear Carbomer gel with emollients and humectants. The high glycerin content makes it usable as a curl activator product. The dl-Panthenol aids the humectancy and coats the hair to repair damage and improve luster.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	81.10
2. Acritamer 940	0.80
3. Glycerin	10.00
4. Propylene Glycol	5.00
5. Dimethicone Copolyol	1.00
6. dl-Panthenol	0.80
7. Laneto 50	0.50
8. Color, Fragrance and Preservative	QS
9. Triethanolamine (99%)	0.80

Compounding Procedure:

Disperse item 2 into 90% of the water without incorporation of air. Add item 3 to item 8. Mix gently to avoid air. Combine item 9 with balance of water. Add to batch. Mix gently-avoid air.

Formulation HB-89-PA-17

Hair Setting Lotion Containing a Chitosan DerivativeExample 1:

Chitosan (having 90% free amino groups)	1.0g
Acetic acid (10%)	3.36g
Sorbic acid	1.0g
Water, completely desalted	95.54g

20 ml of this solution are spread on the washed, towel-dry hair and the hair is then set and dried as customary.

Example 2:

Chitosan (having 90% free amino groups)	0.6g
Formic acid (10%)	1.56g
Isopropanol	25.0g
Water, completely desalted	72.84g

20 ml of this solution are spread on the washed, towel-dry hair and the hair is then set and dried as customary.

Example 3:

Chitosan (having 90% free amino groups)	1.5g
Lactic acid (10%)	7.4g
Sorbic acid	0.1g
Water, completely desalted	91.0g

20 ml of this solution are spread on the washed, towel-dry hair and the hair is then set and dried as customary.

Example 4

Chitosan (having 90% free amino groups)	1.00g
Acetic acid (10%)	3.36g
Cetyltrimethylammoniumchloride (50% aqueous-alcoholic solution)	0.10g
C.I. Basic Violet 1	0.05g
Water, completely desalted	95.49g

20 ml of this solution are spread on the washed, towel-dry hair and the hair is then set and dried as customary. The hair thereafter exhibited a slight bluish tint.

Containing a Chitosan Derivative: Formulas

Hair Styling Gel with Oil

A non-mineral oil grooming gel with moisturizer and film former.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Acritamer 940	0.60
2. Distilled Water	66.70
3. Glycerin	5.00
4. SD Alcohol 40	10.00
Part B:	
5. Laneto 50	5.00
6. PPG-12-Buteth-16	10.00
7. PVP	1.50
8. Supersat AWS 4	1.00
Part C:	
9. Diisopropanolamine	0.20
Part D:	
10. Color, Fragrance, Preservatives	QS

Compounding Procedure:

Combine water, glycerin and alcohol in main mixing tank with impeller agitation and mix until uniform. Sprinkle in Acritamer to complete Part A. Mix until uniform. Combine materials of Part B and mix until uniform. Add Part B to Part A with mixing. Mix until uniform. Add Part C. Mix until uniform. Add color, fragrance and preservative. Package.

Formulation H-89-A-17

Hair Setting Gel

A non-mineral oil, soft holding hair setting gel with glycerin and film former.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Acritamer 940	0.70
2. Distilled Water	49.30
Part B:	
3. Distilled Water	41.60
4. PVP K-30	2.00
5. Supersat AWS 4	1.00
6. Glycerin	4.00
7. Triethanolamine (50%)	1.40
Part C:	
8. Color, Fragrance, Preservatives	QS

Compounding Procedure:

Disperse Acritamer in Part A water in main mixing tank with impeller. Combine the materials in Part B and heat until Supersat is melted. Mix until uniform. Add Part B to Part A and mix until uniform. Add Part C to Parts A and B and mix until uniform. Package.

Formulation H-89-A-18/Ref. 114-93

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Highlighting Hair Gel

A quick-drying, hydro-alcoholic gel which imparts pearlescent highlights to hair. It can be packaged into a jar, tube, or automatic mascara-type container.

<u>Phase:</u>	<u>Ingredients:</u>	<u>% wt.</u>
A.	Carbomer 940 - 2% Solution (Acritamer 940)	40.00
	Methyl Gluceth-20 (Glucam E-20)	2.00
	Propylene Glycol	2.00
	Glycerin	1.00
	Panthenol (DL-Panthenol)	1.00
B.	Water	2.00
	Triethanolamine	1.00
C.	Water (q.s. to 100%)	29.80
	Sodium Hexametaphosphate	0.10
	Antimicrobials	q.s.
D.	Cloisonne' Super Gold 232Z	5.00
E.	SD Alcohol 40	15.00
F.	PVP (PVP-K30)	2.00

Procedure:

- I. Mix all the ingredients in Phase A in suitable vessel until completely uniform.
- II. Add pre-mixed Phase B to Phase A while mixing until completely uniform.
- III. In a separate vessel combine all ingredients in Phase C.
- IV. Disperse Phase D into Phase C.
- V. Add Phase E to Phase C and mix.
- VI. Add Phase F to Phase C and mix.
- VII. Add pre-mixed Phase C, D, E and F to pre-mixed Phase A-B and mix until completely uniform.

Instant Hair Conditioner

A viscous, opaque hair conditioner with reduced eye irritation.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Grilloten LSE 87K	2.00
2. Grilloten PSE 141G	4.00
3. Cetearyl Alcohol	2.50
4. PEG-20 Cetearyl Alcohol	0.50
5. Alcohol Glycol Ether	4.00
6. Gafquat N755	1.00
7. Polyquart H-81	1.00
Part B:	
8. Glycerin	3.00
9. Distilled Water	82.00
Part C:	
10. Perfume	QS
11. Citric Acid (25% Solution)	QS
12. Preservative	QS

Compounding Procedure:

Combine the materials in Part A. Heat to 150F with agitation. Combine Glycerin and water in part B and heat to 150F with agitation. Add Part A to Part B. Avoid aeration. Cool to 120F. Add perfume and preservative. Cool to 95F. Adjust to pH of 4.0 to 4.4 with Citric Acid.

Formulation H-89-G-26

Instant Hair Conditioner

An opaque viscous conditioning and reparative hair conditioner. Conditions, moisturizes and adds body. Product is designed to be applied, left on the hair 2-3 minutes and then rinsed.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	97.00
2. Jaguar C-13 S	0.75
3. Pationic ISL	0.50
4. Patlac IL	0.40
5. Ritoleth 20	0.30
6. Cetyl Alcohol	0.75
7. Sorbic Acid	0.20
8. Methylparaben	0.10
9. Patlac LA (44%)	QS
10. Perfume	QS

Compounding Procedure:

Disperse Jaguar in water in the main mixing kettle, heat to 75C. Allow to stand for one hour, enough to de-aerate. Combine the remaining materials, except Patlac LA and perfume in an auxiliary tank. Heat to 75C. Add This mixture to the Jaguar solution with agitation while both are at 75C. Cool to 45C with agitation. Add perfume, adjust pH to 4.5 with Patlac LA.

pH: 4.5+-0.2

Viscosity: 3,000 cps

Formulation H-89-P-9

SOURCE: R.I.T.A. Corp.; Suggested Formulations

Liquid Brilliantine

This brilliant, colorless liquid imparts a high gloss to the hair.

Liquid Brilliantine with Protein(514143)

Drakeol 7, Light Mineral Oil USP	96.7%
Diisopropyl Adipate	2.5
Olive Oil	0.6
Isostearyl Hydrolyzed Animal Protein	0.2
Fragrance	q.s.

Combine all ingredients except fragrance and heat slowly to 60C while stirring until a homogeneous liquid blend is evident. Cool to 40C with stirring then add fragrance. Cool to room temperature and package.

Solid Brilliantine

These solids aid in moisture retention, hold hair in place, and add shine. Solid Brilliantine II is softer than Solid Brilliantine I.

Solid Brilliantine I with Sunscreen(514693)

Penreco Ultima, White Petrolatum USP	62.00 wt%
Microcrystalline wax	24.00
Drakeol 35, White Mineral Oil	7.80
Dimethicone, 350 vis	3.28
Isopropyl myristate	2.52
Sunscreen	0.20
Propylparaben	0.20

Melt all the ingredients together at 75C with gentle stirring. When the blend is uniform, allow it to cool and pour into containers just above the solidification point. If fragrance is desired, it should be added at 45C.

Solid Brilliantine II(514108)

Penreco Ultima, White Petrolatum USP	60.00wt%
Drakeol 9, Light Mineral Oil	34.85
Butyl Stearate	5.00
Butylparaben	0.15

Heat all ingredients slowly to 80C with moderate stirring. Once the mixture is homogeneous, cool and fill containers just above the product's set point. If desired, fragrance may be added at 45C.

SOURCE: Penreco: Penreco Cosmetic Formulary

Lotion Moisturizer

A water in oil lotion product for use on hair or skin. This is a high oil content formula which is expected to leave substantial residue.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Mineral Oil	25.50
2. Lanolin, Extra Deodorized	5.00
3. Beeswax	3.00
4. Petrolatum	0.50
5. Octyl Dimethyl PABA	0.50
6. Ritahydrox	0.25
7. Propylparaben	0.10
Part B:	
8. Distilled Water	63.69
9. Sorbitan Oleate	0.80
10. Borax	0.26
11. dl-Panthenol	0.10
Part C:	
12. Fragrance	0.30

Compounding Procedures:

Heat Part A and Part B to 165F. Add Part A to Part B with agitation. Cool to 120F. Add Part C. Mix to room temperature. Package.

Initial Viscosity: 4000 cps

Formulation 101-62

Oil Moisturizer Lotion

This oil moisturizer gives hair a soft, natural sheen while adding substantivity through the use of Pationic CSL. It also contains dl Panthenol (Vitamin B) to nurture the hair and the sunscreen to reduce the damaging effects of the sun. Pationic CSL is used in this water in oil emulsion to eliminate the need for beeswax/borax.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Mineral Oil	25.50
2. Lanolin, Extra Deodorized	5.00
3. Petrolatum	0.50
4. Pationic CSL	3.00
5. Octyl Dimethyl PABA	0.50
6. Ritahydrox	0.30
7. Propylparaben	0.10
Part B:	
8. Distilled Water	63.90
9. dl-Panthenol	0.10
10. Sorbitan Monooleate	0.80
11. Methylparaben	0.10
Part C:	
14. Fragrance	0.20

Heat Part A and Part B to 165F. Add Part A to Part B with mixing. Cool to 120F, add Part C. Cool to 80F with mixing.

Viscosity: 4000 cps.

SOURCE: R.I.T.A. Corp.: Formulation 104-74/HB-89-L-33

Moisturizing Conditioner

<u>Ingredients:</u>	<u>% by Weight</u>
Deionized water	90.00
Neobee M-5	3.35
Kessco Cetyl Alcohol	2.20
Stearyl alcohol	1.25
Wecobee S	1.20
Ammonyx Cetac	1.00
Hydroxyethylcellulose	0.50
DMDM hydantoin	0.25
Propyl paraben	0.25
Fragrance	Q.S.

Mixing Procedure:

Phase A:

Add deionized water to a suitable mixing vessel and begin heating. Start mixing water and slowly disperse the hydroxyethylcellulose (avoid clumping). Add DMDM hydantoin and Ammonyx Cetac to the water phase, making sure to allow good agitation after each addition. Maintain heat at 65C.

Phase B:

Add Cetyl Alcohol, Stearyl Alcohol, Neobee M-5, Wecobee S, and Propyl Paraben to a separate mixing vessel. Heat to 65C and maintain at this temperature. Add the oil phase to the water phase slowly using quick agitation. Continue quick agitation for 10-15 minutes, making sure temperature doesn't exceed 67C. Slow agitation to moderate speed and begin cooling until temperature reaches 40C. Add fragrance and color if desired. Cool to 25C and fill.

Typical Properties:

White slightly viscous cream

Viscosity: 13,000 cps

Passed elevated temperature and freeze thaw study

Formulation No. 592

Clear Hair Conditioner

<u>Ingredients:</u>	<u>% by Weight</u>
Ammonyx KP	3.00
Ammonyx Cetac	1.50
Propylene glycol	1.50
Hydroxyethylcellulose	0.90
Polyquaternium 10	0.25
Fragrance, dye, preservative	Q.S.
D.I. water	Q.S. to 100

Mixing Procedure:

Disperse hydroxyethylcellulose in D.I. water with mixing until clear. Add Ammonyx KP and mix until homogeneous.

Slowly add Ammonyx Cetac and mix until homogeneous.

Disperse Polyquaternium-10 in propylene glycol and add to above solution with mixing until clear. Add fragrance, dye and preservative, if desired.

Typical Properties:

Clear liquid

pH (as is): 5.5

Freeze thaw and elevated heat stable

Viscosity: 750 cps

SOURCE: Stepan Co.: Formulation No. 420

Moisturizing Elastin Hair Styling Gel

This is a setting gel with a non-greasy water soluble oil. The Laneto 50 is used to solubilize the perfume oil and add the benefits of conditioning and shine. The Ritalastin EL30 (elastin) is added for superior protein benefits. dl-Panthenol is used to moisturize and condition. Ritaphenone 3 protects against UV damage.

<u>Ingredients:</u>	<u>% W/W</u>
1. Acritamer 940	0.60
2. Distilled Water	63.90
3. Glycerin	10.00
4. dl-Panthenol	0.20
5. Alcohol	10.00
6. Laneto 50	5.00
7. Ritaphenone 3	0.10
8. Tetrasodium EDTA	0.10
9. PPG-12-Buteth-16	5.00
10. PVP	1.50
11. Fragrance, Preservatives and Color	QS
12. Triethanolamine (99%)	0.60
13. Ritalastin EL 30	3.00

Compounding Procedure:

Add the preservatives to one-half of the water. Stir until clear. Disperse the Acritamer 940 in the glycerin and add to the water phase and stir until clear. Make a 10% solution of the triethanolamine and set aside. Combine the remaining ingredients, stir until clear. Add to the Acritamer 940 solution. Stir until clear. Allow all air to be removed with gentle stirring, then add the triethanolamine solution. This will thicken the product. Fill into proper containers when uniform.

Formulation HB-89-PA-15

Pump Spray Hair Detangler

A cationic based detangler spray with conditioners and moisturizers. dl-Panthenol is an effective moisturizer, emollient and conditioner for hair. It is used to give hair a healthy shine. Simchin WS is a water soluble jojoba oil derivative. It serves as a super fatting and foam stabilizing agent, as well as a plasticizer. Supersat AWS 4 is an emollient and conditioning agent, leaving a film, which is neither sticky nor tacky, but velvety smooth, and has exceptional slip and spreadability.

<u>Ingredients:</u>	<u>% W/W</u>
1. Cetyl Trimethyl Ammonium Chloride	5.00
2. Distilled Water	85.50
3. Dimethicone Copolyol	1.00
4. Supersat AWS 4	1.00
5. Glycerin	4.00
6. Propylene Glycol	2.00
7. dl-Panthenol	1.00
8. Simchin WS	0.50
9. Color, Fragrance, Preservatives	QS

Compounding Procedure:

Heat water to 87C. Add Supersat AWS 4. Mix until clear. Add remaining ingredients while cooling to 40C. Fill into proper containers.

SOURCE: R.I.T.A. Corp.: Formulation HB-89-PA-21

Opaque Hair and Scalp Moisturizer

This moisturizer is especially designed for use after a curl relaxer to rebalance pH of the scalp and hair cuticle. It is substantive and reparative.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Polypeptide LSN	3.00
2. DL Panthenol	1.00
3. Ritamectant K2	0.20
4. Grillocin HY-77	1.00
5. Pationic ISL	2.00
6. Glycerin	2.00
7. Distilled Water	73.90
8. Laneto 50	1.00
Part B:	
9. Ritapeg 150 DS	3.00
10. Rita EGDS	2.00
11. Rita GMS	3.00
12. PEG 100 Stearate	0.60
13. Patlac IL	1.00
14. Myristyl Lactate	1.00
Part C:	
15. Methocel E4M	0.50
Part D:	
16. Patlac LA (44%)	+ -4.00
17. Germall II	0.80

Compounding Procedure:

Weigh and heat Part B in an auxiliary kettle to 165F. Add Part C with agitation until dispersed. Heat Part A to 165F in the main mixing kettle. Add oil phase (Parts B and C) to Part A with agitation. Maintain heat and mix until uniform. Cool to 110F. Add Germall II. Adjust pH to 3.5 with Patlac LA.
Formulation HB-89-L-12

Hair Moisturizer

This product leaves hair easy to comb. The hair is protected and moisturized by the Shebu.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Ritachol 0	3.00
2. Shebu Refined	1.00
3. Ritoleth 10	0.50
Part B:	
4. Cetrimonium Chloride	0.50
5. Glycerin	5.00
6. Distilled Water	+ -90.00
7. Color, France & Preservative	QS

Compounding Procedures:

Combine Part A in an auxiliary kettle and heat to 70C. Combine Part B in the main kettle and heat to 70C. Add Part A to Part B. Mix until uniform. Cool with mixing to 40C. Add remaining ingredients.

Pomade

These pomade formulas are designed to provide a variety of textures and consistencies. They are starting points from which a product of the characteristics the formulator wants can be developed. Pomades can be made harder by increasing the amount of wax in the formula, or by substituting Penreco Ultima Petrolatum for Penreco Snow petrolatum. All of these pomades are light in color, slightly translucent, and can be drawn into classic petrolatum peaks.

Pomade(514991)

Penreco Snow, White Petrolatum USP	96.0 wt%
Paraffin Wax	4.0
Fragrance	q.s.

Pomade with Lanolin(514992)

Penreco Snow, White Petrolatum USP	94.0 wt%
Paraffin Wax	5.0
Lanolin	1.0
Fragrance	q.s.

Pomade with Protein(514993)

Penreco Snow, White Petrolatum USP	98.0 wt%
Drakeol 9, Light Mineral Oil USP	1.5
Isostearyl Hydrolyzed Animal Protein	0.5
Fragrance	q.s.

Heat slowly to 85C with moderate stirring. Hold at this temperature until mixture is uniform, then allow blend to cool to 45C. Add fragrance and color if desired, then fill containers just above set point of product.

Pomade Hair Dressing

Petrolatum-based dressing with improved spreading and sheen

<u>Ingredient:</u>		<u>Wt. %</u>
Petrolatum	Snow White USP	28.0
Ozokerite	White Ozokerite 77W	8.0
Lanolin	Lanolin, Cosmetic	22.0
Mineral Oil	Drakeol 9	32.0
PPG-9	Macol P-500	3.0
Phenyl Trimethicone	Masil SF 556	7.0

Appearance: Light tan, uniform soft solid

Melt Point: 49C (120F)

Procedure:

Heat petrolatum, lanolin, and ozokerite together to 85C (185F) to completely melt the wax. Add the mineral oil, Macol P-500, and Masil SF 556, cooling the batch to 65C (150F). Fill at 58-62C to avoid shrink holes.

SOURCE: Mazer Chemicals: Formulation D-101

Pomade Stick

This formula is a stick hair dressing that imparts sheen and soft hold to the hair.

	<u>% (w/w)</u>
Sodium Stearate C-1	8.00
Glycerine	42.00
Propylene Glycol USP	40.00
Lexquat AMG-0 (Oleamidopropyl Dihydroxypropyl Dimonium Chloride)	7.00
PVP K-90 (Polyvinylpyrrolidone)	3.00

Procedure:

Charge the batch vessel with propylene glycol and glycerine. Begin mixing and heating to 78+-2C. Add the sodium stearate C-1 and let it mix. When the sodium stearate is well dispersed, add the Lexquat AMG-0 and the PVP-K90. Allow to mix for 15 minutes at 78C then cool to 45C. Add to stick container and allow to cool to room temperature.

SOURCE: Inolex Chemical Co.: Formulation HR-100

Professional Extra-Strength Relaxer

Extra strength relaxer with Supersat AWS 4 and Ritaderm as emollients and moisturizers.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Ritachol 1000	12.00
2. Ritaderm	4.00
3. Mineral Oil	13.00
4. Ritachol	2.00
5. Petrolatum	17.50
6. Supersat AWS 4	1.00
Part B:	
7. Glycerin	6.00
8. Distilled Water	35.30
Part C:	
9. Sodium Hydroxide Solution (25%)	9.20

Compounding Procedure:

Pre-dissolve sodium hydroxide in water to obtain enough 25% solution for batch. Weigh Part A into sweep type jacketed tank and begin heating to 78-82C. Weigh Part B in a separate tank and begin heating to 78-82C. When both are at temperature, slowly add Part B to Part A avoiding aeration. Cool to 65C. Add sodium hydroxide solution (Part C) with agitation. Avoid aeration. Pump through colloid mill, cool to 25C and package.

Formulation HB-89-R-5

Professional No Base Relaxer C

An extra strength, professional relaxer with humectants and emollients to moisturize and prevent dryness.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Ritachol 1000	12.00
2. Ritaderm	2.00
3. Mineral Oil, Light	13.00
4. Ritachol	2.00
5. Petrolatum	17.50
6. Supersat AWS 4	3.00
Part B:	
7. Glycerin	6.00
8. Distilled Water	35.30
Part C:	
9. Sodium Hydroxide (25% solution)	9.20

Compounding Procedure:

Pre-dissolve sodium hydroxide in water to obtain enough 25% solution for batch. Weigh Part A into sweep type jacketed tank and begin heating to 78-82C. Weigh Part B in a separate tank and begin heating to 78-82C. Weigh both are at temperature, slowly add Part B to Part A avoiding aeration. Cool to 65C. Add sodium hydroxide solution (Part C) without agitation. Avoid aeration. Pump through colloid mill, cool to 25C and package.

Formulation HB-89-R-13

Relaxer

Regular strength potassium hydroxide based relaxer.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Ritachol 5000	15.00
2. Mineral Oil 70 wt.	17.00
3. Ritachol	2.00
4. Petrolatum	17.50
5. Ritahydrox	0.50
6. Propylparaben	0.13
7. Stearyl Alcohol	2.00
Part B:	
8. Glycerin	6.00
9. Distilled Water	29.67
10. Methylparaben	0.20
Part C:	
11. Potassium Hydroxide (25% Solution)	10.00

Compounding Procedure:

Weigh Part A and Part B and heat to 78 to 82C. When both parts are at temperature, add Part B to Part A slowly to avoid aeration. Cool to 65C and add Part C slowly to avoid aeration. Cool to 25C. Mill if necessary.

Formulation 109-184

Relaxer

Super strength sodium hydroxide based hair relaxer.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Ritachol 5000	15.00
2. Mineral Oil 70 wt.	17.00
3. Ritachol	2.00
4. Petrolatum	17.50
5. Ritahydrox	0.50
6. Propylparaben	0.13
7. Stearyl Alcohol	2.00
Part B:	
8. Glycerin	6.00
9. Distilled Water	29.67
10. Methylparaben	0.20
Part C:	
11. Sodium Hydroxide (20% Solution)	10.00

Compounding Procedure:

Separately weigh Part A and Part B and heat to 78 to 82C. When both parts are at temperature, add Part B to Part A slowly to avoid aeration. Cool to 65C and add Part C slowly to avoid aeration. Cool to 25C. Mill if necessary.

Formulation 109-202

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Ringing Gel

An adaptable clear ringing gel which is suitable as a hair dressing or vehicle for other cosmetic materials where a micro emulsion is desired.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	+54.00
2. Glycerin	10.00
3. Mineral Oil, Light	12.00
4. Ritoleth 5	10.00
5. Supersat AWS 4	12.00
6. Pationic ISL	1.00
7. Simchin WS	1.00
8. Preservative	QS
9. Fragrance and color	QS

Compounding Procedure:

Combine items 1, 2 and 7 and heat to 175F. Combine items 3,4,5 and 6 and heat to 175F. Add second phase to first phase with agitation. (NOTE: Use an additional 3 to 4% of the weight of the batch as add-back water to compensate for moisture loss. This is important.) Mix until uniform. Begin cooling. Cool to 130F or until thickening begins. Add items 8 and 9. Add back water to compensate for moisture loss. Fill hot. Cover immediately.

Formulation H-89-S-2

Ringing Gel

A clear ringing gel suitable as a hair dressing or vehicle for other cosmetic materials.

<u>Ingredients:</u>	<u>% W/W</u>
<u>Part A:</u>	
1. Distilled Water	42.40
2. Glycerin	15.00
<u>Part B:</u>	
3. Mineral Oil	12.00
4. Ritoleth 5	10.00
5. Supersat AWS 4	17.00
6. Pationic ISL	1.00
7. 2-Phenoxyethanol	2.00
<u>Part C:</u>	
8. Germall II	0.40
9. Perfume	0.20

Compounding Procedure:

Heat Part A and Part B to 165F. Add Part B to Part A. Cool to 140F. Add Part C. Pour into jars. Pour temperature-135F to 140F.

Note: Be sure to add water to compensate for moisture loss.

If this cannot be weighed, then use 3-4% excess water.

Formulation 109-109

Sculpting Gel

A gum setting gel with emollients and plasticizers. dl-Panthenol helps plasticize the film without losing holding properties and also acts as a humectant.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	92.70
2. Polyquaternium 11	3.00
3. Ritaloe 200M	1.00
4. PVP	0.50
5. Ritoleth 20	0.30
6. Hydroxyethylcellulose	1.00
7. dl-Panthenol	0.50
8. Supersat AWS 4	0.80
9. Simchin WS	0.20
10. Color, Preservative and Fragrance	QS

Compounding Procedure:

Heat a small amount of the formula water. Add ingredients 4,5,7 and 8 and dissolve. Add remaining water. No further heating is required. Disperse ingredient 6 into water phase. Mix well. Add remaining ingredients.

Formulation HB-89-PA-7

Pump Gel Setting Lotion

A gel setting lotion which can be dispensed from a pump. Contains setting agents anti-stat and humectants. dl-Panthenol is used for repair, humectancy and luster.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	86.50
2. Propylene Glycol	5.00
3. Polyquaternium 4	3.00
4. dl-Panthenol	1.00
5. Ritaloe 200M	1.00
6. Polyquaternium 10	1.00
7. Ritabate 20	1.00
8. Hydroxyethylcellulose	1.00
9. Olealkonium Chloride	0.50
10. Patlac LA (44%)	QS
11. Color, Fragrance and Preservatives	QS

Compounding Procedure:

Disperse items 6 and 4 into item 1. Mix well for 30 minutes. Heat to speed solution. Disperse item 8 into batch. Mix for 30 minutes. Add remaining ingredients. Adjust to pH 6 with Patlac LA.

Note: For a lower viscosity product, reduce item 8 to 0.5%.

Section VII

Insect Repellents

Gelled DEET

Protection against insects in a convenient non-greasy clear gel form, using 10% DEET.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. DEET	10.00
2. Alcohol - Ethyl Alcohol 190 Proof	40.00
Part B:	
3. Acritamer 940	0.50
Part C:	
Distilled Water	48.50
Part D:	
5. Triethanolamine (50%)	1.00

Compounding Procedures:

Combine Part A; add Part B and mix for 15 minutes. Slowly add C and mix for 45 minutes. Neutralize with D. (If product is aerated, allow to stand before adding D).

Viscosity: RVF Brookfield, Spindle #7 @ 20 rpm: 45,000 cps

Formulation 107-171

Gelled DEET

Protection against insects in a convenient non-greasy clear gel form, using 10% DEET.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. DEET	10.00
2. Alcohol - Ethyl Alcohol 190 Proof	40.00
3. Myristyl Lactate	0.50
Part B:	
4. Acritamer 940	0.50
Part C:	
5. Distilled Water	48.00
Part D:	
6. Triethanolamine (50%)	1.00

Compounding Procedure:

Combine Part A; add Part B and mix for 15 minutes. Slowly add Part C and mix for 45 minutes. Neutralize with part D. (If product is aerated allow to stand after adding D).

Viscosity: RVF Brookfield #7 @ 20 rpm: 42,000 cps.

Formulation 107-172

Gelled DEET

Protection against insects in a convenient non-greasy clear gel form, using 10% DEET.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. DEET	10.00
2. Alcohol-Ethyl Alcohol 190 Proof	40.00
Part B:	
3. Acritamer 941	0.50
Part C:	
4. Distilled Water	48.50
Part D:	
5. Triethanolamine (50%)	1.00

Compounding Procedures:

Combine Part A; add Part B and mix for 15 minutes. Slowly add Part C and mix for 45 minutes. Neutralize with Part D. (If product is aerated allow to stand before adding D).

Viscosity: RVF Brookfield, Spindle #7 @ 20 rpm: 14,000 cps.
Formulation 107-173

Gelled DEET

Protection against insects in a convenient clear gel form, using 10% DEET.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. DEET	10.00
2. Alcohol - Ethyl Alcohol 190 Proof	40.00
Part B:	
3. Acritamer 940	0.25
4. Acritamer 941	0.25
Part C:	
5. Distilled Water	48.50
Part D:	
6. Triethanolamine (50%)	1.00

Compounding Procedures:

Combine Part A; add Part B and mix for 15 minutes. Slowly add Part C and mix for 45 minutes. Neutralize with Part D. (If product is aerated allow to stand before adding D.)

Viscosity: RVF Brookfield, Spindle #7 @ 20 rpm: 26,000 cps.
Formulation 107-175

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Gelled DEET

Protection against insects in a convenient non-greasy clear gel form, using 7.5% DEET.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. DEET	7.50
2. Alcohol - Ethyl Alcohol 190 Proof	40.00
3. Myristyl Lactate	0.50
Part B:	
4. Acritamer 940	0.50
Part C:	
5. Distilled Water	50.50
Part D:	
6. Triethanolamine (50%)	1.00

Compounding Procedures:

Combine Part A; add Part B and mix for 15 minutes. Slowly add Part C and mix for 45 minutes. Neutralize with Part D.

(If product is aerated allow to stand before adding D.)

Viscosity: RVF Brookfield, Spindle #7 @ 20 rpm: 41,000 cps.

Formulation 107-207

Gelled Deet

Protection against insects in a convenient clear gel form, using 7.5% DEET.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. DEET	7.50
2. Alcohol - Ethyl Alcohol 190 Proof	40.00
3. Myristyl Lactate	0.50
Part B:	
4. Acritamer 940	0.60
Part C:	
5. Distilled Water (80-95C)	16.00
6. Methocel E4M	0.20
7. Distilled Water (very cold or ice)	34.00
Part D:	
8. Triethanolamine (50%)	1.20

Compounding Procedures:

Combine Part A; add Part B and mix for 15 minutes. Premix hot water and Methocel E4M until all particles are thoroughly wetted and a smooth paste is obtained, then add cold water or ice. Cool to 20C and mix for 20 minutes. Then slowly add C and mix for 45 minutes. Neutralize with Part D.

Viscosity: RVF Brookfield, Spindle #7 @ 20 rpm: 54,000 cps

Repellent Stick

The following formula has produced a stick which is very cosmetically appealing and holds up well under storage. Formulators would be responsible for their own acute toxicology for registration purposes.

Stick Formula

DEET	14%
MGK 264	4%
MGK Repellent 326	2%
Isopropyl alcohol	55%
Glycerin	4%
*Beeswax	20%
Stearyl alcohol	1%

Blend all liquid ingredients together, heat to ca. 45C, then add solids. Agitate until all ingredients are dissolved.

Immediately pour into stick container and cool to room temperature.

Sticks of this type have held up chemically and physically after one year's storage at 100F.

*Synthetic Beeswax Beads Waxenol 82/5B

Repellent Roll-On

The roll-on applicator is a convenient way to apply a repellent to exposed skin - particularly the arms. MGK has developed a formulation that is suitable for this mode of application, and is cosmetically acceptable.

MGK Intermediate 5734	20.00%
Isopropyl alcohol	51.00%
Deionized water	28.50%
Carbopol 940	0.25%
Ethomeen C-25	0.25%

The levels of Carbopol 940 and Ethomeen C-25 can be varied to change the viscosity of the formulation.

SOURCE: McLaughlin Gormley King Co.: Suggested Formulations

Spray Pump Formulations

There has developed an interest in personal repellent formulations which can be dispensed by finger operated spray pumps. The spray pumps provide almost the same ease of application of a pressurized product but without propellents. In the MGK work, two basic types of pumps and containers were evaluated - crimp-on with aerosol can and screw-on with various synthetic containers. The purpose of the study was to determine long-time action of typical repellent solutions in containers and pumps.

A. Crimp-On Pump:

Units containing the repellent formulation outlined below were stored at 100F upright and inverted. Each three months the units were weighed and actuated.

Pump - Emson

Crimp-Type Pump Spray Dispenser
1" Tin-Plate Mounting Cup
Epon Top and Bottom

Actuator:

"Extractor-Mist" actuator
1/2" diameter anadized
insert, .017" orifice,
.f180" depth.

Flowed-In Gasket
Buna Diaphragm
Delrin Stem

Container:

Peerless Tube
Epon Lining

Formulations:

Formula 2007	32.50%	to give: 25.00% DEET (95% meta)
Isopar E	15.00%	5.00% MGK 264
Isopropyl alcohol	52.50%	2.50% MGK R-326

After one year storage, all units continued to function properly, the weight loss was negligible (all units did not leak) and there was no effect on the can or pump. Chemical analysis showed the actives up-to-strength.

SOURCE: McLaughlin Gormley King Co.: Suggested Formulations

Spray Pump Formulations (Continued)**B. Screw-On Pump:**

The liquids were stored at 100F in the various containers listed below. The pumps were stored separately and upside-down in a primed condition so that the solutions were in intimate contact with all parts of the pumps and dip tubes for the longest possible time between inspections. At each inspection (at three weeks, one month, six weeks, two months, six months, nine months and one year) the pumps were put onto the respective containers and tested for continued ability to spray satisfactorily.

Containers:

- 1) White, translucent, dense polyethylene from Monsanto Chemical Company.
- 2) White, opaque dense polyethylene from Contintal Can Company.
- 3) Green, translucent (almost clear) from high nitrile polymer Cyclopac from Borg Warner.

Pumps:**Comments:**

- | | |
|---|---|
| 1) Ethyl/VCA (Bridgeport)
Type: LP11
Rubber: Neoprene
Finish: 22 mm
Size: .415 D.C.
Dip Tube: .060"
Actuator: LP11-26 | Good spray and good projection |
| 2) Ethyl/VCA (Bridgeport)
Type: LP19
Rubber: Buna
Finish: 20 mm
Size: .410
Dip Tube: .060"
Actuator: L19-26 (std. insert) | Good spray and good projection |
| 3) Ethyl/VCA (Bridgeport)
Type: LPS10
Piston: Std.
Finish: 28
Size: 400
Dip Tube: .160 I.D.
Actuator: L28-21 (W-4 insert) | Particle size larger than with others, but still okay. Projection of spray not as good as others. |
| 4) Risdon Pump Valve SL-200
#372-017-14
Piston: 959-037-14
Body: 959-031-17
Actuator: 979-101-04 | Good spray and good projection |

General Formulation Information for Pressurized Spray

The variety of repellent mixtures offered by MGK enables the marketer of pressurized products to take advantage of this method of product use. For example, Intermediate 5734 might be filled as follows:

Formula 1:

MGK Intermediate 5734	15%
Isopar E	30%
Isopropanol	51%
Nitrous Oxide or Carbon Dioxide	4%

This formula should be used with a valve such as Precision NN with:

- 0.016" MBRT Button
- 0.013" Stem
- 0.080" Pressure Fill Body

The end product has a "soft" fine particle spray with little bounce-off.

A hydrocarbon propellant system can also be used to fill Intermediate 5734.

Formula 2

Intermediate 5734	10-25%
**Solvent	70-55%
A-46 Isobutane/Propane	20%

** All Isopropanol, all Isopar E, or blend of the two.

The selection of valves seems to be critical with this formulation. MGK has found two valves that gives suitable sprays:

.016" MBRT button	.016" MBRT button
.013" stem	.013" stem
.040" body	.080" body
regular dip tube	regular dip tube

Neoprene stem gasket proved satisfactory at 100F storage for one year. MGK expects Buna N to be okay also.

This pressurized fill, like all personal repellent pressurized fills, is flammable and must be labeled accordingly.

Section VIII

Lotions

Aloe Lotion

A viscous lotion with aloe and emollients.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	35.50
2. Glycerin	4.00
3. Acritamer 940	0.50
4. Ritaloe 1X	50.00
5. Ritachol	5.00
6. Patlac IL	1.00
7. PEG 20 Stearate	3.00
8. Triethanolamine (50%)	1.00
9. Color, Fragrance, Preservative	QS

Compounding Procedure:

Disperse item 3 into item 1. Add item 2. Mix well and heat to 70C. Combine items 5,6 and 7 and heat to 70C. Combine both phases, mix well. Add item 8, cool with mixing to 45C. Add remaining ingredients. Cool to 35C; package.

Formulation HB-89-R-17

Keri-Type Lotion

A Keri-type lotion formulation with emollients, softeners and humectants.

<u>Ingredients:</u>	<u>% W/W</u>
<u>Part A:</u>	
1. Ritalan C	2.00
2. Ritachol	5.00
3. Mineral Oil, 70/80	18.00
4. Cetyl Alcohol	2.00
5. Supersat AWS 4	2.00
6. Propylparaben	0.05
<u>Part B:</u>	
7. Glycerin	1.00
8. Methylparaben	0.10
9. Distilled Water	69.85

Compounding Procedures:

Combine Part A and heat to 65-70C with agitation. Combine Part B and heat to 75C with agitation. When both phases are at temperature, and uniform, add Part A to Part B with continued agitation. Cool to 35C. Package.

Formulation HB-89-R-16

All Purpose Skin Lotion

<u>Ingredients:</u>	<u>% by Weight</u>
Part A: Mineral oil, light	4.00
Kessco Isopropyl Myristate	4.00
Polowax	3.50
Propyl Paraben	0.15
Part B: Glycerine	3.00
Carbomer 941	0.20
Methyl Paraben	0.15
Triethanolamine	0.20
Fragrance, dye	Q.S.
D.I. Water	Q.S. to 100

Mixing Procedure:

Disperse Carbomer 941 in water and heat to 65C. After completely dispersed, add glycerine, methylparaben and triethanolamine. Mix until homogeneous. Heat Part A to 65C and add to Part B w/rapid mixing. Continue to heat and mix for thirty minutes. Cool to room temperature and add fragrance and dye if desired.

Typical Properties:

Creamy thick white emulsion
 Viscosity @ 25C: 20,000 cps
 pH (as is): 7
 Passed freeze thaw and elevated temperature study
 Formulation No. 444

Lotion for Normal-Oily Skin

<u>Ingredients:</u>	<u>% by Weight</u>
Kessco Octyl Isonanoate	5.00
Glycerin	3.00
Stearic acid, tech.	3.00
Triethanolamine 88%	1.80
Wecobee S	0.50
Kessco Cetyl Alcohol	0.50
DMDM hydantoin	0.25
Carbopol 934	0.15
Methyl paraben	0.15
Dow Corning 200 fluid (200cST)	0.10
Propyl paraben	0.10
Tetrasodium EDTA	0.10
D.I. water	Q.S. to 100

Mixing Procedure:

Add D.I. Water to a suitable mixing vessel and begin agitation. Add Carbopol 934 with good agitation and mix at high speed until a solution free of lumps is obtained. Add Silicone DC-200 and mix until completely dissolved. Add Glycerin, DMDM Hydantoin, and Methyl Paraben. Heat to 165-170F. Prepare the oil phase by adding together Kessco Octyl Isonanoate, Wecobee S, Kessco 653, Kessco Cetyl Alcohol, Stearic Acid, and Propyl Paraben. Heat to 170-175F. Add the oil phase to the water phase with good agitation and mix for 30 minutes. Start cooling to 90F. At 110F add Tetrasodium EDTA and Triethanolamine. Stop cooling and agitation at 90F.

<u>Phase C:</u>	
Water	3.00
Triethanolamine, 99%	0.10
<u>Phase D:</u>	
Water	3.00
Germall 115	0.30

Procedure:

Heat Phase A to 85C. Stir well. Disperse Carbopol-934 in water while heating to 85C. Mix until uniform. Add Phase C to Phase B. Mix well with a sweep blade. Add Phase A to batch At 85C. Homogenize while cooling to 75C. Homogenize until uniform. Cool to 45C. while stirring with a sweep blade and add Phase D.

Behenyl Hand Lotion

	<u>% Weight</u>
Behenamidopropyl Dimethylamine (Incromine BB)	3.00
Behenic Acid (Crodacid B)	2.50
PPG-2 Myristyl Ether Propionate (Crodamol PMP)	20.00
Dimethicone, 200 cps. (Dow Corning 200 Fluid)	3.00
Germaben II	1.00
Water	68.50
Fragrance	2.00

Procedure:

Combine the first 4 ingredients and heat to 85-90C. Heat water to 85-90C and add to oils with good mixing. Cool to 40C and add Germaben II and fragrance. Continue mixing and cool to 30C.

Body Massage Lotion

A low solids cream with emollients and humectants. dl-Panthenol helps dry skin, promotes healing and moisturizes.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Mineral Oil, 200/210	0.90
2. Dimethicone, 350 CST	1.20
3. Stearic Acid XXX	3.60
4. Rita CA	1.30
5. Ritalan	0.40
6. Ritachol	0.40
7. Propylparaben	0.30
8. Pationic ISL	0.20
Part B:	
9. Glycerin	1.50
10. Distilled Water	87.48
11. Ritapan DL	0.20
12. Triethanolamine (50%)	1.80
13. Methylparaben	0.70
Part C:	
14. Ritaloe 200M	0.02

Compounding Procedure:

Combine ingredients in Part A and heat to 180F. Combine ingredients in Part B and heat to 180F. Add Part A to Part B and stir until emulsion is uniform. Cool to 140F. Add remaining ingredient (Phase C).

Formulation HB-89-PA-14

Temporary Anti-Wrinkle Lotion

This product contains a wrinkle remover (temporary), Bovinal 30. The smoothing effect on the skin is due to the Ritachol, Ritawax ALA, Ritalan C, and the Pationic ISL. The stabilizer, Acritamer 941, and the Pationic ISL are the primary emulsifiers.

<u>Ingredients:</u>	<u>% W/W</u>
1. Ritachol	2.50
2. Ritawax ALA	1.00
3. Glyceryl Stearate	1.00
4. Stearic Acid	2.00
5. Ritalan C	5.00
6. Pationic ISL	1.25
7. Acritamer 941	0.20
8. Distilled Water	+75.55
9. Propylene Glycol	4.50
10. Triethanolamine (50%)	1.00
11. Bovinal 30	6.00
12. Color, Fragrance, Preservatives	QS

Compounding Procedure:

Disperse item 7 into item 8 and add item 9. Heat to 70C. Combine items 1-6 and heat to 70C. Combine both phases, mix well and add item 10. Cool with mixing to 40C before adding remaining ingredients. Cool to 35C. Fill.

Formulation HB-89-L-26

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Cationic Conditioning Lotion

<u>Ingredients:</u>	<u>% by weight</u>
Part A:	
Deionized Water	90.85
Glycerin	2.00
AMP-95	0.25
Distearyldimmonium Chloride	0.10
Part B:	
Isopropyl Palmitate	2.50
White Petrolatum	1.00
Octyl Hydroxystearate	1.00
Glycol Stearate	1.00
Pemulen TR-1	0.40
Part C:	
Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben	0.90

Procedure:

Combine A ingredients in a vessel which will contain the entire formulation. With mixing, heat to 60C. In a separate vessel, combine all B ingredients except Pemulen. Heat to 60C. When all B ingredients have melted, reconfirm temperature and add Pemulen. Use agitation to break up any soft agglomerates of resin. With vigorous agitation, add B to A. Continue mixing to produce a smooth emulsion. At 45-50C, add C. Continue mixing. Fill containers @ 35C.

Formulation PF-0227 suggested by B.F. Goodrich

Hand and Body Lotion

<u>Ingredients:</u>	<u>% by weight</u>
A Stearic acid xxx	2.00
Glyceryl mono/distearate (Myvacet 9-40)	1.00
Cetyl alcohol (Crodacol C-70)	1.00
White Petrolatum USP (Penreco Snow)	2.50
White Mineral Oil (Drakeol 9)	4.00
Dimethicone (Silicone SF 96-200)	0.40
Oxaban-A	0.10
B Water	73.00
Glycerin	5.00
AMP	0.90
C Carbomer 2984	0.20
Disodium EDTA	0.10
Water	9.80

Procedure:

1. Dissolve EDTA into the water of Section C. With vigorous agitation, gently sprinkle Carbomer 2984 into the EDTA solution.
2. In a separate mixing vessel, combine all of the ingredients in Section B and heat to 80C.
3. Combine the ingredients in Section A, heat to 80C and mix.
4. Add A to B with vigorous agitation. Mix for a further 20 minutes.
5. Add C.
6. Cool rapidly

Cleansing Lotion

A	Water	35.0%
	Jordapon CI Flake	18.0
	Preservative, EDTA	0.4
B	Mineral Oil (1)	7.0
	Cetyl Alcohol (2)	2.0
C	Water	36.2
	Hydroxypropyl Methylcellulose (3)	0.5
	Triethanolamine	0.6
D	Fragrance	0.3
	(1) Drakeol 7, Penreco	
	(2) CO-1695, Proctor and Gamble	
	(3) Methocel 40-100, Dow Chemical	

Procedure:

In the main vessel, heat the part A ingredients to 55C with stirring. Premix part B, heat to 55C, and add to the batch with high shear mixing. In a separate vessel, disperse the Methocel in the part C water. Add approximately 0.06% of triethanolamine to initiate hydration. When hydration is complete, add this phase to the batch, cooling to 35-40C. Add fragrance, and adjust pH to 6.0-6.5 with remaining triethanolamine.

Formula 7003-41

Cleansing Lotion

A	Jordapon CI Dispersion	25.0%
	Water	56.8
	POE 20 Sorbitan Monostearate (1)	2.0

Cold Mix - W/O Emulsion Dihydroxyacetone Lotion

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Polyglyceryl-4 Isostearate (and) Cetyl Dimethicone Copolyol (and) Hexyl Laurate (Abil WE-09)	5.0
Mineral Oil	6.0
Isopropyl Myristate (Tegosoft M)	6.0
Caprylic/Capric Triglycerides (Tegosoft CT)	4.0
Petrolatum	3.0
Octyl Stearate (Tegosoft OS)	3.0
Stearyl Dimethicone (Abil Wax 9800)	3.0
Phase B:	
Sorbitol (70%)	3.0
Glycerin	2.0
Sodium Chloride	2.0
Water	58.0
Dihydroxyacetone	5.0

Procedure:

1. Blend Phase A.
2. Mix Phase B.
3. With slow lightning mix - slowly stream B into A. A milky dispersion will form.
4. Homogenize.

Skin Softening Lotion
(W/O Emulsion - Cold Process)

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Cetyl Dimethicone Copolyol (Abil EM-90)	2.0
Polyglyceryl-4 Isostearate (Isolan GI-34)	0.5
Mineral Oil	8.5
Octyl Stearate (Tegooft OS)	5.0
Cetearyl Octanoate (Tegosoft Liquid)	7.0
Cetyl Dimethicone (Abil Wax 9814)	1.0
Phase B:	
Water	Q.S.
Polyquaternium-16	5.0-10.0
Preservatives	Q.S.
Phase C:	
Fragrance	Q.S.

Procedure:

1. Combine the ingredients of Phase A.
2. Combine the ingredients of Phase B.
3. Add B to A slowly with a low energy mixer. Maintain a smooth milky appearance at all times.
4. Add fragrance. Homogenize.

SOURCE: Goldschmidt Chemical Corp.: Suggested Formulations

Hand and Body Lotion

This oil/water emulsion applies easily and is absorbed into the skin quickly. It does not leave any residual greasiness or oiliness on the skin and leaves the skin soft and smooth to the touch.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	80.40
2. Acritamer 934	0.10
3. Glycerin	4.00
4. Tetra Sodium EDTA	0.05
5. Methylparaben	0.20
6. Glyceryl Stearate	3.20
7. Stearic Acid	3.00
8. Ritachol	3.00
9. Cetyl Alcohol	1.40
10. Ritachol 1000	0.60
11. Ritaderm	2.00
12. Isopropyl Palmitate	0.50
13. Propylparaben	0.10
14. Triethanolamine (50%)	1.20
15. Imidazolidinyl Urea	0.25
16. Fragrance	QS
17. Color	QS

Compounding Procedure:

Weigh and add item 1 into a container and begin stirring. Stir by means of a variable speed agitator equipped with a stirrer capable of imparting relatively high shearing stress (propeller type). Sprinkle in item 2 and stir until the resultant dispersion is smooth and free of lumps. Weigh items 3, 4 and 5 into the container and begin heating, while stirring continuously. Heat to 70-73C. Into another container add items 6 through 13 and begin heating and stirring. Heat this blend to 70-73C. When the water-containing blend is at 70-73C, add item 14. After neutralization of the Acritamer 934 has occurred, add the water-containing blend, while maintaining temperature, to the blend of items 6 through 13, which should be at 70-73C. While all the water-containing blend has been added, begin cooling the batch, while stirring continuously to ensure adequate emulsification. Cool to 55-60C and add the Urea. Cool to 40-43C and add remaining ingredients. Cool the batch to 25-30C and package.

SOURCE: R.I.T.A. Corp.; Formulation H-89-A-7

Hand and Body Lotion

This is an oil/water emulsion providing a creamy textured lotion which is adsorbed by the skin quickly and does not deposit residual greasiness or oilness. Ritaderm has been included for its natural moisturizing factor-related qualities, as well as lanolin-like attributes. Ritaderm, as an emollient and lubricating agent, heightens the user's awareness of skin softness and smoothness imparted by this product.

Ingredients:

	<u>% W/W</u>
1. Distilled Water	72.37
2. Acritamer 941	0.05
3. Propylene Glycol	5.00
4. Methylparaben	0.10
5. Triethanolamine (50%)	1.48
6. Stearic Acid	2.60
7. Mineral Oil	8.00
8. Ritaderm	2.75
9. Lanolin	1.00
10. Propylparaben	0.10
11. Ritachol	4.00
12. Glyceryl Stearate	2.00
13. Cetyl Alcohol	0.30
14. Fragrance	QS
15. Color	QS
16. Imidazolidinyl Urea	0.25

Compounding Procedure:

Weigh and add item 1 into the container and commence stirring. An agitator equipped with a stirrer capable of imparting relatively high shearing stress is recommended. (A variable speed agitator equipped with a propeller-type stirrer is suitable.) Add item 2 and stir until the Acritamer 941 is completely dispersed and no lumps can be seen or felt. Weigh items 3, 4 and 5, begin heating the blend. Heat to 70-73C, while stirring continuously. In another container, weigh and add all other ingredients with the exception of the fragrance and urea. Heat this blend, while stirring continuously to 70-73C. When both blends are at 70-73C add the water-containing blend to the Ritaderm-containing blend. When all the water-containing blend has been added, begin cooling the batch. Cool to 40-43C and add the remaining ingredients. Cool to 30-33C and package fill into suitable containers.

Formulation 103-24

Lubriderm Type Lotion with 1% Patlac IL

A good replication of the well accepted commercial product.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Distilled Water	76.60
2. Sorbitol 70% USP	3.50
Part B:	
3. Forlan 500	6.00
4. Rita CA	0.70
5. Mineral Oil 80/90	8.00
6. Patlac IL	1.00
7. Stearic Acid	2.00
8. Methylparaben	0.15
9. Propylparaben	0.05
Part C:	
10. Distilled Water	1.00
11. Triethanolamine (50%)	1.00

Compounding Procedure:

Heat A and B to 165F. Combine with mixing (add B into A). Add C and maintain temperature for 10 minutes. Cool with mixing.

Formulation 107-116

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Moisturizing Lotion

This oil/water skin lotion features excellent emollience, moisturizing and lubricating attributes without an oily or greasy residue. Ritachol is included for its emollient and moisturizing qualities, as well as the low friction characteristics it imparts when this preparation is massaged into the skin. Ritachol is included for its lanolin-related conditioning effects and as a supplemental source of cholesterol.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	86.30
2. Potassium Hydroxide (20% Solution)	2.00
3. Sodium Hydroxide (18% Solution)	0.16
4. Acritamer 934	0.10
5. Methylparaben	0.10
6. Mineral Oil	5.50
7. Stearic Acid	3.09
8. Cholesterol	0.75
9. Ritasol	0.50
10. Ritachol	0.50
11. Rita CA	0.35
12. Myristyl Alcohol	0.20
13. Rita SA	0.10
14. Butyl Paraben	0.20
15. Propyl Paraben	0.15
16. Fragrance	QS
17. Color	QS

Compounding Procedure:

Add item 1 into a container and begin stirring by means of a variable speed agitator equipped with a stirrer capable of imparting relatively high shearing stress. Then add item 4 with continuous stirring. Stir until the Acritamer 934 has been completely dispersed and is smooth and free of lumps. Begin heating and add item 5. Heat to 70-73C with continuous stirring. In another container, add all other ingredients, with the exception of Potassium Hydroxide, Sodium Hydroxide and Fragrance. Heat this blend to 70-73C with continuous stirring. Add the oil phase to the water phase with agitation. Continue stirring and maintain the temperature at 70-73C. In another container, using a small amount of water, dissolve the Potassium Hydroxide and Sodium Hydroxide. Use caution when handling these materials. When the Potassium and Sodium Hydroxide have been dissolved, add this to the batch. Begin cooling. With continuous stirring, cool to 40-43C and add the fragrance. Cool to 25-30C and package.

Moisturizing Lotion

<u>Part:</u>	<u>Ingredient:</u>	<u>Wt. %</u>
A	Deionized Water	74.5
	Polysorbate 20	T-Maz 20 1.0
	Sorbitol	Sorbitol 70% 4.0
	Methyl Paraben	0.2
	Na4EDTA	0.2
	Xanthan Gum	Kelzan 0.2
B	Capric/Caprylic Triglyceride	Mazol 1400 5.0
	Mineral Oil	Drakeol 9 1.0
	Isopropyl Myristate	Lexol IPM 3.0
	Dimethicone	Masil SF-1000 0.5
	Sorbitan Monostearate	S-Maz 60 3.0
	Polysorbate 60	T-Maz 60 2.0
	Cetyl Alcohol	CO-1695 2.0
	Ethylene Glycol Monostearate	Mapeg EGMS 1.5
	Hydroxypropyl Methylcellulose	Methocel 40-100 0.1
C	Deionized Water	1.5
	Hydrolyzed Animal Protein	Peptein 2000 0.2
D	Fragrance	0.1
	Citric Acid	Q.S.

pH : 6.5-7.0

Viscosity: 4,100 cps

Appearance: Glossy, flowable white lotion

Procedure:

Blend Part A ingredients except xanthan gum. When uniform, sprinkle in the xanthan gum and heat to 65C (150F). Pre-mix Part B, and heat to 65C (150F). When uniform, add Part B to Part A with high shear mixing. Sweep-cool to 40C (105F), and adjust the pH with citric acid. Pre-mix Part C and add to the batch. Add fragrance.

SOURCE: Mazer Chemicals: Formulation No. I-101

Moisturizing Lotion (Cold Preparation)

<u>Ingredients:</u>	<u>% by weight</u>
A Water	90.00
Hydroxypropylmethylcellulose (Methocel 40-100)	0.10
AMP	0.40
Oxaban-A	0.10
Glycerin	2.50
Disodium EDTA	0.10
B White Mineral Oil (Drakeol 9)	3.00
White Petrolatum (Penreco Snow)	3.00
Dimethicone (Silicone SF 96-200)	0.50
Isopropyl Palmitate	1.00
Sodium Isethionate (Hostapon KA)	0.10
Pemulen TR-2	0.20

Procedure:

This procedure is designed for ambient temperature production.

It is important that all ingredients should be sterile.

1. Combine the water, AMP, Oxaban-A, glycerin and disodium EDTA.
2. Vigorously agitate 1 and add hydroxypropylmethylcellulose.
3. In a separate vessel, combine the mineral oil, petrolatum, dimethicone, isopropyl palmitate and sodium isethionate; then add Pemulen TR-2. Mix until uniform.
4. Add 3 to 2 with vigorous agitation.

Formula PF-0187

Moisturizing Lotion (Cold Preparation)

<u>Ingredients:</u>	<u>% by weight</u>
A. Water	90.00
AMP-95	0.40
Oxaban-A	0.10
Glycerin	2.50
Disodium EDTA	0.10
B. Hydroxypropylmethylcellulose	0.10
C. White mineral oil	3.00
White Petrolatum	2.00
Dimethicone	0.50
Isopropyl palmitate	1.00
Sodium isethionate	0.10
D. Acrylates C10-30 alkyl acrylate crosspolymer (Pemulen TR-2)	0.20

Procedure:

Combine A. Vigorously agitate; add B. In a separate vessel, combine C. Add D. Mix until uniform. Add CD to AB with vigorous agitation.

This procedure is designed for ambient temperature production. It is important that all ingredients should be sterile.

Moisturizing Lotion

This rich moisturizing lotion helps the skin retain its youthful elasticity. It is a rich formulation to help replenish and maintain the skin's moisture level. LEXQUAT AMG-0 is the primary cationic emulsifier with the added benefit of emolliency.

Phase A:	% (w/w)
Deionized water	58.00
Cellose QP-15,000H (Hydroxyethyl Cellulose)	0.30
Glycerine	3.00
Propylene Glycol	2.00
Lexgard M (Methylparaben)	0.20
Lexquat AMG-0	12.00
Phase B:	
Lexol PG-865	15.00
Lexemul 55G	4.50
Myristyl Myristate	1.00
Stearyl Alcohol	2.20
Cetyl Alcohol	1.50
Lexgard P	0.10
Phase C:	
Fragrance	0.20
Procedure:	

Charge batch vessel with water (Phase A). Begin mixing and heating to 78C+2C. Dust in Cellose. When completely hydrated, add remaining material of Phase A to batch. Combine Phase B in a separate vessel and heat to 78C+2C. When uniform slowly add Phase B to Phase A maintaining mixing and temperature. Allow to mix at 78C for 15 minutes. Cool. At 40C, add Phase C to batch. Cool to room temperature.

Observations:

pH (direct): 4.8

Viscosity: 11,000 cps

SOURCE: Inolex Chemical Co.: Formulation SK-103

Deep Moisturizing Lotion

This after-bath lotion gives the benefits of potent skin conditioners while eliminating the tackiness associated with lanolin and petrolatum through the unique emolliency provided by Phospholipid EFA.

Part A:	%
Phospholipid EFA	4.00
Steareth-21	0.40
Water	82.00
Part B:	
Steareth-2	1.60
Anhydrous Lanolin	1.50
Petrolatum	3.00
Octyldodecyl Myristate	2.00
Cetearyl Alcohol	4.00
Dimethicone (100 cS)	1.50

Combine ingredients in both phases separately and heat to 65C. Homogenize (B) into (A) with continued heating until sufficiently mixed. Stir-cool to 45-50C, then add fragrance, color, and preservative as needed before filling.

SOURCE: Mona Industries Inc.: Phospholipid EFA: Formula

Moisturizing Lotion

<u>Ingredients:</u>	<u>% by weight</u>
Part A:	
Deionized Water	72.25
Hydroxypropyl Methylcellulose (1.0% solution)	10.00
Glycerin	2.00
Disodium EDTA	0.05
Part B:	
Petrolatum	5.00
Mineral Oil	3.00
Glycol Stearate	2.00
Isostearyl Benzoate	2.00
Paraffin	2.00
Dimethicone (110 cs.)	0.50
Pemulen TR-1	0.30
Part C:	
AMP-95	0.20
Part D:	
Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben	0.70

Procedure:

Combine A ingredients. Mix until homogeneous. Combine all B ingredients except Pemulen in a separate vessel. Heat both phases to 60-65C. Confirm that B is homogeneous and at the specified temperature. Add Pemulen to this phase. Agitate to break-up soft lumps of resin. With vigorous agitation, promptly add B to A. Maintain temperature at 60C. Mix for 15-30 minutes or until a smooth, non-grainy dispersion is apparent. Add C and discontinue heating. Continue vigorous agitation to produce a smooth product. When the temperature falls to 40-45C add D. Continue mixing until the product temperature is 30-35C. Cease agitation and fill containers.

SOURCE: Angus Chemical CO.; Formula PF-0224 B.F. Goodrich

Moisturizing Lotion

Soft, white, glossy lotion. Contains Kytamer PC, a substantive humectant which contributes to the lasting moisturization of the skin. The mild, nonionic emulsifying pair of Glucamate SSE-20 (o/w) and Glucate SS (w/o) gives the lotion long term stability. Promulgen serves as an auxiliary emulsifier to this o/w lotion.

Water Phase:

Kytamer PC (Chitosan PCA)	1.0%
Glucamate SSE-20 (PEG-20 Methyl Glucose Sesquistearate)	1.5
Deionized Water	82.0

Oil Phase:

Glucate SS (Methyl Glucose Sesquistearate)	1.5
Promulgen G (Stearyl Alcohol and Ceteareth-20)	4.0
Mineral Oil	10.0
Perfume and Preservative	q.s.

Disperse Kytamer PC in water at room temperature with high speed agitation. When completely dispersed heat to 75C with continuous mixing until clear and uniform. Maintain temperature at 75C and add Glucamate SSE-20. Heat oil phase to 75C. Add the water phase at 75C to oil phase at 75C with good agitation. Continue mixing while slowly cooling to room temp. Add perfume.

SOURCE: Amerchol Corp.; Formula T57-130-1

Moisturizing Cleansing Lotion

This light, elegant moisturizing cleansing lotion applies with a rich lubricity. It deep cleans and softens the skin. Lexquat AMG-M is the primary cationic emulsifier with the added benefit of emolliency.

<u>Phase A:</u>	<u>% w/w</u>
Deionized Water	60.30
Cellose QP-15,000H	1.00
Glycerine	3.00
Propylene Glycol	2.00
Lexgard M	0.20
Lexquat AMG-M	9.00
<u>Phase B:</u>	
Lexol PG-865	15.00
Lexemul 55G	4.50
Myristyl Myristate	1.00
Stearyl Alcohol	2.20
Cetyl Alcohol	1.50
Lexgard P	0.10
<u>Phase C:</u>	
Fragrance	0.20
<u>Procedure:</u>	

Charge batch vessel with water (Phase A). Begin mixing and heating to 78C+-2C. Dust in Cellose. When completely hydrated, add remaining material of Phase A to batch. Combine Phase B in a separate vessel and heat to 78C+-2C. When uniform slowly add Phase B to Phase A maintaining mixing and temperature. Allow to mix at 78C for 15 minutes. Cool. At 40C, add Phase C to batch. Cool to room temperature.

SOURCE: Inolex Chemical Co.: Formula SK-102

Light Emollient Lotion with Pseudocollagen

<u>Ingredients:</u>	<u>% by weight</u>
Carbopol 1342 2%	15.00
Glycerine	3.00
Phenonip	1.00
Brookswax D	1.00
Liquiwax DICDD	1.00
Evening Primrose Oil	1.00
AMP-95	0.30
Pseudocollagen	5.00
Deionized Water	72.70

Procedure:

1. Heat the Brookswax D, Liquiwax DICDD and Evening Primrose Oil to 50C, until molten.
2. Add the Carbopol dispersion to the water and glycerine. Mix and heat to 50C.
3. Add Part 1 to Part 2 with mixing. Add the AMP-95 to neutralize the Carbopol, then add the Phenonip and the Pseudocollagen.
4. Check pH (approximately 7) and viscosity.

Nonionic Hand Lotion with Chlorhexidine Gluconate

A nonionic hand lotion with bactericide. Contains emollients and humectants to soothe skin and relieve dryness. Also contains Panthenol to relieve soreness and promote healing.

<u>Ingredients:</u>	<u>% W/W</u>
1. Mineral Oil	17.00
2. Ritalan C	3.00
3. Ritachol	5.00
4. Ritachol 1000	0.65
5. Ritapro 165	0.65
6. Ritapro 300	1.25
7. Cetyl Alcohol	2.00
8. Supersat AWS 4	2.00
9. DL Panthenol	0.50
10. Methylparaben	0.10
11. Propylparaben	0.05
12. Chlorhexidine Gluconate 20% BP	1.25
13. Distilled Water	66.55

Compounding Procedure:

Combine items 1-12 and heat to 75C. Heat item 13 to 75C and add to stirred mixture. Mix until cool.

Deodorizing Hand Lotion

A hand lotion with Grillocin HY-77 to be used when objectionable household or industrial odors have been retained on the hands.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Ritachol	2.50
2. Ritawax ALA	1.00
3. Rita GMS	2.00
4. Stearic Acid	2.00
5. Ritalan C	5.00
6. Propylparaben	0.05
7. Methylparaben	0.15
Part B:	
8. Distilled Water	74.10
9. Acritamer 941	0.20
Part C:	
10. Grillocin HY-77	2.00
11. Dipropylene Glycol	10.00
Part D:	
12. Triethanolamine (50%)	1.00
13. Fragrance	QS

Compounding Procedure:

Weigh water of Part B into a jacketed tank equipped with a variable speed mixer capable of creating a vortex. Sprinkle Acritamer 941 into vortex, avoiding any lumps or "fish eyes". Weigh Part A into a separate container and heat both water and oil phase to 80C. Add Part A to Part B with mixing. Mix until uniform. Pre-mix Part C and add to batch. Mix until uniform. Begin cooling. Add Triethanolamine. Mix until uniform. Begin cooling to 45C. Add perfume. Cool to 35C. Package.

Pearl Premix

Highly concentrated pearlescent additive in paste form

<u>Ingredient:</u>		<u>Wt. %</u>
Deionized Water		47.0
Propylene Glycol		6.0
Isostearamidopropyl Ethyldimonium		
Ethosulfate	M-Quat 522	22.0
Preservative		QS
Ethylene Glycol Monostearate	Mapeg EGMS	25.0
Triethanolamine		QS

pH (5% in water): 6.0-6.5

Appearance: White pearlescent paste

Procedure:

Blend the first four ingredients, heating to 70C (160F). Add the Mapeg EGMS with good mixing, maintaining the high temperature. When smooth and uniform, adjust pH and fill into suitable containers.

Note:

This premix, prepared ahead of time and packed into conveniently sized containers, can be added at room temperature to cold-mix products such as Family Shampoo A-102 or Cold Mix Hair Conditioner B-106 to impart a pearlescent appearance without heating and cooling steps. Pearl Premix should be added at 3-5% by formula weight.

NaCl	1.0
Polysorbate 80	0.2
Water	69.7
Dowicil 200	0.1

Procedure:

- 1) Add Part A ingredients in order as shown, thoroughly mixing each component until homogeneous before adding next ingredient.
 - 2) Mix all ingredients of Part B together.
 - 3) Add Part B to Part A with good mixing gradually increasing agitation to high shear as mixture thickens. Continue agitation for 5-10 minutes. Mixture will become very thick.
 - 4) Mill on homogenizer for 1-2 minutes.
- Formulation SP106

Rich Moisturizing Skin Lotion

A glossy white lotion which smooths instantly into the skin, leaving it soft, nonoily, and moisturized.

<u>Part:</u>	<u>Ingredient:</u>	<u>Wt. %</u>	
A	Deionized Water	78.5	
	Triethanolamine	0.1	
	Methyl Paraben	0.2	
	Tetrasodium EDTA	0.2	
B	Cetearyl Alcohol (and)		
	Ceteareth-20	Macol 124	6.0
	Stearic Acid	Hystrene 7018	1.2
	Benzyl Laurate	Mazon EE-1	3.0
	PPG-10 Butanediol	Macol 57	4.0
	Tetrabutoxypropyl Methicone	Masil 756	5.0
	Deionized Water		5.0
C	Imidazolidinyl Urea	Germa11 115	0.2
	Citric Acid, 50%		0.1
	Fragrance		Q.S.

pH: 6.0-6.5

Viscosity: 180,000-185,000 cps (Brookfield TD @ 0.6 rpm)

9,000- 12,000 cps (Brookfield #3 @ 6 rpm)

Appearance: Smooth glossy white lotion

SOURCE: PPG Industries, Inc.: Formulation I-107

Light Emollient Lotion with Pseudocollagen

<u>Ingredients:</u>	<u>% by weight</u>
Carbopol 1342, 2%	15.00
Glycerine	3.00
Phenonip	1.00
Brookswax D	1.00
Liquiwax DICDD	1.00
Evening Primrose Oil	1.00
AMP-95	0.30
Pseudocollagen	5.00
Deionized Water	72.70

Procedure:

1. Heat the Brookswax D, Liquiwax DICDD and Evening Primrose Oil to 50C, until molten.
2. Add the Carbopol dispersion to the water and glycerine. Mix and heat to 50C.
3. Add Part 1 to part 2 with mixing. Add the AMP to neutralize the Carbopol, then add the Phenonip and the Pseudocollagen.
4. Check pH (approximately 7), and viscosity.

Silky Hand Lotion with Silicone

This light lotion goes on smoothly, and leaves a nongreasy, silicone-fortified barrier

<u>Part:</u>	<u>Ingredient:</u>		<u>Wt. %</u>	
A	Phenyl Trimethicone	Masil SF 556	2.0	
	Dimethicone	Masil SF 100	0.5	
	Isopropyl Myristate	Lexol IPM	2.0	
	Mineral Oil	Drakeol 9	3.0	
	Cetyl Alcohol	CO-1695	1.5	
	Stearic Acid	Emersol 132	0.5	
	Ceteareth-20	Macol CSA-20	2.0	
	Sorbitan Stearate	S-Maz 20	1.0	
	B	Deionized Water		80.3
		Glycerin		3.0
Propylene Glycol			3.0	
Hydroxypropyl Methylcellulose		Methocel 40-100	0.1	
C	Triethanolamine		0.3	
	Preservative	Germaben II	0.6	
	Fragrance		0.1	
	Citric Acid		0.1	

pH: 6.0-6.5

Viscosity: 31,000 cps (#2@1.5rpm)

23,000 cps (#2@3rpm)

Appearance: Glossy white flowable lotion

Procedure:

Premix Part A, heat to 60C. In the main vessel, mix the first four ingredients of Part B. Begin heating to 60C, add triethanolamine to initiate hydration of the hydroxypropyl methylcellulose. With both parts at 60C, slowly add A to B with high shear mixing. Sweep cool to 35C, adding the Part C ingredients at around 40-45C

Hand and Body Lotion

<u>Phase A:</u>	<u>% Weight</u>
Linoleamidopropyl PG-Dimonium Chloride Phosphate (Phospholipid EFA)	4.00
Water	82.00
Phase B:	
Steareth-2 (Brij 72)	2.00
Light Mineral Oil	4.00
Cetearyl Alcohol (Lanette O)	3.00
Octyldodecyl Myristate	2.50
Dimethicone, 100 cps. (Dow Corning 200 Fluid)	1.50
Phase C:	
Germaben II-E	1.00

Procedure:

Combine ingredients for Phase A and Phase B separately and heat to 65C. Homogenize Phase B into Phase A with continued heating until sufficiently mixed. Stir-cool to 40C, add Phase C and package.

SOURCE: Sutton Laboratories: Suggested Formulations

Skin Lotion (514117)

Part A:	
Drakeol 21, Mineral Oil USP	20.0 wt%
Polysorbate 60	7.5
Cetyl alcohol	5.0
Sorbitan Stearate	2.5

Part B:	
Deionized water	64.8
Methylparaben	0.1
Propylparaben	0.1

Heat Part A to 55C, and heat Part B to 60C. With stirring, add Part B to Part A, and let cool to room temperature. Fragrance may be added at 40C.

Hand and Body Lotion (514119)

Part A:	
Penreco Mineral Jelly No. 15	75.0 wt%
Sorbitan Sesquioleate	3.0
Mineral Oil (and) Lanolin Alcohol	2.0

Part B:	
Deionized water	20.0

Part C:	
Preservatives	q.s.

Mix the ingredients in Part A and heat to 70C with stirring. Heat Part B to 75C. Add Part B to Part A with stirring. Let the mixture cool to room temperature with stirring. Add fragrance at 40C if desired.

Hand and Face Lotion (514123)

Part A:	
Deionized water	69.75 wt%
Propylene glycol	6.00
Hydroxyethylcellulose	0.20
Triethanolamine	0.20
Carbopol 934	0.15

Part B:	
Drakeol 7, Light Mineral Oil USP	11.00
Glyceryl Stearate	3.00
Penreco Amber, White Petrolatum USP	2.75
Isopropyl myristate	2.00
Stearic Acid	2.00
Sorbitan Stearate	1.00
Stearyl Alcohol	1.00
Dimethicone, 200 cSt	0.50
Vitamin E Acetate	0.15
Part C:	
Preservatives	0.30

Heat each Part separately to 70C. While stirring Part A, add Part B. Stir vigorously until the mixture reaches room temperature. Add Part C and any desired fragrance when the temperature reaches 45C.

W/O Alcohol Lotion

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Cetyl Dimethicone Copolyol (Abil EM-90)	2.0
Mineral Oil	16.0
Octyl Stearate (Tegosoft OS)	1.5
Cetyl Dimethicone (Abil Wax 9801)	1.5
Hydrogenated Castor Oil	0.5
Synthetic Wax	0.5
Phase B:	
Cyclomethicone (Abil B 8839)	5.0
Phase C:	
Water	60.3
Sodium Chloride	0.5
Carbomer 940 (1.5% - NaOH Neutralized)	0.2
SD Alcohol 40A	10.0
Phase D:	
Fragrance, Preservatives	Q.S.

W/O Alcohol Lotion

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Cetyl Dimethicone Copolyol (Abil EM-90)	2.0
Mineral Oil	14.0
Octyl Stearate (Tegosoft OS)	3.5
Cetyl Dimethicone (Abil Wax 9801)	1.5
Hydrogenated Castor Oil	0.5
Synthetic Wax	0.5
Phase B:	
Cyclomethicone (Abil B 8839)	5.0
Phase C:	
Water	65.3
Sodium Chloride	0.5
SD Alcohol 40A	5.0
Phase D:	
Fragrance, Preservatives	Q.S.

Procedure:

1. Combine the ingredients of Phase A. Heat to 80C. Mix until uniform and the waxes are dispersed. Cool to 40C.
2. Add the Cyclomethicone.
3. Mix Phase C add to A/B. Slowly add to Phase A/B with low energy stirring. Maintain a milky appearance at all times.
4. Add Phase D.
5. Homogenize.

Section IX

Shampoos

Aloe Shampoo and Body Wash

A premium shampoo with Aloe and Panthenol. Combines good cleansing with conditioning. Betaine improves ease of combing. Pationic ISL and Panthenol are deposited to repair hair, moisturize and impart luster.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Distilled Water	40.35
2. Ritaoe IX	15.00
3. dl-Panthenol	0.50
Part B:	
4. Sodium Lauryl Sulfate	25.00
5. Cocamidopropyl Betaine	10.00
6. Lauramide DEA	5.00
7. Pationic ISL	1.75
8. Methylparaben	0.15
Part C:	
9. Kathon CG	0.05
10. Fragrance	0.20
11. Sodium Chloride (25% Solution)	2.00
12. Patlac LA (44%)	QS

Compounding Procedure:

Combine ingredients of Part A and heat to 50C. Combine ingredients of Part B and heat to 50C. Combine Part A and Part B with mixing. Adjust pH with Patlac LA (7.0 recommended). Cool to 120F, add perfume and Kathon CG. Mix until uniform. Adjust viscosity with Sodium Chloride solution.

Formulation 112-56

Deodorizing Shampoo

A deodorizing shampoo with moisturizing and conditioning properties.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	59.20
2. Grillocin HY-77	1.00
3. Pationic 138C	4.00
4. Ritapeg 150 DS	1.75
5. Sodium Laureth Sulfate	33.00
6. Glydant 40-700	0.25
7. Methylparaben	0.10
8. Sodium Chloride (25% Solution)	+ -0.70

Compounding Procedure:

Heat water, Ritapeg 140 DS, Sodium Laureth Sulfate, Pationic 138C, and Grillocin to 165F. Mix until uniform. Add Methylparaben. Mix until dissolved. Begin cooling. Cool to 120F. Add Glydant (also add fragrance at this point, if desired). Cool to 80F. Add Sodium Chloride solution to increase viscosity. Package.

Formulation 113-105B

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Amide Free Viscous Clear Shampoo with Pationic ISL

A clear shampoo which can be made without the use of amides, using Pationic ISL as a thickener and conditioner.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Distilled Water	20.00
2. Sodium Laureth Sulfate (2 Mole)	46.50
Part B:	
3. Pationic ISL	5.00
4. Fragrance	0.20
Part C:	
5. Distilled Water (cold)	26.15
Part D:	
6. Sodium Hydroxide (20% Solution)	+0.70
7. Sodium Chloride (25% Solution)	+1.25
8. Glydant 40-700	0.20

Compounding Procedure:

Heat water to Part A to 140F. Blend Part B. Add Part B to Part A, mix. Add Part C to Part AB (Note: Part C water should be cold to bring entire batch to 95F or lower, so it can be filled immediately without using cooling water). Add Glydant solution. Adjust pH to 7.0+0.1 with sodium hydroxide solution. Adjust viscosity with sodium chloride solution.

Viscosity: 2000 cps

Cloud Point: 22F

Clear Point: 32F

Formulation 104-140

Low Irritation/Sting Shampoo with Pationic 138C

A clear shampoo which has good cleaning properties, yet is proven to have low irritancy characteristics.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Distilled Water	64.08
2. Sodium Laureth Sulfate (2 Mole)	16.67
3. Pationic 138C	10.00
4. Ritamid C	4.00
5. Methylparaben	0.10
Part B:	
6. Triethanolamine (50	2.00
Part C:	
7. Perfume	0.20
8. Glydant 40-700	0.20
Part D:	
9. Sodium Chloride (25% Solution)	2.75

Compounding Procedures:

Heat Part A to 165F. While mixing, adjust to pH 7.5 with Part B. Cool to 120F. Add Part C. Adjust viscosity with Sodium Chloride 25% Solution.

Formulation 103-130

SOURCE: R.I.T.A. Corp.: Suggested Formulation

Amide Free Viscous Clear Shampoo with R.I.T.A. Complex A

A clear shampoo which can be accomplished without the use of amides, using Ritacomplex A as a thickener and conditioner.

Ingredients:	% W/W
Part A:	
1. Distilled Water	20.00
2. Sodium Laureth Sulfate (2 Mole)	46.50
Part B:	
3. Ritacomplex A	3.00
4. Fragrance	0.20
Part C:	
5. Distilled Water (Cold)	28.02
Part D:	
6. Sodium Hydroxide (20% Solution)	+ -0.33
7. Sodium Chloride (25% Solution)	+ -1.75
8. Glydant 40-700	0.20

Compounding Procedure:

Heat Water in Part A to 140F. Add Sodium Laureth Sulfate and mix. (Part A should be about 115F). Add Part B to Part A, mix. Add Part C to Parts AB (Note: Part C water should be cold to bring the entire batch to 95F, or lower, so it can be filled immediately without using cooling water. Add Glydant. Adjust pH to 7.0-0.1 with sodium hydroxide solution. Adjust viscosity with sodium chloride solution.

Viscosity, Brookfield: 1600 cps.

Cloud Point: 25F

Clear Point: 32F

Note: This formula can be compounded without using warm water in Part A. However, the mixing time must be extended.

Formulation 103-187A

Amide Free Viscous Clear Shampoo with R.I.T.A. Complex B

A clear shampoo made without the use of amides, using Ritacomplex B as a thickener and conditioner.

Ingredients:	% W/W
Part A:	
1. Distilled Water	47.07
2. Sodium Laureth Sulfate (2 Mole)	46.50
3. Glydant 40-700	0.70
Part B:	
4. Ritacomplex B	2.00
Part C:	
5. Sodium Hydroxide (20% Solution)	+ -0.23
6. Sodium Chloride (25% Solution)	+ -4.00

Compounding Procedure:

Heat Part A to 115F. Add Part A to Part B, mix. Add Part C to parts AB (Note: Water should be cold to bring entire batch to 95F or lower, so it can be filled immediately without using cooling water). Adjust pH to 7.0+ -0.1 with sodium hydroxide solution. Adjust viscosity with sodium chloride solution.

Formulation 103-187B

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Amphoteric Shampoo with Sunscreen

	<u>% Weight</u>
Phase A:	
Lauramide DEA (Monamid 716)	1.00
Dimethyl PABA Ethyl Cetearyldimonium Tosylate (Escalol 537Q)	0.20
Phase B:	
Water	47.80
Lauramidopropyl Betaine (Monateric LMAB)	15.00
Sodium Laureth Sulfate (Maprofix ES-1)	35.00
Phase C:	
Germaben II	1.00

Procedure:

Combine Phase A and heat to 80C, mixing until Escalol 537Q is completely dissolved. Combine Phase B and heat to 80C. Add Phase A to Phase B. Cool to 50C and Phase C. Cool to room temperature.

Conditioning Shampoo

	<u>% Weight</u>
Water	45.15
Sodium Laureth Sulfate (2 Mole EO, 26% active) (Sipon ES-2)	20.00
Sodium Lauryl Sulfate (and) Disodium Lauryl Sulfosuccinate (Monaterge 1164)	20.00
Trisodium Lauroampho PG Acetate Phosphate Chloride (Phosphoteric QL-38)	10.00
Dimethicone, 200 cps. (Dow Corning 200 Fluid)	2.50
Glycol Distearate (Kessco Ethylene Glycol Distearate)	1.00
Cocamide MEA (Monamid CMA)	1.00
Sodium Chloride	0.15
Germaben II	0.20

Procedure:

Excluding Germaben II, add ingredients in order listed with agitation. Heat to 70C. Cool to 40C. Adjust pH to 5.5-6.0 with 50% citric acid. Add Germaben II.

SOURCE: Sutton Laboratories: Suggested Formulations

Anti-Dandruff Shampoo

<u>Ingredients:</u>	<u>% by Weight</u>
Stepanol AM-V	50.0
Stepan TAB-2	5.0
Zinc pyrithione (ZPT) 48% dispersion	4.2
Ninol 40-CO	2.0
EDTA	0.2
Glydant	0.2
Citric acid	Q.S.
Sodium hydroxide	Q.S.
Ammonium chloride	Q.S.
D.I. water	Q.S. to 100

Mixing Procedure:

Add Stepanol AM-V, Ninol 40-CO, and EDTA to water and heat to 165-170F with mixing. Add Stepan TAB-2 and Zinc Pyrithione 48% dispersion and mix for 30 minutes. Begin to cool to room temperature with mixing. At 120F add preservative and adjust pH to 5.0-6.2 with Sodium Hydroxide or Citric Acid as needed. Adjust to desired viscosity with Ammonium Chloride.

Typical Properties:

Appearance: Opaque, liquid

Viscosity: 2500-3500 cps @ 25C

Comment:

Stable at 0C, 25C, and 42C for 1 month

Formulation No. 563

Anti-Dandruff Shampoo

<u>Ingredients:</u>	<u>% by Weight</u>
Stepanol AM-V	51.7
Stepan TAB-2	5.0
Ninol 40-CO	2.0
Selenium Sulfide	1.0
EDTA	0.2
Glydant	0.2
Sodium Hydroxide	Q.S.
Citric Acid	Q.S.
Ammonium Chloride	Q.S.

Mixing Procedure:

Into a suitable vessel equipped with mixing, heating and cooling capabilities add DI water, EDTA, Stepanol AM-V, Ninol 40-CO. Begin to agitate and heat to 160-165F. Add Selenium Sulfide. At 145F add Stepan TAB-2 and continue to heat to 160-165F. Agitate the batch for 30 min.** Begin to cool. At 110F add Glydant. Adjust pH to 5.0-6.2 with Sodium Chloride or Citric Acid. Adjust to desired viscosity with Ammonium Chloride.

**If smaller particle size and a pearly product is desired, homogenize the batch at 110-130F.

Typical Properties:

Appearance: Opaque, liquid

Viscosity: 2500-3500 cps @ 25C

pH (as is): 5.0-6.2

Comment:

Stable at 0C, 25C, and 42C for 1 month

Anti-Dandruff Shampoo

<u>Ingredients:</u>	<u>% by Weight</u>
Pre-Mix:	
D.I. Water	20.0
Stepanol AM-V	20.7
Sulfur Powder, Tech.	2.0
Ninol 40-CO	1.0
Main Batch:	
D.I. Water	56.1
Stepanol AM-V	31.0
Stepan TAB-2	5.0
Ninol 40-CO	1.0
EDTA	0.2
Glydant	0.2
Sodium Hydroxide	Q.S.
Ammonium Chloride	Q.S.

Mixing Procedure:

Main Batch:

Into a suitable vessel equipped with mixing, heating and cooling capabilities add DI water, EDTA, Stepanol AM-V, Ninol 40-CO. Begin agitation and heating to 165-170F. At 145F add Stepan TAB-2.

Pre-Mix:

In a vessel equipped with a homogenizer add D.I. water, Stepanol AM-V, Ninol 40-CO, and Sulfur powder. Homogenize the product until a small particle size of sulfur and a homogenous mixture is obtained.

Add pre-mix to main batch, adjust temperature to 165-170F and agitate for 30 minutes. Begin to cool. At 110F add Glydant. Adjust pH to 5.0-6.2 with Sodium Hydroxide or Citric Acid as needed. Adjust to desired viscosity with Ammonium Chloride.

Typical Properties:

Appearance: Opaque, liquid

Viscosity: 2500-3500 cps @ 25C

pH (as is): 5.0-6.2

Comment:

Stable for 1 month at 0C, 25C, and 42C.

Monamine 779	10.0
Monamine 150-ADY	2.5

Add ingredients in order listed and mix with slow agitation. Adjust pH level. At pH 7 viscosity is approximately 5000 cps.

SOURCE: Mona Industries, Inc.: Suggested Formulation

Cleansing Shampoo

<u>Ingredients:</u>	<u>%w/w</u>
Water	45.4
Ammonium Laureth Sulfate (30%)	35.0
Ammonium Lauryl Sulfate (30%)	10.0
PEG-18 Glyceryl Oleate/Cocoate (Antil 171)	1.0
Cocamidopropyl Betaine (Tego Betaine L-7)	7.0
Dimethicone Copolyol (Abil B 8852)	0.6
Citric Acid	Q.S. to pH 6.5
Ammonium Chloride	1.0
Fragrance	Q.S.
Color	Q.S.
Preservative	Q.S.

Procedure:

1. Dissolve the Tetrasodium EDTA in the water.
 2. Add ingredients in order, mixing between additions. Avoid air entrapment.
 3. Slowly mix in the PEG-18 Glyceryl Glycol Dioleococate.
 4. Adjust viscosity with the 25% solution of Ammonium Chloride.
- Note: For manufacturing ease, a 25% solution of Ammonium Chloride can be made.
- Note: SLS/SLES and Sodium Chloride may be substituted for the ALS/ALES and Ammonium Chloride.

Gentle Cleansing Shampoo

<u>Ingredients:</u>	<u>%w/w</u>
Sodium Lauryl Sulfate	15.00
Sodium Laureth Sulfate	25.00
Carbomer 208 (Antil 208)	0.70
PEG-7 Glyceryl Cocoate (Tegosoft GC)	3.00
Cocamidopropyl Betaine (Tego Betaine L-7)	5.00
Dimethicone Copolyol (Abil B 88183)	0.50
Propylene Glycol	1.00
Water	49.70
Tetrasodium EDTA	0.10
Preservatives	Q.S.
Color	Q.S.
Fragrance	Q.S.
Citric Acid (25% Solution)	to pH 6.0
Sodium Chloride (25% Solution)	Q.S.

Procedure:

1. Add the ingredients in order. Mix until uniform between additions.
2. Adjust pH with citric acid.
3. Adjust viscosity with the Sodium Chloride

Clear Conditioning Shampoo

Delivers softness and excellent combability to the hair. It's a mild, clear, rich shampoo that provides easy combing and luster properties.

Part A:	<u>%(w/w)</u>
Sodium C14-16 Olefin Sulfonate	15.00
TEA Lauryl Sulfate	10.00
Lexamine LM (Lauramidopropyl Betaine)	10.00
Cocamide DEA	3.00
Maypon 4C (Potassium Coco-hydrolyzed Animal Protein)	3.00

Part B:	
Deionized Water	48.30
Propylene Glycol USP	3.00
Lexgard M (Methylparaben)	0.20
Lexgard P (Propylparaben)	0.10
Uvinul MS-40 (Benzophenone-4)	0.10
Tetrasodium EDTA	0.10

Part C:	
Lexquat AMG-IS (Isostearylamidopropyl Dihydroxypropyl Dimonium Chloride)	7.00

Part D:	
Fragrance	2.00
Color	

Part E:	
Citric acid pH=7.0+/-0.2	q.s.

Procedure:

Charge batch vessel with water (part B) and begin mixing. Add the remaining ingredients of part B to the water and heat to 60C+-2C. When materials are completely dissolved, add Part A to Part B. Maintain temperature and mixing. When uniform, add Part C to the batch. Begin cooling. At 40C-45C, add Part D. Cool to room temperature and adjust the pH (Part E).

Observations:

pH: 7.2

Viscosity: 500 cps

SOURCE: Inolex Chemical Co.: Formulation SP-103

Clear Protein Shampoo

	<u>%(w/w)</u>
Deionized Water	60.80
Sodium Lauryl Sulfate	30.00
Lexaine C (Cocamidopropyl Betaine)	6.00
Lexein QX3000 (Quaternium-76)	3.00
Lexgard M (Methylparaben)	0.15
Lexgard P (Propylparaben)	0.05
Sodium Chloride (to desired viscosity)	q.s.
Phosphoric Acid (to desired pH)	q.s.

Procedure:

Heat water to 70C. Add sodium lauryl sulfate and Lexaine C slowly with agitation. Adjust pH then add remaining ingredients at 55C.

Observations:

pH (direct): 6.1

Viscosity: 560 cps

Formulation SP-89

Clear Conditioning Shampoo

Lexquat AMG-BEO is the primary conditioning agent in this luxurious, clear conditioning shampoo. It features improved softness and shine with easier comb-out.

Part A:

	<u>%(w/w)</u>
Sodium C14-16 Olefin Sulfonate	15.00
TEA Lauryl Sulfate	10.00
Lexamine LM (Lauramidopropyl Betaine)	10.00
Cocamide DEA	3.00
Maypon 4C (Potassium Coco-hydrolyzed Animal Protein)	3.00

Part B:

Deionized Water	48.30
Propylene Glycol USP	3.00

Preservative, EDTA, Fragrance, Citric Acid	0.8
Water	62.2

Procedure:

Blend the water, Jordapon CI Dispersion, ammonium lauryl sulfate, preservative, and EDTA. When uniform, add the Mafo CSB-50, Mazamide 80, and fragrance. Adjust the pH to 6.0-6.5 with citric acid. Final viscosity: 5000 cps.

SOURCE: PPG Industries, Inc.: Formulation 7003-45

Dandruff Control Shampoo

<u>Ingredients:</u>	<u>% by Weight</u>
Part A:	
D.I. Water	40.00
Magnesium Aluminum Silicate	1.00
Hydroxypropyl Methylcellulose	0.70
Part B:	
Bio-Terge AS-40	30.00
Amphosol CA	8.30
Part C:	
Selenium Sulfide	1.00
Titanium Dioxide	0.70
Citric Acid	Q.S.
Fragrance, Dye, Preservative	Q.S.
Sodium Chloride	Q.S.
D.I. Water	Q.S. to 100

Mixing Procedure:

Heat water in Part (A) to 70C. Add magnesium aluminum silicate and disperse. Add hydroxypropyl methylcellulose slowly, mixing until completely homogeneous. Remove (A) from heat source and stir in (B). Mix thoroughly. Blend in titanium dioxide to mixture, mixing until thoroughly dispersed. Repeat with selenium sulfide. Adjust pH to 4.0-5.0 with citric acid. Add fragrance, dye and preservative, if desired. Adjust to desired viscosity with sodium chloride. Complete process by homogenizing product.

Physical Properties:

Viscosity @ 25C: 4,450 cps
 Orange, opaque liquid
 pH (as is): 4.0-5.0
 Formulation No. 392

Dandruff Control Shampoo

<u>Ingredients:</u>	<u>% by Weight</u>
Part A:	
D.I. Water	52.5
Magnesium Aluminum Silicate	1.0
Hydroxypropyl Methylcellulose	0.8
Part B:	
Bio-Terge AS-40	35.0
Ninol 96-SL	3.5
Hydrolyzed Animal Protein	2.0
Ninol 201	3.0
Part C:	
Zinc Pyrithione (48% Dispersion)	4.2

Mixing Procedure:

Heat the water in Part A to 70C. Add magnesium aluminum silicate and disperse. Add hydroxypropyl methylcellulose slowly, mixing until completely homogeneous. Remove (A) from heat source and stir in Part (B). Mix thoroughly. Blend in zinc pyrithione to mixture, mixing until thoroughly dispersed. Adjust pH to 4.0-5.0 with citric acid. Add fragrance, dye and preservative, if desired. Complete process by homogenizing product.

White, opaque liquid
 Viscosity @ 25C: 5,250 cps
 pH (as is): 4.0-5.0

SOURCE: Stepan Co.; Formulation No. 382

Detangling Shampoo

A viscous, clear shampoo with conditioning effects. Contains Simchin WS (water soluble Jojoba Oil) to replace oils, Grilloten to reduce irritation and stripping, and Betaine for conditioning.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	62.00
2. Hydroxypropyl Methylcellulose	1.00
3. Grilloten LSE 87	1.00
4. Sodium C14-16 Olefin Sulfate	30.00
5. Cocamidopropyl Betaine	5.00
6. Simchin WS	1.00
7. Patlac LA (44% Solution)	QS
8. Color, Fragrance and Preservatives	QS

Compounding Procedure:

Prepare dispersion of ingredients 1 and 2. Weigh ingredient 3. When the gum is completely dissolved, warm ingredient 3 gently to liquefy and add to batch. Add ingredients 4, 5 and 6 to the batch, mixing until uniform between additions. Add perfume, color and preservative, mixing until uniform. Adjust pH to 5.5 with Patlac LA lactic acid.

Formulation H-89-G-9

Detangling Shampoo

A viscous, light foaming conditioning shampoo.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	+ -73.00
2. Hydroxypropyl Methylcellulose	1.00
3. Grilloten LSE 87	2.00
4. Sodium C14-16 Olefin Sulfate	18.00
5. Cocamidopropyl Betaine	5.00
6. Simchin WS	1.00
7. Patlac LA (44.0%)	QS
8. Color, fragrance and preservatives	QS

Compounding Procedures:

Heat water to 70C and add item 2 into water with good agitation. Add Grilloten LSE 87. Add item 4, 5 and 6 and continue agitation. Begin cooling. Cool to 120F. Add item 7 to pH 5.5. Add color, fragrance and preservative. Cool to 95F.

Formulation H-89-S-3

Everyday Soft Highlights Shampoo

<u>Ingredients:</u>	<u>% w/w</u>
PEG-7 Glyceryl Cocoate (Tegosoft GC)	4.00
Ammonium Lauryl Sulfate	17.00
Ammonium Laureth Sulfate	22.00
PEG-18 Glyceryl Oleate/Cocoate (Antil 171)	2.50
Dimethicone Copolyol (Abil B 88183)	1.00
Water	47.15
Tetrasodium EDTA	0.10
Cocamidopropyl Betaine (Tego Betaine L-7)	6.00
Sodium Lactate (and) Sodium PCA (and) Glycine (and) Fructose (and) Urea (and) Niacinamide (and) Inositol (and) Sodium Benzoate (and) Lactic Acid (Lactil)	0.25
Citric Acid (25% Solution)	to pH 6.0
Preservatives	Q.S.
Color	Q.S.
Fragrance	Q.S.
Ammonium Chloride (25% Solution)	Q.S.

Procedure:

1. Add the ingredients in order. Mix until uniform between additions.
2. Adjust pH with the Citric Acid.
3. Adjust viscosity with the Sodium Chloride.

Three in One Shampoo
(Cleansing, Conditioning and Shine)

<u>Ingredients:</u>	<u>% w/w</u>
Tetrasodium EDTA	0.1
Water	44.8
Ammonium Laureth Sulfate (30%)	35.0
Ammonium Lauryl Sulfate (30%)	10.0
Cocamidopropyl Betaine (Tego Betaine L-7)	7.0
Dimethicone Propyl PG-Betaine (Abil B 9950)	0.6
Dimethicone Copolyol (Abil B 8852)	0.6
Dimethicone Copolyol (Abil B 88183)	0.3
Cetyl Dimethicone Copolyol (Abil EM-90)	0.6
Citric Acid	to pH 6.5
Fragrance	Q.S.
Color	Q.S.
Preservative	Q.S.
PEG-18 Glyceryl Oleate/Cocoate (Antil 171)	1.0
Ammonium Chloride (25% solution)	As needed to adjust viscosity

Procedure:

1. Dissolve the Tetrasodium EDTA in the water.
2. Add ingredients in order, mixing between additions. Avoid air entrapment.
3. Slowly mix in the PEG-18 Glyceryl Oleate/Cocoate.
4. Adjust viscosity with the 25% solution of Ammonium Chloride.

Extra Mild Pearlized Shampoo

A low actives lotion shampoo which is made milder by the Grilloten LSE 87 K, which also reduces sting. Contains Panthenol for thickening and strengthening the hair fibers.

Ingredients:

	<u>% W/W</u>
1. Distilled Water	54.84
2. Sodium Lauryl Sulfate (28%)	22.86
3. Sodium C14-16 Olefin Sulfate (40%)	5.00
4. Lauramide DEA	4.00
5. Ritabate 20	3.00
6. dl-Panthenol	0.50
7. Methylparaben	0.10
8. Grilloten LSE 87K	3.00
9. Rita EGMS	2.50
10. Sodium Chloride (25% Solution) (or to desired viscosity)	4.00
11. Color	QS
12. Fragrance	QS
13. Glydant	0.20

Compounding Procedure:

Heat water to 70C. Add ingredients in order for items 2-8, bringing temperature back to 70C after each addition and stir until clear. Cool stirred mixture to 40C. Add remaining ingredients, except Sodium Chloride. Mix until uniform. Add Sodium Chloride solution to adjust viscosity.

Formulation HB-89-PA-9

Cold Process Pearlized Shampoo

A viscous shampoo which can be made without heating. Ritasynt CBE blend is used as a thickener and conditioner.

Ingredients:

	<u>% W/W</u>
Part A:	
1. Lauramide DEA	5.00
2. Perfume	0.20
3. Pationic ISL	3.00
4. Methylparaben	0.10
Part B:	
5. Distilled Water	39.15
6. Alpha Olefin Sulfate	41.00
7. Kathon CG	0.05
Part C:	
8. Ritasynt CBE Blend	9.00
Part D:	
9. Patlac LA (44%)	0.50
10. Sodium Chloride (25% Solution)	2.00

Compounding Procedure:

Weigh Lauramide DEA, add perfume and mix until uniform. Add Pationic ISL and mix until uniform. Add Methylparaben and mix until uniform. Add Part A to Part B with mixing and mix until consistent. Add Part C. Adjust pH with Patlac LA (pH 5.5-6.5 recommended). Adjust viscosity with Sodium Chloride solution.

Formulation 103-61

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Family Shampoo

<u>Ingredient:</u>		<u>Wt. %</u>
Deionized Water		40.0
Hydroxypropyl Methylcellulose	Methocel 40-100	0.7
Triethanolamine		0.1
Ammonium Lauryl Sulfate	Mazon AL-300	45.0
Cocamidopropyl Betaine	Mafo CAB	7.0
Lauramine Oxide	Mazox LDA	6.0
Dimethicone Copolyol	Masil 280 LP	0.5
Fragrance		0.3
Preservative, EDTA		0.4
Citric Acid		Q.S.

pH: 6.0-6.5

Viscosity: 2,100 cps

Appearance: Clear, straw-colored liquid

Procedure:

This is an economical, room-temperature process requiring only one vessel. Disperse the hydroxypropyl methylcellulose in the water; then add the triethanolamine to initiate hydration. Add the Mazon AL-300, Mafo CAB, and Mazox LDA. When uniform, add the Masil 280 LP and fragrance (these can be pre-mixed to speed dissolution of the fragrance in the batch). Add the preservative and EDTA, and adjust the pH.

Low Cost Clear Shampoo

<u>Ingredients:</u>	<u>Percent by Weight</u>
Water (20C or cooler), q.s.	65.54
Dowicil 200 preservative	0.10
Methocel 40-100	0.90
Versene 100 (EDTA)	0.11
Ammonium lauryl sulfate (28% active)	28.40
Coco-diethanolamide (liquid)	4.00
Citric acid	0.20
Sodium chloride	0.75

Note:

Alternately, one could use Methocel 40-202 at 1.3% for an exceptionally clear shampoo. Any alkali source will suffice to activate surface treated Methocel products. Other examples include alkanolamines, aminomethylpropane, or dilute sodium hydroxide. Methocel hydroxypropyl methylcellulose not only provides thickening, but also contributes to production of luxurious and stable foam.

Procedure:

This is a cold process shampoo, no heating required.

1. Add the indicated cool water to a stirred vessel and dissolve the Dowicil 200 preservative.
2. Mix in the thickener, Methocel 40-100 hydroxypropyl methylcellulose surface treated powder, and activate it by adding liquid Versene 100, an alkaline EDTA chelating agent for water hardness ion control.
3. Continue mixing at low to moderate speeds to minimize foaming and to enable hydration of the Methocel 40-100. The resulting solution should thicken and turn clear.
4. At this point, one can blend in the surfactants and fatty amide followed by citric acid and salt to adjust final pH and viscosity.
5. Fragrance can be added anytime after the surfactant addition. Alternately, one could use Methocel 40-202 at 1.3% for an exceptionally clear shampoo.

SOURCE: Dow Chemical Co.: Suggested Formulation

High Performance Shampoo

	<u>% by Weight</u>	<u>% Active</u>
Monamate LA-100	9.5%	8.1
Monateric LMM-30	20.0%	6.0
AOS (40%)	15.0%	6.0
Water	55.0%	---

Adjust pH to 5.0

Mix with heat until clear. Cool. Adjust pH.

This shampoo has good viscosity, is crystal clear, non-irritating, and provides an abundance of luxurious lather which cleans hair without stripping.

SOURCE: Mona Industries, Inc.: Suggested Formulation

Low Cost Clear Shampoo (Cold Process)

<u>Ingredients:</u>	<u>Percent by Weight</u>
Dowicil 200 preservative	0.10
Methocel 40-202	1.30
Versene 100 (EDTA)	0.11
Ammonium lauryl sulfate (28% active)	28.40
Coco-diethanolamide (liquid)	4.00
Citric acid	0.20
Ammonium chloride	0.40
Water (20C or colder), q.s.	65.49

Note:

Any alkali source will suffice to activate surface treated Methocel products. Other examples include alkanolamines, amino-methylpropanol, or dilute sodium hydroxide. Methocel hydroxypropyl methylcellulose not only provides thickening, but also contributes to production of luxurious and stable foam, with excellent lubricity.

Procedure:

1. This is a cold process shampoo, no heating required. Add the indicated cool water to a stirred vessel and dissolve the Dowicil 200 preservative.
2. Mix in the thickener, Methocel 40-202 hydroxypropyl methylcellulose surface treated powder, and activate it by adding liquid Versene 100, an alkaline EDTA chelating agent for water hardness ion control.
3. Continue mixing at low to moderate speeds to minimize foaming and to enable hydration of the Methocel 40-202. The resulting solution will thicken and turn clear.
4. At this point, one can blend in the surfactants and fatty amide followed by citric acid and salt to adjust final pH and viscosity.
5. Fragrance can be added anytime after the surfactant addition.

Water and Preservative	39.0	---
Monamate LNT-40	12.0	4.75
Monamate C-1142	12.0	4.75
Monateric 985A	35.0	12.20
Monamid 1089	2.0	2.00

Add ingredients in order listed and blend until homogeneous. Adjust pH level to 5.5 Viscosity: approximately 2500 cps.

SOURCE: Mona Industries, Inc.: Suggested Formulation

Low Irritation/Sting Shampoo

A shampoo which has good cleaning properties with proven low irritancy and characteristics.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Distilled Water	64.08
2. Sodium Laureth Sulfate (2 Mole)	16.67
3. Pationic 138C	10.00
4. Ritamid C	3.00
5. Monaquat TG	0.50
6. dl-Panthenol	0.50
7. Methylparaben	0.10
Part B:	
8. Triethanolamine (50%)	+ -2.00
Part C:	
9. Perfume	0.20
10. Glydant 40-700	0.20
Part D:	
11. Sodium Chloride (25% Solution)	2.75

Compounding Procedure:

Heat A to 165F. While mixing, adjust pH to 7.5 with B. Cool to 120F. Add C. Cool to 90F. Adjust viscosity with Sodium Chloride 25% Solution.

Formulation 107-117

Low Irritation Shampoo

A shampoo which has good cleaning properties, yet is proven to have low irritation characteristics. The hair is left soft and manageable due to the use of Pationic 138C and the cationic surfactant Monaquat PTS.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Distilled Water	64.08
2. Sodium Laureth Sulfate (2 Mole)	16.67
3. Pationic 138C	10.00
4. Ritamid C	3.00
5. Methylparaben	0.10
6. Monaquat PTS	0.50
7. dl-Panthenol	0.50
Part B:	
8. Triethanolamine (50%)	2.00
Part C:	
9. Perfume	0.20
10. Glydant 40-700	0.20
Part D:	
11. Sodium Chloride (25% Solution)	2.75

Compounding Procedure:

Heat A to 165F. While mixing, neutralize to 7.5 with B. Cool to 120F. Add C. Adjust viscosity with Sodium Chloride 25% solution.

Formulation 107-118

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Low Sting Shampoo

A shampoo which has good cleaning properties, yet is proven to be mild.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Pationic 138C	7.50
2. Hamposyl TL 40	18.75
3. Ritapeg 150 DS	2.00
4. Distilled Water	69.32
5. Methyl Parahydroxybenzoate	0.15
Part B:	
6. Potassium Hydroxide (10% Solution)	QS
Part C:	
7. Kathon CG	0.03
8. Perfume	0.25
Part D:	
9. Potassium Chloride (25% Solution)	2.00

Compounding Procedures:

Gently heat Part A with mixing to 165F. Mix until uniform. Begin cooling. Cool to 120F. Check pH. Add/QS amount of Potassium Hydroxide solution to adjust pH up to 7.5. Add perfume and preservative. Cool to 90F. Add Potassium Chloride to adjust viscosity (if needed-3,000 to 4,000 cps seems desirable). Add back water to 100% to compensate for moisture loss.

Low Sting Shampoo

A shampoo which has good cleaning properties, yet is proven to be mild.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Hamposyl TL 40	37.50
2. Ritapeg 150 DS	4.00
3. Distilled Water	56.07
4. Methyl Parahydroxybenzoate	0.15
Part B:	
5. Potassium Hydroxide (10% Solution)	QS
Part C:	
6. Perfume	0.25
7. Kathon CG	0.03
Part D:	
8. Potassium Chloride (25% Solution)	+/-2.00

Compounding Procedure:

Gently heat Part A with mixing to 165F. Mix until uniform. Begin cooling. Cool to 120F. Check pH. Add/QS amount of Potassium Hydroxide solution to adjust pH up to 7.5. Add perfume and preservative. Cool to 90F. Add Potassium Chloride to adjust viscosity (if needed-3,000 to 4,000 cps seems desirable). Add back water to 100% to compensate for moisture loss.

Low Sting Shampoo

A shampoo which has good cleaning properties, yet is proven to be mild.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Pationic 138C	7.50
2. Hamposyl L	7.50
3. Ritapeg 150 DS	2.00
4. Distilled Water	80.57
5. Methyl Parahydroxybenzoate	0.15
Part B:	
6. Potassium Hydroxide (10% Solution)	QS
Part C:	
7. Perfume	0.25
8. Kathon CG	0.03
Part D:	
9. Potassium Chloride (25% Solution)	2.00

Compounding Procedure:

Gently heat Part A with mixing to 165F. Mix until uniform. Begin cooling. Cool to 120F. Check pH. Add/QS amount of Potassium Hydroxide solution to adjust pH up to 7.5. Add perfume and preservative. Cool to 90F. Add Potassium Chloride to adjust viscosity (if needed-3,000-4,000 cps seems desirable). Add back water to 100% to compensate for moisture loss.

Low Sting Shampoo

A shampoo which has good cleaning properties, yet is proven to be mild.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Hamposyl L	15.00
2. Distilled Water	78.57
3. Ritapeg 150 DS	4.00
4. Methyl Parahydroxybenzoate	0.15
Part B:	
5. Potassium Hydroxide (10% Solution)	QS
Part C:	
6. Perfume	0.25
7. Kathon CG	0.03
Part D:	
8. Potassium Chloride (25% Solution)	2.00

Compounding Procedure:

Gently heat Part A to 165F with agitation. Mix until uniform. Hold at 165F. Add Potassium Hydroxide solution to pH 7.5. Begin cooling. Cool to 120F. Recheck pH and adjust if necessary. Add perfume and preservative. Cool to 80F. Add Potassium Chloride to adjust viscosity (if needed-3,000 to 4,000 cps seems desirable). Add back water to 100% to compensate for moisture loss.

Low Sting Shampoo

A low actives content shampoo with reduced irritation and sting because of the Grilloten LSE 87. Viscosity is adjusted by the use of lauramide, Ritapeg 150DS and salt solution. Panthenol is used to thicken and strengthen the hair fibers and improve luster.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	52.90
2. Sodium Lauryl Ether Sulfate (28%)	30.00
3. Lauramide DEA	5.00
4. Ritapeg 150 DS	2.00
5. Ritabate 20	2.00
6. dl-Panthenol	0.50
7. Methylparaben	0.10
8. Grilloten LSE 87	3.00
9. Color	QS
10. Sodium Chloride (25% Solution) (or to desired viscosity)	4.00
11. Patlac LA (44%)	0.50
12. Fragrance	QS

Compounding Procedure:

Heat water to 70C. Add ingredients in order for items 2-9, bringing temperature back to 70C after each addition and stir until clear. Cool to 40C. Add Patlac LA to adjust pH between 6.5 to 7.0. Add remaining ingredients, except salt solution. Adjust viscosity with salt solution.

Formulation HB-89-PA-10

Low Sting Shampoo

A shampoo which has good cleaning properties, yet is proven to be mild.

<u>Ingredients:</u>	<u>% W/W</u>
<u>Part A:</u>	
1. Pationic 138C	15.00
2. Distilled Water	78.57
3. Ritapeg 150 DS	4.00
4. Methylparaben	0.15
<u>Part B:</u>	
5. Potassium Hydroxide (10% Solution)	QS
<u>Part C:</u>	
6. Perfume	0.25
7. Kathon CG	0.03
<u>Part D:</u>	
8. Potassium Chloride (25% Solution)	2.00

Compounding Procedure:

Gently heat Part A with mixing to 165F. Mix until uniform. Hold at 165F. Add Potassium Hydroxide solution to pH 7.5. Begin cooling. Cool to 120F. Recheck pH and adjust if necessary. Cool to 80F. Add Potassium Chloride to increase viscosity (if needed-3,000 to 4,000 cps seems desirable). Add back water to 100% to compensate for moisture loss.

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Maximum Conditioning Shampoo

<u>Ingredients:</u>	<u>% w/w</u>
Tetrasodium EDTA	0.1
Water	44.3
Ammonium Lauryl Sulfate	18.0
Ammonium Laureth Sulfate (2M. E.O.)	25.0
Cocamidopropyl Betaine (Tego Betaine L-7)	6.0
PEG-7 Glyceryl Cocoate (Tegosoft GC)	3.0
Dimethicone Copolyol (Abil B 88183)	0.4
Dimethicone Copolyol (Abil B 8852)	0.6
Cetyl Dimethicone Copolyol (Abil EM-90)	0.6
Quaternium-80 (Abil Quat 3270)	0.3
Polyquaternium-7	0.5
Citric Acid	to pH 6.5
Fragrance	Q.S.
Color	Q.S.
Preservatives	Q.S.
PEG-18 Glyceryl Oleate/Cocoate (Antil 171)	1.2
Ammonium Chloride (25% solution)	As needed to adjust viscosity

Procedure:

1. Dissolve the Tetrasodium EDTA in the water.
2. Add ingredients in order, mixing between additions. Avoid air entrapment.
3. Slowly mix in the PEG-18 Glyceryl Oleate/Cocoate.
4. Adjust viscosity with the 25% solution of Ammonium Chloride.

2:1 Conditioning Shampoo

<u>Ingredients:</u>	<u>% w/w</u>
Water	48.6
Sodium Laureth Sulfate (28%)	40.0
PEG-7 Glyceryl Cocoate (Tegosoft GC)	3.0
Cetyl Dimethicone Copolyol (Abil EM-90)	0.6
Dimethicone Copolyol (Abil B 8852)	0.5
Polyquaternium-7	0.4
Quaternium-80 (Abil Quat 3270)	0.3
Cocamidopropyl Betaine (Tego Betaine L-7)	5.0
Citric Acid	to pH 6.5
Fragrance	Q.S.
Color	Q.S.
Preservative	Q.S.
PEG-18 Glyceryl Oleate/Cocoate (Antil 171)	1.6

Procedure:

1. Add the ingredients in order, mixing well between the additives.
2. Adjust pH with the Citric Acid.
3. Add the fragrance, color and preservatives. Mix well.
4. Add the Antil 171. Mix well avoiding air entrapment. Maximum viscosity is observed at 24 hours.

Note: Additional viscosity can be obtained by increasing the Antil 171 or by adding Sodium Chloride.

Mild Shampoo

<u>Ingredient:</u>		<u>Wt. %</u>
Deionized Water		62.2
Sodium Cocoyl Isethionate	Jordapon CI Dispersion	3.0
Ammonium Lauryl Sulfate	Mazon AL-300	25.0
Cocamidopropyl Hydroxysulfate	Mafo CAB-50	8.0
Methyl Paraben		0.2
Tetrasodium EDTA		0.2
Cocamide DEA	Mazamide JT-128	1.0
Fragrance		0.2
Imidazolidinyl Urea	Germa11 115	0.2
Citric Acid		Q.S.

pH: 6.5-7.0

Viscosity: 5,000-8,000 cps (with 0 to 0.4% NaCl)

Appearance: Clear, straw-colored liquid

Foaming: Flash: 25 sec.

Half-life: 6 min., 19 sec.

Density: 45.1 gm/liter

Procedure:

Blend the first six ingredients. With mixing, heat the batch to 45C (115F). When uniform, add the Mazamide JT-128 and fragrance, cooling to 35C (95F). Add the imidazolidinyl urea and adjust the pH.

Note:

A pearlescent product will result if 0.75-1.5% Ethylene Glycol Monostearate or Ethylene Glycol Distearate (Mapeg EGMS, Mapeg EGDS) is added with the initial ingredients. Heat the batch to 60-65C (140-150F) to ensure complete dissolution of the pearl agent.

SOURCE: PPG Industries, Inc.: Formulation A-101

Mild High Foaming Shampoo (28% active)

The following formula is suggested as an everyday shampoo because of its mildness to the skin and eyes and gentleness to the hair. It has excellent flash-foaming properties and develops a dense soapy lather which rinses easily, leaving the hair soft and manageable.

	<u>% By Weight</u>
Water and Preservative	22.9
Monamate LNT-40	20.0
Monateric 985-A	57.1

Procedure:

Add ingredients in order listed. No heat is necessary.

Adjust pH to approximately 6.5.

Viscosity: approximately 1000 cp

SOURCE: Mona Industries, Inc.: Suggested Formulation

Mild Conditioning Shampoo

<u>Ingredients:</u>	<u>% by Weight</u>
Stepan-Mild LSB	29.0
Steol CS-330	22.0
Amphosol CA	14.0

Neutralizer Shampoo

For use after relaxer or hair straightener treatment. Will lay down the cuticle, and restore shine and pH balance.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Alpha Olefin Sulfonate (40% active)	37.50
2. Pationic ISL	3.00
3. Monamid 150-LMW-C	3.00
4. Perfume	0.30
5. Methylparaben	0.20
6. Distilled Water	56.00
7. Patlac LA (44%)	QS

Compounding Procedure:

Warm Lauric Myristic Diethanolamide to 140F maximum. Dissolve Pationic ISL and Methylparaben into the Amide. Combine AOS and water. Add Lactylate/Amide mixture to water/AOS. Mix until uniform. Adjust pH to 5.5 with Patlac LA (44%).

Note:

Viscosity may be increased by the use of 2-3% of Ritapeg 150 (PEG 6000 Distearate), which can be added to the Lactylate/Amide blend.

Formulation 105-15

Pationic SSL Lotion Shampoo

A conditioning shampoo which leaves hair soft and manageable.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Sodium Lauryl Sulfate	21.43
2. Sodium Lauryl Ether Sulfate (2 mole)	21.43
3. Kathon CG	0.03
4. Pationic SSL	3.00
5. Methylparaben	0.15
6. Distilled Water	45.56
7. Rita EDGS	3.50
Part B:	
8. Ritamid C	4.50
Part C:	
9. Perfume (Finesse)	0.40
Part D:	
10. Patlac LA (44%)	QS
Part E:	
11. Sodium Chloride (25% Solution)	QS

Compounding Procedure:

Heat Part A to 160-165F with mixing. Mix until uniform. Allow to de-aerate before cooling. Begin cooling with mixing, cool to 140F. Add Part B, cool to 120F. Add Part C, cool to 80-85F. Adjust viscosity with Part E to 3,000-4,000 cps.

Formulation 105-128

SOURCE: R.I.T.A. Corp.; Suggested Formulations

Normal Hair Shampoo

A good, basic shampoo with excellent flash foam and lather which is dense and soft.

<u>Part</u>	<u>Ingredient:</u>	<u>Wt. %</u>
A	DeminerIALIZED Water	58.54
	Hydroxypropyl Methylcellulose	Methocel 40-100 0.10
	Na4EDTA	0.20
	Triethanolamine	0.01
B	TEA Lauryl Sulfate	Sipon LT-6 22.50
	Methyl Paraben	0.20
	Imidazolidinyl Urea	Germall 115 0.20
	Ammonium Laureth Sulfate	Alfonic 1412-A 5.50
	Ammonium Cocoyl Isethionate	Jordapon ACI-30 6.70
C	Cocamide DEA	Mazamide 80 3.00
	Isostearamidopropyl Ethyl-	
	dimonium Ethosulfate	M-Quat 522 0.70
	Fragrance	0.10
	Citric Acid	0.25
	Ammonium Chloride	2.00

pH: 6.3-6.7

Viscosity: 5500-6000 cps

Appearance: Clear, straw-colored liquid

In the main vessel, disperse the hydroxypropyl methyl-cellulose in the water, mixing for ten minutes. Add the Na4EDTA and triethanolamine, which initiates hydration of the gum. Mix for about 20 minutes to ensure complete hydration, then add the part B ingredients in order given. When batch is clear and uniform, add the Mazamide 80 and the M-Quat 522, and fragrance, and adjust the pH and viscosity.

Formula A-108

Gel Shampoo

High-viscosity shampoo suitable for tube packaging. Mildness and foam lubricity are enhanced by Jordapon ACI-30 surfactant.

<u>Part:</u>	<u>Ingredient:</u>	<u>Wt. %</u>
A	Deionized Water	44.1
	Ammonium Lauryl Sulfate	Sipon L-22 31.0
	Ammonium Cocoyl Isethionate	Jordapon ACI-30 15.4
	Na4EDTA	0.2
	Methyl Paraben	0.2
	Imidazolidinyl Urea	Germall 115 0.2
B	Cocamidopropyl Betaine	Mafo CAB 5.8
	Cocamide DEA	Mazamide JT-128 1.5
	Lauric Acid	1.0
C	Fragrance	0.1
	Citric Acid	0.1
	Ammonium Chloride	0.4

pH: 6.3-6.7

Viscosity: 18,000-22,000 cps

Appearance: Clear, pale yellow viscous liquid

Mix the part A ingredients in the main vessel until uniform. In a separate vessel, premix part B, heating to 40C if necessary to dissolve all the lauric acid. Add B to A, mixing continuously. Adjust pH and viscosity with part C ingredients.

SOURCE: PPG Industries, Inc.: Formula A-109

Pearlescent Shampoo

	<u>%(w/w)</u>
Deionized Water	61.75
Sodium Lauryl Sulfate	30.00
Lexaine C (Cocamidopropyl Betaine)	6.00
Lexemul EGMS (Glycol Stearate)	1.00
Lexein X250 (Hydrolyzed Animal Protein)	1.00
Lexgard M (Methylparaben)	0.15
Lexgard P (Propylparaben)	0.05
Citric Acid	0.05
Sodium Chloride (to desired viscosity)	q.s.

Procedure:

Heat water to 70C. Add ingredients slowly with agitation to ensure complete dispersion. Adjust pH, cool to 40C. and fill. Full pearlescence develops within 24 hours.

Observations:

pH (direct): 6.0

Viscosity: 1,625 cps

Formulation SP-94

Moisturizing Shampoo

8. Preservative, Perfume	QS

Compounding Procedure:

Combine ingredients 1 and 2 at room temperature. Begin heating with agitation. Heat to 165 to 170F. Add ingredient 3. Continue mixing and maintain temperature. Add ingredients 4, 5 and 6 while mixing. Maintain temperature. Examine for undissolved material. When uniform, begin cooling. Cool to 120F. Add perfume and preservative. Continue cooling. Adjust viscosity with salt solution.

Formulation H-89-G-19

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Pearlized Shampoo

A pearlized, conditioning, acid pH shampoo. Contains dl-Panthenol for hair thickness, repair and luster.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	68.20
2. Xanthan Gum	0.10
3. TEA Lauryl Sulfate	9.40
4. Sodium C14-16 olefin Sulfate	9.50
5. Ritamid C	5.50
6. Pationic ISL	2.50
7. Cocamidopropyl Betaine	1.40
8. Ritabate 20	0.50
9. Ritapeg-165	1.40
10. Stearic Acid	0.50
11. dl-Panthenol	1.00
12. Patlac LA (44%)	QS
13. Preservative	QS
14. Fragrance, Color	QS

Compounding Procedure:

Disperse item 2 into item 1. Heat to 75C. Add ingredients 3-11 with good agitation, maintaining 75C. When mixed well, begin cooling to 25C. Adjust pH to 6.0 with Patlac LA and add remaining ingredients.

Formulation HB-89-PA-12

Pearlized Shampoo

This shampoo has a beautiful pearly opaqueness with the use of Ritasynt IP. Viscosity is derived from the Ritasynt IP and Ritapeg 150 DS. Hair is left soft, with a pleasant after-feel, due to the inclusion of Pationic ISL.

<u>Ingredients:</u>	<u>% W/W</u>
<u>Part A:</u>	
1. Distilled Water	52.85
2. Sodium C14-16 Olefin Sulfonate	37.50
3. Methylparaben	0.10
<u>Part B:</u>	
4. Ritasynt IP	4.00
5. Pationic ISL	3.00
6. Ritapeg 150 DS	2.00
<u>Part C:</u>	
6. Perfume	0.10
7. Kathon CG	0.05
<u>Part D:</u>	
8. Sodium Hydroxide (18% Solution)	0.40
9. Sodium Chloride (25% Solution)	QS

Compounding Procedures:

Heat Part A and Part B to 180F. Add Part B to Part A with agitation and maintain heat for 10 minutes. Cool, with mixing to 120F and add Part C. Adjust pH to 7.0+0.1 with Sodium Hydroxide solution. Adjust viscosity with Sodium Chloride solution.

Formulation 103-28

Formulation No. 148

Mild Shampoo

<u>Ingredients:</u>	<u>% by Weight</u>
Steol CS-130	30.0
Amphosol CA	20.0
Polysorbate 20	5.0
Kessco PEG 6000 Distearate	2.0
Sodium hydroxide	Q.S.
Fragrance, dye, preservative	Q.S.
Sodium chloride	Q.S.
D.I. water	Q.S. to 100

Mixing Procedure:

Add the Steol CS-130 and Kessco PEG 6000 Distearate to D.I. water. Heat to 60C and mix until the PEG 6000 Distearate is completely dispersed. Add the polysorbate 20 and Amphosol CA. Blend well and cool to 30C. Adjust pH to 6.5-7.0 with sodium hydroxide. Add fragrance, dye and preservative, if desired. Adjust to desired viscosity with sodium chloride.

Physical Properties:

Clear, yellow, liquid
 Viscosity @ 25C: 25,500 cps
 Passed three freeze/thaw cycles and one week at 50C

Comment:

Thick shampoo without using additional sodium chloride.

SOURCE: Stepan Co.: Formulation No. 409

Shampoo for Normal Hair

A viscous, clear, high foaming shampoo which conditions and adds body without buildup.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	+47.50
2. Sodium C14-16 Olefin Sulfate	20.00
3. Sodium Lauryl Sulfate	20.00
4. Ritamid C	3.00
5. Cocamidopropyl Betaine	3.00
6. Ritapeg 150 DS	2.00
7. Pationic ISL	2.50
8. Simchin WS	2.00
9. Patlac LA (44%)	QS
10. Sodium Chloride (25% Solution)	QS
11. Fragrance, color and preservatives	QS

Compounding Procedure:

Combine items 1 through 8 and heat to 165F. Mix until uniform. Begin cooling. Cool to 120F. Add fragrance, color and preservatives. Cool to 95F. Adjust pH to 5.5 with Patlac LA (lactic acid). After pH adjustment, adjust viscosity with salt solution. Do not exceed 1% salt (dry basis).

Formulation H-89-S-1

Conditioning Shampoo with Lactylate and Cationic

This clear shampoo has excellent cleaning properties, yet leaves the hair soft and manageable due to the use of Pationic ISL and Monaquat P-TS.

<u>Ingredients:</u>	<u>% W/W</u>
<u>Part A:</u>	
1. Distilled Water	49.95
2. Sodium Laureth Sulfate	40.00
3. Glydant 40-700	0.20
<u>Part B:</u>	
4. Monaquat P-TS	0.75
5. Distilled Water	2.25
<u>Part C:</u>	
6. Ritamid C	2.00
7. Perfume	0.30
8. Pationic ISL	3.00
9. Methylparaben	0.10
10. Propylparaben	0.05
<u>Part D:</u>	
11. Patlac LA (44%)	0.05
12. Sodium Chloride (25% Solution)	1.25
13. Color (1% Solution)	0.10

Compounding Procedure:

Combine Part A. Heat Part B slightly to produce a clear solution. Add to Part A. Combine Part C in order, blending after each addition. Add Part C to AB. Adjust pH to 6.5 with Patlac LA. Adjust viscosity with Sodium Chloride solution. Adjust color.

Formulation 103-108

2 in 1 Conditioning Shampoo

This two-in-one shampoo provides light conditioning without build-up during daily use.

<u>Materials:</u>	<u>Part/Wt(%)</u>
Part A:	
Steol CA-460 (ammonium laureth sulfate)	16.7
Ninol 30LL (lauramide DEA)	4.0
Part B:	
Water	76.9
Carbopol 1342 (acrylates/C10-C30 alkyl) (acrylate cross polymer)	0.8
Dowicil 200 (quaternium 15)	0.1
Part C:	
50% Solution Sodium Hydroxide	q.s.
Part D:	
SF1708-D1 (trimethylsilylamodimethicone)	1.5
Part E:	
Citric Acid	q.s.

Procedure:

- 1) Mix Part B ingredients until Carbopol 1342 is completely dissolved.
- 2) Add Part A to Part B with moderate agitation.
- 3) Add Part C to pH=7.5.
- 4) Add Part D slowly with moderate agitation.
- 5) Add Part E to pH=6.0.

Formulation HP202

Clear Conditioning Shampoo

<u>Materials:</u>	<u>Part/Wt(%)</u>
Part A:	
Steol CA-460 (ammonium laureth sulfate)	25.0
Ninol 30LL (lauramide DEA)	4.0
Part B:	
Water	67.3
Methocel 60HC (4000)	0.6
Kathon	0.1
Part C:	
SF1188	3.0
Color	q.s.
Perfume	q.s.
Part D:	
Citric Acid	q.s.

Procedure:

- 1) Mix Part B until Methocel is completely dissolved.
- 2) Add ingredients of Part A slowly with slow agitation to avoid air entrainment.
- 3) Add SF1188 also with very slow agitation. Then blend in perfume and color.
- 4) Adjust pH with Part D (citric acid) to 4.5.

Formulation HP204

Amphosol CA	4.0
Ninol 96-SL	1.0
Citric acid	Q.S.
Dye, preservative	Q.S.
Sodium chloride	Q.S.
D.I. water	Q.S. to 100

Mixing Procedure:

Add the first four components to D.I. water. Heat to 40C and blend until clear. Adjust pH to 5.5-6.5 with citric acid. Add dye and preervative, if desired. Adjust to desired viscosity with sodium chloride.

Physical Properties:

Yellow liquid

Passed freeze thaw cycle

pH (as is): 5.5-6.5

Stable for two weeks at 50C

Formulation No. 390

SOURCE: Stepan Co.: Suggested Formulations

Conditioning Hand Soap

<u>Ingredients:</u>	<u>% by Weight</u>
Bio-Terge AS-40	23.30
Ammonyx MO	5.00
Ninol 96-SL	3.50
Amphosol CA	1.00
Polyquaternium-7	0.25
Citric acid	Q.S.
Fragrance, dye, preservative	Q.S.
Sodium chloride	Q.S.
D. I. water	Q.S. to 100

Mixing Procedure:

Add 1st five components to water, heat to 60C, blend until homogeneous. Adjust pH to 6.0-7.0 with citric acid. Add fragrance, dye and preservative, if desired. Adjust to desired viscosity with sodium chloride.

Physical Properties:

Clear yellow liquid

Freeze thaw and elevated heat stable

Viscosity Profile:

as is: 1000 cps

0.5% sodium chloride: 13,300 cps

1.0% sodium chloride: 25,300 cps

Formulation No. 371

Emollient Liquid Hand Soap

<u>Ingredients:</u>	<u>% by Weight</u>
Bio-terge AS-40	15.0
Steol CS-460	9.0
Amphosol CA	4.0
Polyquaternium-7	4.0
Ninol 96-SL	1.0
Citric acid	Q.S.
Fragrance, dye, preservative	Q.S.
Sodium chloride	Q.S.
D.I. water	Q.S. to 100

Mixing Procedure:

Disperse polyquaternium in water and heat to 50C. Add the first three components and Ninol 96-SL and mix well. Adjust pH to 5.5-6.5 with citric acid. Add fragrance, dye and preservative, if desired. Adjust to desired viscosity with sodium chloride.

Physical Properties:

Yellow clear liquid

pH (as is): 5.5-6.5

Viscosity Profile: as is: 10 cps

1.0% sodium chloride: 40 cps

2.0% sodium chloride: 260 cps

3.0% sodium chloride: 1670 cps

Freeze thaw and elevated heat stable

Formulation No. 373

Cold Process Waterless Hand Cleaner

A creamy waterless hand cleaner that owes its smooth texture to Acritamer 934.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. White Mineral Oil	10.00
2. PEG 8 Oleate	3.00
Part B:	
3. Distilled Water	85.60
4. Triethanolamine (50%)	1.00
Part C:	
5. Acritamer 934	0.40

Compounding Procedures:

Mix Part A and Part B separately until clear. Add Part A to Part B slowly with agitation. Add Part C slowly while mixing and continue mixing for 30 minutes. Perfume as desired.

Formulation 110-107

Non-Mineral Spirits Waterless Handcleaner

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Finsolv TN	45.00
2. Laneto 50	4.00
3. Ritalan C	1.00
4. Ritachol 1000	12.00
5. Propylparaben	0.10
6. Grillocin HY-77	0.50
Part B:	
7. Distilled Water	37.30
8. Methylparaben	0.10

Compounding Procedure:

Heat Part A and Part B to 165F. Add Part A to Part B with mixing. Cool to 110F. Pour into jars.

Formulation 104-47

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Handcleaner

A waterless handcleaner containing kerosene for hard to remove dirt and stains. Lanolin and Ritabate 80 leave the hands smooth, and help condition the skin.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Polysorbate 85	3.75
2. Ritabate 80	11.25
3. Anhydrous Lanolin USP	2.00
4. Kerosene	60.00
Part B:	
5. Distilled Water	23.00

Compounding Procedure:

Blend Part A ingredients together and heat to 45-50C. Heat Part B to a similar temperature and add to Part A slowly with mechanical stirring.

Formulation 110-108

Hand Cleanser

A viscous product which moisturizes and leaves a good after feel. Grilloten is used to prevent drying. Pationic ISL and Panthenol are used for moisturization and after feel.

<u>Ingredients:</u>	<u>% W/W</u>
1. Grilloten LSE 87K	3.00
2. Distilled Water	42.50
3. DL Panthenol	1.00
4. Sodium Laureth Sulfate	46.00
5. Pationic ISL	3.50
6. Euperlan PK 900	3.00
7. Sodium Chloride (25% Solution)	1.00
8. Preservative, Perfume	QS

Compounding Procedure:

Stir items 1 and 2 thoroughly. Add other ingredients through item 6, in given order, stirring after each addition. After addition of item 6, mix until uniform. Add perfume. Mix until uniform. Add Sodium Chloride solution to adjust viscosity.

Formulation 110-125

Hand Cleaner

This hand cleaner has a beautiful pearly opaqueness.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Bio Terge AS40	25.00
2. Distilled Water	66.62
3. Methylparaben	0.10
Part B:	
4. Ritasynt IP	4.00
5. Ritapeg 150 DS	2.00
Part C:	
6. Perfume	0.05
7. Kathon CG	0.05
Part D:	
8. Patlac LA (44%)	+ -0.18
Part E:	
9. Sodium Chloride (25% Solution)	2.00

Compounding Procedures:

Heat Part A and Part B to 185F. Add Part B to Part A with mixing. Avoid aeration. Mix 15 minutes, then cool. At 120, add perfume and Kathon. Adjust pH with Patlac LA. Adjust viscosity with Sodium Chloride solution.

Formulation 101-21

Non-Drying Lotion Hand Cleaner

A surfactant based hand cleaner with Pationic ISL to prevent drying and leave a luxurious after feel.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Distilled Water	64.80
2. Alpha Olefin Sulfonate	25.00
3. Methylparaben	0.10
Part B:	
4. Ritasynt IP	4.00
5. Pationic ISL	3.00
6. Ritapeg 150 DS	2.00
Part C:	
7. Sodium Chloride (25% Solution)	1.00
8. Kathon CG	0.05
9. Perfume	0.05
10. Patlac LA (44% Solution)	QS

Compounding Procedure:

Heat ingredients of Part A and Part B to 185F (85C). Add Part B to Part A with agitation and maintain heat until blended. Cool to 120F (50C), add Part C. Adjust pH to 6.0 with Patlac LA (44% solution). Fill.

Formulation 101-30

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Liquid Hand Soap

<u>Ingredients:</u>	<u>% by Weight</u>
Bio-Terge AS-40	10.00
Stepanol AM	8.74
Stepanol WAT	6.25
Ninol 40-CO	3.00
Citric acid	Q.S.
Fragrance, dye, preservative	Q.S.
Sodium chloride	Q.S.
D.I. water	Q.S. to 100

Mixing Procedure:

Add first four components to D.I. water and mix until homogeneous. Adjust pH to 5.5-6.5 with citric acid. Add fragrance, dye and preservative, if desired. Adjust to desired viscosity with sodium chloride.

Physical Properties:

Clear, yellow liquid
 Passed three freeze/thaw cycles
 Stable at 50C for two weeks
 Viscosity Profile: as is: 10 cps
 2.0% sodium chloride: 430 cps
 3.0% sodium chloride: 2,300 cps

Formulation No. 149

Hand Soap

<u>Ingredients:</u>	<u>% by Wt.</u>
Bio-Terge 804	50.00
Kessco EGMS	1.50
Water, D.I.	34.75
d-Limonene	10.00
Sodium chloride	3.75

Mixing Procedure:

Mix first three ingredients and heat to 60C with slow agitation. EGMS must be thoroughly dispersed in solution. Start cooling while mixing slowly. Add d-Limonene when temperature is between 25C and 30C while mixing. Mix until homogeneous. Add salt and mix until homogeneous.

Properties:

Appearance: Pearled viscous liquid
 pH, as is: 7.0
 Viscosity @ 25C, cps: 5000
 Odor: Citrus

Use Instructions:

Use as is from a dispensing bottle.

Liquid Handwashing Cleanser

This preparation imparts a prolific, creamy textured foam with excellent cleansing characteristics. Bovinal 30 is utilized for its whole protein content imparting skin conditioning and protective qualities. Bovinal 30 is a whole natural ingredient and is not a hydrolysate consisting of a degraded perfume. Ritawax AEO also contributes emollience and lubricating properties to this product.

<u>Ingredients:</u>	<u>% W/W</u>
1. Sodium Laureth Sulfate	15.00
2. Cocamidopropyl Betaine	7.50
3. Ritamid C	3.00
4. Bovinal 30	2.00
5. Ritawax AEO	2.00
6. Lytron 614	0.75
7. Citric Acid	QS
8. Sodium Chloride (25% Solution)	1.00
9. Glydant	0.15
10. Distilled Water	67.85
11. Perfume	QS
12. Color	QS
13. Ritapeg 150 DS	0.75

Compounding Procedures:

Weigh and add the distilled water into a container and begin stirring and heating. Stir by means of a variable speed agitator equipped with a stirrer designed to minimize foaming and possible air entrapment. Begin weighing the other ingredients, with the exception of the perfume and Glydant. When all ingredients have been added, bring the temperature blend to 70-73C and stir until all ingredients have thoroughly dispersed. Begin cooling with continuous stirring to 40-43C and add the perfume and Glydant. Adjust the pH to 5.4 with Citric Acid. Cool to 25-30C and package

Water	55.7
Chlorhexidine	0.5
Sodium Chloride	As Needed
Fragrance	Q.S.

Procedure:

1. Add the water and Tego-Betaine to a vessel-heat to 60C. Mix.
2. Add the Antil 141 Liquid. Mix until uniform.
3. Cool to 40C. Add the remaining ingredients. Adjust viscosity with Sodium Chloride.

Note: If a pearled or opaque product is desired, add 3-4% of Tego-Betaine B-48

SOURCE: Goldschmidt Chemical Corp.: Suggested Formulations

The following are examples of syndet bar formulations taken from the patent literature:

Neutral pH Detergent Bar

(US Patent #3,376,229, Lever Bros. April 2, 1968)

Jordapon CI Powder	59.0%
Sodium Alkylbenzene Sulfonate	2.0
Stearic Acid	22.7
Sodium Isethionate	1.4
Water	4.2
Soap Chip (80/20 Tallow/Coco)	10.0
Miscellaneous	0.7

Neutral pH Detergent Bar

(US Patent #3,248,333, Hewitt Soap Co. April 26, 1966)

Jordapon CI Powder	25.0%
Milled Bleached White Flour	54.0
Glycerine	3.0
Cornstarch	4.0
Lanolin	1.0
Isopropyl Myristate	2.0
Lactic Acid	2.0
Water	2.0

Solid Iodophor Cleansing Bar

(US Patent #3,687,855, Synergistics, August 29, 1972)

Jordapon CI Powder	20.0%
Polyvinylpyrrolidone Iodine	10.0
Cetyl Alcohol	2.0
PEG-4000	68.0

Applications:

The common bar of soap has provided personal cleanliness for centuries. But soap has several drawbacks which today's sophisticated consumer only grudgingly tolerates: irritancy, drying of the skin, and poor lathering/scum formation in hard water. Jordapon CI Powder's combination of mildness, soft after-feel, and excellent hard water performance offsets each of soap's negatives. Thus, syndet bars based on Sodium Cocoyl Isethionate have been well received by consumers. Jordapon CI Powder also offers advantages to the formulator and processor of syndet bars. The trace quantities of sodium chloride will eliminate salt-induced cracking of the bars. The low free fatty matter minimizes bar softness and tackiness. And the high active level means that Jordapon CI Powder imparts optimum foaming and cleansing performance.

3. Pationic 138C	2.00
4. Pationic ISL	2.00
5. Rita EGDS	0.35
6. Ritapeg 150 DS	0.25
<u>Part B:</u>	
7. Laneto 50	2.00
8. Distilled Water	68.90
<u>Part C:</u>	
9. Sodium Chloride (25% Solution)	+1.00
10. Color, Fragrance and Preservative	QS
11. Patlac LA (44%)	QS

Compounding Procedures:

Combine ingredients in Part A and heat to 70C. Combine ingredients in Part B and heat to 70C. Add Part A to Part B with agitation. Cool to 40C. Add perfume, then cool to room temperature. Adjust pH to 7.0-7.5 with Patlac LA. Adjust viscosity with sodium chloride 25% solution.

Formulation 110-127

Pearlized Liquid Soap

A pearlized liquid soap which does not dry the skin and leaves a smooth feel.

<u>Ingredients:</u>	<u>% W/W</u>
1. Grilloten LSE 87K Soft	4.00
2. Distilled Water	21.00
3. Sodium Laureth Sulfate - 40 Mole	40.00
4. Ritasynt IP	3.00
5. Cocamidopropyl Betaine	8.00
6. Distilled Water	23.00
7. Sodium Chloride (25% Solution)	+1.00
8. Preservative, Perfume	QS

Compounding Procedures:

Combine ingredients 1, and 2 and mix. Heat to 175F. Add ingredient 4 to this premix. Maintain at 175F. Combine ingredients 3, 5 and 6 in main mixer and heat to 175F. Add ingredients 1, 2 and 4 premix to ingredients 3, 5 and 6 while mixing. Mix until uniform. Begin cooling at 120F. At 120F, add perfume and preservative. Cool to 95F with mixing. Adjust viscosity with Sodium Chloride solution.

Formulation 110-129

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Sanitizing Hand Soap

<u>Ingredients:</u>	<u>% by Wt.</u>
Water	83.9
Natrosol 250 HHR	0.5
BTC 2125M (50% active)	5.0
Amphosol CG	5.5
Ammonyx CDO	3.5
Amidox C-5	1.6

Mixing Procedures:

Charge vessel with water and heat to 140F with high speed mixing. Slowly sprinkle in Natrosol 250HHR. Continue to mix until the Natrosol is hydrated and a clear homogeneous solution is obtained. Discontinue heating and add remaining ingredients in order shown. Mix until a clear homogeneous solution is obtained. Finally, adjust pH to 6.7 with 10% citric acid.

Properties:

Appearance: Clear, light yellow liquid
 pH, as is: 6.7
 Density, lbs/gal: 8.35
 Viscosity @ 25C, cps: 100-300

Use Instructions:

This formulation effectively reduces bacterial flora of the skin. For one-step hand washing and sanitizing place approximately 5 cc (ml) in palm of hand, add approx. 15 cc (ml) of water, lather and wash normally. After use, hands must be thoroughly rinsed with potable water. Repeat whenever re-entering production area.

This formulation must be dispensed from an adequate dispenser located a sufficient distance from the processing line to prevent accidental production contamination.

This formulation is authorized for use by USDA in federally inspected meat and poultry processing plants under Category E2: Hand Washing and Sanitizing Compounds.

Efficacy tests have demonstrated that this formulation is effective in water up to 400 ppm hardness as CaCO₃.

Comments:

To market a product based on this formulation, a completed "Application for Authorization of Distributor Product" must be submitted to USDA. Contact Stepan's Regulatory Dept. for assistance.

Storage Stability:

This formulation is freeze/thaw stable. Upon thawing it will return to its original state.

Store in a cool dry place.

SOURCE: Stepan Co.: Formulation No. 74

Skin Conditioning Liquid Soap

	<u>%(w/w)</u>
Deionized Water	52.70
TEA Lauryl Sulfate	35.00
Lexaine O (Oleamidopropyl Betaine)	10.00
Lexein X250 (Hydrolyzed Animal Protein)	2.00
Lexgard M (Methylparaben)	0.20
Lexgard P (Propylparaben)	0.10
Sodium Chloride	q.s.
Dye	q.s.
Fragrance	q.s.

Procedure:

Charge water into vessel and heat to 70C. Add Lexgard M, Lexgard P, TEA lauryl sulfate, Lexaine O, and Lexein X250 with agitation. Mix until clear. Cool to 40C. Add sodium chloride to desired viscosity. Adjust pH. Cool and package.

Observations:

Adjusted pH (direct): 7.0 with citric acid
Viscosity: 200 cps

Formulation SO-103

Clear Gel Hand Soap

	<u>%(w/w)</u>
Ammonium Lauryl Sulfate	49.70
Deionized Water	40.00
Lexaine IS (Isostearamidopropyl Betaine)	10.00

Fragrance	q.s.

Procedure:

Charge water into vessel and heat to 70C. Add ammonium lauryl sulfate, Lexaine IS, Lexgard M, and Lexgard P with agitation. Mix until clear. Add sodium chloride to desired viscosity. Adjust pH. Cool and package.

Observations:

Appearance: Clear light yellow gel
Adjusted pH (direct): 5.1 with citric acid
Viscosity: 11,000 cps

Formulation SO-104

SOURCE: Inolex Chemical Co.: Suggested Formulations

The following formulations produce both gel and lotion type waterless hand cleaners offering:

Excellent heavy soil detergency	Excellent water rinsability
Quick "break" on application	Ease of manufacture
Excellent shelf stability	

Gel Waterless Hand Cleaner

Water	58.0%
Monamine 853	11.0%
Deodorized Kerosene	27.0%
Oleic Acid	4.0%

Mixing Procedure:

Add ingredients in the order listed with good agitation.

Slow Setting Gel Waterless Hand Cleaner

The addition of Gafac RM-510 to the basic formulation delays the set-time sufficiently to permit liquid filling of containers, and eliminates the need for heavy mixing and piston filling equipment. This system remains flowable for approximately one hour after filling, and on standing overnight develops the desired "pinging" gel structure.

Water	58.0%
Monamine 853	11.0%
Gafac RM-510	2.0%
Deodorized Kerosene	27.0%
Oleic Acid	2.0%

Mixing Procedure:

Add ingredients in the order listed with good agitation.

SOURCE: Mona Industries, Inc.: Suggested Formulations

Waterless Hand Cleaner

<u>Ingredient:</u>	<u>As Supplied, %</u>
Water	47.13
Aculyn 22	1.67
Triton N-101	3
Deodorized Kerosene	38
Mineral Oil	10
NaOH (50%)	0.2

Mixing Procedure:

Add the ingredients in the listed order. High shear mixing is necessary to disperse the solvents (kerosene, oil).

SOURCE: Rohm and Haas Co.: Suggested Formulations

Slow Set Waterless Hand Cleaner

	<u>% by Weight</u>
Water	47.90
Nonyl Nonoxynol - 10 Phosphate	2.40
Nonyl Phenol 9.5 moles E.O.	1.20
Dimethicone Copolyol	0.40
Oleic Acid	1.80
Polysorbate 80 & Acetylated Lanolin Alcohol & Cetyl Alcohol	0.40
Monamine 1255	5.90
Mineral Spirits	40.00

Procedure:

Add in order listed. Slowly add mineral spirits with agitation. Add fragrance, coloring and preservatives as required. Mix until uniform and package.

Appearance:

White pourable lotion which sets in 3-4 hours and becomes a ringing gel after 12 hours.

Fast Set Waterless Hand Cleaner

	<u>% by Weight</u>
Odorless Mineral Spirits	40.0
Monamine 1255	12.0
Monafax 785	0.5
Glycerine (99%)	1.0
Light Mineral Oil	2.0
Water	44.5

Procedure:

Add ingredients as listed except water. Mix well, stop agitation and add water, turn agitation on and mix.

Appearance: White ringing gel

Note:

Product sets immediately upon thorough agitation and requires A piston type filler.

Soap Base Beauty Bar

A high foaming beauty bar which combats dryness and leaves a luxurious after-feel.

Ingredients:

	<u>%W/W</u>
1. Soap Base 80/20 Tallow/Coco	+-94.00
2. Pentasodium Pentetate	QS
3. Tetrasodium Etidronate	QS
4. Perfume Oil K-79-531	1.00
5. Pationic ISL	3.00
6. Polyox WSR N-80	1.50
7. Titanium Dioxide	0.50

Compounding Procedure:

Pre-mix the Pationic ISL and perfume oil to reduce the viscosity of the Pationic ISL and facilitate subsequent incorporation. Combine the other materials to some degree of uniformity using suitable equipment. Add the Pationic-perfume mixture and continue blending until uniform.

pH: 10.1-10.5

Formulation H-89-P-10

Liquid Soap

A high quality liquid soap especially suited to multiple daily use. The Grilloten has been shown to reduce irritation. The Panthenol also helps minimize irritation, plus moisturizes. The Betaine and Euperlan prevent stripping and leave a good after feel.

Ingredients:

	<u>% W/W</u>
1. Grilloten LSE 87K Soft	4.00
2. Distilled Water	43.00
3. DL Panthenol	1.00
4. Sodium Laureth Sulfate	40.00
5. Euperlan PK 810	3.00
6. Cocamidopropyl Betaine	8.00
7. Sodium Chloride (25% Solution)	1.00
8. Preservative, Perfume	QS

Compounding Procedures:

Stir ingredients 1 and 2 thoroughly. Add other ingredients in given order, stirring after each addition. Add Sodium Chloride solution in small amounts to increase viscosity.

Formulation 110-128

Transparent Liquid Soap

This clear, rich-lathering system has the mildness and soft skin feel of Jordapon ACI-30 surfactant. And it is economical to make, due to the low level of actives and efficient room-temperatures processing.

<u>Part:</u>	<u>Ingredient:</u>	<u>Wt. %</u>
A	Deminerlized Water	58.80
	Ammonium Lauryl Sulfate	Sipon L-22 18.50
	Ammonium Cocoyl Isethionate	Jordapon ACI-30 9.20
	Na4EDTA	0.20
	Imidazolidinyl Urea	Germa11 115 0.20
	Methyl Paraben	0.20
B	Cocamidopropyl Betaine	Mafo CAB 3.40
	Cocamide DEA	Mazamide JT-128 0.90
	Fragrance	0.05
C	Citric Acid, 50%	0.10
D	Deionized Water	6.75
	Ammonium Chloride	1.70

pH: 6.0-6.5

Viscosity: 2500-3500 cps

Appearance: Clear, nearly water-white liquid

Procedure:

Mix part A ingredients until clear and uniform. In a side vessel, blend part B together. This premix will not be clear, but it will speed up the dissolution of the fragrance. Add B to A, mixing until clear and uniform. Adjust the pH with citric acid. In the side vessel, dissolve the NH4Cl in the part D water, and add to the batch. Viscosity is responsive to NH4Cl level, from under 1000 cps at 1% salt to 4000 cps at 2% salt.

Formulation N-104

Applications: Bars

Jordapon CI Flake offers the bar producer a convenient, preformulated chip. It can be amalgamated, plodded, and stamped much the same as regular soap.

Syndet Bar

Waterless Handcleaner

This waterless handcleaner contains Grillocin HY-77 to absorb and neutralize odors. It leaves the hands soft and smooth.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Mineral Spirits, Deodorized	45.00
2. Laneto 50	4.00
3. Ritalan C	1.00
4. Ritachol 1000	12.00
5. Grillocin HY-77	0.50
6. Propylparaben	0.10
Part B:	
7. Distilled Water	37.10
8. Methylparaben	0.10
Part C:	
9. Perfume	0.20

Compounding Procedure:

Heat Parts A and B to 165F. Add Part A to Part B with mixing. Cool to 120F. Add Part C. Fill into jars while warm.

Formulation 104-18

Waterless Handcleaner

This creamy waterless handcleaner owes its smooth texture to Acritamer 934 and Ritachol, and pleasant after feel to Laneto 50.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Distilled Water	60.25
2. Acritamer 934	0.50
3. Methylparaben	0.10
Part B:	
4. Laneto 50	3.00
5. Triethanolamine (50%)	1.00
Part C:	
6. Mineral Spirits, Deodorized	25.00
7. Ritachol 1000	10.00
8. Propylparaben	0.05
Part D:	
9. Perfume	0.10

Compounding Procedure:

Dissolve Methylparaben in water. Then slowly, with mixing, add the Acritamer 934. Mix until thoroughly dispersed. Add Part B with mixing, then heat to 165F. Heat Part C to 165F. Add Part D. Mix. Cool with mixing to 120F. Add Part D. Fill.

Waterless Hand Cleanser with Antimicrobial Properties

This waterless hand cleaner is virtually without odor. It has excellent cleansing characteristics and "breaks" rapidly upon application. Forlan L contributes emulsion stability and lanolin-related moisturizing and emollient qualities. Ritachol helps prevent defatting of the skin due to the cleansing related solvent. Antimicrobial properties are imparted by the use of Triclosan.

<u>Ingredients:</u>	<u>% W/W</u>
1. Ritachol	3.00
2. C13-14 Isoparaffin	40.00
3. Emulsifier WHC	14.00
4. Forlan L	2.00
5. Propylparaben	0.10
6. BHA	0.10
7. Triclosan	0.10
8. Distilled Water	40.60
9. Methylparaben	0.10
10. Perfume	QS

Compounding Procedures:

Weigh and add 1-7 ("oil blend") into a container and begin heating and stirring. Heat the "oil" phase to 70-73C. Weigh and add 8 and 9 into another container and begin heating and stirring. When both blends are at 70-73C, add the water/paraben blend to the "oil" phase blend. Begin cooling, after adding all the water containing blend, while stirring continuously. Add 10 at 45-48C. Package fill into suitable containers at 35-40C

Formulation 110-138

Waterless Hand Cleaner

A waterless hand cleaner with Laneto 50 to prevent drying and Grillocin HY-77 to remove objectionable household or industrial odors that have been retained on the hands.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Magnesium Aluminum Silicate	2.00
2. Distilled Water	69.30
Part B:	
3. Propylene Glycol	5.00
4. Cocamidopropyl Betaine	3.00
5. Laneto 50	3.00
6. Sodium Lauryl Sulfate	0.50
Part C:	
7. Glyceryl Oleate	5.00
8. Ritapro 300	1.50
9. Mineral Spirits	10.00
10. Methylparaben	0.10
11. Propylparaben	0.10
12. Grillocin HY-77	0.50

Compounding Procedures:

Add ingredient 1 into 2 and heat with stirring to 50C. Mix B into A, keeping the mixture at 50C. Then mix C into the A and B mixture. Stir until smooth while cooling.

Sun Care Products

All Natural Tan Glow Intensifying Gel

A tanning enhancer gel with tyrosine to hasten tanning with aloe, glycerin and propylene glycol for humectancy and with Panthenol as an anti-inflammatory agent.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	37.00
2. Ritaloe 1X	45.00
3. Acritamer 940	2.00
4. Glycerin	3.50
5. Propylene Glycol	3.50
6. Germaben II	1.00
7. dl-Panthenol	1.00
8. Supersat AWS 4	1.00
9. Tyrosine	2.00
10. Triethanolamine (50%)	4.00
11. Fragrance	QS

Compounding Procedure:

Weigh ingredients 1 and 2 into mixing container. Slowly add ingredient 3 into stirred mixture, stir until completely dispersed. Add ingredients 4-9 into this mixture and stir until completely dispersed. Add ingredient 11. Slowly add ingredient 10 to stirred mixture, stir until the batch is uniform. Pour into suitable containers.

Improved Wear Sunscreen

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Cetyl Dimethicone Copolyol (Abil EM-90)	2.0
Caprylic/Capric Triglyceride (Tegosoft CT)	3.0
Mineral Oil	3.0
Octyl Palmitate (Tegosoft OP)	1.0
Octyl Stearate (Tegosoft OS)	1.0
Hydrogenated Castor Oil	0.5
Synthetic Wax or Beeswax	0.5
Cyclomethicone (and) Dimethiconol (and) Dimethicone (Abil OSW-13)	10.0
Octyl Methoxycinnamate	4.5
Phase B:	
Water	73.9
Sodium Chloride	0.6
Preservatives	Q.S.
Fragrance	Q.S.

Procedure:

1. Add the components of Phase A. Heat while mixing to 80C to incorporate the waxes. Cool to 50C.
2. Heat Phase B to 50C. Add B to A slowly with a low energy mixer. Maintain a smooth milky appearance at all times.
3. Cool to 35C with sweep mixer. Add fragrance.
4. Homogenize.

Clear Anhydrous Sunscreen

<u>Ingredients:</u>	<u>% w/w</u>
Cyclomethicone (Abil B 8839)	56.0
Cyclomethicone (and) Dimethiconol (and) Dimethicone (Abil OSW-12)	20.0
Diisopropyl Adipate	10.0
C12-15 Alcohols Benzoate	10.0
Octyl Dimethyl PABA	4.0

Procedure:

Mix ingredients in order.

This formula is anhydrous, oil-free and clear. It is quick spreading and hydrophobic on the skin.

Phase D: Fragrance	0.20

Procedure:

Disperse Carbopol 941 in water and heat to 80C; add triethanolamine slowly to prepare Phase B. Combine Phase A ingredients except Dermacryl-79 and heat to 80C. Sift Dermacryl-79 into the oil phase with constant stirring until dissolved. Add Phase A to Phase B at 80C and mix for 15 minutes. Cool to 45C, add Phase C and Phase D. Continue cooling to room temperature and package.

Pearlescent Waterproof Sun Creme

This formula is a light textured oil in water emulsion which contains a high percentage of Flamenco Ultra Silk pearl pigment. An attractive pearlescent cream, this product also functions as an effective waterproof sunscreen.

<u>Phase:</u>	<u>Ingredients:</u>	<u>% wt.</u>
A.	PVP/Eicosene Copolymer (Ganex V220)	4.10
	Stearic Acid	3.30
	Triisostearyl Trilinoleate (Schercemol TIST)	3.30
	Isononyl Isononanoate (Wickenol 151)	3.30
	Octyl Methoxycinnamate (Parso1 MCX)	2.60
	Cetyl Alcohol (Adol 52)	0.80
	Benzophenone-3 (Uvinul M-40)	0.80
	Dimethicone (Dow Corning 200 Fluid)	0.20
	Antimicrobials (oil soluble)	q.s.
B.	DEA Cetyl Phosphate (Amphisol)	2.00
C.	Water (q.s. to 100%)	46.60
	Glycerin	4.10
	Antimicrobials (water soluble)	q.s.
	Carbomer 940-2% aqueous solution (Carbopol 940)	3.80
D.	Triethanolamine	0.10
E.	Flamenco Ultra Silk	25.00

Procedure:

- I. Separately heat Phase A and Phase C to 80+-3C while mixing until completely uniform.
- II. Stir Phase B into Phase A until homogeneous.
- III. Add pre-mixed Phase A & Phase B to Phase C while mixing until completely uniform. Then cool to 40C with slow stirring.
- IV. Add Phase D with stirring.
- IV. Disperse pigment (Phase E) into warm base.
- V. Cool to 30C and fill.

Pearly Bronze/Copper Suntan Cream

A suntan cream containing a high percentage of a copper or bronze pearl pigment not only has the advantage of color/function association, but can create an attractive "instant tan". A wide range of shades can be produced to satisfy different opinions on how a tan should look.

<u>Phase:</u>	<u>Ingredients:</u>	<u>% wt.</u>
A.	Octyl Methoxycinnamate (Parsol MCX)	3.00
	Lanolin Acid (Amerlate LFA)	3.00
	Isopropyl Lanolate (Amerlate P)	1.50
	Petrolatum (and) Lanolin (and) Lanolin Alcohol (Amerchol C)	4.00
	Mineral Oil, 70 visc. (Carnation White Mineral Oil)	3.50
	Glyceryl Stearate SE (Tegin)	6.00
	Stearyl Alcohol	3.00
	Ozokerite (170D)	5.00
	Antimicrobials (oil soluble)	q.s.
	Antioxidants	q.s.
B.	Triethanolamine	1.00
	Methyl Gluceth-10 (Glucam E-10)	2.50
	Water (q.s. to 100%)	62.50
	Antimicrobials (water soluble)	q.s.
	Fragrance	q.s.
C.	Cloisone' Super Copper 350Z	5.00

Procedure:

- I. Separately heat Phase A and B to 80+-3C.
- II. Stir Phase B into Phase A until homogeneous. Then cool to 40C with slow stirring.
- III. Disperse pigment (Phase C) into Phase A-B.
- IV. Cool to 30C and fill.

Presun Moisture Accelerator

	<u>% Weight</u>
Phase A:	
Polysorbate 80	3.00
Octyl Palmitate	2.50
Glyceryl Stearate	2.50
Stearyl Alcohol (Crodacol S-95)	2.00
Tocopheryl Linoleate (Vitamin E Linoleate)	1.50
Sorbitan Stearate	1.50
Cetyl Esters	1.50
Tocopheryl Acetate (Vitamin E Acetate)	1.00
Phase B: Water	80.35
Panthenol (Dexpanthenol)	1.00
Carbomer-934 (Carbopol 934)	0.30
Phase C: Triethanolamine, 50% Solution	0.60
Phase D:	
Corn Oil (and) Retinyl Palmitate (Vitamin A Palmitate P1M0/BH)	1.20
Germaben II-E	0.75
Fragrance	0.20
Tocopherol (Vitamin E Alcohol)	0.10

Dissolve panthenol in water, sprinkle in Carbopol 934, mix until properly dispersed. Separately heat Phase A and Phase B to 75C; add Phase A to Phase B with agitation. Using paddle-type mixer, add Phase C. Cool to 40C and add Phase D. Cool to room temperature, mixing until smooth.

After Sun Moisturizer

	<u>% Weight</u>
Phase A:	
Water	56.05
Polyacrylamide	0.15
Carbomer-940 (Carbopol 940, 2% Solution)	15.00
Phase B:	
Wheat Germ Oil Fatty Acids (and) Wheat Germ Oil (and) Tocopherol (EFA-Plex WGOFA)	0.30
Stearic Acid	1.70
Cetyl Alcohol	3.00
Lanolin Oil (Ivarlan 3100)	2.00
Sorbitan Sesquiolate (Liposorb SQO)	2.00
Mineral Oil	9.00
C12-15 Alcohols Benzoate (Finsolv TN)	2.50
Phase C: Glycerin	3.00
Tissue Respiratory Factors (Biodynes TRF)	0.70
Phase D: Germaben II	1.00
Water	3.00
Potassium Hydroxide	0.30
Tetrasodium EDTA	0.10
Phase E: Fragrance	0.20

In main vessel, melt Phase B materials at 70C. In side vessel dissolve the polyacrylamide at 75C. Add Carbopol solution to complete Phase A, mix until uniform. Add Phase A to Phase B with rapid agitation. Cool to 50C with sweep agitation. Add Phase C and mix until uniform. Combine Phase D, add to batch. Cool to room temperature, Add Phase E.

Protective Skin Product with Sunscreen

An excellent protective product for daily use on face or other exposed skin areas.

<u>Materials:</u>	<u>Parts/Wt(%)</u>
Part A:	
SF1202	12.0
Mineral Oil (light)	1.0
Heliopan AV	5.0
SS4267	3.0
SF1228	10.0
Lanolin	0.5
TiO ₂ (micronized)	3.0
Part B:	
Polysorbate 80	0.2
Glycerine	3.0
NaCl	1.0
Water	61.2
Dowicil 200	0.1

Procedure:

- 1) Add Part A ingredients in order as shown, thoroughly mixing each component until homogeneous before adding next ingredient. The solution should remain clear until TiO₂ is added.
- 2) Mix all ingredients of Part B together.
- 3) Add Part B to Part A with good mixing gradually increasing agitation to high shear as mixture thickens. Continue agitation for 5-10 minutes. Mixture will become very thick.
- 4) Mill on homogenizer for 1-2 minutes.

SOURCE: GE Silicones: Formulation SP107
Sunscreen Cream

<u>Phase A:</u>	<u>% Weight</u>
Octyl Methoxycinnamate (Neo Heliopan AV)	7.50
Menthyl Anthranilate (Neo Heliopan MA)	5.00
Cyclomethicone (Dow Corning 344 Fluid)	2.00
Cetyl Octanoate (Trivent OC-16)	4.00
PVP/Eicosene Copolymer (Ganex V-220)	3.00
Polyethylene (AC Polyethylene 617A)	2.00
Cetearyl Alcohol (Lanette O)	0.50
PEG-40 Stearate (Myrj 52S)	0.50
Acrylates/C10-30 Alkyl Acrylate Cross Polymer (Pemulen TR-1)	0.25
Tocopheryl Acetate (Vitamin E Acetate)	0.10
Phase B: Water	59.75
Carbomer-980, 2% Solution (Carbopol 980)	10.00
Propylene Glycol	3.00
Aloe Vera Gel	1.00
Phase C: Triethanolamine, 99%	0.40
Phase D: Germaben II-E	1.00

Procedure:

In a suitable vessel weigh Phase A, heat to 75C and completely disperse Pemulen TR-1. In another vessel able to contain the entire batch, weigh Phase B and heat to 75C with agitation. Mix until uniform, and start cooling with continuous agitation. Cool to 40C and add Phase D. Continue cooling with agitation to 25-28C, pass thru a mill and package.

Sprayable Sunscreen

<u>Ingredients:</u>	<u>% by weight</u>
Part A:	
Deionized Water	79.20
Glycerin	3.00
AMP-95	0.12
Part B:	
Octyl Methoxy Cinnamate	7.00
Octyl Salicylate	3.00
Oxybenzone	2.00
C12-15 Alcohols Benzoate	4.00
Oleth-10	0.08
Sorbitan Oleate	0.05
Dimethicone, 100 cs.	0.50
Pemulen TR-2	0.15
Part C:	
Propylene Glycol (and) Diazolidinyl Urea (and)	
Methylparaben (and) Propylparaben	0.80
Disodium EDTA	0.10

Procedure:

Combine A ingredients in a vessel which will contain the entire formulation. In a separate vessel, combine all B ingredients except dimethicone and Pemulen. Heat to 45-50C to hasten dissolution of oxybenzone. Discontinue heating and add Pemulen. Mix to obtain a smooth dispersion. Add dimethicone. Add B to A with rapid agitation. Continue mixing to obtain a smooth emulsion. Add C. Disodium EDTA should be added incrementally such that a Brookfield viscosity of 500-1000 cps is achieved.

Sun CareSuntan Oil(51485A)

This formula produces an essentially colorless, transparent oil. It spreads evenly and does not leave a greasy feel on the skin.

Drakeol 7, Light Mineral Oil USP	63.7wt%
Isopropyl Palmitate	28.8
Sunscreen	5.0
Wheat Germ Oil	2.5
Fragrance	q.s.

Blend all ingredients at room temperature and package.

Suntan Lotion(514127A)

This lotion is thick and very smooth, with emollient characteristics in addition to its sun screening properties. It goes on smoothly with a nice cushion and leaves a fine moisturizing coating on the skin.

Part A:	
Drakeol 7, Light Mineral Oil USP	18.0wt%
Penreco Snow, White Petrolatum USP	12.0
Glyceryl Stearate	7.0
White Beeswax	3.0
Sunscreen	2.0
Part B:	
Deionized water	58.9
Thickening agent	0.1
Part C:	
Preservatives	q.s.
Fragrance	q.s.

Disperse the thickening agent in the water at 70C. Separately, blend the ingredients in Part A and heat the mixture to 75C. When Part A is uniform, add Part B to Part A and continue to mix until the blend has cooled to room temperature. Add fragrance and preservatives at 45C.

Sun Protection Cream (O/W) SPF 5

<u>Ingredients:</u>	<u>% by weight</u>
A. PEG-1 Glyceryl oleostearate and paraffin wax	6.00
Mineral oil high viscosity	14.50
Beeswax, white	3.00
Dimethicone, 100 cs	2.00
Tocopherol acetate	0.50
B. Phenyl benzimidazole sulfonic acid	1.50
C. Tris(hydroxymethyl)aminomethane	0.66
D. Water, demineralized	qs 100.00
E. Glycerin	2.00
Magnesium sulfate heptahydrate	0.70
Preservatives	q.s.

Procedure:

To neutralize B, dissolve C in D. Add B while stirring. When uniform, add E; heat to 80C. Heat A to 75C. Add BCDE slowly to A, stirring gently. Homogenize. Cool while stirring. Add fragrance at 40C, as required. Note: Viscosity 76,000 mPas at 26C.

SOURCE: Angus Chemical Co.: Formulation PF-0221 Suggested by EM Industries, Inc.

Sunscreen Oil

In this formula, Macol 57 and Mazon EE-1 solubilize the actives and reduce the greasiness of the oil. Macol 57, due to its relatively polar structure, helps to offset the hypsochromic shift ("blue shift") in the lambda-max caused by the mineral oil.

<u>Ingredient:</u>	<u>Trade Name:</u>	<u>Wt. %</u>
Benzyl Laurate	Mazon EE-1	20.0
PPG-10 Butanediol	Macol 57	8.0
Homosalate	Uniderm Homsal	8.0
Ethylhexyl p-Methoxycinnamate	Parsol MCX	3.0
Fragrance		Q.S.
Mineral Oil	Drakeol 7	61.0
Appearance: Clear, water-white light oil		

Procedure:

Blend the first four ingredients at ambient temperature, add fragrance. When uniform, blend in the mineral oil.

SOURCE: PPG Industries, Inc.: Formula L-104

Sun-Protection-Gel (Aqueous)

<u>Ingredients:</u>	<u>% by weight</u>
A. Eusolex 232	4.00
Tris Amino brand of tris(hydroxymethyl)aminomethane	1.77
Allantoin	0.20
Sorbitol F liquid	5.00
Preservatives	q.s.
Water, Demineralized	ad 100.00
B. Perfume 72979	0.30
PEG-35 Hydrogenated Castor Oil	0.60
C. Carbopol 940	1.50
Water, Demineralized	36.10
D. Tris Amino	2.40
Water, Demineralized	10.00

Procedure:

To neutralize Eusolex 232 dissolve Tris Amino in the water of Phase A and add Eusolex 232 while stirring. When uniform add the remaining ingredients of Phase A. Heat to 70C until homogeneous and cool while stirring. Blend ingredients of Phase B. Disperse Carbopol 940 in the water of phase C and homogenize. Dissolve the Tris Amino in the water of phase D. Combine phases C and D and homogenize. Incorporate phases A and B. Homogenize again.

Note: Transparent Gel

Viscosity: 35,000 mPas at 25C

pH: 6.7

Formulation PF-0171 suggested by EM Industries, Inc.

Sun-Protection Cream (O/W)SPF-5 (sun protection factor, FDA-method with 5 human subjects)

<u>Ingredients:</u>	<u>% by weight</u>
A. PEG-1 Glyceryl Oleostearate + Paraffin Wax	6.00
Mineral Oil High Viscosity	14.50
Beeswax, white	3.00
Dow Corning 200 (100 cs)	2.00
Tocopherol acetate	0.50

Sunscreen Cream with TiO₂(514128)

This light, fluffy product goes on easily without leaving a white film or a greasy feel on the skin.

Part A:	
Penreco Snow, White Petrolatum USP	6.00wt%
Sorbitan Sesquioleate	5.00
Mineral Oil (and) Lanolin Alcohol	5.00
Drakeol 9, Light Mineral Oil USP	2.00
Laneth-16 (and) Ceteth-16 (and) Oleth-16 (and) Steareth-16	1.00
Part B:	
Deionized water	74.25
Titanium dioxide	5.00
Thickening agent	1.75
Part C:	
Fragrance and preservatives	q.s.

Disperse the titanium dioxide in the water at 70C with vigorous stirring. Add the thickening agent. Separately, heat Part A to 70C until homogeneous. Add Part A to Part B with stirring. Let the blend cool to room temperature with stirring. At 45C, add Part C.

Sunscreen Lotion Containing TiO₂(514118)

Part A:	
Deionized water	74.90wt%
Glycerin	3.00
Methylparaben	0.20
Propylparaben	0.10
Citric Acid	0.10
Part B:	
Titanium dioxide	4.50
Hydroxyethylcellulose	0.80
Part C:	
Drakeol 7, Light Mineral Oil USP	11.20
Emulsifying Wax	3.50
Cetyl Alcohol	1.00
Dimethicone, 200 cSt	0.50
Vitamin E Acetate	0.20

Heat Part C to 70C with stirring. Add well-mixed Part B to Part C very slowly with vigorous stirring. Stir until smooth. Heat Part A to 70C. Add hot BC to A with rapid stirring. Stir complete mixture at 65-70C for 15 minutes, then cool to room temperature with stirring. If desired, add fragrance at 40C.

pH: 6.5-7.0

Viscosity: 59,800 cps

Appearance: Glossy white lotion

Performance: Non-greasy, smooth feel

Procedure:

Pre-mix Part A; heat to 55C. Pre-mix Part B; heat to 55C. Add Part A to B with high shear. Sweep-cool to 35C. If necessary, adjust pH with 50% citric acid in water.

Formulation I-102

Sunscreen Oil

<u>Ingredient:</u>		<u>Wt. %</u>
Cyclomethicone	Masil SF-V	64.9
Octyl Dimethyl PABA	Escalol 507	6.0
Capric/Caprylic Triglyceride	Mazol 1400	5.0
Fragrance		0.1
Isopropyl Palmitate	Propal	24.0

Appearance: Clear, water-white

Performance: A light oil which spreads rapidly and leaves a uniform, non-oily film

Procedure:

Blend all ingredients at room temperature.

Formulation L-102

Cooling Suntan Lotion

<u>Phase A:</u>	<u>% Weight</u>
Octyl Methoxycinnamate (Neo Heliopan AV)	3.00
Octyldodecanol (Eutanol G)	4.50
PEG-5 Glyceryl Stearate (Arlatone 983S)	2.00
Mineral Oil (Drakeol 7)	2.00
Isopropyl Myristate	2.00
Steareth-10 (Brij-76)	2.00
Menthyl Lactate (Frescolat)	2.00
Cetearyl Alcohol (Lanette O)	1.50
Phase B:	
Water	75.50
Carbomer-934 (Carbopol 934)	0.30
Propylene Glycol	3.00
Phase C:	
Sodium Hydroxide, 10% Solution	1.20
Phase D:	
Germaben II-E	1.00
Fragrance	Q.S.
Procedure:	

In a suitable vessel weigh Phase A and heat to 75C with agitation. In another vessel able to contain the entire batch, weigh water and completely disperse Carbopol 934 with vigorous agitation. Add the remaining ingredients in Phase B and heat to 75C with agitation. Slowly add Phase A to Phase B, mix for 10 minutes and add Phase C. Mix until uniform and start cooling with agitation. Cool to 40C and add Phase D. Continue cooling with agitation to 25-28C and package.

SOURCE: Sutton Laboratories: Suggested Formulation

Sun Screen Oil

This preparation contains a quantity of sun screen agent. It must be noted that the Food and Drug Administration, in its monograph referring to over-the-counter sun screen drug products, has concluded that over-exposure to the sun may lead to premature aging, as well as other negative conditions.

<u>Ingredients:</u>	<u>% W/W</u>
1. Isopropyl Myristate	10.00
2. Ritalan	3.00
3. Ritacetyl	1.75
4. Ritawax AEO	5.00
5. Mineral Oil	72.15
6. Propylparaben	0.10
7. Fragrance	QS
8. Homo Menthyl Salicylate	8.00

Compounding Procedure:

Weigh and add all ingredients with the exception of the fragrance and Homo Menthyl Salicylate into a container and begin stirring. Heat while stirring continuously to a temperature of 67-72C. Hold at this temperature for about 20 minutes, stirring until all ingredients dissolve. Begin cooling. Cool to 40-43C and add the remaining ingredients. Cool to 25-30C and package fill into suitable containers.

Formulation HB-89-L-23

Sun Screen Gel

This Acritamer-based gel has Ritalan and Patlac IL to prevent the skin from drying. NOTE: All sun screen products must be checked to comply with the OTC monograph.

<u>Ingredients:</u>	<u>% W/W</u>
1. Ritalan	5.00
2. PEG-32	3.00
3. Octyl Dimethyl PABA	3.00
4. Patlac IL	1.00
5. Acritamer 934	0.60
6. Distilled Water	+56.20
7. Triethanolamine (50%)	1.20
8. SD Alcohol 40	30.00
9. Color, Fragrance, Preservative	QS

Compounding Procedure:

Disperse item 5 into item 6 and heat to 70C. Combine items 1-4 and heat to 70C. Combine both phases with mixing. Add item 7. Cool with mixing to 40C. Add remaining ingredients.

Formulation HB-89-L-24

SOURCE: R.I.T.A. Corp.; Suggested Formulations

Sunscreen Oil

In this formula, Macol 57 and Mazon EE-1 solubilize the actives and reduce the greasiness of the oil. Macol 57, due to its relatively polar structure, helps to offset the hypsochromic shift ("blue shift") in the lambda-max caused by the mineral oil.

<u>Ingredient:</u>		<u>Wt.%</u>
Benzyl Laurate	Mazon EE-1	20.0
PPG-10 Butanediol	Macol 57	8.0
Homosalate	Uniderm Homsal	8.0
Ethylhexyl p-Methoxycinnamate	Parso1 MCX	3.0
Fragrance		Q.S.
Mineral Oil	Drakeol 7	61.0
Appearance: Clear, water-white light oil		

Procedure:

Blend the first four ingredients at ambient temperature, add fragrance. When uniform, blend in the mineral oil.

SOURCE: PPG Industries, Inc.: Formulation L-104

Sun Stick

This product in stick form will serve as a moisturizer for the skin and will give an oil-free smooth coverage of sunscreen which stay effective for a time span.

	<u>% (w/w)</u>
Sodium Stearate C-1	10.00
Glycerine	69.00
Lexquat AMG-0	10.00
Amerscreen P	6.00
SDA-40 (200 P.)	5.00

Procedure:

Charge the batch vessel with glycerine. Begin mixing and heating to 78C+-2C. Add the sodium stearate C-1 and let it mix. Add the Amerscreen P with mixing. Add the Lexquat AMG-0 and continue mixing. Begin to cool. At 45C, add the alcohol. Continue mixing at this temperature for 10 minutes, then pour into the mold.

Sunscreen
O/W with Ethanol

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Steareth-25 (Emulgator E-2568)	2.5
Glyceryl Stearate (Tegin M)	5.5
Cetyl Dimethicone (Abil Wax 9801)	3.0
Dimethicone (Abil 350)	0.5
Stearyl Alcohol	2.5
Benzophenone-3	2.0
Octyl Methoxycinnamate	4.0
Mineral Oil	5.0
Decyl Oleate (Tegosoft DO)	6.5
Phase B:	
Glycerin	3.0
Carbomer 934 (1.5% - NaOH Neutralized)	0.2
Water	55.3
Preservatives	Q.S.
Phase C:	
SD Alcohol 40	10.0
Fragrance	Q.S.
Procedure:	
1. Combine the ingredients of Phase A. Heat to 80C.	
2. Combine the ingredients of Phase B. Heat to 80C.	
3. Mix Phases A & B. Cool to 60C while mixing. Homogenize.	
4. Cool to 45C with sweep mix.	
5. Add Phase C. Rehomogenize. Cool to 25C with sweep mix.	

Titanium Dioxide Sunscreen

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Octyl Isostearate	12.0
Cetyl Dimethicone Copolyol (Abil EM-90)	2.5
Mineral Oil	13.0
Hydrogenated Castor Oil	0.5
Synthetic Wax	1.0
Phase B:	
Titanium Dioxide	8.0
Phase C:	
Water	62.3
Sodium Chloride	0.7
Fragrance	Q.S.
Preservatives	Q.S.
Procedure:	
1. Mix the ingredients of Phase A together and heat at 80C. Mix until uniform.	
2. Cool Phase A to 25C. Add the actives of Phase B. Mill until uniform.	
3. Mix Phase C (20-25C). Slowly add to the milled Phase A/B with slow mix. At all times maintain a creamy appearance.	
4. Homogenize.	
Note: Waterproofing polymers may be added to this formula.	

SOURCE: Goldschmidt Chemical Corp.; Suggested Formulations

Suntan Lotion

This formulation contains Ritaderm for its lipid layer-related attributes, as well as its natural moisturizing factor-like properties. Thus, Ritaderm functions to help protect the skin against negative environmental influence, such as sun, wind, cold and water by imparting moisturizing benefits that assist in maintaining the normal moisture content of the stratum corneum. The lotion is an easily applied oil/water emulsion that "rubs in" quickly, leaving the skin soft and smooth to the touch.

This sun screen preparation is based on the use of Para Amino Benzoic Acid. Based on current regulations, this formulation should be considered a drug item. The SPF (sun protection factor) for this product should be determined by "in vivo" methods to be used on the label.

Ingredients:

	<u>% W/W</u>
1. Distilled Water	72.50
2. Acritamer 941	0.10
3. Propylene Glycol	3.00
4. Methylparaben	0.20
5. Isopropyl Myristate	5.00
6. Ritaderm	5.00
7. Ritacetyl	2.50
8. Ritalan	1.00
9. Cetyl Alcohol	0.70
10. Glyceryl Stearate	1.50
11. Stearic Acid	2.00
12. Mineral Oil	2.00
13. Octyl Dimethyl Paba	2.50
14. Propylparaben	0.10
15. Triethanolamine (50%)	1.60
16. Fragrance	QS
17. Imidazolidinyl Urea	0.30

Compounding Procedure:

Add item 1 into a container and stir by means of a variable speed agitator equipped with a stirrer capable of imparting high shear. Slowly sprinkle in item 2 and stir until it is thoroughly dispersed and no lumps can be seen or felt. Add items 3 and 4 and heat to 70-73C, with stirring, add item 15 to the first blend until completely dispersed. When both blends are at 70-73C, add the first blend to the second blend, stirring continuously to ensure adequate emulsification. After all of the first blend has been added, cool to 40-45C and add the remaining ingredients. Cool to 25-30C and package.

SOURCE: R.I.T.A. Corp.: Formulation H-89-A-6

Suntan Lotion

This lotion will moisturize the skin while providing sunburn protection. Pationic ISL and Glycerin moisturize. Shebu provides emollience which adds to the UV protection.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	77.40
2. Acritamer 934	0.20
3. Glycerin	4.00
4. Xanthan Gum	0.10
5. Supersat	0.50
6. Shebu	2.00
7. Glyceryl Stearate	1.00
8. Octyl Dimethyl PABA	2.00
9. Mineral Oil	7.00
10. Pationic ISL	2.00
11. Stearic Acid	2.00
12. Triethanolamine (50%)	1.80
13. Color, Fragrance and Preservatives	QS

Compounding Procedure:

Disperse item 2 into item 1, add items 3 and 4 and heat to 70C. Combine items 5-11, heat to 70C. Combine both phases, add item 12; cool with mixing to 40C, add remaining ingredients.

Note:

The above provides a minimum of protection. Other sunscreens can be used to obtain better protection and testing must be done to claim a specific SPF.

Formulation HB-89-S-1

Bronzer Gel

A clear gel that imparts color to the skin.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	76.00
2. Acritamer 934	1.00
3. Glycerin	16.00
4. Ritoleth 20	3.00
5. Supersat AWS 4	2.00
6. Triethanolamine (50%)	2.00
7. FDA Approved Dye Solutions	QS
8. Fragrance and Preservatives	QS

Compounding Procedure:

Disperse the Acritamer in water and Glycerin. Combine and melt the Ritoleth 20 and Supersat AWS4 and add to batch while stirring. Add correct dye solution- Recheck for color. Add items 6 and 8 and mix until uniform.

Formulation H-89-A-13

Tanning Accelerator Formulation

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Distilled Water	39.70
2. Ritaloe 1X	41.50
3. Acritamer 940	0.10
Part B:	
4. Ritapro 300	2.00
5. Octyl Dimethyl PABA	1.50
6. Simchin	3.00
7. Pationic ISL	3.50
8. Shebu	2.00
9. Supersat AWS 4	2.00
10. Stearic Acid XXX	1.00
11. Rita GMS	2.00
Part C:	
12. DL Panthenol	1.00
13. Triethanolamine (50%)	0.70
14. Preservative	QS
15. Color	QS

Compounding Procedure:

Weigh items 1 and 2 into mixing container. Slowly add item 3 into rapidly mixing blend. Stir until completely dispersed. Weigh items 4 through 11 into another container. Heat both phases to 70C. Pour Part A into Part B. Add item 12 and mix. Add item 13 and mix. Cool mixture to 45C, then add items 14 and 15. Cool to 35C. Fill into suitable containers.

Note: 2.0% Tyrosine may be added to further promote more rapid tanning.

Formulation H-89-S-12

Tanning Oil

This oil will give sunburn protection and will keep the skin soft and smooth. The combined protection of Octyl PABA and Shebu will help prevent burning. Check OTC monograph before marketing any sun product.

<u>Ingredients:</u>	<u>% W/W</u>
1. Ritalan C	7.00
2. Pationic ISL	2.00
3. Ritacetyl	1.75
4. Shebu	3.00
5. Mineral Oil	84.25
6. Octyl Dimethyl PABA	2.00
7. Color, Fragrance and Preservative	QS

Compounding Procedure:

Combine and heat ingredients 1-5 to 50C. Mix until uniform. Allow to cool to 40C. Add remaining ingredients, mix until uniform.

Waterproof Sunscreening Cream (O/W)
SPF 8

A non-greasy, waterproof sunscreen preparation. The polymer provides a waterproof matrix for the sunscreen. The Pationics act as emulsifiers and improve the ease of application. The lactylates and Ritapro moisturize and condition the skin.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Octyl Dimethyl PABA	8.00
2. Stearic Acid	4.00
3. Cetyl Alcohol	1.00
4. Pationic ISL	3.00
5. Pationic SSL	3.00
6. PVP/Eicosene Copolymer	5.00
7. Dimethicone	0.30
8. Shebu Refined	3.00
Part B:	
9. Ritapro 300	2.50
Part C:	
10. Distilled Water	64.00
11. Glycerin	5.00
12. Acritamer 940	0.10
Part D:	
13. Distilled Water	1.00
14. Triethanolamine 99%	0.10
Part E:	
15. Perfume, Preservatives	QS

Heat Part A to 85C while mixing with planetary mixer. Then add Part B. Blend Acritamer into water and glycerin of Part C. Heat to 75C. When both are homogeneous, add Part B to Part C with mixing. Mix until uniform. Add Part D. Begin cooling, cool to 40C. Add Part E. Compensate for water loss, continue mixing until homogeneous, while cooling to 35C.

Formulation HB-89-S-2

Body Spray After Sun Burn

A simple body spray moisturizer to relieve dryness. May be used during or after sun exposure. Ritalan, glycerin and Panthenol soothe, condition and moisturize.

<u>Ingredients:</u>	<u>% W/W</u>
1. Ritaloe IX	80.00
2. Glycerin	3.00
3. dl-Panthenol	0.50
4. Methylparaben	0.20
5. Distilled Water	16.30
Combine ingredients and stir until completely dissolved.	
Formulation HB-89-PA-27	

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Water-Resistant Suntan Lotion

<u>Phase:</u>	<u>Ingredients:</u>	<u>Percent by Weight</u>
A	Deionized water	60.90
	Versene powder chelating agent	0.05
	Carbomer 934	0.15
B	Glycerin	3.00
	Propylene glycol	1.00
	Methylparaben	0.20
C	Ethylparaben	0.15
	Propylene glycol	2.00
D	Xanthan gum	0.10
	Solution of 10% Ethocel and diisopropyl adipate	10.00
	Mineral oil	10.00
	Glyceryl stearate	3.00
	Sorbitan stearate	1.00
	Stearic acid	2.00
	Dimethicone	0.50
	Octyl dimethyl PABA	1.50
	Petrolatum white	1.00
	Cetyl alcohol	1.00
E	Deionized water	1.00
	Triethanolamine	0.20
F	Deionized water	1.00
	Dowicil 200 preservative	0.10
G	Perfume oil	0.15

Procedure:

1. Meter deionized water into a compounding vessel and begin mixing without heat. Add Versene powder and mix until dissolved. Sprinkle in Carbomer and mix rapidly until dissolved. Start heating to 80C.
2. Mix together ingredients in phase B and heat to 80C to dissolve parabens. Add to water phase when water phase is above 60C.
3. Mix together ingredients in Phase C and add to water phase at about 60C. (Be sure that xanthan has been well wetted by the propylene glycol).
4. Mix together ingredients in Phase D. Heat to 80C with mixing. Add to water phase when both phases are at 80C. Mix for 5 minutes.
5. Mix together ingredients in Phase E. Add to batch and continue mixing for 10 minutes. Start to cool batch.
6. At 45C add Phase F solution.
7. At 45C add Perfume oil.
8. Continue to mix batch to 35C.

Some ideas you can try:

1. For a "lighter" feel, substitute a vegetable oil for the mineral oil in Phase D.
2. Try using an additive that would be helpful in product marketing, such as aloe vera or skin proteins.

1. Add the components of Phase A. Heat while mixing to 80C to incorporate the waxes. Cool to 50C.
2. Heat Phase B to 50C. Add B to A slowly with a low energy mixer. Maintain a smooth milky appearance at all times.
3. Cool to 35C with sweep mixer. Add fragrance. (4) Homogenize. Formula LB-30-66

Waterproof W/O Sunscreen Lotion (PABA/Melanin)
SPF-15

<u>Ingredients:</u>	<u>% w/w</u>
Phase A:	
Cetyl Dimethicone Copolyol (and) Polyglyceryl-4 Isostearate (and) Hexyl Laurate (Abil WE-09)	5.0
Mineral Oil	5.0
Octyl Stearate (Tegosoft OS)	6.0
Cyclomethicone (Abil B 8839)	4.0
Cetyl Dimethicone (Abil Wax 9801)	1.0
Isopropyl Myristate (Tegosoft M)	4.0
Hydrogenated Castor Oil	0.8
Microcrystalline Wax	1.2
Octyl Dimethyl PABA	1.4
Phase B:	
Water	60.8
Melanin (10% active)	10.0
Sodium Chloride	0.8
Preservatives	Q.S.
Phase C:	
Fragrance	Q.S.

Procedure:

1. Add the components of Phase A. Heat while mixing to 80C to incorporate the waxes. Cool to 50C. (2) Heat Phase B to 50C. Add B to A slowly with a low energy mixer. Maintain a smooth milky appearance at all times. (3) Cool to 35C with sweep mixer. Add fragrance. (4) Homogenize.

SOURCE: Goldschmidt Chemical Corp.: Suggested Formulation
Waterproof Sunscreen Lotion (SPF 15)

<u>Ingredients:</u>	<u>% by weight</u>
Part A:	
Deionized Water	72.75
Hydroxypropyl Methylcellulose (1% solution)	10.00
Quaternium-15	0.15
Disodium EDTA	0.05
Part B:	
Octyl Methoxy Cinnamate	7.00
Octyl Salicylate	3.00
Oxybenzone	2.00
C12-15 Alcohols Benzoate	4.00
Pemulen TR-1	0.25
Carbopol 2984	0.20
Methylparaben	0.15
Propylparaben	0.05
Part C:	
AMP-95	0.40

Combine A ingredients. Mix until homogeneous. Combine first four B ingredients in a separate vessel. Mix until oxybenzone has dissolved. Warming will hasten dissolution. Disperse last four B ingredients in B vessel. Mix to break up lumps. With moderate agitation, add B to A. Mix for 20-40 minutes or until a smooth, non-grainy dispersion is apparent. Add C and mix vigorously until until a smooth, lustrous product is obtained.

Section XIII

Miscellaneous

Antimicrobial Topical Gel

A sanitizing hand cleaner in a convenient gel form.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Distilled Water	46.00
2. Glycerin	1.50
3. Ucon 50HB-660	1.00
Part B:	
4. Isopropyl Alcohol	50.00
5. Acritamer 940	1.00
Part C:	
6. Isopropanolamine/Distilled Water (50/50)	+ -0.50

Compounding Procedures:

Part A: Combine materials with agitation until thoroughly mixed.
 Part B: Sift Acritamer 940 into the isopropyl alcohol with rapid agitation and mix until a thin, cloudy dispersion without lumps is attained. Part C: Combine isopropanolamine and distilled water and mix until thoroughly blended.

Slowly add Part A to Part B with moderate agitation. Continue mixing for 30 minutes to insure a uniform solution. Slowly add Part C with agitation until the pH of the solution is 6.0-6.2 and a clear gel is formed.

Initial Viscosity: 40,000 cps.

48 hour pH: 6.0

48 hour Viscosity: 57,000 cps.

Note: Isopropanyl used at 50% is considered to be a sanitizer.

Eucalyptus + Mint Emulsion

A light lotion which provides temporary relief to areas sore from exercising.

<u>Ingredients:</u>	<u>Rich</u>
Part A:	
1. Distilled Water	46.25
Part B:	
2. Eucalyptamint	37.50
3. Pationic SSL	7.00
4. Supersat AWS 4	3.50
5. Ritasynt IP	1.75
6. Ritachol 1000	4.00

<u>Ingredients:</u>	<u>Super Rich</u>
Part A:	
1. Distilled Water	42.25
Part B:	
2. Eucalptamint	37.50
3. Pationic SSL	7.00
4. Supersat AWS 4	3.50
5. Ritasynt IP	1.75
6. Ritachol 1000	8.00

Compounding Procedure:

Weigh Part A in a container and heat to 71C. Weigh ingredients of Part B in another container and heat to 71C. Slowly add Part A to Part B. Mix for one hour. Cool stirred mixture to 35-45C. Pour into containers.

Eucalyptus + Mint Type Ointment

An unctuous lotion which has an analgesic effect when applied topically.

<u>Ingredients:</u>	<u>% W/W</u>
1. Menthol	16.00
2. Eucalyptus	4.00
3. Lanolin Anhydrous USP	80.00

Compounding Procedure:

Heat lanolin until melted, approximately 50C. Add remaining ingredients with mixing. Mix for one hour minimum. Fill hot.

High Quality Dog Shampoo

<u>Ingredients:</u>	<u>% by Weight</u>
Steol CS-330	30.0
Stepanol AM-V	15.0
Glycerine	3.0
Ninol 55-LL	2.0
Ammonyx LO	1.0
Hydroxypropyl Methylcellulose	0.4
Citric acid	Q.S.
Fragrance, dye, preservative	Q.S.
Sodium chloride	Q.S.
D.I. water	Q.S. to 100

Mixing Procedure:

Heat one third required amount of D.I. water to 70C. Add hydroxypropyl methylcellulose and mix until all particles are wetted. Cool to room temperature while adding the remainder of the D.I. water. Mix until solution is clear and particle free. Add the first five components from above, mixing well after each addition. Adjust pH to 6.0-7.0 with citric acid. Add fragrance, dye and preservative, if desired. Adjust to desired viscosity with sodium chloride.

Clear, yellow liquid

pH (as is): 6.0-7.0

Passed three freeze/thaw cycles

Stable for two weeks at room temperature

Stable for four months at room temperature

Stable at 50C for two weeks

Stable for four months at room temperature

Viscosity Profile: as is: 680 cps

0.5% sodium chloride: 4,800 cps

1.0% sodium chloride: 10,450 cps

Evaluated in salon against leading brand. Formulation 484 was easier to comb (wet & dry) than leading brand.

Formulation No. 484

Mild Dog Shampoo

<u>Ingredient:</u>	<u>% by Weight</u>
Amphosol CA	25.00
Polysorbate 20	2.00
Propylene Glycol	2.00
Kessco PEG 6000 Distearate	0.50
Methyl Paraben	0.15
Citric Acid	Q.S.
Fragrance, Dye	Q.S.
D.I. Water	Q.S. to 100

Mixing Procedure:

Add first five components to D.I. water with mixing and heat to 60-65C until all components have melted. Cool with mixing to 40C. Adjust pH to 6.5-7.2 with citric acid. Add fragrance and dye, if desired.

Clear yellow liquid

pH (as is): 6.5-7.2

Viscosity @ 25C: 10 cps

Freeze/thaw stable

Stable at 50C for two weeks

Formulation No. 487

Lipid- and Vitamin-Containing Liposome Gel

<u>Ingredients:</u>	<u>% by weight</u>
1. Phosphal 75 SA	4.0
2. Vegetable oils	2.0-10.0
3. Vitamin A palmitate	0.2
4. Vitamin E linoleate	0.2
5. Demineralized water	35.0
6. Demineralized water	to 100.0
7. Ethanol	16.0
8. Carbomer 980	0.8
9. AMP-95	0.5
10. Perfume oil	0.1

Procedure:

- A. Dissolve 1,2 and 3 homogeneously in 4.
- B. Add 5.
- C. Homogenize for 30 minutes at 3000 rpm (Stephen UMC 5 Mixer). Liposomes with a mean particle size of 250 nm should be produced.
- D. Testing for homogeneity:
dilute 0.5 ml liposome dispersion with 99.5 ml demineralised water in a measuring cylinder. After turning over a few times, a transparent homogeneous dispersion should form, which exhibits Tyndall scattering. If this is not the case, the preparation should be repeated.
- E. Disperse 8 in 6 and 7, add 10 and stir.
- F. Add the product from E to the liposome dispersion and stir for 2 minutes.
- G. Add 9 and stir for 2 minutes at 2100 rpm.

Formulation PF-0196E

Rheumagel With (Without) Camphor

<u>Ingredients:</u>	<u>% by weight</u>
Carbomer 940	1.0
Tris Amino	1.0
2-hydroxyethylsalicylate	10.0
(Camphor)	(1.0)
EDTA	0.05
Propanediol	20.0
Isopropanol	20.0
Water	to 100.0

Procedure:

- A. Disperse the Carbomer in the water, then add EDTA to the dispersion.
- B. Mix hydroxyethyl salicylate (and camphor if required), propanediol and isopropanol.
- C. Mix A and B homogeneously and if necessary de-gas.
- D. Slowly stir in Tris Amino.
- E. Packaging should protect against light.

Formulation PF-0197E

Oil in Water Cream Base

A simple oil in water ointment base suitable for modification or incorporation of medicaments.

<u>Ingredients:</u>	<u>% W/W</u>
Part A:	
1. Ritachol 1000	12.00
2. Ritaderm	2.00
3. Shebu Refined	3.00
Part B:	
4. Glycerin	5.00
5. Distilled Water	78.00

Compounding Procedures:

Combine Phase A and heat to 70C. Combine Phase B and heat to 70C. Slowly add Phase A to Phase B with agitation. Cool to 35C with agitation. Package.

Formulation HB-89-R-32

Anhydrous Ointment Base

An anhydrous ointment base for use with added water and medicaments.

<u>Ingredients:</u>	<u>% W/W</u>
1. Ritachol	36.00
2. Mineral Oil, 70 viscosity	16.00
3. Microcrystalline Wax MP-170	24.00
4. Lanolin, Cosmetic Grade	24.00

Compounding Procedure:

Combine all ingredients. Heat with agitation to 175F and mix until uniform. Begin cooling, continue agitation. Slowly cool stirred mixture to just above the set point. Package.

Water-In-Oil Emulsion Base

A non-beeswax water in oil emulsion which can be used at an acid pH. Has good rub-out for a w/o cream.

<u>Ingredients:</u>	<u>% W/W</u>
Part A - Oil Phase:	
1. Mineral Oil 80/90	21.00
2. Pationic CSL	7.20
3. Pationic ISL	0.80
4. Ritahydrox	1.00
5. Propylparaben	0.05
Part B - Water Phase:	
6. Glycerin	5.00
7. Distilled Water	64.65
8. Methylparaben	0.10
Part C:	
9. Glydant	0.20

Compounding Procedure:

Combine ingredients of Part A and heat to 72C. Combine the ingredients of Part B, heating to 72C. Add Part B to Part A while stirring and continue to mix. Cool to room temperature. Add Part C. Mix. Package.

Formulation HB-89-L-17/Ref. 104-6

All Purpose Aloe Vera Gels

A soothing gel to be applied for relief of irritation from sun, wind, detergents, minor burns and insect bites. Contains Panthenol and Aloe to soothe, relieve pain and promote healing.

<u>Ingredients:</u>	<u>% W/W</u>
1. Distilled Water	96.60
2. Ritaloe 200M	0.50
3. Ritapan DL	0.50
4. Germaben II	0.90
5. Acritamer 940	0.50
6. Triethanolamine (50%)	1.00

Compounding Procedure:

Dissolve in order items 2, 3, 4 and 5 into item 1, mixing between additions until uniform. Heat this mixture to 40C to get complete solution. Add item 6 to the stirred mixture.

Monamate CPA-40	Disodium cocamido Nipa- sulfosuccinate	Mona
Monamate LNT-40	Diammonium lauryl sulfo- succinate	Mona
Monamid CMA	Cocamide MEA	Mona
Monamid 716 & 1034	Lauramide DEA	Mona
Monaquat P-TS	Stearamidopropyl PG-Dimonium chloride phosphate	Mona
Monaquat TG	Dihydroxyethyl dihydroxyprop- yl stearammonium chloride	Mona
Monaterge 1164	Sodium lauryl sulfate (and) Disodium lauryl sulfosuccinate	Mona
Monateric CAB	Cocamidopropyl betaine	Mona
Monateric CAB-LC	Cocamidopropyl betaine	Mona
Monateric ISA-35	Amphoteric-12	Mona
Monateric LMAB	Lauramidopropyl betaine	Mona
Monateric 805	Cocamphodiacetate (and) Di- sodium cocamido MIPA sulfosuccinate	Mona
M-Quat Dimer 18	Hydroxypropyl bis stearyl- dimonium chloride	PPG
M-Quat Dimer 18PG	Hydroxypropyl bis-stearyl dimonium chloride	PPG
M-Quat JO-50	Olealkonium chloride	PPG
M-Quat JS-25	Stearalkonium chloride	PPG

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
M-Quat 522	Isostearamidopropyl ethyl-dimonium ethosulfate	PPG
M-Quat 1033	Soya ethyldimonium ethosulfate	PPG
Multiwax 180W	Microcrystalline wax	Witco
Myracet 9-40	Glyceryl mono/distearate	Eastman
Myristyl Myristate		Van Dyk
Myrj 52	PEG-50 Stearate	ICI
Myrj 52S	PEG-40 Stearate	ICI
Myverol 18-00	Hydrogenated animal glyceride	Eastman
Myverol 18-06	Hydrogenated soy glyceride	Eastman
Natrosol 250 HHR & 250 HR & 250R	Hydroxyethylcellulose	Aqualon
Natural Beeswax	Beeswax	RITA
Neobee M5	Caprylic/capric triglyceride	Stepan
Neo Heliopan AV	Octyl methoxycinnamate	Haarman
Neo Heliopan Hydro	Phenylbenzimidazole sulfonic acid	Haarman
Neo Heliopan MA	Menthyl anthanilate	Haarman
Ninol 30LL	Lauramide DEA	Stepan
Ninol 40 CO	Cocamide DEA	Stepan
Ninol 49-CE&50-LL&55-LL&96-SL&201 LMP	Alkylolamide	Stepan
Noville #24093	Fragrance	Henkel
Novol	Oleyl alcohol	Lonza

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Octyldodecyl Stearoyl stearate		VanDyk
Octyl Hydroxystearate		CasChem
Octyl Palmitate (and) Titanium Dioxide		Tioxide
Ohlan	Hydrogenated lanolin	Amerchol
Oleth-10		Protamean
Olympic Talc	Talc	Cyprus
Orgasol 2002D Natural Extra Cos	Nylon-12	Atochem
Oxaban A	Preservative	Angus
Oxybenzone	Benzophenone-3	
Ozokerite 170-D		Strahl&Pit-
Ozokerite Wax 77W	Ozokerite wax	Ross
Pale Gold Glitter	(.004X.004X.001)	Meadowbrook
Panalane	Hydrogenated Polybutene	Amoco
Paraffin Wax Fully Refined 130		Ross
Parso1 MCX	Octyl methoxycinnamate	Givaudan
Parso1 1789	Butyl methoxydibenzoylmethane	Givaudan
Pationic CSL	Calcium stearoyl lactylate	RITA
Pationic ISL	Sodium isostearoyl lactylate	Patco
Pationic SBL	Sodium behenyl lactylate	Patco
Pationic SCL	Sodium cocoyl lactylate	Patco

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Pationic SSL	Sodium stearoyl lactylate	Patco
Pationic 122A	Sodium caproyl lactylate	Patco
Pationic 138C	Sodium lauroyl lactylate	Patco
Patlac IL	Isostearyl lactate	Patco
Patlac LA	Lactic acid	Patco
Patlac NAL	Sodium lactate	Patco
PEG-1 Glyceryl Oleostearate + Paraffin Wax		ICI
PEG-35 Hydrogenated Castor Oil		ICI
Pemulen TR-1 & TR-2	Acrylates C10-30 alkyl acrylate cross polymer	Goodrich
Penreco No. 15	Mineral jelly	Penreco
Penreco Snow & Ultima	White petrolatum USP	Penreco
Peptein 2000	Hydrolyzed animal protein	Hormel
Perfume 673-146		Perry
Perfume M-45790		ShawMudge
Perfume Oil		Novarome
Perfume Oil	Fragrance	Givaudan
Perfume #2478		Norda
Perfume 72979		Haarman
Perfume 802169U		PFW
Permethyl 102A (and) Permethyl 104A	Isoeicosane (and) Isooctahexacontane	
PG-3 Beeswax		KosterKuen-
Phenonip	Phenoxyethanol and etc.	Nipa
Phenyl Dimethicone		Wacker

Preface

This book contains 959 cosmetic and toiletry formulations, based on information received from numerous industrial companies and other organizations. This is Volume 4 of the Second Edition of this work; Volume 1 was published in 1989, Volume 2 in 1992, and Volume 3 in early 1995. There are no duplications in any of these volumes.

The data represent selections from manufacturers' descriptions made at no cost to, nor influence from, the makers or distributors of these materials. Only the most recent formulas have been included. It is believed that all of the trademarked raw materials listed are currently available, which will be of interest to readers concerned with raw material discontinuances. The 1995 market for cosmetic raw materials is estimated at \$2 billion.

Each formulation in the book is identified by a description of end use. The formulations include the following as available, in the manufacturer's own words: a listing of each raw material contained; the percent by weight of each raw material; suggested formulation procedure; and the formula source, which is the company or organization that supplied the formula. The book is divided into the following 12 sections:

- I. Antiperspirants and Deodorants
- II. Baby Products
- III. Bath and Shower Products
- IV. Beauty Aids
- V. Creams
- VI. Hair Care Products
- VII. Lotions
- VIII. Shampoos
- IX. Shaving Products
- X. Soaps and Hand Cleaners
- XI. Sun Care Products
- XII. Miscellaneous

Each formula is indexed in the section which is most applicable. The reader seeking a formula for a specific end use should check each section which could possibly apply.

In addition to the above, there are two other sections that will be helpful to the reader:

- XIII. Trade-Named Raw Materials. Each raw material is listed with a brief chemical description and the name of the raw material supplier.
- XIV. Suppliers' Addresses. Addresses of suppliers of trade-named raw materials and/or formulations, some of which are not available in the usual reference books.

It should be noted that some formulations in the book are translations. The manufacturer's exact wording has been used in these cases. Occasionally different companies have listed the same raw material differently; it is hoped that the reader will be able to identify the same of similar raw materials by consulting the Trade-Named Raw Materials section.

The table of contents of the book is organized in such a way as to serve as a subject index.

My fullest appreciation is expressed to the companies and organizations which supplied the information included in this book.

September 1995

Ernest W. Flick

NOTICE

To the best of our knowledge the information in this publication is accurate; however, the Publisher does not assume any responsibility or liability for the accuracy or completeness of, or consequences arising from, such information. This book does not purport to contain detailed user instructions, and by its range and scope could not possibly do so. Mention of trade names or commercial products does not constitute endorsement or recommendation for use by the Author or Publisher.

Cosmetic and toiletry raw materials could be toxic or cause allergies in some circumstances, and, therefore, due caution should always be exercised in the use of potentially hazardous materials and the manufacturing processes involved. Final determination of the suitability of any information or product for use contemplated by any user, and the manner of that use, is the sole responsibility of the user. We strongly recommend that users read and adhere to a manufacturer's or supplier's current instructions for handling each material they use.

The Author and Publisher have used their best efforts to include only the most recent data available. The reader is cautioned to consult the supplier in case of questions regarding current availability.

Contents and Subject Index

SECTION I: ANTIPERSPIRANTS AND DEODORANTS	1
Aluminum Chlorohydrate Antiperspirant Stick	2
Aluminum Chlorohydrate Antiper	2
Antiperspirant	3
Aerosol Antiperspirant	3
Antiperspirant Cream	4
Oil/Water Antiperspirant Cream	4
Antiperspirant Roll-On	5
Roll-On Antiperspirant	5
Antiperspirant Stick	6
Oil-in-Water Antiperspirant Lotion	6
Antiperspirant Lotion	6
Deodorant	7
Deodorant Stick	7

Section I

**Antiperspirants and
Deodorants**

Aluminum Chlorohydrate Antiperspirant Stick

<u>Ingredients:</u>	<u>% W/W</u>
A Dow Corning 345 fluid	45.00
Arlamol ISML	10.00
Stearyl alcohol	15.00
Aluminum chlorohydrate powder	25.00
Hydrogenated castor oil	5.00
B *Fragrance	
* q.s. these ingredients.	

Procedure:

Heat all ingredients till they are all liquid (app. 72C) and mix thoroughly. Cool to just above set point and package in antiperspirant stick containers.

Formula CP 1085

Aluminum Chlorohydrate Antiperspirant Stick

<u>Ingredients:</u>	<u>% W/W</u>
A Dow Corning 345 fluid	45.00
Stearyl alcohol	25.00
Aluminum chlorohydrate powder	25.00
Hydrogenated castor oil	5.00
B *Fragrance	
* q.s. these ingredients.	

Procedure:

Heat all ingredients till they are all liquid (app. 72C) and mix thoroughly. Cool to just above set point and package in antiperspirant stick containers.

Formula CP 1086

Aluminum Chlorohydrate Antiper

<u>Ingredients:</u>	<u>% W/W</u>
A Dow Corning 344 fluid	45.00
Arlamol ISML	10.00
Stearyl alcohol	15.00
Reheis micro dry	25.00
Castorwax, hydrogenated castor oil	5.00

Procedure:

Heat all ingredients till they are all liquid (app. 72C) and mix thoroughly. Cool to just above set point and package in antiperspirant stick containers.

Formula PC 8220

SOURCE: ICI Surfactants: Suggested Formulations

Antiperspirant

<u>Ingredients:</u>	<u>%W/W</u>
Volatile silicone, D.C. 344 fluid	45.00
Arlamol ISML	10.00
Stearyl alcohol	15.00
Aluminum chlorohydrate powder, Micro-dry	25.00
Castor wax	5.00

Procedure:

Heat all ingredients till they are all liquid (app. 72C) and mix thoroughly. Cool to just above set point and package in antiperspirant stick containers.

Antiperspirant

<u>Ingredients:</u>	<u>%W/W</u>
Volatile silicone, D.C. 344 fluid	48.50
Arlamol ISML	10.00
Al Zr Tetrachlorohydrate-gly, Rezal 36 GP, super ultrafine	20.00
Stearyl alcohol	16.00
Hydrogenated Castor Oil	5.00
Fragrance, Spicy lime #4851-AN, IFF	0.50

Procedure:

Heat all ingredients till they are all liquid (app. 72C) and mix thoroughly. Cool to just above set point and package in antiperspirant stick containers.

Aerosol Antiperspirant

<u>Ingredients:</u>	<u>%W/W</u>
A Quaternium-18 hectorite gel	8.00
Arlamol E	3.00
Cyclomethicone, Volatile silicone 7207	3.00
Arlacel 80	0.50
B Aluminum chlorohydrate, Macrospherical 95	6.00
C Hydrocarbon propellant, propellant A-46	79.50

Procedure:

Mix (A) thoroughly with medium sheer equipment. Add (B) at a slow steady rate and mix thoroughly. Fill, vacuum crimp and charge aerosol units with (C).

4 *Cosmetic and Toiletry Formulations*

Anti-Perspirant Cream

<u>Ingredients:</u>	<u>%W/W</u>
A Arlachel 165, acid stable g.m.s.	5.00
Cetyl alcohol	5.00
B Water, deionized	50.00
Aluminum chlorhydroxide complex, 50% solution	40.00

Procedure:

Heat (A) to 70C. Heat (B) to 72C. Add (B) to (A) with agitation. Stir until set.

Anti-Perspirant Cream

<u>Ingredients:</u>	<u>%W/W</u>
A Arlachel 165	18.00
Spermaceti	5.00
B Glycerol	5.00
Water, deionized	53.00
C Titanium dioxide	1.00
D Aluminum chlorhydroxide complex	18.00
E *Perfume	

* q.s. these ingredients.

Procedure:

Heat (A) and (B) to 80C. and add (B) to (A) with agitation. Stir for 15 minutes and add (C) slowly, continue to agitate and cool to 40C. Add (D) and continue to agitate until mixture is homogenous. Add (E) and stir.

Oil/Water Antiperspirant Cream

<u>Ingredients:</u>	<u>%W/W</u>
A Stearic acid, triple pressed	14.00
Beeswax	2.00
Mineral oil	1.00
Arlachel 60	5.00
Tween 60	5.00
B Water, deionized	33.00
C Aluminum Chlorhydrate, 50% sol.	40.00
*Perfume	

*q.s. these ingredients.

Procedure:

Heat (A) to 85 deg. C and (B) to 85 deg. C. Add (B) to (A) while stirring. Mix while cooling to 40 deg. C. Add (C) and continue mixing until cool.

SOURCE: ICI Surfactants: Suggested Formulations

Antiperspirant Roll-On

<u>Ingredients:</u>	<u>% W/W</u>
A Arlamol E	3.00
Arlamol ISML	4.00
Brij 721	1.50
Brij 72	2.50
B Water	49.00
C Aluminum Zirconium Tetra Chlorohydrax-GLY (50% aqueous solution)	40.00
D *Preservative	
*Fragrance	
* q.s. these ingredients.	

Procedure:

Heat (A) to 60C and (B) to 65C. Add (B) to (A) using propeller type agitation. Add (C) at about 50C and (D) at about 45C. Add water at 35C to compensate for loss due to evaporation. Package. Formula AD-3

Roll-On Antiperspirant

<u>Ingredients:</u>	<u>% W/W</u>
A Arlamol ISML	3.00
Arlamol E	3.00
Brij 721	1.50
Brij 72	2.50
B Water, deionized	49.00
C Aluminum chlorohydrate (50% solution), Wickeno1 303	40.00
D Germaben II	1.00
* q.s. these ingredients.	

Procedure:

Heat (A) to 60C and (B) to 65C. Add (B) to (A) using propeller type agitation. Add (C) at about 50C and (D) at about 45C. Add water at 35C to compensate for loss due to evaporation. Package.

SOURCE: ICI Surfactants: Suggested Formulations

Antiperspirant Stick

<u>Ingredients:</u>	<u>%W/W</u>
A Brij 721	2.30
Arlamol E	11.50
Isopropyl myristate & stearylalkonium hectorite	5.70
Ozokerite wax	22.40
Myristyl alcohol	17.20
B Aluminum-Zirconium trichlorohydrate	23.00
C Cyclomethicone	17.90

*q.s. these ingredients.

Procedure:

Heat (A) to 65 deg. C and (B) to 68 deg. C. Add (B) to (A) with agitation and immediately add (C). Stir to 50 deg. C and pour into molds.

Oil-In-Water Antiperspirant Lotion

<u>Ingredients:</u>	<u>%W/W</u>
A Cetyl alcohol	0.50
Arlamol E	3.00
Brij 72	2.00
Brij 721	1.00
B Water	58.50
*Preservative	
C Aluminum chlorhydroxide, 50% aqueous solution	35.00

*q.s. these ingredients.

Procedure:

Heat (A) to 85 deg. C and (B) to 85 deg. C. Add (B) to (A) while stirring. Mix while cooling to 40 deg. C. Add (C) and continue mixing until cool.

Formula AD-5

Anti-Perspirant Lotion

<u>Ingredients:</u>	<u>%W/W</u>
A Arlancel 165, acid stable g.m.s.	15.00
Water, deionized	45.00
B Aluminum chlorhydroxide complex, 50% solution	40.00

Procedure:

Heat (A) to 70C. Heat (B) to 72C. Add (B) to (A) with rapid agitation. Cool to room temperature with stirring.

SOURCE: ICI Surfactants: Suggested Formulations

Deodorant

	<u>Wt%</u>
A. Imwitor 960 flakes	6.0
Softisan 645	5.0
Hostaphat KL 340 N	5.0
Cetyl alcohol	2.0
Raluben TL	0.5
Aluminum acetate	0.5
B. Karion F	5.0
Hostacerin gel 1%*	12.0
Benzyl alcohol	1.0
Water	to 100.0
C. Perfume	qs

Preparation:

The ingredients of A. are heated to 75-80C. Those of B. are brought to the same temperature and added slowly to A. with stirring. C. is added at approx. 30C.

*Preparation of the Hostacerin gel: Hostacerin PN 73 1.0%
Water to 100.0%

The Hostacerin is mixed with water until homogeneous and the mixture stirred until the gel is clear.

Deodorant Stick

Manufacturing Directions

- A. Heat the Cyclomethicone to 65C.
- B. With stirring, slowly add ingredient 2, maintaining the temperature at 65C thru step E.
- C. When all of ingredient 2 is melted, add ingredients 3 and 4. Mix for 15 minutes.
- D. Add Bentone Gel VS-5 Rheological Additive and mix for 30 minutes.
- E. Add ingredients 6 and 7, mix for 30 minutes.
- F. Allow the batch to cool to 55C, add Fragrance, mix for 5 minutes and pour into suitable containers.

Formula TS-289

Quick Drying Roll-On Antiperspirant

<u>Materials:</u>	<u>% by Weight</u>
1. Bentone Gel VS-5 Rheological Additive	15.0
2. Cyclomethicone	54.0
3. SDA Alcohol 40	3.0
4. Isopropyl Myristate	2.0
5. Aluminum Chlorohydrate	25.0
6. Fragrance	1.0

Manufacturing Directions:

- A. Combine the Bentone Gel VS-5 with ingredients 2 and 3 using vigorous agitation. Mix until uniform.
- B. Add ingredient 4, then ingredient 5, with constant agitation. Mix until the powder is uniformly distributed.
- C. Add ingredient 6.

Formula TS-288

Dry Roll-On Antiperspirant

<u>Materials:</u>	<u>% by Weight</u>
1. Bentone Gel IPM rheological additive	15.0
2. SDA 40	3.0
3. Isopropyl Myristate	2.0
4. Cyclomethicone	54.0
5. Aluminum Chlorohydrate	25.0
6. Fragrance	1.0

Manufacturing Directions:

1. Combine the Bentone Gel IPM additive with ingredients 2,3 and one-half of ingredient 4 in a mixing kettle. Mix until uniform. Add the remaining portion of ingredient 4, continue mixing.
2. Add ingredient 5 with agitation, stirring until the powder is uniformly distributed.
3. Add the fragrance, mix, fill units.

Formula TS-237

Talc Spray Antiperspirant

<u>Materials:</u>	<u>% by Weight</u>
1. Bentone Gel IPM rheological additive	8.0
2. SDA 40	2.0
3. Isopropyl Myristate	1.5
4. Cyclomethicone	5.0
5. Aluminum Chlorohydrate	6.0
6. Talc	2.0
7. Fragrance	0.5
8. Propellant A-46	75.00

Manufacturing Directions:

1. Combine ingredients 1 through 4 and thoroughly mix using medium shear equipment.
2. Add ingredients 5 and 6 at a slow rate and mix in thoroughly.
3. Add fragrance and mix.
4. Fill, vacuum crimp and gas aerosol units.

Formula TS-245

SOURCE: Rheox, Inc.: Suggested Formulations

General Purpose Stick Formulation-1

<u>Ingredients:</u>	<u>Wt%</u>
A-C Polyethylene 617A	8
Acetylated Lanolin Alcohol*	16
Ozokerite (170D)**	16
Mineral Oil (70 ss)***	55
Span 60	5

Cloud Point, C: 80

General Purpose Stick Formulation-2

<u>Ingredients:</u>	<u>Wt%</u>
A-C Polyethylene 617A	7
Acetylated Lanolin Alcohol*	14
Ozokerite (170D)**	14
Mineral Oil (70 ss)***	60
Span 60	5

Cloud Point, C: 76

Procedure:

Heat all ingredients with slow agitation 2-5C above its cloud point until solution turns clear. Around 60-70C, add perfume, aluminum chlorohydrate and preservative. Deaerate and package.

Manufacturers:

- * Malmstrom Chemical, Acetol, or Amerchol, Acetulan
- ** Ross Wax or equivalent
- *** Witco Chemical, Carnation Mineral Oil, or equivalent

Stick Antiperspirant

<u>Ingredients:</u>	<u>Parts, Wt.</u>
1. A-C 400	15
2. Isopropyl Palmitate	50
3. Dow Corning Silicone 344	15
4. Stearyl Alcohol	20
5. Aluminum Chlorohydrate	15
6. Perfume	Q.S.

Procedure:

Weigh 1-4 and heat until A-C 400 has dissolved or melted. Stir until wax blend is uniform. Add 5 and stir in. Cool mixture down to 55C and add Perfume.

Roll-On Antiperspirant

This low viscosity emulsion is stabilized with Veegum HV which also provides moderate thickening and excellent, dry after-feel. The Aluminum/Zirconium Complex has higher anti-perspirant efficacy than aluminum chlorohydrate.

<u>Ingredient:</u>	<u>% by Wt.</u>
A Veegum HV, Magnesium Aluminum Silicate	1.00
Deionized Water	29.00
B Glyceryl Stearate (and) PEG-100 Stearate (2)	8.00
C Aluminum Zirconium Tetrachlorohydrate GLY, 30% Soln. (3)	33.00
Aluminum Chloride, 32 Baume Soln.	5.50
Aluminum Chlorhydrate, 50% Soln. (4)	16.50
D Cyclomethicone (5)	7.00
E Fragrance, Dye, Preservative	q.s.
(2) Arlacel 165	
(3) Rezal 36G	
(4) Chlorhydrol, 50% Solution	
(5) Rhodorsil 700 45V2	

Preparation:

Add Veegum HV to water at 75C and mix with maximum available shear until smooth, uniform and completely free of undispersed particles. In another container, heat B to 75C. Heat C to 55C in a third container. Add B to A with slow mixing and cool to 50C. Add C to A&B. Mix at slow speed until the temperature reaches 25C. Add D and homogenize for 5 minutes. Add E. Mix until uniform and package.

Consistency:

Viscosity measured after 30 days at room temperature is 600-800 cps.

Suggested Packaging: Roll-On Containers

Comments:

This prototype formula is designed to serve as a guide for the development of new products or improvement of existing ones.

SOURCE: R.T. Vanderbilt Co., Inc.: Formula No. 443

Roll-On Antiperspirant

<u>Ingredients:</u>	<u>%W/W</u>
A Arlamol E	4.00
Brij 721	0.75
Brij 72	3.25
B Water, deionized	34.55
Allantion	0.20
C Aluminum Zirconium Tetrachlorohydrax Gly, Wickeno1 386	57.25
D *Perfume and Preservative	

*q.s. these ingredients.

Procedure:

Heat (A) to 60C and (B) to 65C. Add (B) to (A) using propeller type agitation. Add (C) at about 50C and (D) at about 45C. Add water at 35C to compensate for loss due to evaporation. Package.

Quick Dry Roll-On Lotion

<u>Ingredients:</u>	<u>%W/W</u>
A Cyclomethicone	10.00
Brij 72	2.00
Brij 721	0.70
B Water, deionized	52.30
C Aluminum chlorhydrate, 50% aqueous solution	35.00
D *Perfume	

*q.s. these ingredients.

Procedure:

Heat (A) to 70C and (B) to 72C. Add (B) to (A) with agitation. Cool to 35-40C with stirring and slowly add the remainder of ingredients.

Clear Roll-On A.P. Lotion

<u>Ingredients:</u>	<u>%W/W</u>
A Ethyl alcohol	69.00
Hydroxypropyl cellulose, Klucel GF	1.00
B Arlamol E	10.00
C Aluminum chlorhydroxide-propylene glycol complex	20.00

Procedure:

Mix (A) thoroughly using high shear if necessary. Add Arlamol E and stir until homogeneous. Add (C) and stir until clear.

SOURCE: ICI Surfactants: Suggested Formulations

Spray Powder Anti-Perspirant

<u>Ingredients:</u>	<u>% by Weight</u>
(1) Ethanol (SD 40)	2.0
(2) Bentone Gel IPM	8.0
(3) Isopropyl Myristate	1.5
(4) Cyclomethicone	5.0
(5) Aluminum Chlorohydrate	6.0
(6) Kaopolite TLC	2.0
(7) Fragrance	0.5
(8) Propellant A46	75.0

Procedure:

Add (1) to (2) and mix for 5 minutes. Add (5) and mix for 5 minutes. At high speed, add (3), (4), (6), and (7). Mix with (8) and fill.

Follow recommended handling practices of the supplier of each product used.

Good industrial practices should be used when handling flammable ingredients.

SOURCE: Kaopolite, Inc.: Suggested Formulation

Deodorant Stick

	<u>% by Weight</u>
Stearic Acid	8.00
Ethanol	74.13
Propylene Glycol	10.00
Isopropyl Palmitate	5.00
Phospholipid PTC	0.50
Sodium Hydroxide 50%	2.37

Procedure:

Blend ingredients together except the sodium hydroxide. Heat and agitate to 65-70C, then slowly neutralize the stearic acid with the sodium hydroxide 50% and continue mixing until clear. Cool slightly to 70C. Add fragrance and color, and package.

Properties:

Physical Appearance: Translucent Solid

SOURCE: Mona Industries, Inc.: Suggested Formulation

Stick Formulation

	<u>Wt%</u>
1. A-C Copolymer 400	15
2. Isopropyl Myristate	50
3. Dow 344 Fluid	15
4. Stearyl Alcohol	20

Procedure:

Weigh all ingredients and heat with agitation. The cloud point of this blend is 72C. Above the cloud, the polyethylene will eventually dissolve in the blend. If a higher solvating temperature is used, solvation is much faster. Care must be taken, however, not to volatilize the Dow 344 Fluid. When all ingredients are dissolved, add 15% aluminum chlorhydrate and quick cool, with agitation, to 45C. Pour into container and allow to cool further.

Ref: 5189-12-2

Stick Formulation

	<u>Wt%</u>
A-C 400	20
2-Ethyl Hexyl Stearate	43
Myristyl Myristate	18
Dow Corning C344	16
Cetyl Alcohol	2.5
Span 65	0.5

Stick Formulation

	<u>Wt%</u>
A-C 400	20
2-Ethyl Hexyl Stearate	40
Myristyl Myristate	18
Dow Corning C344	16
Glycerol Mono Stearate	3
Cetyl Alcohol	2.5
Span 65	0.5

Stick Formulation

	<u>Wt%</u>
R762D	15
Isopropyl Palmitate	45
Dow Corning 344	15
Stearyl Alcohol (Alfol 18)	25

Procedure:

The ingredients are mixed and heated until they form a clear solution. Cloud point of this stick is 76C. It can be poured at 65C.

Antiperspirant Stick:

For antiperspirant stick to this base formulation add 25% aluminum chlorhydrate (particle size 12) and mix in hot. Perfume is added just prior to pouring.

Deodorant Stick:

For deodorant stick to this base formulation, add deodorant 1% just prior to pouring.

Baby Shampoo

This baby shampoo features Crovol A-70 and Crosultaine C-50, natural derived surfactants which give this formula its mildness. Using a fragrance with a "baby-fresh" smell adds to its appeal.

<u>Ingredients:</u>	<u>%</u>
Part A:	
SLES (3 mole)	20.0
Crosultaine C-50 (Cocamidopropyl Hydroxysultaine)	12.0
Deionized Water	51.3
Part B:	
Crovol A-70 (PEG-60 Almond Glycerides)	15.0
Crothix* (PEG-150 Pentaerythrityl Tetrastearate)	0.5
Part C:	
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben**	1.0
Florasynt AB5697 (Powder Type)	0.2

Procedure:

Combine the ingredients of Part A with mixing. Combine the ingredients of Part B with mixing and heat to 65C. Add Part B to Part A with mixing. Add the ingredients of Part C individually with mixing. Adjust pH if needed with a 10% HCl aqueous solution. Cool with mixing to desired fill temperature.

pH: 7.0+-0.5

Viscosity: 5,000cps+-10% (@25C)

**Germaben II

N.A.T.C. Approved

*The use of Crothix in cosmetic and other formulations is covered under U.S. Patent #5,192,462.

Preservative	0.20

Procedure:

Add (B) to (A) with good agitation. Add (C) with stirring with slight heat to facilitate solution when necessary. Adjust the final product to a pH of less than 7.0 with an acid such as citric. Filter if necessary.

Bubble Bath

<u>Ingredients:</u>	<u>%W/W</u>
G-9600	20.00
NaCl	0.90
Sulfo succinate	7.00
Fragrance	0.20
Preservative	0.10
*Color	
Water	71.80

*q.s. these ingredients.

Procedure:

Mix well at room temperature.

Bubble Bath

<u>Ingredients:</u>	<u>%W/W</u>
A Triethanolamine lauryl sulfate, Mapprfox TLS-500	20.00
Coconut fatty acid diethanolamide, Super Amide L-9	7.50
B Perfume	5.00
C Water, deionized	57.50
Propylene glycol	5.00

Procedure:

Warm (A) and mix until clear. Cool and add perfume, stirring until dissolved. Add (C) and stir.

SOURCE: ICI Surfactants: Suggested Formulations

Clear Gel

This clear gel is a classic formula that is based on Volpo and Crodafos surfactants. It exhibits the "ringing gel" phenomenon, characteristic of many clear microemulsions. This effect is achieved by a system of water, oil and surfactant formulated in a ratio that forms a rigid micelle structure. The Volpos and Crodafoses are used as co-emulsifiers. (For laboratory preparation, a minimum batch size of 400 grams is recommended because they cool slower, allowing more time before the set point temperature is reached).

<u>Ingredients:</u>	<u>%</u>
Part A:	
Deionized water	54.0
Propylene Glycol	12.0
Part B:	
Crodafos N3 Neutral (DEA Oleth-3 Phosphate)	2.0
Crodafos N10 Neutral (DEA Oleth-10 Phosphate)	4.0
Volpo 5 (Oleth-5)	4.0
Volpo 3 (Oleth-3)	7.0
Mineral Oil (70ssu)	17.0

Procedure:

Combine ingredients of Part A with mixing and heat to 90-95C. Combine ingredients of Part B with mixing and heat to 90-95C. Add Part A to Part B with mixing and cool to desired fill temperature (above set point). Set point approximately 85C.

N.A.T.C. Approved

Formula CG-8R

High Foaming Shower Gel

This formula uses an optimized combination of Crosultaine C-50, Incrodet TD-7C and SLES (3 mole) to produce a clear, high foaming, low color, and low odor bath and shower gel. Crothix is used to provide the body and viscosity seen in the formula, and Crovol A-70 is used to solubilize the fragrance and maintain the clarity of the product.

<u>Ingredients:</u>	<u>%</u>
Part A:	
SLES (3 mole)	20.0
Incrodet TD-7C (Trideceth-7 Carboxylic Acid)	7.0
Crosultaine C-50 (Cocamidopropyl Hydroxysultaine)	20.0
Disodium EDTA	0.1
Deionized water	48.3
Germaben II	1.0
Part B:	
Crothix (PEG-150 Pentaerythrityl Tetrastearate)	1.0
Crovol A-70 (PEG-60 Almond Glycerides)	2.0
BHT	0.1
Part C:	
Perfume (BBA 860753)	0.5

Procedure:

Combine ingredients of Part A with mixing. Combine ingredients of Part B with mixing and heat to 65-70C. Continue mixing and cool to 50C. Add Part C to Part B with mixing. When clear, add Part B to Part A with mixing. Adjust pH with 10% NaOH solution.

Shower Gel Cleanser

A gentle foaming gel cleanser designed to thoroughly deep cleanse and refresh the skin without disturbing the skin's natural moisture balance.

<u>Ingredient/Trade Name:</u>	<u>% by Weight</u>
Part A:	
Deionized Water	50.150
Polyquaternium-10	0.200
Citric Acid	0.100
Tetrasodium EDTA	0.100
Methylparaben	0.150
Sodium PCA/Ajidew N-50	0.500
Part B:	
Sodium Laureth Sulfate	30.000
TEA-Cocoyl Glutamate/Amisoft CT-12	10.000
Cocamidopropyl Betaine	5.000
PEG-150 Distearate	0.700
Lauramide DEA	2.000
Part C:	
Fragrance/#IY-67	0.250
Methylchloroisothiazolinone and Methylisothiazolinone	0.050
Part D:	
Sodium Chloride	0.800

Procedure:

Disperse Polymer JR-125 in deionized water. Heat to 70C. Add remaining part A ingredients. Mix until uniform. Add part B ingredients in order. Mix at 70C until completely homogeneous. Cool to 40C. Add part C. Mix well. Add part D as needed to increase viscosity. Continue mixing and cooling to 35C. Appearance: Clear liquid/pH: 5.20-5.70/Viscosity: 4,000-6,000 cps

Bath Crystals

A gentle milky bath crystal formulation that will relax your senses with the aroma of the hot baths of Japan. It will leave your skin clean and smooth while taking your mind to far and exotic places.

<u>Ingredients:</u>	<u>% by Weight</u>
Sodium Chloride	86.00
Cocoyl Glutamate/Amisoft CA	7.00
Fragrance/Takasago	1.50
Cabosil M-5	0.50

Blend ingredients 1,2,3. Premix ingredients 4 and 5. Add premix to pre-blend and mix until homogeneous and uniform.

Silky Bath Gel

Rhodigel is used as a thickener and foam stabilizer for this silky bath gel formula. Vanseal NALS-30 provides foam enhancement and skin conditioning properties. The cocoamidopropyl betaine and sodium laureth sulfate surfactants provide good cleaning and rinsing properties for this formula. The glycerin and PPG-3 myristyl ether are emollients which contribute to the elegant after feel.

<u>Ingredient:</u>	<u>% by Wt.</u>
A Rhodigel	0.50
Deionized Water	55.00
Glycerin	1.00
B Vanseal NALS-30	8.00
Cocoamidopropyl betaine (2)	16.00
Sodium laureth sulfate (3)	16.00
C PPG-3 myristyl ether (4)	3.50
Preservative, color, fragrance	q.s.
(2) Lexaine C	
(3) Sipon ES-2	
(4) Promyristyl PM-3	

Preparation:

Add Rhodigel to the water slowly, while agitating at high shear. Rhodigel will become uniformly distributed throughout the water and thickening will begin. At this time, adjust to gentle mixing. Gentle, uniform mixing will solubilize the Rhodigel in time and will also minimize air entrapment. Add glycerin and mix until uniform. Add A to 50C and hold this temperature while adding remaining ingredients. Add B ingredients in order using gentle mixing to avoid air entrapment. Addition of C will thicken formula to a gel consistency.

Consistency: Flowable gel. (Viscosity: 8000-10,000 cps)

Suggested Packaging: Squeeze bottle or tube.

Comments:

This prototype formula is designed to serve as a guide for the development of new products or improvement of existing ones.

SOURCE: R.T. Vanderbilt Co., Inc.: Formula No. 429

Water White Shower Gel

Sandopan DTC acid, used as the secondary surfactant, contributes to the mildness of the surfactant system. Velsan P8-3 is an emollient ester that adds a velvety feel to the skin. This crystal clear, water white shower gel has good viscosity and foaming characteristics.

<u>Ingredients:</u>	<u>%W/W</u>
Standapol ES-3	41.25
Sandopan DTC Acid	10.00
Lauramide DEA	3.30
Velsan P8-3	2.00
Glucamate DOE-120	1.70
Germaben II	1.00
Versene NA	0.10
Fragrance	0.05
Deionized Water	qs

Procedure:

Phase A: Hydrate Glucamate DOE-120 and Versene NA in all of the deionized water.

Phase B: Add remaining ingredients in order. Combine Phase A&B, adjust pH to 6.0.

Properties:

Viscosity: 8500 cps % Solids: 29.0% pH: 6.0
Formulation CHS-51

Shower Gel

Sandobet SC and Sandopan DTC acid contribute to the mildness of the surfactant system and add to the foaming properties of the shower gel. Velsan P8-3 is an emollient ester that adds a velvety feel to the skin. This crystal clear shower gel has good viscosity and foaming characteristics.

<u>Ingredients:</u>	<u>%W/W</u>
Standapol ES-3	46.40
Sandobet SC	10.00
Sandopan DTC Acid	5.60
Lauramide DEA	3.30
Velsan P8-3	2.00
Glucamate DOE-120	1.70
Germaben II	1.00
Versene NA	0.10
Fragrance	0.05
Deionized Water	qs

Procedure:

Phase A: Hydrate Glucamate DOE-120 and Versene NA in all of the deionized water.

Phase B: Add remaining ingredients in order. Combine Phase A&B, adjust pH to 6.0

14. Perfume	0.35
 *Pigment Concentrate:	
Color No. 3121 D & C Red. No. 21	30.00
Castor Oil	70.00

Manufacturing Directions:

1. Weigh items 1 through 5 into a stainless steel jacketed kettle. Heat to 85C until melted clear.
2. Bring temperature down to 80C. Add and mix in item 7 until it is homogeneous. Mix for 10 minutes.
3. Add and mix item 8 for 5 minutes or until dispersed.
4. Add items 9 through 13. Add each powder separately, making sure that each pigment is properly dispersed before the next addition.
5. Add item 14 and mix.

Note:

Items 10 through 13 should be micropulverized to achieve a smooth, homogeneous finished product.

SOURCE: Rheox, Inc.: Formula TS-129

Concealing Stick

This product covers fine facial lines and blemishes naturally, leaving a flexible barrier which also retains moisture and conditions the skin. Cera Bellina (Pg-3 Beeswax) is used as a pigment disperser which makes this formulation easier and thereby avoiding the expense of milling.

Phase A:

Castor Oil (Caschem)	27.3%
Petrolatum, White (Witco)	22.0%
Synthetic Candelilla (Koster Keunen)	10.0%
Isopropyl Palmitate (Unichema)	6.0%
Carnauba Wax (Koster Keunen)	5.0%
Orange Wax (Koster Keunen)	5.0%
Jojoba Wax (Flora Tech)	4.0%
Paraffin Wax 130/135 (Koster Keunen)	1.5%
Ozokerite 170 (Koster Keunen)	1.0%
Squalane (Barnet)	1.0%
Vitamin E (Roche)	0.5%

Phase B:

Cera Bellina (Pg-3 Beeswax, Koster Keunen)	9.0%
Titanium Dioxide (Whittaker C & D)	5.0%
Cosmetic Tan Iron Oxide (Sun Chemical)	1.5%
Brown Iron Oxide (Sun Chemical)	0.2%

Phase C:

Liquipar (Sutton)	1.0%
-------------------	------

Procedure:

Heat and mix Phase B till pigments are evenly dispersed. Weigh Phase A and individually add to Phase B while mixing. Heat AB till homogeneous, add Phase C, cool and pour at 60C.

Adaption of formula and its influence on the product:

By reducing the wax concentration this product can be poured into a compact tray. Large variations can be made in wax and oil concentrations that are incorporated in stick products and still produce a similar finished product.

Procedure:

Weigh 1-6, then weigh 7-10. Heat 7-10 with agitation using a homomixer or colloid mill. When the aqueous solution reaches 85C, heat oil phase to 90-95C with slow agitation until all the wax has dissolved. Combine 1-10 and shear until mixture is homogeneous. Add 11 and shear well. Cool to 55C and add 12.

Cream-to-Powder Eye Shadow with Dry-Floc PC

Dry Floc PC, a highly water resistant starch, provides a silky smooth elegant feel, and is talc free.

Dermacryl LT provides water resistance, increased moisture protection as well as improved coverage.

<u>Ingredients:</u>	<u>%W/W</u>
Phase A:	
Eutanol G	13.00
Dermacryl LT	1.00
Phase B:	
Multiwax W-835	0.30
Bentone Gel VS-5 PC	30.00
Phase C:	
Myritol 318	3.00
Trivent SS-20	0.50
Emerest 2452	4.00
Vitamin E Acetate	0.10
Isopar H	7.40
Cab-O-Sil TS-530	0.50
Spectrapearl BLG	10.00
Dry-Flo PC	30.00
Phenoxyethanol	0.20

Procedure:

Phase A, slowly sift Dermacryl LT into Octyl Dodecanol, heat to 80C, mix until complete. Add Phase B, mix thoroughly. Combine Phase C. Add Phase C to A/B mix thoroughly. Cool to room temperature.

Formula 8302-115

Liquid Talc

Tapioca Flour gives a soft powdery after feel and is talc free.

<u>Ingredients:</u>	<u>%W/W</u>
SD Alcohol 40 (190 Proof)	54.00
Crodacol S-95NF	0.75
Vitamin E	1.00
Dexpanthenol	1.00
Tween 80	0.75
Fancol ALA	1.00
Estalan 430	10.00
Dermol 89	6.00
Dermol 105	4.00
Ceraphyl 375	0.75
Ethomeen C-25	2.00
Carbopol 1382	0.75
Tapioca	18.00
Ethomeen C-25	qs pH 7.00

Combine all ingredients except Carbopol 1382 and Tapioca. Mix with good agitation until uniform. Slowly sift in Carbopol 1382. Mix until completely dispersed. Sift in Tapioca. Mix until uniform. Add Ethomeen C-25 to obtain pH of 7.0 package.

Formula 7915-68

Creamy Eye Shadow

<u>Materials:</u>	<u>% by Weight</u>
1. Isopropyl Lanolate-Distilled	2.0
2. Stearyl Alcohol	3.0
3. Beeswax	6.0
4. Ganex V-220	5.0
5. Cyclomethicone	3.0
6. Soltrol 100	5.0
7. Hi-Sil T-600	0.8
8. Bentone Gel SS71 rheological additive	45.0
9. Chroma-lite Dark Blue	6.0
10. 50% 328 Titanium Dioxide CTFA Extended with Talc 141	20.0
11. Flamenco Velvet-100	4.0
12. Preservative	0.2

Manufacturing Directions:

1. Weigh items 1 to 4 into a stainless steel jacketed kettle. Heat to 70C until melted clear.
 2. Bring temperature down to 65C. Add 5 and slowly while mixing to avoid sudden cooling. Mix for 5 minutes.
 3. Maintain temperature to 65C. Add and mix items 7 and 8 using a homomixer at medium speed. Mix until homogeneous (lump free)
 4. Add items 9 and 10. Mix thoroughly after each addition to disperse pigments uniformly.
 5. Add items 11 and 12 and mix for 5 minutes.
 6. Pour at 62-63C just before it starts congealing.
- Formula TS-249

Waterproof Eye Liner

<u>Materials:</u>	<u>% by Weight</u>
1. Beeswax	16.5
2. Ganex V-220	5.0
3. Shell Sol 71	35.0
4. Bentone Gel SS71 rheological additive	33.5
5. Preservative	0.2
6. Chroma-lite Black	9.8

Manufacturing Directions:

1. Weigh items 1 and 2 into a stainless steel jacketed kettle. Heat to 70C and hold until melted clear.
 2. Bring temperature down to 65C. Add item 3 slowly, while mixing, to avoid sudden cooling. Mix for 5 minutes.
 3. Maintain temperature at 60C. Add and mix in item 4 using a homomixer at medium speed. Mix until homogeneous.
NOTE: A clean chrome spatula dipped into the gel mass will show an even surface sheen, with no agglomerates when properly dispersed.
 4. Add items 5 and 6 separately. Mix thoroughly after each addition.
 5. Pour at 55-60C just before it starts congealing.
- Formula TS-189

Creamy Matte Make Up Base

<u>Ingredients:</u>	<u>% by Weight</u>
(1) Deionized Water	54.20
(2) Bentonite (NF grade)	3.00
(3) Carboxymethyl Cellulose (medium viscosity)	0.50
(4) Tamol N	0.30
(5) Propylene Glycol	5.00
(6) Kaopelite TLC	19.80
(7) Titanium Dioxide	3.70
(8) Iron Oxide (micronized)	1.50
(9) Isopropyl Myristate	5.00
(10) Sorbitol Monolaurate	0.75
(11) Polysorbate 20	2.25
(12) Stearyl Alcohol	2.00
(13) Amerchol-L-101	2.00
Perfume & Preservative	q.s.

Procedure:

Mix with high shear (1), (2), and (3) until well dispersed (approximately 20 minutes). Add (4), (5), (6), (7), and (8) and heat to approximately 60C. In a separate container, mix (9), (10), (11), (12), and (13) and heat to 70C while mixing. Add to the other mix and continue mixing until cool.

Follow recommended handling practices of the supplier of each product used.

Good industrial practices should be used when handling flammable ingredients.

Liquid Make-Up

<u>Ingredients:</u>	<u>% by Weight</u>
(1) Deionized Water	66.6
(2) Bentonite (NF grade)	1.5
(3) Carboxymethyl Cellulose (medium viscosity)	0.5
(4) Triethanolamine	1.0
(5) Tamol-N	0.4
(6) Lexanol PG 900	5.0
(7) Kaopelite TLC	7.0
(8) Titanium Dioxide (cosmetic grade)	2.0
(9) Iron Oxide (micronized)	1.0
(10) Lexmul P	0.5
(11) Isopropyl Myristate	5.0
(12) Lexate IL	4.5
(13) Stearic Acid	2.0
(14) Mineral Oil	3.0
Preservative & Fragrance	q.s.

Procedure:

Disperse (2) into (1) at high speed. Add (3) and continue to disperse until uniform. Reduce speed and add (4), (5), (6), (7), (8), and (9). Heat to 70C. In a separate container, heat and mix (10), (11), (12), (13) and (14) to 70C. Continue mixing until dissolved. Add this to the aqueous phase. Continue mixing and cool to 30C.

Follow recommended handling practices of the supplier of each product used.

Good industrial practices should be used when handling flammable ingredients.

7. Timiron Super Red	3.0
8. Perfume	0.1

*Pigment Concentrate:

Castor Oil	60.0
Color No. 3106 D&C Red No. 6	40.0

Manufacturing Directions:

1. Weigh items 1 through 4 into a stainless steam jacket kettle. Heat to 80C and hold until melted clear.
2. Bring temperature down to 75C; add and mix in item 5 using homomixer at medium speed. Mix for 10 minutes at 75C.
3. Add item 6 and mix for 5 minutes or until dispersed; then add item 7 and mix for another 5 minutes.
4. Continue mixing at medium speed and lower temperature to 60C. Add item 8. Remove heat and allow mass to come to room temperature.

Pigment Concentrate Preparation:

1. Weigh dry powder into the castor oil using a slow speed Hobart type mixer until uniform.
2. Give this concentrate two passes over a three roll mill at room temperature.

SOURCE: Rheox, Inc.: Suggested Formula TS-190

Deep Extra Body Conditioner

This formula utilizes the gelling properties of the Hexanediol Behenyl Beeswax in a silicone oil and conditioning effects of Bee's Milk.

Oil Phase A:

Emulsifying Wax NF (Koster Keunen)	3.0%
Silicone Oil 245 (Dow)	2.5%
Silicone Oil 556 (Dow)	2.0%
Hexanediol Behenyl Beeswax (Koster Keunen)	1.0%
Lecithin (Am. Lecithin)	1.0%
Liquapar (Sutton)	0.5%
Propyl Paraben (Sutton)	0.2%

Water Phase B:

Carbopol 940 2% Solution (BF Goodrich)	10.0%
Sodium Lauryl Sulfate (DuPont)	0.5%
Triethanolamine (Dow)	0.1%
Cocamide (Croda)	0.1%
Silk Powder (Dasco)	0.1%
Marine Dew (Ajinomoto)	0.1%
Silk Soluble Liquid (Dasco)	0.1%
Water (Distilled)	68.3%
Methyl Paraben (Sutton)	0.3%

Phase C:

Bee's Milk (Koster Keunen)	10.0%
Fragrance (Aroma Tech)	0.2%

Procedure:

Mix and heat water phase to 70-75C. Melt oil phase and add to water phase at 70-75C under agitation. Continue mixing while cooling. At 40C add phase C and pour into container at 35C.

Adaptation of formula and its influence on the product:

Changes in the actives and the conditioners are straight forward, simple replacements. Gafquat's would be a class of conditioners which would fit this formula well.

SOURCE: Koster Keunen, Inc.: Suggested Formulation

Emollient Liquid Make-up

Conceals minor skin imperfections yet moisturizes, giving skin a soft dewy finish. This product has tremendous endurance through very vigorous activities.

Phase A:

Xanthan Gum (Kelco)	0.33%
Cellulose Gum (Aqualon)	0.23%
Water (Distilled)	50.55%
Triethanolamine (Dow)	0.70%
PEG 1450 (Union Carbide)	2.35%
Methyl Paraben (Sutton)	0.28%
Propylene Glycol (Dow)	1.88%
Polysorbate 60 (Gallard & Schlesinger)	0.47%

Phase B:

Titanium Dioxide (Whittaker C&D)	8.44%
Brown Iron Oxide (Warner-Jenkinson)	2.35%
Yellow BC Iron Oxides (Warner-Jenkinson)	0.94%
Orange Wax (Koster Keunen)	6.10%
Cera Bellina (Koster Keunen)	4.69%

Phase C:

Octyl Palmitate (Barnel)	6.57%
Silicone 245 (Dow)	2.00%
Isopropyl Palmitate (Unichema)	6.10%
Hydrogenated Castor Oil (Acme)	1.41%
Isostearic Acid (Unichema)	1.50%
Jojoba Oil (Jojoba Growers)	0.94%
Propylene Glycol Stearate (Inolex)	1.89%
Propylparaben (Sutton)	0.28%

Procedure:

Disperse pigments in the Orange Wax and Cera Bellina in a beaker with a glass stirring rod, allow to solidify. Repeat so-as-to break up visible applomerations. Mix and heat to 75C phase C until uniform, add to phase B under agitation, maintaining the temperature till homogeneous. Add the mixed and melted phase B and C to the mixed and melted phase A. Continue mixing while cooling, pour into containers at approximately 50C.

Adaption of formula and its influence on the product:

Sunscreens, vegetable oils and branched oils can be substituted in minor amounts since products such as these are sensitive to small changes that will affect stability.

SOURCE: Koster Keunen, Inc.: Suggested Formulation

Emulsion Makeup**Part A:**

Amerchol L-101	4.5%
Amerlate	0.9
Stearic acid, XXX	2.7
Glyceryl monostearate, neut.	1.8
Carnation Mineral Oil	4.5

Part B:

Propylene glycol	4.5
Triethanolamine	0.9
Water	70.2
Titanium dioxide, talc & pigments	10.0
Perfume and preservative	q.s.

Procedure:

Add Part B to 85 celsius to Part A at 95 celsius while stirring. Continue mixing and cool to 30 celsius. Add to the micronized powder blend in increments, mixing well after each addition.

Water-in-Oil Lotion Makeup

	<u>Percent</u>
Magnesium aluminum silicate	1.2

Eye Contour Balm

The skin around the eye is thinner, more sensitive and rapidly shows the signs of aging and fatigue such as; crow's feet, sagging skin, dark circles and puffiness. This is designed using nature as a starting point. Much of the product's activity comes from mildly refined raw materials that keeps intact the natural properties, producing a non-oily, quick penetrating and fragrance free product. A low concentration of synthetic preservative is needed due to the minor components of a few of the raw materials. With regular use the appearance of aging will be reduced.

Oil Phase:

Sweet Almond Oil (Croda)	4.0%
Propolis Wax (Koster Keunen)	5.0%
Rice Bran Oil Filtered (Koster Keunen)	4.0%
Safflower Oil (Arista)	2.0%
Orange Wax (Koster Keunen)	1.0%
Hydrogenated Castor Oil (CasChem)	0.5%
Vitamin A Palmitate (BASF)	0.5%
Vitamin E (Roche)	0.5%
Isostearic Acid (Unichema)	2.5%
Cetylstearyl Alcohol (P&G)	1.5%
Squalene (Polyester)	1.0%
Isopropyl Palmitate (Unichema)	2.0%
Glycerol Monostearate (Henkel)	2.0%

Water Phase:

Water (Distilled)	69.6%
Ginkgo Biloba (Vernin)	0.5%
Allantoin (Sutton)	0.5%
Triethanolamine (Dow)	1.0%
Xanthan Gum (Kelco)	1.0%
Magnabrite S (Whittaker C & D)	0.4%
Polysorbate 60 (Gellard & Schlesinger)	0.2%
Methyl Paraben (Sutton)	0.3%

Procedure:

Mix and heat oil phase to 80C. Add components of water phase under agitation and heat and homogenize to 75C. Add oil phase to water phase under agitation. Cool and pour into container at 45 to 50C.

Adaption of formula and its influence on the product:

With only slight changes this product can be all natural and free of synthetics preservatives.

Eye Mascara

<u>Ingredients:</u>	<u>Wt%</u>
1. A-C Polyethylene 617	12.0
2. A-C Copolymer 540	2.0
3. Mineral Spirits	68.0
4. Dihydroabietyl Alcohol	5.0
5. Candelilla Wax	2.4
6. Aluminum Stearate	0.5
7. Butyl Parahydroxy Benzoate	0.1
8. Iron Oxide	10.0

Procedure:

Mix 1-5 and heat with agitation until all solid waxes have dissolved. Then sprinkle with stirring 6 and 7; when all is dissolved, add 8 and shear with homomixer or grind in with 3 roll mill.

Eye Mascara

<u>Ingredients:</u>	<u>Wt%</u>
1. Mineral Spirits	70
2. A-C 617A	12
3. Dihydroabietyl Alcohol	5
4. Candelilla Wax	2.4
5. Aluminum Stearate	0.5
6. Butyl Parahydroxy Benzoate	0.1
7. Iron Oxide	10

Procedure:

Mix 1-4 and heat with agitation until all solid waxes have dissolved. Then sprinkle with stirring 5 and 6, when all is dissolved add 7 and shear with homomixer or grind in with a 3 roll Mill.

SOURCE: Allied Signal Inc.: Suggested Formulations

Eye Mascara

This formula demonstrates the stability, dispersive and rheological properties of Cera Bellina. The product is quick drying on the eye lash and uses a multi-phase emulsion system.

Oil Phase:

Cera Bellina (Pg-3 Beeswax, Koster Keunen)	15.0%
Glycerol Monostearate (Henkel)	3.5%
Orange Wax (Koster Keunen)	2.0%
Isostearic Acid (Unichema)	1.0%
Propyl Paraben (Sutton)	0.3%

Water Phase:

Water (Distilled)	63.6%
Sodium Borate (Borax)	1.5%
Propylene Glycol (Dow)	1.0%
Carboxy Methyl Cellulose (Hercules)	0.2%
Methyl Paraben (Sutton)	0.3%

Alcohol Phase:

SDA-30 (Quantum)	9.0%
Purified Black Oxide (Whittaker)	2.6%

Procedure:

Melt Cera Bellina to a maximum of 75C. Then add the rest of the oil phase while mixing. Make sure all ingredients are melted. In a separate vessel dissolve the components of the water phase. Add the water phase to the oil phase, maintaining the temperature of 75C for approximately 15 minutes. Allow to cool slowly. When the temperature is 35-40C, add the alcohol phase under high shear.

Adaptation of formula and its influence on the product:

Changing the concentrations of water (increase) and solids (decrease) by small amounts will control the viscosity. A variety of pigments can be substituted to suit products needs.

Eyeliner Stick/Pencil

This product incorporates a large pigment load at the same time as having a smooth, even application to the skin. The texture is ridged, highly colored for long wear characteristics, will not bleed and is very stable.

1. Titanium Dioxide (Whittaker C & D)	25.0%
2. Ceresine Wax 140/150 (Koster Keunen)	15.0%
3. Red D&C #7 (Warner-Jenkinson)	12.5%
4. Purified Navy Blue (Whittaker C & D)	12.5%
5. Cera Bellina (Pg-3 Beeswax, Koster Keunen)	10.0%
6. Glycerol Trioctanoate (Barnet)	10.0%
7. Ethylene Glycoldistearate (Henkel)	5.0%
8. Glycerol Tribehenate (Croda)	5.0%
9. Hydrogenated Castor Oil (CasChem)	5.0%

Procedure:

Add 2,5,6,7,8 and 9 into a vessel. Melt, mix and maintain a temperature of 75C, add 1,3 and 4 under high shear. Maintain high shear mixing for 30-40 minutes. Cool and pour into molds.

Lower pigment load and higher wax and oil concentrations can be substituted so-as-to facilitate the greatest cost effectiveness and at the same time, produce a luxurious product.

Gentle Beauty Wash

This elegant beauty wash is based on mild surfactants that result in a mild cleansing product. Its non-alkaline pH and combination of ingredients are designed to leave the skin clean and smooth without harsh soap effects.

<u>Materials:</u>	<u>% by Weight</u>
1. Deionized Water	46.20
2. Propylene Glycol	8.00
3. 50% Sodium Hydroxide	0.60
4. Bentone EW	0.40
5. Stearic Acid, triple pressed	8.00
6. Igepon AC78	11.00
7. Sipon ESY	11.00
8. Siponate DDB-40	5.00
9. Alconate SBR-3	2.50
10. Sodium SETHIONATE 55	6.50
11. Oxaban A	0.05
12. Fragrance KU 70	0.75

Manufacturing Directions:

Disperse the Bentone EW in the deionized water, sodium hydroxide and propylene glycol with rapid agitation. Start heating. Decrease agitation and add the stearic acid and Igepon AC78. Continue heating until the Igepon AC78 has dissolved (70 degrees celsius). Add the Sipon ESY, Siponate DDB-40, Alconate SBR-3 and Sodium Isethionate 55. Start cooling. Add the preservative and fragrance at 35C. The viscosity and pearl will develop upon standing.

Ingredient Label:

Water, Sodium cocoyl isethionate, Stearic acid, Propylene glycol, Sodium isethionate, Sodium laureth sulfate, Sodium dodecyl benzene sulfonate, Disodium ricinoleimido, MEA-sulfosuccinate, Fragrance, Hectorite, Sodium hydroxide, 4,4-Dimethyl-oxazolidine, 3,4,4-Trimethyl-oxazolidine.

Physical Properties:

pH: 5.8-6.1

Viscosity: Brookfield LV4 @ 25 degrees C (at rest 12 hours):
 @ 3 RPMs 80,000-110,000 cp
 @ 6 RPMs 50,000- 70,000 cp
 @ 12 RPMs 30,000->50,000 cp

Appearance: White, pearled, pumpable cream

Hair and Skin Moisturizing Mist

A refreshing spray containing special humectants to replenish much needed moisture to hair and skin. Contains Sodium PCA to help restore normal moisture balance and keep the skin young looking and fresh. Also contains Aloe Vera Gel and Panthenol to soothe, condition and protect the skin and hair from drying out. Recommended for use under dry climatic conditions, dry heat or during sun exposure.

<u>Ingredient/Trade Name:</u>	<u>%</u>
Part A:	
Deionized Water	91.13
Polyquaternium-4/Celquat H-100	0.05
Citric Acid	0.01
Propylene Glycol	2.00
Methylparaben	0.20
Part B:	
Sodium PCA/Ajidew N-50	2.00
Sorbitol & Sodium Lactate & Proline & Sodium PCA & Hydrolyzed Collagen/Prodew 100	2.00
Panthenol	0.10
Aloe Vera Gel/Aquasol 104	1.00
Dimethicone Copolyol/Dow Corning 193	0.30
Diazolidinyl Urea/Germall II	0.20
Part C:	
Tea-Cocoyl Glutamate/Amisoft CT-12	0.50
Polysorbate 20/Tween 20	0.50
Fragrance #X3110	0.01

Procedure:

Disperse Celquat H100 into rapidly agitating deionized water. Heat to 70 degrees Centigrade. Add remaining Part A ingredients. Mix until completely clear and uniform. Start cooling. At 50 degrees Centigrade, add Part B ingredients. Mix well after each addition. Premix Part C. At 40 degrees Centigrade add premixed Part C to Part A. Continue mixing and cooling to 35 degrees Centigrade.

Appearance: Clear, light yellow, water-thin liquid
pH: 5.00-5.40

Lip Pencil

This product utilizes the dispersive properties of Cera Bellina to produce a product which glides on easily, leaves silky lasting colour that is water resistant.

Phase A:

Castor Oil (Caschem)	51.5%
Candelilla Wax (Koster Keunen)	8.0%
Carnauba Wax (Koster Keunen)	7.0%
Microcrystalline Wax (Koster Keunen)	5.0%
Ceresine 130/135 Wax (Koster Keunen)	3.0%
Mineral Oil (Witco)	3.0%
Cetyl Alcohol (P&G)	1.5%

Phase B:

Cera Bellina (Pg-3 Beeswax, Koster Keunen)	8.0%
Iron Oxide Brown (Warner-Jenkinson)	2.0%
Titanium Dioxide (Whittaker C&D)	8.0%
D&C Red #6 (Whittaker C&D)	3.0%

Heat and mix Phase B, dispersing pigments and breaking up visible agglomeration. Add Phase A to Phase B, heat and mix together under agitation. Allow to cool to 65C and pour into molds. Changing the concentration of waxes and or oils will soften and harden the product to maintain consistency when changing pigments and colours. Different pigments will affect the gelling properties of the base and is compensated for with changes in concentrations of waxes and oils used. Sunscreens can also be incorporated without difficult formula changes.

New Look Lipstick

This red lipstick has a creamy texture and is long wearing. The lipstick is very stable, although it has a high oil concentration. By using synthetic replacements of natural products this formula is of very low cost but looks and performs like a high end product.

1. NF Yellow Beeswax (Koster Keunen)	5.0%
2. Synthetic Candelilla (Koster Keunen)	9.9%
3. Ozokerite 170 (Koster Keunen)	10.6%
4. Synthetic Carnauba (Koster Keunen)	1.5%
5. Castor Oil (Caschem)	20.0%
6. Paraffin Oil (Kydol-Witco)	15.3%
7. Edible Coconut Oil (Cocochem)	32.7%
8. D&C Red #30 (Warner-Jenkinson)	4.5%
9. Titanium Dioxide (Whittaker C & D)	0.5%

Add 1, 5, 8 and 9 into a vessel large enough that will allow the other components to be added after the beeswax, castor oil and pigments have been melted (75C.) and mixed together with the intention of breaking down as many of the visible agglomerations. After the visible agglomerations have been separated, add 2, 3 and 4 to the dispersion while mixing. Increase the temperature slightly if needed to melt the synthetic carnauba. Then the remainder of the components can be added and mixed at a temperature of 70C. After the product is homogeneous use a shear mixer at low speed for 45 to 60 minutes, maintaining a similar temperature.

Slight changes in oils and waxes will not alter the products appearance or performance. Sunscreens are easily incorporated.

Lipstick

This red lipstick has a creamy texture and is long wearing. The lipstick is very stable, although it has a high oil concentration. Cera Bellina allows for high coloration without large pigment load and imparts a satin like feel to the lips.

Formula:

1. Cera Bellina (Pg-3 Beeswax, Koster Keunen)	16.70%
2. Candelilla (Koster Keunen)	3.10%
3. Ozokerite 160/164 (Koster Keunen)	4.20%
4. Carnauba #1 Yellow (Koster Keunen)	1.20%
5. Castor Oil (Caschem)	43.45%
6. Paraffin Oil (Kydol-Witco)	16.30%
7. Octyl Palmitate (Inolex)	6.20%
8. Jojoba Oil (Jojoba Growers)	1.00%
9. Vitamin E (Freeman)	0.50%
10. D&C Red #7 (Warner-Jenkinson)	4.00%
11. Orange Wax (Koster Keunen)	3.00%
12. Titanium Dioxide (Whittaker C&D)	0.25%
13. Propyl Paraben (Sutton)	0.10%

Procedure:

Add 1, 10, 11, and 12 into a vessel large enough that will allow the other components to be added after the Cera Bellina (Pg-3 Beeswax), Orange Wax and pigments have been melted (75C) and mixed together with the intention of breaking down as many of the visible agglomerations. After the visible agglomerations have been separated add 2, 3 and 4 to the dispersion while mixing. Increase the temperature slightly if needed to melt the carnauba. Then the remainder of the components can be added and mixed at a temperature of 70C. After the product is homogeneous, use a shear mixer at low speed for 45 to 60 minutes, maintaining a similar temperature.

Adaptation of formula and its influence on the product:

Other oils natural or synthetic can easily be substituted to meet the formulators needs, cost, availability, etc. without significantly changing the characteristics. Higher melting points can easily be achieved with only slight alterations in wax concentration. Biologically active compounds are easily incorporated into the formulas. Depending on the desired color and the blend of pigments used, there will be a need for small ingredient concentration changes in the formula due to the pigment's effect on the gelling properties of the mixture.

Liquid Make-Up

This formula demonstrates the stability, dispersive qualities and rheological properties of Cera Bellina in a high pigment load, vegetable oil and hydrocarbon oil free product. The product is quick drying on the skin leaving a soft velvet like feel, for a flawless, long wearing natural look.

Oil Phase:

Isopropyl Palmitate (Unichema)	14.50%
Cera Bellina (Pg-3 Beeswax, Koster Keunen)	6.00%
Silicone Oil 556 (Dow)	4.50%
Ceresine Wax 130/135 (Koster Keunen)	1.50%
Glycerol Monostearate (Witco)	0.80%
Emulsifying Wax NF (Koster Keunen)	0.70%
PEG-100 Stearate (Lipo)	0.50%
Orange Wax (Koster Keunen)	0.30%
Propyl Paraben (Sutton)	0.20%

Water Phase:

Water (Distilled)	51.05%
Sodium Hydroxide (Aldrich)	0.60%
Citric Acid (Aldrich)	0.50%
Bermocall E230 (Whittaker C&D)	0.20%
Methyl Paraben (Sutton)	0.20%

Pigment Phase:

Titanium Dioxide (Whittaker C&D)	13.50%
Iron Oxide Yellow 7055 (Warner-Jenkinson)	2.70%
Iron Oxide Brown 7058 (Warner-Jenkinson)	1.20%
Mica (Rona)	1.00%
Iron Oxide Red 7067 (Warner-Jenkinson)	0.50%

Procedure:

Melt oil phase to a maximum of 75C and mix, making sure all ingredients are melted. In a separate vessel dissolve the components of the water phase. Add the oil phase to the water phase, maintaining the temperature of 75C for approximately 15 minutes. Allow to cool slowly. When the temperature is 55 to 60C, add the pigment phase under high shear.

Adaptation of formula and its influence on the product:

Changing the concentrations of water (increase) and solids (decrease) by small amounts will control the viscosity. A variety of pigments can be substituted to suit products needs.

8. Bentone MA Rheological Additive	4.0
9. Zinc Oxide	3.0
10. 328 Titanium Dioxide	2.5

Manufacturing Directions:

1. Weigh items 1 through 4 into a stainless steel steam jacketed kettle. Heat Part A to 65C.
2. In a separate vessel, add items 5 through 7 and heat to 65C. Mix until completely melted and homogeneous.
3. Mix Part B slowly into Part A while mixing. Mix for 15 to 20 min., and bring temperature down to 55C while mixing.
4. Mix Part C separately using a homomixer and add to above mixture while stirring. Mix it for 15 minutes. Maintain temperature and pass through Colloid Mill.

Formula TS-252

Lotion Scrub

Part A:	Wt%
Water	36.2
Aloe Vera Gel	1.0
Germaben II	1.8
Magnesium Aluminum Silicate (1)	1.0
Part B:	
Glycol Stearate (2)	5.0
Safflower Oil	0.5
Sesame Oil	0.5
Hydroxypropyl Methylcellulose (3)	0.5
Part C:	
Sodium Lauryl Ether Sulfate (4)	20.0
Sodium Lauryl Sulfate (4)	18.0
Cocamide DEA (5)	0.5
Cocamidopropyl Betaine (6)	5.0
Part D:	
Acuscrub 44	10.0

Procedure:

Slowly add thickener (2) with agitation to Part A ingredients until dissolved. Heat to 70C. Separately combine Part B and Part C ingredients, then add to Part A, mixing well between additions. At 50C, moderately add Acuscrub 44 and stir until smooth & uniform.

1. Veegum
2. Emerest 2350
3. Methocel 40-100
4. Sipun ES, Sipun LCP
5. Ninol 49-CE
6. Lexaine C

Lotion Hand Scrub

Part A:	Wt%
Sodium C14-16 Olefin Sulfonate (1)	30.0
Cocamidopropyl Betaine (2)	6.7
Cocamide DEA (3)	2.0
Glycol Stearate	1.0
Ammonium Chloride	2.5
Germaben II	0.8
Water	50.0
Part B:	
Hydrolyzed Animal Protein (4)	2.0
Part C:	
Acuscrub 44	5.0

Procedure:

Heat water to 70C, then slowly add remaining Part A ingredients. Cool to 55C, add Part B with agitation. Add Part C with agitation and mix until homogeneous.

Low Cost, Extended Wear Lipstick

Resulting lipstick has exceptional shine, adherence and wear attributes. When applied to lips, the formula produces a comfortable non-waxy film, which resists migration and feathering. The shade of this formula is a clean, true, high chroma red with moderate opacity.

	%w/w
A. Castor Oil NF (Crystal O)	61.66
Candelilla Wax (S&P 75)	8.30
Carnauba Wax (S&P #1 Yellow 73)	2.05
Microcrystalline Wax (S&P 18)	4.20
Beeswax (S&P White NF 422P)	1.87
Tocopherol (Copherol F-1300)	0.12
Propylparaben (Lexgard P)	0.08
Butylparaben (Lexgard B)	0.05
B. D&C Red No. 6 Barium Lake, CI #15850:2 (C19-012)	1.38
D&C Red No. 7 Calcium Lake, CI #15850:1 (C19-011)	0.97

Castor Oil (Crystal O)	11.88
C. Glycerin/Diethylene Glycol/Adipate Crosspolymer (Lexorez 100)	4.70

Procedure:

1. Combine section "A" heating to 90C. Mix slowly (be sure not to entrap air) until the phase is clear and homogeneous, then reduce temperature to 80 to 85C. Continue slow mixing.
2. Disperse pigments in section "B" in the castor oil contained in Phase "B" by adding the dry pigments to the castor oil and blending with a spatula, then disperse using a Cowles dissolver and finally pass the blend through a three roller mill three times or until the particle size of the pigments are less than number 7 on a Haggeman gauge.
3. When section "B" is adequately dispersed, add section "B" to section "A". Continue slow agitation and maintain a temperature of 80 to 85C.
4. When sections "AB" is homogenous add section "C" to "AB". Maintain a temperature of 80 to 85C and mix slowly until homogeneous.
5. Mold sticks at 80-85C.

SOURCE: Inolex Chemical CO.: Formulation 398-152-1

Low Cost Lipstick

Resulting lipstick is a low cost formulation that exhibits good application characteristics and is comfortable on lips. Wearability of the lipstick is limited. Feathering and migration of the lipstick film would be expected. The shade of this formula is a clean, true, high chroma red with moderate opacity.

	<u>%w/w</u>

Arlamol E	3.00
B Arlatone 2121	2.00
Propylene glycol	1.25
Glycerol	1.25
*Preservative	
C Water	72.50
Carbomer 934 (3% w/w mastergel)	5.00
D *NaOH (10% w/w solution) to adjust pH to 6.5-7	
E *Perfume	
*q.s. these ingredients.	

Procedure:

Mix the Arlatone 2121 in the water phase at 80C under moderate stirring until a homogenous dispersion is formed. Disperse the hydrocolloid in the heated water phase at 75C with moderate stirring. Add the oil phase (RT) to the water phase while stirring intensively. Homogenise the mixture between 75 and 65C. Energy input is related to final formulation viscosity. Allow to cool to 40C while stirring. Homogenise again if adding additional ingredients. e.g. perfume, vitamins,.....

Dry Skin Oil with Alcohol

<u>Ingredients:</u>	<u>%W/W</u>
Arlacel 186	30.00
Arlamol E	30.00
Ethanol, SDA-40, (190 Proof)	30.00
Cyclomethicone	10.00

Procedure:

Mix all ingredients well at room temperature. If necessary warm the Arlacel 186 to achieve clarity before mixing.
Formula CP 1049

Petroleum Oil/Petroleum Wax Free Lipstick

This lipstick is a creamy stick that doesn't use any petroleum oils or waxes in the formula nor does it use any synthetic raw materials that has petroleum base products in it.

Oil Phase I:

1. Kester Wax 100 (Koster Keunen)	6.00
2. Candelilla (Koster Keunen)	7.00
3. Hydroxy Polyester (Koster Keunen)	3.70
4. Hexanediol Behenyl Beeswax (Koster Keunen)	4.00
5. Cocoa Butter	3.00
6. Shea Butter (Koster Keunen)	4.50
7. Squalane (Centerchem)	1.50
8. Rice Bran Oil (Koster Keunen)	4.00
9. Octyl Palmitate (Inolex)	3.00
10. Coconut Oil (Alnor)	5.50
11. Vitamin E (BASF)	0.10
12. Vitamin A Palmitate (BASF)	0.10
13. Wheat Germ Oil (Lipo)	1.50
14. Sweet Almond Oil (Lipo)	1.50
15. Isopropyl Palmitate (Unichema)	15.50
16. Oyster Nut Oil (Koster Keunen)	1.50
17. Castor Oil (Caschem)	20.00
18. Ethoxylated Carnauba (Koster Keunen)	1.30
19. Orange Wax (Koster Keunen)	5.50
20. TiO ₂ (WC&D)	2.50
21. Z-Cote (SunSmart)	5.00
22. Pigment	2.80
23. Beta Glucan 15% Coarse (Koster Keunen)	0.50

Procedure:

Add 20, 21 and 22 together. To the mixture of pigments add 17, 18, and 19, heat till everything is dispersed. Add the rest of the ingredients except the Beta Glucan. The Beta Glucan will be added last to the batch, just before pouring into the molds.

Adaption of formula and its influence on the product:

With the increase or decrease of oils and/or waxes one could create a stick that is creamier or harder.

Pressed Powder Eye Shadow
(Pearlescent Type)

Ingredients:	<u>% by Weight</u>
(1) Bentonite (NF grade)	5.0
(2) Mearlin-AC	35.0
(3) Kaopolite TLC	29.0
(4) Zinc Stearate (fine ground)	8.0
(5) Magnesium Carbonate	1.0
(6) Acetol	3.0
(7) Polysorbate 20	9.0
(8) Deionized Water	10.0
Preservative	q.s.

Procedure:

Dry mix (1), (2), (3), (4), and (5). In separate tank, thoroughly mix (6), (7), and (8). Then slowly add this mixture to the dry mix. Screen through a No. 16 sieve and press.

Follow recommended handling practices of the supplier of each product used.

Face Mask

Ingredients:	<u>% by Weight</u>
(1) Deionized Water	36.7
(2) Bentonite (NF grade)	8.0
(3) Kaolin USP	40.0
(4) Isopropyl Alcohol	10.0
(5) Lanolin (PEG 50)	0.5
(6) Glyceryl Stearate (Emerest 2000)	1.5
(7) Dimethicone (Dow Corning 200)	1.5
(8) Phenoxyethanol (Emmenessence)	1.5
(9) Methyl Paraben	0.2
(10) Propyl Paraben	0.1

Procedure:

Add (2) to (1) and heat to 90C, add (9) and (10) until dissolved. Add (5), (6), (7), and (8). Cool and add (4) with good mixing until dispersed. Add (3) and continue high speed mixing until completely uniform.

Follow recommended handling practices of the supplier of each product used.

Good industrial practices should be used when handling flammable ingredients.

Purifying Clay Face Mask

This product removes imbedded impurities which smoothes skin, cleans pores, brings a glow and removes dulling cells for a finer texture so skin has a radiant glow.

Phase A:

Magnabrite S (Whittaker & D)	4.5%
Xanthan Gum (Kelco)	0.2%
Water (Distilled)	63.2%
Glycerin (Unichema)	4.0%
Aloe Vera Gel (Active Organics)	0.5%
Propylene Glycol (Arco)	1.5%
Tween 60 (Gallard Schlesinger)	0.6%
Methyl Paraben (Sutton)	0.5%

Phase B:

Emulsifying Wax NF (Koster Keunen)	5.0%
Cetylstearyl Alcohol (P&G)	0.5%
Kester Wax K-48 (Spermaceti, Koster Keunen)	2.0%
Propyl Paraben (Sutton)	0.5%

Phase C:

Cera Bellina (Pg-3 Beeswax: Koster Keunen)	4.5%
Green Chromium Oxide (Sun Chemical)	0.5%
Titanium Dioxide (Whittaker C&D)	2.0%

Phase D:

Titanium Dioxide (Whittaker C&D)	4.0%
Vanclay (Vanderbilt)	6.0%

Procedure:

Heat and mix till homogeneous, Phase A to 80C. Heat and mix Phase B to 80C. Heat and mix Phase C till pigments are dispersed. Mix Phase B with Phase C, add BC to A at 80C under agitation. When emulsified, sprinkle a mixed Phase D into ABC and continue mixing till thoroughly dispersed, allow to cool while mixing. Pour at 55-60C.

Adaption of formula and its influence on the product:

Changes in clay concentration will reduce or increase drying time on the skin, which also changes the respective purifying qualities toward the skin. Moisturizing agents and or other actives can be added to enhance the properties of this product.

SOURCE: Koster Keunen, Inc.: Suggested Formulations

Slenderizing Cream with Green Tea Extract

This slenderizing cream incorporates Phyt'iod and Iodobio 45. This lipolitic product develops an elective metabolic action at the level of adipocytes through the inhibition of the phosphodiesterase. This inhibition blocks the degradation of the cyclic AMP which is indispensable to the protein kinase activation. The kinase proteins activate the lipase which trigger a degradation of the triglycerides in the adipose cell in the form of fatty acids and glycerol and then eliminated.

<u>Ingredients:</u>	<u>%</u>
A. Unitina KD-16	16.00
Emulgin B-1	1.00

Procedure:

Premix B. Add B to A while mixing at moderate speed. Heat C to 60C until clear. Add C to A. Mix until completely homogeneous. Add D (pre-washed with anhydrous ethanol) and gently mix into A until uniformly dispersed.

SOURCE: Penreco: Suggested Formulation

Anhydrous Deep Penetrating Gel

Simple but effective is a way to describe this quick penetrating product. Use of this gel will diminish the signs of aging by conditioning and treating the skin with anti-inflammatory agents. The activity comes from phytosterols and bioflavonoids in orange wax. These class of chemicals are also strong anti-oxidants which will scavenge free radicals thereby preventing potential premature aging.

Silicone Oil 556	56.0%
IPP (Unichema)	5.0%
Squalane (Polyester)	10.0%
Cera Albalate 103 (Koster Keunen)	14.0%
Apricot Oil (Arista)	2.0%
Orange Wax (Koster Keunen)	10.0%
Vit. A Palmitate (Roche)	0.5%
Vit. E (BASF)	0.5%
Candelilla Wax (Koster Keunen)	2.0%

Procedure:

Melt and mix all components to 70C, cool to 60C and pour into container.

Adaption of formula and its influence on the product:

Triglyceride oils can only be use sparingly, since incorporation at any significant concentration will destroy the gelling properties of the Hydroxy-Hexanyl-Behenyl-Beeswaxate (Cera Albalate 103). Cera Albalate 103 is a highly effective gelling agent for very low viscosity oils, as is indicated above.

14. Fragrance	0.5

*Pigment Concentrate:

Castor Oil	75.00
D&C Red #21 Aluminum Lake	15.00
Cosmetic Brown C-33 115	10.00

Manufacturing Directions:

1. Weigh items 1 through 12 into a stainless steel jacketed kettle. Heat to 85C until melted clear.
2. Bring temperature down to 80C. Add and mix in item 13 using homomixer at medium speed. Mix for 10 minutes at 80C.
3. Continue mixing at medium speed, lower temperature to 70C, and add item 14. Remove heat and stir slowly until congealed, or pour into trays.
4. When casting, melt and pour molten mass into mold at 75C with slow agitation (avoid air entrapment).

Note: For a shiny polished surface on the lip-gloss, the sticks should be surface flamed.

Pigment Concentrate Preparation:

1. Weigh dry powder and mix to the castor oil using a slow speed Hobart type mixture until uniform.
2. Give this concentrate two passes over a 3 roller mill at room temperature.

Ultra Rich Hand and Body Nourisher

Veegum Ultra thickens and stabilizes this creamy, oil-in-water emulsion prepared using a nonionic emulsifier system. It features the "dry touch" application properties typical of formulas containing Veegum. Palmitoyl hydrolyzed animal protein functions as an anti-irritant that complements the group of oil phase emollients. Veegum Ultra whitens and brightens this cosmetic formula and adjusts the pH to approximate that of normal skin.

<u>Ingredient:</u>	<u>% by Wt.</u>
A Veegum Ultra (Magnesium Aluminum Silicate)	1.50
Deionized Water	79.00
B Glycerin	3.00
Aloe Vera Gel (2)	2.00

Alpha Hydroxy Acid Cream

Resulting product is a light cream that could be dispensed from a flexible tube or a jar. The alpha hydroxy acid (AHA) contained in this formula is buffered lactic acid with a use level of approximately 10%.

	%w/w
A. Deionized Water	65.80
Methylparaben (Lexgard M)	0.20
2,4-Dichlorobenzyl Alcohol (Myacide SP)	0.20
Glycerin USP (99.7%)	3.00
Lactic Acid USP (88%)	0.60
B. Glyceryl Stearate (and) Stearamidoethyl Diethylamine (Lexemul AR)	2.50
Glyceryl Stearate (and) PEG-100 Stearate (Lexemul 561)	4.00
Stearamidopropyl Dimethylamine (Lexamine S-13)	1.00
Cetyl Alcohol (Adol 52)	1.00
Caprylic/Capric Triglyceride (Lexol GT-865)	6.00
Isobutyl Stearate (Lexol BS)	2.00
Propylparaben (Lexgard P)	0.10
C. Lactic Acid (88%)	5.60
Sodium Lactate (Purasal S/SP 60%)	8.00

Procedure:

1. Combine section "A" heating to 75-80C. Use propeller mixer for agitation.
2. Combine section "B" heating to 80-85C. Agitate slowly with a propeller mixer.
3. When sections "A" & "B" are homogeneous and at the designated temperatures slowly add "B" to "A". Mix with rapid agitation for 5 minutes then begin cooling.
4. Reduce mixing speed during cooling to prevent vortexing.
5. At 55-60C, add section "C" to sections "AB".
6. When the batch is homogeneous and at 35-45C adjust for water loss.
7. Mix to 30C.
8. Adjust final pH to 3.50-3.75 with Lactic Acid or Sodium Lactate, as required.

Physical Properties:

Viscosity: 10,000 cPs @ 24C (Brookfield RVT, TA @ 10 rpm).
24 hour sample.

Anti-Cellulite Cream

Actives specifically developed to reduce the signs and quantity of cellulite are incorporated into this quick penetrating, non-greasy cream. The use of Cera Albalate 103 allows for a stable emulsion using a high concentration of low viscosity oils. Orange Wax in this formula is also an active due to similar chemistry. The claims for Centerchem's anti-cellulite products are based on groups of chemicals which are also found in Orange Wax, for example; Steroids, Flavonones, Flavonols and Cinnamates.

Phase A:

Cera Albalate 103 (Koster Keunen)	3.0%
Glycol Stearate (Koster Keunen)	4.0%
Glycerol Monostearate (Henkel)	3.0%
Orange Wax (Koster Keunen)	4.0%
Isopropyl Palmitate (Unichema)	2.0%
Silicone Oil 556 (Dow)	2.0%
Emulsifying Wax NF (Koster Keunen)	2.0%
Cetareth-20 (Croda)	1.5%
Eucalyptus Oil (Crompton & Knowles)	0.5%
Caprylic/Capric Triglyceride (Bernel)	2.5%

Phase B:

Water (Distilled)	50.1%
Carbopol 940 (BF Goodrich)	0.2%
Glycerin (Unichema)	3.0%
Pronalan Anticellulite (Centerchem)	10.0%
Ivy Extract (Alban Muller)	5.0%
Seaweed Extract (Centerchem)	5.0%
Triethanolamine (Dow)	0.2%
Aloe Vera Gel (Aloe Corp.)	1.0%
Germaben II (Sutton)	1.0%

Procedure:

Heat Phase A to 75 to 80C. Heat and mix Phase B to 75C. Emulsify by adding Phase A to Phase B. Add the preservative and mix while cooling. Pour into containers at 40C.

Adaption of formula and its influence on the product:

There is room for changing this product by the use of other actives which produce similar claims. The use of other plant oils will not dramatically alter the finished product. Worth mentioning is the ability of Orange Wax to mask the aroma of the eucalyptus oil producing a product of low fragrance.

Day Cream O/W for Sensitive Skin

<u>Component:</u>	<u>%</u>
I. Emulgade PL 1618	7,5
Almond Oil	2,0
Cetiol 868	6,0
Isopropyl Palmitate	2,0
Baysilon M 350	0,5
II. Glycerin 86%	3,0
Water	79,0
Preservative	q.s.
Viscosity 23C mPas: 150000	

Preparation in the Laboratory:

1. Heat oil phase to 80C. Heat aqueous phase to 80C and add to oil phase while stirring. Emulsify for 5 minutes at this temperature.
2. The emulsion is cooled down while stirring; the stirring must be selected in such a way that the emulsion is kept in continual motion, without developing a so-called "stirring cone". Excessive stirring, in particular below 50C, can lead to the reduction of the final viscosity.
3. Heat-sensitive additives are added below 40C. Finish stirring at 30C.

SOURCE: Henkel KGaA: Formulation No.: 92/216/106

Cleansing Cream

This formulation is a dual purpose makeup remover and skin conditioner. Myvaplex 600P glyceryl stearate provides mild cleansing, emollience, and emulsion stability. Eastman vitamin E6-81, the acetate ester of vitamin E, offers improved heat and light stability.

<u>Phase A:</u>	<u>%W/W</u>
Myverol 18-06 hydrogenated soy glyceride	6.00
Stearic acid, USP/NF	4.00
Petrolatum, USP	10.00
Drakeol 9 mineral oil	10.00
Isopropyl myristate	10.00
SF 18 (350) silicone fluid (dimethicone)	2.00
 Phase B:	
Distilled water	q.s. to 100
Propylene glycol, USP	5.50
Triethanolamine 99%, USP	0.70
 Phase C:	
Eastman vitamin E 6-81 (vitamin E acetate)	0.30
 Phase D:	
Fragrance	q.s.
Preservative	q.s.

Procedure:

1. Combine ingredients and heat Phase A and Phase B separately to 80C, mixing until each phase is uniform.
2. Add Phase B to Phase A with propeller mixing.
3. Continue mixing and slowly cool to 50C.
4. Add Phase C with mixing and when uniform add Phase D.
5. Continue mixing and cool to room temperature.
6. Adjust agitation speed throughout process as needed. Inversion will occur at 32C, and cream will become smooth and white.
pH: 7.71

Deep Moisturizing Cream

This moisturizing cream uses Cromoist CS as a moisture absorbing, film forming protein to retain moisture and bind to the skin. The emulsion is formed and stabilized by the Polawax, Syncrowax, and Super Hartolan combination. The oils are a blend of Crodalan LA, Crodamol PMP, Super Refined Babassu Oil, and Petrolatum which provides a non greasy elegant feel and helps to soften the skin.

<u>Ingredients:</u>	<u>%</u>
Part A:	
Polawax (Emulsifying Wax NF)	2.00
Syncrowax AW1-C (C18-36 Acid)	5.50
Syncrowax HGL-C (C18-36 Acid Triglyceride)	1.00
Crodalan LA (Cetyl Acetate (and) Acetylated Lanolin Alcohol)	1.00
Super Refined Babassu Oil (Babassu Oil)	3.00
Super Hartolan (Lanolin Alcohol)	1.00
Crodamol PMP (PPG-2 Myristyl Ether Propionate)	7.00
Petrolatum	1.00
Propyl Paraben	0.20
Part B:	
Water, deionized	66.00
Methyl paraben	0.30
Glycerin	10.00
Triethanolamine (99%)	1.00
Part C:	
Cromoist CS (Chondroitin Sulfate (and) Hydrolyzed Protein)	1.00

Procedure:

Combine the ingredients of Part A with mixing and heat to 75C. Combine the ingredients of Part B with mixing and heat to 75C. Add Part B to Part A with homogenizer mixing and cool to 65C. Continue mixing with a sweep blade mixer and cool to 40C. Add part C with mixing and cool to desired fill temperature.

Viscosity: 4,000,000+-10% (Brookfield RVT, Spindle TE, 25C)
N.A.T.C. Approved

Deep Moisturizing Creme

Part A:	<u>% by Weight</u>
Water	84.5
Potassium Hydroxide (45%)	0.4
Monafax 160	1.0
Phospholipid SV	2.5
Germaben II-E	0.6
Titanium Dioxide	0.5

Part B:	
Cetyl Alcohol	2.0
Myristyl Myristate	3.0
Isopropyl Palmitate	4.0
Dimethicone (100cs)	1.0
Lanolin Alcohol	0.5

Procedure:

Heat Part A with agitation to 60C. Separately heat Part B to 60C. Homogenize Part B into Part A for a sufficient time to ensure good emulsification. Stir cool to 45C, add fragrance, and package.

Emollient Cream

Part A:	
Water	69.12%
Magnabrite	0.50
Methyl paraben	0.20
Propyl paraben	0.10
BHA	0.08
Part B:	
Carnation Mineral Oil	4.50
Propylene glycol	3.50
Sorbitol	4.00
Myristyl propionate	3.00
Cocoa butter	5.00
Cetyl alcohol	4.00
Stearic acid	4.00
Part C:	
Octyl dimethyl PABA	1.00
Triethanolamine	1.00
Fragrance	q.s.

Procedure:

Heat water to 80 degrees celsius. Dissolve parabens and BHA into water. Sift Magnabrite into the vortex. When dispersed add B ingredients and mix until melted and uniform. Begin cooling. At 50 degrees celsius add C ingredients. Continue mixing until cool.

Emollient Cream for Dry Flaking Skin

<u>No.:</u>	<u>Phase:</u>	<u>Ingredient:</u>	<u>% by Weight</u>
1	A	Deionized Water	74.65%
2	A	Triethanolamine 99%	1.00%
3	A	Propylene Glycol	3.00%
4	A	Xanthan Gum	0.30%
5	A	Tetrasodium EDTA	0.10%
6	B	Cetearyl Alcohol	1.00%
7	B	Laneth-5	1.50%
8	B	Glyceryl Monostearate	4.00%
9	B	Oils of Aloha Kukui Nut Oil	3.00%
10	B	Vitamin E Acetate	0.20%
11	B	Stearic Acid XXX	4.00%
12	B	Dimethicone	1.00%
13	B	Octyl Palmitate	5.00%
14	C	Germaben II	1.00%
15	D	Fragrance	0.25%

Manufacturing Procedure:

Heat Phase A to 75C. Heat Phase B to 75C.

Add Phase B to Phase A. Cool to 40C and add remaining phases.

Package.

A oil in water emulsion where the primary emulsifiers are stearic acid with triethanolamine and Laneth-5.

This is a fairly inexpensive formula that uses two emollients- Kukui and octyl palmitate.

An excellent example of the feel of Kukui.

Facial Cleansing Cream

<u>No.:</u>	<u>Phase:</u>	<u>Ingredient:</u>	<u>% by Weight</u>
1	A	Deionized Water	54.00%
2	A	Glycerine	6.00%
3	B	Mineral Oil	15.00%
4	B	Oils of Aloha Macademia Nut Oil	5.00%

Allantoin	0.20
C *Preservative	
Xanthan gum	0.15
Water	67.10

*q.s. these ingredients.

Procedure:

Melt Arlatone 2121 and add to remainder of (B) and (C) mixture at 80C. Add heated (A) to the (B) and (C) mixture at 75C with vigorous agitation. Homogenize mixture at 65C.

Cream

<u>Ingredients:</u>	<u>W/W</u>
A Cetyl alcohol	6.00
Brij 721S	5.00
Silicone oil, 350 cs	0.50
B Water, deionized	66.30
C Hydrogen peroxide, 27% dilution grade	22.20

Procedure:

Heat (A) to 60C and (B) to 65C. Add (B) to (A) slowly with moderate agitation. Add (C) below 35C. Replace water lost by evaporation and adjust pH to 3.5-4.0 with dilute phosphoric acid (10% C.P.). Package in suitable container for possible evolution of oxygen.

Formula PC-8200

SOURCE: ICI Surfactants: Suggested Formulations

Exfoliating Cream

The use of natural exfoliating agent (easily dispersed) in this cream formula giving a marvelous, non-irritating, abrasive quality for the removal of spent surface cells. This will renew and revitalize worn and damaged skin, leaving a barrier which contains natural anti-oxidants inherent in the beeswax and orange wax.

Phase A:

Orange Wax (Koster Keunen)	3.5%
NF White Beeswax (Koster Keunen)	1.0%
Isostearic Acid (Unichema)	3.0%
Almond Oil (Arista)	3.5%
Light Mineral Oil (Witco)	4.0%
Glycerol Monostearate (Koster Keunen)	1.5%
Cetylstearyl Alcohol (P&G)	1.0%
Octyl Palmitate (Unichema)	3.0%

Phase B:

Water (Distilled)	64.6%
Propylene Glycol (Dow)	2.5%
Triethanolamine (Dow)	1.0%
Polysorbate 60 (Gallard & Schlesinger)	0.2%
Carbopol 940 (BF Goodrich)	0.2%
Germaben II (Sutton)	1.0%

Phase C:

Microgranulated Carnauba, 20-60 mesh (Koster Keunen)	10.0%
--	-------

Procedure:

Add a mixed and uniform Phase A to a mixed and uniform Phase B at 75C under agitation. Continue mixing and cool to 50C. Add Phase C and mix until homogeneous.

Adaption of formula and its influence on the product:

Viscosity of this product can easily be altered by substituting stearic acid for isostearic acid, to accomodate your preferred container. For sensitive skin, reduce the orange wax, and replace with Kester Wax 62 and Ceresine 130/135. A low viscosity will allow this product to be packaged in a bottle fitted with a pump and a product with high viscosity allows packaging in an open jar. The formulating advantages remain unaltered by the changes in viscosity.

General Purpose Cream

	<u>Wt%</u>
1. A-C Copolymer 540	2.0
2. A-C Polyethylene 617	2.0
3. Amerchol L-101	5.0
4. Mineral Oil	10.2
5. Hexadecyl Stearate	10.0
6. Emerest 2452	5.5
7. Propyl-p-Hydroxybenzoate	0.1
8. Methyl-p-Hydroxybenzoate	0.2
9. Sorbitol (70%)	5.0
10. Borax	0.3
11. Magnesium Sulfate	0.3
12. Water	59.7

Procedure:

Weigh 1-7 and heat to 85C with slow agitation. The blend has a cloud point of approximately 80C. Above the cloud point all waxes will eventually dissolve in the blend. If a higher solvating temperature is used, solvation can be much faster. Hold the wax blend at 85C. Heat 8-12 to 85-90C and stir gently until all has dissolved. Hold at 85C.

Place wax blend in mixing container, add aqueous phase to it and shear with homomixer or colloid mill. At 78C the crude dispersion inverts and a thick creamy emulsion forms. Continue shearing while scraping the sides of the container and make sure the whole content is properly sheared. Add perfume, de-aerate and package.

General Purpose Water/Oil Cream

	<u>Wt%</u>
1. A-C Polyethylene 617	2.0
2. Beeswax	4.0
3. Mineral Oil	15.0
4. Arlachel 83	5.5
5. Propyl-p-Hydroxybenzoate	0.1
6. Borax	0.3
7. Sorbitol	5.0
8. Methyl-p-Hydroxybenzoate	0.2
9. Germall 115	0.3
10. Water	67.6

Procedure:

Weigh 1-4 and heat to 85C with slow agitation. This wax blend has a cloud point of approximately 80C. Above the cloud point all waxes will eventually dissolve in blend. If a higher temperature is used, the solvation can be much faster. Hold the wax blend at 80-85C. Heat 5-10 to 85-90C and stir gently until all is dissolved. Hold at 85C.

Place wax blend in mixing container, add aqueous phase to it and shear with homomixer or colloid mill. At approximately 48C the crude dispersion inverts. Some water may not be completely taken up at this point but continued shearing will incorporate it all. Add perfume, de-aerate and package.

Procedure:

- Heat 1-5 to 90C until all has dissolved.
- Add 6, 7 and 8 to 1-5. Hold at 85C.
- Heat 10 and 11 to 90-95C until all has dissolved; add 12 gradually with shear using the Gifford-Wood Homomixer or equivalent.
- Add 1-8 to mixer and shear for 10 minutes at 85-90C. Shear to 65C, add perfume and package.

SOURCE: Allied Signal Inc.: Suggested Formulations

General Purpose Cream

	Wt%
1. A-C Polyethylene 617A	3.0
2. Beeswax	2.0
3. Lanolin Alcohol	1.0
4. Isopropyl Palmitate	8.2
5. 2-ethyl Hexyl Palmitate	10.0
6. Dow 200 Fluid, 350 cs	1.0
7. Triglyceral Diisostearate	5.5
8. Propyl-P-Hydroxybenzoate	0.1
9. Sorbitol (70%)	5.0
10. Aloe Extract	5.0
11. Sodium Borate, Anhydrous	0.3
12. Methyl-P-Hydroxybenzoate	0.2
13. Germall 115	0.3
14. Butyl-P-Hydroxybenzoate	0.1
15. Water	58.3

Procedure:

Weigh 1-8 and heat to 85C with slow agitation. The blend has a cloud point of approximately 80C. Above the cloud point all waxes will eventually dissolve in the blend. If a higher solvating temperature is used, solvation can be much faster. Hold the wax blend at 85C. Heat 9-15 to 85-90C and stir gently until all has dissolved. Hold at 85C.

Place wax blend in mixing container, add aqueous phase to it and shear with homomixer or colloid mill. At 67C the crude dispersion inverts and a thick creamy emulsion forms. Continue shearing while scraping the sides of the container to make sure the whole content is properly sheared. Add perfume, de-aerate and package.

Water-In-Oil Cream

	%
1. A-C 617	3.0
2. Mineral Oil (70-75 SS)	15.0
3. Isopropyl Palmitate	6.0
4. Escalol 507	4.0
5. Lanogene	5.0
6. Sorbitan Sesquioleate (Arlacel 83)	5.0
7. Sorbo	5.0
8. Borax	0.3
9. Germaben IIE	1.0
10. Water	Balance
11. Perfume	Q.S.

Procedure:

Heat 1-6 with mild agitation until all the A-C 617 has dissolved. Maintain it at 100-110C. Heat 7-10 with vigorous agitation with a colloid mill or homofixer until the solution is at 85C. Continue vigorous agitation and pour in 1-6. A crude oil-in-water emulsion is formed. Cool with cold water bath to about 55-60C when it inverts into a smooth cream. At 50-55C add perfume and package.

Gentle Night Repair Cream

This product encapsulates an active ingredient which can decrease the oxidation of a precious compound thereby increasing shelf life and reducing the chance of rancidity. The emulsion is very stable, quickly penetrates the skin and leaves a silky feel.

Oil Phase:

Cera Bellina (Pg-3 Beeswax, Koster Keunen)	7.10%
Ozokerite Wax 160/164 (Koster Keunen)	2.20%
Light Mineral Oil (Witco)	7.60%
Isopropyl Palmitate (Unichema)	3.00%
Glycerine Monostearate (Henkel)	1.20%
PEG-100 Stearate (Lipo)	1.00%
Emulsifying Wax NF (Koster Keunen)	1.00%
Incropol SC-20 (Croda)	4.00%
Isostearic Acid (Unichema)	4.00%
Vitamin E (Roche)	0.10%
Vitamin A Palmitate (BASF)	0.10%
Safflower Oil (Lipo)	2.00%
Liquapar (Sutton)	0.50%
Wheat Germ Oil (Lipo)	3.00%
Squalane (Centerchem)	2.00%
Propylene Glycol Dioctanate (Inolex)	4.00%
Silicone 200/100 (Dow)	2.00%

Water Phase:

Water (Distilled)	35.8%
Methyl Paraben (Sutton)	0.30%
Sodium Borate (Borax)	0.60%
Carbopol 940 2%	10.00%

Active Phase:

Phenonip (Nipa)	0.50%
Hyaluronic Acid (Active Organics)	1.00%
Firming Liposome (Centerchem)	4.00%
APT (Centerchem)	3.00%

Procedure:

Heat the components of the oil phase, mix and maintain at a temperature of 82C. In a separate vessel dissolve the components of the water phase while mixing and increasing the temperature to 80C. Add the oil phase to the water phase under moderate agitation, and cool slowly while mixing. When a temperature of 40C is mixed, add phenonip. Cool to 35C and add the three actives. Cool to room temperature.

Adaption of formula and its influence on the product:

You can substitute your preferred secondary emulsifier and some oils with only slight changes to viscosity, gloss, etc. The concentration of Cera Bellina (CTFA=Pg-3 Beeswax) can only be slightly altered since it helps control consistency and the micelle size and shape. The water soluble biologically active ingredients are well protected in this type of emulsion allowing you to incorporate a wide range of active compounds. A formulation of this type is not affected by ionic strength.

Glycolic Acid Cream

A rich cream with the benefits of an alpha-hydroxy acid. Incorporation of Geahlene 750 helps moisturize the skin and gives it a rich, silky after feel.

<u>Ingredient/Trade Name:</u>	<u>Weight%</u>
A Deionized Water	61.00
Magnesium Aluminum Silicate/Veegum Ultra	1.00
Xanthan Gum/Keltrol	0.30
Methylparaben	0.20
Butylene Glycol	5.00
Tetrasodium EDTA/Hamp-Ene 220	0.10
B Mineral Oil (and) Hydrogenated Butylene/Ethylene/ Styrene Copolymer (and) Hydrogenated Ethylene/ Propylene/Styrene Copolymer//Geahlene 750	9.00
DEA-Cetyl Phosphate/Amphisol	2.00
C12-15 Alkyl Benzoate/Finsolv TN	5.00
Propylparaben	0.10
Cetyl Alcohol/Lanette 16	2.00
Stearic Acid/Emersol 132	4.00
C Diazolidinyl Urea/Germall II	0.30
Glycolic Acid/Glypure 70%	8.00
D Deionized Water	1.00
Sodium Hydroxide	1.00

Procedure:

Disperse Veegum in rapidly agitated deionized water (part A). Add Keltrol. Heat to 80C. Mix until uniform. In a separate container, heat part B to 80C and mix until all the solids are dissolved. Add part B to part A. Mix for 30 minutes until completely homogeneous. Cool to 50C. Add part C and mix well. Add premixed part D. Continue mixing and cooling to 30C. Add fragrance at 30C if desired.

Hand and Body Cream

A rich, protective hand and body cream designed to relieve dryness and leave the skin soft and silky smooth. Geahlene 750 provides long-lasting moisturization, a perceptible conditioning effect, and an elegant after feel.

<u>Ingredient/Trade Name:</u>	<u>Weight%</u>
A Deionized Water	70.60
Carbomer/Carbopol 940	0.20
Propylene Glycol	7.00
Methylparaben	0.20
Panthenol/DL-Panthenol	0.10
B Mineral Oil (and) Hydrogenated Butylene/Ethylene/ Styrene Copolymer (and) Hydrogenated Ethylene/ Propylene/Styrene Copolymer//Geahlene 750	7.00
Propylene Glycol Dicaprylate/Dicaprate//Myritol PC	5.00
Isostearyl Alcohol/Prisorine 3515	2.00
Propylparaben	0.10
Cetyl Alcohol/Lanette 16	2.00
Glyceryl Stearate (and) PEG-100 Stearate/Arlacel 165	2.50
Potassium Cetyl Phosphate/Amphisol K	1.75
Tocopheryl Acetate/Vitamin E Acetate	0.10
C Triethanolamine, 99%	0.15
D Diazolidinyl Urea/Germall II	0.20
E Soy Lecithin/Sedermasome	1.00
Fragrance	0.10

Procedure:

Disperse Carbomer into rapidly agitated deionized water. Add remaining part A ingredients. Heat to 75-80C and mix until uniform and lump-free. Combine part B. Heat to 80C and mix until all the solids are dissolved. Add part B to part A. Mix for 30 minutes with good agitation. Add part C. Mix until completely smooth and homogeneous. Cool to 50C. Add part D. Cool to 40C. Add part E. Continue mixing and cooling to 30C.

High Content Mineral Oil Cream

<u>Ingredients:</u>	<u>%W/W</u>
A Mineral oil, (Carnation brand)	70.00
Brij 721S	3.70
Brij 72	3.30
B Water, deionized	22.60
C Sodium hydroxide (10% aqueous)	0.10
D Dowicil 200	0.10
E Herbal fragrance (SL 79-1224, PFW)	0.20

Procedure:

Heat (A) to 65C and (B) to 60C. Add (A) to (B) slowly with moderate anchor type agitation and add (C). Add (D) at about 50C. Add (E) at 35C and add water to compensate for loss due to evaporation.

Formula PC-9026

O/W Petrolatum Cream

<u>Ingredients:</u>	<u>%W/W</u>
A Petrolatum, white	35.00
Brij 721, POE 21 stearyl ether	1.00
Brij 72, POE 2 stearyl ether	4.00
Dimethicone (350 cs.)	3.00
B Water, deionized	56.70
Carbomer 934	0.10
C NaOH, 10% aqueous solution	0.10
D Germall II	0.10

Procedure:

Heat (A) to 70C and (B) to 72C. Add (B) to (A) with moderate anchor stirring. Add (C). Add (D) below 50C. Stir to 35C and add any water lost due to evaporation.

Formula CP 1090

Hydrocortisone Cream

<u>Ingredients:</u>	<u>%w/w</u>
Phase A:	
Propylene Glycol	5.0
Glycerin	2.5
Water	10.0
Hydrocortisone USP	(0.5/1.0)
Phase B:	
Water	Q.S.
Preservatives	Q.S.
Phase C:	
Polyglyceryl-3 Methylglucose Distearate (Tego Care 450)	3.0
Octyl Stearate (Tegosoft OS)	6.0
Octyl Palmitate (Tegosoft OP)	5.0
Mineral Oil	5.5
Glyceryl Stearate (Tegin M)	1.8
Stearyl Alcohol	0.8
Cetyl Dimethicone (Abil Wax 9801)	1.0
Phase D:	
Fragrance	Q.S.

Procedure:

1. Mix Phase A to dissolve the active.
2. Add the balance of the water of Phase B plus the preservatives. (Allow for water loss during manufacturing). Heat A/B to 70C.
3. Add the ingredients of Phase C. Mix. Maintain temperature of 70C.
4. Begin cooling when fully dispersed. Begin homogenization at 60C.
5. Homogenize while cooling to 35C.
6. Add fragrance with sweep mixer.

All Natural Cream
(W/O type)

<u>Ingredients:</u>	<u>%w/w</u>
Phase A:	
Polyglyceryl-3 Oleate (Isolan GO 33)	4.0
Hydrogenated Castor Oil	1.5
Beeswax	1.5
Octyl Stearate (Tegosoft OS)	11.5
Cetearyl Octanoate (Tegosoft Liquid)	11.5
Phase B:	
Glycerin	2.5
D-panthenol	0.5
Magnesium Sulfate	0.5
Water	66.5
Phase C:	
Fragrance	Q.S.

Procedure:

1. Add the ingredients of Phase A to a mix tank. Heat to 80-85C and disperse the waxes. Cool to 65-70C.
2. Mix the ingredients of Phase B. Heat to 65-70C.
3. Add Phase B to Phase A. Homogenize and cool to 40C with mixing
4. Add the fragrance. Cool and fill.

Hydroxy Acid Cream
(W/O Emulsion)

<u>Ingredients:</u>	<u>%w/w</u>
Phase A:	
Polyglyceryl-4 Isostearate (and) Cetyl Dimethicone Copolyol (and) Hexyl Laurate (Abil WE-09)	5.5
Cetyl Dimethicone (Abil Wax 9801)	1.0
Cyclomethicone	5.0
Isohexadecane	4.0
Octyl Stearate (Tegosoft OS)	5.0
Stearyl Heptanoate (Tegosoft SH)	2.5
Beeswax	0.6
Hydrogenated Castor Oil	0.6
Phase B:	
Water	67.7
Sodium Chloride	0.6
Lactic Acid (44% Solution)	5.0
Sodium Salicylate	1.5
Preservatives	Q.S.
Sodium Lactate (and) Sodium PCA (and) Glycine (and) Fructose (and) Inositol (and) Sodium Benzoate (and) Lactic Acid (Lactil)	1.0
Phase C:	
Fragrance	Q.S.

Procedure:

1. Heat Phase A in a closed kettle to 85C, mixing until all components are fully dispersed or solubilized. When uniform, cool to 45-50C.
2. Mix the ingredients of Phase B together. Heat to 40-45C.
3. Add B to A slowly with soft propeller agitation (150-250 RPM's). Mix until uniform.
4. Homogenize at 35-40C. 5. Add fragrance.

Moisturizing Cream
Cold Process
W/O

<u>Ingredients:</u>	<u>%w/w</u>
Phase A:	
Polyglyceryl-4 Isostearate (and) Cetyl Dimethicone Copolyol (and) Hexyl Laurate (Abil WE-09)	5.0
Mineral Oil	5.0
Caprylic/Capric Triglycerides (Tegosoft CT)	5.0
Isopropyl Myristate (Tegosoft M)	5.0
Phase B:	
Water	79.2
Sodium Chloride	0.8
Preservatives	Q.S.
Perfume	Q.S.
Color	Q.S.

Procedure:

1. Mix the oils of Phase A together. Mix well. 2. Dissolve the sodium chloride in the water. Mix until uniform.
3. Add Phase B slowly into Phase A with agitation. 4. Homogenize
5. Preservatives, perfume and color can be added at any time.

Light Texture Hand Creme

This high humectant creme provides a non-greasy, long lasting soothing feel.

Part A:	<u>% By Weight</u>
Phospholipid SV	3.00
Steareth-20	0.45
Glycerin	5.00
Methyl Paraben	0.25
Water	77.75

Part B:	
Steareth-2	0.80
Cetearyl Alcohol	3.50
Myristyl Myristate	3.50
Finsolv TN	1.50
Isopropyl Palmitate	3.00
Dimethicone (100 cS)	1.00
Propyl Paraben	0.25

Procedure:

Heat both phases to 65C, and homogenize the oil phase into the water phase. Stir-cool to 40C and add fragrance, coloring or preservative as required.

Facial Moisture Creme

This elegant formulation provides high moisturization, excellent rub off resistance, and is ideally suited for over-night skin care.

Part A:	<u>% By Weight</u>
Phospholipid SV	3.00
Steareth-20	0.20
Methyl Paraben	0.25
Water	81.50

Part B:	
Steareth-2	1.30
Cetearyl Alcohol	4.00
Myristyl Myristate	4.00
Isopropyl Myristate	4.00
Dimethicone (100cS)	1.00
Lanolin Alcohol	0.50
Propyl Paraben	0.25

Procedure:

Heat both phases to 65C, and homogenize the oil phase into the water phase. Stir-cool to 40C and add fragrance, coloring or preservative as required.

Mixed Alpha Hydroxy Acid Cream

Resulting product is a viscous firm cream, most appropriately dispensed from a jar. The alpha hydroxy acids (AHA's) contained in this formula consists of Malic, Citric and Lactic Acids. The total use level of AHA's contained in the formula is approximately 8.5%. This formulation utilizes a combination anionic (Lexemul AS) and nonionic (Lexemul 561) emulsion system.

	<u>%w/w</u>
A. Deionized Water	64.70
Methylparaben (Lexgard M)	0.20
2,4-Dichlorobenzyl Alcohol (Myacide SP)	0.20
Propylene Glycol USP	1.00
B. Glyceryl Stearate (and) Sodium Lauryl Sulfate (Lexemul AS)	4.00
Glyceryl Stearate (and) PEG-100 Stearate (Lexemul 561)	2.10
Glyceryl Stearate (Lexemul 515)	3.00
Cetyl Alcohol NF (Adol 52)	1.00
Caprylic/Capric Triglyceride (Lexol GT-865)	3.00
Octyl Stearate (Lexol EHS)	2.00
Avocado Oil	2.00
Tocopherol (Copherol 1300)	0.10
Butylparaben (Lexgard B)	0.10
C. Deionized Water	4.50
Malic Acid (Granular)	0.60
Sodium Citrate USP-FCC	3.00
Lactic Acid USP (88%)	0.60
Sodium Lactate (Purasa 1 S/SP 60%)	7.90

Procedure:

1. Combine section "A" heating to 75-80C. Use a propeller mixer for agitation.
2. Combine section "B" heating to 80-85C. Agitate slowly with a propeller mixer.
3. When sections "A" & "B" are homogeneous and at the designated temperatures slowly add "B" to "A" then begin cooling.
4. Reduce mixing speed during cooling to prevent vortexing.
5. At 55-60C, add section "C" to sections "AB".
6. When the batch is homogeneous and at 35-45C adjust for water loss.
7. Mix to 30C.
8. Adjust final pH to 5.00-5.50 with Lactic Acid or Sodium Lactate.

Procedure:

Viscosity: 10,000 cPs @ 24C (Brookfield RVT TC @ 10 rpm).
24 hour sample.
pH: 4.8 @ 24C.

SOURCE: Inolex Chemical Co.: Formulation 398-104-5

Multi-functional Day Cream

This Bee's Milk formulation creates a barrier that effectively replenishes moisture, softens and imparts radiance. This will combat dry skin caused by variations in humidity and will help to minimize the signs of aging.

Water Phase I:

Bermocol E 481 (Whittaker)	0.4%
Glycerine (Unichema)	2.7%
Water (Distilled)	52.1%
Triethanolamine	0.2%

Oil Phase:

Nikkol Lecinol S-10-M (Barnet)	2.1%
Squalane (Polyester)	7.9%
Macademia Nut Oil (Tri-K)	4.3%
Borage Oil (Tri-K)	2.9%
Vitamin E (BASF)	0.3%
Vitamin A Palmitate (BASF)	0.3%
Kester Wax-62 (Koster Keunen)	1.0%
Glycerol Monostearate (Koster Keunen)	0.2%
Ozokerite 158/160 (Koster Keunen)	0.3%
Cera Albalate 103 (Koster Keunen)	0.3%
Phytoglycolipid (Barnet)	4.0%
Liquipar (Sutton)	1.0%

Water Phase II:

Bee's Milk (Koster Keunen)	20.0%
----------------------------	-------

Procedure:

Mix and heat water phase I components to 75C. Add all the oil phase components, heat till 75C and mix. Add slowly the water phase I to the oil phase under agitation (approx. 700 rpm) maintaining mixing a temperature of 75C for 5 minutes (make sure that mixing does not exceed 800 rpm's, as a phase inversion will occur). Allow to cool to 50-55C, add water phase II at room temperature, under moderate agitation (approx. 200 rpm's), continue mixing for 5 minutes and pour into container.

Adaption of formula and its influence on the product:

Sunscreens are easily incorporated to give this product an SPF of 6-8 by using Escalol 507 (Van Dyk) at approximately 5% and reducing the concentration of water and or oils.

SOURCE: ICI Surfactants: Suggested Formulations

Moisturizer O/W Cream

This product utilizes the minor components of natural products to deliver mild anti-microbial activity, which allows the formulator to reduce the concentration of synthetic preservatives. The light yellow coloured cream quickly penetrates the skin, leaving a non-greasy feel and diminishes the signs of aging by laying down a flexible barrier.

Oil Phase:

Orange Wax (Koster Keunen)	4.5%
NF Yellow Beeswax (Koster Keunen)	2.5%
Isostearic Acid (Unichema)	1.0%
Almond Oil (Arista)	3.0%
Mineral Oil (Witco)	3.5%
Glycerol Monostearate (Henkel)	6.0%
Cetylstearyl Alcohol (P&G)	6.0%
Octyl Palmitate (Unichema)	2.5%

Water Phase:

Water (Distilled)	67.8%
Propylene Glycol (Dow)	1.5%
Triethanolamine (Dow)	1.0%
Polysorbate 60 (Gallard & Schlesinger)	0.2%
Germaben II (Sutton)	0.5%

Procedure:

Add a mixed and uniform water phase to a mixed and uniform oil phase at 75C under agitation. Continue mixing till cool.

Adaptation of formula and its influence on the product:

Actives are easily incorporated into a product such as this without altering the aesthetics. Changing the types of oils should only alter the viscosity, if maintaining similar concentrations of oils. Viscosity changes are achieved by reducing the concentration of cetylstearyl alcohol and glycerol monostearate, by approximately 30-40%, however this may cause instability.

SOURCE: Koster Keunen, Inc.: Suggested Formulations

Moisturizing Cream

This formulation demonstrates a polymeric approach to occlusive moisturization eliminating undesirable feel properties of petrolatum or other traditional occlusive ingredients.

Epolene N-34 wax is a non-emulsifiable polyethylene which provides a film that is resistant to wash-off. It is incorporated into this emulsion with Eastman AQ 55 water-dispersible polyester which also contributes a protective film. The wash-off resistance is due to the inability of Epolene N-34 to be emulsified by soap or surfactants. The dual film-forming action of this polymer combination has been shown to reduce moisture loss. In vitro occlusivity data is available.

<u>Phase A:</u>		<u>% W/W</u>
Distilled water	q.s. to	100
Propylene glycol, USP		4.00

<u>Phase B:</u>		
Polawax emulsifying wax, NF		3.00
Arlacel 165 glyceryl stearate and PEG-100 stearate		3.00
Myverol 18-06 distilled monoglyceride		3.00
Isopropyl myristate		5.00
Robane squalane, NF		5.00
Epolene N-34 polyethylene wax		1.00

<u>Phase C:</u>		
Distilled water		10.00
Propylene glycol		3.00
Eastman AQ 55S polymer		1.00

<u>Phase D:</u>		
Eastman vitamin E TPGS (20%)		1.00

<u>Phase E:</u>		
Fragrance		q.s.
Preservative		q.s.

Procedure:

1. Prepare Phase C by adding propylene glycol to water and heating to 95C and then adding Eastman AQ 55S with mixing. Allow to cool to 70C.
 2. Heat Phase A with mixing to 95C.
 3. Heat Phase B with mixing to 105-110C.
 4. Cool Phase B to 95C and add to Phase A with propeller mixing.
 5. Continue mixing and cool to 70C, avoiding air entrapment.
 6. At 70C, add Phase C.
 7. Continue mixing and cool to 50C; then add Phase D and Phase E.
 8. With mixing, force cool to room temperature. Product will thicken and form a cream at 44C.
- pH: 5.5

Neck Firming Cream

The neck is the most neglected part of the body and shows the first visible signs of aging. The product delivers actives to that area in a cost effective product which has emollient and moisturizing properties that firms tiny lines. Continued use helps promote the look of firm, resilient, soft, youthful-looking skin.

Phase A:

Orange Wax (Koster Keunen)	3.0%
Emulsifying Wax NF (Koster Keunen)	5.0%
Shea Butter (Koster Keunen)	3.0%
Stearic Acid (Unichema)	3.0%
Mineral Oil (Witco)	5.0%
Isopropyl Palmitate (Unichema)	5.0%
Glycerol Monostearate (Koster Keunen)	1.5%
Squalane (Barnet)	3.0%
Phytoglycolipid (Barnet)	2.0%
Cetyl Stearyl Alcohol (P&G)	0.5%

Phase B:

Water (Distilled)	57.9%
Carbopol 940 (BF Goodrich)	0.2%
Triethanolamine (Dow)	0.4%
Glycerin (Unichema)	2.0%
Aloe Vera Gel (Active Organics)	0.5%
Propylene Glycol (Dow)	2.0%
Germaben II (Sutton)	1.0%

Phase C:

Elastosol Animal Collagen & Elastin (Croda)	5.0%
---	------

Procedure:

Weigh out materials for Phase A, heat to 80C and mix till homogeneous. Heat Phase B to 75C, while mixing. Add Phase A to Phase B under rapid agitation. Cool to 45C and add Phase C. Continue mixing till 35 to 40C.

Adaption of formula and its influence on the product:

Sunscreens are easily incorporated into a formula of this type. By reducing the concentration of water and or the oils, Escalol 507 (Van Dyk) can be substituted at approximately 5% to produce a SPF of 6-8.

Skin Care Cream

This product imparts good skin feel and has a high quality appearance, though the production is cost effective. There are also barrier and moisturizing properties which are highly effective hydration system for all skin types. The formula also will help reduce transepidermal water loss.

Oil Phase:

Cetylstearyl Alcohol 1618 (P&G)	4.50%
NF White Beeswax (Koster Keunen)	2.50%
Isopropyl Palmitate (Unichema)	3.00%
Light Mineral Oil (Witco)	5.00%
Propylene Glycol Dioctanate (Inolex)	1.50%
Stearic Acid (Unichema)	0.50%
Coconut Oil (CocoChem)	1.25%
Propyl Paraben (Sutton)	0.20%

Water Phase:

Water (Distilled)	74.25%
Glycerine (UniChema)	5.50%
Carboxymethyl Cellulose (CMC, Hercules)	0.30%
Carbopol 940 (BF Goodrich)	0.60%
Sodium Borate (Borax)	0.40%
Triethanolamine (Dow)	0.30%
Methyl Paraben (Sutton)	0.20%

Procedure:

Add to the water phase under agitation, in order; CMC until everything is dissolved then methyl paraben while mixing. Then add carbopol, mix till homogeneous making sure there are no agglomerations. Add the remainder of the water phase components, mix and heat to 75C. Add all the oil phase components, heat till 75C and mix. Add slowly the oil phase to the water phase under agitation maintaining a temperature of 75C. When the oil phase is added, cool and pour into container.

Adaption of formula and its influence on the product:

By reducing the concentrations of mineral oil by 2.0%, propylene glycol dioctanate by 0.5% and the addition of 2.5% Escalol 507 (Van Dyk) the cream will take on an SPF of 6-8. The product has the same appearance, skin feel and stability. Fragrances can also be added without affecting its texture.

"Arctic Mist" Spray Gel

This water white, clear, sprayable gel uses Diaformer Z-301 to provide excellent hold, clear films, and no flaking. It exhibits good viscosity characteristics. Sandoxylate SX-424 is used as a fragrance solubilizer.

<u>Ingredients:</u>	<u>%W/W</u>
Deionized Water	91.80
Carbopol 980	0.30
NaOH 10%	0.40
Diaformer Z-301	6.95
Glycerin	0.10
Disodium EDTA	0.05
Sandoxylate SX-424	0.25
Fragrance	0.05
Preservative	0.10

Procedure:

Add Carbopol 980 to water with rapid agitation and mix until homogeneous. Add NaOH 10% to neutralize the Carbopol 980. Mix well. Add Diaformer Z-301 and Glycerin one at a time with mixing. Add Disodium EDTA. Presolubilize fragrance in Sandoxylate SX-424 and add to batch. Mix well. Adjust pH as needed with NaOH 10%.

Properties:

pH: 6.5

Viscosity: 12,000-14,000 cps.

Appearance: Water white, clear gel

Formulation CHF-20

Super Hard Hold Hair Spray

Diahold A-503 is used to create this super hard hold hair spray that meets the 80% VOC requirements. Its ability to form hard, crystal clear films result in a hair spray that has good gloss and excellent hold on the hair. Diahold A-503 is also easily removed from the hair by shampooing.

<u>Ingredients:</u>	<u>%W/W</u>
Diahold A-503	17.50
Deionized Water	12.70
Dow Corning 190	0.10
SD 40 Alcohol	69.50
Lauramide DEA	0.10
Fragrance	QS

Procedure:

Add Diahold A-503 to alcohol with mixing. Add water and mix well. Add remaining ingredients in order with mixing.

Properties:

Appearance: Pale Yellow Liquid

pH: 8.2-8.6

Formulation CHF-18

Mackester SP (Glycol Stearate Modified)	3.0
BHA	0.1
Propyl Paraben	0.1
B. Mackalene 316 (Stearamidopropyl Dimethylamine Lactate)	25.0
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance qs to	100.0

Procedure:

1. Heat part A to 70 degrees C.
2. Add Mackalene 316 to water and heat to 70 degrees C.
3. Add A to B and with continuous blending cool to 45 degrees C.
4. Add remaining components and cool.

Hair Conditioner

	<u>Weight, %</u>
Mackadet CBC (Conditioner concentrate for viscous cream consistency)	5.0
Mackstat DM (DMDM Hydantoin)	qs
Water, Fragrance, Dye qs to	100.0

Procedure:

1. Add Mackadet CBC to water and heat to 70 degrees C.
2. With continuous mixing cool to 50 degrees C.
3. Add remaining components and cool.

Pearl Conditioner

	<u>Weight, %</u>
Macadet LCB (Liquid Conditioner Concentrate that can be cold blended)	10.0
Triethanol Amine	1.0
Sodium Chloride	0.5
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance q.s. to	100.0

Procedure:

1. Warm water to 40 degrees C.
2. Add sodium chloride and TEA.
3. Add Mackadet LCB and blend slowly.
4. When completely dispersed add dye, preservative and fragrance.
5. Cool and fill.

Cream Hair Rinse

<u>Ingredients:</u>	<u>%W/W</u>
Cetyl alcohol	1.50
Brij 721S	1.00
Forestall	1.40
Water, deionized	96.10

Procedure:

Heat to 70 deg. C with stirring until uniform. Cool with stirring and add makeup water.

Formula PC-8214

Hydrogen Peroxide Emulsion

<u>Ingredients:</u>	<u>%W/W</u>
A Cetyl alcohol	6.00
Brij 721, Steareth-21	5.00
Silicone oil, 350 cs.	0.50
B Water, deionized	66.30
C Hydrogen peroxide, 27% dilution grade	22.20

Procedure:

Heat (A) to 60C and (B) to 65C. Add (B) to (A) slowly with moderate agitation. Add (C) below 35C. Replace water lost by evaporation and adjust pH to 3.5-4.0 with dilute phosphoric acid (10% C.P.). Package in suitable container for possible evolution of oxygen.

Formula HC-13

Permanent Wave Lotion

<u>Ingredients:</u>	<u>%W/W</u>
A Forestall	1.40
Brij 35 SP	2.00
Water, deionized	80.10
B Ethanolamine	9.50
C Thioglycolic acid	7.00

Procedure:

Mix (A) with gentle heat if necessary until uniform. Add (B). Add (C). Adjust pH to 9.0-9.5 with additional ethanolamine or thioglycolic acid.

Formula HC-15

SOURCE: ICI Surfactants: Suggested Formulations

Deep Conditioning Treatment

Deep conditioning formula based on a controlled deposition of Cholesterol.

<u>Ingredients</u>	<u>%W/W</u>	<u>Function</u>
1. Distilled/Deionized Water	75.17	-----
2. Propylene Glycol	3.00	Moisture
3. Ritachol (R.I.T.A. Blend)	2.00	Control
4. Rita-STAC (Steartrimonium Chloride)	1.50	Conditioner
5. Cholesterol NF	1.00	Repair
6. Supersat AWS-4 (PEG-20 Hydrogenated Lanolin)	2.00	Repair
7. Ritachol 1000 (R.I.T.A. Blend)	10.00	Emulsifier
8. Petrolatum	5.00	Repair
9. Fragrance	0.30	Odor
10. Kathon CG	0.03	Preservative

Compounding Procedure:

Combine items 1 and 2 and heat to 75-80C. In a separate beaker combine items 3-8 and heat to 70C. Mix and add to water phase with good mixing. Cool to 50C and add perfume and preservative.

Ref. No. 118-116

Intensive Conditioner with Body

A detangling conditioner with great wet/dry combing. Hair has increased body/volume.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Rita-BTAC (Behentrimonium Chloride)	4.00	Conditioner, Anti-Static
2. Rita CA (Cetyl Alcohol)	3.00	Emulsifier, Thickener
3. Rita SA (Stearyl Alcohol)	1.00	Emulsifier, Thickener
4. Distilled/Deionized Water	80.80	-----
5. Volatile Silicone Fluid 344 or 345	5.00	Lubricant, Emollient
6. Silicone Fluid 200 (100 cSt)	5.00	Lubricant, Emollient
7. Wheat Germ Oil	1.00	Nourishment
8. Glydant	0.20	Preservative

Compounding Procedure:

Heat items 1-3 to 70C. Heat water to 80-85C. Add items 1-3 to water and mix until it reaches 50C. Then add items 5-7 and mix. At 45C add items 8. Mix until 35-40C.

Ethnic Hair Glosser/Conditioner

This water-in-oil formula based on a silicone polymeric emulsifier is designed for use as a leave on conditioner to give gloss and body especially for hair which has been chemically treated.

<u>Ingredients:</u>	<u>%w/w</u>
Phase A: Oil Phase:	
Cetyl Dimethicone Copolyol (Abil EM-90)	2.0
Petrolatum	6.0
Mineral Oil	10.0
Cetyl Dimethicone Copolyol (Abil Wax 9801)	2.0
Octyl Palmitate (Tegosoft OP)	3.5
Isopropyl Palmitate (Tegosoft P)	3.5
Lanolin Oil	3.0
Phenyl Trimethicone (Abil AV 20)	2.0
Phase B:	
Fragrance	Q.S.
Phase C: Water Phase:	
Water	64.3
Sodium Chloride	0.7
Glycerin	3.0
Preservatives	Q.S.

Procedure:

1. Blend the components of Phase A together, heating to 50C. Mix until fully dispersed.
2. Cool to 40-45C with agitation. Add fragrance.
3. In a separate vessel, mix the components to Phase C together.
4. Add Phase C to Phase A/B slowly with slow lightning mix. Mix until all water is incorporated into the oil phase.
5. Homogenize.

Ethnic Pump Spray Conditioner

<u>Ingredients:</u>	<u>%w/w</u>

Hair Brushing Lotion

	<u>Wt%</u>
A. Amihope LL	0.5
TL-10 (PEG-20 Sorbitan Monolaurate)	0.5
1,3-Butanediol (Butylene Glycol)	0.5
Stearyl Alcohol	0.3
Carbopol 941 (Carbomer 941)*	10.0
B. Water	68.2
C. Ethanol	20.0

*0.5% wt Carbomer 941 aqueous solution (neutralized by NaOH)

Procedure:

1. Each chemical cited in (A) is weighed in a glass vessel. Heat it to 60-70C and stir until the solution is homogeneous.
2. Add a previously warmed water (B) [60-70C] to the former prepared solution and cool it to room temperature with stirring.
3. Add a 20.0g ethanol (C) to the cooled solution with stirring.

Note:

This hair brushing lotion has a good antistatic effect and gives good combability. Amihope LL decreased the friction between hair and comb or brush remarkably.

Usage: Spray the hair before brushing.

Hair Brushing Lotion

	<u>Wt%</u>
Amihope LL	0.5
POE (20) Sorbitan Monolaurate (Polysorbate 20)	0.5
Ethanol	99.0

Procedure:

Mix all components at room temperature.

Note:

This hair brushing lotion alcoholic type has good antistatic effect and smoothness for the hair.

Amihope LL acts as hair conditioning agent instead of the cationic surfactant.

Usage: Spray the hair before brushing.

SOURCE: Ajinomoto USA, Inc.: **Suggested Formulations**

Hair Conditioner

This formula incorporates a mixture of protein and extracts the have a good affinity for hair, especially when bleached and damaged, leaving your hair smooth, silky and more manageable.

Water Phase I:

Water (Distilled)	61.20%

Active Phase:

Ginseng Extract (Active Organics)	1.00%
Arnica Extract (Active Organics)	1.00%
Wheat Protein (Vege-Tech)	0.70%
Fragrance	0.20%

Procedure:

Disperse the cellosize in the water and when dispersed and added the rest of phase. Heat the water phase I to 80C and the oil phase to 82C. Slowly add the oil phase to water phase I under moderate agitation. Cool to 70C and add water phase II. Continue mixing and added the active phase at 35C. Cool to room temperature.

Adaptation of formula and its influence on the product:

Other active compounds and conditioning agents are easily introduced into this type of formula.

**Hair Conditioner with Moisturizers & Quaternium-79 Hydrolyzed
Animal Protein**

	<u>Weight, %</u>
Mackol 1618 (Cetearyl Alcohol)	3.0
Mackernium SDC-85 (Stearalkonium Chloride)	3.0
Propylene Glycol	1.0
Glycerin	1.0
Mackamide AME-100 (Acetamide MEA)	1.0
Mineral Oil	1.0
Mackpro NLP (Quaternium-79 Hydrolyzed Animal Protein) (Natural Lipid Protein)	2.0
Mackstat DM (DMDM Hydantoin)	qs
Deionized Water, Fragrance, Dye qs to	100.0

pH: 3.5-4.5

Viscosity (cps 25 degrees C): 1500-3000

Procedure:

1. Melt waxes and oils to 70 degrees C.
2. Separately heat water plus Mackpro NLP to 70 degrees C. and add hot water solution to hot oils and waxes.
3. Start stirring vigorously for 10 minutes and then start slow cooling while mixing and at 40 degrees C. add Mackstat DM then fragrance and dye and slow mixing down close to room temperature.
4. Stop mixing at 30 degrees C.
5. Adjust pH with citric acid.

High Quality Conditioner

	<u>Weight, %</u>
Mackernium SDC-25 (Stearalkonium Chloride)	10.0
Mackol 1618 (Cetearyl Alcohol)	2.0
Brij 72	2.0
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance qs to	100.0

Procedure:

1. Add components to water and heat to 70 degrees C.
2. With mild agitation blend until homogeneous.
3. Cool to 50 degrees C. and add dye and fragrance.
4. Cool and fill.

Hair Conditioning Gel

<u>Ingredients/Trade Name:</u>	<u>% by Weight</u>
Part A:	
Deionized Water	89.94
Hydroxyethylcellulose	0.80
Hydroxypropyl Guar	
Hydroxypropyltrimonium Chloride	0.40
Citric Acid	0.06
Methylparaben	0.02
Part B:	
Panthenol	0.30
Sodium PCA/Ajidew N-50	3.00
Partially Deacetylated Chitin (1% Solution)/Marine-Dew	3.00
Polyquaternium-11	2.00
Diazolidinyl Urea	0.30

Procedure:

Add part A ingredients in order. Heat to 75 degrees Centigrade. Mix until clear and uniform. Cool to 50 degrees Centigrade. Add part B ingredients in the given order, mixing well after each addition. Continue mixing and cooling to 35 degrees Centigrade.

Appearance: Clear gel

pH: 4.5-5.5

Viscosity: 7,000-10,000 (RVT #5 @ 10rpm @ 25 degrees C)

Hair Conditioner with CAE

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
Cetanol	3.0
Amitec LGS-2	2.0
Nikkol MYS-55	1.0
Phase B:	
CAE	1.0
A-SM	3.0
Prodew 100	2.0
Glycerin	10.0
Methylparaben	0.2
Water	77.8

Specifications: pH: 5.0 Vis: 2500 cps

Procedure:

Mix ingredients Phase A and heat to 75-80 degrees C. Mix ingredients Phase B and heat to 75-80 degrees C. Add Phase A to Phase B and mix with homomixer (1500 to 2500 RPM). Cool to 35 degrees C.

This hair conditioner has good antistatic and conditioning effects.

Formula No. 1 CR-56-11

Hair Conditioning Lotion

<u>Ingredients:</u>	<u>%W/W</u>
A Brij 721S	1.30
Cetyl alcohol	0.90
Stearyl alcohol	0.60
Stearalkonium	0.50
B Water, deionized	96.70

Procedure:

Heat (A) to 60C and (B) to 62C. Add (B) to (A) with moderate agitation. Cool while agitating to 40C. Add water to compensate for loss due to evaporation.

Clear Hair Conditioner Lotion

<u>Ingredients:</u>	<u>%W/W</u>
A Hydroxyethyl cellulose, Natrosol 250HR	40.00
B Forestall	1.40
Water, deionized	58.60

Procedure:

Mix (A) in advance by dispersing hydroxyethyl cellulose in water to yield a 3% solution. Prepare solution (B). Add (B) to (A) with stirring until homogeneous.

Hair Conditioning Gel

<u>Ingredients:</u>	<u>%W/W</u>
A Mineral oil	11.00
Arlasolve 200	20.00
Brij 93	6.00
B Water, deionized	49.60
Propylene glycol	5.00
Sorbo	7.00
Forestall	1.40

Procedure:

Heat (A) and (B) to 90C. Add (B) to (A) with gentle stirring. Cool to 60C and add make-up water. Stir until uniform and pour while still fluid.

Hair Dressing
W/O Cold Process

<u>Ingredients:</u>	<u>%w/w</u>
Phase A:	
Cetyl Dimethicone Copolyol (Abil EM-90)	2.0
Mineral Oil	7.3
Caprylic/Capric Triglycerides (Tegosoft CT)	3.0
Cetyl Dimethicone (Abil Wax 9801)	1.0
Cyclomethicone (Abil B 8839)	5.0
Polyglyceryl-4 Isostearate (Isolan GI 34)	1.0
Cetearyl Isononoanoate (Tegosoft CI)	1.5
Cetyl Octanoate (Tegosoft CO)	0.8
Fragrance	Q.S.
Phase B:	
Water	72.9
Propylene Glycol	3.0
Quaternium-80 (Abil Quat 3270)	0.5
Glycerin	1.2
Sodium Chloride	0.8
Preservatives	Q.S.

Procedure:

- Mix the ingredients of Phase A together.
- Dissolve the Sodium Chloride into the water. Add the Glycerin and Propylene Glycol. Mix until clear.
- Add the preservatives and Quaternium-80 to the water phase. Mix until fully dispersed.
- Add Phase B to Phase A slowly with soft propeller mixing. Maintain, at all times, a creamy appearance. 5. Homogenize.

Hair Styling Gel

<u>Ingredients:</u>	<u>%w/w</u>
Cyclomethicone (and) Dimethiconol (and) Dimethicone (Abil OSW-12)	22.20
Phenyl Trimethicone (Abil AV-20)	3.00
Cyclomethicone (Abil B 8839)	3.00
Propylene Glycol	42.00
Hexylene Glycol	4.55
Water	22.00
Glycerin	1.00
Preservatives	Q.S.
Polyacrylamide (and) C13-14 Isoparaffin (and) Laureth-7	2.25

Procedure:

Add the ingredients in order, mixing well between additions. When all ingredients are combined, continue mixing until viscosity increases. Final product is a translucent, colorless gel.

Formula BAM-5-43

Hair Pomade

High luster hair pomade based on natural Simchin and Shebu. Pationic SSL and Ritapan DL provide moisturization for healthy looking hair.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Mineral Oil - 90 wt.	5.00	Luster
2. Simchin Refined (Jojoba Oil)	2.00	Emollient
3. Petrolatum	85.70	Hold
4. Shebu (Shea Butter)	2.00	Luster
5. Lanolin USP (Lanolin)	2.00	Hold
6. Ritapan DL (Panthenol DL)	0.50	Health
7. Pationic SSL (Sodium Stearoyl Lactylate)	2.40	Moisture
8. Fragrance	0.20	Odor
9. Glydant	0.20	Preservative

Compounding Procedure:

Blend items 1-7 at 70C. Stir until uniform. Cool to 40C and add remaining items. Fill into containers.

Ref. No. 118-173

Hair Pomade

Quality hair pomade formulated with Simchin and Shebu for luster. Pationic ISL provides moisturization.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Ritawax (Lanolin Alcohol)	1.50	Feel
2. Mineral Oil	5.00	Spread
3. Simchin Refined (Jojoba Oil)	2.00	Luster
4. Shebu (Shea Butter)	1.00	Luster
5. Petrolatum	84.60	Spread
6. Ritalan (Lanolin Oil)	3.00	Luster
7. Pationic ISL (Sodium Isostearoyl Lactylate)	2.50	Moisture
8. Glydant	0.20	Preservative
9. Fragrance - Jergens Type R-30318	0.20	Odor

Compounding Procedure:

Blend items 1-7 and heat until clear. Cool with mixing until 50C. Add perfume and preservative. Fill hot while mixing.

Ref. No. 118-178

Hair Relaxer - Glycerine

Glycerine based hair relaxer which moisturizes hair. Emulsion stability based on Ritachol 2000.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Ritachol 2000 (R.I.T.A. Blend)	15.00	Emulsifier
2. Mineral Oil 70 Wt.	17.00	Spread
3. Ritachol (Mineral Oil and Lanolin Alcohol)	2.00	Feel
4. Petrolatum	17.50	Viscosity
5. Ritahydrox (Hydroxylated Lanolin)	0.50	Stability
6. Propylparaben	0.13	Preservative
7. Rita SA (Stearyl Alcohol)	2.00	Emulsifier
8. Glycerine	6.00	Moisture
9. Distilled/Deionized Water	29.67	-----
10. Methylparaben	0.20	Preservative
11. Sodium Hydroxide (25% Solution)	10.00	Relaxing

Compounding Procedure:

Combine items 1-7 in Kitchen Aid mixer bowl and heat to 80C. In separate beaker heat items 8-10 to 85C. Add this water mixture to oil mixture and mix at low speed for 1 minute. Add cold water to cooling pan and cool to 65C. Add Sodium Hydroxide solution and mix. Then add ice to cooling pan and cool to 25C.

Note: Inversion will occur during mixing.

Ref. No. 118-168

Hair Relaxer - Glycol

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Ritachol 2000 (R.I.T.A. Blend)	15.00	Emulsifier
2. Mineral Oil NF	17.00	Emollient
3. Ritachol (Mineral Oil and Lanolin Alcohol)	2.00	Spread
4. Petrolatum	17.50	Spread
5. Ritahydrox (Hydroxylated Lanolin)	0.50	Stability
6. Propylparaben	0.13	Preservative
7. Rita SA (Stearyl Alcohol)	2.00	Emulsifier
8. Propylene Glycol	6.00	Humectant
9. Distilled/Deionized Water	29.67	-----
10. Methylparaben	0.20	Preservative
11. Sodium Hydroxide (25% Solution)	10.00	Active

Compounding Procedure:

Weigh and melt items 1-7 at 80C in Kitchen Aid mixer bowl. In separate beaker heat items 8-10 to 85C. Add water phase to oil phase and mix for one minute. Add cooling water to mixer cooling pan and cool to 65C. Add Sodium Hydroxide, then add ice to cooling pan, and then cool to 25C with constant agitation. Note inversion during cooling process.

Hair Sculpting Cream

This cream gives shine to the hair without being greasy and makes hair easy to style and manage. The Geahlene gives viscosity to the cream and helps hold hair in place. Inclusion of wheat protein adds body and conditioning effects.

<u>Ingredient/Trade Name:</u>	<u>Weight%</u>
A Deionized Water	62.86
Soluble Wheat Protein/Tritisol	1.00
Sodium Chloride	0.80
Panthenol/DL-Panthenol	0.10
Diazolidinyl Urea/Germall II	0.30
PVP/PVP K-30	1.00
B Phenoxyethanol/Emeressence 1160	0.70
Methylparaben	0.20
Propylene Glycol	5.00
C Polyglycerol-4 Isostearate (and) Cetyl Dimethicone	
Copolyol (and) Hexyl Laurate/Abil WE-09	5.00
Mineral Oil (and) Hydrogenated Butylene/Ethylene/ Styrene Copolymer (and) Hydrogenated Ethylene/ Propylene/Styrene Copolymer//Geahlene 750	20.00
Phenyl Trimethicone/Dow Corning 556	3.00
Fragrance	0.04

Procedure:

Mix part A ingredients until uniform. Heat part B to 60C with gentle stirring until clear. Add part B to part A with mixing. In a separate container, premix part C. Slowly add parts A and B to part C in small increments with high shear mixing until uniform.

SOURCE: Penreco: Suggested Formulation

Hair Conditioner**Part A:**

Deionized Water	90.60
Busan 1504	0.10
Panthenol	0.25
Aloe Vera 200X	0.05
Disodium EDTA	0.05
Cetearyl Alcohol & Cetearath-20	1.10
Stearyl Alcohol & Cetrimonium Bromide	5.00
Jojoba Oil	0.30

Part B:

Acetamide MEA & Lactamide MEA	1.00
Hydrolyzed Wheat Protein & Wheat Oligosaccharides	1.25
Sodium PCA	0.30

Procedure:

Heat DI water to 75C. Add Busan 1504 preservative to water and mix until dissolved. Maintain temperature at 75C and add remaining Part A ingredients in order shown, ensuring that each is completely blended into batch before the addition of the next ingredient. Mix while cooling to 40C. Add Part B ingredients in order shown and mix until each is dissolved. Cool while mixing to 35C.

I. Water	37.35
Amphomer	3.75
Aminomethyl Propanol	0.60
Dow Corning 929 Emulsion	0.40
Phospholipid EFA	0.60
SD3A Alcohol	10.00
II. Hydroxyethyl Cellulose	0.30
Water	37.00
III. Propellant	10.00

Procedure:

Prepare Part I and II separately. To prepare Part II, carefully sprinkle hydroxyethyl cellulose into water with good agitation. Heat may be applied to help solubilization. Blend Part II to I and then aerosolize.

Formula F-554

Light Oil Free Conditioner

Light oil free with a touch of foaming to cleanly condition hair to the ends.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Grilloten LSE-87K (Sucrose Cocoate)	2.00	Conditioning, Mild
2. Grilloten PSE 141G (Sucrose Stearate)	4.00	Cleaning, Mild
3. Rita Cetearyl 70/30 (Cetearyl Alcohol)	2.50	Re-fattig
4. PEG-20 Cetearyl Alcohol	0.50	Combing
5. Propylene Glycol	1.00	Humectant
6. Polyquta 400 (Polyquaternium-10)	1.50	Combing, Style
7. Glycerine	3.00	Moisture
8. Distilled/Deionized Water	85.17	-----
9. Fragrance-Pert Type 189-724	0.30	Odor
10. Kathon CG	0.03	Preservative
11. Citric Acid (25% Soln.)	q.s.	pH Control

Compounding Procedure:

Heat 1-4 to 70C. Separately disperse item 6 in water. Then add items 5 and 7. Heat to 80-85C. Then add items 1-4 to mixture. Cool to 40C and add perfume and preservative. Adjust pH with Citric Acid to pH 5.0.

Ref. No. 118-121

Aloe Vera Hair Conditioner (Light)

A light strength conditioner specially formulated for normal hair. Adds sheen to hair.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Distilled/Deionized Water	94.47	----
2. Ritaloe 200M (Aloe Vera Gel)	0.25	Shine
3. Rita CA (Cetyl Alcohol)	2.00	Emulsifier, Thickener
4. Rita SA (Stearyl Alcohol)	1.00	Emulsifier, Thickener
5. Rita-STAC (Steartrimonium Chloride)	1.50	Conditioner, Anti-static
6. Simchin Refined (Jojoba Oil)	0.75	Conditioner, Shine
7. Kathon CG	0.03	Preservative
8. Fragrance	q.s.	Odor

Compounding Procedure:

Heat items 1 and 2 to 70C. Heat items 3-6 to 65-70C and add with stirring. Continue mixing until batch reaches 40-45C. Add Kathon and Fragrance.

Ref. No. 116-174

Low Cost Relaxer

A lower cost relaxer with reduced oil phase materials. Laneto-100 provides scalp protection from irritation.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Ritachol 2000 (R.I.T.A. Blend)	15.00	Emulsifier
2. Rita SA (Stearyl Alcohol)	1.00	Emulsifier
3. Ritoleth-10 (Oleth-10)	2.00	Emulsifier
4. Petrolatum	8.00	Viscosity
5. Mineral Oil 70 wt.	10.00	Spread
6. Laneto-100 (PEG-75 Lanolin)	0.50	Feel
7. Propylene Glycol	2.00	Moisture
8. Distilled/Deionized Water	52.50	-----
9. Sodium Hydroxide (25% Soln.)	9.00	Relaxer

Compounding Procedure:

Combine items 1-5 and heat to 60C. In a separate container, heat items 6-8 and heat to 60C. Add to oil phase and mix at low speed. Cool to 45C and add Sodium Hydroxide solution. Continue mixing and fill to jars at 30C.

Ref. No. 120-26

Extra Stable Relaxer

Very cost efficient, stable relaxer formulation which is easy to process.

<u>Ingredients:</u>	<u>% W/W</u>	<u>Function</u>
1. Ritachol 5000 (R.I.T.A. Blend)	10.00	Emulsifier
2. Mineral Oil 70 Wt.	16.00	Spread
3. Ritachol (Mineral Oil and Lanolin Alcohol)	2.00	Feel
4. Petrolatum	17.00	Texture
5. Ritahydrox (Hydroxylated Lanolin)	0.60	Stability
6. Rita SA (Stearyl Alcohol)	2.00	Emulsifier
7. Ritox 52 (PEG-40 Stearate)	1.50	Stability
8. Glycerine	6.00	Moisture
9. Distilled/Deionized Water	34.70	-----
10. Methylparaben	0.20	Preservative
11. Sodium Hydroxide (20% Solution)	10.00	Relaxer

Compounding Procedure:

Combine items 1-7 in orbital mixer at 80C. Combine items 8-10 at 80C and add to oil mixture. Cool to 65C. Add Sodium Hydroxide solution with agitation. Cool in ice bath to 25C. Homogenize if necessary to further improve stability.

Medium Hold, 80% VOC Pump Hair Spray

Diaformer Z-A provides a medium hold in this clear, water white spray. It also reduces static and improves manageability when the hair is combed. Its clear, flexible film gives a natural looking hold while offering excellent curl retention.

<u>Ingredients:</u>	<u>%W/W</u>
Phase A:	
Diaformer Z-A	5.00
Dow Corning 190	0.20
Monamide 716	0.10
SD 40 Alcohol	75.00
Fragrance	0.10
Deionized Water	Q.S.

Procedure:

Add Diaformer Z-A to alcohol, mixing well. Add water with mixing. Add remaining ingredients one at a time with mixing.

Properties:

Appearance: Crystal clear, water white liquid

Formulation CHF-12

55% VOC Pump Hair Spray

This 55% VOC hair spray incorporates Diaformer Z-400. This deodorized polymer is well suited to lightly fragranced products. It provides a medium hold in this crystal clear, water white spray. Velsan P8-3 acts a non-greasy superfatting agent.

<u>Ingredients:</u>	<u>%w/w</u>
Phase A:	
Diaformer Z-400	4.00
SD 40 Alcohol	40.00
Velsan P8-3	0.50
Fragrance	0.05
Deionized Water	Q.S.

Procedure:

Add Diaformer Z-400 to alcohol, mixing well. Add water with mixing. Add remaining ingredients one at a time with mixing.

Properties:

Appearance: Crystal clear, water white liquid

Formulation CHF-14

Medium Strength Hair Conditioner

Conditioning designed to provide nourishing and combing benefits while leaving a clean feel in the wet mode due to Dimethyl Quat.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Rita-SBC (Stearalkonium Chloride)	1.14	Conditioner
2. Rita-CTAC (Cetrimonium Chloride)	0.48	Conditioner
3. Rita-CA (Cetyl Alcohol)	0.85	Re-fattening
4. Citric Acid @ 100%	0.09	pH Control
5. Dimethyl Stearamine (Adogen MA-108)	0.13	Conditioner
6. Distilled/Deionized Water	94.81	-----
7. Promois WK-HQ (Hydroxypropyl trimonium Hydrolyzed Keratin)	0.05	Body
8. Ritaleo 200M (Aloe Vera Gel)	0.05	Body
9. Ritapan DL (dl-Panthenol)	0.05	Body
10. Propylene Glycol	0.50	Clean Feel
11. Hydroxyethyl Cellulose (Natrosol 250 HHR)	1.00	Viscosity
12. Kathon CG	0.03	Preservative
13. Dow Corning 2-7224	0.40	Combing
14. Dow Corning 344 Fluid	0.17	Combing
15. Fragrance	0.25	Odor

Compounding Procedure:

To 15% of total water at 65C add separately items 1-4. Heat to 70C, add item 5 and mix 20 min. Add another 10% of the water at room temperature and continue mixing 20 min. To remaining 75% of water add items 7,8 and 9 at room temperature. Add item 10 and slowly sift in item 11. Agitate 15 min. while heating batch to 35C. When batch thickens, increase agitation for up to 60 min. until uniform. Add items 12,13 and 14, continue mixing. Then add quaternary/fatty alcohol phase (items 1-6) and fragrance. Mix until uniform.

Ref. No. 116-181B

Medium Hair Conditioner

Humectant conditioner to maximize combing from silicone and body from glycerine.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Rita-STAC (Steartrimonium Chloride)	2.40	Conditioner
2. Rita GMS (Glyceryl Stearate)	1.00	Control
3. Rita CA (Cetyl Alcohol)	5.00	Coating
4. Ritaceti (Cetyl Esters)	2.00	Combing
5. Ritacet-20 (Ceteareth-20)	0.50	Emulsifier
6. Glycerine	1.00	Humectancy
7. Distilled/Deionized Water	85.77	-----
8. Dow Corning 344 Fluid	2.00	Combing, Shine
9. Fragrance - Finesse Type	0.30	Odor
10. Kathon CG	0.03	Preservative

Compounding Procedure:

Heat items 1-5 to 70C. In separate beaker heat items 6 and 7 to 75C. Add 1-5 to water. Mix and cool to 50C. Add silicone and mix. Add perfume and preservative.

Ref. No. 118-117

Moisture Balance Conditioner w/Cropeptide W

Although this easy-to-make conditioner contains few ingredients, it delivers big conditioning benefits.

<u>Ingredients:</u>	<u>%</u>
Part A:	
Incroquat CR Conc. (Cetearyl Alcohol (and) PEG-40 Castor Oil (and) Stearalkonium Chloride)	6.00
Part B:	
Deionized Water	92.70
Part C:	
Cropeptide W (Hydrolyzed Wheat Protein (and) Wheat Oligosaccharides)	1.00
Methyl paraben	0.20
Propyl paraben	0.10

Procedure:

Heat Part A and Part B separately to 70-75C with mixing. At 70-75C, add Part B to Part A with mixing and cool to 40C. Add ingredients of Part C individually with mixing and cool to desired fill temperature.

pH: 4.0+-0.5

Viscosity: 2,000+-10% (@25C)

N.A.T.C. Approved

SOURCE: Croda Inc.: Formulation HP-158

"Leave-On" Conditioner Concentrate

1. Incorporate fragrance. Take an exact weight of Concentrate and add exact weight of fragrance (depending on level after dilution. Blend together with thorough mixing.

Note: Concentrate contains only enough preservative to protect the concentrate. Please add additional preservative to product diluted solution.

2. Dilute the above concentrated blend with 7 parts of deionized water for a firm set, or with 9 parts deionized water for regular setting product.
3. Apply finished product to shampooed and towel dried hair. Don't rinse. Style hair.

Pump Gel Type Spritz

A gel setting lotion which can be dispensed from a pump. Contains setting agents, anti-stats and Ritapan DL for repair and luster.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Distilled/Deionized Water	88.87	-----
2. Propylene Glycol	5.00	Humectant
3. Ritapan DL (Panthenol DL)	1.00	Repair
4. Ritaloe 200M (Aloe Gel)	1.00	Repair
5. Polyquta 3000 (Polyquaternium-10)	2.00	Set, Anti-Stat
6. Ritabate 20 (Polysorbate 20)	1.00	Stability
7. Hydroxyethylcellulose	1.00	Gelling
8. Rita CTAC (Cetrimonium Chloride)	0.50	Conditioning
9. Fragrance	0.20	Odor
10. Kathon CG	0.03	Preservative

Compounding Procedure:

Combine items 3 and 4 with the water and heat to 60C. Mix until clear. Disperse items 5 and 7 into batch. Mix until uniform (about 30 minutes). Then add remaining items in order and mix well.

Ref. No. 118-180

Moisturizing Hair Styling Gel

<u>Ingredient</u>	<u>%W/W</u>	<u>Function</u>
1. Distilled/Deionized Water	58.20	-----
2. Acritamer 940 (Carbomer 940)	0.60	Gelling
3. Glycerine	10.00	Conditioning
4. Ritapan DL (Panthenol dl)	0.20	Moisturization
5. Ethanol @ 95%	10.00	Clarity
6. Laneto 50 (PEG-75 Lanolin)	5.00	Shine
7. Ritaphenone 3 (Benzophenone-3)	0.10	UV Absorber
8. Tetrasodium EDTA	0.10	Clarity
9. PPG-12-Buteth-16	5.00	Set
10. PVP	1.50	Set
11. Fragrance	0.10	Odor
12. DMDM Hydantoin	0.20	Preservative
13. Triethanolamine @ 99%	0.60	pH
14. Distilled/Deionized Water	5.40	-----
15. Ritalastin EL 30	3.00	Moisture

Compounding Procedure:

Combine items 1 + 3 and mix. Add item 2 slowly with agitation until uniform. Separately combine items 4-12 and item 15. Mix until uniform. Add to Acritamer mixture. Premix 13 & 14 for 10% TEA solution. Add to mixture and agitate during thickening.

Pump Spray Hair Detangler

Healthy shine detangling spray based on cationics.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Rita-CTAC (Cetrimonium Chloride)	2.00	Cationic
2. Distilled/Deionized Water	88.50	-----
3. Dimethicone Copolyol (Abil B 88183)	1.00	Slip
4. Supersat AWS-4 (PEG-20 Hydrogenated Lanolin)	1.00	Feel
5. Glycerine @ 99%	4.00	Moisture
6. Propylene Glycol	2.00	Moisture
7. Ritapan DL (Panthenol DL)	1.00	Health
8. Simchin Refined (Jojoba Oil)	0.15	Shine
9. Glydant	0.20	Preservative
10. Fragrance - Pert Plus Type #189-724	0.15	Odor

Compounding Procedure:

Heat water to 87C and add item 4. Mix until clear. Add remaining ingredients except preservative and perfume. Cool to 46C and add items 9 and 10.

Ref. No. 118-171

Hot Oil Treatment

Hot oil treatment for deep penetration of the hair shaft. Rejuvenates hair to its healthy state.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Mineral Oil 65/70	89.00	Moisture, Shine
2. Pationic ISL (Na Isostearoyl Lactylate)	5.00	Substantive
3. Lauryl Myristyl Alcohol	2.00	Coupling
4. Phenoxyethanol	1.00	UV Protection
5. Shebu Refined (Shea Butter)	0.50	Emollient
6. Lanolin-X-tra Deodorized (Lanolin)	2.00	Repair
7. Fragrance-Floral #169-120	0.30	Odor
8. Glydant	0.20	Preservative

Compounding Procedure:

Combine items 1-6 and heat to 165F. Mix and cool to 120F. Add perfume and preservative.

Ref. No. 118-119

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Ringin_g Gel

Clear ringin_g gel with moisturization from Pationic ISL and gel structure from Supersat.

Ingredients:

	<u>W/W</u>	<u>Function</u>
1. Distilled/Deionized Water	42.40	-----
2. Glycerine	15.00	Feel
3. Mineral Oil 70 sus.	12.00	Coat
4. Ritoleth 5 (Oleth-5)	10.00	Emulsifier
5. Supersat AWS 4 (Peg-20 Hydrogenated Lanolin)	17.00	Gel
6. Pationic ISL (Sodium Isostearoyl Lactylate)	1.00	Mildness
7. 2-Phenoxyethanol	2.00	Solubilizer
8. Germall II	0.40	Preservative
9. Fragrance	0.20	Odor

Compounding Procedure:

Heat items 1 and 2 to 165F. Heat items 3-7 to 165F. Add items 3-7 to items 1 and 2. Mix until uniform. Pour in jars at 135F.
Ref. No. 118-160

Micro Emulsion Ringin_g Gel

Shebu WS ringin_g micro emulsion gel. Ideal for hair dressing with mildness and shine.

Ingredients:

	<u>%W/W</u>	<u>Function</u>
1. Distilled/Deionized Water	53.70	-----
2. Glycerine	10.00	Feel
3. Mineral Oil, Light	12.00	Shine
4. Ritoleth 5 (Oleth-5)	10.00	Emulsifier
5. Supersat AWS 4 (PEG-20 Hydrogenated Lanolin)	12.00	Ring\Gel
6. Pationic ISL (Sodium Isostearoyl Lactylate)	1.00	Mildness
7. Shebu WS (PEG-50 Shea Butter)	1.00	Shine
8. Glydant (DMDM Hydantoin)	0.20	Preservative
9. Fragrance	0.10	Odor

Compounding Procedure:

Heat items 1,2 and 7 to 175F. Combine items 3,4,5 and 6 and heat to 175F. Add this to the first phase with agitation. (Note: process may need an add-back of 3-5% water). Cool to 130F or until thickening occurs. Add items 8 and 9. Add back water loss. Fill at this temperature into jars and cover.

Salon Type Hair Conditioner

State of the art protein/panthenol based hair conditioner designed for achievement of salon type performance.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Rita CA (Cetyl Alcohol)	0.85	Clean Feel
2. Rita-STAC (Steartrimonium Chloride)	0.44	Conditioner
3. Rita-CTAC (Cetrimonium Chloride)	0.48	Conditioner
4. Citric Acid @ 100%	0.09	pH Control
5. Dimethyl Stearamine (Adogen MA-108)	0.13	Conditioner
6. Distilled/Deionized Water	95.51	-----
7. Promois WK-HQ (Hydroxypropyl trimonium Hydrolyzed Keratin)	0.05	Body
8. Ritaloe 200M (Aloe Vera Gel)	0.05	Body
9. Ritapan DL (dl-Panthenol)	0.05	Body
10. Propylene Glycol	0.50	Clean Feel
11. Hydroxyethyl Cellulose (Natrosol 250 HHR)	1.00	Viscosity
12. Kathon CG	0.03	Preservative
13. Dow Corning 2-7224	0.40	Combing
14. Dow Corning 344 Fluid	0.17	Combing
15. Fragrance	0.25	Odor

Compounding Procedure:

To 15% of total water at 65C add separately items 1-4. Heat to 70C, add item 5 and mix 20 min. Add another 10% of the water at room temperature and continue mixing 20 min. To remaining 75% of water add items 7,8 and 9 at room temperature. Add item 10 and slowly sift in item 11. Agitate 15 min. while heating batch slightly to 35C. When batch thickens, increase agitation for up to 60 min. until uniform.

Ref. No. 116-181A

Salon Type Hair Conditioner

Salon type hair conditioning is achieved with the help of Shebu and an all-natural conditioning agent.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Ritachol 1000 (R.I.T.A. Blend)	5.00	Emulsifier
2. Shebu Refined (Shea Butter)	0.50	Natural Shine
3. Ritoleth-10 (Oleth-10)	0.50	Application
4. Rita-CTAC (Cetrimonium Chloride)	2.00	Conditioning
5. Glycerine	3.00	Moisture
6. Distilled/Deionized Water	88.67	-----
7. Fragrance - Silkience Type #169-120	0.30	Odor
8. Kathon CG	0.03	Preservative

Compounding Procedure:

Combine items 1-4 and heat to 70C. In a separate beaker combine items 5 and 6 and heat to 75-80C. Add items 1-4 to water mixture and mix until uniform. Cool to 40C and add fragrance and preservative.

Ref. No. 118-120

SOURCE: R.I.T.A. Corp.; Suggested Formulations

Silicone Hair Gel

Silicone based setting gel. High glycerine appropriate for curl activation. Ritapan D1 for humectancy.

<u>Ingredients:</u>	<u>%</u>	<u>Function</u>
1. Distilled/Deionized Water	81.10	-----
2. Acritamer 940 (Carbomer 940)	0.80	Gelling
3. Glycerine	10.00	Curl
4. Propylene Glycol	5.00	Emollient
5. Dimethicone Copolyol	1.00	Shine
6. Ritapan DL (Panthenol d1)	0.80	Moisture
7. Laneto 50 (PEG-75 Lanolin)	0.50	Shine
8. Fragrance	0.10	Odor
9. Glydant (DMDM Hydantoin)	0.20	Preservative
10.TEA @ 99%	0.80	pH

Compounding Procedure:

Disperse slowly item 2 into 90% of the water with agitation. Premix items 4,5,6 and 7 with agitation. Premix items 8 and 9 into item 3. Combine item 10 with remaining 10% of the water. Neutralize Acritamer solution. When complete add other premixes and mix until uniform.

Ref. No. 118-156

Shebu Hair Setting Gel

Water based setting gel with Shebu. The setting agent is plasticized with Supersat for softer hold.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Distilled/Deionized Water	60.80	-----
2. Acritamer 940 (Carbomer 940)	0.70	Gelling
3. Distilled/Deionized Water	26.50	-----
4. Glycerine	4.00	Moisture
5. Shebu WS (PEG-50 Shea Butter)	3.00	Luster
6. Supersat AWS 4 (Peg 20-Hydrogenated Lanolin)	1.00	Plasticizer
7. PVP K-30	2.00	Set
8. Ritapan DL (Panthenol d1)	0.20	Moisture
9. TEA @ 50%	1.40	pH
10.Fragrance	0.20	Odor
11.DMDM Hydantoin	0.20	Preservative

Compounding Procedure:

Slowly disperse Acritamer into item 1. Agitate until fully hydrated. Combine items 3-9 until uniform (slight heating may be necessary). Add this to the Acritamer mixture, add items 10 and 11, and agitate until uniform.

Section VII

Lotions

After Exercise Body Lotion

This refreshing lotion is an excellent carrier for fragrances and will provide moisturizing along with a skin smoothing effect.

	<u>% by Weight</u>
Part I:	
Water	51.65
Carbomer 940	0.25
Triethanolamine (99%)	0.40
Part II:	
Water	30.00
Phospholipid SV	1.00
SD3A Alcohol	15.00
Part III:	
Phenyl Dimethicone	1.50
Titanium Dioxide (Cosmetic White)	0.20

Procedure:

Slowly add Carbomer 940 to water with good agitation. After the Carbomer 940 is dissolved, add triethanolamine. In a separate container, mix water with Phospholipid SV and heat to 65C with mixing. When dissolved, cool to 30-35C then add SD3A alcohol. Blend Part II to I mixing well, and part III as a slurry and blend together until a uniform white lotion is obtained. Add color, fragrance and preservative as required and package.

Therapeutic Humectant Lotion

	<u>% by Weight</u>
Part A:	
Phospholipid SV	1.7
Glycerin	15.0
TiO ₂	0.5
Water	72.6
Methyl Paraben	0.2
Part B:	
Steareth-2	3.3
Hexyl Laurate	3.0
C12-C15 Alcohol Benzoates	2.0
Dimethicone and Trimethylsiloxysilicate	1.5
Propyl Paraben	0.2

Procedure:

Combine phases A and B separately with heating to 65C. Homogenize B into A for a sufficient time to ensure good emulsification. Stir cool to 45C, add fragrance, and package.

Comments:

This smooth pourable lotion provides instant relief of dry, chapped skin and provides a generous amount of emollients and glycerin. The use of Phospholipid SV eliminates any greasiness and leaves the skin with an elegant afterfeel.

Alpha Hydroxy Acid Lotion

Resulting product is a highly absorbent lotion that can be dispensed from a flexible tube or soft bottle. The alpha hydroxy acid (AHA) contained in this formula is buffered lactic acid with a use level of approximately 10%. The formulation utilizes a cationic and nonionic emulsification system consisting of Lexemul 561, Lexemul AR and Lexamine S-13. The cationic Lexamine S-13 enhances the substantivity of the formulation and may act as an auxiliary AHA buffer. The product produces minimal whitening during rub-out.

	<u>%w/w</u>
A. Deionized Water	67.42
Glycerin USP (99.7%)	3.00
Methylparaben (Lexgard M)	0.20
2,4-Dichlorobenzyl Alcohol (Myacide SP)	0.20
Lactic Acid USP (88%)	0.60
B. Glyceryl Stearate (and) PEG-100 Stearate (Lexemul 561)	3.00
Glyceryl Stearate (and) Stearamidoethyl Diethylamine (Lexemul AR)	1.25
Stearamidopropyl Dimethylamine (Lexamine S-13)	0.50
Cetyl Alcohol (Adol 52)	0.50
Caprylic/Capric Triglyceride (Lexol GT-865)	8.00
Isobutyl Stearate (Lexol BS)	1.00
Propylparaben (Lexgard P)	0.10
C. Lactic Acid USP (88%)	5.90
Sodium Lactate (Purasal S/SP 60%)	8.33

Procedure:

1. Combine section "A". Begin heating to 75-80C.
2. Combine section "B". Heat to 80-85C with constant slow agitation.
3. When sections "A" and "B" are homogeneous and at the designated temperatures, slowly add "B" to "A". Mix with rapid agitation for 5 minutes then begin cooling.
4. Reduce mixing speed during cooling to prevent vortexing.
5. At 40-50C, add section "C" to sections "AB".
6. When the batch is homogeneous and at 35-40C adjust for water loss.
7. Mix to 30C.
8. Adjust final pH to 3.50-3.75 with Lactic Acid or Sodium Lactate, as required.

Fragrance GK-17	q.s.

Procedure:

Heat the water to 60C under agitation and slowly add the Carbomer 934. When the water is fully mixed add the 573, GMS, Avocado Oil, Coconut Oil and Jojoba Oil that have been heated to 65C in separate kettle. As soon as the Oil Phase has been mixed well, add the Germaben II and then the TEA under high agitation, then the fragrance. Cool to 55C for filling.

O/W Lotion

Phase 1:	
Ross Wax 63-0412	1.6
Ross Wax 1641	1.0
Mineral Wax #9	2.1
Ross Wax 63-0212	1.0
Amerchol L-101	5.2
Ross Jojoba Oil	2.1
GMS SE	2.1
Phase 2:	
Triethanolamine	1.0
Propylene Glycol	4.7
Water	78.2
Preservative Germaben II	1.0
Novarome DE-47 Fragrance	q.s.

Procedure:

In separate kettles bring Phase (1) and (2) to 170F. When temperature is reached add Phase (1) to (2) with agitation. Cool to 120F and package.

Behenyl Hand Lotion

This lotion features the combination of Incromine BB and Crodacid B, that provide great stability (1 month at 50C). Crodamol PMP helps to formulate a non-oily lotion with smooth rub in.

<u>Ingredients:</u>	<u>%</u>
Part A:	
Incromine BB (Behenamidopropyl Dimethylamine)	3.0
Crodacid B (Behenic Acid)	2.5
Crodamol PMP (PPG-2 Myristyl Ether Propionate)	20.0
Dimethicone	3.0
Part B:	
Deionized Water	70.5
Part C:	
Propylene Glycol (and) Diazolidinyl Urea (and)	
Methyl Paraben (and) Propyl Paraben	1.0

Procedure:

Combine ingredients of Part A with mixing and heat to 85-90C. Heat Part B to 85-90C. Add Part B to Part A with mixing and cool to 45C. Add Part C with mixing and cool to desired fill temperature.

N.A.T.C. Approved
Formula SC-215

Velvet 44-Behenyl Lotion

This lotion features a unique combination of emulsifiers (Incromine BB and Crodacid B) that provide great stability (3 months @ 50C) and leave a soft velvety feel on the skin. Crodamol PMP helps reduce the oiliness of the mineral oil and promotes a smooth rub in.

<u>Ingredients:</u>	<u>%</u>
Part A:	
Incromine BB (Behenamidopropyl Dimethylamine)	3.00
Crodacid B (Behenic Acid)	2.50
Mineral Oil (70ssu)	15.00
Crodamol PMP (PPG-2 Myristyl Ether Propionate)	10.00
Silicone Fluid (200 cps) DC 200	1.00
Part B:	
Deionized water	67.50
Part C:	
Germaben II	1.00

Procedure:

Combine ingredients of Part A with mixing and heat to 85-90C. Heat Part B to 85-90C. Add Part B to Part A with mixing and cool to 40C. Add Part C with mixing and cool to desired fill temperature.

N.A.T.C. Approved
Formula SC-213

Body Lotion

<u>Ingredients:</u>	<u>%w/w</u>
Phase A:	
Polyglyceryl-3 Methyl Glucose Distearate (Tego Care 450)	2.0
Caprylic/Capric Triglycerides (Tegosoft CT)	6.5
Octyl Stearate (Tegosoft OS)	5.7
Phase B:	
Glycerin	3.0
Water	81.4
Phase C:	
Mineral Oil	0.8
Carbomer 941	0.2
Phase D:	
Sodium Hydroxide (10% solution)	0.4
Phase E:	
Fragrance	Q.S.
Preservatives	Q.S.

Procedure:

1. Heat the ingredients of Phase A to 80C.
2. Heat the ingredients of Phase B to 80C.
3. Add A to B or B to A without stirring.
4. Stir.
5. Disperse Carbomer into the oil/ester add to A/B. Homogenize.
6. Cool to 35-40C with stirring.
7. Add Phase D/E. Stir.
8. Mix until viscosity is correct.

Emollient Lotion
O/W Cold Process

<u>Ingredients:</u>	<u>%W/W</u>

Concentrated Alpha Hydroxy Acid Lotion

Resulting product is a pourable lotion that could be dispensed from a glass or rigid plastic bottle. The formulation utilizes a buffered alpha hydroxy acid (AHA), Lactic Acid, at a use level of approximately 15%. The formula utilizes a cationic and nonionic emulsification system consisting of Lexquat AMG-IS and Lexemul 561. In addition to functioning as the primary emulsifier, Lexquat AMG-IS, also enhances skin substantivity. This formulation offers a high level of activity in a buffered form.

	<u>%w/w</u>
A. Deionized Water	52.30
Methylparaben (Lexgard M)	0.20
2,4-Dichlorobenzyl Alcohol (Myacide SP)	0.20
Propylene Glycol USP	2.70
Lactic Acid USP (88%)	0.50
B. Hydroxyethylcellulose (Cellosize QP-15,000H)	0.50
C. Isostearamidopropyl PG-Dimonium Chloride (Lexquat AMG-IS)	10.10
D. Glyceryl Stearate (Lexemul 515)	1.75
Glyceryl Stearate (and) PEG-100 Stearate (Lexemul 561)	3.40
Propylene Glycol Dicaprylate/Dicaprate (Lexol PG-865)	2.50
Cetyl Alcohol (Adol 52)	0.80
Jojoba Oil (Golden Jojoba Oil)	2.50
Myristyl Myristate (Ceraphyl 424)	0.85
Propylparaben (Lexgard P)	0.10
E. Lactic Acid USP (88%)	7.25
Sodium Lactate (Purasal S/SP 60%)	14.35

Procedure:

1. Combine section "A" heating to 80-85C. Use propeller mixer for agitation.
2. Sprinkle section "B" into section "A". Increase mixing speed to create a vortex during addition, then slow to highest speed which does not produce a vortex.
3. When sections "A" and "B" are homogeneous and at the designated temperatures add section "C" to sections "AB".
4. Combine section "D". Heat to 80-85C with continuous slow mixing.
5. When sections "ABC" and section "D" are homogeneous and at the designated temperatures, slowly pour section "D" into Sections "ABC". Increase mixing speed to a high speed. Maintain at 80-85C for 5 minutes, then begin cooling. Slow mixing speed to highest speed possible that will not cause vortexing.
6. Add section "E" to sections "ABCD" at 60-65C. Continue mixing and cooling.
7. At 40-45C adjust for water loss.
8. Mix batch until it reaches room temperature.
9. Adjust final pH to 3.60-3.80 with Lactic Acid or Sodium Lactate, as required.

Physical Properties:

Viscosity: 2400 cPs @ 24C (Brookfield RVT, TA @ 10 rpm)
pH: 3.7 @ 24C

SOURCE: Inolex Chemical Co.: Formulation 398-99-2

Deep Skin Cleansing Lotion

<u>Materials:</u>	<u>% by Weight</u>
1. Mineral Oil SUS 65/75	50.0
2. Amerchol L-101	3.0
3. Cerasynt PA	3.0
4. Tween 20	3.0
5. Stearic Acid T.P.	1.0
6. Propylparaben	0.1
7. Methylparaben	0.2
8. Water (deionized)	38.6
9. Borax U.S.P.	0.5
10. Bentone LT rheological additive	0.3
11. Perfume	0.3

Manufacturing Directions:

- Part 1-In a stainless steel vessel, add items 1 through 7 and heat to 75C. Maintain this temperature and stir slowly until everything is in solution. Bring temperature to 60C.
- Part 2-In a separate stainless steel vessel, add item 8 and heat to 60C. Add and dissolve item 9. Add item 10 and mix at medium speed (1200 rpm) for about 20 minutes, or until completely dispersed, while maintaining temperature at 60C.
- Part 3-Add Part 2 to Part 1 slowly and mix together.
- Cool lotion to 50C and add item 11. Stir slowly to room temperature.

Formula TS-105

Hand Lotion

<u>Materials:</u>	<u>% by Weight</u>
1. Water	87.59
2. Triethanolamine	0.42
3. Propylene Glycol	4.00
4. Methylparaben	0.10
5. Bentone LT rheological additive	0.80
6. Ceraphyl 424	3.00
7. Stearic Acid T.P.	0.79
8. Pluronic F-127	1.00
9. Glyceryl Monostearate	2.00
10. Propylparaben	0.10
11. Perfume	0.20

Manufacturing Directions:

- Part 1-In a stainless steel jacketed kettle, add items 1 through 4 and heat to 60C. Using a homomixer at about 1400 rpm, add item 5 slowly to avoid lumps, and mix for 20 minutes or until homogeneous. If foam develops, add a minute amount of Antifoam 60. Heat Part 1 to 78C.
- Part 2-In a separate vessel, add items 6 through 10 and heat to 78C. Mix until completely melted and homogeneous.
- Mix Part 2 slowly in Part 1 at 78C using sweep blades.
- Cool to 50C. Add item 10, mix and cool to room temperature.

Formula TS-200

Deep Moisturizing Lotion

This after-bath lotion gives the benefits of potent skin conditioners while eliminating the tackiness associated with lanolin and petrolatum through the unique emolliency provided by Phospholipid EFA.

Part A:	<u>% By Weight</u>
Phospholipid EFA	4.00
Steareth-21	0.40
Water	82.00

Part B:	
Steareth-2	1.60
Anhydrous Lanolin	1.50
Petrolatum	3.00
Octyldodecyl Myristate	2.00
Cetearyl Alcohol	4.00
Dimethicone (100cS)	1.50

Combine ingredients in both phases separately and heat to 65C. Homogenize (B) into (A) with continued heating until sufficiently mixed. Stir-cool to 45-50C, then add fragrance, color, and preservative as needed before filling.

Hand and Body Lotion

A superior product designed for after-bath use on traditionally dry areas such as hands, elbows and heels. Phospholipid EFA is strongly substantive towards skin providing non-greasy moisturizing and a pleasant after feel.

Part A:	<u>% by Weight</u>
Phospholipid EFA	4.00
Water	83.00

Part B:	
Steareth-2	2.00
Light Mineral Oil	4.00
Cetearyl Alcohol	3.00
Octyldodecyl Myristate	2.50
Dimethicone (100cS)	1.50

Combine ingredients in both phases separately and heat to 65C. Homogenize (B) into (A) with continued heating until sufficiently mixed. Stir-cool to 45C. Add fragrance, color, and preservative as needed and fill.

Emollient Lotion

Illustrates the use of Veegum Pro magnesium aluminum silicate as an emulsion stabilizer and thickener. The formula is designed to serve as a guide for the development of new products or the improvement of existing ones.

A	Veegum Pro	1.5%
	Water	83.8
B	Triethanolamine	0.1
	Glycerin	3.5
C	Marcol 130	3.6
	Petrolatum	0.4
	Stearic acid XXX	1.6
	Cetyl alcohol	1.5
	Kessco Glycerol Monostearate SE	1.4
	Acetulan	2.0
	Dow Corning 200 Fluid	0.6
	Preservative	q.s.

Procedure:

Heat the water to 70 to 75C, then slowly add the Veegum PRO while agitating at maximum available shear. Mix until smooth. Add B to A with slow agitation until smooth. Maintain A/B at 70 to 75C, heat C to 75 to 80C. Add C to A/B and mix until cool.

Consistency: Medium viscosity lotion.

Suggested Packaging: Squeeze or pump bottle.

Comments: Veegum PRO effectively thickens and stabilizes the lotion, even at elevated temperatures. This lotion is absorbed rapidly, leaving the skin smooth and greaseless.

Hand and Body Lotion

Illustrates the use of Veegum PRO magnesium aluminum silicate as an emulsion stabilizer and thickener. The formula is designed to serve as a guide for the development of new products or the improvement of existing ones.

A	Veegum Pro	2.00%
	Water	70.75
	Glycerin	6.00
B	Marcal 130	10.00
	Petrolatum	4.00
	Arlacel 165	5.00
	Synchrowax AW1-C	1.25
C	Allantoin	1.00
	Preservative	q.s.

Procedure:

Heat the water to 70 to 75C, then slowly add the Veegum PRO while agitating at maximum available shear. Mix until smooth. Add glycerine and mix until uniform. Heat B to 75 to 80C. Add B to A and mix until cool. Add C and mix until uniform.

Consistency: Medium viscosity lotion.

Suggested Packaging: Squeeze or pump bottle.

Comments: Veegum PRO effectively thickens and stabilizes the emulsion even at elevated temperatures. Glycerin helps to rapidly hydrate dry skin and the selection of oils and waxes produces a smooth and non-greasy feel. The allantoin provides soothing relief for wounds, burns, and skin problems in general.

Disperse the Carbomer 934 in the water phase in a stainless steel kettle.

Part B:

In a separate heated kettle, heat the oil phase until all ingredients are melted. When everything is melted add the Oil Phase to the Water Phase. When everything is blended add the preservative, the fragrance and the Triethanolamine with increased agitation. Cool to room temperature and package.

Jojoba Lotion

Part A:	%
Modulan	1.6
Amerchol L-101	0.8
Isopropyl Palmitate	5.0
Glyceryl Mono Stearate Pure	2.1
Rosswax 63-0412	4.0
Isopropyl Myristate	4.0
Ros Jojoba Oil	1.6
Part B:	
Water	74.4
Glycerine Pure Emery 916	4.2
Triethanolamine	2.3

Procedure:

Heat Part (A) and Part (B) in separate vessels to 170F under agitation. When temperature is reached mix Part (A) to Part (B), and cool. Package in container at below 120F.

High Petrolatum Lotion

High petrolatum for severely dry, chapped or chafed skin.

<u>Oil Phase:</u>	<u>%W/W</u>
White Protopet 1S	30.00
Crodamol PMP	10.00
Volpo 3	2.30
<u>Water Phase A:</u>	
Deionized Water	46.35
Carbopol 941	0.13
10% Sodium Hydroxide Solution	0.52
<u>Water Phase B:</u>	
Glycerin	5.00
Volpo S-10	5.70
Germaben II	qs

Procedure:Water Phase A:

Charge a vessel with water and dust in the carbomer. Start heating to 80C. When completely dispersed, add the sodium hydroxide solution and continue mixing.

Water Phase B:

Combine components in a separate vessel and mix, heat to 80C. When uniform, add to water phase A.

Oil Phase:

Combine all components of the oil phase, mix and heat to 80C. When uniform, add the combined water phases slowly while mixing. Continue mixing to room temperature.

Lanolin & Aloe Lotion

Lotions have a wide range of applications in today's cosmetic market. Ideally they should leave a smooth luxurious afterfeel to the skin and help alleviate such problems as dry skin or chapping from wind and sunburn. SC-188 is an economical lotion which achieves both ends. Crodamol PTC, a non-oily ester which gives a "cushiony" feel at low levels of addition, also works with the lanolin and lanolin derived products to leave a satiny, non-greasy, protective film on the skin.

Ingredients:

	%
<u>Part A:</u>	
Super Refined Babassu Oil (Babassu Oil)	2.00
Corona Pure New Lanolin (Lanolin)	2.00
Crodacol CS-50 (Cetearyl Alcohol)	1.50
Super Sterol Ester (C10-30 Cholesterol/Lanosterol Esters)	1.00
Crodamol PTC (Pentaerythrityl Tetracaprylate/Caprate)	0.80
Crodacol C-95 (Cetyl Alcohol)	0.50
Crodamol MM (Myristyl Myristate)	0.50
Incropol CS-20 (Ceteareth-20)	1.00
Mineral Oil (70ssu)	4.00
Stearic Acid XXX	0.50
Silicone L-45 (100cps)	0.30
Propyl Paraben	0.15
 <u>Part B:</u>	
Deionized Water	81.55
Glycerin	3.00
Verage1 200 Powder	0.50
Methyl Paraben	0.30
Carbopol 941	0.10
Dowicil 200	0.10
PEG-15 Cocamine	0.20

Procedure:

Dust the Carbopol 941 of Part B into the water with mixing. When completely dissolved, add the remaining ingredients of Part B and heat to 75-80C. Combine ingredients of Part A with mixing and heat to 75-80C. Add Part B to Part A with good mixing and cool to desired fill temperature. Adjust pH with 1.0% NaOH.

pH: 6.0+-0.5

Viscosity: 7,500+-10% (RVT Spindle #5, 20 rpm @ 25C)

H) Panthenol	2.00
I) Ponceau Red SX 0.2% sol'n	0.25
J) Parflex 49915	0.40**

Procedure:

Heat part A) to 85C while stirring. When homogeneous, add parts B),C) and D) pre-heated to 75C, while mixing. Add Part E) pre-heated to 75C, while mixing (be sure that the Parsol HS has been completely dissolved, if traces remain, add a small quantity of the neutralizing base until the solution is clear). Cool to 40C, add parts F), G), H, I) and J). Compensate for water loss and continue stirring while cooling to ambient temperature.

Remark:

*While not a sunscreen, this formulation scored an SPF 8 when tested according to the FDA/OTC method (range-finding assay on six subjects: IRI Ref. 582627).

**Dermatologically tested perfume for sunscreens. The final pH value should be around 7.0 to prevent recrystallization of Parsol HS.

8. Arlacial 60	1.3
9. Tween 60	1.8
10. Propyl-P-Hydroxybenzoate	0.1
11. Sorbitol (70%)	5.0
12. Carbopol 941	0.25
13. Germall 115	0.4
14. Methyl-P-Hydroxybenzoate	0.2
15. Triethanolamine	0.75
16. Water	68.8

Procedure:

Disperse Carbopol in water. Weigh 1-10 and heat to 80-90C with slow agitation. Add remaining ingredients to Carbopol/water dispersion, except triethanolamine, and heat to 80-90C. Add the wax phase to the aqueous phase and shear in homomixer. Continue shearing while cooling to 40C, then add triethanolamine, mixing well. Cool to 30C, add perfume, deaerate and package.

Ref: 5189-2-5

O/W Lotion

	Wt. %
1. A-C Copolymer 540	2.0
2. Mineral Oil, 70 ss	10.0
3. Glycerine	5.0
4. Isopropyl Palmitate	10.0
5. Anhydrous Lanolin	3.0

1. Add first four components to water and heat to 70C.
2. Blend until EGMS is completely dispersed.
3. Add sodium chloride and cool to 45C.
4. Add preservative, fragrance and dye.
5. Cool to room temperature and fill.

SOURCE: McIntyre Group Ltd.: Personal Care Formulary

Skin Care Body Lotion

This product imparts good skin feel and has a high quality appearance, though the production is cost effective. There are also barrier and moisturizing properties which act as a highly effective hydration system for all skin types. A formula of this type also help reduce transepidermal water loss.

Oil Phase:

Cetylstearyl Alcohol 1618 (P&G)	3.50%
NF White Beeswax (Koster Keunen)	1.50%
Light Mineral Oil (Witco)	4.00%
Isostearic Acid (Unichema)	1.00%
Amerchol L101 (Amerchol)	2.00%
Propyl Paraben (Sutton)	0.20%

Water Phase:

Water (Distilled)	76.85%
Glycerine (Unichema)	6.00%
Polyethylene Glycol 1450 (Union Carbide)	3.50%
Carboxymethyl Cellulose (CMC, Hercules)	0.30%
Carbopol 940 (BF Goodrich)	0.25%
Sodium Borate (Borax)	0.50%
Triethanolamine (Dow)	0.20%
Methyl Paraben (Sutton)	0.20%

Procedure:

Add to the water phase under agitation, in order; CMC until dissolved, then propyl paraben while mixing. Add carbopol, mix till homogeneous making sure there are no agglomerations. Then the remainder of the water phase components can be added, mix and heat to 75C. Add all the oil phase components, heat till 75C. and mix. Add slowly the oil phase to the water phase under agitation maintaining a temperature of 75C. When the oil phase is added, cool and pour into container.

Adaption of formula and its influence on the product:

By reducing the concentrations of mineral oil by 2.0%, polyethylene glycol 1000 by 0.5% and the addition of 2.5% Escalol 507 (Van Dyk) the cream will take on an SPF of 6-8. The product has the same appearance, skin feel and stability. Fragrance can also be added without affecting texture.

Super Moisturizing Lotion

This silky-feeling emulsion is stabilized and thickened using a synergistic combination of Veegum Magnesium Aluminum Silicate and Rhodigel Xanthan Gum. It also contains the sodium salt of pyrrolidone carboxylic acid as a natural moisturizing factor along with the well known humectant, glycerine. This lotion spreads easily and is quickly absorbed leaving the skin moist and supple.

<u>Ingredient:</u>	<u>% by Wt.</u>
A Veegum	1.0
Rhodigel	0.5
Deionized Water	74.5
B Sodium PCA (2)	3.0
Glycerine	5.0
C Hydrogenated Polyisobutene (3)	4.0
Mineral Oil (and) Lanolin Alcohol (4)	3.0
Cetyl Alcohol	2.0
Isopropyl Myristate	2.0
Sorbitan Palmitate	1.2
Polysorbate 40	3.8
D Citric Acid to pH 5.5	q.s.
Preservative, Dye, Fragrance	q.s.
(2) Ajidew N-50	
(3) Polysynlane	
(4) Amerchol L-101	

Preparation:

Dry blend Veegum and Rhodigel and add to the water, mixing with maximum available shear until smooth and uniform. Add B ingredients and mix until dissolved. Mix C ingredients and heat to 50C until a uniform clear mixture is obtained. Add C to (A+B) with high speed mixing. Avoid incorporating air. Cool with continuous stirring to 30C and add D.

Consistency: Medium Viscosity Lotion (Viscosity: 1900-2400 cps)

Suggested Packaging: Plastic squeeze bottle or pump.

Comments:

W/O Lotion with Eldew

<u>Ingredients/Trade Name:</u>	<u>% by Weight</u>
Part A:	
Di-(Cholesteryl, behenyl, octyldodecyl)	
N-Lauroyl-L-glutamic acid ester/Eldew CL-301	2.00
Cetearyl Octanoate	10.00
C12-C15 Alkyl Benzoate	5.00
Phenoxyethanol	0.60
Tocopheryl Acetate	0.05
Part B:	
Polyglyceryl-4 Isostearate (and) Cetyl Dimethicone	
Copolyol (and) Hexyl Laurate	5.00
Cetyl Dimethicone	3.00
Part C:	
Deionized Water	65.55
Sodium Chloride	0.80
Glycerin (99.5%)	5.00
Partially Deacetylated Chitin (1.0%)/Marine Dew	2.00
Part D:	
Methylparaben	0.20
Butylene Glycol	0.80

Procedure:

Pre-melt part A at 50 degrees Centigrade. Add part B to part A. Pre-melt part D by heating to 50 degrees C. Add to part C. Slowly add Part C and D mixture to Parts A and B with high shear mixing.

Appearance: White, smooth, shiny lotion pH: 6.0-6.5

Viscosity: 20,000-20,000 (RVT #6 @ 10rpm @ 25 degrees C)

Mild Lotion with Amihope

<u>Ingredients:</u>	<u>% Weight</u>
Phase A:	
Mineral Oil	5.00
Amiter LGOD	2.00
Propylene Glycol Stearate	0.50
PEG-5 Hydrogenated Castor Oil	1.50
PEG-5 Glyceryl Stearate	2.50
Butylparaben	0.10
Amihope-LL	3.00
Phase B:	
Acylglutamate HS-11	0.30
Carbomer 941	0.20
Sodium Hydroxide	0.08
Butylene Glycol	5.00
Methylparaben	0.20
Water	79.62

Procedure:

Dissolve Carbomer 941 and Sodium Hydroxide in water first. Add all other ingredients of Phase B to the solution and dissolve at 75 to 80 degrees centigrade.

Dissolve Phase A ingredients at 80 degrees centigrade. When both phases are at 80 degrees centigrade add A to B with agitation.

Cool down to room temperature while continuing mixing.

This lotion has a smooth feeling and good spreadability.

Antidandruff Shampoo

Materials:	% by Weight
1. Deionized Water	48.55
2. Bentone MA Rheological Additive	1.00
3. Methocel E 4M Premium	0.75
4. Zinc Omadine 48%	4.20
5. Super Amide GR	4.00
6. Standapol T	38.00
7. Triethanolamine	3.00
8. Color and Fragrance	0.50

Manufacturing Directions:

1. Heat Deionized Water to 70C, and with rapid stirring, add Bentone MA additive slowly and mix it for 20 minutes or until homogeneous. Maintain the temperature through step 4.
2. Add Methocel and mix it for 15 minutes with continuous stirring.
3. Add Zinc Omadine and mix for 5 minutes.
4. Reduce the stirrer speed and at low speed add Super Amide GR. Mix for 10 minutes.
5. Turn off the heat and while cooling, add Standapol T. Mix for 15 minutes at low speed.
6. Add Triethanolamine and color solution, stir slowly until mixed. Adjust the water loss and cool it to room temperature. Add fragrance and mix it.

Glycol Distearate (Kessco Ethylene Glycol Distearate, Armak)	1.00
Cocamide MEA (Monamid CMA)	1.00
Sodium Chloride	0.15

Procedure:

Add ingredients in order listed with agitation. Heat to 70C. Cool to 40C. Adjust pH to 5.5 to 6.0 with 50% citric acid. Add fragrance, color and preservative as required.

Formulation Properties:

Physical Appearance: White pearled lotion
Viscosity @ 25C: 7,100 cps

Formula F-578

Mild Conditioning Shampoo

	<u>% by Weight</u>
Water	34.0
Monateric CLV	8.5
Phospholipid EFA	1.5
Sodium Lauryl Sulfate (28%)	27.0
Sodium Laureth (2) Sulfate	29.0

Procedure:

Blend in order listed, adjust pH down 5.5 to 6.0 with 50% citric acid.

Typical Properties:

Appearance: Clear Liquid
Viscosity @ 25C: Approximately 17,000 cps.

Formula F-644

SOURCE: Mona Industries, Inc.: Suggested Formulations

Cream Shampoo

	<u>Weight, %</u>
Mackanate LO-Special (Disodium Lauryl Sulfosuccinate)	88.0
Mackol 16 (Cetyl Alcohol)	2.0
Brij 52	2.0
Mackstat DM (DMDM Hydantoin)	qs
Water, Fragrance qs to	100.0

Solids, %: 40.0

pH (as is): 5.5

Appearance: Pearly Cream

Procedure:

1. Add Mackol 16, Brij 52 and water to Mackanate LO-Special and heat to 70 degrees C.
2. Blend until homogeneous.
3. Adjust pH to 5.5 to 6.0 with sodium hydroxide.
4. Cool to 50 degrees C, and add Mackstat DM and fragrance.
5. Adjust solid to 40.0+/-1.0 at this point.
6. Cool and fill.

Highly Pearlescent Shampoo

	<u>Weight, %</u>
Sodium Lauryl Ether Sulfate 60%	20.0
Mackamide C (Cocamide DEA (1:1))	2.0
Mackester SP (Glycol Stearate Modified)	2.0
Stearic Acid	2.0
Magnesium Sulfate (7H ₂ O)	6.0
Diethanolamine	0.67
Mackstat DM (DMDM Hydantoin)	qs
Deionized Water, Fragrance, Dye qs to	100.0

pH: 7.5-8.0

Viscosity (cps 25 degrees C): 1000-2500

Procedure:

1. Heat water to 75 degrees C. and add Magnesium Sulfate.
2. Dissolve completely then add other surfactants and DEA then add waxes.
3. Keep temperature at 70 degrees C. for 20 minutes start cooling slowly.
4. At 35 degrees C. add remainder of ingredients and cool while mixing to room temperature.
5. Adjust pH with DEA or Sulfuric Acid diluted solutions.

Emollient Shampoo

<u>Ingredients:</u>	<u>%W/W</u>
A Arlamol E	0.50
Arlacel 186	0.50
B Tween 20	4.00
C Water, deionized	71.00
Tensagex EOC-670	6.00
D Sodium Cocoyl Sarcosinate	6.00
Lauryl Polyglucose	8.00
E PEG 6000 Distearate	4.00

Procedure:

Mix (A) and add (B). Mix until clear and add (C) slowly. Mix (D) and with slight heat and add to (A,B,C). Heat to 65C and add (E) while stirring.

Moisturizing Shampoo

<u>Ingredients:</u>	<u>%W/W</u>
A CP 1052 (shampoo base)	31.50
Water	66.50
Glycerine	0.50
Arlamol E, ICI (PPG-15 stearyl ether)	0.25
Jojoba Oil	0.25
B Glycol distearate (Stepan-Kessco Ethylene Glycol Distearate)	1.00

Procedure:

Add water to shampoo base with moderate agitation. Add Glycerin and Arlamol E with medium agitation. Heat (A) to 80C and add glycol stearate with fast stirring. Stir with medium agitation until cooled to room temperature.

Formula CP 1059

Shampoo Concentrate

<u>Ingredients:</u>	<u>%W/W</u>
Ammonium lauryl sulfate (Stepanol AM)	75.59
Water	0.30
Cocamidopropyl betaine (Tegobetaine L-7)	17.78
NaCl	0.47
Citric acid	0.53
Cocamide DEA (Monamid 150ADD)	5.33

Procedure:

Heat ingredients to about 45C. Stir each ingredient in one at a time in order using moderate agitation.

Moisture Balance Shampoo with Cropeptide W

This formula gives hair more body control in all humidities, an effect created by Cropeptide W. Especially recommended for dry, damaged hair, Cropeptide W can reduce its brittleness at low RH and its limpness at high RH. The shampoo is an easy-to-make and economical cold mix formula with very good cleansing properties.

<u>Ingredients:</u>	<u>%</u>
Part A:	
Incromide LR (Lauramide DEA)	5.00
Incronam 30 (Cocamidopropyl Betaine)	5.00
Sodium Pareth-25 Sulfate	15.00
Cropeptide W (Hydrolyzed Wheat Protein (and) Wheat Oligosaccharides)	1.00
Deionized Water	73.70
Part B:	
Methyl paraben	0.20
Propyl paraben	0.10

Procedure:

Combine ingredients of Part A with mixing until clear. Add the ingredients of Part B individually with good mixing. Adjust pH with a 10% citric solution.

pH: 5.0+-0.5

Viscosity: 7,500+-10% (RVT Spindle #4, 20 rpm, 25C)

N.A.T.C. Approved

Formula SH-82

Shampoo with Tritisol

A rich foaming shampoo with wheat derived Tritisol added for conditioning. Excellent wet combing characteristics are produced by this pearlescent product.

<u>Ingredients:</u>	<u>%</u>
Part A:	
SLES (3 mole)	16.50
Crosultaine C-50 (Cocamidopropyl Hydroxysultaine)	7.00
Deionized Water	61.50
Incromectant AMEA-100 (Acetamide MEA)	3.75
Part B:	
Incromide CAC (Cocamide DEA Cocoyl Sarcosine)	3.00
Incromide ALD (Almondamide DEA)	1.00
Incromate OLL (Olivamidopropyl Dimethylamine Lactate)	1.00
Part C:	
Tritisol (Soluble Wheat Protein)	2.25
Crodapearl Liquid (Sodim Laureth Sulfate (and) Hydroxyethyl Stearamide MIPA)	3.00
Germaben II	1.00

Procedure:

Combine ingredients of Part A with mixing and heat to 60-65C. Combine ingredients of Part B with mixing and heat to 80-85C. Slowly add B to A with mixing and cool to 40C. Add Part C with mixing. Adjust pH to 6.0 with a 10% citric acid solution. Cool to desired fill temperature.

pH: 6.00+-0.5

Viscosity: 2,500+-10% (@25C)

Wheat & Sesame Shampoo

Hydrotritricum WAA is the key ingredient in this shampoo, which acquires its unique quality from a blend of wheat derived materials. This shampoo has excellent foam with a rich, creamy lather and leaves the hair feeling refreshingly clean. Hydrotritricum WAA, a powerful humectant, helps to retain moisture that is vital to maintaining healthy hair. Incromectant AMEA-100 and Incromate SEL improve wet combing and detangling.

<u>Ingredients:</u>	<u>%</u>
Part A:	
Incromine Oxide WG (Wheat Germamidopropylamine Oxide)	3.00
Incronam WG-30 (Wheat Germamidopropyl Betaine)	3.00
Incromectant AMEA-100 (Acetamide MEA)	5.00
SLES (3 mol EO)	40.00
Disodium EDTA	0.10
Deionized Water	41.45
Part B:	
Incromide WGD (Wheat Germamide DEA)	2.00
Incromate SEL (Sesamidopropyl Dimethylamine Lactate)	1.00
BHT	0.10
Part C:	
Hydrotritricum WAA (Wheat Amino Acids)	3.00
Part D:	
Methylparaben	0.25
Propylparaben	0.10
Propylene Glycol	1.00
Citric Acid (10% soln) to pH 5.4	

Combine Part A and heat to 60C. Combine Part B and heat to 60C, mixing until homogeneous. Add Part B to Part A with mixing. Continue mixing and cool to 45C. Add Part C, followed by Part D, mixing until uniform. Adjust pH with citric acid solution.

N.A.T.C. Approved Formula SH-84

Detangling Shampoo

<u>Ingredients:</u>	<u>%</u>
Part A:	
SLES (3 mol.)	20.0
Crosultaine C-50 (Cocamidopropyl Hydroxysultaine)	7.0
Deionized Water	58.0
Incromectant AMEA-100 (Acetamide MEA)	2.0
Part B:	
Incromide CAC (Cocamide DEA Cocoyl Sarcosine)	3.0
Incromate ISML (Isostearamidopropyl Morpholine Lactate)	4.0
Part C:	
Crodacel QM (Cocodimonium Hydroxypropyl Cellulose)	2.0
Crodapearl Liquid (Sodium Laureth Sulfate (and) Hydroxyethyl Stearamide-MIPA)	3.0
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben*	1.0

Combine ingredients of Part A with mixing and heat to 60-65C. Combine ingredients of Part B with mixing and heat to 60-65C. Add Part B to Part A with mixing and cool to 40C. Add Part C with mixing and cool to desired fill temperature. Adjust pH with 10% citric acid solution.

Cloud Point: 5C	

Procedure:

1. Add caustic soda to water and adjust pH to 7.0-8.0 with DDBSA.
2. Add remaining components and adjust pH to 6.5-7.0 with citric acid.
3. If necessary, lower viscosity with SXS, or raise viscosity with sodium chloride.

Shaving Products

Aerosol Shaving Cream

<u>Ingredients:</u>	<u>%W/W</u>
A Stearic acid, triple pressed	6.30
Stripped coconut fatty acid	2.70
Sorbo	10.00
B Water, deionized	50.00
Allantoin	0.20
C Potassium hydroxide	1.70
Water	29.10
D *Perfume	
*q.s. these ingredients.	

Procedure:

Heat (A) to 75C. Add (B) and reheat to 75C. Add (C) slowly, with agitation. Mix for 30 minutes, maintaining temperature at 75C. Cool slowly while agitating slowly. Add (D) at 35C. Prepare aerosol shaving cream cans and pressure fill each can with 3% to 4% isobutane-propane, 40 psig to 46 psig.

Nonionic Aerosol Foam

<u>Ingredients:</u>	<u>%W/W</u>
A Cetyl alcohol	4.30
Brij 721S	2.20
B Water, deionized	93.25
Sorbic acid	0.17
C Fougere Lavender, Fritzsche, D&O	0.08

-PRESSURIZE-

D Above concentrate (160.0g)
Difluoro ethane, Dymel 152A (8 mls)

Procedure:

Heat (A) to 70C and (B) to 75C. Add (B) to (A) slowly with agitation and add (C) at 35C. Adjust pH to 5.5 with dilute NaOH. Add water to compensate for loss due to evaporation. Continue agitation until viscosity is low enough to pour.

After Shave Balm

Dry Flo PC is a highly water resistant starch, provides a silky smooth elegant feel, and is talc free.

<u>Ingredients:</u>	<u>%W/W</u>
Phase A:	
Estol 1550	4.00
Cutina CP	2.50
Lonzest 143-S	3.00
Ivarlan 3230	1.50
Phase B:	
Deionized Water	61.60
Alcolec BS	1.00
Carbopol 941 (2% Aq. Soln.)	10.00
NaOH (25%)	0.40
Methylparaben	0.15
Propylparaben	0.15
Phase C:	
Glycerin (99.5%)	7.00
Dry-Flo PC	8.00
Phenoxyethanol	0.20
Phase D:	
Fragrance	0.50
Procedure:	

Combine Phase B, heat to 80C. Combine Phase A, heat to 80C. At 80C add A to B, mix for 15 minutes. Cool to 40C. Phase C; slurry Dry-Flo PC into Glycerin, add to A/B at 40C. Add Phenoxyethanol, mix well. Add Phase D. Mix until uniform.

SOURCE: National Starch and Chemical Co.: Formula 8062-16

Shave Gel

The product will raise the hair off the face to make for a closer cut without irritation. The Hexanediol Behenyl Beeswax stabilizes the silicone oil to leave the skin silky and smooth.

Phase A:	
Hexanediol Behenyl Beeswax (Koster Keunen)	3.0%
Orange Wax (Koster Keunen)	2.0%
Permethyl 104A (Permethyl)	3.0%
Polybutene (Amoco)	4.0%
Isostearic Acid (Unichema)	0.6%
Palmitic Acid (Proctor & Gamble)	1.4%
Phase B:	
Purified Water	63.9%
Triethanolamine (Dow)	0.8%
Carbopol 940 2% dispersion (B.F. Goodrich)	12.0%
Aloe Vera Gel (Active Organics)	0.8%
Phase C:	
Silicone 345 (Dow)	6.7%
Allantoin (Sutton)	0.8%
Germaben II (Sutton)	1.0%

Heat and mix Phase A and add to a heated and mixed Phase B. Cool to 50C and add phase C, one at a time. Cool to 40C and pour into containers.

Fragrances, actives and other silicone oils can be incorporated into this type of formula, with only minimal changes in stability and performance.

SOURCE: Koster Keunen, Inc.: Suggested Formulation

After Shave Conditioner

This multi-phase emulsion (o/w/a) is very stable and has wonderful skin feel. Besides the previously mentioned advantages, Cera Bellina produces a product with good viscosity characteristics in a product of low solids content.

Oil Phase:

Light Mineral Oil, Carnation (Witco)	7.5%
Cera Bellina (Pg-3 Beeswax, Koster Keunen)	4.0%
Glycerol Monostearate (Henkel)	3.3%
Deodorized Orange Wax	2.0%
Vitamin E (Van Dyk)	0.5%
Propyl Paraben (Sutton)	0.1%

Water Phase:

Water (distilled)	64.0%
Butylene Glycol (Arco)	5.0%
Glycerol (Unichema)	1.0%
Methyl Paraben (Sutton)	0.3%
Triethanolamine (Dow)	1.0%

Alcohol Phase:

SDA-30 (Quantum)	10.0%
Benzocaine (National Starch)	1.0%
Carboxy Methyl Cellulose (Hercules)	0.3%

Procedure:

Combine components of the wax phase in a vessel, melt and mix maintaining a temperature of 75C. Heat the water phase to 75C in a separate vessel making sure the components are all dissolved. Slowly add the oil phase to the water phase under low shear. Cool to 35 to 40C and then add the alcohol phase under low shear. This will ensure that the friction will not increase the temperature which will evaporate the alcohol.

Adaptation of formula and its influence on the product:

Alterations in component concentrations can be achieved by the addition of the secondary emulsifying agents. This will allow for active ingredients to be added at the same time as maintaining the stability and rheological properties.

Alcohol Free After Shave Lotion

<u>Ingredients:</u>	<u>% by Weight</u>
Part I:	
Water	66.00
Phenyl Dimethicone	1.50
Carbomer 940	0.30
Triethanolamine (99%)	0.60
Part II:	
Water	30.00
Phospholipid SV	1.00
Menthol	0.10

Procedure:

Slurry Carbomer 940 into Dimethicone then mix well with the water. After the Carbomer 940 is dissolved, add triethanolamine. In a separate container blend and heat the water, menthol and Phospholipid SV to 75-80C. When dissolved, blend Part II to Part I mixing well. Add color, fragrance and preservative as required and package.

Conditioning After Shave Toner

	<u>% by Weight</u>
Part I:	
Water	51.00
Carbomer 940 (Premix)	0.35
Phenyl Dimethicone (Premix)	2.00
Triethanolamine (99%)	0.60
Part II:	
Water	30.05
Phospholipid SV	1.00
SD3A Alcohol	15.00

Procedure:**Part I:**

Slurry Carbomer 940 into water by first mixing it with Phenyl Dimethicone. Allow to mix until homogenous. When Part II is ready, neutralize Part I with TEA. Add Part II and blend together until a smooth lotion is formed.

Part II:

Mix water and Phospholipid SV. Heat to 65 with agitation until the Phospholipid SV is dissolved. Cool to 30-40C and add SD3A alcohol. Add to Part I.

Brushless Shave Cream

This formulation features Vanseal NACS-30, sodium cocoyl-sarcosinate, Vanseal CS, cocoylsarcosine and potassium cocoate as high foaming yet mild surfactants. Sorbitol adds humectancy while PVP and talc provide lubricity. Stearic acid, propylene glycol stearate, and cetyl alcohol are included as thickeners and to provide pleasant after-feel.

<u>Ingredient:</u>	<u>% by Wt.</u>
A Vanseal NACS-30	15.00
Vanseal CS	2.50
Deionized Water	25.75
Potassium Cocoate (2)	35.00
Sorbitol, 70%	5.00
PVP (3)	0.75
B Talc (4)	5.00
C Stearic Acid	7.00
Propylene Glycol Stearate (5)	2.50
Cetyl Alcohol	1.50
D Preservative, Dye, Fragrance	q.s.
(2) Liquid Coconut Soap, 40%	
(3) PVP K-30	
(4) AGI Talc	
(5) Cerasynt PA	

Preparation:

Mix A ingredients together and heat to 55C with gentle stirring until clear. Add B to A with adequate agitation. Heat C to 60C. Add C to (A + B), mixing until uniform and homogeneous. Cool to 30C and add D.

Consistency: Flowable gel (Viscosity: 2500-3500 cps)

Suggested Packaging: Plastic bottle or pump.

Comments:

This prototype formula is designed to serve as a guide for the development of new products or improvement of existing ones.

Ultra Aerosol Shave Cream for Sensitive Skin

Veegum Ultra, magnesium aluminum silicate, is used in this emulsion formula to improve the stability of the luxurious lather produced by combining Vanseal NACS-30 (sodium cocoyl sarcosinate) with stearic and coconut acid soaps. Vanox PCX acts as an anti-oxidant in this formulation.

<u>Ingredient:</u>	<u>% by Wt.</u>
A Veegum Ultra (Magnesium Aluminum Silicate)	1.00
Deionized Water	75.80
B Glycerin	3.00
Triethanolamine	4.00
C Stearic Acid XXX	6.00
Coconut Acid (2)	1.30
Mineral Oil	2.50
Cetyl Alcohol	1.00
Vanox PCX (BHT)	0.20
D Vanseal NACS-30 (Sodium Cocoyl Sarcosinate)	5.00
Methylparaben	0.20
Fragrance	q.s.
(2) Emery 622	

Procedure:

Sift Veegum Ultra into the water while stirring with a propeller mixer at 700 rpm. Increase the mixer speed to 1700 rpm and mix for 30 minutes. Add the B ingredients in the order shown while mixing at 1700 rpm and heating to 75C. Mix the C ingredients and heat to 75C. Slowly add C to (A and B). Adjust the mixer speed to avoid air entrapment and excessive foaming. Mix for 10 minutes at 75C, then slow the mixer while cooling to 30C. Add the D ingredients in the order shown and mix each until uniform. Package in aerosol containers using 95.0 wt % of Formula No. 451 and 5.0 wt.% A-46 propellant.

Product Characteristics:

Viscosity: 500-700 cps

pH: 8.0+-0.2

Comments:

This prototype formula is designed to serve as a guide for the development of new products or the improvement of existing ones.

Liquid Soap with Aloe Vera Gel

This is a cleansing and conditioning liquid soap with Aloe Vera.

Phase A:	%w/w
Ammonium lauryl sulfate, 28% active	35.70
Ammonium laureth sulfate, 26% active	19.20
Phase B:	
Citric acid, anhydrous	0.20
Phase C:	
Deionized water	20.45
Polyquaternium-10	0.75
Phase D:	
Lauramide DEA	3.00
Lauryl methyl gluceth-10 hydroxypropyl dimonium chloride	8.00
PEG-120 methyl glucose deoleate	2.00
Tetrasodium EDTA	0.20
Phase E:	
Aloe Vera Gel (Terry AG002)	10.00
Phase F:	
Suttocide A	0.30
Fragrance	qs
Procedure:	

Add Phase A ingredients to main mixing vessel, and combine with propeller agitation. Heat to 60C. Dissolve Phase B ingredients. In a premix container, disperse Phase C ingredients. Heat to 60C to hydrate. When Phase A is uniform, add Phase C to main vessel, agitating between each addition. Cool batch to 40C. Slowly add Phases E and F with adequate mixing.

"Medicated" Skin Cleaner

	<u>Wt. %</u>
Rhodapon LT-6	25.0
Rhodapon 21LS	30.0
50% Sodium Hydroxide Aqueous Solution	1.S. to pH 8.0
PCMX	1.0
Water	23.4
Alkamide DL 203/S	2.5
Cycloteric BET C 30	7.5
Geroxon SBFA 30	10.0
Alkamuls EGMS	0.6
Fragrance and Dye	Q.S.

Procedure:

1. Charge Rhodapon LT-6 and Rhodapon 21LS into mixing vessel. Warm system to 45-50C. With smooth agitation, adjust pH to 8.0 with sodium hydroxide solution (50% Aq.), as needed.
2. With rapid but smooth agitation, slowly blend in PCMX. Mix until system is completely uniform.
3. With smooth agitation, slowly blend in Alkamide DL 203/S and water. Heat system to 70-75C with smooth agitation.
4. Slowly blend in Cycloteric BET C 30, Geroxon SBFA 30 and Alkamuls EGMS. Maintain 70-75C temperature until system is completely uniform. Cool to 40-45C and blend in compatible fragrance and dye.

Typical Properties After 24 Hours:

Appearance: Viscous, pearlescent liquid

pH (as is): 8.0-8.5

Viscosity @ 25C: 10,000-14,000 cps

Approx. Solids (%): 30.4

Active Ingredient: Parachlorometaxylenol (PCMX)

Formula HA-0100

Heavy-Duty Hand Cleaner

	<u>Wt. %</u>
Rhodapon SB 8208/S	30.0

Rhodapon LSB	16.0
Water	63.0

Adjust pH to 7.5 with citric acid.

Procedure:

Add the water. With mixing, add the remaining materials and mix until uniform.

Physical Properties:

Appearance: Slightly hazy gel
 pH: 7.5
 Viscosity: 1500-2000
 Specific Gravity: 1.0408

Formula HA-0070

SOURCE: Rhone-Poulenc: Suggested Formulations

All quantities indicated in the following formulations are expressed as parts by weight of the finished soap. These weights are on a percentage basis so that quantities necessary to produce any size batch may be conveniently calculated.

6) Triethanolamine Oleic-Coconut Shampoo (40% Real Soap)

Emery 621 Coconut Fatty Acid (acid value 263)	12.7
Emery 213 Low Titer Oleic Acid (acid value 203)	12.7
Triethanolamine (avg. mol. wt. 140)	14.7
Carbitol	7.0
Water	to 100.0

Procedure:

Blend the oleic and coconut fatty acids. Dissolve the triethanolamine in the required amount of water and proceed as for the coconut shampoo, formula 4, with the exception that heating is not essential. Longer standing is required without heat, but the ability to make soaps without heating may be valuable in particular situations.

Properties and Variations:

This soap product is a clear liquid of amber to red color, very mild and nonirritating. The Carbitol gives the soap a pleasing odor and contributes to the cleansing power of the shampoo.

Triethanolamine soaps cannot be checked for neutrality by the usual methods, but even if an excess of triethanolamine is present, the soap will be only mildly alkaline.

7) Coconut-Oleic Hand Soap (15% Real Soap)

Emery 621 Coconut Fatty Acid (acid value 263)	6.5
Emersol 213 Low Titer Oleic Acid (acid value 203)	6.5
Caustic potash (100%)	3.0
Water	to 100.0

Procedure:

Prepare as for formulation 4:

Dissolve the caustic in the necessary amount of water, heating to 49-54C (120-130F), then add the fatty acid in a slow steady stream. Agitate while mixing the fatty acid and caustic until saponification is complete. The reaction mixture should be heated to 66-71C (150-160F) during the final stages of saponification.

Check the neutrality of the soap and adjust as necessary. Perfume as desired. Allow the soap to stand and settle for several days at near freezing temperatures, if possible, and decant or filter the soap.

Properties and Variations:

Distilled pine oil or other perfume may be added. This is a typical formula for soaps used in liquid soap dispensers, and many such products contain fluorescein, a dye that imparts a greenish-yellow fluorescence.

Water, deionized	54.00
*Preservative	
*q.s. these ingredients.	

Procedure:

Heat (A) to 70C. Heat (B) to 72C. Add (B) to (A) slowly with moderate stirring. Stir to 35C and add water lost due to evaporation.

Waterless Hand Cleaner

<u>Ingredients:</u>	<u>%W/W</u>
A Magnesium aluminum silicate	2.50
Water, deionized	30.00
B Arlacel 60	2.00
Tween 60	8.00
Deodorized kerosene	35.00
C Methylcellulose, 4000 cps	0.50
Water, deionized	22.00
*Preservative	
*q.s. these ingredients.	

Procedure:

A-Add MAS to H2O slowly, agitating continually until smooth. (About 1 hour). Heat (A) to 62C. B-Heat to 60C. Add (A) to (B). Stir until cool. C-Heat 1/2 of H2O to 90C and add methylcellulose slowly with agitation until dispersed. Add (C) to (A&B) with agitation.

SOURCE: ICI Surfactants: Suggested Formulations

Waterless Hand Cleaner

	<u>Wt%</u>
A. Montmorillonite (1)	3.0
Water	39.5
B. Potassium Hydroxide	1.5
Water	10
C. Oleic Acid	6.0
Deodorized Kerosene	25.0
Polysorbate 80, Acetylated Lanolin Alcohol, Cetyl Acetate (2)	3.0
Petrolatum	2.0
D. Acuscrub 50	10.0
Preservatives	q. s.

Procedure:

Slowly add the Montmorillonite to the water while agitating at maximum available shear. Dissolve the potassium hydroxide in the water. Add B to A with medium shear. Heat A/B to 60C. Combine C and heat to 65C. Cool to 50C, then slowly add Acuscrub 50 until cooled to 30C. Add preservatives and mix until smooth and uniform.

(1) Mineral Colloid BP (2) Solulan 98

Waterless Hand Cleaner

	<u>Wt%</u>
A. Oil Phase:	
Petroleum Distillates (1)	30.0

SOURCE: Allied Signal Inc.: Suggested Formulations

Waterless Hand Cleaner No. 390

	Van Gel B	1.7
A	CMC 7MF	0.3
	Water	44.0
B	Potassium hydroxide	1.0
	Water	3.0
	Oleic acid	10.0
C	Carnation White Mineral Oil	10.0
	Deodorized kerosene	30.0
	Preservative	q.s.

Procedure:

Blend Van Gel B and CMC. Slowly add to the water while agitating at maximum available shear. Continue mixing until smooth. Add B to A and mix until uniform. Add C to A/B and mix until emulsion is smooth and uniform. Add desired preservative.

Consistency: Medium viscosity cream.

Suggested Packaging: Pump or wide mouth container.

Comments:

Van Gel B/CMC thickens this cold process formula to a medium viscosity cream while stabilizing the emulsion from bleed and separation. Potassium oleate allows good cleansing action at a pH of 8. The mineral oil minimizes defatting of the skin caused by the deodorized kerosene.

Liquid Waterless Hand Cleaner No. 243

	Veegum	2.0
A	Water	73.0
	Glycerin	4.0
B	Tergitol NP-10	3.0
	2-Amino-2-methyl-1-propanol	0.5
	Deodorized kerosene	10.0
	Oleic acid	1.5
C	Arlacel 186	5.0
	Clearlan	1.0
	Preservative	q.s.

Procedure:

Slowly add Veegum to the water while agitating at maximum available shear. Continue mixing until smooth. Add B to A and heat to 50C. Heat C to 55C. Add C to A/B. Mix until uniform. Add desired preservative.

Consistency: Pourable liquid

Suggested Packaging: Pump dispenser

Comments:

Veegum stabilizes and thickens this liquid emulsion. In this formulation, glycerin serves as a humectant while the lanolin helps prevent defatting of the skin.

SOURCE: Dr. Madis Laboratories Inc.: Suggested Formulations

Buffered Self Tanning Lotion

Resulting product is a pourable lotion that could be dispensed from an opaque glass or rigid plastic bottle. The formulation utilizes a 5% Dihydroxyacetone (DHA) as the self tanning ingredient. The formulation contains no amines to react with Dihydroxyacetone and the final pH is adjusted to approximately 4, to insure natural colored tan development. The formulation applies easily and evenly. The finished product should be stored away from light and at temperature conditions below 40C to prevent DHA from degrading.

	<u>%w/w</u>

Deionized Water	15.00

Procedure:

1. Combine section "A" heating to 75-80C. Use a propeller mixer for agitation.
2. Sprinkle section "B" into section "A". Increase mixing speed to create a vortex during addition, then slow to highest speed which does not produce a vortex.
3. Combine section "C". Heat to 80-85C with continuous slow mixing.
4. When sections "AB" and "C" are homogeneous and at the designated temperatures add section "C" to sections "AB". Increase mixing speed to a high speed. Begin cooling. Slow mixing speed to highest speed possible that will not cause vortexing.
5. Using gloves, combine section "D" and mix until clear.
6. Add section "D" to sections "ABC" at 35-40C. Continue mixing and cooling.
7. At 30-35C adjust for water loss.
8. Mix batch until it reaches room temperature.
9. Adjust final pH to 4.00-4.10 with Citric Acid or Sodium Citrate solutions, as required.

Cooling After Sun Lotion

<u>Ingredients:</u>	<u>%w/w</u>
Phase A:	
Polyglyceryl-3 Methyl Glucose Distearate (Tego Care 450)	2.0
Caprylic/Capric Triglycerides (Tegosoft CT)	6.5
Mineral Oil	5.7
Phase B:	
Glycerin	3.0
Water	71.4
Phase C:	
Mineral Oil	0.8
Carbomer 941	0.2
Ethanol	10.0
Phase D:	
Sodium Hydroxide (10% solution)	0.4
Phase E:	
Fragrance	Q.S.
Preservatives	Q.S.

Procedure:

1. Heat the ingredients of Phase A to 80C.
2. Heat the ingredients of Phase B to 80C.
3. Add A to B or B to A without stirring. 4. Stir.
5. Disperse Carbomer into the oil/ester add to A/B. Homogenize
6. Cool to 35-40C with stirring. 7. Add Ethanol.
8. Add phase D/E. Stir.
9. Mix until viscosity is correct.

Suntan Lotion

<u>Ingredients:</u>	<u>%w/w</u>
Phase A:	
Polyglyceryl-3 Methyl Glucose Distearate (Tego Care 450)	2.0
Decyl Oleate (Tegosoft DO)	6.5
Isopropyl Palmitate (Tegosoft P)	5.7
Octyl Methoxycinnamate	7.0
Oxybenzone	3.0
Phase B:	
Glycerin	3.0
Water	71.4
Phase C:	
Isopropyl Palmitate (Tegosoft P)	0.8
Carbomer 941	0.2
Phase D:	
Sodium Hydroxide (10% solution)	0.4
Phase E:	
Fragrance	Q.S.
Preservatives	Q.S.

Procedure:

1. Heat the ingredients of Phase A to 80C. 2. Heat the ingredients of Phase B to 80C. 3. Add A to B or B to A without stirring. 4. Stir. 5. Disperse Carbomer into the oil/ester add to A/B. Homogenize. 6. Cool to 35-40C with stirring. 7. Add Phase D/E. Stir. 8. Mix until viscosity is correct.

Daily UV Protection Lotion (Approximate SPF 18)

Dermacryl LT provides increased moisture protection, rub-off resistance and water resistance as well as improved rub-in properties.

<u>Ingredients:</u>	<u>%W/W</u>
Phase A:	
Neo Heliopan AV	7.50
Brij 76	1.00
Cerasynt Q	1.50
Cetyl Alcohol	1.00
Emersol 132	1.50
Tioveil FIN	1.70
Finsolv TN	5.00
DC 334 Fluid	3.00
DC 556 Fluid	1.00
Abil B8852	0.50
Phase B:	
Deionized Water	40.30
Triethanolamine (99%)	4.00
Dermacryl LT	1.00
Neo Heliopan Hydro	4.00
Carbopol 940 (2% Aq. Soln.)	20.00
Phase C:	
Propylene Glycol	3.00
Dry-Flo PC	3.00
Phase D:	
Germaben IIE	1.00

Procedure:**Phase B:**

Combine Triethanolamine 99% and Deionized Water, heat to 60C. Slowly sift in Dermacryl LT, heat to 80C. When complete, sift in Neo Heliopan Hydro and Carbopol 940, mix until complete.

Phase A:

Combine and heat to 80C. Add Phase A to Phase B at 80C, mix for 15-30 minutes. Cool to 40C. Slurry Dry-Flo PC in Propylene Glycol, add to A and B at 40C and mix thoroughly. Add Phase D. Cool to room temperature and package.

European O/W Sun Protection Cream

<u>Ingredients:</u>	<u>%W/W</u>
A Mineral oil	10.00
Isohexadecane	5.00
Octyl Methoxycinnamate	5.00
Cyclomethicone	2.80
Arlamol E	1.20
Behenyl alcohol	2.00
Tocopherol Acetate	5.50
B Arlatone 2121	5.50
Glycerol	4.00
*Preservative	
Water	62.85
C Xanthan gum	0.10
D *Perfume	
*q.s. these ingredients.	

Procedure:

Melt Arlatone 2121 and add to remainder of (B) at 80C. Disperse (C) and (B) at 75C with moderate stirring. Add heated (A), (E), and (F) to mixture with vigorous stirring. Homogenize mixture between 75C and 65C and cool to 40C with moderate stirring. Homogenize at 30C to 40C with addition of (D).

O/W Moisturizing Sunscreen Cream

<u>Ingredients:</u>	<u>%W/W</u>
A Octyl dimethyl PABA	7.00
Benzophenone-3	3.00
Mineral oil	5.00
Stearyl alcohol	0.50
Brij 721	2.00
Brij 72	2.00
Dimethicone	0.50
B Water	79.60
Carbomer 940	0.20
C Sodium hydroxide (10% W/W aqueous)	0.20
D *Preservative and Fragrance	
*q.s. these ingredients.	

Procedure:

Disperse Carbomer in water and heat (B) to 70C. Heat (A) to 72C. and add (B) to (A) with propeller agitation. Slowly add (C) and increase speed of the agitation as needed. Add (D) and replace water lost by evaporation.

Non-Chemical Sunscreen Lotion (approx. SPF 15)

This lotion incorporates titanium dioxide as the sunscreen agent. It has a smooth feel upon application and rubs in easily without whitening. The Geahlene 750 adds thickness and may contribute to water resistance and product stability.

<u>Ingredient/Trade Name:</u>	<u>Weight%</u>
A Deionized Water	64.80
Magnesium Aluminum Silicate/Veegum Ultra	0.80
Xanthan Gum/Keltrol	0.25
Methylparaben	0.20
Tetrasodium EDTA/Hamp-Ene 220	0.10
B Mineral Oil (and) Hydrogenated Butylene/Ethylene/ Styrene Copolymer (and) Hydrogenated Ethylene/ Propylene/Styrene Copolymer//Geahlene 750	10.00
C12-15 Alkyl Benzoate/Finsolv TN	10.00
Titanium Dioxide/Micronized TiO ₂ LA-20	6.00
Phenoxyethanol/Emeressence 1160	0.70
Stearic Acid/Emersol 132	2.50
Glyceryl Stearate SE/Lexemu1 T	2.00
DEA-Cetyl Phosphate/Amphisol	2.50
Propylparaben	0.10
C Fragrance	0.05

Procedure:

Disperse Veegum Ultra in rapidly agitated deionized water. Mix well. Add Keltrol. Mix until uniform. Heat to 80C. Add remaining part A ingredients. Homogenize Finsolv TN and Micronized Titanium Dioxide until smooth. Add remaining part B ingredients. Heat to 80-85C. Mix until all the added solids are completely dissolved. Add part B to part A while mixing with good agitation. Mix for 30 minutes, until homogeneous. Cool to 40C. Add part C. Continue mixing and cooling to 30C.

O/W After Sun Milk

<u>Ingredients:</u>	<u>%W/W</u>
A Arlamol S7	10.00
Arlamol HD	8.00
B Arlatone 2121	2.00
Alpantha	0.50
Glycerol	2.50
*Preservative	
C Water	76.78
Carbopol EDT	0.07
D *NaOH (10% solution)	
E Perfume	0.15
*q.s. these ingredients.	

Procedure:

Disperse Carbopol in water while stirring. Heat to 80C. Mix the Arlatone 2121 into the heated (C) phase while stirring moderately. Homogenise this mixture until a homogeneous dispersion formed. Heat (A) to 80C and add to (B+C) while stirring intensively. Homogenise the mixture between 75 and 65C. Allow to cool down to 50C while stirring. Add (D) until pH of 6.5 to 7 is reached. Add (E) at 40C while stirring.

W/O After Sun Cream

<u>Ingredients:</u>	<u>%W/W</u>
A Arlancel 582	2.50
Arlatone T	0.50
Magnesium stearate	0.50
Beeswax	1.50
Candelilla wax	0.50

Tioveil MOTG	20.00

Manufacture:

- * Heat phases A and B separately to 75C * Heat phase C to >60C
 - * Slowly add B to A with intensive stirring * Add C with intensive stirring * Cool to 25-30C, maintaining the same stirrer speed * Homogenize
- In-Vitro SPF Value: 20-24 Viscosity: 2000 mPas (Brookfield)
Formulation Number 20

O/W Vitaminized Broad Spectrum Sunscreen Lotion
 (Indicative SPF 8)*

<u>Ingredients:</u>	<u>% w/w</u>
A) Parsol MCX	2.00
Parsol 1789	1.00
Parsol 5000	0.60
Glyceryl Monomyristate	4.00
Ganex V-220	2.00
Cetyl Alcohol Extra	1.00
Dermol 185	10.00
Amphisol K	2.00
Edeta BD	0.10
Butylated Hydroxytoluene	0.05
Phenonip	0.60
B) Deionized Water	34.93
Carbopol 981 1% sol'n	10.00
Propylene Glycol	5.00
C) KOH 10% sol'n	0.64
D) Deionized Water	20.00
Parsol HS	0.60
KOH 10% sol'n	1.08
E) Vitamin E Acetate	2.00
F) Panthenol	2.00
G) Parfex 49915	0.40**

Procedure:

Heat part A) to 85C while stirring. When homogeneous, add parts B) and C) pre-heated to 75C, while mixing. Add part D) pre-heated to 75C, while mixing (be sure that the Parsol HS has been completely dissolved, if traces remain, add a small quantity of neutralizing base until the solution is clear). Cool to 40C, add parts E), F) and G). Compensate for water loss and continue stirring while cooling to ambient temperature.

Remark:

*SPF determination: IRI Ref. 582627. Test method based on FDA/OTC conditions with six subjects.

**Dermatologically tested perfume for sunscreens.

The final pH value should be around 7.0 to prevent recrystallization of Parsol HS

Neo Heliopan, Type Hydro; used as a 15% solution	20.00
neutralized with sodium hydroxide	(active: 3.00%)
Zinc Oxide neutral H&R	10.00
 C Perfume oil	 0.30

Manufacturing Process:

Part A: Heat up to 75C with thorough agitation.

Part B:

Heat the water to 90C. Disperse the Veegum in the water during high speed agitation. Then add the other ingredients and disperse the Zinc Oxide neutral H&R in the solution. Put Part B to Part A while stirring.

Part C:

At 30C add the perfume oil to Part A/B and homogenize the emulsion.

The pH-value of the finished emulsion should be approx. 7.5 and has to be checked.

Sun Protection Lotion

This medium viscosity lotion utilizes a synergistic Veegum/Rhodigel blend to help stabilize the emulsion and modify the viscosity. In addition, this formula incorporates A-C 617G polyethylene to provide a luxurious after feel and improve the water resistance of the sun protection film. This product is designed to have an SPF (Sun Protection Factor) of about 15.

<u>Ingredient:</u>	<u>% by Wt.</u>
A Veegum	1.00
Rhodigel	0.20
Glycerin	5.50
Deionized Water	68.80
B A-C 617G Polyethylene	2.00
Glyceryl Monostearate, SE (2)	3.00

(3) Ceraphyl 45	
(4) Brij 72	
(5) Brij 78	
(6) Escalol 567	
(7) Escalol 507	

Preparation:

Dry blend Veegum and Rhodigel. Add Veegum/Rhodigel blend to water preheated to 85-90C. Hydrate using maximum available shear until smooth, uniform and free of undispersed particles. Add glycerin and maintain temperature at 85-90C. In a separate container, add all B ingredients and heat to 85-90C until all components are in a liquid state. Stir gently as necessary. Slowly add B to A and homogenize for 5 minutes. Cool emulsion quickly to room temperature with gentle stirring. Add C and mix until uniform.

Consistency:

Flowable Liquid; Viscosity measured after 30 days at room temperature: 1500-1900 cps.

Suggested Packaging: Plastic bottles or tubes.

Comments:

This prototype formula is designed to serve as a guide for the development of new products or improvement of existing ones.

Sunscreen with Amihope

An elegant sunscreen of about SPF-15 using micronized Titanium Dioxide. Amihope LL provides improved spreadability and an excellent afterfeel.

<u>Ingredient/Trade Name:</u>	<u>% by Weight</u>
Part A: Deionized Water	64.30
Synthetic Hectorite	0.80
Disodium EDTA	0.10
Glycerin	6.00
Part B: C12-15 Alkyl Benzoate	15.00
Titanium Dioxide	6.50
Cetearyl Alcohol (and) Cetareth-20	5.00
PEG-80 Sorbitan Laurate	1.00
Part C: Lauroyl Lysine/Amihope LL	1.00
Part D: Isopropylparaben (and) Isobutylparaben (and) Butylparaben	0.10
DMDM Hydantoin (and) Iodopropynyl Butylcarbamate	0.20

Disperse the Synthetic Hectorite in deionized water. Heat to 80C. Add remaining part A ingredients. Mix until uniform. In a separate container, homogenize the C12-15 Alkyl Benzoate and Titanium Dioxide until smooth. Add remaining part B ingredients. Heat to 80C. Add part B to part A with mixing. Mix at 80C for 30 minutes until smooth and uniform. Cool to 70C. Add part D. Mix well. (Homogenize to ensure complete dispersion.) Cool to 40C. Add part E. Continue mixing and cooling to 35C.

Appearance: Off-white, smooth, viscous cream pH: 7.20-7.80

Viscosity: 30,000-36,000 cps (Brookfield #6 @ 10rpm @ 25C)

W/O SPF20 Sunscreen with Elder

<u>Ingredients/Trade Name:</u>	<u>% by Weight</u>
Part A:

D Neo Heliopan, Type AV	6,500
Baysilone Fluid PK 20	3,000
Bisabolol	0,100
Perfume Oil	0,200

***Sun Protection Factor:**

Tested mean SPF 8.2 according to the German DIN 67501 method.

Manufacturing Process:

Part A:

Dissolve Trilon B, Panthenol and Germall 115 in the mixture of alcohol and water. Then slowly add under stirring Carbopol 940 and continue until completely dispersed.

Part B:

Add slowly the sodium hydroxide solution to part A for neutralization. A transparent high viscid gel will be formed.

Part C:

Successively add with stirring propylene glycol and Cremogen Aloe Vera into the gel part A/B.

Part D:

Blend the ingredients and add the mixture with stirring into the gel part A/B/C.

After complete mixing it is necessary to pass the dispersion through a homogenizer (colloid mill).

The Sunscreen Balm contains no emulsifier.

SOURCE: Haarman & Reimer: Formulation K 18/5-51132 A/E

Sunscreen Cream

Illustrates the use of Veegum Pro as a suspending agent and viscosity modifier. Veegum Pro effectively thickens and stabilizes the emulsion even at elevated temperatures. This lotion has an estimated SPF of 12 and has a light feel with quick, greaseless rub-in. Benzophenone-3 is a UV-A absorber for protection against tanning radiation. Octyl Methoxycinnamate is a UV-B absorber for protection against burning radiation.

<u>Ingredient:</u>	<u>% by Wt.</u>
A Veegum Pro	1.5
Water	67.7
Propylene glycol	3.0
Triethanolamine	0.6
B Benzophenone-3 (1)	5.0
C12-15 Alcohols Benzoate (2)	7.5
Octyl Methoxycinnamate (3)	7.5
Mineral Oil (and) Lanolin Alcohol (4)	4.0
Stearic acid XXX	2.0
C18-36 Acid (5)	0.2
Glycol Stearate SE (6)	0.5
Cetyl alcohol	0.5
C Preservative, Dye, Fragrance	q.s.
(1) Uvinul M-40	
(2) Finsolv TN	
(3) Parsol MCX	
(4) Ritachol	
(5) Synchronowax AW1-C	
(6) Cerasynt MN	

Procedure:

Heat the water to 75 to 80C, then slowly add the Veegum Pro while agitating at maximum available shear. Mix until smooth. Add remaining ingredients in order shown with careful mixing until smooth, maintain at 75 to 80C. Heat B to 75 to 80C. Add B to A and mix until cool. Add C.

Consistency: Cream

Suggested Packaging: Pump bottle or tube

Comments:

This prototype formula is designed to serve as a guide for the development of new products or improvement of existing ones.

Sunscreen Cream

	<u>Wt. %</u>
1. A-C Polyethylene 617	3.0
2. Beeswax	2.0
3. Amerchol L-101	5.0
4. Mineral Oil, 70 s.s.	6.2
5. Dow Fluid 200, 350 cs.	1.0
6. 2-Ethyl Hexyl Stearate	7.0
7. Triglycerol Diisostearate	5.5
8. Escalol 507	5.0
9. Propyl-P-Hydroxybenzoate	0.1
10. Sorbitol (70%)	5.0
11. Sodium Borate, Anhydrous	0.3
12. Methyl-P-Hydroxybenzoate	0.2
13. Germall 115	0.3
14. Water	59.4

Procedure:

Weigh 1-9 and heat to 85C with slow agitation. The blend has a cloud point of approximately 80C. Above the cloud point all waxes will eventually dissolve in the blend. If a higher solvating temperature is used, solvation can be much faster. Hold the wax blend at 85C. Heat 10-14 to 85-90C and stir gently until all has dissolved. Hold at 85C.

Place wax blend in mixing container, add aqueous phase to it and shear with homomixer or colloid mill. At 67C the crude dispersion inverts and a thick creamy emulsion forms. Continue shearing while scraping the sides of the container to make sure the whole content is properly sheared. Add perfume, de-aerate and package.

Sunscreen Gel
SPF 6 (FDA-OTC)*

<u>Ingredients:</u>	<u>%w/w</u>
A Ethylalcohol (96 Vol. %) denatured	5,000
Deminerlized water	60,350
1,2-Propylene glycol	5,000
Germaben II	1,000
Allantoin	0,100
D-Panthenol	0,500
Carbopol 940	1,100
 B Deminerlized water	 5,000
Triethanolamine	2,200
 C Deminerlized water	 15,000
Neo Heliopan, Type Hydro	2,000
Triethanolamine	1,200
 D Cremophor NP 14	 1,200
Perfume Oil	0,300
 E Sunset Yellow 307009	 0,050
1% aq. solution	

***Sun Protection Factor:**

Tested SPF 5.9 on a five subject panel according to the FDA-OTC proposed method.

Manufacturing Process:

Part A:

Dissolve propylene glycol, Germaben II, Panthenol and Allantoin in the alcohol-water solution. Then slowly add while stirring Carbopol 940 and continue until completely dispersed.

Part B:

Dilute the neutralizing agent with water and add slowly into part A for neutralization. A high viscid gel will be formed.

Part C:

Add Neo Heliopan, Type Hydro while stirring into the water to get a suspension. Continue stirring and add slowly triethanolamine until the neutralization of Neo Heliopan, Type Hydro is complete and a clear solution is obtained. Before adding the solution into the gel part A/B, it is recommendable to filter the solution.

Part D:

Blend the perfume oil with the solubilizer and add the mixture while stirring into the gel A/B/C.

Part E:

While stirring, add the colorant to the transparent gel.

The pH value of the gel should be approx. 7.2-7.5. At a pH value below 7 Neo Heliopan, Type Hydro could precipitate.

SOURCE: Haarman & Reimer: Formula K 18/5-51282 D/E

Sunscreen Lotion

This formula demonstrates the rheological and stabilizing properties of Cera Bellina and of Siliconyl Beeswax. Incorporated into this formula is the sunscreen Neo Heliopan AV (Octyl methoxycinnamate) giving this formula an appropriate SPF value. The product has high gloss and excellent skin feel. The rheological properties of Cera Bellina allow for this product to be packaged in convenient tubes or squeeze bottles.

Oil Phase:	
Neo Heliopan AV (H&R)	5.00%
Squalane (Centerchem)	2.00%
Cera Bellina (Pg-3 Beeswax; Koster Keunen)	4.00%
Glycerol Monostearate (Henkel)	0.50%
Light Mineral Oil (Witco)	1.50%
Isostearic Acid (Unichema)	4.00%
Liquapar (Sutton)	0.40%
Octyl Palmitate (Inolex)	5.00%
Shea Butter (Koster Keunen)	4.00%
Emulsifying Wax (Koster Keunen)	1.50%
Vitamin E (BASF)	0.10%
Vitamin A Palmitate (BASF)	0.10%
Stearic Acid (Unichema)	0.50%
Ceresine 130/135 (Koster Keunen)	0.70%
Hexanediol Behenyl Beeswax (Koster Keunen)	1.00%
Siliconyl Beeswax (Koster Keunen)	1.40%
Propyl Paraben (Sutton)	0.20%
Elefac I 205 (Bernel)	1.40%
Sunflower Oil (Lipo)	3.00%
Propylene Glycol Dioctanate (Inolex)	5.00%
Isopropyl Palmitate (Unichema)	3.00%
Diisostearyl Malate (Bernel)	1.20%
Gamma Orzanol (Koster Keunen)	1.00%
Water Phase:	
Water (Distilled)	41.70%
1,3-Butylene Glycol (Hoechst)	3.00%
Carboxymethyl Cellulose (Hercules)	0.30%
Keltrol TF (Kelco)	0.30%
Methyl Paraben (Sutton)	0.30%
Sodium Borate (Borax)	0.60%
Water Phase II:	
Water (Distilled)	5.00%
Tea 99% (Dow)	0.80%
Active Phase:	
Silicone 245 (Dow)	1.00%
Phenonip (Nipa)	0.50%

Heat the water phase to 80C under agitation ensuring that the entire phase is solubilized. Heat and mix the oil phase to 82C. Slowly add the oil phase to the water phase, cool to 70C and add water phase II. Cool to 40 and add the active phase. Cool to room temperature.

It is easy to alter the sunscreen to suit your preference, without changing the consistency. The emulsion viscosity can easily be altered by changing the oil and/or wax concentration. Orange Wax (Koster Keunen) can be added to naturally enhance SPF.

*Sun Protection Factor

Tested mean SPF 6 according to the German DIN 67501 method.

Manufacturing Process:

Part A:

Disperse the Carbopol in water using high speed agitation. Mix to form a uniform dispersion free from lumps. With stirring add to the dispersion the sodium hydroxide solution to form a high viscid gel.

Part B: Heat to 75C.

Part C:

Heat to 85C. Add part C to part B while stirring rapidly. Mix while cooling to 60C and add the Carbopol gel part A.

Part D:

Dissolve Disodium Phosphate and Potassium Phosphate in water at 60C. Add the buffer solution to the emulsion at 55-60C.

Part E:

Cool while stirring to 35-40C and add the perfume oil. Continue stirring to room temperature.

The pH-value of the finished emulsion should be 7.5 and must be controlled.

Neo Heliopan, Type E 1000	3,000
Cetiol MM	2,000
Abil 100	0,500
Phenonip	0,200
B Demineralized water	52,500
Carbopol 934	0,400
Sodium hydroxide (10% aq. solution)	2,050
Neo Heliopan, Type Hydro used as a 15% aq. solution neutralized with sodium hydroxide corresponding 2% active Neo Heliopan, Type Hydro	13,350
Phenonip	0,200
C Demineralized water	10,000
Phosphoric acid, Disodium salt	0,580
Phosphoric acid, Monopotassium salt	0,120
D Perfume Oil	0,400

*Sun Protection Factor:

Tested mean SPF 11.8 according to the German DIN 67501 method.

Manufacturing Process:

Part A: Heat to 75C.

Part B:

Disperse the Carbopol well in water using high speed agitation. Mix to form a uniform dispersion free from lumps. Add with stirring to the dispersion Phenonip and the sodium hydroxide solution. Then add the neutralized solution of the 15% Neo Heliopan, Type Hydro and heat to 85C. Add part B slowly with thorough agitation to part A. Then cool with stirring to 60C.

Part C:

Dissolve Dicalcium Phosphate and Potassium Phosphate in water at 60C (buffer system). Add part C to part A/B and cool with stirring to 35-40C.

Part D:

Add the perfume oil and continue stirring to room temperature.

The pH value of the finished emulsion should be 7.5 and must be controlled.

	Perfume oil	0,300
	Pemulen TR-1	0,250
	Carbopol 954	0,050
C	Triethanolamine	0,450

***Sun Protection Factor(SPF):**

The SPF was determined on a five subject panel test according to the FDA-OTC proposed method.

****Waterproof:**

The procedure for determining "waterproof" effectiveness was 20 minutes moderate activity in water. The SPF before water immersion was 5.7 and after water immersion 6.1.

Manufacturing Process:

Part A:

Dissolve Arosol, Soltrol P and M in propylene glycol. Add the mixture and Trilon B liquid to the water.

Part B:

Mix all ingredients (without Permulen and Carbopol). Disperse Carbopol and Pemulen very carefully with high speed agitation. Then add part B to part A while stirring. Stir for 45 minutes.

Part C:

Add triethanolamine while stirring and stir until homogeneous. The pH-value of the finished emulsion should be approx. 7 and has to be controlled.

Sunscren Moisturizing Cream

This formula demonstrates the stabilizing properties of Siliconyl Beeswax. Incorporated into this formula is the sunscren Neo Heliopan AV (Octyl methoxycinnamate) giving this formula an appropriate SPF value. The cream has high gloss and excellent skin feel.

Oil Phase:

Cera Bellina (Pg-3 Beeswax, Koster Keunen)	6.0%
Elefac I 205 (Bernel)	1.4%
Glycerol Monostearate (Henkel)	1.4%
Isopropyl Palmitate (Unichema)	2.0%
Ceresine 130/135 (Koster Keunen)	1.3%
Propyl Paraben (Sutton)	0.2%
Squalane (Centerchem)	1.8%
Jojoba oil (Jojoba Growers)	1.0%
Liquapar (Sutton)	0.4%
Neo Heliopan AV (H&R)	5.0%
Vitamin E (BASF)	1.0%
Octyl Palmitate (Inolex)	2.5%
Shea Butter (Koster Keunen)	2.5%
Isostearic acid (Unichema)	3.0%
Lipopeg 100-S (Lipo)	1.5%
Siliconyl Beeswax (Koster Keunen)	3.0%
Emulsifying Beeswax (Koster Keunen)	1.7%
Hexanediol Behenyl Beeswax (Koster Keunen)	1.0%
Gamma Orzanol (Koster Keunen)	1.0%

Water Phase:

Water (Distilled)	44.3%
Butylene Glycol (Hoechst)	3.0%
Sodium Borate (Borax)	0.8%
Methyl Paraben (Sutton)	0.3%
Aloe Vera Gel 1:1 (Active Organics)	3.0%
Glycerin 99%	4.0%
Keltrol TF (Kelco)	0.3%

Water Phase II:

TEA 99% (Dow)	1.0%
D.I. Water	5.0%

Active Phase:

Silicone 245 (Dow)	1.0%
Phenonip (Nipa)	0.5%

Procedure:

Heat the water phase to 80C under agitation ensuring that the entire phase is solubilized. Melt and mix the oil phase to 82C is maintained. At the last minute added the gamma orzanol to the oil phase, allow to disperse then slowly add the oil phase to the water phase while mixing. Allow to cool to 45C and add the silicone and the phenonip. Cool to room temperature.

Adaptation of formula and its influence on the product:

It is easy to alter the sunscren to suit your preference, without changing the consistency. The emulsion viscosity can easily be altered by changing the oil and/or wax concentration. Orange Wax (Koster Keunen) can be added to naturally enhance the SPF.

Phase D:	
Fragrance	Q.S.

Procedure:

Combine Phase B and heat to 80C. In a separate vessel combine Phase A except for Dermacryl-79 and Titanium Dioxide and heat to 80C. Slowly sift in Dermacryl-79 with constant stirring until completely dissolved. Add Titanium Dioxide with constant stirring until completely dispersed. Add Phase A to Phase B at 80C and mix for 30 minutes. Cool to 40C and add Phase C and Phase D, homogenize, cool to room temperature and package.

SOURCE: National Starch and Chemical Co.: Formula 7023-24A

Ultra Violet Absorbing Sunscreen

Veegum Ultra, magnesium aluminum silicate, is used to thicken and stabilize this sunscreen emulsion. Two ultra violet absorbers are used to achieve an estimated SPF (Sun Protection Factor) of approximately 15. This smooth, flowable lotion spreads easily and dries quickly, leaving non-tacky after-feel.

<u>Ingredient:</u>	<u>% by Wt.</u>
A Veegum Ultra (Magnesium Aluminum Silicate)	1.50
Deionized Water	70.50
Glycerin	5.50
B PEG-150 Distearate	3.00
Diocetyl Malate*	2.00
Mineral Oil	4.00
Cetyl Alcohol	0.50
Benzophenone-3	3.00
Octyl Dimethyl PABA	7.00
Steareth-2	0.90
Steareth-20	2.10
C Preservative, Fragrance	q.s.

*Ceraphyl 45

Procedure:

Heat the water to 55C. Slowly add Veegum Ultra to the water while stirring with a propeller mixer at 700 rpm. Increase the mixer speed to 1500-1700 rpm and mix for 30 minutes, maintaining temperature at 55C. Add glycerin and mix for 5 minutes. Mix B ingredients and heat to 60C. Add B to A while mixing at 1500-1700 rpm. Continue mixing for 30 minutes. Avoid air entrapment. Slow mixing speed to 1000 rpm and continue mixing while cooling to 35C. Add C and mix until uniform. Package.

Product Characteristics:

Viscosity: 5000-6000 cps
pH: 5.0+-0.2

Comments:

This prototype formula is designed to serve as a guide for the development of new products or the improvement of existing ones.

SOURCE: R.T. Vanderbilt Co., Inc.: Formula No. 448

Un-Buffered Self Tanning Cream

Resulting product is a soft cream that could be dispensed from a flexible tube or a jar. The formulation utilizes 5% Dihydroxyacetone (DHA) as the self tanning ingredient. The formulation contains no amines to react with Dihydroxyacetone. The formulation applies easily and evenly and forms a moderately thick film allowing maximum tan color development. The finished product should be stored away from light and at temperature conditions below 40C to prevent DHA from degrading.

	<u>%w/w</u>
A. Deionized Water	63.10
Methylparaben (Lexgard M)	0.20
2,4-Dichlorobenzyl Alcohol (Myacide SP)	0.20
Propylene Glycol USP	1.00
B. Hydroxyethylcellulose (Cellosize QP-15,000H)	0.40
C. Glyceryl Stearate (Lexemul 515)	6.00
Glyceryl Stearate (and) PEG-100 Stearate (Lexemul 561)	3.00
Caprylic/Capric Triglyceride (Lexol GT-865)	4.00
Isobutyl Stearate (Lexol BS)	2.00
Propylparaben (Lexgard P)	0.10
D. Dihydroxyacetone	5.00
Deionized Water	15.00

Procedure:

1. Combine section "A" heating to 75-80C. Use a propeller mixer for agitation.
2. Sprinkle section "B" into section "A". Increase mixing speed to create a vortex during addition, then slow to highest speed which does not produce a vortex.
3. Combine section "C". Heat to 80-85C with continuous slow mixing.
4. When sections "AB" and "C" are homogeneous and at the designated temperatures add section "C" to sections "AB". Increase mixing speed to a high speed. Begin cooling. Slow mixing speed to highest speed possible that will not cause vortexing.
5. Using gloves, combine section "D" and mix until clear.
6. Add section "D" to sections "ABC" at 35-40C. Continue mixing and cooling.
7. At 33-35C adjust for water loss.
8. Mix batch until it reaches 30.

Water Resistant Sunscreen

	<u>% By Weight</u>
A Veegum Pro	1.0
Water	83.2
B Glycerin	1.5
Triethanolamine	0.6
C Amerscreen P	4.0
Cetyl alcohol	0.8
Stearic acid XXX	2.0
SS4267 Fluid	4.0
Isopropyl myristate	2.0
Synchrowax AW1 C	0.4
Cerasynt MN	0.5
Preservative	q.s.

Procedure:

Heat the water to 70 to 75C, then slowly add the Veegum PRO while agitating at maximum available shear. Mix until smooth. Add B to A with slow agitation until smooth. Maintain A/B at 70 to 75C; heat C to 70 to 75C. Add C to A/B and mix until cool.

Consistency: Medium viscosity lotion.

Suggested Packaging: Squeeze or pump bottles.

Comments: Veegum PRO effectively stabilizes the emulsion even at elevated temperatures. This lotion, using silicone fluid to provide an emollient water resistant protective barrier, imparts a non-greasy feel. The Amerscreen P at 4% provides an estimated Sun Protection factor of 8.

SOURCE: R.T. Vanderbilt Co., Inc.: Formulation No. 418

Water Resistant Sunscreen

Resulting product is a viscous sunscreen lotion which can be dispensed from a flexible tube or soft bottle. The formulation exhibits exceptional water resistance which is contributed by Lexorez 100. The formula applies easily and leaves a non-greasy film on the skin. The sunscreen active ingredient is Octyl Methoxycinnamate. The SPF value of the formulation is unknown.

	<u>%w/w</u>
A. Deionized Water	71.45
Propylene Glycol USP	7.50
Methylparaben (Lexgard M)	0.20
Tetrasodium EDTA (Hamp-ene Na4)	0.05
B. Carbomer (Carbopol ETD 2055)	0.15
C. Sodium Hydroxide (10% w/w)	QS
D. Glyceryl Stearate (Lexemul 515)	4.00
Glyceryl Stearate (and) PEG-100 Stearate (Lexemul 561)	1.00
Cetyl Alcohol NF	0.50
Aluminum Starch Octenylsuccinate (Dry Flo-PC)	1.00
Caprylic/Capric Triglyceride (Lexol GT-865)	3.00
Isopropyl Palmitate (and) Isopropyl Myristate (and) Isopropyl Stearate (Lexol 3975)	1.00
Tocopherol (Copherol F-1300)	0.05
Propylparaben (Lexgard P)	0.10
Octyl Methoxycinnamate (Escalol 557)	8.00
Glycerin/Diethylene Glycol/Adipate Crosspolymer (Lexorez 100)	2.00

Procedure:

1. Combine all ingredients in phase "A" and heat to 75-80C. Agitate at low speed.
2. Slowly add phase "B" to phase "A". Agitate at a higher speed until all Carbomer is fully dispersed.
3. Combine phase "D" in a separate vessel and heat to 80-85C. Add phase "D" to phase "AB". Mix for five minutes and start to cool.
4. At 45C adjust for water loss. Mix until homogeneous. Then adjust for viscosity using 10% NaOH (9,500+-500 cps using spindle #6 @ 50rpm, 25C). The final product has a pH of approximately 6.0.

Miscellaneous

Aloe Medicated Gel
With Alcohol (SDA 39C)

<u>Formula:</u>	<u>%</u>	<u>Per 2000g</u>
l-Menthol	6.00	120.00
SDA 39C	8.00	160.00
Tween 60	3.00	60.00
Aloe Moist	83.00	1660.00

Procedure (With alcohol, SDA 39C):

1. Add Aloe Moist to large beaker. Fit with stirrer.
2. In a separate container, mix the menthol, alcohol and Tween and stir until clear.
3. With slow-medium agitation add the mixture to the Aloe Moist.
4. Stir until a milky white and homogeneous.
5. Fill into HDPE jars.

Aloe Medicated Gel
Without Alcohol

<u>Formula:</u>	<u>%</u>	<u>Per 75g</u>
l-Menthol	3.00	2.25g
Tween 60	12.00	9.00g
Aloe Moist	79.70	59.78g
3% Carbopol 940	5.00	3.75g
TEA	0.30	0.225g
FDC Yellow #5, 1%	qs	2 drops
FDC Blue #1, 1%	qs	2 drops

Procedure (Without alcohol):

1. Mix l-menthol and Tween 60 together and heat to about 45C.
2. Heat Aloe Moist to 55-58C - add colors.
3. Add the menthol/Tween mix to the Aloe Moist with stirring.
4. Add the 3% Carbopol 940 and mix well.
5. Add the TEA and mix well.
6. Cool to room temp with slow agitation.

Clear Gel without DEA

This formula contains no diethanolamine, yet is able to produce a microemulsion gel which exhibits clarity and possesses a manageable set point (80C), using potassium hydroxide in place of the DEA. Lower ethoxylates like the Volpos and Crodafoses used here are the emulsifiers of choice for clear gel formulations, since less ethoxylated materials have been shown to cause less irritation. The powerful emulsifying properties of these esters yield an extremely efficient system in which a 1:1 ratio of emulsifier:oil concentration is achieved - a balance that minimizes irritation potential and optimizes gel formation.

<u>Ingredients:</u>	<u>%</u>
Part A:	
Deionized Water	52.6
Propylene Glycol	12.0
Part B:	
Volpo 3 (Oleth-3)	7.0
Volpo 5 (Oleth-5)	4.0
Crodafos N3A (Oleth-3 Phosphate)	2.0
Crodafos N10A (Oleth-10 Phosphate)	4.0
Mineral Oil (70ssu)	17.0
Part C:	
KOH (25% Aq. Soln.)	1.4

Procedure:

Combine ingredients of Part A with mixing and heat to 90-95C. Combine ingredients of Part B with mixing and heat to 90-95C. Add Part C to Part A with mixing. Add Part A/C to Part B with mixing using a propeller blade mixer. Avoid aeration as much as possible. Cool to desired fill temperature, cooling at a 2C/min rate. Set point approximately 80C.

Emulsifier:Oil Ratio: 1:1

Set Point: 80C

Formula CG-25

Silicone Emulsion

This product uses Incroquat Behenyl TMS to form a stable emulsion (1 month @ 50C), specifically with Fluid 200 (200 cs) but also suitable for other silicone fluids, for Volatile Silicone and dimethicone.

<u>Ingredients:</u>	<u>%</u>
Part A:	
Deionized Water	72.0
Incroquat Behenyl TMS (Behentrimonium Methosulfate (and) Cetearyl Alcohol)	7.0
Silicone Fluid (200cps)	20.0
Part B:	
Germaben II	1.0

Procedure:

Combine ingredients of Part A with mixing and heat to 80-85C. Cool to 40C with mixing and add Part B. Cool with mixing to desired fill temperature.

Heat (A) to 75C. Heat (B) to 77C. Add (B) to (A) slowly with moderate but thorough agitation. Add (C) at 45C. Stir until room temperature and package.

Liquid Cologne

<u>Ingredients:</u>	<u>%W/W</u>
Perfume oil	5.00
Tween 20	21.50
Water	73.50
*Preservative	

*q.s. these ingredients.

Procedure:

Mix the perfume oil and Tween 20. Slowly add this mixture to the water and add preservative. Stir until a clear product results.

Solid Cologne

<u>Ingredients:</u>	<u>%W/W</u>
A Stearic acid, triple pressed	5.00
Sorbo	2.00
Alcohol, SD-40	83.00
B Sodium hydroxide to saponify the 5% stearic acid	
Water, deionized	5.00
C Perfume oil	5.00

Procedure:

Heat (A) to 65C and (B) to 70C. Add (B) to (A) with agitation. Add (C) at 55-60C. Pour into heated molds. Cool slowly to prevent formation of air pockets and to achieve the greatest translucency. Unmold, wrap in foil and package in air tight containers.

High-Luster Toothpaste

<u>Ingredients:</u>	<u>% by Weight</u>
Part A:	
(1) Sorbitol (70% solution)	30.00
(2) Deionized Water	17.52
Part B:	
(3) Kaopolite SF	24.25
(4) Dicalcium Phosphate Dihydrate	24.25
(5) Sodium Lauryl Sulfate	2.00
(6) Carboxymethyl Cellulose (medium viscosity)	0.80
(7) Trimagnesium Phosphate	0.50
(8) Korthix H	0.25
(9) Sodium Saccharin	0.20
(10) Methyl Paraben	0.18
(11) Propyl Paraben	0.05
Part C:	
(12) Flavoring Oil	q.s.

Procedure:

Mix (1) and (2). In a separate container, thoroughly dry-blend ingredients (3) through (11). Add Part B slowly to Part A. Mix thoroughly. Add Part C, mill twice and deaerate.

Follow recommended handling practices of the supplier of each product used.

Denture Cleaner

<u>Ingredients:</u>	<u>% by Weight</u>
(1) Deionized Water	30.8
(2) Korthix H	1.5
(3) Carboxymethyl Cellulose (medium viscosity)	0.5
(4) Sorbitol (70% solution)	10.0
(5) Glycerin	10.0
(6) Sodium Saccharin	0.2
(7) Kaopolite 1147	45.0
(8) Sodium Lauryl Sulfate	2.0
(9) Flavor, Preservative & Colorant	q.s.

Procedure:

Mix (2) into (1) with high shear. Add (3) and continue mixing at high shear until well dispersed. Reduce speed and add (4), (5), and (6). Slowly add (7) and continue to mix until well dispersed. Then add (8). Add (9) and mill twice and deaerate.

Follow recommended handling practices of the supplier of each product used.

Micro-Emulsions with Aloe Vera and d-Limonene

The following formulas are clear, microemulsions of d-Limonene and Aloe Vera. They represent the range of d-Limonene and Aloe Vera concentrations commonly used as degreasing solvent cleaners. These formulas are generally used by diluting in water (1->16 oz./gallon depending on the use requirements). The formulas are clear and exhibit a bloom effect upon dilution.

	<u>%w/w</u>
d-Limonene	10.0
Monamulse DL-1273 ^V	18.0
Isopropanol	10.0
Water	42.0
Aloe Vera Gel (Terry AG002)	20.0

	<u>%w/w</u>
d-Limonene	35.0
Monamulse DL-1273	28.0
Isopropanol	5.0
Water	12.0
Aloe Vera Gel (Terry AG002)	20.0

	<u>%w/w</u>
d-Limonene	65.0
Monamulse DL-1273	23.0
Aloe Vera Gel (Terry AG002)	12.0

Procedure:

In all cases, mix Monamulse DL-1273 with d-Limonene until completely dissolved and of uniform consistency. Add the Isopropanol, mixing until homogeneous. Pre-mix Aloe Vera Gel with water. Slowly add to batch with stirring until uniform.

Preface

This book contains 1,444 cosmetic and toiletry formulations, based on information received from numerous industrial companies and other organizations. This is Volume 5 of the Second Edition of this work; Volume 1 was published in 1989, Volume 2 in 1992, Volume 3 in early 1995 and Volume 4 in late 1995. There are no duplications in any of these volumes.

The data represent selections from manufacturers' descriptions made at no cost to, nor influence from, the makers or distributors of these materials. Only the most recent formulas have been included. It is believed that all of the trademarked raw materials listed are currently available, which will be of interest to readers concerned with raw material discontinuances. The 1996 market for cosmetic raw materials is estimated at \$2 billion.

Each formulation in the book is identified by a description of end use. The formulations include the following as available, in the manufacturer's own words: a listing of each raw material contained; the percent by weight of each raw material; suggested formulation procedure; and the formula source, which is the company or organization that supplied the formula. The book is divided into the following 13 sections, with the number of formulations indicated in ().

- I. Antiperspirants and Deodorants (31)
- II. Baby Products (37)
- III. Bath and Shower Products (140)
- IV. Beauty Aids (172)
- V. Creams (238)
- VI. Hair Care Products (325)
- VII. Insect Repellents (7)
- VIII. Lotions (96)
- IX. Shampoos (225)
- X. Shaving Products (18)
- XI. Soaps and Hand Cleaners (30)
- XII. Sun Care Products (80)
- XIII. Miscellaneous (45)

Each formula is indexed in the section which is most applicable. The reader seeking a formula for a specific end use should check each section which could possibly apply.

In addition to the above, there are two other sections that will be helpful to the reader:

XIV. Trade-Named Raw Materials. Each raw material is listed with a brief chemical description and the name of the raw material supplier.

XV. Suppliers' Addresses. Addresses of suppliers of trade-named raw materials and/or formulations, some of which are not available in the usual reference books.

It should be noted that some formulations in the book are translations. The manufacturer's exact wording has been used in these cases. Occasionally different companies have listed the same raw material differently; it is hoped that the reader will be able to identify the same or similar raw materials by consulting the Trade-Named Raw Materials section.

The table of contents of the book is organized in such a way as to serve as a subject index.

My fullest appreciation is expressed to the companies and organizations which supplied the information included in this book.

May 1996

Ernest W. Flick

NOTICE

To the best of our knowledge the information in this publication is accurate; however, the Publisher does not assume any responsibility or liability for the accuracy or completeness of, or consequences arising from, such information. This book does not purport to contain detailed user instruction, and by its range and scope could not possibly do so. Mention of trade names or commercial products does not constitute endorsement or recommendation for use by the Author or Publisher.

Cosmetic and toiletry raw materials could be toxic or cause allergies in some circumstances, and, therefore, due caution should always be exercised in the use of potentially hazardous materials and the manufacturing processes involved. Final determination of the suitability of any information or product for use contemplated by any user, and the manner of that use, is the sole responsibility of the user. We strongly recommend that users read and adhere to a manufacturer's or supplier's current instructions for handling each material they use.

The author and Publisher have used their best efforts to include only the most recent data available. The reader is cautioned to consult the supplier in case of questions regarding current availability.

Contents and Subject Index

SECTION I: ANTIPERSPIRANTS AND DEODORANTS	1
Antiperspirant Cream	2
Antiperspirant Roll-On	2
Antiperspirant Cream O/W	3

2 *Cosmetic and Toiletry Formulations*

Anti-Perspirant Cream

Soft white cream. Leaves no visible traces of aluminum chlorohydrate on the skin.

Material/CTFA-Index:

A: Cetyl Alcohol	2,50%
Stearyl Alcohol	2,50
Locron P/Aluminum Chlorhydrate	15,00
Eumulgin M8/Oleth-10 (and) Oleth-5	3,00
Eutanol G/Octyldodecano1	6,00
B: Belsil CM 040/Cyclomethicone	9,00
Water	62,00
Pigments, fragrances	q.s.

Mix A and heat to 70C, form a solid phase with warm water, work in Belsil CM 040 and dilute with water.

Temperature stability: at 45C 4 weeks.

Formulation 216 AH

Anti-Perspirant Cream

Soft white cream. Leaves no visible traces of aluminum chlorhydrate on the skin.

Material/CTFA-Index:

A: Cetyl Alcohol	2,50%
Stearyl Alcohol	2,50
Locron P/Aluminum Chlorhydrate	10,00
Eumulgin M8/Oleth-10 (and) Oleth-5	3,00
Eutanol G/Octyldodecano1	6,60
B: Belsil CM 040/Cyclomethicone	9,00
Belsil PDM 20/Phenylmethicone	3,00
Water	63,40
Pigments, fragrances	q.s.

Mix A and heat to 70C, mix in hot water, add B and mix well.

Temperature stability: at 45C over 10 weeks.

Formulation 217AH

Anti-Perspirant Roll-on

Milky white, liquid.

Material/CTFA-Index:

A: Locron P/Aluminum Chlorhydrate	20,00%
Wacker HDK H15/Silica	1,00
B: Lamecreme KS/Glyceryl Stearate se	3,00
Belsil DM 100/Dimethicone	5,00
C: Belsil CM 020/Cyclomethicone	71,00
Pigments, fragrances	q.s.

Mix A and heat to 70-75C, mix B and melt. Mix A and B, add C, cool.

Temperature stability: at 45C 3 weeks.

Formulation 185 AH

SOURCE: Wacker Silicone: Suggested Formulations

Antiperspirant Cream O/W

	<u>%W/W</u>
I Lanette O	8.0
Eumulgin B1	1.5
Eumulgin B2	1.5
Eutanol G *	8.0
II Aluminum chlorohydrate	20.0
Water	61.0

Formula No. F12-01

Antiperspirant Cream O/W Transparent, in Gel Form

	<u>%W/W</u>
I Eumulgin B3	12.0
Cetiol HE	20.0
Paraffin oil, high viscous	5.0
II Aluminum chlorohydrate	20.0
Water	43.0

Formula No. F12-02

Perfumed Cream O/W Transparent, in Gel Form

	<u>%W/W</u>
I Eumulgin B1	2.0
Ethyl alcohol 96%	45.0
Carbopol 940	1.5
Perfume	5.0
II Triethanolamine	2.3
Water	44.2

Preparation:

Eumulgin B1 and the perfumed oil are dissolved in the mixture of ethyl alcohol and 40 parts water; the Carbopol 940 is stirred while being swelled in the solution. The dispersion produced is neutralized with the mixture of triethanolamine and the rest of the water.

Formula No. F13-01

Perfumed Cream O/W Transparent, in Gel Form

	<u>%W/W</u>
Cetiol HE	2.0
Ethyl alcohol 96%	20.0
Viscontran HEC 30 000 PR-3% solution	65.0

Formula No. F13-02

SOURCE: Henkel KGaA: Cosmetic Model Formulae

Anti-perspirant Roll-on
Slightly cloudy, high viscosity.

Material/CTFA-Index:

A: Belsil DMC 6032/Dimethicone Copolyol Acetate	2,00%
Water	52,00
B: Ethanol/Alcohol (Cosmetic grade)	25,00
C: Locron L/Aluminum Chlorhydrate	20,00
Tylose H 4000 P/Hydroxyethylcellulose	0,5-1,0
Pigments, fragrances	Q.S.

Mix A, stir B into A, mix in C. The desired viscosity can be regulated with Tylose H 4000 P (add Tylose H 4000 P either mixed with water to A or mix at the end in the finished formulation).

Formulation 516 AH

Anti-perspirant Roll-on
Cloudy, low viscosity.

Material/CTFA-Index:

Water	51,20%
Ethanol/Alcohol (Cosmetic grade)	12,00
Belsil DMC 6031/Dimethicone Copolyol	5,00
Wacker HDK H15/Silica	1,50
Tylose H 4000 P/Hydroxyethylcellulose	0,30
Locron L/Aluminum Chlorhydrate	30,00
Pigments, fragrances	q.s.

Mix the water and cosmetic alcohol, dissolve Belsil DMC 6031. Add HDK H15 and Tylose H 4000 P to the solution whilst stirring. Stir in the aluminum chlorhydrate.

Temperature stability: at 45C over 10 weeks.

Formulation 242 AH

Anti-perspirant Stick
White firm stick with little soft rub.

Material/CTFA-Index:

A: Belsil CM 040/Cyclomethicone	52,50%
B: Stearyl Alcohol	24,00
Arlacel 165/Glyceryl Stearate se	1,00
Locron P/Aluminum Chlorhydrate	22,00
Pigments, fragrances	q.s.

Mix B and heat to 65C. Stir in Belsil CM 040.

Temperature stability: at 45C over 10 weeks.

Formulation 302 AH

SOURCE: Wacker Silicone: Suggested Formulations

Clear Antiperspirant Stick

A solid antiperspirant stick which contains a solubilized enhanced efficacy aluminum-zirconium tetrachlorohydrate GPG active in a clear base.

<u>Ingredients:</u>	<u>% by weight</u>
A. Reach AZP-908PG (30% soln.)	50.00
B. Propylene Glycol	20.70
C. PPG-3-Isosteareth-9	8.00
D. Propylene Carbonate	6.00
E. Dipropylene Glycol	4.00
F. Dibenzylidene Sorbitol	3.00
G. Isosteareth-2	3.00
H. Laureth-2 Benzoate	2.00
I. Dimethicone Copolyol	1.50
J. AMP Regular	1.80
K. Fragrance	q.s.

Procedure:

1. Add B,D,E, and I in sequence to beaker with medium agitation and heat to 100C.
2. Add F to beaker and mix with medium agitation until dissolved and the solution is clear. Lower temperature to 95C.
3. Heat A separately to 85C and add J. Mix until clear. Add to main batch.
4. Premix C, G, H, and K and heat to 85C and add to main batch slowly at low to medium speed.
5. Continue mixing and pour into casings at 80-85C.

Formulation PF-0276 suggested by Reheis, Inc.

SOURCE: Angus Chemical Co.: Angus Product Formulary

Antiperspirant Roll-on

Colourless, clear, low-viscosity.

Material/CTFA-Index:

Wacker-Belsil DMC 6038/Dimethicone Copolyol	2,00%
Water	53,00
Ethanol/Alcohol (Cosmetic grade)	25,00
Locron L/Aluminumchlorhydrat	20,00
Fragrances, pigments	q.s.

Mix all ingredients.

Deodorant Emulsion O/W for Roll-On

	<u>%W/W</u>
I Cutina MD	4.0
Eumulgin B1	1.5
Eumulgin B2	1.5
Eutanol G	5.0
Bactericide	0.5
II Ethyl alcohol 96%	10.0
Carbopol 934	0.3
Triethanolamine	0.5
Henkel Glycerin 86% DAB 9	5.0
Water	71.7

Preparation:

The fatty substances are melted on the water bath at approx. 70C and the bactericide is dissolved. 50 parts of the water are mixed with the glycerine, heated to approx. 75 C and, stirring slowly, added to the fat phase. The Carbopol 934 is stirred while being dispersed in 15 parts of the water. After the emulsion has cooled to approx. 35C, the ethyl alcohol and the Carbopol dispersion are added, perfumed, preserved and neutralized with the triethanolamine which has been dissolved earlier in the remaining 6.1 parts of the water.

Formula NO. F21-01

Deodorant Stick

	<u>%W/W</u>
Lanette O	3.0
Eutanol G	27.0
Comperlan 100	3.0
Siegert Stearin L4	8.0
Perfume	2.0
Bactericide	0.2
Ethyl alcohol 96%	51.8
1,2-propylene glycol	2.0
Sodium hydroxide solution 38%	3.0

Preparation:

Lanette O, Eutanol G, Comperlan 100, Siegert Stearin L4 and the bactericide are melted together on the water bath at approx. 70C with most of the ethyl alcohol. Propylene glycol and the remaining part of the alcohol are mixed together with the sodium hydroxide solution, also heated to 70C and stirred into the alcoholic fat melt. The compound is then perfumed and cast in moulds. It solidifies in a few minutes and can be taken out of the mould before it cools down completely. It is advisable to work with a certain excess of alcohol. In small batches, this is about 10%, whilst in larger ones, correspondingly less. Because of the risk of evaporation, the finished stick must be packed in a sufficiently tight container.

Note: Max. pH 11

Formula No. F41-01

Deodorant Stick Without Alcohol

	<u>%W/W</u>
Siegert Stearin L2SM	8.0
Comperlan 100	3.0
Lanette 22	8.0
Irgasan DP 300	0.5
1,2-propylene glycol	65.3
Sodium hydroxide sol. 10%	15.2

Formula No. F41-04

Deodorant Stick Without Alcohol

	<u>%W/W</u>
Siegert Stearin L2SM	10.0
Comperlan 100	4.0
Lanette 22	10.0
Irgasan DP 300	0.5
1,2-Propylene glycol	56.5
Sodium hydroxide sol. 10%	19.0

Formula No. F41-05

Preparation for Formulas F41-04 and F41-05:

Siegert Stearin L2SM, Comperlan 100, Lanette 22, Irgasan DP 300 are dissolved in 40 parts propylene glycol at 70C. The sodium hydroxide solution is also heated to 70C with the rest of the propylene glycol and stirred into the melt. It is poured into moulds at 65C.

Deodorant Stick

Translucent stick with soft rub.

Material/CTFA-Index:

Sodium Stearate	6,00%
Ethanol 96 %ig/Alcohol (cosmetic grade)	65,00
Propylene Glycol	24,80
Belsil CM 040/Cyclomethicone	3,00
Pigments, preservatives, fragrances	q.s.

Mix all components and heat to 60-70C, until all the sodium stearate has melted. Fill at 60C.

Temperature stability: at 45C over 10 weeks.

Formulation 186 AH

Deodorant Stick

Firm, slightly yellow stick with soft rub.

Material/CTFA-Index:

Lanolin Acid	50,00%
Belsil SDM 6022/Dimethicone (and) Stearoxy Dimethylsilane (and) Stearoxy Dimethyl-disiloxane	36,00
Isopropyl Myristate	5,00
Belsil DM 350/Dimethicone	4,00
Belsil CM 040/Cyclomethicone	5,00
Preservatives, pigments, fragrances	q.s.

Melt all components together. Fill while hot.

Temperature stability: at 45C over 10 weeks.

Formulation 279 AH

Deodorant Stick

Firm, slightly yellow stick with little rub.

Material/CTFA Index

A: Lanolin Acid	60,00%
Belsil SDM 6022/Dimethicone (and) Stearoxy Dimethylsilane (and) Stearoxy Dimethyl-disiloxane	30,00
Belsil DM 35/Dimethicone	5,00
B: Belsil CM 040/Cyclomethicone	5,00

Melt A, mix in B, fill while hot.

Temperature stability: at 45C over 10 weeks.

Formulation 357 AH

SOURCE: Wacker Silicone: Suggested Formulations

Deodorant Stick Formulation

<u>Ingredient:</u>	<u>Weight%</u>
Propylene Glycol	67.2
Water	19.2
Phenoxyde STA-100 (Steareth-100)	4.4
Sodium Stearate	4.1
Silwax WS-L	4.0
Phenoxyde STA-2 (Steareth-2)	0.6
Triethanolamine	0.5

Procedure:

1. Add water, propylene glycol and heat to 75C.
2. Add other ingredients in order shown under agitation.
3. Cool to 60C.
4. Add fragrance and color as desired.

Silwax WS-L is a patented silicone compound which lowers the tack of the stick and provides a silicone feel. It does not affect the clarity.

Formula L-2418A

Deodorant Stick Formulation

<u>Ingredient:</u>	<u>Weight%</u>
Propylene Glycol	67.2
Water	19.2
Phenoxyde STA-100 (Steareth-100)	4.4
Sodium Stearate	4.1
Silwax WD-F	4.0
Phenoxyde STA-2 (Steareth-2)	0.6

 Formula A VI/5804

Baby Cream

White, soft cream. Slightly greasy, but well absorbed.
Water-proof.

Material/CTFA-Index:

A: Hostacerin WO/Polyglyceryl-2 Sesquiosostearate (and) Beeswax (and) Mineral Oil (and) Magnesium Stearate (and) Aluminum Stearate	10.00%
Lunacera M/Microwax	1.00
Mineral Oil (high viscosity)	10.00
Isopropyl Myristate	7.00
B: Glycerine	3.00
Water	61.60
C: Belsil CM 1000/Cyclomethicone (and) Dimethiconol	5.00
Preservatives, perfume, pigments	q.s.

W/O Cream

Melt A at approx. 80C, heat B to 80C. Stir A into B with
good agitation. Add C at approx. 45C.

Temperature stability: at 45C more than 10 weeks.

Formulation 809 AH

Baby Lotion

High-viscosity lotion, easily spread.

Material/CTFA-Index:

A: Wacker-Belsil DM 350/Dimethicone	35.00
Crodawachs GP 200/Stearylalcohol (a.) PEG Stearate	4.00
B: Water	55.00
C: Zinc Oxide	6.00
Preservative, fragrances, pigments	q.s.

Heat both A and B to 60-65C, stir B into A, and then add C.

Formulation 939 AH

SOURCE: Wacker Silicone: Formulation 939 AH

Baby Shampoo

<u>Ingredients:</u>	<u>%</u>
Phase A:	
H2O, Deionized	49.40
Sodium Lauramphoacetate & Sodium Trideceth Sulfate	25.00
Sodium Laureth-3 Sulfate	10.00
Hetaine CLA (Canolamidopropyl Betaine)	4.00
Hetsorb L-80-72% (PEG-80 Sorbitan Laurate)	10.00
PEG-150 Distearate	0.90
Phase B:	
Quaternium-15	0.20
Phase C:	
Citric acid	0.50
Specifications:	
pH: 6.90	
Viscosity #3/12: 2000 cps	

Procedure:

- 1) In a stainless steel kettle equipped with a Lightnin' type mixer, combine Phase A. Heat to 70C while mixing until uniform.
 - 2) Cool to 45C while mixing; add Phase B.
 - 3) Adjust to desired pH with Phase C.
- Formula HS 92-61-3

Baby Bath

<u>Ingredients:</u>	<u>%</u>
H2O, Deionized	58.8
PEG-80 Glyceryl Cocoate	14.0
Sodium Lauryl Sulfate	12.0
PEG-30 Glyceryl Cocoate	8.0
Hetaine CLA (Canolamidopropyl Betaine)	6.0
Aloe Vera Gel	0.5
Methyl Paraben	0.25
Propyl Paraben	0.15
Imidazolidinyl Urea	0.30
Specifications:	
pH: 6.80	
Viscosity #3/12: 2300	

Procedure:

In a stainless steel kettle, combine all ingredients, except imidazolidinyl urea, and heat to 70C while mixing until uniform. Cool to 30C and add remaining ingredient. Mix well.

Bubble-Bath

With pearl lustre effect, 18.2% active ingredient

Recipe:

A	Hostapon CT paste	8.00%
	Sodium Methyl Cocoyl Taurate	
B	Water	20.00%
C	Genapol LRO liquid	40.00%
	Sodium Laureth Sulfate	
	Genapol AMG	10.00%
	Magnesium-PEG-3 Cocamide Sulfate	
	Genapol PGM liquid	4.00%
	Sodium Laureth Sulfate (and) Glycol Distearate (and) Cocamide MEA	
	Gelita Sol C	3.00%
	Hydrolyzed Collagen	
	Perfume	0.50%
	Water	10.70%
	Dyestuff solution	q.s.
	Preservative	q.s.
	Genapol L-3	2.00%
	Laureth-3	
D	Sodium chloride	1.80%

Procedure:

- I Dissolve A in warmed B.
- II One after another the components of C are added to I.
- III If necessary adjust the pH.
- IV Finally adjust the viscosity with D.

Formulation A I/2009

Bubble-Bath

Low price quality, clear, 10.0% active ingredient

Recipe:

A	Genapol LRO liquid	25.00%
	Sodium Laureth Sulfate	
B	Hostapur SAS 60	5.00%
	Sodium C14-17 Sec. Alkyl Sulfonate	
	Perfume	0.50%
	Water	67.50%
	Dyestuff solution	q.s.
	Preservative	q.s.
C	Sodium chloride	2.00%

Procedure:

- I One after another the components of B are added to A.
- II If necessary adjust the pH.
- III Finally adjust the viscosity with C.

Formulation A I/2010

Alpha Hydroxy Acid Lotion

Rich emulsion containing alpha hydroxy acid to gently exfoliate and rejuvenate the skin.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Grillocose PS (Methyl Glucose Sesquistearate)	3.00	Emulsifier
2. Behenyl Alcohol (Lanette 22)	3.00	Thickener
3. Mineral Oil 9NF	7.50	Emollient
4. Octyl Octanoate (Tegosoft EE)	7.50	Emollient
5. Sodium Cetearyl Sulfate (Lanette E)	0.10	Emulsifier, Cleaning
6. Glycerine	3.00	Humectant
7. Xanthan Gum (Keltrol CG-T)	0.40	Thickener
8. Distilled/Deionized Water	64.00	----
9. Patlac LA (Lactic Acid-88%)	5.60	Hydroxy Acid
10. Sodium Hydroxide (20% Soln.)	5.00	pH Adjuster
11. Glydant	q.s.	Preservative
12. Fragrance-Nature's Herbal #165-050	0.20	Odor

Compounding Procedure:

Add Patlac LA to 10% water and adjust pH with Sodium Hydroxide solution to 3.8. In remaining water, dissolve item 7. Add items 5 and 6 and heat to 80C. Separately heat items 1-4 to 80C. Add items 1-4 to items 5-8 and mix. While mixing, cool to 45C and add items 11 and 12. At 40C add prepared Lactic Acid solution (pH 3.8) and homogenize.

Ref. No. 119-7

Facial Moisturizing Lotion

Elegant mineral oil and lanolin based emulsion.

<u>Ingredients:</u>	<u>W/W</u>	<u>Function</u>
1. Ritapro 165 (R.I.T.A. Blend)	4.00	Emulsifier
2. Mineral Oil	5.00	Emollient
3. Lanolin X-tra DEO (R.I.T.A. Lanolin)	0.50	Emollient
4. Ritapro 100 (R.I.T.A. Blend)	1.50	Emulsifier, Viscosity
5. Dimethicone (Dow 225 Fluid)	0.40	After Feel
6. Distilled/Deionized Water	81.70	----
7. Propylene Glycol	6.00	Moisturization
8. Polyquta 3000 (Polyquaternium-10)	0.50	After Feel
9. Glydant	0.20	Preservative
10. Fragrance - Light Musk 169-119	0.20	Odor

Compounding Procedure:

Dissolve Polyquta 3000 in water. Add item 7 and heat to 70C. Separately heat items 1-5 to 70C. Add this mixture to water mixture. Mix to uniform and cool to 40C. Add preservative and perfume.

Gel After Bath Freshener

A clear gel bath freshener which liquifies rapidly upon application. Formulated to help soften, smooth and condition skin.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Distilled/Deionized Water	69.27	----
2. Acritamer 941 (Carbomer 941)	0.15	Gel
3. Glydant	0.20	Preservative
4. Propylene Glycol	5.00	Moisture
5. SD Alcohol-40	23.00	Refreshing
6. Laneto-50 (PEG-75 Lanolin)	1.00	Smoothness
7. Fragrance	1.00	Odor
8. Triethanolamine @ 50%	0.30	Neutralization
9. Versene-EDTA	0.08	Clarity

Compounding Procedure:

Add item 2 to water with high sheer agitation. After complete hydration add items 3 - 9. Agitate until resultant gel is clear and smooth.

Ref. No. 118-187

After Bath Splash

A highly emollient, non-drying after bath splash which refreshes while it moisturizes. Excellent after-feel and perfume solubilization.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Ethanol-95	70.00	Refreshment
2. Patlac NAL (Sodium Lactate)	5.00	Moisture
3. Patlac IL (Isostearyl Lactate)	4.00	Emollient
4. Pationic ISL (Sodium Isostearoyl Lactylate)	2.00	Conditioning
5. Perfume	2.70	Odor
6. Distilled/Deionized Water	16.30	----

Compounding Procedure:

Combine items 1-5 and mix until clear. Slowly add water with good agitation. Filter if desired.

Ref. No. 118-188

Hand and Bath Gel

<u>Ingredients:</u>	<u>%w/w</u>
Phase A:	
Sodium Isethionate	3.00
Sodium Lauryl Sulfate (30%)	15.00
Disodium Laureth-3 Sulfosuccinate	10.00
Water	25.00
Phase B:	
Acrylates/Steareth Stearate-50 Acrylate Copolymer (and) Laureth-3 (and) Propylene Glycol (Antil 208)	1.00
Cocamidopropyl Betaine (Tego Betaine F50)	11.75
Cocamidopropyl Betaine (and) Glycol Distearate (and) Cocamide MEA (and) Cocamide DEA (Tego Pearl B-48)	2.50
Dimethicone Copolyol (Abil B8851)	0.75
Glycerin	3.00
PEG-7 Glyceryl Cocoate (Tegosoft GC)	0.75
Sodium Lactate (and) Sodium PCA (and) Glycine (and) Fructose (and) Urea (and) Niacinamide (and) Inositol (and) Sodium Benzoate (and) Lactic Acid (Lactil)	1.00
Polyglyceryl-4 Isostearate (Isolan GI 34)	1.00
Water	25.25
Preservatives	Q.S.

Procedure:

1. Add ingredients of Phase A in order, mixing between additions.
2. Add the Antil 208, heat to 40C. Mix well. High viscosity may result. Avoid air entrapment.
3. Add remaining ingredients - mixing well during additions.

Dispersible Bath Oil

A luxury residual skin feel derives from this highly frag-
ranced classic "blooming" bath oil. Emulan Oil of Mink
replacing mineral oil will enrich it further.

	<u>Wt. %</u>	<u>CTFA</u>
A. Emulan, Light Fraction	7.5	Mink Oil
PEG-8 Dioleate	7.5	
Isopropyl Myristate	20.0	
Perfume	10.0	
B. Penetek 38/40	55.0	Mineral Oil

Procedure:

Pre-mix Phase A at RT, then slowly add mineral oil with
continued stirring.

SOURCE: Emulan, Inc.: Suggested Formulation

Liquid Bubble Bath

A high lather non-drying bubble bath.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Distilled/Deionized Water	47.30	---
2. Bioterge AS-40 (Sodium C14-16 Olefin Sulfonate)	40.00	Lather
3. Pationic ISL (Sodium Isostearoyl Lactylate)	3.00	Moisture
4. Ritamide C (Cocamide DEA)	5.00	Lather Density
5. Laneto-50 (PEG-75 Lanolin)	4.00	Silky Feel
6. Fragrance	0.50	Odor
7. Preservative	0.20	Preservative

Compounding Procedure:

Combine fragrance with item #4. Add item #3 to the pre-mix. Combine water and item #2. Add pre-mix and agitate until uniform. Add item #5. Adjust pH to 6.8 if necessary.
Ref. No. 118-189

Shebu Bubble Bath Powder

A high-foaming bath product with a luxurious after-feel.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Sodium Lauryl Sulfate (Dry)	18.00	Foam, Cleaning
2. Sodium Bicarbonate	20.00	pH
3. Sodium Sesquicarbonate	38.00	Chelating
4. Sodium Lauryl Sulfoacetate	10.00	Mildness
5. Pationic SSL (Sodium Stearoyl Lactylate)	5.00	Moisture, Mild
6. Laneto AWS (PPG-12, PEG-50 Lanolin)	3.00	Skin Feel
7. Shebu WS (PEG-50 Shea Butter)	5.00	Emolliency
8. Fragrance	1.00	Odor
9. Preservative	q.s.	Preservative

Compounding Procedure:

Combine ingredients 1-5 in a ribbon blender. Pre-mix other ingredients and add to blender while mixing.
Ref. No. 117-60

SOURCE: R.I.T.A. Corp.: Shower/Bath Care

Pearlescent Shower Gel

Has excellent foaming qualities and a beautiful pearl finish.

<u>Ingredients:</u>	<u>% by Weight</u>
A. Water, Deionized	78.10
B. Carbopol 1342	0.30
C. Steol CS-230	15.00
Monateric CAB	5.00
D. AMP-95	0.10
Flonac MS	0.50
Suttocide A	1.00

Procedure:

Add A to main kettle. Slowly add B; mix 1 hour. Next add C; mix well. Change to sweep-type mixer. Slowly add D. Mix until smooth gel develops.

Formulation PF-0319 suggested by Presperse

Aloe Vera Herbal Shower Gel

<u>Ingredients:</u>	<u>% by Weight</u>
Part A:	
Deionized water	32.43
Aloe vera gel concentrate 10:1	4.00
Sodium laureth sulfate, 27.5%	50.00
Cocamide betaine	10.00
Citric acid to pH 5-6	q.s.
Part B:	
BHT	0.05
Cocamide DEA	2.00
Part C:	
Fragrance	1.00
Part D:	
Bronopol	0.02
Herbal extract	0.50

Procedure:

Combine A; heat to 40C with stirring. Dissolve B with heat if necessary. Cool to 40C; add C. Add BC to A with stirring. Cool to 30C; add D with stirring. Thicken to 5,000 to 10,000 cps with sodium chloride. Package at room temperature.

Formulation PF-0234 suggested by Aloecorp.

Citric Acid	0.04
Phase B:	
Cropeptide W	0.30
Kathon CG	0.07
F.D.&C. Blue #1 (1% Sol.)	0.06

Specifications:

pH: 5.0-6.0

Viscosity: #3/12: 7500 cps

Procedure:

- 1) In a stainless steel kettle, combine Phase A. Heat to 75C while mixing.
- 2) Cool to 45C, add Phase B. Mix well.

Formula HSG 92-80

Bubble Bath

<u>Ingredients:</u>	<u>%</u>
H2O, Deionized	51.83
Sodium Laureth-3 Sulfate	21.00
Decyl Polyglucose	12.00
Hetaine CLA (Canolamidopropyl Betaine)	10.00
Hetamide RC (Cocamide DEA)	4.00
Hest GC-7 (PEG-7 Glyceryl Cocoate)	1.00
Kathon CG	0.07
Citric Acid	0.10

Specifications:

pH: 7.00

Viscosity #3/12: 2000 cps

Procedure:

In a stainless steel tank equipped with a Lightnin' type mixer, add ingredients one at a time in order listed. Mix until uniform after each addition.

Formula HB 93-108-2

SOURCE: Heterene, Inc.: Suggested Formulations

Protein and Honey Skin Bath

	<u>%W/W</u>
A. Quat-Pro S (Stearyltrimonium Hydroxy Ethyl Hydrolyzed Collagen)	1.00
Methylparaben	0.20
Deionized Water	32.60
B. May-Tein CT (TEA-Cocoyl Hydrolyzed Collagen)	30.00
Sodium Laureth Sulfate	25.00
Collagen Hydrolyzate Cosmetic N-55 (Hydrolyzed Collagen)	5.00
Honey	1.00
C. Fragrance, color	q.s.
Dowicil 200 (Quaternium-15)	0.20
D. Lemon juice concentrate	5.00
Citric Acid to pH 5.5	q.s.

Procedure:

1. Mix and heat phase A to 65C. Mix until dissolved and homogeneous.
2. Add Phase B to Phase A. Mix to incorporate.
3. Add Phase C and D. Mix to incorporate.

Properties:

Very mild, natural-type skin cleanser and beauty bath. Anti-drying, anti-irritant effects are provided by the foaming protein (May-Tein CT). Skin substantivity is high because of cationic effects of quaternized collagen and collagen hydrolyzate. For hand, face and general body cleansing. Makes a delightful, refreshing bath foam.

SOURCE: Maybrook Inc.: Formula #SW-3006

Emollient Bath Gelee

	<u>Weight, %</u>
Mackol 70NS	17.0
Mackamide LLM	20.0
Mackanate EL	20.0
Mackanate WGD	10.0
Paragon Preservative	q.s
Water, Dye, Fragrance qs to	100.0

Procedure:

1. Add Mackamide LLM to Mackol 70NS.
2. Add the remaining components and heat to 60C.
3. Blend until homogeneous. Avoid aeration.
4. Adjust pH to 6.5-7.0 with citric acid.
5. Cool and fill.

SOURCE: McIntyre Group Ltd.: Suggested Formulation

Shebu After Bath Splash

An emollient after bath splash. Refreshment without skin dryness. Extra moisturization.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Fragrance	2.00	Odor
2. Pationic ISL (Sodium Isostearoyl Lactylate)	2.00	Moisturization
3. Shebu WS (PEG-50 Shea Butter)	2.00	Emollient
4. Alcohol-95	69.00	Refreshment
5. Patlac NAL (Sodium Lactate)	5.00	Moisturizing
6. Patlac IL (Isostearyl Lactate)	5.00	Skin Feel, Mild
7. Distilled/Deionized Water	15.00	----

Compounding Procedure:

Pre-mix items 1-3. Pre-mix items 4-6. Mix together with agitation. Add in water until clear.

Ref. No. 117-46

Shebu After Bath Lotion

A low alcohol moisturizing lotion which has cooling, soothing properties. Substantive after-feel.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Acritamer 941 @ 5% (Carbomer 941)	37.50	Viscosity, Feel
2. Distilled/Deionized Water	43.86	----
3. Patlac IL (Isostearyl Lactate)	1.00	Moisturization
4. Shebu WS (PEG-50 Shea Butter)	1.00	Emollient
5. Ritapro 300 (R.I.T.A. Blend)	0.50	Emulsification
6. Pationic ISL (Sodium Isostearoyl Lactylate)	1.00	Substantivity
7. Rita CA (Cetyl Alcohol)	0.50	Feel
8. Myristyl Lactate	1.00	Smoothness
9. TEA @ 50%	0.64	pH
10. Alcohol-95	12.00	Cooling
11. Fragrance	1.00	Odor

Compounding Procedure:

Combine items 1 and 2 and heat to 165F. Pre-mix items 3-8 and heat to 165F. Add to water. Pre-mix items 9-11 and add, then cool to 110F. Adjust pH to 5.5.

Shower Bath Gel

Shower gel based on natural sucrose esters. Mildness while leaving a smooth skin feel.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Grilloten LSE-87K Soft (Sucrose Cocoate)	4.00	Mildness
2. Distilled/Deionized Water	38.95	----
3. Sodium Laureth-2 Sulfate (Standapol ES-2)	44.00	Lather
4. Disodium Cocamphodiacetate (Mackam 2C)	8.00	Lather
5. PEG-55 Propylene Glycol Oleate (Antil 141B)	1.50	Viscosity
6. Ritasynt IP (R.I.T.A. Blend)	3.00	Opacity
7. Citric Acid (25% Soln)	0.20	pH Control
8. Fragrance	0.25	Odor
9. Preservative	0.10	Preservative

Compounding Procedure:

Combine item 1 with 30% of the water. Heat to 175F with mixing. Combine items 3-6 with remaining water and heat to 175F. Add to other pre-mix. Cool to 120F. Add preservative and perfume. Adjust pH to 5.5-6.0 if necessary.

Ref. No. 118-186

Shower/Bath Gel

Low eye irritation formulation.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Grilloten LSE 65K (Sucrose Cocoate)	2.00	Mildness
2. Pationic 138C (Sodium Lauroyl Lactylate)	1.80	Eye Mildness
3. Distilled/Deionized Water	40.90	-----
4. Sodium Laureth-2-Sulfate (Standapol ES-2)	45.00	Lather
5. Cocamidopropyl Betaine (Mackam J)	8.00	Lather
6. Sodium Chloride (25% Soln.)	2.00	Viscosity Control
7. Fragrance	0.20	Odor
8. Preservative	0.10	Preservative

Compounding Procedure:

Combine items 1 and 2 with 25% of the water. Mix until uniform. Combine items 4 and 5 and mix until uniform. Add first pre-mix to second with agitation. Add items 7 and 8 and adjust viscosity as desired with item 6.

Ref. No. 118-185

SOURCE: R.I.T.A. Corp.: Shower/Bath Care

Shower/Bath Gel

Non-drying formulation designed to clean and leave skin moisturized.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Grilloten LSE-87K (Sucrose Cocoate)	3.00	Mildness
2. Rita EGDS (Glycol Distearate)	0.50	Opacity
3. Pationic 138C (Sodium Lauroyl Lactylate)	2.50	Mildness
4. PEG-55 Propylene Glycol Oleate (Antil 141B)	1.00	Feel
5. Distilled/Deionized Water	40.60	----
6. Sodium Laureth-2-Sulfate (Standapol ES-2)	51.00	Lather
7. Promois ECP (Collagen)	1.00	Conditioning
8. Citric Acid @ 50%	0.10	pH Control
9. Fragrance	0.20	Odor
10. Preservative	0.10	Preservative

Compounding Procedure:

Combine items 1,3,5 and 6 and heat to 160F with agitation. Combine items 2 and 4 and mix at 160F. Add to batch with mixing. Cool to 120F and add items 9 and 10. Cool to 110F and add item 7. Adjust pH to 6.0-6.5 with item 8.
Ref. No. 118-183

Silky Feel Shower Gel

High lather shower gel base with added moisturization. Silky skin feel.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Sodium Laureth-3-Sulfate (Standapol ES-3)	53.00	Cleaning
2. Ritamide C (Cocamide DEA)	4.00	Lather
3. Ritawax-15 (Laneth-15)	3.00	Moisture
4. Pationic ISL (Na Isostearoyl Lactylate)	3.00	Moisture
5. Ritapeg 150 DS (PEG-150 Distearate)	0.50	Viscosity
6. Methylparaben	0.15	Preservative
7. Rita PEO-2 (PEG-9M)	0.25	Silky Feel
8. Distilled/Deionized Water	35.65	----
9. Fragrance	0.40	Odor
10. Kathon CG	0.05	Preservative

Compounding Procedure:

Heat items 1-6 to 165F. Slowly add item 7 to water, mix until dissolved. Heat to 165F. Add to items 1-6 and mix until uniform. Add fragrance and preservative after cooling to 120F.

Beauty Aids

**Ajinomoto Moisturizing Foundation with Ajidew, Eldew,
Marine-Dew and Amihope**

<u>Ingredients/Trade Name:</u>	<u>% by Weight</u>
Part A:	
Deionized Water	61.15
Magnesium Aluminum Silicate	0.70
Cellulose Gum	0.15
Trisodium EDTA	0.10
Sodium PCA/Ajidew N-50	1.00
Triethanolamine 85%	0.60
Part B:	
Methylparaben (and) Butylparaben (and) Ethylparaben (and) Propylparaben	0.30
Stearic Acid	2.50
Propylene Glycol Stearate SE	2.00
Polysorbate 60	1.70
Cetearyl Octanoate	6.00
Cetyl Alcohol	2.00
Sorbitan Stearate	0.60
Dimethicone/Dow Corning 200 (350cs)	0.50
Di (cholsteryl, behenyl, octyldodecyl) N-lauroyl-L-glutamic acid ester/Eldew CL-301	5.00
Phenoxyethanol	0.60
Part C:	
Propylene Glycol	6.00
Iron Oxides and Talc	2.00
Titanium Dioxide	5.00
Lauroyl Lysine/Amihope-LL	0.10
Part D:	
Partially Deacetylated Chitin (1% Solution)/Marine-Dew	2.00

Procedure:

Disperse Magnesium Aluminum Silicate and Cellulose Gum in deionized water. Heat to 80 degrees C. Add remaining Part A ingredients. Mix well. Heat Part B to 80 degrees C. Add Part B to Part A. Mix at 80 degrees C for 15 minutes. Homogenize Part C. Add to the batch. Mix until uniform. Cool to 40 degrees C. Add Part D. Continue mixing and cooling to 35 degrees C.

Appearance: Beige cream

pH: 7.40 to 8.00

Viscosity: 20,000-25,000 cps (RVT #6 @ 10 rpm @ 25C)

Alcohol-Free Cologne

This sprayable product is light, elegant and will not dry or sting the skin.

<u>Ingredient (CTFA)</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	92.88	Diluent
DMDM Hydantoin (1)	0.30	Preservative
Methylparaben	0.10	Preservative
Propylparaben	0.05	Preservative
Part B:		
Cyclomethicone (2)	4.00	Lubricant
Pemulen TR-2	0.15	Emulsifier/ Stabilizer
Part C:		
Fragrance, Noville #31563	2.00	
Oleth-10 (3)	0.30	P.S. Reduction
Part D:		
Triethanolamine (99%)	0.12	Neutralizing Agent
Part E:		
Disodium EDTA	0.10	Chelating Agent and Viscosity Adjustment

Preparation:

1. Combine Part A ingredients in a vessel which will contain the entire formulation. Mix until parabens have dissolved.
2. Slurry Pemulen in cyclomethicone. Disrupt any soft agglomerates of Pemulen. With moderate agitation, add Part B to Part A.
3. Blend Part C ingredients and add to Parts A/B. Continue mixing for 10-20 minutes to allow resin to swell. Add Part D and mix vigorously to produce a smooth emulsion.
4. Mix Part E into emulsion incrementally to adjust viscosity down to 600-800 cps.

Cream Eye Shadow

<u>Ingredients:</u>	<u>Wt. %*</u>
A: Talc	18.00
Vanclay, Kaolin	2.00
Iron Oxides	4.50
Titanium Dioxide	5.50
B: Stearic Acid	0.80
Glyceryl Stearate	2.00
Lanolin	4.00
Sesame Oil	2.00
Olive Oil	1.00
Isopropyl Myristate	3.00
C: Cellulose Gum (CMC 7LF)	0.10
Distilled Water	9.90
D: Veegum, Magnesium Aluminum Silicate	1.75
Distilled Water	33.75
E: Propylene Glycol	5.00
Triethanolamine, 99%	0.40
Darvan No. 1, Sodium Polynaphthalene Sulfonate	0.30
Distilled Water	6.00
F: Preservative, Fragrance	q.s.

Procedure:

Micropulverize ingredients in Part A. Heat Part B to 70C. Prepare cellulose gum solution using the Part C ingredients. Prepare a Veegum dispersion using the Part D ingredients. Combine Parts C and D. Add the combined Part E ingredients and add to Parts C+D. Add Part A pigments to water phase and homogenize. Heat to 60C and maintain temperature for 10 minutes. Add oil phase to water phase and mix until temperature cools to 45C. Add F when cool.

*As received basis

Creamy Lotion Moisturizer

A creamy, non-greasy lotion with a quick drying cooling sensation. Leaves skin feeling soft, smooth and moisturized.

	<u>Wt%</u>
A. Methyl Paraben	0.25
Carbomer 941 (Goodrich, Carbopol 941)	0.50
Water	65.40
B. Isopropyl Lanolate (Amerchol, Amerlate P)	2.50
Stearyl Alcohol (and) Cetareth-20 (Amerchol, Promulgen G)	3.50
Mink Oil (Emulan, Light Fraction)	5.50
Myristyl Myristate (Van Dyk, Ceraphyl 424)	1.50
Propyl Paraben	0.15
C. Triethanolamine (99%)	0.50
Ethanol (SD 40 Alcohol, 95%)	20.00
Perfume	0.20

Procedure:

1. Disperse Carbopol in water, add methyl paraben, then heat Phase A to 75C.
2. Add 75C Phase B to 75C Phase A via propellor agitation.
3. Cool to 45C and add Phase C.

Moisture Balm

An analgesic, non-irritating, soothing, moisturizing skin balm. Unique formula combining Lipoprotein, Yeast Extract and Mink Oil with Homomenthyl Salicylate for superior skin benefits.

	<u>Wt.%</u>
A. Isopropyl Palmitate (Amerchol, Propal)	5.0
Mink Oil (Emulan, Light Fraction)	5.0
Homomenthyl Salicylate	5.0
PEG-6 Stearate (and) Glyceryl Stearate (and) Ceteth-20 (Gattefosse, Tefose 2561)	7.5

Depilatory Cream O/W

	<u>%W/W</u>
I Lanette N/SX	6.0
II Urea	4.0
Water	74.5
III Gelwhite USP	5.0
Thioglycolic acid 80%	6.0
Lithium hydroxide	4.5

Note: In accordance with the German cosmetics legislation, depilatory creams may contain a maximum of 5% thioglycolic acid and the pH must be <12.65. The pH of this cream is approx. 12.

Preparation: Thioglycolic acid and lithium hydroxide are dissolved or suspended in 20 parts water. Gelwhite is swelled in 20 parts cold water. With the rest of the water, in which the urea has been dissolved, a cream is produced with Lanette N/SX. After the cream has completely cooled down, the active ingredient mixture and the gelwhite solution are added.

Formula No. G11-01

Depilatory Emulsion O/W, High Viscous

	<u>%W/W</u>
I Lanette N	4.0
Eumulgin B3	2.0
II Thioglycolic acid 80%	6.0
Lithium hydroxide	4.5
Urea	4.0
Melamine	2.0
Water	77.5

Preparation: Thioglycolic acid, lithium hydroxide and melamine are dissolved or suspended in half the water. With the rest of the water, in which the urea has been dissolved earlier, a cream or emulsion is produced with the fatty substances. After the cream has cooled down completely, the active ingredient mixture is added to the cream and then perfumed.

Note: In accordance with the German cosmetics legislation, depilatory creams may contain a maximum of 5% thioglycolic acid and the pH must be <12.65. The pH of this emulsion is approx. 12.

Face Mask

Clear yellow, high viscosity. Produces a film on the skin which can be pulled or rubbed off after approx. 10 minutes.

Material/CTFA-Index:

A: Polyviol W 25/140/Polyvinyl Alcohol	10,00%
Ethanol 96%ig/Alcohol(Cosmetic grade)	25,00
B: Water	45,00
Belsil DMC 6035/Methicone Copolyol Acetate	2,00
C: Triethanolamine	3,00
Ethanol 96%ig/Alcohol (Cosmetic grade)	15,00
Preservatives, fragrances, pigments	q.s.

Mix Polyviol W 25/140 and the cosmetic alcohol and stir into B. Heat to approx. 85C in water bath (whilst stirring), until a clear lump-free solution is produced. Cool to at least 40C and add to C whilst stirring.

Temperature stability: at 45C over 10 weeks.

SOURCE: Wacker Silicone: Formulation 313 AH

Gel Exfoliator

Product is a mild scrub due to the inclusion of DC 193 which provides a smooth feel on the skin, while Polytrap 6038 does the scrubbing action by releasing mineral oil (in form of beads) and absorbing at the same time excessive oil from the skin.

Ingredients:

	<u>% by Weight</u>
Water (distilled)	37.56
EDTA Disodium	0.10
Extrapone Witch Hazel	3.00
AMP-95	0.44
Dow Corning 193	3.00
Carbopol 1342 (2% Soln)	50.00
Polytrap 6038	3.00
Suttocide A	0.70
Perf. Rain Forest	0.20

Note: pH should be 5.50-6.50 (correct with AMP, if necessary)

Procedure:

1. Start mixing water and add EDTA, and Witch Hazel and DC 193 and mix to dissolve.
2. Then add slowly Carbopol solution with low speed (to avoid formation of air bubbles).
3. When all Carbopol is in, add AMP-95 to neutralize it and then add slowly Polytrap 6038 to get uniform distribution.
4. In a homogeneous mixture add Suttocide and mix.
5. At the end add the fragrance and slowly mix in.
6. Take a sample for QC and, when approved, pack off product.

Facial Cleanser

This cleansing formulation is light, non-greasy and water-rinsable. It provides thorough cleansing without drying the skin.

<u>Ingredient (CTFA):</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	89.55	Diluent
Cocoamphodiacetate (1)	1.00	Rinsability
Quaternium-15 (2)	0.10	Preservative
Methylparaben	0.10	Preservative
Propylparaben	0.05	Preservative
Part B:		
Isostearyl Benzoate (3)	4.00	Solvent
Dioctyl Maleate (4)	2.00	Solvent
Caprylic/Capric Triglyceride	1.00	Solvent
Octyl Hydroxystearate (5)	1.00	Emollient
Pemulen TR-2 (6)	0.20	Emulsifier
Carbopol 980 (7)	0.60	Thickener
Part C:		
Aminomethyl Propanol (95%) (8)	0.40	Neutralizing Agent

- (1) Miranol C2M Conc. NP (Miranol)
- (2) Dowicil 200 (Dow Chemical)
- (3) Finsolv SB (Finetex)
- (4) Bernel Ester DOM (Bernel Chemical)
- (5) Wickeno1 171 (CasChem)
- (6) Acrylates/C10-30 Alkyl Acrylate Copolymer (BFGoodrich)
- (7) Carbomer (BFGoodrich)
- (8) AMP-95 (Angus Chemical)

Preparation:

1. Combine Part A ingredients in a vessel which will contain the entire formulation. Mix to dissolve parabens.
2. Combine Part B ingredients in a separate vessel. Mix to dissolve any soft lumps of Pemulen and Carbopol.
3. With moderate agitation, add the Part B slurry to Part A. Mix for 10-20 minutes to allow resins to swell.
4. Add Part C and mix vigorously to produce a smooth, white cream.

Gelled Nail Lacquer Remover

<u>Ingredients:</u>	<u>Weight%</u>	<u>Function</u>
Acetone	72.0	Solvent
Deionized Water	9.5	Diluent
Propylene Glycol	9.5	Lubricant
Carbopol 941 (1)	2.0	Gelling Agent
PEG-15 Cocamine (2)	2.0	Neutralizer
Glycerin	5.0	Lubricant
Color	q.s.	
Fragrance	q.s.	

Procedure:

1. Combine acetone, deionized water, and propylene glycol. Mix thoroughly.
2. Disperse Carbopol 941 into the acetone mixture with moderate agitation. Mix for 30-45 minutes.
3. Reduce agitation and neutralize with PEG-15 Cocamine.
4. Add glycerin, color, and fragrance and mix until well combined

Suppliers:

- (1) BFGoodrich Co.
 (2) Akzo (Ethomeen C-25)

Formula C0030

Icey Blue Camphorated Skin Gel (Clear)

<u>Ingredients:</u>	<u>Weight%</u>	<u>Function</u>
<u>Part A:</u>		
Water (Deionized)	85.6	Diluent
Carbopol 940	0.9	Gelling Agent
<u>Part B:</u>		
Isopropyl Alcohol	10.0	Solvent for Active
Camphor (Crystals)	0.2	Active
Polysorbate 20	1.0	Surfactant
Triethanolamine (99%)	2.0	Neutralizer
Methyl Parabens	0.2	Preservative
FDYC Blue	0.002	Soluble Dye
Disodium EDTA	0.1	Chelating Agent

Procedure:

1. Slowly sift Carbopol 940 into the vortex of rapidly agitating water when resin is dispersed, reduce agitation, mix until homogenous dispersion is obtained.
2. Separately combine Part B. Add to Part A with moderate sweeping agitation until a clear gel results.

Formula C0031

SOURCE: BF Goodrich Co.: Suggested Formulations

Gentle Body Polisher
(Formula 91-0507)

This elegant body polisher is prepared with mild surfactants and a fine abrasive that results in a mild yet effective body polisher. Its non-alkaline pH and combination of ingredients are designed to cleanse the skin and leave it feeling clean and smooth. The polisher is thick and rich in the package and on your hand but readily thins when sheared, therefore, it dispenses easily.

	<u>% By Weight</u>
Deionized Water	Q.S.
Veegum Ultra (R.T. Vanderbilt)	1.00
Methocel E4M (Dow Chemical)	0.80
Miracare XL	8.50
Hamosyl C (W.R. Grace)	1.00
Sodium Hydroxide (50%)	0.50
Alkamide DL 207/S	2.00
Stearic Acid (Triple Pressed)	1.00
Alkamuls EGMS	1.00
Geropon AC-78/NP	13.00
Acuscrub 50 (Allied Signal)	20.00
Fragrance, Dye(s), Preservative	Q.S.

Blending Procedure: With vigorous agitation disperse Veegum Ultra in Deionized Water and begin heating. When batch has reached 75C, add Methocel E4M, agitate vigorously until dispersed. Decrease agitation to avoid air entrapment. Maintain temperature at 75C and add Miracare XL, Hemosyl C, Sodium Hydroxide (50%), Alkamide DL 207/S, Stearic Acid, Alkamuls EGMS, and Geropon AC-78/NP. After the Geropon AC-78/NP has dissolved begin cooling. Add Acuscrub 50 at 60C. Add Fragrance, Dye(s) and Preservative at 40C.

Note: Fragrance selection may affect pH and viscosity. Viscosity can be adjusted by varying the Methocel E4M level, pH can be adjusted by varying the Sodium Hydroxide level.

Typical Formulation Properties

Appearance:	Opaque, Abrasive Cream	
Viscosity:	Brookfield LV4 @ 25C (12 hours after preparation)	
	@ 0.3 RPM	650,000-750,000 cps
	@ 0.6 RPM	450,000-550,000 cps
	@ 1.5 RPM	250,000-350,000 cps
pH:	6.5-7.5	

CTFA Identification: Water, Oxidized Polyethylene, Sodium Cocoyl Isethionate, DEA-Lauryl Sulfate, Lauramide DEA, Sodium Stearate, Sodium Cocoyl Sarcosinate, Glycol Stearate, Magnesium Aluminum Silicate, DEA-Lauraminopropionate, Sodium Lauramimopropionate, Propylene Glycol, Hydroxypropyl Methylcellulose, Fragrance, Preservative, Dye(s).

Gentle Facial Cleanser & Moisturizer
(Formula 91-0901)

This elegant, high solids facial cleanser is formulated with mild cleansing agents and moisturizing agents to leave the face clean and moisturized. Its non-alkaline pH has been chosen to match the skin's natural pH. Its rich creamy, pearled appearance conveys its luxurious feel and performance.

	<u>% By Weight</u>
Deionized Water	Q.S.
Hamposyl L-30 (W.R.Grace)	40.00
Rhodafac RS 610	3.00
Sorbitol (70%)	2.10
Glycerin	1.50
Diglycerin (Solvay)	1.50
Alkamuls EGMS	4.00
Cetearyl Alcohol	1.50
Alkamide DIN 295/S	1.00
Mineral Oil	1.00
Beeswax	0.20
Ceresin	0.20
Sodium Borate	0.05
Cheelox 100	0.05
Geroxon AC-78/NP	20.00
Fragrance, Dye(s), Preservative	Q.S.

Blending Procedure: In a side scraped kettle, or other kettle suitable for preparing heavy creams, heat all components except Geroxon AC-78/NP to 75C with gentle agitation to avoid foaming and aeration. Add Geroxon AC-78/NP and maintain at 75C until dissolved. Avoid aeration and foaming. Cool. Add Fragrance, Dye(s) and Preservative at 35C.

While cooling, the product will pass through a very thick phase. However, upon further cooling and mixing, the product will thin.

Note: Viscosity can be adjusted as desired by varying the Alkamuls EGMS level.

Typical Formulation Properties

Appearance:	Pearled, Flowable Cream
pH:	5.7-6.1
Solids:	50%
Viscosity*:	Brookfield LV4 @ 25C
	@ 0.3 RPM 50,000-150,000
	@ 1.5 RPM 25,000-100,000

* Viscosity reading is function of aeration.

Highly Protective Foundation

<u>Ingredient:</u>	<u>%W/W</u>
1 Monomuls 90-0 18	2.0
2 Lameform TGI	4.0
3 Cetiol A	10.0
4 Sipol 1618 C50	1.0
5 Beeswax	3.0
6 Zinc stearate	2.0
7 Tioveil TG	10.0
8 Magnesium sulphate	1.0
9 Glycerine	3.0
10 Pigments	q.s.
11 Preservative	q.s.
12 Water	to 100.0

This formulation gives a rich W/O Tinted Foundation Cream with good emollience and high UV protection (SPF approx. 12).

The first seven components are melted together at about 85C. Components 8 & 9 are dissolved in the water and this mixture is then heated to the same temperature as the oil phase. The water phase is then added to the oil phase and dispersed. Mixing should continue down to about 35C. The pigments should be incorporated well, and the product homogenised by Triple Roll Mill.

Formula TS 476

Water Thin Milk

<u>Ingredient:</u>	<u>%W/W</u>
1 Eumulgin B2	1.0
2 Cutina E24	2.0
3 Cetiol 1414E	7.0
4 Cutina MD	1.0
5 Sipol 1618 C50	1.0
6 Urea	3.0
7 Glycerine	3.0
8 Preservative	q.s.
9 Water	to 100.0

This formulation gives a water thin O/W skin milk. It would also be suitable for use in a pump dispenser or as an aerosol body mousse.

The first five components are melted together at about 85C. Components 6 & 7 are dissolved in the water and heated to the same temperature as the oil phase. The oil phase is then added to the water phase and dispersed. Mixing should continue down to about 35C.

Formula TS 453

Lasting Strength Nail Toughener
(Keratin Protein Nail Strengthener and Conditioner)

Nails are made of Keratin protein. Keratin Nail Toughener is applied directly to the nail becoming a part of the nail itself and forming a protective moisture retentive film which enhances the nail's flexibility and durability.

When used regularly, Lasting Strength Nail Toughener will counteract the damaging effects of detergents and other environmental abuse.

Kera-Tein 1000 and Gel-Co are film formers, coating and penetrating into the "pores" of the nail. Kera-tein 1000 AS, a cationic, alcohol soluble Keratin ester will help plasticize the nail and prevent embrittlement due to excessive drying. Lasting Strength Nail Toughener adds a very attractive, natural-looking, healthy sheen to the nails.

<u>Ingredients:</u>	<u>%W/W</u>
Water	59.5
Isopropyl Alcohol	20.0
Kera-Tein 1000 (Hydrolyzed Keratein)	9.2
Kera-Tein 1000 AS (Ethyl Ester of Hydrolyzed Keratin)	10.0
Gel-Co (Gelatin)	1.0
Celquat L 200 (Polyquaternium-4)	0.2
Fragrance	0.1

Procedure:

Mix water, gelatin and Celquat and warm to 50C until all in solution. Cool to 40C. Add the rest of the ingredients. Age overnight. Filters clear.

Directions:

Remove nail polish. Apply "Dab-O-Matic" over clean, dry nails and under tips. Use twice daily and always after washing.

Applicator and Cap by: Dab-O-Matic, Mt. Vernon, NY

Vial by: Brockway Glass, Parkersburg, WV

Hydroxypropyl Methylcellulose (2) (1.0% Solution)	10.00	Aqueous Film-Former
Tetrasodium EDTA	0.03	Chelant
Benzophenone-4	0.02	U.V. Absorber
Triethanolamine (99%)	0.20	Neutralizing Agent
Diazolidinyl Urea (and) Methylparaben (and) Propylparaben (3)	0.80	Preservative
Part B**:		
Castor Oil	1.80	Fragrance Carrier
Octyl Hydroxystearate (4)	1.80	Emollient
Glyceryl Tribehenate (5)	0.40	Oil Phase Thickener
Pearlescent Pigment (Titanium Dioxide/Mica-based)	0.10-0.20	Visual Appeal
Fragrance Oil	2.00	
Part C:		
Deionized Water	15.00	Diluent
Carbopol 981 (2.0% Solution)	15.00	Thickener/ Stabilizer
Propylene Glycol	2.20	Humectant
Hydrogenated Starch Hydrolysate (70% Solution)	2.00	Humectant

- (1) Acrylates/C10-30 Alkyl Acrylate Crosspolymer (BFGoodrich)
 (2) Benecel MP943PR (Aqualon)
 (3) Germaben II (Sutton)
 (4) Nature Chem OHS (CasChem)
 (5) Syncrowax HR-C (Croda)
 (6) Carbomer (BFGoodrich)

**Combine Castor Oil, Hydroxystearate, and Tribehenate esters. Heat to 90C. Slowly cool to ambient temperature with agitation, then add pigment and fragrance.

Mild Facial Cleanser

<u>Ingredients:</u>	<u>%w/w</u>
Propylene Glycol	2.00
Butylene Glycol	1.50
Glycerin	0.75
Cocamidopropyl Betaine (Tego Betaine F)	1.50
Dimethicone Propyl PG-Betaine (Abil B 9950)	2.50
Menthol	0.10
Fragrance*	Q.S.
Sodium Lactate (and) Sodium PCA (and) Glycine (and) Fructose (and) Urea (and) Niacinamide (and) Inositol (and) Sodium Benzoate (and) Lactic Acid (Lactil)	0.20
Preservatives	Q.S.
Water	91.40

Procedure:

1. Mix all ingredients in order.
2. If necessary, solubilize the preservatives in the Propylene Glycol and part of the water.

*If a non-water soluble fragrance is used - it can be solubilized with the addition of PEG-18 Glyceryl Oleate/Cocoate (Antil 171) or PEG-20 Glyceryl Laurate (Tagat L2)

Hot Oil Treatment

Moisturizing Fluid

Pemulen TR-1 allows the ambient temperature emulsification of this light-feeling, glossy lotion. Suitable as a light hand lotion or facial moisturizer, this product exudes a moist, nourishing feel upon application followed by a dry, light after feel. pH is about 5.6.

<u>Ingredient (CTFA):</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	83.70	Diluent
Hydroxypropyl Methylcellulose (1)	0.10	Aqueous Smoothing Aid
Glycerin	4.00	Humectant
Polysorbate 80 (2)	0.40	Particle Size Reduction
Disodium EDTA	0.10	Chelating Agent
Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben (3)	0.80	Preservative
Part B:		
Polyglyceryl-10 Decaoleate (4)	4.00	Moisture Barrier
Octyl Hydroxystearate (5)	3.00	Emollient
Isostearyl Benzoate (6)	2.50	Emollient
Dimethicone (1000 c.s.)	0.50	Lubricant
Pemulen TR-1 (7)	0.20	Emulsifier
Carbopol 981 (8)	0.30	Thickener
Part C:		
Triethanolamine (99%)	0.40	Neutralizing Agent

- (1) Methocel E4M Premium (Dow Chemical)
 (2) Tween 80 (ICI Americas)
 (3) Germaben IIE (Sutton Labs)
 (4) Capmul 10G-10-0 (Capital City Products)
 (5) Wickemol 171 (CasChem)
 (6) Finsolv SB (Finetex)
 (7) Acrylates/C10-30 Alkyl Acrylate Crosspolymer (BFGoodrich)
 (8) Carbomer (BFGoodrich)

Preparation:

1. Combine Part A ingredients in a vessel which will contain the entire formulation. Methocel is added slowly with rapid agitation.
2. Combine Part B ingredients in a separate vessel. Soft lumps of Pemulen and Carbopol should be disrupted with mixing.
3. With moderate agitation, add Part B to Part A. Mix for 15-30 minutes to allow polymers to swell. Add Part C and mix vigorously to produce a smooth, glossy lotion.

Re-Vital Facial Toner

	<u>%W/W</u>
Solulan 98 (Polysorbate 80 (and) Cetyl Alcohol (and) Acetylated Lanolin Alcohol)	3.00
Fragrance	0.20
SD Alcohol 40	30.00
Deionized Water	61.10
Allantoin	0.20
Aqua-Tein C (Collagen Amino Acids (and) Acetamide MEA)	5.00
Pro-Tein ES-20 (Ethyl Ester of Hydrolyzed Collagen)	0.50

The above formula may be modified in the following ways:

1. Increase SD Alcohol for deeper cleansing, more drying effect.
2. By addition of herbal extracts such as Rose Water, chamomile (soothing) (4), soap bark extract (astringent) (3).
3. By addition of essential oils such as menthol & eucalyptus (3) for odor and cooling effect, ginger & lemon (3) for odor and facial feel.

Pre-mix Solulan 98 & Fragrance. Add SD Alcohol 40 to the mixture. Add the rest of the ingredients in order. Mix until each is dissolved.

Mild facial toner which cleans and tightens, but leaves the skin with a healthy, soft after-feel. Aqua-Tein C, a superb humectant, adds skin softening and soothing properties, while reducing the harshness of the alcohol. Pro-Tein ES-20, a cationic ester, leaves a protective, smooth film and serves as an anti-irritant.

Formula #ST-3251

Sun-Rise Fresh Cleansing Gel

	<u>%W/W</u>
A. Deionized Water	27.50
Sodium C14-16 Olefin Sulfonate	40.00
Monamid 150-LW (Lauramide DEA)	3.50
Cocoamphocarboxyglycinate	6.00
Supro-Tein V (TEA-Cocoyl Hydrolyzed Collagen (and) Sorbitol)	10.00
Amino Silk SF (Silk Amino Acids)	3.00
European Elastin-30 (Hydrolyzed Elastin)	3.00
B. Ammonium Chloride	2.00
Deionized Water	5.00
Fragrance, Preservatives, Color	q.s.
Citric Acid	q.s. to pH=6.5

1. Warm Phase A to 50C. Mix until melted & homogeneous.
2. Adjust pH while warm to pH=6.5.
3. Predissolve NH4Cl in water. Add carefully to avoid air entrapment.

A mild cleansing gel, non-drying to the skin. Smooths and softens skin while removing excess skin oil and desquamating skin cells. To use-moisten hands, pour into palm and work up into a creamy luxurious lather. Massage skin in a circular motion with the moisture-laden foam, then rinse thoroughly and dry. The after-feel of the skin is all softness and sheer delight.

Sand Beige Oil-Free Makeup

<u>Phase A:</u>	<u>%W/W</u>
Distilled water	30.00
Propylene glycol	8.00
PEG 200 stearate	1.00
Triethanolamine 99%	0.90
Trisodium EDTA	0.20
Veegum magnesium aluminum silicate	1.00
Sodium carboxy methyl cellulose gum	0.25

<u>Phase B:</u>	
Distilled water	30.85
Eastman AQ treated pigment-red	0.40
Eastman AQ treated pigment-yellow	0.80
Eastman AQ treated pigment-black	0.16
Eastman AQ treated pigment-white	6.64

<u>Phase C:</u>	
Talc	5.00
DC3225C cyclomethicone and dimethicone copolyol	9.00
Stearic acid	1.80
Polawax emulsifying wax, NF	1.00
Myverol 18-06 distilled monoglyceride	2.00
Tween 80 polysorbate 60	1.00

Preserve as necessary.

Procedure:**Phase A:**

1. Slowly sprinkle Veegum into water while mixing.
2. Continue mixing until uniform.
3. Slowly sprinkle sodium carboxy methyl cellulose into water while mixing.
4. Continue mixing until uniform.
5. Add remaining ingredients of (A) and mix well.

Phase B:

1. Heat water to 85C, add pigments and mix until well dispersed.
2. Add to Part A and heat combined phases to 70C.

Phase C:

1. Combine ingredients and heat with mixing to 70C.
2. At 70C, add to Parts A and B with mixing.
3. Continue mixing and cool to room temperature.

Silk and Elastin Facial Firming Gel

	%W/W
A. Deionized Water	51.60
Propylene Glycol	5.00
European Elastin-10 (Hydrolyzed Elastin)	0.50
Carbomer 940 - 2% Aq. Soln.	40.00
Disodium EDTA	0.20
B. Triethanolamine-99%	0.50
C. Silk Pro-Tein (Hydrolyzed Silk)	2.00
Camomile Extract	0.10
Biocare SA (Albumen and Hyaluronic Acid and Dextran Sulfate)	0.10
Preservatives	q.s.
FD&C Yellow #5 (If desired)	q.s.

Properties:

Revives, smoothes and moisturizes tired complexions. Moist, supple skin is more elastic and youthful looking. Oil-free formula rehydrates the skin with vital elastin and silk proteins and Hyaluronic Acid.

Procedure:

Add Phase B to Phase A. Mix until gelled and clear. Mix slowly to avoid air entrapment. Add Phase C. Mix to incorporate.

Formula #SK-2050

Honey & Wheat Hydrating Facial/Body Gel

	%W/W
A. Deionized Water	62.90
Wheat-Tein NL (Hydrolyzed Wheat Protein)	3.00
Honey	1.00
Amphosol CA (Cocamidopropyl Betaine)	5.00
Sipon ESY (Sodium Laureth-1 Sulfate)	20.00
Monamate CPA-40 (Disodium Cocamido MIPA-Sulfosuccinate)	5.00
Monamate 716 (Lauramide DEA)	2.00
Kessco PEG 6000 Distearate (PEG-150 Distearate)	0.50
B. Honey Fragrance	0.30
Quaternium-15	0.30
Amber Color	q.s.

Procedure:

Heat phase A with mixing to 70C. Mix until PEG-150 DS is melted and homogeneous. Mix and cool to 50C. Add B. Mix to incorporate.

Properties:

Honey and wheat protein are incorporated in this formula to moisturize and hydrate the skin. This bath gel is gentle enough to use as a facial and/or body wash. Opacifying/pearling agents can be added for a pearlescent look.

Formula #SW-3008

Skin Conditioning Treatment
(Formula 90-0502)

	<u>% By Weight</u>
<u>Water Phase:</u>	
Hi-Care 1000	0.50
Glycerine	2.00
Water	87.40
Alkamuls GMS	3.50
<u>Oil Phase:</u>	
Cetyl Alcohol NF	1.60
Light Mineral Oil	1.50
Dermalcare NI	1.00
Alkamuls MM/M	0.50
Stearic Acid TP	2.00
Fragrance, Dye, Preservative	Q.S.

Blending Procedure: Charge water into mixing vessel followed by the Glycerine. With rapid but smooth agitation, slowly blend in Hi-Care 1000. Heat water system to 70-75C. Slowly blend Alkamuls GMS into heated water base. Maintain 70-75C temperature.

In a separate mixing vessel, combine Oil Phase ingredients and heat to 70-75C until completely molten. With rapid but smooth agitation, slowly blend heated Oil Phase into heated Water Phase. Once system is completely uniform, cool to 40-45C with moderate agitation and add compatible Fragrance, Dye(s) and Preservative.

The formulation will reach its final consistency, a soft lotion, after standing 24 to 48 hours.

Skin Conditioning Bath & Shower Gel
(Formula 91-1110)

	<u>% By Weight</u>
Jaguar C-162	0.3
Miracare MPC	40.0
Citric Acid	Q.S.
Fragrance, Dye(s), Preservative	Q.S.
Sodium Chloride	0.05-0.60
Water	59.3

Blending Procedure: With rapid but smooth agitation, disperse Jaguar C-162 in room temperature water. Once system is uniform, heat water system to 35-40C and then adjust pH to 5.0-6.0 with Citric Acid as needed. Slowly blend in Miracare MPC and mix until uniform. Again, adjust formulation pH to 5.0-6.0 with Citric Acid as needed. Add compatible Fragrance, Dye(s), and Preservative and then adjust formulation viscosity to 14,000-18,000 cps (No. 5 Spindle @ 10 RPM-25C) with the judicious addition of Sodium Chloride as needed.

Typical Formulation Properties:

Appearance @ 25C:	Clear, Viscous Liquid
Viscosity @ 25C:	14,000-18,000 cps
pH:	5.0-6.0
% Non Volatiles:	15-17

Skin Gel

This gel is a light, greaseless moisturizer which exhibits sparkling clarity and quick application.

<u>Ingredient:</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	83.30	Diluent
Glycerin	2.50	Humectant
Hydrogenated Starch Hydrolysate (70%) (1)	2.50	Humectant
Methylparaben	0.10	Preservative
Carbopol 980 (2)	0.60	Gellant
Part B:		
Deionized Water	10.00	Diluent
Triethanolamine (99%)	0.50	Neutralizing Agent
DMDM Hydantoin (3)	0.30	Preservative
PVP (K30)	0.10	Conditioner
Disodium EDTA	0.05	Gel Protectant
(1) Hystar CG (Lonza)		
(2) Carbomer (BFGoodrich)		
(3) Glydant (Lonza)		

Preparation:

- Using agitation, dissolve methylparaben in a mixture of the first three Part A ingredients. When solution is homogeneous, slowly sift Carbopol 980 into the vortex of the agitated solution. When resin is dispersed, reduce agitation and mix until a homogeneous dispersion is obtained.
- In a separate vessel, blend Part B ingredients. Mix until homogeneous.
- Using paddle-type agitation, add Part B to Part A. Mix to produce a clear gel.

Formula C0019

2. Add Phase A to Phase B at 70C with adequate mixing.
3. Add Phase C immediately. Mix to incorporate.
4. Mix and cool to 35C.

Properties:

A light, creamy, nice looking and stable emulsion. Highly emollient, but not greasy. A good all-around hand and face lotion. Proto-Lan 8 is an excellent non-greasy, protective emollient, based on naturally occurring essential fatty acids and lipo-proteins. Maywax P is an efficient, non-ionic self-emulsifying wax. Collagen Hydrolyzate Cosmetic 55 is a non-occlusive film former which moisturizes and protects the skin.

Sparkling Skin Moisturizing Fluid With Microcapsules

This is a fluid containing attractive moisturizing beads in a light, greaseless aqueous base which exhibits sparkling clarity and smooth feel.

<u>Ingredient:</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	83.35	Diluent
Glycerin	2.50	Humectant
Hydrogenated Starch Hydrolysate (70%) (1)	2.50	Humectant
Methylparaben	0.10	Preservative
Carbopol 981 (2)	0.25	Gellant
Part B:		
Deionized Water	10.00	Diluent
Sodium Hydroxymethyl Glycinate (3)	0.30	Neutralizing Agent/Preservative
PVP (K30)	0.10	Conditioner
Disodium EDTA	0.05	Gel Protectant
Benzophenone-4	0.05	Gel Protectant
Part C:		
Mineral Oil in Gelatin Microcapsules (4)	0.80	Moisturizing Agent

(1) Hystar CG (Lonza)

(2) Carbomer (BFGoodrich)

(3) Suttocide A (Sutton Labs)

(4) Red and Blue Nuggets (Ronald T. Dodge Co.)

Preparation:

- Using agitation, dissolve methylparaben in a mixture of the first three Part A ingredients. When solution is homogeneous, slowly sift Carbopol 981 into the vortex of the agitated solution. When resin is dispersed, reduce agitation and mix until a homogeneous dispersion is obtained.
- In a separate vessel, blend Part B ingredients. Mix until homogeneous.
- Using paddle-type agitation, add Part B to Part A. Mix to produce a clear fluid.
- Using paddle-type agitation, add Part C to neutralized fluid until microcapsules are well dispersed.

Sprayable Moisturizer

This novel moisturizer is a pumpable product which provides a fine spray for quick and easy application. It is an ideal after bath alternative to greasy baby oil.

<u>Ingredient (CTFA):</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	79.83	Diluent
Glycerin	6.00	Humectant
DMDM Hydantoin (1)	0.30	Preservative
Methylparaben	0.10	Preservative
Propylparaben	0.05	Preservative
Part B:		
Mineral Oil (2)	10.00	Moisture Barrier
Octyldodecyl Stearoylstearate (3)	3.00	Emollient
Oleth-10 (4)	0.40	Particle Size Reduction
Pemulen TR-2 (5)	0.12	Emulsifier/ Stabilizer
Part C:		
Triethanolamine (99%)	0.10	Neutralizing Agent
Part D:		
Disodium EDTA	0.10	Chelating Agent and Viscosity Adjustment

- (1) Glydant (Lonza)
- (2) Drakeol 7 (Penreco)
- (3) Ceraphyl 847 (Van Dyk)
- (4) Brij 96 (ICI Americas)
- (5) Acrylates/C10-30 Alkyl Acrylate Crosspolymer (BF Goodrich)

Preparation:

1. Combine Part A ingredients in a vessel which will contain the entire formulation. Parabens may be predispersed in glycerin to accelerate dissolution. Mix until parabens have dissolved.
2. Combine Part B ingredients in a separate vessel. Mix to disrupt any soft agglomerates of Pemulen.
3. With moderate agitation, add Part B to Part A. Mix for 10-15 minutes to allow resin to swell. Add Part C and use vigorous mixing to produce a smooth, white emulsion. Add Part D incrementally until a viscosity of 600-900 cps is obtained.

Sprayable Moisturizing Milk

This light, milky white, low viscosity emulsion delivers a fine mist from a pump sprayer and provides a silky feeling to the skin.

<u>Ingredient:</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	70.45	Diluent
NaOH (18%)	0.15	Neutralizing Agent
Part B:		
Propylene Glycol Isoceteth-3		
Acetate (1)	10.00	Humectant
Pemulen TR-2 (2)	0.15	Emulsifier
Glycerol Triisostearate (3)	4.00	Emollient
Isostearyl Isostearate (4)	4.00	Emollient
Cyclomethicone (5)	10.00	Lubricant
Fragrance (6)	0.20	
Part C:		
Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben (7)	1.00	Preservative
Part D:		
Disodium EDTA	0.05	Chelating Agent

- (1) Hetester PHA; Bernel Chemical Co., Inc.
- (2) Acrylates/C10-30 Alkyl Acrylate Crosspolymer; BFGoodrich
- (3) Prisorine GTIS; Unichema International
- (4) Prisorine ISIS; Unichema International
- (5) Dow Corning 344 Fluid; Dow Corning Corp.
- (6) Noville #27986; Noville, Inc.
- (7) Germaben II-E; Sutton Laboratories, Inc.

Procedure:

1. Combine Part B ingredients at room temperature in a vessel which will contain the final product, breaking up any agglomerated particles.
2. Add Part A to Part B and mix using rapid agitation for 15 minutes.
3. Add Part C to the emulsion.
4. Use Part D to adjust viscosity downward to a range of 600 cps to 1000 cps.

Properties:

Appearance: Milky White
 Viscosity: 910 cps*
 pH: 6.0
 Stability: No separation-10C to 25C Five cycles
 35 Days (50C) viscosity 840 cps*

Vitamin E and Wheat Active Daily Facial Moisturizer

	<u>%W/W</u>
A. Deionized Water	45.40
Carbopol 940-2% Aq. Sol'n (Carbomer 940)	35.00
Wheat-Tein NL (Hydrolyzed Wheat Protein)	3.00
Tween 20 (Polysorbate 20)	1.50
B. Arlacial 60 (Sorbitan Stearate)	1.50
Petrolatum	2.00
Wheat Germ Oil	2.00
Sesame Oil	3.00
Cetyl Alcohol	1.00
Arlacial 165 (Glyceryl Stearate (and) PEG-100 Stearate)	1.00
Isopropyl Palmitate	3.00
Shea Butter	1.00
C. Tocopheryl Acetate	0.10
Triethanolamine-99%	1.00
Preservatives, Fragrance	q.s.

Procedure:

Heat Phases A & B separately to 80C. Add Phase B to A at 80C with agitation. Mix until smooth. Add Phase C carefully to avoid aeration.

Properties:

This elegant, vegetable-based moisturizer rubs in completely, leaving a soft after feel. Vegetable oils and Petrolatum normalize the skin lipids. Wheat-Tein NL binds moisture and leaves a non-occlusive protective film. Vitamin E Acetate acts as an antioxidant to reduce free radicals in the skin.
Formula #SK-2010

Water-in-Oil Luxurious Makeup

This formula is a cold process water-in-oil emulsion stabilized by Veegum which also controls the viscosity and insures uniform color throughout the product. This is a moisturizing makeup for dry skin.

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Veegum, Magnesium Aluminum Silicate	1.20
Deionized Water	37.90
Magnesium Sulfate	0.40
B: Talc	5.50
Vanclay, Kaolin	1.50
Titanium Dioxide	5.00
Iron Oxides	3.00
C: Mineral Oil	15.00
Hydrogenated Polisobutylene (Polysynlane)	8.00
Mineral Oil (and) Lanolin Alcohol (Ritachol)	8.00
Isopropyl Lanolate (and) Lecithin (Lanapene)	7.00
Sorbitol, 70%	5.00
Oleamide DEA (Witcamide 511C)	2.50
D: Preservative	q. s.

Procedure:

Slowly add Veegum to the water, while agitating at maximum available shear. Continue mixing until smooth. Add the magnesium sulfate and mix until smooth. Grind Part B and add to Part A, mixing until uniform. Add Parts A+B to Part C. Mix until uniform and smooth. Add Part D and mix until uniform.

Cleansing Cream

This formulation is a dual purpose makeup remover and skin conditioner.

Phase A:		%W/W
Myverol 18-06 hydrogenated soy glyceride		6.00
Stearic acid, USP/NF		4.00
Petrolatum, USP		10.00
Drakeol 9 mineral oil		10.00
Isopropyl myristate		10.00
SF 18 (350) silicone fluid (dimethicone)		2.00
Phase B:		
Distilled water	q.s. to 100	
Propylene glycol, USP		5.50
Triethanolamine 99%, USP		0.70
Phase C:		
Eastman vitamin E 6-81 (vitamin E acetate)		0.30
Phase D:		
Fragrance		q.s.
Preservative		q.s.

Procedure:

1. Combine ingredients and heat Phase A and Phase B separately to 80C, mixing until each phase is uniform.
2. Add Phase B to Phase A with propeller mixing.
3. Continue mixing and slowly cool to 50C.
4. Add Phase C with mixing and when uniform add Phase D.
5. Continue mixing and cool to room temperature.
6. Adjust agitation speed throughout process as needed. Inversion will occur at 32C, and cream will become smooth and white.

pH: 7.71

7 Paraffin oil	11.0
8 White Soft Paraffin	14.0
9 Preservative	q.s.
10 Water	to 100.0

This formulation gives a rich moisturising O/W skin cream.

The first eight components are melted together at about 85C. The water is then heated to the same temperature. The oil phase is then added to the water phase and dispersed. Mixing should continue down to about 30C.

The product will only achieve its optimum viscosity, if mixing is continued until the product has cooled down.

Cream for Skin Impurities O/W

	<u>%W/W</u>
I Lanette N/SX	15.0
Salicylic acid	0.4
Menthol	0.3
Bactericide	0.5
Rice starch	5.0
Powder colorant	1.0
Titanium dioxide	2.0
Sulfur, precipitated	2.0
II Water	73.8

Preparation:

Rice starch, powder colorant, titanium dioxide and sulfur are mixed with 15 parts water and twice rolled. The remaining water is heated together with above mixture to approx. 70C. Lanette N is melted on the water bath at 70C and menthol and salicylic acid are dissolved in the fat melt. The aqueous phase is then added and after brief stirring the cream produced is homogenized several times by recirculation.

Formula No. C11-01

Cream for Skin Impurities, Transparent, in Gel Form O/W

	<u>%W/W</u>
I Eumulgin B3	14.0
Cetiol HE	20.0
Eutanol G	5.0
Menthol	0.1
Bactericide	0.2
II Allantoin	0.2
Water	60.5

Procedure:

Eumulgin B3 and the fatty substances are melted on the water bath at 95C and menthol is dissolved in the fat melt. The water, in which allantoin has been dissolved earlier, is also added to the fat melt at a temperature of 95C. The gel produced is cooled whilst stirring and the perfume is added at 60C. Stirring is continued while the gel is cooling down, but should be terminated after a short while to avoid air pockets. In order to obtain a gel with the desired transparency, it is essential to observe the temperature specified.

Note:

Medium-fatting, soft-consistency, "Cold cream" type

Day creams are also designated as matt creams, vanishing creams, foundation creams or are called snow creams or pearly gloss creams due to their appearance. They are almost exclusively oil-in-water emulsions, in which mono/diglycerides such as Cutina MD and stearic acid are the main ingredients of the fatty phase.

The triethanolamine (preferably a "non-yellowing" type) normally used as the saponifying agent in the stearate creams can also be replaced by AMPD (aminomethyl propanediol), thus allowing more color-fast finished preparations to be produced.

Facial Cleansing Cream

<u>Ingredients/Trade Name:</u>	<u>Wt%</u>
Part A:	
Sodium Hydrogenated Tallow Glutamate/Amisoft HS-11	4.0
Water	23.8
Methyl Parahydroxybenzoate	0.2
Part B:	
Squalane	70.4
POE (30) Glyceryl Triisostearate/Emalex GIWS330	1.5
Butyl Parahydroxybenzoate	0.1

Procedure:

Heat Part A to 80-85 degrees centigrade with mixing until mix is completely uniform.

Cool Part A quickly to 30 degrees centigrade.

While Part A is being cooled, mix Part B at room temperature.

When Part A is at 30 degrees centigrade, add Part B slowly to Part A while homogenizing.

Cool the mixture to 10 degrees centigrade while mixing.

Formula MRE-04

Facial Cleansing Milk

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Part A:	
TEA Cocoyl Glutamate/Amisoft CT-12	20.0
Sodium Hydrogenated Tallow Glutamate/Amisoft HS-11	1.5
Water	6.8
Methyl Parahydroxybenzoate	0.2
Part B:	
Isostearic Acid	8.5
Liquid Paraffin	59.9
Eldew CL-301	3.0
Butyl Parahydroxybenzoate	0.1

Procedure:

Heat Part A to 80-85 degrees centigrade while mixing. Heat Part B to 80-85 degrees centigrade while mixing. When both parts are at 80-85 degrees centigrade add Part A to Part B with stirring or homogenizing. Cool to 30 degrees centigrade.

Formula MRE-03

Foundation Cream

Firm cream. Absorbed well.

Material/CTFA-Index:

A: Lamecreme KSM/Glyceryl Stearate se	20.00%
Olive Oil	5.00
B: Glycerine	4.00
Water	69.50
Belsil PDM 20/Phenyl dimethicone	1.00
Belsil CM 020/Cyclomethicone	0.50
Preservatives, perfume, pigments	q.s.

Melt A, mix B and heat to 65C. Work B into A whilst stirring quickly.

Temperature stability: 8 weeks at 45C.

Formulation 191 AH

Foundation Cream

Thin cream. Absorbed well.

Material/CTFA-Index:

A: Crodawax GP 200/Stearyl Alcohol (and) PEG-Stearate	13.00%
Mineral oil	30.00
Belsil PDM 20/Phenyl Dimethicone	4.00
B: Glycerine	9.00
Wasser dest./Water	44.00
Preservatives, perfume, pigments	q.s.

Mix A and melt, heat B to 65C, work B into A whilst stirring quickly. Stir whilst cooling.

Formulation 192 AH

Hand Cream

Soft, white cream with a good protective effect.

Material/CTFA-Index:

A: Stearic Acid	15.00%
Isopropyl Myristate	2.00
Belsil DM 350/Dimethicone	10.00
B; Sodium Hydroxide	1.00
Glycerine	18.00
Water	54.00
Preservatives, perfume	q.s.

Heat A to 80C, heat B to a little over 80C. Stir B slowly into A, stir cold.

Temperature stability: at 45C over 10 weeks.

Formulation 196 AH

"Light and White" Day Cream

The combination of Dow Corning silicones provides the skin with benefits such as: non-oily, emolliency (DC 556), highly spreadable product (DC 334), substantivity and silky feel (DC 1403); w/o cold processed emulsion, glossy smooth and stable (DC 5200).

<u>Ingredients:</u>	<u>% by Weight</u>
A. Dow Corning 5200	2.00
Dow Corning 344	5.00
Dow Corning 556	1.00
Amerchol L-101	2.00
Camelia Oil	8.00
Copherol 1250	1.00
Coviox T-70P	0.10
B. Propylene Glycol	3.00
EDTA Disodium	0.20
Sodium Chloride	2.00
Coviox T-30	0.10
Pronalen Fruit Acids AHA-20	3.00
AMP-95	0.30
Suttocide A	0.80
Water (Distilled)	63.30
Chinese White Tuckahoe	3.00
C. Dow Corning 1403	5.00
Perf. Jingle	0.20

Note: Check pH of water phase (should be around 5.0) and correct with AMP-95, if necessary.

Procedure:

1. Mix ingredients of phase A and B in separate containers (make sure to correct pH of water phase before proceeding further).
2. With high speed stirring, add small amount of water phase (1%-2%) to oil phase and mix until primary emulsion is formed.
3. Transfer emulsion to propeller stirrer and start adding water phase slowly and constantly while mixing with average speed.
4. When whole of water phase is used add ingredients of Phase C one after another with slow mixing.
5. Continue mixing until desired viscosity is achieved, stop mixing, take sample to QC and when approved pack the product.

Light Body Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Cutina FS45	3.0
2 Cegesoft C24	7.0
3 Lorol C16	1.0
4 Lorol C18	1.0
5 Cutina MD	1.0
6 Dow Corning Fluid 345	0.25
7 Carbopol 980	0.1
8 KOH (20%)	1.2
9 Preservative	q.s.
10 Water	to 100.0

This formulation gives a light weight O/W skin cream with a slightly translucent appearance.

The first five components are melted together at about 85C. Component 7 is dissolved in half of the water, with the Component 8 being dissolved in the other half. Both portions of water are then heated to 85C and mixed. The oil phase is then added to the water phase and dispersed. Mixing should continue down to about 35C.
Formula TS 498

Moisturising Enrichment Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Cutina FS45	4.0
2 Cegesoft C24	10.0
3 Lorol C16	1.5
4 Lorol C18	1.5
5 Cutina MD	3.0
6 Hygroplex HHG	4.0
7 KOH (20%)	1.5
8 Preservative	q.s.
9 Water	to 100.0

This formulation gives a heavy weight O/W skin cream.

The first five components are melted together at about 85C. Component 6 is dissolved in half of the water, with the Component 7 being dissolved in the other half. Both portions of water are then heated to 85C and mixed. The oil phase is then added to the water phase and dispersed. Mixing should continue down to about 35C.

Light Emollient Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Stenol 16-65	2.2
2 Monomuls 60-35	5.0
3 Eumulgin B2	3.0
4 Cetiol SB45	5.1
5 Myritol 318	10.0
6 Preservative	q.s.
7 Water	to 100.0

This formulation gives a lightweight O/W Cream with good emollience.

The first five components are heated together to 85C. The water is also heated to this temperature. The oil phase can then be added to the water phase and dispersed. Mixing should continue down to about 35C.

Formula TS 374

Almond Oil Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Eumulgin B2	3.0
2 Monomuls 60-35	3.1
3 Novata AB	4.8
4 Almond Oil	10.2
5 Lorol C16	2.05
6 Lorol C18	2.05
7 Preservative	q.s.
8 Water	to 100.0

This formulation gives a stiff O/W Cream, with good spreading and a rich feel.

The first six components are heated together to 85C. The water is also heated to 85C. The oil phase can then be added to the water phase and dispersed. Mixing should continue down to about 35C.

Formula TS 415

Almond Oil Cream with Protein

<u>Ingredient:</u>	<u>%W/W</u>
1 Eumulgin B2	3.0
2 Monomuls 60-35	3.1
3 Cetiol SB45	4.5
4 Almond Oil	10.2
5 Sipol 16-18 C50	4.1
6 Gluadin AGP	1.0
7 Preservative	q.s.
8 Water	to 100.0

This formulation gives a stiff O/W Cream, with good spreading and a rich feel.

The first five components are heated together to 85C. Component six is dissolved in the water and this mixture is also heated to 85C. The oil phase can then be added to the water phase and dispersed. Mixing should continue down to about 35C.

Formula TS 416

Formulation 418 AH

Emollient Cream

White firm cream. A slightly cooling effect.

Material/CTFA-Index:

A: Arlancel 165/Glyceryl Stearate se	6.00%
Arlamol E/PPG-15 Stearylether	3.00
Cetyl Alcohol	5.00
Vaseline/Petrolatum	3.00
Belsil PDM 20/Phenyl Dimethicone	2.00
B: Sorbitol 70%ig/Sorbitol	10.00
Water	71.00
Preservatives, fragrances, pigments	q.s.

Heat A to 70C, heat B to 72C. Stir B into A, stir cold.

Temperature stability: at 45C over 10 weeks.

Formulation 405 AH

Day Cream

Soft white cream. Absorbed well, slightly cooling effect.

A: Lanette N/Cetearyl Alcohol (and) Sodium Cetearyl Sulfate	15.00%
Eutanol G/Octyldedecanol	5.00
Belsil DM 350/Dimethicone	10.00
Belsil PDM 20/Phenyl Dimethicone	2.00
B: Glycerine	5.00
Water	63.00
Preservatives, fragrances, pigments	q.s.

Heat A and B each to 70C. Stir B into A. Stir cold.

Temperature stability: at 45C over 10 weeks.

Formulation 404 AH

SOURCE: Wacker Silicone: Suggested Formulations

Moisturizing Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Eumulgin B2	1.5
2 Eumulgin B1	1.5
3 Cutina MD	3.5
4 Cetiol MM	5.0
5 Lorol C16	1.75
6 Lorol C18	1.75
7 Myritol 318	8.0
8 Paraffin oil	11.0
9 White Soft Paraffin	14.0
10 Silicone Oil M100	0.5
11 Preservative	q.s.
12 Water	to 100.0

This formulation gives a high viscosity, rich moisturising O/W skin cream.

The first ten components are melted together at about 85C. The water is then heated to the same temperature. The oil phase is then added to the water phase and dispersed. Mixing should continue down to about 30C. To achieve the optimum viscosity, mixing must be continued until the product has fully cooled down.

Formula TS 496

O.T.C. Type Moisturizing Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Eumulgin B2	1.5
2 Eumulgin B1	1.5
3 Cutina MD	3.5
4 Novata AB	5.0
5 Sipo1 1618 C50	3.5
6 Myritol 318	8.0
7 Paraffin oil	11.0
8 White Soft Paraffin	14.0
9 Silicone Oil M100	1.0
10 Preservative	q.s.
11 Water	to 100.0

This formulation gives a high viscosity, rich moisturising O/W skin cream.

The first ten components are melted together at about 85C. The water is then heated to the same temperature. The oil phase is then added to the water phase and dispersed. Mixing should continue down to about 30C. To achieve the optimum viscosity, mixing must be continued until the product has fully cooled down.

Formula TS 497

Moisturizing Protective Day Care Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Cutina MD	7.0
2 Stenol 16-65	2.0
3 Eumulgin B2	3.0
4 Eutanol G	3.0
5 Cetiol SN	7.0
6 Cetiol SB45	5.0
7 Hygroplex HHG CLR	4.0
8 Preservative	q.s.
9 Water	to 100.0

This formulation gives an O/W cream which gives active moisturising.

The first six components are heated together to 85C. Component seven is dissolved in the water and this mixture is also heated to 85C. The oil phase is then mixed into the water phase and dispersed. Mixing should continue down to about 35C.

Formula TS 265

Light Everyday Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Cutina MD	5.9
2 Stenol 16-65	2.1
3 Eumulgin B2	3.0
4 Cetiol SB45	4.8
5 Cetiol SN	10.0
6 Preservative	q.s.
7 Water	to 100.0

This formulation gives an O/W Cream with good emollience.

The first five components are heated together to 85C. The water is also heated to this temperature. The oil phase can then be added to the water phase and dispersed. Mixing should continue down to about 35C.

Formula TS 369

Everyday Moisturizing Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Cutina MD	4.1
2 Stenol 16-65	1.1
3 Eumulgin B2	3.0
4 Cetiol SB45	5.0
5 Cetiol SN	9.0
6 Hygroplex HHG	2.0
7 Preservative	q.s.
8 Water	to 100.0

This formulation gives an O/W Cream with effective moisturising.

The first five components are heated together to 85C. Component six is incorporated into the water, and this mixture is also heated to 85C. The oil phase can then be added to the water phase and dispersed. Mixing should continue down to about 35C.

Formula TS 370

Moisturizing Body Cream

A moisturizing body cream formula to help alleviate skin dryness, roughness and chapping.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Ritachol 1000 (R.I.T.A. Blend)	3.00	Emulsifier
2. Rita CA (Cetyl Alcohol)	3.00	Emulsifier
3. Rita GMS (Glyceryl Stearate)	1.50	Viscosity
4. Rita Stearic Acid	2.25	Emulsifier
5. Ritachol (Mineral Oil and Lanolin Alcohol)	2.00	Emollient
6. Ritaderm (R.I.T.A. Blend)	10.00	Moisture Base
7. Mineral Oil	4.00	Slip
8. BHT	0.10	Anti-oxidant
9. Propylparaben	0.10	Preservative
10. Acritamer 940 (Carbomer 940)	0.10	Stability
11. Distilled/Deionized water	68.25	----
12. Glycerine	5.00	Humectant
13. Methylparaben	0.10	Preservative
14. Triethanolamine @ 50%	0.20	Neutralizer
15. Glydant	0.20	Preservative
16. Perfume	0.20	Odor

Compounding Procedure:

Weigh items 1-9 into beaker and heat to 70C with stirring. To the water add item #10 and stir until lump free. Add items 12 and 13 and heat until 70C. Add oil phase to water phase with agitation. Add item 14 and stir well. Cool to 40C and add remaining items.

Ref. No. 119-84

Every Day Hand Cream

An everyday medium strength hand cream with emollient system designed to vanish quickly on the skin.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Rita GMS (Glyceryl Stearate)	2.00	Emulsion Stabilizer
2. Rita CA (Cetyl Alcohol)	3.00	Emulsifier
3. Mineral Oil	2.00	Moisture
4. Rita Stearic Acid	1.50	Emulsifier
5. Propylene Glycol Dioctanoate (Lexol PG 800)	2.00	Feel
6. Propylparaben	0.05	Preservative
7. Glycerine	1.50	Humectant
8. Triethanolamine @ 100%	0.30	Neutralizer
9. Methylparaben	0.15	Preservative
10. Distilled/Deionized Water	87.50	----

Compounding Procedure:

Melt ingredients 1-6. Heat water to 70-75C. Add items 7-9 to the water. Add oil phase to water phase with agitation. Cool with mixing until 40C.

Moisturizing Cream

This formulation demonstrates a polymeric approach to occlusive moisturization eliminating undesirable feel properties of petrolatum or other traditional occlusive ingredients.

Epolene N-34 Wax is a non-emulsifiable polyethylene which provides a film that is resistant to wash-off. It is incorporated into this emulsion with Eastman AQ 55 water-dispersible polyester which also contributes a protective film. The wash-off resistance is due to the inability of Epolene N-34 to be emulsified by soap or surfactants. The dual film-forming action of this polymer combination has been shown to reduce moisture loss. In vitro occlusivity data is desirable.

Phase A:	%W/W
Distilled water	q.s. to 100
Propylene glycol, USP	4.00

Phase B:	
Polawax emulsifying wax, NF	3.00
Arlacel 165 glyceryl stearate and PEG-100 stearate	3.00
Myverol 18-06 distilled monoglyceride	3.00
Isopropyl myristate	5.00
Robane squalane, NF	5.00
Epolene N-34 polyethylene wax	1.00

Phase C:	
Distilled water	10.00
Propylene glycol	3.00
Eastman AQ 55S polymer	1.00

Phase D:	
Eastman vitamin E TPGS (20%)	1.00

Phase E:	
Fragrance	q.s.
Preservative	q.s.

Procedure:

1. Prepare Phase C by adding propylene glycol to water and heating to 95C and then adding Eastman AQ 55S with mixing. Allow to cool to 70C.
2. Heat Phase A with mixing to 95C.
3. Heat Phase B with mixing to 105-110C.
4. Cool Phase B to 95C and add to Phase A with propeller mixing.
5. Continue mixing and cool to 70C, avoiding air entrapment.
6. At 70C, add Phase C.
7. Continue mixing and cool to 50C; then add Phase D and Phase E.
8. With mixing, force cool to room temperature. Product will thicken and form a cream at 44C.

pH: 5.5

Moisturizing Skin Cream

This traditional formulation is a rich, stiff cream which is suitable for the treatment of dry skin.

<u>Ingredient:</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	60.90	Diluent
Carbopol 934 (1)	0.20	Emulsion Stabilizer
Propylene Glycol	4.00	Humectant
Methylparaben	0.15	Preservative
Propylparaben	0.05	Preservative
Part B:		
Mineral Oil	18.00	Moisture Barrier
Isopropyl Palmitate	5.00	Emollient
Glycol Stearate	5.00	Secondary Emulsifier
Stearic Acid	2.00	Primary Emulsifier
Cetyl Alcohol	2.00	Structuring Agent
Polysorbate 20	0.80	Primary Emulsifier
Part C:		
Triethanolamine (99%)	1.80	Neutralizing Agent
Part D:		
Quaternium-15 (2)	0.10	Preservative

(1) Carbomer (BFGoodrich)

(2) Dowicil 200 (Dow Chemical)

Preparation:

1. Charge water to a vessel which will contain the entire formulation. Slowly sift Carbopol into the vortex of rapidly agitated water. When resin has been dispersed, reduce mixing rate. Heat to 60C.
2. Dissolve parabens in the propylene glycol. Add this solution to the Carbopol dispersion.
3. In a separate vessel, combine all Part B ingredients and heat to 60C.
4. When Parts A and B are homogeneous, add B to A with vigorous agitation.
5. Add Part C. Continue mixing and remove heat.
6. Add Part D @ 40-45C. When temperature reaches 35-40C, stop agitation and fill containers.

Alcohol Cream O/W

	<u>%W/W</u>
I Cutina MD	4.0
Eumulgin B1	1.0
Cetiol V	5.0
Carbopol 934	1.0
Ethyl alcohol 96%	45.0

II Triethanolamine 1.5
Water 42.5

Preparation: Whilst stirring, Carbopol 934 is allowed to swell in 40 parts ethyl alcohol and about half of the water. The gel produced is neutralized with triethanolamine which has been mixed earlier with the remaining 5 parts of ethyl alcohol. The solids and the rest of the water are processed to form a cream and stirred together with the gel before being perfumed and homogenized.

H ₂ O, Deionized	1.00
Phase D:	
Vitamin E Acetate	0.60
Aloe Vera Extract	1.00
Elastin CLR	1.00
Almond Extract	0.25
Phase E:	
Germall 115	0.30
H ₂ O, Deionized	1.00
Specifications:	
pH: 7.00	

Procedure:

- 1) In a stainless steel kettle equipped with a Lightnin' type mixer, add H₂O.
- 2) With mixer on high, slowly sprinkle Carbopol 934 into vortex. Mix until uniform.
- 3) Begin heating to 75C, add Phase A.
- 4) In a separate kettle, combine oil Phase B and heat to 75C while mixing, until completely melted.
- 5) Slowly add Phase B to Phase A while mixing until homogeneous.
- 6) Add Premix Phase C. Mix well. Avoiding aeration, begin cooling.
- 7) At 45C add remainder of ingredients, mix well.

Formula A VI/1950

SOURCE: Hoechst: Guide Formulations for Cosmetics & Toiletries

Protective Moisture Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Cutina FS45	4.0
2 Cutina CBS	8.0
3 Cetiol LC	11.0
4 Paraffin oil	5.0
5 Parsol MCX	2.0
6 Parsol 1789	1.0
7 KOH (20%)	1.5
8 Glycerine	5.0
9 Preservative	q.s.
10 Water	to 100.0

This formulation gives a medium weight O/W skin cream with UV protection.

The first six components are melted together at about 85C. Components 7 & 8 are dissolved in the water, which is then heated to the same temperature. The oil phase is then added to the water phase and dispersed. Mixing should continue down to about 35C. Formula TS 484

Very Light Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Dehydag Wax E	0.5
2 Eutanol G	4.5
3 Cutina MD	3.5
4 Stenol 16-65	1.2
5 Preservative	q.s.
6 Water	to 100.0

This formulation gives a very light O/W emollient cream.

The first four components are melted together at about 85C. The water is heated to the same temperature as the oil phase. The oil phase is then added to the water phase and dispersed. At this stage, the mixture needs homogenisation by, for example, a Silverson. Mixing should continue down to about 35C. Formula TS 483

Protective Day Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Cutina FS45	4.0
2 Cutina CBS	8.0
3 Cetiol B	11.0
4 Paraffin oil	5.0
5 Parsol MCX	2.0
6 Parsol 1789	1.0
7 KOH (20%)	1.5
8 Glycerine	5.0
9 Preservative	q.s.
10 Water	to 100.0

This formulation gives a medium weight O/W skin cream with UV protection.

The first six components are melted together at about 85C. Components 7 & 8 are dissolved in the water, which is then heated to the same temperature. The oil phase is then added to the water phase and dispersed. Mixing should continue down to about 35C.

Protective Moisturizing Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Cutina MD	7.0
2 Stenol 16-65	2.0
3 Cetiol MM	5.0
4 Eumulgin B2	3.0
5 Eutanol G	3.0
6 Cetiol SN	7.0
7 Hygroplex HHG (CLR)	4.0
8 Preservative	q.s.
9 Water to	100.0

This formulation gives a rich feeling O/W cream, of medium consistency, which helps to stimulate the skin's natural regenerative powers.

The first six components are heated together to 85C. Component seven is then added to the water and this mixture is also heated to 85C. The oil phase is then mixed into the water phase and dispersed. Mixing should continue down to about 35C. Formula TS 185

Light Repair Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Cutina MD	3.5
2 Sipol 16-18 C50	1.5
3 Cetiol MM	4.0
4 Eumulgin B2	1.5
5 Eutanol G	5.0
6 Myritol 318	5.0
7 Repair Complex CLR	5.0
8 Collagen CLR	2.0
9 Elastin CLR	2.0
10 Preservative	q.s.
11 Water to	100.0

This formulation gives a very light feeling O/W cream which helps to prepare the skin before sunbathing, by enhancing the speed of cell renewal.

The first six components are heated together to 85C. The water is heated to the same temperature. The oil phase is then mixed into the water phase and dispersed. Mixing should continue down to about 35C. Components seven to nine can then be incorporated, and the product homogenised. Formula TS 253

Replenishing Cream

<u>Ingredients:</u>	<u>%</u>
Phase A:	
H ₂ O, Deionized	73.48
Carbopol 934	0.20
Propylene Glycol	3.00
Methyl Paraben	0.25
Phase B:	
Hest CSO (Cetearyl Octanoate)	6.00
Hest MS (Myristyl Stearate)	3.50
Hetoxamate SA-100 (PEG-100 Stearate)	2.00
Hetan SS (Sorbitan Stearate)	2.00
Hetoxol P (Emulsifying Wax)	2.00
Hetoxol G (Stearyl Alcohol & Ceteareth 20)	0.60
Dimethicone 350	0.80
Parsol MCX	2.00
Vitamin E Acetate	0.25
Propyl Paraben	0.15
Phase C:	
H ₂ O, Deionized	1.00
TEA 99%	0.22
Phase D:	
Sodium Hyaluronate (1%)	1.00
Soluble Collagen	0.25
Phase E:	
H ₂ O, Deionized	1.00
Germall 115	0.30

Procedure:

- 1) In a stainless steel kettle equipped with a Lightnin' type mixer add H₂O. Slowly sprinkle Carbopol 934 into vortex while mixing until free of lumps.
- 2) Add balance of Phase A, heat to 75C. In a separate kettle, combine ingredients of Phase B, heat to 75C while mixing.
- 3) Add B to A. Mix until uniform. Avoid aeration.
- 4) Add Phase C premixed and cool to 40C.
- 5) At 40C, add Phase D to batch.
- 6) Premix Phase E, add to batch.
- 7) Mix until uniform.

Specifications:

pH: 6.80
 Viscosity, #4/6 RPM: 65000

SOURCE: Heterene, Inc.: Formula HC 91-12-1

Ritavena Hand and Body Cream

A natural hand and body cream designed around the benefits of colloidal oats (Ritavena) to provide natural skin therapeutic moisturization and softening.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Distilled/Deionized Water	10.00	----
2. Ritavena-5 (Hydrolyzed Oat Flour)	1.00	Natural Moisture
3. Distilled/Deionized Water	65.20	----
4. Sorbitol	3.50	Humectant
5. Methylparaben	0.15	Preservative
6. Forlan 500 (R.I.T.A. Blend)	6.00	Emolliency
7. Rita CA (Cetyl Alcohol)	2.50	Emulsifier
8. Mineral Oil (130-SUS-Penreco)	8.00	Emolliency
9. Rita Stearic Acid	2.00	Emulsifier
10. Propylparaben	0.05	Preservative
11. Triethanolamine @ 50%	0.80	pH
12. Germall II @ 25%	0.80	Preservative

Compounding Procedure:

Heat first water to 100C (boiling), add item 2 and mix in blender for 2 minutes. Heat items 3-5 to 75C. In separate beaker heat items 6-10 to 75C. Combine with agitation. Add item 11 and maintain heat and agitation for 10 minutes. Add Ritavena mixture and mix until uniform. Cool with agitation. At 45C add preservative.

Ref. No. 116-33

Therapeutic Barrier Cream

Elegant water in oil emulsion which resists chemicals and oils better than silicone systems. Based on Ritaplast to maximize barrier properties.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Mineral Oil	24.50	Oil-Out
2. Ritaplast (Barrier Base)	20.00	Barrier
3. R.I.T.A. Beeswax, Natural	13.00	Barrier
4. Lanolin USP	10.00	Barrier
5. Ritalan C (Isopropyl Palmitate and Lanolin Oil)	2.00	Film
6. Propylparaben	0.10	Preservative
7. Ritahydrox (Hydroxylated Lanolin)	0.30	Anchor
8. Distilled/Deionized Water	28.50	----
9. Borax	1.30	Stability
10. Methylparaben	0.10	Preservative
11. Fragrance	0.20	Odor

Compounding Procedure:

Heat items 1-7 and items 8-10 to 165F in separate containers. Add oil phase to water phase with mixing. Cool to 120F and add fragrance.

Skin Cream O/W Transparent in Gel Form

	<u>%W/W</u>
I Eumulgin B3	13.0
Cetiol HE	20.0
Eutanol G	5.0
II Water	62.0

Preparation:

Eumulgin B3 and the fatty substances are melted on the water bath at 95C and the water is added to the fat melt also at 95C. The gel produced is stirred while cooling and perfume is added at 60C. The gel is cooled and stirring continued, although the stirring process should be terminated after a short while to avoid air pockets. In order to obtain the desired transparency, it is essential to observe the temperature specified.

Smoothing Care Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Cutina FS45	6.0
2 Cetiol LC	11.0
3 Lorol C16	1.5
4 Lorol C18	1.5
5 Cutina MD	3.0
6 KOH (20%)	2.0
7 Preservative	q.s.
8 Water	to 100.0

This formulation gives a very hard, heavy weight O/W skin cream with an exceptionally smooth, enriching feel.

The first five components are melted together at about 85C. Component 6 is dissolved in the water to the same temperature. The oil phase is then added to the water phase and dispersed. Mixing should continue down to about 35C.
Formula TS 500

Emollient Care Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Cutina FS25	5.0
2 Cetiol B	9.0
3 Lorol C16	1.5
4 Lorol C18	1.5
5 Cutina MD	3.0
6 KOH (20%)	1.75
7 Preservative	q.s.
8 Water	to 100.0

This formulation gives a soft, medium weight O/W skin cream.

The first five components are melted together at about 85C. Component 6 is dissolved in the water which is heated to the same temperature. The oil phase is then added to the water phase and dispersed. Mixing should continue down to about 35C.
Formula TS 501

Night Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Emulgade CL special	20.0
2 Silicone Oil M100	1.0
3 Fragrance	q.s.
4 Preservative	q.s.
5 Water	to 100.0

This formulation gives an O/W cream which has a rich, smoothing feel on the skin.

Components 1 and 2 are added to the water and the mixture is heated to about 85C. The mixture is vigorously mixed until homogeneous. It can then be cooled, with moderate mixing down to about 35C.
Formula TS 510

Soft Touch Cleansing Cream

	<u>%W/W</u>
A. Carbopol 940-2% Aq. Sol'n.	50.0
1,3-Butylene Glycol	12.0
Tween 20	0.5
Tween 80	0.5
Deionized Water	8.0
B. Mineral Oil, Heavy	20.0
Arlacel 60	1.0
Proto-Lan 8*	3.0
Solulan 98	1.0
C. Glydant DMDMH-55	0.3
May-Tein KTS (Sodium/TEA Lauryl Hydrolyzed Keratin)	2.0
Triethanolamine-99%	1.5
D. Fragrance	0.2
*(Lecithin (and) Butyl Stearate (and) Cocoyl Hydrolyzed Collagen (and) Oleoyl Sarcosine (and) Sesame Oil (and) Lanolin Alcohol)	

Procedure:

Heat Phase A & B separately to 80C. Add B to A with mixing. Add C. Mix carefully to avoid entrapping air. Mix and cool to 40C. Add D.

Properties:

A mild, creamy facial cleanser which leaves a smooth after-feel. May be washed off or rinsed off with water. Non-drying.

SOURCE: Maybrook Inc.: Formula #SW-3241

Care Cream

Solid cream. Good spreadability, good absorption. Leaves a pleasant soft touch.

Material/CTFA-Index:

A. Emulgator E2155/Stearyl Alcohol (and) Steareth-7 (and) Steareth-10	6.00%

Sunflower Oil Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Eumulgin B2	3.0
2 Monomuls 60-35	3.1
3 Novata AB	4.8
4 Sunflower Oil	10.2
5 Loro1 C16	2.05
6 Loro1 C18	2.05
7 Preservative	q.s.
8 Water	to 100.0

This formulation gives an O/W Cream, with good spreading and a medium weight feel.

The first six components are heated together to 85C. The water is also heated to 85C. The oil phase can then be added to the water phase and dispersed. Mixing should continue down to about 35C.

Formula TS 417

Sunflower Oil Cream with Protein

<u>Ingredient:</u>	<u>%W/W</u>
1 Eumulgin B2	3.0
2 Monomuls 60-35	3.1
3 Novata AB	4.5
4 Sunflower Oil	10.2
5 Loro1 C16	2.05
6 Loro1 C18	2.05
7 Gluadin AGP	1.0
8 Preservative	q.s.
9 Water	to 100.0

This formulation gives an O/W Cream, with good spreading and a medium weight feel.

The first six components are heated together to 85C. Component seven is dissolved in the water and this mixture is also heated to 85C. The oil phase can then be added to the water phase and dispersed. Mixing should continue down to about 35C.

Formula TS 418

Light Moisturizing Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Eumulgin B2	3.0
2 Myritol 318	10.0
3 Cetiol SB45	5.1
4 Monomuls 60-35	5.0
5 Sipol 1618 C50	2.2
6 Hygroplex HHG	2.0
7 Preservative	q.s.
8 Water	to 100.0

This formulation gives a light O/W cream with natural moisturising effect.

The first five components are melted together at about 85C. Component 6 is dissolved in the water and heated to the same temperature as the oil phase. The oil phase is then added to the water phase and dispersed. Mixing should continue down to about 35C.

Urban Protection Day Cream

This light textured day cream contains an effective level of natural antioxidants to provide protection from urban environmental influences. The antioxidants are in the form of liposomes as Dermalome SOD and Dermalome E to provide enhanced penetration and efficacy and the Protein-bound Biomin SE/P/C.

<u>Ingredients/C.T.F.A.:</u>	<u>% by Weight</u>
Demineralized Water	65.00
Carbopol 1342, 2%/Carbomer	15.00
Glycerine	2.00
Brookswax D/Cetearyl Alcohol (and) Ceteareth-20	1.00
Finsolv TN/C12-15 Alcohols Benzoate	2.00
DC 200 Fluid, 350 cs/Dimethicone	0.50
Germaben II-E/Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben	1.00
Biomin Se/P/C/Selenium Polypeptides	0.30
Dermalome SOD/Lecithin (and) Superoxide Dimutase	10.00
Dermalome E/Lecithin (and) Tocopheryl Acetate	3.00
AMP-95/Aminomethylpropanol	0.20

Procedure:

1. Disperse the Carbopol in water while heating to 75C.
2. Add the Glycerin and mix well.
3. Blend the Finsolv TN, Brookswax D, and Silicone Fluid at 70C until uniform and add to water phase. Mix until uniform.
4. Add the AMP-95 and mix until uniform with fast propellor agitation.
5. Cool to 50C and add the Biomin SE/P/C and Germaben with sweep agitation.
6. Cool to 35C and add the Dermalomes.
7. Fragrance as desired and mix well.
8. Adjust pH to 5.0 with Citric Acid if required.

Formulation PF-0163 suggested by Brooks Industries, Inc.

B: Propylene Glycol	12.00
Water	46.50
Belsil DMC 6032/Dimethicone Copolyol Acetate	4.50
Preservatives, fragrances, pigments	q.s.

Heat A and B each to 65C, mix B into A, stir cold.
 Temperature stability: at 45C over 10 weeks.
 Formulation 397 AH

Day Cream

White firm cream with a silky shine. Absorbed well, leaves a dry feeling on the skin.

Material/CTFA-Index:

A: Stearic Acid	25.00%
Belsil PDM 20/Phenyl Dimethicone	5.00
B: Glycerine	8.00
Aminomethylpropanol	1.50
Water	60.50
Preservatives, perfume, pigments	q.s.

Heat A and B each to 75C. Stir A slowly into B. Stir cold.
 Temperature stability: at 45C over 10 weeks.
 Formulation 399 AH

Skin Cream

White, creamy, silky shine.

Material/CTFA-Index:

A: Belsil PDM 20/Phenyl Dimethicone	3.60%
Stearic Acid	4.20
Cetyl Alcohol	1.00
B: Glycerine	2.00
Triethanolamine	0.80
Wasser dest./Water	88.40
Preservatives, fragrances, pigments	q.s.

Heat A and B each to 80C, stir A into B.
 Temperature stability: at 45C over 10 weeks.
 Formulation 187/3 AH

W/O Cream with Eldew

<u>Ingredients/Trade Name:</u>	<u>% by Weight</u>
Part A:	
Di-(Cholesteryl, behenyl, octyldodecyl)	
N-Lauroyl-L-glutamic acid ester/Eldew CL-301	2.00
Cetearyl Octanoate	8.00
C12-15 Alkyl Benzoate	5.00
Phenoxyethanol	0.60
Tocopheryl Acetate	0.05
Part B:	
Polyglyceryl-4 Isostearate (and) Cetyl Dimethicone	
Copolyol (and) Hexyl Laurate	5.00
Cetyl Dimethicone	2.00
Part C:	
Deionized Water	68.55
Sodium Chloride	0.80
Glycerin (99.5%)	5.00
Partially Deacetylated Chitin (1.0%)/Marine Dew PC-100	2.00
Part D:	
Methylparaben	0.20
Butylene Glycol	0.80

Procedure:

Pre-melt Part A at 50 degrees Centigrade. Add Part B to Part A. Pre-melt Part D by heating to 50 degrees C. Add to Part C. Slowly add Part C and D mixture to Parts A and B with high shear mixing.

Appearance: White, smooth, shiny lotion.

pH: 6.00-6.50

Viscosity: 20,000 cps (RVT #6 @ 10rpm @ 25 degrees C)

Hand Cream

	<u>Wt%</u>
(O) Liquid Paraffin (#70)	10.0

Aerosol Hairspray "100% VOC"-CMB Horizon System

<u>Ingredients:</u>	<u>% by Weight</u>
Ethanol	91.67
AMP Regular	0.11
Advantage CP	8.00
Dimethicone Copolyol	0.10
Perfume, Kristine K/19718	0.12

Procedure:

Dissolve AMP neutralizer in ethanol. Add Advantage CP with stirring until uniform. Add remaining ingredients in order listed, mixing thoroughly after each addition. Charge into aerosol containers and pressurize using compressed gas (e.g. nitrogen) to 8 to 9 bar pressure.

Note: Containers should be checked for corrosion resistance to the product.

Formulation PF-0245E suggested by ISP

Aerosol Hairspray, Hydrocarbon Propellant

<u>Ingredients:</u>	<u>% by Weight</u>
Ethanol	60.82
AMP Regular	0.06
Advantage CP	4.00
Perfume, Kristine K/19718	0.12
Propane/butane	35.00

Procedure:

Dissolve AMP neutralizer in ethanol. Add Advantage CP with stirring until uniform. Add remaining ingredients in order listed, mixing thoroughly after each addition. Charge into aerosol containers and pressurize with propellant.

Formulation PF-0246E suggested by ISP

Aerosol Hairspray

<u>Ingredients:</u>	<u>% by Weight</u>
Ethanol	71.74
Water, Deionized	20.00
AMP Regular	0.16
Advantage CP	8.00
Dimethicone polyol	0.10
Sufadone LP-300	0.10
Perfume	q.s.

Procedure:

This hairspray uses the compressed gas-CMB Horizon system and meets the 80% VOC requirement. Dissolve AMP Regular in ethanol and water. Add Advantage with stirring, until uniform. Add remaining ingredients with stirring until uniform. Charge into aluminum containers and pressurize with nitrogen.

Formulation PF-0239E suggested by ISP

Alcohol-Free Styling Gel

<u>Ingredients:</u>	<u>% by Weight</u>
Part A:	
Deionized water	93.03
Octylacrylamide (and) acrylates (and) butylamino-ethyl methacrylate copolymer (Amphomer)	3.50
AMP-95	0.62
Part B:	
Propylene glycol	0.50
Cocamidopropyl PG-dimonium chloride (Monaquat P-TC)	0.40
Cocamidopropyl betaine (Varion CADG)	0.25
Lauramide DEA (Monamid 716)	0.20
Polysorbate 20	0.15
Quaternium-15	0.10
Part C:	
Hydroxyethylcellulose (Natrosol-250 HHX)	1.25
Fragrance	q.s.

Procedure:

Combine A. When complete, add B. When homogenous slowly sift in C with good agitation.
Formulation PF-0253 suggested by National Starch and Chemical

Hair Setting Gel

Setting gel contains conditioning active ingredients for normal to dry hair.

<u>Ingredients:</u>	<u>% by Weight</u>
Part A:	
Ethanol, 96% denatured	15.00
PVP/VA copolymer (PVP/VA E-735)	4.00
Cetrimonium chloride (Dehyquart A)	0.50
Part B:	
Water	77.70
Carbomer 940 (Carbopol 940)	0.60
Color	0.20
AMP-95	0.30
Part C:	
Trideceth-9 (and) PEG-5 octanoate (NEO-PCL Water Soluble)	1.00
Trideceth-9 (and) PEG-40 Hydrogenated castor oil	0.50
Fragrance	0.20

Procedure:

Swell carbomer in water using an Ultraturrax stirrer. Blend A and C separately. Add A to C. Add AC to B using an Ultraturrax stirrer. Adjust pH to 6.2.
Formulation PF-0254 suggested by Dragoco

Alcohol-Free Styling Mousse

<u>Ingredients:</u>	<u>% by Weight</u>
Part A:	
Octylacrylamide/acrylates/butylaminoethyl methacrylate (Amphomer)	2.50
AMP-95	0.40
Amodimethicone (and) nonoxynol 10 (and) tallowtrimonium chloride	0.40
Octoxynol-9 (Triton Z-100)	0.30
Cocamidopropyl betaine (Varion CADG)	0.10
Quaternium-15	0.10
Deionized Water	48.90
Fragrance	q.s.
Part B:	
Hydroxyethyl cellulose (Natrosol 250 HHR)	0.30
Deionized Water	37.00
Part C:	
Isobutane/propane	10.00

Procedure:

Prepare A and B. When solutions are complete, add A to B; mix until homogeneous. Filter and fill concentrate. Charge with C

Formulation PF-0181 suggested by National Starch

Setting Lotion

Extra-strong hold, for all climatic zones, easy to comb and wash out.

<u>Ingredients:</u>	<u>% by Weight</u>
Ultrahold Strong	4.00
AMP-95	0.60
Ethanol, abs.	20.00
Water, distilled	75.40
Perfume oil	q.s.

Procedure:

Place ethanol, AMP-95, water and perfume oil in the mixing vessel, add Ultrahold Strong, stir until dissolved, then fill into containers.

Formulation PF-0336 suggested by BASF

Aqua-Vital Moisturizing Spray (Pump Type)

	<u>%W/W</u>
A. Deionized Water	84.20
Cel-quat L200 (Polyquaternium-4)	0.20
Gel-Co (Gelatin)	1.00
Methylparaben	0.20
B. Propylene Glycol	6.00
Glycerin	1.00
Cationic Collagen Polypeptides	0.50
Aqua-Tein C (Collagen Amino Acids and Acetamide MEA)	2.00
Dowicil 200 (Quaternium-15)	0.20
Citric Acid, dry	0.40
Quat-Pro S (Steartrimonium Hydrolyzed Animal Protein)	0.20
C. Isopropyl Alcohol	4.00
Fragrance	0.10

Procedure:

Warm Phase A to bring all ingredients into solution. Add Phase B to Phase A. Pre-mix Phase C and add to Phase A/B at a temperature below 40C.

Properties:

A pump-type spray which moisturizes and protects the hair. Quats allow for easier combing. High molecular weight proteins impart a smooth, protective outer layer while the Amino Acids work from within. For best results, use a pump which delivers a fine mist.

Formula #HE-1607

Every Day Wave Gel Activator

	<u>%W/W</u>
Deionized Water	36.55
Carbopol 940 - 2% Aqueous Sol'n	25.00
Glycerin	20.00
Proto-Lan 30 (Propylene Glycol and PPG-12-PEG-65 Lanolin Oil and Hydrolyzed Collagen)	3.00
Dow Corning 193 Surfactant (Dimethicone Copolyol)	2.50
Panthenol	0.10
Propylene Glycol	10.00
DMDM Hydantoin	0.30
Solulan 98 (Polysorbate 80 and Cetyl Acetate and Acetylated Lanolin Alcohol)	2.00
Triethanolamine (TEA)	0.55

Procedure:

Mix all ingredients together except the TEA. Add TEA and mix carefully to avoid aeration.

Properties:

Softens and moisturizes to help return hair to a loose curl. The silicone serves to lubricate, add gloss and to "de-tack" the humectants. Good all-around formula for daily use.

Bodifying Sculpting Lotion

This clear formula combines good holding power with conditioning, producing a bodyfying sculpting lotion which provides easy stylability. Hair acquires more body and a softer, silkier feel from the unique combination of bodyfying and styling properties which Crodacel QM imparts to this lotion - an effect of covalently bonding a fatty quaternary group to a cellulose backbone. Super Solan Flaked is used to plasticize the resin.

<u>Ingredients:</u>	<u>% by Weight</u>
A. SDA-40 Alcohol	40.00
Amphomer 28-4910	1.00
Super Solan Flaked	0.50
B. Crodacel QM	1.00
AMP-95	0.16
Deionized water	57.34

Procedure:

Dust the copolymer of Part A into the alcohol, mixing well until clear and then add Super Solan Flaked with mixing. Combine the ingredients of Part B with mixing and add to Part A, mixing until clear.

Formulation PF-0322 suggested by Croda Inc.

55% VOC Pump Hair Spray

<u>Ingredients:</u>	<u>% by Weight</u>
Water	6.80
Ethanol	80.00
AMP-95	0.56
Acudyne 255 (41% solids)	12.50
Dow Corning 190 Fluid	0.10

Procedure:

Mix water, ethanol, AMP-95 and plasticizer. Add polymer with stirring. Mix until solution is clear.

Properties:

Cloud Point: <-22F

Viscosity: 5 cps, spindle #1 @ 60 rpm

Brushing Gel

	<u>Wt%</u>
A. Amihope LL	0.5
POE (20) Sorbitan Monolaurate	0.5
POE (20) Sorbitan Monostearate	0.5
POE (25) Glyceryl Monopyroglutamate Monoisostearate	1.0
Propylene Glycol	2.0
Grape Seed Oil	0.5
B. Carboxyvinylpolymer (Carbopol 940) (1.0% wt% solution)	50.0
Deionized Water	balance
Preservatives	0.2
C. 10% wt. NaOH Solution	2.0

Procedure:

1. Weigh each ingredients (A) in glass vessel and mix.
2. Add (B) to the former mixture and heat to 70-80C with stirring.
3. After dissolution, cool down to room temperature. Then add (C) to the mixed solution and it turns to gel state.

Note:

This brushing gel reduces an electrostatic charge produced by combing and leads to smooth combing.

Hair Rinse

	<u>Wt%</u>
A. Cetanol	3.0
Amiter LGOD-2	5.0
Glyceryl Monostearate, Self Emulsifying (HLB 11)	2.0
Amihope LL	3.0
B. 1,3-Butylene Glycol	5.0
Stearyltrimethyl Ammonium Chloride	3.0
Methylparaben	0.2
Water	the rest

Procedure:

1. Dissolve (A) at 80C.
2. Dissolve (B) at 80C.
3. Add (B) to (A).
4. Mix them with a homomixer, and cool to 30C.

Note:

This creamy hair rinse has light finishing touch.

SOURCE: Ajinomoto USA, Inc.: Suggested Formulations

Brushing Lotion

	<u>Wt%</u>
A. Amihope LL	0.5
POE (20) Sorbitan Monolaurate	1.5
POE (25) Glyceryl Monopyroglutamate Monoisostearate	1.0
Propylene Glycol	2.0
B. Stearyl Alcohol	0.5
Carboxyvinylpolymer (Carbopol 941)	15.0
(0.5 wt% solution; neutralized by NaOH)	
Deionized Water	balance
Preservatives	0.2
C. ProdeW 100	0.2
Ethanol	5.0

Procedure:

1. Weigh each ingredient (A) in glass vessel and mix.
2. Add (B) to the former mixture and heat to 70-80C with stirring.
3. After dissolution, cool down to 50C. Then add (C) to the mixed solution.
4. With stirring, cool down to room temperature.

Note:

This brushing lotion reduces an electrostatic charge produced by combing and leads a smooth combing.

Hair Brushing Lotion

	<u>Wt%</u>
Amihope LL	1.0
POE (20) Sorbitan Monolaurate (Polysorbate 20)	1.0
Water	50.0
Ethanol	48.0

Procedure:

Mix all components at room temperature.

Note:

This hair brushing lotion has good antistatic effect and smoothness for the hair.

Amihope LL acts as hair conditioning agent instead of the cationic surfactant.

Usage:

Spray the hair before brushing.

Cationic Thermal Styling Mousse
(Nonaerosol - For Foamers)

	<u>%W/W</u>
A. Supro-Tein V (Tea-Cocoyl Hydrolyzed Collagen (and Sorbitol))	3.00
Kera-Tein 1000 AS (Ethyl Ester of Hydrolyzed Keratin)	3.00
Ameroxol OE-20 (Oleth-20)	0.25
Dimethicone Copolyol	0.25
Polyox WSR N-3000 (2% Aq. Soln.) (PEG-14M)	1.50
Cocoamphocarboxypropionate	1.00
Deionized Water	82.00
B. Amersette (Methacrylol Ethyl Betaine/Methacrylates Copolymer)	1.00
SD Alcohol 40, Anhydrous	8.00
Fragrance, Preservatives	q.s.

Procedure:

1. Heat the water in Phase A to 65C. Add the rest of Phase A to the water and mix until dissolved.
2. Dissolve the Amersette in the Alcohol at room temperature.
3. Slowly add Phase B to Phase A. Mix until homogeneous.

Properties:

This nonaerosol styling mousse utilizes Amersette and Kera-Tein 1000 AS as styling agents for long-lasting hold properties. The Kera-Tein 1000 AS, a substantive cationic protein, also adds a natural shine and protective properties.

Supro-Tein V enhances the quality of the mousse foam while conditioning the hair. Polyox WSR N-3000 enhances combing and shine characteristics.

Formula #HF-1406

Firm Hold Cationic Hair Spray

	<u>%W/W</u>
Alcohol SD-40A	75.00
Gantrez ES-225 (Ethyl Ester of PVM/MA Copolymer)	10.00
Dow Corning 190 Polyether (Dimethicone Copolyol)	0.10
Fragrance	0.10
Aminomethyl Propanol-95	0.18
Water	13.62
Pro-Tein ES-20 (Ethyl Ester of Hydrolyzed Collagen)	1.00

Procedure:

1. Add alcohol to mixing vessel.
2. Add the Gantrez to the Alcohol. Mix until dissolved.
3. Add the rest of the ingredients in the order listed, one at a time and mixing in between additions.

Properties:

An excellent hair spray for hard-to-hold hair. The Pro-Tein ES-20 and DC-190 plasticize the resin and improve shine and combing ability. Pro-Tein ES-20 is a cationic, substantive protein which gives the hair a natural look and feel.

Formula #HF-1400

Cold Wave Cream

	<u>%W/W</u>
I Lanette O	16.00
Eumulgin 05	2.50
Eumulgin 010	2.50
Cetiol V or Eutanol G	5.00
II Water	42.55
Turpinal SL	0.20
III Ammonia 25%	18.75
IV Thioglycolic acid 80%	12.50

Note: The German cosmetics legislation limits the thioglycolic acid content in products for personal use to 8% and in products for commercial use to 11%. The pH must not exceed 9.5.

The pH of this formula is 7.5-9.5.

Because of the thioglycolic acid content in the formulas UA 11-01, -02 and UA 21-01 of approx. 10%, these cold wave preparations are only permissible for commercial use.

Preparation (valid for all cold wave emulsions): The fatty substances are melted at 70-80C. The water is also heated to 70-80C and stirred into the fat melt. The mixture is cooled to approx. 30C whilst stirring and the emulsion forms. Ammonia is carefully stirred in and then slowly neutralized with thioglycolic acid while being cooled.

Due to the risk of discoloration, contact with metal should be avoided.

Formula No. UA11-01

Hair Straightening Cream

	<u>%W/W</u>
I Lanette O	14.0
Eumulgin 05	2.0
Eumulgin 010	2.0
Comperlan KD	2.0
Cetiol V	2.0
II Turpinal SL	0.2
Borax	0.5
Water	47.9
III Ammonia (25%)	18.9
IV Thioglycolic Acid (95%)	10.5

Preparation: All the ingredients of I are weighed and melted at approx. 80C. The water, in which Turpinal SL and Borax have been dissolved, is also heated to 80-90C and stirred into the fat melt which is kept at 80-90C in a water bath. The mixture is then cooled to approx. 30C at which stage the emulsion is formed. Ammonia is carefully added while stirring and finally the thioglycolic acid is added while the mixture is being cooled and stirred.

The hair straightening cream has a pH of between 9 and 9.3.

Water	91.00
Preservatives, fragrances	q.s.

Heat Lamecreme KSM and the cetyl alcohol to 70C, work in the water stirring well. Leave to cool somewhat, mix in Belsil CM 040.

Temperature stability: at 45C over 10 weeks.

Formulation 311 AH

Conditioner

Slightly cloudy, high viscosity.

Material/CTFA-Index:

A: Water	94.50%
Tylose H 4000 P/Hydroxyethylcellulose	1.00
B: Belsil DMC 6035/Methicone Copolyol Acetate	2.00
Belsil ADM 6042 E/Amodimethicone (and) Emulsifier	2.50
Preservatives, fragrances, pigments	q.s.

Mix A well, mix in B.

Formulation 550 AH

SOURCE: Wacker Silicone: Suggested Formulations

Conditioner

Creamy soft. Produces a good shine and makes hair easy to comb

Material/CTFA-Index:

Water	90.30%
Ethylenglykol/Glycol	3.20
Lanette N/Cetearyl Alcohol (and) Sodium Cetearyl Sulfate	3.50
Belsil ADM 6056 E/Dimethicone (and) Amodimethicone (and) Nonoxynol-4 (and) Nonoxynol-14	2.50
Belsil DM 100000/Dimethicone	0.50
Preservatives, Fragrances	q.s.

Heat the glycol to 70C, dissolve Lanette N in it. Stir in 70C hot water, mix in Belsil ADM 6056 E and Belsil DM 100 000.
Formulation 577 AH

Hair Gel

Translucent gel. Good hold, wet look.

Material/CTFA-Index:

Water	59.50%
Carbopol 934/Carbomer 934	0.50
Triethanolamine	1.20
Glycerine	34.20
Propylene Glycol	2.00
Belsil DMC 6035/Methicone Copolyol Acetate	2.30
Preservatives, fragrances	q.s.

Mix the Carbomer 934 well into the water. Mix in the others homogeneously.

Temperature stability: at 45C over 10 weeks.

Formulation 353 AH

Hair Fixative

For dry hair with slight hold.

Material/CTFA-Index:

Luviskol VA 64/PVP/VA Copolymer	1.50%
Ethanol/Alcohol	30.00
Water	65.00
Genamin CTAC/Cetrimoniumchlorid	0.10
Propylene Glycol	0.30
Wacker-Belsil DMC 6031/Dimethicone Copolyol	1.00
Preservative, Fragrances, Pigments	q.s.

Dissolve Luviskol VA 64 in Alcohol then add the remaining ingredients.

Formulation 819 AH

SOURCE: Wacker Silicone: Suggested Formulations

Conditioner

<u>A</u>	Deionized Water	79.39%
	PVP (PVP K-30)	0.50
	Cetylpyridinium Chloride	1.00
	Pecosil SWPQ-40 (Hydrolyzed Wheat Protein/ DCP Copolymer, Quaternary)	2.00
<u>B</u>	Methylparaben	0.25
	Propylene Glycol	5.00
	Disodium EDTA	0.10
<u>C</u>	Cetyl Alcohol	1.25
	Stearyl Alcohol	1.25
	Lanolin	0.50
	Mineral Oil (Kaydol)	7.75
	Propylparaben	0.15
	Meadowfoam Seed Oil	0.50
<u>D</u>	Tocopheryl Acetate	0.01
	DMDM Hydantoin	0.35

Procedure:

Add PVP K-30 to phase A water, propeller mix until uniform. Add Cetylpyridinium Chloride and Pecosil SWP-83 to the rest of phase A and propeller agitate until uniform. Heat phase A to 72C and then add phase B to phase A. Heat phase C to 75C. When both phase AB and phase C are uniform and at temperature, add phase C to phase AB with propeller agitation. Cool ABC to 50C while continuing propeller agitation. Then add phase D to ABC, continue agitation while cooling ABCD to 35C.
Formula 14-60-A

Styling Gel

<u>A</u>	Deionized Water	50.00%
	Carbomer 940	0.50
	Triethanolamine (99%)	0.63
<u>B</u>	Deionized Water	42.97
	PVP (PVP K-30)	1.00
	Polyquaternium-11 (Gafquat 755)	4.00
	Pecosil SWP-83 (Hydrolyzed Wheat Protein/Dimethicone Copolyol Phosphate Copolymer)	0.50
	Panthenol	0.25
	Quaternium-15	0.10
	DMDM Hydantoin	0.05

Procedure:

Disperse Carbomer in phase A water with adequate agitation. When Carbomer is uniformly dispersed, add Triethanolamine under slow sweep agitation. With adequate agitation, add PVP to phase B water. When PVP is completely dissolved, Add remaining phase B items. When phase B is uniform, add phase B to phase A under slow sweep agitation.
Formula 14-61-A

SOURCE: Phoenix Chemical, Inc.: Suggested Formulations

Conditioning Protein Hair Gel

<u>Ingredients:</u>	<u>Weight%</u>	<u>Function</u>
Deionized Water	98.0	Diluent
Carbopol 940	0.5	Gelling Agent
Triethanolamine	0.5	Neutralizer
Soluble Keratin	0.5	Protein
DMDM Hydantoin	0.3	Preservative
Benzophenone 4	0.1	UV Stabilizer
Fragrance	q.s.	
Color	q.s.	

Procedure:

1. Slowly sift Carbopol 940 resin into rapidly deionized water.
2. Reduce the agitation with sweep blade. Add triethanolamine, keratin, preservative, benzophenone, and EDTA. Mix until homogeneous.

Formula C0028

Hair Setting Gel

<u>Ingredients</u>	<u>Weight%</u>	<u>Function</u>
Carbopol 940	0.6	Gelling Agent
Water (Deionized)	80.0	Diluent
PVP/VA Copolymer	1.0	Hair Setting Resin
Triethanolamine (99%)	1.4	Neutralizing Agent
Water (Deionized)	16.1	Diluent
DMDM Hydantoin	0.3	Preservative
Disodium EDTA	0.1	Chelating Agent
Oleth-20	0.5	Lubricant/Fragrance Stabilizer

Procedure:

1. Slowly sift Carbopol 940 into the vortex of rapidly agitating water. When resin is dispersed, reduce agitation and mix until a homogeneous dispersion is obtained.
2. Separately combine copolymer, triethanolamine, water, preservative, and disodium EDTA until dissolved.
3. Add to Carbopol dispersion with moderate sweeping agitation.
4. Heat Oleth-20 to liquid. Add to gel with slow mixing.

Formula C0029

Curl Activator
(Formula 82-1010)

	<u>% By Weight</u>
<u>Oil Phase:</u>	
Alkamuls GMS	3.0
Cetyl Stearyl Alcohol	2.0
Petrolatum (Penreco)	2.0
Drakeol 10 (Penreco)	6.5
Sesame Oil	0.1
<u>Water Phase:</u>	
Cellosize QP	0.5
Propylene Glycol	5.0
Glycerine	4.0
Alkamuls GMS	3.5
Solulan 75 (Amerchol)	0.5
Preservative	Q.S.
Water	72.9
Fragrance, Dye	Q.S.

Blending Procedure:

Charge water into mixing vessel and while warming to 75C, lightly blend in Cellosize QP. Once Cellosize QP is completely dispersed, blend in remaining water phase ingredients in order listed. In a separate container, prepare oil phase and gently warm to 75C. With rapid but smooth agitation, slowly add oil phase to water phase. Once system is uniform, cool with moderate agitation to 40-45C and blend in dye and fragrance.

Use Directions: Lightly coat hair with a small amount of activator. Work into hair with fingers. Brush and style.

Wave Lotion (Buffered)
(Formula 92-1209)

	<u>% by Weight</u>
A.	
Miranol DM	8.0

**Economy Creme Rinse Conditioner
(Formula 86-0902M)**

Miracare SCS is a flaked conditioner concentrate specially developed to produce luxurious creme rinse products. A unique blend of emollients and conditioning agents, Miracare SCS readily disperses in 75-80C water to form elegant hair care products.

	% By Weight
Miracare SCS	5.0
Sodium Chloride	0.2
Citric Acid	0.3
Fragrance, Dye, Preservative	Q.S.
Water	94.5

Blending Procedure: Dissolve Sodium Chloride and Citric Acid in water and then heat to 75-80C. With smooth agitation, slowly blend Miracare SCS into heated water system. Mix until completely uniform. With smooth agitation cool system to 40C and add compatible Fragrance, Dye(s), and Preservative.

Typical Formulation Properties

Appearance After 24 Hrs:	Viscous, Opaque Lotion
pH (10% Aq.):	2.5-3.5
% Non Volatiles:	5-7

CTFA Identification: Water, Cetearyl Alcohol, PEG-40 Castor Oil, Stearalkonium Chloride, Citric Acid, Sodium Chloride, Fragrance, Preservative, Dye(s).

**"Light" Creme Rinse Conditioner
(Formula 88-0806)**

	% By Weight
Rhodaquat M242B/99	0.80
Cetyl Alcohol NF	4.00
Citric Acid	0.20
Fragrance, Dye(s), Preservative	Q.S.
Water	95.00

Blending Procedure: Dissolve Citric Acid in water and heat to 70-75C. With smooth agitation, slowly blend in Rhodaquat M242B/99 followed by Cetyl Alcohol NF. Mix until completely uniform. With smooth agitation, cool system to 40-45C and blend in compatible Fragrance, Dye(s), and Preservative.

Typical Formulation Properties

Appearance After 24 Hours:	Viscous, Opaque Lotion
pH:	2.2-3.2
Viscosity After 24 Hours (25C):	5,000-8,000 cps (No. 4 Spindle @ 10 RPM)

CTFA Identification: Water, Cetyl Alcohol, Cetrimonium Bromide, Citric Acid, Fragrance, Preservative, Dye(s).

Carbopol 940 Resin (1)	0.50	Gelling Agent
Deionized Water	55.90	Diluent
Hydrogenated Starch Hydroxylate (2)	9.60	Gloss, Sheen
Glycerin	22.40	Humectant
Part B:		
PEG-60 Lanolin (3)	5.00	Conditioning
Propylene Glycol	3.00	Humectant
Dimethicone Copolyol (4)	2.30	Lubricant
Triethanolamine (99%)	1.00	Neutralizer
Methyl Parabens	0.20	Preservative
Disodium EDTA (5)	0.10	Chelating Agent

(1) BF Goodrich Co.

(2) Glyco Division, Lonza

(3) Croda, Inc.

(4) Dow Corning

(5) Dow Chemical

Preparation Procedure:

- 1) Slowly sift Carbopol 940 into vortex of water, starch, and glycerin while rapidly agitating.
- 2) Separately combine Part B, add to Part A with moderate sweeping agitation.

Formula C0025

Clear Curl Activator Gel

<u>Ingredients:</u>	<u>Weight%</u>	<u>Function</u>
Water	78.6	Diluent
Carbopol 940	0.5	Gelling Agent
Glycerin	10.0	Humectant
Propylene Glycol	10.0	Humectant
Methyl Parabens	0.2	Preservative
Propyl Parabens	0.1	Preservative
Triethanolamine (99%)	0.5	Neutralizer
Disodium EDTA	0.1	Chelating Agent
Fragrance	q.s.	

Procedure:

1. Slowly sift Carbopol 940 into the vortex of rapidly agitating water. When resin is dispersed, reduce agitation and mix until homogeneous dispersion is obtained.
2. Separately combine glycerine, glycol, parabens, triethanolamine, EDTA, and fragrance.
3. Add to Carbopol dispersion with moderate sweeping agitation until clear gel is obtained.

Formula C0027

SOURCE: BF Goodrich Co.: Suggested Formulations

Hair Brushing Lotion

	Wt%
A. Amihope LL	0.5
TL-10 (PEG-20 Sorbitan Monolaurate)	0.5
1,3-Butanediol (Butylene Glycol)	0.5
Stearyl Alcohol	0.3
Carbopol 941 (Carbomer 941)*	10.0
B. Water	68.2
C. Ethanol	20.0

*0.5% wt Carbomer 941 aqueous solution (Neutralized by NaOH)

Procedure:

1. Each chemical cited in (A) is weighed in a glass vessel. Heat it to 60-70C and stir until the solution is homogeneous.
2. Add a previously warmed water (B) (60-70C) to the former prepared solution and cool it to room temperature with stirring.
3. Add 20.0g ethanol (C) to the cooled solution with stirring.

Note:

This hair brushing lotion has a good antistatic effect and gives good combability. Amihope LL decreased the friction between hair and comb or brush remarkably.

Usage:

Spray the hair before brushing.

Hair Brushing Lotion

	Wt%
Amihope LL	0.5
POE (20) Sorbitan Monolaurate (Polysorbate 20)	0.5
Ethanol	99.0

Procedure:

Mix all components at room temperature.

Note:

This hair brushing lotion is an alcoholic type and has good antistatic effect and smoothness for the hair.

Amihope LL acts as hair conditioning agent instead of the cationic surfactant.

Usage:

Spray the hair before brushing.

Hair Conditioner with CAE

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
Cetanol	3.0
Amiter LGS-2 (Disteareth-2 Lauroyl Glutamate)	2.0
Nikko1 MYS-55 (PEG-55 Stearate)	1.0
Phase B:	
CAE (PCA Ethyl Cocoyl Arginate)	1.0
A-SM (Stearamine Oxide)	3.0
ProdeW 100 (Sorbitol & Sodium Lactate & Proline & Sodium PCA & Hydrolyzed Collagen)	2.0
Glycerin	10.0
Methyl paraben	0.2
Water	77.8

Specifications:

pH: 5.0
Vis: 2500 cps

Procedure:

Mix ingredients phase A and heat to 75-80 degrees C. Mix ingredients phase B and heat to 75-80 degrees C. Add phase A to phase B and mix with homomixer (1500 to 2500 rpm). Cool to 35 degrees C.

This hair conditioner has good antistatic and conditioning effects.

SOURCE: Ajinomoto USA Inc.: Formula No. 1 CR-56-11

Setting Lotion

Normal hold for all climatic zones, easy to comb and wash out.

Hair Sculpturing Treatment
(Formula 90-0501M)

This light conditioning formula provides a soft hold that is ideally suited for hair modeling and sculpturing. Unlike most styling treatments that leave the hair tacky and stiff, this unique formula demonstrates superb styling properties and leaves the hair soft and manageable. It also reduces tangles and fly away hair caused by static charges.

Recommended Use Directions: Shampoo and rinse hair as normal. Thoroughly massage sculpturing rinse into wet hair. Do not rinse out. Towel dry hair as normal. Style and sculpture hair as desired and blow dry.

	<u>% by Weight</u>
Mirapol A-15	0.50
Jaguar HP-60 COS	0.75
Mirapol 133	3.50
Propylene Glycol	0.50
Glycerine	1.00
Citric Acid	Q.S.
Fragrance, Dye(s), Preservative	Q.S.
Water	74.15
SD Alcohol 40	20.00

Blending Procedure: Blend Propylene Glycol and Glycerine in water. With smooth agitation, disperse Jaguar HP-60 COS in water base. Heat to 50C. Once system is uniform, blend in Mirapol A-15. Adjust formulation pH to 3.5-4.5 with citric acid as needed. Slowly blend in Mirapol 133 and mix until uniform. Cool with smooth agitation to 30-35C and blend in compatible Fragrance, Dye(s), and Preservative. Once system is uniform, blend in SD Alcohol 40.

Typical Formulation Properties:

Appearance @ 25C:	Clear to Slightly Hazy Liquid
Viscosity @ 25C:	1,000-3,000 cps
pH:	3.5-4.5

Flexible Hold Styling Mousse
(Formula 90-0102M)

This styling mousse formula provides a soft hold for all hair types. It incorporates extra body building ingredients which help protect the hair from blow drying and repeated styling treatments. This styling mousse is ideally suited for both aerosol and pump dispenser applications.

Keratin Creme Dry Hair Dressing

	<u>%W/W</u>
A. Deionized Water	42.70
Carbopol 940-2% Aq. Sol'n. (Carbomer 940)	40.00
Kera-Tein 1000 SD (Hydrolyzed Keratin)	1.00
B. Petrolatum	5.00
Tween 60 (Polysorbate 60)	1.50
Arlacel 60 (Sorbitan Stearate)	1.50
Olive Oil	2.00
Cetyl Alcohol	1.00
Isopropyl Palmitate	2.00
Jojoba Oil	0.10
Castor Oil	1.00
Proto-Lan 8*	1.00
C. Triethanolamine - 99%	1.20
Fragrance, Preservatives	q.s.
*CTFA: Lecithin (and) Butyl Stearate (and) Cocoyl Hydrolyzed Collagen (and) Oleoyl Sarcosine (and) Sesame Oil (and) Lanolin Alcohol.	

Procedure:

Heat Phases A & B separately to 80C. Add Phase B to A at 80C with agitation. Mix until smooth. Add Phase C carefully to avoid aeration.

Properties:

A leave-in creme hair dressing which conditions, reduces split ends and dryness. Proto-Lan 8 contains proteins, essential fatty acids and phospholipids which replenish and rejuvenate overworked and stressed hair. Kera-Tein 1000 SD moisturizes, protects and strengthens the hair. Leaves a natural shine and smooth finish.

Uses:

For wet or dry hair--Massage a small amount into the hair and especially into the ends to improve natural shine, styling and softness.

SOURCE: Maybrook Inc.; Formulation #HC-511

Keratin Infused Hair Treatment

	<u>%W/W</u>
A. Panthenol	0.10
Methyl Paraben	0.20
Fragrance	0.20
Polysorbate 80	0.50
SD Alcohol 40A	2.00
B. Deionized Water	87.30
Dowanol DPM (PPG-2 Methyl Ether)	1.00
Gafquat 755N (Polyquaternium-11)	1.00
Kera-Tein 1000 AS (Ethyl Ester of Hydrolyzed Keratin)	3.00
Quat-Pro S 30 (Stearyltrimonium Hydroxyethyl Hydrolyzed Collagen)	1.00
Quaternium-15	0.20
Amersil DMC-357 (Dimethicone Copolyol)	0.50
C. Dow Corning 929 Emulsion (Amodimethicone and Tallowtrimonium Chloride and Nonoxynol-10)	3.00

Procedure:

Pre-mix Phase A until clear. Add water from Phase B to Phase A. Add the rest of the (B) ingredients with mixing. Mixture should be clear at this stage. Add Phase C (mixture becomes milky).

Properties:

A leave-in conditioner/detangler for adding body and shine to the hair. Makes fine, limp hair feel thicker, more manageable. The Quat-Pro S 30 adds body and smoothness due to its high molecular weight. Kera-Tein 1000 AS is a cationic, keratin derivative which adds shine and combability to this product.

Light Holding/Body Building Hair Spray

<u>Ingredients:</u>	<u>% by Weight</u>
Stepanhold Extra	11.88
AMP Regular	0.30
Dimethicone Copolyol Resin Modifier	0.15
Panthenol	0.20
PPG-10 Methyl Glucose Ether	0.10
SDA-40A Alcohol	87.37
Fragrance	q.s.

Procedure:

Charge alcohol to mixing vessel. With moderate agitation, add AMP and mix well. Add Stepanhold Extra and mix until completely dissolved. Add dimethicone copolyol, panthenol, and PPG-10 methyl glucose ether, mixing well after each addition. Add desired fragrance and mix thoroughly. Formulation PF-0162 suggested by Stepan Co.

Forever Curls Hair Spray

<u>Ingredients:</u>	<u>% by Weight</u>
Crovol A-70	1.00
Ethanol SDA-40	63.50
Amphomer 28-4910	0.75
Deionized Water	33.62
AMP-95	0.13
Hydrotriticum QL	1.00

Procedure:

Dust Amphomer into alcohol under vigorous agitation. Premix water, AMP-95 and Crovol A-70. Add alcohol solution to water solution with mixing. When clear, mix in Hydrotriticum QL. Formulation PF-0169 suggested by Croda Inc.

Conditioning Firm Hold Hair Spray

<u>Ingredients:</u>	<u>% by Weight</u>
Stepanhold Extra	13.75
AMP-Regular	0.35
Ammonyx KP	0.50
Methyl gluceth-20	0.25
SDA-40A Alcohol	85.15
Fragrance	q.s.

Procedure:

Charge alcohol to vessel. With moderate agitation, add AMP-Regular. Mix well. Add Stepanhold Extra. Mix until completely dissolved. Add Ammonyx KP. Mix thoroughly. Add methyl gluceth-20. Mix until completely dissolved. Add fragrance. Mix well. Formulation PF-0178 suggested by Stepan Co.

Liquid Protein Protective Hair Finish

	<u>%W/W</u>
A. Deionized Water	89.4
Methylparaben	0.2
Celquat L-200 (Polyquaternium-4)	0.2
Sodium Benzoate	0.2
B. Citric Acid, granular	0.4
Quat-Pro S30 (Stearyltrimonium Hydroxyethyl Hydrolyzed Collagen)	1.0
Cationic Collagen Polypeptides	3.0
Carsquat CT 429 (Cetrimonium Chloride)	0.3
Dowicil 200	0.2
C. Isopropyl Alcohol	5.0
Fragrance	0.1

Procedure:

1. Mix and heat Phase A to 160F. Mix until dissolved. Heat off.
2. Mix and cool to 120F.
3. Add Phase B.
4. Pre-mix Phase C and add to the rest of the batch.

Properties:

This protective styler utilizes the protective and film-forming properties of proteins to coat and seal the hair. Quat-Pro S30 and Cationic Collagen Polypeptides are cationic, enhanced proteins which build body and add a smooth, natural texture to the hair due to their moisture binding properties. The high molecular weight of these substantive proteins will gently set the hair. The two polymeric quats add an easy to style combing ability.

Maximum Keratin Therapy
(For Extremely Damaged Hair)

Hair is composed of Keratin protein. As hair becomes damaged and abused, protein is lost. The hair becomes weaker, more difficult to manage and loses its gloss and liveliness.

This formulation will replenish protein lost from the hair with a soluble keratin protein. Kera-Tein 1000 has been made with the optimum molecular shape and weight so as to maximize its coating and repair properties. It will help seal extremely damaged hair improving its texture and shine.

'Maximum Keratin Therapy' should be applied after shampooing and left on for 15-20 minutes prior to rinsing.

	<u>%W/W</u>
A. Deionized Water	85.15
Methylparaben	0.20
Celquat H-100 (Polyquaternium-4)	0.30
Kera-Tein 1000 (Hydrolyzed Keratin)	10.00
Cationic Collagen Polypeptides	1.00
Cetrimonium Chloride	0.20
Ceraphyl 60 (Quaternium-22)	0.30
Dowicil 200 (Quaternium-15)	0.20
B. Ivarlan AWS (PPG-12-PEG-65 Lanolin Oil)	2.00
Polysorbate 20	0.50
Fragrance	0.15

Procedure:

1. Dissolve Methylparaben and Celquat in the water. Slight warming may be necessary to solubilize the Paraben.
2. Add the rest of Phase A. Mix.
3. Premix Phase B and add. Mix.

Moisturizing Styling Spray
(Formula 90-0103M)

This specially formulated moisturizing spray demonstrates superb holding properties for optimum styling and sculpting ease. This formula should be applied to the hair as a fine mist with a pump dispenser or aerosol spray.

	<u>% By Weight</u>
SD Alcohol 40	15.00
Propylene Glycol	0.50
Polycare 133	2.00
Fragrance, Dye, Preservative	Q.S.
Water	82.50

Blending Procedure:

Charge water into mixing vessel and slowly blend in propylene glycol. With rapid but smooth agitation, slowly blend Polycare 133 water and mix until completely uniform. Add SD Alcohol 40 and then blend in fragrance, dye and preservative.

CTFA Identification: Water, SD Alcohol 40, Polymethacrylamidopropyl Trimonium Chloride, Propylene Glycol, Fragrance, Preservative, Dye.

Hair Conditioner/Rinse
(Formula 92-1203)

	<u>% by Weight</u>
Miranol DM Conc 45%	15.0
Alkamuls EGMS	2.5
Cetyl Alcohol NF	2.0
Jaguar C13S	0.3
Citric Acid	Q.S. to pH 4-5
Fragrance, dyes, preservatives	Q.S.
Deionized Water	80.5

Procedure:

Disperse Jaguar C13S thoroughly in water. Adjust pH with citric acid to 4-5 and warm to 70-75C, then blend in Alkamuls EGMS, Miranol DM and cetyl alcohol. With smooth agitation, cool system to 40-45C and add compatible fragrance, dyes and preservative.

Typical Formulation Properties:

Appearance:	Opaque/pearlescent, viscous liquid
pH:	5-6
% Non-Volatile:	12

CTFA Identification: Water, stearoamphoacetate, glycol stearate, cetyl alcohol, guar hydroxypropyl trimonium chloride, fragrance, citric acid, dyes, preservatives.

Professional Care Intensive Conditioner

	<u>%W/W</u>
A. Ammonyx 4 (Stearalkonium Chloride)	6.00
Deionized Water	83.20
Cationic Collagen Polypeptides	2.00
Kera-Tein 1000 (Hydrolyzed Keratin)	1.00
B. C-Base (Mineral Oil and PEG-30 Lanolin and Cetyl Alcohol)	5.00
Petrolatum	0.50
Isopropyl Myristate	1.00
Stearyl Alcohol-70%	1.00
C. Fragrance	0.30
Preservatives	q.s.

Procedure:

- 1) Heat phases A & B separately to 75C.
- 2) Add Phase B to Phase A at 75C. Mix.
- 3) Mix and cool to 35C.

Properties:

This intensive conditioning treatment utilizes the time-proven softening benefits of Stearalkonium Chloride along with the moisturization and body building benefits of proteins. Kera-Tein 1000 is derived from hair while Cationic Collagen Polypeptide is a cationic, high molecular weight collagen. The combination of these two proteins provides an optimum balance of hair moisturizing, sealing and strengthening. C-Base is the basis for the emulsification system.

Professional Treatment Conditioner
(Formula 6-0907M)

Miracare CT-100 is a flaked conditioner concentrate specially formulated to produce high performance hair care products. Based on a unique conditioning agent, Cetrimonium Bromide, Miracare CT-100 readily disperses in 75-80C water to form elegant creme rinse products which gently condition the hair leaving it soft and manageable. The distinct feel imparted on the hair by Miracare CT-100 makes it a favorite of professional beauticians.

	<u>% by Weight</u>
Cetyl Alcohol NF	1.0
Miracare CT-100	4.0
Fragrance, Dye, Preservative	Q.S.
Water	95.0

Blending Procedure:

Warm water to 75-80C. With smooth agitation, slowly blend in Miracare CT-100 followed by the Cetyl Alcohol NF. Mix until completely uniform. Cool to 40C with smooth agitation and blend in compatible Fragrance, Dye(s), and Preservative.

Typical Formulation Properties:

Appearance After 24 Hrs.:	Viscous, Opaque Lotion
% Non Volatiles:	4-6
pH (10% Aq.):	3-5

CTFA Identification: Water, Stearyl Alcohol, Cetrimonium Bromide, Cetyl Alcohol, Fragrance, Preservative, Dye(s).

"Light" Creme Rinse Conditioner
(Formula 88-0806)

	<u>% by Weight</u>
Rhodaquat M242B/99	0.80
Cetyl Alcohol NF	4.00
Citric Acid	0.20
Fragrance, Dye(s), Preservative	Q.S.
Water	95.00

Blending Procedure:

Dissolve Citric Acid in water and heat to 70-75C. With smooth agitation, slowly blend in Rhodaquat M242B/99 followed by Cetyl Alcohol NF. Mix until completely uniform. With smooth agitation, cool system to 40-45C and blend in compatible Fragrance, Dye(s), and Preservative.

Typical Formulation Properties:

Appearance After 24 Hours:	Viscous, Opaque Lotion
pH:	2.2-3.2
Viscosity After 24 Hours (25C):	5,000-8,000 cps (No. 4 @ 10 RPM)

CTFA Identification: Water, Cetyl Alcohol, Cetrimonium Bromide, Citric Acid, Fragrance, Preservative, Dye(s).

Protein & Lanolin Hot Oil Treatment

	<u>%W/W</u>
Deionized Water	40.50
Collagen Hydrolyzate Cosmetic N55 (Hydrolyzed Collagen)	3.00
Quat-Pro S30 (Stearyltrimonium Hydroxypropyl Hydrolyzed Collagen)	1.00
Solulan L575 (PEG-75 Lanolin)	50.00
Ammonyx 4 (Stearalkonium Chloride)	5.00
Fragrance	0.20
Quaternium-15	0.30

Procedure:

Heat Water and Ammonyx to 75C. Mix until dissolved. Add Solulan and mix until clear and uniform. Cool to 50C. Add CHC N55 and Quat-Pro S30. Cool to 40C, add fragrance and Quaternium. Product will opacify as it cools.

Properties:

A Hot Oil treatment which revitalizes hair and fights damage caused by styling, chemical treatments and weather exposure. This Protein & Lanolin enriched formula is heat activated to condition and then rinse clean. Quat-Pro S is particularly attracted to the most damaged areas of the hair.

Directions:

Heat product in hot tap water. This will clear it. Note: Product is opaque and will separate at room temperature. Wet hair and massage in for one minute. Rinse hair with warm water. Shampoo and dry hair as usual.

Shake aerosol before use!

Formula No. WB71-03

Setting Lotion, Foam, Aerosol-Packed

	<u>%W/W</u>
Nasuna B *)	2.0
Polyquart H	2.0
Water	96.0

Note: Filling: 92 parts product
8 parts propellant 12/114 (40:60)

Foam nozzle

Shake aerosol before use!

Formula No. WB71-04

Setting Lotion, Extra Strong, Aerosol-Packed

	<u>%W/W</u>
Nasuna B *)	8.0
Eumulgin RO 40	0.2
Comperlan COD	0.2
Ethanol	10.0
Water	81.6

Note: Filling: 92 parts product
8 parts propellant, Frigen 12

Valve: Vertical valve and foam nozzle

Formula No. WB 71-06

Note:

*) The Nasuna types are not for sale in West Germany. Various PVP/VA types on the market can be referred to.

Setting Mousse

Applicable to wet hair, strong hold, for all climatic zones.

<u>Ingredients:</u>	<u>% by Weight</u>
Luvimer 100 P	5.00
AMP-95	1.16
Cremophor A 25	0.20
Perfume	q.s.
Water	83.64
Preservative	q.s.
Propane/Butane	10.00

Procedure:

Combine all ingredients and mix until homogeneous.

Formulation PF-0304 from BASF

Setting Conditioning Mousse

Applicable to wet hair, strong hold, for conditioning effect, improves the wet combability, gives body to the hair, prevents "flyaway" effect.

<u>Ingredients:</u>	<u>% by Weight</u>
Luvimer 100 P	3.00
AMP-95	0.69
Luviquat FC370	2.50
Cremophor A 25	0.20
Luviquat Mono CP	0.50
Perfume/Cremophor RD 40 1:3	q.s.
Preservative	q.s.
Water	83.11
Propane/Butane	10.00

Procedure:

Combine all ingredients and mix until homogeneous.

Formulation PF-0306 from BASF

Pump Setting Mousse

Applicable to wet hair, normal hold, for all climatic zones.

<u>Ingredients:</u>	<u>% by Weight</u>
Luvimer 100 P	3.00
AMP-95	0.69
Perfume	q.s.
Preservative	q.s.
Water	96.11

Procedure:

Combine all ingredients and mix until homogeneous.

Formulation PF-0305 from BASF
