Fragrance	q.s.
Tween 20	1.50

Procedure:

Dissolve the PVP in hot water. Add the rest of the ingredients, except fragrance and Tween. Pre-dissolve the fragrance in the Tween, and add to the batch below 40C.

Properties:

This formula contains an effective combination of styling resins, combing aids and hair softening and shining agents. In addition, Quat-Pro E serves to moisturize and build body in the hair. The cationic nature and film forming properties of this substantive protein will protect the hair. Kera-Tein 1000 and Aqua-Tein S will condition and add highlights. In addition, Aqua-Tein S will penetrate the hair cuticle to bring moisture to where it is needed most. Note: This system is suitable for dispensing from a Mistette pump.

Silk and Soy Styling/Blow Drying Conditioner

	<u>%W/W</u>
A. Flexan 130 (Sodium Polystyrene Sulfate)	2.00
Soy-Tein NL (Hydrolyzed Soy Protein)	2.00
Silk Pro-Tein (Hydrolyzed Silk)	0.50
Deionized Water	89.70
Glydant (DMDM Hydantion)	0.30
B. Methyl Paraben	0.20
d1-Panthenol	0.10
Isopropyl Alcohol	5.00
Fragrance	q. s.
Tween 20 (Polysorbate 20)	0.20

Procedure:

Mix Phase A and B separately. Add Phase B to Phase A. Mix.

Properties:

In this formula, natural Silk and Soy proteins moisturize and beautify the hair. Flexan 130, a high molecular weight polymer, is the primary setting agent. Its use level can be varied depending on the control desired. Films are hard and moisture resistant yet water soluble. Excellent wet combing and a natural, glossy look are an added benefit of using this product.

Formula #HF-1201

Moisturizing Styling Spray

	<u>%W/W</u>
A. Alcohol SDA-40	15.00
PVP/VA E-535 (PVP/VA Copolymer)	4.00
Lantrol AWS 1692 (PPG-12 PEG-65 Lanolin Oil)	2.00
Fragrance	0.10
B. Deionized Water	61.60
Glycerin	10.00
Kera-Tein 1000 AS (Ethyl Ester of Hydrolyzed Keratin)	3.00
Aqua-Tein C (Collagen Amino Acids (and) Acetamide MEA (and) Propylene Glycol)	3.00
Cetrimonium Chloride	1.00
DMDM Hydantoin	0.30

Procedure:

Pre-mix Phase A and Phase B separately. Mix the two phases together.

Properties:

This styling spray has been designed to provide softness along with sufficient styling and bodying characteristics to achieve the "Modern Upswept Look". Shine and moisturization are provided by the Aqua-Tein C, Kera-Tein 1000 AS and glycerin. Improved body and flexibility will also result. Aqua-Tein C penetrates to where its needed most, resulting in an improved condition of the hair.

Silky Soft Conditioner for Bodied Hair

	<u>%W/W</u>
A. Deionized Water	78.00
Collagen Hydrolyzate Cosmetic N-55 (Hydrolyzed Collagen)	6.00
Carsquat SDO-85 (Stearalkonium Chloride)	4.00
Polquatonium-11	0.40
Panthenol	0.10
Methylparaben	0.20
Propylparaben	0.10
Quat-Pro S (Stearyltrimonium Hydroxy Ethyl Hydrolyzed Collagen)	0.50
Silk Pro-Tein (Hydrolyzed Silk)	0.50
B. Laneth-15	2.50
Cetyl Alcohol	7.00
C. Proto-Lan 8*	0.50
Fragrance	0.20
Color	q.s.

*(Lecithin (and) Butyl Stearate (and) Cocoyl Hydrolyzed Collagen (and) Oleoyl Sarcosine (and) Sesame Oil (and) Lanolin Alcohol)

Procedure:

Heat Phase A and B separately to 80C. Add A to B at 80C. Mix and cool to 60C. Add the Proto-Lan 8. Mix and cool to 50C. Add the fragrance. Mix to incorporate.

Properties:

Provides maximum conditioning for damaged, dry hair. Contains substantive silk and collagen proteins to smooth and protect the hair shaft. Proto-Lan 8 adds essential fatty acids phospholipids and lipo-proteins to replenish and rejuvenate the hair. Improves texture, bodies the hair. Good wet and dry combing.

Mackstat DM	q.s.
Water, Dye, Fragrance qs to	100.0

Procedure:

1. Add the first three components to water and heat to 65C.
2. With continuous stirring, cool to 40C. and add dye, Mackstat DM and fragrance.
3. Cool and fill.

SOURCE: McIntyre Group Ltd.: Suggested Formulation

Spray GelIngredients:

	<u>Weight%</u>	<u>Function</u>
Part A:		
Carbopol 980 (1) (1% dispersion)	30.00	Gelling Agent
Part B:		
Deionized Water	59.17	Diluent
PVP/VA Copolymer (2)	8.00	Hair Setting Resin
Triethanolamine (99%)	0.12	Neutralizer
Disodium EDTA	0.01	Chelating Agent
Part C:		
Glycerin	2.00	Humectant
Polysorbate 20 (3)	0.50	Lubricant/ Fragrance
Methylparaben	0.20	Preservative
(1) Carbomer (BFGoodrich Co.)		
(2) Luviskol VA-73W (BASF)		
(3) Tween 20 (ICI Americas, Inc.), Protasorb L-20 (Protameen), or Nikkol TL-10 (Nikko)		

Procedure:

1. Prepare 1% Carbopol 980 dispersion in room temperature deionized water.
2. Mix Part B ingredients until all ingredients dissolve.
3. Add Part B to Part A with moderate agitation.
4. Mix Part C ingredients with slight heating until paraben is dissolved.
5. Add Part C to Parts A and B.
6. Add a small additional amount of TEA until gel is clear.

Properties:

pH: 5.60 to 5.80
 Viscosity (cps) @ 25C: 4,500 to 8,000
 Viscosity (cps) @ 50C (day 60): 4,500 to 8,000
 Clarity (%T): 92.0 to 95.0

Special Instructions:

In this formulation, a PVP/VA (70:30) copolymer in aqueous solution is required to maintain optimum clarity at up to 4% resin solids. Additionally, the best clarity will be seen when the pH is maintained between 5.55 and 5.80. Special care should be taken to not exceed this pH.

Additional hold can be obtained by the addition of PVP K90 (BASF) at 0.5% to Part B without a reduction of gel clarity.

Comments:

This clear gel has excellent pump spray quality, with moderate hold and little tack on hair under humid conditions. Carbopol 980 gives a very clear gel structure to suspend air bubbles, yet thins when pumped through sprayer to give a fine mist.

Note:

Recommended pump sprayer is: Calmar Mark IV high pressure, 1.5 lb. precompression spring, WH orifice (Calmar, Inc.)

SOURCE: BF Goodrich Co.: Formulation C0040

Styling Gel with Shellac

<u>Ingredients:</u>	<u>% by Weight</u>
A Carbopol 1382	1.00
Demineralized water	52.30
Phenonip	0.50
B Tris Amino	1.20
C Ethanol	42.00
Shellac Wax MHP105 D0	3.00

Procedure:

Disperse Carbopol 1382 in demineralized water containing Phenonip, according to the procedure suggested by BF Goodrich (430-I). Carbopol 1382 can also be dispersed using a rotor-stator at high turbulence. Foam formation may then occur; this foam can be eliminated using a small amount of a strong inorganic acid (20 ppm).

Neutralize with Tris Amino. As soon as a clear gel is obtained, 50% of the Ethanol is added to obtain a hydro-alcoholic gel of Carbopol 1382.

Shellac is dissolved in the remainder Ethanol. When the shellac is completely dissolved, the solution is gradually added to the hydro-alcoholic gel while gently stirring with an anchor mixer.

To remove most of the entrapped air, the gel is slowly stirred for 30 minutes. Finally the hydro-alcoholic Shellac gel is transferred to a suitable bottle.

Important Note: Attention needs to be given to the Shellac solution; the speed of dissolution is low. The Shellac solution is best prepared while boiling Shellac under reflux with Ethanol, or to dissolve Shellac in Ethanol and to age the solution overnight.

Formulation PF-0337 suggested by BF Goodrich

High Solids 55% VOC Pump Spray

<u>Ingredients:</u>	<u>% by Weight</u>
Lovocryl 47	8.00
AMP-95	1.38
Citroflex-2	0.22
Monamid 716	0.20
Anhydrous Ethanol, SDA-40	55.00
Deionized Water	35.20
Fragrance	q.s.
Preservative	q.s.

Procedure:

Dissolve AMP-95 in water and ethanol. While maintaining good agitation, slowly sift in Lovocryl 47. When dissolved, add remaining ingredients and mix until homogeneous.

Valve: Seaquist EuroMist II 160 output with a 0.016" x 0.010"

Styling Mousse

Eastman AQ 55S water-dispersible polyester is the fixative in these conditioning mousse formulas. Eastman AQ 55S polymer offers excellent curl retention, humidity resistance, and sheen for hair. Myvatex Texture Lite emulsifier and Myvatex 60 emulsifier provide a stable hair conditioning base for both hydroalcoholic and alcohol-free formulas. Levels of Eastman AQ 55S and Myvatex Texture Lite can be adjusted to modify levels of hold and conditioning. These mild, nonionic, soap-free formulas are suitable for all hair types.

Formulation X22176-106 (Hydroalcoholic)

<u>Concentrate:</u>	<u>%W/W</u>
Distilled water	q.s.* to 100
Eastman AQ 55S polymer	8.0
Myvatex Texture Lite emulsifier	2.0
Monamid 150 ADD	1.0
Myvatex 60 emulsifier	0.3
SDA-40C alcohol	20.0
Fragrance	q.s.*
Citric acid	q.s.*

*q.s.=quantity sufficient

Procedure:

1. Heat Eastman AQ 55S and water to 80-85C with mixing until the polymer is completely dispersed in the water.
2. Cool to room temperature.
3. Slowly add Myvatex Texture Lite with high-speed agitation. Care should be taken when mixing to avoid aeration.
4. When uniform, add Myvatex 60 and Monamid 150 ADD.
5. Slowly add SDA-40C alcohol.
6. Add fragrance.
7. Adjust pH to 6.5-7.0 with citric acid.
8. Aerosol final concentrate at 5.23 g/mL of A46 propellant (Aeropress).

Formulation X22176-107 (Alcohol-Free)

<u>Concentrate:</u>	<u>%W/W</u>
Distilled water	q.s.* to 100
Eastman AQ 55S polymer	8.0
Myvatex Texture Lite emulsifier	5.5

Water-Based Hair Sprays

These formulations demonstrate a dual-resin approach to alcohol-free hair spray systems which utilize the quick-setting benefits of Eastman AQ polymer to achieve comparable performance with traditional alcohol products. The combination of Eastman AQ water-dispersible polyesters and conventional water-soluble resins provides performance improvements over single component systems. This technology provides formulation flexibility to optimize performance in rinseability/washability, degree of hold, humidity resistance, film elasticity, and viscosity control for spray pattern.

Formulation X21980-057 (Pump)

Phase A:	
Distilled water	%W/W 90.4
Eastman AQ 55S polymer	5.0
Phase B:	
Germall II diazolidinyl urea	0.3
Methylparaben	0.3
Phase C:	
Luviskol VA 73W PVP/VA copolymer-50% solids	4.0
Procedure:	
1. Heat Phase A to 85C.	
2. With mixing, hold at 80-85C for 15 minutes.	
3. Cool to 60C, add Phase B, and mix until dissolved.	
4. Cool to 40C and add Phase C.	
5. Add water lost during heating.	
6. Mix until uniform; filter and package.	
pH: 6.0+-1.0	

Formulation X21980-058 (Aerosol)

Phase A:	
Distilled water	%W/W 60.4
Eastman AQ 38S polymer	5.0
Phase B:

AMP-95	0.16
Ethanol DEB 100	to 100
Gantrez ES425 (PVM/MA copolymer)	8.00
Escalol 507 (octyl dimethyl PABA)	1.00
Water, deionized	11.36
d-Panthenol	0.10
Perfume, preservatives, color	q.s.

Procedure:

Dissolve the AMP-95 in the alcohol. Add the Gantrez ES resin with mixing. Mix in the Escalol, then Crovol. Premix the water and Panthenol then add the alcohol. Mix until clear.

Formulation PF-0249E

Wet Gel, Alcohol-Free

	<u>%W/W</u>
I Eumulgin HRE 60	1.0
Perfume	0.5
II Water	55.0
Carbopol 940	0.8
III Water	5.0
Triethanolamine	1.5
IV Nasuna B	0.5
Water	35.7

Preparation: Carbopol 940 is sprinkled into the alcohol/water mixture stirring continuously, and allowed to swell. Later it is neutralized with the triethanolamine dissolved in 5 parts water.

Nasuna B is dissolved in the remaining water, stirring continuously. This solution is added to the swollen Carbopol. Eumulgin SML 20 and perfume are mixed together and then mixed with a small quantity of the above gel before being mixed with the remaining gel.

Wheat Moisturizing and Styling Gel

	<u>%W/W</u>
A. Tween 20 (Polysorbate 20)	1.00
Ivarlan AWS (PPG-12 PEG-65 Lanolin Oil)	2.00
Fragrance (Novarome Tuberose MG-02)	0.20
Glycerin	10.00
Deionized Water	22.20
Wheat-Tein NL (Hydrolyzed Wheat Protein)	1.00
Preservative, color	q.s.
B. Carbopol 940 (2% Aq. Sol'n) (Carbomer 940)	50.00
C. Aminomethyl Propanol	0.60
D. Isopropyl Alcohol 99%	10.00
PVP/VA E-735 (PVP/VA Copolymer)	2.00
E. Kera-Tein 1000 AS (Ethyl Ester of Hydrolyzed Keratin)	1.00

Procedure:

Pre-mix AWS, Tween and Fragrance until clear. Add the Glycerin, water and wheat. Mix until homogeneous. Add to Phase B. Add Phase C (AMP) to A/B. Mixture will clear and thicken. Pre-mix Phase D. Add to batch. Add Phase E. Mix.

Properties:

A thick, spreadable gel providing hair holding and moisturizing. Adds shine and protective proteins to the hair. Kera-Tein 1000 AS is a substantive cationic ester. Wheat-Tein NL is a substantive, film-forming protein.

Formula #HF-1003

Hi-Fashion Hair Sculpture Gel

	<u>%W/W</u>
A. Deionized Water	19.50
Pro-Tein ES-20 (Ethyl Ester of Hydrolyzed Collagen)	3.00
Tetrasodium EDTA	0.10
Aqua-Tein C (Collagen Amino Acids (and) Acetamide MEA (and) Propylene Glycol)	1.00
Carbomer 940 - 2% Aq. Sol'n	44.00
B. SD Alcohol 40A	30.00
PVP/VA E535	2.00
Fragrance	0.10
C. Aminomethyl Propanol-95	0.30

Procedure:

1. Mix Phase A at room temperature.
2. Pre-mix Phase B, then add to A.
3. Add Phase C to A/B.

Properties:

A pumpable, styling gel for the very fashionable new hair-styles. Repairs and conditions while providing a professional-hold. Protein ES-20 is a cationic protein which provides shine and flex to the hair. This cationic protein is unusual in that it is compatible with the anionic Carbopol.

Aqua-Tein C nurtures the hair from within providing a natural feel and bounce while protecting the hair from external damage.

Formula #HF-1002

3 in 1 Professional Conditioning Mousse with Sunscreen

<u>Ingredients:</u>	<u>% by Weight</u>
Water	70.153
Polycare 133	3.15
Igepal CO-630	0.18
Miranol Ultra C-32	0.18
Syntase 230	0.045
Mirapol A-15	0.10
dI-Panthenol	0.045
Alcohol (190 proof)	16.00
Silbione 71634	0.120
Silbione 70646	0.027
AMP-95	q.s. pH=5.0
Preservative, Fragrance	q.s.
A-46 Propellant	10.00

Procedure:

1. Add water to the main beaker and dissolve the dI-Panthenol and Syntase 230.
2. Add and dissolve the Polycare 133.
3. Add Igepal CO 630, Mirapol A-15, Miranol Ultra C-32, and Alcohol.
4. Prephase Silbione 71634 and Silbione 70646, then add to main phase.
5. Add fragrance and preservative.
6. Adjust pH with AMP-95.
7. Package product using Propellant A-46.

Lotions

Alpha Hydroxy Acid Lotion

Rich emulsion containing alpha hydroxy acid to gently exfoliate and rejuvenate the skin. Extra mildness.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Grillocose PS (Methyl Glucose Sesquistearate)	3.00	Emulsifier
2. Behenyl Alcohol (Lanette 22)	3.00	Thickener
3. Mineral Oil 9NF	7.50	Emollient
4. Octyl Octanoate (Tegosoft EE)	7.50	Emollient
5. *Grilloten LSE 65K (Sucrose Cocoate)	2.00	Emulsifier/ Emollient
6. Sodium Cetearyl Sulfate (Lanette E)	0.10	Emulsifier/ Cleaning
7. Glycerine	3.00	Humectant
8. Xanthan Gum (Keltrol G-T)	0.40	Thickener
9. Distilled/Deionized Water	62.70	----
10. Patlac LA (Lactic Acid, 88%)	5.60	Hydroxy Acid
11. Sodium Hydroxide (20% Soln.)	5.00	pH Adjuster
12. Glydant	q.s.	Preservative
13. Fragrance-Nature's Herbal #165-050	0.20	Odor

* Substitution with Ritalan C and Natural Extract DP is being investigated.

Compounding Procedure:

Add Patlac LA to 10% water and adjust pH with Sodium Hydroxide solution to 3.8. In remaining water, dissolve item 8. Add items 6 and 7 and heat to 80C. Separately heat items 1-5 to 80C. Add items 1-5 to items 6-9 and mix. While mixing cool to 45C and add items 12 and 13. At 40C add prepared Lactic Acid solution (pH 3.8) and homogenize.

Ref No. 119-11

Light Hand Lotion

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Ritachol 2000 (R.I.T.A. Blend)	3.50	Emulsifier
2. Pationic SSL (Sodium Stearoyl Lactylate)	1.40	Mildness
3. Rita IPP (Isopropyl Palmitate)	1.30	Emollient
4. Distilled/Deionized Water	88.50	----
5. Propylene Glycol	5.00	Humectant
6. Fragrance	0.10	Odor
7. Glydant	0.20	Preservative

Compounding Procedure:

Combine items 1-3 and heat to 70C. Combine items 4 and 5 and heat to 70C. Add oil phase to water phase and mix well. Cool to 40C and add fragrance/dyes/preservatives.

Alpha Hydroxy Acid Lotion

Rich emulsion containing alpha hydroxy acid to gently exfoliate and rejuvenate the skin.

<u>Ingredients/Trade Name:</u>	<u>%W/W</u>	<u>Function</u>
1. Grillocoese PS (Methyl Glucose Sesquistearate)	3.00	Emulsifier
2. Behenyl Alcohol (Lanette 22)	3.00	Thickener
3. Mineral Oil 9NF	7.50	Emollient
4. Isopropyl Palmitate	7.50	Emollient
5. Sodium Cetearyl Sulfate (Lanette E)	0.10	Emulsifier, Cleaning
6. Glycerine	3.00	Humectant
7. Xanthan Gum (Keltrol G-T)	0.40	Thickener
8. Distilled/Deionized Water	64.70	----
9. Patlac LA (Lactic Acid 88%)	5.60	Hydroxy Acid
10. Sodium Hydroxide (20% Soln.)	5.00	pH Adjuster
11. Glydant	q.s.	Preservative
12. Fragrance-Nature's Herbal #165-050	0.20	Odor

Compounding Procedure:

Add Patlac LA to 10% water and adjust pH with Sodium Hydroxide solution to 3.8. In remaining water, dissolve item 7. Add items 5 and 6 and heat to 80C. Separately heat items 1-4 to 80C. Add items 1-4 to items 5-8 and mix. While mixing, cool to 45C and add items 11 and 12. At 40C add prepared Lactic Acid solution (pH 3.8) and homogenize.

Ref. No. 119-18B

Hand and Body Lotion

All over hand and body lotion with excellent feel and moisturizing benefits.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Mineral Oil	5.00	Emollient
2. Petrolatum	4.00	Emollient
3. Ritawax ALA (R.I.T.A. Blend)	6.00	Skin Feel
4. Ritachol (Mineral Oil and Lanolin Alcohol)	4.00	Rub In
5. Ritapro 165 (R.I.T.A. Blend)	5.00	Emulsifier
6. Polyquta 3000 (Polyquaternium-10)	0.50	Skin Feel
7. Distilled/Deionized Water	69.10	----
8. Glycerine	6.00	Moisture
9. Fragrance - Eau Sauvage 169-118	0.20	Odor
10. Glydant	0.20	Preservative

Compounding Procedure:

Dissolve Polyquta 3000 in water. Add Glycerine and heat to 70C. Separately heat items 1-5 to 70C. Add items 1-5 to water mixture while mixing. Cool and add preservative and perfume.

Ref. No. 119-36

Barrier Lotion

This buttery lotion applies easily and protects the hands from harsh environments.

<u>Ingredient:</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	75.30	Diluent
Glycerin	3.00	Humectant
Triethanolamine (99%)	0.40	Neutralizing Agent
Part B:		
Dimethicone, 1000 cs.	10.00	Barrier
Pemulen TR-1	0.30	Emulsifier
Carbopol 954	0.20	Thickener
Part C:		
Mineral Oil	10.00	Barrier
Part D:		
Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben	0.80	Preservative

- (1) Acrylates/C10-30 Alkyl Acrylate Crosspolymer (BFGoodrich)
- (2) Carbomer (BFGoodrich)
- (3) Drakeol 19 (Penreco)
- (4) Germaben II-E (Sutton Laboratories)

Preparation:

1. Blend Part A ingredients in a vessel which will contain the entire formulation.
2. Prepare Part B in a separate vessel by mixing polymers in dimethicone to produce a fine suspension.
3. With vigorous agitation, add Part B to Part A. Promptly add Part C to the mixture. Mix to produce a smooth, glossy product.
4. Add Part D and blend thoroughly.

SOURCE: BFGoodrich Co.; Formula P0024

Body Lotion

Thick lotion leaving a soft touch.

Material/CTFA-Index:

A: Emulgator E2149/Stearyl Alcohol (and) Steareth-7	7.00%
Tegosoft 189/Isooctadecyl Isononanoate	1.00
Wacker-Belsil SM 6018/Stearyl Methicone	2.50
Isopropyl Myristate	7.00
B: Wacker-Belsil DMC 6035/Methicone Copolyol Acetate	2.00
C: Carbopol 934 2%ig/Carbomer 934	15.00
Water	65.50
Preservatives, fragrances, pigments	q.s.

Heat A and C each to 70C. Mix C well into A, add B.

Formulation 1326 AH

Body Lotion

White, creamy lotion which dissolves easily.

Material/CTFA-Index:

A: Mineral Oil, thinly liquid	5.00%
Stearic acid	5.00
Cetyl Alcohol	1.50
B: Water	81.20
Allantoin/5-Ureido-hydantoin	0.50
Triethanolamine	0.80
C: Propylene Glycol	3.00
Wacker-Belsil DMC 6035/Methicone Copolyol Acetate	3.00
Preservative, Perfume, Colourings	q.s.

Heat A and B to 65C. Add A to B with stirring. Add C and stir until cool.

Formulation 1225/7 AH

SOURCE: Wacker Silicone: Suggested Formulations

Body Lotion

Thick lotion with good absorption leaving a soft touch on the skin.

Material/CTFA-Index:

A: Emulgator E2149/Stearyl Alcohol (and) Steareth-7	7.00%
Tegosoft 189/Isooctadecyl Isononanoate	1.00
Wacker-Belsil SDM 6022/Dimethicone (and) Stearoxy Dimethylsilane (and) Stearoxy Dimethyldisiloxane	2.50
Isopropyl Myristate	7.00

Carbopol 934 2%ig/Carbomer 934	5.00
Triethanolamine 2%ig	5.00
Water	69.50
Preservatives, fragrances, pigments	q.s.

Heat A and B each to 70C. Mix B well into A.

Formulation 1337 AH

Skin Lotion

Thin lotion with good spreadability and quick absorption.

Material/CTFA-Index:

A: Stearic Acid	2.80%
Cetyl Alcohol	1.00
B: Glycerine	2.00
Wacker-Belsil DMC 6038/Dimethicone Copolyol	4.00
Triethanolamine	0.80
Wasser dest./Water	89.40
Preservatives, fragrances, pigments	q.s.

Heat A and B to 80C, stir A into B.

Formulation 1336 AH

SOURCE: Wacker Silicones: Suggested Formulations

Body Lotion

Thick lotion. Easily spread, quickly absorbed and leaves a pleasant soft feeling on the skin.

Material/CTFA-Index:

A: Emulgator E 2155/Stearyl Alcohol (and) Steareth and Steareth-10	6.00%
Isopropyl Myristate	10.00
Stearyl Alcohol	1.00
Mineral oil	3.00
Belsil DM 100/Dimethicone	0.50
B: Glycerine	3.00
Wasser dest./Water	76.00
Preservatives, fragrances, pigments	q.s.
Heat A and B to 65C, mix and homogenise, cool whilst stirring.	
Temperature stability: at 45C over 10 weeks.	
Formulation 153 AH	

Body Lotion

Easily spread, quickly absorbed.

Material/CTFA-Index:

A: Belsil PDM 200/Phenyl Dimethicone	3.60%
Stearic Acid	2.80
Cetyl Alcohol	1.00
B: Glycerine	2.00
Triethanolamine	0.80
Wasser dest./Water	89.80
Preservatives, fragrances, pigments	q.s.
Heat A and B each to 80C, stir A into B.	
Formulation 187/4 AH	

Hand Lotion

White, thick lotion. Does not feel greasy.

Material/CTFA-Index:

Water	79.40%
Carbopol 934/Carbomer 934	0.40
Mineral oil, low viscosity	10.00
Belsil DM 350/Dimethicone	10.00
Triethanolamine	0.20
Preservatives, perfume	q.s.
Mix the Carbomer 934 slowly into the water until a homogeneous mixture is formed. Mix the mineral oil and Belsil DM 350 and add whilst stirring. Finally stir in the triethanolamine.	
Temperature stability: at 45C over 10 weeks.	
Formulation 188 AH	

SOURCE: Wacker Silicone: Suggested Formulations

Body Lotion

Thick lotion. Leaves a soft feeling on the skin.

Material/CTFA-Index:

A: Emulgator E 2149/Stearyl Alcohol (and) Steareth	7.00%
Tegosoft 189/Isooctadecyl Isononanoate	1.00
Belsil SDM 6022/Dimethicone (and) Stearoxy Dimethyl- silane (and) Stearoxy Dimethyldisiloxane	2.50
Isopropyl Myristate	7.00

Body Lotion

<u>Ingredients:</u>	<u>%</u>
Phase A:	
H ₂ O, Deionized	64.80
Carbopol 934	0.20
Hetoxide G-7 (Glycereth-7)	3.00
Phase B:	
Hest MS (Myristyl Stearate)	3.00
Product SE-100 (Glyceryl Stearate & PEG-100 Stearate)	6.00
Hest L-2-0 (Laureth-2 Octanoate)	10.00
Stearic Acid	5.00
Phase C:	
TEA 99%	2.00
H ₂ O, Deionized	5.00
Phase D:	
Germaben II	1.00

Specifications:

pH: 7.00

Viscosity #4/30: 8000 cps

Procedure:

- 1) In a stainless steel kettle, add H₂O. Disperse Carbopol 934 using Lightnin' type mixer. Add Hetoxide G-7 and heat to 75C while mixing.
 - 2) In a separate stainless steel kettle, combine Phase A and heat to 75C while mixing.
 - 3) Add Phase B to Phase A. Mix until uniform.
 - 4) Premix Phase C and add to batch. Mix until uniform, avoiding aeration.
 - 5) Cool to 45C while mixing.
 - 6) Add Phase D. Mix until uniform.
- Formula HL 93-111

Moisture Lotion

<u>Ingredients:</u>	<u>%</u>
Phase A:	
H ₂ O, Deionized	76.00
Phase B:	
Hest G-7-T0 (Glycereth-7 Trioctanoate)	5.00
Hest IS-2-0 (Isosteareth-2 Octanoate)	5.00
Hetol CS (Cetearyl Alcohol)	5.00
Hetoxol L-12 (Laureth-12)	3.00
Product SE-100 (Glyceryl Stearate & PEG-100 Stearate)	5.00
Phase C:	
Germaben II	1.00

Specifications:

pH: 7.05

Viscosity #4/30: 9000 cps.

Procedure:

- 1) In separate stainless steel kettles, add Phase A and Phase B and heat to 75C while mixing.
 - 2) At 75C, add Phase B to Phase A while mixing until homogeneous.
 - 3) Cool to 40C and add Phase C. Mix well.
- Formula HL 93-120-5

SOURCE: Heterene, Inc.: Suggested Formulations

Cationic Conditioning Lotion

This novel formulation moisturizes while imparting a soft, velvety feel to the skin.

<u>Ingredient:</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	90.30	Diluent
Glycerin	2.00	Humectant
Triethanolamine (99%)	0.30	Neutralizing Agent
Distearyldimonium Chloride (1)	0.10	Conditioner
Part B:		
Isopropyl Palmitate	2.50	Emollient
White Petrolatum	1.00	Moisture Barrier
Octyl Hydroxystearate (2)	1.00	Emollient
Glycol Stearate	1.00	Opacifier
Dimethicone (100 cs.)	0.50	Lubricant
Pemulen TR-1	0.40	Emulsifier/ Stabilizer
Part C:		
Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben (4)	0.90	Preservative

(1) Arosurf TA-100 (Sherex Chemical)

(2) Wickenol 171 (CasChem)

(3) Acrylates/C10-30 Alkyl Acrylate Crosspolymer (BFGoodrich)

(4) Germaben IIE (Sutton Laboratories)

Preparation:

1. Combine Part A ingredients in a vessel which will contain the entire formulation. With mixing, heat to 60C.
2. In a separate vessel, combine all Part B ingredients except Pemulen. Heat to 60C.
3. When all Part B ingredients have melted, reconfirm temperature and add Pemulen. Use agitation to break-up any soft agglomerates of resin.
4. With vigorous agitation, add Part B to Part A. Continue mixing to produce a smooth emulsion.
5. At 45-50C, add Part C. Continue mixing. Fill containers @ 35C.

SOURCE: BFGoodrich Co.: Formula P0021

Cationic Conditioning Lotion

<u>Ingredient:</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	80.00	Diluent
Glycerin	2.00	Humectant
Triethanolamine 99%	0.30	Neutralizing Agent
Distearyldimonium Chloride (1)	0.10	Conditioner
Part B:		
Hydroxypropyl Methyl Cellulose (2)	0.10	Film Former
Deionized Water	10.00	Diluent
Part C:		
Isopropyl Palmitate	2.50	Emollient
White Petrolatum	1.00	Moisture Barrier
Octylhydroxy Stearate (3)	1.00	Emollient
Glycol Stearate	1.00	Opacifier
Dimethicone	0.50	Lubricant
Cetyl Alcohol	0.20	Bodying Agent
Pemulen TR-1 (4)	0.40	Emulsifier/ Stabilizer
Part D:		
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben (5)	0.90	Preservative

(1) Arosurf TA-100 (Sherex Chemical)

(2) Methocel E4M (Dow Chemical Co.)

(3) Wickeno1 171 (CasChem)

(4) Acrylates/C10-30 Alkyl Acrylate Crosspolymer (BFGoodrich)

(5) Germaben IIE (Sutton Laboratories)

Preparation:

1. Combine Part A ingredients in a vessel which will contain the entire formulation. With mixing, heat to 60C.
2. In a separate vessel, disperse the methocel into available deionized water. Gently warm to facilitate dissolution.
3. In a separate vessel, combine all of the oil phase ingredients (Part C), except Pemulen. Heat to 60C.
4. When all Part C ingredients have melted, reconfirm temperature and add Pemulen resin. Use agitation to break-up any soft agglomerates of resin.
5. With vigorous agitation, add Part C to Part A. Continue mixing to produce a smooth emulsion.
6. Combine the thickened Part B to the emulsion and continue mixing.
7. At 45-50C, add Part D. Continue mixing, and fill containers at 35C.

Procedure:

Pre-dissolve Gelamide in water phase. Add the rest of the ingredients to Phase B and heat to 70C. Heat Phase A separately X----->to 70C. Heat Phase A separately to 70C. Add Phase B to Phase A at 70C. Add the TEA, Phase C. Mix and cool to 40C. Add Phase D. Mix to incorporate.

Properties:

A superb, non-greasy, quick penetrating, skin softener and moisturizer. Use for hands, face, throat - wherever troublesome dry skin exists.

SOURCE: Maybrook Inc.; Formula #SK-2005

Conditioning Hand Lotion

This lotion moisturizes and softens the skin without leaving a greasy, heavy feel.

Part 1:	<u>Weight%</u>
Deionized Water	81.0
Pemulen TR-1 (1)	0.4
Glycerin	2.0
Methyl Paraben	0.1
Propyl Paraben	0.1
Part 2:	
White Petrolatum	1.0
Isopropyl Palmitate	2.5
Dimethicone	2.5
Triethanolamine (99%)	0.3
Part 3:	
Distearyldimonium Chloride (2)	0.1
Deionized Water	10.0
Part 4:	
Fragrance	q.s.
Color	q.s.

(1) BFGoodrich Co.

(2) Sherex Chemical Co. (Arosurf TA-100)

Procedure:

1. Combine deionized water, glycerin and parabens. With rapid agitation, sift the Pemulen TR-1 into the water phase ingredients. After the addition of resin, reduce agitation and continue mixing for approximately 30 minutes while heating the mixture to 70C.
2. Combine the oil phase ingredients in Part 2 and heat to 70C with mixing.
3. Form the emulsion by slowly adding the oil phase to the water phase with rapid agitation. Allow 15-20 minutes additional mixing time.
4. Disperse the Dimethyldimonium chloride into the available water in Part 3 and add this mixture to the emulsion, with mixing.
5. Add color, and fragrance as needed.

SOURCE: BFGoodrich Co.: Formula P0014

Dry Skin Care Lotion
(Formula 92-0729)

<u>Part A:</u>	<u>% By Weight</u>
Deionized Water	74.43
Sorbitol 70%	3.00
Triethanolamine (99%)	1.85
Sodium Chloride	0.02
<u>Part B:</u>	
Mineral Oil	7.00
Petrolatum	3.00
Lanolin	3.00
Lanolin Alcohol	3.00
Stearic Acid	2.50
Cetyl Alcohol N.F.	1.75
<u>Part C:</u>	
Fragrance, Preservative	q.s.

Blending Procedure:Step 1 (Part A):

Charge water into mixing vessel and add sorbitol, triethanolamine and sodium chloride. Heat with mixing to 70C.

Step 2 (Part B):

Charge "Part B" components into a vessel and heat with gentle mixing to 70-75C, being sure that all components are melted.

Step 3:

When both parts are at 70-75C, add "Part B" to "Part A" with good mixing, and mix fifteen minutes at 70C. After emulsion is homogeneous, begin cooling with moderate agitation.

Step 4 (Part C):

At 40C, add remainder of components and cool with agitation to 25C.

Typical Formulation Properties:

Appearance at 25C: Slightly off-white lotion
 pH (10%): 7.5-8.0
 Viscosity at 25C (RVT #5 @ 20 rpm): 15,000-20,000 cps

CTFA Identification:

Water, mineral oil, petrolatum, sorbitol, lanolin, lanolin alcohol, stearic acid, triethanolamine, cetyl alcohol, fragrance, preservative, sodium chloride.

Emollient Care Lotion

<u>Ingredient:</u>	<u>%W/W</u>
1 Cutina FS25	5.0
2 Cetiol B	9.0
3 Sipol 1618 C50	2.0
4 Cutina MD	2.0
5 KOH (20%)	1.75
6 Preservative	q.s.
7 Water	to 100.0

This formulation gives a viscous, medium weight O/W skin lotion.

The first four components are melted together at about 85C. Component 5 is dissolved in the water which is heated to the same temperature. The oil phase is then added to the water phase and dispersed. Mixing should continue down to about 35C. Formula TS 502

Cleansing Lotion

<u>Ingredient:</u>	<u>%W/W</u>
1 Emulgade SE	8.0
2 Cetiol B	9.0
3 Cetiol MM	4.0
4 Cyclomethicone 345	0.5
5 Natrosol (H.E.C.)	0.5
6 Preservative	q.s.
7 Water	to 100.0

This formulation gives a medium weight O/W skin lotion.

The first three components are melted together at about 85C. Component 5 is dissolved in the water which is heated to the same temperature. The oil phase is then added to the water phase, also at about 85C, and dispersed. Mixing should continue down to about 35C. The Cyclomethicone can then be added. Formula TS 503

Viscous Body Milk

<u>Ingredient:</u>	<u>%W/W</u>
1 Emulgade SE	7.0
2 Cegesoft C24	7.0
3 Novata AB	4.0
4 Preservative	q.s.
5 Water	to 100.0

This formulation gives a very light O/W skin lotion with a viscous consistency.

The first three components are melted together at about 85C. The oil phase is then added to the water phase, also at about 85C, and dispersed. Mixing should continue down to about 35C. Formulation TS 505

Emollient Fluid

<u>Ingredient:</u>	<u>%W/W</u>
1 Cutina E24	2.0
2 Cetiol 1414E	5.0
3 Cutina MD	2.0
4 Sipo1 1618 C50	2.0
5 Urea	3.0
6 Glycerine	2.0
7 Preservative	q.s.
8 Water	to 100.0

This formulation gives a high viscosity O/W Lotion with good emollience, and a very pleasant, light skin feel.

The first five components are melted together at about 85C. Components 6 & 7 are dissolved in the water and heated to the same temperature as the oil phase. The oil phase is then added to the water phase and dispersed. Mixing should continue down to about 35C.

Formula TS 451

Cleansing Lotion

<u>Ingredient:</u>	<u>%W/W</u>
1 Cutina E24	2.0
2 Cetiol 1414E	10.0
3 Cutina MD	2.0
4 Sipo1 1618 C50	2.0
5 Urea	3.0
6 Glycerine	2.0
7 Preservative	q.s.
8 Water	to 100.0

This formulation gives an O/W lotion with good emollience, and a very pleasant skin feel.

The first five components are melted together at about 85C. Components 6 & 7 are dissolved in the water and heated to the same temperature as the oil phase. The oil phase is then added to the water phase and dispersed. Mixing should continue down to about 35C.

Formula TS 452

Emollient Fluid

<u>Ingredient:</u>	<u>%W/W</u>
1 Eumulgin B2	1.5
2 Myritol 318	5.0
3 Eutanol G	5.0
4 Novata AB	4.0
5 Sipol 1618 C50	1.5
6 Cutina MD	3.5
7 Preservative	q.s.
8 Water	to 100.0

This formulation gives a light, viscous O/W lotion, with good emolliency.

The first six components are melted together at about 85C. The water is then heated to the same temperature as the oil phase. The oil phase is then added to the water phase and dispersed. Mixing should continue down to about 35C.
Formula TS 461

General Hand and Body Lotion

<u>Ingredient:</u>	<u>%W/W</u>
1 Generol 122 E25	3.0
2 Eutanol G	10.0
3 Novata AB	5.1
4 Monomuls 60-35	5.0
5 Lorol C16	1.1
6 Lorol C18	1.1
7 Preservative	q.s.
8 Water	to 100.0

This formulation gives a fairly heavy O/W emollient lotion.

The first five components are melted together at about 85C. The water is heated to the same temperature as the oil phase. The oil phase is then added to the water phase and dispersed. Mixing should continue down to 35C.
Formula TS 485

Hand & Body Lotion

<u>Ingredient:</u>	<u>%W/W</u>
1 Generol 122 E25	3.0
2 Eutanol G	10.0
3 Cetiol SB45	5.1
4 Monomuls 60-35	5.0
5 Sipol 1618 C50	2.2
6 Dow Corning 345 Fluid	4.0
7 Preservative	q.s.
8 Water	to 100.0

This formulation gives a low viscosity O/W emollient lotion.

The first five components are melted together at about 85C. The water is heated to the same temperature as the oil phase. The oil phase is then added to the water phase and dispersed. Mixing should continue down to about 35C. The volatile 345 Fluid can now be added and the product homogenised.
Formula TS 486

Emollient Lotion

	<u>%W/W</u>
A. Amerchol L-101 (Mineral Oil (and) Lanolin Alcohol)	3.00
Acetulan (Cetyl Acetate (and) Acetylated Lanolin Alcohol)	2.00
Stearic Acid T.P.	4.00
Mineral Oil, 70 vis.	15.00
*Proto-Lan 4R	2.50
Arlacel 165 (Glyceryl Stearate (and) PEG-100 Stearate)	1.50
B. Deionized Water	60.40
Glycerin	4.00
Triethanolamine	2.00
Methylparaben	0.20
Solulan L-575 (PEG-75 Lanolin)	5.00
Glydant (DMDM Hydantoin)	0.40
Fragrance, color	q.s.
*(Cocoyl Hydrolyzed Collagen (and) Mineral Oil (and) Hydrogenated Lanolin (and) Emulsifying wax N.F. (and) Myristyl Myristate)	

Procedure:

1. Heat Phases A and B separately to 80C.
2. Add Phase B to Phase A at 80C with agitation.
3. Mix and cool to 40C.
4. Add Phase C. Mix to incorporate.

Properties:

A water in oil emulsion which exhibits considerable slip in application. Highly emollient with considerable skin softening effects. An efficient moisturizer using the occlusive nature of mineral oil to trap moisture in the skin and the hygroscopic action of glycerin and collagen to attract moisture to the skin. Note: Addition of 2-3% Collagen Native Extra 1% (Soluble Collagen) makes this an excellent nutrient eye cream.

SOURCE: Maybrook Inc.: Formula #SK-2003

Emollient Lotion

A: Deionized Water	37.60%
Pecosil WDS-100 (Dimethicone Copolyol Phosphate)	3.00
Carbomer 934 (2% Aq.)	25.00
Propylene Glycol	5.00
Triethanolamine (99%)	0.70
B: Pelemol GMS (Glyceryl Stearate)	2.00
Meadowfoam Seed Oil	4.00
Pelemol ISL (Isostearyl Lactate)	7.20
Macademia Nut Oil	2.00
Cetearyl Alcohol	2.00
Pelemol BB (Behenyl Behenate)	0.50
Dimethicone (5,000 cs)	2.00
Pelemol OPG (Octyl Pelargonate)	8.00
C: Germaben II	1.00

Procedure:

Heat phase A to 70-75C. Heat phase B to 70-75C. Agitate both phase A and B until uniform. Under homogenization add phase B to phase A. When uniform, change to prop. agitation and cool to 45C. Add phase C to AB, and continue prop. agitation to 35C. Formula 14-110-A

Light Body Lotion
(Cold Mix)

A: Deionized Water	50.10%
Pecosil PS-100 (Dimethicone Copolyol Phosphate)	3.00
Carbopol 934 (2% Aq.)	25.00
B: Pelemol ICB (Isocetyl Behenate)	10.00
Pelemol EE (Eicosyl Erucate)	10.00
C: Triethanolamine (99%)	0.90
D: Germaben II	1.00

Procedure:

Combine phase A with sweep agitation. Combine phase B. Under homogenization, add phase B to phase A. When uniform, switch to propeller agitation and add phase C then phase D. Formula 14-115-A

SOURCE: Phoenix Chemical, Inc.: Suggested Formulations

Emollient Lotion

<u>A</u>	Propylene Glycol	5.00%
	Deionized Water	71.88
	Magnesium Aluminum Silicate	0.75
	Xanthan Gum	0.25
<u>B</u>	Pecosil PS-200 (Dimethicone Copolyol Phosphate)	3.00
	NaOH (Sodium Hydroxide)	0.12
<u>C</u>	Pelemol GMS (Glyceryl Stearate)	5.00
	Pelemol ISB (Isostearyl Behenate)	5.00
	Pelemol 89 (Octyl Isononanoate)	5.00
	Cetearyl Alcohol	2.00
	Dimethicone (5000 cs)	1.00
<u>D</u>	Germaben II	1.00

Procedure:

1. Prewet Magnesium Aluminum Silicate and Xanthan Gum with the Propylene Glycol. 2. Homogenize this slurry into phase A water. 3. When phase A is uniform, add phase B to phase A with sweep agitation and heat AB to 70-75C. 4. Heat phase C to 70-75C with adequate agitation. 5. Homogenize phase C into AB. 6. When uniform, switch to sweep agitation and cool to 45C. 7. Add phase D and continue cooling and sweep agitation to 35C.
Formula 14-111-B

Light Body Lotion

<u>A</u>	Deionized Water	67.30%
	Pecosil PS-100 (Dimethicone Copolyol Phosphate)	2.70
	Carbomer 934 (2% Aq.)	10.00
	Xanthan Gum	0.30
	Germaben II	1.00
<u>B</u>	Pelemol SPO (Cetyl/Stearyl Octanoate)	9.00
	Pelemol DIA (Diisopropyl Adipate)	9.00
<u>C</u>	Triethanolamine (99%)	0.70

Procedure

With prop. agitation disperse Xanthan Gum in D.I. water. When uniform, add remainder of phase A items. Continue prop. agitation while adding phase B to phase A. Mix until uniform then add phase C. After A, B, and C are combined, homogenize to obtain finished lotion.

Fragrance Lotion

This glossy, white lotion imparts slight emolliency from a smooth, greaseless application.

<u>Ingredient (CTFA):</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	88.50	Diluent
Glycerin	4.00	Humectant
Dimethicone Copolyol (1)	0.30	Lubricant
Disodium EDTA	0.10	Chelating Agent
Part B:		
C12-15 Alcohols Benzoate (2)	3.00	Emollient/Fragrance Fixer
Fragrance, Noville #24093	2.00	
Oleth-10 (3)	0.20	Particle Size Reduction
Pemulen TR-1 (4)	0.25	Emulsifier
Carbopol 981 (5)	0.35	Thickener
Part C:		
Aminomethyl Propanol (95%) (6)	0.50	Neutralizing Agent
Part D:		
Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben (7)	0.80	Preservative

- (1) 193 Surfactant (Dow Corning)
 (2) Finsolv TN (Finetex)
 (3) Procol OA-10 (Protameen Chemicals), Brij 96 (ICI)
 (4) Acrylates/C10-30 Alkyl Acrylate Crosspolymer (BFGoodrich)
 (5) Carbomer (BFGoodrich)
 (6) AMP-95 (Angus Chemical)
 (7) Germaben II (Sutton Labs)

Preparation:

1. Blend Part A ingredients in a vessel which will contain the entire formulation.
2. Blend Part B ingredients in a separate vessel. Pemulen and Carbopol should be slurried in this phase. Disrupt any soft lumps of these resins.
3. With moderate agitation, add Part B to Part A. Mix for 15-20 minutes. Add Part C and mix vigorously to produce a glossy, white product.
4. Mix Part D into emulsion.

7 Eusolex 6300	0.75
8 Repair Complex CLR	5.0
9 Elastin CLR	2.0
10 Preservative	q.s.
11 Water	to 100.0

This formulation gives a lightweight O/W lotion, with a high viscosity, which helps to protect the skin from harmful UV Rays, and also aids skin cell removal. The first seven components are heated together to 85C. The water is heated to the same temperature. The oil phase is then mixed into the water phase and dispersed. Mixing should continue down to about 35C. Components eight and nine can then be incorporated, and the product homogenised.

Formula TS 255

Pearlescent Lotion

<u>Ingredient:</u>	<u>%W/W</u>
1 Cutina E24	5.0
2 Cetiol B	5.0
3 Myritol 318	2.0
4 Monomuls 90 L12	5.0
5 Sipol 1618 C50	2.0
6 Cetiol MM	5.0
7 Carbopol 980	0.1
8 NaOH (10%)	0.4
9 Glycerine	5.0
10 Preservative	q.s.
11 Water	to 100.0

This formulation gives a moderately viscous O/W skin lotion with pearl sheen appearance.

The first six components are melted together at about 85C. Component 7 is dissolved in half the water with vigorous mixing. Components 8 & 9 are dissolved in the other half. The two halves of the water phase are added together and heated to the same temperature as the oil phase. The oil phase is then added to the water phase and dispersed. Mixing should continue down to about 35C. The pearl appearance begins to develop after a few hours.

Formula TS 441

Low Solids Mild Cationic Lotion

The following formulation is an ideal starting point for face, body, or baby skin moisturizers. It is a low solids (7.67 by weight) version of SC-183 possessing the same feel characteristics - a pleasant cushiony feel, no tacky water phase, and a moist rubdown. It dries more quickly, with a powdery cationic long lasting after feel.

<u>Part A:</u>	<u>%</u>
Incroquat Behenyl TMS (Behentrimonium Methosulfate (and) Cetearyl Alcohol)	1.17
Polawax (Emulsifying Wax NF)	1.00
Crodacol S-95 (Stearyl Alcohol)	0.33
Crodamol PMP (PPG-2 Myristyl Ether Propionate)	1.00
Crodamol PTC (Pentaerythrityl Tetra Caprate)	0.67
Carnation Mineral OI1	1.00
Snow White Petrolatum	2.00
Dimethicone 200SF (350 cps)	0.50
<u>Part B:</u>	
Water, deionized	82.33
Glycerin	8.00
<u>Part C:</u>	
Germaben II	1.00
Hydrotriticum 2000 (Hydrolyzed Whole Wheat Protein)	1.00

Procedure:

Combine ingredients of Part A with mixing and heat to 75C. Combine ingredients of Part B with mixing and heat to 75C. Add Part B to Part A with good mixing. Continue mixing and cool to 45C. Add Part C with mixing and cool to desired fill temperature.

Mild Lotion with Amihope

<u>Ingredients:</u>	<u>% by Weight</u>
Phase A:	
Mineral Oil	5.00
Amiter LGOD (Di-Octyldodecyl Lauroyl Glutamate)	2.00
Propylene Glycol Stearate	0.50
PEG-5 Hydrogenated Castor Oil	1.50
PEG-5 Glyceryl Stearate	2.50
Butylparaben	0.10
Amihope-LL	3.00
Phase B:	
Acylglutamate HS-11	0.30
Carbomer 941	0.20
Sodium Hydroxide	0.08
Butylene Glycol	5.00
Methylparaben	0.20
Water	79.62

Procedure:

Dissolve Carbomer 941 and sodium hydroxide in water first. Add all other ingredients of Phase B to the solution and dissolve at 75 to 80 degrees centigrade.

Dissolve Phase A ingredients at 80 degrees centigrade. When both phases are at 80 degrees Centigrade add A to B with agitation.

Cool down to room temperature while continuing mixing.

This lotion has a smooth feeling and good spreadability.

Formula No. NON-404

W/O Lotion With Eldew

<u>Ingredients/Trade Name:</u>	<u>% by Weight</u>
Part A:	
Di-(Chlolesteryl, behenyl, octyldodecyl)	
N-Lauroyl-L-glutamic acid ester/Eldew CL-301	2.00
Cetearyl Octanoate	10.00
C12-C15 Alkyl Benzoate	5.00

Moisturizing Lotion

This lotion exhibits the soft feel and emolliency of a traditional stearate soap formulation without the greasiness and potential irritation. It is easily absorbed and is formulated to give a pH of 6.

Ingredient (CTFA):

<u>Ingredient (CTFA):</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	72.20	Diluent
Hydroxypropyl Methylcellulose (1) (1.0% Solution)	10.00	Aqueous Smoothing Aid
Glycerin	2.00	Humectant
Disodium EDTA	0.05	Chelating Agent
Part B:		
Petrolatum	5.00	Moisture Barrier
Mineral Oil (2)	3.00	Moisture Barrier
Glycol Stearate	2.00	Emollient/ Opacifier
Isostearyl Benzoate (3)	2.00	Emollient
Paraffin	2.00	Opacifier
Dimethicone (100 cs.)	0.50	Lubricant
Pemulen TR-1 (4)	0.30	Emulsifier/ Stabilizer
Part C:		
Triethanolamine (99%)	0.25	Neutralizing Agent
Part D:		
Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben (5)	0.70	Preservative
(1) Methocel E4M (Dow Chemical)		
(2) Drakeol 7 (Penreco)		
(3) Finsolv SB (Finetex)		
(4) Acrylates/C10-30 Alkyl Acrylate Crosspolymer (BFGoodrich)		
(5) Germaben IIE (Sutton Labs)		

Preparation:

1. Combine Part A ingredients. Mix until homogeneous.
2. Combine all Part B ingredients except Pemulen in a separate vessel. Heat both phases to 60-65C.
3. Confirm that Part B is homogeneous and at the specified temperature. Add Pemulen to this phase. Agitate to break-up soft lumps of resin. With vigorous agitation, promptly add Part B to Part A. Maintain temperature at 60C.
4. Mix for 15-30 minutes or until a smooth, non-grainy dispersion is apparent. Add Part C (triethanolamine) and discontinue heating. Continue vigorous agitation to produce a smooth product.
5. When the temperature falls to 40-45C add Part D. Continue mixing until the product temperature is 30-35C. Cease agitation and fill containers.

Washing Lotion
Clear, 15.3% active ingredient

Recipe:

A	Genapol ZRO liquid	35.00%
	Sodium Laureth Sulfate	
B	Hostapon KCG	8.00%
	Sodium Cocoyl Glutamate	
	Genapol AMG	5.00%
	Magnesium-PEG-3 Cocamide Sulfate	
	Perfume	0.50%
	Water	39.50%
	Dyestuff solution	q. s.
	Preservative	q. s.
	Genagen CAB	8.00%
	Cocamidopropyl Betaine	
	Genapol L-3	2.00%
	Laureth-3	
C	Sodium chloride	2.00%

Procedure:

- I Add one after another the components of B to A.
 II If necessary adjust the pH.
 III Finally adjust the viscosity with C.

Formula A II/4010

Washing-Lotion
Clear, 10.5% active ingredient

Recipe:

A	Genapol AMG	20.00%
	Magnesium-PEG-3 Cocamide Sulfate	
B	Hostapon KCG	6.00%
	Sodium Cocoyl Glutamate	
	Glucamate DOE 120	1.00%
	PEG-120 Methyl Glucose Dioleate	
	Perfume	0.30%
	Water	62.70%
	Dyestuff solution	q. s.
	Preservative	q. s.
	Genagen CAB	10.00%
	Cocamidopropyl Betaine	

Procedure:

- I Add one after another the components of B to A.
 II If necessary adjust the pH.

Formula A II/4019

SOURCE: Hoechst: Guide Formulations for Cosmetics & Toiletries

Washing-Lotion

With bacteriostatic effect, clear, 10.5% active ingredient

Recipe:

A	Octopirox	0.20%
	Piroctone Olamine	
B	Genapol AMG	20.00%
	Magnesium-PEG-3 Cocamide Sulfate	
C	Hostapon KCG	6.00%
	Sodium Cocoyl Glutamate	
	Glucamate DOE 120	1.00%
	PEG-120 Methyl Glucose Dioleate	
	Perfume	0.30%
	Dyestuff solution	q.s.
	Preservative	q.s.
D	Allantoin	0.20%
E	Water	62.30%
F	Genagen CAB	10.00%
	Cocamidopropyl Betaine	

Procedure:

- I Dissolve A in B.
 - II One after another the components of C are added to I.
 - III Dissolve D in warmed E.
 - IV Stir III into II.
 - V If necessary adjust the pH.
 - VI Finally adjust the viscosity with F.
- Formula A II/4020

Handwashing-Paste

Clear, gel type, with solvent, 21.2% active ingredient

Recipe:

A	Genapol UD-030	5.00%
	Undeceth-3	
	Oleic acid	4.00%
	Triethanolamine	2.00%
	Preservative	q.s.
B	Genapol ZRO liquid	15.00%
	Sodium Laureth Sulfate	
	Hostapur SAS 60	20.00%
	Sodium C14-17 Sec. Alkyl Sulfonate	
	Water	29.00%
C	Shellsol D 70	25.00%
	Petroleum Distillates	

Procedure:

- I Mix the components of A.
 - II One after another, the components of B are added to I.
 - III Heat II to 70C, then add C.
 - IV Finally homogenize if necessary.
- Formula A II/1029

Section IX

Shampoos

Amino Moisture Balance Shampoo

	<u>%W/W</u>
A. Deionized Water	35.10
Sodium C14-C16 Olefin Sulfonate	35.10
May-Tein CT (TEA-Cocoyl Hydrolyzed Collagen)	10.00
Quat-Pro S (Stearyltrimonium Hydroxy Ethyl Hydrolyzed Collagen)	1.50
Aqua-Tein C (Collagen Amino Acids (and) Acetamide MEA (and) Propylene Glycol)	3.00
Cocoamphocarboxyglycinate	5.00
Monamid CMA (Cocamide MEA)	3.00
Methylparaben	0.20
B. Dowicil 200 (Quaternium-15)	0.20
Ammonium Chloride	2.00
Deionized Water	5.00
Citric Acid	q.s.
Fragrance, color	q.s.

Procedure:

Warm phase A to 65C. Mix until melted and homogeneous. Adjust pH while warm to pH=6.5. Pre-dissolve Ammonium Chloride in water. Add carefully to avoid air entrapment. Cool to 50C. Add fragrance

Properties:

This shampoo is an effective cleanser with excellent foam generating properties. Quat-Pro S and Aqua-Tein C provide the conditioning required for good manageability and an optimum moisture balance throughout the hair. May-Tein CT provides anti-irritancy and mildness. Quat-Pro S, a quaternized, high molecular weight protein coats, seals and protects the hair. The hair is left feeling soft and bodied.

SOURCE: Maybrook Inc.: Formula #HS-115

Shampoo

Clear, low viscosity

Materials/CTFA-Index:

Texapon NA/Ammonium Laureth Sulfate	22.50%
Hoe S 3267/Cocamidopropyl Betaine	22.50
Water	48.00
Belsil ADM 6041 E/Amodimethicone (and) Emulsifier	1.00
Belsil DMC 6031/Dimethicone Copolyol	1.00
Ammonium Chloride	5.00
Preservatives, fragrances	q.s.

Dissolve Hoe S 3267 in water, add the remaining components and adjust the viscosity with the ammonium chloride.

Temperature stability: at 45C over 10 weeks.

SOURCE: Wacker Silicone: Formulation 150 AH

Amino-Soy Revital Shampoo

	<u>%W/W</u>
A. Deionized Water	46.70
Monamate OPA-30 (Disodium Oleamido PEG-2 Sulfosuccinate)	8.00
Monateric ISA-35 (Sodium Isostearamphopropionate)	8.00
Soy-Tein NL (Hydrolyzed Soy Protein)	2.00
Ammonium Lauryl Sulfate	25.00
May-Tein SY (TEA-Cocoyl Hydrolyzed Soy Protein)	10.00
B. Glydant	0.30
Fragrance	q.s.
Citric Acid, 50% Solution	q.s. to pH 6.5

Procedure:

Mix and heat phase A to 50C. Mix until homogeneous. Mix and cool to 40C. Add fragrance & preservative. Add citric acid to thicken.

Properties:

A foaming vegetable shampoo with excellent foam generation. Mild, yet thorough cleansing. May-Tein SY is a mild, foaming Lipo-protein which is biodegradable. Soy-Tein NL adds conditioning and post-shampoo benefits. These substantive proteins equilibrate the moisture content of the hair so it actually improves with time. Moist hair is less raspy, feels better and is less prone to breakage. An excellent shampoo for permed or treated hair.

SOURCE: Maybrook Inc.: Formulation #HS-202

Shampoo for Permed Hair

	<u>Weight, %</u>
Mackanate OP	20.0
Mackanate CP	12.0
Mackol 70NS	10.0

Anti-Dandruff Shampoo

Therapeutic shampoo containing 2% zinc pyrithione in a thick, rich foaming conditioning shampoo.

<u>Ingredients:</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	31.1	Diluent
Ammonium Lauryl Sulfate (28%) (1)	34.3	Surfactant
Lauramidopropyl Betaine (32%) (2)	7.5	Surfactant
Part B:		
Carbopol 1382 (3)	0.5	Suspension Stabilizer
Cocamide DEA (4)	3.5	Foam Stabilizer
Part C:		
Deionized Water	16.0	Diluent
Disodium EDTA	0.1	Chelant
DMDM Hydantoin (5)	0.4	Preservative
Guar Hydroxypropyltrimonium Chloride (6)	0.5	Conditioner
Sodium Hydroxide (10%)	2.0	Neutralizing Agent
Part D:		
Zinc Pyrithione (48%) (7)	4.1	Active

- (1) Standapol A (Henkel)
- (2) Mackam LMB-LS (McIntyre Group)
- (3) Carbomer (BFGoodrich)
- (4) Standamid KD (Henkel)
- (5) Glydant (Lonza)
- (6) N-Hance (Aqualon)
- (7) Zinc Omadine (Olin Chemical)

Preparation Procedure:

1. Combine Part A ingredients, slowly mix, heat to 40-50C.
2. Separately heat cocamide DEA to 50C, slowly mix in Carbopol forming a paste, add to Part A.
3. Combine Part C ingredients, carefully disperse guar before adding NaOH, add to Part A&B.
4. With slow mixing add zinc pyrithione to shampoo base; mix 20-30 minutes.

Anti-Dandruff Shampoo with Ritavena 5

<u>Ingredients:</u>	<u>%W/W</u>
Part A:	
1. Sodium Lauryl Sulfate	51.70
2. Distilled Water	8.80
3. Pationic ISL/85	3.00
4. Rita EGDS	3.00
5. Ritamid C	4.50
6. Propylene Glycol	2.00
Part B:	
7. NaCl (25% Solution)	+ -1.00
8. Patlac LA (44% Solution)	QS
Part C:	
9. Flowers of Sulfur	2.00
Part D:	
10. Ritavena 5	4.00
11. Distilled Water (100C)	20.00

Compounding Procedure:

Premix Part D in blender for 2 minutes. Heat part A to 165F. When at temperature stir Part A until homogeneous. Switch to high shear mixing (do not aerate). Add Part C into Part A and shear for 10-12 minutes (until thoroughly dispersed). While still warm, switch again to regular impeller mixer and add Part D. Mix well while cooling in water bath. Adjust pH to 7.5 with Patlac LA if needed. Adjust viscosity with NaCl solution. Formula 113-120A

Anti-Dandruff Shampoo with Ritavena 5

<u>Ingredients:</u>	<u>%W/W</u>
Part A:	
1. Sodium Lauryl Sulfate	51.70
2. Distilled Water	8.80
3. Pationic ISL/85	3.00
4. Rita EGDS	3.00
5. Ritamid C	4.50
6. Propylene Glycol	2.00
Part B:	
7. NaCl (25% Solution)	+ -1.00
8. Patlac LA (44% Solution)	QS
Part C:	
9. Flowers of Sulfur	2.00
Part D:	
10. Ritavena 5	4.50
11. Distilled Water (100C)	19.50

Compounding Procedure:

Heat Part A to 165F. When at temperature, stir until homogeneous, then switch to high shear mixing (do not aerate). Sprinkle Part C into Part A and shear for 10-12 minutes (until thoroughly dispersed). Premix Part D in blender for 1 minute. While still warm, switch A & C to regular impeller mixer and add Part D. Mix well while cooling in water bath. Adjust pH to 7.5 with Patlac LA if needed. Adjust viscosity with NaCl solution.

Formula 113-120B

SOURCE: R.I.T.A. Corp.: Ritavena 5 Suggested Formulations

Anti-Dandruff Shampoo with Ritavena 5

<u>Ingredients:</u>	%W/W
Part A:	
1. Sodium Lauryl Ether Sulfate	57.69
2. Pationic ISL/85	3.00
3. Rita EGDS	3.00
4. Propylene Glycol	2.00
Part B:	
5. Zinc Omadine	2.00
Part C:	
6. Ritavena 5	4.50
7. Distilled Water (100C)	26.41
Part D:	
8. Patlac LA (44% Solution)	+ -0.40
Part E:	
9. NaCl (25% Solution)	+ -1.00

Compounding Procedure:

Heat Part A in water bath to 165F, stir until uniform. Premix Part C in blender for 2 minutes. Place Part A under high shear mixer (do not aerate). Add Part B and shear for approximately 12-15 minutes (until thoroughly dispersed). While still warm, remove from high shear mixer, place under regular impeller mixer and add Part C. Water bath cool to 120F. Add Part D to pH=5.5. Adjust viscosity with Part E if necessary.

Note: 2% Zinc Omadine is not necessary as functionality remains with 1% Zinc Omadine. Acid pH is necessary for proper stability of Omadine.

Formula 113-141C

Silicone Shampoo with Ritavena 5

<u>Ingredients:</u>	%W/W
Part A:	
1. Pationic 138C	8.00

Clear & Bright Shampoo Plus Conditioner
(Formula 90-1109)

This rich lathering shampoo conditions the hair while it cleans and leaves the hair soft and manageable. Unlike many conditioning shampoos, which leave the hair feeling heavy or oily, this formula conditions the hair without heavy buildup.

<u>Step A:</u>	<u>% By Weight</u>
Water	22.20
Jaguar C-162	0.30

Charge water into mixing vessel. With rapid but smooth agitation, slowly disperse Jaguar C-162 in water. With smooth agitation, warm system to 40-45C.

<u>Step B:</u>	
Rhodapon L-22HNC	65.00
Ammonium Xylene Sulfonate (40%)	5.00
Citric Acid (25% Aqueous)	Q.S. to pH 5.5-6.0

With smooth agitation slowly blend Rhodapon L-22HNC and AXS-40 into heated water system. Mix until completely uniform (heat may be needed). Adjust pH system to 5.5-6.0 with Citric Acid (25% Aq.) as needed.

<u>Step C:</u>	
Alkamide LE	1.50
Mirapol 550	0.50
Mirataine BET-0-30	5.00
Citric Acid (25% Aqueous)	Q.S. to pH 5.5-6.0

Combine Alkamide LE, Mirapol 550, and Mirataine BET-0-30. Mix until uniform. This should produce a pourable slurry. Slowly blend the slurry into the main system and mix until uniform. Adjust pH of system to 5.5-6.0 with Citric Acid as needed.

<u>Step D:</u>	
Fragrance	Q.S.
Dye(s)	Q.S.
Preservative	Q.S.

Slowly blend compatible Fragrance, Dye(s), and Preservative into system. Mix until uniform.

<u>Step E:</u>	
Ammonium Chloride	Q.S.
or	
Ammonium Xylene Sulfonate (40%)	Q.S.

If desired, trace concentrations (0.05% increments) of Ammonium Chloride may be added to increase the formulation viscosity. Additions of AXS-40 (0.5% increments) may be used to lower the formulation viscosity.

Typical Formulation Properties

Appearance @ 25C:	Clear Liquid
pH (as is):	5.5-6.0
Viscosity @ 25C (No. 4 Spindle @ 20RPM)	4,000-6,000 cps

CTFA Designation: Water, Ammonium Lauryl Sulfate, Ammonium Xylene Sulfonate, Lauramide DEA, Oleamidopropyl Betaine, Polyquaternium 7, Hydroxypropyl Guar Hydroxypropyltrimonium Chloride, Citric Acid, Preservative, Dye, Ammonium Chloride.

SOURCE: Rhone-Poulenc Surfactants & Specialties: Formula 90-1109

Conditioning, Anti-Dandruff Shampoo
(Formula 91-1105)

	<u>% By Weight</u>
<u>Step A:</u> Jaguar C-17	0.50
Water	35.00
<u>Step B:</u> Rhodigel EZ	0.05
<u>Step C:</u> Citric Acid	Q.S. to pH 5-7
<u>Step D:</u> Rhodapon SB 8208S	45.00
<u>Step E:</u> Alkamide C-212	1.80
Alkamuls EGMS	0.90
<u>Step F:</u> Zinc Omadine 48% Active Dispersion (Olin)	2.00
Water	45.00
<u>Step G:</u> Citric Acid	Q.S. to pH 5.5-6.5
<u>Step H:</u> Fragrance, Dye(s), Preservative	Q.S.
<u>Step I:</u> Mirataine CBC	6-14

Blending Procedure:

- Step A: With rapid but smooth agitation, disperse Jaguar C-17 in water. Heat system to 40-45C with smooth agitation.
- Step B: With vigorous agitation, disperse Rhodigel EZ into heated water base. With vigorous agitation, continue to heat system to 60C.
- Step C: Adjust formulation pH to 5-7 with Citric Acid as needed.
- Step D: With smooth agitation, slowly blend in Rhodapon SB 8208S. With smooth agitation heat system to 70-75C.
- Step E: With smooth agitation, slowly blend Alkamide C-212 and Alkamuls EGMS into heated system. Mix until uniform.
- Step F: Combine water and Zinc Omadine dispersion and mix until uniform. With rapid but smooth agitation, slowly blend into heated shampoo base. Mix until uniform and then cool system to 40-45C with smooth agitation.
- Step G: Adjust formulation pH to 5.5-6.5 with Citric Acid as needed.
- Step H: Add compatible Fragrance, Dye(s), and Preservative.
- Step I: Adjust formulation viscosity to 7,000-11,000 cps (No. 4 Spindle @ 10 RPM-25C) with the incremental addition of Mirataine CBC as needed.

Typical Formulation Properties

Appearance @ 25C: Viscous, Opaque Liquid
 pH: 5.5-6.5
 Viscosity @ 25C: 7,000-11,000 cps (No. 4 spindle @ 10 RPM)
 % Non Volatiles: 20-23
 Active Ingredient: Zinc Pyrithione

Other Ingredients (CTFA Identification): Water, Sodium Lauryl Sulfate, Cocamidopropyl Betaine, Cocamide MEA, Glycol Stearate, Guar Hydroxypropyltrimonium Chloride, Fragrance, Preservative, Citric Acid, Xanthan Gum, Dye(s).

DMDM Hydantoin (7)	0.40	Preservative
Guar Hydroxypropyltrimonium Chloride (8)	0.20	Conditioner
NaOH (10%)	2.00	Neutralizing Agent

- (1) Standapol A (Henkel)
- (2) Standapol EA-3 (Henkel)
- (3) Carbomer (BFGoodrich)
- (4) Standamid KD (Henkel)
- (5) 200 Fluid (Dow Corning)
- (6) M-Quat JO 50 (PPG-Mazer)
- (7) Glydant (Lonza)
- (8) N-Hance (Aqualon)

Preparation Procedure:

1. Combine Part A ingredients, slowly mix, heat to 50C.
2. Separately heat cocamide DEA to 50C, slowly mix in Carbopol forming a paste, add to Part A with moderate speed, mixing 30 minutes.
3. Separately combine Part C ingredients, heat to 50C, slowly mix to combine with Parts A and B with moderate speed mixing.
4. Separately add guar into first three ingredients of Part D, when dispersed add NaOH, combine with Parts A, B, and C, with slow agitation for 20 minutes.

SOURCE: BF Goodrich Co.: Formula C-0038

Conditioning Shampoo

High-viscosity product with a silky shine. Very mild.

Material/CTFA-Index:

Water	53.50%
Texapon ASV/Sodium Laureth Sulfate (and) Magnesium Laureth Sulfate (and) Sodium Laureth 8-Sulfate (and) Sodium Oleth Sulfate (and) Magnesium Oleth Sulfate	20.00
Dehyton K/Cocamidopropyl Betaine	11.00
Comperlan KD/Cocamide DEA	4.00
Sodium Chloride	1.00
Texapon SG/Sodium Laureth Sulfate (and) Cocamide MEA (and) Glycol Distearate	10.00
Belsil DMC 6031/Dimethicone Copolyol	0.50
Preservatives, fragrances	q.s.

Mix all components in the given order.

Temperature stability: at 45C over 10 weeks.

Formulation 201 AH

Shampoo

Clear, thin gel.

Materials/CTFA-Index:

Hoe S 3267/Cocamidopropyl Betaine	22.50%
Wasser, dest./Water	52.00
Texapon NA/Ammonium Laureth Sulfate	22.50
Belsil DMC 6033/Dimethicone Copolyol Acetate	1.00
Belsil ADM 6041 E/Amodimethicone (and) Emulsifier	1.00
Ammonium Chloride	1.00
Preservatives, fragrances	q.s.

Dissolve Hoe S 3267 in water, add Texapon NA, Belsil DMC 6033 and Belsil ADM 6041 E, homogenise the mixture and adjust the desired viscosity with the ammonium chloride.

Temperature stability: at 45C over 10 weeks.

Formulation 151 AH

SOURCE: Wacker Silicone: Suggested Formulations

Conditioning Shampoo

<u>Ingredients:</u>	<u>%</u>
Phase A:	
H2O, Deionized	54.995
Celquat H-100	0.10
Standapol ES-2	25.00
Hetaine CLA (Canolamidopropyl Betaine)	5.00
Hetamide RC (Cocamide DEA)	1.50
Hest E.G.D.S. (E.G.D.S)	0.80
SF 96-350	0.75
Merquat 280	0.75
Phase B:	
Kathon CG	0.07
Phase C:	
Citric Acid	0.035
FD&C Blue #1	Q.S.

Specifications:

- pH: 5.5-6.0
- Viscosity #3/12: 5000 cps

Procedure:

- 1) In a stainless steel kettle add H2O. While mixing sprinkle Celquat H-100 into vortex.
 - 2) Add remainder of Phase A and heat to 75C while mixing until homogeneous.
 - 3) Cool to 40C and add Phase B.
 - 4) Adjust pH with citric acid.
 - 5) Color as desired.
- Formula HS 93-85

Clear Shampoo

<u>Ingredients:</u>	<u>%</u>
H2O, Deionized	56.93
Sodium Laureth-2 Sulfate	25.0
Hetaine CLA	9.5
Decyl Polyglucose	7.5
PEG-7 Glyceryl Cocoate	1.0
Kathon CG	0.07

Specifications:

- pH: 6.50
- Viscosity #3/12: 5500 cps

Procedure:

In a stainless steel tank equipped with a Lightnin' type mixer, combine all ingredients. Mix until uniform.

Comments:

This mild shampoo is alkanolamide and salt free, while maintaining viscosity.

It is also a cold process formula.

Formula HS 93-90

SOURCE: Heterene, Inc.: Suggested Formulas

Conditioning Shampoo
(Formula 92-1202)

	<u>% by Weight</u>
A. Deionized water	61.20
Jaguar C-17	0.30
Citric Acid	Q.S. to pH 4.0-5.0
B. Rhodacal A-246L	20.0
Mirataine BET C-30	15.0
Alkamide DC-212/S	2.0
Alkamuls EGMS/C	1.0
Sodium Chloride	0.5
Preservative	Q.S.
Fragrance and dye(s)	Q.S.

Blending Procedure:

Dissolve Jaguar C-17 thoroughly in water. Adjust pH to 4-5 with citric acid with agitation. Heat to 65C, then add "B" (except Alkamuls EGMS/C and sodium chloride). Adjust pH of formulation to 5-6 with citric acid, then add Alkamuls EGMS/C and sodium chloride. Continue agitation until uniform and cool to room temperature.

Note: Sodium chloride may be added in trace concentrations (0.05-0.1%) to increase viscosity and to provide a very good pearl.

Tentative Specifications:

Solids: 16.2%
pH: 5.0-6.0
Viscosity: 4,500-5,000 cps

After-Perm Conditioning Shampoo
(Formula 92-1211)

	<u>% by Weight</u>
A. Deionized water	60.7
Jaguar HP 8	0.3
Citric Acid	q.s. to pH 4-5
B. Rhodopon ESY	22.0
Mirataine BET C 30	12.0
Alkamide DC-212/S	2.0
Alkamuls EGMS/C	1.0
Ammonium Xylene Sulfonate	2.0
Fragrance, preservative, dye	q.s.

Procedure:

Disperse Jaguar HP 8 thoroughly in water. Adjust pH with citric acid to 4-5. Heat/mix to 75C and add "B" in order given. Continue agitation until uniform. At 45C, adjust pH to 5-6 with citric acid, if necessary.

Typical Formulation Properties:

Appearance @ 25C: Viscous, opaque liquid
Viscosity @ 25C: 3500 cps
pH: 5-6
% Non-Volatiles: 15

Conditioning Shampoo
(Crème of Nature Type)
Formula 92-1212

	<u>% by Weight</u>
Step A:	
Deionized water	52.2
Jaguar C-13S	0.3
Citric Acid	q.s. to pH 4-5
Step B:	
Rhodapon L22HNC	30.0
Mirataine BET C-30	12.0
Alkamuls EGMS/C	2.0
Hydrolyzed Collagen	2.0
Alkamide DC-212/S	1.0
Sodium Chloride	0.5
Fragrance, dyes, preservative	Q.S.

Blending Procedure:

Disperse Jaguar C-13S thoroughly in water and adjust pH to 4-5 with citric acid. Continue agitation and heat to 75C, then add "B" in order listed. Continue agitation to cool to 45C. Adjust pH to 5-6 with citric acid, if necessary.

Typical Formulation Properties:

Appearance:	Viscous, opaque liquid
% Nonvolatile:	16.5
pH:	5.0-6.0
Viscosity:	3,800 cps

CTFA Identification: Water, Ammonium Lauryl Sulfate, Cocamidopropyl Betaine, Glycol Stearate, Hydrolyzed Collagen, Cocamide DEA, Sodium Chloride.

Neutralizing Shampoo
(Formula 93-0501)

<u>Component:</u>	<u>% by Weight</u>
A.	
Rhodapex ES	18.0
Mirataine COB	10.0
Alkamide DC-212/S	2.0
B.	
Deionized Water	69.1
Sodium Borate	0.5
Acetic Acid	0.2
Sorbic Acid	0.2
C.	
Phenolphthalein	Q.S.
FD&C Yellow #6	Q.S.
Methyl Paraben	Q.S.
Fragrance	Q.S.

Procedure:

Heat "A" and "B" separately to 75C. With agitation, add "B" to "A" until uniform and cool to 45C. Adjust pH to 4.0-5.5 with acetic acid, if necessary. Add "C", then package.

Everyday Mild Conditioning Shampoo
(Formula 92-0213)

	<u>% By Weight</u>
Miranol C2M Conc. NP	20.0
Rhodapon ES	20.3
Mirataine BET-0-30	4.9
Alkamuls EGMS/C	2.0
Jaguar C-14 COS	0.2
Propylene Glycol	1.0
Citric Acid	Q.S. to pH 6-7
D.I. Water	51.6
Fragrance, Dye(s), Preservative	Q.S.

Blending Procedure:**Step A:**

Charge water into mixing vessel. Heat to 50C. With smooth agitation, slowly sift in Jaguar C-14 COS. Mix until uniform and add Citric Acid Q.S. to pH 4.0-4.5. When uniform, blend in Propylene Glycol, Miranol C2M Conc. N.P. and Rhodapon ES. Slowly blend in BET-0-30. Shampoo will thicken with betaine addition. Mix until uniform and adjust pH to 6.0-7.0 with Citric Acid.

Step B:

Heat system to 70-75C and add Alkamuls EGMS/C. Mix until completely uniform and then allow system to cool to 40-45C and add Fragrance, Dye(s) and Preservative.

Typical Formulation Properties

Appearance @ 25C:	Pearlescent Liquid
pH (as is):	6.0-7.0
Viscosity @ 25C:	4,000-6,000 cps
% Non-Volatiles	19-21

CTFA Identification: Water, Disodium Cocoamphodiacetate, Sodium Laureth Sulfate, Sodium Chloride, Glycol Stearate, Oleamidopropyl Betaine, Guar Hydroxypropyltrimonium Chloride, Citric Acid.

C. Fragrance, preservative, color	q.s.
Citric Acid to pH 6.5	q.s.
NaCl	q.s.*
*q.s. to desired viscosity	

Procedure:

1. Heat Phase A to 60C. Mix carefully until clear.
2. Add Phase B. Mix to incorporate.
3. Add Phase C when product is below 40C. Mix to incorporate.

Properties:

Mild, creamy lather, rinses readily from hair. A clear gel protein shampoo for developing body and imparting a clean, natural look.

Formula #HS-105

SOURCE: Maybrook Inc.: Suggested Formulations

Frequent-Use Antidandruff Shampoo Plus Conditioner

Vanseal CS, Cocoyl Sarcosine, enhances the quality and quantity of the lather produced by the primary surfactant, ammonium lauryl sulfate. Both are mild surfactants that make this shampoo safe for daily use. The formula is thickened with a synergistic combination of Veegum HS, Magnesium Aluminum Silicate and Hydroxypropyl Guar. The primary hair conditioning agent is Polyquaternium-10 and Zinc Pyrithione is the anti-dandruff agent.

<u>Ingredient:</u>	<u>% by Weight*</u>
A: Veegum HS, Magnesium Aluminum Silicate	1.00
Deionized Water	47.35
Citric Acid	0.05
Hydroxypropyl Guar**	1.00
B: Deionized Water	15.00
Vanseal CS, Cocoyl Sarcosine**	3.00
Ammonium Lauryl Sulfate	30.00
Polyquaternium-10***	0.50
C: Sodium Hydroxide (25% Soln.) to pH 6.5	q.s.
Zinc Pyrithione***	2.10
Preservative, Dye, Fragrance	q.s.

*As Received Basis

**Jaguar HP-60

***Polymer LR-400

****Zinc Omadine, 48% Dispersion

Mixing Procedure:

Mix the Polyquaternium-10 in the Part B water until a clear solution is achieved. Add Ammonium Lauryl Sulfate and Vanseal CS and continue mixing until uniform and clear. Deaerate if necessary. Heat Part A water to 50C and add Veegum HS while stirring with a propeller mixer at 1800 rpm. Continue mixing for 1 hour. Remove from heat and allow the batch to cool. Add Citric Acid and then the Hydroxypropyl Guar. Continue mixing for 15 minutes. Slow the mixer to 500 rpm and add the part B mixture. Continue mixing and cooling until smooth and uniform. Add Part C ingredients in the order shown, mixing until uniform. Package in opaque bottles.

Formula Properties:

Viscosity: 7000+-1000 cps (Brookfield Model LVT at 60 RPM)

pH: 6.5+-0.2

SOURCE: R.T. Vanderbilt Co., Inc.: Formula No. 456

Gentle Shampoo

A clear, moderately viscous shampoo that provides rich, lubricious lather and softness to the hair. This pH-balanced formula is extremely gentle and provides effective cleansing without harsh stripping.

	<u>% by Weight</u>
Part A:	
Deionized Water	45.55
Methylparaben	0.20
Lauroamphoglycinatate (and) Trideceth Sulfate (Miranol MHT)	30.00
TEA-Cocoyl Glutamate (Amisoft CT-12)	20.00
Sodium Cocoyl Glutamate (Amisoft CS-11)	1.00
PEG-150 Distearate	1.50
Sodium PCA (Ajidew N-50)	1.00
Part B:	
Methylchloroisothiazolinone (and) Methylisothiazol- inone (Kathon CG)	0.05
Fragrance (Noville #84504)	0.20
Citric Acid	0.50

Compounding Procedure:

Heat part A to 65C until completely homogeneous. Cool to 40C. Add part B.

Color: Light straw-clear

pH: 5.65

Viscosity: 3,750 cps (#4 spindle @ 10 rpm)

Conditioning Shampoo

Milky cloudy, high viscosity.

Material/CTFA-Index

A: Water	76.50%
Tylose H 4000 P/Hydroxyethylcellulose	0.80
B: Comperlan KD/Cocamide DEA	3.00
Texapon NA/Ammonium Laureth Sulfate	16.70
Belsil ADM 6057 E/Amodimethicone (and) Tallowtrimon- ium Chloride (and) Nonoxynol-10	3.00
Preservatives, fragrances, pigments	q.s.

Homogenise A well, mix Belsil ADM 6057 E.

SOURCE: Wacker Silicone: Formulation 551 AH

Hair Repair Shampoo
(Shampoo for Damaged Hair)

<u>Ingredients:</u>	<u>%w/w</u>
Tetrasodium EDTA	0.1
Water	60.5
Ammonium Lauryl Sulfate	10.0
Ammonium Laureth Sulfate (2M E.O.)	20.0
PEG-18 Glyceryl Oleate/Cocoate (Antil 171)	1.5
Cocamidopropyl Betaine (Tego Betaine L-7)	5.0
Dimethicone Copolyol (Abil B 8851)	0.5
Propylene Glycol	1.0
Dimethicone/Sodium Poly PG-Propyl Dimethicone Thiosulfate Copolymer (Abil S 201)	1.0
Quaternium-80 (Abil Quat 3272)	0.4
Color	Q.S.
Fragrance	Q.S.
Preservatives	Q.S.
Citric Acid	to pH 7.0
Ammonium Chloride	Q.S.

Procedure:

1. Dissolve the Tetrasodium EDTA in the water.
2. Add ingredients in order, mixing between additions. Avoid air entrapment.
3. Slowly mix in the PEG-18 Glyceryl Glycol Dioleococoate.
4. Adjust viscosity with the 25% solution of Ammonium Chloride.

Note: For manufacturing ease, a 25% solution of Ammonium Chloride can be made.

Note: SLS/SLES and Sodium Chloride may be substituted for the ALS/ALES and Ammonium Chloride.

Ethnic Hair Care
Cream Conditioning Shampoo

<u>Ingredients:</u>	<u>%w/w</u>
Water	37.6
Sodium Lauryl Sulfate	45.0
Glyceryl Stearate (Tegin)	3.0
Octyl Palmitate (Tegosoft OP)	0.5
Isopropyl Palmitate (Tegosoft P)	0.5
Cocamidopropyl Betaine (Tego Betaine F)	7.0
Quaternium-80 (Abil Quat 3272)	0.4
Dimethicone Copolyol (Abil B 88183)	0.5
Jajoba Oil	0.5
Citric Acid (25% Solution)	to pH 6.8
Cocamidopropyl Betaine (and) Glyceryl Laurate (Antil HS 60)	5.0
Fragrance	Q.S.
Sodium Chloride (25% solution)	Q.S.

Procedure:

1. Heat the water to 60-65C. Add the Sodium Lauryl Sulfate, Tegin, and the Tegosofts. Mix until fully dispersed.
2. Begin cooling. Cool to 45C.
3. Add the remaining ingredients in order.
4. Adjust viscosity.

Kera-Quat WKP (Cocodimonium Hydroxypropyl Hydrolyzed Keratin)	1.0
Deionized Water	32.0
Fragrance, Preservatives	q.s.
Citric Acid	q.s. to pH=4

Procedure:

Mix all ingredients together except the Citric Acid. When homogeneous, add the citric acid slowly and with gentle agitation to pH=4.

Properties:

A high foaming, mild, neutralizing shampoo. Restores body and shine to damaged hair. Two cationic proteins condition, protect and re-vitalize the hair. Cationic Collagen Polypeptide, a substantive high molecular weight protein, is very stable at low pH's and is particularly effective at sealing and protecting the hair. Keri-Quat WKP, a substantive quaternized keratin, adds back essential amino acids lost during processing and improves shine and combability.

Paste Shampoo
(Formula 9-0204)

	<u>% By Weight</u>
Rhodapon SB 8208S	50.0
Alkamide DS 280/S	3.0
Alkamuls EGMS	2.5
Stearic Acid TP	7.5
Sodium Hydroxide (50% Aq.)	2.1
Cheelox 100 (Dow)	0.1
Fragrance, Dye(s), Preservative	Q.S.
Water	34.8

Blending Procedure: Combine Sodium Hydroxide solution, Cheelox 100, and water and heat to 65-70C. With smooth agitation slowly blend Stearic Acid TP into system. Mix until uniform. Slowly blend Rhodapon SB 8208S into system. With smooth agitation, heat system to 70-75C. With smooth agitation, slowly blend in Alkamide DS 280/S and Alkamuls EGMS. Mix until uniform and then cool to 40-45C with smooth agitation. Add compatible Fragrance, Dye(s), and Preservative.

Typical Formulation Properties:

Appearance @ 25C*: Firm, Opaque/Pearlescent Paste

% Non Volatiles: 27.5-30.5

CTFA Identification: Water, Sodium Lauryl Sulfate, Stearic Acid, Stearamide DEA, Glycol Stearate, Sodium Hydroxide, Fragrance, Preservative, Tetrasodium EDTA, Dye(s).

*Note: Final formulation consistency will be reached after standing 7-10 days.

Self Adjusting Shampoo
(Formula 82-0206M)

	<u>% By Weight</u>
Rhodapon LT-6	40.0
Alkamide DL-207/S	2.2
Mirataine TM	3.0
Methocel E4M Premium (Dow)	0.7
Cheelox 100 (Dow)	0.2
Citric Acid	Q.S. to pH 6-7
Fragrance, Dye, Preservative	Q.S.
Sodium Chloride	0.5-1.0
Water	53.2

Blending Procedure: Charge water into mixing vessel and warm to 35-40C. With vigorous agitation, slowly sift Methocel E4M Premium into heated water. Mix until completely dispersed. With smooth agitation, continue heating to 50-55C and blend in Rhodapon LT-6, Alkamide DL-207/S, and Mirataine TM. Mix until completely uniform. With smooth agitation, blend in Cheelox 100 and then cool to 35-40C. Adjust the formulation pH to 6-7 with Citric Acid as needed and add compatible Fragrance, Dye(s), and Preservative. Adjust the formulation viscosity to 3,000-5,000 cps with the judicious addition of Sodium Chloride as needed.

Typical Formulation Properties

Appearance @ 25C: Clear Liquid

pH: 6-7

Viscosity @ 25C: 3,000-5,000 cps

% Non Volatiles: 20-22

SOURCE: Rhone-Poulenc Surfactants & Specialties: Formulas

Pearled Acid Balanced Geropon T-77 Shampoo
(Formula 91-1114)

	<u>% By Weight</u>
Rhodapon L-22 HNC	53.6
Geropon T-77	3.0
Alkamuls EGMS/C	1.0
Fragrance, Dye(s), Preservative	Q.S.
Ammonium Chloride	0.0-0.5
Water	Q.S.

Blending Procedure:

Charge tank with water and Rhodapon L-22 HNC, start heating and mixing. Add Geropon T-77 and Alkamuls EGMS/C and heat (65-70C) and mix until clear (Alkamuls EGMS/C melted). Cool. Add fragrance, dye and preservative at 35C. Thicken product, if desired, with ammonium chloride. Adjust pH, if desired, with citric acid.

Typical Formulation Properties

Appearance @ 25C:	Pearled Liquid
Viscosity @ 25C:	2,000-4,000 cps
pH:	6-7
% Non Volatile:	19-21

CTFA Identification:

Water, Ammonium Lauryl Sulfate, Sodium Methyl Oleoyl Taurate, Glycol Stearate, Ammonium Chloride, Fragrance, Preservative and Dye.

Clear Geropon T-77 Shampoo
Formula 92-0301

	<u>% By Weight</u>
Rhodapon LSB	50.0
Geropon T-77	2.0
Fragrance, dye, preservative	Q.S.
Sodium Chloride	1.5-2.0
Water	Q.S.

Blending Procedure:

Charge water and Rhodapon LSB into mixing tank. Add Geropon T-77, mix and heat until clear. (Heating will speed dissolution, but product can be prepared at ambient temperature.) Cool to 35C and add fragrance, dye and preservative. Add sodium chloride to thicken.

Typical Formulation Properties

Appearance at 25C:	Clear liquid
pH @ 25C:	7.2-7.8
Viscosity @ 25C:	2,000-4,000 cps
% Nonvolatile:	18-20

CTFA Identification:

Water, Sodium Lauryl Sulfate, Sodium Methyl Oleoyl Taurate, Sodium Chloride, Fragrance, Preservative, Dye.

Pearlized Mink Shampoo

Pearlescent formulations are the easiest way to introduce "heavy duty" hair conditioners such as unsaturated Emulan Oil of Mink into shampoos. This formula is particularly rich, containing Soya Sterol as well. The Glycol Stearate provides a pearlescence that can be dramatically enhanced by adding color.

	<u>Wt. %</u>	<u>CTFA</u>
Water	45.8	
Generol 122E5	1.0	PEG5 soya sterol
Cerasynt IP	1.5	Glycol stearate SE
Emulan, Light Fraction	1.5	Mink Oil
Standapol A	30.0	Ammonium Lauryl Sulfate
Standapol EA-2	15.0	Ammonium Laureth Sulfate
Lauramide DEA	5.0	
Tetrasodium EDTA	0.2	
Perfume, Preservative	q.s.	

Procedure:

Heat water to 55C, add to it the soya sterol, mink oil, and glycol stearate. Stir until they melt and disperse. Then add remaining ingredients (at RT) in the sequence shown.

Re-Nu Shampoo for Thinning Hair

	<u>%W/W</u>
A. Deionized Water	49.70
Monamid 150-LW (Lauramide DEA)	4.00
Stepanol WAT (TEA Lauryl Sulfate)	15.00
B. Sipon ES-2 (Sodium Laureth Sulfate)	25.00
Aqua-Tein C (Collagen Amino Acids and Acetamide MEA and Propylene Glycol)	2.00
Amphosol CA (Cocamidopropyl Betaine)	4.00
Disodium EDTA	0.30
C. Fragrance, Preservative	q.s.
Citric Acid, to pH 5.5	q.s.

Procedure:

1. Mix and heat Phase A until dissolved.
2. Add Phase B to Phase A with mixing.
3. Mix and cool to 50C. Add Phase C.

**Total surfactant solids can be reduced if desired, and Sodium Chloride added to maintain viscosity.

Properties:

A rich, mild, viscous shampoo with a specially formulated blend of gentle cleansing agents which clean thinning hair gently, but effectively while adding body and manageability. Cleans without damaging delicate or thinning hair. Aqua-Tein C is a moisture-binding complex of amino acids and Acetamide MEA which maintain the moisture content of the hair. Moist hair has better tensile strength and appears to have an increased volume and fullness. Aqua-Tein C is also an effective anti-irritant and adds to the gentleness of the formula.

Shampoo Plus Conditioner**(Formula 90-0601)**

This one step shampoo and conditioner demonstrates rich lathering properties while it conditions the hair. Comprised of two protein substantive conditioning agents, this unique formula detangles snarled hair and significantly reduces comb drag.

Step A: % By Weight

Water	26.65
Jaguar C-14S	0.30

25% Citric Acid Solution	Q.S. to pH 4.0-4.5
--------------------------	--------------------

Heat water to 50C. With rapid but smooth agitation, slowly disperse Jaguar C-14S in water. Adjust pH to 4.0-4.5 with Citric Acid solution as needed. With pH adjustment, the system will thicken.

Step B:

Rhodapex ESY	30.00
--------------	-------

Ammonium Xylene Sulfonate (40% Aq.)	2.00
-------------------------------------	------

25% Citric Acid Solution	Q.S. to pH 5.7-6.3
--------------------------	--------------------

Slowly blend Rhodapex ESY and AXS-40 into heated water system. Mix until completely uniform. Adjust formulation to pH 5.7-6.3 with Citric Acid solution as needed. With smooth agitation, continue to heat system to 70-75C.

Step C:

Varisoft TC-90 (Sherex)	0.50
-------------------------	------

Cetyl Alcohol NF	0.40
------------------	------

Stearyl Alcohol	0.40
-----------------	------

Alkamuls EGDS	2.00
---------------	------

In a separate mixing vessel, combine Step C ingredients. Heat Step C ingredients (do not scorch) until clear and molten. With rapid but smooth agitation, slowly blend molten Step C phase into 70-75C water phase. Mix until completely uniform.

Step D:

Alkamide C-212	1.70
----------------	------

Rhodapon L-22HNC	36.00
------------------	-------

25% Citric Acid Solution	Q.S. to pH 5.7-6.3
--------------------------	--------------------

Slowly blend Alkamide C-212 into heated system and mix until completely uniform. Slowly blend Rhodapon L-22HNC into system. Once uniform, adjust formulation pH to 5.7-6.3 with Citric Acid as needed. With smooth agitation, cool system to 40-45C.

Step E:

Kathon CG (Rohm and Haas)	0.05
---------------------------	------

Fragrance and Dye	Q.S.
-------------------	------

Slowly blend Kathon CG and compatible Fragrance and Dye into system. Mix until uniform. Sodium Chloride may be added in trace concentrations (0.05-0.10%) to increase viscosity if needed. Ammonium Xylene Sulfonate may be added to decrease viscosity if needed.

Typical Formulation Properties

Appearance @ 25C:	Opaque/Pearlescent Liquid
-------------------	---------------------------

pH:	5.7-6.3
-----	---------

Viscosity @ 25C (No. 4 Spindle @ 10 RPM):	3,000-5,000 cps

Shampoo Plus Conditioner
Plus UV Protection
Formula 93-0401

This one-step shampoo conditioner and UV protector demonstrates rich-lathering properties, while it conditions and protects the hair. Comprised of two protein-substantive conditioning agents and an ultraviolet absorber, this unique formula detangles snarled hair and significantly reduces comb drag, while protecting the hair from the harsh effects of sunlight.

<u>A. Component</u>	<u>% By Weight</u>
Water	25.65
Jaguar C-14S	0.30
25% Citric Acid Solution	Q.S. to pH 4.0-4.5
Heat water to 50C. With rapid but smooth agitation, slowly disperse Jaguar C-14S in water. Adjust pH to 4.0-4.5 with citric acid solution, as needed. With pH adjustment, the system will thicken.	
B. Rhodapex ESY	30.0
Ammonium Xylene Sulfonate (40% Aq.)	2.0
25% Citric Acid Solution	Q.S. to pH 5.7-6.3
Slowly blend Rhodapex ESY and AXS-40 into heated water system. Mix until completely uniform. Adjust formulation pH to 5.7-6.3 with citric acid solution, as needed. With smooth agitation, continue to heat system to 70-75C.	
C. Varisoft TC-90 (Sherex)	0.50
Cetyl Alcohol NF	0.40
Stearyl Alcohol	0.40
Alkamuls EGDS	2.00
Syntase 62	1.00

In a separate mixing vessel, combine "C" ingredients. Heat "C" ingredients (do not scorch) until clear and molten. With rapid but smooth agitation, slowly blend molten "C" phase into 70-75C water phase. Mix until completely uniform.

D. Alkamide C-212	1.70
Rhodapon L-22HNC	36.00
25% Citric Acid Solution	Q.S. to pH 5.7-6.3
Slowly blend Alkamide C-212 into heated system and mix until completely uniform. Slowly blend Rhodapon L-22HNC into system. Once uniform, adjust formulation pH to 5.7-6.3 with citric acid, as needed. With smooth agitation, cool system to 40-45C.	
E. Kathon CG (Rohm and Haas)	0.05
Fragrance and Dye	Q.S.

Slowly blend Kathon CG and compatible fragrance and dye into system. Mix until uniform. Sodium chloride may be added in trace concentrations (0.05-0.10%) to increase viscosity, if needed. Ammonium xylene sulfonate may be added to decrease viscosity, if needed.

Typical Formulation Properties

Silk Neutralizing Shampoo

	%W/W
Bio-Terge AS-40 (Sodium C14-16 Olefin Sulfonate)	22.0
Amphosol CA (Cocamidopropyl Betaine)	14.0
Ammonyx CDO (Cocamidopropylamine Oxide)	5.0
Deionized Water	56.0
Cationic Collagen Polypeptides	2.5
Amino-Silk SF (Silk Amino Acids)	0.5
Preservative, Fragrance	q.s.
Citric Acid	q.s. to pH=4

Procedure:

Mix all components together except the citric acid. Adjust pH to 4 with citric acid.

Properties:

A mild, low pH shampoo which neutralizes and re-conditions at the same time. Cationic Collagen Polypeptides, a cationic high molecular weight protein, protects and smooths the hair shaft to counteract damage due to harsh processing. Amino-Silk SF adds shine and bounce to the hair.

Sodium Chloride	2.50
C. Dowicil 200 (Quaternium-15)	0.20
Polysorbate 20	1.00
Fragrance	0.30
Q.S. to pH = 5.5 with Citric Acid or Potassium Hydroxide as needed.	

Procedure:

1. Mix and heat phase A until homogeneous.
2. Add phase A to phase B. Mix.
3. Pre-mix phase C and add to phase A/B. Mix.

Properties:

A viscous, but mild shampoo. Enriched with natural ingredients. Lemon juice and quaternized protein supply good manageability and an attractive sheen. May-Tein C and Quat-Pro S provide lubricity and conditioning. The Hydrolyzed Collagen coats and protects the hair as well as adding body.

Vege-Clean Conditioning Shampoo

	<u>%W/W</u>
A. Bioterge AS-40 (Sodium C16-18 Olefin Sulfonate)	40.00
Monamid 150-LW (Lauramide DEA)	3.00
Deionized Water	46.80
Supro-Tein S (Sodium Cocoyl Hydrolyzed Soy Protein (and) Sorbitol)	5.00
Soy-Quat C (Cocodimonium Hydroxypropyl Hydrolyzed Soy Protein)	1.50
Soy-Tein NL (Hydrolyzed Soy Protein)	1.50
Kessco PEG 6000 DS	1.00
Sodium Chloride	1.00
B. Fragrance	0.2
Preservative	q.s.
Citric Acid	q.s. to pH 6.5

Procedure:

Mix and heat Phase A to 60C. Mix until homogeneous. Mix and cool to 40C. Add Phase B.

Properties:

Vegetable-based surfactants and quaternaries give this conditioning shampoo an extra boost. An effective cleanser, this formula provides a creamy, stable foam. Conditioning and mildness are provided by the Soy-Tein NL and Supro-Tein S. Supro-Tein S is a foaming protein which gently cleans and is biodegradable. Soy-Quat C is a cationic, quaternized soy protein which adds highlights to the hair and improves wet and dry combing.

Wheat Germ Oil & Honey Shampoo
(Formula 86-0106)

	<u>% by Weight</u>
Rhodapex NA 61	10.0
Mirataine BET-C 30	3.5
Alkamide DC-212/S	1.5
Honey	0.025
Wheat Germ Oil	0.025
Citric Acid	Q.S. to pH 6-6.5
Fragrance, Dye, Preservative	Q.S.
Sodium Chloride	1.5-2.5
Water	83.95

Blending Procedure:

1. Charge water into mixing vessel.
2. With rapid but smooth agitation, slowly blend in Rhodapex NA 61 and Mirataine BET-C 30. Mix until completely uniform.
3. In a separate container, disperse honey and wheat germ oil in Alkamide DC-212/S and mix until uniform. With smooth agitation, slowly add this blend to shampoo system. Mix until shampoo is completely clear and uniform.
4. Adjust pH of system to 6.0-6.5 with citric acid, as needed.
5. Add compatible fragrance, dye and preservative.
6. Adjust shampoo viscosity to 1,000-1,500 cps with incremental additions of sodium chloride, as needed.

CTFA Identification:

Water, Sodium Laureth Sulfate, Sodium Chloride, Cocamide DEA, Cocamidopropyl Betaine, Wheat Germ Oil, Honey, Citric Acid, Preservative, Fragrance, Dye.

Pearlescent Cream Shampoo
(Formula 83-0902M)

	<u>% By Weight</u>
Rhodapon SB 8208S	33.0
Mirasheen 202	10.0
Citric Acid	Q.S. to pH 5-6
Fragrance, Dye(s), Preservative	Q.S.
Sodium Chloride	1.5-2.5
Water	55.0

Blending Procedure:

Charge water into mixing vessel. With smooth agitation, slowly blend in Rhodapon SB 8208S and Mirasheen 202. Mix until completely uniform. Adjust formulation pH to 5-6 with citric acid as needed and then add compatible Fragrance, Dye(s), and Preservative. Adjust formulation viscosity to 2,000-4,000 cps with the judicious addition of Sodium Chloride as needed.

Typical Formulation Properties

Appearance @ 25C:	Opaque/Pearlescent Liquid
pH:	5-6
Viscosity @ 25C:	2,000-4,000 cps
% Non Volatiles:	15-17

CTFA Identification: Water, Sodium Lauryl Sulfate, Glycol Stearate, Sodium Chloride, Lauramide DEA, Cocamidopropyl Betaine, Glycerine, Fragrance, Preservative, Citric Acid, Dye(s).

2-in-1 Conditioning Shampoo

Thick, stable shampoo having good cleaning and conditioning properties for the hair.

<u>Ingredient:</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	34.10	Diluent
Ammonium Lauryl Sulfate (28%) (1)	34.00	Surfactant
Ammonium Laureth Sulfate (27%) (2)	9.25	Surfactant
Part B:		
Carbopol 1382 (3)	0.75	Suspension Stabilizer
Cocamide DEA (4)	3.50	Foam Stabilizer
Part C:		
Dimethicone (100,000 cs) (5)	1.00	Lubricant
Olealkonium Chloride (6)	0.50	Conditioner
Part D:		
Deionized Water	15.00	Diluent
Disodium EDTA	0.10	Chelant
DMDM Hydantoin (7)	0.40	Preservative
Guar Hydroxypropyltrimonium Chloride (8)	0.20	Conditioner
NaOH (10%)	1.00	Neutralizing Agent
Part E:		
Fragrance (9)	0.20	

- (1) Standapol A (Henkel)
- (2) Standapol EA-3 (Henkel)
- (3) Carbomer (BFGoodrich)
- (4) Standamid KD (Henkel)
- (5) 200 Fluid (Dow Corning)
- (6) M-Quat JO 50 (PPG-Mazer)
- (7) Glydant (Lonza)
- (8) N-Hance (Aqualon)
- (9) Shampoo Fragrance A62120/794457 (Haarman & Reimer)

Preparation Procedure:

1. Combine Part A ingredients, slowly mix, heat to 50C.
2. Separately heat Cocamide DEA to 50, slowly mix in Carbopol, forming a paste, add to Part A with moderate speed, mixing 30 minutes.
3. Separately combine Part C ingredients, heat to 50C, slowly mix to combine with Parts A and B with moderate speed mixing.
4. Separately add guar into first three ingredients of Part D, when dispersed add NaOH, combine with Parts A, B, and C, with slow agitation for 20 minutes until 40C.
5. Add Part E and mix slow agitation for 20 minutes.

SOURCE: BF Goodrich Co.: Formula C-0039

2-in-1 Conditioning Shampoo

A synergistic mixture of Veegum HS Magnesium Aluminum Silicate and hydroxypropyl guar thickens this shampoo to maintain the mica and titanium dioxide in suspension. Vanseal CS, renowned for its mildness to the skin and eyes, enhances the quality and quantity of lather produced by this formula. It also acts as a conditioning agent, augmenting the conditioning effect of stearalkonium chloride.

<u>Ingredient:</u>	<u>% by Weight*</u>
A: Veegum HS Magnesium Aluminum Silicate	1.30
Hydroxypropyl Guar**	1.30
Deionized Water	60.35
B: Citric Acid	0.05
Ammonium Lauryl Sulfate	30.00
Vanseal CS Cocoyl Sarcosine	3.00
C: Stearalkonium Chloride, 25%	3.00
D: Mica (and) Titanium Dioxide***	1.00
Sodium Hydroxide Solution to pH 6.0	q.s.
Preservative, Dye, Fragrance	q.s.

*As Received Basis

**Jaguar HP-60

***Timeron Super Copper

Mixing Procedure:

Heat the water in part A to 50C. Add the Veegum HS slowly to the water while stirring with a propeller mixer at 1800 rpm. Mix 1 hour. Add the hydroxypropyl guar and mix 3 minutes. Deaerate. Slow the mixer to avoid air entrapment and foam generation. Add the part B ingredients in the order shown, mixing each until smooth and uniform. Heat part C to 50C and add slowly to A and B. Cool to 30C or less and add part D ingredients in the order shown, mixing each until smooth and uniform.

Formula Properties:

Viscosity: 10,000-15,000 cps (Brookfield Model LVT at 60 RPM)

pH: 5.8 to 6.2

Appearance: Smooth, uniform, pourable lotion

Shaving Products

After Shave Balm

<u>Ingredient:</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	90.00	Diluent
Glycerin	3.00	Humectant
Dimethicone Copolyol (1)	1.00	Humectant/ Lubricant
Polysorbate 80 (2)	0.10	Surfactant
Allantoin	0.10	Skin Conditioner
Part B:		
Cyclomethicone (3)	4.00	Lubricant
Decyl Oleate (4)	0.50	Emollient
Pemulen TR-1	0.25	Emulsifier/ Stabilizer
Part C:		
Triethanolamine, 99%	0.25	Neutralizing Agent
Part D:		
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben (6)	0.80	Preservative
Fragrance	q.s.	

- (1) Dow Corning 190 Surfactant (Dow Corning)
- (2) Tween 80 (ICI Americas)
- (3) Dow Corning 245 Fluid (Dow Corning)
- (4) Ceraphyl 140 (Van Dyk)
- (5) CTFA Acrylates/C10-C30 Alkyl Acrylate Crosspolymer
(BFGoodrich)
- (6) Germaben II (Sutton Labs)

Preparation Procedure:

- 1) Combine Part A ingredients. Mix until homogeneous.
- 2) Combine Part B ingredients in a separate vessel. Mix to break-up any soft lumps of Pemulen.
- 3) With moderate agitation, add Part B to Part A. Mix for 15-30 minutes.
- 4) Add Part C. As emulsion thickens, increase rate of mixing to produce a smooth, opaque product.
- 5) Mix Part D ingredients into emulsion.

After-Shave Cream

	%W/W
I Carbopol 934	1.00
Ethyl alcohol 96%	30.00
Water	26.75
II Triethanolamine	1.50
Water	5.00
III Cutina MD	3.00
Eumulgin B2	1.00
Cetiol LC	5.00
Water	26.75

Preparation:

Allow I to swell, neutralize with II, process III into a cream at 70C and add it to the gel produced.

Formula No. D12-01

After-Shave Gel

	%W/W
I Menthol	0.2
Ethyl alcohol 96%	50.0
II Water	42.6
Boric acid	0.2
III Carbopol 940	0.8
IV Triethanolamine	1.2
Cetiol HE	5.0

Preparation:

Dissolve I and add II in a dissolved state. Stirring quickly, allow III to swell in the alcoholic/aqueous solution. Stir in IV to neutralize.

Formula No. D12-02

After Shave Tonic

	%W/W
Ethanol 96%	40.0
Monomuls 90-L 12	1.0
Lamacit GML 20	10.0
Allantoin	0.2
Irgasan DP 300	0.1
Perfume	0.8
Water	47.9

Preparation:

Monomuls 90-L 12 is dissolved in Lamacit GML at 70C and the perfume is added. Ethanol and water are then added and, finally, allantoin and Irgasan DP 300 are dissolved, stirring thoroughly.

The pH is adjusted with lactic acid.

Formula No. D51-05

SOURCE: Henkel KGaA: Cosmetic Model Formulae

Aftershave Gel

<u>Ingredients:</u>	<u>% by Weight</u>
A. Ethanol, 96% denatured	60.00
Perfume oil	2.00
Menthol	0.10
Cremophor RH 60	0.80
Uvinul D 50	0.05
B. Water, distilled	25.10
Allantoin	0.10
EDTA Acid	0.05
C. Carbomer 980	0.50
D. Water, distilled	10.00
Tris Amino	0.60

Procedure:

Part A: Dissolve perfume oil, menthol, Cremophor RH 60 and Uvinul D 50 in ethyl alcohol.

Part B: Dissolve allantoin and EDTA in water and stir part B into part A.

Part C: Gently sift Carbomer 980 into the combined Parts A and B while maintaining good agitation of the mixture. Continue stirring until the Carbomer has been completely dispersed.

Part D: Dissolve Tris Amino in the water and stir into parts A, B and C in order to neutralize the Carbomer. A highly viscous, transparent gel is obtained. The pH value of the gel should be approximately 7.0-7.5.

SOURCE: Angus Chemical Co.: Angus Product Formulary: Suggested Formulation PF-0189E

Pre-shave Lotion

Slightly yellow, clear, low viscosity.

Material/CTFA-Index:

A: Ethanol/Alcohol (Cosmetic grade)	75.00%
B: Belsil DMC 6031/Dimethicone Copolyol	4.00
Adol 66/Isostearyl Alcohol	2.50
Isopropyl Myristate	5.00
Rewolan AWS/PEG-75 Lanolin oil	2.50
C: Water	11.00

Mix B into A stirring lightly. Add C stirring lightly. Stir until a clear solution is formed.

Temperature stability: at 45C over 10 weeks.

IV Perfume	1.0

Preparation:

Melt I at 80C on the water bath, dissolve II in III and heat to 80C. Stir this solution slowly into I (saponification). The stirring process lasts at least 0.5 h at a temperature of 80C. Melt IV at 80C and gradually add it to the mixture. After cooling to 50C, V is reduced to approx. 40C and also stirred. VI is added at a temperature of 30C. The lost water is finally replaced. The shaving cream is mechanically homogenized once. The process is repeated after 24 h, after which packaging takes place.

Note: Max. pH 11

Formula No. D11-03

Section XI
Soaps and Hand Cleaners

Ajinomoto Solid Bar AI-KK

<u>Ingredients:</u>	<u>Weight%</u>
Sodium N-Cocoyl, Tallowyl-L-Glutamate (Amisoft GS-11)	42.00
Sodium cocoylisethionate	42.00
Cetyl alcohol	7.00
Titanium dioxide	0.10
EDTA disodium salt	0.10
Deionized water	8.80

Procedure:

1. Dissolve cetyl alcohol and deionized water at 80 degrees Centigrade with stirring.
2. Add titanium dioxide and EDTA disodium salt and disperse thoroughly.
3. Add small amount of GS-11 (3g per 100g of water) to the mixture to emulsify at 80 degrees C, cool with continued stirring.
4. Add the mixture from step 3 to GS-11 and Sodium cocoyl-isethionate and mingle thoroughly.
5. Mill the mixture on a roller mill and then convert into a bar through an extruder.
6. Mold the bar in a stamping machine.

Ajinomoto Clear Soap with Amisoft

Anti-Bacterial Handsoap
(Formula 91-1007)

	<u>% By Weight</u>
Rhodacal A246LX	10.0
Rhodapon L-22HNC	25.0
Mirataine CBS	3.5
Cheelox 100 (Dow)	0.2
Propylene Glycol	1.0
Alkamide LE	0.5
Ottasept Extra (Ferro)	1.0
Citric Acid	Q.S. to pH 5.5-6.5
Fragrance, Dye(s), Preservative	Q.S.
Sodium Chloride	0.05-0.50
Water	58.5

Blending Procedure:

Charge water into mixing vessel and slowly blend in Rhodacal A246LX, Rhodapon L-22HNC, Mirataine CBS, and Cheelox 100. Mix until completely uniform. In a separate mixing vessel, combine Propylene Glycol, Alkamide LE and Ottasept Extra. With gentle heat, mix until uniform. With smooth agitation, slowly blend this mixture into main system. Once system is uniform, adjust pH to 5.5-6.5 with Citric Acid as needed and then blend in compatible Fragrance, Dye(s), and Preservative. Adjust the formulation viscosity to 7,000-10,000 cps with the judicious addition of Sodium Chloride as needed.

Typical Formulation Properties:

Appearance @ 25C:	Clear, Viscous Liquid
% Non Volatiles:	15-17
pH:	5.5-6.5
Viscosity @ 25C:	7,000-10,000 cps
Active Ingredient:	Chloroxylenol

Emollient Hand Cleaner

(Formula 91-1006)

"Cold Process Formula"

	<u>% by Weight</u>
Rhodapon L-22HNC	35.0
Mirapol 550	0.5
Mirasheen 202	8.0
Fragrance, Dye(s), Preservative	Q.S.
Citric Acid	Q.S. to pH 5.5-6.5
Sodium Chloride	0.2-1.0
Water	56.0

Blending Procedure: Charge water into mixing vessel. With smooth agitation, slowly blend in Rhodapon L-22HNC and Mirapol 550. Mix until completely uniform. With smooth agitation, slowly blend in Mirasheen 202. Mix until uniform. Add compatible Fragrance, Dye(s), and Preservative. Adjust formulation pH to 5.5-6.5 with Citric Acid as needed. Adjust formulation viscosity to 4,000-6,000 cps (No. 4 spindle @ 10 RPM) with the judicious addition of Sodium Chloride as needed.

Typical Formulation Properties:

Appearance @ 25C:	Opaque/Pearlescent Liquid
pH:	5.5-6.5
% Non Volatiles:	13-15

Conditioning Cleansing Bar
(Formula 91-1104)

This combo bar combines the cleaning and foaming of a soap bar with the mildness and hard water compatibility of a synthetic detergent bar. Additionally, it incorporates the skin conditioning properties of quaternized guar. Use of this bar with its emollients, moisturizers and conditioners leaves the skin feeling soft and smooth. The bar has been specially formulated to give a non-alkaline pH to more nearly match the skin's natural pH.

	<u>% by Weight</u>
Step A:	
Geroon AS-200	76.0
80/20 Bradpride Soap Base (Original Bradford Soap Works)	7.0
Stearic Acid, Triple Pressed	Q.S.
Nadex 360 (National Starch)	0.2
Jaguar C-162	1.0
Titanium Dioxide	0.2
Step B:	
Water	4.2
Sodium Chloride	0.5
Step C:	
Fragrance, Dye(s), Preservative	Q.S.

Blending Procedure:

- Step A:** Blend the dry components (Geroon AS-200, Soap Base, Stearic Acid, Nadex 360, Jaguar C-162, Titanium Dioxide) in a powder mixer.
- Step B:** Dissolve the Sodium Chloride and any other water soluble components in the water. Add uniformly to Step A to avoid wet spots.
- Step C:** Finally, add the fragrance evenly to Steps A and B.
- Step D:** When the batch has been uniformly mixed, mill and/or refine until batch is homogeneous. Extrude and stamp into bars.

Typical Formulation Properties:

Appearance:	Opaque Bar
pH (5% dispersion):	6.5-7.0

CTFA Identification: Sodium Cocoyl Isethionate, Stearic Acid, Sodium Tallowate, Water, Dextrin, Sodium Cocoate and/or Sodium Palm Kernalate, Hydroxypropyl Guar Hydroxypropyltrimonium Chloride, Sodium Chloride, Titanium Dioxide, Fragrance, Preservative, Dye(s).

Liquid Waterless Hand Cleaner

<u>Ingredients:</u>	<u>% by Weight</u>
A. Veegum	2.00
Water	73.00
B. Glycerin	4.00
Tergitol NP-10	3.00
AMP-Regular	0.50
C. Deodorized kerosene	10.00
Oleic acid	1.50
Arlacel 186	5.00
Clearlan	1.00
Preservative	q.s.

Procedure:

Slowly add Veegum to the water while agitating at maximum available shear. Continue mixing until smooth. Add B to A and heat to 50C. Add C to A/B. Mix until uniform. Add desired preservative.

Consistency: Pourable liquid

Suggested Packaging: Pump dispenser

Comments:

Veegum stabilizes and thickens this liquid emulsion. In this formulation, glycerin serves as a humectant while the lanolin helps prevent defatting of the skin.

Formulation PF-0125 suggested by R.T. Vanderbilt Co., Inc.

Synthetic Detergent (SYNDET) Cleansing Bar

This mild, synthetic detergent bar gently cleans and provides copious, luxurious lather, leaving a smooth after-feel on the skin. Veegum F, micronized Magnesium Aluminum Silicate, reduces softening of the bar in the soap dish after use. Vanseal LS, lauroyl sarcosine, when melted, acts as a solvent for the stearic acid and sodium cocoyl isethionate. Vanlube PCX, BHT is used as an antioxidant.

<u>Ingredient:</u>	<u>% by Weight*</u>
A: Vanseal LS, Lauroyl Sarcosine	32.63
Stearic Acid	32.64
Sodium Cocoyl Isethionate	32.63
B: Veegum F, Magnesium Aluminum Silicate	2.00
Vanlube PCX, BHT	0.10
Sodium Hydroxide Solution to pH 6.5	q.s.
Preservative, Dye, Fragrance	q.s.

*As Received Basis

Mixing Procedure:

Heat Vanseal LS to 50C. Add stearic acid and stir gently until the mixture is clear. Add sodium cocoyl isethionate and mix until smooth and uniform. Maintain the temperature between 50 and 60C. Add part B ingredients in the order shown, mixing each until smooth and uniform. Pour the mixture into warm (50C) soap molds and cool to room temperature.

Cream Hand Cleanser

	<u>Weight, %</u>
Mackanate LO-Special	78.0
Glycerine	5.0
Mackamide PKM	4.0
Mackernium 007	2.0
Mackstat DM	q.s.
Water, Fragrance qs to	100.0

Procedure:

1. Add Mackamide PKM and glycerine to Mackanate LO-Special and heat to 70C.
2. Blend until homogeneous.
3. Dissolve Mackernium 007 in remaining water and slowly add to product.
4. Blend until completely homogeneous.
5. Cool to 50C with mild agitation.
6. Add Mackstat DM, fragrance and cool with continuous agitation.

SOURCE: McIntyre Group Ltd.: Suggested Formulation

Waterless Hand Cleaner

<u>Ingredient:</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	62.45	Diluent
Tween 80 (1)	0.40	Surfactant
Glycerin	4.00	Humectant
Disodium EDTA	0.05	Chelating Agent
Part B:		
Odorless Mineral Spirits	30.00	Solvent
Finsolv TN (2)	1.00	Emollient
Acetulan (3)	0.50	Emollient
Pemulen TR-2 (4)	0.30	Emulsifier
Carbopol 954 (5)	0.20	Thickener
Part C:		
Triethanolamine, 99%	0.40	Neutralizing Agent
Part D:		
Germaben IIE (6)	0.70	Preservative
(1) Polysorbate 80 (ICI Americas)		
(2) C12-C15 Alcohols Benzoate (Finetex)		
(3) Cetyl Acetate (and) Acetylated Lanolin Alcohol (Amerchol)		
(4) Acrylates/C10-C30 Alkyl Acrylate Crosspolymer (BFGoodrich)		
(5) Carbomer (BFGoodrich)		
(6) Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben (Sutton Labs)		

Preparation Procedure:

- 1) Prepare Part A in a vessel which will contain the entire formulation.
- 2) Prepare Part B in a separate vessel. Pemulen and Carbopol should be slurried in this phase.
- 3) Add Part B to the Part A vessel. Mix for 15-20 minutes.
- 4) Add Part C and mix vigorously to produce a smooth product.
- 5) Mix Part D into emulsion. Cease agitation and fill containers.

Section XII
Sun Care Products

After Sun Lotion

White creamy lotion. Easily spread.

Material/CTFA-Index:

A: Mineral oil, low viscosity	5.00%
Stearic Acid	5.00
Cetyl Alcohol	1.50
B: Water	67.20
Allantoin/5-Ureido-hydantoin	0.50
Triethanolamine	0.80
C: Propylene Glycol	3.00
Belsil PDM 20/Phenyl Dimethicone	2.00
D: Belsil CM 1000/Cyclomethicone(a.) Dimethiconol	15.00
Preservatives, perfume, pigments	q.s.

Heat A and B to 65C. Add A to B with stirring. Add C and stir until cool, add D at approx. 30-40C.

Temperature stability: at 45C more than 10 weeks.

Formulation 606 AH

Sun Tan Cream

Soft, white cream, well absorbed.

Material/CTFA-Index:

A: Crodawachs GP 200/Stearyl Alcohol(a.) PEG Stearate	3.80%
Teginacid/Glyceryl Stearate(a.) Ceteareth-20	5.00
Belsil PDM 1000/Phenyl Dimethicone	3.50
Eusolex 6300	2.50
Eusolex 8020	1.50
B: Water	73.70
C: Belsil CM 1000/Cyclomethicone(a.) Dimethiconol	10.00
Preservatives, perfumes, pigments	q.s.

Heat A and B to 70C. Stir into B and add C.

Temperature stability: 3 weeks at 45C.

Formulation 578 AH

Sun Tan Oil

Colourless, clear, low viscosity

Material/CTFA-Index:

A: Belsil CM 025/Cyclomethicone	10.00%
Isopropyl Myristate	10.00
Mineral oil	77.00
Parsol MCX/Octyl Methoxycinnamate	3.00
Preservatives, pigments, fragrances	q.s.

Mix A, add Parsol MCX and mix.

Temperature stability: at 45C over 10 weeks.

Formulation 197 AH

Formula A VI/3016

After Sun Milk

<u>Ingredients:</u>	<u>Parts by Weight</u>
Part A-Oil Phase:	
Egg yolk extract (Tensami 8/09)	100.00
Refined avocado oil	20.00
Calendula extract	0.10
Tocopherol	0.10
Part B-Water Phase:	
Deionized water	SQF1000
Lecithin-xanthan gum (Tensami 1/05)	7.00
Calendula extract	20.00
270 Solarium HS	30.00
Amigel in aqueous solution at 2%	250.00
Part C:	
Isopropyl myristate	30.00
Carbomer 940 (Carbopol 940)	2.00
Part D:	
Bronopol	0.60
Myacide SP	0.50
Part E:	
Perfume	2.00

Procedure:

Prepare A and B phases (do not heat). Add phase A to phase B. While agitating, add phase C and then the ingredients of phase D one by one. Add phase E. Balance the pH around 6.5-7.0. Formulation PF-0275E suggested in Soap, Perfumery, Cosmetics; October, 1993 issue.

Moisturizing Hydrogel with B-Glucan

This product is used after exposure to the sun to regain the moisture lost by the skin. Healing and moisturizing are two of its unique properties which B-Glucan has on inflamed skin (sunburn). Bees milk places a protective barrier over the skin to prevent moisture loss.

<u>Ingredients:</u>	<u>% by Weight</u>
A. Carbomer 940, 2%	54.00
Glycosome	3.70
APT	3.50
Ginkgo extract	2.00
Aloe vera gel	5.00
Polyquaternary spearmint extract	4.00
Firming liposome	3.00
Phenonip	0.70
Tris Amino	3.20
B. Deionized water	13.40
Methylparaben	0.40
Disodium EDTA	0.08
C. B-Glucan, 70%	0.02
D. Bees milk	7.00

Procedure:

Add A under agitation. Heat B to 80C. At 80C, add C; mix well. Cool BC to 30C, add to A under agitation. Slowly add D to ABC; mixing until homogeneous.

Formulation PF-0326 suggested by Koster Keunen

Dry Touch Physical Sunscreen

This formula is not an emulsion but rather a suspension of several water-insoluble ingredients in water. Veegum Plus prevents these ingredients from settling and/or separating. The physical sunscreen used is micronized Titanium Dioxide. This formula also contains liposomes with a payload of the well-known moisturizing agents Sodium PCA and amino acids. A silicone oil dispersion is also included to enhance application properties. The formula contains no emulsifying agents.

<u>Ingredient:</u>	<u>% by wt.*</u>
A: Deionized Water	59.70
Veegum Plus (Magnesium Aluminum Silicate (and) Cellulose Gum)	1.50
Rhodigel (Xanthan Gum)	0.20
B: Glycerin (and) Titanium Dioxide**	28.60
C: Deionized Water (and) Phenyl Trimethicone (and) Cyclomethicone (and) Dimethiconol (and) Phospho- lipids (and) Phenoxyethanol (and) Methylparaben (and) Carbomer (and) Triethanolamine (and) Ethyl- paraben (and) Propylparaben (and) Butylparaben***	5.00
D: Preservative	q.s.
E: Deionized Water (and) Sodium PCA (and) Phospholipids (and) Phenoxyethanol (and) Tocopheryl Acetate (and) Xanthan Gum (and) Arginine (and) Lysine (and) Glycine (and) Methylparaben (and) Proline (and) Ethylparaben (and) Propylparaben (and) Butylparaben****	5.00

*As Received Basis

**TiO₂ Sperse GLY

***Satin Finish

****Moisturizing Liposomes

Mixing Procedure:

Weigh and dry blend the Veegum Plus and Rhodigel. Add the blend to the Part A water at room temperature, mixing with a propeller mixer at 1800 rpm. Continue mixing for 30 minutes. Add Part B and mix 10 minutes at 1800 rpm. Add Parts C and D to the batch in the order shown. Mix Part C for 10 minutes at 1800 rpm before adding Part D. Mix Part D 5 minutes at the same speed. Slow the mixer to 500 rpm and add Part E. Mix 5 minutes and package.

Product Characteristics:

Viscosity: 1300-1700 cps (Brookfield Model LVT, #3 @ 60 rpm)
pH: 7.5-7.8

High SPF Sunscreen Cream

<u>Ingredient:</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	73.37	Diluent
Glycerin	2.50	Humectant
Disodium EDTA	0.03	Chelating Agent
Part B:		
Octyl Methoxy Cinnamate	7.50	UVB Absorber
Octyl Salicylate	5.00	UVB Absorber
Oxybenzone	5.00	UVA Absorber
C12-C15 Alcohols Benzoate (1)	4.00	Emollient/Solvent
Sorbitan Oleate	0.30	Surfactant
Pemulen TR-1 (2)	0.30	Emulsifier
Carbopol 980 (3)	0.50	Thickener
Part C:		
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben (4)	0.80	Preservative
Part D:		
Triethanolamine (99%)	0.70	Neutralizing Agent

(1) Finsolv TN (Finetex)

(2) Acrylates/C10-C30 Alkyl Acrylate Crosspolymer (BFGoodrich)

(3) Carbomer (BFGoodrich)

(4) Germaben IIE (Sutton)

Preparation:

1. Combine Part A ingredients. Mix until homogeneous.
2. Combine first five Part B ingredients in a separate vessel. Mix until oxybenzone has dissolved. Warming will hasten dissolution.
3. Add Pemulen TR-1 and Carbopol 980 to Part B vessel. Mix to break-up any soft agglomerates of powder.
4. With moderate agitation, add Part B to Part A. Mix for 30-40 minutes or until a smooth, non-grainy dispersion is apparent. Add Part C.
5. Add Part D and mix vigorously until a smooth, lustrous product is obtained.

Nourishing UVB Gel Sunscreen

Basic gelled formulation with aqueous UVB sunscreens. Skin nourishment and anti-irritancy.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Acritamer 940 (Carbomer 940)	1.00	Gelling Agent
2. Distilled/Deionized Water	74.90	----
3. Ritapan D (d-Panthenol)	0.20	Conditioner
4. DEA Methoxy Cinnamate	3.00	Sunscreen
5. SD Alcohol (Ethanol @ 95%)	10.00	Solvent/ Solubilizer
6. Ritachol (Mineral Oil and Lanolin Alcohol)	8.00	Emollient
7. Pationic ISL (Sodium Isostearoyl Lactylate)	0.50	Solubilizer
8. Preservative	q.s.	Preservative
9. Fragrance	q.s.	Odor
10. NaOH (18% Soln.)	2.40	Neutralizer

Compounding Procedure:

Prepare Carbomer gel by dispersing item 1 into item 2 with agitation. Neutralize with item 10. Separately combine items 3, 4 and 5 and mix until dissolved and uniform. Add to Carbomer gel with low shear mixing, then add item 6. Solubilize fragrance (9) with (7), add to Carbomer gel. Preserve and package. Ref. No. 118-152

Bain de Soleil Type Orange Gelee'

Broad spectrum UV protection in a non-greasy waterproof gel type formula based on Ritaplast. Product has high body gloss.

<u>Ingredients:</u>	<u>%W/W</u>	<u>Function</u>
1. Ritaplast - 50W	68.00	Film Former
2. Rita IPM (Isopropyl Myristate)	28.00	Emollient
3. Propylparaben	0.08	Preservative
4. Menthyl Anthranilate	2.92	Sunscreen
5. Ritaphenone-3 (Benzophenone-3)	1.00	Sunscreen

Compounding Procedure:

Dissolve item 3 into a portion of item 1. Dilute item 2 into remaining item 1. Add likewise items 4 and 5 with mild stirring. Add blend 3/1, until uniform, and package.

Sprayable Sunscreen

This light sunscreen applies quickly and spreads easily. It gives an approximate waterproof SPF of 15.

<u>Ingredient (CTFA):</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	79.20	Diluent
Glycerin	3.00	Humectant
Triethanolamine, 99%	0.12	Neutralizing Agent
Part B:		
Octyl Methoxy Cinnamate	7.00	UVB Absorber
Octyl Salicylate	3.00	UVB Absorber
Oxybenzone	2.00	UVA Absorber
C12-15 Alcohols Benzoate (1)	4.00	Emollient/Solvent
Oleth-10 (2)	0.08	P.S. Reduction
Sorbitan Oleate (3)	0.05	P.S. Reduction
Dimethicone, 100 cs.	0.50	Lubricant
Pemulen TR-2 (4)	0.15	Emulsifier/ Stabilizer
Part C:		
Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben (5)	0.80	Preservative
Disodium EDTA	0.10	Chelating Agent/ Viscosity Adjustment

- (1) Finsolv TN (Finetex)
 (2) Procol OA-10 (Protameen Chemicals), Brij 96 (ICI)
 (3) Protachem SMO (Protameen Chemicals), Span 80 (ICI)
 (4) Acrylates/C10-30 Alkyl Acrylate Crosspolymer (BFGoodrich)
 (5) Germaben IIE (Sutton Laboratories)

Preparation:

1. Combine Part A ingredients in a vessel which will contain the entire formulation.
2. In a separate vessel, combine all Part B ingredients except dimethicone and Pemulen. Heat to 45-50C to hasten dissolution of oxybenzone. Discontinue heating and add Pemulen. Mix to obtain a smooth dispersion. Add dimethicone.
3. Add Part B to Part A with rapid agitation. Continue mixing to obtain a smooth emulsion.
4. Add Part C. Disodium EDTA should be added incrementally such that a Brookfield viscosity of 500-1000 cps is achieved (Model RVT @ 20 RPM, #2 spindle).

Sprayer: Calmar Mark II

SOURCE: BF Goodrich Co.: Formula P0012

Sprayable Sunscreen (SPF8)

<u>Ingredient:</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Deionized Water	84.20	Diluent
Glycerin	2.00	Humectant
Hydrogenated Starch Hydrolysate (70% Solution)	1.50	Humectant
Part B:		
Octyl Methoxy Cinnamate	4.50	UVB Absorber
Menthyl Anthranilate (1)	3.50	UVA Absorber
C12-C15 Alcohols Benzoate (2)	3.00	Emollient
Pemulen TR-2 (3)	0.15	Emulsifier
Sorbitan Oleate	0.10	Surfactant
Part C:		
Triethanolamine (99%)	0.12	Neutralizing Agent
Part D:		
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben (4)	0.90	Preservative
Disodium EDTA	0.03	Chelating Agent
(1) Sunarome UVA (Felton)		
(2) Finsolv TN (Finetex)		
(3) Acrylates/C10-C30 Alkyl Acrylate Crosspolymer (BF Goodrich)		
(4) Germaben IIE (Sutton)		

Preparation:

1. Combine Part A ingredients. Mix until homogeneous.
2. Combine Part B ingredients in a separate vessel. Mix well to ensure blending of oils and break-up of soft powder lumps.
3. With mixing, add Part B to Part A. Mix 20-40 minutes or until a smooth dispersion is apparent.
4. Add triethanolamine (Part C) to the emulsion. Mix vigorously to thicken and reduce oil droplet particle size.
5. When emulsion is smooth and opaque, add Part D. Mix for 5-10 minutes. Part D ingredients will dissolve and thin the emulsion to a sprayable viscosity.

Formula 700-213-6C

SOURCE: BF Goodrich Co.: Waterproof Sunscreen Emulsions

Sprayable Sunscreen

<u>Ingredients:</u>	<u>% by Weight</u>
Part A:	
Deionized Water	69.90
Propylene Glycol	5.00
AMP-95	0.15
Germaben II-E	0.70
Part B:	
Finsolv TN	5.00
Butyl Stearate	3.00
Sorbitan Oleate	0.20
Polysorbate 80	0.10
Pemulen TR-2	0.20
Part C:	
Tioveil OP	15.00
Capmul 10G-10-0	0.50
Part D:	
Disodium EDTA	0.10
Sodium Chloride	0.15

Combine Part A ingredients in the mixing vessel at room temperature. Separately combine Part B ingredients, dispersing Pemulen completely. Add Part B to Part A with rapid agitation. Separately combine Part C, then slowly add to the Part A/B emulsion with moderate agitation. Add Part D with moderate agitation to lower lotion viscosity.

Waterproof Sunscreen (SPF 12)

This smooth lotion contains no "chemical" absorbers and delivers uniform, non-chalky protection. Pemulen TR-1 ensures high stability and allows easy spreading of the lotion.

<u>Ingredients:</u>	<u>% by Weight</u>
Part A:	
Deionized water	67.80
Propylene Glycol	5.00
Benece1 MP943PR	0.10
AMP-95	0.25
Disodium EDTA	0.05
Germaben II-E	0.30
Part B:	
Finsolv TN	3.00
Ceraphyl 424	4.00
Butyl Stearate	3.00
Sorbitan Oleate	0.10
Pemulen TR-1	0.20
Carbopol 2984	0.20
Part C:	
Tioveil OP	15.00
Capmul 10G-10-0	0.20

Combine Part A ingredients in a vessel which will contain the entire formulation. Heat to 50C. In a separate vessel, combine Part B ingredients. Heat to 50C. Using rapid agitation, add Part B to Part A. Mix to form a smooth, viscous emulsion. Using moderate agitation, slowly add Part C to the emulsion. Slowly cool lotion using continued moderate agitation.

(2) Drakeol 19 (Penreco)

(3) (Amerchol)

(4) Acrylates/C10-30 Alkyl Acrylate Crosspolymer (BFGoodrich)

(5) Tioveil OP (Tioxide Chemicals)

(6) Capmul 10G-10-0 (Karlshamns)

Preparation Procedure:

1. Combine Part A ingredients in the mixing vessel at room temperature.
2. Separately combine Part B ingredients, dispersing Pemulen completely.
3. Add Part B to Part A with rapid agitation.
4. Separately combine Part C, then slowly add to the Part A/B emulsion with moderate agitation.
5. Rapidly agitate (2000 rpm) with a marine-type blade for 20 minutes.
6. Add Part D with moderate agitation to lower lotion viscosity.

Sun Block Lotion
(Formula 92-0511)

	<u>% By Weight</u>
<u>Part A:</u>	
D.I. Water	70.40
Glycerin	4.65
Veegum F	1.50
Rhodigel EZ	0.15
<u>Part B:</u>	
Mirasil DM300	2.95
Cetyl Alcohol NF	3.10
Dermalcare GMS/SE	3.00
Isopropyl Myristate	3.25
<u>Part C:</u>	
Octyl Dimethyl PABA	7.00
Syntase 62	3.00
<u>Part D:</u>	
Fragrance, Dye(s), Preservative	Q.S.

Blending Procedure Step 1 (Part A):

Charge water into mixing vessel and add glycerin with mixing. Preblend Veegum F and Rhodigel EZ and, with good agitation, slowly sift this blend into the water/glycerin solution. Mix until smooth with no particles apparent, then begin heating to 70C.

Step 2 (Part B):

Charge Part B components into a vessel and heat with gentle mixing to 70-75C, being sure all components are melted.

Step 3:

When both parts are at 70C, add Part B to Part A, with good mixing, and mix fifteen minutes at 70C. After emulsion is homogeneous, begin cooling with moderate agitation.

Step 4 (Part C):

Premix the two components of Part C, heating very gently if necessary, to obtain a clear solution.

Step 5:

When product reaches 55C, add Part C and continue to cool, with agitation.

Step 6:

At 40C, add remainder of components and cool, with agitation, to 25C.

Typical Formulation Properties

Appearance at 25C	Lt. yellow/beige lotion
pH (10%)	7.3
Viscosity at 25C (RVT #5 @ 20 rpm)	14,000 cps

CTFA Identification

Water, glycerin, isopropyl myristate, cetyl alcohol, glyceryl stearate SE, dimethicone, magnesium aluminum silicate, xanthan gum.

Active ingredients: Padimate O, Oxybenzone

SOURCE: Rhone-Poulenc Surfactants & Specialties: Formula 92-0511

Suncare Product with Titanium Dioxide

<u>Ingredients:</u>	<u>% by Weight</u>
A. Crodamol PMP	2.00
Crodamol W	3.00
Fluilan	2.00
Crodacol S-95	0.25
Crill 3	0.75
Crodarom Nuto O	2.50
Crodarom Rhatania O	2.50
B. Deionized water	72.55
Carbomer 2984	0.20
Acrylates/C10-30 Alkyl Acetate Cross Polymer	0.20
Crodesta F-160	1.50
Glycerin	5.00
Na2EDTA	0.05
C. AMP-95	0.25
Water (and) Titanium Dioxide	6.25
D. Propylene Glycol (and) Diazolidinyl Urea (and)	
Methyl Paraben (and) Propyl Paraben	1.00

Dissolve the Na2EDTA of part B in deionized water. Disperse Carbomer 2984 and Pemulen TR-1 into the water of Part B. Disperse Crodesta F-160 in glycerin, then add to the Carbomer/Pemulen dispersion with good mixing. Heat Part B to 75-80C. Combine ingredients of Part A with good mixing and heat to 75-80C. Add Part A to Part B with good mixing. Neutralize with the AMP-95 of Part C and stir until uniform. Slowly add Tioveil AQ with continuing stirring. Cool to 40C and add Part D. Cool to desired fill temperature. Formulation PF-0321 suggested by Croda

Titanium Dioxide Based Waterproof Sunscreen

This smooth lotion contains no "chemical" absorbers and delivers uniform, non-chalky protection. Pemulen TR-1 ensures high stability and allows easy spreading of the lotion. SPF=12.

<u>Ingredients:</u>	<u>% by Weight</u>
A. Deionized water	67.80
Propylene Glycol	5.00
Hydroxypropyl Methylcellulose	0.10
AMP-95	0.25
Disodium EDTA	0.05
Propylene Glycol (and) Diazolidinyl Urea (and)	
Methylparaben (and) Propylparaben	0.30
B. C12-15 Alcohols Benzoate	3.00
Butyl Stearate	3.00
Myristyl Myristate	4.00
Sorbitan Oleate	0.10
Pemulen TR-1	0.20
Carbopol 2984	0.20
C. Octyl Palmitate (and) Titanium Dioxide	15.00
Polyglyceryl-10 Decaoleate	1.00

1. Combine Part A ingredients in a vessel which will contain the entire formulation. Heat to 50C. 2. In a separate vessel, combine Part B ingredients. Heat to 50C. 3. Using rapid agitation, add Part B to Part A. Mix to form a smooth, viscous emulsion. 4. Using moderate agitation, slowly add Part C to the emulsion. Slowly cool lotion using continued moderate agitation.

Sun Protection Gel, Approx. SPF8

An effective sun protection gel especially for sensitive and allergic skin.

<u>Ingredients:</u>	<u>% by Weight</u>
Part A:	
Water	60.60
Part B:	
Carbomer 980 (Carbopol 980)	1.20
Part C:	
Ethanol, 98% denatured	5.00
Benzophenone-4 (Uvinul MS 40)	3.00
Part D:	
2-Phenylbenzimidazol-5-sulfonic acid (Eusolex 232)	3.00
Tris(hydroxymethyl)aminomethane (Tris Amino)	4.00
Water	20.00
Tetrasodium EDTA (Trilon B liquid)	0.30
Imidazolidinyl urea (and) triethylene glycol (and) methylparaben (and) propylparaben (and) dehydroacetic acid (Neo-Dracoco Liquid)	0.40
Aloe vera gel concentrate, 10/1	0.50
d-Panthenol	0.50
Part E:	
Fragrance	0.20
Bisabolol (Dragosantol)	0.10
Emulsifier	1.20

Procedure:

Dissolve B in A using an ultra-turrax stirrer. Add C. Blend D and E; add to ABC. The pH-value is 6.8. The pH should not be over 7 or product could have a strong yellow color. Formulation PF-0271E suggested by Dragoco

Waterproof Aerosol Sunscreen (SPF10)

<u>Ingredients:</u>	<u>% by Weight</u>
SD Alcohol 40	43.65
AMP-95	0.35
Dermacryl	2.00
Deionized water	9.00
Octyl Methoxycinnamate	7.50
Menthyl Anthranilate	4.00
Cyclomethicone	3.00
Tocopheryl Acetate	0.50
Dimethyl Ether	30.00

Procedure:

Combine SD alcohol 40 with AMP-95. With good agitation, slowly sift in Dermacryl-79. Mix until complete. Add rest except Dimethyl ether. Continue mixing until complete. Filter, fill and charge with dimethyl ether.

Formulation PF-0318 suggested by National Starch and Chemical

These formulations give non-greasy, soft consistency, moisturising O/W creams with effective UV Protection. The first seven components are heated together to 85C. Component nine is added to the water and this mixture is also heated to 85C at which point component eight is stirred in and neutralized. The oil phase is then mixed into the water phase and dispersed. Component ten can be incorporated whilst the temperature is still high. Mixing should continue down to about 35C.

12 Water to	100.0

This formulation gives a pale brown, high viscosity, medium weight O/W lotion which has a soothing, astringent effect on skin.

The first seven components are heated together to 85C. Component eight is then dispersed in the hot molten oil. The water is also heated to 85C. The oil phase is then mixed into the water phase and dispersed.

Mixing should continue down to about 35C at which point the remaining ingredients can be incorporated.

Myristyl Myristate	4.00
Sorbitan Oleate	0.10
Pemulen TR-1	0.20
Carbopol Ultrez 10	0.20
C. Propylene Glycol (and) Diazolidinyl Urea (and)	
Methylparaben (and) Propylparaben	1.00
D. Octyl Palmitate (and) Titanium Dioxide	15.00
Polyglyceryl-10 Decaoleate	1.00

Properties:

pH: 6.2-6.8

Viscosity* (cPs): 32,000-38,000

Color, odor, appearance: White, thick, creamy emulsion

*Brookfield RVT @ 20rpm, 25C, #6 spindle

Procedure:

1. Combine Part A ingredients in a vessel which will contain the entire formulation. Heat to 50C.
2. In a separate vessel, combine first four Part B ingredients. After mixture is uniform, disperse resins. Mix until uniform.
3. Using rapid agitation, add Part B to Part A. Mix to form a smooth, viscous emulsion.
4. Combine Part D ingredients and mix well.
5. Add Part C to batch.
6. Using moderate agitation, slowly add Part D to the emulsion. Slowly cool lotion using continued moderate agitation.

Transparent Sun-Block Cream

<u>Ingredient:</u>	<u>%W/W</u>
1 Monomuls 90-0 18	2.0
2 Lameform TGI	4.0
3 Cetiol A	10.0
4 Sipo1 1618 C50	1.0
5 Beeswax	3.0
6 Zinc stearate	2.0
7 Tioveil TG	10.0
8 Magnesium sulphate	1.0
9 Glycerine	3.0
10 Preservative	q.s.
11 Water	to 100.0

This formulation gives quite a heavy W/O cream with good emollience and high UV Protection (SPF approx. 12).

The first seven components are melted together at about 85C. Components 8 and 9 are dissolved in the water and this mixture is then heated to the same temperature as the oil phase. The water phase is then added to the oil phase and dispersed. Mixing should continue down to about 35C. The product must then be homogenised using, for example, a Triple Roll Mill.
Formula TS 475

W/O SPF20 Sunscreen with Eldew

<u>Ingredients/Trade Name:</u>	<u>% by Weight</u>
Part A:	
Stearic Acid Triple Pressed	4.00
Cetyl Alcohol	1.00
DEA-Cetyl Phosphate/Amphisol	2.00
Dimethicone (and) Trimethylsiloxysilicate/Dow Corning 593	5.00
Octyl Methoxycinnamate/Parsol MCX	7.50
Benzophenone-3/Uvinul M-40	6.00
Octyl Salicylate/Uvinul 0-18	5.00
Octyldodecyl Neopentanoate/Elfac I-205	5.00
Methylparaben (and) Butylparaben (and) Ethylparaben (and) Propylparaben/Nipastat	0.20
Di (chloesteryl, behenyl, octyldodecyl) N-Lauroyl-L-Glutamic Acid ester/Eldew CL-301	5.00
Part B:	
Deionized Water	57.75
Sodium Carbomer/PNC 400	0.25
Part C:	
Diazolidinyl Urea/Germall II	0.30
Deionized Water	1.00

Combine Part A and heat to 75 degrees Centigrade with mixing. Heat deionized water of Part B to 75 degrees C. Disperse PNC 400 into the water with high shear mixing until uniform gel is formed. Add part A to part B with mixing. Hold at 75 degrees for 15 minutes. Cool to 40 degrees C and add premixed part C with continuous mixing. Cool to 30 degrees C.

Appearance: White, smooth, shiny cream

pH: 6.00 to 6.50

Viscosity: 60,000-80,000 cps (RVT #6 @ 10 rpm @ 25 degrees C)

Sunscreen Lip Balm with Eldew

Clear Golden Hydrogel

<u>Ingredients:</u>	<u>% by Weight</u>
A. Water (Distilled)	86.98
EDTA Disodium	0.10
Cellosize PCG-10	1.50
B. Dow Corning 193	3.00
C. Suttocide A	0.70
Pronalen Fruit Acids AHA-20	4.00
AMP-95	0.60
Extrapone Bamboo Timiron Sungold	3.00
Sparkle MP-29	0.02
Perf. Rain Forest	0.10

Note: Maintain pH close to 5.50 (not over), correct with AMP, if necessary.

Description:

Product is mild due to action of Dow Corning 193 which provides smmoth feel on the skin.

Procedure:

1. Put water in the tank, add EDTA, mix and start heating.
2. Sprinkle Cellosize on top and heat the mixture up to 75C.
3. Then start cooling the mixture and add DC 193.
4. Gel will be formed on cooling.
5. When temperature is below 50C, add Suttocide and mix and after that add AHA slowly.
6. The addition of AHA will break the gel and then addition of AMP-95 will help to reform it.
7. Premix pigment with plant extract and add slowly, and after that perfume.
8. Stop mixing at 25C, take sample for QA and when approved pack the product.

Formulation PF-0309 suggested by Dow Corning

Glycerol Gel Base

Other ingredients may be incorporated as desired.

<u>Ingredients:</u>	<u>% by Weight</u>
Water, deionized	9.00
Stabileze 06	0.50
AMP-95	0.50
Glycerine	89.70
Additives	q.s.
Germall II	0.30

Procedure:

Disperse Stabileze in water with stirring for 10 minutes. Heat the dispersion to 70-80C for 15 to 20 minutes, until thickening occurs. Start cooling. Add AMP with stirring. Mix until uniform. Add glycerine slowly over 10 minutes with stirring. Stir until uniform gel is obtained. Add remaining ingredients, mixing thoroughly after each addition.

Dentifrice Gel

Dentifrice gel with anti-caries active sodium monofluorophosphate (Sodium MFP).

<u>Ingredient:</u>	<u>Weight%</u>	<u>Function</u>
Part A:		
Glycerin	22.00	Humectant
Carbopol 1382 (1)	0.50	Gelling Agent
Part B:		
Deionized Water	24.43	Diluent
Tetrasodium Pyrophosphate	0.25	Chelant
Sodium Saccharine	0.20	Sweetener
Sodium Benzoate	0.50	Preservative
Sodium MFP	0.76	Active
Part C:		
Sodium Hydroxide (50%)	0.40	Neutralizer
Part D:		
Dicalcium Phosphate, Dihydrate	48.76	Abrasive
Part E:		
Sodium Lauryl Sulfate (2)	1.20	Surfactant
Flavor	1.00	

(1) Carbomer (BFGoodrich)

(2) Texapol LS 100F (Henkel)

Preparation Procedure:

1. In a stainless steel vacuum mixer tank at ambient temperature and pressure, slowly add Carbopol to glycerin with rapid agitation.
2. In separate vessel combine Part B with moderate agitation until a clear solution is formed, then combine with Part A with moderate agitation.
3. Add Part C to Parts A and B with moderate agitation.
4. Add Part D with slow mixing until powder is wetted.
5. Turn on vacuum and mix at moderate speed 30 minutes, introduce Part E. Mix 5-7 minutes at very slow speed.

II Dehydazol A400P	0.6
III Sorbitol (70%)	68.0
IV Sident 12 DS	16.0
Aerosil 200	2.0
V Eumulgin SML 20	0.4
Eumulgin SMS 20	0.8
Toothpaste aroma	1.0
VI Texapon K12	1.0
Water	3.5
Coloring agent E 131 1%	0.5

Preparation:

Dissolve the sodium hydroxide in water. Add sorbitol and allow to swell with Dehydazol A400P, stirring slowly. When swelling is complete (any lumps must be destroyed) add Sident 12 DS and Aerosil 200 and stir you have a homogeneous paste. The aroma is solubilized in Eumulgin SML 20/SMS 20 in a separate vessel before being added to the paste. The coloring agent and the Texapon K12 are dissolved in water and stirred in carefully (keep foam formation to a minimum). De-aerate for max. 1/2 hour in a strong vacuum. (Vacuum <650 Pa.)

Formula No. K11-11

SOURCE: Henkel KGaA: Cosmetic Model Formulae

ToothpasteMaterial/CTFA-Index:

Tylose CB 200/Sodium Carboxymethyl Cellulose	1.20%
Water	31.80
HDK N 20 P/Silica	2.00
Glycerine	10.00
Sorbitol 70%ig/Sorbitol	10.00
Calcium Carbonate	40.00
Texapon K 1296/Sodium Lauryl Sulfate	5.00
Preservatives, flavours, pigments	q.s.

Disperse Tylose well in water and let swell. Add HDK and disperse well, mix in glycerine and Sorbitol. Stir in calcium carbonate. Add Texapon K 1296 carefully; avoid strong foaming. Evacuate the finished formulation for a short period.
Formulation 250 AH

Toothpaste, TransparentMaterial/CTFA-Index:

Tylose CB 200/Sodium Carboxymethyl Cellulose	0.50%
Water	19.00
Polyethylenglykol 400/PEG-8	4.30
Sorbitol 70%ig/Sorbitol	17.00
Glycerine	50.00
HDK N20P/Silica	5.70
Texapon K 1296/Sodium Lauryl Sulfate	2.50
Preservatives, flavours, pigments	q.s.

Add Tylose and HDK to the water whilst string. Stir in PEG-8. Add Texapon K1296 carefully; avoid strong foaming. Evacuate the finished formulation for a short period.
Formulation 252 AH

ToothpasteMaterial/CTFA-Index

A: Water	37.60%

Water-Resistant Sport Tint

Veegum Ultra, and Rhodigel provide emulsion stabilization, viscosity enhancement, and pigment suspension in this luxurious, water-resistant, cold processed, liquid makeup. A dual sunscreen system (octyl methoxycinnamate and titanium dioxide) provides protection from UV radiation for the active sportswoman.

<u>Ingredient:</u>	<u>% by Wt.*</u>
A: Veegum Ultra (Magnesium Aluminum Silicate)	1.60
Rhodigel (Xanthan Gum)	0.40
Deionized Water	70.40
Propylene Glycol	5.00
B: Iron Oxides	0.67
Manganese Violet	0.10
Talc	4.27
Titanium Dioxide	6.96
C: Isocetyl Alcohol	3.00
Octyl Methoxycinnamate	3.00
Mineral Oil (and) Lanolin Alcohol**	2.00
Oleth-3 Phosphate***	2.20
D: PVP****	0.40
Preservative, Fragrance	q.s.

* As Received Basis

** Ritachol, R.I.T.A. Corp.

*** Crodafos N-3 Neutral

**** PVP K-90

Procedure:

Dry blend Veegum Ultra and Rhodigel and add to the water while mixing with a high speed disperser at 1700 rpm for 25 minutes. Adjust mixer to 850 rpm and add the propylene glycol. Blend B ingredients thoroughly and grind if necessary. Slowly add B to A until all is added, mixing until smooth and uniform. Mix together C ingredients with a propeller stirrer. Add C to (A and B) and mix until homogeneous. Add D ingredients in order, mixing until smooth and uniform.

Product Characteristics:

Viscosity: 1800-2400 cps*****

pH: 6.1+0.2

*****Measured after 28 days aging at room temperature using Brookfield Viscometer, Model LV, Spindle #4 at 60 rpm.

Preface

This book contains 652 cosmetic and toiletry formulations, based on information received from numerous industrial companies and other organizations. This is Volume 6 of the Second Edition of this work; Volume 1 was published in 1989, Volume 2 in 1992, Volume 3 in early 1995, Volume 4 in late 1995 and Volume 5 in 1996. There are no duplications in any of these volumes.

The data represent selections from manufacturers' descriptions made at no cost to, nor influence from, the makers or distributors of these materials. Only the most recent formulas have been included. It is believed that all of the trademarked raw materials listed are currently available, which will be of interest to readers concerned with raw material discontinuances. The 1996 market for cosmetic raw materials is estimated at \$2 billion.

Each formulation in the book is identified by a description of end use. The formulations include the following as available, in the manufacturer's own words: a listing of each raw material contained; the percent by weight of each raw material; suggested formulation procedure; and the formula source, which is the company or organization that supplied the formula. The book is divided into the following 12 sections, with the number of formulations indicated in ().

- I. Antiperspirants and Deodorants (2)
- II. Baby Products (18)

- XI. Sun Care Products (60)
- XII. Miscellaneous (8)

Each formula is indexed in the section which is most applicable. The reader seeking a formula for a specific end use should check each section which could possibly apply.

In addition to the above, there are two other sections that will be helpful to the reader:

XIII. Trade-Named Raw Materials. Each raw material is listed with a brief chemical description and the name of the raw material supplier.

XIV. Suppliers' Addresses. Addresses of suppliers of trade-named raw materials and/or formulations, some of which are not available in the usual reference books.

It should be noted that some formulations in the book are translations. The manufacturer's exact wording has been used in these cases. Occasionally different companies have listed the same raw material differently; it is hoped that the reader will be able to identify the same or similar raw materials by consulting the Trade-Named Raw Materials section.

The table of contents of the book is organized in such a way as to serve as a subject index.

My fullest appreciation is expressed to the companies and organizations which supplied the information included in this book.

September 1997

Ernest W. Flick

NOTICE

To the best of our knowledge the information in this publication is accurate; however, the Publisher does not assume any responsibility or liability for the accuracy or completeness of, or consequences arising from, such information. This book does not purport to contain detailed user instruction, and by its range and scope could not possibly do so. Mention of trade names or commercial products does not constitute endorsement or recommendation for use by the Author or Publisher.

Cosmetic and toiletry raw materials could be toxic or cause allergies in some circumstances, and, therefore, due caution should always be exercised in the use of potentially hazardous materials and the manufacturing processes involved. Final determination of the suitability of any information or product for use contemplated by any user, and the manner of that use, is the sole responsibility of the user. We strongly recommend that users seek and adhere to a manufacturer's or supplier's current instructions for handling each material they use.

The author and Publisher have used their best efforts to include only the most recent data available. The reader is cautioned to consult the supplier in case of questions regarding current availability.

CONTENTS AND SUBJECT INDEX

SECTION I: ANTIPERSPIRANTS AND DEODORANTS	1
Solid Antiperspirant	2
Anti Perspirant Stick	2
SECTION II: BABY PRODUCTS	3
Baby Conditioner	4
Spray-On Detangler for Children	4
Baby Cream	5
Conditioning Baby Lotion	5
Baby Lotion	6
Baby Oil	6
Baby Shampoo	7
Diaper Rash Lotion	9
Baby Skin Wash	10
Diaper Cream	10
Baby Wash	11
Foam Bath for Children	11
Economy Baby Lotion	12
Shampoo-Baby	13
Baby Shampoo with Olive Oil	13

Section I

**Antiperspirants and
Deodorants**

Solid Antiperspirant

Formulating Design and Advantages:

Illustrated in this formula is the gelling properties of Hexanediol Behenyl Beeswax in a silicone oil, producing an opaque stick which is creamy and spreads evenly.

<u>Formula:</u>	<u>Wt%</u>
Hexanediol Behenyl Beeswax (Koster Keunen)	12.0
Deodorized Orange Wax (Koster Keunen)	6.0
Kester Wax 82 (Koster Keunen)	8.0
Silicone Oil 556 (Dow)	36.0
Cetyl Stearyl Alcohol (P&G)	18.0
Aluminum Chlorohydrate (Reheis)	20.0

Procedure:

Melt and homogenize at 75C, cool and pour into container at 55C.

Adaptation of Formula and Its Influence on the Product:

Irgason DP-300 can be added to change this product to a deodorant/antiperspirant. Fragrances are easily added.

SOURCE: Koster Keunen, Inc.: A Guide to Natural Formulating

Anti Perspirant Stick

<u>Ingredient:</u>	<u>Wt%</u>
Volatile Silicone	44.50
Stearyl Alcohol	23.00
Oils of Aloha Kukui Nut Oil	5.00
Arlacel 165	2.00
Silica	0.50
Aluminum Chlorohydrate	25.00

Manufacturing Procedure:

Combine ingredients at 75C.

Stearyl alcohol is the hardening agent that make the stick.

The Silica serves as a stabilizer and the Oils of Aloha Kukui Nut oil serves two functions-reduces tackiness and reduces whitening on the skin.

Section II

Baby Products

Baby Conditioner
(Formula 86-0404M)

	<u>% by Weight</u>
Rhodaquat D261C/75	2.20
Cetyl Alcohol NF	1.70
Alkamuls PSML-80	0.15
Cellose QP 52,000 H	1.70
Citric Acid	Q.S. to pH 3.5-4.5
Fragrance, Dye(s), Preservative	0.10
Water	94.15

Blending Procedure:

Dissolve Citric Acid in water and heat to 30-35C. With vigorous agitation, lightly sift Cellose QP 52,000H into water. With smooth agitation, continue to heat system to 70-75C. With smooth agitation, slowly blend Rhodaquat D261C/75, Cetyl Alcohol NF, and Alkamuls PSML-80 into heated water system. Mix until completely uniform. With smooth agitation, cool system to 40C and blend in compatible Fragrance, Dye(s), and Preservative.

Typical Formulation Properties:

Appearance @ 25C: Viscous, Opaque Liquid
 Viscosity @ 25C: 16,000+ cps (No, 4 spindle @ 10 RPM)
 pH: 3.5-4.5
 % Non Volatiles: 5-6

Spray-On Detangler for Children
(Formula 88-708M)

	<u>% by Weight</u>
Rhodaquat D261C/75	1.0
Silicone 344 Fluid (Dow Corning)	0.5
Citric Acid	Q.S.
Fragrance, Dye(s), Preservative	Q.S.
Water	98.5

Blending Procedure:

Heat water to 70C. With rapid but smooth agitation, slowly blend in Rhodaquat D261C/75 and mix until uniform. With smooth agitation, cool system to 40-45C and blend in Silicone 344 Fluid. Once system is uniform, adjust formulation pH to 3.5-4.5 with Citric Acid as needed and add compatible Fragrance, Dye(s), and Preservative.

Use Directions: Dispense via pump or aerosol spray.

Typical Formulation Properties:

Appearance @ 25C: Thin Liquid
 pH: 3.5-4.5

Propylene Glycol Stearate	9.00
Stearic Acid	2.00
Carnation Mineral Oil (Witco)	8.00
Acetylated Lanolin Alcohol	1.00
Lanolin Oil	1.00
Cetyl Alcohol	0.50
Propylparaben	0.10
B:	
Tech-0 11-070 Ster-0-Pro (Beacon CMP)	2.00
C:	
Propylene Glycol	1.50
Triethanolamine (85%)	0.90
Methylparaben	0.20
Imidazolidinyl Urea	0.20

Procedure:

Weigh A and heat with stirring to 75C. In a separate container weigh B and mix until dispersed. Add C and heat to 75C with stirring. With both phases at 75C add B to A with good agitation, mix 10 minutes at this temperature, then cool with mixing to room temperature.

Conditioning Baby Lotion

<u>Formula:</u>	<u>% by Weight</u>
A:	
Carnation Mineral Oil (Witco)	10.00
Stearic Acid	5.00
Cetyl Alcohol	1.50
Propylparaben	0.15
Silicone 220 Fluid	4.00
Tech-0 11-075 Concentrated Oat Protein (Beacon CMP)	2.00
B:

Baby Lotion

<u>Stage Material:</u>	<u>Quantity</u>
Oil Phase:	
1 AEC Octyl Palmitate	2.000g
2 Dervacid 3155	3.000g
3 Cocoa Butter, Refined	1.000g
4 Lasemul 92 AE	2.500g
5 Lipovol PAL	3.000g
Aqueous Phase:	
6 Water; Pure	81.095g
7 Xanthan Gum	0.350g
8 Glycerine BP	1.000g
9 Triethanolamine 99%	0.700g
Preservative Mix:	
10 Nipastat	0.250g
11 Propylene Glycol USP	5.000g
Cooling Cycle:	
12 P. Cocoa butter AA 6780	0.100g
13 C.S. D&C Red 33; 1% Soln	0.005g

Mixing Instructions:

Weigh the items of the Oil Phase into a jacketed vessel and heat to 70/75C with occasional stirring. Meter out the water into the mixing vessel and start heating.

Disperse the Xanthan Gum and heat to 70/75C with continuous mixing.

Add the other items of the Aqueous Phase while heating and mix briefly with the Silverson to smooth the mixture. Remember to pre-mix the Propylene Glycol & Nipastat to aid solubility.

Add the Oils to the water with careful Silverson mixing and mix while cooling. When cool adjust pH, add perfume, match colour to Master Sample and give a final brief mix with the Silverson.

Baby Shampoo
(Formula 91-1004)

	% by Weight
Miracare MS-1	50.00
Fragrance and Dye(s)	Q.S.
Benzyl Alcohol	0.15
Dowicil 200 (Dow)	0.15
Citric Acid	Q.S. to pH 6.8-7.2
Water	49.70

Blending Procedure:

Charge water into mixing vessel and slowly blend in Miracare MS-1. Mix until completely uniform. With smooth agitation, slowly blend in compatible Fragrance and Dye(s). Mix until uniform. Slowly blend in Benzyl Alcohol, Dowicil 200, and Citric Acid as needed to adjust formulation pH to 6.8-7.2.

Typical Properties:

Appearance @ 25C: Clear Liquid

% Non-Volatiles: 19-21

pH: 6.8-7.2

Viscosity @ 25C: 800-2,000 cps

CTFA Identification:

Water, PEG-80 Sorbitan Laurate, Sodium Trideceth Sulfate, Disodium Lauroamphodiacetate, PEG-150 Distearate, Cocamidopropyl Hydroxysultaine, Sodium Laureth-13 Carboxylate, Citric Acid, Fragrance, Benzyl Alcohol, Quaternium-15, Dye(s).

Note: While the suggested Miracare MS-1 Baby Shampoo has been proven to be essentially non-irritating to the eyes, the addition of untested Fragrances, Dyes, and other additives can adversely affect the irritation potential of the resulting formula.

Baby Wash
(Formula 91-1113)

This ultra-mild skin cleanser formula is ideally suited for babies, children and anyone with sensitive skin. It gently cleans the skin and imparts an elegant, soft afterfeel. It can also be used as a mild bubble bath that is safe for children.

	<u>% By Weight</u>
Miranol BT	25.0
Geropon SBFA-30	10.0
Jaguar C-162	0.3
Citric Acid	Q.S.
Fragrance, Dye(s), Preservative	Q.S.
Water	64.7

Blending Procedure:

With vigorous agitation, disperse Jaguar C-162 in water. With smooth agitation, adjust formulation pH to 5-6 with Citric Acid as needed. With smooth agitation, blend in Miranol BT and Geropon SBFA-30. Mix until completely uniform. Adjust formulation pH to 6-7 with Citric Acid as needed and add compatible Fragrance, Dye(s) and Preservative.

Typical Formulation Properties:

Appearance @ 25C: Clear Liquid
 Viscosity @ 25C: 50-300 cps
 pH: 6-7
 % Non Volatiles: 13-14

Foam Bath for Children
(Formula 87-0508R)

	<u>% by Weight</u>
Rhodapex ES	6.2
Geropon SBFA-30	14.5

Economy Baby Lotion
(Formula 87-0901M)

Water Phase:	<u>% by Weight</u>
A) Methylparaben	0.15
Propylene Glycol	2.50
B) D.I. Water	90.97
C) Carbopol 934 (Goodrich)	0.15
D) Sodium Hydroxide (50% Aq. Solution)	0.13

Oil Phase:	
Dermalcare NI	1.50
Alkamuls MM/M	1.50
Alkamuls GMS	1.00
Stearic Acid TP	2.00
Propylparaben	0.10

Blending Procedure:**Water Phase:**

- A) Disperse Methylparaben in Propylene Glycol. With mixing, heat system until Methylparaben has completely dissolved in Propylene Glycol.
- B) Slowly blend Propylene Glycol mix into Deionized Water. Heat water system to 45-50C.
- C) With rapid but smooth agitation, slowly disperse Carbopol 934 into heated water base. Continue to heat system to 75-80C.
- D) Slowly blend Sodium Hydroxide solution into heated water base. The system should immediately thicken and clear.

Oil Phase:

In a separate mixing vessel combine Oil Phase ingredients and, with gentle heat, warm Oil Phase to 70-75C (avoid scorching). With rapid but smooth agitation, slowly blend heated Oil Phase into heated Water Phase. Once system is uniform, cool to 40-45C with moderate agitation and blend in compatible Fragrance and Dye(s).

Typical Properties:

Appearance (after standing 72 hrs.): Viscous, Smooth Lotion
pH (10% Aq.): 6.5-7.5

CTFA Identification:

Water, Propylene Glycol, Sodium Stearate, Myristyl Myristate, Cetearyl Alcohol and Cetareth-20, Glyceryl Stearate, Carbomer 934, Methylparaben, Propylparaben, Fragrance, Dyes.

Bath and Shower Products

After Bath Moisturizing Lotion

A mild, smooth, white lotion that boosts contraction and reorganization of collagen fibers with Raffermine to reinforce firmness and elasticity of the skin.

<u>Ingredients:</u>	<u>%W/W</u>
1. Distilled/Deionized Water	88.97
2. Propylene Glycol	2.50
3. Methylparaben	0.15
4. Acritamer 941 (Carbomer)	0.15
5. Ritapro 300 (Cetearyl Alcohol and Ceteareth-20)	1.50
6. Rita IPM (Isopropyl Myristate)	1.50
7. Rita GMS (Glyceryl Stearate)	1.00
8. Stearic Acid	2.00
9. Propylparaben	0.10
10. NaOH (50% Solution)	0.13
11. Raffermine (Hydrolyzed Soy Flour)	2.00

Compounding Procedure:

Combine items 1-3 and begin mixing. Slowly add item 4 while mixing. Heat to 75C. Combine items 5-9 and heat to 75C. Add item 10 to water. Add oil to water while mixing. Cool to 40C and add item 11.

Ref. No. 120-208A

3-Phase Bath Oil

An appealing tri-layer bath oil which moisturizes the skin and contains Simchin for a luxurious feel.

<u>Ingredients:</u>	<u>%W/W</u>
1. Mineral Oil 7NF	26.40
2. Simchin Natural (Jojoba Oil)	6.60
3. Diethylphthalate	32.00
4. Fragrance-"Blue Mint"	1.00
5. Methylparaben	q.s.
6. Glycerine	22.67
7. Distilled/Deionized Water	9.07
8. NaCl	2.26
9. Glydant	q.s.

Compounding Procedure:

Dissolve Simchin in mineral oil. Dissolve methylparaben and fragrance in diethylphthalate. Dissolve NaCl and Glydant in water and mix with glycerine. Mix all three phases together.

Cocoamidopropyl Betaine (Tego Betaine F 50)	11.75
Glycol Distearate (and) Steareth-4 (Tego Pearl N 100)	2.50
Sodium Chloride	Q.S.

Procedure:

1. Dissolve the Tetrasodium EDTA in the water.
2. Add ingredients in order, mixing between additions. Avoid air entrapment.
3. Slowly mix in the PEG-18 Glyceryl Oleate/Cocoate.
4. Add the Cocamidopropyl Betaine.
5. Adjust viscosity with the 25% solution of Sodium Chloride.

Creamy "2 in 1" Body Wash

<u>Ingredients:</u>	<u>Weight%</u>
Phase A:	
Glycol Distearate (Tegin EGS)	2.50
Myristic Acid	4.00
Jojoba Oil	5.00
Sodium Laureth Sulfate (28% 2M. E.O.)	45.00
Water	10.00
Phase B:	
Water	19.00
PEG-7 Glyceryl Cocoate (Tegosoft GC)	2.00
Phase C:	
Propylene Glycol (and) PEG-55 Propylene Glycol Oleate (Antil 141L)	2.50
Fragrance, Preservative, etc.	Q.S.
Phase D:	
Cocamidopropyl Betaine (Tego Betaine F 50)	10.00

Procedure:

1. Heat Phase A to approximately 70C while mixing (above the melting point of Tegin EGS).
2. Heat the ingredients of Phase B to the same temperature as Phase A.
3. Stir Phase B into Phase A. Cool to 40C.
4. Add Phase C. Mix well. Avoid air entrapment.
5. Add Phase D with stirring. Avoid air entrapment.

Luxury Shower Gelee

A clear, viscous, rich-lathering shampoo for hair and body which cleanses gently, and leaves a soft, smooth afterfeel.

<u>Part:</u>	<u>Ingredient (Trade Name):</u>	<u>Wt%</u>
A	Deionized Water	41.6
	TEA Lauryl Sulfate (Stepanol WAT)	15.6
	Na4EDTA	0.2
	Imidazolidinyl Urea (Germa11 115)	0.2
	Methyl Paraben	0.2
	Cocamidopropyl Amine Oxide (Mazox CAPA)	10.4
	Ammonium Cocoyl Isethionate (Jordapon ACI-30)	13.0
	Ammonium Laureth Sulfate (Alfonic 1412-A)	13.0
B	Cocamide MEA (Monamid CMA)	2.3
	Cocamide DEA (Mazamide JT-128)	2.6
	Fragrance	0.5
C	Citric Acid	0.4

pH: 6.3-6.8

Viscosity: 7500-10,000 cps (Brookfield #3 @ 6 rpm)

Appearance: Clear, viscous liquid

Procedure:

Mix part A ingredients in main vessel until clear and uniform. In a side vessel, premix part B, warming to 40C to dissolve the cocamide MEA. Add B to A, mixing until clear and uniform. Adjust pH.

Formulation F-105

Pearlescent Shower Gel

<u>Phase:</u>	<u>Ingredient:</u>	<u>% by Wt</u>
A	Deionized Water	65.50
A	Sodium Lauryl Sulfate	20.00
A	Ammonium Laureth Sulfate	8.00
A	Cocamid DEA	5.00
A	Glycol Stearate	1.50
A	Preservative	QS
A	Oils of Aloha Kukui Nut Oil	0.50
B	Sodium Chloride	1.00
B	Perfume	0.25

Manufacturing Procedure:

Phase A:

Combine all ingredients except preservative and perfume at 60C. Cool to 40C.

Phase B.

Add preservative and perfume. Package.

Here the function of the Kukui Nut Oil is to replenish the oils lost on the hair so that it does not get overly dry. Using too much Oil would cut down on foaming.

After Bath Talc

<u>Phase:</u>	<u>Ingredient:</u>	<u>% by Wt</u>
A	Talc	92.50
B	Perfume Oil	5.00
B	PPG-20 Methyl Glucose Ether	1.50
B	Oils of Aloha Macadamia Nut Oil	1.00

Manufacturing Procedure:

Combine Phase B and when uniform blend into talc.

Here the Oils of Aloha Macadamia Nut Oil helps the talc spread and cuts down on the dry feeling of the skin. Leaves a nice smooth feel.

Rona/Shampoo/Shower Gel

Use of titanated mica pearl pigments in shampoo formulations creates iridescent effects which cannot be achieved with conventional stearate pearling agents. Rona's Timiron Super Colors, which derive their effect from light interference, reflect single colors across the visible spectrum. Timiron Super Gold produces a gold luster, Timiron Super Red a red reflectance, and so on. Combinations of the Super Colors and water-soluble dyes will result in unique "two-color" effects, whose appearance varies with the angle of viewing.

Rona has developed a system for suspending mica pigments in detergent formulations. An increase in viscosity alone will not prevent settling; a thixotropic gel is needed. The combination of Veegum HV (Mg Al Silicate) and Klucel G (hydroxypropyl-cellulose) yields a gel network that is compatible with many detergent systems: the Veegum provides the suspension properties, while the Klucel acts as a protective colloid to prevent agglomeration of the Veegum.

The detergent systems containing the Veegum/Klucel combination can be manufactured via cold process. The pre-homogenization step to swell the Veegum can be accelerated with heat. Because Veegum is sensitive to salts, lack of agglomeration of the Veegum with the desired detergent level and salt content should be insured before proceeding with formulation.

Pearlized Bath Salts

<u>Phase #:</u>		<u>Wt%</u>
1	Bath Crystals	99.00
1	Pearl pigment (e.g. Colorona Magenta)	1.00
2	Luviskol VA641	0.40
2	Isopropanol	3.60
2	Fragrance	q.s.

Procedure:

Combine phase 1 with gentle tumbling agitation. Combine phase 2. When homogeneous, spray onto phase 1 with continuous tumbling agitation. Evaporate solvent via vacuum or tray drying.

Biorepair Skin Gel

This white gel with emollients has a good penetration with a non-oily afterfeel. Hyasol-BT delivers moisture to the skin. Repair function is provided by Fitobroside (lipid barrier) and Immucell (activation of cell respiration).

<u>Item</u>	<u>Ingredients:</u>	<u>Weight%</u>
1	A) Deionized Water	70.40
2	Glycerin	5.00
3	Hamamelis Extract	5.00
4	D-Panthenol 50P	1.00
5	Phenonip	0.30
6	Carbopol 1342	0.60
7	Natrosol 250 HR	0.30
8	Luviskol K90	0.10
9	B) Sodium Hydroxide 18% Solution	2.70
10	C) Isopropyl Myristate	3.00
11	Bisabolol	0.50
12	Antarox CO 630	2.00
13	D) Fitobroside	3.00
14	Immucell	3.00
15	Hyasol-BT	3.00
16	Fragrance	0.10

Procedure:

Dissolve items 2-8 in water (1). Neutralize with phase B). Mix phase C and incorporate in the resulting gel. A white gel is obtained. Finally add items 13-16 one after another. Application No. D 009.A/04.93

Anti-Aging Leave On Mask

This refreshing quick mask accelerates skin cell turnover (Immucell) and strengthens the weakened lipid barrier (Lactomide)

<u>Item</u>	<u>Ingredients:</u>	<u>Weight%</u>
1	A) Deionized Water	76.90
2	Glycerin	5.00
3	Phenonip	0.30
4	Imidazolidinyl Urea	0.20

Clear Facial Cleansing Gel

A clear, mild foaming facial cleanser suitable for a tube or pump packaging. The Jordapon ACI-30 provides excellent foaming, gentle cleansing, and a soft, smooth afterfeel on the skin.

<u>Part:</u>	<u>Ingredient(Trade Name):</u>	<u>Wt%</u>
A	Deionized Water	51.40
	Hydroxypropyl Methylcellulose (Methocel 40-100)	0.20
	Triethanolamine	0.05
	Na4EDTA	0.10
	Citric Acid, 50%	0.05
	Imidazolidinyl Urea (Germall 115)	0.15
B	Deionized Water	20.00
	TEA Lauryl Sulfate (Stepanol WAT)	3.50
	Methyl Paraben	0.15
	PEG-150 Distearate (Mapeg 6000DS)	0.50
C	Ammonium Cocoyl Isethionate (Jordapon ACI-30)	16.80
	Cocamidopropyl Hydroxysultaine (Mafo CSB-50)	4.00
	Soyamide DEA (Mazamide SS-10)	1.50
	Cocamide DEA (Mazamide JT-128)	1.50
D	Fragrance	0.10
	Citric Acid, 50%	Q.S.

pH: 6.3-6.8

Viscosity: 18,900 cps (Brookfield #3 @ 3 rpm)

Appearance: Clear, viscous yellow liquid

Procedure:

Disperse the hydroxypropyl methylcellulose in the part A water, stirring for about ten minutes. Add the Na4EDTA and the triethanolamine; continue mixing for about 20 minutes to ensure complete hydration. Add the remaining part A ingredients and continue mixing at room temperature. In a separate vessel, premix the part B ingredients, heating to 65C to dissolve the Mapeg 6000DS. Add part B to part A with good agitation. Add the part C ingredients in order, mixing until clear and uniform. Add the fragrance and adjust the pH.

Enriched Emollient Liquid Makeup

The combination of Veegum and Cellulose Gum in this formula provides synergistic rheological effects including thickening and stabilization of the emulsion and suspension of the pigments. The unusually high concentration of several emollients provides an enriched liquid makeup that spreads smoothly and easily and covers well without tacky afterfeel.

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Veegum, Magnesium Aluminum Silicate	0.70
Cellulose Gum (CMC-7MF)	0.25
Deionized Water	42.28
Triethanolamine, 99%	0.75
Glycereth-26 (Liponic EG-1)	10.50
Methylparaben	0.30
 B: Titanium Dioxide	 10.00
Talc	3.15
Iron Oxides	1.97
 C: Isopropyl Isostearate	 10.00
Mineral Oil (and) Lanolin Alcohol (Amerchol L-101)	6.50
Isopropyl Palmitate	4.00
Isopropyl Myristate	2.50
Hydrogenated Soy Glyceride (Myverol 18-06)	2.10
Stearic Acid	1.60
Dioctyl Adipate (and) Octyl Stearate (and) Octyl Palmitate (Wickenol 161 (1.1% by wt) & Wickenol 163 (1.0% by wt)	2.10
Vanseal CS, Cocoyl Sarcosine	1.00
Lithium Stearate	0.10
Propylparaben	0.10
Butylparaben	0.10

Procedure:

Heat the water to 70 to 75C. Add the Veegum and mix at maximum available shear until smooth. Slowly mix in remaining Part A ingredients. Mix Part B ingredients thoroughly into A until uniform. Maintain temperature at 70 to 75C. Heat Part C to 70 to 75C and add to Parts A+B. Mix while cooling.

*As received basis

Exfoliant Scrub

<u>Stage Material:</u>	<u>Quantity</u>
Oil Phase:	
1 Light Mineral Oil	5.000g
2 AEC Isocetyl Stearate	5.000g
3 GMS s/e, Acid Stable ES0	3.000g
4 Volpo CS20	3.000g
5 AEC Decyl Oleate	1.000g
6 AEC Cetyl Palmitate	2.000g
7 Superhartolan	0.500g
Aqueous Phase:	
8 Water, Pure	68.500g
9 Glycerine BP	5.000g
10 Carbopol 940	0.800g
11 Triethanolamine 99%	0.500g
12 Phenonip	0.500g
Cooling Cycle:	
13 Polyethylene Spheres	5.000g
14 Fragrance	0.200g

Mixing Instructions:

The Oil Phase is added to the Aqueous at 70C with mixing. Mixing is continued while cooling, and the gently exfoliating Polyethylene Spheres added below 40C. Do not homogenise or use high shear mixing after the addition of the Polyethylene Spheres.

The high ester content base will soften skin and assist the gentle exfoliating action of the Polyethylene Spheres. The spheres are available in a variety of colours making it possible to formulate very interesting products.

Exfoliating Foot Scrub

<u>Stage Material:</u>	<u>Quantity</u>
Pre-Mix 1	
1 E.O. Tea Tree	0.150g
2 E.O. Peppermint	0.200g
3 Cocamidopropyl Betaine	3.000g
Stage A:	
4 Water; Pure	44.810g
5 Myacide SP	0.100g
6 EDTA, Disodium Salt	0.200g
7 Bronidox L/15	0.200g
8 Veegum Regular	0.400g
Stage B:	
9 Sodium Laureth Sulphate (SLES)	40.000g
Stage C:	
10 AEC Corn Cob Granules	5.000g
11 Cocamide CDE	2.000g
12 C.S. FD&C Yellow No. 5; 1% Soln	0.170g
13 C.S. FD&C Blue No. 1; 1% Soln	0.135g
14 Lactic Acid; Natural	0.035g

Mixing Instructions:

This Foot Scrub has a cleansing and gentle exfoliating action. The Tea Tree oil is a natural fungicide, the peppermint oil has a natural cooling action and the Corn Cob Granules exfoliate rough and dead skin.

1. Meter out the water and start heating. Add Myacide/EDTA/Bronidox.
2. Continue heating & disperse the Veegum; heat to 60/65C to obtain a smooth paste, switch off heat.
3. While mixing very carefully to avoid foaming slowly & carefully add Sodium Laureth Sulfate. This brings the temperature down to approx. 45C. Continue mixing until a smooth paste (about 30 mins.).
4. Separately mix together Tea Tree/Peppermint Oil and Cocamidopropyl Betaine and add to main mix.
5. While still liquid stir in the AEC Corn Cob Granules followed by Cocamide DEA which will thicken the product.
6. Match colour, adjust pH to 7.5-8.5, stir until product thickens to avoid Corn Cob Granules floating to the surface.

Extra Light W/O Emulsion

<u>Ingredients:</u>	<u>Weight%</u>
<u>Oil Phase:</u>	
Polyglyceryl-4 Isostearate (and) Cetyl Dimethicone Copolyol (and) Hexyl Laurate (Abil WE-09)	4.0
Cetyl Dimethicone (Abil Wax 9801)	1.0
Dimethicone (350 cs)	1.0
Beeswax	0.2
Hydrogenated Castor Oil	0.2
Cyclomethicone	9.0
Octyl Stearate (Tegosoft OS)	4.0
Isopropyl Palmitate (Tegosoft P)	3.0
Isopropyl Myristate (Tegosoft M)	4.0
<u>Water Phase:</u>	
Water	72.8
NaCl	0.8
Preservatives, Color, Fragrance	Q.S.

Procedure:

1. Add the components of the oil phase together. Heat to melt and disperse the waxes. When dispersed, maintain temperature of 50-60C.
2. Mix the water and sodium chloride. Heat to 50-60C.
3. With lightnin' mixing, stream the water phase into the oil phase.
4. With sweep agitation, cool to 35C.
5. Add color, fragrance and preservatives.
6. Homogenize with a roto-stator homogenizer.

Pearlescent Eye Shadow

<u>Ingredients:</u>	<u>Weight%</u>

Eye Mascara**Formulating Design and Advantages:**

This mascara provides a quick drying initial effect. The product is silky to the lashes and smudge proof.

	Wt%
Oil Phase:	
Siliconyl Beeswax (Koster Keunen)	7.50
PEG Carnauba (Koster Keunen)	7.50
Glycerol Monostearate (Witco)	2.75
Orange Wax (Koster Keunen)	2.00
Stearic Acid (Koster Keunen)	1.00
Paraffin 150/155 (Koster Keunen)	1.50
Microcrystalline W445 (Witco)	1.50
Propyl Paraben (Sutton)	0.30
Water Phase:	
Water (Deionized)	58.45
Sodium Borate (Borax)	1.20
Propylene Glycol (BASF)	1.00
Carbopol 2% Solution (B.F. Goodrich)	1.00
Alcohol Phase:	
Alcohol SDA 30 (Quantum)	10.00
Purified Black Oxide (Clarke)	4.00

Procedure:

Heat the oil phase and water phase to 75C. Add the oil phase to the water phase. Cool to 40C and add the premixed alcohol phase. Cool.

Adaptation of Formula and Its Influence on the Product:

A variety of pigments can be substituted to suit the product's needs. Viscosity can be altered by reducing solids and increasing water phase.

Powder Formula**Formulating Design and Advantages:**

Binder systems utilizing the silicone oil/Cera Albalate 103 gel produces a dry non-oily skin feel. These type of products also have high structural integrity and can withsatnd five drops from one to two feet.

	Wt%
Binder:	
Silicone Oil 345 (Dow)	60.0
Hexanediol Behenyl Beeswax (Koster Keunen)	40.0
Pressed Powder:	
Cosmetic Tan C33-130 (Sun Chemical)	13.0
Talc (Whittaker C&D)	47.0
Binder (Koster Keunen)	40.0

Procedure:

Homogenize and press in container at 1000 psi for 15-20 seconds.

Adaptation of Formula and Its Influence on the Product:

Other oils and/or waxes can be substituted into the binder system. In the final product, pigments and concentration of binder can easily be altered to produce varying degrees of creaminess and firmness of the powder.

Facial Cleanser with Pemulen TR-2 Polymer Emulsifier
and Carbopol Ultrez 10 Polymer

This cleansing formulation is light, non-greasy and water-rinsable. It provides thorough cleansing without drying the skin.

<u>Ingredients:</u>	<u>% by Weight</u>
Part A:	
Deionized Water	89.55
Miranol Ultra	1.00
Dowicil 200	0.10
Methylparaben	0.10
Propylparaben	0.05
Part B:	
Finsolv SB	4.00
Berneel Ester DOM	2.00
Caprylic/Capric Triglyceride	1.00
Wickenol 171	1.00
Pemulen TR-2	0.20
Carbopol Ultrez 10	0.60
Part C:	
AMP-95	0.40

Procedure:

1. Combine Part A ingredients in a vessel which will contain the entire formulation. Mix to dissolve Dowicil 200.
2. Combine Part B ingredients in a separate vessel. Mix to disperse any soft lumps of Pemulen and Carbopol polymer.
3. With moderate agitation, add the Part B slurry to Part A. Mix for 10-20 minutes to allow polymers to swell.
4. Add Part C and mix vigorously to produce a smooth, white cream.

Properties:

pH: 5.6-6.0

Viscosity* (cPs) at 25C: 28,000-35,000

*Brookfield RVT @ 20 rpm, #6 spindle

Facial Scrub

<u>Phase:</u>	<u>Ingredient:</u>	<u>Wt%</u>
A	Carbomer 940 (2%)	15.00
A	Deionized Water	57.75
A	Propylene Glycol	2.50
A	Aloe Vera Gel	0.25
B	Cyclomethicone	5.00
B	Oils of Aloha Macadamia Nut Oil	2.50
B	Stearic Acid XXX	3.50
B	Promulgen D	1.00
B	Isopropyl Myristate	10.00
C	Triethanolamine 99%	1.00
D	Polyethylene AC-9A	1.50
E	Preservative	QS

Manufacturing Procedure:

Phase A: Disperse Carbopol into water while heating to 75C. Add Propylene Glycol and Aloe Vera Gel.

Phase B: Heat oil phase to 75C and add to water phase.

Phase C: Add Triethanolamine to oil/water mixture and cool to 40C.

Phase D/E: Add Polyethylene AC-9A. Add preservative.

Carbomer 940 is the suspending agent. This scrub is designed for people with oily skin and needs to have a drying effect. Uses two very dry emollients-cyclomethicone and isopropyl myristate. They leave a dry feeling skin. The Oils of Aloha Macadamia Nut Oil leaves the skin with a fresh, moist afterfeel. Kukui Nut Oil would also work very well in this formula.

SOURCE: Oils of Aloha: Suggested Formulation

Facial Cleansing Gel

<u>A:</u>	<u>Wt%</u>
Deionized Water	60.90
Sodium PCA	0.10
Carbomer 940 (2% Aq.)	25.00

Gel with MPC-Liposomes**MPC-Milk Peptide Complex:**

MPC contains natural polypeptides from milk, in activated form. A protective environment exclusively comprised of milk components such as lactalbumin, lactoglobulin, lactoferrin, lactose and lactate provides for product stability and maintenance of bioactivity. Bioactivity is standardized in every batch of MPC to a representative concentration range (EC50). In vitro bioassays in cell cultures and in vivo tests on epithelial tissue and on human skin give proof of the bioactivity and cosmetic benefits of MPC.

Lipstick "Soft and Moist" (Modified)

<u>Materials:</u>	<u>% by Weight</u>
1. Ozokerite White 170	4.0
2. Castorwax	2.0
3. Candelilla Wax, Light Refined	8.0
4. Lexol PG 855	31.3
5. Castor Oil	24.0
6. Propylparaben	0.1
7. Tenox 4	0.1
8. Bentone Gel CAO Rheological Additive	10.0
9. Pigment Concentrate*	20.0
10. Perfume	0.5

*Pigment Concentrate:

Castor Oil	30.00
Color No. 3106 D&C Red No. 6	70.00

Manufacturing Directions:

1. Weigh items 1 through 7 into a stainless steam jacketed kettle. Heat to 85C until melted clear.
2. Bring temperature down to 80C. Add and mix in item 8 using a homomixer at medium speed. Mix for 10 minutes at 80C.
3. Add and mix item 9 for 5 minutes or until dispersed.
4. Continue mixing at medium speed and lower temperature to 70C and add item 10. Remove heat and stir slowly until congealed, or pour into trays.
5. When casting, melt and pour molten mass into mold at 75C, with slow agitation (avoid air entrapment).

Note: For a shiny polished surface on the lipstick, the sticks should be surface flamed.

Pigment Concentrate Preparation:

1. Weigh dry powder into the castor oil using a slow speed Hobart type mixer and mix until uniform.
2. Give this concentrate two passes over a 3 roll mill at room temperature.

SOURCE: Rheox Inc.: Suggested Formulation

Lipstick Base

	<u>Wt%-1</u>	<u>Wt%-2</u>
A-C 617	8	7
Acetylated Lanolin	16	16
2-Ethyl Hexyl Stearate	6	7
Ozokerite	20	20
Mineral Oil (75 SS)	50	50

Procedure:

Weigh out all ingredients. Heat mixture slightly above their cloud points with mild agitation. (Blends 1 & 2 have cloud points of 80 & 79C respectively). Once blend is clear the mixture can be cooled and packaged.

Lipstick with A-C 400, No. 162

	<u>%w/w</u>
1. TiO ₂ in Castor Oil (40% pigment)	1.8
2. Red 6 in Castor Oil (25% pigment)	14.3
3. Red 7 in Castor Oil (25% pigment)	10.8
4. Castor Oil (extra)	3.3
5. Polybutene H-100	9.3
6. A-C 400A	4.7
7. Eutanol G	23.3
8. Refined Lanolin	9.3
9. Candelilla	13.0
10. Polyglyceryl di-isostearate (Emerest 2452)	10.2

Procedure:

The pigment castor oil blends are predispersed. Weigh all ingredients together, heat and mix to 93C. Cool to 85C and pour the mixture into the molds.

NOTE: This stick was flamed. Without flaming it would not be as glossy. To make it more matte, reduce polybutene to 5%, and increase No. 7 by 2%, No. 8 by 0.5%, No. 9 by 1%, and No. 10 by 1.5%. Preservative and anti-oxidant as minor amounts should not be a problem.

Lip Gloss

	<u>%w/w</u>
1. 2-ethyl hexyl stearate	51.175
2. Castor oil	15
3. A-C 400	20
4. Lanolin alcohol	5
5. Oleyl alcohol	8
6. Perfume	0.75
7. Brown umber shade 1985	0.025
8. Brown red shade 1654	0.05
9. Preservative	q.s.

Procedure:

- A. Disperse pigment in 0.225% castor oil.
- B. Mix the remaining 1,2,3,4,5 and heat to 85-90C with stirring until the polyethylene has completely dissolved. Add pigment mixture to it.
- C. Mix slowly, add perfume at 50-55C and de-aerate. Pour into molds or containers and allow to cool to room temperature.

Liquid Make-Up**Formulating Design and Advantages:**

This make-up covers nicely yet it is very light on the skin and leaves a smooth and silky after-feel. It will also reduce transepidermal water loss.

Oil Phase:	Wt%
Hexanediol Behenyl Beeswax (Koster Keunen)	0.50
Octyl Palmitate (Lexol)	2.00
Silicone Oil 556 (Dow Corning)	4.00
Isopropyl Palmitate (Lexol)	2.00
Isostearic Acid (Unichema)	1.50
Oyster Nut Oil (Koster Keunen)	1.00
Propyl Paraben (Sutton)	0.30

Water Phase:	
Deionized Water	59.60
Xanthan Gum (Kelco)	0.40
Cellulose Gum (Aqualon)	0.30
Triethanolamine (Dow Corning)	0.70
Glycerin (Unichema)	2.00
Propylene Glycol (BASF)	2.00
Polysorbate 60 (BASF)	0.60
Methyl Paraben (Sutton)	0.30

Pigment Phase:	
Optatint Titanium Dioxide (Colorcon)	13.00
Deodorized Orange Wax (Koster Keunen)	2.00
Siliconyl Beeswax (Koster Keunen)	2.30
PEG Carnauba (Koster Keunen)	2.30
Brown Iron Oxide (Clark Colors)	2.20
Yellow Iron Oxide (Clark Colors)	1.00

Procedure:

Heat pigment phase until melted, stirring to break up any globules. Let cool. Reheat and melt again stirring globules. Add to the preheated oil phase at 75C. Add the oil phase to the 75C heated water phase under vigorous agitation. Cool.

Adaptation of Formula and Its Influence on the Product:

Small amounts of sunscreen may be added to replace the oils. The oil may be reduced to give an even lighter feel. Replacement of Oyster Nut Oil with Polyethylene Glycol Distearate will make this formula an oil free product.

MPC - Milk Peptide Complex

MPC contains natural polypeptides from milk, in activated form. A protective environment exclusively comprised of milk components such as lactalbumin, lactoglobulin, lactoferrin, lactose and lactate provides for product stability and maintenance of bioactivity. Bioactivity is standardized in every batch of MPC to a representative concentration range (EC50). In vitro bioassays in cell cultures and in vivo tests on epithelial tissue and on human skin give proof of the bioactivity and cosmetic benefits of MPC.

Night Cream Moisturizer

An elegant, glossy, white, moisture-retaining cream that repairs the skin.

<u>Ingredients:</u>	<u>%W/W</u>
1. Distilled/Deionized Water	61.65
2. Acritamer 940 (Carbomer)	0.40
3. Ritaloe 1X (Aloe Vera Gel)	0.20
4. Disodium Oleamido PEG-2 Sulfosuccinate	2.00
5. Propylene Glycol	2.00
6. Hydrogenated Polyisobutene	5.00
7. Dimethicone	2.00
8. Ritapro-165 (Glyceryl Stearate and PEG-100 Stearate)	5.00
9. Mineral Oil	4.00
10. Rita IPP (Isoopropyl Palmitate)	6.00
11. Tocopheryl Acetate	0.25
12. Tocopheryl Linoleate	0.10
13. Rita IPM (Isopropyl Myristate)	0.50
14. Rita Cetearyl Alcohol 70/30	1.50
15. Triethanolamine (99%)	0.40
16. Corn Starch	1.00
17. Germaben II	1.00
18. Raffermine (Hydrolyzed Soy Flour)	3.00
19. Reductine (Oat Protein)	4.00

Compounding Procedure:

Slowly disperse item 2 in item 1. Mix until dissolved. Add items 3-5 and heat to 75C. Combine items 6-14 and heat to 75C. Add to water and mix. Add item 15. Cool to 40C and add items 16-19.

Ref. No. 122-10C

Skin Nutrient Gel

<u>Ingredients:</u>	<u>%W/W</u>
1. Distilled/Deionized Water	87.40
2. Acritamer 940 (Carbomer 940)	0.50
3. Xanthan Gum	0.10
4. 1,3 Butylene Glycol	5.00
5. Ritasil 190 (Dimethicone Copolyol)	0.10
6. Shebu WS (Shea Butter)	1.00
7. TEA @ 99%	0.40
8. Promois ECP (Collagen)	0.20
9. Glydant	0.20
10. Fragrance	0.10
11. Rita HA C-1-C (Sodium Hyaluronate)	5.00

Compounding Procedure:

Disperse item 2 in water. Add item 3 and mix until dissolved. Add items 4, 5 and 6 separately. Add TEA until batch thickens. Add items 8,9,10 and 11. The pH of a gel is 5.5

Ref. No. 122-103B

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Nonionic Liquid Makeup

Veegum provides a liquid makeup with uniform, shear coverage. Veegum stabilizes the emulsion while inhibiting pigment settling. The 5:1 Veegum/xanthan gum ratio provides optimum viscosity and flowability. The blend of oil phase ingredients is designed to give emollience without an oily or greasy feel. A nonionic emulsifying system gives maximum stability to the formula at pH 5.5-6.0. The formula is designed specifically for oily skin.

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Veegum, Magnesium Aluminum Silicate	0.75
Rhodigel, Xanthan Gum	0.15
Deionized Water	67.10
Glycerin	4.00
Citric Acid	0.30
B: Talc	5.00
Titanium Dioxide	5.00
Iron Oxides	3.70
C: Mineral Oil (and) Lanolin Alcohol (Ritachol)	5.00
Myristyl Myristate (Crodamol MM)	2.50
Hydrogenated Polyisobutene (Polysynlane)	2.00
Oleyl Alcohol	2.00
Stearyl Alcohol (and) Cetareth-20 (Cosmowax K)	2.00
Polysorbate 85 (Tween 85)	0.50
D: Preservative	q.s.

Procedure:

Blend Veegum and Rhodigel. Slowly add to the water, while agitating at maximum available shear. Continue mixing until smooth. Add the glycerin and citric acid. Mix until smooth. Mix Part B (grind if necessary) until homogeneous. Add Part B to Part A and mix until uniform. Heat Parts A+B to 60-65C. Heat Part C to 60-65C. Add Part C to Parts A+B and mix while cooling. At 40C, add Part D and mix until uniform.

*As received basis

Oil Free Make-Up with Hypan SR150H

<u>Sequence:</u>	<u>Raw Material:</u>	<u>Percent</u>
1	Deionized Water	48.14
1	Hypan SR150H	0.01
1	Methylparaben	0.25
1	Propylene Glycol	4.60
1	Triethanolamine, 99%	0.90
2	Titanium Dioxide #3328	8.00
2	Iron Oxide Yellow	0.80
2	Iron Oxide Red	0.40
2	Iron Oxide Black	0.10
2	Orgasol 2002D Nat Cos	1.00
3	Deionized Water	20.00
4	Lipovol MOS-70*	10.00
4	Liponate TDTM	1.00
4	Lipo GMS-450	1.00
4	Lipo Stearic Acid	2.50
4	Propylparaben	0.20
5	Deionized Water	1.00
5	Unicide U-13	0.10

*Patent #4,659,573

Procedure:

1. Into main kettle, combine Sequence #1 ingredients under Lightnin' mixing and heat to 60-70C.
2. In auxiliary kettle, combine Sequence #2 ingredients and add to Sequence #1 slowly under Lightnin' mixing.
3. Pass combined Sequences #1 and #2 through colloid mill and recirculate until pigments are evenly dispersed.
4. Rinse colloid mill using Sequence #3 ingredient and add to Sequences #1 and #2 under Lightnin' mixing. Heat combined batch to 76C.
5. In auxiliary kettle combine Sequence #4 under Lightnin' mixing and heat to 82C.
6. At proper temperature add Sequence #4 ingredients to batch under sweep mixing, maintaining temperature until emulsification is complete. Begin cooling to 35C, switching to slow sweep mixing as batch thickens.
7. At 35C add premixed Sequence #5 ingredients to batch and cool to 25C.

Petroleum Oil/Petroleum Wax Free Lipstick**Formulating Design and Advantages:**

This lipstick is a creamy stick that does not use any petroleum oils or waxes in the formula, nor does it use any synthetic raw materials that have petroleum products in it.

Oil Phase I:	Wt%
Hydroxy Polyester (Koster Keunen)	3.7
Rice Bran Oil (Koster Keunen)	5.0
Octyl Palmitate (Inolex)	9.0
Castor Oil (Alnor)	38.0
PEG Carnauba (Koster Keunen)	1.3
Titanium Dioxide Powder (Whittaker C&D)	2.0
Silicone Oil 556 (Dow Corning)	10.0
D&C Red #30 (Clarke)	3.0
Oil Phase II:	
K80-D22 (Koster Keunen)	5.0
Synthetic Candelilla (Koster Keunen)	9.0
Hexanediol Behenyl Beeswax (Koster Keunen)	7.0
Deodorized Orange Wax (Koster Keunen)	4.0

Procedure:

Mix Phase I, heat to 75C breaking up any small agglomerates. Cool. Repeat two more times. Reheat to 75C and add Phase II that has been heated to 75C. Cool to 65C and pour into molds.

Adaptation of Formula and Its Influence on the Product:

Various oil substitutions can be made to suit formula.

Lip Gloss with Sun Protection**Formulating Design and Advantages:**

This product protects the lips from the sun, with the help of the PEG Carnauba and Deodorized Orange Wax while adding moisture and color to the lips.

Formula:	Wt%
1. PEG Carnauba (Koster Keunen)	5.0
2. Deodorized Orange Wax (Koster Keunen)	5.0
3. White Petroleum (Witco)	26.1
4. Shea Butter (Koster Keunen)	5.0
5. Jojoba Oil (Jojoba Growers)	2.0
6. Hexanediol Behenyl Beeswax (Koster Keunen)	10.5
7. Caprylic/Capric Triglyceride (Inolex)	45.0
8. Gamma Orzanol (Koster Keunen)	0.6
9. Pigments	0.8

Procedure:

Combine 9, 1, 2, heat till dispersed. Add the rest of the ingredients to the batch, except the gamma orzanol which should be added last, after everything has been dispersed.

Adaptation of Formula and Its Influence on the Product:

To make the product with greater gloss it would normally require more petroleum. To make the product softer less wax should be used.

Purified Bentonite Refining Mask

Veegum HS is classified as "Purified Bentonite" in the USP/NF. This mask formulation is for all skin types and takes advantage of the recognized absorbative and cleansing properties of bentonite. Apply a thin coating to the face. Allow it to dry or remove it after 10 to 15 minutes before it is completely dry. Rinse off with clear water and a soft cloth or cotton ball.

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Veegum HS, Magnesium Aluminum Silicate	4.00
Rhodigel, Xanthan Gum	0.30
Deionized Water	43.70
B: Sucrose	15.00
Glycerin	10.00
DEA-Oleth-3 Phosphate (Crodafos N-3 Neutral)	5.00
C: Propylene Glycol (and) Grape Extract (and) Hypericum Extract (and) Arnica Extract (and) Witch Hazel Extract (and) Horse Chestnut Extract (and) Ivy Extract (Phytelene Complex EGX 243)	3.00
Propylene Glycol (and) Calendula Extract (and) Chamomile Extract (and) Linden Extract (and) Cornflower Extract (and) Matricaria Extract (and) Hypericum Extract (Phytelene Complex EGX 244)	3.00
Allantoin	1.00
Oat Flour (Ster-O-Pro)	10.00
Zinc Oxide	5.00
D: Preservative	q.s.

Procedure:

Dry blend the Veegum HS and Rhodigel. Add them to the water, agitating at maximum available shear until smooth. Add the Part B ingredients and mix until smooth. Add the Part C ingredients in the order shown and mix each until uniform. Add Part D and mix until uniform.

W/O Liquid Foundation

<u>Ingredients:</u>	<u>Weight%</u>
Phase A:	
Cetyl Dimethicone Copolyol (Abil EM-90)	2.00
Polyglyceryl-3 Oleate (Isolan GO-33)	1.00
Cetyl Dimethicone (Abil Wax 9801)	1.00
Octyl Palmitate (Tegosoft OP)	1.00
Hydrogenated Castor Oil	0.40
Beeswax	0.80
Phase B:	
Cyclomethicone	18.00
Phase C:	
Red, Yellow, Black Iron Oxides	3.00
Titanium Dioxide	7.80
Talc	1.70
Phase D:	
Butylene Glycol	2.80
Water	60.00
Sodium Chloride	0.50
Phase E:	
Fragrance	Q.S.

Procedure:

1. Combine ingredients of Phase A. Mix and heat to 85-90C. Mix until uniform.
2. Cool to 50C. Add Cyclomethicone.
3. Add ingredients of Phase C. Mix thoroughly to disperse.
4. Cool to 50C with mixing.
5. Combine ingredients of Phase D at ambient temperature. Add Phase D slowly to A/B/C mixture with slow agitation.
6. Increase agitation speed after all of Phase D is added. (10-15 minutes).
7. Homogenize.
8. Fragrance.

Section V

Creams

AEC Cocoa Butter Cream

<u>Stage Material:</u>	<u>Quantity</u>
Stage A:	
1 Light Mineral Oil	20.000g
2 Petroleum Jelly; White	25.000g
3 Cocoa Butter, Refined	44.000g
4 Castorwax Mp80	10.000g
Cooling Cycle:	
5 Vitamin E Acetate	0.500g
6 Carrot Oil; Novarom	0.100g
7 P. Cocoabutter AA 6780	0.400g

Mixing Instructions:

Change in material proportions to make it less draggy and nearer Palmers Original.

Use a jacketed kettle suitable for heating and cooling, preferably fitted with a gate or anchor type mixer.

Stage 1: Weigh in the mineral oil and commence heating with slow stirring.

Add Petroleum Jelly and continue heating and stirring until all melted.

Add Cocoa Butter and Castor Wax and continue heating and stirring until all melted, the temperature should not exceed 60C. When a clear, homogeneous mix is obtained start cooling with continuous mixing.

Cooling Stage: Add the Vitamin E Acetate and Carrot Oil at about 55C and the Perfume at about 40C.

The product will thicken and then set, ideally it should be hot filled just above its setting temperature. Some experimental batches may be necessary to determine the optimum filling temperature.

Project: JW 2527/Formula Ref.: 1186*3

Cocoa Butter Cream

<u>Stage Material:</u>	<u>Quantity</u>
Oil Phase:	
1 Light Mineral Oil	17.000g
2 Cocoa Butter, Refined	42.000g
3 Petroleum Jelly; White	32.500g
4 Castorwax Mp80	8.000g
Cooling Cycle:	
5 P. Cocoabutter AA 6780	0.500g

Mixing Instructions:

Weigh out the mineral oil and start heating.

Add each item in turn, mix and continue heating until all ingredients have melted.

Switch off heat and cool with slow mixing, add the perfume at 40C.

The product may then be filled hot.

Cleansing Cold Cream W/O**Formulating Design and Advantages:**

This classic product has a natural mild orange aroma which refreshes while deeply cleansing the skin of dirt and oils, leaving the skin smooth and silky. Natural anti-microbial agents inherent in the beeswax and orange wax preserve this product along with the pH (pH=8).

Oil Phase:	<u>Wt%</u>
NF White Beeswax (Koster Keunen)	10.0
Ceresine Wax 130/135 (Koster Keunen)	6.0
Deodorized Orange Wax (Koster Keunen)	4.0
Light Mineral Oil (Witco)	38.5
Propylene Glycol Stearate (Inolex)	2.0

Water Phase:	
Water (Distilled)	27.5
Carbopol 940 2% Solution (BF Goodrich)	10.0
Sodium Borate (Borax)	2.0

Procedure:

Add Carbopol solution to the water phase mix and heat to 75C, add borax under agitation. Mix and melt oil phase to 75C. Add oil phase to the water phase while mixing. Cool and pour into containers.

Adaptation of Formula and Its Influence on the Product:

Small changes in this formula are possible, such as, reducing the concentration of the orange wax will eliminate the natural orange aroma. Plant oils can be added in low concentrations for label claims.

Emollient Cream

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Methyl Glucose Dioleate (Glucate DO)	1.50
PEG 20 Methyl Glucose Sesquistearate (Glucamate SSE-20)	3.00
Petrolatum	8.00
Isopropyl Palmitate (Propal)	3.00
Mineral Oil	6.00
Dimethicone	0.50
Stearyl Alcohol (Stearal)	2.00
Cetyl Alcohol (Cetal)	1.00
B: Deionized Water	73.70
Veegum, Magnesium Aluminum Silicate	1.00
Rhodigel, Xanthan Gum	0.30
C: Preservative	q.s.

Procedure:

Weigh Part B water into a suitable vessel and mix with homogenizer at 5000 rpm. Weigh and dry blend the Veegum and Rhodigel and add them slowly to the water. Mix for 20 minutes at 5000 rpm. Begin heating to 70C. Weigh the Part A ingredients into another vessel and heat to 70C. Add Part A to Part B and mix for 10 minutes at 5000 rpm. Move the batch to a propeller mixer and adjust the speed to produce a small vortex. Cool to 40C and add the Part C ingredient. Continue cooling and package at 35C.

Formula from Amerchol Corp.

Hand Cream

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Dimethicone, 1000 cs. (SF-96)	2.50
Isopropyl Myristate	2.00
Stearic Acid	7.00
Lanolin	0.50
Emulsifying Wax NF (Polawax)	4.00
Sorbitan Oleate (Arlacel 80)	0.50
Polysorbate 60 (Tween 60)	2.50
B: Propylene Glycol	7.00
Deionized Water	66.00
Veegum, Magnesium Aluminum Silicate (5% Aqueous Dispersion)	8.00
C: Preservative	q.s.

Procedure:

Prepare the 5% Veegum dispersion using a homogenizer operating at 5000 rpm. Mix the dispersion for 20 minutes. Weigh the indicated amount of the dispersion into a suitable vessel. Mix with a propeller mixer at 1800 rpm and add the Part B water. Heat to 70C. Add the Propylene Glycol and mix for 5 minutes. Weigh the Part A ingredients into a suitable vessel, mix and heat to 70C. Add Part A to Part B and mix at 1800 rpm for 10 minutes at 70C. Slow the mixer to produce a slight vortex and begin cooling. At 40C, add Part C, continue cooling and package at 35C.

Emollient Eye Cream

This emollient cream is specifically designed for use around the eyes and contains Crodamol ISNP for the gentle, yet very emollient, effects that it confers to such delicate areas as the eyes, face and neck. Super Sterol Ester and Cromoist HYA are moisturizers that help keep the skin around the eyes smooth and supple. A combination of Polawax and ethylene glycol monostearate is used to emulsify the cream.

<u>Ingredients:</u>	<u>Wt%</u>
Part A:	
Deionized water	84.50
Carbomer 934	0.25
Glycerin	1.50
Part B:	
Crodamol ISNP (Isostearyl Neopentanoate)	3.00
Polawax (Emulsifying Wax NF)	3.00
Super Sterol Ester (C10-30 Cholesterol/Lanosterol Esters)	2.00
Ethylene Glycol Monostearate	4.00
Part C:	
TEA 99%	0.25
Part D:	
Cromoist HYA (Hydrolyzed Protein (and) Hyaluronic Acid)	0.50
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben	1.00

Procedure:

Add the Carbomer 934 of Part A to the water with mixing and heat to 65-70C. When homogeneous, add the glycerin of Part A with mixing. Combine the ingredients of Part B with mixing and heat to 65-70C. Add Part A to Part B with mixing and cool to 60C. Add Part C with mixing and cool to 40C. Add Part D with mixing and cool to desired fill temperature.

Enriched W/O Cream with Vitamin E Oil

<u>Stage Material:</u>	<u>Quantity</u>
Oil Phase:	
1 Peach Kernel Oil	10.000g
2 Almond Oil USP; Sweet	5.000g
3 AEC Macadamia Nut Oil	3.000g
4 AEC Hydroxyoctacosanyl Hydroxystearate	7.000g
5 AEC Methoxy Peg 22 Dodecylglycol Copolymer	4.000g
6 AEC PEG 45 Dodecylglycol Copolymer	3.000g
7 Vitamin E Oil	1.500g
Aqueous Phase:	
8 Water; Pure	60.770g
9 Propylene Glycol USP	5.000g
10 Magnesium Sulphate	0.080g
11 Nipaguard BPX	0.150g
Cooling Cycle:	
12 Fragrance	0.500g
Mixing Instructions:	
Heat the Oil Phase in a suitable jacketed vessel.	
Heat the Aqueous Phase in a separate vessel.	
Slowly add the hot water to the hot oils with high shear mixing and mix for five minutes. Start cooling and mix with a gate type mixer; add the perfume at about 35C and homogenise.	
This rich w/o emulsion is made with natural oils and uses Vitamin E Oil as a free radical scavenger.	
Project: JW 2382/Formula: 796*1	

Anti-Wrinkle Cream

<u>Stage Material:</u>	<u>Quantity</u>
Oil Phase:	
1 AEC Hydroxyoctacosanyl Hydroxystearate	5.000g
2 AEC Methoxy Peg 22 Dodecylglycol Copolymer	2.000g
3 AEC PEG 45 Dodecylglycol Copolymer	4.000g
4 Cocoa Butter, Refined	3.000g

Eye Contour Cream, Type W/O, with MPC-Milk Peptide Complex

<u>Ingredients:</u>	<u>Weight%</u>
a) Dehymuls F	12.00
Vaseline, white	5.00
Softisan Gel	10.00
Paraffinum subl.	10.00
Phenonip	0.30
b) Water, distilled	46.70
Phenonip	0.30
Glycerin	5.00
Magnesium Sulfate x 7H ₂ O	0.70
c) Water, distilled	9.38
Na ₃ Citrate x 2 H ₂ O	0.12
MPC-Milk Peptide Complex	0.50

Manufacture:

- a) Melt and bring to approx. 70C;
- b) Bring to approx. 70C and stir into a); Continue stirring until cream has cooled to approx. 30C.
- c) Add under stirring. Perfume, roll.

Moisturizing Cream with MPC - Milk Peptide Complex

<u>Ingredients:</u>	<u>Weight%</u>
a) Promulgen D	3.50
Paraffinum perliquidum	10.00
Glucam E-10	3.00
Cremerol HMG	1.50
Phenonip	0.30
b) Carbopol 940	0.10
Water, distilled	70.70
MPC-Milk Peptide Complex	0.50
c) Water, distilled	10.00
Phenonip	0.30
Triethanolamine	0.10

Manufacture:

- a) Melt and dissolve at approx. 75C. Allow to cool to approx. 40C
- b) Disperse at room temperature with rapid stirring.
- c) Dissolve at room temperature and stir into b).
Add mixture bc) to a) with slow stirring.
Adjust abc) to approx. pH 6.84. Homogenize.

Gentle Night Repair Cream
Water in Oil Emulsion

Formulating Design and Advantages:

This product encapsulates Barley Beta an active ingredient which is anti-microbial and reduces the effects of skin aging. This cream quickly penetrates the skin leaving a soft silky feel.

	<u>Weight%</u>
Oil Phase:	
Emulsifying Wax (Koster Keunen)	3.10
Hexanediol Behenyl Beeswax (Koster Keunen)	3.00
Siliconyl Beeswax (Koster Keunen)	3.00
Ozokerite 164/170 (Koster Keunen)	1.00
Sunflower Oil (Alnor Oil)	8.00
Rice Bran Oil (Koster Keunen)	4.00
Foraha Oil (Koster Keunen)	1.00
Liquapar (Sutton Laboratories)	0.50
Fitoderm-Vegetal Squalane (Centerchem)	2.00
Silicone 200/100 (Dow Corning)	2.00
Glycerol Monostearate (Witco)	2.10
Isopropyl Palmitate (Inolex)	0.80
Vitamin E (BASF)	0.10
Vitamin A Palmitate (BASF)	0.10

Water Phase:	
Water (Deionized)	48.70
Methyl Paraben (Aldrich)	0.30
Sodium Borate (Amend)	0.50
Carbopol 940 2% (B.F.Goodrich)	9.60

Active Phase:	
Firming Liposome (Collaborative Laboratories)	4.00
APT (Centerchem)	3.00
Beta Glucan (Koster Keunen)	0.20

Procedure:

Heat the components of the oil phase, mix and maintain at a temperature of 82C. In a separate vessel heat the components of the water phase, mix and maintain at a temperature of 80C. Add the oil phase to the water under moderate agitation, and cool slowly while mixing. Add the Beta Glucan at a temperature less than 80C. Cool to 40C and add the Firming Liposome and APT. Cool to room temperature.

Adaptation of Formula and Its Influence on the Product:

Substitution can be made of the various plant oils depending on the formulation desired.

Light Moisturizing Cream for Dry Skin

Ultra light weight and low cost moisturizing cream for normal/dry skin. Leaves the skin with a soft satiny feel from the Liponate NPGC-2. Lipo/DNS Completech MBAC-DS helps control the dryness of the skin.

<u>Sequence</u>	<u>Raw Material:</u>	<u>Weight%</u>
1	Deionized Water	66.35
1	Methylparaben	0.25
1	Trisodium EDTA	0.05
2	Carbopol 2984 (2% sol'n)	17.50
3	Liponate NPGC-2	4.00
3	Lipomulse 165	1.50
3	Lipocol C	0.60
3	Propylparaben	0.10
3	Butylparaben	0.05
4	Deionized Water	1.00
4	Triethanolamine, 99%	0.35
5	Deionized Water	1.00
5	Unicide U-13	0.25
6	Deionized Water	5.50
6	DNS Completech MBAC-DS	1.50

Procedure:

1. Heat Sequence #1 to 75C. Mix with overhead mixer at medium speed until all ingredients are completely into solution.
2. Heat Sequence #2 to 75C and add to Sequence #1 with medium agitation (holding temperature at 75C).
3. Mix Sequence #3 together and heat to 75C, then add to batch with medium/high agitation.
4. Premix Sequence #4 ingredients and add to batch at 70-75C. Switch to moderate sweep and cool slowly to 35C.
5. At 35C add premixed Sequence #5 ingredients to batch and cool to 25C.
6. Premix Sequence #6 together until completely into solution and then add to batch on sweep mixer.

Light Skin-Feel Cleansing CreamW/O**Formulating Design and Advantages:**

This adaptation of a typical cold cream has been updated with new ingredients to reduce oiliness while deep cleansing of the skin is still possible, leaving the skin with a luxurious smooth and silky after feel.

Oil Phase:	Wt%
Hexanediol Behenyl Beeswax (Koster Keunen)	5.00
Siliconyl Beeswax (Koster Keunen)	3.00
Ceresine 130/135 (Koster Keunen)	7.00
Light Mineral Oil (Witco)	17.25
Isostearic Acid (Unichema)	2.00
Cetylstearyl Alcohol (Koster Keunen)	1.00
Dow 200/100	6.00
Dow 245	11.25
Emulsifying Wax (Koster Keunen)	2.00
Liquapar Oil (Sutton)	0.30

Water Phase:	
Water (Deionized)	33.95
Carbopol 940 2% Solution (BF Goodrich)	10.00
Sodium Borate (Borax)	1.25

Procedure:

Add Carbopol solution to the water phase mix and heat to 75C, add borax under agitation. Mix and melt oil phase to 75C. Add oil phase to the water phase while mixing. Cool and pour into containers.

Adaptation of Formula and Its Influence on the Product:

Small changes in this formula are possible, such as the addition of small amounts of plant oils for label claims.

SOURCE: Koster Keunen, Inc.: A Guide to Natural Formulating

Hand Care Cream

	Wt%
Part A: Mulsifan CB	6.0
Dow Corning 593 Fluid	2.0
Dow Corning 200-1000	2.0
Avocado oil	3.0
Paraffin oil	2.0
Part B: Water	84.0
Carbopol ETD 2001	0.15
Part C: Caustic soda (45%) approx.	0.07
Part D: Perfume, preservative, antioxidant	0.3

Mix part A, B and D each separately.

Add part B, C and D successively to part A whilst stirring.

Adjust pH to approx. pH 6.5 using caustic soda (15%) or citric acid.

SOURCE: Zschimmer & Schwarz GmbH & Co.: Formulation B27/19

Moisturizer O/W Cream**Formulating Design and Advantages:**

This product utilizes the minor components of natural products to deliver mild anti-microbial activity, which allows the formulator to reduce the concentration of synthetic preservatives. The light yellow colored cream quickly penetrates the skin, leaving a non-greasy feel and diminishes the signs of aging by laying down a flexible barrier.

Oil Phase:	Wt%
Orange Wax (Koster Keunen)	4.5
NF Yellow Beeswax (Koster Keunen)	2.5
Isostearic Acid (Unichema)	1.0
Almond Oil (Arista)	3.0
Mineral Oil (Witco)	3.5
Glycerol Monostearate (Henkel)	6.0
Cetyl Stearyl Alcohol (P&G)	6.0
Octyl Palmitate (Unichema)	2.5

Water Phase:	
Water (Distilled)	67.8
Propylene Glycol (Dow)	1.5
Triethanolamine (Dow)	1.0
Polysorbate 60 (Specialty Industrial Prod.)	0.2
Germaben II (Sutton)	0.5

Procedure:

Add a mixed and uniform water phase to a mixed and uniform oil phase at 75C under agitation. Continue mixing till cool.

Adaptation of Formula and Its Influence on the Product:

Actives are easily incorporated into a product without altering the aesthetics. Changing the types of oils should only alter the viscosity, if maintaining similar concentrations of oils. Viscosity changes are achieved by reducing the concentration of cetyl stearyl alcohol and glycerol monostearate, by approximately 30-40%, however this may cause instability.

Preservative	q.s.

Procedure:

Weigh the Part A water into a suitable vessel and mix with a homogenizer at 5000 rpm. Weigh and dry blend the Veegum HV and Rhodigel, add them slowly to the water and continue mixing for 20 minutes. Begin heating to 65C. Add the remaining Part A ingredients and continue mixing at 5000 rpm. Weigh the Part B ingredients into another vessel. Mix and heat to 70C. Add Part B to Part A and mix for 10 minutes at 5000 rpm. Move the batch to a propeller mixer and adjust the speed to produce a small vortex. Cool while mixing to 35C and add the Part C ingredients in order, mixing each for 5 minutes. Continue cooling and package at 25-30C.

Moisturizing Cream

<u>Ingredients:</u>	<u>Wt. %*</u>
A: Stearic Acid	2.00
Cetyl Alcohol	2.00
Isopropyl Myristate	2.00
Lanolin Oil (Lantrol 1673)	10.00
Glyceryl Stearate (and) PEG-100 Stearate (Arlacel 165)	3.00
B: Veegum, Magnesium Aluminum Silicate	1.50
Deionized Water	74.50
C: Glycerin	4.00
Triethanolamine, 99%	1.00
D: Preservative	q.s.

Procedure:

Weigh the Part B water into a suitable vessel. Mix with an homogenizer operating at 5000 rpm and begin heating to 70C. Slowly add the Veegum and mix for 20 minutes. Add the Part C ingredients in the order shown, mixing each for 3 minutes at 5000 rpm. Weigh the Part A ingredients into another vessel. Mix and heat to 70C. Add Part A to Part B at 70C and mix for 10 minutes at 5000 rpm. Move the batch to a propeller mixer, adjust the speed to produce a small vortex and begin cooling. At 40C, add Part D and package at 35C. *As received basis

Multi Purpose Cream

This white, creamy emulsion has a good cosmetic texture and is suitable for different applications. Phytaluronate adds a pleasant slip to the formula, whereas Fitobroside (penetration enhancer) and Revitalin-BT exert their actions in deeper layers of the skin.

<u>Item:</u>	<u>Ingredients:</u>	<u>%w/w</u>
1	A) Glucate SS	1.20
2	Glucamate SSE 20	1.80
3	Stearic acid	1.50
4	Promulgen D	1.00
5	Modulan	2.00
6	Mineral oil	4.00
7	Eutanol G	2.00
8	B) Water demineralized	71.60
9	Imidazolidinyl urea	0.20
10	Phenonip	0.30
11	Glucam E 20	4.00
12	Phytaluronate	3.00
13	Revitalin-BT	3.00
14	Carbopol 1342	0.50
15	C) Triethanolamine	0.60
16	D) Fitobroside	3.00
17	E) Fragrance/Black Dragon II 0/232511	0.30

Procedure:

Heat the ingredients of fatty phase A) to 70C.

Heat the ingredients of water phase B) to 75C.

Under stirring add phase B) to phase A), with phase C) adjust the pH to 6.0, homogenize and cool to 30C.

Then add phases D) and E) one after another and stir cold.

SOURCE: Pentapharm Ltd.: Application No. A 028.B/07.93

Neck Firming Cream**Formulating Design and Advantages:**

The neck is the most neglected part of the body and shows the first visible signs of aging. This product delivers actives to that area in a cost effective product which has emollient and moisturizing properties that firms tiny lines. Continued use helps promote the look of firm, resilient, soft, youthful-looking skin.

Phase A:	<u>Wt%</u>
Deodorized Orange Wax (Koster Keunen)	3.0
Emulsifying Wax NF (Koster Keunen)	5.0
Shea Butter (Sederma)	3.0
Stearic Acid (Unichema)	3.0
Mineral Oil (Witco)	5.0
Isopropyl Palmitate (Unichema)	5.0
Glycerol Monostearate (Koster Keunen)	1.5
Squalane (Barnet)	3.0
Phytoglycolipid (Barnet)	2.0
Cetyl Stearyl Alcohol (P&G)	0.5
Phase B:	
Water (Distilled)	57.9
Carbopol 940 (B.F. Goodrich)	0.2
Triethanolamine (Dow)	0.4
Glycerin (Unichema)	2.0
Aloe Vera Gel (Active Organics)	0.5
Propylene Glycol (Dow)	2.0
Germaben II (Sutton)	1.0
Phase C:	
Elastosol Animal Collagen & Elastin (Croda)	5.0

Procedure:

Weigh out materials for Phase A, heat to 80C and mix till homogeneous. Heat Phase B to 75C while mixing. Add Phase A to Phase B under rapid agitation. Cool to 45C and add Phase C. Continue mixing till 35 to 40C.

Adaptation of Formula and Its Influence on the Product:

Sunscreens are easily incorporated into a formula of this type. By reducing the concentration of water and/or the oils, Escalol 507 (Van Dyk) can be substituted at approximately 5% to produce an SPF of 6-8.

SOURCE: Koster Keunen, Inc.: A Guide to Natural Formulating

Night Cream

<u>Phase:</u>	<u>Ingredient:</u>	<u>Wt%</u>
A	Deionized Water	43.45
A	Sodium Borate	0.70
A	Glycerin	2.00
A	Xanthan Gum	0.30
A	Tetrasodium EDTA	0.10
B	Cetearyl Alcohol	2.00
B	Sorbitan Sesquioleate	2.00
B	Glyceryl Monostearate	5.00
B	Oils of Aloha Macadamia Nut Oil	8.00
B	Vitamin E Acetate	0.20
B	Beeswax	12.00
B	Mineral Oil	15.00
B	Octyl Palmitate	8.00
C	Germaben II	1.00
D	Fragrance	0.25

Manufacturing Procedure:

Heat Phase A to 75C.

Heat Phase B to 75C. Add Phase B to Phase A. Cool to 40C.

Add remaining phases. Homogenize.

This formula is meant to be left on the skin and to have a heavier film so that it lasts all night. This is a water in oil emulsion and the principal emulsifiers are Sorbitan Sesquioleate and a combination of sodium borate and beeswax. The combination of oils gives proper weight and feel. Could be all Macadamia Nut Oil, but it might be expensive. This formulation can also be used as a makeup remover for lipstick and eye makeup.

8. Propylparaben	0.05
9. Borage Oil	3.00
10. Fragrance	1.00
11. Tensine (Wheat Protein)	6.00

Compounding Procedure:

Heat items 1-4 to 70C. Heat items 5-8 to 70C. Add oil to water. Cool to 40C. Add items 9-11.

Ref. No. 122-13

SOURCE: R.I.T.A. Corp.: Suggested Formulations

Oil-Free Exfoliating Cream**Formulating Design and Advantages:**

The use of natural exfoliating agent (easily dispersed) in this cream formula gives a marvelous, non-irritating, abrasive quality for the removal of spent surface cells. This will renew and revitalize worn and damaged skin, leaving a barrier which contains natural anti-oxidants inherent in the beeswax and deodorized orange wax.

Phase A:	<u>Wt%</u>
Deodorized Orange Wax (Koster Keunen)	3.0
Hydroxy Polyester (Koster Keunen)	2.0
Isostearic Acid (Unichema)	3.0
Dimethicone 200/100 (Dow)	7.5
Glycerol Monostearate (Koster Keunen)	1.5
Cetyl Stearyl Alcohol (P & G)	1.0
Octyl Palmitate (Unichema)	3.0
Phase B:	
Water (Deionized)	64.35
Propylene Glycol (Dow)	2.5
Triethanolamine (Dow)	1.0
Polysorbate 60 (Specialty Industrial Prod.)	0.2
Carbopol 940 (BFGoodrich)	0.2
Methyl Paraben (Aldrich)	0.75
Phase C:	
Microgranulated Carnauba, 20-60 mesh (Koster Keunen)	10.0

Procedure:

Add a mixed and uniform Phase A to a mixed and uniform Phase B at 75C under agitation. Continue mixing and cool to 50C. Add Phase C and mix until homogeneous.

Adaptation of Formula and Its Influence on the Product:

Viscosity of this product can easily be altered by substituting stearic acid for isostearic acid, to accommodate your preferred container. For sensitive skin, reduce the orange wax, and replace with Kester Wax 62 and Ceresin 130/135. A low viscosity will allow this product to be packaged in an open jar. The formulating advantages remain un-altered by the changes in viscosity.

Phytodermin

Phytodermin contains solubilized high molecular weight constituents of the plant matrix from soybeans in natural distribution: hydroxyproline-rich glycoproteins as extensins, arabinogalactans as proteoglycan equivalents and proline-rich glycoproteins. The specific, most gentle production procedure applied in the case of Phytodermin maintains, contrary to conventional soya hydrolysates, the native character of the matrix components contained. In in vivo tests, Phytodermin has proved to be an efficient alternative to the classic animal derived matrix composition.

Regenerative Cream, Type W/O, with Phytodermin

<u>Ingredients:</u>	<u>Weight%</u>
a) Dehymuls PGPH	7.00
Lameform TGI	3.00
Beeswax	5.00
Isopropyl myristate	10.00
Myritol 318	5.00
Cetiol 868	5.00

O/W Basic Cream, Without Paraffin

<u>Ingredients:</u>	<u>Weight%</u>
A) Softisan 601 (Glyceryl Cocoate (and) Hydrogenated Coconut Oil (and) Ceteareth-25)	35.00
Miglyol 812 (Caprylic/Capric Triglyceride)	3.00
Cetyl Alcohol	2.00
B) Preservative	q.s.
Water	60.00

This basic cream can be used to incorporate nonionic active ingredients.

Preparation:

(A) is heated to ca. 65 degrees C. (B) is heated to the same temperature and then emulsified into (A). The cream is then constantly stirred until cool.

SOURCE: Huls America Inc.: Formulation 1.1N

Protective Cream with Cromoist CM Glucan

Due to the incorporation of Cromoist CM Glucan, this cream can protect skin from environmental insult and help it to function better. Cromoist CM Glucan is a unique protective and therapeutic agent that works by stimulating the skin's own defense mechanisms, resulting in protective effects that enhance skin function and increase the skin's resistance to UVA-induced oxidative stress. Crodafos CES is a substantive phosphate-based emulsifying system that enhances the delivery of the other ingredients and improves the application properties of the cream.

<u>Ingredients:</u>	<u>Weight%</u>
Part A:	
Crodafos CES (Cetearyl Alcohol (and) Cetearyl Phosphate)	4.0
Crodamol GTCC (Caprylic/Capric Triglyceride)	5.0
Corona PNL (Lanolin)	1.0
Part B:	
Deionized Water	69.8
Triethanolamine (98%)	0.2
Part C:	
Deionized Water	5.0
Hydrotriticum WAA (Wheat Amino Acids)	1.0
Part D:	
Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben	1.0
Cromoist CM-Glucan (Sodium Carboxymethyl B-Glucan)	1.0
Incromectant LAMEA (Acetamide MEA (and) Lactamide MEA)	5.0
Part E:	
Deionized Water	5.0
DL Panthenol	2.0

pH=4.5+-0.5

Viscosity=20,000 cps+-10% (RVT Spindle #TC @ 10 rpm @ 25C)

Procedure:

Combine ingredients of Part A with mixing and heat to 75-80C. Combine ingredients of Part B with mixing and heat to 75-80C. Add ingredients of Part A to B with mixing and cool to 50C. Add ingredients of Part C, D and E with mixing and cool to desired fill temperature.

Rain Forest Cream

This formula produces a relatively viscous, shiny white cream and features Cronatural Cohune Oil, an emollient oil harvested out of the rain forest, and Crodafos CES. The use of Crodafos CES enhances the formulation's application properties significantly, allowing the cream to rub in effortlessly without any indication of drag. Crodafos CES confers a pleasing emollience, providing the skin with a conditioned afterfeel.

<u>Ingredients:</u>	<u>Wt%</u>

Na ₂ EDTA	0.05
Part C:	
TEA 99%	1.25
Part D:	
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben	1.00

Viscosity=22,000+-10% (RVT Spindle B, 10rpm @ 25C)
pH=7.0+-0.5

Procedure:

Dissolve the Na₂EDTA of Part B in deionized water. Disperse Carbomer 2984 into water of Part B. When fully hydrated, add glycerin with mixing and heat to 70-75C. Combine ingredients of Part A with mixing and heat to 70-75C. Add Part A to Part B with mixing. Add C to A/B with mixing and cool to 40C. Add Part D with mixing and cool to desired fill temperature.

N.A.T.C. Approved

Rejuvenating AHA Cream
(W/O Emulsion)

<u>Ingredients:</u>	<u>Weight%</u>
Oil Phase:	
Polyglyceryl-4 Isostearate (and) Cetyl Dimethicone Copolyol (and) Hexyl Laurate (Abil WE-09)	5.00
Hydrogenated Castor Oil	0.50
Microcrystalline Wax	0.50
Caprylic/Capric Triglycerides (Tegosoft CT)	3.00
Octyl Stearate (Tegosoft OS)	5.00
Isopropyl Myristate (Tegosoft M)	4.00
Isopropyl Palmitate (Tegosoft P)	1.00
Cetyl Dimethicone (Abil Wax 9801)	1.00
Cyclomethicone	4.00
Water Phase:	
Water	70.75
NaCl	0.80
Propylene Glycol	2.00
Sodium Citrate	0.60
Malic Acid Granular	1.60
Sodium Lactate (and) Sodium PCA (and) Glycine (and) Fructose (and) Urea (and) Niacinamide (and) Inositol (and) Sodium Benzoate (and) Lactic Acid (Lactil)	0.25
Preservatives, Color, Fragrance	Q.S.

Procedure:

1. Add the components of the oil phase together. Heat to 80-85C to melt and disperse the waxes. When dispersed, cool and maintain a temperature of 45-50C.
2. Mix water, propylene glycol and sodium chloride together dissolving sodium chloride. Add and mix the remaining ingredients of the water phase.
3. Adjust the pH of the water phase to 4.0-4.5 if necessary.
4. With slow lightnin' mixing, slowly stream the water phase into the oil phase.
5. With sweep agitation, cool to 35C.
6. Add color, fragrance and preservatives.
7. Homogenize with a roto-stator homogenizer.

Skin Care Cream**Formulating Design and Advantages:**

This product imparts good skin feel and has a high quality appearance, though the production is cost effective. There are also barrier and moisturizing properties which are highly effective hydration system for all skin types. The formula also will help reduce transepidermal water loss.

Oil Phase:	<u>Wt%</u>
Cetyl Stearyl Alcohol 1618 (P&G)	4.50
NF White Beeswax (Koster Keunen)	2.50
Isopropyl Palmitate (Unichema)	3.00
Light Mineral Oil (Witco)	5.00
Propylene glycol Dioctanate (Inolex)	1.50
Stearic Acid (Unichema)	0.50
Coconut Oil (CocoChem)	1.25
Propyl Paraben (Sutton)	0.20

Water Phase:	
Water (Distilled)	74.25
Glycerine (UniChema)	5.50
Carboxymethyl Cellulose (CMC, Hercules)	0.30
Carbopol 940 (BFGoodrich)	0.60
Sodium Borate (Borax)	0.40
Triethanolamine (Dow)	0.30
Methyl Paraben (Sutton)	0.20

Procedure:

Add to the water phase under agitation, in order; CMC until everything is dissolved then propyl paraben while mixing. Then add Carbopol, mix till homogeneous making sure there is no agglomeration. Add the remainder of the water phase components, mix and heat to 75C. Add all the oil phase components, heat till 75C and mix. Add slowly the oil phase to the water phase under agitation maintaining a temperature of 75C. When the oil phase is added, cool and pour into container.

Adaptation of Formula and Its Influence on the Product:

By reducing the concentrations of mineral oil by 2.0%, propylene glycol dioctanate by 0.5% and the addition of 2.5% Escalol 507 (Van Dyk) the cream will take on an SPF of 6-8. The product has the same appearance, skin feel and stability as the above formula. Fragrances can also be added without affecting its texture.

SOURCE: Koster Keunen, Inc.: A Guide to Natural Formulating

Skin Cream**Formulating Design and Advantages:**

The emulsifying wax adds to the stability and richness of the cream.

Oil Phase:	<u>Wt%</u>
Emulsifying Wax NF (Koster Keunen)	12.0
Sunflower Oil (Alnoroil)	6.0
Olive Oil, Unsaponifiable (Collaborative Labs)	3.0
Isopropyl Myristate (Unichema)	2.0
Liquapar (Sutton)	1.0

Water Phase:	
Water (Deionized)	74.0
Glycerine (Unichema)	2.0

Procedure:

Mix and heat oil phase to 75C. Mix and heat water phase to 75C. Add oil phase to water phase. Cool.

Adaptation of Formula and Its Influence on the Product:

Other actives may be substituted for the olive oil.

Skin Rejuvenating Cream

A synergistic combination of Veegum Plus and Rhodigel Xanthan Gum is used to thicken and stabilize this oil-in-water emulsion. Approximately 5% Glycolic Acid, an alpha-hydroxy acid, is incorporated into the formula to provide its well-known skin rejuvenating function.

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Veegum Plus, Magnesium Aluminum Silicate	0.95
Deionized Water	63.67
Rhodigel, Xanthan Gum	0.29
B: Glycerin	4.75
C: Triethanolamine, 99%	0.71
D: Cetyl Alcohol	2.85
Glyceryl Stearate (and) PEG-100 Stearate (Arlacel 165)	4.28
Stearic Acid	1.43
Isopropyl Palmitate	4.28
Mineral Oil (and) Lanolin Alcohol (Amerchol L-101)	4.28
Dimethicone (350 cs.)	1.43
E: Preservative	0.95
Glycolic Acid (67% Soln.)	7.13
Sodium Hydroxide (50% Soln.)	3.00

Procedure:

Dry blend the Veegum Plus and Rhodigel and slowly add the mixture to room temperature water while stirring with a propeller mixer at 1800 rpm. Continue mixing for 30 minutes. Add Part B and mix 5 minutes. Heat Parts A+B to 50-55C and add Part C. Mix 3 minutes. Heat the water phase to 75C. Mix and heat Part D to 75-80C. Add Part D to parts A+B+C while stirring at 1800 rpm for 10 minutes. Maintain temperature at 75C. Begin cooling while stirring. At 40C, add Part E in the order shown, mixing each until uniform. Continue cooling and slow the stirrer to 900 rpm. Check the pH and adjust, if necessary, to 4.2-4.5. Package at 35-38C.

Ultra Skin Treatment Cream

Veegum Ultra is an ideal candidate for thickening and stabilizing this acidic oil-in-water emulsion because it yields a low pH when dispersed in water. When used in combination with Rhodigel Xanthan Gum, synergistic thickening and stabilization is achieved. Approximately 5% Glycolic Acid is added to provide its well-known skin rejuvenating function.

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Veegum Ultra, Magnesium Aluminum Silicate	1.43
Deionized Water	63.51
Rhodigel, Xanthan Gum	0.29
B: Glycerin	4.76
C: Triethanolamine, 99%	0.71
D: Cetyl Alcohol	2.85
Glyceryl Stearate (and) PEG-100 Stearate (Arlacel 165)	4.28
Stearic Acid	1.43
Isopropyl Palmitate	4.28
Mineral Oil (and) Lanolin Alcohol (Amerchol L-101)	4.28
Dimethicone (350 cs.)	1.43
E: Preservative	0.95
Glycolic Acid (67% Soln.)	7.14
Sodium Hydroxide (50% Soln.)	2.66

Procedure:

Dry blend the Veegum Ultra and Rhodigel. Slowly add the mixture to room temperature water while stirring with a propeller mixer at 1800 rpm. Continue mixing for 30 minutes. Add Part B and mix 5 minutes. Heat Parts A+B to 50-55C and add Part C. Mix 3 minutes. Heat the water phase to 75C. Mix and heat the Part D ingredients to 75-80C. Add Part D to Parts A+B+C. Stir at 1800 rpm for 10 minutes. Maintain temperature at 75C. Begin cooling while stirring. At 40C, add the Part E ingredients in the order shown, mixing each until uniform. Continue cooling and slow the mixer to 900 rpm. Check the pH and adjust, if necessary, to 3.5-4.0. Package at 35-38C.

Emulsion 25-3800 (50% active)	14.00
AMP-95	1.00
Monawet MO-75E	0.30
Deionized water	84.70

Procedure:

Combine water, MO-75E and AMP. Next, add polymer emulsion with stirring until completely dissolved. Filter and fill concentrate.

Valving and Actuator:

Pump Type:	EuroMist, 190 mcl
Liner:	PE/Butyl
Closure:	24-410, White
Spring:	302 SS, 1 lb 0 oz.
Body:	190 mcl output
Dip Tube:	7", 0.060" ID
Insert:	.010" x .010" deep
Seal Valve:	Standard
Hood:	SBS, Clear
Turret:	24 mm

Formulation PF-0402 suggested by National Starch & Chemical Co. (8757-120-2)

Super Hold Pump Spray

<u>Ingredients:</u>	<u>% by Weight</u>
A. SD Alcohol 40, 190 proof	84.21
Deionized water	8.12
AMP-95	1.47
Dow Corning Q2-5220 Polyether	0.10
Fragrance (Peach Floral 92F/3235)	0.10
B. Luvimer 100 P	6.00

Procedure:

Combine phase A ingredients in order listed, mixing after each addition.

Sprinkle B into A with mixing until clear.

Formulation PF-0398 suggested by BASF (DKL84/3)

Alcohol-Free Ringing Gel with Hold

<u>Ingredients:</u>	<u>Parts by Weight</u>
Part A:	
Deionized Water	57.59
Propylene Glycol	12.00
AMP-Regular	0.41
Amphomer	3.00
Part B:	
Lt. Mineral Oil	10.00
Volpo 5	9.00
Crodafos N10 Neutral	4.00
Crodafos N3 Neutral	3.00
Part C:	
Germaben II	1.00

Preparation:

Part A: Combine the water, AMP, and propylene glycol. While maintaining good agitation, slowly sift in Amphomer. Slowly heat Part A to 70C.

Part B: Combine ingredients of Part B and heat to 80C. Add Part B to Part A with mixing and start to cool. Add Part C when the temperature drops to approximately 55C.

Continue mixing for five minutes or until homogeneous. Cool to room temperature.

Formula No. 8802:76B

Cream Hair Conditioner

This cream hair conditioner has excellent wet combability, adds body to the hair, and has good hold.

<u>Ingredients:</u>	<u>Parts by Weight</u>
A) Celquat L-200	1.00
Triethanolamine	0.50
Propylene Glycol	2.25
Distilled Water	76.25
Preservative	q.s.
B) Acetulan	0.50
Amerchol L-101	2.50
Stearic Acid XXX	1.25
Emerest 2407	1.00
Mineral Oil	14.75
Fragrance	q.s.

Preparation:

Heat A and B separately to 80C. While mixing, add B to A. Continue mixing while cooling to 25-30C. Add C. Adjust pH to 7.5 if necessary. Mix until uniform.

Formula No. 3474-28

SOURCE: National Starch and Chemical Co.: Suggested Formulations

Alcohol-Free Styling Mousse

This alcohol-free styling mousse has good wet/dry combability, good subjective properties and excellent hold.

<u>Ingredients:</u>	<u>% by Weight</u>
A. Lovocryl 47	3.00
AMP-95	0.63
DC-929 Silicone	0.30
Triton X-100	0.30
dl-Panthenol	0.10
Neo Heliopan Hydro	0.10
Croteen Q	0.20
Dowicil 200	0.10
Deionized water	40.01
B. Natrosol 250 HHR	0.40
Deionized water	44.86
C. Propellant A-46	10.00

Procedure:

Prepare part A by dissolving AMP-95 in water. While maintaining good agitation, slowly sift in the Lovocryl-47. When solution is complete, add the remaining ingredients. Prepare part B. When solutions are complete, add A to B and mix until homogeneous. Filter and fill concentrate. Charge cans with propellant C.

Formulation PF-0356 suggested by National Starch & Chemical Corp. (7879:H101)

Alcohol-Free Styling Mousse

<u>Ingredients:</u>	<u>% by Weight</u>
A. Amphomer	3.00
AMP-95	0.52
DC-929 Silicone	0.40
Triton X-100	0.30
Varion CADG	0.10
Fragrance	q.s.
Dowicil 200	0.10
Deionized water	48.08
DC-190	0.40
B. Natrosol 250 HHR	0.30
Deionized water	36.80
C. Propellant A-46	10.00

Procedure:

Prepare portions A and B. When solutions are complete, add A to B and mix until homogeneous. Filter and fill concentrate. Charge propellant C.

Formulation PF-0357 suggested by National Starch & Chemical Corp. (7974:32-3)

Brush-On Hair Color

This formulation provides dramatic streaks and highlights yet rinses out easily.

	<u>Wt%</u>
A: Veegum, Magnesium Aluminum Silicate (5% Aq. Soln.)	10.00
B: Hydroxypropylcellulose (5% Aq. Soln.) (Klucel G)	15.00
C: Deionized Water	24.00
PVP (Luviskol K30)	2.00
Methylparaben	0.20
D: Cetyl Alcohol	3.60
Cetareth-25 (Cremophor A25)	2.40
Propylparaben	0.10
E: Deionized Water	17.34
Propylene Glycol	5.00
F: Mica (and) Iron Oxides (Colorona Copper)	20.00
G: DMDM Hydantoin (Glydant)	0.36

Procedure:

Prepare A and B in advance. Combine C and heat to 75C with stirring. Combine D. Heat to 75C stirring until clear. Add D to C with counter rotation agitation. Cool to 40C. Separately, add B to A followed by E, stirring until homogeneous. Add combined A,B,E to C+D. Homogenize at high speed for 5 minutes with a Silverson-type homogenizer. Add F and G, stirring with counter rotation agitation. Cool to 30C. Package in mascara vials with brush applicator.

Formula from Rona

Creme-in Hair Cleanser

	<u>Wt%</u>
Ammonium Lauryl Sulfate (Carsonol ALS)	15.00
Cocoamidopropyl Betaine	10.00
Lauramide DEA (Carsamide SAL-7)	2.00
PPG-5-Ceteth 10 Phosphate (Crodafos SG)	2.00
Stearyl Alcohol (and) Cetareth 20 (Cosmowax K)	2.50
Sucrose Cocoate (Crodesta SL-40)	12.00
Steartrimonium Hydroxyethyl Hydrolyzed Collagen (Crotein Q)	3.00
Veegum K, Magnesium Aluminum Silicate	0.45
Water	53.05
Dye, fragrance	q.s.

Procedure:

Disperse the Veegum K in half the water and heat to 85C until a uniform slurry is achieved. Dissolve the Crodesta in the rest of the water, then dissolve the Crotein Q. Heat other ingredients to 60C with stirring. Cool to 40C, add fragrance and fill off.

Clear Hair Rinse Formulation

Natrosol viscosifies this crystal-clear hair rinse, which promotes manageability. Control formulas made without Natrosol have viscosities of less than 100 cps.

<u>Ingredients:</u>	<u>Weight%</u>
Natrosol 250HHR CS	1.0
Water	73.5
Cocamidopropylamine oxide (30%)	5.1
Lauramine oxide (30%)	10.2
Cetrimonium chloride (25%)	10.2
Perfume, preservative	q.s. to 100.0

Procedure:

1. Disperse Natrosol in water with good agitation. Mix until fully dissolved.
2. Add the remaining ingredients in the order listed, mixing well between additions.
(Brookfield viscosity at 30 rpm, 25C=3,360 cps [mPas])

Pearlescent Cream Rinse Formulation

Natrosol viscosifies this product and prevents phase separation.

<u>Ingredients:</u>	<u>Weight%</u>
Phase A:	
Natrosol 250HHR CS	1.3
Water	82.3
Phase B:	
Stearalkonium chloride (25%)	10.1
Propylene glycol	1.5
Glycol stearate	1.5
Oleth-20	1.5
Polyquaternium-17 (62%)	1.8
Perfume, preservative	q.s. to 100.0

Procedure:

1. Disperse Natrosol in water with good agitation. Mix until fully dissolved.
2. In a separate vessel, mix the stearalkonium chloride and propylene glycol. Heat to 80C.
3. Add the other ingredients listed in Phase B, in the order listed, to the mixture of stearalkonium chloride and propylene glycol. Mix well between each addition.
4. Add the surfactant mixture to the Natrosol solution. Mix well. Cool to 35C.
5. Add perfume and preservative.
(Brookfield viscosity at 30 rpm, 25C = 8,600 cps [mPas])

Conditioner for Dry Brittle Hair

Phase:	Ingredient:	Wt%
A	Deionized Water	88.20
A	Guar Hyd. Propyl Trimonium Chloride	0.80
A	Quaternium-76 Hydrolyzed Animal Prot.	6.00
B	Glycol Stearate	2.00
B	Cetyl Alcohol	0.50
B	Myrj 52S (PEG-40 Stearate)	1.50
B	Oils of Aloha Kukui Nut Oil	1.00
C	Preservative	QS

Manufacturing Procedure:

Phase A: Disperse Guar in water while heating to 65C.

Phase B: Combine fatty components and add to water phase. Cool to 40C.

Phase C: Add remaining ingredients.

pH: 5.0

The primary conditioners are Guar hydroxy propyl trimonium chloride and the Quaternium-76 Hydrolyzed Animal Protein. Emulsifier is the Myrj 52S. Kukui Nut Oil (Macadamia Nut could be used) provides a glossing agent for dry hair and replaces the natural oils lost in shampooing.

SOURCE: Oils of Aloha: Suggested Formulation

Hair Styling Gel

<u>A:</u>		<u>Wt%</u>
	Deionized Water	85.95
	Carbomer 940	1.00
<u>B:</u>		
	Deionized Water	3.00
	Triethanolamine (99%)	1.00
<u>C:</u>		
	Vinylcaprolactam/PVP/Dimethylaminoethylmethacrylate Copolymer	7.50
<u>D:</u>		
	Silicone Quaternium-5 (Pecosil SMQ-40)	1.50
<u>E:</u>		
	Methylchloroisothiazolinone (and) Methylisothiazolinone	0.05

Procedure:

Disperse Carbomer in Phase A water. When a uniform dispersion is obtained, add Phase B to Phase A. Slowly sweep in Phase C, Phase D and Phase E until a uniform gel is obtained.

Cream Rinse Conditioner

This cream rinse formula features Crodafos CES, together with a cationic conditioner, Incroquat BES-35S. By its ability to promote fast release of oils and conditioning agents to the hair and its compatibility with quaternary conditioners, Crodafos CES enables this cream rinse to provide enhanced conditioning effects. The increased sheen, silkier, softer feel, and improved texture the hair acquires is the result of the quick delivery of the Crodamol esters, Super Refined Wheat Germ Oil and Incroquat BES-35S by Crodafos CES. Because Crodafos CES also improves its application properties, the product rinses out extremely easily without incidence of drag or a waxy deposit.

Ingredients:

	<u>Wt%</u>
Part A:	
Crodafos CES (Cetearyl Alcohol (and) Cetearyl Phosphate)	6.0
Incroquat BES-35S (Behenamidopropylethyldimonium Etho-sulfate (and) Stearyl Alcohol)	1.5
Crodacol CS-50 (Cetearyl Alcohol)	1.5
Super Refined Wheat Germ Oil	2.0
Crodamol OS (Octyl Stearate)	2.0
Crodamol OPG (Octyl Pelargonate)	2.0
Part B:	
Deionized Water	83.65
TEA 99%	0.35
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben	1.0

pH=5.5+-0.5

Viscosity=16,000cps+-10%, (Spindle TD @ 10RPM @ 25C)

Procedure:

Combine ingredients of Part A with mixing and heat to 75-80C. Combine ingredients Part B with mixing and heat to 75-80C. Add Part B to Part A with mixing and cool to desired fill temperature.

N.A.T.C. Approved

Detangling Creme Rinse

N-Hance 3000 cationic guar provides wet and dry combability to this flowable, opaque, after-shampoo rinse for hair detangling and conditioning. This product will also increase hair softness and reduce fly-away. The cyclomethicone contributes gloss and adds protection against damage from heat styling. With N-Hance, the viscosity is 2,000 cps and the pH=5.2. Without N-Hance, the formulation is water-thin and experiences phase separation.

<u>Ingredient:</u>	<u>Wt%</u>
Aqueous Phase:	
Distilled water	q.s. to 100.00
N-Hance 3000 cationic guar	1.00
Cetrimonium chloride (25% active)	4.00
Citric acid (50% solution)	0.35
Oil Phase:	
Cetyl alcohol	1.50
Cyclomethicone	1.50
Stearamidopropyl dimethylamine	0.70
Glyceryl stearate	0.60
Polysorbate 80	0.40
Propylene glycol (and) diazolidinyl urea (and) methylparaben (and) propylparaben	0.75

Procedure:

1. Disperse N-Hance 3000 cationic guar by adding it to the vortex of well-agitated water. Add the citric acid solution, which promotes hydration of the N-Hance and neutralizes the stearamidopropyl dimethylamine. As elevated temperature is needed to form the emulsion, start heating to 65C. Mix until the polymer is fully dissolved.
2. Add the cetrimonium chloride and mix well.
3. In a separate vessel, combine the oil-phase ingredients. Heat to 65C.
4. Add the aqueous-phase ingredients to the oil-phase ingredients with good agitation. Turn off heat but continue mixing.
5. When at 40C or below, add preservatives and fragrance.

SOURCE: Aqualon Division: N-Hance 3000 Cationic Guar: Formulation

Easy Spreading Mousse

This mousse contains Dow Corning 193 surfactant to plasticize the Gantrez resin and to enhance the spreadability of the resin on the hair. Dow Corning 193 surfactant also assists in foam building and foam stability.

<u>Ingredients:</u>	<u>% by Weight</u>
Dow Corning 193	0.50
Gantrez ES-225	5.00
AMP-95	0.20
Water	74.30
SD Alcohol 40	10.00
Propellant A-46	10.00

Procedure:

Add the AMP-95 to the ethanol. Stir in the Gantrez. Add Dow Corning 193 surfactant to the water. Stir the water mixture into the ethanol mixture. Add fragrance and preservative, if desired.

Aerosol Filling:

Load the concentrate (90% by weight) and fill with A-46 hydrocarbon propellant (10% by weight).

Stability:

The stability of this formulation has not been assessed.
Formulation PF-0364 suggested by Dow Corning Corp. (E2-5284)

Gantrez Hair Spray with Cyclomethicone

This hair spray contains silicone cyclics, which plasticize the resin. The cyclics give improved curl retention when compared with the same formulation without cyclics. This formulation shows how silicone cyclics can be used in Gantrez-based hair sprays.

<u>Ingredients:</u>	<u>% by Weight</u>
Dow Corning 345 Fluid	1.00
Gantrez ES-425	7.60
AMP-Regular	0.16
SD Alcohol 40	71.24
Propellant A-46	20.00

Procedure:

Weigh out the alcohol and dissolve the AMP into it. Stir in the Gantrez. Add the Dow Corning 345 fluid. Add fragrance if desired. Dow Corning 344 fluid can be substituted for Dow Corning 345 fluid.

Aerosol Filling:

Load the concentrate (80% by weight) and fill with A-46 hydrocarbon propellant (20% by weight).

Stability:

The stability of this formulation has not been assessed.
Formulation PF-0365 suggested by Dow Corning Corp. (E2-5273)

Extra-Hold Conditioning Mousse

<u>Ingredients:</u>	<u>% by Weight</u>
A. Amphomer	3.75
AMP-95	0.60
Amodimethicone (and) nonoxynol-10 (and) tallow-trimonium chloride	0.40
Phospholipid EFA	0.60
Alcohol, denatured	10.00
Water	37.35
B. Hydroxyethyl cellulose	0.30
C. Water	37.00
D. Propellant	10.00

Procedure:

Combine A. Carefully sprinkle B in C with good agitation. Heating may help solubilization. Blend BC in A. Pressurize with D

Formulation PF-0370 suggested by Angus/Mona

De-Frizzing Creme-Gel

<u>Ingredients:</u>	<u>% by Weight</u>
A. Deionized water	89.45
D-Panthenol 50P	1.00
AMP-95	0.25
Luvimer 36 D	2.80
B. Luvitol EHO	2.00
Sepigel 305	4.00
C. Nipaguard DMDMH	0.50
D. Fragrance	q.s.

Procedure:

Combine phase A in order listed while mixing.

Combine phase B.

Add B to A under propeller mixing until uniform emulsion is formed.

Add C and D to AB and mix until uniform.

Formulation PF-0395 suggested by BASF (ND547/2)

Glossing Hair Conditioner

This conditioner provides exceptional hair control, wet and dry combability, and gives a soft gloss to the hair.

<u>Ingredients:</u>	<u>Weight%</u>
Phase A:	
Water	91.25
Citric Acid	0.50
Phase B:	
Stearamidopropyl Dimethylamine (Tego Amid S 18)	1.25
Glyceryl Stearate S.E. (Tegin)	3.00
Ceteth-2	1.50
Behenoxy Dimethicone (Abil Wax 2440)	0.35
Phase C:	
Propylene Glycol	0.90
Quaternium-80 (Abil Quat 3272)	0.40
Phase D:	
Dimethicone Copolyol (Abil B 8851)	0.25
Sodium Chloride - 25% aqueous solution	0.60
Phase E:	
Color, Fragrance, Preservatives	Q.S.

Procedure:

1. Heat the water to 70C. Add and disperse the Citric Acid.
2. Add the ingredients of Phase B to Phase A, one at a time, mixing between additions. After all additions are made, mix until homogeneous.
3. Cool batch to 40C. Mix Phase C and add to A/B. Use sweep mixer.
4. Add remaining ingredients. Mix until uniform using sweep mixer.

Acidic Hair Rinse

Gives permed and dyed hair a soft smooth tactile feel and gloss.

<u>Ingredients:</u>	<u>Weight%</u>
Phase A:	
Polyglyceryl-3 Methylglucose Distearate (Tego Care 450)	4.0
Phase B:	
Water	73.8
Glycerin	2.0
Citric Acid (10%)	0.2
Phase C:	
Hydroxyethylcellulose (2.5% aqueous solution)*	20.0
Phase D:	
Perfume	Q.S.
Preservative	Q.S.

*Natrosol 250 HR

Procedure:

1. Heat Phase A and B to 70C, stir B into A and homogenize.
2. Add the Hydroxyethylcellulose and homogenize again. Stir until the emulsion is cool (30C).
3. The perfume is added at 30C.

SOURCE: Goldschmidt Chemical Corp.: Suggested Formulations

Hair Conditioner**Formulating Design and Advantages:**

This formula incorporates a mixture of amino acids from the Silk'n Soluble Liquid (Dacso). These amino acids have a good affinity for hair, especially when bleached and damaged, leaving your hair smooth and silky.

Water Phase I:	<u>Wt%</u>
Water (Distilled)	64.0
Butylene Glycol (Hoechst)	4.0
Glycerine (Unichema)	2.0
Silk'n Soluble Liquid (Dasco)	0.3
Cellosize (Hercules)	0.3
Methylparaben (Sutton)	0.3

Oil Phase:

Cera Bellina (Pg-3 Beeswax, Koster Keunen)	3.5
Minosil (Pride Solvents)	3.5
Glycerol Monostearate (Henkel)	2.0
Amerchol L 101 (Amerchol)	1.5
Vitamin E (Phibro Chem)	0.5
Propylparaben (Sutton)	0.1

Water Phase II:

Water (Distilled)	17.0
Triethanolamine (Dow)	1.0

Procedure:

Heat the water phase I to 75C under agitation ensuring that the entire phase is solubilized. Melt and mix the oil phase until homogeneous and a temperature of 75C is maintained. Slowly add the water phase I to the oil phase under moderate agitation. Allow to cool to 55C and add water phase II. Continue mixing and cool until at room temperature.

Adaptation of Formula and Its Influence on the Product:

Other active compounds and conditioning agents are easily introduced into this type of formula. Consistency is easily increased by using a greater concentration of Cera Bellina. This will also combine to increase the conditioning properties of the product.

Hair Conditioner with DLL

<u>Stage Material:</u>	<u>Quantity</u>
Oil Phase:	
1 Procol CS-20 D	2.000g
2 AEC Cherry Pit Oil	0.500g
Aqueous Phase:	
3 Water; Pure	87.850g
4 Natrosol 250 HR	0.500g
5 AEC Dimethicone (&) Laureth-4 (&) Laureth-23	2.000g
6 AEC Dicetyldimonium Chloride	3.000g
7 Propylene Glycol USP	3.000g
8 Germaben 11-E	0.500g
Cooling Cycle:	
9 D-Panthenol 75%	0.500g
10 Fragrance; Cherry AG6330	0.150g
11 Colours as required	g

Mixing Instructions:

Disperse the Hydroxyethyl Cellulose in water and bring to 70C while adding the remaining items of the Aqueous Phase.

Separately heat the Oil Phase to 70C and with high shear mixing add the Oil Phase to the Aqueous, mix briefly then stir until cool.

Add Panthenol and fragrance and adjust the pH to 5.0-5.5 with citric or phosphoric acid.

Colour as required.

This simple formula may be readily adapted to take herbal additives, soluble proteins and other active ingredients.

Project: JW 2390/Formula Ref.: 817*2

Hair Conditioner with DLL

<u>Stage Material:</u>	<u>Quantity</u>
Oil Phase:	
1 Cetearyl Alcohol	3.000g

AMP-95	0.34
Phase 3:	
Ethanol, SDA-40	10.00
Germaben II	1.00

Procedure:

Combine ingredients in Phase 1. Heat to 80C. Combine all ingredients of phase 2, except for Amphomer. With vigorous agitation, heat ingredients to 60C. Slowly sift in Amphomer. Bring heat to 80C. Combine ingredients of Phase 1 with ingredients of Phase 2. Mix for 15 minutes. Cool to 50C. Add ingredients of Phase 3. Mix for 10 minutes. Pour into container. Allow to cool.

Formulation PF-0353 suggested by National Starch & Chemical Corp. (8334-66)

Resyn Hair Spray with Dimethicone Copolyol

This hair spray contains Dow Corning 193 surfactant which plasticizes the resin. This formulation shows how silicone glycols can be used in Resyn-based hair sprays. Dow Corning Q2-5220 resin modifier can be substituted for Dow Corning 193 surfactant.

<u>Ingredients:</u>	<u>% by Weight</u>
Dow Corning 193	0.50
Resyn 28-3307	3.00
AMP Regular	0.28
SD Alcohol 40	76.22
Propellant A-46	20.00

Procedure:

Dissolve the Resyn into the ethanol. Add the AMP. Add Dow Corning 193 surfactant. Stir until uniform. Add fragrance if desired.

Aerosol Filling:

Load the concentrate (80% by weight) and fill with A-46 hydrocarbon propellant (20% by weight).

Stability:

The stability of this formulation has not been assessed.

AMP Regular	1.61
Citroflex-2	0.20
Crotein ADW	0.10
d1-Panthenol	0.05
Purcellin Oil	0.05
Deionized Water	9.99
Anhydrous Ethanol, SDA-40	80.00

Valve Specifications:	Calmar Mark II Valve	
	Head: WS	Inductor: 6 1/4"
	SPV: 302 SS	ACM: 1 BLIP
	GSK: 05744	

Preparation:

Dissolve AMP in water and ethanol. While maintaining good agitation, slowly sift in Lovocryl-47. Once dissolved, add balance of ingredients and mix until homogeneous. Filter and fill.

Formulation 7974:115

Ultra-Hold Finishing Spray

This anhydrous aerosol hair spray has a stiff hold with excellent humidity resistance, compatibility with a wide variety of additives and excellent subjective properties on hair.

<u>Ingredients:</u>	<u>Parts by Weight</u>
Resyn 28-2930	5.40
AMP Regular	0.54
DC Q2-5220	0.20
Phospholipid EFA	0.20
TEA Salicylate	0.05
Monamid 716	0.10
Fragrance	q.s.
Anhydrous Ethanol, SDA-40	68.51
Propellant A-46	25.00

Preparation:

Dissolve AMP in ethanol. While maintaining good agitation, slowly sift Resyn 28-2930 into the vortex. When the solution is complete, add remaining ingredients and mix until homogeneous. Filter and fill concentrate. Charge with propellant.

Formulation 6472:146

Hot Oil Conditioner with CPO

<u>Stage Material:</u>	<u>Quantity</u>
Stage A:	
1 Water; Pure	85.440g
2 Natrosol 250 HR	0.750g
3 Germaben 11-E	0.500g
Stage B:	
4 Incroquat SDQ-25	3.000g
5 Emulgade 1000 NI	1.000g
6 AEC Cherry Pit Oil	1.000g
7 Propylene Glycol USP	3.000g
8 Citric Acid BP	0.440g
9 Lexamine S-13	2.220g
Cooling Cycle:	
10 D-Panthenol 75%	0.500g
11 Fragrance; Cherry AG6330	0.150g
12 Colours as required	2.000g

Mixing Instructions:

Disperse the Hydroxyethyl Cellulose in water and bring to 70C. Separately heat the Oil Phase to 70C and with high shear mixing add the Oil Phase to the Aqueous, mix briefly then stir until cool.

Add Fragrance, Preservative and colour as required and adjust the pH to 5.0-5.5.

This simple formula may be readily adapted to take herbal additives, soluble proteins and other active ingredients as required.

Hair Straightener

Panalane's function is to reduce scalp burn while providing emollience and spreadability. Yet it has a less greasy feeling on the skin than other oils used in this type of product. Panalane is stable at the high pH required for this application.

<u>Sequence:</u>	<u>Raw Material:</u>	<u>Percent</u>
1	Deionized Water	56.00
1	Propylene Glycol	2.00
1	Uniphen P-23	1.00
2	Lipowax P	15.00
2	Petrolatum White	8.00
2	Panalane L-14E	10.00
3	Sodium Hydroxide (25% soln)	8.00

Procedure:

1. Combine and heat Sequence #1 and Sequence #2 separately to 75C
2. Add Sequence #2 to Sequence #1 with rapid mixing.
3. Cool to 40C before adding Sequence #3.
4. Cool to room temperature and package.

SOURCE: Lipo Chemicals Inc.: Formula No. 825

Modern Expression Hair Mask

<u>Ingredients:</u>	<u>% by Weight</u>
A. Deionized water	70.01
Pluracare F127	20.00
Luviquat Mono CP	1.00
D-Panthenol 50 P	2.00
Luviskol VA 73 W	1.00
Dow Corning 193 Polyether	0.50
Hydrolyzed Wheat Protein	0.70
Solu-Soy EN25	0.30
Nipaguard DMDMH	0.50
AMP-95	0.49
Tenox BHT (10% in SD Alcohol)	1.00
B. Cremophor RH 40	0.35
Fragrance	0.15
C. Luvimer 100 P	2.00

Procedure:

Using cold water for phase A (40-10C) slowly add the Pluracare to the water and mix until the solution is homogeneous.

Add the remaining ingredients of A to the Pluracare solution.

Combine Phases B and C separately.

Maintain the phase A temperature below 10C and add phases B and C to A.

Transfer the mixture to appropriate containers and allow to warm up to room temperature, whereupon the liquid becomes a ringing gel.

Formulation PF-0397 suggested by BASF (SG1103/2)

Spiking Spritz

This spiking spritz contains Dow Corning 190 surfactant, which reduces tackiness and provides a light, nongreasy feel.

<u>Ingredients:</u>	<u>% by Weight</u>
Ethanol (190 proof)	91.90
Dow Corning 190 Surfactant	1.00
AMP-Regular	1.10
Amphomer	6.00

Procedure:

Mix in order.

Stability:

3 months at 40C

6 months at room temperature

Formulation PF-0367 suggested by Dow Corning Corp. (E8239-21)

Non-Aerosol Finishing Spray

A light, holding spray that provides a conditioning sheen through the use of Phospholipid EFA.

	<u>% By Weight</u>
SD Alcohol 40	94.10
Vinyl Acetate/Crotonic Acid Copolymer	3.75
Water	1.20
Phospholipid EFA	0.60
Aminomethyl Propanol	0.35

Add vinyl acetate/crotonic acid copolymer to alcohol slowly with adequate agitation, mix until well dispersed. Add aminomethyl propanol to neutralize, and mix until dissolved. Add remaining ingredients, color, fragrance and package.

Finishing Spray

	<u>% By Weight</u>
SD Alcohol 40	94.10
Resyn 28-1310	3.75
Water	1.20
Aminomethyl Propanol	0.35
Phospholipid EFA	0.60

Procedure:

Add Resyn 28-1310 to alcohol slowly with adequate agitation, mix until well dispersed. Add aminomethyl propanol to neutralize, and mix until dissolved. Add remaining ingredients color, fragrance and package.

Replenishing Creme Rinse

	<u>% By Weight</u>
Water	87.80
Hydroxyethyl Cellulose	0.70
Glycol Distearate	2.00
Cetearyl Alcohol	2.50
Monaquat TG	6.70
Phospholipid EFA	0.30

Procedure:

Charge water, carefully add Natrosol 250 HHR with good agitation. Heat to 50-60 and add remaining ingredients and continue heating to 70C. Cool to 45C and adjust pH to 4.5 to 5.0. Add color, fragrance and preservative as required. Continue agitation and cooling until pearl develops.

Formula F-577

Pelan Hair Conditioner

This product employs humectants, emollients and natural conditioners such as Pelan Black and Lipoquat R which soften and enrich the hair, leaving a healthy shine.

<u>Sequence</u>	<u>Raw Material:</u>	<u>Weight%</u>
1	Deionized Water	79.00
1	Keltrol	0.30
3	Liponic EG-1	2.00
3	Uniphen P-23	0.50
4	Pelan Black	8.00
5	Lipocol C	1.50
5	Lipo GMS-450	1.25
5	Liponate SPS	1.00
5	Lipowax D	1.00
5	Lipopeg 6000 DS	1.00
5	Liponate IPP	0.75
5	Lipowax P	0.75
5	Lipocol S	0.65
5	Liponate DPC-6	0.50
5	Vitamin E Acetate	0.50
6	Deionized Water	1.00
6	Lipoquat R	0.30

Procedure:

1. Heat Sequence #1 to 76C.
2. Add Sequence #2 to Sequence #1 slowly on overhead mixer at medium/high speed.
3. Once Sequence #2 is completely hydrated, add Sequence #3 in order of addition, while holding temperature at 76C.
4. Add Sequence #4 to batch under homogenization at low/medium speed while holding temperature at 76C.
5. Heat Sequence #5 to 78C, until clear, then add to batch under homogenization at low/medium speed.
6. At room temperature, premix Sequence #6 and add to heated batch on homomixer at low speed for 20-30 seconds.
7. Switch to overhead mixer at low speed while cooling to room temperature.

Specifications:

pH: 5.2+-0.2

Viscosity: 27,900+-10% LVT #3 @ 3.0 rpm

Pomade**Formulating Design and Advantages:**

This anhydrous product has been formulated for low cost and still have good functional properties toward hair.

Formula:	<u>% by Weight</u>
Perfecta Petrolatum (Witco)	32.00
Mineral Oil USP (Kaydol-Witco)	51.55
Emulsifying Wax NF (Koster Keunen)	6.00
Ceresine Wax 130/135 (Koster Keunen)	8.00
Vitamin E (BASF)	0.20
Deodorized Orange Wax (Koster Keunen)	2.00
D & C Red #17 Dye (Whittaker)	0.05
Coconut Fragrance Oil (Aroma Tech)	0.20

Procedure:

Add all ingredients except fragrance into a vessel, heat till 70C and mix. Once homogeneous, allow to cool while mixing. Add fragrance at 50C and pour into container.

Adaptation of Formula and Its Influence on the Product:

Substitution of the dye and/or fragrance will not alter product consistency. Additional actives may be incorporated to fit consumer's needs.

Premium Biodegradable Hair Conditioner

	<u>% by Weight</u>
D.I. Water	Q.S. to 100.0
Hydroxyethyl Cellulose	0.70
Sodium Hydroxide (50%)	Q.S.
Ammonyx GA-90/GA-70PG	2.22/2.86
Kessco Cetyl Alcohol	2.00
Kessco Octyl Isononanoate	2.00
Potassium Chloride	0.50
Citric Acid (50%)	Q.S.
Fragrance, Dye, Preservative	Q.S.

Mixing Procedure:

Into a suitable vessel equipped with heating, cooling, and agitation means, add D.I. Water. Begin mixing. Into a vortex, sprinkle in Hydroxyethyl Cellulose. Add Sodium Hydroxide to raise the pH to 7.5-8.0 and continue agitation until all of the Hydroxyethyl Cellulose has dissolved (30-40 minutes). Heat to 70-75C. Add Ammonyx GA-90 or GA-70PG, Kessco Cetyl Alcohol, and Kessco Octyl Isononanoate. Emulsify for 30 minutes and maintain the temperature between 70-75C. Cool to 38-48C and add Potassium Chloride dissolved in water. Adjust final pH (3.5-4.5) with citric acid, if necessary. Cool to ambient temperature with continuous mixing, add remaining ingredients.

Ethnic Hair Shine

	<u>% by Weight</u>
Dow Corning Silicone 245	70.0
Kessco Octyl Isononanoate	25.0
Octyl Methoxycinnamate	5.0

Mixing Procedure:

Combine all ingredients with mixing.

Pump Hair Spray

Pump Hair Spray based on the well-known Gantrez ES-225, contains Dow Corning 3225C Formulation aid which functions in two ways. First, the cyclomethicone component provides lubricity for the initial styling and combing. Second, the dimethicone copolyol component remains behind after all the volatiles are gone, to provide easy combing. Dow Corning 3225C also acts as a resin plasticizer and detackifier.

<u>Ingredients:</u>	<u>% by Weight</u>
Dow Corning 3225C Fluid	1.00
Gantrez ES-225	6.90
AMP-Regular	0.20
SD Alcohol 40	91.90

Procedure:

Weigh out the alcohol and dissolve the AMP into it. Stir in the resin and the Dow Corning 3225C formulation aid. Mix until uniform and add fragrance if desired.

Stability:

The stability of this formulation has not been assessed.
Formulation PF-0366 suggested by Dow Corning Corp. (E2-3287)

Flexible Spray Gel

Highly shear thinning due to the copolymer thickener in Phase B.

<u>Ingredients:</u>	<u>% by Weight</u>
<u>Part A:</u>	
Water	79.94
Ethanol	6.00
Disodium EDTA	0.10
AMP-95	0.62
Kathon CG	0.04
Citroflex-2	0.10
Acudyne 255, 41%	10.00
<u>Part B:</u>	
Aculyn 22	3.20

Procedure:

Combine A in order shown. Stir until clear. Add B. Stir until thickened.

Properties:

Viscosity (#4 at 60 rpm): 400 cps
Formulation PF-0369 suggested by Rohm & Haas.

Salon Type Hair Conditioner

State of the art protein/panthenol based conditioner designed for achievement of salon type performance.

<u>Ingredients:</u>	<u>%W/W</u>
1. Rita CA (Cetyl Alcohol)	5.00
2. Rita STAC-80 (Steartrimonium Chloride)	2.50
3. Rita CTAC-605 (Cetrimonium Chloride)	0.50
4. Citric Acid @ 50%	0.18
5. Dimethyl Stearamine (Adogen MA-108)	0.13
6. Distilled/Deionized Water	85.84
7. Amanduline SG (Sweet Almond Protein)	2.00
8. Ritaleo 200M (Aloe Vera Gel)	0.50
9. Ritapan DL (dl-Panthenol)	1.00
10. Propylene Glycol	0.50
11. Polyquta 400 (Polyquaternium-10)	1.00
12. Kathon CG	0.03
13. Dow Corning 7224	0.40
14. Dow Corning 344 Fluid	0.17
15. Fragrance	0.25

Compounding Procedure:

Disperse item 11 in item 6 while mixing. Heat to 70C. Add items 8, 9, 10 and 13. Combine items 1, 2, 3 and 5 and heat to 70C. Add to water phase. Add item 4 and mix while cooling. Add items 7, 12, 14 and 15 when cool.

Ref. No. 121-177

Pump Spray Hair Conditioner

A pump spray conditioner containing Polyquta 400, Ritasil 190 and Amanduline SG for conditioning.

<u>Ingredients:</u>	<u>%W/W</u>
1. Distilled/Deionized Water	89.60
2. Polyquta 400 (Polyquaternium-10)	0.50
3. Amanduline SG (Hydrolyzed Sweet Almond Protein)	5.00
4. Ritasil 190 (Dimethicone Copolyol)	1.00
5. Propylene Glycol	3.50
6. Glydant	0.20
7. Fragrance	0.20

Compounding Procedure:

Disperse item 2 in item 1. Heat if necessary. Allow to cool and add items 3-7. Mix until uniform.

Soft Set Conditioning Mousse

This conditioning mousse formulation provides for both a soft, nontacky hold to a hair set and a conditioning effect on the hair fibers. The Sodium Poly PG-propyl Dimethicone Thiosulfate contributes gloss and hydrophobicity to the hair.

<u>Ingredients:</u>	<u>% by Weight</u>
Part A:	
Water	82.20
Stearamidopropyl PG-dimonium chloride phosphate	3.00
Part B:	
Isopropyl Alcohol	10.00
Sodium Poly PG-propyl Dimethicone Thiosulfate (Abil S-201)	0.50
AMP-95	0.30
Butyl Ester of PVM/MA copolymer	2.00
Part C:	
Dimethicone Copolyol (Abil B 8851)	2.00
Part D:	
Fragrance, Preservatives	q.s.
Fill:	
Concentrate	83.30
Isobutane	16.70

Procedure:

Mix A. Heat to 65C and continue to mix until homogeneous. Cool to 40C. Separately mix B at 25C until homogeneous. Add A to B with stirring. Add C and D, mix until homogeneous. Add fragrance, coloring and preservative as required. Cool to 25C. Charge into aerosol container. Add propellant.

Formulation PF-0237 suggested by Goldschmidt Chemical Corp.

Styling/Conditioning Mousse

<u>Ingredients:</u>	<u>% by Weight</u>
Phase A:	
Water, deionized	74.15
Mulgofen ON-870	0.10
Gafquat HS-100	10.00
Dimethicone polyol	0.40
Phase B:	
Ethanol	10.00
Advantage CP	5.00
AMP Regular	0.35
Aerosol Fill:	
Concentrate	90-95
Propane/butane	5-10

Procedure:

Prepare Phase A by dissolving Mulgofen in water. Add remaining ingredients in order listed, stir thoroughly after each addition. Prepare Phase B by dissolving AMP Regular in ethanol. Then add Advantage CP, mix until uniform. Add perfume with stirring. Add Phase B to Phase A with stirring. Mix until uniform. Charge aerosol containers and pressurize with propellant.

Lotions

AHA Moisturizing Lotion

	<u>% by Weight</u>
D.I. Water	Q.S. to 100.0
Glycerin	5.00
Methyl Paraben	0.15
Ammonyx GA-70 PG	2.85
Neobee M-5 Cosmetic	15.0
Kessco GMS Pure	2.5
Kessco IPM	2.0
Kessco Cetyl Alcohol	2.0
Stearyl Alcohol	1.5
Propyl Paraben	0.01
Glycolic Acid (70%)	7.0-10.0
Preservative, Color, Fragrance	Q.S.
Mixing Procedure:	

Into a suitable vessel equipped with heating, cooling, and agitation, prepare the water phase by adding D.I. Water, Glycerin, Methyl Paraben, and Ammonyx GA-70 PG. Start heating to 70-75C. Into a separate vessel, prepare the oil phase by adding together Neobee M-5 Cosmetic, Kessco GMS Pure, Kessco IPM, Kessco Cetyl Alcohol, Stearyl Alcohol, and Propyl Paraben. Heat to 73-77C. Add the oil phase to the water phase with good agitation. Emulsify for 20-25 minutes at 80-82C. With mixing, start cooling to room temperature. Slowly add Glycolic Acid (70%) at 30C. Mix well. Add Preservative, Color, and Fragrance. Adjust pH to 3.0-3.5 if necessary.

AHA Moisturizing Lotion

	<u>% by Weight</u>
D.I. Water	Q.S. to 100.0
Methyl Paraben	0.15
Glycerin	1.5
Kessco GMS S.E./A.S.	2.0
Kessco GMS Pure	3.5
Kessco Cetyl Alcohol	1.5
Neobee M-5 Cosmetic	5.0
Kessco ICS	1.5
Glycolic Acid (70%)	7.2
Preservative, Color, Fragrance	Q.S.
Mixing Procedure:	

Into a suitable vessel equipped with heating, cooling, and agitation, prepare the water phase by adding D.I. Water, Methyl Paraben, and Glycerin. Start mixing and heating to 75-80C. Into a separate vessel prepare the oil phase by adding together Kessco GMS S.E./A.S., Kessco GMS Pure, Kessco Cetyl Alcohol, Neobee M-5 Cosmetic, and Kessco ICS. Start heating to 77-82C. Add the oil phase to the water phase with good agitation. Emulsify for 20-25 minutes at 80-82C. With mixing, start cooling to room temperature. Slowly add Glycolic Acid (70%) at 30C. Mix well. Add Preservative, Color, and Fragrance. Adjust pH to 3.5-4.0, if necessary.

Anti-Aging Day Lotion

This soft, anti-aging lotion leaves a non-oily, gentle after feel on the skin. Pentavitin improves the water retention and Immucell makes skin smoother and more delicate.

<u>Item</u>	<u>Ingredients:</u>	<u>Weight%</u>
1	A) Glucate D0	2.00
2	Glucate SS	1.50
3	Glucam E 20 Distearate	1.50
4	Promulgen D	1.50
5	Isopropyl Palmitate	3.00
6	Sesame Oil	1.00
7	B) Deionized Water	77.30
8	Phenonip	0.30
9	Imidazolidinyl Urea	0.20
10	Glucam E 10	3.00
11	Carbopol 1342	0.20
12	Pentavitin	5.00
13	Immucell	3.00
14	C) Triethanolamine	0.20
15	D) Fragrance-Courage 0/243101	0.30

Procedure:

Heat the ingredients of fatty phase A) to 70C.

Heat the ingredients of water phase B) to 75C.

Under stirring add phase B) to phase A). With phase C adjust the pH to 6.0, homogenize and cool to 30C.

Then add phase D) and stir cold.

Cationic Lotion with Incroquat Behenyl TMS

Due to the superior emulsifying and conditioning properties of Incroquat Behenyl TMS, only a few basic ingredients are needed to form this stable and elegant lotion. This lotion acquires its soft, powdery afterfeel from the conditioning effects of the Behenyl quat. If desired, emollients, proteins or other such materials can easily be added to the formula to enhance the appeal of the final product.

<u>Ingredients:</u>	<u>Weight%</u>
Part A:	
Deionized Water	83.0
Glycerin	5.0
Part B:	
Mineral Oil (70ssu)	5.0
Petrolatum	2.0
Incroquat Behenyl TMS (Behentrimonium Methosulfate (and) Cetearyl Alcohol)	4.0
Part C:	
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben	1.0

Procedure:

Combine ingredients of Part A with mixing and heat to 70-75C. Combine ingredients of Part B with mixing and heat to 70-75C. Add Part B to Part A with mixing and cool to 40C. Add Part C with mixing and cool to desired fill temperature.

Cromoist CM-Glucan Lotion with Crodafos CES

This lotion features Cromoist CM Glucan and Crodafos CES - two high activity ingredients that reflect today's demands for truly functional products. Cromoist CM Glucan works by stimulating the skin's resistance to oxidative stress and improve its level of skin own function. Crodafos CES works by exhibiting shear thinning, producing a system that provides better oil deposition, faster delivery of active ingredients, and enhanced application properties. The lotion itself has a glossy white texture, a lubricious feel and quick rub-in.

<u>Ingredients:</u>	<u>Weight%</u>
Part A:	
Crodafos CES (Cetearyl Alcohol (and) Cetearyl Phosphate)	4.0
Crodamol GTCC (Caprylic/Capric Triglyceride)	5.0
Crodacol C-70 (Cetyl Alcohol)	0.5
Volpo S-2 (Steareth-2)	0.1
Volpo S-10 (Steareth-10)	0.5
Part B:	
Triethanolamine (98%)	0.2
Deionized Water	87.7
Part C:	
Cromoist CM-Glucan (Sodium Carboxymethyl B-Glucan)	1.0
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben	1.0

pH=5.0+/-0.5

Viscosity=5,700 cps+-10% (RVT Spindle TC, 10 rpm @ 25C)

Procedure:

Combine ingredients of Part A with mixing and heat to 70C. Combine ingredients of Part B with mixing and heat to 70C. Add Part A to Part B with mixing. Cool to 45C with mixing. Add ingredients of Part C separately. Continue mixing to desired fill temperature.

SOURCE: Croda Inc.; Suggested Formulation SC-264

Dihydroxyacetone Lotion

<u>Ingredients:</u>	<u>Weight%</u>
Phase A:	
Cetyl Dimethicone Copolyol (Abil EM-90)	1.5
Polyglyceryl-4 Isostearate (and) Cetyl Dimethicone Copolyol (and) Hexyl Laurate (Abil WE-09)	1.0
Octyl Stearate (Tegosoft OS)	4.0
Isohexadecane	7.0
Hydrogenated Castor Oil	0.4
Beeswax	0.4
Phase B:	
Cyclomethicone	6.0
Phase C:	
Water	72.9
Propylene Glycol	2.0
Sodium Chloride	0.8
Dihydroxyacetone	4.0
Preservatives	Q.S.
Color	Q.S.
Phase D:	
Fragrance	Q.S.

Procedure:

1. Blend the components of Phase A. Heat to 85C in a closed kettle while mixing until all waxes are dispersed.
2. Cool to 40C.
3. Add the Cyclomethicone. Mix.
4. Heat Phase C components to 40C while mixing.
5. Add C to A/B slowly with slow agitation until B is fully dispersed.
6. Add fragrance with slow agitation. 7. Homogenize.

Isolan DO Lotion
O/W Cold Process

<u>Ingredients:</u>	<u>Weight%</u>
Phase A:	
Methylglucose Dioleate (Isolan DO)	2.0
Octyl Stearate (Tegosoft OS)	5.0
Octyl Palmitate (Tegosoft OP)	5.0
Isopropyl Palmitate (Tegosoft P)	5.0
Phase B:	
Water	79.0
Glycerin	3.0
Preservative	Q.S.
Phase C:	
Carbomer 1382	0.2
Isopropyl Palmitate (Tegosoft P)	0.8
Phase D:	
NaOH (10% Solution) adjust pH to 5.5-6.5	Q.S.

Procedure:

1. Mix the ingredients of Phase A and B separately. Add B to A without mixing.
2. Homogenize A/B, oil particle size <0.1 um.
3. Disperse the Carbomer 1382 into the oil/ester and add to A/B. Stir intensively for 30 minutes.
4. Add D and stir for five additional minutes.

Temperature of the phases A, B, C, D: are 20-25C

Emollient Lotion

A synergistic combination of Veegum and Carbomer is used to thicken and stabilize this elegant cosmetic lotion. The emollients in this formula were selected for their moisturizing properties. The emulsification for the formula is provided by the glyceryl monostearate and the triethanolamine stearate (formed in situ).

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Veegum, Magnesium Aluminum Silicate	0.50
Deionized Water	83.66
Carbomer 934 (Carbopol 934)	0.10
B: Triethanolamine	0.10
Glycerine	4.00
C: Mineral Oil	4.00
Petrolatum	0.44
Stearic Acid XXX	1.80
Cetyl Alcohol	0.90
Glyceryl Stearate SE (Kessco GMS-SE)	1.60
Cetyl Acetate (and) Acetylated Lanolin Alcohol (Acetulan)	2.20
Dimethicone, 350 cs	0.70
D: Preservative	q.s.

Procedure:

Add the Veegum to the water slowly, agitating at maximum available shear until smooth. Add the remaining Part A ingredient and mix until thoroughly dispersed. Add the Part B ingredients in the order shown, mixing each until uniform. Heat Parts A+B to 70-75C. Mix and heat the Part C ingredients to 75-80C. Add Part C to Parts A+B with high speed agitation. Begin cooling while mixing slowly and add Part D at 40C or lower.

*As received basis

Ethnic Hand & Body Lotion

	<u>% by Weight</u>
D.I. Water	Q.S. to 100.0
Tetrasodium EDTA	0.10
Methyl Paraben	0.15
Propyl Paraben	0.10
Carbopol 934	0.15
Triethanolamine (88%)	1.80
Glycerin	5.00
Neobee M-20	6.50
Stearic Acid, Tech.	3.00
Wecobee S	0.50
Kessco Cetyl Alcohol	0.46
Kessco GMS Pure	0.10
Silicone DC-200 (200 cps)	0.10
DMDM Hydantoin	0.25

Mixing Procedure:

Into a suitable container equipped with mixing, heating, and cooling capabilities, add the D.I. Water, Tetrasodium EDTA, Methyl Paraben, Propyl Paraben, Carbopol 934, and Glycerin. Mix with very good agitation until there are no lumps. Add Triethanolamine (88%). Start heating to 165-170F. In a separate container, combine Neobee M-20, Stearic acid, Wecobee S, Kessco Cetyl Alcohol, and Kessco GMS Pure. Heat to 170-175F. Add to water phase and emulsify for 20-25 minutes. Start cooling. At 100F, add Silicone DC-200. At 90F, add DMDM Hydantoin. At room temperature, adjust pH to 7.8-8.0 if necessary. Check viscosity.

Ethnic Hand & Body Lotion

	<u>% by Weight</u>
D.I. Water	Q.S. to 100.0

Hand and Body Lotion

A Veegum and Cellulose Gum combination is used effectively in this formula to provide emulsion stabilization and viscosity control. The combination of liquid emollients provides smooth rub-in and non-greasy feel. Stearic Acid is used as a non-greasy oil phase thickener.

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Veegum, Magnesium Aluminum Silicate	1.00
Cellulose Gum (CMC 7MF)	0.15
Deionized Water	80.75
Simethicone (Dow Corning Antifoam AF)	0.10
B: Mineral Oil	5.00
Mineral Oil (and) Lanolin Alcohol (Amerchol L-101)	4.00
Stearic Acid XXX	3.00
Glyceryl Stearate (and) PEG-100 Stearate (Arlacel 165)	4.00
Lanolin Oil	2.00
C: Preservative	q.s.

Procedure:

Add the Veegum/Cellulose Gum dry blend to the water slowly, agitating at maximum available shear until smooth. Add Simethicone at slow mixing speed. Heat Part A to 70C and Part B to 75C. Add Part B to Part A and mix while cooling. Package at 40C.

Formula No. 370

Dry Touch Emollient Lotion

Veegum stabilizes the emulsion and adjusts the viscosity of this lotion. The emollients used for these lotions were selected for their moisturizing properties. The emulsification for these formulas is provided by the glyceryl monostearate and the triethanolamine stearate (formed in situ).

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Veegum, Magnesium Aluminum Silicate	0.50
Water	85.50
B: Triethanolamine	0.10
Glycerin	3.50
C: Mineral Oil	3.60
Petrolatum	0.40
Stearic Acid XXX	1.60
Cetyl Alcohol	0.80
Glyceryl Stearate SE (Kessco GMS-SE)	1.40
Cetyl Acetate (and) Acetylated Lanolin Alcohol (Acetulan)	2.00
Dimethicone, 350 cs.	0.60
D: Color, Preservative, Perfume	q.s.

Procedure:

Add the Veegum to the water slowly, agitating at maximum available shear until smooth. Add the Part B ingredients to Part A and heat to 70-75C with gentle stirring. Heat the Part C ingredients to 75-80C. Add Part C to Parts A+B and mix thoroughly while cooling. At 40C add Part D, mix until uniform.

Hand and Body Lotion

A non-tacky, moisturizing hand and body lotion with natural skin feel, containing Clariskin for eliminating brown age spots.

Ingredients:

	<u>%W/W</u>
1. Distilled/Deionized Water	78.90
2. Disodium EDTA	0.10
3. Acritamer 941 (Carbomer)	0.20
4. Propylene Glycol	0.80
5. Glycerine	5.00
6. Methylparaben	0.20
7. Propylparaben	0.10
8. Mineral Oil (Drakeol-21)	4.00
9. Stearic Acid	2.00
10. Rita EGMS (Glycol Stearate)	1.50
11. Ritawax ALA (R.I.T.A. Blend)	0.50
12. Rita SA (Stearyl Alcohol)	0.50
13. Rita CA (Cetyl Alcohol)	0.20
14. Ritasil 190 (Dimethicone Copolyol)	0.50
15. Triethanolamine	0.50
16. Clariskin (Yeast Extract)	5.00

Compounding Procedure:

Disperse item 2 into the water until uniform and add item 2. Mix items 4-7 and add to the combined items 1-3, then heat to 65C. Mix items 8-14 and heat to 65C. Add oil phase to water phase. Hold temperature at 65C and add item 15. Cool to 40C and add item 16.

Ref. No. 122-88B

Hand Lotion

A non-greasy hand lotion designed for normal skin.

Ingredients:

	<u>%W/W</u>
1. Mineral Oil (Light)	3.00
2. Stearic Acid	2.50
3. Rita GMS (Glyceryl Stearate)	2.00
4. Ritawax ALA (Cetyl Acetate and Acetylated Lanolin Alcohol)	0.75
5. Rita CA (Cetyl Alcohol)	0.50
6. Propylparaben	0.05
7. Acritamer 934 (Carbomer)	0.10
8. Distilled/Deionized Water	81.85
9. Methylparaben	0.10
10. Triethanolamine (50%)	0.65
11. Propylene Glycol	3.50
12. Fragrance	q. s.
13. Tensine (Wheat Protein)	5.00

Compounding Procedure:

Slowly add item 7 to item 8 with agitation. Add item 9 and heat to 70C. Combine items 1-6 and heat to 70C. Add items 10 and 11 to water. Add oil to water with mixing. Begin cooling while mixing. Add items 12 and 13.

Incroquat Behenyl TMS Lotion

This basic formulation shows how Incroquat Behenyl TMS can form a stable and elegant, yet simple, emulsion. The soft/powdery feel it confers on the skin is due to the conditioning effects of the behenyl quat.

<u>Ingredients:</u>	<u>Weight%</u>
Part A:	
Incroquat Behenyl TMS (Behentrimonium Methosulfate (and) Cetearyl Alcohol)	3.00
Crodamol GTCC (Caprylic/Capric Triglyceride)	5.00
Dimethicone 200 (200 cps)	1.00
Volpo S-2 (Steareth-2)	0.10
Volpo S-10 (Steareth-10)	0.50
Part B:	
Deionized Water	77.40
Part C:	
Deionized Water	5.00
Hydrotriticum 2000 (Hydrolyzed Whole Wheat Protein)	1.00
Part D:	
Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) and Propylparaben	1.00
Crodasome CM-Glucan (Sodium Carboxymethyl B-Glucan)	1.00
Incromectant LAMEA (Acetamide MEA (and) Lactamide MEA)	5.00

pH=4.5+-0.5

Viscosity=9,000 cps+-10% (RVT Spindle #TC, 10 rpm, 25C)

Procedure:

Combine ingredients of Part A with mixing and heat to 75-80C. Heat Part B to 75-80C. Add Part A to B with mixing. Cool with mixing to 50C and add Parts C and D. Continue mixing and cool to desired fill temperature.

SOURCE: Croda, Inc.: Formulation SC-268

High SPF-30 Lotion
Cold Process

Active Ingredients:

Octyl Methoxycinnamate	3%
Octyl Salicylate	3%
Titanium Dioxide	2%

Ingredients:Weight%**Phase A:**

Polyglyceryl-4 Isostearate (and) Cetyl Dimethicone Copolyol (and) Hexyl Laurate (Abil WE-09)	5.00
Caprylic/Capric Triglycerides (Tegosoft CT)	3.00
Cyclomethicone	3.00
Octyl Palmitate (Tegosoft OP)	3.00
Octyl Stearate (Tegosoft OS)	2.00
Polydecene	2.00
Cetyl Dimethicone (Abil Wax 9801)	1.00
Octyl Methoxycinnamate	3.00
Octyl Salicylate	3.00

Phase B:

Water	68.40
Sodium Chloride	0.80
Hydroxyethyl Cellulose	0.80
Titanium Dioxide (40% aq. dispersion)	5.00
Preservatives	Q.S.
Fragrance	Q.S.
Color	Q.S.

Procedure:

1. Combine the ingredients of Phase A together. Mix well.
2. Dissolve the Hydroxyethyl Cellulose into the vortex of the agitating water phase. Allow the cellulose to fully hydrate prior to adding the sodium chloride. Add TiO₂ (40% aq. dispersion). Mix until uniform. Add preservatives.
3. Add Phase B slowly into Phase A with slow agitation.
4. Homogenize.
5. Fragrance and color can be added upon forming the emulsion.

Low pH Glycolic Acid Lotion with
18-B Glycyrrhetic Acid Phytosome

An AHA lotion containing Lipo Fruit Acid Complex for softer smoother skin and 18-B Glycyrrhetic Acid Phytosome which should make this more acceptable to sensitive skin.

<u>Sequence:</u>	<u>Raw Material:</u>	<u>Wt%</u>
1	Deionized Water	52.65
1	Hypan QT-100 (1% gel)	0.20
1	Benzyl Alcohol	0.50
1	FG-10 Antifoam Simethicone Emulsion	0.10
2	Liponate NPGC-2	5.00
2	Lipocol C	1.75
2	Lipomulse 165	5.00
2	DC Silicone 200/350 cts.	0.50
2	Lipowax D	3.00
3	Liponic EG-1	6.00
3	18-B Glycyrrhetic Acid Phytosome	0.50
4	Lipo Fruit Acid Complex	5.00

Procedure:

1. In main kettle, combine Sequence #1 ingredients under homogenizer and heat to 75C.
2. In auxiliary kettle, combine Sequence #2 ingredients and heat to 80C.
3. At proper temperature, add combined Sequence #2 to Sequence #1 under homogenizer and continue to homogenize until emulsification is complete and all Hypan Gel particles are not visible. Begin to cool and switch to lightnin' mixing.
4. Cool to 40C and add premixed Sequence #3 into batch mix until dissolved and batch is uniform. Cool to 25C with sweep blade at low speed.
5. At 25C, add Sequence #4 into batch.
6. Adjust pH to 3.8-4.1 with appropriate buffer.

Moisturizing Lotion

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Glyceryl Stearate (and) PEG-100 Stearate (Lexemul 561)	2.00
Isopropyl Myristate (Lexol IPM)	1.00
Glycol Stearate (Lexemul EGMS)	0.50
Mineral Oil	0.50
Acetylated Lanolin Alcohol	1.00
Cetyl Alcohol	1.00
Stearic Acid	1.00
Cyclomethicone	0.50
Propylparaben (Lexgard P)	0.05
B: Sorbitol, 70%	4.00
Veegum, Magnesium Aluminum Silicate	0.30
Triethanolamine, 99% to pH 7.0	q.s.
Carbomer 934	0.20
Methylparaben (Lexgard M)	0.15
Deionized Water	87.80

Procedure:

Weigh the water into a suitable vessel and heat to 70C while mixing with a homogenizer at 5000 rpm. Add the Veegum slowly and continue mixing for 20 minutes. Add the Sorbitol and Methyl Paraben and mix each for 3 minutes at 5000 rpm. Add the Carbomer 934 and mix for 3 minutes. Weigh the Part A ingredients into another vessel. Mix and heat to 70C. Add Part A to Part B and mix for 10 minutes at 70C. Move the batch to a propeller mixer, adjust the speed to produce a small vortex, and begin cooling. At 40C, measure the pH and adjust to 7.0 using Triethanolamine. Continue cooling and package at 35C.

Collagen Lotion

The Veegum/Rhodigel mixture stabilizes the emulsion and adjusts the viscosity of this cold process lotion. The lotion provides an elegant feel in both initial application and in the residual film.

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Veegum, Magnesium Aluminum Silicate	1.00
Rhodigel, Xanthan Gum	0.50
Deionized Water	76.25
B: Glycerin	6.00
Soluble Collagen (Collasol)	5.00
Allantoin	0.25
C: Hydrogenated Polyisobutylene (Polysynlane)	4.00
Mineral Oil (and) Lanolin Alcohol (Amerchol L-101)	3.00
C10-30 Cholesterol/Lanosterol Esters (Super Sterol Ester)	2.00
DEA-Oleth-3 Phosphate (Crodafos N-3 Neutral)	1.00
Dimethicone, 350 cs. (Dow Corning 200 Fluid)	1.00
D: Preservative	q.s.

Procedure:

Dry blend Veegum and Rhodigel and add them to the water while agitating at maximum available shear until smooth. Add Part B in order, mixing each until smooth and uniform. Combine Part C ingredients, stirring until uniform. Add Part C to Parts A+B. Mix until homogeneous.

*As received basis

SOURCE: R.T.Vanderbilt Co., Inc.: Formulas: Inolex Chemical/#381

Moisturizing Lotion

<u>Ingredient:</u>	<u>Wt.%*</u>
A: Pentaerythrityl Tetralaurate	5.00
Glyceryl Stearate (and) PEG-100 Stearate	5.00
Mineral Oil	2.50
Acetylated Lanolin Alcohol	1.00
Dimethicone	1.00
Stearic Acid	1.00
Stearyl Alcohol	0.50
Cetyl Alcohol	0.50
B: Deionized Water	78.00
Veegum HV, Magnesium Aluminum Silicate	0.30
Carbomer 934, 3% Soln. (Carbopol 934)	5.00
C: Triethanolamine, 99%	0.20
Preservative	q.s.

Procedure:

Prepare the 3% Carbomer solution in accordance with the manufacturer's recommendations. Weigh the Part B water into a suitable vessel and heat to 50C. While mixing the water with a homogenizer at 5000 rpm, slowly add the Veegum HV and continue mixing for 20 minutes while heating to 75F. Add the Carbomer solution and continue mixing. Weigh the Part A ingredients into another vessel. Mix and heat to 75C. Add Part A to Part B and mix for 10 minutes at 75C. Move the batch to a propeller mixer and adjust the speed to produce a small vortex. Begin cooling. At 45C, add the Triethanolamine. At 40C, add the preservative and package at 35C.

Formula from Rhone-Poulenc, Inc.

Silicone Barrier Lotion

In this formula, Veegum is used along with Rhodigel Xanthan Gum to stabilize the emulsion and adjust the viscosity. This lotion uses a silicone fluid to achieve an emollient protective barrier with a pleasant non-greasy feel. Stearic Acid is used as a non-greasy oil phase thickener. The Span/Tween combination provides the emulsification for this formula. Lotion viscosity is adjusted by changing the Veegum/Rhodigel level.

<u>Ingredient:</u>	<u>Wt.%*</u>
A: Veegum, Magnesium Aluminum Silicate	1.00
Rhodigel, Xanthan Gum	0.25
Water	80.75
B: Phenyl Trimethicone (Dow Corning 556 Fluid)	5.00
Stearic Acid XXX	5.00
Polysorbate 20 (Tween 20)	4.50
Sorbitan Laurate (Span 20)	3.50
C: Preservative	q.s.

Procedure:

Add the Veegum/Rhodigel dry blend to the water slowly, agitating at maximum available shear until smooth. Heat Part A to 70C. Heat Part B to 75C. Add Part B to Part A and mix while cooling to room temperature. Add Part C and mix until uniform.

Protective Lotion with Cromoist CM Glucan

This lotion is ideal for every day use due to the protective effects of Cromoist CM Glucan on the skin and is especially beneficial before and after exposure to the sun. By stimulating the skin's own defense mechanisms, the powerful protectant and therapeutic agent is able to increase the skin's resistance to UV-A induced oxidative stress and other environmental insults. Crodafos CES is a unique conditioning and emulsifying system that enhances the protective and emollient effects of the lotion by promoting better delivery of Cromoist CM Glucan and Crodamol PMP, the emollient ester used to reduce the greasiness of the petrolatum.

<u>Ingredients:</u>	<u>Weight%</u>
Part A:	
Crodafos CES (Cetearyl Alcohol (and) Cetearyl Phosphate)	4.0
Crodamol PMP (PPG-2 Myristyl Ether Propionate)	5.0
Petrolatum	2.0
Part B:	
Deionized Water	75.8
Triethanolamine (98%)	0.2
Part C:	
Deionized Water	5.0
Collasol (Soluble Collagen)	1.0
Part D:	
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl- paraben (and) Propylparaben	1.0
Cromoist CM-Glucan (Sodium Carboxymethyl B-Glucan)	1.0
Incromectant LAMEA (Acetamide MEA (and) Lauramide MEA)	5.0

pH=4.5+-0.5

Viscosity=6,000 cps+-10% (RVT Spindle # TC @ 10 rpm @ 25C)

Procedure:

Combine ingredients of Part A with mixing and heat to 75-80C.
Combine ingredients of Part B with mixing and heat to 75-80C.
Add ingredients of Part A to B with mixing and cool to 50C.
Add ingredients of Part C and D with mixing and cool to desired fill temperature.

pH @ 25C: 6.0-7.0

Mixing Procedure:

Prepare water phase by adding 1,2 and 3. Heat to 70C. Prepare oil phase by adding 4,5,6,7,8 and 9. Heat to 70C. Add oil phase to the water phase. Increase agitation. Mix at 70C for 20-25 minutes. Start cooling to room temperature with continuous agitation. At 45C, add 10 and 11. Adjust pH if necessary. Cool to ambient temperature.

Ethnic Hand & Body Lotion

	<u>% by Weight</u>
D.I. Water	Q.S. to 100.0
Glycerin	4.00
Ammonyx 4	18.40
Petrolatum	4.00
Kessco IPP	3.00
Silicone DC-200 (350 cps)	1.00
Kessco Cetyl Alcohol	2.00
Potassium Chloride	0.40
Citric Acid (50%)	Q.S.
Preservative	Q.S.

Mixing Procedure:

Into a suitable container equipped with mixing, heating, and cooling capabilities, add the D.I. Water, Glycerin, and Ammonyx 4. Start mixing and heating to 155-160F. At 155-160F, add Petrolatum, Kessco IPP, Silicone DC-200, and Kessco Cetyl Alcohol. Mix well for 20 minutes, keeping heat at 160F. Start cooling to room temperature. At 100F, premix potassium chloride with small amount of D.I. Water and add to the batch. At 90F, add preservative. At room temperature, adjust pH to 4.0-4.5 if necessary with citric acid (50%).

Conditioning Color Enhancer Shampoo

<u>Ingredients:</u>	<u>Weight%</u>
Phase A:	
Water	20.00
Sodium Laureth Sulfate (28% 2M. E.O.)	20.00
Disodium Cocoamphodipropionate	10.00
PEG-7 Glyceryl Cocoate (Tegosoft GC)	1.50
Quaternium-80 (Abil Quat 3272)	0.50
Phase B:	
Basic Blue 99	Q.S.
Basic Brown 16	Q.S.
Acid Violet 43	Q.S.
Basic Red 36	Q.S.
Basic Yellow 57	Q.S.
Phase C:	
Water	38.40
Tetrasodium EDTA	0.10
Cocamidopropyl Betaine (Tego Betaine E)	7.00
Dimethicone Copolyol (Abil B 8852)	0.50
Fragrance	Q.S.
Preservatives	Q.S.
Citric Acid	to pH 6.0
PEG-18 Glyceryl Oleate/Cocoate (Antil 171)	2.00

Procedure:

1. Combine ingredients of Phase A.
2. Blend colors, add to Phase A. Mix well.
3. Add ingredients of Phase C to A/B in order, mixing well. Avoid foaming. Adjust pH to 6.0 with Citric Acid.
4. Adjust viscosity with the PEG-18 Glyceryl Oleate/Cocoate (Antil 171).

SOURCE: Goldschmidt Chemical Co.: Suggested Formulations

Shampoo-Clear Gel Type

<u>Ingredients:</u>	<u>Weight%</u>
Carbopol ETD 2020, 1.5%	77.70
Disodium EDTA	0.10
Calfoam SLS-30	15.00
Calfoam ES-303	5.00
Calamide C	2.00

Comments about this formula:

1. A 1.5% solution is made by dispersing the Carbopol in 40C warm water and stirring.
2. The dispersion is slightly hazy with gel-like consistency.
3. Probably even a 1% solution would be suitable for this application.
4. The ingredients are gradually added into the Carbopol solution and stirred until a homogeneous product is prepared.

Conditioning Shampoo

This formula uses Incroquat HO-80PG, a quaternary conditioning agent suitable for 2-in-1 shampoos, in combination with Incromine Oxide C and Crodafos SG to give hair improved wet combing and a soft, dry feel. Incroquat HO-80 PG has been found to work especially well with polymeric quaternaries, like the Jaguar C14S used here, as it appears to enhance the effects of these polyquats, resulting in greater conditioning.

<u>Ingredients:</u>	<u>Weight%</u>

Deodorizing Shampoo

<u>Ingredients:</u>	<u>Weight%</u>
Phase A:	
Water	32.60
Tetrasodium EDTA	0.10
Sodium Lauryl Sulfate (28%)	17.50
Sodium Laureth Sulfate (28% 2M E.O.)	20.00
PEG-20 Glyceryl Laurate (Tagat L)	2.50
PEG-7 Glyceryl Cocoate (Tegosoft GC)	2.50
PEG-18 Glyceryl Oleate/Cocoate (Antil 171)	2.50
Glycol Distearate (Tegin EGS)	3.00
Zinc Rincinoleate (and) Triethanolamine (and) Dipropylene Glycol (and) Lactic Acid (Tego Deo HY77)	1.80
Phase B:	
Water	10.00
Preservatives	Q.S.
Fragrance	Q.S.
Cocamidopropyl Betaine (Tego Betaine L7)	7.50
Citric Acid (20% solution)	to pH 7.0
Sodium Chloride (25% solution)	Q.S.

Procedure:

1. Heat Phase A to 70C. Add components in order, mixing well between additions. Avoid foam.
2. Begin cooling. Slowly cool to 35-40C. Some of the water of Phase B can be used to start the cooling.
3. Add the ingredients of Phase B.
4. Adjust pH and viscosity.

Moisture Therapy Shampoo with Hydrotriticum WAA

The use of Hydrotriticum WAA in this shampoo gives hair deep-down moisturization for shine that shows clear through to the outside. Hydrotriticum WAA is a powerful wheat protein-derived amino acid complex that has been shown to penetrate inside the hair, enabling it to moisturize from within. As a cold formula, this shampoo is economical and easy to make.

Ingredients:

	<u>Weight%</u>
Part A:	
Incromide LR (Lauramide DEA)	5.00
Incronam 30 (Cocamidopropyl Betaine)	5.00
Sodium Pareth-25 Sulfate	15.00
Hydrotriticum WAA (Wheat Amino Acids)	1.00
Deionized Water	73.00
Part B:	
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben	1.00

Procedure:

Combine ingredients of Part A, with mixing until clear. Then add Part B with mixing. Adjust pH to 5.0 with a 10% citric acid solution.

pH=5.0±0.5

Viscosity=8,000±10% (RVT Spindle #4, 10rpm, 25C)

N.A.T.C. Approved

SOURCE: Croda Inc.: Formulation SH-93

Pearlescent Conditioning Shampoo

<u>Ingredient:</u>	<u>Wt%</u>
Distilled water	q.s. to 100.00
TEA-lauryl sulfate (40% active)	15.00
Sodium lauroamphoacetate (and) sodium trideceth sulfate	10.00
Cocamide DEA	2.50
Glycol stearate	1.20
Propylene glycol (and) diazolidinyl urea (and) methylparaben (and) propylparaben	0.75
Benecel MP 943 R hydroxypropyl methylcellulose	0.60
N-Hance 3000 cationic guar	0.50
Citric acid (50% solution)	pH adjust

Procedure:

1. Disperse the N-Hance by adding to the vortex of well-agitated water. Reduce to pH 7.0 with citric acid solution to promote dissolution of the surface-treated N-Hance. Heat to 50C.
2. Sift the Benecel into the N-Hance solution. Mix until both polymers are fully dissolved.
3. Increase the temperature to 70C. Add the TEALS and glycol stearate, one at a time. Mix well between each addition. Turn off heat when homogeneous. Maintain mixing.
4. When temperature is at 55C, add remaining surfactants and preservative.
5. Adjust to pH 5.0 with citric acid solution.
6. When below 40C, add fragrance.

Normal Hair Shampoo

A good, basic shampoo with excellent flash foam and lather which is dense and soft.

<u>Part:</u>	<u>Ingredient (Trade Name):</u>	<u>Wt%</u>
A	Deionized Water	58.64
	Hydroxypropyl Methylcellulose (Methocel 40-100)	0.10
	Na4EDTA	0.20
	Triethanolamine	0.01
B	TEA Lauryl Sulfate (Stepanol WAT)	22.50
	Methyl Paraben	0.20
	Imidazolidinyl Urea (Germall 115)	0.20
	Ammonium Laureth Sulfate (Alfonic 1412-A)	5.50
	Ammonium Cocoyl Isethionate (Jordapon ACI-30)	6.70
C	Cocamide DEA (Mazamide 80)	3.00
	Soya Ethyldimonium Ethosulfate (M-Quat 1033)	0.70
	Citric Acid	0.25
	Ammonium Chloride	2.00

pH: 6.3-6.7

Viscosity: 5500-6000 cps

Appearance: Clear, straw-colored liquid

Procedure:

In the main vessel, disperse the hydroxypropyl methylcellulose in the water, mixing for ten minutes. Add the Na4EDTA and triethanolamine, which initiates hydration of the gum. Mix for about 20 minutes to ensure complete hydration, then add the part B ingredients in order given. When batch is clear and uniform, add the Mazamide 80 and the M-Quat 1033, and adjust the pH and viscosity.

Formula A-208

Baby Shampoo

Clear, mild, gentle-cleansing shampoo. Note: while PPG test data on the individual ingredients indicate that this formula should be extremely mild to skin and eyes, PPG has not performed mildness testing on this system.

<u>Part:</u>	<u>Ingredient (Trade Name):</u>	<u>Wt%</u>
A	Deionized Water	68.1
	PEG-80 Sorbitan Laurate (T-Maz 28)	3.0
	Sodium C12-15 Pareth-15 Sulfonate (Avanel S-150 CG)	7.1
	PEG-150 Distearate (Mapeg 6000DS)	1.0
B	Ammonium Cocoyl Isethionate (Jordapon ACI-30)	10.0
	Cocamidopropyl Hydroxysultaine (Mafo CSB-50)	9.0
	Cocamide DEA (Mazamide JT-128)	1.5
C	Quaternium 15 (Dowicil 200)	0.2
	Fragrance	0.1

pH: 6.8-7.2

Viscosity: 3,400 cps (Brookfield #2 @ 6 rpm)

Appearance: Clear, pale straw-colored liquid

Procedure:

Blend the Part A ingredients, heating to 60-65C to dissolve the Mapeg 6000DS. When uniform, add the Part B ingredients in order and begin cooling. Add the Part C ingredients at approximately 40C.

Formula A-112

SOURCE: PPG Industries, Inc.: Suggested Formulations

Opaque Antidandruff Shampoo

	<u>Wt%</u>
Water	65.3
Veegum, Magnesium Aluminum Silicate	1.0
Hydroxypropyl Methylcellulose	1.1
Zinc Pyrithione, 48% (Zinc Omadine)	4.2
Citric Acid, 50%	0.4
Sodium Lauryl Ether Sulfate	18.0
Cocamide DEA	5.0
Sodium Lauryl Sarcosinate	1.0
Hydrolyzed Collagen	2.0
FD&C Blue No. 1, 0.2%	1.5
FD&C Yellow No. 5, 01.%	0.5
Fragrance	q.s.

Procedure:

Heat the water to 70C. Begin and maintain rapid stirring (1,500 rpm) during the adding of ingredients. Add the Veegum and stir 15 minutes. Add the hydroxypropyl methylcellulose and stir an additional 15 minutes. Add the Zinc Omadine and stir 5 minutes. Reduce speed to 300 rpm. Add the citric acid and stir until mixed. Turn off heat. While cooling, add the other ingredients (except fragrance) in the order listed. Stir until mixed after each addition. Weigh back and add water to make up for evaporation losses. Cool to room temperature, stirring slowly. Add fragrance. Adjust pH to 8.

Formula from Olin Corp.

Ultra Pearlescent Conditioning Shampoo

This luxurious shampoo formula is thickened using Veegum Ultra which also suspends the mica pigment that provides pearlescence. Vanseal CS (cocoyl sarcosine) provides mildness and hair conditioning properties while combining with lauramide DEA to markedly enhance the quality and stability of the lather produced during shampooing.

	<u>Wt%</u>
A: Veegum Ultra, Magnesium Aluminum Silicate	2.00
Deionized Water	61.25
B: Mica (and) Titanium Dioxide (Timeron MP-1001)	0.50
C: Sodium Laureth Sulfate	25.00
Lauramide DEA (Monamid 716)	7.50
Vanseal CS, Cocoyl Sarcosine	3.75
Preservative, dye, fragrance	q.s.

Procedure:

Sift Veegum Ultra into the water while mixing at 700 rpm with a propeller stirrer. Adjust the propeller speed to 1500-1700 rpm and mix for 30 minutes. Add the B ingredients and mix for 5 minutes. Adjust the speed to 200 to 500 rpm and add the C ingredients in the order shown, mixing after each addition until smooth and uniform.

Formula No. 452

SOURCE: R.T.Vanderbilt Co., Inc.: Veegum Formulations

Pearlescent Shampoo

Three color variants using titanated mica pearl pigments are suggested with this shampoo formula.

	<u>Wt%</u>
A:	
Veegum HV, Magnesium Aluminum Silicate (5% aq. Susp.)	14.00
Hydroxypropylcellulose (5% aq. Soln.) (Klucel G)	20.00
Distilled Water	6.00
B:	
Distilled Water	q.s. to 100.00
TEA Lauryl Sulfate (Standapol T)	25.00
C:	
Citric Acid	0.10
Distilled Water	2.00
D:	
Methyl Paraben	0.20
Diazolidinyl Urea (Germall II)	0.30
Titanium Dioxide (and) Mica (Timiron Super Gold or Super Red)	0.20
Cocamidopropyl Betaine (Velvetex BA-35)	5.00
Cocamide DEA (Standamid KD)	3.00
E:	
Water Soluble Dyes:	
(w/red pearl) 0.2% aq D&C Red 33	0.25
(w/gold pearl) 0.02% FD&C Blue 1	0.30
Yellow 5	0.40
(or) 0.02% FD&C Blue 1	1.00
(or) D&C Red 33	2.00

Procedure:

Prepare the part A dispersion and solution in advance; combine A. Homogenize until no undispersed particles remain. Continue batch with sidesweep agitation. Add B in order. Combine C, add to batch. Combine D; add to batch. Add E, insuring that each is well dispersed before proceeding.

Pearlescent Shampoo

<u>Ingredients:</u>	<u>Weight%</u>
CalBlend Pearl	30.00
Fragrance, Dye, Preservative	Q.S.
Sodium Chloride	1.00-2.00
Water	68.50

Comments about this formula:**Blending Procedure:**

Charge water into mixing vessel and slowly blend in Pearl. Mix until uniform. Add compatible fragrance, dye, and preservative. Adjust formulation viscosity to 4,000-7,000 cPs (No. 4 Spindle @ 10rpm) with the incremental addition of sodium chloride as needed.

Typical Formulation Properties:

Appearance: White, Pearlescent Liquid
 Viscosity @ 25C: 4,000-7,000 cPs
 pH: 6.0-7.0
 % Non Volatiles: 12.5-13.5

CTFA Identification:

Water, Sodium Laureth Sulfate, Cocamide DEA, Cocamidopropyl Betaine, Glycol Stearate, Fragrance, Preservative, PEG-45M, Citric Acid, Dye(s).

Formulation SHM-020-01

Basic Shampoo Gel

<u>Ingredients:</u>	<u>Weight%</u>
Calfoam ES-303	42.86
Calamide F	3.00
Sodium Chloride	3.00
Water	51.14

Comments about this formula:

1. The viscosity of this formula is 125,000 cPs. At 2.5% salt, the viscosity is 96,000 cPs.
2. Increasing the amide provides for higher viscosities at lower salt levels. For example, at 4% amide, a viscosity of 112,000 cPs is reached at 1.5% salt, and 230,000 cPs is reached at 2% salt.

Formulation SHM-018-01

Pearlescent Shampoo

A pearlized shampoo utilizing Pationic ISL for mildness and Ritapan DL for conditional feel.

<u>Ingredients:</u>	<u>%W/W</u>
1. Pationic ISL (Sodium Isostearoyl Lactylate)	2.25
2. Ritapeg 150 DS (PEG-150 Distearate)	0.75
3. Rita EGDS (Glycol Distearate)	2.00
4. Sodium Laureth Sulfate (Standapol ES-2)	53.60
5. Distilled/Deionized Water	37.45
6. Methylparaben	0.15
7. Ritapan DL (Panthenol)	0.25
8. Laneto-50 (PEG-75 Lanolin)	0.75
9. Propylene Glycol	2.50
10. Perfume	0.20
11. Kathon CG	0.10
12. NaCl (25% Soln.)	q.s.

Compounding Procedure:

Heat items 1-7 to 70-75C. Add items 8 and 9. Cool to 40-45C. Add items 10-12.

Ref. No. 122-104

Salon Conditioning Shampoo

Optimized conditioning level is achieved through use of a Polyquta Cationic Polymer and Ritapan DL (Pro-Vitamin B-5).

<u>Ingredients:</u>	<u>%W/W</u>
1. Sodium Laureth-2 Sulfate (Standapol ES-2)	40.00
2. Pationic ISL (Sodium Isostearoyl Lactylate)	3.00
3. Ritapeg 150 DS (PEG-150 Distearate)	0.50
4. Ritapan DL (dl-Panthenol)	0.50
5. Laneto-50 (PEG-75 Lanolin)	0.75
6. Polyquta 400 (Polyquaternium-10)	0.50
7. Kathon CG	0.03
8. Fragrance-Nature Harvest 165-050	0.30
9. Distilled/Deionized Water	49.42
10. Amanduline S.G. (Hydrolyzed Sweet Almond Protein)	5.00

Compounding Procedure:

Disperse item 6 in water at 165F. Add item 3 and mix until uniform. Then add item 4, 2, 1, and 5 in order and mix until uniform. Cool to 120F. Add items 7, 8 and 10.

Pearlized Conditioning Shampoo
with Amilan GST 40
(cold process)

<u>Ingredients:</u>	<u>Weight%</u>
Water	46.00
Tetrasodium EDTA	0.10
Sodium Lauryl Sulfate (28%)	20.00
Sodium Laureth Sulfate (28% 2M. E.O.)	20.00
PEG-7 Glyceryl Cocoate (Tegosoft GC)	1.00
Dimethicone Copolyol (Abil B 88183)	1.00
Quaternium-80 (Abil Quat 3272)	0.40
Cocamidopropyl Betaine (Tego Betaine F)	7.50
DATEM (Amilan GST 40)	1.50
Glycol Distearate and Steareth-4 (Tego Pearl N100)	2.50
Preservatives	Q.S.
Color	Q.S.
Fragrance	Q.S.
Sodium Chloride (25% Solution)	Visc. Adj.
Citric Acid (10%)	Adjust to pH 5.5-6.0 if needed

Procedure:

1. Add ingredients in order - mixing between additions.
2. Adjust viscosity with the Sodium Chloride.

SOURCE: Goldschmidt Chemical Co.: Suggested Formulation

Shampoo-Clear Gel Type

<u>Ingredients:</u>	<u>Weight%</u>
Carbopol ETD 2020, 1.5%	77.70
Disodium EDTA	0.10
Calfoam TLS-40	20.00
Calamide C	2.00

Comments about this formula:

1. A 1.5% solution in water is prepared by dissolving the Carbopol at 40C.
2. The dispersion is slightly hazy with gel-like consistency.
3. Probably even a 1% solution would be suitable for this application.
4. The ingredients are gradually added into the Carbopol solution.
5. The blend turns clear upon Calfoam TLS-40 addition.
6. Stir until the blend is homogeneous.
7. Without adjustment the pH is 5-6.

SOURCE: Pilot Chemical Co.: Formulation SHM-004-01

Pearl Pigment Shampoo

	<u>Wt%</u>
Veegum HV, Magnesium Aluminum Silicate & (Klucel G) Hydroxypropyl Cellulose Solution	40.0
TEA Lauryl Sulfate (Texapon T42)	25.0
Citric Acid	0.1
Sodium Chloride	2.0
Preservative	0.2
Sicomet	0.5-0.2
Amaranth 85 E123 or Sicomet Blue S 42045 (Dyestuff Suspension 1%)	0.1-0.2
Titanium Dioxide (and) Mica (Timeron MP 1001 or Timeron S.I. Pigments)	0.1-0.2
Cocamidopropyl Betaine (Dehyton K)	5.0
Cocamide DEA (Comperlan KD)	3.0
Water, demineralized	q.s.

Procedure:

Composition of Veegum/Klucel Suspension: A) Veegum HV (5%) 35%; B) Klucel G (5%) 50%; Water 15%.

For the Veegum HV Suspension (A) hydrate 5% Veegum HV in water, followed by homogenization with (e.g.) an Ultra Turrax. For the Klucel G solution (B) add 5% Klucel G to the appropriate amount of water stirring continuously. This is followed by the addition of a preservative, e.g. Germall 115. Then the solution is allowed to swell for about 12 hours. The stock suspension (A) and solution (B) are mixed as assigned (A:35%, B:50%, C:15% water) and homogenized. To the resulting Veegum/Klucel suspension all other components are added in the order as indicated, while stirring. Developed by Dr. A. Thurn-Müller.

Formula from E. Merck

Pearlescent Conditioning Shampoo

	<u>Wt%</u>
A: Veegum HV, MAS (5% Disp.)	14.00
Hydroxypropyl Cellulose (5% Soln.) (Klucel G)	20.00
Distilled Water	11.50
B: Sodium Lauryl Sulfate (Standapol WAQ Spec.)	30.00
Hydrolyzed Collagen (Nutrilan L)	10.00
C: Sodium Chloride	1.00
Distilled Water	1.55
D: Diazolidinyl Urea (Germall II)	0.20
Distilled Water	1.55
E: Titanium Dioxide (and) Mica (Timeron Super Gold)	0.20
Coco-Betaine (Dehyton AB30)	10.00
Water soluble dyes, optional	q.s.

Procedure:

Prepare dispersions in advance; combine A. Homogenize until no undispersed particles remain. Continue batch with sidesweep agitation. Add B, in order. Combine C, add to batch. Combine D, add to batch. Add E in order, insuring that each is dispersed before proceeding.

Formula from Rona

Salon Conditioning Shampoo

Optimized conditioning level is achieved through use of a Polyquta Cationic Polymer and Ritapan DL (Pro-Vitamin B-5).

<u>Ingredients:</u>	<u>%W/W</u>
1. Sodium Laureth-2 Sulfate (Standapol ES-2)	54.35
2. Pationic ISL (Sodium Isostearoyl Lactylate)	3.00
3. Ritapeg 150 DS (PEG-150 Distearate)	1.00
4. Ritapan DL (dl-Panthenol)	0.25
5. Laneto-50 (PEG-75 Lanolin)	0.75
6. Polyquta 400 (Polyquaternium-10)	0.50
7. Sodium Chloride (25% Soln.)	0.25
8. Kathon CG	0.03
9. Fragrance-Nature Harvest 165-050	0.30
10. Distilled Water	37.87
11. Amanduline S.G. (Hydrolyzed Sweet Almond Protein)	5.00

Compounding Procedure:

Disperse item 6 in water at 165F. Add item 3 and mix until uniform. Then add item 4, 2, 1, 5 and 7 in order and mix until uniform. Cool to 120F. Add preservative and perfume. Adjust viscosity with NaCl.

Ref. No. 121-171

Conditioning Shampoo

A rich shampoo containing Amanduline SG and Pationic ISL for conditioning and hair repair.

<u>Ingredients:</u>	<u>%W/W</u>
1. Sodium Laureth Sulfate 29%	25.00
2. Sodium Lauryl Sulfate 29%	20.00
3. Ritamide C (Cocamide DEA)	5.00
4. Pationic ISL (Sodium Isostearoyl Lactylate)	3.50
5. Distilled/Deionized Water	40.80
6. Rita PEO-3 (PEG-23M)	0.50
7. Amanduline SG (Hydrolyzed Sweet Almond Protein)	5.00
8. Glydant	0.20

Compounding Procedure:

Disperse item 6 into item 5. Add items 1-4 and heat while mixing until uniform. Allow to cool to 40C. Add items 7 and 8.

Ref. No. 121-161C

Shampoo
All Purpose for Normal Hair

<u>Ingredients:</u>	<u>Weight%</u>
Water	50.00
Calfoam ES-303	40.00
Caltaine C-35	5.00
Calamide LL	1.50
Citric Acid	0.07
Fragrance, Dye(s)	0.00
NaCl	2.50

Comments about this formula:

1. Mix the first four ingredients.
 2. Add Citric Acid to adjust the pH to 5.5-6.5.
 3. Add the reported amount of salt. Salt content can be adjusted to achieve desired viscosity.
 4. Fragrance or dye compatibility were not evaluated.
- Formulation SHM-006-01

Shampoo
All Purpose for Oily Hair

<u>Ingredients:</u>	<u>Weight%</u>
Water	46.00
Calfoam SLS-30	25.00
Calfoam ES-303	25.00
Calamide LL	2.50
Citric Acid	0.10
Fragrance, Dye(s)	0.00
NaCl	1.00

Comments about this formula:

1. Mix the first four ingredients.
 2. Add enough Citric Acid to adjust the pH to 5.5-6.5.
 3. Fragrance or dye compatibility was not evaluated.
- Formulation SHM-007-01

Shampoo-Inexpensive

<u>Ingredients:</u>	<u>Weight%</u>
Water	45.70
NH ₄ Cl	1.00
PEG-75 Lanolin	0.30
Calfoam ALS-30	50.00
Calamide C	3.00
Preservative	0.00
Fragrance, Dye	0.00

Comments about this formula:

1. The ingredients should be mixed in order reported.
 2. If needed, adjust pH to 5.5-6.5 with Citric Acid.
- Formulation SHM-009-01

SOURCE: Pilot Chemical Co.: Suggested Formulations

Shampoo-Clear Gel Type

<u>Ingredients:</u>	<u>%Wt.</u>
Carbopol ETD 2020 (1.5%)	77.70
Disodium EDTA	0.10
Calfoam TLS-40	20.00
Calamide C	2.00

Comments About this Formula:

Carbopol ETD 2020-Hydrophobically Modified Polyacrylic Acid (Easy to Disperse)-B.F.Goodrich

1. A 1.5% solution in water is prepared by dissolving the Carbopol at 40C.
2. The dispersion is slightly hazy with gel-like consistency.
3. Probably even a 1% solution would be suitable for this application.
4. The ingredients are gradually added into the Carbopol solution.
5. The blend turns clear upon Calfoam TLS-40 addition.
6. Stir until the blend is homogeneous.
7. Without adjustment the pH is 5-6.
Formulation #SHM-004-01

Shampoo-Clear Gel Type

<u>Ingredients:</u>	<u>%Wt.</u>
Carbopol ETD 2020 (1.5%)	77.70
Disodium EDTA	0.10
Calfoam SLS-30	15.00
Calfoam ES-303	5.00
Calamide C	2.00

Comments About this Formula:

Carbopol ETD 2020 (Easy to Disperse)-Hydrophobically Modified Polyacrylic Acid, B.F.Goodrich

1. A 1.5% solution is made by dispersing the Carbopol in 40C warm water and stirring.
2. The dispersion is slightly hazy with gel-like consistency.
3. Probably even a 1% solution would be suitable for this application.
4. The ingredients are gradually added into the Carbopol solution and stirred until a homogeneous product is prepared.
Formulation #SHM-005-01

Shampoo-Clear Liquid Conditioning

<u>Ingredients:</u>	<u>Weight%</u>
Water	55.00
Calfoam ES-301	30.00
Caltaine C-35	6.50
Cocamidopropylamine Oxide	3.00
Calamide C	1.50
PEG-7 Glyceryl Cocoate	2.00
PEG-15 Cocopolyamine	2.00
Fragrance, Dye(s)	0.00
Preservative	0.00

Comments about this formula:

1. Add ingredients, one at a time, in the order given, under agitation.
2. Adjust pH to 6.5+0.5 With Citric Acid.
3. Small addition of salt can be used to adjust viscosity.

Formulation SHM-011-01

Shampoo - All Purpose

<u>Ingredients:</u>	<u>Weight%</u>
Water	51.20
Calfoam ES-302	40.00
Caltaine C-35	5.00
Calamide C	3.00
NaCl	0.75
Kathon CG	0.05

Comments about this formula:

1. Mix ingredients as listed.
2. Adjust pH to 6.3 with Citric Acid.
3. Formula is similar to SHM-006-0.

Formulation SHM-010-01

Shampoo - Clear Liquid

<u>Ingredients:</u>	<u>Weight%</u>
Water	60.70
n-coco Beta Amino Propionic Acid	7.00
Calfoam TLS-40	28.00
Calamide LL	4.00
Fragrance	0.00
Sodium Chloride	0.25
Kathon CG	0.05

Comments about this formula:

1. Add ingredients in the order given under adequate agitation. (if fragrance is added, pre-mix it with Calamide LL).
2. Adjust to pH 6.5 with Citric Acid.
3. Adequate agitation is important-otherwise gel-like particles will form upon standing for a few days.

Formulation SHM-013-01

Shampoo - Clear Viscous

<u>Ingredients:</u>	<u>Weight%</u>
CalBlend Clear	30.00
Fragrance, Dye, Preservative	Q.S.
Sodium Chloride	1.00-2.00
Water	68.50

Comments about this formula:**Blending Procedure:**

Charge water into mixing vessel and slowly blend in Clear. Mix until completely uniform. Add compatible fragrance, dye, and preservative. Adjust formulation viscosity to 3,000-5,000 cPs (No. 4 Spindle @ 10 rpm) with the incremental addition of sodium chloride as needed.

Typical Formulation Properties:

Appearance: Clear, Viscous Liquid
 Viscosity @ 25C: 3,000-5,000 cPs
 pH: 6.0-7.0
 % Non Volatiles: 11.5-12.5

CTFA Identification:

Water, Sodium Laureth Sulfate, Cocamide DEA, Cocamidopropyl Betaine, Sodium Chloride, Fragrance, Preservative, Citric Acid, Dye(s).

Formulation SHM-019-01

Shampoo-Conditioning

<u>Ingredients:</u>	<u>Weight%</u>
Water	57.85
Calfoam SLS-30	35.00
Calamide LL	3.00
Calamide C	0.50
Silicone Dimeramidoquat	2.00
EG Monostearate	0.50
NaCl	1.00
Preservative, Dye, Fragrance*	9.50

Comments about this formula:

- Mix ingredients in order reported while heating to about 60C.
 - Cool before adding fragrance.
 - Add preservative and dye as needed.
 - Adjust pH to 6 with Citric Acid.
- *Fragrance, Fragrance #S-5704 - Fine Flavors & Fragrances, Inc
 Formulation SHM-017-01

Shampoo-Concentrate

<u>Ingredients:</u>	<u>%Wt.</u>
Water	12.75
Propylene Glycol	8.00
Calfoam TLS-40	20.00
Calamide C	12.50
Calamide LL	12.50
Calfoam ALS-30	26.00
Citric Acid	0.75
NaCl	7.50

Comments About this Formula:

1. Mix water and Propylene Glycol.
 2. Add the next three ingredients into the water/PG solution.
 3. The last surfactant added is ALS-30; the blend becomes viscous.
 4. Adjust the pH with Citric Acid (pH 6-7).
 5. Add NaCl last. The concentrate is very viscous.
 6. Add Perfume, Dye(s) and Preservative as desired.
 7. Finished shampoo can be made by diluting 1 part concentrate with 7-15 parts water.
- Formulation #SHM-008-01

**Shampoo

Calamide C	12.50
Calamide LL	12.50
Calfoam ALS-30	26.00
Citric Acid	0.75
NaCl	7.50

Comments about this formula:

1. Mix water and Propylene Glycol.
 2. Add the next three ingredients into the water/PG solution.
 3. The last surfactant added is ALS-30; the blend becomes viscous
 4. Adjust the pH with Citric Acid (pH 6-7).
 5. Add NaCl last. The concentrate is very viscous.
 6. Add Perfume, Dye(s) and Preservative as desired.
 7. Finished shampoo can be made by diluting 1 part concentrate with 7-15 parts water.
- Formulation SHM-008-01

Shampoo-Cream

<u>Ingredients:</u>	<u>Weight%</u>
Part A:	
Calfoam SLS-30	45.00
Stearic Acid	7.50
PEG-5 Soya Sterol	1.00
Part B:	
Water	43.50
NaOH, 50%	1.00
NaCl	2.00

Comments about this formula:

1. Heat Part A and Part B (separately) to 70C with agitation.
 2. Add Part A to Part B.
 3. Cool while stirring.
 4. Add Perfume, Dye(s) and Preservative as needed at 45C.
 5. The Ethoxylated Soya Sterol provides a desirable after shampoo sheen to the hair.
- Formulation SHM-012-01

Shampoo with Silicone

<u>Stage Material:</u>	<u>Quantity</u>
Stage A:	
1 Water; Pure	47.390g
2 Polymer JR 400	0.500g
3 Kathon CG 100	0.100g
Stage B:	
4 Sodium Laureth Sulphate (SLES)	18.000g
5 Empicol TL 40t	17.500g
6 Texapon SBN	9.500g
Stage C:	
7 Empilan EGMS	1.000g
8 Empilan LDE	2.000g
Stage D:	
9 AEC Dimethicone (&) Laureth-4 (&) Laureth-23	4.000g
Stage E:	
10 Sodium Hydroxide 33%	0.010g

Mixing Instructions:

Weigh out water and start heating. Disperse Polymer JR and add Kathon.

Add items of Part B and bring to 65/70C.

Stir in items of Part C and stir until dissolved, more heating may be required.

Add Silicone CM2139-D1 and Silverson mix - do not introduce air - Adjust pH. Cool with slow stirring.

Gentle Everyday Shampoo

This mild shampoo is suitable for everyday use. A clear, water-white, viscous shampoo with excellent heat stability.

<u>Ingredients:</u>	<u>Weight%</u>
Distilled water	q.s. to 100.00
Sodium laureth sulfate, 28%	19.60
Cocamidopropyl betaine, 35%	11.00
Sodium lauroyl sarcosinate, 30%	9.60
PEG-150 distearate	2.90
Benece1 MP 943 R	1.10
Methylchloroisothiazolinone and methylisothiazoline, 1.5%	0.08

Procedure:

1. Disperse the Benece1 by adding to the vortex of well-agitated water. Heating to 40-45C will accelerate hydration. Mix until fully dissolved.
2. Add the surfactants, one at a time, mixing well between each addition.
3. Heat to 70-75C. Add the PEG-150 distearate. Mix until dissolved. Turn heat off.
4. When temperature reaches 40C or below, add fragrance and preservative.

Shaving Products

Brushless Shave Cream

<u>Formula:</u>	<u>% by Weight</u>
A:	
Deionized Water	78.193
Glycerine	5.000
Triethanolamine	0.857
B:	
Methocel 40-100 (Dow)	0.100
C:	
Stearic Acid	10.000
Stearyl Alcohol	0.500
Acetylated Lanolin Alcohol	1.500
White Protopet 1S (Witco)	1.500
Glyceryl Stearate SE	1.500
D:	
Deionized Water	0.500
Dowicil 200 Antimicrobial	0.200
E:	
Perfume Oil-Almond	0.150

Procedure:

Mix A at room temp. 10 min., then add B and mix until completely dissolved. Begin heating A&B and, in separate vessel, combine and heat C ingredients. When both mixtures are between 75 and 80C, combine with rapid agitation. When batch cools below 45C add D. Add E when batch is below 40C.

Brushless Shave Cream

<u>Formula:</u>	<u>% by Weight</u>
A:	
Deionized Water	78.193
Glycerine	5.000
B:	
Methocel 40-100	0.100
C:	
Triethanolamine	0.857
D:	
Stearic Acid	10.000
Stearyl Alcohol	0.500
Acetylated Lanolin Alcohol	1.500
White Fonoline Petrolatum (Witco)	1.500
Glyceryl Stearate SE	1.500
E:	
Deionized Water	0.500
Dowicil 200 Preservative	0.200
F:	
Perfume Oil (Almond)	0.150

Procedure:

Mix A ingredients at room temp. for 10 mins., then add B with agitation, then C. The dispersed Methocel will hydrate in about 15 mins. Begin heating the solution and in a separate vessel combine and heat D. When both mixtures are 75-80C combine with rapid agitation. When batch cools to 45C add E. Add F when batch is below 40C.

After Shave Balm

<u>Ingredients:</u>	<u>Weight%</u>
Phase A:	
SD Alcohol 40A	30.00
Water	30.00
Carbomer 940	0.40
Phase B:	
Water	5.74
Triethanolamine	0.56
Allantoin	0.20
Phase C:	
Glyceryl Stearate (and) Ceteth-20 (Teginacid H)	0.75
Steareth-7 (and) Stearyl Alcohol (and) Steareth-10 (Emulgator 2155)	0.75
Decyl Oleate (Tegosoft D0)	3.00
Isopropyl Stearate (Tegosoft S)	3.00
Menthol	0.05
Phase D:	
Water	25.55
Phase E:	
Fragrance	Q.S.

Procedure:

1. Disperse the Carbomer in the water and alcohol.
2. Mix Phase B and add to Phase A. Mix well.
3. Heat Phase C to 80C.
4. Heat the water (Phase D) to 80C and add to Phase C. Begin homogenization and cool to 50C.
5. Using sweep mixer, add Phase A/B to Phase C/D. Homogenize. Sweep mix cool to 30C. Dispense.

Shave Gel

The rich lather of this shaving gel has good foam and lubricity with low irritancy characteristics.

<u>Ingredients:</u>	<u>%W/W</u>
1. Distilled/Deionized Water	53.73
2. Sodium Laureth Sulfate	26.67
3. Pationic 138C (Sodium Lauroyl Lactylate)	10.00
4. Ritamide C (Cocamide DEA)	4.00
5. Ritapeg 150 DS (PEG-150 Distearate)	2.00
6. Titanium Dioxide	0.50
7. Rita PEO-1 (PEG-5M)	0.10
8. Methylparaben	0.10
9. Perfume	0.20
10. Glydant	0.20
11. Triethanolamine 50%	+ -2.00
12. Sodium Chloride (25% solution)	+ -0.50

Compounding Procedure:

Heat items 1-8 to 165F while mixing. Neutralize to pH 7.5 with Triethanolamine. Cool to 120F and add items 9 and 10. Adjust viscosity with Sodium Chloride solution.

Ref. No. 122-91

Low Alcohol Moisturizing Lotion

A moisturizing, low alcohol, opaque aftershave, which has a cooling, soothing skin-tightening feel with a substantive after-feel from the Patlac IL and Pationic ISL.

<u>Ingredients:</u>	<u>%W/W</u>
1. Acritamer 941 (Carbomer)	0.75
2. Distilled/Deionized Water	81.61
3. Patlac IL (Isostearyl Lactate)	1.00
4. Ritapro 165 (Glyceryl Stearate and PEG-100 Stearate)	0.50
5. Pationic ISL (Sodium Isostearyl Lactylate)	1.00
6. Rita CA (Cetyl Alcohol)	0.50
7. Myristyl Lactate	1.00
8. Triethanolamine (50%)	0.64
9. Alcohol SD 40	12.00
10. Perfume, A.S. Type	1.00

Compounding Procedure:

NOTE: A sweep agitator is recommended for this product.

Weigh items 1-2 and items 3-7 and heat to 165F. Slowly add items 3-7 to items 1-2, taking care not to entrap air. Cool to 140F. Add items 8-9. Cool to 110F and add item 10. Adjust pH to 5.3. Pour into containers.

Viscosity: Brookfield RVF Heliopath TA @ 10 rpm @ 27C: 6460cps

Section X

Soaps and Hand Cleaners

Anti-Bacterial Handsoap

<u>Ingredients:</u>	<u>%Wt</u>
CalBlend Clear	35.0
Nipacide PX	0.75
Propylene Glycol	1.50
Versene 100	0.20
Fragrance, Dye, Preservative	Q.S.
Sodium Chloride	Q.S.
Water	62.55

Comments About this Formula:**Blending Procedure:**

With smooth agitation, slowly blend CalBlend Clear and Versene 100 into water and mix until uniform. In a separate mixing vessel, disperse Nipacide PX in propylene glycol and, with smooth agitation, warm slightly until clear and uniform. With smooth agitation, slowly blend the propylene glycol/PX mixture into the main CalBlend Clear system and stir until uniform. Add compatible fragrance, dye and preservative. If desired, the viscosity of the system may be increased with the trace addition (0.05-0.25%) of sodium chloride or decreased with the addition (0.2-0.5%) of propylene glycol as needed.

Typical Formulation Properties:

Active Ingredient: Chloroxylenol
 Appearance: Clear Liquid
 Viscosity @ 25C: 6,000-10,000 cps
 pH: 6.5-7.5

CTFA Identification: Water, Sodium Laureth Sulfate, Cocamide DEA, Cocamidopropyl Betaine, Sodium Chloride, Fragrance, Preservative, Tetrasodium EDTA, Citric Acid, Dye(s).

SOURCE: Pilot Chemical Co.: Formulation #HAN-019-01

Baby Mild Cleansing Bar
(Formula 91-1103)

This high foaming cleansing bar is mild enough for baby use. Therefore, it is perfect for anyone who wants a good cleansing product for sensitive skin. Its non-alkaline formula gently cleanses the skin without the drying effects of soap. Its emollients and moisturizers leave the skin feeling clean, soft and smooth.

	<u>% by Weight</u>
Step A:	
Geroon AS-200 (Rhone-Poulenc)	64.0
Stearic Acid, Triple Pressed	Q.S.
Wickeno1 550 (CasChem)	6.0
Titanium Dioxide	0.2
Step B:	
DV-3284* (Rhone-Poulenc)	6.0
Step C:	
Water	4.0
Sodium Chloride	0.4
Step D:	
Fragrance, Dye(s), Preservative	Q.S.

*DV-3284 is a 55% aqueous solution of Sodium Isethionate

Blending Procedure:

Step A:

Blend the dry components (Geroon AS-200, Stearic Acid, Wickeno1 550, Titanium Dioxide) in a powder mixer.

Step B:

Slowly and evenly, add the DV-3284 to Step A to avoid wet spots.

Step C:

Dissolve the Sodium Chloride and any other water soluble components in the water and uniformly add to Steps A and B to avoid wet spots.

Step D:

Finally, add the fragrance evenly to the batch. When uniformly mixed, mill and/or refine the batch until it is homogeneous. Extrude and stamp into bars.

Typical Formulation Properties:

Appearance: Opaque Bar

pH (5% dispersion): 5-6

 Formulation HAN-019-01

Waterless Liquid

<u>Ingredients:</u>	<u>Weight%</u>
White Mineral Oil	30.00
Deodorized Kerosene	10.00
EGMS (Ethylene Glycol Monostearate)	5.00
Calimulse PRS	5.00
Propylene Glycol	5.00
Ethoxy Lanolin (75 Mole)	6.00
Water	39.00

Comments about this formula:

Part A: White Mineral Oil, Kerosene, EGMS, and Calimulse PRS.
 Combine and heat to 160F to melt EGMS.

Part B: Propylene Glycol, Ethoxy Lanolin and water. Combine and heat to 160F. Combine parts A and B.

Part C: Dye and Perfume if desired. Cool A and B, blend below 110F before adding.

Formulation HAN-009-01

SOURCE: Pilot Chemical Co.: Suggested Formulations

Hand Cleaner, Heavy DutyPhase A:Ingredients:

	<u>%Wt</u>
d-Limonene	35.00
Caloxylate N-9	13.00
Pilot SXS-40	4.00

Phase B:Ingredients:

	<u>%Wt</u>
Water	30.00
Calsoft AOS-40	4.00
Calfax 10L-45	10.00
Calamide C	4.00

Comments About This Formula:

Propylene Glycol can be used instead of SXS-40.

Phase A-Organic Phase:

Mix the ingredients in order listed. Upon SXS-40 addition, the blend is slightly hazy (the blend is clear when Propylene Glycol is used).

Phase B-Aqueous Phase:

Mix the ingredients in order listed.

Add Phase A into Phase B with vigorous mixing. A white creamy paste is formed. This is a good grease cutting hand cleaner.

Hot Pour Syndet Bar

This mild cleansing bar provides rich lather and soft skin as a result of Jordapon CI-60. The formula is designed to be manufactured using hot-fill equipment; no soapmaking lines are needed.

<u>Ingredient:</u>	<u>Wt%</u>
Sodium Cocoyl Isethionate (and) Stearic Acid (Jordapon CI-60)	80.0
Stearyl Alcohol (CO-1895)	10.0
PEG-150 (Carbowax E-8000)	3.0
Triethanolamine, 99%	5.0
Demineralized Water	2.0

pH (5% solution): 6.3

Procedure:

With all ingredients in the vessel, heat to 70C. Begin propellor agitation when the batch becomes fluid. Maintain slow mixing until all solids are dissolved and the batch becomes a uniform, nonviscous, opaque fluid. Fill molds, allow to solidify.

Formula M102

Syndet Bar

Modification of an example in US Patent #4,707,288

<u>Ingredient:</u>	<u>Wt%</u>
Sodium Cocoyl Isethionate (and) Stearic Acid (Jordapon CI-75)	76.5
Tallow/Coco Soap	16.7
Water	4.1
NaCl	0.3
TiO ₂	1.0

Liquid Soap

A mild, high-foaming formulation which is simple, yet offers lubricious lather and soft skin afterfeel thanks to the Jordapon CI-UP. The Mapeg EGMS provides a bright pearlescence to the system. It can be omitted if a clear product is desired.

Part:	Ingredient (Trade Name):	Wt%
A	Deionized Water	74.4
	Sodium Cocoyl Isethionate (Jordapon CI-UP)	3.0
	Ammonium Lauryl Sulfate (Stepanol AM)	13.0
	Glycol Stearate (Mapeg EGMS)	0.5
	Na4EDTA	0.1
	Methyl Paraben	0.2
B	Cocamidopropyl Betaine (Mafo CAB)	6.0
	Cocamide DEA (Mazamide JT-128)	2.5
C	Fragrance	0.2
	Citric Acid	0.1

pH: 6.0-6.5

Viscosity: 2500-3500 cps (with 0.6-0.9% NaCl)

Appearance: Creamy, Pearlescent Liquid

Procedure:

Mix and heat part A ingredients to 65C (150F). When uniform, add the Mafo CAB and the Mazamide JT-128. Cool the batch to 40C (150F), add fragrance and adjust pH. Adjust viscosity with sodium chloride.

Mild Hand Cleanser

	<u>Wt%</u>
Mackanate LO-Special	83.0
Mackamide PKM	4.0
Mackernium 007	0.8
Mackstat DM	qs
Water, Fragrance qs to	100.0

Procedure:

1. Add Mackamide PKM to Mackanate LO-Special and heat to 70 degrees C.
2. Blend until homogeneous.
3. Dissolve Mackernium 007 in water and add to product.
4. Blend until completely homogeneous.
5. Cool to 50 degrees C. with mild agitation.
6. Add Mackstat DM and fragrance and cool with continuous agitation.

SOURCE: McIntyre Group Ltd.: Personal Care Formulary: Formula

Mild Pearlied Hand Cleanser

	<u>% By Weight</u>
Water	61.4
Sodium Chloride	0.3
Monateric 951A	20.8
Monamate LNT-40	12.5
Monamid 1089	1.0
Cerasynt IP	1.5
Phospholipid PTC	2.5

Procedure:

Add ingredients in order listed and warm with gentle agitation to 60C. Maintain 60C until the Cerasynt IP has dissolved. Cool - adjust pH with phosphoric acid. At pH 6.5, viscosity is about 2000 cps.

Formula F-128

Pearled Gel Facial Cleanser

	<u>% By Weight</u>
Water	52.5
Sodium Laureth (1) Sulfate (25% Active)	28.0
Monamate CPA-40	12.5
Monamid 1089	3.0
Cerasynt IP	1.5
Phospholipid PTC	2.5

Procedure:

Add ingredients in order listed and heat with gentle agitation to 70C while the Cerasynt IP dissolves. Cool and adjust pH level desired. At pH 5 to 6 the product is a pearled, barely flowable gel which is suitable for packing in tubes. Hand lather is copious, with a soft-creamy feel. When dry, the skin has a silky feel.

Formula F-156

Facial Cleanser

This high foaming formulation utilizes the mild cleansing and anti-irritation properties of Phospholipid PTC. Its substantivity to the skin and effective conditioning activity will help to minimize or alleviate dry skin conditions while leaving a silky talc-like afterfeel.

	<u>% By Weight</u>
Phospholipid PTC	2.5
Monateric CLV	12.5
Sodium Laureth (1) Sulfate (26%)	28.0
Water	57.0

Opaque Liquid Soap

Natrosol 250HHR hydroxyethylcellulose effectively boosts the viscosity of this lower actives opaque shampoo base. At a surfactant solids level of only 7.3%, the addition of Natrosol yields a rich liquid soap with a viscosity of 4,000 cps (MPas) (Brookfield LVT at 30 rpm, 25C).

<u>Ingredients:</u>	<u>Weight%</u>
Water	75.88
Sodium C14-C16 olefin sulfonate, 40% active	7.50
Sodium lauroyl sarcosinate, 30% active	6.66
Cocamidopropyl betaine, 35% active	6.66
Glycol stearate	1.00
Natrosol 250HHR CS hydroxyethylcellulose	0.80
Propylene glycol	0.50
Glycerin	0.50
Tetrasodium EDTA	0.30
Stearalkonium chloride	0.10
Methyl paraben	0.10

Procedure:

1. Disperse the Natrosol in water with good agitation. Mix until fully dissolved. Moderate heating or an increase in solution pH to slightly alkaline will accelerate hydration.
 2. Disperse the methyl paraben in the propylene glycol. Add to the Natrosol solution. Mix until dissolved.
 3. While slowly stirring the water-soluble polymer solution, add the stearylalkonium chloride, olefin sulfonate, and glycol stearate. Heat the mixture to 80C until all of the glycol stearate has melted and the solution has turned opaque.
 4. Add the remaining ingredients while cooling the solution slowly to room temperature.
 5. Add color and fragrance.
- Formula N09-01W

Transparent Toilet Soap

Natrosol 250HR gives viscosity and pseudoplastic flow to this transparent hand soap.

<u>Ingredients:</u>	<u>Weight%</u>
Water	65.70
Sodium C14-C16 olefin sulfonate, 40% active	20.00
Sodium lauroyl sarcosinate, 30% active	10.00
Cocamide MEA	3.00
Natrosol 250HR CS	1.00
Disodium EDTA	0.20
Methyl paraben	0.10

Formula N09-02W

SOURCE: Aqualon Division: Natrosol 250 Hydroxyethylcellulose

Soap Bar for Hard Water
(Formula 91-1106)

This soap bar incorporates a mild amphoteric surfactant to improve foaming in hard water situations. Additionally, the amphoteric reduces the harshness of the soap system in any washing environment. This bar is less drying than a pure soap based product.

	<u>% by Weight</u>
Step A:	
80/20 Bradpride Soap Base (Original Bradford Soap Works)	Q.S.
Bentone EW (Rheox)	10.0
Step B:	
Water	7.5
Miranol C2M-SF 70%	5.0
Step C:	
Fragrance, Dye(s), Preservative	Q.S.

Blending Procedure:**Step A:**

Blend the dry components (Bradpride Soap Base, Bentone EW) in a powder mixer.

Step B:

Dissolve the Miranol C2M-SF 70% and any other water soluble components in the water with heating. Slowly and evenly add the aqueous solution to Step A to avoid wet spots.

Step C:

Finally, add the fragrance to Steps A and B. When uniformly mixed, mill and/or refine until the batch is homogeneous. Extrude and stamp into bars.

Typical Formulation Properties:

Appearance: Opaque Bar

pH (5% dispersion): 10.0-10.5

CTFA Identification:

Sodium Tallowate, Sodium Cocoate and/or Sodium Palm Kernalate, Hectorite, Water, Disodium Cocamphodipropionate.

Waterless Hand Cleaner

<u>Formula:</u>	<u>% by Weight</u>
A:	
Mineral Colloid BP (ECC America)	2.0
Water	36.0
B:	
Potassium Hydroxide	1.0
Water	5.0
C:	
Microwhite 100 (ECC America)	20.0
D:	
Oleic Acid	6.0
Deodorized Kerosene	25.0
Solulan 98	3.0
Yellow Protopet 2A Petrolatum (Witco)	2.0
Preservatives	q.s.

Procedure:

Slowly add the Mineral Colloid BP to the water while agitating at max. shear. Dissolve potassium hydroxide in water. Add B to A with medium shear. Add Microwhite 100 to A/B and mix until smooth and uniform. Heat A/B/C to 60C. Combine D and heat to 65C. Add D to A/B/C with slow mixing until cooled to 30C. Add preservatives and mix until smooth and uniform. Mineral Colloid, a refined smectite clay, effectively thickens and stabilizes the emulsion and suspends the abrasive.

Waterless Hand Cleaner with Abrasive

<u>Formula:</u>	<u>% by Weight</u>
A:	
Veegum Pro	2.0
Water	39.4
B:	
Potassium Hydroxide	0.9
Water	2.7
C:	
Oleic Acid	9.0
Carnation Mineral Oil (Witco)	9.0
C11-12 Isoparaffin	27.0
D:	
Polyethylene	
Preservative	q.s.

Procedure:

Slowly add Veegum Pro to the water, agitating at maximum available shear. Mix until smooth. Add B with careful mixing and mix until uniform. Add C to A/B and mix until emulsion is smooth and uniform. Add D and mix until uniform. This is a medium viscosity cream.

Procedure:

1. Combine the ingredients of Phase A together. Heat to 65C and mix.
2. Combine the ingredients of Phase B together. Heat to 65C.
3. Add Phase A to B. Homogenize.
4. Add pigments. Continue to homogenize. When the pigments are fully dispersed, begin cooling.
5. Cool to 35-45C with sweep agitation.
6. Add Fragrance. Sweep mix.
7. Dispense.

O/W-Sun Blocker

<u>Ingredients:</u>	<u>% by Weight</u>
A. Hostacerin DGL	1.00
Hostacerin DGS	4.00
Mineral oil, low viscosity	10.00
Isopropyl palmitate	5.00
Eusolex 6300	5.00
D-Panthenol	0.50
B. PNC 400	1.30
C. Eusolex 232	5.00
D. Tris Amino	2.21
Water	65.69
Preservative	q.s.
E. Fragrance	0.30

Procedure:

1. Melt A at ca. 70C, then add B.
2. Dissolve C in D at ca. 70C.
3. Stir 2 into 1 and stir until cool.
4. At ca. 35C add E to 3.
5. Homogenize the emulsion.

(C) is added at about 35 degrees C.

Formulation 4.2C

SOURCE: Huls America Inc.: Suggested Formulations

Pre-Sun Moisture Accelerator

A glossy oil-in-water emulsion containing Vitamin E, vitamin A, Ritapan D and Defensine to protect against the drying and damaging effects of the sun.

<u>Ingredients:</u>	<u>%W/W</u>
1. Ritabate-80 (Polysorbate 80)	3.00
2. Rita IPP (Isopropyl Palmitate)	2.50
3. Rita GMS (Glyceryl Stearate)	2.50
4. Rita SA (Stearyl Alcohol)	2.00
5. Tocopheryl Linoleate	1.50
6. Sorbitan Stearate	1.50
7. Ritacetyl (Acetylated Lanolin)	1.50
8. Tocopheryl Acetate	1.00
9. Distilled/Deionized Water	79.65
10. Ritapan D (Panthenol)	1.00
11. Acritamer 934 (Carbomer)	0.30
12. Triethanolamine (99%)	0.60
13. Vitamin A Palmitate	1.20
14. Germaben IIE	0.75
15. Fragrance	q.s.
16. Defensine (Wheat Germ Extract)	1.00

Compounding Procedure:

Dissolve item 10 in item 9 and slowly add item 11 with rapid agitation. Heat to 75C. Heat items 1-8 to 75C. Add to water with agitation. Add item 12. Cool to 40C. Add items 13-16. Cool to room temperature while mixing.

Ref. No. 121-174

Oil in Water Sunscreen Cream

An oil in water emulsion that protects against UV-B rays.

<u>Ingredients:</u>	<u>%W/W</u>
1. Polyethylene	2.00
2. Stearic Acid	0.50
3. Ritalan (Lanolin Oil)	6.00
4. Rita IPP (Isopropyl Palmitate)	12.50
5. Sorbitan Stearate	1.30
6. Ritabate-60 (Polysorbate 60)	1.80
7. Octyl Methyloxycinnamate	6.50
8. Distilled/Deionized Water	62.00
9. Acritamer 940 (Carbomer)	0.20
10. Sorbitan (70%)	5.00
11. Germaben II	0.80
12. Triethanolamine (99%)	0.40
13. Defensine (Wheat Germ Extract)	1.00

Compounding Procedure:

Slowly sift item 9 into item 8 with rapid agitation. Add items 10 and 11 and heat to 85C. Combine items 1-7 and heat to 95C. Slowly add to water while mixing. Add item 12 with agitation until smooth and uniform. Cool to 40C and add item 13.

Ref. No. 121-172

Self Tanning DHA Cream
(W/O Emulsion)

<u>Ingredients:</u>	<u>Weight%</u>
Oil Phase A:	
Polyglyceryl-4 Isostearate (and) Cetyl Dimethicone Copolyol (and) Hexyl Laurate (Abil WE-09)	5.0
Hydrogenated Castor Oil	0.5
Microcrystalline Wax	0.5
Caprylic/Capric Triglycerides (Tegosoft CT)	3.0
Octyl Stearate (Tegosoft OS)	5.0
Isopropyl Myristate (Tegosoft M)	4.0
Isopropyl Palmitate (Tegosoft P)	1.0
Cetyl Dimethicone (Abil Wax 9801)	1.0
 Oil Phase B:	
Cyclomethicone	4.0
 Water Phase:	
Water	69.2
Propylene Glycol	2.0
Dihydroxyacetone	4.0
NaCl	0.8
Preservatives, Color, Fragrance	Q.S.

Procedure:

1. Add the components of the Oil Phase together. Heat to melt and disperse the waxes. When dispersed, cool to 40C while mixing.
2. Add the Cyclomethicone. Mix.
3. Add the components of the Water Phase together. Heat to 40C.
4. Adjust pH of the Water Phase to 4.0-4.5, if necessary.
5. With lightnin' mixing, stream the Water Phase into the Oil Phase.
6. With sweep agitation, cool to 35C.
7. Add color, fragrance and preservatives.
8. Homogenize with a roto-stator homogenizer.

Skin Protecting Waterproof Sunscreen

A waterproof sunscreen that protects the skin by avoiding free radical formation with Defensine.

<u>Ingredients:</u>	<u>%W/W</u>
1. Octylmethoxycinnamate	7.50
2. Benzophenone-3	3.00
3. Rita IPP (Isopropyl Palmitate)	3.00
4. Rita CA (Cetyl Alcohol)	1.00
5. Stearic Acid	2.00
6. Ritox 52 (PEG-40 Stearate)	1.50
7. Ritasil 190 (Dimethicone Copolyol)	1.00
8. Dimethyl Stearamine	2.00
9. Acrylates/Octylacrylamide Copolymer	2.00
10. Distilled/Deionized Water	72.60
11. Acritamer 941 (Carbomer)	0.20
12. Triethanolamine (99%)	0.70
13. Germaben II-E	1.00
14. Defensine (Wheat Germ Extract)	2.50

Compounding Procedure:

Combine items 1-8 and heat to 70C. Slowly sift in item 9. Disperse item 11 in item 10 and heat to 70C. When completely dispersed add item 12. Add oil to water and mix. Allow to cool and add items 13 and 14.

Ref. No. 120-194B

Waterproof Sunscreen

A high SPF sunscreen lotion which is waterproof and contains Ritasil 190 for lubricity.

<u>Ingredients:</u>	<u>%W/W</u>
1. Distilled/Deionized Water	74.90
2. Acritamer 941 (Carbomer 941)	0.20
3. Octylmethoxy Cinnamate	7.50
4. Benzophenone-3	3.00
5. Rita IPP (Isopropyl Palmitate)	3.00
6. Rita CA (Cetyl Alcohol)	1.00
7. Stearic Acid XXX	2.00
8. Ritox 52 (PEG-40 Stearate)	1.50
9. Ritasil 190 (Dimethicone Copolyol)	1.00
10. Dimethyl Stearamine	2.00
11. Acrylates/Octylacrylamide Copolymer	2.00
12. TEA	0.70
13. Germaben IIE	1.00

Compounding Procedure:

Disperse item 2 in item 1 and heat to 70C. When completely dispersed add item 12. Combine items 3-10 and heat to 70C. Slowly sift in item 11 and mix until uniform. Add to water phase and mix. Cool to 45C and add item 13.

Solar Protection Lotion

<u>Ingredient:</u>	<u>Wt%*</u>
A: Dimethicone	2.00
Hydroxyoctocosanyl Hydroxystearate	3.50
Potassium Cetyl Phosphate (Amphisol K)	0.50
Titanium Dioxide (and) C12-15 Alkyl Benzoate (Tioveil FIN)	12.50
Sorbitan Palmitate	3.50
Dilauryl Trimethylolpropane Siloxy Silicate	5.00
B: Deionized Water	63.10
Veegum Ultra, Magnesium Aluminum Silicate	0.80
Rhodigel, Xanthan Gum	0.20
Propylene Glycol	5.00
Polysorbate 20	3.50
Sodium Lactate	0.30
Lactic Acid to pH 5.5	q.s.
C: Methylchloroisothiazolinone (and) Methylisothiaz- olinone (Kathon CG)	0.10

Procedure:

Weigh the water into a suitable vessel and heat to 75C. Mix with a homogenizer operating at 5000 rpm. Weigh and dry blend the Veegum Ultra and Rhodigel, add them to the water and mix for 20 minutes. Add the remaining Part B ingredients and mix each for 3 minutes. Maintain temperature at 75C. Weigh the Part A ingredients into a separate vessel, mix and heat to 75C. Add Part A to Part B. Mix for 10 minutes at 5000 rpm. Transfer the batch to a propeller mixer and adjust the speed to create a small vortex. Begin cooling while mixing, at 40C, add Part C. Package at ambient temperature. Note: Avoid pH of 6.5-7.5 as this may affect SPF value.

Formula from A&E Connock, Ltd.

TiO₂ Lotion

<u>Ingredient:</u>	<u>Wt%*</u>
A: Propylene Glycol Isoceteth-3 Acetate (Hetester PHA)	10.00
Octyldodecyl Neopentanoate (Elefac I-250)	10.00
Titanium Dioxide (and) Bismuth Oxychloride (Titanium Dioxide 110)	10.00
B: Deionized Water	68.90
Veegum, Magnesium Aluminum Silicate	0.70
Rhodigel, Xanthan Gum	0.30
C: Methylchloroisothiazolinone (and) Methylisothiazol- inone	0.10

Procedure:

Weigh the water into a suitable vessel and mix with a propeller mixer at 1800 rpm. Dry blend the Veegum and Rhodigel and add them to the water. Mix for 60 minutes. In a separate vessel, mix the Part A ingredients until the Titanium Dioxide is uniformly dispersed. Add Part A to Part B and mix until uniform. Add Part C, mix until uniform and package.

Formula from Bernel Chemical Co., Inc.

Sprayable Sunscreen

<u>Ingredients:</u>	<u>% by Weight</u>
Part A:	
Deionized Water	79.20
Glycerin	3.00
AMP-95	0.12
Part B:	
Octyl Methoxy Cinnamate	7.00
Octyl Salicylate	3.00
Oxybenzone	2.00
C12-15 Alcohols Benzoate	4.00
Oleth-10	0.08
Sorbitan Oleate	0.05
Dimethicone, 100 cs.	0.50
Pemulen TR-2	0.15
Part C:	
Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben	0.80
Disodium EDTA	0.10

Procedure:

Combine A ingredients in a vessel which will contain the entire formulation. In a separate vessel, combine all B ingredients except dimethicone and Pemulen. Heat to 45-50C to hasten dissolution of oxybenzone. Discontinue heating and add Pemulen. Mix to obtain a smooth dispersion. Add dimethicone. Add B to A with rapid agitation. Continue mixing to obtain a smooth emulsion. Add C. Disodium EDTA should be added incrementally such that a Brookfield viscosity of 500-1000 cps is achieved (model RVT @ 20 RPM, #2 spindle).

Formulation PF-0320 suggested by B.F. Goodrich

Waterproof Aerosol Sunscreen (SPF 10)

<u>Ingredients:</u>	<u>% by Weight</u>
SD Alcohol 40	43.65
AMP-95	0.35
Dermacryl	2.00
Deionized water	9.00
Octyl Methoxycinnamate	7.50
Menthyl Anthanilate	4.00
Cyclomethicone	3.00
Tocopheryl Acetate	0.50
Dimethyl Ether	30.00

Procedure:

Combine SD Alcohol 40 with AMP-95. With good agitation, slowly sift in Dermacryl-79. Mix until complete. Add rest except Dimethyl Ether. Continue mixing until complete. Filter, fill and charge with dimethyl ether.

Formulation PF-0318 suggested by National Starch & Chemical (7172-100)

SOURCE: Angus Chemical Co.: Product Formulary

Sunblock Lotion

In this formula, Veegum is used with Rhodigel Xanthan Gum and a Xanthan Gum-based dispersible emulsifier to stabilize the emulsion and adjust emulsion viscosity. This cold process lotion has a light feel with quick, greaseless rub-in. The sunscreen should offer considerable protection against sunlight-induced skin problems. The Ritachol and Finsolv are included for emollience and rapid skin absorption on rub-in.

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Veegum, Magnesium Aluminum Silicate	0.60
Rhodigel, Xanthan Gum	0.15
Deionized Water	65.45
Nonfat Dry Milk (and) Xanthan Gum (and) Glyceryl Stearate (and) Hydrogenated Vegetable Glycerides Phosphate	0.80
Propylene Glycol	3.00
B: C12-15 Alkyl Benzoate (Finsolv TN)	8.00
Benzophenone-3 (Escalol 567)	5.00
Octyl Methoxycinnamate (Parsol MCX)	7.50
Mineral Oil (and) Lanolin Alcohol (Ritachol)	4.00
Polysorbate 80	0.50
C: Zinc Oxide	5.00
D: Preservative	q.s.

Add the Veegum/Rhodigel dry blend to the water slowly, agitating at maximum available shear until smooth. Add the remaining Part A ingredients in the order shown, mixing after each until smooth and uniform. Mix the Part B ingredients until the Benzophenone-3 dissolves. Add Part B to Part A and mix until smooth. Add Part C and then Part D and mix each until smooth and uniform.

Sunblock with TiO₂

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Diisopropyl Dimer Dilinoleate (Schercemol DID)	10.00
Cetyl Octanoate (Schercemol CO)	1.50
Sorbitan Stearate	3.00
Glyceryl Isostearate	1.00
Dimethicone Copolyol	1.00
Titanium Dioxide (and) Caprylic/Capric Triglyceride	12.50
Cetearyl Alcohol (and) Cetareth-20	1.00
Phenyl Trimethicone	1.50
B: Deionized Water	62.20
Veegum, Magnesium Aluminum Silicate	1.00
Rhodigel, Xanthan Gum	0.30
Propylene Glycol	2.00
Polysorbate 60	3.00
C: Preservative	q.s.

Weigh the water into a suitable vessel and heat to 70C. Mix the water with a homogenizer at 5000 rpm. Weigh and dry blend the Veegum and Rhodigel, add them to the water and continue mixing for 20 minutes. Add the remaining Part B ingredients, mixing each for 3 minutes. Weigh the Part A ingredients into another vessel, mix and heat to 70C. Add Part A to Part B and mix for 10 minutes at 5000 rpm. Move the batch to a propeller mixer, adjust the speed to create a small vortex and begin cooling. At 40C add Part C and continue cooling. Package at 35C.

Veegum Ultra, Magnesium Aluminum Silicate	0.50
Rhodigel, Xanthan Gum	0.50
Propylene Glycol	2.00
Disodium EDTA	0.20
C: Methylchloroisothiazolinone (and) Methylisothiazol- inone (Kathon CG)	0.10

Procedure:

Weigh the water into a suitable vessel and heat to 75-80C. Mix the water with a homogenizer at 5000 rpm. Weigh and dry blend the Veegum Ultra and Rhodigel, add them to the water and continue mixing for 15 minutes. Add the remaining Part B ingredients in order, mixing each for 3 minutes. Weigh the Part A ingredients into another vessel. Mix and heat to 75-80C. Add Part A to Part B and mix for 10 minutes at 75-80C. Move the batch to a propeller mixer, adjust the speed to produce a small vortex and start cooling. At 40C add Part C and continue cooling. Package at 35C.

Sunscreen Emulsion with Titanium Dioxide

This base is an ideal starting point for sunscreen lotions. It is a very stable formulation for any type of pigmented product.

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Deionized Water	61.98
Veegum, Magnesium Aluminum Silicate	0.50
Cellulose Gum	0.15
Allantoin	0.05
Methylparaben	0.20
Titanium Dioxide (and) Alumina (and) Glycerin (and) Silica (UV-Titan M212)	8.00
B: Lecithin	1.00
Lanolin Alcohol	1.50
Glyceryl Stearate	0.80
Isopropyl Palmitate	4.00
Stearic Acid	0.50
Caprylic/Capric Triglycerides	4.00
Isoeicosane (Permethy1 102A)	7.50
Polyisobutene (Permethy1 104A)	2.50
Isostearic Acid	2.40
Propylparaben	0.10
C: Imidazolidinyl Urea	0.20
D: Triethanolamine, 99%	1.62
Polyglycerylmethacrylate	3.00

Procedure:

Weigh the Part A water into a suitable vessel and mix with a homogenizer operating at 5000 rpm. Dry blend the Veegum and cellulose gum, add the mixture to the water and continue mixing for 30 minutes at 5000 rpm, while heating the batch to 70-72C. Add the remaining Part A ingredients in order, mixing each until uniformly dispersed. Mix the Part B ingredients in another vessel and heat to 75C. Add Part B to Part A and mix for 10 minutes at 5000 rpm. Move the batch to a propeller mixer and adjust the speed to create a small vortex. Begin cooling while mixing. At 60C, add Part C. At 40C, add the Part D ingredients in order. Package at ambient temperature.

*As received basis

Sunscreen Gel

Cera Bellina (Pg-3 Beeswax) produces a non-granular, low penetration and high stability gel. This formula utilizes an array of oils and actives producing a product with a non-greasy skin feel, penetrates the skin quickly and has an SPF of 4 to 6.

Oil Phase:	Wt%
Sweet Almond Oil (Croda)	29.0
Cera Bellina (Pg-3 Beeswax, Koster Keunen)	15.3
Isopropyl Palmitate (Unichema)	15.0
Jojoba Oil (Jojoba Growers)	13.0
Sesame Oil (Polyester)	9.0
Avocado Oil (Arista)	9.0
Cetyl Stearyl Alcohol (Proctor & Gamble)	4.0
Escalol 507 (Van Dyk)	4.0
Ozokerite 160/164 (Koster Keunen)	1.0
Carnauba #1 Yellow (Koster Keunen)	0.5
Vitamin A Palmitate (BASF)	0.1
Vitamin E Concentrate (BASF)	0.1

Procedure:

Weigh and add each component of the oil phase to a vessel. Heat, not exceeding 75C, and mix until homogeneous. Reduce temperature to 60C and pour into container.

Adaptation of Formula and Its Influence on the Product:

By replacing the jojoba, sesame and avocado oils with light mineral oil (28.8%) and increasing the Cera Bellina concentration (17.5%), one can produce the same product as described above. The formulator has the ability to substitute their preferred oils with only slight concentration changes of Cera Bellina to produce products of the same consistency. Orange Wax (Koster Keunen) can be added to naturally enhance the SPF.

Lip Care Balm

This very economical product offers good barrier properties and has an SPF of 4-6. Neo Heliopan (H & R) is a solution of 2-Ethylhexyl-p-methoxycinnamate, a UV-B absorber which offers protection over a wide spectra range and is considered safe.

	Wt%
Petrolatum White USP (Witco)	44.0
Stearyl Alcohol (Proctor & Gamble)	17.5
NF White Beeswax (Koster Keunen)	9.5
Ozokerite 160/164 (Koster Keunen)	19.5
Deodorized Orange Wax (Koster Keunen)	2.5
Isopropyl Palmitate (Unichema)	1.0
Paraffin 160/165 (Koster Keunen)	3.0
Neo Heliopan AV (H&R)	2.0
Titanium Dioxide (Whittaker C&D)	1.0

Procedure:

Add all components, heat till 75C and use low shear to disperse the TiO₂. Once the mixture is homogeneous, cool and pour into molds.

Adaptation of Formula and Its Influence on the Product:

It is easy to incorporate actives such as vitamins, other oils and additional sunscreens to increase the SPF. Fragrance and colors are also easily added. This formula is very stable and slight substitutions in ingredients can be tolerated.

SOURCE: Koster Keunen, Inc.: A Guide to Natural Formulating

Sunscreen Lotion**Formulating Design and Advantages:**

This formula demonstrates the rheological and stabilizing properties of Cera Bellina. Incorporated into this formula is the sunscreen Escalol (Octyl Dimethyl PABA; Van Dyk) giving this formula an approximate SPF value of 4 to 6. The product has high gloss and excellent skin feel. The rheological properties of Cera Bellina allow for this product to be packaged in convenient tubes or squeeze bottles.

Oil Phase:	<u>Wt%</u>
Escalol 507 (Van Dyk)	5.63
Amerchol L 101 (Amerchol)	4.70
Cera Bellina (Pg-3 Beeswax; Koster Keunen)	3.80
Glycerol Monostearate (Henkel)	2.77
Light Mineral Oil (Witco)	2.83
Isostearic Acid (Unichema)	1.00

Water Phase:	
Water (Distilled)	71.66
1,3-Butylene Glycol (Hoechst)	2.90
Glycerine (Unichema)	2.83
Triethanolamine (Dow)	0.80
Germaben II (Sutton)	0.80
Carboxymethyl Cellulose (Hercules)	0.28

Procedure:

Heat the water phase to 75C under agitation ensuring that the entire phase is solubilized. Melt and mix the oil phase at 75F. Slowly add the oil phase to the water phase under vigorous agitation. Allow to cool to 35C and pour into jars.

Adaptation of Formula and Its Influence on the Product:

It is easy to alter the sunscreen to suit your preference, without changing the consistency. The emulsion viscosity can easily be altered by changing the oil and/or wax concentration. Orange Wax (Koster Keunen) can be altered by changing the oil and/or wax concentration. Orange Wax (Koster Keunen) can be added to naturally enhance the SPF.

Wash-Off Resistant Sunscreen Lotion with Crodafos CES

The incorporation of Crodafos CES in the formula enables this sunscreen lotion to attain higher static SPF and sustain a more improved waterproof SPF. These improved SPF's are due to the ability of Crodafos CES to enhance oil deposition, which gives the higher initial SPF, and to its substantivity as a phosphate-based emulsifying system, which results in better resistance to wash-off to give the higher sustained waterproof SPF.

<u>Ingredients:</u>	<u>Wt%</u>
Part A:	
Crodafos CES (Cetearyl Alcohol (and) Cetearyl Phosphate)	6.0
Crodacol C-70 (Cetyl Alcohol)	0.5
Volpo S-2 (Steareth-2)	0.5
Volpo S-10 (Steareth-10)	1.0
Petrolatum	4.5
Mineral Oil (70ssu)	8.0
Part B:	
Deionized water	70.7
TEA 99%	0.3
Part C:	
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben	1.0
Octyl Methoxycinnamate	7.5

pH=5.0+-0.5

Viscosity=(RVT Spindle #5, 10rpm, 25C)=13,000cps+-10%

Procedure:

Combine ingredients of Part A with mixing and heat to 75-80C. Combine ingredients of Part B with mixing and heat to 75-80C. Add Part B to Part A with mixing and cool to 40C. Add ingredients of Part C with mixing and cool to desired fill temperature.

N.A.T.C. Approved

SOURCE; Croda Inc.: Formulation SC-258

Water-In-Oil Sunscreen
SPF 26

<u>Ingredients:</u>	<u>Weight%</u>
Phase A:	
Cetyl Dimethicone Copolyol (and) Polyglyceryl-4 Isostearate (and) Hexyl Laurate (Abil WE-09)	5.00
Cetyl Dimethicone (Abil Wax 9840)	0.25
Octyl Palmitate (Tegosoft 0P)	1.25
Octyl Stearate (Tegosoft 0S)	5.35
Mineral Oil	1.75
Beeswax	1.20
Hydrogenated Castor Oil	0.80
 Phase B:	
Octyl Methoxycinnamate	5.00
Titanium Dioxide	5.00
Cyclomethicone	4.40
 Phase C:	
Water	69.20
Sodium Chloride	0.80
Preservatives	Q.S.

Procedure:

1. Heat Phase A to 85C to melt and disperse waxes.
2. Cool Phase A to 50C. Add B to A slowly with a low energy mixer.
3. Roller mill to reduce particle size of Titanium Dioxide.
4. Cool to 50C.
5. Heat Phase C to 50C. Add Phase C to A/B slowly with low energy mixing. Maintain a smooth milky appearance at all times while mixing.
6. Cool to 35C and homogenize.

Waterproof SPF 30 Sunscreen

This sunscreen formula containing Croda's new conditioning and emulsifying system Crodafos CES was clinically tested by AMA Laboratories for its Sun Protection Factor (SPF) and shown to have a static SPF of 31.66 and a Waterproof SPF of 30.31. The ability of Crodafos CES to increase oil deposition and improve wash-off resistance appears to enhance the formula's sunscreen performance and contribute to the high SPF.

<u>Ingredients:</u>	<u>Weight%</u>
Deionized Water	63.23
Carbopol 981	0.13
Crodafos CES (Cetearyl Alcohol (and) Cetearyl Phosphate)	6.50
Benzophenone-3	5.00
Octyl Methoxycinnamate	7.50
Octyl Salicylate	5.00
Menthyl Anthranilate	5.00
Crodamol OS (Octyl Stearate)	5.00
NaOH-10% Soln.	1.54
BHT	0.10
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben	1.00
pH=5.8+-0.5	
Viscosity=17,000 cps+-10% (RVT Spindle TB, 10 rpm @ 25C).	
Static SPF=31.66	Waterproof SPF=30.31

Procedure:

Dust Carbopol into the deionized water while stirring rapidly. Mix well for good hydration. Begin heating to 75-80C. Add Crodafos CES and mix well until all is melted and homogeneous. Add Benzophenone-3, Octyl Methoxycinnamate, Octyl Salicylate, Menthyl Anthranilate and Crodamol OS individually and with good mixing. Continue mixing at 75-80C, until homogeneous. Begin slow cooling and at 60C add NaOH solution. Cool to 45C and add BHT and preservative.

Mix for 30 minutes at 1800 rpm. Add the remaining Part C ingredients in order and mix until uniform. Begin heating the water phase to 80C. Weigh the Part A ingredients into another vessel and heat to 80C. Add Part B to Part A and mix until uniform. Slowly add Parts A+B to Part C and homogenize at 5000 rpm until uniform. Transfer the batch to a propeller mixer and adjust the speed to produce a small vortex. Begin cooling. At 40C, add Part D. Continue mixing and cooling. Package at 25-30C.

Sunscreen Lotion Using Micronized TiO2

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Propylene Glycol Isoceteth-3 Acetate	8.00
C12-15 Alkyl Benzoate	5.00
Casein (and) Xanthan Gum (Tensami 306)	1.50
Propylparaben (Trisept P)	0.25
B: Deionized Water	67.40
Veegum, Magnesium Aluminum Silicate	0.70
C: Methyl Gluceth-20	5.00
Glycerin	3.00
Methylparaben (Trisept M)	0.25
Titanium Dioxide (Micro Titanium Dioxide MT-500B)	5.00
D: Deionized Water	3.00
Imidazolidinyl Urea (Tristat IU)	0.30
E: Sodium Lactate	0.60

Weigh the water into a suitable vessel and heat to 75C. Mix the water with a homogenizer at 5000 rpm. Add the Veegum to the water and continue mixing for 20 minutes. Add the Part C ingredients in order, mixing each for 5 minutes. Weigh the Part A ingredients into another vessel. Mix and heat them to 75C. Add Part A to Parts B+C and mix for 10 minutes at 75C. Move the batch to a propeller mixer and adjust the speed to create a small vortex. Begin cooling with continuous, slow mixing. Mix the Part D ingredients and add them at 40C, then add Part E. Continue mixing and cooling. Package at 35C.

*As received basis.

Zinc Oxide Sunscreen Cream (PABA/Oxybenzone Free)
Estimated SPF=20

<u>Ingredient:</u>	<u>Wt.%*</u>
A: Octocrylene (Neo Heliopan 303)	7.00
Octyl Methoxycinnamate (Neo Heliopan AV)	7.50
Isocetyl Alcohol	2.00
Cetearyl Alcohol (and) Cetareth-20	2.00
Glyceryl Stearate	3.00
PEG-40 Stearate	1.00
Dimethicone	1.00
Cetyl Alcohol	0.75
Tocopheryl Acetate	0.25
B: Zinc Oxide	6.00
C: Deionized Water	65.30
Veegum Ultra, Magnesium Aluminum Silicate	0.50
Rhodigel, Xanthan Gum	0.50
Propylene Glycol	2.00
Disodium EDTA	0.20
D: Propylene Glycol (and) Diazolidinyl Urea (and)	
Methylparaben (and) Propylparaben	1.00

Procedure:

Weigh the Part C water into a suitable vessel and mix with a propeller stirrer operating at 1800 rpm. Weigh and dry blend the Veegum Ultra and Rhodigel and add them to the water. Mix for 30 minutes at 1800 rpm. Add the remaining Part C ingredients in order and mix until uniform. Begin heating the water phase to 75C. Weigh the Part A ingredients into another vessel and heat to 75C. Add Part B to Part A and mix until uniform. Slowly add Parts A+B to Part C and homogenize at 5000 rpm until uniform. Transfer the batch to a propeller mixer and adjust the speed to produce a small vortex. Begin cooling. At 40C, add Part D. Continue mixing and cooling. Package at 25-28C.

Section XII

Miscellaneous

Fluoride Dentifrice*

<u>Ingredients:</u>	<u>% by Weight</u>
Calcium pyrophosphate	45.00
Sorbitol, 70% aq. soln.	20.00
Sodium lauryl sulfate	1.20
Sodium carboxymethylcellulose	0.60
Sodium saccharine	0.10
Stannous fluoride	0.40
Hexetidine	0.20
Flavoring	0.75
Water	31.75

*UK Patent 2,001,526A held by William R. Warner Co. Ltd. (1979)

Mouthwash*

<u>Ingredients:</u>	<u>% by Weight</u>
Ethanol	10.00
Glycerol	5.00
Ethoxylated high-purity castor oil (Cremophor EL)	0.25
Zinc Citrate	0.15
Hexetidine	0.20
Flavoring, saccharine	0.10
Water	to 100.00

*European Patent 0,049,830 A2 held by Professor Hans Muehlmann (1982)

Gum-Massage-Gel*

<u>Ingredients:</u>	<u>% by Weight</u>
Water	87.69
Allantoin	1.00
Panthenol	5.00
Cetylpyridinium chloride	0.01
Hexetidine	0.10
Methylcellulose	6.00
Peppermint oil	0.20

*Swiss Patent 622,945 held by Hans Lukaschek and Professor Manfred Maier (1981)

Glycerol Gel Base

Other ingredients may be incorporated as desired.

<u>Ingredients:</u>	<u>% by Weight</u>
Water, deionized	9.00
Stabileze 06	0.50
AMP-95	0.50
Glycerine	89.70
Additives	q.s.
Germall II	0.30

Procedure:

Disperse Stabileze in water with stirring for 10 minutes. Heat the dispersion to 70-80C for 15 to 20 minutes, until thickening occurs. Start cooling. Add AMP with stirring. Mix until uniform. Add glycerine slowly over 10 minutes with stirring. Stir until uniform gel is obtained. Add remaining ingredients, mixing thoroughly after each addition.

Formulation PF-0244E suggested by ISP

Aculyn 33 Fluid Gel Emulsion

<u>Ingredients:</u>	<u>% by Weight</u>
A. Water	to 100%
Aculyn 33	2.50
Isopropyl myristate	10.00
Imidazolidinyl Urea	0.30
EDTA Na ₂	0.15
B. AMP-95	2.50

Procedure:

Mix the ingredients in the order listed.

Physical Characteristics:

Appearance: Fluid gel
pH: 7.34
Viscosity: 700 cps

Formulation PF-0387 suggested by Rohm & Haas Co. (PF-039)

SOURCE: Angus Chemical Co.: Product Formulary

Oil Liposome Gel

<u>Ingredients:</u>	<u>% by Weight</u>
Phase 1: Water, dem.	ad 100.00
Panthenol	10.00
Phase 2: Alcohol	13.30
Phase 3: Ultrez 10	0.80
Phase 4: Jojoba Oil	5.00
Titanium Dioxide	0.50
Phase 5: Tris Amino	q.s.
Water, dem.	5.00
Phase 6: Natipide II	5.00
Phase 7: Preservatives, Perfume	q.s.

Manufacture:

1. Manufacturing at room temperature.
2. Slowly add phase 2 to phase 1 while stirring thoroughly.
3. Slowly add phase 3 while stirring thoroughly.
4. Homogenize the mixture intensively.
5. Add phase 4 while stirring thoroughly.
6. Homogenize the mixture intensively.
7. Add phase 5 while stirring thoroughly.
8. Homogenize the mixture intensively.
9. Add phase 6 while stirring thoroughly.
10. Homogenize the mixture intensively.
11. Add phase 7 and homogenize the mixture intensively for a short time.

Formulation PF-0376E suggested by Rhone-Poulenc Rorer.

SOURCE: Angus Chemical Co.: Product Formulary

Ritavena 5 (1.0%)/Acritamer 934 (1.0%) Blend

<u>Ingredients:</u>	<u>%W/W</u>
Part A:	
1. Distilled Water	0.00
2. Methylparaben	0.15
Part B:	
3. Ritavena 5	1.00
4. Distilled Water, (100C)	10.00
Part C:	
5. Acritamer 934	1.00
6. Distilled Water	75.80
Part D:	
7. Glydant 40/700	0.25
8. NaOH (20% Solution)	1.80

Compounding Procedure:

Premix A in hot water bath. Premix C. Mix B in Blender for 2 minutes. Mix A and B. Add C. Adjust pH to 7.0 with NaOH solution. Combine. Mix until uniform.

Formulation 111-117

Gel Stick

A solid gel stick obtained by using Behenoyl Lactylate and Propylene Glycol. The addition of Ritavena 5 adds slip and glide for application, and reduces crumbling of edges. The Ritavena 5 also reduces synerisis of the glycol.

<u>Ingredients:</u>	<u>%W/W</u>
Part A:	
1. Behenoyl Lactylate	15.00
2. Propylene Glycol	70.00
3. Rita CA	3.00
Part B:	
4. Distilled Water (100C)	6.48
5. Ritavena 5	1.00
Part C:	
6. Sodium Hydroxide (20% Solution)	4.52

Compounding Procedure:

Weigh and heat Part A to 170F. All items should be liquid. Mix until uniform. Premix Part B in a Blender for 2 minutes. Add Part B to Part A. Mix. Adjust pH to 8.5 with Part C. Package while fluid.

Melt point ca. 55C.

Formulation 114-111

SS4267	Dimethicone/trimethyl-siloxy- silicate	GESilicone
Starfol OS	Difatty ester	Sherex
Stabileze XL-80W		ISP
Stabileze 06		ISP
Standamid KD	Cocamide DEA	Henkel

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Standamid LD		Henkel
Standapol A	Ammonium lauryl sulfate	Henkel
Standapol ES1 (30%)	Sodium laureth sulfate	Henkel
Standapol ES-2	Sodium laureth sulfate	Henkel
Standapol T	TEA lauryl sulfate	Henkel
Standapol WAQ-LC	Sodium lauryl sulfate	Henkel
Standapol WAQ Spec.	Sodium lauryl sulfate	Henkel
Steol CA-130/CS-130/ CS-230/CS-330/CS-460	Alcohol ether sulfate	Stepan
Stepan-Mild BSB		Stepan
Stepan-Mild LSB		Stepan
Stepan-Mild SL3		Stepan
Stepanol AM	Ammonium lauryl sulfate	Stepan
Stepanol AM-V/ ME-Dry/WA-Extra	Alkyl sulfate	Stepan
Stepanol WAT	TEA lauryl sulfate	Stepan
Stepan TAB-2		Stepan
Sunett	Acesulfame K	Hoechst
Sunflower Oil		Lipo
Sunscreen Liposomes	Complex of chemicals	Collaborat-
Super Floss	Diatomaceous earth	Manville
Super Hartolan	Lanolin alcohol	Croda
Super Refined Wheat Germ Oil		Croda
Supersat AWS-4	PEG-20 hydrogenated lanolin	RITA
Supra Talc	Premium talc	RITA

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Syncrowax AW1-C	Synthetic wax	Croda
Syncrowax ERL-C	Synthetic wax	Croda
Syncrowax HGL-C	C18-36 acid triglyceride	Croda
Syncrowax HR-C	Synthetic wax	Croda
Synthetic Candelilla		Keunen
Tagat L	PEG-20 glyceryl laurate	Goldschmidt
Tagat O	PEG-30 glyceryl oleate	Goldschmidt
Talc 141		Whittaker
Talc 1625		
TEA Salicylate	TEA salicylate in propylene glycol	Haarman
Technocell 90DV		
Tech-O 11-070 Ster-O-Pro		Beacon CMP
Tech-O 11-075 Concentrated Oat Protein		Beacon CMP
Tegin	Glyceryl stearate S.E.	Goldschmidt
Tegin M	Glyceryl stearate	Goldschmidt
Teginacid C		Goldschmidt
Teginacid H	Glyceryl stearate/ceteth-20	Goldschmidt
Tegin EGS	Glycol distearate	Goldschmidt
Tegin M	Glyceryl stearate	Goldschmidt
Tego Alkanol 16	Cetyl alcohol	Goldschmidt
Tego Amid S18	Stearamidopropyl dimethylamine	Goldschmidt
Tego Betaine E/F/F50/ L7	Cocamidopropyl betaine	Goldschmidt

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Tego Care 450	Polyglyceryl-3 methylglucose distearate	Goldschmidt
Tego Deo HY77	Zinc rincinoate/triethanol-amine/dipropylene glycol/lactic acid	Goldschmidt
Tego Glucosid L55	Lauryl glucoside/cocamido-propyl betaine	Goldschmidt
Tego Glucosid 1216	Lauryl glucoside	Goldschmidt
Tego Pearl N100	Glycol distearate/steareth-4	Goldschmidt
Tegosoft CI	Cetearyl isononanoate	Goldschmidt
Tegosoft CT	Caprylic/capric triglycerides	Goldschmidt
Tegosoft D0	Decyl oleate	Goldschmidt
Tegosoft GC	PEG-7 glyceryl cocoate	Goldschmidt
Tegosoft Liquid	Cetearyl octanoate	Goldschmidt
Tegosoft M	Isopropyl myristate	Goldschmidt
Tegosoft OP	Octyl palmitate	Goldschmidt
Tegosoft OS	Octyl stearate	Goldschmidt
Tegosoft P	Isopropyl palmitate	Goldschmidt
Tegosoft S	Isopropyl stearate	Goldschmidt
Tenox BHT	Antioxidant	Eastman
Tenox 4	Antioxidant	Eastman
Tensami 306	Casein/xanthan gum	AlbanMuller
Tensine	Wheat protein	RITA
Texapon L20M		Henkel
Texapon SBN		Henkel
Texapon T42	TEA lauryl sulfate	Henkel

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Thioglycolate Trihydrate		Merck
Thioglycolic Acid		Witco
Timica Sparkle 110P	Cosmetic pearl powder	Rona
Timiron MP-24 Gold Karet	Interference Pigment	Rona
Timiron MP1001/MP1500	Titanium dioxide/mica	Rona
Timiron S.I. Pigments	Titanium dioxide/mica	Rona
Timiron Silk Red/ Starlight Colors	Mica/titanium dioxide	Rona
Timiron Super Pigments	Pearlescent pigments	Rona
Tioveil FIN	Titanium dioxide/C12-15 Alkyl Benzoate	Tioxide
Titanium Dioxide 110	Titanium dioxide/bismuth oxy- chloride	Presperse
Titanium Dioxide #3328		
Tris Amino	Tris (hydroxymethyl) amino- methane	Angus
Trisept M	Methylparaben	Tri-K
Trisept P	Propyl paraben	Tri-K
Tristat IU	Imidazolidinyl urea	Tri-K
Tritisol	Soluble wheat protein	Croda
Triton X-100	Octoxynol-9	Rohm&Haas
Trivent OC-G	Tridecyl neopentanoate	Trivent
Tween 20	Polysorbate 20	ICI
Tween 40	Polysorbate 40	ICI
Tween 60	Polysorbate 60	ICI

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Tween 80	Polysorbate 80	ICI
Tylose CB 200	Cellulose gum	Hoechst
Tylose H1000	Hydroxyethyl cellulose	Hoechst
Ucare Polymer JR-125	Polyquaternium-10	UnionCarb
Ultraol 70 NF		
Ultrapure L	Petrolatum	Ultra
Ultrez 10		Goodrich
Unicide U-13	Imidazolidinyl urea	Lipo
Uninontan U-34	Water/propylene glycol/sodium citrate/lemon extract/cucumber extract	Lipo
Uniphen P-23	Phenoxyethanol/methylparaben/ethylparaben/propylparaben/butylparaben	Lipo
Unirep U-18		
Uvatone 2-6		
Uvinul M-40	Benzophenone-3	BASF
Uvinul MC80		BASF
UV-Titan M212	Titanium dioxide/alumina/glycerin/silica	Kemira
Van Gel B/C/ES/O	Magnesium aluminum silicate	Vanderbilt
Vanilla BB-36943		Ungerer
Vanseal CS	Cocoyl sarcosine surfactant	Vanderbilt
Vanseal NACS-30	Sodium lauroyl sarcosinate	Vanderbilt
Vanseal NALS-30	Sarcosinate surfactant	Vanderbilt

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Varion CADG/CADG LS/	Surfactant	Sherex
Varisoft TA-100	Hair rinse concentrate	Sherex
Varonic LI-48/LI-67/ 63-E-20	Nonionic wetting agent	Sherex
Vaseline White	Petrolatum white	Witco
Veegum/ HV/ K/ Pro/ Regular/ T/ Ultra	Magnesium aluminum silicate	Vanderbilt
Velvetex BA-35	Cocamidopropyl betaine	Henkel
Velvetex BK-35		Henkel
Versatyl-42	Hair spray polymer	National
Versene Powder/100	Tetrasodium EDTA chelating agent	Dow
Vibrant Splash 94F/2203	Fragrance	Fragrance
Vigilan AWS		Fanning
Vitamin-E-Acetate	Tocopheryl acetate	BASF
Vitamin F Forte CLR		Richter
Volpo CS20	Ethoxylated oleoyl ether	Croda
Volpo S-2	Steareth-2	Croda
Volpo S-10	Steareth-10	Croda
Volpo S-20	Steareth-20	Croda
Volpo 5	Oleth-5	Croda
Vybar-5013	Polymer	Petrolite

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Walnut Shells (AD-7B Type)		Agrashell
Waxenol 810		Wickhen
Wecobee S	Synthetic butter	Stepan
Wecobee SS	Synthetic cocoa butter	Stepan
Wheat Germ Oil		Rita
Wheat-Tein NL	Hydrolyzed wheat protein	Maybrook
White Fonoline	Petrolatum	Witco
White Protopet 1S	Petrolatum	Witco
Wickenol 152		CasChem
Wickenol 171		CasChem
Wickenol 550		CasChem
Witcamide 511	Alkanolamide surfactant	Witco
Witconate NIS	Sodium isethionate	Witco
Witconol APM	Nonionic surfactant	Witco
Xanthan Gum		Kelco
Yellow Protopet 2A	Petrolatum	Witco
Zetesol NL	Sodium lauryl ether sulfate	Zschimmer
Zetesol 856T	Fatty alcohol ether sulfate	Zschimmer
Zinc Omadine	Zinc pyrithione, 48%	Olin
Zinc Oxide Neutral		Haarman
Zinc Stearate #695		
Zusolat 1004	Alkyl polyethylene glycol ether	Zschimmer
Zusolat 1005/85	Alkyl polyethylene glycol ether	Zschimmer

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
18-B	Glycyrrhetic Acid Phytosome	
33-5198	Black Iron Oxide	Rona
43W1810	Ultramarine Blue	Rona
80/20	Bradpride Soap Base	Bradford
7054	Red Iron Oxide	Rona
7055	Yellow Iron Oxide	Rona
7133	Black Iron Oxide	Rona
43001	Manganese Violet	Rona

Preface

This book contains 576 cosmetic and toiletry formulations, based on information received from numerous industrial companies and other organizations. This is Volume 7 of the Second Edition of this work; Volume 1 was published in 1989, Volume 2 in 1992, Volume 3 in early 1995, Volume 4 in late 1995, Volume 5 in 1996, and Volume 6 in 1998. There are no duplications in any of these volumes.

The data represent selections from manufacturers' descriptions made at no cost to, nor influence from, the makers or distributors of these materials. Only the most recent formulas have been included. It is believed that all of the trademarked raw materials listed are currently available, which will be of interest to readers concerned with raw material discontinuances. The 1996 market for cosmetic raw materials is estimated at \$2 billion.

Each formulation in the book is identified by a description of end use. The formulations include the following as available, in the manufacturer's own words: a listing of each raw material contained; the percent by weight of each raw material; suggested formulation procedure; and the formula source, which is the company or organization that supplied the formula. The book is divided into the following 12 sections, with the number of formulations indicated in ().

- I. Antiperspirants and Deodorants (20)
- II. Baby Products (17)
- III. Bath and Shower Products (59)
- IV. Beauty Aids (97)
- V. Creams (75)
- VI. Hair Care Products (66)
- VII. Lotions (40)
- VIII. Shampoos (43)
- IX. Shaving Products (11)
- X. Soaps and Hand Cleaners (48)
- XI. Sun Care Products (72)
- XII. Miscellaneous (28)

Each formula is indexed in the section which is most applicable. The reader seeking a formula for a specific end use should check each section which could possibly apply.

In addition to the above, there are two other sections that will be helpful to the reader:

- XIII. Trade-Named Raw Materials. Each raw material is listed with a brief chemical description and the name of the raw material supplier.
- XIV. Suppliers' Addresses. Addresses of suppliers of trade-named raw materials and/or formulations, some of which are not available in the usual reference books.

It should be noted that some formulations in the book are translations. The manufacturer's exact wording has been used in these cases. Occasionally different companies have listed the same raw material differently; it is hoped that the reader will be able to identify the same or similar raw materials by consulting the Trade-Named Raw Materials section.

The table of contents of the book is organized in such a way as to serve as a subject index.

My fullest appreciation is expressed to the companies and organizations which supplied the information included in this book.

July 1999

Ernest W. Flick

NOTICE

To the best of our knowledge the information in this publication is accurate; however, the Publisher does not assume any responsibility or liability for the accuracy or completeness of, or consequences arising from, such information. This book does not purport to contain detailed user instruction, and by its range and scope could not possibly do so. Mention of trade names or commercial products does not constitute endorsement or recommendation for use by the Author or Publisher.

Cosmetic and toiletry raw materials could be toxic or cause allergies in some circumstances, and, therefore, due caution should always be exercised in the use of potentially hazardous materials and the manufacturing processes involved. Final determination of the suitability of any information or product for use contemplated by any user, and the manner of that use, is the sole responsibility of the user. We strongly recommend that users seek and adhere to a manufacturer's or supplier's current instructions for handling each material they use.

The Author and Publisher have used their best efforts to include only the most recent data available. The reader is cautioned to consult the supplier in case of questions regarding current availability.

Contents and Subject Index

SECTION 1: ANTIPERSPIRANTS AND DEODORANTS	1
Antiperspirant Gel with 20% Active Al/Zr	2
Deodorant Gel with 25% Active ACH	3
Enhanced Antiperspirant Stick	4
Reduced VOC Antiperspirant Aerosol	4
Enhanced Antiperspirant Suspension Roll-on	5
Enhanced Efficacy Antiperspirant Suspension Roll-On	5
Non Whitening Antiperspirant Cream	6
Water-in-Oil Antiperspirant Cream	6
Oil-in-Water Roll-on Anti-Perspirant	7
Clear Pumpable Antiperspirant	7
Roll-On Antiperspirant	8
Deo Antiperspirant Spray with Aerosol	8
Roll-on Antiperspirant Lotion	9
Antiperspirant Roll-on Lotion with Isosorbide Monolaurate	9
Roll-On Antiperspirants	10
ACH Formula	10
Al Zr Tetrachlorohydrate-GLY Formula	10
Roll on Deodorant Emulsion	11
Antiperspirant Spray	11
Stick Antiperspirants	12
SECTION II: BABY PRODUCTS	13
Baby Cream	14
Baby Shampoo	14
Baby Hair Conditioner Formulation	15
Baby Shampoo	15
Baby Lotion	16
Diaper Rash Ointment	17
Baby Shampoo	18
Pearlized Baby Bath	19

Crystal Clear Baby Shampoo	20
Acid Balanced Shampoo	20
W/O Baby Cream	21
Baby Lotion	21

SECTION III: BATH AND SHOWER PRODUCTS 22

After Bath/Shower Milky Lotion	23
After Bath/Shower Soft Milky Creme	23
After-Shower Milky Lotion	24
After-Shower Soft Milky Creme	24
After-Shower Flowable Milky Creme/Lotion	24
Bath Gel	25
Shower Gel for Sensitive Gel	25
Bath Gel with Vitamin E Moisturizing Beads	26
Bath and Shower Cleanser	27
Facial Cleanser	27
Bath and Shower Gel	28
Body Shampoo	29
Simple Bath Gel	29
Clear Milk-Based Bubble Bath	30
Opacified Milk-Based Bubble Bath	30
Clear Shower Gel	31
Shower Bath	31
Cream Body Shampoo	32
Powdered Bath Foam	32
Creamy Bath Oil	33
Floating Bath Oil	33
Creamy Shower Gel	34
Creamy "2 in 1" Body Wash	34
Creme Body Wash with Emmollients	35
Economy Shower Gel	36
European Style Bath Gel	37
Blooming Emollient Bath Oil	37
Exfoliating Body Scrub	38
Foaming Bath Oil	39
Gentle Body Wash	40
Economical Body Wash	40
Clear Body Wash	40
Low Cost Body Wash	41
Mild Bubble Bath	42
After Bath Talc	42
Milk Bath Gel	43
Body Wash for Sensitive Skin	43
Milk Enriched Bath and Shower Cleanser (Clear)-B	44

Milk Enriched Bath and Shower Cleanser (Clear)-C	44
Milk Enriched Bath and Shower Cleanser (Clear)-D	44
Milk Enriched Bath and Shower Cleanser (Clear)-E	45
Milk Enriched Bath and Shower Cleanser (Clear)	45
Milk Enriched Body Cleanser	46
Gel Conditioning Body Cleanser	46
Moisturizing Shower Lotion	47
Moisturizing Self-Emulsifying Bath Oil (With AHA-Ester)	47
Moisturizing Shower Lotion	48
Shower Gel with Low Washing Active Solids	48
Opacified Bath & Shower Liquid	49
Opacified Bath & Shower Liquid Gel	49
Pearlized Bath Salts	50
Shower and Bath Gel	51
Shower Gel	52
Water White Shower Gel	53
2 in 1 Creamy Body Wash	54
SECTION IV: BEAUTY AIDS	55
AHA-Clarifying Face Mask	56
Aloe Vera Gel Moisturizer	57
Amphoteric Facial Cleanser	58
O/W-Moisturizing Milk	58
Anhydrous Deep Penetrating Vitamin Gel	59
Gel with Thiosome (P)	59
Blackstar Eye Shadow	60
Eye Shadow with Timiron MP-60, MP-65	60
Body Mask With Liposilt Green	61
Cleansing Gel	62
Make up Remover	62

S.T. Tonic	355
Stearyl Alcohol Formulation	356
Washable Oil	357
SECTION XIII: TRADE-NAMED RAW MATERIALS	358
SECTION XIV: SUPPLIERS' ADDRESSES	394

Section I
Antiperspirants and
Deodorants

**Antiperspirant Gel
With 20% Active Al/Zr**

Ingredients:	Wt%
Phase A:	
Dimethicone Copolyol (and) Cyclomethicone (Abil EM 97)	2.40
Cyclomethicone (Abil B 8839)	13.80
Isopropyl Palmitate (Tegosoft P)	0.50
Dimethicone (Abil 50)	0.80
Dimethicone Copolyol (Abil B 8852)	0.80
Stearyl Heptanoate (Tegosoft SH)	0.75
Phase B:	
Aluminum Zirconium Tetrachlorohydrate Gly (46% solution)	43.50
SD Alcohol 40	2.50
Propylene Glycol	14.30
Water	10.65
Dipropylene Glycol	10.00

Procedure:

1. Add the raw materials of Phase A, mixing to uniformity at room temperature.
2. Add the raw materials of Phase B to a second vessel, mixing to uniformity. The active salt should be mixed to a clear, colorless solution.
3. Measure the refractive indices of both phases. Adjust Phase B with either propylene glycol or water to match the refractive index of Phase A. The refractive indices should agree to the fourth decimal place for total clarity.
4. Slowly stream Phase B into Phase A with slow (300rpm) multi-blade mixing. The addition rate should match the agitation, not allowing the water to pool on the emulsion surface. After the addition of the water phase is complete, increase the agitation rate to 1,200 rpm for a few minutes. This will build the viscosity of the mixture to a low viscosity, flowing gel.
5. Homogenize the mixture at a low rate. Mix until a firm (shearable) gel is obtained.

Isopropyl Palmitate (Tegosoft P)	0.50
Dimethicone (Abil 50)	0.80
Phenyl Trimethicone (Abil AV 20)	0.50
Dimethicone Copolyol (Abil B 8852)	0.80
Stearyl Heptanoate (Tegosoft SH)	0.75
Phase B:	
Aluminum Chlorohydrate (50% solution)	50.00
SD Alcohol 40	4.00
Sorbitol	0.50
Propylene Glycol	13.95
Water	9.00
Dipropylene Glycol	3.00

Procedure:

1. Add the raw materials of Phase A, mixing to uniformity at room temperature.
2. Add the raw materials of Phase B to a second vessel, mixing to uniformity. The active salt should be mixed to a clear, colorless solution.
3. Measure the refractive indices of both phases. Adjust Phase B with either propylene glycol or water to match the refractive index of Phase A. The refractive indices should agree to the fourth decimal place for total clarity.
4. Slowly stream Phase B into Phase A with slow (300 rpm) multi-blade mixing. The addition rate should match the agitation, not allowing the water to pool on the emulsion surface. After the addition of the water phase is complete, increase the agitation rate to 1,200 rpm for a few minutes. This will build the viscosity of the mixture to a low viscosity, flowing gel.
5. Homogenize the mixture at a low rate. Mix until a firm (shearable) gel is obtained.

Enhanced Antiperspirant Stick

A smooth feeling, high payout stick incorporating a cost effective enhanced efficacy aluminum-zirconium active demonstrating optimal antiperspirant efficacy.

<u>Ingredients:</u>	<u>Wt%</u>
A. Reach AZP-908 SUF	20.0
B. Cyclomethicone (Pentamer)	50.5
C. Stearyl Alcohol	20.0
D. Promyristyl PM-3	5.0
E. PEG-8 Distearate	2.0
F. Talc, 325 mesh	1.0
G. Silica	1.5
H. Fragrance	q.s.

Procedure:

1. Add B to reaction vessel and heat to 65C.
2. Add D and E with moderate stirring.
3. Add C slowly, maintain 65C. Increase agitation and add A. Mix for 5 minutes.
4. Add F and mix 5 minutes.
5. Add G and mix 5 minutes.
6. Add H. Using slow to moderate stirring, cool to 55C and pour into stick casings.

Reduced VOC Antiperspirant Aerosol

This composition was formulated to meet the interim CARB (California Air Resources Board) regulations beginning 12/31/92. The use of a non-volatile ester provides a cleaner formula with reduced residue when compared to many marketed products.

<u>Ingredient:</u>	<u>Wt%</u>
A. Reach 103	12.5
B. Bentone Gel VS-5/PC	12.5
C. Diisopropyl Adipate	15.0
D. Perfume	q.s.
E. Isobutane	60.0

Procedure:

1. Combine B and C using an Eppenbach homomixer at 5000 rpm for 5 minutes.
2. Add A. Mix 10 minutes.
3. Add D and mix 5 minutes.
4. Place mixture in a suitable container and charge with E, as specified.

* Macrospherical 95 is a recommended alternative active.

SOURCE: Reheis, Inc.: Suggested Formulations

Enhanced Antiperspirant Suspension Roll-On

A dry roll-on that incorporates an enhanced efficacy aluminum-zirconium active that demonstrates optimal antiperspirant efficacy.

<u>Ingredients:</u>	Wt%
A. Reach AZZ-902	20.0
B. Bentone 38	2.7
C. SD Alcohol 40	1.8
D. Cyclomethicone (tetramer)	75.5
E. Fragrance	q.s.

Procedure:

1. Disperse B into D using Eppenbach Homomixer. Mix 20 minutes; maintain temperature 25-35C.
2. Add pre-mix of C and E; mix 5 minutes.
3. Add A and mix with moderate shear until uniform.
4. Pour into suitable containers.

Enhanced Efficacy Antiperspirant Suspension Roll-On

This formula employs an enhanced efficacy aluminum zirconium tetrachlorohydrate glycine in a superultrafine particle size distribution, which is the most popular form of the active. Hydrogenated polyisobutene is used to maintain viscosity behavior over time and to reduce whitening residue upon application.

<u>Ingredients:</u>	Wt%
A. Reach AZP 908 SUF	20.00
B. Bentone Gel VS-5/PC	13.50
C. Cyclomethicone (Tetramer)	35.25
D. Panalane L-14E (hydrogenated polyisobutene)	30.00
E. Silica	0.50
F. Fragrance	0.75

Procedure:

1. Mix B and C with overhead mixer for 10 minutes.
2. Add D and mix for 10 minutes.
3. Add A and mix for 15 minutes.
4. Add E and F. Mix for 10 minutes.
5. Homogenize for approximately 4 minutes and pour into suitable containers.

SOURCE: Reheis, Inc.: Suggested Formulations

Non Whitening Antiperspirant Cream

Ingredients:	Wt%
A Brij 721S, Steareth-21	3.2
Brij 72, Steareth-2	1.8
Atlas 1500, Glycerol monostearate	2.0
Cetyl alcohol, N.F.	5.0
Arlamol ISML, Isosorbide Laurate	2.5
Florasun 90, Hybrid Sunflower Seed Oil	0.5
Dow Corning 344 fluid, Cyclomethicone	4.0
B Water	23.8
C Rezal 36G, Aluminum zirconium tetrachlorohydroxylglycine (35% solution)	57.1
D Preservative, Dowicil 200	0.1

Preparation:

Heat (A) to 70C and (B) to 72C. Heat (C) to 60C. Add (B) to (A) with good agitation. When (AB) is uniform slowly add (C). Mix well. When temperature drops to 35C, add (D) and any water that was lost due to evaporation.
Formula CP 1178

Water-in-Oil Antiperspirant Cream

Ingredients:	Wt%
A Arlamol HD isohexadecane	14.7
Caprylic capric triglycerides	7.35
Arlamol E PPG 15 stearyl ether	7.35
Hydrogenated castor oil	2.0
Arlacel P135 PEG 30 dipolyhydroxystearate	4.0
B 50% aluminum chlorohydrate solution	40.0
Water	24.3
C Preservative	q.s.

Preparation:

Heat (A) to 70C and (B) to 72C. Add (B) to (A), mix well, homogenize for a few minutes. Continue regular stirring to room temperature. Add preservative as per manufacturer's instructions. Replace water lost by evaporation.
Formula CP 1203

Roll-on Antiperspirant Lotion

<u>Ingredients:</u>	<u>Wt%</u>
A. Arlamol E pop 15 stearyl ether	4.00
Brij 721 poe 21 stearyl ether	0.76
Brij 72 poe 2 stearyl ether	3.24
B. Water, deionized	34.86
C. Preservative	q.s.
D. Aluminum Zirconium Tetrachlorohydrate GLY (35% solution)	57.14

Preparation:

Heat (A) to 70C and (B) to 72C. Add (B) to (A) with moderate agitation. Add (C) between 50-60C. Add (D) at 45C. Stir to 35C and replace water lost by evaporation.

Formulation Notes:

The active ingredient is 20% of the formula.

Stability:

The formula is stable for at least four weeks at 5C, 40C, 50C, and four freeze-thaw cycles.

Viscosity:

The viscosity of the formula after one week at 25C was 1,760 cps. After eleven weeks it was 3,328 cps.

Formula AE-13

Antiperspirant Roll-on Lotion with Isosorbide Monolaurate

<u>Ingredients:</u>	<u>Wt%</u>
A. Arlamol E pop 15 stearyl ether	3.0
Arlamol ISML isosorbide monolaurate	2.0
Brij 721 poe 21 stearyl ether	1.4
Brij 72 poe 2 stearyl ether	2.6
B. Water, deionized	51.0
C. Aluminum Zirconium Tetrachlorohydrate GLY (50% aqueous solution)	40.0
D. Preservative	q.s.

Preparation:

Heat (A) to 70C and (B) to 72C. Add (B) to (A) using a propeller stirrer. Add (C) to about 50C and (D) at 45C. At 35C replace water lost by evaporation and package.

Stability:

This formula is stable for at least four weeks at 5C, 25C, 40C and for four freeze-thaw cycles.

Viscosity:

The viscosity of the formula after one week at 25C was 2,960 cps. After four weeks it was 2,800 cps.

Formula AE-14

SOURCE: ICI Surfactants: Suggested Formulations

Roll-On Antiperspirants

Arlamol ISML, isosorbide monolaurate is also functional as an emollient in roll-on formulas due to its pleasant feel on the skin and compatibility with the active ingredients. The following formula illustrates its use with aluminum chlorohydrate.

ACH Formula

<u>Ingredients:</u>	<u>Wt%</u>
A. Arlamol ISML, isosorbide monolaurate	3.0
Arlamol E, POP (15) stearyl ether	3.0
Brij 721, POE (21) stearyl ether	1.5
Brij 72, POE (2) stearyl ether	2.5
B. Water	49.0
C. Aluminum chlorohydrate (50% solution)	40.0
D. Preservative	1.0

Suggested Preparation:

Heat A to 70C and B to 72C. Add B to A using a propeller. Add C at about 50C and D at about 45C. At 35C add water to compensate for loss due to evaporation.

Stability:

The above formula is stable for at least four weeks at 40C and 50C and for at least four freeze-thaw cycles. It has a viscosity of 2240 cps. at 25C.

Al Zr Tetrachlorohydrate-Gly Formula

<u>Ingredients:</u>	<u>Wt%</u>
A. Arlamol ISML, isosorbide monolaurate	4.0
Arlamol E, POP (15) stearyl ether	3.0
Brij 721, POE (21) stearyl ether	1.5
Brij 72, POE (2) stearyl ether	2.5
B. Water	48.0
C. Al Zr Tetrachlorohydrate-gly (50% aqueous solution)	40.0
D. Preservative	1.0

Suggested Preparation:

Heat A to 70C and B to 72C. Add B to A using a propeller. Add C at about 50C and D at about 45C. At 35C add water to compensate for loss due to evaporation.

Stability:

This formula is stable for at least four weeks at 5C, 25C, 40C, and for four freeze-thaw cycles.

Stick Antiperspirants

Arlamol ISML, isosorbide monolaurate is an excellent choice for an emollient in antiperspirant systems. In stick formulas it provides a smooth, dry feel and shows dramatic improvement in anti-whitening and anti-flaking characteristics proven by panel studies. In the formula below containing aluminum chlorohydrate, the efficacy improved with the presence of Arlamol ISML vs. the control without it.

<u>Ingredients:</u>	<u>Wt%</u>
Cyclomethicone	45.0
Arlamol ISML, isosorbide monolaurate	10.0
Stearyl alcohol	15.0
Aluminum chlorohydrate powder	25.0
Hydrogenated castor oil	5.0

Suggested Preparation for Antiperspirant Sticks:

Heat Arlamol ISML, isosorbide monolaurate, stearyl alcohol, and hydrogenated castor oil to 70C or until completely melted. Slowly add antiperspirant active with stirring while maintaining 70C. When antiperspirant active is completely dispersed, remove from heat and continue stirring until temperature drops to 60C. At this point add the cyclomethicone (at 60C) to the mixture, stir well, add fragrance and pour into sticks just before mixture sets up. Cool rapidly to avoid any setting of dispersed antiperspirant active.

Excellent application, anti-whitening, and anti-flaking properties resulted with the following formula (compared to a control without Arlamol ISML emollient) containing aluminum zirconium tetrachlorohydrate-gly as the active ingredient. Efficacy studies were not determined.

<u>Ingredients:</u>	<u>Wt%</u>
Cyclomethicone	48.5
Arlamol ISML, isosorbide monolaurate	10.0
Al Zr Tetrachlorohydrate-gly	20.0
Stearyl alcohol	16.0
Hydrogenated castor oil	5.0
Fragrance	0.5

Baby Products

Baby Cream**Concept Statement:**

A rich emollient cream containing ISL for moisturizing properties suitable for baby skin.

<u>Ingredients:</u>	Wt%
1. Rita EGMS (Glycol Stearate)	9.00
2. Stearic Acid	2.00
3. Mineral Oil	8.00
4. Ritawax ALA (Cetyl Acetate and Acetylated Lanolin Alcohol)	1.00
5. Ritalan (Lanolin Oil)	1.00
6. Rita CA (Cetyl Alcohol)	0.50
7. Propylparaben	0.10
8. Pationic ISL (Sodium Isostearoyl Lactylate)	2.00
9. Distilled/Deionized Water	73.60
10. Propylene Glycol	1.50
11. TEA 50%	0.90
12. Methylparaben	0.20
13. Germall II	0.20

Compounding Procedure:

Combine items 1-8 and heat to 70C. Combine items 9-13 and heat to 70C. Add oil to water and mix until cool.

Formulation Ref. No. 123-10

Baby Shampoo**Concept Statement:**

A super mild shampoo for gentle cleaning. Makes hair soft, shiny and easy to comb.

<u>Ingredients:</u>	Wt%
1. Distilled/Deionized Water	55.90
2. Sodium Lauryl Sulfate (28%)	30.00
3. Lauramide DEA	5.00
4. Ritapeg 150 DS (PEG-150 Distearate)	2.00
5. Ritabate-20 (Polysorbate-20)	2.00
6. Ritapan DL (Panthenol)	0.50
7. Methylparaben	0.10
8. Sucrose Cocoate	3.00
9. Sodium Chloride (25%)	1.00
10. Patlac LA (Lactic Acid)	0.50

Compounding Procedure:

Heat item 1 to 70C. Add items 2 to 8, in order, bringing the temperature back to 70C after each addition and stir until clear. Cool to 40C. Add item 9. Add item 10 to adjust pH between 6.5-7.0.

Baby Shampoo

A liquid shampoo which has a low order of eye irritation can be made by carefully selecting the detergents. In the following baby shampoo, the combination of anionic and amphoteric surfactants with G-4280 produces a formula which should be mild, effective and esthetically appealing.

<u>Ingredients:</u>	<u>Wt%</u>
A G-4280	20.0
Sodium trideceth sulfate	12.0
Lauroamphodiacetate	5.0
Cocamidopropyl hydroxysultaine	2.5
Sodium laureth-13 carboxylate	2.0
Water	53.5
Preservative	q.s.
B PEG-150 distearate	5.0
C Citric acid	q.s.

Preparation:

Mix (A) with gentle stirring and heat until homogeneous. Heat to around 60C and add (B) and continue stirring. When clear, cool and adjust pH to 6.8 with (C). Replace water lost by evaporation.
Formula HC-5

Baby Shampoo

Tween 20 Polysorbate 20 has been used as an effective anti-irritant for shampoos.

<u>Ingredients:</u>	<u>Wt%</u>
A Tween 20 polysorbate 20	6.0
Cocoamphodiacetate	6.0
Sodium lauryl sulfate	3.0
Sodium laureth sulfate	3.0
PEG-150 distearate	4.0
Propylene glycol	3.0
Water	75.0
B Citric acid	q.s.

Preparation:

Mix (A) with gentle stirring and heat until homogeneous. Adjust pH to 5.0 to 5.5 with (B).
Formula HC-6

Baby Shampoo**Concept Statement:**

A gentle shampoo containing Ritataine B and Pationic ISL for mildness and moisturization.

Ingredients:

	<u>Wt%</u>
1. Distilled/Deionized Water	47.10
2. Sodium Lauroamphoacetate	15.00
3. Sodium Trideceth Sulfate	10.00
4. Sodium Laureth Sulfate	5.00
5. Ritataine B (Cocamidopropyl Betaine)	4.00
6. Pationic ISL (Sodium Isostearoyl Lactylate)	3.00
7. Ritapeg 150 DS (PEG-150 Distearate)	0.50
8. PEG-80 Sorbitan Laurate	15.00
9. Glydant	0.20
10. Fragrance	0.20
11. Citric Acid	q.s.

Compounding Procedure:

Combine items 1-8 and heat to 70C. Mix until uniform and allow to cool. Add items 9 and 10. Adjust pH with item 11 to 6.0-6.5.

Formulation Ref. No. 123-22

Pearlized Baby Bath**Concept Statement:**

A pearlized body wash designed to be gentle for baby care, combining the mildness of Pationic ISL and Ritataine B.

Ingredients:

	<u>%Wt</u>
1. Distilled/Deionized Water	58.80
2. Pationic ISL (Sodium Isostearoyl Lactylate)	3.00
3. Sodium Trideceth Sulfate (30%)	25.00
4. Ritataine B (Cocamidopropyl Betaine)	5.00
5. Pearlizing Agent	5.00
6. Ritamide C (Cocamide DEA)	3.00
7. Glydant	0.20

Compounding Procedure:

Heat item 1 to 70C. Add items 2-7 while mixing. Mix until uniform and allow to cool.

Formulation Ref. No. 123-14A

Crystal Clear Baby Shampoo

Sandopan LS-24 and Sandobet SC are mild, multi functional surfactants. Sandobet SC, a mild amphoteric, is compatible with all ionic classes. Sandobet LS-24 is very mild and additionally acts as a hydrotrope to aid in formula stability. Sandopan LS-24 eliminates latent clouding and sludging which can be caused by adverse storage conditions. Velsan D8P-3 is an emollient ester which adds body, control and conditioning.

<u>Ingredients:</u>	<u>Wt%</u>
Deionized Water	60.8
Monamid 716	3.0
Standopol ES-50	11.7
Sandobet SC liquid	21.0
Sandopan LS-24 gel	0.5
Dow 193 Surfactant	1.0
Germaben II	1.0
Velsan D8P-3 liquid	1.0
Fragrance	qs

Procedure:

Charge first four ingredients to vessel. Heat with stirring to 62C. When melted and homogeneous, add water. Cool to room temperature with stirring. Adjust pH to 5.5 with citric acid. Add Germaben II and Velsan D8P3 separately with stirring. Mix until homogeneous.

Properties:

pH: 5.5-6.0
 Viscosity: 1100 cps
 % Solids: 18
 Ross Miles Foam Height: 195/188
 REF: CL29-41: CHS-25

Acid Balanced Shampoo

<u>Ingredients:</u>	<u>Wt%</u>
Ammonium Lauryl Ether Sulfate	13.30
Sandopan DTC acid	5.50
Cocoamidopropyl Betaine	15.60
Deionized Water	qs
Fragrance	qs
Potassium Hydroxide (10%)	qs

Procedure:

Heat Ammonium Lauryl Ether Sulfate and water to 50-55C and stir until solubilized. Pre-mix Sandopan DTC acid and the Cocoamidopropyl Betaine 50-55C then add to main mix. Cool to room temperature, adjust pH to 5.0 with Potassium Hydroxide. Add water to bring up to 100%.

W/O Baby Cream

Formula SK-14 is a water-in-oil zinc oxide cream which functions well as a protective product. The formula may be modified to include Vitamin A, Vitamin D, antihistamines, analgesics, cod liver oil or Peru Balsam to provide a diaper rash treatment. This cream is exceptionally stable and spreads easily on the skin. The combination of Sorbitol Solution, USP and Arlancel 186 Glyceryl Oleate in the ratio of 9:1 forms a unique gel base emulsification system. It provides a water-in-oil emulsion which leaves an unusually nongreasy, nontacky film on the skin surface and imparts a high degree of water-repellency.

W/O Baby Cream

<u>Ingredients:</u>	<u>Wt%</u>
A Arlancel 186	3.0
Sorbitol Solution, USP	27.0
B Mineral oil	10.0
Beeswax	1.0
Ceresin wax	1.0
C Zinc Oxide, USP	20.0
D Water	38.0
Preservative	q.s.

Preparation:

(A) Add the Sorbitol Solution slowly to the Arlancel 186 with continuous agitation at room temperature. Add (B) to (A) and heat to 70C. Add (C) and mix to uniform dispersion. Heat (D) to 72C. Add (D) to (A, B, C) and mix until room temperature is reached. Replace water lost by evaporation. Mill to improve smoothness and shelf life.

A typical mineral oil-based baby lotion is illustrated by Formula SK-14

Baby Lotion

<u>Ingredients:</u>	<u>Wt%</u>
A Mineral oil	20.0
Cetyl alcohol	5.0
Silicone Fluid, 1000 cs	5.0
Arlancel 60 Sorbitan Stearate	2.5
Tween 60 Polysorbate 60	7.5
B Water	60.0
Preservative	q.s.

Preparation:

Heat (A) to 70C. Heat (B) to 72C. Add (B) to (A). Stir until cool. Replace water lost by evaporation.

Bath Gel

A more complex surfactant system has been selected for this pearlescent bath gel to provide thorough, yet gentle cleansing. Glucamate DOE-120 is used to thicken the product to a gel like consistency. The incorporation of Polyox WSR N-3000 ensures good slip and lubricating properties and improves foam feel. Glucam E-10 functions as a humectant. The bath gel produces a rich, creamy foam which rinses easily while leaving a soft, emollient feel on the skin.

<u>Ingredients:</u>	<u>Wt%</u>
Texapon NSO (Sodium Laureth Sulfate)	9.00
Plantaren 2000 (Decyl Glucoside)	1.00
Texapon SB-3 (Disodium Laureth Sulfosuccinate)	1.00
Dehyton G (Disodium Cocoamphodiacetate)	2.50
Euperlan PK 3000-AM	1.00
Glucamate DOE-120 (PEG-120 Methyl Glucose Dioleate)	1.00
Deionized Water	82.70
Polyox WSR N-3000 (PEG-14M)	0.05
Glucam E-10 (Methyl Gluceth-10)	1.00
Sodium Chloride	0.75
Preservative and Fragrance	q.s.

Disperse Glucamate DOE-120 in part of the water with moderate agitation and gentle heating (45-50C). Remove heat. Add the surfactants. Adjust pH. Separately disperse Polyox WSR N-3000 in Glucam E-10. Add water. Add this premix to the surfactant system. Add preservative and fragrance. Adjust pH. Package.

Viscosity: 7,900 cps (20C, LVT, 3, 12 rpm)

pH: 6.5

Formulation E941-131-28

Shower Gel for Sensitive Gel

This pearlescent shower gel is based on a mild cleansing system thickened synergistically by the combination of Glucamate DOE-120 and lauryl glucoside. This shower gel has low washing active solids (WAS) of 6.0%. Ucare Polymer LK has been selected to provide protective conditioning. Glucam E-20 is used for emollience and humectance. This low WAS shower gel is intended for sensitive or dry skin. It cleanses gently and provides a soft, conditioned feel to the skin.

<u>Ingredients:</u>	<u>Wt%</u>
Standapol ES-2 (Sodium Laureth Sulfate)	4.00
Plantaren 1200 (Lauryl Glucose)	10.00
Euperlan PK 3000-AM	1.00
Glucamate DOE-120 (PEG-120 Methyl Glucoside Dioleate)	0.75
Deionized Water	83.15
Glucam E-20 (Methyl Gluceth-20)	1.00
Ucare Polymer LK (Polyquatarnium-10)	0.10
Preservative and Fragrance	q.s.

Disperse Ucare Polymer LK in water with moderate agitation and gentle heating to 50C. Add Glucamate DOE-120 and continue heating until the Glucamate DOE-120 has dissolved. Add the surfactants. Add Glucam E-20. Add preservative and fragrance. Adjust pH to 6.5. Package.

Formulation E942-021-15

Bath Gel with Vitamin E Moisturizing Beads

This sparkling blue bath gel creates luxurious foam, and features gelatin beads which contain Vitamin E and mineral oil to moisturize and nourish the skin.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Part A:	
1. Deionized Water	45.93
2. Acrylates/C10-30 Alkyl Acrylate Crosspolymer/ Carbopol ETD 2020	1.20
3. Propylene Glycol	6.00
4. Sodium Hydroxide (18%)	0.40
5. Sodium Laureth Sulfate/Standapol ES-3	30.00
6. Propylene Glycol, Diazolidinyl Urea, Methylparaben, Propylparaben/Germaben II	1.00
Part B:	
7. Deionized Water	5.00
8. Benzophenone-4/Uvinul MS-40	0.02
9. Disodium EDTA	0.10
Part C:	
10. Sodium Hydroxide (18%)	2.40
11. Cocoamidopropyl Betaine/Incronam 3	4.00
12. Fragrance/J9262	0.60
13. Polysorbate 20/Tween 20	0.80
14. White Beads w/Vitamin E/Lipopearls	1.00
15. FD&C Blue #1 (0.1%)	0.05
16. D&C Green #5 (0.1%)	1.50

Properties:

Color, Odor, Appearance: Viscous, clear blue gel with beads
 pH: 6.6-6.8
 Viscosity (cP): 5,500-6,500
 Yield Value (dynes/cm²): 300-400
 Clarity (%T): 50-60

Preparation Procedure:

1. Disperse Carbopol ETD 2020 in warm (40C) deionized water using rapid agitation. Reduce mixing speed after polymer is dispersed.
2. Add Propylene Glycol and Sodium Hydroxide. Allow any air to escape before pre-neutralizing. Mix until uniform. Add remaining ingredients in Part A in order.
3. Pre-combine Part B ingredients. Heat water to dissolve. Add Part B to Part A.
4. Add remaining ingredients in order to batch. Precombine fragrance and Tween 20 before adding to batch. Mix until uniform.

Cream Body Shampoo

This pearlescent white cream contains Jordapon CI-75 Flake and Avanel S-150 CGN for mildness and soft skin, while providing voluminous silky lather.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Deionized Water	58.9
	Hydroxypropyl Methylcellulose/Methocel 40-100	0.1
B	Na4EDTA	0.2
	Triethanolamine, 50%	0.1
C	Sodium C12-15 Pareth-15 Sulfonate/Avanel S-150 CGN	2.3
	Sodium Cocoyl Isethionate (and) Stearic Acid/Jordapon CI-75	27.0
	Ammonium Laureth Sulfate/Alfonic 1412-A	7.0
	Glycol Stearate/Mapeg EGMS	0.5
	Methyl Paraben	0.2
	Sodium Sulfate	2.5
D	Imidazolidinyl Urea/Germall 115	0.2
	Deionized Water	2.0
E	Fragrance	0.5
	Citric Acid, 50%	Q.S.

pH: 6.3-6.8

Viscosity: 20,000 cps (Brookfield #3 @ 1.5 rpm)

Appearance: Viscous pearlescent lotion

Procedure:

Disperse the hydroxypropyl methylcellulose in the part A water at ambient temperature. With good propellor mixing, add the part B ingredients and agitate for at least 20 minutes to ensure complete hydration. Add the part C ingredients and heat to 65C. When uniform, cool to 40C and add part D (premixed). Add the fragrance and adjust the pH. The product is initially a nonviscous liquid which develops into a soft paste after standing at room temperature.

Formulation F-108

Powdered Bath Foam

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Sodium Sesquicarbonate/Crex	78.0
B	Cocamide DEA/Mazamide JT-128	2.0
	Glycerin	2.0
C	Fragrance	Q.S
	Dyes	Q.S.
D	Sodium Cocoyl Isethionate/Jordapon CI Powder	15.0
E	Maltodextrin/Maltrin M-100	3.0

Procedure:

Add part A to a ribbon blender or P-K V-blender. Premix part B ingredients, spray onto part A with agitation. Follow with the part C ingredients. Add the Jordapon CI Powder and maltodextrin, blend until uniform.

Formulation E-104

SOURCE: PPG Industries, Inc.: Suggested Formulations

Creamy Bath Oil

This unusual bath oil is an emulsion which blooms in the bath, releasing emollients throughout the water. The viscosity is low, yet the system is stable because of the blend of effective S-Maz and T-Maz emulsifiers.

Part:	Ingredient/Trade Name:	Wt%
A	Demineralized Water	41.19
	Na4EDTA	0.20
	Nonoxynol-9/Maco1 NP-9.5	0.01
	Magnesium Aluminum Silicate/Veegum HV	0.60
	Xanthan Gum/Kelzan	0.10
	Propylene Glycol	6.00
	Methyl Paraben	0.20
B	Petrolatum/Perlatum 410 CG	35.00
	Mineral Oil/Drakeol 9	2.00
	Sorbitan Stearate/S-Maz 60	2.00
	Polysorbate 60/T-Maz 60	4.00
	Polysorbate 80/T-Maz 80	3.00
C	Demineralized Water	5.00
	Triethanolamine	0.30
	Citric Acid	0.20
	Imidazolidinyl Urea/Germall 115	0.20

Procedure:

Mix part B ingredients in the main vessel, heating to 75-80C. In another vessel, blend the part A ingredients with good agitation. Predissolve the methyl paraben in the propylene glycol to speed this step. Warm part A to 75-80C and mix well for 30 minutes to ensure hydration of the Veegum and xanthan gum. With high shear mixing (e.g. a rotor-stator type), add part A to part B to form the emulsion. Maintain good mixing while cooling the batch to below 50C. Blend the Part C ingredients and add to the batch, adjusting the final pH to 6.0-6.5

Formulation G-104

Floating Bath Oil

A teaspoon of this oil spreads a thin film of emollients over the bath water, providing the skin with a very effective moisturizing treatment.

Part:	Ingredient/Trade Name:	Wt%
A	PPG-30 Cetyl Ether/Maco1 CA-30 P	15.0
	PEG-8 Dioleate/Mapeg 400 DO	1.0
	Isopropyl Palmitate/Propal	39.0
	Fragrance	1.0
	Dyes (oil soluble)	Q.S.
B	Mineral Oil/Drakeol 9	44.0

Appearance: Clear, water-white nonviscous oil

Procedure:

Blend the part A ingredients at room temperature. When uniform and clear, add the mineral oil and mix until uniform.

Sodium Lactate (and) Sodium PCA (and) Glycine (and) Fructose (and) Urea (and) Niacinamide (and) Inositol (and) Sodium Benzoate (and) Lactic Acid (Lactil)	0.25
DATEM (Amilan GST 40)	2.00
PEG-7 Glyceryl Cocoate (Tegosoft GC)	1.00
Cocamidopropyl Betaine (Tego Betaine F 50)	5.00
Glycol Distearate (and) Steareth-4 (Tego Pearl N 100)	2.00
Preservatives	Q.S.
Sodium Chloride	Adjust to desired viscosity
Citric Acid (10%)	Adjust to pH 5.5-6.0 if needed

Procedure:

1. Dissolve Sodium Cocoyl Isethionate in warm water at 60C.
2. Add Sodium Lauryl Sulfate, Sodium Laureth Sulfate.
3. Cool to 40C.
4. Add remaining ingredients in order as listed, stirring between each addition.
5. Cool to 30-35C. Add Tego Pearl N 100 and preservatives.
6. Adjust pH and viscosity.

Creamy "2 in 1" Body Wash

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
Glycol Distearate (Tegin EGS)	2.50
Myristic Acid	4.00
Jojoba Oil	5.00
Sodium Laureth Sulfate (28% 2M. E.O.)	45.00
Water	10.00
Phase B:	
Water	19.00
PEG-7 Glyceryl Cocoate (Tegosoft GC)	2.00
Phase C:	
Propylene Glycol (and) PEG-55 Propylene Glycol Oleate (Antil 141L)	2.50
Fragrance, Preservative, etc.	Q.S.
Phase D:	
Cocamidopropyl Betaine (Tego Betaine F 50)	10.00

Procedure:

1. Heat Phase A to approximately 70C while mixing (above the melting point of Tegin EGS).
2. Heat the ingredients of Phase B to the same temperature as Phase A.
3. Stir Phase B into Phase A. Cool to 40C.
4. Add Phase C. Mix well. Avoid air entrapment.
5. Add Phase D with stirring. Avoid air entrapment.

Creme Body Wash with Emollients

This luxurious body wash is rich in foam and moisturizing, creating a smooth, elegant after feel to the skin. Its mildness is the result of surfactant selection and low salt level.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Part A:	
1. Deionized Water	49.59
2. Acrylates/C10-30 Alkyl Acrylate Crosspolymer/ Carbopol ETD 2020	0.80
3. Sodium Hydroxide (18%)	0.10
Part B:	
4. Deionized Water	10.00
5. Guar Hydroxypropyltrimonium Chloride/Hi-Care 1000	0.30
6. Disodium EDTA	0.05
Part C:	
7. Methyl Gluceth-20 Benzoate/Finsolv EMG-20	2.50
8. Tocopheryl Acetate/Vitamin E Acetate	0.20
9. Cetyl Alcohol	1.00
10. Dimethicone/Dow Corning 200 Fluid, 5000 cs	0.50
11. Sodium Laureth Sulfate (2 mole, 53%)/Standapol ES-250	15.00
12. Cocoamphoacetate (32%)/Miranol Ultra	8.50
13. Ammonium Cocoyl Isethionate (30%)/Jordapon ACI-30G	10.00
Part D:	
14. Phenoxyethanol, Methylparaben, Butylparaben, Ethylparaben, and Propylparaben/Phenonip	0.50
15. Fragrance/Bell Fragrance #J-7820, "Sporty"	0.50
16. D&C Violet #2 (1.0%)/Bell Fragrance #J-7820	0.06
17. Sodium Hydroxide (18%)	0.40

Properties:

Color, Odor, Appearance: Creamy, light lavender gel

Actives (%): 13.67

pH: 6.1-6.5

Viscosity (cP): 7,500-10,500

Yield Value (dynes/cm²): 200-400

Preparation Procedure:

- Part A: 1. Disperse Carbopol ETD 2020 in warm deionized water.
2. Reduce mixing speed, mix for 20 minutes. 3. Partially neutralize with NaOH (18%). 4. Mix 30 minutes or until uniform.
- Part B: 5. Disperse Hi-Care 1000 in a side vessel (NOTE: Polymer will not swell yet).
6. Add Disodium EDTA. When polymer swells, add Part B to Part A. (NOTE: Part B will become very thick if it is not added after swelling begins.) Mix until uniform.
- Part C: 7. Add 8% of Standapol and all of Jordapon to main batch. Mix slowly to avoid air entrapment.
8. In a side vessel, melt the following ingredients: Finsolv EMG, Vitamin E, Cetyl Alcohol, and Dimethicone at 75C.
9. Add 7% Standapol to melted oil phase, hold heat at 65C until uniform. Add Miranol Ultra to side oil phase, maintaining temperature.
10. Add side oil/surfactant phase to main batch. 11. Mix until uniform. Do not overmix. 12. Add the following ingredients in order with mixing: Phenonip, fragrance, and color.
13. Adjust pH with NaOH (18%) to 6.1-6.5.

Economy Shower Gel

Designed for mildness and value, this basic body cleanser delivers a thick, rich lather. The Carbopol polymer prevents the silicone oil from creaming.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Part A:	
1. Deionized Water	65.016
2. Acrylates/C10-30 Alkyl Acrylate Crosspolymer/ Carbopol ETD 2020	0.90
3. Sodium Hydroxide (18%)	0.12
Part B:	
4. Deionized Water	8.00
5. Guar Hydroxypropyltrimonium Chloride/Hi-Care 1000	0.10
6. Disodium EDTA	0.05
Part C:	
7. Sodium Laureth Sulfate/Standapol ES-250	18.00
8. Cocoamphoacetate (32%)/Miranol Ultra	5.00
9. Dimethicone/Dow Corning 200 Fluid, 5000 cs	0.70
10. Phenoxyethanol, Methylparaben, Butylparaben, Ethylparaben and Propylparaben/Phenonip	0.50
11. Fragrance/Bell Fragrance #J-7820, "Sporty"	0.50
12. FD&C Yellow #5 (1.0%)	0.055
13. FD&C Blue #1 (1.0%)	0.009
14. Sodium Hydroxide (18%)	1.05

Properties:

Color, Odor, Appearance: Green gel
 Actives (%): 11.14
 pH: 6.1-6.5
 Viscosity (cP): 5,000-8,000
 Yield Value (dynes/cm²): 125-225
 Stability: Passes 28 days at 45C

Preparation Procedure:**Part A:**

1. Disperse Carbopol ETD 2020 in warm deionized water.
2. Reduce mixing speed, mix for 20 minutes.
3. Partially neutralize with NaOH (18%).
4. Mix 30 minutes or until uniform.

Part B:

5. Disperse Hi-Care 1000 in a side vessel (NOTE: Polymer will not swell yet).
6. Add Disodium EDTA. When polymer swells, add Part B to Part A. (NOTE: Part B will become very thick if it is not added after swelling begins.)

Part C:

7. Reduce mixing speed, add the following ingredients to batch in order with mixing: Standapol ES 250, Miranol Ultra. Mix until smooth.
8. Add the following ingredients in order with mixing: Dimethicone, Phenonip, fragrance, and color. ES250, Miranol Ultra. Mix until smooth.
9. Adjust pH with NaOH (18%) to 6.1-6.5.

European Style Bath Gel

<u>Ingredients:</u>	<u>Wt%</u>
Water	54.9
Tetrasodium EDTA	0.1
Sodium Laureth Sulfate (28% 2M. E.O.)	25.0
Cocamidopropylamine Oxide (Aminoxid WS 35)	8.0
PEG-18 Glyceryl Oleate/Cocoate (Antil 171)	1.3
Jojoba Oil	0.2
PEG-20 Glyceryl Stearate (Tagat S2)	1.0
Citric Acid	to pH 6.0
Natural Extracts	0.5
Fragrance	Q.S.
Preservative	Q.S.
Color	Q.S.
Cocamidopropyl Betaine (Tego Betaine F)	9.0
Sodium Chloride (25% Solution)	Q.S.

Procedure:

1. Dissolve the Tetrasodium EDTA in the water.
2. Add ingredients in order, mixing between additions. Avoid air entrapment.
3. Slowly mix in the PEG-18 Glyceryl Oleate/Cocoate.
4. Add the Cocamidopropyl Betaine.
5. Adjust viscosity with the 25% solution of Sodium Chloride.

NOTE: For a pearlized formula substitute the following for part of the water:

Cocamidopropyl Betaine (and) Glycol Distearate (and)	
Cocamide MEA (and) Cocamide DEA (Tego Pearl B-48)	3.00%

Blooming Emollient Bath Oil

This is a quick blooming bath that will accept a high fragrance loading. The Dimethicone Copolyol and PEG-25 Glyceryl Trioleate contribute substantially to the emolliency and are major factors in blooming effect.

<u>Ingredients:</u>	<u>Wt%</u>
Dimethicone Copolyol (Abil B 8852)	10.00
PEG-25 Glyceryl Trioleate (Tagat T0)	13.00
Avocado Oil	20.00
Mineral Oil	40.00
Caprylic/Capric Triglycerides (Tegosoft CT)	10.00
Isopropyl Myristate (Tegosoft M)	7.00

Procedure:

Add the ingredients in order. Mix well between additions.

SOURCE: Goldschmidt Chemical Corp.: Suggested Formulations

Exfoliating Body Scrub

This mild gently foaming body scrub includes jojoba beads to exfoliate and cleanse, leaving the skin feeling smoother.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Part A:	
Deionized Water	54.88
Acrylates/C10-30 Alkyl Acrylate Crosspolymer/ Carbopol ETD 2020	1.10
Triethanolamine (99%)	0.10
Disodium EDTA/Versene NA	0.05
Part B:	
Propylene Glycol	1.50
Diazolidinyl Urea, Propylene Glycol, Methylparaben, Propylparaben/Germaben II	1.20
Part C:	
Disodium Laureth Sulfosuccinate/Mackanate EL	13.00
Disodium Dimethicone Copolyol Sulfosuccinate/ Mackanate DC-30	5.00
Polysorbate 20/Tween 20	1.50
Cocamidopropyl Betaine/Incronam 30	3.00
Sodium Lauryl Ether Sulfate 1 (3 mole, 30%)/ Standapol ES-3	4.00
Part D:	
Triethanolamine (99%)	1.45
Fragrance/99411 Fruit Blend	0.22
Hydrogenated Jojoba Oil/Gypsy Rose Florabeeds	3.00

Properties:

Appearance: Bright red gel
 pH: 6.0-6.5
 Viscosity (cP): 7,200-8,200
 Yield Value (dynes/cm²): 300-350
 Clarity (%T): 50-60

Preparation Procedure:

1. Disperse Carbopol ETD 2020 polymer in deionized water and allow to hydrate.
2. Partially neutralize the dispersion with TEA in Part A; mix until homogeneous.
3. Add disodium EDTA and mix until homogeneous.
4. Combine ingredients in Part B, and add to Part A; mix until homogeneous.
5. Add the surfactants in Part C individually to Part A/B with slow continuous mixing.
6. Add the TEA in Part D to complete the neutralization; mix until homogeneous.
7. Add the remaining ingredients individually with continuous, slow mixing.

Foaming Bath Oil

A mild and rich-foaming bath additive, ideal as a fragrance vehicle

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>	
A	Demineralized Water	58.7	
	Na4EDTA	0.2	
	Imidazolidinyl Urea/Germall 115	0.2	
	Ammonium Cocoyl Isethionate/Jordapon ACI-30G	13.3	
	Methyl Paraben	0.2	
	Ammonium Laureth Sulfate/Alfonic 1412-A	16.7	
	Cocamidopropyl Betaine/Mafo CAB	5.7	
	Cocamide DEA/Mazamide JT-128	2.0	
	B	PEG-7 Glyceryl Cocoate/Macol 159	3.0
		Fragrance	Q.S.
C	Citric Acid	Q.S.	
	Ammonium Chloride	Q.S.	

pH: 6.5-7.0

Appearance: Clear, straw-colored liquid

Procedure:

Add the part A ingredients in order to the main vessel, mixing until uniform. Premix the part B components and add to the main mix. When clear and uniform, adjust pH and viscosity with part C ingredients.

Formulation E-105

Foaming Bath Oil

An easily-fragranced soluble bath oil, which also provides foaming.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Demineralized Water	65.4
	Na4EDTA	0.2
	Imidazolidinyl Urea/Germall 115	0.2
	Ammonium Cocoyl Isethionate/Jordapon ACI-30 G	12.0
	Methyl Paraben	0.2
	Cocamidopropyl Amine Oxide/Mazox CAPA	2.0
	B	Polysorbate 20/T-Max 20
Fragrance		Q.S.
C	Citric Acid	Q.S.
	Ammonium Chloride	Q.S.

pH: 6.5-7.0

Appearance: Clear, straw-colored liquid

Procedure:

Add the part A ingredients in order to the main vessel, mixing until uniform. Premix the part B components and add to the main mix. When clear and uniform, adjust pH and viscosity with Part C ingredients.

Low Cost Body Wash

A rich, high foaming, oil-free body wash which cleanses while leaving the skin with a soft smooth feel.

<u>Sequence:</u>	<u>Raw Material/INCI Name:</u>	<u>Wt%</u>
1	Deionized Water	68.45
1	Uniphen P-23	0.30
2	Keltrol/Xanthan Gum	0.25
3	Liponic EG-1/Glycereth-26	0.75
4	Lipo Stearic Acid	2.00
4	Lipopeg 4-S/PEG-8 Stearate	1.50
4	Lipocol L-4/Laureth-4	1.00
4	Liponate NPGC-2	1.00
4	Lipopeg 6000 DS/PEG-150 Distearate	0.50
5	Plantaren PS-100	20.00
5	Standamid LD/Lauramide DEA	3.00
6	Deionized Water	1.00
6	Unicide U-13/Imidazolidinyl Urea	0.25

Procedure:

1. Heat Sequence #1 to 78C on overhead mixer at medium/high speed.
2. Slowly add Sequence #2 to Sequence #1 with medium/high speed mixing until completely hydrated. Hold temperature at 78C.
3. Add Sequence #3 at medium/high speed.
4. Heat premixed Sequence #4 to 80C until clear and add to main batch at medium/high speed. Cool to 65C.
5. At 65C, add Sequence #5 ingredients in order of addition while mixing at medium/low speed. Cool to 35C.
6. At 35C, add premixed Sequence #6 at medium/low speed.

Specifications:

pH: 6.7+-0.2

Viscosity: LVT #4 @ 12 rpm = 23,750 +-10%

Mild Bubble Bath

<u>Ingredients:</u>	<u>Wt%</u>
Bio-Terge AS-40	20.0
Alpha-Step MC-48	5.0
Ninol LMP	3.0
Tetrasodium EDTA	0.2
Citric acid	Q.S.
Sodium Chloride	Q.S.
D.I. water	Q.S. to 100.0

Mixing Procedure:

Heat water to 50-60C. Add first two components and EDTA, mixing well after each addition. Add LMP, mixing until clear. Cool to 25C. Adjust pH to 6.0-7.0 with Citric Acid. Add fragrance, dye and preservative as desired. Adjust to desired viscosity with Sodium Chloride.

Typical Properties:

Appearance: Clear, liquid
 Viscosity: 200 cps @ 1.5% sodium chloride
 1100 cps @ 2.0% sodium chloride

Comment:

Stable for 3 weeks at 42C, 2 months at 25C, and through 3 freeze/thaw cycles.

Milk Enriched Body Cleanser

This viscous high foaming formulation utilizes the foam stabilization, mild cleansing and conditioning properties of Monalac MO.

<u>Ingredient:</u>	<u>Wt%</u>
Water	22.0
Sodium Laureth (2) Sulfate (28%)	40.0
Sodium Lauryl Sulfate (30%)	25.0
Monalac MO	10.0
Monalac MPL	2.0
Sodium Chloride	1.0

Adjust the pH to 5.5.

Features of Monalac MO:

Lather and foam enhancement
 Extra conditioning for skin and hair
 Excellent viscosity building properties
 Contributes gentle cleansing
 Low irritation potential
 Cationic at acidic pH

Gel Conditioning Body Cleanser

This high foaming conditioning formulation provides gentle and thorough cleansing, while imparting a soft, smooth and clean after-feel.

<u>Ingredient:</u>	<u>Wt%</u>
Water	55.0
Sodium Chloride	1.0
Sodium Laureth (2) Sulfate (25%)	35.0
Monalac MAB	5.0
Monalac MPL	2.0
Monamid CMA	2.0

Adjust the pH to 6.0

Appearance: Clear viscous liquid

Viscosity at 25C: 51000 cP

Solids (%): 14

Features of Monalac MAB:

Effective conditioning to skin and hair
 Provides mild cleansing
 High foaming primary surfactant
 Excellent viscosity building properties
 Anti-irritant for anionics and cationics
 Compatible with all surfactant types

Moisturizing Shower Lotion

This shower lotion is based on a mild cleansing system thickened by Glucamate DOE-120. Cremerol HMG and Glucam E-20 are incorporated for moisturization and humectance. Promulgen D provides creaminess. Ucare Polymer JR-30M is added for long-lasting conditioned skin feel.

<u>Ingredients:</u>	<u>Wt%</u>
Texapon NSO (Sodium Laureth Sulfate)	20.00
Dehyton K (Cocamidopropyl Betaine)	15.00
Ucare Polymer JR-30M (Polyquaternium-10)	0.10
Deionized Water	60.05
Promulgen D (Cetearyl Alcohol and Cetareth-20)	1.00
Glucam E-20 (Methyl Gluceth-20)	1.00
Glucamate DOE-120 (PEG-120 Methyl Glucose Dioleate)	1.50
Cremerol HMG (Hydroxylated Milk Glycerides)	1.00
Timiron MP-1001 Supersheen (Mica and Titanium Dioxide)	0.35
Triethanolamine	q.s.
Preservative and Fragrance	q.s.

Procedure:

Heat half of the water to 75C and add Promulgen D. Disperse the Ucare Polymer JR-30M in the other half while heating to 45-50C. Add Glucamate DOE-120 and Cremerol HMG to the Ucare solution. Once a uniform solution has formed, add to the Promulgen solution with gentle agitation. Add remaining ingredients, mixing until uniform. Cool to 35C while stirring. Adjust pH to 6.5. Package.

Performance Data:

Viscosity: 23,500 cps (20C, LVT, 4, 12 rpm)
pH: 6.5

Triethanolamine	q.s.
Fragrance and Preservative	q.s.

Procedure:

Heat half of the water to 75C and add Promulgen D. Disperse the Ucare Polymer JR-30M in the other half while heating to 45-50C. Add Glucamate DOE-120 and Cremerol HMG to the Ucare solution. Once a uniform solution has formed, add to the Promulgen solution with gentle agitation. Add remaining ingredients, mixing until uniform. Cool to 35C while stirring. Adjust pH to 6.5.

Note: Texapon NSO is 28% active, max. 0.6% salt; Dehyton K is 30% active, 4.5 to 5.5% salt.

Shower Gel with Low Washing Active Solids

Alkyl polyglucose functions as the primary surfactant in this shower gel which has low washing active solids (WAS). Ucare Polymer LK has been selected to provide protective conditioning. Glucam E-20 is used for emollience and humectance. This low WAS shower gel is intended for sensitive or dry skin. It cleanses gently and provides a soft, conditioned feel to skin.

Viscosity: 5,300 cps pH: 6.5

Ingredients:

	Wt%
Texapon NSO (Sodium Laureth Sulfate)	4.00
Plantaren 1200 (Lauryl Polyglucose)	10.00
Euperlan PK 3000-AM (Glycol Distearate (and) Laureth-4 (and) Cocamidopropyl Betaine)	1.00
Glucamate DOE-120 (PEG-120 Methyl Glucose Dioleate)	0.75
Deionized Water	83.15
Glucam E-20 (Methyl Gluceth-20)	1.00
Ucare Polymer LK (Polyquaternium-10)	0.10
Preservative and Fragrance	q.s.

Procedure:

Disperse Ucare Polymer LK in the water with gentle heating (45-50C). Add Glucam DOE-120. Stop heating. Add surfactants. Add Glucam E-20. Add preservative and fragrance. Adjust pH.

Shower Gel

This mild shower gel has good viscosity and foaming properties and leaves a velvety feel on the skin. Velsan P8-3 liquid is a water soluble emollient ester with a silky dry emolliency that is non-greasy. Sandopan DTC acid liquid is a multi-functional surfactant that can increase cationic deposition if a cationic conditioner is used. It also acts as a hydrotrope and performs well in hard water. Sandopan DTC acid liquid and Sandobet SC liquid are both very mild surfactants.

<u>Ingredients:</u>	<u>Wt%</u>
Standapol ES-3	46.40
Sandobet SC liquid	10.00
Sandopan DTC acid liquid	5.60
Lauramide DEA	3.30
Velsan P8-3 liquid	2.00
Glucamate DOE 120	1.70
Germaben II	1.00
Versene NA	0.10
Deionized Water	qs

Procedure:

Hydrate Glucamate DOE 120 and Versene NA in all of the Deionized water. In a separate vessel, add remaining ingredients in order. Combine the two phases and adjust pH to 6.0.

Properties:

pH: 6.0

Appearance: Clear, slightly yellow, viscous gel

Viscosity: 8,500 cps (Brookfield LVT viscometer, Spindle #3, 6 rpm)

Ref: CL30-3: CHS-52

Water White Shower Gel

Adds a velvety feel to the skin. This crystal clear shower gel has good viscosity and foaming characteristics.

<u>Ingredients:</u>	<u>Wt%</u>
Standapol ES-3	41.25
Sandopan DTC acid	10.00
Lauramide DEA	3.30
Velsan P8-3 liquid	2.00
Glucamate DOE-120	1.70
Germaben II	1.00
Versene NA	0.10
Fragrance	qs
Deionized Water	40.70 qs

Procedure:

Hydrate Glucamate DOE-120 and Versene NA in all of the Deionized Water. In a separate vessel, add the remaining ingredients in order mixing well after each addition. Combine the two phases and mix well. Adjust pH=6.0.

Properties:

pH: 6.0

Viscosity: 8500 cps

% Solids: 29

REF: CL30-3: CHS-51

2 in 1 Creamy Body Wash

<u>Ingredients:</u>	<u>Wt%</u>
A) Arlatone DUO	20.0
Water	69.5
Xanthan Gum (1)	0.1
B) Water	5.0
Triethanolamine	0.6
C) Arlatone MAP Concentrate (2)	2.5
D) Dimethicone (3)	2.0
E) Quaternium-15 (4)	q.s.

Preparation:

*Heat water to 80-85C, disperse xanthan gum and the Arlatone DUO with moderate agitation while maintaining temperature above 80C.

*Heat and stir (B) to 80C.

*Add (C) to (B) slowly with good agitation maintaining 80C until clear.

*Add (B/C) at 50C to (A) at 50C with moderate stirring.

*Add (D) and (E) to (A/B/C) mixture below 40C with moderate stirring.

*Stir to room temperature and add any water lost due to evaporation.

Features:

*Feels good during washing

*Moisturizing after feel

*Excellent cleansing

Section IV

Beauty Aids

AHA-Clarifying Face Mask**Formula Profile:**

Veegum F is used in this face mask. This formulation is for all skin types and takes advantage of the absorbing and cleansing properties of purified Bentonite. This formula contains humectants that will improve the residual skin feel. The surfactant aids in the rinsability of the dried mask.

Ingredients:

	<u>Wt%</u>
A: Water	44.75
Veegum F (Magnesium Aluminum Silicate)	7.0
B: Glycerin	5.0
Butylene Glycol	3.0
Vanclay (Kaolin)	20.0
Talc (Cosmetic Grade)	5.0
Vanseal NALS-30 (Sodium Lauroyl Sarcosinate)	5.0
C: Preservative	qs
D: Glycolic Acid	7.0
E: Fragrance	qs
F: Triethanolamine	3.25
Citric Acid	Adjust pH to 3.7+-0.2
	qs

Procedure:

- Step 1: Sift Veegum F into an established vortex in water. Veegum F will need approximately 60 minutes for hydration using a homogenizer or up to 3 hours using a prop mixer. Additional energy, such as an increase in mixing intensity or water temperature, will reduce hydration time. The addition of any other ingredients during the hydration process will interfere with the hydration of Veegum F and will reduce or even eliminate the desired properties generated by the Magnesium Aluminum Silicate.
- Step 2: Add remaining water phase ingredients listed in Part B.
- Step 3: Add Part C-Preservative.
- Step 4: Add Part D-AHA-Glycolic Acid.
- Step 5: Add Part E-Fragrance.
- Step 6: Adjust pH to 3.7 with Part F.

Product Specifications:

Viscosity: Brookfield LVT DVII Spindle #TF @ 0.3 RPM: 1,000,000+-
100,000 cps

pH: 3.5-3.9

This formula produces a stable product that passes 3 month stability testing at RT, 5C, 38C, 50C and 3 cycle F/T.

Aloe Vera Gel Moisturizer

This clear aloe vera gel, thickened with Carbopol ETD 2020, is an excellent gel for soothing sunburn and other skin irritations and may promote healing.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Part A:	
Deionized Water	88.20
Acrylates/C10-30 Alkyl Acrylate Crosspolymer/Carbopol ETD 2020	0.80
DMDM Hydantoin/Glydant	0.30
Sodium Hydroxide (18%)	0.60
Part B:	
Deionized Water	5.00
Dimethicone Copolyol Wax/Silwax WS	1.00
Disodium EDTA/Versene NA	0.20
Aloe Vera Gel (40:1)/Aloe Vera Gel DC 40	2.50
Sodium Hydroxide (18%)	1.00
D&C Green No. 8 (1.0%)	0.20
D&C Green No. 5 (0.1%)	0.20

Properties:

Appearance: Thick, brilliant green gel
 pH: 7.0-7.5
 Viscosity (cP): 45,000-60,000
 Clarity (%T): 75-82

Preparation Procedure:**Part A:**

1. Disperse Carbopol ETD 2020 polymer in deionized water (20-50C). Mix until polymer is dispersed.
2. Add Glydant.
3. Partially neutralize Carbopol and water mixture with NaOH. Mix until smooth.

Part B:

1. In a side vessel, heat water to 50-55C, add Silwax WS (pre-melt). Mix until well dispersed.
2. Dissolve disodium EDTA in mixture.
3. Add aloe (40:1) to mixture.
4. Add NaOH (18%) to mixture.
5. When mixture is uniform, add Part B to Part A. Mix until uniform.
6. Add desired color.
7. Adjust final pH to 6.5-7.0 with sodium hydroxide (18%) for optimum clarity.

Anhydrous Deep Penetrating Vitamin Gel**Formulating Design and Advantages:**

Light, smooth, and quick penetrating best describes this gel. Use of this gel will diminish the signs of aging by conditioning and treating the skin with anti-inflammatory agents. The activity comes from phytosterol and bioflavonides in Deodorized Orange Wax. This class of chemicals is also a strong anti-oxidant which will scavenge free radical thereby preventing potential premature aging.

Raw Materials:

	<u>Wt%</u>
Silicone Oil 556	56.0
Isopropyl Palmitate	5.0
Fitoderm-Vegetal Squalane	10.0
Hexanediol Behenyl Beeswax	14.0
Rice Bran Oil	2.0
Deodorized Orange Wax	10.0
Vitamin A Palmitate	0.5
Vitamin E	0.5
K80-D22	2.0

Procedure:

Melt and mix all components to 75C, cool to 60C and pour into container.

Adaptation of Formula and Its Influence on the Product:

Different oils may be used, the gel consistency can be regulated by changing the concentration of K80-D22 according to the desired result.

Liquapar	1.0

Procedure:

Heat and mix Phase B till pigments are evenly dispersed. Weigh Phase A and individually add to Phase B while mixing. Heat A&B till homogeneous, add Phase C, cool and pour at 60C.

Adaptation of Formula and its Influence on the Product:

By reducing the wax concentration this product can be poured into a compact tray. Large variations can be made in wax and oil concentrations that are incorporated in stick products and still produce a similar finished product.

Creamy Liquid Make-Up

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
Ceteareth-15 and Glyceryl Stearate (Tego Care 215)	2.20
Cetyl Alcohol (Tego Alkanol 16)	1.75
Stearoxy Dimethicone (Abil Wax 2434)	0.25
Octyl Stearate (Tegosoft OS)	3.00
Octyl Palmitate (Tegosoft OP)	3.00
Isoeicosane	5.00
Caprylic/Capric Triglyceride (Tegosoft CT)	5.00
Phase B:	
Water	60.60
Preservatives	Q.S.
Glycerin	1.00
Butylene Glycol	3.00
Phase C:	
Carbomer 941	0.20
Octyl Palmitate (Tegosoft OP)	0.80
Phase D:	
Titanium Dioxide	9.00
Mica	2.00
Talc	2.00
Iron Oxides	1.20
Phase E:	
Sodium Hydroxide (10%)	to pH 6.0
Fragrance	Q.S.

Procedure:

1. Heat the ingredients of Phase A to 80C. Mix well.
2. Heat the ingredients of Phase B to 80C. Mix well to dissolve preservatives.
3. Add B to A or A to B with mixing. Cool to 60-65C.
4. Continue mixing. Add Phase C.
5. Homogenize.
6. While homogenizing, add pigments.
7. After homogenization, cool to 40-45C with sweep mixing.
8. Adjust pH. Fragrance.

Dark Beige Makeup with Tego Care 450

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
Polyglyceryl-3 Methylglucose Distearate (Tego Care 450)	2.0
Almond Oil	2.0
Cyclomethicone	3.5
Cetyl Dimethicone (Abil Wax 9801)	1.0
Caprylic/Capric Triglycerides (Tegosoft CT)	4.0
Iron Oxides	1.5
Titanium Dioxide	6.0
Phase B:	
Glycerin	2.0
Water	76.6
Phase C:	
Carbomer 941	0.2
Isopropyl Palmitate (Tegosoft P)	0.8
Phase D:	
Sodium Hydroxide (10% solution)	0.4
Phase E:	
Preservative	Q.S.
Fragrance	Q.S.

Procedure:

1. Heat the ingredients of Phase A to 80C. Disperse Iron Oxides and Titanium Dioxide into Phase A with sufficient agitation.
2. Heat the ingredients of Phase B to 80C.
3. Add A to B with agitation.
4. Homogenize.
5. Disperse Carbomer into the oil/ester add to A/B. Homogenize.
6. Cool to 35-40C with stirring.
7. Add Phase D/E. Stir.
8. Mix until viscosity profile is obtained.

Facial Cleaner and Toner

<u>Ingredients:</u>	<u>Wt%</u>
Water	83.40
Tetrasodium EDTA	0.10
Aloe	1.00
Allantoin	0.30
PEG-6 Caprylic/Capric Glycerides (Tegosoft GMC 6)	1.50
Caprylamido/Capramidopropyl Betaine (Tego Betaine 810)	3.70
Lactil	2.00
Organic Extracts	2.00
Propylene Glycol	1.00
SDA Alcohol 40	5.00
Preservatives	Q.S.
Color	Q.S.
Fragrance	Q.S.

Procedure:

Mix ingredients in order, mixing until clear.

Deep Extra Body Conditioner**Formulating Design and Advantages:**

This formula utilizes the gelling properties of the Hexanediol Behenyl Beeswax in a silicone oil and the conditioning effects of Bee's Milk.

<u>Raw Materials:</u>	<u>Wt%</u>
Oil Phase A:	
Emulsifying Wax NF	3.0
Silicone Oil 245	2.5
Silicone Oil 556	2.0
Hexanediol Behenyl Beeswax	1.0
Lecithin	1.0
Water Phase B:	
Carbopol 940 (2% solution)	10.0
Sodium Lauryl Sulfate	0.5
Triethanolamine	0.1
Cocamide	0.1
Silk Powder	0.1
Marine Dew	0.1
Silk Soluble Liquid	0.1
Water (Distilled)	68.3
Phase C:	
Bee's Milk	10.0
Germaben II	1.0
Fragrance	0.2

Procedure:

Mix and heat water phase to 70-75C. Melt oil phase and add to water phase at 70-75C under agitation. Continue mixing while cooling. At 45C add Phase C and pour into container at 35C.

Adaptation of Formula and its Influence on the Product:

Changes in the actives and the conditioners are straight forward, simple replacements. Gafquat's would be a class of conditioners would fit this formula well.

SOURCE: Koster Keunen Inc.: Suggested Formulation

Emollient Liquid Make-Up**Formulating Design and Advantages:**

Conceals minor skin imperfections, yet moisturizes, giving skin a soft dewy finish. This product has tremendous endurance through very vigorous activities.

<u>Raw Materials:</u>	<u>Wt%</u>
Phase A:	
Xanthan Gum	0.33
Cellulose Gum	0.23
Water (Distilled)	50.55
Triethanolamine	0.70
PEG 1450	2.35
Methyl Paraben	0.28
Propylene Glycol	1.88
Polysorbate 60	0.47
Phase B:	
Titanium Dioxide	8.44
Brown Iron Oxide	2.35
Yellow BC Iron Oxides	0.94
Orange Wax	6.10
Cera Bellina	4.69
Phase C:	
Octyl Palmitate	6.57
Silicone 245	2.00
Isopropyl Palmitate	6.10
Hydrogenated Castor Oil	1.41
Isostearic Acid	1.50
Jojoba Oil	0.94
Propylene Glycol Stearate	1.89
Propyl Paraben	0.28

Procedure:

Disperse pigments in the Orange Wax and Cera Bellina in a beaker with a glass stirring rod, allow to solidify. Repeat so-as-to breakup visible agglomerations. Mix and heat to 75C Phase C until uniform, add to Phase B under agitation, maintaining the temperature till homogeneous. Add the mixed and melted Phase B and C to the mixed and melted Phase A. Continue mixing while cooling, pour into containers at approximately 50C.

Adaptation of Formula and its Influence on the Product:

Sunscreens, vegetable oils and branched oils can be substituted in minor amounts since products such as these are sensitive to small changes that will affect stability.

Ester Based Lipstick

Ingredients:	Wt%
Phase A:	
Glyceryl Stearate (Tegin M)	40.00
Caprylic/Capric Triglycerides (Tegosoft CT)	3.00
Cetearyl Octanoate (Tegosoft Liquid)	3.00
Mineral Oil	4.00
Castor Oil	19.50
Cetyl Dimethicone (Abil Wax 9814)	0.50
Petrolatum	6.00
Carnauba	5.00
Ozokerite	2.00
Microcrystalline Wax	2.00
Phase B:	
Pigments in Castor Oil)	15.00
Castor Oil)	
Phase C:	
Antioxidants	Q.S.
Fragrance	Q.S.
Flavor	Q.S.

Procedure:

1. Melt together the ingredients of Phase A (80-90C). Mix until uniform.
2. Add the pigment grinds and the remaining Castor Oil.
3. Add Phase C.
4. Mold.

Sheer Liquid Foundation

Ingredients:	Wt%
Phase A:	
Iron Oxides (micronized/silicone treated)	1.60
Titanium Dioxide (micronized/silicone treated)	6.00
Talc (silicone treated)	4.00
Cyclomethicone	9.00
Cetearyl Octanoate (Tegosoft Liquid)	2.00
Polydecene	3.00
Phase B:	
Dimethicone Copolyol (and) Cyclomethicone (Abil EM 97)	2.80
Cyclomethicone	9.00
Phenyl Trimethicone (Abil AV 20)	1.00
Fragrance	Q.S.
Phase C:	
Propylene Glycol	6.00
Water	54.35
Sodium Chloride	1.25
Preservatives	Q.S.

Procedure:

1. Mix Phase A. Mill.
2. Mix Phase B. Add to Phase A.
3. Mix Phase C, add slowly to A/B.
4. Homogenize.

Eye Contour Balm**Formulating Design and Advantages:**

This product is designed to reduce the signs of aging and fatigue around the eyes. The product's activity comes from Barley Beta Glucan which helps promote the healing of skin through the reduction of irritation. Deodorized Orange Wax moisturizes and protects the skin from the sun due to the strong antioxidant properties.

Raw Materials:

	<u>Wt%</u>
<u>Oil Phase:</u>	
Oyster Nut Oil	2.0
Siliconyl Beeswax	5.0
Rice Bran Oil	2.0
Safflower Oil	6.0
Deodorized Orange Wax	2.0
Isostearic Acid	1.5
Isopropyl Palmitate	1.0
Vitamin E	0.5
Isostearic Acid	2.5
Cetylstearyl Alcohol	1.5
Squalane	1.0
Isopropyl Palmitate	2.0
Hydroxy Polyester	1.2
Liquapar	0.4
<u>Water Phase:</u>	
Water (Deionized)	76.1
Allantoin	1.0
Magnesium Aluminum Silicate	1.2
Sodium Borate	0.8
Methyl Paraben	1.2
Xanthan Gum	1.2
Barley 1-3 Beta Glucan 70%	0.2

Procedure:

Weigh out ingredients for Water Phase. Heat to 80C while mixing vigorously (without adding air). Heat Oil Phase to 80C while mixing. Add Oil Phase to Water Phase under rapid agitation. Cool to room temperature.

Adaptation of Formula and its Influence on the Product:

Natural preservatives may be substituted for the synthetics in the formula. Different oils may be substituted.

Eye Cream

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
H2O	79.80
Carbopol 934	0.35
Phase B:	
Product SE-100 (Glyceryl Stearate & PEG-100 Stearate)	3.00
Petrolatum	3.50
Super Hartolan	2.40
Lanolin	2.00
Hest CSO (Cetearyl Octanoate)	1.70
Hest IS-2-O (Isoceteareth-2 Octanoate)	1.40
Hest L-2-O (Laureth-2 Octanoate)	1.40
Cocoa Butter	1.70
Phase C:	
H2O, Deionized	1.00
TEA 99%	0.75
Phase D:	
Germaben II E	1.00

Specifications:

pH: 7.50

Visc. #4/12: 40,000 cps

Procedure:

1. In a stainless steel kettle, disperse Carbopol 934 into H2O using a lightnin' type mixer.
2. When completely dispersed and free of lumps, heat to 75C while mixing.
3. In a separate kettle, combine Phase B and heat to 75C while mixing.
4. At 75C, add Phase B to Phase A. Mix until uniform.
5. Add premixed Phase C. Mix well.
6. Cool to below 40C and add Phase D.

SOURCE: Heterene, Inc.: Formulation HC94-147

Facial Scrub

No.	Phase:	Ingredient:	Wt%
1	A	Carbomer	15.00
2	A	Deionized water	57.75
3	A	Propylene glycol	2.50
4	A	Aloe vera gel	0.25
5	B	Cyclomethicone	5.00
6	B	Oils of Aloha Macadamia Nut Oil	2.50
7	B	Stearic Acid XXX	3.50
8	B	Emulsifier	1.00
9	B	Isopropyl myristate	10.00
10	C	Triethanolamine 99%	1.00
11	D	Polyethylene AC-9A	1.50
12	E	Preservative	QS

Manufacturing Procedure:

Phase A: Disperse Carbopol into water while heating to 75C.
Add Propylene glycol and Aloe vera gel.

Phase B: Heat oil phase to 75C. Add to water phase.

Phase C: Add Triethanolamine to oil/water mixture. Cool to 40C.

Phase D: Add Polyethylene AC-9A.

Phase E: Add preservative.

Carbomer is the suspending agent. This scrub is designed for people with oily skin and needs to have a drying effect. Uses two very dry emollients-cyclomethicone and isopropyl myristate. They leave a dry feeling skin. The Oils of Aloha Macadamia Nut Oil leaves the skin with a fresh, moist afterfeel. Kukui nut oil would also work very well in this formula.

SOURCE: Oils of Aloha: Suggested Formulation

Clear Facial Cleanser

Moderately priced formula. Very mild facial cleanser that conditions the skin while it cleans.

Viscosity: 600 to 1100 cps pH: 6.0

Ingredients:

	Wt%
Deionized Water	65.12
Sodium Cocoyl Isethionate (80% active)	2.50
Ammonium Lauryl Sulfate (33% active)	13.32
Cocamidopropyl Betaine (35% active)	14.29
Ucare Polymer LR-400 (Polyquaternium-10)	0.10
Sodium Xylenesulfonate (40% active)	1.25
Ucon 50-HB-660 (PPG-12-Buteth-16)	0.02
Glucam E-10 (Methyl Gluceth-10)	1.00
Glucquat 125 (Lauryl Methyl Gluceth-10 Hydroxypropyl Dimonium Chloride)	2.00
DMDM Hydantoin	0.40

Procedure:

Add the sodium xylenesulfonate to the water with stirring. Continue stirring while sprinkling in the Ucare Polymer LR-400. Once the polymer is completely dispersed, heat to 70C. When the polymer is hydrated, add the sodium cocoyl isethionate, cocamidopropyl betaine and ammonium lauryl sulfate, in that order, waiting for each to dissolve before adding the next. Once uniform, add the remaining ingredients one at a time in the order shown. Allow to cool to at least 40C, then add preservative.

Liposome Emulsion

This light, milky white emulsion contains liposomes that deliver Evening Primrose Oil, which are rich in gamma-linolenic acid and provide excellent moisturizing and softening benefits.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Part A:	
Acrylates/C10-30 Alkyl Acrylate Crosspolymer/ Pemulen TR-1	0.25
Carbomer/Carbopol Ultrez 10	0.20
Octyl Stearate/Cetiol 868	8.00
Mineral Oil	10.00
Part B:	
Deionized Water	75.55
Glycerin	2.00
Part C:	
Sodium Hydroxide (18%)	0.50
Part D:	
Phenoxyethanol (and) Methylparaben (and) Butylparaben (and) Ethylparaben (and) Propylparaben/Phenonip	0.50
Lecithin (and) Evening Primrose Oil/Brooksme EPO	3.00

Properties:

pH: 6.2-6.6

Viscosity (cP): 11,000-14,000

Appearance: Milky-white emulsion

Preparation Procedure:

1. Combine the ingredients of Part A in the container that will hold the final product. Mix the ingredients well to disperse the polymers.
2. Combine the ingredients of Part B and mix until homogeneous.
3. Add 3/4 of Part B to Part A slowly with strong mixing. Mix for about 15 minutes to swell the polymers.
4. When the emulsion is smooth and white, add part of the sodium hydroxide and bring the pH to about 7.0. Continue mixing until smooth and uniform.
5. Slowly add the remainder of Part B with moderate mixing.
6. Add remaining sodium hydroxide.
7. Add the preservative and mix until uniform. Add the liposomes using slow agitation to avoid rupturing liposomes. Mix until uniform.

SOURCE: B.F. Goodrich Co.: Formula P0050

Lipstick**Formulating Design and Advantages:**

This red lipstick has a creamy texture and is long wearing. The lipstick is very stable, although it has a high oil concentration. Cera Bellina allows for high coloration without large pigment load and imparts a satin like feel to the lips.

Raw Materials:

	Wt%
1. Cera Bellina (Pg-3 Beeswax)	16.70
2. Candelilla	3.10
3. Ozokerite 160/164	4.20
4. Carnauba #1 Yellow	1.20
5. Castor Oil	45.70
6. Paraffin Oil	16.30
7. Isopropyl Palmitate	6.20
8. Jojoba Oil	1.00
9. Vitamin E	0.50
10. D&C Red #7	4.00
11. Escalol 507	0.75
12. Titanium Dioxide	0.25
13. Propyl Paraben	0.10

Procedure:

Add 1, 10, and 13 into a vessel large enough that will allow the other components to be added after the Cera Bellina (Pg-3 Beeswax) and pigments have been melted (75C) and mixed together with the intention of breaking down as many of the visible agglomerations. After the visible agglomerations have been separated add 2, 3 and 4 to the dispersion while mixing. Increase the temperature slightly if needed to melt the carnauba. Then the remainder of the components can be added and mixed at a temperature of 70C. After the product is homogeneous, use a shear mixer at low speed for 45 to 60 minutes, maintaining a similar temperature.

Adaptation of Formula and its Influence on the Product:

Other oils natural or synthetic can easily be substituted to meet the formulator's needs, cost, availability, etc. without significantly changing the characteristics. Higher melting points can easily be achieved with only slight alterations in wax concentration. Biologically active compounds are easily incorporated into the formulas. Depending on the desired color and the blend of pigments used, there will be a need for small ingredient concentration changes in the formula due to the pigment's effect on the gelling properties of the mixture.

Myritol PC Propylene Glycol Dicaprylate/Dicaprate	6.0
Eutanol G Octyldodecanol	17.0
Candelilla Cera	5.5
Carnauba Cera	7.0
Bienenwachs 8100 Cera Alba	6.5
Generol 122 N Soya Sterol	2.5
Dehymuls PGPH Polyglyceryl-2 Dipolyhydroxystearate	4.0
Monomuls 90 L 12 Hydrogenated Palm Glycerides	3.0
Castor oil	18.0
Color pigments	q.s.
II Hydagen CMF Chitosan Glycolate	10.0
III Copherol F 1300 Tocopherol	2.0

Preparation in the Laboratory:

1. Melt the components listed under I. at 80-85C and stir until the pigments are completely incorporated. Homogenise once with a triple roll press and heat up again to 80-85C. 2. Add the ingredients of phase II one after the other and stir for 5 minutes at 80C. Pass mixture twice more through the triple roll press and melt again at approx. 80C. 3. For a pearl-shine lipstick add the pearliser and stir until homogeneous. 4. Cast with stirring into the moulds. Allow to cool down to approx. 30C and keep in the refrigerator overnight.

Formulation No.: 94/056/179

SOURCE: Henkel KGaA: Suggested Formulations

Lipstick

<u>Raw Materials:</u>	<u>Wt%</u>
A: Castor oil	30.0
D&C Red #7	3.0
Amihope LL	1.0
Mica	12.0
TiO ₂	4.0
B: Castor oil	22.4
Candelilla	5.7
Carnauba	1.8
Cerecin	4.0
Myritol 318	9.0
Mineral oil	2.0
Propylparaben	0.1
Eldew CL-301	5.0

Procedure:

Mix (A) pigments with Amihope LL in a high speed mixer for several minutes, then disperse the treated pigments in castor oil with triple roll mill.

Dissolve all (B) ingredients with heating and add to (A) in triple roll mill. Mold and cool down.

Formula LP-205

Lipstick

<u>Ingredients:</u>	<u>Wt%</u>
A: Castor oil	55.0
Candelilla wax	4.8
Carnauba wax	2.0
Ozokerite	4.0
Caprylic/capric triglyceride	15.0
Eldew CL-301	5.0
B: Mica	7.4
Yellow iron oxide	2.2
D&C Red #7	3.0
Amihope LL	1.6

Procedure:

Mix (A) ingredients at 80C. Mix (B) ingredients in a turbo mixer until a fine & homogeneous dispersion is obtained. Add (B) to (A) and mix until uniform, then pour into molds.

Features:

Eldew CL-301 improves spreadability, gloss and vividness of colors in lipsticks.

Formula LP-203

Liquid Crystal Make-Up

<u>Ingredients:</u>	<u>Wt%</u>
A) Water	58.70
Arlatone 2121, Sorbitan Stearate (and) Sucrose	
Cocoate	2.50
Glycerin	4.00
B) Ultrafine Titanium Dioxide, Titanium Dioxide	12.00
Yellow Iron Oxide, Iron Oxide	2.00
Red Iron Oxide, Iron Oxide	0.40
Black Iron Oxide, Iron Oxide	0.25
C) Xanthan Gum	0.15
D) Arlamol S7, Cyclomethicone (and) PPG-15 Stearyl Ether	20.00
E) Preservative, Quaternium-15	Q.S.

Preparation Method:

- 1) Heat and stir (A) to 80C.
- 2) Blend (B) well at room temperature.
- 3) Slowly add (B) at RT to (A) at 80C with good agitation.
- 4) When the temperature of (AB) drops to 75C, add (C) with moderate stirring.
- 5) When (ABC) is uniform, add (D) to (ABC) and homogenize for a few minutes (until temperature drops to 65C).
- 6) Return to propeller stirring and continue stirring until temperature drops to 45C. At this point add (E) and any water lost due to evaporation. Switch to sweep type agitation and stir to room temperature.

Formula CP1207

Water-in-Oil Make-up

<u>Ingredients:</u>	<u>Wt%</u>
A) Arlancel P135, PEG-30 Dipolyhydroxystearate	2.00
Arlamol S7, Cyclomethicone (and) PPG-15 Stearyl Ether	6.00
Arlamol HD, Isohexadecane	12.00
B) Atlas G-2330, Sorbeth-30	4.00
MgSO4-7H2O, Magnesium Sulfate	0.70
Water	60.65
C) Ultrafine Titanium Dioxide, Titanium Dioxide	12.00
Yellow Iron Oxide, Iron Oxide	2.00
Black Iron Oxide, Iron Oxide	0.25
Red Iron Oxide, Iron Oxide	0.40
D) Preservative, Quaternium-15	Q.S.

Preparation Method:

- 1) Heat and stir (A) to 75C.
- 2) Heat and stir (B) to 85C.
- 3) Blend (C) well at room temperature.
- 4) Slowly add (B) to (A) with good agitation.
- 5) After (A) & (B) are mixed begin adding (C) at room temperature to (AB) using propeller agitation.
- 6) Homogenize (ABC) for a few minutes and then switch back to sweep type agitation and stir to room temperature. Add (D) to (ABC) at any temperature below 50C.

Luxurious Makeup (W/O)

<u>Ingredients:</u>	<u>Wt%</u>
A: Veegum	1.2
Water	37.9
Magnesium Sulfate	0.4
B: Talc	5.5
Kaolin	1.5
Titanium Dioxide	5.0
Iron Oxides	3.0
C: Mineral Oil Light	15.0
Polysynlane	8.0
Ritachol	8.0
Lanapene	7.0
70% Sorbitol Solution	5.0
Witcamide 511	1.5
Preservatives	q.s.

Procedure:

Add the Veegum to the water slowly, agitating continuously until smooth (for detailed preparation recommendations, see Veegum smooth). Grind B and add to A, mixing until uniform. Add A and B to C and mix until smooth and uniform.

Packing:

This formula is a fluid lotion suitable for dispensing from a standard liquid makeup bottle.

Comments:

This formula constitutes an economical, cold process W/O emulsion stabilized by the use of Veegum. It is an elegant moisturizing makeup for dry skin. Veegum serves to not only stabilize the emulsion and help control viscosity, but also to insure uniform color throughout the product with no color streaking or settling. By formulating the pigments into the internal phase, where they are suspended by the Veegum, the stability of the emulsion itself insures that no pigment settling can occur.

The makeup spreads smoothly with a rich, non-greasy feel, leaving a uniform pigment film plus the effective emollients and moisturizers of the external phase. This formula would be a suitable base for a line of luxurious makeups for the mature woman with dry skin problems. The CTFA adopted name for Veegum is magnesium aluminum silicate.

Mascara

This mascara eyelash makeup cream applies beautifully from an automatic mascara unit containing a brush for application. The urethane polymer (Avalure UR 450 polymer) contributes bulk and adherence to the eyelashes allowing for a long-lasting plump look. It also eliminates the need for any of the other gums such as gum arabic in the product.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Part A:	
1. Deionized Water	59.50
2. Methylparaben NF	0.10
3. Hydroxypropyl Methyl Cellulose/Methocel 40-202	0.20
4. Triethanolamine (99%)	2.80
5. DL-Panthenol USP	0.50
6. Urethane Polymer/Avalure UR 450 Polymer	6.00
7. PVP-K30	2.00
Part B:	
8. Iron Oxides/C33-7734 Cosmetic Black	2.00
Part C:	
9. Stearic Acid/Emersol 132	5.50
10. Bayberry Wax	1.80
11. Glyceryl Stearate/Protachem GMS-450	1.70
12. Beeswax, White	4.50
13. Carnauba Wax, Prime #1 Yellow, Refined Flakes	2.70
14. WW Gum Rosin	1.80
15. Propylparaben NF	0.10
Part D:	
16. Simethicone/Mirasil SM	0.10
17. Wheat Germ Oil/Lipovol WGO	0.10
18. Phenonip	0.10
19. Germaben II	0.50

Preparation Procedure:**Part A:**

1. Add the deionized water to a suitable kettle and begin heating the water to 40C. Add the methylparaben and mix until dissolved.
2. Turn the heat off and add the Methocel. Mix until uniformly dispersed and until no lumps appear.
3. Add the triethanolamine and mix until the gum is hydrated and clear.
4. Add the Panthenol and mix until dissolved.
5. Add the Avalure UR 450 polymer and continue mixing until the mixture is uniform.
6. Add the PVP powder and mix until all of the powder is in solution and Part A is uniform. Maintain the temperature but raise it to 75C just before combining with Parts B & C.

Part B & C:

7. Mix all of the ingredients of Part C (oil phase) in a suitable kettle and melt to 75C.
8. When all of Part C has been melted, add the pigment of Part B to it and mix until the pigment is completely wetted/uniform.
9. Continue mixing and begin cooling and at 50C add Simethicone, Wheat Germ Oil and preservatives. Continue cooling to RT.

Moisturizing Milk Creme with Monasil PCA

This formulation provides a high degree of substantivity and conditioning. It helps to minimize or alleviate dry skin conditions while leaving a smooth non-greasy after-feel.

<u>Part:</u>	<u>Raw Material:</u>	<u>Wt%</u>
A	Monalac MPL	3.0
A	Monaquat SL-5	5.0
A	Water	57.7
A	Potassium Hydroxide (45%)	0.2
A	Monasil PCA	4.0
B	Monafax MAP 160	0.5
B	Monalac ML	20.0
B	Cetearyl Alcohol	5.1
B	Isopropyl Palmitate	2.0

Procedure:

Combine ingredients in both phases separately and heat to 75C. Add (B) to (A) and continue to homogenize. Stir-cool, with minimal aeration, to 40C, add fragrance, color and preservative. Adjust pH to 6.0 then fill.

Appearance: High moisturizing milky creme

Formulation F-717

Pump Dispensible Luxurious Body Moisturizer

<u>Part:</u>	<u>Raw Material:</u>	<u>Wt%</u>
A	Deionized Water	71.3
A	Monalac MPL	4.0
A	Monalac MO	5.0
A	Monaquat SL-5	3.0
A	Glycerin	4.0
B	Monalac ML	6.0
B	Cetearyl Alcohol	4.0
B	Oleyl Alcohol	2.0
C	Fragrance	0.2
C	Preservative	0.5

Procedure:

Heat both parts (A and B) separately to 70C. Add Part B to Part A and homogenize well at 70-75C. Stir cool with minimal aeration to 40-45C and add fragrance, preservative, etc. Adjust the pH to 5.0-6.0 then fill.

Odor and Appearance: Pleasantly scented, pump dispensible, milky creme/lotion

Formulation F-730

Oil-in-Water Hydro-Gel for Sensitive Skin (Page 1)

The following formulation illustrates the outstanding versatility of Arlatone 2121 compared with classic HLB-type emulsifiers. Two different formulations are mixed together to obtain an end formulation with outstanding lightness, smoothness and stability. This type of formulation, with a low oil phase and an extended amount of bound moisture, fits very well in this new concept of "gel-creams".

Oil-in-Water Hydro-Gel for Sensitive Skin

<u>Ingredients:</u>	<u>Wt%</u>
A Oil-in-water moisturising milk F41-5-16A	50.0
B Hydrating gel F41-5-16B	50.0

Manufacture:

Mix both formulations at room temperature.

Comments:

Viscosity: 16,692 mPa s (Brookfield LVT, spindle D, 6 rpm)

Energy input is related to final formulation viscosity.

Formulation F41-5-16

The separate components are:

Hydrating Gel

<u>Ingredients:</u>	<u>Wt%</u>
A Water	89.3
Alpantha	0.4
B Atlas G-2330	10.0
Preservative	q.s.
C Carbopol ETD 2001*	0.3
D NaOH (30% solution)	to pH 6.5-7

Manufacture:

1. Mix A at room temperature.

2. Add B whilst stirring.

3. Slowly add C and stir until a homogeneous solution is obtained

4. Neutralise product by adding D.

Comments:

Viscosity: 42,120 mPa s (Brookfield LVT, spindle C, 6 rpm)

Purifying Clay Face Mask**Formulating Design and Advantages:**

This product removes imbedded impurities which smooths skin, cleans pores, brings a glow and removes dulling cells for a finer texture so skin has a radiant glow.

<u>Raw Materials:</u>	<u>Wt%</u>
Phase A:	
102 Magnabrite HV	4.5
Xanthan Gum	0.2
Water (Distilled)	63.2
Glycerin	4.0
Aloe Vera Gel	0.5
Propylene Glycol	1.5
Tween 60	0.6
Methyl Paraben	0.5
Phase B:	
Emulsifying Wax NF	5.0
Cetylstearyl Alcohol	0.5
Kester Wax K-48	2.0
Propyl Paraben	0.5
Phase C:	
Cera Bellina (Pg-3 Beeswax)	4.5
Green Chromium Oxide	0.5
Titanium Dioxide	2.0
Phase D:	
Titanium Dioxide	4.0
670 Bentonite NFBC	6.0

Procedure:

Heat and mix till homogeneous, Phase A to 80C. Heat and mix Phase B to 80C. Heat and mix Phase C till pigments are dispersed. Mix Phase B with Phase C, add BC to A at 80C under agitation. When emulsified, sprinkle a mixed Phase D into the AB&C phase and continue mixing till thoroughly dispersed, allow to cool while mixing. Pour at 55-60C.

Adaptation of Formula and its Influence on the Product:

Changes in clay concentration will reduce or increase drying time on the skin, which also changes the respective purifying qualities toward the skin. Moisturizing agents and/or other actives can be added to enhance the properties of this product.

Viscosity: 63,000 cps (Brookfield RVT, Sp. C, 5 rpm) at 24C

SOURCE: Rona/EM Industries, Inc.: Formula 32-33/E

Replenishing Milk Cleanser

This cleanser is formulated specifically for facial skin. Its gentle cleansing and foaming properties are achieved without the use of soap-based ingredients and it is oil free. The Cremerol HMG improves the rub-in of the product and the texture of the foam and leaves a smooth afterfeel. Added emollience and moisturization is contributed by the cationic film-forming ability of Ucare Polymer JR-30M which leaves a lasting smoothness to the skin despite rinsing. Glucamate DOE-120 works synergistically with the other surfactants to build viscosity, improve foam and act as an anti-irritant.

Directions for Use: Wet hands and face. Work a small amount of cleanser in your hands to produce a lather. Massage lather into face, and then rinse.

Viscosity: 2,500 cps pH: 6.8-7.2

<u>Ingredients:</u>	<u>Wt%</u>
Deionized Water	35.0
Miracare 2MCAS (Cocoamphodiacetate (and) Sodium Lauryl Sulfate (and) Sodium Laureth Sulfate (and) Propylene Glycol)	35.0
Ucare Polymer JR-30M (1% aqueous) (Polyquaternium-10)	20.0
Cocamide DEA	2.0
Glucamate DOE-120 (PEG-120 Methyl Glucose Dioleate)	3.0
Glycol Distearate	1.5
Glucam E-10 (Methyl Gluceth-10)	3.0
Cremerol HMG (Hydroxylated Milk Glycerides)	0.5
Preservative	q.s.
Citric Acid	q.s.

Procedure:

In a separate premix container, prepare a 1% solution of Ucare Polymer JR-30M using the standard preparation method for this raw material. In the main container, add the Miracare 2MCAS and water and mix with moderate to slow agitation with a sweep blade. Heat to 70-80C. When uniform, slowly add the formula weight of the Ucare solution to the surfactant. When uniform, dissolve remaining ingredients in the order listed, waiting for each to dissolve before adding the next. Keep heating with adequate agitation for 10-15 minutes. Cool to room temperature and adjust pH with citric acid to 6.8-7.2.

SOURCE: Amerchol: Formulation T74-52-1

Skin Cleanser

This is an opaque lotion formula which is soap-free. Foaming and cleansing of oily skin is provided by the Avanel S-35 CG, while a blend of emollient ingredients soften dry areas.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Deionized Water	10.00
	Methyl Cellulose/Methocel A4M	0.10
B	Deionized Water	32.00
C	Sodium Octoxynol-2 Ethane Sulfonate/ Avanel S-35 CG	45.00
	Sodium Benzoate	0.20
	Tetrasodium EDTA	0.10
D	Petrolatum	5.00
	Octoxynol-3	1.30
	Mineral Oil	1.30
	Lanolin Alcohol	0.50
	Oleyl Alcohol	0.50
	Cocamide DEA/Mazamide 80	1.25
E	Imidazolidinyl Urea/Germall 115	0.25
	Deionized Water	0.25
F	Fragrance	Q.S.
	Citric Acid or TEA to pH 6.0-7.0	Q.S.

Procedure:

Heat the part A water to >80C. Disperse the methyl cellulose in the hot water with good agitation. Add the part B water as ice or as freezing cold water. Hold the batch temperature <5C for 30-40 minutes to get complete hydration of the methyl cellulose. Add the part C ingredients in order and heat the batch to 65-70C. Blend the part D ingredients in a side vessel, heating to 65-70C. Add part D to the batch with rapid agitation to form the emulsion. Maintain this agitation as the batch is cooled to 40-45C. Blend the part E ingredients in a side vessel and add to the batch. Add the fragrance and adjust the pH to 6.0-7.0.

SOURCE: PPG Industries, Inc.: Formulation K-105

Skin Cleanser

This is an opaque lotion formula which is soap-free. Foaming and cleansing of oily skin is provided by Avanel S-35 CG and Mafo CAB, while a blend of emollient ingredients soften dry areas.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Deionized Water	47.70
	Hydroxypropyl Methylcellulose/Methocel 40-100	0.10
	Tetrasodium EDTA	0.10
	Triethanolamine	0.05
B	Sodium Octoxynol-2 Ethane Sulfonate/ Avanel S-35 CG	32.00
	Cocamidopropyl Betaine/Mafo CAB	10.00
C	Petrolatum	5.00
	Lanolin Alcohol	0.50
	PEG-7 Glyceryl Cocoate/Mazon 159	1.30
	Cetearyl Alcohol (and) Ceteareth-20/Macol 124	2.00
	Cocamide DEA/Mazamide 80	1.25
D	Preservative	Q.S.
	Fragrance	Q.S.
	Citric Acid or TEA to pH 6.0-7.0	Q.S.

Procedure:

Disperse the hydroxypropyl methylcellulose in the part A water at ambient temperature by mixing for >10 minutes. Add the tetrasodium EDTA and the TEA to raise the pH above 8.5 and initiate hydration of the hydroxypropyl methylcellulose. Mix for at least 20 minutes while heating the batch to 60-65C. Add the part B ingredients in order, maintaining the batch at 60-65C. Blend the part C ingredients in a side vessel, heating to 60-65C. Add part C to the batch with rapid agitation to form the emulsion. Maintain this agitation as the batch is cooled to 40-45C. Add the preservative and fragrance, and adjust the pH to 6.0-7.0.

Skin Smoother Gel**Concept Statement:**

A skin smoothing gel containing Rita HA C-1-C and Tensine to help cover wrinkles and fine lines.

<u>Ingredients:</u>	<u>Wt%</u>
1. Distilled/Deionized Water	70.15
2. Acritamer 940 (Carbomer)	0.50
3. SD Alcohol 40	10.00
4. Methylparaben	0.10
5. Distilled/Deionized Water	10.00
6. Diazolidinyl Urea	0.15
7. Rita PEO-3 (PEG-23M)	0.50
8. Ritasil 190 (Dimethicone Copolyol)	1.00
9. Rita HA C-1-C (Sodium Hyaluronate)	2.00
10. NaOH 20%	1.10
11. Tensine (Wheat Protein)	5.00
12. FD & C Blue #1 @ 1%	q.s.
13. Fragrance	q.s.

Compounding Procedure:

Disperse item 2 in item 1. Neutralize with item 10. Dissolve item 4 in item 3 and add to gel. Dissolve items 6 and 7 in item 5, add items 8 and 9 and add to gel. Add items 11-13 and mix until uniform.

Formulation Ref. No. 123-16C

Liposome Serum**Concept Statement:**

A heavy load liposome serum containing Rovisome C, Tensine, and Raffermine for facial firming attributes.

<u>Ingredients:</u>	<u>Wt%</u>
1. Distilled/Deionized Water	63.75
2. Rovisome C (Magnesium Ascorbyl Phosphate & Lecithin)	20.00
3. Tensine (Wheat Protein)	5.00
4. Raffermine (Hydrolyzed Soy Flour)	3.00
5. Glycerine	5.00
6. Rita PEO-3 (PEG-23M)	3.00
7. DMDM Hydantoin	0.25

Compounding Procedure:

Disperse item 6 in item 1. Mix until uniform. Add items 2-5 and item 7 and mix.

Formulation Ref. No. 123-55B

Sparkling Skin Moisturizing Fluid with Microcapsules

This is a fluid containing attractive moisturizing beads in a light, greaseless aqueous base which exhibits sparkling clarity and smooth feel.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Part A:	
Glycerin	2.50
Hydrogenated Starch Hydrolysate (70%)/Hystar CG	2.50
Methylparaben	0.10
Part B:	
Deionized Water	83.35
Carbomer/Carbopol ETD 2050	0.25
Part C:	
Deionized Water	10.00
Sodium Hydroxymethyl Glycinate/Suttocide A	0.30
PVP (K30)	0.10
Disodium EDTA	0.05
Benzophenone-4	0.05
Part D:	
Mineral Oil in Gelatin Microcapsules/LipoPearls	0.80

Properties:

pH: 5.3-6.0

Viscosity (cP) at 25C: 1,500-3,000

Yield Value: 140-200

Clarity (%T): 90-94

Preparation Procedure:

1. Part A: Using agitation, dissolve methylparaben in a mixture of the glycerin and Hystar using shear.
2. Part B: In a separate vessel, disperse Carbopol ETD 2050 polymer into the vortex of rapidly agitating water. When dispersed, reduce agitation and mix until homogeneous.
3. Add Part A to Part B (Carbopol dispersion).
4. In a separate vessel, blend Part C ingredients. Mix until homogeneous.
5. Using paddle-type agitation, add Part C to Part B. Mix to produce a clear fluid.
6. Using paddle type agitation, add Part D to neutralized fluid until microcapsules are well dispersed.

Super Moisturizing Gel

This clear gel provides moisture to the skin. The addition of Hypan SA 100H in this formulation helps stabilize the viscosity of the product while adding to the clarity of the gel, eliminates tackiness and leaves the skin with an elegant feel. Lipo/DNS Completech MBAC-EA helps smooth out the skin and eliminate wrinkles in the area of the eye.

<u>Sequence:</u>	<u>Raw Material:</u>	<u>Wt%</u>
1	Deionized Water	21.75
1	Methylparaben	0.25
2	Liponic EG-1	5.00
2	Hypan SA-100H	0.10
3	Carbopol ETD 2001 (2% Aq. Disp'n.)	30.00
4	Deionized Water	1.00
4	Triethanolamine, 99%	0.60
5	Lubragel MS	25.00
6	Deionized Water	1.00
6	Unicide U-13	0.30
7	Hylacure, 1% Sol'n	5.00
8	Deionized Water	8.50
8	DNS Completech MBAC-EA	1.50

Procedure:

1. Premix Sequence #1 with overhead mixer while heating to 80C until Methylparaben is solubilized.
2. Premix Sequence #2 and add to Sequence #1 at 80C on overhead mixer using medium/high agitation.
3. Add Sequence #3 to batch holding temperature at 80C.
4. Premix Sequence #4 and add to batch at 80C mixing with overhead mixer at medium speed until completely hydrated without (fish eyes) noticed (approximately 20 minutes). Cool to 70C.
5. Add Sequence #5 without heating to batch held at 70C with medium speed on overhead mixer. Reduce temperature to 35C.
6. At 35C add premixed Sequence #6 to batch at low speed while cooling to 25C.
7. At 25C add Sequence #7 to batch at low speed.
8. Premix Sequence #8 until into solution and add to batch while mixing at low speed with sweep blade.

Timiron Silk Color Corrector

<u>INCI Name/Trade Name:</u>	<u>Wt%</u>
Phase A:	
Ceteareth-6 (and) Stearyl Alcohol/Cremophor A6	1.00
Ceteareth-25/Cremophor A25	1.00
Glyceryl Monostearate, Pure	2.50
Cetearyl Octanoate/Luvitol EHO	7.00
Mineral Oil Light 90 SUS/Blando1	3.00
Cetyl Alcohol	1.50
Dimethicone/100cs./Dow Corning 200 Fluid	0.10
Propyl Paraben	0.10
Phase B:	
Deionized Water	73.05
Glycerine USP	3.00
Methyl Paraben	0.20
Titanium Dioxide (and) Mica/Timiron Silk Green	5.00
Phase C:	
Fragrance	0.25
Phase D:	
Imidazolidinyl Urea/Germall 115	0.30
Deionized Water	2.00

Procedure:

Heat Phase A and Phase B separately to 70-75C with stirring. When homogeneous, the water phase is added to the oil phase at 70-75C with propeller mixer agitation. After maintaining temperature for 15 minutes, cool to 55C. Homogenize. Continue to cool to 45C with stirring. Add Phase C and combined Phase D. Cool to 30C.

Notes:

The Timiron Silk Green color corrector is used under makeup to hide red blotchy areas on the face. Timiron Silk Gold will mask bluish discolorations, and combined with Timiron Silk Red, provide a brighter appearance to the complexion.

Undereye and Spot Concealer Makeup

This undereye and spot concealer makeup can be applied either from an automatic unit containing a brush for application or from a tube with a narrow opening. The urethane polymer contributes to the long lasting film forming properties while providing improved adhesion to the spot or area being covered. It is also a good substitute for the pigment suspending capabilities of colloidal clay, so common to these types of products.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>

Properties:

Color, Odor, Appearance: Pigmented, moderately thick cream
with slight wax-like odor

pH: 7.5-8.0

Viscosity cp at 25C: 5,000-6,000

SOURCE: BF Goodrich Specialty Chemicals: Formulation A0003(Cont)

Undereye and Spot Concealer Makeup (Continued)

Preparation Procedure:

Part A:

1. Add the deionized water to a suitable kettle and then add the methylparaben.
2. Heat the water to 35C to dissolve the methylparaben and then add the methocel.
3. Continue mixing until the methocel is dispersed and no lumps appear.
4. Add the triethanolamine and mix until the solution is clear. Add the Panthenol and mix until dissolved.
5. Add the Avalure UR 445 polymer and mix until it is dispersed and a colloidal white solution occurs.
6. Add the Glycereth-26 and heat to 75C.

Part B:

7. Mix all of the powders together and mill if necessary until the blend is uniform and no streaks or particles of pigment are present.
8. Add this powder blend to Part A and mix until ready to combine with Part C.

Part C:

9. Mix all of the ingredients of Part C in a suitable vessel and heat to 75C.
10. After all of the ingredients are completely melted, add Part C to Parts A & B and continue mixing until the emulsion forms.

Part D:

11. Begin cooling the combined batch to 70C and add the cyclomethicone. Mix well to insure that the cyclomethicone is brought into the emulsion and is uniformly dispersed. Continue cooling and mixing.
12. Add vitamins at 45C and mix well.
13. Add aloe and mix well.
14. Add the Germaben II and continue cooling to room temperature.

Anti-Cellulite Cream**Formulating Design and Advantages:**

Actives specifically developed to reduce the signs and quantity of cellulite are incorporated into this quick penetrating, non-greasy cream. The use of Hexanediol Behenyl Beeswax allows for a stable emulsion using a high concentration of low viscosity oils. Orange Wax in this formula is also an active due to similar chemistry. The claims for Centerchem's anti-cellulite products are based on groups of chemicals which are also found in Orange Wax, for example; Steroids, Flavonones, Flavonols and Cinnamates.

Raw Materials:

	<u>Wt%</u>
Phase A:	
Hexanediol Behenyl Beeswax	3.0
Glycol Stearate	4.0
Glycerol Monostearate	3.0
Orange Wax	4.0
Isopropyl Palmitate	2.0
Silicone Oil 556	2.0
Emulsifying Wax NF	2.0
Cetareth-20	1.5
Eucalyptus Oil	0.5
Caprylic/Capric Triglyceride	2.5
Phase B:	
Water (Distilled)	50.1
Carbopol 940	0.2
Glycerin	3.0
Pronalan Anticellulite	10.0
Ivy Extract	5.0
Seaweed Extract	5.0
Triethanolamine	0.2
Aloe Vera Gel	1.0
Germaben II	1.0

Procedure:

Heat Phase A to 75 to 80C. Heat and mix Phase B to 75C. Emulsify by adding Phase A to Phase B. Add the preservative and mix while cooling. Pour into containers at 40C.

Adaptation of Formula and its Influence on the Product:

There is room for changing this product by the use of other actives which produce similar claims. The use of other plant oils will not dramatically alter the finished product. Worth mentioning is the ability of Orange Wax to mask the aroma of the eucalyptus oil producing a product of low fragrance.

Cream

Formula SK-8b is a glossy cream with medium-high viscosity and is made with a high content of mineral oil and stearyl alcohol. Viscosity control is excellent, and this emollient formulation could make a cold cream, moisturizer, or skin cleanser. The formulation is thermally stable.

<u>Ingredients:</u>	<u>Wt%</u>
A Light mineral oil	15.0
Stearyl alcohol	5.0
Brij 721 Steareth-21	2.5
Brij 72 Steareth-2	2.5
B Water, deionized	74.8
C Preservative	q. s.
D Fragrance	0.2

Preparation:

Heat (A) to 70C and (B) to 72C. Add (B) to (A) and agitate with propeller. Add (C) below 50C and (D) at 35C. Add water to replace that lost by evaporation. Homogenize.
Formula SK-8b

Oil-in-Water High Mineral Oil Cream

This formula is a very viscous, glossy cream with excellent phase stability for at least eight weeks at 5C, 40C, 50C, and room temperature, and at least five freeze-thaw cycles.

<u>Ingredients:</u>	<u>Wt%</u>
A Light mineral oil	70.0
Brij 721	3.7
Brij 72	3.3
B Water, deionized	22.7
Carbomer 934	0.1
C Sodium hydroxide solution, 10% aqueous	0.1
D Preservative	q. s.
E Fragrance	0.1

Preparation:

Heat (A) to 70C and (B) to 72C. Add (A) to (B) slowly with moderate anchor type agitation. Add (C). Add (D) about 50C. Add (E) at 35C and replace water lost by evaporation.
Formula SK-10

Emollient Cream

Glucate SS/Glucamate SSE-20 is used as the basic nonionic emulsifier system. Glucam E-10 is added for its humectance in this excellent white cream base formula.

Viscosity: 100,000 to 120,000 cps

pH: 5.5 to 6.5

<u>Ingredients:</u>	<u>Wt%</u>
Oil Phase:	
Glucate SS (Methyl Glucose Sesquistearate)	1.0
Glucamate SSE-20 (PEG-20 Methyl Glucose Sesquistearate)	2.0
Squalane	7.0
Glyceryl Stearate	1.5
Caprylic/Capric Triglyceride (and) Stearalkonium Hectorite (and) Propylene Carbonate	8.0
Cera Alba	3.0
Water Phase:	
Glucam E-10 (Methyl Gluceth-10)	1.5
Deionized Water	q.s.
Preservative	

Procedures:

Heat both phases to 85C and add the water phase to the oil phase. Cool while stirring to 35C. Add other ingredients. Adjust pH.

Note: Homogenization is recommended.

Face Cream

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
H ₂ O, Deionized	79.30
Carbopol 934	0.20
Propylene Glycol	2.00
Phase B:	
Hest IS-2-0 (Isosteareth-2 Octanoate)	5.00
Product SE-100 (Glyceryl Stearate & PEG-100 Stearate)	4.00
Hetan SS (Sorbitan Stearate)	2.50
Lanolin	1.60
Hest CSO (Cetearyl Octanoate)	3.00
Hetoxol J (Cetearyl Alcohol & Ceteareth-20)	0.60
Hest L-2-0 (Laureth-2 Octanoate)	0.30
Phase C:	
Sodium Hydroxide (10% Solution)	0.50
Phase D:	
Germaben IIE	1.00

Specifications:

pH: 6.50

Visc. #4/12: 26,000 cps

Procedure:

1. In a stainless steel kettle, disperse Carbopol 934 into H₂O using a lightnin' type mixer.
2. When completely dispersed and free of lumps, add propylene glycol and heat to 75C while mixing.
3. In a separate kettle, combine Phase B and heat to 75C while mixing.
4. At 75C, add Phase B to Phase A. Mix until uniform.
5. Add Phase C. Mix well.
6. Cool to below 40C and add Phase D.

Light Moisturizing Cream for Dry Skin

Ultra light weight moisturizing cream. Leaves the skin with a soft satiny feel from the Liponate NPGC-2. Lipo/DNS Completech MBAC-DS helps control the oiliness of the skin.

<u>Sequence:</u>	<u>Raw Material/INCI Name:</u>	<u>Wt%</u>
1	Deionized Water	63.35
1	Methylparaben	0.25
1	Trisodium EDTA	0.05
2	Carbopol 2984 (2% sol'n)	17.50
3	Liponate NPGC-2	4.00
3	Lipomulse 165	1.50
3	Lipocol C/Cetyl Alcohol	0.60
3	Propylparaben	0.10
3	Butylparaben	0.05
4	Deionized Water	1.00
4	Triethanolamine, 99%	0.35
5	Deionized Water	1.00
5	Unicide U-13/Imidazolidinyl Urea	0.25
6	Deionized Water	8.50
6	Completech MBAC-DS	1.50

Procedure:

1. Heat Sequence #1 to 75C. Mix with overhead mixer at medium speed until all ingredients are completely into solution.
2. Heat Sequence #2 to 75C and add to Sequence #1 with medium agitation (holding temperature at 75C).
3. Mix Sequence #3 together and heat to 75C, then add to batch with medium/high agitation.
4. Premix Sequence #4 ingredients and add to batch at 70-75C. Switch to moderate sweep and cool slowly to 35C.
5. At 35C add Sequence #5 to batch with low/medium speed on sweep until temperature cools to 25C.
6. Premix Sequence #6 together until completely into solution and then add to batch on sweep mixer.

Light Night Cream

Designed for normal to oily skin, this emulsion features a light, dry feel.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Part A:	
Acrylates/C10-30 Alkyl Acrylate Crosspolymer/ Pemulen TR-2	0.25
Carbomer/Carbopol Ultrez 10	0.50
Laneth-5 (and) Ceteth-5 (and) Oleth-5 (and) Steareth-5/ Solulan 5	1.00
Mineral Oil/Drakeol 21	10.00
Octyl Stearate/Cetiol 868	8.00
Part B:	
Glycerin/Pricerine 9083	2.00
Phenoxyethanol (and) Methylparaben (and) Ethylparaben (and) Propylparaben (and) Butylparaben/Phenonip	2.00
Deionized Water	77.20
Part C:	
Sodium Hydroxide Solution (18% w/w)	0.40
Part D:	
Fragrance/Fruity Floral Scent NY-16	0.15

Properties:

pH: 5.0-5.1

Viscosity (cP) at 25C: 55,000-60,000

Appearance: Creamy white viscous emulsion

Preparation Procedure:

1. Combine Part A ingredients. Heat until completely liquid and mix until homogeneous. Add the powdered polymers to the liquid and mix until completely dispersed.
2. Combine Part B ingredients and mix until solution is complete. Add Part A to Part B with good mixing until the polymers hydrate well (about 15 minutes).
3. Add neutralizer slowly until thickening is observed. While the emulsion is still of mixable consistency, increase mixing until the emulsion is creamy white and homogeneous.
4. Finish by adding the fragrance and remaining neutralizer and mixing until homogeneous.

SOURCE: B.F. Goodrich Co.: Formulation P0053

Moisturizing Cream Cold Process W/O

Ingredients:	Wt%
Phase A:	
Polyglyceryl-4 Isostearate (and) Cetyl Dimethicone Copolyol (and) Hexyl Laurate (Abil WE-09)	5.0
Mineral Oil	5.0
Caprylic/Capric Triglycerides (Tegosoft CT)	5.0
Isopropyl Myristate (Tegosoft M)	5.0
Silica (Degussa R812)	0.5
Phase B:	
Water	77.9
Sodium Chloride	0.8
Hydroxyethyl Cellulose (Tylose H2O)	0.8
Preservatives	Q.S.
Perfume	Q.S.
Color	Q.S.

Procedure:

1. Mix the oils of Phase A together. Add the fumed silica to the oil phase with adequate agitation and ventilation. Mix well.
2. Dissolve the Hydroxyethyl Cellulose into the vortex of the agitating water phase. Allow the cellulose to fully hydrate prior to adding the sodium chloride. Mix until uniform.
3. Add Phase B slowly into Phase A with agitation.
4. Homogenize.
5. Preservatives, perfume and color can be added upon forming the emulsion.

**Barrier Cream
Cold Mix Formula**

Ingredients:	Wt%
Phase A:	
Polyglyceryl-4 Isostearate (and) Cetyl Dimethicone Copolyol (and) Hexyl Laurate (Abil WE-09)	5.0
Decyl Oleate (Tegosoft DO)	5.0
Caprylic/Capric Triglycerides (Tegosoft CT)	5.0
Isopropyl Myristate (Tegosoft M)	5.0
Silica	0.5
Phase B:	
Sodium Citrate (solution)*	20.0
Water	58.7
Hydroxyethylcellulose	0.8
Phase C:	
Fragrance	Q.S.
Preservatives	Q.S.

*100 G Sodium Citrate/1 liter water.
pH adjusted to 5.0 with Citric Acid.

Procedure:

1. In a vessel, blend together the ingredients of Phase A until uniform.
2. In a separate vessel, disperse the Hydroxyethylcellulose into the water.
3. Add the Phase B slowly to Phase A with agitation.
4. Add Phase C, mix until dispersed.
5. Homogenize and dispense.

Moisturizing Day Cream

This emulsion utilizes Glucate SS/Promulgen D as the emulsifier pair. Cremerol HMG provides moisturization. Glucam E-20 and BioCare Polymer BHA-10 are incorporated for humectance and skin hydration. Ucon Fluid AP has specific emollient properties.

Viscosity: 100,000 to 120,000 cps

pH: 5.5 to 6.5

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
Glucate SS	1.00
Promulgen D	1.50
Cetearyl Octanoate	6.00
Cyclomethicone	1.50
Cera Alba	1.50
Cremerol HMG	2.00
Octyl Methoxycinnamate	1.50
Butyl Methoxydibenzoylmethane	0.75
Ucon Fluid AP	1.50
Phase B:	
Acrylates/C10-30 Alkyl Acrylate Crosspolymer	0.20
Deionized Water	q.s.
Glucam E-20	2.00
Phase C:	
Biocare Polymer BHA-10	1.00
Tocopheryl Acetate	0.10
Phase D:	
Triethanolamine	q.s.
Preservative	

Procedures:

Disperse the carbomer in the water and add Glucam E-20. Heat phase A and phase B to 75C and add phase B to phase A. Add the triethanolamine while mixing and cool to 35C. Add other ingredients. Readjust the pH.

Moisturizing Milk Creme with Monasil PLN

This formulation provides a high degree of substantivity and conditioning. It helps to minimize or alleviate dry skin conditions while leaving a smooth non-greasy after-feel.

<u>Part:</u>	<u>Raw Material:</u>	<u>Wt%</u>
A	Monalac MPL	5.0
A	Monaquat SL-5	5.0
A	Water	57.2
A	Potassium Hydroxide (45%)	0.2
A	Monasil PLN	4.0
B	Monafax MAP 160	0.5
B	Monalac ML	20.0
B	Cetearyl Alcohol	5.1
B	Isopropyl Palmitate	3.0

Procedure:

Combine ingredients in both phases separately and heat to 75C. Add (B) to (A) and continue to homogenize. Stir-cool, with minimal aeration, to 40C, add fragrance, color and preservative. Adjust pH to 6.0 then fill.

Physical Properties:

Appearance: Milky white

Formulation F-732

Moisturizing Milk Creme

<u>Part:</u>	<u>Raw Material:</u>	<u>Wt%</u>
A	Water	61.2
A	Potassium Hydroxide (45%)	0.2

Moisturizing Skin Cream

An elegant and rich moisturizing cream based on the NMF (Natural Moisturizing Factor) concept of ProdeW 100.

<u>Ingredient:</u>	<u>Wt. %*</u>
A: Deionized Water	59.60
Veegum HV, Magnesium Aluminum Silicate	1.00
Triethanolamine, 99%	2.40
Rhodigel, Xanthan Gum	0.20
B: Squalane (Fitoderm)	6.00
Cetyl Palmitate	4.00
Dioctyl Maleate	8.00
Propylene Glycol Isostearate	4.00
Pentaerythrityl Tetrapelargonate	4.00
Dimethicone (100 cs.)	0.80
Hydrogenated Soy Glyceride	1.00
Stearyl Alcohol	1.00
Stearic Acid	5.00
C: Sorbitol (and) Sodium Lactate (and) Proline (and) Sodium PCA (and) Hydrolyzed Collagen (ProdeW 100) Preservative	3.00 q.s.

Procedure:

Weigh the Part A water into a suitable vessel and mix with a homogenizer at 5000 rpm. Weigh and dry blend the Veegum HV and Rhodigel, add them slowly to the water and continue mixing for 20 minutes. Begin heating to 65C. Add the remaining Part A ingredients and continue mixing at 5000 rpm. Weigh the Part B ingredients into another vessel. Mix and heat to 70C. Add Part B to Part A and mix for 10 minutes at 5000 rpm. Move the batch to a propeller mixer and adjust the speed to produce a small vortex. Cool while mixing to 35C and add the Part C ingredients in order, mixing each for 5 minutes. Continue cooling and package at 25-30C.

Multi-functional Day Cream**Formulating Design and Advantages:**

This Bee's Milk formulation creates a barrier that effectively replenishes moisture, softens and imparts radiance. This will combat dry skin caused by variations in humidity and will help to minimize the signs of aging.

Raw Materials:

	<u>Wt%</u>
Water Phase I:	
Bermocol E 481	0.4
Glycerine	2.7
Water (Distilled)	52.1
Triethanolamine	0.2

Oil Phase:

Nikkol Lecinol S-10-M	2.1
Squalane	7.9
Macadamia Nut Oil	4.3
Borage Oil	2.9
Vitamin E	0.3
Vitamin A Palmitate	0.3
Kester Wax-62	1.0
Glycerol Monostearate	0.2
Ozokerite 158/160	0.3
Hexanediol Behenyl Beeswax	0.3
Phytoglycolipid	4.0
Liquapar	1.0

Water Phase II:

Bee's Milk	20.0
------------	------

Procedure:

Mix and heat Water Phase I components to 75C. Add all the oil phase components, heat till 75C and mix. Add slowly the Water Phase I to the Oil Phase under agitation (approx. 700 rpm) maintaining mixing a temperature of 75C for 5 minutes (make sure that mixing does not exceed 800 rpm's, as a phase inversion will occur). Allow to cool to 50-55C, add Water Phase II at room temperature, under moderate agitation (approx. 200 rpm's), continue mixing for 5 minutes and pour into container.

Adaptation of Formula and Its Influence on the Product:

Sunscreens are easily incorporated to give this product an SPF of 6-8 by using Escalol 507 at approximately 5% and reducing the concentration of water and/or oils.

Homogenize.

This formula is meant to be left on the skin and to have a heavier film so that it lasts all night. This is a water-in-oil emulsion and the principal emulsifiers are Sorbitan sesquioleate and a combination of sodium borate and beeswax. This combination of oils gives proper weight and feel. Could be all Macadamia Nut Oil, but it might be expensive. This formulation can also be used as a make-up remover for lipstick and eye makeup.

Facial Cleansing Cream

No.	Phase:	Ingredient:	Wt%
1	A	Deionized water	54.00
2	A	Glycerine	6.00
3	B	Mineral oil	15.00
4	B	Oils of Aloha Macadamia Nut Oil	5.00
5	B	Oils of Aloha Kukui Nut Oil	5.00
6	B	Cetyl alcohol	2.00
7	B	C12-15 alcohols benzoate	2.00
8	B	Glyceryl stearate	10.00
9	B	Polysorbate 60	1.00
10	C	Preservative	QS

Manufacturing Procedure:

Phase A: Heat water and glycerine phase to 75C.

Phase B: Heat oil phase to 75C. Add to water phase. Cool to 40C.

Phase C: Add preservative.

Night Cream W/O with Regeneration Effect

Component:	Wt%
I Dehymuls PGPH/Polyglyceryl-2 Dipolyhydroxystearate	4.0
Lameform TGI/Polyglyceryl-3 Diisostearate	2.0
Bienenwachs 8100/Cera Alba	2.0
Zincum N 29/Zinc Stearate	2.0
Traubenkernel/Vitis Vinifera	1.0
Myritol 312/Caprylic/Capric Triglycerides	3.0
Cetiol SN/Cetearyl Isononanoate	8.0
Cetiol OE/Dicaprylyl Ether	5.0
Copherol 1250/Tocopheryl Acetate	3.0
Vitamin A Palmitate	0.2
II Water	63.3
1,4-Butylene Glycol	5.0
MgSO ₄ -7H ₂ O	1.0
III Collapuron DAK/Desamidocollagen	0.5
Preservative/Perfume	q.s.

Viscosity, Brookfield, mPas: 112,500

Preparation in the Laboratory:

1. Melt the components listed under I at 80-85C and stir until a homogeneous mixture results. 2. Heat the components listed under II to 80-85C and add to phase I with stirring/homogenizing. Stir for 5 minutes at this temperature. 3. Allow the emulsion to cool with stirring in such a way that it remains in continual motion. Avoid incorporation of air. Homogenize at 65-55C by means of a suitable dispersion unit (e.g. Ultra Turrax) in order to improve stability and structure. Add the single components listed under III at 30C. Allow to cool to 30C.

Hint:

Duration and intensity of homogenization influence the viscosity.

SOURCE: Henkel KGaA: Formulation No. 96/030/3

Night Foundation Cream

This cream exhibits an elegant, highly emollient feel. It is suitable for a night cream, a foundation cream or an all-purpose body cream.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	U.S.P. White Mineral Oil	6.0
	Cetyl Alcohol	10.0
	Sodium C12-C15 Pareth-3 Sulfonate/Avanel S-30	2.0
B	Propylene Glycol	5.0
	Methyl Paraben	0.25
	Deionized Water	76.75
	Color & Perfume	As Desired

pH: About 6.8

Appearance: Non-pourable, viscous cream

Procedure:

Heat part A to 70C and part B to 75C. Add part A to part B with moderate to high agitation, including side-scraping motion. Mix for a few minutes, then cool rapidly to 30C. Emulsion will invert to give a viscous water-in-oil emulsion.

Formulation J-28

All Purpose Cream, Hand & Body Cream

This emulsion is similar to the J-28, but is less lipophilic (more hydrophilic). It leaves a smooth, non-sticky feel to the skin and is extremely mild.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	U.S.P. White Mineral Oil	6.0
	Cetyl Alcohol	10.0
	Sodium C12-C15 Pareth-15 Sulfonate/	
	Avanel S-150 CGN	4.0
B	Propylene Glycol	5.0
	Methyl Paraben	0.25
	Deionized Water	74.75
	Color & Perfume	As Desired

pH: About 6.8

Appearance: Non-pourable, viscous cream

Procedure:

Heat part A to 70C, and part B to 75C. Add part A to part B with moderate to high agitation, including side-scraping motion. Mix for a few minutes, then cool rapidly to 30C. Emulsion will invert to give a viscous water-in-oil emulsion.

Formulation J-47

SOURCE: PPG Industries, Inc.: Suggested Formulations

Oil-in-Water Dimethicone Cream

<u>Ingredients:</u>	<u>Wt%</u>
A Silbione oil 70047/V350*	20.0
B Arlatone 2121	5.5
Glycerol	4.0
Preservative	q.s
Water	70.35
C Rhodopol SC*	0.15

Manufacture:

1. Mix the Arlatone 2121 in the heated water phase at 80C under moderate stirring until a homogeneous dispersion is formed.
2. Disperse the hydrocolloid in the heated aqueous phase at 75C with moderate stirring.
3. Add the heated oil phase to the aqueous phase under intensive stirring.
4. Homogenise the mixture intensively at 75C for one minute.
5. Cool to 35C whilst stirring moderately.
6. Add heat-sensitive ingredients while stirring moderately.

Comment:

During the cooling process (step 5), when Arlatone 2121 emulsion starts to build up in the lamellar crystalline structure and can reduce the final viscosity. The viscosity of the formulation is inversely proportional to the mixing energy that has been put into the emulsion during manufacture.

Comments:

Viscosity: 78,000 mPa s (Brookfield LVT, spindle E. 1.5 rpm)
Energy input is related to formulation viscosity.

*Keltrol (Xanthan Gum, INCI)-Kelco

SOURCE: ICI Surfactants: Formulation F41-5-9

Oil-in-Water Natural Cream

<u>Ingredients:</u>	<u>Wt%</u>
A Sunflower oil	20.0
Anti-oxidant	q.s.
B Arlatone 2121	5.5
Glycerol	4.0
Preservative	q.s.
Water	70.3
C Rhodopol SC*	0.15

Manufacture:

1. Mix the Arlatone 2121 in the heated water phase at 80C under moderate stirring until a homogeneous dispersion is formed.
2. Disperse the hydrocolloid in the heated aqueous phase at 75C with moderate stirring.
3. Add the heated oil phase to the aqueous phase under intensive stirring.
4. Homogenise the mixture intensively at 75C for one minute.
5. Cool to 35C whilst stirring moderately.
6. Add heat-sensitive ingredients whilst stirring moderately.

Comment:

During the cooling process (step 5), when Arlatone 2121 emulsion starts to build up in the lamellar crystalline structure, moderate stirring is recommended. Intensive stirring can break down the lamellar structure and can reduce the final viscosity. The viscosity of the formulation is inversely proportional to the mixing energy that has been put into the emulsion during manufacture.

Soft Cream

<u>Ingredients:</u>	<u>Wt%</u>
A. Arlamol ISML, isosorbide monolaurate	4.00
Stearyl alcohol	1.00
Arlamol E, POP (15) stearyl ether	1.00
Dimethicone, 250 cs.	0.50
Brij 700, POE (100) stearyl ether	2.25
Brij 72, POE (2) stearyl ether	2.25
B. Water	88.05
Carbomer 934	0.40
C. Sodium hydroxide (10% aqueous)	0.40
D. Preservative	0.10
E. Fragrance	0.05

Suggested Preparation:

Heat A to 70C and B to 72C. Add B to A slowly with moderate agitation. Add C. Add D below 50C. Add E at 35C and add water to compensate for loss due to evaporation.

Comments:

This cream has a low emollience. It is non-greasy and has a very pleasant afterfeel. It is relatively inexpensive since it contains nearly 90% water.

This formula is stable for at least three months at 5C, 40C and 50C and for at least six freeze-thaw cycles.

Emollient Skin Cream

B: Bring to approx. 70C and add to A with stirring.
Continue stirring until cooled to approx. 50C.

C: Add.
Continue stirring until cooled to approx. 30C.

D: Stir in.
Perfume, homogenize.

SOURCE: Chemisches Laboratorium Dr. Kurt Richter GmbH: Suggested Formulations

Ultra-Moisturizing Skin Cream**Formula Profile:**

The synergistic mixture of Veegum Ultra and Carbopol will create a thick rich cream that will have the Carbomer feel without the tack. Veegum Ultra will improve stability and maintain viscosity of the product through its stability cycle. The emollients in the oil phase and humectants in the water phase will support lasting residual skin feel and moisturization.

Ingredients:

	Wt%
A: Water	81.1
Veegum Ultra (Magnesium Aluminum Silicate)	0.5
Carbomer (Carbopol 934)	0.5
B: Glycerin	3.0
Butylene Glycol	2.0
C: Cetyl Alcohol	1.0
Glyceryl Monostearate SE (Dermacare MS SE)	3.0
Caprylic/Capric Triglyceride (Neobee M-5)	5.0
C12-15 Octanoate (Finester EH-25)	1.0
Dimethicone (DC-200 fluid-350 cts)	1.0
Steareth-2 (Brij 72)	0.83
Steareth-21 (Brij 721)	0.83
D: Preservative	qs
E: Fragrance	qs
F: Triethanolamine	0.24
Citric Acid Adjust pH to 5.6+/-0.3	qs

Procedure:

Step 1. Dry blend Veegum Ultra and Carbopol 934 in Part A. (Dry blending reduces the clumping of Carbopol and allows for the simultaneous introduction of ingredients). Sift the powder into an established vortex in the water. Veegum Ultra will be completely hydrated within 15 minutes. Allow about 45 minutes for Carbomer hydration.

The addition of any other ingredients during the hydration process will interfere with the hydration of Veegum Ultra and will reduce or even eliminate the desired properties generated by the Magnesium Aluminum Silicate.

Step 2: Begin heating water phase in Step 1 to 70C-75C.

Step 3: Once hydration process is completed, add remaining water phase ingredients from Part B to Step 2.

Step 4: Blend oil phase ingredients in Part C and heat the oil phase to 70C-75C.

Step 5: When both phases are at 70C-75C, add oil phase in Step 4 to water phase Step 2.

Step 6: Cool to 45C. Add Part D-Preservative to Step 2.

Step 7: Add Part E-Fragrance to Step 2.

Step 8: Cool to 35C. Adjust pH to 5.6 with Part F.

Product Specifications:

Viscosity: Brookfield LVT: 425,000+/-25,000 cps after 24 hours.

pH: 5.3-5.9

This formula produces a stable emulsion that passes 3 month stability at RT, 5C, 38C, 50C and 3 cycle F/T.

SOURCE: R.T. Vanderbilt Co., Inc.: Formula No. 489

Ultra-Moisturizing Skin Cream**Formula Profile:**

The synergistic mixture of Veegum Ultra and Carbopol will create a thick, rich cream that will have the great Carbomer feel without the tack. Veegum Ultra will improve stability and maintain the viscosity of the product. The emollients in the oil phase and the humectants in the water phase will support lasting residual skin feel and moisturization.

Ingredients:

	Wt%
A: Water	81.44
Veegum Ultra (Magnesium Aluminum Silicate)	0.25
Carbomer (Carbopol 934)	0.25
B: Glycerin	3.0
Butylene Glycol	2.0
C: Cetyl Alcohol	1.0
Glyceryl Monostearate SE (Dermacare MS SE)	3.0
Caprylic/Capric Triglyceride (Neobee M-5)	5.0
C12-15 Octanoate (Finester EH-25)	1.0
Dimethicone (DC-200 fluid-350 cts)	1.2
Steareth-2 (Brij 72)	0.83
Steareth-21 (Brij 721)	0.83
D: Preservative	qs
E: Fragrance	qs
F: Triethanolamine	0.2
Citric Acid	qs
	Adjust pH to 5.6+/-0.3

Procedure:

Step 1: Dry blend Veegum Ultra and Carbopol in Part A. (Dry blending reduces the clumping of Carbopol and allows for the simultaneous introduction of ingredients). Sift the powder into an established vortex in the water. Veegum Ultra will be hydrated within 15 minutes. Allow about 45 minutes for the Carbopol slurry to hydrate completely.

The addition of any other ingredients during the hydration process will interfere with the hydration of Veegum Ultra and will reduce or even eliminate the desired properties generated by the Magnesium Aluminum Silicate.

Step 2: Begin heating water phase in Step 1 to 70-75C.

Step 3: Once the hydration process is completed, add remaining water phase ingredients from Part B to Step 2.

Step 4: Blend oil phase ingredients in Part C and heat the oil phase to 70-75C.

Step 5: When both phases are at 70-75C, add oil phase in Step 4 to water phase Step 2.

Step 6: Cool to 45C. Add Part D-Preservative to Step 2.

Step 7: Add Part E-Fragrance to Step 2.

Step 8: Cool to 35C. Adjust pH with Part F.

Product Specifications:

Viscosity: Brookfield LVT DVII, Spindle #TF @ 0.3 RPM: 300,000+-30,000 cps after 24 hours.

pH: 5.3-5.9

This formula produces a stable emulsion and passes 3 month stability testing at RT, 5C, 38C, 50C and 3 cycle F/T.

SOURCE: R.T. Vanderbilt Co., Inc.: Formula No 474

Ultra-Moisturizing Skin Cream**Formula Profile:**

The synergistic mixture of Veegum Ultra and Carbopol Ultrez 10 will create a thick rich cream that will have the great Carbomer feel without the tack. Veegum Ultra will improve stability and maintain the viscosity of the product. The emollients in the oil phase and the humectants in the water phase will support lasting residual skin feel and moisturization.

Ingredients:

	Wt%
A: Water	81.14
Veegum Ultra (Magnesium Aluminum Silicate)	0.5
Carbomer (Carbopol Ultrez 10)	0.5
B: Glycerin	3.0
Butylene Glycol	2.0
C: Cetyl Alcohol	1.0
Glyceryl Monostearate SE (Dermacare MS SE)	3.0
Caprylic/Capric Triglyceride (Neobee M-5)	5.0
C12-15 Octanoate (Finester EH-25)	1.0
Dimethicone (DC-200 fluid-350 cts)	1.0
Steareth-2 (Brij 72)	0.83
Steareth-21 (Brij 721)	0.83
D: Preservative	qs
E: Fragrance	qs
F: Triethanolamine	0.2
Citric Acid	Adjust pH to 5.6+/-0.3

Procedure:

Step 1: Dry blend Veegum Ultra and Carbopol Ultrez 10 in Part A. (Dry blending allows for the simultaneous introduction of ingredients, even though these raw materials do not have to be added simultaneously). Sift the powder into an established vortex in the water. The Veegum Ultra and Carbopol Ultrez 10 will be hydrated within 15 minutes.

The addition of any other ingredients during the hydration process will interfere with the hydration of Veegum Ultra and will reduce or even eliminate the desired properties generated by the Magnesium Aluminum Silicate.

Step 2: Begin heating water phase in Step 1 to 70C-75C.

Step 3: Once the hydration process is completed, add remaining water phase ingredients from Part B to Step 2.

Step 4: Blend oil phase ingredients in Part C and heat the oil phase to 70C-75C.

Step 5: When both phases are at 70C-75C, add oil phase in Step 4 to the water phase Step 2.

Step 6: Cool to 45C. Add Part D-Preservative to Step 2.

Step 7: Add Part E-Fragrance to Step 2.

Step 8: Cool to 35C. Adjust pH with Part F.

Product Specifications:

Viscosity: Brookfield LVT DVII, Spindle #TF @ 0.3 RPM: 300,000+-30,000 cps after 24 hours

pH: 5.3-5.9

This formula produces a stable emulsion and passes 3 month stability testing at RT, 5C, 38C, 50C and 3 cycle F/T

SOURCE: R.T. Vanderbilt Co., Inc.: Formula No. 475

Vanishing Cream

<u>Ingredients:</u>	<u>Wt%</u>
A. Arlamol ISML, isosorbide monolaurate	10.0
Stearyl alcohol	4.0
Dimethicone, 350 cs.	0.5
Arlamol E, polyoxypropylene (15) stearyl ether	3.0
Brij 700, polyoxyethylene (100) stearyl ether	2.0
Brij 72, polyoxyethylene (2) stearyl ether	3.0
B. Water	72.9
Sorbitol Solution USP	4.0
Carbomer 934	0.2
C. Sodium hydroxide (10% aqueous)	0.2
D. Preservative	0.1
E. Fragrance	0.1

Suggested Preparation:

Heat A to 70C and B to 72C. Add B to A with moderate agitation. Add C. Add D below 50C. Add E to 35C and add water to compensate for loss due to evaporation.

In this formula Arlamol ISML, isosorbide monolaurate is the primary emollient complemented by Arlamol E, POE (15) stearyl ether. Stearyl alcohol is the viscosity builder, and silicone oil eliminates "soaping." Brij 700, POE (100) stearyl ether and Brij 72, POE (2) stearyl ether were chosen because of their excellent emulsifier properties for Arlamol ISML, isosorbide monolaurate.

The above formula is stable at 5C, R.T., and 40C, for three months. It is also stable for at least six freeze-thaw cycles.

Emollient Cream

<u>Ingredients:</u>	<u>Wt%</u>
A: Arlamol E pop 15 stearyl ether	20.0
Arlasolve 200 Liquid (72% active) poe 20 isohexadecyl ether	1.1
Brij 72 poe 2 stearyl ether	7.2
Stearyl alcohol, USP	2.0
B: Carbomer 934	0.2
Water, deionized	69.3
C: NaOH (10% w/w aqueous)	0.2
D: Perfume and preservative	q.s.

Preparation:

Disperse the Carbomer 934 in the water. Heat (A) to 70C and (B) to 72C. Add (B) to (A) with good agitation. Add (C). Add (D) between 35-40C. Pour about 35C.

Formulation AE-16

Water-in-Oil Cream

<u>Ingredients:</u>	<u>Wt%</u>
A: Arlachel 582	2.5
Arlatone T	0.5
Arlamol HD	12.0
Magnesium stearate	0.5
Beeswax	1.5
Candelilla wax	0.5
Isopropyl myristate	6.0
Almond oil	3.0
Dimethicone 100 mPa s	0.5
Oxynex 2004*	0.05
Aerosil R972*	0.5
B: Atlas G-2330	1.25
Propylene glycol	1.25
Glycerol	1.5
MgSO ₄ -7H ₂ O	0.5
Preservatives	q.s.
Water	67.95
C: Perfume	q.s.

Manufacture:

1. Heat A and B separately to 80C.
2. Add B to A slowly whilst stirring intensively.
3. Homogenise for 1 minute.
4. Cool to 50C whilst stirring intensively.
5. Homogenise for 1 minute.
6. Cool to room temperature whilst stirring intensively.

Comments:

Note that the emulsion is made with an extremely small amount of emulsifier. To compensate for this, very intensive homogenisation is essential. The silica is added for rheological purposes and improves the skin-feel.

Viscosity: 300,000 mPa s (Brookfield LVT, spindle F, 1.5 rpm)

Aerosol Fine Fragrance Mousse

This formula provides a quick breaking foam which elegantly delivers fragrance with a dry talc-like after feel due to the emolliency of Veslan P8-3 liquid. Cartaretin F-4 provides hair and skin substantivity while Sandoxylate SX-424 contributes fragrance solubilization and fast breaking foam.

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
Sandoxylate SX-424	1.00
Fragrance	1.00
Phase B:	
Deionized Water	81.10
Velsan P8-3 liquid	5.00
SD-40-2 Alcohol	11.20
Phase C:	
Cartaretin F-4	0.50
Dimethicone Copolyol	0.20

Procedure:

Pre-mix Phase A. In a separate vessel, add ingredients of Phase B, mixing well after each addition. Add Phase A, mix and add Phase C. Adjust pH=7.0 with Citric Acid. Fill cans and charge with propellant.

Typical Ratio: Propellant A-46: 4.0%
Concentrate: 96.0

Appearance: Clear liquid

pH: 7-8

Ref.: CL11-31-1 & CMP-07

Men's Finishing Fragrance Mousse

Blow-Dry Styling Lotion

This clear, water white, pump spray provides excellent curl retention and body. Diaformer Z-SM produces a clear, flexible film on the hair. Sandoxylate SX-424 functions as a fragrance solubilizer and Sandopan LS-24 is an excellent hydrotrope.

<u>Ingredients:</u>	<u>Wt%</u>
Diaformer Z-SM (Methylacrylol Ethyl Betaine/Methacrylates Copolymer)	2.00
Deionized Water	80.00
Dow Corning 193 (Dimethicone Copolyol)	0.20
SD 40 Alcohol	17.00
Sandopan LS-24 gel (Sodium Laureth-13 Carboxylate)	0.20
Sandoxylate SX-424 (PPG-2 Isodeceth-12)	0.40
Fragrance and Preservative	qs

Procedure:

Add water to vessel. With mixing, add Dow Corning 193, SD 40 Alcohol, Diaformer Z-SM and Sandopan LS-24 in order. Mix well after each addition. Premix Sandoxylate SX-424 and fragrance. Add to batch with mixing. Add preservative with mixing.

Appearance: Clear, water white liquid
Formula CHF-10/REF: CL24-95

Water Based Pump Hair Spray

Diahold A-503 requires no neutralization in formulation and its high water compatibility allows formulation of low VOC hair sprays. This water based hair spray uses Diahold A-503 to provide a clear glossy film and a strong hold.

<u>Ingredients:</u>	<u>Wt%</u>
Diahold A-503 (AMP-Acrylates Copolymer)	7.00
Deionized Water	91.50
Dow Corning 190 (Dimethicone Copolyol)	0.30
Lauramide DEA	0.30
Glycerine	0.20
Propylene Glycol	0.40
Fragrance and Preservative	qs

Procedure:

Add water to vessel. With mixing, add Dow Corning 190, Lauramide DEA, Diahold A-503, Glycerine, and Propylene Glycol in order. Mix well after each addition. Add Fragrance and Preservative with mixing.

Properties:

pH: 6.5-7.0

Appearance: Clear, water white liquid
Formula CHF-11/REF: CL24-74

SOURCE: Clariant Corp.: Suggested Formulations

Clarifying and Volumizing Hair Mask**Formula Profile:**

This mask formulation is for all hair types and takes advantage of the absorbing and cleansing properties of Bentonite. The extra fine grind of Veegum F is a mechanical volumizing aid in hair masks. This formula contains glycerin that will improve residual feel and improve the shine of hair. The surfactant aids in the rinsability of the dried mask.

<u>Ingredients:</u>	Wt%
A: Water	47.8
Veegum F (Magnesium Aluminum Silicate)	7.0
B: Glycerin	5.0
Vanclay (Kaolin)	30.0
Talc (Cosmetic Grade)	5.0
Vanseal NALS-30 (Sodium Lauroyl Sarcosinate)	5.0
C: Preservative	qs
D: Fragrance	qs
E: Triethanolamine	0.2
Citric Acid Adjust pH to 6.0+-0.5	qs

Procedure:

Step 1: Sift Veegum F into an established vortex in water. Veegum F will need approximately 60 minutes for hydration using a homogenizer or up to 180 minutes using a prop type mixer. Additional energy, such as an increase in mixing intensity or water temperature, will reduce hydration time.

The addition of any other ingredients during the hydration process will interfere with the hydration of Veegum F and will reduce or even eliminate the desired properties generated by the Magnesium Aluminum Silicate.

Step 2: Add remaining water phase ingredients listed in Part B.

Step 3: Add Part C-Preservative.

Step 4: Add Part D-Fragrance.

Step 5: Adjust pH to 6.0 with part E.

Product Specifications:

Viscosity: Brookfield LVT DVII Spindle #TF @ 0.3 RPM: 1,000,000+-
100,000 cps

pH: 5.5-6.5

This formula produces a stable emulsion that passes 3 month stability testing at RT, 5C, 38C, 50C and 3 cycle F/T

SOURCE: R.T. Vanderbilt Co., Inc.: Formula No. 473

Clear Conditioning Hair Fluid
(This is a moderate viscosity fluid)

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
Dimethicone Copolyol (and) Cyclomethicone (Abil EM 97)	2.15
Cyclomethicone (Abil B 8839)	15.20
Phenyl Trimethicone (Abil AV-20)	2.15
Quaternium-80 (Abil Quat 3272)	1.10
Cyclomethicone (and) Dimethiconol (and) Dimethicone (Abil OSW 12)	5.40
Fragrance	Q.S.
Phase B:	
Water	27.50
Preservatives	Q.S.
Propylene Glycol	38.50
Hexylene Glycol	4.00
Glycerin	3.00
Sodium Chloride	1.00

Procedure:

1. Combine the ingredients of Phase A together. Determine the refractive index.
2. Dissolve the preservatives and Sodium Chloride into the water of Phase B.
3. Add the remaining ingredients to Phase B. Determine the refractive index.
4. Match the refractive index of Phase B to Phase A using water or propylene glycol, depending on the direction needed.
5. Add Phase B slowly to Phase A while homogenizing. (Avoid air entrapment).

Antidandruff Hair Tonic

<u>Ingredients:</u>	<u>Wt%</u>
A: Octopirox (Piroctone Olamine)	0.10
B: Ethyl alcohol	35.00
C: Fragrance	0.30
Emulsogen EL (PEG-36 Castor Oil)	0.60
D: Water	63.20
Genamin KSL (PEG-5 Stearyl Ammonium Lactate)	0.30
D-Panthenol	0.50
E: Citric acid----->pH 5.0-6.0	q.s.

Procedure:

1. Dissolve A in B.
2. Stir 1 into mixture C.
3. Stir mixture D into 2.
4. Finally adjust the pH with E.

SOURCE: Hoechst Aktiengesellschaft: Formula B III/3006

Clear Conditioning Hair Gel

<u>Ingredients:</u>	Wt%
Phase A:	
Dimethicone Copolyol (and) Cyclomethicone (Abil EM 97)	2.00
Cyclomethicone (Abil B 8839)	14.00
Phenyl Trimethicone (Abil AV-20)	2.20
Quaternium-80 (Abil Quat 3272)	0.80
Cyclomethicone (and) Dimethiconol (and) Dimethicone (Abil OSW 12)	5.00
Fragrance	Q.S.
Phase B:	
Water	28.20
Preservatives	Q.S.
Propylene Glycol	40.00
Hexylene Glycol	4.00
Glycerin	3.00
Sodium Chloride	0.80

Procedure:

1. Combine the ingredients of Phase A together. Determine the refractive index.
2. Dissolve the preservatives and Sodium Chloride into the water of Phase B.
3. Add the remaining ingredients to Phase B. Determine the refractive index.
4. Match the refractive index of Phase B to Phase A using water or propylene glycol, depending on the direction needed.
5. Add Phase B slowly to Phase A while homogenizing. (Avoid air entrapment).

Cream Rinse

<u>Raw Materials:</u>	Wt%
A: Genamin EQ	2.00
Hostacerin T-3 (Cetareth-3)	1.00
Cetyl alcohol	1.50
Jojoba oil	1.50
B: Water	93.20
Panthenol	0.50
Preservative	q.s.
C: Fragrance	0.30
Dyestuff solution	q.s.
D: Citric acid----->pH 4.0	q.s.

Procedure:

1. Melt A at 75C.
2. Stir 2 into 1.
3. Heat B to 75C.
4. Stir until cool.
5. At ca. 40C add the components of C to 4.
6. Finally adjust the pH with D.

Clear Gel Activator/Conditioner

This is a clear rinsing curl activator used to bring out the natural curl of the hair. It also contains humectants, detackifiers and conditioners.

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
Water	57.65
Carbomer 940	0.50
Triethanolamine	2.25
Phase B:	
Glycerin	32.20
Propylene Glycol	5.00
Dimethicone Copolyol (Abil B 88183)	1.00
Dimethicone Copolyol (Abil B 8851)	1.00
Quaternium-80 (Abil Quat 3272)	0.40
Phase C:	
Color, Fragrance, Preservative	Q.S.

Procedure:

Disperse the Carbomer into the water and mix until completely clear. Add the Triethanolamine and mix well. Mix Phase B and add slowly to Phase A while mixing. Add Phase C with mixing.

Ethnic Hair Care
Extra Conditioning Conditioner

<u>Ingredients:</u>	<u>Wt%</u>
Cyclomethicone (and) Dimethiconol (and) Dimethicone (Abil OSW 12)	50.0
Cyclomethicone	30.5
Isohexadecane or Mineral Oil	8.0
Octyl Palmitate (Tegosoft OP)	3.0
Octyl Stearate (Tegosoft OS)	3.0
Phenyl Trimethicone (Abil AV 20)	5.0
Quaternium-80 (Abil Quat 3474)	0.5

Procedure:

Combine all ingredients in order with mixing.

Clear Silicone Hair Gel

<u>Ingredients:</u>	<u>Wt%</u>
Oil Phase:	
Cetyl Dimethicone Copolyol (Abil EM-90)	1.60
Cyclomethicone	7.20
Isopropyl Myristate (Tegosoft M)	3.60
Cetyl Dimethicone (Abil Wax 9801)	1.80
Dimethicone (50 cs)	1.80
Water Phase:	
Water	39.00
Propylene Glycol	42.50
Sodium Chloride	2.50
Preservatives	Q.S.

Procedure:

1. Mix the ingredients of the oil phase and the water phase separately at room temperature.
2. Measure the refractive indices of each phase. These must be identical to achieve optimum clarity. If necessary, adjust the refractive index of the water phase with additional propylene glycol.
3. Add the water phase to the oil phase slowly with strong shear. Mix until water phase is fully dispersed.

Ethnic Hair Glosser/Extra Conditioning

This water-in-oil formula based on a silicone polymeric emulsifier is designed for use as a leave in conditioner to give gloss and body especially for hair which has been chemically treated.

<u>Ingredients:</u>	<u>Wt%</u>
Phase A: Oil Phase:	
Cetyl Dimethicone Copolyol (Abil EM-90)	2.0
Petrolatum	6.0
Mineral Oil	10.0
Cetyl Dimethicone (Abil Wax 9801)	2.0
Octyl Palmitate (Tegosoft OP)	3.5
Isopropyl Palmitate (Tegosoft P)	3.0
Lanolin Oil	3.0
Phenyl Trimethicone (Abil AV 20)	2.0
Quaternium-80 (Abil Quat 3474)	0.5
Phase B:	
Fragrance	Q.S.
Phase C: Water Phase:	
Water	64.3
Sodium Chloride	0.7
Glycerin	3.0
Preservatives	Q.S.

Procedure:

1. Blend the components of Phase A together--heating to 50C. Mix until fully dispersed.
2. Cool to 40-45C with agitation - add fragrance.
3. In a separate vessel, mix the components to Phase C together.
4. Add Phase C to Phase A/B slowly with slow lightning mix. Mix until all water is incorporated into the oil phase.
5. Homogenize.

Ethnic Pump Spray Conditioner

Hair Conditioner Lotion

This lotion is typical of a modern rinse-off formula but has excellent freeze-thaw stability.

<u>Ingredients:</u>	<u>Wt%</u>
A Brij 721	1.3
Cetyl alcohol	0.9
Stearyl alcohol	0.6
Stearalkonium chloride	0.5
B Water, deionized	96.7

Preparation:

Heat (A) to 70C and (B) to 72C. Add (B) to (A) with moderate agitation. Cool while agitating to 40C. Replace water lost by evaporation and package.

Formula HC-10

Hair Conditioner Gel

Demonstrates the use of Forestall in a surfactant gel which would be a good hair dressing. The formula is a clear (micro-emulsion), "ringing" gel.

<u>Ingredients:</u>	<u>Wt%</u>
A Mineral oil	11.0
Arlasolve 200L Isoceteth-20	27.8
Brij 93 Oleth-2	6.0
B Water	41.8
Propylene glycol	5.0
Sorbitol Solution, USP	7.0
Forestall	1.4

Preparation:

Heat (A) and (B) to 90C. Add (B) to (A) with gentle stirring. Cool to 80C and add make-up water. Stir until uniform and pour while still fluid.

Formula HC-11

Hair Relaxers

These formulations for a hair relaxer give a stable composition with a very desirable consistency. They can be easily worked through the hair and will remain until reacted. The products are extremely mild with minimal skin irritation.

Hair Relaxer D-51

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Petrolatum (USP)	23.0
	Mineral Oil	14.0
	Cetearyl Alcohol	5.5
B	Tetrasodium EDTA, 40%	0.1
	Propylene Glycol	5.5
	Sodium C12-C15 Pareth-15 Sulfonate/ Avanel S-150 CGN	3.65
	PEG 60 Lanolin	0.25
	Sodium Hydroxide, 50%	4.1
	Hydrolyzed Animal Protein/Lexein QX 300	0.25
	Perfume	0.1
	Deionized Water	43.55

Hair Relaxer D-52

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Petrolatum (USP)	23.0
	Mineral Oil	14.0
	Cetearyl Alcohol	5.5
B	Tetrasodium EDTA, 40%	0.05
	Propylene Glycol	5.5
	Sodium C12-C15 Pareth-3 Sulfonate/Avanel S-30	3.65
	PEG 60 Lanolin	0.25
	Sodium Hydroxide, 50%	4.1
	Hydrolyzed Animal Protein/Lexein QX 300	0.25
	Perfume	0.1
	Deionized Water	43.55

Procedure:

Heat the petrolatum to 80C and add the mineral oil. Continue heating with slow agitation. When the petrolatum is completely melted, add the cetearyl alcohol. Maintain temperature at 80C and continue stirring. To the deionized water, add the tetrasodium EDTA, propylene glycol, Avanel S-150 CGN or S-30 and PEG 60 lanolin with mixing. Heat to 80C. With vigorous agitation, add Part A to Part B. Stir for 15 minutes. Cool to 40C. Add the sodium hydroxide, animal protein and perfume. (NOTE: At this stage, the formula is separated and resembles cottage cheese. This will be corrected as the batch is finished.) Mix the batch while cooling to a temperature of about 20C using an external ice bath. The sides of the vessel must be freed of product while mixing.

Part B:	
10. Deionized Water	78.92
11. PVP (100%)/Luviskol K90 Powder	1.00
13. Triethanolamine (99%)	0.38
Part C:	
14. PEG-20 Almond Glycerides/Crovol A-40	0.20
15. Linoleamidopropyl PG-Dimonium Chloride Phosphate/ Phospholipid EFA	0.30
16. Cocodimonium Hydroxylpropyl Hydrolyzed Wheat Protein/Hydrotriticum QM	0.30
17. Fruity Floral Fragrance/Fragrance #A42017	1.00
18. Propylene Glycol (and) Methylparaben (and) Propyl- paraben (and) Diazolidinyl Urea/Germaben IIE	1.00

Properties:

Appearance: Thick, glossy, creamy emulsion

pH: 6.0-6.8

Viscosity (cP): 20,000-40,000

Preparation Procedure:

- Part A: Combine all oil phase ingredients, heat mixture to 60-65C, mix until uniform. Disperse Pemulen TR-1 and Carbopol Ultrez 10 polymers in oil phase. Mix until powders are dispersed well.
- Part B: Disperse PVP K-90 in deionized water (55-60C). Mix until polymer is hydrated. Add triethanolamine to solution.
- Add Part A to Part B. Both phases should be at 55-60C. Mix until no lumps remain and batch is uniform, maintaining a temperature of 55-60C.
- Part C: Add Crovol A-40 to batch. NOTE: Batch may invert to a water in oil emulsion (batch will look curdled). Keep mixing and cool batch to 40-45C. Keep mixing until batch reinverts to an oil-in-water emulsion (extra shear agitation may be necessary if the batch has still not reinverted at 40C)
- Part C: After the batch has cooled to 40-45C and inversion is complete, add remaining Part C ingredients. Mix til uniform.

SOURCE: B.F. Goodrich Co.: Formulation P0048

Hair Styling Gel

Diaformer Z-301 provides excellent hold, clear films, and does not flake. This water white, clear formulation has good viscosity initially and over time. This formula can be easily removed from the hair by shampooing.

<u>Ingredients:</u>	<u>Wt%</u>
Deionized Water	95.75
Carbopol 941 (Carbomer 941)	0.40
Triethanolamine 99%	0.40
Diaformer Z-301 (Methacryloyl Ethyl Betaine/Methacrylates Copolymer)	3.35
Fragrance and Preservative	qs

Procedure:

Add Carbopol 941 to water and mix until a homogeneous viscous liquid develops. Add Triethanolamine to neutralize the Carbopol 941. Mix well. Add Diaformer Z-301 and other ingredients one at a time mixing well after each addition. Adjust pH as desired.

Properties:

Appearance: Water white, clear gel
 pH: 6.0
 Viscosity: 12,500-13,000 cps
 Formula CHF-16/REF: CL24-101

Hard Hold Hair Spray

This hard hold hair spray uses Diaformer Z-AT for its excellent curl retention and hold. Diaformer Z-AT also helps to reduce static and improve manageability when the hair is combed. This formulation also meets 80% VOC requirements by incorporating almost 13% water.

<u>Ingredients:</u>	<u>Wt%</u>
Diaformer Z-AT (Methacryloyl Ethyl Betaine/Methacrylates Copolymer)	17.50
Deionized Water	12.70
Dow Corning 190 (Dimethicone Copolyol)	0.10
SD 40 Alcohol	69.50
Lauramide DEA	0.10
Fragrance and Preservative	qs

Procedure:

Add Diaformer Z-AT to the alcohol mixing well. Add water with mixing. Add remaining ingredients one at a time with mixing.

Appearance: Clear, slightly yellow liquid
 Formula CHF-17/REF: CL27-35

Hair Styling Gel

Illustrates a hair styling gel based on a Carbomer resin and polyvinylpyrrolidone.

<u>Ingredients:</u>	<u>Wt%</u>
A Carbomer 940	0.33
Sorbitol Solution, USP	2.00
SDA-40 Ethanol, 25% aqueous	72.85
B Arlasolve 200 Liquid/Gel	0.40
Water/denatured alcohol, SDA Formula No. 40, 75/25 Weight % mixture	23.07
Vinylpyrrolidone/vinyl acetate copolymer	1.00
Triethanolamine	0.35
Perfume	q.s.

Preparation:

Part (A): Mix Sorbitol Solution with water/alcohol blend. Disperse Carbomer 940 in the Sorbitol Solution water/alcohol blend using high speed propeller agitation. Allow the air bubbles to disperse.

Part (B): Add the Arlasolve 200 Liquid/Gel to the perfume with gentle agitation. Add the water/alcohol solution, PVP/VA, and triethanolamine in that order, stirring after each addition to insure solution. Add (B) to (A) with very slow agitation.

Caution! Ethanol is very flammable!

Formula HC-4

Neutralizing Lotion

A typical bromate neutralizing lotion is represented. Viscosity is controlled by blending surfactants.

<u>Ingredients:</u>	<u>Wt%</u>
A Sodium bromate	12.0
Brij 30 Laureth-4	4.5
Polyglycol palmitic amide	4.5
Water	79.0
Preservative	q.s.
B Acetic acid, glacial	q.s.

Preparation:

Add the sodium bromate to water. Stir with heat until dissolved. Add the remainder of (A). Heat to 70-75C. Agitate continually until cooled to room temperature. Adjust pH to 6.5-7.0 with (B). Replace water lost by evaporation. Package.
Formula HC-18

SOURCE: ICI Surfactants: Suggested Formulations

Hair Styling Mousse

Diaformer Z-SM provides hold as well as conditioning on the hair. Its natural looking hold is flexible and bouncy. Sandoxylate SX-424 acts as a fragrance solubilizer and Elfugin AKT 300 is a corrosion inhibitor.

<u>Ingredients:</u>	<u>Wt%</u>
Diaformer Z-SM (Methacryloyl ethyl betaine/Methacrylates Copolymer)	4.00
Deionized Water	78.05
Dow Corning 193 (Dimethicone Copolyol)	0.25
SD 40 Alcohol	17.00
Sandoxylate SX-424 (PPG-2 Isodeceth-12)	0.45
Fragrance	0.10
Elfugin AKT liq 300 (Sodium C13-15 Pareth-8 Butyl Phosphate and Sodium C13-15 Pareth-9 Phosphate)	0.10
Preservative	qs

Procedure:

Add water to vessel. With mixing, add Dow Corning 193, SD 40 Alcohol, and Diaformer Z-SM in order. Mix well after each addition. Premix Sandoxylate SX-424 and Fragrance and add to batch with mixing. Add Elfugin AKT and Preservative one at a time with mixing.

Aerosolize in the ratio of 95% concentrate to 5% A-70 propellant.

Notes:

Clariant has worked with Seaquist Valve to develop recommendations for valves. Their recommended valve system for CHF-09 is as follows:

Button: Long Skirt/Long Spout//Stem: 2x0.020", 0.333" stem length
 Gasket: Buna-N 0.042"/Cup: Alum. CC, Ep.Top/Bottom, Cut gasket
 Spring: 0.020" SS Body: Tailless

In addition, they also tested and found four specific gaskets to be compatible with this formulation. They are in the NS-20 series: Buna-N #100 and #102, Buna-P #150 and Butyl #501. CHF-09/Ref: CL24-95

Crystal Clear Hair Styling Gel

<u>Ingredients:</u>	<u>Wt%</u>
Deionized Water	96.78
Carbopol 1342 (Acrylates/C10-30 Alkyl Acrylate Cross-polymer)	0.61
Triethanolamine 99%	0.20
Diaformer Z-301 (Methacryloyl Ethyl Betaine/Methacrylates Copolymer)	1.60
Fragrance and Preservative	qs

Procedure:

Sprinkle Carbopol 1342 into rapidly agitating cold water. Mix well until thoroughly dispersed. With mixing, add Triethanolamine to neutralize the Carbopol 1342. Add Diaformer Z-301 and other ingredients one at a time with mixing. Adjust pH as desired.

Properties:

Appearance: Water white, clear gel

Viscosity: 36,000-40,000 cps

CHF-07/Ref: CL24-66

SOURCE: Clariant Corp.: Suggested Formulations

Hydrogen Peroxide Emulsions

Hydrogen peroxide emulsions are listed below, based on 6% hydrogen peroxide content. Other levels should be tolerated but should be carefully evaluated. Viscosity can be varied by adjusting the levels of fatty alcohols, fatty acid, and emulsifier.

Cream

<u>Ingredients:</u>	<u>Wt%</u>
A Cetyl alcohol	6.0
Brij 721 Steareth-21	5.0
Silicone oil, 350 cs.	0.5
B Water, deionized	66.3
C Hydrogen peroxide, 27% dilution grade	22.2

Lotion

<u>Ingredients:</u>	<u>Wt%</u>
A Cetyl alcohol	3.0
Brij 721 Steareth-21	3.0
Silicone oil, 350 cs.	0.5
B Water, deionized	66.3
Sorbitol Solution, USP	5.0
C Hydrogen peroxide, 27% dilution grade	22.2

Preparation:

Heat (A) to 70C and (B) to 72C. Add (B) to (A) slowly with moderate agitation. Add (C) below 45C and stir to 35C. Replace water lost by evaporation and adjust pH to between 3.5-4.0 with dilute phosphoric acid (10% C.P.). Package in suitable container for possible evolution of oxygen.

Comments:

After four weeks at room temperature the above cream formula has a viscosity of about 17,600 cps. The emulsion stability is good for at least four weeks at 50C and for at least four freeze-thaw cycles.

After four weeks at room temperature the lotion formulation has a viscosity of 5,600 cps. The emulsion is physically stable at 50C for at least four weeks and four freeze-thaw cycles. After three months at room temperature the H2O2 content was almost 5%.

SOURCE: ICI Surfactants: Formula HC-13

Hydrogen Peroxide Lotion

The formula listed below departs in that a combination of stearic acid and fatty alcohols is used to achieve the desired consistency. Also phenacetin, a stabilizer, and N-hydroxyethyl-ethylenediaminetriacetic acid, a chelating agent, are included to promote stability of the hydrogen peroxide.

<u>Ingredients:</u>	Wt%
A Stearic acid, triple pressed	10.00
Stearyl alcohol	0.50
Cetyl alcohol	1.00
Brij 721	5.00
Silicone oil, 350 cs.	0.50
B Water	60.56
N-hydroxyethylethylenediamine-triacetic acid	0.20
Phenacetin	0.04
C Hydrogen peroxide, 27% dilution grade	22.20
D Phosphoric acid (10% C.P.)	9.50

Preparation:

Heat (A) to 70C and (B) to 72C. Add (B) to (A) slowly with moderate agitation. Add (C) below 45C and stir to 35C. Replace water lost by evaporation and adjust pH to between 3.5-4.0 with dilute phosphoric acid (10% C.P.). Package in suitable container for possible evolution of oxygen.

Comments:

After five weeks at room temperature the viscosity of the lotion was 10,200 cps. The emulsion was stable for at least five weeks at 50C and for at least four freeze-thaw cycles. After three months at room temperature the hydrogen peroxide content was 5%.

Formula HC-14

Styling/Conditioning Mousse

A prototype styling/conditioning mousse is shown. It includes Forestall as a conditioner, a silicone copolymer to improve wet combing and polymeric resin for setting.

<u>Ingredients:</u>	Wt%
A Forestall	1.4
Brij 721	0.5
Amodimethicone (and) Nonoxynol-10 (and) Tallow-trimonium chloride	0.1
Water	78.0
B Vinylcaprolactam/PVP/Dimethylaminoethyl methacrylate copolymer	5.0
Ethanol, SDA-40	10.0
C Hydrocarbon Propellant A-46	5.0

Preparation:

Heat (A) to 70C with stirring until uniform. Cool to 40C. Add (A) to (B) with stirring. Pack in suitable aerosol containers and pressurize with (C) at room temperature.

Caution: Ethanol is very flammable!

Formula HC-12

Medium Hold, 80% VOC Pump Hair Spray

Diaformer Z-A provides a medium hold in this clear, water white spray. It also reduces static and improves manageability when the hair is combed. Its clear, flexible film gives a natural looking hold while offering excellent curl retention.

<u>Ingredients:</u>	<u>Wt%</u>
Diaformer Z-A (Methacrylol Ethyl Betaine/Methacrylates Copolymer)	5.00
Dow Corning 190 (Dimethicone Copolyol)	0.20
Lauramide DEA	0.10
SD 40 Alcohol	75.00
Fragrance and Preservative	qs
Deionized Water	qs

Procedure:

Add Diaformer Z-A to the alcohol mixing well. Add water with mixing. Add remaining ingredients one at a time with mixing.

Appearance: Clear, water white liquid

Formula CHF-12/REF: CL24-76

Firm Hold, 80% VOC Pump Hair Spray

Diahold A-503 is easily formulated into a firm hold spray. This anionic polymer requires no in-process neutralization. Its good compatibility with water and superior curl retention produce a clear water white spray with excellent hold.

<u>Ingredients:</u>	<u>Wt%</u>
Diahold A-503 (AMP-Acrylates Copolymer)	7.00
Dow Corning 190 (Dimethicone Copolyol)	0.20
Lauramide DEA	0.10
SD 40 Alcohol	75.00
D-Panthenol	0.05
Fragrance and Preservative	qs
Deionized Water	qs

Procedure:

Add Diahold A-503 to the alcohol mixing well. Add water with mixing. Add remaining ingredients one at a time with mixing.

Appearance: Clear, water white liquid

Formula CHF-13/REF: CL24-74

SOURCE: Clariant Corp.: Suggested Formulations

Mild Fortified Hair Conditioner

This formulation provides a high degree of substantivity and conditioning. It helps to minimize damaged hair while leaving the hair soft and manageable.

<u>Ingredients:</u>	<u>Wt%</u>
Water	90.5
Cetearyl Alcohol	3.0
Monalac MPL	2.0
Monaquat SL-5	2.5
Glycerin	2.0

Adjust the pH to 5.0
 Appearance: White milky liquid
 Viscosity at 25C: 800 cP

Features of Monalac MPL:

Long lasting conditioning
 Highly substantive on skin and hair
 Smooth silky after-feel
 Unusually mild cleanser properties
 Multifunctional surfactant
 Low irritation potential

Hair Conditioner

<u>Ingredients:</u>	<u>Wt%</u>
0.5% Hydroxyethylcellulose in water	93.0
Cetyl Alcohol	3.0
Monasil PLN	4.0

Viscosity: 2000 cps
 Opaque Viscous Liquid

Procedure:

Hydrate HEC in water, then add remaining ingredients in order with sufficient heat to melt cetyl alcohol. Add fragrance, preservative, and then package.

Features of Monasil PLN:

Water soluble
 High silicone content
 Highly substantive
 Non irritating
 Long lasting silky after-feel
 Multifunctional surfactant properties

SOURCE: Mona Industries, Inc.: Suggested Formulations

Permanent Wave Lotion

One obvious application for Forestall is in home permanents as a deodorizer/conditioner. The following example is a basic formula without optional ingredients like opacifiers or thickeners.

<u>Ingredients:</u>	<u>Wt%</u>
A Forestall soyaethyl morpholinium ethosulfate	1.4
Brij 35 Laureth-23	2.0
Water	80.1
B Ethanolamine	9.5
C Thioglycolic acid	7.0

Preparation:

Mix (A) with gentle heat if necessary until uniform. Add (B). Add (C). Adjust pH to 9.0-9.5 with additional ethanolamine or thioglycolic acid.
Formula HC-15

Neutralizing Lotion

<u>Ingredients:</u>	<u>Wt%</u>
A Forestall soyaethyl morpholinium ethosulfate	1.4
Brij 35	2.0
Water	92.3
Stabilizer	q.s.
B Hydrogen peroxide, 35%	4.3
C Phosphoric acid	q.s.

Preparation:

Mix (A) with gentle heat until uniform. Add (B) at 25C. Adjust pH to 4.0-5.0 with (C). Optional stabilizers may include sequestrants or antioxidants.
Formula HC-16

SOURCE: ICI Surfactants: Suggested Formulations

Spray Hair Gel

This clear gel has excellent pump spray quality, with moderate hold and little tack on hair under humid conditions. Carbopol Ultrez 10 gives a very clear gel which suspends air bubbles, yet thins when pumped through the sprayer to give a fine mist.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Part A:	
Deionized Water	29.70
Carbomer/Carbopol Ultrez 10	0.30
Part B:	
Glycerin	2.00
Methylparaben	0.20
Part C:	
Deionized Water	59.37
PVP/VA copolymer/Luviskol VA-73W	8.00
Triethanolamine (99%)	0.12
DMDM Hydantoin/Glydant	0.20
Disodium EDTA/Versene NA	0.01
Part D:	
PEG-45 Palm Kernel Glycerides/Crovol PK-70	0.10

Properties:

pH: 5.3-5.6

Viscosity (cP): 8,000-10,000

Clarity (%T): 89.0-95.0

Preparation Procedure:

1. Part A: Disperse Carbopol Ultrez 10 polymer by sprinkling on the surface of warm (25-45C) deionized water. No mixing required.
2. After the polymer is wetted (no dry white powder visible), mix slowly at low speed.
3. Mix Part B ingredients with heat until paraben is dissolved.
4. Add Part B to Part A with moderate agitation.
5. Mix Part C ingredients until they are dissolved.
6. Add Part C to Parts A and B with moderate agitation.
7. Premelt Crovol PK-70 and add to batch.
8. Add small additional amounts of TEA until gel is clear (pH 5.3-5.6).

Special Instructions:

In this formulation, a PVP/VA (70:30) copolymer in aqueous solution is required to maintain optimum clarity at up to 4% resin solids. Additionally, the best clarity will be obtained when the pH is maintained between 5.3-5.6. Special care should be taken to not exceed this pH.

Additional hold can be obtained by the incorporation of PVP K90 (BASF) at 0.5% to Part B without a reduction of gel clarity.

The viscosity can be lowered by adding very small quantities of Na₂ EDTA (0.01% increments) if so desired.

Note:

Recommended sprayer is Calmar Mark IV high pressure, 1.8 lb. precompression spring, Wt 25 Actuator orifice (Calmar, Inc.).

SOURCE: B.F. Goodrich Co.: Formulation 0003

Spray-On Conditioner

<u>Ingredients:</u>	<u>Wt%</u>
Water	93.35
Tetrasodium EDTA	0.10
Propylene Glycol	2.00
Glycerin	1.25
Quaternium-80 (Abil Quat 3272)	0.30
DL-Panthenol	0.50
Dimethicone Copolyol (Abil B 88183)	1.00
Sucrose Cocoate (Tegosoft LSE 65K)	0.50
PEG-30 Glyceryl Laurate (Tagat L)	1.00
Fragrance	Q.S.
Preservatives	Q.S.

Procedure:

Combine ingredients in order, mixing between additions.

Spray Detangler

This product is sprayed onto the hair to make combing of wet or dry hair easier.

<u>Ingredients:</u>	<u>Wt%</u>
Water	87.3
Propylene Glycol	8.0
Cocamidopropyl Betaine (Tego Betaine L-7)	3.0
PEG-7 Glyceryl Cocoate (Tegosoft GC)	1.0
Dimethicone Copolyol (Abil B 8852)	0.7
Fragrance	Q.S.
Preservatives	Q.S.

Procedure:

Blend the ingredients in order, mixing between additions until the formula is clear.

Comb Through Glosser

<u>Ingredients:</u>	<u>Wt%</u>
Cyclomethicone (and) Dimethiconol (and) Dimethicone (Abil OSW-12)	68.0
Phenyl Trimethicone (Abil AV-20)	20.0
Dimethicone (500 cs)	2.0
Dimethicone (1000 cs)	10.0
Fragrance	Q.S.

Procedure:

Combine ingredients in order - mixing well.

Caution: Traces of water will cause turbidity.

Washable Crew Cut Wax

This formula was developed to provide good grooming, color, odor, high melting point, and rapid washability. Hair brushes stay clean and the user gets a light shampoo simply by standing under the shower.

<u>Ingredients:</u>	<u>Wt%</u>
Tallow glycerides	15.0
Tween 60	20.0
Arlacel 165 glycerol monostearate and PEG-100 stearate	30.0
Brij 58 Ceteth-20	30.0
Paraffin wax	5.0

Preparation:

Heat all ingredients together at 70C and agitate. Cast into molds and cool.

Formula HC-3

Clear Hair Conditioner Lotion

<u>Ingredients:</u>	<u>Wt%</u>
A Hydroxyethyl cellulose, 3% aqueous	40.0
B Forestall soyaethyl morpholinium ethosulfate	1.4
Water	58.6

Preparation:

Prepare (A) in advance by dispersing hydroxyethyl cellulose in water to yield a 3% solution. Prepare solution (B). Add (B) to (A) with stirring until homogeneous.

Formula HC-8

Cream Hair Rinse

Forestall can also be used effectively in an opacified "cream rinse" lotion like the one shown below.

<u>Ingredients:</u>	<u>Wt%</u>
Cetyl alcohol	1.5
Brij 721 Steareth-21	1.0
Forestall soyaethyl morpholinium ethosulfate	1.4
Water	96.1

Preparation:

Heat to 70C with stirring until uniform. Cool with stirring and add make-up water at 50C.

Formula HC-9

55% VOC Pump Hair Spray

This 55% VOC hair spray incorporates Diaformer Z-400. This deodorized polymer is well suited to lightly fragranced products. It provides a medium hold in this crystal clear, water white spray. Velsan P8-3 acts as a non-greasy superfatting agent.

<u>Ingredients:</u>	<u>Wt%</u>
Diaformer Z-400 (Methacryloyl Ethyl Betaine/Methacrylates Copolymer)	4.00
SD 40 Alcohol	40.00
Velsan P8-3 (Isopropyl C12-15 Pareth-9 Carboxylate)	0.50
Fragrance and Preservative	qs
Deionized Water	qs

Procedure:

Add Diaformer Z-400 to the alcohol mixing well. Add water with mixing. Add remaining ingredients one at a time with mixing.

Appearance: Clear, water white liquid
Formula CHF-14/REF: CL24-76

80% VOC Aerosol Hair Spray

Diaformer Z-AT provides excellent curl retention and hold in this 80% VOC aerosol hair spray. In addition, it provides some conditioning, reduces static, and improves manageability when the hair is combed.

<u>Ingredients:</u>	<u>Wt%</u>
Diaformer Z-AT (Methacryloyl Ethyl Betaine/Methacrylates Copolymer)	3.60
Deionized Water	19.60
Dow Corning 190 (Dimethicone Copolyol)	0.20
SD 40 Alcohol	75.00
Lauramide DEA	0.10
Fragrance and Preservative	qs

Procedure:

Add Diaformer Z-AT to the alcohol mixing well. Add water with mixing. Add remaining ingredients one at a time with mixing.

Aerosolize in the ratio of 80 parts concentrate to 20 parts propellant.

Appearance: Clear, water white liquid

Carbopol 980	0.30
Glycerin	2.00
c) KOH 20%	0.75
d) Water, distilled	9.38
Na3-Citrate x 2H2O	0.12
MPC-Milk Peptide Complex	0.50

Manufacture:

- a) Melt and bring to approx. 80C.
- b) Bring to approx. 80C and add to a) with stirring. Continue stirring until cooled to approx. 50C.
- c) Add. Continue stirring until cooled to approx. 30C.
- d) Stir in. Perfume, homogenize.

MPC contains natural polypeptides from milk, in activated form. A protective environment exclusively comprised of milk components such as lactalbumin, lactoglobulin, lactoferrin, lactose and lactate provides for product stability and maintenance of bioactivity. Bioactivity is standardized in every batch of MPC to a representative concentration range (EC50). In vitro bioassays in cell cultures and in vivo tests on epithelial tissue and on human skin give proof of the bioactivity and cosmetic benefits of MPC.

Hand Lotion

An easy-to-make, basic, yet very effective moisturizing hand lotion.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Demineralized Water	82.34
	Hydroxypropyl Methylcellulose/Methocel 40-100	0.10
B	Na4EDTA	0.20
	Triethanolamine	0.08
C	Glycerin	3.00
	Propylene Glycol	3.00
	Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben/ Germaben II	0.60
	Sodium C12-15 Pareth-15 Sulfonate/Avanel S-150 CGN	0.50
D	Cetearyl Alcohol (and) Ceteareth-20/Maco1 124	4.50
	Sorbitan Stearate/S-Maz 60	1.00
	Mineral Oil/Drakeol 9	2.00
	Isopropyl Palmitate/Lexol IPP	2.00
	Cyclomethicone/Masil SF-V	0.50
E	Fragrance/Lotion 4047	0.05
F	Citric Acid, 50%	0.13

pH: 6.0-6.5

Viscosity: 4000-6000 cps (Brookfield #2 @ 6 rpm)

Appearance: Glossy white, flowable lotion

Procedure:

In the main vessel, mix the part A ingredients for 10 minutes. Add the part B ingredients, and mix for 20 minutes. Add the part C ingredients, and begin heating the batch to 60C. In a separate vessel, premix part D, heating to 60C. Slowly, with good propellor agitation, add part D to the main batch. When uniform and smooth, begin cooling while maintaining good agitation. Add fragrance and adjust pH when batch is at about 45C. Package at about 35C. Product will remain thin and pourable for several hours at room temperature. It thickens to specified viscosity overnight.

Hand and Body Lotion

This hand and body lotion combines skin moisturizing and protective properties with a non-tacky, natural skin feel.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Part A:	
Deionized Water	83.90
Disodium EDTA	0.10
Carbomer/Carbopol Ultrez 10	0.20
Part B:	
Propylene Glycol	0.80
Glycerin	5.00
Methylparaben	0.20
Propylparaben	0.10
Part C:	
Mineral Oil/Drakeol 21	4.00
Stearic Acid (triple pressed)/Hystrene 5016	2.00
Glycol Stearate	1.50
Cetyl Acetate/Acetylated Lanolin Alcohol/Acetulan	0.50
Glyceryl Stearate	0.50
Cetyl Alcohol	0.20
Dimethicone/Dow Corning 200 Fluid, 100 cs	0.50
Part D:	
Triethanolamine (99%)	0.50

Properties:

pH: 6.9-7.3

Viscosity (cP) at 25C: 14,000-20,000

Color, odor, appearance: Thick, white, glossy emulsion

Procedure:

1. Add disodium EDTA to the water. Mix until dissolved.
2. Disperse Carbopol Ultrez 10 polymer in the water. After polymer has fully wetted, mix at a slow speed.
3. Combine Part B. Heat slightly and mix until the parabens are dissolved. Add to Part A.
4. Heat the combined Parts A and B to 65C.
5. Combine Part C. Heat to 65C and mix slightly until all the solids are dissolved.
6. Add Part C to Parts A and B. While the temperature is at 65C, add Part D.
7. Mix the emulsion with moderate agitation until the temperature reaches 40C. Cool to room temperature.

Light Moisturizing Lotion

A light, nonoily lotion which spreads easily and is absorbed quickly into the skin. Suitable as a base for an after-shave balm or an after-sun lotion.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Deionized Water	79.5
	Hydroxypropyl Methylcellulose/Methocel 40-100	0.1
	PPG-4 Ethylene Diamine/Mazeen 174	0.2
B	Cetyl Alcohol/CO-1695	2.0
	Stearic Acid/Emersol 132	2.0
	Sorbitan Laurate/S-Maz 20	2.0
	Benzyl Laurate/Mazol EE-1	1.0
	Cyclomethicone/Masil SF-V	2.0
	Dimethicone/Masil SF-1000	0.5
C	Methyl Paraben	0.2
	Imidazolidinyl Urea/Germall 115	0.2
	SD Alcohol 40B	5.0
D	Citric Acid	0.3
	Deionized Water	5.0

pH: 6.0-6.5

Viscosity: 54,000 cps (Brookfield TC @ 1.5 rpm)
7,200 cps (Brookfield #3 @ 12 rpm)

Appearance: Slightly pearlescent, glossy white lotion

Procedure:

Mix part A water and the hydroxypropyl methylcellulose in main tank, begin heating to 70C. After five minutes, add the Mazeen 174 to raise the pH to 8.5-9.0, hydrating the cellulose. In a side vessel, mix and heat the part B ingredients to 70C. Add part B to part A with good mixing. Add the methyl paraben. Cool the batch to 35-40C, add the imidazolidinyl urea and alcohol. Adjust the pH with citric acid dissolved in water.

SOURCE: PPG Industries, Inc.: Suggested Formulation I-205

Lotion

Formula SK-8a is a mineral based oil-in-water lotion with a viscosity in the range of 6-8,000 cps. Thermal stability is good, with some separation noted after the fourth freeze-thaw cycle.

<u>Ingredients:</u>	<u>Wt%</u>
A Light mineral oil	8.0
Stearyl alcohol	1.0
Brij 721 Steareth-21	2.0
Brij 72 Steareth-2	2.0
B Water, deionized	86.9
C Preservative	q.s.
D Fragrance	0.1

Preparation:

Heat (A) to 70C and (B) to 72C. Add (B) to (A) and agitate with propeller. Add (C) below 50C and (D) at 35C. Add water to replace that lost by evaporation. Homogenize.
Formula SK-8a

The formula below provides excellent emollience without excessive greasiness. This might be used for a dry skin preparation.

Dry Skin Lotion

<u>Ingredients:</u>	<u>Wt%</u>
A. Light mineral oil	10.0
Arlamol ISML Isosorbide Laurate	7.0
Silicone oil, 350 cs.	0.5
Brij 700 Steareth-100	2.4
Span 60 Sorbitan Stearate	3.6
B. Water, deionized	72.8
Carbomer 934	0.3
Sorbitol Solution, USP	3.0
C. Sodium hydroxide solution, 10% aqueous	0.3
D. Preservative	q.s.
E. Fragrance	0.1

Preparation:

Heat (A) to 70C and (B) to 72C. Add (B) to (A) slowly with moderate agitation. Add (C). Add (D) below 50C. Add (E) at 35C and replace water lost by evaporation.
Formula SK-11

SOURCE: ICI Surfactants: Suggested Formulations

Lotion for Very Dry Skin

Provides instant softening and moisturization for rough, chapped skin. The greasiness of the petrolatum is greatly reduced by the dry feel of Mazon EE-1, and there is no draggy transition during rubout thanks to Macol 57.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Deionized Water	71.2
	Hydroxypropyl Methylcellulose/Methocal 40-100	0.2
	Triethanolamine, 50%	0.1
B	Glycerin	4.0
	Methyl Paraben	0.2
C	Petrolatum/Perlatum 410 CG	6.0
	Cetearyl Alcohol (and) Ceteareth-20/Macol 124	5.0
	Benzyl Laurate/Mazon EE-1	4.5
	Cetyl Acetate (and) Acetylated Lanolin Alcohol/ Acetulan	4.0
	PPG-10 Butanediol/Macol 57	2.5
D	Imidazolidinyl Urea/Germall 115	0.2
	Deionized Water	2.0
E	Fragrance	0.1
	Citric Acid	Q.S.

pH: 6.3-6.8

Viscosity: 300,000 cps (Brookfield TF @ 1.5 rpm)

Appearance: Glossy white, viscous lotion

Procedure:

Disperse the hydroxypropyl methylcellulose into the part A water. Add the triethanolamine and mix for at least 20 minutes. Add the part B ingredients, and heat to 65C. Premix part C in a separate vessel, heating to 70C. Add part C to A+B with good agitation to form the emulsion. With sweep agitation, cool to 45C. Add part D (premixed), followed by fragrance. Adjust pH, if necessary.

Low Cost Moisturizing Lotion

This ultra light lotion leaves the skin with a soft, smooth velvety feel.

<u>Sequence:</u>	<u>Raw Material/INCI Name:</u>	<u>Wt%</u>
1	Deionized Water	77.76
1	Methylparaben	0.25
1	Hampene Na3T/Trisodium EDTA	0.05
1	Liponic EG-1/Glycereth-26	1.25
2	Carbopol 934 (2% aq. disp'n.)/Carbomer	12.00
3	Liponate NPGC-2	2.00
3	Lipomulse 165	1.25
3	Lipopeg 6000DS/PEG-150 Distearate	0.50
3	Lipocol C/Cetyl Alcohol	1.00
3	Lipowax P/Emulsifying Wax, NF	0.60
3	Lipovol CO/Castor Oil	0.50
3	Lipovol ALM/Sweet Almond Oil	0.30
3	Propylparaben	0.10
4	Deionized Water	1.00
4	Triethanolamine, 99%	0.24
5	Deionized Water	1.00
5	Unicide U-13/Imidazolidinyl Urea	0.20

Procedure:

- Mix and heat Sequence #1 to 80C using high speed on overhead mixer.
- Heat Sequence #2 to 70C and add to Sequence #1, bringing temperature back to 80C.
- Mix together Sequence #3 and heat to 78C until completely melted and clear. Then add to batch at medium speed on overhead mixer.
- Premix Sequence #4 and add to batch at medium/high speed on overhead mixer, while cooling batch to 35C using sweep blade at low speed.
- Premix Sequence #5 ingredients and add to batch at 35C.

Moisture Lotion

<u>Ingredients:</u>	<u>Wt%</u>
A: Squalane	34.5
Beeswax	1.5
Propylene glycol stearate	1.5
Glyceryl stearate SE	3.0
POE (15) Glyceryl stearate	4.0
POE (30) Glyceryl stearate	2.0
B: Acylglutamate HS-11	0.2
Propylene glycol	5.0
Prodew 100	2.0
Methyl paraben	0.2
Water	balance

Procedure:

Dissolve (A) and (B) respectively at 80-85C. Add (A) to (B), stir. Cool down to 50C with rapid agitation by homomixer and then to 35C with moderate agitation.

Formula No. NCC-1003-1

W/O Lotion

<u>Raw Materials:</u>	<u>Wt%</u>
A: Eldew CL-301	2.0
Polyglyceryl-3 diisostearate	0.5
Glyceryl trioctanoate	8.0
Squalane	4.4
B: Dimethicone copolyol	10.0
Dimethicone (highly polymerized)	2.0
C: Glycerin	5.0
Marindew PC-100	0.02
BG-M	1.0
NaCl	0.8
Water	to make 100.0

Procedure:

Heat (A) to 40-50C. Add (B) to (A) with agitation. Mix and dissolve (C) at room temperature and add slowly to the mixture of (A) and (B) with high shear mixing (4000 rpm for 4 minutes).

Features:

A w/o lotion with light and less occlusive touch.

Formula No. M-2

SOURCE: Ajinomoto U.S.A., Inc.: Applications Formulas

Moisturizing Milk Lotion

<u>Ingredient:</u>	<u>Wt%</u>
Part A:	
Monalac MPL	5.0
Monaquat SL-5	5.0
Water	55.7
Potassium Hydroxide (45%)	0.2
Monasil PLN	4.0
Part B:	
Monafax MAP 160	0.5
Monalac ML	20.0
Cetearyl Alcohol (Alfol 1618CG)	5.1
Isopropyl Palmitate	2.0
Part C:	
Fragrance	2.0
Germaben II	0.5

Procedure:

- 1) Combine ingredients in both phases separately.
- 2) Heat both separately to 75C.
- 3) Add Part B to Part A and homogenize for at least 15 minutes.
- 4) Stir cool, with minimal aeration to 45C.
- 5) Add fragrance, color, and preservative (Part C).
- 6) Adjust pH to 6.0-6.5 then fill.

Monasil PCA Lotion

<u>Ingredients:</u>	<u>Wt%</u>
Part A:	
Phospholipid SV	3.0
Propylene Glycol	2.0
Germaben IIE	0.4
Titanium Dioxide	0.4
Triethanolamine (99%)	0.6
Water	84.6
Part B:	
Cetyl Alcohol	2.0
Monafax MAP 160	1.0
Hexyl Laurate	4.0
Monasil PCA	2.0

Procedure:

Heat A & B separately to 65C. Slowly add B to A with homogenization and continue blending for an appropriate time. Stir cool to 40-45C, add fragrance and package.

Typical Properties:

Viscosity: 100,000 cP/pH: 6.4

O/W Body Lotion, Cold Processing

<u>Component:</u>	<u>Wt%</u>
I Eumulgin VL 75/Lauryl Glucoside (and) Polyglyceryl-2-Di-polyhydroxystearate (and) Glycerin	4.5
Cetiol J 600/Oleyl Erucate	4.0
Cetiol V/Decyl Oleate	3.0
Cetiol OE/Dicaprylyl Ether	2.0
Myritol 312/Caprylic/Capric Triglyceride	6.0
Dow Corning 1401 Fluid/Cyclomethicone (and) Dimethiconol	1.0
II Glycerin 86%	2.4
Carbopol 980 2% sol./Carbomer	15.0
KOH 20%	0.6
Water	61.5
Preservative/Perfume	q.s.
Viscosity mPas: 8,800	

Preparation in the Laboratory/Cold Emulsifying Process:

Mix phase I at room temperature, add the previously swollen Carbopol (2%) and the other components of phase II while stirring and homogenize. Duration and intensity of the homogenization depend upon the technical conditions. Finally neutralize with KOH.

Formulation No.: 95/117/59

Light O/W Lotion

<u>Component:</u>	<u>Wt%</u>
I Eumulgin VL 75/Lauryl Glucoside (and) Polyglyceryl-2 Dipolyhydroxystearate (and) Glycerin	4.5
Lanette O/Cetearyl Alcohol	1.0
Cetiol J600/Oleyl Erucate	3.0
Myritol 331/Cocoglycerides	6.0
Cetiol OE/Dicaprylyl Ether	2.0
Baysilon M 350/Dimethicone	0.5
Monomuls 60-35 C/Hydrogenated Palm Glycerides	1.0
Carbopol ETD 2001/Carbomer	0.2
Copherol F 1300/Tocopherol	1.0
II Glycerin 86%	2.0
KOH 20%	0.5
Water	78.3
Preservative/perfume	q.s.
Viscosity mPas: approx. 10,000	

Preparation in the Laboratory:

Heat phase I to 80C. Heat phase II to 80C and add the oil phase while stirring. Allow the emulsion to cool with stirring. The stirring rate must be selected in such a way that the emulsion is kept in continual motion without developing a so-called "stirring cone". Add the Carbopol into the oil phase. Neutralize at 40C. Add preservative and perfume at room temperature.

Formulation No.: 97/004/25

SOURCE: Henkel KGaA: Suggested Formulations

O/W Lotion for Spray Application

<u>Component:</u>	<u>Wt%</u>
I. Emulgade SE/Glyceryl Stearate (and) Ceteareth-20 (and) Ceteareth-12 (and) Cetearyl Alcohol (and) Cetyl Palmitate	4.5
Eumulgin B2/Ceteareth-20	1.0
Cetiol LC/Coco-Caprylate/Caprata	5.0
Cetiol OE/Dicaprylyl Ether	5.0
II. Water, demin.	84.5
Preservative	q.s.
Viscosity, 23C. mPas: <100	
Brookfield	

Preparation in the Laboratory:

1. Heat phase I to 85C and stir until homogeneous.
 2. Heat phase II to 85C and stir slowly into phase I.
 3. Allow the emulsion to cool with stirring; the stirring rate must be selected in such a way that the emulsion is kept in continual motion and no air is trapped.
 4. Add preservative if necessary. Stop stirring at 30C.
- Formulation No. 93/060/24

Soft O/W Body Lotion

<u>Component:</u>	<u>Wt%</u>
I. Emulgade SE/Glyceryl Stearate (and) Ceteareth-20 (and) Ceteareth-12 (and) Cetearyl Alcohol (and) Cetyl Palmitate	8.0
Eumulgin B 2/Ceteareth-20	2.0
Mandelol/Almond oil	2.0
Eutanol G/Octyldodecanol	2.0
Cetiol 868/Octyl Stearate	8.0
II. Water	55.0
Glycerin 86%	5.0
III. Carbopol 980 2% swelling/Carbomer	15.0
IV. NaOH (1% sol)	9.0
Preservative	q.s.
Viscosity, mPas: 8000	
Brookfield, 23C	

Preparation in the Laboratory:

1. Melt phase I at 85C and stir until homogeneous.
 2. Melt phase II at 85C and stir slowly into phase I. Stir at temperature for min.
 3. Allow the emulsion to cool until 50C with stirring and add phase III. Stir until homogeneous.
 4. Neutralize with phase IV. Allow to cool to 30C with stirring.
- Formulation No. 93/027/22

Oil-in-Water Stearic Acid Lotion

Arlacel 165 produces a stable lotion which is made even more elegant by the addition of Arlamol E.

<u>Ingredients:</u>	Wt%
A. Stearic acid, triple pressed	2.0 to 4.0
Arlamol E	2.0
Arlacel 165 Glyceryl Stearate and PEG-100 Stearate	5.0
B. Sorbitol Solution, USP	10.0
Water	79.0 to 81.0
Preservative	q.s.

Preparation:

Heat (A) to 70C. Heat (B) to 72C. Add (B) slowly to (A) with rapid agitation. Stir until cooled to room temperature. Replace water lost by evaporation.

Formula SK-2a

Hand Lotion

<u>Ingredients:</u>	Wt%
A. Light mineral oil	8.0
Arlamol E	3.0
Arlacel 165	5.0
Myrj 52, PEG-40 Stearate	2.0
Brij 30, Laureth-4	1.0
B. Water	76.4
Sorbitol Solution, USP	4.0
Carbomer 934	0.3
C. Sodium hydroxide solution, 10% aqueous	0.3
D. Preservative	q.s.

Preparation:

Disperse Carbomer 934 with agitation and heat to 72C. Heat (A) to 70C. Add (B) to (A) with moderate agitation. Add (C). Add (D) below 50C. Stir to 35C and replace water lost by evaporation.

Formula SK-3

Hand Lotion

<u>Ingredients:</u>	Wt%
A. Arlamol E pop 15 stearyl ether	8.0
Arlasolve 200 Liquid (72% active) poe 20 isohexadecyl ether	1.7
Brij 72 poe 2 stearyl ether	2.8
Stearyl alcohol, USP	2.0
B. Water, deionized	85.1
Carbomer 934	0.2
C. NaOH (10% w/w aqueous)	0.2
D. Perfume and preservative	q.s.

Preparation:

Disperse the Carbomer 934 in the water. Heat (A) to 70C and (B) to 72C. Add (B) to (A) with good agitation. Add (C). Add (D) between 35-40C. Pour about 35C.

Formula AE-10

	Ceteareth-20/Macol CSA-20	2.0
	Sorbitan Stearate/S-Maz 20	1.0
B	Deionized Water	80.3
	Glycerin	3.0
	Propylene Glycol	3.0
	Hydroxypropyl Methylcellulose/Methocel 40-100	0.1
	Triethanolamine	0.3
C	Preservative/Germaben II	0.6
	Fragrance	0.1
	Citric Acid	0.1

pH: 6.0-6.5

Viscosity: 31,000 cps (Brookfield #2 @ 1.5 rpm)
23,000 cps (Brookfield #2 @ 3 rpm)

Appearance: Glossy white, flowable lotion

Procedure:

Premix Part A, heat to 60C. In the main vessel, mix the first four ingredients of Part B. Begin heating to 60C; add the triethanolamine to initiate hydration of the hydroxypropyl methylcellulose. With both parts at 60C, slowly add A to B with high shear mixing. Sweep cool to 35C, adding the Part C ingredients at around 40-45C.

Formulation I-204

Solar Protection Lotion

<u>Ingredient:</u>	<u>Wt%*</u>
A: Dimethicone	2.00
Hydroxyoctocosanyl Hydroxystearate	3.50
Potassium Cetyl Phosphate (Amphisol K)	0.50
Titanium Dioxide (and) C12-15 Alkyl Benzoate (Tioveil FIN)	12.50
Sorbitan Palmitate	3.50
Dilauryl Trimethylpropane Siloxy Silicate	5.00
B: Deionized Water	63.10
Veegum Ultra, Magnesium Aluminum Silicate	0.80
Rhodigel, Xanthan Gum	0.20
Propylene Glycol	5.00
Polysorbate 20	3.50
Sodium Lactate	0.30
Lactic Acid to pH 5.5	q.s.
C: Methylchloroisothiazolinone (and) Methylisothiazol- inone (Kathon CG)	0.10

Procedure:

Weigh the water into a suitable vessel and heat to 75C. Mix with a homogenizer operating at 5000 rpm. Weigh and dry blend the Veegum Ultra and Rhodigel, add them to the water and mix for 20 minutes. Add the remaining Part B ingredients and mix each for 3 minutes. Maintain temperature at 75C. Weigh the Part A ingredients into a separate vessel, mix and heat to 75C. Add Part A to Part B. Mix for 10 minutes at 5000 rpm. Transfer the batch to a propeller mixer and adjust the speed to create a small vortex. Begin cooling while mixing at 40C, add Part C. Package at ambient temperature. Note: Avoid pH of 6.5-7.5 as this may affect SPF value.

*As received basis

Ultra-AHA Moisturizing Skin Lotion**Formula Profile:**

The synergistic mixture of Veegum Ultra and Rhodigel will create an AHA cream that will have great spreadability and feel without the tack and stringiness characteristic of Rhodigel. Veegum Ultra will improve stability and maintain viscosity of the product. The emollients in the oil phase and the humectants in the water phase will support lasting residual skin feel and moisturization.

Ingredients:

	Wt%
A: Water	70.64
Veegum Ultra (Magnesium Aluminum Silicate)	1.0
Xanthan Gum (Rhodigel)	0.5

D: Preservative	qs
E: Glycolic Acid	7.0
F: Fragrance	qs
G: Triethanolamine	3.2
Citric Acid	Adjust pH to 3.8+0.2
	qs

Procedure:

Step 1: Dry blend Veegum Ultra and Rhodigel in Part A. (Dry blending reduces the clumping of Rhodigel and allows for the simultaneous introduction of ingredients). Sift the powder into an established vortex in the water. Veegum Ultra will be hydrated within 15 minutes. Allow about 45 minutes for Rhodigel to dissolve completely.

The addition of any other ingredients during the hydration process will interfere with the hydration of Veegum Ultra and will reduce or even eliminate the desired properties generated by the Magnesium Aluminum Silicate.

Step 2: Begin heating water phase in Step 1 to 75C.

Step 3: Once the hydration process is completed, add remaining water phase ingredients from Part B to Step 2.

Step 4: Blend oil phase ingredients in Part C and heat the oil phase to 75C.

Step 5: When both phases are at 75C, add oil phase in Step 4 to water phase Step 2.

Step 6: Cool to 45C. Add Part D-Preservative to Step 2.

Step 7: Add Part E-AHA-Glycolic Acid to Step 2.

Step 8: Add Part F-Fragrance to Step 2.

Step 9: Cool to 35C. Adjust pH with part G.

 Viscosity: 50,000+-10,000 cps after 24 hours.

 pH: 3.6-4.0

 Stable emulsion that passes 3 month stability testing.

SOURCE: R.T. Vanderbilt Co., Inc.: Formula No. 470

Ultra-AHA Moisturizing Skin Lotion**Formula Profile:**

The synergistic mixture of Veegum Ultra and Rhodigel will create an AHA cream that will have great spreadability and feel without the tack and stringiness characteristic of Rhodigel. Veegum Ultra will improve stability and maintain the viscosity of the product. The emollients in the oil phase and the humectants in the water phase will provide residual skin feel and moisturization.

Vanishing Lotion

<u>Ingredients:</u>	<u>Wt%</u>
A: Arlamol ISML, isosorbide monolaurate	4.00
Stearyl alcohol	1.00
Arlamol E, POP (15) stearyl ether	1.00
Dimethicone, 350 cs.	0.50
Brij 700, POE (100) stearyl ether	2.00
Brij 72, POE (2) stearyl ether	2.00
B: Water	79.05
Carbomer 934	0.15
Magnesium Aluminum Silicate solution (5% aqueous)	10.00
C: Sodium hydroxide (10% aqueous)	0.15
D: Preservative	0.10
E: Fragrance	0.05

Suggested Preparation:

Heat A to 70C and B to 72C. Add B to A with moderate agitation. Add C. Add D below 50C. Add E at 35C and add water to compensate for loss due to evaporation.

Comments:

This formula would be suitable for a hand lotion. It is non-greasy and has a very pleasant afterfeel. It is relatively inexpensive since it contains nearly 90% water.

This formula is stable for at least 13 weeks at 5C, and room temperature and for at least six freeze-thaw cycles.

Emollient Lotion

<u>Ingredients:</u>	<u>Wt%</u>
A: Arlamol E pop 15 stearyl ether	12.0
Brij 72 poe 2 stearyl ether	4.8
Brij 721 poe 21 stearyl ether	1.2
B: Water, deionized	82.0
C: Perfume and preservative	q.s.

Preparation:

Heat (A) to 70C and (B) to 72C. Add (B) to (A) slowly. Add (C) at about 40C. Pour about 35C.

Velvet Care Lotion

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
Polyglyceryl-3 Methylglucose Distearate (Tego Care 450)	2.0
Apricot Oil	2.0
Safflower Oil	1.0
Cyclomethicone	3.5
Caprylic/Capric Triglycerides (Tegosoft CT)	3.0
Octyl Stearate (Tegosoft OS)	2.0
Rose Extract	Q.S.
Lavender Extract	Q.S.
Phase B:	
Glycerin	3.0
Water	82.1
Phase C:	
Carbomer 941	0.2
Isopropyl Palmitate (Tegosoft P)	0.8
Phase D:	
Sodium Hydroxide (10% solution)	0.4
Phase E:	
Fragrance	Q.S.
Preservatives	Q.S.

Procedure:

1. Heat the ingredients of Phase A to 80C.
2. Heat the ingredients of Phase B to 80C.
3. Add A to B with agitation.
4. Homogenize
5. Disperse Carbomer into the oil/ester add to A/B. Homogenize.
6. Cool to 35-40C with stirring.
7. Add phase D/E. Stir.
8. Mix until viscosity profile is obtained.

O/W AHA Lotion with Lactic Acid

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
Ceteareth-15 (and) Glyceryl Stearate (Tego Care 215)	6.0
Mineral Oil	4.0
Octyl Stearate (Tegosoft OS)	5.0

Water-In-Oil Mineral Oil Lotions

Formula SK-6, a unique Gel Base, serves as a starting point in formulating W/O emulsions which have exceptional water repellency and pleasant application feel without the usual greasiness or tackiness characteristic of many W/O emulsions.

Gel Base

<u>Ingredients:</u>	<u>Wt%</u>
A Arlacel 186 Glycerol Oleate and Propylene Glycol	10.0
B Sorbitol Solution, USP	90.0
Preservative	q.s.

Preparation:

Add (B) to (A) in small increments, mixing thoroughly between additions. As the addition is continued, the product thickens to form a viscous translucent gel.

Formula SK-6

Water-in-Oil Mineral Oil Lotion

The Gel Base concept of formulating can be used in preparing water-in-oil lotions which have the unique property of water repellency without an oily feel. A small quantity of Tween 80, a hydrophilic surfactant, is added to promote emulsion stability. Although the Gel Base in the following formula is shown as a separate entity, it may be prepared in situ by replacing the 30% Gel Base with 27% Sorbitol Solution and 3% Arlacel 186 (the ratio of 9 to 1 shown in Formula SK-6).

<u>Ingredients:</u>	<u>Wt%</u>
A Formula SK-6 Gel Base	30.0
Mineral oil	15.0
Ceresin wax	0.5
Beeswax	0.5
Tween 80 Polysorbate 80	0.5
B Water	53.5
Preservative	q.s.

Preparation:

Heat (A) to 70C. Heat (B) to 72C. Add (B) to (A) with continuous agitation. Continue agitation to room temperature. Replace water lost by evaporation.

Formula SK-7

Water-In-Oil Moisturizing Lotion

<u>Ingredients:</u>	<u>Wt%</u>
A: Veegum	1.3
Water	55.7
Magnesium Sulphate	0.5
B: Mineral Oil, Light	9.0
Polysynlane	10.0
Nimlesterol D	7.5
Amerchol L101	9.0
70% Sorbitol Solution	5.0
Witcamide 511	2.0
Preservative	q.s.

Procedure:

Add the Veegum to the water slowly, agitating continually until smooth. Add the magnesium sulphate and mix until smooth. Blend B well and add A to B; mix until smooth and uniform.

Packaging:

This formula is a rich, pourable or pumpable lotion and may be dispensed from a suitable glass or plastic bottle.

Comments:

This formula is an elegant, economical, and easily prepared water-in-oil lotion for softening and moisturizing dry skin.

The use of Veegum as an emulsion stabilizer allows a relatively large internal phase without sacrificing product stability. The amount of Veegum used controls the viscosity. In addition, Veegum contributes to the rich, nongreasy feel imparted by the highly emollient oil phase.

This formula would make an elegant addition to a treatment line as a super moisturizer for dry skin.

The CTFA adopted name for Veegum is magnesium aluminum silicate.

Hand Lotion

<u>Ingredients:</u>	<u>Wt%</u>

Shampoos

Anti-Dandruff Shampoo with Zinc Pyrithione

This anti-dandruff shampoo, which contains cationic conditioning agents, uses zinc pyrithione as the active ingredient. The zinc pyrithione is kept suspended using Carbopol ETD 2020.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Part A:	
1. Deionized Water	38.90
2. Acrylates/C10-30 Alkyl Acrylate Crosspolymer/ Carbopol ETD 2020	1.00
3. Sodium Hydroxide (18%)	0.10
Part B:	
4. Propylene Glycol	5.00
5. Sodium Lauryl Sulfate (29%)/Standapol WAQ-LC	16.00
6. Sodium Laureth Sulfate (3 mole, 30%)/Standapol ES-3	16.00
7. Cocamidopropyl Betaine/Incronam 30	4.00
Part C:	
8. Deionized Water	12.00
9. Polyquaternium-10/Ucare Polymer JR-400	0.25
10. DMDM Hydantoin/Glydant	0.30
11. Sodium Hydroxide (18%)	1.30
Part D:	
12. Polyquaternium-39/Merquat 3330	1.00
13. Dimethicone Copolyol/Dow Corning 5324 Fluid	0.20
14. Zinc Pyrithione (48%)/Zinc Omadine FPS	2.50
15. Fragrance/Spicy Floral Fragrance #A41073	0.40
16. FD&C Blue #1 (0.1%)	1.05
Color, Odor, Appearance: Opaque, light blue, viscous liquid	
Actives (1%): 11.14	
pH: 5.8-6.2	
Viscosity (cP): 6,000-9,000	
Yield Value (dynes/cm ²): 180-250	
Stability: Passed 45C, accelerated-28 days	
Freeze/thaw-5 cycles	

Preparation Procedure:**Part A:**

1. Disperse Carbopol ETD 2020 in warm (45C) deionized water using rapid agitation. Reduce mixing speed and mix for 20 minutes. Partially neutralize with sodium hydroxide.

Part B:

2. Add Part B ingredients in order to Part A using slow mixing.

Part C:

3. Disperse Ucare JR-400 in deionized water (heat to help hydration). Add Glydant and sodium hydroxide. Mix until uniform. Add Part C to batch.

Part D:

4. Add Part D ingredients in order to batch.

Special Notes & Precautions:

1. Do not use a chelating agent as this will deactivate the zinc pyrithione.
2. When using zinc pyrithione, be sure it is uniform and has not frozen.
3. Assay for zinc pyrithione can be performed using an iodine titration. Call Olin (203-271-4000) for the procedure.

SOURCE: B.F. Goodrich Co.; Formulation C0075

Clear and Mild Shampoo

This shampoo is near water-white in clarity and color. The amphoteric surfactant, in combination with SLES and ALS, is the basis of this gentle-cleansing formula. Addition of only 0.60 wt% Benecel HPMC is needed to boost the viscosity from 2,900 cps (mPas) to 9,500 cps (mPas), yielding a rich, highly viscous shampoo that pours smoothly. This is possible due to the thickening efficiency of Benecel and the pseudoplastic rheology it imparts.

Ingredients:	Wt%
Distilled water	q.s. to 100.00
Ammonium lauryl sulfate, 30%	27.50
Disodium cocoamphodiacetate, 50%	6.90
Sodium laureth sulfate, 60%	5.70
Benecel MP 943 R	0.60
DMDM hydantoin	0.30
Methyl paraben	0.10
Citric acid	to pH 5.5

Procedure:

1. Disperse Benecel by adding to the vortex of well-agitated water. Heating to 40-45C will accelerate hydration. Mix until fully dissolved.
2. In a separate container, disperse the methyl paraben in the DMDM hydantoin. Add to the Benecel solution. Mix until fully dissolved.
3. Add the remaining ingredients, one at a time, mixing well between additions.
4. Adjust pH to 5.5 with citric acid.
5. When temperature falls to below 40C, add fragrance.

Coconut Shampoo
(35% Real Soap)

	<u>Wt%</u>
Emery 621 Coconut Fatty Acid (acid value 263)	29.6
Caustic potash (100%)	7.9
Water	to 100.0

Procedure:

Dissolve the caustic in the necessary amount of water, heating to 49-54C (120-130F), then add the fatty acid in a slow steady stream. Agitate while mixing the fatty acid and caustic until saponification is complete. The reaction mixture should be heated to 66-71C (150-160F) during the final stages of saponification.

Check the neutrality of the soap and adjust as necessary. Perfume as desired. Allow the soap to stand and settle for several days at near freezing temperatures, if possible, and decant or filter the soap.

Properties and Variations:

This soap is characterized by its clarity and profuse sudsing. If it clouds on standing, a trace of sequestering agent (0.1-0.5%) will restore brilliance.

Alcohol may be substituted for a portion of the water in any of these formulas. Alcohol will improve clarity and increase the resistance of the soap to low temperature precipitation and gel formation, but it will also reduce foaming.

Carbitol, glycerine, and various glycols may be used to increase the viscosity of the soap. Perfumes are generally used in small amounts to impart a distinctive and pleasant odor.

Coconut-Oleic Shampoo
(35% Real Soap)

	<u>Wt%</u>
Emery 621 Coconut Fatty Acid (acid value 263)	15.1
Emersol 221 Oleic Acid (acid value 203)	15.1
Caustic potash (100%)	7.1
Water	to 100.0

Procedure:

Blend coconut and oleic acids and proceed as for the formulation above, Coconut Shampoo. Perfume as desired.

Properties and Variations:

This shampoo exhibits good foaming and foam stability. It will have only a trace of color. If a gold-colored shampoo is preferred, use of Emersol 210 Oleic Acid (A) is suggested.

Frequent Use Shampoo

This pearlescent shampoo provides gentle cleansing with protective conditioning. Glucamate DOE-120 is used to thicken this mild cleansing system which contains cocoamphodiacetate and sulfosuccinate. Glucam E-20 and Ucare Polymer JR-400 have been included for humectance and conditioning, respectively. This formulation is recommended for normal to dry hair.

<u>Ingredients:</u>	<u>Wt%</u>
Texapon NSO (Sodium Laureth Sulfate)	7.00
Dehyton G (Disodium Cocoamphodiacetate)	3.00
Texapon SB-3 (Disodium Laureth Sulfosuccinate)	1.00
Euperlan PK 3000-AM (Glycol Distearate and Laureth-4 and Cocamidopropyl Betaine)	1.00
Glucamate DOE-120 (PEG-120 Methyl Glucose Dioleate)	1.50
Deionized Water	84.30
Ucare Polymer JR-400 (Polyquaternium-10)	0.25
Glucam E-20 (Methyl Gluceth-20)	1.50
Sodium Chloride	0.45
Preservative and Fragrance	q.s.

Procedure:

Disperse Ucare Polymer JR-400 in water with moderate agitation and gentle heating to 50C. Add Glucamate DOE-120 and continue heating until dissolved. Remove heat. Add the surfactants and Glucam E-20. Add preservative and fragrance. Adjust pH to 6.5. Package.

Performance Data:

Viscosity: 4,300 cps (20C, LVT, 3, 12 rpm)

pH: 6.5

Formulation E941-129-10

Daily Use Shampoo

Glucamate DOE-120 is used to thicken this mild surfactant system in conjunction with the lauryl glucoside. The cocamidopropyl betaine enhances the foam feel. Ucare Polymer LK provides the light conditioning effect desired in this daily use shampoo. In total, the washing active substances for this pearlescent formulation are 11%.

<u>Ingredients:</u>	<u>Wt%</u>
Standapol ES-2 (Sodium Laureth Sulfate)	24.00
Velvetex BK-35 (Cocamidopropyl Betaine)	6.00
Plantaren 1200 (Lauryl Glucoside)	5.00
Euperlan PK 3000-AM	1.50
Glucamate DOE-120 (PEG-120 Methyl Glucose Dioleate)	1.00
Ucare Polymer LK (Polyquaternium-10)	0.35
Deionized Water	61.85
Sodium Chloride	0.30
Preservative and Fragrance	q.s.

Procedure:

Disperse Ucare Polymer LK in water with moderate agitation and gentle heating to 50C. Add Glucamate DOE-120 and continue heating until the Glucamate DOE-120 has dissolved. Add the surfactants and the Euperlan with continued stirring. Add the sodium chloride, preservative and fragrance. Adjust the pH to 6.5. Package.

Formulation E921-146-4

SOURCE: Amerchol: Suggested Formulations

Gentle Everyday Shampoo

<u>Ingredients:</u>	<u>Wt%</u>
Distilled water	q.s. to 100.00
Sodium laureth sulfate, 28%	19.60
Cocamidopropyl betaine, 35%	11.00
Sodium lauroyl sarcosinate, 30%	9.60
PEG-150 distearate	2.90
Benecel MP 943 R	1.10
Monochloroisothiazolinone and methylisothiazolinone, 1.5%	0.08

Procedure:

1. Disperse the Benecel by adding to the vortex of well-agitated water. Heating to 40-45C will accelerate hydration. Mix until fully dissolved.
2. Add the surfactants, one at a time, mixing well between each addition.
3. Heat to 70-75C. Add the PEG-150 distearate. Mix until dissolved. Turn heat off.
4. When temperature reaches 40C or below, add fragrance and preservative.

Formula B02-02W

Self-Adjusting Conditioning Shampoo

<u>Ingredients:</u>	<u>Wt%</u>
Distilled water	q.s. to 100.00
TEA-lauryl sulfate, 40%	22.25
Dihydroxyethyl tallow glycinate, 40%	7.10
Lauramide DEA	3.50
Cocodimonium hydrolyzed animal protein	0.80
Benecel MP 943 R	0.60
Methylchloroisothiazolinone and methylisothiazolinone, 1.5%	0.08
Citric acid	to pH 5.5

Procedure:

1. Disperse the Benecel by adding to the vortex of well-agitated water. Heating to 40-45C will accelerate hydration. Mix until fully dissolved.
2. Add the remaining ingredients, one at a time, mixing well between each addition.
3. Adjust to pH 5.0 with citric acid.
4. When temperature falls to below 40C, add fragrance.

Formula B02-03W

Gentle Shampoo

This shampoo provides gentle and thorough cleansing, while imparting softness and manageability to hair.

<u>Ingredients:</u>	<u>Wt%</u>
Water	29.5
Sodium Chloride	1.0
Sodium Laureth (2) Sulfate (25%)	35.0
Sodium Lauryl Sulfate (30%)	27.5
Monalac MAB	5.0
Monalac MPL	2.0

Adjust the pH to 6.0

Appearance: Clear viscous liquid

Viscosity at 25C: 23,000 cP

Solids (%): 20

Features of Monalac MAB:

Effective conditioning to skin and hair

Provides mild cleansing

High foaming primary surfactant

Excellent viscosity building properties

Anti-irritant for anionics and cationics

Compatible with all surfactant types

Gentle Shampoo

This shampoo provides gentle and thorough cleansing, while imparting softness and manageability to hair.

<u>Ingredients:</u>	<u>Wt%</u>
Water	29.5
Sodium Chloride	1.0
Sodium Laureth (2) Sulfate (25%)	35.0
Sodium Lauryl Sulfate (30%)	27.5
Monalac MO	5.0
Monalac MPL	2.0

Water, preservative, perfume	ad 100

pH Value: 6.0

WAS: 12.5

Viscosity mPas: approx. 1500

Preparation:

Mix all components successively at room temperature while stirring. The pH value is adjusted with citric acid.

Formulation No. 94/218/28

Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
Texapon NSO/Sodium Laureth Sulfate	40.0
Dehyton K/Cocamidopropyl Betaine	12.5
Lamesoft PW 25/Cetyl Palmitate (and) Beheneth-10 (and) Hydrogenated Castor Oil (and) Glyceryl Stearate	5.0
Cosmedia Guar C 261 N/Guar Hydroxypropyl Trimonium Chloride	0.25
Methocel E4M Premium EP/Hydroxypropyl Methylcellulose	1.5
Water	40.75
Preservatives	n.B.
Viscosity mPas: 6000	
pH value: 5.5	

Preparation in the Laboratory:

Of Methocel E4M Premium EP and Water has to be manufactured a clear swelling. In this swelling Cosmedia C 261 N has to be stewed and homogeneous distributed. With addition of citric acid the pH value will be slightly acidified, which means that Cosmedia Guar is also starting to swell. After completed swelling Texapon NSO, Dehyton K and Lamesoft PW 45 will be stirred homogeneous into the swelling. At the end the pH value will be focused.

High Performance Low Irritation Shampoo

<u>Ingredients:</u>	<u>%Wt/wt</u>
Plantaren 2000	15.0
Standapol EA-2	15.0
Velvetex BK-35	12.5
Nutralan I	1.5
Citric Acid	to pH 6.0-6.5
Fragrance	q.s.
Water, preservative	Balance

Procedure:

Charge kettle with water; while stirring, add the remaining ingredients in the order listed. Adjust viscosity with sodium chloride.

NOTE: Gel-like viscosities can be obtained via use of thickeners, such as PEG-150 Distearate.

Comments: This is a very high quality shampoo that combines very low irritation with excellent foam characteristics, while leaving the hair in a very manageable condition.

Formula H-4999

Low Irritation Conditioning Shampoo

<u>Ingredients:</u>	<u>%Wt/wt</u>
Plantaren 2000	12.0
Standapol ES-2	24.0
Standamid KD	3.0
Cetiol HE	1.5
Cosmedia Guar C-261	0.75
Euperlan PK-810	4.0
Citric Acid	to pH 6.5
Fragrance	q.s.
Water, preservative	Balance

Procedure:

Charge kettle with water; while stirring, add the first three ingredients in the order listed. Pre-slurry the Cosmedia Guar C-261 and Cetiol HE, and add to the batch followed by the Euperlan PK-810. Adjust pH with citric acid and viscosity with sodium chloride or other viscosifiers.

Comments: By taking advantage of the ability of Plantaren 2000 to enhance cationic polymer deposition, a mild 2 in 1 shampoo is created.

Formula H-5001

SOURCE: Henkel Corp./Emery Group: Plantaren Suggested Formulations

Low-Cost Shampoo

An economical formulation with a cold-mix procedure which provides very good performance.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Deionized Water	64.12
Hydroxypropyl Methylcellulose/Methocel 40-100	0.08
Triethanolamine	0.04
Na4EDTA	0.16
Cocamidopropyl Hydroxysultaine/Mafo CSB-50	6.00
Ammonium Lauryl Sulfate/Rhodapon L-22	14.40

Citric Acid	Q.S.
Sodium Chloride	Q.S.

pH: 6.0-6.5

Viscosity: 3,500-4,500 cps (Brookfield #2 @ 6rpm)

Appearance: Pale, straw-colored clear liquid

Procedure:

Disperse hydroxypropyl methylcellulose into stirring water; then add triethanolamine to initiate hydration. Add Na4EDTA and let mix 15-20 minutes. Add the Mafo CSB-50 followed by the ammonium lauryl sulfate. When uniform, add the sodium laureth sulfate and mix until gel-free. Add premixed Mazamide JT-128 and Mazamide SS-10, optionally with the fragrance. Add preservative and adjust pH and viscosity as needed.

Formulation A-105

Conditioning Shampoo

This formula can function as a conditioning shampoo for a medicated or dandruff shampoo. It exhibits a creamy, compact soap-type foam, excellent rinsing, good conditioning properties, and mildness. The viscosity of the product is about 1,000 cps.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Sodium C12-C15 Parath-3 Sulfonate/Avanel S-30	40.0
Cocamidopropyl Betaine/Mafo CAB	10.0
Lauramine Oxide/Mazox LDA	10.0
Lauramide DEA	4.0
Methyl Paraben	0.25
Citric Acid	to pH 7.0
Perfume & Color	As desired
Deionized Water	Q.S. to 100.0

Procedure:

Heat Lauramide DEA to 40C. Add to rest of ingredients at 40C. Cool to 35C then add perfume and color. Cool to room temperature.

Formulation A-26

Clear Mink Oil Shampoo

<u>Ingredients:</u>	<u>Wt%</u>
Sandopan DTC acid (Trideceth-7 Carboxylic Acid)	19.00
Oil of Mink (AAA Refined)	1.00
Standapol A (Ammonium Lauryl Sulfate)	16.50
Myrj 52S (PEG-40 Stearate)	5.00
Deionized Water	qs
Fragrance	qs
Potassium Hydroxide	qs

Procedure:

Combine Sandopan DTC acid and the water while mixing. Neutralize to pH=5.5 with Potassium Hydroxide. Heat to 80C and add other ingredients in order with mixing.

Properties:

Appearance: Clear Homogeneous Liquid
pH: 5.5-6.0
Viscosity: 1,300-1,400 cps
Ross-Miles Foam Height: 185 mm/80 mm

Formula CHS-06/REF: CL29-37

SOURCE: Clariant Corp.: Suggested Formulations

Neutralizing Conditioning Ethnic Shampoo

This is a clear, neutralizing shampoo for use in combination with a Creme Relaxer. Its low pH neutralizes the effect of the Creme Relaxer. Sandopan DTC acid, used as the secondary surfactant, contributes to the mildness of the surfactant system.

<u>Ingredients:</u>	<u>Wt%</u>
Water	77.5
Ammonium Lauryl Ether Sulfate (28%)	13.9
Lauramide DEA	2.8
Sandopan DTC acid	3.3
Cartaretin F-4	1.0
Sodium Chloride	1.0
Ucare Polymer JR-400	0.5
Dye, Fragrance	qs

Procedure:

Heat the water to 50C and sprinkle in the Polymer JR-400 while stirring. When the Polymer JR-400 is completely in solution, remove heat, add remaining ingredients, stirring after each addition and adjust the pH to 5-5.5 with citric acid.

Properties:

Appearance: Clear Yellow Liquid
 pH: 5-5.5
 Viscosity: 600-800 cps
 Ross-Miles Foam Height: 120mm/120mm
 REF: CL9-61-01: CHS-01

Mild Anti-Dandruff Shampoo

<u>Ingredients:</u>	<u>Wt%</u>
Standapol ES-50	21.00
Sandopan DTC acid	5.00

Salon-Style Shampoo

This viscous formulation develops a dense, rich, silky lather which rinses easily.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Deionized Water	41.0
	Hydroxypropyl Methylcellulose/Methocel 40-100	0.2
	Polyquaternium-10/Polymer JR-125	0.1
B	Triethanolamine	0.1
C	Cocamidopropyl Betaine/Mafo CAB	5.5
	Ammonium Lauryl Sulfate/Rhodapon L-22	45.0
	Tetrasodium EDTA	0.2
	Methyl Paraben	0.2
	Imidazolidinyl Urea/Germall 115	0.2
	Soluble Animal Keratin/Kerasol	0.4
D	Cocamidopropyl Amine Oxide/Mazox CAPA	5.5
	Cocamide DEA/Mazamide JT-128	1.0
	Fragrance	0.3
E	Citric Acid	0.2

pH: 6.0-6.5

Viscosity: 12,000-13,000 cps (Brookfield #3 @ 6 rpm)

Appearance: Clear, viscous, very pale straw-colored liquid

Mix the part A ingredients until thoroughly dispersed, then add the triethanolamine to initiate hydration. Allow to stir until completely hydrated, then add the part C ingredients one at a time. Premix the part D ingredients, and add to the main batch. This premix will not be clear, but it does facilitate the solubilization of the fragrance in the product. Adjust the pH with citric acid.

Baby Shampoo

This is a clear, fluid shampoo designed for mildness, gentle cleaning, and good rinseability.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Deionized Water	32.0
	PEG-80 Sorbitan Laurate/T-Maz 28	6.8
	Sodium Trideceth Sulfate/Liposurf EST-30	14.0
	PEG-150 Distearate/Mapeg 6000 DS	2.6

	S-150 CGN	1.5
B	Deionized Water	34.0
	Cocamidopropyl Hydroxysultaine/Mafo CSB-50	4.8
	Cocamidopropyl Betaine/Mafo CAB	4.0
	Fragrance	0.1
	Quaternium-15/Dowicil 200	0.1
	Citric Acid	0.1

Viscosity: 800-1500 cps (Brookfield #2 @ 12 rpm)

Appearance: Clear, straw-colored liquid

Blend the Part A ingredients in the main vessel, heating to 70C to dissolve the Mapeg 6000 DS. When uniform, begin cooling and add the part B ingredients in order. Optionally, the fragrance can be premixed with the Mafo CAB in a small container. The premix will not be clear, but it will speed up the dissolution of the fragrance in the shampoo. The container can be rinsed with a small amount of withheld water, into which the quaternium-15 can be dissolved.

Heat Phase A to 75C. Cool to 45C and add remaining phases.
Package.

Lab Control:

pH: 6.5

Viscosity: 3800 cps

Brookfield RVT: #4 @ 20 RPM

This high performance shampoo utilizes Polysynlane to provide refatting and Silk Powder to enhance the appearance of the shampoo and add to the conditioning. There are numerous patents using silicone as a conditioning agent/refatting material. Polysynlane circumvents these patents.

SOURCE: Polyester Corp.: Suggested Formulation

Two-In-One Shampoo

Diaformer Z-W provides conditioning on the hair resulting in improved combability, and manageability. Sandopan DTC acid is a multi-functional surfactant which enhances deposition of the conditioning agent and contributes to the mildness of the surfactant system. This crystal clear, water white shampoo has good viscosity and foaming characteristics.

<u>Ingredients:</u>	<u>Wt%</u>
Deionized Water	53.94
Sodium Lauryl Ether Sulfate	33.00
Sandopan DTC acid	8.06
PEG-120 Methyl Glucose Dioleate	3.00
Diaformer Z-W	1.00
Disodium EDTA	0.10
Preservative and Fragrance	qs

Procedure:

Add Sandopan DTC acid to water with mixing. Using 25% NaOH solution, neutralize to pH=6.0. Heat to 80C while stirring. Add PEG-120 Methyl Glucose Dioleate and mix until dissolved. Add Sodium Lauryl Ether Sulfate with mixing. Cool to 40C while stirring. Add Diaformer Z-W and Disodium EDTA one at a time with mixing. Adjust pH=6.0. Add preservative and fragrance while mixing well.

Properties:

pH: 6.0

Viscosity: 2500-2700 cps

Appearance: Clear, water white liquid

REF: CL24-102: CHS-50

All in One Shampoo/Conditioner

In this crystal clear shampoo and conditioner in one, Diaform-Z-W conditions, improves combability, and is an excellent anti-static agent. Sandopan LS-24 complexes with the Diaformer Z-W and enhances deposition of this conditioning agent on the hair.

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
Deionized Water	65.85
Monamid 716	2.40
PEG-120 Methyl Glucose Dioleate	0.80
Phase B:	
Sodium Lauryl Ether Sulfate	15.00
Monateric CAB	6.00
Sandopan LS-24 gel	8.00
Phase C:	
Diaformer Z-W	0.50
Preservative and Fragrance	qs

Procedure:

Heat water to 80C, add remaining ingredients in Phase A with mixing. Add Phase B ingredients in order with mixing. Cool to 40C. Add Phase C ingredients one at a time with mixing until homogeneous. Adjust pH=5.0. Let cool and package.

Properties:

pH: 5.0

Appearance: Crystal clear liquid

REF: CL24-67: CHS-49

SOURCE: Clariant Corp.: Suggested Formulations

Ultra Mild Conditioning Shampoo with Suspended Mica

This ultra mild shampoo uses naturally derived surfactants and cationic conditioning agents which produce a very rich, creamy, luxurious foam and leaves the hair conditioned and full of body.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
1. Deionized Water	56.65
2. Acrylates/C10-30 Alkyl Acrylate Crosspolymer/ Carbopol ETD 2020	0.75
3. Triethanolamine (99%)	0.35
4. Sodium Laureth Sulfate (3 mole, 30%)/Standapol ES-3	14.00
5. Decyl Polyglucose (50%)/Plantaren 2000	12.00
6. Cocoamphoacetate (32%)/Miranol Ultra	6.50
7. Tetrasodium EDTA	0.20
8. Lauryl Methyl Gluceth-10 Hydroxypropylidimonium Chloride/Glucquat 125	3.00
9. Ricinoleamidopropyl-trimonium Chloride/Surfactol Q1	0.60
10. Dimethicone Copolyol/Dow Corning Q2-5324 Fluid	0.45
11. Disodium Laureth Sulfosuccinate/Mackanate EL	2.00
12. Polymethoxy Bicyclic Oxazolidine/Nuosept C	0.20
13. Soyamide DEA/Schercomid SLS	1.20
14. Fruity Floral Fragrance/Fragrance #A42017	0.50
15. Mica and Titanium Dioxide/Timiron MP-149	0.10
16. D&C Green No. 5 (0.10%)	1.50

Properties:

Color, odor, appearance: Aqua, pearlescent viscous liquid
with fruity floral odor

pH: 6.3-6.6

Viscosity (cP) at 25C: 7,000-9,000

Brookfield Yield Value: 130

Preparation Procedure:

1. Disperse Carbopol ETD 2020 polymer in deionized water. Reduce mixing speed after polymer is dispersed. Hold out 1.0% water for step number 5.
2. Neutralize batch with given amount of TEA, mix until no lumps are present.
3. Add sodium laureth sulfate, mix until uniform.
4. Add decyl polyglucose, mix until uniform.
5. Add ingredients 6-16 in order with mild agitation, mix until uniform. NOTE: Pre-mix Timiron with 1.0% water before adding to batch. Mix until uniform.

Section IX
Shaving Products

Aerosol Shave Cream

A wide range of emollients, moisturizers and foam stabilizers can be added to improve the esthetic properties of a basic shave cream formula. In formula SK-17, Arlamol F PPG-11 Stearyl Ether improves razor glide and adds emollience to the formula. Surfactants like Brij 98 Oleth-20 improve the density and stability of the foam without contributing to skin irritation. Sorbitol Solution, USP acts as a humectant to hold moisture on the face and keep the lather from drying out during the shave.

<u>Ingredients:</u>	<u>Wt%</u>
A Stearic acid, triple pressed	9.0
Brij 98	2.0
Arlamol F	2.0
B Water	67.4
Triethanolamine	4.6
Sorbitol Solution, USP	10.0
C Preservative	q.s.
D Hydrocarbon Propellant A-46	5.0

Preparation:

Heat (A) to 75C. Add (B) to (A) slowly with agitation while maintaining temperature at 70-75C. After 15 minutes at this temperature, cool. Add (C) about 50C. Replace water lost by evaporation. Package in aerosol containers. Pressurize with (D). Formula SK-17

Formula SK-18 offers an alternative to the soap type product. The product is nonionic and could be prepared at a neutral or acidic pH. Benefits offered by this formula include low irritation, better rinsability and compatibility with a wide range of other ingredients. The foam, itself, is rich and dense.

Nonionic Aerosol Shave Cream

This is a dense, rich, economical foam with a pH that can be varied over a wide range.

<u>Ingredients:</u>	<u>Wt%</u>
A Cetyl alcohol	4.30
Brij 721	2.20
B Water, deionized	93.25
Sorbic Acid	0.17
C Fragrance	0.08

Preparation:

Heat (A) to 70C and (B) to 75C. Add (B) to (A) slowly with good agitation. Add (C) at 35C. Adjust pH to 5.5 with dilute NaOH. Add water to compensate for evaporation. Continue agitation until viscosity is low enough to pour.

Pressurized: Above concentrate: 160.0g
Difluoroethane: 5.0g

Formula SK-18

SOURCE: ICI Surfactants: Suggested Formulations

After Shave Conditioner**Formulating Design and Advantages:**

This multi-phase emulsion (O/W/A) is very stable and has wonderful skin feel. Besides the previously mentioned advantages, Cera Bellina produces a product with good viscosity characteristics in product of low solid content.

<u>Raw Materials:</u>	<u>Wt%</u>
Oil Phase:	
Minosil	7.5
Cera Bellina (Pg-3 Beeswax)	4.0
Glycerol Monostearate	3.3
Amerchol L-101	2.0
Vitamin E	0.5
Propyl Paraben	0.1
Water Phase:	
Water (distilled)	64.0
Butylene Glycol	5.0
Glycerol	1.0
Methyl Paraben	0.3
Triethanolamine	1.0
Alcohol Phase:	
SDA-30	10.0
Benzocaine	1.0
Carboxy Methyl Cellulose	0.3

Procedure:

Combine components of the wax phase in a vessel, melt and mix, maintaining a temperature of 75C. Heat the water phase to 75C in a separate vessel making sure the components are all dissolved. Slowly add the oil phase to the water phase under low shear. Cool to 35 to 40C and then add the alcohol phase under low shear. This will ensure that the friction will not increase the temperature which will evaporate the alcohol.

Adaptation of Formula and its Influence on the Product:

Alterations in component concentrations can be achieved by the addition of secondary emulsifying agents. This will allow for active ingredients to be added at the same time as maintaining the stability and rheological properties.

Aftershave Gel with Peppermint and Tea Tree Oil

This clear aftershave gel, thickened with Carbopol Ultrez 10, contains Tea Tree and Peppermint Oil and will help soothe and cool post-razor skin burn. Tea Tree Oil is known for its healing and therapeutic properties.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Part A:	
Deionized Water	84.23
Carbomer/Carbopol Ultrez 10	0.20
Propylene Glycol	1.50
Sorbitol (70%)/Sorbo 70%	0.50
PEG 600/Carbowax 600	2.00
NaOH (18%)	0.20
Polyquaternium-39/Merquat Plus 3330	0.25
Part B:	
Oleth-10/Brij-97, Volpo-10	0.80
Peppermint Oil, Refined	0.80
Tea Tree Oil/EmCon Tea Tree	0.12
Part C:	
SD 40 Alcohol	10.00
NaOH (18%)	0.12

Properties:

pH: 6.3-6.8
 Viscosity (cP): 7,000-10,000
 Clarity (%T): 90-95
 Appearance: Clear pourable gel
 Stability: Passed 45C, 28 days

Procedure:

1. Disperse Carbopol Ultrez polymer by sprinkling on the surface of warm (30-40C) deionized water. Begin stirring when polymer is wetted.
2. With slow stirring, add propylene glycol, Sorbo and PEG 600 (pre-melted). Stir for 20 minutes.
3. Add NaOH (18%), increase mixing as gel thickens. Mix until smooth.
4. Slow agitation speed and add Polyquaternium-39.
5. Combine Part C ingredients (pre-melt oleth-10). Add Part C to Part A. (NOTE: Part A should be 30C). Mix until uniform.
6. With slow mixing, add SD 40 alcohol and NaOH (18%). Mix until uniform.

SOURCE: B.F. Goodrich Co.: Formulation U0014

Experimental Shaving Cream Preparation

<u>Ingredient:</u>	<u>Amount, g</u>
Deionized water	633.6
Sodium hydroxide (24.6% solution)	9.6
Potassium hydroxide (34.2% solution)	34.2
Stearic acid, double pressed	71.6
Coconut acid	10.0
Propylene glycol	27.0
Lauramide DEA	10.0
Coconut oil	2.5
Tallow glycerides	30.0
Preservative	5.0
1.5% N-Hance 3000 solution	166.5

To prepare the N-Hance 3000 cationic guar solution, add the polymer to the vortex of well-agitated water. Stir 5 minutes. Use acetic acid* to lower pH to 6-7. Stir 30 minutes. Make sure pH is still within the 6-7 range. Add 2.5% sorbitol** (70% active). Stir 30 minutes. Set the resulting solution aside.

To prepare the shaving cream concentrate, add the sodium hydroxide and potassium hydroxide to the deionized water at room temperature. Raise the temperature to 75C. Stir 5 minutes. Premelt the stearic acid and coconut acid separately and then add each to the caustic/water mix. Stir 30 minutes and then cool to 55C. Add, one at a time, the propylene glycol, lauramide DEA (melted), coconut oil, tallow glycerides (melted), and preservative. Stir 15 minutes and then turn off the heat. Add the N-Hance solution and cool to room temperature while stirring. (For the control, 166.5 g of deionized water was used in place of the N-Hance solution.)

The concentrate (225g) was weighed into a standard 12-oz shaving cream can. The can was then sealed with a valve assembly using laboratory canning equipment and charged with 9.0 g of propellant.

*Acetic acid is added to speed up the hydration of the N-Hance polymer and reduce solution preparation time to <1 hr.

**Sorbitol is added to prevent borate ion, present in the N-Hance polymer, from complexing with the cationic guar in high-pH (>7) formulations, such as shaving creams. Addition of sorbitol is unnecessary in lower pH formulations.

SOURCE: Aqualon Division, Hercules Inc.: Experimental Formulation

Gel Shave Cream

Gel shave creams are essentially soap-type formulas packaged in a Sepro-Can aerosol container (Continental Can Co.). The gel concentrate contains a low level of propellant. When the gel is expelled from the can, this propellant volatilizes on warm skin surfaces and produces a foam. Nonionic surfactants like Brij 98 Oleth-20 stabilize the foam.

<u>Ingredients:</u>	<u>Wt%</u>
A Palmitic acid	6.50
Stearic acid	2.25
Brij 98	1.00
B Water	34.20
Sorbitol Solution, USP	10.00
C Water	10.00
Triethanolamine	4.75
D Hydroxypropyl cellulose solution (1.0% W/W in water)	7.50
Propylene glycol	3.30
E Carbomer 934 solution (1.5%, W/W in water)	15.00
F Propylene glycol dipelargonate	2.75
n-Butane	0.55
n-Pentane	2.20

Preparation:

Heat (A), (B), and (C) to 60C. Add (B) to (A) with gentle agitation. Add (C) slowly to (AB) with gentle agitation. Add (D) and (E) separately to this soap base and stir until homogeneous. Mix (F) at 5C. All ingredients are transferred to a pressurized vessel and mixed at 7 to 10 psig. This mixture is packaged in a suitable aerosol can. The can is pressurized from the bottom with a mixture of propane and isobutane having a vapor pressure of approximately 46 psig.

Caution: n-Butane and n-Pentane are very flammable!

Formula SK-19

The next formula is designed to provide the shaver who uses an electric razor with a lubricated face which will allow the razor to glide over the skin readily and to prevent "razor burn."

Pre-electric Shave Lotion

<u>Ingredients:</u>	<u>Wt%</u>
Arlamol E pop 15 stearyl ether	10.0-15.0
Alcohol, SDA Formula No. 40	84.6-89.6
Menthol, USP	0.2
Perfume	0.2

Preparation:

Mix ingredients together.

Formula AE-7

SOURCE: ICI Surfactants: Suggested Formulations

Oil-in-Water After-Shave Balm

<u>Ingredients:</u>	<u>Wt%</u>
A Arlamol S7	10.0
Babassu oil	5.0
B Arlatone 2121	5.5
Atlas G-2330	2.5
Preservative	q. s.
Water	71.6
C Keltrol*	0.2
D Ethanol	5.0
E Fombin HC/03*	0.2

Manufacture:

1. Mix the Arlatone 2121 in the heated water phase at 80C under moderate stirring until a homogeneous dispersion is formed.
2. Disperse the hydrocolloid in the heated aqueous phase at 75C with moderate stirring.
3. Add the heated oil phase to the aqueous phase under intensive stirring.
4. Homogenise the mixture intensively at 75C for one minute.
5. Add phases D and E at +-40C.
6. Cool to 35C whilst stirring moderately.
7. Add heat-sensitive ingredients whilst stirring moderately.

Comments:

Viscosity: 6.550 mPa s (Brookfield LVT, spindle C, 6 rpm)

Shave Cream Concentrate

Rich lather, good razor glide, and won't leave a calcium soap scum in the basin.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Deionized Water	76.9
Carbomer 934/Carbopol 934	0.2
Sodium Cocoyl Isethionate (and) Stearic Acid/ Jordapon CI-60 Flake	12.5
Stearic Acid/Emersol 132	0.8
Coconut Acid/C-108	0.1
Paraffin 6971	1.6
Propylene Glycol	5.0
PEG-75 Lanolin/Solulan 75	0.5
Preservative/Germaben II	0.2
Fragrance	0.2
Triethanolamine	2.0

Procedure:

Disperse and dissolve the carbomer 934 in the water. Add the Jordapon CI-60 Flake, fatty acids and paraffin, heating to 55C (130F) to dissolve. Premix the propylene glycol, PEG-75 lanolin, preservative, and fragrance; add to the batch. Adjust pH to 7.0-7.5 with triethanolamine. Use this concentrate at 96% with 4% Propellant A-46.

Foamulation P-301

Electric Preshave

A hydro-alcoholic splash which lubricates the skin and wets the beard for a faster, more comfortable shave. The formula also works well as a moisturizing aftershave, and as a moisturizing afterbath splash.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
PPG-10 Butanediol/Maccol 57	3.0
Dimethicone Copolyol/Masil 280	0.5
Fragrance	Q.S.
SD Alcohol 40B	25.0
Deionized Water	71.5

Appearance: Clear, water-white fluid

Procedure:

Blend the first three ingredients at ambient temperature. Add the fragrance, and blend until uniform. Add the water, and blend until uniform.

Formulation P-104

SOURCE: PPG Industries, Inc.: Suggested Formulations

Shave Gel**Formulating Design and Advantages:**

The product will raise the hair off the face to make for a closer cut without irritation. The Hexanediol Behenyl Beeswax stabilizes the silicone oil to leave the skin silky and smooth.

<u>Raw Materials:</u>	<u>Wt%</u>
Phase A:	
Hexanediol Behenyl Beeswax	3.0
Deodorized Orange Wax	2.0
Permethyl 104A	3.0
Polybutene	4.0
Isostearic Acid	0.6
Palmitic Acid	1.4
Phase B:	
Purified Water	63.9
Triethanolamine	0.8
Carbopol 940 (2% dispersion)	12.0
Aloe Vera Gel	0.8
Allantoin	0.8
Germaben II	1.0
Phase C:	
Silicone 345	6.7

Procedure:

Heat and mix Phase A and add to a heated and mixed Phase B. Cool to 50C and add Phase C. Cool to 40C and pour.

Adaptation of Formula and its Influence on the Product:

Fragrances, actives and other silicone oils can be incorporated into this type of formula, with only minimal changes in stability and performance.

Antibacterial Liquid Soap

A high-foaming liquid soap containing Jordapon ACI-30 to provide excellent lather slip and soft skin afterfeel. An effective antibacterial provides residual benefits.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Ammonium Laureth Sulfate/Alfonic 1412A	9.6
	Triclosan/Irgasan DP-300	0.3
	Cocamidopropyl Amine Oxide/Mazox CAPA	3.5
	Cocamidopropyl Hydroxysultaine/Mafo CSB-50	3.3
	Methyl Paraben	0.2
B	Deionized Water	74.0
	Na4EDTA	0.2
	Imidazolidinyl Urea/Germall 115	0.2
C	Ammonium Cocoyl Isethionate/Jordapon ACI-30	7.4
	Cocamide DEA/Mazamide JT-128	1.3
	Citric Acid to pH=6.5+0.2	Q.S.
	Ammonium Chloride	Q.S.

Viscosity: 2,500-4,000 cps

Appearance: Clear, straw-colored liquid

Procedure:

Blend part A ingredients in the main vessel, heating to 45C until uniform. Add the part B components in order, maintaining 45C. When uniform, begin cooling, add part C ingredients.

Formulation N-109

Mild Liquid Soap

This formula lathers and cleans well, yet leaves skin feeling smooth and soft thanks to the Jordapon CI-UP and Mafo CAB ingredients. The white pearlescent appearance is due to the Mapeg EGMS. Omitting this ingredient yields a clear, pale yellow product.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Deionized Water	74.2
	Sodium Cocoyl Isethionate/Jordapon CI-UP	3.0
	Ammonium Lauryl Sulfate/Stepanol AM	13.0
	Glycol Stearate/Mapeg EGMS	0.5
	Na4EDTA	0.1
	Methyl Paraben	0.2
B	Cocamidopropyl Betaine/Mafo CAB	6.0
	Cocamide DEA/Mazamide JT-128	2.5
C	Imidazolidinyl Urea/Germall 115	0.2
	Fragrance	0.2
	Citric Acid	0.1

pH: 6.2-6.8

Viscosity: 2,500-3,500 cps (with 0.6-0.9% NaCl)

Appearance: Creamy, pearlescent liquid

Total Actives: 11.5%

Procedure:

Mix and heat the Part A ingredients to 65C to melt and dissolve the Jordapon CI-UP and the Mapeg EGMS. When uniform, add the Part B ingredients and cool the batch to 40-45C. Add the Germall 115 and fragrance, and adjust the pH. Cool the batch to 25C and adjust the viscosity with sodium chloride.

Coconut-Soya Hand Soap
(15% Real Soap)

	<u>Wt%</u>
Emery 621 Coconut Fatty Acid (acid value 263)	9.65
Emery 610 Soya Fatty Acid (acid value 202)	3.20
Caustic potash (100%)	3.18
Water	to 100.00

Procedure:

Blend the coconut and soya fatty acids and proceed: Dissolve the caustic in the necessary amount of water, heating to 49-54C (120-130F), then add the fatty acid in a slow steady stream. Agitate while mixing the fatty acid and caustic until saponification is complete. The reaction mixture should be heated to 66-71C (150-160F) during the final stages of saponification.

Check the neutrality of the soap and adjust as necessary. Perfume as desired. Allow the soap to stand and settle for several days at near freezing temperatures, if possible, and decant or filter the soap.

Soya Scrub Soap
(15% Real Soap)

	<u>Wt%</u>
Emery 610 Soya Fatty Acid (acid value 202)	13.20
Caustic potash (100%)	2.69
Water	to 100.00

Procedure:

Prepare in the same way as formulation above.

Properties and Variations:

Scrub soaps are made for general purpose applications and are usually made from the cheaper grades of fatty acids. Cottonseed and soya fatty acids are quite popular raw materials for this type of product, though oleic and other fatty acids may also be used.

Addition of several percent of pine oil will give a pleasant odor to the soap and cause it to congeal slightly. The pine oil should not be added until the soap is fairly cool, since high temperatures cause vaporization and loss. Furthermore, addition of pine oil at or near room temperatures assures better control of viscosity of the finished soap.

Solid Bar

<u>Raw Materials:</u>	<u>Wt%</u>
Sodium N-Cocoyl, Tallow-L-Glutamate (Amisoft GS-11)	42.00
Sodium cocoylisethionate	42.00
Cetyl alcohol	7.00
Titanium dioxide	0.10
EDTA disodium salt	0.10
Deionized water	8.80

Procedure:

1. Dissolve cetyl alcohol and deionized water at 80C with stirring.
2. Add titanium dioxide and EDTA disodium salt and disperse thoroughly.
3. Add small amount of GS-11 (3g per 100g of water) to the mixture to emulsify at 80C, with continued stirring.
4. Add the mixture from step 3 to GS-11 and Sodium cocoylisethionate and mingle thoroughly.
5. Mill the mixture on a roller mill and then convert into a bar through an extruder.
6. Mold the bar in a stamping machine.

Formula AI-KK

SOURCE: Ajinomoto U.S.A., Inc.: Suggested Formulations

D-Limonene Hand Cleaner

An opaque, firm gel waterless hand cleaner based on natural d-limonene and biodegradable emulsifiers. Effective, clean-rinsing, and pleasant-smelling.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	d-Limonene, Grade M	20.00
	Butylated Hydroxy Toluene (BHT)	0.10
	Oleic Acid/Pamolyn 125	7.20
	Cocamide DEA/Mazamide JT-128	1.70
	Polysorbate 80/T-Maz 80	5.00
	PEG-85 Lanolin/Lanogel 65	0.50
B	Triethanolamine	3.10
	Glycerin	1.00
	Deionized Water	61.39
	Na4EDTA	0.01

pH: 8.2-8.5

Odor: Citrus

Appearance: White, opaque gel

Procedure:

No heating is required to process this formula. In a side vessel, dissolve the BHT in the d-Limonene, then blend in the other part A ingredients. In the main vessel, blend the part B ingredients. With rapid propellor mixing, add part A to part B, forming the emulsion. Check and adjust pH, then package. Product is a flowable liquid when made, thickens to a soft cream in about 2 hours, and becomes a ringing gel in about 3 hours.

Formulation 0-106

Waterless Hand Cleaner with d-Limonene

A firm white cream for heavy-duty hand cleaning with or without water. The d-limonene aids grease-cutting in addition to fragrancing the product. Mazclean EP provides emulsification and detergency as well as improved rinsability.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Deodorized Kerosene	25.00
	Light Mineral Oil/Drakeol 9	5.00
	d-Limonene, Grade M	5.00
	d-Limonene Emulsifier/Mazclean EP	6.00
	Stearic Acid/Hystrene 5016	5.00
B	Water	49.83
	Glycerin	2.00
	Triethanolamine, 99%	2.10
	Preservative/Kathon CG	0.07

pH: 7.5-8.0

Viscosity: 550,000-600,000 cps (Brookfield TD @ 0.3 rpm)

Appearance: Firm, glossy white cream

Procedure:

Blend the Part A ingredients in the main vessel, heat to 60C. In a second vessel, blend and heat the Part B ingredients to 60C. Slowly add Part B to A with good agitation. The batch will thicken as the emulsion forms, then it will thin slightly as the emulsion inverts. Cool the batch to 35C with sweep stirring&pack off.

Heavy Duty Liquid Soap

A high-lathering, hard-working liquid soap which doesn't dry the skin with repeated use because of the Mafo CSB-50, which also helps build the product's viscosity. A pearlescent appearance is imparted by the Mapeg EGMS, which could be omitted if a clear product is desired.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Demineralized Water	20.0
	Sodium C14-15 Olefin Sulfonate/Witconate AOS	10.0
	Glycol Stearate/Mapeg EGMS	1.0
B	Demineralized Water	46.1
	Sodium C12-15 Pareth Sulfate/Neodo1 25-35	10.0
	Cocamidopropyl Hydroxysultaine/Mafo CSB-50	10.0
	Propylene Glycol (and) Diazolidinyl Urea	
	(and) Methyl Paraben (and) Propyl Paraben/ Germaben II	0.5
	Na4EDTA	0.2
	Cocamide DEA/Mazamide 80	2.0
C	Citric Acid (50%)	0.2
	Ammonium Chloride	Q.S.

pH: 6.0-6.5

Viscosity: 300 cps (with 0.0% NH₄Cl)
6,000 cps (with 0.5% NH₄Cl)

Appearance: White, pearlescent liquid

Procedure:

Part A ingredients are mixed and heated to 65C to melt and dissolve the pearl agent. Heating is discontinued, and the Part B ingredients are added in order, with propellor mixing. When the batch is uniform, the pH is adjusted with citric acid and the viscosity with ammonium chloride.

Formulation N-103

Combo Bar

(Modification of an example from US Patent #5,041,233)

Liquid Soap

A mild, high-foaming formulation which is simple, yet offers lubricious lather and soft skin afterfeel thanks to the Jordapon CI-UP. The Mapeg EGMS provides a bright pearlescence to the system. It can be omitted if a clear product is desired.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Deionized Water	74.4
	Sodium Cocoyl Isethionate/Jordapon CI-UP	3.0
	Ammonium Lauryl Sulfate/Stepanol AM	13.0
	Glycol Stearate/Mapeg EGMS	0.5
	Na4EDTA	0.1
	Methyl Paraben	0.2
B	Cocamidopropyl Betaine/Mafo CAB	6.0
	Cocamide DEA/Mazamide JT-128	2.5
C	Fragrance	0.2
	Citric Acid	0.1

pH: 6.0-6.5

Viscosity: 2500-3500 cps (with 0.6-0.9% NaCl)

Appearance: Creamy, Pearlescent Liquid

Procedure:

Mix and heat the part A ingredients to 65C (150F). When uniform, add the Mafo CAB and the Mazamide JT-128. Cool the batch to 40C (105F), add fragrance and adjust pH. Adjust viscosity with sodium chloride.

Liquid Hand Soap

<u>Ingredients:</u>	<u>Wt%</u>
Standapol WAQ Special	16.00
Plantaren 2000	10.00
Velvetex BK-35	3.50
PEG-150 Distearate	2.00
Lantrol AWS 1692	0.30
Emerest 2355	1.00
Cosmedia Polymer HSP-1180	1.00
Kathon CG	0.05
Fragrance & Dyes	q.s.
Water	Balance

Procedure:

Charge kettle with water. Heat water to 60-65C. Keep temperature constant. Add remaining ingredients, one at a time, under agitation. Once uniform, take heat off and continue stirring until product has reached ambient temperature. Adjust pH to 6.0-6.5 with citric acid.

Comments:

By combining Standapol WAQ Special and Plantaren 2000, we are assured of a high foaming liquid hand soap that is mild to the skin. The inclusion of Lantrol 1692 and Cosmedia HSP-1180 leaves an elegant feel on the skin.

Formula H-5003

Coconut-Oleic Hand Soap
(15% Real Soap)

	<u>Wt%</u>
Emery 621 Coconut Fatty Acid (acid value 263)	6.5
Emersol 213 Low Titer Oleic Acid (acid value 203)	6.5
Caustic potash (100%)	3.0
Water	to 100.0

Procedure:

Dissolve the caustic in the necessary amount of water, heating to 49-54C (120-130F), then add the fatty acid in a slow steady stream. Agitate while mixing the fatty acid and caustic until saponification is complete. The reaction mixture should be heated to 66-71C (150-160F) during the final stages of saponification.

Check the neutrality of the soap and adjust as necessary. Perfume as desired. Allow the soap to stand and settle for several days at near freezing temperatures, if possible, and decant or filter the soap.

Properties and Variations:

Distilled pine oil or other perfume may be added. This is a typical formula for soaps used in liquid soap dispensers, and many such products contain fluorescein, a dye that imparts a greenish-yellow fluorescence.

Formula AE-19

SOURCE: ICI Americas: Suggested Formulations

Opaque Liquid Soap

Natrosol 250HHR hydroxyethylcellulose effectively boosts the viscosity of this lower actives opaque shampoo base. At a surfactant solids level of only 7.3%, the addition of Natrosol yields a rich liquid soap with a viscosity of 4,000 cps (mPas) (Brookfield LVT at 30 rpm, 25C).

Ingredients:

	Wt%
Water	75.88
Sodium C14-C16 olefin sulfonate, 40% active	7.50
Sodium lauroyl sarcosinate, 30% active	6.66
Cocamidopropyl betaine, 35% active	6.66
Glycol stearate	1.00
Natrosol 250HHR CS hydroxyethylcellulose	0.80
Propylene glycol	0.50
Glycerin	0.50
Tetrasodium EDTA	0.30
Stearalkonium chloride	0.10
Methyl paraben	0.10

Procedure:

1. Disperse the Natrosol in water with good agitation. Mix until fully dissolved. Moderate heating or an increase in solution pH to slightly alkaline will accelerate hydration.
2. Disperse the methyl paraben in the propylene glycol. Add to the Natrosol solution. Mix until dissolved.
3. While slowly stirring the water-soluble polymer solution, add the stearylalkonium chloride, olefin sulfonate, and glycol stearate. Heat the mixture to 80C until all of the glycol stearate has melted and the solution has turned opaque.
4. Add the remaining ingredients while cooling the solution slowly to room temperature.
5. Add color and fragrance.

Formula NO9-01W

Transparent Toilet Soap

<u>Ingredients:</u>	<u>Wt%</u>
Water	65.70
Sodium C14-C16 olefin sulfonate, 40% active	20.00
Sodium lauroyl sarcosinate, 30% active	10.00
Cocamide MEA	3.00
Natrosol 250HR CS	1.00
Disodium EDTA	0.20
Methyl paraben	0.10

Procedure:

1. Disperse the Natrosol in water with good agitation. Mix until fully dissolved.
2. Add the methyl paraben to the Natrosol solution. Mix until fully dissolved.
3. In a separate vessel, combine the surfactants, heat to 80C, and mix until homogeneous.
4. Add the surfactant solution to the water-soluble polymer solution and mix until well blended.
5. Add the disodium EDTA and cool to room temperature.

Formula NO9-02W

C	Cocamidopropyl Betaine/Mafo CAB	3.40
	Cocamide DEA/Mazamide JT-128	0.90
	Fragrance	0.05
D	Citric Acid, 50%	0.10
E	Deionized Water	6.75
	Ammonium Chloride	1.70

pH: 6.0-6.5

Viscosity: 1,000 cps (Brookfield #3 @ 6 rpm)

5,000 cps (Brookfield #3 @ 6 rpm with 0.6% NH4Cl)

Appearance: Pearlescent, white liquid

Procedure:

In the main vessel, mix and heat part A to 70C. When uniform, discontinue heating and add the part B ingredients in order, cooling the batch. Premix part C, and add to the batch. Adjust pH when batch temperature is 45-55C. Cool the batch to 25C, and adjust viscosity with part E.

Formulation N-105

Syndet Bar

Modification of an example in US Patent #4,707,288

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Sodium Cocoyl Isethionate (and) Stearic Acid/ Jordapon CI-75	76.5
Tallow/Coco Soap	16.7
Water	4.1
NaCl	0.3
TiO2	1.0
Fragrance	1.0
BHT	0.2
Na3HEEDTA	0.2

Procedure:

Blend all ingredients together at room temperature.

Formulation M-103

SOURCE: PPG Industries, Inc.: Suggested Formulations

Surgical Scrub

This is an opaque lotion formula which is soap-free. Foaming and cleansing is provided by Avanel S-35 CG and Mafo CAB, and germ-killing by PCMX. A blend of emollient ingredients soften dry areas.

<u>Part:</u>	<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A	Deionized Water	46.00
	Hydroxypropyl Methylcellulose/Methocel 40-100	0.10
	Tetrasodium EDTA	0.10
	Triethanolamine	0.05
B	Sodium Octoxynol-2 Ethane Sulfonate/ Avanel S-35 CG	32.00
	Cocamidopropyl Betaine/Mafo CAB	10.00
	Chloroxylene/Phenosept	3.00
C	Petrolatum	5.00
	Lanolin Alcohol	0.50
	Cetearyl Alcohol (and) Ceteareth-20/Macol 124	2.00
	Cocamide DEA/Mazamide 80	1.25
D	Fragrance	Q.S.
	Citric Acid or TEA to pH 6.0-7.0	Q.S.

Procedure:

Disperse the hydroxypropyl methylcellulose in the part A water at ambient temperature by mixing for >10 minutes. Add the tetrasodium EDTA and the TEA to raise the pH above 8.5 and initiate hydration of the hydroxypropyl methylcellulose. Mix for at least 20 minutes while heating the batch to 60-65C. Add the part B ingredients in order, maintaining the batch at 60-65C while the PCMX dissolves. Blend the part C ingredients in a side vessel, heating to 60-65C. Add part C to the batch with rapid agitation to form the emulsion. Maintain this agitation as the batch is cooled to 40-45C. Add the fragrance and adjust the pH to 6.0-7.0.

Toilet Soap Base*

	<u>Wt%</u>
Emery 531 Fatty Acid	48.37
Emery 621 Coconut Fatty Acid	12.09
Caustic soda (36%) (40.7 Baume)	26.39
Water	10.08
Salt	0.19
Sodium silicate	1.92
Titanox	0.96
Perfume	q.s.

Floating Soap*

	<u>Wt%</u>
Emery 531 Fatty Acid	43.13
Emery 621 Coconut Fatty Acid	18.48
Caustic soda (36%) (40.7 Baume)	28.98
Water	5.37
Salt	0.19
Sodium silicate	3.85
Perfume	q.s.

*Formulations 1 and 2 require normal bar soap manufacturing procedures; as well as specialized equipment including soap kettles, crutchers, pladders, and cutting and stamping equipment. Formulation 2 requires special processing to float.

Pine Oil Hand Soap
(15% Real Soap)

	<u>Wt%</u>
Emery 621 Coconut Fatty Acid (acid value 263)	12.7
Caustic potash (100%)	3.3
Pine oil (steam distilled)	3.2
Water	to 100.0

Procedure:

Dissolve the caustic in the necessary amount of water, heating to 49-54C (120-130F), then add the fatty acid in a slow steady stream. Agitate while mixing the fatty acid and caustic until saponification is complete. The reaction mixture should be heated to 66-71C (150-160F) during the final stages of saponification. The pine oil is added to the mixture following saponification.

Check the neutrality of the soap and adjust as necessary. Perfume as desired. Allow the soap to stand and settle for several days at near freezing temperatures, if possible, and decant or filter the soap.

Ultra-Waterless Hand Cleaner with Abrasive

Formula Profile:

The synergistic mixture of Veegum Ultra and Rhodigel will create a light waterless hand cleaning lotion that will have great spreadability and feel without the tack and stringiness characteristic of Rhodigel. Veegum Ultra will improve stability, suspend the abrasives and maintain viscosity of the product. The formed soap is Potassium Oleate and the D-Limonene is the natural cleaner.

Ingredients:

	Wt%
A: Water	59.3
Veegum Ultra (Magnesium Aluminum Silicate)	1.5
Rhodigel (Xanthan Gum)	0.5
B: Oleic Acid	9.0
Mineral Oil	5.0
Cetyl Alcohol	1.0
Lanolin	1.0
C: Water	2.0
Potassium Hydroxide	0.7
D: D-Limonene	10.0
E: Polyethylene Beads (A-C 9-A)	10.0
F: Preservative	qs

Procedure:

Step 1: Dry blend Veegum Ultra and Rhodigel in Part A. (Dry blending reduces the clumping of Rhodigel and allows for the simultaneous introduction of ingredients). Sift the powder into an established vortex in the water. Veegum Ultra will be hydrated within 15 minutes. Allow about 45 minutes for Rhodigel to dissolve completely. The addition of any other ingredients during the hydration process will interfere with the hydration of Veegum Ultra and will reduce or even eliminate the desired properties generated by the Magnesium Aluminum Silicate.

Step 2: Begin heating water phase in Step 1 to 75C.

Step 3: Blend oil phase ingredients in Part B and heat the oil phase to 75C.

Step 4: When both phases are at 75C, add oil phase in Step 3 to water phase Step 2.

Step 5: Cool to 45C. Dissolve the KOH in water and add Part C to Step 2.

Step 6: Cool to 35C. Add Part D to Step 2.

Step 7: Add Part E to Step 2.

Step 8: Add Part F to Step 2.

Product Specifications:

Viscosity: Brookfield LVT: 20,000+-3,000 cps after 24 hours

pH: 8.0-8.5

This formula produces a stable product that passes 3 month stability testing at RT, 5C, 38C, 50C and 3 cycle F/T.

Waterless Hand Cleaner Cream

Formula SK-20 is a waterless hand cleaner cream based on deodorized kerosene as the cleansing agent.

<u>Ingredients:</u>	<u>Wt%</u>
A Magnesium aluminum silicate	2.5
Water	30.0
B Arlacel 60 Sorbitan Stearate	2.0
Tween 60 Polysorbate 60	8.0
Deodorized kerosene	35.0
C Methylcellulose, 4000 cps	0.5
Water	22.0
Preservative	q.s.

Preparation:

Part (A): Add magnesium aluminum silicate to water slowly, agitating continually until smooth (about one hour). Heat (A) to 62C.

Part (B): Heat (B) to 60C. Add (A) to (B). Stir until cool.

Part (C): Heat half of the water to 90C. Add methylcellulose very slowly. Mix thoroughly to disperse methylcellulose. Add the remainder of the water. Cool and add (C) to the emulsion (A,B blend). Mix well. Replace water lost by evaporation.
Formula SK-20

d-Limonene Hand Cleaner

<u>Ingredients:</u>	<u>Wt%</u>
A d-Limonene	15.00
Arlamol E PPG 15 Stearyl ether	15.00
Brij 35 Liquid Laureth-23	2.30
Brij 72 Steareth-2	4.35
B Water	62.75
Carbopol 934	0.50
D Dowicil 200	0.10

Preparation:

Disperse Carbopol 934 in water. Heat (A) to 60C and (B) to 62C. Add (B) to (A) slowly with moderate agitation. Add (C) at about 50C. Stir to 35C and replace water lost by evaporation.
Formula SK-21

Section XI
Sun Care Products

Clear Liquid Sunblock

Hard to dissolve Benzophenone-3 instantly solubilizes in Velsan D8P-3 liquid to produce these cold mix sunblocks similar to popular "Pre-Sun" products. In addition to benzophenone-3 solubilization, Velsan D8P-3 also imparts an excellent non-greasy afterfeel to the formula.

Dry Touch Physical Sunscreen

This formula is not an emulsion but rather a suspension of several water-insoluble ingredients in water. The suspending agent Veegum Plus prevents these ingredients from settling and/or separating. The physical sunscreen used is micronized Titanium Dioxide. This formula also contains liposomes with a payload of the well-known moisturizing agents liposomes Sodium PCA and amino acids. A silicone oil dispersion is also included to enhance application properties. The formula contains no emulsifying agents.

<u>Ingredients:</u>	<u>Wt. %*</u>
A: Deionized Water	59.70
Veegum Plus, Magnesium Aluminum Silicate (and)	
Cellulose Gum	1.50
Rhodigel, Xanthan Gum	0.20
B: Glycerin (and) Titanium Dioxide (TiO ₂ Sperse GLY)	28.60
C: Deionized Water (and) Phenyltrimethicone (and)	
Cyclomethicone (and) Dimethiconol (and) Phospho-	
lipids (and) Phenoxyethanol (and) Methylparaben	
(and) Carbomer (and) Ethylparaben (and) Propyl-	
paraben (and) Butylparaben (Satin Finish)	5.00
D: Preservative	q.s.
E: Deionized Water (and) Sodium PCA (and) Phospholipids	
(and) Phenoxyethanol (and) Tocopheryl Acetate (and)	
Xanthan Gum (and) Arginine (and) Lysine (and) Glycine	
(and) Methylparaben (and) Proline (and) Ethylparaben	
(and) Propylparaben (and) Butylparaben (Moisturizing	
Liposomes)	5.00

Procedure:

Weigh and dry blend the Veegum Plus and Rhodigel. Add the blend to the Part A water at room temperature, mixing with a propeller mixer at 1800 rpm. Continue mixing for 30 minutes. Add Part B and mix 10 minutes at 1800 rpm. Add Parts C and D to the batch in the order shown. Mix Part C for 10 minutes at 1800 rpm before adding Part D. Mix Part D 5 minutes at the same speed. Slow the mixer to 500 rpm and add Part E. Mix 5 minutes and package.

Oil and Emulsifier Free Sunscreen Lotion

Velsan D8P-16 acts as a solubilizer for the sunscreen agents and also imparts an excellent non-greasy afterfeel to these products. The formulations are oil free, emulsifier free and also exhibit gel-like characteristics.

Formula CSS-05:

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
SD Alcohol 39C	45.24
Hydroxypropyl Cellulose	1.50
Phase B:	
Velsan D8P-16	9.64
Octyl Methoxycinnamate	7.50
Benzophenone-3	3.00
SD Alcohol 39C	24.30
Fragrance	0.60
Phase C:	
Deionized Water	9.76

Formula CSS-06:

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
SD Alcohol 39C	44.24
Hydroxypropyl Cellulose	1.50
Phase B:	
Velsan D8P-16	9.64
Octyl Methoxycinnamate	7.50
Parsol 1789*	1.00
Benzophenone-3	3.00
SD Alcohol 39C	24.30
Fragrance	0.60
Phase C:	
Deionized Water	9.76

Procedure:

Disperse hydroxypropyl cellulose in SD Alcohol. Mix until a clear gel develops. For Phase B, add all ingredients except SD Alcohol and Fragrance in order with mixing. Heat to 45C with mixing until homogeneous. Cool to 35C and add the alcohol and fragrance with mixing. Add Phase B to Phase A and mix well. When Phase A/Phase B mixture is homogeneous, add Phase C slowly and mix completely.

Properties:

pH: 6.9

Viscosity: 7300+-500 cps

Appearance: Cloudy, light yellow gel-like lotion

*Parsol 1789 is not yet FDA approved.

Oil-in-Water Sun Protection Cream

<u>Ingredients:</u>	<u>Wt%</u>
A Paraffin oil perliquidum*	10.0
Arlamol HD	5.0
Arlamol S7	4.0
ParsoI MCX*	5.0
ParsoI 1789*	5.0
Vitamin E acetate*	1.0
Stenol 1822A*	2.0
Anti-oxidant	q.s.
B Arlatone 2121	5.5
Glycerol	4.0
Preservative	q.s.
Water	62.9
C Rhodopol SC*	0.1
D Perfume	q.s.

Manufacture:

1. Mix the Arlatone 2121 in the heated water phase at 80C under moderate stirring until a homogeneous dispersion is formed.
2. Disperse the hydrocolloid in the heated aqueous phase at 75C with moderate stirring.
3. Add the heated oil phase to the aqueous phase under intensive stirring.
4. Homogenise the mixture intensively at 75C for one minute.
5. Cool to 35C whilst stirring moderately.
6. Add heat-sensitive ingredients whilst stirring moderately.

Comment:

During the cooling process (step 5), when Arlatone 2121 emulsion starts to build up in the lamellar crystalline structure, moderate stirring is recommended. Intensive stirring can break down the lamellar structure and can reduce the final viscosity. The viscosity of the formulation is inversely proportional to the mixing energy that has been put into the emulsion during manufacture.

Comments:

Viscosity: 159.120 mPa s (Brookfield LVT, spindle E, 1.5 rpm)
Energy input is related to the final formulation viscosity.

Oil-in-Water Sun Protective Cream with "Natural" Sun Filter

Ingredients:	Wt%
A Arlamol HD	5.0
Arlamol S7	4.0
Paraffin oil perliquidum*	10.0
Lorol C18*	2.0
Vitamin E acetate*	1.0
B Tioveil AQ*	12.5
Arlatone 2121	5.5
Glycerol	4.0
Keltrol*	0.1
Disodium EDTA	0.1
Preservative	q.s.
Sorbic acid	0.2
Demineralised water	to 100

Manufacture:

1. Disperse Tioveil AQ in water and adjust pH to 6.0-6.5 with acid.
2. Homogenise the water phase intensively for one minute.
3. Add Arlatone 2121 and other ingredients to the water phase.
4. Heat B to 85C.
5. Heat the oil phase A to 80C.
6. Add A to the hot aqueous phase B with stirring.
7. Homogenise the mixture intensively at 75C for one minute.
8. Allow to cool to room temperature whilst stirring.
9. Control pH and adjust if necessary to pH 6.0-6.5.

Comments:

Viscosity (after 1 week): 46,490 mPa s (Brookfield LVT, spindle E, 6 rpm)

Energy input is related to final formulation viscosity

Leave-On Hair Treatment Spray with Sunscreen

A light hair and scalp treatment containing Lipamide MEAA and Lipoquat R for conditioning and shine, with Unitrienol T-27 for oil control. The Unipabol U-17 helps protect the hair from UV induced color damage.

<u>Sequence:</u>	<u>Raw Material/INCI Name:</u>	<u>Wt%</u>
1	Liponic EG-1/Glycereth-26	3.00
1	Lipamide MEAA/Acetamide MEA	3.50
1	Lipoquat R/Ricinoleamidopropyl Ethyldimonium Ethosulfate	0.50
2	Deionized Water	3.00
2	Unipabol U-17/PEG-25 PABA	7.50
3	SD Alcohol 40-B (190 proof)	73.50
4	Unitrienol T-27/Farnesyl Acetate (and) Farnesol (and) Panthenyl Triacetate	2.00
4	Lipovol J/Jojoba (Buxus Chinensis) Oil	1.00
4	Liponate NPGC-2/Neopentyl Glycol Dicaprylate/Dicaprate	6.00

Procedure:

1. Premix Sequence #1 ingredients at ambient temperature on overhead mixer at low/medium speed.
2. Premix Sequence #2 and add to Sequence #1 at low/medium speed.
3. Add combined Sequence #1 and Sequence #2 to Sequence #3 on overhead mixer at medium/low speed.
4. Add premixed Sequence #4 to batch at medium speed until solution is clear and homogeneous.

SOURCE: Lipo Chemicals Inc.: Formulation No. 1005

Sunblock Lotion

In this formula, Veegum is used with Rhodigel Xanthan Gum and a Xanthan Gum-based dispersible emulsifier to stabilize the emulsion and adjust emulsion viscosity. This cold process lotion has a light feel with quick, greaseless rub in. The sunscreen should offer considerable protection against sunlight-induced skin problems. The Ritachol and Finsolv are included for emollience and rapid skin absorption on rub-in.

<u>Ingredients:</u>	<u>Wt%*</u>
A: Veegum, Magnesium Aluminum Silicate	0.60
Rhodigel, Xanthan Gum	0.15
Deionized Water	65.45
Nonfat Dry Milk (and) Xanthan Gum (and) Glyceryl Stearate (and) Hydrogenated Vegetable Glycerides Phosphate	0.80
Propylene Glycol	3.00
B: C12-15 Alkyl Benzoate (Finsolv TN)	8.00
Benzophenone-3 (Escalol 567)	5.00
Octyl Methoxycinnamate (Parsol MCX)	7.50
Mineral Oil (and) Lanolin Alcohol (Ritachol)	4.00
Polysorbate 80	0.50
C: Zinc Oxide	5.00
D: Preservative	q.s.

Procedure:

Add the Veegum/Rhodigel dry blend to the water slowly, agitating at maximum available shear until smooth. Add the remaining Part A ingredients in the order shown, mixing after each until smooth and uniform. Mix the Part B ingredients until the Benzophenone-3 dissolves. Add Part B to Part A and mix until smooth and uniform.

*As received basis
Formulation No. 367

TiO₂ Lotion

<u>Ingredients:</u>	<u>Wt%*</u>
A: Propylene Glycol Isoceteth-3 Acetate (Hetester PHA)	10.00
Octyldodecyl Neopentanoate (Elefac I-250)	10.00
Titanium Dioxide (and) Bismuth Oxychloride (Titanium Dioxide 110)	10.00
B: Deionized Water	68.90
Veegum, Magnesium Aluminum Silicate	0.70
Rhodigel, Xanthan Gum	0.30
C: Methylchloroisothiazolinone (and) Methylisothiazolinone	0.10

Procedure:

Weigh the water into a suitable vessel and mix with a propeller mixer at 1800 rpm. Dry blend the Veegum and Rhodigel and add them to the water. Mix for 60 minutes. In a separate vessel, mix the Part A ingredients until the Titanium Dioxide is uniformly dispersed. Add Part A to Part B and mix until uniform. Add Part C, mix until uniform and package. *As received basis

SPF 12 Sunscreen Liposome Lotion

This is an elegant feeling sunscreen in a cold-process lotion containing liposomes for longer lasting protection.

<u>Ingredient:</u>	<u>Wt%*</u>
A: Deionized Water	58.53
Veegum Magnesium Aluminum Silicate	1.40
Rhodigel Xanthan Gum	0.18
Cellulose Gum (CMC 7MF)	0.56
B: Glycerin, 99%	3.00
Butylene Glycol (and) Glycerin (and) Chlorophenesin (and) Methylparaben (Killitol)	3.00
Water (and) Octyl Methoxycinnamate (and) Phenyl Trimethicone (and) Cyclomethicone (and) Dimethiconal (and) Phosphoglycerides (and) Phenoxyethanol (and) Methylparaben (and) Ethylparaben (and) Propylparaben (and) Butylparaben (Sansuif OMC)	23.33
Water (and) Octyl Methoxycinnamate (and) Soy Phosphoglycerides (and) Phenoxyethanol (and) Tocopheryl Acetate (and) Methylparaben (and) Propylparaben (and) Ethylparaben (and) Butylparaben (Sunscreen Liposomes)	10.00

Procedure:

Weigh the water into a suitable vessel and mix with a propeller stirrer at 1800 rpm. Weigh and dry blend the Veegum, Rhodigel and CMC and add them to the water. Continue mixing for 60 minutes at 1800 rpm. Reduce the mixer speed to produce a slight vortex and add the Part B ingredients in the order shown, mixing each for 5 minutes. Package.

PABA Free Milk & Honey Sunscreen Stick

The following formulation produces a waterproof sunscreen stick which has a SPF factor of approximately 10-20.

<u>Ingredients:</u>	<u>Wt%*</u>
Monalac ML (Refined Milk Lipid)	70.0
Bleached Beeswax	20.0
Octyl Methoxycinnamate	7.0
Benzophenone-3	3.0
Fragrance	qs

Procedure:

Blend the Monalac ML and Beeswax together at 65-75C. Avoid air entrainment. When uniform, add other ingredients one at a time and continue blending until clear. Reduce heat, add fragrance and pour at 50-65C into package. A rich, smooth, protective and non-greasy skin covering will be provided.

Sun Protection Gel (aqueous)
SPF 10 (Sun Protection Factor, FDA-Method with 5 Volunteers)

<u>Raw Materials:</u>	<u>Wt%</u>
A Eusolex 232 (Art. No. 105372) (Phenylbenzimidazole Sul- fonic Acid)	4.00
Tris-(hydroxymethyl)-aminomethane (Art. No. 108386) (Tromethamine)	1.77
Allantoin (Art. No. 101015)	0.20
Sorbitol F liquid (Art. No. 102993)	5.00
Preservatives	q.s.
Water, demineralized	ad 100.00
B Perfume 72979	0.30
Arlatone 980 (PEG-35-Hydrogenated Castor Oil)	1.00
C Carbomer 940	1.50
Water, demineralized	36.10
D Tris(hydroxymethyl)-aminomethane (Art. No. 108386) Tromethamine	2.40
Water, demineralized	10.00

Procedure:

To neutralize Eusolex 232 dissolve Tris(hydroxymethyl)-aminomethane in the water of phase A and add Eusolex 232 while stirring. When uniform add the remaining ingredients of Phase A. Heat to 70C until homogeneous and cool while stirring. Blend ingredients of phase B. Disperse Carbomer 940 in the water of phase C and homogenize. Dissolve the Tris(hydroxymethyl)-aminomethane in the water of phase D. Combine phases C and D and homogenize. Incorporate phases A and B. Homogenize again.

Note:

Transparent gel
 Viscosity 35,000 mPas (Brookfield RVT, Sp. C, 5 rpm) at 25C
 pH_{22C}=6.7
 Samples contain as preservatives:
 0.20% Methyl-4-hydroxybenzoate (Merck-Art.-No. 6757)

Clear Sunscreen Gel

This formula is a clear, oil-free gel. Excellent non-greasy afterfeel.

Ingredients:

	<u>Wt%</u>
Phase A:	
SD Alcohol 40-2	44.07
Hydroxypropyl Cellulose	1.67
Phase B:	
Velsan D8P-3	9.64
Octyl Methoxycinnamate	7.50
Parsol 1789*	1.00
Benzophenone-3	2.00
SD Alcohol 40-2	24.30
Fragrance	0.60
Phase C:	
Deionized Water	9.76

Procedure:

Disperse the hydroxypropyl cellulose in Phase A's portion of the SD Alcohol. Mix until a clear gel develops. In Phase B add ingredients in order while mixing. Continue mixing until all of the benzophenone-3 and Parsol 1789 is dissolved. Add Phase B to Phase A and continue to mix until a smooth gel develops. Slowly add water with mixing until gel is clear and homogeneous.

Properties:

pH: 6.4

Viscosity: 12,800 cps

Appearance: Clear, Yellow Gel

*Parsol 1789 is not yet FDA approved.

SOURCE: Clariant Corp.; Formulation CSS-04

Sunscreen Emulsion with Titanium Dioxide

This base is an ideal starting point for sunscreen lotions. It is a very stable formulation for any type of pigmented product.

<u>Ingredient:</u>	<u>Wt%*</u>
A: Deionized Water	61.98
Veegum, Magnesium Aluminum Silicate	0.50
Cellulose Gum	0.15
Allantoin	0.05
Methylparaben	0.20
Titanium Dioxide (and) Alumina (and) Glycerin (and) Silica (UV-Titan M212)	8.00
B: Lecithin	1.00
Lanolin Alcohol	1.50
Glyceryl Stearate	0.80
Isopropyl Palmitate	4.00
Stearic Acid	0.50
Caprylic/Capric Triglycerides	4.00
Isoeicosane (Permethy1 102A)	7.50
Polyisobutene (Permethy1 104A)	2.50
Isostearic Acid	2.40
Propylparaben	0.10
C: Imidazolidinyl Urea	0.20
D: Triethanolamine 99%	1.62
Polyglyceryl methacrylate	3.00

Procedure:

Weigh the Part A water into a suitable vessel and mix with a homogenizer operating at 5000 rpm. Dry blend the Veegum and cellulose gum, add the mixture to the water and continue mixing for 30 minutes at 5000 rpm, while heating the batch to 70-72C. Add the remaining Part A ingredients in order, mixing each until uniformly dispersed. Mix the Part B ingredients in another vessel and heat to 75C. Add Part B to Part A and mix for 10 minutes at 5000 rpm. Move the batch to a propeller mixer and adjust the speed to create a small vortex. Begin cooling while mixing. At 60C, add Part C. At 40C, add the Part D ingredients in order. Package at ambient temperature.

Sunscreen Gel**Formulating Design and Advantages:**

Cera Bellina (Pg-3 Beeswax) produces a non-granular, low penetration and high stability gel. This formula utilizes an array of oils and actives producing a product with a non-greasy skin feel, penetrates the skin quickly and has an SPF of 4 to 6.

Raw Materials:

	<u>Wt%</u>
<u>Oil Phase:</u>	
Sweet Almond Oil	29.0
Cera Bellina (Pg-3 Beeswax)	15.3
Isopropyl Palmitate	15.0
Jojoba Oil	13.0
Sesame Oil	9.0
Avocado Oil	9.0
Cetyl Stearyl Alcohol	4.0
Escalol 507	4.0
Ozokerite 160/164	1.0
Carnauba #1 Yellow	0.5
Vitamin A Palmitate	0.1
Vitamin E Concentrate	0.1

Procedure:

Weigh and add each component of the oil phase to a vessel. Heat, not exceeding 75C, and mix until homogeneous. Reduce temperature to 60C and pour into container.

Adaptation of Formula and its Influence on the Product:

By replacing the jojoba, sesame and avocado oils with light mineral oil (28.8%) and increasing the Cera Bellina concentration (17.5%), one can produce the same product as described above. The formulator has the ability to substitute their preferred oils with only slight concentration changes of Cera Bellina to produce products of the same consistency. Orange Wax (Koster Keunen) can be added to naturally enhance the SPF.

Sunscreen Gel SPF 10
(Aqueous)

<u>INCI Name/Trade Name:</u>	<u>Wt%</u>
Phase A:	
Phenylbenzimidazole Sulfonic Acid (% as acid)/ Eusolex 232	4.00
Triethanolamine (99%)	2.18
Allantoin/Rona	0.10
Glycerine	5.00
Methyl Paraben	0.20
Deionized Water	14.77
Phase B:	
Imidazolidinyl Urea/Germall 115	0.15
Deionized Water	1.00
Phase C:	
Carbomer/Carbopol 940	1.50
Deionized Water	58.10
Phase D:	
Triethanolamine (99%)	3.00
Deionized Water	10.00

Procedure:

To neutralize Eusolex 232 dissolve triethanolamine in the water of phase A and add Eusolex 232 while stirring. When uniform, add the remaining ingredients of phase A. Heat to 70C until homogeneous then cool to 45C while stirring. Dissolve Germall 115 in the water of phase B, add to batch. Combine phase C and homogenize. Combine phase D. Add phase D to phase C with side sweep agitation until homogeneous. Add phase A and homogenize.

Notes:

Stability RT-No separation after 2 years.

Sunscreen Gel SPF 10
(Aqueous-Alcoholic)

<u>INCI Name/Trade Name:</u>	<u>Wt%</u>
Phase A:	
Phenylbenzimidazole Sulfonic Acid (% as acid)/ Eusolex 232	4.00
Triethanolamine (99%)	2.18
Allantoin/Rona	0.10
Glycerine	5.00
Methyl Paraben	0.20
Deionized Water	1.00
Phase B:	
Imidazolidinyl Urea/Germall 115	0.15
Deionized water	1.00
Phase C:	
Carbomer/Carbopol 940	1.50
Deionized Water	50.87
Phase D:	
Triethanolamine (99%)	3.00
Deionized Water	5.00
Phase E:	
Ethanol (90%)	20.00

Procedure:

To neutralize Eusolex 232 dissolve triethanolamine in the water of phase A and add Eusolex 232 while stirring. When uniform add the remaining ingredients of phase A. Heat to 70C until homogeneous, then cool to 45C while stirring. Dissolve Germall 115 in the water of phase B, add to batch. Combine Phase C and homogenize. Combine phase D. Add phase E step by step while stirring, proceeding with each addition after it is clear and uniform. Add phase A and homogenize.

SOURCE: Rona/EM Industries, Inc.: Formula EUS1-5-2

Sunscreen Lotion**Formulating Design and Advantages:**

This formula demonstrates the rheological and stabilizing properties of Cera Bellina. Incorporated into this formula is the sunscreen Escalol (Octyl Dimethyl PABA) giving this formula an approximate SPF value of 4 to 6. The product has high gloss and excellent skin feel. The rheological properties of Cera Bellina allow for this product to be packaged in convenient tubes or squeeze bottles.

<u>Raw Materials:</u>	<u>Wt%</u>
<u>Oil Phase:</u>	
Escalol 507	5.63
Amerchol L 101	4.70
Cera Bellina (Pg-3 Beeswax)	3.80
Glycerol Monostearate	2.77
Light Mineral Oil	2.83
Isostearic Acid	1.00
<u>Water Phase:</u>	
Water (Distilled)	71.66
1,3-Butylene Glycol	2.90
Glycerine	2.83
Triethanolamine	0.80
Germaben II	0.80
Carboxymethyl Cellulose	0.28

Procedure:

Heat the water phase to 75C under agitation ensuring that the entire phase is solubilized. Melt and mix the oil phase at 75C. Slowly add the oil phase to the water phase under vigorous agitation. Allow to cool to 35C and pour into jars.

Adaptation of Formula and its Influence on the Product:

It is easy to alter the sunscreen to suit your preference, without changing the consistency. The emulsion viscosity can easily be altered by changing the oil and/or wax concentration. Orange Wax (Koster Keunen) can be added to naturally enhance the SPF.

Titanium Dioxide Based Water Resistant Sunscreen (SPF 22)

This smooth sunscreen lotion contains no "chemical" absorbers and delivers uniform, non-chalky waterproof protection. Pemulen TR-1 ensures high stability and allows for easy formulation of the lotion.

Ingredient/Trade Name:

	<u>Wt%</u>
Part A:	
1. Deionized Water	67.10
2. Disodium EDTA	0.05
3. Hydroxypropyl Methylcellulose/Benece1 MP943PR	0.10
4. Aminomethyl Propanol/AMP-95	0.25
5. Propylene Glycol	5.00
Part B:	
6. C12-15 Alcohols Benzoate/Finsolv TN	3.00
7. Butyl Stearate	3.00
8. Myristyl Myristate/Ceraphyl 424	4.00
9. Sorbitan Oleate	0.10
10. Acrylates/C10-30 Alkyl Acrylates Crosspolymer/ Pemulen TR-1	0.20
11. Carbomer/Carbopol Ultrez 10	0.20
Part C:	
13. Octyl Palmitate (and) Titanium Dioxide/Tioveil OP	15.00
14. Polyglyceryl-10 Decaoleate/Capmul 10G-10-0	1.00

Properties:

Appearance: White, thick, creamy emulsion

pH: 6.2-6.8

Viscosity (cP): 32,000-38,000

Preparation Procedure:

1. Combine Part A ingredients in a vessel which will contain the entire formulation. Heat to 50C.
2. In a separate vessel, combine first four Part B ingredients. Heat to 65C. After mixture is uniform, disperse resins. Mix until uniform.
3. Using rapid agitation, add Part B to Part A. Mix to form a smooth, viscous emulsion.
4. Combine Part D ingredients and mix well.
5. Add Part C to batch.
6. Using moderate agitation, slowly add Part D to the emulsion. Slowly cool lotion using continued moderate agitation.

Waterproof Sunscreen Cream**Concept Statement:**

An elegant waterproof sunscreen cream containing Pationic SCL to moisturize and smooth skin, and SOD Vegetable and Defensine to detoxify, repair and protect the skin.

Ingredients:

	<u>Wt%</u>
1. Pationic SCL (Sodium Cocoyl Lactylate)	0.50
2. Rita Cetearyl Alcohol 50/50 (Cetearyl Alcohol)	1.60
3. Rita GMS (Glyceryl Stearate)	4.00
4. Titanium Dioxide (Micro)	4.00
5. Methyl Anthranilate	5.00
6. C12-C16 Alkyl Benzoate	7.50
7. PVP/Eicosene Copolymer	0.50
8. Distilled/Deionized Water	68.10
9. Acritamer 941 (Carbomer)	0.20
10. Propylene Glycol	3.00
11. DMDM Hydantoin	2.00
12. NaOH (20% Solution)	q.s.
13. SOD Vegetable (Superoxide Dismutase)	2.40
14. Defensine (Wheat Germ Extract)	3.00
15. Fragrance	q.s.
16. D&C Red No. 33	q.s.

Compounding Procedure:

Disperse item 9 into item 8 and neutralize with item 12. Add item 10 and heat to 80C. Combine items 1-7 and heat to 80C. Add oil phase to water phase. Cool to 35C and items 13-16.

Waterproof Suntan Lotion SPF 17

<u>Ingredient:</u>	<u>Wt%*</u>
A: Isostearic Acid	4.00
Cetyl Alcohol	1.00
DEA Cetyl Phosphate	2.00
Dimethicone	0.50
Octyl Methoxycinnamate (Parsol MCX)	7.50
Octyl Salicylate	4.00
Benzophenone-3 (Uvinul M-40)	2.00
Octyldodecyl Neopentanoate (Elefac I-205)	10.00
B: Deionized Water	63.00
Veegum, Magnesium Aluminum Silicate	0.75
Rhodigel, Xanthan Gum	0.25
Glycerin	4.00
C: Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben	1.00

Procedure:

Weigh the water into a suitable vessel and heat to 85C. Dry and blend the Veegum and Rhodigel and add them to the water while mixing with a homogenizer at 5000 rpm. Continue mixing for 20 minutes. Add the remaining Part B ingredient and mix 3 minutes. Weigh and mix the Part A ingredients in another vessel and heat them to 85C. Add Part A to Part B and mix for 10 minutes at 5000 rpm. Move the batch to a propeller mixer and adjust the speed to create a small vortex. Begin cooling while mixing slowly. At 40C, add Part C. Continue cooling and package at 35C.

Water Resistant Sunscreen Lotion

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Part A:	
1. Deionized Water	62.60
2. Carbomer/Carbopol Ultrez 10	0.20
3. Deionized Water	20.00
4. Hydroxypropyl Methylcellulose/Methocel E4M	0.10
5. Polymethoxy Bicyclic Oxazolidine/Nuosept C	0.20
6. Disodium EDTA	0.05
Part C:	
7. Octyl Methoxycinnamate/Neo Heliopan, Type AV	7.00
8. Octyl Salicylate/Neo Heliopan, Type OS	3.00
9. Oxybenzone/Uvinul M-40	4.00
10. C12-15 Alcohols Benzoate/Finsolv TN	4.00
11. Acrylates/C10-30 Alkyl Acrylates Crosspolymer/ Pemulen TR-1	0.25
Part D:	
12. Aminomethyl Propanol/AMP-95	0.25
13. PEG-20 Almond Glycerides/Croval A-40	0.20
14. Fragrance/Fragrance #99189 "Twister"	0.14

Properties:

pH: 5.8-6.1

Viscosity (cP): 20,000-28,000

Appearance: Creamy white emulsion

Preparation Procedure:

Part A:

1. Disperse Carbopol Ultrez 10 in deionized water (40-50C).

Part B:

2. Disperse Methocel in deionized water in a separate vessel.
When uniform, add other Part B ingredients.

3. Add Part B to Part A.

Part C:

4. Combine first four Part C ingredients in a separate vessel.
Heat mixture and mix until oxybenzone has dissolved.5. Cool Part C to 45C. Disperse Pemulen TR-1 in Part C. Mix
until polymer is dispersed well.6. With vigorous agitation, add Part C to Part A. Mix for 20
minutes or until a smooth, non-grainy dispersion is apparent.

7. Add AMP-95 to batch. Mix until a smooth product is obtained.

8. Add Croval A-40 and fragrance. Mix until uniform.

Water-Resistant Sunscreen Lotion
SPF 24

This high SPF sunscreen lotion provides long-lasting UV protection and has excellent water-resistant properties provided by Avalure AC 118 film forming polymer and Pemulen TR-2 polymeric emulsifier.

Ingredient/Trade Name:	Wt%
Part A:	
1. Deionized Water	66.10
2. Carbomer/Carbopol Ultrez 10 Polymer	0.25
3. Hydroxypropyl Methylcellulose/Methocel E4M	0.10
4. Propylene Glycol	1.00
5. Polymethoxy Bicyclic Oxazolidine/Nuosept C	0.40
6. Disodium EDTA	0.05
7. PEG-20 Almond Glycerides/Crovol A-40	0.40
Part B:	
8. Octyl Methoxycinnamate/Neo Heliopan, Type AV	7.50
9. Octyl Salicylate/Neo Heliopan, Type OS	5.00
10. Oxybenzone/Neo Heliopan, Type BB	6.00
11. C12-15 Alcohols Benzoate/Finsolv TN	5.00
12. Acrylates/C10-30 Alkyl Acrylate Crosspolymer/ Pemulen TR-2 Polymer	0.25
Part C:	
13. Aminomethyl Propanol/AMP-95	0.30
14. Acrylates Copolymer/Avalure AC 118 Polymer	7.50
15. Fragrance #99189 "Twister"	0.15

Properties:

Appearance: Milky white emulsion
 pH: 6.0-6.5
 Viscosity (cP): 16,000-24,000
 SPF: 24
 Stability: Passed 45C, accelerated 1 month
 Passed freeze/thaw-3 cycles

Preparation Procedure:

1. Part A: Disperse Carbopol Ultrez 10 polymer and Methocel E4M in warm deionized water (40-50C). Reduce mixing speed after polymers are dispersed.
2. When uniform, add other Part A ingredients and mix until uniform.
3. Part B: Combine first four ingredients in Part B in a separate vessel. Heat and mix until oxybenzone has dissolved.
4. Cool Part B to 45C. Disperse Pemulen TR-2 in Part B and mix until well dispersed.
5. With vigorous agitation, add Part B to Part A. Mix for 20 minutes or until a smooth, non-grainy dispersion is apparent.
6. Add AMP-95 to batch, mix until a smooth product is obtained.
7. Add Avalure AC 118 and fragrance to batch. Mix until uniform.

W/O Sunscreen Lotion

<u>Component:</u>	<u>Wt%</u>
I Dehymuls PGPH/Polyglyceryl-2 Dipolyhydroxystearate	3.0
Monomuls 90-018/Glyceryl Oleate	1.0
Myritol 318/Caprylic/Capric Triglyceride	6.0
Eutanol G/Octyldodecanol	6.0
Cetiol SN/Cetearyl Isononanoate	5.0
Copherol F 1250/Tocopheryl Acetate	1.0
Permulgin 2550/Beeswax (Cera Alba)	1.2
Neo Heliopan E1000/Isoamyl p-Methoxycinnamate	7.0
Zinc Oxide neutral	6.0
II Water	58.0
Glycerin 86%	5.0
III Phenonip/Phenoxyethanol (and) Methylparaben (and) Ethylparaben (and) Propylparaben (and) Butylparaben	0.5
Perfume Oil	0.3
1. Melt the components listed under I at 80-85C and stir until homogeneous.	
2. Heat the components listed under II to 80-85C and add to phase I while stirring. Stir for 5 minutes at this temperature.	
3. Allow the emulsion to cool with stirring in such a way that it remains in continual motion. Avoid the incorporation of air. Homogenise at 65-55C by means of a suitable dispersion unit to improve both stability and structure. When fully homogeneous allow to cool to 30C with stirring. Addition of III at 30C.	

Formulation No.: HR1 LSF/SPF ca. 17 (DIN)

O/W Lotion with SPF 15

<u>Component:</u>	<u>Wt%</u>
I Emulgade PL 68/50/Cetearyl Glucoside (and) Cetearyl Alcohol	4.5
Cetiol SN/Cetearyl Isononanoate	10.0
Baysilon M 350/Dimethicone	0.5
Copherol F 1300/Tocopherol	2.0
Benzophenone-3	2.0
Octyl Methoxycinnamate	7.5
II Glycerin 86%	3.0
Water	65.4
III Carbopol 981 2%ig/Carbomer	5.0
IV KOH 20%ig	0.1
Viscosity 23C mPas: 15,000	
1. Heat oil phase to 80C. Heat aqueous phase to 80C and add to oil phase while stirring. Emulsify for 5 minutes at this temperature.	
2. Allow the emulsion to cool with stirring in such a way that it remains in continual motion without developing a so-called "stirring cone". Avoid incorporation of air. Excessive stirring, in particular below 50C, can lead to the reduction of the final viscosity. 3. Add phase III, at 50C.	
4. At 40C neutralized with phase IV. Finish stirring at 30C.	
Note: During cooling, emulsion systems on the basis of Emulgade PL 68/50 can pass through distinct gel phase.

Children's Dentifrice Gel

Stage:	Ingredient:	Wt%
A	Glycerin	5.00
	CMC 9MXF	0.30
Using Cowles dissolver, add CMC to glycerin until well dispersed.		
B	Sorbitol (70%)	35.55
	Water	3.00
	Na Benzoate	0.50
	Na MFP	0.84
	Na Saccharin	0.20
	FD&C Blue #1 (1% soln)	0.15
Dissolve benzoate, MFP, and saccharin in water and sorbitol. Add color. Mix until dispersed.		
C	Add B to A using a homogenizer. Allow mixture to heat to 50-60C.	
D	PEG 1450	5.00
	Sorbitol (70%)	25.00
Melt PEG. Mix with sorbitol at high speed. Add to C, while mixing. Maintain heat at 50-60C, and mix for 30 mins.		
E	Sylodent 750	5.00
	Sylodent 2	12.00
Transfer batch to vacuum, mixer. Mix for 20-30 mins. Heat may be applied if desired (30 to 40C).		
F	Flavor	1.00
Add and mix for one min.		
G	Sorbitol (70%)	5.00
	Na Lauryl Sulfate	1.50
Predisperse SLS in hot sorbitol. Add to batch with minimal dispersion. Pull 28" before starting mixer.

Men's Alcohol-Free Cologne

This sprayable product is light, elegant and will not sting the skin.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Part A:	
Deionized Water	91.58
DMDM Hydantoin/Glydant	0.30
Oleth-10/Brij 97	0.30
Part B:	
Cyclomethicone/245 Fluid	4.00
Isostearyl Benzoate	0.50
Acrylates/C10-30 Alkyl Acrylate Crosspolymer/ Pemulen TR-2	0.15
Part C:	
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl- paraben (and) Propylparaben/Germaben IIE	1.00
Triethanolamine/TEA (99%)	0.12
Fragrance/"Polo Sport" type #A11518 or "Drakkar" type #F10091513	2.00
Disodium EDTA/Versene NA	0.05

Properties:

pH: 5.5-6.0

Viscosity (cP) at 25C: 600-900

Preparation Procedure:

1. Combine Part A ingredients in a vessel which will contain the entire formulation.
2. Blend Part B ingredients in a separate vessel (ambient temperature). The Pemulen polymer should be slurried in this phase.
3. With moderate agitation, add Part B to Part A. Mix for 10-20 minutes to allow polymer to swell. Add Germaben IIE and mix until uniform.
4. Add TEA and mix vigorously to produce a smooth emulsion.
5. Add fragrance to batch.
6. Mix Disodium EDTA and emulsion incrementally to adjust viscosity downward to 600-900 cP to make product sprayable. (NOTE: Do not add more than a total of 0.1% or emulsion may separate.)

Mineral Oil Emulsion Containing Ethanol

Formula SK-13 is a mineral oil cream with a luxurious after-feel. The alcohol provides a cooling effect as the cream spreads smoothly with good "rub-in" characteristics resulting in a non-greasy feel.

<u>Ingredients:</u>	<u>Wt%</u>
A Light mineral oil	8.00
Stearyl alcohol	1.00
Brij 721 Steareth-21	2.28
Brij 72 Steareth-2	1.72
B Water, deionized	66.00
Carbomer 934	0.40
C Sodium hydroxide solution, 10% aqueous	0.40
D Preservative	q.s.
E Perfume	0.20
F Ethanol, SDA-40 (190 proof)	20.00

Preparation:

Heat (A) to 70C and (B) to 72C. Add (B) to (A) slowly with moderate agitation. Add (C). Add (D) below 50C. Add (E) and (F) at 35C. Replace water lost by evaporation and package.
Formula SK-13

Hydrophilic Oil

<u>Ingredients:</u>	<u>Wt%</u>
Arlatone T	3.0
Arlamol E	6.0
Arlamol HD	20.0
Arlamol S7	4.0
Sunflower oil	20.0
Jojoba oil	5.0
Paraffin oil	42.0

Manufacture:

Simple room-temperature blending.

Comments:

Hydrophilicity of the oil can be altered by adjusting the concentration of Arlatone T.
Formula F44-12-3

Multiple Emulsion

I. Primary emulsion W/O:

<u>Ingredients:</u>	<u>Wt%</u>
A Arlamol HD, Isohexadecane	15.0
Caprylic/capric triglycerides	7.5
Arlamol E, PPG-15 stearyl ether	7.5
Arlacel P135, PEG-30 Dipolyhydroxystearate	4.0
B Water	65.6
Sodium chloride	0.4
Preservative	q.s.

Preparation-Primary Emulsion:

Heat (A) and (B) to 45C separately. Add (B) to (A) with propeller stirring. Homogenize mixture thoroughly. Propeller stir for 30 minutes.

II. Secondary emulsion W/O/W:

<u>Ingredients:</u>	<u>Wt%</u>
A Primary emulsion (W/O)	70.0
B Water	26.8
Synperonic PE/F/127 Poloxamer 407	2.0
C Carbopol 934, Carbomer	0.5
D Sodium chloride	0.2
E Preservative	q.s
F Triethanolamine	0.5

Preparation-Secondary Emulsion:

Dissolve Synperonic PE/F127 in water at 20C with stirring to produce (B). Sift (C) into (B) with fast stirring. Add (D) and (E) to (B)/(C) mixture with fast stirring. Slowly add (A) to (B)/(C)/(D)/(E) mixture. Add (F) with moderate stirring. Stir moderately fast for 15 minutes.

Peppermint Foot Scrub

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Part A:	
Deionized Water	79.00
Carbomer/Carbopol Ultrez 10	0.25
Acrylates/C10-30 Alkyl Acrylate Crosspolymer/ Carbopol ETD 2020	0.40
Triethanolamine (99%)	0.16
Part B:	
TEA Lauryl Sulfate (40%)/Standapol T	4.00
Propylene Glycol	2.50
Part C:	
Glycerine	2.50
Peppermint (Mentha Piperita) Oil	0.10
Propylene glycol (and) Water (and) Matricaria (Chamomilla Recuita) Extract/Actiphyte Of Chamomile	0.05
Propylene glycol (and) Water (and) Ivy (Hedera Helix) Extract/Actiphyte of Ivy	0.05
Polymethoxy Bicyclic Oxadilidine/Nuosept C	0.20
Part D:	
Pumice	10.00
D&C Red No. 33 (0.1%)	0.35
Triethanolamine (99%)	0.44

Properties:

Color, Odor, Appearance: Light-red pumice suspension gel
 pH: 6.3-6.6
 Viscosity (cP): 18,000-20,000
 Brookfield Yield Value (dynes/cm²): 750-850
 Stability: Passed freeze/thaw-5 cycles
 Passed heat aging-30 days at 45C

Preparation Procedure:

1. Disperse Carbopol ETD 2020 and Ultrez 10 polymer in the deionized water. Continue stirring slowly to hydrate for about 20 minutes.
2. Partially neutralize the Carbopol dispersion with TEA in Part A and mix until smooth.
3. Add Part B to Part A with slow, sweep mixing to avoid foaming.
4. Pre-combine ingredients in Part C, and add Part C to Parts A/B. Mix slowly until homogeneous.
5. Add ingredients in Part D to Parts A/B/C, in order, mixing thoroughly between. Finish by adding remaining TEA to neutralize.

Skin Soothing Ointment**Concept Statement:**

An emulsion-type ointment containing Supersat for emollience with the anti-irritation attributes of Pationic ISL and Ritaloe 1X.

<u>Ingredients:</u>	<u>Wt%</u>
1. Petrolatum	45.70
2. Supersat (Hydrogenated Lanolin)	8.30
3. Ritabate-60 (Polysorbate-60)	3.50
4. Rita GMS (Glyceryl Stearate)	6.30
5. Pationic ISL (Sodium Isostearoyl Lactylate)	1.70
6. Distilled/Deionized Water	27.80
7. Ritaloe 1X (Aloe Vera Gel)	2.10
8. Ritapan D (Panthenol)	0.40
9. Propylene Glycol	4.20

Compounding Procedure:

Combine items 1-5 and heat to 70C. Combine items 6-9 and heat to 70C. Add to oil phase and mix until uniform.

Formulation Ref. No. 123-13

Lactylate Based Barrier Cream**Concept Statement:**

A rich barrier cream containing Ritaplast for its film-forming ability, and using Pationic emulsifiers for their added moisturizing properties.

<u>Ingredients:</u>	<u>Wt%</u>
1. Petrolatum	20.00
2. Ritaplast (Mineral Oil and Polyethylene)	20.00
3. Shebu Refined (Shea Butter)	10.00
4. Rita SSO (Sunflower Seed Oil)	10.00
5. Rita IPP (Isopropyl Palmitate)	2.00
6. Pationic SBL (Sodium Behenoyl Lactylate)	3.00
7. Pationic CSL (Calcium Stearoyl Lactylate)	5.00
8. Propylparaben	0.10
9. Distilled/Deionized Water	29.80
10. Methylparaben	0.10

Compounding Procedure:

Combine items 1-8 and heat to 70C. Heat item 9 to 70C and add item 10. Add water to oil phase and mix until cool.

Formulation Ref. No. 123-15B

Stearyl Alcohol Formulation

<u>Ingredients:</u>	<u>Wt%</u>
A. Stearyl alcohol	2.0
Arlamol ISML, isosorbid monolaurate	3.0
Brij 721, POE (21) stearyl ether	1.1
Brij 72, POE (2) stearyl ether	0.4
B. Water	92.8
Carbomer 934	0.2
C. Sodium hydroxide (10% aqueous)	0.2
D. Preservative	0.1
E. Fragrance	0.2

Suggested Preparation:

Heat A to 70C and B to 72C. Add B to A slowly with moderate agitation. Add C. Add D below 60C. Add E below 40C. Add water to compensate for loss due to evaporation. Homogenize. Adjust pH to 5.5-6.5.

A similar effect occurs when a ratio of four parts cetyl alcohol is used with one part of Arlamol ISML emollient as shown in the following formula.

Stearyl Alcohol Formulation

<u>Ingredients:</u>	<u>Wt%</u>
A. Cetyl alcohol	4.0
Arlamol ISML, isosorbid monolaurate	1.0
Brij 721, POE (21) stearyl ether	1.3
Brij 72, POE (2) stearyl ether	0.2
B. Water	92.8
Carbomer 934	0.2
C. Sodium hydroxide (10% aqueous)	0.2
D. Preservative	0.1
E. Fragrance	0.2

Suggested Preparation:

Heat A to 70C and B to 72C. Add B to A slowly with moderate agitation. Add C. Add D below 60C. Add E below 40C. Add water to compensate for loss due to evaporation. Homogenize. Adjust pH to 5.5-6.5.

Plantacare K55	Lauryl glucoside & cocamido-propyl betaine	
Plantacare PS 10	Sodium laureth sulfate & lauryl glucoside	
Plantacare 1200 UP	Lauryl glucoside	
Plantaren PS-100	Surfactant	Henkel
Plantaren 1200	Lauryl glucoside	Henkel
Plantaren 2000	Decyl polyglucose (50%)	Henkel
Plantaren 2000 UP	Lauryl glucose	Henkel
"Polo Sport" Type #A11518	Fragrance	Haarman&
Polyethylene AC-9A		Allied
Polyethylene Glycol 400: PEG-8		
Polyethylene Glycol 1500: PEG-30		
Polymer JR-30M	Polyquaternium-10	UnionCarb
Polymer JR-125	Polyquaternium-10	UnionCarb

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Polyox WSR N-3000	PEG-14M	UnionCarb
Polyquta 400	Polyquaternium-10	RITA
Polysynlane	Hydrogenated polyisobutene	Polyester
Pricerine 9083	Glycerin	Unichema
Prisorine 2021	Isopropyl isostearate	Unichema
Prodew 100	Sorbitol/sodium lactate/pro- line/sodium PCA/hydrolyzed collagen	Ajinomoto
Prodew 200		Ajinomoto
Prodew 400		Ajinomoto
Product SE-100	Glyceryl stearate & PEG-100 stearate	Heterene
Promois Milk	Hydrolyzed casein	RITA
Promois Silk-1000	Hydrolyzed silk	RITA
Promulgen D	Cetearyl alcohol/ceteareth-20	Amerchol
Promulgen DD		Amerchol
Promyristyl PM-3	PPG-3 myristyl ether	Croda
Propal	Isopropyl palmitate	Amerchol
Propanediol-1,2	Propylene glycol	
Protasorb	Polysorbate 20. Lubricant	Protameen
Protectan	Lactococcus ferment lysate	
Pyroter CPI-40	PEG-40 hydrogenated castor oil PCA isostearate	Ajinomoto
Pyroter CPI-60		Ajinomoto
Pyroter GPI-25	Glycereth-25 PCA isostearate	Ajinomoto

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Raffermine	Hydrolyzed soy flour	RITA
Reach AZP-902	Antiperspirant	Reheis
Reach AZP-908 SUF	Antiperspirant	Reheis
Reach 103	Antiperspirant	Reheis
Reductine	Oat protein	RITA
Rewopal PIB 1000	Polyisobutene	Witco
Rewoteric AM B-14	Cocamidopropyl betaine	Witco
Rewoteric AM B-15	Cocamidopropyl betaine	Witco
Rewoteric AM DML-35	Cocamidopropyl betaine	Witco
Rewoteric AM TEG		Witco
Rewoteric AM 2CW		Witco
Rhodapon L-22	Ammonium lauryl sulfate	RhonePoul
Rhodapon 201-10	Sodium laureth sulfate, 60%	RhonePoul
Rhodigel	Xanthan gum	RTVanderbil
Rice Bran Oil		Keunen
Ritabate-20	Polysorbate-20	RITA
Ritabate-60	Polysorbate-60	RITA
Rita CA	Cetyl alcohol	RITA
Rita Cetearyl Alcohol 50/50		RITA
Ritacetyl Alcohol	Cetearyl alcohol	RITA
Ritachol	Mineral oil & lanolin alcohol	RITA
Rita EGMS	Glycol stearate	RITA
Rita GMS	Glyceryl stearate	RITA
Rita HA C-1-C	Sodium hyaluronate	RITA

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Rita IPP	Isopropyl palmitate	RITA
Ritalan	Lanolin oil	RITA
Ritaloe 1X	Aloe vera gel	RITA
Ritamide C	Cocamide DEA	RITA
Ritapan D	d-Panthenol	RITA
Ritapan DL	dL-Panthenol	RITA
Ritapeg 150 DS	PEG-150 distearate	RITA
Rita PEO-3	PEG-23M	RITA
Ritaplast	Mineral oil & polyethylene	RITA
Rita SA	Stearyl alcohol	RITA
Ritasil 190	Dimethicone copolyol	RITA
Rita SSO	Sunflower seed oil	RITA
Ritataine	Cocamidopropyl betaine	RITA
Ritataine B	Cocamidopropyl betaine	RITA
Ritavena-5	Hydrolyzed oat flour	RITA
Ritawax ALA	Cetyl acetate & acetylated lanolin alcohol	RITA
Rovisome C	Magnesium ascorbyl phosphate & lecithin	RITA
Sachtotec LA10	Zinc oxide	Sachtelben
Sandobet SC Liquid	Cocamido propyl hydroxysultaine	Clariant
Sandobet DTC Acid	Trideceth-7 carboxylic acid	Clariant
Sandopan ES-50	Sodium myreth sulfate	Clariant
Sandopan KST-A Solid	Sodium ceteth-13 carboxylate	Clariant

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Sandopan LS-24 Gel	Sodium laureth-13 carboxylate	Clariant
Sandoxylate SX-424	PPG-2-isodeceth-12	Clariant
Schercomid SLS	Soyamide DEA	Clariant
Serdolamide PPF 67	Cocamide DEA	Huls
Setacin 103	Disodium laureth sulfosuccinate	Zschimmer
Shebu Refined	Shea butter	RITA
Silicone 245 & 345 & 556		DowCorning
Siliconyl Beeswax	Dimethicone copolyol beeswax	Keunen
Silkol P55	Mineral oil	
Silk Powder		
Silwax WS	Dimethicone copolyol wax	Siltech
S-Maz 20/S-Maz 60	Sorbitan stearate	PPG
Softigen 701	Glyceryl ricinoleate	Creanova
Softigen 767	PEG-6 caprylic/capric glycerides	Creanova
Softisan Gel	Complex of chemicals	Creanova
Softisan 100	Hydrogenated coco-glycerides	Creanova
Softisan 378	Caprylic/capric/stearic tri-glyceride	Creanova
Softisan 601	Glyceryl cocoate/hydrogenated coconut oil/cetareth-25	Creanova
Softisan 645	Bis-diglyceryl polyacyladipate-2	Creanova
Softisan 649	Bis-diglyceryl polyacyladipate-2	Creanova
Solulan C-24		Amerchol
Solulan 5	Laneth-5/ceteth-5/oleth-5/steareth-5	Amerchol

In memory of my wife, Ruth

Preface

This book contains 541 cosmetic and toiletry formulations, based on information received from numerous industrial companies and other organizations. This is Volume 8 of the Second Edition of this work: Volume 1 was published in 1989, Volume 2 in 1992, Volume 3 in early 1995, Volume 4 in late 1995, Volume 5 in 1996, Volume 6 in 1998, and Volume 7 in 1999. There are no duplications in any of these volumes.

The data represent selections from manufacturers' descriptions made at not cost to, nor influence from, the makers or distributors of these materials. Only the most recent formulas have been included. It is believed that all of the trademarked raw materials listed are currently available, which will be of interest to readers concerned with raw material discontinuances. The 1996 market for cosmetic raw materials is estimated at \$2 billion.

Each formulation in the book is identified by a description of end use. The formulations include the following as available, in the manufacturer's own words: a listing of each raw material contained; the percent by weight of each raw material; suggested formulation procedure; and the formula source, which is the company or organization that supplied the formula. The book is divided into the following 12 sections, with the number of formulations indicated in ().

- I. Antiperspirants and Deodorants (12)
- II. Baby Products (18)
- III. Bath and Shower Products (49)
- IV. Beauty Aids (94)
- V. Creams (62)
- VI. Hair Care Products (77)
- VII. Lotions (50)
- VIII. Shampoos (73)
- IX. Shaving Products (10)
- X. Soaps and Hand Cleaners (22)
- XI. Sun Care Products (53)
- XII. Miscellaneous (21)

Each formula is indexed in the section which is most applicable. The reader seeking a formula for a specific end use should check each section which could possibly apply.

In addition to the above, there are two other sections that will be helpful to the reader:

XIII. Trade-Named Raw Materials. Each raw material is listed with a brief chemical description and the name of the raw material supplier.

XIV. Suppliers' Addresses. Addresses of suppliers of trade-named raw materials and/or formulations, some of which are not available in the usual reference books.

It should be noted that some formulations in the book are translations. The manufacturer's exact wording has been used in these cases. Occasionally different companies have listed the same raw material differently; it is hoped that the reader will be able to identify the same or similar raw materials by consulting the Trade-Named Raw Materials section.

The table of contents of the book is organized in such a way to serve as a subject index.

My fullest appreciation is expressed to the companies and organizations which supplied the information included in this book.

July, 2000

Ernest W. Flick

NOTICE

To the best of our knowledge the information in this publication is accurate; however, the Publisher does not assume any responsibility or liability for the accuracy or completeness of, or consequences arising from, such information. This book does not purport to contain detailed user instruction, and by its range and scope could not possibly do so. Mention of trade names or commercial products does not constitute endorsement or recommendation for use by the Author or Publisher.

Cosmetic and toiletry raw materials could be toxic or cause allergies in some circumstances, and, therefore, due caution should always be exercised in the use of potentially hazardous materials and the manufacturing processes involved. Final determination of the suitability of any information or product for use contemplated by any user, and the manner of that use, is the sole responsibility of the user. We strongly recommend that users seek and adhere to a manufacturer's or supplier's current instructions for handling each material they use.

The Author and Publisher have used their best efforts to include only the most recent data available. The reader is cautioned to consult the supplier in case of questions regarding current availability.

Contents and Subject Index

SECTION I: ANTIPERSPIRANTS AND DEODORANTS 1

Antiperspirant Roll-On	2
Antiperspirant Stick	2
Antiperspirant Solid	3
Antiperspirant Gel	3

Section I
Antiperspirants and
Deodorants

Anti-Perspirant Roll-On

Slightly cloudy, high viscosity

Ingredients:

	<u>Wt%</u>
A: Wacker-Belsil DMC 6032	2.00
Water	52.00
B: Ethanol Alcohol (Cosmetic grade)	25.00
C: Locron L	20.00
Tylose H 4000 P	0.5-1.0
Pigments, fragrances	q.s.

Mix A, stir B into A, mix in C. The desired viscosity can be regulated with Tylose H 4000 P (add Tylose H 4000 P either mixed with water to A or mix at the end in the finished formulation).
Formulation 516 AH

Anti-Perspirant Stick

Firm slightly yellow stick with little rub

Ingredients:

	<u>Wt%</u>
A: Lanolin Acid	45.00
Wacker-Belsil SDM 6022	30.00
Locron P	15.00
Wacker-Belsil DM 350	5.00
B: Wacker-Belsil CM 040	5.00

Melt A, mix in B and fill while hot.
Temperature stability: at 45C over 10 weeks.
Formulation 358 AH

SOURCE: Wacker Silicones: Suggested Formulations

Antiperspirant Solid

A typical antiperspirant stick formulation. SF1202 acts as a fugitive carrier for the antiperspirant active, thus providing a dry, non-greasy feel. In antiperspirant solid or stick products, SF1202 is the preferred cyclomethicone providing a stable colloidal matrix of wax for stick integrity and strength. SF96 (100) provides anti-whitening properties.

<u>Ingredient:</u>	<u>Wt%</u>
Cyclomethicone (SF1202)	45.0
Dimethicone [(SF96)(100)]	5.0
Stearyl Alcohol	19.0
Hydrogenated Castor Oil (mp 70C)	3.0
Talc	4.0
Glyceryl Stearate and PEG-100 Stearate	2.0
Aluminum Zirconium Tetrachlorohydrate Gly (ZAG)	22.0

Procedure:

1. Mix together cyclomethicone, dimethicone and stearyl alcohol.
2. Add ZAG, talc and glyceryl stearate & PEG-100 stearate.
3. Heat to 75C and stir with moderate agitation until all wax is melted.
4. Pre-melt hydrogenated castor oil and add to mixture as a liquid and stir for 15 minutes.
5. Cool mixture to 55C with continued mixing and pour into container. Cool (avoid air entrapment due to excessive mixing speeds.)

Formula AP 100

Antiperspirant Gel

A simple emulsion demonstrating the use of SF1328 as a water-in-oil emulsifier. Cyclomethicone is the external phase to provide a dry, non-greasy feel and to reduce tack. The product is an opaque gel but can be clarified by matching the refractive index of Part A and Part B. This is often done by adding propylene glycol to Part B. Formulation AP104 illustrates transparent gel formulation.

Materials:

	<u>Wt%</u>
<u>Part A:</u>	
Cyclomethicone (and) Dimethicone Copolyol (SF1328)	10.00
Cyclomethicone (SF1204)	14.00
<u>Part B:</u>	
Polysorbate-80	0.25
Aluminum Zirconium Tetrachlorohydrate Gly (ZAG)	20.00
Water	55.75

Procedure:

1. Mix together Part A ingredients.
2. Dissolve polysorbate-80 into warm water.
3. Add ZAG to the water and polysorbate-80 solution and mix to form Part B.
4. Slowly add Part B to Part A with high shear mixing.
5. Homogenize with a high speed and high shear mixer such as an Eppenbach mixer.

Formula AP102

SOURCE: GE Silicones: Formulary: Formula AP100 & AP102

Antiperspirant Stick
Firm stick with soft rub

<u>Ingredients:</u>	<u>Wt%</u>
A Wacker-Belsil SDM 6022/Stearoxy Dimethicone, Dimethicone	6.00
Adol 66/Isostearyl Alcohol	13.50
Brij 78/Steareth-20	2.50
Lanette O/Cetearyl Alcohol	20.00
 B Wacker HDK H 15/Silica Dimethyl Silylate	 1.00
Locron P/Aluminum Chlorhydrate	25.00
 C Wacker-Belsil DM 100/Dimethicone	 2.00
Wacker-Belsil CM 040/Cyclomethicone	30.00
 Fragrances, pigments	 q.s.

Mix A and heat to 65C. Stir B into A, cool to approx. 45C and then add C.
 Formulation 280 AH

Antiperspirant Roll-On
White, low viscosity

<u>Ingredients:</u>	<u>Wt%</u>
A Wacker-Belsil CM 040/Cyclomethicone	70.00
Wacker-Belsil DM 100/Dimethicone	5.00
 B Tegin M/Glyceryl Stearate	 2.70
 C Locron P/Aluminum chlorhydrate	 20.00
Wacker HDK H 15/Silica Dimethyl Silylate	1.00
 Fragrances, pigments	 q.s.

Mix A, melt B and stir into A, mix C and stir into AB homogeneously.
 Formulation 178/2 AH

SOURCE: Wacker-Chemie GmbH: Formulas for Beauty

Antiperspirant Suspension Roll-on

A typical antiperspirant suspension roll-on. Cyclomethicones, SF1173 and SF1202, act as fugitive carriers for the antiperspirant active, thus providing a dry, non-greasy feel. The type of cyclomethicone for antiperspirant products is generally chosen based on evaporation rate. Various mixtures of the different cyclomethicones are used depending on the desired properties of the finished formulation. SF96 (50) provides anti-whitening properties.

Materials:

Cyclomethicone (SF1173)	Wt%
	45.7
Cyclomethicone (SF1202)	19.5
Dimethicone [SF96 (50)]	5.0
Quaternium-18 Hectorite	2.5
Ethanol	2.0
Aluminum Zirconium Tetrachlorohydrate Gly (ZAG)	25.0
Silica	0.3

Procedure:

1. Mix SF1173, SF1202 and quaternium-18 hectorite in a high speed mixer.
2. Add SF96 (50) and ethanol and continue mixing.
3. Add silica and ZAG and mix an additional 15 minutes.
4. Transfer the material to a homogenizer such as an Eppenbach Homomixer and homogenize for 3 minutes at high speed.
5. Check viscosity. It should be approximately 3000 cps.

Formula AP101

Antiperspirant Roll-on Emulsion

Similar to formulation AP102, a simple emulsion demonstrating the use of SF1328 as a water-in-oil emulsifier. By decreasing the internal phase, the viscosity of the emulsion is reduced thus, providing a roll-on product instead of a gel. Cyclomethicone is the external phase to provide a dry, non-greasy feel and to reduce tack. The product is opaque but can be clarified by matching the refractive index of Part A and Part B. This is often done by adding propylene glycol to Part B.

Materials:

Part A:	Wt%
Cyclomethicone (and) Dimethicone Copolyol (SF1328)	7.50
Cyclomethicone (SF1204)	20.50
Part B:	
Polysorbate-80	0.11
Aluminum Zirconium Tetrachlorohydrate Gly (ZAG)	20.00
Water	51.89

Procedure:

1. Mix together Part A ingredients.
2. Dissolve polysorbate-80 into warm water.
3. Add ZAG to the water and polysorbate-80 solution and mix to form Part B.
4. Slowly add Part B to Part A with moderate shear mixing. Gradually increase agitation to high shear as the mixture thickens. Continue agitation for 5 minutes.
5. Homogenize 1-2 minutes with a high speed/high shear mixer such as an Eppenbach mixer.

Formula AP 103

SOURCE: GE Silicones: Personal Care Formulary: Formulas

Deodorant Stick

<u>Ingredient:</u>	<u>Wt%</u>
Propylene Glycol	49.50
Carbowax 1540	6.00
Triclosan	0.25
Promidium SY	7.00
DI Water	27.25
Monateric CLV	2.00
Fragrance	2.00
Sodium Stearate	6.00

Procedure:

Heat the Promidium SY, Propylene Glycol and Carbowax 1540 to 70-75C. Add the Triclosan. Mix. Add the fragrance, Monateric stirring slowly. Add the Sodium Stearate, when melted, add water slowly. Discontinue heating. Cool, fill warm.
Formula F-850

Deodorant Stick with Phospholipid CDM

<u>Ingredient:</u>	<u>Wt%</u>
Propylene Glycol	50.50
Carbowax 1540 (PEG-32)	6.00
Promidium SY (PPG-3 Hydroxyethyl Soyamide)	7.00
Phospholipid CDM (Coco PG-Dimonium Chloride Phosphate)	1.00
Triclosan	0.25
Monateric CLV (Disodium Cocoamphodiacetate)	2.50
Fragrance	2.00
Sodium Stearate	6.00
Water	24.75

Procedure:

Heat the Promidium SY, Propylene Glycol and the Carbowax 1540 to 70-75C. Add the Triclosan. Mix. Add the fragrance, Phospholipid CDM and Monateric stirring slowly. Add the Sodium Stearate, when melted, stir and add water slowly. Discontinue heating. Cool, fill warm.
Formula F-851

SOURCE: Mona Industries, Inc.: Formulas F-850 and F-851

Promidium Deodorant Stick

The following deodorant stick applies smoothly and leaves you feeling fresh and confident all day long.

<u>Ingredient:</u>	<u>Wt%</u>
Propylene glycol	60.00
PEG-32	6.00
Triclosan	0.20
Promidium CO (PPG-2 Hydroxyethyl Cocamide)	7.00
Water	15.30
Monateric CLV (Disodium Cocoamphodiacetate)	2.50
Fragrance	2.00
Sodium Stearate	7.00

Procedure:

Heat the Promidium CO, Propylene Glycol and the PEG-32 to 70-75C. Add the Triclosan. Mix. Add the fragrance and Monateric, stirring slowly. Add the Sodium Stearate. When melted, add water slowly. Discontinue heating. Cool, fill warm.

SOURCE: Mona Industries, Inc.: Formula F-852

Antiperspirant Stick

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
Part A:	
Stearyl Alcohol	20.00
Schercemol BE/Behenyl Erucate	10.00
Schercemol DIS/Diisopropyl Sebacate	15.00
DC 344 Fluid/Cyclomethicone	15.00
Schercemol PGMS/Propylene Glycol Stearate	10.00
Part B:	
Cornstarch	10.00
Rezal 36 GP/Aluminum Zirconium Tetrachlorohydrate GLY	20.00

Procedure:

Heat and melt Part A (60-65C) until homogeneous. Add Part B. Mix well. Cast into molds.

Baby Bath

Starting formula for high quality baby bath.

<u>Ingredients:</u>	<u>Wt%</u>
Water	to 100
PEG-80 glyceryl cocoate	10.00
Chembetaine C	8.40
Sulfochem TD-3	15.00
Disodium Cocoamphodiacetate	1.80
PEG-150 distearate	1.75
Glycerin	1.80
Laureth-13 carboxylate	0.25
Preservatives, colors, fragrance	q.s.

Blending Procedure:

Mix ingredients in order listed, heating to 60-65C to dissolve PEG-150 distearate. Adjust pH with citric acid to desired pH.

Formulation No. F1013

Baby Shampoo

Starting formula for high quality baby shampoo

<u>Ingredients:</u>	<u>Wt%</u>
Water	to 100
PEG-80 sorbitan laurate	8.70
Chembetaine C	8.40
Sulfochem TD-3	8.00
Cocoamphocarboxyglycinate	2.00
Sodium chloride	q.s.
PEG-150 distearate	2.00
Laureth-13 carboxylate	0.25

Blending Procedure:

Mix ingredients in order listed, heating to 60-65C to dissolve PEG-150 distearate. Add NaCl to desired viscosity, if necessary. Adjust pH with citric acid to desired pH.

Formulation No. F1011

SOURCE: Chemron Corp.: Suggested Formulations

Baby Lotion with Vitamin E and Aloe

A smooth, nongreasy lotion which rubs in easily.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A: Propylene Glycol Dicaprylate/Dicaprate/Myritol PC	5.00
Mineral Oil/Drakeol 7	9.00
Petrolatum/Snow Petrolatum	4.00
Emulsifying Wax/Polawax	4.20
Aloe Extract/Aloe Vera Lipo-Quinone Extract	0.10
Tocopheryl Acetate/Vitamin E Acetate	0.10
Cetyl Alcohol	0.25
Stearyl Alcohol	0.25
Propylparaben	0.15
B: Deionized Water	75.70
Propylene Glycol	1.00
Methylparaben	0.10
C: Diazolidinyl Urea/Germall II	0.15
Fragrance	q.s.

Procedure:

Heat part A to 80C while gently mixing. Heat part B to 75C with stirring. Add part A to B with stirring and continue mixing with unforced cooling. At 40C add part C. Continue stirring to 30C.

Diaper Rash Cream with Aloe

This water-in-oil cream has an ointment-like consistency. High levels of petrolatum and mineral oil create an excellent moisture barrier.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A: Petrolatum/Ultima Petrolatum	19.00
Mineral Oil/Drakeol 9	7.50
Sorbitan Sesquioleate/Arlacel 83	3.50
Isostearyl Isostearate/Prisorine 2039	2.00
Aloe Extract/Activera 106 Lipo M	2.00
B: Deionized Water	55.50
Glycerin	1.50
Magnesium Sulfate	0.50
C: Zinc Oxide	7.50
D: Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben/Germaben II-E	1.00
Fragrance	q.s.

Procedure:

Heat part A to 80C with stirring. Heat part B to 80C with stirring. Add part B to A with vigorous stirring. Slowly sift Part C into rapidly stirred mixture. Allow the blend to cool with stirring. At 40C, add part D. Continue stirring to 30C.

Baby Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
Mackadet BSC (Baby Shampoo Concentrate)	20.0
Sodium Chloride	2.0
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Add Mackadet BSC to water with slow agitation.
2. Heat to 40C.
3. Add Mackstat DM.
4. Adjust pH to 6.5-7.0 with Citric Acid.
5. Adjust viscosity to 2000 cps with Sodium Chloride.
6. Add Dye and Fragrance.
7. Cool to room temperature.

Baby Wipes

<u>Raw Materials:</u>	<u>Wt%</u>
Propylene Glycol	4.0
Mackam 2C (Disodium Cocoamphodiacetate)	2.0
Paragon (Propylene Glycol (and) DMDM Hydantoin (and) Methylparaben)	qs
Water, Fragrance	qs to 100.0

Procedure:

1. Blend components until clear.
2. Adjust pH to 6.0 with Citric Acid.

Note: The solution is to be combined with baby wipe tissues. It is very mild to the skin and eyes.

Ingredients:

	<u>Wt%</u>
Water	to 100
PEG-80 sorbitan laurate	8.50
Chembetaine CL	8.40
Sulfochem TD-3	8.30
Sodium lauroamphoacetate	1.80
Polyquaternium-10	0.10
PEG-150 distearate	1.75
Glycerin	1.80
Laureth-13 carboxylate	0.25
Preservatives, colors, fragrance	q.s.

Blending Procedure:

Mix ingredients in order listed, heating to 60-65C to dissolve PEG-150 Distearate. pH with citric acid to desired pH.

Typical Physical Properties:

pH: 6.58
 Viscosity, cps: 920
 Formulation No. F1002

Baby Shampoo

Starting formulation for a baby shampoo from a pre-blended concentrate.

Ingredients:

	<u>Wt%</u>
Sulfochem SBS	35.00
Water, soft	64.90
Fragrance	0.10
NaCl	q.s.
Preservatives	q.s.

Blending Procedure:

Charge mixing vessel with water and Sulfochem SBS, and mix until dissolved. Adjust pH with citric acid to 6.25-6.75. Add preservatives, color, and fragrance. Adjust viscosity to 1,000-1,500 cps with sodium chloride.

Typical Physical Properties:

Viscosity: 1,000-1,500 cps
 pH: 6.25-6.75
 Formulation E3144

SOURCE: Chemron Corp.: Suggested Formulations

Diaper Rash Cream

This unique vitamin A&D fortified diaper rash cream is an emulsion based on Lubrasil DS and petrolatum. The Lubrasil DS lends a soft velvety feel as well as aiding in the water repellency. This formulation has a much lighter feel than the essentially 100% petrolatum based salves.

<u>Material:</u>	<u>Wt%</u>
A Deionized Water	53.27
B Propylene Glycol	1.00
C Methylparaben	0.18
D Propylparaben	0.05
E Petrolatum	15.00
F Cetiol LC (Coco-caprylate/capratae)	5.00
G Glycerol Monoisostearate	3.00
H Paraffin Wax 160/165	4.00
I Arlacel 83 (Sorbitan sesquioleate)	3.00
J Vitamin A/D3	0.50
K Lubrasil DS	15.00

Procedure:

1. Prepare the preservative blend by dissolving the methylparaben and propylparaben in the propylene glycol with a small amount of heat.
2. Place the water in a suitable mixing vessel and heat to 80C. Label this Phase I.
3. In a separate vessel, prepare Phase II by mixing components E, F, G, H and I and heating to 80C.
4. Using high shear mixing, slowly add Phase II to Phase I. Remove from heat.
5. Upon natural cooling to below 60C, using low shear mixing, add the preservative blend followed by the Vitamin A/D3 and Lubrasil DS. Allow the cream to mix well after each addition.
6. Packaging may be done warm.

6	Unicide U-13/Imidazolidinyl Urea	0.25

*Patent #4,849,410 (and) 4,745,104

Procedure:

- Heat Sequence #1 to 76C on overhead mixer at medium/high speed.
- Heat Sequence #2 to 60C and add to Sequence #1 with medium/high speed on overhead mixer while holding batch temperature at 76C.
- Heat premixed Sequence #3 to 78C until clear and add to batch with medium/high speed on overhead mixer.
- Add Sequence #4 to batch with medium/high speed. Cool to 40C.
- At 40C, add Sequence #5. Cool to 35C.
- At 35C, add premixed Sequence #6. Cool batch to room temperature.

Specifications:

pH: 5.80+-0.2

Viscosity: LVT #3 @ 3 rpm=31,000 cps.+ -10%

Section III

Bath and Shower Products

Bath Oil

Colourless, clear, low viscosity

Ingredients:

	<u>Wt%</u>
A: Wacker-Belsil SDM 6022	1.00
Mineral Oil	69.00
B: Wacker-Belsil CM 020	25.00
Arlamol E	5.00
Preservatives, pigments, fragrances	q.s.

Heat A to 50C (mix in Wacker-Belsil SDM 6022 homogeneously), mix B into A.

Temperature stability: at 45C over 10 weeks.

Formulation 330 AH

Bath Oil

Colourless, clear, low viscosity

Ingredients:

	<u>Wt%</u>
Wacker-Belsil CM 040	25.00
Mineral Oil	70.00
Arlamol E	5.00
Preservatives, pigments, fragrances	q.s.

Mix all components.

Temperature stability: at 45C over 10 weeks.

Formulation 350 AH

Shower Bath

Creamy, well foaming shower gel leaving a pleasant touch on the skin.

Ingredients:

	<u>Wt%</u>
A: Texapon A	20.00
Texapon NA	20.00
B: Genapol PMS	3.00
Lanette O	1.00
C: Tylose H 4000 P	2.00
Wacker-Belsil DMC 6038	5.00
Water	49.00
Preservatives, fragrances, pigments	q.s.

Mix Tylose well into water, add Wacker-Belsil DMC 6038. Heat A and B each to 70C, mix B into A, add C.
Formulation 1347/3 AH

SOURCE: Wacker Silicones: Suggested Formulations

Bubble Bath

Starting formulation for an economical pearly bubble bath.

<u>Ingredients:</u>	<u>Wt%</u>
Sulfochem B-2090P	25.00
Water, soft	73.65
Fragrance	0.25
NaCl	typical: 0.80
Citric acid	typical: 0.05
Preservatives	q.s.
Hydrolyzed milk protein	0.25

Blending Procedure:

With medium agitation, mix water, Sulfochem B-2090P, and milk protein in main vessel. Add citric acid and mix until solution is homogeneous. Add preservatives, fragrance, color, and remaining ingredients. Adjust pH to 7.0-7.5 with citric acid. Adjust viscosity to 4,000-5,000 cps with sodium chloride.

Typical Physical Properties:

Viscosity: 4,000-5,000 cps

pH: 7.0-7.5

Formulation E3134

Bubble Bath

Prototype formulation for an economical bubble bath.

<u>Ingredients:</u>	<u>Wt%</u>
Sulfochem B-209	25.00
Water, soft	73.76
Fragrance	0.25
NaCl	typical: 0.90
Citric acid	typical: 0.09
Preservatives	q.s.

Blending Procedure:

With medium agitation, mix water and Sulfochem B-209 in main vessel. Add citric acid and mix until solution is clear and homogeneous. Add preservatives, fragrance, and color. Adjust pH to 6.5-7.5 with citric acid. Adjust viscosity to 3,500-5,000 cps with sodium chloride.

Typical Physical Properties:

Viscosity: 3,500-5,000 cps

pH: 6.5-7.5

Formulation E3129

15. Sodium Chloride	qs

This body wash will be a pearlescent viscous liquid (5,000-10,000 cps) with a pH of 5.5-6.5 and a concentration of approximately 30%.

Procedure:

- Charge ingredients 1,2, and 3; heat to 55-60C with moderate agitation. Mix until clear and homogeneous.
- At 60C, add 4 and 5. Heat to 70C and hold for one hour. Ensure that there is no unmelted particulate matter in the batch.
- After 4 and 5 are fully dispersed, cool liquid to 40C. Charge ingredients 6 through 13.
- Add 14 (citric acid) to adjust pH to 5.5-6.5.
- Add 15 (sodium chloride) or water to reach desired viscosity. Cool and fill.

Bath Gelee with Natural Lipid Protein

<u>Raw Materials:</u>	<u>Wt%</u>
Sodium Laureth Sulfate (60%)	20.0
Mackamide CS (Cocamide DEA)	20.0
Mackanate CP (Disodium Cocamide MIPA Sulfosuccinate)	20.0

Foaming Bath Oil

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
Light Mineral Oil	20
PEG 400 Monolaurate/PEG-8 Laurate	20
Schercemol Mel-3/Myreth-3 Laurate	8
Schercomid AME-100/Acetamide MEA	8
Schercoquat IALA/Isosteamidopropyl Laurylacetodimonium Chloride	15
Water, Deionized	29

Procedure:

1. Add the first five ingredients (oil phase).
2. With good mixing heat to 30-35C until uniform.
3. Cool to 25C and with fast agitation add the water in small increments; mix until clear.

Specifications:

Appearance @ 25C: Clear slightly viscous liquid
 Color: Colorless
 pH @ 1.0% sol'n (typical): 4.5

Bath Oil Milk

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
Schercemol DIA/Diisopropyl Adipate	15
PEG 200 Dilaurate/PEG-4 Dilaurate	15
Schercemol Mel-9/Myreth-9 Laurate	5
Schercomid AME-100/Acetamide MEA	5
Schercoquat ALA/Di-Lauryl Acetyl Dimonium Chloride	15
Water, Deionized	45

Procedure:

1. Add the 1st five ingredients (oil phase).
2. With good mixing heat to 30-35C until uniform.
3. Cool to 25C and with fast agitation add the water in small increments; mix until the emulsion is uniform and smooth.

Specifications:

Appearance @ 25C: White emulsion
 pH @ 1.0% sol'n (typical): 4.5
 Viscosity @ 25C (typical): 3,000 cps
 Formula SO-015

High Fragrance Bubble Bath

<u>Ingredient:</u>	<u>Wt%</u>
Water	23.2
Disodium EDTA	0.2
Sodium Laureth-2 Sulfate (26%)	69.0
Promidium CC (PPG-1 Hydroxyethyl Caprylamide)	2.5
Promidium SY (PPG-2 Hydroxyethyl Soyamide)	2.5
Fragrance	2.5
Citric Acid	0.1

Procedure:

To the water, add disodium EDTA and sodium laureth-2 sulfate with stirring. Premix Promidium CC, Promidium SY and fragrance. Add to sodium laureth-2 sulfate mixture. Add color, and preservative. Adjust the pH to 6.0 with citric acid.

Formulation Properties:

Appearance: Clear yellow liquid
 Activity (%): 22.5
 Viscosity (cP) @ 25C: 1400
 Krafft Point: 3C

Note: Add sodium chloride if a higher viscosity is desired.

SOURCE: Mona Industries, Inc.: Formula F-861

Moisturizing Three Layer Bath Oil

A three-layer bath oil containing Panalane L-14E which is an effective moisturizer and skin emollient.

<u>Sequence:</u>	<u>Raw Material/INCI Name:</u>	<u>Wt%</u>
1	Cetiol HE/PEG-7 Glyceryl Cocoate	32.50
2	Panalane L-14E/Hydrogenated Polyisobutene	35.00
3	Glycerin	32.50

Procedure:

- At room temperature, weigh Sequence #1 ingredient and pour into appropriate container.
- Slowly add Sequence #2 into container on top of Sequence #1.
- Slowly add Sequence #3 to the above two ingredients.

Note:

After the product has been shaken to achieve maximum benefits, it will take approximately 5-10 minutes to return to three-layer oil.

SOURCE: Lipo Chemicals Inc.: Formula No. 1082

Milk Bath

This low viscosity, milky product is designed to be added to a bathtub of water (2 fl. oz.). It provides a non-greasy, soft, silky feel to the skin.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
2-Phenoxyethanol/Preservative	0.2
DMDM Hydantoin/Preservative	0.2
Deionized Water/Diluent	70.6
Part B:	
Dimethicone (and) Laureth-4 (and) Laureth-23(SM2169)(1)/ Smooth, silky feel	15.0
Part C:	
Phenyl Trimethicone(SF1550)(1)/Emollient with non-greasy feel	7.5
Glycerin/Humectant	3.0
Part D:	
Fragrance	q.s.
PEG-20 Almond Glycerides(2)/Emollient/Solubilizer	3.5

Procedure:

1. Dissolve Part A with moderate propeller agitation.
2. Add Part B and continue stirring for 10-15 minutes.
3. Combine Part C. Add to batch and continue stirring for 15-20 minutes.
4. Combine Part D and add to batch. Continue mixing with moderate propeller agitation for 15-20 minutes.

Suppliers:

- (1) GE Silicones
(2) Croda, Inc.
Formula SP 112

After-Bath Oil

This oil, applied after bathing, gives the skin a soft, silky feel. SF1550 acts as a non-greasy emollient, while SF1204 promotes a quick dry time without a greasy feel.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Phenyl Trimethicone(SF1550)(1)/Non-oily emollient	10.0
Mineral Oil (light)/Emollient	32.0
Cyclomethicone(SF1204)(1)/Quick dry/Non-oily feel	56.0
Fragrance(2)	2.0

Procedure:

1. Mix together SF1550 and SF1204, stirring until uniform.
2. Add mineral oil with good mixing.
3. When homogeneous, slowly add fragrance and continue stirring 15 minutes.

Moisturizing Body Wash

A liquid body wash product which is designed to cleanse and moisturize the skin. SM2169 is a 60% nonionic emulsion of a 60,000 ctsks dimethicone fluid. It provides the smooth, silky, feel of a high molecular silicone in an easy-to-use aqueous delivery system.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Deionized Water/Diluent	51.45
Disodium EDTA/Chelating agent	0.05
Carbomer(1)/Thickener	1.00
Part B:	
Propylene Glycol/Humectant	1.00
Glycerin (96%)/Humectant	2.00
Part C:	
Sodium Laureth Sulfate (28-30%)/Surfactant	16.00
Disodium Dimethicone Copolyol Sulfosuccinate(30%)(2)/ Surfactant	15.00
Polysorbate-20/Emulsifier	1.00
Dimethicone (and) Laureth-4 (and) Laureth-23(SM2169)(3)/ Conditioning	5.00
Cocamidopropyl Betaine/Surfactant	3.00
Part D:	
Polyquaternium-39(4)/Conditioning	3.00
DMDM Hydantoin (and) Iodopropynyl Butylcarbamate(5)/ Preservative	0.15
Fragrance(6)	0.25
Part E:	
Triethanolamine(99%)/pH adjustment	1.10

Procedure:

- Meter water of Part A into appropriate vessel. Add EDTA and mix until dissolved. With moderate propeller agitation, add the carbomer and mix for 20 minutes.
- Add ingredients of Part B to Part A with moderate propeller agitation.
- Add Part C to Part AB in order listed with moderate propeller agitation. Mix 20-30 minutes with moderate agitation.
- Add Part D to batch in order listed. Mix with moderate agitation for 20 minutes.
- Adjust batch to pH 5.5 with part E.

Moisturizing Shower Gel

Starting formulation for a high-foaming shower gel with moisturizing properties.

<u>Ingredients:</u>	<u>Wt%</u>
Sulfochem SLS	14.00
Sulfochem ES-2	24.00
Chembetaine C	6.50
Chemoxide CAW	5.50
Citric acid	0.10
Water, soft	47.30
Amidex CME	1.80
Preservatives	q.s.
NaCl	0.50
Fragrance, color, etc.	q.s.

Blending Procedure:

At ambient temperature, charge mixing vessel with Sodium Lauryl Sulfate, Sodium Laureth Sulfate, and water. Add Cocamidopropyl Betaine, Cocamidopropylamine Oxide, and citric acid and mix until homogeneous. When mixture is homogeneous, heat to 70C and add Amidex CME, preservatives, color, fragrance, and NaCl. Adjust pH to 6.0-6.5 with citric acid. Adjust viscosity to 15,000 cps with NaCl.

Formulation No. F1004

Silky Shower Gel

Prototype formula for a shower gel that leaves skin with a soft, silky feel.

<u>Ingredients:</u>	<u>Wt%</u>
Sulfochem ALS	37.00
Chembetaine S	3.50
Chembetaine OL	1.25
Citric acid	0.12
Water, soft	q.s.
Amidex CME	1.70
Quaternium 15	0.10
Preservatives	q.s.
NaCl	0.50

Blending Procedure:

At ambient temperature, charge mixing vessel with Sulfochem ALS and water. Add Chembetaine S, Chembetaine OL, and citric acid until homogeneous. When mixture is homogeneous, heat to 70C and add Amidex CME and NaCl. Adjust pH to 5.50-6.00 with citric acid. Adjust viscosity to 16,000 cps with NaCl.

Formulation No. F1003

Oil Foam Bath

<u>Raw Materials:</u>	<u>Wt%</u>
A. Marlinat 242/28 (Sodium Laureth Sulfate)	28
Ampholyt JB 130 (Cocamidopropyl Betaine)	7
Marlamid DF 1218 (Cocamide DEA)	8
B. Softigen 767	37
Miglyol 840 (Propylene Glycol Dicaprylate/Dicaprate)	20
Colour	q.s.
Fragrance	q.s.

Preparation:

A is mixed, heated up to approx. 75C and stirred cold to about 30C. B is subsequently admixed.

Mild Foam Bath

<u>Raw Materials:</u>	<u>Wt%</u>
A. Marlinat CM 105 (Sodium Laureth-11 Carboxylate)	25
Ampholyt JB 130 (Cocamidopropyl Betaine)	25
Softigen 767	5
Elfacos GT 282 S (Hydrogenated Talloweth-60 Myristol Glycol)	7
Colour	q.s.
Preservative	q.s.
Water ad	100
B. Fragrance	q.s.

Preparation:

A is mixed and heated to approx. 75C. Then the blend is stirred cold down to approx. 30C. B is gradually admixed.

Oil Bath Slightly Foaming with Good Refatting Property

<u>Raw Materials:</u>	<u>Wt%</u>
A. Softigen 767 (PEG-6 Caprylic/Capric Glycerides)	21.5
Miglyol 812 (Caprylic/Capric Triglyceride)	27
Imwitor 375	22.5
Mineral Oil	26
Fragrance	3

Preparation:

All components are put together at about 40C.

SOURCE: Huls Aktiengesellschaft: Suggested Formulations

Pearlescent Bath Lotion

<u>Raw Materials:</u>	<u>Wt%</u>
Sodium Lauryl Sulfate (30%)	40.0
Mackanate EL (Disodium Laureth Sulfosuccinate)	30.0
Mackam 35HP (Cocamidopropyl Betaine)	5.0
Mackester SP (Glycol Stearate (and) Stearamide MEA)	1.5
Sodium Chloride	1.0
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Add first four components to water.
2. Heat to 70C.
3. Blend until Mackester SP is completely dispersed.
4. Add Sodium Chloride and cool to 45C.
5. Add Mackstat DM, Dye, and Fragrance.
6. Cool to room temperature.

Bath Oil

<u>INCI Name/Trade Name:</u>	<u>Wt%</u>
Phase A:	
Isopropyl Myristate/Emerset 2314	25.00
Octyldodecanol/Eutanol G	20.00
Caprylic/Capric Triglyceride/Myritol 318	38.00
Laureth-3/Dehydol LS3	10.00
Fragrance/Haarman & Reimer	4.90
Silica/Aerosil 200	2.00
Pearl Pigment	0.05-0.10

Procedure:

Aerosil 200 is added with stirring to a mixture of Isopropyl Myristate, Eutanol G, Myritol 318, Dehydol LS 3, and fragrance, then homogenized e.g. in an Ultra Turrax. Then the pearl pigment and the dyestuff solution are added with stirring.

Note:

- *Viscosity 3600 mPas (Brookfield LV3, 6 rpm @ 20C)
- *Recommended Pearl Pigments-All Sparkle pigments, e.g. Timiron Starlight Colors, Colorona Bronze Sparkle, Timiron MP-149

Shower Gel with Avocado Exfoliants

<u>Stage Materials/INCI Listing</u>	<u>Wt%</u>
Stage A:	
1 Water, Pure	64.100
2 Carbopol ETD 2020/Acrylates/C10-30 Alkyl Acrylate Crosspolymer	1.000
Stage B:	
3 EDTA, Disodium Salt/Disodium EDTA	0.100
4 Glycerine BP	2.000
5 Ammonium Lauryl Sulfate 30% Active	15.000
6 Disodium Laureth Sulfosuccinate 40%	10.000
7 Cocamidopropyl Betaine	3.000
8 Fragrance	0.500
9 Cosflor Awapuhi HGS	1.000
Stage C:	
10 Add preservative(s) & colour to suit	0.500
Stage D:	
11 Triethanolamine 99%	0.800
12 AEC Avocado Prills/Persea Gratissima (Avocado Oil)	2.000

Mixing Instructions:

Avocado Prills are smooth wax-like beads available in various colours which act as a gentle exfoliant. They are suspended in the shower gel by the high yield strength of the Carbopol ETD 2020.

- Stage A: Measure out the water and disperse the Carbopol ETD 2020 in this with moderate agitation until homogeneous.
- Stage B: Add each item in turn to Stage A with careful mixing.
- Stage C: Add preservatives and colour to suit.
- Stage D: Adjust pH to 6.0-6.5 by careful addition of TEA and then slowly mix in the Avocado Prills.

Transparent Bath and Shower Bar

<u>Raw Materials:</u>	<u>Wt%</u>
Propylene Glycol	4.0
Ceteareth-27	16.0
Mackamide LMD (Lauramide DEA)	16.0
Mackam CB (Coco Betaine)	10.0
Mackol 70NS (Sodium Laureth Sulfate)	20.0
Poloxamer 407	4.0
Glycerin (99%)	14.0
Urea	6.0
Stearic Acid	8.0
50% Sodium Hydroxide	2.0
Fragrance	qs

This formulation will produce a clear, high foaming cleansing bar. The hardness of the bar can be varied with the concentration of the sodium stearate, which is made in situ using stearic acid and 50% sodium hydroxide. The bar is non-tacky and releases from its mold when cooled.

Procedure:

1. Blend all ingredients but the Urea, Stearic Acid, and 50% Sodium Hydroxide.
 2. Heat and stir until uniform at 60-65C.
 3. Add Urea and stir until clear at 60-65C.
 4. Add Stearic Acid, stir until clear while heating to 75-80C.
 5. Add 50% Sodium Hydroxide at 75-80C.
 6. Stir in Fragrance at 75-80C; package.
- Formulation No. 2

Bath Gelee

<u>Raw Materials:</u>	<u>Wt%</u>
Sodium Laureth Sulfate (60%)	34.6
Mackamide C (Cocamide DEA)	20.0
Mackanate EL (Disodium Laureth Sulfosuccinate)	45.0
Mackstat DM (DMDM Hydantoin)	qs
Dye, Fragrance	qs to 100.0

Procedure:

1. Add components in order.
2. Heat to 45C.
3. Blend until homogeneous.
4. Adjust pH to 6.0-6.5 with Lactic Acid.
5. Add Dye and Fragrance.
6. Cool to room temperature.

Section IV

Beauty Aids

After Bath Spray Moisturizer

This formulation demonstrates how easy it is to use CreamJel to produce creamy emulsions with difficult ingredients. This white lotion is an excellent moisturizer with a luxurious, silky feel and may be dyed and fragranced to suit any needs.

<u>Material:</u>	<u>Wt%</u>
1 Volatile Silicone VS-7158	1.50
2 Isopropyl Palmitate	3.70
3 Myristyl Myristate	1.10
4 CreamJel	14.50
5 DI H2O	78.20
6 Germaben II	1.00
7 Fragrance	q.s.

Procedure:

- 1.0 Combine components 1,2, and 3 in a suitable mixing vessel. Heat to 35-40C until the wax melts.
- 2.0 Place component 4 in a suitable mixing vessel. With rapid high shear mixing slowly add Step 1 and continue mixing until a smooth cream.
- 3.0 With continued high shear rapid mixing slowly add component 5 to step 2.
- 4.0 When a uniform, smooth lotion mix in component 6 followed by component 7 using low shear mixing.

Formulation 93105-GE

Clear Body Moisturizer

This formulation produces an excellent moisturizer which illustrates many benefits of incorporating Lubrajel into formulations. The moisturization is imparted by the addition of Lubrajel CG, while the smooth feel is due to the use of Lubrajel Oil. This formulation also illustrates how easy it is to formulate with the different grades of Lubrajel.

<u>Material:</u>	<u>Wt%</u>
1 Deionized Water	81.0
2 Sodium Carboxymethylcellulose type 7H4F	1.0
3 Lubrajel CG	15.0
4 Lubrajel Oil	2.0
5 Germaben II	1.0

Procedure:

- 1.0 Place component 1 into a suitable mixing vessel. With rapid high shear mixing disperse component 2. Continue mixing until completely hydrolyzed.
- 2.0 Switch to paddle blade mixing and add components 3,4 and 5. Mix until homogeneous

Formulation No. 95003-E

Methyldibromoglutaronitrile and Dipropylene Glycol	0.20
Demineralized Water	Bal to 100%

Bentone LT dispersion:

Bentone LT	3.00
Deionized Water	97.00

Method of Manufacture:

1. Thoroughly disperse the Bentone Gel TN in the C12-15 Alkyl Benzoate, Jojoba Oil and Sunflower Seed Oil, by warming to 40C and stirring until uniform. Add the remaining components of the oil phase (GMS, Cetearyl Alcohol, and Vitamin E Acetate) and heat to 75-80C.
2. Heat the aqueous phase (Glycerine, Protein, Bentone LT dispersion and water) to 75-80C.
3. Using high shear mixing, add the two phases together and continue to homogenize.
4. At 45-50C transfer to a propeller stirrer and cool to 20C.
5. Add the Mixed Fruit Acids and stir well. Add the perfume and preservative.

Bentone LT Dispersion:

1. Prepare a 3% dispersion of Bentone LT additive in deionized water using a rotor-stator or similar high-shear mixer (e.g. Silverson). Start the mixer in the water, steadily add the Bentone LT to the vortex and stir until completely dispersed (15-20 mins).
2. Allow the suspension to stand to let any entrapped air escape.

Beta Hydroxy Moisturizing Clear Gel

A clear sprayable gel containing Lipo CD-SA which is a water soluble source of Beta Hydroxy Acid-Salicylic Acid. This gel also contains the moisturizing ingredients Unimoist U-125 and Hylucare.

<u>Sequence:</u>	<u>Raw Material/INCI Name:</u>	<u>Wt%</u>
1	Deionized Water	76.55
1	Uniphen P-23	0.30
1	Liponic EG-1/Glycereth-26	2.50
2	Viscarin SD 389/Carageenan	0.50
3	Lipo CD-SA	12.50
4	Unimoist U-125	2.00
5	Deionized Water	1.00
5	Unicide U-13/Imidazolidinyl Urea	0.25
6	Hylucare, 1% Sol'n/Water (and) Hyaluronic Acid	4.00
7	Sodium Chloride (25% Sol'n)	0.40
8	Triethanolamine, 99%	*QS
*To adjust pH		

Procedure:

- Heat Sequence #1 to 75C on overhead mixer at medium/high speed.
- Slowly add Sequence #2 to Sequence #1 and mix until completely hydrated.
- Cool batch to 40C and add Sequence #3 at medium/low speed.
- Add Sequence #4 to batch at medium/low speed and cool to 35C.
- Add premixed Sequence #5 to batch at medium/low speed and cool to 25C.
- At 25C, add Sequence #6 and Sequence #7 to batch in order of addition at medium/low speed.
- Adjust pH to 3.8-4.2 using Sequence #8.

Specifications:

pH: 4.0+/-0.2

Viscosity: Brookfield LVT, spindle T-C @ 3.0 rpm = 17,700 cps+/-10%

SOURCE: Lipo Chemicals Inc.: Formula No. 962

Cleansing Milk

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
A-A1 Arlacel 165/Glyceryl Stearate (and) PEG 100 Stearate	1.50
Schercemol NGDC/Neopentyl Glycol Dicaprate	20.00
B-B1 Deionized Water	37.00
Propylene Glycol	3.00
Carbopol 941 2% Aq. Sln.	25.00
B2 Deionized Water	10.00
Keltrol/Xanthan Gum	0.20
B3 Triethanolamine	0.50
B4 Schercomid AME-100/Acetamide MEA	1.50
C- Germaben II	1.00
D- Fragrance	0.30
E- Cucumber Extract	q.s.

Procedure:**Phase B:**

In the main beaker, disperse B1 at 75C.

Disperse B2 in a separate beaker at ambient temperature.

Add B2 to B1.

Add B3 to the main beaker at 75C.

Add B4 to the main beaker at 75C.

Phase A:

Blend A together at 75C.

Add Phase A to Phase B at 75C with continuous mixing until a homogeneous emulsion is formed (at least 15 minutes at 75C).

Cool batch to 60C and add Phase C.

Continue to cool batch to 30C and add fragrance.

Formulation L-213-1

Chapstick Prototype

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
Petrolatum	48.0
Isopropyl Lanolate	6.0
Ozokerite	16.5
Candelilla Wax	4.5
Schercemol DID/Diisopropyl Dimer Dilinoleate	25.0

Procedure:

Heat all ingredients to 75-80C until melted and uniform.

Cast into molds.

Formulation SK 83

Clear AHA Moisturiser

This clear water-in-silicone gel demonstrates the unique versatility of Dow Corning 3225C formulation aid in preparing stable low pH emulsions.

Ingredients:

	<u>Wt%</u>
Phase A:	
Dow Corning 1401 (Cylomethicone and dimethiconol)	10.00
Dow Corning 3225 C (Cyclomethicone and dimethiconol copolyol)	10.00
Dow Corning 344 (Cyclomethicone)	5.00
Phase B:	
Deionised water	to 100
Purasal S/PF 60 (60% sodium lactate)	5-12
Purac PH 90 (Lactic acid) to required pH	2- 5
Triethanolamine	3.5
Glycerin	27.0

Procedure:

1. Combine the ingredients in Phase A, mix until uniform, using a dual blade, turbulent style mixing action. Measure refractive index (RI).
2. Combine the ingredients in Phase B, mix until uniform. Measure RI.
3. If RI of Phase B is higher than A, add more water to match. If B is lower, add more glycerin to match.
4. Increase the mixing speed of Phase A to a tip velocity of 900 ft/min (i.e. a 2-inch blade at 1.376 rpm) and very slowly add Phase B. This addition should take 10 minutes.
5. Continue mixing for an additional 10 minutes.
6. Pass the emulsion through a high-shear, one pass device (i.e. colloid mill, Hydroshear, or hand-held mill) to achieve a particle size distribution ranging from 0.5-2.0 microns.

Stability:

- 2 months at 40C
- 5 Freeze-Thaw cycles
- 2 months ambient

Cream Eye Shadow

<u>Material:</u>	<u>Wt%</u>
Part A:	
PPG-2 Myristyl Ether Propionate	41.28
Pigments	25.30
Unitwix	21.40
Super Refined Almond Oil	7.47
Stearic Acid	3.53
Cab-O-Sil	0.92
Fragrance	0.05
Propylparaben	0.05

Procedure:

1. Add the pigments to the PPG-2 Myristyl Ether Propionate while mixing with a low shear propeller blade at moderate speed.
2. In a separate vessel weigh out the Unitwix and the Cab-O-Sil. Heat gently with stirring to melt the Unitwix.
3. When the Unitwix is melted add the pigment blend and the Super Refined Almond Oil and mix while heating to 80-85C.
4. Slowly add the remaining components.
5. When well blended remove the heat and cool with mixing to 55C. Pour into desired containers.

Formulation 97048-U

Eye Firming Gel

This formulation, based on Lubrajel MS, is a classic display of the complementary properties of Lubrajel and liquid crystals. This Eye Firming Gel is visually very appealing. The Lubrajel MS is the sole moisturizing agent and viscosifier, while the liquid crystals add artistic elegance and moisture retention.

<u>Material:</u>	<u>Wt%</u>
A Lubrajel MS	25.00
B Deionized Water	73.15
C Propylene Glycol, USP	1.75
D Methylparaben	0.08
E Propylparaben	0.02
F Liquid Crystal CN/G9	QS

Procedure:

1. Dissolve components D and E in component C. Use a small amount of heat if necessary.
 2. Using a paddle blade, mix components A and B.
 3. Add step 1 to step 2 and package into containers.
 4. Add liquid crystals to each container using a swirling motion.
- Formulation #92-043-E

Eye Area Firming Gel

Completech MBAC-EA helps to reduce fine lines and increases viscoelasticity of the skin. The addition of Hypan SA-100H adds clarity while aiding in the removal of tackiness. The result leaves the skin with an elegant feeling. The addition of Liponic EG-1, Hylucare and Unimoist U-125 aid in moisturization of the skin.

<u>Sequence:</u>	<u>Raw Material/INCI Name:</u>	<u>Wt%</u>
1	Deionized Water	61.95
1	Hampene Na2T/Disodium EDTA	0.05
1	Uniphen P-23	0.20
2	Liponic EG-1/Glycereth-26	1.50
2	Hypan SA100H/Acrylic Acid/Acrylonitrogens Copolymer	0.10
3	Carbopol ETD2001/Carbomer(2% disp)	20.00
4	Deionized Water	1.00
4	Triethanolamine, 99%	0.60
5	Lubrigel MS/Polyglycerylmethacrylate (and) Propylene Glycol	5.00
6	Unimoist U-125	1.00
7	Benzophenone-4	0.15
7	Deionized Water	1.00
7	Unicide U-13/Imidazolidinyl Urea	0.25
8	Hylucare (1% sol'n)/Hyaluronic Acid	1.00
9	Deionized Water	5.00
9	Completech MBAC-EA	1.20

Procedure:

- Heat and mix Sequence #1 to 80C and mix until a clear solution is reached.
- Premix Sequence #2 and add to Sequence #1 at 80C with medium/high speed on overhead mixer using propeller blade.
- Heat Sequence #3 to 70C and add to batch bringing temperature back to 80C.
- Premix Sequence #4 and add to batch on overhead mixer at medium/high speed. Mix for 15-20 minutes or until completely hydrated/neutralized.
- Add non-heated Sequence #5 to batch with medium speed on overhead mixer. Lower temperature to 60C.
- Add Sequence #6 into solution using low heat and add to batch with low/medium speed on overhead mixer with propeller blade. (Lower heat to 35C).
- At 35C premix Sequence #7 until clear and add to batch. (Lower temperature to 25C).
- At 25C add Sequence #8 at low speed using propeller blade.
- Premix Sequence #9 until homogeneous and add to batch with low speed until completely mixed into batch.

Face Bronzer with Sunscreen

SF1214 is a blend of cyclomethicone and high molecular weight dimethicone. The cyclomethicone acts as an emollient and gives a dry, non-greasy feel. The high molecular weight dimethicone gives a soft, silky feel when applied to the skin. SS4267 is a blend of a low molecular weight dimethicone and a silicone resin which is film-forming and provides a more durable product.

Ingredient/Function:

	<u>Wt%</u>
Part A:	
Water	52.9
Carbomer (1)/Suspending/Thickener	0.5
DMDM Hydantoin/Preservative	0.4
Dehydroacetic Acid/Preservative	0.1
Sodium Hydroxide (40%)/Neutralizer	0.4
Glycerin/Humectant	5.0
Part B:	
Stearyl Alcohol (and) Cetareth-20 (2)/Emulsifier/ Thickener	2.2
Glyceryl Stearate (and) PEG-100 Stearate (3)/Emulsifier	5.0
Cetyl Alcohol/Viscosity/Opacifier	0.6
Isopropyl Isostearate/Emollient	3.9
Mineral Oil/Emollient	7.5
Myristyl Lactate/Emollient	0.5
Octyl Methoxycinnamate/UV absorber	7.0
Benzophenone-3/UV absorber	4.0
Part C:	
Mica (and) Titanium Dioxide (and) Iron Oxides (4)/Pigment	5.0
Part D:	
Dimethicone (and) Trimethylsiloxysilicate (SS4267) (5)/ Film-former	3.0
Cyclomethicone (and) Dimethicone (SF1214) (5)/Smooth, silky feel/Emollient	2.0

Procedure:

1. In Part A, predissolve carbomer in warm water. Heat to 75C and add other Part A ingredients.
2. Heat Part B to 75C until all ingredients are melted with moderate agitation.
3. Slowly add Part B to Part A with good mixing.
4. Cool with continued mixing to 60C and add Part C.
5. Continue mixing until 55C and add Part D.
6. Mix and cool to 25C and mill through a colloid mill at 0.005" setting.

Comments:

- * Reduce greasiness by replacing isopropyl isostearate with SF1202 cyclomethicone.
- * Increase water resistance by increasing SS4267.
- * Increase viscosity by decreasing glycerin level.

Facial Cleanser
High-foaming facial cleanser.

<u>Ingredients:</u>	<u>Wt%</u>
Potassium Cocoate	10.83
Water	39.70
Sulfochem SLS	36.93
Stearic Acid	3.46
Chemsperse EGDS	0.95
Chembetaine C	4.76
Amidex CE	3.37
Preservatives	q.s.
Fragrance, color, etc.	q.s.

Blending Procedure:

Mix potassium cocoate, water, and SLS, and heat to 90C in main mixing vessel. Add premelted stearic acid, maintain temperature, and mix until emulsified (about 5 to 10 minutes). Add EGDS. Turn off heating, begin cooling, and add Chembetaine C and Amidex CE. When temperature reaches 45C or below, add preservatives, fragrance, and color.

Typical Physical Properties:

pH: 6.5

Viscosity: 7,200 cps

Appearance: Pearly white liquid

Note:

This formula will yield a product with a viscosity of approximately 7,000 cps. To make a product with higher viscosity, increase the level of the potassium cocoate and stearic acid, maintaining the same ratio between the two. To make a product with lower viscosity, decrease the level of potassium cocoate and stearic acid, maintaining the same ratio between the two.
Formulation No. F1007

Facial Cleanser

Starting formulation for a premium, mild facial cleanser.

<u>Ingredients:</u>	<u>Wt%</u>
Sulfochem SBS	36.00
Water, soft	63.88
Fragrance	0.10
NaCl	q.s.
Preservatives	q.s.
Citric acid	typical: 0.02

Blending Procedure:

Charge mixing vessel with water and Sulfochem SBS, and mix until dissolved. Adjust pH with citric acid to 6.5-7.0. Add preservatives, color, and fragrance. Adjust viscosity to 1,200-2,500 cps with sodium chloride.

Typical Physical Properties:

Viscosity: 1,200-2,500 cps

pH: 6.5-7.0

Formulation No. E3145

Facial Mask

This ultra mild, deep cleansing formulation will eliminate little imperfections and blemishes to leave the skin silky smooth. Monafax MAP 230 helps in the the dispersion of the bentonite clay and allows for an even layer of the clay to be spread over the skin for easy application. The Phospholipid CDM provides gentle cleansing, excellent substantivity, and anti-microbial properties on the skin.

<u>Ingredients:</u>	<u>Wt%</u>
Water	76.4
Disodium EDTA	0.1
Polargel NF (Bentonite)	12.5
Monafax MAP 230	5.0
Propylene Glycol	4.0
Phospholipid CDM	1.0
Germaben IIE	1.0

Procedure:

Heat water to 50-60C, add Na₂ EDTA. Slurry the Polargel NF very slowly with shearing agitation. After slurry is achieved, let it hydrate by having it stand for 10-15 minutes. Add the Monafax MAP 230 slowly allowing it to blend evenly in the slurry. Add the remaining ingredients in order listed, the same way the Monafax MAP 230 was added. Package in tubes.

Important Notes:

- Minimize water loss
- Minimize aeration

Facial Scrub

<u>Stage Materials:</u>	<u>Wt%</u>
Stage:	
Pre-Mix 1:	
1 Water; Pure	72.050
2 Carbopol 940	0.200
Pre-Mix 2:	
3 Propylene Glycol USP	6.000
4 Preservative as required	0.300
Stage A:	
5 Magnesium Sulphate	0.100
Stage B:	
6 Light Mineral Oil	8.000
7 GMS s/e	4.000
8 Stearic Acid-Triple Pressed	3.000
9 Almond Oil USP, Sweet	1.100
10 Peach Kernel Oil	1.100
Stage C:	
11 Triethanolamine 99%	0.900
Stage D:	
12 AEC Walnut Shell Powder	3.000
Cooling Cycle:	
13 Fragrance	0.250

Mixing Instructions:

Pre-Mix 1: Meter out water and start heating. Sprinkle in Carbopol and mix until all lumps are dispersed.

Pre-Mix 2: Dissolve preservative in Propylene Glycol and add to Mix.

Stage A: Complete Stage A by adding Magnesium Sulphate to mix and bring to temperature (70C).

Stage B: Melt the Oils and waxes of Stage B and mix, bring to temperature.

With the Silverson running slowly add the hot oils to the hot Aqueous Phase, mix briefly then add the Triethanolamine which will thicken the product. Start cooling with mixing, before the product gets too thick add the Walnut Shell and mix until dispersed, add the perfume and mix briefly. (Silverson mixing after addition of walnut shell should be avoided).

Procedure:

1. Melt components A,B,C,D,G and I at approximately 70C.
2. Add remainder of components and mix while cooling to 50-55C.
3. Package.

Formulation #92-036-H

Lip Moisturizer

Utilizing Lubrajel CG and Solimate 'E', this formulation exhibits excellent lip moisturization, a pleasant taste and UV protection.

Solimate 'E' is used to microemulsify the sunscreen along with the peppermint and spearmint oils. The ultimate choice in moisturization is Lubrajel CG, which is used at a significant concentration for this purpose.

<u>Material:</u>	<u>Wt%</u>
A Lubrajel CG	50.00
B Deionized Water	46.72
C Solimate 'E'	2.50
D Octyl Salicylate	0.50
E Peppermint Oil, USP	0.05
F Spearmint Oil, USP	0.05
G FD&C Blue #1 (100ppm)	0.18

Procedure:

1. Premix components A and B and label as "Phase I."
2. Premix components C,D,E and F and label as "Phase II."
3. Premix component G (prepare the 100ppm solution) and label as "Phase III."
4. Add "Phase II" to "Phase I" with low speed stirring.
5. Add "Phase III" and continue stirring until uniform. Package.

Formulation #91-112

Lip Gloss with D-Panthenol

<u>Raw Materials:</u>	<u>Wt%</u>
A. Softisan 645	44.5
Softisan 649	10
Softigen 701 (Glyceryl Ricinoleate)	10
Polyisobutene 1000	13
Lanfrax (Lanolin Wax)	10
Candelilla Wax	2.5
B. Pearlustre Pigment	3
Colour	2
D-Panthenol	5
Fragrance	q.s.

Preparation:

A and B are heated up to 75C. The mixture is chilled to about 40C by stirring. Then B is added. Preferably homogenize mixture before pouring.

Lip Stick

<u>Raw Materials:</u>	<u>Wt%</u>
Softisan 100 (Hydrogenated Cocoglycerides)	20
Miglyol 812 (Caprylic/Capric Triglyceride)	14
Softisan 649	5
Petrolatum	30
Beeswax	20
Paraffin	5
Cetyl Alcohol	5
Carnauba Wax	1

Preparation:

All ingredients are heated to 75C. Then the homogeneous compound is poured into moulds.

Liposilt Black Body Mask

A non-drying body mask that is rich in vitamins and minerals for skin cleansing and nourishment. The Liposilt Black is the source of the nutrients and yields a nourished and soft appearance to the skin.

<u>Sequence:</u>	<u>Raw Material/INCI Name:</u>	<u>Wt%</u>
1	Deionized Water	37.28
1	Uniphen P-23	0.60
2	Keltrol/Xanthan Gum	0.12
2	Mineral Colloid BP/Montmorillonite	0.10
3	Liposilt Black/Silt	30.00
3	Deionized Water	5.00
4	Lipovol SES/Sesame Oil	15.00
4	Lipo GMS-450/Glyceryl Stearate	2.50
4	Lipopeg 6000 DS/PEG-150 Distearate	0.50
5	Kaolin	7.50
6	Eucalyptus Oil	0.10
7	Deionized Water	1.00
7	Unicide U-13/Imidazolidinyl Urea	0.30

Procedure:

1. In main kettle combine Sequence #1 ingredients, mix with overhead mixer while heating to 78C.
2. Dry mix Sequence #2 together and add to Sequence #1 at medium speed on overhead mixer.
3. In auxiliary kettle combine Sequence #3 ingredients and heat to 65C. Place on homomixer for one (1) minute at medium speed.
4. Add Sequence #3 to batch under homomixer, holding temperature at 78C.
5. Heat Sequence #4 to 78C until completely melted and add to batch under homomixer.
6. Add Sequence #5 to batch under homomixer. Switch to moderate sweep and cool to 42C.
7. At 42C add Sequence #6 and mix until thoroughly dispersed. Cool to 35C.
8. At 35C add premixed Sequence #7 to batch and cool to 25C.

Liposilt Black Cleansing Silt

A non-drying cleansing mud that is rich in vitamins and minerals for skin cleansing and nourishment. The Liposilt Black is the source of the nutrients and yields a nourished and soft appearance and feel to the face. Suggested for oily skin.

<u>Sequence:</u>	<u>Raw Material:</u>	<u>Wt%</u>
1	Deionized Water	31.85
1	Methylparaben	0.25
2	Keltrol	0.15
2	Veegum HV (4% Disp'n)	0.50
3	Liponic EG-1	6.00
3	Lan-Aqua-Sol 75; 100	4.50
4	Triethanolamine, 99%	1.20
4	Deionized Water	1.00
5	Lipovol SES	12.00
5	Fancol IPL	3.50
5	Liponate NPGC-2	3.50
5	Lipo Stearic Acid	3.00
5	Lipolan Distilled	2.00
5	Lipo GMS-450	1.50
5	DC 200 Fluid (350 cts)	1.00
5	Lipopeg 100-S	0.90
5	Liposorb S	0.75
5	Lipocol C	0.50
5	Propylparaben	0.10
6	Hamposyl C-30	4.00
6	Monawet MO-70R	0.50
7	Liposilt Black	20.00
8	Deionized Water	1.00
8	Unicide U-13	0.30

Procedure:

1. Premix Sequence #1, heat to 80C and mix until dissolved using overhead mixer.
2. Dry mix Sequence #2 and add to Sequence #1 at 80C with overhead mixer at medium/high speed until completely homogeneous.
3. Add Sequence #3 ingredients one at a time to batch while bringing temperature batch to 80C.
4. Premix Sequence #4 and add to batch.
5. Mix Sequence #5 ingredients together and heat until completely melted (approximately 80C) and add to batch with overhead mixer at medium/high speed. Cool slowly to 70C.
6. At 70C add Sequence #6 ingredients in order of addition to batch.
7. Heat Sequence #7 to 50C and mix on homomixer for 1 minute at medium speed.
8. Add Sequence #7 to batch on overhead mixer using sweep blade and cool to 35C.
9. At 35C add premixed Sequence #8, cool to 25C and package.

Liposilt Green Cleansing Mud

A non-drying cleansing mud that is rich in vitamins and minerals for skin cleansing and nourishment. The Liposilt Green is the source of the nutrients and yields a nourished and soft appearance and feel to the face. Suggested for dry or sensitive skin.

<u>Sequence:</u>	<u>Raw Material:</u>	<u>Wt%</u>
1	Deionized Water	20.80
1	Keltrol F	0.15
1	Veegum HR (4% Disp'n)	12.50
1	Liponic EG-1	6.00
1	Triethanolamine 99%	1.20
1	Lan-Aqua-Sol 50	4.50
1	Methylparaben	0.30
2	Lipovol SES	12.00
2	Fancol IPL	3.50
2	Liponate NPGC-2	3.50
2	Lipo Stearic Acid	3.00
2	Lipolan Distilled	2.00
2	Lipo GMS-450	1.50
2	DC 200 Fluid (350 cts)	1.00
2	Lipopeg 100-S	0.90
2	Lipocol C	0.50
2	Liposorb S	0.75
2	Propylparaben	0.10
3	Hamosyl C-30	4.00
3	Monawet MO-70R	0.50
4	Liposilt Green	20.00
5	Deionized Water	1.00
5	Unicide U-13	0.30

Procedure:

1. In the main kettle, add water and disperse the Keltrol completely using Lightnin' mixing. When completely hydrated, add remainder of Sequence #1 ingredients in order of addition. Heat to 75C with Lightnin' mixing.
2. In a side kettle, combine Sequence #2 ingredients and heat to 78C with mixing.
3. Add combined Sequence #2 ingredients to combined Sequence #1 ingredients under Lightnin' mixing. Mix for 15 minutes or until emulsification is complete. Cool to 70C.
4. At 70C, add Sequence #3 ingredients with continued Lightnin' mixing. Mix for 10 minutes and continue cooling.
5. At 55-60C or when batch begins to thicken, remove Lightnin' mixer and insert variable speed side-wiper mixing.
6. Cool to 42C and add Sequence #4 ingredients.
7. Cool to 35C and add premixed Sequence #5 ingredients. Cool to 25C and package.

Liquid Make-up with Panalane L14E and Ultraresistant Pigments
And Increased Wetting Agents

This product provides an even smooth application with a cushioning effect and moisturization combined with transfer proof and long wear properties of the Ultraresistant Pigments.

<u>Sequence:</u>	<u>Raw Material/INCI Name:</u>	<u>Wt%</u>
1	Deionized Water	66.02
1	CMC 7H3SF/Cellulose Gum	0.30
1	Veegum/Magnesium Aluminum Silicate	0.40
1	Butylene Glycol	3.75
1	Methylparaben	0.20
2	Lipo Lecithin	0.40
2	Liposorb 0-20/Polysorbate 80	0.10
2	Triethanolamine, 99%	1.13
2	Boron Nitride 6069	2.00
2	Titanium Dioxide UH 0082	8.00
2	Iron Oxide Yellow #C-UR0200	0.40
2	Iron Oxide Red #C-UR1800	0.90
2	Iron Oxide Black #C-UR2500	0.10
3	Lipo GMS-470/Glyceryl Stearate SE	1.00
3	Liponate IPP/Isopropyl Palmitate	2.00
3	Lipo Stearic Acid	2.00
3	Liponate 2DH/PEG-4 Diheptanoate	2.00
3	Panalane L-14E/Hydrogenated Polyisobutene	7.00
3	Emersol 871/Isostearic Acid	1.00
3	Propylparaben	0.20
4	Deionized Water	1.00
4	Unicide U-13/Imidazolidinyl Urea	0.10

Procedure:

1. In main kettle, combine Sequence #1 ingredients under Lightnin' mixing and heat to 60-70C.
2. Add Sequence #2 ingredients to Sequence #1 slowly under Lightnin' mixing.
3. Pass combined Sequence #1 and #2 through colloid mill and recirculate until pigments are evenly dispersed.
4. Transfer the bulk to main kettle and mix under Lightnin' mixer and heat to 80C.
5. In auxiliary kettle, combine Sequence #3 ingredients under Lightnin' mixing and heat to 80-85C.
6. At proper temperature (80-86C) add combined Sequence #3 ingredients to batch (water phase pigment grind) under sweep mixing, maintaining temperature until emulsion is complete. Begin cooling to 40C, switching to slow mixing as batch thickens.
7. At 40C add premixed Sequence #4 ingredients to batch and cool to 30C.
8. Pour the batch into a suitable container.

Total Solids(%): 28.8

Formula F-860

SOURCE: Mona Industries, Inc.: Formulas F-859 and F-860

Make-Up Base

SF1214 is a blend of cyclomethicone and high molecular weight dimethicone. The cyclomethicone acts as an emollient and gives a dry, non-greasy feel. The high molecular weight dimethicone gives a soft, silky feel when applied to the skin. SS4267 is a blend of a low molecular weight dimethicone and a silicone resin which is film-forming and provides a more durable product.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Cetyl Acetate (and) Acetylated Lanolin Alcohol (1)/ Emollient	3.00
Myristyl Myristate/Emollient	2.20
Diethyl Sebacate/Emollient	2.00
Stearyl Alcohol (and) Cetareth-20 (1)/Emulsifier	2.00
Ceteth-10/Emulsifier	0.10
Butylparaben/Preservative	0.10
Part B:	
Water	68.35
Magnesium Aluminum Silicate (2)/Thickener	0.50
Xanthan Gum/Suspending agent/Thickener	0.15
Glycerin/Humectant	3.00
Citric Acid/pH adjuster	0.30
Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben (3)/Preservative	0.60
Part C:	
Dimethicone (and) Trimethylsiloxysilicate (SS4267)(4)/ Film-former	3.00
Cyclomethicone (and) Dimethicone (SF1214) (4)/Soft, silky feel	1.00
Talc/Feel, pigment	5.00
Titanium Dioxide/Pigment	5.00
Iron Oxides/Pigment	3.70

Procedure:

1. Heat Part A and Part B to 75C.
2. Add Part B to Part A with high shear mixing.
3. Cool to 55C and add Part C with good mixing.
4. Continue mixing until cooled to 25C.

Mascara Using Avalure UR 450 PolymerA002

This mascara eyelash makeup cream applies beautifully from an automatic mascara unit containing a brush for application. The urethane polymer (Avalure UR 450 polymer) contributes bulk and adherence to the eyelashes allowing for a long-lasting plump look. It also eliminates the need for any of the other gums such as gum arabic in the product.

INCI-CTFA Name/Trade Name:

	<u>Wt%</u>
<u>Part A:</u>	
1. Deionized Water	59.50
2. Methylparaben	0.10
3. Methocel 40-202	0.20
4. Triethanolamine (99%)	2.80
5. DL-Panthenol	0.50
6. Avalure UR 450 Polymer	6.00
7. PVP-K30	2.00
<u>Part B:</u>	
8. C33-7734 Cosmetic Black/Iron Oxides	10.00
<u>Part C:</u>	
9. Stearic Acid/Emersol 132	5.50
10. Bayberry Wax	1.80
11. Glyceryl Stearate/Protachem GMS-450	1.70
12. Beeswax, White	4.50
13. Carnauba Wax, Prime #1 Yellow, Refined Flakes	2.70
14. WW Gum Rosin	1.80
15. Propylparaben NF	0.10
<u>Part D:</u>	
16. Mirasil SM/Simethicone	0.10
17. Lipovol WGO/Wheat Germ Oil	0.10
18. Phenonip	0.10
19. Germaben II	0.50

Preparation Procedure:Part A:

1. Add the deionized water to a suitable kettle and begin heating the water to 40C. Add the methylparaben and mix until dissolved.
2. Turn the heat off and add the Methocel. Mix until uniformly dispersed and until no lumps appear.
3. Add the triethanolamine and mix until the gum is hydrated and clear. 4. Add the Panthenol and mix until dissolved.
5. Add the Avalure UR 450 polymer and continue mixing until the mixture is uniform.
6. Add the PVP powder and mix until all of the powder is in the solution and Part A is uniform. Maintain the temperature but raise it to 75C just before combining with Parts B & C.

Parts B&C:

7. Mix all of the ingredients of Part C (oil phase) in a suitable kettle and melt to 75C.
8. When all of Part C has been melted, add the pigment of Part B to it and mix until the pigment is completely wetted and uniform. 9. Continue mixing and begin cooling and at 50C add Simethicone, Wheat Germ Oil and preservatives. Continue cooling to room temperature.

7055 Iron Oxide Yellow	0.45
7061 Iron Oxide Brown	0.8
7054 Iron Oxide Red	0.25
D) Cucumber Extract	0.50

Procedure:

Phase B:

1. Disperse Veegum slurry in water until uniform.
2. Add the rest of the water phase, mixing well.

Phase C: Mix Phase C:

3. Add Phase C to Phase B and mix for 5 minutes or until fully dispersed. In main beaker mix ingredients of Phase A. Heat both Phases A and Phase B & C to 70C. Add Phase B, C to A with moderate agitation. Cool batch to room temperature with continuous mixing, then add Phase D.

Formulation SK 147

"Matte-Finish" Emollient Make-UpFormula for Lotion

<u>Part A: Ingredients/CTFA Name:</u>	<u>Wt%</u>
Stearic Acid	2.70
Schercemol GMIS/Glyceryl Isostearate	2.00
Schercemol DISD/Diisostearyl Dimer Dilinoleate	5.00
Schercemol IDO/Isodecyl Oleate	4.50
Cetyl Alcohol	0.75
Part B:	
Propylene Glycol	4.50
Triethanolamine	0.90
Water	79.65
Preservative	q.s.

Procedure:

Add Part B to Part A at 80C, mixing slowly. Cool to room temp.

Formula for Make-Up

Lotion	90.00
Pigment Blend	10.00

Procedure:

Slowly add lotion to pigment blend (which has been micronized) in increments to make a paste. Continue to add lotion until a fluid homogeneous emulsion is formed.

Mixing Instructions:

This is an oil-in-water emulsion.

Heat the Oil Phase to 70/75C and mix well, ensure all waxes are melted.

Heat the Aqueous Phase to 70/75C, carefully dispersing the Carbopol and mix well.

Carefully add the hot oil phase to the hot aqueous phase with mixing.

Cool with continual slow mixing, when below 35C add the fragrance and homogenise.

Formula Ref.: 536*

SOURCE: A&E Connock Ltd.: Suggested Formulations

Moisturizing Eye Gel

A clear gel to be used around the eyes to smooth the skin and give a soft, silky feel.

<u>Ingredients/Function:</u>	<u>Wt%</u>
Part A:	
Deionized Water/Diluent	88.64
Disodium EDTA/Chelating agent	0.03
Citric Acid(10% solution)/pH adjustment	0.03
Carbomer(1)/Gelling agent	0.40
Part B:	
1,3 Butylene Glycol/Humectant	2.00
Glycerin(96%)/Humectant	3.50
Panthenol/Moisturizer/Provitamin B	0.30
Part C:	
Phenyl Trimethicone(SF1550)(2)/Non-oily emollient	0.35
Cyclopentasiloxane (and) Dimethicone(SF1214)(2)/ Breathable barrier, smooth, silky feel	3.00
Part D:	
Sodium Hydroxide(10% solution)/Neutralizer	1.60
Part E:	
DMDM Hydantoin (and) Iodopropynyl Butylcarbamate/ Preservative	0.15

Procedure:

1. Meter water of Part A into appropriate vessel. Add EDTA and citric acid to the water and mix with propeller agitation until dissolved. With moderate propeller agitation, slowly add carbomer and when dissolved, mix an additional 20 minutes.
2. Add ingredients of Part B to Part A with moderate propeller agitation.
3. Add Part C to Part AB in order listed with moderate propeller agitation. Mix 20-30 minutes with moderate agitation.
4. Add Part D to batch with sweep agitation and adjust pH to 7.2+-0.1.
5. With sweep agitation, add Part E and mix for 30 minutes.

Pan Foundation

<u>Material:</u>	<u>Wt%</u>
1 Part A:	
2 PPG-2 Myristyl Ether Propionate	44.50
3 Talc	15.61
4 Pigments	13.94
5 Part B:	
6 Unitwix	15.06
7 Super Refined Almond Oil	7.08
8 Stearic Acid	2.96
9 Cab-O-Sil M5	0.75
10 Fragrance	0.05
11 Propylparaben	0.05

Procedure:

1. Premix the pigments, talc and titanium dioxide of part A.
2. Add the pigment blend to the PPG-2 Myristyl Ether Propionate while mixing with a low shear propeller blade at moderate speed.
3. In a separate vessel weigh out the Unitwix and the Cab-O-Sil M5. Heat gently with stirring to melt the Unitwix.
4. When the Unitwix is melted add the pigment blend and the Super Refined Almond Oil and mix while heating to 80-85C.
5. Slowly add the remaining components.
6. When well blended remove the heat and cool with mixing to 55C. Pour into desired containers.

Formulation 97048-P

Moisturizing Face Wash

This unique face-wash formulation is based on the ability of Lubrajel DV to provide significant moisturization as well as body. The cleansing properties are provided by the sodium laureth sulfate and Polysorbate 20. This product is characterized by its low foaming, creamy body and its pleasant, but light fragrance.

<u>Material:</u>	<u>Wt%</u>
A Lubrajel DV	61.70
B Deionized Water	30.54
C Sodium Laureth Sulfate (28%)	7.50
D Polysorbate 20	0.25
E Fragrance	0.01

Procedure:

1. Using a paddle blade, mix components A and B.
2. With very slow mixing, add component C.
3. Premix components D and E before adding to step 2. Mix until homogeneous.
4. Package.

Formulation #92037-V

Powder Eye Shadow with Superior Feel

Tospearl 130A is a fine particle silicone resin. The sub-micron spherical particles act as "ball bearings" providing superior slip and lubricity. Tospearl provides a smooth, silky feel, reduces pigment/powder agglomeration and enhances the color of cosmetic products.

Ingredient/Function:

	<u>Wt%</u>
Part A:	
Mica (and) Titanium Dioxide/Pigment	6.4
Mica/Pigment	32.0
Iron Oxides/Pigment	3.0
Ultramarine/Pigment	12.7
Iron Blue/Pigment	18.9
Part B:	
Polymethylsilsesquioxane (Tospearl 130A)(1)/ Slip/ Lubricity/Smooth, silky feel	19.5
Part C:	
Dimethicone [SF96 (5)] (1)/Emollient	2.5
Squalene/Moisturizer	2.5
Petrolatum/Moisturizer	2.5
Fragrance	q.s.
Preservative	q.s.

Procedure:

- Mix pigments in Part A except titanium dioxide and mica.
- Add the titanium dioxide, mica, Part C (fragrance and preservative), and Part B to Part A with high shear mixing. Add the fragrance and preservative with the same high shear mixing.
- Press into suitable containers.

Trade Names/Suppliers:

(1) GE Silicones

Formula CC 106

Smooth, Silky Eye Shadow

A formulation using SF1214 to provide slip and spreadability. It gives a smooth, velvety feel, reduces creasing and provides durability.

Ingredient/Function:

	<u>Wt%</u>
Mica (and) Iron Oxides (and) Titanium Dioxide (1)/Pigment	40.5
Talc/Powder Base	32.4
Cyclomethicone (and) Dimethicone (SF1214) (2)/Smooth, silky feel	13.6
Oleyl Erucate/Waxy emollient	13.5

Procedure:

- Mill through a 0.027" herringbone screen.
- Press into a suitable container.

Pressed Powder Makeup

This pressed powder makeup formulation exhibits excellent pay-off and exceptional strength as compared to the same formulation which contains mineral oil and sorbitan diisostearate (2.5% each) in place of the Lubrajel Oil.

<u>Material:</u>	<u>Wt%</u>
A Mearl Talc TCA	36.60
B Zinc Stearate	11.00
C Shinju 100T White	11.00
D Mearl Mica SVA	8.00
E Mearlite GBU	5.00
F Flamenco Ultrasilk 2500	10.00
G Titanium Dioxide	2.00
H D&C Red #6 Barium Lake	3.40
I FD&C Yellow #5 Aluminum Lake	2.00
J Lubrajel Oil	5.00
K Cloisone Super Gold	6.00

Procedure:

1. Components #1-#9 were combined and blended in a roller mill until uniform. This was labeled as Phase "A".
2. Component #10 was added in several portions to Phase "A" with blending in-between additions.
3. Component #11 then added and milling continued until uniform.
4. Powders were pressed to 1000 PSI using a Carver Press.

Lipstick

<u>Materials:</u>	<u>Wt%</u>
1 Lanolin Oil	4.91
2 Oleyl Alcohol	29.48
3 Super Sterol Ester (Croda)	7.37
4 Paraffin Wax 160/165	2.46
5 Unitwix	19.66
6 Fragrance	0.25
7 Castor Oil	21.62
8 Pigment Blend	14.25

Procedure:

Mill the pigment blend in the castor oil. Combine the remaining ingredients with mixing and heat to 80-85C. Add the pigment/castor oil blend to the remaining ingredients with mixing and cool to desired fill temperature and mold.

Sand Beige Makeup (Oil-Free)

This formulation utilizes Eastman AQ55S polymer to improve wearability and water resistance while aiding pigment dispersion.

<u>Formula:</u>	<u>Wt%</u>
Part A:	
Distilled Water	58.44-60.44
Eastman AQ55S Polymer	2.00- 4.00
Veegum (Magnesium Aluminum Silicate)	1.00
Cellulose Gum (Na CMC)	0.25
Propylene Glycol	8.00
Carbowax PEG 200	1.00
Triethanolamine 99%	0.90
Trisodium EDTA	0.20

Part B:	
Talc, Lo-Micron	5.00
Titanium Dioxide 3328	5.32
Iron Oxide, Red C33-8075	0.32
Iron Oxide, Yellow C33-8073	0.64
Iron Oxide, Black C33-134	0.13

Part C:	
Dow Corning 3225C	9.00
Stearic Acid	1.80
Polawax, NF	1.00
Myverol 18-06 Monoglyceride	2.00
Polysorbate 60	1.00

Part D:	
Preservative	q.s.

Procedure:**Part A:**

Heat water to 80C. Slowly sift Eastman AQ55S polymer into water with continuous stirring. Dispersion should be complete in 20-30 minutes.

Slowly sprinkle in Veegum and cellulose gum. Mix at maximum available shear until uniform.

Add remaining Part A ingredients and mix well.

Part B:

Combine and mix ingredients until homogeneous.

Add Part B to Part A with mixing. Maintain temperature at 80C.

Part C:

Combine ingredients and heat with mixing to 80C.

Add Part C to Parts A+B. Mix while cooling.

Part D:

At 40C, add Part D and mix until uniform.

Perfume and Preservatives	q.s.

Procedure:

Prepare silk concentrate using sufficient mixing and grinding to produce a fine dispersion. Heat the phase A to 85C. Add silk concentrate to the phase A with mixing. Heat the phase B to 85C. Add the phase B to silk concentrate at 85C and continue mixing to the room temperature.

Compact Rouge

<u>Raw Materials:</u>	<u>Wt%</u>
Silkall 100	5.0
Talc	77.1
Titanium dioxide	5.0
Color	2.7
Perfume	0.2
Emulsion binder	10.0
 (Formula for binder):	
Light mineral oil	25.0
Sorbitan sesquioleate	10.0
Water	64.8
Methyl paraben	0.1
Propyl paraben	0.1

Procedure:

This binder is manufactured according to the procedure for making a good emulsion. It is rather unstable and should be mixed well before staying into rouge. Mix all ingredients until uniform.

Give formulation is based on world standard formulation. Asia Pacific customers do prefer sometimes a less greasy/sticky formulation and/or improve stability at higher temperatures:

Reduce Stickiness/Greasiness:

- * Exchange mineral oil for an emollient ester, Crodamol OP, which is branch chains and imparts a light emollience on the skin. and/or:
- * Add fatty alcohol level to impart dryness to the skin. Note, that increase of fatty alcohol increases the body of the emulsion. and/or:
- * Other emollients that may be suitable to replace mineral oil; Crodamol AB or CAP. They act as a solvent for the Parsol MCX and aid solubilisation.

Improve Temperature Stability (>50C):

- * Add thickening agent in water phase; such as cellulose, guar gum or natural clay thickening agent.
- * Other alternative: add higher melting point wax, possibly Syncrowax.

Smooth Silky Foundation

This smooth silky foundation uses Tospearl 130A, fine particle silicone resin. The sub-micron spherical particles act as "ball bearings" providing superior slip and lubricity. Tospearl 130A provides a smooth, silky feel, reduces pigment/powder agglomeration and enhances the color of cosmetic foundations. This foundation has demonstrated the use of silicones in conjunction with organics.

<u>Ingredient/Function:</u>	<u>Wt%</u>

Substantive Lip Balm with Sunscreen

SF1318, silicone resin ester, is a copolymer of a silicone resin and a long-chain organic ester. It provides excellent compatibility with organic materials and substantivity to the skin. It is commonly used to enhance the durability of cosmetic products. In this formulation, SF1318 provides a substantive film which makes the lip balm very durable, providing moisturization as well as sun protection for several hours. Pigments could be added to make a colored lip gloss product.

Undereye and Spot Concealer Makeup Using Avalure UR 445 Polymer
A0003

This undereye and spot concealer makeup can be applied either from an automatic unit containing a brush for application or from a tube with a narrow opening. The urethane polymer contributes to the long lasting film forming properties while providing improved adhesion to the spot or area being covered. It is also a good substitute for the pigment suspending capabilities of colloidal clay, so common to these types of products.

Continued Next Page

Undereye and Spot Concealer Makeup Using Avalure UR 445 Polymer
A0003 (Continued)

Properties:

Color, Odor, Appearance: Pigmented, moderately thick cream
with slight wax-like odor

pH: 7.5-8.0

Viscosity* cP at 25C: 5,000-6,000

*Brookfield RVT @ 20 rpm, #4 spindle

Preparation Procedure:

Part A:

1. Add the deionized water to a suitable kettle and then add the methylparaben.
2. Heat the water to 35C to dissolve the methylparaben and then add the methocel.
3. Continue mixing until the methocel is dispersed and no lumps appear.
4. Add the triethanolamine and mix until the solution is clear. Add the Panthenol and mix until dissolved.
5. Add the Avalure UR 445 polymer and mix until it is dispersed and a colloidal white solution occurs.
6. Add the Glycereth-26 and heat to 75C.

Part B:

7. Mix all of the powders together and mill if necessary until the blend is uniform and no streaks or particles of pigment are present.
8. Add this powder blend to Part A and mix until ready to combine with Part C.

Part C:

9. Mix all of the ingredients of Part C in a suitable vessel and heat to 75C.
10. After all of the ingredients are completely melted, add Part C to Parts A&B and continue mixing until the emulsion forms.

Part D:

11. Begin cooling the combined batch to 70C and add the cyclomethicone. Mix well to insure that the cyclomethicone is brought into the emulsion and is uniformly dispersed. Continue cooling and mixing.
12. Add vitamins at 45C and mix well.
13. Add aloe and mix well.
14. Add the Germaben II and continue cooling to room temperature.

Waterproof Mascara

SF1318, silicone resin ester, is a copolymer of a silicone resin and a long-chain organic ester. It provides excellent compatibility with organic materials, excellent substantivity and is totally non-irritating to the eyes and skin. It is commonly used to enhance the durability of cosmetic products. In this formulation, SF1318 provides a film which is water resistant, smear resistant, non-flaking and non-irritating to the eyes.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Deionized Water/Diluent	51.45
Propylene Glycol/Humectant	3.0
Methylparaben/Preservative	0.2
Imidazolidinyl Urea/Preservative	0.15
Triethanolamine 99%/Neutralizer/Emulsifier	3.10
Acrylates/Octylacrylamine Copolymer/Dermacryl-79/ Film-former	5.00
Part B:	
Diisostearyl Trimethylolpropane Siloxy Silicate (SF1318)/Film-former/Emollient	5.00
Candelilla Wax/Wax matrix	4.50
Yellow Beeswax/Wax matrix	5.50
Ozokerite Wax/Wax matrix	2.00
Carnauba Wax/Wax matrix	1.00
Cetyl Alcohol/Thickener/Secondary emulsifier	3.00
Stearic Acid/Primary emulsifier	5.00
Propylparaben/Preservative	0.10
Part C:	
Iron Oxides/Pigment	11.00

Procedure:

1. While heating Part A water to 90C, add remaining ingredients in order listed with moderate propeller agitation.
2. Combine Part B and heat to 90C with moderate propeller agitation. When Part B reaches 90C, add Part C to Part B with high shear homomixer agitation (Silverson with square hole screen) for 30-40 minutes.
3. Add Part BC SLOWLY to Part A at 85-90C with moderate propeller agitation. Mix 10 minutes and begin force-cooling with propeller and sweep agitation to room temperature.

Demineralized Water	Bal to 100%

Method of Manufacture:

1. Mix the liquid oil and the ester. Thoroughly disperse the Bentone Gel TNV in the mixture. Add the Cetearyl Alcohol and the emulsifier to the mix.
2. Heat to 75C.
3. In a separate vessel, blend the glycerine with the water and heat to 75C.
4. Add the oil phase to the water phase with minimal initial stirring, then emulsify with a homogenizer on low speed. Care is needed with the extent of stirring or a water-in-oil emulsion will form then invert to an oil-in-water system with a large particle size on cooling.
5. At around 65C transfer to a propeller stirrer and continue to cool.
6. At below 35C add the algae extract, perfume and preservative.

The major formulation components of the cream, including the active ingredient Bentone Gel TNV, have been specifically selected to be of vegetable origin.

Anti-Wrinkle Treatment CreamConcept Statement:

An elegant, white, creamy emulsion containing Rovisome-AHA, which delivers Sodium Lactate to the skin.

Ingredients/Function:

	<u>Wt%</u>
1. Pationic SBL (Sodium Behenoyl Lactylate)/Lactylate	1.60
2. Rita Cetearyl Alcohol 50/50 (Cetearyl Alcohol)/ Emulsifier	3.00
3. Rita GMS (Glyceryl Stearate)/Emulsifier	2.60
4. Rita IPP (Isopropyl Palmitate)/Emollient	6.00
5. Rita SSO (Sunflower Seed Oil)/Emollient	6.00
6. Distilled/Deionized Water	71.60
7. Rita Glycerine (Glycerine)/Humectant	3.00
8. Lanodant DM (DMDM Hydantoin)/Preservative	0.20
9. Rovisome-AHA (Sodium Lactate and Alcohol and Lecithin)/Liposome	6.00
10. Fragrance/Odor	q.s.

Compounding Procedure:

Combine items 1 to 5 and heat to 80C. Combine items 6 and 7 and heat to 80C. Add oil phase to water phase. Cool to 35C. Add items 8 and 9. Add item 10.

LI Ref. No. 124-26B

Cleansing CreamConcept Statement:

A cleansing cream with Pationic SCL to provide skin moisture and smoothness, and a pleasant feel.

Ingredients/Function:

	<u>Wt%</u>
1. Rita GMS (Glyceryl Stearate)/Emulsifier	4.00
2. Rita Cetearyl Alcohol 50/50 (Cetearyl Alcohol)/ Emulsifier	1.60
3. Pationic SCL (Sodium Cocoyl Lactylate)/Lactylate	0.50
4. Mineral Oil/Emollient	20.00
5. Ritachol (Mineral Oil and Lanolin Alcohol)/Emollient	4.00
6. Distilled/Deionized Water/Vehicle	64.70
7. Glycerine/Humectant	5.00
8. DMDM Hydantoin/Preservative	0.20

Compounding Procedure:

Combine items 1-5 and heat to 80C. Combine items 6 and 7 and heat to 80C. Add oil phase to water phase. Cool to 35C and add item 8.

Barrier Cream

A protective skin cream which acts as a barrier, providing protection to the skin when under occupational and environmental stress. In addition, it provides protection from chafed, chapped or wind-burned skin and falls within the requirements of the FDA monograph for OTC skin protectant products. SF1632 is a silicone alkyl copolymer which provides an occlusive barrier and reduces water loss from the skin (TEWL). SF1214 is a solution of high molecular weight silicone gum in cyclopentasiloxane which provides a breathable barrier and a smooth, silky feel to the skin.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Deionized Water/Diluent	77.23
Tetrasodium EDTA/Chelating agent	0.05
PEG-8/Humectant	3.00
1,3 Butylene Glycol/Humectant	2.00
Methylparaben/Preservative	0.25
Propylparaben/Preservative	0.10
Imidazolidinyl Urea/Preservative	0.20
Magnesium Aluminum Silicate/Thickener	0.25
Part B:	
Cetearyl Methicone(SF1632)(1)/Occlusive/TEWL reduction	8.00
Cyclopentasiloxane (and) Dimethicone(SF1214)(1)/ Protectant/Smooth/Silky feel	7.00
Acrylates/C10-30 Alkyl Acrylate Crosspolymer(2)/ Emulsifier	0.30
Carbomer(3)/Thickener	0.30
Sorbitan Oleate/Emulsifier	0.60
Part C:	
Fragrance(4)	0.12
Part D:	
Triethanolamine 99% (to pH 7.0)/Neutralizer	0.60

Procedure:

1. Heat water of Part A to 50C. Add remaining ingredients of Part A with moderate propeller agitation. Mix for 10 minutes.
2. Combine Part B with sweep agitation at ambient temperature. Mix until a smooth "paste" is obtained.
3. Add Part B to Part A with rapid propeller agitation. Mix for 30 minutes or longer to ensure that the polymers are completely dispersed.
4. Cool with moderate agitation to 45C. Add Part C to batch with moderate propeller agitation. Mix for 10 minutes
5. Add Part D to batch at 40C. Mix with moderate agitation for 20 minutes.
6. Cool to room temperature.

Day Cream

A photoprotecting and emollient cream for daily use for moist-urising and protection. The inclusion of Lipex Shea-U brings UV-absorbing and anti-inflammatory components to the skin. Lipex 512 helps to soften and smooth the skin to prevent dryness and further improve the excellent skin feel of shea derived products.

<u>Raw Material/INCI Name:</u>	<u>Wt%</u>
A. Arlatone 985/Polyoxyethylene stearyl stearate	4.0
Brij 721/Steareth-21	2.0
Jarcol I-20/Octyldodecanol	8.0
Lipex 512/Shea butter (<i>Bytorosternum parkii</i>)	4.0
Lipex Shea-U/Shea butter unsaponifiables	4.0
B. Atlas G-2330/Sorbeth-30	2.5
Water	75.0
Phenonip/Esters of p-hydroxybenzoic acid	0.45
C. Perfume	0.05

Procedure:

1. Heat the phases A and B to 75C.
2. Add the oily phase A to the water phase B whilst stirring thoroughly.
3. Cool down to 55C, homogenize.
4. Cool down to 35C, add C.
5. Cool down to room temperature whilst stirring.

Rheological Characteristics:

Viscosity after one week at 20C (Bohlin Rheometer VOR):
 10 Pas at shear rate of 1.0 s⁻¹
 1.1 Pas at shear rate of 30.0 s⁻¹

Day Protecting Cream (Elhibin/Iricalmin)

This day cream with natural based emulsifier contains UV-filters and different active ingredients. Iricalmin has an anti-irritant effect and promotes the normalization of stressed skin. Elhibin protects the skin from degradation of proteins by its elastase inhibitor activity.

<u>Ingredients/INCI Name:</u>	<u>Wt%</u>
A) Tego Care 450/Polyglyceryl-3 Methylglucose Distearate	2.50
Lanette O/Cetearyl Alcohol	2.00
Cutina GMS V/Glyceryl Stearate	2.00
Cetiol OE/Dicaprylyl Ether	5.00
Cetiol 868/Octyl Stearate	8.00
Fitoderm/Squalane	5.00
Parsol MCX/Octyl Methoxycinnamate	2.00
Parsol 1789/Butyl Methoxydibenzoylmethane	1.00
Vitamin E Acetate/Tocopheryl Acetate	0.20
B) Deionized Water	61.50
Elhibin/Soy Bean (Glycine Soja) Protein	2.00
C) Glycerin/Glycerin	5.00
Iricalmin/Water, Wheat (Tritium Vulgare) Germ Extract, Saccharomyces Cerevisiae Extract, Sodium Hyaluronate	3.00
Phenonip	0.50
D) Fragrance/Rivalia 0/221212	0.30

Procedure:

Heat the ingredients of fatty phase A) to 70C.

Heat the ingredients of water phase B) to 75C.

Under stirring add phase B) to phase A), cool to 50C, homogenize and cool to 30C.

Then add phase C) and stir cold. Finally incorporate phase D).

Economy Skin Cream

An economical oil-in-water cream containing Bentone Gel MIO and Bentone LT.

<u>Ingredients:</u>	<u>Wt%</u>
Cetearyl Alcohol, Cetareth 20	3.50
Mineral Oil	5.00
Octyldodecanol	1.50
Cetyl Alcohol	0.75
Octyl Palmitate	5.00
Glycerine 99.5%	2.00
Perfume	0.40
Bentone Gel MIO	1.50
Bentone LT (dispersion)	23.30
Demineralized Water	Bal to 100%
Bentone LT dispersion	
Bentone LT	3.00
Demineralized Water	97.00

Method of Manufacture:

1. Prepare a dispersion of the Bentone LT in water. (See below)
2. Add the glycerine and water to the Bentone LT dispersion and heat to 75-80C.
3. Thoroughly disperse the Bentone Gel MIO in the liquid oils and ester, add the emulsifier and the Cetyl Alcohol and heat to 75-80C.
4. Add the two phases together with high shear stirring.
5. At 50C, transfer to a propeller stirrer and continue to cool.
6. At 30C add the perfume and preservative.

Preparation of Bentone LT dispersion:

1. Prepare a 3% dispersion of Bentone LT in demineralized water using a rotor-stator or similar high-shear mixer (e.g. Silverson). Start the mixer in the water, steadily add the Bentone LT to the vortex and stir until completely dispersed (15-20 mins).
2. Allow the suspension to stand to let any entrapped air escape.

This basic functional skin care cream has been developed to meet the needs of the economy emulsions sector. The formulation provides a rich feeling cream (that would be expected from higher cost ingredients), excellent application properties and leaves a silky after-feel. It demonstrates Bentone Gel can be used in the "economy" end of the market as well as in the usual higher-margin sector products.

Emollient Night Cream

This rich, nongreasy cream is ideal for overnight use. High levels of moisturizers provide excellent treatment for dry skin.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A: Deionized Water	55.40
Propylene Glycol	3.50
Sodium PCA/Ajidew N-50	1.00
Methylparaben	0.15
B: Petrolatum/Snow Petrolatum	10.00
Benzyl Laurate/Mazon EE-1	7.50
Mineral Oil/Drakeol 500	4.00
Isopropyl Myristate/Estol 1514	3.50
Cetyl Alcohol	3.00
PEG-20 Stearate/Cerasynt 840	3.00
Polysorbate 60/Tween 60	3.00
Stearyl Alcohol	3.00
Arlamol E/PPG-15 Stearyl Ether	2.00
Tocopheryl Acetate/Vitamin E Acetate	0.50
Propylparaben	0.15
C: Imidazolidinyl Urea/Germall 115	0.30
Fragrance	q.s.

Procedure:

Heat part A to 70C with stirring. Heat part B to 75C with stirring until all the solids have dissolved. Add part A to part B with stirring, and continue mixing while allowing the blend to cool. Add part C when the mixture is below 40C. Continue stirring until the mixture is below 30C, then package.

Formula 597-114

Cocoa Butter Skin Cream

This rich, anhydrous cream goes on smoothly and provides excellent moisturization. It gives relief to extremely dry skin and may be beneficial for stretch marks.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Mineral Oil/Drakeol 21	32.00
Microcrystalline Wax	32.00
Cocoa Butter	25.50
Petrolatum/Snow Petrolatum	10.00
Tocopheryl Acetate/Vitamin E Acetate	0.20
Allantoin	0.20
Propylparaben	0.10
Fragrance	q.s.

Procedure:

Mix all ingredients except fragrance at 95C until uniform. Let cool with mixing. Add the fragrance and pour into containers just above the solidification temperature.

Formula 597-122

SOURCE: Penreco: Suggested Formulations

Hand and Nail Cream

A rich textured, nourishing, water-in-oil hand and nail cream containing Bentone Gel VS-5

<u>Ingredients:</u>	<u>Wt%</u>
Laurylmethicone Copolyol	2.00
Cyclomethicone	7.00
Isopropyl Palmitate	2.00
Glyceryl Tricaprylate/caprata	6.00
Sweet Almond Oil	2.00
Silk Protein Gydrolysate	1.00
Sodium Chloride	2.00
Bentone Gel VS-5	4.00
Perfume	0.15
Preservative	0.10
EDTA Disodium	0.10
Demineralized Water	Bal to 100%

Method of Manufacture:

1. Mix together the silk protein, Sodium Chloride, EDTA, glycerine and water.
2. Mix the Bentone Gel VS-5 thoroughly with the cyclomethicone. This is a simple blending operation and does not require heating.
3. Add the gel pre-mix to the rest of the oil phase and blend thoroughly.
4. Using high-shear mixing, slowly add approximately 1% of the water phase to the oil phase and continue to homogenize for several minutes before further addition. Very slowly add the remainder of the water phase, a little at a time, waiting until the previous addition has been incorporated into the system before further water is added. Continue to homogenize for several minutes after the addition is complete.
5. Add perfume and preservative.

Water-in-oil creams of this type tend to be somewhat heavy in texture and have residual tack. The use of Bentone Gel VS-5 retains a rich texture, yet gives the cream a light feel and eliminates both the greasy feel and tack.

Propyl Paraben	0.10
D. Water, Deionized	4.50
Potassium Hydroxide	0.50
E. Fragrance (Givaudan)	0.25

Procedure:

1. Prepare Part A by heating the ingredients to 75C to dissolve the solids.
2. Part B. Prepare Carbopol solution by dispersing Carbopol into water using high speed agitation until a smooth slurry is obtained. Then heat the dispersion to about 80C until a smooth, viscous solution is formed.
3. Combine Part C at 55C and add to Part B.
4. Add Part B & C to Part A with continual mixing. Allow the batch to cool.
5. At 55C, add Part D. Then add fragrance at room temperature.

Cleansing Cream #4

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
A. Schercemol MM/Myristyl Myristate	4.00
Stearic Acid, Triple Pressed	3.00
Schercemol 318/Isopropyl Isostearate	7.00
Schercemol PGMS/Propylene Glycol Stearate	4.00
Propyl Paraben	0.20
Arlacel 165/Glycerol Stearate & PEG 100 Stearate	2.50
Cetyl Alcohol	1.00
B. Triethanolamine	1.50
Carbowax 400	5.00
Water, Deionized	71.35
Methyl Paraben	0.20
C. Fragrance (Givaudan)	0.25

Procedure:

1. Prepare Part A. Heat it to 70-75C.
2. Prepare Part B. Heat it to 70-75C.
3. Add Part B to Part A with continual stirring.
4. Cool to 40C with agitation. Add fragrance.

Moisturizing Day Cream (Fitobroside/Mariscan)

This soft cream for daily use is based on many natural ingredients. Fitobroside positively influences the skin moisture content by its barrier repairing activity. Mariscan increases the skin moisture by its water binding capacity and gives a smooth feel to the formulation.

<u>Ingredients/INCI Name:</u>	<u>Wt%</u>
A) Cremophor GS 32/Polyglyceryl-3 Distearate	4.00
Lanette O/Cetearyl Alcohol	3.00
Stearic Acid/Stearic Acid	1.00
Sesame Oil/Sesame Oil	6.00
Cetiol LC/Coco-Caprylate/Caprates	3.00
Abil-350/Dimethicone	2.00
B) Deionized Water	69.20
Mariscan/Glycosaminoglycans	4.00
C) 1,3-Butandiol/Butylene Glycol	5.00
Phenonip	0.50
Fitobroside/Wheat (Triticum Vulgare) Germ Extract	2.00
D) Fragrance/Rivalia 0/221212	0.30

Procedure:

Heat the ingredients of fatty phase A) to 70C.

Heat the ingredients of water phase B) to 75C.

Under stirring add phase B) to phase A), cool to 50C, homogenize and cool to 30C.

Then add phase C) and stir cold. Finally incorporate phase D.

Application No. A 055.0/05.99

Anti-Ozone Cream (Preregen)

In this simple cream, with "PEG-free" raw materials, Preregen protects the skin from damage due to an enhanced ozone concentration in the atmosphere (summer smog).

<u>Ingredients/INCI Name:</u>	<u>Wt%</u>
A) Tego Care 450/Polyglyceryl-3 Methylglucose Distearate	3.00
Lanette O/Cetearyl Alcohol	2.25
Cutina GMS V/Glyceryl Stearate	2.25
Cetiol 868/Octyl Stearate	10.00
Fitoderm/Squalane	5.00
B) Deionized Water	67.00
C) Glycerin/Glycerin	5.00
Phenonip	0.50
D) Preregen/Soybean (Glycine Soya) Protein, Oxido Reductases	5.00

Procedure:

Heat the ingredients of fatty phase A) to 70C.

Heat the ingredients of water phase B) to 75C.

Under stirring add phase B) to phase A), cool to 50C, homogenize and cool to 30C.

Then add phase C) and stir cold. Finally incorporate phase D).

Application No. A 053.A/06.99

SOURCE: Pentapharm Ltd. Suggested Formulations

Multifunctional Day Cream

In this simple, white emulsion the active ingredients Cerasol and Sericin exert barrier regeneration and therefore protecting and moisturizing functions. A pleasant and multifunctional day cream with sun protection filters is obtained.

Item:	Ingredients/INCI Name:	Wt%
1	A) Emulgade SE	8.00
2	Lanette O/Cetearyl Alcohol	2.50
3	Paraffin Oil/Mineral Oil	4.50
4	Miglyol 812/Caprylic/Capric Triglyceride	3.00
5	Abil-350/Dimethicone	0.50
6	Parsol MCX/Octyl Methoxycinnamate	2.00
7	Parsol 1789/Butyl Methoxydibenzoylmethane	1.00
8	Cerasol	1.50
9	B) Deionized Water	70.20
10	Phenonip	0.50
11	Glycerin	3.00
12	Sericin	3.00
13	C) Fragrance/Kaya EV 2940	0.30

Procedure:

Heat the ingredients of fatty phase A) to 70C.

Heat the ingredients of water phase B) to 75C.

Under stirring add phase B to phase A), cool to 50C, homogenize and cool to 30C.

Then add phase C) and stir cold.

Protective Cream with Cromoist CM Glucan

Due to the incorporation of Cromoist CM Glucan, this cream can protect skin from environmental insult and help it to function better. Cromoist CM Glucan is a unique protective and therapeutic agent that works by stimulating the skin's own defense mechanisms, resulting in protective effects that enhance skin function and increase the skin's resistance to UVA-induced oxidative stress. Crodafos CES is a substantive phosphate-based emulsifying system that enhances the delivery of the other ingredients and improves the application properties of the cream.

<u>Ingredients:</u>	<u>Weight%</u>
Part A:	
Crodafos CES (Cetearyl Alcohol (and) Cetearyl Phosphate)	4.0
Crodamol GTCC (Caprylic/Capric Triglyceride)	5.0
Corona PNL (Lanolin)	1.0
Part B:	
Deionized Water	69.8
Triethanolamine (98%)	0.2
Part C:	
Deionized Water	5.0
Hydrotriticum WAA (Wheat Amino Acids)	1.0
Part D:	
Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben	1.0
Cromoist CM-Glucan (Sodium Carboxymethyl B-Glucan)	1.0
Incromectant LAMEA (Acetamide MEA (and) Lactamide MEA)	5.0
Part E:	
Deionized Water	5.0
DL Panthenol	2.0

pH=4.5+-0.5

Viscosity=20,000 cps+-10% (RVT Spindle #TC @ 10 rpm @ 25C)

Procedure:

Combine ingredients of Part A with mixing and heat to 75-80C. Combine ingredients of Part B with mixing and heat to 75-80C. Add ingredients of Part A to B with mixing and cool to 50C. Add ingredients of Part C, D and E with mixing and cool to desired fill temperature.

Pure as Water Cleansing Cream

<u>Ingredient/Tradename:</u>	<u>Wt%</u>
Phase A:	
Cyclomethicone & dimethiconol copolyol/Dow Corning 3225C	8.00
Cyclomethicone & dimethiconol/Dow Corning 1401	6.00
Cyclomethicone/Dow Corning 435	4.00
Hydrogenated Polybutene/Panalene L-14E	5.00
DL-Alpha-Tocopherol Linoleate/Vit E-linoleate	1.00
Bisabolol/Dragosantol	0.20
Perf Compound/Perf. Rainforest	0.20
Phase B:	
Hexylene Glycol	12.40
Glycerin	11.00
Polyethylene Glycol-16 (PEG-800)	16.00
Dimethicone Copolyol/Dow Corning 2501	2.00
Plant extract/Extrapone Witch Hazel	3.00
D-Panthenol/Panthenol 50P	1.00
Purac PF/P 41	4.00
Propylene Glycol/Germaben II-E	
Diazolidinyl Urea	
Methyl Paraben	
Propyl Paraben	
Water	25.60

Procedure:

- Mix ingredients of oil phase (a) and measure RI (RII), then warm them slightly (up to 35 degrees C).
- Mix ingredients of water phase (B) until homogeneous and warm them slightly to solubilise DC 2501 and PEG 800.
- Measure RI of water phase (R12).
- Adjust R12 to match RII on a way:
 - if $R12 > R11$ add some water
 - if $R12 < R11$ add some polyol (glycerin, hexyleneglycol or PEG 800)
- When RI of both phases are the same proceed with emulsification as: slowly add water phase to oil phase which is mixing with turbulent mixing.
- The addition of water phase should be 5-10 mins.
- When the whole of water phase is added, continue mixing for another 10-20 minutes to get thicker gel.

C Water	54.00
Glycerin	3.00
D Allantoin	0.20
Uniphen P-23	0.40
Magnesium Sulfate-7H2O	0.70
E Unimoist U-125	3.00
F Unicide U-13 (in 10% Water)	4.00
G Fragrance	0.30

Procedure:

Manufacturing is best performed in a closed apparatus (as eg. Fryma, Krieger) provided with vacuum and a speed-regulated stirrer with integrated rotor-stator homogenizer. Care has to be given on the microbiological quality of the deionized water. Manufacturing is performed under vacuum.

1. Melt sequence A while stirring in the machine at 85C. Before emulgating add sequence B immediately (=AB).
2. Sequence D is dissolved separately in sequence C at 85C (=CD).
3. Under vacuum, while stirring at a medium speed and homogenizing at low speed add CD in small portion to AB.
4. Homogenize ABCD 10 min at highest speed and let mixture cool down.
5. At 50C add E and homogenize during 5 min at medium speed.
6. Add at 45C F and at 38C add G. Homogenize at highest speed for 10 min and let mixture cool down.
7. At 25C the mixture can be removed from the machine.

Tube-Dispensed Hand Cream

A tube dispensed hand cream utilizing SF96 (1000), dimethicone, to provide lubricity and a smooth feel. SF96 (1000) also provides anti-whitening properties as well as skin protection. The use of dimethicone in this formulation falls within the requirements of the FDA monograph for OTC skin protectant products.

Ingredient/Function:

	<u>Wt%</u>
Part A:	
Dimethicone [SF96(1000)](1)/Protectant/Anti-whitening	2.50
Isopropyl Myristate/Emollient	2.00
Stearic Acid/Thickener/Emulsifier	7.00
Lanolin/Emollient	0.50
Emulsifying Wax NF(2)/Emulsifier	4.00
Sorbitan Oleate/Co-emulsifier	0.50
Polysorbate-60/Emulsifier	2.50
Part B:	
Propylene Glycol/Humectant	7.00
Deionized Water/Diluent	66.00
Magnesium Aluminum Silicate(3)(5% aqueous dispersion)/Thixotropic thickener	8.00
Part C:	
Fragrance	q.s.
Preservative	q.s.

Procedure:

1. Prepare a 5% magnesium aluminum silicate dispersion using a homogenizer. Mix the dispersion for 20 minutes.
2. Mix together Part B water and 5% dispersion of magnesium aluminum silicate using a propeller mixer. Heat to 70C.
3. Add propylene glycol and mix for 5 minutes.
4. Weigh Part A ingredients into a separate vessel, mix and heat to 70C.
5. Add Part A to Part B with good propeller agitation. Mix 10 minutes at 70C.
6. Slow mixing and begin cooling.
7. At 40C or less, blend in part C.

Hair Care Products

Alcohol-Free No Voc Hair Spray Formulation

A commercially-proven medium-hold no-voc pump formulation for the rapidly emerging alcohol-free hair spray arena. This non-flaking formulation will not dry out the hair like conventional hair sprays and is ultra-environmentally friendly.

Ingredients:

	<u>Wt%</u>
Water	84.46
AMP Regular	0.99
50% Acylates Copolymer	14.00
Monawet MO-70R	0.30
Glycerin	0.25

AMP=Aminomethylpropanol

Acrylates Copolymer=Balance 0/55

Procedure:

Combine ingredients in order shown with mild agitation. Add fragrance and preservative. Package in pump hair spray container.

Typical Properties:

pH: 8.5

Viscosity: 8 cps

Appearance: Clear

Mackine 301 (Stearamidopropyl Dimethylamine)	1.6
Cetyl Alcohol	1.8
Phosphoric Acid (85%)	0.9
Sodium Chloride	0.3
Mackstat DM (DMDM Hydantoin)	qs
Balsam of Peru	qs
Water, Dye	qs to 100.0

Procedure:

1. Add first four components to water.
2. Heat to 70C.
3. Blend until homogeneous.
4. Cool to 45C and add Mackstat DM and Balsam of Peru.
5. Cool to room temperature.

Clear Conditioner with Wheat Germ Cationic

<u>Raw Materials:</u>	<u>Wt%</u>
Mackalene 716 (Wheatgermamidopropyl Dimethylamine Lactate)	1.0
Hydroxyethylcellulose	1.0
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Completely disperse Hydroxyethylcellulose in cold water.
2. Heat to 45C and add Mackalene 716.
3. Adjust pH to 5.0 with Lactic Acid.
4. Blend until clear.
5. Add remaining components.
6. Cool to room temperature.

Clear Leave-On Conditioner

<u>Raw Materials:</u>	<u>Wt%</u>
Mackalene 426 (Isostearamidopropyl Morpholine Lactate)	6.0
Hydroxyethylcellulose	1.0
Mackstat DM (DMDM Hydantoin)	qs
D.I. Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Completely disperse Hydroxyethylcellulose in cold water.
2. Add Mackalene 426.
3. Blend until clear.
4. Heat to 40C.
5. Add remaining components.
6. Cool to room temperature.

Clear Conditioner for Daily Use

This light rinse-off clear conditioner contains SME253 which is a 20% Trimethylsilylamodimethicone micro emulsion with particle size less than 20nm. It has been designed for global markets. All components of SME253 comply with regulations related to personal care products in the U.S., European Union, Canada and China. This formulation remains clear upon adding SME253 with excellent conditioning effects which are soft, smooth, and silky feel.

Ingredient/Function:

	<u>Wt%</u>
Part A:	
Deionized Water/Diluent	90.15
Hydroxyethylcellulose/Thickener	1.50
Glycerin/Humectant	2.00
Methylparaben/Preservative	0.20
Propylparaben/Preservative	0.10
Part B:	
Cetrimonium Chloride (28-30%)/Conditioner	3.00
Methylchloroisothiazolinone (and) Methylisothiazolinone(1)/Preservative	0.05
Trimethylsilylamodimethicone (and) C11-15 Pareth-7 (and) C12-16 Pareth-9 (and) Glycerin (and) Trideceth-12(SME253)(2)/Conditioner	3.00

Procedure:

1. Heat water, glycerin, methylparaben, propylparaben at 65C. Slowly add Hydroxyethylcellulose and mix until uniform.
2. Cool the batch down to 45C and add Part B as the order listed.

Daily Use Conditioner for Normal to Dry HairIngredients/Function:

	<u>Wt%</u>
Water/Diluent	86.00
Dimethiconol(SM2765)(1)/Conditioning agent	5.00
Quaternium-27/Antistatic agent and conditioner	3.30
Stearyl Alcohol/Emulsifier	3.00
Glyceryl Stearate/Thickener	1.50
Propylene Glycol/Humectant	1.00
Germaben II/Preservative	0.20

Procedure:

1. Melt together Glyceryl Stearate and Stearyl Alcohol.
2. Separately combine Water, Quaternium-27, Propylene Glycol and Germaben II with moderate propeller agitation. Heat to 65C.
3. When both phases are at the same temperature, add wax phase to aqueous phase with rapid agitation for approximately 5 minutes. Remove heat and reduce stir speed to moderate. Continue mixing.
4. Add dimethiconol emulsion under 45C and continue stirring until cool.

Conditioner for Dry/Damaged Hair with SM2101

This conditioner is designed for daily use on dry/damaged hair. SM2101 is an effective conditioner for hard-to-condition hair due to its high level of substantivity, yet is readily removed and does not result in build-up.

Ingredient/Function:

Part A:

	<u>Wt%</u>
Deionized Water/Diluent	76.40
Propylparaben/Preservative	0.10
Methylparaben/Preservative	0.20

Part B:

Behentrimonium Methosulfate (and) Cetearyl Alcohol(1)/ Conditioner/Emulsifier	2.70
Pentaerythrityl Tetrastearate(2)/Thickener	1.50
Cetyl Alcohol/Refatting agent/Emulsifier	2.30
Stearamidopropyl Dimethylamine/Conditioner	2.50

Part C:

Trimethylsilylamodimethicone (and) Isolaureth-6 (and) Octoxynol-40 (SM2101)(3)/Conditioner	5.00
FD&C Yellow No. 5 (1.0% solution)/Color	0.30

Part D:

Polysorbate-80/Emulsifier/Solubilizer	1.50
Glycerin/Humectant	2.75
Fragrance (4)	0.50
Tocopherol/Vitamin E/Antioxidant	0.05

Part E:

Cyclomethicone (SF1204)(3)/Wet combing	4.20
--	------

Procedure:

1. Dissolve parabens in water and heat with moderate propeller agitation to 65C.
2. Melt together Part B ingredients and add to the water phase. Remove heat and continue stirring 15-20 minutes.
3. Mix together Part C and add to Part AB. Stir approximately 15 minutes.
4. Mix together Part D; add to batch below 40C with moderate stirring for 15 minutes. Add SF1204 cyclomethicone and continue stirring for an additional 10-15 minutes.

Conditioning Color Sealant for Temporary Hair Dyes

SM2115 is a microemulsion of an amine functionalized silicone polymer of high amine content. Due to its small particle size and high amine content, it is extremely substantive to hair and provides intensive conditioning. In addition, SM2115 acts as a color sealant, providing protection against wash-out of temporary dyes.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Deionized Water/Diluent	88.10
Quaternium-15/Preservative	0.20
Stearamidopropyl Dimethylamine/Conditioner	0.50
Acetic Acid/pH adjuster	0.19
Sodium Acetate/Buffer	0.11
Part B:	
Fragrance	0.75
Octoxynol-40/Surfactant	0.85
Isolaureth-6/Surfactant	1.96
Glycerin/Humectant	1.09
Part C:	
Trimethylsilylamodimethicone (and) Octoxynol-40 (and) Isolaureth-6 (and) Glycerin (SM2115) (1)/Color sealant/ Conditioner	6.25

Procedure:

1. Combine Part A with moderate propeller agitation and heat to 60C. Continue stirring for 15 minutes. Remove from heat.
2. Combine Part B ingredients and add to Part A with moderate propeller agitation.
3. Slowly add Part C to Part AB and continue mixing 15 minutes.

Conditioning Pretreatment for Chemical Processing

SM2115 is a microemulsion of an amine functionalized silicone polymer with a high amine content. It is extremely substantive to hair and provides conditioning which is substantive through chemical processing, making this product an ideal pretreatment for perms, dyes, bleaching, and relaxers. Hair feels soft, conditioned and less damaged even after chemical processing.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Deionized Water/Diluent	85.10
Quaternium-15/Preservative	0.20
Acetic Acid/pH adjustment	0.19
Sodium Acetate/Buffer	0.11
Part B:	
Fragrance	0.50
Octoxynol-40/Surfactant	0.85
Isolaureth-6/Surfactant	1.96
Glycerin/Humectant	1.09
Part C:	
Trimethylsilylamodimethicone (and) Octoxynol-40 (and) Isolaureth-6 (and) Glycerin (SM2115)/Conditioner	10.00

Procedure:

1. Combine Part A with moderate propeller agitation and heat to 60C. Continue stirring for 15 minutes. Remove from heat.
 2. Combine Part B ingredients and add to Part A with moderate propeller agitation.
 3. Slowly add Part C to Part AB and continue mixing 15 minutes.
- Formula CP 111

Hair Gloss Spray

A leave-in conditioner which can be sprayed onto the hair and used throughout the day to provide shine and conditioning. SF1550 provides gloss and sheen to the hair, while SF1202 makes the product fast-drying without an oily residue.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Phenyl Trimethicone (SF1550)(1)/Shine/Conditioning	10.0
Cyclopentasiloxane (SF1202)(1)/Fast dry/Conditioning	90.0

Cream Rinse Conditioner

This cream rinse formula features Crodafos CES, a conditioning and emulsifying system from Croda, together with a cationic conditioner, Incroquat CTC-30. By its ability to promote fast release of oils and conditioning agents to the hair and its compatibility with quaternary conditioners, Crodafos CES enables this cream rinse to provide enhanced conditioning effects. Increased sheen, silkier, softer feel, and improved texture. The product rinses out extremely easily without incidence of drag or a waxy deposit.

Ingredients:Weight%**Part A:**

Crodafos CES (Cetearyl Alcohol (and) Cetearyl Phosphate)	6.0
Crodacol CS-50 (Cetearyl Alcohol)	1.5
Super Refined Wheat Germ Oil (Wheat Germ Oil)	2.0
Crodamol OS (Octyl Stearate)	2.0
Crodamol OPG (Octyl Pelargonate)	2.0

Part B:

Deionized Water	83.65
Incroquat CTC-30 (Cetrimonium Chloride)	1.50
TEA 99%	0.35

Part C:

Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben	1.00
--	------

pH=5.5+-0.5

Viscosity=18,500cps+-10% (Spindle TD @ 10 RPM @ 25C)

Procedure:

Combine ingredients of Part A with mixing and heat to 75-80C. Combine ingredients of Part B with mixing and heat to 75-80C. Add Part B to Part A with mixing and cool to 50C. Add Part C while mixing and cool to desired fill temperature.

N.A.T.C. Approved

Daily Protection Spray

Designed for use on damp hair after showering, at the beach or by the poolside, this Daily Protection Spray contains a trio of ingredients that can protect hair from sun damage or blow-dryer burnout. Crodasone W is a heat-activated protein/silicone copolymer and provides thermal protection that helps prevent hair from becoming heat-damaged by styling appliances. Incroquat UV-283 guards against UVB damage caused by the sun. Hydrosesame AA provides moisturizing benefits throughout the day.

<u>Ingredients:</u>	<u>Wt%</u>
Part A:	
Deionized Water	94.0
Crodasone W (Hydrolyzed Wheat Protein Hydroxypropyl Polysiloxane)	1.0
TEA	q.s.
Crovol PK-70 (PEG-45 Palm Kernel Glycerides)	2.0
Part B:	
Hydrosesame AA (Sesame Seed Amino Acids)	1.0
Incroquat UV-283 (Cinnamidopropyltrimonium Chloride)	1.0
Part C:	
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben/Germaben II	1.0
pH: 4.6+-0.5	

Procedure:

Combine first two ingredients of Part A with mixing. Continue mixing and add TEA until pH is 5.5, at which point mixture will become clear. Add remaining ingredient of Part A and mix well. Add ingredients of Part B individually with mixing. When uniform add Part C and mix until ready to fill.

Formula HP-202

Leave-On Detangling Spray

This formula is an easy cold-mix system and is designed to highlight the detangling effects and wet combing properties of Incroquat Erucyl HE. Hydrotritricum WAA is used to moisturize the hair, and the copolyol, to add shine.

<u>Ingredients:</u>	<u>Wt%</u>
Deionized Water	94.5
Incroquat Erucyl HE (Hydroxyethyl Erucamidopropyl Dimonium Chloride)	3.0
Hydrotritricum WAA (Wheat Amino Acids)	1.0
Dimethicone Copolyol/D.C. Surfactant 193	0.5
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben/Germaben II	1.0
pH: 5.6+-0.5	

Procedure:

Combine ingredients in order given and mix until clear and uniform. Fill.

Easy to Manufacture Creme Rinse

<u>Raw Materials:</u>	<u>Wt%</u>
Mackadet CBC (Cetyl Alcohol (and) Stearyl Alcohol (and) Stearalkonium Chloride (and) Dimethyl Stearamine (and) Lactic Acid)	4.0-6.0
Potassium Chloride	qs
Paragon III (Phenoxyethanol (and) DMDM Hydantoin (and) Methylparaben (and) Propylparaben)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Heat water to 70C.
2. Add Mackadet CBC and mix until completely dispersed.
3. Adjust pH as needed with Citric Acid.
4. Cool to 50C and add Paragon III, Dye and Fragrance.
5. Adjust viscosity with Potassium Chloride if necessary.
6. Cool and fill.

Spray Detangler for Children

<u>Raw Materials:</u>	<u>Wt%</u>
Mackpro WLW (Wheatgermamidopropyl Hydroxypropyl Dimonium Hydrolyzed Wheat Protein)	1.0
Mackalene 426 (Isostearamidopropyl Morpholine Lactate)	3.0
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Add components to water.
2. Heat to 40C and blend until clear.

Natural Lipid Styling Mousse

<u>Raw Materials:</u>	<u>Wt%</u>
PVP/VA E335	4.5
SDA 40 Alcohol	21.5
Mackpro NLP (Quaternium-79 Hydrolyzed Collagen)	4.0
D.I. Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Combine components and blend until clear.
2. Pressurize with suitable propellant.

Hair Balm with Repair Effect

<u>Raw Materials:</u>	<u>Wt%</u>
A. Softisan 601	18
Marlpal 1618/25 (Ceteareth-25)	5
Softisan 645	5
Mineral Oil	6
Castor Oil	3
Aloe Vera Lipo Quinon	1
B. Glycerol	5
Propylene Glycol	3
Preservative	q.s.
Water ad	100
C. Extrapon Phytostimulin Spezial	3
Placenta liquid, water soluble	3
D. Fragrance	q.s.

Preparation:

A is heated to about 75C. B is brought to the same temperature and emulsified into A. C is added at about 30C.

Hair Fixative

<u>Raw Materials:</u>	<u>Wt%</u>
Softigen 767	1.5
Luviskol VA 64 (PVA-VA Copolymer)	2
Isopropanol or Ethyl Alcohol	38
Lactic acid	1
Fragrance	q.s.
Water ad	100

Preparation:

All ingredients are mixed and stirred homogeneously.

Hair Conditioner for Damaged Hair

SM2115 is a substantive amine functional emulsion, 20% active, which is particularly good for damaged, chemically processed or hard-to-condition hair. At low levels, it can be used in daily use products, providing softness, shine and body. Build-up is a concern at higher levels.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Ceteareth-20/Emulsifier	1.0
Stearyl Alcohol/Refatting agent/Emulsifier/Thickener	2.0
Stearamidopropyl Dimethylamine/Conditioner	0.8
Quaternium-18/Conditioner	1.4
Cyclomethicone (SF1202)(1)/Wet-combing/Quick dry time	3.0
Part B:	
Water	89.7
Part C:	
Trimethylsilylamodimethicone (and) Octoxynol-40 (and) Isolaureth-6 (and) Glycerin (SM2115)(1)/Conditioner/ Shine	2.0
Methylchloroisothiazolinone (and) Methylisothiazolinone (2)/Preservative	0.1

Procedure:

1. Preheat Part A to 75C.
2. Preheat the water in Part B, to 75C.
3. Add Part B to Part A with moderate agitation.
4. Cool with agitation to 40 to 50C.
5. Blend in SM2115.
6. Blend in the preservative.
7. Cool to room temperature.

Trade Names/Suppliers:

- (1) GE Silicones
- (2) Kathon, Rohm and Haas

SOURCE: GE Silicones: Personal Care Formulary: Formula CP 101

Hair Conditioner for Superior Body

SF1214 is a blend of cyclopentasiloxane and high molecular weight dimethicone. It provides wet combing plus imparts body, softness and shine. The high molecular weight dimethicone smooths damaged, split ends.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Ceteareth-20/Emulsifier	0.5
Steareth-20/Emulsifier	0.5
Stearyl Alcohol/Refatting agent/Emulsifier/Thickener	2.0
Stearamidopropyl Dimethylamine/Conditioner	0.8
Dicetyldimonium Chloride/Conditioner	1.5
Part B:	
Water	92.6
Hydroxyethylcellulose (1)/Thickener	0.5
Part C:	
Dimethicone (and) Cyclopentasiloxane (SF1214)(2)/Conditioner	1.5
Methylchloroisothiazolinone (and) Methylisothiazolinone (3)/Preservative	0.1

Procedure:

1. Mix together Part A. Preheat to 75C.
2. Separately mix together the water and the hydroxyethylcellulose. When the hydroxyethylcellulose is dissolved, preheat to 75C.
3. Add Part B to Part A with moderate agitation.
4. Cool with agitation to 60 to 65C.
5. Blend in the SF1214.
6. Cool to 40 to 50C and add the preservative.
7. Cool to room temperature.

Comments:

For thin, straight hair, use only 1% dicetyldimonium chloride. Increase the stearyl alcohol wt% for a thicker system.

Trade Names/Suppliers:

**Hair Conditioner with Moisturizers and Quaternium-79
Hydrolyzed Collagen**

<u>Raw Materials:</u>	<u>Wt%</u>
Cetearyl Alcohol	3.0
Mackernium SDC-85 (Stearalkonium Chloride)	3.0
Propylene Glycol	1.0
Glycerin	1.0
Mackamide AME-100 (Acetamide MEA)	1.0
Mineral Oil	1.0
Mackpro NLP (Quaternium-79 Hydrolyzed Collagen)	2.0
Mackstat DM (DMDM Hydantoin)	qs
D.I. Water, Dye, Fragrance	qs to 100.0

pH: 3.5-4.5

Viscosity (cps 25C): 1500-3000

Procedure:

1. Melt waxes and oils to 70C.
2. Separately heat water plus Mackpro NLP to 70C.
3. Add hot water solution to hot waxes and oils.
4. Start stirring vigorously for 10 minutes. Then start slow cooling while mixing.
5. At 40C, add Mackstat DM then Dye and Fragrance; slow mixing down close to room temperature and stop mixing at 30C.
6. Adjust pH to 3.5-4.5 with Citric Acid.

Natural Lipid Conditioner for Professional Salon

<u>Raw Materials:</u>	<u>Wt%</u>
Mackernium SDC-85 (Stearalkonium Chloride)	1.5
Mackalene NLC (Oleamidopropyl Dimethylamine Lactate (and) Palmitamidopropyl Dimethylamine Lactate (and) Palmitoleamidopropyl Dimethylamine Lactate)	1.0
Mackpro NLP (Quaternium-79 Hydrolyzed Collagen)	2.0
Cetearyl Alcohol	1.8
Steareth-2	1.8
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Add first five components to water.
2. Heat to 70C.
3. Cool to 45C and add remaining components.

Hair Defining Complex

Styling aid and anti-frizz oil-in-water/water-in-oil emulsion containing Bentone Gel M10 rheological additive.

<u>Ingredients:</u>	<u>Wt%</u>
Polyvinylpyrrolidone Vinyl Acetate Copolymer	2.0
Cetearyl Alcohol, Behenyl Trimonium Methosulphate	4.0
Cyclomethicone, Dimethiconol	10.0
Glycerin 99.5%	4.0
Perfume	0.3
Methyldibromoglutaronitrile	0.2
and Propylene Glycol	0.4
Bentone Gel M10	1.0
Sodium Hydroxide	qs to pH 5.5
Demineralized Water	Bal to 100%

Method of Manufacture:

1. Heat the Bentone Gel M10 and Cetearyl Alcohol, Behenyl Trimonium Methosulphate to 75-80C.
2. In a separate vessel, heat the water, glycerine and Polyvinylpyrrolidone Vinyl Acetate Copolymer to 75-80C.
3. Add the two phases together with high shear stirring.
4. Add the Cyclomethicone, Dimethiconol.
5. At 50C, transfer to a propeller stirrer and continue to cool.
6. At 30C, add the perfume and preservative.

Applied sparingly to towel-dried, wet, freshly shampooed hair prior to drying, this formulation containing Bentone Gel M10 at 1% provides noticeable benefits. Direct comparisons against the same formulation without the gel reveals enhanced application, curl definition and style management in salon half-head studies. Without the gel the product sits on the wet hair rather than dissipates into it.

Hair Nourishing Treatment

This formula contains a mixture of Croda ingredients, each of which has 'nourishing' effects that help keep hair looking healthy and shiny. Hydrolupin AA is a plant-based amino acid complex that can moisturize hair from within. Cropure Wheat Germ and Solan 50 both add emolliency. Hydrotriticum QM is a substantive wheat protein with enhanced conditioning. Incroquat Behenyl TMS provides dual action, acting as a detangling aid, as well as the emulsifier.

Ingredients:

	<u>Wt%</u>
Part A:	
Incroquat Behenyl TMS (Behentrimonium Methosulfate (and) Cetearyl Alcohol)	4.00
Cropure Wheat Germ (Wheat Germ Oil)	1.00
Crodacol C-70 (Cetyl Alcohol)	0.50
Part B:	
Deionized Water	83.40
Propylene Glycol	5.00
Solan 50 (PEG-60 Lanolin)	1.00
Part C:	
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben/Germaben II	1.00
Part D:	
Panthenol/DL-Panthenol Liquid, 50%	2.00
Hydrolupin AA/Lupin Amino Acids	1.00
Hydrotriticum QM (Cocodimonium Hydroxypropyl Hydrolyzed Wheat Protein)	1.00

pH: 6.0+-0.5

Viscosity: 2,530 cps+-10% (RVT Spindle #3 @ 10 rpm)

Procedure:

Combine ingredients of Part A with mixing and heat to 75C. Combine ingredients of Part B with mixing and heat to 75C. Add Part A to Part B with mixing and cool to 50C. Add Part C with mixing and cool to 40C. Add Part D ingredients individually, mixing well. Cool to 25C and adjust pH to 6.0 with a 10% solution of NaOH.

Hair Styling Gel

A light gel with a soft set. Does not contain any alcohol. If a stronger hold is desired, increase the concentration of H2OLD. The concentration of AMP-95 will also need to be increased, although not proportionately. To use, just apply a small amount to towel dried hair and rub in vigorously. Blow dry as usual.

<u>Material:</u>	<u>Wt%</u>
1 Deionized Water	86.74
2 H2OLD EP-1	5.00
3 AMP-95	0.20
4 Lubrajel Oil	1.00
5 Thixotrate	2.00
6 Deionized Water	4.50
7 Germall 115	0.50
8 Fragrance	0.03
9 Polysorbate 80	0.03

Procedure:

1. Disperse item #2 into #1.
2. Add item #3 and mix until clear.
3. Add item #4 and mix for a few minutes before adding item #5.
4. Premix item #7 and #6 and add into gel.
5. Premix item #8 and #9 and add into the gel.

Hair Treatment Gel

This formulation is a clear, light straw colored gel with excellent flow characteristics. It has excellent substantivity and may be used as a wash-off or leave-on conditioner.

<u>Material:</u>	<u>Wt%</u>
A Deionized Water	76.80
B Dowicil 200	0.20
C Ucare Polymer JR-400	2.00
D Polyjel	20.00
E Crotein CAA SF	0.33
F Aminogluten MG	0.33
G Crotein HKP SF	0.33

Procedure:

1. Dissolve components B and C into A by heating to 60-65C with high shear mixing. Continue mixing until the polymer is in solution.
 2. Remove heat and using a paddle blade mixer, add components D, E, F and G.
 3. Cool to less than 30C and add fragrance if desired.

Intensive Rinse-off Conditioner

Rinse-off conditioner providing deep, intensive conditioning for damaged or hard-to-condition hair. SM2115 is a 20% micro-emulsion of an amine functional silicone fluid with a high amine content. It is very substantive and provides conditioning durable through several shampoos.

Ingredient/Function:

	<u>Wt%</u>
Part A:	
Cetearyl Alcohol (and) Dicapryldimonium Chloride (and) Stearamidopropyl Dimethylamine (1)/Conditioning/Static	5.00
Citric Acid/pH adjustment	0.05
Quaternium-15/Preservative	0.10
Water/Diluent	89.85
Part B:	
Trimethylsilylamodimethicone (and) Octoxynol-40 (and) Isolaureth-6 (and) Glycerin (SM2115) (2)/Conditioning agent	5.00
Citric Acid/pH adjustment	q.s.

Procedure:

1. Heat water, citric acid and quaternium-15 to 65C. Slowly add remaining Part A ingredients until completely melted and emulsion forms.
2. Cool to 45-50C and add SM2115. Adjust pH to 4.5 with citric acid.
3. Cool and package.

Trade Names/Suppliers:

- (1) Varisoft CRC, Witco Corp.
 - (2) GE Silicones
- Formula CP 109

Cuticle Coat

An excellent leave-in conditioner which can be used throughout the day to provide shine, split end control and overall conditioning. It is applied to the hands and then smoothed through the hair for a soft, silky feel.

Ingredient/Function:

	<u>Wt%</u>
Cyclopentasiloxane (and) Dimethicone (SF1214) (1)/Conditioning/Shine	65.0
Isohexadecane/Carrier/Dry time	33.0
Octyl Methoxycinnamate/UV absorber	2.0

Procedure:

1. Dissolve octyl methoxycinnamate in isohexadecane or isohexadecane/SF1173 blend.
2. Slowly add SF1214 to isohexadecane mixture. Mix until homogeneous.

Overnight Repair Gel

SM2115 is a 20% microemulsion of an amine functional fluid with a high amine content which provides substantive conditioning. The overnight repair gel is an intensive conditioner, providing a soft, silky feel to the hair plus does not stain fabric. Apply to the hair before sleeping, wash out in the morning with normal shampooing.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Carbomer (1)/Thickener	0.5
Sodium Hydroxide (50%)/Neutralizer	2.0
Deionized Water/Diluent	73.5
Part B:	
Quaternium-15/Preservative	0.2
Trimethylsilylamodimethicone (and) Octoxynol-40 (and) Isolaureth-6 (and) Glycerin (SM2115) (2)/ Conditioner	5.0
Deionized Water/Diluent	17.8
Part C:	
Glycerin/Humectant	1.0
Fragrance	q.s.
Acetic Acid/pH adjustment	q.s.

Procedure:

- Mix Part A by slowly adding the carbomer to the water until thoroughly dispersed, then add sodium hydroxide to bring the pH up to 9.
- Mix together quaternium-15, SM2115 and remaining water.
- Slowly add Part A to Part B with good stirring.
- Add glycerin, fragrance and color.
- Adjust pH to approximately 6 with acetic acid.

Trade Names/Suppliers:

Protein Lotion Conditioner

<u>Raw Materials:</u>	<u>Wt%</u>
Mackine 301 (Stearamidopropyl Dimethylamine)	1.5
Cetyl Alcohol	2.5
Lactic Acid (88%)	0.7
Mackpro NLP (Quaternium-79 Hydrolyzed Collagen)	1.5
Sodium Chloride	0.5
Paragon (Propylene Glycol (and) DMDM Hydantoin (and) Methylparaben)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Dissolve sodium chloride in water.
2. Add first four components and heat to 70C.
3. Blend until homogeneous.
4. Cool to 45C and add remaining components.
5. Cool to room temperature.

Pearl Conditioner

<u>Raw Materials:</u>	<u>Wt%</u>
Mackadet LCB (Liquid Conditioner Concentrate that can be cold blended)	10.0
Triethanolamine	1.0
Sodium Chloride	0.5
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Warm water to 40C.
2. Add Sodium Chloride and Triethanolamine.
3. Add Mackadet LCB and blend slowly.
4. When completely dispersed, add Mackstat DM, Dye, and Fragrance
5. Cool to room temperature.

Hair Conditioner

<u>Raw Materials:</u>	<u>Wt%</u>
Mackadet CBC (Conditioner Concentrate for Viscous Cream Consistency)	5.0
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Add Mackadet CBC to water.
2. Heat to 70C.
3. With continuous mixing, cool to 50C.
4. Add remaining components.
5. Cool to room temperature.

Setting Lotion
for blow-dried hair

<u>Recipe:</u>	<u>Wt%</u>
A Aristoflex A 60/VA/Crotonates Copolymer, Isopropyl Alcohol	1.50
Genamin KSL/PEG-5 Stearyl Ammonium Lactate	1.00
PEG 400/PEG-8	0.20
Iso-Adipate/Diisopropyl Adipate	0.20
Fragrance	0.20
B Isopropyl alcohol	45.00
Water	51.90
Preservative	q.s.

Procedure:

Dissolve the components of A one after another in B.
Formula B V/1020

Antidandruff Setting Lotion

<u>Recipe:</u>	<u>Wt%</u>
A Octopirox/Piroctone Olamine	0.10
Luviskol VA 64I/PVP/VA Copolymer, Isopropyl Alcohol	5.50
Iso-Adipate/Diisopropyl Adipate	0.60
Genamin KSL/PEG-5 Stearyl Ammonium Lactate	0.70
PEG 400/PEG-8	0.50
Fragrance	0.30
B Isopropyl alcohol	35.00
C Water	57.30
D Citric acid-->pH 5.0-6.0	q.s.

Procedure:

1. Dissolve the components of A one after another in B.
2. Stir C into 1.
3. Finally adjust the pH with D.

Formula B V/5002

SOURCE: Hoechst Aktiengesellschaft: Guide Recipes

Simplified Hair Tonic Preparation

<u>Raw Materials:</u>	<u>Wt%</u>
Mackpro WWP (Wheatgermamidopropyl Dimethylamine Hydrolyzed Wheat Protein)	3.0
Hydroxyethylcellulose	0.4
Mackstat DM (DMDM Hydantoin)	0.3
Menthol Crystals	0.2
Ethyl Alcohol	14.0
PEG-8	4.0
Mackamide AME-75 (Acetamide MEA)	1.0
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Dissolve Hydroxyethylcellulose in water using heat as needed.
2. When dissolved, add Mackpro WWP, PEG-8, Mackamide AME-75, and Mackstat DM.
3. Dissolve Menthol Crystals in Ethyl Alcohol and add to batch
4. Add Dye and Fragrance; cool and fill.

Leave-On Conditioner

<u>Raw Materials:</u>	<u>Wt%</u>
Mackadet INC (Conditioner Concentrate)	10.0-12.5
Mackstat DM (DMDM Hydantoin)	qs
D.I. Water and Fragrance	qs to 100.0

Procedure:

1. Vary the amount of Mackadet INC depending on the set desired. 10% use level is suggested for regular set and 12.5% for firm set.
2. Completely disperse the fragrance in the Mackadet INC.
3. Add Mackstat DM to protect the diluted solution. (Note: The concentrate contains only enough preservative to protect the concentrate. Please add additional preservative to protect diluted solution.)
4. Add D.I. Water.
5. Apply finished product to shampooed and towel dried hair; do not rinse; style hair.

55% VOC Aerosol Hair Spray

This formula utilizes Eastman AQ 48 Ultra polymer to give fast-drying, moderate hold with good curl retention in a 55% VOC system.

<u>Formula:</u>	<u>Wt%</u>
Part A:	
Eastman AQ 48 Ultra Polymer	5.0
Deionized Water	36.1
Part B:	
Eastman Ethanol (SDA-40)	20.0
AMP-95	0.6
Balance-47 (28-4947)	3.0
Silwet L-7657 (Dimethicone Copolyol)	0.3
Dymel A (Dimethyl Ether)	35.0

Procedure:**Part A:**

Start agitation of deionized water and add Eastman AQ 48 Ultra polymer pellets.

Heat pellet/water mixture to 40C with continuous rapid agitation.

Mix until polymer is completely dispersed.

Part B:

Dissolve AMP-95 in ethanol.

While maintaining good agitation, slowly sift in Balance-47.

Mix until polymer is dissolved.

Add Part B to Part A:

Add dimethicone copolyol.

Mix until homogeneous.

Filter, and fill cans.

Charge with dimethyl ether propellant.

Suggested Valve System:

Item:	Description:
Seaquist Valve	XT-91
Stem Orifice	0.013"
Gasket	Butyl 0.035" THK. Code: 502
Spring	0.023" SS
Body Orifice	0.016" XT-Standard

55% VOC Aerosol Hair Spray with AQUAREZ HS Polymer

<u>Formula:</u>	<u>Wt%</u>
Aquarez HS Polymer Emulsion (41% Solids) (a)	17.07
Deionized Water	26.79
Eastman Ethanol (SDA-40), Anhydrous	20.00
AMP-95 (b)	1.14
Fragrance and Other Additives	q.s.
Dymel A (Dimethyl Ether) (c)	35.00

Procedure:

Combine Aquarez HS polymer emulsion and deionized water. While maintaining good agitation, add ethanol. Add AMP-95 sufficient for 75% neutralization of Aquarez HS. Add remaining ingredients. Mix until homogeneous. Fill cans and charge with dimethyl ether propellant.

Styling Mousse (Alcohol-Free)

This alcohol-free mousse offers styling with a natural look and moderate hold.

Formula:

	<u>Wt%</u>
Distilled Water	q.s. to 100
Eastman AQ48 Ultra Polymer	8.0
Myvatex Texture Lite Emulsifier	5.5
Monamid 150 ADD	1.0
Polysorbate 60	0.15
Myvacet 9-45 Distilled Acetylated Monoglyceride	0.15
Preservative	q.s.
Fragrance	q.s.
Citric Acid	q.s.

Procedure:

Heat deionized water to above 40C.

Disperse Eastman AQ48 Ultra polymer with rapid agitation.

Cool to room temperature and add preservative.

Slowly add Myvatex Texture Lite emulsifier with high-speed agitation. Care should be taken when mixing to avoid aeration.

Prewarm and mix polysorbate 60, Myvacet 9-45 distilled acetylated monoglyceride, and Monamid 150, when uniform, add to batch. Add fragrance.

Adjust pH to 6.5-7.0 with citric acid.

Aerosol final concentrate at 5.23 g/mL of A-46 propellant.(1)

Section VII

Lotions

After Sport Massage Lotion

A low viscosity "emulsifier-free" lotion containing Bentone Gel EUG rheological additive.

<u>Ingredients:</u>	<u>Wt%</u>
Caprylic/Capric Triglyceride	5.00
Octyldodecanol	4.00
Isopropyl Myristate (and) Soya Bean Oil (and) Arnica Extract	2.00
Propylene Glycol	3.00
Acrylic Acid/Vinyl Ester Copolymer	0.30
Triethanolamine 99%	0.15
Perfume	0.20
Methyldibromoglutaronitrile (and) Dipropylene Glycol	0.20
Bentone Gel EUG	3.00
Demineralized Water	Bal to 100%
	(pH approx 5.5)

Method Of Manufacture:

1. Thoroughly disperse the Bentone Gel EUG additive in the oil phase, then disperse the Acrylic Acid/Vinyl Ester Copolymer, then heat to 45C.
2. Add the Triethanolamine to the aqueous phase and heat to 45C.
3. Add the two phases, with mixing, and continue to stir.
4. Add the perfume and preservative below 30C.

This "emulsifier free" lotion is easy to apply to the skin and the emulsion breaks rapidly on contact with the skin. The presence of Bentone Gel EUG additive provides body to the lotion and eliminates the "wetness" often associated with Carbomer-stabilized emulsions.

6	Triethanolamine, 99%	Q.S.*

* To adjust pH

Procedure:

- Mix sequence #1 together with overhead mixer while heating to 78C.
- Dry mix sequence #2 together and add slowly to sequence #1 with medium/high agitation. (Mix well until both gums are completely hydrated/homogeneous).
- Mix sequence #3 together and heat to 78C until completely melted and add to batch. (Cool to 55C, place on sweep blade and continue to cool to 45C).
- At 45C, premix sequence #4 together at room temperature and add to batch using sweep blade at low speed. Lower temperature to 40C.
- At 40C, add sequence #5 to the batch.
- Cool down to 25C and remove from mixer.
- Adjust pH to 3.8-4.2 with sequence #6.

Body Lotion with AHAIngredients:

	<u>Wt%</u>
Phase A:	
Water, deionised	53.60
Stabileze 06/QM	2.00
Suttocide A	0.50
Phase B:	
Water, deionised	10.00
Sodium lactate (Purasal S/PF 60)	8.40
Lactic Acid (Purac PH 90) (adjust to pH 4)	3.00
Phase C:	
Glyceryl Stearate (Cerasynt 945)	4.00
PEG-20 Stearate (Cerasynt 840)	2.00
Beeswax	3.00
Maleated Soybean Oil (Ceraphyl GA-D)	2.00
Diisopropyl Adipate (Ceraphyl 230)	2.00
Myristyl Myristate (Ceraphyl 424)	2.50
Isocetyl Alcohol (Ceraphyl ICA)	3.00
Mineral oil	3.00
Germaben II-E	1.00

Procedure:

1. Disperse Stabileze 06/QM in water and heat to 80 degrees Celsius with constant stirring until a translucent gel is formed.
2. Cool to 60 degrees Celsius. Add Suttocide A and mix until a clear gel is obtained.
3. Add premix (Phase B) with pH adjusted to 4, into Phase A.
4. Heat Phase C with uniform stirring and cool to 60 degrees Celsius. Add to Phase AB.
5. Mix and homogenize to 45 degrees Celsius.
6. Add Germaben II-E at 40 degrees Celsius.

Body Lotion with Sunscreens

SFE839 Elastomer Dispersion is silicone elastomer dispersed in cyclopentasiloxane. It acts as an emollient and provides smooth, silky and luxurious afterfeel.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Octyl Methoxycinnamate/UV absorber	7.5
Benzophenone-3/UV absorber	3.0
Stearic Acid/Emulsifier	2.5
Glyceryl Stearate SE/Emulsifier	1.0
PVP/Eicosene Copolymer (1)/Film former	2.0
Cetyl Alcohol/Thickener	0.3
Caprylic/Capric Triglyceride/Emollient	3.0
Acrylates/C10-30 Alkyl Acrylate Crosspolymer (2)/ Emulsifier/Thickener	0.25
Part B:	
Glycerin/Humectant	3.0
Disodium EDTA/Chelating agent	0.05
Methylparaben/Preservative	0.2
Propylparaben/Preservative	0.1
Xanthan Gum/Thickener	0.4
Water	70.5
Part C:	
Triethanolamine/Neutralizer/Emulsifier	0.9
Part D:	
Cyclopentasiloxane (and) Dimethicone/Vinyl Dimethicone Crosspolymer (SFE839)(3)/Emollient	5.0
Sorbitan Oleate/Emulsifier	0.3

Procedure:

1. Combine Part A and heat with agitation to 75C.
2. Mix together all Part B and heat to 70C.
3. Add Part A to Part B under high shear mixing.
4. Cool with agitation to 45C and add Part C.
5. Combine Part D and add to the batch with moderate agitation until uniform.

Body Lotion with Sunscreens

This water-in-oil formulation using SF1528 is a light, non-greasy, less tacky sunscreen. SF1642 acts as an emollient/thickener and provides smooth, silky and luxurious afterfeel. This sunscreen demonstrates the use of silicones in conjunction with organics.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Octyl Methoxycinnamate/UV-absorber	7.5
Octyl Salicylate/UV-absorber	3
Benzophenone-3/UV-absorber	3
Part B:	
Bis-Phenylpropyl Dimethicone(SF1555)(1)/Emollient	5
C30-45 Alkyl Dimethicone(SF1642)(1)/Thickener, Emollient	1
Dimethicone/Vinyl Dimethicone Crosspolymer(SFE839)(1)/Thickener, Emollient	5
Cyclopentasiloxane (and) Dimethicone Copolyol(SF1528)(1)/Primary Emulsifier	10
PEG-30 Dipolyhydroxystearate/Secondary Emulsifier	1
Sorbitan Oleate/Secondary Emulsifier	0.5
Part C:	
Water/Vehicle	q.s.
Butylene Glycol/Humectant	2
NaCl/Stabilizer	1.0
Quaternium-15/Preservative	0.1

Procedure:

1. Combine Part A and mix until uniform.
2. Add ingredients of Part B to Part A and heat to 60-65C.
3. In a separate vessel, mix all ingredients of Part C. Heat to 60-65C.
4. Slowly add water phase to oil phase under moderate mixing.
5. Homogenize for 1-2 minutes.

B-B1 Deionized Water	67.40
Carbopol 941 2% Aq. Soln.	10.00
B2 Glycerin	3.00
B3 Triethanolamine	0.20
C- Germaben II	1.00
D- Rose Extract	0.50

Procedure:**Phase B:**

In the main beaker, disperse B1 together at 75-85C.

Add Glycerin.

Add Triethanolamine to neutralize the Carbopol gel.

Mix until a smooth gel is obtained.

Phase A:

Blend Phase A1 to at least 85C. Once completely clear add A2.

Blend Phase A together until a homogeneous oil phase is obtained.

Add Phase A to Phase B with continuous mixing at 80-85C for 15 minutes.

Cool batch to 60C, then add C. Continue to cool batch to 30C, then add D.

Formulation L-213-3

Cationic Emollient Lotion

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
Part A:	
Deionized Water	q.s.
Schercoquat IALA/Isostearamidopropyl Laurylaceto-dimonium Chloride	5.0

Schercemol MM/Myristyl Myristate	1.0
Cetyl Alcohol	4.0
Schercemol GMIS/Glyceryl Isostearate	4.5

Procedure:

1. Part A. Disperse Schercoquat IALA in water. When solution is uniform, add the rest of the ingredients and heat to 70C.

2. Prepare Part B and heat to 70C.

3. Add Part A to Part B, stirring continuously.

4. Cool to room temperature. Continue with moderate agitation.

Formulation SK 135

SOURCE: Scher Chemicals, Inc.: Suggested Formulations

European Body Lotion

A water-in-oil formulation producing a lotion with a light, non-greasy feel. SF1328 acts as a water-in-oil emulsifier. SF1202, cyclopentasiloxane, is an emollient providing spreadability, detackification and a dry, non-greasy feel.

(1)

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Sorbitan Stearate/Emollient/Co-emulsifier	0.91
Lanolin/Emollient	0.96
Part B:	
Glycerin/Humectant	1.05
Sodium Chloride/Stabilizing aid	1.80
Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben(3)/Preservative	0.60
Water	54.69
Part C:	
Cyclomethicone (and) Dimethicone Copolyol (SF1328)(4)/Emulsifier	25.24
Cyclopentasiloxane(SF1202)(4)/Emollient/Detackifier	14.75

(2)

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Sucrose Distearate(1)/Emollient/Co-emulsifier	0.40
Sorbitan Stearate/Emollient/Co-emulsifier	0.50
Lanolin/Emollient	0.80
Perfluoromethylisopropyl Ether(2)/Film-former	0.50
Part B:	
Magnesium Aluminum Silicate/Viscosity adjuster	0.30
Glycerin/Humectant	2.50
Sodium Chloride/Stabilizing aid	1.80
Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben(3)/Preservative	0.60
Water	64.60
Part C:	
Cyclomethicone (and) Dimethicone Copolyol (SF1328)(4)/Emulsifier	14.00
Cyclopentasiloxane(SF1202)(4)/Emollient/Detackifier	14.00

Procedure:

1. Add Part B to Part C with high-speed mixing.
2. Melt Part A and quickly add to Part BC emulsion with continued high-speed mixing.
3. Homogenize to a stable emulsion.

Comments:

- * Improve freeze-thaw stability by using 1% sorbitan isostearate
- * Increase viscosity with lower SF1202 level and/or increased magnesium aluminum silicate.

Facial Cleansing Lotion

Dual purpose make-up remover and skin conditioner for every day use. The lotion provides mild cleansing, emollience and skin protection. The inclusion of Akoline MCM offers anti-microbial properties to the formulation and helps solubilising impurities on the skin. Lipex Canola-U adds natural tocopherols and phyto-sterols to protect and reduce skin irritancy from environmental stress and other aggressions against the skin. Akorex L and Lipex together with Lipex Canola-U imparts a nice soft skin feel.

<u>Raw Material/INCI Name:</u>	<u>Wt%</u>

Trimaran 61636/Parfum	0.07
4. Sicovit Patentblau 85 E131/C.I.42051/Acid Blue 3	q.s.

Manufacturing Procedure:

Take the ingredients for Position 1. Heat to 80-85C. Melt the ingredients for Position 2 at a temperature of 80-85C. Once the product has reached the prescribed temperature, slowly work Position 1 into Position 2, stirring and homogenising all the time. Stir while cooling down. Once a temperature of 30C has been reached, add the ingredients for Position 3. Finally add Position 4 as a solution in a small amount of water from Position 1. Cool down to 28C, stirring all the time.

Appearance: Smooth, shiny, blue colored lotion.

*To adjust pH

Procedure:

- Mix sequence #1 together with overhead mixer while heating to 78C.
- Dry mix sequence #2 together and add slowly to sequence #1 with medium/high agitation. (Mix well until both gums are completely hydrated/homogeneous.)
- Mix sequence #3 together and heat to 78C until completely melted and add to batch. (Cool to 55C, place on sweep blade and continue to cool to 45C.)
- At 45C, add sequence #4 to batch using sweep blade at low speed. Lower temperature to 40C.
- At 40C, add sequence #5 to the batch. Cool to 35C.
- At 35C, add sequence #6 to batch.
- Cool down to 25C and remove from mixer.
- Adjust pH to 3.8-4.2 with sequence #7.

General Purpose Skin Lotion

This is a simple base formulation for an all-purpose oil-in-water skin lotion. It is a light product for the face and hands. SF96 (100), dimethicone, provides emollient and anti-whitening properties as well as skin protection.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
PEG-8 Stearate/Emulsifier	1.31
Dimethicone [SF96 (100)](1)/Emollient/Anti-whitening	6.50
Myristyl Alcohol/Emollient/Viscosity	3.80
Glyceryl Stearate (and) PEG-100 Stearate/Emulsifier/ Opacifier	4.00
Sodium Dioctylsulfosuccinate(2)/Surfactant	0.17
Myristyl Lactate/Emollient	2.70
Cetyl Acetate/Emollient	2.70
Methylparaben/Preservative	0.17
Part B:	
Disodium EDTA/Chelating agent	0.05
Water/Diluent	78.60

Procedure:

1. Heat Part A and Part B to 80C.
2. Add Part A to Part B with agitation.
3. Continue to mix until product is cooled to 25C. Force-cool if needed.

Comments:

- * Methylparaben may be added to Part B or it may be substituted with Germaben II-E.
- * Greater viscosity may be achieved by replacing myristyl alcohol with cetyl, cetearyl, stearic or behenyl alcohol.
- * Greater elegance may be achieved by replacing SF96 (100) with SF1214.

Hand and Body Lotion for Dry Skin

A non-greasy lotion designed for daily use as a moisturizing lotion on the hands or entire body. This formulation demonstrates the use of SF1632 in a moisturizing product. SF1632 is a silicone wax which melts when applied to the skin and forms an occlusive barrier which reduces water loss from the skin (TEWL). It has a light, non-greasy feel and is ideal when formulating moisturizing products.

Ingredients/Function:

	<u>Wt%</u>
Part A:	
Deionized Water/Diluent	73.53
Disodium EDTA/Chelating agent	0.02
Butylene Glycol/Humectant	3.00
Panthenol/Moisturizer/Provitamin B	0.40

Part B:	
Cyclopentasiloxane (SF1202)(2)/Emollient	5.00
Cetearyl Methicone (SF1632)(2)/Occlusive/TEWL reduction/ Emollient	10.00
Glyceryl Stearate (and) PEG-100 Stearate/Emulsifier	1.00
Tocopherol (and) Cococaprylate/Caprates/Vitamin E/ Antioxidant	0.50
Part C:	
Polyacrylamide (and) C13-14 Isoparaffin (and) Laureth-7(3)/Emulsifier	1.40
Part D:	
Fragrance (4)	0.35
Aluminum Starch Octenylsuccinate/Slip/Feel	4.00

Procedure:

1. Heat water of Part A to 75C with moderate propeller agitation. Add remaining ingredients in order listed with moderate stirring.
2. Combine Part B and heat to 75C with slow agitation. Add Part B to Part A with moderate propeller agitation. Mix for 5 minutes, then begin cooling batch.
3. At 50C add Part C to Part AB and mix with rapid propeller agitation until uniform and viscosity increases. Mix 10 minutes with moderate homogenizer agitation. Cool to 45C.
4. Add Part D to batch in order listed and mix with moderate propeller agitation for 15 minutes.
5. Cool to room temperature with continued stirring.

Moisturizing Facial Lotion

A facial lotion which demonstrates the use of SF1632 in a light moisturizing product. SF1632 is a silicone wax which melts when applied to the skin and forms a semi-occlusive barrier which reduces water loss from the skin (TEWL). It has a light, non-greasy feel and is ideal when formulating moisturizing products.

Ingredient/Function:

	<u>Wt%</u>
Part A:	
Deionized Water/Diluent	76.58
Tetrasodium EDTA/Chelating agent	0.02
Propylene Glycol/Humectant	3.00
Panthenol/Moisturizer/Provitamin B	0.50
Phenoxethanol (and) Methylparaben (and) Ethylparaben (and) Propylparaben (and) Butylparaben (1)/Preservative	0.80
Part B:	
Cetearyl Methicone (SF1632)(2)/Occlusive/TEWL reduction/ Emollient	5.00
Dicaprylyl Ether/Emollient	4.00
Floraester-20/Emollient	3.00
Maleated Soybean Oil/Emollient	4.50
Cetyl Alcohol/Bodifying agent/Secondary emulsifier	1.00
Part C:	
Polyacrylamide (and) C13-14 Isoparaffin (and) Laureth-7(3)/Primary emulsifier/Thickener	1.40
Floral Fragrance	0.20

Procedure:

1. Heat water of Part A to 75C with moderate propeller agitation. Add remaining ingredients in order listed with moderate stirring.
2. Combine Part B and heat to 75C with slow agitation. Add Part B to Part A with moderate propeller agitation. Mix for 5 minutes, then begin cooling batch to 60C.
3. At 60C add Part C (Sepigel, then fragrance) to Part AB and mix with rapid propeller agitation until uniform and viscosity increases. As viscosity develops, increase mixing speed.
4. Cool to room temperature with adequate agitation.

<u>Raw Materials:</u>	<u>Wt%</u>
A. Amerchol L-101	8.00
Solulan 98 (Laneth-10 Acetate)	0.50
Klearol (Mineral Oil)	15.00
Propylene Glycol	5.00
Arlacel 165	1.00
Cetyl Alcohol	0.50
B. Water, Deionized	61.25
Carbopol 941 (Carbomer-941)	0.50
C. Propylene Glycol	0.70
Methyl Paraben	0.20
Propyl Paraben	0.10
D. Water, Deionized	4.50
Potassium Hydroxide (40%)	0.50
E. Water, Deionized	1.80
Germall 115 (Imidazolidinyl Urea)	0.20
F. Perfume Oil	0.25

Moisturizing Lotion (SK-105)

<u>Raw Material:</u>	<u>Wt%</u>
A. Lanolin Alcohol	0.50
Solulan 98 (Laneth-10 Acetate)	0.50
Schercemol DID (Diisopropyl Dimerate)	8.00
Propylene Glycol	4.00
Arlacel 165	1.00
Cetyl Alcohol	1.00
B. Water, Deionized	76.25
Carbopol 941 (Carbomer-941)	0.50
C. Propylene Glycol	0.70
Methyl Paraben	0.20
Propyl Paraben	0.10

Potassium Hydroxide (40%)	0.50
E. Water, Deionized	1.80
Germall 115 (Imidazolidinyl Urea)	0.20
F. Perfume Oil	0.25

Manufacturing Procedure:

1. Prepare Phase "A" by heating the ingredients to 75C to dissolve the solids.
2. Prepare the Carbopol solution by dispersing Carbopol 941 into water using high speed agitation until a smooth slurry is obtained. Then heat the dispersion at about 80C until a smooth viscous solution is formed.
3. Dissolve the parabens in propylene glycol by warming solution to 55C. Add Phase "C" to "B".
4. Add Phase "B" & "C" to "A" with mixing.
5. When base is at 55C, add in Phase "D" stirring until the base is completely mixed in.
6. Add Germall solution and perfume when cool.

Protective Facial Lotion with Superior Substantivity

This formulation produces a light lotion for daily facial use. It contains UVB sunscreen and exhibits superior substantivity, providing sun protection throughout the day, even when active.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Stearic Acid/pH Modifier	2.50
Cetyl Alcohol/Opacifier	1.80
Cetyl Phosphate (and) DEA Cetyl Phosphate(1)/Emulsifier	2.50
Diisostearoyl Trimethylolpropane Siloxy Silicate (SF1318)(2)/Emollient/Film-former	5.00
Octyl Methoxycinnamate/UV absorber	7.00
Cyclopentasiloxane (SF1202)(2)/Emollient	5.00
Part B:	
Glycerin/Humectant	4.00
Quaternium-15/Preservative	0.10
Xanthan Gum/Thickener/Stabilizer	0.25
Fragrance	q.s.
Water/Diluent	71.85

Procedure:

1. Heat Parts A and B in separate containers to 85-90C with agitation.
2. Add Part A to Part B with high shear agitation.
3. Cool to room temperature with continued mixing.

Trade Names/Suppliers:

- (1) Amphisol, Givaudan
- (2) GE Silicones

Facial Lotion

This lotion is a water-in-oil emulsion which is an excellent product for everyday facial use. It applies easily, with a wet feel, yet leaves a non-greasy, dry, silky finish. The use of SF1328 as a water-in-oil emulsifier is demonstrated in this formulation.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Cyclomethicone (and) Dimethicone Copolyol (SF1328)(1)/Emulsifier	10.0
Cyclopentasiloxane (SF1202)(1)/Emollient (oil carrier)	8.5
Cyclopentasiloxane and Dimethicone (SF1214)(1)/Emollient/Film former	7.5
Part B:	
Glycerin/Humectant	13.0
Sodium Chloride/Stabilizer	1.0
Polysorbate-80/Emulsifier	0.2
Quaternium-15/Preservative	0.1
Deionized Water/Diluent	59.7

Procedure:

1. Combine Part A ingredients in order shown, thoroughly mixing each component until homogeneous before adding the next ingredient. 2. Mix all ingredients of Part B together.
3. Slowly add Part B to Part A with good mixing. Gradually increase agitation to high shear as mixture thickens. Continue agitation for 5-10 minutes. Mixture will become very thick.
4. Mill on homogenizer for 1-2 minutes.

SOURCE: GE Silicones: Formulas SP 104 and SP 102

Protective Skin Lotion

This formulation employs Lubrajel TW which moisturizes the skin. The Panalane and stearyl alcohol leaves a protective occlusive barrier which slows down moisture efflux.

<u>Material:</u>	<u>Wt%</u>
1 Deionized Water	67.19
2 Oil of Orchids (WS)	1.50
3 Triethanolamine	0.24
4 Diammonium EDTA	0.10
5 Panalane L14E	7.00
6 Stearic Acid	2.00
7 Stearyl Alcohol	1.60
8 Polysorbate 80	1.00
9 Glycerol Monostearate	0.60
10 Propylene Glycol	1.00
11 Methyl Paraben	0.18
12 Propyl Paraben	0.05
13 Lubrajel TW	17.50
14 Floral Gardenia Fragrance 169-724	0.02
15 Rose Fragrance 34844	0.02

Procedure:

1. Prepare Phase "A" by combining components 1,2,3 and 4 in a vessel suitable for heating. Heat to 70-80C with stirring until homogeneous.
2. Prepare Phase "B" by combining components 5,6,7,8 and 9. Heat to 70-80C with stirring until all solids are melted.
3. Prepare Phase "C" by combining components 10,11 and 12. Heat to 50C with stirring until all solids are dissolved.
4. While maintaining 70-80C, slowly add Phase "B" to Phase "A" with high speed dispersion blade mixing.
5. Allow mixture to cool with continued mixing to less than 50C. Switch to low shear mixing and add Phase "C", the Lubrajel and the two fragrances.

SOURCE: Guardian Laboratories: Formulation #90213-A

Protective Skin Lotion with Sunscreen (SP107)

A water-in-oil formulation producing a light protective lotion with a SPF of 5-6 for daily use on the face or other exposed skin areas. Although the formulation is water-in-oil, it dries to a dry, non-greasy feel due to the use of silicone emulsifier SF1328.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Cyclomethicone (SF1202) (1)/Emollient (oil carrier)	12.0
Mineral Oil (light)/Emollient (solubilizer)	1.0
Octyl Methoxycinnamate/UVB protection	5.0
Dimethicone (and) Trimethylsiloxysilicate (SS4267) (1)/ Film-former	3.0
Cyclomethicone (and) Dimethicone Copolyol (SF1328) (1)/ Emulsifier	10.0
Lanolin/Emollient	0.5
Titanium Dioxide (micronized)/UVA/UVB protection	3.0
Part B:	
Polysorbate-80/Emulsifier	0.2
Glycerin/Humectant	3.0
Sodium Chloride/Stabilizer	1.0
Quaternium-15/Preservative	0.1
Water	61.2

Procedure:

1. Combine Part A ingredients in order shown, thoroughly mixing each until homogeneous before adding the next ingredient. The solution should remain clear until TiO₂ is added.
2. Mix together all Part B ingredients.
3. Slowly add Part B to Part A with good mixing. Gradually increase agitation to high shear as mixture thickens. Continue agitation for 5-10 minutes. Mixture will become very thick.
4. Mill on homogenizer for 1-2 minutes.

Skin Lightening Lotion

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
Water deionised	40.70
Stabileze 06	0.80
Phase B:	
Glyceryl Stearate and PEG-100 Stearate	6.50
Glyceryl stearate (Cerasynt SD)	4.00
Isocetyl stearate (Ceraphyl 494)	2.00
Octyldodecyl Stearoyl Stearate (Ceraphyl 847)	2.00
Diisopropyl Adipate (Ceraphyl 230)	2.50
Octyl palmitate (Ceraphyl 368)	3.00
Octyl methoxy cinnamate (Escacol 557)	4.00
Benzophenone (Escacol 567)	3.00
Octyl Salicylate (Escacol 587)	3.00
Phase C:	
Water, deionised	10.00
Polyvinylpyrrolidone (Povidern SK3)	1.00
Diazolidinyl Urea (Germall Plus)	0.20
Lactic acid (Purac PH 90)	4.50
Sodium lactate (Purasal S/PF 60)	9.00
Propylene Glycol	3.00
Fragrance	q.s.

Procedure:

- In phase A, disperse Stabileze 06 in water and heat to 80 degrees Celsius with constant stirring until a translucent gel is obtained.
- Cool down to 60 degrees Celsius and add triethanolamine and mix well. A clear gel will form.
- Heat phase B to 70 degrees Celsius and stir until uniform.
- Add Phase B to Phase A and homogenize.
- In Phase C, dissolve Povidern and Germall Plus in deionised water. Then add in Purac PH 90, Purac S/PF 60 and propylene glycol with mixing after each addition.
- Add Phase C to mixture in step 4 at 40-45 degrees Celsius. Continue stirring to room temperature.

Note: pH of lotion should be in the range of 4-4.5.

To date formula passed 1 month stability test @ 50 degrees Celsius.

Substantive Skin Lotion Using Polymeric Emulsifiers

A skin lotion which uses SF1318 as an emollient/film-former. SF1318 provides a breathable barrier which is very substantive, keeping active ingredients on the skin and providing water resistant properties. This is a simple formulation to demonstrate the film-forming properties of SF1318.

Ingredient/Function:

	<u>Wt%</u>
Part A:	
Deionized Water/Diluent	85.05
Disodium EDTA/Chelating agent	0.05
Methylparaben/Preservative	0.20
Propylene Glycol/Humectant	2.00
Part B:	
Diisostearoyl Trimethylolpropane Siloxy Silicate (SF1318)(1)/Emollient/Film-former	10.00
Propylparaben/Preservative	0.10
Acrylates/C10-30 Alkyl Acrylate Crosspolymer(2)/ Polymeric emulsifier	0.25
Carbomer(3)/Thickener	0.35
Oleth-10/Solubilizer	0.30
Fragrance(4)	0.15
Part C:	
Triethanolamine/Neutralizer	1.50
Quaternium-15/Preservative	0.05

Procedure:

1. Heat water of Part A to 60C. Add remaining ingredients of Part A with moderate propeller agitation. Mix for 10 minutes.
2. Combine Part B with sweep agitation at ambient temperature. Mix until a smooth "paste" is obtained.
3. Add Part B to Part A with rapid propeller agitation. Mix 30 minutes or longer to ensure that polymers are completely dispersed.
4. Cool with moderate agitation to 40C. Add Part C to batch with moderate propeller agitation. Mix 20 minutes at 40C and cool to room temperature with agitation.

Sodium Chloride/Stabilizer	1.0
Quaternium-15/Preservative	0.1
Water/Diluent	71.3

Velvety Body Lotion

A water-in-oil formulation which demonstrates the use of SF1328 as an emulsifier. The product applies as a rich moisturizing lotion, yet dries to a dry, non-greasy feel. SF1214 provides a soft, velvety feel to the skin. SF1202, cyclopentasiloxane, helps to produce a dry, non-tacky, non-greasy afterfeel.

<u>Ingredients/Function:</u>	<u>Wt%</u>
Part A:	
Sorbitan Oleate/Co-emulsifier	0.6
Cyclomethicone (and) Dimethicone Copolyol(SF1328)(1)/Emulsifier	10.0
Cyclopentasiloxane(SF1202)(1)/Emollient/Detackifier	6.0
Cyclopentasiloxane (and) Dimethicone(SF1214)(1)/Smooth/Silky Feel	10.0
Part B:	
Glycerin/Humectant	1.0
Sodium Chloride/Stabilizer	1.0
Quaternium-15/Preservative	0.1
Water/Diluent	71.3

Procedure (Both Formulas):

1. Combine Part A ingredients in order shown, thoroughly mixing each component until homogeneous before adding next ingredient.
2. Mix all ingredients of Part B together. Stir until homogeneous.
3. Slowly add Part B to Part A with good mixing. Gradually increase agitation to high shear as mixture thickens. Continue agitation for 20 minutes. Mixture will become very thick.
3. Homogenize for 1-2 minutes.

Velvety Body Lotion with Sunscreens

SFE839, Elastomer Dispersion is a substantive emollient, providing extraordinary smooth, silky and luxurious feel. This sunscreen gives a moisturizing and cushioning feel with smooth, soft and powdery finish.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Deionized Water/Diluent	74.13
Tetrasodium EDTA/Chelating agent	0.05
PEG-8/Humectant	4.00
Phenoxyethanol (and) Methylparaben (and) Butylparaben (and) Ethylparaben (and) Propylparaben (1)/Preservative	0.25
Magnesium Aluminum Silicate/Thickener	0.25
Part B:	
Cyclopentasiloxane (and) Dimethicone/Vinyl Dimethicone Crosspolymer (SFE839) (2)/Film-former/Emollient	7.00
Octyl Methoxycinnamate/UV absorber	7.00
Octyl Salicylate/UV absorber	3.00
Benzophenone-3/UV absorber	3.00
Acrylates/C10-30 Alkyl Acrylate Crosspolymer (3)/ Emulsifier/Thickener	0.30
Carbomer (4)/Thickener	0.15
Sorbitan Oleate/Emulsifier	0.20
Part C:	
Fragrance	0.12
Part D:	
Triethanolamine 99%/Neutralizer	0.55

Procedure:

1. Heat water of Part A to 75C. Add remaining ingredients in order with moderate propeller agitation, making sure that all parabens have dissolved. Mix for 15 minutes, while cooling to 50C.
2. Combine Part B with sweep agitation at ambient temperature. Mix until a smooth "paste" is obtained.
3. Add Part B at room temperature to Part A (at 50C) with rapid propeller agitation. Mix for 30 minutes, or longer to ensure that the polymers are completely dispersed.
4. Cool with agitation to 45C. Add Part C to batch with propeller agitation. Mix 10 minutes.
5. Add Part D to batch at 40C. Mix with moderate agitation for 20 minutes. Cool to room temperature.
6. The pH should be 6-7.

Section VIII

Shampoos

Aloe Vera Gel Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
Aloe Vera Gel Liquid (1:1)	50.0
Water	14.5
Mackernium 007 (Polyquaternium 7)	3.0
Mackstat SBC-8 (Mild Shampoo Blend)	32.0
Mackstat DM (DMDM Hydantoin)	qs
Dye, Fragrance	qs to 100.0

Procedure:

1. Disperse Mackernium 007 in water and Aloe Vera Gel Liquid.
2. Add Mackadet SBC-8 and heat to 45C.
3. Blend until homogeneous.
4. Adjust viscosity with Sodium Chloride.
5. Add remaining components and blend until clear.
6. Cool to room temperature.

Acid Balanced Conditioning Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
TEA Lauryl Sulfate (40%)	35.0
Mackam 35HP (Cocamidopropyl Betaine)	10.0
Mackalene 426 (Isostearamidopropyl Morpholine Lactate)	6.0
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Add components to water.
2. Heat to 40C.
3. Blend until clear.
4. Adjust pH to 4.0 with Citric Acid.
5. Cool to room temperature.

All Purpose Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
Mackadet SBC-8 (Mild Shampoo Blend)	20.0
Sodium Chloride	qs
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Add Mackadet SBC-8 to water.
2. Blend until clear.
3. Add Mackstat DM.
4. Adjust viscosity to 2000-3000 cps with Sodium Chloride.
5. Add Dye and Fragrance.
6. Blend until clear.

Amide Free Shampoo
Formulated to be amide-free

<u>Ingredients:</u>	<u>Wt%</u>
Water	q.s. to 100
Carbopol 1382 (Goodrich)	0.25
Quickpearl II	5.00
Chembetaine OL-30	0.50
Sulfochem ES-2	26.00
Sulfochem SLS	12.00
Chembetaine C	4.00
Chembetaine S	3.00
Fragrance, color, preservatives, etc.	q.s.
NaCl	(0.50 typical) q.s.

Blending Procedure:

Blend ingredients in order listed, allowing Carbopol to solubilize completely before adding remaining ingredients. Add NaCl to desired viscosity.

Typical Physical Properties:

Appearance: Pearly liquid

Viscosity: Brookfield LVT, Sp. 3, 6 rpm, 25C: 9,000 cps

Formulation No. F1001

Premium Clarifying Shampoo

Preliminary formulation. Normal, dry, fine, and damaged hair type versions may be made by increasing the amount of dimethicone to achieve more conditioning or increasing the amount of EA-2 and ALS to increase cleansing.

<u>Ingredients:</u>	<u>Wt%</u>
Sulfochem EA-2	35.00
Sulfochem ALS	32.00
Preservatives	q.s.
Amidex CME	1.00
Water, soft	to 100
AXS	0.75
Panthenol	0.50
Fragrance, color, etc.	q.s.
Other ingredients	q.s.

Blending Procedure:

With medium agitation, mix water, Sulfochem EA-2, and ALS in main vessel. Heat to 145-155F, add Amidex CME and citric acid, and mix until solution is clear and homogeneous. Turn on cooling and add preservatives, fragrance, color, and remaining ingredients. Adjust pH to 5.0-5.5 with citric acid. Adjust viscosity to 5,000-7,500 cps (NH₄Cl to bring viscosity up, AXS to bring it down).

Formulation No. F1006

SOURCE: Chemron Corp.: Suggested Formulations

Anti-Dandruff Lotion Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
Part A:	
Veegum	1.0
Methocel FYM	0.8
Water	qs to 100.0
Part B:	
Sodium Olefin Sulfonate (40%)	35.0
Mackamide LLM (Lauramide DEA)	4.0
Mackamide S (Soyamide DEA)	1.0
Mackpro NLP (Quaternium-79 Hydrolyzed Collagen)	2.0
Part C:	
Zinc Omadine (48%)	4.0

Procedure:

1. Thoroughly disperse Veegum in water at 70C.
2. Slowly add Methocel FYM and blend until homogeneous.
3. Add Part B to Part A and adjust pH to 6.5 with Citric Acid.
4. Add Zinc Omadine (Part C) and blend until homogeneous.

Anti-Dandruff Cream Type Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
Sodium Lauryl Sulfate (30%)	61.8
Mackam 35HP (Cocamidopropyl Betaine)	10.0
Sodium Chloride	7.0
Triple Pressed Stearic Acid	5.0
Mackamide LLM (Lauramide DEA)	4.0
Propylene Glycol	4.0
Zinc Pyrithione (48%)	4.0
Mackamide PKM (Palmkernelamide MEA)	2.0
Caustic Soda (50%)	1.6
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Heat Stearic Acid, Mackamide LLM, Mackamide PKM, and Propylene Glycol to 70C.
2. Heat SLS, Mackam 35HP, Sodium Chloride, Caustic Soda, and water to 70C.
3. Add oil to water and cool to 55C.
4. Slowly add Zinc Pyrithione.
5. Cool to 45C and add remaining components.

Antidandruff Shampoo
clear, 13.6% active ingredient

<u>Recipe:</u>	<u>Wt%</u>
A Octopirox/Piroctone Olamine	0.50
B Water	10.00
C Genapol LRO liquid/Sodium Laureth Sulfate	30.00
D Hostapon KCG/Sodium Cocoyl Glutamate	5.00
Fragrance	0.30
E Polymer JR 400/Polyquaternium-10	0.30
F Water	40.90
G Dyestuff solution	q.s.
Extrapon Chamomile Special	2.00
Genagen CAB/Cocamidopropyl Betaine	8.00
Genapol L-3/Laureth-3	1.50
H Sodium chloride	1.50

Procedure:

- Mix A and B.
 - Add C to 1 and keep stirring until a clear solution has been obtained.
 - Stir the components of D one after another into 1.
 - Dissolve E in F under stirring while heating slightly and then stir into 1.
 - Stir the components of G one after another into 1.
 - If necessary adjust the pH.
 - Finally adjust the viscosity with H.
- Formula B I/6144

Antidandruff Shampoo
clear, 13.1% active ingredient

<u>Recipe:</u>	<u>Wt%</u>
A Octopirox/Piroctone Olamine	0.50
B Water	10.00
C Genapol LRO liquid/Sodium Laureth Sulfate	30.00

Apricot Shower Shampoo Gel

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
Sodium Lauryl Sulfate (30%)	25.1
Schercotaine APAB (40%)/Apricotamidopropyl Betaine	12.6
Schercamox CAA-G (35%)/Cocamidopropylamine Oxide	3.8
Schercoquat APAS (90%)/Apricotamidopropyl Ethyl- dimonium Ethosulfate	0.6
Herbasol Extract Apricot/Apricot Extract	1.0
Preservative	0.2
Color, Fragrance	q.s.
Water (deionized)	56.7

Procedure:

1. Heat water to 50C. With stirring add Schercoquat APAS to dissolve.
 2. Add Schercotaine APAB, mix.
 3. Add Schercamox CAA-G, mix.
 4. Add preservative, mix.
 5. Add Apricot Extract, mix.
 6. Increase stirring and add Sodium Lauryl Sulfate. Mix thoroughly at high rpm until uniform.
 7. To clear up bubble formation, warm finished product at 45-50C.
- Formulation 221-89

Clear 2-in-1 Shampoo

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
Deionized Water	54.4
Schercoquat DAS	3.0
Rhodacal A246/L/Sodium C14-16 Olefin Sulfonate	30.0
Schercomid AME-70/Acetamide MEA	2.0
Schercotaine CAB-G/Cocamidopropyl Betaine	10.0
Schercoquat IALA/Isostearamidopropyl Laurylacetodimonium Chloride	0.6
Preservative	q.s.

Procedure:

Dissolve Schercoquat DAS in water with gentle heat to 40C. Add the rest of the ingredients one by one in order listed, mixing well after each addition.

Formulation SK 140

Clear Conditioning Shampoo with SM2101

A conditioning shampoo designed for daily use on normal to dry hair. SM2101 is an excellent conditioner providing softness and combability. SF1188A provides additional conditioning, enhances wet combing and stabilizes foam. Both products are readily removed, and therefore build-up is not a problem. As is, this formulation is clear but may be opacified if desired.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Deionized Water/Diluent	38.32
Guar Hydroxypropyltrimonium Chloride (1)/Conditioner/ Thickener	0.75
Propylparaben/Preservative	0.05
Methylparaben/Preservative	0.15

Part B:	
Ammonium Lauryl Sulfate (26%)/Primary surfactant	24.00
Ammonium Laureth Sulfate (28%)/Primary surfactant	14.30
Cocoamidopropyl Betaine (35%)/Secondary surfactant	11.43

Part C:	
Lauramide DEA/Foam booster	2.00
Cocamide MEA/Foam booster	2.50

Part D:	
Trimethylsilylamodimethicone (and) Isolaureth-6 (and) Octoxynol-40 (SM2101) (2)/Conditioner	4.00
Dimethicone Copolyol (SF1188A or SF1288A) (2)/ Conditioner/Foam stabilizer	1.00

Part E:	
Polysorbate-80/Solubilizer	1.00
Fragrance (3)	0.50

Procedure:

1. Combine parabens. Slowly sprinkle mixture into water with rapid propeller agitation. Add guar hydroxypropyltrimonium chloride in same manner.
2. When thoroughly solvated, reduce to slow agitation. Add ingredients of Part B individually, allowing each ingredient to be thoroughly mixed. After addition of Part B is complete, heat to 65C with continued slow agitation.
3. Melt together Part C, add to Part AB at 65C. Remove heat and continue stirring.
4. Add Part D below 45C with slow-moderate propeller mixing for 15 minutes.
5. Mix fragrance into polysorbate-80 and add to batch below 40C. Continue stirring to room temperature.

Clear Conditioning Shampoo with SM2115

SM2115 is a 20% active emulsion of a substantive, non-curable amine functional silicone fluid. It is a microemulsion which remains clear upon dilution, enabling the formulation of a clear product. This is an excellent conditioning shampoo which provides a soft, smooth, silky feel to hair and puts an end to dry, frizzy ends.

Materials/Function:

	<u>Wt%</u>
Part A:	
Water/Diluent	37.12
Methylparaben/Preservative	0.15
Propylparaben/Preservative	0.05
Part B:	
Dimethicone Copolyol (SF1188A or SF1288) (1)/ Conditioning agent/Foam stabilizer	1.00
Ammonium Lauryl Sulfate (26%)/Primary surfactant	24.00
Ammonium Laureth Sulfate (28%)/Primary surfactant	14.30
Cocamidopropyl Betaine/Secondary surfactant	11.43
Part C:	
Cocamide MEA/Foam booster	4.00
PEG-150 Pentaerthrityl Tetrastearate (2)/Thickener	0.95
Part D:	
Trimethylsilylamodimethicone (and) Octoxynol-40 (and) Isolaureth-6 (and) Glycerin (SM2115) (1)/Conditioning agent	2.50
Part E:	
Fragrance	q.s.
Polysorbate-80/Solubilizer	2.50
Glycerin/Solubilizer/Humectant	2.00

Procedure:

1. Heat water to 65C. Feather in methylparaben and propylparaben until dissolved with rapid agitation.
2. Reduce agitation to moderate agitation. Add ingredients of Part B to Part A in the order listed.
3. Melt Part C in a separate container. Add to Part AB when melted.
4. Cool mixture to 40C and add Part D.
5. In a separate container, mix together Part E. Add to the mixture when temperature is 40C or less.

Conditioning Shampoo

This formula uses Incroquat HO-80PG, a quaternary conditioning agent suitable for 2-in-1 shampoos, in combination with Incromine Oxide C and Crodafos SG to give hair improved wet combing and a soft, dry feel. Incroquat HO-80 PG has been found to work especially well with polymeric quaternaries, like the Jaguar Cl4S used here, as it appears to enhance the effects of these polyquats, resulting in greater conditioning.

<u>Ingredients:</u>	<u>Weight%</u>
Part A:	
Deionized Water	57.05
Guar Hydroxypropyltrimonium Chloride	0.35
Citric Acid	0.10

Part B:	
SLES (3 mole)	15.00
SLS	5.00
Incronam 30 (Cocoamidopropyl Betaine)	6.00
Incromide LR (Lauramide DEA)	3.00
Crodafos SG (PPG-5-Ceteth-10 Phosphate)	2.00
Glycerox HE (PEG-7 Glyceryl Cocoate)	1.00
Incroquat HO-80PG (Dioleoylamidoethyl Hydroxyethylmonium Methosulfate)	2.50
Glycol Stearate	0.50
Incromine Oxide C (Cocamidopropylamine Oxide)	2.00

Part C:	
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben	1.00
Hexylene Glycol	3.00
Dimethicone Copolyol	1.50

Procedure:

Combine Part A ingredients with good mixing. Heat Part A ingredients to 45C. Add Part B ingredients to Part A as listed. Heat batch up to 70-75C with good mixing. Make sure all ingredients are dissolved. Start cooling batch. At 50C, add Part C.

Dimethicone	1.25

Blending Procedure:

With medium agitation, mix water and ALS in vessel. Heat to 145-155F, add EGDS, and mix until melted. Turn on cooling and add EA-2, Quatrex S, Dimethicone, and citric acid. Add Amidex CME (temperature must still be above 125F). Premix AXS, propylene glycol, and zinc, and add to main vessel. When temperature reaches 45F, add Kathon CG, fragrance, and color. Adjust pH to 5.5-6.5 with citric acid. Adjust viscosity to 5,000-7,500 cps (use NaCl to bring viscosity up and AXS to bring it down).

Formulation No. F1009

Conditioning Shampoo

Prototype formulation for a mild, high-foaming conditioning shampoo.

<u>Ingredients:</u>	<u>Wt%</u>
Sulfochem DLS	40.00
Preservative	q.s.
Amidex CME	1.20
EGDS	1.00
Water, soft	to 100
AXS	0.75
Propylene glycol	0.65
Fragrance, color, etc.	q.s.
Quatrex S	0.50
Dimethicone	0.75

Blending Procedure:

With medium agitation, mix water and DLS in vessel. Heat to 145-155F, add EGDS, and mix until melted. Turn on cooling and add Quatrex S, Dimethicone, and citric acid. Add Amidex CME (temperature must still be above 125F). Add AXS and propylene glycol. When temperature reaches 45F, add preservative, fragrance, and color. Adjust pH to 5.5-6.5 with citric acid. Adjust viscosity to 5,000-7,500 cps (use NaCl to bring viscosity up and AXS to bring it down).

Formulation No. F1014

SOURCE: Chemron Corp.: Suggested Formulations

Conditioning Shampoo

Starting formulation for an economical conditioning shampoo

<u>Ingredients:</u>	<u>Wt%</u>
Sulfochem B-209OP	35.00
Water, soft	63.10
Fragrance	0.15
NaCl	typical: 0.55
Citric acid	typical: 0.10
Preservatives	q.s.
Quatrex S	0.30
Dimethicone	0.75
Color	q.s.

Blending Procedure:

With medium agitation, mix water, Sulfochem B-209, Quatrex S, and dimethicone in main vessel. Add citric acid and mix until solution is homogeneous. Add preservatives, fragrance, color, and remaining ingredients. Adjust pH to 6.0-6.5 with citric acid. Adjust viscosity to 7,500-9,500 cps with sodium chloride.

Typical Physical Properties:

Viscosity: 7,500-9,500 cps

pH: 6.0-6.5

Formulation No. E3132

Regular Shampoo

Starting formulation for a high quality shampoo for normal hair.

<u>Ingredients:</u>	<u>Wt%</u>
Sulfochem B-209	35.00
Water, soft	63.99
Fragrance	0.15
NaCl	typical: 0.75
Citric acid	typical: 0.12
Color	q.s.
Preservatives	q.s.

Blending Procedure:

With medium agitation, mix water and Sulfochem B-209 in main vessel. Mix until solution is clear and homogeneous. Add preservatives, fragrance, color, and remaining ingredients. Adjust pH to 6.75-7.75 with citric acid. Adjust viscosity to 10,000-12,000 cps with sodium chloride.

Typical Physical Properties:

Viscosity: 10,000-12,000 cps

pH: 6.75-7.75

Formulation No. E3127

SOURCE: Chemron Corp.: Suggested Formulations

Conditioning Shampoo with Botanicals

Conditioning shampoo containing natural ingredients to enhance the conditioning and shine of the hair. SM2169 is utilized to provide combability, shine and softness.

<u>Materials/Function:</u>	<u>Wt%</u>
Part A:	
Deionized Water/Diluent	52.85
Polyquaternium-10 (1)/Thickener/Conditioner	0.40
Part B:	
Sodium Laureth Sulfate (and) Glycol Stearate (30%)/ Primary surfactant	20.00
Disodium Laureth Sulfosuccinate/Primary surfactant	10.00
Cocamidopropyl Betaine/Secondary surfactant	4.00
PEG-120 Jojoba Acid (and) PEG-120 Jojoba Alcohol (2)/ Conditioning/Shine	3.50
Part C:	
Lauramide DEA/Foam booster	4.00
Part D:	
Panthenol/Conditioning/Shine	0.50
Nettle Extract (and) Chamomile Extract (and) Comfrey Extract (and) Henna Extract (and) Rosemary Extract (3)/ Botanicals/Conditioning	0.50
Part E:	
Dimethicone (and) Laureth-4 (and) Laureth-23 (SM2169)(4)/ Conditioning/Shine	3.40
Phenoxyethanol (and) Methylparaben (and) Ethylparaben (and) Butylparaben (and) Propylparaben (5)/Preservative	0.80
Fragrance	q.s.
Disodium EDTA/Preservative	0.05
Part F:	
Color	q.s.

Procedure:

1. Charge water of Part A. With medium propeller stirring, slowly sprinkle in the polyquaternium-10. Mix 20 minutes until all polyquaternium-10 is dispersed and heat to 50C.
2. With batch at 50C, slowly add Part B to Part A in given order and mix until dissolved.
3. Add Part C and slowly mix until dissolved. Begin force-cooling of batch to 45C.
4. Add Part D to batch in given order and mix with slow to moderate propeller agitation.
5. Add Part E to batch in given order and mix with slow to moderate propeller agitation.
6. Adjust color with Part F. Mix until uniform.

Trade Names/Suppliers:

Conditioning Shampoo with SM2169

SM2169 is a 60% non-ionic emulsion of a 60,000 centistoke dimethicone fluid. In conditioning shampoos, it is a conditioning agent providing combability, softness and shine. This formulation provides conditioning for normal hair.

Materials/Function:

	<u>Wt%</u>
Part A:	
Polyquaternium-10 (1)/Thickener/Conditioner	0.4
Polyquaternium-10 (2)/Thickener/Conditioner	0.4
Distilled Water	56.0
Part B:	
Ammonium Lauryl Sulfate (and) Ammonium Laureth Sulfate (and) Cocamidopropyl Betaine (and) Cocamide DEA (42%)(3)/Surfactant/Foam booster	38.0
Part C:	
Ethylene Glycol Distearate/Pearlizing agent	1.0
Ceteareth-20/Emulsifier	0.3
Part D:	
Dimethicone (and) Laureth-4 (and) Laureth-23 (SM2169)(4)/ Conditioning agent	3.4
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl- paraben (and) Propylparaben (5)/Preservative	0.5
33% Citric Acid and/or 25% NaOH/pH adjuster	q.s.
Distilled Water	q.s.

Procedure:

1. Stir Part A ingredients until polyquaternium-10 materials are completely dissolved.
2. Add Part B ingredient to Part A with moderate agitation.
3. Heat mixture of Part A and Part B to 60-65C.
4. Melt Part C ingredients and add to warm mixture.
5. With continued agitation, cool mix below 40C.
6. Add SM2169 and preservative.
7. Adjust pH to approximately 6.0.
8. Add fragrance and water to bring to 100%.

Trade Names/Suppliers:

Conditioning Shampoo with Viscasil 60M

Viscasil 60M is a high molecular weight dimethicone fluid. It provides conditioning in a daily use conditioning shampoo. A suspension system is typically used to provide formulation stability.

<u>Materials/Function:</u>	<u>Wt%</u>
Part A:	
Sodium Laureth Sulfate (28%)/Primary surfactant	35.7
Cocamide DEA/Secondary surfactant	4.0
Part B:	
Water/Diluent	56.9
Acrylates/C10-30 Alkyl Acrylate Crosspolymer (1)/ Thickening/Suspending	0.8
Methylchoroisothiazoline (and) Methylisothiazolinone (2)/ Preservative	0.1
Part C:	
Sodium Hydroxide (50%)/Neutralizer	q.s.
Part D:	
Dimethicone (Viscasil 60M) (3)/Conditioning/Shine	2.5
Part E:	
Citric Acid (33%)/pH adjustment	q.s.

Procedure:

- Mix Part B ingredients with moderate agitation until completely dissolved.
- Add Part A to Part B with moderate agitation.
- Add Part C to pH=7.5.
- Add Part D slowly with moderate agitation.
- Add Part E to pH=6.0

Trade Names/Suppliers:

- Carbopol, BF. Goodrich Co.
- Rohm and Haas Co.
- GE Silicones

Cream Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
Mackanate LO-Special (Disodium Lauryl Sulfosuccinate)	88.0
Cetyl Alcohol	2.0
Brij 52	2.0
Mackstat DM (DMDM Hydantoin)	qs
Water, Fragrance	qs to 100.0

Solids, %: 40.0(+/-1.0)

pH (as is): 5.5-6.0

Appearance: Pearly Cream

Procedure:

1. Add Cetyl Alcohol, Brij 52 and Water to Mackanate LO-Special.
2. Heat to 70C.
3. Blend until homogeneous.
4. Adjust pH to 5.5-6.0 with Sodium Hydroxide.
5. Cool to 50C and add Mackstat DM and Fragrance.
6. Adjust solids to 40.0(+/-1.0)% at this point.
7. Cool to room temperature.

Mild Conditioning Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
Mackanate EL (Disodium Laureth Sulfosuccinate)	10.0
Mackam 35 (Cocamidopropyl Betaine)	25.0
Sodium Laureth Sulfate (60%)	10.0
Mackanate DC-30 (Disodium Dimethicone Copolyol Sulfosuccinate)	1.0
Mackamide C (Cocamide DEA)	2.0
Polysorbate 20	1.0
Paragon III (Phenoxyethanol (and) DMDM Hydantoin (and) Methylparaben (and) Propylparaben)	qs
Water, Dye, Fragrance	qs to 100.0

pH: 5.5-6.7

Viscosity (cps, 25C): 600-1200

Procedure:

1. Add surfactants to water.
2. Start mixing at room temperature until all components are clearly dissolved.
3. Blend Fragrance with Polysorbate and add to batch.
4. Adjust pH to 5.5-6.7 with Citric Acid.
5. Adjust viscosity to 600-1200 cps with Sodium Chloride.

Dry/Damaged Hair Shampoo

Starting formulation for a mild shampoo for dry or damaged hair.

<u>Ingredients:</u>	<u>Wt%</u>
Sulfochem SBS	37.00
Water, soft	62.33
Fragrance	0.20
NaCl	q.s.
Preservatives	q.s.
Citric acid	typical: 0.02
Quatrex S	0.25
Panthenol	0.20

Blending Procedure:

Charge mixing vessel with water and Sulfochem SBS, and mix until dissolved. Adjust pH with citric acid to 6.5-7.0. Add preservatives, color, fragrance, and remaining ingredients. Adjust viscosity to 2,500-3,500 cps with sodium chloride.

Typical Physical Properties:

Viscosity: 2,500-3,500 cps

pH: 6.5-7.0

Formulation No. E3147

Botanical Shampoo

Starting formulation for a very mild shampoo containing botanical extracts.

<u>Ingredients:</u>	<u>Wt%</u>
Sulfochem SBS	35.00
Water, soft	63.85
Fragrance	0.15
NaCl	q.s.
Preservatives	q.s.
Botanical extracts	1.00
Color	q.s.

Blending Procedure:

Charge mixing vessel with water and Sulfochem SBS, and mix until dissolved. Adjust pH with citric acid to 6.5-7.5. Add preservatives, color, fragrance, and remaining ingredients. Adjust viscosity to 2,000-3,500 cps with sodium chloride.

Typical Physical Properties:

Viscosity: 2,000-3,500 cps

pH: 6.5-7.5

Formulation No. E3146

SOURCE: Chemron Corp.: Suggested Formulations

Hair Shampoo

Hair Shampoo containing Bentone EW rheological additive.

<u>Ingredients:</u>	<u>Wt%</u>
Sodium Laureth Sulphate	28.0
Cocamidopropylbetaine	6.0
Coco Glucoside	6.0
Glycol Distearate, Steareth 4	3.0
Dimethicone Copolyol	0.2
D-Panthenol	1.0
Bentone EW (3% in dist. water)	50.0
Methyldibromoglutaronitrile, Propylene Glycol	0.2
Laureth 3	2.0
Lactic Acid	qs to pH 5.5-6.0
Demineralized Water	bal to 100%

Method of Manufacture:

1. Prepare a dispersion of Bentone EW in most of the distilled water.
2. Using a propeller stirrer, add the surfactants one by one, in the order listed.
3. Add the pearlizing agent and the silicone.
4. Dissolve the panthenol in the remaining water by warming slightly, and then add to the batch.
5. Add the perfume and preservative, then add laureth 3.
6. Adjust the pH if required.

Bentone EW is incorporated at a level of 1.5% w/w. This level was selected to ensure easy handling during product manufacture and also to minimize cost. However, it is high enough to demonstrate a considerable difference in performance from the control product when evaluated in salon trials.

High Foaming Adult Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
Mackadet BW-173 (Sodium Lauryl Sulfate (and) Cocamide DEA (and) Cocamidopropyl Betaine)	32.0
Sodium Chloride	0.1-1.0
Paragon III (Phenoxyethanol (and) DMDM Hydantoin (and) Methylparaben (and) Propylparaben)	qs
Water, Dye, Fragrance	qs to 100.0

This shampoo will be a viscous liquid with a pH of 6.0-7.0 and a concentration of approximately 12-13%.

Procedure:

1. Completely disperse Mackadet BW-173 in warm water (approximately 40C).
2. Add appropriate amount of Sodium Chloride and blend until clear and homogeneous.
3. Add Citric Acid, if necessary, to adjust pH to 6.0-7.0.
4. Add Paragon III, Fragrance, and Dye.
5. Cool and fill.

Wheat Germ Conditioning Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
Mackanate OPS (Disodium Oleamido MIPA Sulfosuccinate)	20.0
Sodium Laureth Sulfate (30%)	24.0
Mackanate WGD (Disodium Wheatgermamido PEG-2 Sulfo- succinate)	8.0
Mackam WGB (Wheatgermamidopropyl Betaine)	5.0
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Add surfactants to water.
2. Heat to 40C.
3. Adjust pH to 5.5 with Citric Acid.
4. Add remaining components.
5. Adjust viscosity to 2000 cps with Sodium Chloride.

SOURCE: McIntyre Group Ltd.: Personal Care Formulary: Formulas

High Foaming 2 in 1 Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
Ammonium Lauryl Sulfate (28%)	65.0
Mackalene 426 (Isostearamidopropyl Morpholine Lactate)	6.0
Mackanate DC-30 (Disodium Dimethicone Copolyol Sulfosuccinate)	4.0
Mackester EGDS (Glycol Distearate)	1.0
Mackamide PKM (Palmkernelamide MEA)	2.0
Mackernium 007 (Polyquaternium 7)	0.4
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Combine first five components and heat to 70C with continuous mixing.
2. Dilute Mackernium 007 in remaining water and slowly add to the blend.
3. Blend until product is homogeneous and cool to 50C.
4. Add Mackstat DM, Dye, and Fragrance.
5. Adjust pH to 5.0-6.0 with Citric Acid and cool.

Silicone Free 2:1 Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
Ammonium Lauryl Sulfate (30%)	40.0
Mackanate LA (Diammonium Lauryl Sulfosuccinate)	20.0
Mackalene 426 (Isostearamidopropyl Morpholine Lactate)	6.0
Mackamide CMA (Cocamide MEA)	2.0
Mackernium 007 (Polyquaternium 7)	1.2
Mackester EGDS (Glycol Distearate)	1.0
Sodium Chloride	0.8
Paragon (Propylene Glycol (and) DMDM Hydantoin (and) Methylparaben)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Add first seven components to water.
2. Heat to 70C.
3. Cool to 50C and add Paragon, Dye, and Fragrance.
4. Adjust pH to 5.5-6.0 with citric acid.
5. Cool to room temperature.

Highly Pearlescent Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
Sodium Laureth Sulfate (60%)	20.0
Mackamide C (Cocamide DEA)	2.0
Mackester SP (Glycol Stearate (and) Stearamide MEA)	2.0
Stearic Acid	2.0
Magnesium Sulfate (7H ₂ O)	6.0
Diethanolamine	0.67
Paragon II (Propylene Glycol (and) DMDM Hydantoin (and) Methylparaben (and) Propylparaben)	qs
D.I. Water, Dye, Fragrance	qs to 100.0

pH: 7.5-8.0

Viscosity (cps, 25C): 1000-2500

Procedure:

1. Heat water to 75C and add Magnesium Sulfate; dissolve completely.
2. Add other surfactants and DEA, then add waxes.
3. Keep temperature at 70C for 20 minutes; start cooling slowly.
4. At 35C add remainder of components and cool while mixing to room temperature.
5. Adjust pH to 7.5-8.0 with dilute TEA or dilute Sulfuric Acid.

Economy Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
Mackadet SBC-8 (Mild Shampoo Blend)	10.0
Sodium Chloride	qs
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Add Mackadet SBC-8 to water and blend until clear.
2. Add Mackstat DM.
3. Adjust viscosity to 3000-4000 cps with Sodium Chloride.
4. Add Dye and Fragrance and blend until clear.

Natural Conditioning Shampoo-Pearlescent

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
Water (Deionized)	52.50
Ethylene Glycol Monostearate/Glycol Stearate	1.0
Schercoquat SOAS (90%)/Soyamidopropyl Ethyldimonium Ethosulfate	1.5
Schercotaine CAB-G (35%)/Cocamidopropyl Betaine	20.0
Schercamox CAA-G (35%)/Disodium Oleamido PEG-2 Sulfosuccinate	7.0
Sodium Lauryl Ether Sulfate(30%)/Sodium Laureth (3.0 EO) Sulfate	18.0
Preservative	q.s.
Fragrance	q.s.

Procedure:

1. Heat water to 60C.
2. Gently melt Ethylene Glycol Monostearate (m.p.-56-60C) and, with stirring, add to water.
3. Add Schercoquat SOAS to dissolve.
4. Add Schercotaine CAB-G, followed by Schercamox CAA-G.
5. Slowly add Sodium Lauryl Ether Sulfate, mix thoroughly, as viscosity will build rapidly.
6. Cool, add Preservative and Fragrance.

Formula SK-156

Shower-Shampoo Gel

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
Sodium Lauryl Sulfate (30%)	20
Alpha Olefin Sulfonate (40%)/Sodium C14-16 Olefin Sulfonate	10
Schercopol OMES-Na (35%)/Disodium Oleamido PEG-2 Sulfosuccinate	10
Schercotaine CAB-G (35%)/Cocamidopropyl Betaine	10
Schercamox CAA-G (35%)/Cocamidopropylamine Oxide	3
Schercoquat IAS-LC (90%)/Isostearamidopropyl Ethyl Dimonium Ethosulfate	1
Color, Fragrance, Preservative	q.s.
Water (deionized)	q.s. to 100

Procedure:

1. Heat water to 50C. With stirring add Schercoquat IAS-LC to dissolve.
2. Add Schercotaine CAB-G.
3. Add Schercamox CAA-G and Schercopol OMES-Na.
4. Slowly add Alpha Olefin Sulfonate, viscosity builds slightly.
5. Increase stirring and slowly add Sodium Lauryl Sulfate. Mix thoroughly at high rpm until uniform.
6. To clear up bubble formation heat finished product in an oven (at 45-50C).

Typical Specifications:

Activity: 19%

Viscosity @ 25C: 16,000 cps (without fragrance)

pH @ 25C: 6.8

Natural Mild (Apricot) Conditioning Shampoo

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
Schercoquat APAS/Apricotamidopropyl Ethyldimonium Ethosulfate	0.5
Schercotaine APAB (40%)/Apricot Amidopropyl Betaine	6.0
Schercotaine CAB-G (45%)/Cocamidopropyl Betaine	14.0
Sipon ES-2 (27%)/Sodium Lauryl Ether Sulfate	18.0
Herbasol Extract Apricot/Apricot Extract	1.0
Schercomid SAP/Apricot Kernel DEA	1.0
Preservative	0.2
Water (deionized)	59.3
Color, Fragrance	q.s.

Procedure:

1. Heat water to 50C. With stirring add Schercoquat APAS to dissolve.
 2. Add preservative, mix.
 3. Add Schercotaine APAB & Schercotaine CAB-G. Heat & mix to 50C until uniform.
 4. Add Schercomid SAP, mix.
 5. Add Apricot Extract, mix.
 6. Add Sipon ES-2. Mix thoroughly until uniform.
- Formula 220-195

Conditioning Shampoo
(Self Preserved)

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
Water (Deionized)	48.5
Schercoquat IIS-LC (98%)/Isostearyl Ethyl Imidonium Ethosulfate	1.5
Schercotaine UAB (35%)/Bis (Undecylenic Amidopropyl Dimethyl Glycine)	10.0
Schercotaine CAB-G (45%)/Cocamidopropyl Betaine	10.0
Schercopol OMS-Na (35%)/Disodium Oleamido MEA Sulfosuccinate	10.0
Sodium Lauryl Ether Sulfate (30%)/Sodium Laureth (2 OEO) Sulfate	20.0
Fragrance	q.s.

Procedure:

1. Heat water to 45C. With stirring add Schercoquat IIS-LC to dissolve.
2. Add Schercotaine CAB-G and Schercotaine UAB.
3. Add Schercopol OMS-Na.
4. Slowly add Sodium Lauryl Ether Sulfate; mix thoroughly as viscosity will build rapidly.
5. Cool, q.s. with fragrance.

Typical Specifications:

Activity: 19%

Viscosity @ 25C: 2600 cps (without Fragrance)

Formula SO-0027

Natural Mild (Wheat Germ) Conditioning Shampoo

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
Schercoquat WOAS/Wheat Germ Amidopropyl Ethyldimonium Ethosulfate	0.5
Schercotaine WOAB/Wheat Germ Amidopropyl Betaine	6.0
Schercotaine CAB-G (45%)/Cocamidopropyl Betaine	14.0
Sipon ES-2 (27%)/Sodium Lauryl Ether Sulfate	18.0
Herbasol Extract Wheat Germ/Wheat Germ Extract	1.0
Schercomid SWG/Wheat Germ Diethanolamide	1.0
Preservative	0.2
Water (deionized)	59.3
Color, Fragrance	q.s.

Procedure:

1. Heat water to 50C. With stirring add Schercoquat WOAS to dissolve.
 2. Add preservative, mix.
 3. Add Schercotaine WOAB & Schercotaine CAB-G. Heat & mix to 50C until uniform.
 4. Add Schercomid SWG, mix.
 5. Add Wheat Germ Extract, mix.
 6. Add Sipon ES-2. Mix thoroughly until uniform.
- Formula SK 151

Clear Moisturizing Shampoo

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
Water	53.3
Schercoquat IALA/Isostearamidopropyl Laurylacetodimonium Chloride	2.5
Sodium Lauryl Sulfate	35.0
Schercomid AME-70/Acetamide MEA	5.0
Schercomid SCO-EX/Cocamide DEA	4.0
Perfume	q.s.
Preservative	0.2

Procedure:

1. Dissolve Schercoquat IALA in 60C water. Add Schercomid AME-70.
 2. Add while mixing, Sodium Lauryl Sulfate and Schercomid SCO-EX.
 3. Mix until uniform.
 4. At 35-40C add preservative.
 5. When cool, add fragrance.
- Formula SK 150

Natural Mild Conditioning Shampoo
(With Wheat Germ)

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
Water (Deionized)	46.5
Schercoquat WOAS (90%)/Wheat Germamidopropyl Ethyl-dimonium Ethosulfate	0.5
Schercotaine CAB-G (45%)/Cocamidopropyl Betaine	20.0
Schercopol OMES-Na (35%)/Disodium Oleamido PEG-2 Sulfosuccinate	10.0
Sodium Lauryl Ether Sulfate (30%)/Sodium Laureth (3.0 EO) Sulfate	20.0
Schercomid SWG/Wheat Germamide DEA	3.0
Preservative	q.s.
Fragrance	q.s.

Procedure:

1. Heat water to 45C. With stirring add Schercoquat WOAS to dissolve.
2. Add Schercotaine CAB-G, followed by Schercopol OMES-Na.
3. Add Sodium Lauryl Ether Sulfate.
4. Add Schercomid SWG; mix thoroughly, as viscosity will build.
5. Cool, q.s. with Preservative and Fragrance.

Typical Specifications:

Activity: 20%
 Viscosity @ 25C: 2900 cps (without fragrance)
 pH @ 25C: 5.5

Conditioning Shampoo for Dry Scalp

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
Part A:	
Water (Distilled)	34.00
Na Lauryl Sulfate	20.00
Schercotaine CAB-Z/Cocamidopropyl Betaine-Zinc	20.00
Part B:	
Water (Distilled)	20.00
Schercoquat IAS-LC/Isostearamidopropyl Ethyl Dimonium Ethosulfate	1.00
Part C:	
Schercomid SL-ML/Lauramide DEA	5.00
Part D:	
Fragrance	q.s.
Preservative	q.s.

Procedure:

1. Prepare Part A, stirring until a clear and uniform solution is formed.
2. Dissolve Schercoquat IAS-LC in water. Add solution to Part A, warming slightly if necessary to produce a clear solution.
3. Add Part C to Part D.

Pearlescent Shampoo Concentrate

<u>Raw Materials:</u>	<u>Wt%</u>
TEA Lauryl Sulfate	50.0
Mackamide LLM (Lauramide DEA)	30.0
Mackester SP (Glycol Stearate (and) Stearamide MEA)	5.0
Propylene Glycol	5.0
Sodium Chloride	1.0
Paragon III (Phenoxyethanol (and) DMDM Hydantoin (and) Methylparaben (and) Propylparaben)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Add first five components to water.
2. Heat to 70C and blend until homogeneous.
3. Cool to 40C and add Paragon III, Dye, Fragrance.
4. Adjust pH to 7.5 with Phosphoric Acid.

NOTE: Product can be diluted one pint to a gallon with water.
Viscosity can be controlled by regulating the propylene glycol.

Neutralizer Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
Mackanate OM (Disodium Oleamido MEA Sulfosuccinate)	30.0
Sodium Laureth Sulfate (30%)	20.0
Mackamine CAO (Cocamidopropylamine Oxide)	6.0
Mackamine WGO (Wheatgermamidopropylamine Oxide)	2.0
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance	qs to 100.0

Solids, %: 19.5
pH: 5.0-5.5
Viscosity (cps, 25C): 1500

Procedure:

1. Add surfactants to water and blend until clear.
2. Adjust pH to 5.0-5.5 with Citric Acid.
3. Add Dye and Fragrance.

Premium High Foaming Mild Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
Mackadet CA (Sodium Laureth Sulfate (and) Sodium Lauryl Sulfate (and) Disodium Oleamido MEA Sulfosuccinate (and) Cocamide DEA (and) Cocamidopropyl Betaine)	32.0
Sodium Chloride	qs
Paragon III (Phenoxyethanol (and) DMDM Hydantoin (and) Methylparaben (and) Propylparaben)	qs
Water, Dye, Fragrance	qs to 100.0

This shampoo will be a viscous liquid with a pH of 6.0-7.0 and a concentration of approximately 9-10%.

Procedure:

1. Completely disperse Mackadet CA in warm water (approximately 40C).
2. Add appropriate amount of Sodium Chloride and blend until clear and homogeneous.
3. Add Citric Acid, if necessary, to adjust pH to 6.0-7.0.
4. Add Paragon III, Dye, and Fragrance.
5. Cool and fill.

Economic High Foaming All-Purpose Shampoo

<u>Raw Materials:</u>	<u>Wt%</u>
Mackadet CA (Sodium Laureth Sulfate (and) Sodium Lauryl Sulfate (and) Disodium Oleamido MEA Sulfosuccinate (and) Cocamide DEA (and) Cocamidopropyl Betaine)	20.0
Sodium Chloride	1.0-2.0
Paragon III (Phenoxyethanol (and) DMDM Hydantoin (and) Methylparaben (and) Propylparaben)	qs
Water, Dye, Fragrance	qs to 100.0

This shampoo will be a viscous liquid with a pH of 6.0-7.0 and a concentration of approximately 9-10%.

Procedure:

1. Completely disperse Mackadet CA in warm water (approximately 40C).
2. Add appropriate amount of Sodium Chloride and blend until clear and homogeneous.
3. Add Citric Acid, if necessary, to adjust pH to 6.0-7.0.
4. Add Paragon III, Dye, and Fragrance.
5. Cool and fill.

Shampoo for Permed Hair

<u>Raw Materials:</u>	<u>Wt%</u>
Mackanate OP (Disodium Oleamido MIPA Sulfosuccinate)	20.0
Mackanate CP (Disodium Cocamido MIPA Sulfosuccinate)	12.0
Sodium Laureth Sulfate (30%)	15.0
Mackamine WGO (Wheatgermamidopropylamine Oxide)	4.0
Mackalene 716 (Wheatgermamidopropyl Dimethylamine Lactate)	1.0
Mackstat DM (DMDM Hydantoin)	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Add surfactants to water.
2. Heat to 40C.
3. Blend until clear.
4. Adjust pH to 6.0 with Citric Acid.
5. Add remaining components.
6. Adjust viscosity to 2000 cps with Sodium Chloride.

Shampoo for Color-Treated Hair

<u>Raw Materials:</u>	<u>Wt%</u>
Mackanate CP (Disodium Cocamido MIPA Sulfosuccinate)	30.0
Ammonium Lauryl Sulfate (28%)	25.0
Mackamine CAO (Cocamidopropylamine Oxide)	7.0
Mackanate WGD (Disodium Wheatgermamido PEG-2 Sulfosuccinate)	2.0
Sodium Chloride	2.0
Water, Dye, Preservative, Fragrance	qs to 100.0

Solids, %: 22.0

pH: 6.2

Viscosity (cps, 25C): 2300

Procedure:

1. Add surfactants to water and blend until clear.
2. Adjust pH to 6.0-6.5 with Citric Acid or Sodium Hydroxide.
3. Adjust viscosity with Sodium Chloride.
4. Add dye, preservative and fragrance.

Shampoo with Unicerin C-30

<u>Raw Materials:</u>		<u>Wt%</u>
A	1 Water	66.95
	2 Propylene Glycol	1.50
	3 Uniphen P-23	0.25
	4 Unicide U-13	0.40
	5 Citric Acid	0.30
	6 Carrageenan (Chondus Crispus)	2.50
B	7 Decyl Glucoside	24.00
	8 Uniphen P-23	0.50
	9 Fragrance	0.40
C	10 FD&C Blue No. (C.I. 42090)	0.20
D	11 Unicerin C-30	3.00

Procedure:

Manufacturing is best performed in a closed apparatus (as eg. Fryma, Krieger) provided with vacuum and a speed-regulated stirrer with rotor-stator homogenizer. The microbiological quality of the demineralized water must be checked carefully.

1. Presoak 11 in aqua conservans (preserved solution containing 0.4% Uniphen P-23 and 0.3% Unicide U-13) and leave the suspension for 24 h at room temperature to soften Unicerin C-30.
2. Dissolve 3 in 1 and 2 at 100C. Let cool down to 40C and dissolve 4 and 5. Disperse 6 with a propeller stirrer at high speed. Continue stirring at reduced speed for 30 minutes, then homogenize intensively for 3 minutes and let cool overnight.
3. Dissolve separately 8 and 9 in 7. Prevent foam building (see note below).
4. At reduced stirrer speed suck B from below into A and mix further 15 minutes, then homogenize for additional 3 minutes at medium intensity.
5. Add 10 and mix 10 minutes, then homogenize 3 minutes at low speed.
6. Add 1 at low stirrer speed as long until a homogeneous distribution is obtained.

NOTE:

If manufacturing equipment is not provided with vacuum, set the stirrer below the liquid.

Shaving Products

After Shave Balm

A soothing water-in-oil lotion containing Bentone Gel EUG rheological additive

<u>Ingredients:</u>	Wt%
Sorbitan Isostearate	2.50
Glycerine BP	3.00
Magnesium Sulphate	0.70
Caprylic/Capric Triglyceride	4.00
Octyldodecanol	4.00
Beeswax BP	0.50
Bisabolol	0.20
D-Panthenol	0.50
Cetearyl Octanoate, Isopropyl Myristate	5.00
2-Phenoxyethanol, Methyl dibromoglutaronitrile, 2-Bromo-2-Nitropropane-1,3-Diol, Butyl 4-Hydroxy- benzoate, Isobutyl 4-Hydroxybenzoate	0.20
Perfume	0.20
Bentone Gel EUG	3.00
Demineralized Water	Bal to 100%

Method of Manufacture:

1. Thoroughly disperse the Bentone Gel EUG in the oil phase and heat to 75-80C.
2. In a separate vessel, heat 98% of the water with the Glycerine and the Magnesium Sulphate to 75-80C.
3. Add the water phase to the oil phase steadily mixing with a propeller stirrer on medium speed.
4. Dissolve the D-Panthenol in the remaining 2% of the water.
5. Add the D-Panthenol premix below 50C to the cooling emulsion.
6. Transfer to a high shear stirrer for around 10 minutes and continue to cool.
7. At 30C add the perfume and preservative.

The balance of richness and light, easy-to-spread characteristics provided by Bentone Gel EUG additive makes this After Shave Balm pleasant on the skin. This formulation is designed to be soothing and combat irritation on freshly shaved skin through the action of the Bisabolol.

After Shave Lotion

An after shave balm which uses SF1632 to add moisture due to its ability to reduce water loss from the skin (TEWL). SF1202, cyclopentasiloxane, is used to provide a quick dry which does not sting or cool the skin.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Deionized Water/Diluent	59.61
Disodium EDTA/Chelating agent	0.02
SD Alcohol-40/Astringent	15.00
Phenoxyethanol (and) Methylparaben (and) Ethylparaben (and) Propylparaben (and) Butylparaben(1)/Preservative	0.60
Sorbital 70%/Humectant	3.00
Part B:	
Cyclopentasiloxane(SF1202) (2)/Emollient/Quick dry	5.00
Cetearyl Methicone(SF1632)(2)/Occlusive/TEWL reduction/ Emollient	8.00
Bisabolol/Reduces irritation and redness	0.20
Tocopheryl Acetate/Vitamin E/Antioxidant	0.20
Coco-Caprylate/Caprates/Emollient	0.80
Aluminum Starch Octenylsuccinate/Slip/Feel/Viscosity	5.00
Polysorbate-85/Preservative	1.50
Part C:	
Fragrance(3)	1.00
D&C Green No. 5(0.1% solution)/Color	0.07

Procedure:

1. Combine Part A at room temperature and mix for 15 minutes with moderate propeller agitation.
2. Combine Part B and mix with moderate propeller agitation for 20 minutes until uniform.
3. Add Part B to Part A SLOWLY with moderate stirring. Continue mixing for 15 minutes.
4. Add Part C to Part AB and mix with moderate propeller agitation for 20 minutes.

Moisturizing After Shave Treatment (Eashave)

Eashave in this pleasant light after shave cream has moisturizing properties and calms the skin after shaving.

<u>Item:</u>	<u>Ingredients/INCI Name:</u>	<u>Wt%</u>
1	A)Emulgade SE	6.00
2	Lanette O/Cetearyl Alcohol	1.00
3	Cetiol V/Dicaprylyl Ether	8.00
4	Eutanol G/Octylododecanol	4.00
5	B)Deionized Water	69.20
6	Glycerin	3.00
7	Phenonip	0.50
8	Carbopol Ultrez 10/Carbomer	0.30
9	C)Triethanolamine	
10	D)Bisabolol	0.20
11	Ethyl Alcohol 96%	3.00
12	Eashave	4.00
13	Fragrance/Courage 0/243101	0.80

Procedure:

Heat the ingredients of fatty phase A) to 80C.

Heat the ingredients of water phase B) to 75C.

Under stirring add phase B) to phase A), cool to 50C, homogenize and cool to 30C.

Then adjust the pH with phase C) to 5.7.

Finally incorporate items of phase D) one after the other and stir cold.

Application No.: I 006.0/11.97

Refreshing After Shave (Eashave)

This alcohol containing, clear after shave formulation refreshes the face and leaves a decent touch of perfume on the skin. Eashave combats the negative effects of the alcohol (e.g. "burning" feeling and washing out of skin lipids).

<u>Item:</u>	<u>Ingredients/INCI Name:</u>	<u>Wt%</u>
1	A)Irgasan DP 300/Triclosan	0.01
2	Crodamol DA/Diisopropyl Adipate	1.00
3	Ethyl Alcohol 96%	50.00
4	B)Propylene Glycol	2.00
5	Deionized Water	41.49
6	C)Fragrance/Courage 0/243101	0.50
7	D)Eashave	5.00

Procedure:

Dissolve phase A). Mix phase B).

Slowly add phase B) to phase A). Then add item 6.

Finally add item 7.

Application No.: I 001.D/05.96

SOURCE: Pentapharm Ltd.: Suggested Formulations

Soft After Shave Balm (Eashave)

This white, elegant balm contains 20% alcohol and gives a fresh feeling on the face. Eashave reduces irritation and strengthens the lipid barrier of the skin after shaving. The balm has soothing and moisturizing properties.

<u>Item:</u>	<u>Ingredients/INCI Name:</u>	<u>Wt%</u>
1	A) Deionized Water	69.70
2	Allantoin	0.10
3	Carbopol 941/Carbomer 941	0.40
4	B) PCL Solid/Stearyl Heptanoate, Stearyl Caprylate	2.00
5	Bisabolol	0.20
6	Cremonophor RH40/PEG-40 Hydrogenated Castor Oil	0.30
7	C) Ethyl Alcohol 96%	20.00
8	Menthol	0.10
9	Fragrance/Aras 0/221807	1.50
10	D) Eashave	5.00
11	Triethanolamine	0.70

Procedure:

Dissolve items 2+3 in water (1) and heat to 60C.

Heat the ingredients of phase B) to 60C.

Under stirring add phase B) to phase A), cool to 50C, homogenize and cool to room temperature.

Then add phase C). Finally incorporate item 10 and neutralize with item 11.

Application No. I 004.0/0.5.96

Mild After Shave Balm (Eashave)

This white, alcohol free balm is designed especially for men with sensitive skin. Eashave reduces the irritation from shaving and gives the skin a soft feeling.

<u>Item:</u>	<u>Ingredients/INCI Name:</u>	<u>Wt%</u>
1	A) Deionized Water	75.80
2	Glycerin	10.00
3	Phenoxyethanol	0.50
4	Allantoin	0.10
5	Imidazolidinyl Urea	0.20
6	Carbopol 980/Carbomer 980	0.20
7	B) Crodamol EHO/Oleyl Oleate	3.00
8	Glucamate SSE 20/PEG-20 Methyl Glucose	3.00
9	Glucate SS/Methyl Glucose Sesquistearate	1.00
10	C) Triethanolamine	0.20
11	D) Eashave	5.00
12	Fragrance/DRN-20/232146	1.00

Procedure:

Dissolve items 2-6 in water (1) and heat to 60C.

Heat the ingredients of fatty phase B) to 60C.

Under stirring add phase B) to phase A), homogenize and cool to room temperature.

Neutralize with item 10. Finally add items 11 and 12 one after the other.

Application No. I 005.0/05.96

Soaps and Hand Cleaners

Antibacterial Handwash

A premium liquid cleansing system that leaves a long lasting soft and smooth after-feel.

<u>Ingredients:</u>	<u>Wt%</u>
Water	44.3
Ammonium Lauryl Sulfate(28%)	23.0
Sodium Laureth-2 Sulfate(26%)	21.5
Promidium CO	3.5
Monateric LMAB	3.0
Phospholipid CDM	2.5
Pricerine 9083	1.0
Triclosan	0.2
Monamate RMEA-40	0.7
Disodium EDTA	0.2
Cutric Acid	0.1

Procedure:

With stirring, combine all ingredients except Triclosan. Heat mixture to 55C and add Triclosan. While cooling, add color and fragrance. Adjust the pH to 6 with citric acid.

Typical Properties:

Appearance: Clear Liquid
 Solids(%): 18
 Viscosity (cP) @ 25C: 5400
 Formula F-858

Clear Antibacterial Hand Wash

<u>Ingredients:</u>	<u>Wt%</u>
Part 1:	
Ethanol(95%)	63.0
Hydroxyethyl Cellulose	1.0
Part 2:	
Propylene Glycol	5.0
Phospholipid CDM	3.0
Part 3:	
Water	28.0

Procedure:

Blend hydroxyethyl cellulose and ethanol with high speed agitation. Separately, mix Phospholipid CDM, propylene glycol and water. Add part 1 to part 2. Mix until uniform. Add water, color and fragrance. Package.

Typical Properties:

Appearance: Clear colorless liquid
 pH: 6.0
 Formula F-853

SOURCE: Mona Industries, Inc.: Formulas F-858 and F-853

Clear Liquid Hand Soap with Suspended Mineral Oil Beads

<u>Ingredient:</u>	<u>Wt%</u>
DI Water	68.00
Carbopol ETD 2020	0.90
Glycerin	2.00
Triethanolamine	0.20
Ammonium lauryl sulfate (30%)	20.00
Lauryl ether sulfosuccinate (40%)	2.00
Disodium EDTA	0.10
Propylene glycol	2.00
Triclosan	0.50
DMDM hydantoin	0.70
Triethanolamine	0.60
Cocamidopropyl betaine (35%)	2.00
Mineral oil beads	1.00

Physical Properties:

- Brookfield RVT Viscosity-20 rpm: 5,000 cP
- Product pH: 5.0-6.0
- Product Clarity/Appearance: Clear

Procedure:

1. Using moderate agitation (800 rpm) provided by a Lightnin' Mixer or similar variable speed unit and an impeller suitable for general mixing and blending operations, disperse or screen the Carbopol polymer into the DI water. Mix the slurry for approximately 15 minutes or until the slurry is homogeneous. Heating the water to 40-50C will increase the wetting and dispersability of the Carbopol ETD polymers.
2. With minimal agitation to avoid excessive air entrapment, add in the glycerin, TEA, lauryl sulfate, sulfosuccinate, and the EDTA.
3. Premix the propylene glycol and the triclosan. Add the mixture.
4. Continue agitation and add the DMDM hydantoin followed by the triethanolamine and the cocamidopropyl betaine surfactant. Add the mineral oil beads with reduced agitation to avoid breaking the beads.
5. Add color and fragrance, as desired.

SOURCE: BFGoodrich Co.: Formulation HIT-410

d-Limonene Hand Soap

Starting formulation for a hand soap containing d-Limonene as a grease cutter.

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
Water, DI	77.40
Carbopol 1382	1.00
Triethanolamine 99%	1.50
Phase B:	
Sulfochem ES-2	5.10
Phase C:	
d-Limonene	15.00

Blending Procedure:

Charge water and begin vigorous agitation. Add the Carbopol 1382 and mix. After adequate mixing, add the TEA-99 (Note: This will form a thick gel.) To this, add the Sulfochem ES-2 and mix until homogeneous. Add the d-Limonene. Adjust the pH up with TEA and down with citric.

Formulation No. F1027

d-Limonene Hand Soap

Starting formulation for a hand soap containing d-Limonene as a grease cutter.

<u>Ingredients:</u>	<u>Wt%</u>
Phase A:	
Water, DI	73.40
Carbopol 1382	1.00
Triethanolamine 99%	1.50
Phase B:	
Sulfochem ES-2	5.10
Amidex O	2.00
Neodol 91-8	2.00
Phase C:	
d-Limonene	15.00

Blending Procedure:

Charge water and begin vigorous agitation. Add the Carbopol 1382 and mix. After adequate mixing, add the TEA-99. (Note: This will form a thick gel.) To this, add the Sulfochem ES-2, Amidex O, and the Neodol 91-8, and mix until homogenous. Add the d-Limonene. Adjust the pH up with TEA and down with citric.

Formulation No. F1028

SOURCE: Chemron Corp.: Suggested Formulations

d-Limonene Waterless Hand Cleaner**Ingredient:**

	<u>Wt%</u>
DI water	69.85
Carbopol ETD 2001	0.35
d-Limonene	25.00
Propylene glycol	1.00
Glycerin	2.00
C12-15 linear alcohol, 7 moles EO	0.50
Germaben IIE	1.00
Sodium hydroxide (18%)	0.30
 Pumice*	 10.00

Physical Properties:

Brookfield RVT Viscosity, 20 rpm: 35,000 cP

*addition of pumice may increase viscosity

Product pH: 5.5-5.8

Product Clarity/Appearance: Thick, white, creamy emulsion

Procedure:

1. Using moderate agitation (800 rpm) provided by a Lightnin' Mixer or similar variable speed unit and an impeller suitable for general mixing and blending operations, disperse or screen the Carbopol polymer into the DI water. Mix the slurry for approximately 15 minutes or until the slurry is homogeneous. Heating the water to 40-50C will increase the wetting and dispersability of the Carbopol ETD polymers.
2. Using moderate agitation, add the d-Limonene to the polymer dispersion and mix for 10 minutes.
3. Premix the propylene glycol, glycerin, alcohol ethoxylate and preservative together. Add to the solvent/water mixture.
4. Add the sodium hydroxide to the formulation-check the pH frequently-until pH 5.8 is achieved. For best results, keep pH under 6.0.
5. Add the pumice, or other abrasive, as desired.
6. Add color and fragrance, as desired.

SOURCE: BFGoodrich Co.: Formulation HIT-400

d-Limonene Waterless Hand Cleaner

<u>Ingredient:</u>	<u>Wt%</u>
d-Limonene	25.00
Pemulen TR-1	0.20
Deionized water	70.10
Propylene glycol	1.00
Glycerin	2.00
C12-15 linear alcohol, 7 moles EO	0.50
Germaben IIE	1.00
Sodium hydroxide (18%)	0.20
Pumice	10.00

Physical Properties:

Brookfield RVT Viscosity 20 rpm: 11,400 cP
 Product pH: 5.8
 Product Clarity/Appearance: Opaque

d-Limonene Waterless Hand Cleaner

<u>Ingredient:</u>	<u>Wt%</u>
d-Limonene	25.00
Pemulen TR-2	0.20
Deionized water	70.10
Propylene glycol	1.00
Glycerin	2.00
C12-15 linear alcohol, 7 moles EO	0.50
Germaben IIE	1.00
Sodium hydroxide (18%)	0.20
Pumice	10.00

Physical Properties:

Brookfield RVT Viscosity 20 rpm: 6,500 cP
 Product pH: 5.8
 Product Clarity/Appearance: Opaque

Procedure:

1. Use a Lightnin' Mixer or similar variable speed unit and an impeller suitable for general mixing and blending operations. Add the Pemulen polymer into the vortex of the rapidly agitating d-limonene (800 rpm). Allow to mix until homogeneous and free of polymer lumps.
2. Using moderate agitation, add the deionized water to the oil phase and mix for 10 minutes.
3. Premix the propylene glycol, glycerin, alcohol ethoxylate and preservative together. Add to the solvent/water mixture.
4. Add the sodium hydroxide to the formulation-check the pH frequently-until pH 5.8 is achieved. For best results keep pH under 6.0.
5. Add the pumice, or other abrasive, as desired.
6. Add color and fragrance, as desired.

*Patent #4,849,410 (and) 4,745,104

Procedure:

1. Combine Sequence #1 ingredients and heat to 80C while mixing on overhead mixer at medium/high speed with propeller blade at bottom of vessel to avoid aeration of batch.
2. Mix Sequence #2 ingredients into a slurry and add to Sequence #1 with medium/high mixing while holding batch temperature at 80C.
3. Premix Sequence #3 and add to batch at 80C on overhead mixer at medium/high speed for approximately 15-20 minutes or until Hypan is completely hydrated and clear (without fish eyes).
4. Heat Sequence #4 to 60C and add to batch while mixing at medium/high speed. Hold temperature at 75C.
5. Premix Sequence #5 and add to batch at medium/high speed. Continue mixing while holding temperature at 75C until mixture is completely into solution and clear (5-15 minutes). Cool batch to 60C after completely into solution.
6. Add Sequence #6 to batch at medium speed. Cool to 40C.
7. At 40C add Sequence #7 to batch with low speed mixing using propeller blade. Lower temperature to 35C.
8. Premix Sequence #8 and add to batch held at 35C mixing with overhead mixer at low speed. Cool to room temperature.
9. At room temperature, add Sequence #9 to batch.

Specifications:

pH: 5.9+-0.2

Viscosity: 367,000 cps+-10% T-E @ 0.6 rpm

After Sun Lotion

A smooth, soothing lotion for use after sun-bathing to restore moisture, and to add natural oils to the skin, whilst reducing the erythema caused very excessive UV exposure. The inclusion of Lipex Canola-U brings natural antioxidants and anti-inflammatory components to the UV-stressed skin. Akogel has a slightly cooling effect and helps to soften and smooth the skin to prevent dryness and flaking.

Raw Material/INCI Name:

<u>Raw Material/INCI Name:</u>	<u>Wt%</u>
A. Arlatone 985/Polyoxyethylene stearyl stearate	4.0
Brij 721/Steareth-21	2.0
Jarcol I-20/Octyldodecanol	6.0
Akogel/Hydrogenated vegetable oil	6.0
Lipex Canola-U/Canola oil unsaponifiables	4.0
B. Atlas G-2330/Sorbeth-30	2.5
Water	75.0
Phenonip/Esters of p-hydroxybenzoic acid	0.45
C. Perfume	0.05

Procedure:

1. Heat the phases A and B to 75C.
2. Add the oily phase A to the water phase B whilst stirring thoroughly.
3. Cool down to 55C, homogenize.
4. Cool down to 35C, add C.
5. Cool down to room temperature whilst stirring.

Rheological Characteristics:

Viscosity after one week at 20C (Bohlin Rheometer VOR):
 10 Pas at shear rate of 1.0 s⁻¹
 1.1 Pas at shear rate of 30.0 s⁻¹

After Sun Lotion (Iricalmin)

This modern after sun lotion with Iricalmin regenerates the protective lipid layer of the skin and has anti-irritant activity. In addition Iricalmin has moisturizing properties. The alcohol in the formulation gives an agreeable cooling effect.

Ingredients/INCI Name:

	<u>Wt%</u>
A) Tego Care 450/Polyglyceryl-3 Methylglucose Distearate	1.50
Lanette O/Cetearyl Alcohol	1.15
Cutina GMS V/Glyceryl Stearate	1.15
Cetiol 868/Octyl Stearate	8.00
Fitoderm/Squalane	5.00
Bisabolol/Bisabolol	0.20
Wacker-Belsil CM 040/Cyclomethicone	2.00
B) Deionized Water	65.10
Keltrol/Xanthan Gum	0.10
C) Glycerin/Glycerin	5.00
Phenonip	0.50
Iricalmin/Water, Wheat (Tritium Vulgare) Germ Extract, Saccharomyces Cerevisiae Extract, Sodium Hyaluronate	5.00
D) Ethyl Alcohol 96%/Alcohol	5.00
Fragrance/Rivalia 0/221212	0.30

Procedure:

Heat the ingredients of fatty phase A) to 70C.

Heat the ingredients of water phase B) to 75C.

Under stirring add phase B) to phase A), cool to 50C, homogenize and cool to 30C.

Then add phase C) and stir cold. Finally incorporate phase D).

SOURCE: Pentapharm Ltd.: Application No. C 029.0/05.99

After Sun Soother with Aloe Vera

A refreshing creamy lotion which soothes, cools and moisturizes sun-dried skin.

<u>Ingredients:</u>	<u>Wt%</u>
A. Water	86.23
Phospholipid SV	3.0
Propylene Glycol	2.0
B. Monafax MAP 160	1.0
Cetyl Alcohol	2.0
Hexyl Laurate	1.0
Monasil PCA	2.0
C. AMP (95%)	0.35
D. Titanium Dioxide	0.4
E. Aloe Vera Gel 1:1	2.0

Procedure:

Combine Part A while heating to 70C. Separately, mix Part B while heating to 70C. Add Part B to Part A slowly with rapid agitation. Add Part C. Add Part D, homogenize, cool to 50C. Add aloe vera, color, fragrance and preservative. Package.

Typical Properties:

Appearance: White flowable lotion
 Viscosity: 23,400 cP
 pH: 6.1
 Formula F-836

Sunscreen Stick

The following formulation produces a waterproof sunscreen stick which has a SPF factor of approximately 10-20.

<u>Ingredients:</u>	<u>Wt%</u>
Monalac ML (Refined Milk Lipid)	75.0
Ozokerite #1	15.0
Octyl Methoxycinnamate	7.0
Benzophenone-3	3.0
Fragrance	q.s.

Procedure:

Blend the Monalac ML and Ozokerite #1 together at 65-75C. Avoid air entrainment. When uniform, add other ingredients one at a time and continue blending until clear. Reduce heat, add fragrance, antioxidant (optional) and preservative and pour at 50-60C into package. A rich, smooth, protective and non-greasy skin covering will be provided.

Formula F-835

Natural Everyday Sunblock

This light, smooth cream has nice emolliency and spreads easily. It incorporates both titanium dioxide and zinc oxide as the natural sunblocks.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A: Deionized Water	55.50
Propylene Glycol	2.50
Water (and) Titanium Dioxide/Tioveil AQ-G	10.00
B: Zinc Oxide (and) Isopropyl Myristate/Spectraveil IPM	10.00
Mineral Oil/Drakeol 7	7.00
Cyclomethicone/DC 344 Fluid	2.50
Apricot Kernel Oil	2.50
Steareth-21/Brij 721S	2.50
Glyceryl Stearate/Cerasynt GMS	2.00
PPG-15 Stearyl Ether/Arlamol E	2.00
Cetyl Alcohol/Lanette 16	1.50
Isocetyl Alcohol/Eutanol G-16	1.00
C: Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben/Germaben II-E	1.00
Fragrance	q.s.

Procedure:

Mix the part A ingredients and heat to 70-75C with stirring. Heat part B (except for the Spectraveil) to 75-80C with gentle stirring until all the solids have dissolved. Add the Spectraveil to part B, mix well, then add part B to A with stirring. Continue stirring while allowing the mixture to cool. Add part C at 40C. Continue mixing to 30C.

Sunscreen Gelee

This light, smooth anhydrous gelee contains mineral oil and other emollients which help moisturize the skin while exposed to the sun.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
Mineral Oil/Drakeol 7	55.00
Polyethylene/Epolene N-21	9.75
Isopropyl Palmitate	9.00
Octyl Methoxycinnamate/Escalol 557	7.00
Super Petrolatum	5.25
Kukui Nut Oil	4.00
Maleated Soybean Oil/Ceraphyl GA-D	3.00
Cetearyl Alcohol (and) Ceteareth-20/Lipowax D	3.00
Macadamia Nut Oil	2.00
Peanut Oil	1.00
Dimethicone/DC 200 Fluid 2 cSt	0.95
BHT	0.05
Fragrance	q.s.

Procedure:

Heat all ingredients except fragrance to 75-80C with stirring until homogeneous. Allow the mixture to cool and add fragrance just before solidification occurs. Continue gentle mixing during cooling to give a creamy, light gel. Package at 30C.

Physical Sunscreen Body Lotion

This sunscreen lotion provides a light, soft, smooth and non-tacky feel for daily use. This unique after-feel results from SFE839 elastomer dispersion, SF1642 silicone alkyl copolymer and SF1528 silicone emulsifier. All three ingredients are both functional ingredients and aesthetic ingredients. SF1528 silicone emulsifier gives a stable water in oil emulsion where SFE839 elastomer dispersion and SF1642 silicone alkyl copolymer act as thickening agents. In addition, SFE839 elastomer dispersion is a detackifier and gives substantivity to the formulation.

<u>Ingredient/Function:</u>	<u>Wt%</u>
Part A:	
Cyclopentasiloxane (and) Dimethicone Copolyol(SF1528) (1)/Emulsifier	10.0
Cyclopentasiloxane(SF1202)(1)/Emollient	16.0
Cyclopentasiloxane (and) Dimethicone/Vinyl Dimethicone Copolymer(SFE839)(1)/Emollient, Thickener	3.0
Sorbitan Oleate/Emulsifier	0.5
Part B:	
Titanium Dioxide (2)/Physical Sunscreen	5.0
Part C:	
C30-45 Alkyl Dimethicone(SF1642)(1)/Thickener	1.0
Part D:	
Butylene Glycol/Humectant	2.0
NaCl/Stabilizer	0.5
Quaternium-15/Preservative	0.1
Water/Diluent	61.9

Procedure:

1. Combine SF1528, SFE839, SF1202 and mix until uniform, then add Sorbitan Oleate.
2. Slowly add TiO₂ to Oil Phase. Mix until uniform.
3. Heat the batch to 65C.
4. Melt SF1642 and add to 3.
5. Separately mix together water, butylene glycol, NaCl, and preservative.
6. Slowly add water phase to oil phase and continue mixing for 30 min.
7. Homogenize and package.

Self Tanning Body Lotion (Erythrulose/Phytaluronate)

Erythrulose and Dihydroxyacetone in this body lotion is the ideal combination for a natural, uniform and long lasting tan. Phytaluronate adds moisture to the skin and in combination with glycerin combats the drying out.

<u>Ingredients/INCI Name:</u>	<u>Wt%</u>
A) Emulgade PL68/50/Cetearyl Glucoside, Cetearyl Alcohol	1.50
Lanette O/Cetearyl Alcohol	1.50
Miglyol 812/Caprylic/Capric Triglyceride	8.00
Cetiol 868/Octyl Stearate	4.00
Abil-350/Dimethicone	0.50
B) Deionized Water	66.60
Keltrol/Xanthan Gum	0.10
Phytaluronate/Locust Bean (Ceratonia Siliqua) Gum	3.00
C) Glycerin/Glycerin	5.00
Phenonip	0.50
D) Deionized Water	5.00
Erythrulose/Erythrulose	3.00
Dihydroxyacetone/Dihydroxyacetone	1.00
E) Fragrance/Rivalia 0/221212	0.30

Procedure:

Heat the ingredients of fatty phase A) to 70C.

Heat the ingredients of water phase B) to 75C.

Under stirring add phase B) to phase A), cool to 50C, homogenize and cool to 30C.

Then add phase C) and stir cold. Finally incorporate phases D) and E) one after the other and adjust the pH to 4.5.

SOURCE: Pentapharm Ltd.: Application No. C 030.0/05.99

Self Tanning Lotion

An oil-in-water Self Tanning Lotion containing Bentone Gel TN and Bentone LT rheological additives.

<u>Ingredients:</u>	<u>Wt%</u>
Glyceryl Stearate, PEG-100 Stearate	4.0
Caprylic/Capric Triglyceride	5.0
Propylene Glycol	4.0
Cetearyl Alcohol	1.2
Dihydroxy Acetone	5.0
C12-15 Alkyl Benzoate	4.0
Bentone Gel TN	2.5
Bentone LT (3% dispersion)	8.0
Methyl Paraben	0.1
Propyl Paraben	0.1
Citric Acid	qs to pH 4
Demineralized Water	bal to 100%

Bentone LT dispersion:

Bentone LT	3.0
Deionized Water	97.0

Method of Manufacture:

1. Prepare a dispersion of the Bentone LT in water. (see below)
2. Disperse the two preservatives in 90% of the water, add the Propylene Glycol and the Bentone LT premix.
3. Heat to 75-80C.
4. Mix the liquid oil and the ester, and thoroughly disperse the Bentone Gel TN in the mixture. Add the Cetearyl Alcohol and emulsifier to the mix.
5. Heat to 75-80C.
6. Add the two phases together with high-shear stirring.
7. At 50C, transfer to a propeller stirrer and continue to cool.
8. Mix the Dihydroxyacetone with the remaining 10% of the water.
9. At 40C add the DHA premix.
10. At 25C check the pH and adjust if necessary with Citric Acid to pH 4.

Preparation of Bentone LT Dispersion:

1. Prepare a 3% dispersion of Bentone LT additive in deionized water using a rotor-stator or similar high-shear mixer (e.g. Silverson).
Start the mixer in the water, steadily add the Bentone LT to the vortex and stir until completely dispersed. (15-20 mins).
2. Allow the premix to stand to let any entrapped air escape.

The Dihydroxy Acetone has a pH of about 4.0 and therefore present a problem for many aqueous thickeners. Bentone LT additive, however, provides stable viscosity build. Additionally, the even distribution and spreadability of the lotion together with its silky residual feel are imparted by the Bentone TN additive.

Oil Phase:		
1	AEC Cherry Pit Oil	7.500
2	AEC Hydroxyoctacosanyl Hydroxystearate	5.000
3	AEC Methoxy PEG 22 Dodecylglycol Copolymer	2.000
4	AEC PEG 45 Dodecylglycol Copolymer	4.000
5	Tioveil TG	12.500
6	Cocoa Butter, Refined	5.000
7	AEC Diisostearyl Trimethylolpropane Siloxy Silicate	3.000
8	AEC Dimethicone V100	2.000
Aqueous Phase:		
9	Water; Pure	53.250
10	Propylene Glycol USP	5.000
11	Preservative as required	0.400
Cooling Cycle:		
12	Fragrance; Cherry AG6328	0.350

Mixing Instructions:

NOTE: The Aqueous is added to the Oil Phase. The product is a w/o emulsion and is water resistant. Weigh the items of the Oil Phase into a jacketed vessel and heat to 80/85C with stirring, ensure the Tioveil TG is fully dispersed before slowly adding the Aqueous Phase while vigorously mixing. Once addition is complete the emulsion is cooled with slow speed stirring, the perfume added and the product given a final high shear mix.

Soothing After Sun Lotion

This emollient lotion contains actives to soothe sunburned skin.
Petrolatum helps moisturize dry skin exposed to the sun.

<u>Ingredient/Trade Name:</u>	<u>Wt%</u>
A: Deionized Water	78.10
Aloe Vera Gel/Activera 104	2.00
Glycerin	1.00
Acrylates/Octylacrylamide Copolymer/Dermacryl LT	1.00
Triethanolamine	1.00
Carbomer/Carbopol 941	0.20
Methylparaben	0.20
Tetrasodium EDTA/Hamp-Ene 220	0.05
B: Dioctyl Malate/Ceraphyl 45	3.50
PEG-7 Glyceryl Cocoate/Cetiol HE	3.30
Petrolatum/Snow Petrolatum	2.50
Glyceryl Stearate/Cerasynt GMS	2.00
PEG-40 Stearate/Myrj 52-S	1.00
Shea Butter Unsaponifiables (and) Decosahexanoic Acid (and) Eicosapentaenoic Acid (and) Tocopheryl Acetate (and) Corn Oil Unsaponifiables/Destressine 2000	1.00
Retinyl Palmitate/Vitamin A Palmitate	0.50
Propylparaben	0.15
C: Imidazolidinyl Urea/Germall 115	0.30
Fragrance	0.20

Procedure:

Disperse the Carbopol and Dermacryl in rapidly agitated DI water. Add the triethanolamine and heat to 75C with stirring. Add the remaining part A ingredients and continue stirring and heating to 75C. Heat part B to 80C with gentle mixing until all the solids have dissolved. Add part B to A with stirring and continue mixing while allowing the mixture to cool. At 40C, add part C. Continue gentle stirring to 30C.

Sun Care SPF 15
PABA Free, Oil Free

<u>Ingredients/CTFA Name:</u>	<u>Wt%</u>
A-A1 Schercemol CO/Cetyl Octanoate	10.00
Schercemol DISD/Diisostearyl Dimer Dilinoleate	1.00
Schercemol TISC/Triisostearyl Citrate	5.00
Silicone fl. 350 cps	0.20
Cetyl Alcohol	1.50
Schercemol GMIS/Glyceryl Isostearate	4.00
Amphisol/Cetyl Phosphate (and) DEA Cetyl Phosphate	2.50
 A2 Parsol MCX/Octyl Methoxycinnamate	 7.50
Dipsal/Dipropylene Glycol Salicylate	5.00
 B-B1 Deionized Water	 48.40
Carbopol 940 2% Aq. Sln.	10.00
B2 Glycerin	3.00
B3 Triethanolamine	0.20
 C- Germaben II	 1.00
D- Aloe Vera Extract	0.50
E- Fragrance	0.20

Procedure:**Phase B:**

In the main beaker, disperse B1 together at 75-85C.

Add Glycerin.

Add Triethanolamine to neutralize the Carbopol gel.

Mix until a smooth gel is obtained.

Phase A:

Blend Phase A1 at 85C.

Once completely clear add A2.

Blend Phase A together until a homogeneous oil phase is obtained.

Add Phase A to Phase B with continuous mixing at 80-85C for fifteen minutes.

Cool batch to 60C with continuous mixing then add Phase C.

Continue to cool batch to 30C, then add Phase D and Phase E in sequence

Continue to cool batch with mixing to 25-28C

Cocoa Butter	0.10
Tocopheryl Acetate/Vitamin E Acetate	0.10
Propylparaben	0.10
B: Deionized Water	74.05
Water (and) Titanium Dioxide/Tioveil AQ-G	5.00
Magnesium Aluminum Silicate/Veegum Ultra	1.75
Methylparaben	0.10
C: Diazolidinyl Urea/Germall II	0.10
Fragrance	q.s.

Procedure:

Heat part A to 80-85C with gentle mixing until all the solids have dissolved. Heat Part B to 75-80C with stirring. Add part A to B with stirring and continue mixing while allowing the mixture to cool. At 40C, add part C. Continue stirring to 30C.
Formula 597-87

SOURCE: Penreco: Suggested Formulations

Waterproof SPF 30 Sunscreen

This sunscreen formula containing Croda's new conditioning and emulsifying system Crodafos CES was clinically tested by AMA Laboratories for its Sun Protection Factor (SPF) and shown to have a static SPF of 31.66 and a Waterproof SPF of 30.31. The ability of Crodafos CES to increase oil deposition and improve wash-off resistance appears to enhance the formula's sunscreen performance and contribute to the high SPF.

<u>Ingredients:</u>	<u>Weight%</u>
Deionized Water	63.23
Carbopol 981	0.13
Crodafos CES (Cetearyl Alcohol (and) Cetearyl Phosphate)	6.50
Benzophenone-3	5.00
Octyl Methoxycinnamate	7.50
Octyl Salicylate	5.00
Menthyl Anthranilate	5.00
Crodamol OS (Octyl Stearate)	5.00
NaOH-10% Soln.	1.54
BHT	0.10
Propylene Glycol (and) Diazolidinyl Urea (and) Methyl Paraben (and) Propyl Paraben	1.00

pH=5.8+-0.5

Viscosity=17,000 cps+-10% (RVT Spindle TB, 10 rpm @ 25C).

Static SPF=31.66 Waterproof SPF=30.31

Procedure:

Dust Carbopol into the deionized water while stirring rapidly. Mix well for good hydration. Begin heating to 75-80C. Add Crodafos CES and mix well until all is melted and homogeneous. Add Benzophenone-3, Octyl Methoxycinnamate, Octyl Salicylate, Menthyl Anthranilate and Crodamol OS individually and with good mixing. Continue mixing at 75-80C, until homogeneous. Begin slow cooling and at 60C add NaOH solution. Cool to 45C and add BHT and preservative.

N.A.T.C Approved

**Water-Resistant Sunscreen Lotion Using Avalure AC 118,
Pemulen TR-2 & Carbopol Ultrez 10 Polymers
SPF 24/A0005**

This high SPF sunscreen lotion provides long-lasting UV protection and has excellent water-resistant properties provided by Avalure AC 118 film-forming polymer and Pemulen TR-2 polymeric emulsifier.

INCI-CTFA Name/Trade Name:**Wt%****Part A:**

1. Deionized Water	66.10
2. Carbopol Ultrez 10 Polymer/Carbomer	0.25
3. Methocel E4M/Hydroxypropyl Methylcellulose	0.10
4. Propylene Glycol	1.00
5. Nuosept C/Polymethoxy Bicyclic Oxazolidine	0.40
6. Disodium EDTA	0.05
7. Crovol A-40/PEG-20 Almond Glycerides	0.40

Part B:

8. Neo Heliopan, Type AV/Octyl Methoxycinnamate	7.50
9. Neo Heliopan, Type OS/Octyl Salicylate	5.00
10. Neo Heliopan, Type BB/Oxybenzone	6.00
11. Finsolv TN/C12-15 Alcohols Benzoate	5.00
12. Pemulen TR-2 Polymer	0.25

Part C:

13. AMP-95/Aminomethyl Propanol	0.30
14. Avalure AC 118 Polymer/Acrylates Copolymer	7.50
15. Fragrance #99189 "Twister"	0.15

Properties:

Appearance: Milky white emulsion

pH: 6.0-6.5

Viscosity (cP): 18,000-24,000

SPF: 24

Stability: Passed 45C, accelerated 1 month

Passed freeze/thaw-3 cycles

Preparation Procedure:

1. Part A: Disperse Carbopol Ultrez 10 polymer and Methocel E4M in warm deionized water (40-50C). Reduce mixing speed after polymers are dispersed.
2. When uniform, add other Part A ingredients and mix until uniform.
3. Part B: Combine first four ingredients in Part B in a separate vessel. Heat and mix until oxybenzone has dissolved.
4. Cool Part B to 45C. Disperse Pemulen TR-2 in Part B and mix until well dispersed.
5. With vigorous agitation, add Part B to Part A. Mix for 20 minutes or until a smooth, non-grainy dispersion is apparent.
6. Add AMP-95 to batch, mix until a smooth product is obtained.
7. Add Avalure AC 118 and fragrance to batch. Mix until uniform.

Water Resistant Sunscreen with SPF 15

SC1318, silicone resin ester, is a substantive emollient, forming a durable, water resistant film which holds the active ingredient on the skin. This SPF 15 sunscreen stays with you while you are active.

Ingredient/Function:

	<u>Wt%</u>
Part A:	
Deionized Water/Diluent	74.13
Tetrasodium EDTA/Preservative	0.05
PEG-8/Humectant	4.00
Phenoxyethanol (and) Methylparaben (and) Butylparaben (and) Ethylparaben (and) Propylparaben (1)/Preservative	0.25
Magnesium Aluminum Silicate/Slip/Feel	0.25
Part B:	
Diisostearoyl Trimethylolpropane Siloxysilicate (SF1318) (2)/Film-former/Emollient	7.00
Octyl Methoxycinnamate/UV absorber	7.00
Octyl Salicylate/UV absorber	3.00
Benzophenone-3/UV absorber	3.00
Acrylates/C10-30 Alkyl Acrylate Crosspolymer (3)/Emulsifier/Thickener	0.30
Carbomer (4)/Thickener	0.15
Sorbitan Oleate/Emulsifier	0.20
Part C:	
Fragrance	0.12
Part D:	
Triethanolamine 99%/Neutralizer	0.55

Procedure:

1. Heat water of Part A to 75C. Add remaining ingredients in order with moderate propeller agitation, making sure that all parabens have dissolved. Mix for 15 minutes, while cooling to 50C.
2. Combine Part B with sweep agitation at ambient temperature. Mix until a smooth "paste" is obtained.
3. Add Part B at room temperature to Part A (at 50C) with rapid propeller agitation. Mix for 30 minutes, or longer to ensure that the polymers are completely dispersed.
4. Cool with agitation to 45C. Add Part C to batch with moderate propeller agitation. Mix 10 minutes.
5. Add Part D to batch at 40C. Mix with moderate agitation for 20 minutes. Cool to room temperature.
6. The pH should be 6-7.

Miscellaneous

Anhydrous Basic Ointment

<u>Raw Materials:</u>	<u>Wt%</u>
A. Softisan 649	10
Miglyol 812 (Caprylic/Capric Triglyceride)	5
Softigen 701 (Glyceryl Ricinoleate)	4
Imwitor 780K (Isostearyl Glyceryl Succinate)	3
Petrolatum	68
Permulgin 4101 (co-emulsifier)	10

Preparation:

All ingredients are melted, mixed and stirred cold.

Analgesic Suppositories

<u>Raw Materials:</u>	<u>Parts by Weight</u>
Trimethobenzamid-HCl	0.200g
Benzocain	0.030g
Witepsol H15 (Hard Fat, DAB 10)	1.800g
Softigen 710	0.200g

Heparin Gel

<u>Raw Materials:</u>	<u>Wt%</u>
Heparin sodium	50,000IE
Softigen 767	10
Carbopol 980 (Carbomer)	1.5
NaOH solution, 10%	4
Preservative	q.s.
Water ad	100

Preparation:

Dissolve the heparin sodium in the quantitative of water specified, add preservative. After weighing the quantity, add Carbopol and NaOH solution and stir well until a homogeneous gel is obtained. Gradually mix the gel with the Softigen.

Heparin Cream

<u>Raw Materials:</u>	<u>Wt%</u>
A. Softisan 601	18
Imwitor 960 flakes (Glyceryl Stearate SE)	5
Miglyol 812 (Caprylic/Capric Triglyceride)	5
Cetyl Alcohol	3
B. Preservative	q.s.
Water ad	100
C. Heparin sodium	20000IE

Preparation:

A is heated to about 75C, B is brought to the same temperature and emulsified into A. At about 25C A+B is put into C portion by portion.

Procedure:

Mix phase C. Heat phase B to 80C, stir until clear and cool to 25C. Add phase A to phase B. Add phase C. Homogenize. As required add perfume.

Note:

Samples contain as preservatives

0.20% Euxyl K400

Formulation 14-04/F

Insect Repellent Lotion

<u>Raw Materials:</u>	<u>Wt%</u>
A Insect Repellent 3535 (Art. No. 111887) (Ethyl Butyl-acetylaminopropionate)	20.00
Polyethylene glycol 400 (Art. No. 817003) (PEG-8)	5.00
B Ethanol 96% (Art. No. 100971)	35.00
Water, demineralized	15.00
C Polyethylene glycol 1500 (Art. No. 817005) (PEG-30)	4.00
D Arlamol E (PPG-15 Stearyl Ether)	3.00
Perfume oil Bariton (10607)	0.30
E Water, demineralized	17.70

Procedure:

Blend phase D. Mix phase B and incorporate phases A, C, D and E while stirring.

Note:

pH22C=5.8

Formulation 10-01/F

SOURCE: Rona-Merck: Suggested Formulations

Peppermint Foot Balm

A cooling peppermint foot balm formulation containing Bentone Gel LOI rheological additive

<u>Ingredients:</u>	<u>Wt%</u>
Cetearyl Alcohol (and) Cetareth 20	5.00
Cetyl Alcohol	3.00
Caprylic/Capric Triglyceride	8.00
Aloe Vera Gel 10:1 decolorized	1.50
Methyl Pyrrolidone Carboxylate	0.80
Glycerine-Vegetable derived	5.00
Methyl Gluceth 10	2.00
Propylene Glycol and Lichen Extract	0.20
Perfume Peppermint	0.30
Methyldibromoglutaronitrile (and) Dipropylene Glycol	0.20
FDC Yellow 5 (0.1% solution)	0.40
FDC Green 3 (0.1% solution)	0.20
Bentone Gel LOI	2.00
DeminerIALIZED Water	
	Bal to 100%
	(pH approx. 6.0)

Method of Manufacture:

1. Thoroughly disperse the Bentone Gel LOI additive in the oil phase, add the Methyl, Pyrrolidone Carboxylate and heat to 75-80C.
2. Heat the aqueous phase (water, colors, Aloe Vera, Glycerine, and Methyl Gluceth 10) to 75-80C.
3. Using high shear mixing, add the two phases together and continue to homogenize.
4. At 45-50C transfer to a propeller stirrer and at 40C add the Propylene Glycol and Lichen Extract.
5. Add the perfume and preservative below 30C.

This is a rich, oil-in-water cream, containing Aloe Vera and a fungicide. The presence of the coolant (Methyl Pyrrolidone Carboxylate) gives a refreshing sensation. The stability, viscosity control, and in particular, the excellent skin feel during and after application are provided by Bentone Gel LOI additive.

SOURCE: Rheox, Inc.: Elementis Specialties: Suggested Formula

Rheumatic Ointment

<u>Raw Materials:</u>	<u>Wt%</u>
A. Softisan Gel	25
Mineral Oil	15
Imwitor 780K (Isostearyl Diglyceryl Succinate)	5
B. Preservative	q.s.
Water ad	100
C. Miglyol 812 (Caprylic/Capric Triglyceride)	3
Camphor	0.5
D. Benzyl Nicotinate	1

Preparation:

A is stirred homogeneously and warmed up to approx. 75C. B is brought to the same temperature slowly emulsified into A. C is warmed until camphor is dissolved and then stirred into the hot emulsion. After cooling down D is emulsified into the cream.

Haemorrhoidal Ointment

<u>Raw Materials:</u>	<u>Wt%</u>
A. Softisan Gel	15
Petrolatum, white	15
Imwitor 780K (Isostearyl Diglyceryl Succinate)	5
B. Allantoin	1
Heparin-Na	10000IE
Lidocain-HCl x H2O	0.4
Preservative	q.s.
Water ad	100
C. Basic Bismuth Nitrate	5

Preparation:

At first A is stirred to a homogeneous mass and heated to approx. 75C. Solution B is brought to the same temperature and prepared together with A to an emulsion. After cooling down to room temperature C is dispersed homogeneously in A+B.

SOURCE: Huls Aktiengesellschaft: Suggested Formulations

Rheumatism Ointment

<u>Raw Materials:</u>	<u>Wt%</u>
A. Benzyl Nicotinate	0.3
B. Imwitor 780K (Isostearyl Diglyceryl Succinate)	5
Miglyol Gel B	25
Mineral Oil	15
C. Camphor	2
Miglyol 812 (Caprylic/Capric Triglyceride)	3
D. Heparin sodium	5000 I.E.
Aqua conservans ad	100

Preparation:

B is homogeneously stirred first and then melted at about 75C. The heparin is dissolved in a part of water. The water residue, after heating to about 75C, is compounded with B to an emulsion. Phase C is heated until camphor is dissolved and is then added to the hot ointment. After cooling down A and the heparin solution are emulsified into the cream.

Nasal Ointment

<u>Raw Materials:</u>	<u>Wt%</u>
A. Ephedrine-HCl	0.05
Camphor	0.15
Peppermint Oil	0.30
Eucalyptus Oil	0.90
Fennel Oil	0.60
B. Miglyol Gel B	10
Imwitor 780K (Isostearyl Diglyceryl Succinate)	5
Mineral Oil	17
Paraffin	3
C. Aqua conservans ad	100

Preparation:

Ephedrine-HCl is dissolved in a small amount of water. B is heated up to approx. 75C and then homogenized. C is brought to the same temperature and emulsified into B. After cooling down to below 40C the ephedrine solution and the mixture of the remaining components of A are admixed.

SOURCE: Huls Aktiengesellschaft: Suggested Formulations

Wound- and Healing Ointment

<u>Raw Materials:</u>	<u>Wt%</u>
A. Zinc Oxide	10
D-Panthenol	3
Vitamin A	0.3
B. Imwitor 780K (Isostearyl Diglyceryl Succinate)	6
Miglyol 812 (Caprylic/Capric Triglyceride)	7
Paraffin	5
Petrolatum	13
Lunacera P (Microwax)	3
C. Aqua conservans ad	100

Preparation:

B and C are each heated up to approx. 75C and then admixed until an emulsion is obtained. The zinc oxide is manufactured homogeneously with the finished ointment. At last the vitamin A is added.

Urea Cream, W/O

<u>Raw Materials:</u>	<u>Wt%</u>
A. Miglyol 812 (Caprylic/Capric Triglyceride)	7
Imwitor 780K (Isostearyl Diglyceryl Succinate)	6
Imwitor 928 (Glyceryl Cocoate)	3
Petrolatum	9
Elfacos ST9 (stabilizer)	4
Elfacos C26 (Hydroxyoctacosanyl Hydroxystearate)	5
B. Urea	10
Preservative	q.s.
Citrate buffer solution ad	100

Preparation:

A is heated to 75C. B is brought to the same temperature and emulsified into A.

SF1550 Silicone	Phenyl trimethicone	GESil
SF1555 Silicone	Bis-phenylpropyl dimethicone	GESil
SF1632 Silicone	Cetearyl methicone	GESil
SF1642 Silicone	C30-45 alkyl dimethicone	GESil
SF1708 Amine Silicone	Trimethylsilylamodimenthicone	GESil
SFE839 Elastomer Disp	Cyclopentasiloxane & dimethicone/ vinyl dimethicone crosspolymer	GESil
Shebu Refined	Shea butter/emollient	
Shinju 100T White	Synthetic pearl pigment	Mearl
Sicovit Patentblau 85	E131: C.I. 42051/Acid Blue 3	
Silikonol AK350		Wacker
Silicon Oil AK500	Dimethicone	Wacker
Silicon Oil AR200		Wacker
Silicone 200/100	Dimethicone	DowCorn
Silkall 100	Silk powder	Polyest
Silkpro	Hydrolyzed silk	Polyest
Silsoft A-843		NatStar
Silwet L-7657	Dimethicone copolyol	Witco
Sipon ES-2	Sodium lauryl ether sulfate	
SM2101 Silicone	35% emulsion of a non-reactive aminofunctional silicone fluid	GESil
SM2115 Silicone	Amine functional silicone micro- emulsion	GESil
SM2169 Silicone	60% emulsion of a 60,000 cst dimethicone fluid	GESil
SM2658 Silicone Emulsion	Cationic emulsion of an amine functional polymer	GESil

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
SM2725 Silicone Emulsion	Dimethiconol & sodium dodecylbenzenesulfonate	GESil
SM2765 Silicone Emulsion	Dimethiconol & sodium dodecylbenzenesulfonate	GESil
Snow Petrolatum		Penreco
Sodium Bicarbonate, Grade 3		Church&
Sodium Carboxymethylcellulose, Type 7H4F		Aqualon
Softigen 701	Glyceryl ricinoleate	Huls
Softigen 710		Huls
Softigen 767	PEG-6 caprylic/capric triglycerides	Huls
Softisan Gel	Complex of chemicals	Huls
Softisan 100	Hydrogenated cocoglycerides	Huls
Softisan 378	Caprylic/capric/stearic triglyceride	Huls
Softisan 601	Glyceryl cocoate & hydrogenated coconut oil & cetareth-25	Huls
Softisan 645 & 649	Bis-diglyceryl polyacyladipate-2	Huls
Solan 50	PEG-60 lanolin	Croda
Solimate "E"		UnitedG
Solubilizer S12	Nonoxynol-14	Givauda
Solulan C-24		Amercho
Solulan 16		Amercho
Solulan 75		Amercho
Solulan 98	Polysorbate 80, cetyl acetate, acetylated lanolin alcohol	Amercho
Solvent ID	Isododecane	
Sorbitan Palmitate		Connock

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Sorbitol F Liquid		
Span 60	Surfactants	ICI
Span 80	Surfactants	ICI
Spearmint Oil RM-110		
Spectraveil IPM	Zinc oxide & isopropyl myristate	Dempsey
Spectraveil TG 40% Dispersion		Dempsey
Spermaceti Substitute #573 Cetyl Esters		
SPM Wax	Cetyl esters	Robeco
Squalane		Robeco
SR1000 Silicone Resin	Trimethylsiloxysilicate	GESil
SR4230 Silicone Resin	Cyclopentasiloxane & Trimethylsiloxysilicate	GESil
SS4267 Silicone Resin	Dimethicone & trimethylsiloxysilicate	GESil
Stabileze 06/QM		ISP
Standamox	Amine oxide	Henkel
Standapol A & EA-1	Alkyl ether sulfate/alkyl sulfate	Henkel
Stearic Acid No. 63-0412		Ross
Stearyl alcohol & cetareth-20		Lanaete
Stepanol AEG	Ammonium lauryl sulfate &.....	Stepan
Stepanol AM-V	Ammonium lauryl sulfate (30%)	Stepan
Stepanol WA Paste	Sodium lauryl sulfate	Stepan
Stepanol WA-100	Sodium lauryl sulfate	Stepan
Sucrose Distearate		Croda
Sulfochem ALS & AOS & B-209 & B-2090P & DLS & EA-2 & ES-2 & ES-3 & MG & MG-LC & SBS & SLS & SLX & TD-3 & TLS	Alkyl sulfate/alkyl ether sulfate	Chemron

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Sunflower Seed Oil		Polyest
Super Hartolan	Lanolin alcohol	Croda
Super Refined Wheat Germ Oil		Croda
Super Sterol Ester		Croda
Suttocide A	Neutralizer/preservative	ISPSutt
Sylodent D767 & 15 & 15X & 750 & 753 & 756		Davison
Talc 141 BC		Whittak
Talc 1629		Whittak
Teginacid	Glyceryl stearate & cetareth-20	Golds
Teginacid H	Glyceryl stearate & ceteth-20	Golds
Tegin M	Glyceryl stearate	Golds
Tegin P		Golds
Tego-Betaine F	Cocamidopropyl betaine	Golds
Tego Care 450	Polyglyceryl-3 methylglucose distearate	Golds
Tego-Glucoside L55	Lauryl glucoside, steareth-25, ceteth-20	Golds
Tego-Pearl N100	Glycol distearate, steareth-4	Golds
Tenox 2 & 6	Antioxidants	Eastman
Tensine	Wheat protein/Film former	
Texapon K14S70 Spec & K14S Spec	Sodium myreth sulfate	Henkel
Texapon NSO & N40 & N70	Sodium laureth sulfate	Henkel
Texapon SB3F & SB3KC	Disodium laureth sulfosuccinate	Henkel
Thixotrate		UnitedG

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Timica Golden Bronze	Mica & iron oxides & titanium dioxide	Mearl
Timica Gold Sparkle	Mica & titanium dioxide & iron oxides	Mearl
Timiron MP-1001	Mica & titanium dioxide	Rona
Tioveil AQN		Dempsey
Tioveil AQ-G	Water & titanium dioxide	Dempsey
Tioveil FIN		Dempsey
Tioveil IPM	Titanium dioxide & isopropyl myristate	Dempsey
Tioveil MOTG	Titanium dioxide & mineral oil & caprylic/capric triglyceride	Dempsey
Tioveil OP	Titanium dioxide & octyl palmitate	Dempsey
Tioveil TG	Titanium dioxide & caprylic capric triglyceride	Dempsey
Titanium Dioxide UH 0082		
Titanium Dioxide 328 & 3328		Whittak
TiO2 Sperse BG		Collab
T-Maz 20	Polysorbate 20	PPG
Tocopherol Acetate		Hoffman
Tospearl 120A, 130A, 145A, 2000 Fine Particle	Polymethylsilsesquioxane	GESil
	Silicone Resins	
Transcutol		
Trimarin 61636	Perfume	
Tris(hydroxymethyl)-aminomethane:	Tromethamine	Merck
Tritiplex III	Disodium EDTA	
Tween 60	Polysorbate 60	ICI
Tween 80	Polysorbate 80	ICI

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Tween 85	Polysorbate 85	ICI
Tylose H4000P & H1000 & H100000yp	Hydroxyethylcellulose	Hoechst
Ucare Polymer JR-30M & JR-400 & LR-30M & LR-400	Polyquaternium-10	UnionCa
Ultima Petrolatum	Petrolatum	
Ultrapure L	Petrolatum White USP	Ultra
Ultra Talc #4006		Ultra
Ultrez 10		
Unicerin C-30		Induc
Unicide U-13	Imidazolidinyl urea	Induc
Unimoist U-125		Induch
Uninontan U-34		
Unipabol U-17	PEG-25 PABA	
Uniphen P-23	Preservative	Induc
Unipherol U-14		Induc
Unispheres YE-501 Yellow		Induc
Unistab S-69	Farnesol & linalool	UnCarb
Unitrienol T-27	Farnesyl acetate & farnesol & panthenyl triacetate	Induc
Unitwix		UnitedG
Uvinul O-18	Octyl salicylate	BASF
Varisoft CRC	Cetearyl alcohol & dicetyldim- onium chloride & stearamido- propyl dimethylamine	Witco
Veegum & HR & HV & Regular & Ultra	Magnesium aluminum silicate	Vander

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Viscarin SD389 & TP389	Carrageenan	FMC
Viscasil 60M	Dimethicone	GESil
Vitamin A Palmitate	Retinyl palmitate	
Vitamin A Palmitate Type PIMO/BH	Corn oil & retinyl palmitate	
Vitamin E Acetate	Tocopheryl acetate	
Vitamin E Linoleate	DL-alpha-tocopherol linoleate	Bleakle
Volatile Silicone VS-7158 or VS-1758		Witco
Volpo 20	Oleth-20	Croda
Wacker-Belsil CM040	Cyclomethicone	Wacker
Wacker-Belsil DM100	Dimethicone	Wacker
Wacker-Belsil DM350	Dimethicone	Wacker
Wacker-Belsil DMC6038	Dimethicone copolyol	Wacker
Wacker-Belsil SDM6022	Stearoxy dimethicone, dimethicone	Wacker
Wacker-Belsil TMS 3069 VP	Dimethicone, trimethylsiloxysilicate	Wacker
Wacker Emulsion E32	Stearoxy methicone, trideceth-10	Wacker
Wacker HDK H15	Silica dimethyl silylate	Wacker
Walnut Shell Powder		Connock
White Beeswax	Beeswax	
White Ozokerite 77W	Ozokerite	
Witcamide 511	Alkanolamide surfactant	Witco
Witconol 14	Polyglyceryl-4 oleate	Witco
Witco White Petrolatum		Witco
Witepsol H15	Hard fat, DAB10	Huls
