Other weekend and holiday eating-out options are *lechonerías* (roast pork restaurants) and seafood and fritter stands by the beach. *Lechonerías* are located all over the rural mountainous areas. They roast whole pigs and serve the meat with accompaniments that include rice, beans, *viandas*, *pasteles*, and *alcapurrias*. Even though most of the pigs are more likely to be roasted in gas ovens than over natural wood charcoal, *lechonerías* retain their reputation for serving old-style Puerto Rican food. The atmosphere is like a party, with plenty of music, dancing, and beer. In the coastal areas seafood outlets serve fried fish, as well as seafood salads made with *carrucho* (conch), octopus, *bacalao*, *jueyes* (land crabs), king crab, or imitation crabmeat. Beachside kiosks are also famous for their generously sized fritters, like *alcapurrias de jueyes* (land crab-stuffed *yautía* and green plantain fritters).

There is a wide variety of restaurants. Each town has at least a *fonda*, a *criollo* (Puerto Rican) restaurant, a pizzeria, and a Chinese restaurant. *Criollo* restaurants of all price levels abound all over, and seafood restaurants are the specialty of coastal towns but do not necessarily serve local seafood. The large metropolitan area, which includes San

A whole pig being grilled in a marketplace in Puerto Rico. (Dreamstime)

Juan and other municipalities, has a dynamic restaurant culture with a wide variety of international cuisines. The most popular restaurant categories are seafood, Puerto Rican, Italian, and Asian, followed by steakhouse, Caribbean, Iberian, and international. There are a few French restaurants and many upscale eclectic restaurants with renowned chefs like Wilo Benet of Pikayo and Peter Schintler of Marmalade. Upscale restaurants serve both international tourists and the growing local population of fine-restaurant enthusiasts. There is also a large number of fusion restaurants where chefs incorporate local flavors and ingredients into dishes from different parts of the world, with an emphasis on Asia. Fusion restaurants serve innovations like sushi rolls wrapped with ripe plantain strips and tandoori chicken with plantains and guava paste.

Restaurant culture in Puerto Rico is currently at a high point. In 2007 the first restaurant guide, called *Sall!* was published, and it has a companion Web site with editorial content, a calendar of food-related events, recipes, and customer-written reviews of restaurants in Puerto Rico and abroad. Many restaurants have been featured in U.S. gourmet magazines, and Puerto Rican chefs participate in U.S. cooking shows and competitions. Chef Roberto Treviño of Aguaviva participated in *Iron Chef America*, and Wilo Benet participated in *Top Chef Masters*. Many chefs working in Puerto Rico have lived, traveled, worked, or trained in the United States, Spain, France, and beyond, which gives their

restaurants an international flavor, whether they serve criolla or international cuisine.

Special Occasions

Traditional Puerto Rican food is expected at Christmastime. Even families without the time or expertise to cook the required dishes look for small caterers who sell specific dishes or full meals. The ideal menu consists of *arroz con gandules* (rice with pigeon peas), *pernil* (roasted pork leg), and pasteles in both the plantain and yucca varieties. These main dishes can be complemented with fritters and with store-bought snacks like potato chips, tortillas, and salsa. Traditional sweets are also required, particularly those made with coconut. Coconut flan, *tembleque* (cornstarch-thickened coconut milk custard), and *arroz con dulce* (thick coconut-milk rice pudding) are some of the favorites, and it is not rare to serve all three. Coconut milk is also the main ingredient in the Christmas drink *coquito*, which is often described as a coconut eggnog. Other treats expected for the Christmas meal are almonds, walnuts, hazelnuts, and *turrónes* (almond nougats) imported from Spain. The Christmas meal is generally a gathering of the extended family, and throughout the holiday season schools, offices, clubs, and groups of friends have their own Christmas parties with a similar menu. The Christmas menu serves as the model for other family celebrations like New Year's Eve, Mother's Day, and Father's Day.

Thanksgiving is a part of the Puerto Rican holiday calendar. Families gather together to enjoy either a traditional Puerto Rican holiday meal, a traditional U.S. Thanksgiving meal, or a combination of both. Rice and beans could be served with a roasted turkey that has been generously rubbed with a garlicky adobo to make it taste like pernil. Turkey prepared in this way is known as *pavochón*, a combination of the words for turkey (*pavo*) and pork (*lechón*). The turkey could also be stuffed with plantain, breadfruit, or yucca mofongo. Dessert options are likely to include a pumpkin flan and homemade or store-bought pies.

Roman Catholicism is the dominant religion in Puerto Rico, although large numbers consider

Arroz con gandules, rice with pigeon peas, is one of the traditional dishes served at Christmastime in Puerto Rico. (iStockPhoto)

themselves nonpracticing Catholics, and many others combine elements of Catholicism with Afro-Caribbean religions like Santería. This openness and eclecticism is manifested during Lent, particularly during Holy Week. Few Puerto Ricans abstain from meat in any officially prescribed way, but during Holy Week it is still customary for many families to consume seafood at home or in restaurants. Traditional peasant dishes like *serenata con bacalao*, a combination of boiled viandas served with a salted codfish salad, appear during this period, sometimes with more nostalgic than religious connotations.

For weddings and *quinceañeros* (15th-birthday celebration, particularly for girls), hiring a food caterer has increasingly become the norm. The menu could be similar to the Christmas meal, but often it consists of standard catering dishes that have been Puerto Ricanized. Such dishes include chicken legs in guava sauce and yucca-stuffed chicken breasts.

Diet and Health

A history of a plantation economy followed by one dominated by industries and services means that Puerto Rico imports the bulk of its food. There is small-scale production of coffee, bananas, vegetables, poultry, and dairy products, but it is not

enough to satisfy local demand, and many local producers find it hard to compete with cheaper food imports. In the 20th century the Puerto Rican diet shifted from one based on agricultural products and frequent scarcity to one based on agroindustrial processed foods and relative abundance. The results are well known in all industrialized countries: widespread obesity, including high rates of childhood obesity, and related diseases like diabetes, high blood pressure, and heart disease. In 2007 the government of Puerto Rico initiated a campaign to make exercise and nutrition instruction available in all municipalities.

Puerto Ricans are trying to improve the quality of their food in many different ways. Vegetarianism has become established as a viable diet alternative, and many stores and restaurants cater to this lifestyle. There are a few small organic farms, some of which offer community-supported agriculture programs. Most people have switched from lard to olive or vegetable oil, and many try to reduce their consumption of the fried and high-carbohydrate foods that are abundant in the Puerto Rican diet: rice, beans, viandas, fritters. Sedentary lifestyles, an abundance of heavily processed foods, and confusion and misinformation regarding diet and health guidelines are the norm.

Suriname

Overview

Suriname is the smallest independent country on the South American continent. The country is part of the greater Caribbean Basin and borders the Atlantic Ocean to the north, French Guiana to the east, Guyana to the west, and Brazil to the south. Suriname's official language is Dutch, but the Surinamese dialect Sranang Tongo is frequently spoken. In the 17th century the first Europeans settled in the area. Due to the colonization the native population of Amerindians was forced into the margins of a new society. From 1667 until 1975 Suriname was a Dutch colony and had a plantation economy. At the end of the 18th century, the majority of the population consisted of West African slaves. After the abolition of slavery, in 1863, immigrants from northern India, Indonesia (Java), and China started to constitute the workforce.

What Surinamese eat is strongly determined by ethnic background, geography, and religion. In this ethnically highly diverse country, no religion predominates. At present, around 27 percent of the Surinamese are Hindus, while various forms of Christianity are practiced by much of the rest of the population, which is comprised of around 20 percent Creoles (descendants of West African slaves and Europeans) and 15 percent Maroons (descendants of escaped slaves) and descendants of Europeans. The 15 percent who are Javanese are either Muslim or Christian. The remainder of the population consists of minorities such as Amerindians, Chinese, Jews, and Brazilians. The vast majority of Suriname's total population of around 470,000 people live in the capital Paramaribo. Following

independence in 1975, a third of the population migrated to the Netherlands, where at present approximately 350,000 Surinamese are living.

Food Culture Snapshot

Mavis Hofwijk was born in Paramaribo in 1939, where her husband Lesley was born in 1941. They were both raised in Suriname; the couple moved to the Netherlands in 1970, but they continue to live in Suriname as well, spending part of the year in each place. Lesley retired from teaching at an elementary school. Together with her daughter Candice, Mavis runs *Surinaams Buffet*, a well-known catering company in Amsterdam Zuidoost, a suburb where in the 1970s many Surinamese settled. The lifestyle and foodways of Mavis and Lesley are representative for many middle-class Surinamese, whose diet includes typical Surinamese but also Dutch and European-style dishes.

In Suriname the couple breakfasts on slices of bread or *Surinaamse puntjes* (Surinamese bread rolls) with *bakkeljauw* (salted dried cod), peanut butter, cheese, or jam. Breakfast is accompanied by a cup of tea or coffee. Every second or third day Mavis goes to the bakery to buy bread.

The couple eats a hot meal once a day, for either lunch or supper. Many times the meal is prepared with whatever is at hand or available, and served for lunch at around 1 or for dinner at 6. The main dish mostly consists of vegetables sautéed together with meat. Cooking is done without recipes. The taste of the dish should be good in the pot, and spices, salt, and pepper are added while cooking. The meal is always accompanied by rice. Together with rice, a few times a

week boiled roots and tubers are served. The meal is accompanied by *zuurgoed* (sweet and sour pickles) that are prepared with either *bilimbi* (a cucumber-like vegetable that grows on a tree; *Averrhoa bilimbi*) or cucumbers and onions in a mixture of vinegar, water, sugar, and spices such as allspice, peppercorns, garlic, and bay leaf. For dessert fresh fruits such as bananas, mangoes, and oranges are eaten. When in season, fruit is collected from the garden.

Like most Surinamese households, Mavis has a larder filled with food supplies. Her larder always contains *zoutvlees* (salted beef), *bakkeljauw*, dried shrimp, rice, legumes, spices, roots, and tubers. She buys her groceries either in one of the many local grocery stores or at the market; both are open seven days a week. From fresh meats to toilet paper, the mom-and-pop type of grocery stores sells all kinds of products. Ingredients are bought depending on the season and availability. Like most Surinamese, Mavis judges the quality of fruits, vegetables, meats, and other foodstuffs “with the eye” by touching, smelling, and looking at their appearance.

Major Foodstuffs

In the 1700s the arrival of the colonists caused a major change in the diet. New foods like wheat, olive oil, beef, pork, chicken, beer, and wine and new preparation techniques (e.g., smothering in butter and/or oil and cooking in an oven) were introduced. The colonists that migrated to Suriname were foremost of English, Dutch, and Sephardic Jewish origin, and they brought with them their own culinary habits and traditions. During colonization and in the centuries that followed, these habits contributed to the development of Suriname’s cuisine.

For centuries Suriname was a plantation economy with a strong focus on growing cash crops such as sugar, coffee, and cacao, so little attention was paid to agriculture. Since the colonial period grains, legumes, potatoes, beets, carrots, salt, meat, fish, and many other foods have been imported from abroad (Europe and North America). During the colonial period these costly imports provided the population with food but also ensured that the colonists could replicate their traditional foodways.

Suriname is an area that has a rich biodiversity. Over 90 percent of the country is covered with forest. Most of the agriculture and fishing takes place on the coast but hardly contributes to the country’s economy. Of the 40 million acres (16.2 million hectares) of land, around 3.7 million acres are considered to have agricultural potential. Only 15 percent of the labor force works in agriculture. Rice accounts for about half of all cultivated land, and rice and bananas are the major export products. The small fishing industry mostly exports shrimp.

Historically, the livelihoods of Amerindians, Maroons, Creoles, and other small communities depend on the produce of home gardens and fishing. Long before Suriname was discovered, the indigenous people already cultivated more than 50 plants. In addition to agriculture and fishing, hunting and gathering of wild plants provided food.

The traditional and largely self-supporting system for food provision is still practiced by inland communities such as the Maroons and Amerindians. These communities are foremost located in remote areas that are covered by dense tropical rain forest with an abundance of flora and fauna. In these communities women are responsible for the household and the kitchen garden. To provide carbohydrates, they cultivate roots and tubers such as cassava, taro (*Xanthosoma* spp.), and sweet potatoes. Other cultivated crops include pineapple, corn, plantains, melons, pumpkins, and peppers (*Capsicum annuum*), as well as edible fruits from palm species, cashew nuts (*Anacardium occidentale*), calabashes (*Crescentia cujete*), mangoes, guavas, lemons, coconuts, tropical almonds (*Terminalia catappa*), star fruit, bitter melons (or gourds), tomatoes, and all kinds of Chinese cabbages, legumes, and beans.

Surinamese hardly consume fresh milk. The use of powdered and (sweetened) condensed milk is very common. Condensed milk is frequently used for the preparation of pastries, porridges, and desserts. Sliced Dutch cheeses such as Edam and Gouda are imported and are popular eaten on bread.

Many different types of fresh- and saltwater fish can be found in the waters of Suriname. The fishing sector foremost thrives on the cultivation, catching, and export of shrimp. In the Surinamese kitchen

A Surinamese woman tends to her backyard garden. (iStockPhoto)

the use of (dried) shrimp and (imported) cod is very common. Besides catfish, grouper, mullet, shark, snapper, perch, snook, and anchovies, many kinds of known and lesser-known tropical fish from the ocean and the rivers are consumed. Fishing is done either privately or by local fishermen who sell their catch on the market.

Popular herbs and spices include allspice, bay leaf, celery, (black) pepper, masala (curry powder), cumin, coriander, nutmeg, and (hot) peppers. Due to the generous use of different kinds of chili peppers, Surinamese cuisine tends to be hot and spicy. The beloved Madame Jeanette pepper is one of the world's hottest. Other seasonings are salted meat (beef), *bakkeljauw* (salt cod), and dried shrimp. Surinamese celery is the most popular kitchen herb and is used in many dishes. Another distinctive feature of Surinamese cuisine is the balance between sweet, sour, and salt. For the proper balance of a dish, sugar, vinegar, salt, Aromat (a popular dry seasoning mix of salt, onion, mushroom, turmeric, and other spices), and stock cubes are added according to taste.

Surinamese love color. Red, yellow, blue, and green liquid colorings are frequently used to decorate pastry. The popular *schaafijfs* (crushed ice) is flavored with sugar syrups made from almonds, roses, and tropical fruits such as passion fruit, pineapple, and coconut. The yellow fatty substances of the seeds of *masoesa* (*Renealmia exaltata* —a plant that belongs to the ginger family) are solely used for

the flavoring and coloring of *moksi alesi* (literally, “mixed rice”).

Cooking

Surinamese cuisine is a mixture of ingredients and cooking techniques from local Indians, the colonial powers, African slaves, and Asian immigrants. Reflecting a rich and dynamic multicultural society, the cuisine became a melting pot and a patchwork that is continuously developing. Food and the preparation of specific dishes play a very important role in the daily and social life of the Surinamese community.

Depending on ethnicity, income, and social class, the Surinamese kitchen, kitchen equipment, cooking, and cooking techniques can vary immensely. During the colonial period many houses had an outdoor kitchen. Nowadays, the standard kitchen equipment in general consists of various aluminum or stainless steel cooking pots, a rice cooker, a (cast iron) wok, and several frying pans. Barbecuing is done on either a wood or charcoal fire. The possession of a *tawa* (a flat iron griddle) is common among Hindus.

Typical Meals

Social, geographic, and ethnic differences make it hard to describe a typical Surinamese meal. On average Surinamese eat three meals a day. Two hot meals a day are not exceptional, and in between one or two snacks (which many times consist of fresh fruits) are eaten. For breakfast, white bread rolls (known as *Surinaamse puntjes*) or slices of bread with butter or margarine, topped with cheese, jam, peanut butter, and occasionally fruit, are eaten. The preferred drinks are coffee, tea, and sometimes fruit juice. Milk is not drunk, but it is used in coffee and for the preparation of desserts.

Overall and all year round, nourishing soups and stews as well as baked and rice-based dishes are served. Lunch or dinner many times consists of one main dish accompanied by several side dishes and condiments. In general Surinamese eat a lot of chicken and meats such as lamb, beef (with the

exception of Hindus), and pork (with the exception of Jews and Muslims). Larger cuts of meat are barbecued or boiled in stews and soups.

Boiled white rice, roots and tubers, and white bread are popular side dishes. The most popular rice variety is *Surinaamse rijst* (Surinamese rice), which has a very long and thin grain. Rice is either boiled or used for *alesi*—a mixed rice dish of which most Surinamese women prepare several varieties. Roots and tubers are commonly boiled in water. With or without meat, most vegetables are smothered or sautéed in oil or butter, in a pot or wok. *Zuurgoed* (sweet and sour pickles) accompanies most meals. The leftovers from hot meals many times end up on a slice of bread or a roll and are even consumed for breakfast.

Among the most frequently used vegetables are *kousenband* (gartner L. *Vigna unguiculata* subsp. *sesquipedalis*), *tajerblad* (taro leaf), *sopropo* (bitter melon), *klaroen* (Chinese spinach), *dagoebblad* (water spinach), *antroewa* (African eggplant), and (African) okra. Brown beans, yellow split peas, and lentils are the most popular pulses, and to a lesser extent soybeans, cowpeas, black-eyed peas, and mung beans are also used. Coconut milk and shredded coconut are used in many desserts and cakes such as the popular *bojo*, a flourless cake with grated coconut and grated cassava. Originally prepared from tapioca (cassava starch), *gomakuku* (corn-flour cookies) are the most distinctive cookies. Popular cakes include *fiadu* (a yeast-dough cake that is filled with butter, cinnamon, sugar, almonds, pineapple, and raisins) and *Engris boroe* (English cake) and *keksi* (cake). To preserve cakes these are either sprinkled with liqueur or spread with clarified butter.

Next to tea and coffee, popular drinks are *gemberbier* (ginger beer), *kasiri* (an alcoholic beverage from cassava juice), *Parbobier* (local beer), fruit syrups and lemonades, and fruit and egg punches prepared with and without alcohol.

Together with the development of a national cuisine, most Surinamese ethnic groups have managed to keep their own distinctive dishes and eating habits. The country's cuisine is a mixture of dishes with multiple foreign origins. Well-known dishes

consumed by all Surinamese are *roti* (of Indian origin and prepared with baking powder), (Creole) peanut soup, *bakabana* (fried plantains), *telo met bakkeljauw* (fried cassava with clipfish), (Chinese) *bami* (noodles), *bruine bonen met rijst* (brown beans with rice), *her'heri* (literally, “fruits of the earth”), *peprewatra* (literally, “pepperwater”; a watery soup with catfish), *moksi alesi* (mixed rice), *pepperpot* (a savory stew and/or soup), cassava bread, and the Jewish Creole baked dish *pom*.

Pom

Within the Surinamese community *pom* is the most popular and best-known festive dish. Within and outside of Suriname, the oven dish is prepared by both men and women, and each Surinamese ethnic group makes a slightly different version. Hindus add piccalilli relish, Javanese add soy sauce, Jews use oil instead of butter, and Chinese add ginger or lychees.

Ingredients

2.2 lb grated *pomtajer* (fresh or frozen malanga or *yautia*)

7 oz piccalilli relish

1 stalk celery, finely chopped

1 small onion, chopped

2 chopped tomatoes

1 stick butter

7 tbsp sunflower oil

½ lb chicken pieces

1 onion, chopped

1 small can tomato paste

1 stalk celery, finely chopped

¾ c cold water

½ stock cube (chicken or beef)

5 tbsp sugar

½ tsp black pepper

Nutmeg to taste

Preheat the oven to 375°F.

Pomtajer preparation

Put the package of pomtajer in a bowl, put it in the refrigerator, and let it defrost overnight. Put the tajer in a bowl, add the piccalilli, celery, onions and tomatoes, and mix the pomtajer with a spoon or fork.

Preparation of the stewed chicken

Melt half the butter and oil in a large casserole over low heat. Add the chicken pieces, and sauté the chicken over high heat for about 4 minutes. Reduce the heat, add the onions, and fry, stirring occasionally, until tender, about 5 minutes. First, add the tomato paste, then the celery; stir once or twice, and simmer the chicken for 2 to 3 minutes on low heat.

Assembly

Mix the chicken thoroughly with the pomtajer. Add the water, crumble the stock cube into the pan, add the sugar, and stir well. Add salt, pepper, and nutmeg to taste. Put the pom on a greased baking tray. Put pieces of the remaining butter on top, and bake the pom in the oven for about 60 minutes. The pom is done when the inside is yellow and the crust is golden brown.

Surinamese cuisine is not regional but ethnically specific. Until the middle of the 19th century, Surinamese cuisine was foremost influenced by Amerindians, Europeans, and West Africans. Cassava bread, *cassareep*, and pepperpot are dishes of Amerindian origin. Pepperpot (or pepper pot) is a well-known savory stew and/or soup. In the region there are numerous pepperpot variations. The ingredients and thickness of the dish vary, but most recipes make use of hot (chili) peppers and cassareep: the thick boiled juice (syrup) of poisonous cassava that Amerindians used either as a preservative or as a cooking liquid. Depending on the season and availability, various meats and vegetables were added and boiled in the

cooking pot, and, with addition of more meats and vegetables, it was frequently reheated.

During the colonial period, the European plantation owners considered food, like clothing, a sign of wealth. Especially in the 18th century this meant a rich dinner table. With soup as a starter and pineapple, oranges, and other fresh fruits for dessert, the main course often consisted of various meats, fish, and poultry. Stuffed pigs, ham, pork chops, lamb chops, game, pigeons, chicken, and pies were served together with fresh garden vegetables such as radishes, lettuce, endive, beans, celery, and parsley. Pickles and European wines, brandy, and liqueurs were imported.

The food on the table of Suriname's small but influential Jewish community was determined by the Jewish dietary laws. Eating pork and the consumption of milk and meat together are not allowed. Also, drinking of alcohol (wine and liquor) was not a habit. The Jews ate plenty of chicken and other poultry, fish, vegetables, fruits, and sweets. In the Jewish kitchen oil and spices, especially pepper, were used. For the Jewish holidays and Sabbath, special baked dishes, breads (challah), and matzos (for Passover) were prepared. The Jewish culinary influence includes the oven dishes pom and *popido* (prepared with rice with chicken).

Even as late as 1928, the diet of the former West African slaves still consisted of hard-to-digest starchy fruits and roots such as bananas (*Musa* spp.), *tajers* (both *Xanthosoma* and *Colocasia*), yams

Within the Surinamese community pom is the most popular and best known festive dish. (Dreamstime)

(*Dioscorea cayennensis* Lam.), *napi* (*Dioscorea trifida*), cassava, sweet potatoes, and rice. Vegetables and fruit were cultivated on so-called *kostgrondjes*—small plots of land or home gardens. The culinary influence of West Africa is reflected in the consumption of roots, tubers, plantains, okra, and dishes such as peanut soup, *tomtom* (balls of boiled plantain or roots and tubers), and *her’heri*.

Her’heri

This is plantains, sweet potatoes, Chinese taro (*Colocasia esculenta*), pomtajer (*Xanthosoma* spp.), and *napi* (*Dioscorea trifida*, a kind of sweet potato) with sautéed salt cod.

- 1 green plantain
- 1 yellow plantain
- 1 tsp salt (per quart of water)
- ½ lb peeled Chinese taro, in pieces
- ½ lb peeled pomtajer, in pieces
- 14 oz frozen cassava, in pieces
- 14 oz peeled *napi*, in pieces
- 14 oz peeled sweet potatoes, in pieces
- 14 oz bakkeljauw (salt cod)

Put a large pot of water on the stove, and bring to a boil. Meanwhile, peel the plantains. Add salt to the water, and put the plantains in the pot. Bring to a boil. Add the pieces of Chinese taro, pomtajer, frozen cassava, *napi*, and sweet potatoes. With a slotted spoon, remove the plantains after 30 minutes. Boil the rest of the tubers about 30 more minutes, and until tender.

Meanwhile, rinse the salt cod under cold running water. Cook it for 10 minutes in 2 quarts of boiling water. With a slotted spoon, remove the fish from the pot, and set aside.

Divide the fish into pieces. Use a slotted spoon to remove the tuber pieces from the pot. Serve the plantains and tubers with the fish and a little bit of its cooking liquid.

After the abolition of slavery in 1863, contract workers from Asia were hired. Between 1853 and

1913 approximately 50,000 new immigrants from the former Dutch East Indies (Java), British India (which part of India), and China arrived in Suriname, bringing along all kinds of ingredients and dishes from their own culinary traditions: rice, roti, soy sauce, chutney, piccalilli, noodles, ginger, Chinese cabbages, and lychee.

The ties with the motherland were always very close, and before and after Suriname’s independence in 1975, many Surinamese settled in the Netherlands, where at present around 350,000 Surinamese are living. Upon arrival in the Netherlands, traditional food patterns were replicated. In order to be able to prepare Surinamese cuisine, ingredients such as cassava (manioc), taro, sweet potatoes, and bitter gourds (or melons) were either imported or replaced with locally available produce such as potatoes, endive, and spinach. Lacking familiar foods, many Surinamese suffered from homesickness. Two popular songs reflect the homesickness and the role of food within the Surinamese community abroad. At the same time, these songs, “Bruine bonen met rijst” (Brown beans with rice) and “Oh Nederland geef mij rijst met kousenband” (Please, Netherlands, give me rice with yard-long beans), familiarized the Dutch with Surinamese food. Due to the ongoing globalization, nowadays most Surinamese food-stuffs are available in the Netherlands.

Eating Out

Traditionally, cooking and entertaining are done at home. Street vending to make a livelihood is quite a common phenomenon in Suriname; in particular, many Surinamese women make a living selling all kinds of foods on the street. Surinamese are used to buying take-out foods and snacking in public. Street-food vendors sell all kinds of cakes, fruits, snacks, ice, drinks, sandwiches, and sausages. Due to globalization, and since Suriname is becoming a more popular vacation destination, the number of eateries and restaurants that serve a variety of foods is on the rise. In Paramaribo, eateries and restaurants that serve Javanese and Chinese cuisine are popular. Furthermore, a growing number of eateries and restaurants, ranging from outdoor food courts

serving Javanese specialties to roti shops, sell a larger variety of seafood, pancakes, and curries.

Special Occasions

Surinamese are very hospitable, and no matter the occasion guests are usually expected to partake in a meal. Regardless of ethnicity, Surinamese serve huge amounts of food at special occasions and festivities such as weddings, birthdays, and especially at a *Bigi Yari*, the celebration of a jubilee year. The most popular Surinamese festive dish that is served on all special occasions is pom. The Surinamese expression “without pom there is no birthday” specifies one of the occasions for which pom is prepared.

In Javanese religious life, during the *sadjén* and *slametan* (rituals commemorating events such as birth, circumcision, marriage, and death), special dishes with rice, chicken, boiled eggs, various fruits, and seasoned vegetables, as well as drinks such as water with blossoms, tea, and coffee, are served.

During funerals of Hernhutters (a small Christian community) everything is either black or white. After the burial *Anitri beri* (literally, “Hernhutter burial”) is served. The two ingredients—rice and boiled salted beef—are eaten together with taro leaf smothered in butter.

Diet and Health

Despite a wealth of natural resources and a small population of around 500,000, a large number of people in Suriname suffer from malnutrition and a poor health. According to a World Bank Report on Suriname, approximately 47 percent of the population lives in poverty and is deprived of sufficient and healthy nutrition. Although the government is

responsible for the promotion, protection, and improvement of public health, Suriname’s government lacks funding.

In Suriname, diet and health are intertwined. Hindus, Muslims, Jews, Creoles, and indigenous communities all follow their own medical system, and traditional healers are often consulted. The cuisines of the Chinese Surinamese and Javanese Surinamese communities are considerably healthier than those of the Creole Surinamese and Hindu Surinamese. The Hindu and Creole diets tend to be too fatty and monotonous. Many Creoles follow Winti, a traditional African practice, and largely a secret religion, with its own myths, rites, offerings, spirits, and taboos. In Suriname Winti is influenced by both Christianity and Judaism. In Winti taboos are often related to food and called *treefs* (from the Hebrew *tarefa*, for forbidden food). Similar to in Judaism, for followers of Winti certain types of animal food are prohibited such as turtle and deer but also plants like plantain. Also, *kaseri* (from the Hebrew word *kosher*) plays a role in forbidding, for instance, menstruating women preparing or touching food.

Trinidad and Tobago

Overview

Trinidad and Tobago are the southernmost islands in the southern Caribbean island chain. Trinidad is a mere seven miles off the coast of Venezuela and was, geologically speaking, once part of the South American landmass, separated from the mainland by tectonic shifts. As such, the island features flora and fauna otherwise seen only in South America. Tobago, a true volcanic island formation, has a slightly different geology and lies 19 miles northwest of Trinidad. Trinidad is 1,864 square miles, roughly the size of Delaware, and Tobago is 116 square miles, roughly the size of Martha's Vineyard.

In addition to the indigenous plant and animal species, Trinidad and Tobago feature a wide variety of fruits and vegetables originally brought by colonial settlers of Spanish, Dutch, French, and, lastly, English descent. Some notable additions are the now-ubiquitous breadfruit, pineapple, and *otaheite* (Malay) apple brought to the Caribbean by Captain Bligh of the infamous *HMS Bounty*.

The first European to set foot on Trinidad was Christopher Columbus, who came to the island in the summer of 1498 on his third voyage across the Atlantic. It was he who named Trinidad (trinity) for the three mountain ranges that cross the island at its south, center, and north. Columbus met native Amerindians of the Carib and Arawak tribes upon his arrival on Trinidad and Tobago. While legend has it the Arawaks were more peaceful than the warlike Caribs, both tribes were equally subject to slaughter at the hands of Spanish settlers and were highly susceptible to European diseases. Those who were not decimated were absorbed into the fabric of the

colony, which would come to include French Catholics, invited by the Spanish king, and finally the English, all of whom brought African slaves to the island. When slavery was abolished throughout the English Caribbean, Trinidad, a British colony since 1802, employed a system of indentureship that brought first Chinese, then East Indian laborers to work the islands' lucrative cane and cacao fields from emancipation in 1838 to 1917.

Today, Trinidadian foods are categorized in the local mind as either Indian or Creole; the latter refers to foods of either African or mixed European and African descent. The myriad peoples who came together through ambition and hardship on the islands of Trinidad and Tobago have evolved into a population of 1.3 million that is a montage of language, culture, and food unique to the Caribbean.

Food Culture Snapshot

Damian and Joy Luk Pat are young urban Trinidadians living in Port of Spain. Damian is of Chinese and Spanish-Venezuelan descent and works as an independent sales and marketing manager. He is president of the T&T Business Network, while his wife, Joy, is a senior marketing officer.

The couple define themselves as foodies. Damian is the family cook, often experimenting with foreign dishes or fusions of Trinidadian and foreign dishes. One of his favorite pastimes is ferreting out traditional and new eateries around the island and posting photos and reviews on Facebook.

Like most Trinidadians, the Luk Pats do their grocery shopping in a variety of venues, from traditional farmers'

Men spreading out cocoa beans in cocoa drying sheds around the turn of the century, Trinidad. (StockPhotoPro)

markets to Western-style supermarkets. Because of their relative affluence they can afford delicacies from gourmet markets from time to time as well as a fair amount of dining out, including at American specialty eateries and ice cream parlors such as Cold Stone Creamery. Many are newly opened in Trinidad but feature American prices that are cost prohibitive to most Trinidadians, as the exchange rate is roughly TT\$6 to US\$1.

Breakfast in the Luk Pat home is usually eggs and whole wheat toast or low-fat yogurt rather than the more traditional salted codfish, smoked herring, and fried *bake* (a kind of fried biscuit). Lunch and dinner fare is similar, featuring a mix of Trinidadian dishes in either the Creole, Chinese, or Indian style. Rice is a staple the couple enjoys, as well as potatoes and pasta. Salad is usually eaten, too. They most commonly eat beef, pork, chicken, and fish. While stewed beef often graces their table, steak is less common. Along with shrimp, the Luk Pats consider it a special-occasion item.

As Trinidad has become more global, a variety of new food styles have come to the island including Arabian,

Japanese, and Mexican, mainly from international franchises. The couple are avid experimenters and particularly love sushi. It is quite common for Damian to research those dishes and recreate them at home on weekends or special occasions, sharing with family and friends. His parents, in particular, are always willing to try new dishes in his company though they are a far departure from what they are accustomed to eating. The family also enjoys partaking of the rich variety of traditional street foods available in their island home.

Health has become an increasing consideration for the Luk Pats, and they are trying to eat more vegetables that are steamed rather than fried or stewed. They are staying away from fried, high-sugar, and high-sodium foods as hypertension and diabetes are increasingly common in Trinidad and Tobago.

The Luk Pats' favorite foods are varied and include traditional dishes such as stewed chicken; callaloo; curried beef, chicken, or goat with roti (flatbread); and modern items like sushi and steaks. Damian lists some typical Trinidadian foods among his least favorite items,

including dasheen (taro), avocados, and *caraili* (bitter squash). Outside of his experimental cooking extravaganzas, when cooking at home during the workweek, Damian cooks items that are simple and fast to prepare including stewed chicken, mixed rice dishes, mashed potatoes, or items that make use of minced beef.

Major Foodstuffs

Like the rest of the colonized Caribbean, Trinidad and Tobago's value to their European rulers was their vast agricultural resources, particularly sugarcane, which was processed in the North American colonies not only into sugar but also into molasses, used in rum production. Sugarcane was also part of the triangular slave trade in which slave-produced sugarcane was shipped to America, processed into sugar, and sent to Europe. Europe in turn shipped it along with other goods to Africa to trade for more slaves to go to the Caribbean and work on sugarcane plantations. Although 80 percent of the sugarcane produced in Trinidad is used for export, the amount of sugar produced on the island has declined dramatically following the closure of the country's largest sugarcane estate, Caroni Ltd., in 1975.

By the late 1860s the cacao industry in Trinidad and Tobago became another major cash crop, produced on estates where indentured laborers worked. A crossbreed of Central American native *criollo* and *forestero* cacaos planted by the Spaniards, the resulting *trinitario* was considered superior in taste and hardiness, perfect for use in the then–newly discovered process of removing cocoa butter from the bean, which is necessary for the production of chocolate bars. While *trinitario* beans still fetch a high price on the world market, local production has steadily declined since 1920, and Central and South American *trinitario* beans, particularly from Colombia, have entered the market.

By the early 20th century petroleum production began in Trinidad and continued to grow, outpacing agriculture as the mainstay of the national economy. Today, agriculture comprises less than 1 percent of Trinidad and Tobago's gross domestic product while oil and natural gas comprise 40 percent.

Other major foodstuffs produced and eaten in Trinidad are directly related to the islands' heyday of sugar and cacao production, as a variety of fruits and vegetables were imported into Trinidad and Tobago from Africa, India, and the South Pacific as sustenance for farm laborers. Rice, brought by Indian laborers and produced on the island, has become a major starch in the Trinidadian diet and is eaten with Indian and Creole foods alike. It may be served as a side dish to curries or stewed meats and vegetables, or within a pilaf.

Pelau

Serves 6

Pelau is one of those dishes that really exemplifies Trinidadian cuisine because it is an admixture of various cooking styles. *Pelau*, or rice layered with meats and vegetables, is a variation of East Indian *pilau*, which originated in Persia where it is called *polow*. The Anglicized version of the dish is called *pilaf*. The process of browning meat in sugar for *pelau* is an African tradition, and ketchup is a New World addition. It likely has its basis in tomato chutneys available in British India and brought to Trinidad by the English.

Chicken is the most common meat in *pelau*, but tender cuts of stew beef or lamb work just as well. In Tobago, *pelau* is often made with crab. Green seasoning is an herb paste made of chives, cilantro, thyme, oregano, parsley, garlic, and water that can be bought in West Indian groceries or made fresh at home.

1 c dry or 1 (12-oz) can pigeon peas, pinto beans, or black-eyed peas

3 tbsp canola oil

$\frac{3}{4}$ c sugar (white or brown)

1 (3-lb) chicken, cut into 8 pieces, skin removed

1 small onion, chopped

1 clove garlic, minced

1 c coconut milk

1 bay leaf

2 tsp green seasoning

- ½ c chopped parsley
- 1 sprig thyme
- 2 carrots, peeled and chopped
- 5 scallions, chopped (white and green parts)
- 2 c long-grain rice
- 2 c cubed fresh calabaza or butternut squash
- 1 small Scotch bonnet pepper, whole
- ½ c ketchup
- 1 tbsp butter

1. If using dried peas, soak them overnight in 3 cups of water. Drain. Bring 3 cups of fresh water to a boil in a saucepan, and add the peas. Simmer for 15 minutes, or until cooked almost completely through. Drain and set aside. If using canned beans, drain, rinse with cold water, drain again, and set aside.
2. Heat the oil in a Dutch oven or other heavy, deep pot. Add the sugar and swirl in the pot; allow it to caramelize to a light brown color. Add the chicken and stir well to coat.
3. Lower the heat to medium, and add the onion and garlic. Cook for 1 to 2 minutes, stirring constantly.
4. Add 2 cups of water, the coconut milk, bay leaf, green seasoning, parsley, thyme, carrots, and scallions to the chicken. Cover and simmer over medium-low heat for 10 minutes.
5. Wash the rice by placing in a bowl and running cold water over it to just cover. Swirl the rice around with your hand until the water becomes cloudy, then carefully pour off the water. Repeat the process four or five times until the water runs clear. Drain well, and stir the rice into the chicken mixture.
6. Add the squash, peas, hot pepper, ketchup, and butter to the chicken. Reduce the heat to low, cover, and cook for 20 minutes, or until the peas and vegetables are tender.
7. Remove the lid and fluff the rice. The rice should be moist but not sticky.

A variety of tubers and starchy vegetables, or *ground provisions* as they are collectively called, including yucca, Caribbean sweet potato (*boniato*), and pumpkin, are incorporated into a variety of dishes

as a vegetable component, are used in desserts, or are simply boiled, fried, or roasted for use as a side dish with meats. Ground provisions also include breadfruit and plantains, though both are tree fruits.

Legumes are used by all Trinidadians, including dal (yellow split peas), *channa* (chickpeas), pigeon peas, black-eyed peas, and kidney beans. They are used in everything from breads to rice dishes to soups and stews to side dishes and desserts.

Breads and baked goods, both in the form of traditional Indian griddle breads and European-style breads and sweets, are heavily consumed in Trinidad and Tobago. Roti, a soft, round griddle bread cooked on a *tawa* (flat, round cast iron skillet), was brought from India by indentured laborers and includes variations like *dal puri*, a version of roti stuffed with ground, spiced lentils, and *buss up shut*, a version of roti that is torn up into pieces to resemble a “burst-up shirt.” The latter is a late 20th-century addition to the Trinidadian bread repertoire. Bake, a savory beignet, is widely eaten for breakfast or as a sandwich roll.

Fish and fowl comprise most of the meat eaten in Trinidad and Tobago. The former is thanks to the abundant waters that both surround the island and form the rivers and streams inland. Kingfish, redfish, shark, salted codfish, smoked herring, shrimp, and crab are popular, but two—*Cascadura cascadoo*, a highly scaled fish in the catfish family that lives in muddy fresh waters, and flying fish, an ocean fish living in the waters between Tobago and Barbados—are the most prized. According to local legend, anyone who partakes of *Cascadura* is destined to return to Trinidad. Flying fish is so beloved that when the dredging of a deeper harbor in Barbados’s capital disturbed the fish’s habitat enough to cause a biomass migration to Tobago, it sparked an international argument.

The limited land for livestock rearing in Trinidad and Tobago, coupled with the limited palate for beef among Indian Hindus and pork among African and Indian Muslims, has made chicken the favored choice in the islands. Traditionally, every home, even in relatively crowded urban areas, kept “yard fowl” for both meat and eggs. However, increasingly, fowl are purchased from the local market or supermarket,

supplied by large-scale poultry farms, as the society has moved away from its agrarian roots. Goat was and still is widely eaten on both islands because goats' small size means that even those who do not have large land tracts, which correlates to most of the country, can keep them with relative ease. Goat is most often eaten curried.

As a society Trinidadians eat a large quantity of vegetables, due in great part to cultural influence. Vegetarian Hindu Indians brought caraili, a bitter squash; *bodi*, long Indian string beans; eggplant; and more. Greens, such as spinach and callaloo (Indian dasheen), harken from both the Indian and African traditions. Crops are varied and include corn,

Platter of typical local Trinidad food including *bodi*, salt-fish cod, fried *accra*, bread fritters, and vegetables with *jonnycake* bread. (Robert Lerich | Dreamstime.com)

tomatoes, zucchini, and other temperate-weather foodstuffs that have been adopted in the islands.

The diversity of fruits available on Trinidad and Tobago is far more varied than that in even some of the other Caribbean islands, as they include South American items in addition to those items native to Central America and the Caribbean. Coconuts are available year-round, and numerous varieties of mangoes, another popular fruit, are available for 10 months of the year. Although too many to mention, some more commonly used fruits include avocados, guavas, passion fruit, *pomme cythere* (June apple), *pommerac* (otaheite apple), pineapple, soursops, *barbadine* (a large greenish fruit with cream-colored flesh), and *sapodilla*. Watermelon, which arrived on the islands in the 1980s, is incredibly popular as well.

In terms of beverages Trinidad and Tobago are noted throughout the Caribbean for the production of Carib and Stag, two local beers, and for Angostura bitters, used in many cocktails, which has been made following a secret recipe on Trinidad since 1824. Local rums of varying grades are also produced, including increasingly aged sipping rums, such as 1919 and 1824, also from the House of Angostura.

Nonalcoholic beverages, such as green coconut water, ginger beer, *mauby* (a punch made from the bark of the carob tree and having a flavor similar to root beer), and sorrel (a sweet-tart ade made from dried hibiscus flowers) are widely drunk. Commercially produced local soft drinks, such as Solo and Chubby sodas, reflect the extreme sweet tooth of people in this sugar-producing country. Interestingly, the British soft drinks Pear Drax and, to some extent, Apple Drax are highly favored—particularly around Christmas—in Trinidad and Tobago, creating a market for the drinks that no longer exist in their native England.

Cooking

Historically, cooking in Trinidad and Tobago was most often done over a small fire on which an iron pot was directly set or hung, or on baking stones placed in the fire that a *tawa* could be settled upon. This method was based in the plantation era when slaves and laborers had only rudimentary wooden

barracks. Outdoor cookhouses did exist in the plantation houses, but for poor, average folk a simple fire served the purpose and also kept the heat and danger of live fire away from the home.

This cooking method was used well into the mid-20th century throughout many parts of the island and is still extant in the popular “river lime” or “beach lime,” in which a hot food picnic is cooked over an open fire. The hallmark of those events is that the food might be prepared in any kitchen and closely mimic those that were historically produced on an open flame including pelau, a rice dish incorporating stewed meat, beans, spices, and vegetables; stewed chicken, in which chicken pieces are first browned in caramelized sugar; dumplings; and boiled ground root vegetables.

Mud ovens, specifically for baking, and similar to what was used in Mesoamerica, were also used in Trinidad and Tobago well into the modern era and can still be found in rural communities on both islands. In communities with a high percentage of people with Amerindian and *Cocoa Panyol* (Venezuelan Spanish) roots, “buccaneer” cooking is still done; this is a method of smoking using native hardwoods, such as tonka or *samaan*, and wet banana leaves to smoke highly seasoned and marinated foods, particularly bush meats such as iguana, *manicou* (in the muskrat family), and *gouti* (hare). The method harkens back to the original cooking methods of island natives and is similar to the process of jerking in Jamaica, where wild boar and now domesticated pig are the preferred meats and allspice wood is used for smoking. Later, the form evolved to what became known as barbecue (from the word *barbacoa*).

Pickling provided a way to reduce the gaminess of bush meats or goat, or preserve out-of-season fruits. Indian hot pickles, such as lime or mango *achar*, or *kuchela*, made from shredded, peppered, and pickled green mango, are typical condiments. Non-Indian-style hot pickles are collectively called *chow chow* and are similar to the American versions. They mostly make use of vinegar or saltwater and plenty of hot pepper. Some common chows are mixed vegetables including cauliflower and caraili, the Indian bitter melon. Other chows include pineapple, pomme cythere, and mango, but any variety of green

fruits or hard vegetables can be used in chow. Pepper sauces are an absolute must-have on the Trinidadian table and, generally, are still homemade, though national brands like Chiefs and Matouk’s provide various kinds for those who cannot make it themselves.

Cookery in Trinidad and Tobago was based largely on what could be achieved using the preceding cooking methods—stews and soups, roasted meats, griddle breads, and boiled vegetables—but those cooking styles remain the hallmark of the modern Trinidadian kitchen. It is not uncommon for foreign ingredients or methods to be adapted to this type of cooking or to local ingredients. Home cooking in Trinidad remains the standard, and most people eat breakfast at home, often carry their lunch to work or school, and eat a home-cooked hot meal for dinner. Given the heat of the country, lunch was, at one time, the heaviest meal of the day, with a lighter supper following at nightfall.

Teatime was a beloved ritual in Trinidadian life, taking place in the mid- to late afternoon, as in the United Kingdom, continuing even after independence. As time has passed, tea has fallen away or might comprise only a cup of tea, sweetened with condensed milk as is the local custom, and a digestive biscuit or small roll. The afternoon snack taken by schoolchildren when they return home from their day is still collectively called “tea,” regardless of what it might comprise, and this has more to do with the hour than the foods eaten.

With the advent of modern conveniences like air-conditioning coupled with Trinidad and Tobago’s rapid rush toward being a First World, industrialized nation, daily schedules have moved closer to those of people in Europe and America, with an eight-hour workday, including a lunch break and a busy commute home. Additionally, it is fairly usual for both husband and wife to work outside of the home, so there is no one present to cook a hot meal to which the family can return after a busy day. The end result is that a variety of adaptations, including the use of packaged and frozen foods, or eating out, have rapidly become solutions for the evening meal. Within some affluent houses a cook, or lady who comes in to cook, may still be employed, similar to what was the norm even in middle-class families in colonial times, though the

lady of the house would have been present. Today, this is fairly rare except among the most privileged.

Typical Meals

Breakfast in Trinidad and Tobago is a mix of European and ethnic cooking and food styles. Eggs scrambled, fried, or in an omelet and served with toast are equally popular to *egg chokha*, or eggs fried with tomatoes, onions, and spices. Salted codfish, or salt fish, is popular at breakfast when served as *buljol*, a dish in which it is fried with onion, tomato, and spices and served with fried bake (a fried biscuit or fritter). Smoked herring, cooked in a similar manner but served with dumplings, is another breakfast that makes use of a typically English ingredient cooked in the local style.

Guava jam or jelly is a must-have on the breakfast table as is tea, though coffee is increasingly served. Coffee beans are grown and processed right on the island. Hong Wing is the most established and popular brand. Rituals, a Starbucks imitator, has popped up all over the islands and serves as a pit stop for many breakfast-goers, though, for the most part, the American price levels (US\$3.50 for a latte) puts those drinks mostly in the “treat” category.

For those who choose to eat their breakfast out, *doubles*, or spiced chickpeas layered between two pieces of fried yeast-based dough, is a beloved breakfast standard. Doubles vendors can be seen throughout the island every morning and in the wee hours of weekend nights to service partying club-goers.

Once based in heavy dishes, such as rice and beef stew, curried chicken, fried fish, and other extensive meals, lunch has morphed to include sandwiches and take-out foods, particularly from the many Western chains popping up around the island, such as Kentucky Fried Chicken or pizza. Still, the island’s vibrant street-food culture does provide lunch for office workers, just as it did for laborers a century before. The most popular offerings include roti and curry, barbecue, corn soup, roast corn, *phoulourie* (fried balls of split pea–flour dough), shark and bake, cow-heel soup, callaloo soup (the “national” dish of Trinidad), and more. Soft drinks are commonly consumed with lunch.

Curried shrimp, a very popular dish in restaurants in Trinidad and Tobago. (StockPhotoPro)

Curried Shrimp

This is a popular curry in roti shops and is often paired with dal puri or *paratha roti* (a flat bread; see the following).

- 1 lb large shrimp, shelled and deveined
- 3 scallions, white and green parts, minced
- 1 small onion, chopped
- ½ tsp turmeric
- ½ tsp cumin
- 1 tbsp West Indian curry powder (such as Chief’s Brand)
- ¼ Scotch bonnet pepper, minced
- 4 leaves *shado beni*, chopped, or 2 tbsp chopped cilantro
- 1 tbsp canola oil
- 2 Roma tomatoes, chopped
- Salt and pepper to taste

1. Mix shrimp, scallions, onion, turmeric, cumin, curry powder, Scotch bonnet pepper, and shado beni together in a large bowl. Cover with plastic wrap and refrigerate for 2 hours.

2. Heat the oil in a large, deep frying pan, and add the tomatoes. Cook 1 minute, and add the shrimp mixture. Season with salt and pepper, and mix well.

3. Add 1 cup water and simmer until shrimp turns pink. Remove from heat and serve with dal puri or paratha roti.

Paratha Roti

Makes 4

Roti

2 c all-purpose flour

2 tbsp baking powder, preferably Lion Brand

¼ tsp salt

Warm water as needed

Paste (Loya)

3 tbsp cold ghee

2 tbsp canola oil

Flour as needed

1. Whisk together flour, baking powder, and salt in a bowl and gradually add water, using your fingers to mix the flour and water together. Do not knead; simply gently combine the flour and water.

2. Continue adding the water until you achieve a soft, sticky dough that just comes together into a ball. Cover and set aside to rest for 15 minutes.

3. Make the paste by combining the ghee and oil. Set aside.

4. Flour a work surface and turn out the roti dough. Cut the dough into 4 large pieces and gently form into a ball. Flour your hands as needed to be able to handle the dough, and do not overknead.

5. Roll out each ball of dough into a circle ¼ inch thick, and brush with the Loya paste. Sprinkle the surface lightly with flour. Make a cut halfway through the middle of the circle and roll the dough away from you into a cone shape. Roll the cylinder into a ball by pushing the narrow end of the cone in towards the wider end, and pinching the edges closed. Repeat with the remaining pieces of dough and let the balls rest for 15 to 20 minutes on a floured surface.

6. Roll the rested dough into ⅛-inch-thick circles and place on a hot tawa or cast iron griddle. Brush

with oil, immediately turn over, and brush with oil again. Continue to flip the dough until it is puffy. Remove from heat, and place in a clean dishtowel. Fold dishtowel to cover the rotis so they stay warm.

What was once typical lunch fare has become the repertoire of dinners at home for those who have time to cook. Rice, curry, stewed meat and vegetable dishes, fried fish, Creole-style food, and the like are equally cooked regardless whether a home is primarily of Indian, African, or Creole descent. Take-out such as Chinese or pizza is often eaten as well.

In its most traditional form, dinner will include a green salad, and often a soup, followed by the main dish, which comprises a balance of protein, vegetable, and a larger portion of starch, whether that be rice, provisions (tubers), or bread. Bread is less often eaten at dinner except perhaps as roti and curry, though that is increasingly becoming lunchtime fare. Trinidadians tend to eat dinner fairly late by American standards, more aligned with those of Europe. It is not unlikely to find dinner taken at 8 or 8:30 P.M. in the average home. Water is the beverage most likely consumed at dinner, though wine is beginning to reach a larger audience. Drinks like beer are more often consumed separately, in the manner of a cocktail rather than accompanying food.

Trinidadians are champion snackers, enabled by the well-established and myriad street-food scene: *sahina* (a fritter of split pea flour), *dasheen* (callaloo), *phoulourie*, oyster shooters, spiced fried channa (chickpeas), boiled *peewah* (a fruit/nut in the palm tree family), and much more. A number of packaged snack food companies on the island provide Trinidadians with popular nosh—everything from potato chips to candy bars and English digestive biscuits, sold in packs of two.

Sugary snacks are ubiquitous and well consumed in the islands, most likely because of the abundance of sugar that has always been available. Indian sweets (collectively called *mithai*) are eaten by all and have a high sugar content. They include items like *kulma* (a fried dough stick dusted with sugar), *golab jamun* (syrup-soaked fritters), *jalebi* (deep-fried batter like funnel cakes soaked in syrup), and various types of

barfi (a kind of milk fudge). Other European preparations, such as fudge made from chocolate or coconut, cookies, cakes, and tarts, are supplemented by a wide variety of ice creams using local fruits. In 2009, Cold Stone Creamery opened in the capital city of Port of Spain.

Eating Out

The dining-out option that has existed for the longest time in Trinidad and Tobago is street foods. Initially simple food stalls that served estate laborers in the 19th century, as the years passed street-food vendors have become more elaborate in their setup. Stalls are supplemented with food trucks, and some vendors even provide makeshift outdoor seating. Today, the government board of health licenses

street-food vendors, and patrons are discouraged from purchasing foods from unlicensed stalls.

The best-known street-food collective in Trinidad was, perhaps, The Breakfast Shed, started in 1920 to provide a hot breakfast option to local schoolchildren. Situated in a galvanized-roof warehouse in Port of Spain's harbor district, inside were various vendors of Creole-style food, set-up stalls, and some seating from which patrons could choose. The original building was torn down to make room for a waterfront revival and promenade. The New Breakfast Shed, housed in a modern building, has retained some of the former vendors but is, in the estimation of locals, a shadow of its former self.

Since 1990, a robust fast-food and fast-casual restaurant culture has sprung up on Trinidad and Tobago. While the beef-heavy McDonald's doesn't have

A Kentucky Fried Chicken in downtown Trinidad. (AFP | Getty Images)

a major presence, Kentucky Fried Chicken, Popeye's, and the local chain Royal Crown are well patronized. Papa John's and Pizza Hut compete with the local chains Pizza Boys and Mario's, which serve a pizza featuring the far sweeter (sugar-enhanced) tomato sauce that appeals to local tastes. Subway and Burger King are here as well. Most of the fast-food chains are concentrated around the capital and the large cities of Chaguanas, in the central part of Trinidad, and San Fernando, in the south. Chinese takeouts that serve "Trini-Chinee" food are numerous throughout the country and offer a number of specialties specific to Trinidad and Tobago, including dasheen pork and fried wontons.

American fast-casual chains such as TGI Fridays and Ruby Tuesday's enjoy a status above what they do in the United States, as they charge American prices (the exchange rate is about TT\$6 to US\$1). They are considered stylish and unique in their offerings of "typical" American fare.

In the past decade, a crop of fine-dining restaurants that are the bailiwick of chefs classically trained in the French culinary style in Europe or America have opened, particularly in the capital city. The most creative of those chefs mix their formal training with local ingredients, adapting traditional dishes to more formal presentation or preparations to good result. *Mélange* restaurant is one good example of the nouvelle Trinidadian cuisine, as is *Battimamzelle*.

Special Occasions

Celebrations are central to Trinidad and Tobago's culture, and the country is perhaps most known for holding one of the biggest parties on earth in its yearly pre-Lenten Carnival activities. The nation's population burgeons during the festivities, which feature reveling in the form of costumed street parades, steel drum music, and copious consumption of alcohol. Unlike other special occasions in Trinidad, Carnival is not particularly marked by certain foods. Instead, religious-based holidays and feast days are where food takes center stage.

Trinidad and Tobago's population is primarily Christian (75%) with a small percentage of groups

that mix traditional West African religion with Christianity such as Shouter Baptists and practitioners of Orisha. Hindus comprise nearly 23 percent of the population, and Muslims nearly 6 percent. Some quick addition indicates that these numbers total well over 100 percent, which neatly tells the tale of religion in Trinidad: Like its people it is a *mélange* of practices that exist and intermingle, usually with no sense of dilution or lack of authenticity on the part of their practitioners.

Regardless of their self-proclaimed religious heritage, Trinidadians often celebrate holidays across religions. The Hindu festival of Diwali is a national holiday in Trinidad and Tobago and is most notable for Indian vegetarian foods such as vegetable and fruit curries and *mithai*, the traditional Indian sweets already mentioned.

Ramadan, the Muslim fast month, is shared with non-Muslim friends during *Eftar*, the breaking of the fast that starts with the consumption of a date and some water. Other foods are traditional Trinidadian foods that do not make use of pork. During *Eid al-Fitr*, the end of Ramadan, feasts are celebrated throughout the country and again feature Indian sweets, as the Trinidad Muslim tradition is largely Indian based though there is an increasing number of African Muslim converts. The small Trinidad Lebanese population tends to be Christian. *Sawine*, a vermicelli pudding, is a must-have during the feast.

Regardless of religion, nearly every Trinidadian celebrates Christmas in one fashion or another, and this is the occasion when food is most important. Much of the Trinidadian Christmas foods have their heritage in the *Cocoa Panyol* or Spanish community of the islands. Specialties like *pastelle*, a meat-filled corn turnover similar to a tamale, and *paymee*, a sweetened version of the same dish, without meat are also typical Christmas foods. Black cake, a descendant of Irish Christmas cake that was brought to Trinidad by the small population of Irish indentured laborers in the 19th century, is an absolute must-have for Christmas.

Popular holiday beverages include sorrel, ginger beer, and *ponche crème*, eggnog featuring condensed milk and Angostura bitters. Roasted turkey, imported from the United States, has become a major

dish for Christmas dinner, and it is usually stuffed with a local stuffing made from *chataigne*, a starchy tree fruit in the breadfruit family.

Weddings across cultures are another major feasting occasion. In Indian families, particularly, hundreds of guests may attend a wedding celebration, often for days at a time. Cooks who are well versed in cooking for traditional Indian weddings are employed during this time, making three-foot-long rotis on four-foot-wide tawas and huge pots of food. Dal puri is most often served at these events because it is complex to make and requires a delicate hand.

Diet and Health

Trinidadian foods have come to be considered by nutritionists as overly carbohydrate- and fat-rich, based heavily in starches, once used to provide calories to field laborers along with limited protein and poorer, fattier cuts of meat unwanted by plantation masters. Oil, particularly coconut oil, was well used in African, Indian, and Chinese cooking and continues to be so today, even when vegetable or seed oils are substituted. In recent years, the government health department has undertaken health campaigns to promote more judicious use of fats and oils for heart health, as heart disease is the leading cause of disease-related death in Trinidad and Tobago.

According to the United Nations' Food and Agriculture Organization (FAO), obesity is not yet a problem in Trinidad and Tobago among children and young people, much like the United States, though the number of overweight individuals has increased as the country has moved away from an agrarian to an industrial society. The FAO reported in 1999 that

nearly 17 percent of people over 20 are overweight, and within that group 31 percent are obese.

Childhood nutrition, particularly regarding the consumption of adequate calcium, is also a concern into which health officials are putting efforts. Hypertension and alcoholism are two other common diet-based health issues. Although no recent data have been gathered about food access, in 1995, 22 percent of the population was listed as living below the poverty level, half of which were considered "extremely poor" and therefore having limited access to food and proper nutrition. Most at risk for malnutrition in those households, according to the FAO, are children, the elderly, and pregnant and lactating women. While Trinidadians do eat a wide variety of fruits and vegetables on a daily basis, they also consume a great deal of sugar as alcohol, and diabetes is on the uptick.

United States: The Mid-Atlantic

Overview

The mid-Atlantic states of the United States are here defined as the heavily urbanized and industrial region stretching from north of Virginia to the south of New England including New York, New Jersey, Pennsylvania, Delaware, and Maryland as well as the interior of these states. While this region shares many features with states to the north and south, it is unique in its remarkable ethnic and religious diversity as well as the food cultures associated with vibrant immigrant communities, which have been arriving in successive torrents since the 17th century. New York City, for example, hosts perhaps the most eclectic range of cuisines on earth; its food culture is in a sense a convergence of practically every tradition covered in this encyclopedia, adapted to local conditions and often having evolved into foods eaten today around the globe. Its role as a financial and commercial hub of world trade has also given this region an astoundingly cosmopolitan character, always ready to integrate new ingredients, recipes, and ways of eating. Thus one finds as common everyday fare dishes descended from English roasts to Irish stews, Italian pizza to Jewish bagels, Chinese lo mein to Polish kielbasa, as well as soul food introduced by African Americans who migrated from the South, and more recent introductions from virtually every corner of the earth. Here one can dine in some of the most acclaimed French-inspired restaurants in the world as well as find Indian, Russian, Salvadoran, or Korean cuisine—the list is endless. This region also produces many of the industrial foods most commonly eaten across the United States, whether it be Campbell's Soup from Camden, New

Jersey; Nabisco crackers, originally from New York; or Tyson chickens raised in Maryland. The majority of artificial flavors used in the United States are also developed in New Jersey. Thus one can rightly say that this region hosts the best and worst of American cuisine and every possible variety in between.

The original inhabitants of this region were the Lenape Indians. They survived by hunting and fishing as well as extensive agriculture based on native plants such as corn, beans, and squash. Although they suffered a devastating demographic catastrophe with the introduction of European diseases as well as more overt forms of aggression, the foods they consumed still form a solid backbone of mid-Atlantic food culture. New Jersey is still renowned for superior corn and tomatoes. Although many other New World plants were actually reintroduced to this region later, zucchini and peppers, for example, or potatoes introduced from South America—made into chips said to have been invented in Saratoga, New York—the legacy of the Native Americans remains in many favorite dishes: Maryland crabs, oysters all along the coast, native blueberries in the pine barrens of New Jersey, or native grape species made into wine in the Finger Lakes. Sunflowers, vitally important for their oil, seeds, and edible roots (Jerusalem artichokes), are native to eastern North America.

The first European settlers in this region were the Dutch, whose claim was staked with the explorer Henry Hudson in 1609. Within a few years a settlement named New Amsterdam was established on the island of Manhattan. The outpost of Albany up the Hudson River was established in 1614, and between these two points large Dutch landholders maintained

patroonships that, virtually feudal in organization and structure, encompassed small farmers working the fields of large “patrons.” The fortified port of New Amsterdam welcomed virtually anyone regardless of origin or religion to settle and engage in commerce, so from the start there was a mixed population of Dutch and other Europeans, Jews, and Africans. Dutch cuisine, although relatively simple, survives in this region in dishes such as waffles and pancakes as well as in the concept and word *cookie*. In a series of wars the English sought to oust the Dutch from the mid-Atlantic, and this was accomplished permanently in 1674, when the city and region kept the name New York.

To the immediate south there were Swedish settlements in what is now New Jersey and Delaware, though ultimately the most important group to settle along the Delaware River were religious exiles known as Quakers. William Penn founded the colony of Pennsylvania and its capitol, Philadelphia, which by the 18th century became the second-largest English-speaking city in the world. English culinary traditions were introduced, but equally important were those derived from German settlers, Mennonites, and Amish Anabaptists also seeking religious freedom. Pretzels are one of the most recognizably American foods introduced by Germans, but hot dogs, sauerkraut, and mustard, not to mention beer, are considered quintessentially American. To the south the colony of Maryland was formed as a haven for Catholics by Lord Baltimore, and in many respects it is here that a uniquely English cuisine survives, especially in the fishing culture of the Chesapeake.

In the early 19th century the population began to move westward and inland. This was aided by a series of canals to facilitate trade and later railroads. Eventually, major industrial cities like Pittsburgh and Buffalo sprang up, as well as farms in rural districts. But the most important event of the 19th century was the massive influx of immigrants hailing primarily from eastern and southern Europe. Southern Italians introduced pizza, spaghetti, and other dishes that are culinary staples—not to mention the Philly cheese steak sandwich. Jews fleeing religious persecution brought with them deli culture: corned beef and pastrami sandwiches, rye bread, and sour

dill pickles as well as bagels and lox. Irish immigrants escaping the potato famine as well as Poles and other eastern Europeans made their own contributions. In the wake of the Civil War there was a massive influx of former slaves to the North, bringing what is essentially Southern food; some of the best anywhere can be found in places such as Harlem.

Prominent immigrant groups adding to this incredibly eclectic culinary mix include Chinese, mostly from Canton, whose dishes are familiar and commonly eaten in Chinese restaurants by everyone. An enormous Hispanic community made up first of Puerto Ricans after the Spanish American War, followed by other Caribbean and Central American peoples as well as Mexicans, means that Latino cuisine is equally familiar to anyone living in this region. Although Americans in the mid-Atlantic states might not regularly cook dishes from more far-flung parts of the world, a thriving restaurant culture means that few people live far from an Indian or Thai restaurant, a Greek diner, a Japanese sushi bar, Spanish tapas bar, or any number of ethnic restaurants that have now become integral to the way everyone eats.

Food Culture Snapshot

Nina and Will Lok-Segal live in Prospect Heights, a middle-class neighborhood in Brooklyn. She is a senior researcher for a nonprofit foundation. He is an editor for a large publishing firm. Their lifestyle and eating habits are typical of professionals living in a cosmopolitan city where food has become a major preoccupation, and trying new foods only requires a hop on the subway. They are also influenced by their backgrounds: Nina was born in Hong Kong, and Will’s mother grew up in Paris.

Nina and Will usually eat breakfast at home because neither of them needs to be at work until 10 A.M., thereby avoiding the worst of rush hour into Manhattan. While Nina often prepares oatmeal from scratch or fixes a bowl of cold cereal with sliced fruit and soy milk, Will sticks to black coffee and dry multigrain toast. On weekends they take turns preparing more elaborate meals: Nina makes frittatas with vegetables or herbs, while Will has a sweet tooth and a light touch

with pancakes or French toast. Like many New Yorkers, the Lok-Segals either pack lunch (often leftovers) to eat at their desks or buy something at the many quick-service lunch places in midtown Manhattan. While Nina's favorite is a Korean buffet, Will is partial to the meatball sandwiches sold at a small Italian take-out shop. Very common are soup-and-salad chains and food trucks where people line up for ethnic specialties like halal chicken over rice, Indian *dosas*, and Belgian waffles. Will's office has a coffee bar stocked with cookies, chips, and other snack foods where employees graze whenever they are hungry or bored. Nina keeps a bag of pistachios and chocolate bars in her desk drawer, nibbling them along with the green tea she drinks throughout the day.

Dinner is eaten at 8:30 P.M. Either Nina or Will prepares something simple: a green salad, sautéed pork chops or a rotisserie chicken picked up on the way home, and rice. They have wine with dinner. On the weekends, especially if they are entertaining friends, dinner is more elaborate, an occasion to try out new recipes and fresh produce bought in Chinatown or at the Grand Army Plaza Greenmarket. On occasion they will also purchase cheese at Murray's or Dean & DeLuca, or perhaps seafood at Citarella, which are among the most revered gourmet shops in the country. Dessert is either store-bought sorbet or fruit.

Major Foodstuffs

Three major influences on New York City's food habits are its geographic location, its role as a port city, and its long history of immigration. The Dutch and other early settlers of New Amsterdam cultivated potatoes, cabbages, onions, and apples on land that is now Upper Manhattan and the Bronx. As they moved up the Hudson Valley, apples were an important crop: sliced, dried, and used for pies all winter long, and pressed for cider. Cows were raised for milk and as a source of meat. Chickens, ducks, and geese provided eggs and the occasional roast. Pigs provided fresh meat and bacon, as well as sausages and headcheese. Farms north, west, and east of New York, including Long Island's East End, provided fresh vegetables and fruits, and its shores were a source of oysters, cod, lobsters, and other fish

and seafood. The borough of Queens was once the city's milk shed, ensuring a fresh and constant supply of milk.

Throughout its history, New York City has consumed the fruits of global trade. As a major port city, foods would pass through New York. Every technological innovation including refrigeration and steam engines brought new foods to the city. In the 1920s, a mere 12 percent of the produce consumed in the city was grown in New York State. After World War II, the number of farms within 200 miles of the city declined dramatically, as suburbs sprouted in the place of fields. In the 1950s, nearly 20 percent of the United States' food supply passed through New York State. Foods from every state in the nation and more than 30 countries were consumed on a regular basis.

Immigration has shaped and continues to shape New York City's food culture. Iconic foods include bagels (with a *schmear* of cream cheese) and pizza (thin crust). Knishes have been replaced with taco trucks, and sushi joints have become ubiquitous. Western European food practices continue to dominate; wheat products like bread, pasta, and cereals are consumed in large quantities. Corn is more likely to be consumed in processed foods than as tortillas, cornbread, or grits. Vegetables and fruits, particularly potatoes, onions, and apples, available at the city's farmers' markets, reflect both geographic constraints and people's tastes.

A drive toward more sustainable food practices is inspiring a resurgence of small-scale food processing and do-it-yourself classes being offered in butchering and sausage making. People are raising chickens and rabbits in backyards. Rooftop gardens are thriving as private as well as commercial enterprises. Though Mayor Bloomberg's otherwise-inspiring 2030 Plan for a sustainable future did not include food (nor did Robert Moses's and Jane Jacobs's competing visions), city agencies, nonprofits, and community organizations are responding with new policies, programs, and proposals for more local food production. East New York Farms and Value Added involve volunteers and schoolchildren in urban agriculture; Flatbush Food Coop is among several cooperatively owned and managed grocery

stores; Cornell Cooperative Extension trains aspiring farmers, many of whom are recent immigrants, and helps them find land to lease as well as markets where they sell their produce.

Water, sodas, and fruit juices are commonly served with meals. Children drink milk (or soy milk) in school, and at meals eaten at home as well. Energy drinks, vitamin waters, smoothies, and other fortified beverages are consumed on the go. Coffee, light and sweet, is bought from coffee carts, and Starbucks has its lines of devotees. Throughout upscale residential neighborhoods, cafés roast their own fair-trade beans. Beer is part of the city's heritage. When Germans and Czechs immigrated to New York in the mid-19th century, they brought with them a taste for lager-style beers. Breweries were established throughout Brooklyn; a combination of mass production, mass marketing, and labor strikes caused their decline in the 1950s. Brooklyn Brewery and Six Points Brewery are marking a comeback of local beer. Wine is an important part of New York's thriving restaurant culture. It is also served at home in households with European roots. Among the many residents with roots in South and Central America, beer and/or distilled liqueurs are more commonly consumed alcohols. Quality wines are produced in the Finger Lakes region in upstate New York, and on the North and South Forks of Long Island.

Cooking

Cooking in New York and the mid-Atlantic region varies broadly, and it is difficult to generalize. In some households cooking is an ordinary part of the daily routine with many family members pitching in. Especially in less affluent homes, cooking may be a necessity to feed the family affordably, especially with the prevalence of fast food. In busy homes, cooking is still usually done by the mother of the family, though constraints of time and the general hectic pace of life, when both parents work and children have after-school commitments, can seriously curtail the frequency of home-cooked meals eaten together as a family.

During the early decades of the 20th century, immigrants lived in crowded tenements. Many depended

on foods cooked outside the home. Today, many New Yorkers continue to depend on take-out foods. While some pick up an entire meal (Chinese food, pizza, fast food, or other convenience options), others combine prepared foods with something cooked at home. Microwaves and rice cookers are as commonly used to prepare foods as are more traditionally European techniques like sautéing or roasting. Grilling is popular, whether in city parks, on apartment balconies, or in backyards across Queens, or Staten Island. In the vast suburban sprawl of the megalopolis, the barbecue grill is an absolute necessity for every backyard, wealthy or more modest. It is here, and often only here, that men take charge, wielding spatula and fork, flipping burgers or steaks, ribs, wings, or perhaps something more adventurous like fish.

Otherwise, the standard kitchen is much like elsewhere in the United States, although with perhaps more attention to style and detail and less to utility. An average family will own a full four- or six-burner range and oven, a capacious refrigerator that allows shopping once a week for groceries, and sometimes a large separate freezer as well. Especially in suburban households, the fridge can be the center of the entire home. There will be cavernous cabinets to hold an array of canned goods, boxed cereals, and snack foods. There will invariably be a dishwasher, and perhaps a stand mixer, food processor, coffeemaker, toaster, and a range of other gadgets large and small. The irony, of course, is that much of the food consumed is frozen or requires little preparation—perhaps only a few minutes in the microwave.

There is, however, a growing percentage of the population, men and women, that treats cooking as a leisure activity. Perhaps inspired by cooking magazines or cooking shows on television, they socialize with friends by cooking a meal at home, showing off their latest culinary experiments and sharing good wine. Such people are open to new cuisines, trying new ingredients and following the latest trends avidly. They may try their hand at a pad Thai one night, a ceviche the next, without any qualms about mixing and matching flavors in a kind of homemade fusion cuisine.

Typical Meals

A typical breakfast consists of cold cereal with milk and fruit, toast with jam, or instant oatmeal, accompanied by coffee or tea and orange juice. People grab egg-and-cheese sandwiches at delis or McDonald's. Kids are sent to school with breakfast bars, toaster waffles, or other “grab-and-go” foods. On weekends, breakfast turns into brunch, and anything goes, from bagels and lox to diner-style platters of eggs, bacon, pancakes, and hashed browns. Waffles are served with whipped cream and fresh berries. Dim sum parlors attract large groups of all ethnicities. Whether savory or sweet, weekend breakfasts are occasions to indulge.

Lunch is usually a quick meal. For people working in offices, it means stepping out for half an hour, buying something in the vicinity, and eating in a nearby park, at a desk, or in an employee lunchroom. Sandwiches, whether “deli-style” piled high with cold cuts, lettuce, and mayo or European-style panini, are typical choices. Chains offering customized salads and soups are popular. Trucks and carts line the streets of business districts, offering a dizzying array of ethnic foods at good prices, attracting everyone from mail clerks to executives. Some people pack their lunch—sandwiches and a piece of fruit, or leftovers to be warmed up in the office microwave. The power lunch continues to exist for those with expense accounts—although the multi-course three-martini meal has been replaced with “express” options of single-course meals, often salads that include sliced steak or grilled shrimp, and lemonade or sparkling water.

At home, lunch is also a casual, quick affair consisting of sandwiches or leftovers. In addition to cold cuts, typical sandwiches include tuna and chicken salads, and the childhood classic, peanut butter and jelly. Chips or pretzels are often served as accompaniments, and a simple dessert like a cookie or piece of fruit completes the meal. Some cultural groups like Italian and African American families continue the tradition of a Sunday lunch as the main meal of the day.

Dinner is the main meal due to the organization of the working and school day. Whether eaten at

home or in a restaurant, for many, dinner is the one hot meal of the day regardless of cultural or ethnic/national background. A typical dinner includes a portion of animal protein, whether meat or fish; a starch like potatoes or rice; and a vegetable. Stews and braises can be prepared ahead of time, with meat supplemented with root vegetables. These filling dishes are popular in the colder months. Summer means cold salads and grilled foods like burgers and sausages, corn on the cob, and watermelon. Pasta is a popular choice because it can be prepared cheaply and easily. Take-out foods ranging from pizza and fast food to entrées ordered at fine-dining establishments are a mainstay.

Eating Out

Restaurant culture thrives in the cities dotting the mid-Atlantic coast. These range from a simple aluminum pushcart with Sabrett hot dogs for those who like to dine *al fresco* to Michelin-starred restaurants owned by celebrity chefs. In fact, the presence of the Food Network Studios in New York City means that many food television stars have restaurants here—Bobby Flay and Mario Batali, for example. Everything in between amounts to literally thousands of restaurants. In some neighborhoods you will find half a dozen on every block, with an expensive formal white-tablecloth establishment jockeying for space with a Greek diner, an Italian pizzeria, a small Chinese take-out place, a Korean convenience store, an upscale bistro, and a Salvadoran *pupuseria*. For a quick pick-me-up, there are also native establishments like Papaya King for a hot dog or juice, as well as fast-food chains like McDonald's, Burger King, and KFC. New Yorkers probably dine out more than any other people on earth, and it is said that you could eat out in a different spot every single day of your life. It is often joked that wealthy New Yorkers have trophy kitchens decked out with high-tech ovens and appliances that they never use. It is true that some people don't even have a working kitchen, as there is always food to be bought within a few steps. In small apartments, dishwashers are used as dry storage; shoes are shelved in cabinets.

A shop on the corner in Chinatown, New York. (Shutterstock)

Urbanites in all major cities of the mid-Atlantic, including Washington, D.C., and Philadelphia, are extremely sophisticated and particular about their restaurant choices. With so many options, they can afford to be choosy, and it is true that unless a restaurant is well rated (the ubiquitous democratic *Zagat Guide* is one measure), it is bound to fold. Restaurants, not surprisingly, turn over remarkably quickly, and only the best withstand the test of time, and even then not always, if one thinks of the legendary Lutece or Le Pavillon.

In New York one can find not only fine, expensive restaurants but also many that set culinary trends globally, whether it be in fusion cuisine, the latest science-inspired “molecular gastronomy” establishment, or merely the newest as yet undiscovered corner of the world. If it exists anywhere, it will be found in New York; in fact, some culinary

traditions survive only here in exile, with the people themselves.

Special Occasions

Foods consumed on special occasions often erase regional distinctions in favor of national traditions. For example, Thanksgiving is observed with foods that are now considered traditional throughout the United States: turkey, sweet potatoes, pumpkin pie, and cranberry relish. The stuffing reveals the region’s British influence, incorporating chestnuts and celery. The many immigrants living in New York City adopt Thanksgiving, making it their own by adding Bengali spices to cranberry sauce or rubbing a turkey with jerk seasoning. Summer is all about ball games; hot dogs are consumed with lager-style beer. In Prospect Park, as well as the greenways lining the

Hudson River, informal soccer, softball, and volleyball games attract food vendors. When the New York Philharmonic plays its annual concerts in Central Park, thousands gather with friends to dine on blankets under the stars. On Super Bowl Sunday, everyone suspends their diets to nosh on chicken wings and nachos piled high with cheese, sour cream, and pickled jalapeños. St. Patrick's Day means corned beef and cabbage, and green bagels, in a town where everyone claims Irish, Jewish, and Italian heritage as part of their civic identity.

Like elsewhere, Christmas is celebrated by practically everyone, sometimes even non-Christians, as an excuse to exchange gifts and decorate a Christmas tree. Not surprisingly, a large Jewish population celebrates Passover with unleavened bread and fasts on Yom Kippur, as well as enjoying many other food-centered holidays. African Americans celebrate Kwanzaa, and devout Muslims fast during Ramadan. Uniquely, it is perhaps only in this region that one will find all these holidays side by side, sometimes within the same household when there are parents of mixed heritage. Schools will often be shut for a range of holidays for children of various faiths. Memorial Day, the Fourth of July, and Labor Day are three-day weekends marking the start, middle, and end of summer. They are celebrated with picnics and barbecues.

Diet and Health

New York City faces the same challenges as the rest of the United States: Obesity/overweight and diabetes are threatening the well-being of large percentages of the population. Obesity, diabetes, and other diet-related diseases are strongly correlated with class, race/ethnicity, and neighborhood. While middle- and upper-income people like Will and Nina live in neighborhoods with many food choices including large grocery stores, specialty stores, restaurants ranging from fast food to full-service, and two farmers' markets within walking distance of their home, too many New Yorkers live in neighborhoods described as "food deserts." Access to fresh, healthy foods is a challenge in these food deserts, and residents are consigned to paying high prices for low-

quality foods. Often, they are dependent on bodegas and other small stores with limited selections. Not all vendors accept EBT (food stamps/electronic benefits), WIC coupons, and other forms of social supports, further limiting where people can shop. Compounded with long working hours (many low-income individuals work more than one job), and long routes to and from work, these factors mean shopping is difficult. Kitchens in public housing—let alone shelters and other temporary housing—are often in disrepair. Fast food offers quick satisfaction at a reasonable price—and long-term negative impacts on overall health. A number of recent government initiatives have been established to correct this situation, including federal funds that will help chain groceries build new stores in areas of the Bronx and Brooklyn that have low food access (a program piloted successfully in Philadelphia). GreenCarts is a Department of Health program that issues licenses to pushcart vendors who agree to sell produce in food deserts. Chain restaurants are required to post calorie counts in an effort to help consumers make more informed choices. Trans fats were banned several years ago, causing major food processors to adjust their recipes. The city sent advisors out to bakeries, restaurants, and local manufacturers to help them change their practices. Salt is the new target in an effort to lower rates of hypertension, especially prevalent among lower-income residents. While critics complain that Mayor Bloomberg is operating a "nanny state," diet-related diseases cost the city millions in health care and lost productivity every year. Without laws that force food processors to institute changes, it is very difficult to address these issues. A large city like New York has the market muscle to make this happen.

New York's Greenmarket program started in 1976 when a farmers' market opened at Union Square to provide farmers within a 200-mile radius of the city with a profitable outlet for their produce, and city residents with fresh fruits and vegetables. Today, Greenmarket operates nearly 50 markets, found in every borough of the city. There are more requests for markets than there are farmers to supply them. To encourage residents of lower-income neighborhoods to patronize the markets, many vendors have terminals

that accept EBT. Most markets are seasonal and are open only one day a week, but they provide an important source of local foods, and an opportunity for people to mingle and socialize in ways that supermarkets don't encourage. Seasons are marked with food. Strawberries, asparagus, and peas announce the end of a long winter. In July, people chat while shucking corn. Tomatoes invite careful prodding. As New Yorkers have developed more sophisticated palates, and as Greenmarkets have ranged into more diverse neighborhoods, basil and cucumbers are now side by side with Asian greens, wasabi sprouts, cilantro and culantro, and freshly jarred kimchi. Growing concerns about factory-farmed meat have created a market for lamb, chicken, beef, and pork. Customers can talk to producers, learning why some grow organically while others bypass certification and depend on their customers' trust.

Supermarkets vary greatly by neighborhood. Whole Foods, with its full range of grass-fed beef, organic chicken, line-caught fish, and beautifully displayed produce, cheeses, and coffees, locates in well-to-do neighborhoods with high foot traffic like Columbus Circle, Union Square, and Chelsea. Shopping at Whole Foods duplicates the experience of wandering a market, while offering prices on basic goods that are comparable to those in less-luxurious grocery stores. Trader Joe's has wide appeal for their relatively low-cost prepared foods and snacks. They, too, are found only in well-to-do neighborhoods. Fairway's original store is on the Upper West Side. They have since opened stores in Harlem and in Red Hook, Brooklyn. Here, shopping is a contact sport, with great prices on produce combined with gourmet goods and a full-service butcher and fishmonger. In these "better" neighborhoods, even the national chains like Pathmark are nicely appointed and offer a wide selection of products.

In low- and moderate-income neighborhoods, supermarkets are run-down, selling tired-looking produce and limited selections of meat and poultry. Shelves lined with processed foods reinforce the health and diet problems facing residents. It's no problem finding 20 kinds of sugary cereal and juiceless fruit punch, but it is highly unlikely that these stores will carry natural peanut butter or bulk grains.

The tired argument is that healthy foods won't sell in lower-income neighborhoods, but studies find over and over that residents are well aware of the dangers of unhealthy choices for their community's health. Mobility is relative; in gentrifying neighborhoods, among the signs of change are people getting off the subways carrying bags of groceries from other, more affluent parts of the city. In Washington Heights, for example, the new professional classes shop at Fairway and West Side Market; long-time residents make do with the Associated with its shabby awning, rusty carts, and constant funk of spoiled meat. The prices are higher for most goods, except for Central American and Caribbean staples like plantains.

While New York City has not joined the mayor of Rome in declaring that access to healthy food is a civil right, many changes have been made to the school lunch, and breakfast, programs. Efforts have been made to reduce the total fats, salts, and sugars in school food and to increase total nutrients and fiber. Changes are incremental. Obstacles include lack of infrastructure (schools where cafeterias are designed to reheat, not cook, food), funding, and kids' tastes. Introducing a healthy option is pointless if it ends up in the trash. Nonetheless, the Department of Education is committed to introducing more cultural variety and more locally sourced foods. All apples purchased by the school system are now grown in New York State; local carrots will soon follow. Milk is now skim, not whole or chocolate, and soy milk is available for the many children of African and Asian descent who are lactose intolerant. For many lower-income children, the meals eaten at school (free or nearly free) are the only full meals they eat. Summer programs were introduced to fill in the gaps between school terms. Ensuring that these meals are nutritionally balanced and otherwise fulfilling is critical to long-term public health and to advancing justice through access to food.

United States: The Midwest

Overview

The American Midwest comprises 12 states: Ohio, Michigan, Indiana, Illinois, Wisconsin, Minnesota, Iowa, Missouri, Kansas, Nebraska, South Dakota, and North Dakota. These states span the midcontinent from the western edge of the Allegheny Mountains on the east all the way to the high plains that abut the Rocky Mountains in the west. The Midwest is cut in two by the Mississippi, a river that drains all the waters from two-thirds of the continent, while the Great Lakes and the 49th parallel define the northern border and the Ohio River the southern boundary. The whole region encompasses 820,000 square miles and is occupied by 66 million inhabitants. Today, roughly 50 million people live in metropolitan areas and large towns, unlike the 1890s, when the farming population was much larger and farmers' food came directly from the land on which they lived.

Much of the Midwest is relatively flat prairie land but not entirely. It has been further subdivided into broad areas: the Great Lakes and Old Northwest, Ohio River and Trans-Mississippi River, and the Great Plains. Each subregion represents different landforms, natural resources, histories, ethnic origins, and dialects. This fact counters the common perception that the Midwest is nothing but a flat and endless plain with food to match. Many of the Midwestern states have more than one of these divisions within them, and that is important in considering local foodways.

Although home to major cities, such as Chicago, and heavy industrial production, agriculture lies behind the idea of the Midwest as America's food-

producing heartland. Some of the most important agricultural-production technologies were invented in the Midwest, including the John Deere plow and the McCormick reaper. From the 1890s on, the region has been seen as filled with small towns and broad farmlands, occupied by people who are slow to adopt new cultural trends. For these reasons the Midwest is usually thought of as center of "normal" American culture. Food is an integral part of this image: The Midwest said to be the land of plain cooking, of casseroles and "white food," meaning mashed potatoes and cream sauces. In fact, Midwestern foodways represent a global food system with dishes and foods imported from the far corners of the world.

Food Culture Snapshot

Steve and Brenda Wilson live in Saint Louis, Missouri, with their young son and daughter. They are interested in locally produced food and, on Saturday, go to the weekly farmers' market in Tower Grove, one of the 1,500 farmers' markets in the Midwest. They cannot fulfill all their week's food needs at the open-air market because it does not sell breakfast cereals, milk, cheap commonly eaten meats, flour, sugar, salt and pepper, canned soups and sauces, cooking oils, butter and margarine, juices, frozen products, snack foods, and imported fruits and vegetables, such as bananas. These will be purchased later, while pushing a large food cart, from the food aisles and cases in a local supermarket. The children have a lot to say about what cereals and snacks the family buys. At the farmers' market

the Wilsons can buy in-season, fresh sweet corn, lettuce and greens (such as kale and chard), green beans and fresh peas, tomatoes (including some old heirloom breeds), varieties of green and red peppers, different kinds of eggplants, potatoes, onions, garlic, carrots, rhubarb, melons, grapes, berries, pears, apples, peaches, and fresh herbs. Basil, tarragon, oregano, thyme, mint, rosemary, parsley, and cilantro (fresh coriander leaves) are popular and used in a number of dishes. All of these are sold directly by the farmers who grow them. In this market there are also animal farmers. Sustainably raised lamb, beef, pork, rabbit, sausages, chicken, and eggs straight from the farm, as well as cheeses, are all available for sale, and the Wilsons stock up on some of these, though the meats and produce are somewhat more expensive than supermarket food. This market also encourages freshly baked goods. Young women from a local Mennonite community, dressed in plain, long skirts and wearing small white kerchiefs, sell their homemade cakes, nut cakes and cookies, yeast breads, and quick breads. Other bakers have crusty Italian, French, and whole-grain breads.

From these ingredients the Wilsons will prepare daily breakfasts, lunches or dinners, and suppers. On Sunday they usually make a roast beef or chicken served with mashed potatoes, green beans, fresh bread and butter, and a freshly made fruit pie for dinner. On this day, they are buying ingredients to prepare a dish for a potluck

Corn chowder, a dish that mixes traditions from New England and the South, in Midwestern corn country. (Robyn Mackenzie | Dreamstime.com)

dinner at a nearby history museum. Steve grew up in a town on the Illinois/Indiana border where corn chowder has been made for generations. It is a dish that mixes traditions from New England and the South in Midwestern corn country.

Corn Chowder

Serves 6–8

¼ lb bacon, chopped

8 tbsp butter

2 large potatoes, diced (about ¾ lb)

1 large carrot, sliced into rounds

1 small onion, chopped

4 ears fresh sweet corn, shucked and kernels cut from cob

Water to cover

4 tbsp flour

2 c milk

1 tsp salt, or to taste

Ground black pepper to taste

Place bacon in a deep pan over medium heat. Cook bacon until the fat melts but the bacon is not crispy. Add 4 tablespoons butter, and melt. Add potatoes, carrot, and onion, and sauté in butter and bacon until the vegetables are coated and onion begins to wilt. Add just enough water to cover, and bring to a boil. Reduce heat to a simmer, cover pan, and cook until potatoes are tender, 15–20 minutes. Meanwhile, melt 4 tablespoons butter in a separate saucepan. Whisk the flour into the butter until completely blended. Stir the milk into the butter-flour mixture until smooth. When the vegetables are done stir them with a whisk or fork until the potatoes break up into small lumps. Stir in the milk mixture, stirring well. When thickened and heated through, add salt and pepper to taste and stir well. Serve with corn muffins or cornbread.

Major Foodstuffs

What people eat everyday is the result of environments, history, and technology. Although the Midwest

states are agricultural powerhouses, much of what they produce is not grown for local consumption. Iowa, for instance, is the number one grower of soybeans, Illinois number two, and Minnesota number three, but tofu is not a regular part of the Midwestern diet. Iowa and Illinois are the top producers of feed grains for farm animals, and Iowa is the nation's premier hog farmer. Most of this massive output is processed by large food manufacturers and sold in national and international markets. Before World War II (1945), farmers and people living in small towns were able to produce enough food in gardens and from truck farms to feed their own families during the year: Only some supplies such as flour and sugar needed to be purchased from stores. But today, with some local exceptions, food eaten every day by Midwesterners is bought in food stores and supermarkets, a lot of it coming from as far as 1,500–3,000 miles away.

Midwesterners consume between 1,500 and 1,900 pounds of food annually. Of this, about 35–40 percent comes from animal products, including both meats and dairy, and more beef (about 75 pounds per year) is eaten than in other parts of the country. Thirty percent of the diet is vegetables, but 30 percent of that is potatoes. Grains compose 13–14 percent of the average diet, most of them processed. Wheat is the most popular, made in the form of breads, sweet baked goods, and breakfast cereals. Corn is also widely used, but much of it is used in processed foods, including animal feeds, cornstarches, and corn syrups. Fats, oils, sugars, and sweeteners compose most of the remaining daily calories. Dried legumes such as navy, pinto, and black beans are a small (about 8 pounds per year) but growing food segment, in part due to a rising Hispanic population. The average per-person caloric intake is about the national average of 2,600–3,000, though Midwestern states are generally at the middle to lower end of the national overweight and obesity scale.

Meat is the center of almost all Midwestern meals, whether home cooked or in restaurants. Beef, poultry, pork, and some fish are common. Ground beef is the most widely used form, often as patties (hamburgers) or loose for chili and similar dishes, including a famous sandwich style in Iowa. Poultry zoomed

in popularity in the last quarter of the 20th century because it costs less and is thought to be lower in fat. Chicken is used year-round, with breast meat the favored cut. Turkey is also widely available and a necessity at holidays such as Thanksgiving and Christmas. A great deal of the poultry consumed comes from Midwestern states, especially Indiana and Ohio. Pork has declined in competition with poultry, but bacon and ham are staples of people's tables, often at breakfast and for lunches. Iowa remains a major producer. Though the region is surrounded by great lakes and big rivers, freshwater fish is less widely eaten than imported seafood, especially shrimp, salmon, and canned tuna. Of freshwater fish types, catfish is popular in southern parts of the Midwest and among African Americans, while along Lakes Michigan and Superior, local whitefish is used in fish fries and fish boils (in northern Wisconsin).

Other meats include game animals such as duck, goose, turkey, venison, squirrel, and rabbit, which appear during hunting seasons, especially in rural areas of the Midwest. With almost a million deer taken during the fall hunting season, venison is more widespread than might be supposed.

Animal-based proteins also come from dairy products. Like other Americans, people in the Midwest love milk in liquid state, as cheeses, and in ice cream. The amount of milk drunk per person has declined by 30 percent since 1970, but cheese use has increased by 100 percent over the same period (10 pounds of milk make 1 pound of cheese). Wisconsin, the Dairy State, produces more cheese than any other state, and its citizens are above-average cheese eaters (hence the common insult for Wisconsinites, "Cheeseheads"). A considerable amount of cheese is not eaten out of hand but instead used in pizza and pasta dishes. Ice cream is a highly favored dessert, and states such as Indiana, Illinois, and Minnesota are major ice cream makers. Not a basic component of Midwestern diets, yogurt has nonetheless increased in usage to as much as 4 pounds per person per year, as compared to 15 pounds for ice cream.

In days when more Midwesterners lived on farms, most vegetables and fruits were grown locally. Green beans, cabbages, carrots, peas, bell peppers, tomatoes, lettuces, spinach, cucumbers, potatoes, onions,

parsnips, turnips, rutabagas, zucchini, squash, and pumpkins (Illinois is the number one pumpkin grower) were raised in gardens and fields and eaten regularly. What was not eaten fresh was canned at home for use over the winter. Potatoes, however, were the most popular tuber and remain so. Today, many more fresh vegetables are available in supermarkets, though few are grown nearby, except for those sold in local farmers' markets. Most of the same vegetables are consumed today as in the past with the addition of broccoli and cauliflower because of their high vitamin content and antioxidant qualities. Also, salad greens have become very popular, making for higher lettuce consumption than ever before. Instead of being home canned, a good portion of the vegetables eaten now are frozen, actually the best way to preserve their nutritional contents.

The Midwest enjoys abundant fruit production. Michigan is the sixth-largest fruit producer in the United States and the leading grower of sour cherries, which are used in pie fillings. Wisconsin is number one in cranberries, and until early in the 20th century southern Illinois led the nation in peach exports. Surprisingly, citrus fruits from Florida and California are the most popular fruits, most of them made into juices. Melons, peaches, pears, sweet cherries, and berries are frequently purchased, but more popular are bananas (imported) and apples. A good deal of apple consumption in the Midwest is in the form of processed juices, 33 percent higher than the rest of the country. Altogether fresh fruits and fruit juices make up only about 18 percent of the average diet.

Living in the midst of the nation's greatest producers of wheat and corn, Midwesterners ought to be great whole-grain eaters, but they are not. Most wheat and barley is milled and baked into breads, pastas, cakes, and other pastries. Wheats, including the red durums from the Great Plains, are processed, stripped of their main nutrients, and turned white, into the flour sold for home use. Where whole grains mainly appear is in breakfast cereals. Oats and cracked wheats are staple cooked hot cereals, while corn, wheat, barley, and flax are used in cold cereals. That is appropriate for the Midwest because the breakfast cereal industry was pioneered in Michigan, Ohio, and Illinois. Rice plays a smaller but important

role in Midwestern cuisine, none of it grown in the region and almost all of it milled to make it white, thus removing its natural vitamins and fiber.

Some historical local foods are still used even in the modern industrial food system, many of them gathered from the wild. American persimmons, mostly used for preserves and pies, are collected from trees in southern Ohio and especially southern Indiana and Illinois. Pawpaws, also called custard apples, or Hoosier bananas in Indiana, are found across the Midwest. Their creamy pulp is also used in sweet desserts and drinks. Both fruits are the focus of local late-summer festivals. Mushroom gathering is a popular pastime. Morels and chanterelles found in Midwestern forests are highly prized and widely consumed in season. Wild rice, Minnesota's state grain, in its true natural state is harvested by canoe from small lakes and streams, often by Native Americans. Although now farmed for national distribution, the wild version is very local. Fish, such as bass, perch, buffalo, and bluegills, is caught locally and widely consumed. Turtles and frogs (the legs) are in the same category, though eaten by relatively few Midwesterners in recent years.

Cooking

What people cook and how they cook it depends on income levels, availability of ingredients, and the cook's interest in good cooking. In times when the more people lived in rural areas and worked on farms, cooking was almost entirely in the hands of women. Farmwives and their daughters rose early in the morning to stoke fires in their wood- or coal-burning ovens and started cooking. These stoves usually had two ovens, one hot for baking, the other called a warming oven to keep cooked food hot. The stovetop had anywhere from two to four hot plates on which the cook could set pans and kettles. Because coffee was an essential beverage, kettles and coffee-pots were kept on the stove the whole day through. Skillets were essential because Midwesterners, like all Americans, love fried food. Deeper pans were used for soups and stews and for cooking vegetables.

Inventories of kitchens from around 1900 show that many had dozens of cooking devices, ranging

from knives to cooking spoons and spatulas, different-sized strainers, mortars and pestles, whisks, mixing bowls, baking pans of various sizes, apple corers, cherry pitters, hand meat grinders, sausage stuffers, and many others. Since few foods were pre-prepared, as now, cooking was labor-intensive. For the midday farm meal, meat had to be cut to size and roasted or baked; and when the meat was done, gravy was made from the drippings. Potatoes were peeled and boiled, and vegetables like green beans picked, trimmed, and also boiled. Fresh bread had been made beginning with early morning preparations. Desserts were usually pies, the crusts made with lard that had been rendered at home, the fruit fillings prepared by hand. Most recipes were not elaborate, except for cakes, and many of the dishes prepared in country kitchens remain as staples of Midwestern cooking.

For more than 100 years American cooking has trended toward easier preparation and faster cooking. Inventions such as the gas and electric stove, refrigerator, home freezer, food mixers, food processor, and, more recently, the microwave oven have saved a lot of time in the kitchen. To accommodate these new implements food companies created food products that were easy to use and also fit American tastes. Many of these companies are Midwestern, and the people who created the foods grew up with Midwestern foodways. For instance, a favorite dish, Kraft boxed macaroni and cheese dinner, was invented in

A baked casserole with potato, sausage, onion, and cheese. (Teresa Kasprzycka | Dreamstime.com)

Chicago in 1937 using powdered American cheese and pasta, butter, and milk. It is really a casserole that is a characteristically Midwestern dish.

Modern-day cooking varies from person to person. For those who are keen on new food trends and fine dining, kitchens are equipped with the best stoves and many electric food-preparation devices. They also have the best ingredients including varieties of fresh herbs and spices. Some of these cooks make efforts to use locally sourced food products or at least foods that are organically grown, if not local. Although these innovative cooks are a significant part of the culinary scene, most kitchens and cooks are rather different, employing foods processed by industrial production techniques.

Modern stoves have the same functions as the old wood-burning ones: ovens for baking and roasting and cooktops for frying, sautéing, boiling, and steaming. Modern utensils are often made of heat-resistant plastics but serve the same functions as the old ones. Home cooking includes baked, roasted, or fried meats, but the rest of the meal might be prepared by heating pre-prepared dishes in a conventional or microwave oven. Casseroles, for instance, are often made with packaged or canned soup. Frozen foods are eaten in an average household six times each week, many of these heated by microwaves (the best way to preserve vitamin contents). These might be vegetables or the ever-popular pizza. Salads to accompany the meal often come from pre-cut and washed salad mixes and dressings from bottled preparations. Desserts are one kind of dish that remains traditional. Fruit pies are a Midwestern specialty, and many are made at home. However, a good many might be made from store-bought pie crusts and canned fruit fillings. Cakes, too, are commonly made from cake mixes, mixed with an electric blender and baked in the oven. Or whole meals can be purchased premade from food stores. Roughly 50 percent of all Thanksgiving dinners are served from this source.

Though the basic foodstuffs of Midwestern cuisine seem homogeneous, there is diversity in its peoples and their foodways. Immigration and local environments make for distinctive regional and local foodways.

Typical Meals

Native American peoples of what is now the Midwest used corn and gathered the same wild plants that people do now, wild rice and mushrooms, for example, but most modern foods came with later immigrants. The main English-speaking settlers followed two routes, the Ohio River in the south and northern trails. The southern areas of the Midwest tend to be hilly all the way from the Allegheny Mountains to the Missouri Ozarks. Settlers here came mainly from the American South and brought Southern, Appalachian foodways with them. Abraham Lincoln was one of them. In southern Indiana, Illinois, and Missouri, pioneer women cooked with corn more than other grains. Cornbread, johnnycakes, and hoecakes, all made from cornmeal, were cooked in skillets set over open fires, and later on in ovens. Wheat flour, usually mixed with butter or soured milk, was used to make biscuits. Meats were mainly pork, all raised, slaughtered, and processed by each family. All the family members participated in what was a major late-autumn or winter event in the farm year. Baked ham fried in home-rendered lard was a commonplace meal served with red-eye gravy (made from the pan drippings) and corn grits. Hunting, usually by the men in the family, also brought protein to the table. One of the most famous dishes is still burgoo, a stew made with squirrel and whatever other meats might have been available, all cooked up with vegetables in a big pot. Wild greens often accompanied meals. Desserts were usually fruit pies, the crusts made with lard, and sometimes the pies were fried in deep fat.

Modern food production has affected these old foodways. Lard, for example, has been largely replaced by vegetable shortening and margarine. But many of the same meal ingredients remain common in the southern, Ohio River, and Ozark regions. Grits and biscuits are still on breakfast tables, pork is more widely used than in other parts of the Midwest, and frying is king at home and in restaurants. Home cooks still make pies at home, and they are popular in restaurants throughout the Midwest. One specialty homemade treat is sugar pie, Indiana's official state pie, made of a simple pie crust, sugar, and cream.

English speakers, including Irish immigrants moving to the central and northern parts of the Midwest, came mainly from New York and New England. Their foods were based on beef, with some pork, and wheat, rather than the pork and corn common in the South. Roasted beef, stews, and fried steaks in various forms were the center of most meals along with potatoes, a cooked green vegetable, and gravy. Desserts were usually baked—pies, cakes, and lots of puddings. The main variation was chicken for Sunday dinner and, especially for Catholic families, fish on Fridays. Today, chicken is far more common on everyday dinner tables, but beef in various versions is still the dominant meat. Coleslaw, from a Dutch word for cabbage salad, was also a popular dish at home and in public settings, such as potluck meals and church socials. It is still made at home but is now mostly purchased from food stores. In the rural Midwest dinner was the main meal of the day, taken in the middle of the workday, at about noon. Supper was lighter, usually the dinner leftovers, served about 6 P.M. This word usage is still used in many parts of the Midwest, less so in cities, and early evening meals are still the rule.

A distinctive British food tradition came with miners from Cornwall from the middle of the 19th century. Working the tin, lead, copper, and iron mines in the hilly country of western Wisconsin and Michigan's Upper Peninsula was hard work and needed hearty food. The women of mining families made pasties for the men to take to work. Pasties are turnovers made with meat and vegetables such as potatoes. Cornish pasties were then taken up by Finnish migrants, and these homemade savorys remain as an identifier of regional food culture.

In the 1850s Germans began to arrive in the Midwest in large numbers and settled on farms and in cities. Although their own religions and dialects varied, their foods were similar. Sausages and beer are important elements of German food culture. Noodles and various potato preparations, along with vinegar-laced preparations such as sauerkraut and sauerbraten, are all part of German cuisine. So are several types of cakes and cookies. It was not unusual for wealthier people in cities and farm households to employ young German women as cooks, and in this

way, German foodways became part of Midwestern cuisine. Cities with large German populations—Milwaukee, Saint Louis, Chicago, and Detroit, among others—became famous for beer manufacturing. A light variety called pilsner became so popular that it is now what we think of as American beer. Beer is an important item in everyday American foodways. It is the most ubiquitous mildly alcoholic beverage, and few sporting events are held without it being served.

German food culture centers on sausages. Several of the many German types are now embedded in the Midwest. Bratwurst is a signature dish of Wisconsin: There is not a fair or ball game, picnic, or festival that does not feature bratwurst. These are often lightly boiled in beer, then grilled on an open fire, and finally served on a bun with German-based mustard and onions. The same holds for frankfurters (supposedly from Frankfurt in Germany) and wieners (Vienna sausages from Austria), which became hot dogs in the United States. Hot dogs are served in restaurants, at stands, and by street vendors. Chicago has distinctive hot dog styles as do Detroit and Cincinnati. Perhaps the most famous hot dogs of all come from a German-founded company in Chicago and Wisconsin, Oscar Mayer. Since the 1950s Oscar Mayer wieners have been eaten at home by children, an easily heated convenience food and an important part of Midwestern and American foodways.

One group of German speakers came to the Midwest in the decades around 1900 from Russia, where large numbers of them lived along a section of the Volga River. Settling in the Great Plains including Kansas and Nebraska, many lived on family farms, planting and harvesting the hard red wheat that they introduced to the Midwest. One dish they brought is called a *bierock* or *runza* and is virtually the state food of Nebraska. These are savory pastries, stuffed with cabbage and sometimes meat, that are traditionally baked at home as everyday food—eaten by the farm men in the fields—and for holidays. So popular are they that a chain of runza restaurants has spread across Nebraska.

Scandinavians from Norway, Denmark, Finland, and Sweden immigrated in the 19th and early 20th centuries in large numbers. Minnesota, Wisconsin, parts of Michigan, and cities such as Chicago and

Minneapolis acquired the food habits of these new settlers. Most of the food preparations were like those in the rest of the Midwest, heavy on meats and potatoes (potato sausage with white sauce is a classic homemade dish), with creamy sauces laced with lots of dill common. Several dishes remain as indicators of local culture and are still features of home cooking, especially on holidays. *Lefse*, a kind of thick bread, made with potatoes and cooked on a flat griddle, is one, and *limpa*, a rye bread made with cardamom, anise, citron peel, and some sugar, is another. Lutefisk is dried whitefish that has been soaked in water mixed with lye and then cooked. Almost no one except Norwegian Americans likes fish prepared this way, but that is what makes it culturally important. One dish that has translated to general Midwestern food culture is the Swedish pancake. Beginning about 100 years ago, this sweet pancake topped with berries and whipped cream was served in restaurants, and it has remained a popular breakfast dish, often after church services, ever since.

Eastern European foods and cooking have played a large role in Midwestern food culture. Czechs, Poles, Russians, and other Slavic-speaking people arrived with Ashkenazi (eastern European) Jews beginning in the last years of the 19th century. On farms across the Midwest and especially in the newly industrialized cities, Americans began to learn about Polish pierogi (Polish filled dumplings) and *paczki* (jam-filled doughnuts), Czech *kolache* (small pastries made with butter and filled with fruit), Jewish blintzes (thin pancakes rolled up with fruit or cheese fillings, served with sour cream), bagels, *biyalis* (a small, flat roll similar to a bagel but without a hole and topped with onion and poppy seeds), latkes (potato pancakes), and sausages of all kinds, including the (Jewish) all-beef hot dog. All of these can be found in Midwestern supermarkets, especially in cities where people of eastern European descent live. Pastries such as paczki and kolache are holiday treats often made in homes by several generations of women in the family: grandmothers, mothers, and daughters. They are a few of the foods that serve as family binders.

Italian immigrants have had the greatest impact on Midwestern foodways—and those in the United

States as a whole. Beginning around 1900, most came from the southern parts of Italy and Sicily, bringing a whole range of pastas, breads, vegetable dishes, and tomato-based sauces. Though most were poor laboring families, before too long they entered the food business. Small Italian restaurants and green grocers sprang up in Chicago and other main cities, and some dishes became part of Midwestern cuisine. Eggplant, zucchini, greater use of garlic than elsewhere, lettuce, tomato sauce, lasagna, spaghetti, and casseroles are everyday cooking in homes everywhere in the Midwest. Spaghetti and meatballs is an Italian American dish, unknown in the mother country but suited to hearty Midwestern home cooking. Surveys show that pasta of some kind, not counting macaroni and cheese, is served at home once or twice a week, and pizza appears more often than that. Pizza is another Italian dish that became Americanized. The Chicago version, a very heavy, cheese-loaded version called deep dish, has been served in restaurants since the late 1940s. It is one of the characteristic dishes of that city. The largest chain of pizza restaurants, Pizza Hut, was founded in Wichita, Kansas, in 1958. One very local traditional Italian food called *cudighi* is characteristic of Michigan's Upper Peninsula. Invented for miners who worked in the Iron Mountain range in the 1930s by restaurateurs who came from northern Italy, this heavy, spiced pork patty sandwich can be made at home, but it is a common fast food for Yoopers, as the people there are known.

Two other important influences on Midwestern foods are African Americans and Latin Americans. In the early years of the 20th century and again just after World War II (post-1945), African Americans migrated from the Southern states to Midwestern cities in large numbers. In cities such as Chicago and Detroit some characteristic dishes came to be called soul food by restaurateurs in the 1960s. Southern fried chicken and fish, grits, greens, pork, biscuits, and certain cakes and pies are now staples in Midwestern cities, and ingredients are widely available in food markets. One important Southern food has crossed into general usage: barbecue. Around World War I, African Americans employed in the Kansas City, Missouri, region set up barbecue restaurants.

A backyard barbecue grill with pork meat on the slats and a bowl of homemade sauce on the side. (Eti Swinford | Dreamstime.com)

Today, Kansas City has dozens upon dozens of barbecue places and is world famous. Often made with a sweet, tomato or ketchup base, Midwestern barbecue has distinctive styles. It is made not only in restaurants but also at home, usually by men, as a type of backyard cooking or grilling. Weekends and holidays are the great days for such preparations, and often home-style barbecue cooks bring their creations to the many barbecue competitions held across the country.

People from various regions of Mexico entered the Midwest in the 1910s and settled to work in industrial towns and cities in small numbers. From the 1960s immigration increased exponentially not only in cities but also in the countryside, where more recent migrants work in agriculture. Many Mexican dishes have become Midwestern, eaten out or in the home. Tamale pies and taco casseroles are common home-cooked meals. Tacos and enchiladas eaten out of hand, loaded with Wisconsin cheddar cheese and not too spicy-hot tomato salsas, are regular fast-food dishes and are made at home. Often these come in ready-to-eat forms made by large food manufacturers. And there is hardly a sporting event that does not serve tortilla chips covered in a melted cheese-food product. From fine dining to small local restaurants run by newly immigrated families, Mexican food is now an important part of the region's foodways.

In many ways, Midwestern foodways are generically modern American with an increasingly global taste. But there are ongoing traditions of plain, hearty home cooking and regional dishes that set the Midwest apart from other parts of the United States.

Eating Out

Eating out in the Midwest varies by locations, incomes, and taste. Public dining places range from expensive fine-dining restaurants run by celebrated chefs (Chicago is a world leader in these kinds of eating houses) to middle-income facilities, both locally owned and corporate places, such as Applebee's and Olive Garden, and fast-casual establishments, of which McDonald's, Big Boy, Culver's, and Pot Belly are some Midwest-based examples. In between are many ethnic restaurants, local diners, and quick fast-food places. Of the latter, quick food, the Midwest has types that are closely identified with their communities. Chicago hot dogs loaded with condiments, Detroit coney dogs covered in meat sauces, Iowa loose meat sandwiches (Maid-Rite is the best known), and Cincinnati chili are examples. Few people eat family dinners at these places, but all are very popular for lunchtime dining and midday snacking.

Ethnic restaurants are mainly found in urban areas. Once, this kind of dining was confined mainly to Italian, Greek, German, eastern European, and Chinese restaurants. Today, diners in almost any city can choose from a much wider variety of international places, from Mexican to African, varieties of Indian, and Southeast Asian, among the most common. Thai and Vietnamese restaurants are widespread, and in northern cities such as Minneapolis, Hmong cuisine is popular. Green, red, and *massaman* curries, *sate* (grilled meat on a skewer), spicy soups, papaya salads, *pho* (beef soup), and many noodle dishes are regularly consumed by Midwesterners. One savory noodle dish, pad Thai, is so popular that it has become Thai American.

In former days, before the national interstate highway system was fully established, many towns had their own local restaurants. Often, the food was sourced from the nearby countryside, especially dur-

ing the growing and harvest seasons. Fried chicken, pot roasts, and meat loaf, with baked or mashed potatoes and some overcooked vegetable, followed by homemade fruit pies with cream, were favorites. Today, most of these kinds of eating places have been replaced by corporate chain outlets, whether burger or family sit-down eateries.

Two kinds of restaurants with local roots remain, both of ethnic origin. Many cities and towns in the Midwest have Greek-owned diners, often called "family restaurants." Diners such as these serve meals all through the day, with dishes ranging from pancakes, bacon, and eggs for breakfasts, to soups and sandwiches at lunchtime, to full-scale meals for dinner. A common joke is that "Grecian chicken" is the standard dish. These kinds of restaurants fill an important dining niche that was once occupied by several kinds of places, such as coffee shops, cafeterias, and locally owned small eateries.

A broad swath of the Midwest has been called "the chop suey belt." Chinese American restaurants number in the tens of thousands in the United States and make more money than the major hamburger chains. Hardly a small town in the Midwest is without one, and hardly a Midwesterner has never eaten chop suey and chow mein, sweet and sour pork or chicken, fried egg rolls and wontons, sweet and sour soup, and egg foo yong. In many respects, Chinese American dishes are as Midwestern as beef and potatoes.

Special Occasions

Like all Americans, Midwesterners have plenty of holidays and festivals, all of them celebrated with the consumption of food in large quantities. Some celebrations are private, family affairs with meals, such as Thanksgiving, Christmas, and Passover. Others are both private and public, with family dinners and food served in public, examples being Eid al-Fitr (the end of the Muslim month of fasting), Asian New Year, and Easter. Other festivals are regular calendric events, such as the Fourth of July; state, county, and town fairs; and specific public food events, often called "Taste of ____." In most of them, Islamic feasts excepted, alcoholic beverages are commonly served along with featured foods.

Thanksgiving is a uniquely American holiday and nowhere more revered than in the heartland from which so much of America's food comes. It is also an autumn harvest season fest. Roasted turkey is the centerpiece, usually stuffed with an herbed wheat or cornbread mixture, and accompanied by thick, fatty gravy made from the pan drippings. Served family style, meaning put in large bowls that are passed around the table, are mashed white or sweet potatoes, a green vegetable (particularly lightly boiled green beans), baked squash, cranberry sauce, bread rolls, and plenty of butter. There are also plenty of beverages. Desserts will usually be fruit pies, possibly mince pie, or a fruit cobbler, all served with ice cream. One variation of the standard table is the addition of macaroni in tomato sauce, or lasagna. Introduced by Italian immigrants around 1900, these dishes migrated to the African American and other

communities to the point where Thanksgiving lasagna is not uncommon.

Virtually all of the foods at this table are the same as those on a Midwestern farm table a century ago. Potatoes, squash, green beans, cranberries, dairy products, fruits, and the turkey are all Midwestern products that can still be obtained fairly locally. If any single meal holds a Midwestern food identity, it is Thanksgiving.

Public fairs, the first held in Ohio in 1850, and food festivals are also occasions for plenty of eating in hearty Midwestern fashion. Fairs are often served by vendors who offer foods that can be found at similar events around the country: fried funnel cakes, doughnuts, hot dogs, hamburgers, and cotton candy, among many others. There are some special dishes that are either unique to one fair or another or characteristic of Midwestern food. Fried

A garish hot dog stand at a county fair in Ohio. (Dreamstime)

cheese curds, often breaded, remind us of Wisconsin, where they are a common snack dish; Indian tacos (fried bread filled with mildly spiced tomato sauce, ground hamburger, and shredded cheese) are Nebraska's and the Dakota's contributions to America's cuisine; and pork chops on a stick and roasted corn are examples from Iowa. Corn dogs (hot dogs coated in a cornmeal batter and deep-fried) are a specialty of the Illinois State Fair and are called Cozy Dogs named after a local restaurant that supposedly invented them (it did not). In Wisconsin, bratwurst is king, boiled in beer, then grilled on open charcoal fires, and served on a bun with grilled or fresh onions and German mustard. Apart from such sausages, ice creams, and candy, almost everything to be eaten at a Midwestern fair is deep-fried.

There are also many specialized festivals centered on regional foods. Mitchell, Indiana, and Taylorville, Illinois, among others, hold persimmon festivals in the fall of each year. This native American fruit is not commonly eaten today, but persimmon puddings and pies were staple dishes in early American cooking. Lake Snowden near Albany, Ohio is the scene of a pawpaw fest. A once-popular fruit, the pawpaw can be eaten fresh only for a short time and thus does not appear in supermarket produce aisles. Some food festivals are very large and cover varieties of foods. The world's largest is the Taste of Chicago, which draws more than 3.5 million visitors over a 10-day period in July. Foods, served mainly by the city's many ethnic restaurants, range from kebabs to sate, pizza, hummus, hot dogs, Italian beef, and, most famously, barbecues. So popular is this event that Midwestern cities such as Madison, Wisconsin; Cincinnati, Ohio; and many smaller towns and cities hold similar festivals with varieties of food that represent their own communities.

Diet and Health

Ideas about diet and health among Midwesterners do not spring from religious tenets, with several small exceptions, but from modern science and common sense. This has not always been the case, since in the 19th and early 20th centuries folk medicine and folktales were often invoked to cure illness and promote

physical health. One collection of folklore from the 1930s shows that some rural people believed that goiters (a painful swelling of the thyroid gland, usually from a lack of iodine in the diet) could be cured by hanging a warty frog around the victim's neck or by boiling a frog alive and rubbing the fat on the goiter. At the same time, many herbal medicines were concocted and used locally. Sassafras tea, for instance, was widely used as a healthful tonic after a long winter when "the blood thickened" and people wanted to cleanse their systems by purging themselves. Nonetheless, in the absence of scientific research, patent medicines were also widely used, most of them sold by "quack" (phony) medical practitioners who laced their potions with lots of high-percentage alcohol.

Diet has always played an important role in people's ideas about good health. Rural people looked forward to the first wild greens of the spring and ate them as "sallets." When the first cultivated lettuces appeared, they, too, were consumed as health foods. Similar ideas about the obvious connections between diet and health drove the earliest health reformers, the most famous being Sylvester Graham in the early 19th century. He believed that chemical additives to foods were harmful and so promoted eating whole-grain flours. His graham cracker was widely known, though nothing like the biscuit of the same name today. His ideas were taken up by the Kellogg brothers, whose sanitarium (literally, "healthy place") in Battle Creek, Michigan, became hugely popular. People who came to restore their health ate a special diet consisting of many vegetables and high-fiber foods. One of these was corn flakes, which the Kelloggs invented and one of the brothers marketed nationally. Thus began the breakfast cereal industry, many of whose products are still marketed as important to a healthy diet. Several of the major cereal producers remain as Midwest-based companies.

If eating a good breakfast is important to health, so are other dietary procedures and products. In the present day, people in the Midwest are as concerned about diet and health as they are in other parts of the country. Overweight to the point of obesity, high blood pressure, blood serum cholesterol as a danger to the heart, and cancers are among the chief worries. As a result, and despite the notion of Midwestern

food being filled with saturated fats, sugars, and high amounts of gluten, people have changed their diets in the last several decades. Fat and salt consumption has decreased, and leaner meats and fruits and vegetables are eaten in greater amounts than ever. Obesity levels and other health statistics in the Midwest are about in the middle range for American states—about 26 percent of the population. Life expectancy is also at the national average. This compares favorably with statistics from 1940 when the surgeon general of Illinois issued a report stating that the average life expectancy of an average male in the state was 60 years old, without hope of it ever getting better.

The single dietary factor leading to ill health in the Midwest is poverty. The urban poor's inability to find and pay for healthy foods (high-carbohydrate, high-fat, and high-salt foods are cheaper) is matched by the lack of money for similar foods among the rural poor. Obesity rates for such people in the Midwest are among the highest in the United States, ranging up to 36 percent. Obesity leads to many other health issues, from heart attacks to respiratory problems. Individuals know this, but their circumstances do not allow for healthier diets. As

such, this is a major public health problem in America's agricultural heartland.

United States: New England

Overview

New England comprises six states in the northeastern corner of the United States: Maine, Vermont, New Hampshire, Massachusetts, Rhode Island, and Connecticut. The most densely populated New England state is Massachusetts, where more than 6 million of New England's 14.3 million residents live—about 810 per square mile. The most sparsely populated states are Maine, with a total population of 1.3 million (41 per square mile), and Vermont, where there are about 620,000 residents (67 per square mile). Because Massachusetts played a central historical role in the move for independence from Great Britain, has a large, dense population, and is home to New England's largest city, Boston, the state is often viewed as the focal point of New England and as emblematic of the Yankee personality: resourceful, independent, ingenious, and innovative.

The ancestral roots of New England frame its historic food traditions. From north to south the emphasis differs somewhat: Vermont, New Hampshire, and Maine's roots are predominantly French Canadian, English, Irish, and German; Massachusetts's ancestors are Irish, Italian, French or French Canadian, and English; Rhode Island's are the same as Massachusetts but include Hispanic and Portuguese ancestry; and Connecticut has more Italian ancestry than its northern neighbors, followed by Irish, English, German, and French or French Canadian ancestry.

Although New England remains largely Caucasian, its historical food culture is overlaid by and enriched with food cultures introduced by modern immigrants. Blacks/African Americans, Hispanics/

Latinos, and Asians are growing populations in all the New England states. Massachusetts is home to many Central and South Americans as well, particularly Brazilians; Rhode Island has Liberian, Nigerian, and Ghanaian citizens; South Americans, Portuguese, and immigrants from former Soviet countries live in Connecticut. Supermarkets, grocery stores, and restaurants reflect this ethnic diversity.

New England has projected an energetic presence into American food culture and technology from its early days to modern times. The first cookbook authored by an American, *American Cookery*, was written by Amelia Simmons in 1796 and originally published in Hartford, Connecticut. In the 1960s, Massachusetts resident Julia Child brought French cooking into American homes with her book *Mastering the Art of French Cooking* and her public television cooking show, *The French Chef*. Many culinary tools were created in New England that embody the concept of Yankee ingenuity. For example, the first can opener was patented in 1858 by Ezra J. Warner of Waterbury, Connecticut. David Goodell of Antrim, New Hampshire, built a business on an improved apple parer that he invented in 1864. Turner Williams of Providence, Rhode Island, improved on the hand-operated egg beater by adding a second, interlocking beater in 1870, and his appliance became known as the Dover egg beater. Potato breeders in Vermont and Maine created hundreds of new potato varieties in the late 19th century. In the 1940s, following World War II, the home microwave oven was developed in Massachusetts as weapons manufacturer Raytheon looked to diversify its product portfolio. The Cuisinart food processor was invented

in 1973 by Greenwich, Connecticut, native Carl G. Sonthaimer.

The development of speedy global trade in all kinds of foodstuffs has flattened the distinctiveness and seasonality of everyday New England cookery in a broad sense by making a wide range of foods available year-round—similar to what any American can purchase in any local supermarket. Traditional New England foods that were once consumed on a daily basis due to the limitations of the seasons and of supply, such as baked beans, boiled puddings, salt pork and salted fish, breads and puddings made of cornmeal and rye flour, molasses, and seasonal fruits and vegetables, are now foods that are eaten by choice rather than necessity and that form the region's culinary identity. Many native foodstuffs, dishes, and foodways distinguish New England from other regions in the United States. Festivals, tourism, holidays, and family traditions acknowledge, support, and celebrate regional, traditional, and seasonal foods such as blueberries, strawberries, cranberries, and apples; corn, squash, and beans; lobsters, clams, oysters, mussels, and cod; maple syrup; and cheddar cheese. The Thanksgiving feast is a keystone of American identity that is based on the colonial-period New England harvest festival.

Food Culture Snapshot

In the 21st century, New Englanders spend more than half their food dollars, or about 10 percent of their net income, on meals prepared at home. They spend about 40 percent of their food dollars, or about 5 percent of their net income, on meals away from home.

Among foods purchased for home preparation, meats predominate, particularly poultry and beef. Following meats are fresh fruits and vegetables; cereals and bakery products; frozen prepared meals and other foods; canned and packaged soups; potato chips, nuts, and other snacks; condiments and seasonings, such as olives, pickles, relishes, sauces, and gravies; baking needs; other canned and packaged prepared foods, such as salads and desserts; and dairy products such as milk, cream, cheeses, sour cream, and buttermilk. Because of the time constraints imposed on families in which both parents are working, and even in single-person

households where the priority is to spend less time in the kitchen and more time pursuing leisure activities, prepared meals are convenient, popular, and responsive to current trends and fashions in nutrition.

Like most Americans, New Englanders tend to do their shopping at supermarkets, and in urban areas they can shop online and have groceries delivered to their homes. Until the 1990s, independent grocers played a strong role alongside growing supermarket chains. But with the consolidation of supermarkets, independents and smaller grocers have a decreasing presence except in rural areas. In rural areas, independent grocers are more common.

As supermarkets penetrate a greater share of the market, at the same time New Englanders place increasing value on locally grown foods. Natural-foods supermarkets highlight organically grown, native, seasonal foods, as well as heirloom varieties of produce and breeds of poultry and livestock. Many shoppers seek organic produce, meat, poultry, baked goods, and dairy products at indoor and outdoor farmers' markets that operate year-round, fueled by a strong regional organization of organic farmers and gardeners. Supermarkets that recognize the growing consumer interest in local and organic foods also carry items from such producers. Smaller boutique markets emphasize locally grown or manufactured foods, from fruits and vegetables to breads and other baked goods, meats, poultry, cheeses, wines, beers, and soft drinks.

New Englanders have grown more health conscious in the 21st century and less physically active than their forebears. Dietary choices reflect the trend in the consumption of smaller quantities of meat and fats and greater quantities of fruits, vegetables, and grains than the preceding generations consumed. A typical breakfast might be fruit with dry cereal and milk or yogurt, or eggs and toast. A commuter might pick up a bagel with cream cheese or—on the heavier side—a breakfast sandwich with egg, ham or sausage, and cheese on the way to work. Coffee, tea, or citrus juice is commonly consumed with breakfast.

Lunches are light, perhaps prepared at home and brought to work or sent with children to school: a sandwich or soup, perhaps with a salad, accompanied by a soft drink, juice, or water. Dinners typically include a roast or broiled meat, a starch, vegetables or a salad,

and sometimes a dessert. Casseroles, pastas, and other one-dish meals are also common, often accompanied by a salad or vegetable. Prepared meals bought at a supermarket, either fresh or frozen, are also common fare. New Englanders tend to drink wine at home more than any other alcoholic beverage, and they enjoy tea and fruit juice as their primary nonalcoholic drinks.

Major Foodstuffs

The geography of New England provides a rich landscape for growing and harvesting foodstuffs. With more than 6,000 miles of tidal shoreline and U.S. fishing rights that extend 200 miles from shore, its waters yield abundant fish and shellfish. The inland countryside offers an environment that supports both large- and small-scale farming as well as having the climate and soils necessary to produce the forage needed for dairy farming. Although the growing season is short, the income per farmed acre for all six New England states is among the top five regions in the country.

Colonial and Revolutionary New England was largely rural, and its economy was rooted in agriculture as a source of capital to support its developing economy. Growing urban populations in Boston and Salem, Massachusetts; Newport, Rhode Island; and Portsmouth, New Hampshire, provided markets for farm goods. The fish and shellfish industries played

Lobsters and clams steam over hot rocks at an annual clambake in Cape Cod, Massachusetts. (National Geographic | Getty Images)

a large role in New England's economy as well as on its dining tables. The codfish was so abundant in colonial times that it became a symbol of economic prosperity in New England. A gilded cod carved of wood has graced the State House in Boston since 1784, and the cape of Massachusetts is known as Cape Cod.

Contemporary New England agriculture and fishing are minor players on the national level, but the significant crops, fish, and shellfish of the region form a large part of the New England cultural and culinary identity. Its major crops—those for which its states are among the top 10 in acres harvested nationally—include wild blueberries, cranberries, raspberries, strawberries, apples, pears, pumpkins and other squashes, and potatoes. It has the largest number of maple trees tapped for syrup in the United States and also maintains a large inventory of milk goats and milk cows. Maine is known for American lobster and is the location of the majority of American lobster landings in the United States. Oysters, soft-shell and hard-shell clams, mussels, shrimp, scallops, and crab come from New England waters, as well as cod, haddock, bass, flounder, tuna, halibut, and many other fishes. Local and seasonal delicacies such as New England eggs and poultry, smelts, Maine shrimp, fiddlehead ferns, and wild or farmed mushrooms tend to stay in the region.

Maple sap is processed into maple syrup in the spring and is strongly identified with Vermont. Cow, goat, and sheep milks are made into butter, cheese, ice cream, and other dairy products by dozens of local and regional dairy processors. Berries are sold fresh in their summer season locally, as well as canned, frozen, baked into pies and muffins, and processed into jams and jellies. The apple harvest begins in early fall, when young, fresh apples are at their peak of flavor. As fall progresses, apples become cider and hard cider, jelly, and pies. Pumpkins are sold fresh and also processed, canned, and made into pies. From May to October, many varieties of potatoes are sold fresh or processed into frozen French fries and other potato products; beans are baked with molasses and pork and canned or sold dried for home cooking. Most fish and shellfish are exported, but regional demand and local festivals that celebrate fishing and shellfishing,

such as the annual lobster festivals in Maine and New Hampshire, are helping to keep more of the catch local.

Cooking

Classic New England cookery is known for being simple, spare, seasonally based, and not highly spiced. Everyday modern New England cooking is much the same. Modern refrigeration and preservation have reduced the need for emphasis on seasonality, but certain iconic New England dishes that are distinguished by their style of cookery remain ritual around the seasons. More ethnic influences are evident in some of the variations on classic New England dishes, particularly in southern New England.

New England kitchens typically differ from urban to suburban/rural in the amount of space available—urban kitchens tend to be smaller—but major appliances are the same for the most part. In some of the more rural kitchens, a wood-burning cookstove/oven may serve the triple purpose of cooking, heating the room, and heating water, in addition to an electric or gas stovetop and oven used solely for cooking. Suburban and rural kitchens, given the luxury of space, serve as a center of the household, where socializing and family activities other than cooking take place. Like most modern American kitchens, any New England kitchen will have a gas or electric stovetop and oven, a refrigerator, a sink, a dishwasher, and sometimes a garbage-disposal system in the sink. Microwave ovens, mixers, toasters and toaster ovens, food processors, slow cookers, and other small appliances are common.

Eating in modern homes can take place in both formal and informal rooms. Informal eating usually happens in the kitchen. When entertaining or having a special meal, a dining room that is separate from the kitchen is used. In smaller, urban apartments, often there is only one multipurpose dining area.

Cooking outdoors is very popular in New England in the summertime. Summer is the backdrop for the classic clambake or lobster bake that takes place on rocky shores, sandy beaches, or backyard grills. New Englanders were slow to adopt the clambake tradition from Native Americans, rejecting shellfish as

“savage” food, but once they accepted the tradition, many variations cropped up. The basic menu comprises hard-shell or soft-shell clams, potatoes, onions, and corn, and it may include lobster and fish. Other additions reflect ethnic influences, such as *Saugys* in Rhode Island, which are veal-based wieners that are known for the “snap” of their natural casings; Italian sausage; linguica (Portuguese sausage); and, sometimes, tripe. Clambakes are most often community gatherings or celebrations—a favorite for Independence Day.

There are many ways to assemble a clambake. One method popular along the Maine coast, where the focus is more on lobsters but soft-shell clams are almost always included, is to build a fire on a rocky shore, in a U-shaped hollow in the rocks that is open on one end, and over which a thick metal sheet can be laid. When the metal is heated, rockweed is piled on top. Also known as bladder wrack, rockweed is an intertidal seaweed that holds a great deal of moisture and imparts a unique flavor to the bake. Live lobsters are laid down in the first layer, followed by a layer of rockweed, then soft-shell clams that have been placed in mesh bags, then another layer of rockweed, followed by corn on the cob. All is topped off with a final layer of rockweed and a sheet of wet canvas; then seawater is poured over the whole. A bakemaster watches over the bake, stokes the fire, and determines when the shellfish and corn are done. Eaten outdoors at tables covered with newspaper, the bake is often accompanied by hot rolls or bread and potatoes. Bowls of melted butter are set out for diners to dip lobster and clams into, and everyone eats with their hands, tossing the shells into common shell bowls. Blueberry pie, made with the tiny, sweet, wild blueberries that are native to Maine and served with vanilla ice cream, and strawberry shortcake, made with a biscuit-style shortcake and sugared native strawberries topped with whipped cream, are perennial favorites for dessert.

Fall and winter cookery features hearty one-pot meals, stews, and chowders, from the traditional Yankee pot roast or New England boiled dinner to fish or clam chowder or oyster stew. Scallops and tiny sweet Maine shrimp appear in the markets from December to February. A popular way to eat Maine

shrimp is to bake them whole in a hot oven until just done, separate the head and tail, and suck the shrimp meat from the tail. Another winter delicacy is smelt: small, silver fish with sweet white flesh. Fished through holes bored in the ice at the mouths of tidal rivers from December until March, often by local fishermen in small fishing shacks set up on the ice, the smelts are cleaned, coated in a mixture of flour, cornmeal, salt, and pepper, and skillet-fried. Smelts can be finger food or eaten with utensils, either plain or with a squeeze of lemon or dip of tartar sauce.

In the springtime, fiddlehead ferns appear in local markets, along with dandelion greens, rhubarb, and morel mushrooms. Fiddleheads, which are the young coiled heads of the ostrich fern, are blanched or steamed and then tossed with butter. A particularly delicious spring treat is to sauté the fiddleheads with the morels of the season or other mushrooms.

Typical Meals

New England meal patterns follow the same sequence through the day as meals across the United States: breakfast, which is typically a light morning meal; lunch at midday, which again tends to be on the lighter side; and dinner, the main meal of the day and also the heaviest. People who do physically demanding work are likely to consume heavier breakfasts and lunches than people who work in a more sedentary environment.

Meat, potatoes, and a vegetable or vegetables have long characterized the typical New England main meal. Usually the three elements are cooked separately, as in the New England boiled dinner of corned beef, potatoes, carrots, and turnips. Sometimes they are cooked together, as in a Yankee pot roast.

Yankee Pot Roast

Season a 4-pound top sirloin roast generously with salt and pepper. Heat some oil, bacon drippings, or other fat in a large, heavy-bottomed saucepan, and brown the roast on all sides. Pour a quart of boiling water over it and cover closely. Simmer as gently as possible for 2 hours, or until the roast is tender. Add peeled onions, carrots, turnips, and potatoes,

cut into large pieces. Cook till the vegetables are tender; then remove the meat and vegetables from the pan and thicken the cooking liquid with 2 tablespoons of flour mixed smoothly with a little cold water. If necessary add more water while the roast is cooking so that there will be enough sauce to cover the vegetables.

It is useful to look at a typical day's meals in the early 19th century to note both the departures in modern eating as well as some of the traces of meals and foodways from the past that are carried into the present. Compared to the meals of preindustrial New England, contemporary meals are smaller and simpler. For example, an early 19th-century farmer's breakfast during the working week might include meats, such as sausages, ham, souse (pickled pig's ears, snouts, cheeks, and feet), or fried pork, and eggs, or pork and apples with a milk gravy, served with boiled potatoes. Salt mackerel and shad might be soaked overnight and then boiled. Baked goods served could include johnnycake (cornmeal and water) or "rye and Indian" bread made from rye flour and cornmeal, and possibly pie.

In the 21st century, a weekend breakfast or brunch—a combination of breakfast and lunch—might be on the heavier side: a breakfast meat, eggs, toasted bread, biscuits or pancakes, and fish cakes. Brunch is more a meal to be enjoyed at leisure and for the pleasure of eating than a practical meal, and it recalls the abundance of a farm breakfast. A typical weekday breakfast would be lighter, more expedient, and pragmatic, as already described: fruit with dry cereal and milk or yogurt, or eggs and toast. A commuter might pick up a bagel with cream cheese or—on the heavier side—a breakfast sandwich with egg, ham or sausage, and cheese on the way to work.

The 19th-century midday meal was known as dinner, and it was usually the big meal of the day and on Sundays could be a time for guests to visit and join in. The meal usually consisted of a roast, which was turned on a spit in front of the fire and could be tended by a child if necessary. Pies were frequent fare—baked in quantity in wintertime and frozen in a cold room, then thawed as needed for dinner.

Weekday dinners might consist of boiled corned beef and pork with a savory pudding and seasonal vegetables as well as cellared vegetables such as turnips, cabbage, pumpkins, and squashes.

Lunch is the modern New England midday meal. Like breakfast, it can be a bigger, more lavish affair on weekends as a brunch. During the workweek, it is normally a lighter meal consisting of a sandwich, a soup, or a salad, possibly composed of leftovers from the previous evening's meal, and perhaps a piece of fruit or other sweet for dessert.

Supper was the 19th-century evening meal, comprising the leftovers from dinner, along with such dishes as hasty pudding (made of cornmeal and water) with milk or molasses, brown bread and milk with stewed pumpkin, baked apples, berries when in season, pie, gingerbreads, and custards. Often, a pot

Baked Beans in a classic Boston Bean Pot. Beans are slow cooked in an oven with a variety of seasonings, some including onion, molasses, and sugar. (iStockPhoto)

of baked beans would be started on Saturday to eat the next day on the Sabbath.

Dinner is the modern evening meal and is the main meal of the day: a meat, a starch, and vegetables or a salad. Sunday dinner is usually the most elaborate of the week—a special roast meat or fowl—and for many the leftovers from Sunday become Monday's dinner. Dessert is not as common a coda to the evening meal as it once was and is often served only on special occasions. Baked beans, often called Boston baked beans because of their close identification with Boston, are still widely eaten today.

Boston Baked Beans

The first published recipe for baked beans appeared in 1829 in *The Frugal Housewife*, by Lydia Maria Child, and called simply for a pound of pork to a quart of beans with a sprinkling of pepper and nothing more. The following is a more flavorful recipe for Boston baked beans.

Rinse and pick over 1 pound of great northern or white navy beans. Soak in cold water overnight, then place the beans and soaking liquid in a large cooking pot. Simmer the beans until the skins burst when you blow on them—15 minutes or longer. Then place the beans in an earthenware baked bean pot, leaving the liquid simmering on the stovetop. Press a whole, peeled onion into the beans. Score deeply a ¼-pound piece of salt pork, and press it into the beans over the onion. Mix together ½ cup molasses, 1 teaspoon dry mustard, and ½ teaspoon each of salt and ground black pepper. Pour over the beans, then pour in the simmering water, adding more if necessary to cover. Put the lid on the pot, and bake in a preheated 250°F oven for 5 hours or until the beans are tender and cooked through. Baked beans are traditionally served with brown bread.

Eating Out

There is a long history of eating out in New England. The ordinaries, taverns, and public houses of the 17th–19th centuries are the earliest examples of Americans eating away from home in a setting other

than that of friends or family. Taverns were located on the owner's property, often next to the town's meetinghouse. In their earliest days they were meant to serve residents primarily, and then travelers. A typical tavern would provide food, drink, lodging, and space for horses, carts, and often livestock. The tavern or public house was a place of entertainment, social interaction, and business transactions for local residents, and a welcome stopping point for those bringing produce or livestock to market and for people traveling by stagecoach.

Early tavern fare was not known to be particularly good or abundant, but as the relationship of the tavern became more intertwined with the food trade, which was becoming more entwined with the alcohol trade, the food improved. Travelers could stop for a meal or a drink, or stay for lodging as well. Meals were served at communal tables and at appointed times. Dining rooms were separate from the taprooms where alcohol was served, and the better taverns served a breakfast that often included steaks, fish, eggs, cakes, and tea or coffee. Smaller taverns or country taverns might include pies, puddings, and cider at breakfast. Dinner was served in the afternoon and was a similar menu to breakfast. Supper was the evening meal, again with the table laid similarly to breakfast, but including cold fowl, ham, and other meats. Cider, ale, and distilled spirits, particularly rum, were served. As the urban landscape developed, taverns became hotels with a greater emphasis on finer dining and decor.

The American diner had its start in Providence, Rhode Island, in the early 1870s as a horse-drawn, mobile freight wagon that provided take-out sandwiches, pies, hot meals, and coffee outside the offices of the *Providence Journal* after restaurants had closed for the night. An entrepreneur in Worcester, Massachusetts, improved on the freight wagons by creating wagons with indoor seating and, later, indoor cooking that catered to late-night workers and public events. The improved diners added items such as baked beans, hamburgers, and clam chowder to their menus. By the early 20th century, public health and safety concerns necessitated that the mobile wagons become set in permanent locations, and by 1940 the classic stainless steel diner had been

developed. Diners might serve New England fare, or, if situated in an ethnic neighborhood, the menu would reflect the local tastes. Many diners survive from their heyday, and they continue to be popular casual eating-out destinations today.

In modern New England, a large diversity of options exist for eating out, from diners, carryouts, and clam shacks to upscale restaurants serving traditional New England fare, restaurants serving modern interpretations of traditional dishes, and a large diversity of ethnic eateries, from the very informal to very upscale.

Though dining-out options are myriad, residents of the Northeast comprise the smallest market share of Americans who do eat out, and when they do, it is most likely to be for dinner at a full-service restaurant. Tourism fuels a healthy restaurant economy, and when visitors come to New England, they look for traditional New England fare, particularly seafood.

Informal clam shacks and lobster shacks abound along the coastal areas, where diners can enjoy a shore dinner of lobster, steamed soft-shell clams, and corn on the cob; deep-fried seafood of all kinds including scallops, shrimp, oysters, and particularly clams; stuffed clams or *stuffies*, which are large hard-shell clams (quahogs) that are chopped, mixed with breadcrumbs and herbs, and stuffed back into the shells and baked—a Rhode Island specialty that can also be embellished with chorizo for a Portuguese touch; or lobster rolls and crab rolls, in which the lobster or crabmeat is mixed with a little mayonnaise and served on a toasted New England-style hot dog bun. Chowders can be “clear” clam chowder, a Rhode Island specialty that is not enriched with cream, or creamy chowder, which is common from Massachusetts north. Chowders can also be tomato-based, seen most often south of the “chowder line” in Connecticut, where clear or creamy New England clam chowder becomes tomatoey Manhattan clam chowder. Shacks usually offer hard ice cream, soft-serve ice cream, and various kinds of ice cream drinks that are known variously as milk shakes (Connecticut), frappés (Maine, Massachusetts), or cabinets (Rhode Island). Frozen lemonade—a slushy lemon drink of Italian origin—and

coffee milk—milk with sweet coffee syrup—are popular treats in Rhode Island.

Stuffies

Scrub 12 live quahogs and rinse in cold water to remove grit. Bring a couple of inches of water to boil in a large pot, add the quahogs, and simmer covered for about 5 minutes, or until the clams open. Set clams aside to cool. Reserve the steaming liquid.

Finely mince a quarter of an onion, a stalk of celery, 2 cloves of garlic, and half a bell pepper. Sauté in olive oil with a big pinch of dried thyme until tender. Stir in 1½ to 2 cups of dried breadcrumbs and transfer to a large bowl.

Remove the quahog meat from the shells, and reserve the shells. Check for grit and dip into reserved steaming liquid to rinse if necessary. Chop roughly and add to vegetable and breadcrumb mixture, along with a handful of finely chopped parsley, the juice of half a lemon, a dash of Worcestershire sauce, and salt and pepper to taste. Mix thoroughly, adding 1 beaten egg and clam juice or strained steaming liquid as needed to moisten the mixture.

Heat oven to 425°F. Spoon the stuffing mixture into the shells and press it flat. Arrange the stuffed shells on a baking sheet, and bake for about 15 minutes until browned. Serve with lemon wedges.

Diner food often includes deep-fried fish and shellfish, but diners round out their offerings with other traditional New England foods such as pickled tripe, roast turkey with cranberry sauce and mashed potatoes, Yankee pot roast, and New England boiled dinner. Oyster stew, lobster stew and lobster bisque, and clam, fish, or corn chowder are also diner staples. Desserts run the traditional gamut, especially including pies of all kinds, which feature New England fruits and vegetables in season such as strawberries, rhubarb, blueberries, apples, raspberries, and pumpkin. Indian pudding, a dessert made of milk, cornmeal, and molasses that dates back to colonial times, is another popular item.

New England dishes are showcased in upscale settings as well. Locke-Ober restaurant in Boston, which has been in operation since the 1870s, offers

such classics as lobster stew, lobster bisque, and clams casino. Clams casino—an elegant version of the stuffie composed of tiny cherrystone clamshells stuffed with a mixture of clam meat, breadcrumbs, bacon, onions, and bell peppers—was supposed to have been created in the early 20th century by the Little Casino in Narragansett, Rhode Island. Locke-Ober and many other restaurants throughout the six New England states use native New England ingredients and traditional recipes in innovative ways as well, sometimes putting a new spin on an older recipe or creating a recipe that folds a native ingredient, such as lobster, into a nonnative form, such as an Asian spring roll.

New England's native foodstuffs have often had a regional identity appended to them on menus or in markets that reflects a pride of place and skill in growing or manufacturing foods and food products. As the European concept of *terroir*—the influence of local growing conditions on the flavor of produce—has spread and combined with New England's pride in its products, native foodstuffs are increasingly and more specifically identified with their place of origin. Fish and shellfish are described in terms of where they are harvested, so diners or shoppers will often see “Point Judith” (Rhode Island) describing their calamari or “Duxbury” or “Wellfleet” (Massachusetts) or “Damariscotta River” (Maine) and dozens of other place-names describing their oysters. Produce of all kinds is often described by the name of the area where it was grown—for example, Roxbury Russet, Newton Pippin, and Rhode Island Greening apples. Cheeses are not simply varieties such as cheddar or chèvre, they are from specific dairies or creameries, often by one of the scores of licensed artisanal cheese makers in New England, particularly Vermont.

Besides traditional New England fare, there are many ethnic restaurants in New England, particularly in the southern states and more urban areas where immigrants are more concentrated. Italian, Portuguese, Caribbean, Brazilian, Mexican, Asian, African, and other ethnic eateries abound.

Special Occasions

The iconic American holidays of Independence Day and Thanksgiving spring from New England history.

Many of the foods and rituals surrounding the celebration of these holidays are still in practice today.

A secular, patriotic, and publicly celebrated holiday, Independence Day, or the Fourth of July, does not have a set feast menu associated with it, though drinking alcoholic beverages has always been associated with the Fourth. Toward the beginning of the 19th century, some towns began to hold public dinners featuring seasonal foods following the public speeches, parades, music, and other events of the day, and before the fireworks that capped the celebration. Picnics became very popular in the mid-19th century, either at home and eaten outdoors or packed up to take to a pretty spot. Cold meats, pickles, cheese, olives, bread, and pies were popular packable fare for a Fourth of July picnic, much as they are today. Later in the 19th century, whole poached salmon served with peas and new potatoes, or lamb with peas, appeared on celebratory menus, as did roast pig, clambakes, and chowders. Salmon, peas, and potatoes are the most iconic of New England Independence Day feasts.

The modern Thanksgiving celebration is based, at least in spirit, on a “harvest home” feast that was held on the occasion of bringing the last of the harvest home. The popular belief is that the first Thanksgiving occurred at Plymouth in 1621. The association is thanks to the efforts of Sarah Josepha Hale, who was the editor of *Godey’s Ladies’ Book*. Hale campaigned for many years to have Thanksgiving declared a national holiday and finally succeeded in 1863 when she persuaded President Abraham Lincoln to proclaim

Thanksgiving dinner placed on table. (Corel)

the last Thursday of November as a day of thanks. In 1865 she wrote and published an editorial in *Godey’s* that connected the events at Plymouth in 1621 with the first Thanksgiving holiday, and with it she captured the popular imagination.

The basic Thanksgiving menu that Americans cook up in their homes each November is composed of foods that are considered native to America, and are also native to New England. Roast turkey is the main course, and it is such a strong symbol that vegetarian substitutes made of tofu or wheat gluten are shaped to look like a turkey. Stuffing, often with oysters or chestnuts; cranberry sauce or relish; potatoes, usually mashed and served with gravy; and pumpkin, apple, or mincemeat pie for dessert are the classic elements of a modern Thanksgiving feast.

In the springtime, Vermont, Maine, and New Hampshire have sugaring-off parties to celebrate the end of maple syrup season. The centerpiece of the party is sugar on snow, maple syrup that is boiled to 230 degrees and poured in thin ribbons over bowls of snow, where it firms to a caramel-like consistency. The intensely sweet maple candy is served with sour pickles, which can be eaten alternately with the candy to cut through its sweetness. Raised doughnuts are traditionally served alongside.

In southern New England, saint’s day feasts are held from June to October and feature Italian American food that is associated with immigrants from various regions of Italy. One feast of note is the Fisherman’s Feast in Boston, established in the early 20th century. Sicilian fishermen pay respect to Madonna del Soccorso (Our Lady of Help) and bless the fishing waters. The streets are filled with people, music, and vendors selling Italian goods and souvenirs as well as Italian sausages, calamari, pizza, pasta, and other Italian and Italian American treats.

Diet and Health

Research has established that a lack of physical activity coupled with unhealthy eating patterns contributes to obesity and a number of chronic diseases, including some cancers, cardiovascular disease, and diabetes. Compared with people who consume a diet with only small amounts of fruits and vegetables, those who eat more generous amounts as part

of a healthful diet are likely to have reduced risk of chronic diseases.

Americans in general have been growing heavier over the last several decades, which can be viewed in part as a trend related to living in an affluent and well-nourished society. Changes in technology have allowed a more sedentary lifestyle; in most families, both parents usually work, and the proliferation of fast food and other convenience foods, which tend to be high in fat and simple carbohydrates, has also contributed to the increasing size of the American waistline.

Compared with other Americans, New England residents are among the least obese; relatively few have a body mass index, or BMI, of greater than 30. Obesity trends upward from south to north. New Englanders struggle more with overweight—a body mass index of 25–29.9. Here, the trend is reversed from north to south, with more overweight people in southern New England. The total population who are either overweight or obese is about 60 percent. Finally, about 40 percent of New Englanders are neither underweight nor overweight.

The optimal diet for maintaining good health, as established by governmental and independent studies, includes at least five servings of vegetables and fruits per day. While only about 30 percent of Americans report consuming the recommended amount, the New England states are in the top 20 of those who do so. Exercise is also a key component of good health. About 20 percent of New Englanders are considered to be at risk for health problems due to a lack of physical activity.

In recent years, medical practice in the United States is placing a greater emphasis on treating disease by prescribing lifestyle changes in diet and exercise as an adjunct to medication and other therapies. Complementary and alternative medicines are becoming more integrated into traditional medical practice. Such medicines and therapies include homeopathy and herbal medicines, mind-body balancing practices (such as yoga, meditation, or tai chi classes), acupuncture, massage and relaxation techniques, and energy healing therapies. The National Institute of Health created the National Center for Complementary and Alternative Medicine in 1999

to advance research on such therapies and make authoritative information available to the public.

United States: The Pacific Northwest

Overview

The Pacific Northwest is the North American geographic region along the northeastern edge of the Pacific Ocean. It is predominantly limited to the states of Washington and Oregon in the United States and the province of British Columbia in Canada, though it often includes Idaho, western Montana, southeastern Alaska, and northern California. This region's major metropolitan areas consist of Vancouver, British Columbia; Seattle, Washington; and Portland, Oregon, and the region's total population is approximately 16 million people. Many people from the region refer to it as "Cascadia"; in fact, talk of secession has been taking place in the region for nearly as long as Washington and Oregon have been part of the United States. Today, the region is still strongly identified with political liberalism and radicalism, though this is primarily concentrated in urban areas; most of the rural areas in the region are politically conservative.

Located along the Pacific Ocean, the Pacific Northwest is highly representative of America's so-called melting pot of cultures, and this is highly evident in the variety of ethnic cuisines commonly available throughout the region. Though the majority of the regional population is comprised of Caucasians of European descent, Latinos and Asians (immigrant and naturalized) are the second and third most populous. Of the provinces of Canada, British Columbia has the highest proportion of visible minorities, comprising 24.8 percent of the total population. Vancouver, British Columbia, has the second-largest Chinatown district in North America (after San Francisco, California), and 45 percent of all Japanese living in

Canada live in British Columbia—more than in any other Canadian province. People of Asian origin also dominate foreign immigration to Washington. Commensurate with the situation in other regions of the United States, Latinos comprise the majority of immigrants to Oregon and the second-highest proportion of immigrants in Washington, representing the majority of the agricultural workforce in the Pacific Northwest.

Indigenous peoples (the aboriginal peoples of Canada, American Indians, and Alaska Natives) also make up a central part of the Pacific Northwest's cultural identity, though their populations in the region are only slightly higher than national averages. Alaska purports to have the region's highest proportion of indigenous people, with approximately 20 percent of Alaskans identifying themselves as American Indian or Alaska Native. Many Pacific Northwest indigenous people strongly advocate upholding their ancestral hunting and fishing rights in order to observe tradition as well as for subsistence.

Food Culture Snapshot

Matt and Sarah Roberts are a married couple in their early thirties. They're originally from the Midwestern United States but moved to Portland, Oregon, after graduate school to find work and live in a region that was more representative of their active, environmentally conscious lifestyle. Matt works at a large software company, and Sarah works for an environmental engineering firm. Their lifestyle and diets are typical of so-called DINK (dual-income, no kids) couples. They live in an older house in a neighborhood approximately

10 to 15 minutes from downtown and have a small backyard where they grow a few vegetables and have an old apple tree that was probably planted sometime in the 1920s. Rosemary grows well in the Mediterranean climate of the Pacific Northwest, and like many homes in the area, the Roberts have a large shrub of it in their front yard.

Instead of making large shopping trips to stock up on groceries, they usually make daily or near-daily shopping trips to their neighborhood grocery store, health-food store, or farmers' market, if the weather is nice. These trips are often made on the way home from work, to pick up ingredients to prepare that night's dinner.

The Roberts try to shop sustainably whenever possible—for them, this means buying primarily locally produced, organically grown meats and produce. Conversely, they make occasional visits to one of the Asian supermarkets that are common in their neighborhood. Imported Asian produce and packaged products are readily available in Pacific Northwest urban centers, thanks to the large number of immigrants from all over Asia. Many of these Asian products, such as tofu, miso, and a variety of Asian vegetables, are produced locally.

Sarah, like many young North American women, watches her caloric intake and leans toward a low-fat diet. She sometimes skips breakfast but tries to at least have a piece of wheat toast with peanut butter and a cup of green tea before she runs out the door to catch a bus to work. She usually brings lunch from home (often last night's leftovers) so she can have something healthy and save money. Matt usually opts to buy breakfast from some coffee shop near his workplace—usually a bagel or English muffin sandwich with scrambled egg and ham for breakfast (with a latte), and he will usually buy a burrito, a slice of pizza, or maybe some Vietnamese beef noodle soup for lunch. Dinner, at around 8 P.M., is often eaten in front of the television. Tonight's dinner will be wild-caught Alaska salmon fillets with rosemary-roasted baby potatoes and a green salad with some sliced apples on top. Sarah enjoys a glass or two of wine with dinner, and Matt usually has a microbrewed beer (in warmer weather he might opt for a domestic brew such as Pabst Blue Ribbon).

Major Foodstuffs

Seafood

Fisheries are a major economy in the Pacific Northwest, and this is reflected in the abundance of locally available seafood including wild-caught Pacific cod, albacore tuna, sole, Alaskan halibut, Dungeness and Alaskan king crab, pink shrimp and spot prawns, and more than 25 varieties of oysters raised in commercial beds in the chilly bays and sounds of Washington and British Columbia. But no other fish is more central to the cultural and regional identity of the Pacific Northwest than the salmon (*Oncorhynchus* spp.): Chinook, coho, and sockeye salmon and steelhead trout (a close relative of salmon) are the region's most important fish species, being generally available to commercial and/or recreational anglers during most of the year. Due to a variety of factors, populations of wild salmon have been on the decline for years, warranting the protection of some species under the U.S. Endangered Species Act. This decline has recently led to restrictions on commercial fishing in the Pacific Northwest.

Agriculture

Agriculture and viticulture are also important Pacific Northwest economies. The majority of North America's pomes and stone fruits (specifically sweet cherries) are produced in the Pacific Northwest,

Fresh grilled sockeye salmon steak dinner with asparagus and lemon wedges. (Sally Scott | Dreamstime.com)

particularly in Washington's Yakima Valley. The region's volcanic soils and mild, maritime climate are also ideal for growing berries and grapes. Berries in the *Vaccinium* genus such as huckleberries, cranberries, and blueberries thrive considerably in the deep, acidic soils of the region, though raspberries, blackberries, currants, gooseberries, and kiwi berries (a small, hairless variety of kiwi) are all commercially grown in the Northwest as well.

Hazelnuts (colloquially called *filberts*) are another regionally specific agricultural product. Only Turkey produces more hazelnuts than the Pacific Northwest, though Oregon produces vastly more than Washington or British Columbia (approximately 23,000 tons per year, compared to 100 tons in Washington and 360 tons in British Columbia).

Potent Potables

Oregon's Willamette Valley and Washington's Yakima Valley are second only to Germany in world production of hops, and this is reflected in the production and consumption of microbrewed beers in the Northwest. Since the 1980s, more than 360 microbreweries (breweries that produce fewer than 20,000 barrels per year) and brewpubs have become established in Oregon, Washington, and British Columbia.

Viticulture is a somewhat recent agricultural development in the region, taking off in the 1990s; however, the Okanagan Valley in British Columbia, Yakima and Walla Walla counties in Washington, and Yamhill County in Oregon are now considered to be comparable to grape-growing regions of France and Italy for their *terroir*. Enology and viticulture are highly commercially viable in the region because of economies of scale, with the region's wineries being typically small and family owned, compared to other major wine-producing regions such as California's Napa Valley.

More recently, connoisseurs of hard alcohol have followed suit, and artisanal distilleries have begun to comprise a niche market in the Pacific Northwest—of the approximately 100 distilleries in the United States, 20 are microdistilleries located in Oregon, producing fragrant gins, vodkas, and eaux-

de-vie (literally, “water of life”; fruit brandy), all from locally produced ingredients. One Oregon microdistillery even produces an *eau-de-vie poire* with a small pear grown inside the bottle.

Dairies and Creameries

The Willamette Valley in northwestern Oregon is known as the “grass seed capital of the world.” While most grass seeds are neither fit nor intended for human consumption, this achievement does point to the fact that the Pacific Northwest is good at growing grass, which is a preferred food of dairy-producing livestock (cows, sheep, and goats). As a result, the region is home to more than 80 artisanal creameries as well as several large-scale commercial dairies. Many independent cheese makers in the region rival the highest-quality European creameries.

Wild Foods

In addition to fishing, hunting is a popular pastime in the Pacific Northwest, and the region supports large populations of big game such as deer and elk (also antelope, moose, and bear, though these are hunted less frequently); upland birds such as turkey, grouse, quail, pheasant, partridge, and ptarmigan; and waterfowl including several species of ducks and geese. Though some hunters in the region participate for sport and keep trophies of their game, the majority are subsistence hunters and eat what they kill (trophy hunters are generally tourists to the region and are treated with disdain by locals). Many hunters utilize the numerous small-scale meat processors located throughout the region to butcher large game and convert meat scraps into sausage.

Gathering wild foods, particularly mushrooms and berries, is another hobby that has been growing in popularity over the past several years. The Pacific Northwest provides excellent habitat for expansive thickets of several species of wild huckleberries and an abundance of choice edible mushrooms such as chanterelles, boletes (known in Italy as porcini or in France as *cèpe*), oyster mushrooms, chicken-of-the-woods (a variety of *maitake*), cauliflower mushroom, white “Oregon” truffles, and matsutake. Recreational

and commercial mushroom hunters tend to return to favorite spots year after year, the locations of which are often closely guarded (sometimes with firearms). Stories of mushroom hunters shooting their own family members during disputes over prime picking territories are common, but national forests and private properties closer to residential areas tend to be relatively safe for casual pickers.

Cooking

Like in most regions of North America, home cooking in the Pacific Northwest is typically performed by women, though men still comprise the majority of cooks and chefs in commercial kitchens. Most Pacific Northwesters learn to cook from their mothers or other elder women in the family. Nearly all households come equipped with a standard four-burner electric or gas range, electric oven, and refrigerator/freezer. The majority of households also have an electric toaster and a microwave oven, though many health-conscious people in the region avoid using microwaves due to concerns that microwaves destroy the nutritional content of foods (these concerns have yet to be substantiated by scientific evidence).

Many households also equip themselves with electric slow cookers. These appliances allow busy people to safely and conveniently cook time-consuming foods like tougher cuts of meat and stews on a countertop without supervision (e.g., while away at work). Other small electric appliances such as toaster ovens, electric blenders, and food processors are also fairly common.

Sautéing in vegetable or olive oil and baking/roasting are two of the most commonly employed cooking techniques, likely due to their ease and relatively low health impacts. Vegetable fats tend to be preferred over animal fats for general cooking purposes.

Most households in the Pacific Northwest also have a means of outdoor cooking, such as a propane or charcoal grill. When weather permits, many people in this region prefer to cook outdoors and frequently have social gatherings centered around the cooking and consumption of foods. These gatherings are often erroneously called barbecues. Unlike the more regionally significant true barbecue of the

southern United States, wherein proteins (generally large cuts of pork or beef) are slow-cooked for several hours (or even days) over indirect heat at low temperatures, Pacific Northwest “barbecues” consist of grilled foods that are generally prepared fairly quickly over direct heat and may include more vegetarian-friendly options such as hot dogs and burgers made from soy protein, fish fillets, and skewered vegetables.

One technique that is intrinsic to the Pacific Northwest is cooking fish, typically salmon, on a plank of cedar or alder wood over a direct heat source such as a flame or coals. This cookery method was adopted from indigenous people of the region, and wood planks specifically made for grilling salmon are readily available in the region. Smoking fish and meat for flavor and as a means of food preservation is still a fairly common practice in the Pacific Northwest, especially among recreational anglers. This has been particularly true since the advent of small electric, gas, and charcoal smokers and smoker-grills intended for home use.

Many younger people in the Northwest draw culinary inspiration from foreign cultures and are somewhat more adventurous with flavor than their parents were, preferring to prepare their foods with fresh rather than canned or frozen ingredients, and they tend to use more fresh herbs, garlic, chilies, and flavored oils and vinegars. It is also common to see younger home cooks prepare vegetarian or vegan versions of foods typically associated with a high amount of animal fats and proteins, such as making Southern-style biscuits and gravy using soy sausage and almond milk instead of pork sausage and cow milk for the gravy, or a Reuben sandwich with tempeh (a fermented soybean cake) instead of corned beef.

Typical Meals

Families tend to eat meals together, sometimes at the dinner table in the kitchen or dining room, but often in the living room or family room, seated in front of the television. Breakfast and dinner are usually eaten at home, but lunch is almost always eaten away from home (at school or at the workplace), at least on weekdays.

As in much of the United States and Canada, most people in the Pacific Northwest tend to eat fast breakfasts before school or work, such as cold breakfast cereals with milk; store-bought frozen waffles reheated in the toaster and served with a sweet topping such as maple syrup, nut butter, or a fruit spread; oatmeal with a bit of nuts or dried fruit; or a cup of yogurt that contains fruit. Toast and eggs are another common quick breakfast.

Among working people, weekdays in the Pacific Northwest often start with a cup of coffee and a bagel or pastry from a neighborhood coffee shop (though many people skip eating breakfast and opt only for coffee). The Pacific Northwest is the birthplace of Starbucks, and espresso and coffee drinks have been building in popularity in the region since the 1990s. Now, nearly every town in the Northwest

A busy Starbucks store in Seattle, Washington. (StockPhotoPro)

has at least one place that serves espresso drinks—even rural gas stations have instant latte machines.

Preferred lunchtime fare in the Pacific Northwest is not particularly distinct from lunch foods across the United States and Canada. Women are more likely than men to bring lunch from home, often leftover dinner from the previous night. Many large companies in the region are sited on campuses that include employee cafeterias where restaurant-style foods are prepared by experienced cooks.

Most children eat a lunch that was prepared by one of their parents and brought from home, though many children instead eat lunch foods that were purchased in their school cafeterias. Children from low-income households may qualify for free lunches that are provided by their schools; these are the same lunches that are served to the rest of the student body, but they are offered at no cost to the child's family. Some public school districts also offer free breakfast to children from low-income families.

Dinners usually consist of a protein (meat or fish), a starch (pasta, rice, or potato), and a vegetable. This can be as simple as roasted chicken with mashed potatoes and green beans or as elaborate as coffee-rubbed venison tenderloin with polenta and wild mushrooms, depending on the cook's interest and skill in cooking. Sometimes these components are combined into a hearty soup or stew and served with a bread product such as a biscuit (a chemically leavened quick bread) or a dinner roll (a yeast-leavened bread). Soups, stews, and chowders are considered comfort food in the Northwest and are favored during the cooler, rainy months between October and April.

Thai-Spiced Salmon Chowder

This chowder combines the best of the Pacific Northwest: local salmon and Southeast Asian spices. Corn's sweetness pairs wonderfully with salmon.

Serves 4–6

Ingredients

2 tbsp butter

1 tsp olive oil

2 oz salt pork (or 2 slices bacon)
 1 celery rib, diced
 ½ jalapeño, seeded and minced
 ½ c red onion, diced
 ¾–1 lb waxy potatoes (such as Yukon gold), diced
 1 c frozen corn
 1 can creamed corn
 1 c coconut milk
 3½ c fish stock (or chicken stock)
 2 bay leaves
 ½ tsp grated fresh galangal (or ginger)
 3 star anise pods
 2 tbsp basil chiffonade
 8 oz coho salmon fillet, skinned and deboned
 Salt and pepper to taste
 Garnish: arugula chiffonade or chopped cilantro

In a large, heavy-bottomed pot, melt the butter over medium-high heat. Add the olive oil to prevent the butter from browning, and add the salt pork. Let the pork render for a minute, then add the celery, jalapeño, and onion (mirepoix). Toss in a pinch of salt so the mirepoix sweats (avoid browning the mirepoix).

Add the potatoes and frozen corn, and stir to coat with the buttery pork fat. Add the creamed corn, coconut milk and stock, the bay leaves, the galangal, and the star anise. Simmer over medium low until the potatoes are tender, approximately 20 minutes.

When the potatoes are nice and tender, turn off the heat and remove the bay leaves and star anise. Slice the salmon into bite-sized pieces and add to the soup with the basil. The latent heat from the soup will cook the salmon.

Pairs well with a peppery, slightly acidic Pacific Northwest Pinot Gris.

Eating Out

Breakfast and brunch establishments are highly popular in the Pacific Northwest. These are typically in-

expensive neighborhood restaurants that also serve lunch and dinner, but they include some higher-end prix fixe restaurants that serve sophisticated weekend brunch items. Waits for a table at popular breakfast spots may exceed an hour on Saturday or Sunday. Typical brunch offerings consist of a scramble (eggs scrambled with vegetables and/or meat), home fries (fried or roasted cubed potatoes), and a piece of toast. This will typically be served with locally roasted coffee. Many people in the region also enjoy a breakfast cocktail during weekend brunch, such as a screwdriver (orange juice with vodka), a Bloody Mary (tomato juice with vodka and a dash of horseradish and Worcestershire sauce, garnished with a rib of celery or pickled vegetables), or a mimosa (orange juice with champagne or Prosecco).

Recently Portland, Oregon, has received some notoriety for its populations of food carts. Food carts are a popular alternative to indoor dining establishments, and they tend to be clustered in parking lots in neighborhoods or streets that receive ample foot traffic. Food carts usually specialize in one type of cuisine, including Kazakh, Czech, Lebanese, Indian, Japanese, Vietnamese, Thai, and Mexican, though some are more generalist (e.g., “Mediterranean”). Some carts specialize in one type of food, such as barbecue, hot dogs, crepes, handheld pies, waffles, or Belgian-style *frites* (thin French fries). Neighborhood carts are often open very late to cater to crowds spilling out of closing bars, whereas the majority of the food carts located in the downtown area are frequented by lunch crowds and close after lunch.

Asian restaurants are widely available and usually provide diners with a substantial meal for little money—Japanese, Korean, Chinese, Vietnamese, Thai, and Indian restaurants are all common in the Pacific Northwest. In Vancouver, British Columbia, alone, there are more than 130 Japanese *sushi-ya* (sushi restaurants) and *izakaya* (restaurants serving small plates of grilled foods like *yakitori* and *robata*) that are tucked into every nook and cranny, providing diners with an experience reminiscent of wandering the streets of Tokyo. Vietnamese beef noodle soup (*pho*) houses are abundant in the Pacific Northwest, serving fragrant bowls of star anise–

spiked beef broth with thinly sliced beef and rice noodles. Adventurous eaters can usually order more traditional ingredients such as beef tendon or tripe. Authentic Hong Kong-style Chinese restaurants are also widespread, offering freshly roasted duck or pork, fried *yi mein* (thin wheat noodles, colored yellow with lye water), and seafood hotpots, in addition to traditional Cantonese dim sum.

The Pacific Northwest is also well known for its fine-dining establishments, though not all of them are necessarily expensive. These restaurants tend to be staffed with young, often heavily tattooed chefs who have their own style of cooking, though many rely on the implementation of European techniques with local, seasonal ingredients. An appetizer such as French-style pork pâté (made with local pork) served with house-pickled baby heirloom vegetables is an example of this marriage between technique and product and is commonly featured on menus. Most fine-dining and higher-quality casual establishments, even if not inherently French, also feature a salad of roasted beets with (local or French) bleu cheese, the ever-popular steak frites as an entrée, and a *pot de crème* (a chilled custard) or seasonal fruit dessert. Fresh seafood, if featured on the menu, tends to be obtained from local waters, and restaurants specializing in seafood dishes are fairly common.

A tattooed chef puts the finishing touches on a dish in a Portland restaurant, Oregon. (Richard Ross | Getty Images)

Special Occasions

Major holidays and events such as Thanksgiving, Christmas, New Year's Eve, birthdays, and weddings are celebrated in the Pacific Northwest much in the way they are celebrated elsewhere in the United States and Canada. Meals on holidays and other special occasions are typically casual gatherings of family and friends.

Canadian Thanksgiving is celebrated on the second Monday in October, whereas American Thanksgiving is observed on the third Thursday of November. There are not really any components of the Thanksgiving feast that are specific to the Pacific Northwest; the meal typically focuses on roasted turkey served with cranberry sauce and a variety of side dishes that traditionally consist of mashed potatoes with gravy, stuffing (cubed bread cooked with onions, celery, and poultry broth, with variations in ingredients occurring among households, such as the use of oysters, cornbread, dried fruits, or nuts), green bean casserole (green beans baked with cream of mushroom soup or a béchamel sauce and topped with fried onions), and candied yams (technically a sweet potato, baked with butter and brown sugar, and often topped with marshmallows). Vegetarian households may prepare a product called tofurkey, which is a soy-based, savory loaf that bears little resemblance to turkey. Dessert traditionally consists of pumpkin pie, and an additional fruit pie might be served as well.

The Pacific Northwest does not have any particular meal or foods associated with New Year's Eve. Like elsewhere in the United States and Canada, the event is often celebrated with champagne or another sparkling white wine (or apple cider), with a toast to the new year being traditionally conducted at the stroke of midnight.

Canada Day (Canada) and Independence Day (United States) are national holidays observed on July 1 and July 4, respectively. Being summertime holidays, these are typically celebrated with outdoor parties—backyard cookouts and camping excursions are both common. Foods typically consumed during these holidays include grilled chicken (with or without barbecue sauce), hamburgers, hot dogs or sausages, corn on the cob, potato or macaroni

salad (usually with a mayonnaise-based dressing), baked beans, and watermelon. Cold beer is often consumed in copious amounts during these holidays. The foods typically eaten during these holidays are similar to those eaten at American parties that celebrate sporting events.

Birthdays and weddings are typically associated with cake. A birthday cake may be homemade or purchased at a bakery or grocery store and is usually one or two layers of cake with frosting. If the cake is for a child, a dusting of colorful sugar sprinkles, toy figures, or other accoutrements may decorate the cake. One candle representing each year the honoree has been alive is another traditional topping; the birthday boy or girl then attempts to blow out the candles, and tradition speaks of a wish being granted if all candles are extinguished with one breath.

Wedding cakes tend to be much more elaborate, consisting of multiple tiers of (usually white) cake with buttercream icing or fondant and decorated according to the bride and groom's preferences and the season during which the wedding is being held (floral themes are common, though an autumn wedding may include colorful leaves as part of the decor). In the Pacific Northwest, this tradition is typically observed in the same way as in other parts of the United States and Canada, though whimsical alternatives to a cake may include a cupcake "tree" (a selection of cupcakes arranged on a tiered platter) or doughnuts arranged in a pyramid. One Portland, Oregon, doughnut shop caters weddings and allows wedding ceremonies to be conducted in their bakery. In addition to the traditional wedding cake, many weddings include a groom's cake. The groom's cake is usually a smaller, informal cake that is decorated in a way that represents the groom's interests or personality. Groom's cakes are usually a flavor other than vanilla.

Though Christmas is a Christian holiday, it is widely celebrated by non-Christians in the Pacific Northwest. At Christmastime, homemade cookies and candies are typically prepared and exchanged among friends and family members. Christmas dinners are granted a little more creative license than Thanksgiving, with no specific protein being symbolic

of the holiday. Some households prepare another roasted turkey, while others serve a pork roast or roast beef. Side dishes vary as well. Coconut cream pie and desserts with a peppermint and chocolate component are fairly representative of American and Canadian Christmas celebrations.

Hanukkah, like most Jewish holidays, has symbolic foods that are traditionally eaten in observance of the holiday; Hanukkah's food is latkes. Latkes are fried potato pancakes that are often served with sour cream and/or applesauce. Children may be given *gelt*, which are thin chocolate wafers wrapped in gold foil to resemble coins. Dinner will often focus on a beef brisket. A traditional Hanukkah dessert, particularly among Sephardic Jews, is *sufganiot* (a raised donut dusted with powdered sugar).

Easter dinner is traditionally a ham, though lamb may be served instead (the lamb is viewed in Christianity as a symbol of Christ). Eggs are also symbolic of Easter, though this predates Christianity as a pagan fertility symbol. Hard-boiled eggs are colored with food-grade dyes and then hidden by adults for children to hunt for and place in a basket lined with plastic grass. These eggs can then be eaten as a snack or breakfast following Easter. Egg-shaped candies are also traditional gifts to children during the Easter celebration, along with chocolate bunnies (another remnant of pagan fertility celebrations).

The Passover seder is a ritual feast that has six symbolic components: The *maror* and *chazeret* are bitter herbs, symbolizing the bitterness and harshness of the slavery that the Jews endured in ancient Egypt. The *maror* is usually grated horseradish, and *chazeret* is usually a lettuce leaf. *Charoset* represents the mortar used by the Jewish slaves to build the storehouses of Egypt and is usually comprised of a blend of chopped nuts, apples, and sweet spices. *Karpas* is another vegetable (usually parsley, though celery or potato is sometimes used) that is dipped in saltwater or vinegar to symbolize the tears shed during slavery. *Beitzah*, a roasted egg, is a traditional symbol of the festival sacrifice (or may be interpreted as a symbol of mourning the loss of the Temple of Jerusalem). *Z'roa* is a roasted lamb shank bone that acts as an additional symbol of the Passover sacrifice.

Traditional seder dinners usually include gefilte fish (cakes of chopped whitefish), matzo ball soup, and brisket or veal, though modern households often prepare different versions of these dishes.

Diet and Health

The Pacific Northwestern diet is comparable to that in the rest of the United States and Canada, though it leans toward slightly healthier choices. The Pacific Northwest has a high proportion of vegetarians and vegans compared with elsewhere in the United States and Canada. Its major urban centers (Portland, Seattle, and Vancouver) are considered to be the top three vegetarian-friendly cities in North America according to surveys by the nonprofit organization People for the Ethical Treatment of Animals (PETA). Vegetarians and vegans in the Pacific Northwest tend to simply eat meatless versions of

the same foods that omnivores eat or meat substitutes that are usually made of soy or textured vegetable protein (TVP). They also tend to rely more heavily on Asian cuisines, deriving much of their protein intake from tofu (soybean curd originally from China but now widespread across Asia), tempeh (fermented soy or grain cakes from Indonesia), and seitan (solid wheat gluten from China, Japan, and Vietnam). Many vegetarians add nutritional supplements to their foods as seasonings—Bragg Liquid Aminos (a salty-tasting source of 16 amino acids that resembles tamari or soy sauce) and nutritional yeast flakes (a source of B-complex vitamins that is often used for flavoring cheese substitutes) are in nearly every vegetarian kitchen in the Pacific Northwest.

Ecologically conscientious or so-called green lifestyles are common in the Pacific Northwest, and this is reflected in the dietary choices that are made

People shopping for farm-fresh produce, including peaches and plums, sold by a local farmer in Eugene, Oregon. (Lee Snider | Dreamstime.com)

by many of its residents. Organically grown produce and free-range, organic meats are readily available at most mainstream grocery stores, and specialty stores that provide a wide selection of locally grown meats and produce are relatively common, even in smaller cities. Many heirloom varieties of vegetables and fruits are grown and sold in the region, and these are more available and affordable than in other parts of the United States or Canada. Many of the region's restaurants have received accolades for taking advantage of the Pacific Northwest's bounty by showcasing local flora and fauna on their menus. Some restaurants even have their own farms.

Farmers' markets are another successful means of closing the gap between farm and table, in that the people who grow or raise the foods can sell directly to the consumer. Most neighborhoods or districts in each urban center have a farmers' market (usually open one day per week), and even smaller urban areas (especially college towns like Eugene, Oregon, and Olympia, Washington) tend to have at least one farmers' market. Community-supported agriculture, or CSAs, enable individuals or families to purchase a yearly share of a local farm's seasonal produce (sometimes delivered directly to their homes), while simultaneously providing income to small, organic farmers.

United States: The South

Overview

The American South, a cultural and political region of the United States, is loosely defined as the 11 states of the former Confederacy. They are historically linked by the devastating shared experience of defeat in the American Civil War in which they defended chattel slavery, followed by decades of poverty. The South, larger geographically than Germany and France combined, and home to a population of roughly 100 million Americans, is considered as having one of the most vibrant of American cuisines.

Five states border the Atlantic Ocean: Virginia, North Carolina, South Carolina, Georgia, and Florida; four others stretch westward from Florida, on the Gulf of Mexico: Alabama, Mississippi, Louisiana, and Texas. Two other states, Tennessee and Arkansas, connect on opposite sides of the Mississippi River and stretch westward from Virginia to Texas. The region also includes the southern parts of the border states to the north that still allowed slavery when the Civil War began, stretching westward from Delaware across Maryland, West Virginia, Kentucky, and Missouri. (These border states remained in the Union, with West Virginia—a mountainous area with few slaves—separating from Virginia over the issue of secession and becoming a new state in 1863.)

The mass migration of several million African Americans (the black diaspora) during and after the post-Civil War period of Reconstruction created large pockets of Southern cultural infusion, including the blues, jazz, and food, in Chicago, Cleveland, Detroit, Los Angeles, New York City, Washington, D.C., and elsewhere. The migration accelerated after

World War II and the early years of the civil rights movement.

Many nationalities converged over time into the American South already inhabited by Native Americans: Spaniards and French arrived beginning in the 16th century, later moving into Louisiana, where they became known as Creoles, a designation ultimately including Caribbean free persons of color. In the 17th century, the English settled in Virginia and South Carolina, followed by Scots, Scots-Irish, Irish, and Welsh. French Huguenots took advantage of John Locke's declaration of religious freedom to settle in Charleston, joining sons of Barbadian planters, capitalist-minded Quakers, Jews, and German Lutherans.

African slaves of many tribal groups and nations were shipped across the Atlantic, especially from Senegal. French Acadians settled in Louisiana after great tribulation. Diverse groups of Germans settled in concentrated areas, as did smaller numbers of Italians and Greeks. Small groups of Chinese were brought over to work building the canals of Augusta, Georgia, and as laborers in the Mississippi delta.

The latest influx of primarily white inhabitants began with the advent of air-conditioning. The civil rights movement was the catalyst for the South's full reunion with the rest of America—sometimes referred to as the Second Reconstruction, with both white and black in-migration; much of the latter returning natives were lured by family ties and the opening of new job opportunities. Late 20th-century additions include Latinos, primarily from Mexico

and Central America, Puerto Ricans, and Cubans. Each of these nationalities brought with them their cultural and food heritage, melding primarily African and European cuisines shared by blacks and whites.

The South is frequently referred to as the Bible Belt of the United States, as religion has always had a strong influence. Overwhelmingly Protestant, ranging from High Episcopalians to the dominant Baptists, Methodists, and a host of fundamentalist groups, it includes expanding Catholic and Jewish populations as well as Amish and even Baha'i. Little religious prejudice still exists, in part due to numbers of interfaith marriages. (Greeks and Jews were accepted by whites on the basis of skin color.) In more recent years the Muslim (including Nation of Islam) population has slowly expanded, with its incumbent dietary restrictions and often little-noticed morgues in larger cities.

African Americans tend to be concentrated among African Methodist Episcopal (AME), American Baptist, and other historically black congregations. Although many white and black congregations are technically integrated, it is often said that Sunday is the most segregated day of the week. Religious institutions frequently provide extensive social activity and child care, as well as providing a meal after the service. African American communities are known for their church food, with such delicacies as fried chicken and sweet fruit pies, providing a refuge from de facto segregation, but in both white and black congregations volunteer and home cooking is being replaced by church kitchen staffs.

The region's late 20th-century in-migration has muted the level of religiosity of the South, but religion continues to play a more significant role than elsewhere in America in shaping political and social attitudes.

Food Culture Snapshot

Betty Sue and Ryan Bradley live in Atlanta, Georgia, part of the middle class returning from the suburbs to live in central cities after their children are grown. Betty Sue is a pharmacist, and Ryan is an attorney. The Bradleys' lifestyle and foodways are typical of college-

educated Southerners. Their food interests are broad, including foods of many nationalities. The only meals where they eat together are evenings and weekends. The average Southerner eats three meals a day and several snacks.

The Bradleys rise at 6:30 each weekday, with Ryan going for a two-mile run. Betty Sue prepares a breakfast tray holding Diet Coca-Cola; cereal with raisins, pecans, and bananas; and commercial fresh Florida orange juice, returning to bed to eat. Ryan makes a weekly refrigerator batch of low-fat yogurt, canned pineapple, raisins, pecans, wheat germ, and oatmeal, eating a bowl of it each day along with a sliced banana, a glass of orange juice, and coffee brewed from freshly ground beans. He eats while briefly watching the news before work.

Midmorning, at work, Betty Sue sips a caffeinated Diet Coke and eats a snack of peanut butter crackers; Ryan drinks his third cup of coffee, accompanied by an oatmeal cookie or a doughnut. For lunch, Betty Sue eats in a small restaurant, ordering a Caesar salad topped with ham followed by a dessert of fried beignets sprinkled with powdered sugar. (For her grandparents this was the major meal of the day and was called dinner.) Ryan meets a client for a lunch of curried chicken with sautéed turnip greens, rice, and a wedge of caramel cake for dessert. This traditional cake is light and has a caramelized icing. Both Betty Sue's and Ryan's desserts are typical Southern indulgences that busy people rarely fix at home.

Mid-afternoon, each will eat a sweet or a piece of fruit. After work they have a glass of wine and a snack of cheese straws (baked from cheese, flour, and butter) or celery filled with pimento cheese (a mixture of pureed pimento peppers, mayonnaise, garlic, and onions.)

At 7 P.M., the Bradleys cook dinner (formerly called supper) together. Betty Sue tosses a salad of fresh arugula, basil, thyme, lemon balm, or mint from their garden with dried cherries, a slice or two of Parmigiano Reggiano cheese, and a sliced pear, covered in a vinaigrette dressing of sherry vinegar and olive oil. Ryan grills a fresh-caught Carolina red snapper. Betty Sue cooks rice, which she grew up eating daily, and steams a green vegetable. This main meal of their day is cooked and eaten within 45 minutes, before they each turn to their computers for work and relaxation.

Their children are college students studying away from home at Southern colleges. One is eating fried chicken while drinking a highly caffeinated, sugared soda. The other is eating fried local farm-raised catfish, hush puppies (fried balls of a cornmeal mixture), and coleslaw. Even with their eclectic, international diet chosen from the broad array of foodstuffs of the world, historically Southern food still resonates with the Bradleys and their children.

Although the Bradleys' day is sprinkled with reminiscences of Southern meals, it is very different from what either Betty Sue or Ryan ate while growing up. Both their mothers cooked a substantial breakfast each morning of biscuits, eggs, sautéed ham with red-eye gravy, and grits (cornmeal mush). Lunch, consisting of an apple or banana and a peanut butter sandwich taken to school in a lunch box or paper bag, was washed down with sweetened iced tea, called sweet tea to differentiate it from unsweetened tea, or chocolate milk from a carton. Dinner was eaten with the entire family sitting down at the table in the formal dining room. It might have consisted of rice, macaroni (traditionally spaghetti is called macaroni), or potatoes; a green vegetable; pork chops; and canned fruit on top of iceberg lettuce topped by commercial mayonnaise, followed by pudding for dessert.

The Bradleys are in marked contrast to the many that remain mired in extreme poverty in the South. This includes both blacks and whites, with the blacks proportionally more disadvantaged than whites. Poverty affects their dietary habits considerably, with more reliance on heavily salted, fat-laden processed foods due to their need to work one or more jobs, leaving less time for grocery shopping and cooking.

Major Foodstuffs

The American South's major foodstuffs vary according to the geography, weather, soil content, and primary origin of its immigrants. The early English colonists brought cattle, chickens, and pigs; curries and spices; and wheat, oats, and other grains, along with root vegetables and beans. Africans, through ship captains and others, brought peas, okra, melons, eggplants, *benne* (sesame) seeds, and rice. Indigenous foods included beans, squash (including pumpkins),

poke "salat" or pokeweed (supplemented by English and African greens), muscadine and other wild grapes, plums, wild game, and seafood. Tomatoes from Central and South America were early arrivals.

Growing seasons vary from two or three in the lower South to one in mountainous areas. Until World War II, the South was predominantly agrarian. Many homes had a milk cow and chickens. This was due in part to the lack of refrigeration, which made food highly perishable, and was a way for the family to save money. Milk was left overnight to thicken and sour (*clabber*) before being churned into butter. Buttermilk, the residual liquid, was used as a tenderizer for soaking chicken, in cooking (the combination of buttermilk and baking powder caused a higher rise in baked goods), and as a beverage.

The primary breads are cornbread and biscuits. The rise of commercial baking powder in the mid-to late 19th century enabled Southerners to cook quick breads such as biscuits and cornbread, which require less time in a hot kitchen than yeast breads, which were reserved for special occasions. By the end of the 19th century, low-gluten soft-wheat flour was milled from winter wheat, producing delicate, airy cakes, pies, and cheese straws, with baking (originally adapted from English cookbooks) considered an art. Coconuts brought in as ballast for incoming ships gave rise to coconut cake as well as the coconut industry. Pastries include pecan, lemon, lime, and fruit pies.

Food Processor Biscuits

- 2½ c self-rising flour
- ½ c shortening or lard, frozen
- ¾–1 c milk or buttermilk
- ¼–⅓ c melted butter
- ¼ c all-purpose flour for shaping

Preheat the oven to 500°F. Add 2 cups of the flour to a food processor using the steel or pastry blade. Cut one half of the shortening into ¼-inch cubes; cut the second half into ½-inch cubes and refrigerate. Add the cold ¼-inch cubes to the food processor. Pulse one or two times until it is like cornmeal;

add the remainder of the shortening and process until pea sized. Add the $\frac{3}{4}$ cup of milk. Pulse 2 or 3 times until the shortening is cut in and the milk is incorporated, looking a bit like cottage cheese. The mixture should loosely cling to a finger. Add more flour or milk as needed. Lightly flour a work surface. Pat dough to $\frac{1}{4}$ inch thick. Fold in half. Pat out again. Fold again. Repeat two more times. Pat out $\frac{1}{4}$ inch thick. Brush half the dough with the melted butter. Fold the dough over to make it 4 inches thick. Dip a 2-inch round metal cutter into the flour. Cut out rounds in the dough, starting at the outside, avoiding the fold. Move biscuits to a greased sided cookie sheet or iron skillet next to each other. Bake for 10–12 minutes on the second rack of the oven.

Ham Biscuits

5 dozen baked biscuits, each the size of a 50-cent piece (see previous recipe)

$\frac{3}{4}$ c butter, softened

1 small onion, finely chopped

2 tbsp poppy seeds

2–3 tsp Dijon mustard

1 lb shaved ham

Split the baked biscuits. Mix together the butter, onion, poppy seeds, and mustard. Spread the bottom halves of the biscuits with the mixture. Top with the shaved ham. Replace the top halves of the biscuits. Arrange the biscuits in a basket or on a platter and serve immediately, or store the finished biscuits, tightly covered in foil, in the refrigerator for up to 2 days. To freeze, wrap the biscuits in foil, then place in a freezer bag. To reheat, defrost in the refrigerator overnight. Reheat biscuits from the refrigerator in the tightly wrapped foil until heated through.

Rice, prevalent in the lower coastal South, had a symbiotic relationship with slavery. Slaves from rice-growing areas of Africa had the skill, knowledge, and ability to grow rice. Hurricanes and other disasters did away with rice as a primary crop in the Carolinas by the beginning of the 19th century,

although it continued to be eaten there. The primary Southern rice-growing states into the 21st century were Arkansas, Louisiana, Mississippi, Missouri, and Texas.

Corn was of extraordinary value in the South. Whether as cornbread dunked in clabber (soured milk), freshly boiled and buttered off the cob, scraped to be “creamed” in a frying pan, or fried as fritters, corn, coupled with pork, provided sustenance all year. Grits, cornmeal, and corn flour are integral by-products of ground corn. Grits are increasingly served as a dinner starch rather than at breakfast. Whole-kernel corn hominy, primarily sold canned, is rarely eaten anymore.

Louisiana developed two unique cuisines, distinct from other Southern food. The Cajun cuisine, a form of country cooking created by French Acadians, is broad and flavorful. The “holy trinity” (onions, celery, and bell pepper) and “the pope” (garlic) are its base. Its bursts of spiciness derive from the need to use what was available, from crawfish to sassafras. Creole cuisine is New Orleans city food, a sophisticated, rich *mélange* of Spanish, French, Italian, and African foods. The major Louisianan thickeners are roux, primarily made from slowly browning flour with vegetable oil; *filé* powder (ground sassafras); and okra. Hot pepper sauces, both homemade and commercial, provide an important condiment all over the South. The semi-isolated Gullahs (also known as Geechees) of Georgia and South Carolina barrier islands also have a specific cuisine, which includes many soul food dishes.

African foodstuffs brought to the South, most likely by ship captains, are beloved among the broad expanse of Southerners, without regard to color and income. The South is unlike cultures where the elite reject peasant food such as peas and beans. The legacy of poverty suffered by both races after the Civil War combined with the presence of black cooks (first as slaves, then as servants) in white middle-class homes until the late 1960s melded both cooking styles and methods of cooking with available local ingredients. Cooks had “toting” privileges, allowing them to bring excess food home, reinforcing the shared cuisine. Each race brought something to the table, one teaching baking, the other rendering lard or frying.

Race-based superior social status for whites, who could not be mistaken for black, allowed both cultures to eat the same comforting and filling foods, which have been called soul food for the last quarter century. *Chitlins* (pork intestines) were used by both blacks and whites in rural regions but have fallen in disfavor, due to the need for arduous cleaning and cooking. There are still festivals celebrating them (boiled or fried) as well as grits, peanut, oyster, shrimp, and other food festivals.

Numerous varieties of peas, descended primarily from the wild African cowpea, *Vigna unguiculata* and other species, were imported, including pigeon peas, field peas, black-eyed peas, butter peas, Crowder, zipper, leather britches, and lady peas. This was due in large part to President Thomas Jefferson's interest in them. After their original importance in feeding African slaves familiar food, they have been embraced throughout Southern food culture, with greater variety than is seen elsewhere in the United States. They are an inexpensive, important source of nutrition often combined with seasoning meat, rice, and/or hot cornbread.

The peanut (which grows under the soil and is not a nut at all) has become a significant Southern financial and nutritional asset, with worldwide dietary influence. Southerners are as likely as other Americans to eat peanut butter sandwiches and salted peanuts. Only in the South, however, do people savor freshly harvested peanuts boiled in the shell. Soybeans are a cash crop, rotated with crops such as rice and cotton, as they supplement the soil. Pole beans, a long, wide bean with a thick string, were the dominant bean until the late 20th century when smaller runner and half runner beans came into use. Other green vegetables include butter beans, broccoli (a favorite of President George Washington), brussels sprouts, cabbage, celery, asparagus, and fennel.

Turnip and collard greens remain an important source of nutrients, especially among low-income residents. The heat of the kitchen and traditional African one-pot cooking encouraged cooking tough greens and pole beans slowly on the back of the stove with a slice of smoked pork and a hot pepper. Young greens are now sautéed, braised, or even used in salads, but there is still a great affection at

all income levels for the older style, eaten with cornbread, particularly when there is a nip in the air. The broth (called *pot likker*) adds nutritional value and warmth.

Root vegetables, such as turnips, carrots, Jerusalem artichokes (sunchokes), sweet potatoes, and Irish potatoes, are boiled, sautéed, baked, mashed, or grilled. Vidalia, Georgia, and Texas have developed *terroir* providing for specialty onions, sweet enough to eat out of hand. Pecans are plentiful, grown commercially primarily in Georgia, South Carolina, and Texas. Peaches are the principal stone fruit, with abundant apples, blueberries, figs, strawberries, cantaloupes and watermelons, and various plums, as well as Florida's Valencia oranges, limes, lemons, tomatoes, mangoes, other tropical fruits, and avocados. Kitchen gardens of tomatoes, beans, squash, root vegetables, and herbs have never gone out of favor.

Blue crabs, eaten from the shell or as soft shells, range from Maryland down the Atlantic coast to the Gulf of Mexico. The three varieties of shrimp change with temperature, depth, and latitude. Their flavor varies with the marshes, bayous, and waterways where they feed. Oysters, farm-raised mussels, and clams from many coves add to the available shellfish, as does the Florida snow crab. A wide array of round and flat fish include sea bass, sea trout, grouper, flounder, and varieties of snapper. Sturgeon is nearly extinct after once being plentiful. Inland lakes, ponds, and streams provide the indigenous catfish,

Platter of fried fish, cole slaw, hush puppies, and french fries. (Danny Hooks | Dreamstime)

wild and farmed. Freshwater trout, stocked by state agencies, may be found along with indigenous bass and crappie. Catfish and crawfish are both wild and farmed.

Chicken, pork, and beef remain the prevalent meats. Each part of the region has developed its own process for preserving pork, usually smoked and salted, with Virginia's the most renowned. Country ham is served thin, like an Italian prosciutto, cut into half-inch to one-inch slices for sautéing, or soaked, boiled, and then glazed in the oven.

Historically, the use of meat depended on class and income, with agrarian and less fortunate families using meat primarily as a condiment during the week and eating chicken or roasts only on Sundays. Cheaper cuts of pork, such as fat back, belly fat, hog jowls, neck, and so on, called "seasoning meats," were utilized to season vegetables and provide protein. Game is a hobby food, with quails and pigeons commercially farm-raised.

Sugarcane and sorghum developed the Southern sweet tooth—a proclivity toward sugary desserts. Sorghum "molasses" syrup was prominent from the Civil War through World War II, when less expensive refined sugars became available. Cold, carbonated, caffeinated beverages, including Coca-Cola and Dr. Pepper, found wide acceptance in the South long before becoming international. The home cook might make custards, peanut brittle, pralines, benne seed wafers, or toffee as a treat. Sweetened condensed milk was used for fudge and caramelized for a sauce, caramel being a relished flavor, as in caramel cake.

Bourbon, a whiskey that started illegally as corn moonshine, has long been an accepted part of the Southern table, whether for marinating meat, making bourbon balls for dessert, or being served with "branch water" (fresh stream water), Coca-Cola, or muddled mint, ice, and sugar in a silver mint julep cup. Kentucky whiskey is now made from a sour-mash distilled product of corn, rye, barley, and fresh limestone spring water.

In Texas, only the eastern part of the state remains oriented toward Southern food; western Texas is oriented toward Southwestern and Mexican food. Tortillas, guacamole, and salsas had become part of the Southern diet by the late 1980s, with Mexican and

Hispanic food gaining in the following decades. Florida maintains a Southern cuisine in the areas close to Georgia; below that is a more Hispanic style, frequently called "Miami cuisine."

Cooking

Home cooking constantly evolves as more women have begun working. Outside cooks have disappeared in the middle-class home. Cooking duties fall primarily to women, but men are increasingly helpful. The average family shops for food once a week, with perhaps a stop for fresh milk, fruit, or a specialty item.

Grocery shopping in the South has altered significantly. A half century ago, home deliveries were made by grocery stores, and dairies, bakeries, and local neighborhood markets were found within walking distance. Today's urban large chain grocery stores and supermarkets are not easily accessible for the poor, requiring transportation. These stores sell a vast array of easily heated frozen and prepared foods; frozen and fresh fruits and vegetables; mixes for cakes, pies, biscuits, and breads; one-pot dinners; and other convenience foods. Many poultry or meat products are premarinated and sold in easily cooked, boneless cuts.

Distribution of locally grown products has expanded through local farmers' markets and acceptance by some grocery stores. Typical homes have a stovetop with four burners, an oven, a microwave, and a refrigerator with a freezer and ice maker, as well as a hot/cold-water sink. A dishwasher is found in most middle-class homes. The disadvantaged utilize electric hot plates, portable ovens, a sink with inadequate hot water, and a secondhand refrigerator.

Braising, boiling, steaming, roasting, and sautéing are the prevalent methods of cooking. Virtually no deep-frying occurs in the middle-class home. The iron skillet is associated with Southern cooking even if not used to the same degree as nonstick pans. Baking pans, saucepans, and frying pans, along with a variety of knives, measuring cups, teaspoons, tablespoons, and wooden spoons, remain. Measures are taken with measuring cups (in ounces) and measuring spoons (the largest, a tablespoon, is equal to three teaspoons). Nearly every home has a grill, whether

outside or built into the stove, grill pans, or small electric grills. Men typically do the outdoor grilling.

Typical home evening meals include fresh or frozen vegetables, a starch, and a meat, with an occasional meatless pasta or rice meal. Everything is served at one time rather than in courses. Soups, both commercially prepared and fresh, are frequently served as an entrée rather than a starting dish, perhaps with a salad and crackers, biscuits, cornbread, or yeast rolls, for lunch or dinner.

Typical Meals

Three meals a day is the norm, with morning and afternoon snacks and, after dinner, chips, cookies, and/or ice cream while watching television before bedtime. Cereals for breakfast, skim milk, sandwiches, and low-calorie salad dressings are daily norms, with few elaborate breakfasts at home. The occasional Sunday breakfast with fried eggs, featherlight biscuits or hotcakes, and country ham sautéed in a frying pan with its pan (red-eye) gravy poured over hot grits is a treat.

The goal of most home cooks is to prepare and serve the dinner meal in 45 minutes, preferably less. Families try to eat together, but middle-class children have many activities, making shared mealtimes difficult. Chicken breasts are a favorite meat because of the ease of preparation. Boneless or marinated legs and thighs are a distant alternative. Other quick-cooking favorites are pork tenderloins and scaloppini, shrimp pilaf, crawfish, ground beef, steaks, and an occasional stir-fry. The amount of deep-frying has decreased considerably in the last 40 years. Coastal areas eat much more seafood, and mountain and inland people have eaten more freshwater or frozen fish until the last 25 years, as transportation has improved.

Meals are eaten with knife, fork, and spoon, and paper or cloth napkins are used. Food is served either from the stove or family style in serving bowls where individuals serve themselves. Homemade desserts are rare during the week, with the exception of cake or brownies from a mix. Many families batch-cook on weekends, preparing stews, roasts, gumbos, chicken and dumplings (made from biscuit dough

A typical country breakfast made up of grits and biscuits. (iStockPhoto)

or pasta) or other soup meals, meat loaves and other items made from ground beef, macaroni and cheese, or roasted chicken or chicken parts that will provide several meals. “Scratch” baking is usually done on the weekends.

During the week commercial loaf bread, cornbread, or freezer-to-oven biscuits are eaten with meals. Once every week or two, pizza, a Chinese meal, barbecue, or fried chicken might be purchased (or delivered) to eat at home. Cooked rotisserie chickens from the grocery store are used as they are, or the cooked meat is incorporated into other dishes such as soups, stews, and salads.

Eating Out

The Civil Rights Act of 1964, which outlawed racial discrimination at restaurants and interstate accommodations, was pivotal in changing the South’s social structure. Prior to this time, by state law or custom,

white-only restaurants predominated, whether lunch counters at the Woolworth's dime store serving tuna salad sandwiches or Continental restaurants with escargot. Clubs were segregated.

African Americans had separate facilities and clubs. After integration, previously black-only barbecues and soul food restaurants reached a new national appeal, with black Southern music forms such as jazz and the blues paving the way for increasing social interaction. The opening up of social accommodations not only broke social barriers, especially among young adults, but also created stronger recognition of the biracial heritage of Southern food. The act also outlawed employment discrimination. With blacks and whites beginning to work together as equals in the workplace they not only sat together at restaurants but also engaged in lively conversation and recognized the commonality of their food.

Money earned by blacks employed in previously white-only jobs resulted in a larger market for goods and services, and African Americans supplied an experienced workforce for a growing economy in the 20th century's final 30 years, helping to fuel eating out for blacks and whites in the new fast-food restaurants. The enhanced economic growth, together with black withdrawal from domestic work, led to more whites eating out. This opened the way for development of a new and lighter Southern cuisine, using local products and classic European cooking techniques.

Every sizable Southern city historically had at least one popular Greek restaurant. Chain and other diners, such as Waffle Houses at interstate highway exits, are highly patronized, most serving grits all day long as a breakfast or side dish. Bistro and fine-dining restaurants have multiplied, stressing fresh local ingredients and fresh-caught seafood as well as making their own charcuteries. "Family" restaurants provide inexpensive choices, allowing each member of a family to order his or her preferred meal. Southern ingredients are cooked in new as well as traditional ways. Fried seafood restaurants, even in coastal areas, frequently import seafood and sell it cheaply. Buffet restaurants are primarily Southern and economical.

Barbecue is one of the most beloved foods. Barbecue restaurants, whether primarily carryout or sit down, are known for their specialty ingredients. On the East Coast, shredded pork barbecue is the norm; moving westward toward Tennessee, ribs become more popular. Further west, barbecues are most often beef.

Special Occasions

Barbecues are prominent on the Fourth of July, Independence Day. Ideally, a whole pig is cooked in a pit, called a "six-pack pit" as it takes two men one six-pack of beer to dig the pit. The butterflied pig, wired to a rack, cooks slowly all night over an open fire, swabbed with local versions of sauce. After much of the meat and crispy skin have been removed and chopped, eaters vie for any leftover meat clinging to the bones. It is served with coleslaw, potato salad, Brunswick stew, and white bread. Homemade cakes are set out on a large table, along with peach ice cream ready to go on top.

Wedding receptions historically serve cheese straws; crustless cucumber, chicken salad, or pimento cheese sandwiches; and tiny ham biscuits. The low country adds hot shrimp and grits. When a death occurs, neighbors, friends, and family bring covered dishes as they would to a church picnic, and the food is left accessible for whoever drops by, with a preponderance of hams, fried chicken, and cakes. After the funeral food is frequently served at the place of worship.

Coastal families may grill or bake whole snapper or other ocean fish for Thanksgiving, or serve an oyster stuffing in roast turkey, while other areas add ham to the table. A wide range of vegetables is available in bowls on the table. At Christmas, Latino communities serve *lechón de Navidad*, a pit-roasted pig stuffed with sour oranges, garlic, lemons, and rosemary. Coastal communities serve oyster stew on Christmas Eve, with other communities serving sliced ham or turkey. Cured hams make their appearance during Christmas and New Year's Eve, with less-salty processed hams taking more of a modern role.

Black-eyed peas are eaten on New Year's Eve, usually combined with rice and called *hoppin' John*, as a

sign of good luck, in part because, when the Union soldiers foraged Southern gardens and foodstuffs during the Civil War, they spurned the peas that helped keep Southerners alive, both black and white. Traditionally, cooked turnips or collard greens foretell “green backs” (dollars) all year long.

Mardi Gras is elaborately celebrated in Louisiana. Kings cake, which has a tiny baby (once a piece of jewelry) inserted as a surprise, is a ritual. The main Easter meal is served midafternoon, a throwback to when dinner was served at three o’clock or later in the afternoon in high society such as in Charleston. Ham (rather than fresh lamb), asparagus, fresh local lettuces for salads, and a daffodil or other cake are served.

Diet and Health

The American South has the highest rate of obesity in the United States. Despite much talk about curtailing sugar, salt, and fat, the South’s middle class complicates this by dietary inconsistency, spurning low-fat seasoning meat such as smoked neck in vegetables and instead cooking bacon with brown sugar or adding sugar-laden products to a barbecue sauce. Hidden calories in condiments such as tomato sauce and prepared foods are frequently ignored, as are visible calories in starchy vegetables such as baked potatoes with sour cream.

Although the rising obesity among the poor is attributed to unhealthy home cooking—frying a pork chop, for instance, or seasoning meat in the vegetables—snacking and frequent eating in fast-food restaurants with more calories in less-filling foods are more likely the culprit. Fresh fruits and vegetables, as well as meat lower in fat, are expensive out of season. Small neighborhood grocery stores accommodating

the poor tend to be more expensive or have been supplanted by stores attached to gasoline stations, which offer high-carbohydrate snacks and canned products high in salt. Food stamps have the possibility for improved nutrition and can now be used where fresh products are available, such as farmers’ markets. Fad diets abound. Yet those with access to fresh food find that eating all things in moderation not only is pleasing but also, in the long run, is healthier and reduces obesity.

United States: The Southwest

Overview

The U.S. Southwest comprises the states of Arizona, Colorado, New Mexico, and Utah, including some parts of Texas. This region mainly comprises the Colorado Plateau, ranging between 5,000 and 8,000 feet in elevation, separated by deep canyons. In southern Arizona, the terrain drops from 2,000 feet down to the arid Arizona-Sonora Desert. As well, in northwestern Utah, the plateaus drop down into the Great Basin Desert. In short, this region is marked by both some of the hottest areas in the United States and some of the coldest.

Prehistorically, the Southwest was settled by different groups of ancestral Native Americans. The Puebloan peoples primarily concentrated in the Four Corners region and along New Mexico's Rio Grande River, supported through the practice of small-scale agriculture. Puebloan peoples subsisted on a combination of three basic foods: corn, beans, and squash. Other groups, such as the more nomadic Navajo (the Diné), Apache, and Utes, maintained a hunting and gathering lifeway, exploiting the animal and plant resources available in both the mountain and desert regions of Arizona, Utah, and New Mexico. In 1598, the first Spanish and Mexican settlers traveled from Mexico City to establish the Spanish towns of Albuquerque and Santa Fe, settling in northern New Mexico. The Spaniards brought with them European fruits, vegetables, and grains, including wheat, orchard fruits, grapes, and other Old World grains. As well, they introduced domesticated animals, including cattle, horses, sheep, goats, and pigs. Early Spanish and Mexican expansion into Texas gave rise to the Tejano culture and ancestral traditions that

characterize South Texas. As a result, South Texas shares common foods and food traditions with the Mexican ranching families of New Mexico and southern Arizona.

By the early 1800s, Anglo traders and explorers established contacts in the Southwest, and following the Mexican-American War in 1846, Mexico ceded all lands between Texas and the Pacific Ocean to the United States. Anglo settlers and ranchers brought with them the tradition of cattle ranching and small-scale dryland farming. Incorporating regional food traditions, Anglo settlers also introduced new foods and cooking methods that came to characterize a recognized "cowboy" cuisine. While cowboy cuisine may characterize what is more commonly recognized as a Western cuisine, these peoples and their foodways comprise both historical and modern components of the food culture of the Southwest. West Texas shares the ranching tradition that marks the regions of eastern New Mexico and Arizona, a life-way that gave rise to cowboy cuisine.

During the early 20th century, many Mexicans temporarily immigrated to the Southwest under the Bracero Program, and since the end of this program, Mexican immigrants have continued to settle in the U.S. Southwest, bringing with them new cultural practices, regional variations in Spanish language, and different foodways. This influence is expressed more in the foodways of southern Arizona and New Mexico.

Many Americans associate Southwestern cuisine with Mexican food, grouping together a set of intraregional foodways that mark cultural and ethnic differences within the Southwest. The food cultures

of the Southwest more accurately reflect the history of the region, bringing together Native Americans, Spanish and Mexican settlers, Anglo ranchers, and, more recently, Mexican national immigrants. In general, Southwestern food cuisine reflects a fusion of different cultural groups and their respective foodways. It is characterized by extensive use of beef and pork, chili, pinto beans, rice, and corn.

Yet, within the region, important differences persist. While the rest of the United States may group these different intraregional cuisines together, no discussion sparks more fervor than those surrounding the use of certain spices, chilies, and/or beans. Southwestern cuisine in Arizona is influenced by indigenous foodways, Anglo ranching cuisine, and Sonoran food traditions. New Mexican cuisine is much simpler than Mexican cuisine, grounded in the combination of beef, green chili, potatoes, and/or corn. In contrast with Tejanos, New Mexicans cook with a basic combination of onion, garlic, and small amounts of oregano, not using cumin or jalapeño chilies to the degree that their eastern neighbors do. Tex-Mex is consumed in the areas of western and southern Texas, reflecting the culinary adaptations of Mexican American immigrants. Tex-Mex cuisine is marked by extensive use of beef, pinto beans, cheese, red chili, and cumin in the red chili sauces. Tex-Mex cooks may opt for the shortcut chili gravy, that is, canned red chili or enchilada sauce, to season their dishes. In the Southwest, how one prepares “Southwestern” cuisine represents an important marker of ethnic identity, both reinforcing solidarity within a group and marking distinctive boundaries between others.

Green Chili Sauce

Ingredients

- ½ c vegetable oil
- 2 cloves garlic, minced
- 1 c onion, minced
- 1 tbsp flour
- 2 c chicken broth
- 2 c diced green chili (hot, preferably)
- Salt to taste

Sauté garlic and onion in oil in saucepan. Blend in flour. Add broth and green chili. Bring to a boil and simmer, stirring frequently, for 5–8 minutes.

Green Chili Enchiladas

Serves 2

Ingredients

- 6 corn tortillas
- 2 tbsp vegetable oil
- 1 clove garlic
- 2 c green chili sauce (previous recipe)
- 1 tbsp flour
- 2 c grated cheddar or Monterey Jack cheese
- ¼ c minced onion

Heat the tortillas on a griddle, and keep warm under a kitchen towel. Heat the garlic in the oil, then discard garlic. Blend flour into the oil. Stir in green chili sauce, and heat thoroughly. If mixture is too thick, add water or chicken broth. Add salt to taste. Layer tortillas with sauce, minced onion, and cheese on ovenproof plates. Sprinkle cheese on top. Place in oven to allow cheese to melt. For an authentic New Mexican touch, place a fried egg on top.

Food Culture Snapshot

In her village in northern New Mexico, Doña Manuela Luján rises early on the morning of Christmas Eve, noticing that the snow has continued to fall all night and now covers the neighboring mountains. Despite the cold and continuing snowfall, she hurriedly carries dry wood outside to her adobe oven, her *horno*, located in the patio behind her home. She checks on the red chili tamales she prepared yesterday, carefully stacked on the back porch where they froze overnight.

Once she starts the fire in the outdoor oven, she returns to her kitchen to make the bread from the dough she left rising the night before. She divides the dough into two parts, one part for the bread and one part for the traditional sweet rolls, the *molletes*. She shapes the bread dough into loaves, leaving them to rise in the

pans. Turning to the sweet rolls, she separately beats eggs, sugar, aniseed, and lard to create a mixture added to the bread dough. Kneading the sweet dough, she carefully shapes the rolls, cutting a cross in the center of each roll. From the sacks of dried corn, she scoops lime-treated hominy into a boiling pot of water, leaving it to cook.

While the bread and sweet rolls bake outside in the *horno*, Doña Manuela turns her attention to the *biscochitos*, anise-flavored sugar cookies traditionally made for Christmas. Starting with sugar, Doña Manuela beats fresh pig lard into the sugar, whipping the mixture to incorporate air until it approaches the consistency of whipped cream. Adding a pinch of aniseed, she then adds a mixture of whole wheat flour, salt, and baking powder. After shaping the *biscochitos* by hand, she places them in the gas stove to bake, now turning to make the *empanadas*, which are meat pastries. She mixes the filling from cooked meat, cooked dried apples, cinnamon, ground cloves, ginger, molasses, and raisins. Leaving the mixture to cook on the stove, Doña Manuela rolls out the pastry dough, cutting the rounds for the *empanadas*.

As the sun disappears below the horizon, she hears children singing as they process through the village. Stopping at her door, they sing a hymn, recreating the tradition of the *posadas*, in which Joseph and Mary searched for lodging in Bethlehem. She invites the children in to share in the *molletes*, *biscochitos*, and sweet rolls, all representing traditional symbols of Christmas gifts.

After the children leave, Doña Manuela goes to her storeroom to take dried red chili pods from the strands that hang in storage. She removes the stems and seeds, washing the pods; she then adds the chili, oregano, salt, garlic, and onion to the *posole* stew. Bringing the frozen tamales in from the back porch, Doña Manuela stacks them carefully in the tamale cooker, leaving them to steam. Bundling her coat and scarf around her to protect against the winter cold, she hurries to the church for Christmas Eve midnight mass. Gathering around the bonfires outside the church, friends and family greet each other, wishing each other happiness for the season. Later, following mass, the family and extended kin return for an early Christmas breakfast of *empanaditas*, *posole*, and tamales.

Major Foodstuffs

For many Americans, Southwestern cuisine is characterized by some combination of corn, beans, chili, and/or meat. Within this complex of foods, the intraregional variation in cuisines is constructed by different combinations of similar ingredients. For the Southwesterner, these apparently subtle differences in types of beans, or the method of preparing chili, for example, represent important markers that distinguish intraregional cuisines. These seemingly slight differences in ingredients are neither minor nor trivial. As some Mexican cooks in southern New Mexico will say, “Ahora es cuando el chile verde le ha de dar el sabor al caldo” (Now is when the green chili gives the flavor to the soup).

Corn historically represented the most important food throughout the Southwest. For Native Americans, corn has comprised the dietary staple and provided the central ingredient in many regional dishes.

Some typical sauces from the Southwest, including green chile, guacamole, and mole. (Dreamstime)

The domestication of maize occurred in the highland regions of Mexico and Guatemala in prehistoric times, and indigenous farmers first brought domesticated maize varieties into the Rio Grande Valley in about 700 A.D. Corn's important role in Native American agriculture and foodways thus led to its incorporation into important religious rituals, creation narratives, and ancestral legends. For Native Americans in the Southwest, corn came to be sacred, a symbolic representation of their ancestral mother and the essence of culture itself. Prayers are offered to the corn, in order to ensure the plant's maturity and productivity. Once harvested, corn is used in different forms in traditional ceremonies, including the plant, the seed, and the corn pollen.

Across the Southwest, five different varieties of corn predominate: blue, white, red, yellow, and speckled. Blue, red, and speckled corn are more commonly associated with the foodways of the Puebloan peoples, including both the Rio Grande Pueblos and the Western Pueblos, including Hopi and Zuni. Blue corn is traditionally used in baking, stews, and traditional breads, such as the Hopi *piki*. Red corn is used in stews and parched corn, while speckled corn is used in a range of baked goods.

When the Spaniards arrived in New Mexico, they brought European foods with them, but they also incorporated corn into their diet, reflecting both the influences from Mexico and shared foodways with indigenous peoples. Corn was incorporated into some of the most traditional Hispanic dishes of the region, including the hominy used in *posole* and *chicos*, which are small dried kernels of corn, used in stews in northern New Mexico. Unlike Mexican cooks to the south, neither Spanish settlers in New Mexico nor Mexican settlers in Arizona or Texas used corn in tortillas, preferring flour tortillas to accompany meals.

Beans were first domesticated in Mesoamerica, and indigenous farmers spread the common pinto bean throughout the Southwest in prehistoric times. Pinto beans are commonly used throughout different regional cuisines of the Southwest, readily adopted by Spanish and Anglo settlers. Among different Native American groups, a wide variety of beans, including white, blue, red, yellow, and multicolored ones, were

used through the prehistoric and historic periods, although their use has declined in modern times. In the Arizona desert, the Tohono O'odham used the tepary bean, known for its drought tolerance. In more recent times, Arizona chefs and food activists have incorporated tepary beans into regional dishes in an effort to revive consumption of indigenous beans. As well, in prehistoric and historic times, the Tohono O'odham of the Arizona desert, the Mescalero Apache of New Mexico, and different Native American groups in Texas gathered wild mesquite beans for consumption. In Hopi and Rio Grande Pueblo dishes, beans are often combined with corn or squashes in the same dish to construct simple vegetable stews.

In their migrations from the Mexican interior, Spanish and Mexican settlers brought with them the acquired taste for pinto beans. In northern New Mexican cuisine, both the pinto bean and the *bolita*, a round, light brown bean, are used interchangeably in preparing beans, while the pinto bean is more commonly used throughout Arizona and Texas. Across Mexican and Mexican American cuisines in the Southwest, pinto beans are usually prepared separately; that is, they accompany the main dish. Thus, the chili with beans first prepared by the historic chili queens on the downtown plaza of San Antonio represented a historic creation, a culinary strategy to stretch a meat-based dish. In addition, Spanish and Mexican settlers in the Southwest brought with them the beans and pulses of the Old World, in particular, garbanzo beans and lentils. In the cuisines, these foods are now more often associated with dishes consumed during the Lenten period, when devout Catholics abstain from eating meat.

Chili peppers of the *Capsicum* genus are widely used throughout the Southwest, although the different varieties characterize regional diversity. In southern Arizona and northern Sonora, chiltepins, small wild chili peppers, are found in the protected transition zone between the desert and mountain ranges. These extremely hot, small red chilies were used by indigenous populations to add flavor and spice to vegetable dishes. In addition to using chilies as a food spice, Native American women put the hot chili pepper powder on their nipples to initiate weaning in their toddlers. In modern times, chiltepins may be

dried, crushed, and then sprinkled judiciously over soups and stews. Reflecting a history of Mexican migration from Sonora, Arizonan cuisine more often includes the use of milder Mexican chilies, such the Mexican poblano and dried ancho.

In New Mexico, the Anaheim chili is used, a long, varied, narrow chili, used both as a fresh green chili and, once ripened, as a dry red chili. Green chilies are traditionally roasted, to peel off the outer skin and leave the meaty flesh. Green chili sauces are simple, comprised primarily of green chili. In contrast, red chili sauces may be made from either fresh chili, dried red chili, or dried chili that has been ground to a powder. In either case, the cook will often add thickeners, such as flour, and other spices, including ground cumin and/or oregano, to the final sauce. In Texas, jalapeño chilies are more often used in dishes and stews, reflecting culinary influences from Mexican immigrants.

Of the domesticated vegetables, squash represented the most important food in the Native American diet. Along the Rio Grande and in northern Arizona, Native American farmers grew primarily winter squash, such as varieties of pumpkins, acorn, cushaw, and gourd squashes. These squashes were grown for their edible seeds and fruits, as well as to be used as tools and containers. When the Spaniards arrived, they brought with them the summer squashes, also known as *calabacitas*, which were commonly used in the stews and sautéed dishes of Mexican cuisine. As well, Spaniards introduced new vegetables and fruits, such as tomatoes, melons, and cantaloupes, which were quickly incorporated into Native American foodways.

In addition to domesticated plants, wild-gathered plants also contributed important foods to the Native American diet. In the Arizona desert, the Tohono O'odham harvested juice from the saguaro cactus and gathered fruits from the prickly pear and cholla cactus. In cooler climates at higher altitudes, Native Americans of northern Arizona and northern New Mexico seasonally gathered wild greens, such as lamb's-quarter, mustard, wild mint, purslane, and wild onions. When the Spaniards arrived, they often incorporated these greens, known also as *verdolagas* or *quelites*, into stews and vegetable dishes.

During the prehistoric period, Native Americans acquired meat through hunting, incorporating small amounts of wild game and small animals into their diet. Grounded in indigenous beliefs in animal spirits, Native American hunters ceremonially sought the permission of animal spirits before killing animals. The meat of large game, such as elk or bison, was usually dried into a jerky, while smaller animals, such as jackrabbits or cottontails rabbits, were normally used in stews or grilled. Wild birds and fish also represented an occasional protein source in indigenous diets.

With the arrival of the Spaniards and Anglos, European food plants and animals also became part of the Southwestern foodways. Old World domesticated animals were integrated into Southwestern foodways, including, in particular, sheep, cattle, goats, and pigs. As the Diné adopted a subsistence pattern of herding sheep, lamb, or mutton, became a more common meat item in their stews and other dishes.

In dishes that include meat, beef is most common across the Southwest in general, but preparation methods vary significantly by region. In the Arizona desert, the Tohono O'odham traditionally dried meat in the sun, producing a dried meat flesh that required no refrigeration. Adopted by American soldiers and trappers, this product became beef jerky; for the Mexicans, the dried beef became *carne seca*, or dried beef.

Cooking

Throughout the Southwest, the most common cooking methods include sautéing, deep-frying, and stewing, that is, stovetop methods that reflect ancestral traditions of cooking over an open fire. Sautéing normally begins by gently frying some combination of onion, garlic, chili, and/or herbs in oil, to which vegetables or meat are then added for longer, gentler cooking. Different flavors in the sauces are thus created by different combinations of standard food ingredients.

As a cooking method, deep-frying was introduced in historic times and is more commonly used in the preparation of snack foods, such as fry bread or

sopaipillas, or Mexican foods more commonly recognized as snack foods in Mexico, such as *taquitos*, more commonly known as rolled tacos throughout the Southwest, or *chiles rellenos*.

Stewing is a cooking method that draws on the tradition of Mexican *caldillos*, combining red or green chili with meat and, often, some combination of vegetables. Prepared through long hours of stovetop simmering, these dishes served to both stretch meat among many family members and use vegetables seasonally available from household gardens. In the Southwest, stews are traditionally seasoned simply, usually based on an initial sauté of onion, garlic, and chili.

In general, baking is not a preferred method of preparing most food dishes. Baking is specifically limited to the preparation of breads, cookies, or empanadas, foods that are often associated with special occasions or feast days. The Spaniards first introduced the earthen oven, the *horno*, to the Pueblo Indians during the colonial period. The *horno* is located outside the residence, and Puebloan peoples will often place one to four *hornos* together, so that bakers may work together in preparing bread for community feasts. In Hispanic households, baking empanadas or cookies, in particular, *bizcochitos*, often marked the beginning of the Christmas season.

Typical Meals

Historically in the region, most farming and ranching households would consume three to five meals a day, with the main meal at midday. In modern times, most people eat three meals a day, with dinner in the evening being the main meal of the day. The following are examples of typical meals in middle-class families in seven different regions of the Southwest.

In the Arizona-Sonoran household, a traditional dinner might center on *machaca*, a meat stew made of reconstituted dried beef jerky, stewed with mild chilies and tomatoes until the meat is soft and shreds easily. The meat's smoky flavor is enhanced by marinating it in garlic and citrus juices, followed by hours of sun-drying. Accompanying this stew would be huge white flour tortillas found only in Sonora and

Arizona, often measuring up to 16 inches across. More recently, Arizonans have become accustomed to the infamous *chimichanga*, a burrito comprised of a flour tortilla wrapped around *machaca* and then deep-fried. Various restaurants in border towns, including Tucson and Nogales, all claim to have invented the *chimi*, as it is affectionately known in Arizona.

In a traditional Tohono O'odham household, the dinner meal of vegetable stew would include tepary beans, similar to pinto beans, and a particular O'odham squash, both adapted to desert climates. Accompanied by a juice or fruit *ade* made of prickly pear cactus, these foods are characteristically low glycemic, thus metabolizing slowly in the body and controlling blood sugar levels.

Southern New Mexican regional cuisine has been more heavily influenced by Mexico. Thus, a typical dinner meal would include red chili *enchiladas*, usually including chunks of beef or pork, often topped with grated cheese. These *enchiladas* would be prepared in a casserole-style baking dish and then baked in the oven. As a main dish, *enchiladas* would be accompanied by refried pinto beans and Mexican-style rice. The rice is prepared by first sautéing it in vegetable oil before it is cooked in chicken broth combined with a blend of tomatoes, garlic, and onion. The sautéing gives the prepared rice a bite that distinguishes the rice from the soupier Tex-Mex rice.

In northern New Mexico, Hispanic families might partake of green chili stew for dinner, a thick stew comprised of chopped, roasted green chili, cubed meat (either beef or pork), and small chunks of potatoes. In more rural and traditional households, this stew might contain *chicos*, small dried corn kernels, harvested from a traditional, small-kerneled corn still grown throughout northern New Mexico. Accompanying the green chili stew would be white flour tortillas, warmed on the griddle and served folded beneath the bowl. For dessert, under special circumstances, families might have *sopaipillas*, a small square of fried bread, hot and puffy, with honey drizzled over it.

Among the Rio Grande Pueblos of northern New Mexico, including also the more western Pueblos, such as Zuni or Hopi, dinner might include a meat-based stew of either beef or mutton, which would

Texas-style chili con carne, now recognized as the official dish of Texas. (Dreamstime)

contain vegetables such as corn and squash. In general, vegetable and meat stews in Native American communities are milder, not including the spices and chili that characterize stews in Mexican or Mexican American households.

In West Texas, a rural family might sit down to a beef stew, also known as chuckwagon stew, or chili con carne, made with ground beef, tomatoes, red chili powder, and beans, accompanied by sourdough biscuits. In South Texas, dinner might consist of Texas-style chili con carne, now recognized as the official dish of Texas. In this region of the Southwest, chili is a stew of small pieces of beef, cooked in a broth of red chili. The red chili pods are boiled, peeled, chopped, and then liquefied in a broth. Lazy cooks may prepare the red broth with chili powder, but true chili aficionados can recognize the difference readily. Historically, in San Antonio, pinto beans were added to the chili as a means of stretching the stew. In the

late 1800s, Mexican American women, known as the “chili queens,” traditionally prepared chili stew in San Antonio’s downtown plaza in the evenings. Patrons would gather to sup on red chili stew and large flour tortillas, entertained as well by strolling mariachi musicians. In 1937, the San Antonio health department imposed new sanitary regulations on the chili stalls, effectively shutting them down permanently.

Eating Out

Historically, dining out was never common throughout the Southwest. During the 1800s, for travelers and traders throughout the West, small establishments offered lodging and sustenance for nonlocals. Some of the earliest restaurants in Arizona, New Mexico, and Texas were originally established as stage stops along major routes from the East to California. In modern times, restaurants are evaluated by a discerning clientele, critiqued for the freshness of their tortillas, the heat of the chili, and the flavor of the salsas. Loyalties to different establishments are deep-seated and earnest, reflecting a discernment of taste developed through many years of savoring homemade and locally prepared food. While fast-food “Mexican” establishments abound, locals continue to patronize traditional, locally owned restaurants. However, across the board, local Southwestern restaurants are characterized by reasonably priced food.

For many Southwesterners, Santa Fe, New Mexico, represents a foreign world, populated by movie stars, artists, visiting dignitaries, and wealthy tourists. Although Santa Fe is recognized as one of culinary capitals of the world, most regional residents find little connection between the foodways of their ancestral heritage and Santa Fe’s nouvelle cuisine. Grounded in the creative combination of traditional Southwestern ingredients and standards from other cuisines, Santa Fe dinners are both a delight for the eye and an experience in unique and unusual flavor combinations. While taking relatives visiting from outside the Southwest to Santa Fe, a visiting Southwesterner might partake of foie gras flavored with figs and chili and honey-grilled giant shrimp, followed by a main dish of peppered elk tenderloin.

Snack foods have been commonly consumed in the Southwest since prehistoric times. Among Native Americans, grains and seeds provided the basis of foods that could be carried over long distances. In historic times, foods such as pumpkin seeds, roasted piñon (pine) nuts, parched corn, and dried desert fruits have become more commonly recognized as snack foods.

Among Mexican and Mexican American populations in southern Arizona, southern New Mexico, and South Texas, snack foods draw on the rich heritage of Mexican cuisine. Tortilla-based food items, such as gorditas, taquitos, and chimichangas, among others, are widely available at evening food stands, at take-out establishments, and, as fresh processed

items, in every grocery store. Most famous is the traditional burrito, a large flour tortilla wrapped around ingredients including either chopped meat flavored with red chili or mashed refried pinto beans accompanied by grated cheese. Popular folk legend attributes the burrito's creation to taco vendors during the Mexican Revolution in Ciudad Juárez, Chihuahua, located across the U.S.-Mexican border from El Paso, Texas, who offered "wrapped" snacks to urban patrons. Along this border region, including southern New Mexico and West Texas, burritos may comprise a wide range of different kinds of meat, including shredded beef (*deshebrada*), pork with mole, beef stomach, tripe, and/or tongue.

Special Occasions

In this region, special foods are served both for community or family feast celebrations and for public consumption, reflecting the long tradition of tourism in the Southwest. Within the Native American community, during feast days, the meals are served in common dishes, with guests and family coming and going, eating and visiting, as they arrive. Some Native American communities allow tourists to come and watch their traditional celebrations; other communities may ban outsiders. In cases where outsiders are allowed, feast foods, such as stews, snack foods, or special breads, may be available for purchase; in other cases, residents may invite visitors into their homes, serving them foods in compliance with their ancestral traditions. Some of the most important feast breads include piki bread and fry bread.

Piki is a tissue-thin corn wafer that is unique to the northern Pueblos. Traditionally made throughout the northern Pueblos, it is more common among the Hopi, although piki is undergoing a renaissance in specific Pueblos, in particular, Tesuque and San Ildefonso. Piki may be made from blue, red, or yellow corn, depending on personal preference and the specific ceremony. Piki batter is comprised of a mixture of water, finely ground cornmeal, and small amounts of chamisa ash. The ash imparts the traditional grayish-blue color that distinguishes traditional piki. Pueblo women cook piki on traditional

A man at a traditional Native American fry bread food stall at the Gourd Show in Arizona. (StockPhotoPro)

piki stones, which are large, smooth, flat stones that have been passed down from mother to daughter for generations. The stone is heated by a prepared fire underneath. Once it reaches sizzling, the woman quickly spreads a paper-thin layer of piki batter, moving her hand quickly over the batter to smooth out lumps while at the same time avoiding burning her hand. The batter is laid on in overlapping strips, resulting in a thin paperlike wafer. The first piki is fed to the fire, as an offering, and subsequent piki sheets are either rolled or gently folded before they harden. Piki is traditionally offered to friends and family during the summer Katchina dances.

Fry bread is often served at public feast days both in the New Mexico Pueblos and on the Navajo reservation. It is a flat dough made of wheat flour, leavened with yeast or baking powder, and then deep-fried in oil, shortening, or lard. Fry bread was created during the 1880s by Native Americans from the rations (lard, flour, salt, baking powder, and powdered milk) distributed by the U.S. government. Once symbolically a starvation food product, it has since come to be a “traditional” food. Fry bread is now associated with Native American powwows, feast days, and public events. Traditionally, fry bread is served with honey or powdered sugar as a sweet. In other instances, the fry bread may be slit open and then pinto beans, ground beef, grated cheese, and/or shredded lettuce are inserted, thus transforming it into what is known as an Indian or Navajo taco. In more recent years, fry bread has come to represent a controversial symbol of the impact of processed, high-fat foods on Native American diets, and some nutritionists allege fry bread plays a role in Native American obesity and high incidence of type 2 diabetes.

Fry Bread

Makes 6–8 large fry breads

Ingredients

- 3 c all-purpose flour
- 1 tbsp baking powder
- 1 tsp salt

1 ¼ c warm water

Extra flour for processing

Vegetable oil for frying, or lard (traditional)

Blend the flour with the baking powder and salt in a mixing bowl. Make a well in the center of the flour mixture, and pour in the warm water. Mix the flour and water with a wooden spoon. Take the dough from the bowl, and mix gently with hands on a board until dough is thoroughly mixed. Excessive kneading will make a heavy fry bread. Form into a ball. Cover dough with a kitchen towel, and let rest for 10 minutes. Place dough on a cutting board, and cut dough into 6–8 pieces. Shape and pat each piece into a disk 5–7 inches in diameter.

Place vegetable oil or lard in deep, heavy pan. Oil should be a minimum of 1 inch deep. Heat oil to about 350°F. Place formed dough gently in oil, and press down on dough as it fries so the top is submerged in the hot oil. Don't overcrowd pan. Fry until some browning occurs, approximately 2–3 minutes, then flip and fry other side. Bread is done when surface is dry to the touch and smooth.

Among Southwestern Hispanics, ceremonial foods are most often associated with important Catholic feast days throughout the liturgical calendar, including Christmas, Lent, Easter, and All Saints' Day, more recently recognized as the Día de los Muertos. These feast foods are traditionally served to extended family and friends, although they may also be available for visiting tourists.

For Christmas, both posole and tamales are traditional feast foods. Posole is a thick stew made with pork, red chili, onions, garlic, and hominy corn. In some areas of northern New Mexico, particularly among the Pueblos, a “green” or “white” posole may be more common, containing the same stew ingredients already listed except the red chili.

Tamales are made from a thick masa, that is, cornmeal dough, blended with rich pork lard to the consistency of whipped cream. Throughout most of the Southwest, tamales contain meat, usually pork, and red chili. Pre-Christmas festivities often begin with the *tamalada*, the tamale-making party, in which

family and friends join as a group to make the tamales. Tamale making is labor-intensive, requiring hours of careful hand labor to construct and roll the tamales. In addition to red pork chili tamales, sweet tamales, made with a filling of brown sugar, walnuts, raisins, and spices, such as nutmeg, cinnamon, and/or ginger, may be prepared for Christmas. As well, for many Mexican immigrant and Mexican American households, tamales with dark chocolate mole are traditionally served on Christmas Eve, accompanied by hot chocolate.

Diet and Health

For many Americans, Southwestern foodways are more commonly conceptualized as a cuisine marked by the heavy use of chili, fat, and meat. In modern times, health experts have watched with alarm the increased rates of obesity and type 2 diabetes among minority populations, including both Native Americans and Latinos, in the U.S. Southwest. Pointing to the traditional foodways as a culprit, public health specialists and dieticians have proposed radical changes in traditional diets, in an attempt to head off a future health disaster. Other experts call for a more judicious analysis of the foodways of the Southwest, often citing the healthier aspects of an earlier, more traditional diet based on vegetables, complex carbohydrates, little animal fat, and no processed foods. For these food activists, drawing on the ancestral heritage of Native American, Hispanic, and Anglo frontier foodways represents an opportunity to improve diets while at the same time allowing ancestral foods to play important roles in conserving cultural heritage.

Venezuela

Overview

The continent of South America hosts four major landscape types, from the Andean heights to the Amazonian basin, from vast central grasslands to coastal regions bordering three different oceans. Venezuela, occupying the continent's northeastern perch with 1,740 miles of Caribbean coastline, includes all four of them. And just as these landscapes differ geographically, each contributes its own particular elements to the cultural stew that is modern-day Venezuelan cuisine, including native plants, local economies, and regional traditions.

The Andean range, traveling up the continent's west coast, makes a gentle turn to the east in Colombia, then spills into the sea along Venezuela's north coast. With it comes some of the most sophisticated of pre-Columbian traditions such as terraced farming, drying as a technique of food preservation, and that all-important Andean vegetable, the potato. At the southern tip of the southernmost state, 70,000 square miles of Amazonian river basin lap across the Brazilian border into the least populated region in the country. Here, small Indian tribes hunt, fish, and farm cassava as their primary foodstuff just as their ancestors did.

The Orinoco, the second-largest river on the continent, with the third-largest water volume in the world, fertilizes vast grasslands, or *llanos*, as it travels across the country from east to west. Here, *llaneros* herd the cattle descended from those brought by the Spaniards, turning beef into an essential element of the Venezuelan diet. Finally, coastal cultures are often closer in lifestyle and food traditions

to those of the Caribbean islands than to those in the country's inland areas.

Today, corn and beans remain all important, and cassava, or yucca as it is called here, is still a major ingredient. Venezuelan food culture and cuisine blend these with a hint of Africa and a powerful dose of Spain to produce its *cocina criolla*.

Food Culture Snapshot

Maria Reyes, who lives in Caracas, is thinking of the evening meal as she studies the empty pantry shelf where the bag of *masarepa* used to sit. She had better take immediate action, or there will be no arepas for dinner. The Venezuelan equivalent of tortillas, these pillow-like rounds are an absolute necessity. A trip to the market is in order. While she is out, she might as well pick up a week's worth of supplies.

In busy Caracas, the nearby supermarket is the best place to fill up on bulk products, but Maria is a good bargainer and can get better prices on meat and produce at the traditional market down the street. Here she can compare quality, and, in a worldly city like Caracas, the riotous displays of food connect her to the countryside far more than the grocery stores or fancy food shops.

Before she proceeds to the produce stalls, she stops to replenish her all-important supply of black beans, so important in Venezuelan cuisine that they are popularly known as *criollo caviar*. She loads up on onions, garlic, tomatoes, and bell peppers to make a week's worth of *sofrito*, a sauté, soup, or stew base. A package of presoaked cassava goes into her basket along with a

bunch of plantains and a couple of pounds of potatoes. She grabs several bunches of cilantro, then thoughtfully selects the freshest vegetables she can find. The spinach, green beans, and eggplant all look good.

Maria visits the meat vendors to pick out both pork and beef. Pork is the family's favorite, but beef stays good and cheap thanks to local production in the llanos. She moves to a cheese stall to pick out some soft native cheese for breakfast arepas. Nearby are the fruit stalls piled high with mangoes, papayas, cherimoyas, soursops, and guavas. She selects a few of each, adds some avocados for *guasacaca*, the Venezuelan equivalent of guacamole, and, with a basket filled to bursting, heads toward home, a week's menu already worked out in her head.

Major Foodstuffs

Strong as the influence of Spain has been on the way Venezuelans eat, it is more visible in the cities than the countryside, among the wealthy than the poor, and during holidays and special events than every day. Imported ingredients such as olives, capers, wine, and spices signal the Spanish influence and are found mostly in the cities and at holiday times. Wheat, also a Spanish gift, plays a similar role since its flour is more expensive than corn products, though wheat breads are very popular.

Corn and beans still form the backbone of the rural diet and remain central to urban foodways as well. Arepas, made from processed corn flour, still accompany almost every meal, and fresh corn kernels along with local cheese are often mixed into wheat flour to make *cachapas*, a favorite pancake. Whole corncob chunks are incorporated into hearty stews, or *sancochos*.

Except in the llanos, country dwellers eat less meat than city dwellers do, and, because pigs are easy to raise at home, the meat is more likely to be pork than beef. Llaneros, like the gauchos of Argentina, herd their cattle freely over the grasslands and continue the tradition of slaughtering an entire cow to roast over a fire. Meanwhile, the diet of the Amazon remains relatively unchanged from pre-Hispanic times.

Cachapas, which are corn dough patties filled with cheese. This is a popular food item in Columbia and Venezuela. (iStockPhoto)

Cooking

At the time of the Spanish conquest in the early 16th century, most of Venezuela's population was organized into disparate farming communities subsisting on corn, yucca, beans, and vegetables. Meals were eaten twice a day. Cooking was done by roasting, grilling, or boiling. There were no fats, and, except for the occasional treat of honey, sweets were unheard of. The rivers and oceans supplied fish, while hunters supplemented the diet with game.

While the diet may have been simple, its preparation was not. Sophisticated technology allowed cooks to keep their communities alive and healthy. They soaked, cooked, and fermented yucca to eliminate its bitter toxins. They softened corn by soaking it in wood-ash-suffused water, then ground it to make flour. In the process, they liberated otherwise-unavailable nutrients from corn, which, when com-

bined with beans, provided their people with an adequate supply of protein.

The Spaniards not only introduced new ingredients and improved cooking implements but also brought an entirely new technology. Frying in olive oil had been an important cooking method in Spain, but olive trees did not grow well in the New World. Instead, they turned to lard. They brought a means of enhancing flavor by sautéing onions, garlic, and leeks until soft to make a sofrito before adding other ingredients to the pot. In a perfect example of the Columbian Exchange, the New World added tomatoes and peppers to the sofrito, which today flavors Venezuela's favorite dishes.

Typical Meals

Meals are usually taken twice a day in the countryside and three times in the cities. Though an increase in the pace of life has driven the urban lunch from the home to the workplace, breakfast and dinner remain relatively unchanged. Breakfast is based on bread, which can be made with wheat or, more commonly, corn flour. Arepas are a favorite, often pulled open and filled with a runny cheese somewhat like crème fraîche.

Dinner is the biggest meal of the day, a time when families gather together to enjoy several courses. Soups are usually part of the menu, and, though beans

A woman preparing arepas, typical corn fritters of Venezuela. (StockPhotoPro)

may dominate in rural meals, they are rarely absent on the tables of the wealthy. Rice is extremely popular as well. But Venezuelans love meat, poultry, and seafood, so those who can afford it usually include it in the evening meal.

Arepas

The classic bread of Venezuela is made with pre-cooked white corn flour called masarepa, *harina precocida*, or *masa al instante*. It is not masa harina or tortilla flour. Look for it in Latin American stores under the brand name Harina P.A.N.

2 c masarepa

1 tsp salt

2 c water (approximate)

Preheat oven to 350°F.

Whisk together arepa flour with salt in a large bowl. Stir in water to make a relatively stiff dough. If mixture doesn't blend properly, add water in small increments. Let dough stand for 5 minutes, then form into balls and flatten into cakes 3 inches across and a half-inch thick.

Cook on a lightly greased griddle over moderate heat for 5 minutes to a side. Place on baking sheets, and bake for 20 to 30 minutes, turning occasionally. Fully cooked arepas sound hollow when tapped gently.

Pabellón Criollo con Caraotas Negras (Beef with Black Beans and Plantains)

Considered Venezuela's national dish, *pabellón* is truly a Creole concoction. It is always served with black beans. White rice, cooked with a simple sofrito of onions and garlic, is also essential.

Serves 6

For the Beef

1½ lb flank or skirt steak, cut to fit in a large sautépan

3 onions, one cut into large chunks, two chopped
Beef broth to cover

3 tbsp olive oil
 3 cloves garlic, minced
 1 red bell pepper, seeded and chopped
 1 lb fresh or canned tomatoes, peeled, seeded, and chopped
 1 tsp salt
 Black pepper to taste

For the Beans

2 c black beans
 3 tbsp olive oil
 1 onion, chopped
 1 red bell pepper, seeded and chopped
 4 cloves garlic, smashed and chopped
 1 tsp cumin
 1 tsp ground sugar
 Salt, pepper, and sugar to taste

For the Plantain

1 ripe plantain or 2 underripe bananas
 2 tbsp olive oil

Place the meat and onion chunks into a large saucepan and cover with beef broth. Bring to a boil over medium heat and simmer, covered, until the meat is tender, 1½ to 2 hours. Allow to cool, remove cooled meat from stock, and shred finely. Strain stock and set aside.

Heat 3 tablespoons of oil over medium heat, add shredded meat, and brown, stirring lightly. Reduce heat to medium and stir in onions, garlic, bell pepper, tomatoes, salt, and pepper. Cook, uncovered, about 20 minutes, moistening with stock if necessary to create a dense sauce. Adjust salt and pepper.

Wash and pick over the beans. Cover with cold water and soak from 4 hours to overnight. Add enough water to cover the beans by 1 inch, bring to a boil, and simmer, covered, checking periodically, until they are tender, about 2 hours. Stir more frequently toward the end to keep beans from sticking to the pot.

In a skillet, heat 3 tablespoons oil and sauté onion and bell pepper until soft. Add garlic, cumin, and

sugar, and sauté partly covered over low heat for 30 minutes. Add to the beans, cook briefly to blend flavors, and then add salt, pepper, and sugar to taste.

Just before serving, peel plantain or bananas, cut into 3 pieces, and slice each lengthways. Fry in the 2 tablespoons remaining oil over low heat, 3 minutes to a side. Arrange the beef, beans, and rice on a large platter garnished with plantain.

Eating Out

While urban workers are likely to bring lunch from home, fast food is available to anyone looking for an inexpensive meal. This doesn't just mean McDonald's, though the U.S. chains are well-enough entrenched. Venezuelans today boast their own fast-food joint, the *arepera*. The country's ancient bread is split open and the doughy inner portion torn out. Then it is stuffed with all manner of beans, meats, cheeses, or stews to make *arepas rellenas*. Vendors produce them in huge quantities, wrap them in napkins, and sell them on paper plates.

Restaurants began to appear in Venezuela in the 19th century and are now well established, from unpretentious *luncheñas* to fine-dining places. Many are owned by descendants of foreigners, particularly Italians, but just about any cuisine can be found in the cities, from Chinese to Indian to French.

Special Occasions

Most dining out in Venezuela is reserved for special occasions. Birthdays, engagements, anniversaries, and weddings may be celebrated at restaurants, but important holidays, community achievements, and saint's days are recognized at home. None of these is more important than Christmas and Easter.

Christmas, in addition to churchgoing, is a time for gathering and feasting with the family, usually at the home of the senior member. The *pièce de résistance* may be a stuffed turkey or glazed ham that looks as if it came straight off an American table, but the plate of *hallacas* beside it is all Venezuelan. Similar to Mexican tamales, these cornmeal dumplings are stuffed with sautéed meat, wrapped in banana leaves rather than corn husks, and boiled rather

Hallacas, cornmeal dumplings stuffed with sautéed meat, wrapped in banana leaves, and boiled are traditional Christmas food in Venezuela. (iStockPhoto)

than steamed. They are essential to any Christmas meal.

While many take Holy Week, or *Semana Santa*, as an opportunity for a vacation, others observe it quite seriously. Residents of South America add to the repertoire of accepted Lenten dishes to include amphibians, reptiles, and water-dwelling mammals. Venezuelans particularly relish the meat of the semi-aquatic capybara, the world's largest rodent, to the point where poaching is common and there is some fear that the population may be threatened.

Diet and Health

Early Spanish commentators noted the glowing good health of South America's indigenous peoples, including those of Venezuela. They talked of strong, healthy stature, shining hair, and gleaming teeth, properties soon to disappear with the deadly onslaught of foreign germs, slavery, and, as even 16th-century commentators suggested, the Spanish diet. Like all conquerors, the Spanish imported as much of their own diet as possible. In addition to new vegetables, herbs, and wheat, they brought farm animals, fat, sugar, and the expectation of three meals a day. They taught the local population to fry their foods in lard.

In terms of flavors and technology, the Spanish contribution merged with indigenous ingredients and techniques and gave birth to *cocina criolla*, something greater than the sum of its parts. But today

the cuisines of Venezuela and other Latin American countries are much higher in fat and sugar than those of the pre-Hispanic period. Frying is widely used. Sugary sodas are as popular as fruit juices. Those with enough money now confront the evils of the Western diet. At the same time, class distinctions leave some people with too little money to buy meats, fats, and sweets in any large quantity and others with too little to eat at all. Only in the last decade have Venezuelans connected the dots between overconsumption of animal fats and ill health. Within recent years, the use of lard has declined while vegetable oils have rallied, hopefully a first step in a healthier direction.

About the Editor and Contributors

Ken Albala, Editor, is professor of history at the University of the Pacific in Stockton, California. He also teaches in the gastronomy program at Boston University. Albala is the author of many books, including *Eating Right in the Renaissance* (University of California Press, 2002), *Food in Early Modern Europe* (Greenwood Press, 2003), *Cooking in Europe 1250–1650* (Greenwood Press, 2005), *The Banquet: Dining in the Great Courts of Late Renaissance Europe* (University of Illinois Press, 2007), *Beans: A History* (Berg Publishers, 2007; winner of the 2008 International Association of Culinary Professionals Jane Grigson Award), and *Pancake* (Reaktion Press, 2008). He has co-edited two works, *The Business of Food* and *Human Cuisine*. He is also editor of three food series with 29 volumes in print, including the Food Cultures Around the World series for Greenwood Press. Albala is also co-editor of the journal *Food Culture and Society*. He is currently researching a history of theological controversies surrounding fasting in the Reformation Era and is editing two collected volumes of essays, one on the Renaissance and the other entitled *The Lord's Supper*. He has also coauthored a cookbook for Penguin/Perigee entitled *The Lost Art of Real Cooking*, which was released in July 2010.

Julia Abramson has visited France on a regular basis for more than 25 years to study, research, travel, and eat. She has published essays on aspects of food culture from vegetable carving to gastronomic writing and is the author of the book *Food Culture in France*. Abramson teaches French literature and culture and food studies at the University of Oklahoma, Norman.

M. Shahrin Al-Karim is a senior lecturer of food service and hospitality management at the Universiti Putra Malaysia. His research interests include food and culture, culinary tourism, food habits, and consumer behavior. He received a BS in hotel and restaurant management from New York University; an MBA from Universiti Teknologi MARA, Malaysia; and a PhD in hospitality and tourism from Oklahoma State University, United States.

E.N. Anderson is professor emeritus of the Department of Anthropology, University of California, Riverside.

Laura P. Appell-Warren holds a doctorate in psychological anthropology from Harvard University. Her primary focus of research has been the study of

personhood; however, she has also studied the effects of social change on children's play. She has done research among the Bulusu' of East Kalimantan, Indonesia, and among the Rungus Momogon, a Dusunic-speaking peoples, of Sabah, Malaysia. In addition, she has traveled widely throughout Arctic Canada. She is the editor of *The Iban Diaries of Monica Freeman 1949–1951: Including Ethnographic Drawings, Sketches, Paintings, Photographs and Letters* and is author of the forthcoming volume entitled *Personhood: An Examination of the History and Use of an Anthropological Concept*. In addition to her current research on cradleboard use among Native North Americans, she is a teacher of anthropology at St. Mark's School in Southborough, Massachusetts.

Heather Arndt-Anderson is a Portland, Oregon, native who draws culinary inspiration from many world cuisines but prefers cooking from her own backyard. She is a part-time natural resources consultant and a full-time radical homemaker; in her (rare) spare time she writes the food blog *Voodoo & Sauce*.

Michael Ashkenazi is a scholar, writer, and consultant who has been researching and writing about Japanese food since 1990. In addition to books and articles on Japanese society, including its food culture, he has written numerous scholarly and professional articles and papers on various subjects including theoretical and methodological issues in anthropology, organized violence, space exploration, migration, religion and ritual, resettling ex-combatants, and small arms. He has taught at higher-education institutions in Japan, Canada, Israel, and the United Kingdom, directing graduate and undergraduate students. He is currently senior researcher and project leader at the Bonn International Center for Conversion in Germany, with responsibility for the areas of small arms and reintegration of ex-combatants. He has conducted field research in East and Southeast Asia, East and West Africa, the Middle East, and Latin America.

Babette Audant went to Prague after college, where she quickly gave up teaching English in order to cook at a classical French restaurant. After graduating from the Culinary Institute of America, she worked as a chef in New York City for eight years, working at Rainbow Room, Beacon Bar & Grill, and other top-rated restaurants. She is a lecturer at City University of New York Kingsborough's Department of Tourism and Hospitality, and a doctoral candidate in geography at the City University of New York Graduate Center. Her research focuses on public markets and food policy in New York City.

Gabriela Villagran Backman, MA (English and Hispanic literature), was born in Sweden and raised in Mexico and the United States; she currently lives in Stockholm, Sweden. She is an independent researcher, interested in food studies, cultural heritage, writing cookbooks, red wine, and the Internet.

Carolyn Bánfalvi is a writer based in Budapest. She is the author of *Food Wine Budapest* (Little Bookroom) and *The Food and Wine Lover's Guide to Hungary: With Budapest Restaurants and Trips to the Wine Country* (Park Kiado). She contributes to numerous international food and travel publications and leads food and wine tours through Taste Hungary, her culinary tour company.

Peter Barrett is a painter who writes a food blog and is also the Food & Drink writer for *Chronogram Magazine* in New York's Hudson Valley.

Cynthia D. Bertelsen is an independent culinary scholar, nutritionist, freelance food writer, and food columnist. She lived in Haiti for three years and worked on a food-consumption study for a farming-systems project in Jacmel, Haiti. She writes a food history blog, *Gherkins & Tomatoes*, found at <http://gherkinstomatoes.com>.

Megan K. Blake is a senior lecturer in geography at the University of Sheffield. She has published research that examines the intersections between place and social practices. While her previous work focused on entrepreneurship and innovation, her recent work has examined food practices and family life.

Janet Boileau is a culinary historian who holds a master of arts degree in gastronomy from Le Cordon Bleu Paris and a doctorate in history from the University of Adelaide.

Andrea Broomfield is associate professor of English at Johnson County Community College in Overland Park, Kansas, and author of *Food and Cooking in Victorian England: A History*.

Cynthia Clampitt is a culinary historian, world traveler, and award-winning author. In 2010, she was elected to the Society of Women Geographers.

Neil L. Coletta is assistant director of food, wine, and the arts and lecturer in the MLA in gastronomy program at Boston University. His current research includes food and aesthetics and experimental pedagogy in the field of food studies.

Paul Crask is a travel writer and the author of two travel guides: *Dominica* (2008) and *Grenada, Carriacou and Petite Martinique* (2009).

Christine Crawford-Oppheimer is the information services librarian and archivist at the Culinary Institute of America. She grew up in Ras Tanura, Saudi Arabia.

Anita Verna Crofts is on the faculty at the University of Washington's Department of Communication, where she serves as an associate director of the master of communication in digital media program. In addition, she holds an appointment at the University of Washington's Department of Global Health, where she collaborates with partner institutions in Sudan, Namibia, and India on trainings that address leadership, management, and policy development, with her contributions targeted at the concept of storytelling as a leadership and evidence tool. Anita is an intrepid chowhound and publishes on gastroethnographic topics related to the intersection of food and identity. She hosts the blog *Sneeze!* at her Web site www.pepperforthebeast.com.

Liza Debevec is a research fellow at the Scientific Research Centre of the Slovene Academy of sciences and arts in Ljubljana, Slovenia. She has a PhD in social anthropology from the University of St. Andrews, United Kingdom. Her research

interests are West Africa and Burkina Faso, food studies, Islam, gender, identity, and practice of everyday life.

Jonathan Deutsch is associate professor of culinary arts at Kingsborough Community College, City University of New York, and Public Health, City University of New York Graduate Center. He is the author or editor of five books including, with Sarah Billingsley, *Culinary Improvisation* (Pearson, 2010) and, with Annie Hauck-Lawson, *Gastropolis: Food and New York City* (Columbia University Press, 2009).

Deborah Duchon is a nutritional anthropologist in Atlanta, Georgia.

Nathalie Dupree is the author of 10 cookbooks, many of which are about the American South, for which she has won two James Beard Awards. She has hosted over 300 television shows on the Public Broadcasting Service, The Food Network, and TLC. She lives with her husband, Jack Bass, who has authored 9 books about the American South and helped with her contribution to *Food Cultures of the World*.

Pamela Elder has worked in food public relations and online culinary education and is a freelance writer in the San Francisco Bay area.

Rachel Finn is a freelance writer whose work has appeared in various print and online publications. She is the founder and director of Roots Cuisine, a non-profit organization dedicated to promoting the foodways of the African diaspora around the globe.

Richard Foss has been a food writer and culinary historian since 1986, when he started as a restaurant critic for the *Los Angeles Reader*. His book on the history of rum is slated for publication in 2011, to be followed by a book on the history of beachside dining in Los Angeles. He is also a science fiction and fantasy author, an instructor in culinary history and Elizabethan theater at the University of California, Los Angeles, Extension, and is on the board of the Culinary Historians of Southern California.

Nancy G. Freeman is a food writer and art historian living in Berkeley, California, with a passion for food history. She has written about cuisines ranging from Ethiopia to the Philippines to the American South.

Ramin Ganeshram is a veteran journalist and professional chef trained at the Institute of Culinary Education in New York City, where she has also worked as a recreational chef instructor. Ganeshram also holds a master's degree in journalism from Columbia University. For eight years she worked as a feature writer/stringer for the *New York Times* regional sections, and she spent another eight years as a food columnist and feature writer for *Newsday*. She is the author of *Sweet Hands: Island Cooking from Trinidad and Tobago* (Hippocrene NY, 2006; 2nd expanded edition, 2010) and *Stir It Up* (Scholastic, 2011). In addition to contributing to a variety of food publications including *Saveur*, *Gourmet*, *Bon Appetit*, and *epicurious.com*, Ganeshram has written articles on food, culture, and travel for *Islands* (as contributing editor), *National Geographic Traveler*,

Forbes Traveler, *Forbes Four Seasons*, and many others. Currently, Ganeshram teaches food writing for New York University's School of Continuing Professional Studies.

Hanna Garth is a doctoral candidate in the Department of Anthropology at the University of California, Los Angeles. She is currently working on a dissertation on household food practices in Santiago de Cuba. Previously, she has conducted research on food culture, health, and nutrition in Cuba, Chile, and the Philippines.

Mary Gee is a medical sociology doctoral student at the University of California, San Francisco. Her current research interests include herbalism and Asian and Asian American foodways, especially with regards to multigenerational differences. Since 1995, she has actively worked with local and national eating disorders research and policy and advocacy organizations as well as for a program evaluation research consulting firm.

Che Ann Abdul Ghani holds a bachelor's degree in English and a master's degree in linguistics. She has a keen interest in studying language and language use in gastronomy. She is currently attached to the English Department at Universiti Putra Malaysia. Her research interests range from the use of language in context (pragmatics) to language use in multidisciplinary areas, namely, disciplines related to the social sciences. She also carries out work in translation and editing.

Maja Godina-Golija is research adviser at the Institute of Slovenian Ethnology, Scientific Research Centre of Slovenian Academy of Science and Arts, Ljubljana, Slovenia.

Annie Goldberg is a graduate student studying gastronomy at Boston University.

Darra Goldstein is Frances Christopher Oakley Third Century Professor of Russian at Williams College and the founding editor-in-chief of *Gastronomica: The Journal of Food and Culture*.

Keiko Goto, PhD, is associate professor at the Department of Nutrition and Food Sciences, California State University, Chico. Dr. Goto has more than 15 years of work experience in the field of nutrition and has worked as a practitioner and researcher in various developing countries. Dr. Goto's current research areas include food and culture, child and adolescent nutrition, sustainable food systems, and international nutrition.

Carla Guerrón Montero is a cultural and applied anthropologist trained in Latin America and the United States. She is currently associate professor of anthropology in the Department of Anthropology at the University of Delaware. Dr. Guerrón Montero's areas of expertise include gender, ethnicity, and identity; processes of globalization/nationalism, and particularly tourism; and social justice and human rights.

Mary Gunderson calls her practice paleocuisineology, where food and cooking bring cultures alive. Through many media, including the sites HistoryCooks.com

and MaryGunderson.com, she writes and speaks about South and North American food history and contemporary creative living and wellness. She wrote and published the award-winning book *The Food Journal of Lewis and Clark: Recipes for an Expedition* (History Cooks, 2003) and has authored six food-history books for kids.

Liora Gvion is a senior lecturer at the Kibbutzim College of Education and also teaches at the Faculty of Agriculture, Food and Environment at the Institute of Biochemistry, Food Science and Nutrition Hebrew University of Jerusalem.

Cherie Y. Hamilton is a cookbook author and specialist on the food cultures and cuisines of the Portuguese-speaking countries in Europe, South America, Africa, and Asia.

Jessica B. Harris teaches English at Queens College/City University of New York and is director of the Institute for the Study of Culinary Cultures at Dillard University.

Melanie Haupt is a doctoral candidate in English at the University of Texas at Austin. Her dissertation, “Starting from Scratch: Reading Women’s Cooking Communities,” explores women’s use of cookbooks and recipes in the formation and reification of real and virtual communities.

Ursula Heinzelmann is an independent scholar and culinary historian, twice awarded the prestigious Sophie Coe Prize. A trained chef, sommelier, and ex-restaurateur, she now works as a freelance wine and food writer and journalist based in Berlin, Germany.

Jennifer Hostetter is an independent food consultant specializing in writing, research, and editing. She has degrees in history and culinary arts and holds a master’s degree in food culture and communications from the University of Gastronomic Sciences in Italy. She also served as editorial assistant for this encyclopedia.

Kelila Jaffe is a doctoral candidate in the Food Studies Program at New York University. Originally from Sonoma, California, and the daughter of a professional chef, she has pursued anthropological and archaeological foodways research since her entry into academia. She received a BA with distinction in anthropology from the University of Pennsylvania, before attending the University of Auckland, where she earned an MA with honors in anthropology, concentrating in archaeology. Her research interests include past foodways, domestication, and zooarchaeology, and she has conducted fieldwork in Fiji, New Zealand, and Hawaii.

Zilkia Janer is associate professor of global studies at Hofstra University in New York. She is the author of *Puerto Rican Nation-Building Literature: Impossible Romance* (2005) and *Latino Food Culture* (2008).

Brelyn Johnson is a graduate of the master’s program in food studies at New York University.

Kate Johnston is currently based in Italy, where she is an independent cultural food researcher and writer and a daily ethnographer of people’s food habits. She

has a degree in anthropology from Macquarie University in Sydney, Australia, and a recent master's degree in food culture and communication from the University of Gastronomic Sciences, Italy. She was also editorial assistant for this encyclopedia.

Desiree Koh was born and raised in Singapore. A writer focusing on travel, hospitality, sports, fitness, business, and, of course, food, Koh's explorations across the globe always begin at the market, as she believes that the sight, scent, and savoring of native produce and cuisine are the key to the city's heart. The first and only female in Major League Eating's Asia debut, Koh retired from competition to better focus on each nibble and sip of fine, hopefully slow food.

Bruce Kraig is emeritus professor of history at Roosevelt University in Chicago and adjunct faculty at the Culinary School of Kendall College, Chicago. He has published and edited widely in the field of American and world food history. Kraig is also the founding president of the Culinary Historians of Chicago and the Greater Midwest Foodways Alliance.

R. J. Krajewski is the research services librarian at Simmons College, where among other things he facilitates discovery of food-culture research, especially through the lens of race, class, and gender. His own engagement with food is seasonally and locally rooted, starting in his own small, urban homestead, much like his Polish and German ancestors.

Erin Laverty is a freelance food writer and researcher based in Brooklyn, New York. She holds a master's degree in food studies from New York University.

Robert A. Leonard has a PhD in theoretical linguistics from Columbia. He studies the way people create and communicate meaning, including through food. He was born in Brooklyn and trained as a cook and *panaderia-reposteria* manager in the Caribbean; his doctoral studies led him to eight years of fieldwork in language, culture, and food in Africa and Southeast Asia. In the arts, as an undergraduate he cofounded and led the rock group Sha Na Na and with them opened for their friend Jimi Hendrix at the Woodstock Festival. Leonard is probably one of a very few people who have worked with both the Grateful Dead and the Federal Bureau of Investigation, which in recent years recruited him to teach the emerging science of forensic linguistics at Quantico.

Jane Levi is an independent consultant and writer based in London, England. She is currently working on her PhD at the London Consortium, examining food in utopias, funded by her work on post-trade financial policy in the City of London.

Yrsa Lindqvist is a European ethnologist working as the leading archivist at the Folk Culture Archive in Helsinki. Her research about food and eating habits in the late 1990s, combined with earlier collections at the archive, resulted in 2009 in the publication *Mat, Måltid, Minne. Hundraår av finlandssvensk matkultur*. The book analyzes the changes in housekeeping and attitudes toward food. She has also contributed to other publications focusing on identity questions and has worked as a junior researcher at the Academy of Finland.

William G. Lockwood is professor emeritus of cultural anthropology at the University of Michigan. His central interest is ethnicity and interethnic relations. He has conducted long-term field research in Bosnia-Herzegovina and the Croatian community in Austria and also among Roma and with a variety of ethnic groups in America, including Arabs, Finns, and Bosnians. He has long held a special interest in how food functions in ethnic group maintenance and in reflecting intra- and intergroup relations.

Yvonne R. Lockwood is curator emeritus of folklife at the Michigan State University Museum. Her formal training is in folklore, history, and Slavic languages and literatures. Research in Bosnia, Austria, and the United States, especially the Great Lakes region, has resulted in numerous publications, exhibitions, festival presentations, and workshops focused on her primary interests of foodways and ethnic traditions.

Janet Long-Solís, an anthropologist and archaeologist, is a research associate at the Institute of Historical Research at the National University of Mexico. She has published several books and articles on the chili pepper, the history of Mexican food, and the exchange of food products between Europe and the Americas in the 16th century.

Kristina Lupp has a background in professional cooking and has worked in Toronto and Florence. She is currently pursuing a master of arts in gastronomy at the University of Adelaide.

Máirtín Mac Con Iomaire is a lecturer in culinary arts in the Dublin Institute of Technology. Máirtín is well known as a chef, culinary historian, food writer, broadcaster, and ballad singer. He lives in Dublin with his wife and two daughters. He was the first Irish chef to be awarded a PhD, for his oral history of Dublin restaurants.

Glenn R. Mack is a food historian with extensive culinary training in Uzbekistan, Russia, Italy, and the United States. He cofounded the Culinary Academy of Austin and the Historic Foodways Group of Austin and currently serves as president of Le Cordon Bleu College of Culinary Arts Atlanta.

Andrea MacRae is a lecturer in the Le Cordon Bleu Graduate Program in Gastronomy at the University of Adelaide, Australia.

Giorgos Maltezakís earned his PhD in anthropology with research in cooperation with the Institute Studiorium Humanitatis of the Ljubljana Graduate School of the Humanities. His dissertation was on consumerism, the global market, and food, which was an ethnographic approach to the perception of food in Greece and Slovenia.

Bertie Mandelblatt is assistant professor at the University of Toronto, cross-appointed to the departments of Historical Studies and Geography. Her research concerns the early-modern French Atlantic, with a focus on commodity exchanges at the local and global scales: Her two current projects are the history

of food provisioning in the Franco-Caribbean and the transatlantic circulation of French rum and molasses, both in the 17th and 18th centuries.

Marty Martindale is a freelance writer living in Largo, Florida.

Laura Mason is a writer and food historian with a special interest in local, regional, and traditional foods in the United Kingdom and elsewhere. Her career has explored many dimensions of food and food production, including cooking for a living, unraveling the history of sugar confectionery, and trying to work out how many traditional and typically British foods relate to culture and landscape. Her publications include *Taste of Britain* (with Catherine Brown; HarperCollins, 2006), *The Food Culture of Great Britain* (Greenwood, 2004), and *The National Trust Farmhouse Cookbook* (National Trust, 2009).

Anton Masterovoy is a PhD candidate at the Graduate Center, City University of New York. He is working on his dissertation, titled “Eating Soviet: Food and Culture in USSR, 1917–1991.”

Anne Engammare McBride, a Swiss native, food writer, and editor, is the director of the Experimental Cuisine Collective and a food studies PhD candidate at New York University. Her most recent book is *Culinary Careers: How to Get Your Dream Job in Food*, coauthored with Rick Smilow.

Michael R. McDonald is associate professor of anthropology at Florida Gulf Coast University. He is the author of *Food Culture in Central America*.

Naomi M. McPherson is associate professor of cultural anthropology and graduate program coordinator at the University of British Columbia, Okanagan Campus. Since 1981, she has accumulated over three years of field research with the Bariai of West New Britain, Papua New Guinea.

Katrina Meynink is an Australia-based freelance food writer and researcher. She has a master’s degree in gastronomy through Le Cordon Bleu and the University of Adelaide under a scholarship from the James Beard Foundation. She is currently completing her first cookbook.

Barbara J. Michael is a sociocultural anthropologist whose research focuses on social organization, economics, decision making, and gender. Her geographic focus is on the Middle East and East Africa, where she has done research with the pastoral nomadic Hawazma Baggara and on traditional medicine in Yemen and is working on a video about men’s cafes as a social institution. She teaches anthropology at the University of North Carolina Wilmington and has also worked as a consultant for several United Nations agencies.

Diana Mincyte is a fellow at the Rachel Carson Center at the Ludwig Maximilian University-Munich and visiting assistant professor in the Department of Advertising at the University of Illinois, Urbana-Champaign. Mincyte examines topics at the interface of food, the environment, risk society, and global inequalities. Her book investigates raw-milk politics in the European Union to consider the production risk society and its institutions in post-Socialist states.

Rebecca Moore is a doctoral student studying the history of biotechnology at the University of Toronto in Ontario, Canada.

Nawal Nasrallah, a native of Iraq, was a professor of English and comparative literature at the universities of Baghdad and Mosul until 1990. As an independent scholar, she wrote the award-winning *Delights from the Garden of Eden: A Cookbook and a History of the Iraqi Cuisine* and *Annals of the Caliphs' Kitchens* (an English translation of Ibn Sayyar al-Warraq's 10th-century Baghdadi cookbook).

Henry Notaker graduated from the University of Oslo with a degree in literature and worked for many years as a foreign correspondent and host of arts and letters shows on Norwegian national television. He has written several books about food history, and with *Food Culture in Scandinavia* he won the Gourmand World Cookbook Award for best culinary history in 2009. His last book is a bibliography of early-modern culinary literature, *Printed Cookbooks in Europe 1470–1700*. He is a member of the editorial board of the journal *Food and History*.

Kelly O'Leary is a graduate student at Boston University in gastronomy and food studies and executive chef at the Bayridge University Residence and Cultural Center.

Fabio Parasecoli is associate professor and coordinator of food studies at the New School in New York City. He is author of *Food Culture in Italy* (2004) and *Bite Me: Food and Popular Culture* (2008).

Susan Ji-Young Park is the program director and head of curriculum development at École de Cuisine Pasadena (www.ecolecuisine.com); project leader for Green Algeria, a national environmental initiative; and a writer for LA WEEKLY'S Squid Ink. She has written curriculum for cooking classes at Los Angeles Unified School District, Sur La Table, Whole Foods Market, Central Market, and Le Cordon Bleu North America. She and her husband, Chef Farid Zadi, have co-written recipes for *Gourmet Magazine* and the *Los Angeles Times*. The couple are currently writing several cookbooks on North African, French, and Korean cuisines.

Rosemary Parkinson is author of *Culinaria: The Caribbean*, *Nyam Jamaica*, and *Barbados Bu'n-Bu'n*, and she contributes culinary travel stories to Caribbean magazines.

Charles Perry majored in Middle East languages at Princeton University, the University of California, Berkeley, and the Middle East Centre for Arab Studies, Shmolan, Lebanon. From 1968 to 1976 he was a copy editor and staff writer at *Rolling Stone* magazine in San Francisco, before leaving to work as a freelance writer specializing in food. From 1990 to 2008, he was a staff writer in the food section of the *Los Angeles Times*. He has published widely on the history of Middle Eastern food and was a major contributor to the *Oxford Companion to Food* (1999).

Irina Petrosian is a native of Armenia and a professional journalist who has written for Russian, Armenian, and U.S.-based newspapers. She is the coauthor of

Armenian Food: Fact, Fiction, and Folklore and holds degrees in journalism from Moscow State University and Indiana University.

Suzanne Piscopo is a nutrition, family, and consumer studies lecturer at the University of Malta in Malta. She is mainly involved in the training of home economics and primary-level teachers, as well as in nutrition and consumer-education projects in different settings. Suzanne is a registered public health nutritionist, and her research interests focus on socioecological determinants of food intake, nutrition interventions, and health promotion. She has also written a series of short stories for children about food. Suzanne enjoys teaching and learning about the history and culture of food and is known to creatively experiment with the ingredients at hand when cooking the evening meal together with her husband, Michael.

Theresa Preston-Werner is an advanced graduate student in anthropology at Northwestern University.

Meg Ragland is a culinary history researcher and librarian. She lives in Boston, Massachusetts.

Carol Selva Rajah is an award-winning chef and food writer currently based in Sydney, Australia. She has written 10 cookbooks on Malaysian and Southeast Asian cuisine. Her book *The Food of India* won the gold award for the Best Hardcover Recipe Book at the prestigious Jacob's Creek World Food Media Awards.

Birgit Ricquier is pursuing a PhD in linguistics at the Université Libre de Bruxelles and the Royal Museum for Central Africa, Tervuren, Belgium, with a fellowship from the Fonds de la Recherche Scientifique (FNRS). The topic of her PhD project is "A Comparative Linguistic Approach to the History of Culinary Practice in Bantu-Speaking Africa." She has spent several months in central Africa, including one month in the Democratic Republic of the Congo as a member of the Boyekoli Ebale Congo 2010 Expedition and two months of research focused on food cultures in Congo.

Amy Riolo is an award-winning author, lecturer, cooking instructor, and consultant. She is the author of *Arabian Delights: Recipes and Princely Entertaining Ideas from the Arabian Peninsula*, *Nile Style: Egyptian Cuisine and Culture*, and *The Mediterranean Diabetes Cookbook*. Amy has lived, worked, and traveled extensively through Egypt and enjoys fusing cuisine, culture, and history into all aspects of her work. Please see www.amyriolo.com, www.baltimoreegypt.org, and diningwithdiplomats.blogspot.com for more information and further reading.

Owen Roberts is a journalist, communications instructor, and director of research communications for the University of Guelph in Guelph, Ontario, Canada. He holds a doctorate of education from Texas Tech University and Texas A&M University.

Fiona Ross is a gastrodetective whose headquarters is the Bodleian Library in Oxford, United Kingdom. She spends her time there investigating the eating foibles of the famous and infamous. Her cookery book *Dining with Destiny* is the

result: When you want to know what Lenin lunched on or what JFK ate by the poolside, *Dining with Destiny* has the answer.

Signe Rousseau (née Hansen) is Danish by birth but a long-term resident of southern Africa and is a researcher and part-time lecturer at the University of Cape Town. Following an MA in the Department of English and a PhD (on food media and celebrity chefs) in the Centre for Film and Media Studies, she now teaches critical literacy and professional communication in the School of Management Studies (Faculty of Commerce).

Kathleen Ryan is a consulting scholar in the African Section of the University of Pennsylvania Museum of Archaeology and Anthropology, Philadelphia. She has carried out research in Kenya since 1990, when she began a study of Maasai cattle herders in Kajiado District.

Helen Saberi was Alan Davidson's principal assistant in the completion of the *Oxford Companion to Food*. She is the author of *Noshe Djan: Afghan Food and Cookery*; coauthor of *Trifle* with Alan Davidson; and coauthor of *The Road to Vindaloo* with David Burnett; her latest book is *Tea: A Global History*.

Cari Sánchez holds a master of arts in gastronomy from the University of Adelaide/Le Cordon Bleu in South Australia. Her dissertation explores the global spread of the Argentine *asado*. She currently lives in Jacksonville, Florida, where she writes the food and travel blog *viCARIOUS* and is the marketing manager for a craft brewery.

Peter Scholliers teaches history at the Vrije Universiteit Brussel and is currently head of the research group "Social and Cultural Food Studies" (FOST). He studies the history of food in Europe in the 19th and 20th centuries. He co-edits the journal *Food and History* and is involved in various ways in the Institut Européen d'Histoire et des Cultures de l'Alimentation (Tours, France). Recently, he published *Food Culture in Belgium* (Greenwood, 2008). More information can be found at http://www.vub.ac.be/FOST/fost_in_english/.

Colleen Taylor Sen is the author of *Food Culture in India; Curry: A Global History; Pakoras, Paneer, Pappadums: A Guide to Indian Restaurant Menus*, and many articles on the food of the Indian Subcontinent. She is a regular participant in the Oxford Food Symposium.

Roger Serunyigo was born and lives in Kampala, Uganda. He graduated from Makerere University with a degree in urban and regional planning, has worked in telecommunications, and is now a professional basketball player for the Uganda National Team. He also coaches a women's basketball team (The Magic Stormers).

Dorette Snover is a chef and author. Influenced by French heritage and the food traditions of the Pennsylvania Dutch country, Chef Snover teaches exploration of the world via a culinary map at her school, C'est si Bon! in Chapel Hill. While the stock simmers, she is writing a novel about a French bread apprentice.

Celia Sorhaindo is a freelance photographer and writer. She was the editor of the 2008 and 2009 *Dominica Food and Drink Guide* magazine and content manager for the Dominica section of the magazine *Caribbean Homes & Lifestyle*.

Lyra Spang is a PhD candidate in the Department of Anthropology and the Food Studies Program at Indiana University. She has written about food, sex, and symbolism; the role of place in defining organic; and the importance of social relationships in small-scale food business in Belize. She grew up on a farm in southern Belize and is a proud promoter of that country's unique and diverse culinary heritage.

Lois Stanford is an agricultural anthropologist in the Department of Anthropology at New Mexico State University. In her research, she has examined the globalization of food systems both in Mexico and in the U.S. Southwest. Her current research focuses on the critical role of food heritage and plant conservation in constructing and maintaining traditional foodways and cultural identity in New Mexico. In collaboration with local food groups, she is currently developing a community food assessment project in the Mesilla Valley in southern New Mexico.

Aliza Stark is a senior faculty member at the Agriculture, Food, and Environment Institute of Biochemistry, Food Science, and Nutrition at the Hebrew University of Jerusalem.

Maria “Ging” Gutierrez Steinberg is a marketing manager for a New York City–based specialty food company and a food writer. She has a master's degree in food studies from New York University and is a graduate of Le Cordon Bleu. Her articles have appeared in various publications in Asia and the United States.

Anita Stewart is a cookbook author and Canadian culinary activist from Elora, Ontario, Canada.

Emily Stone has written about Guatemalan cuisine in the *Radcliffe Culinary Times*, and she is at work on a nonfiction book about chocolate in Central America. She currently teaches journalism and creative writing at Sun Yat-sen University in Guangzhou, China.

Asele Surina is a Russian native and former journalist who now works as a translator and interpreter. Since 1999 she has worked at the Institute of Classical Archaeology at the University of Texas on joint projects with an archaeological museum in Crimea, Ukraine.

Aylin Öney Tan is an architect by training and studied conservation of historic structures in Turkey, Italy, and the United Kingdom. Eventually, her passion for food and travel led her to write on food. Since 2003, she has had a weekly food column in *Cumhuriyet*, a prestigious national daily, and contributes to various food magazines. She was a jury member of the Slow Food Award 2000–2003, with her nominees receiving awards. She contributes to the Terra Madre and Presidia projects as the leader of the Ankara Convivium. She won the Sophie Coe Award on food history in 2008 for her article “Poppy: Potent yet Frail,” presented

previously at the Oxford Symposium on Food and Cookery where she's become a regular presenter. Currently, she is the curator of the Culinary Culture Section of Princess Islands' City Museum. She is happy to unite her expertise in archaeology and art history from her previous career with her unbounded interest in food culture.

Nicole Tarulevicz teaches at the School of Asian Languages and Studies at the University of Tasmania.

Karen Lau Taylor is a freelance food writer and consultant whose food curriculum vitae includes a master's degree in food studies from New York University, an advanced certificate from the Wine and Spirits Education Trust, and a gig as pastry cook at a five-star hotel after completing L'Academie de Cuisine's pastry arts program. She is working toward a master's degree in public health while she continues to write, teach, test recipes, eat, and drink from her home in Alexandria, Virginia.

Thy Tran is trained as a professional chef. She established Wandering Spoon to provide cooking classes, culinary consultation, and educational programming for culinary academies and nonprofit organizations throughout Northern California. Currently, she is a chef instructor at the International Culinary Schools at the Art Institute of California–San Francisco and Tante Marie's. She is also the founder and director of the Asian Culinary Forum. She co-authored *The Essentials of Asian Cooking*, *Taste of the World*, and the award-winning guide, *Kitchen Companion*.

Leena Trivedi-Grenier is a Bay-area food writer, cooking teacher, and social media consultant. Her writings have appeared in *The Business of Food: Encyclopedia of the Food and Drink Industry*, *Culinary Trends* magazine, and the *Cultural Arts Resources for Teachers and Students* newsletter and will be featured in several upcoming titles by Greenwood Press. She also runs a food/travel/gastronomy blog called *Leena Eats This Blog* (www.leenaeats.com).

Karin Vaneker graduated from the AKI Academy of Visual Arts in Enschede, the Netherlands. She later attended Sint-Lukas Hoger Instituut voor Schone Kunsten in Brussels, Belgium. She has written for numerous Dutch newspapers and magazines, specializing in trends and the cultural and other histories of ingredients and cuisines, and has published several books. Furthermore, Vaneker has worked for museums and curated an exhibition about New World taro (*L. Xanthosoma* spp.). At present she is researching its potential in domestic cuisines and gastronomy.

Penny Van Esterik is professor of anthropology at York University, Toronto, where she teaches nutritional anthropology, advocacy anthropology, and feminist theory. She does fieldwork in Southeast Asia and has developed materials on breast-feeding and women's work and infant and young child feeding.

Richard Wilk is professor of anthropology and gender studies at Indiana University, where he directs the Food Studies Program. With a PhD in anthropology from the University of Arizona, he has taught at the University of California,

Berkeley; University of California, Santa Cruz; New Mexico State University; and University College London and has held fellowships at Gothenburg University and the University of London. His publications include more than 125 papers and book chapters, a textbook in economic anthropology, and several edited volumes. His most recent books are *Home Cooking in the Global Village* (Berg Publishers), *Off the Edge: Experiments in Cultural Analysis* (with Orvar Lofgren; Museum Tusculanum Press), *Fast Food/Slow Food* (Altamira Press), and *Time, Consumption, and Everyday Life* (with Elizabeth Shove and Frank Trentmann; Berg Publishers).

Chelsie Yount is a PhD student of anthropology at Northwestern University in Evanston, Illinois. She lived in Senegal in 2005 and again in 2008, when performing ethnographic research for her master's thesis at the École des Hautes Études en Sciences Sociales in Paris, on the topic of Senegalese food and eating habits.

Marcia Zoladz is a cook, food writer, and food-history researcher with her own Web site, *Cozinha da Marcia* (Marcia's Kitchen; www.cozinhadamarcia.com.br). She is a regular participant and contributor at the Oxford Symposium on Food and History and has published three books in Brazil, Germany, and Holland—*Cozinha Portuguesa* (Portuguese cooking), *Muito Prazer* (Easy recipes), and *Brigadeiros e Bolinhas* (Sweet and savory Brazilian finger foods).

Preface

This encyclopedia is the culmination of nearly a decade's work on the *Food Culture around the World* series. As that project expanded to 20 volumes, we realized that many peoples and places, fascinating and important in their own right, had not been covered. Considering that the cultural study of food has become more sophisticated and comprehensive over the past decade, that food has become a legitimate academic topic in curricula at every level of education, and that we seem to become more obsessed with food every day, we recognized that we simply could not leave out much of the planet. The only way to satisfy this growing demand is the set you see before you, which includes material covered in the series plus new articles that span the globe. We have gathered food scholars from around the world—people whose passion and expertise have given them deep insight into the ingredients, cooking methods, and ways of eating and thinking about food in their respective countries.

A number of questions regarding breadth and depth naturally arose in planning this work, particularly about the level of analysis for each article. Could we do justice to the vast array of distinct cuisines on earth? Could we include regional coverage for well-recognized food cultures? That is, rather than the nation-state as the criterion for inclusion, why not add Alsace, Provence, and Burgundy with France, or Sichuan, Hunan, and Canton with China? It became apparent that we would need another 20 volumes or risk very brisk, superficial coverage and that as arbitrary as the construction of nation-states has been historically, in particular the way minority cultures have tended to be obscured, the best way to organize this encyclopedia was by nation. Regional variations and minority groups can, of course, be discussed within the framework of nation-based articles. On the other hand, some groups frankly demanded separate entries—those who stood out as unique and distinct from the majority culture in which they happen politically to be included, or in some cases those people who either transcend national boundaries or even those very small places, whose great diversity demanded separate coverage as truly different from the culture around them. Thus we include the Basques separate from Spain and France, and the Hmong. We have not, however, included every single people merely on the basis of national status. This should not be taken to suggest that these cultures are unimportant but merely that many places share a common culture with those around them, though divided by national borders. In such cases we have provided cross-references. This seemed a preferable solution to suffering repetitiveness or unmanageable size.

The format for each entry also raised many questions. “Eating Out,” for example, is simply not relevant in some places on earth. Would forcing each article into a common structure ultimately do injustice to the uniqueness of each culture? In the end it seemed that the ability to conduct cross-cultural analysis proved one of the most valuable assets of this set, so that one could easily compare what’s for lunch in Brazil or Brunei. Moreover, tracing the various global currents of influence has been made possible since a shared set of parameters places each article on a common footing. We can trace, for example, the culinary influence of various peoples as they spread around the world. In this respect this work is unique. There are several excellent food encyclopedias on the market, all of which cover individual ingredients, topical themes, cooking methods, and sometimes recipes. None, however, treats individual food cultures as discrete units of analysis, and for students hoping to find an in-depth but succinct description of places, or for those hoping to compare a single food topic across cultures, this is the only source to which they can turn. We anticipate that this work will be invaluable for students, scholars, food writers, as well as that indomitable horde popularly known as foodies.

The other major question in designing this encyclopedia was how to define what exactly constitutes a *food culture*. This term should be distinguished from *cuisine*, which refers only to the cooking, serving, and appreciation of food. Naturally we include this within each entry and in doing so have taken the broadest possible definition of the term *cuisine*. That is, if a people cooks and recognizes a common set of recipes and discusses them with a common vocabulary, then it should be deemed a cuisine. Thus there is no place on earth without a cuisine. A nation, continent, region, and even a small group may share a common cuisine. This encyclopedia, however, covers much more. It explores the social context of consumption, the shared values and symbolic meanings that inform food choices, and the rituals and daily routine—indeed everything that constitutes a food culture. Thus we include religion, health, mealtimes, and special occasions, as well as the way certain foods confer status or have meanings beyond simple sensory gratification. Nor have we neglected the gastronomic angle, as recipes are an essential expression of what people think is good to eat, and their popularity is the outcome of decisions made at every level of society, from the farmer who grows food, and the environment and material resources that make it possible, to the government policy that promotes certain ingredients, to the retailers who market them, to the technologies by which they are transformed, and to the individual preference of family members at the level of the household. To this end we have added food culture snapshots to each entry, which puts a human face on the broader topics under discussion.

As with the series that preceded this encyclopedia, our aim is to present the panoply of human experience through the lens of food in an effort to better understand and appreciate our differences. We will find remarkably common experiences among us, especially as the world increasingly falls under the sway of corporate multinational food industries, but we will also find deep, profound, and persistent distinctions, ones that should and must be preserved because they are essential to who we are and how we define ourselves. These are differences

that should not be effaced nor lost as our tastes become increasingly cosmopolitan. I hope that in reading these articles you find, like me, that the world is a marvelously diverse place and what people eat tells us about them in such an immediate and palpable way that in a certain sense you feel you know the people at some level. This, of course, is the first step toward understanding, appreciating, and living with each other peacefully on this small lump of turf we call earth.

Aboriginal Australians

Overview

The Commonwealth of Australia is an island country located between the Indian and South Pacific Oceans. It is comprised of the continental mainland, the island of Tasmania, and several smaller surrounding islands. Consisting of six states, Australia is the world's sixth-largest country, just slightly smaller than the continental United States. The continent was inhabited by Aboriginal settlers from Southeast Asia up to 60,000 years ago. The British took possession of the country in the late 18th century and turned it into a prison colony for their criminals, and Australia officially became a country in 1901.

The majority of the country's population is concentrated along the southeastern and eastern coasts. The central region is sparsely populated because of its dry, desert environment. As a whole, the country receives very little rainfall and struggles to manage its limited freshwater resources. The country boasts more than 21 million citizens, with indigenous Australians making up only 1 percent of the population, just over 500,000 people.

Indigenous Australians are defined as those whose ancestors lived on the continent and its neighboring islands before British colonists began to arrive in the 17th century. The Northern Territory has the highest proportion of Aboriginal Australians among its population, and the state of Victoria has the lowest. The percentage of Aboriginal Australians living in remote areas of Australia is just slightly lower than for Aboriginal Australians who dwell in or near urban settings.

Aboriginal Australians' diets vary by location. Generally, the closer a family lives to an urban

center, the more processed, Western-style foods they consume. The farther a family lives from a city, the more likely they are to supplement the processed, Western foods they consume with traditional foods and cooking methods.

Food Culture Snapshot

Jack and Ann Smith are Aboriginal Australians who live with their two children, Nicole and Jonah, and Jack's unemployed brother, Mark, in a modest neighborhood in Walkerville, South Australia, a suburb northeast of the city of Adelaide. A few years back, Jack and Ann moved their family closer to the city from the bush, or the desert region where the nomadic Aboriginal populations traditionally lived. In Walkerville, Jack works as a mechanic, and Ann has a job as a housekeeper. Still, they struggle to pay the bills and buy groceries every month because they make nearly 50 percent less than the average nonindigenous Australian family does. This lower-class lifestyle affects their diet, which incorporates many processed, fatty Western foods and very few traditional foods and cooking methods. However, processed foods are not new to the Aboriginal Australian diet; since the late 18th century, in the bush, nearly everyone has relied on government rations of processed food to survive as European settlement killed off more and more natural food sources. The only difference now is that there is a much larger selection to choose from.

For daily breakfasts, Ann makes sure to stock up on plenty of fresh fruit for a family favorite, fruit salad with cream and sugar, which Jack eats before heading to work at 6 A.M. She also stocks up on cream, as the rest

of the family loves it on top of cereal with fruit juice when they wake up at 7 A.M. for school. Mark, Jack's brother, typically gets the children ready for school so Ann can leave for work at 6:30 A.M. He spends the rest of his day doing chores around the house for the family to help contribute.

Most of the family eats lunch out during the day. Jack and Ann often buy meat pies from convenience stores during work around noon, and the children purchase chicken nuggets and toasted cheese sandwiches from their school cafeteria. The children also drink off-brand sodas with fruit flavors like passion fruit and mango or their favorite juice, Ribena, which is made from black currants. Mark is the only one who eats lunch at home, and he typically makes himself a *snag on the dag*, which is a pork sausage that is quickly grilled and served in a piece of white sandwich bread with barbecue sauce.

At dinnertime, Nicole and Jonah beg their mother to cook frozen French fries sprinkled with chicken salt, which is chicken-flavored salt. Ann gets out pre-formed frozen hamburger patties that she throws on the family grill and a bag of frozen mixed vegetables that she heats in the microwave. For a treat, especially on the weekends, Ann uses all-purpose flour and butter to make *quandong* crumble from the country's wild native peach.

Quandong Crumble

Filling

1 c dried quandongs, rehydrated in water overnight

1 c peeled, chopped apple

½ c water

¾ c sugar

1 tbsp fresh lemon juice

1 tbsp cornstarch or arrowroot

Crumble Topping

½ stick cold butter (2 oz), chopped into cubes

1 ⅓ c flour

¼ c rolled oats

3 tbsp sugar

½ tsp ground cinnamon

Preheat oven to 400°F. To make the crumble topping, put all of the crumble ingredients in a bowl and work them with your fingers until pea-sized bits of butter are integrated with the rest of the ingredients. Place quandong, apple, water, sugar, lemon juice, and cornstarch in a baking pan and toss to thoroughly combine. Sprinkle crumble on top of filling and bake for 45 minutes, or until filling is bubbling and thickened and crumble is browned.

Since leaving the bush three years ago, the Smith family has experienced many changes in their eating habits and cooking methods. While he was growing up in the outback, Jack's mother would grab one of the chooks (chickens) they raised in their backyard and slaughter it before dinner. When Jack brought home a live chook recently, both of his children cried for hours after the slaughter. The older Smiths miss the days when a few hours of hunting would yield a kangaroo; these days, money is the only currency that will buy them meat. A special meal used to mean freshly caught echidna (porcupine) cooked in a ground oven and johnnycakes (a campfire flatbread) shared with several other families, but today, a special monthly treat is an intimate meal with the immediate family at the local Mackas (McDonald's) for burgers, fries, and Happy Meals.

Major Foodstuffs

Aboriginal Australians have the oldest living culinary tradition in the world. They are believed to have entered northern Australia 40,000–60,000 years ago. From there, Aboriginal families and clans spread across the country, each adapting to wildly different climates and environments, from humid rain forests to achingly dry deserts, from sunny coastlines to snowy mountaintops. Due to such an assortment of climates and settings, it is difficult to generalize about early Aboriginal cuisine.

However, a few commonalities were shared by almost all Aboriginal clans before the Europeans settled in Australia in the year 1788. Early Aboriginal clans were hunter-gatherers who moved frequently based on food supplies. Their diet consisted of over 1,000 different plants and a variety of wild animals. It was largely vegetarian with the occasional infusion of meat and had a heavy focus on grains. Women and children gathered plants (nuts, tubers, seeds, and fruit), caught small animals, and fished, which accounted for a majority of the clan's diet. Men were responsible for hunting large and small animals, including kangaroos, emus, wild birds, bandicoots (mouse-sized marsupials), and turtles.

Variations existed based on region, with desert clans dining on *witchetty* grubs (moth larvae) and flying foxes (bats) and coastal clans serving shellfish, stingrays, and oysters. To catch their meals, they would use spears, sharpened animal bones, nets, or whatever they could fashion or use from their surroundings. Almost all Aboriginal communities made some form of flatbread on their campfires, commonly known as damper. To make most dampers, they would gather seeds, dry them, and then grind them when they needed flour. The result was much heartier than the wheat-flour damper of today and was also very nourishing.

After European settlement, foodstuffs available to Aboriginal Australians changed drastically, altering their basic diet. As land was cleared for more settlement, crops, and livestock, more wild Australian plant and animal foods were destroyed or displaced, affecting the availability of traditional Aboriginal food sources. To account for this gap in their natural diet, the government assisted Aboriginals with rations of processed, Western, high-fat foods, which still account for a majority of their food today. Traditional foods and cooking methods are still used but only by those families living remotely and only as a supplement to the high-calorie, low-nutrient processed food they regularly eat.

Cooking

Traditional Aboriginal Australian cooking was viewed by Europeans as simple, but it was very

time- and labor-intensive and required many skills from the clan cook. These abilities included adapting to different weather and environments, getting creative when tools or new cooking methods were needed, knowing which kind of wood works with which sort of food, and so on. Some plants and fruits were edible in their raw state, but several required cooking in hot ashes or soaking in water to improve digestibility or to leach out toxins in the food. For instance, *munja* seeds, or kernels from the cycad palm, were great for drying and grinding into flour, but fresh *munja* contains a poisonous acid. Aboriginals would cut the seed into thin slices with a sharpened kangaroo-bone blade and dry the pieces. When they needed flour, they would soak the pieces in water until the acid was released and then grind them into flour for bread making. This and other traditional cooking methods were passed down to their children through songs, along with an oral history of their culture.

Their cooking equipment and methods were quite rudimentary and yet sophisticated; they could steam and smoke food in an earth oven or char it in an ash oven, grill it over hot ashes, bake it in hot ashes (parching), or roast it on hot coals (mainly reserved for small animals and seafood). For example, to cook damper or other flatbreads, a cook would build a large fire, scrape aside the hot coals, set the dough in the center of the fire, and then top the dough with hot coals and ashes to bake.

To cook a kangaroo, they would build a ground oven by digging a shallow hole and starting a wood fire in it. Stones would be placed on top of the fire, and when the fire burned down and the stones were hot, soaked branches were placed on top. The branches would start steaming, and then the meat would be placed on top and covered with more hot stones, wet leaves, and paper bark to make an airtight seal until the meat was cooked. Cooking equipment had to be light, portable, and made from the land, like *coolamons* (vessels) made from bark or tree gnarls.

For the modern, remote-living Aboriginal family, some aspects of their modern cookery reflect traditional as well as Western cooking methods, like using the Western methods of boiling and frying over a traditional open fire. How remote a particular

Aboriginal community is will determine what sort of cooking equipment is available. Many remote areas have no running water or electricity. If a family is lucky enough to have a kerosene-run refrigerator, it breaks often, or funds are too short to run it all the time. A camp might have a small propane cooktop, but typically Aboriginals rely on cooking over an open campfire or use ready-made convenience foods that require little to no cooking, purchased from a station store or a monthly mail truck. After European settlement, certain cooking equipment was introduced into remote Aboriginal communities to make open-fire cooking easier, like shovels for handling fires and making damper and cast iron or steel camp ovens (a three-legged pot with a lid that acts as an oven when placed into hot coals).

Damper Bread

Ingredients

1 c self-rising flour

Dash of salt

1 tbsp sugar

½ tsp baking soda

½ tbsp butter

½ c milk

Mix the flour with the salt, sugar, and baking soda, then rub the butter into the flour until you get pea-sized bits. Stir in milk until the mix forms into a dough. Shape into small biscuits, and bake in a 400°F oven for 15 minutes, or until bread is fully browned.

Billy cans are pots used to boil water or brew tea over open fires, and nearly every family has a coveted billy can. Aboriginals supplement processed foods by hunting and gathering native foods whenever possible, and adapting native cooking to Western cooking equipment and methods. A common sight that blends the Western and Aboriginal worlds is a campfire pot boiling a leg of kangaroo with the paw curled over the edge of the pot.

Several organizations and individuals are striving to preserve Aboriginal Australian culinary heritage. Professional chef and Aboriginal Australian Mark Olive works in remote indigenous communities, organizing workshops to reclaim traditional Aboriginal cooking methods and educating kids about these traditions as well as nutrition. Modern, non-remote-living Aboriginal families use even fewer traditional cooking methods and recipes than their remote-living brothers. The most common cooking methods involve using a microwave, a stovetop or basic oven, and the occasional barbecue grill. Since these families have easier access to a wide range of processed food and tend to own a refrigerator or freezer, frozen or premade foods like fish sticks and sausage rolls are popular. This means that instead of cooking food, only reheating is needed. While this average family tends to have better living conditions than those living in more remote locations (electricity and running water are much more common), housing and cooking equipment tend to be modest and are often in need of repair.

If a traditional Aboriginal recipe is made, the main ingredients are almost always replaced with available Western ingredients, and Western cooking methods are used; it is often for celebration or reminiscence, rather than a daily or religious sustenance. For example, a traditional Aboriginal stew might contain kangaroo or emu meat and be cooked on an open fire, but today, they might use corned beef, a preserved meat that was served at the station camps because it required no refrigeration, and a stovetop. Many modern Aboriginal families still rely on corned beef for a large quantity of their meat supply, not because of poor refrigeration but rather because these are the traditions they remember.

Typical Meals

For remote-living Aboriginal Australians, breakfast starts with leftover food from the day before. During mid- to late afternoon, they eat dinner, which consists of vegetables, grains, and occasionally meat or fish depending on the community's location and is typically prepared at the main camp. Throughout the day, they also consume snacks au naturel, eaten

fresh while hunting and gathering, typically berries, nuts, insects, and plants.

Traditional Aboriginal eating habits are still factored into some modern, remote-living Aboriginal communities, which include taboos and eating order. Meat is a rare treat and carefully split up among the community based on rank. Men are favored, with the hunter giving away choice bits to his relatives, who might pass some down to the women. Offal, which is really prized, goes to the elders. The hunter may invoke a traditional law called “The Vow,” where he is allowed to lay claim to a choice piece of offal, and if anyone else in the tribe eats it, they will have broken the law. Other taboos include various foods that are forbidden to be eaten based on circumstances, particularly around menstruating women and girls, and boys around the age of initiation. For example, young boys about to undergo initiation are forbidden to eat wallaby (a small relative of the kangaroo) and two kinds of bandicoot because they have been known to turn black beards brown, an unfavorable color.

Urban-living Aboriginal Australians’ typical meals are most similar to a Western diet. Breakfast is often cereal with cream or whole milk, toast with Vegemite (a yeast-based spread), or a bigger fried English breakfast of sausage, tomatoes, mushrooms, fried eggs, and toast. Lunch can be fast food or something convenient and prepackaged, like meat pies and sausage rolls with tomato sauce that can be bought at gas stations and convenience stores.

Dinner is made up of cheap meats (pork, lamb, beef, and chicken are common), cooked simply—either grilled, fried (breaded meat cutlets is a popular dish), boiled, or baked—or it can consist of frozen, premade food like a frozen pizza or shepherd’s pie. A few times a month, a typical family treats themselves to a meal at a fast-food restaurant.

Eating Out

Regardless of where they live, many Aboriginal Australians are classified as lower class or impoverished, so the opportunity to dine out does not come often. For remote-living Aboriginals, restaurants are few and far between in the bush, so dining

out often involves picking up premade food from a local store.

For urban-dwelling Aboriginal Australians, there are certainly more opportunities to dine out, as proximity to an urban center typically means there are more restaurants, and fast-food restaurants are a popular choice. McDonald’s is widely popular across Australia, as are other U.S. fast-food companies like KFC, Subway, and Burger King. Even so, an outing to a fast-food restaurant is a special occasion, because families are often large and money is scarce.

Restaurants that serve traditional Aboriginal Australian food do not really exist in Australia, and if they do, they often go out of business because the general population does not dine on native Australian ingredients or traditional Aboriginal Australian cuisine. For example, professional Aboriginal chef Mark Olive opened an indigenous Australian restaurant called The Midden in Sydney in 1996, but the restaurant lasted for only 18 months as there was not enough interest in it. Plenty of non-Aboriginal Australian chefs are using native ingredients in their cuisine but not to create Aboriginal Australian food. A lamb meat pie flavored with native lemon verbena and wattleseed (an Australian acacia) would be a good example of how chefs are utilizing native ingredients within popular European dishes. The use of native foods in restaurants is currently a trend, and often these restaurants charge far beyond an average Aboriginal’s dining budget and the native population is not able to enjoy the food.

Special Occasions

Special occasions like cultural ceremonies traditionally drew together a large group of Aboriginals, so there was a great need to hold such occasions near an abundant source of food. This means many ceremonial foods were linked with seasonal abundance. For instance, spring and summer in the mountains in the states of Victoria and New South Wales yield large quantities of *bogong* moths, so ceremonies that take place during that time often occurred in the mountains so there would be a plentiful food

source for the group. The moths were simply roasted and eaten whole.

Although they do not perform ceremonies nearly as frequently as their ancestors did, modern remote-living Aboriginal Australians still perform ceremonies whenever possible and try to use traditional recipes and ingredients whenever possible. For example, for the Kunapi (Fertility Mother) ceremonies, a hearty damper is made from munja seeds; it can be stored for months before the ceremony to save time and energy. Urban Aboriginal Australians do participate in such ceremonies and foods but not nearly as often.

Diet and Health

The diet of the average Aboriginal Australian family has been modified drastically over the past 200 years; a brief history of this change is warranted to understand the modern Aboriginal Australian diet. Traditional Aboriginal Australian cuisine was based on the belief that people should live in harmony with their environment instead of damaging it, as well as a practice of seasonal eating. As hunter-gatherers, they would travel around based on the season and available food supply, and as a result, they often ate fresher food, which is healthier than processed food. This also helped prevent them from completely depleting a food supply in a single area, as they constantly moved to find new food sources. Through trial and error, they discovered foods that hurt their bodies and foods that increased their health, and they passed this knowledge down to younger generations through songs and stories.

The Europeans settled in the country in the late 18th century and took ownership of the land because they assumed it was *terra nullius*, a legal term that means “owned by no one.” Aboriginal Australian clans were displaced or killed as Europeans spread out for settlements and to raise herds and grow crops. Life as hunter-gatherers taught Aboriginals to adapt to new environments, and they coped by hunting the herds and cooking them using traditional methods, as well as hunting newly introduced vermin like rabbits that were killing off native animals.

Shortly after European settlement, the newly formed government started handing out rations of Western food to displaced Aboriginal Australians, and they quickly became dependent on the hand-outs. Other Aboriginals were sent to work at pastoral stations where they received similar rations in exchange for work—foods they had never tried such as corned beef, flour, sugar, and tea. At this point, Aboriginal diets depended largely on how well the station stores were stocked. If the station store manager wasn’t empathetic to the Aboriginals, the store would lack healthy, nutritious food, which negatively affected Aboriginal health, as the foods available were low in calcium and vitamins. They shifted from a mainly vegetarian diet to a meat-focused diet because rations rarely had fruit, vegetables, and dairy, due to poor transportation methods and a lack of refrigeration.

Families were separated, and from the late 18th through the late 19th century, Australian federal and state governments removed Aboriginal children from their homes and placed them into European Australian households, which made it difficult to pass on the oral culture and culinary traditions of their people. However, this did not eliminate Aboriginal Australian culinary culture completely; some remote-living Aboriginals adapted by finding time to hunt and gather traditional *bush tucker* (Aboriginal food) on the weekends, and when work on the stations would slow down, many would go on a walkabout, or a spiritual walk into the bush to live off the land, rebuild their health and strength, and share Aboriginal traditions.

In the late 1960s Aboriginal civil rights were finally recognized, and government control over where they lived and moved was taken away. Many Aboriginal Australian workers were let go from their station jobs and forced to live in fringe camps and be on welfare, which only further cemented their dependence on processed foods that were cheap and easily available in local stores. There was also a decline in gathering bush tucker, which was exacerbated by the ongoing clearing of land for more settlement areas.

From the 1960s until the present, Aboriginal clans and families have taken various paths that have

ultimately led them to one of two destinations: living in a rural, remote Aboriginal community, often close to the outback, or moving closer to cities and towns and attempting to assimilate even more into Western society. Those who created their own remote Aboriginal communities still rely on station stores or monthly mail trucks for their food supplies. Canned fruit, powdered milk, rice, and canned meat are staples in a modern remote Aboriginal diet. But ever-adaptive, remote-living Aboriginals have combined parts of Western culture with their traditional culture, supplementing processed foods with Aboriginal foods and cooking methods whenever possible. Many families adapt popular recipes from other ethnic cuisines to their native food supply and cooking methods, and curried *gulah*, or spaghetti and kangaroo meatballs, is commonly found in modern Aboriginal campsites. Bush plum pudding is another common recipe found in campsites during the holidays, an Aboriginal take on the popular British Christmas dish.

Those Aboriginal families who chose to live closer to Western society had better exposure to food sources in the form of grocery stores, which meant direct access to fresh fruit, vegetables, and dairy. But meat and sugar still play a significant role in their diet, just as they did at the pastoral stations. Even though Aboriginals living in a nonremote area can now self-select their diet for the first time in 100 years, they still cling to their learned pastoral station diets because that is what they know. Fast-food outlets are also finding their way into the average modern nonremote Aboriginal diet. Almost all of these communities (remote and nonremote) are lower class or impoverished, so food supplies vary based on the money a family or community can generate at any given time.

An interesting twist in the history of Aboriginal Australian cuisine is the native-foods industry of Australia. Created in the 1970s, the native-foods industry comprises indigenous Australian foods such as fruits, spices, nuts, and herbs, commercially manufactured for restaurants and gourmet stores. A positive side of the Australian native-foods industry is that it utilizes Aboriginal cultural heritage and provides Aboriginals with jobs. However, most native

foods are so high priced that neither remote nor nonremote Aboriginal families can afford to work them into their regular diets.

Due to the westernization of their diets to varying degrees, both remote-living and urban-dwelling Aboriginal Australians have a number of serious health concerns, including obesity, diabetes, cardiovascular disease, and alcohol and drug abuse. As of 2005, 57 percent of Aboriginal Australians were overweight or obese regardless of whether they lived in a city or the bush. They are 1.2 times more likely to be overweight or obese compared with their non-indigenous counterparts.

Studies show that Aboriginal Australian babies are fully nourished by their mother's milk, but with so much processed food in their environment, they inevitably gain excess weight and become unhealthy when they move on to solid foods. Exercise is another large factor in why so many Aboriginals are overweight, as more than 70 percent of remote and nonremote Aboriginal Australians do little to no exercise. Diet and exercise are also contributors to the large number of Aboriginals suffering from cardiovascular disease and high blood pressure.

One group trying to make a difference in Aboriginal Australian health is the Fred Hollows Foundation, which has been collaborating with indigenous women in the Northern Territory to create a cookbook for indigenous Australians that can be used in remote communities and can help alleviate poor health due to diet. Aboriginal Australians' increased rate of obesity has led to an excessive occurrence of type 2 diabetes in the Aboriginal Australian community, making them four times more likely to develop diabetes than the nonindigenous Australian community. The first Aboriginal Australian case of diabetes occurred in 1923, but before that, there was no history of metabolic conditions among this community, as most hunter-gatherer Aboriginals were in good physical condition and their diet was healthy. After a group of diabetic Aboriginal Australians returned to a traditional lifestyle and cuisine, studies found that their health improved and their diabetes symptoms either lessened or disappeared. Alcohol is another factor in poor Aboriginal health, specifically in diabetes and cardiovascular disease. Studies

have shown that although Aboriginals are less apt to drink alcohol than nonindigenous Australians, they are more prone to drink dangerous amounts of alcohol when they do imbibe. Between 2000 and 2004, injuries or diseases related to alcohol use led to the deaths of 1,145 Aboriginal Australians, with the median age of death around 35 years of age.

Afghanistan

Overview

Afghanistan is a landlocked, mountainous country situated at the crossroads of four major cultural areas: the Middle East, Central Asia, the Indian Subcontinent, and the Far East. It is bordered by Iran in the west, Pakistan in the south and east, Turkmenistan, Uzbekistan, and Tajikistan in the north, and China in the far northeast. Afghanistan was also a major crossroad on the ancient Silk Road that linked East and West and played a vital role in the exchange of ideas, religions, foods, and plants.

Afghanistan has had a turbulent history, which continues to the present day. Because of its geographic position Afghanistan has been invaded many times by armies from different places, each bringing its own influences on the culture. After a brief period of relative stability under King Zahir Shah (r. 1933–1973), since the late 1970s Afghanistan has suffered continuous conflict and war. The Russians invaded in 1980. After they left, the 1990s saw a brutal civil war and the rise of the Taliban. In 2001 the U.S.-led invasion toppled the Taliban, but the war against them continues.

Afghanistan, which became an Islamic Republic in 2001, has an estimated population of between 28 and 33 million. The population is made up of a number of ethnic groups, the main ones being Pashtun, Tajik, Hazara, Uzbek, Aimak, Turkmen, and Baloch. While the majority (99%) of Afghans are Muslims, there are also small pockets of Hindus and Sikhs, and there used to be a small community of Jews. Afghanistan has been a melting pot for a large number of cultures and traditions over

the centuries, and the cuisine reflects its internal diversity and the tastes and flavors of its neighbors.

Food Culture Snapshot

Homayoun and Shakila live in a two-bedroom apartment in southwestern Kabul. Shakila works as a housekeeper for an Afghan engineer, and their apartment is attached to his house in the same compound. Her husband, Homayoun, is a chauffeur for the Ministry of Foreign Affairs in Kabul. They have five children, two boys and three girls, ranging from 7 to 16 years of age.

Their lifestyle is typical of an upper-working-class family in Afghanistan. Their day begins early in the morning. Shakila sends one of her children to the local bakery to buy bread (nan) for the family. With the bread they drink tea sweetened with sugar and perhaps some milk added. On special occasions they might have butter, yogurt, honey, or jam to go with the bread.

In the morning Shakila goes to the local bazaar to buy the ingredients for the main midday meal and the evening meal. The menu will be decided by what seasonal vegetables and fruits are available. She may buy meat (usually lamb) for the main dish. In winter and early spring vegetables and fruits are very limited, but onions, carrots, potatoes, cucumbers, oranges (including sour oranges), lemons, and bananas are usually available. In summer and autumn there is much more variety as eggplant, tomatoes, beans, okra, grapes, melons, watermelons, peaches, pears, apples, quinces, pomegranates, and plums come into season. In the bazaar Shakila may also buy dairy products and eggs if

needed and also stock up on basic ingredients such as rice, flour, pulses, cooking oil, sugar, and tea.

Shakila tries to vary the main midday meal. Sometimes she makes a meat and vegetable soup to be eaten with nan or a rice dish, either plain white rice served with a meat or vegetable *qorma* (braised dish with yogurt and ground nuts), or a pilau (rice dish) cooked with meat or perhaps a sticky rice dish with lentils or beans called *shola*. For a change she may make *ash*, a noodle soup-like dish with beans and yogurt and flavored with mint.

Aush

Afghans often prepare this dish to help cure colds. They add plenty of garlic and lots of red pepper as they say it helps clear the head and chest. Afghans usually make their own noodles. The noodle dough is rolled out very thin, then rolled up tight and cut into fine strips with a sharp knife. The noodles are then tossed in a little flour and allowed to dry on a board. Dried noodles or ready-made fresh spaghetti, as in this recipe, can be substituted although the cooking time may vary. Canned chickpeas and kidney beans may also be substituted.

2 oz dry chickpeas
 2 oz dry red kidney beans
 8 oz fresh spaghetti or tagliatelle
 2 c strained yogurt
 Salt
 Red pepper, according to taste
 1 tbsp dried mint

For the Minced Meat

6 tbsp vegetable oil
 2 medium onions, finely chopped
 1 lb minced beef or lamb
 ½ c tomato juice (or water)
 1 tsp ground coriander
 Salt and pepper

Soak the chickpeas and beans in 4 cups water overnight.

Put the chickpeas and beans into a large pan with the water in which they were soaked and add ½ cup water. Bring to a boil, then reduce the heat and boil gently until cooked, adding extra water if necessary. Cooking time will vary according to the freshness of the pulses.

While the pulses are cooking, prepare the meat. Heat the oil in a pan over medium to high heat. Add the chopped onions, and fry over medium heat, stirring continuously until they are reddish-brown. Turn up the heat, add the meat, and stir well. Fry until brown. Add the tomato juice (or water), and bring to a boil. Add the coriander and salt and pepper to taste. Stir again, then turn down the heat and simmer for about half an hour or until the meat is cooked and the sauce is thick. Add extra water if the sauce becomes too dry.

When the meat and pulses are cooked, bring to a boil 3½ cups water in a large pan. Add salt and the noodles, and boil gently for about 10 minutes. Add the chickpeas, beans, strained yogurt, and some or all of the liquid from the chickpeas and beans, depending on how thick you want the soup. Add the dried mint, salt, and red pepper, and mix well. More water can be added if required. Leave on low heat for about 10 minutes or so to let the flavors blend. Serve the soup and top with a little of the meat. The remaining meat is served separately to be added to the top of each individual portion of aush.

The evening meal, usually eaten at around 6 or 7 P.M., generally consists of leftovers from lunch with the addition of a snack such as fried potatoes or *boulanee* (fried leek- or potato-filled pastries). Nan is served with every meal, and tea is drunk throughout the day and after every meal. When Shakila has unexpected guests, which happens quite frequently, she sends the children out to buy biscuits from the local bakery and perhaps some sweets, such as *noql* (sugared almonds). These are served with tea. For special occasions Shakila will make more elaborate food such as a pilau or the meat-filled dumpling-like steamed dish called *mantu* or the leek-filled boiled pasta *ashak*. She also likes to make a crisp sweet fried pastry called

goash-e-feel, which means “elephant’s ears.” Fresh fruit is served after the meal.

Major Foodstuffs

Afghanistan is one of the poorest countries in the world, and many years of war and political instability have taken their toll, leaving the country in ruins and dependent on foreign aid. It is a land of contrasts, with vast areas of scorching, parched deserts; high, cold, inaccessible mountain regions; and extensive green valleys and plains. Generally the summers are hot and dry, and the winters are cold with heavy snowfalls, especially in the mountains. It is from the snow-capped mountains that water is available for irrigation. The plains and valleys are very fertile as long as there is water. With the diversity of its terrain and climate Afghanistan can produce a wide variety of foodstuffs.

Agriculture is the main source of income. Cereals such as wheat, corn, and barley are the chief staple crops. They are ground into flour and made into different kinds of breads and noodle-type dishes. A small amount of rice, another staple, is grown on the terraces of the Hindu Kush in the north and in the Jalalabad area in the southeast, although much has to be imported.

Vegetables, fruits, and nuts are cultivated extensively, and many are exported. Afghanistan is famous for its numerous varieties of grapes, from which green and red raisins are produced, and for its melons and watermelons. Other fruits include pomegranates, plums, mulberries, quinces, cherries, apricots, nectarines, apples, and pears. Bananas, lemons, and oranges grow in the subtropical region of Jalalabad. Vegetables include onions, potatoes, tomatoes, eggplant, *gandana* (a kind of allium similar to Chinese chives), spring onions (scallions), green beans, okra, cabbage, cauliflower, radishes, and numerous kinds of pumpkins, squashes, gourds, and zucchini. Nuts also play an important role in the Afghan diet. Walnuts, pistachios, pine nuts, and almonds are all used in cooking—in pastries, pilaus, and desserts—but they are also eaten on their own as snacks, often salted and mixed with dried fruits such as raisins and served with tea.

Afghans add spices and herbs to their food for flavor and fragrance; the results are neither too spicy nor too bland. Some spices are imported, but many herbs are grown locally. Saffron, although expensive, is the preferred spice for flavoring and coloring rice dishes and desserts. It is grown in Afghanistan, and its cultivation is being encouraged to try to persuade farmers to switch from growing poppies, which are processed into opium and are thus an enormous cash crop. Similarly, farmers are being encouraged to cultivate more quinces and pomegranates for export. Other popular spices include aniseed, cardamom, cassia and cinnamon, chilies, cloves, coriander, cumin, dill, fenugreek, ginger, nigella, black and red pepper, poppy seeds, sesame seeds, and turmeric. Asafetida, which grows profusely in the north of Afghanistan, is not used much in Afghan cooking but is an important crop, as much of it is exported to India. Herbs such as cilantro, dill, and mint are used extensively in cooking, especially in soups and stews. Garlic is also widely used. Other flavorings include rose water, especially for desserts. Roses grow abundantly in Afghanistan, and distilling rose water is a cottage industry.

Industry in Afghanistan is based on agriculture and pastoral raw materials. The major industrial crops are cotton, tobacco, madder, castor beans, and sugar. Sugar beets are grown in the north, and sugarcane is grown near Jalalabad in the southeast. *Nabot* (crystallized sugar) is a popular energy-boosting snack, especially with children. *Gur* (unrefined sugar) is used as a sweetener.

Lamb, which comes from the fat-tailed sheep, is the preferred meat, but beef, veal, goat, water buffalo, horse, and camel are also eaten. Chicken, which used to be a luxury and not always available, is liked, and today many chickens are imported (often frozen) from Iran, Pakistan, and India and are plentiful in the cities. Since Afghanistan is a Muslim country, pork is not eaten. Game meats such as quail, pigeon, duck, and partridge are eaten when available. All parts of animals are eaten including the heads, feet, and testicles. A sausage made from boiled horse meat using the innards as a casing is made and eaten by Uzbeks and Kirghiz in northern Afghanistan.

Fish is not a regular part of the Afghan diet even though many of the rivers and lakes teem with fish: brown trout, rainbow trout, *sheer mahi* (milkfish), catfish called *mahi laqa*, and carp (which were introduced to the Darunta Dam near Jalalabad with Chinese assistance in 1967). In winter some sea fish is imported from Pakistan.

Traditionally Afghans cooked with what is called *roghan-e-dumbah*, a fat rendered from the tail of the fat-tailed sheep, and *roghan-e-zard*, a clarified butter. Cottonseed oil is produced in Kunduz in the north and is used for cooking. Nowadays, much of the cooking medium is in the form of ghee (clarified butter) and vegetable oils, which are imported.

Dairy products play an important role in the Afghan diet, especially in the high mountainous areas where fresh vegetables and fruits are not readily available. Milk comes from cows, water buffalo, sheep, and goats. Most of the milk is made into butter (*maska*), cheese (*panir*), or yogurt (*mast*), which can be kept for longer periods. When the yogurt is strained, the remaining curds are called *chaka*. Chaka is often salted, dried, and formed into round balls that harden and resemble gray pebbles; these are called *quroot*. For use in cooking the quroot is reconstituted in water in a special bowl with a rough bottom surface, called a *taghora qurooti*. *Qymaq* is another milk product; it is a close relation to the *kaymak* of the Middle East and is similar to clotted cream. Milk is rarely drunk, but a refreshing drink called *dogh* (yogurt mixed with water and mint) is sometimes made.

Tea, green or black, is drunk copiously throughout the day and is always served after a meal. It is not usually drunk with milk except sometimes for breakfast, but it is often sweetened with sugar and flavored with cardamom. An Afghan custom is to have a first cup of tea with sugar followed by one without. Many people soak sugar cubes called *qand* in their tea and hold them in their mouths as they sip the tea. Affluent Afghans will serve fruit juices, sherbets, or bottled soft drinks, such as Coca-Cola and Fanta, with meals for guests. Bottled water (locally produced or imported) has recently become readily available in the bazaars.

Cooking

Many Afghans live in extended families, and this means that a large amount of food must be prepared each day. The shopping used to be the responsibility of the men, but recently women and children have taken on this role. The preparation and cooking of the food, which are very labor-intensive, are normally done by the female members of the household, the most senior woman usually being in charge with her female relatives helping. Affluent families have cooks, usually male, and for big parties and special occasions professional male cooks are hired.

The traditional Afghan kitchen is very basic. Few people have electric ovens, even in the cities. Cooking is done over wood or charcoal fires or in more recent times on burners fueled by bottled gas. Some large families may have a clay oven (*tandoor*) for baking bread. Refrigerators are also rare. Food is kept cool and fresh during the hot summer months in a range of clay pots and containers. In many households, especially in rural areas, there is no running water. All washing up is done outside, using water from a well. Sophisticated kitchen equipment such as electric mixers or grinders is practically nonexistent. Most Afghans do, however, have a range of pans (*dayg*) in different sizes, some quite large for cooking pilaus. The *awang* (mortar and pestle) is an essential piece of equipment for crushing garlic, onions, herbs, and spices, and all Afghan homes own one. Many Afghan families grind their own spice mixture called *char masala*, which is used mainly to flavor pilaus. The choice of spices varies, but the four most common ones are cassia (or cinnamon), cloves, cumin, and black cardamom seeds. Most families have a rolling pin for rolling out the dough for their pasta and noodle dishes. Affluent Afghans may have a pasta-making machine.

Afghans rarely measure out their ingredients. Recipes and techniques tend to be passed down from mother to daughter and are learned through practice and experience. Most kitchens do, however, have a range of pots with handles, called *malaqa*, which are used as measuring aids, and ordinary cups, glasses, and spoons are also used for measuring.

Food tends to be cooked slowly and for a longer time, especially meat dishes, as meat can be quite tough and this method of cooking helps bring out all the flavors of the ingredients. Some Afghans own a pressure cooker, which shortens the cooking time considerably.

Nan forms the basis of the diet of all Afghans, and it usually accompanies every meal to scoop up food or soak up juices. The word *nan* actually means “food” in Afghanistan. First thing in the morning the dough for the bread will be made. It is leavened with a fermented starter prepared from a small lump of dough from the previous day. Bread is left to rise before being baked in the tandoor or taken to the local bakery to be baked. A tandoor is a clay oven built into the ground that is capable of reaching temperatures far higher than an ordinary domestic oven does. The bread is cooked by slapping the dough onto the hot sides of the tandoor. When ready it is deftly removed using a hook or a stick. Breads are also cooked on a *tawah*, a curved, circular cast iron plate that is heated over a fire before the bread is slapped onto it and cooked on both sides. The plate is portable, and this method is especially used by the nomads. Bread cooked on a *tawah* is unleavened and known as *chapati* or *nan-e-tawagi*.

Noodle dishes are popular and resemble many of the noodle dishes found along the Silk Road. They are all made in the home, with some of the more complicated versions made only for special occasions, including *mantu*, which is closely related to the *man t'ou* of China and the *manti* of Turkey. *Ashak*, a leek-filled pasta, resembles Italian ravioli. *Aush* is the basic noodle dish, served much like a soup. *Lakhchak* is similar to lasagna.

Two types of rice are used in cooking: long grain and short grain. The long-grain variety is used for pilaus and *chalaus*. *Chalau* is plain white rice that is served with a vegetable or meat dish. Pilaus are more elaborate and are cooked with meat and meat juices. They are colored by using browned onions, spinach, caramelized sugar, saffron, or turmeric. Very often vegetables, such as carrots, or fruits and nuts, such as orange peel, apricots, raisins, almonds, and pistachios, are used as a garnish.

Ashak, a leek-filled boiled pasta often served at special occasions. (Shutterstock)

Two methods are used for cooking long-grain rice. In the *dampokht* method the rice is boiled in just enough liquid for the cooking. With the *sof* method the rice is first parboiled in a large amount of salted water and then drained. Oil, spices, and a little more liquid (water or stock) are added, and the rice is finished off in an oven or on top of the stove or fire.

The basic short-grain rice dish is called *bata*, where the rice is cooked with plenty of water and a little oil until soft and sticky. It is served with a vegetable or meat *qorma*. *Shola*, another sticky white rice dish, is cooked in a similar way but can be savory or sweet. The savory version is cooked with meat and pulses. Sweet versions are often flavored with cardamom and rose water and studded with flaked almonds and pistachios. *Ketcheree quroot* (similar to the *kitchri* of India) is another version that is made with the addition of mung beans and served with a meat *qorma* and *quroot*.

Onions play an important role in Afghan cookery. Both white and red onions are used, but red ones are preferred as they give a thicker sauce and richer flavor. Onions are sometimes fried until very brown and soft, almost caramelized, before being ground for adding to soups, *qormas*, and pilaus to give flavor and color.

The Afghan housewife makes full use of fruits and vegetables in season and dries them or makes

preserves, chutneys, and pickles. Pickles (*turshi*) are made from lemons, carrots, eggplants, and mixed vegetables. Apricots, peaches, cherries, bell peppers, cilantro, and mint are made into chutneys (*chutni*). Meat is also dried, especially in mountainous or remote regions where fresh meat is not always available in the winter months. *Landi* is a special type of dried meat. A fat sheep is slaughtered at the end of autumn and the wool is sheared off, leaving the skin with a thick layer of fat underneath. The whole carcass is then hung to dry. To make *gosht-e-qagh* (dried meat) the meat is cut into large chunks that are scored and rubbed with salt. The meat is then hung up in a warm, shady place to dry and let the juices drip out. After the process is repeated, the meat is hung in a cool place until needed.

Typical Meals

Although many people in Afghanistan are desperately poor and their diet and meals are generally very basic, most eat three meals a day: breakfast, a midday meal, and an evening meal. Breakfast is bread, sometimes in the form of *nan-e-roghani*, which is nan with oil added to the dough before baking. This is served with sweet tea, sometimes with milk added; for those who can afford it, the bread may be accompanied by cheese, qymaq (cream), honey, or jam. The midday meal usually consists of a main dish such as soup, noodles, or a rice dish, all accompanied by bread. Bread soaked in soup is the most common staple food of poor people. Bread is also eaten with grapes when in season. Another simple and traditional dish is *qurooti*. Quroot (dried yogurt) is reconstituted in water, and garlic, salt, and pepper are added. The mixture is boiled and eaten with bread with dried mint sprinkled on top. The evening meal is similar and often includes leftovers. Snacks such as *khagina* (a kind of omelet similar to frittatas and Spanish tortillas) are sometimes made for a quick lunch. Other popular snacks include fried savory pastries called *boulanee* stuffed with gandana or mashed potato. Desserts are a luxury and usually made only for special occasions.

The traditional mode of eating in Afghanistan is on the floor. Everyone sits on cushions around

Mantu, a traditional noodle dumpling often served as a part of *iftar*. (Imagevillage | Dreamstime.com)

a large cloth or thin mat called a *disterkhan*. It is often the custom to share food communally. Three or four people share one large platter of rice with smaller side dishes of a meat qorma, kebabs, and a vegetable dish, perhaps spinach or okra, or a *burani* (see the following) made with eggplant or potatoes. A salad might be an accompaniment, as well as chutneys and pickles, to add piquancy to the meal. Nan is passed around for diners to tear off a piece.

Burani Bonjon

2–3 large eggplants

Vegetable oil for frying

1 medium onion, finely chopped

2 medium tomatoes, thinly sliced

1 green bell pepper, finely sliced in rings (optional)

Salt

¼–½ tsp red pepper

1–2 c strained yogurt

2 cloves garlic, peeled and crushed

2 tsp dried mint

Peel the eggplants, and slice them into rounds about ¼–½ inch thick.

Heat plenty of vegetable oil in a frying pan (eggplant soaks up a lot of oil), and fry as many slices of the eggplant as possible in one layer. Fry on both sides

until brown. Remove from the pan, and drain on absorbent kitchen paper. Repeat with the remaining eggplant, adding more oil as necessary.

Fry the chopped onions in a little oil until reddish-brown. Arrange the eggplant, sliced tomatoes, and sliced pepper in layers in the frying pan, sprinkling each layer with some fried onion and a little salt and a little red pepper. Spoon over 2–3 tablespoons of water, cover the pan with a lid, and simmer over low heat for about 20 to 30 minutes.

Meanwhile, combine the strained yogurt, the crushed garlic, a little salt, and the dried mint. Put half of the strained yogurt onto a warm serving dish. Carefully remove the eggplant from the pan with a spatula, and arrange it on the yogurt. Dot the rest of the yogurt over the eggplant, and sprinkle over any remaining sauce (but not the oil) from the eggplant on top. Serve immediately with freshly baked nan or with chalu.

The traditional way of eating for most Afghans is with the right hand. Rice is formed, using the fingers, into small balls, which are popped into the mouth. Nan or chapati is also used to scoop up small portions of food. Even soup is eaten with the hands. Bread is broken into pieces and added to the soup to soak up the juices. Spoons may be used for eating desserts and yogurt. More affluent Afghans do use Western-style plates and cutlery.

All the dishes are served at the same time. Although there is no formal sequence of courses, generally all the savory dishes are eaten first. If there is a dessert such as *firni* (a rice or corn-flour milk pudding), it will be eaten as a final course. Fresh fruit is usually served after the meal. The meal ends with tea (green or black), usually without milk or sugar and often flavored with cardamom to aid digestion.

Eating Out

Afghans rarely eat in restaurants, although there are some that serve traditional Afghan food to locals. Most restaurants in major cities cater to foreigners or well-to-do Afghans. With the arrival of many foreign troops and aid workers since 2001, a

great variety of restaurants opened in Kabul, including Chinese, Mexican, Thai, and French. Many have closed recently due to the deterioration of security. Street foods, *chaikhana* (teahouses, sometimes called *samovar*), and kebab stalls are, however, very popular with Afghans.

Street vendors, called *tabang wala*, sell a variety of tasty foods for people wanting a quick snack. A *tabang* is a large, flat, round wooden tray on which the vendor carries his wares and then stakes his claim to a particular street corner or patch. He may roast corn over charcoal or fry leek-filled pastries called *boulanee*. Passersby stop to taste his *shour nakhod* (salty chickpeas), red kidney beans, and boiled, sliced potatoes, all doused with a mint and vinegar dressing and served with brightly colored chutneys such as hot red pepper or tangy green cilantro. Other favorite street snacks are samosas and *pakaura* (vegetable or potato fritters). The passersby can quench their thirst with *kishmish ab* (red or green raisins soaked in water). In recent years the old-style *tabang wala* has been disappearing, and most of the street vendors today have a kind of mobile kiosk on wheels.

More permanent stalls in the bazaar sell *faluda* (a kind of vermicelli dessert), into which are added crushed ice and a custard made with milk and sugar thickened with salep (orchid bulb) and flavored with rose water and chopped pistachios; or *sheer yakh* (ice cream) can be added to the *faluda* instead. In winter fried fish is served with *jelabi* (a fried funnel cake-like sweet soaked in syrup) or a thick and hearty porridge of whole wheat and ground meat served with oil and sugar called *haleem*. *Kishmish panir* (cheese with red raisins), displayed on a colorful bed of vine leaves, is a popular street food in springtime.

The *samovar*, or *chaikhana*, are places where men can meet and chat over endless cups of tea served from a constantly boiling *samovar* in which the tea is made. Some are very basic and serve only tea. Others provide customers with a variety of refreshments and food, including the traditional but simple soup called *sherwa-e-chainaki* (teapot soup). Lamb, onions, split peas, fresh cilantro, salt, and pepper are put into a teapot, covered with water,

Military bases in Afghanistan are becoming more and more comfortable as is evidenced by this restaurant in Kabul. (Pavel Burian | Dreamstime.com)

and then left to simmer slowly among burning embers raked from either the charcoal brazier used for grilling kebabs or the fire of the boiling samovar.

Many chaikhana have kebab stalls attached. Kebabs are one of the main street foods all over Afghanistan. The kebabs are usually made from small cubes of lamb interspersed on the skewers with fat called *dumba* from the fat-tailed sheep and grilled over charcoal. The kebabs are placed on nan, *lawasha* (a larger but thinner type of nan), or *chapati* and often served with a salad of sliced onions and tomatoes with cilantro. For added flavor the kebabs are sprinkled with crushed dried sour grapes called *ghora*, salt, red pepper, and lemon if available. Other kebabs include *kofta* (minced meat), *shinwari* (lamb chops), and the specialty of lamb's testicles, considered by many to be an aphrodisiac. A specialty of Jalalabad is the fried *chappli* kebab, which is fiery hot and consists of minced meat, lots of *gandana* (Chinese chives), *noash piaz* (scallions), cilantro, and green chilies. *Chappli* means "sandal,"

and this kebab is named thus because of its resemblance to the sole of a sandal.

Special Occasions

Afghanistan is a Muslim country, and religion plays a very important part in the way of life. Afghans observe all religious days and festivals, which are based on the lunar calendar. Fasting is one of the five pillars of Islam, and during the holy month of Ramadan (Ramazan), Muslims refrain from taking any food or water between dawn and dusk. The fast is broken every day at sunset. This is called *iftar*. Afghans at first take a sip of water, and some will take a pinch of salt, but others eat a date. After this a large meal is served. It is ironic that during this month of fasting special and elaborate meals are prepared: soup; pasta or noodle dishes such as *ashak* or *mantu*; rice dishes in the form of *chalau* (plain white rice) and *pilau*; meat *qormas*; vegetable dishes; and pickles and chutneys. All this is

followed by lots of fresh fruit and the inevitable tea. Before sunrise and after morning prayers, another much lighter meal will be eaten, usually consisting of bread and tea with perhaps some eggs, cheese, qymaq, or preserves.

The two most important religious festivals are Eid al-Fitr (also called Eid-e-Ramazan) which marks the end of Ramadan (Ramazan) and Eid al-Adha (known in Afghanistan as Eid-e-Qorban), which marks the end of the hajj, the pilgrimage to Mecca. At each Eid people visit their relatives to drink tea and eat nuts and sweets. Often special sweets and pastries are prepared: *halwa-e-swanak* (a kind of nut brittle), *sheer payra* (a rich milky sweet with nuts), *goash-e-feel* (literally, “elephant’s ear”; sweet fried pastries, so called because of their shape and size). At Eid al-Adha many families sacrifice a lamb or calf. The meat is distributed among the poor, relatives, and neighbors.

Afghans celebrate their New Year (called Nauroz) on March 21, which is the first day of spring. Nauroz has its origins long before Islam, in the time of Zoroaster (founder of the Zoroastrian faith in Persia, ca. 18th–10th century B.C.). Special foods are prepared. *Samanak* is an ancient and traditional dish for the New Year. About 15 to 20 days before the New Year, wheat is planted in flowerpots, and the green shoots of the wheat are made into a sweet pudding. Other traditional dishes include *haft miwa*, a compote that traditionally contains seven different kinds of fruit and nuts (*haft* means “seven,” *miwa*, “fruit”), and *kulcha Naurozee*, a biscuit made with rice flour. It is also the custom to prepare white and green foods at Nauroz such as *sabzi chalaui* (white rice with spinach) and chicken.

New Year is also the time when Afghans like to go on picnics, which can be quite elaborate affairs. While the women prepare a feast of rice dishes, qor-mas, and salads and the men are in charge of making kebabs, children play and fly their kites. Bread and fruit are often purchased on the way.

The custom of *Nazr*, a kind of thanksgiving, is also observed at New Year. Sweet rice dishes called *shola-e-shireen* or *shola-e-zard* are prepared and distributed among the poor. Another dish often prepared for Nazr is *halwa*, made with either wheat

flour, semolina, or rice flour, flavored with rose water and studded with pistachios and almonds.

Shola-e-Zard

This dish is particularly associated with the 10th day of Muharram (the lunar month of mourning, the 10th day being the anniversary of the massacre of Hazrat-e-Hussein, grandson of Muhammad, and 72 members of his family), when it is traditionally served with *sharbat-e-rayhan* (a sweet drink flavored with basil seed).

- 1 c short-grain rice
- 1–1½ c sugar, according to taste
- ¼ tsp saffron
- 1 tbsp chopped or flaked pistachios
- 1 tbsp chopped or flaked almonds
- 1 tbsp rose water
- ½ tsp ground cardamom

Soak the rice in water, well covered, for a couple of hours or longer.

Boil approximately 7 cups of water, and add the rice. The water should come up to about 4 inches above the rice. Simmer the rice in the water slowly, stirring occasionally, until the rice dissolves and becomes like jelly. This can take 1 to 2 hours, or perhaps even longer. Add the sugar, saffron, chopped pistachios and almonds, rose water, and ground cardamom. Turn down the heat to very low, and cook for another half an hour.

Pour the warm shola onto a large serving dish, and leave to set in a cool place for a couple of hours.

Afghans will find any excuse to have a party. Births, circumcisions, engagements, and weddings are celebrated in style, and many special foods are prepared. The birth of a child, especially the first male child, is a big occasion, and many guests come to congratulate the family. Lots of food is prepared. Special “hot” and nourishing foods are prepared for the mother to give her strength: *humach* (a flour-based soup), *leetee* (a flour-based dessert), *kachee*

(a kind of halwa), aush (a noodle soup with plenty of garlic), and *shola-e-holba* (a sweet sticky rice dish flavored with fenugreek). On the 40th day after the birth a rich, sweet bread called *roht* is baked.

Engagements and weddings are festive occasions. Engagements are called *shirnee khoree*, which literally means “sweet eating.” Traditionally the family of the groom brings sweets, goash-e-feel, and other gifts such as clothes and jewelry to the bride’s family. The bride’s family in return prepares and organizes the food for the party. Often special kitchens are set up in order to cope with the vast amounts of food to be prepared: pilaus, qormas, kebabs such as *shami* kebab or *do piiza* (usually shrimp or chicken stewed with lots of onions), ashak, mantu, boulanee, and lots of sweet dishes such as firni, *maughoot* (cornstarch pudding), *shola-e-shireen*,

sheer payra, and sweet pastries such as *baqlava* and the elaborate fried pastry called *qatlama*. A special tea called *qymaq chai* is often served. It is made with green tea, but by a process of aeration and the addition of bicarbonate of soda the tea turns dark red. Milk is added (and sugar too), and it becomes a purply pink color. It has a strong, rich taste. *Qymaq* (a kind of clotted cream) is floated on the top. Sugared almonds called *noql* are served with the tea.

Qabili Pilau

This pilau is probably the best known of all the rice dishes of Afghanistan and could almost be described as the national dish. It is a popular main dish and

Jamila Sharifi, the groom-to-be’s mother, throws candy over the heads of bride-to-be Najilla Ahmadi and groom-to-be Dawood Sharifi to wish them all the best during their engagement party in Kabul, Afghanistan, 2002. (Getty Images)

is nearly always served as one of the rice dishes prepared for guests. There are, of course, many variations, as families have their own special way of making it. But common to all versions is the use of carrots and raisins. It can be made with lamb or chicken, the spices may vary, and other garnishes may be added such as lightly fried almonds and pistachios. This recipe is an Uzbek version.

1 lb (2½ c) long-grain rice, preferably basmati
 6 tbsp vegetable oil
 2 medium onions, finely chopped
 2 lb lamb on the bone or 1 chicken, cut up
 2 large carrots
 4 oz raisins
 2 tsp ground cumin
 1 tsp black pepper
 Salt

Rinse the rice several times until the water remains clear, then leave it to soak in fresh water for at least half an hour.

Heat the oil in a heatproof casserole over medium to high heat, and add the chopped onions. Fry until golden brown and soft. Add the meat (if lamb, trimmed of excess fat), and fry until well browned. Then add enough water to cover the meat, and salt, bring to a boil, turn down the heat, and cook gently until the meat is tender.

While the meat is cooking, wash, peel, and cut up the carrots into julienne strips. When the meat is done and you are ready to cook the rice, place the carrots and the raisins on top of the meat, and sprinkle with 1 teaspoon each of cumin and black pepper and some salt.

Drain the rice, place it on top of the carrots and raisins, and add enough water to cover it by about ½ inch. Add the second teaspoon of cumin and a little salt, bring to a boil, turn down the heat, cover, and boil gently for about 10 to 12 minutes until the rice is tender and the water has been absorbed.

Place the casserole, which should have a tight-fitting lid, in a preheated oven at 300°F for about 45 minutes. Or you can finish the cooking by leaving

it over on very low heat on top of the stove for the same length of time.

To serve, mound the rice, meat, carrots, and raisins in a large dish.

Similar dishes are prepared for weddings except they are even more elaborate and more food is prepared as there will be a larger number of guests. *Abrayshum kebab* (*abrayshum* meaning “silk”) is an unusual sweet often made for festive occasions such as weddings. It is made with egg in such a way that the egg forms “silken” threads, which are then rolled up like a kebab and sprinkled with syrup and ground pistachios. But perhaps the most traditional food served at weddings is *molida*, sometimes called *changali*. This special powdery sweetmeat made from flour, oil, sugar, and butter and flavored with cardamom and rose water is tasted by the bride and groom as they sit on their wedding throne during the ceremony. The groom first feeds his bride a teaspoon, then she in turn feeds him. Then the *molida* is served to the wedding guests. Sugared almonds (*noql*), symbolizing fruitfulness and prosperity, and other sweets, symbolizing happiness, are then showered over the newlyweds. For funerals it is tradition to serve *halwa* to the mourners.

Diet and Health

Although much liked by Afghans, meat is expensive and sometimes eaten only once or twice a week. However, the bread is very nutritious, and when supplemented with soups, pulses, and vegetables it provides enough protein, carbohydrates, vitamins, and minerals for a fairly healthy diet. Desserts and sweets are a luxury, but fruits abound in summer and autumn. Afghan tastes favor a large amount of fat or oil in their cooking. Indeed, this is a sort of status symbol. Many Afghans, especially those now living in the West, have reduced their use of oil or fat and are much more conscious about a healthy diet.

Many people in Afghanistan still adhere in everyday life to the ancient Persian concept of *sardil garmi*, literally “cold/hot.” Like yin-yang in China, it is a system for classifying foods for the purpose of dietary health. In general people believe that eating “hot” foods can alleviate “cold” illnesses such as the common cold. “Cold” foods are prescribed to reduce fevers or hot tempers. “Hot” and “cold” here refer to the properties of the food, not the temperature. While there are some differences of opinion as to just what foods can be classified as hot or cold, there is a definite pattern. Hot foods are rich, warm in aroma, sweet, and high in calories and carbohydrates, whereas cold foods are generally characterized by acidity or blandness, have a high water content, and are low in calories. In Afghanistan hot foods include sugar and honey, fats and oils, wheat flour and chickpea flour, dried fruits, nuts, garlic and onions, fish, meat, eggs, and most spices such as chilies, fenugreek, ginger, turmeric, and saffron. Cold foods include rose water, milk and yogurt, chicken, rice, some pulses (such as lentils and kidney beans), fresh fruits (such as melons, grapes, pears, apples, and lemons) and vegetables (especially

spinach, cucumbers, and lettuce), and most herbs (such as cilantro and dill). Both spices and herbs are valued by Afghans for their medicinal properties, and many are used to aid digestion or help cure and alleviate other illnesses.

Australia

Overview

The only country in the world to encompass an entire continent, Australia is about the size of the continental United States and is home to primarily Mediterranean and tropical climates. With some of the oldest and most stable geology in the world, Australia's environment is characterized by enormous deserts with a few uplifted but eroded mountain ranges and a wetter tropical north. Australia was settled over 40,000 years ago by people presumed to have arrived over land bridges and through short sea voyages from Asia. They likely brought with them some foods and food-preparation techniques, but the first Australian cuisine was forged largely from native animals and vegetation. In more recent times the British claimed and colonized the continent starting in the late 18th century. The new settlers brought with them many nonindigenous crops and animals that would require transportation, transplantation, and adaptation to local conditions. They also opened the continent to settlement by migrants from throughout the world, all bringing their own ideas about food preparation and in many cases stock they intended to cultivate in their new home.

The current population is around 22 million people, of whom more than 6 million are migrants, who come from over 200 countries.¹ With such a diverse and multicultural background, Australian cuisine is elusive to define. Australians themselves take great pleasure in arguing about whether or not it exists, where it comes from, and who gets to decide its parameters. Food is more than a dinner conversation in Australia. Australians idealize their farming

heritage, have a long history of cooking shows on television and cooking books on their shelves, and are in the midst of a boom in foodie culture, making heroes and rock stars out of local chefs and farmers. But still no one can definitively say what Australian cuisine actually is. The slippery nature of food and eating in Australia, and the debate itself, probably is the essence of Australian food culture.

Food Culture Snapshot

Ingrid and Christian are a typical middle-class couple in their mid-thirties. He is a software engineer and she is a psychologist, and they both hold full-time jobs. His father migrated from Holland, and three of her grandparents came to Australia from Great Britain. They just bought a house in the hills overlooking the city of Adelaide where they have lived all their lives, minus a few years here and there working or traveling overseas.

Typically, breakfast consists of a bowl of *muesli* (granola) with yogurt or toast spread with butter and Vegemite. Christian drinks espresso coffee (never instant or percolated), and Ingrid drinks tea with milk and sugar before they go to work. Australians are equally in love with tea and coffee, though the older generations and Asian Australians tend toward tea. For lunch they either bring sandwiches from home or buy a sandwich from the take-out shops in the food courts near their respective workplaces. Ingrid eats at her desk while continuing to work on most days. In the evenings they usually eat together, as Australians tend to eat in nuclear families.

On Saturdays, they shop for food. Ingrid prefers to do this together so that Christian can buy what he needs for the one night a week he is responsible for cooking. They put their stylish shopping trolley in the car and go to the Adelaide Central Markets in the middle of the city: a large warehouse of small food stalls filled with fresh fruit and vegetables, meats, and grocery items. On the fringes of the markets are breakfast places where they meet with friends for a bite to eat before shopping. Just outside the markets are the “eat streets” of Adelaide, giving the accurate impression that this quarter of the city is all about food.

Ingrid and Christian get their fresh fruit and vegetables as well as bread, cheese, olives, prepared dips, muslie, pasta, and rice from bulk bins. Christian goes to a seafood shop next to the stalls to talk to the staff about the freshest fish to buy for the curry he is making this week. He got the recipe online and thinks it approximates the one he ate on their last visit to Thailand. He also picks up some sausages for the barbecue they are attending that afternoon. Ingrid goes to the Asian grocery stall to get lemongrass and galangal for a *laksa* (noodle soup) she is making and on the way picks up a frozen lasagna at a little Italian-themed stall and pre-prepared roast at the German butcher’s stall, both of which she can just throw in the oven on a week-night. On the way home they stop at the supermarket to get their canned goods, jars of everyday items like vegemite, black tea, milk, and anything frozen.

While Ingrid does most of the cooking, Christian would never say it was her role, and he is the assistant cook on most nights. Preparing a meal is time for couples, the core of the household, to catch up on the events of the day and is usually timed for a 7 P.M. meal. The meal could be a stir-fry, a pasta casserole, or a recipe from any ethnic cuisine they have come across in their travels, seen on television, or heard about from friends. It usually contains meat, although Australia is home to an increasing number of vegetarians and a meat-free meal in a week is not unusual. Dinner is the biggest meal of the day unless there is a barbecue on the weekend, where a late lunch bleeds into the dinner hour.

Ingrid and Christian also aim to make healthy meals, which they define as low fat and low salt with a good balance of the major food groups in accordance with

the dietary advice advertisements on television or discussed in the local media’s food and lifestyle section. They gave up on meat pies and fish and chips down at the local take-out place years ago when the extra pounds started to show. Still, when they get take-out food (about once a week) or go out to eat (also about once a week), health is sacrificed for good taste and interesting cuisine at any number of Indian, Thai, Italian, Vietnamese, Chinese, Japanese, Greek, Argentinean, or modern Australian restaurants in their multicultural city. While Christian’s and Ingrid’s parents cooked more traditional fare while they were growing up, Ingrid now swaps recipes with her mother-in-law as changing cuisine is a stable feature of Australian foodways.

Major Foodstuffs

From a British colonial perspective, in the late 18th and 19th centuries, Australia was vast, water poor in the habitable south, and very far away from home. Indigenous food and cuisines developed by Aboriginal inhabitants were barely acceptable to colonists and thought a poor cousin to British fare. Some native meats such as kangaroo, wallaby, and possum could be cut and cooked into recognizable dishes, but more exotic fare such as banyan nuts, mountain pepper, and macadamia nuts was relegated to curiosities or used in recipes as substitutes for better-known ingredients. Even today the legacy of substitution exists. For example, the *quandong* (*Santalum acuminatum*), a member of the sandalwood family, is commonly referred to as the desert peach. Quandongs are not related to and do not look like nor taste overwhelmingly similar to the stone fruit in the genus *Prunus*. While migrants investigated the suitability of native plants and animals as food, they did not consider native plants and animals as an existing and functional system of food, nor did they consider Aboriginal cuisine fit for consumption. Even today “bush food” is viewed primarily as a provider of exotic ingredients to be incorporated into European or Asian dishes, rather than as a complete cuisine in and of itself. Instead, early colonists and migrants continued to bring British ideas about food and quickly rooted both plant and

animal stock based on those ideas into Australian soils and culture. One of the first developments in Australian cuisine centered on how to transplant a British diet into what was viewed as a Mediterranean climate, both for the uses of the colonists and for export back to Britain.

With an abundance of land (much of it poor quality), a shortage of labor, and the need to aggregate production to make international exporting a viable business, Australians encouraged the development of large-scale commodity-production facilities for European food and agricultural goods. While this did not change what Australians ate, it did impact how much they ate. For example, one of the more successful industries in colonial Australia was grazing. As Michael Symons has detailed in *One Continuous Picnic*, the lack of a peasantry coupled with the high status afforded meat consumption in European dietary thinking encouraged the development of a prestigious and lucrative cattle and sheep industry. The success of the rangelands and the ensuing availability of inexpensive meat allowed even laborers to eat more meat than the typical British diet.² In the mid-19th century, the available meat supply allowed for 9.5 pounds (4.3 kilograms) of meat per person per week in New South Wales, slightly less than the government-set standard rations of 9.9–12.1 pounds (4.5–5.5 kilograms) per person. Records indicate that the working-class diet in Britain in the same period contained only 0.5–2 pounds (0.23–0.90 kilograms) of meat per person per week.³ The transplantation of ideas about the importance and prestige of meat coupled with its abundance translated into changes in diet, and Australians typically ate meat with every meal.

Early Australians also planted familiar grains, fruits, and vegetables from their predominantly British diet. The wheat farms established throughout New South Wales, Victoria, South Australia, and eventually Western Australia entrenched a culture of dryland farming and ensured bread became the staple carbohydrate. The late 19th-century development of irrigation infrastructure throughout the Murray-Darling Basin allowed Australians to reliably establish water-dependent crops and pasturelands for dairying. This irrigation infrastructure

largely exists today though it is overtaxed and is the cause of many of the environmental and freshwater-access problems Australians face. Dairying, for example, used about 1.5 billion gallons (5.4 giga-liters) of irrigation water per 1,000 hectares (2,471 acres) of land in the 2000–2001 agricultural year, which is a relatively high amount of water, given that vegetables used over 1 billion gallons (4.37 giga-liters) and wheat is farmed without irrigation. Furthermore, almost 480,000 hectares (1,186,000 acres), or 18 percent, of all irrigated land is dedicated to dairy farming.⁴ All this is produced for essentially a luxury European suite of products: milk and various cheeses. The persistence of “thirsty” luxury foods such as dairy, stone fruits, and wine grapes in a water-poor country demonstrates the cultural persistence of maintaining a largely European foodscape in Australia.

While in southern Australia farmers were able to find or create suitable climates for European-style agriculture, the subtropical weather is more suited to traditional Southeast Asian fare and farming techniques. Early farmers persisted with largely European crops, limiting their initial range north and their success. However, two crops in the subtropics stood out as appropriate for the Australian domestic and export markets: sugarcane and bananas. Their consumption as part of a European food pattern was either well established or, in the case of bananas, rapidly becoming so. Even with these notable exceptions there is no doubt that the short heritage of Australian settlement shaped the Australian landscape into a European-styled foodscape. This development in the face of a very non-European environment and climatic conditions is a testament to the strength and creative adaptation of the tastemakers of colonial Australia. The notion of an Australian-shaped landscape, as opposed to one of wild native food, is central to Australian notions about eating “Australian,” and therefore the maintenance of the existing local foodscape is central to notions of Australian cuisine.

Cooking

Many Australian critics have called what Australians did with this largely industrial and commodity-based

foodscape “uninspiring.” In her study of colonial Australian cookbooks, Barbara Santich noted that while Australian cookbooks adapted recipes to Australian conditions and native foodstuffs, they were still based on techniques from the home country, so much so that even the few bush foods used were incorporated into English recipes and not constructed as native cuisine.⁵ According to Symons, this British cuisine translated into roughly a meal starting with soup, followed by a centerpiece of meat and two vegetables, and ending with a pudding, pie, or cake dessert until well into the 1950s.⁶ Further research by Deborah Lupton suggests that this meal pattern persists in rural Australia even today.⁷ Pork pies, lamb roasts, puddings, and sponge cakes are all familiar hallmarks shared with British cuisine. In addition, a few distinctly Australian dishes from the period are still widely enjoyed today, such as damper, a yeastless bread made over a campfire; pavlova, a meringue-based dessert; Lamingtons, small sponge cakes coated with chocolate and coconut; and ANZAC biscuits, hard sweet oatmeal biscuits (i.e., cookies) designed to store and ship well in packages.⁸ There are also some Australian dishes such as the carpetbag steak (steak stuffed with oysters) and the kangaroo steamer (steamed kangaroo meat) that have fallen out of fashion.⁹ Overall, the food industry and the cuisines promoted in cookbooks and periodicals during the first half of the 20th century emphasized adaptation to British fare with necessary concessions to the hotter climate of the continent. By the 1950s there was not yet a great divergence from British cuisine just as there was no great divergence from British culture.

Carpetbag Steak

Carpetbag steaks were last popular in Australia in the 1950s, but they are making a comeback as an authentic Australian creation and a dish that takes advantage of Australia’s high-quality beef and seafood. The following recipe is per person.

1 thick scotch fillet (rib eye) steak
3–4 fresh shucked oysters

1 tsp Worcestershire sauce

Salt and pepper to taste

Butter to taste

Cut a pocket along the side of the steak about $\frac{3}{4}$ of the way into the steak. Season the fresh oysters with the Worcestershire sauce, salt, and pepper. Stuff the seasoned oysters into the steak, and secure with skewers or toothpicks that have been soaked in water. Grill the steak on a barbecue, basting with the butter, to each individual’s preferences and serve.

In the mid-20th century, Australia began to contend with its geographic position as part of Asia but also as a continent with unique weather patterns and soil. This was coupled with the dismantling of policies designed to keep Australia “British” in a backhanded recognition that it was in fact not British. With the ending of World War II, Australia began once again to take in large numbers of migrants. While most of them were European, a significant number of them were not British but rather from Italian, Greek, and other southern European communities with their own entrenched ideas about what constituted a good meal. In his oral history *Wogfood*, John Newton details the challenges Mediterranean migrants faced in a new Mediterranean climate with a British food heritage.¹⁰ He details the initial resistance and even racism associated with introducing elements of a new (and climatically appropriate) cuisine to predominantly British Australia. Thankfully, the new migrants persisted and contributed to the agricultural landscape and skills as well as the cuisine. Italian, Greek, and other Mediterranean produce and cuisines are ubiquitous in modern Australia. In fact, a perusal of current menus suggests that the prestige of Italian food, dish names, and techniques largely surpasses that of the traditional French high-brow influence in Australian restaurants inherited from the English.¹¹

In the 1970s the Whitlam government began to officially dismantle the White Australia policy of immigration and assimilation in favor of an official

policy of multiculturalism, which included a large intake of Southeast Asian migrants.¹² This had a tremendous impact on Australian cuisine and supplied Australia with new opportunities to adapt, adopt, and mould Australian cuisine from the enduring British food legacy. According to Cherry Ripe in *Goodbye Culinary Cringe*, these changes were coupled with an increase in acceptance and exploration of international cuisine as Australians started to travel and embrace their geographic location.¹³ Furthermore, improved supply chains resulting from increased traffic with Asia and technological improvements in storage and transport have consistently brought more of the world's food products to Australia, allowing Australians to take culinary advantage of changes in political attitudes.

Since the 1970s Australians have done nothing but add to the variety in their shopping baskets. The post-World War II European migrants moved out of their home kitchens and into restaurants and cookbook production. With the opening of Australia's doors to Asian migration and travel, an influx of migrants enhanced the small but firmly entrenched Chinese community established during the 19th-century gold rush. Chinese Australian fusion cuisine, found even in small country towns, has been augmented by more ethnically accurate Chinese food. Indian cuisine can be increasingly found outside metropolitan areas, and the sophistication of urban Indian restaurants is rising as customers want to know "What *kind* of Indian food, from *where*?" As Australians have made Bali and Thailand tropical holiday destinations, a plethora of Indonesian, Malaysian, and Thai restaurants, cooking classes, and cookbooks have found success with Australian palates. *Nasi goreng* (Indonesian fried rice), laksa soups, and the jungle curries of northern Thailand are all at home on Australian urban eat streets and increasingly in the kitchens of middle-class Anglo-Australians, where you will also find a full set of family chopsticks in the cutlery drawer. Some of this variety has been driven by the natural impulses that drive all urban centers. These globalizing trends influence Australia more than other countries as over three-quarters of the

population lives in urban areas.¹⁴ Urbanity may set the pace of innovation and acceptance of culinary multiculturalism in all countries, but it also largely defines the Australian population.

The cuisines of new Asian migrants still face some challenges. Not only is the foodscape still firmly established as European, but the geography, climate, and sparse population often hinder the availability of the required primary produce. While Australians might crave jungle curries, Vietnamese cold rolls, and other delicacies and they might be able to find newly migrated Australians to teach them how to construct these dishes, they cannot always find the *pac chi farang* and mint varieties needed to recreate them. Australian farmers have at long last started to grow subtropical Asian fruits and vegetables in the environmentally appropriate north and to expand the production of an Asian food base throughout Australia.¹⁵ While many of these enterprises have Asian export markets in their sights, they also increasingly supply the domestic markets in specialty shops and sections alongside heritage tomatoes and specialty cheeses.

Though the variety of foods grown in the countryside is increasing, the food still has to get into the city. In many places the near duopoly of the two major grocery chains, Coles and Woolworths, hampers access to new and local foodstuffs due to their national supply-chain policies. However, most Australian cities have retained a market somewhere in the city limits. These markets, such as the Queen Victoria Markets in Melbourne, Paddy's Haymarket in Sydney, and the Central Markets in Adelaide, still cater to small stallholders and maintain a mix of primary produce, butcher, and *provodore* stalls (grocery purveyors). Though far from genuine farmers' markets, they provide an outlet for niche ingredients and imported specialties and a rallying point for food exploration. In addition, since the 1990s many outlying periurban areas have developed genuine farmers' markets aimed at increasing the variety of foodstuffs available to the public. For the most part these markets cater to urban or periurban customers who value the surrounding countryside and ideas about fresh, local, and pampered healthy food that they associate with it.

Typical Meals

Today, Australian kitchens are constructed along the same general lines as most modern European-influenced kitchens found all over the world. The kitchen will typically also contain cookbooks and magazines reflecting both Australian and ethnic foods. While many Australian cooks learned how to cook from their mothers, they are also aware of the explosion of culinary possibilities that were not contemplated a generation ago. The Australian media promote the contemplation of Australian cuisine. Cooking shows have been avidly watched for at least 40 years; a variety of Australian food magazines such as *Delicious*, *Epicure*, *Food and Wine*, *Gourmet Traveller*, and *Sumptuous* enjoy a wide readership; and there has been an explosion in Australian cooking books over the past 20 years. Alongside the expected set of pots and pans, Australian cooks are also familiar with woks, *tagines*, bamboo steamers, and a multitude of other cooking implements gathered from cuisines around the world. The refrigerator tends to privilege fresh over frozen foods, and most Australians shop weekly for their produce. The pantry will have a wide variety of spices and spice mixes gathered in attempts to master various dishes, but it will also inevitably contain some Australian staple favorites: vegemite, a yeast-based salty spread for toast; Milo, a chocolate powder for milk; and some variety of Arnott's biscuits (cookies) to serve with tea or coffee when guests arrive. If guests are very lucky, they might even be treated to a Tim Tam, an iconic chocolate-covered layered biscuit (again, a kind of cookie).

With both parents working in many families, the idealized Australian family meal is less of a common reality than in times past. While breakfast and lunch can be eaten on the run, out with friends, or as the increasingly popular “deskfast” (the meal you eat at your desk while working), dinner is at least discussed as something nuclear families should strive to have together. The patterns for such a meal are rooted in the old British ideal of a first course of soup, a second course of a meat centerpiece with two cooked vegetables, and a third course of pudding (the Australian sticky date pudding if you are

lucky) or cake for dessert. While most Anglo-Australians would agree that this is a “proper” meal achievable only on occasional Saturday or Sunday nights, actual main meals are much more varied. To save time, most are served as single plates and take advantage of the faster preparation and cooking times of pasta dishes, stir-fries, and curries. Anything that fits within a family's time constraints can be found on the dining room table without a set pattern of consciously borrowed cuisines.

Even with the variety in Australian cooking, there are elements of rigid structure. For example, nearly every household in Australia has, effectively, a second kitchen. At a minimum it consists of an old brick incinerator retrofitted with a grill, a rickety table next to it, and an *esky* (a cooler) to keep the beer and sausages cold. At best, a quick perusal of backyard-renovation shows reveals that the ideal “other kitchen” is just off the back porch, complete with the latest gas barbecue, a spit for a leg of lamb, and a wok burner installed next to an outdoor sink and an electric bar fridge. This is an Australian man's kitchen, and while the women of the household can contribute salads and the occasional marinade, any woman found outdoors publicly cooking with fire leaves herself open to criticism and often replacement at the grill. Australian cookbooks, magazines, and advertising consistently discuss how men can improve their barbecuing techniques, such as selecting cuts of meat, better-quality sausages, and better cooking techniques as well as beer matching. These discussions are often mirrored around the grill as men, beer in hand, cook meat with fire.

The Australian barbecue is perhaps the most common and formally constituted meal. At its heart, it must contain sausages, bread on which to put the sausages, fried onions and tomato sauce as accompaniments, and beer. The sausages by no means have to be of good quality or “fancy,” and the bread is expected to be sliced white bread. The meat is simply grilled and the onion fried on the hotplate of the barbecue. The beer only has to be cold. This simple and consistent barbecue formula can be found at any school fete, most voting booths, and many hardware stores on any given weekend. In backyards across Australia, the “sausage sizzle”

forms the background of more elaborate barbecues to which the attending guests might add lamb or pork chops, cuts of beef and kangaroo, and chicken for the ladies. In general, salads are communal, but guests are expected to bring their own meat and drinks and to share any surplus with the host and others. Meat is put on the barbecue in shifts, usually organized by the host or a recognized master of the grill, and people are responsible for cooking the meat they brought and distributing it if necessary. A barbecue is more a type of party with its own rules of etiquette than it is a method of cooking.

Eating Out

At the turn of the 20th century Australia had about 20,000 restaurants and 20,000 take-out and fast-food outlets.¹⁶ Australians eat one in every five meals outside their homes. This is split fairly evenly between takeout or fast food and restaurant dining.¹⁷ Eating out is ubiquitous but not yet a national pastime nor the main source of food for most Australians. When they do eat out, Australians tend to eat ethnic, as in non-British-Australian, cuisine. In a 2009 survey of 1,500 consumers, most respondents nominated their preferred restaurants as Chinese, Italian, and Thai, whereas only 13 percent of respondents named Australian or British restaurants as favorite choices.¹⁸ While much of this ethnic food has been altered to fit Western expectations for portion size, proportions of meat to starch, cuts of meats, and vegetables and variety of ingredients, the stated preference itself demonstrates not just an acceptance but a seeking of international cuisines.

Despite stated preferences, there are still places Australians nostalgically reflect on a distinctively Australian meal. Regardless of the level of high-brow sophistication in tastes, any Australian will be able to identify the best pub counter meal in their neighborhood. Australian pubs usually have restaurants, but they also serve a fairly standard menu of easy-to-prepare fast meals in the bar, commonly referred to as counter meals. Traditionally these are eaten while standing up or sitting on a stool propped against the main bar. A typical counter-meal menu includes chicken or veal schnitzels, meat

An Australian meat pie topped with a special sauce. (Shutterstock)

pies, burgers, and battered and fried fish, all served with thick fried chips and a suggestion of a green salad. Today, particularly in the cities, many pubs have become gentrified, and their menus have had a yuppie overhaul. If you scratch the surface, you can still see the great Aussie counter meal peeking through, even if you are eating Coopers ale-battered barramundi fillets with thickly sliced Tasmanian potato chips (fries) with a rocket (arugula) and pear side salad in the new beer garden of the local microbrewery.

Special Occasions

With regard to traditional British holidays, Australians have had to make many concessions to their hemisphere. Christmas is in the middle of summer in Australia. Increasingly, Santa wears board shorts, gives the reindeer a break, and is transported around by a koala and a kangaroo driving a red *ute* (truck). This makes sense to Australian children. Likewise, Australians are letting go of British traditions involving hot stoves and large baked birds in favor of an outdoor setting involving seafood and barbecues, as this makes sense to Australian cooks. The main meal of the Christmas holiday is typically a late lunch on December 25, served outside to take advantage of good weather. Cold hams; barbecued meat; crustaceans such as native lobsters,

freshwater yabbies, or Moreton bay bugs; and a ring of giant prawns (never called shrimp) are hallmarks of Christmas lunch. Several British traditions that do not involve hot stoves have also survived, such as Christmas toffee date puddings and a plethora of traditional English boiled sweets. Across Australia, the idealized Christmas meal is an extended family summer picnic.

Meals at Easter generally follow a less elaborate version of the Christmas model. However, the treatment of Easter gifts has an increasingly Australian ring to it. One challenge facing Australian parents is reconciling the Easter bunny with the status of feral rabbits as a plague on the Australian landscape, decimating populations of native animals as well as crops. An increasingly popular solution to this problem has been to substitute the chocolate Easter bunnies available throughout the Western world with a chocolate bilby, a small, rabbit-like, endangered Australian animal. Easter also entails the exchange of large chocolate eggs, where the size of the chocolate egg is what really matters. Odd for a country so in love with British boiled lollies, Easter is almost exclusively about the chocolate. Even the traditional hot cross buns are now available in chocolate chip varieties.

Australia also has its own secular holidays, and while both Australia Day and the Queen's Birthday holiday are more associated with fireworks than meals, ANZAC Day, a memorial day for war veterans on April 25, does have a meal associated with the celebrations. After gathering around flagpoles throughout the country, Australians participate in a dawn service and then retire to a local park for an outdoor community breakfast, which is usually cooked and organized as a fund-raiser for local community groups and veterans organizations. The meal is striking in that it is the only time Australians tend to break the pattern of celebrating occasions with an outdoor leisurely midafternoon lunch.

Diet and Health

At the turn of the century, 60 percent of Australians age 25 and over were overweight, and 21 percent were obese.¹⁹ Both adult and childhood obesity

continue to be a growing concern in Australia. As in most Western countries, Australians seem to be suffering from what Australian thinker and author Clive Hamilton has diagnosed as "affluenza" and the overindulgences associated with an office-bound, consumption-based lifestyle.²⁰ Whether Australians blame the influx of American fast-food chains over the last 30 years, the long heritage of a starchy, meat-filled British diet, or the abundance of homegrown meat pies and take-out fish and chip shops more suited to an earlier, more active era, they are looking for solutions among the varied cuisines around them. Almost since settlement, Australians have discussed the merits of following a Mediterranean diet in their largely Mediterranean climate, as a matter of health. These discussions continue today. Added to them are recognitions of the health benefits Asian and other cuisines have to offer. Australians are doing what they have always done to answer the perceived health crisis: They are looking across the world for solutions they can cook at home, casting off what does not fit and wrangling what does into patterns of cooking that work in a "she'll be right" functional, fast-moving, and avidly discussed Australian cuisine.

Bangladesh

Overview

The People's Republic of Bangladesh, located between Burma and India on the Bay of Bengal, has an area of 55,599 square miles (144,000 square kilometers) and a population of 142 million, making it the world's eighth-largest country in terms of population. The climate is tropical. Around 80 percent of the landmass is on the fertile alluvial lowland called the Bangladesh Plain, which receives heavy rainfalls during the monsoon season.

The territory that now constitutes Bangladesh was under the rule of various Islamic rulers, including the Moguls, from 1201 until 1757, when it passed into British rule. From then until 1947, the year in which India gained its independence from Britain, the territory was part of the Indian province of Bengal. In 1947, the region became East Pakistan, a part of the Islamic Republic of Pakistan. East Pakistan gained its independence from Pakistan in 1971 and became an independent country. The capital of Bangladesh, Dhaka, has a population of over 12 million people and is by far the largest city. The language is called Bengali.

Culturally and gastronomically, Bangladesh has much in common with the Indian state of West Bengal. The main difference is religion; whereas West Bengal is predominantly Hindu, around 85 percent of the inhabitants of Bangladesh are Muslim, 15 percent are Hindu, and 1 percent practice Buddhism or a tribal religion. Thus, most Bangladeshis follow Islamic food practices, which forbid the consumption of pork and alcohol. Only a small proportion of Bengali Hindus are vegetarian.

The country is extremely poor, with a per-capita gross domestic product of around US\$600, and is predominantly agricultural. However, the cuisine of the affluent is one of most delicious on the subcontinent. For centuries, Bengal was a province of the Mogul Empire, and the emperor's representatives, called nawabs, sought to emulate the rulers' lavish lifestyles and their sumptuous cuisine, which featured meat, cream, and aromatic spices and flavorings such as cardamom, cloves, and cinnamon. They found it unpalatable to eat rice without first frying it and perfected rich pilaus and *biryanis* (rice baked with meat and aromatic spices) laden with ghee (clarified butter) and decorated with nuts and dried fruits.

A uniquely Bangladeshi dish is *rezala*, made by slowly cooking pieces of goat or lamb with yogurt, milk, spices, and green chilies. It is often eaten with *Dhaka parota*, a large, round bread with 50 or 60 flaky layers and a crisp golden outside. Today, these dishes are mainly served at weddings and other feasts.

Rezala (White Lamb Curry)

- 2 lb goat or lamb meat, cut into 1-in. cubes
- 1 finely chopped onion
- 2 tbsp finely chopped ginger
- 1 tsp finely chopped garlic
- 3 whole green cardamom pods
- 2 2-in. pieces of cinnamon
- 2 cloves
- ½ c yogurt

1 tsp sugar
 1½ tsp salt
 ½ c ghee (clarified butter)
 Pinch of saffron, dissolved in ½ c warm milk
 5–10 green chilies (to taste), split lengthwise with the seeds removed

Combine all the ingredients in a large pot, mix well, cover, and cook on low heat for half an hour. Stir the meat well, cover again, and continue to simmer until the moisture has evaporated and the ghee has separated from the meat. Add the milk with the saffron, and pour over the meat. Add the chilies, and cook over low heat for another half hour or until the meat is tender. Serve with rice pilau.

Food Culture Snapshot

Fazrul and Aysha Chaudhry are a middle-class couple living in Dhaka. Fazrul is a civil servant, and Aysha is a housewife. They have two children, Rashid (age 12) and Amina (age 14). The family starts its day with a bowl of *cheera*, flattened rice, served with sugar, fruits, yogurt, or milk, or sometimes a bowl of Western cereal and toast. Fazrul has lunch at his office canteen, while the children have lunch at school. Around 5 P.M. the family has an afternoon cup of tea with snacks and sweets. Sometimes friends and relatives drop in to visit. Dinner is typically eaten at 9 P.M. and includes rice, dal (stewed lentils), two vegetable dishes, and a meat or fish curry.

Major Foodstuffs

The main crop of Bangladesh is rice, and it is the staple of the diet. Instead of asking “Have you had lunch (or dinner)?” a Bengali speaker asks, “Bhat kheiicho?” (Have you eaten rice?). The development of new hybrids under the green revolution greatly increased rice production in Bangladesh. Average annual consumption is around 350 pounds (175 kilograms) per person. Most rice is parboiled before use. The most common way of preparing rice at home is by boiling it in water with no added flavoring, a preparation called *bhat*. On more important

occasions, rice is fried in ghee and cooked with spices, nuts, meat, and vegetables. The second dietary staple is wheat, which is grown in the western parts of the country. Consumption averages about 46 pounds (21 kilograms) per person. Wheat is ground into flour and made into breads.

The rich soil of Bangladesh produces a multitude of edible plants. Vegetables include eggplant, cabbage, cauliflower, beans, many kinds of gourds and squash, chilies, okra, amaranth, sweet potatoes, spinach, carrots, plantains, onions, radishes, and water lilies. All parts of the plant are eaten, including the leaves, roots, stems, flowers, and stalks. Potatoes, grown in the winter, account for more than 55 percent of all vegetable production and are widely eaten as a vegetable rather than a staple. Bangladeshis are said to be the world’s second-largest potato eaters after the Irish. Sugarcane is widely cultivated and consumed.

Unlike in India, where lentils are a dietary staple, Bangladeshis eat relatively small amounts of lentils, about 9 pounds (4 kilograms) per person per year, compared with about 25 pounds (11 kilograms) in India. One reason may be the lower incidence of vegetarianism and the availability of protein in fish. The most commonly eaten lentils are *masur dal*, or red lentils.

Bangladesh abounds with a large variety of tropical and subtropical fruits. The most widely cultivated are mangoes, jackfruit, pineapple, bananas, lychee, citrus fruits, guavas, papayas, custard apples, sapodillas, coconuts, tamarinds, melons, watermelons, pomegranates, palmyras (a relative of the coconut whose small fruits are gelatinous when immature), plums, rose apples, and Indian jujubes (something like a date). Many fruits with no equivalents in the West grow wild in the jungle, among them the *latkan*, monkey jack, durian, rattan, river ebony, *garcinia*, water coconut, and wild date palm.

An important source of protein is fish, which is abundant in rivers, canals, floodplains, ponds, and lakes and in the Bay of Bengal. Both West Bengal and Bangladeshis are famous for their love of fish: According to a proverb, *maacher bhate bangali*, which means “Bengali = fish + rice.” Bangladeshis consume an average of about 25 pounds

Exotic fruits and vegetables on display at a market in Bangladesh. (iStockPhoto)

(11 kilograms) a year of seafood and 20 pounds (9 kilograms) of freshwater fish. Sea fish are generally considered less desirable than freshwater fish, especially those caught in rivers. Exceptions are pomfret and *bekti* (a delicate codlike fish), shrimp, and prawns. The most highly prized fish is *hilsa*, the national fish of Bangladesh. Related to the shad, it is a sea fish that swims upriver to spawn. It is very oily and bony and must be eaten with great care, using one's fingers. Other popular fish are *rui* (buffalo) and *magur* (catfish), which are pond dwellers; *koi*; "the climbing perch"; *chital* (featherback fish); groupers; croakers; and grey mullet. Dried fish is eaten mainly in coastal regions.

Because meat is expensive, consumption is very low (about 8 pounds, or 3.5 kilograms per year); meat is eaten by most Bangladeshis only on special occasions. The most common meats are beef, water buffalo, goat, and chicken. The establishment of large poultry farms has increased the availability of chickens and eggs.

Dairy products are an important source of protein. Around two-thirds of all the milk consumed in Bangladesh comes from goats, which are raised by the rural poor, especially women. Yogurt (*dahi*) is widely used as a marinade for meat, served as a side dish, or churned to produce butter. Cow milk and sugar are the main ingredients in Bangladeshi sweets.

Bangladesh is a major producer and exporter of chilies. Other spices grown in the country are ginger, garlic, turmeric, red pepper, and coriander.

Cooking

Kitchens in Bangladesh are simple by Western standards. Most cooking is done on top of a simple burner. The traditional stove is a small clay oven with a hole for inserting fuel and knobs on the top to hold the pot. Traditional fuels are charcoal, twigs, and dried cow patties. Today, middle-class households use a small cooktop with two burners fueled by bottled gas (propane). Sautéing and deep-frying are done in a wok-shaped pot made of stainless steel or cast iron, called a *karai*. A heavy, flat iron griddle with a wooden handle, called a *tawa*, is used for roasting spices and sautéing breads.

Spices can be dry-roasted and ground into a powder. Powdered or whole spices may be sautéed and added to a dish at the end of the cooking process to add flavor. For vegetables and dals, Bangladeshis use a spice mixture called *panch phoron* (five spices), a mixture of equal parts of fennel seed, *radhuni* (also known as celery seeds), nigella (*N. sativa*, sometimes called black cumin or onion seed), fenugreek, and cumin seeds. *Panch phoron* is typically added at the end of the cooking by frying it in oil or ghee and adding it to the dish. Spices can also be ground into a wet paste with onions, garlic, ginger, yogurt, coconut milk, or some other liquid that serves as the basis of a gravy, especially for meat dishes.

Pickling, an ancient technique, is essential in a country with a hot climate. It is a way of preserving fruits, vegetables, meat, or fish by impregnating them with acid, which discourages the growth of most microbes. In the coastal regions of Bangladesh, drying fish or salting them and sealing them in earthenware pots is a common practice.

Typical Meals

People in rural areas often start the day with *panta bhat*, boiled rice that is soaked overnight in water so that it becomes slightly fermented and is then mixed with salt and chilies. Other breakfast staples are

moori (puffed rice), *cheera* (flattened rice), and *khoi* (popped rice), eaten with milk or yogurt and seasonal fruits. Middle-class city dwellers may have a breakfast of Western-style cereal or toast and eggs.

Traditionally, lunch was the main meal of the day, taken between 1 and 2 P.M. Before the days of outside employment, the entire family ate together, but today the breadwinner eats outside the home. A typical lunch centers around rice, supplemented by dal, vegetables, and, for those who can afford it, fish. Vegetable preparations include *bhorta* (boiled vegetables mashed and flavored with mustard oil and spices) and *bhati* (sautéed or fried vegetables). Fish can be fried; simmered in a thin, watery gravy (*jhol*); cooked with large amounts of onions (*dopijaji*); fried crisp; or made into a spicy chili-flavored dish called a *jhal*. Sweet chutneys, made from mango or tomatoes, and hot and sour pickles are standard accompaniments.

Because it is expensive, meat is not a common everyday dish even among the affluent. Meat is often eaten with a bread called *lucchhis*, made with a dough of white flour, oil, and water that is rolled into disks that are then deep-fried until they puff into spheres. A meal ends with yogurt, either plain or sweetened with sugar.

Throughout the Indian Subcontinent people take an afternoon meal called tea, and the Bangladeshis are no exception. Taken around 5 P.M., this consists of cups of black tea served with salty snacks and sweets. Sweets are one of the glories of Bengali/Bangladeshi cuisine and are distributed to friends and families on the occasion of births, engagements, weddings, success in examinations, and religious festivals. A traditional homemade sweet is *pantua*, deep-fried sausage-shaped rolls made of semolina, milk, ghee, and sugar syrup. Today, most people purchase sweets from sweet shops, some of them dating back to the 19th century. Bengali sweets are typically made from *chhanna*—the curd produced by separating milk with a sour substance (a technique that may have been introduced by the Portuguese in the 16th century). It is heated with sugar and ghee and flavored with cardamom powder, rose water, nuts, or orange rind. The apogee of the Bengali sweetmaker's art is *sandesh*, small fudge-like

A selection of traditional Bengali sweets, including jamun and mawa. (iStockPhoto)

delicacies made by pressing the dough into pretty molds shaped like flowers, fruits, or shells. There are more than 100 varieties of sandesh, with poetic names such as *pranahara* (losing one's heart), which is a specialty of Dhaka. Dinner is typically eaten very late, around 9 P.M. or even later, and is a smaller version of lunch. The standard drink taken with meals is water.

The meals of Hindu Bangladeshis are similar. One difference is that a meal typically begins with a bitter dish, such as *shukto*, made with diced bitter gourd, white radish, potatoes, beans, and other vegetables.

Eating Out

The subcontinent did not have a restaurant culture in the past; eating meals outside the house was a necessity rather than a luxury or source of pleasure.

However, from ancient times people bought savory items from stalls and street vendors, including *shingara* (deep-fried pastry shells filled with vegetables or meat), kebabs, curries, and salty snacks. Today, in Dhaka and other large towns, restaurants serve Thai, Italian, and Chinese food as well as American-style burgers and sandwiches. Sweet shops are ubiquitous in Bangladeshi towns, many serving local specialties.

Special Occasions

Meat is central to the feasts and festivals of Muslim Bangladeshis. The most important holiday is Eid al-Fitr, which ends the fasting month of Ramadan. Goats or cows are sacrificed, and elaborate dishes are prepared and served to friends and family and to the poor.

Hindu Bangladeshis celebrate Durga Puja in the autumn by building statues of the goddess. On the final day, Bijoya Dashami, people visit each other and bring sweets, including sandesh, *rosgollas* (cheese dumplings in syrup), *pantua*, *patishapta* (sweet stuffed crepes), and *malpoas* (fritters in syrup).

Malpoa

3 c sugar, divided

2 c water

1 c flour

$\frac{3}{4}$ c milk

1 tsp fennel or anise seeds

1 c clarified butter or vegetable oil

Make a thin syrup with 2 cups sugar and the water. Set aside.

Mix the flour and remaining sugar, and then add the milk to make a smooth, thick batter. Add the fennel.

Heat the ghee or oil in a shallow pan, and pour 1 tablespoon of batter into the fat. Fry on both sides until brown. Remove with a slotted spoon, and dip into the syrup.

Chill and serve cold.

All communities celebrate the harvesting of new rice at community festivals. Typical dishes include *payesh*, a rice pudding made with *gur* (a gritty brown sugar made by boiling down sugarcane juice); a potato dish called *alur dam* with lucchhis; a dal made with yellow split peas and coconut; and sweets.

Bangladeshi weddings are lavish affairs to which hundreds or even thousands of guests are invited. The wedding banquet features as many meat dishes as the bride's family can afford. Traditionally it includes at least one biryani, *kormalqorma* (meat cooked in a fragrant yogurt gravy), *rezala* (meat slow-cooked in a piquant white gravy), Dhaka *parota*, *navrattan* (mixed vegetables), *shami* kebab (patties made of ground meat and chickpeas), fish curry or fried fish, yogurt and cucumber salad, bread, and many desserts, including rice pudding (*kheer*) in clay pots, *gulab jaman* (chhanna balls in a sugar syrup), *ras malai* (chhanna balls in a cream sauce), wedding cake, and tea.

Diet and Health

In addition to Western medicine, the traditional Ayurvedic and Unani systems are widely practiced in Bangladesh, especially at the primary health care level. An estimated 70 to 75 percent of people in the country still use traditional medicine to manage their health problems.

Ayurveda, the ancient Indian school of medicine, had its roots in the region. Ayurveda is holistic: It treats the entire individual, including one's mental, emotional, and physical makeup, not just the symptoms. Ayurveda also strongly emphasizes the link between health and diet. The goal of eating is to increase desirable qualities, reduce negative qualities, and introduce previously absent qualities.

Unani, the Muslim system of medicine, is offered by 4,000 qualified and professionally trained physicians, called *hakims*. Unani medicine is based on the humoral theory of Greek medicine, which assumes the presence of four humors in the body: blood, phlegm, yellow bile, and black bile. Every person is born with a unique humoral constitution, which represents his healthy state and determines his personality. When the amounts of the humors

are changed and thrown out of balance with each other, it leads to disease. Restoring the quality and balance of humors is the goal of treatment, and diet plays a role in this. Certain foods are prescribed for certain ailments.

Brunei

Overview

A tiny jewel perched on the tip of Sarawak, Brunei became a force to contend with when oil was discovered around 1929. From ancient times it has always been regarded as one of the more progressive countries in the area, much spoken about by seafarers and sought after by colonials including Spain and Portugal, especially during the golden age of Sultan Bolkiah, head of the longest-running hereditary monarchy in the world, when Brunei ruled all of Sumatra, Borneo, and the southern islands of the Philippines. Brunei then stood alone as a proud monarchy. Only through James Brooke's subtle approach as Raja Brooke of Sarawak were the British colonials able to force a series of treaties on the royal house that, in typical colonial maneuvers, left Brunei as it stands today: two elongated slivers of land separated by a tract of Sarawak.

The present Sultan Haji Hassanal Bolkiah, a graduate of the Sandhurst military academy with close ties to British royalty, rules the country with absolute power and has kept the peace as his father did, while laying the foundations for independent rule from the British. The sultan is simultaneously ruler, prime minister, and minister for defense in a country that stresses the importance of Malay culture, Islam, and the monarchy in Darussalam, which means "Abode of Peace."

Of the population of 389,000, 68 percent are Brunei-Muslim, practicing a brand of Islamic fundamentalism. There is no income tax for anyone, including the 29 percent Chinese and 3 percent expatriates working in government and in the private

sector, who enjoy generous pensions with many handouts from the government such as free overseas education, lifetime guaranteed jobs, and occasional cash bonuses when oil prices soar. Islam plays an overall decisive role in the country, today more than ever before.

Food Culture Snapshot

Mohamed Shafar and Noor Azna are a middle-class couple living in a government-subsidized townhouse in a suburb close to Bandar Sari Begawan, or BSB. Shafar, a teacher of information technology, and Azna, a dental nurse, both work in the city. They are saving for a deposit for a house of their own. As government employees they have the added advantage of interest-free loans.

After the 5 A.M. call to prayer, breakfast is a meal of toast and fried eggs splashed with some soy sauce, washed down with black coffee. Shafar and Azna travel together to work and on the way pick up a light lunch of rice or noodles from hawker stalls close to Shafar's office. Today it is a banana leaf-wrapped packet of *nasi lemak*, coconut rice with spiced whitebait *ikan bilis* sambal (a sauce made of the tiny fish) and slices of fresh cucumber. Azna prefers a simple *gado-gado*, a fresh vegetable salad with crisp pineapple, cucumber, and tofu cubes drizzled with a light peanut sauce.

Dinner is curried fish, tofu served with a spicy shrimp paste (*belacan*) sauce, and a stir-fry of mixed vegetables, served after evening prayers at about 7:30 P.M. Dinner plates are set on batik placemats with glasses of water on the side. There is no cutlery

except for the serving spoons at each dish. While dining privately at home, people eat with their fingers or with chopsticks.

Major Foodstuffs

Although Brunei is self-sufficient in poultry and egg production, Chinese greens, and some seafood, almost 80 percent of Brunei's food is imported from Malaysia and Indonesia. Australia and the United States supply frozen and fresh halal beef and lamb, as well as most other goods including fresh ultra-pasteurized milk in cartons and canned evaporated milk.

Pork, deemed *haram* (forbidden) for the Muslim market, is imported for the non-Muslims as pig rearing is banned here. Pork is clearly labeled and separated from halal meats in local markets and supermarkets with cold-storage facilities. The sale of alcohol is banned, although expatriates and non-Muslim residents are allowed restricted amounts when entering Brunei. Duty-free liquor is available on Labuan Island, Malaysia, a short boat ride from the capital, BSB.

A broad variety of foods is available to cater for the varied peoples living here. Food is available from the less expensive wet markets, where water is sprayed regularly to keep greens fresh for daily shoppers. Malay vegetable stalls specialize in fern shoots, small-leaved greens, lotus stems, spinach, varieties of sweet potatoes, and local herbs, especially the Vietnamese mint, galangal (*lengkuas*), lemongrass (*serai*), pink torch ginger (*bunga kantan*), kafir lime leaves called *daun limau perut*, sweet potato leaves, various types of basil, banana flowers, the aromatic *pandan* (pandanus) leaf, and stacks of banana leaves, the aluminum foil of the East, used for wrapping and cooking. Shrimp paste is sold in cakes and packed in banana leaves to keep it fresh.

Asian greens are plentiful: Chinese bok choy, *kailan* (Chinese broccoli) and *kang kong* (water convolvulus), long beans, green golf ball-sized eggplants, and green bitter melons are popular, as are garlic chives, onions, garlic, and spring onions. Here tofu products are also found, close to salted radishes,

Nasi lemak, the most popular food in Brunei that can be served during breakfast, lunch, dinner, and as a snack. (Hooelse | Dreamstime.com)

fresh bean sprouts, and noodles, including broad flat rice noodles and yellow wheat noodles. Coconut halves are freshly grated and pressed into coconut milk that is sold in plastic bags, where in a few minutes the heavier cream separates from the milky fluid.

During the April fruit season, a mad profusion of exotic fruits are available: The strong smelling durians, mangosteens, green and yellow mangoes, pomelo and other citrus, watermelons, longans, and rambutans will satisfy every palate. On the main roads, seasonal stalls are piled high with rambutans, durians, and mangosteens to attract the shoppers in passing traffic. These fruits have short shelf lives and have to be disposed of quickly.

Seafood is the preferred protein, eaten at least three times a week. At the fishmongers, customers find snapper, mackerel, small red-spotted whiting, black and white pomfret, *kembong*, anchovies dried into ikan bilis, and shoals of prawns sitting amid shaved ice next to crates of blue swimmers and live mud crabs.

A halal section with meat on hooks and fresh poultry is slightly less expensive than the chilled meats at the cold-storage supermarkets. Spice stores specialize in curry powders and pastes, tamarinds, and dried prawns as well as flours—local sago flour from the sago-palm core and glutinous rice, wheat, and tapioca flours—and wines, cooking oils, and Chinese vinegars.

Cooking

The food eaten in Brunei is similar to the food of Malaysia as the inhabitants of these places are basically the same people eating a blend of food influenced by Indian and Chinese traders who traveled through from the 11th century on and who married their styles with local herbs and Malay cooking using woks brought with them. Although the food is intricate to prepare, the kitchens are basic, with cupboards for storage and counters. A gas burner with two or three rings, a coconut scraper stool with a protruding goose-necked scraper with prongs for scraping coconut halves, and a granite mortar and pestle for grinding herbs seem sufficient. A sharp Chinese cleaver tackles the slicing and chopping, done on a large chopping board from a tree trunk. Garlic, onions, and chilies are dry-roasted and then pounded before being added to meat and fish. Vegetables are stir-fried, sautéed, or stewed in soups or sometimes mashed into pureed sambals with chili, ginger, and garlic. Tamarind sours a curry without any tartness, and tofu is used by Chinese and Malays especially as its health-promoting properties are known and respected.

Malay cooking is spicy, reflecting Indian and Arab styles with tasty sambals, curries, and elaborate rice, meat, and vegetable dishes with a Mogul bent, while Chinese meals are sauce based. Various methods of cooking are used: stir-frying, stewing,

steaming, and boiling. There are few salad dishes. Rice or noodles forms the main meal, and these are eaten twice, even three times a day, with a small quantity of meat or fish, which is sliced thinly and tossed with vegetables or served on its own.

Typical Meals

Meals are eaten with the fingers of the right hand, managed by pinching off pieces of fish or meat and mixing them with some curry sauce, some vegetables, and a small amount of rice. The thumb acts as a shovel. The palm of the hand should remain clean. Everything is sliced into small pieces for holding small portions for eating.

Bruneians are used to eating smaller portions of meat or fish cooked with vegetables. In most of Asia, the main carbohydrate (in this case, rice) is served on a dining table along with three or more vegetable dishes. Etiquette decrees that one never takes a second helping unless invited by the hostess.

Typical meals may be fried rice cooked with fresh prawns and Chinese vegetables with a chili stir-fry base or rice noodles called *mee-hoon*, chock-full of dried prawns, mushrooms, and leafy greens. Tofu or tempeh (fermented soybeans) is often added for texture. Chicken rice steamed in chicken stock is served with a sweet chili sauce. Indian roti with a soupy lentil and vegetable curry is commonly served at lunchtime. Malay dishes are stronger flavored with lemongrass, galangal, and chili. A good example is the *laksa*, a soupy curried coconut soup flavored with lemongrass, galangal, and chili. In contrast, Chinese meals are less spicy. Steamed prawns and fish with slivers of ginger are popular, as well as chicken wings steeped in wine, beef slivers cooked in a black bean sauce, and *yong tofu* (tofu puffs stuffed with fish paste served in a rich brothy soup).

Malay festive dishes include slow-cooked beef *rendang* cooked in 12 spices. Fried fish and prawn sambals are served in spicy sauces. Chicken *satay* (strips of meat on a skewer) is typical of the region. When entertaining guests, noodle dishes are served in Chinese bowls with chopsticks, but when a rice meal is served, forks and spoons are laid with paper

napkins. Knives, traditionally considered a sign of aggression, are never placed on the table.

Prawn Sambal

- 2 lemongrass bulbs, finely chopped
- 4 cloves garlic, finely chopped
- 2 red onions (to yield 1 c chopped)
- 1 tbsp dried prawns, soaked in hot water
- 1 tbsp chili paste or Indonesian *sambal oelek*
- ¼ c vegetable oil
- 1½ c coconut milk
- 1 lb peeled green shrimp
- Salt, sugar, and fresh lime juice to taste
- Garnish of cilantro leaves

Collect all the chopped ingredients, and pound roughly in a mortar and pestle with the dried prawns and the chili paste.

Heat the oil in a wok, and add the blended mixture. Stir until the aromas are fragrant and to prevent sticking at the bottom of wok. Add the coconut milk, mix, and simmer to reduce mixture to a thick pouring consistency, then add the shrimp and allow to cook for 3 to 4 minutes until shrimp turn pink. Season with salt, sugar, and fresh lime juice, and garnish with cilantro leaves.

Eating Out

Restaurants attached to the hotel chains serve high-quality halal meals and a tantalizing mix of local and foreign steaks and pasta dishes everywhere. Malay and Chinese restaurants and coffeehouses are available for those who want to enjoy a meal cooked outside the home. Asians prefer to eat at small stalls and take-out cafés that serve a variety of cuisines. They are normally found in the busy parts of the city. Often a family with pajama-clad children in tow can be seen at a late-night market, enjoying a “past-bedtime” bowl of piping hot fish congee (rice porridge). It is also possible to sample Brunei’s official dish, the *ambuyat*, a starchy sago flour boiled into a thick pasty mush, eaten with a

two-pronged bamboo sticks called *chanda* and accompanied with many spicy sambal dips to flavor the pottage.

People snack at any time of day, buying from many portable stalls that move to serve commuting office workers throughout the day. Here, cakes and noodles are available 24/7, and even a unique version of cappuccino: coffee *kopi tarik*, sweetened with condensed milk, then frothed by pouring from a distance. This is served in a plastic bag threaded through with the ubiquitous pink raffia as a handle.

Special Occasions

Ramadan is the most important Muslim festival. It is a month of fasting, the end of which (Eid al-Fitr) is celebrated with a general open-house invitation to friends and colleagues, who come to pay their respects to the family. Clothed in their best, Muslim families in silken *kain songket* cloth sarongs and batik shirts invite their guests to a heavily laden buffet table laden with celebratory food including rendang, saffron or biryani rice, and glutinous rice coconut cakes. No alcohol is served, but fresh lime barley or commercial fizzy drinks like Coke or orange crush are an acceptable alternative to tea.

Children greet their elders by bowing low, hands held to their hearts, addressing them as aunt or uncle, a custom that defers to elders in the community. To call an adult by his common name would be an unpardonable offence. Shoes are left on the doorstep Brunei-style, where one can be fully dressed without shoes.

Chinese New Year, celebrated similarly by Chinese the world over, begins with a New Year’s Eve dinner where ancestors are remembered and “lucky” dishes—including prawns for happiness and fish with black moss fungus—portend good luck for the New Year. Firecrackers are lit to dispel bad luck, and children receive lucky red packets of money.

Diet and Health

The spices and herbs used in Brunei, Malaysia, and Indonesia have been used for centuries for their health-giving properties, long before people started using them in cooking. Spices like turmeric,

cinnamon, ginger juice, the Asian pennywort or *gotu kola*, and asafetida are now being seriously researched to determine their healing properties as the locals have used them for centuries with positive results. Brunei is also a well-informed country, where health authorities remind the people of health issues, such as the dangers of the cholesterol in coconut milk, and encourage active exercise classes. In BSB, the capital city, many gymnasiums offer affordable exercise classes to encourage the younger office workers to keep trim. Brunei has its fair share of joggers and Hash House Harriers, as in any part of the world, but unless the sedentary lifestyle gets to them, balanced meals with large helpings of vegetables will continue to be advantageous to health.

Cambodia

Overview

Cambodia shares many culinary traditions with the neighboring countries of Thailand, Laos, Vietnam, and Indonesia. This reflects the power of the Khmer Empire in the 9th to 15th centuries, spreading the influence of this Indianized kingdom beyond the borders of present-day Cambodia. The royal tradition of palace food centered in the temple complex of Angkor Wat had a profound influence on Thai palace food. Thai and Khmer palace cooking share the elaborate flavoring pastes based on herbs and spices that enrich their curries, soups, and stews. Cambodian dishes are likely to contain more aromatic spices such as cardamom, star anise, cloves, and nutmeg, common in the islands, along with lemongrass, ginger, galangal, coriander, and wild lime leaves. Most dishes make less use of the fiery hot chilies that dominate Thai cooking.

The Khmer in Cambodia make up about 90 percent of the population. Theravada Buddhism is the dominant religion in Cambodia, although in the war years under the Khmer Rouge, religious practice was forbidden and culinary skills all but disappeared, as the country faced a constant state of near starvation.

The Mekong River and its delta in southern Vietnam is the longest river in Southeast Asia, forming boundaries and bounty for communities living in southern China, Thailand, the Lao People's Democratic Republic, Cambodia, and Vietnam. The Mekong and its tributaries create rich alluvial soils ideally suited for wet-rice agriculture. The Khmer built their earliest civilizations around the Mekong River and the freshwater lake, Tonle Sap. The great

Tonle Sap represents the largest reserve of freshwater fish in the world in the rainy season. This is reflected in the fish dishes that accompany most Cambodian meals today.

Food Culture Snapshot

Nary and Chayim owned a rice mill in the town of Siem Riep, near the famous site of Angkor Wat. As successful entrepreneurs of Chinese and Cambodian ancestry, they had made a comfortable life for themselves and their four grown children. Their rice for daily meals came from their own land, worked by their children's families. The daughters knew how to make the side dishes of grilled fish, soups, and stir-fried vegetables they consumed from ingredients grown on their own land. In the 1960s and early 1970s, they would drive into Phnom Penh several times a year to visit the family of Nary's brother, who worked for the government in the diplomatic corps. When he was not overseas, he set a European table and had his wife and servant prepare French dishes for his dinner every night, including French bread and French wine with his meals. Nary enjoyed these occasional meals, but Chayim missed the richly flavored fish curries his family prepared at home.

After 1975, when the Khmer Rouge took over the country, Nary's brother and his family were executed, and Chayim disappeared. Nary and her children were separated and sent to work camps, where they barely survived; somehow, they survived the starvation rations and heavy workload. Eating only a few grains of rice and insects, Nary made it through the war years and now lives in a more modest style in her daughter's

home in a village near Siem Riep. Here, she teaches her grandchildren how to make the dishes she remembers from her childhood—grilled fish, soups delicately flavored with lemongrass, and steamed cakes.

Major Foodstuffs

Cambodians prefer long-grain nonglutinous rice as their main staple. Rituals accompany the skilled technical practices of rice production, ritual work that must be accomplished for a good harvest. These important rice rituals were probably established to support the complex irrigation systems that flourished during the powerful Khmer Empire. Irrigated wet rice varieties are the most productive but rely on canals, irrigation systems, terracing, and other labor-intensive techniques to produce large yields. These were not maintained under the Khmer Rouge leadership, who knew little about the day-to-day work of rice farming.

Fish and fermented fish products are also critically important to Cambodian diets. Freshwater fish, sea fish, and shellfish are the major sources of protein for most meals. The Mekong River has supplied people from Cambodia with a steady supply of river fish for centuries. Snakehead, snapper, catfish, and mackerel are popular fish in the country. In Cambodia, the Tonle Sap (Great Lake) supplies a large variety of freshwater fish for much of the population especially during the rainy season. In November, when the waters of the Tonle Sap crest and begin to run backward, freshwater fish are scooped up in quantity. Cambodians process this fish in a variety of ways, including making a preserved fermented fish product, *prahok*, in order to make full use of the seasonal surplus all year long. The fish and shellfish are also sun-dried and salted.

Vegetables such as green beans, bamboo shoots, squash, eggplant, and wild and cultivated greens are served in soups; stir-fried with onions, garlic, meat, or fish; or served raw or lightly steamed with fermented fish products as dipping sauces. They are key ingredients in dry and wet curries. Eggplants come in a wide variety of forms, from long green or purple plants used for grilling or stir-fries to tiny bitter pealike plants flavoring curries. Other popular

vegetables include banana blossoms, bitter melons, lotus, bok choy, rapini, napa cabbage, sweet potatoes, and green onions or scallions. Chinese chives and bean sprouts (from soy and mung beans) garnish a wide variety of side dishes. Cambodians enjoy a wide range of tropical fruits and include preserved lemons in many savory dishes. They honor the durian as the king of fruit and the mangosteen as the queen, and they enjoy fruit as a snack or with salted fish and rice as part of a simple meal.

Cooking

In the decades after World War II, it was common for urban middle-class and elite households in Cambodia to have servants, including cooks who were trained to prepare French dishes; children from these households may never have learned to cook and would have to learn Cambodian recipes from cookbooks as adults. The disruption of war and famine in the 1970s and 1980s further eroded the transmission of traditional knowledge of Cambodian cooking. Cambodians who fled the country as refugees may have carried with them treasured family recipes and cooking techniques.

Cambodian meals include steamed rice with a number of accompanying side dishes. Many side dishes are grilled or stir-fried, but some specialties such as chicken or fish *amok* (with a thick coconut sauce) are steamed. Curries and wet or dry stews are cooked with aromatic flavoring pastes. Many ingredients such as chilies, garlic, and shallots are dry-roasted before cooking to intensify their flavors. Sesame seeds mixed with salt and black pepper can be dry-roasted and ground, with or without dried chilies, to enhance dishes served with rice. Lemongrass and galangal can be added to the mixture. In Cambodia, stir-frying is usually the last step in preparing a dish to go with rice. Vegetables are washed and dried, cut evenly, and cooked quickly over high heat in small amounts of oil with meat, fish, and seasonings, as in this simple but tasty dish:

Cambodian Pork and Eggplant Stir-Fry

This simple eggplant stir-fry could be made with other vegetables as well.

3 eggplants
 2 tbsp oil
 5 cloves garlic, coarsely chopped
 ½ lb ground pork
 2 tbsp fish sauce
 1 tbsp sugar
 Ground black pepper
 Small bunch of garlic chive blossoms, cut in 2-in. lengths

Prick eggplant and grill or roast for 40 minutes until soft. When cool, peel and mash the flesh. Stir-fry garlic in oil until golden, and add pork. Add fish sauce, sugar, and pepper. Add eggplant and chives, stir-frying until well mixed, and serve with rice.

Typical Meals

In the capital city and major towns, a wider range of meal options including baguettes and noodles are available from food vendors for breakfast and snacks. Most rural Cambodians eat rice with side dishes for all meals. A special stew or thick soup made for an evening meal might be heated up and eaten for breakfast with rice the next morning.

Cambodian meals are served all at once, rather than in courses, unless the meal contains French-style dishes, in which case the European pattern of courses is followed. Cambodian meals do not usually begin with appetizers. The Western category of appetizer might better be understood as the food to go with drinks, often snack foods purchased from street vendors—or side dishes without rice. When there are several side dishes, it is appropriate

A typical meal found in Cambodia from a popular restaurant. (Anyee | Dreamstime.com)

to take a small amount from one side dish at a time rather than pile a selection of all side dishes on a plate of rice at once. The latter is considered both rude and foolish, as mixing the side dishes makes it difficult to appreciate the taste contrasts and to personalize mouthfuls. Dry and wet condiments are placed directly on rice or on the side of the plate.

Accompanying most Cambodian meals is a sauce or paste made from fermented fish or shellfish. Fish sauce is also a crucial ingredient in most Khmer dishes. A thicker form of fermented fish, called *prahok* in Khmer, is served as a dish with rice, often accompanied by raw or lightly steamed vegetables. Fermented catfish or snakehead fish provides the distinctive salty taste in Khmer dishes. Fermented fish products can be served alone as a condiment or made into more complex sauces by adding a number of herbs and spices.

Caramelized Fish

This technique of caramelizing fish is also popular in Vietnamese cooking; the caramelizing process probably has its origin in French techniques.

- 1 trout, cleaned and filleted
- 3 tbsp sugar
- 1 tbsp water plus 1 c water
- 2 cloves garlic, chopped
- 1 tbsp fish sauce
- Black pepper
- 3 green onions, chopped

Cut fish into strips and set aside. Make a caramel sauce by browning 1 tablespoon sugar in 1 tablespoon water in a skillet. When it is brown, slowly add 1 cup water and stir until it is an even brown color. Add chopped garlic, the remaining sugar, and fish sauce, along with the fish steaks. Simmer, and turn the fish when it is cooked on one side and the sauce thickens. Remove from heat, and garnish with black pepper and green onions. Serve with rice.

Eating Out

While French restaurants once flourished in the towns and cities of Cambodia, the years of war reduced their numbers, and they do a good business only in the capital of Phnom Penh, where visitors have the cash to eat out on a regular basis. However, street foods have returned to the towns and cities in the form of vendors close to central markets and small noodle shops. Night markets in the capital sell foods like chicken, beef, or pork *satay* (thin strips of meat on a skewer), sausages, fried bananas, glutinous rice cakes, grilled squid, baguette sandwiches, fried or fresh spring rolls, salty or sweet fried doughnuts, and rice porridge.

Fried or grilled meats, sausages, and deep-fried snacks including insects such as crickets and grasshoppers may be offered at small drinking shops frequented mostly by men. As the economy recovers, more lakeside, riverside, and seaside restaurants feature regional specialties of fried, smoked, grilled, or salted fish.

Special Occasions

Cambodians celebrate life-cycle events such as births, weddings, and funerals as well as the round of Buddhist holidays that fit with the agricultural cycle. New Year's celebrations in April are always occasions for festive meals. Grilled fish with special relishes is popular on such occasions, as well as grilled packets of glutinous rice with coconut milk and bananas wrapped in banana leaves.

The Khmer Rouge disrupted the cycle of Buddhist rituals that used to be integrated into the rural agricultural cycle. Where temples are flourishing, rural and urban households cook rice at dawn for distribution to monks on their early-morning alms rounds. This means that boiled rice is available for family breakfasts. The best dishes the family can afford are prepared for the monks early in the morning; later, the family and neighbors can enjoy the rest of the dishes for their breakfast meal. Some families prepare special food for the monks only on the days when religious services are held in the community temples of Cambodia.

Diet and Health

There are few food cultures more ideally suited to human health than the Cambodian diet based on rice, fish, fresh vegetables, and fruit. However, the war years disrupted the development of the once-famous Cambodian cuisine associated with the ancient Khmer Empire.

Cambodia faces severe problems with malnutrition, with many communities and households eating less than the minimal calories recommended. Most of the available calories come from rice. The World Food Program estimates that a third of the population is undernourished. The infant mortality rate of 98 deaths per 1,000 live births is dropping, as is the under-five mortality rate (143 per 1,000). But malnutrition remains a significant problem in the country. International assistance has focused on immunizations, food supplements in schools, and vitamin A supplementation. Few households use iodized salt, which means that iodine deficiency and goiter are still common.

When Cambodians fled their country as refugees, escaping war and the repressive regime of the Khmer Rouge, healers known as Khru Khmer

offered a variety of traditional medical services in the refugee camps, including massage and herbal therapies.

Central Asia

Overview

Central Asia, including the province of Xinjiang in China, is a massive territory, more than half the size of the United States. The newly independent states of Uzbekistan, Turkmenistan, Tajikistan, and Kyrgyzstan are situated east of the Caspian Sea, west of China, south of Russia, and north of Afghanistan and Iran. (A fifth state, Kazakhstan, just to the north, is covered in a separate article.) Central Asia is generally regarded as a vast, imprecise zone, simultaneously connecting and dividing the continents of Europe and Asia. Turkic and Iranian peoples are the dominant cultural groups of the region.

Far from the moderating influence of oceans, the main geographic features of the region are steppe, desert, and mountains. Most of the land is desert in Uzbekistan (two-thirds), Xinjiang (two-thirds), and Turkmenistan (four-fifths), in addition to semiarid plains. Kyrgyzstan and Tajikistan are mountainous regions; towering ranges from 16,000 to 26,000 feet radiating out from the Pamirs form the border separating Central Asia from India and China.

For Central Asian non-nomadic (sedentary) society, the vibrant culture of Iran was the primary creative inspiration, with later Arabic and Chinese contributions. Most recently, 150 years of Russian control in the Soviet era have considerably altered the foodways. The varied Central Asian cuisine also forms the foundation of cookery in modern-day Turkey. The mountains, steppes, and deserts divided people into two lifestyles—scattered settlements in river valleys and along oases on the one hand, and nomadic pastoralists on the other. The swath of

territory along the Silk Road—the network of exchange routes linking Asia and Europe—forms the heart of Central Asia, more specifically Uzbekistan, with its fabled cities of Samarqand and Bukhara.

Central Asian cuisine is as elusive as identifying the boundaries of the area itself. From Xian (the starting point for the Silk Road in China) to Istanbul on the threshold of Europe, the variety of dishes gradually diverges from one region to the next. Yet the similarities are more striking than the differences. Hospitality—symbolized in the *dastarkhan* (a Turkic word for “tablecloth,” or “great spread”)—is foremost among the common culinary cultural traits. More like a bountiful holiday table setting, *dastarkhan* refers to the prolific assortment of prepared dishes laid out for an honored guest.

The ancient Eastern hospitality, the ritual of the *dastarkhan*, flatbread, lamb, and cumin unite this area and its immense collection of traditions and produce, as well as setting Central Asian cuisine apart from Chinese, Indian, and European fare. Central Asia has been home to countless ethnic groups and kingdoms throughout the ages. While the new nations of Central Asia attempt to draw ethnic and cultural distinctions between themselves and their close neighbors, the region is a fascinating mix of Mongol, Turkic, and Iranian ancestry. Today, Central Asia is home to almost 80 million people. Turkic ethnic groups dominate post-Soviet Central Asian demographics, accounting for almost 65 percent of the population. Tajiks of Iranian extraction, Russians, and others make up the remaining ethnic groups.

Of all the Central Asian political units, Uzbekistan remains among the most distinctive in dress, language, culture, traditions, and customs. This contributes to a well-defined concept of identity in the post-Soviet world, due in part to the enormous Uzbek population and centuries of sedentary life. The Turkmen and Kyrgyz nomads were forcibly settled and collectivized by the Soviets—their culture, in essence, confined to unfamiliar apartment walls.

Central Asian nomadic groups keep sheep and goats as well. Cattle and camels are also herded, even though most cattle could barely survive the winters without fodder. The main source of protein in the nomadic diet is milk products, especially kumiss, yogurt, *ayran* (yogurt mixed with water), and *qurt* (or *qurut*; air-dried cheese).

In terms of culinary cultures, it is possible to divide the region into multiple categories: nomadic or urban, highland or lowland, and Mongol, Turkic, or Iranian. Kazakhstan, Kyrgyzstan, and Turkmenistan represent the subsistence nomadic diet based on meat and dairy products. The settled Turks—Uzbeks and Uighurs (from western China)—form another Central Asian tradition. Their core cuisine includes pilafs, kebabs, noodles, stews, tandoori breads (flatbreads cooked on the side wall of a cylindrical clay oven), and savory pastries. The Eastern philosophy of harmony and balance permeates the cuisine, underlying the preventative and medicinal qualities of food. The third culinary group is Iranian, encompassing Tajikistan and southern Uzbekistan, extending into parts of northern Pakistan and India. Rice dishes, stewed vegetables, extensive spices, and lavish sweets mark this cuisine. Despite attempts at classification and definition of all the varied features or regional variations, the uniformity of lifestyle, customs, and history produces a singular identifiable culinary culture.

Food Culture Snapshot

The Abdurakhmanov family lives in a downtown two-bedroom apartment in Tashkent, the capital of Uzbekistan. Gulmira is an accountant, and Ramiz is a dentist. Aziza is their nine-year-old daughter, and Surat is their

five-year-old son. The family gathers on the weekends for meals at the grandmother's house, which contains a traditional garden courtyard and detached kitchen. On Fridays, they prepare Central Asian pilaf with rice, mutton or beef, chickpeas, onions, and carrots. The other favorite outdoor meal is shish kebabs (*shashlyk*) of lamb, beef, or chicken.

Central Asian cuisine is extremely labor-intensive, requiring long preparation and cooking times. Therefore, it is quite common for the Abdurakhmanova to eat modestly throughout the week and make a special effort when guests come over or for the Friday meal. Ramiz, like most Muslim men, visits the mosque to participate in community worship on Fridays, and that evening is considered their family time at home or with the extended family at grandmother's house. She is fortunate enough to have a modest three-bedroom home with a courtyard. They take their weekend morning and evening meals outside in the shade. A raised square platform or dais with a low table in the center is the main place for enjoying family meals. In the heat of summer, it is fairly common to eat bread, fruit, and tea all day to stave off hunger and have only one large meal a day.

Their essential staples in the household are rice, flour, mutton, beef, onions, carrots, potatoes, tomatoes, and cucumbers. For a one-week period, the Abdurakhmanovs buy roughly 8 pounds of potatoes, 4 pounds of tomatoes, 4 pounds of cucumbers, 3 pounds of rice, 2 pounds of pasta, 2 pounds of flour, 2 pounds of carrots, 2 pounds of meat, 1.5 pounds of sugar, 1 pound of onions, 1 pound of bell peppers, 1.5 quarts of oil, and a dozen eggs. In autumn they add pumpkin and fruits.

For breakfast, the family eats buckwheat kasha (from the Russian influence) or rice porridge with milk and sugar. The weekly repertoire of dishes made by Gulmira includes pilaf and the pasta dishes of *manti*, *chuchvara*, and *khanum*. Manti are large steamed dumplings with a mutton and onion filling. Chuchvara are smaller boiled dumplings with a similar filling to that of manti. Khanum is also a steamed noodle roll with a mutton or pumpkin filling. Gulmira also regularly makes *samsa* (savory pastries) and soup. Other starch staples include store-bought flatbread, fried homemade flatbread (*gilmindi*), and spaghetti noodles. Green

tea is consumed all day long, usually with bread or sweet biscuits.

Major Foodstuffs

The rich, mildly seasoned, and celebratory qualities of Central Asian cookery reflect the nomadic, Eastern, and Islamic customs of the region. The high courtly style of Persian cuisine, famous for its perfumed rice dishes and fat-tailed sheep, heavily influenced the regal cities of Samarqand, Bukhara, and Merv. Central Asian cuisine also incorporates the distinguished cooking methods of China with its reliance on woks and steaming. Grilled meats, yogurt, and stuffed vegetables are similar to those found in the Middle East. Rice pilaf, shashlyk, noodle dishes, flatbreads, and *halva* are among the most recognizable dishes. Dishes that may seem unusual to the Westerner include green turnip salads, pumpkin or mung bean stews, horse sausage, and hearty kebabs of liver and sheep fat. The Russians introduced beets, potatoes, and vodka, and the modern era brought pizza, beer, and ice cream sandwiches.

Grains form the dietary basis for most Central Asians; those that are grown in significant quantities are wheat, rice, millet, and barley. Millet is brewed into a beerlike drink called *boza* in Kyrgyzstan. Alfalfa, oats, barley, and sorghum are grown mainly for fodder. Chickpeas (*nokhat*) and mung beans (*mosh*) are the standard legumes found in soups and rice dishes. The most common use of grain is in the form of wheat flour for breads. Rice and noodles are the other starchy mainstays. Flatbread (*non*) is present at every meal. Non was traditionally made at home, although now it is increasingly sold at markets or communal bakeries. The standard non is simply a mixture of wheat flour, water, yeast, and salt. The dough ferments and proofs overnight, then is baked in a tandoor before dawn. European-style dark and white wheat-bread loaves have become common in urban areas through Russian influence.

Rice pilaf (*palov*) is the flagship of Central Asian cookery. In its most basic form, it is a dish with rice, meat, onions, and carrots. However, it has a much greater cultural significance. Pilaf is intimately bound to hospitality, community, and identity. Pilaf

provides nourishment as well as a glimpse into the Central Asian psyche. For Central Asians, pilaf signifies hospitality, celebration, and solemnity, and it is a weekly ritual.

From the earliest times, a paste of flour and water has formed the basis for many meals. Turkic nomads have added dough to their dishes for centuries. *Sutli atala* is an Uzbek milk soup thickened with flour, while a similar dish in Tajikistan is called *atolai kochi*. *Manpar* are small bits of pinched dough, or sometimes small, square noodles, in a meat soup. The varieties of noodles and filled dumplings make Central Asian cuisine especially diverse. *Laghman* is a thick noodle dish served with a soup or dry with meat, peppers, tomatoes, and onions.

Chuchvara in Uzbek, or *tushbera* in Tajik, are the Central Asian version of Russian *pelmeni* (ravioli-like dumplings), filled with meat and onions. A special spring treat is *koq chuchvara*, a filling made with any mixture of greens available—sorrel, spinach, mint, cilantro, dill, basil, thyme, parsley, celeriac, garlic, green onion, arugula, or shepherd's purse—and topped with yogurt.

The savory meat pastries in Central Asia are similar to those found in Russia, which is not surprising since many have the same source and the same name. A Kazan Tatar dish, *belishi* (Russian *belyashi*), is a fried dough with a mincemeat and onion filling similar to *chebureki*, a dish eaten throughout the former Soviet Union. Central Asians also use the tandoor to make triangular or round *samsa*

Samsa is being baked in a tandoor, the traditional Central Asian oven. (Monsteranimal | Dreamstime.com)

(Uzbek) or *sambusa* (Tajik) with the standard mutton and onion filling.

The Central Asians remain true to their pastoral heritage as manifested in their sizable livestock herds. The principal products from cattle, sheep, and goats are dairy products, leather, meat, and wool. Central Asia is renowned for the vibrancy of its fermented dairy products. The region can claim kumiss, fermented mare's milk, among its best-known contributions to world cuisine.

Some yogurt is made with naturally occurring bacteria, while other yogurts are made by adding a bacterial culture to fresh cow, ewe, goat, or even camel milk. *Katyk* is made by heating milk and then allowing it to sour naturally. Both yogurt and *katyk* are served as an appetizer and used frequently as a garnish in soups and stews. *Ayran* is a salty mix of yogurt and water, especially refreshing in the summer.

The primary sources of protein in Central Asia are mutton, beef, poultry, and eggs. Goat and camel meat are less common. Pork is usually raised and eaten by Slavs, Koreans, and Germans who live in the area. Mutton is the most important meat, and unless otherwise specified, almost all recipes and menus that list meat denote mutton. Throughout Central Asia fat-tailed sheep are esteemed for their meat, fat, milk, and wool.

Meat is most commonly served as kebabs made from beef, mutton, liver, mincemeat, and chicken. It is also found in pilaf, soups (*shorpo*, *shurva*, *sorpa*), stews (*kovorma*), and salads. Horse meat and horse sausage are consumed mainly in Kyrgyzstan. *Chuchuk* or *kazy*, sausage made from horse meat, is considered a delicacy.

In regard to state vegetable production, all four Central Asian countries grow huge quantities of tomatoes and potatoes. Almost all produce is locally grown, and the bazaars have a tremendous selection of fruits, vegetables, and nuts. The chief vegetables are tomatoes, peppers, onions, cucumbers, and eggplant. Some kinds of vegetables that are virtually unknown outside Central Asia include green radishes (*turp*), yellow carrots (actually a type of turnip), and dozens of pumpkin and squash varieties. Pumpkin is found in stews, *samsa*, and *manti*. Vegetables most often are grilled or stewed. A salad

made from fresh tomato, onion, and hot pepper (*achik-chichuk*) is enjoyed throughout the warm months, and turp salad accompanies the main dish in the winter. Among the legumes, chickpeas and mung beans are the most prevalent.

Hundreds of varieties make melons the principal fruit export, famous throughout the region for their unique flavor. Fruit, fresh or dried, is eaten throughout the day for between-meal snacks. Grapes, too, are generally eaten fresh since Islam discourages the production of wine. The superiority of Central Asian fruit has been hailed over the ages. Early travelers to Central Asia, western China, and Iran never failed to mention the selection of luscious melons. Grapes, apples, quinces, and melons compose the largest fruit crops of the region. The spring is eagerly awaited for all the new plants, herbs, vegetables, and fruits that begin to appear. The fresh, young grape leaves are stuffed with a rice and meat mixture in a fashion almost identical to that found in Middle Eastern cuisine.

Apricots, strawberries, cherries, figs, and peaches are other fruits that appear in the early warm months. Toward the end of the summer, the fruit

orchards bloom with apples, quinces, persimmons, and pears. The final growing season produces the legendary melons, as well as pomegranates, lemons, and mandarins. Pomegranate seeds are mixed into salads, and one effortless dish combines only onions and pomegranate seeds. Citrons, similar to lemons, are native to Central Asia and have a thick, aromatic rind.

Central Asian cuisine is characteristically mild, but piquant sauces, garlicky relishes, and even whole peppers are added for punch in some regions, especially in the Fergana Valley. Rendered sheep fat is the general cooking oil, often mixed with cottonseed oil. Cottonseed oil has a strong and distinctive taste, and Central Asians bring it to the smoking point before adding the food, in the belief that the heat purifies the oil and seasons the wok. Vegetable oils are becoming more popular, but olive oil and butter are not traditional cooking fats. The main seasoning comes from black cumin, red and black pepper, barberries, coriander, and sesame seeds. The Uzbek cumin (*zera*) is smaller, darker, and more pungent than the seeds found in the West. Barberries are an acidic fruit, gathered in the autumn from an ornamental shrub. They contain vitamin C and, used in moderation, impart a tartness to any pilaf or stew. Cilantro (*kinza*) and parsley are the primary herbs, although dill, celeriac, and a pungent basil are broadly available.

Green tea (*koq chai*) reigns as the main beverage in Central Asia. It is the drink of hospitality, of leisure, and of health. Countless cups are consumed throughout the day. Green tea is served at every meal, and it is always the right time for a cup of tea. Central Asians prefer to drink it straight, but sugar is customarily offered to guests.

Dessert in general is another European borrowing. Sweet dishes are, however, part of teatime. An addictive mixture of walnuts and raisins is a frequent offering with tea. Endless varieties of halva, fruits, and confections—including sugar-coated almonds and crystallized sugar (*novvot*)—also make an appearance at teatime. Dried fruit is combined with honey, walnuts, pistachios, or almonds into many dessert recipes. In Uzbekistan, *chakchak* is fried dough fingers coated with honey, and *urama* is

fried spiraled strips of dough dusted with powdered sugar. *Boorsok* are unsweetened triangular pieces of leavened, deep-fried dough that are served with tea in Kyrgyzstan.

Cooking

Today's food-production and cooking techniques differ little from those employed by the ancients. Wives, mothers, grandmothers, and other women of the household spend a considerable portion of their day shopping for and preparing meals at home. There are few women in the workforce, and those who work are also expected to prepare the family meals. Women are responsible for all of the cooking except on those occasions when the men want to demonstrate their proficiency with the flame. Nomadic women make most of the dairy products, although the men sometimes help milk the horses. Central Asians cook over open flames in *qazans* (wok-shaped cauldrons) for deep-fat frying, frying, stewing, and simmering. Street vendors and home cooks still grill kebabs in braziers over glowing coals, make bread and *samsa* in tandoor ovens, and make dumplings (*manti*) in a bamboo or aluminum steamer (*gasqan*). The brazier, or grill, for cooking *shashlyk* is called a *mangal*. The preparation of Central Asian dishes resembles in many respects Chinese methods of cutting, cooking, and seasoning foods. All vegetables are cut according to strict traditional guidelines—shredded, diced, sliced, and so forth—depending on the dish. For the main courses, meat and vegetables are also fried before stewing (for pilaf or *shavlya*—a meat and rice porridge) or boiling (for stock for *laghman*—noodles). Among widely used dishware are *kasa* (a deep plate) and *piala* (a handleless teacup), round and oval serving platters, china teapots, and trays, as well as ceramic and wooden dishes.

In nomad cookery, the amount of equipment is minimal because it must be transported from location to location to follow the grazing herds. Furthermore, there is no luxury of electricity or running water. The iron *qazan* is the most indispensable cookware, used for cooking pilaf, soups, and even bread. If the *qazan* is shallow, it may be turned over

a flame to create a convex cooking surface to produce flatbreads among other things. Many parts of the sheep and goat—especially the cleaned, emptied stomach—are used for holding milk products or producing cheese. The main dairy products are milk, yogurt, ayran, kumiss, butter, and qurt made from the milk of sheep, goats, yaks, and even camels. Large (up to 10 gallons), sealable aluminum storage cans are one modern convenience the nomads have adopted for storing liquids or oil.

Considering the region's history of borrowing, adopting, and contributing elements of culture, the foodways and culinary arts of Central Asia are bound to flourish if their esteemed traditions of hospitality keep pace with the introduction of new foodstuffs. In the short time since independence, Central Asians have fostered a new national consciousness, developed a distinct identity, and cooked up increasingly distinct culinary boundaries through the savvy use of national cuisine.

Typical Meals

The four countries of Central Asia have populations that exhibit a mix of urbanized, Sovietized, nomadic, Russian, Turkic, and Iranian cultures and influences. While the apartment kitchen epitomizes Russian daily meals, the open flame sets Central Asian food apart. Fire is the preferred method of cooking for the region's staples of pilaf, kebabs, samsa, and flatbreads. Increased contact with the outside world pushes some Central Asians to adapt their eating habits and mealtimes to conform to world patterns. Restaurant culture, European convenience foods, imported Turkish and Iranian dishes, and inexpensive Chinese cookware and equipment have all contributed to the changing foodways.

For the sake of simplicity, meals in Central Asia may be crudely divided into two groups—urban and rural. The meals of the city or apartment dweller have taken on many Russified elements, such as the number and timing of meals. The rural group, including the remaining nomads of Kyrgyzstan, has experienced a tremendous change of lifestyle but generally maintains much of the basic foodways of its forefathers. Three meals a day are standard for

both nomads and city dwellers, with every meal including tea and flatbread (non). For breakfast, fresh cheese or honey may be added, but the meal is normally light. Lunch, usually a soup, may be taken at home, or a quick snack can be bought from street vendors.

The largest meal is usually eaten in the evening. The meal customarily starts with a prayer. After the prayer, diners make a passing gesture across their eyes with two hands as if they are washing their face. The men are expected to break and distribute the flatbread. Tea is first offered to everyone who passes a threshold in Central Asia, and a whole subset of customs exists surrounding the preparation, presentation, and consumption of tea. Green tea is predominant and the drink of hospitality. Black tea is preferred in Russian regions. Green tea is generally served straight, but sugar, milk, salt, or even butter may be added depending on individual preference. An entire portion of the cuisine—samsas, bread, halva, and various fried foods—is dedicated solely to teatime.

The nomads of Central Asia live in portable felt dwellings called yurts. The nomadic evening meal, as in antiquity, is the most substantial and often consists of mutton or beef. The traditional Kyrgyz dinner table is low and round and covered with a cloth. It is usually positioned near the center of the yurt. Diners sit around the table on decorative felts topped with long, narrow mattresses or pillows for comfort. The place of honor is reserved for the elderly, guests, or the head of the family. The daughter-in-law sits near the tea urn and serves the guests. These customs are still preserved, especially in rural areas. The visitor is first served kumiss (mare's milk) or ayran (yogurt and water). Kyrgyz prefer green tea (koq chai) during the summer. It is served in the morning, before and after lunch, and in the evening with fresh milk. *Aktagan* is one type of Kyrgyz tea drink, made with milk, butter, sour cream, and salt. Turkmen consume large quantities of meat, cereals, grains, dairy products, legumes, and fruit. Bread makes up a significant portion of the diet, especially in the rural areas. Their traditional bread is *chorek*, a tandoori flatbread.

Uzbeks normally have three or four meals a day—breakfast, lunch, afternoon snack, and dinner.

Selling bread at the Russian bazaar in Turkmenistan. (Travel-images.com)

Traditionally, freshly made green tea is served at the beginning and end of every breakfast, lunch, and dinner. Baked goods, sweets, and tea (sometimes with milk or cream) are served for breakfast. It is fairly common for the Tajiks, Turkmen, and Uzbeks to have a dining room that is devoid of furniture, with only a brightly colored wool carpet hanging on the wall. The tablecloth, or *dastarkhan*, is laid out on the floor or on low tables, and everyone eats on pillows surrounding the tablecloth. For both lunch and dinner, flatbreads, sweets, and fruits are served first, with tea. Then a hot dish is served, and fresh fruit follows as dessert. Desserts are generally the tea adjuncts—raisins and nuts, lightly sweetened cookies, multiple variations of *halva*, fruits, and confections. Pastries and layer cakes are a European addition. The Uzbek winter diet traditionally consists of vegetables, dried fruits, and preserves to provide the necessary vitamins throughout the season. Hearty noodle or pasta-type dishes are common chilly-weather fare. Nuts (walnuts, peanuts, pistachios, and almonds) and honey are eaten separately or used in sweets and desserts. Even in the middle of winter, melons, apples, pomegranates, pumpkins, and other products of the fall harvest are available in the market, almost up until the spring harvest.

Bairam Palovi (Uzbek Wedding Pilaf)

3 lb mutton or beef
 4½ c vegetable oil
 5 onions, sliced

2 lb carrots, cut in matchstick strips

2½ qt water

1 c chickpeas, canned

¾ c raisins

Salt, black pepper, cumin, coriander, turmeric, and barberries to taste

5 c rice

Cut meat in pieces, and sear in hot oil. Add sliced onions. After a few minutes put in carrot strips and mix. Add water, chickpeas, raisins, salt, and spices; simmer for 25–30 minutes. Add rice and additional water as needed to rise to ½ inch above the rice. Cook, uncovered, until water evaporates. Cover and cook on low heat 30–40 minutes or until meat is tender and rice is fully steamed. Stir mixture, remove the meat, and cut into small uniform-sized pieces. Serve rice in a mound on a large platter topped with the meat pieces.

Eating Out

Central Asian cuisine, if it has a reputation at all beyond the borders of the former Soviet Union, is considered a poor cousin to Turkish food. Anyone who has traveled to the area has undoubtedly experienced Soviet-era service and low-quality dishes in the few restaurants operating before the five Central Asian states became independent. The restaurants presented a very meager imitation of the diverse local cuisine. Scratching only the surface may give the impression that the region offers little more than pilaf, *shashlyk*, and a few miscellaneous noodle dishes. Nothing could be further from the truth, reinforcing the argument that restaurants are a poor source for judging a nation's culinary culture.

Central Asia has a rich tradition of hospitality, expressed through food in its teahouses and caravansaries along the Silk Road for over a millennium. A caravansary is a way station that provided shelter for trade caravans, a hostel and a place for nourishment for road-weary travelers and their camels. The Silk Road attracted merchants moving east and west laden with goods for exchange and sale from the 2nd century A.D. until the

15th century A.D. In Central Asia, all the roads converged, bringing the area into contact with Chinese, Indian, Persian, Slavic, and Middle Eastern traders and cultural influences. The teahouse (*chaikhana*), based on similar establishments in China, remains to this day a social institution where a community or neighborhood gathers over green tea and traditional Central Asian dishes of pilaf, shashlyk, and noodle soup (laghman). The chaikhana is the foundation of Central Asian culinary culture, especially in Uzbekistan. Always shaded, preferably situated near a cool stream, the chaikhana is a gathering place for social interaction and fraternity. Robed men congregate around low tables, centered on bed-like platforms adorned with local carpets, to enjoy a meal and endless cups of green tea. In addition to providing nourishment, shade, fellowship, and relaxation during the sweltering summer months, the chaikhana helped preserve many aspects of Central

Asian heritage and cultural identity, which were obscured by 150 years of Russification. Almost every neighborhood has a mosque and a community teahouse, both influential social institutions. The chaikhana functions as a quiet retreat, a social center, a sacred place, a restaurant, and a men's club. The village or community elders gather here to share news, discuss business, make decisions, and comment on family and cultural matters.

The restaurant culture in a Western sense has still not firmly taken hold in the region, mainly due to a strong and preferred tradition of domestic cookery. Because Central Asian cuisine is so labor-intensive and the distribution system is heavily regulated by the state, it has yet to become profitable to open a great number of new restaurants featuring local cuisine. Furthermore, for Western tastes, Central Asian cuisine tends to be too heavy in the use of oil and animal fat. More important, foods prepared

Men sitting at a dais, a low table (*Khiva*), in Uzbekistan. (Travel-images.com)

in commercial kitchens for sizable groups can in no way compare to the outdoor cookery of pilaf made in large woks over open flames, shashlyk smoked over coals, and samsas (savory pastries) baked in tandoor ovens.

In general, restaurant dishes have been artificially assigned to courses of the Russian model: hot and cold appetizers (*zakuski*), a first course (*pervoe*) or soup (*sup*), a main course (*vtoroje*), and dessert. Sometimes the diner is simply told the final amount of the bill; other times a sum total is scribbled on a notepad. Only recently have restaurants begun to present an itemized check. Appetizers generally consist of caviar, samsa, horse meat, tongue, assorted fish, spicy Korean vegetable salads, and seasonal fruit. The primary soups are laghman (mutton, vegetables, and thick noodles), *shurpa* (with potatoes instead of noodles), manpar (pasta bits like thick noodles), and borscht. Pilaf, shashlyk, cutlets, and manti (mutton- or pumpkin-filled dumplings) are the usual main course. Tea and coffee are served at the end. Pilaf, manti, and kebabs are available on almost every other street corner throughout Central Asia.

Special Occasions

Ramadan (Ramazan) is the most renowned Muslim holiday, a monthlong ceremony of prayer, fasting, and charity occurring in the ninth month of the year. No food or drink is allowed during daylight hours. All foods, however, are permitted from sunset to sunrise. The Quran dictates to “eat and drink until the black and white thread can be discerned at dawn.” Ramadan (Uraza in Uzbek) is a working holiday, but work schedules may be seriously disrupted or altered.

In Uzbekistan, the largest festival and holiday is Eid al-Adha (also called Qurban-Hait or Qurban Bayram), eagerly awaited all year. Eid al-Adha occurs 70 days after Ramadan, to celebrate God’s mercy in providing the sacrificial lamb. The holiday has special importance for the pilgrims performing the hajj, or journey to Mecca.

Nauruz Bayram is the ancient, pre-Islamic holiday celebrating the coming of spring on March 21,

the vernal equinox. Although sometimes called the Muslim New Year, it has no basis in Islam. Nauruz has its origins in an Iranian folk holiday with roots in Zoroastrianism. Traditional dishes in Uzbekistan include *koq samsa*, koq chuchvara, *halim*, *nishalda*, and *sumalak*. *Koq* means “green” in Uzbek, and the savory pastries and small ravioli-like dumplings are made with all the spring greens that abound in the mountain valleys. Wheat porridge (*halim*) is made from boiled meat and wheat grains, seasoned with ground black pepper and cinnamon. *Nishalda*, a meringue flavored with licorice root, is also popular during Ramadan. *Sumalak* is a bread made of sprouted wheat.

Koq Chuchvara (Uzbek Green Dumplings)

Dough

- 4 c flour
- 1 egg, hard-boiled and chopped
- 1 c water
- 1 tsp salt

Filling

- 1½ lb mixed greens and herbs: sorrel, spinach, mint, cilantro, dill, basil, thyme, parsley, celeriac, garlic, green onion, arugula, shepherd’s purse
- 12 oz onions, finely diced
- 1 egg, hard-boiled and chopped
- 4 oz butter or animal fat
- Black pepper and salt to taste

Chop the herbs, and combine well with onions, boiled egg, butter, and seasonings. Make a stiff dough out of the flour, salt, egg, and water; let stand for 30–40 minutes. Roll out dough 1/12 inch thick and cut into 2-inch × 2-inch squares. Place a touch of filling in the center, fold dough corner to corner, and pinch edges—completely enclosing filling. Boil in salted water until they float, no more than 4 minutes.

Serve in broth or drained with yogurt or sour cream; sprinkle with black pepper.

The Central Asian republics continue to celebrate the Soviet holidays of New Year's Day, International Women's Day, May 1, and May 9. May 1 was known as the International Day of Workers' Solidarity, only recently officially renamed Spring and Labor Day. The Celebration of Victory Day in World War II is marked on May 9, the day of Soviet triumph over Nazi Germany in 1945. They have also added Nauruz, Islamic holidays, independence days, constitution days, and a handful of nation-building holidays. Some of the older seasonal celebrations in Uzbekistan and Central Asia, directly related to food and survival, are experiencing a cultural revival: Erga urug kadash (planting festival), Khosil bairami (harvest holiday), Mekhrjon (bounty of nature celebration), Uzum saili (grape day), and Kovun saili (melon day). These days are marked with feasts, folk songs, and prayers.

Weddings in Central Asia may follow some Russian/Soviet traditions, but every cultural group has its own unique way of celebrating this special day. Families with nomadic roots, living in Western-style dwellings, may erect yurts to celebrate weddings and funerals. In Uzbekistan, prior to the wedding, representatives from the groom's family visit the bride's house to formally ask for her hand. The event is culminated in a ritual called *non sindirish* (breaking of bread). The date of the wedding is agreed upon. At the end of the evening, the bride's family presents each representative with a dastarkhan, two flatbreads, and sweets, as well as gifts for the groom's family. The party continues at the groom's house, where the presents are examined and the treats enjoyed. The couple is now considered to be engaged. On the day of the wedding two pilafs are cooked: one at the groom's house and one at the bride's house. The typical Uzbek wedding pilaf contains rice, mutton, chickpeas, raisins, onions, carrots, barberries, cumin, and turmeric for a golden color. Tajik wedding pilaf is very sweet—with sugar, dried fruit, and orange peel—to ensure a sweet life for the couple. The bride ceremoniously leaves her house for the groom's house, and the main party continues there.

In Central Asia, a pilaf ritual takes place on three main occasions: the wedding day, the 20th day after a death, and the one-year anniversary of a death. It

involves not only relatives and friends but the entire neighborhood (*mahalla*). On the eve of the event, a carrot-cutting (*sabzi tugrar*) party takes place, usually with a concert (for weddings only) and a feast, during which the roles for the next day are assigned by the elders. The pilaf is cooked just before dawn so it is ready by the time the morning prayer is over. Wedding and funeral feasts are prepared and served by men only. Folk music calls the neighborhood to the table. The ritual begins with bread and tea, and then pilaf is served. Each platter is to be shared by two guests. Once guests are finished with the food, they leave and their places are taken by new arrivals.

Diet and Health

In Central Asia, food is not only treated as a source of nourishment and fuel but also valued for its preventative and curative role. Specific nutritional problems include the lack of affordability of certain healthful and essential food items, the suspect quality of some foodstuffs, and the absence of public awareness of what constitutes a healthful and balanced diet.

Vitamin A and C deficiencies are common in Kyrgyzstan because the people eat fewer fruits and vegetables than do Uzbeks, Tajiks, and Turkmen. One concern in Tajikistan is the prevalence of thyroid deficiencies due to a lack of iron in the diet. Turkmen depend heavily on bread for calories, with only seasonal consumption of vegetables and fruit, resulting in a deficiency of protein and fat. Overall per-capita food consumption in Uzbekistan actually increased between 1992 and 1996, except for milk products. Uzbek consumption of meat increased, while bread intake has remained relatively stable since 1992.

Central Asians loosely maintained a diet based on the ancient Greek humoral practices as propagated by the Muslim philosopher ibn Sina (born near Bukhara in Uzbekistan) in the 11th century. This theory holds that the body has four humors (blood, yellow bile, black bile, and phlegm) that determine health and disease. The humors were, in turn, associated with the four elements: air, fire, earth, and

water, which were neatly paired with the qualities hot, cold, dry, and moist. According to that theory, a proper and evenly balanced combination of humors characterized the health of the body and mind; an imbalance resulted in disease. Combining local wisdom with traditional Chinese thought, Central Asians consider foods to have either “hot” or “cold” as well as “dry” or “moist” qualities in regard to both medicinal and nutritive functions. The inextricable relationship between diet and health forms the basis for the humoral theory of medicine, which still holds considerable sway in individual food choices in the region. The layperson in Central Asia can still classify most foodstuffs as having hot or cold properties.

The major health-related problems in Central Asia are low life expectancy, cardiovascular disease, high rates of tobacco and alcohol use, and general nutritional deficiencies. These, combined with diets high in fat and low in antioxidants, mean that the conditions for cardiovascular disease are ripe. Central Asians consume well below the recommended average daily calories for the European region. Acute malnutrition among children remains high, resulting in disorders caused by lack of micronutrients such as iron and iodine. Carbohydrates in the form of bread and potatoes make up a larger part of the diet than in the past as the consumption of fats, milk products, fish, and eggs has declined. Still, the saturated fatty acids of animal fat make up a large portion of total calorie intake. According to recent reports by the World Health Organization, the Central Asian republics, while still in need of improvement, experienced some positive health results since the early 1990s. The Kyrgyz appear to have the best relative health in the region. In general, they eat a more healthful diet, smoke less, and are less frequent drinkers. Muslims in Central Asia,

according to recent research, were significantly less likely to drink frequently or smoke.

China

Overview

The People's Republic of China is the largest country in the world in terms of population, with 1,320 million people; it is the second largest in area, at 3,696,100 square miles. Taiwan, an island (and some neighboring small islands) that is generally considered to be legally a part of China, is a de facto independent country with 23 million people on 14,000 square miles. In addition, Chinese food and culture have followed Chinese emigrants all over the world, especially to Southeast Asia, where Chinese food has profoundly affected local foodways.

China stretches from the Pacific Ocean to the vast deserts of Central Asia, and from the tropics to the latitude of southern Canada. It is the most geographically varied country in the world, with tropical rain forests, high mountain tundras, waterless deserts, dry dusty plains, and vast riverine landscapes now dominated by rice. Critically important is the monsoon climate, which brings summer rain and winter drought. Rain is very heavy in the far south and southeast, diminishing steadily toward the northwest and far west. China is a major biodiversity center; western China has the most diverse fauna and flora of any temperate region in the world. China is still an agricultural country first and foremost, with extremely varied farming and livestock herding. All this means that Chinese agriculture and foodways can be extremely diverse.

The historic core area of China, the "18 provinces," extends from the southern border to just north of Beijing, the capital. This core can be ecologically divided into north, east, south, and west. Over recent centuries China has added the northeast

(Manchuria), Inner Mongolia, Xinjiang (Chinese Central Asia), and the vast mountain area of Tibet.

China's population is largely Han, a group that has at least eight major languages and thousands of local dialects. The national language, Putonghua, is called Mandarin in most Western literature; closely related are Cantonese, Shanghainese, and other local languages. China has 56 recognized minority groups, each with its own language (or group of related languages) that may be distantly related or quite unrelated to the Chinese language family. The largest minority is the Zhuang, speaking a language very close to Thai. Other minorities include Tibetans, Mongols, Tungus, Koreans, and Turkic speakers including the Uighurs. Each minority has its own food culture.

Food Culture Snapshot

Wu Zilian and his wife, Ni Guifei, are farmers in southern China. (Surnames come first, and women traditionally do not change their names at marriage.) They consider themselves traditional in foodways but have adapted somewhat to changing times.

They need to get to the fields by 7 A.M. and get their son off to school, so breakfast is early; they eat *ju* (congee), which is rice boiled down to thin porridge, with some peanuts, pickled vegetables, and small dried fish and soy sauce mixed in. From the shop next door they buy *yutiao*, strips of dough fried like doughnuts or churros but usually unsweetened. Sometimes they dunk these in the congee or in warm soy milk. With all this they have hot tea; they are still glad to be able to buy decent-quality tea. They recall the

old days where there was only hot water or, somewhat more recently, a dark brew made from old leaves and twigs.

They work hard in the fields till noon, then stop for a fairly substantial lunch of soup noodles and stir-fried greens. After taking it easy during the heat of the day, they finish up several projects and head home by 5 P.M. Ni Guifei goes to her small refrigerator, a prized possession, and gets out a piece of fish and a small bit of pork. She then turns on the small gas stove—another prized possession; she was raised breaking up firewood to burn in a clay bucket. She puts on a large pot of rice. On top of it goes the fish, in a small metal bowl, with ginger, slivered green onions, and a bit of oil over it; the fish will steam in the vapor coming up from the boiling rice. She slices the pork fine and stir-fries it with garlic, pickled soybeans, and assorted vegetables picked from the garden. There is still plenty of tea in the pot. Dessert is fruit from a neighbor family's orchard; they grow oranges, tangerines, and peaches.

This is the daily round, but over the last 15 years they have gradually added cookies, crackers, cheap candy, and store-bought white bread, first as rare luxuries, then as increasingly common snacks. Now, some mornings they eat bread and store-bought spread of some sort for breakfast. They drink sodas regularly, and Wu has a beer or two whenever there is a special occasion.

Such occasions are more common than they used to be, and they involve the whole family—and, usually, some friends and neighbors—eating stewed chicken and duck, roast pork, highly spiced vegetable dishes, and a number of sweets. Bean curd (tofu), once inevitable at such events, is getting rare; people say it is too low class for modern times. The couple says that people aren't as healthy as they used to be, but their son is old enough to have his own opinions and prefers the new ways.

Their neighbor's son, Wang Xifeng, lives a very different life indeed. He went to the city many years ago and prospered in manufacturing. He lives in a large house near Shanghai, with all the modern Euro-American conveniences, from a full kitchen to a flat-screen television. He still eats rice, but many of his calories now come from oil, meat, sugar, and wine, frequently con-

sumed during the course of splendid business lunches and dinners. If he eats vegetables, they are the finest tender young sprouts. He is fully familiar with foreign foods, from McDonald's hamburgers to French wine and Indian curry. Lately, he has taken to eating white bread and jam for breakfast, instead of congee.

Major Foodstuffs

China is famous for rice, which indeed is by far the most common food, but the north and west of the country are not good rice land. They therefore depended until recently on wheat, maize, and several species of millet. Today, rice is grown much farther north than of old, and it is sold everywhere, making it much more important in these other regions. Conversely, wheat is also more common and available, and it has increasingly gained ground against rice in the south and east. Western foods like crackers and white bread have made wheat much more visible in the food system. Maize, disliked because of its perceived low nutritional value and poor fit with Chinese cooking methods, has become an animal food. Other grains, being less productive, have almost disappeared.

The classic divide between wheat and rice split China in half at the Yangtze River (or a bit north of it). South of the Yangtze Valley, rice dominated; north of it, wheat ruled; in the valley itself, people grew rice in summer and wheat in winter and had plenty of both. Rice now grows as far north as southern Manchuria, thanks to development of ever more quick-growing varieties.

China's major protein source until recently was the soybean, a native of northern China. Soybeans require processing to be nutritionally very valuable, and traditionally they were turned into soy sauce, fermented pastes, pickled beans, and bean curd. Bean curd is made by grinding the beans, boiling the resulting meal, and precipitating the protein, letting the oil and starch go off with the water. The bean curd is thus a highly concentrated protein food. However, in recent decades, China has self-consciously tried to raise consumption of meat, and this has come at the expense of lower-status bean

curd. Today, not only is the soybean largely an animal food, but China's production of soybeans is dropping, as urbanization wipes out farmland and more productive grain and vegetables take over what is left. China now imports soybeans from Brazil and elsewhere.

Today, the main protein source is pork; China has two-thirds of the world's pigs. Fish are important and are largely produced by aquaculture (fish farming); China invented aquaculture about 2,500 years ago. China's marine and river fisheries have been decimated by pollution and overfishing, and they no longer supply what they once did. As elsewhere in the world, chicken production has rapidly increased through battery production in huge industrial farms. Ducks are locally common. Beef is not a traditional food but is available. Sheep are common and often dominant in the north and west, especially Xinjiang and Tibet. Camels, donkeys, yaks, horses, goats, and all sorts of game animals and wildlife have been pressed into service for meat.

With the exception of nomadic herders in Inner Mongolia, Tibet, and remote parts of Xinjiang, Chinese peoples very rarely ate dairy products until recently. Today, yogurt, milk, and cheese are available, primarily in cities, but are still somewhat unusual as foods. Virtually no one in China, not even the nomadic herders, can digest lactose (milk sugar) except in early childhood, but using fermented milk products like yogurt overcomes this problem; the real reasons for lack of dairying were lack of pastureland and the settled people's traditional rivalries with the herders.

The universal, dominant, and culturally very important vegetables are Chinese cabbage greens, which come in countless forms, from Beijing celery cabbage to the tender mustard greens of the south. Some are coarse and cheap, and some are exceedingly delicate and expensive. Improvements in farming and in available varieties have led to rapid expansion of the other popular vegetables, including many kinds of beans, peas, squash, onions, garlic, chives, carrots, huge Chinese radishes, cucumbers, and many others. Beans and peas are often grown for the young sprouts, which are among the favorite foods. The Chinese love vegetables, often above

all other foods. After 1600, the Spanish, Portuguese, and later Dutch and English brought New World foods to East Asia, and thus the Chinese acquired and enthusiastically adopted maize, tomatoes, white and sweet potatoes, peanuts, chili peppers, and many other foods. More recently, they have borrowed still more, and few indeed are the foods that cannot be found in China today. One might even find *k'anistel* (*Pouteria campechiana Baehni*), a rare fruit domesticated and grown by the Maya of Mexico, in Taiwanese markets (under the name "heavenly peach").

More usual and traditional fruits include many native to China that are now known worldwide: oranges, tangerines, peaches (native all across Central Asia), plums, jujubes ("Chinese dates"), melons, and others. Apricots abound in the west. Closely related is the native Chinese flowering apricot or *mei* (*Prunus mume*; *mume* is the Japanese name), perversely miscalled "plum" in most translations. Its small, sour fruits are used in pickles, sauces, and salt preserves and as such have gone worldwide in recent decades. Among nonnative fruits, first and foremost is the watermelon, which came from Africa via Central Asia in the medieval period. It is another true favorite food, being not only sweet but also a source of delightfully cooling and refreshing liquid on a hot summer day (and Chinese summers are scorching).

Nuts are combined with fruit in the category *guo*; they include walnuts, pine nuts, almonds, and others. Some are largely medicinal. Pine nuts are recognized as healthful and are supposed to contribute to long life. Apricot kernels (ground up), *torreya* nuts, and acorns treat respiratory irritation. Foxnuts (the seeds of a water lily) are thought to cool and clean the body. Lotus seeds are both healthful and good fortune, since the lotus is sacred in Buddhism and the Chinese word for lotus, *lian*, sounds like a word for "abundance." The underwater stems of the lotus (sold as "lotus roots" in markets), when boiled, produce sticky threads, so that when a stem is broken and the pieces are pulled apart they remain connected by the sticky threads; at Chinese weddings, there is a tradition for someone to break a lotus stem and pull, saying something like "no matter how much this couple is apart, they will always stick

together.” This sort of use of foods as metaphors is universal in Chinese culture, and it is hard to imagine a Chinese wedding or Chinese New Year celebration without lotuses and many other foods that call forth wordplay.

Oil has been crushed from seeds for over 2,000 years. In early times the commonest was from Chinese cabbage seeds (very close to modern canola oil). More recently, soybeans, peanuts, maize, and other foods have come into service. Sesame oil is used for its fine flavor.

Spicing is light but pervasive. The characteristic flavor mix, the real “signature spice” of Chinese food, is soy sauce, ginger, garlic, Chinese “wine,” white pepper (made from young black peppercorns by removing the skin), Sichuan pepper (a different species than black pepper), fermented soybeans or soybean paste, and chili peppers. Only the first three of these are really universal; the others are common and widespread. Chilies vary with the area; they are almost unknown in the north and far west but so heavily used in Hunan and Sichuan that dishes there are often unbearably hot to the uninitiated. (Sichuanese restaurants outside the homeland generally tone this down many notches.)

The famous Chinese drink is tea, but it came to China from the area of northern Burma and northeastern India in the early Middle Ages and spread slowly. Not until around 1100 was it listed as a necessity, and it was actually quite rare except among fairly affluent households until the 20th century. Ordinary people made do with hot water—everyone realized that unboiled water was unsafe—as well as fruit juices and soy milk. Commonest of all, however, was soup, which used to be found at almost every meal because it provided the necessary liquid. Banquets in hot, sweaty southeastern China often included three different soups.

Chinese “wine” made from rice is technically a beer or ale, but it is stronger than beer and not carbonated, so it seems more like a true wine. The Chinese have been distilling for over 1,000 years (possibly 2,000 years) and probably invented distillation, and they thus have a range of drinks similar to whiskey and vodka, with names like *maotai* (fermented from sorghum) and *sanshu* (“triple-distilled”).

Finally, China was a great center of fermentation technology. Soy products were the most varied and important ferments, but alcoholic drinks, pickles, fermented teas, preserved grains, meats and sausages, yogurts, and countless other products made use of a vast variety of yeasts, beneficial bacteria, and similar microorganisms. These not only preserved the food but also made it more digestible and provided necessary nutrients, including vitamin B₁₂, often otherwise absent from Chinese diets.

Cooking

Chinese cooking is a cooking of scarcity. Until recent decades, not only food but also fuel, oil, water, and even time for cooking were all scarce and often expensive. Thus, techniques that use a great deal of fuel and take a long time, like baking, are relatively uncommon.

China’s famous and distinctive cooking method is stir-frying (*chao*): cutting ingredients into small pieces and stirring them in extremely hot oil for a brief period. The oil is heated, sometimes until it catches fire, before the food is put in—the flavorings first, then the main items. This method saves both oil and fuel; the cooking is almost instantaneous. Experts will cut the ingredients in such a way that surface area is maximized, for example, by thin slicing. This speeds the cooking even more. Sparing of meat is often done by using a few small cubes of highly flavorful ham or cured pork in a large dish of vegetables.

However, by far the commonest cooking method is boiling. Rice has to be boiled, and so does millet (a former staple). Wheat is usually eaten in the form of boiled noodles; these and related soup-with-starch dishes like won ton (*huntun*, soup with dumplings) are almost a religion in much of eastern China. The Chinese have had noodles for thousands of years. Soups, stews, ordinary and medicinal teas, and whole boiled chickens and ducks join the list of boiled foods.

The third most common method of cooking is steaming. It is economical not only because little plates of food can be steamed on top of boiling rice but also because steamers full of little dishes can

be stacked over pans of boiling water, so that large amounts of small food items can be steamed very quickly and simply. Almost unique to Chinese cooking are steamed buns: wheat bread buns, leavened with various kinds of baking powders and steamed rather than baked. These are staple foods in much of the north. They can be solid dough (*mantou*), or they can be stuffed with meat, sweet paste, or vegetables (*baozi*). If the filling is wrapped in thin dough instead of leavened bread, the result is *jiaozi* or something similar such as *xiaomi* (the *siu mai* of Cantonese restaurants). Fish is very often steamed, as are even small plates of meat. Deep-frying is rare but widespread, especially for dumplings of many sorts.

Typical Meals

Breakfast was traditionally congee or some other grain porridge, with savory additions. In the north it often involved steamed buns. A more substantial breakfast, often later in the day, consists of *dianxin*—the Cantonese pronunciation *tim sam* gives us the “dim sum” of Cantonese restaurants. *Dianxin* means “to dot the heart,” equivalent to “to hit the spot” in English. These are rich snacks—typically steamed but very often baked or fried, so that they are more expensive and a great deal higher in calories than most Chinese food. They were traditionally the food of workers who needed a lot of calories quickly; they had no time to eat a whole big bowl of congee but had to eat enough to sustain backbreaking labor for a full day. Now, dim sum are the great moneymakers of many a Chinese restaurant, and their high levels of calories, fat, and carbohydrates contribute to the rise in problems with rich food.

Lunch on a nonworking day is often a main meal eaten around 1 P.M., but working all day away from home is no new thing in China, and thus the tendency has always been to have a bowl of soup noodles (*mian*), a plate of fried noodles (*chaomian*) with vegetables and a bit of meat, a plate of rice with a cheap topping, a large wrapped dumpling, or something else that is quick, easy, and cheap. The quick-noodle lunch has now gone worldwide, thanks not only to Chinese technology but also to elaborations such as Japanese ramen and Vietnamese *pho*.

Several bamboo steamers and plates of dim sum. (Shoutforhumanity | Dreamstime.com)

The main meal is eaten as soon as people finish work and return home in a very hungry condition. It almost invariably involves a major grain base (*fan*) with several side dishes (*cai*; literally, “vegetables”) to use as toppings. Cantonese has a distinctive word, *sung*, for dishes used as toppings for rice. *Fan* is so essential that the usual way of saying “to eat” is *chi fan*, “to eat fan,” and the standard greeting around mealtime is “Have you eaten fan yet?” Chinese people generally do not feel that they have eaten unless they have had a good solid bowl of this starch staple. After a banquet without rice they will often seek out a bowl of it, saying that they “haven’t eaten yet.”

In most of China, the grain is now rice, but remote parts of the north and west may still use wheat dumplings or other foods. Boiled millet, sorghum, sweet potatoes, and other lower-rated staples are now

largely a memory. A typical family dinner involves enough rice to give everyone a couple of 12-ounce bowls or more, with a dish of fish or meat, a dish of greens, and a dish of some other vegetable or a vegetable with meat. Small nibbles may come before dinner and some fruit after, but appetizer courses and real desserts are strictly for banquet occasions.

Snacks, known as *xiaochi* (“small eats”), are extremely frequent. Children especially need them after school and at other critical moments. In addition to the more serious and expensive *dianxin*, small eats can be crackers, cookies, small baked tarts, nuts, seeds, fruit, sodas, and indeed almost anything small and easy to carry, up to and including yet another bowl of noodles.

Chinese cuisine is classically divided into five regional variations, following the classic division of the world into the four directions and the center. No one has ever defined the “central” cuisine very well, but the four directions certainly have their marked differences.

The north is the realm of wheat, sheep, Beijing or celery cabbage, and hearty meals where vinegar and other sour flavors are often pronounced. The range of vegetables was traditionally rather small, but diverse grains were available. Lately, rice has become common, replacing most of the minor grains.

The east centers on the Yangtze Delta and is characterized by complex dishes that are often oily or sweet. The river and sea afforded an enormous quantity and variety of seafood until recently; now, long-distance fisheries have to supply the demand. The hot climate makes stews and soups desirable, to replace liquid lost in perspiration. Tea was popular and the subject of connoisseurship.

The west is China’s land of spices, with chili peppers and the Sichuan pepper dominant. Hunan and Sichuan in particular are the home of a fiery cuisine. River fish are common, but food tends to run to mountain specialties, including pork, bamboo shoots, mushrooms, and deciduous fruits and nuts.

Farmers tend to the rice harvest in southern China. (Corel)

The south is the most complex area, with many subtraditions. Classic gourmet cooking is centered on Guangzhou and more recently on nearby Hong Kong. This is the most rice-dependent region of China; rice yields three harvests a year and traditionally supplied fully 90 percent of calories. Otherwise, fish, pork, duck, chicken, and an enormous variety of vegetables dominate.

Within these regions, different provinces and even counties have their own foods. Yunnan in China's far southwest has its own dishes and produces the best hams in China if not in all Asia. The Chaozhou (Teochiu) region in Guangdong Province has a very distinctive cuisine that makes much use of goose, duck, crab, taro (a root crop), and sweet pastes and sauces. Chinese are highly aware of regional cuisines and specialties. For centuries or even millennia, travelers have brought back "local country products" from the regions they visited, as gifts to the home folk. (This custom has spread to Japan, where it has become a vital social function.)

China's minorities all have their own cuisines. The Mongols and their neighbors in the north and west depend heavily on sheep and consume yogurt and kumiss (fermented mare's milk). "Mongolian barbecue" is not really a Mongolian dish; it was created in Beijing in the early 20th century. The Turkic and other settled peoples of Xinjiang traditionally live on Persian-style bread, rice pilaf (with fruit, carrots, and lamb cooked with the rice), roast lamb, noodles with boiled lamb, and fruit, especially grapes and melons—they produce the best melons in China, if not in the world. Tibetan everyday food includes butter, tea, roasted barley meal, and dairy products such as yogurt; festive food involves dumplings (*momo*, similar to jiaozi), meat stews, and noodle dishes. The Yi of the Liang Mountains in Sichuan traditionally depended heavily on buckwheat pancakes but now are switching to rice. The southern border peoples such as the Thai-speaking groups depend on rice and vegetables, with the usual range of meats when affordable.

Stir-Fried Greens

1 tbsp oil
2 cloves garlic, minced

½ in. ginger, minced fine (optional)

2 lb greens, usually one of the following: bok choy, baby bok choy, *gailaan* ("Chinese broccoli"), mustard greens, spinach, or turnip greens (any greens will do)

Soy sauce to taste

Heat the oil over a very hot flame. Add the garlic and ginger. Fry till the garlic begins to brown. Meanwhile, coarsely chop the greens, if needed; small leaves like spinach do not need to be chopped. Add to hot oil, and stir rapidly till wilted. Add ¼ cup water, turn down to a very low flame, and leave to cook for about 15 minutes, stirring occasionally and checking to prevent sticking and burning. The cooking time depends on how tender the greens are, so check them often—when they are tender, add a dash of best-quality soy sauce, stir, and then serve immediately; overcooking ruins them.

Sweet and Sour Fish

Everyone knows sweet and sour pork, but the dish was originally made with fish and was more refined than the usual modern forms.

1 whole cleaned fish (1½ lb), with firm white flesh (rockfish, sea bass, or the like)

5 c cooking oil

1 tbsp garlic, chopped

Marinade

1 tbsp Chinese "wine"

2 green onions, chopped fine

½ in. fresh ginger, scraped, crushed, or chopped fine so as to present maximum surface area

Salt to taste

Sauce

1 package hawthorn-paste tablets (available at Chinese markets)

2 tbsp brown or white sugar

2–3 tbsp clear rice vinegar

2 tbsp soy sauce

¼ tsp sesame oil
 Salt to taste
 ½ tsp cornstarch to thicken (lotus rhizome starch is more traditional, and better, but hard to find)

Optional

Chopped pickled Chinese leeks (*rakkyo*; available from Asian markets)

Pine nuts, roasted or fried

Green pepper, pineapple, and so forth (modern cooks add these, but they are not traditional)

Marinate the fish in the marinade for 20 minutes. Deep-fry in the oil for about 10 minutes. Take out and drain.

Stir-fry the garlic in just a little oil (1 tablespoon) and then add the sauce ingredients, including the Chinese leeks if you can find them. Cook till thick (ca. 5 minutes). Pour over the fish, and serve. Decorate with pine nuts, if desired.

The red color and unique sweet-sour flavor originally came from the hawthorn paste. Almost no one uses it now, but it is worth trying. Modern cooks use a bit of tomato sauce, or just food coloring, to get the red color of the hawthorn paste.

Red-Cooked Pork

Red-cooked pork is a favorite slow-cooked dish, best in winter when one needs the heat and calories.

2 tbsp cooking oil
 3 cloves garlic, minced fine
 3 lb pork in chunks about 1 to 2 in. square
 6 c water
 6 tbsp soy sauce
 3 tbsp Chinese “wine”
 1 tbsp sugar
 1 star anise star
 1 cinnamon stick (Chinese “cinnamon,” actually cassia, if you can find it)

Dried tangerine peel (known as *gu pi*, “very old skin,” in Chinese markets), about 2 square in., in pieces

3 green onions, slivered

About 1 in. ginger, crushed or minced fine

Heat the oil in a large stewpot (cast iron is good) till very hot. Stir-fry the garlic, then add the pork and brown quickly. Then add the rest of the ingredients, and simmer for 3 hours till the sauce cooks down and thickens somewhat.

Eating Out

For centuries, China has had an astonishing number and variety of eating-out options. Until recently, every busy street was lined with small stalls that provided quick snacks of dumplings, noodles, or fruit. Street-stall cooking could get quite elaborate, as in old Hong Kong or the Chinese neighborhoods of Singapore. Some street stalls became more famous than almost any restaurant. Contrary to travel-book myth, street-stall food was usually extremely good and thoroughly safe, being cooked fresh and on the spot.

Restaurants vary from tiny lunchrooms to the vast “wine palaces” and “wine towers” that have become familiar worldwide in recent years. Quality does not vary with price or size, and the best food is often found in a tiny one-room place or street stall

A food vendor at the night market in China.

that specializes in a single dish and has perfected it. Gourmets know that X has the best wonton, Y the best duck, and Z the best mustard greens. A significant amount of conversation concerns such matters, not only in China itself but as far away as Sydney's Chinatown and California's San Gabriel Valley. This lore is often written down, and books from the early medieval centuries on have preserved names and addresses.

Special Occasions

Any important event is celebrated with a banquet. This is literally a sacred tradition; it traces back to ancient times, when gods, spirits, and deceased ancestors had to be entertained with sacrifice rites. The divine beings usually ate only the spirit of the food; the living shared the feast by eating the material parts. China's great culinary tradition developed at least in part through the need to entertain the divinities with the finest that could possibly be provided. In ordinary life, business deals, family rites of passage, and any fortunate occasion must be celebrated with a good dinner. More spectacular are weddings, 60th birthdays (when a full cycle of the Chinese calendar has been completed), and major holidays.

For banquets, all economy is thrown to the winds. This is the time for whole roast pigs, whole boiled ducks and geese, baked buns, great quantities of fat meat, and the most expensive vegetables. Quantities of expensive spices, fine wine, sugar in various forms, and other choice flavorings bring out the best in these items. The goal is to lavish attention on the guests, to satisfy them and make them as comfortable as possible. This is investment, not loss; the guests will reciprocate, either with a return invitation or with help in business or other matters. With increasing affluence in the last few decades, banqueting has gotten somewhat out of hand. It is often seen as a drain on the economy. It invites corruption; favors asked in return for an invitation can be shady ones. Worst, it has doomed the reputation of Chinese cuisine as one of the world's healthiest. Following the rise of banquets has come a rise in heart disease, diabetes, and other conditions that can be brought on by chronic overindulgence in rich foods.

The Chinese New Year begins (theoretically, at least) on the second new moon after the winter solstice. Lunar months are counted from this date, 30 days to the month. New Year is the major festival of the year. Foods that bring luck (like the lotus seeds) are eaten, as well as roast pork and any other luxuries that a family can afford. After that, there was a traditional period of three days before a fire could be lit, and people had to live on leftovers from the New Year feast. This is no longer observed by most households.

Every month brings festivals of one sort or another, and many have traditional foods. The Dragon Boat Festival, the fifth day of the fifth lunar month, is celebrated with *zongzi*, dumplings of sticky rice, meat, and spices wrapped in leaves and steamed. The Midautumn Festival, celebrating the autumn new moon on the 15th day of the eighth month, requires moon cakes. These are round wheat cakes stuffed with sugar, seeds, and other ingredients. They became particularly popular after the future Ming Emperor Zhu Yuanzhang supposedly stuffed moon cakes with messages calling for revolution, in his successful rebellion against the Mongols in 1368. This legend assumes that the Mongols did not share the Chinese tradition and so did not buy the moon cakes. Today, more edible stuffings dominate. Most are fatty and cholesterol-laden, but a recent movement has promoted more healthful moon cakes.

Diet and Health

The traditional Chinese diet of roughly milled or whole grains, vegetables, and bean curd was extremely healthy. Diabetes, heart disease, and other conditions that can be caused or made worse by food were almost unknown. A major study found that traditional Chinese almost never had these conditions, or even high blood pressure or high blood cholesterol. The only problem with the diet was getting enough to eat, but that was a major one before modern agriculture, transportation, and storage. Probably most deaths in China before 1970 were due to malnutrition or starvation, or were caused by parasites and diseases carried by polluted water and sometimes by foods themselves. Locally, some

cancers were caused or made worse by poorly preserved or poorly cooked foods, or by local minerals that got into food.

Chinese medicine has always focused on food, for the very good reason that malnutrition and starvation were the commonest killers throughout most of China's history. The first recourse in illness is eating the diet considered appropriate. Given this reality, it is not surprising that Chinese nutritional science reached a high level at quite early times. Medical texts more than 2,000 years old preserve nutritional lore, though of rather varying quality. Early medical books record successful nutritional therapies for beriberi (vitamin B₁ deficiency), acute diarrhea, and general debility, as well as pointing out that pine nuts are notably more conducive to long life than a primarily grain diet. (The pine nuts are high in protein and minerals lacking in grains.) The books advise a balance between yang (the hot, dry, sunny aspect of nature, dominant in males) and yin (the cool, moist, shady aspect, dominant in females). Flavors, staple grains, and other medical influences were classified in fives, the five flavors being sweet, sour, salt, bitter, and rank (possibly an early anticipation of the discovery of the umami flavor in modern times).

Basic to Chinese medicine is the concept of *qi* (pronounced "chee"), literally "air" or "breath" but expanded to include the vital spirits thought to animate and nourish the body. A good flow of *qi* is necessary to health. Deficiency or blockage causes disease or makes it worse. So does imbalance between yang and yin (types of *qi*) or between any other forms of *qi*. Much (perhaps, theoretically, all) Chinese medical treatment involves getting the *qi* back in order, as well as more direct symptomatic treatment.

The Greek school of medicine that traces back to Hippocrates (fifth century B.C.) and was perfected by Galen (ca. 129–210 A.D.) reached China fairly early from the Near East and fused with Chinese concepts; the fusion process appears in sixth- and seventh-century medical texts. Galen's concern with hot, cool, dry, and wet naturally fused with the yang/yin concept and complemented the fivefold classification system.

Herbs used in Chinese traditional medicine sit on a prescription. (Hyhoon1210 | Dreamstime.com)

Foods continued to be classified in all these ways, climaxing in the great herbal *Bencao Gangmu* by Li Shizhen (ca. 1593 A.D.). However, ordinary people found the heating/cooling, yang/yin dimension much more salient and useful than the others. Today, traditional Chinese still think in these terms. Heating foods are, most obviously, those that provide the most calories (literal heat energy for the body). These are fatty foods, very sweet foods, baked foods, strong alcohol, and the like. One can also understand why foods that cause burning sensations, like chili, black pepper, and ginger, are "heating." Also catalogued among the hot foods are those with "hot" colors: red beans or brown sugar. Cooling foods are those that are very low in calories (like most vegetables), those that feel "cooling" in the sense of being astringent and puckery, and those that are very

watery—getting wet chills you, and drinking cold water cools you down, so watery foods are thought to be cooling. Also cooling are things that are cold colors (green or icy white, for example), especially if they look like ice (for example, rock sugar, white radishes). The perfect balance point is cooked rice, and anything similar to it—white potatoes, white-fleshed fish, soup noodles—is also considered to be at the balanced or temperate point.

The more heating foods tend to be served in winter, when people need the calories, and also at feasts, which are “hot” occasions (consider the English phrase “a hot time”). The more cooling foods go best in summer. This is especially true of foods like watermelon and cucumber that are genuinely cooling. They stay cool during the day and in prerefrigeration times were about the only things that did in China’s blistering summers.

On the whole, this system kept people healthy. The classic “hot” condition was scurvy, which seems like burning. It involves redness, rash, sores, infections, constipation, and other things that seem like the result of too much heat. It was cured by eating cooling foods, notably vegetables. It is actually caused by a lack of vitamin C, which abounds in Chinese vegetables, so these foods really did cure it. Conversely, the commonest “cold” conditions were anemia (iron deficiency) and tuberculosis; they involve pallor, weakness, and often a low body temperature. Anemia is cured, and tuberculosis can be alleviated, by eating strengthening foods seen as “warming,” notably red meat and organ meats. Empirically, the Chinese found that things like pig liver and wild duck meat—particularly rich sources of iron—were especially effective. Some attention was paid to drying and wetting foods, but they remained minor in the system.

Far more important was the purely Chinese concept, over 2,000 years old and probably much older, of *bupin*, “supplementing foods.” These are foods that are high in protein and minerals but low in fats and carbohydrates, and thus easy to digest while extremely nourishing. They are particularly recommended for women who have just given birth, for anyone convalescing from major injury or sickness, and for elders who want to stay as hale as possible.

They were originally things like pork, pig liver, duck, and game meats generally. At some point Chinese doctors found that certain odd items like tendons, mushrooms, sea cucumbers, and similar sea life worked well, and they generalized to assume that anything similar to these was a bupin. Moreover, it was logical to suppose that the odder an item looked, the more it might help, because there was a belief that odd appearance showed an abundance of qi. Thus, odd-seeming items like edible bird’s nests (the nests of a tropical swift that secretes a proteinaceous substance), ancient misshapen fungi, and weird-looking or rare animals (turtles, raccoons, or dogs, for example) are considered bupin. In recent years this has proved a disaster for the species in question. Traditional conservation and management measures, very effective in many cases, have been abandoned, and overhunting is wiping out everything even remotely bupin. Perhaps the biggest irony is that none of these oddities works any better than—or, indeed, as well as—the traditional red meat and pork liver. People rarely eat bupin unless they feel the need, and modern medicine is replacing the more exotic ones.

The bupin belief grades into a belief in the magical power of some powerful animals like tigers and stags. Air-breathing catfish, which can live out of water and are very difficult to kill, are cooked as a cancer remedy, in hopes that they will transfer their tenacity of life to the patient. Another important belief is the idea that some foods are cleansing (*jing*). These are largely herbal remedies that, when taken in medicinal tea, make the body feel refreshed, cooled, and harmonized. So far, very little research has investigated their actual effects on the system. They do not “clean one out” in the sense of purgatives and emetics—both well known to the Chinese and considered a wholly separate matter.

An example of successful nutritional therapy that is being discovered worldwide is the Chinese wolfthorn plant, *gouqi* in Chinese (*Lycium chinense*). This common shrub has edible but tasteless leaves and small berries that are similar to and closely related to small tomatoes. The leaves and berries have the distinction of being among the richest in vitamins and minerals of any common food. They are

thus grown for tonic use, typically in stews of pork, pork liver, Chinese wine, ginger, black vinegar, and other nutritious and strengthening items. These stews are fed to women who have just given birth and to convalescents. A significant percentage of Chinese living today owe their lives to them. The berries, dried, were always a staple of Chinese medicine stores. Recently they have appeared in markets worldwide. From America to Australia, one can now buy a pound bag of goji berries at the corner store, at least if the corner store has much selection of dried fruit. Another nutraceutical that has gone worldwide is wormwood (*Artemisia* spp.). It is used in China to kill intestinal worms and other parasites, including the organisms that cause malaria. One active ingredient, artemisinin, is now the drug of choice for malaria in much of the world.

Hmong

Overview

The Hmong are members of an ancient tribe that existed in relative obscurity for thousands of years. There has never been a Hmong nation-state. According to Hmong oral tradition (there was no written language before the 20th century), the Hmong were originally Mongolians, great horsemen who were separated from the main Mongol population by years of skirmishes with the Chinese and the subsequent building of the Great Wall. Chinese manuscripts from as early as 2700 B.C. bear out the claim, specifically naming the Miao, as the group is known in China, as one of the tribes that were considered a threat to the dominant Han Chinese.

Contemporary Hmong are, indeed, excellent horsemen and blacksmiths and are known for their skill at animal husbandry. Although the legend of the Hmong having been separated from the Mongolians has traditionally been met with skepticism, mitochondrial DNA studies demonstrate that the Hmong are, genetically, more closely related to the Mongol populations north of China than to other peoples living closer to Hmong villages.

Over centuries, as the Han Chinese population grew both in size and power, the Hmong were forced south and east into ever more marginal territories. They eventually retreated to a mountainous area in the southern part of China, with significant spill-over into the region that would eventually become North Vietnam, Laos, and Burma. In the aftermath of the Vietnam War, the Hmong of Laos fled to the United States, Canada, France, and Australia, continuing a nearly 3,000-year diaspora.

Although they are separated in time and space, Hmong people in all these different places maintain their identity as Hmong, as opposed to the nationality of the country in which they happen to reside. Hmong culture and identity transcend everything else, which is why the Hmong people have resisted assimilation for thousands of years. Hmong culture is complicated. It requires commitment and energy to keep speaking an outnumbered language, to maintain a belief system that is out of the mainstream, and to stay true to clan rules even when they are in conflict with the dominant society. Only a truly remarkable culture could sustain the hardship and pressures that the Hmong have endured and yet remain intact.

There are an estimated nine million Hmong in China, the homeland. Although this may seem like a large population, it is a drop in the bucket. The overall population of China is 1.29 billion. The Hmong population is spread out among eight provinces in southern China, but about four million live in the Guizhou Province.

In Laos, there are only about 400,000 Hmong left, compared to more than one million prior to the Vietnam War. They are stubborn survivors of war and genocide, still clinging to a hardscrabble life as subsistence farmers who hardly grow enough food to keep themselves alive. Their only cash crop is opium, which is legal under a special agreement with the Laotian government.

In the United States, there are about 200,000 Hmong, all refugees from Laos and their descendants. The largest population center is in California, with Fresno as the main metropolitan area in

Va Vang (left) walks with the shopping cart as her sister Bao Lee (right) leads the way while they buy groceries at Costco in Fresno, California. The Vangs are among thousands of Hmong refugees who fled Laos for Thailand 30 years ago and now reside in the United States. (Getty Images)

the state. This article concentrates on the Hmong refugees now living in the United States.

Food Culture Snapshot

The Xiong family lives in a house in a working-class neighborhood in Fresno, California. The household is composed of a husband and wife, the husband's mother, and five of their six children, ranging in age from 26 to 10 years old. The 26-year-old son is married, and his wife and baby also live in the home, where they have converted the garage into their private space. A 20-year-old married daughter lives with her husband's family under similar conditions, only a few blocks away. The husband, wife, and mother-in-law came to California in the late 1970s as refugees from Laos. The children were all born in America. Everyone

in the family who is old enough to hold a job does so. Because of their lack of education and poor English skills, both husband and wife hold low-paying, blue-collar jobs. Their working-age children make as much money as their parents and add their earnings to the household budget. There is a high value placed on education, and the dining room has been converted into a study hall, with a computer and study desks. The family eats in the living room, with some members sitting at the table and others on the couch. In the modest kitchen, there is a dinette set to seat another three to four diners.

On Saturday morning, everyone in the house piles into the minivan for the weekly outing to the farmers' market. There, they can buy fresh vegetables from Hmong farmers who live in the vicinity, such as Chinese long beans, oriental eggplant, bok choy, bitter

melon, daikon, lemongrass, black nightshade, Hmong cucumbers, and *opo* (a type of bottle gourd). They also pick up some glutinous rice, a few live chickens, and freshly caught fish. One of the benefits of living in an ethnic enclave the size of Fresno, especially in Fresno County, where there are approximately 2,000 Hmong/Lao family farms, is that fresh vegetables are available in season. There is even a Hmong American extension agent stationed in the county, who helps farmers adjust crops that originated in the tropical rain forest to the arid conditions of central California. The family is able to purchase most of the foods it prefers at the farmers' market during most of the year. There is also a network of small Hmong-owned markets and convenience stores in the area, as well as a few large Asian supermarkets.

While at the farmers' market, individuals in the family purchase ready-made food. Some choose breakfast burritos, while others get hot dogs. One of the interesting things about Hmong culture is that the adherence to "being Hmong" does not extend to food. These are people who have learned over the past 3,000 years to accept whatever food is available, sort of a "when in Rome, do as the Romans do" attitude about food.

Once home, the girls and women go to the kitchen to start cooking dinner while the boys and men work on projects around the house. Most cooking chores are traditionally the work of women, although men do much of the heavy work, such as hunting, fishing, slaughtering large domestic animals (such as pigs), pressing the juice out of sugarcane, and making rice beer.

Major Foodstuffs

The Hmong have never developed a sophisticated cuisine. Food is a simple thing in this complex culture, and the Hmong have always been quite willing to adopt the foods of the dominant culture. There are a few constants, however. The staple food, and the basis for all meals, is rice. In fact, the Hmong phrase for "Let's eat" is *peb noj mov*—literally, "Let us eat rice." There are many types of rice, chosen for special occasions, based on budget, or by personal preference. Families consume so much rice that they purchase three to four 25-pound sacks of rice at a time. One favored variety is jasmine rice, which has

a nutty flavor. The favorite rice for desserts and special occasions is glutinous rice, which is usually referred to as sticky rice, because it is sticky enough to roll into small balls.

The best food is, simply, whatever is freshest. When Hmong refugees first came to the United States, they were unfamiliar with the concept of refrigeration. They were used to harvesting fresh food every day for immediate use, with the exception of rice. The refugees found the very idea of shopping only once a week or so and keeping the food in the refrigerator to be disgusting. The idea of buying meat and then freezing it to be thawed and cooked later was unacceptable to them.

Hmong refugees will eat many sources of protein: fish, pork, beef, chicken, venison, and other wild game. Hunting and fishing are favored activities for both men and women. Pork is the highest-status meat. In Laos, it was reserved for special occasions, but the convenience of purchasing smaller amounts at the supermarket has resulted in pork being eaten for everyday meals. Chicken and fish are probably the most commonly eaten protein sources, partly because chickens are also used ceremonially, for healing and other shamanic rituals. Fish is free and can be caught for same-day consumption, which is highly valued. It can also be bought fresh at the Asian supermarkets and farmers' markets.

Fruits and vegetables are important foods but not as important as meat. The Hmong eat a wide variety of vegetables, many of which have already been listed. They don't limit themselves strictly to vegetables from Southeast Asia and are willing to try any new fruit or vegetable. Favorite fruits include mangoes, peaches, pineapple, bananas, and papaya. The primary carbohydrate is rice. Sweets are not part of the traditional diet, except for the occasional sticky rice cakes sweetened with sugarcane juice. This has changed since moving to the United States, and both children and adults consume sweets and soft drinks.

Cooking

The traditional way to cook rice is to first soak it, then rinse it, then steam it, then rinse it again, and

then steam it again. It is a long process but results in very fluffy grains of rice that do not stick together. More westernized Hmong women, who hold jobs outside the home, use a rice cooker for convenience, although they admit the rice is not as fluffy.

There are two main cooking methods: boiling and stir-frying. In Laos, most families cooked all their meals in one cooking pot, or crucible, hung over a fire. Since moving to the United States, cooks have become comfortable with American cooking methods, and many cooks find the process of stir-frying several dishes for each meal to be efficient and satisfying for serving their typically large families.

Typical Meals

The basic meal consists of rice in a large bowl in the center of the table, surrounded by smaller side dishes. Most of the side dishes are vegetable dishes. One or two dishes contain meat, when available. The preferred meat for most meals is pork, with chicken a close second. Chicken is also important for healing rituals. Families in Asia eat from the same dishes, dipping in with chopsticks, forks, spoons, or fingers. Families that have moved to the Western world are more apt to have adopted the concept of separate dishes for each family member and guest, with serving utensils for reaching into the communal pot. The dishes may be boiled or stir-fried.

A good meal begins with soup. It may be as simple as “rice soup,” which is simply the leftover water from the second steaming of rice. Rice soup is commonly eaten when food is in short supply or as a medicine for sick individuals. It is considered plain but nutritious. Another type of soup is “sour soup,” which can be eaten as is or form the basis for other recipes. Sour soup is a fermented dish that is unique to the Hmong and gives the food a distinctive flavor. Every family has a crock or jar that is used exclusively for sour soup. It should be kept on hand as a pantry staple.

Sour Soup

Mince a collection of vegetables, such as cabbage, carrots, leeks, and radishes together, and place them

in a large crock or jar. Mix in glutinous rice flour, pepper, and salty water. Cover the jar, and set aside for several days.

Here is a recipe for a popular main course:

Zeub Nfsuab (Boiled Pork and Mustard Greens)

8 c water

2 lb pork shoulder

1 ¾ lb mustard greens

Bring water to a boil in a large saucepan. Add pork, and reduce heat to low. Cover and simmer gently until meat is fork-tender, about 1 ½ hours. Remove meat, trim fat carefully, and cut meat into bite-size pieces. Let the broth cool, then skim fat, reserving ¾ cup for use in other recipes.

Wash greens and cut into 2-inch pieces, removing coarse stems. (Stems may be saved for pickling, if desired.)

Put ¾ cup of defatted meat broth in a pan. Add greens and pork, and simmer until greens are wilted, 5 to 10 minutes.

Hmong foods tend to be heavily spiced with Thai peppers, lemongrass, garlic, green onions, ginger, mint, fish sauce, pickled vegetables, and a variety of other herbs and spices. There is a preference for sour flavors, as evidenced by sour soup, but sourness is not the only flavor. Foods can also be spicy, sweet, pungent, and/or salty. Pickled vegetables are another notable item, because it is another possible link to Mongolia. Although cucumbers and pickling date back about 4,000 years, to ancient India, they were quickly adopted by the Tatars of Mongolia.

Alcoholic beverages are popular with men, but women usually limit their drinking to special occasions—when they sometimes drink heavily. One popular drink is made, not surprisingly, with fermented rice. It has a flavor similar to beer. This drink is called sweet rice—usually said with a knowing grin.

Eating Out

There is a running joke in the Hmong refugee community that there are no Hmong restaurants, a reference to the spartan quality of the cuisine. It's almost true. There is a significant number of Hmong-owned restaurants, but they are usually presented as Chinese restaurants, with classic "Chinese" dishes, such as chop suey. Some Hmong dishes are usually on the menu as well, but they are hidden among the Chinese dishes. There are also about three openly Hmong restaurants in the United States. One is in Fresno.

When Hmong refugees go out to eat, they are usually not interested in eating Hmong food. In fact, there is no distinctive preference, although Vietnamese restaurants are favorites. Otherwise, the typical "when in Rome" attitude prevails, and restaurants are chosen based on convenience, price, and other factors, such as the chance to see and be seen by other people in the community. Hmong refugees enjoy trying the foods of other cultures and, besides Vietnamese restaurants, will happily frequent Mexican restaurants, mainstream American family restaurants, Chinese restaurants, and the ethnic restaurants that have been opened by the chefs of other ethnic groups. Hmong refugees and Latinos live in the same neighborhoods and get along quite well. The Hmong have adopted many Latino foods, such as tortillas, churros, and jicama. Hmong foods are beginning to enter the mainstream, with the opening of a small number of restaurants in Minneapolis, the Central Valley in California, and Chicago. These restaurants offer some Hmong dishes along with Vietnamese, Thai, or even Philippine cuisines.

Special Occasions

The most important celebration of the year is the Hmong New Year, which takes place after the harvest in the autumn. Traditionally, it lasts 10 days. In the United States, it has been changed from a 10-day event to a full season, lasting approximately from Halloween to New Year's Day. For example, the Fresno Hmong New Year is generally held between December 26 and January 1. The Atlanta

Hmong New Year is held on Thanksgiving weekend. The Seattle Hmong New Year is typically held the first weekend of November. This allows people an opportunity to visit New Year celebrations in several cities over the course of a season.

Hmong New Year is a joyous occasion. In the traditional religion, which is a combination of animism and ancestor worship, it is also a time for important rituals. The rituals that are done to appease the ancestors and release the souls of the dead are done in the home. There are also thousands of Hmong who have converted to Christianity. They also hold smaller family get-togethers in the New Year tradition but are more apt to sing gospel music than to sacrifice a chicken to the ancestors. Nonetheless, most of the celebration of the New Year is done in huge parties where literally everyone in the community comes together for singing, dancing, eating, and mixing.

The food of the Hmong New Year season is best described as "abundant" and is served from buffet tables that are crowded with all kinds of foods, either brought potluck-style or purchased from a caterer. One traditional treat is the sticky rice cake, which is made by sweetening glutinous, or sticky, rice with sugarcane syrup and forming it into a bite-size patty. The patty is wrapped in a banana leaf and roasted, making a pleasantly browned confection. Another popular treat is rice beer, which the adults in the crowd enjoy thoroughly.

The Hmong New Year has changed, however, and in the United States it reflects the American lifestyle. It celebrates ancient traditions, but it is also influenced by the American and Western concepts. Feasting is one of the traditional aspects of the Hmong New Year that continues to this day, except that some of the food and other customs are different from in Laos. For example, there are both private and public aspects to the celebration. Families entertain out-of-town guests and invite friends over for dinner in the private celebrations. This is the time to slaughter the New Year's pig, or *npua tsiab*, which has been raised for this specific purpose. In urban areas, it is difficult to raise and slaughter the *npua tsiab*, which is one of the reasons that so many Hmong families have moved to rural areas.

Bao Lee (left) helps her sister Va Vang kill chickens for a special Hmong New Year feast on December 12, 2004, in Fresno, California. (Paula Bronstein | Getty Images)

Both Christians and followers of the old religion mix freely in the public celebration. At the public celebration, there is, increasingly, paid entertainment instead of long-winded renditions of folktales and recitations of traditional poetry. While many of the women still wear traditional clothing, the men are more likely to wear Western-style business suits. Business is conducted at the party, politicians shake hands and kiss babies, and community groups set up booths and pass out flyers.

The food at the Hmong American New Year represents adaptation to life in multicultural America. There might be a range of food, from fried chicken and noodle soup to ice cream and donuts. There might also be tacos, churros, Thai and Chinese foods, green papaya salad, and Lao *khao poun* mixed in with the Hmong smoked pork and sticky rice cakes.

The Hmong in China hold two special, food-related holidays. The first is Chixin Jie, the New Rice Tasting Festival, in July. This festival celebrates the rice harvest. To express gratitude to the spirits, the newly harvested rice is steamed and eaten with newly harvested vegetables and freshly caught fish. Some of the rice is also made into wine for the festival. The theme is freshness, which relates directly to the high value placed on fresh foods.

The other festival is called the Sister Rice Festival, sometimes referred to as the “First Valentine’s Day.” This festival, a celebration of spring and an annual mating ritual, is based on the folktale of the seven sisters. The sisters in the story were lonely, because there were no marriageable men on their mountain. On a neighboring mountain, separated by a river, there were seven lonely brothers. The

bearded god, Zhang Guolao, who carried a tubular bamboo drum, took pity on them. He instructed the girls to dye glutinous rice into colors, using flowers and leaves of mountain plants. The dyed rice was then rolled into balls containing meat or fish. The god then brought the brothers across the river, where the sisters presented them with small bamboo baskets filled with the colored rice balls. And they lived happily ever after.

In modern-day China, the Sister Rice Festival is a colorful reenactment of the folktale. Single women still go into the hills to collect flowers and leaves to dye small balls of sticky rice. They sometimes insert highly symbolic gifts into the colored rice balls, which are arranged in small bamboo baskets. When suitors come to call, they take these love tokens as messages from their intended mate. For example, a small bamboo fishhook means, quite literally, “Let’s hook up and get married quickly.”

Diet and Health

Food and diet, health and disease, are controversial topics within the Hmong refugee community. Some of the older people try to maintain a traditional diet, but so much has changed that it seems impossible. For example, pork, once reserved for special occasions, is abundant, but it does not taste the same. Refrigeration, so much a part of American life, changes the flavors of food. The need to go out and work for wages results in very different time issues than when living in a village and supporting oneself by raising one’s own food.

In some ways, traditional Hmong food customs, such as the emphasis on freshness and plenty of vegetables, help keep the group healthy. But others, such as a perceived value in being fat (a sign of plenty) and the uncritical acceptance of other foods, have the opposite effect. The Hmong in America are suffering from diseases that they did not know existed 30 years ago, and not everyone agrees on the reasons.

One of the more positive traditional practices is the tender custom of caring for a woman during the first month after the delivery of a baby. During this time, the mother is considered vulnerable and must

eat a special diet for protection and to regain her strength. The diet is made up of boiled chicken with special, healing herbs. She is not allowed to work during that month, and rest is required. It is best for the husband’s mother to cook and care for her daughter-in-law for the first month after delivery, which is a nice benefit for young women who, otherwise, must serve their mothers-in-law. The women say that the diet is monotonous but important. A public health study conducted by the National Institutes of Health (NIH) showed that maternal and child deaths among Hmong refugees were surprisingly low.

One negative result of the access to an abundance of food in the United States is a high rate of obesity and diabetes. In Laos, food was sometimes in short supply. There was never a surplus of food, and people adjusted to living on a low-calorie, low-fat, plant-based diet. In that environment, a fat baby was a healthy baby. When the Hmong moved to the United States, they delighted in how easy it was to have fat babies and fat children. Some of the adults also became overweight, and a high rate of diabetes, previously unknown, is the outcome. Diabetes educators find that it is difficult to work with Hmong patients, because their cultural beliefs are in conflict with Western medicine. A study in Minnesota found that Hmong refugees with diabetes do not accept that it is caused by food. Rather, they see it as a result of their refugee experience, of the loss that they have suffered. In their belief system, they are “out of balance here.”

Hmong American children have learned about hot dogs, hamburgers, tacos, pizza, and other Western-style foods through their school lunch programs, and they often demand those foods at home, resulting in an especially high intake of foods that are high in calories and low in nutrients. The best efforts of nutrition educators sometimes are stymied by cultural differences. For example, one public health office took care to hire a registered dietitian with a master’s degree, who was Hmong and from the local community, in an earnest effort to improve the diet and health status in the area. It looked like a win-win situation, with a culturally appropriate yet scientifically trained care provider. The dietitian did

her best, concentrating on prenatal health, diabetes, weight control, and heart disease, but her advice fell on deaf ears among her clientele. The reason: She came from a low-ranking clan.

There is a high level of mistrust toward American doctors. Western medicine is cold and intrusive in comparison with the more familiar shaman. Even individuals who have converted to Christianity tend to fear and avoid American doctors. To make things more difficult, there are only 13 last names, one for each clan. There is a limited number of first names as well, resulting in many people having the same name. This causes confusion at pharmacies and health clinics, resulting in treatments and prescriptions being confused on a semiregular basis. In one example, a man with kidney problems went to see his doctor. The doctor gave him an appropriate prescription, but the pharmacist got his prescription

switched with that of another man with the same name. As a result, the man suffered kidney failure. His doctor suggested dialysis, but there was a rumor circulating among the Hmong that dialysis was just a way for the doctors to collect blood that they wanted to drink. The myth of the vampire doctor started during the Vietnam War and has never really gone away. The man refused treatment until he was so weak that his American friends just picked him up and carried him to the emergency room. When his wife was notified, she came to the hospital and screamed at their American friends that the doctors just wanted to kill her husband, until a nurse, who also happened to be Hmong, managed to calm her down. In this case, the man recovered, but every time a Hmong person dies in the hospital it helps perpetuate the myth of the vampire doctor.

A group of local Hmong farmers proudly display their crop of dikons near Fresno, California. (Andy Sacks | Getty Images)

There is a higher rate of kidney stones and kidney failure in the Hmong population than in the general population. The reasons are unclear, but one possible cause is high protein intake combined with low water intake. It is also possible that there is a genetic enzymatic imbalance that is widespread in this small population, similar to the tendency, in some families, to develop gout due to a genetic tendency to build up uric acid in the system. Even so, the problem might be alleviated by eating less protein and drinking more water.

Most Hmong people who now live in the United States have adjusted the traditional diet to Western standards. For example, they will keep frozen meat in the home freezer, although they still prefer meats and fish that are as fresh as possible. The preference for fresh fruits and vegetables remains, however, and those foods are to be found at Hmong-owned booths at local farmers' markets, as well as from Hmong people who have moved to rural areas where they can farm. However, most Hmong homemakers still cook rice with every meal and prefer the flavor of pork to beef, flavored with traditional spices such as coriander, lemongrass, and monosodium glutamate.

Hong Kong

Overview

Food is so intimately woven into the fabric of Hong Kong's society that it is part of the standard greeting when one encounters family, friends, and acquaintances. Hong Kong is a gourmet's paradise where one can eat, and eat well, 24 hours a day, seven days a week. The choices range from some of the best street food in Asia to haute fusion cuisine at the restaurants of world-famous chefs.

Hong Kong, which means “fragrant harbor” in Cantonese, after the incense that used to perfume the island, was once just a small fishing village. The deep natural harbor and its location as the gateway to southern China ensured its destiny as a busy entrepôt, but it has suffered a tumultuous history in the last two centuries. After the Chinese lost the Opium War, Hong Kong was ceded to the British and in 1842 became a Crown Colony. After the Chinese lost the Second Opium War, the Kowloon Peninsula south of Boundary Street was also ceded to Britain. In 1898, faced with an increasing French influence in southern China and worried about the colony's security, Britain obtained a 99-year lease of Lantau Island and the adjacent northern lands, which became known as the New Territories. These three agreements formed the territory that is collectively known today as Hong Kong. The territory was briefly occupied by the Japanese during World War II and in the last century has experienced waves of immigration, first from mainland Chinese fleeing the newly established Communist government, and then a steady flow of Indian and Pakistani entrepreneurs, Vietnamese refugees in the 1980s and 1990s and, since its return to Chinese sovereignty in 1997,

internal migration from the mainland. Under its period of British rule, Hong Kong became a thriving port that attracted tradespeople, immigrants, refugees, Commonwealth expatriates, and others from all over the world. Throughout the territory's transformation, the dominant culture (and population, which is 95% Han Chinese) has remained unmistakably rooted in Chinese practices, traditions, and preferences, but its complicated history can be clearly observed in Hong Kong's rich and eclectic food culture.

Food Culture Snapshot

Wendy and David Chan live in a modest but high-rise apartment close to the bustling shops, restaurants, and businesses of Mong Kok. Wendy and David were born and raised in Hong Kong, although David was educated abroad. David works in the family's import-export business. Wendy also works there part-time while raising their two boys. The Chans employ a maid to help with household chores and cooking but also eat out frequently. Their lifestyle and foodways are typical of well-educated, bilingual, and well-traveled middle-class Hong Kongers. Their background has influenced their diet, which embraces foodstuffs from both East and West.

David usually gets up at 7 A.M. and goes straight to work. He picks up a hot breakfast along the way, which usually consists of a bowl of rice porridge (congee) with scallions, preserved duck eggs called *pei dan*, and lean pork. Sometimes he stops by a storefront and buys a small package of *ju cheong fun*—rolled rice crepes that are doused in soy or hoisin sauce, sprinkled with

sesame and scallions, and dressed with peanut sauce. This he takes back to work and eats at his desk. An occasional coffee drinker, David might also purchase a small eight-ounce cup of coffee with sugar to perk him up. Meanwhile, Wendy prepares breakfast at home for herself and the boys. The boys favor cold cereal with milk and buttered toast. Other times Wendy will ask their Filipina domestic helper, Josephine, to pick up something from the bakery the night before. This is usually an assortment that includes sweet and savory options: soft glazed rolls with ham and egg sandwiched in between; glazed buns stuffed with roast pork (*cha siu bao*); sweet buns with a cookie-like crumble top and custard filling, known as pineapple buns for how the crumble resembles a pineapple; light, sweet rolls split in half, filled with sweetened whipped cream, and sprinkled with toasted coconut (*lai yeo bao*); or plain semihard rolls known as *ju tsai bao*, or “piggie rolls,” which are eaten with butter and jam.

The boys buy what they wish for lunch at the school cafeteria. The cafeteria offers ham and cheese sandwiches, curried soup noodles, or stir-fried rice or noodles. If they are really hungry, they might buy a *fan hup*, or “rice box,” which contains a meat of choice, a vegetable, and a sauce, all over a large helping of rice. Wendy and David also eat out for lunch and usually choose to go to the large food court in the basement of their office building to get a quick “set meal” of a soup, a rice, a vegetable, and a meat for a modest price.

At around 4 P.M. someone in David and Wendy’s office is sent downstairs for an afternoon tea break. The designated courier takes orders from everyone and returns shortly with an assortment of *lai cha* (strong hot tea usually sweetened with condensed milk), coffee, and a few colorful bubble tea drinks (tea, coffee, or juice-based beverages with large brown tapioca pearls mixed in). The boys, meanwhile, have been let out of school and head to the nearby 7-Eleven with their friends to buy drinks and processed snack foods such as BBQ potato chips, shrimp crackers, Japanese candies, or ice creams. They might also stop at one of the hawker stalls (street vendors) near their school. Some favorites include curried fish balls (fish paste formed into Ping-Pong ball-sized balls) on skewers, waffles slathered with peanut butter and margarine

folded inside paper bags, and fried stinky (fermented) tofu served with sweet hoisin sauce.

Dinner is the most important meal of the day for a busy family like the Chans because it is when everyone sits together to share a meal and their day. As Wendy is at work in the afternoon, it is Josephine’s job to visit the local market when it opens at 10 A.M. That way, the family ensures they have the best selection of meat, fish, and produce.

Major Foodstuffs

Hong Kong is often described as a crossroads of East and West, which translates into the foods available for purchase as well. The region’s proximity to other Southeast Asian neighbors, long history of attracting visitors, and continued role as a major trading port have meant that Hong Kongers today have developed a wide-ranging palate that demands foodstuffs from all over the world. Land is at a premium, the cost of living is high, and labor is expensive, so the territory must import most of its food in any case. Chinese cuisine, and especially the regional preferences of neighboring Canton, is the one that maintains the strongest influence, however, and this is reflected in the major foods that are consumed in Hong Kong.

Located just north of the Tropic of Cancer, Hong Kong is subject to the annual monsoons that irrigate the rice paddies of Southeast Asia. Rice is thus the preferred staple in Hong Kong, with noodles of all types also consumed regularly. Rice paddies used to be a common sight in Hong Kong, but rapid urbanization and an exploding population have changed this. Rice must now be imported, with fragrant jasmine rice from Thailand preferred above other types.

Like other cuisines at cultural crossroads, the geography of Hong Kong has played an important part in its food culture. Seafood, whether captured from the South China Sea at its doorstep or imported from far away, is beloved by all Hong Kongers. Hong Kong seafood markets are exhilarating sights to behold, with what seems to be every edible creature piled, dumped, stacked, and laid out to satisfy every possible craving. Aside from a

huge variety of fish—frozen, swimming in tanks, or simply gasping for air on wet tarps laid out on the pavement—there is every size and shape of clams, mussels, oysters, crabs, lobster, shrimp, crayfish, sea urchins, sea eels, and more. Some of the more spectacular specimens in markets are huge, almost lobster-like mantis shrimp, long-bladed razor clams, prehistoric-looking rockfish, pricey abalone, and the unmistakably phallic-looking geoduck clam. The Cantonese also love frogs, which can be found in the “wet” seafood section of markets. These are piled into small wire cages, from which they are removed and skinned and gutted upon request.

Walk through any of Hong Kong’s markets, and the variety of fruits for sale year-round is equally stunning. Fruit is flown in daily from the rest of Southeast Asia, China, Australia, New Zealand,

North and South America, and beyond. Hong Kongers adore fruit and usually end their meals with it. Apples, oranges, and grapes are popular, as are tropical fruits such as the impressive jackfruit, with its long (some up to four feet!), hard, spiky body; the gorgeous pink and green dragon fruit with its white flesh and black, kiwilike seeds; the succulent Cantonese lychee and longans that have inspired classic poems; the neat purple billiard ball-like mangosteens; crisp-juicy Asian pears; fragrant papayas; honeyed Thai mangoes; and more.

Hong Kongers, like their mainland cousins, are enthusiastic vegetable eaters. No meal is considered complete without a vegetable dish. Chinese broccoli (*gai lan*), mustard greens, napa cabbage, and bok choy and its more svelte relative *choy sum* are some of the most popular leafy greens. Chinese eggplant,

white Chinese turnips, starchy taro root, and lotus root are commonly seen on Hong Kong menus and may be fried, boiled, steamed, sautéed, braised, and so on. Additionally, while technically not a vegetable, mushrooms of all kinds are embraced, with the meaty oyster mushroom fetching premium prices whether dried or fresh.

Soybean products are omnipresent in Hong Kong markets and menus. Soy milk, known as *dou tseung*, is popular beverage that is consumed either hot or cold and can be purchased from small cafés or in bottles from stores. Tofu in its many forms is used in soups, stews, braises, stir-fries, and desserts. Fresh and dried tofu “skin,” which forms on the surface of soy milk as it is boiled, is used to add textural interest to vegetarian dishes and soups. Perhaps its most interesting use is in Buddhist vegetarian cuisine, where the skins can be used to imitate duck or chicken, both texturally and visually. Soybeans themselves are not commonly eaten whole, except perhaps as a bar snack or at Japanese restaurants.

Cooking

Preparation of meals in Hong Kong relies on the same set of equipment and techniques as on the Chinese mainland. Chinese cooking does not involve a lot of specialized equipment, but the most basic kitchen will have three items: a wok, a meat cleaver, and a heavy cutting board. The wok is the workhorse of the Hong Kong kitchen and is used for everything from steaming to braising, stir-frying to deep-frying. The best woks are made of cast iron, and the 14-inch diameter size is sufficient for the average household. A large meat cleaver, usually made of carbon or stainless steel and with a wooden handle, is also standard in every Chinese kitchen. While it may appear unwieldy, the Chinese cleaver is extremely versatile and can accomplish cutting tasks that range from a fine mince to chopping bones. As the cleaver is a weighty knife, it is necessary to have a heavy and stable cutting board. Traditional boards were made from round wood taken from a slice of a single tree trunk and were so large that they should be more accurately described as blocks. Modern boards are made of a dense, heavy-duty

rubber or plastic material that is not as thick but can still meet the downward chop of a cleaver into bone without bouncing off the counter.

Hong Kong kitchens tend to be tiny, which limits the number of appliances that can be crammed into them. Refrigerators are diminutive and simple compared to the high-tech behemoths found in North American kitchens, which means that daily grocery shopping is a must for anyone who eats at home regularly. Since open markets are available in every neighborhood, though, shopping is not the same kind of chore in Hong Kong as it would be in North America’s car-centric society. Fresh food items tend to be purchased in open markets, while dry goods, processed or frozen foods, and household goods are purchased in supermarkets. Most shopping is done on the way home from work, or if the household employs a maid, she (maids are almost always female) will do the shopping during the workday. Microwaves are not ubiquitous as they tend to take up a lot of room, and those who have them tend to limit their use to reheating, rather than cooking, food. Households without microwaves reheat food the old-fashioned way by steaming it in a wok or giving it a quick stir in a pot. Actual stoves are not available in every household; many contain cooktops with single or double burners that stand on top of the counter and may be hooked up to a gas tank that must be exchanged regularly. Set-in cooktops will be attached to a gas supply line. Chinese home cooking does not feature many roasted or baked dishes; that, combined with the lack of space, means that ovens are not common either. Even households that do have kitchens large enough for a proper stove and oven rarely use them unless there is an interest in preparing Western dishes or in baking.

One appliance that is universal, however, is the rice cooker. Rice being an important staple, having the rice cooker can help free up a burner, which is especially important if there is only one burner. The rice cooker can cook large amounts of rice at once without requiring any attention. As a bonus, small dishes of food can be steam-cooked by placing them directly on top of the rice while it is cooking, saving space and energy. The food also flavors or perfumes the rice in the process.

In terms of technique, stir-frying is perhaps the best-known Chinese cooking method. To stir-fry, a small amount of oil is placed in a wok over high heat. Evenly cut pieces of meat and/or vegetables are then placed in the wok and quickly tossed together. The high heat and the round-bottomed shape of the wok allow heat to conduct quickly and evenly over a large surface area, resulting in a very quick method of cooking that seals in flavors and nutrients. This was particularly desirable in the days when firewood still had to be collected as it was an energy-efficient way of preparing food.

Steaming is popular and is a simple, healthy method of preparation that brings out the true flavors of the food. The setup for steaming usually involves placing a small stainless steel wire rack at the bottom of a wok and filling the wok with boiling water up to the height of the rack. A plate of the food to be steamed is then lowered gently onto the rack and a cover placed over the wok until the dish is done.

Other important techniques include clay pot cooking, braising, double steaming, and slow-simmered soups. All of these techniques belong to the larger body of Chinese cooking methods as well but are an integral part of how Hong Kongers cook. Clay pot cooking is exactly that—food is cooked in earthen pots whose interiors are typically glazed black, with a small sturdy handle to one side and a matching lid. These are especially suitable for long braises because of the material's ability to conduct and retain heat evenly, minimizing burning. One popular use for clay pots is in preparing *bo tsai fan*, or clay pot rice. Rice and water are measured into the pot, with seasoned meat and vegetables settled on top to cook with the rice. It is a literal one-pot meal, with the pot acting as an attractive serving bowl as well. Braising differs from Western braising only in the choice of ingredients for the liquid, with soy sauce being a common base flavoring. Double steaming is a method usually reserved for preparing expensive delicacies such as shark's-fin or bird's nest soups. Ingredients are placed inside a ceramic jar with water, this is in turn placed inside another container, and the whole contraption is gently steamed for several hours. This technique minimizes the loss

Traditional soup found in Hong Kong made with meat, vegetables, and noodles. (Shutterstock)

of moisture while cooking and so is considered ideal when there is a need to preserve the nutritional and medicinal benefits of expensive ingredients. Double steaming is often used when making *tong sui*, Cantonese dessert soups that incorporate herbal medicines and are consumed for their nourishing and beautifying benefits.

Soups, both savory and sweet, hold a special place in Hong Kong food culture. Similarities can be drawn between the healthful, comfort-food qualities of chicken noodle soup and the body of Cantonese-style slow-simmered soup recipes (*lo foh tong*) that Hong Kongers draw on. The Chinese herbs that are present in almost every recipe create soups that are believed to counteract everything from overwork and poor diet to post-pregnancy health problems and asthma and are the ultimate expression of caring when prepared for family and friends.

Typical Meals

Most meals consumed at home are primarily Cantonese influenced, reflecting Hong Kong's geography and the majority Cantonese population. Chinese home meals are eaten communally, with all the dishes placed at the center of the table and everyone taking small portions to go with their individual portions of rice throughout the meal. Thus, when eating at home, there are no courses because

everything is placed on the table at once. At formal banquets there will be courses, but they, too, are placed in the center of a large table, albeit at intervals. The dishes remain on the table until they are empty, so by the end of a banquet all 9, 12, or 13 courses may be present in the middle of the table.

The basic structure of a meal is predicated on the belief that a healthy, balanced meal consists, at a bare minimum, of a meat dish, a vegetable dish, and a soup, or *leung sung yat tong*, meaning “two side dishes and one soup.” This is, of course, in addition to jasmine rice. If guests are expected, dinner will be much more elaborate, with at least one seafood dish, usually steamed fish, and some roasted meats such as barbecued pork (*cha siu*), crispy-skinned roasted suckling pig, honey-lacquered roast duck, roast pigeon, or soy-braised chicken, purchased from special roasted-meat vendors.

The vegetable is usually the simplest dish, with a dark leafy green such as bok choy or choy sum quickly boiled and served with a dressing of oyster sauce or stir-fried with garlic. The meat dish might feature modest home-style dishes such as sliced beef stir-fried with onion, sweet and sour pork with bell peppers and pineapple, or steamed chicken with mushrooms and ginger.

Seafood is a little more expensive, so a family may have fresh fish less often. Salted fish and shrimp are usually used as condiments as part of a larger dish, although sometimes salted or dried fish and cuttlefish will be steamed and eaten plain. Hong Kongers prefer to purchase fish as fresh as possible. Still swimming is best, and a fresh fish is a must if guests will be present. The fish, gutted and descaled but with head and tail still intact, is typically steamed in the wok with ginger, scallions, and soy sauce and doused with hot oil to bring out the flavors.

Depending on what kind of soup is being prepared, ingredients such as dried nuts, seeds, or roots; fresh or dried fish; fresh or preserved vegetables; and/or meat may be included. Fresh fruit is usually eaten for dessert, and as noted earlier, the average Hong Kong fruit bowl may contain anything from apples and oranges to lychees, durians, and mangosteens.

Eating Out

Eating out is also a very important part of the local food culture. Tiny apartments and long workdays (most people work a half day on Saturday and even schools require morning attendance) mean that Hong Kongers have little space or time to socialize. Restaurants provide much-needed social spaces in this inescapably cramped city.

Hong Kong’s food culture, like that in other Southeast Asian cities, begins on its streets. Street-food vendors, known as hawkers, can be found on the streets and in the markets throughout the territory. Most require some sort of vending license, although some operate illegally and take their chances with the authorities, leading to desperate scrambles whenever a uniform happens along. Common foods sold are chestnuts roasted in giant woks of hot coals; stinky tofu (which can be smelled a block away); *boot tsai go*, which are small, sweet steamed puddings studded with mung beans or adzuki red beans; and mock shark’s-fin soup, made of similar flavoring ingredients but with vermicelli replacing the strands of cooked shark’s fin. Waffles—both the familiar square-holed variety and the “little chicken egg” type known as *gai dan tsai*—are very popular with children. Both are made from waffle batter. *Gai dan tsai* is cooked in an iron with little half-moon indentations that result in the “egg” look and is eaten plain, pulled apart piece by piece. Regular waffles are smeared with peanut butter and/or butter. Dragon beard candy—finely pulled sugar rolled around bits of crushed peanut, toasted sesame, white sugar, and coconut that resembles silk cocoons—was a typical hawker treat but is now a rare sight. Pulling sugar into gossamer strands takes practice and skill, but this dying art can no longer command a living wage.

Dai pai dong are beloved institutions and an important part of the local food culture. These informal, affordable outdoor eateries usually consist of rickety plastic or cheap metal tables and chairs set on the pavement. The kitchen doles out simple Cantonese favorites such as congee, soups, noodles, and stir-fries, as well as small snacks such as *jung*, the Chinese tamale-like dumpling. The menu is usually

in Chinese. Open early in the morning through the wee hours, dai pai dong are frequented for every meal of the day.

As Hong Kong is a city that never sleeps, it seems inevitable that there is a proper mealtime—the fourth in a standard day—to sustain those who keep going long after the sun sets. *Siu yeh* (both characters mean “night”) is the term used for a small meal taken late at night, after dinner has already been eaten. It is usually eaten with friends after an evening out or a long night at work. Larger and more formal restaurants tend to close after 10 or 11 P.M., so more casual Hong Kong-style cafés, hawker stands, or dai pai dong are the usual venues for siu yeh.

There are several categories of cafés in Hong Kong. The Hong Kong-style ones, known as *cha chaan teng* (literally, “tea diner”), serve casual Cantonese dishes similar to what is available at dai pai dong, with the addition of “Western” items such as steak, pork cutlets, ramen noodles or macaroni with Spam and a fried egg, plain buttered toast, or French toast. In Hong Kong French toast is two slices of deep-fried bread with peanut butter in between, served with English golden syrup and margarine. These cafés also serve a variety of classic Hong Kong beverages such as iced lemon water with simple syrup, hot or cold malted drinks sweetened with condensed milk, and “fleecies”—red bean ices made of sweetened red beans with condensed milk and ice

A typical dai pai dong, or street restaurant, in Hong Kong. (Shutterstock)

or topped with ice cream. Casual, cheap, and ubiquitous, cafés are popular for a quick, casual meal or snack.

More upscale Western-style cafés in Hong Kong serve only *sai chan*, or Western cuisine. Dishes on the menu here are derived from no specific Western country but are adjusted for local tastes, earning this style of cooking the nickname “soy sauce cuisine.” Most will offer a three-course set meal consisting of a soup, a main course, and a dessert. Clam chowder, cream of asparagus, borscht, and minestrone are popular options for the soup course, while wok-fried spaghetti with meat sauce or sizzling iron plates of steak are the usual main-course options. Dessert usually consists of a scoop of ice cream, mango pudding, or Jell-O.

Although there are international fast-food chains, Hong Kong also has its indigenous category of fast-food establishments. The two largest chains are Café de Coral and Fairwood. Diners order and pay up front at the cashier and then take their receipt and a tray to a cafeteria-style line to claim their meals. Well-lit, consistent, and inexpensive, these places also offer items similar to those at cha chaan teng and set-meal deals that can include home-style slow-simmered soups.

Large banquet/seafood restaurants sit at the top of the pecking order in local cuisine. *Yum cha*, meaning literally to “drink tea,” is served in the mornings. It is a beloved activity on weekends, when entire extended families get together around a table to enjoy dish after dish of small bites known as dim sum. Classic dim sum include *ha gao*, steamed shrimp dumplings; *siu mai*, steamed pork dumplings; *cha siu bao*, barbecue roast pork buns; and *daan tat*, custard egg tarts. Weekday mornings in these large restaurants belong to Hong Kong’s senior citizens, who start their days lingering over a bamboo steamer or three of dim sum, a pot of black tea, and a newspaper. Most choose a favorite restaurant and become familiar with the servers and fellow patrons, and it becomes an important part of their daily social routine. In the evenings, the restaurants’ kitchens cater to wedding banquets and dinner parties, serving more elaborate items not usually made at home such as abalone with mushroom, winter melon soup

with the hollowed-out melon serving as the tureen, lobster, shark's-fin soup, and roasted meats.

Mock Shark's-Fin Soup

This popular street snack is also easy and inexpensive to make at home. All ingredients can be found in well-stocked Asian groceries. Be careful not to overcook the vermicelli or overthicken the soup; it will become gummy.

Serves 4

- 6 oz lean pork butt, trimmed
- 8 c chicken stock
- 2 tbsp ginger, julienned
- ½ oz dried snow ear fungus, rehydrated and shredded
- 6–8 shiitake mushrooms, fresh or dried and rehydrated, julienned
- 7 tbsp water chestnut starch
- 8 tbsp cold water
- 2 tbsp oyster sauce
- 2 tbsp dark soy sauce
- Sesame oil and white pepper, to taste
- 2 packages dried vermicelli, rehydrated in cold water and cut into about 2-in. sections
- 2 eggs, beaten
- Red rice vinegar and extra julienned ginger, to serve

1. Rinse and dry the pork. Blanch pork in boiling water for 5 minutes. Rinse, drain, and place in pot with chicken stock and simmer for half an hour, skimming off any foam that rises to the surface.
2. Remove pork from stock. Reserve stock, and set pork aside to cool, and then pull the meat apart with a fork.
3. Heat a little oil in a wok, and sauté ginger, snow ear fungus, and mushrooms until soft and fragrant. Add reserved stock, and bring to a boil.
4. Meanwhile, dissolve water chestnut starch in the water and set aside.

5. To the wok, add oyster sauce, soy sauce, sesame oil, and white pepper, to taste. Thicken the soup with water chestnut solution to desired consistency. Stir in vermicelli. Bring to a boil, and pour in beaten eggs, stirring quickly to create thin strands of cooked egg.

6. Serve hot with red rice vinegar, ginger, salt, and white pepper on the side.

Japanese sushi and noodles, Thai cuisine, Vietnamese soups, Korean barbecue, and French haute cuisine are the top cuisines favored by Hong Kongers, although chances are good that one can find at least one option for even the most esoteric cuisine. Fusion cuisine is very trendy and one of the more expensive dining options in Hong Kong, with the restaurants themselves often located within luxury hotels.

Hong Kong is a city prone to trends of all kinds. Food trends are no exception. Sometimes these trends may begin in other Asian cities, as was the case with Portuguese egg tarts, little puff pastry shells filled with egg custard. Originally from neighboring Macau, they first became a huge sensation in Taiwan and Singapore in the 1990s. The craze soon caught on in Hong Kong as well, where people lined up for hours in front of bakeries that couldn't turn them out fast enough. Other crazes have followed since with foods such as Japanese-style cheesecake (so light and moist as to be compared to the lightest pound cakes), Taiwanese bubble tea, and "crunch" cake (an angel food cake-like base with a light layer of frosting, topped with crunchy meringues).

Special Occasions

Banquet halls are where Hong Kongers celebrate their life events. In a society where face and status are important, the bigger the event is, the better one looks. In a city where people don't like to host dinner parties because of lack of space, the expansive banquet halls are a necessity.

Births are celebrated by hosting a *mun yuet jau*, or "full-month banquet," so named because it is held when the child reaches one month of age. This custom arose because communities were used

to experiencing high infant mortality rates. Babies would not be named or formally welcomed into the family until this time, when they had survived the most dangerous period of their lives. Close friends and family are invited to the typically nine-course banquet, which ends with a noodle dish (the length symbolizes longevity), red-dyed hard-boiled eggs, and slices of red-dyed ginger. Nutritious eggs and the warming properties of ginger are both believed to help women recover from childbirth, while red is the color of happiness, luck, and prosperity. In the old days, red eggs were sent to friends and family to announce the birth. Birthday banquets are usually reserved for those aged 60 and older, when people get together to celebrate the person's health and longevity and to pay their respects to an elder. Long egg noodles are served at the end of these banquets, too, along with *sau bao* (long-life buns), steamed little white buns stuffed with sweet lotus seed paste and painted with a rosy flush to resemble peaches, another symbol of longevity. Children's birthdays are marked with cakes from one of the Western-style bakeries; the cakes are filled with fresh fruit and iced with whipped cream.

There are no particular foods associated with funerals; however, it is customary for the bereaved family to host a *gai wai jau*, or a "stomach-easing banquet," for those who attended the funeral. This meal, held to celebrate the deceased's journey to heaven, is vegetarian and traditionally consists of only five courses—much shorter than the minimum nine of happier occasions.

Weddings are the most elaborate celebrations of all. Prior to the event, the bride's family is expected to distribute *loh poh beng*, "wife cakes," to those invited. These heavy little cakes are filled with winter melon or almond paste and are encased in pastry made flaky with pork lard. They used to serve as the wedding announcements and invitations, but in hectic Hong Kong, the preferred method is to enclose "cake cards" with the red-and-gold wedding invitations. These cards are later redeemed at the bakery that issued them for whatever the recipient desires. The wedding banquet itself is an opportunity for the family to put on a show of prosperity and wealth, so the larger the event, and the longer

and more expensive the menu, the better. During the meal, the wedding party goes from table to table to personally toast all their guests and thank them for coming. Bottles of champagne, scotch, and cognac are placed at each table for this express purpose.

Diet and Health

To Hong Kongers, food is never eaten just for the sake of filling the belly. Every food is believed to possess innate qualities that can ultimately affect the natural balance of a body's system. When poor diet, stress, and other hazards of 21st-century life throw the body out of balance, Hong Kongers rely on food as medicine to put them back on track. This understanding is grounded in the Taoist principle of yin-yang. There is no positive without a negative, no light without dark, no male without female. This is true of everything in nature, including food, and only when all elements are present in equal amounts can balance and harmony be achieved. Thus, every food is ascribed a property—hot or cold, damp or dry, nourishing or neutral—and when eaten will have a corresponding effect on the body.

The structure of the basic Chinese meal is based on this idea, and ingredients are combined in recipes according to their properties. For example, bok choy on its own is very cooling and not suitable for someone with a cold or weak constitution. Cooking bok choy with ginger, which is a warming food, counterbalances this property. This is most evident in Cantonese soup recipes where complex combinations of ingredients are simmered slowly together to create tonics that are curative or prophylactic, as the case may be. Ingredients may be purchased in markets and at special herbalist shops where Chinese doctors are available to listen to patients' pulses and prescribe brews tailored to individual needs. The shops are distinguishable by the cases of dried food items that line the walls and entrances, as well as by their unique smell—briny and musty, with an undertone of bitter medicine.

Hong Kong being a busy town, there is a fast-food option for those too busy to eat right and make their own soups—herbal tea shops. They are recognizable by large copper-colored urns with taps

dispensing a variety of brews. The urns are usually placed near the front of the shop, with bowls of tea already poured and available to passersby for a quick fix. If one chooses to enter and sit, a larger menu of soups and teas is available to treat everything from fatigue to poor digestion, and others claim beauty benefits. A subtype of these shops sells the popular—and expensive—turtle pudding. Made from turtle shell and a mixture of Chinese herbs, this black, mild-tasting pudding is believed to flush toxins from the body.

India

Overview

The Republic of India occupies most of the landmass called the Indian Subcontinent or South Asia, which also includes the republics of Pakistan, Bangladesh, and Sri Lanka and the independent kingdoms of Nepal and Bhutan. India is a federal republic consisting of 29 states and six union territories. India is the world's seventh-largest country in area and, with more than a billion people, is second only to China in population. Some Indian states are larger than most countries and have distinctive languages, ethnicities, cultures, and cuisines.

Religion and geography play a key role in determining what Indians eat. More than 80 percent of the population is Hindu, but 13.5 percent—138 million—are Muslims, making India the world's second-largest Muslim country after Indonesia. The population also includes 24 million Christians, 19 million Sikhs, 8 million Buddhists, 4 million Jains, and small communities of Parsis (Zoroastrians), animists, and other religious groups. While it is a common belief that Indians are overwhelmingly vegetarian, in reality only 30 percent of the population has never eaten meat. However, because meat is expensive, most people are de facto vegetarians who eat meat and fish rarely. On average, Indians get 92 percent of their calories from vegetable products, including 70 percent from cereals, and just 8 percent from animal products (meat, dairy products, and eggs). Very few Indians are vegans.

Food Culture Snapshot

Robin and Anu Das live in an affluent neighborhood of South Delhi. Robin, a Bengali originally from Calcutta,

is a freelance documentary film director; his wife, Anu, a Punjabi from Amritsar, is a freelance writer who helps Robin with his work. Their lifestyle and foodways are typical of middle-class cosmopolitan urbanites whose diet includes dishes from different parts of India as well as the West.

Robin and Anu start their day at 9 A.M. with *dalia*, a porridge made from cracked wheat, or perhaps a bowl of oatmeal or cold cereal, together with toast, a piece of fruit, and a cup of tea. For the Dases, as for many Indians, lunch is the largest meal of the day. It generally includes fried or stewed fish (reflecting Robin's Bengali origins), dal (boiled spiced lentils), one or two fried or boiled vegetable dishes, and rice. Around 5 P.M. the Dases have an afternoon snack of tea and biscuits (cookies). If guests drop by, they will purchase Indian sweets, European pastries, and fried snacks from a bakery. Dinner is around 9 P.M. Roast chicken, cooked Western style without any spices, or a roast of mutton, is served instead of fish, together with Indian or Western-style breads, boiled vegetables, dal, and fruit for dessert.

With globalization, things are changing rapidly in India. According to Anu, people are much more health conscious than in the past, so that meals are much smaller than the multicourse meals their parents enjoyed and butter and oil consumption is reduced. Even a decade ago, shopping would take several hours since it meant visiting a number of outdoor markets and small shops—one for fish, another for meat, a third for vegetables, and a fourth for dry goods like rice and flour. Today, people do one-stop shopping at supermarkets that carry not only all these items but also once-exotic “foreign” vegetables (such as broccoli, bell peppers, and asparagus), frozen foods, cold meats,

other prepared foods, and even imported goods such as olive oil and Italian pasta. Robin and Anu also eat out much more than their parents did, both in restaurants serving Thai, Italian, and Indian regional cuisines and in fast-food outlets.

Major Foodstuffs

India is a predominantly rural country, and most Indian food is still produced regionally or locally. Only 2 percent of India's agricultural output is processed, so most meals are made from scratch. India has an enormous diversity of climates, soils, and weather systems. The states of Punjab and Haryana, called the breadbasket of India, are wheat producers. The northeastern states of Bengal and Assam to the east produce two, and sometimes three, crops of rice each year. Much of western India (Rajasthan, part of Gujarat) consists of barren deserts where only millets, sorghum, and other "coarse grains" grow. Consequently, in northern India, the dietary staple is wheat, ground into flour and made into bread, whereas in the east and south, the staple is rice. Indians prefer rice varieties with long, slender grains that retain their shape when cooked. The best known is basmati.

Another dietary staple are legumes—lentils (there are more than 50 commercial varieties), peas, chickpeas, and beans. In Hindi, both the raw ingredients and the boiled dish made from them are called dal. Almost all Indians eat dal every day. The combination of grains and lentils provides most of the amino acids our bodies need to stay healthy.

Minerals and trace elements are provided by vegetables. Potatoes, tomatoes, green peppers, winter squash, corn, okra, and other popular vegetables were brought by the Portuguese from the Western Hemisphere and Africa beginning in the late 15th century in the so-called Columbian Exchange. During their 300-year rule, the British introduced cabbages, cauliflower, lettuce, carrots, green beans, and navy beans.

Indigenous vegetables include bitter melons (*kar-ela*); many varieties of squash and gourds, including the bottle gourd (*lauki* or *lau*), ash gourd, (*petha kaddu*), a small green gourd (*parwal*), and snake

gourd (*chichinda*); eggplant (*brinjal* or *baingun*); long green beans (*seema*); white radishes (*mooli*); and various kinds of leafy greens, collectively called *saag*.

Milk and its products are an important source of protein. In North India milk is drunk by itself or boiled with tea and spices to make *chai*. Milk solids are pressed and cut into cubes to make *paneer*, a mild cheese that is a meat substitute in vegetarian dishes. Yogurt (*dahi*) is widely used as a marinade for meat, served as a side dish, or churned to produce butter. Because butter is perishable, it is made into clarified butter, called ghee, by cooking it over low heat until all the water has evaporated. Ghee is the preferred cooking medium in India, but oils made from mustard seeds, sesame seeds, peanuts, coconut, corn, and sunflower seeds are also used in different parts of the country.

The most distinctive feature of Indian cuisine is the addition of spices and seasonings to most dishes. The most widely used are turmeric, cloves, coriander, cumin, black pepper, cardamom, cinnamon, ginger, fenugreek, nutmeg, poppy seeds, saffron, mustard seeds, and, of course, chilies. Although Indian food has the reputation of being hot, in reality both the degree of hotness, which comes from chilies and pepper, and the spices that are used depend on the dish and regional and individual preferences. For example, mustard seeds and fenugreek are standard in South Indian vegetarian dishes, while highly aromatic spices such as cloves, cardamom, nutmeg, and cinnamon are essential ingredients in North Indian meat and rice dishes. Onions and garlic, sautéed in oil, are the starting point for many dishes but are avoided by some Hindus.

India is a fruit lover's paradise. Virtually all the fruits and berries cultivated in temperate climates grow in the cooler parts of the country, including peaches, plums, apricots, mulberries, strawberries, and apples. Most tropical and semitropical fruits flourish there, including bananas, mangoes, citrus fruits, jackfruit, papayas, guavas, sapodillas, custard apples, and pineapples.

Sugarcane cultivation and sugar refining are native to India. The stems are crushed to extract the juice, which is boiled down to make solid brown

Vendor of dried fruit in New Delhi, India. (Shutterstock)

sugar, called *gur* or jaggery. It is combined with milk products to make many Indian sweets.

Hindus and Sikhs avoid eating beef, since the cow is highly valued for its many contributions, and cow slaughter is banned in most parts of the country. The most popular meats are mutton, a word used for the flesh of both goats and sheep, and chicken. The meat of pigs is forbidden to Muslims and is generally avoided by non-Muslims as well.

Fish is a dietary staple in certain regions. Bengalis prefer freshwater fish from rivers and ponds. Popular varieties include *hilsa* (which is a kind of shad), carp, catfish, the perchlike *bekti*, pomfret, and kingfish. In Kerala, sea fish are widely eaten, including varieties of sardines, mackerel, pomfret, seer, squid, and prawns. Shrimp (called prawns in Indian English) are considered a delicacy, and several varieties are caught in Indian waters.

Water is served with meals. Milk and buttermilk are popular drinks in northern and western India, including *lassi*, yogurt mixed with water and spices. Bottled soft drinks are popular among the young. Tea boiled with milk and spices is popular in North India, while coffee is mainly grown and consumed in the south.

Cooking

Preparing Indian food is very labor-intensive. In an Indian joint family, where several generations live in one household, the senior woman supervises

the food preparation, aided by her daughters and daughters-in-law. Affluent families have cooks.

Indian kitchens are simple by Western standards. Most cooking is done on top of a simple burner. The traditional stove, a *chula*, is a small U-shaped clay oven with a hole for inserting fuel and knobs on the top to hold the pot. Traditional fuels are charcoal, twigs, and dried cow patties. Today, middle-class households use a small cooktop with two burners fueled by bottled gas (propane).

Sautéing and deep-frying are done in a wok-shaped pot made of stainless steel or cast iron, called a *kadhai*. Many households own a pressure cooker, which considerably shortens the time needed to cook curries. A heavy, flat iron griddle with a wooden handle, called a *tawa*, is used for roasting spices and grilling and sautéing breads.

In North India, spices, onions, garlic, and herbs are crushed using a small rolling pin on a stone slab. In South India, a mortar and pestle are more commonly used. Modern cooks use electric grinders and blenders. Spices and flavorings are often ground early in the morning for the day's meals. Whole spices are kept in a spice box next to the stove.

Spices can be dry-roasted and ground into a powder, called *garam masala*, or "warm seasonings." This is stored in airtight bottles. A few pinches are added to a dish just before serving. Ready-made garam masalas are sold commercially and are sometimes called curry powder. Powdered or whole spices may be sautéed and added to a dish at the end of the cooking process to add flavor. Spices can also be ground into a wet paste with onions, garlic, ginger, yogurt, coconut milk, or some other liquid and used to make a gravy.

A uniquely Indian technique is called *bhuna*. After frying spices, garlic, onions, ginger, and perhaps tomatoes in a little oil, the cook sautés pieces of meat, fish, or vegetables in the mixture and then adds small amounts of water, yogurt, or other liquid a little at a time, stirring constantly. Other common techniques are sautéing and deep-frying. Since most households do not have ovens, roasted and grilled foods, such as kebabs (pieces of meat impaled on a stick and grilled over hot coals or in a tandoor, a large clay oven), are purchased outside.

Pickling, an ancient Indian technique, is essential in a country with a hot climate. It is a way of preserving fruits, vegetables, meat, or fish by impregnating them with acid, which discourages the growth of most microbes.

Typical Meals

Describing a typical Indian meal is difficult in view of the region's great regional, religious, and social diversity. However, there are certain commonalities. Most Indians who can afford it eat four meals a day: two main meals—lunch and dinner—and two supplementary meals—breakfast and a light snack in the late afternoon, sometimes called tea or *tiffin*.

Rural people start the day with a hearty breakfast or early lunch to prepare for the day's labor. In cities, most people enjoy a light breakfast, followed by a large lunch either at home or at the office or school, a light afternoon tea when family members return home from work or school, and a dinner eaten at 8:30, 9:00, or even later. In southern India, breakfast is the main meal of the day.

Traditionally, Indians sat on the floor for meals, sometimes on a carpet or raised stool. The food is prepared for each meal and served hot. Breads are always cooked on the spot and slid onto each diner's plate. The traditional plate is a *thali*, a circular metal tray with raised edges. Liquid dishes and yogurt are served in little metal bowls, called *kathoris*. In South India, banana leaves are used. Today, many families use Western-style plates and utensils, especially in cities.

The time-honored way of eating is with the fingers of the right hand. If bread is part of the meal, the diner breaks off a piece, uses it to scoop up a small portion of the food, and pops it into his mouth. For rice or vegetables, the tips of the fingers are used to form a little ball of food. A diner never touches the food or plate of another person.

Indian meals do not normally have a sequence of courses. Everything arrives more or less at once, although certain dishes may be served together. An Indian meal is centered around a cereal—wheat, rice, or some other grain. The second main component is lentils, generally served as a spiced souplike

dish called dal. Generally, thick dals are eaten with bread, and thinner, more watery dals with rice. Relatively small amounts of meat, fish, and vegetables are added to enhance the taste and qualities of the main grain. Additional flavors come from yogurt; sweet and sour fruit and vegetable chutneys; sweet, sour, or pungent pickles; and salads. Sometimes seasonal fruit is served at the end of a meal. In many parts of India a meal ends with buttermilk or yogurt as an aid to digestion.

Dal Makhani

The thick, rich dals of the northern states of Punjab and Haryana are famous all over the subcontinent. They are made from black gram beans (often called black lentils though botanically unrelated to the true lentil), chickpeas, black-eyed peas, or kidney beans simmered for a long time over a slow fire until they become thick and then flavored with spices and cream. *Dal makhani* has been called India's favorite lentil dish.

$\frac{2}{3}$ c *urad* dal (whole black gram beans)

3 tbsp red kidney beans

1-in. piece of ginger or 3 tsp ready-made ginger paste

4 cloves garlic or 3 tsp garlic paste

4 tomatoes, pureed in a food processor or blender

1 tsp chili powder

4 tbsp ghee (clarified butter) or oil

$\frac{1}{2}$ c cream

Wash the beans and soak overnight. If ready-made ginger and garlic paste are not available, grind the ginger and garlic together with a little water to make a paste. Drain the water from the beans, and place in a large pot with 6 cups fresh water. Add salt, half the garlic and ginger paste, and 1 tablespoon ghee, and simmer until the beans are cooked. Mash lightly. Remove from the fire. Heat the remaining ghee and cook the tomatoes, chili powder, and the rest of the ginger and garlic paste until the ghee separates from the mixture. Add the mixture to the

cooked beans, and cook over low heat for 20–25 minutes, mashing occasionally with a spoon against the side of the pot. Add the cream, and cook for 15–20 minutes more.

Within this basic framework there are wide variations depending on religion, region, social class, and affluence. For the very poor, a meal means a handful of boiled rice with chilies or vegetable peels, or roasted chickpea flour mixed with salt and green chilies. According to a recent survey, 35 percent of respondents said that at least once in the past year they or someone in their family did not have two square meals a day.

Less than a third of Indians are vegetarians, although the regional proportion varies from 2–3 percent in the states of Kerala and West Bengal to 45 percent in Gujarat and 62 percent in Haryana and Rajasthan. Because a vegetarian diet is associated with spiritual serenity, meat is avoided by swamis, yogis, and their followers. Some people also avoid garlic and onions for the same reason. Almost all Hindus and Sikhs avoid beef. Pork and alcohol are forbidden to Muslims, and although pigs are not explicitly proscribed for Hindus, many avoid pork as well. However, even people who are not vegetarians eat very little meat by Western standards; meat is a condiment, a flavoring of the starch, rather than the focal point of a meal.

The following are examples of typical meals in middle-class families in three regions of India. The food of Punjab and Haryana, rich agricultural states in northern India, is simple, robust, and closely linked to the land. In rural areas, the day may start with a hearty breakfast of sautéed bread called *parathas*, sometimes stuffed with potatoes, cauliflower, or grated radish. Sometimes breakfast is supplemented with *halwa*, a dish of grated vegetables cooked in butter and sugar syrup.

Lunch and dinner consist of bread and butter, dal, yogurt, a vegetable dish, and, for nonvegetarians, a chicken or mutton currylike dish. Paneer is combined with peas and other vegetables in curries or grilled on sticks. Spicing is straightforward, featuring coriander, cumin seeds, and red chilies. Rice

is served mainly on special occasions. The region is renowned for its thick, rich dals flavored with spices and cream.

In Gujarat in western India, breakfast is served around 7 A.M. and includes tea with wheat or millet bread; *papri* (crisp little squares made from chickpea flour); or puffed rice. For lunch, Gujaratis eat flatbreads called *rotla* and *rotli* lightly sautéed on a griddle and traditionally made from millet or sorghum flour. Other dishes are a sautéed vegetable or vegetable stew, followed by plain boiled rice and dal or *kadhi*, a spicy yogurt curry thickened with chickpea flour. Gujaratis always add a pinch of sugar to dishes and may serve milk- or lentil-based sweets as part of the meal itself. Dinner, typically served at 8:00–8:30 P.M., is smaller than lunch. Sometimes it features a thick bread called *bakri* and a vegetable or a one-dish meal, such as *khichri*, a dish of boiled rice, lentils, and vegetables and nuts.

In southern India, the core cereal is rice. Breakfast is an important meal for Hindus and typically features *idlis* (soft, steamed, disk-shaped cakes) or *dosas* (flat, round, crispy crepes lightly sautéed in oil). The doughs are made by grinding rice, black lentils, and water into a paste. The standard accompaniments are *sambar*—a spicy lentil soup that sometimes includes vegetables—and coconut chutney. The standard breakfast drink is strong filtered coffee mixed with milk. Another popular breakfast dish is *uppuma*, a semolina porridge with tomatoes and onions.

Lunch features boiled white rice, accompanied by two or three seasonal vegetables (potatoes, plantains, eggplants, cabbage) sautéed with mustard seeds, fenugreek, and red chilies in a little oil or cooked in a gravy; a thin, very hot lentil soup called *rasam*; pickles; perhaps a salad of cucumber or bean sprouts; and mango or other fruit in season. A meal always ends with yogurt mixed with rice. Dinner is similar to lunch but generally simpler, and the dishes do not repeat those served at lunch. Often dinner includes *pappadums*, crispy lentil wafers.

Hyderabad, the capital of Andhra Pradesh, has a large Muslim population. A breakfast in a middle-class Muslim household might include parathas served with fried eggs, an omelet, or minced meat

and/or sautéed potatoes. Lunch could feature bread or rice, a meat dish (beef or mutton) made with a gravy, dal, and yogurt. Dinner would be similar to lunch with the inclusion of a vegetable. On special occasions, *pulao* or *biryani* (richly spiced rice dishes with vegetables or meat) might be served.

Eating Out

Until the middle of the 20th century, India did not have a restaurant culture. Eating out was tolerated as a necessity rather than valued as a luxury or a new experience. Concerns about pollution prevented many Indians from eating in public places. Cooking and entertaining at home were facilitated by the presence of many women in a joint family and, for the wealthy, abundant servants.

There were exceptions. Large temples have always had kitchens that prepared vegetarian meals for pilgrims, and some became famous for their food, especially the temples at Udupi in Karnataka. In the 19th century, the temples' cooks started migrating to other parts of India where they opened small vegetarian restaurants; today, some South Indian restaurants have the word *Udupi* (sometimes spelled Udipi) in their names. In the mid-1930s K. K. Rao opened Woodlands Restaurant in Madras to serve this food in a more elegant setting. One of its specialties was an enormous yard-wide, paper-thin dosa, today a popular restaurant dish.

The first Indian restaurant in the modern sense was Delhi's Moti Mahal, opened in 1947 by Kundan Lal Gujral, a Hindu refugee from Pakistan. He invented tandoori chicken—chicken marinated in spiced yogurt and roasted in a tandoor, a large clay oven. Moti Mahal also served kebabs (meat on skewers that is grilled in the tandoor), butter chicken (tandoori chicken in a tomato sauce), and tandoor-roasted breads, called nan. Moti Mahal spawned many imitators, including the Kwality and Gaylord chains, whose menu expanded to include so-called Moghlai dishes—rich meat-based dishes—and Punjabi dishes.

Chinese restaurants are very popular in India and have their roots in Calcutta's Chinatown. Standard dishes include chicken corn soup, chili chicken, sweet

and sour pork or lamb served in a dark red, very spicy sauce, and noodles.

Indians love to snack, and every town and village has many roadside vendors and shops selling samosas (small pastries filled with vegetables or meat), meat and vegetable patties, kebabs (meat grilled on skewers), and other savory items. Mumbai is famous for its crunchy spicy snacks, such as *bhelpuri*, a mix of crispy noodles, puffed rice, tomato, onion, boiled potatoes, coriander, and tamarind chutney. Kolkata is known for its sweet shops.

Today, people are discarding their old taboos, and India's rapidly growing middle class has the money, time, and desire to eat out at trendy restaurants that serve Thai, Italian, and Indian regional cuisines as well as at fast-food chains. McDonald's, Pizza Hut, Dominos, Kentucky Fried Chicken, and other Western fast-food chains have outlets throughout the subcontinent and have adapted their dishes to local

Snack vendor at the Amber Palace Courtyard, Jaipur, India. (Corel)

tastes and customs, with such dishes as McAloo Tikka, a vegetarian fried potato patty, and chicken curry–topped pizza. Spending on restaurant meals doubled in the past decade to five billion dollars a year and is expected to double again in five years.

Special Occasions

India has been called the land of feasts, fasts, and festivals. All groups celebrate seasonal and harvest festivals, religious holidays, and life transitions, such as weddings, births, and deaths, by eating certain foods, avoiding them (fasting), or sometimes both.

On festival days, large Hindu temples prepare elaborate vegetarian feasts featuring hundreds of dishes. Hindu deities have favorite foods, usually sweets, which are offered to them during ceremonies in the temple and are afterward distributed to worshippers. For example, the festival Janmashtami, observed in the early autumn, commemorates the birth of Lord Krishna, who as a child loved milk, ghee, and yogurt. Thus, devotees celebrate this day by eating *bhog kheer*, a rich rice pudding, or *shrikand*, a thickish pudding made from strained yogurt, sugar, and cardamom. Ganesh Chaturthi celebrates the birthday of the elephant-headed god Ganesh, who is always depicted holding a *modaka*—a steamed rice dumpling filled with coconut, sugar, milk solids, and dried nuts. On this day, devotees eat and serve modakas along with another of Ganesh's favorite foods—*laddoos*, fried balls made from flour, ghee, sugar, and nuts, raisins, or sesame seeds.

The most colorful Hindu festival, Holi, is celebrated on the day of the full moon in March. Special foods include sweets, snacks, and a mildly intoxicating milk drink called *thandai*. The Indian equivalent of Christmas is Diwali, the Festival of Lights, which celebrates Lord Rama's return to his kingdom after 14 years in exile. Because this symbolizes the victory of good over evil and light over darkness, little lamps are lit everywhere and people exchange lantern-shaped sweets.

In Punjab, the harvest festival Lohri is marked by eating sheaves of roasted corn from the new harvest as well as laddoos and other sweets. South Indians observe the harvest festival Pongal by eating a dish

of that name made by boiling rice in milk with jaggery, cashew nuts, ghee, and coconut.

Laddoos

One of the most popular Indian sweets often associated with Hindu festivals, laddoos are balls made of chickpea, rice, or wheat flour; ghee; sugar or jaggery; and other ingredients, such as nuts, raisins, and sesame seeds. Often they are made from little drops of fried chickpea-flour batter that are soaked in sugar syrup and shaped into balls. The following recipe is easy to make.

1 c chickpea flour

1/3 c ghee or melted butter

1 c ground jaggery or powdered sugar

1/2 tsp ground cardamom (purchased as powder or made by grinding a few green cardamom pods, shells and all)

2 tbsp chopped almonds, cashew nuts, and/or raisins

Sift the chickpea flour. Heat the ghee over high heat until it starts to smoke, then lower the heat to medium and add the flour. Stir it well until the flour starts to turn brown and releases a fragrant aroma. Remove from the heat, add the sugar, and mix well. When it cools down slightly, add the cardamom powder and nuts, mix well, and form into small balls around 1 1/2 inches in diameter using your greased palms. Set aside to harden.

Many Hindus fast, either individually or communally, as a form of worship, a petition to a god for a favor, an instrument of self-discipline, a means of attaining spiritual merit, or a form of physical cleansing. Some people always fast on certain days of the month. Fasting can mean total abstention from food and water or a restricted vegetarian diet.

Fasting is one of the five pillars of Islam. During the month of Ramadan, Muslims avoid taking any food or water between dawn and dusk. The fast is broken every day at sunset with a sip of water, dates, and perhaps a little fruit, a custom called *iftar*. This is followed by a large meal featuring

meat dishes such as biryanis, a richly spiced meat and rice dish, and *haleem*, a sticky stew of pounded meat and grains. The end of Ramadan, called Eid al-Fitr, is celebrated with great fanfare. People visit the mosque, give food and alms to the poor, and prepare special sweet dishes, such as *sewian*, a vermicelli pudding, and *sheer korma*, a sweet pudding made from vermicelli, milk, saffron, sugar, spices, and ghee.

Indians of all communities devote much energy and wealth to arranging and celebrating their children's marriages. Many prewedding rituals involve offering food to prospective in-laws. The amount and quality of the food served at wedding meals are symbolic of a family's prestige. The traditional wedding banquet was prepared by caterers and held in a large tent. Guests sat in long rows with banana leaves in front of them, while teams of servers laddled food onto the leaves. Today, however, wealthy and even middle-class people hold wedding receptions in large hotels, where the food is served buffet style and people sit on chairs and at tables.

When there is a death in a Hindu family, all eating and cooking activities stop until the body is cremated. A household's normal food patterns are suspended for 10 to 13 days, depending on the community, and many restrictions are observed, such as taking only one meal a day, eating only vegetarian food, and eliminating spices. When the mourning period ends, a lavish feast is held for family and friends. Hindu widows traditionally become vegetarian and in the old days were expected to lead very austere lives.

Diet and Health

"You are what you eat" is a central tenet of Indian medical and philosophical systems. The best known of these is Ayurveda (which means "science of life" in Sanskrit), the ancient indigenous Indian system of medicine that is enjoying a vogue in the West. In Ayurvedic theory, all existence is made up of five elements: earth, water, fire, air, and ether (or space). They in turn manifest themselves in three *doshas* that govern all human biological, psychological, and physiological functions. The doshas determine

personality and disposition as well as basic constitutions. But they keep the body and mind healthy only as long as they can maintain their flow and balance. When the doshas are underproduced or overproduced, disease can result.

An important method of controlling doshas is proper eating. According to the legendary physician Charaka (b. 300 B.C.), "Without proper diet, medicines are of no use; with a proper diet, medicines are unnecessary." After evaluating their patients' conditions, Ayurvedic physicians prescribe certain foods to restore the flow and balance.

Moreover, food should be "alive" in order to give life to the eater. Raw food is more alive than cooked food. Leftovers should be heated up as soon as possible or, ideally, avoided altogether. Spices should be ground freshly for each use. Ayurveda is not vegetarian; in fact, meat, especially venison, is even recommended for certain ailments, as is wine.

Once a disease has developed, it is treated by an appropriate diet recommended by the physician. This regimen always begins with fasting, "the first and most important of all medicines." Once the acute stage of the disease has passed, the patient is given appropriate medicines derived from plants and herbs. Some of these ancient remedies were later adapted by Greek and Western medicine, such as reserpine, extracted from *Wauwolfia serpentina*, which is still prescribed for reducing blood pressure.

A parallel, although distinct, attitude to food is found in yoga, which is not just a series of physical

Herbs commonly used in the practice of Ayurveda. (Shutterstock)

postures but a profound philosophy of life aimed at the development of a balance between body and mind in order to reunite the individual self with the Absolute. People who aspire to spiritual advancement are supposed to eat vegetarian *sattvic* foods that render the mind pure and calm—fresh fruits and vegetables, wheat, rice, cow milk, cucumber, green vegetables, nuts, and clarified butter—and avoid onion and garlic as well as meat. *Rajasic* foods, recommended for warriors, stimulate energy and creativity but also passion and aggressiveness. They include fish, chilies, wild game, goat, eggs, coffee and tea, white sugar, and spices. *Tamasic* foods fill the mind with anger, darkness, confusion, and inertia and are to be avoided. They include meat, leftovers, fast foods, fried foods and processed foods, tobacco, alcohol, and drugs.

In yet another classification that is more a part of folk medicine, all foods are classified as either “hot” or “cold” and are to be eaten or avoided depending on the time of year, an individual’s constitution and state of health, and other factors. However, there is no consistency or logic in the way foods are classified as hot or cold, and there are wide regional variations. For example, most lentils are considered cold foods in western India but hot foods in the north.

Muslims practice their own system of medicine, called Unani, which is based on the humoral theory of Greek medicine that assumes the presence of four humors in the body that determine physical health

and temperament. Digestion plays a central role, and minor and even some major ailments can be prevented by eating certain foods and eating in a proper manner. People are also advised to eat foods that have the opposite quality to their temperament.

Indonesia

Overview

Indonesia is located in Southeast Asia and shares land borders with Malaysia, Papua New Guinea, and East Timor. Indonesia is the world's fourth most populous nation, consisting of 240.3 million people with more than 250 ethnic groups. There are more than 17,500 islands, 6,000 of which are inhabited. Main islands include Java, Sumatra, Kalimantan (shared with Malaysia and Brunei), New Guinea (shared with Papua New Guinea), and Sulawesi. Other, smaller islands include Bali, Lombok, Sumbawa, and the Maluku Islands (the Moluccas).

Indonesia's religions include Islam (86.1%), Protestantism (5.7%), Catholicism (3%), and Hinduism (1.8%). Islam, Catholicism, Protestantism, Buddhism, and Hinduism are the five religions officially recognized by the Indonesian government. Indonesia has the largest Muslim population in the world. The spread of Islam was influenced by increased trade links between Southeast Asia and the Muslim world. This increase was further generated by emerging demand for spices in late-medieval Europe. Java and Sumatra became regions where Islam was dominant by the end of the 16th century.

Many ethnic groups largely influenced the creation of unique regional food cultures in the country. Since the Srivijaya kingdom, an ancient Malay kingdom on the island of Sumatra, started trading with China in the seventh century, Indonesia has been an important trade region for its abundant natural resources. The Indian merchants brought with them the Hindu and Buddhist religions as well as dried spices such as cardamom, cumin, and caraway. Chinese traders and immigrants contributed

soybeans, noodles, and the technique of stir-frying, while Arab traders introduced kebabs and Arabian spices such as dill and fennel. Meanwhile, Europeans, including the Dutch, Portuguese, and Spanish, fought each other for control of the Spice Islands of Maluku. Spanish and Portuguese traders brought produce from the New World before the Dutch finally colonized Indonesia for three and a half centuries. During that time, the colonists imported potatoes, cabbage, cauliflower, carrots, string beans, and corn in order to have food habits relatively similar to those in their home countries. The Japanese invasion during World War II ended Dutch rule of Indonesia, and two days after the surrender of Japan in August 1945, the Indonesian declaration of independence was proclaimed by Sukarno and Hatta, who were appointed president and vice president.

Indonesia has an incredible diversity of ethnicities, religions, and natural resources in its over 782,000 square miles (about 2 million square kilometers). *Bhinneka Tunggal Ika* (Unity in Diversity), the official national motto, can be applied to the description of the modern Indonesian food culture. Even within a single province, many distinctive food cultures exist. Today, Indonesian food culture continues to influence the cuisine of its neighboring countries such as Malaysia and Singapore.

Food Culture Snapshot

Muhammad and Ani, a young Minangkabau couple, live in Jakarta Selatan (South Jakarta). They are originally from Sumatera Barat (West Sumatra) and are devout

Muslims. Muhammad owns a small business, and Ani helps in his business. Muhammad and Ani attempt to preserve their traditional Minangkabau food culture while living in Jakarta. In the Minangkabau culture, people have three meals a day, and food is normally prepared in midday to be consumed as lunch, dinner on that day, and breakfast the following morning. Ingredients are purchased in a local market near their house. The main ingredients of Minangkabau food include rice, fish, coconut, and chili peppers. With Muhammad's middle-class income, they can also afford to purchase beef and chicken for their meat dishes. They never eat pork, which is a *haram* (unlawful) food for Muslims.

Around 7:30 A.M., they have breakfast, which consists of fried banana with boiled glutinous rice and grated coconut. Muhammad loves to sip *teh-telur*, a mixture of raw egg and Sumatran tea they brought from their hometown. Lunch is the most important meal in the day for Muhammad and Ani. The core component of their lunch is rice. Ani spends a couple of hours to make hot and delicious *rendang*, a traditional Minangkabau meat dish made of beef cooked in a generous amount of coconut milk and spices such as ginger, galangal, turmeric leaf, lemongrass, and red chilies. *Kangkung* (water spinach) boiled with coconut milk is also served as a side dish.

The durian season has started, and Muhammad and Ani enjoy durian as a midafternoon snack and feel slightly nostalgic. Durian trees were right next to their house when they grew up in West Sumatra. Now Ani goes to a local market to get fresh durians. The durian is a huge fruit with a fearsome spiked shell. Inside it is yellowish and creamy with an aroma that is reminiscent of stinky cheese or feces, but it is nonetheless delicious.

Around 6:30 P.M. guests, originally from East Java, arrive in their house and enjoy *rendang*, *tempeh* (fermented soybeans), and *kangkung*. When Ani was in West Sumatra, she never cooked *tempeh*, which is originally from Java. Now, in Jakarta, Ani frequently enjoys *tempeh* as a relatively inexpensive and nutritious protein source. Papaya and rambutan (a spiked fruit similar to the lychee), another favorite fruit of Indonesians, are purchased in a local market and served at the dinner table. Muhammad, Ani, and their guests talk about a new Chinese restaurant located inside a shopping mall

in Kuningan, a fast-growing district in Jakarta's Golden Triangle. Because of globalization, Chinese foods have become very popular in Jakarta. Historically, Chinese brought soy sauce, soybean cake, Chinese vegetables, and stir-frying ingredients and techniques, contributing to the present Indonesian cuisine. Today, middle-class Indonesians in urban areas, such as Muhammad and Ani, experience both authentic Chinese foods at fancy restaurants and delicious street foods of Chinese origin at *warung* (food-hawker stalls).

Major Foodstuffs

Indonesia has a huge diversity of ethnicities, religions, and natural resources. About 6,000 species of plants are used in local traditional foods.

Rice

Indonesia is one of the world's leading rice producers. Just as in other Asian countries, rice is also a main staple food throughout the country, with more than 440 pounds (200 kilograms) per person consumed each year. Rice is perceived to be essential for survival, to be easy to store and cook, and to give strength during pregnancy and delivery. In Bahasa Indonesia, the official national language of Indonesia, there are four different words for rice: *Padi* is rice on the stalks, while *gabah* is unhulled rice that is separated from the stalks. When it is hulled, it is then called *beras*. Finally, *nasi* is the cooked end product. Also, the word for cooked rice (*nasi*) is synonymous with the word for a meal. There are two common types of rice consumed in Indonesia: *nasi putih* (long-grain white rice), which is served as a plain cooked rice, and *nasi ketan* (glutinous rice), which is used for making cakes and snacks. During harsh times, cassava, which is perceived to be of lower quality than rice in some parts of the country, is substituted for rice. Interestingly, when the price of rice increased during the economic crisis of 1997, rice consumption increased.

Other Starches

Sago (a starch that accumulates in the pith of the sago palm stem), corn, and cassava are also con-

Boy working at a rice paddy, Bali, Indonesia. (Corel)

sumed as carbohydrate-rich foods in some parts of the country. Sago and corn are commonly consumed in the eastern part of the country, such as in Papua, Maluku, and Sulawesi. Cassava and sweet potatoes became important staple foods in Maluku and Papua. *Kerupuk*, cassava chips, are popular and consumed as a side dish or snack in Indonesia.

Animal Proteins

Islam precludes the use of pork in many parts of the country. The main animal meats consumed by Muslims include beef, chicken, and goat. The Hindu Balinese consume pork, including *babi guling* (roasted suckling pig), and avoid beef. *Sate* (kebabs) is a common meat dish, including Indonesian sweet and sour beef sate with peanut sauce (*sate daging sapi manis pedas sambal kacang*). *Sate kambing* (goat sate) and *sate ayam* (chicken sate) are also popular. A chicken soup with noodles, called *soto ayam*, is a

popular soup in the country. Each household has its own recipe that has been passed down from generation to generation.

Indonesia is also known as a maritime country. Its national fish consumption was 57 pounds (26 kilograms) per capita in 2008 according to the *Jakarta Post*. Fish and shellfish, including shrimp, mussels, crab, and squid, are often prepared with abundant seasonings such as coconut, tamarind, chili peppers, and herbs.

Plant Sources

Nuts and pulses, especially soybeans, are important protein sources for many Indonesians. In addition to *tafu* (tofu), which is originally from other Asian countries, tempeh, a fermented soybean cake using *Rhizopus* molds as a starter, is uniquely Indonesian. The use of a fermentation processing technique may be attributed to the adaptation of tofu to

the tropical climate of the country. Originally from Java, tempeh became popular throughout the nation in the 20th century. Peanuts, originally from South America, have become an important part of the Indonesian cuisine. Peanuts are used for sauces for sate, *gado-gado* (a vegetable salad with peanut sauce), and other traditional Indonesian dishes.

Gado-Gado

Sambal Kacang (Peanut Sauce)

- 1 c roasted peanuts
- 3 large cloves garlic, chopped
- 4 shallots, chopped
- 1 tsp shrimp paste
- Salt to taste
- 2 tbsp peanut or vegetable oil
- 1 tsp red chili powder
- 1 tsp brown sugar
- 1 tbsp soy sauce
- 2 c water
- 1 tbsp lemon juice

1. Grind the roasted peanuts into a fine powder using a coffee grinder.
2. Blend the garlic, shallots, shrimp paste, and salt in a food processor to make a paste. Heat the oil in a medium-sized nonstick frying pan. Fry the blended paste in the oil for 3 minutes on medium heat. Be careful not to burn the paste.
3. Add the chili powder, brown sugar, soy sauce, and water to the paste. Bring the mix to a boil, then add the ground peanuts. Simmer about 20 minutes or until the sauce becomes thick. Stir occasionally.
4. Add lemon juice just before use.

Vegetables

- 1 c cauliflower florets
- 1 medium carrot, peeled and thinly sliced
- 1 c cabbage, shredded
- 1 c snow peas
- 1 c bean sprouts

Garnish

- 4 lettuce leaves
- A few sprigs of watercress
- 2 medium potatoes, boiled in their skins, then peeled and sliced
- ½ cucumber, thinly sliced
- 4 eggs, hard-boiled
- 4 green onions, sliced diagonally

Bring about 2½ quarts of water to a boil. Place the cauliflower and carrots in the boiling water, and boil about 2 minutes. Using a slotted spoon, remove them and place in a colander. Rinse under cold water until cool.

Repeat the procedure with the cabbage, snow peas, and bean sprouts, but let them stay in the boiling water for just 30 seconds. Drain well.

To serve, arrange the lettuce and watercress around the edge of a serving dish. Then place the vegetables in the middle of the dish. Arrange the boiled eggs, sliced potatoes, and sliced cucumber on top.

Drizzle the warm sambal kacang over the top, and sprinkle with the green onion.

Indonesians enjoy a variety of unique tropical fruits such as durians, mangosteens, rambutans, passion fruit, jackfruit (often eaten young), and tamarinds. Other tropical fruits consumed in many parts of the world, such as mangoes, papayas, and bananas, are also popular in Indonesia. The durian, native to Indonesia, is called the “king of fruits.” Locals enjoy eating fresh durians that have been ripened on the tree. The flavor of durian may be unfamiliar to most people who are not from Southeast Asia, but locals enjoy the flavor of the durian very much, and even some tourists fall in love with it. The exotic and complex odor of the durian comes from different sulfur and ester compounds.

Many fruits are cooked or used for juice in Indonesia. *Pisang goreng*, Indonesian banana fritters, is a popular snack across the nation. Soursop, called *sirsak*, is used to make fresh juice. Avocado “juice” with chocolate syrup (*jus apulkat*) is another popular drink unique to Indonesia, more like a smoothie

since an avocado cannot be juiced. Passion fruit syrup, called *sirup markisa*, is a specialty in Medan, North Sumatra.

Many types of vegetables are also consumed in Indonesia. Vegetables and spices in Indonesia are closely associated with the country's immigrant history. The Dutch introduced cabbage, cauliflower, carrots, string beans, and potatoes to Indonesia. Chinese traders brought mustard greens, mung beans, and Chinese cabbage. Kangkung (water spinach) is a popular aquatic green and has a pleasant flavor and texture.

Many spices and herbs are also used throughout the country. The Indonesian islands of Maluku, also called the Spice Islands, contributed to the introduction of native spices to Indonesian cuisine—of the greatest culinary world importance are cloves from Ternate and Tidore and nutmeg from Ambon (Amboyna). India also brought cumin, coriander, ginger, and caraway to the country. Dill and fennel came with Arab traders. Today, common spices and herbs include turmeric, cloves, nutmeg, cinnamon, ginger, galangal, lemongrass, *salam* leaves (also called Indonesian bay leaf), and lemon leaves.

Finally, coconut is an important staple food in many parts of Indonesia and is extensively used for meat and vegetable dishes, desserts, and street foods. The extensive use of coconut milk is especially found in Minangkabau cuisine (in West Sumatra), as well as in Minahasan (in North Sulawesi)

Traditional Indonesian soup made with rice and coconut milk, *lontong opor*. (Willy Setiadi | Dreamstime.com)

cuisine. It is a great lubricator and provides oil, flavor, and texture when it is thickened.

Beverages

Indonesia is famous for its high-quality coffee. It is currently the fourth-largest coffee producer, following Brazil, Vietnam, and Colombia. Coffee beans have mainly been grown on the islands of Java, Sumatra, and Sulawesi since the 17th century when the first coffee plantations of arabica were established under Dutch rule. Today, Indonesia produces mainly robusta coffee, around 80 percent of its total output. At the same time, the international market is dominated by arabica coffee, accounting for 70 percent of global demand.

Kopi luwak is a coffee product unique to Indonesia. Kopi luwak is made from coffee berries that are eaten by, and pass through, the digestive tract of the Asian civet cat and are then extracted from its excrement. Recent research has demonstrated that the animal's digestion process makes the coffee beans harder, more brittle, and darker in color than the same type of bean that hasn't been eaten. Because producing kopi luwak is a very labor-intensive process, kopi luwak is very expensive, ranging from \$100 to \$600 per pound, and is exported to the United States, Japan, and Europe.

Cooking

Each island and region has its own culinary characteristics. The people of Java, on the one hand, are known for their generous use of sugar in their cooking. On the other hand, the Sumatrans usually enjoy extremely hot foods. In general, common methods for preparing food across the islands include frying, grilling, simmering, steaming, and stewing, often with coconut milk. *Oseng-oseng* and *tumis* (cooking in small amounts of cooking oil and water) and *sayur bening* (cooking in water with added refined sugar) are also common cooking methods used in Indonesia.

While many Indonesians living in Jakarta may have access to ready-made processed foods, many

who live in rural areas still cook everyday meals in a traditional way. Many Indonesians use firewood for cooking, and few own a refrigerator. A gender difference in food preparation exists in Indonesia. Women in general cook everyday meals. In Minangkabau, men prepare beef dishes for special occasions. At the same time, the head chefs in all Minang restaurants are men.

Rice is an important part of the Indonesian meal. Rice is steamed and commonly served with other side dishes. Besides plain rice, nasi goreng is a popular fried rice in Indonesia. Rice, especially glutinous rice, is also used to make traditional cakes and snacks.

Vegetables are often steamed, fried, or boiled. They are also eaten raw. Gado-gado is a popular Javanese vegetable salad with peanut sauce. Herbs and spices are cooked to make *sambal*, a condiment popular in Indonesia and other Asian countries. *Sambal ulak* (spiced chili paste) is made of red chilies, onions, garlic, sugar, lime peel, oil, and salt. *Sambal rerasi* is a popular shrimp paste used for many Indonesian dishes. Sambal is used for meat, fish, and vegetable dishes. It is also added to fruits to make a spicy fruit salad called *rujak*.

Coconut provides oil, flavor, and texture when it is thickened. It is extensively used in some parts of the country, such as Minangkabau. Fish and meat are cooked with coconut milk and spices. Rendang is a great example of a meat dish cooked with a generous amount of coconut, herbs, and spices. Minced meat is cooked with herbs and spices and is simmered gradually on low heat until the coconut milk is reduced. In Java, people enjoy cooking meat and vegetables in a *wajan* (wok) with a generous amount of coconut milk and spices.

Typical Meals

It is difficult to describe a typical meal in Indonesia, which has such great diversity of regional cuisines. The meal patterns also vary across the country. For example, while patterns of three mealtimes a day are common among the Minangkabau people, two main meals are found in rural West Java. Breakfast is an important meal for most Indonesians. Rice is

a major food item for breakfast in most parts of the country and is served in different forms. One of the popular dishes served for breakfast is *lontong sayur*, which consists of cooked vegetables in coconut milk with rice cake. *Lontong* is an Indonesian rice cake. The vegetables and fruits used for *lontong sayur* include chayote (*labu siam*), long beans, young jackfruit, green papaya, and carrots. *Bubur* (porridge), especially *bubur ayam* (chicken porridge), is another popular breakfast item. Indonesians also enjoy nasi goreng, an Indonesian fried rice, and *nasi pecel*, a Javanese rice dish served with cooked vegetables and peanut sauce, for breakfast.

Lunch is the most important meal of the day for many Indonesians. The core component of their lunch is steamed rice. Indonesians eat steamed rice with a meat, chicken, fish, egg, goat, or soybean dish, as well as with vegetables, soup, and sambal. These main dishes vary across the nation. Pork dishes, such as babi guling (roast suckling pig), are consumed in Bali. In Maluku and Papua, where sago palm, cassava, and sweet potatoes are the staple foods, *papeda* (thick sago porridge) is a popular dish consumed with fish. An Indonesian supper is lighter than lunch, and something leftover from lunch is often consumed for supper.

Snacks are consumed between the two large meals in the morning or afternoon. Or the same foods eaten as snacks can also be served after a meal as dessert. In urban areas, snacks are more varied and consumed more often than in rural villages. *Pisang goreng* (banana fritters), *tape ketan* (fermented sticky rice), *tape telor* (fermented cassava), and *klepon* (rice cake with grated coconut) are some popular snacks.

Eating Out

Eating out at a restaurant is still not very common among Indonesians. However, just like other Asian countries, Indonesia is proud of its variety of street foods for breakfast, lunch, dinner, and light snacks, which are sold by street vendors or at a *warung* (a local food stall), the social center of villages and towns in Indonesia. In big cities, in addition to local foods, many traditional dishes from various

regions across the nation are served at warung. The types of street or warung food offered vary across the islands, but there are some universal street foods found throughout the country. *Bakso*, or meatballs, one of the most popular street foods in Indonesia, are usually served in a soup bowl with noodles, fried *wan ton*, vegetables, and condiments. *Soto* (soup) and sate (kebabs) are other popular street foods that demonstrate a regional variation. For example, *banjar soto*, from South Kalimantan, is spiced with lemongrass and sour, hot sambal, accompanied with potato cakes, whereas *Bandung soto* is a clear beef soup with daikon pieces.

It has been argued that the Javanese cuisine has dominated because thousands of Javanese migrate to other regions every year and often make a living by selling foods. Hence, *soto ayam*, *sate Madura* (chicken on skewers), and *mie bakso* (meatball soup) are found at warung outside the island of Java.

When it comes to more formal restaurants, both locals and tourists enjoy *nasi Padang* restaurants, which serve a Minang cuisine that originates from West Sumatra. They are famous for their spicy food and their unique way of serving and “recycling” the food. Padang restaurants can be found throughout the country. In a nasi Padang restaurant, dozens of small dishes filled with spicy and flavorful foods are displayed on the table. These foods include dishes such as *gulai ikan* (fish curry), *sambal cumi* (squid in spicy sauce), fried tempeh, soto Padang (crispy beef in spicy soup), and sate Padang (a Padang-style *satay* with a yellow sauce). The best-known Padang dish is *rendang sapi*, a spicy beef stew with coconut milk. Customers have many dishes to choose from and pay only for the dishes that they have eaten.

Due to globalization, locals in urban areas have started to enjoy eating out at a restaurant much more often than before. Numerous American fast-food chains and expensive Japanese restaurants are now found in big cities such as Jakarta. Chinese restaurants, whether sophisticated ones at five-star hotels and at huge multistory office buildings or modest noodle parlors, are perhaps one of the most popular non-Indonesian restaurants in Indonesia. Food hawkers also serve Chinese foods at a modest price. Chop suey, fried noodles, noodle soup, and

rice porridge are just a few examples of delicious Chinese foods sold by hawkers.

Special Occasions

There are plenty of holidays related to religion in Indonesia. Ramadan (Puasa) is the most important time of the year for Muslims in Indonesia. After fasting from dawn to dusk, people get together with their families and friends and enjoy delicacies for breaking the fast, or *buka puasa*, at the Ramadan bazaar or at home. After a monthlong observance of fasting, Muslims in Indonesia celebrate Eid al-Fitr (called *Lebaran* or *Hari Raya Puasa*) with special dishes such as *ketupat* (blocks of rice cooked in coconut leaves), *rendang*, and *dodol* (a sweet toffee made of glutinous rice, coconut milk, and sugar).

Bali, the most popular island for tourists in Indonesia, is home to the largest Indonesian Hindu population. Because of that, the Balinese Hindu elaborately celebrate Hari Raya Nyepi, the Hindu New Year. It is a day of silence, fasting, and meditation for many people in Bali, and tourists are not allowed to leave their hotel on that day. On New Year's Eve, food is prepared for the following day (particularly homemade pastries and sweetmeats), when Hindus refrain from all activities, including food preparation. Streets are deserted.

Selamatan is a special occasion unique to Indonesia. It is not a religious feast. Rather, it is a way of expressing family and neighborhood solidarity before a significant event. *Selamatan* means thanksgiving, blessing, and grace. Following the prayer, *nasi tumpeng*, a cone-shaped mountain of steamed yellow or white rice, is sliced at the top and served. White rice is cooked in coconut, and the yellow rice is colored with turmeric, a popular spice in Indonesia.

Every year, Indonesians celebrate Hari Proklamasi Kemerdekaan (Independence Day) on August 17. It is a fun event for children. *Krupuk* (shrimp chips)-eating contests and other events for children take place. Women make nasi tumpeng surrounded by various foods such as *sayur urap* (spicy vegetable salads), roasted chicken, coconut beef, *bergedel*

Traditional Indonesian rice dish called *nasi tumpeng*.
(Deepta Sateesh | Dreamstime)

(potato patties), salt fish, and dried tempeh to celebrate this important day for every Indonesian.

Diet and Health

While there are approximately 2.56 physicians per 1,000 people in the United States, the physician/patient ratio is much lower in Indonesia, only 0.13 physicians per 1,000 people, according to 2006 statistics. People, especially rural women in Indonesia, primarily rely on home remedies to prevent and treat illness within the family. *Dukun* (traditional healers) also play an important role in the traditional medicine system.

Jamu is a traditional herbal medicine commonly consumed by Indonesians. Different types of *jamu*

are used to maintain physical fitness, as well as to cure certain kinds of illness. *Jamu* has been sold in the form of powders, creams, pills, and capsules, and its market has expanded to outside of the country. The ingredients include ginger, cinnamon, turmeric, galangal, papaya leaf, and guava leaves and flowers.

Research has shown that some pregnant women consume *jamu cabe puyang*, which reduces tiredness; bitter *jamu* (*jamu pahitan*), which increases appetite; and *jamu sawanan*, which prevents disease. However, some women avoid the use of *jamu* during pregnancy to avoid possible side effects, including the contamination of the amniotic fluid.

Similar to other developing countries, Indonesia is experiencing a nutrition transition, which is characterized by rapid changes in dietary habits, as well as a double burden of disease, in which noncommunicable diseases are becoming more prevalent while infectious diseases remain undefeated. Indonesia's leading causes of death have shifted from infectious diseases to more chronic diseases, especially cardiovascular disease. In 2002, cardiovascular disease was the leading cause of death, accounting for 22 percent of all mortality. Infectious diseases such as tuberculosis and lower respiratory infections remain major causes of death in Indonesia. Diarrheal diseases and pneumonia are still leading causes of death among children under five. In general, there has been a rapid increase in consumption of meat, eggs, milk, and processed foods, while the consumption of cereal products has decreased.

There has also been a nutrition transition for indigenous people, who used to be foragers. For example, the Punan people who reside in Kalimantan have drastically changed their dietary habits through globalization and urbanization. They used to consume sago palm, their staple food, along with berries, wild boars, and other wild animals. Nowadays, the consumption of fat and processed foods has increased, and overweight has become an issue among periurban Punan women.

Micronutrient deficiencies, called "hidden hunger," remain a public health issue among certain populations. A recent study suggests that nonpregnant women are at greater risk of clinical vitamin

A deficiency, such as night blindness, in families that spend more on rice and less on animal and plant-based foods. Prevention of iodine deficiency continues to be a challenge in the country, where fortification of salt with iodine has not always been successful in some areas of the country. Moreover, the recent food price increase has affected the nutritional status of people in Indonesia. The cost of staple soybean-based products such as tofu and tempeh rose by about 50 percent in 2008. Child malnutrition, including hidden hunger, is on the rise.

Although fat consumption has increased slightly, there is a movement to maintain the traditional diet in Indonesia rather than adopting highly processed global or fast foods. A recent study of contemporary Minangkabau food culture in West Sumatra suggests that their traditional use of coconut may encourage the consumption of fish and vegetables, and, therefore, a well-balanced diet.

Japan

Overview

Japan is a group of over 3,600 islands that is 2,174 miles (3,500 kilometers) long, roughly the area of California but without its expanse of habitable terrain. Steep mountains cover over 80 percent of the four main islands of (from north to south) Hokkaido, Honshu, Shikoku, and Kyushu. Surrounded on all sides by the sea or the mountains, the Japanese naturally look to these sources for their food and lyrically refer to food as the delights of the seas and the mountains (*umi no sachi, yama no sachi*). Hokkaido as well as northern and western Honshu have a cold temperate climate with heavy snowfall for over half of the year, beginning as early as October and melting only in April. The rest of Honshu and Shikoku have a cool temperate climate, while southern Kyushu and the Okinawan islands have subtropical to tropical climates. The four seasons are regular and clearly defined. Monsoon rains occur between May and July. There is also a clear set of seasons in the seas around Japan: Certain species of fish appear at regular intervals and are best eaten at particular times.

Close to 100 percent of the population is ethnically Japanese. There are well-established historical minorities: Ainu, Koreans, Chinese, and Ryukyuan. Recent immigrants—from Brazil, Southeast Asia, and Europe and North America—have also added to the mix. Japanese religion is a blend of Buddhism and a native polytheistic religion called Shinto. Both emphasize purity, naturalness, and simplicity in daily life, and this philosophy has had a major effect on food-preparation practices and preferences, including, notably, less consumption

of meat and milk products. Over 90 percent of the population is urban (until the start of the 20th century, some 80 percent were rural), and only about 5 percent of the population engages in full-time farming.

The modern Japanese family is small: usually one or two children. Most families live in what, by American standards, are very cramped quarters: three rooms, one or two serving for living, studying, and sleeping and one combination dining-kitchen area. The living zone is usually floored in fine woven straw mats (*tatami*) and is converted to a sleeping zone at night by folding any furniture away and bringing out sleeping quilts (*futon*) from built-in storage closets. The dining-kitchen area and one room often have Western-style furniture: a dining table, chairs, and armchairs. The traditional style of living “on the floor” is being superseded by more Western-type (though still Japanese-sized) accommodations and furnishings.

Food Culture Snapshot

Ken and Chie Tanaka live in a middle-class neighborhood of Tokyo. Their apartment is in a 10-story building that is part of a huge apartment complex near the terminal of a city feeder line of the railway. The complex includes a large shopping precinct (*shôten-gai*) with a large department store and several supermarkets, along with a covered market selling everything from food to electronics. Ken works in an office in downtown Tokyo and commutes for an hour daily. Chie works part-time in a nearby small business. Their only child, Matsu, is seven years old and attends

primary school. Their lifestyle is typical of most blue- and white-collar salaried workers.

They start their weekdays around 7 A.M., with breakfast consisting of bread or toast, jams, a fried egg, and a small sausage, along with coffee for the adults. Matsu gets orange juice and cold cereal. On Sundays Chie sometimes cooks a Japanese-style breakfast of grilled salted salmon slices, crisp nori seaweed, fresh rice, miso soup, and fermented beans (*natto*), the last of which Chie, who is from western Japan, does not partake of.

They each eat lunch at work or school. Matsu has a lunch that Chie prepared according to school guidelines: a small fried cutlet, a seaweed roll, a small mound of pickles, a piece of fruit, and a candy bar. Most of these she buys ready-made from the supermarket, which offers a wide range of these side dishes for children and adults. The food is placed in half of a small lunch box, and she fills the compartment in the other half with cooked rice. Chie prepares a similar though larger lunch box for herself on some days. On others she and her coworkers order bowls of noodles from a neighborhood shop. Ken usually leaves work for about half an hour at lunchtime. He goes to one of the eateries around the office. He pays for a set meal of grilled fish or meat, rice, pickles, and soup and receives a token in exchange. The waiter accepts the token and brings the meal, and after a quick meal, Ken heads back to the office.

Chie shops on the way home from work, splitting purchases between the neighborhood supermarket and the small shops and stalls in the market. For exotics and special occasions she may shop in the basement supermarket of the large department store, where prices are higher but there is a large range of luxury foods, including tropical fruits and specialties from Japan's provinces.

The family tries to eat dinner together, but Ken often works late. Dinner may be cooked rice, grilled or cooked fish or meat, soup, cooked vegetables and pickles, and a sweet for dessert, sometimes from a ready-made pack. It may also be Western foods such as spaghetti or pizza, or a Japanese variation of curry called *kareraisu*, which Matsu adores.

On weekends the family tries to eat together and often goes out to one of the specialty restaurants in

the shopping precinct. Sometimes they simply order out at one or another of their favorite neighborhood restaurants: noodles in soup or sushi. They also do more serious shopping for food on the weekend: Like many families they have a large freezer compartment designed to accept the standardized ready-made meals they buy from the supermarket once a month. Heavy items such as 22-pound (10-kilogram) bags of rice and plastic barrels of miso and pickles will be delivered by neighborhood shops. Chie had signed up for a fresh produce delivery service, which provided vegetables and mushrooms from named farmers, but rising costs have forced her to terminate this.

Major Foodstuffs

Traditionally, the three major sources of calories in Japan were rice (the most highly prized food), vegetables (either cooked or pickled), and fish (either fresh, pickled, dried, or made into fish sauce). The staple is still rice cooked without any flavoring. Rice is sometimes prepared as fried rice (that is, after cooking, small pieces of vegetables, fish, or meat are added) or as sushi rice (slightly vinegared and either formed into a ball with a topping or tossed with bits of fish and vegetables into a sort of salad), or it is cooked with beans, taro, or some other vegetable. Special varieties of rice with a very high starch content are steamed and pounded into a gluey, doughy consistency called *mochi*, which is a requirement for many kinds of rituals. The proportion of rice in the modern meal has declined throughout Japan as foreign foods have proliferated. Households with older people probably still eat rice three times a day. Younger people tend to have rice once, perhaps twice a day.

Japanese eat a large number and variety of noodles. Japanese-style noodles, made of wheat or buckwheat, are eaten in soup or with dipping sauces, hot or cold. The choice of meat, seafood, or vegetable toppings is vast. Italian-style pasta is widely eaten. Wheat-based Chinese-style noodles (*râmen*) are highly popular in soup or stir-fried. Popular garnishes include slices of flavored bamboo shoots, fresh bean sprouts, and thin slices of roast pork.

Ameyoko market in Ueno District in Tokyo, Japan. Ameyoko, once an entertainment district for U.S. Marines, now an exotic, classic Asian market. (Shutterstock)

Variations include fermented soybean paste (miso) flavoring and a seafood garnish. Bread is commonly eaten for breakfast instead of rice, and as a snack. Bakeries make a variety of rolls and buns, both plain and with fancy fillings ranging from cheese and curry to melon and green-tea flavors.

Soybeans were an important source of protein in premodern periods and are still an important food component. Green soybean pods (edamame) are cooked and eaten as a snack, but most of the crop goes to produce three important ingredients: soy sauce (shoyu), tofu, and miso. Soy sauce is used to flavor food during cooking and as a table condiment. Plain tofu is an element in a variety of dishes. Small cubes garnish *misoshiru* soup and many other dishes as well. Tofu is so plastic that a great many dishes incorporate some form of tofu, which can fool the eye, and even the tongue, into

believing it is meat or some kind of vegetable. Tofu also comes in the form of deep-fried cakes called *abura age*, which may be filled with meat or vegetables. Soybean milk can be gently simmered to form a film on its surface called *yuba*, used to wrap various fillings; the resulting roll is simmered in flavored broth or added to stews. Eastern Japan also favors a fermented-soybean dish called *natto* (beans suspended in a sticky paste), which is mixed with freshly beaten raw egg and soy sauce and poured over steaming hot rice.

Partly as a result of the adoption of Buddhism by the Japanese people in the seventh century A.D. and partly as a result of ecological considerations, the Japanese have evolved a complex and rich repertoire of purely vegetarian dishes in which a wide array of roots, fruits, seeds, leaves, bulbs, and other parts of plants are used in imaginative ways. There

are many methods to prepare, cook, pickle, and serve vegetables: Various forms of pickling, light simmering in broth, and quick poaching are the most common.

The brassicas—cabbages, radishes, and turnips—are probably the most commonly used. Other familiar vegetables are bean sprouts, carrots, onions, squashes, and Japanese leeks. More exotic and relatively less well known are chrysanthemum flowers and leaves, *konnyaku* (devil's-tongue root), taro, burdock root, yams, and Japanese angelica. Over the centuries, native vegetables have been augmented by imports that have become naturalized to become intrinsic parts of Japanese cuisine: Small purple eggplants, tomatoes, sweet potatoes, and sweet and chili peppers have been adopted, as well as young flax plants, potatoes, and European cabbage. Japanese farmers have domesticated many varieties of mushrooms, and fungi constitute a major agricultural crop. Ten varieties are widely cultivated commercially, and some are known outside Japan. Perhaps the most well known is the brown, thick-fleshed shiitake, widely available all year round, fresh or dried. It is a component of soups and stews, is grilled and eaten on its own, and serves as a garnish for other foods. *Shimeji*, *enokitake* (enoki), *hiratake*, tree ears, *nameko*, *maitake*, and button mushrooms are also common. Supplementing the cultivated fungi are those collected from the wild. The most notable of all Japanese fungi is the pine mushroom (*matsutake*; *Armillaria edodes*), avowedly the most delicious and aromatic of all. This fungus has only recently been successfully raised commercially. Choice *matsutake* are the Japanese counterpart of the European truffle.

The Japanese love fruit, and, in fact, the word used today for cakes and candy was, early in history, used for fruit. Perhaps the most beloved fruit is the mandarin orange (*mikan*), and large orchards cover many of the temperate areas in Japan. There are also several unique varieties of grapes, from the tiny-berried, intensely sweet Delaware to choice plum-sized seedless varieties. Apples, persimmons, Asian pears (*nashi*), watermelons, melons, strawberries, and exotic fruits, such as loquats, are common

and have been eaten by the Japanese for centuries. Continuous agricultural improvement has resulted in new varieties such as Mutsu and Fuji apples, crisp 20th-century Asian pears, the supersized seedless Pione grape, and, a gift-giving novelty, conveniently cubic watermelons.

Fruits are sold in small mounds or baskets by greengrocers, and it is as small mounds of four or more fruit that they are offered to the deities at temples and shrines. Imported fruits are highly prized, ranging from bananas, mangoes, and pineapples from Central America and Southeast Asia to exotic fruits such as mangosteens and lychees.

Cooking

Day-to-day cooking is usually done by housewives. Magazines, cooking clubs, and many television shows offer clues for variety and nutrition, which is very important since multigenerational households are rare. Japanese eat out a great deal, so the other major figure in food is the professional chef. Professional chefs come in many types, specializations, and even grades (like many Japanese arts, chef schools award graded ranks to their trainees). There are schools of traditional cooking, and a high-quality chef is usually able to trace his lineage from pupil to student for many generations.

Most kitchens have relatively modest cooking arrangements. Refrigerators are generally small by U.S. standards, and working surfaces are very limited. Cooking is done on a countertop gas range. Built-in ovens are rare, though houses and apartments built in the past 30 years often have built-in ranges and ovens, and larger refrigerators are becoming more common. Countertop labor-saving devices, including ovens, mochi makers, bread machines, and yogurt makers, have proliferated. Japanese kitchens include a large variety of knives. Rectangular knives with very thin blades are used for slicing and peeling vegetables. Thicker triangular blades are used for meat and fish. The edges of these tend to be beveled on one side only, which allows a better control of the cut. Most kitchens will have at least one vegetable knife and two of the triangular blades: a

short one for smaller fish and cuts, a long one for long, smooth slicing of items such as sashimi. Long chopsticks for cooking—stirring, whipping eggs, frying—and shorter ones for eating at the table are the most common implements.

To preserve the natural flavors of foods and their colors, and to present them visually in the best possible way, Japanese food often requires extensive preprocessing before cooking actually starts. Cuts have been developed to suit the characteristics of each type of vegetable and the cooking requirements for each dish. Many dishes require that a vegetable or fish be cut in a specific way to encourage even transmission of heat, ensure uniform distribution of flavor, and showcase natural textures. For example, an asymmetric and diagonal cut (*rangiri*) made by rolling a vegetable during cutting will create more facets than achieved by static square cutting, thereby exposing more of the vegetable to the hot cooking liquid. Each type of fish has its own special needs, and the good cook will be equipped with a series of very sharp knives and will need a great deal of practice to get the cut perfect: Cutting fish for sushi is quite different from cutting fish for grilling, for instance. Because of the importance of cutting, a chef is usually titled *itamae* (behind the counter), meaning the one responsible for the actual slicing of fish into its components. Since the eighth century, imperial chefs, and specialist chefs at some Shinto shrines in Kyoto, still carry out an annual ritual of slicing fish, using nothing but a pair of large chopsticks and a sharp knife.

Simmering and quick poaching are used, notably for vegetables. Fish can be served raw as sashimi or sushi. Smaller whole fish may be grilled, poached, or stewed. Meat is stir-fried, deep-fried in batter, or grilled. Chicken is often cut into small pieces and grilled on small skewers (*yakitori*). Long oven baking is rare.

Japanese cooks use relatively few spices. Mountain-ash berry, dried Japanese lime zest, sweet liquor (*mirin*), and soy sauce are often used for Japanese-style food. Western food is flavored with the full range of imported spices, though Japa-

nese tend to prefer foods that are less aggressively seasoned.

Stews are well represented. Many are flavored with miso. They may contain meat, vegetables, fish, and mushrooms, in many combinations. Sumo wrestlers live on a diet of *chanko-nabe* stew, which includes all of the above plus mochi and liberal splashings of sake, to put on bulk.

Typical Meals

Typical meals in Japan can be categorized as rice-centered meals (most household meals), no-rice meals (which equate often to snacks), and rice-peripheral meals (which equate to feasts). Daily home meals often (almost always in the recent past) consisted of plain cooked rice, soup, and side dishes including fish, pickles, vegetables, and sometimes meat. Nowadays, fewer Japanese eat rice at every meal. Eating out includes snacks such as noodles or confectionary. Festive meals, often eaten at special restaurants, include many side dishes but almost always end with a bowl of rice and a bowl of soup.

Breakfast in Japanese households may be Western or Japanese style. Japanese-style breakfasts are more time-consuming and are more and more confined to weekends and nonworking days. Most households, particularly those with younger couples and couples with children, eat a Western-style breakfast. Children have corn flakes or some other cereal, milk, fruit, and yogurt. Adults tend to have toast and butter, eggs (fried, scrambled, or in an omelet), and slices of vegetables such as tomato or cucumber. There is also usually a slice or two of ham or a few small sausages. Adults drink coffee and store-bought orange juice, and the children have milk.

Japanese-style breakfasts are more complex: Steamed white rice, a bowl of misoshiru soup, and pickles, usually either giant radish (*takuan*), pickled plum (*umeboshi*), or short-pickled cabbage, form the centerpieces of the meal. Sheets of dried laver (*nori*) cut into standard one-inch by three-inch strips are used to wrap rice and awaken the taste buds. Commonly, a Japanese-style breakfast will also include

a slice of salted grilled salmon (or some other fish) and a raw egg, which is beaten in a small bowl and poured on the hot rice. In eastern but not western Japan, a popular breakfast dish is fermented beans (*natto*), which are mixed with either the soup or the rice. Preparing all the little side dishes is time-consuming, and, unsurprisingly, most busy housewives, who might have to go to work themselves, prefer preparing quicker Western-style breakfasts.

The midday meal in most Japanese households is lighter than the evening meal, and more diffuse, since most household members are at work or at school. For the stay-at-homes it might mean little more than a bowl of noodles or some other light meal. Midday meals thus fall into three different types. People at home will usually eat a light meal of some sort. People at work will either bring a boxed lunch or eat at the company canteen, if there is one, or at a nearby restaurant, usually one that caters to working people and sells set lunches: salt-grilled fish, fried fish or meat, and stir-fried vegetables with rice and soup.

The main meal for most Japanese is the evening meal. The composition of such a meal varies of course according to taste, but it will almost always contain, or conclude with, plain rice. This is also likely to be an event where etiquette is preserved and where the entire family eats together, although many commuters arrive home too late to join their family at meals on weeknights.

A huge variety of box lunches (*obentô*) are available in Japanese cuisine, and they are popular for people working away from home, whether at work or traveling for leisure, as well as for special occasions. They consist of a plastic box divided into many irregular compartments, each with a few morsels of one food type. One compartment almost always contains rice, often with a pickled plum inserted to preserve freshness. Many box-lunch ingredients can be bought ready-made from department stores and supermarkets. The simplest of box lunches—*oigiri*—is little more than a ball of vinegared rice surrounding a piece of pickle or dried bonito shavings, sold in plastic containers at all supermarkets and convenience stores. More complex ones served at homes or restaurants can have many compartments, and even several stacked boxes. They are

nominally intended for people who are in a hurry or are traveling. The stations of interurban trains usually have station boxed meals (*ekiben*) for sale, which are hugely popular.

Kamo/Niku Namban Soba (Duck or Beef and Noodle Soup)

4 servings of soba (buckwheat noodles) or *udon* (thick wheat noodles)

2 breasts of duck or ¼ lb beef per person, cut into 1-in. x 2-in. fillets and then very thinly sliced

1 leek, sliced into ¼-in. rounds

4 c dashi stock

1 tsp grated ginger

6 c water for the noodles, plus 1 c water

4 large Asian soup bowls

Grill the duck (if using) skin side up until the skin is golden brown. The meat of the duck will be uncooked.

Remove from the grill, and slice across the duck breast into slices about ¼ inch thick.

Warm the dashi to a mild simmer. Slide in the duck or beef, the leek, and the ginger. Keep on a very slow simmer, but do not allow it to boil.

While the duck is grilling, boil 6 cups of water in a pot. When boiling, put in the noodles. Allow water to return to a boil. Pour in an additional cup of water (and a bit more if necessary) so that the boiling subsides. As soon as the water starts boiling again, remove from the heat, drain the noodles, and divide them among the four bowls. Ladle in a measure of stock, the leeks, and finally the meat on top of the noodles. Serve immediately.

Eating Out

Japanese sociologists argue that the Japanese eat out a great deal because Japanese houses are small and not suited for entertaining. Whatever the cause, Japanese do like to eat out a lot and there is a bewildering array of choices. Eating-out establishments range from carts and traditional Japanese-style

restaurants (with or without geisha entertainment provided by women in formal traditional dress), through snack bars of various descriptions, to restaurants that combine foreign ideas with Japanese tastes.

Carts selling street foods are particularly common around train stations, where there are many potential customers. Street foods include *takoyaki* (chopped octopus puff-balls), *taiyaki* (waffles in the shape of a *tai* fish filled with sweet bean jam), and *manju* (Chinese steamed buns stuffed with a mixture of meat, bamboo shoots, and leeks or with sweet beans). A typical after-hours pick-me-up for tired roisterers is *oden*, a stew of brown tubes of fish paste (*chikuwa*), sweet potato and white potato slices, bundles of tied kelp (kombu), peeled boiled eggs, white and pink half-moon slices of fish paste (*kamaboko*), yuba (a skimmed soy-milk solid) tied with bow knots of dried gourd, small taro tubers (*satoimo*), and devil's foot root jelly (*konnyaku*). This is consumed with mustard and washed down with beer or sweet potato liquor (*sochu* or *shochu*—which can also be distilled from barley or rice).

There is a wide range of other foods that are more often eaten out than in. Many of these are best eaten at a counter, where the counterperson can serve morsels, sometimes one by one, and gauge the customer's satisfaction. Such foods include fresh or pickled fish on mouthfuls of vinegared rice (sushi), which comes in two varieties: Edo (Tokyo) style, made of fresh fish sliced to order and placed on rice balls, or in rolls or cones, and Osaka style, made of pickled fish and rice compressed in square molds. Sashimi are choice cuts of fresh fish. Tempura is another food best eaten at a counter, consisting of morsels of vegetables, fish, and seafood deep-fried in a light batter. This is served with a sauce of stock (*dashi*), grated radish, grated ginger, and light soy sauce.

Fish and other foods can be consumed in specialist *robatayaki-ya*, where diners sit around sand pits filled with glowing charcoal. *Robatayaki-ya* provide different grilled foods, as the taste and expertise of the cook and the demands of the customers dictate. *Yakitoriya* specialize in providing chicken bits on skewers, somewhat like the shish kebab of

A sushi chef making sushi at a restaurant in Japan. (Shutterstock)

the Middle East. *Yakitoriya* are common, perhaps because the investment is small: a narrow charcoal grill, just wide enough for standard bamboo skewers, some cuts of chicken, and a refrigerator full of chilled beer, and voila! *yakitori*. Grill bars come in a wide variety of styles to fit any purse. Smaller shops have a more limited choice of tidbits, but the small size offers an opportunity to talk with the owner as he grills the food. Larger places have much wider menus, and new types of grilled meats and other food are added all the time. For vegetarians there is a wide array of vegetables: shiitake mushrooms, asparagus, leeks, or cubes of tofu topped with a spread of thick tea- or miso-flavored paste and then grilled (*dengaku*).

Shared-pot restaurants serve one-pot dishes that are notable for their conviviality. Ceramic *donabe* and cast iron *tetsunabe* are deep-bellied, covered pots used for cooking soupy stews, of which the most common version is *shabu-shabu* (roughly “swirly” or “swish”). A quantity of stock is heated, then placed in the pot over a tabletop burner. When the liquid is roiling, fish and meat are added. Each diner takes out tidbits and dips them in a dipping sauce—Japanese lime and soy sauce is very common—before conveying them to the mouth. As the stock absorbs the meaty flavor, vegetables—Chinese cabbage, shiitake mushrooms, enokitake mushrooms, sliced leeks, carrots, chrysanthemum leaves, bean sprouts, or any vegetable that will cook quickly in liquid—are added and consumed. Finally, once the soup is fully flavored, thick udon noodles, which absorb flavor well, are added and consumed as well. Sukiyaki is supposed to have originated as a

quick cooking method for farmers or soldiers out in the field, who used a hoe blade as a makeshift grill. Today, it is cooked using a special cast iron, flat-bottomed pot in which thin strips of beef are cooked in sweet rice liquor (mirin), lime juice, and soy liquid and eaten dipped in beaten raw egg. The sauce is thinned with sake, and then vegetables and bean gelatin noodles (*harusame*) are added.

Japanese enjoy both Japanese (*wagashi*) and Western (*yôgashi*) confections. Japanese confections are based largely on two major ingredients. Mochi is glutinous rice that is made by steaming and then pounding sticky rice into a thick paste somewhat like chewing gum. Very similar to marzipan in Europe, mochi is very plastic: It accepts and blends flavors and colors and can be shaped into anything from lifelike peaches to little statues of dogs. Cooked beans are sweetened and serve as a common filling, and sometimes coating, for mochi

Restaurant, Tokyo, Japan. (Corel)

confections. Other sweets are made of jellies from seaweed and translucent bean noodles. Wagashi are almost universally served with green tea, often in *kisaten* (tea shops) dedicated to the purpose.

Western confectionary covers the entire range of types and geographic locations, from delicate petit fours, through the entire range of Austrian, Italian, and German cream cakes and cheesecakes, to American fruit pies. These are either made at home or, more commonly, bought in one of the many Western-style bakeries and confectionaries found in every Japanese town.

Feasts, or banquets, punctuate and are part of most social life. The standard meal consisting of rice, soup, and side dishes can also be expanded into a full banquet or feast in which the entire corpus of cooking styles available to the Japanese cook can be brought into play. Obviously such banquets are indulged in only on special occasions, and they are very rarely undertaken at home. A banquet starts with an appetizer of small delicate tidbits (*zensai*) followed by a clear soup (*suimono*) intended to awaken the appetite, and possibly some sashimi: The delicate flavor of fresh raw fish is best appreciated when one is not completely hungry but before the taste of other foods dulls the palate.

The central dishes of a banquet come in a fixed order. A grilled dish (*yakimono*) starts the process. This is followed by a soft steamed dish (*mushimono*), which contrasts with the stronger flavors of the grilled food, and then a dish of vegetables or fish simmered in stock (*nimono*). Softer foods are followed with a crisp, fried item (*agemono*), and the oil is subsequently cut and the mouth freshened by vegetables or fish dressed in vinegar sauce (*sunomono*). The banquet then concludes with a rice dish, usually plain steamed white rice but sometimes rice with included materials: beans, chestnuts, or flavoring (*gohanmono*), which is accompanied by a heavier soup, usually misoshiru, and pickles (*tsukemono*). Finally, most modern banquets conclude with a sweet (*okashi*) and green tea.

The most refined form of dining—*kaiseki*—is that surrounding the tea ceremony. The practice of ritually drinking tea was originally imported from China, where it is still practiced today. But

the Japanese, partly under the influence of Buddhism, made this ritual their own. *Kaiseki* cooking, strongly influenced by Buddhism, eschews meat to a large degree and encourages the use of delicate morsels of food that would complement the bitter-blandness of tea, as well as the refined atmosphere of the tea ritual itself. Nature enters into the *kaiseki* by minute attention to the types of plates used as well as the types of foods, which are to fit each season. Brightly colored plates and bowls are used in summer, and more somber colors in winter. In the fall, there are various evocations of the season such as decorations of red maple leaves, flying geese, or chrysanthemums, which flower in October. Spring utensils feature plum blossoms or some fresh greenery. There are even differences in the shape of utensils: Summer bowls and dishes tend to be airy, open mouthed, and often flat. Winter dishes tend to be solid, with thick vertical walls, and often lidded. A full *kaiseki* banquet is likely to have one or more dishes for each of the categories of Japanese cooking. Unsurprisingly, a full tea ceremony and banquet can take up an entire day.

Western-style fine-dining establishments have proliferated throughout Japan, which boasts numerous Michelin-starred restaurants as well.

Special Occasions

The Japanese enjoy and practice a variety of rituals, festivals, and holidays. In addition to traditional festivities that are related, at some level, to the divine, Japan as a nation also celebrates a number of purely civil holidays. At the core of every festive day in Japan is the concept of sharing food—often in the form of a full feast but, at a minimum, a sharing of rice or even a bite of seaweed, and wine, with the deities (*kami*) or ancestors (*hotoke*). As a consequence, few Japanese festivals do not include food, whether formally presented at a shrine or temple ritual, eaten at home with family or friends, and perhaps a visiting deity, or consumed from one or more of the street stalls that populate every festival.

New Year (*oshōgatsu*; December 31–January 3) is both a national and religious holiday, the most

important of the year. Most businesses close for a few days. On the eve of the New Year (December 31), shrines and temples hold special services, and many people dressed in kimono visit a favorite shrine and temple, particularly at midnight, when the temple bells toll out the 108 Buddhist sins. This is the time to consume special New Year foods (*oseichi*), to decorate the entrances of homes with cut green bamboo poles wrapped in straw rope and decorated with pine branches and oranges (*kadomatsu*), and to visit friends and family. New Year food is traditionally packed in special three-tiered square lacquered box trays (*jūbako*) decorated with an indication of the season: pine needles or branches, plum blossoms, and bamboo leaves, all indicating the approach of spring and the turn of the year. The foods themselves refer to the season as well, whether through a well-placed pun on the name (kombu [kelp] = *yorokobu* [felicitations]) or by their color or shape. Red, green, white, and gold colors predominate. For example, slices of red and white fish paste (kamaboko) might be alternated in a checkerboard pattern. Pink cooked whole prawns might be placed next to erect, hollowed-out spears of cucumber filled with brilliant reddish-orange fresh salmon roe. Mandarin oranges, whose plentiful seeds hint at fecundity, might be filled with brilliant gold-colored jelly. Lotus root, chicken breast fillets, and taro bulbs or burdock roots are fried a golden color or glazed with golden sauce and added to the trays. The arrangements of these boxes are so delicate and pleasing to the eye that many households keep the traditional three (sometimes four) box trays for display only, bringing in piled plates for actual consumption. Many of the individual foods are extremely time-consuming to make. Threading boiled golden ginkgo nuts individually on a pine needle, or cutting carrot slices into the shape of a plum blossom, requires a great deal of time and skill. So, in modern Japan, one can purchase either an entire tray or the more finicky preparations from the many supermarkets and particularly from the elite department stores.

Perhaps the single most important food of the New Year is *ozoni*. This New Year's soup is based on the finest *ichibandashi* (stock made from shaved

Japanese *ozoni*, a traditional soup served for New Year's celebrations. (Shutterstock)

bonito and kombu), often flavored with a strip of decoratively cut Japanese lime whose intense aroma fills the bowl. Besides the stock, the single most common ingredient in *ozoni* is pounded and roasted rice cake.

Other national festival days include the Doll Festival (*Hinamatsuri*) during which parents of girls set out the *hina-ningyo* dolls, which portray an ancient imperial court, complete with emperor and empress, ladies-in-waiting, ministers, and musicians. Young girls entertain one another with drinks of *amazake* (a sweet, slightly fermented drink made of rice gruel), colored rice cakes, and red rice cooked with beans. One month after *Hinamatsuri* is the boys' turn. During the Boy's Festival (*Tanganosekku*) people eat rice dumplings

(*chimaki dango*) of special rich rice wrapped in a bamboo leaf in the shape of a demon's horn, and also steamed and pounded-rice cakes wrapped in oak leaves called *kashiwa mochi*. During spring, office parties, families, and friends will have formal blossom-viewing picnics (*hanami*). Seasonal foods, including cakes in cherry-blossom shape, can be bought from many shops and are consumed under the blossoming trees. Many Japanese families celebrate Obon, the day of the dead, by a visit to the family graves, where the favorite foods of the recently departed are offered on the graves.

Life-cycle events—birth, adulthood, marriage, death, and a number of others—are celebrated in Japan and characterized by specific foods whose shape, coloration, or associations recalls the event. For example, families moving to a new neighborhood will often offer their neighbors—the three houses opposite and one on either side (*mukai sängen, ryodonari*), as the Japanese saying has it—packets of noodles (or tickets for a free meal at the neighboring noodle shop). *Soba* means both noodles and neighbors, and by offering the gift they are asking to become members of the local community. Special ritual foods may be offered to children on their third month, and to adults upon reaching their 60th birthday.

Red and White Salad

¼ c dashi stock

¼ c rice vinegar

1 tbsp sugar

½ daikon radish, peeled (use the upper half of the radish)

carrots, peeled, roughly the same quantity as the radish

2-in. piece of kombu (kelp), soaked in cool water for 15 minutes (the dry kombu will expand into a large leathery sheet)

Make the sweet vinegar the day before: Warm the dashi. Add the vinegar, then dissolve the sugar in the liquid. Allow to cool.

The next day, with a sharp, thin vegetable knife, cut the radish into a four-sided prism shape. Slice the prism into ¼-inch slices. Cut each slice into ¼-inch strips. Cut the carrots the same way.

Place the vegetables in a bowl, salt thoroughly, then knead with the hands for about 5 minutes. Allow to rest for a few minutes, then squeeze handfuls of the vegetables gently over a colander, and discard all liquid. Place the squeezed vegetables into a clean bowl.

While radish and carrots are resting, drain the kombu and slice it into thin strips. Combine all the vegetables.

Add one-third of the sweet vinegar. Mix by hand, then lightly squeeze handfuls of the vegetables over a colander once again. Discard the liquid. Return the vegetables to a clean bowl (glass is ideal).

Add the rest of the vinegar to the vegetables. Add the kombu. Mix all ingredients by hand, then allow to rest overnight before serving as side dish or salad.

Diet and Health

Most Japanese recognize that the key to healthy life can be found in two things: exercise and diet. The Japanese diet as a whole is apparently, with some reservations, extremely healthy. Scientific evidence is emerging that certain foods—kombu and nori, tea, shiitake mushrooms—have health benefits above and beyond their caloric value. The evidence is clear, if nothing else, in the actuarial tables. Notwithstanding the stresses of living in modern Japan, the Japanese consistently come at the head of the life-expectancy tables. Some of the features of Japanese cuisine that have a positive effect on health include the following:

A high proportion of vegetables in the diet: Traditional side dishes are largely based on lightly cooked vegetables: blanching, light steaming, and quick cooking in preference to heavy frying or long stewing. Thus, both caloric value and vitamins are maintained, and more roughage persists in the diet.

Low fat consumption: On the whole Japanese prefer to simmer or grill foods. Deep-frying, though available, is only one of a range of food-preparation methods.

High fish consumption: Japanese have traditionally consumed fatty fish, leading to an increase in high-density lipoprotein (HDL) cholesterol and a decrease in low-density lipoprotein (LDL) cholesterol. Seaweed—lavers, kelps, and true seaweed—which Japanese consume on a regular basis, has beneficial properties, apparently including anticarcinogenic abilities.

Freshness: The Japanese insistence, on the whole, on consuming fresh food, or at least food that has come as quickly as possible from the producer to the consumer (problems of hygiene and modern mass production aside), probably has beneficial aspects as well.

Small servings: Small portions, and lengthy service of desirable meals, have meant that the diner has the time, the emotional resources, and the leisure to savor each morsel and to digest food properly. Japanese meals, consisting of many small portions, ensure that the digestive process is not being put under stress.

Health-promoting foods: There seems to be substantial evidence of active health promotion by foods as diverse as tea, kelp (kombu), and shiitake mushrooms, among others. Tea—green (unfermented), oolong (semifermented and smoked), and black (fermented) types—is regularly consumed by most Japanese: Tea is available at work and school breaks, packed for travelers, and as a part of most meals. There are also strong claims by Japanese scientists that consumption of kelp, both cooked and fresh, may help in suppressing absorption of cancer-inducing chemicals. *Katsuobushi* (dried fermented skipjack tuna) flakes (from which dashi, the stock that is heavily used in Japanese cooking, is brewed) have the property of reducing blood pressure, and some studies have shown that the flakes themselves contain amino acids that act to suppress high blood pressure.

In contrast, there are some negative effects of the Japanese diet. These include the following:

High salt levels: Since salt pickles are a major component of the Japanese diet, along with miso, which is brewed with salt, high rates of stomach cancer and high blood pressure are recurring problems in Japan. The Japanese government has taken those findings seriously and has run several campaigns to reduce salt consumption.

Industrial food: Since the end of World War II, the Japanese populace has been affected by a series of problems such as outbreaks of *E. coli*, contaminated milk, and overconsumption of sugar, which have been traced to industrial processes in food manufacturing. Food manufacture is pervasive, and many Japanese households consume large proportions of ready-made meals and industrially produced food. An indication of the extent of factory-processed food is the Japanese government's authorization of the production of purely artificial food bars. Made by biochemists from chemicals and fermentation, they yield full nutritional value with very little taste.

Refined foodstuffs: Until well into the modern era, few Japanese families ate refined white rice as a staple. The process of polishing the rice removes the husk and the germ, which together provide vitamins and protein available only in brown rice. White rice was a desirable commodity, not necessarily an item of daily consumption. White rice is now commonly available, and refined foods such as fish paste (kamaboko), from which much of the vitamins have been removed, are eaten very frequently.

Sugar: The Japanese have become addicted to sugar, and the consumption of sweets in Japan, notably among children, has increased. High consumption of many sweet foods and candies available to Japanese children has contributed to poor dentition among Japanese as they become adults and has also encouraged obesity, which is currently becoming a problem among Japanese children.

Kazakhstan

Overview

The Republic of Kazakhstan is the ninth-largest country in the world by landmass, about the same size as western Europe or Texas, but it is only the 62nd most populated, containing nearly 15.5 million people, about 60 percent of whom live in cities. North to south it stretches from the western Siberian plains to the Central Asian desert and the edge of the Silk Road; east to west it stretches from the Altai Mountains to the Volga. A landlocked country bordering two landlocked seas—the Caspian and the Aral—it neighbors China to its east, Kyrgyzstan, Turkmenistan, and Uzbekistan to the south, and Russia to the north and west.

Historically, the Kazakhs are a nomadic people, a mixture of Turkic and Mongol tribes who migrated to the area in the 13th century. Russia conquered part of Kazakhstan in the 18th century and the remainder in the 19th, and it became a Soviet republic in 1936. The Soviet Union's "virgin lands" project in the 1950s and 1960s had the twin effects of causing extensive immigration from Russia and other Soviet republics and of bringing to an end much of the traditional nomadic living and farming practices of the previous centuries. Among these Soviet immigrants were workers for the local industries and prisoners of the gulag, much of which was located in the steppes of Kazakhstan. Kazakhstan gained its independence in 1991, and many of the immigrant communities returned home. Today, although the country prides itself on accommodating 120 nationalities, the population is predominantly a mixture of native Kazakhs (approximately 55%) and Russians (approximately 30%), with Uzbeks,

Tartars, and Ukrainians the next-largest groups. Russian and Kazakh are the official languages. About 44 percent practice the Russian Orthodox religion, and 47 percent of the population is Sunni Muslim. All of these populations have had their own influence on the food of the nation.

Kazakhstan's economy outstrips all of the other Central Asian states combined. Rich in natural minerals (it is said that almost every element in the periodic table can be found in Kazakhstan), it has a particular wealth of deposits of petroleum, natural gas, coal, copper, iron ore, lead, zinc, bauxite, gold, and uranium. It retains a strong relationship with Russia, and ever since independence has leased 2,316 square miles (6,000 square kilometers) of land around the Baikonur Cosmodrome to Russia for continued use in its space program. Its main agricultural products are grain—largely spring wheat—and livestock—sheep, horses, and cattle—although its continental climate means that it also has good conditions for growing a wide variety of fruits and vegetables in summer. Generally speaking, Kazakhstan is a nation of meat eaters, with between 30 and 50 percent of daily calories coming from meat and 50 percent from starches.

Food Culture Snapshot

Sholpan and Talgat live in an apartment in central Almaty, with their young daughter and baby son. A little over a year ago, when his mother died, Talgat's father came to live with the family. As the youngest son, Talgat is responsible for his parents and his sisters when the need arises. Both Sholpan and Talgat are middle-class

urban professionals who work full-time, and they have regular help from an older woman, Gulfiya, who comes into their home to assist with cooking, cleaning, and child care.

Although both adults work, it is Sholpan's responsibility to take care of the family home and to shop for and prepare their meals. Home cooking is an essential component of their family life, extending even to the traditional fruit compotes or cordials that are always in a bottle in the fridge should anyone be thirsty. Talgat's favorite is made from dried apples and barberries simmered in water over a low flame, with the addition of raspberries in summer and dried apricots or raisins in winter.

Staple foods that are usually in the larder include fresh and preserved meats in the form of sausages and smoked meats, rice, eggs, wheat flour, ready-made breads and biscuits, and pickled fish, as well as a wide variety of fruits and vegetables in season. Nuts and dried fruits from the region are another important staple.

Sholpan and Talgat are typical of others in their social group in thinking that fruits and vegetables purchased from a supermarket are simply not fresh. The vast majority of fresh produce is still bought in outdoor or farmers' markets, which are centrally located, or from street vendors who bring their produce of the day into town to sell. Dried fruits and nuts are also best from the market. The impressive new supermarkets tend to be used for bulk purchases—or by the many foreigners working in the larger cities.

Major Foodstuffs

Traditionally, the most important foods for Kazakhs were meat and dairy, and these continue to play a prominent role on Kazakh tables. Sheep, horse, and camel are the traditional meats, and beef is popular. Wild goat is still relatively commonly consumed in rural areas, though the population of *saiga*, or long-nosed antelope, which used to be a staple, has dropped to the extent that it is now protected. Poultry is less frequently consumed than red meat but is becoming increasingly popular, especially chicken and duck. Meat is bled at slaughter, and the animal's head faces west in keeping with

halal practice (Mecca is west of Kazakhstan). Camels are slaughtered on their knees, presumably since the animals are so tall. A carcass is usually divided into 12 pieces, each of which has a traditional owner when the meat is served: the head and pelvic bone for guests, kinsmen, and the elderly; the liver and tail fat to all of the in-laws; the breast/brisket for the son- or daughter-in-law; the anklebone for the son-in-law; the rump for a friend; the large intestine for the herdsman; the heart, fat, and cervical vertebrae for the girls; and the kidneys and neck vertebrae (and the ears from the head) for the children.

Horse is an especially important meat. In fact, everything about horses is redolent of Kazakhstan, and there are few more uplifting sights than a herd of horses galloping together across the steppe. Superb horsemen, Kazakhs breed different herds of horses to work, milk, and eat. Horseflesh is often the main meat in traditional Kazakh dishes, and it is also made into a wide array of sausages and preserved meats, each with a different flavor, texture, and balance. Horses raised for eating are encouraged to develop extensive deposits of fat, as this is particularly prized, especially the yellow fat from mountain-fed horses (lowland horses are leaner, and their fat is whiter). On the whole, the fattier the sausage the better. One sausage type, *kazy*, is made from the long strips of meat and fat from the ribs, seasoned with garlic, salt, and pepper and threaded in large, long, whole pieces into the guts. The meat and fat for *shuzhuk* is chopped before being seasoned with salt, pepper, and garlic and stuffed into guts. *Karta* is made from the thickest part of the rectum, which is washed carefully so as not to break up the fat that surrounds it and is then even more carefully turned inside out so that the fat is encased inside. Whole preserved meats include *zhal*, the oblong accumulation of fat from underneath the horse's mane, which is cut off with a thin piece of flesh and then salted, and *zhaya*, which is the salted upper muscular layer of the hip with up to 4 inches (10 centimeters) of fat. *Sur-yet* may be made of any part of the horse's flesh cut into in a piece of between 1 and 2 pounds (0.5 and 1 kilogram) and salted. All of these will be either dried or smoked, and all are boiled for up to two hours before use.

Sheep are an important meat source, and fattiness is also prized in this meat. The sheep are bred to have particularly fat rears, and this fat, as well as fat from the tail, is an important ingredient in many dishes as well as being eaten in its own right. The most expensive *shashlyk*, or kebabs, are those with the most fat included. Mutton is also preserved in sausages such as *kyimai*, a blood sausage, and *ulpershek*, made of the heart, aorta, and fat. No part of the animal is wasted. Children collect the knuckle and anklebones to play a throwing game called *asikya*—historically, this was also used to help them learn how to count. Men may be given one of these bones on their wedding day to symbolize hope for a son.

Although it borders two inland seas (the Caspian and Aral), Kazakhstan is landlocked, so as much freshwater as sea fish is consumed. Sturgeon, carp, and pike perch are particularly common, the former eaten for both its meat and its eggs—caviar. Sturgeon and carp are farmed, and in recent years programs have been put in place to try to repopulate the Aral Sea with Aral and Syr Darya sturgeon. As result of Russian and other northern European influence (especially German), salmon is eaten, and pickled fish in many forms is common, usually herring.

Milk from cows, mares, and camels is consumed in the form of milk, yogurt, cream, and cheeses, all of which may be fresh, soured, or fermented. In the countryside, beestings (the first milk after the birth of a calf), or *uyz*, are commonly consumed either boiled and drunk as a warm liquid or boiled, cooled, solidified, and eaten in slices. Fresh milk is usually drunk boiled and is sometimes added to black tea. Slightly fermented milk drinks are traditional, especially kumiss made from mare's milk, *shabat* from camel milk, and *airan* from cow milk. Slightly yogurty and sour, sometimes with a slight fizz, these drinks are refreshing and nourishing and a typical start to a meal or offering to a guest. Both kumiss and shabat are highly recommended for their health-giving properties, renowned for being good for the digestion and the liver, and even a cure for tuberculosis. Boiled soured milk from cows and mares is often strained and formed into small balls that are left to dry in the sun. The resulting *kurt*

is eaten as a snack alone or with tea, or diluted in broth or porridge.

Fresh fruit in season is plentiful and prized. In summer, there is a profusion of raspberries and currants of every color, peaches, apricots, melons, and watermelons. Many of these are dried for use in winter, too, the local dried fruits being supplemented by a vast array of imported dried fruits from southern neighbors, especially Uzbekistan, Kyrgyzstan, and Tajikistan. The sheer variety of differently prepared dried raisins, apricots, cherries, and plums from multiple fruit varieties make Kazakh markets a jeweler's shop of glowing color. Autumn is one of the more important fresh fruit seasons, for Kazakhstan is famous as the birthplace of the apple. Most apples eaten in the world today originate from its wild *Malus sieversii*, and the old capital, Almaty, is named for the apple—*Alma-ata* means “father of apples.” Although many of the ancient orchards have been lost since independence, apples remain an important crop. Ranging from the highly scented and enormous Aport apple, which can be as large as a baby's head and will grow only on the land around Almaty, to the tiny wild crab apple, they are eaten fresh, dried, or made into brandy.

Alongside displays of dried fruits one finds an equally astonishing array of nuts, grown locally and imported. Almonds of every size, walnuts, cashews, pistachios, and even nutty little apricot kernels are sold in markets everywhere and served as snacks at home. A wide variety of honeys are also sold for consumption and for health. Unlike its Silk Road neighbors, however, Kazakhstan does not have a huge market in spices and herbs. In its markets, meat, dairy products, dried fruits and nuts, and fresh fruit and vegetables predominate. In summer, a profusion of the sweetest tomatoes are on sale; all year, onions, cabbage, seasonal greens, and fresh herbs, especially parsley and cilantro, are available. The influence of several immigrant communities can be found in the most commonly consumed salads: Russian beetroot salad and spicy Korean carrot salad.

With 70 percent of its agricultural land under cultivation, Kazakhstan is the sixth most important global wheat exporter, and wheat is grown in great

quantities for the internal markets as well as for export. Wheat flour is consumed as bread, pasta, or noodles and is the key ingredient in the casing for different types of dumplings and pies. Bread is an important staple food, and there are numerous local breads, many of them the round, flattish, leavened loaves called *non* or *nan* with a distinct raised edge and attractive center decorated with a stamped pattern. Despite the name, these breads are not the same as the flat, unleavened Indian *nan*. *Nan* may be plain (*taba nan*), or it can include some fried onions rolled into the outer rim, or have sesame or nigella seeds strewn on the surface, or have a little tail fat added. Highly decorated smaller versions of this loaf, called *damdy nan*, are often served in restaurants. This type of loaf may also be enriched with egg to make *salma nan*. Egg-enriched puffy fried breads, or *baursak*, are very popular, and these, too, may be either simply savory or sweetened with

sugar (*yespe baursak*) or, for a more complex preparation, have curds added and be boiled before frying (*domalak baursak*). Many of the dumplings that Kazakhs love to eat are made with leavened dough: *Samsa* are stuffed with meat, rice, and onion, shaped into half-moons, and baked; *belyashes* are shaped into small rolls, stuffed with meat or fish and onion, and fried; and *cheburek* are made in rounds, stuffed with meat and onions with the edges pinched together, and fried. Russian dumplings, *perogi* or *pelmeniy*, are also popular. *Manti* are more Chinese in style, made with a thinner, unleavened, wheat-based dough and steamed. *Gutap* dough is also unleavened but enriched with butter, the filling is rich in egg and herbs, and the square fritters are deep-fried. Many of these may be served with a sour cream sauce.

Rice is another important starch grown in the country and the basis for one of the national dishes, *plov*.

Bread sellers in Shymkent, Kazakhstan. (Travel-images.com)

Plov

This is a classic of Kazakh cuisine. Although it is clearly related to the typical rice dishes or pilafs common throughout Central Asia, plov has its own particular characteristics. Carrots are the main flavoring agent, and it rarely contains dried fruits (unheard of in most of its cousins). It is much less highly seasoned than other similar rice dishes from along the Silk Road. Typically, any meat can be used, though red meats are preferred. Lamb, including the fat from the tail, is the most common option, though some restaurants offer horse, and beef is popular with many families making it at home.

- 14 oz medium-grain white rice
- 2.2 lb lamb or beef, chopped into small cubes
- 3 tbsp sunflower or corn oil
- 2 pinches ground coriander
- 1 medium onion, peeled and sliced
- 2.2 lb carrots, cut into strips
- 2 tbsp ground mixed spices (cumin, coriander, cinnamon)
- 3½ c water
- 6 cloves garlic, peeled

Wash the rice until the water runs clear, and soak it in water. Heat the oil on high heat, and fry the lamb or beef until very well cooked, about 30 minutes, adding a couple pinches of ground coriander to reduce the smell of the meat. Add the onion, and fry for 2 minutes, then add the carrots and the spice mix. Fry for about 20 minutes until the carrots begin to caramelize. Turn down the heat to low, and add the water and a teaspoon of salt. Turn the heat to high, cover with a lid, and bring to a boil. Add the garlic and then the rice, which should be pushed gently under the surface of the liquid but not stirred. Replace the lid. Cook for 20 minutes, until the water is absorbed and the rice is cooked. Tip out onto a large dish, and serve with a tomato and onion salad.

Every meal ends with something sweet. Chocolate- or vanilla-flavored light sponge cakes, sandwiched

together with jam, covered in sweetened cream, and brightly iced, are commonly bought at bakeries and served as desserts or with tea. Local factories produce a vast array of brightly wrapped boiled sweets in fruit, nut, and chocolate flavors. There is a thriving chocolate-making industry, and locals take rightful pride in the quality of the beautifully wrapped bars.

Cooking

Preparing Kazakh food is fairly labor-intensive. Although dishes tend to be composed of relatively few ingredients, meals are composed of multiple dishes, so a lot of chopping and mixing is required. In most households cooking is a female occupation, the responsibility of the senior woman in the house, aided by her daughters or daughters-in-law as required.

Middle-class Kazakh kitchens are somewhat simpler than Western kitchens. The room itself tends to be small, and the main piece of equipment is a domestic stove with an oven and surface burners (either electric or gas). The majority of cooking is done on the burners, and in many lower-middle-class households the oven is put to use as an additional storage area for pots and pans rather than as a means of cooking. Poorer households without these facilities continue to use the traditional dried-cow-dung fire. Some rural households have a clay oven in their backyard, used for baking bread and meats, but this type of oven is traditionally Uzbek, not Kazakh. The Kazakh “oven” is a more temporary affair made of two large, heavy metal pans of similar size, one used as a lid for the other, buried in the cow-dung fire. Grilling is done over charcoal outside.

Deep-frying and sautéing are done in large, deep frying pans; boiled dishes, especially meat-based stews, are made in large cast iron or steel saucepans, or *kazans*. Dumplings are steamed in large multi-layered pans called *kaskans*. Narrow rolling pins or a large broom handle are used to roll out bread or pasta dough. Handleless china cups or soup bowls, called *pialas*, are used for measuring volumes of about 1 cup (200 grams) dry and 8.5 fluid ounces (250 milliliters) of liquid ingredients. Spices are

bought ready-ground, and often ready-mixed, from the market, so milling and crushing are not usually done at home.

Typical Meals

Most Kazakhs in urban and rural areas eat three meals a day, the largest of which is dinner. All meals are accompanied by tea, either black or green. Black tea may have milk added. Breakfast is usually eaten at home; it consists of tea and either bread with jam, honey, or cheese, plus hard-boiled or scrambled eggs, or a thin porridge with sweet toppings of jam or raisins. Some savory items are interchangeably consumed as either breakfast or lunch foods: breads stuffed with chopped eggs and greens or cabbage, or pancakes spread with a thin layer of minced lamb and rolled. Lunch is light and often eaten outside the home—perhaps *manti* or *samsa*, or soup (*sorpa*), or Korean-style salad bought from a street vendor or small restaurant. In many offices, people will bring in leftover food from home to eat at lunchtime.

Hospitality is a critical part of Kazakh life, and dinner tends to be an important time for this. The dining table in most homes is always set with two three-tiered plates of dried fruits, nuts, and sweets, ready for any guest who happens to visit. A typical meal for guests might start with savory *boursak*, little hollow doughnut-like fried puffed breads, and some salads—perhaps *sveyko nay*, made of grated beetroot and finely minced garlic; *mimosa*, or crab salad, made of chopped crab, hard-boiled eggs, rice, cucumbers, and sweet corn with a dill dressing; and a tomato and onion salad with garlic, this last one essential if *plov*, the Kazakh pilaf, is on the menu. *Plov* is traditionally made with horse or fat mutton, but many families prefer their *plov* made with beef. A soup of some kind, either fish or meat broth, will probably be served along with the meal. Every dish is placed on the table, and guests are exhorted to help themselves before the family begins eating. Mainly homemade up to this point, the meal may turn to purchased items for dessert. Along with tea with hot milk there will be a profusion of sweetmeats: dried fruits and nuts; fresh fruit (watermelon, raspberries,

pomegranates, according to season); fruit jams, eaten by the teaspoonful; and cake, perhaps *midovi*, a honey cake with cream. Any cookies or chocolates brought by the guests will also be served.

Eating Out

Kazakh cities have numerous restaurants, and eating out is a popular pastime, with large groups meeting for business or social entertainment. In the summer, many restaurants have large open-air seating areas with live music to encourage parties to stay and enjoy the hospitality—and order more food. Many restaurants offer typical foods of the region, in particular Kazakh, Uzbek, or Georgian dishes. Although some of these restaurants specialize in a particular cuisine, many of them offer a broader range of dishes from the region.

Other Asian restaurants are also popular, especially Korean and Chinese, and there are a few Indian and Thai restaurants in the major cities. In many cases local ingredients are used to prepare classic dishes on these menus. The meat wrapped and steamed in a banana leaf in a Kazakh Thai restaurant is as likely to be horse meat as chicken.

Snacking is extremely popular, and many of the local foods lend themselves to the quick street-food treatment. Several of the favorite meat and vegetable dumplings, in particular *manti* and *samsa*, are readily available in markets, on the street, and in small, fast restaurants that let you drop in for a quick bite. One is also never too far from an open-air grill that has been wheeled into position in a park or on a street corner and is loaded with *shashlyk*, which are then served with bread, sliced onion and tomato, and a spicy sauce. Typical Western fast food is also available, and the local *McBurger* chain is a popular choice, but local foods seem to remain the preferred option for most snacking outside the home.

Special Occasions

The traditional Kazakh feast is known as the *dastarkhan*, which is literally the word for the tablecloth on which food would be laid out but is better translated here as a festive table. The *dastarkhan*

is an expression of the importance of sharing generous hospitality with family, friends, and guests. Based on the nomadic tradition of the early Kazakh peoples, it has sheep as its centerpiece. Before the feast begins, the table is decorated with the snacks always laid out on a Kazakh table: dried fruits, nuts, and sweets. Guests are offered kumiss, fermented mare's milk; shabat, fermented camel milk; or airan, liquid yogurt, to drink. The small, puffy fried breads called boursak are served. The rest of the meal is focused on the meat, starting with the sheep's head. Traditionally this is presented to the most senior person at the table, who carves it and serves the other guests according to their status. Older people and children are taken particular care of—the children usually get the ears. *Beshbarmek* follows. This is a dish of boiled meat, in this case mutton or lamb, served in whole pieces on the bone on a dish of broad noodles and stewed onions. The meat is again served to the guests according to the most suitable part for them (pelvic bone or leg for elderly guests of honor, the cervical vertebrae to the girls), and each person has a soup bowl of the broth that the meat and pasta were cooked in, known as sorpa, which is served in small soup bowls called pialas. Black or green tea is served.

Beshbarmek

This dish is simple and filling. With the use of good ingredients and a healthy appetite, it is quite delicious. The same recipe can be used with any red meat: horse, beef, or mutton, depending on availability and preference. Horse will produce the leanest result, mutton the fattiest. Many families and restaurants prefer it made with mutton.

1 large, fat piece of mutton on the bone
(approximately 4 lb)

4 onions

Salt

Pepper (optional)

1 egg

1 c water

4½ c white flour

Place the meat, a little salt, and one peeled whole onion in a large saucepan, cover with water, bring to a boil, and simmer until cooked—approximately 2 hours—frequently skimming off any scum that rises to the surface.

About an hour into the cooking of the meat, slice the remaining 3 onions thinly. Skim some fat and bouillon from the meat pan, and place into a smaller saucepan. Add the sliced onions, bring to a boil, and simmer gently until the onions are soft but not disintegrating. Season with salt and a little pepper if desired.

Now make the pasta. Beat together the egg and water with 1½ pinches salt in a large bowl. Gradually add the flour, and mix together with your hands, kneading firmly and scraping the dough from the sides of the bowl as you go. Keep adding flour and kneading until the mixture doesn't stick to the sides of the bowl any more—approximately 4–5 minutes. Tip out onto a large, clean work surface, and roll and knead it hard into a springy ball. Return to the bowl, cover, and let rest for 15 minutes. Flour the work surface. Cut the dough into 4 pieces, sprinkle each piece liberally with flour, and knead each for about a minute. Form 4 neat balls, pressing each one flat and allowing it to bounce up again. Then, take one ball at a time and press it flat with the knuckles, turning over and over in flour, and finally roll out through the lasagna setting of a pasta machine. Cut the pieces into long rectangles. Remove the cooked meat from the pan, and boil the pasta pieces in the broth until cooked, approximately 4 minutes.

To serve, place a generous layer of boiled sliced onions on a large dish. Cover with the pasta and then the rest of the onions. Place the meat on top, and take the dish to the table where the guests can help themselves. The broth should be served alongside in individual soup bowls, and the entire dish is eaten with a spoon.

Nauryz, the spring equinox at the end of March, is another important celebration, whether marked at home in the city or back in the family village. Of course, the sharing of food plays a crucial role.

Traditionally, every household makes its *nauryz koje*, a thin, savory porridge made with seven ingredients: ground wheat, water, tail fat and the pelvic bone from a sheep, pieces of kazy (horse-meat sausage), garlic, and salt. Neighbors invite one another to their houses to taste some. It's also a time for sweets: *taryltara*, or dried wheat fried in tail fat with honey and served with hot milk, and *chak-chak*, a kind of extra-small baursak drenched in honey and sugar that has been boiled to the hard ball stage, perhaps decorated with walnuts or raisins.

Islam has influenced the traditional feasts of the Uighur and Dungan communities (groups of Turkic and Chinese origin). Shek Beru is held just before Ramadan; traditionally, a sheep is slaughtered and shared with neighbors, with a particular focus on sharing with the elderly and the poor. After the fast, Oraza Ait is a period of feasting and celebration in which traditionally one would visit 40 houses to taste food and share hospitality over a period of about three days. On the day of Oraza Ait itself, children visit the mosque to eat a special fat pancake called *kokidi* that is prepared for them.

To mark a year since a significant death, for example, that of a parent, many families will follow the old Kazakh tradition of *as beru*, a special meal to celebrate the person's life and the end of mourning. In many families the meal must include baursak, as the smell of the frying as the breads puff up in the hot oil is supposed to reach the spirit in heaven.

Diet and Health

As in other former Soviet states, life expectancy in Kazakhstan improved during President Gorbachev's anti-alcohol campaign of the mid-1980s; fell sharply beginning in 1992; and then began to improve again after 1997. Compared to other newly independent states, its infant and maternal

mortality rates remain relatively high, as are its rates for cancer (especially lung cancer, in line with rising tobacco use) and infectious and parasitic diseases such as tuberculosis and hepatitis. The rate of cardiovascular disease in Kazakhstan is higher than in the rest of the region, due to the high rate of consumption of saturated fatty acids and salt. Male life expectancy, at 59 years, is 11 years lower than that for females.

In common with other Central Asian countries, the core thinking on diet and health is based on the Galenic humoral theories popularized in the region by ibn Sina's *Canon of Medicine* in the 11th century. Many Kazakh dietary beliefs continue to center on helping to digest the large amounts of saturated fat in the diet. Green tea, sweets, fresh herbs, and fruit all help with the digestion of protein. Green tea also provides valuable antioxidants and vitamins that are helpful in balancing the animal-product-heavy diet. Nonetheless, vitamins A and C are found to be lacking in many people's diets.

Korea

Overview

The Korean War (1950–1953), which was both a civil war and a proxy war for China, Russia, the United States, and the United Nations, who were involved in a larger cold war, ceased in a stalemate. An armistice was signed, and two distinct political nations were formed on the tiny Korean Peninsula in northeastern Asia.

North Korea (the Democratic People's Republic of Korea) is a Socialist state with a single-party dictatorship. The country has been extremely isolated since the end of the war. South Korea (the Republic of Korea) is noted for its rapid transition from an agrarian society to an industrialized country with a large and stable middle class.

North and South Koreans are ethnically and linguistically homogeneous. Regional dialect variations are relatively minor, and all are mutually intelligible. On the surface, the peninsula appears to have enjoyed relative peace for thousands of years; dramatic foreign invasions, although significant, have not punctuated Korean history as frequently as in many other parts of the world. However, the peninsula is located at a crossroads for northeastern Asia, and much of Korean history is about the resistance to incursions by larger or more aggressive neighbors: Chinese, Japanese, Russians, Mongols, and Manchurians.

During Korea's Chosun dynasty (1392–1910), Toyotomi Hideyoshi, who had recently unified Japan, demanded Korean assistance to attack China. Korea refused. In 1592, an army of 150,000 Japanese troops invaded the peninsula. Internal resistance, with aid from Chinese troops, quickly ended the invasion in 1593. The Japanese returned in 1597 but

were again expelled by the Koreans and Chinese in 1598.

The Ming dynasty of China, which had been able to send massive numbers of troops to Korea in the 1590s, declined rapidly from internal disorder. The Manchu, a non-Chinese people from just north of Korea, ruled China beginning in 1644. The Manchus invaded Korea in 1627, and Korea negotiated a tributary relationship with the Manchu (Qing) dynasty. Manchu people had a long history of territorial disputes with Koreans, as well as a shared dynasty, the Parhae Kingdom (719–926).

The Meiji government of Japan (1868–1912) adopted Western expansionist philosophies and once again attacked China and Korea. The First Sino-Japanese War (1894–1895) was fought over control of Korea; the Russo-Japanese War (1904–1905) was fought over control of Manchuria and Korea. Japan defeated both China and Russia, and Korea became a Japanese protectorate in 1905. In 1910, representatives of both governments signed the Japan-Korea Annexation Treaty, and the emperor of Korea ceded sovereignty to the emperor of Japan. In contemporary Korea, the treaty is referred to as a coerced—and hence null—treaty; the day it was signed is popularly referred to as the “national day of shame.”

Although Japanese occupation ended in 1945, Korea continued to dispute the legality of the treaty. In 1965, representatives from both countries signed the Treaty of Basic Relations, which also included a clause nullifying the previous treaty. This may seem like splitting hairs, but Korean identity is rooted in the idea of having successfully maintained cultural

autonomy throughout its history as a tiny country surrounded by cultures who all developed formidable military capacity at one time or another. This stubborn sense of uniqueness permeates the culture, including cultural identity related to food.

Late Chosun-era reformers began incorporating Western ideas of progressive histories and Social Darwinism. Between 1905 and 1910, Korean scholars raced with competing Japanese colonial historiographies and textbooks to create a national narrative, *minjok*. *Minjok* as “people-family” became *minjok* as “race-nation” to forge a collective history of Koreans bound to a nation-state. The first leaders of North and South Korea came of age within this zeitgeist. *Minjok* forked into two distinct paths: North Korea’s *juche* (self-reliance) policies and South Korea’s continued use of *minjok* to fuel the country’s remarkably rapid transition to modernity.

In 1948, Syngman Rhee became the first president of the Republic of Korea with U.S. support. He was born into a *yangban* (landed gentry or aristocratic) family and received the requisite classical Korean neo-Confucian education of all socially elite men. He learned English at a Methodist school and earned degrees from Harvard and Princeton. Rhee was actively anti-Communist and perceived as invested in maintaining status-quo power structures.

Kim Il Sung led North Korea from its founding until his death in 1994. He was raised in a religious Protestant household of modest means. His family moved to Manchuria (present-day northern China) during the Japanese occupation. There, Kim joined various anti-Japanese occupation and Communist organizations. Apparently, he rejected the traditional Korean feudal system at an early age. He returned to Korea in 1945 with a Soviet-backed army, gained peasant support, and quickly organized a domestic army. In 1948 Kim Il Sung became the leader of the Democratic People’s Republic of Korea with Russian support.

Both the Republic of Korea and the Democratic People’s Republic of Korea claimed to be the only legitimate government for the entire peninsula. Larger cold war issues aside, the internal problems on the peninsula had to do with the extreme socio-economic stratification under the traditional feudal

system. Wealth, status, and power were in the hands of just a few, while the vast majority of the population were peasants or indentured servants. The lower classes had almost no opportunity for upward mobility based on a heredity system of wealth and title perpetuation.

The political upheavals and economic changes of the 20th century created a significant Korean diaspora. For the first time in history, a people that had coterminous ethnic and linguistic borders for thousands of years began scattering around the world. Currently there are about seven million Koreans living outside of the peninsula. The largest populations are in China, Japan, the United States, and the former Soviet-bloc countries, with smaller populations in the Middle East, Latin America, Australia, and Europe. Everywhere Koreans went they took kimchi, the culturally iconic food for all Koreans.

Korea has a subarctic climate with four distinct seasons: spring, summer, autumn, and winter. Autumn and spring are temperate. The contrast between summer and winter is the most striking. Summers are hot and humid from maritime winds. In the winter, cold, dry air from the Mongolian plains creates below-freezing temperatures. When Korea was a preindustrialized, agrarian country, kimchi was the primary way of preserving vegetables for consumption during the bitter cold winter months.

Korean cuisine is both a reaction to the tyranny of geography and climate and an ingenious use of the same factors. Long before refrigeration and industrial foods, Koreans had to figure out how to keep foods from spoiling rapidly during the summer and how to store foods for the barren winter months. Salt from the sea was plentiful, so pickling was the answer to both.

Commercial production of kimchi began in the 1960s. South Korea instigated an international trade dispute with Japan when *kimuchi* (the Japanese pronunciation of kimchi) was proposed as an official food of the Atlanta Olympic games. At the same time Japanese manufacturers of kimuchi were increasing their share of international markets for kimchi. Kimchi received official certification from the CODEX Alimentarius Commission in 2001, giving Korea control over international standards

A plate of pickled cabbage, or kimchi, beside a traditional pickling jar from Korea. (Shutterstock)

and guidelines, a moment that was hailed as a cultural victory.

The Kimchi Museum in Seoul lists about 200 historical and contemporary kimchi recipes, made from various vegetables and seasonings. However, the most ubiquitous type is made with salted napa cabbage seasoned with red pepper flakes, chives, garlic, and salted fish. It is basically a spicy and garlicky sauerkraut: salted cabbage transformed through a process of lactofermentation into a more nutritious and digestible food with an extended shelf life.

🍴 Food Culture Snapshot

Kyoung-Mi Choe and Jung-Ho Baek moved to a suburb of Seoul after they decided to raise a family. Seoul has

a population of over 10 million residents; even the suburbs are densely populated. Real estate is very tightly utilized, and kitchens tend to be small. Kyoung-Mi and her husband, Jung-Ho, were born in Seoul, but their parents are from southern provinces. Kyoung-Mi works as a pharmacist and Jung-Ho as a software developer. Their lifestyle and diet are representative of educated urbanites living in Seoul and include dishes from different regions of Korea as well as Western foods.

They begin their day at 6:30 A.M. with a breakfast consisting of the three most basic components of a Korean meal: boiled short-grain rice, kimchi, and soup. They both eat lunch with coworkers at around noon. Kyoung-Mi's boss orders Chinese takeout for the entire staff. Jung-Ho eats fast food for lunch with his coworkers. He has a McDonald's *bulgogi* burger; the patty is seasoned with a Korean barbecue marinade. Dinner is the largest meal of the day. The main components are rice, napa cabbage kimchi, and a soup of *dwenjang* (a miso-type bean paste). The remainder of the *banchan* (side dishes) are purchased from various vendors or at the supermarket.

Kyoung-Mi and Jung-Ho purchase the bulk of their household staples at a megamarket such as Carrefour or Costco. The rest of their pantry items are purchased at *shijang* (open-air markets), minimarkets, and specialty stores. Most of Seoul is comprised of mixed-use commercial and residential neighborhoods; even in suburban areas, stores are densely packed within and around large apartment complexes. Side streets with single-family homes are dotted with minimarkets, small specialty stores, and mom-and-pop restaurants. Seoul's public transportation is extensive, fast, and consistent. Shopping and eating out are very convenient, and delivery services are extensive.

Major Foodstuffs

During the Chosun dynasty, Korea was divided into eight provinces. Natural borders of mountains and waterways separated the provinces. Before modern transportation, travel between provinces and throughout the peninsula was difficult. Provincial styles of cooking developed based on local climates and available resources. Each province became known for different styles of kimchi and specialty dishes.

Traditionally, the most important kimchi making was done in late autumn. *Kimjang* was a culinary event, a process that involved many family members over a two- to three-day period, when enough kimchi was made to last from late autumn until early spring. For three to five months of the year, kimchi was the primary source of vegetables for agrarians. As winter continued, food scarcity and rationing became predictably problematic. A portion of the kimchi was stored in outdoor freezers, essentially a hole in the ground, to extend its shelf life and ensure a steady supply of food in late winter.

In South Korea, *Kimjang* is no longer a necessity and has become more a symbolic preparation event. Industrialized agriculture, government policies, and trade agreements have obliterated food-security issues. The country enjoys a year-round supply of fresh vegetables and foods from imported sources and domestic farms that utilize greenhouse technology during winter. Small kimchi refrigerators with adjustable temperature settings are used to store kimchi throughout the year.

North Korea accomplished temporary food self-sufficiency by industrialization of its agricultural system and through price-controlled trade with the Soviet Union. However, there were always reports of food rationing, with Pyongyang, the capital, receiving preferential provisions. While other Communist countries adapted to reforms, Kim Il Sung stubbornly adhered to his self-reliance policies. The country has had widely reported food-security issues since the early 1990s. The famines of 1995 were initiated by natural disasters and then worsened with the collapse of the Soviet Union. During the remainder of the decade, the country was plagued with repeated famines. Food insecurity and famine conditions persist to this day.

The traditional Korean diet is based on cereals and vegetables, with the bulk of protein coming from soy products, seafood, and sea vegetables. Historically, cooking oil and animal fats were extremely scarce, so Korean cooking makes very little use of frying. In South Korea, consumption of animal proteins increased dramatically with economic growth. From 1980 to 2003, per-capita consumption of beef,

pork, and chicken increased from 25 pounds to almost 70 pounds per year. Dairy consumption increased by 2,450 percent from 1969 to 1987.

Rice is the staff of life in Korea. The word *bap* (cooked rice) is synonymous with food. Boiled short-grain rice is eaten everyday, at almost every meal, unless noodles are served. Rice and kimchi are the two most basic components of a Korean meal. Sweet rice is used in a limited number of savory dishes. It is more commonly ground into flour and used for rice cakes.

Common vegetables include radishes, napa cabbage, peppers, carrots, onions, burdock, mushrooms, squash, gourds, potatoes, lotus root, bamboo shoots, bellflower roots, leeks, watercress, *rocambole* (a type of garlic), shepherd's purse (a green related to mustard), and chives. Common fruits are Asian pears, apples, tangerines, persimmons, *yuja* (Asian citrus), Concord grapes, and melons.

Soybeans are an important component of the diet. Fresh beans are eaten as a snack; soybean sprouts are eaten in saladlike preparations or in soups. *Dubu* (tofu or bean curd) is eaten cold or fried, used as filler for meat stuffing, and added to soups and stews. Toasted and ground soybean flour is sprinkled on rice cakes or mixed with water and drunk as a cold beverage.

Soybeans are also used to make the three essential sauces of Korean cooking: *kanjang*, *dwenjang*, and *kochujang* (*jang* means "sauce"). Traditionally the sauces were made once a year in a series of related processes. *Dwenjang* and *kanjang* are made first. Blocks of *meju* (fermented soybeans) are covered with water, salt, and malt syrup. A few jujubes (also known as red or Chinese dates) and whole red peppers are added for seasoning. Oak charcoal is added to the mixture for color. After two months of curing, the *meju* will have crumbled and softened to become *dwenjang* (fermented bean paste, similar to miso). The liquid that is strained off is *kanjang*, or soy sauce. *Kochujang*, a red pepper paste, is made last, since it contains soy sauce.

It is hard to imagine Korean cooking without red chili peppers. However, these are a relatively new introduction with two possible routes of entry:

Koreans who met Portuguese Jesuits in Beijing during the 16th century, or a Dutch shipwreck on the island of Cheju-do in the mid-17th century. During the Chosun dynasty, accounts documented new vegetables and fruits from foreign lands including pumpkins, sweet potatoes, white gourds, apples, watermelons, and the chili pepper. Before the introduction of red chili peppers, cockscomb flower (*Celosia cristata*), safflower, and violet mustard were used to tint foods red. The most common type of pepper in Korea is a long finger-type variety. It is used fresh or dried in powder, flakes, or shredded into fine threads.

Mung beans are another important legume. Mung bean sprouts are prepared the same way as soybean sprouts. Sweetened mung beans are used in rice cake preparations. Ground beans are used to make pancakes, and the starch is used to make cellophane noodles. Wheat flour is used for savory crepes, pancakes, noodles, dumplings, and batters.

Seafood is abundant in Korea. Preservation techniques include brining, salting, and drying. Tiny salted fish and tiny shrimp are used in kimchi sauces. Dried anchovies, kelp, and other seaweed are common home-cooking items. Roasted laver is ubiquitous. Fish is usually salted and fried or added to stews.

Water or roasted barley tea is served with meals. Sweet or carbonated drinks are not taken with Korean meals. Teas include five-grain, citrus,

persimmon leaf, ginger, ginseng, green, and wild sesame. *Sikhye* is a lightly fermented rice drink.

Cooking

Kanjang, dwenjang, and kochujang are the three basic sauces of Korean cooking. Basic seasonings include garlic, green onions, red pepper flakes, fresh ginger, toasted sesame seeds, toasted sesame oil, and rice wine vinegar. Sweeteners include sugar, honey, malt barley, and malt syrup. White beef stock and sun-dried anchovy or kelp broth are the most common foundations for soups and stocks. Home cooks often use bouillon granules as a shortcut.

Contemporary cooking evolved from agrarian kitchens. Until the early 1970s, many households still used charcoal-fueled stoves, and poorer families often struggled with fuel shortages, especially during the winter. Large cylinders of charcoal were burned in an *agungi* (firebox) built into a stone table. One *agungi* heated at least two burners. The stone tables retained ambient heat and functioned to keep prepared foods warm before they were served.

The fireboxes also functioned to heat adjoining rooms, which were built slightly higher than the kitchen on raised masonry frames covered with clay. *Agungi* had vents in the back that were opened on chilly days. Smoke from the firebox was directed through flues underneath the rooms. The flues were insulated with layers of organic materials: shale, straw, stone, and clay. A vertical chimney at the other end of the house provided a draft. *Ondol* (underfloor heating systems) are still very popular in Korea. High-tech versions are utilized in homes, spas, and hotels.

Modern Korean kitchens are tiny by North American standards. They have gas-fueled stoves with at least four burners. Oven cooking is virtually unknown outside of European-style bakeries. Refrigerators are also very small by North American standards. Traditional rice pots are made from cast iron; some are made from stone for specialty dishes. Almost all households have electric rice cookers with different heat settings for cooking rice

Red peppers on display in a market in South Korea, Busan Jagalchi Street. (Firststar | Dreamstime.com)

and then keeping it warm. Rice is always served piping hot.

Soups and stews are served boiling hot. Basic soups or stews are made daily. Soybean-sprout, spinach, and seaweed *guk* (soup) are commonly prepared at home. Dwenjang, the fermented soybean paste, is a reliable source of protein and is used to flavor soups and stews. Dwenjang *chigae* (stew) is a convenient way to use leftover vegetables, beef, or fish cakes.

Pickled vegetables are served cold. Most households specialize in just a few kimchi preparations. *Baechu* kimchi (napa cabbage kimchi), *ggakdugi* kimchi (pickled daikon radish kimchi), and cucumber kimchi are probably the ones most commonly prepared at home. Other vegetable preparations are served at room temperature or slightly chilled. Besides pickling, vegetables are also blanched and lightly dressed with sesame oil, toasted sesame seeds, and minced garlic. Salad-type kimchi preparations are becoming increasingly common. Tender, uncooked greens are dressed in a kimchi vinaigrette of red pepper flakes, garlic, rice wine vinegar, toasted sesame oil, and sugar.

Since vegetables are a major component of the Korean diet, a great deal of emphasis is placed on precise vegetable preparations. Texture and color are of paramount importance. Each component of *japchae*, a dish of cellophane noodles tossed with a mixture of vegetables, is cooked individually even though all the ingredients are tossed together before plating: Spinach is blanched, then sautéed. Carrots are cut into matchsticks and sautéed until just tender but still a bit crunchy. Onions are thinly sliced and cooked until translucent. Mushrooms are lightly cooked, just enough to release their juices. Everything is seasoned with salt, toasted sesame oil, and garlic.

Koreans love fruit and tend to take great care in its presentation. Fruit is eaten as a snack and almost automatically offered to guests. Carefully peeled and neatly cut platters of fruit are served for dessert on special occasions. Otherwise, Koreans do not eat dessert of any kind on a regular basis. There is a cultural tendency to dislike very sweet foods. The Korean language has several words for gradations

of sweetness; a light, natural sweetness is considered the most pleasing.

Typical Meals

Since industrialization, South Koreans, especially women, have been abandoning the agrarian life in droves. The population of the greater Seoul region is 24.5 million, about half the total population of South Korea. Extensive transportation systems throughout the country have made domestic travel very accessible. The country's smaller cities, such as the port city of Pusan and Taejon, have fewer Western food options. Eating habits tend to differ more according to generation than by region. Younger Koreans tend to eat more white bread, beef, and sugar. Older Koreans tend to remain faithful to rice, kimchi, and soup as the trinity of the Korean meal.

Korean cuisine has been extensively cataloged and documented in historical texts, museums, cultural organizations, and cookbooks. The royal court of the Chosun dynasty delighted in gathering regional specialties. Today, regional tourist centers heavily promote local agriculture and dishes. South Korea is dotted with living museums, called folk villages, where visitors get glimpses of daily life in rural villages as they existed 50 to 100 years ago. Regardless of industrialization, Korean people are not in danger of losing their food culture.

Traditionally, Koreans sit on the floor for meals, usually on cushions. Many families now have Western-style tables. Food is eaten with steel or silver chopsticks and spoons. Rice is the focal point of the meal, kimchi is a constant companion, and at least one soup is eaten every day. Korean meals prepared at home expand on these basic components to include additional side dishes. Restaurant food varies widely. South Korea is a very entrepreneurial country, and new dishes and styles of eating are created frequently.

Koreans tend to be early risers. Breakfast is eaten before work, anytime between 5:30 and 7 A.M. Breakfast tends to be a simple but hearty meal of rice, kimchi, and soup. Koreans do not have separate breakfast foods. Younger Koreans might have some

bread purchased at a European-style bakery for breakfast.

Eating out for lunch is common and can be very inexpensive. Street food, food stalls, small snack shops, fast food, and food courts tend to be popular with students and young people, who are more likely to have noodles or bread for lunch than older Koreans. *Kimbap* (rice and vegetables wrapped in seaweed), *ddukbokki* (rice cakes and fish cakes in a spicy chili sauce), instant ramen, sandwiches, and burgers are common lunch items for students.

The Korean table is communal; all side dishes are shared. Koreans are very social eaters and love eating with family, friends, or coworkers. It's very common to go out for lunch and dinner with coworkers. Since Koreans also have a strong work ethic, lunch tends to be a bit rushed, and restaurants serve orders at astonishing speed. Again, there are no separate foods for lunch per se. Lunch meals tend to be lighter than dinner, but many of the same foods are served.

Dinner is the biggest meal of the day and is eaten at a more relaxed pace. Family mealtime is still honored. Unlike at lunch, rice is a must for dinner. Soups or stews tend to be heavier or more extravagant than those served for breakfast. Larger portions of protein are usually served, such as panfried fish, short ribs braised in soy sauce, barbecued beef, or barbecued pork marinated in chili sauce. More kimchi and vegetable dishes are also served.

Koreans cook a variety of dishes at the table. *Chongol*, one-pot stews of meat, poultry, or seafood and vegetables, with noodles sometimes added, are cooked in electric casseroles. Barbecue is cooked on aluminum grills or stone griddles over portable propane burners.

Eating Out

Dining-out options are ample, almost all Korean food or Koreanized food. The Chinese are the largest minority group in Korea. For most of Korea's history, the peninsula did not share a border with China. Chinese began moving into the frontier between Manchuria and Korea in the 19th century, and some Chinese immigrated to Korea. Chinese

restaurants were the first non-Korean dining options in the country. Common and special occasions are still punctuated with meals at Chinese restaurants.

Seafood and soybean products such as dubu (tofu) are the most common source of protein. Raw-seafood restaurants serve sashimi and sushi in the traditional Korean manner or in the Japanese style. Koreans who were educated abroad introduced Americanized sushi. Korean *hwe* (raw fish) is served with a vinegar-chili condiment (*cho kochujang*) and salad greens for wrapping (*ssam*).

Korea was never colonized by a Western power, nor does it have a history of Western immigration. European influences in food were filtered through Japan, where the British introduced curry. Packaged curry sauce is a mixture of spices, mostly turmeric, in a solidified suspension of oil and flour. The Portuguese introduced breaded cutlets (*tonkatsu*) and croquettes to Japan. Curry and tonkatsu are popular light meals in Korea. Croquettes are purchased at Korean-European fusion bakeries and eaten as snacks.

American influences entered Korea during the Korean War and continued with the U.S. military presence in South Korea. (South Korea is dotted with more than two dozen U.S. military installations.) American influences were limited to products such as instant coffee, powdered milk, Spam, and hard liquor until the industrialization process reached the level of globalization.

During Japanese occupation, British and American missionaries taught English in schools, and Korean elites began sending their children abroad for higher education. Middle-class Koreans view English-language acquisition as a marketable skill and American education as a window into modernity, necessary to be active participants in globalization. Koreans who had left for educational and economic opportunities in other countries began returning to take advantage of a growing domestic economy hungry for foreign products. Domestic and foreign corporations began responding to an increasing demand for convenience foods and international flavors. Processed foods and American-style fast food began rapidly proliferating. Ketchup, mayonnaise, bottled dressing, canned tuna, and sausages are now fairly common ingredients.

Snacks are purchased from sidewalk vendors or at food courts. *Pochang matcha* (outdoor food stalls) specialize in a specific dish or a small group of related dishes, which can be eaten on the spot or more commonly as takeout. In the evening tented *pochang matcha* serve as casual drinking spots.

Korea has an extensive drinking culture; *anju*, food eaten with drinks, includes almost all variations from light snacks to elaborate platters. Mom-and-pop businesses serve *soju* (grain alcohol) and *makuli* (unfiltered rice wine) with dried squid. *Hofs* (pubs) serve beer and fried chicken. Western-style restaurants and clubs serve wine, cocktails, and hard liquor with expensive platters of *anju*. Male-dominated corporate drinking is usually conducted in restaurants with private rooms. Traditional holidays and special occasions include ceremonial drinking.

Restaurants are highly specialized. Noodle shops serve specific noodles. *Kalguksu* (literally, “knife

noodles,” or noodles cut with a knife) are thick, soft wheat noodles served in meat or seafood stock with onions and sliced beef or shellfish. *Nengmyun* (literally meaning “cold noodles”), a North Korean cold buckwheat noodle dish, is a traditional winter dish that is now a summertime favorite. Restaurants serving *chajang-myun* (Chinese noodles in black bean sauce) often have front-window stations to show hand-pulled noodles being made.

Korean barbecue restaurants use lump charcoal or gas-fired grills built into tabletops. A few places still use large charcoal cylinders that are brought to the table in portable grills. Diners are served *banchan* (small shared dishes) and rice, as well as marinated beef, pork, or poultry that is cooked at the table. Marinades are based on either soy sauce or chili paste, to which garlic, sugar, and toasted sesame oil are added. Chili-paste marinades usually include rice wine vinegar.

A food market in the Dongmyo district of Seoul, South Korea. (Sebastian Czarnik | Dreamstime.com)

Ssam, a style of eating, is not limited to raw seafood. Grilled meat or steamed pork belly is wrapped in lettuce leaves with slivers of raw garlic and thinly sliced raw green peppers, and served with *ssamjang*, literally, “wrap sauce.”

Koreans eat soup almost every day with breakfast, lunch, or dinner. White beef stock, anchovy broth, or dried seaweed broth serves as the basis for light soups or noodle broths. Restaurants don’t just serve soup; they serve specific types of *tang*, meat- or poultry-based soups. *Samgyetang*, game hens stuffed with sweet rice and cooked in a stock of ginseng, jujubes, and garlic, is considered a medicinal food. Ginseng is valued for its purported health benefits.

Bibimbap literally means “mixed rice.” Many restaurants serve this dish, but restaurants that specialize in it tend to offer more elaborate versions. *Dolsot bibimbap* is almost exclusively a restaurant dish. It is served in a hot stone pot (*dolsot*) that creates a delicious crust at the bottom of the bowl.

On weekends, younger Koreans frequently go bar and restaurant hopping, with predinner drinks at a club, an appetizer at a trendy restaurant, and a main course at another restaurant, followed by a night of drinking and partying.

Hanjeongsik is a multicourse meal based on royal and aristocratic ways of eating. Contemporary interpretations are often presented as tourist attractions;

Bibimbap. (Courtesy of the Korea Tourism Organization)

dishes can vary widely, but the general idea is to serve a dozen or two regional preparations that also represent a range of ingredients and cooking methods. A meal might begin with a cold appetizer and abalone *juk* (rice porridge), followed by one or more of the following dishes: braised beef, grilled whole fish, *sinseollo* (hot pot made with meatballs, mushrooms, and vegetables), *chongol* (casserole-type hot pots), *gulchupan* (nine varieties of vegetables served with minicrepes and dipping sauces), marinated raw blue crab, cold seafood salads, stuffed mussels, steamed clams, crispy fried whole prawns, raw seafood plates, seaweed salad, stuffed peppers, battered and fried vegetables, and savory crepes. Various soups, kimchis, and salad-type preparations fill in the courses. Desserts include sweet-rice punch, cinnamon persimmon punch, or *omija* tea (five-flavored tea), fresh and dried fruit, and a selection of rice cakes and Korean cookies.

Special Occasions

Shamanism (known in Korea as Muism; the shaman is called a *mudang*) is the oldest religion in Korea, and a shaman might be consulted regarding marital or financial decisions, as an intercessor with the gods. Missionaries from Central Asia and China introduced Buddhism to Korea in the fourth century during the Three Kingdoms period of the Goguryeo, Baekje, and Silla dynasties; it became the official religion of all three states. The tradition continued when the three kingdoms were unified as the Koryo dynasty (917–935). The Chosun dynasty (1392–1910) adhered to the sociopolitical tenets of Korean neo-Confucianism and took a policy of tolerating Buddhism and relegating shamanism to rural areas. Figures vary widely, but it is estimated that approximately half of all Koreans who profess religious affiliation are Buddhists; the other half are Christians. Shamanism has declined rapidly during the past few decades.

Catholic missionaries first arrived in the 17th century. Koreans living in Manchuria first met Protestant missionaries from Scotland in 1884. Presbyterian Reverend John Ross helped translate the first Korean-language version of the Bible. In the

1880s, Methodists and Presbyterians from America came to Korea and worked as teachers and doctors. Medical missionaries helped build Korea's first Western hospital. The majority of Christians are Protestant, 70 percent of whom are Presbyterian. Christmas foods include barbecued *kalbi* (ribs), cellophane noodles with mixed vegetables, savory crepes, battered and fried vegetables, special pickles, and beef soup and rice.

Buddha's birthday is the most important holiday for Korean Buddhists. Weeklong festivities include lighting strings of colorful lanterns, lantern parades, and eating special foods. Many temples provide tea and *sanchae bibimbap*, rice mixed with wild greens.

Major cultural holidays shared by all Koreans include the lunar New Year (*seollal*) and harvest moon festival (*chuseok*). Dumpling and rice cake soup is the traditional New Year's dish. *Songpyeon* are crescent-shaped rice cakes that represent the moon for the harvest moon festival. Regional stuffing variations include pumpkin, chestnut paste, sesame seeds, and acorns. Five-colored songpyeon are a specialty of Seoul. Ingredients such as cinnamon powder, strawberry syrup, and gardenia seeds are used to tint the dough. White, pink, green, brown, and yellow represent the harmony of nature. In Pyongyang they make clam-shaped songpyeon. The ability to make aesthetically pleasing songpyeon is an auspicious sign of beautiful babies to come, especially lovely daughters.

Many families with a deceased parent or parents integrate memorial services into seollal and chuseok. These services are typically held at the eldest son's home. *Charye*, a ritualized system of presenting and consuming food, includes symbolic and seasonal dishes. The foods are placed on the table in a specific order following an east-west orientation. A variety of whole fruits is a must, as are ceremonial wine, rice cakes and cookies, whole fish, and seasonal vegetable dishes. Fresh vegetables are sliced, dipped in batter, and panfried to make *jun*. Vegetables are also chosen for color; spinach, mung bean sprouts, and fern brake (a kind of fiddlehead) are blanched and lightly seasoned. Kimchi is served freshly prepared, never fermented. Some families include whole dried cuttlefish and whole chicken.

Dried fruits include persimmon, jujubes, and apricots. At the head of the table are bowls of rice and rice cake soup; at the opposite end on a smaller table is the ceremonial wine.

Baekil is celebrated to mark the first 100 days of a baby's life. A variety of symbolic rice cakes are served, such as songpyeon for a healthy mind and white rice cakes for purity and longevity. For first-birthday celebrations, babies are dressed in *tolbok*, traditional clothes made of silk tied with a long silk belt representing longevity. A ceremonial table is prepared with the child at the head of the table. Towers of rice cakes and mounds of fresh whole fruit are served with soup and rice. Various objects including a book, needle and thread, and a ruler are placed in front of the child; whichever one he or she grabs first is considered a sign of the life to come. Books represent a scholarly life, a toy weapon represents warriorship, and thread represents longevity. Neighbors and friends give 24-carat gold rings. Children's Day is celebrated on May 5. Children are given presents, taken on field trips, given their favorite treats, and generally doted on.

South Korean wedding ceremonies have changed dramatically over the past few decades and continue to evolve and adapt to changing social structures. Contemporary weddings typically incorporate elements of Korean and Western-style ceremonies in varying degrees. Many couples have their *hanbok* (traditional clothes) custom made, as they will be worn again on traditional holidays. Western-style dresses and tuxedos are available for rent at bridal shops. Wedding halls cater to both markets with turnkey packages. Noodles are served to represent hopes for a long and happy life together.

Diet and Health

Taoism was introduced into Korea in the seventh century. The first Taoist temple was built in the 12th century and was occupied by 11 Korean Taoist monks. However, Taoism never developed into an organization of believers or as a distinct branch of thought on the peninsula. Evidence indicates that elements of Taoism were integrated into shamanism and Buddhism. The national flag of South

Korea has the yin-yang symbol in the center and an I Ching trigram at each corner.

Traditional Korean medicine, *hanbang*, is based on the concepts of *chi*, *eum-yang* (yin and yang), and the five elements: wood, fire, earth, metal, and water. Concepts borrowed from Taoism were translated into Korean ethnomedicine and continue to evolve. Hanbang has a long contiguous history on the peninsula going back thousands of years.

Historically, hanbang had support from various royal dynasties and continued support from postwar governments. Aspects of it permeate Korean culture and persist even in diaspora societies, including among foreign-born Koreans, regardless of educational level and understanding of modern medicine. It is not considered an alternative medicine. Koreans tend to use hanbang remedies for preventative care, for strengthening the immune system, and for detoxification, general weakness, or chronic conditions, while they use Western medicine for acute problems. There is a cultural tendency toward syncretism; the two approaches are viewed as complementary, not contradictory. Hanbang also places importance on proper eating habits. Orally ingested remedies are not just in the form of herbal teas and tonics; food is also medicine.

Modernization has only made hanbang even more popular. It was always a part of Korean spa culture with hot herbal dips, aromatherapy rooms, and salt-bed treatments. More recently, hanbang herbs have been integrated into toiletries and expensive skin-care products. Marketing campaigns incorporate themes of nostalgia as the “natural approach of our ancestors.”

Buddhism influenced virtually every aspect of Korean culture. Wonhyo (617–686), a Buddhist monk and great scholar, took Buddhism out of

the exclusive realm of the ruling elites and aristocracy. He chose to travel the countryside, spreading Buddhism as penance after siring a son with a Silla princess. Pure-land Buddhism and meditative Buddhism had the greatest impact on Korean religious beliefs. Chinese Ch’an Buddhism was introduced into Korea in the seventh century, where it became interpreted as Son; almost 500 years later it would become Zen in Japan. Son Buddhism is the dominant form of Buddhism in Korea today.

Mahayana monks developed strictly vegetarian temple food. Temple cooking utilizes vegetables and herbs harvested in the mountains. This aspect of temple cooking probably influenced the Korean tendency to make kimchi out of virtually any vegetable. “Hot” vegetables such as garlic, green onion, rocambole (a kind of garlic), and leeks are not used. Temple kimchis do not include salted or fermented fish. The main seasonings are salt, soy sauce, red chili powder, ginger, and sesame seeds. Pine nuts and perilla leaves are used as thickeners. Some temples are renowned for specific types of kimchi.

Lao People's Democratic Republic

Overview

The Lao People's Democratic Republic (Lao PDR), a landlocked country in Southeast Asia, is classified as a low-income food-deficit country. After decades of war, including fighting for independence from French colonial control and surviving the bombing inflicted by the American secret war, the country remains food insecure. The Communist Pathet Lao took over the country in 1975, ending the royal rule and feudal governance. The persistent poverty is reflected in the nutritional status of its population, with nearly half its children under five underweight, and many stunted and wasted. The government has been struggling to improve food security in the country.

The ethnic Lao in the Lao PDR represent 68 percent of the population. In addition, the Lao government recognizes 65 distinct ethnic groups but stresses “unity in diversity” among all ethnic groups. Ethnic minorities such as the Akha and Hmong cross national borders, while other groups occupy marginal lands such as dense upland forests. Most ethnic minorities are adapted to upland mountain ecologies. Theravada Buddhism is the dominant religion of the Lao in the Lao PDR; however, the Pathet Lao discouraged religious practice, and only recently have young men returned to the practice of being ordained as monks in their local temples.

farm and work it with Manivong's brother. They have four school-age children, three girls and one boy, but Manivong remembers her son who died at six months of age. Each morning, they steam glutinous rice, and they generally eat two rice meals a day, at dawn and dusk. Their children carry sticky rice in a basket along with some leftover fish with them to school to eat at midday. Their son watches for frogs and lizards he can capture and grill for lunch, but if his sisters see him, he must bring all the food home to share with the family. Like other families in their village, they might sit down in the evening to a basket of steamed sticky rice; a bowl of *padek* (fermented fish paste); a plate of fresh greens including cilantro, mint, basil, watercress, lettuce, and wild greens from the forest with a chili-based dipping sauce; and a pot of fish soup with bamboo shoots.

The rice comes from their own fields, along with beans and garlic that Manivong tends in their household garden. Most days, they are able to catch small fish at the edge of their fields. They gather bamboo shoots and mushrooms in the forest, where Manivong knows the location of wild foods. Manivong has been trying to teach her daughters how to recognize wild forest foods and process them to remove the toxins, but her daughters don't like the taste of wild foods and want to be taken into Luang Prabang where they can eat more refined foods and even French baguettes.

Food Culture Snapshot

Khamla and Manivong live in a small village close to the old royal capital of Luang Prabang. They own a small

Major Foodstuffs

The Lao PDR is primarily agricultural. The key marker of the collective identity of lowland Lao

is the use of glutinous or sticky rice as their daily staple. More recent arrivals to the Lao PDR such as the Yao and Hmong prefer to use nonglutinous rice. The Lao appreciate the qualities of glutinous rice and believe that glutinous rice is more nutritious and more aromatic than any other kind of rice. Rice adapts to local conditions, and rice surveys in the country have found over 3,000 distinct rice varieties, most of them glutinous. Glutinous rice is generally hardier and survives drought, salinity, and floods better than its nonglutinous relatives. Most glutinous rice is consumed close to its place of production. It is eaten by hand; a ball is formed by hand with a thumb-size indentation and then is used to scoop up some sauce or side dish.

In the forests of the Lao PDR, wild yams, cassava, and taro are collected by women who know where to find them and how to process them to remove poisons, if necessary, by soaking, cooking,

and drying the roots. They also collect mushrooms, bamboo products, wild greens, and herbs. Greens, vegetables, and aromatic herbs are available from household gardens and collected from forests; they are particularly valued for their freshness and texture. Recent development projects on home gardens in rural areas have dramatically increased the amount of fresh vegetables available to households. Wild greens and herbs are often available free or at very low cost to rural households. Vegetables are used in soups and in quick stir-fries.

Fish and fermented fish products are important parts of Lao diets. The Mekong River supplies people from the Lao PDR with an abundant supply of river fish. The favorite, the giant Mekong catfish, whose properties have reached mythical proportions, is near extinction. Lao make use of fermented fish products made in the household to suit the taste of family members. Accompanying most rice

An old woman in ethnic clothing works in a rice paddy. (Shutterstock)

meals is a sauce or paste made from fermented fish or shellfish. The salted, dried fish are pounded and packed with toasted rice and rice husks in ceramic jars for a month or more. Rice husks along with salt break down the fish, and special ceramic jars absorb the odor. Fish products that are fermented become “cooked” and are no longer considered “raw.” In its thicker form, called *padek*, fermented fish is served as a dish with rice. Many poor households may have only *padek* to eat with rice.

Roasted glutinous rice powder adds texture and taste to Lao dishes. It is made by dry-roasting glutinous rice in a dry pan until brown and fragrant. It is then cooled and ground to a powder. It can be stored for several weeks.

Cooking

Cooking for the Lao means to prepare food for consumption, not just to apply heat. Thus fermenting, sun-drying, and preparing raw dishes are important parts of the cooking process. Lao meals require the freshest possible ingredients, prepared simply by steaming, boiling, or grilling. Grilling of meats is most often done by men. However, everyday food preparation and cooking of rice are usually done by women and young girls.

Fermenting is one of the most important food-processing techniques in the Lao PDR. Fermented fish products are processed in rural households or purchased ready prepared at the market in towns and cities where modern neighbors might not appreciate the smell emitted by jars of fermenting fish. Other items such as bamboo shoots and bean curd can be fermented as well. Often, the water used for washing rice or the initial cooking of rice is used in the fermenting process. Sun-drying is another useful food-processing technique in communities without refrigeration. Vegetables can be sun-dried, as well as beef, water buffalo, and leftover glutinous rice. Vegetables may also be salted or pickled in vinegar to form the basis for sour salads or side dishes.

Glutinous rice must be soaked in water for several hours or overnight before it is steamed in a conical bamboo steamer. The cooked rice is then turned out,

patted with a paddle or wooden spoon to remove lumps, and packed in rice baskets until ready to eat.

Soups are boiled and vary from the simplest flavored water to more complex fish broths. Grilling food over wood or charcoal has a long tradition in the Lao PDR. Grilled vegetables also add texture to many different recipes. When the cooking is done over an open fire, children emulate the technique by grilling frogs, fish, and insects over small fires. A variety of wrapped foods (*mok*) are roasted on hot embers. Fish and chicken pieces are easily turned on a grill when they are wedged between strips of split bamboo. The following Lao version of barbecued chicken traveled from the Lao PDR through northeastern Thailand into the specialty shops of Bangkok and around the world.

Gai yang being sold at an open air market in Laos. (Shutterstock)

Gai Yang (Lao-Style Barbecue Chicken)

1 chicken, split open (or use legs and thighs)

Marinade

1 stalk lemongrass, sliced

3 tbsp coriander roots, minced

Pinch salt

1 tbsp fish sauce

2 tsp white pepper

5 cloves garlic

(Coconut milk to moisten paste if necessary)

Grind marinade ingredients in a small food processor. Rub into the chicken pieces, and marinate at least 3 hours or overnight in the refrigerator. Grill until bottom side is brown; turn over and grill until juices run clear. Serve with steamed glutinous rice and papaya salad.

Typical Meals

In rural and urban communities, glutinous rice with side dishes of soup, vegetables, and fresh or fermented fish may be prepared for breakfast, with the leftover dishes and rice eaten at noon and evening meals. Towns and cities provide the opportunity to purchase fresh baguettes, which are consumed with relishes for breakfast or snacks. Fruit is also a common snack, often dipped in a mixture of sugar, salt, and dried chilies. When rural children take a basket of glutinous rice to school for a midday meal, they may pick up edible leaves, herbs, insects, fish, or frogs to go with their rice.

Most rural meals are served and consumed on woven floor mats or at low bamboo tables. Lao households and restaurants provide places for hand washing, since they use small balls of sticky rice as scoops for side dishes. Leaves, herbs, and greens can also be used as wrappers to carry food to the mouth. Side dishes are served all at once with baskets of sticky rice. *Jeaw*, the Lao version of a hot chili sauce, accompanies most meals. It is common for people to offer the best pieces from a side dish to

others at the table. A choice piece of fish or meat, for example, might be picked up and placed on the plate of a favored relative or guest.

The best-known Lao dish is *laap*, a spicy minced fish or meat dish served primarily on festive occasions in villages but widely available in restaurants in the country and overseas. This dish condenses many significant contrasts; real men eat *laap dip* (raw laap), while women and those concerned about the health risks associated with eating raw meat prefer *laap suk*, or cooked laap. The following version is cooked lightly, but it could be modified for other taste preferences.

Beef Laap

1 lb lean ground beef

1 green onion, finely chopped

2 chilies, chopped

1-in. piece galangal, finely chopped

2 stalks lemongrass, finely chopped

1 tbsp fish sauce

2 tbsp lime juice

1 ½ tbsp roasted rice powder

½ c chopped mint

½ c chopped cilantro

Cook beef lightly in a nonstick pan, and let cool. Mix with all other ingredients. Adjust seasonings to taste, and serve on a bed of lettuce with extra cilantro and mint.

A legacy of French colonialism, baguettes have made their way into Lao meals at breakfast and in the form of baguette sandwiches that blend French and Vietnamese food items. In the cities and towns of the Lao PDR, these baguettes replace rice-based meals.

Eating Out

In a country that is food insecure like the Lao PDR, one might not expect great restaurants. But in cities like Vientiane and Luang Prabang wonderful

French restaurants are to be found, with Lao chefs trained in the French culinary arts. Restaurants are relatively new and cater to the newly developed tourist market in the country. Young tourists are often attracted to eating sticky rice with their hands. But Lao cuisine is not as well known as Thai or Vietnamese. Lao cuisine is often considered crude and rustic compared with Thai or Vietnamese cuisine. Lao cuisine is harder to replicate in overseas restaurants because of its reliance on aromatic and bitter herbs that are rarely imported or grown outside of the country. Many greens and herbs are wild forest foods gathered by villagers and consumed immediately.

In all areas of the Lao PDR, noodle or rice soup is available at small stands, served with platters of fresh vegetables and greens to be eaten on the side or submerged in the hot soup. Fried grasshoppers sold in street stalls in Lao towns provide protein for poor rural migrants and get rid of pesky grasshoppers that could damage crops.

Special Occasions

Lao people love parties and share food generously on any occasion. When people recover from an illness, move away, or change status, their souls may wander and need to be called back through a *sukh-wan* ritual to entice their souls to reside firmly in their bodies, held in place with strings tied around their wrists. Spirit souls are attracted back through these household and community rituals, centered around a treelike structure draped with white strings, surrounded by dishes of cooked rice, boiled eggs, fruit, and whiskey. Following the ritual blessings, food and drink are shared among all participants.

Theravada Buddhist rituals of food sharing were discouraged by the Pathet Lao but are reemerging in many towns. Transplanting rice in particular is marked by ritual; during transplanting, the spirits of the rice fields are fed and honored with blessings. Community-wide feasts of merit are held in the uplands of the Lao PDR, when a buffalo might be sacrificed. In the uplands, people give feasts to gain political and spiritual potency. Fermented rice

liquor plays a key role in many Lao celebrations, as consumption of alcohol creates links between the living and the dead, humans and spirits, and guests and hosts.

Diet and Health

Years of war reduced the formerly self-sufficient country to conditions that threatened the diet and health of much of the population. The Lao PDR is now a food-insecure country with high malnutrition rates. Insufficient food consumption, in addition to infection and poor health, is the primary cause of malnutrition. Poor diets can also contribute to other problems such as iron deficiency, vitamin A deficiency (resulting in night blindness), and iodine deficiency (resulting in goiter), a common problem in some regions of the country.

The Lao government, along with United Nations partners, is working toward reducing the high infant and under-five mortality rates, as well as maternal mortality rates and malnutrition. The national prevalence of critical food poverty was around 18 percent, indicating that nearly one in five people did not have enough income to buy the food necessary to meet their daily minimum energy requirements. The upland peoples depend more on natural resources than food purchases, but their wild food sources are increasingly threatened as forests are eroded.

Communities depend on traditional herbal medicines, since few people outside of cities have access to primary health care. Herbal medicines are part of health-maintenance systems, not simply treatments for specific diseases. Herbal medicines can be taken orally in alcohol, water, or rice water; swallowed in pill form; or rubbed on the body. They can also be used for a steam “sauna.” Herbal saunas are particularly popular with women. Most striking is the number of products used in each concoction; common ingredients include chilies, red ginger, sesame oil, cottonseed, opium, bark, leaves, roots, and ground snail shells. Spirit doctors and shamans practice in some minority communities.

Macau

Overview

Macau (also spelled Macao) and its two associated islands of Coloane and Taipa is a tiny enclave located at the mouth of the Pearl River Estuary. Originally a small village populated by southern Chinese fisherman, Macau is the site of the earliest—and longest—European settlement in Asia. Portuguese merchants were the first to stop in Macau, which happened to be located on their Asian trade route, halfway between Japan and Melaka. The Chinese, being highly suspicious of foreigners, at first granted them only the right to drop anchor. Eventually they grew to tolerate the Portuguese traders who brought silver from Japan and were so eager to purchase Chinese silks, ceramics, and tea. Over four centuries, the Portuguese gradually extended their presence to erecting onshore storage for their warehouses and later establishing a permanent settlement and self-administration rights. Ultimately the Chinese lost all control of the enclave after the Opium War, when Macau was formally ceded to the Portuguese.

Macau was returned to China in 1999, but 500 years of exposure to Portuguese ways left an indelible impression on all aspects of life. Today, the local population is 95 percent Chinese, mostly of Cantonese or Fujianese descent, with Portuguese (both expatriates and local-born), as well as those of mixed Chinese Portuguese descent—the Macanese—making up the remainder. A contemporary visitor to Macau looking to experience the cuisine would find that most restaurants offer either Cantonese or Portuguese cuisine, with a small minority offering international alternatives such as Thai, Japanese, French, and fusion. Few restaurants serve

only Macanese cuisine, and until recently Macanese dishes were usually found in Chinese or Portuguese restaurants as part of the larger menu or were prepared in private homes. This is perhaps reflective of the tiny Macanese demographic. Traditional Macanese recipes were thus prepared by only a small number of people, mostly female homemakers who tended to guard their recipes jealously. This has raised concerns that Macanese food culture is in danger of disappearing. The 1999 handover, however, has caused many local and expatriate Macanese to reexamine their unique identity, and happily this has resulted in a resurgent interest in Macanese foodways.

Food Culture Snapshot

Evelyn and Rick Lopes are a middle-class Macanese couple. Evelyn, who speaks both Cantonese and English, is of Chinese descent, but her family has lived in Macau for generations and consider themselves to be *ngo mun yan*, or “Macau people.” Her husband, Rick, is of mixed Portuguese-Chinese descent. His primary languages are Cantonese and English, although he knows a smattering of Portuguese as well. Both work in one of the large casinos, Evelyn in marketing and Rick as security. Their food habits are typical of the local population’s, which are very similar to those of Hong Kong. Breakfast either is a quick meal of toast and coffee at home or is eaten in one of the many *cha chaan teng* cafés before work. Ham and macaroni in chicken broth, preserved mustard greens with minced pork in soup noodles, or pineapple buns (sweet rolls with a cracked cookie-like crust on top) sliced and

filled with a wedge of butter are typical choices. Rick eats lunch at the casino cafeteria, but Evelyn packs a hot thermos full of rice and leftovers from the night before. This may contain a chicken curry and some boiled green vegetables, *minchi* (a dish of ground meat and potatoes dish), or some salted fish. If she does not bring her lunch, she might go back to the cha chaan teng to order three-treasures rice (a selection of three different roasted meats over rice with some Chinese broccoli), *ma kai yau* (a local dish of fried potatoes with *bacalhau*—salted preserved fish), or fried fish croquettes. Similar to their neighbors in Hong Kong, dinner usually consists of rice, a soup, and two to three dishes that include vegetables and meat. If Rick is working late, he might go out after his shift for an additional meal of *siu yeh* with his friends. Favorite foods at this time include a sweet egg tea made with medicinal herbs, *cha cha* (pronounced *tsa tsa*; a Malaysian dessert of shaved coconut, taro, cream, sugar, and coconut milk), or long fried dough sticks called *yeow tsa gwai*, dunked in plain white congee (rice porridge).

There are only three “fresh” markets in Macau, and these are open twice a day—once in the morning at around 10 A.M. and again at 5 P.M., to catch office workers on their way home. Most Macanese will shop for their staples in these markets almost daily; freshness of ingredients is valued, and, in any case, homes and kitchens are small, limiting the amount of bulk purchases that can be made. There are well-stocked supermarkets in Macau, but these are frequented more for household items, frozen foods, snacks, and imported foods. There are generational differences in shopping preferences, too—the younger generation will do more shopping in supermarkets, while the older generation will purchase almost all their foods in the open markets and traditional specialty stores.

Minchi

Pronounced “meen tse” in Cantonese, this is probably a corruption of the English word *minced*. Minchi is a homey dish that does not usually appear on restaurant menus, but every Macanese family nonetheless has their own unique recipe for making it. The general formula consists of minced meat sau-

téed with fried diced potatoes and onions, flavored with soy sauce. Worcestershire sauce and molasses also appear in some versions—a reminder of the influence the British had on some groups of Macanese. The dish is quite salty, which makes it an ideal accompaniment over a mound of white rice. Minchi may also be topped with a fried egg, a flourish often assumed to derive from the Portuguese habit of topping steak with a fried egg. Combining meat with a variety of vegetables makes this an inexpensive, quick, and balanced one-pot meal (except for the rice, of course, which cooks in a rice cooker while this dish is prepared).

- 3 tbsp olive oil
- 2 medium russet potatoes, diced
- 3 cloves garlic, smashed and minced
- 1 onion, chopped into small dice
- 1 bay leaf
- 1 c fresh or frozen peas
- 1 lb minced pork, not too lean (at most 80% lean)
- 2 tsp sugar
- 1½ tbsp light soy sauce
- 3 tbsp dark soy sauce
- 1 tsp salt
- 2 tsp white pepper
- ½ tsp sesame oil

1. Heat 1 tablespoon olive oil in a wok or frying pan until shimmering. Sauté potatoes until golden and beginning to crisp at edges. Set aside.
2. Heat second tablespoon of olive oil in pan. Add garlic and sauté until fragrant, being careful not to burn it. Add onion and bay leaf, and stir-fry 3–4 minutes, then add peas. Continue to cook until onion is translucent and peas are tender. Set aside.
3. Place minced pork in a bowl. Add sugar, both soy sauces, salt, white pepper, and sesame oil.
4. Heat third tablespoon of oil. Add minced pork and stir-fry over high heat, alternately pressing down flat with a spatula and “slicing” the pork with the edge of the spatula to break down the meat into small bits, about 5 minutes.

5. Return onion, bay leaf, and peas to pan with pork, and continue to cook another 3–4 minutes, and taste. The minchi should be quite salty as it will be accompanying plain white rice, which can be sweet. Add more light and/or dark soy sauce as necessary.

6. Serve over white rice, with fried potatoes if desired.

Major Foodstuffs

The Macanese pantry is an edible lineup representing Portugal's colonial empire. When viewed together one might wonder how such an eclectic mix of ingredients could ever work together. In fact, they do so spectacularly, composing what has been referred to as the original East–West fusion cuisine.

As one of the most densely populated places in the world, Macau does not have a lot of arable land so food must be imported, mainly via Hong Kong and southern China. The foodstuffs may not originate from Hong Kong and China, but those places have a much more robust infrastructure (airports, container terminals, warehouses, etc.), and it is easier for little Macau to leverage these resources rather than build its own.

Dark and light soy sauces, Shaoxing rice wine for cooking, and *lap cheong* (sweet pork sausages) make up the local contingent of ingredients, while olive oil and olives, *morcela* (Portuguese blood sausage), bacalhau (salt-preserved codfish), and milk are the Portuguese contributions. Southeast Asian staples such as coconut milk, cinnamon, bay leaf, turmeric, curry mixes, bird's-eye chilies, saffron, tamarind, and fragrant jasmine rice round out the team to add depth and complexity to Macanese recipes.

Balichão is perhaps the most defining ingredient in Macanese cuisine. Usually described as a fermented fish sauce, it is actually made of shrimp, unlike the Vietnamese or Thai fish sauces that are often suggested as substitutions. Those are made from anchovies. The name is believed to be derived from Malaysian *balachan*, a krill-based paste that is sold in blocks, and *balichão* is believed to be the precursor of the very pungent Cantonese shrimp paste.

Bacalhau, a type of fish, cooked in Portuguese style. (Tim Martin | Dreamstime.com)

Balichão is used to flavor soups and stews, stir-fries, and casseroles. Sadly, there are few *balichão* producers today, and those who remain tend to be elderly. Since it may be difficult to purchase authentic *balichão*, fish sauces may be used or cooks may prepare their own.

Cooking

As in neighboring Hong Kong, basic cooking equipment found in every kitchen includes a rice cooker, Chinese cleaver, wok, and chopping block. Macanese households are more likely to use ovens than their Chinese counterparts to prepare Portuguese-style dishes such as casseroles, roasts, baked desserts, and such. Kitchens and homes are still very small, though, so not every household has a full stove and oven. Chinese households vastly outnumber Macanese ones in any case, which means that

the cooking habits for most of Macau's population are similar to those of Hong Kong households.

Typical Meals

Macau is a complicated hybrid of so many cultures absorbed over time that food historians have had difficulty identifying what recipes should be considered “typical” or “traditional” to Macau. How dishes are prepared can vary according to preferences, identity, and economic status. For example, Portuguese Chinese cuisine was fused in Portuguese or mixed Portuguese-Chinese households that would hire Chinese cooks to prepare their daily meals. When certain ingredients were too expensive or not available, these cooks would find local substitutes. They would also prepare specialties from their home regions for their employers, resulting in a very eclectic combination of dishes at the table. In Chinese households on Macau the picture would have been very different. The food budget might not have been as large, and the preference might have been to prepare Chinese cuisine from inexpensive local ingredients. Later, when groups of Cristang (people of mixed Portuguese-Melakan heritage, a result of Portuguese settlement in the 16th century) migrated to Macau, they brought with them their foodways as well, which were in turn influenced by the Portuguese, Indians, Malays, and others. These differences have created a variety of possible Macanese culinary norms that have been passed along in families and communities. Additionally, truly Macanese households—those of mixed Portuguese-Chinese descent—are in the extreme minority. All these factors make it difficult to describe a typical meal in Macau.

Generally speaking, most Macanese tend to eat just one or two Macanese dishes a day. A Macanese meal at home today may include one Macanese dish—a meat-based casserole or curry, accompanied by several dishes that are more readily considered Chinese, such as a slow-simmered soup or simply cooked vegetables, and rice.

Contrary to what might be expected, collections of Macanese recipes contain few that seem to be of Chinese origin. However, there are also relatively

few Macanese recipes for preparing vegetables. Green salads are popular instead and stand out in stark contrast to the usual Chinese abhorrence of raw vegetables. Otherwise, cooked vegetables are usually prepared in the simple Cantonese style by boiling and dressing them with oyster sauce or stir-frying them with garlic.

There is a well-established wine culture in Macau that is unusual for an Asian city. The earliest merchants and missionaries brought casks of wine and spirits with them. Over time locals grew to enjoy glasses of *vinho verde* (light green-tinted white wine) with their meals as well, which, incidentally, pairs well with the seafood-rich Macanese cuisine. Today, wine is preferred over soft drinks at the dinner table and is available at even the most humble hole-in-the-wall café. Indeed, Macau imports the best selection of Portuguese wines anywhere in the world outside of Portugal.

Eating Out

Macanese cuisine has a reputation for being tasty but not elegant, and the enclave is often considered Mediterranean-like in its pace. These characteristics are reflected by the fact that locals generally favor smaller, less formal dining establishments, such as *cha chaan teng* (literally, “tea diner”), noodle shops, or small mom-and-pop restaurants, and these types of restaurants make up the majority in Macau. There are international fast-food chains in Macau, but only a handful.

Surprisingly, there used to be few authentic Portuguese restaurants in the enclave. In the mid-1980s this began to change, and now there are a variety of well-respected Portuguese restaurants on Macau that have been written up in guidebooks and are a draw for gourmets and tourists alike.

The waterfront in Macau has seen quite a transformation in the early years of this century, with large and impressive new casinos being built on reclaimed land. It used to be that there were only a couple of restaurants located in the old casinos. They catered to tourists, day-trippers from Hong Kong trying their luck upstairs, and diners looking for a nostalgic experience. The food was mediocre,

Luxury casino and restaurant on the waterfront in Macau. (Leung Cho Pan | Dreamstime.com)

and by the late 1990s the once-grand decor—all-red carpeting, brass railings, large staircases, and crystal chandeliers—was just loud and shabby. With the arrival of the new casinos there are other options now, but food habits are hard to change, and the locals rarely visit casinos for their restaurants.

Special Occasions

The Macanese preference for laid-back, informal dining extends to special occasions. Birthdays, new years, and other events are best celebrated by having a feast known as *cha gorda* (literally, “fat tea”) at home with the extended family. *Cha gorda* is the quintessential Macanese meal, a smorgasbord of favorite foods held at home and never at a restaurant. Roasted meats, soups, curries, rice, potatoes, bread, desserts, and a hot-pot dish of pig’s feet and sausage known as *tacho*—all are piled onto a groaning table to feed the extended family and friends who are invited over.

Some favorite Macanese dishes at a *cha gorda* are Portuguese curried chicken (which paradoxically

cannot be found in Portugal), African chicken, curried crab, and *vaca estufada* (braised beef loin). These are also occasions where a more expensive or time-consuming dish such as duck *bafassa* (*bafa* means “to simmer,” and *assar*, “to roast”—the duck is first simmered in a vinegar-based mixture, then roasted) might make an appearance.

Diet and Health

Macanese cuisine, while heavily Portuguese in nature and not very vegetable-centric, includes many more vegetables in its repertoire than Portuguese cuisine does. This is probably due to influence from Chinese foodways, in which vegetables play a key role in maintenance of a healthy diet. Indeed, no meal is considered complete unless accompanied by at least one vegetable-centric dish. The local Chinese in turn have taken a cue from the Portuguese table and embraced olive oil in their cooking for its healthful properties.

Cholesterol might be a concern for those who consume Macanese specialties on a regular basis.

Lard is still a popular choice for cooking and pastry making. Local desserts such as Portuguese egg tarts (the pastry shell is best made with lard), flans, and custards are derived from Portuguese recipes, which tend to rely on egg yolks. The Macanese love their seafood, and seafood in general can be high in cholesterol, but crab—which is the featured ingredient in Macau’s famous curried crab dish—is also picked clean of its greenish hepatopancreas (commonly referred to as the “mustard”). The mustard is considered a delicacy, but toxins such as mercury can accumulate here if the crab is raised in polluted waters and therefore it should be consumed with caution.

One of the more unhealthy Macanese dietary habits—the heavy consumption of carbohydrates—can be considered a curious side effect of being influenced by so many cuisines. Minchi, for example, is a popular home-style dish of minced meat with fried diced potatoes that is eaten over rice, often served with a side of bread.

In terms of how the general Macanese population eats, whether Chinese, Portuguese, Macanese, or expatriate, Macau has its share of dietary concerns arising from the increased consumption of processed, junk, and fast foods. Local public health authorities are trying to raise awareness of the risks associated with overconsumption of these foods and promote healthier alternatives.

Malaysia

Overview

Malaysia, a country located in Southeast Asia, is surrounded by the South China Sea in the east and the Strait of Melaka in the west. This country consists of two parts, East Malaysia and West Malaysia. East Malaysia is made up of two states called Sabah and Sarawak, which are located on the island of Borneo. It faces the South China Sea and is bordered by the Philippine archipelago in the north. The more populated and more advanced part is West Malaysia, where the capital city, Kuala Lumpur, is located. West Malaysia, or Peninsular Malaysia, also shares a border with Thailand in the north and Singapore in the south.

The country gained its independence from the British in 1957. Before that Malaysia was colonized by several world powers for many decades, namely, the Portuguese, the Dutch, the English, and the Japanese. However, after World War II, the colonizers relinquished their power to the local people. Now, after 52 years of independence, Malaysia has developed from a commodity-based economy to an industrial one and is slowly progressing toward a service economy. By 2020, Malaysia is expected to reach the status of a fully developed country.

Much of Malaysia's current economic and political system was influenced by the British. For example, Malaysia's parliament was adopted from the English parliamentary system. Additionally, the education system, from primary school to higher levels, also was typically based on the British educational system.

The country's population is reaching 30 million people. It includes Malay as the majority of the

population, followed by Chinese and Indians. Malaysia also has many indigenous tribes in Peninsular and East Malaysia, mainly found in rural and rain forest parts of the country. Today, these people still practice their traditional lifestyles; however, they have begun to adopt modern lifestyles while still maintaining their roots. The government is striving to provide better housing, medical care, and education for these groups. These days most of them have basic access to education and lifestyles that will reduce their dependence on local resources.

Food Culture Snapshot

In the rural village of Mersing, Johor, a married couple named Mustapha Omar and Fatimah Ramli own several acres of paddy fields and live next to one. Mustapha works as a farmer, growing paddy and some vegetables for personal consumption. His wife is a full-time housekeeper. She usually performs household chores and sometimes helps Mustapha during the harvesting season. They have five children, who live in different cities in Malaysia. Normally, Mustapha wakes up very early in the morning to pray and then prepares himself for the paddy fields. His wife also wakes up as early as 5:30 A.M. to prepare breakfast for her husband. It will be a heavy breakfast to make sure that her husband will have enough energy to perform his work. Sometimes she will cook *nasi lemak* (coconut steamed rice) served with fried or hard-boiled eggs, *sambal ikan bilis* (a hot and spicy sauce made from chilies cooked with anchovies), nuts, cucumbers, and sometimes fried chicken or fish as accompaniments. Besides nasi lemak, other breakfast items in her repertoire are *nasi goreng* (fried rice), *mee goreng* (fried noodles),

lontong (compressed rice cakes in a stew of coconut and vegetables), *roti jala* (a lacy pancake, served with chicken curry), *roti canai* (a flaky thin bread), and some *kueh-mueh* (traditional cakes) like *popia* (spring rolls) and doughnuts. Hot coffee or hot tea is served during breakfast.

Mustapha eats breakfast at 6:30 so he can be at the paddy field by 7 A.M. He will return home at 12:30 P.M. for lunch. His wife will prepare a simple lunch for him that she cooks by herself. She will pick some vegetables such as bird's-eye chili, eggplant, and okra from her backyard and use them in her daily cooking. She and her husband plant herbs and vegetables in the garden. She usually cooks plain white rice with several dishes. The structure of the lunch includes steamed white rice with fish, chicken, or meat stew; stir-fried vegetables; *sambal belachan* (chili pounded with shrimp paste); and fried salted fish. She buys fresh produce and other ingredients from a nearby wet market. Some of the dishes that she normally prepares are *ikan masak asam pedas* (fish cooked with tamarind) and *sambal* or hot chili paste cooked with lots of onion and seafood or chicken. Besides that, she prepares *angka masak lemak* (young jackfruit cooked in coconut milk and turmeric), *daging masak kicap* (beef cooked in soy sauce), and *kangkung masak belachan* (stir-fried water convolvulus—a kind of bindweed vine). Coconut milk is added to many dishes, especially in preparing stews and desserts. All of the dishes are usually consumed with *ulam* (local culinary herbs that are eaten fresh) and *sambal belachan*. At lunch, they normally drink plain water or homemade pandanus syrup (pandanus is a screw pine, also called *kewra*). In the afternoon, she will prepare *cucur* (onion fritters), *pengat pisang* (sweet banana porridge dessert), or *bubur pulut hitam* (black glutinous rice porridge), which are accompanied by hot tea or coffee during teatime. Sometimes, she will get some fried bananas from the stall nearby. Both of them will have their dinner at 8 P.M. Usually, she will reheat the leftovers from lunch and sometimes will cook a vegetable dish. By 10 P.M. both of them are already in bed.

Major Foodstuffs

Rice is the staple diet in this country for all peoples, of Malay, Chinese, or Indian origin. Rice is typically

served at breakfast, lunch, and dinner. Besides rice, noodles also are very important in the Malaysian diet. Normally, Malaysians will have three meals a day. Noodles are prepared in various methods such as noodle soup or curry noodles, which are stir-fried according to Malay, Chinese, or Indian styles. It is very unique in Malaysia that foods such as *nasi lemak* (steamed coconut rice) are served throughout the day, from breakfast to supper, and are savored by Malaysians from different races. Similarly, different types of noodles also can be served throughout the whole day. Noodles are flavored with different ingredients such as chicken, curry, seafood, and vegetables.

Another important food item in Malaysia is *roti canai* (flaky thin bread), known as *paratha* in India. This particular dish was introduced by the Indians in Malaysia, who brought this flaky bread when they immigrated from Chennai, India, about 70 to 80 years ago. However, this bread has become one of the most popular foods, served at breakfast or any time of the day. Different types of *roti canai* have different types of fillings, which include onions, eggs, sardines, and bananas. Many authentic Malay dishes are served during breakfast; some of them are *soto ayam* (chicken soup served with compressed rice), *lontong* (a spicy stew of coconut and vegetables with compressed rice and condiments), *mee rebus* (curried noodles), and varieties of local *kueh* (sweets). Sometimes, in the village, onion and anchovy fritters are freshly made at home. Since

Nasi lemak, a traditional Malaysian spicy rice dish. (Shutterstock)

Malaysia is also home to many different species of bananas, not surprisingly banana fritters are sold at stalls by the roadside or at some restaurants. Banana fritters are also another favorite, served during the day, especially at breakfast and teatime. Other types of fritters such as sweet potato and yam are also well known. *Cha kueh* (Chinese deep-fried bread) is popular among Malaysians.

Typical Malaysian cakes include savories and sweets. Examples of savories are curry puffs (a savory pastry filled with curried potatoes and chicken), *pulut panggang* (glutinous rice wrapped in banana leaves and stuffed with spicy coconut and dried shrimp), fried spring rolls, a lacy pancake served with chicken curry, *kueh badak* (sweet potatoes filled with a spicy coconut filling), and *murtabak* (chicken- or meat-filled layered bread). Sweet cakes are made from rice flour, glutinous rice flour, or whole glutinous rice. Examples are *seri muka* (glutinous rice topped with pandanus custards), *kosui* (a brown sugar custard served with freshly grated coconut), *kueh lapis* (steamed layered red and white cake made from glutinous rice flour and coconut milk flavored with rose syrup), and *kueh koci* (glutinous rice stuffed with sweet coconut and wrapped in banana leaf). All these local cakes have been adopted by other races in the country; the method of making them remains the same, but the color and presentation of the cake could be based on individual style.

Cooking

Typical Malaysian cooking styles are divided into three major ethnicities: Malay, Chinese, and Indian. Malay cooking styles are typically influenced by the neighboring countries; for example, the northern states are mainly influenced by Thai cuisines. The cooking styles there resemble foods from the southern part of Thailand. The flavor of the food is dominated by sweet, sour, and salty flavors, which are the major flavors in Thai food.

In Penang, the food reflects a combination of Malay and Indian influences. A lot of curries and Indian cooking originated from the southern part of India. Indian traders who came to Malaysia brought their food culture. Marriages between Indians and local women also contributed to enriching

the flavor and style of the local food. Penang is well known for its hawker (street) foods ranging from simple appetizers, snacks, and main dishes to succulent desserts. Popular food items include *nasi kandar* (rice served with various curry dishes), *mee goreng mamak* (fried noodles Indian style), and *chendol* (pandanus dessert with coconut milk). When eating nasi kandar, one picks dishes from a wide selection of items. The price of the food depends on what you pick at the food counter.

The Chinese settlers have also greatly influenced the cuisine. Various Chinese dishes such as *char kuay teow* (stir-fried flat noodles) and *lee chee kang* (sweet soup served with dried fruits and black fungus) have become national favorites among all Malaysians. Nyonya food was derived from the marriage of Chinese dishes and local dishes. The food is mostly enriched with coconut milk, local spices, and Chinese ingredients. Cooking methods for Nyonya dishes vary from stir-frying to stewing to steaming. *Kari kapitan* (chicken curry), *terong belachan* (stir-fried eggplant and shrimp paste), and *itik tim* (duck soup) are some of the dishes that can be found in Nyonya restaurants.

States in the middle region such as Perak and Pahang are mostly influenced by Chinese traders. The Chinese foods from these states are known to be the best because they are heavily populated by Chinese. This provides a wide range of Chinese cuisines since there are more Chinese settlements here. Perak offers some of the greatest *pan mee* (hand-kneaded noodles, cooked and served to the customer in a hot frying pan), while Pahang offers many varieties of noodles such as *wan tan mee* (noodles served in soup with prawn dumplings) and *loh mee* (fresh thick yellow noodles cooked with thick soy sauce, egg, prawns, and chicken).

For those states in the southern part, the Malay cooking is influenced by the various Indonesian ethnicities, for example, Minangkabau, Bugis, and Javanese. All these people were traders, and they traveled to Malaysia and finally settled there. They brought with them their cultures and lifestyles, which determine the daily food culture. Basically, Minangkabau food is popular in Negeri Sembilan. Coconut is used in most of the main dishes. For example, beef or chicken *rendang* (spicy beef or

chicken simmered in coconut milk) is the most popular food during major celebrations. The meat is cooked with coconut milk, spices, and other fresh ingredients and stewed for several hours. A delicate and full-flavored dish is produced, and this is eaten with steamed white rice or rice pilaf, accompanied by other dishes.

Food influenced by the Bugis can be found in the state of Johor, which is located at the southern tip of Malaysia. The food in Johor is a blend of Middle Eastern, Indonesian, and traditional Malay food. The ancestors of the people here originated from the Arab countries and several parts of Indonesia. The food as such is flavored by various spices and ingredients that produce a unique flavor. For example, the famous *biryani* rice (mixed with meats and vegetables) is an influence of Arabs and Indian settlers. Several dishes brought by the Indonesians in the past have become local traditional dishes, such as *lontong*. Although these dishes have been influenced by other cultures, the flavor of these foods is unique and authentically represents the cuisine of Malaysia. The taste of these foods in Indonesia or India is totally different, and they have become truly Malaysian dishes.

In East Malaysia, cooking is made up of indigenous dishes that vary according to ethnic group. These states are heavily populated by indigenous peoples such as the Dayak, Tekun, Iban, Temiang, and Umai, who reside in many interior parts of

Spices, such as curry, are popular in Malaysian cooking. (Shutterstock)

Sarawak. Some of the local dishes that are well known in Sarawak are *midin*, *nasi aruk*, *linut*, and *bubur pedas*. *Midin* is a kind of fern that is typically stir-fried with plenty of garlic. It is usually served with white rice along with other dishes. *Nasi aruk* is Sarawakian fried rice, which is similar to the fried rice found on the peninsula. The ingredients are anchovies, garlic, onion, and egg. *Linut* is a finger food made of sago flour that is fried in deep oil and dipped into chili sauce. It is usually served with tea or coffee. Finally, *bubur pedas* is the Sarawak version of savory porridge, which is usually cooked in the fasting month of Ramadan. Its main ingredients are turmeric, lemongrass, galangal, chili, ginger, coconut, and shallots, which are boiled with the rice.

As for Sabah, which has an equally large number of ethnic groups that settled in the interior of the state, the largest known groups are the Murut and the Dusun. Their cuisine predominates compared to the lesser-known groups. Among the frequently served dishes are *jaruk*, *hinava tongii*, and *bambangan*. *Jaruk* is a dish made by packing chunks of uncooked wild boar or river fish into a wide bamboo tube together with salt and cooked rice. The bamboo tube is filled with leaves, and the contents are fermented for months and are normally served in small portions with rice or tapioca starch. *Hinava tongii* is a type of pickled Spanish mackerel (*ikan tenggiri*). It is a delicious combination of fresh fish, red chilies, shredded ginger, and sliced shallots, drenched in a lot of lime juice, which “cooks” the fish. Also incorporated into the dish is the grated seed of several mangoes found in Sabah, called the *bambangan*. It is a perfect complement for white rice. *Bambangan* is a variety of mango that is not eaten as fruit but rather as a pickle or cooked with fish to provide a distinctive flavor.

Dishes from both Sabah and Sarawak are commonly found in homes and during festivals nowadays. Many restaurants are serving fewer ethnic foods and opting for more popular dishes that have already been mentioned (Chinese, Malay, and Indian cuisines) and Western foods.

Malay cooking methods comprise frying, sautéing, steaming, stewing, and boiling. Frying usually

is used to cook fish, chicken, and snacks such as *keropok lekor* (fish crackers). Sautéing is used to cook vegetable dishes. Most of the time herbs and spices are sautéed until aromatic to produce well-flavored dishes. Steaming is used to prepare traditional steamed cakes and desserts such as kueh koci (glutinous rice with coconut wrapped in banana leaf), *kueh talam beras* (steamed rice cake), kueh lapis (layered steamed cake), and *seri muka* (steamed glutinous rice topped with egg custard). Stewing is mainly used to prepare soups and rendang, an authentic hot and spicy dish that can be made from various types of meats such as chicken, beef, mutton, and seafood. It can also be made from certain types of vegetables. The most popular rendang is made from beef, cooked with fresh and dried spices, coconut milk, and chili and stewed for four to five hours. It is served with white rice or compressed rice during major celebrations. There are many varieties of rendang originating from different areas in Malaysia. The color of the dish also varies from dark brown and dark green to red, depending on the types of ingredients being used.

Malay cooking does not really require an extensive array of cooking utensils. The traditional utensils are the mortar and pestle, *kuali* (wok), pot, steamer, and coconut grater. In certain celebrations such as at wedding ceremonies, meals are prepared in a big wok known as a *kawah* and large pots that can fit the meat from a whole cow. Additionally, other utensils used together with the *kawah* are long wooden spatulas or stainless steel ladles. In the past, most ingredients were pounded manually; however, today, machines are used to grind the ingredients for everyday cooking. However, some families are still using the traditional methods because they give a better flavor to the food.

Typical Meals

Malaysian cuisine is known for its unique range of flavors and culinary styles that provide an endless gastronomic adventure. Malay food is known for being hot and spicy. It contains rich flavors from many herbs and spices like galangal (*lengkuas*), tur-

meric (*kunyit*), kaffir lime leaves, torch ginger (*bunga kantan*), and screw-pine leaves (pandanus leaves). Typical food items for Malay cuisine are nasi lemak, *satay* (skewered strips of meat), beef rendang, mutton soup, *karipap* (a small flaky pie of curried chicken), roti canai, *teh tarik* (“pulled” tea with condensed milk; i.e., it is poured back and forth between two glasses), and *air bandung* (rose-flavored milk). There is no distinct difference between the eating cultures of rural and urban Malays. The only difference is in the eating style because some Malays eat with their hands and some eat with a fork and spoon. The former mix the rice with curry, meats, or vegetables with their fingers and scoop the food into their mouths. Most Malays in the cities eat with forks and spoons as this is more convenient because they do not have to wash their hands before and after eating.

Beef Rendang

This is one of the most popular dishes in Malaysia. It can be made from other meats such as chicken and mutton. However, the most popular are beef and chicken rendang. It has to be simmered for several hours until it becomes thick and well flavored.

Ingredients

2.2 lb beef, preferably top side—stew meat or round, cubed

15 shallots, ground

5 garlic cloves, ground

1 in. fresh ginger, ground

½ in. fresh turmeric root, ground

3 tbsp ground dried chili

3 stalks lemongrass, thinly sliced

A handful of kaffir lime leaves

2 tbsp ground coriander

½ tbsp ground black pepper

4 c coconut milk

Salt to taste

Mix all ingredients except the coconut milk with the meat, and place the mixture in a saucepan. Bring to a boil, and simmer for 30 to 45 minutes. Stir occasionally until the meat and the other ingredients are thoroughly cooked. Add the coconut milk, and stir for another 15 to 20 minutes. Lower the heat and stir continuously to prevent from sticking. Season with salt. Remove from the heat, and serve with steamed white rice.

Chinese cuisines consist of a variety of cooking styles like Cantonese, Hokkien, Hakka, and Szechuan. Normally, Chinese cuisines are mild in flavor, but Chinese dishes in Malaysia are slightly spicier due to the influences of Malay and Indian food cultures. Chinese cuisines often use garlic and ginger to enhance the flavor of dishes. Typical meals for Chinese cuisines are dim sum, *bak kut teh* (meat bone tea), char kuay teow, Hainanese chicken rice, chili crab, wan tan mee (noodles and pork), and fried *mee hoon* (fried rice noodles). Usually Chinese in rural places have their meals at stalls or hawkers, while Chinese in the city have their meals at restaurants.

Indian cuisines can be divided into two types: northern and southern cuisines. Bread is always the main item for both North and South Indian cuisines. Typical dishes for Indians in Malaysia are *nan* (leavened bread with poppy seeds), paratha (flaky bread flavored with ghee), chapati (wheat-flour pancakes), *putu mayam* (Indian steamed noodles, normally as a snack or for breakfast), mutton curry, *thosai* (sour-dough flatbread), *rasam* (Indian soup, prepared with tamarind juice, pepper, and other spices), and *raita* (Indian yogurt containing spices like curry leaves, onion, and dry chilies). Spices are the heart and soul of Indian cooking. They use spices in their food and rice and even in drinks. There is not much difference in food culture between rural and city areas. Many Indian restaurants or Mamak stalls (*Mamak* refers to Tamil Muslims from India) stalls can be found everywhere.

Nowadays, Malaysians' eating habits in cities have been influenced by Western food habits. People living in big cities are always in a hurry compared

to people living in the rural areas. There is one common phenomenon among the Malay, Chinese, and Indian food cultures in the cities. They spend more on eating out compared to rural citizens because urban life is more hectic and challenging than rural life. Therefore, they try to save time by having meals outside the home. In contrast, rural life is more peaceful and less hectic, and this allows rural people to prepare home-cooked meals.

Eating Out

In Malaysia, eating out is becoming more popular. This is due to smaller family sizes, so that parents feel that it is not worth it to cook. Most Chinese families choose Chinese restaurants to dine in. Sometimes, Chinese families will eat out when there is a special occasion such as family member's birthday or anniversary. During this time, they will probably choose Western restaurants because the ambiance is better than in Chinese restaurants, which are always very noisy. Another place for Malaysians to eat out is the *pasar malam* (night market), *pasar tani* (farmers' market), and outdoor stalls.

Malays tend to eat at home more or to love home-cooked food, but sometimes for special occasions or ceremonies, Malays prefer dining at restaurants, hotels, fast-food restaurants, coffee-concept restaurants, food stalls, and Mamak restaurants serving Indian food and local delicacies. This habit actually varies according to the age range. For example, teenagers and students prefer to dine at fast-food and Mamak restaurants due to their financial constraints. During the month of fasting, Malays will go to the Ramadan bazaar to buy their food for breaking the fast. Chinese and Indians will also go to Ramadan bazaar to savor traditional Malay food. Nowadays, in a Malay family, working parents will just buy *nasi campur* (rice served with several dishes) at lunch for their children and will perhaps take their children to a local restaurant for dinner. Working people in Malaysia prefer having "economical" rice for lunch. This is a plate of rice served with a variety of vegetables and meats. The price is calculated according to the amount and the type of food chosen.

Street vendor offers a dazzling variety of delicious Indian foods on Lebu Penang in the Little India district of Georgetown on Penang Island, Malaysia. (Lee Snider | Dreamstime.com)

Special Occasions

Eid al-Fitr (Hari Raya Aidilfitri) is the biggest celebration in the country. Muslims from around the world celebrate this event. After successfully going through the fasting period in the month of Ramadan, Muslims feast. Normally, many types of authentic and traditional dishes will be prepared. Throughout the country, maintaining an open house is very popular during this time; people visit from house to house. Another important celebration observed by Muslims in Malaysia is Eid al-Adha (Hari Raya Aidil Adha, also known as Hari Raya Korban or Hari Raya Haji). Normally, it is celebrated two months after Eid al-Fitr, usually on the 10th day of Zulhijah, the 12th month of the Muslim calendar, which marks the end of the hajj pilgrimage period (about two weeks), and hence it is sometimes called

Hari Raya Haji (festival of the pilgrimage). Eid al-Adha also commemorates the sacrifices made by the prophet Abraham (hence the word *korban*, which means sacrifice), who fully accepted the command from Allah to sacrifice his own son when Allah tested him. Eid al-Adha is celebrated among family members only, and it is mainly observed for just two to three days. Popular dishes during these two celebrations are rendang, curries, *ketupat* (rice wrapped in coconut leaves and boiled for several hours), *lemang* (glutinous rice cooked in bamboo), and other dishes. Some of these dishes are quite similar to those served during Eid al-Fitr, and different regions in Malaysia will prepare different types of food during the celebration.

The Chinese in Malaysia celebrate festivals that are similar to those in China. The festivals include Chinese New Year, Chap Go Meh (the last day of

the Chinese New Year), the Moon Cake Festival, the Dumpling Festival, and also the Hungry Ghost Festival. The biggest celebration for Chinese is the Chinese New Year. Chinese New Year is the first day in the lunar calendar. On the Chinese New Year's Eve, Chinese will have their reunion dinner whereby the whole family will have their meal together and all the foods prepared have their own meaning so that the family will have a good beginning for the next year. For example, the chicken must be presented with a head, tail, and feet to symbolize completeness so that the family members will do their jobs with a good beginning and perfect results; fish is served but should not be finished during the meal so that the family will always have some savings at the end of the year. During Chinese New Year, *nian gao*, a sweet steamed sticky rice pudding, is served, and it means wishes for the children to grow well. The *fa gao* cake is made from wheat flour and is a symbol of prosperity.

The Chinese Moon Cake Festival falls on the 15th day of the eighth month in the Chinese lunar calendar. It can be considered as a historical festival rather than a religious festival, since it marks the successful rebellion against the Mongol rulers during the 14th century in China. The Mongols had established the Yuan dynasty, which was very oppressive. During that time, the Mongols did not eat moon cakes, so they were used as a medium for the Ming revolutionaries to distribute letters secretly in the conspiracy to overthrow the Mongolian rulers. This idea was conceived by Zhu Yuan Zhang and his advisor Liu Bo Wen, who circulated a rumor that a fatal plague was spreading and the only way to prevent it was to eat moon cakes. Then, this prompted quick distribution of moon cakes with a hidden secret message coordinating the Han Chinese revolt on the 15th day of the eighth lunar month. Besides hiding the message in the filling, the other method was printing the message on the surface of the moon cakes as a simple puzzle or mosaic. To read the encrypted message, each of the four moon cakes packed together had to be cut into four parts and the total 16 pieces of moon cake then had to be fixed together in such a pattern that the secret message

could be read. The moon cakes were then eaten to destroy the message.

During this festival, foods that are often consumed are moon cakes, tea, and *pamelo* (or pomelo, a kind of citrus). Since moon cakes are considered a sweet dish, they are usually consumed with tea to revive the taste buds. Traditionally, the filling of the moon cakes includes lotus seed paste, sweet bean paste, jujube paste, taro paste, and five kernels from among the following: walnuts, pumpkin seeds, watermelon seeds, peanuts, sesame, or almonds. Nowadays, there is more variety in the filling, such as cream cheese, ginseng, bird's nests, chicken floss (shredded dried chicken), tiramisu, green tea, durian, chocolate, coffee, and others.

Malaysian Indians celebrate many occasions throughout the year. The three biggest festivals are Deepavali, Thaipusam, and Thaiponggol. During these festivals, a lot of different foodstuffs are served. Deepavali, or the Festival of Lights, is celebrated by Indians in Malaysia around late October and November. On the morning of Deepavali, Indians will light their homes with oil lamps. This custom is practiced to thank the gods for bringing happiness, health, and wealth into their life. Two to three weeks before the festivals, most Indians will be busy preparing for the big celebration. Indians clean their houses before the festival, and buying new clothes and accessories is necessary in their culture. During Deepavali, a variety of scrumptious food can be found in Indian homes. Popular sweets in Indian families are *muruku* (also called *chakkali*), *halwa* (made from flour, oil, and some nuts), *burfi* (made from condensed milk and sugar), *athirasam* (a sweet made by mixing flour, sugar, jaggery, and spices and then frying it before it is served), and *laddu* (made from flour and formed into a ball shape, also called *nei urundai*).

Hindus love eating spicy food and indulge in favorites like mutton curry, prawn sambal, and fish-head curry. During Deepavali, Indian homes normally serve sweet *pongal* (cooked rice mixed with cashew nuts and ghee) when praying. Sweet *pongal* symbolizes planting new crops and thanking the gods for all the prosperity in the previous year. A

typical Deepavali spread includes Indian foods such as rice and curries for the main course; savory snacks such as muruku, made of rice flour; and sweet coconut candy. *Gulab jamun* is also one of the special foods served. It is made with milk, cream, and ghee and is then rolled into balls and fried.

During Thaipusam, buttermilk and free meals, or *annathanam*, are served to devotees who throng the temples. Only vegetarian food is served during this festival. Additionally, at the Thaiponggol celebration, freshly harvested rice is cooked in a new pot outside the home with milk and sugar at dawn. As the rice boils over, the members of the family often shout “pongalo pongal,” and then all family members have their vegetarian breakfast.

Besides the three major festivals, weddings are also a big celebration for Indians where a lot of foodstuffs are served to the guests. The types of food prepared are steamed white rice, biryani rice, tomato rice, sambal roasted chicken, lamb *korma* (stewed with yogurt), vegetable curry, cabbage *pakora* (deep-fried cabbage with chickpea flour), mango *pacheri* (in sweet and sour sauce), and the like. Drinks such as mango *lassi* (a mango and yogurt drink) and syrup are also served. Vegetarian foods are also served at weddings.

Diet and Health

Malaysian cooking uses numerous local herbs and spices. These herbs have been used for generations, and they contribute to a healthier diet. For example, kaffir lime leaves provide a refreshing taste that is crucial in many local dishes such as soups, curries, and stews. This leaf can act as a digestive aid and cleanses the blood while helping to maintain healthy teeth and gums. Turmeric root is also another important ingredient in food preparation. It has been used for preparing special dishes such as *rendang*, *gulai lemak* (beef and coconut stew), and *pais ikan* (fish cooked in banana leaves) to provide an exotic taste to the food. Like the root, the leaf also has many health benefits like aiding digestion, fighting bacteria, and cleansing the system. Another

important leaf in Malaysian cooking is *daun kesum*, used in making *laksa* (a noodle soup using fish as the base for the soup). At some places in Malaysia, *daun kesum* is referred to as *daun laksa* or *laksa* leaves. *Daun kesum* is a member of the mint family. And, finally, screw-pine leaves are long, narrow, dark green leaves from the screw pine, or pandanus tree. The leaves have a sweet perfume and flavor and are often used in Southeast Asian cooking to flavor rice, puddings, and other desserts. The green color from the leaves is extracted and used as a natural food coloring.

The Chinese in Malaysia use a lot of garlic in their cooking. It can be used to treat high cholesterol, parasites, respiratory problems, poor digestion, and low energy. Studies have found that eating garlic regularly helps lower blood pressure, controls blood sugar and blood cholesterol, and boosts the immune system. It has also been found to reduce the risk of esophageal, stomach, and colon cancer.

In Indian cooking, they use a lot of spices that have medical properties and are good for health. Mostly dried herbs such as cumin, coriander, cinnamon, aniseed, and curry leaves are used. The different cooking styles and ingredients used reflect the demographic variation in the land of origin, which is mainly divided into the northern and southern regions. In addition, Indian cuisines are also influenced by religious beliefs as many dishes are meant to be served to the gods.

Māori

Overview

Aotearoa, or New Zealand, is an island nation located in the southwestern Pacific Ocean, separated from Australia by the Tasman Sea. Aotearoa is usually taken to mean “land of the long white cloud” in Māori, the language of Aotearoa’s indigenous inhabitants. Aotearoa consists of two large islands, Te Ika A Maui in the north and Te Waipounamu, sometimes called Te Waka A Maui, in the south, as well as numerous small coastal islands. Māori legends claim that Aotearoa was originally inhabited by the mythical Moriori, but there is no archaeological evidence for the existence of the Moriori of Aotearoa. The Moriori of Aotearoa should not be confused with the Moriori of Rekohu, known as the Chatham Islands in English and Wharekauri in Māori, who were very much real until relatively recently. It is generally accepted that the Māori initially settled in Aotearoa over 1,000 years ago.

Aotearoa was largely isolated until Western contact in 1642. The Treaty of Waitangi, still a controversial document, was signed in 1840, at which point the British claimed Aotearoa for the Crown. Aotearoa experienced a great influx of immigrants, while disease and warfare took a toll on the Māori population. Only 15 percent of New Zealanders now identify themselves as Māori. Māori culture has, however, experienced a revival and is a source of national character and pride. Māori food, although not as common as it once was, is still eaten today. *Kai*, or food, is central to Māori life.

Food Culture Snapshot

Rachel Rawiri lives in Grey Lynn, a suburb of Auckland, Aotearoa’s largest city, located on Te Ika A Maui. She is a postgraduate student at the University of Auckland and lives in an apartment she shares with two other students. Rachel is of mixed Māori, Scottish, and English ancestry but identifies herself as Māori. Although Rachel is originally from Wellington, she is a member of the Ngāpuhi iwi of Northland. Like many Māori, Rachel’s family moved to an urban area for the better economic opportunities it offered.

Rachel’s eating and shopping habits mirror those of mainstream New Zealand. She does most of her food shopping at one of the large supermarkets located near her home, and occasionally picks up items at convenience stores, known as dairies. Rachel’s student allowance keeps her on a tight budget. She will occasionally visit a greengrocer or a discount butcher shop to cut costs. Rachel does not cook frequently, and cutting back on grocery expenses allows her to eat out more often. Rachel prefers convenience foods to prepare at home, such as canned baked beans, bread, cold cereal, and packaged pasta.

Rachel almost always eats a simple breakfast at home. Lunch is eaten either at home or at the university, where Rachel picks up something inexpensive from a cafeteria or nearby café. Likewise, dinner is sometimes eaten in the home but is often purchased from a restaurant, café, take-out shop, or pub. She rarely eats dinner alone, usually sharing the meal with her roommates or friends from the university. Rachel’s

eating habits mirror those of most university students in New Zealand. Distinctly Māori foods are rarely consumed, although special family occasions will sometimes feature traditional Māori fare.

Major Foodstuffs

Polynesian voyagers carried a suite of domesticated plants and animals with them throughout the Pacific to ensure successful settlements. Many of these plants were of tropical origin and poorly suited to Aotearoa's temperate climate. Agriculture was more important in Aotearoa's warmer northern reaches, while hunting and gathering were prominent in the south. Māori everywhere, however, relied largely on the forest and sea for daily subsistence.

The only introduced animals to survive were the *kuri*, the Māori dog, and the *kiore*, the Polynesian rat. Both animals were important sources of meat and supplemented the protein provided through hunting and fishing native game. *Kuri* were kept among Māori society, while *kiore* lived in the wild and were hunted and trapped when desired, like indigenous food animals. Aotearoa's only native mammals are bats. With a lack of large game animals Māori hunting focused on birds and aquatic resources.

Aotearoa has been home to thousands of bird species, many of which were endemic. Some of these have played, and in some cases continue to play, a significant role in the Māori diet. Moa, gigantic flightless birds, once inhabited Aotearoa and provided early Māori with large amounts of meat. These docile birds were quickly hunted to extinction. Kiwi, small flightless birds revered by the Māori, were also eaten in the past. Kiwi, which have become a national emblem of New Zealand, are now endangered and under federal protection. This is due largely to the introduction of dogs and cats from Europe. Like the kiwi, many of the native birds that the Māori once relied on are now endangered and are no longer considered suitable for food. One exception is the *tītī*, a type of petrel commonly called muttonbird for its lamblike flavor. *Tītī* chicks are harvested from April 1 to May 31 by the Rakiura Māori, who have maintained gathering

rights for the *Tītī* Islands. *Tītī*, either fresh or preserved in fat, can be found for sale in specialty shops throughout New Zealand and are considered a special treat.

Seafood, including fish and shellfish, made up a large portion of the traditional Māori diet, and it is still extremely popular and widely available in New Zealand today. Snapper was the dominant catch in the north, whereas red cod was the most commonly consumed fish in the south. Both fishes are commercially fished today, and snapper is now New Zealand's most popular fish. Many of the shellfish varieties the Māori consumed prior to contact have fallen out of use today, but others not only are popular with Māori but have also been adopted into New Zealand's national cuisine. *Kōura*, known commonly as crayfish in New Zealand and rock lobster

The Moa bird, from W. Rothschild's *Extinct Birds* published in 1907. (Getty Images)

abroad, has become an expensive luxury food. Green-lipped mussels, *pipi* (a type of small clam), and *tuangi* (commonly known as cockles) are inexpensive in New Zealand but are exported at higher prices as luxury items. There are a number of shellfishes that are still collected for consumption but are rarely available for purchase. *Tuatua*, a larger clam, and *pūpū*, an aquatic snail, are still gathered by hand. *Kina*, a local variety of sea urchin, are very popular in Māori communities and are gaining in popularity with the general population. As demand has increased, so has the price. *Pāua*, the black-footed abalone, has also gained favor outside of the Māori communities, and they are commonly offered in fritter form at fish and chip shops. Bluff oysters and small rock oysters, which were part of the traditional Māori diet, are now widespread favorites throughout New Zealand and beyond. Seaweeds, such as *karengo*, provided important nutrients and held ceremonial importance. Freshwater foods also hold a place of prominence in the Māori diet. Freshwater eels, called *tuna* but known by a number of Māori names according to color and skin types, can be found dried, smoked, and live in many fish markets today. They are popular steamed, roasted, and especially grilled. Whitebait are the juveniles of the *īmanga*, *kōaro*, and *kōkopu* fishes. These delicate fish are collected seasonally in screens or nets and can be found at supermarkets and fish shops, but prices are exorbitant. Once making up a large part of the Māori diet, fish and shellfish are now relegated to the category of special-occasion foods because of their high price tags.

Other once-common foods have become less popular for other reasons. *Huhu* is a type of native beetle whose large, whitish larva, called a grub, is still sometimes eaten as a delicacy. Once a common snack for some Māori, huhu are now enjoyed only by those who are more traditional or more adventurous. The European aversion to bug eating has become widespread in Aotearoa, where most people consider eating bugs disgusting.

Some of the traditional Māori plant foods have remained popular, while others have declined or disappeared altogether. It is believed that prior to contact *aruhe*, the bracken fern, was an important staple

food. The rhizomes of the plant were pounded, separating the inedible fiber from the starch, which was made into versatile cakes. Although *aruhe* itself is not especially palatable, it could be sweetened or flavored and served alongside nearly anything. The practice of eating *aruhe* has largely been abandoned in favor of introduced starches. Other fern foods, however, have remained more popular. The young fern shoots, called *koru* or fiddleheads, of a variety of ferns were commonly eaten. *Koru* have a delicate flavor and pleasing texture, commonly being likened to young asparagus. The *koru* of the *kiokio* and *pikopiko* are still enjoyed today, when in season, and are sometimes showcased on fine-dining menus.

Taro, *kūmara* (sweet potatoes in English), and *uwahi* (a type of small yam) were brought to Aotearoa by Polynesian settlers. Taro, a tropical plant, was established only in the northern reaches of Te Ika A Maui, while the more rugged *uwahi* did slightly better. *Kūmara* had the largest range and quickly became the most important cultivated food. The importance of *kūmara* can be seen in Māori religion and ceremonial life. *Kūmara* is associated with Rongo, the god of peace, and the *kūmara*-planting cycle dictated much of the Māori year.

Māori potatoes are another important source of starch. Although there are traditions that claim potatoes were present in precontact Aotearoa, it is generally accepted that early contact with European explorers resulted in the introduction of the potato, a South American cultivar. Nevertheless, the potato, which is well adapted to New Zealand's cool climate, quickly became one of the Māori's most important food sources. Adapting Māori cultivation to potatoes was easy, as they are produced in much the same way as *kūmara*. Because they were an outside food source, potatoes were also considered *noa*, meaning unlike *kūmara* there were no religious restrictions on their production. Māori potatoes range in size and color but tend to be small, thin-skinned, and pinkish, purplish, or swirled. They more closely resemble a number of South American varieties than they do their European counterparts, which is most likely due to their early introduction, as potatoes were not well established in Europe at that time.

Potatoes have become a major component of the wider New Zealand diet, following the modern British tradition. Māori potato consumption has paralleled this, and they are widely available today. Their lovely coloring and waxy texture have earned them a place at many gourmet shops and restaurants. *Rewena paraoa* is a sourdough potato bread specific to the Māori, known in English as Māori bread. *Rewena paraoa* is commonly served alongside many modern Māori dishes, such as boil-up, or *hāngi*.

Cooking

Traditional Māori cooking methods include fire roasting, hot stone grilling, and steam roasting in a *hāngi*. In addition to cooking, there is also a tradition of eating many seafoods, such as kina and pūpū, raw. Modern Western cooking implements and techniques have replaced traditional cooking styles with the exceptions of the *hāngi* and fire roasting, which are still sometimes done at beaches or while camping. *Hāngi* are underground ovens, similar to the Hawaiian *imu* or Fijian *lovo*. Parcels of food are placed in a hole with hot rocks from a wood fire and then covered with earth to steam roast for several hours before being dug up and enjoyed. Fish, pork, lamb, chicken, potatoes, corn, pumpkins, kūmara, onions, carrots, stuffing, and cabbage are all common *hāngi* foods. *Hāngi* are traditionally prepared by men, although women may prepare some of the foods that will be cooked in the *hāngi*. Because *hāngi* is labor-intensive, it is now often reserved for celebrations and special occasions, although it is now sometimes offered for purchase at cultural festivals and outdoor markets. *Hāngi* is also offered as part of a package at some Māori cultural showcases, where traditional Māori song and dance are performed for tourists. Many of these outfits have built permanent *hāngi* out of concrete or brick, resulting in a significant loss of flavor.

Typical Meals

Māori meal patterns are generally the same as those of mainstream New Zealand. There are, however, a number of Māori meals that are eaten regularly

in addition to the famous *hāngi*. One of the most common is called boil-up. Boil-up is a dish made from pork bones and watercress or *puha*, sometimes known as prickly sow thistle, boiled together with various vegetables to make a hearty soup. The pork bones are often smoked. Vegetables added to boil-up often include carrots, kūmara, potatoes, and pieces of pumpkin. Boil-up is often served with *rewena* bread or doughboys, which are large flour-and-water dumplings. There are also a number of Māori sweet dishes. *Kaanga piro* or *kanga wai*, commonly known as rotten corn, is a dish made from fermented maize. A basket of corn is placed in running water, such as a stream, or in a barrel of water that is changed daily, and allowed to ferment. This produces a sweet but strong-smelling mush that can then be eaten or made into other dishes, such as rotten corn custard. Kūmara is also featured in many sweet dishes, such as *roroi*. *Roroi* is a pudding made from grated kūmara and sugar, which is then steamed or baked.

Roroi Kūmara

5 kūmara (sweet potatoes), peeled and grated

¼ c brown sugar

¼ c sugar

2 tbsp butter, melted

1 kūmara (sweet potato), sliced

Mix grated kūmara, brown sugar, sugar, and melted butter in a bowl. Place in a lightly greased baking dish and cover with sliced kūmara. Cover with aluminum foil, and bake at 350°F for 1 hour. Serve warm or cold with whipped cream.

Boil-Up

5 lb meaty pork bones

10 potatoes, halved

3 kūmara, quartered

1 small pumpkin, seeded and cut into pieces

2 large onions, quartered

1 large bunch watercress (or *puha*), cleaned and trimmed

Salt to taste

Pepper to taste

Place the pork bones in a large pot, and cover with water. Bring to a boil, and allow to simmer for 2 hours, adding more water as needed. Add the potatoes, kūmara, pumpkin, and onion, and simmer for 20 minutes. Add the watercress, and simmer for an additional 15 minutes. Add salt and pepper to taste. Serve hot with fresh bread.

Eating Out

Although most Māori do eat out, Māori food is not commonly found in restaurants. Māori foods, especially hāngi and rewena paraoa, are offered at cultural festivals and outdoor markets. Māori food is also offered at cultural showcases, as already mentioned, and many *marae*, Māori meeting grounds, take pride in offering Māori food at marae gatherings. With the rise of local and regional cuisine, many native ingredients that have been consumed by Māori for generations have begun to be showcased in New Zealand's finest restaurants.

Special Occasions

The day-to-day eating habits of most Māori are similar to those of New Zealanders of predominantly European descent. Many traditional Māori foods have become expensive or are difficult to obtain or prepare. Special occasions have become a time when the extra expense and effort are made and traditional foods are prepared. Events such as weddings, birthdays, and anniversaries are celebrated by laying down a hāngi or purchasing or gathering fresh seafood. Funerals, or *tangihanga*, are important events within Māori communities. Ceremonial feasts follow these *tangi*. When leaving the graveyard, or *urupa*, Māori wash to break the *tapu* (i.e.,

taboo associated with death), especially before eating. Rewena bread can be crumbled and used to restore *noa* in place of water.

Diet and Health

Prior to Western contact Māori enjoyed relatively good health. A physically active lifestyle, coupled with a nutritious diet, resulted in a strong and vigorous community. Warfare among Māori was common and was a much greater threat to Māori health than famine or disease. Western contact introduced new diseases that became epidemics in Māori communities, and the Māori Wars increased Māori attrition rates and land confiscations. The Māori were relegated to the lower classes during the colonial period, which has had lasting effects on the Māori peoples.

Poor health and diet continue to plague Māori communities. Māori are among the poorest New Zealanders, which directly affects the modern Māori diet. Like the urban poor in most counties, Māori are plied with inexpensive packaged food that offers little nutritional value. Poor diet is then coupled with poor health care. Although health care in New Zealand is free, Māori remain among the most underserved, especially in rural areas. The traditional Māori diet would be a far wiser choice than the industrialized diet of today.

Mongolia

Overview

Mongolia is the world's largest landlocked nation, sandwiched between China and Russia's Siberia in northern Asia. At approximately 604,000 square miles, Mongolia is slightly larger than Alaska and more than three times as large as France. With a population of only about 2.9 million, it is among the most sparsely populated countries in the world. Called *Mongol Uls* in Mongolian, it is also known as Outer Mongolia, to differentiate it from the Mongol-inhabited region of China known as Inner Mongolia.

The image people generally have of Mongolia—the vast, sweeping steppe that was once home to the great armies of Chinggis Khaan (the Mongolian spelling of Genghis Khan)—is close to being the whole story in Mongolia. Almost 80 percent of the land is steppe pastureland, which supports huge herds of grazing livestock. The remaining 20 percent of the country is divided almost equally between barren desert and forested mountains. Less than 1 percent of the land is arable, and of that, only about 840 square miles is irrigated. The climate is extreme continental, with hot summers, tremendously cold winters, and little precipitation.

Despite dramatic political changes during the 20th century, Mongolians retain most of their traditions and cultural identity. Early in the century, Mongolia escaped Chinese control, only to find itself taken over by the Soviet Union. The Soviet machine worked to force urbanization on the previously nomadic population and built the kind of hideously polluting industrial installations and blocky worker housing for which the Soviets became so

well known, and they replaced Mongolian script with Russia's Cyrillic alphabet. Then, with the dissolution of the Soviet Union in 1990, Mongolia regained its independence. It reverted to being called Mongolia after nearly 60 years as the Mongolian People's Republic; adopted a multiparty, democratic form of government, with free elections; and started on the road to becoming a participant on the world stage. Russian architecture, Cyrillic signage, and a few introduced foods are lingering reminders of the Soviet era, but today, Mongolia balances between the joyous return to traditions by many and the equally joyous rush toward modernization by others.

Even now, with more opportunities available in the cities, half of the country's population still pursues the traditional life of the nomadic herder. Millions of grazing sheep, goats, yaks, horses, and camels spread out across the vast, open grasslands of the steppe. However, even among urban Mongolians, many traditions are observed, including living in *gers* (the round felt-covered tents of the nomads—called *yurts* by the Russians; *ger* is pronounced more or less like *gair*). Even Ulaanbaatar, the capital and largest city, has large neighborhoods of *gers*. Along with habitation, food customs have also been preserved.

The population of Mongolia is almost entirely Mongol (about 95%). However, geography and history have dictated that, while religion and housing may differ among the minorities, lifestyle and foodways are very similar nationwide. Education is compulsory for nine years, and the literacy rate is 98 percent. The dominant religion is Tibetan

A local man herds goats in the Mongolian countryside. Most of Mongolia's people live the pastoral life of animal herders in the country's harsh climate. (Travel-Images.com)

Buddhism, usually blended with traditional shamanistic/spiritist beliefs. The Kazakh minority is primarily Muslim. Due to the Soviets' concerted efforts to eradicate religion, about 40 percent of Mongolians now identify themselves as not being part of any religion, though they carry on some of the traditions. Most religious activities involve food at some level, and they often revolve around food and the hope of having enough.

The half of the population that remains nomadic raises livestock, including sheep, goats, horses, yaks, and camels. The makeup of herds varies by region, with more yaks in the north and more camels in the south. The Dukha, a small minority living in the far north, raise reindeer instead and live in tepees rather than gers, but they are nomadic herders like other Mongolians. Livestock raising makes up about

70 percent of the value of agricultural production in Mongolia, and most of the industry that has grown up revolves around processing related to herding, from processing and knitting cashmere to tanning leather to producing meat and milk products. Mongolia does have mineral reserves that have more recently become a factor in the country's economy, but it is still the herds that rule.

Food Culture Snapshot

Batbayar sits on the edge of the small, metal-framed bed that was placed against the back wall of the ger. The felt at the base of the ger is turned up to allow whatever breeze there might be to pass through. July in the Gobi is hot, but the white of the felt reflects

the heat and, with the breeze, makes the ger relatively comfortable. Soon, the neighbors will arrive, to both help with and celebrate the first milking of the mares. Batbayar watches as his wife, Sarangerel, fills a huge bowl with boiled mutton, scoops soft blobs of camel-milk cheese into another bowl, and stacks dried curd (called *aaruul*) and fried dough (*boortsog*) on a metal plate.

Batbayar and Sarangerel have already started preparing for the winter, as the summer is so short. Strips of drying meat—mutton and horse—hang from the ger framework along one wall. Blocks of *aaruul* dry on the roof. Large jars along another wall hold various fermented milk products—milk vodka (*arkhi*) from the sheep, yogurt from the camels, *airag* (a fermented milk) from the horses (better known in the West by its Russian name, kumiss). Outside, their herds prepare, too, grazing on coarse golden grass, recovering from the harsh winter and putting on fat for the winter to come—and, more important, having babies and making milk.

Batbayar and Sarangerel's four children play outside among the camels until the guests begin to arrive, and then they enter the ger, too, not wishing to miss any of the celebratory food. As the guests enter, the men begin to pass around their snuff bottles, as the custom of hospitality dictates. Everyone politely reaches around the outside of the two ger poles, never between. Sarangerel opens a large metal container and ladles camel-milk yogurt into bowls, which are passed around the room. Lumps of dried camel milk are passed next.

After eating, everyone goes outdoors—it is time to go to work. First, the foals have to be captured. About half of the men are on horseback. Those on foot help guide the stampeding horses away from the children and toward the riders. One rider has a long pole with a lasso at the end—a device called an *uurga*. This permits the rider to slip a loop of rope over the neck of a horse more easily. As the foals are captured, they are tethered nearby. The foals have to be captured because, unlike cows, mares won't give milk if their foals are not beside them. The mares are captured next and tethered near their foals.

After all this effort, it is time for some refreshment. In the ger, Batbayar pours sheep-milk vodka into a

glass, and the glass is handed to one neighbor. After he drinks all he wants, the glass is handed back, refilled, and passed to the next guest. This continues until all have had a drink. Then this is repeated with the camel-milk vodka. A *morin khuur*—the traditional horse-headed fiddle of Mongolia—is produced, and the men sing songs about the earth. Then, at the time appointed by tradition, everyone goes back outside for the milking of the mares. Women are expected to milk sheep, goats, yaks, and camels, but milking horses is men's work. Mare's milk is made into cheese and vodka, like other milks, but most of it is made into *airag*, a slightly alcoholic, yogurtlike beverage that is the national drink of Mongolia.

Mares milked, the crowd returns to the ger for more food. Sarangerel passes around bowls of mutton soup with noodles while the men fall on the mound of boiled mutton. Soon everyone—men, women, children—are gnawing bones and downing blood sausage and lumps of fat. The meal ends with bowls of tea with camel milk and salt.

Batbayar mounts his horse. The first pail of mare's milk is handed to him, and he threads it onto the *uurga* pole. Two riders join him, one on either side, holding the pole, while Batbayar holds a ladle. The three then gallop around the camp three times in a clockwise direction, with Batbayar ladling milk into the air, as a gift to the sky. This is to ensure that the mares will continue to give milk.

Guriltai Shol (Mutton Soup with Noodles)

Traditional Mongolians would make the noodles from scratch as well—simply flat noodles made of wheat flour, water, and a little salt, kneaded, rolled thin, and cut by hand, but in the cities, packets of noodles are available for busy urbanites who no longer have the luxury of time but still long for familiar dishes.

1 lb fatty mutton (beef may be substituted)

1 tsp salt

8 c cold water

Meaty soup bones (optional)

- 2 medium onions, thinly sliced
- 4 oz packaged noodles ($\frac{3}{4}$ in. wide)

Cut the meat into strips, as if you were preparing it for a stir-fry dish. Put the meat and 1 tsp salt into the water. (If using soup bones, to create a heartier broth, add them to the water, too.) Boil until the meat is thoroughly cooked and water has become a light broth (about 45 minutes), skimming if scum forms. If you used bones, remove them from the broth after the meat is cooked. Then add the onion and noodles, and continue to boil until noodles are done. Taste for seasoning, and add salt if necessary. Soup is ready to serve once the noodles are cooked.

Major Foodstuffs

For about half of the population, the “grocery store” is grazing outside, and the “pantry” is any available space in the ger. Grazing animals—sheep, goats, horses, camels, yaks, and, for one ethnic minority, reindeer—provide almost the entire diet, in the form of both meat and milk products, for the half of Mongolia’s population that still live as nomad herders. Even those who live in the city often rely on these same provisions, begging relatives for carafes of airag and going to the meat market to buy whole butchered sheep or goats.

Hunting supplements the meat supply, with marmot season of particular importance to those who have developed a taste for this large squirrel relative. Mongolian gazelles and wild sheep are also hunted for their meat. Interestingly, though Mongolia’s lakes and rivers team with fish, supporting a small fishing industry, most of the fish that are caught are canned and shipped overseas. While some fish may be served in the cities, it is not part of the traditional Mongolian diet.

Meat and dairy, though occasionally consumed fresh, are usually processed into a wide range of products that will last without refrigeration. Thanks to the dry air (the humidity averages about 10 percent), even milk and meat can be dried safely. Dried meat is called *borts*. The rock-hard borts can be easily stored or transported until needed, at which time

it is pounded to powder and put in boiling water. Milk may be fermented, distilled, made into cheese or yogurt, churned into butter, or dried. When fresh milk is available, milk tea, or *suutei tsai*, is the favorite way to consume it. Milk and hot tea are combined in equal parts, and then salt and sometimes butter are added. This beverage makes sense in an arid country where life depends on water, salt, and getting enough calories.

These dining traditions have remained unchanged for 1,000 years or more. When Marco Polo visited this land 700 years ago, his report on the diet was virtually identical to what can be seen today—meat, milk (including mare’s milk, which startled the explorer), and game (including marmot, which Polo described as being abundant). He even described the methods of producing dried milk, which are the same methods used by Mongolian nomads today.

Mongolia has one major crop, wheat, though a small amount of barley and millet is also grown. With so little arable land and such a short summer, Mongolia is not a major grain producer, but that hasn’t kept Mongolians from utilizing wheat flour, in particular, in traditional cuisine. Bread, boortsog (fried dough strips that are also sometimes called “nomad biscuits”), noodles, and dumplings are the main outlet for wheat. Meat-filled dumplings are much loved, and there are those who believe that the reason every culture from Korea through to eastern Europe has meat-filled dumplings is that that was the extent of the Mongolian Empire. There are three types of dumplings: *buuz*, *bansh*, and *huushuur* (*buuz* is pronounced *boats*, but the other two are pronounced pretty much as they appear).

Mongolians will sometimes eat fruit and vegetables when they are available, though fruit is the rarer option. As some of the population has adopted a more settled lifestyle, small garden farms have begun to appear around the countryside, making vegetables more readily available. Not too surprisingly, because of both climate and history, the hardy and hearty vegetables valued by the Russians are the ones most commonly found in Mongolia. Beets, carrots, cabbage, potatoes, onions, and turnips are generally the available options. Any and all may appear in soups or stews. The beets, carrots,

A Chinese man selling his fresh produce on a street in HoHot, Inner Mongolia, northern China. (Nico Smit | Dreamstime.com)

and cabbage are most regularly seen shredded and served as salads (even at breakfast), simply tossed with chopped garlic and a little mayonnaise or oil and vinegar.

A few indigenous plants are collected, but they are not a major source of calories. Some imported goods, such as rice and sugar, make their way into the diet in even remote settlements, and a fairly wide range of imports are coming into the cities now. However, the main diet is still meat, milk, and flour. It is this diet that has seen the population not only through centuries of history but also, in recent years, through the severe economic upheaval when the Soviets pulled out.

Even in the cities, while local vegetables are readily available, the foods on offer are heavily weighted toward meat, dairy, flour, and vodka. More convenience foods and imports are appearing in the

few grocery stores, but these mostly draw foreigners, while locals get their food at the huge outdoor markets.

Cooking

A lot of the traditional fare of the Mongolians is not cooked. Meat and curd are dried. Milk is fermented, distilled, or made into cheese. However, Mongolia has some delicious and much-loved fare that is cooked. If an animal is killed for food during the summer, it must be processed immediately. If it is not torn in strips and dried, it must be cooked. Out on the steppe, there are essentially two recipes for cooking a whole animal: You make *horhog* or *boodog*. Both dishes involve hot rocks.

First, two or three dozen medium-sized, water-smoothed stones are collected. The stones are

placed in an open fire and heated until almost red hot. For horhog, a sheep is cut into pieces, with the bones still in. A few quarts of water are poured into a large metal container (a 40-quart container for a medium sheep) with a tight-fitting lid, and then the pieces of meat are added, alternating layers of meat and hot stones. The lid is tightly closed, and the meat is left to cook for an hour or two. This renders a fabulously moist meat that falls off the bone.

Boodog is a dish made of goat or marmot. There is no metal container, as the animal becomes the cooking vessel. The goat or marmot is cleaned out, the entrails being removed through the neck, in order to leave the skin whole, and then the body is filled with the red-hot rocks. It is then sealed tightly. While the meat cooks from the inside out, a torch or gas burner is used to burn off all the hair on the outside.

For both boodog and horhog, when the dishes are cooked, the greasy, still-warm stones are removed first and passed around to the diners, who move the rocks from hand to hand, holding them long enough to warm the hands. This is considered to be healthful; it is definitely relaxing.

While firewood is burned to heat stones for boodog and horhog, for other more common cooking, especially in the steppe, the primary fuel is dried dung, which is abundant and is almost all plant matter. Soups—all with meat—are boiled in pots over open fires, as is the water for suutei tsai (milk tea). Boortsog, a traditional “biscuit,” is fried in the oil rendered when soup is made. All these dishes are prepared over the dung fires.

The only other traditional cooked foods are dumplings, and while their recipes are all quite similar, their sizes and the methods for cooking them are quite different. The dough is a simple one of flour and water, and the filling is chopped meat (usually mutton) with onion, garlic, and seasonings. Buuz (pronounced “boats”) are two-bite dumplings that are similar to, though fatter than, pot stickers. Buuz are steamed. Bansh are much smaller and are boiled. They commonly appear bobbing around in soup or milk tea. Huushuur are much larger, about five or six inches on its longest side. Huushuur are fried, which makes it more portable than the other two dumplings. In fact, huushuur often appear at

outdoor venues and festivals, where they are eaten out of hand.

Huushuur (Mongolian Fried Meat-Filled Pastries)

Makes 8 pastries

Dough

2¼ c flour

¼ tsp salt

About 1 c water

Filling

1 lb chopped or ground fatty beef or mutton

1½ tsp salt

¼ tsp ground black pepper

½ tsp marjoram

½ onion, finely chopped

1–2 cloves garlic, finely chopped

Oil for frying the filled pastries (mutton fat is traditional, but cooking oil works)

Combine flour and salt. Add half a cup of water to the flour, and then continue to add water a little at a time, mixing it thoroughly, until you have a rough, dry dough, about the texture of that for pie crust.

Traditional Mongolian dumplings stuffed with meat. (Shutterstock)

Knead until dough is smooth and elastic. Cover and let rest for 5 to 10 minutes.

Combine all filling ingredients, mixing thoroughly. If dry, add a few drops of water to moisten.

Divide the dough into quarters. Roll each quarter into a cylinder, and cut in half. Roll each half cylinder into a circle about 5–6 inches across. Place about 2 to 2½ tablespoons of the filling on one side of the circle, leaving space around the outside edge. Fold the other side over, creating a half-moon. Pinch the edges closed, squeezing out air and flattening the filling as you work. Repeat the process with the rest of the filling and dough pieces.

Pour oil into a frying pan to a depth of about ½ inch. Heat oil until hot. Fry two or three pastries at a time for 2 minutes per side, until they are golden to brown and the meat is cooked. The huushuur can be eaten hot or cold.

Typical Meals

Among the nomad population, the amount and types of food vary with the seasons. In summer, the consumption of dairy products is heaviest, while meat is more heavily consumed during the rest of the year. Cooking is generally done once a day, unless there are guests. Breakfast and lunch are the biggest meals of the day and generally consist of boortsog (fried bread), salty milk tea, boiled mutton, broth with noodles or another starch, and dairy products, depending on what is available—fresh milk, sour clotted milk, yogurt, cheese, curds, or airag. In summer, an entire meal can be made of dairy, or “white food,” as the Mongolians call it.

Minor variations exist across the country. In the north, the high-fat milk of yaks is more common, while camels and goats are more numerous in desert regions, so a more common source of milk there. In the far north, around Lake Khuvsgul, the Dukha rely on their reindeer. But everyone is still mixing the milk with tea and salt, making yogurt and cheese, and drying curd. The Muslim Kazakhs of Mongolia’s west find nothing to object to in the Mongolian diet, but they tend to eat more horse

meat than other Mongolians do. Throughout Mongolia, however, meat and milk are still the foundations of the meal.

In an urban setting, meals vary only slightly. A meal will usually consist of broth with noodles, or possibly borscht, a relic of the longtime Russian presence; a salad of shredded beet, carrot, and/or cabbage; and a meat dish. Desserts are uncommon.

Eating Out

Eating out for the majority of Mongolians pretty much means either dining outdoors or visiting the neighbors, even for those living in urban areas. The only real exception for many is if one makes the trek to the annual Naadam Festival, and even then, most of the food on offer is fairly traditional, with fresh fruit and ice cream being among the most exotic items offered, amid a sea of grilled meat and huushuur.

However, not every meal is eaten at home. The rural population in particular is very mobile, moving with the herds or making regular, if infrequent, runs to town or distant farms for supplies, and the urban population is increasingly too busy to make familiar dishes. Almost ubiquitous in Mongolia is an eatery called a *guanz*. These generally modest dining establishments can be found in abundance in every town or city, as well as along roads that have regular traffic. A *guanz* may be located in a building, a *ger*, a small hut, or even a railway car. These little shops offer basic Mongolian comfort food, including soup, salty milk tea, and either *buuz* or *huushuur*. There are also nicer restaurants that serve traditional specialties, including some that offer traditional Mongolian entertainment. However, the average Mongolian is more likely to stop at a *guanz* to fill up on cheap, familiar favorites.

The real advent of varied cuisine came after the Soviets pulled out. Mongolia is now able to have business and political ties with other countries, there has been an influx of foreign workers and entrepreneurs, more young Mongolians are traveling overseas for advanced education, and tourism is an increasingly important part of the nation’s income. All these factors have contributed to growing

A Chinese Mongolian elder offers traditional sweets blessed by Buddhist Lamas at a ceremony on a shrine on top of a hill, during the Naadam festival on the grassland of Gegental Steppe in China's Inner Mongolia region. (Getty Images)

interest in what the rest of the world is eating—and a growing number of immigrants able to bring the cuisines of the world to Mongolia's cities.

Many of the restaurants that are not specifically Mongolian focus on cuisines that value meat, from Korean barbecue to Turkish kebabs. In recent years, French, Italian, German, Mexican, and Indian foods have become available in Ulaanbaatar, as well as in other large cities. A few cities even have vegetarian restaurants. While the cooking style identified as “Mongolian barbecue” in the United States was invented by the Chinese and bears no resemblance to any cooking method in Mongolia, an American Mongolian barbecue restaurant has

opened in Ulaanbaatar and has found an amused but appreciative audience. Cafés have become popular, with outdoor seating cherished during the short summer, and there are a few brewpubs, primarily serving local beers, such as Altan gobi, Khan brau, and Chinggis. Pizza has put in an appearance, as have submarine sandwiches (Sub-Baatar), catering primarily to the younger generation. It is unlikely that a major portion of the population will be giving up milk tea and dumplings anytime soon, but for those who wish to explore, or those who have fond memories of food consumed during their travels, there are now several options besides traditional Mongolian food.

Special Occasions

The biggest event in Mongolia is the Naadam Festival (*naadam* means “games”), held every year on July 11–13. Founded more than 800 years ago by Chinggis Khaan, the Naadam Festival has come to be a celebration of both the great Khaan's birth and Mongolia's independence. This three-day event features the “three manly sports” of horse racing, archery, and wrestling (though women may compete in archery, and children ride in some races). A few remote areas hold their own naadam events, but the big event is in Ulaanbaatar. Temporary villages of gers crowd fields and hillsides around the city. Herds of horses clog the roadways, slowing motor traffic. Everyone who is able comes to Ulaanbaatar for this event, and those who can't come are usually glued to their televisions, to see which horse, archer, or massive, powerful wrestler will be victorious. The president, top officials, and visiting dignitaries attend.

As much fun as watching the sports is the fairway, for those attending. This is the one opportunity many nomadic or rural Mongolians have to eat fruit or buy new clothes, and the fairway is lined with vendors selling everything from huushuur to infant's shoes, and from ice cream to cooking pots—every necessity, as well as a number of luxuries. Even so, many of the vendors are selling familiar foods, and grilled meat is more common than the modest stacks of fresh fruit.

The most important holiday on the Mongolian calendar is Tsagaan Sar, or “White Moon”—the lunar new year. This holiday, which follows lunar cycles, can fall anywhere from late January to early March. It symbolizes new beginnings and is considered to be the day when spring begins to return. Food is a key component of the holiday, as a full belly during Tsagaan Sar is said to represent prosperity in the year ahead. Tsagaan Sar is a family holiday, and much of urban Mongolia shuts down, as people travel to be with their families. Everyone dresses in their best clothes and goes from ger to ger, visiting neighbors. The festivities last for several days. Every family will cook a saddle of mutton and prepare mountains of buuz for family and visitors, and there is even more feasting on the night of the new moon.

Mongolians happily celebrate anything that marks a milestone in life or the year. Birthdays, the first cutting of a child’s hair (at age three), weddings, the first milking of mares, and gatherings to shear sheep and make felt for gers at the end of summer are all reasons for eating and drinking. For special events, white foods (dairy products) are served first; these are considered pure and noble. Then red foods (meat) are served.

Mongolian nomads have a strict code of hospitality. Anyone can approach a ger and ask for food and drink. However, there are elaborate rules and ceremonies surrounding both giving and accepting hospitality—including the cry of “hold the dogs” on approaching a ger—which is both good manners and an important safety measure. When the traveler leaves, the host will dip his finger in milk and flick it into the air, in the general direction the traveler will be taking. Like the larger milk-sprinkling ceremony that follows the first milking of the mares, this is done to honor the gods of sky and nature and ask for protection for the traveler.

Diet and Health

On the whole, Mongolians, particularly those living a traditional lifestyle, are a robust people. However, conflicting reports and incomplete research that started only after Soviet withdrawal make it difficult

to know precisely how healthy the Mongolian diet is. The traditional Mongolian diet is not well balanced, and some deficiencies have been detected in some groups but not as many as one might expect. Mare’s milk is high in vitamin C, which compensates largely for the lack of fruits and vegetables in the diet. The vigorous lifestyle, especially in winter, requires a high calorie intake, and only the meat and dairy diet can supply all the calories needed, especially in a country where people are generally too poor to seek other calorie sources. Some research seems to suggest that, after more than 1,000 years of eating the same thing, Mongolians have either adapted or are genetically predisposed to digesting large amounts of protein.

While the traditional diet may not be perfect, the urban diet has introduced a number of new problems. Dental health has worsened. Children in Ulaanbaatar, where sugar is readily available, have far more cavities and dental problems than nomad children, for whom the consumption of hard cheese offers generally good dental health. The World Health Organization notes that cancer, heart disease, and other problems associated with lifestyle change are increasing. While urban diets have more variety, increasing urbanization also leads to a generally more sedentary lifestyle and greater consumption of refined carbohydrates and highly processed foods, including a switch to sugared soft drinks in place of milk. While vegetables are more available, it remains to be seen whether the added vegetables compensate for the loss of vitamin C and calcium from the consumption of abundant mare’s milk. The sedentary lifestyle has, not too surprisingly, led to an increase in obesity in urban settings.

As more people are living in close proximity to one another, there is also the issue of safe water and sanitation. Mongolia is turning to its allies and trade partners for aid in establishing water-safety and sanitation practices that aren’t necessary when one’s nearest neighbor is a few dozen miles away.

The biggest threats to health for those who eat the traditional diet are external. Foremost is the *zud* (also occasionally spelled *dzud*). About every 10 years, Mongolia experiences a *zud*, or dangerously colder winter than usual. The long winter is

normally cold, with January temperatures averaging minus 20 degrees Fahrenheit (minus 30 degrees Celsius). Mongolians and their animals easily survive these ordinary freezes, but a *zud* takes the temperature much lower or brings a combination of factors, such as heavy snow or a layer of ice, which keep the animals from eating. During the winters of 1999/2000 and 2000/2001, approximately six million head of Mongolian livestock (sheep, goats, horses, camels, yaks) perished in record *zuds*. When animals die, people often perish as well, for lack of food. These last two disastrous cold spells threatened the health and food security of approximately 40 percent of Mongolia's population.

Another external threat is marmot hunting. Marmots may be a favored food, but they are rodents—flea-bearing rodents that often have bubonic plague. As a result, there are a few deaths from the plague each summer, usually after marmot-hunting season.

Nepal

Overview

The Federal Democratic Republic of Nepal (until December 2008 the Kingdom of Nepal) is a landlocked country bordered to the north by Tibet and to the south, east, and west by India. It has an area of 57,000 square miles and a population of approximately 30 million. Unlike the rest of South Asia (except Afghanistan) Nepal was never occupied by a foreign power. It was virtually isolated from the rest of the world until the 1950s. The country thereafter became a magnet for tourists, including trekkers, mountain climbers, and young people from Western countries. Nepal is an extremely poor country, with an average per-capita gross national product of \$1,200.

Nepal is divided into three geographic regions: the lowlands, or Terai (an extension of India's Ganges Plain); the central *pahar* (foothills), which range from 1,000 feet to nearly 15,000 feet with many valleys, including the populous and cultivated Kathmandu Valley; and the Himalayan region with many of the world's highest peaks, including Mount Everest. These east–west regions are intersected by many rivers and streams. Until the 1950s transportation was poor, so that many ethnic groups and tribes lived in isolation from each other for centuries and retained their own customs and foodways.

The original inhabitants of Nepal were probably Mongoloid people speaking Tibeto-Burman languages who came from the Tibetan Plateau. In more recent times, Tibetan refugees came to Nepal. Starting around 2000 B.C. people speaking Indo-European languages came to the region from the plains of India and the western Himalayas and between

the 12th and 6th century B.C. established small kingdoms in the Himalayan foothills. Siddhartha Gautama, who became the Buddha, was born in one of these kingdoms in 624 B.C., and Buddhism became the dominant religion of Nepal. The region later came under the cultural influence of various Indian empires, which led to the spread of Hinduism and the entrenchment of the caste system. From 1846 to 1953 the country was ruled by the Ranas, who were originally Rajputs from India. This reinforced the cultural and culinary ties with India.

Nepal is one of the world's most ethnically diverse countries. The 2001 census identified 92 languages belonging to four major linguistic groups (Indo-European, Dravidian, Sino-Tibetan, and Austro-Asiatic) and 103 distinct caste and ethnic groups. More than 80 percent of the population is Hindu, nearly 11 percent are Buddhist, 4 percent are Muslim, and 5 percent are Christian and animists.

The northern region is inhabited by Buddhist ethnic groups of Tibetan origin, including the Sherpas, famous as mountain guides, and the Gurkhas, who once ruled the area and later made their mark as intrepid soldiers in the British army. Other groups include the Gurungs, Magars, and Chetris in the west and the Rais and Limbus in the east. The *pahar* (meaning “mountain regions”) is home to the Parbatiya, the name given to Nepali-speaking Hindus, and the Newars, who live mainly in the Kathmandu Valley. Although numbering only one million they have retained their cultural and culinary identity and have made important contributions to the art, architecture, and cuisine of the country. The Terai region, once nearly deserted because of malaria,

became home to many immigrants from India after the discovery of DDT. The residents have close ethnic and culinary ties with people in the adjacent Indian states of Bihar and Uttar Pradesh.

This diversity means that it is extremely difficult to generalize about Nepali cuisine. Although a national cuisine is developing, or at least certain national dishes, there is still reliance on local ingredients, especially in remote mountain areas.

🍴 Food Culture Snapshot

Uttam Karki is a senior civil servant in the Nepali government. He and his wife, Rajani; their 13-year-old son, Devendra; and their 10-year-old daughter, Uma, live on the outskirts of Kathmandu. After taking their baths, the family has a meal at 9:30 A.M. consisting of dal, rice, and a vegetable stew (a meal known as *dal-bhat-tarkari*), with a little spicy pickle (*achaar*) on the side. The adults drink strong black tea with milk and sugar; the children have a glass of cow or water buffalo milk.

The father and children enjoy a light lunch at their office or school canteens. When Devendra and Uma return from school around 4:00, they join their mother for a light meal called tea or *tiffin*. It includes savory dishes such as pressed rice flakes (*chiura*) with spices and nuts, sautéed potatoes, and samosas (pastries filled with spiced vegetables or meat) as well as sweets (*mithai*) bought from an outside vendor. Like most Nepalis, the Karkis have dinner at 9 or 9:30 P.M. Dinner is the same as the morning meal but with an additional dish, such as a goat curry or sautéed greens.

The Karkis are Hindus belonging to the *chhetri* (warrior) caste (*kshatriya* in India), which means that they eat goat, lamb, and chicken but not beef. Like many Hindus Rajani fasts twice a month. On these days she avoids meat and spicy food and eats only rice, dal, and boiled vegetables. During the festival Dashain the Karkis go to the Dakshinkali temple in Kathmandu, where they purchase a goat for sacrifice. They leave behind the head, neck, and tail at the temple as an offering and take the rest home to prepare.

Major Foodstuffs

Nepal is a predominantly rural country. The largest crop and the dietary staple for most Nepalis is

rice, which is grown mainly in the central region. At higher, drier altitudes, people cultivate wheat, corn, barley, millet, buckwheat, amaranth, and root vegetables as the staples. According to the United Nations' Food and Agriculture Organization, in 2005 Nepalis consumed an average of 180 pounds (82 kilograms) of rice, 86 pounds (39 kilograms) of wheat, and 77 pounds (35 kilograms) of corn per capita per year.

Other important crops are vegetables such as potatoes, okra, taro, radishes, cauliflower, kohlrabi, bitter gourds, snake gourds, *iskus* (a squashlike vegetable with a delicate skin), eggplants, and many vegetables that have no English equivalents, including local greens known collectively as *saag*. Bamboo grows in profusion in Nepal, and the tender shoots are used in many different ways for making pickles and in curries.

Tama ko Tarkari (Bamboo-Shoot Curry)

- 1 medium onion, finely sliced
- 2 tbsp mustard oil or corn oil
- 1 tbsp ginger, finely minced
- ½ tsp turmeric
- ½ tsp ground coriander
- ½ tsp chili powder
- 1 tsp salt, or to taste
- 1 c potatoes, cut into 1-in. pieces
- 1 c black-eyed peas, soaked overnight

A Sherpa woman uses a flat basket to winnow barley in Nepal. (Christine Kolisch | Corbis)

1 ripe tomato, cut in pieces

1½ c water

½ c bamboo shoots (canned or fermented)

Sauté the onion in the oil in a heavy pan until it is golden brown. Add the spices and salt, and fry until they separate from the oil. Add the potatoes, black-eyed peas, and tomato. Cook until tender. Add the water. When it begins to boil, add the bamboo shoots, and cook for a few minutes until they are hot. Serve with rice.

Locally grown spices include ginger, mustard seed (of which Nepal is the world's largest exporter), nutmeg, mace, cardamom, and chilies. Hotness also comes from *timur*, a berry similar to Sichuan pepper. *Jimbu*, an aromatic grass with a shallot-like flavor, is a popular seasoning, as is *chhyapi*, a member of the *Allium* genus that resembles chives. Oranges and tangerines grow in the hilly regions, mangoes in the Terai, and pineapple in eastern Nepal.

Although most Nepalis practice Hinduism or Buddhism, which have restrictions on meat consumption, all except the most orthodox Brahmins and Vaishnavs (worshippers of Vishnu) eat meat. However, each ethnic group has its own preferences and prohibitions. Virtually no one eats beef (cows are the national animal of Nepal, and killing a cow used to be a capital offense). Some people avoid yak and water buffalo, because they are similar to cows, and chicken, which is considered unclean, although they may eat wild jungle fowl. Venison and wild boar are popular, although their populations in the wild are declining. Some ethnic groups domesticate and eat pigs. Goat meat is eaten by almost everyone and is the preferred animal in sacrifices, which play an important role in Hindu rituals. Fish consumption is not common in central Nepal, but fish is eaten in the Himalayas where carp, trout, and catfish are caught in local streams. Often, fish are smoked or sun-dried.

Tea is grown in eastern Nepal in the region adjacent to Darjeeling in India. Production is small and mainly for domestic consumption. Cow and yak milk are common beverages and are turned into yogurt and *ghiu* (clarified butter).

Cooking

Traditionally, most utensils and dishes were made of copper or brass. As in India, the main cooking devices are a *karahi*, a woklike pan with two handles used for deep-frying, and a *tawa*, a flat iron pan for sautéing breads. Meat and vegetables are cut on a *chules*, a slanting footlong blade fixed on a piece of wood. The user sits on the ground, presses the end of the wooden block with her foot, holds the item to be cut in both hands, and cuts it by pushing it against the blade. Spices are traditionally ground on a stone slab with a stone roller, but middle-class homes have electric spice grinders and pressure cookers. Standard cooking mediums are *ghiu*, vegetable oil, and pungent mustard oil. Traditional meals are served on a *thali*, a round tray made of stainless steel or brass with a rim. The rice is placed on the thali, and the other dishes are served in small metal bowls or directly on the thali.

Two popular techniques in Nepal are fermentation and drying. A dish called *gundruk* is made by drying green leafy vegetables in the sun, shredding and crushing them, and then storing them in an earthen jar lined with banana leaves. The vegetables ferment for 10 days, after which they are again dried in the sun. *Gundruk* is used as an ingredient in curries, soups, or pickles. Meat, especially venison, is cut into long, thin strips and marinated in garlic, turmeric, ginger, and other spices; it is then slowly dried in the air and sun or over a slow fire, a process that may take several days, to make a dish called *sukuti*.

Typical Meals

Middle-class people in central and southern Nepal eat two main meals a day, one in midmorning and the second in the evening. The meals are basically the same, except that the evening meal may have one or two more dishes since there is more time for preparation. A typical meal consists of a starch—rice among those who can afford it, or corn, wheat, or millet in the hillier regions and among poorer people—accompanied by boiled lentils (*dal*), two or three sautéed or curried vegetables, and a small serving of hot pickles (*achaar*), chutney, or salad. This meal, known as *dal-bhat-tarkari*, is

identical to that eaten throughout northern and eastern India.

Most Nepalis eat rice at every meal. A common greeting is the equivalent of “Have you eaten your rice?” Both long-grain and short-grain white rice are used, and there are many varieties, some of which are boiled and fermented to make alcoholic drinks. A popular rice product is *chiura*, which is made by soaking rice in water, drying and roasting it, and then beating it into flat flakes that are mixed with spices, nuts, or raisins and eaten as a snack. Rice can be sautéed with spices and cooked with meat or vegetables to make *pulaos*, as in North India.

Bread, called *roti*, is made from wheat, corn, millet, soybeans, legumes, rice, and potatoes. Typically, breads are sautéed in a little oil on a *tawa* or are deep-fried. Wheat breads similar to those in North India include *puri* (deep-fried puffy disks), *parathas* (a flaky sautéed flatbread), and flat *chapatis*. Bread made from corn flour is popular in the hilly regions. In the harsh climate of northeastern Nepal, bread is made from sweet potatoes.

The second major dietary component is legumes, known collectively as *dal*, a word that refers to both the raw material and the boiled dish. They include a wide variety of beans: yellow, green (*moong*), orange (*masur*), black, horse gram, split peas, pigeon peas, and chickpeas. Combined with grains, *dal* provides most of the amino acids needed to maintain health. The most common method of preparation is boiling the *dal* in water and adding spices sautéed in ghee or oil at the end. Nepali *dal* tends to be thinner than *dal* in India. Soybeans are extensively grown and consumed in Nepal (unlike in India where they have never caught on) and are an ingredient in salads and soups. One of the most famous Nepali lentil dishes that is of Newari origin is *kwaati*, made by sprouting nine or more varieties of lentils and beans, sautéing them with spices, and cooking them to make a thick soup.

Vegetables are eaten at every meal. A standard method of cooking is to sauté spices, ginger, garlic, onions, chilies, and herbs in mustard oil, vegetable oil, or clarified butter, and then add vegetables or greens, cover, and cook slowly, adding water if necessary.

Most families eat meat and fish only occasionally, since they are expensive. Poor people consume meat only on special occasions and at festivals. The most common meat is a freshly slaughtered goat. The Nepali word for goat is the same as the word for meat—*khas* or *boka*. Lamb and pork are eaten less frequently.

A standard way of preparing meat is to marinate it in yogurt, spices, onions, and garlic, then cook it slowly until it is done and the gravy has thickened. The spice mixture often contains fenugreek and *ajowan* seeds and is generally milder than in Indian dishes. The meat is always cooked with the bones since this adds flavor. *Bhutuwa* is a method of preparing boneless goat, pork, or water buffalo by cooking the meat in oil and spices over high heat until it browns. Meat can be cooked very slowly in water and spices to make a thin souplike dish called *suruwa*. Pieces of goat or chicken are marinated in yogurt and spices and grilled to make kebabs, called *sekuwa*.

Achaars (pickles) are an essential component of a Nepali meal since they provide vitamins that may otherwise be lacking as well as variety of flavor. Mustard oil and chilies give hotness and pungency. Almost any fruit or vegetable or even meat can be used to make an *achaar*, although tomato is the most common ingredient. Chutneys made from fruit, vegetables, dried fish, or mint are usually prepared fresh for each meal and can range from mild to fiery hot.

Achaar (Tomato Pickle)

2 lb tomatoes

6 cloves garlic, finely chopped

4 green chilies

½ in. piece of ginger, finely chopped

½ tsp salt

⅛ tsp timur (or Sichuan pepper)

¼ c finely chopped cilantro

Bake the tomatoes in the oven at 450°F for 30 minutes or on a grill until the skin darkens. Let cool and remove the skin. Roast the garlic and the green chilies in the oven or on the grill. Grind the garlic, chilies, ginger, salt, and timur in a blender, then add

the tomatoes and mix well. Transfer to a bowl and add the chopped cilantro.

A meal may end with fruit but does not generally include a prepared dessert.

In the midafternoon, a light afternoon meal (sometimes called tiffin or tea) consisting of snacks and sweets is served. Typical teatime snacks are *chura* (flattened rice), *pakor*s (vegetable fritters), and samosas (baked or fried pastries filled with meat or vegetables). Many sweets are identical to those of North India, including *halwa* (a grain or vegetable pudding), *gulab jaman* (sugar and milk balls in a sugar syrup), *jilebis* (pretzel-like coils of chickpea batter fried in oil and soaked in sugar syrup), and *barfi* (a fudge made from flour, lentils, nut, fruits or vegetables, and thickened milk). A distinctly Nepali sweet dish is *juju dhau*, a sweetened yogurt traditionally made from buffalo milk and fermented in red clay pots. Tea drinking is an important part of Nepali social life; tea is served throughout the day, usually with milk and sugar.

The 1.2 million Newars, who live mainly in the Kathmandu Valley, have an extremely rich culture and cuisine based on the wide variety of vegetables that grow in their fertile habitat. Newars are one of the few ethnic groups who eat the meat of water buffalo, which may be fried, grilled, dried to make a kind of jerky, boiled into a broth, or cooked in curries. A delicacy is *cho-hi*, steamed buffalo blood eaten with marrow and spices.

Wo, a patty made of ground lentils with a meat or egg topping, is eaten as a snack. Two distinctive rice-flour breads are *chatamari*, a flat, round bread eaten plain or topped with minced meat, egg, or sugar, and *yomari*, a steamed conch-shaped dumpling filled with roasted sesame seeds and brown sugar.

The Newaris are famous for their alcohol drinks made from rice and other grains. *Jaand* is a mild rice beer made by fermenting cooked rice for 24 hours and adding water. *Raksi*, sometimes called Nepali whiskey, is a stronger drink distilled from fermented rice, millet, and barley.

Rice will not grow at high altitudes, so in the Himalayas the main starches are barley, millet, and potatoes, made into bread or noodles. A traditional

Sherpa meal consists of boiled potatoes rubbed in a thick paste of hot chilies with a few slivers of yak meat dried above the fire. Another staple is roasted barley flour or millet flour boiled in water to make a thick paste (*tsampa*) eaten with chilies. The standard drink is tea with yak butter and salt.

The Tibetan population has made important contributions to the cuisine of Nepal. The most famous Tibetan dish is *momos*, small steamed or fried dumplings made from wheat flour and filled with meat, vegetables, and onion. Other ingredients used in the region are bamboo shoots, soy sauce, salted and pickled radish, and sun-dried fish from the mountain streams. *Thupka* is a traditional Sherpa soup made with noodles and meat. A local alcoholic drink is *chhang*, made from boiled millet fermented in a bamboo container and then in an earthen jar.

Traditional fried Nepalese dumplings, or momos. (Shariff Che' Lah | Dreamstime.com)

Momos

4 c white flour

2–3 c water

1 lb minced beef, lamb, pork, or chicken

1 medium onion, minced

1 clove garlic, minced

½ tsp salt, or to taste

½ tsp chili pepper

Knead the flour into a soft, fine dough, adding water as needed. Combine the other ingredients in a bowl and mix well. Pinch off balls of dough the size of an egg and flatten them on a floured surface. Hold a ball in your palm and place 1 tablespoon of filling in the center. Fold over the sides and use the other hand to squeeze the edges tightly to seal and make a little bite-sized bag.

Grease a steamer tray, place momos in it, and steam for 10 minutes. Serve with a mint or tomato chutney.

The foodways in the Terai are very similar to those of the neighboring Indian states of Bihar and Uttar Pradesh, since many of the residents migrated from there. The standard meal consists of dals, wheat bread or rice, and one or two seasonal vegetable dishes. A typical food of the poor is *sattu*, roasted chickpea flour. Laborers carry it in a towel to their jobs and eat it mixed with salt and green chilies.

Eating Out

Traditionally Nepalis did not eat meals outside the home, although snack and sweet shops have always existed, but the influx of Western tourists into Kathmandu starting in the 1950s led to a proliferation of restaurants of all kinds, including German, Russian, Indian, Chinese, Italian, French, Japanese, and now American fast food. Kathmandu is famous for its pastry shops that sell Western-style pies and cakes. Tibetan restaurants serving momos are especially popular.

Special Occasions

Nepali festivals and the foods and food rituals associated with them are numerous. The Newars in particular are known for their festivals, especially during the three harvest months from August to October. The biggest festival is Dashain (the equivalent of Dussehara in North India), which is celebrated for 15 days in September/October. Worshippers celebrate the victory of the goddess Durga over a demon, and the belief is that she must be appeased with blood to prevent her from doing further harm. During this festival, tens of thousands of animals are sacrificed to the goddess, especially goats and black water buffalo, and the courtyards of the temples are literally filled with blood from the sacrifices. People also sacrifice animals at home.

After the animals are killed, every part is consumed, including the liver, intestines, lungs, heart, testicles, and blood. At important temples, braziers are kept burning all day so that the worshippers can cook and consume their meat on the spot. Congealed blood (*ragati*) is considered a delicacy and prepared in different ways. It can be mixed with cumin, garlic, ginger, chili, and turmeric, boiled to a solid mass, and then cut into strips and fried for use in curries. It can be steamed and then cooked with vegetables or be boiled, cut into chunks, flavored with lime juice, and served as a salad. In one version of a dish called *bhutuwa*, intestines and other organs are boiled until done, then cut into small pieces and fried with turmeric, cumin, and chili powder.

Paradoxically, many Hindus fast on certain days of the month, especially on the 11th day after the full moon and the 11th day after the new moon and during festivals associated with the god Vishnu. Fasting can mean many things: abstaining from meat; eliminating cooked food, salted food, or rice; or avoiding food altogether.

Second in importance among Hindus is Tihar, a five-day festival dedicated to the goddess Laxmi and celebrated in October. It is the equivalent of Deepavali/Diwali in northern India. People present each other with sweets during this period. On the first day, food is offered to crows, on the second day people honor dogs, and on the third day cows.

Diet and Health

Because medical resources are limited, especially in remote areas, many Nepalis have recourse to traditional systems of medicine, including Ayurveda, the ancient Indian system of medicine, and Amchi, a Tibetan healing practice. There are an estimated 400,000 practitioners of traditional medicine in Nepal. Both systems rely on the use of local herbs (*jadibuti*) to treat illnesses, and the harvesting of these herbs is a source of income for farmers. In Ayurveda food plays an essential role in preventing and curing illnesses. It is based on the principle

that disease is caused by an imbalance of humors (*doshas*) in the body that can be restored by eating the appropriate foods prescribed by an Ayurvedic physician.

Pakistan

Overview

The Islamic Republic of Pakistan has a land area of around 308,881 square miles (800,000 square kilometers) and a population of more than 130 million. It has borders with Iran, Afghanistan, China, and India and 650 miles of coastline on the Arabian Sea. There are three major geographic areas: the towering Hindu Kush Mountains in the north, the green valleys and fertile plains of the Indus River valley, and barren desert in the south. The climate ranges from extreme heat to cold, and the soil varies from rich to barren.

A separate Muslim state on the subcontinent was first proposed in 1930 by the poet-philosopher Muhammad Iqbal, who suggested that the four northwestern provinces of India (Sindh, Balochistan, Punjab, and the North-West Frontier Province) be united to form such a state. His vision became reality in 1947 when India gained independence from the British Empire and was partitioned into two countries: India, a secular republic with a Hindu majority, and Pakistan, with a Muslim majority. Pakistan initially comprised two parts, West Pakistan and East Pakistan, separated by about 1,000 miles (1,600 kilometers) of Indian territory.

During the partitioning, more than 14 million people crossed the new borders. Some 7 million non-Muslims (Sikhs, Hindus, Parsis, Christians) moved to India, while around the same number of Indian Muslims, many from northern India, moved to Pakistan. In 1971 East Pakistan gained its independence following a short war and became the Republic of Bangladesh. Although Pakistan is an Islamic state, the constitution guarantees freedom of religion. According to the

1998 census, 96 percent of the population is Muslim, 1.6 percent Hindu, and 1.5 percent Christian, plus tiny communities of Sikhs and Parsis.

Modern Pakistan consists of four states: Punjab, Sindh, the Northwest Frontier Province, and Balochistan plus several small federally administered tribal areas. Urdu, an Indo-European language written in a Persian script, is the official language of Pakistan; the national language (used in government documents) is English. Around 66 percent of the population speak Punjabi as their first language; 13 percent Sindhi; 9 percent Pashtu; and 3 percent Balochi. The remaining 8 percent are immigrants from India called Muhajirs (Arabic for “immigrants”) or their descendants. Their first language is Urdu. The capital is Islamabad, a city built in the 1960s to replace Karachi as the capital.

Speakers of these languages belong to the major ethnic groups in Pakistan, a term we define as a community of persons, related to each other by origin and language, and close to each other by mode of life and culture. These ethnic groups have their distinctive cuisines and dishes, but these are not uniquely theirs since they share the culinary traditions of their co-ethnics in adjacent countries. For example, the food of Punjabis in Pakistan is very similar to that of Punjabis on the Indian side of the border, subject to religious dietary restrictions. Pork is forbidden to Muslims, while most Hindus and Sikhs do not eat beef and many are vegetarian. Balochis and Pashtuns share dishes with their co-ethnics in Afghanistan and Iran. The cuisine of the Muhajirs, with its rich, aromatic *biryani* (mixed rice dishes), *pulaos* (rice pilafs), and *kormas* (made with yogurt and nuts), is essentially identical to

that eaten by Muslims in Indian cities like Lucknow or New Delhi. There are very few, if any, dishes that are exclusively Pakistani.

One of the very few cookbooks in English with the word *Pakistan* in the title is K. G. Saiyidain's *Muslim Cooking of Pakistan*. Much of it is a verbatim transcription Balbir Singh's superb *Indian Cookery*, first published in the United Kingdom in 1961. The recipes for bread, meat, and rice dishes in the two books are identical except that the publishers of Saiyidain's book substitute the word *Islamic* or *Pakistani* for *Indian* in Singh's text. A significant difference is that whereas *Indian Cookery* has 25 vegetarian recipes, the so-called Pakistani cookbook has only 12, indicative of the important role meat plays in Pakistani cuisine.

Food Culture Snapshot

Sayeed Ali and his wife, Anita, are a young married couple who live in Lahore, the capital of the province of Punjab. The couple runs a computer consulting business. Their typical breakfast consists of *paratha*, a thick sautéed bread, sometimes stuffed with potatoes, onions, or radish; pickle; and any leftovers from the previous night's dinner, accompanied by a glass of sweet lassi, a drink of beaten yogurt, water, salt or sugar, and mango. Sometimes they have an "American breakfast" consisting of toast and jam and perhaps eggs.

Lunch, eaten around 1 P.M., consists of a chapati, a round wheat bread cooked on a grill; dal (boiled spiced lentils); a couple of vegetable dishes—perhaps carrots or okra sautéed in spices or a potato curry; and just a little meat, since meat is very expensive. Goat meat costs the equivalent of a dollar a pound, the daily salary of an average workingman. Dinner consists of chapati, a *salan* (a goat or lamb curry in a thin gravy) or kebabs, and a vegetable. The Alis eat rice once or twice a week. When guests come they may prepare a more elaborate biryani, a rice and meat dish (see the following). Dessert is not a standard part of their meals, but sometimes they may have fruit in season, a *kheer* (rice pudding), or *firni*, a custard.

Major Foodstuffs

Pakistan is a predominantly rural country, where more than half the population is involved in agriculture. The dietary staple is wheat, the country's largest cash crop. According to data from the United Nations' Food and Agriculture Organization, in 2003 per-capita consumption of wheat in Pakistan was 240 pounds (109 kilograms), compared with 136 pounds (63 kilograms) for India. Although rice is the country's second-largest crop, per-capita consumption is only 35 pounds (16 kilograms) per year compared with 136 pounds (63 kilograms) in India and 352 pounds (160 kilograms) in Bangladesh (where rice is the staple). Much of the rice, especially basmati and other high-end varieties, is exported to the Middle East. Other food grains are millet, sorghum, corn, and barley. Chickpeas are the main nongrain food crop in area and production. Pakistan is an important producer of apricots, oranges, mangoes, and other citrus fruits. Livestock, mainly cattle, buffalo, and goats, contributes about half the value added in the agricultural sector, amounting to nearly 11 percent of Pakistan's gross domestic product.

Farmers harvest wheat by hand in Pakistan's Punjab region. (Ric Ergenbright | Corbis)

Cooking

As in other parts of the subcontinent, most domestic cooking is done in a pot on top of a simple burner traditionally fueled by charcoal, twigs, and dried cow patties. Today, middle-class households use a small cooktop fueled by bottled propane gas. Sautéing and deep-frying are done in a wok-shaped pot made of stainless steel or cast iron, called a *kadhai*. Many urban households own a pressure cooker, which considerably shortens the time needed to cook meat until tender. A heavy flat iron griddle with a wooden handle, called a *tawa*, is used for roasting spices and sautéing breads.

Spices, onions, garlic, and herbs are crushed using a small rolling pin on a stone slab or, in more modern households, in an electric spice grinder. Spices can be dry-roasted and ground into a powder, called *garam masala*, or “warm seasonings”; this is stored in airtight bottles. A few pinches are added to a dish just before serving. Powdered or whole spices may be sautéed and added to a dish at the end of the cooking process to add flavor. Spices can also be ground into a wet paste with onions, garlic, ginger, yogurt, coconut milk, or some other liquid and used to make a sauce or gravy.

A standard method for preparing meat starts with frying spices, garlic, onions, ginger, and perhaps tomatoes in a little oil, then sautéing the meat in the mixture and adding small amounts of water, yogurt, or other liquid a little at a time, stirring constantly. Since most households do not have ovens, roasted and grilled foods, such as kebabs (pieces of meat impaled on a stick and grilled over hot coals or in a tandoor, a large clay oven), are either purchased from outside vendors or sent to a local bakery for cooking. Some villages have communal tandoors for baking bread and roasting meat.

Typical Meals

One of the most characteristic features of Pakistani foodways is the consumption of meat (at least by those who can afford it), which is two to three times higher on a per-capita basis than in India, even though

Pakistan’s gross national product and per-capita income is lower. There are very few vegetarians in Pakistan, although there is a tradition of vegetarianism among Sufi saints, who are revered in Pakistan.

Meat is the centerpiece of all feasts and celebrations, including religious holidays and weddings: The greater the number of meat dishes, the higher the status and wealth of the host. The most popular meats are goat, lamb, and chicken; beef is considered somewhat inferior. All parts of the animal are eaten, including the feet, kidneys, livers, brains, and other organs. Pork is never eaten by Muslims.

The most popular meat dishes in Pakistan were brought by the Muhajir immigrants from northern India. This style of cooking is often called Mogul, after the Mogul emperors who ruled much of the subcontinent from 1526 to 1857, but this is a misnomer popularized by restaurateurs and food writers. This cuisine developed over centuries in the kitchens of the Central Asian and Afghan dynasties who ruled northern India from Delhi from the early 12th to the 15th century. Their wealthy courts were magnets for travelers and scholars from the entire Islamic world—the Middle East, Persia, Afghanistan, Central Asia, even North Africa—who brought rose water, saffron, almonds, pistachios, dried fruit, and sweet dishes and pastries. Characteristic ingredients of this cuisine include onions and garlic (shunned by some Hindus); aromatic spices such as cloves, brown and green cardamom, nutmeg, mace, black pepper, and cinnamon; yogurt, cream, and butter; other aromatic flavorings; and nuts, raisins, and other dried fruits.

Meat Dishes with a Gravy

The most popular are *roghan josh*, an aromatic, red-colored curry (stew) marinated in yogurt; korma (also spelled *qorma*), a mildly aromatic braised whitish-colored curry made with yogurt; *dopiya*, a curry made with a large proportion of onions; and *kalia* (*qalia*), a hot preparation with a sauce made with a paste of ground ginger and onion.

A standard method of preparing meat curries starts with sautéing onions, garlic, and ginger in clarified butter or cooking oil until they are brown; adding the

Roghan josh made with lamb and served with basmati rice. (Monkey Business Images | Dreamstime.com)

spices (both ground and whole); sautéing the meat, which may have been marinated in spices, yogurt, or both; and then adding a small amount of liquid, covering the pot, and simmering slowly. The dish may be flavored with rose water and decorated with fried onions, slivered almonds, and silver or gold foil on special occasions.

Korma (Lamb Stew with Yogurt)

- 3 medium onions, sliced
- 2 whole green cardamom pods
- ½ c oil or ghee
- ½ c yogurt
- 2–3 cloves garlic
- 1-in. piece fresh ginger
- 1 tsp black pepper
- 1 tsp black cardamom seeds
- 2 lb boneless lean lamb, cut into 1-in. cubes

½–1 tsp red chili powder (to taste)

1–2 tsp salt (to taste)

Several drops of rose water

15 roasted almonds

Sauté the onions and the cardamom pods in the oil or ghee in a medium pot. When they start to brown, remove them with a slotted spoon and drain as much oil as possible back into the pot. Grind the onions, cardamom seeds, and yogurt into a paste in a food processor or blender, and set aside. Grind the garlic, ginger, pepper, and cardamom pods with a little water until smooth. Heat the oil again, and add the meat, the garlic mixture, and the chili powder. Cook over medium heat for 10 minutes, stirring so that the meat is well coated. Add the onion/yogurt mixture, 2 cups water, and salt. Simmer, partly covered, for an hour or until the meat is tender. Pour into a bowl and sprinkle with rose water, and garnish with the roasted almonds. Serve with paratha or rice.

Meat and Grain Dishes

The most popular dishes are pulao (also spelled pilau, pilaf) and biryani, both originally Persian words. The distinction between these two dishes is blurred and a subject of controversy. Some people claim that a pulao (which can be made with vegetables and seafood as well as meat) is more refined than a biryani; others say the opposite. Both involve cooking the meat with spices, boiling the rice, and combining the two, but the order and manner in which this is done vary.

One way of making a biryani is to boil the meat with spices, cook the rice in the meat water, and then layer the rice and meat in a pan and bake them in an oven. Alternatively, the meat may be marinated in yogurt, spices, and crushed onions while the rice is half-cooked in water. The meat is spread at the bottom of a pot and covered with saffron-flavored milk, the rice water, fried onions, and spices. A layer of rice is spread over the meat and sprinkled with the remaining saffron milk, ground cardamom, and lime juice. The pot is sealed with dough and cooked very slowly so that the contents have a soft texture. On special occasions, biryanis and pulaos are garnished

with fried nuts, raisins, or other dried fruits and decorated with gold and silver foil. *Kabuli (qabuli) pulao*, a popular rice dish that originated in Afghanistan, is made with lamb or chicken, vegetables such as cauliflower or carrots, and sometimes raisins.

Haleem (halim), a popular winter breakfast dish, probably came from Iran or Afghanistan and resembles *harissa* in the Arab countries. It is a thick porridge-like stew made from whole and cracked wheat, lentils, sometimes other grains, spices, and beef or lamb; it is garnished with sliced green chilies, fried onions, and coriander and is eaten with nan. It is cooked overnight and stirred constantly to ensure the right consistency. It is used to break the fast during Ramadan and is also eaten during the festival Muharram if it falls during the winter.

Kebabs

These grilled meats originated in Central Asia and the Middle East and are typically made of lamb or beef. Usually they are purchased from restaurants or roadside stalls and either eaten on the spot or taken home. Some popular kebabs are

- *Seekh* kebab: ground spiced meat rolled into long cylinders and grilled on skewers
- *Shami* kebab: a lightly sautéed small patty made of minced meat and ground chickpeas
- *Chapli* kebab: a spicy flattened meat patty (a specialty of the Northwest Frontier Province)
- *Bihari* kebab: long, thin strips of meat, usually beef, marinated in yogurt, papaya, and spices and roasted on skewers
- *Boti* kebab: whole chunks of meat marinated in yogurt and/or spices and grilled on skewers (also called *tikka* kebab).
- Tandoori chicken: chicken marinated in yogurt and spices and baked in a clay oven (tandoor)
- *Shawarma*, unspiced lamb, beef, or chicken roasted on a spit and served with pita bread or baguette (this dish was brought to Pakistan by workers from the Mideast)

Sweet Dishes

Pakistan has a rich tradition of desserts. They include *halwa*, a kind of pudding made from ground

vegetables (such as carrot and green squash) cooked in ghee; *kheer*, a thick rice or vermicelli pudding made from boiled-down milk (*khoya*); *zarda*, a kind of pulao made from rice, raisins, sugar, nuts, and saffron; *kulfi*, cream flavored with mango, cardamom, or saffron and frozen in small cylinders; *jalebis*, funnel cake-like coils of chickpea batter and sugar deep-fried and soaked in sugar syrup; *sewian*, very thin strands of vermicelli fried in ghee, then cooked slowly in milk until it thickens and flavored with rose water; and *sheer korma*, a sweet pudding made from vermicelli, milk, saffron, sugar, spices, and ghee.

Sewian

2 oz fine vermicelli

$\frac{3}{4}$ c ghee

6 crushed green cardamom pods

3 cloves

$\frac{3}{4}$ c sugar

1 qt milk

2 oz dried coconut

10 drops of rose water or *kewra* (screw pine) water

Break the vermicelli into small pieces, and roast them in a heavy frying pan until they are pink. Heat the ghee in a frying pan, and brown the cardamom pods and cloves, then add the sugar and milk. When the milk is reduced to half its volume, add the fried vermicelli and dried coconut. Cook until done. Sprinkle with rose water or *kewra* water, and serve hot or cold.

Breads

The major staple in Pakistan is bread, usually made from *atta*, a whole wheat flour that has much of the bran and husk left in it. Probably no other region of the world has such a variety of breads as North India and Pakistan. They may be leavened, semileavened, or unleavened; flat, disk-shaped, round, or oblong; soft, crispy, flaky, or spongy; small, medium, or large; austere or opulent; plain or stuffed; and dry-roasted, sautéed, deep-fried, or baked.

Table 22.1

Name of Bread	Ingredients	Method of Cooking	Comments
Chapati/Roti	Atta	Dry roasted on a tawa	Unleavened. Saucer-shaped; puffs up slightly, then flattens
Phulka	Atta	Dry roasted on a tawa, then held with tongs over an open flame	Unleavened. Puffs up to a round ball, then deflates
Paratha	Atta, ghee	Fried in a little ghee or oil	Unleavened. May be round, square, or triangular. Ghee is added during rolling to create a layered, flaky texture. May be stuffed with vegetables, eggs, or meat
Puri	Atta or a mixture of atta and white flour; ghee	Deep-fried	Round, 4–5 inches in diameter; puffs up, then flattens. May have a vegetable filling. Often eaten with halwa
Bhatura	White flour, semolina, sugar, yogurt, baking powder	Deep-fried	Semileavened. Round, slightly puffy. Served with chickpeas. A typical Punjabi dish
Khameeri	Atta and white flour, milk, ghee, yeast, sugar, aniseed, yogurt	Roasted in tandoor or deep-fried	Leavened, sweetened bread
Nan or tandoori roti	Atta or white flour, ghee, sometimes baking powder, eggs, yogurt, milk, sugar	Baked on the wall of a tandoor	Slightly leavened. Round or cylindrical. Rather thick, slightly puffy in places. Served sprinkled with poppy seeds and nigella
Bakarkhani	White flour, milk, sugar, yeast, ghee, almonds, raisins	Baked	
Barqi paratha	White flour, milk, sugar, ghee	Sautéed in ghee on tawa	Rolled several times, adding ghee to layers. Very flaky and rich
Missi roti	Atta and chickpea flour, onion, ghee, spices, fenugreek leaves	Cooked on hot tawa, then roasted over fire	Served with fresh butter and yogurt
Kulcha	Atta, yeast, milk, yogurt, ghee	Baked in tandoor	Semifermented, circular or square shape. Often eaten with chickpeas
Sheermal	White flour, ghee, milk, sugar, egg	Baked	Leavened. After baking, bread is moistened with milk flavored with cardamom and saffron
Double roti	White flour	Oven	Name for Western-style bread
Makki ki roti	Corn flour	Dry roasted or sautéed in a little ghee	Eaten with mustard greens and spinach in the Punjab
Taftan	Atta, saffron, cardamom	Baked in tandoor	Leavened. Served with <i>nihari</i>

Typically a Pakistani breakfast consists of parathas, perhaps stuffed with potatoes, cauliflower, or grated radish, or chapatis, sometimes accompanied by halwa. More westernized families start the day with toast and eggs or cereal and milk.

The midday meal, eaten around 1:30 or 2:00, typically consists of a vegetable dish, a *salan* (a curry with a thin gravy), *korma*, or some other meat curry; dal; pickles or chutney; and yogurt (especially in the summer), accompanied by bread or perhaps a rice pulao. Most people have a light afternoon meal, called a tea,

featuring salty items such as *pakora*, vegetables coated with chickpea batter and deep-fried; *aloo bhaji*, potatoes sautéed in spices; or kebabs purchased from a street vendor.

Dinner is eaten around 7:30 or 8 p.m. In some families, dinner is lighter than the midday meal and consists largely of leftovers from lunch. In others, dinner is the main meal of the day and features dishes that involve more preparation, such as *haleem*, *pulao*, *kofte* (meatballs), or kebabs, served with rice or bread or both along with yogurt, pickles, and salad.

Desserts are not a standard part of a Pakistani meal, but sometimes fruit (such as mangoes in season) or kheer is served, especially if guests are present.

Punjab, the nation's largest state with 25 percent of the land area and 48 percent of the population, shares a border and a culinary tradition with the adjacent Indian states of Punjab and Haryana. This region is the breadbasket of Pakistan, and the food is closely linked to the land. Typical meat dishes include *keema matar*, a rich, dry stew of minced mutton, beans, tomatoes, onions, garlic, and spices, and *mutton rarha*, cooked with yogurt, tomatoes, and spices until the gravy dries up and the meat is well browned.

The region's thick, rich dals are famous all over the subcontinent. *Dal makhani* is made from black lentils, chickpeas, black-eyed peas, or kidney beans simmered for a long time over a slow fire until they become thick and then flavored with spices and cream. Another well-known Punjabi dish is mustard greens, *sarson ka saag*, served with cornbread that is very similar to corn tortillas.

The second-largest state is Sindh, whose capital, the port of Karachi, is Pakistan's largest city. Since the province has a long coastline, fish and seafood are important parts of the diet. A local delicacy is *bunda palais*, fish stuffed with a paste of red pepper, garlic, ginger, and dried pomegranate seeds, then wrapped in cloth and buried three feet deep in hot sand in the sun for several hours. Other characteristic

View of traditional Pakistani dishes. Much of Pakistani cuisine includes pickles, lentils, chutneys, and a variety of spices. (Shutterstock)

Sindhi dishes are *palo kok*, lotus stems cooked in earthenware pots, and *kori gosht*, saddle of mutton marinated in salt, tamarind, and yogurt and roasted slowly over a low flame. A popular drink is *thandal*, made from milk and ground almonds, sometimes with rose petals, cardamom, and other spices.

Many of the residents of Karachi are Muhajirs, who brought with them the food traditions of Lucknow and Delhi. A traditional breakfast dish is *nihari*, beef shank cooked slowly overnight with ginger, fried onions, green chilies, and aromatic spices until a dark, rich gravy is formed. It is garnished with coriander, sliced ginger, and chilies and served with nan. Nihari became so popular that it is now served in special restaurants all day long. *Paya* are goat trotters slowly cooked in a spicy dark brown gravy that becomes gelatinous.

Nihari (Beef Stew with Ginger)

- 2 large onions, sliced
- 1 tbsp oil
- 1 lb boneless beef, cut into 1½-in. cubes
- 1-in. piece fresh ginger
- 3 cloves garlic
- 1 tsp chili powder
- 1 tsp salt
- 2 tsp flour

Garam Masala (Spice Mixture)

- 6 cloves
- 1 tsp cumin seeds
- 8 black cardamom seeds, removed from pods
- 8 black peppercorns
- 1 2-in. piece cinnamon stick

Garnish

Sliced ginger, sliced green chilies, chopped fresh cilantro leaves

Cook the onions in the oil in a medium-size pot for 5 or 6 minutes until they become golden brown. Add the meat, and cook over medium heat for 30 minutes,

stirring frequently. Grind the ginger and garlic in a food processor or blender with a little water until they are smooth. Add to the meat and cook 10 minutes more. Add the chili powder and salt, and cook another 30 minutes. Meanwhile, grind the spices for the garam masala in a spice or coffee grinder to make a fine powder. Mix the flour and spices with a little water, stir into the beef mixture, and add 4 cups water. Mix well, and cook, tightly covered, over very low heat for about an hour or until the meat is tender. Before serving, add the garnishes, and serve with parathas.

The state of Baluchistan borders on Iran and Afghanistan, and Baluchis live on both sides of the border. Traditionally nomads, they cook many of their dishes over an open fire or in a tandoor. Spicing is much milder than in other parts of the subcontinent. Kebabs are very popular. The best-known Baluchi dish is *sajji*, a whole lamb with all the fat intact, marinated in salt and sometimes papaya paste (for tenderizing), stuffed with rice, and roasted over coals or in a tandoor. It is accompanied by *kaak*, a rock-hard bread made by rolling the dough over a stone and baking it in a tandoor.

Eating Out

Large cities such as Karachi and Lahore have a thriving restaurant culture that encompasses many kinds of establishments, ranging from little roadside stands serving snacks and kebabs to modern Western fast-food chains and pricey Thai, French, Italian, and even Indian restaurants in five-star hotels. The most popular “ethnic” food by far is Chinese food. Chinese restaurants are everywhere, and chicken corn soup is a standard item on the menus of most restaurants, even those serving Pakistani food.

The country’s most famous food district is Gawal Mandi (Food Street) in Lahore, which is lined with restaurants serving traditional dishes like nihari, paya, sajji, kebabs, and biryani at reasonable prices. In Karachi, the main restaurant district is Burns Road, but a newly fashionable area is Zam Zama market, where Thai, French, Japanese, Italian, pizza, steak,

Mediterranean, Lebanese, and traditional restaurants are found. During Ramadan, people break their fast by flocking to restaurants and food stalls, which do a booming business at this time.

Special Occasions

Ramadan, or Ramazan, the ninth month in the Islamic lunar calendar, is a period of prayers and fasting. Fasting, one of the five pillars of Islam, commemorates the revelation of the Quran to Muhammad and is a means of physical and spiritual purification. The fast is strictly observed: No food or water can be taken between dawn and dusk, although special dispensations are given for pregnant women, children, sick people, and travelers.

Muslims begin the day with a predawn meal of porridge, bread, or fruit. The fast is broken every day at sunset with a sip of water, dates, and perhaps a little fruit, a custom called *iftar*. People then enjoy sumptuous feasts with their friends and families, centered around meat dishes such as biryanis, kormas, and haleem. The end of Ramadan, called Eid al-Fitr, is marked by the sighting of the new moon and is celebrated with great fanfare. People put on new clothes, visit the mosque, and give food and alms to the poor. Special sweet dishes are prepared, such as sewian and sheer korma.

The second major festival of Muslims is Eid al-Adha (Eid-ul-Zuha or Bakrid), which commemorates Abraham’s offering of his son to God, who at the last moment replaced him with a ram (an event also described in the Old Testament). On this day Muslims are expected to sacrifice a ram or goat if they can afford it and to distribute one-third of the meat to friends, one-third to family, and one-third to the poor. Every meal will include meat dishes until the animal is eaten. Another holiday is Shab-i-Barat, the night when God registers men’s deeds and determines their fates. People distribute sweets in the name of their ancestors and offer flowers.

A Muslim wedding banquet is a lavish affair featuring as many meat dishes as the bride’s family can afford. Traditionally it includes at least one biryani, a korma, mixed vegetables, shami kebab, fish curry or fried fish, yogurt and cucumber salad, bread, and many desserts.

Pakistani Muslim men eat a predawn meal before beginning their fast at a restaurant in Islamabad on the second week of the Muslim holy month of Ramadan. (AFP | Getty Images)

Diet and Health

The Unani system of medicine (*Unani tibbia*) was introduced into the subcontinent by the Muslim conquerors in the 14th century and is adhered to by many Pakistanis. The theoretical framework is derived from the writings of the Greek physicians Hippocrates (460–377 B.C.) and Galen (died ca. 200 A.D.) via the Muslim physician ibn Sina (Avicenna, ca. 980–1037). The Arabic word *Unan* derives from Ionian, the west coast of Turkey, which was at the time part of the Greek world. Unani practitioners are called *hakims*.

Unani medicine is based on the humoral theory of Greek medicine, which assumes the presence of four humors in the body: blood, phlegm, yellow bile, and black bile. Every person is born with a unique humoral constitution, which represents his healthy state and determines his personality. When the amounts of the humors are changed and thrown out of balance

with each other, it leads to disease. Restoring the quality and balance of humors is the goal of treatment, using the body's natural power of self-preservation and adjustment.

Digestion plays a central role in the Unani system. Certain foods can cause indigestion and are to be avoided: those that putrefy quickly (milk and fresh fish), those that take time to digest (such as beef), stale foods, spices and chilies, alcohol, strong tea, coffee, and oily food. However, any food is acceptable in moderation. Aids to digestion include drinks made from *ajwain* seeds, mint, and fennel and coriander seeds; pomegranate juice; and other herbs and spices.

When a disease is advanced, treatment often begins with a total fast, which gives the patient's system a chance to rest, or with the restriction of food. A liquid diet consisting of fruit juices or soups made from meat or vegetables is prescribed for digestive

failure. A semisolid diet comprising yogurt or *kh-ichri* (boiled rice and lentils) is recommended in the case of poor or incomplete digestion.

People are also advised to eat foods that have the opposite quality to their distemper. A person who has too much of the sanguine humor, which leads to increased heat, should eat cold food such as barley water or fish and take cooling herbs; if there is a thinning of the sanguine humor, warm and dry foods are prescribed. For diabetes, bitter and astringent foods are prescribed, such as bitter gourd juice. Weaknesses of specific organs are corrected by eating the same organ of an animal.

Papua New Guinea

Including Bariai, West New Britain Province

Overview

Papua New Guinea (PNG), an independent nation-state (since 1975) and member of the commonwealth of former British colonies, is perhaps the most culturally and linguistically diverse area of the world (800–900 languages). Geographically, PNG varies from the high mountains and lush valleys of the highlands, to sea coasts and reefs, to the verdant volcanic islands off its coast. This cultural, linguistic, and geographic diversity makes it impossible to generalize about anything pertaining to PNG. Foodways in PNG share many commonalities, and more specific examples will be given from West New Britain Province, in particular for the 1,500 speakers of Bariai, one of the approximately 25 cultural groups on the northwestern coast of West New Britain. The island of New Britain (population 405,000) lies off the east coast of PNG in the Bismarck Sea, oriented east and west, between 4° and 5° south of the equator. New Britain is a large island, about 373 miles (600 kilometers) in length and between 31 and 62 miles (50 and 100 kilometers) across. The island's spine is comprised of active volcanic mountains, which are reminders of its geomorphic origins, dense tropical rain forests, narrow coastal plains, and, in many areas, beaches protected from the ocean by a fringe of magnificent coral reefs. Given the ecological features of the environment, different foods take on a central role in people's diet, but food is never just about nutrition; food also carries a huge symbolic load in terms of cosmology, gender relations, exchange value, and identity.

More than 85 percent of the population of PNG is rural, with a self-sufficient, subsistence-

based system of horticulture and accessing of resources from land, forest, rivers, and ocean. Food production—planting, weeding, harvesting, preparation, and distribution—is primarily a female task. Men help create gardens by cutting down the biggest trees and slashing the low growth, all of which is burned to clear the way for planting and to add needed nutrients to the thin tropical soils. Men also build fences to keep out marauding pigs and perform garden magic to make crops grow well, to keep out various pests that destroy taro and sweet potatoes, and to keep the food from wandering away into a competitor's garden. In addition to its nutritional value, food throughout PNG has social and cultural meaning and is a key ingredient for creating and maintaining social relationships, as well as earning and manipulating power and prestige.

Major Foodstuffs

Since their introduction to PNG 200 years ago, and as recently as 60 years ago in some areas (see Ballard et al. 2005), sweet potatoes (*Ipomoea batatas*) have become the nutritional basis for people and for pig husbandry. Other sources of carbohydrates, such as sago (*Metroxylon sagu*), taro (*Colocasia esculenta*), cassava (*Manihot esculenta*), and numerous varieties of yams, are preferred foods and items of symbolic value and exchange. Crops such as *pit-pit* (*Saccharum edule*) and many varieties of bananas, plantains, leafy greens, and the omnipresent coconut (*Cocos nucifera*) round out the daily fare throughout much of PNG. Gardens also contain imported food crops, such as pineapples, tomatoes,

cucumbers, squash, and onions and, in highlands environments, the “Irish” potato, cabbages, and carrots. Where conditions allow, people utilize and semicultivate tropical fruits and nuts such as breadfruit, the Malay apple (*Syzygium malaccense*), mangoes, papayas, various citrus fruits, the Polynesian chestnut (*Inocarpus fagifer*), and the *galip* nut (*Canarium indicum*). Although knowledge of bush foods and medicines is declining throughout PNG, the Bariai access a wide range of seasonal, wild, uncultivated, or “famine” foods (Bariai: *baginga*) gathered when gardens are not mature or not producing due to too much or too little rain or pest infestations.

Pigs are raised primarily for exchange and consumption during ceremonials. Animal protein is obtained from the sea or rivers, and hunting in the tropical forests provides other sources of meat including wild pigs, birds, fruit bats (*Megachiroptera* spp.), the dwarf cassowary (*Casuarius bennetti*), lizards, possum, and wallaby. For the Bariai and other PNG coastal dwellers and fisherfolk, the sea and its bounty figure large in people’s diets. The Bariai seafood repertoire includes all kinds of reef and deep-sea fish, shark, sea turtles, octopus, squid, spiny lobster, crabs, numerous shellfish, and *bêche-de-mer* (sea cucumber) species. Seaweeds, a salty treat in a largely salt-free diet, are eaten raw or cooked with boiled and baked food as a seasoning and salty garnish.

Every culture has a range of foods considered edible or nonedible, preferred or less preferred. Famine foods are not preferred foods but are accessed as necessary, but knowledge of their seasonality and processing is fast disappearing. The sweet potato, although an introduced crop, is a staple food eaten every day; however, sweet potatoes are also considered pig fodder and take third place to the most important and savored of foods: taro (B: *moi*) and the flour processed from the sago palm (B: *mama*), or, in the highlands, yams. Originally planted as a cash crop (copra) for export, the coconut palm has a number of uses, but, most important, just about everything is cooked in coconut cream or with grated coconut meat. All Papua New Guineans, including the Bariai, are able to purchase imported and processed foods, some of which are just treats (e.g.,

cookies, soft drinks, potato chips, candy) but others of which, such as rice, flour, salt, sugar, and tea (and in some instances alcoholic beverages), have become indispensable to daily and ceremonial life. Clearly, the Bariai and most people in PNG have an abundance of foods, whether cultivated in gardens and groves; collected or hunted from the tropical forest, the sea, and the coral reefs along their coast and the rivers they navigate; or purchased from shops in towns.

Typical Meals

Most Papua New Guineans eat two meals a day, one in the morning and one in late afternoon, and in most villages (and towns) meal preparation is heralded by a familiar “scrape, scrape, pause . . . scrape, scrape, pause,” the rhythmic sounds of women scraping coconut meat from the shell. The grated coconut is squeezed with water to produce coconut cream. The “scrape, scrape, pause” is accompanied by the thump of axes as women chop wood for the fire, the swish of rakes as women and girls sweep up the debris from around their houses, and the incessant noise of roosters crowing, pigs squealing, dogs barking, and babies crying. Taro is seasonal, vulnerable to pests and drought, and not always available. For both meals, sweet potatoes, cassava (*tapiok*), sweet bananas, or plantains are peeled, cut into aluminum pots, covered with coconut cream, and set on the wood fire to cook. Sometimes tubers are laid on the open fire to roast for snacking later in the day or for children’s school lunches. Both the potato peelings and the used grated coconut meat are fed to the pigs. Breakfast is very often accompanied by fish caught in the nets set overnight or by octopus, squid, and lobster caught at night using burning coconut fronds, kerosene lamps, or flashlights. Large fish are cut up and boiled in coconut cream with curry powder and onions if available; smaller fish are roasted on the open fire.

Men often fish at night in preparation for an upcoming church feast day or a traditional ceremony. The fish is slow-smoked over an open fire and keeps for two to four days without rotting. Smoked fish is quite dried out and is eaten cold; only occasionally

will it be put on the fire to warm it up. An ideal meal is taro (but more often sweet potatoes and cassava) accompanied by fish, shellfish, or pork and greens. To eat only sweet potatoes or even taro without a fish or meat accompaniment is not a satisfactory meal.

In Bariai villages, eating is a private act, and families do not sit together to eat; indeed, there is no such thing as a dining table or dining space. In the not-so-distant past, children delivered cooked food to their fathers and elder brothers, who lived and slept in the men's ceremonial house where men ate together, away from their wives and young children. Now, men's houses are not being built, so husbands and sons usually retreat to individual private areas on the house veranda, in the cookhouse, or on the beachfront, where they eat with their backs turned to everyone. During ceremonial feasts, men still eat together in small kinship groups, as do women with

their small children and unmarried daughters. At mealtimes, small children run around with a boiled tuber or roasted tapiok root or piece of fish or pork in their hands. Women and their daughters eat last.

After their morning meal, people head off to their gardens and daily chores. Schoolchildren start out on their typically five-mile (eight-kilometer) walk to school, eating their breakfast of roasted tubers or boiled sweet potatoes as they go. No midday meal is prepared, but schoolchildren carry food to school, usually tubers cooked that morning, or grated tapiok that was wrapped in banana leaves and cooked overnight in a stone oven. If available, they carry a roasted fish as well. Women prepare enough food in the morning so that children and elders who stay in the village can help themselves during the day. On returning from their gardens in late afternoon, women haul water, rebuild their cooking fires, and

Bosco, Francis, Tony, and John smoking fish for a feast the next day. (N. McPherson, 2003)

prepare the evening meal following the same routine as for the morning meal.

Eating Out

Only those who live in towns and cities have an opportunity to eat out at restaurants, which are becoming very popular. Villagers visiting town go to fast-food, take-out vendors who offer roasted cuts of pork and chicken and deep-fried, battered fish with French fried and boiled sweet potatoes as sides. Ice cream cones are a favorite with adults and children alike, and juice boxes and carbonated soft drinks of all varieties are the beverages of choice. Some shops also offer lamb flaps, a very fatty cheap meat that Papua New Guineans, traditionally used to a low-fat diet, find satisfying and tasty. Many women who market subsistence foods as a source of cash income in towns and cities purchase boxes of frozen lamb flaps from supermarkets and cut them into pieces to barbecue at the markets for people to buy as a snack on the go (Gewertz and Errington 2009). Besides basic foods such as taro, sweet potatoes, fruits, and vegetables, market foods also include hard-boiled eggs, rice balls cooked with meat in them, smoked fish, and popsicle-like frozen treats.

Special Occasions

Even when people's gardens are plentiful with sweet potatoes, tapiok, and bananas, Bariai still crave taro, their "real" food. Taro is so important that it is the focus of three ceremonies that honor a mother and her firstborn child. On the occasion of the appearance of their firstborn's first tooth, parents send bundles of taro stalks, areca (betel) nut, and sprouting coconuts to be distributed in each village to every newly married couple who has not yet conceived or given birth to their first child. The taro corms are immediate food, and the stalks can be planted for future consumption. Thus, taro here is symbolic of plenitude, well-being, and reproduction. The sprouting coconut is also associated with temporal reproduction; planting the nut means a producing coconut tree in the future. The red saliva created when

chewing betel nut with betel pepper and lime powder symbolizes blood, not only that of the child's sore gums but also the blood of menstruation and child-birth. A second ceremony requires taro production and a distribution to the firstborn's lineage members and to the married couple who oversee the child's entire ceremonial cycle and the firstborn's decorative finery. Finally, a taro distribution called *otnga dadanga* (clearing or stripping the garden) entails the firstborn's mother preparing and planting five or more taro gardens, thus displaying her strength and ability to work hard, to plan into the future, and to provide sustenance. The firstborn, as her exemplar and in whose name these gardens are made and the taro distributed, is seen as a provider of food. Thus, the Bariai say, "We eat from the hand of the firstborn." The mother, the firstborn, and the taro are decorated and paraded through the village.

Taro decorated for *otnga dadanga* distribution. (N. McPherson, 2005)

Nutritionally, taro is high in fiber and carbohydrates, but it has no fat (until it is boiled in coconut cream) and contains vitamin C, niacin, calcium, and iron. Eaten with fish or pork and leafy greens it is a nutritious meal. Sago flour is not very nutritious at all, being about 90 percent carbohydrates, but, cooked with coconut cream and served with leafy greens and fish or meat protein, sago is a palatable and healthy meal. During the rainy season or times of famine, when sago flour might be eaten everyday in various guises but without the garnish of vegetables and fish, it is merely a carbohydrate filler and over long periods not nutritious at all. Both taro and sago are such important foods, ripe with symbolic and cultural meaning, that their origins are given in mythology, presented here in truncated form.

The Origin of Taro

Galiki, the firstborn, and her grandmother huddled together as the sun set on their fifth day without food. Galiki asked Grandmother to cut her hair, prepare a fire, and make some coconut oil, half of which should be tinted with red pigment and the other half with black pigment. When ready, Grandmother decorated Galiki with red oil on the left side of her head and body and black pigment on the right side.

Then Galiki asked Grandmother to heat a stone oven (*eamo*) even though they had no food to cook. When the stones were blinking with heat, Grandmother removed the big rocks and spread banana leaves on the hot stones lining the oven bed. Galiki sat down in the middle of the leaves on the bed of hot stones. “Replace the hot stones” she said, “and cook me. You will hear me sizzling, like this, SSSSeeeee. When the sizzling stops, I will be done and you can remove the stones. Then you will understand.”

When the sizzling stopped, frantic and weeping, Grandmother removed the cool stones. There on the banana-leaf bed, Galiki had been transformed into the many different colors of taro, red, black, white, purple. “Eat, Grandmother, taste me! Collect all the taro stalks you see lying around,” said Galiki’s voice, “and in five days I will sprout and grow into

more taro.” Grandmother gathered up and planted the stalks and tended them until the taro matured. She heard Galiki’s voice: “All is well again, the taro has matured. We will always have taro and never be hungry again. Taro will sustain us.”

Siko Pore, who told this myth in 1985, commented that

taro is our primary food, ahead of all other foods. Taro is number one, sago is number two and all bush foods are last. Other foods, such as yam and sweet potato, we depend on, but the true basis of subsistence is taro. Taro is significant to us because it was once a human being. If you don’t look after taro the pigs will eat it, the sun will scorch it. In times of drought, soak taro stalks in the river and they will germinate for you. Take good care of it and taro will always be with you.

The relationship between food and gender is important here. Taro is the *sine qua non* of human sustenance and was produced by a process of cooking—transforming the inedible to the edible—in this instance, the female body is transformed by fire into taro. Like the female body, which is symbolically moist, plump, and cool, taro grows well in a cool, moist environment to produce rounded, well-formed corms. Women also create food through the transformation of their labor, the sweat of their brows; and, as already noted, taro, like one’s wife, needs to be treated well so that its/her beneficence will not run away, leaving people without any true sustenance. These symbolic meanings appear again when two families reach an agreement concerning a daughter’s marriage and her bridewealth amount, and the future groom’s family provides a gift of taro and wealth (B: *murangga*) to the bride’s parents. The taro corms, complete with stalks, are tied in bundles of four, decorated, and presented in a carved iron-wood bowl (B: *tabla*) with two lengths of the highest value of “gold” shell wealth (B: *bula misi*) and five lengths of lesser valued black shell wealth (B: *bula kasuksuk*) to seal the betrothal. The role of taro as the *sine qua non* of foodstuffs, and its association with the human female body, with women’s

bridewealth and their future productivity as taro gardeners, with their reproductive promise of many children, as well as its central role in ceremonies, underscore how important this food is to the Bariai.

Taro gardens were ideally created in quadrants, with each color of taro—red, yellow, white, and purple flesh, the colors the mythic Galiki is adorned in—planted in its own quadrant. While the color quadrants are rarely created today, taro gardens usually have no other foodstuffs grown in them. Garden magic is performed by knowledgeable men who say spells over the red leaves of the blood banana plant (B: *bonbone*), probably *Musa zebrina*. The bespelled banana plants are planted throughout the garden to protect the taro from pests and

disease and to make the corms grow large. Before a woman has completed the *otnga dadanga*, both she and her firstborn are unable to wear red in their clothing, decorations, and paint. Red, here represented in the red banana plant, is symbolic of energy, strength, production, reproduction, and the blood of generations of females. To wear red communicates a woman's having achieved high status for having completed the massive taro garden distribution (*otnga dadanga*).

Taro is cooked by boiling it in coconut cream, roasting it on top of the fire, or baking it in the stone oven. Taro cooked in a clay pot (B: *ulo*) with coconut cream, sweet bananas, and greens is the most relished everyday dish, as clay cooking pots

Rambo and Gena placing grated tapiok wrapped in banana leaves, sweet potato, and taro on banana leaves to bake in the stone oven. (N. McPherson, 2009)

add flavor that is absent from foods cooked in aluminum pots. The most favored and the most important taro dish, always served at ceremonies, is *sapala*. *Sapala* is prepared by first peeling and cutting the taro into small pieces, then wrapping the chopped taro in banana leaves and baking it in the stone oven. While the cooked taro is still hot, it is placed in a large ironwood bowl (B: *tabla*) or a specially carved mortar (B: *nagalgal*) held between the knees. Coconut cream is added to the hot taro, a little at a time, while pounding with a pestle (B: *iut*) to combine the taro and coconut milk. When done, the taro is a chunky, creamy, and oily mixture that is very sweet, a favored dish with everyone. When taro is unavailable, this same dish can be prepared

by substituting ground cassava. For the final firstborn ceremony (of 17), the child's parents prepare *sapala* in a very large ironwood bowl, top it with 20 to 30 lengths of gold and black shell wealth, and present it to their ceremonial partners to compensate them and mark the completion of their work for the firstborn.

Taro is symbolically female, women are the gardeners (producers) and child bearers (reproducers), and taro ceremonies focus on the mother and her child (fathers are not decorated or celebrated in any firstborn ceremonies). The Bariai do have a gendered division of labor. Men fish at sea, hunt, and do the heavy work of garden preparation and building houses, canoes, and fences. Women also collect

Andrew tipping sago pith into the trough for washing; the flour settles to the bottom of the canoe/container below the trough. Eventually all the water is displaced as the container fills with flour. (N. McPherson, 2009)

shellfish, seaweeds, lobster, crabs, octopus, and squid. Men may help plant new gardens, but after that the labor of weeding, harvesting, and preparing foods is women's work. As is the case throughout PNG, the production of food is primarily a female responsibility, which girls learn from a very early age. Sago processing, however, is often the exception to the rule, and, in many PNG cultures, it is an exclusively male activity. Processing sago flour from the pith of the palm is arduous work. The palm, often 33 feet (10 meters) high or more, is felled. The outer bark is then split and peeled back to expose the inner pith, which must be pounded to loosen the fibers, which are then drenched in water and squeezed to separate the flour from the pith.

Sago work parties leave the village before dawn and rarely return before dusk with the fruits of their labor. Although it is primarily men who chop down the palm and pound the pith, Bariai men and women often share the work involved in washing the sago flour from the pith. But this was not always the case.

The Story of Sago Processing

In the past, the story goes, women dressed in their traditional finery and went off in groups to process the sago palms growing near river banks. They did this for several days, cutting, pounding, and washing sago while their menfolk stayed behind in the village. Each day the women, who should have been hot, tired, and dirty from their efforts to process the sago flour, returned looking rested and happy, with large amounts of sago flour. One day, the men decided to spy on the women as they washed sago. Instead of seeing the women hard at work along the riverbank, the men found them, still beautifully outfitted in their best finery, obviously enjoying themselves talking, laughing, and singing together. Unobserved by the women, the men sneaked back to the village, intent on chastising their wives when they returned that evening without sago flour. Instead of returning empty-handed, the women came home with an abundance of sago flour. The men concluded that the women were meeting their lovers in the bush, and these men were processing the

sago flour in exchange for sexual favors. Henceforth, the men proclaimed, women would not leave the village to process sago; this work would be a male responsibility. Of course, the women were not meeting their lovers in the bush. The sago was processed for them by powerful spirit beings, who, insulted and angered by the men's jealousy, refused to perform this same service for the men. It is due to the jealous behavior of men that sago processing is now backbreaking men's work.

Since this mythic event, sago processing among the Bariai has been and continues to be a female activity performed by males. Men express this state of affairs in the idiom *tikado tue*, "they use clam shells," the traditional female all-purpose tool (*tue*) made from the sharpened half-shell of the mangrove oyster bivalve (B: *kina*). Sago processing is a time when men "use women's tools" and do women's work, and Bariai men rue the day that masculine foolishness saddled them with this tedious, hard work.

The Bariai process two types of sago: a wild variety (*Metroxylon amicarum*) called *mama gigi* that is dangerously spiny, grows in swamps, has whitish flour, and is less productive than the cultivated variety (*Metroxylon sagu*), which has no spines. The Bariai cultivate the palm by cutting the suckers it produces and transplanting them where the palm will be more accessible for processing. *Mamatau*, the thornless sago, produces a pale pink flour. The sago palm matures in about 15 years, when it sends up a single flower indicating that starch content is at its maximum before going to seed. Sago palms (and other food-bearing trees) are owned by individuals, who keep close watch on them in order to process them at peak starch production when the flowering begins. The tools used to process the sago flour are all made on the spot from the sago palm itself. Fronds are also used for thatch; and the newly sprouted pale yellow-green leaf spear is shredded lengthwise, dried, and dyed for women's grass skirts and used fresh and undyed for skirts worn by spirit beings. The narrow end of the midrib is trimmed and lashed together to make house walls; the wide end of the midrib is used for carrying containers or to hold down roof thatch.

Sago is the only food in this tropical environment that can be stored for months at a time without refrigerating or processing it, usually as a solid piece of hard-packed flour wrapped in banana leaves. Sago is eaten daily when available, and it is a required ceremonial food as well as a famine food. The sago palm is so plentiful in Bariai that, during lean times, neighboring coastal and island groups come to Bariai to trade or purchase processed sago flour or the entire palm, which they then process themselves on the spot. About 90 percent carbohydrates, the nutritional value of sago is very low. An important by-product of the sago palm is the sago grub (B: *aoatol*), the larval form of the Capricorn beetle (B: *tangguri*), which lays its eggs in a felled or damaged sago palm. Sago grubs are a tasty delicacy, eaten raw (minus the head), roasted on an open fire, or wrapped in leaves and baked in a stone oven. The grubs are high in fat and protein, as well as trace elements such as iron and zinc, and are a welcome accompaniment to the bland sago-flour carbohydrates, or simply as a treat.

Perhaps because it is such a bland food, sago recipes abound. *Salnga* is made by dry-frying sago flour until it is very crumbly and warmed through. Then coconut cream is stirred into the dry flour to make a thick paste. The sago coconut paste is wrapped in banana-leaf packages and baked in the stone oven. When done, the sago is gelatinous and solid, often a red-purple color. This makes a great take-out meal when traveling by canoe or spending a day in the gardens or on the reefs. *Mama krokrok* is sago flour mixed with grated coconut meat, wrapped in a banana leaf, and roasted on top of the open fire. As the banana leaf dries and burns, it is scraped off. The bundle is repeatedly turned and scraped until it is cooked and the leaf wrapping is all removed. The toasted outside of the bundle of sago has a thin rind of gelled grated coconut, and the inside is dry and floury. For *didnga*, plain sago flour is wrapped in a banana leaf and cooked on top of the open fire. When done, the sago flour is cut in small bits, placed in a pot of boiling water, and cooked until the sago pieces begin to dissolve slightly around the edges. The boiled sago cubes are removed from the water onto a banana leaf, covered with co-

Aisiga and Giarob offer *aoatol*, sago grubs. (N. McPherson, 2003)

conut cream, wrapped, and baked in the stone oven. Similar to this recipe is *kapokapo*. When left uncovered, sago flour turns a deep orange color; *kapokapo* uses this orange flour pressed into small balls and put in a pot of boiling coconut cream. When the sago-flour balls have absorbed all the coconut cream, they are ready to eat. Both sago and taro are ideally eaten with a fish or meat accompaniment and leafy greens. To eat them without a protein or vegetable garnish is unpalatable, and people complain they have had less than a proper meal.

Diet and Health

Papua New Guineans have been interacting with outsiders—missionaries, colonialists, and anthropologists—from as early as 200 years ago to as recently as 60 years ago, but it is only in the last

Katrin's daughters watch her prepare sapala in an ironwood bowl. Note the empty coconut shells, the fresh banana leaves ready to wrap food or use as plates, and the cooked taro and tapiok in the brown banana leaves. (N. McPherson, 2003)

30 years that most rural villagers have had easier access to imported processed foods. In the past decade, these foods have become an integral part of the PNG diet, with some imported foodstuffs eaten on almost a daily basis. Canned tuna and mackerel, corned beef, and other meat products are now processed in PNG, while other protein sources, such as lamb flaps or turkey tails (Gewertz and Errington 2009), are imported from Australia and New Zealand. Processed imported foods most desired by villagers include white rice, white flour, white sugar, cooking oil, tea, coffee, various biscuits, cookies, and sweet treats. Children in particular desire candy, potato chips, puffed cheese treats, and carbonated

soft drinks. None of these foods is particularly nutritious, most are empty calories, and all must be purchased; thus, people need to find a way to make money.

Most recently, the Bariai have exploited the various species of echinoderms, or *bêche-de-mer* or sea cucumber (B: *anwe*), a traditional foodstuff that was boiled for a long time to make them soft enough to get one's teeth into. For the past few years, women have been collecting and drying *bêche-de-mer* on a daily basis for sale to visiting buyers, who sell the product to buyers from China, Japan, Hong Kong, and Indonesia. By 2009, *bêche-de-mer* species had become quite scarce. Bariai women expressed

concern that the supply would soon be gone; however, they are reluctant to curtail collecting sea cucumbers as these are an exceptionally lucrative income source. Women use money earned from bêche-de-mer sales to pay school and medical fees and buy the imported foods and other goods that were once considered luxury items but have become necessities.

Many villagers in West New Britain, if offered the choice, would prefer canned fish or meat to fresh fish from the sea. Indeed, rice, fried flour, tea or coffee overly sweetened with sugar, canned corned beef, and fish have become especially necessary ingredients for ceremonial feasts. Even with the availability of taro, sweet potatoes, cassava, and sago flour, ceremonies are often put off because no one has money to buy rice, sugar, and tea. The growing need for and consumption of processed foods throughout PNG is beginning to create health problems. When the local Bariai aid-post attendant traveled from village to village for his well-baby clinic, he also lectured the women about diseases associated with eating processed foods (obesity, diabetes, heart disease). He tried to impress on the women the importance of growing and eating traditional foods and the sustainability of their lifestyle based on subsistence horticulture. As the need for a cash economy increases and people live off money rather than their gardens and environment, the need to purchase processed and imported foods will increase. The many imported foods that have become

an increasingly central part of their diet are an important issue in food and nutrition studies since these are foods with empty calories and an unhealthy source of sugar, fat, and salt. Obesity, heart disease, and diabetes have become critical health issues in PNG, and there is a movement to encourage people to eat local foods grown in their gardens.

Philippines

Overview

The Republic of the Philippines consists of 7,107 islands located in Southeast Asia. Its long, broken coastline is surrounded by three major bodies of water—the Pacific Ocean on the east, the South China Sea on the north and west, and the Celebes Sea on the south. The country is divided into three major island groups—Luzon, Visayas, and Mindanao—with 17 regions, 81 provinces, and 136 cities. It has 120 ethnic groups and over 180 languages and dialects. Filipino, the national language, and English are the official languages. The Philippines is the 12th most populous country in the world, with over 90 million people. Over 80 percent of the population is Roman Catholic, followed by Muslims (5%), who live mainly on the island of Mindanao. Manila, situated on the island of Luzon, is the nation's capital.

Geography has largely shaped what Filipinos eat. The country's closeness to water sources, its forests and fields, and a tropical climate marked by dry and rainy seasons account for the Filipinos' dependence on rice, fish, and vegetables as diet staples. Other cultures—from the 300-plus years of Spanish rule that started in the 16th century, the presence of Chinese traders and immigrants dating back to the precolonial and Spanish colonial periods, and the 20th-century American occupation—have had a lasting impact on the country's foodways. Filipinos have adapted (“Filipinized”) these cultures' dishes to native tastes and the use of local ingredients. In addition, regional differences have resulted in food variations as well as the emergence of trademark dishes.

Food Culture Snapshot

Ramon and Malou Fernandez live with their two children and a housemaid in a housing development in metropolitan Manila. Ramon is a purchasing manager for a multinational company, and Malou is an administrative assistant to the vice president of a big Filipino corporation. They are a typical two-income middle-class Filipino family who can afford the luxury of a full-time housemaid.

Malou starts every weekend by going to a nearby wet market early Saturday morning with her maid's help. At the market, she buys fresh meats such as chicken, beef sirloin, brisket, and pork loin, as well as shrimp and fish like tilapia, grouper, sole, and milkfish. She also purchases fruits like bananas, apples, pears, papayas, and oranges.

Most Saturday afternoons, the whole family goes to the big supermarket in an upscale mall for grocery shopping. Here, Malou buys pantry staples including corn and olive oils, soy sauce, vinegar, fish sauce, and spices. She also gets rice, pasta, canned fish (tuna and sardines), canned meats (corned beef, Spam, chorizos—spicy sausages), sliced white bread, cereals, low-fat milk, and fruit juices in cartons. In the fresh vegetables section, she often gets potatoes, onions, garlic, tomatoes, lettuce, squash, cauliflower, and swamp cabbage. Occasionally, she also purchases packaged fresh Vigan *longanisas* (specialty sausages from Ilocos Sur, a province north of Manila) and *tocino* (sweet cured pork), which are both popular breakfast foods. She replenishes her stash of snack foods by buying cookies, potato chips, crackers, and ice cream.

Malou writes down a weekly menu for the housemaid, indicating what to serve for breakfast and dinner

every weekday (the couple has lunch at work and the kids eat at school). The family starts their day early, having a quick breakfast around 6:30 A.M., usually consisting of rice, corned beef or sardines, and fried or scrambled eggs. On occasion, they would have cereal with milk and sliced fruit. Dinner is a more leisurely affair. They convene at around 7 P.M. and dine on typical fare like rice, barbecue chicken or grilled fish, fresh green salad, and/or sautéed vegetables like mung beans or shredded cabbage. Dessert is usually fruit such as sliced mangoes, watermelon, or bananas.

Their meals during weekends are more special or elaborate. The family goes out for lunch on Saturdays, usually for Chinese, Italian, or Japanese food. Malou usually cooks dinner Saturday nights, making her husband's and kids' favorite dishes like pasta with pesto, tempura, sukiyaki, and Caesar salad. Sundays are usually spent having lunch with the in-laws.

Many Filipino families still eat home-cooked meals, although some of the meals may come from or include packaged sources, on which there is a heavy reliance (flavoring packets, instant noodles, canned soups). Filipino families, particularly in the urban areas, now also rely heavily on supermarkets for many of their meals, eschewing the wet markets that used to be the primary source for fresh meats, fish, and produce. Although the Fernandez family orders the occasional pizza from Domino's for an afternoon snack, Filipinos in general have not totally embraced the concept of take-out food. They prefer to eat out and, for the middle and upper classes, experiment with other cuisines, as evidenced by the burgeoning growth of ethnic restaurants in many cities around the country. Overall, restaurants serving Filipino food and cheap fast food are still very popular go-to places especially for the middle and lower classes.

Major Foodstuffs

The Philippines is an agricultural country. Its lands are most conducive to rice growing because of excess rainfall brought about by the monsoon season as well as the year-round warm climate. Rice is the primary staple food of Filipinos, who eat it for lunch and dinner and, frequently, for breakfast. It serves as a base for other foods or viands they eat—from

foods as basic as dried fish and vegetables to richer meat and seafood dishes. Steamed rice with its inherent blandness is an excellent foil for the salty, sour, spicy, and bitter foods that Filipinos eat.

Rice is also made into dessert or snack cakes, such as *suman* (a rice cake made from glutinous rice and coconut milk), *puto* (a steamed rice cake), and *sapin-sapin* (a layered multicolored rice cake made with coconut milk). Popular afternoon snacks include rice-based savory dishes like *arroz caldo*, which is rice gruel with chicken and ginger, and the stir-fried rice noodle dish called *pancit bihon*.

Fish and other seafood figure prominently in the Filipino diet. The surrounding ocean and seas, and the country's numerous rivers, lakes, and interior waterways, spawn a wide variety and abundance of seafood. One of the more popular varieties of fish is *bangus*, or milkfish, the national fish, which can be stuffed with onions and tomatoes and grilled, or be salted and dried and then fried. The latter is often eaten for breakfast with garlic rice. Other widely consumed fish varieties are tilapia, swordfish, blue marlin, grouper, catfish, and tuna. Shrimp, prawns, squid, mussels, oysters, and clams are also abundant. Dried fish, called *tuyo*, which could be any salted and dried small fish, is common fare for the country's poor. Fish sauce, or *patis*, made from salted or fermented tiny fish or shrimp, is typically used in Filipino cooking to flavor food or as a dipping sauce. A fermented fish or shrimp paste, *bagoong*, is often paired with certain foods like *kare-kare* (oxtail stew) and used as an ingredient in many dishes.

The coconut is another important land-based crop in the Philippines. Its meat in varying stages of maturity is used for different purposes. The juice of the young coconut, or *buko*, makes a refreshing drink, and its white tender meat can be eaten fresh or used for making sweets, salads, or savory dishes. The mature coconut's (*niyog*) meat is used in sweets and can be grated to make coconut milk. Filipinos also consume coconut-based liquor called *tuba* and *lambanog* as well as coconut vinegar, which is used in cooking and in dipping sauces.

The fertile lands yield a bountiful variety of vegetables. Most vegetables are either steamed, cooked in soups, or sautéed with other vegetables. There

are root crops like cassava (*kamoteng kahoy*), purple yam (*ube*), sweet potato (*camote*), taro (*gabi*), and yam bean (*singkamas*). Other commonly eaten vegetables include swamp cabbage (*kangkong*—water convolvulus, sometimes called water spinach), mustard greens (*mustasa*), banana hearts (*puso ng saging*—actually the blossom of the banana plant), eggplants, and mung beans (*munggo*), as well as gourds like bottle gourds (*upo*), sponge gourds, and bitter melons (*ampalaya*). Garlic is an indispensable flavoring ingredient in everyday Filipino cooking. Tomatoes were introduced to the country by way of the Spanish galleons that plied the route between Manila and Acapulco during the mid-16th to 18th centuries. They are widely used in salads, dipping sauces, and many Spanish-influenced Filipino stews and, when sautéed with garlic and onions, make up the principal flavor base of Filipino cuisine.

Chicken, pork, and beef are the meat staples in the Filipino diet (with the exception of the Muslims on Mindanao, who do not eat pork). Chinese traders are believed to have introduced pork in the precolonial period, which accounts for the Chinese names of many cuts like *liempo* (pork belly) and *kasim* (lean pork). Filipinos use almost every part of the pig in cooking, including its blood and intestines. Beef is said to have been introduced during the Spaniard colonial period, with popular cuts named in Spanish like *solomillo* (tenderloin) and *punta y pecho* (brisket). Many Spanish-influenced dishes use beef as a main ingredient.

Pancit (also spelled *pansit*), or noodles, is a mainstay ingredient that has undergone significant adaptations in the preparation process. Filipinos use different types of noodles, such as those made from rice, egg, wheat, and mung beans, to make various *pancit* dishes. Introduced by the Chinese during the Spanish period, the dish has been Filipinized, and various regions have come up with their own versions as well. These include *pancit Malabon* from the coastal town of Malabon, which is noodles topped with shrimp, oysters, and squid, and *pancit habhab* from the town of Lukban in Quezon Province, which is brown wheat noodles prepared with chayote and pork and eaten without utensils from a banana leaf that serves as the plate.

Filipinos use an assortment of herbs and spices in everyday cooking such as ginger, galangal, lemongrass, coriander, turmeric, bay leaves, screw pine (*pandan*), and black pepper. Different varieties of chili peppers are also common, but the spiciest ones, like the small, very hot pepper called *siling labuyo*, are mainstay ingredients of the Bicol and Lanao regions, where foods tend to be on the very spicy side. Annatto, or *atsuete*, introduced by Mexicans by way of the Spanish galleon trade, is typically used as a food coloring. Tamarind and *kamias* (bilimbi) are used as souring agents, mostly in soups, but they are also made into sweets.

The locally grown *calamansi* or calamondin, a small, tart, green citrus fruit, is a very popular ingredient. It is made into juice, is used to accent foods, and is squeezed into dipping sauces (*sawsawan*) containing soy or fish sauce to complement roasted or grilled meats, seafood, and noodles.

Fruits, just like vegetables, are plentiful in the Philippines. Many of the popular tropical fruits enjoyed by Filipinos such as guavas, pineapples, papayas, avocados, and sugar apples were brought over from Mexico via the Spanish galleon trade. The yellow Philippine mango, *mangga*, is the favorite and most famous fruit, known for its signature succulent sweetness. It is typically eaten fresh and frequently made into desserts. These mangoes are also dried, mostly for export. The province of Davao on the island of Mindanao is the country's fruit capital—it has many plantations growing pineapples, bananas, pomelos, and mangosteens for export.

Water is always served with meals. Juices from fruits like the calamansi, pomelo, watermelon, and *dalandan* (a type of green citrus) are widely drunk. Soda drinks are heavily consumed everywhere in the country. Coffee is grown in the Batangas region on the island of Luzon as well as in certain areas in Mindanao. Filipinos typically drink instant coffee and, increasingly, with the advent of popular chains such as Starbucks and local ones like Figaro, freshly brewed coffee in the metropolitan areas.

Cooking

In the Filipino household, it is usually the head female—in most instances the wife and mother—who

shops for and prepares the meals. More affluent households have househelp who do the food preparation, which may include the shopping and, in most cases, the cooking. The most affluent households employ cooks whose sole job is to run the kitchen and prepare the family meals.

It used to be that Filipino kitchens were small and basic, with food cooked in earthenware pots on clay burners (*kalan*) over coal or wood fires. But the American occupation in the early 20th century changed all that as Americans introduced technology for cooking and food preservation and Western-style kitchens to Filipinos. Now, many households have gas or electric stoves and burners, refrigerators, microwaves, rice cookers, and other modern conveniences. Cookware such as aluminum and nonstick pots and pans is commonly used. During big feasts or fiestas, however, some of the old cooking implements resurface, such as clay pots (*palayok*) and big metal vats (*kawa*), typically used for cooking food for large numbers of people.

Many middle- and upper-class homes, particularly in the urban areas, have “dirty kitchens,” second kitchens where the dirty work involved in food preparation is done. This can include activities like cleaning chicken and fish, chopping vegetables, and peeling shrimp. Some dirty kitchens are still equipped with traditional native cooking implements such as the *kawali*, a multipurpose wok-like cast iron pan, or the mortar and pestle used to pound garlic and spices. The main kitchen houses the modern appliances and is where much of the actual cooking is done.

The most common cooking methods are boiling, grilling, stewing, steaming, and frying—all but frying are indigenous and were used prior to the arrival of the Spaniards. Many of the most popular Filipino dishes are boiled, or *nilaga*, including *bulalo*, a soup made from boiling and simmering beef kneecaps and vegetables that is coveted for its marrow. Grilling, particularly on coals, is widely used for meats and fish.

Stewing is a favored cooking method for chicken and other meats. The country’s national dish, adobo, is a stew of fowl, pork, or vegetables (or a combination) typically prepared with garlic, vinegar, and

soy sauce. From Spain come tomato-based stews, such as *callos* (tripe with chickpeas) and *apritada* (chicken or pork simmered in tomatoes).

Frying and sautéing in oil are not indigenous cooking methods but are commonly used techniques. Filipinos adapted sautéing, or *guisa* (*guisa* derives from the Spanish word *guisar*, meaning “to sauté”), from the Spanish; it involves sautéing garlic, tomatoes, and onions together.

Many Filipinos, especially those who live close to the water, often make fresh fish and seafood (or meats) into *kinilaw*. This involves putting the raw seafood or meat in vinegar, at times with other ingredients like lime juice and onions. The acidity of the vinegar (as well as the lime, if used) “cooks” the food, even if no heat is involved in the process.

Chicken adobo with egg, a traditional Filipino dish. (Rolen Facundo | Dreamstime.com)

Kinilaw is popular as *pulutan*, which are finger foods typically consumed with alcoholic drinks.

Salting is another common method used for fish, a way to preserve an abundant catch for later consumption. Salted fish—tuyo for small fish and *daing* for bigger fish—is a breakfast mainstay in the Filipino diet. Meat, fish, and vegetable dishes, as well as fruits, that are cooked in rich coconut milk or cream are called *ginataan*, a cooking method particularly popular in the Bicol region in the southern part of the country.

Typical Meals

Most Filipinos eat five times a day: breakfast, lunch, and dinner, plus two snacks in between—one in midmorning and one in midafternoon, called *merienda*. The food courses in a Filipino meal are served almost all at once on the table, including the soup course if one has been prepared. Typically, the soup is not just eaten on its own but also enjoyed with the food—the diner often ladles some soup broth onto the rice to flavor and moisten it. Communal platters or bowls containing rice and viands (one or two or several) are placed at the center of the table; small sauce plates containing sawsawan, or dipping sauces, are placed on the table as well.

The typical implements in a Filipino meal are a fork and spoon. The spoon is used primarily to scoop the rice and other foods from the plate. In many rural areas, people still eat the traditional *kamay* way—using their hands. Filipinos from all classes who attend fiestas or feast days in the provinces also get an opportunity to eat celebration food *kamay* style.

Steamed white rice is the basis of every major Filipino meal. A main dish consisting of fish, chicken, or some other form of protein is always served with the rice. A vegetable dish usually rounds out the meal. Soup is served on occasion and can also stand in for the main viand if it contains seafood, chicken, or meats. The Filipino table is not complete without a small dish or two containing sawsawan, or dipping sauce. The sauce helps tailor the dish to the diner's individual taste. Grilled fish is often served with a sauce of *patis* (fish sauce) and a squeeze of the local

lime calamansi, while deep-fried pork knuckles are often accompanied by a sauce of soy sauce, vinegar, and crushed garlic. Desserts are not elaborate in an everyday Filipino meal. It can be as simple as a piece or slice of fruit or a serving of ice cream.

Economic status and regional differences and preferences are factors that influence variations in the typical Filipino meal. Poor Filipinos typically subsist on rice and salted, dried, or canned fish and, for the very poor, rice mixed with fermented fish or shrimp paste. Affluent Filipinos may eat rice with two or three kinds of meat on the table.

The regional variations in the typical Filipino meal were primarily shaped by the regions' natural resources—the people used ingredients they were able to readily source from their surroundings—as well as their collective taste preferences. In the Ilocos region north of Manila, known for its harsh climate and limited arable lands, the natives eat a diet heavy in rice, vegetables, and bagoong (fermented fish or shrimp paste), which they use to flavor vegetables and as a dipping sauce. The hardy and thrifty Ilokans, as the people are called, also have a preference for bitter foods, including *ampalaya* (bitter melon) and for dishes called *pinapaitan*, where bitter bile from a goat or cow is added to a dish as a flavoring ingredient.

There are many regional versions of the national dish *adobo*—an everyday dish usually of chicken or pork (or both) stewed in vinegar, garlic, peppercorns, bay leaves, and, often, soy sauce. Manila has the version with soy sauce and vinegar, Cavite in the south puts mashed pork liver in it to thicken the sauce, and Zamboanga adds coconut cream. Other ingredients such as vegetables, seafood, and various fowl (such as duck or snipe) can also be prepared into *adobo*.

Chicken Adobo

Serves 4

Ingredients

8 chicken thighs

Cloves from a head of garlic, crushed and peeled

2 bay leaves

1 tsp whole black peppercorns, lightly crushed

1 c palm or cane vinegar (or apple cider vinegar)

½ c soy sauce

1 c water

1. In a large pot, combine the chicken, garlic, bay leaves, peppercorns, vinegar, soy sauce, and water, and bring to a boil. Reduce the heat, cover, and simmer for about 25 minutes. Discard bay leaves.

2. Remove the chicken pieces, and broil them in a pan on each side until golden brown, about 10 minutes total (alternatively, you can fry the chicken in a skillet in 2 tablespoons olive oil). Transfer chicken to a platter, and set aside.

3. Meanwhile, boil the sauce until about 1½ cups remain, about 15–20 minutes. Pour the sauce over the broiled chicken. Serve with steamed white rice.

A typical Filipino breakfast consists of *sinangag* (garlic fried rice), fried eggs, and any of the following: fried *tapa* (dried salted sliced beef), fried longanisa (native sausage), sautéed (canned) corned beef, and fried salted dried fish. A dipping sauce of vinegar with salt, crushed garlic, or chilies is typically served with the fried beef, sausage, or fish. At times, Filipinos skip rice and eat the traditional breakfast bread called *pan de sal* (meaning “bread of salt”), which are small, oval-shaped buns that pair well with eggs and popular fillings like *kesong puti* (white fresh carabao-milk cheese), peanut butter, corned beef, and ham. Instant or brewed coffee is often consumed at breakfast.

Lunch usually consists of rice and a dish such as fried or grilled fish like tilapia or pompano, or local dishes like *bistek* (fried sliced beef marinated in soy sauce and calamansi) or *binagoongang baboy* (pork with shrimp or fish paste). Popular vegetable dishes are *munggo guisado* (sautéed mung beans with diced pork and bitter melon), *pinakbet* (a popular dish from the Ilocos region, made of sliced eggplant, okra, squash, and other vegetables flavored with fermented fish or shrimp paste), or *laing* (taro leaves in coconut milk, a specialty of the Bicol region, which is known for its spicy dishes).

A typical dinner features dishes similar to lunch, with rice and perhaps a vegetable side dish. It may also include soup, and among the more typical ones are the classic Filipino soup *sinigang* (fish, meat, or shrimp in broth made with a souring ingredient like tamarind), *tinolang manok* (boiled chicken with ginger), or *suam na tulya* (corn and clam soup from the province of Pampanga, a region acclaimed for its culinary excellence).

Popular merienda (mid-afternoon) snacks include noodle dishes like *sotanghon* (stir-fried mung bean noodles with chicken and vegetables) and *pancit molo* (soup with stuffed pork and shrimp dumplings that originated from the town of Molo in Iloilo Province). Other favorite merienda foods include *dinuguan* (stew made with pork blood), which is often served with steamed rice cakes, and *tokwa't baboy* (fried tofu cubes and boiled pork in a sauce of vinegar, soy sauce, and garlic).

Filipino food is characterized by four dominant flavors: salty, sour, sweet, and bitter. All these flavors complement rice. There are many food pairings in Filipino cuisine that allow combinations of contrasting flavors to meld pleasingly on the native palate, such as sour green mangoes dipped in salty fermented fish or shrimp paste.

Eating Out

During the Spanish colonial period, ambulant vendors walked the streets selling foods to natives, sometimes setting up makeshift tables from where they would sell their food to lure passersby. These vendors, called *chow-chow* (from stir-frying or “chow”) vendors and known for their noodle dishes, were Chinese and are credited for introducing street-food culture in the country.

In the early 19th century, Chinese immigrants began setting up places for public eating, located mostly in Manila, where the Spaniards allowed them to live in a designated area. These places, called *panciterias* (from *pancit*, or noodles), served Chinese foods with Spanish names on their menus like *morisqueta tostada* (fried rice), *camaron rebogado* (shrimp croquettes), and *torta de cangrejo* (crab omelet). The Spanish nomenclature benefited

the patrons, many of whom were from the Spanish-speaking class. To this day, some restaurants in Manila's Chinatown and other parts of the country still list dishes with Spanish names on their menus.

Cooking and entertaining at home were the norm until a restaurant culture emerged around the 1950s, post American rule. During this period, restaurants offering American food, Spanish food, Continental cuisine from countries like France and Germany, and Asian food sprouted in urban areas, particularly in Manila. Filipinos were finally opening up their palates to other cuisines. But at that time, only a few restaurants offered Filipino food, including two that are still around today, the Aristocrat (founded in 1936) and Barrio Fiesta (founded in 1958).

In the 1960s, more restaurants in the cities started serving Filipino food—the kind typically cooked only at home, such as *adobo* and *caldereta* (beef stew). With urbanization and industrialization came the need for more restaurants as people became busier and had less time to cook at home. Tourism was starting to climb, too, and an opportunity arose in the form of Filipino restaurants that would cater primarily to tourists. Urbanites also started hankering for the foods they ate growing up. It became very trendy to open all-Filipino food restaurants—from gourmet-type places, to those offering only regional specialties, to those serving only one type of food (such as bangus, or milkfish, restaurants). This became more than just a passing trend, as Filipino restaurants are still very much around today.

Chinese cuisine has remained very popular in the country, and Spanish restaurants serving upscale dishes that Filipinos still associate with special celebrations have stayed around. But globalization has also had a very strong impact on the thriving local restaurant scene. Many urban restaurants offer the world's most prominent cuisines, including Japanese, Indian, Italian, and French. Local and foreign chefs alike are offering fusion-style food marrying Filipino ingredients or traditional dishes with Asian or European ingredients, particularly in the country's major cities.

The United States has made its culinary mark on the country most significantly in the area of fast foods. American fast-food and drink companies such

as McDonald's, Kentucky Fried Chicken, Dunkin' Donuts, and Coca-Cola are ubiquitous in many cities and towns all over the country. McDonald's is a big favorite, luring the Filipino palate with their offerings of local dishes such as the McSpaghetti, spaghetti topped with sweet Filipino-style tomato sauce, and dishes like their longanisa breakfast value meal composed of fried garlic rice, fried egg, and fried native sausage. Many Filipino rivals to this food giant, most notably the highly successful and very popular local chain Jollibee, are giving McDonald's and its ilk stiff competition with their Filipino-influenced burgers and other fast-food dishes.

The Filipino masses also patronize fare served in *carinderias*, or open-air food stalls—places where people sit communally to eat home-style food. Then there are the *turo-turo* (“point-point”) establishments, downscale places where one can order from a buffet-style arrangement by pointing to the food one wants to consume. Most of these eateries are found close to offices, public markets, and transportation hubs, catering mostly to low-income workers and families in search of quick, cheap, but satisfying meals.

Ambulant vendors are still very much part of the street landscape today. Popular offerings consist of *balut* (a local boiled delicacy of fertilized duck's egg), *taho* (soybean curd topped with sugar syrup), and fish balls on sticks dipped in sweet or spicy sauce. There are vendors with stationary stalls offering snack fare such as *banana-cue* and

Buying fried bananas from a street vendor in the Philippines. (Mtkang | Dreamstime.com)

camote-cue—syrup-coated plantain bananas and sweet potatoes on sticks—and barbecued pork and chicken parts, including entrails. Some of these parts were baptized by Filipinos with descriptive colloquial names such as “Adidas” for chicken feet and “Walkman” for pig’s ears. Other popular street foods include fried *ukoy* (fritters made from rice dough or flour topped with small unshelled shrimp) and *halo-halo* (cut-up fruit, beans, and tubers in crushed ice with milk).

Special Occasions

The introduction of Catholicism during the Spanish colonial period paved the way for the annual celebration of feasts, or fiestas, honoring various towns’ patron saints, a ritual that became deeply ingrained in Filipino community life; to this day these are celebrated with much anticipation, fanfare, and local color. Now more than just a saint’s feast day, the celebration can also be a thanksgiving for a successful harvest as well as for God’s benevolence.

Today’s fiestas are a mixture of the religious and the secular—the parish church organizes mass, processions for the honored saint, and prayer sessions, while the townfolk in turn organize events like beauty contests, sporting matches, dances, and other activities intended to bring not just communal enjoyment but also extra funding to the town’s coffers. All these activities set the stage for private gatherings that bring friends, families, and even strangers back to townspeople’s homes to share the typically extravagant fiesta meal.

The fiestas in the Spanish colonial period were led by the Spanish friar, the head of the church, so the foods that became widely associated with the town celebration tended to showcase Spanish cuisine, as is still the case today. The fare includes the quintessential fiesta food and table centerpiece, the *lechón*, a whole roasted pig, often stuffed with aromatic leaves like lemongrass or tamarind. Spanish-influenced dishes such as paella (rice with meats and/or seafood), *galantina* (stuffed deboned chicken), and *morcón* (stuffed beef roll) remain fiesta mainstays. Some Filipino fare is served as well, such as *kare-kare* (oxtail stew) and various kinds of steamed

or grilled local fish and seafood. The popular Chinese-influenced *pancit* (noodles with meats or seafood and vegetables), typically in one of its more sumptuous regional variations, is usually offered. There are also Spanish-style desserts such as *leche flan* (steamed or baked egg custard) and *brazo de mercedes* (meringue roll filled with custard), as well as American-style cakes and native sweets.

Among the popular fiestas in the Philippines is the Pahiyas, a highly colorful town celebration held in Lukban, in Quezon Province, every May 15 to honor their patron saint San Isidro de Labrador. Here, homeowners decorate the facades of their houses with colorful and edible rice wafers, together with various fruits and vegetables. The wafers are usually fried and eaten after the celebration. In the town of Balayan in Batangas, the Parada ng Lechon, or Parade of Roasted Pigs, is held in honor of the patron saint St. John the Baptist. The pigs are dressed according to the sponsoring team’s theme, blessed by the priest in church, and then consumed by the townspeople afterward.

Another highly anticipated event for Filipinos is the Christmas season. Like the fiesta, it has become more than just a religious celebration. One of the highlights of the season is the family meal served during Noche Buena (meaning “night of goodness,” that is, Christmas Eve), a meal eaten after attending the midnight mass celebrated in honor of the birth of Jesus Christ. Filipinos celebrate with their families by eating foods like Chinese ham, *queso de bola* (Edam cheese), roast turkey or chicken, fruit salad, and the requisite Spanish-influenced foods like *cocido* (boiled meats and vegetables with broth), *chicken pastel* (chicken topped with a savory crust), *ensaimada* (a brioche-like bun topped with butter and cheese), and hot chocolate (also introduced during the Spanish period). Grapes, apples, and roasted chestnuts are often served.

The season also includes the traditional Misa de Gallo (Rooster’s Mass), a 4 A.M. dawn mass held for nine consecutive mornings leading up to Christmas Day. Here, native delicacies—freshly made *bibingka* (a steamed rice pancake topped with butter, cheese, and grated coconut) and *puto bumbong* (a steamed cylindrical sticky purple rice cake served

with butter, sugar, and grated coconut)—are served from stalls outside churches to churchgoers after the dawn mass. Hot ginger tea, or *salabat*, the typical drink accompaniment, helps ward off the early-morning chill.

Diet and Health

The basic Filipino diet conforms to the tenets of what is universally recognized as healthy eating—rice and tubers are high in carbohydrates, fish is an excellent source of protein and omega-3 oils, and vegetables provide necessary vitamins and minerals. While these food groups remain the basis of the Filipino diet, there have been significant changes in dietary patterns over the years, resulting in obesity and increased incidences of serious diseases.

Filipinos are now eating copious amounts of processed foods (including meats, instant noodles, chips, and baked goods) and drinking more soda. Prices of some processed foods have become even more affordable to the average Filipino than prices of fruits and vegetables. The consumption of fruits and vegetables including roots and tubers has decreased, while consumption of animal-based foods, as well as foods high in sugar, fats, and oils, has increased. Instant noodles are overwhelmingly popular, a major source of empty calories. Many Filipinos are increasingly dependent on street food not just for snacking but for their major meals as well. Most street foods are full of calories, fat, and cholesterol but are highly patronized because of their accessibility, low cost, and ability to fill one up. Restaurant fast foods are now a fixture in the everyday Filipino diet. The incidence of coronary diseases has vastly increased and is associated with the changes in dietary trends in the country. Heart disease is now among the leading causes of adult mortality in the country, alongside tuberculosis, pneumonia, and cancer. Adult obesity continues to rise.

Widespread and fast-growing urbanization, globalization (as evident in the rise of food imports

and preference for fast foods), and easier access to technology (cell phones, computers, videos) have all contributed to the significant changes in the Filipino's food-consumption habits. The increased preference for Western foods is a development that has reached even the remotest areas in the country.

With all these changes in the Filipino diet, some things have remained constant. Many Filipinos still turn to the practice of alternative folk medicine by using plants, herbs, vegetables, and other foods to cure common ailments and diseases. Some of these plants and herbs are being manufactured commercially into capsules, powders, and other easily digestible forms. The ampalaya, or bitter melon, widely eaten in the country, is now available in teabag form, and it is being promoted as a treatment for a certain type of diabetes. It is also used for treating cough, liver problems, and sterility. The roots of the *banaba*, a flowering tree, are used for various stomach ailments, and its leaves and flowers for fevers and as a diuretic.

Portuguese in Asia

Overview

At the end of the 15th century Portuguese navigators sailed around the southern tip of Africa and opened a new sea route to the spice-growing regions of India and the Far East. For the next 150 years, Portugal's monopoly of the European spice trade and profits from slave trading in Africa and sugar plantations in Brazil made 16th-century Lisbon the richest capital in Europe. Merchants from all corners of the globe mingled in the Estado da Índia (the Asian portion of the Portuguese Empire). Mixed marriages between Roman Catholic Portuguese men and indigenous women from Malacca, Indonesia, the Philippines, India, Africa, Japan, and China gave rise to a richly multicultural Portuguese Eurasian community and a unique cuisine that combined Iberian ingredients and techniques with the great culinary traditions of Asia.

The Portuguese colonies in Asia were Goa (now a state of India), Malacca (the modern Malaysian city of Melaka), Macau (now a special administrative region of the People's Republic of China), and East Timor (independent Timor Leste). Smaller Portuguese enclaves were located elsewhere in India and Ceylon (Sri Lanka), in trading ports scattered around the Indian Ocean, throughout Southeast Asia, and as far east as Japan. Malacca was lost to the Dutch in 1641, but the other colonies remained Portuguese possessions until the 20th century, when they achieved independence and many Portuguese Eurasians dispersed to other parts of the world. Descendants of the Portuguese traders, with family names such as DeMello, DeSousa, Rodrigues, Monteiro, and Fernandes, still reside in the former

colonies and territories, in enclaves throughout Asia, and in a global diaspora. Wherever they live and regardless of their ethnic origins, Portuguese Eurasians are united by the Catholic faith and an Iberian heritage that celebrates hospitality, a *sozinho* (relaxed) attitude toward life, and the Latin love of a convivial and generous table.

Food Culture Snapshot

Sérgio Rui de Pina and Josefina A. do Rosário are Macanese expatriates residing in greater Vancouver, Canada. Sérgio is a retired businessman and a well-known member of the Macanese community. His wife, Josefina, is the current president of the Macau Cultural Association (Casa de Macau) of Western Canada, a cultural and social-networking organization linked to other Casas de Macau and Macanese communities around the world.

Throughout the four and a half centuries of their history, the people of Macau dispersed throughout South Asia and the Far East, primarily as traders. The last significant wave of emigration took place in the mid-20th century when many Macanese left Macau for the United States, Canada, Australia, Brazil, Portugal, and other European countries. Since the return of Macau to Chinese administration in December 1999, Macanese in the diaspora have had to make adjustments to their political, financial, social, and cultural outlook, changes that have come with some costs and sacrifices. Despite this, the Macanese have managed to retain many aspects of their traditional culture, customs, language, and culinary heritage.

Afternoon tea is a time-honored tradition among the Macanese. (D2xed | Dreamstime.com)

Like all Macanese in the diaspora, Sérgio and Josefina have adjusted their traditional eating habits and methods of food preparation in response to their new environment and the availability of ingredients. But their Portuguese Chinese identity still shapes their tastes and the way they cook and eat.

Their day typically begins around 9:00 with a light breakfast of strong, dark brewed coffee and warm bread buns with butter. At around noon they take a very light lunch. Because of Josefina's tight work schedule, it's usually a fairly quick meal in one of Vancouver's many Chinese restaurants. Sometimes, they'll go to a place serving westernized or fusion food for a change. Like most busy people living in large urban centers, Sérgio and Josefina sometimes eat on the run and have learned to accept and enjoy North American fast foods, like burgers with fries, and fish and chips. Afternoon tea is a time-honored tradition among the Macanese. For Sérgio and Josefina, a short afternoon tea break usually means more coffee, accompanied by some biscuits or home-baked cookies or cakes.

Their evening meal is eaten at around 8:00 or a bit later. There isn't as much time for "proper" home cooking and shopping for fresh ingredients every day, but it will still be a fairly traditional Macanese meal, starting with *caldo verde* or another vegetable soup, based on tomatoes, potatoes, or cabbage, with some soup bones in the pot or a few slices of *chouriço* (a spicy sausage) added as a garnish, along with the signature Portuguese finishing touch of olive oil. One or

two main dishes and a side dish of vegetables follow. *Pork bafassa*, a joint of pork butt or fresh ham cooked with the skin on and flavored with garlic, green onions, and saffron, is a favorite, although Sérgio and Josefina sometimes use turmeric, which is cheaper than saffron and more readily available in North America. Plain steamed rice, rather than potatoes or bread, accompanies most evening meals, along with a glass or two of red wine. Dessert might be fresh fruit, or a slice of cake or flan, and to finish off the meal, they have a cup of good strong coffee.

Major Foodstuffs

Luso-Asian cuisine evolved through Iberian contact with Indian, Malay, and Chinese culinary cultures, enhanced by trading links with Southeast Asia, Indonesia, Sri Lanka, Africa, and the Arabian Gulf. The traffic of people and ingredients along the Portuguese trade routes provided an enormously varied pantry. Rice paddies, coconut groves, the bountiful harvest of the sea, and the cornucopia of Asian fruits, vegetables, and herbs provided the staples. Supply fleets from Lisbon brought wine, olive oil, vinegar, olives, figs, marmalade, jams, and fruits. Merchants from Arabia offered dried fruit, almonds, plums, conserves, saffron, rose water, and dates. From Malacca came spices, Chinese tea, and rhubarb.

Vasco da Gama enjoyed his first meal of fish curry with rice and ghee in India, and the adaptable Portuguese quickly adjusted to a rice-based diet. But their Roman Catholic religion and love of bread, wine, and pork distinguished them from their Asian neighbors, many of whom abstained from alcohol and meat.

Pork is the favorite meat of the Portuguese Eurasians. Roast suckling pig is their classic celebratory dish, and pork is the basis of European-style stews and Asian curries. Pork charcuterie, including *chouriço* and *linguiça* sausages, *presunto* (Iberian ham), and *morçela* (blood sausage) are enjoyed on their own or used to add flavor to other dishes. Goa's spicy *chourissam* sausages and Cantonese *lap cheong* are local substitutes. Traditionally, lard was used as a frying medium and as a fat for baking.

Bolo de carne, a bacon-studded tea cake, is still made in Goa.

Portuguese Eurasians are fond of offal, which is used in dishes such as Goa's *sarapatel* (a vinegary stew), Malacca's *curry feng*, and Macanese *sarrabulho*. They also enjoy beef tripe, liver, and tongue. They are thrifty cooks who traditionally utilized ears, snouts, tails, intestines, hooves, and trotters, as well as the meat of rabbits, horses, frogs, wild game, and fowl.

Fish and shellfish are central to the diet of the Portuguese and the Portuguese Eurasians. *Bacalhau* (salt cod) is prepared in many ways and is much loved, although it's now getting harder to come by. Sea and river fish, rays, octopus, squid, shellfish, prawns, crabs, eels, turtles, crayfish, and lobsters are curried, fried, or steamed in the Asian manner or prepared Portuguese-style, stuffed, grilled, marinated, or included in hearty soups and stews.

The Cristang ("Christian people") of Malacca were specialists in making the pungent fermented shrimp paste called *belacan*, and they use it in a wide variety of dishes. *Balichão* is a Goan adaptation, made with prawns, vinegar, chilies, and garlic. It is eaten as a condiment or used to flavor dishes of meat or fish also called *balchãos*. The Macanese version of *belacan* is called *balichão* or *balichang*.

Bread is a signature of Luso-Asian cuisine. Soft white rolls—called *pão* in Portugal, *pav* in Goa, *pau* or *bau* in Macau, and *pang* in Malacca—are often served in addition to rice. Bread is used to thicken soups called *açordas*, and breadcrumbs are made into a stuffing-like dish called *migas*. A variety of Asian snacks, such as *epuk-epuk* (Malaysia), *pastel* (Indonesia), *chilicotes* (Macau), and *empadinhas* (Goa), are descendants of Iberian pies traditionally encased in bread, called *empanadas*.

Fresh cheeses, olives, olive oil, fresh cilantro, and plenty of onions and garlic are other Iberian elements of Luso-Asian cuisine. Olive oil is used for frying and vinaigrettes and is drizzled over finished dishes. Black and green olives are eaten as an accompaniment to wine and used as an ingredient or garnish.

The Portuguese carried many new plants from the Americas to Asia, including tobacco, papayas,

guavas, cashew nuts, pineapples, jicamas, squashes, peanuts, custard apples, avocados, passion fruit, sapodillas, tomatoes, capsicums, maize, sweet potatoes, and cassava. New starch crops, in particular sweet potatoes and cassava, helped to reduce the region's dependence on rice and susceptibility to famine. New World fruits and vegetables play an important role in Luso-Asian cuisine.

Cashew trees now grow all over Goa. The nuts are served as snacks, baked into cakes and biscuits, added to meat and vegetable dishes, and used to enrich curries. Another hugely successful import was the chili pepper, which was enthusiastically adopted by the peoples of Asia, including the Portuguese Eurasians. In Goa, mild Kashmiri chilies are used in great quantities to give dishes a distinctive red color. Much more potent *piri-piri* peppers are added for heat. Cristang meals typically include a range of chili-based *sambals*. The Macanese are not so liberal in their use of chilies but enjoy *piri-piri* sauce and a table condiment of chilies in oil.

The Portuguese had plenty of Brazilian sugar when it was a rare and expensive commodity for the rest of the world. Sweet preserves and conserves, sugar-glazed pastries, fritters and donuts cooked in sugar syrup, candied fruits and vegetables, and versions of the Portuguese quince paste called *marmelada*, using local fruits such as bananas, mangoes, and guavas, make up the Luso-Asian sweet repertoire. The Portuguese also brought the techniques for making marzipans, caramels, and hard candy to Asia and developed fudges (*alua* and *dodol*) and other sweetmeats using local ingredients such as rice flour, jaggery (unrefined cane sugar or palm-sap sugar), and coconut.

European wine, brandies, and liqueurs and exotic local blends made from palm toddy, hibiscus flowers, fruits, spices, ginger, and other aromatics are drunk for pleasure and used in cooking. Portuguese monks introduced the technique of double distillation that made *arak* (palm wine) more potent and produced Goa's infamous *feni*, a brandy made from coconut toddy or cashew-fruit juice. Portuguese Eurasians in India, Malacca, and Macau traditionally chewed areca nut and betel leaf, but this habit has now largely gone out of style.

Modern Portuguese Eurasian cooks have access to ready-made spice pastes and other convenient foods such as canned frankfurters, coconut powder, evaporated milk, mayonnaise, bottled sauces, and instant noodles. They are acquiring international palates, shopping in supermarkets, and using more manufactured foods. Inevitably, some traditional foodways are being lost, but adaptation and innovation lie at the heart of Luso-Asian cuisine, and it continues to evolve.

Cooking

Luso-Asian cooking is characterized by complex flavors and generous use of spices and aromatics. Common ingredients include European herbs such as bay leaf, thyme, rosemary, and fresh cilantro; Middle Eastern saffron; Indian spices including turmeric, cumin, cinnamon, coriander, and ginger; and Southeast Asian flavorings such as tamarind, lemongrass, galangal, candlenuts, and belacan (shrimp paste). Chinese ingredients such as soy sauce and star anise are also used, along with Indonesian pepper, cloves, nutmeg, and mace.

Historically, many Portuguese Eurasians were economically challenged. They are thrifty cooks who excel at producing richly flavored and nourishing dishes from humble ingredients. Stir-frying and clay pot cooking, which conserve fuel, are common cooking methods. Portuguese techniques such as roasting (*assado*), stuffing (*recheado*), stewing (*guisado*), and steaming (*bafado*) are also used. Braising meats and then finishing them by frying is a Portuguese technique used in dishes such as Malay/Indonesian *rendang*. The class of Indonesian dishes called *balado* (“with chilies”) probably also originated with the Portuguese.

Luso-Asian cuisine relies heavily on meat, which is often marinated in vinegar or cooked with it. *Vinho d'alhos*, a marinade of wine, vinegar, and garlic that improves the keeping quality of foods and imparts a distinctive tangy taste, gave rise to dishes such as Goa's famous *vindalho*. Local souring agents such as lime, tamarind, and *belimbing* (star fruit or carambola) are also used to give dishes an acidic zing.

Vinho d'alhos, a marinade of wine, vinegar, and garlic that improves the keeping quality of foods and imparts a distinctive tangy taste, gave rise to dishes such as Goa's famous vindalho. (iStockPhoto)

Goan Vindalho

Vindaloo served in Indian restaurants in the West has a reputation for being fiercely hot, but the amount of chili or cayenne can be adjusted to suit your taste. The Portuguese favor pork, but the recipe works just as well with beef. Vindalho tastes best when made a day or two ahead so the flavors can develop.

Ingredients

8 tbsp olive oil, divided

6 medium onions, peeled and sliced into half-moons

2 tsp cumin seeds
 2 dried, hot red chilies, or 1 tsp cayenne
 1 tsp black peppercorns
 1 tsp cardamom seeds
 3-in. cinnamon stick
 2 tsp black mustard seeds
 1 tsp fenugreek seeds
 5 tbsp red wine vinegar
 2 tsp salt
 1 tsp brown sugar
 6 tbsp water, divided
 2 lb boneless pork shoulder or loin, cubed
 8 cloves garlic, peeled
 1-in. piece fresh ginger, peeled
 1 tbsp ground coriander
 1 tsp ground turmeric
 1 c red wine

Heat 4 tablespoons of the olive oil, and fry the onions, stirring occasionally, until deep brown, about 20 minutes. While they are cooking, grind the cumin, red chilies, peppercorns, cardamom, cinnamon, black mustard, and fenugreek seeds in a coffee grinder. Put in a blender with the vinegar, salt, brown sugar, and 3 tablespoons of the water. Add the browned onions, and blend to a paste. Scrape out into a large bowl, and mix with the pork cubes until they are well coated. Set aside for 1 hour (or up to 24 hours in the fridge).

Roughly chop the garlic and ginger, and put into the blender (or a mortar and pestle) with 3 tablespoons water. Blend to a coarse paste. Heat the remaining 4 tablespoons olive oil, and fry the paste for 1 or 2 minutes until fragrant. Add the coriander and turmeric. Fry for another 30 seconds. Add the pork cubes, scraping in all the spice paste, and add the wine. Bring to a boil, cover, turn down the heat, and simmer very gently for 2 hours, stirring occasionally, until the pork is very tender.

Traditionally, every Portuguese Eurasian household had a kitchen garden (*horta*), and sourcing the

freshest produce is very important. The Cristang, who endured centuries of economic deprivation after the loss of Malacca to the Dutch, developed a wide range of vegetable and meat-stretching dishes. Like Macanese cooks, they cut vegetables on the bias and stir-fry them in the Chinese manner. Many Goan vegetable dishes reflect the influence of the indigenous Saraswati Hindus, whose meatless curries and dals were adopted for Catholic fasting days. Dishes made with fresh palm toddy, salted buttermilk, curd, yogurt, and ghee, as well as fruit desserts and sweets made with rice, coconut, and jaggery (palm sugar loaves, also made from sugarcane), crossed over from the Hindu kitchen.

The Portuguese Eurasians are masters of preserving fruits and vegetables using salt, vinegar, and sugar. In India, they developed tangy-sweet chutneys that inspired Anglo-Indian classics like Major Grey's. They also adopted the Indian vinegared vegetable pickles called *achars* and Southeast Asian sambals (chili sauces).

Many dishes start with the classic Portuguese *refogado* of garlic and onions slowly caramelized in olive oil. In Malacca, traditional Iberian pot roasting combined with the Chinese *lu* technique gave rise to the method known as "flavor-potting." It is widely believed that the Portuguese popularized deep-frying in Asia, inspiring many of the region's snack foods and Japanese tempura.

Kitchen tools include the Portuguese *tacho* and *panela* (a terra-cotta baking dish and iron soup kettle), the Malay *batu giling* (grinding stone) and *pilung tek-tek* (mortar and pestle), Indian-style *teazers* (curry pots) and *kadais* (miniwoks), and a Chinese wok and cleaver.

Herbs and spices are usually ground fresh in the Indian manner. Goans make South Indian-style curries thickened with freshly grated coconut. Cristang cooks use the Malay technique of frying spice pastes in coconut cream.

At the village level in Asia, traditional cooking methods are still used in simple kitchens equipped with propane cooktops and/or a charcoal brazier. European-style cakes were traditionally cooked in a makeshift oven made by putting a tray of hot coals on top of the brazier. Today, broilers or

toaster ovens are often used to achieve a characteristic browned top on baked cakes. Full-size Western ovens, which are expensive to run and heat up the kitchen, are mostly used in Western-style homes or apartments with air-conditioning.

Many Asian cakes and sweets are of Portuguese origin, with rice flour, tapioca, cassava, and other starches replacing wheat flour. Seventeenth-century Portuguese nuns were famous for confections made from egg yolks and sugar. Thai temple sweets such as *foy thong* (golden threads), Malaysia's *serikaya* (a curd made from coconut, sugar, and eggs), and Chinese egg tarts are believed to have descended from these traditional Portuguese sweets. Cakes such as *bolu*, *molho*, *koku*, and *putugal* appear in all the former Portuguese territories in Asia, along with the wafers known as *love letters*, sweet fritters called *sonhos* ("dreams"), and various interpretations of *bebinca*, a rich layer cake made from reduced coconut milk and jaggery.

Modernization is changing the way foods are procured, prepared, and consumed. Families are smaller; many women have jobs and rely on convenience foods and cooking methods. Fewer Portuguese Eurasian households hire domestic help, and there isn't enough time to prepare the labor-intensive dishes of the past. Refrigerators do away with the need for preserving, and well-stocked supermarkets mean there is no need to stockpile food for the monsoon. But Portuguese Eurasian cooks still recognize that the best flavors come from coconut, chilies, herbs, and spices ground fresh every day and the traditional cooking methods of their grandmothers.

Typical Meals

The wealthy colonial Portuguese lived in grand style. A huge staff of slaves and servants supervised by the *dona de casa* (lady of the house) dealt with the daily tasks of purchasing and preparing food. The main meal in a Catholic Goan country mansion, served in the evening or as a leisurely lunch, was an elaborate affair. A soup course came first, with crusty bread, cocktails or sangria, and cashews and other snacks such as salt cod balls, turnovers, or shrimp rissoles. Main dishes might include

grilled prawns, a pork *balchão*, fish curries, roasted pomfret (a popular white fish in Goa) stuffed with chili paste, or *chouriço* or Goan *chourissam* sausages fried with potatoes and onions, accompanied by European breads and Indian chapatis, boiled rice and an elaborate pilaf, salads, vegetable dishes, and an array of pickles and condiments. The repast would be washed down with Portuguese wines and Indian or Chinese tea, followed by digestifs, port, and desserts such as pudding, flan, or *bebinca* and fresh fruit. These excessive meals were never wasted—leftovers were distributed to household staff and less-well-off members of the Portuguese community.

Except for the bread and wine of Holy Communion and the very occasional feast of roast pig, the poorer Portuguese and *mestiços* (children of mixed marriages) largely followed indigenous foodways, often at a subsistence level. Modern Luso-Asian cuisine is far more egalitarian, the main dichotomy existing between rural (more traditional) and urban (more westernized) foodways. In both groups the dining table, chairs, and tablecloth are likely to be European, but dishes are served all at once, Asian-style.

Fish curry and rice is the staple dish of Hindu and Catholic Goans and is eaten at any time of day. Many Portuguese Eurasians now start the day with tea and toast, but breakfast might also be leftover fish curry for a Goan or a bowl of congee (rice porridge with tasty toppings) for a Macanese. Lunch and dinner are similar meals, centered on rice and a mixture of meat, fish, and vegetable preparations served with condiments and Asian or European breads. Traditionally, a wide variety of dishes were brought to the table, even at lunchtime, but nowadays meals tend to be simpler, with one or two principal dishes, such as *caldeirada* (fish stew), *guisado* (pot roast), or *xacuti* (a fiery Hindu curry of vegetables with chicken or pork). Some traditional Muslim dishes, including rice-based pilafs and *biryanis*, kebabs, mutton dishes, rich *kormas* (food cooked in a yogurt and nut sauce), and desserts such as sweet rice and *kheer* (rice pudding) also appear on Portuguese Eurasian tables. A wide array of chutneys, pickles, and condiments typically accompany

a Luso-Asian meal. Portuguese kale soup (*caldo verde*), made with local Asian greens, is a Luso-Asian soul food that often appears as a first course.

A Cristang meal will typically consist of rice, two or more curries, sambals, and vegetable dishes. Diners help themselves and traditionally eat with the fingers of the right hand in the Malay fashion, or with a spoon and fork. *Bife assado* (beef pot roast), *debal* (devil curry), and curry feng are Cristang specialties. Rice dishes are either European-style (*arroz*) or Malay-style (*nasi*).

The Dutch and British who followed the Portuguese into Asia also influenced Luso-Asian cooking. Stews containing carrots, cabbage, onions, and potatoes; meatballs called *frikkerdel* or *pikkadel*; yeasted sweet breads; and cakes baked in fancy brass molds and cakes with dried fruit reflect the Dutch influence. The British popularized hams, roast beef, dishes served on toast, and afternoon-tea treats such as filled cakes, sandwiches, and scones.

Along with the Portuguese, Chinese, Arab, and Indian settlers influenced Timorese cuisine. *Seu mai* (dumplings) and *chau min* (noodles) are local renditions of Chinese dishes. Arab-inspired kebabs (*sasate*) are made with goat meat or chicken. Frugal, one-bowl meals called *agua e sal* (water and salt), made from meat, poultry, fish, or vegetables served over rice and eaten with a fork and spoon, are enjoyed in every household. The mountain people's traditional stew (*seduk*) is also widely consumed.

The final course of a Luso-Asian meal is likely to consist of fresh fruit or a European-style dessert. Mango pudding is a tropical version of the Portuguese *pudim*, and there are various Asian interpretations of Iberian flan. There might also be a European butter cake, Chinese mung bean porridge, or Peranakan pineapple tarts. Pastes made from guavas and lime juice (*perada*) or mangoes (*mangada*) are served with coffee or a glass of port.

Eating Out

“Goa is crying for her lost cuisine,” reads a billboard advertisement for a restaurant in the state capital, Panjim. When Portuguese Eurasians eat out, it will rarely be at a restaurant serving their own, homey

cuisine. Many people outside the Portuguese Eurasian community find their traditional foods too spicy or strange or think them unrefined.

Few traditional restaurants survived Macau's transformation into a Chinese tourist resort with Vegas-style casinos and hotels. A few token “Portuguese” and “Macanese” restaurants cater to foreign visitors with an interest in cultural tourism. When the overseas Macanese eat out, which they love to do, they'll often head for the local Chinatown. There are only a handful of Cristang living in Malacca today and even fewer traditional cooks. Some Cristang dishes may be found at Peranakan restaurants.

Although restaurants are not a feature of traditional Luso-Asian culture, eating foods prepared outside the home has always been popular. In Asia, hawker stands, bakeries, and the “merenda man” (vendor of teatime treats) traditionally provided a wide range of inexpensive cooked foods at any time of the day or night—curries and bread in Goa; noodles, steamed buns, and barbecued pork and ducks in Macau; sticks of chicken *satay* and entire meals of rice, meat, and vegetables wrapped in banana leaves in Malacca. The cry of street vendors and the steam whistles, bells, and clacking bamboo that announced the arrival of a hawker pushing a cart or balancing a shoulder yoke are nostalgic memories for Portuguese Eurasians in the diaspora. The familiar street foods of their childhood are often the first thing they seek out when they go home for a visit.

Lightened and modernized by chefs who have studied contemporary cooking in the West, Luso-Asian cuisine is starting to be recognized for its eclectic, exotic flavors and unique multicultural style and may begin to appear more often on restaurant menus.

Special Occasions

Easter and Christmas are the biggest celebrations of the Luso-Asian year and are associated with traditional Portuguese foods. Yeasted cakes and breads, some decorated with colored eggs, are popular at Easter. Most Catholics fast to some degree during Lent, even if it just means giving up a favorite

indulgence such as chocolate or steak. A whole roast lamb or kid on Easter Sunday is the traditional reward.

The 12 days of Christmas are the high point of the culinary year, bringing forth a multitude of marzipans, halwas, breads, cakes, and confections with evocative names such as nun's bellies, pope's ears, sighs, dreams, and pillows for Baby Jesus, as well as a super-rich egg custard called *toucinho de ceu* (heavenly bacon). Christmas Eve calls for *consoada* (bacalhau and potatoes) or *galinhia pai* (chicken pie), eaten after midnight mass. The Cristang serve a brandied pig-trotter soup, called *teem*, and *debal*, a spicy curry of Christmas leftovers. Sarapatel, traditionally served with *sanna* (puffy breads made from rice and palm toddy), is mandatory at Goan feasts.

The Portuguese Eurasians also participate in some indigenous Asian holidays, such as Chinese New Year and the Mid-Autumn Festival, which are celebrated by the Macanese. Catholic Goans take part in the Hindu carnival called Holi, buy or make special sweets for Diwali, and celebrate Pongal, the South Indian harvest festival, with the traditional dish of sweetened rice. Cristang cooks will prepare special treats for their Muslim friends and neighbors at the close of Ramadan.

Luso-Asian weddings combine a Catholic ceremony (blessed with bread and wine and followed by wedding cake) with local nuptial customs. Cristang brides traditionally dress in Malay sarong

Sarapatel, a vinegary stew often served on Christmas Eve by Portuguese Eurasians. (iStockPhoto)

and *kebaya*, while Catholic Goan and Macanese brides may appear first in a European bridal gown and then in Asian costume. Portuguese folk dances and music accompany the wedding feast, which in Timor may include the sacrifice of a buffalo.

The Feast of St. Francis Xavier, patron saint of the Portuguese Eurasians, draws Catholics from all over the world to the Basilica of Bom Jesus in Old Goa, where the Jesuit missionary's body is preserved. In Mumbai, the Bandra Feast celebrating the birthday of Mary attracts pilgrims from throughout India. In Malacca, the Festa de San Pedro involves a blessing of the fishing fleet, carnival competitions, and a traditional parade.

Among the Macanese, birthdays, weddings, important business meetings, and other community celebrations call for *cha gordo*, which literally means "fat tea." Community cooks band together to create a banquet featuring the dishes that connect the Macanese with their heritage. There will be *chamuças* (like samosas), *bolos de bacalhau* (codfish cakes), *pão recheado* (small, deep-fried stuffed buns), and other finger foods. Chafing dishes will display *chicken ca-freal* (spicy African chicken), *tacho* (a hearty pork and offal stew), *porco balichang tamarinho* (pork belly with tamarind and shrimp paste), chili prawns, Goan vindalho, and steaming mounds of white rice, *arroz chau-chau* (Portuguese fried rice), and stir-fried noodles. There may be *empada* (an exotic fish pie enclosed in sweet pastry) or *capela* (meatloaf baked in the shape of a crown), and there will definitely be the much-loved *minchi* (ground beef and/or pork with soy sauce and other Asian flavorings, onions, and cubes of fried potato).

Minchi (Macanese Ground Meat)

All Macanese cooks have their own (often secret) recipe for minchi, the Macanese version of "mince." It's a comforting and homely dish that can be served at any time of day, by itself or with rice, noodles, bread, or just about anything else.

2 potatoes, peeled and cut into small cubes

Oil for frying

1 lb ground beef
 ½ lb ground pork
 1 tsp light soy sauce
 4 tsp dark soy sauce
 1 tsp sugar
 1 tsp salt
 ½ tsp pepper
 1 onion, finely chopped
 2 cloves garlic, chopped

Deep-fry the potato cubes, and set aside. Mix the ground beef and pork with the soy sauces, sugar, salt, and pepper. Sauté the onions and garlic in a little oil until softened. Add the seasoned meat, and stir-fry until cooked but not dry. Mix in the fried potatoes. Taste and adjust the seasoning before serving. Some cooks like to add a dash of Worcestershire sauce, toasted sesame oil, or *tau cheo* (fermented yellow soybean paste).

At the dessert end of the table, choices might include *baji* (glutinous rice pudding), *bebinga de leite* (a coconut custard), *pastéis de nata* (Portuguese custard tarts), and *cabelo de noiva* (a tart topped with sweet egg threads called angel's hair). There will be *bolos* (sponge cakes and pound cakes rich with eggs and butter), *batatada* (a delicious sweet-potato cake), cornstarch cookies called *genetes*, cupcakes, and *malassadas*, which are little donuts.

And, if the guests are lucky, one of the older Macanese cooks will still remember how to make *alua* (a fudge containing lard) and *ladu*, another very traditional confection. Otherwise, they will have to be brought back from Macau, where one or two artisan confectioners may still make these treasured heritage sweets.

Diet and Health

The Roman Catholic calendar of fast and feast days laid the framework of the Portuguese diet. Fasting, either total or partial abstention from meat and rich foods, was associated with spiritual purity and undertaken by most of the population. At the basic

level, Portuguese Catholics abstained from eating meat on Fridays and the eve of feast days, ate sparingly during the week, and enjoyed a more elaborate meal on Sundays after church.

The 16th-century Portuguese relied on humoral theory, herbal potions, bloodletting, superstitions, and religious interventions to ensure good health. Antidotes against poisoning by one's enemies were particularly important, and when long-distance voyaging revealed the scourge of scurvy, the diet of seamen became another concern. Vasco da Gama noted that citrus fruits cured scurvy, a fact unknown to British mariners until the 18th century, but a huge number of lives were lost on Portuguese ships sailing to the East, and unfamiliar tropical diseases claimed many more.

The Portuguese studied indigenous Asian healing systems, dietary principles, and folk medicine. They adopted aspects of holistic Indian Ayurvedic practice as well as the Chinese theory of hot and cold, and wet and dry, foods. In Malacca, they learned about *jamu* (Javanese herbal medicine) and the Malay spiritual healers called *dukun*.

The physician Garcia de Orta established a garden for medicinal plants in Goa and wrote Europe's first treatise on tropical medicine. Christoforas Acosta, born in Portuguese Mozambique, published another of the Western world's earliest pharmacological manuals. Jesuit doctors in Macau studied Chinese medicines and used them in their hospital. The Portuguese also studied the effects of local intoxicants and poisons, including palm wine, marijuana, betel leaf, and datura (which contains atropine, both hallucinogenic and poisonous). Goan Catholic women were reputedly notorious for drugging their husbands with heady-scented datura in order to facilitate amorous liaisons with other men. The Portuguese captain Rui Freyre de Andrada escaped from British capture in the Persian Gulf by lacing his enemies' food with the drug.

Some elements of the Portuguese Eurasians' traditional diet are falling from favor in modern times. Animal fats, once an important source of calories, are now thought to encourage arteriosclerosis, and eating food from communal platters with chopsticks is thought to encourage transmission of disease.

Factory-farmed pigs are regarded as “cleaner” than the pigs that root around in village garbage heaps. A generation accustomed to supermarkets is put off by the sights and smells of traditional wet markets. Homely dishes containing offal and animal “parts” are increasingly seen as fodder of the lower classes, while the cuisine of the modernized West is synonymous with social and economic advancement.

Like everyone else living in industrialized countries, the modern Portuguese Eurasians are now falling victim to illnesses caused by urban lifestyles and stress. Most use Western medicine, but traditional folk remedies still have their place. The *Cristang* protect their health by avoiding eating too much meat. A Macanese with a sore throat may brew up a restorative herbal soup or a traditional cure called *mui-garganta*, made from salted plums. Goan housewives still know that the juice from the cashew apple helps the digestion and that sour belimbi fruits cleanse the blood.

Singapore

Overview

Singapore is a small island nation in Southeast Asia, whose geographic size belies its international and culinary significance. It is the third-largest port in the world and commands a standing disproportionate to its population, particularly with regard to technology and regional leadership. Singapore, unique in many ways, is politically and geographically unique in being a city-state. It is an entirely urban nation, with no agricultural hinterland.

Historically, Singapore was a sporadically occupied trading site before its establishment as a British Crown Colony in 1819. Between the 7th and 10th centuries it is thought that the Sumatran Buddhist Srivijaya kingdom used Singapore as a trading outpost. Likewise, between the 13th and 15th centuries there is archaeological evidence to suggest that the island was used by Muslim traders based in Melaka. During the period of Portuguese rule in Melaka (in the past spelled Malacca), a sultanate was established in Johor—just across the causeway from Singapore, and again there is some limited archaeological evidence of trade activities. There was no permanent indigenous population or local food culture.

Today, however, with a Chinese majority population (76%) coexisting with Malay (15%), Indian (8%), and other (1%) minority communities, Singapore forms a uniquely Chinese society in a predominantly Muslim and Malay region. This Chinese population has diverse origins, and although officially Mandarin-speaking, many can trace their origins to dialect-speaking southern China.

In terms of religion the Singaporean Chinese population is quite diverse, with many people incorpo-

rating a mixture of Taoist and Buddhist practices and Christianity—both Catholic and Protestant. The Malay population is largely Muslim, and the Singaporean Indian population Hindu, though there are also some Christian Indians—both Catholic and Protestant.

Singapore's population of only four million includes one million migrants. Foreign workers present a wide spectrum—both by class and by occupation—including day workers who sleep in Malaysia and work in Singapore; Western and Chinese “foreign talent” who work in Singapore for high salaries for a limited period; domestic workers on five-year maid contracts; and construction workers on one-year limited visas. Migration has thus historically promoted, and to an extent continues to promote, diversity and cosmopolitanism in Singapore.

The island has a land area of only 247 square miles, and no land boundaries, other than the causeway to Johor in Malaysia; its total coastline is 120 miles. The foundation of Singapore's geographic constraints thus lies in its small size. Size aside, Singapore has other geographic challenges. Although the rivers were one of the factors that led to the original settlement, Singapore no longer has sufficient water to supply its needs. Recently, Singapore has been buying dirty water from Malaysia, cleaning it, keeping half, and selling half back; this “new water,” however, still leaves them dependent on another nation-state for an essential resource. In attempts to rid itself of this dependency, Singapore is emerging as a world leader in water conservation, reclamation, and desalination.

Singapore's unusual path to nationhood (a reluctant expulsion from the Malaysian Federation in 1965)

and its remarkable economic success give it some unique characteristics. Singapore has no lengthy history, no farmland, and only limited water. That is, without the port, Singapore cannot exist. Historically, the status of the port as entrepôt was critical, and while economic policies have shifted with global economic changes, the port remains critical to Singapore's economy and character. The port is the breadbasket of Singapore. The port feeds the nation in multiple ways: bringing in the goods that fill the population's bowls; providing the money that allows people to buy food; and fundamentally shaping how Singaporeans think about their country.

Though culturally and geographically distinct, Singapore has much in common with its Asian neighbors, including the experiences of colonialism and Japanese occupation. Like Hong Kong and Taiwan, it is an island-state with a predominantly Chinese population. Like Malaysia, it is a former British colony with strong political leadership. And like many Asian nations, it has pursued capitalist economic development, evolving from export-oriented industrialization to high-tech industrialization and more recently to information technology and notably successful value-added service industries.

Food Culture Snapshot

The Chan family conforms exactly to the Singaporean archetype—a husband, a wife, and three children. Husband Jason is two years older than his wife, a product, in part, of the two-year national service requirement, which meant that when Jason and Siew Mae met in their first year at the university, Jason was older than Siew Mae. They married after they had both graduated and accumulated substantial savings for their married life. Both adults work full-time. The children, Kevin (nine), Lily (six), and Timothy (four), are the major focus of the family.

Living with the Chan family is a maid, Wulandari. She is from Indonesia, although many of her colleagues are from the Philippines and increasingly from Bangladesh. Wulandari is employed largely to care for the children, but her duties also include some food preparation, especially for the children, and breakfast for the family.

Breakfast is an early meal; with school starting at 7:30, everyone in the household is up by 6:00. All the children eat cereal. In some households congee, or Chinese porridge, would be more common. Toast is also a popular breakfast choice, often served with *kaya*, a coconut jam. Many Singaporeans eat breakfast out, but a large number still eat this meal in their homes.

Having spent time overseas, Jason and Siew Mae developed Western breakfast habits for weekdays. But on the weekends, holidays, or special occasions they are more likely to eat the foods of their childhoods. For Siew Mae this might be congee, a savory Chinese rice porridge. She knows how to make this dish herself but is more likely to go out and buy congee than cook it at home.

The two older children take small snack foods with them to school—a packet of dried raisins or rice crackers. They will eat lunch at the school canteen. The food at school is generally healthy, and options are provided to meet dietary restrictions, especially those that are religious in nature. As in all canteens, separate trays are used for halal food and utensils. Children are taught to respect religious and ethnic practices in a practical everyday manner by following respectful food practices, such as keeping halal and nonhalal plates separate.

Jason and Siew Mae will both eat out for lunch as well. For Jason this will be a meal at his workplace canteen. Small food stalls are given very low-cost leases in the workplace canteen, and each stall makes only one or two dishes, further keeping prices low. His employer is, thus, effectively subsidizing Jason's meal. The food provided will range from snack foods to elaborate meals. At his workplace there are more than a dozen food stalls, including an Indian food stall (which sells only vegetarian foods), a Muslim Indian stall (which has both vegetarian and meat dishes), a halal Malay stall (which sells rice and vegetable and meat dishes), a Western stall (which sells dishes such as fried eggs, sausages, and chops), a stall that sells steamed dumplings, a fresh fruit and juice stall, a stall that sells fried *kway teah* (a noodle dish), and a Malay noodle stall (which sells *mee rebus* and *mee siam*, spicy noodle dishes with peanuts and shrimp), as well as hot-drink stalls that sell tea and coffee (available sweetened with condensed milk). The canteen is simple and utilitarian, with washable surfaces, attention to ventilation, and reusable plastic or metal tableware. The food

is good, fast, and cheap. Jason eats *Hokien prawn mee* today—noodles cooked with prawns.

There is also a stall that specializes in a dish called carrot cake. It is in fact neither a cake (in the sense of a sweet baked dish) nor made with carrots. Rather it is a savory dish made with grated white radish and eggs, flavored with spring onions, soy sauce, and chili. It is a snack food. Jason comes back to the canteen in the midafternoon for a cup of coffee and a serving of carrot cake.

Siew Mae eats in a hawker center (like a food court) for lunch. It is similar to the canteen where her husband eats lunch, though not subsidized. Prices, however, are still low. She selects a dish of roasted pork, rice, and steamed Chinese green vegetables. The vegetables are served with oyster sauce and deep-fried shallots. Siew Mae does not have time for a formal snack like Jason's, but she has tea and a small cake when she gets home from work. She buys the cakes on her way home and shares them with the children and the maid.

Wulandari does most of the food shopping. Buying food takes her to a variety of places. Fruits, vegetables, and meats come from the local wet market, and specialty markets may be visited for other items. In addition, she visits several different supermarkets—the local supermarket run by the National Trade Union for staple foods and ColdStorage, a competing supermarket, for other items, especially school snack items.

Sometimes Wulandari does the shopping for the evening meal—chicken, vegetables, and rice. Depending on the needs of the children, she will occasionally cook this meal and eat it with the family. Sometimes Jason cooks, and sometimes Siew Mae cooks. On a school night these are simple meals—a chicken curry thickened with potatoes and served with rice and a green vegetable. For a special occasion much more elaborate meals would be cooked.

After a long day, when no one is cooking, the family might get take-out food. At the bottom of their apartment complex is a small hawker center, less elaborate than where Siew Mae ate lunch. This is an indoor/outdoor space with open sides for the breeze; meals can be eaten here or taken out. The Chan family orders steamed fish, fried chicken, stir-fried *kang kong* (water spinach), a dish of Chinese flat noodles with soup and dumplings, and ostrich in black pepper sauce, as well

as rice. Items are purchased from a variety of stalls—noodles from one stall, meat from another, and vegetables from a third. The dishes will be shared, although all the children have specific favorites. The meal concludes with fresh fruit.

With the children in bed and the work of home and office caught up on, Jason and Siew Mae will have a light supper (as the latest evening meal is called) at 10 or 11 P.M. This may be no more than a cup of tea and perhaps a leftover cake. If there is lots of work still to be done, they might instead step downstairs for a more substantial snack—perhaps sharing a piece of *prata* (fried bread) dipped in curry gravy.

Major Foodstuffs

With the exception of hydroponic bean sprouts, there is basically no agriculture in Singapore. There is very limited landmass and an inadequate water supply. Public spaces devoted to parks and the botanical gardens preserve some of the early attempts at agriculture in Singapore, but housing, business, and public services take priority over agriculture for land use.

The island-state relies entirely on imported food and, consequently, on the port. Fresh milk, meats, and other perishables also arrive by plane. Many of these goods come from Australia and New Zealand (milk and meat), but foods are also imported from China, Britain, North America, and Europe. Goods from Southeast Asia arrive by ship or by bus.

Despite, or perhaps because of, these agricultural limitations, Singapore has developed a very varied national cuisine. The foods of the ethnic groups—Chinese, Malay, and Indian—dominate, but the port has provided ingredients from all over the world, and this is evident in the cuisine. Among other influences, there is a sustained tradition of British food, a product of colonial rule. The culinary evidence of this can be seen in both food adaptations and food traditions, including high tea, sandwiches, and pies.

Rojak, a Malay-influenced salad, is a tremendously important and commonly eaten dish that illustrates the breadth of Singaporean foodstuffs. It consists of both fruit and vegetables such as pineapple, cucumber, onions, and bean sprouts and may include fried tofu. It is dressed with *belacan* (a dried shrimp paste),

sugar, chilies, and lime juice. The ingredients are cut into bite-sized pieces, tossed in a bowl with the dressing, and topped with chopped peanuts. This dish has also come to have a social meaning—the term *rojak* literally means “mixture” in Malay. *Rojak* has colloquially come to be an expression for any kind of mix and in particular is often used to describe the multiethnic character of Singaporean society. That is, all the pieces in the salad are separate and remain distinct rather than being mixed, but they are bound together by the dressing. Singapore describes its ethnic policy as one of multiracialism rather than multiculturalism—the salad bowl, not the mixing bowl—and *rojak* exemplifies that. A delicious salad, the metaphor of *rojak* is a potent national symbol that simultaneously speaks to diversity and unity.

Cooking

Much of the cooking in Singapore is done by professionals or paid help. Even a lot of “home cooking” in middle-class homes is done by a domestic worker. In hawker stalls where food is cooked over open flames and intense heat, the physicality of the work has somewhat gendered it; much of the commercial cooking is done by men. There certainly is some domestic cooking, but it is difficult to categorize. In some families, the majority of meals are eaten at home, cooked by an older woman, perhaps. In others the work of cooking is shared by members

Street food vendor preparing a spring roll in Singapore. (Shutterstock)

of the family. In others still, cooking at home is for a special occasion or event.

A lot of Singaporean food requires cooking at high heat, so it is a noisy, messy affair. Singaporean kitchens are architecturally distinct, being largely indoor-outdoor spaces—even in high-rise apartment buildings. Many kitchens back onto a balcony for better ventilation. There is nearly always a door between the kitchen and the living room—to protect the living space from the heat and fumes from the kitchen.

Rice is an important staple for all the ethnic groups in Singapore, and many kitchens have a rice cooker. Likewise, refrigerators are essential for the safe preservation of food in hot and humid temperatures. Kitchens will have a stovetop, often gas, but ovens are rare, since they generate too much heat in the tropical climate. Wealthy Singaporeans, however, may have ovens, and baking has become something of a class symbol.

Kaya

Kaya is a jam made with coconut and egg. Its method and qualities are similar to that of lemon curd, only with coconut and *pandan* (screw pine)-leaf flavoring. As with other jams, *kaya* is typically spread on toast and is eaten both at breakfast and as a snack. Traditionally *kaya* is made only with fresh coconuts, but it is possible to make a version with strained coconut milk. To make strained coconut milk, place a piece of muslin in a large sieve, pour a can of coconut cream into the sieve, and leave to drain for an hour.

Ingredients

- 2 c granulated sugar, if possible caster sugar
- 4 eggs, lightly beaten
- ½ c thick coconut flesh and milk, from 1 grated coconut
- 2 pandan (screw pine) leaves, fresh if possible

Place the sugar in a wok (or large saucepan), and slowly heat it, stirring regularly, until the sugar is golden brown. (Do not try to substitute brown

sugar!) When it has become golden, remove the pan from the heat. Once the sugar has cooled a little, transfer it to a large bowl, and add the eggs, one at a time, stirring as you go, and then add the coconut. Beat until the sugar has dissolved. Pour into a pan, and add pandan leaves. On low heat, stir the mixture until it starts to thicken (to test for thickness, place some of the mixture on the back of your spoon and run your finger through it—if it stays separate, then it is ready). Allow the kaya to cool a little before you put it in jars—this gives the pandan leaves extra time to flavor the jam. Remove the leaves just before sealing the jars. Traditionally, this mixture is not refrigerated, but it can be stored in the fridge.

Typical Meals

Breakfast, like all meals in Singapore, varies depending on the ethnicity and social position of the person consuming it. For many Singaporeans rushing to get to work, breakfast is a quick meal—cereal with milk, toast, and so forth. Breakfast is also a meal that might be consumed on the way to work, purchased at a hawker center; this kind of meal might be *nasi lemak*—rice cooked in coconut milk, served with a rich curry gravy, peanuts, a cold hard-boiled egg, and *ikan bills* (air-dried and salted fish). Congee is another common breakfast food, especially for Chinese Singaporeans. *Tong ho choy*, “tea” made from pork ribs, various herbs, and soy sauce, might also be drunk. Tea and coffee are popular beverages, and a wide range of fresh juices—watermelon, papaya, star fruit, pineapple—are readily available.

Like breakfast, lunch could include food from a wide variety of ethnic backgrounds. Of all the meals it is the one at which people are most likely to eat food outside of their cultural background. This could be because they are eating with a group of colleagues or because they are grabbing a quick and self-contained meal. Noodles and rice form a staple of lunch offerings. Popular noodle dishes could be either Chinese or Malay.

Typical Malay noodle dishes are mee rebus and mee siam. The noodles in mee rebus are yellow egg noodles, and these are served in a thick and spicy

gravy. The gravy is thickened with potatoes and flavored with salted soybeans, dried shrimp, and peanuts. Mee rebus may be garnished with hard-boiled egg, limes, spring onions, fried shallots, and bean sprouts. Mee siam can be served “wet” (with a lot of gravy) or “dry” (with less gravy). The noodles in this dish are thin, and the gravy, while spiced, is sour and tangy in taste and has a tamarind base. The dish can be garnished quite similarly to mee rebus and is likely to be topped with dried bean curd.

The Chinese-influenced noodle dishes that might be eaten at lunch vary from indulgent and rich dishes to austere and healthy ones. *Char koay teow* is made from flat rice noodles stir-fried with soy sauce, chili, *belachan* (shrimp paste), tamarind juice, bean sprouts, and spring onions. Other additions might include prawns, cockles, Chinese sausage, beef, and fish cakes. Traditionally, the dish is cooked in pork lard, but many stalls now offer healthier oils. *Lor mee* is another

Fish-ball soup with noodles, a very common soup in Singapore. (Yew Wah Kok | Dreamstime.com)

popular noodle dish in which a gravy of spiced cornstarch is used. Fish-ball soup and plain soups with rice noodles, a little cooked meat, and green vegetables are common choices.

Dishes served with rice are popular in Chinese, Malay, and Indian lunch choices. A very popular option is fish-head curry, in which the head of a fish is stewed in a curried gravy with vegetables such as okra and eggplant. The dish is usually served with rice, but some people will order it with bread. *Biryani*, or, as it is sometimes referred to, *nasi biryani*, is an Indian spiced rice dish. It is served both as a meal, when made with meat or fish, and as an accompaniment to wet curried dishes for special occasions. Plain white rice served with curried meat and vegetables is very popular at both lunch and dinner, especially, but not exclusively, among the Indian community. An Indian lunch meal, especially one purchased from a hawker stall, will generally include rice, dal, and two or more other dishes such as a bitter melon curry, curried mutton, curried chicken, a dish of spiced and shredded carrots and cabbage, or a green vegetable.

Snacks are a very important part of eating in Singapore and may be had at most times of the day and night. They are multiethnic and widely available. *Tahu goreng* (fried tofu) is one such snack food. The tofu is deep-fried, then cut into triangles and served with bean sprouts, cucumber, spring onions, and a dark, spiced sauce enriched with tamarind, chili, and shrimp paste. Indian snacks might include *murtabak*, a folded and fried bread filled with ground mutton, eggs, and onions and served with a dipping gravy. A less filling version of this dish—*roti prata*—is very popular: unfilled fried bread served with a dipping gravy. *Popiah*, a local variant of a fresh spring roll, is also a popular snack. The exterior is made of a flour-based crepe, and it is filled with a sweet hoisin-based sauce and a mixture of white turnip or jicama, grated carrots, chopped lettuce, tofu, and bean sprouts. It can be topped with fried shallots and peanuts. Curry puffs are a very common snack food. These are small pies made of a puff pastry, filled with curry—vegetarian or chicken and vegetables—and deep-fried. All these snacks can be purchased at small stalls or coffee shops and at hawker markets.

A wide variety of drinks are available in Singapore, and many will be consumed with snacks or instead of a snack. Cold drinks include fresh fruit juices; fresh lime juice diluted with water and sugar is another popular fruit drink. Milk-based drinks—such as Milo Dinosaurs (a chocolate-malt drink with an extra scoop of powder on top)—are quite popular as are bubble teas. India-style tea and *teh tarik* (a pulled tea in which condensed milk is rapidly poured to create both texture and foam) are very popular. Coffee is widely consumed, both in the commercial form produced by international chains and in local variants, often sweetened with condensed milk. Alcoholic beverages, including the locally produced Tiger beer, are available but high priced.

Dinner might include many of the aforementioned items eaten for lunch. It is a meal that is likely to be shared and to include many more dishes—but perhaps only a few mouthfuls of each dish. Some dishes are less likely to be shared—such as *laksa*, a coconut-based noodle soup—but many families will order or cook a range of dishes, which might include meats, fish, vegetables, tofu, rice, and noodles. Many families will purchase some or all of the dishes for an evening meal at a local hawker center but may well eat at home. Singapore's signature dish, chili crab, while not eaten every day, may make an appearance even in hawker fare. The dish is made with soft-shell crabs, such as a mud crab, and the sauce has a base of chili and tomato, flavored with garlic and rice vinegar and thickened with flour and ribbons of egg. It is often served with *mantou*—steamed bread rolls.

If eaten out, especially if eaten in a hawker center, dinner is more likely to include dessert. There is a wide range of Singaporean desserts. One of the most popular is *ice kacang*, a mixture of shaved ice, sweet syrup, and beans. Fruit is often included, and the syrup is brightly colored so the dessert forms a large cone of multicolored ice. Variations are also common in the toppings, including grass jelly, palm seeds, coconut milk, corn, and red beans. Tropical fruits are often served for dessert and are used in other desserts, too, such as mango pudding, which is made with mango, evaporated milk, sugar, and agar.

A typical meal in Singapore is shared. That could be both in the sense of not eating alone and in the

Dessert kebabs made with fruit and glazed being sold in an all-night market. (Kelvintt | Dreamstime.com)

sense of sharing dishes. One particularly notable Singaporean dish is chicken rice. It is a dish that can be enjoyed by Singaporeans of all religious groups. The dish relies on a master stock, identifying it as Chinese in origin, but also includes ingredients from Southeast Asia, such as sweet Indonesian-style soy sauce—*kecap manis* (from which the word *ketchup* is derived).

Chicken Rice

Ingredients

For the Master Stock

- 2 chicken carcasses with meat removed
- 4–6 chicken wings
- 3 pieces ginger
- 2 shallots, or 1 red onion

For the Chicken

- 1 chicken (as fresh as possible)
- 6 thick slices fresh ginger
- 2–3 cloves garlic, peeled and crushed
- 4 shallots, sliced in a few pieces
- 1 tbsp Chinese rice wine
- 2 tbsp soy sauce, divided
- 1 tsp sesame oil
- ½ tsp salt

For the Rice

- 3 c rice, preferably long-grain
- 2 tbsp chicken fat or vegetable oil
- 1 small piece ginger, finely grated
- 3–4 cloves garlic, finely chopped
- 1 tsp salt
- 3½ c chicken stock

For the Chili Sauce

- 10 small red chili peppers, seeds removed
- 3 cloves garlic
- 1 large piece ginger
- 2 tsp chicken stock
- 1 lime, juiced (kaffir limes or regular limes)
- Salt to taste

For the Ginger Sauce for Dipping

- 1 large piece ginger
- 6 cloves garlic
- ½ tsp salt
- 2 tsp lime juice
- 2 tbsp chicken stock

For the Chicken Soup

- Chicken stock (from the boiled chicken)
- Chopped shallots and a little bit of cabbage, chopped

As a Garnish or Condiment

- Sliced cucumbers, sesame oil, and fresh cilantro

A large stockpot is required for this dish. Begin by making the master stock. Place the chicken carcasses and wings in a large stockpot. Add the ginger and shallots. Cover generously with water. Bring to a boil. Skim the foam from the surface. Turn the temperature down, and let the mixture cook for at least 90 minutes, stirring occasionally. The stock will now need to be strained. Using a large sieve pour the liquid into a large bowl. Discard the bones and

other flavorings. The stock can be left to cool. If left overnight a layer of chicken fat will form on top; this can be discarded (not traditional) or used to cook the rice.

When you are ready to cook the chicken, heat the stock; you will need a pot large enough to fit a whole chicken and sufficient liquid to cover it. Make a paste of the ginger, garlic, and shallot. Rub the chicken inside with rice wine and a little soy sauce, and place the paste inside. Bring the stock to a boil, turn off the heat, and put the chicken into the stock with more pieces of ginger and shallot. Every 5 minutes lift the chicken out of the stock and let the liquid drain. Then put it back into the pot. Repeat several times to make sure the chicken cooks through. After half an hour turn the heat back on, but be sure not to let the stock boil. Then turn the heat off again, and let it sit for another half an hour undisturbed. Then remove the chicken from the pot and rub with more soy sauce, sesame oil, and salt. Let cool, and then cut directly through the bones with a heavy cleaver into bite-sized pieces.

To make the rice, begin by washing the rice and draining it. Next, put the chicken fat or oil in a hot wok, and fry the chopped ginger and garlic. Remove them, and add rice and toss for about a minute or two. Remove the rice, place in a pot, and add chicken stock. Bring to a boil, then lower the heat and cook gently, covered, for about 20 minutes.

The chili sauce is made by chopping the chilies with the garlic and ginger and either pounding it into a fine paste with a mortar and pestle or pureeing it in a food processor. Add some stock, lime juice, and salt. The ginger sauce is made the same way. These are both served on the side.

For the chicken soup, reheat the master stock and ladle a small amount into serving bowls. Add finely chopped shallot. Blanch the cabbage and add to the bowls.

To serve, the sauces should be placed on the table, so people can add them to suit their taste. The kecap manis should also be placed on the table. The chopped chicken can be placed on a platter, and the rice is served individually. Slices of cucumber, dressed with sesame oil and topped with cilantro,

can be placed either on a separate platter or under the chopped chicken.

Eating Out

Singapore is a nation of eaters, and much of this eating takes place outside the home. In part, this is a product of geography. The island of Singapore is very small, and the housing is largely high-rise apartments, so that a variety of public spaces are vitally important to Singaporean food culture and socializing. The coffee shop is not just a place where people eat and drink, it is a social space in which Singaporeans “talk-cock,” that is, talk hyperbolically, voice conspiracy theories, and gossip.

The hawker center is likewise a vital part of the fabric of Singaporean society—a space where the quality of the food is far more important than the decor. While eating is a universal human experience, for Singaporeans it takes on a preeminent position in definitions of both the national and the everyday lived experience. The popular Singlish phrase, “die die must try,” is not so much an exaggeration as it is a reflection of the lengths that Singaporeans will go to find great dishes.

A huge array of food is available in Singapore. Singaporean cuisine is certainly worthy of celebration, but it is also a city in which foods from all over the world can be sampled. There are, of course, the ubiquitous chains—KFC, Deli-France, Starbucks—but there is far more than this; there are European, Australian, and Asian restaurants, there are casual places and glamorous places, there is terrible pizza and delicious pizza, there are Vietnamese delicacies and Sri Lankan curries, and there is spaghetti cooked in a wok.

Food provides Singaporeans with a memory of home, with comfort and nostalgia, as it does elsewhere; but in a society that has undergone substantial change in a relatively short amount of time, food serves as a poignant connection to the ever-changing past. Eating—the how and the what—has provided a unifying experience for a diverse society, a metaphor for multiracialism and recognizable national symbols for a fledgling state.

Special Occasions

Chinese New Year is an important event for Chinese communities around the world, including Singapore. For Chinese Singaporeans the reunion meal (New Year's Eve meal) is highly significant and may be eaten at home or out. If eaten out, it is a very expensive affair, with many restaurants charging by the table rather than by the number of diners. The menus, at home or out, incorporate a range of specific foods associated with key concepts of good fortune in Chinese ideology.

In Singapore, *lo hei*, a fish salad, is commonly eaten at the start of a celebratory meal on the seventh day of the Chinese New Year. The dish is said to have the capacity to raise good luck. The dish has a clearly performative aspect—all the ingredients are chopped, perhaps including the fish, shredded white

radish, carrots, red peppers, and shrimp crackers. A family, or gathering of friends, will crowd around the platter that it is being served in, and using their chopsticks they will toss the salad ingredients in the air, calling as they do “*Jíxiáng Huà*”—auspicious wishes and greetings. The higher you toss, the greater your fortunes are reputed to be.

The dish is a crucial part of Singaporean Chinese New Year celebrations, but it would not be recognizable to a mainland Chinese person. Although the origins of the dish are Chinese—a raw fish salad tossed by the diners—the dish as eaten in Singapore originated in 1964 at the Lai Wah Restaurant and was invented as a symbol of prosperity and good health among the Chinese.

Moon cakes, eaten at the Mid-August (or Zhongqiu) Festival, are another traditional celebratory food for Chinese Singaporeans. Moon cakes are

Fish salad, traditional cuisine eaten during Chinese New Year. (Wai Chung Tang | Dreamstime.com)

made of a light dough and a sweet, dense filling. The cakes contain one or more whole salted egg yolks in their center to symbolize the full moon.

For Indian and Malay Singaporeans, festival foods are also important. For Malay Singaporeans the Islamic calendar determines many of these, with Ramadan being the most significant. During Ramadan, Singaporean Muslims fast during the day and break their fast in the evening with quite luscious foods—a practice more common in Southeast Asia than in the Middle East. The end of Ramadan (or Hari Raya Puasa) is marked with especially delicious foods, generally in the form of a family feast. As this is a time marked by openness of heart and mind, non-Muslim friends and colleagues are often invited to share the meal.

Deepavali, the Festival of Lights, is celebrated by Hindus and Sikhs in Singapore; from a culinary perspective it is a time of small snacks, especially sweets. The festival is a public holiday in Singapore and a time when people visit friends and family and receive guests, with ensuing hospitality.

Aside from religious festivals, weddings are considered one of the most special of occasions in Singapore, underscored in Singapore by anxiety about falling birth rates, associated in the public mind with delays in marriage. Wedding food varies by ethnicity and social class. A midrange Chinese wedding banquet, for example, might include eight or nine dishes. Only one to two of these would be sweet—perhaps red bean cakes with lotus seeds—and the majority would be savory. Dishes would be intended to be shared by the table rather than plated individually. The shared dishes would likely include a shark’s-fin dish and a range of other seafood dishes, such as scallops with celery or steamed sea bass. There would be meat dishes, perhaps roast pork or a golden fried chicken dish. There would also be a vegetable dish and a noodle dish, like braised *ee-fun* noodles.

A more elaborate and expensive Chinese-style wedding banquet would offer a greater number of dishes, probably 10, and more elaborate dishes. One distinction is exemplified by the different ways shark’s fin might be presented on a wedding catering menu. A basic affair might list “Braised Shark’s Fin with

Crabmeat in Thick Sauce,” while a midrange menu might include “Shark’s-Fin Soup with Crabmeat and Golden Mushrooms in Lotus Leaf.” The most expensive menu would have more elaborate preparations and more expensive ingredients, such as “Double-Boiled Superior Shark’s Fin in Thick Sauce.” The 10-course version would tend to include more seafood (maybe abalone and dishes of whole fish), more poultry (especially roasted duck), and more meat (generally more pork dishes).

The menus at Malay and Indian weddings would be equally elaborate, although in the typical Malay wedding banquet, rules of halal food preparation exclude pork. Items in a Malay wedding banquet might include a spicy mutton soup, fried or baked chicken, *ikan asam manis* (a sweet and sour fish dish), some kind of *satay* dish (meat or seafood grilled on a skewer), a curried vegetable dish, and a rice dish (*nasi goreng*—fried rice—or *nasi padang*—a pilaf-style dish). Again, a simple dessert course would be served—maybe coconut and pandan-leaf flavored sweets or bean curd served with fruit.

Some families serve buffet-style wedding banquets—generally a more expensive option. Such a buffet might include up to 20 savory dishes and a notably more elaborate dessert menu, including perhaps 5 to 10 different sweets and a wide range of fresh fruit. The buffet would certainly include a range of beef dishes—like beef *rendang* (a slow-cooked beef curry)—and far more side dishes, such as *bawang sambal telur* (an egg and onion dish).

Singaporean Indian weddings are both Indian and Singaporean in character. In form, the Indian wedding banquet is structured more like a Western meal, with a clearer distinction between appetizers and the main course. Appetizers might include *allo chaat* (a potato dish) and grilled chicken dishes. Like the Malay menu, a soup would be included. There would be a range of meat dishes, probably a chicken dish, a mutton curry of some variety, and a dish like *machchi* curry (a Goan-style fish dish). The banquet would also include a range of vegetable dishes such as *aloo gobhi* (potato and cauliflower curry) and *mattar paneer* (pea and cheese curry), as well as curries made from okra and eggplant. There would be plain basmati rice, *biryani* rice (basmati rice cooked with spices

and meat), and condiments such as a fresh chutney made with cilantro. To finish the meal there might be *gajar halwa* (a sweet carrot dish) or *gulab jamun* (a sweet dairy-based dessert served in a sugar syrup).

Diet and Health

Singapore has an enviable world-class health care system. Despite the culinary focus of the culture, the population has not been beset by the problems of widespread obesity, diabetes, heart disease, and so forth. That said, the government takes an active role in preventative campaigning. In the “Healthy Choices” campaign, for example, Singaporeans are encouraged to select foods that are less rich and lower in fat and to eat coconut-based dishes in moderation because of the high levels of saturated fat. Stalls at hawker markets will display government signs about types of oils, indicating that a “healthy choice” can be made at their stall. Largely, Singaporeans are quite health conscious.

While traditional medical practitioners play a role in Singaporean health care, people are more likely to consult these specialists for minor matters, especially relating to the skin and stress. Additionally, the medicinal properties of food are widely respected by members of the three major ethnic groups, and people will alter their food choices in line with, for example, Chinese medical practices. There are a range of restaurants that cater to these needs. It is possible, for example, to order soups with specific herbs or ones that are prescribed for specific conditions.

All three major ethnic groups in Singapore follow specific dietary practices for pregnancy and the period following birth. The month or so after birth is referred to as the confinement period, which was traditionally characterized by a specific diet and the assistance of a confinement specialist who would cook the required foods and help the mother with the new baby. During this period the mother would not leave the home, hence confinement. Confinement diets are continually evolving and will both prohibit some foods and prescribe others. Today, many Singaporean women follow some of the practices of confinement, especially the confinement diet, and middle-class women still often employ a confinement specialist.

There are significant similarities between Chinese, Malay, and Indian confinement practices, but there are also some important variations. The Chinese confinement diet aims to enhance immunity and to help women regain physical strength. Restrictions include discouraging eating cold food. Cold in this context means both temperature and temperament. It is believed that cold foods can harm the spleen because they retard the discharge of toxins. Foods that are considered cold include some meats and seafoods (especially snails, clams, and oysters), certain fruits (including pomelo, star fruit, and watermelon), a range of vegetables (mushrooms, bitter gourd, water spinach, bamboo shoots), and other items such as seaweed and soy sauce.

Malay mothers in confinement are discouraged from eating spicy food, foods cooked with coconut milk, shellfish, and eggs. Their confinement diet emphasizes soft food, especially soups, often served with rice, as well as noodle dishes. Indian confinement diets also have restrictions and a focus on the role of food as medicinal. Additionally, certain foods are encouraged as aiding bodily functions—for example, brown sugar to expel blood from the uterus or toasted garlic to increase lactation. In all three traditions, women are encouraged to drink warm rather than cold water.

Sri Lanka

Overview

Known as Ceylon until 1972, Sri Lanka (“resplendent isle”) is a teardrop-shaped island located in the Indian Ocean approximately 30 miles south of India. Sri Lanka is considered part of the Indian Subcontinent, which also includes India, Pakistan, Bangladesh, Nepal, and Bhutan. The country is made up of nine provinces and 25 districts. Besides being Sri Lanka’s capital and largest city, Colombo has served as a major seaport since the fifth century. During the 15th and 16th centuries, foreign traders from the Netherlands, Portugal, and Great Britain brought spices and cooking styles from all over the world to Sri Lanka. As a result, Sri Lankan cuisine reflects these influences, along with aspects of Arab, Malay, and Indian food and cooking techniques.

Language and religion shape Sri Lanka’s ethnic groups. Among the population of 20 million, 73 percent are Sinhalese, 18 percent are Tamils, and 9 percent are Muslims. There are also smaller communities of Veddas, Burghers, Moors, and other ethnic groups. The majority of Sri Lankans follow Buddhism. Hinduism, Islam, Christianity, and other religions are also practiced. The common perception is that the prevalence of vegetarian dishes in Sri Lankan cuisine is due to religious reasons. While vegetarianism is more prevalent among Hindus, Sri Lanka’s tropical climate and long history as an agricultural society, along with the rising price of meat, also play a major role in the population’s preference for vegetables.

Food Culture Snapshot

Padma Vaas is a high school student who lives in Colombo with her parents and younger brother. Her family is considered middle class, with both parents employed professionally. On weekdays, Padma eats a quick breakfast of *hoppers* (little bowl-shaped rice-flour pancakes), fruit, and hot tea before heading off to classes. For lunch, her mother packs her rice and curry, or she purchases a lunch packet from the street vendor by her school. Padma occasionally picks up a pastry or roti (flatbread) from a short-eats stand after school. Dinner, the most substantial meal of the day, provides an opportunity for the family to catch up and is always eaten together. Padma’s mother starts cooking around 6 P.M., with the family sitting down to eat by 8 P.M. A typical weekday-night dinner for the Vaas family is steamed rice, a fish or chicken curry dish, and two or three vegetable or lentil curry side dishes.

However, it is on the weekends that Padma and her mother really have the opportunity to cook together and talk. The urban home garden they started last year has now flourished, yielding abundant eggplant (*brinjal*) and chili harvests. The day’s menu is planned the night before, followed by an early-morning trip to Pettah Market, an open-air market in Colombo with a dizzying array of wares, spices, vegetables, dried fish, and fruits. Dried shrimp, *goraka* (dried fruit for curry dishes), *Maldive fish* (dried fish), and coconut meat are frequently on the Vaas’s shopping list. Once home, Padma and her mother spend the remainder of the day preparing the dinner meal—which includes a lengthy process of roasting spices and simmering a multitude

of curry dishes. On the weekends, up to 12 side dishes may be served, sometimes more if extended family members visit.

Major Foodstuffs

Despite the rise of the manufacturing sector, Sri Lanka remains mainly an agricultural society—tea, rubber, coconut, cacao, and spices are key exports. Tea estates can be found throughout the southern and central regions at altitudes between 3,000 and 8,000 feet. Tea was first commercially produced in Sri Lanka in 1867 by a Scot, James Taylor, and was largely controlled by British companies until 1971, when the Sri Lankan government assumed ownership through the Land Reform Act. The majority of the world’s spices are also produced by Sri Lanka. These include cinnamon, cardamom, pepper, turmeric, and ginger. Two-thirds of the world’s supply of cinnamon is grown in Sri Lanka.

Rice is a main staple of the Sri Lankan diet. Over 15 varieties are grown for local consumption, along with fruits and vegetables. Bowl-shaped, thin pancakes (hoppers) are considered native to Sri Lanka and eaten as a staple for breakfast and lunch. To make *stringhoppers*, rice flour and salt are formed into a paste and forced through a mortar with a circular opening (*ural*) onto a steaming tray. They are then steamed for 5–10 minutes and served with *sambal* (coconut-based chutney) and/or curries. Stringhoppers can also be purchased ready-made in restaurants and grocery stores. Other types of hoppers include egg, milk, and sweet varieties (*vanduppa*, *paniappa*).

Sri Lanka’s year-round tropical climate offers a fruit paradise with many varieties: mangoes, papayas, durians, bananas, passion fruit, mangosteens, and rambutans, among others. Besides being used for refreshing drinks, fruit is a central ingredient for producing chutneys, cordials, syrups, jams, and marmalades.

Seafood factors heavily into the Sri Lankan diet, with fishing connected to the country’s two monsoon seasons. Cattle are mainly used for milk and farmwork. Though some Sri Lankan dishes incorporate beef as an ingredient, Hindus highly revere

Display of fruit in a Sri Lankan vendor’s stall. Many tropical fruits are native to Sri Lanka, including durians, passion fruit, and woodapples. (Shutterstock)

cows and do not eat beef. Most Buddhists also refrain from beef consumption.

The most popular nonalcoholic beverage in Sri Lanka is tea sweetened with sugar or milk. Coffee is rarely drunk, though available in more upscale urban areas. Popular drinks on a hot tropical day are *tambili* (water from orange coconuts) and *kurumba* (water from young coconuts)—both are believed to bring health benefits. The most popular alcoholic drink is *arrack*, which is distilled from fermented coconut-palm or palmyra-tree sap (toddy). Toddy tappers travel between treetops using rope walkways high above ground to collect sap, “tapping” up to 100 trees a day.

Popular snacks include a deep-fried patty made of lentils and flour (*vadai*) and a soft tortilla filled with different mixtures such as meat, vegetables, and chili peppers (*rotty*). Two sweets commonly consumed in Sri Lanka are *kavun* and *wattalapan*. Made of rice flour and treacle, *kavun* is deep-fried until golden brown. *Wattalapan*, first introduced by the Malays, is a steamed pudding cake made of coconut milk, eggs, and jaggery (refined sugar from palm-tree sap). Most sweets are of South Indian (Tamil Nadu) origin and are served during New Year celebrations.

Cooking

Globalization has heralded an influx of fast-food options such as McDonald’s and Pizza Hut in Sri Lanka. However, most meals are still traditionally

cooked, though exact recipes are seldom followed and preparation can be labor-intensive. Cooking in middle- and upper-class families may be handled by cooks or servants. In households without servants, women are responsible for housework and meal preparation. However, gender roles are shifting, especially in urban households where both the husband and wife may be employed outside of the home.

Due to the smokiness associated with Sri Lankan cooking, the traditional kitchen is located either at the back of the main house or in a detached structure. An open fireplace (*lipa*) is common, with coconut-frond stems serving as fuel for the fire. A brick or iron oven with a door handle and fire pit is also frequently found in rural homes. However, since many aspects of the traditional kitchen are impractical, the two-burner propane stove has now replaced the *lipa* in most modern kitchens.

Many Sri Lankan dishes appear similar to those of South India, though two distinguishing hallmarks are the use of extremely hot spices and local ingredients. Sri Lankan dishes are considered among the spiciest in the world. Hot chilies, such as *amu miris*, *kochehii miris*, and *maaluu miris* (capsicum), are frequently incorporated into dishes, along with coconut milk.

Unique fresh herb- and spice-preparation methods (roasting, pounding, tempering) also distinguish the cuisine from others. Traditional kitchens often have a chili stone (*mirisgala*) made of granite (or another hard stone) that serves as a hard surface for grinding chilies and whole spices. A mortar and pestle (*vangediya*) is used for ingredients that cannot be effectively pounded on the *mirisgala*. The cylinder-shaped mortar is also made of a hard stone and can reach heights and widths of up to 12 inches. Pestles may be up to five feet long and are generally made of *kitul* wood. In modern times, spice preparation involves heating spices in a dry pan until fragrant, then grinding them in an electric grinder once cool.

Regional availability of fresh ingredients largely defines the variances in dishes served. The north is known for the palmyra tree, while rice, fish, and jackfruit appear frequently in dishes from the south. In the central region, also hill country, vegetables and mutton are the mainstays, with fish and spices used

less intensely. Maldivian fish (dried fish) is another local ingredient often used to thicken and flavor dishes, especially vegetable curries.

The two most prevalent frying techniques are tempering and sautéing, with the first being more common. Whereas sautéing is a gentler form of cooking ingredients in a flat-bottomed skillet until translucent, tempered ingredients are fried over very high heat until they are fragrant and golden brown. Following tempering, the ingredients are then simmered on low heat with a partially closed lid. Seasonings are adjusted just before the food is served. Clay pots are the preferred cooking vessel—older pots flavor food more intensely and function similar to cast iron skillets in Western cooking.

Typical Meals

A simple Sinhalese greeting literally translates into “Have you eaten rice?” The typical Sri Lankan meal (also called “rice and curry”) is not divided into separate courses, such as appetizers and entrées. Instead, all dishes are served at the same time, with rice being the central mainstay, accompanied by curry-based side dishes. Lighter fare (called short eats) may be served first at social events, though.

After everyone has been served, meals are traditionally eaten using the fingertips of the right hand to form small balls of rice and curry. In rural homes, meals are consumed while seated on leaf mats on the floor; in urban settings, the dining room table is the site of social activity and meals. While multigenerational households are fairly common throughout Sri Lanka, the number of nuclear families is on the rise with the influences of westernization and urbanization. Most Sri Lankans consume three meals a day (breakfast, lunch, and dinner).

Traditional breakfasts, especially in rural homes, consist of tea and rice-based dishes, including hoppers, a steamed rice/coconut mixture (*pittu*), panfried soft bread (*rotis*), milk rice (*kiri buth*), and leftover rice, curries, and sambals. City dwellers may have bread, fruit, and eggs during weekdays and a more substantial, traditional breakfast on the weekends.

Steamed rice and curry form the staples of lunch and dinner meals and are consumed almost daily. Dinner, usually eaten around 8 P.M., is considered the

Egg hoppers, a crepelike hopper containing a fried egg. (Paul Cowan | Dreamstime.com)

heaviest meal of the day. The typical meal consists of a main curry, made with fish or meat, and several vegetable-, fruit-, or lentil-based curries (*dhal*). Depending on the spices and seasonings used, curries can be white, brown, black, or red. Coconut is frequently incorporated as a base in many dishes. Up to 12 side dishes can be served; these include pickles, chutneys, and spicy chili-based condiments or sauces (*sambals*).

Brinjal (Eggplant) Sambal

Sambals tend to be spicy hot and are served as a condiment or relish alongside rice and curry dishes. There are many variations of sambals—sugar (*seeni*) sambals are the most traditional. Typical sambals

use different combinations of chilies, vegetables, and spices.

Serves 2

¼ lb eggplant, diced

¼ tsp ground turmeric (optional)

½ tsp salt

1 ½ tbsp canola or vegetable oil

1–2 chilies, chopped

¼ c yellow onions, chopped

½ lime, juiced

1 ½ tbsp coconut milk

Salt to taste

Wash and dice eggplant. Season with turmeric (if using) and salt. Heat oil and fry eggplant until browned. Remove from pan and drain on a paper towel. Mix chilies, onions, lime juice, and coconut milk. Combine with eggplant, and add salt as needed.

Most meals end with a serving of fruit, which is readily available on this tropical island. Desserts are reserved for special occasions and teatime.

Eating Out

Sri Lanka has been slow to cultivate a distinctive restaurant culture, since most authentic meals are served within the home. *Buth kadé* (a rice shop) and *kopi kadé* (a coffee shop) selling short eats are available in most towns and villages. As a result of globalization, American fast-food chains are becoming more prominent, though fast food is considered more of a snack than a meal. The impact of tourism can be observed, with at least one Chinese-style restaurant in each town, and restaurants serving local and international cuisines in most large urban cities. Lunch packets (rice, curry, curried vegetables, and sambal), typically sold between 11 A.M. and 2 P.M., are also immensely popular.

Special Occasions

Sri Lankans embrace a strong connection between food and festivities—food embodies much more than

The interior of a typical Sri Lankan restaurant. (StockPhotoPro)

just a means for survival. As a symbol of life and fertility, rice is frequently incorporated into celebrations. For example, milk rice (*kiri buth*) is served at almost all major ceremonial festivities, including as a baby's first solid food, the first food a new bride and groom serve each other, and a food eaten during the New Year. For the Sinhalese, milk rice boiling over the pot is considered to be a good-luck omen during New Year celebrations. Alcoholic beverages are not included as part of any formal ceremonial festivities.

There are over 30 public Buddhist, Hindu, Muslim, and Christian holidays celebrated annually—many which correspond to the full moon (*poya*) and lunar calendar. The Buddhist and Hindu Sri Lankan New Year (*Aurudu*) occurs on April 14, which aligns with the end of the harvest season and beginning of the southwestern monsoon season. Special foods enjoyed during these festivities include plantains, oil cake (*kaung*), and sweetmeat (*kokis*).

The beginning of the harvest (Thai Pongal) is celebrated by Hindus in January with boiled milk, rice, and jaggery (*pongal*) offered to the sun god. In honor of Ramadan, Muslims fast until Eid al-Fitr, when dates, steamed pudding (*vatalappan*), and rice porridge (congee) with a spicy meat-rice dish (*biry-ani*) are shared and eaten.

Diet and Health

Ayurveda, an ancient medicinal system that views the five elements (air, earth, light, water, ether) as connected with the five senses and an individual's biological, psychological, and physiological life forces (*doshas*), is popular in Sri Lanka. The premise is that when *doshas* are out of balance, disease and illness may prevail. Almost all foods are classified into a “hot” or “cold” framework, whereby over- or underconsumption may contribute to health issues.

Herbs, roots, spices, and dietary changes are often prescribed to address unbalanced doshas. For example, when consumed in moderation, tea is believed to have medicinal properties, ranging from improved digestion to prevention of heart disease. *Gotu kola*, another leafy green plant commonly used in Sri Lankan dishes (*mallung*), is also believed to possess health benefits as a diuretic and mild anti-inflammatory and antibacterial, among other functions.

Thailand

Overview

Thailand is a constitutional monarchy, headed by the longest-ruling monarch in the world, King Bhumibol Aduladej. Bangkok, the capital, dominates the economy and culture of the country. The Thai in Thailand make up the dominant ethnic majority in the country—about 75 percent of the population. Many other ethnic minorities including Chinese and Vietnamese live in towns and cities, and groups such as the Lisu, Chin, Kachin and Akha, and Hmong occupy more marginal lands, including upland forests. Theravada Buddhism is the dominant religion in Thailand. The upland peoples often practice shifting (swidden) cultivation; fields are cleared, burned for fertilizer, planted, harvested, and left to fallow; these subsistence farmers then shift to plant new fields. Rivers such as the Mekong and Chao Phraya create rich alluvial soils ideally suited for wet-rice agriculture. Between the uplands and the lowland river valleys, there are a variety of different agricultural niches. Rice, the dominant staple of Thailand, adapts to these different ecological niches.

Food Culture Snapshot

Thongchai and Lek live with their two school-age daughters in the suburbs of Bangkok. Thongchai is a Thai civil servant, and Lek works in a bank. Every morning, they set the electric rice cooker to have hot rice available by 6 A.M., when Lek's mother stands outside the door to offer rice to the orange-robed monks who pass by their laneway on their way back to the temple from their morning alms round. Thongchai and Lek make coffee

and eat a quick meal of rice and leftover dishes from last night's dinner. Their daughters prefer toast and jam with a yogurt drink that they learned to like at school. Lek drops the girls at school after two hours in the congested Bangkok traffic.

Lunch is a formal Chinese restaurant meal with business associates for Thongchai, and a quick bowl of noodles from her favorite street vendor for Lek. She uses her lunch hour to pick up vegetables and condiments at a nearby supermarket and keeps them fresh in a cooler in her car. Like busy women everywhere, Lek does not have a great deal of time to devote to food preparation. Lek might be considered one of Bangkok's many plastic-bag housewives, who pick up bags of wonderful side dishes on the way home from work from street vendors. Leaving work at 5 P.M., Lek returns to her favorite street vendors and picks up plastic bags of freshly made beef curry, *tom yam kung* (tamarind-based shrimp soup), and some Thai desserts made from agar-agar and coconut, favorites of her girls.

Once home, electric rice cookers make monitoring the timing for cooked rice a thing of the past. Electric grinders and blenders shave hours from complex food-processing tasks such as making flavor pastes. Once a week, the family does a larger shopping trip at a supermarket near their home. Thongchai prefers buying fish and fresh vegetables at the open markets early on Saturday morning, but Lek enjoys the air-conditioned comfort of the supermarket where she can pick up vegetables and condiments from all over the world, as well as packages of pre-cut vegetables, fresh herbs, and shrimp paste for making traditional Thai side dishes "from scratch."

Major Foodstuffs

In Thailand, rice is the dominant and preferred cereal crop; it is used for making noodles, rice flour, and rice wine, and it is valued far beyond its nutritional value. Rice needs constant attention from humans to grow, for rice has a soul that must be nurtured. The best-known Thai rice is the long-grain variety known as aromatic jasmine. High-yielding varieties of rice are widely grown in Thailand and exported to North America and elsewhere. Thailand is the world's largest exporter of rice, with around 10 million metric tons projected for the year 2010.

Since the 1960s, high-yielding varieties of irrigated wet rice produced by the green revolution increased rice yields dramatically in the country. However, the newer varieties rely on irrigation to flourish and require insecticides and fertilizers to produce high yields. They also damaged the delicate rice

ecologies and encouraged a shift away from subsistence production. Nevertheless, most rice grown in Thailand comes from modern high-yielding varieties. Dry rice varieties are grown in the uplands. Rice is milled and polished in local rice mills. Thai in the north and northeast of the country use glutinous or sticky rice as their daily staple. In other areas of the country, glutinous rice is grown for making desserts, rice flour, and rice wine. Unpolished black and purple varieties are particularly popular for making special desserts.

Fish is also very important in the Thai diet. Freshwater fish, sea fish, and shellfish are the major sources of protein for most meals. Snapper, catfish, and mackerel are popular fish eaten in the country. The Thai enjoy a long coastline that gives them access to an abundance of fish plus lobsters, crabs, squids, and shrimp. Many rural Thai raise fish in ponds near their homes and rice fields. People seek out fresh fish

A food stall in an open air market in Bangkok, Thailand. (Jiri Kulhanek | Dreamstime.com)

in rivers, streams, or ponds late in the day to eat for the evening meal. Fish and other seafood are widely available in the open markets. Small sun-dried and salted fish are popular additions to meals throughout the year. Fish are most plentiful in the rice fields after the rainy season (October to December). Today, raw fish dishes are discouraged as public health officials consider them unhealthy.

Accompanying most Thai meals is a sauce or paste made from fermented fish or shellfish. The fish are salted, dried, pounded, and packed with toasted rice and rice husks in jars for a month or more. Fish sauce (in Thai, *nam plaa*) is a crucial ingredient in most Thai dishes. The Thai make a fermented salted shrimp mixture usually mixed with chili peppers, called *kapi*. Most often, fish sauce is mixed with chili peppers. The Thai term *nam prik* refers to a fish sauce mixed with ground roasted chilies and other local ingredients according to the region of the country to produce *nam prik plaa pon* (with the addition of ground dried fish), *nam prik plaa raa* (with the addition of fermented fish), *nam prik kapi* (with the addition of shrimp paste), or *nam prik ong* (with the addition of ground pork and tomatoes).

Side dishes including raw salads are made using a wide range of fresh greens and vegetables, including different varieties of onions, garlic, water spinach, eggplants (from long green or purple plants used for grilling or stir-fries to tiny bitter melon-like plants flavoring Thai curries), banana blossoms, bitter melons, lotus, bok choy, rapini, napa cabbage, sweet potatoes, bean sprouts (from soy and mung beans), and a wide variety of local greens. Fruit is eaten as a snack between meals or incorporated into special desserts like mangoes and sticky rice.

Cooking

Thai cooks seek out the freshest possible ingredients and spend a great deal of time cutting and preparing them for cooking. But cooking times are usually short and make use of simple techniques like boiling, steaming, and grilling. Cooking techniques in Thai households are not learned through cookbooks, although Thai cookbooks authored by celebrities sell

well in a market that is fascinated with elite cooks and royal meals. Professional chefs may read cookbooks to learn what is new in Hong Kong or Singapore, but chefs expect that books will not reveal all secrets about a dish, including a complete listing of all ingredients. The idea of recording favorite family recipes has a long history among the Thai elite. Since the late 1800s, cremation volumes, small books given away at funerals, often included cooking instructions and favorite recipes of the deceased.

Kitchens of the rural poor are sparse and may contain only an open fire or a closed ceramic or cement bucket-like stove, a mortar and pestle, cutting board, bamboo steamer, cleaver, wok, spatula, ladle, coconut graters, and baskets for storing rice, vegetables, and spices. The space is always clean and uncluttered, as the equipment is often hung vertically on hooks. Coconut-shell implements are rapidly being replaced by plastic in communities with markets and a cash economy. Dishes may be limited to a few enamel plates or bowls. Food may also be served in cucumbers, coconuts, and pineapples or wrapped in banana or pandanus leaves. Urban Thai households have kitchens as modern and elaborate as Euro-American kitchens, with electric refrigerators, stoves, rice cookers, microwave ovens, and a wide range of specialized appliances from local, Japanese, and European suppliers. But these modern urban homes may also have a simple village-style kitchen behind the house with a charcoal stove, grill, and mortar and pestle for preparing traditional dishes.

Supermarkets in the cities of Thailand provide precut ingredients to simplify cooking tasks in households no longer employing cooks. Many elements of a Thai meal can be prepared ahead in quantities and kept in jars or frozen for later use. For example, fried onions and garlic can be prepared in quantity and stored in jars; curry pastes can be ground in amounts sufficient for several meals; ground toasted rice for Thai-Lao dishes can be prepared and stored for later use; and canned coconut milk and rice paper make meal preparation easier for urban cooks and displaced Thai in North America. Canned bamboo shoots are acceptable substitutes in American kitchens.

The popularity of Thai food overseas has been reinforced by the availability and promotion of

semiprepared Thai food in food kits (also for sale in the Bangkok airport). Outside of Thailand, flavor pastes have recently become available in powdered, canned, and frozen forms, lessening the burden for new immigrants to Australia, Europe, and North America who want to make the dishes they remember from home. To release the flavors, one fries the paste in oil or heats it in coconut milk.

The palace kitchens of the Indianized royal courts in Thailand and Cambodia always produced more elaborate recipes and meals. In the 1800s, Western cooks were hired to teach Western-style dishes to palace cooks. Culinary skills for women were particularly highly valued. The service of royal wives and concubines provided the extra effort necessary to make elaborate meals with theatrical garnishes; time-consuming carving of fruit and vegetables displayed royal power. Even a carved flower made from a green onion, a chili pepper, or a radish could turn a simple stir-fry into a dish fit for a king. The Thai royal tradition in palace food has been made public in a number of cookbooks, complete with instructions for vegetable carving and for making time-consuming difficult elements like egg nets.

Typical Meals

Both rural and urban Thai generally prepare rice with side dishes such as curries, soups, and stir-fried dishes for all meals. Western-style breakfasts with cereal and toast are recent urban innovations. Towns and cities provide more alternatives, such as noodle soups or lightly boiled eggs for early breakfasts and late-night snacks. Desserts are seldom included with meals, but fruit is a welcome snack any time of day.

Food acquisition in rural areas can be as simple as reaching out the back door to grab a handful of edible greens such as watercress or morning glory leaves. Throughout the country, in rural villages, direct patron-client relations distribute and redistribute food within the community. One household may regularly provide another with fresh vegetables, in return for emergency supplies of rice in the hungry season or for help with special occasions such as weddings or funerals. These food-based debts are never fully repaid, for to do so would be to end reciprocal relations basic to community survival.

Thai meals are always presented in aesthetically pleasing ways, even in poor households. Side dishes of food are garnished with fresh aromatic herbs, fried onions, or even edible flowers. Plates, rice bowls, or shallow rimmed bowls are in common use and vary from antique works of art, to products from local ceramic factories, to brightly colored plastic. Forks and spoons are the easiest, most efficient way to eat rice and side dishes, with chopsticks used primarily for noodles and Chinese dishes.

Rice is the central core of most Thai meals, and it is usually served from a common bowl. Rice has a soul and is a gift of the ancestors; its quantity and quality, taste and smell, are a matter of constant concern. Side dishes, literally referred to as “with-rice” dishes, accompany rice and are also served in common bowls for sharing. If rice is not served, then one is “eating for fun,” often with drinks, rather than consuming a meal. Thai meals are served all at once rather than in courses. This simultaneous presentation of all parts of the meal provides the eater with maximum choices about what tastes go best together. Each meal served with rice tries to balance the tastes of hot, sour, salty, and sweet. The people eating the meal create the final balance as they serve themselves from the available side dishes in the order they prefer and fine-tune tastes with wet or dry condiments, reflecting individual needs and desires.

Side dishes usually include soup as a meal component along with rice and other side dishes, rather than as a separate course. Soups are served from a common bowl directly onto rice or into individual bowls. Most soups are fast-cooking, keeping vegetables crisp and nutrients readily available. Soup, either a rice congee or a noodle soup, can also be a meal in itself—often for breakfast or a late-night snack. Soups with a coconut base are more associated with palace cooking, as in this Thai favorite.

Tom Kha Gai (Coconut Chicken Soup)

4 c stock

4 chicken breasts, sliced

2 pieces galangal, 1 in. long, split or sliced

4 wild lime leaves, deveined and torn

2 pieces crushed lemongrass, about 2 in. long
 4 c coconut milk
 4 chilies, sliced
 4 tbsp fish sauce

Bring the stock to a simmer, and add chicken, galangal, lime leaves, and lemongrass. Cook 10 minutes or until chicken is cooked through. Add coconut milk, chilies, and fish sauce; heat through and serve.

Eating Out

Bangkok provides the largest range of restaurants for dining out. But in the 1960s, there were very few Thai restaurants in the city. The best known include Jit Pochana, Seefah, and Sorng Daeng, where visitors and middle-class Thai ate classic dishes, many from the palace tradition. Sorng Daeng opened in 1957 in its present location near government offices in Bangkok and still operates today. Here, one could eat a very high-quality noodle dish served on a banana leaf, tasting very much like the dish served by street vendors in the back alleys but, of course, much pricier.

Eating out for lunch is particularly common in urban areas like Bangkok where the traffic can be very slow and the workplace very distant from home. Street vendors provide foods for early-morning travelers and late-night revelers. Night markets in the towns and cities of Thailand gather together a number of food vendors to facilitate late-night dining when the temperature is lower. Hawker or street foods are not always available in restaurants; they can best be enjoyed on the street. The preparation of some street foods may be too complex or labor-intensive for restaurants or may require special equipment.

Although McDonald's, Kentucky Fried Chicken, Dunkin' Donuts, and other Western fast-food outlets are common in Thai cities, they have not displaced local fast foods that offer better value for money. Today, food courts are available in shopping malls throughout the country and are popular with tourists and locals alike. The customer buys redeemable coupons and uses them as cash to purchase a wide

range of dishes from a selection of food vendors. The vendors then redeem the coupons and pay a percentage to the owner of the food-court space.

Chinese restaurants are still the most popular locations for special meals consumed outside the house. Chinese restaurants have adapted to local tastes with the use of coriander root, tamarind paste, lemongrass, and chilies. But attempts have been made to distinguish between a Chinese and a local noodle dish for nationalistic purposes. For example, pad Thai (Thai fried noodles) is a dish invented in the 1940s in Bangkok in an attempt to distinguish Thai noodles from Chinese noodles and to encourage Thai civil servants to eat local. Pad Thai is one of the favorite Thai dishes of foreigners visiting Thailand, and it is popular in Thai restaurants overseas. But it is only one of many fried noodle dishes available in Thailand. Perhaps its popularity with foreigners is due to the fact that it can be ordered by name in restaurants and from street vendors without the need to speak Thai. Other Thai noodles involve a long dialogue: Do you want your noodles thin, medium, or wide? Wet or dry? With beef, shrimp, or chicken?

Pad Thai (Thai Fried Noodles)

A dry stir-fried noodle dish well known outside of Thailand, pad Thai is usually accompanied by bowls of chili-vinegar sauce, dried chili flakes, lime slices, chopped peanuts, sugar, bean sprouts, and sliced cucumbers and is decorated with cilantro.

Pad Thai, a dry stir-fried noodle dish well known outside of Thailand. (Shutterstock)

- 2 oz thinly sliced pork
- 1 tsp sugar
- 1 tbsp soy sauce
- 1 tbsp fish sauce
- 1 tbsp tamarind juice (or pulp squeezed from tamarinds soaked in 2–3 tbsp warm water)
- 2 eggs
- 3 tbsp oil
- 2–3 cloves minced garlic
- 2 oz thinly sliced tofu (a 2-in. cake)
- ½ lb dried rice noodles, soaked in warm water for 20 minutes
- 2 c rinsed bean sprouts
- 3 green onions, cut in 1-in. pieces
- 1 tbsp dried shrimp

Toss pork slices with sugar. In a small bowl, mix the soy sauce, fish sauce, and tamarind juice. Lightly beat eggs with a pinch of salt. Stir-fry the garlic, pork, and tofu in a tablespoon of oil. Pour in egg mixture until it starts to set, and remove to a plate. In the remaining oil, stir-fry the drained noodles until they are well heated and seared. Add to the center of the wok the bean sprouts, green onions, dried shrimp, and the soy sauce mixture. Mix in the egg and pork mixture. Turn out onto a platter or individual plates, and garnish with an assortment of the condiments listed.

Special Occasions

Food creates and maintains social relations between Thai, and between them and the spirit world. Feeding others occurs across all transitions in the life cycle and across the generations. Those who sponsor feasts gain status from feeding others appropriately and generously. It would be unthinkable to celebrate without food. Most celebrations have a religious or ritual component to them, but purely secular celebrations also involve food.

The predominant religious tradition in Thailand is Theravada Buddhism, a community-based religion

practiced in rural and urban areas in varying intensities. Buddhism and food intertwine at the level of rituals and lay offerings but also at the level of ideology and text. Fasting and not feasting is the Buddhist pattern, recalling always the middle way, avoiding the extremes of asceticism. However, community-based rituals with lay participation are usually celebrated with elaborate shared meals.

Religious rituals are closely integrated with the seasonal agricultural cycle, primarily irrigated rice in mainland Southeast Asia. However, the adoption of high-yielding varieties of rice and other technologies that permit two or three crops a year alter the significance of Buddhist celebrations, since the cycle of planting, transplanting, and harvesting is no longer coordinated with Buddhist seasonal rituals. This results in differences in what Buddhist rituals are emphasized in rural and urban temples.

Everywhere in Southeast Asia, the spirit of rice is feminine and must be placated and carefully tended. Mother rice is the self-sacrificing mother who is given gifts and offerings of food to guarantee a bountiful rice harvest. She is treated like a pregnant woman whose every whim must be indulged. Known as *mae prasob* in Thai, she determines the auspicious days to plant, transplant, and harvest rice. The rice fields are protected by spirits who must be ritually fed for the land to produce the highest rice yields. Feeding spirits may involve simple practices such as leaving a small serving of rice and fruit in a spirit house in the northeastern corner of a Bangkok house, as the inhabitants leave for work.

Theravada Buddhism provides a structure for sharing the best dishes the household can prepare with monks on their early-morning alms round. After elderly household members place some of these dishes in the monks' bowls, the family consumes these special dishes or shares them with neighbors at the community temple. For the rural poor, these occasions may be the only days that rich coconut-based meat curries are made. Ordinations, weddings, and funerals are also occasions for special meals. On such occasions, households may provide elaborate wet and dry desserts that require time and skill to prepare. Some are shaped to resemble miniature fruits and vegetables.

Monks, like spirits, need to be fed. The Buddhist pattern of moderate asceticism is reflected in the practice of restricting the number of meals for monks and the timing of meals. Monks fast from noon on, accepting only tea or sweet drinks in the afternoon and evening. Buddhists accrue merit through *dana* (meritorious giving), including giving daily food to monks. This is one route to a better rebirth and to avoiding dangers in the present life. Most of those feeding monks and spirits are women. In all the Theravada countries, women are the most generous supporters of temples, providing the food for early-morning alms rounds, cooked dishes for the monks' noon meal, and uncooked rice for special ceremonies and community rituals at the temple. In a more

Buddhist monks carry alms given in the street, Thailand. (StockPhotoPro)

commercial vein, women often sell food at temple fairs as a means of earning merit and money.

Ordinations of new monks, giving of gifts of robes to monks, and consecrations of religious buildings and Buddha images are all occasions for pilgrimages and festive meals. Food connects urban and rural communities on these occasions. Income differences may be apparent in the foods given to monks; however, any food given with a good intention is valued. Ethnic heritage may also be reflected in the food given to monks. For example, a rice-flour noodle known as *kanom jeen* mixed with a fish curry (*nam yaa plaachon*) is often served at temple events in areas of Thailand where the Mon settled. It is made from snake-head fish, garlic, shallots, shrimp paste, galangal, and ginger and is served over coiled rice noodles.

After the food is given to monks, everyone who participated in the service shares the donated food. In Buddhist ceremonies, white thread is used to define sacred space and transfer the merit made by feeding monks and spirits to all who participated in the ritual. Merit made by feeding monks can also be transferred to ancestors in general or recently deceased relatives through a ritual known as *kluat nam*; water that has been blessed by the monks is slowly poured into another container or onto the ground, while monks chant appropriate Pali stanzas. Thus, both food and merit are widely shared with the living and the dead.

Theravada Buddhists are not generally vegetarian. In the Theravada tradition, meat dishes are given to monks in most communities. In Buddhist communities, it is more often the elderly who fast, meditate, and keep extra precepts all day, because they no longer have to worry about the work of food production and preparation. Women and the elderly are also more likely to enter into longer-term fasts. New Buddhist movements such as Santi Asoke require their adherents to be vegetarian. Recently, more Theravada Buddhists are taking on the Mahayana practice of fasting a few days a month.

Diet and Health

Thailand imported from India some of the ideas about the cooling and heating properties of food

and how food affects individuals at certain stages of their life cycle. But since Thailand did not import the South Asian system of castes and sub-castes, the heating and cooling properties of food and people had no connotation of purity and pollution; as a result, everyone could eat together.

In the Theravada Buddhist communities of Thailand, some monks, particularly forest monks who reside alone and practice meditation, gain reputations for their skills in healing through herbal and spiritual methods. In the past when villagers might not have had access to any health services, monks were honored as valuable healers who helped reduce suffering out of loving-kindness, free of charge. Ritual speech, words spoken over medicinal mixtures, can be called on in cures. Whether efficacy can be attributed to the placebo effect, or the peace of mind that comes from practicing morality, is not of great concern, particularly in households where no other remedies are available. Spiritual healing is particularly important in palliative care, treating chronic diseases, and when illnesses have a mental health component. Midwives, specialists in traditional massage, herbalists, and shamans all contribute their expertise to the varied healing strategies in Thailand, in addition to the sophisticated and effective public health system in the country.

Food-secure countries like Thailand face a difficult set of problems, as their policy makers must deal with problems related to both under- and over-nutrition. This double dilemma is a result of improvements in food supply combined with changes in food habits. Food security and good health care systems in Thailand are reflected in the low infant and under-five mortality rates in 2005: 18 per 1,000 and 21 per 1,000. A related challenge concerns the complex interactions between malnutrition and HIV/AIDS. For the many people living with HIV/AIDS in Thailand, adequate and healthy food is their most immediate and critical need, as antiretroviral therapy works effectively only for people who are well nourished.

Although Thailand has low rates of malnutrition, some families may still have to deal with both low-birth-weight infants and overweight schoolchildren.

In addition to an estimate of 9 percent low-birth-weight infants and 10–15 percent overweight children in primary schools in the country, about half the people in central Thailand and urban areas now have high cholesterol rates. Changes in food habits and food availability are responsible for this modern “toxic food environment,” according to media reports in Thailand. Climbing obesity rates are blamed on Western fast-food chains. Problematic foods are identified as those high in salt, sugar, and fat, including instant noodles, deep-fried chicken, pizzas, hamburgers, French fries, doughnuts, cookies, and cakes. These mouth-watering edibles are found everywhere, leading to increasing rates of coronary heart disease, diabetes, hypertension, and, to some extent, cancer. Heart disease and cancer, diseases of the affluent, are now the primary causes of death in Thailand.

Tibet

Overview

Tibet is an autonomous region of southwestern China (since 1950) that borders the nations of India, Nepal, Burma, and Bhutan. With an area of 471,700 square miles, it occupies most of the landmass known as the Qinghai-Tibet Plateau—the highest region on earth—and sits at an average elevation of 14,000 feet above sea level. Tibet is virtually surrounded by mountains, including the renowned Himalayan range, where Mount Everest (Chomo Langma), the world's highest at over 29,000 feet, straddles the border with Nepal. Given its geographic position, the climate of Tibet is primarily cold and dry, although some parts of the south are mild and temperate. Many of Asia's largest rivers run through the plateau, including the Mekong (Zachu), the Yangtze (Driчу), and the Indus (Senge khabab). Tibet is divided into one municipality—the capital city of Lhasa—and six prefectures including Shigatse in the southwest, Ngari in the west, Lhaoka in the south (central), Chamdo in the east, Nakchu in the north, and Nyingtri in the southeast. The total population in 2008 was reported at approximately 2.8 million, mostly concentrated in Lhasa or other urban areas. This figure does not include any ethnic Tibetans living in surrounding Chinese provinces that belonged to Tibet prior to Chinese occupation. The total number of ethnic Tibetans living in and surrounding the autonomous region is around six million.

Before 1950, Tibet was an independent territory ruled by a theocratic government, with the Dalai Lama—a Buddhist high priest believed to be a reincarnated deity—acting as head of state. As the official public religion, Buddhism shaped all social

values, norms, rituals, and institutions. Following a political rebellion in 1959, the Dalai Lama fled to India to establish a government-in-exile, triggering the exodus of numerous Tibetans into neighboring countries and beyond. Today, Tibetan Buddhism remains the leading religion in the area, with only a small number who practice the traditional Bön religion (an indigenous faith that some contend existed before Buddhism but that has nonetheless been strongly influenced by it), and even fewer Muslims.

Tibet's strategic location in Central Asia has made it vulnerable to invasion throughout its long history, particularly by the Mongolians and the Chinese. Nevertheless, the Tibetan people have remained relatively isolated from outside influences, resulting in a truly unique culture with its own ethnic group, language, social customs, and cuisine.

Food Culture Snapshot

Norbu Tsering and his wife, Rinchen Lhamo, live in a small house in the historic district of Lhasa—the largest city and the capital of Tibet—together with their seven-year-old daughter, Rabten Pema, and five-year-old son, Lobsong Tashi. Since Norbu and Rinchen were born after Chinese occupation at a time when Tibetan culture was undergoing a tremendous surge of development, they each had the opportunity to receive a formal education—a new phenomenon for many Tibetans. Both of them grew up in farming villages outside of Lhasa but moved into the city to attend Tibet University, where they first met as students of literature. While many ethnic Tibetans have greeted the Chinification of their society with great resistance, Norbu

A Tibetan family has their meals in the wild field after working on their farm. (Gan Hui | Dreamstime.com)

and Rinchen believe they will have more ability to effect positive change as well as greater personal opportunity if they are compliant. They are both fluent in Tibetan and Mandarin Chinese, which serves as an important factor in finding and maintaining full-time employment, especially in a region where inequality is continually on the rise and the throngs of Han Chinese immigrants seem to be getting preferential treatment (most jobs require an understanding of Mandarin). Norbu is a teacher at a local elementary school, and Rinchen works as an editor at a Lhasa television station. Most of Norbu's colleagues are Han cadres, sent to the area by the central Chinese government to serve terms lasting between two and eight years. Similarly, Rinchen's coworkers are predominantly Chinese from neighboring provinces like Sichuan and Yunnan. The children attend the primary school where their father teaches and count language classes in both Tibetan and Mandarin as some of their favorite subjects. In socioeconomic terms, this

family is characteristic of the emerging urban middle class in contemporary Tibetan culture.

Norbu, Rinchen, and the children enjoy and are very thankful for all of the conveniences an urban life affords them. Their home is outfitted with electric power, providing them with heat during the harsh winter months and plenty of light throughout the year. Rinchen has a very modern kitchen by Tibetan standards, with appliances like a methane-fueled stove, a pressure cooker, an electric butter churner, a small refrigerator, and a host of plastic storage containers on hand. The family especially appreciates the color television they recently received from Rinchen's company. Watching televised programs has become a favorite family activity and a special time to spend together.

Among the many benefits of living in the city, Norbu and his family relish most the availability and variety of foods to be found. Lhasa has several daily food markets and street-side stalls selling everything from fresh

vegetables and yak meat to yogurt (*sho*), yak butter (*mar*), barley (*ney*), and brick tea (compressed black tea). While fresh meat and produce were hard to come by in the past, they appear abundantly all over the city today. Greenhouse farming has become very popular throughout Tibet, leading to the cultivation of “exotic” foods such as strawberries and watermelons—fruits that Rabten and Lobsong find particularly enjoyable. Locally produced peaches, pears, apricots, and grapes are favorites for the whole family when in season. Additionally, Rinchen likes to keep dried fruit and nuts on hand for special occasions.

Enormous quantities of fresh produce are flown into the region from neighboring provinces on a daily basis. Therefore, it is not uncommon to find tomatoes, chili peppers, bok choy, carrots, bean sprouts, eggs, spices, cabbage, turnips, potatoes, radishes, garlic, ginger, and more lining market shelves. Wild herbs and mushrooms are abundant throughout the city, too, and the family likes to keep them on hand for medicinal purposes. Rinchen makes regular trips to the market because she likes to keep fresh items on hand but has little refrigerator space in which to store them.

In recent years, Lhasa has seen the opening of three supermarkets, making access to dietary staples and packaged foods all the more convenient. Rinchen purchases the bulk of her family’s food from street markets because she believes the quality of the ingredients is far superior, but occasionally she visits the supermarket to purchase processed roasted barley flour (*tsampa*), wheat, rice, salt, cooking oil (canola), dried yak meat, instant noodles, candy, Pepsi, local barley beer (*chang*), and the like.

While Rinchen handles most of the cooking and shopping, Norbu and the children like to participate from time to time. They particularly enjoy going to the Tianhai Night Market on the west side of town because it is lined with all sorts of street foods, snacks, and sweets. In fact, the daytime market on Barkhor Street is closer to their home, but Rinchen’s work schedule makes it difficult for her to shop during the day. Fortunately, Tianhai is open in the evenings, and the prices are much lower. Here, the family enjoys an inexpensive night out, making dinner out of the Sichuan food stalls. While numerous restaurants are popping up all over the city, many of them are too expensive for the whole family.

Rinchen keeps the family well stocked on Tibetan staples like barley, dairy products (yogurt, cheese, and butter), and yak meat, but on occasion she enjoys splurging on rare or unusual foodstuffs like eggs, seafood, pork, and chicken. The children have acquired a taste for these and other Sichuan foods, as they appear regularly during mealtime at school. Historically, Tibetans were forbidden to eat small animals according to Buddhist law. Yet following the Chinese occupation and the influx of Han ethnic groups, attitudes toward religious taboos relaxed; and poultry, pork, and seafood became increasingly available. Norbu and Rinchen still feel that it is best not to indulge in these foods, except on special occasions.

In contrast to the modern lifestyle led by Norbu and his family, the traditional ways of procuring food in Tibet were far more complex. In fact, this is still very much the case in most rural areas today. Prior to Chinese occupation, many of the foods used in Tibetan cooking were cultivated, prepared, and consumed directly in the home. Everything else was purchased at annual or biannual markets (*lotsong*). These markets were held following a harvest, usually during the ninth month of the year (Tibetans observe a lunar calendar), and were located in areas easily accessed by nomads and farmers alike. *Lotsong* typically took place over a period of two to three weeks to ensure enough time for exchanging goods and stocking up on important staples not readily available at home. Ordinarily, markets were regionally based, providing goods for up to five or six villages at once, but larger cities offered their own municipal markets. Nomads would bring with them an abundance of animal products in exchange for the agricultural harvests of village farmers. Vegetables and fruits were dried to ensure a long shelf life—because the growing season was very short—and to stand up to the demands of the nomadic lifestyle.

Major Foodstuffs

The high elevation and cold, dry climate of Tibet, serving as a natural boundary to the variety of foods grown in the region, have been instrumental in the development of a unique cuisine. Traditionally, very few agricultural crops could withstand such extreme weather conditions, making the use of animal products

an essential means of subsistence. Limited international trade and religious dietary restrictions have been equally influential. Only a few items from surrounding countries such as brick tea, rice, and sugar appear with any regularity, and Buddhist law has forbidden the consumption of seafood, poultry, and other small animals. In recent years, Tibetan cuisine has begun to see major changes, yet food staples have remained relatively constant.

Perhaps more than any other factor, however, social diversification has shaped the production and specification of food in Tibetan homes. It is difficult to understand Tibetan culture at all apart from an understanding of its social structure—with farmers (*rongpa*), nomadic animal herders or pastoralists (*drokpa*), and religious clerics forming the basis of society. Until recently, social organization throughout Tibet remained largely unchanged, thanks to the region's relative geopolitical isolation. Farmers had

permanent homes in villages and towns, where they cultivated their own crops and consumed a predominantly vegetable-based diet. Since most of them did not have their own livestock, they relied on pastoralists for meat and dairy products. Alternatively, animal herders lived as nomads, occupying tents and moving from place to place depending on the season. Most of the foods consumed by pastoralists came from their own herds, including meat, fat (*tsilu*), and dairy products. With little access to vegetables or grains, nomads depended on the agricultural harvest of farmers to supplement their diet. Occupying the highest social positions in Tibetan society were monks, priests (*lamas*), and nuns, who did not produce their own food—although they did cook—but depended on the provisions of farmers and herders for all their dietary needs including vegetables, grains, and dairy products (they were forbidden to eat meat).

The most abundant and valuable crop in Tibet is barley (*ney*), which alone accounts for around 55 percent of all cultivated land and 56 percent of total food production. The average person consumes around 341 pounds (155 kilograms) of the grain per year. Most of the time, barley is ground into flour and toasted (*tsampa*), forming the basis of the Tibetan diet. A typical adult will consume at least 176 pounds (80 kilograms) of *tsampa* every year. And children will eat as much as 158.5 pounds (72 kilograms) in the same time period. No home is considered complete without *tsampa*. Other grains might be substituted including wheat, buckwheat, corn, millet, oats, or soybeans, but the most popular and respected *tsampa* is made with barley. Tibetan people believe that *tsampa* is pure only if barley is used and that it possesses healing, restorative properties. It is so highly revered that it is used as an offering in most religious ceremonies and is always present on special occasions. While it is mainly mixed with a little Tibetan butter tea and eaten as a sort of dough, *tsampa* is used in a multitude of recipes, from soups (*tsamtuk*) and dumplings to sweet and savory cakes (*sengong* and *pag*). In a typical Tibetan home, *tsampa* is eaten with every meal—three times a day—and is processed on-site. Each household is equipped with milling stones for grinding flour, and every village has a mill house, used to process large quantities. The grains are thoroughly cleaned, then toasted in sand prior to being ground, which cooks them evenly and reduces the threat of burning. A sieve is used to separate the barley from the sand. The whole grains of barley (*ney*) are also popular when toasted and eaten as a snack (*yoe*).

In addition, barley (*ney*) is used to make beer (*chang*), another staple of Tibetan cuisine. Like *tsampa*, other grains may be used such as rice, corn, oats, millet, and wheat, but the most traditional and popular *chang* is made with barley (*ney*). It appears at almost all religious events and festivals, although most monks and priests (*lamas*) are forbidden to drink alcohol. *Chang* is enjoyed by people of all ages either hot or cold, and it has an alcohol content of approximately 5 percent. In almost any home, *chang* is offered as a sign of courtesy to guests, who out of respect for the host must first take three sips and then drink the entire serving. *Chang* can be

made into a distilled alcohol (*arag*) as well, appearing regularly at religious ceremonies and on special occasions.

The use of animal products in everyday cooking has been fundamental to the survival of the Tibetan people. As a result, meat, fats, and dairy products predominate in the local cuisine. Almost all foods consumed in Tibet are accompanied by something from an animal—be it meat, fat, butter, yogurt, or cheese. Ironically, Buddhism forbids the killing of animals, except in places where vegetables and grains are so scarce that meat is the only means of survival. Historically, it was only the nomads—animal herders by trade—who were “allowed” the privilege of taking an animal’s life, and that applied only to large species. Buddhist philosophy reasoned that it is better to kill large animals for food as one slaughter feeds many mouths. Therefore, the consumption of small animals, birds, and fish was strictly prohibited. Furthermore, monks and priests (*lamas*) were forbidden to eat meat of any kind, and farmers could partake only in the event of a natural or accidental animal death. Dairy products were available to all social groups since they could be obtained without killing. Today, many Tibetans, particularly the younger generations, are beginning to overlook these religious stipulations and are now eating poultry, seafood, and other small animals.

The meats most commonly used in Tibetan cuisine come from yaks, barren female yaks (*dri*), sheep, goats, cows (*lung-pi*), and yak-cow crossbreeds (*dzo* or *dzomo*). Because the killing of animals is seen as a necessary evil, a ritual precedes each slaughtering, in which prayers, holy water, and butter lamps are offered to the animal. Consequently, no part of the animal is left unused. Fine cuts are enjoyed on special occasions, animal skins and stomachs are used in cooking or for storage, organ meats and blood are eaten in sausages, and even the dung is used to seal storage spaces and as cooking fuel. Dried meat (*sha kampo*) is particularly popular in Tibet and has been a dietary staple for hundreds of years. In the Tibetan climate foods can be dried quickly, a process that prolongs the shelf life and makes them convenient for traveling. The meat is often cut into strips and hung to dry in the sun. *Sha kampo* is eaten raw or cooked.

Other typical meat dishes might include meatball curry served with cream (*shabril*), blood and liver sausages (*gyuma*), spiced grilled meat with tomato sauce (*sha katsa*), and meat and noodle soup (*thugpa*), just to name a few. Meat- or vegetable-stuffed dumplings (*momo*) are the most popular of Tibetan dishes, typically served at formal meals and celebrations. The dumplings are folded into a variety of shapes, depending on the occasion, and served with chili sauce or pickled radishes and cabbages (*lakyur*). In recent years, momo have become so popular with tourists that restaurants in urban areas offer them daily.

Momo

In a typical Tibetan home, these dumplings are filled with yak meat, beef, or mutton, but in monasteries and areas where meat is not available, a vegetable mixture is substituted. The traditional and most popular cooking method is steaming, but the dumplings are sometimes fried as well.

Filling

- 1 lb ground beef or lamb
- ½ c celery, diced
- ¼ c green onion, finely sliced

Traditional Tibetan dishes, momos (center) and bouillon (left). Momos are doughy pouches often filled with a variety of items, including meat, vegetables, or cheese. (Shutterstock)

- 1 tsp fresh ginger, minced
- ¼ tsp ground cumin
- ¼ tsp ground nutmeg
- 2–3 tbsp water, or just enough to bind
- Salt to taste

Dough

- 3 c white flour
- ½ tsp baking soda
- Water, just enough to bring together into a firm dough (approximately ½ c)

In a large bowl, mix together all ingredients for the filling, cover, and chill.

To make the dough, mix together all the dry ingredients in a large bowl. Add water little by little, making sure to stop just when the dough comes together into a firm ball. Chill the dough for approximately 30 minutes (dough can be prepared and chilled overnight). Then cut the dough into 4 pieces. Using a rolling pin, roll each piece out until it is ⅛ inch thick. Using a round cookie cutter, cut the dough into approximately 2–3 round disks. Be sure to roll the dough in stages to prevent it from drying out. In the center of each round put about a teaspoon of filling. Fold the disk in half and firmly pinch together the edges, creating a half-moon shape. Repeat until all the dough and filling have been used. Be sure to keep the completed dumplings covered with a damp cloth or paper towel. The dumplings can be stored overnight and cooked the next day. To cook them, use a bamboo steamer placed over a wok or pot with a little boiling water, and heat, covered, for about 30 minutes or until the filling is well cooked.

In Tibetan cuisine, dairy products are equally significant to tsampa (toasted barley flour), forming a major portion of the diet and maintaining a prominent position at religious ceremonies. Butter (*mar*), above all other foods in this category, is indispensable in a Tibetan kitchen. Traditionally a high-value trade item produced by nomads, butter is used in

everyday cooking and beverages, or as cooking and lighting fuel (butter lamps). In religious rituals, it is shaped into elaborate carvings and used as offerings. The milk of dri (female yaks) is believed to deliver the finest-quality butter with a pleasant golden hue, but sheep, goat, and dzomo (female yak-cow cross-breeds) milk are used as well. Ordinarily, it is made by hand and stored in wet animal skins that shrink as they dry, creating an airtight container that preserves the butter for long periods of time. Butter is the key ingredient in Tibet's most important beverage—butter tea (*boeja*)—a warm, salty concoction that is consumed at every meal and throughout the day. It is not unusual for a Tibetan to drink up to 40 cups a day. Imported Chinese brick tea is steeped in salted water until it is very strong, then is poured into a tall churn and whipped heavily with butter and salt, resulting in a thick consistency very much akin to broth. *Boeja* is served as a token of hospitality in any household, and the cups are refilled after every sip.

Milk, cheese, and yogurt are common food staples as well, appearing regularly at meals and in numerous recipes. Most of the milk comes from the dri, but sheep, goat, and dzomo milk may be used as well. Two kinds of cheese are typical: a hard variety (*chura*) that is dried in the sun and a softer type (*chura loenpa*) reminiscent of cottage cheese. *Chura* has always been a popular snack because of its durability on long journeys. It is so hard that it is best when added to soups or stews. Yogurt (*sho*) is mostly used for making butter, but it is also enjoyed in cooking or as a snack. It is believed that sheep milk makes the best cheese and that dri (female yak) milk makes the best butter.

Cooking

The functionality and layout of traditional Tibetan kitchens varies depending on the lifestyle of the domestic unit. However, every household is equipped with a stove, a stone mill for grinding flour, and a wooden butter churner. In the past, the primary fuel for cooking was wood, but animal dung was used by nomads or in areas where wood was scarce. Today, charcoal and gas are becoming popular sources for

fuel. Modern Tibetan homes in villages and towns are beginning to have access to running tap water and electricity, giving rise to more convenient cooking equipment such as electric butter churners, solar-powered stoves, and refrigerators.

It is most common for women to do all the cooking and food preparation in a Tibetan family home, but it is not unusual for men to participate in household duties as well. Children begin learning to cook as early as three years of age and are expected to regularly assist in meal preparation by the age of six. In religious houses, every inhabitant shares in domestic duties including cooking and purchasing food.

A typical kitchen for a nomadic household is placed in the center of the tent, where tables and portable stoves made of metal tripods are placed. Food is stored in animal-skin bags and kept near the stove for everyday use. Surplus food is placed in cellars dug out of the ground. Because the soil is so cold, these storage pits are excellent natural freezers, preserving foods for long periods of time. They are usually lined with animal dung, which acts as a seal when closed, creating an airtight environment for the food.

As inhabitants of permanent homes, farmers have individual rooms that are used for both cooking and eating. These kitchens are equipped with large stoves made of stone, allowing for several foods to be cooked at once. Most households have additional rooms that are used as storage pantries and for drying meat.

Tibetan monasteries tend to have large, well-equipped kitchens because of the great number of inhabitants (sometimes more than 1,000 people). It is not uncommon to find teapots the size of rooms that require the attention of multiple cooks for churning tea and cleaning.

Professional cooks are highly regarded in Tibetan society and may be hired for special occasions and religious ceremonies. Wealthy families tend to employ them as full-time household cooks. Traditionally, all professional cooks were men and were expected to learn the trade as apprentices of master cooks (*gyal se machem*).

Cooking vessels and serving dishes fluctuate depending on the region, occasion, or social status of the household. Pots for cooking are made from

earthenware, brass, copper, iron, and bronze. Storage containers might also be made of wood. Serving dishes and utensils are usually made of wood or silver. Tibet has its own deposits of jade, so it is normal to find special containers and bowls for barley beer (*chang*), barley liquor (*arag*), or toasted barley flour (*tsampa*).

Typical Meals

Location and social status play a key role in determining the kind of meals that are consumed in Tibetan households. Nomads tend to eat dishes heavy in animal protein, whereas monks and farmers eat more vegetables and grains. Most Tibetans consume three meals a day, and snacks are always nearby. Babies also eat three daily meals that usually consist of *tsampa*, butter (*mar*), milk, and yogurt (*sho*) or soft cheese (*chura loenpa*).

Breakfast might consist of a soup (*tsamtuk*) made with *tsampa*, along with dried cheese (*chura*), dried meat (*sha kampo*), dried fat (*tsilu*), and roasted soybeans. Butter tea is the drink of choice, with at least three or four cups consumed at breakfast alone. A little of the tea may be mixed together with some *tsampa* and crumbled cheese, then hand-kneaded into a dough or “cake” (*pag*).

Lunch and dinner usually follow a similar pattern, although the midday meal is the heaviest and dinner tends to be light. *Tsampa* and butter tea are always on the table, but *chang* (barley beer) is common, too. Vegetarian dishes served for lunch or dinner might include buckwheat leaf salad (*yaba*), baked and buttered mushrooms (*sham trak*), and spicy potato curry (*shogok katsa*). Side dishes like pickled cabbage or radishes (*lakyur*) and tomato-based hot sauce (*sipen mardur*) are frequently served. Meat dishes such as grilled yak served with tomato sauce (*sha katsa*), blood sausages fried in mustard oil (*gyuma*), broth (*rue tang*), dumpling soup (*boetuk*), meat and noodle soup (*thugpa*), and meatball curry (*shabril*) are popular throughout Tibet.

Desserts are not as prominent in Tibetan cuisine as in the West but might appear on special occasions and during religious festivals. The two most prevalent sweets are both made out of rice, a food item

that has been scarce in Tibet until recently. *Dresil* is sweetened rice mixed with butter and dried fruits, served with yogurt. *Omdre* is a very similar recipe, except it does not call for dried fruit or butter and may have a thicker consistency, more like a pudding. On special occasions like New Year’s Day (*Losar*) rice cookies are popular, eaten either baked or fried.

Snacks are enjoyed throughout the day and are especially handy when traveling. The demand for Chinese snacks is growing throughout Tibet these days, following the arrival of numerous Han immigrants (mostly from the Sichuan Province). Traditional options like dried meat (*sha kampo*), dried cheese (*chura*), and toasted grains (*yoe*) are prevalent all over Tibet, and Chinese alternatives such as ravioli-style dumplings (*shuijiao*) and steamed dumplings (*baozi*)—much like *momo*—are popular in urban areas.

Tibetans have an elaborate set of rules surrounding the meal that mirror social norms and religious beliefs. The order of service is crucial, as it follows a hierarchical arrangement believed to be pleasing to Buddha. Those of the highest social status must be seated at the head of the table and served first during a meal. No one else may eat until the head of the table has prayed and begins. In some areas of Tibet, it is polite for guests to lick their bowls or plates to show appreciation. Also, belching is another sign of appreciation that is practiced in some parts of the region. Avoiding bad manners during a meal is as critical as expressing gratitude and respect. Some instances of bad manners are chewing with an open mouth, talking loudly, stepping over food, pointing one’s feet or stretching the legs, eating from communal dishes or utensils, and passing one’s plate or bowl over the dish of another guest.

Eating Out

Eating out in Tibet is a remarkably recent phenomenon, and the majority of restaurant patrons are tourists and urban dwellers (young people). As an isolated territory for much of its history and a region closed to foreign visitors between the 1960s and the 1980s, this comes as no surprise. Traditional society was not conducive to restaurant development

because so much of the population lived as nomads or in remote areas. Some monasteries did offer food and accommodations to travelers, but this practice never became a point of focus.

Following Chinese occupation in 1950, Sichuan restaurants began to appear in cities and towns throughout Tibet. Today, they outnumber any other type of eating establishment. Menus feature specialties such as stir-fried meats and vegetables, noodles, dumplings, rice noodles cooked in a clay pot (*shaguo mixian*), fried noodles (*chaomian*), and egg-fried rice (*dan chao fan*). Even the smallest villages in Tibet will have a Sichuan restaurant, but the prices are much higher than what can be found in the capital city of Lhasa. These eating establishments, and the growing numbers of Han Chinese immigrants, have been responsible for introducing foods into the Tibetan diet that hitherto were forbidden by Buddhist law. Prawns, crabs, chicken, duck, pork, and fish appear on many restaurant menus and are easily found in supermarkets.

Cities and towns are beginning to have a variety of restaurants that serve Nepalese, Indian, Muslim, and Western-style foods, in addition to those that serve traditional Tibetan dishes. Western foods like sandwiches, burgers, pizzas, cookies, and snack foods are easy to find in supermarkets and hotel restaurants. Nepalese and Indian curries are popular as well.

Restaurants in urban parts of Tibet now offer a variety of beverages in addition to butter tea and barley beer (*chang*). Sodas, mineral water, Chinese green tea, and Pakistani sweet tea (*cha ngamo*) are widely available. Bottled beers are gaining popularity as well, including the Tibetan Snow and Lhasa brands, as well as Budweiser. Chinese red wine can be found on some restaurant menus and in supermarkets.

Special Occasions

The Tibetan people love to celebrate, which has given rise to many special holidays and festivals. Many of these events originated as religious ceremonies and have become part of the popular culture today. Food staples like barley flour (*tsampa*) and butter

Typical dishes one might find in a feast in Tibet. This one was prepared for a wedding. (StockPhotoPro)

(*mar*) are commonly used as offerings and made into elaborate carvings. No matter what the occasion, feasting is always part of the agenda.

The Tibetan New Year is considered the most important annual festival, as it is a time for cleansing and new beginnings. It is celebrated over a period of several days and involves a series of monastic and popular rituals. It begins on the 29th day of the 12th month (following a lunar calendar) with monastic prayers and the burning of a giant sculpture called *Goutor*. On the same day, families clean their homes and enjoy a meal of dumpling soup (*gout-houk*) and dough made from *tsampa* (barley flour). From the dough and the remaining soup a human sculpture is created and taken out of the house to ward off any negative elements. On the first day of the New Year, all monasteries are cleaned, and offerings of scarves, butter lamps, and luxury foods—rock sugar, candies, nuts, and dried fruits—are brought. The monks hold a ceremony where they burn incense and distribute small amounts of barley flour (*tsampa*) to all the people, who eventually throw the grains into the air as a symbol of luck and the passing into a new year. During the ceremony there is plenty of chanting, music, and dancing. Inside family homes, everyone wears new clothes and celebrates the upcoming year with a feast that includes the finest meat and vegetable dishes, *tsampa* mixed with butter and sugar (*chemar*), rice dishes, yogurt (*sho*), rice cookies, and barley beer (*chang*). The *chemar* is meant to symbolize a plentiful barley

Decorative food prepared in anticipation of the New Year celebration, Tibet. (Jeeraphat Jantarat | Dreamstime.com)

harvest for the upcoming year, and the sho, plentiful animal products. Prior to the arrival of Buddhism, a sheep was sacrificed as an offering during this festival, and the head (*luggo*) was served during the meal. Although sacrificing sheep is not part of the celebration today, an image of a sheep's head carved out of tsampa is served as a substitute. Meatball curry (*shabril*) is an example of the kind of dish enjoyed on New Year's Day and other festive occasions.

Shabril

Ingredients

- 2 lb ground lamb or beef, or 1 lb each combined
- 4 tsp vegetable oil
- ½ c onions, diced
- 2 tsp fresh ginger, minced
- 2 cloves garlic, minced
- ½ tsp turmeric
- 1 tbsp soy sauce
- 1 c mushrooms, sliced
- ½ c daikon radish, finely sliced
- 8 oz sour cream or plain yogurt
- Salt to taste
- ½ c green onions, sliced

Season the meat with salt, and shape into ½-inch balls. Set aside. In a large saucepan, sauté onions in the oil over medium heat until golden brown. Add the ginger and garlic, and cook for 2–3 minutes more. Add the meatballs, and cook on one side for 2–3 minutes, or until lightly brown on one side, and then flip. Repeat. Add the turmeric and soy sauce and cook for 2 more minutes. Reduce the heat to low, cover, and simmer for 4–5 minutes. Add the mushrooms and radishes, and cook for an additional 10–15 minutes. Remove the pan from the heat, and add sour cream in small batches, stirring constantly. Once the sour cream is well incorporated, return pan to the heat and bring to a gentle simmer. Then turn off the heat, season with salt to taste, and add green onions. Serve with rice and hot sauce or pickled cabbage.

The Great Butter Festival is a traditional Buddhist ceremony held in Lhasa that falls on the 15th day of the first month, when butter lamps are burned and a variety of sculptures are created out of butter including birds, animals, figurines, and flowers. It is the last day of the festival of prayer and a celebration of Buddhist enlightenment.

Diet and Health

Known as the “science of healing” (*gsowa rigpa*), Tibetan medicine is an ancient practice with strong links to Buddhist philosophy, Ayurvedic traditions from India, Chinese medicine, and various forms of astrology. It involves a series of complicated diagnoses and treatments including acupuncture, pulse and urine analysis, herbal remedies, diet and lifestyle modifications, heat therapy, and the like. Tibetan medicine upholds the belief that the health of the body depends on the health of the mind. All illnesses, therefore, come from the three poisons of desire, hatred, and ignorance. The ignorant state of consciousness is the root of all disease because it gives rise to desire, which in turn breeds hatred.

Tibetan medical theory asserts that the body is composed of three humors—wind, bile, and phlegm—that control all bodily functions and correspond to

the five elements found in nature—earth, water, fire, wind, and space. There are numerous subcategories for each humor as well. The key to good health is to maintain a balance of these humors in the body, in the mind, and in relationship to nature. It is believed that individuals have a tendency toward a predominant humor, or a distinct combination thereof, determining a physical disposition and temperament. That is, a person with a bile temperament is prone to bile-related illnesses.

Furthermore, this system classifies all matter as either hot or cold, both in the environment and in the body. The wind humor is associated with air and thus has a cold quality; bile is linked with fire, producing a hot disposition; and phlegm is associated with earth and water and has a cold quality. Since bile is connected to the element of fire, for example, its function in the body might include producing internal body heat and strength and promoting digestion. And a person with a bile humor, or bile-related illness, has a hot disposition.

Foods are either hot or cold as well, playing an important role in overall health. To promote equilibrium of the body, all foods must be consumed in moderation and should correspond to an individual's predisposition. That is, persons with cool temperaments should consume mostly warm foods, and vice versa. Not only is diet a preventative measure for health, it can be used in healing treatments as well. Many Tibetan doctors prescribe diet modifications to improve internal balance. All the major food groups in Tibetan cuisine are categorized in this manner, and the staples of the local diet are considered some of the healthiest foods. Fresh barley flour (tsampa) is considered a cool food and is believed to cure headaches, stomachaches, and fevers (all hot) if cooked as a porridge with milk. Fresh meat is cool, whereas aged meat is warm and

thought to strengthen digestion. These classifications do not correspond with the temperature of the foods but rather their constituents. Broadly speaking, Tibetans believe that cooked foods are superior to anything raw.

In the same manner that a proper diet can restore health, poor food habits are believed to destroy it. An improper diet involves the consumption of anything in excess and the combination of foods that do not belong together. Some examples might include hot milk and fruit, hot milk and sour foods, or drinking cold water with heavy, greasy foods.

Vietnam

Overview

The Socialist Republic of Vietnam curves along the western edge of the Indo-Chinese peninsula of mainland Southeast Asia. After nearly 20 centuries of war, colonization, and foreign occupation, the country is now undergoing rapid economic and social development.

Vietnam is bordered by China to its north and Laos and Cambodia to its west. Tropical lowlands and densely forested highlands cover nearly 80 percent of the country, leaving most of its agricultural and urban development concentrated into two main areas, the Red River Delta of the north and the Mekong Delta of the south. Hanoi and Ho Chi Minh City (once known as Saigon) are located, respectively, in these deltas. The two burgeoning cities contribute to Vietnam's standing as the 14th most densely populated country in the world. Its population reached 86 million in 2008 and continues to increase by 1 million every year.

Vietnam's geography, culture, climate, and cuisine can be divided into three distinct regions: the cool north, the central highlands, and the hot south. Neighboring China, which ruled the area as a tributary state for 2,000 years, heavily influenced the food of northern Vietnam. In the 16th century, the Nguyen dynasty established Hue, located at the narrow fulcrum of the country, for its imperial capital and created an elaborate cuisine for the central region. The hot, fertile lowlands of southern Vietnam, once a part of the Funan Empire that reached from northeastern India, have long boasted an abundance of fresh fruit, vegetables, and fish.

After its arrival in Vietnam in the second century A.D. Buddhism blended easily with Confucianism, Taoism, ancestor worship, and indigenous animism. After decades of Communism, the country has become strongly secular, yet a majority of Vietnamese still consider themselves Buddhists. The most devout Buddhists are vegetarian, while others may simply abstain from eating eggs or the flesh of any animals on the 1st and 15th days of each lunar month. Strict Catholics, who make up about 7 percent of the population, observe the Lenten fast. Followers of Cao Dai, a syncretic religion unique to South Vietnam, must eat a vegetarian diet for at least 10 days during each month. All food served in Buddhist and Cao Dai temples is vegetarian, though Cao Dai allows the use of garlic and onions, which are typically prohibited by Buddhist strictures.

Food Culture Snapshot

The Nguyen family resides in Long Xuyen, a prosperous town with a population of nearly 300,000 in the Mekong Delta region. Dung Cong is a swimming coach at the local university, while his wife, Dung Phuong, takes care of their household. Their daughter, Thao, 21, works as an administrative assistant in a downtown office. Their son, Duc, 19, is a full-time student of engineering. As is typical for unmarried children, both Thao and Duc live with their parents and return home to eat most of their lunches and nearly all their dinners there.

Dung Phuong, who cooks for the family, shops for ingredients every day at 9 A.M. Most days, she walks

about 300 feet to the neighborhood open-air market. There, she chats briefly with the vendors while she typically selects freshwater fish such as eel or *basa* catfish. Increasingly, she has been able to buy pork and poultry, and for special occasions, she can now choose a cut of beef. Seasonal fruit, fresh greens such as watercress or spinach, herbs, spices, eggs, and tofu will also make their way into her basket. Once or twice a week, she rides one of the family's scooters to a large, newly built supermarket. Frozen foods, dry staples, soft drinks, beer, ocean fish, and packaged snacks are all items the family prefers to obtain from the supermarket.

Two or three times a month, each family member enjoys eating at a favorite street vendor, especially for *pho bo* or *bun rieu*, noodle soup specialties that require too many ingredients and too much time to prepare easily at home. During especially hot days, Dung Cong, Thao, and Duc might purchase a small snack, such as sticky rice pudding or fresh fruit skewers sprinkled with salt and chili, to carry them over to a late cooked dinner.

During the past decade, as Vietnam prospered and distanced itself from the difficult postwar years, Dung Phuong has noticed food becoming more affordable for her family. Many ingredients, especially meats and vegetables, are abundant year-round, and her family now has access to products from other countries. Ingredients such as Italian pasta, American apples, French mustard, Chinese noodles, and Japanese pickles are available at the large supermarkets. Thao has been learning to cook from her mother and is beginning to shop for meals during the weekends when she is not working at the office. Though food tends to be more expensive at the new supermarket, Thao values the hygienic packaging and the convenience of the fixed prices she finds there. Dung Phuong enjoys experimenting with unfamiliar foods. Still, most of the meals she prepares for her family revolve around the local region's freshwater fish, vegetables, and rice.

Major Foodstuffs

Rice in some form appears at the center of nearly every meal in Vietnam. Of the arable land in Vietnam, 60 percent is dedicated to growing rice. The

Red River Delta and the Mekong Delta have long symbolized the country's rice baskets, and recent economic growth is especially evident in their increased supply of rice. Vietnam now ranks fifth in the world in consumption of rice and is the third-largest exporter of the grain after Thailand and the United States.

Jasmine rice, or long-grain *gao thom*, literally "fragrant rice," is the preferred variety for its flowery aroma. Its long and narrow grains are typically polished to a white color during milling and are then rinsed well before cooking to remove excess starch, as Vietnamese diners tend to like less starchy grains that retain a firmer bite while fluffing to a lighter texture. While there is some awareness of eating whole-grain rice with its healthful bran layer, polished white rice is still very much widely preferred.

A batter made from ground rice also becomes the base for distinctive *banh trang*, or rice paper. As a cottage industry throughout the countryside, women spread rice batter into paper-thin rounds onto fabric stretched tightly over simmering water. After steaming briefly, the rounds are then transferred to woven mats to dry in the sun. They become thin, translucent, parchment-like rounds that can be stored indefinitely. Later, after a quick dip in warm water at the table, they transform in seconds into delicate wrappers that are used for wrapping thinly sliced meat, seafood, fresh vegetables, and herbs. These rolls, called *banh cuon*, are one of the classic dishes of the Vietnamese table.

In the cooler highlands of the west and north, hill tribes terrace their mountain slopes with curving fields of glutinous rice. Also known as sticky rice or sweet rice, it contains much higher amounts of amylopectin, a branching molecule that results in a stickier, starchier texture upon cooking. There are different varieties of glutinous rice, from short, white, pearly grains to long, thin, purple-black rice. All are eaten as an accompaniment to savory dishes as well as being added to sweet desserts and snacks. Also distinctive to highland cooking is the use of *thinh*, a powder made from raw rice grains that have been roasted until golden brown and then ground fine. The powder lends a sweet, nutty flavor to savory dishes, helps bind minced-

meat preparations, and adds a delicate, powdery texture to salads.

Vietnamese cooks have developed a variety of noodles based on rice, from threads as fine as hair for serving with delicate fish to wide, silken ribbons for hearty stews. Each type of noodle has a different name. *Banh pho* are the flat, square-cut strands that appear in the popular beef soup. *Banh canh* are thick, chewy, round noodles that have both heft and resilience for soups with rich, spicy broths. *Bun*, also known as rice vermicelli, lend their name to the cold noodle salads that are commonly eaten for lunch. *Banh hoi* are extremely thin strands that are delicately steamed, pressed into a veil of noodles, and then cut into small squares for rolling inside lettuce leaves with slices of grilled meat.

Wheat and egg noodles reveal Chinese influence. Known as *mi* in Vietnamese, the golden, toothsome noodles typically marry with heartier flavors. *Mi vit* features a rich broth and duck flavored with five-spice powder and orange peel. When deep-fried, egg noodles become a crunchy, fluffy pillow that serves as the base for a variety of stir-fried dishes such as sweet and sour shrimp or mushrooms with yellow chives.

Mien noodles, made from the starch of mung beans, turn transparent once boiled. Also known as cellophane or glass noodles, the chewy noodles hold up well to stir-frying and braising. They star in *mien ga*, a popular, comforting soup with a clear broth and shredded chicken. Chopped finely, mung bean noodles also help bind the filling for fried spring rolls, steamed pork cakes, and other minced-meat preparations.

Fish and shellfish play an important role in Vietnam's cuisine. The country's long coastline, defined by the Gulf of Thailand, the South China Sea, and the Gulf of Tonkin, stretches 1,860 miles (3,440 kilometers). Further inland, Vietnam's navigable waterways total nearly 9,700 miles (18,000 kilometers), placing it eighth in the world, significant for a country of its small size. Vietnam's many rivers and lakes, along with its flooded rice paddies and irrigation canals, teem with freshwater life. Catfish, eel, and shrimp—along with frogs and snails—all figure heavily in the day-to-day meals of rural communities.

Mud crabs thrive among the roots of coastal mangrove trees. Meaty and sweet, they are cracked and coated with a sweet-sour tamarind glaze or dry-fried with butter and black pepper. A delicate crab and asparagus soup served at formal banquets reveals the influence of French cooks.

One of the most popular ways to serve shellfish of all kinds is simply steamed or grilled and then dipped in a mixture of fresh lime juice, salt, and coarsely ground black pepper. Bream, grouper, and trevally (giant kingfish) are highly sought, expensive fish reserved for special meals. Squid, octopus, clams, mussels, lobster, and other seafood are not widely available locally, as the majority of the catch is destined for fine restaurants, luxury hotels, or the export trade. Freshwater channel fish, perch, and carp appear more frequently in local markets.

Fish and shellfish are often dried for easy, inexpensive transport and storage. Shrimp, crab, and small fish such as anchovies and sardines are also preserved in salt and fermented to make *mam*, a pungent paste that adds depth of flavor to many traditional dishes. *Nuoc mam*, or fish sauce, is an amber-colored liquid that seasons nearly every Vietnamese dish. It is pressed from anchovies that have been salted and fermented. Fish sauce serves as a seasoning in the kitchen, a condiment at the table, and a base for numerous dipping sauces. Dried shrimp is another very common and versatile ingredient. It can be cooked whole with glutinous rice, shredded for garnishing steamed noodles, or ground into a fine powder to make a convenient base for quick stocks.

Vietnam's fishing industry, concentrated in the Mekong Delta, is still dominated by small boats, though many are mechanized. Fish-sauce makers are also based in the south, especially on and near Phu Quoc Island, where the same families have been pressing high-quality fish sauce in small batches and aging it in wooden casks for generations.

Vietnamese cooks prefer to purchase their meat and poultry live from wet markets. Pork is the predominant meat in Vietnam. More than 98 percent of households consume pork, and it comprises about 75 percent of the meat eaten in the country. *Thit kho nuoc dua*, or pork stewed with fresh coconut juice, and *nem nuong*, small meatballs grilled on

skewers and served over rice noodles, are two popular ways of enjoying pork. The French introduced charcuterie such as pâté and forcemeats. Adapting European techniques, Vietnamese cooks perfected *cha lua*, a smooth, pale bologna made with finely pureed pork and potato starch and then cooked inside banana leaves. Other specialties such as head-cheese and cured ham have also been incorporated into the Vietnamese kitchen.

Pork is among the most affordable of meats, as pigs can be raised on much less land than other animals and are much easier to feed. Furthermore, the country does not export pork and can thus maintain low domestic prices. As urban dwellers become more affluent, they tend to include more pork in their diets, and pork consumption remains concentrated near the large cities of the Red River and Mekong deltas. Most pigs are raised on small farms of only a few animals.

Poultry accounts for about 15 percent of meat consumption. Vietnamese cooks prefer *ga di bo* (literally, “walking chicken”), small, free-range chickens that have firm, dark, lean flesh. Younger chickens are cooked in *ga xa ot*, a highly flavored dish with lemongrass, chilies, and turmeric. Long-simmered *chao ga* combines creamy rice congee with the rich flavor of older, tougher hens.

The penchant for eating beef was introduced into Vietnam, as through much of Asia, by Mongolian horsemen. Dishes that now highlight beef were once predominantly made from the meat of water buffalo or oxen. These traditionally involved grinding, mincing, thin slicing, or long simmering to tenderize the meat of an old animal that had worked much of its life pulling a plow or cart. Hanoi is home to the country’s most famous dish, pho bo. The rice noodle soup, now enjoyed all over Vietnam, highlights the meat in many forms: rare slices, well-cooked brisket, chewy meatballs, crunchy tripe, and rich tendon. Oxtail and beef shank enrich the soup’s broth, while ginger and onion scorched over an open flame deepen its color and flavor.

Bo bay mon is the name of a festive meal involving seven courses of beef. Certain restaurants specialize in this traditional feast. The most famous dishes of the meal include thin slices of beef rolled

Pho, Vietnamese soup at a restaurant in Ho Chi Minh City. (Shutterstock)

with peppery *la lot* leaves and grilled, slices of beef cooked at the table in lemongrass-infused vinegar, and a soothing rice soup made from the bones that closes the meal. *Bo kho*, chunks of beef stewed with carrots, potatoes, lemongrass, and star anise, can be served with rice or with thick slices of crusty French bread. In the highlands, strips of sun-dried beef complement green papaya salad for a simple lunch.

Chuot dong, sweet-fleshed field mice that live in rice fields and feed only on the ripened grain, are eaten by nostalgic older diners who remember the more difficult war years; they have also, increasingly, become popular among young, urban food adventurers who travel to the countryside. Historically, dog meat has been a delicacy in Vietnam. Increasing exposure to Western culture, however, has imported an awareness of discomfort in serving it.

Rau song, literally, “live greens,” refers to the abundance of raw vegetables that are served at the Vietnamese table. Wrapping food in lettuce or young mustard leaves is a common way of eating. Crisp *goi* salads often start formal banquets or are served as a side salad with rice soups. These salads feature crisp, finely shredded vegetables, from everyday carrots, celery, or cabbage to special ingredients such as the segmented stems of lotus plants (*bap chuo*) or shredded strips of banana blossoms (*sen*).

Cooked greens accompany meats and fish. *Rau muong*, known as water spinach, has long, hollow stems and dark green, arrowhead-shaped leaves that

Goi Ga, a traditional Vietnamese chicken salad. (Shutterstock)

are similar in flavor to spinach. It grows at the edge of rivers and canals and is an especially important vegetable in northern Vietnam. Watercress, Chinese chives, chrysanthemum greens, and a wide array of cabbages are other leafy vegetables often served at the Vietnamese table. Chayote (*su hao*), bitter melon (*kho qua*), angle squash, long beans, taro stems, and bottle gourds are green vegetables that appear in soups and quick stir-fries.

Canh Chua Ca Loc (Sour Broth)

This colorful soup depends on tamarind's fruity tartness. *Canh chua*, literally, "sour broth," is traditionally served alongside other dishes as a palate cleanser. Ladled over rice, it becomes a comforting, filling meal. Catfish is the most common protein added, but shrimp, eel, and fried tofu are all common substitutes.

Serves 6

- 1 lb fish fillets, cut into 2-in. pieces
- 2 tbsp fish sauce
- ½ tsp ground black pepper
- 4 c fish or chicken stock
- ¼ c tamarind pulp, softened in 1 c boiling water and strained
- 6 thin slices ginger
- 1 red or green chili pepper, sliced thinly
- 1 tbsp canola oil
- 1 shallot, thinly sliced
- 2 cloves garlic, thinly sliced
- 2 tomatoes, seeded and cut into wedges
- 2 c chopped fresh pineapple
- 1 c mung bean sprouts
- ¼ c fresh cilantro leaves
- 2 scallions, sliced thinly

Combine the fish, fish sauce, and black pepper in a bowl, rubbing to coat the fish evenly; set aside. In a large pot, stir together the stock, tamarind, ginger, and chili pepper. Bring to a boil, then reduce heat and simmer, partially covered, for 15 minutes.

Heat oil in a large skillet over medium-high heat. Add shallots, and cook, stirring, for 30 seconds. Add garlic and cook 1 minute. Add the marinated catfish and sear 3 minutes on each side. Transfer the fish to the soup along with the flavorful oil. Add the tomato, pineapple, and bean sprouts. Increase heat to bring the soup to a boil, then reduce heat and simmer until the fish is opaque at the center, 3 to 5 minutes. Sprinkle with the cilantro and scallions; serve immediately.

Goi Ga

This savory salad is a classic example of the fresh vegetables and herbs that frequently appear on the Vietnamese table. It may be offered as a first course in a banquet or as an accompaniment to a bowl of rice congee.

- 1 ½ c cooked chicken, torn into bite-sized shreds
- ½ small head cabbage, cut into thin ribbons

- 1 carrot, coarsely grated
- ¼ small onion, cut into paper-thin slices
- ¼ c chopped mint leaves
- ¼ c chopped *rau ram* leaves
- 3 tbsp fish sauce
- 3 tbsp fresh lime juice
- 1½–2 tbsp sugar
- 1 red chili pepper, thinly sliced (optional)
- Freshly ground black pepper
- 2 tbsp cilantro leaves
- 2 tbsp chopped, toasted peanuts

In a large bowl, combine the chicken, cabbage, carrot, onion, mint, and *rau ram*. In a small bowl, stir together the fish sauce, lime juice, sugar, chili, and black pepper until the sugar is completely dissolved. Drizzle the dressing over the salad, and toss to mix evenly. Set aside to let flavors meld for 15 to 30 minutes. Just before serving, toss again, transfer to a serving platter, and garnish with cilantro and peanuts.

In Vietnam, green tea was traditionally the drink of choice. A large pitcher filled with weakly brewed tea, cooled with a solid block of ice, and placed on a table in the main room of the home will provide refreshment for a family throughout the hot, dusty day. Restaurants immediately offer glasses of tea to each table to welcome diners. Tea infused with jasmine is a favorite served both hot and iced, while for special occasions, tea flavored with lotus blossoms may be poured for guests.

French colonists first planted coffee on the mist-covered slopes of Vietnam's central highlands. Since then, both arabica and robusta coffee plants have flourished, and *café sua da*, or iced milk coffee, has become an iconic, much-loved beverage. Preparing the coffee is as much a ritual as drinking it: A metal filter fits over each individual cup, and an intensely dark, thick, strong brew drips slowly through it. A spoonful or two of sweetened condensed milk, a tall glass of chipped ice, and a long spoon all aid in transforming the coffee into a sweet, cooling drink.

The country's hot weather prompts many sidewalk vendors to sell local fruit drinks. *Nuoc mia* is

the faintly sweet juice pressed from fresh sugarcane. Limeade and orangeade sweetened with sugar and frequently dressed up with fizzy soda water are refreshing drinks offered at nearly every eatery. The country's abundant coconut trees provide a steady source of *nuoc dua*, the clear and refreshing water of young coconuts. *Chanh muoi*, a limeade flavored with salted plums, replaces valuable minerals sweated out of the body on particularly sultry days. Sodas are becoming increasingly popular among younger generations. European and Australian wines, domestic and imported beers, and special, fruit-based cocktails fill the menus of popular clubs and bars.

Many families still make their own rice wine from cooked glutinous rice. Formed into balls, sprinkled with brewer's yeast, packed into ceramic crocks, and immersed in water, the rice ferments within days to create *ruou nep*, which may have 10 to 20 percent alcohol by volume. In the highland regions, the fermented rice wine is infused with herbs and spices for serving from communal jugs at weddings, festivals, and other special occasions.

Diet and Health

Chinese medicine, called *thuoc bac*, has long been practiced alongside traditional Vietnamese folk remedies, called *thuoc nam*. Tue Tinh, considered the founder of traditional Vietnamese medicine, was a scholar and Buddhist monk of the 14th century. He wrote several books that listed hundreds of medical herbs and thousands of recipes for herbal remedies. Today, common home-based cures for colds and pains include massaging with aromatic oils, inhaling steam imbued with healing herbs, and sipping bitter teas and rich broths.

From the 1940s through the 1980s, the country endured severe shortages of food. A drop in livestock numbers after the Vietnam War, combined with devastating floods in 1978 that destroyed 20 percent of the remaining cattle herds, led to a significant decrease in meat consumption. After the United States lifted its economic embargo against the Communist government in 1994, food from around the world began entering the country. Income levels

have doubled every few years since 1990, and after decades of severe food shortages, Vietnam has resumed food exports.

While increasing prosperity has improved the diet of the average Vietnamese, the nutritional status of both children and adults remains poor. The country continues to have one of the highest malnutrition rates in Asia, with 22 percent of children under age five considered low in weight for their age and 33 percent of children under age five considered low in height for their age. For adults, the average consumption is 1,850 calories, or one-fifth less than the accepted minimum daily standard of 2,300 calories.

Antarctica

Overview

Antarctica is a large continent of ice, over five million square miles in area (nearly 14 million square kilometers). It has no native population and no agriculture. While there are potential native foods on the continent—penguins and seals, for example—their hunting is restricted, and they were significant as food products only during early exploration of the continent. Still, Antarctica is a fascinating case in food culture. About 4,000 scientists and support staff live and work for months at a time on the continent (with a much smaller population over the winter). A somewhat newer tourism industry brings tens of thousands of visitors to the continent each year.

Antarctica is the highest, driest, windiest, and most remote continent. Its international contingent of researchers and staff operates out of research stations run by Great Britain, Norway, Russia, Japan, Argentina, Chile, France, Germany, Australia, New Zealand, and the United States of America.

Many explorers, beginning with Ferdinand Magellan in 1519, reported seeing a *Terra Australis* (southern land). Magellan's sighting, south of his eponymous strait, was actually *Tierra del Fuego*, South America, now divided between Chile and Argentina. Subsequent exploration, most famously by the British Captain James Cook from 1773 to 1775, revealed a number of Antarctica's outlying islands, called the Subantarctic Islands. Inspired by these early explorers, European nations dispatched numerous expeditions to discover and claim this most southerly land. The first explorer credited with seeing the continent of Antarctica proper (as opposed

to outlying islands) is the Russian explorer Fabian Gottlieb von Bellingshausen in 1820.

The heyday of Antarctic exploration occurred in the decades preceding and following the “race to the [South] Pole,” begun in 1902 with the attempt by Robert F. Scott, Edward Wilson, and Ernest Shackleton. The race was won (to England's dismay) by Norwegian Roald Amundsen and his team in 1911, beating another attempt by the British team of Robert F. Scott, Edward Wilson, Edgar Evans, and Lawrence Oates by about one month. These and other early explorers hunted seals for fur, perhaps the only industry besides exploration on the continent. Many nations dispatched expedition teams to survey and claim portions of the continent.

By 1959, the age of exploration of Antarctica gave way to the age of scientific discovery with the signing of the Antarctic Treaty. The treaty, effective as of 1961, designated the continent for peaceful purposes, banned mining, and later limited the use of sled dogs and the killing of local wildlife.

Major Foodstuffs

“Food assumes a role of abnormal importance in a place so deficient of so many of life's pleasures” (Wheeler 1996, 86). Since the earliest days of Antarctic exploration, food has meant survival, solace, a heavy, impractical burden, a waste of time and fuel, a tangible reminder of the good life “off the ice,” and much more for the men (and more recently women) who have sought to know this inhospitable land.

Provisioning a continent with no agriculture and few native foods and cooking that food in subfreezing temperatures without vegetation that can be

used for fuel are challenges going back to the earliest days of exploration. Even fresh water—abundant in millions of cubic miles of ice—was a challenge to make usable, requiring a great deal of time, effort, and fuel to melt.

Food in the early days of Antarctic exploration was largely utilitarian. Given the energy required to live and function in this harsh environment (early explorers rationed about 4,700 calories per person per day, about double the U.S. Department of Agriculture’s recommended allowance for adults), and the importance of the expedition at hand, it is little wonder that early expeditioners would not have wanted to spend even more energy to make food pleasurable (Swithinbank 1997). Even today, Antarctic cooks take a certain pride in making do with what’s available rather than fussing over perfect ingredients as one might do off the ice.

Pride in cooking with efficiency of fuel and time, in opposition to the waste and delicacy of the homeland, is a sentiment that can be found among the earliest Antarctic literature, such as this journal entry of Edward Wilson (1872–1912), dating to the Discovery expedition of 1901–1904: “I confess I do fancy myself as a sledge cook, which doesn’t mean that I can make a good omelette, but I can manage a primus lamp and melt the snow and boil up the tea, cocoa or pemmican, and fry the bacon with little wasted time” (Savours 1966/1904, 181).

Pemmican, a food mentioned in the preceding quotation, was a staple of early Antarctica and is a good example of a food that maximizes efficiency. It is a preparation adapted from a Native American food that combines pounded dried meat with animal fat and berries into a dense cake or bars. For Douglas Mawson (Australian Antarctic explorer and geologist, 1882–1958) and other early Antarctic explorers, pemmican was ideal as it was a highly concentrated source of calories and could fulfill their goal of “reduc[ing] as far as possible the weight of food taken upon any journey . . . [such that] only highly concentrated foods are admissible” (Mawson 1998/1911, 116).

Mawson’s need for efficiency on the trail was almost consuming as he recounts in his journal on Christmas Eve, 1912: “A violent blizzard, could

not travel. . . . I cannot sleep, and keep thinking of all manner of things—how to improve the cooker, etc.—to while away the time. The end is always food, how to save oil, and as experiment I am going to make dog pem[mican] & put the cocoa in it” (Jacka and Jacka 1988, 165).

More efficient than pemmican for early explorers was to live off the land, which in Antarctica meant killing and eating seals, penguins, skua (another seabird), and, in times of desperation, their own sled dogs. The blubber of seals was also the primary source of cooking fuel, and the meat of all these animals was used to feed dogs as well. Mawson wrote in 1908, “We must live on seal flesh and local food cooked by local means as much as possible” (Jacka and Jacka 1988, 16).

Early into the Antarctic exploration, seal had made its place as an integral part of the explorers’ diet. An entry from Edward Wilson’s Discovery diary reads: “Seal meat for breakfast, jam and bread and butter and tea at 1 o’clock and seal meat for dinner at 6. . . . We eat the whole seal, heart, liver and kidneys. The liver is as good as any I have ever eaten, the kidneys are tougher in texture than sheep’s even when well cooked and quite fresh. The flesh is dark indeed, but makes very excellent dishes. . . . Appetites simply immense and *how* we enjoy our food, *and* our sleeping bags, though the joy of breakfast always makes up for the necessity of turning out in the morning” (Savours 1966/1904, 218, emphasis in original).

Later, Wilson remarked, “Our food here is always either seal liver, or Adelie penguin, or skua cut up and fried in butter—simply excellent” (Savours 1966/1904, 335). Local meat became so integral to the Antarctic diet that as late as the 1950s, when the Antarctic Treaty was signed to protect the local wildlife, the United States airdropped beef tenderloins to camping expeditioners. Although the expeditioners had ample food, including non-Antarctic meat, the government considered seal and penguin a sufficiently important part of the diet to bring fresh meat at any expense (Bechervaise 1964).

Despite this recent trend toward luxury amid hardship, today’s chefs emphasize the extra steps it takes to be successful on the continent:

All our produce is brought in once a year at the main re-supply so we make do with that. One thing I will say is you adapt to using aged produce. I have to make my own self-rising flour, my eggs are nearly twelve months old so need to be floated first to weed out the rotten ones (they float). The first thing that comes to mind is the age of produce and other products that are used here that you would never use under most other circumstances. For example eggs that are twelve months old (dipped in oil to help with preservation), carrots (10 months old), potatoes (10 months old). They tend to look very ratty after a while but as you're not likely to get anymore you make do and are forced to make the most of it. It's not unusual for me to rummage through a box of apples on the off chance I'll find 10–15 good ones." (Chef Michael Lunny, Casey Antarctic Station [Australian], in an interview with the author)

While floating eggs may seem a world away from Mawson's experiments with dog and cocoa pemmican, the sentiment is similar. Antarctica is a harsh place calling for a can-do attitude with little patience for the niceties of home. At the same time, while efficiency may be a noble goal for an Antarctic expedition, living on a continent with no indigenous foodways, vegetation, or even sunlight for much of the year reminds even the most diehard expeditioner that she or he is human and has food needs far beyond adequate nutrition. Even Mawson, who passionately touted the efficiency of "highly concentrated foods" for sledging, had a soft spot for an occasional treat: "Speaking generally, while living for months in an Antarctic hut, it is a splendid thing to have more than the mere necessities of life. Luxuries are good in moderation, and mainly for their psychological effect. With due regard for variety during the monotonous winter months, there is a corresponding rise in the 'tide of life' and the ennui of the same task, in the same place, in the same *wind*, is not so noticeable" (Mawson 1998/1911, 115–16, emphasis in original).

This theme of nostalgia is poignantly shown in the diary of Wilson, who earlier preaches the wonders of seal in the rigorous Antarctic diet but cannot

let it corrupt his English Sunday dinner. In July, he writes, "Sunday dinner all through this winter has been celebrated by fresh roast mutton off the sheep given us in New Zealand. They have been frozen in the rigging since December [approximately seven months], but are excellent with mint sauce and beer" (Savours 1966/1904, 161). It is not until the first of September that Wilson acknowledges that his nostalgia may have had the upper hand in their menu, when he writes, "We have finished all our mutton, having had it every Sunday all through the winter. As it was tainted, I think it's a good thing there was no more" (Savours 1996/1904, 287).

Even in contemporary Antarctica with its modern kitchens; the ability to ship, store, and cook a year's supply of fresh, canned, and frozen foods; and relative comfort, there is a need to reinforce the idea of home. When asked if he perceived a nostalgic sentiment for food back home, Chef Michael Lunney replied, "Every minute of every day. This becomes more of a topic of conversation as the year draws on." The lack of fresh produce is especially felt at certain times of year, with expeditioners saying things like, "It's strawberry season back home." While hydroponics on the continent have helped to curb some of the cravings for fresh produce, production is low as authorities are wary of introducing new microbes into the Antarctic ecosystem.

Still, the governments are cognizant of the need to provide a semblance of normalcy in Antarctic life and attempt to achieve this by making luxury items such as wine, quail, and good cheese available to chefs, installing espresso machines, and encouraging chefs to keep flexible menus to respond to special requests for traditional dishes.

Cooking

On the barren and remote continent of Antarctica, there has long been pride in cooking with efficiency, juxtaposed against another theme of nostalgia for home and for the early days of Antarctic exploration. The methods themselves are similar to those done in a typical kitchen environment—baking, roasting, sautéing, braising, simmering. Due to the extreme environment, outdoor cooking is rarely done unless

camping out. Even then the food is usually prepared under some shelter as it is nearly impossible to cook in the subfreezing wind.

For early explorers, gastronomic pursuits at the campsite—specifically, adapting cooking methods to the Antarctic environment—were detailed alongside the scientific pursuits of the day. Mawson writes, “I have tried yeast bread but find there is not sufficient constancy or warmth in the Hut temperature for proving” and “Correll is now turning out fine scones” (Jacka and Jacka 1988, 85, 90). Wheeler (1996, 87) recalls that “in the early days culinary ingenuity occupied a good deal of the time. One man assured himself lifelong popularity by producing minty peas, revealing later that he had squirted toothpaste into the pot.”

Cooking with a minimum expenditure of fuel has long been valued on the continent. Even after Antarctica was settled with buildings and working kitchens and the local wildlife was protected, there was evidence of a certain pride in being as efficient as possible. Charles Swithinbank, writing of his expeditions in the 1960s, recounts an innovation that reinforces the dichotomy between the efficient and the nostalgic:

Copper-bottomed stainless steel saucepans replaced the traditional aluminum pans, and hard plastic mugs and bowls replaced enamel plates and cups. Though visitors to the tent never knew it, the result was that we went through the whole season without ever washing dishes. The high fat content of our diet and the absence of burnt food sticking to the pans meant that we could clean everything by wiping it with toilet paper. Water on the trail is expensive. Every drop has to be melted from cold snow. Wiping saved fuel. However there is residual ethic in the sledging fraternity that favors primitive and inconvenient cooking utensils. Thus our eminently successful improvements never caught on outside our little group. Burned aluminum, cracked enamel mugs, crumbling pot scourers, and dirty dishwater are evidently the order of the day for macho explorers. (1997, 72)

With a span of over 50 years of Antarctic exploration, Swithinbank straddled the end of the

discovery era and the beginning of the scientific era. His unheralded dedication to efficiency was felt not only in the preceding quotation but also when he returned to Antarctica in his late sixties to follow up on some research. To his surprise, a two-pound bag of brown sugar was airdropped over their camp at the request of a research assistant who didn’t like white sugar on his morning oatmeal. What would early intrepid explorers have thought of that?

Typical Meals

By 1912, Mawson’s diary reveals a balance between living off the land and living off the rations. An early menu found in his diary shows the rotating entrée from the dinner menu: “Monday—Penguin, Tuesday—Seal, Wednesday—Canned Meats, Thursday—Penguin, Friday—Seal, Saturday—Variable, Sunday—Mutton” (Jacka and Jacka 1988, 59, 63). Wilson’s crew incorporated the local fauna into traditional British dishes including seal steak and kidney pie.

In the 1970s the first Indian Antarctic expedition was planned. While the meat-centered European diet adapted relatively easily to the Antarctic climate, the challenge of cooking dried pulses at negative 40 degrees Fahrenheit is greater. Consequently, a line of Indian rations was developed: preserved chapatis, dehydrated pilaf, and dehydrated dal (Subramanian and Sharma 1982–1984).

Because Antarctic research stations are tied to a national government entity, the daily meals are typically reflective of the host nation’s dining habits. There is typically a commissary or cafeteria in each research station staffed by government or military employees or, increasingly, by government contractors. Because there are no options for meals outside of the station (there are no real restaurants beyond a burger bar at McMurdo station), great attention is given to providing variety, nutritional balance, and food that feels like home. Increasingly, there is more effort to prepare food reflective of the diversity of the researchers themselves. In general, most researchers report that Antarctic food is quality institutional food, perhaps equivalent to food in a good college cafeteria. Monotonous and institutional, to be sure, but not as bad as is often expected.

Nearly every food item needs to be brought from home, often at an annual resupply (some limited fresh produce is grown indoors). Consequently, elaborate planning as well as culinary ingenuity is needed to maintain quality. Running out of an ingredient is no problem at home—you can run to a store or call a vendor to replace it. Not so on a continent of ice!

Eating Out

Eating out is largely a moot question on Antarctica. While McMurdo station boasts a burger bar in addition to the cafeteria, most of the continent's dining is restricted to the institutional cafeterias at research stations or aboard the tourist cruise ships.

Special Occasions

Feelings of nostalgia, contrasted with a lack of practical resources, spur a unique improvisation that would hardly be appropriate anywhere else in the world. Sara Wheeler tells about a visit to Scott Base, a New Zealand Antarctic base: “They put on an Italian night and even produced ciabatta [bread]. An Andres Segovia tape was unearthed; they admitted he was Spanish, but Antarctica taught you to improvise. . . . In the evening we drank the wine the winterers [those relative few who stay over the Antarctic winter] had made from raisins and sultanas. It tasted of cooking sherry, but they had decanted it into Chateau Lafite bottles” (1996, 215). An earlier example dates to 1957, when John Behrendt tells of an improvised cocktail party where “Clint and Mac mixed up some martinis using ethanol (190 proof) for gin and Chilean white wine for vermouth. . . . They must [have been] quite sick of beer” (1957, 138).

Such improvisation is no recent phenomenon. On Christmas Day in 1902, Edward Wilson recounts the menu, which concludes: “Then a very small plum pudding, the size of a cricket ball, with biscuit, and the remains of the blackberry jam and two pannikins [small cups] of cocoa with plasmon [dried milk]. We meant to have had some brandy alight on the plum pudding, but all our brandy has turned

black in its tin for some reason, so we left it alone” (Savours 1966/1904, 228).

While a plum pudding sans plum seems a strange improvisation in 1902, Wilson's compatriot on this side of the century, Sara Wheeler, has made numerous “Bread and Butter Puddings (Antarctic Version)” on the ice, whether or not there was actually any butter, milk, eggs, or sugar available. For special occasions in Antarctica it is very much the thought that counts (Wheeler 1996, 301). Because there is no native population on Antarctica, every holiday is necessarily a time of homesickness and nostalgia. Cooks make efforts to reproduce the foods and feelings of home.

Diet and Health

Because of the extreme Antarctic climate, early rations were more than double the recommended daily dietary intake: about 4,700 calories (Swithinbank 1997). Now that many researchers spend the majority of their time indoors, efforts are made to provide lower-calorie, healthy meals as well as ample opportunities for physical exercise, especially in the dark winter when it is nearly impossible to venture outdoors.

Early explorers suffered from scurvy and vitamin A toxicity (hypervitaminosis A) due to a diet based on seal and penguin (high in vitamin A, especially the liver) with few or no fruits or vegetables. This caused a loss of hair and teeth and skin lesions. Starvation and extreme hunger were constant concerns—and the unfortunate end—of many early Antarctic explorers.

While many tend to view gastronomic variety as a luxury, there seems to be evidence that in times of scarcity, thought of food can be psychologically debilitating if left untended. Mawson and his colleagues wrote extensive menus while subsisting on dog through an Antarctic trek. “Young duck with apple sauce, *petit pois*, new potatoes and American sweet corn,” are some of the 11 courses they devise for their return home to Sydney, Australia (Jacka and Jacka 1988, 39).

Similarly elaborate food dreams abound in the early Antarctic literature, characterized by an abundance

of food and a rude awakening when the dreamer discovers it is unattainable. Mawson dreamed of buying an elaborate cake in a confectioner's shop and accidentally leaving the store without the cake. When he returned, the shop had a sign in the door that read "early closing" (Jacka and Jacka 1988, 175–76).

Wilson writes of dreams with unnerving similarity to Mawson's:

Nearly every night we dream of eating and food. Very hungry always, our allowance being a bare one. Dreams as a rule of splendid food, ball suppers, sirloins of beef, cauldrons full of steaming vegetables. But one spends all one's time shouting at waiters who won't bring one a plate of anything, or else one finds the beef is only ashes when one gets it, or a pot full of honey has been poured out on a sawdusty floor. One very rarely gets a feed in one's sleep, though occasionally one does. For one night I dreamed that I eat the whole of a large cake in the hall at Westal without thinking and was horribly ashamed when I realized it had been put there for a drawing room tea, and everyone was asking where the cake was gone. These dreams are very vivid, I remember them now, though it is two months since I dreamed them. (Savours 1966/1904, 221)

Because of the diversity of the research station personnel and the international treaty managing the continent, all of the world's major religions are represented on the continent at one time or another. There are particular challenges for researchers who require a vegetarian, halal, or kosher diet, and extensive arrangements need to be made in advance since food deliveries to the stations are infrequent and other options for dining do not exist.

In considering the food of Antarctica, past and present, two themes emerge. The first is the idea that food is a necessary burden that needs to be handled deftly and efficiently in order to make for a

successful expedition, be it one of early exploration or present-day research. The second theme is that despite the inhospitable climate and geography of the continent, there is a need to occasionally eschew efficiency and practicality to feed the nostalgic, impractical impulses of the resident. These two themes synthesize to form a contemporary Antarctic food culture that is neither wanton nor ascetic and that prides itself on improvisation, making the most of that which is available. In the words of Sir Douglas Mawson, it is "a subject . . . which requires particular consideration and study" (1998/1911, 115).

Space

Overview

Food is an essential component in human space exploration. If it had not proved possible to eat and digest in space, none of the longer-term space missions since the 1960s would have been achievable. Space travel has such a significant impact on the body that good nutrition is critical. Bone density decreases; muscles waste; cardiovascular deconditioning occurs; red blood cells are lost. Space sickness affects more than half of all astronauts, regardless of experience; and exposure to high levels of radiation can increase susceptibility to other problems such as cataracts and cancer later in life. Space conditions—in particular, the shift of fluid to the head and a low intake of zinc—impact the senses of smell and taste, both of which are reduced, making stimulation of the appetite more difficult. At the same time, the cramped, stuffy, smelly, and noisy conditions on board the spacecraft conspire to dampen the appetite further. Early on, the astronauts would return to Earth thinner and weaker—and with a large proportion of their allotted food uneaten.

Major Foodstuffs

Every aspect of eating in space must be planned months ahead of any meal being eaten. Minimal quantities of fresh food can be taken into space, so seasonality is not a consideration. Rather, an approved list of pre-prepared foods are tasted by the astronauts, their selections are made, and menus for the complete mission are constructed for each one of them. Nutritional balance is an important consideration in the design of each menu, as is the need

to ensure that favorite foods—including snacks like M&Ms—are included in sufficient quantities to keep morale boosted throughout the trip.

Exactly what the foods on the menu are depends largely on the space program. The Chinese *yuhang-yuan* don't eat with chopsticks, but they do eat a recognizable Chinese cuisine with rice, meats, and vegetables in classic sauces of bean, chili and Sichuan pepper (kung pao chicken), or garlic, and fruit dishes; the Soviet Union's space program supplied Russian favorites like borscht (beet soup), pickled herring, and porridge; and the United States' food teams made sure they developed classic meat and vegetable dishes like chicken à la king and mashed potatoes, as well as hamburgers, hot dogs, and Thanksgiving dinners. The impact of space conditions seems to make most travelers crave strong flavors, so sauces are popular with every visitor—fresh onions and garlic for the Russians and chili sauce for the Americans.

Cooking

Astronauts open cans and packets and rehydrate and reheat fully pre-prepared meals. Storage problems and lack of refrigeration mean that there is little or no fresh food except at the very beginning of a mission or immediately after a resupply visit, but even if ingredients were available, there is no kitchen and no equipment to process it with. Every space capsule is a closed environment, so the production of fumes, steam, or, worst of all, smoke, is best avoided. Historically, there was barely enough room to move, and even now interior space is limited

to a fairly tight 1,438 cubic yards (1,100 cubic meters) for six astronauts in the International Space Station. Making room for kitchen equipment would be an expensive undertaking, and it has never been a priority. The astronauts have a demanding work schedule, often cited as another important reason for freeing them from kitchen drudgery and providing ready-to-go convenience foods.

Everything that is consumed in space is prepared in advance—several months in advance—having been tested and tasted by the astronauts, who choose their menus as part of the preflight planning. The food is packaged carefully to minimize its weight and bulk and to reduce spoilage in the extreme and fluctuating conditions of space. The packaging often doubles as the serving dish, and a number of foods can be eaten straight from the package without the need for any utensils other than the scissors to open the bag.

The cooking techniques used on the ground vary according to the type of food being prepared. Historically, pureed foods in aluminum tubes, originally developed in the 1940s and 1950s for air force pilots who had to use pressurized headgear, were the archetypal space food for both the United States and the Soviet Union. Almost anything could be put into these containers, both savory and sweet. In the early 1960s, U.S. scientists put a lot of effort into developing bite-sized compressed foods, which were tested on some of the early Mercury missions. These foods were small, dehydrated cubes (coated in gelatins, starches, or oils to stop them from disintegrating) that would rehydrate in the mouth as they were chewed. They came in a number of flavors—bacon, cheese and crackers, toast, peanut butter, fruitcake—but it was hard to tell them apart without looking at the label. The astronauts found them unpleasant in the mouth and to the taste, and some of the coatings caused stomach upset, so they were discontinued.

Given the concerns about the weight and bulk of everything that is launched into space, dehydration has remained an important technique for preserving and preparing food for space travel. A wide range of freeze-dried meat- and vegetable-based meals were developed during the 1960s, first for the Gemini and

then the Apollo missions. These foods were packed into plastic packages that would then have water injected into them before being massaged by hand to ensure even distribution of the water. The water used was a by-product of the fuel cells that operated the generators on board, but the Gemini capsule produced only cold water, which did little to increase the appeal of items like mashed potatoes. Apollo had warm water, which helped, although the need to knead the food probably did little for its texture and appearance. These types of foods continued to be developed and remain an important source of food on the Space Shuttle, and the range has increased to include fish dishes and breakfast foods as well as soups and casseroles and a variety of drinks provided in powdered form.

By the end of the 1960s there was another advance: thermostabilized wet meat products in plastic pouches or cans. These foods are heat-treated to destroy bacteria, in the same process as is used in normal canning. The Soviet Union used many canned foods on its missions from the earliest stages of the space race. It seems that the weight of the cans discouraged the United States from doing the same, so the development of the pouches was an important step forward in providing better and more familiar food for the astronauts. Thermostabilized foods are commonly warmed on board before being eaten with a spoon or fork. This type of packaging has become particularly used for fish, fruit, and puddings. More recently, irradiated food has been provided on the Space Shuttle. This technique helps to prolong the shelf life of smoked and fresh-cooked meats, fruit, and vegetables.

Bread has been variously provided in cans, pouches, and vacuum packs, all in an effort to reduce crumb production. Crumbs floating in a weightless cabin would, of course, be impossible to sweep up. The provision of tortillas instead of more traditional breads has helped overcome the crumb issue. The tortillas are preserved for up to 12 months by being packaged in a nitrogen atmosphere with an oxygen scavenger packet to ensure no mold can grow.

Everything prepared for space flight is given a technical name. “Intermediate-moisture” foods have long been a staple of the space larder and would

simply be described as dried fruit or jerky by a non-astronaut. “Natural-form” foods like M&Ms, nuts, or granola bars would, equally, simply be called by their own name anywhere but in space. The preparation required on the ground is limited to putting them into appropriate secure and portion-controlled packaging. Condiments like ketchup and chili sauce are provided in individual pouches, requiring no special preparation before launch; but pepper and salt must be liquefied (pepper in oil and salt in water) and put into dropper bottles.

Typical Meals

The meals devised for space fit into to a typical Western pattern of three meals (breakfast, lunch, and dinner) with snacks. However, it is not clear that every mission conforms to this pattern in the timing of its meals. The workload is extensive, and the impact of being in space can reduce the appetite. Many meals are eaten on the move, alone, and without really taking a break.

Gemini Mashed Potatoes

Most of the processing of space food demands industrial techniques that are impossible to replicate domestically. The keen experimenter is limited to using common foods available in the local supermarket and attempting to replicate the space experience by improvising appropriate packaging.

1 package dehydrated mashed potatoes

1 ziplock bag with label

1 syringe

Cold water (quantity according to instructions on original package)

Carefully tip the dehydrated potatoes into the ziplock bag. Seal the bag. Measure the water into the syringe. Inject water into the bag, as close to the seal as possible. Gently massage the bag until the water is evenly distributed and the potato is hydrated. Open one corner of the package and eat with a teaspoon.

For Apollo mashed potatoes, follow the same procedure, but rehydrate with warm water instead of cold.

Eating Out

Every meal in space is a meal eaten in—although every meal in some sense lies far beyond the ordinary. Astronaut Michael Collins apparently devised his own Michelin-style grading system for space food, awarding helmets rather than stars for the items he most enjoyed, although it is not clear that any of the items on the menu would have been award winning back on Earth.

The best way to get a space meal that might come close to eating in a restaurant seems to be to invite a French *spationaut* to join one. From their earliest collaboration with the Russian program to the present day, French chefs have devised delicious meals for spationauts to share with their colleagues on special occasions. Richard Filippi, a chef and cookery school teacher, worked on the first of these dishes in the mid- to late 1990s, developing magnificent delicacies for Mir. In 1996 Claudie Haigneré treated her fellow cosmonauts to beef daube, confit of duck with capers, pigeons in wine, and a rich tomato sauce, all washed down with wine from the Alsace. Filippi’s other dishes were sent to Mir with French spationauts throughout the 1990s: squid in lobster sauce, toffee rice pudding, and, most spectacular, whole quail cooked in wine sauce, then deboned, sliced, and reassembled (including its wings) into a 3.5-ounce can.

More recently, space tourism has given a boost to the idea of restaurant-quality food in space, with chefs like Emeril Lagasse and television cooks like Martha Stewart and Rachel Ray contributing ideas and recipes to the development teams. Bringing a feast to share with the crew has become a component of the experience for the visitor.

Looking further to the future, Michelin-starred chef Alain Ducasse has turned his attention to fine dining for a possible mission to Mars, devising exquisite vegetarian recipes from the foods that could be grown on board or at a base on Mars: Martian

bread with green tomato jam, spirulina gnocchi, tomato and potato mille-feuille. He's even said he would open a restaurant there, so perhaps there is hope for a future of eating very far out indeed.

Special Occasions

Creating an environment that can feel as much like home as possible is a tremendously important consideration for the crews, which means that providing familiar foods is the priority in food provisioning. Of course, occasional treats are part of fostering team spirit and boosting morale. The Soviet Union used to send caviar to the cosmonauts for New Year and birthday celebrations, and the United States developed Thanksgiving and Christmas meals for its astronauts in the Apollo program. Individual teams on long-term missions in space have developed their own traditional treat foods, like Shannon Lucid's Sunday night Jell-O parties with her colleagues on Mir in the mid-1990s.

Diet and Health

Health is a primary concern on all space missions, and every facet of the astronaut's physiology and metabolism is scrupulously monitored, especially given the unique circumstances of weightlessness and the tendency to lose muscle mass and experience other forms of fatigue. The dietary composition of space food is likewise carefully analyzed by nutritionists and naturally changes with the development of nutritional science over the decades since humans were first sent into space.

About the Editor and Contributors

Ken Albala, Editor, is professor of history at the University of the Pacific in Stockton, California. He also teaches in the gastronomy program at Boston University. Albala is the author of many books, including *Eating Right in the Renaissance* (University of California Press, 2002), *Food in Early Modern Europe* (Greenwood Press, 2003), *Cooking in Europe 1250–1650* (Greenwood Press, 2005), *The Banquet: Dining in the Great Courts of Late Renaissance Europe* (University of Illinois Press, 2007), *Beans: A History* (Berg Publishers, 2007; winner of the 2008 International Association of Culinary Professionals Jane Grigson Award), and *Pancake* (Reaktion Press, 2008). He has co-edited two works, *The Business of Food* and *Human Cuisine*. He is also editor of three food series with 29 volumes in print, including the Food Cultures Around the World series for Greenwood Press. Albala is also co-editor of the journal *Food Culture and Society*. He is currently researching a history of theological controversies surrounding fasting in the Reformation Era and is editing two collected volumes of essays, one on the Renaissance and the other entitled *The Lord's Supper*. He has also coauthored a cookbook for Penguin/Perigee entitled *The Lost Art of Real Cooking*, which was released in July 2010.

Julia Abramson has visited France on a regular basis for more than 25 years to study, research, travel, and eat. She has published essays on aspects of food culture from vegetable carving to gastronomic writing and is the author of the book *Food Culture in France*. Abramson teaches French literature and culture and food studies at the University of Oklahoma, Norman.

M. Shahrin Al-Karim is a senior lecturer of food service and hospitality management at the Universiti Putra Malaysia. His research interests include food and culture, culinary tourism, food habits, and consumer behavior. He received a BS in hotel and restaurant management from New York University; an MBA from Universiti Teknologi MARA, Malaysia; and a PhD in hospitality and tourism from Oklahoma State University, United States.

E.N. Anderson is professor emeritus of the Department of Anthropology, University of California, Riverside.

Laura P. Appell-Warren holds a doctorate in psychological anthropology from Harvard University. Her primary focus of research has been the study of

personhood; however, she has also studied the effects of social change on children's play. She has done research among the Bulusu' of East Kalimantan, Indonesia, and among the Rungus Momogon, a Dusunic-speaking peoples, of Sabah, Malaysia. In addition, she has traveled widely throughout Arctic Canada. She is the editor of *The Iban Diaries of Monica Freeman 1949–1951: Including Ethnographic Drawings, Sketches, Paintings, Photographs and Letters* and is author of the forthcoming volume entitled *Personhood: An Examination of the History and Use of an Anthropological Concept*. In addition to her current research on cradleboard use among Native North Americans, she is a teacher of anthropology at St. Mark's School in Southborough, Massachusetts.

Heather Arndt-Anderson is a Portland, Oregon, native who draws culinary inspiration from many world cuisines but prefers cooking from her own backyard. She is a part-time natural resources consultant and a full-time radical homemaker; in her (rare) spare time she writes the food blog *Voodoo & Sauce*.

Michael Ashkenazi is a scholar, writer, and consultant who has been researching and writing about Japanese food since 1990. In addition to books and articles on Japanese society, including its food culture, he has written numerous scholarly and professional articles and papers on various subjects including theoretical and methodological issues in anthropology, organized violence, space exploration, migration, religion and ritual, resettling ex-combatants, and small arms. He has taught at higher-education institutions in Japan, Canada, Israel, and the United Kingdom, directing graduate and undergraduate students. He is currently senior researcher and project leader at the Bonn International Center for Conversion in Germany, with responsibility for the areas of small arms and reintegration of ex-combatants. He has conducted field research in East and Southeast Asia, East and West Africa, the Middle East, and Latin America.

Babette Audant went to Prague after college, where she quickly gave up teaching English in order to cook at a classical French restaurant. After graduating from the Culinary Institute of America, she worked as a chef in New York City for eight years, working at Rainbow Room, Beacon Bar & Grill, and other top-rated restaurants. She is a lecturer at City University of New York Kingsborough's Department of Tourism and Hospitality, and a doctoral candidate in geography at the City University of New York Graduate Center. Her research focuses on public markets and food policy in New York City.

Gabriela Villagran Backman, MA (English and Hispanic literature), was born in Sweden and raised in Mexico and the United States; she currently lives in Stockholm, Sweden. She is an independent researcher, interested in food studies, cultural heritage, writing cookbooks, red wine, and the Internet.

Carolyn Bánfalvi is a writer based in Budapest. She is the author of *Food Wine Budapest* (Little Bookroom) and *The Food and Wine Lover's Guide to Hungary: With Budapest Restaurants and Trips to the Wine Country* (Park Kiado). She contributes to numerous international food and travel publications and leads food and wine tours through Taste Hungary, her culinary tour company.

Peter Barrett is a painter who writes a food blog and is also the Food & Drink writer for *Chronogram Magazine* in New York's Hudson Valley.

Cynthia D. Bertelsen is an independent culinary scholar, nutritionist, freelance food writer, and food columnist. She lived in Haiti for three years and worked on a food-consumption study for a farming-systems project in Jacmel, Haiti. She writes a food history blog, *Gherkins & Tomatoes*, found at <http://gherkinstomatoes.com>.

Megan K. Blake is a senior lecturer in geography at the University of Sheffield. She has published research that examines the intersections between place and social practices. While her previous work focused on entrepreneurship and innovation, her recent work has examined food practices and family life.

Janet Boileau is a culinary historian who holds a master of arts degree in gastronomy from Le Cordon Bleu Paris and a doctorate in history from the University of Adelaide.

Andrea Broomfield is associate professor of English at Johnson County Community College in Overland Park, Kansas, and author of *Food and Cooking in Victorian England: A History*.

Cynthia Clampitt is a culinary historian, world traveler, and award-winning author. In 2010, she was elected to the Society of Women Geographers.

Neil L. Coletta is assistant director of food, wine, and the arts and lecturer in the MLA in gastronomy program at Boston University. His current research includes food and aesthetics and experimental pedagogy in the field of food studies.

Paul Crask is a travel writer and the author of two travel guides: *Dominica* (2008) and *Grenada, Carriacou and Petite Martinique* (2009).

Christine Crawford-Oppenheimer is the information services librarian and archivist at the Culinary Institute of America. She grew up in Ras Tanura, Saudi Arabia.

Anita Verna Crofts is on the faculty at the University of Washington's Department of Communication, where she serves as an associate director of the master of communication in digital media program. In addition, she holds an appointment at the University of Washington's Department of Global Health, where she collaborates with partner institutions in Sudan, Namibia, and India on trainings that address leadership, management, and policy development, with her contributions targeted at the concept of storytelling as a leadership and evidence tool. Anita is an intrepid chowhound and publishes on gastroethnographic topics related to the intersection of food and identity. She hosts the blog *Sneeze!* at her Web site www.pepperforthebeast.com.

Liza Debevec is a research fellow at the Scientific Research Centre of the Slovene Academy of sciences and arts in Ljubljana, Slovenia. She has a PhD in social anthropology from the University of St. Andrews, United Kingdom. Her research

interests are West Africa and Burkina Faso, food studies, Islam, gender, identity, and practice of everyday life.

Jonathan Deutsch is associate professor of culinary arts at Kingsborough Community College, City University of New York, and Public Health, City University of New York Graduate Center. He is the author or editor of five books including, with Sarah Billingsley, *Culinary Improvisation* (Pearson, 2010) and, with Annie Hauck-Lawson, *Gastropolis: Food and New York City* (Columbia University Press, 2009).

Deborah Duchon is a nutritional anthropologist in Atlanta, Georgia.

Nathalie Dupree is the author of 10 cookbooks, many of which are about the American South, for which she has won two James Beard Awards. She has hosted over 300 television shows on the Public Broadcasting Service, The Food Network, and TLC. She lives with her husband, Jack Bass, who has authored 9 books about the American South and helped with her contribution to *Food Cultures of the World*.

Pamela Elder has worked in food public relations and online culinary education and is a freelance writer in the San Francisco Bay area.

Rachel Finn is a freelance writer whose work has appeared in various print and online publications. She is the founder and director of Roots Cuisine, a non-profit organization dedicated to promoting the foodways of the African diaspora around the globe.

Richard Foss has been a food writer and culinary historian since 1986, when he started as a restaurant critic for the *Los Angeles Reader*. His book on the history of rum is slated for publication in 2011, to be followed by a book on the history of beachside dining in Los Angeles. He is also a science fiction and fantasy author, an instructor in culinary history and Elizabethan theater at the University of California, Los Angeles, Extension, and is on the board of the Culinary Historians of Southern California.

Nancy G. Freeman is a food writer and art historian living in Berkeley, California, with a passion for food history. She has written about cuisines ranging from Ethiopia to the Philippines to the American South.

Ramin Ganeshram is a veteran journalist and professional chef trained at the Institute of Culinary Education in New York City, where she has also worked as a recreational chef instructor. Ganeshram also holds a master's degree in journalism from Columbia University. For eight years she worked as a feature writer/stringer for the *New York Times* regional sections, and she spent another eight years as a food columnist and feature writer for *Newsday*. She is the author of *Sweet Hands: Island Cooking from Trinidad and Tobago* (Hippocrene NY, 2006; 2nd expanded edition, 2010) and *Stir It Up* (Scholastic, 2011). In addition to contributing to a variety of food publications including *Saveur*, *Gourmet*, *Bon Appetit*, and *epicurious.com*, Ganeshram has written articles on food, culture, and travel for *Islands* (as contributing editor), *National Geographic Traveler*,

Forbes Traveler, *Forbes Four Seasons*, and many others. Currently, Ganeshram teaches food writing for New York University's School of Continuing Professional Studies.

Hanna Garth is a doctoral candidate in the Department of Anthropology at the University of California, Los Angeles. She is currently working on a dissertation on household food practices in Santiago de Cuba. Previously, she has conducted research on food culture, health, and nutrition in Cuba, Chile, and the Philippines.

Mary Gee is a medical sociology doctoral student at the University of California, San Francisco. Her current research interests include herbalism and Asian and Asian American foodways, especially with regards to multigenerational differences. Since 1995, she has actively worked with local and national eating disorders research and policy and advocacy organizations as well as for a program evaluation research consulting firm.

Che Ann Abdul Ghani holds a bachelor's degree in English and a master's degree in linguistics. She has a keen interest in studying language and language use in gastronomy. She is currently attached to the English Department at Universiti Putra Malaysia. Her research interests range from the use of language in context (pragmatics) to language use in multidisciplinary areas, namely, disciplines related to the social sciences. She also carries out work in translation and editing.

Maja Godina-Golija is research adviser at the Institute of Slovenian Ethnology, Scientific Research Centre of Slovenian Academy of Science and Arts, Ljubljana, Slovenia.

Annie Goldberg is a graduate student studying gastronomy at Boston University.

Darra Goldstein is Frances Christopher Oakley Third Century Professor of Russian at Williams College and the founding editor-in-chief of *Gastronomica: The Journal of Food and Culture*.

Keiko Goto, PhD, is associate professor at the Department of Nutrition and Food Sciences, California State University, Chico. Dr. Goto has more than 15 years of work experience in the field of nutrition and has worked as a practitioner and researcher in various developing countries. Dr. Goto's current research areas include food and culture, child and adolescent nutrition, sustainable food systems, and international nutrition.

Carla Guerrón Montero is a cultural and applied anthropologist trained in Latin America and the United States. She is currently associate professor of anthropology in the Department of Anthropology at the University of Delaware. Dr. Guerrón Montero's areas of expertise include gender, ethnicity, and identity; processes of globalization/nationalism, and particularly tourism; and social justice and human rights.

Mary Gunderson calls her practice paleocuisineology, where food and cooking bring cultures alive. Through many media, including the sites HistoryCooks.com

and MaryGunderson.com, she writes and speaks about South and North American food history and contemporary creative living and wellness. She wrote and published the award-winning book *The Food Journal of Lewis and Clark: Recipes for an Expedition* (History Cooks, 2003) and has authored six food-history books for kids.

Liora Gvion is a senior lecturer at the Kibbutzim College of Education and also teaches at the Faculty of Agriculture, Food and Environment at the Institute of Biochemistry, Food Science and Nutrition Hebrew University of Jerusalem.

Cherie Y. Hamilton is a cookbook author and specialist on the food cultures and cuisines of the Portuguese-speaking countries in Europe, South America, Africa, and Asia.

Jessica B. Harris teaches English at Queens College/City University of New York and is director of the Institute for the Study of Culinary Cultures at Dillard University.

Melanie Haupt is a doctoral candidate in English at the University of Texas at Austin. Her dissertation, “Starting from Scratch: Reading Women’s Cooking Communities,” explores women’s use of cookbooks and recipes in the formation and reification of real and virtual communities.

Ursula Heinzelmann is an independent scholar and culinary historian, twice awarded the prestigious Sophie Coe Prize. A trained chef, sommelier, and ex-restaurateur, she now works as a freelance wine and food writer and journalist based in Berlin, Germany.

Jennifer Hostetter is an independent food consultant specializing in writing, research, and editing. She has degrees in history and culinary arts and holds a master’s degree in food culture and communications from the University of Gastronomic Sciences in Italy. She also served as editorial assistant for this encyclopedia.

Kelila Jaffe is a doctoral candidate in the Food Studies Program at New York University. Originally from Sonoma, California, and the daughter of a professional chef, she has pursued anthropological and archaeological foodways research since her entry into academia. She received a BA with distinction in anthropology from the University of Pennsylvania, before attending the University of Auckland, where she earned an MA with honors in anthropology, concentrating in archaeology. Her research interests include past foodways, domestication, and zooarchaeology, and she has conducted fieldwork in Fiji, New Zealand, and Hawaii.

Zilkia Janer is associate professor of global studies at Hofstra University in New York. She is the author of *Puerto Rican Nation-Building Literature: Impossible Romance* (2005) and *Latino Food Culture* (2008).

Brelyn Johnson is a graduate of the master’s program in food studies at New York University.

Kate Johnston is currently based in Italy, where she is an independent cultural food researcher and writer and a daily ethnographer of people’s food habits. She

has a degree in anthropology from Macquarie University in Sydney, Australia, and a recent master's degree in food culture and communication from the University of Gastronomic Sciences, Italy. She was also editorial assistant for this encyclopedia.

Desiree Koh was born and raised in Singapore. A writer focusing on travel, hospitality, sports, fitness, business, and, of course, food, Koh's explorations across the globe always begin at the market, as she believes that the sight, scent, and savoring of native produce and cuisine are the key to the city's heart. The first and only female in Major League Eating's Asia debut, Koh retired from competition to better focus on each nibble and sip of fine, hopefully slow food.

Bruce Kraig is emeritus professor of history at Roosevelt University in Chicago and adjunct faculty at the Culinary School of Kendall College, Chicago. He has published and edited widely in the field of American and world food history. Kraig is also the founding president of the Culinary Historians of Chicago and the Greater Midwest Foodways Alliance.

R. J. Krajewski is the research services librarian at Simmons College, where among other things he facilitates discovery of food-culture research, especially through the lens of race, class, and gender. His own engagement with food is seasonally and locally rooted, starting in his own small, urban homestead, much like his Polish and German ancestors.

Erin Laverty is a freelance food writer and researcher based in Brooklyn, New York. She holds a master's degree in food studies from New York University.

Robert A. Leonard has a PhD in theoretical linguistics from Columbia. He studies the way people create and communicate meaning, including through food. He was born in Brooklyn and trained as a cook and *panaderia-reposteria* manager in the Caribbean; his doctoral studies led him to eight years of fieldwork in language, culture, and food in Africa and Southeast Asia. In the arts, as an undergraduate he cofounded and led the rock group Sha Na Na and with them opened for their friend Jimi Hendrix at the Woodstock Festival. Leonard is probably one of a very few people who have worked with both the Grateful Dead and the Federal Bureau of Investigation, which in recent years recruited him to teach the emerging science of forensic linguistics at Quantico.

Jane Levi is an independent consultant and writer based in London, England. She is currently working on her PhD at the London Consortium, examining food in utopias, funded by her work on post-trade financial policy in the City of London.

Yrsa Lindqvist is a European ethnologist working as the leading archivist at the Folk Culture Archive in Helsinki. Her research about food and eating habits in the late 1990s, combined with earlier collections at the archive, resulted in 2009 in the publication *Mat, Måltid, Minne. Hundraår av finlandssvensk matkultur*. The book analyzes the changes in housekeeping and attitudes toward food. She has also contributed to other publications focusing on identity questions and has worked as a junior researcher at the Academy of Finland.

William G. Lockwood is professor emeritus of cultural anthropology at the University of Michigan. His central interest is ethnicity and interethnic relations. He has conducted long-term field research in Bosnia-Herzegovina and the Croatian community in Austria and also among Roma and with a variety of ethnic groups in America, including Arabs, Finns, and Bosnians. He has long held a special interest in how food functions in ethnic group maintenance and in reflecting intra- and intergroup relations.

Yvonne R. Lockwood is curator emeritus of folklife at the Michigan State University Museum. Her formal training is in folklore, history, and Slavic languages and literatures. Research in Bosnia, Austria, and the United States, especially the Great Lakes region, has resulted in numerous publications, exhibitions, festival presentations, and workshops focused on her primary interests of foodways and ethnic traditions.

Janet Long-Solís, an anthropologist and archaeologist, is a research associate at the Institute of Historical Research at the National University of Mexico. She has published several books and articles on the chili pepper, the history of Mexican food, and the exchange of food products between Europe and the Americas in the 16th century.

Kristina Lupp has a background in professional cooking and has worked in Toronto and Florence. She is currently pursuing a master of arts in gastronomy at the University of Adelaide.

Máirtín Mac Con Iomaire is a lecturer in culinary arts in the Dublin Institute of Technology. Máirtín is well known as a chef, culinary historian, food writer, broadcaster, and ballad singer. He lives in Dublin with his wife and two daughters. He was the first Irish chef to be awarded a PhD, for his oral history of Dublin restaurants.

Glenn R. Mack is a food historian with extensive culinary training in Uzbekistan, Russia, Italy, and the United States. He cofounded the Culinary Academy of Austin and the Historic Foodways Group of Austin and currently serves as president of Le Cordon Bleu College of Culinary Arts Atlanta.

Andrea MacRae is a lecturer in the Le Cordon Bleu Graduate Program in Gastronomy at the University of Adelaide, Australia.

Giorgos Maltezakis earned his PhD in anthropology with research in cooperation with the Institute Studiorium Humanitatis of the Ljubljana Graduate School of the Humanities. His dissertation was on consumerism, the global market, and food, which was an ethnographic approach to the perception of food in Greece and Slovenia.

Bertie Mandelblatt is assistant professor at the University of Toronto, cross-appointed to the departments of Historical Studies and Geography. Her research concerns the early-modern French Atlantic, with a focus on commodity exchanges at the local and global scales: Her two current projects are the history

of food provisioning in the Franco-Caribbean and the transatlantic circulation of French rum and molasses, both in the 17th and 18th centuries.

Marty Martindale is a freelance writer living in Largo, Florida.

Laura Mason is a writer and food historian with a special interest in local, regional, and traditional foods in the United Kingdom and elsewhere. Her career has explored many dimensions of food and food production, including cooking for a living, unraveling the history of sugar confectionery, and trying to work out how many traditional and typically British foods relate to culture and landscape. Her publications include *Taste of Britain* (with Catherine Brown; HarperCollins, 2006), *The Food Culture of Great Britain* (Greenwood, 2004), and *The National Trust Farmhouse Cookbook* (National Trust, 2009).

Anton Masterovoy is a PhD candidate at the Graduate Center, City University of New York. He is working on his dissertation, titled “Eating Soviet: Food and Culture in USSR, 1917–1991.”

Anne Engammare McBride, a Swiss native, food writer, and editor, is the director of the Experimental Cuisine Collective and a food studies PhD candidate at New York University. Her most recent book is *Culinary Careers: How to Get Your Dream Job in Food*, coauthored with Rick Smilow.

Michael R. McDonald is associate professor of anthropology at Florida Gulf Coast University. He is the author of *Food Culture in Central America*.

Naomi M. McPherson is associate professor of cultural anthropology and graduate program coordinator at the University of British Columbia, Okanagan Campus. Since 1981, she has accumulated over three years of field research with the Bariai of West New Britain, Papua New Guinea.

Katrina Meynink is an Australia-based freelance food writer and researcher. She has a master’s degree in gastronomy through Le Cordon Bleu and the University of Adelaide under a scholarship from the James Beard Foundation. She is currently completing her first cookbook.

Barbara J. Michael is a sociocultural anthropologist whose research focuses on social organization, economics, decision making, and gender. Her geographic focus is on the Middle East and East Africa, where she has done research with the pastoral nomadic Hawazma Baggara and on traditional medicine in Yemen and is working on a video about men’s cafes as a social institution. She teaches anthropology at the University of North Carolina Wilmington and has also worked as a consultant for several United Nations agencies.

Diana Mincyte is a fellow at the Rachel Carson Center at the Ludwig Maximilian University-Munich and visiting assistant professor in the Department of Advertising at the University of Illinois, Urbana-Champaign. Mincyte examines topics at the interface of food, the environment, risk society, and global inequalities. Her book investigates raw-milk politics in the European Union to consider the production risk society and its institutions in post-Socialist states.

Rebecca Moore is a doctoral student studying the history of biotechnology at the University of Toronto in Ontario, Canada.

Nawal Nasrallah, a native of Iraq, was a professor of English and comparative literature at the universities of Baghdad and Mosul until 1990. As an independent scholar, she wrote the award-winning *Delights from the Garden of Eden: A Cookbook and a History of the Iraqi Cuisine* and *Annals of the Caliphs' Kitchens* (an English translation of Ibn Sayyar al-Warraq's 10th-century Baghdadi cookbook).

Henry Notaker graduated from the University of Oslo with a degree in literature and worked for many years as a foreign correspondent and host of arts and letters shows on Norwegian national television. He has written several books about food history, and with *Food Culture in Scandinavia* he won the Gourmand World Cookbook Award for best culinary history in 2009. His last book is a bibliography of early-modern culinary literature, *Printed Cookbooks in Europe 1470–1700*. He is a member of the editorial board of the journal *Food and History*.

Kelly O'Leary is a graduate student at Boston University in gastronomy and food studies and executive chef at the Bayridge University Residence and Cultural Center.

Fabio Parasecoli is associate professor and coordinator of food studies at the New School in New York City. He is author of *Food Culture in Italy* (2004) and *Bite Me: Food and Popular Culture* (2008).

Susan Ji-Young Park is the program director and head of curriculum development at École de Cuisine Pasadena (www.ecolecuisine.com); project leader for Green Algeria, a national environmental initiative; and a writer for LA WEEKLY'S Squid Ink. She has written curriculum for cooking classes at Los Angeles Unified School District, Sur La Table, Whole Foods Market, Central Market, and Le Cordon Bleu North America. She and her husband, Chef Farid Zadi, have co-written recipes for *Gourmet Magazine* and the *Los Angeles Times*. The couple are currently writing several cookbooks on North African, French, and Korean cuisines.

Rosemary Parkinson is author of *Culinaria: The Caribbean*, *Nyam Jamaica*, and *Barbados Bu'n-Bu'n*, and she contributes culinary travel stories to Caribbean magazines.

Charles Perry majored in Middle East languages at Princeton University, the University of California, Berkeley, and the Middle East Centre for Arab Studies, Shmolan, Lebanon. From 1968 to 1976 he was a copy editor and staff writer at *Rolling Stone* magazine in San Francisco, before leaving to work as a freelance writer specializing in food. From 1990 to 2008, he was a staff writer in the food section of the *Los Angeles Times*. He has published widely on the history of Middle Eastern food and was a major contributor to the *Oxford Companion to Food* (1999).

Irina Petrosian is a native of Armenia and a professional journalist who has written for Russian, Armenian, and U.S.-based newspapers. She is the coauthor of

Armenian Food: Fact, Fiction, and Folklore and holds degrees in journalism from Moscow State University and Indiana University.

Suzanne Piscopo is a nutrition, family, and consumer studies lecturer at the University of Malta in Malta. She is mainly involved in the training of home economics and primary-level teachers, as well as in nutrition and consumer-education projects in different settings. Suzanne is a registered public health nutritionist, and her research interests focus on socioecological determinants of food intake, nutrition interventions, and health promotion. She has also written a series of short stories for children about food. Suzanne enjoys teaching and learning about the history and culture of food and is known to creatively experiment with the ingredients at hand when cooking the evening meal together with her husband, Michael.

Theresa Preston-Werner is an advanced graduate student in anthropology at Northwestern University.

Meg Ragland is a culinary history researcher and librarian. She lives in Boston, Massachusetts.

Carol Selva Rajah is an award-winning chef and food writer currently based in Sydney, Australia. She has written 10 cookbooks on Malaysian and Southeast Asian cuisine. Her book *The Food of India* won the gold award for the Best Hardcover Recipe Book at the prestigious Jacob's Creek World Food Media Awards.

Birgit Ricquier is pursuing a PhD in linguistics at the Université Libre de Bruxelles and the Royal Museum for Central Africa, Tervuren, Belgium, with a fellowship from the Fonds de la Recherche Scientifique (FNRS). The topic of her PhD project is "A Comparative Linguistic Approach to the History of Culinary Practice in Bantu-Speaking Africa." She has spent several months in central Africa, including one month in the Democratic Republic of the Congo as a member of the Boyekoli Ebale Congo 2010 Expedition and two months of research focused on food cultures in Congo.

Amy Riolo is an award-winning author, lecturer, cooking instructor, and consultant. She is the author of *Arabian Delights: Recipes and Princely Entertaining Ideas from the Arabian Peninsula*, *Nile Style: Egyptian Cuisine and Culture*, and *The Mediterranean Diabetes Cookbook*. Amy has lived, worked, and traveled extensively through Egypt and enjoys fusing cuisine, culture, and history into all aspects of her work. Please see www.amyriolo.com, www.baltimoreegypt.org, and diningwithdiplomats.blogspot.com for more information and further reading.

Owen Roberts is a journalist, communications instructor, and director of research communications for the University of Guelph in Guelph, Ontario, Canada. He holds a doctorate of education from Texas Tech University and Texas A&M University.

Fiona Ross is a gastrodetective whose headquarters is the Bodleian Library in Oxford, United Kingdom. She spends her time there investigating the eating foibles of the famous and infamous. Her cookery book *Dining with Destiny* is the

result: When you want to know what Lenin lunched on or what JFK ate by the poolside, *Dining with Destiny* has the answer.

Signe Rousseau (née Hansen) is Danish by birth but a long-term resident of southern Africa and is a researcher and part-time lecturer at the University of Cape Town. Following an MA in the Department of English and a PhD (on food media and celebrity chefs) in the Centre for Film and Media Studies, she now teaches critical literacy and professional communication in the School of Management Studies (Faculty of Commerce).

Kathleen Ryan is a consulting scholar in the African Section of the University of Pennsylvania Museum of Archaeology and Anthropology, Philadelphia. She has carried out research in Kenya since 1990, when she began a study of Maasai cattle herders in Kajiado District.

Helen Saberi was Alan Davidson's principal assistant in the completion of the *Oxford Companion to Food*. She is the author of *Noshe Djan: Afghan Food and Cookery*; coauthor of *Trifle* with Alan Davidson; and coauthor of *The Road to Vindaloo* with David Burnett; her latest book is *Tea: A Global History*.

Cari Sánchez holds a master of arts in gastronomy from the University of Adelaide/Le Cordon Bleu in South Australia. Her dissertation explores the global spread of the Argentine *asado*. She currently lives in Jacksonville, Florida, where she writes the food and travel blog *viCARIOUS* and is the marketing manager for a craft brewery.

Peter Scholliers teaches history at the Vrije Universiteit Brussel and is currently head of the research group "Social and Cultural Food Studies" (FOST). He studies the history of food in Europe in the 19th and 20th centuries. He co-edits the journal *Food and History* and is involved in various ways in the Institut Européen d'Histoire et des Cultures de l'Alimentation (Tours, France). Recently, he published *Food Culture in Belgium* (Greenwood, 2008). More information can be found at http://www.vub.ac.be/FOST/fost_in_english/.

Colleen Taylor Sen is the author of *Food Culture in India; Curry: A Global History; Pakoras, Paneer, Pappadums: A Guide to Indian Restaurant Menus*, and many articles on the food of the Indian Subcontinent. She is a regular participant in the Oxford Food Symposium.

Roger Serunyigo was born and lives in Kampala, Uganda. He graduated from Makerere University with a degree in urban and regional planning, has worked in telecommunications, and is now a professional basketball player for the Uganda National Team. He also coaches a women's basketball team (The Magic Stormers).

Dorette Snover is a chef and author. Influenced by French heritage and the food traditions of the Pennsylvania Dutch country, Chef Snover teaches exploration of the world via a culinary map at her school, C'est si Bon! in Chapel Hill. While the stock simmers, she is writing a novel about a French bread apprentice.

Celia Sorhaindo is a freelance photographer and writer. She was the editor of the 2008 and 2009 *Dominica Food and Drink Guide* magazine and content manager for the Dominica section of the magazine *Caribbean Homes & Lifestyle*.

Lyra Spang is a PhD candidate in the Department of Anthropology and the Food Studies Program at Indiana University. She has written about food, sex, and symbolism; the role of place in defining organic; and the importance of social relationships in small-scale food business in Belize. She grew up on a farm in southern Belize and is a proud promoter of that country's unique and diverse culinary heritage.

Lois Stanford is an agricultural anthropologist in the Department of Anthropology at New Mexico State University. In her research, she has examined the globalization of food systems both in Mexico and in the U.S. Southwest. Her current research focuses on the critical role of food heritage and plant conservation in constructing and maintaining traditional foodways and cultural identity in New Mexico. In collaboration with local food groups, she is currently developing a community food assessment project in the Mesilla Valley in southern New Mexico.

Aliza Stark is a senior faculty member at the Agriculture, Food, and Environment Institute of Biochemistry, Food Science, and Nutrition at the Hebrew University of Jerusalem.

Maria “Ging” Gutierrez Steinberg is a marketing manager for a New York City–based specialty food company and a food writer. She has a master's degree in food studies from New York University and is a graduate of Le Cordon Bleu. Her articles have appeared in various publications in Asia and the United States.

Anita Stewart is a cookbook author and Canadian culinary activist from Elora, Ontario, Canada.

Emily Stone has written about Guatemalan cuisine in the *Radcliffe Culinary Times*, and she is at work on a nonfiction book about chocolate in Central America. She currently teaches journalism and creative writing at Sun Yat-sen University in Guangzhou, China.

Asele Surina is a Russian native and former journalist who now works as a translator and interpreter. Since 1999 she has worked at the Institute of Classical Archaeology at the University of Texas on joint projects with an archaeological museum in Crimea, Ukraine.

Aylin Öney Tan is an architect by training and studied conservation of historic structures in Turkey, Italy, and the United Kingdom. Eventually, her passion for food and travel led her to write on food. Since 2003, she has had a weekly food column in *Cumhuriyet*, a prestigious national daily, and contributes to various food magazines. She was a jury member of the Slow Food Award 2000–2003, with her nominees receiving awards. She contributes to the Terra Madre and Presidia projects as the leader of the Ankara Convivium. She won the Sophie Coe Award on food history in 2008 for her article “Poppy: Potent yet Frail,” presented

previously at the Oxford Symposium on Food and Cookery where she's become a regular presenter. Currently, she is the curator of the Culinary Culture Section of Princess Islands' City Museum. She is happy to unite her expertise in archaeology and art history from her previous career with her unbounded interest in food culture.

Nicole Tarulevicz teaches at the School of Asian Languages and Studies at the University of Tasmania.

Karen Lau Taylor is a freelance food writer and consultant whose food curriculum vitae includes a master's degree in food studies from New York University, an advanced certificate from the Wine and Spirits Education Trust, and a gig as pastry cook at a five-star hotel after completing L'Academie de Cuisine's pastry arts program. She is working toward a master's degree in public health while she continues to write, teach, test recipes, eat, and drink from her home in Alexandria, Virginia.

Thy Tran is trained as a professional chef. She established Wandering Spoon to provide cooking classes, culinary consultation, and educational programming for culinary academies and nonprofit organizations throughout Northern California. Currently, she is a chef instructor at the International Culinary Schools at the Art Institute of California–San Francisco and Tante Marie's. She is also the founder and director of the Asian Culinary Forum. She co-authored *The Essentials of Asian Cooking*, *Taste of the World*, and the award-winning guide, *Kitchen Companion*.

Leena Trivedi-Grenier is a Bay-area food writer, cooking teacher, and social media consultant. Her writings have appeared in *The Business of Food: Encyclopedia of the Food and Drink Industry*, *Culinary Trends* magazine, and the *Cultural Arts Resources for Teachers and Students* newsletter and will be featured in several upcoming titles by Greenwood Press. She also runs a food/travel/gastronomy blog called *Leena Eats This Blog* (www.leenaeats.com).

Karin Vaneker graduated from the AKI Academy of Visual Arts in Enschede, the Netherlands. She later attended Sint-Lukas Hoger Instituut voor Schone Kunsten in Brussels, Belgium. She has written for numerous Dutch newspapers and magazines, specializing in trends and the cultural and other histories of ingredients and cuisines, and has published several books. Furthermore, Vaneker has worked for museums and curated an exhibition about New World taro (*L. Xanthosoma* spp.). At present she is researching its potential in domestic cuisines and gastronomy.

Penny Van Esterik is professor of anthropology at York University, Toronto, where she teaches nutritional anthropology, advocacy anthropology, and feminist theory. She does fieldwork in Southeast Asia and has developed materials on breast-feeding and women's work and infant and young child feeding.

Richard Wilk is professor of anthropology and gender studies at Indiana University, where he directs the Food Studies Program. With a PhD in anthropology from the University of Arizona, he has taught at the University of California,

Berkeley; University of California, Santa Cruz; New Mexico State University; and University College London and has held fellowships at Gothenburg University and the University of London. His publications include more than 125 papers and book chapters, a textbook in economic anthropology, and several edited volumes. His most recent books are *Home Cooking in the Global Village* (Berg Publishers), *Off the Edge: Experiments in Cultural Analysis* (with Orvar Lofgren; Museum Tusculanum Press), *Fast Food/Slow Food* (Altamira Press), and *Time, Consumption, and Everyday Life* (with Elizabeth Shove and Frank Trentmann; Berg Publishers).

Chelsie Yount is a PhD student of anthropology at Northwestern University in Evanston, Illinois. She lived in Senegal in 2005 and again in 2008, when performing ethnographic research for her master's thesis at the École des Hautes Études en Sciences Sociales in Paris, on the topic of Senegalese food and eating habits.

Marcia Zoladz is a cook, food writer, and food-history researcher with her own Web site, *Cozinha da Marcia* (Marcia's Kitchen; www.cozinhadamarcia.com.br). She is a regular participant and contributor at the Oxford Symposium on Food and History and has published three books in Brazil, Germany, and Holland—*Cozinha Portuguesa* (Portuguese cooking), *Muito Prazer* (Easy recipes), and *Brigadeiros e Bolinhas* (Sweet and savory Brazilian finger foods).

Preface

This encyclopedia is the culmination of nearly a decade's work on the *Food Culture around the World* series. As that project expanded to 20 volumes, we realized that many peoples and places, fascinating and important in their own right, had not been covered. Considering that the cultural study of food has become more sophisticated and comprehensive over the past decade, that food has become a legitimate academic topic in curricula at every level of education, and that we seem to become more obsessed with food every day, we recognized that we simply could not leave out much of the planet. The only way to satisfy this growing demand is the set you see before you, which includes material covered in the series plus new articles that span the globe. We have gathered food scholars from around the world—people whose passion and expertise have given them deep insight into the ingredients, cooking methods, and ways of eating and thinking about food in their respective countries.

A number of questions regarding breadth and depth naturally arose in planning this work, particularly about the level of analysis for each article. Could we do justice to the vast array of distinct cuisines on earth? Could we include regional coverage for well-recognized food cultures? That is, rather than the nation-state as the criterion for inclusion, why not add Alsace, Provence, and Burgundy with France, or Sichuan, Hunan, and Canton with China? It became apparent that we would need another 20 volumes or risk very brisk, superficial coverage and that as arbitrary as the construction of nation-states has been historically, in particular the way minority cultures have tended to be obscured, the best way to organize this encyclopedia was by nation. Regional variations and minority groups can, of course, be discussed within the framework of nation-based articles. On the other hand, some groups frankly demanded separate entries—those who stood out as unique and distinct from the majority culture in which they happen politically to be included, or in some cases those people who either transcend national boundaries or even those very small places, whose great diversity demanded separate coverage as truly different from the culture around them. Thus we include the Basques separate from Spain and France, and the Hmong. We have not, however, included every single people merely on the basis of national status. This should not be taken to suggest that these cultures are unimportant but merely that many places share a common culture with those around them, though divided by national borders. In such cases we have provided cross-references. This seemed a preferable solution to suffering repetitiveness or unmanageable size.

The format for each entry also raised many questions. “Eating Out,” for example, is simply not relevant in some places on earth. Would forcing each article into a common structure ultimately do injustice to the uniqueness of each culture? In the end it seemed that the ability to conduct cross-cultural analysis proved one of the most valuable assets of this set, so that one could easily compare what’s for lunch in Brazil or Brunei. Moreover, tracing the various global currents of influence has been made possible since a shared set of parameters places each article on a common footing. We can trace, for example, the culinary influence of various peoples as they spread around the world. In this respect this work is unique. There are several excellent food encyclopedias on the market, all of which cover individual ingredients, topical themes, cooking methods, and sometimes recipes. None, however, treats individual food cultures as discrete units of analysis, and for students hoping to find an in-depth but succinct description of places, or for those hoping to compare a single food topic across cultures, this is the only source to which they can turn. We anticipate that this work will be invaluable for students, scholars, food writers, as well as that indomitable horde popularly known as foodies.

The other major question in designing this encyclopedia was how to define what exactly constitutes a *food culture*. This term should be distinguished from *cuisine*, which refers only to the cooking, serving, and appreciation of food. Naturally we include this within each entry and in doing so have taken the broadest possible definition of the term *cuisine*. That is, if a people cooks and recognizes a common set of recipes and discusses them with a common vocabulary, then it should be deemed a cuisine. Thus there is no place on earth without a cuisine. A nation, continent, region, and even a small group may share a common cuisine. This encyclopedia, however, covers much more. It explores the social context of consumption, the shared values and symbolic meanings that inform food choices, and the rituals and daily routine—indeed everything that constitutes a food culture. Thus we include religion, health, mealtimes, and special occasions, as well as the way certain foods confer status or have meanings beyond simple sensory gratification. Nor have we neglected the gastronomic angle, as recipes are an essential expression of what people think is good to eat, and their popularity is the outcome of decisions made at every level of society, from the farmer who grows food, and the environment and material resources that make it possible, to the government policy that promotes certain ingredients, to the retailers who market them, to the technologies by which they are transformed, and to the individual preference of family members at the level of the household. To this end we have added food culture snapshots to each entry, which puts a human face on the broader topics under discussion.

As with the series that preceded this encyclopedia, our aim is to present the panoply of human experience through the lens of food in an effort to better understand and appreciate our differences. We will find remarkably common experiences among us, especially as the world increasingly falls under the sway of corporate multinational food industries, but we will also find deep, profound, and persistent distinctions, ones that should and must be preserved because they are essential to who we are and how we define ourselves. These are differences

that should not be effaced nor lost as our tastes become increasingly cosmopolitan. I hope that in reading these articles you find, like me, that the world is a marvelously diverse place and what people eat tells us about them in such an immediate and palpable way that in a certain sense you feel you know the people at some level. This, of course, is the first step toward understanding, appreciating, and living with each other peacefully on this small lump of turf we call earth.

Armenia

Overview

The Republic of Armenia, bordered by Azerbaijan, the Republic of Georgia, Iran, and Turkey, is the smallest and most ethnically homogeneous nation of the former Soviet republics. Ethnic Armenians compose 95 percent of its population, while Kurds and Russians make up less than 2 percent of the three million total inhabitants. Armenia is highly urbanized, with more than 70 percent of the population living in cities and towns. Most urbanites are no more than a generation or two removed from rural peasant roots.

Armenia is one of the oldest nations in the world and was the first to adopt Christianity as its official religion. Except for brief periods of unification and relative prosperity, for most of its history Armenia has been under foreign domination, subjected to Arab, Byzantine, Ottoman, Persian, and Russian influences. After becoming independent from the Soviet Union in 1991, the Republic of Armenia went through many painstaking changes from its centralized, Socialist economy to the free market system. Despite yearly government reports indicating economic growth, Armenia is still a poor country, with at least 35 percent of its population living below the official poverty line.

Armenian society is divided between a very small upper class that benefits from the market economy and a very large underclass. In turn, the poor are divided into those who can regularly afford staples such as cereals, pasta, bread, and cheese and the poorest, whose main source of nourishment is potatoes. While there are signs that a small Armenian middle class is emerging, it is not yet well defined.

Armenians have often sought security and prosperity beyond the boundaries of their homeland. Large or small Armenian diaspora communities can be found in almost any country of the world. Thus, Armenian cultural territory is much larger than the physical size of the modern Armenian republic, which is smaller than Belgium. Armenian Americans played an important role in promoting Middle Eastern culinary traditions in the United States. The challenge for the modern Republic of Armenia is not only to carve out its own culinary personality based on locally available foods and traditions but also to embrace the rich culinary heritage of Armenian communities outside its borders.

Food Culture Snapshot

Vahram Ananian, age 55, an engineer in a road-construction company, and his wife, Roza, 53, an elementary school teacher, live in a three-room apartment with their children: 26-year-old Vahan, a manager at a Yerevan bank, and their 24-year-old daughter, Marina, a project coordinator for a Western nongovernmental organization. Vahram and Roza feel very fortunate that their children were able to find decent jobs in Armenia, unlike many other young Armenians who must emigrate in search of better opportunities.

The Ananians are a typical Armenian family whose standard of living is far above the poverty line but is not quite at the level of a comfortable middle-class lifestyle. Most of the family earnings are being saved since the future is uncertain and they will need to spend a lot when the children get married.

Roza takes all the responsibility for food shopping and cooking in the family, though on weekends

Vahram goes with her to the farmers' market. Using saving strategies honed during Soviet and post-Soviet times of food scarcity and hardship, Roza prefers to buy food from the farmers' market rather than from higher-priced supermarkets in the downtown district.

Summer and fall are busy months for Roza. Like many Armenian women, Roza throws herself into a frenzy of canning called the *zakati sezon*, "the time for preserving." Most fresh produce available in summer and autumn from the farmers' market is preserved for enjoyment in the winter and spring months. Roza gets a helping hand from her daughter and other relatives, who also stock up with homemade canned foods. Some families exchange jar sets of their fruit compotes and pickled vegetables for variety's sake.

The Ananians buy meat from a small butcher's shop near their residential area. The owner of the shop, Armen, knows the preferences of his loyal customers very well. He is ready to offer Roza fresh ground beef that serves as a filling for stuffed vegetables or pieces of cut beef for soup. Rosa is known in the shop as "Kufta Rosa" because she often asks for well-kneaded ground meat to make *kufta*, Armenian meatballs. By Armenian standards, the Ananians are doing very well, since, for many of their neighbors who live in the same high-rise apartment block, meat is unaffordable and accounts for only a small proportion of the average weekly purchases.

In the spring and summer seasons, twice a week Roza buys *khar kanachi*, an attractive bouquet-style bunch of fresh herbs consisting of those most often used by Armenian cooks: cilantro, dill, basil, and parsley. She also buys tarragon and other fresh herbs in bulk and dries them in the sun on her apartment balcony for later use. At the top of Rosa's vegetable list are eggplant, bell peppers, and tomatoes. They are fried, stuffed, or baked and can be served as either a side dish or a main course at the dinner table.

Though usually not involved in the family chores, the Ananians' children often do some after-work shopping in the supermarkets and treat their family with expensive, imported foods. Sometimes they arrange a day off for Rosa by ordering pizza delivery or take-out grilled meat for the family or their guests to enjoy at dinnertime.

Major Foodstuffs

The Republic of Armenia is a highland country, with only 10 percent of its territory lying below an altitude of 3,280 feet. Sharp changes in altitude bring variations in weather and the types of soil, creating a diversity of agricultural produce. The three main zones of agriculture are the Ararat Valley and its surrounding foothills and mountains, the Shirak Plateau, and the plains around Lake Sevan. The Ararat Plain, part of the Ararat district with metropolitan Yerevan at its center, is the most fertile region. It makes up 4 percent of the total arable land but yields 40 percent of all agricultural production.

Of all the fruits grown in Armenia, the most celebrated is the apricot, *tsiran*. People buy apricots in buckets and wooden crates during apricot season, which lasts from the beginning of June until the end of July. Out of 200 types of grapes grown in Armenia, the most famous is the *areni*, a black grape grown in Vayots Dzor. The special taste of Armenia's produce is attributed to its mineral-rich soil and continental climate, which is drier than in neighboring Georgia and Azerbaijan. Armenians enjoy an average of 2,500 hours of sunshine per year. Northern Armenia is famous for its wild, delicious miniature pears, which are called *panda* because it was once erroneously believed they were a favorite fruit of panda bears.

Dried fruits are historical foods of Armenia and were used as a replacement for sugar in old times. *Chuchkhel* is made by repeatedly dipping strung walnuts or hazelnuts into grape juice. Once coated, they are removed and hung vertically to dry. Another delicacy is *alani*, dried peaches stuffed with a filling of walnuts, sugar, and cinnamon.

Chuchkhel, Armenian national candy made by dipping walnuts hazelnuts into grape juice then dried. (Shutterstock)

Since Armenia is in the northern limit of the subtropical zone, there are no native citrus fruits. Bananas, citrus fruits, and pineapples have not yet become items of mass consumption. Eating oranges and tangerines is an exclusively winter ritual, not a year-round activity, and many families indulge in them only during the New Year holiday.

The Shirak region in the northwest is known as the Armenian granary. Armenian women used to be true experts in grinding grains with stones and sieving them to create many varieties of wheat products. Historical reports mention 15 types of sieves used in Armenian households. In modern Armenia, the most popular grains are *dzavar*, hulled wheat; *atchar*, also known as German wheat; *korkot*, grits made by crushing hulled wheat kernels; and *blghoor*, made by boiling wheat until it swells, then drying and grinding it. Rice was once locally grown in the lowlands around Yerevan and was even a main export item, but in Soviet times all the wetlands around Yerevan were drained in an effort to end epidemics of malaria. Armenians eat rice imported from India and Iran.

Armenia is a landlocked country, but it has 100 mountainous lakes; the largest, Lake Sevan, is in the northeast. Out of the 31 fish species that reportedly exist in Armenia, the whitefish called *sig*, originally introduced to Armenia from Russian lakes, and the trout called *ishkhan* are the most popular. Gentle poaching is the main cooking method for fish. “Leave well enough alone” is the guiding principle for cooking any freshwater fish, since elaborate sauces or dressings are regarded as disguises that may hide the quality of the catch.

The Gegharkunik Province around Lake Sevan is the country’s main supplier of potatoes, cabbage, and barley. For many families in this region, the winter diet consists mainly of fried or mashed potatoes accompanied by sauerkraut. Both foods appeared in the Armenian diet a century ago as a result of Russian influences. Throughout Armenia tomatoes and cucumbers are so tasty and flavorful that they are not only used in salads but also eaten whole and raw, as if they were fruits.

Cheese and traditional plain yogurt are the most frequently consumed dairy products. The two tra-

ditional types of cheeses are *lori* and *chanakh*. Both require short periods of fermentation and are aged in brine. Other traditional Armenian cheeses are string cheese, *chechil*; mold-ripened cheese with a crumbly texture, *mklats*; and the fresh, naturally fermented sheep-milk cheese, *vochkhari panir*. Salty, fetalike goat cheese, *aitsi panir*, packed in small clay pots, is one of the success stories of modern Armenian cheese making.

Armenia is home to an incredible variety of herbs. A wild indigenous sorrel, *avelook*, is collected in the spring, dried in braided ropes during summer, and used in winter. Fresh tarragon sprigs are served at almost every meal during spring and summer. Other popular herbs are horse fennel, sage, *malva* (mallows—a leafy green), goose foot (like spinach),

Roasting kebabs in a roadside cafe in Armenia. (Radist | Dreamstime.com)

falcaria (or sickleweed, in the carrot family), and lemon balm. Greens are usually sautéed with onions and eaten with garlic-seasoned yogurt. Mountain greens are gathered in the wild by low-income villagers to sell in local markets. Lately, Armenian ecologists have taken issue with the widespread picking of wild herbs out of fear of the damage caused by overharvesting.

Mutton is not a popular food choice for Armenians. Only young lamb is in demand with tradition-bound Armenians who follow an age-old symbolic ritual meal of animal sacrifice, called *matakh* in Armenian. Small meat shops near churches in Armenia sell young sheep to accommodate this dining practice. The sheep-breeding businesses are mainly oriented to the export of both live sheep and meats to markets in Iran and the United Arab Emirates. Most Armenians prefer pork over any other meat, another example of the Russian influence on the Armenian diet. Consumption of pork soars closer to the New Year holiday because a roasted piglet (*gochi* in Armenian) is a traditional part of the festive table. Pork is the preferred meat for popular indoor and outdoor barbecues, too. Roasted pork chops called *chalagach* are a favorite part of the barbecue menu.

Cooking

Depending on the family's economic circumstances and on the specific occasion, the same dish can be cooked in a plain or a more sophisticated style. If a stew is made as a dinner meal for the family, the meat and vegetables will be cooked in a broth relying on the natural flavors of the ingredients. But if a stew is meant to be enjoyed by guests or is made for a special occasion, then the cook will make special efforts to enrich its flavor by frying or sautéing the meat and vegetables before adding them to the stockpot and by using more varied ingredients.

For religious observances, the style of cooking is always plain, without seasoning other than salt, itself a symbol of purification. *Khashlama* is a generic name for any dish of boiled meat. The name stems from the verb *khashel*, the Armenian word meaning

“to boil.” Compared to roasting over fire with its connotations of primitivism and paganism, boiling was regarded as a more refined cookery appropriate for Christian rites. If *khashlama* is offered on restaurant menus or cooked at home for celebrations, it is fancied up by addition of seasoning, herbs, and vegetables.

The most common and quick method of preparing a grain dish is to boil the grain in chicken broth or water and then season it with butter and onion. The two methods of cooking rice are called *kamovi* and *kashovi*. *Kashovi* requires the rice to be cooked in water, butter, and salt until the liquid is fully absorbed, with the heat reduced just before it boils. Rice cooked in the *kamovi* style is boiled just long enough to be tender but still firm, then drained and cooked using dry heat with butter. Again, for special occasions or on restaurant menus, grain or rice dishes are more elaborately prepared.

Another traditional cooking style is the blending and combining of ingredients in one-pot cooking. The components of Armenian casserole-type dishes should be packed closely together and in a special order. The traditional flavor of Armenian stews is defined as *ttvash*, meaning “tart.” A good stew should be enlivened with the right touch of tartness. Usually plums, the juice of unripened grapes, or cornelian cherries provide a hint of tartness. Stews and casseroles are delivered to the table in a two-handled crock called *kchooch*. Large clay pots are designed for efficient heat retention, allowing food to stay piping hot for many hours and preserving its juicy flavor. *Chanakh* and *putuk* are stew dishes named after earthenware pots or bowls.

The crown jewel of the Armenian menu is the barbecue (*khavorovats*). Barbecuers usually don't bother to marinate meat before grilling as the exquisite taste needs no enhancement. A simple dash of salt and pepper allows the flavor to shine through. Vinegar is not used for marinating as, according to barbecue vendors, it kills the natural meat taste and raises a customer's suspicion about its freshness. A good cut of fresh meat, professional skewers, and the glowing embers of a natural hardwood fire are enough for making good barbecue. Cheese, fresh herbs, tomato-cucumber salad, and pickled green

An Armenian man enjoying khash, a dense soup of beef tripe and trotters lavishly seasoned with garlic. (Shutterstock)

chili peppers are traditional side dishes that enhance the flavor of barbecue.

The traditional Armenian oven, the *tonir*, is a ceramic cylinder sunk into the ground; it is used in rural households. Country families in modern Armenia use *atar*, dried cow dung briquettes, to fuel the *tonir*. The tall heaps of bricks made of cow dung mixed with straw, stacked next to country homes, are a striking detail of the Armenian rural landscape. In urban households, refrigerators are used to store perishable foods, and cooking is usually done on a gas range. It is more common for food to be prepared over heat than to be baked or roasted in an oven. The flavors of most Armenian cooked dishes are delicate and subtle, not fierce.

Frying is done in a one-handed skillet, the *tava*. When meat is frying in the skillet, the English-trained ear hears the sound “siz-siz-siz,” thus the word “sizzling” in English. Armenians hear “tzh-

vzh-tzh,” so they named their popular dish of liver fried in hot oil *tzhvzhik*.

Typical Meals

Soviet modernization in the early 1920s radically changed eating habits in Armenia. The table etiquette of drinking out of a common cup and handling food with fingers was now considered *déclassé*. Instead of a single meal prepared to be eaten throughout the day, the tradition of serving three distinct meals—breakfast, lunch, and dinner, with appropriate foods for each meal—became the daily habit.

Armenians have a light breakfast or no breakfast at all. Wraps made by spreading a cheese and herb filling on *lavash*, a traditional flatbread of Armenia similar to the tortilla, and rolling it tightly, is the traditional breakfast or lunch. An example of an Armenian-style breakfast is a lavash wrap of boiled eggs and tarragon.

The lunch break is usually at noon for office workers. Snack-food shops and fast-food eateries serve those who have busy schedules and need to buy a quick lunch. Others manage to go home for a light meal. Dinner, the main meal of the day, is served usually after 6 P.M.

No matter what else graces the Armenian table, *panir* (cheese) should be there. Having a meal of bread and slices of cheese is an Armenian emblem of simple, happy, and unpretentious living. *Hahts u panir*, bread and cheese, is the national snack of Armenia, served and eaten at any time of the day. For many low-income Armenians, bread and cheese has always compensated for the lack of meat.

Along with bread and cheese, common to the dinner table is a plate of fresh herbs with radishes, tomato, and cucumber, served as a salad or just cut into pieces. In winter, homemade canned goods serve as a replacement for fresh vegetables and herbs from the farmers’ market. *Basturma*, dried slices of lean, salt-cured, pressed beef coated with a mix of peppery powdered spices, and another traditional Armenian cold meat, *soojookh*, a spicy, dark brown sausage made from ground lamb and lots of garlic, used to be made at home. Nowadays, they are mostly bought from stores. A table platter

of alternating rows of thinly sliced *basturma* and *soojookh* immediately upgrades the level of respect shown by a host toward guests.

Meat *tolma* (leaves or vegetables stuffed with meat) or a Lenten version (filled with a rice or lentil mixture) is a mainstay of the dinner table. Methods of *tolma* preparation have become badges of identity within Armenia. *Tolma* from Echmiadzin showcases a trio of stuffed vegetables: eggplants, tomatoes, and peppers in a tart sauce. In the Ashtarak region, *tolma* is meat-stuffed apples stacked on top of stuffed quinces, with dates and dried apricots placed in-between. Armenians share with the neighboring Iranians the predilection and skill for combining the textures and flavors of meats with fruit.

Many Armenian meatless dishes originated from the tradition of fasting. The culinary repertoire evolved around legumes, grains, fruits, vegetables, and herbs in different combinations. Unlike Russians, Armenians don't include mushrooms in their diet as a replacement for meat during fasting. Out of 300 edible mushroom species identified by Armenian specialists, only 10 are actually commonly used in modern Armenia.

After dinner, Armenians usually serve desserts. The choice of pastry often depends on the availability and price of baking supplies. Light sponge cakes are preferred whenever the price of eggs goes down since the recipes require lots of eggs. Coffee not only marks the end of hospitality for guests but also is a very popular morning fix. Armenians are heavy

Gata, a mildly sweet, flat coffee cake, is a traditional Armenian pastry. (Mirvard | Dreamstime.com)

coffee drinkers. Tea with *mooraba*, preserves made of any fruit or berries, is also served, especially in cold winters. Armenian homemade fruit preserves are thinner in consistency than Western-style jams and contain much less sugar.

A classic dish of Armenian cookery, a yogurt soup called *spas* is made of hulled wheat and yogurt, usually seasoned with cilantro. Egg yolk and flour are added to the soup to prevent the yogurt from curdling. In many Armenian villages, *spas* was made in a large pot and eaten as a one-dish meal for several days. An enduring symbol of earth and home, *spas* continues to have a deep emotional significance for modern Armenians. And, like so many other Armenian dishes, it is proclaimed to have curative powers.

Spas (Yogurt Soup)

1 c korkot wheat (dried or roasted cracked wheat, similar to bulgur)

7 c water

Salt to taste

1 large onion, finely chopped

3 tbsp butter or vegetable oil

1 tbsp fresh mint, finely chopped

1 tbsp cilantro, finely chopped

1 tbsp parsley, finely chopped

2 c plain yogurt

2 eggs, beaten

Combine korkot with water in a saucepan. Bring to a boil, and lower the heat. Add salt to the liquid, and let simmer for about 1 hour. Sauté the chopped onion in butter or oil until it is golden brown. Remove the skillet from the stove, add seasonings to the onions, and mix well. Pour the contents of the skillet into the saucepan when the korkot becomes tender.

Place yogurt in a bowl. Beat with a spoon until it is smooth. Beat in the eggs. Gradually add a little of the hot liquid from the saucepan to the yogurt mixture while continuously stirring to prevent the

egg from curdling. After about 2 cups of liquid have been added to the yogurt, pour the mixture back into the saucepan. Stir for a few minutes until the yogurt is blended. Remove from heat. Serve hot or chilled.

Eating Out

The restaurant scene in Armenia was similar to the deplorable state of dining in the Soviet Union as recently as 1990. But it has radically changed and developed at a rapid rate in recent times. There are about 200 restaurants, cafés, and bars in Armenia, the best of which are mostly concentrated in downtown Yerevan. The restaurant industry is considered one of the fastest-growing sectors of the Armenian economy. Restaurants offer eclectic menus mixing European modernity with more Armenian traditional cuisines, revived to stimulate tourism.

Hot, hearty dishes served in a pleasing oven-to-table presentation are meant to entice diaspora Armenians, who make up the majority of tourists visiting Armenia. Fine restaurants serve food in clay bowls to assure that the dish is authentic and obviously ethnic in origin. It is very chic to offer guests wine poured from a clay pitcher. Antiqued earthenware is used as an artistic decoration, prominently displayed as a means of attracting customers. Like in many post-Soviet countries, local restaurants are not affordable for locals and are mainly oriented toward tourists or expatriates.

Yerevan is famous for its summer downtown cafés, which are open around the clock. Armenia, the smallest republic of the former Soviet Union, was a pioneer of café culture in the Soviet Union. In the more permissive atmosphere of the 1960s, cafés were a sign of modernity, added to a relaxed lifestyle after so many years of Soviet austerity. Though cafés were a sign of social sophistication at first, they were still, in Soviet times, a place for male gathering. In the more liberated times of the independent republic, and with the proliferation of cafés and restaurants, Armenian women feel more comfortable going out to eat or having a cup of coffee without the company of men.

Nonetheless, there are still a lot of eateries where men get together to have parties. Small establishments attended by locals offer *khash*, a dense soup of beef tripe and trotters lavishly seasoned with garlic, for winter early-morning parties. Winter *khash* parties lend some excitement to those dreary months when the majority of the population is waiting for warmer days to come.

Summers in Yerevan are hot and dry, with temperatures often topping 100 degrees Fahrenheit. People stop by small shops or stores to quench their thirst with *tahn*, a lightly viscous drink made of yogurt blended with chilled water and salt. Produced commercially in plastic containers, *tahn* competes with soft drinks sold in store coolers.

Special Occasions

Food is placed at the center of relationships in Armenia. The word for friend, *enker*, means “eating together.” A host treats guests as if they honor their host by their presence. The Armenian word for “party” is *utel-khmel*, meaning literally “eat-drink.”

Like people all over the world, Armenians celebrate important events with food. Different occasions call for particular dishes or delicacies. Salty bread, *aghablit*, is the main culinary emblem of Saint Sarkis Day, celebrated 63 days before Easter, in January or February, in memory of the martyr Sergius of Caesaria in Cappadocia (now in eastern Turkey). Saint Sarkis was executed in 304 A.D.

A banquet of ethnic Armenian foods and drinks. (Corel)

during anti-Christian persecutions by the Roman emperor Diocletian. During his saint day, it is customary for young ladies to eat salty bread and go to sleep thirsty in the hope that dreams will reveal a special romantic someone in their future.

The culinary symbol of Trndez, another ancient Armenian festival of love and marriage, which is celebrated in February, 40 days after Christmas, is *aghandz*, a snack made with roasted, salted grains, nuts, and different kinds of seeds. Married and recently engaged couples not only eat *aghandz* but also jump over a bonfire for good fortune.

Another symbolic dish is *harissa*, a thick porridge made from *korkot* (dried or roasted cracked wheat) and fat-rich meat. It is slowly simmered and stirred all night long to ensure a viscous consistency. Like other ritual dishes, the time taken for its preparation is part of its cherished value. *Harissa* is a symbolic dish of resistance that commemorates those who died during the Turkish siege of Musa Dag Mountain in the Adana Province of the Ottoman Empire, at the beginning of the 20th century. Survivors of the tragedy who still live in Armenia celebrate the deliverance of Musa Dag by sharing *harissa*. Over 100 cauldrons of *harissa* are cooked each year in September for crowds of up to 5,000 people. Overnight, participants take turns stirring the commemorative porridge.

Food is also central in Armenian mourning customs. It is customary not only to have a wake after the burial but also to get together again 7 days after the death, and again 40 days later. In the strong belief that when food is shared or given, it is a comfort to the souls of the dead, families take food to the cemetery and leave it there as a *hogebazhin*, literally “soul-part.” The rising cost of living has made it difficult for many to honor their dead lavishly, but the pressure not to lose face obliges them to lay the food table, at least for a close circle of people.

The most important time in the entire year is the New Year holiday, that special time when the dinner table should be loaded with sweet treats representing optimism for the future. The essential part of Armenian celebrations is drinking and toasting. Because Armenia is famous for its brandy and, to some extent, wine, there has been a broad misconception that

Armenians are avid consumers of wine and cognac. In fact, they mostly drink vodka. *Tti oghi*, mulberry vodka, is considered a real man’s vodka. Another strong, time-honored alcoholic drink is vodka made of cornelian cherries, *honi oghi*. Vodka consumption is three times higher than wine consumption. One might blame the Russian influence, along with the availability of low-priced vodka. In recent years, local consumption of wine has increased due to aggressive marketing campaigns by the Armenian wine industry.

Armenians invest a special symbolism in their brandy, the best of which matures in oak barrels for a minimum of 10 years. The sale of the national brandy factory to the French Pernod Ricard company caused a heated debate in Armenia. To its credit, Pernod Ricard modernized the factory, promotes Armenian brandy internationally, and supports Armenian farmers by using only local varieties of grapes for its brandy production.

The line by the legendary Armenian bard Sayat Nova, “If one gives you bitter bile, you, in return, serve him with a sweet,” encapsulates the symbolic importance of sweets in Armenian culture. With a flourishing pastry business in modern Armenia, many urbanites prefer buying ready-made pastries from shops instead of baking them. But still, for special occasions, women make them from scratch at home to show off their baking skills. *Gata*, a mildly sweet, flat coffee cake, is a traditional Armenian pastry. The most popular type contains *khORIZ*, a layer of filling made from flour, butter, and sugar. Simpler versions of *gata* used to be a popular snack carried by travelers since it keeps for a long time. Ornate *gatas* made for weddings and ceremonies were imprinted with decorative designs.

Gata

Dough

- 1 tbsp dry yeast
- 1 c sour cream
- 1 c butter
- 1 egg

- 1 tbsp vegetable oil
- 1 tbsp vinegar
- 3 c sifted flour

Filling

- 1 c butter, melted
- 2 c sifted flour
- 1¼ c sugar
- ½ tsp vanilla

Glaze

- 2 egg yolks, beaten

To make the dough, combine the yeast with sour cream. Set aside for 10 minutes. Add the butter, egg, oil, and vinegar. Mix well. Add flour gradually. Knead the dough well. Refrigerate overnight.

To make the filling, mix butter and flour. Add sugar and vanilla. Stir well.

Preheat the oven to 350°F. Divide the dough into 8 equal balls. Roll each ball out as thinly as possible. Brush each sheet with melted butter. Cut the sheet in half, and fold each half into a square. Spread filling in the center, and fold the square in half. Press along the edges to seal in the filling. Roll out the square until it is ½ inch thick. Place pastry about 2 inches apart on a lightly floured baking pan. Brush the surface of each pastry with the beaten egg. Bake until golden brown. Remove pan from oven and allow the pastries to cool.

Diet and Health

Armenian food culture is deeply embedded with medical beliefs and prescriptions for good health. In old times, treatment with food was often the only hope for recovery, not just in rural households, but also in towns. The first hospital did not open in Yerevan, the capital of Armenia, until 1890.

Myths about the healthy qualities of herbs are passed from generation to generation. A person who did not know the medicinal and healthful values of herbs and plants was offensively called *angitats*,

“ignorant,” by Amidovlat Amasiatsi, the 15th-century Armenian physician. Mhitar Heratsi, a famous Armenian physician of the 12th century, mentions in his writings the primacy of food for survival in both the healthy and the sick.

Fruits are rich in vitamins, and doctors prescribe them for people on low-calorie diets. Armenians used many foods not only to prevent illness but also to cure diseases. Jerusalem artichoke, *getnakhdzor*, is a good substitute for potatoes and starches in diabetic diets. It is sold in large bags during August and September and advertised as a natural insulin. The Chinese date (*Ziziphus jujuba*), called *unab* in Armenian, is a medicine for high blood pressure and chronic cough. Hawthorn, *alotch*, is known as a treatment for heart conditions and high blood pressure.

Meat did not figure prominently in the traditional Armenian diet, not only because it was unaffordable to peasants but also because meatless religious fasts were strictly obeyed by the faithful. In the past, fasting was strictly followed in Armenian communities. Devout Armenians abided by the dictates of the Armenian Orthodox religious calendar and not only fasted before major holidays but also kept weekdays as abstention days. Keeping off meat and dairy products for 158 fast days freed up more resources to be given and distributed to the village community on festive days. Feasting was an extreme activity because it was about overindulgence following the periods of hunger, plus the value placed on

Broiled fish from an Echmiadzin restaurant in Armenia. (Corel)

certain foods was heightened because they were denied for so long.

Rarely do modern Armenians fast as they did in olden times. Some families do make minor changes to their diets, such as replacing butter with oil or showing a preference for kidney beans or herb soup in the period before Easter or Christmas. The modern pattern of overeating at parties and consuming generous portions of meat, when it is available and affordable, harkens back to the ascetic practices of fasting and abstinence followed by heavy feasting in Armenia.

Austria

Overview

If geography is destiny, as some historians believe, then Austria proves the case, at least in respect to its gastronomy. The republic, an area of approximately 32,377 square miles, lies in southern central Europe. It is landlocked and bordered by eight countries, many of which, or portions of which, were part of the vast Austro-Hungarian Empire at its peak of central European domination in 1914. These include Germany, the Czech Republic, Slovakia, Hungary, Slovenia, Italy, Switzerland, and Liechtenstein. Austrian culture, and, in particular, its food culture, draws from all of these neighbors and more. It seems that all who passed through this central hub over the past two millennia left their imprint on the land and its cuisine.

The Danube, the second longest of Europe's rivers, flows eastward as it meanders through Austria's western and north-central plains and valleys, then constricts through the Wachau Valley before passing through the Vienna Plains as it heads toward Hungary. The Danube has long been a major byway between central and eastern Europe, transporting ships, great barges laden with goods, and travelers. With the completion of the 106-mile Europa Canal connecting the Rhine and Main rivers of Germany with the Danube in 1992, a direct shipping passage now allows transport of goods from the North Sea to the Black Sea.

Because of Austria's central location, plains, and waterway, perhaps no other country in western Europe has been, from its earliest beginnings, so traversed by others. Countless groups passed through and often settled within the flexing borders of this

great commercial hub. Etruscans, Visigoths, and Romans inhabited what is now Austria. In 500 B.C., Celts came to extract salt from its mines, later yielding them to the Romans, who, in 15 B.C., settled Vindobona, a military outpost that grew into present-day Vienna. Later, Slavs, Turks, Huns, Magyars, and Bohemians invaded. In recent years, refugees from eastern Europe and the former Soviet Union have sought harbor in this generous and neutral land. Each of these groups has left its mark on Austria's culinary heritage.

Austria became one of Europe's strongest powers under the long-reigning Babenberg and Hapsburg emperors, the latter having ruled the country from the 1200s until 1918, and uniting its nine independent provinces. Throughout a succession of wars and conflicts, the empire's boundaries were redrawn many times. By the early 1900s the Austro-Hungarian Empire had expanded to become the largest power of all of Europe. But following its defeat in World War I, Austria was reduced to its current size, which is slightly smaller than the state of Maine.

The Federal Republic of Austria consists of nine provinces: Vienna, Burgenland, Styria, Carinthia, Tyrol, Vorarlberg, Salzburg, Upper Austria, and Lower Austria. Each has a distinct geography and culinary specialties. The country's terrain is two-thirds alpine, with northern highlands that form part of the Bohemian massif and lowlands to the east. The Alps dominate the western and southern regions of the country. Though most of the area is covered with forests and mountains, the country is almost fully agriculturally self-sustaining. The flatter northern and eastern parts hold the greatest

concentration of the population, with 67 percent living in urban areas, yet Austria's smaller towns and villages are considered to be among the most picturesque and livable in all of Europe.

Today, tourism is a pillar of Austria's economy, and the country's varied cuisine and high-quality wines are an important attraction. Viennese pastries, first prepared by the pastry chefs of the emperors, are among the country's most famous contributions to world cuisine, but many other specialties are also renowned.

Austria's population in 2007 totaled 8.3 million inhabitants, with an annual growth rate of 0.4 percent. Ethnic groups included Germans, Turks, Serbs, Croats, Slovenes, and Bosnians; other recognized minorities included Hungarians, Czechs, Slovaks, and Roma. The major religions are Roman Catholic (73.6%), Lutheran (4.7%), and Muslim (4.2%). All but 10 percent of Austrians speak German as their primary language. Sizable concentrations of Croatian (in Burgenland), Slovene (in Carinthia), Hungarian, Czech, and Slovak minorities live within the country, with the preservation of their language and culture guaranteed by Austria's constitutional law. Literacy is high (98%), as is life expectancy (76.6 years for men and 82.6 years for women). In 2007, 4.2 million were employed in Austria's workforce, with 67 percent performing service jobs, 28 percent engaged in industrial work, and 5 percent in

Close-up of coating a raw veal cutlet in breadcrumbs to make Wiener Schnitzel. (Carmen Steiner | Dreamstime.com)

agriculture and forestry. As of 2006, Austria was the fourth-richest nation among all European Union countries in terms of its gross domestic product per capita. In 2008, Austrians' per-capita income was the 16th highest in the world, according to World Bank figures.

Food Culture Snapshot

Johann and Annamarie Baumgartner have a home on the outskirts of the industrial and contemporary arts city of Linz, in Upper Austria. Johann is an accomplished violinist and plays in a major orchestra as well as teaching at a private music university. Annamarie is a physical therapist and works with children and adults with physical disabilities. The Baumgartners' twins, a son and daughter, attend a renowned public technical high school, where Felix studies information science and Catarina studies communications. Annamarie, Felix, and Catarina are avid amateur musicians and each play one or two instruments, so the family enjoys making music together, whether at home or at gatherings of family or friends.

Annamarie does all of the cooking, with some help from Catarina and Felix, and Johann and the children welcome a variety of foods, including Austrian traditional fare and foreign specialties. On vacations, the family has hiked in the neighboring Alps and Dolomites in several nearby countries. Johann has also traveled extensively throughout Europe and England for musical performances and has a cosmopolitan appetite. Although they occasionally order pizza or chicken takeout, the family reserves fine dining for special occasions. There are many excellent restaurants in Linz, and Salzburg, with its fine offerings, is only about an hour's drive from Linz.

Linz has a wide variety of stores available for food shopping, from large supermarkets to artisanal food shops where Annamarie can find excellent local produce in season or imported produce throughout the year; top-quality meats, fowl, and freshwater fish; excellent cheeses and dairy products; and many kinds of spices and condiments. She buys organic products as much as possible. There are excellent bakeries in the city, and specialty stores feature many types of foods

and specialties, so she has a wide selection of food to inspire her cooking. She especially enjoys preparing Italian dishes, especially when fresh, vine-ripened tomatoes are available. She has collected many recipes from magazines and has several favorite cookbooks from which she prepares Austrian, Hungarian, French, and Italian dishes.

Because of Austria's diversity and wealth, and the resulting range of choice, it is difficult to typify an Austrian family and its food habits and cooking styles. However, as most Austrians live in cities or large towns, the typical urban-dwelling family has access to good farmers' markets, supermarkets, local bakeries, and specialty stores. Most are likely to keep coffee or tea, yogurt, fruit, milk, rolls, bread, butter and jam, and perhaps packaged muesli or whole-grain cereal, as well as cheese and sliced sausage, on hand for a light early breakfast or late-morning snack consisting of any combination of these foods.

A home cook might choose veal, chicken, beef, pork, fish, or sausage to prepare for the entrée of the main meal. Wiener schnitzel (breaded veal cutlets fried quickly in butter), or one of its many variations, is a typically popular dish. It is frequently available prepared, along with various other entrée choices, at deli counters in larger supermarkets and specialty food stores. Vegetables, noodles, potatoes, rice, or dumplings might accompany the main course, and for these, a home cook might have purchased potatoes and other vegetables (fresh in season or frozen) at a local market or supermarket. Convenience foods and packaged mixes abound in today's Austrian supermarkets, and many busy home cooks keep them on hand and use them readily. For the salad that may accompany or follow the main course, lettuce, cucumbers, and tomatoes are available much of the year owing to imports and greenhouse production.

Many Austrians, particularly city dwellers, often take a mid- or late-afternoon break for coffee and a snack, such as a delectable pastry enjoyed at a favorite coffeehouse. Coffeehouses have been a distinctive part of Austrian social culture since soon after coffee was introduced in Vienna. A Polish hero, Franz George Kolschitzky, purportedly opened the first coffeehouse after the failed siege of the Turks in 1683. The Turks, for whom coffee was a customary beverage, fled so

quickly they left behind sacks of beans; Kolschitzky, a translator, at first tried to sell the beverage as the Turks prepared it: ground and boiled several times. Only when he strained it and served it with added milk did it gain acceptance. Today, coffeehouses are popular venues for breakfast, light lunches, or snack meals in the late morning or afternoon.

For light suppers, cold meats, cheese, or smoked fish might have been purchased at the market, to be served with bread and a variety of sauces or condiments such as a range of mustards. Fruit, fresh or stewed (sometimes with rum, as for the traditional *Rum Topf*), served either alone or with heavy cream, is a popular dessert, as are strudels, fruit-filled flaky pastries with or without *Quark* (a smooth, fresh sour cheese, not unlike yogurt). Wine, beer, fruit juices, and mineral water are the common beverage choices.

Austrian home cooks buy a variety of cooking vegetables, herbs, cheeses, and condiments to keep on hand. These include onions, red and green cabbage, chives, mustards (of which there are a great variety, including sweet, horseradish-flavored, spicy, and wine- or herb-flavored types), and spices or packaged spice mixtures. For the spice rack, a home cook would have parsley (for soups); caraway, paprika, and marjoram (used in making meat stews and Hungarian goulash); and cinnamon (for rice puddings and compotes). Fresh or dry lovage might also be purchased for use in soup stocks or in dishes calling for a light celery accent. Lemons accompany some schnitzels or are purchased for the rind to be used in flavoring desserts.

Lean, dry cured or smoked ham called *Speck* is purchased for seasoning many dishes such as noodles and dumplings. Home cooks buy eggs to have on hand for omelets, soufflés, soups, and puddings. Freshwater fish (carp, pike perch, lake trout, and salmon) and chicken are prepared in many traditional ways, and turkey has gained popularity as a substitute for chicken or even veal. Beef, especially cut for *Tafelspitz* (a distinctive boiled beef dish prepared from a special cut of fine-grained meat from the leg), and pork are also popular. Good-quality veal is plentiful and is used for schnitzels, though chicken, pork, and turkey are also frequently used for this popular breaded and panfried meat preparation. Lamb is neither as plentiful nor as popular as other meats.

Sour cream and whipping cream are staples for cooking. Cheese purchases in 2001 averaged 10 percent of a household's fresh-food bill. Austrian cheeses have received many world cheese awards. Popular cheeses include Quark, Pinzgauer Bierkäse, Salzkammergut Käse, and Vorarlberger Bergkäse.

Major Foodstuffs

Farms are mostly family owned and small (45 acres, or 18.4 hectares, in 2005) in comparison with the U.S. average (445 acres, or 180 hectares). The average dairy herd is comprised of just 12 cows. Still, Austria's self-sufficiency for major agricultural products exceeds 100 percent. The top three products are beef and veal, drinking milk, and sugar. Self-sufficiency is lower for poultry, fruit, and vegetables. The total value of Austria's agricultural production in 2006 was 5.68 billion Euro (US\$8.4 billion), with a little over half from animal production and the rest from plant production. About 5 percent of the nation's gainfully employed persons worked in agriculture or forestry.

Austria's agricultural production includes cereals such as maize, wheat, and barley, much of which is grown in the eastern plains. Oilseed production, including rapeseed, sunflower, soybeans, pumpkin, poppy, linseed (flaxseed), safflower, and sesame, has been increasing since the mid-1990s. Root crops such as potatoes and sugar beets are also plentiful.

Organic fruit display at a farmers market in Austria. (Shutterstock)

In 2006 about 835,000 tons of fruit were harvested from intensive and extensive fruit farming, with apples, plums, peaches, apricots, pears, and garden strawberries of major importance. Viticulture in Lower Austria, Burgenland, Styria, and Vienna has a long tradition dating back to the Roman age. Production and exportation of Austrian-produced wines are both on the rise.

Mountain farmers are federally subsidized to assure quality, agricultural continuity, and food security. Thus, especially for mountain farmers, milk and cattle production constitute a major source of income. Grazing lands are cultivated organically, and Austria is recognized as a leader in high-quality dairy and cheese production.

Livestock of predominantly combined milk/meat breeds are bred, and beef production exceeds domestic consumption by 40 percent. Pork production meets domestic consumption needs, and poultry and egg production nearly do (84% and 74% respectively in 2005). Sheep farming has been on the increase since 1975; most lamb is sold via direct marketing.

Domestic production of fish is limited to freshwater species such as trout and carp. Seafood consumption is rising due to health awareness, and marine fish, shellfish, and crustaceans are imported from other European suppliers such as Italy, Germany, the Netherlands, Denmark, and Norway.

In 2005, Austria ranked third among the top European spenders for organic foods. About 15 percent of Austria's agricultural land is certified organic, and the Ministry of Agriculture, Forestry, Environment and Water Management encourages further development of organic production through active agri-environmental research and marketing assistance. The number of organic farms is on the rise, and in recent years, Austrian consumers have increasingly favored *bio*, or organic, ingredients and products for home cooking.

Cooking

Kitchens range from basic to ultramodern. Cooktops and ovens are heated by electricity or natural gas or by propane in more remote locations. In a corner of the kitchen there is often a nook with a

table and built-in bench seating at which the family eats its daily meals. In addition, a formal dining room, where fine dinnerware may be kept in a freestanding buffet, is a common feature of many homes. The extended family traditionally gathers for a large midday meal on at least one weekend afternoon, usually with the eldest woman or women doing the cooking. Outdoor grilling of meat, sausages, or fish may be done by men or women.

The female head of the family traditionally prepares the daily meals, possibly with her daughters' assistance. Children of both sexes often are expected to help with setup and cleanup. Today, many working couples, with or without children, may share in preparation and cleanup duties.

Soups and stews are simmered on modern stoves and cooktops. Meats and fish may be roasted, fried, or grilled in roasters, grills, or frying pans. For example, chicken paprika, roast chicken with paprika sauce that came from Hungary, is a popular Austrian dish. In some health-conscious homes, whole grains for use in baking are milled using a small household grain mill. Many home cooks enjoy baking, although working women have fine bakeries from which to choose a wide variety of baked goods, and they very often do. Potatoes are commonly served boiled or roasted. *Nudeln* (noodles) and various forms of dumplings, are common starch accompaniments. Rice is also served but not as often as potatoes.

Typical Meals

A light, early breakfast (*Frühstück*) in Austria might consist simply of a roll with butter and jam; bread with sliced cold meats or cheese; or cereals with milk or yogurt, all accompanied by coffee, tea, cocoa, or fruit juice. Traditionally, those who have eaten their breakfast early might take a break from their work around 10 A.M. to have a second light meal (*Gabelfrühstück*) consisting of a sausage or other snack.

Noontime has traditionally been when the main meal of the day (*Mittagessen*) is served at home, in a restaurant, or in a workplace cafeteria. Today's busy work schedules allow less time for a leisurely,

multicourse noontime meal, however, so a quicker and lighter meal may be taken at noon, with a more relaxed larger meal consumed in the evening. Whenever it is served, the main meal might consist of soup and a main course followed by a small salad of mixed vegetables with lettuce and a dessert.

Stews or roasted, grilled, or panfried fish or meats such as veal, beef, or pork are most commonly served for the main meal entrée. Schnitzels (breaded and fried veal, pork, or chicken cutlets) are very popular entrée choices. Root vegetables or green vegetables in season or from hothouses, and noodles, potatoes, or dumplings (large, boiled ones, or tiny ones, such as *Spaetzle*) usually accompany the main course, and the meal may be served with bread. Some restaurants add a small cover charge for a dinner roll with butter. A small mixed-vegetable salad, either in vinaigrette or mayonnaise, may follow or accompany the main course. Wine, beer, or mineral water is also served. Wine is most popular in the eastern provinces, and beer is favored in the west. The meal concludes with dessert, which Austrians, and particularly the Viennese, enjoy immensely. Today's increasingly health-conscious Austrians might favor fruit desserts, but cakes, sweet dumplings, and puddings, as well as strudels and other pastries, are also served.

Many Austrians, particularly city dwellers, often take a midafternoon break to enjoy *Jause*, a light snack of coffee and a delectable pastry enjoyed perhaps at a favorite coffeehouse. Coffeehouses are also popular for breakfast, snacks, or light lunches. A more elaborate afternoon social gathering, like an English tea, including small sandwiches, cakes, and coffee or tea and enjoyed either in a home or in a coffeehouse or café, is also called a *Jause*.

For the evening meal (*Abendessen*)—traditionally consisting of lighter fare unless the main meal could not be eaten at noon—cold meats, sausage, cheese, or smoked fish might be purchased, then served with bread and condiments such as a selection of mustards. Or leftovers from a heavier meal might be served. Wine, beer, and fruit juices are the beverages of choice.

The food of Vienna is among the most cosmopolitan of all of Europe, with especially strong influences from Hungary, Bohemia, and Italy. Starters

may include clear soups, perhaps with strips of cooked egg or small dumplings, noodles, vegetables, or sausage. For main courses, the popular Wiener schnitzel, a breaded cutlet of veal that is fried, is served with potatoes. Favored stews include *Gulyas*, a thicker variation of the paprika-spiced Hungarian goulash. Austrian *Gulyas* is mainly made from beef, veal, or pork, but one famous restaurant in Vienna specializes in *Gulyas* and prepares it with beans, mushrooms, turkey, fish, or chicken livers and even offers a vegetarian version. *Wiener Backhendl*, lightly breaded fried chicken that is served with lemon, is also a popular Viennese specialty.

Wiener Schnitzel

Meaning “Viennese slice,” Wiener schnitzel is a breaded meat cutlet. It can be made of veal, pork, or chicken. Schnitzels are enjoyed in Germany as well as Austria, but a true Viennese Wiener schnitzel is a thinly pounded, perfectly crispy veal cutlet that’s been fried in butter or a mixture of butter and oil and is then garnished with lemon and possibly anchovies, capers, and parsley.

To prepare Wiener schnitzel, allow one 6-ounce cutlet per person. Fill the bottom of one large salad plate with flour, and fill a flat soup bowl with beaten eggs to which a splash of water has been added, and then a second salad plate with crispy breadcrumbs.

Pound the cutlets evenly on both sides with a meat mallet until about $\frac{3}{8}$ inch thick; they will spread out in size considerably. Lightly season the meat with a sprinkling of salt and pepper. Dip each first into the flour (patting off extra), then into the egg (allowing the excess to run off), then into the breadcrumbs—again shaking gently to remove excess. Make sure that all the meat is covered with crumbs. (If a thicker coating is preferred, dip the crumb-coated meat back into the egg, then into the crumbs a second time.) Place the breaded cutlets on a cake rack as you coat them, then chill on the racks, uncovered, in the refrigerator for about 20–30 minutes before cooking. This will dry the coating slightly to assure a crispy crust and moist meat.

Heat a frying pan large enough to accommodate one or two cutlets at most. When hot, add enough butter (or half butter and half canola or other oil with a high smoke point) to coat the bottom of the pan to at least $\frac{1}{8}$ inch. When the butter begins to foam, or the oil and butter combination ripples with heat (do not allow it to smoke), put cutlet(s) in the pan and fry each side for a few minutes just until browned. Additional butter may be required before each turning. Keep cooked cutlets hot in a prewarmed oven until serving. Garnish with sliced lemon and a parsley sprig, along with a few capers and an anchovy, if desired, and serve with parsley-buttered potatoes.

Viennese pastries are world famous, and there are said to be over 100 varieties of cakes made. These include the famous *Sachertorte*, a chocolate cake with apricot filling; *Erdbeeroberstorte*, or strawberry cream torte; the layered *Dobostorte* that originated in Hungary and is frosted with chocolate buttercream; *Malakofftorte*, or ladyfinger torte with rum cream; and *Esterhazytorte*, or a Hungarian-style wafer torte filled with chocolate mousse and apricot jam. In addition, there are various strudels, or rolled flaky pastry filled with fruit or sweetened cheese. These also originated in Hungary, and the most famous of these is *Apfelstrudel* (apple strudel).

Viennese cuisine sets the national standard, and many of its dishes are served throughout Austria.

However, each of Austria's nine *Bundesländer*, or federal states, boasts its own specialties. A marketing initiative, GENUSS ("Region of Delight"), led by the Ministry of Agriculture, Forestry, Environment and Water Management, aims to bring visibility to the culinary specialties of each region.

Vorarlberg, the westernmost federal state, is related more closely to Switzerland in respect to gastronomy than it is to the rest of Austria. The mountainous region produces over 40 cheeses, many of which win awards in international cheese-making competitions. Cheeses and plenty of carbohydrates find their way into hearty Vorarlberg dishes. One of the most popular is *Käsknöpfe*, or cheese noodles made with potatoes and regional cheeses. Others include cheese dumplings and fried breads.

The Tyrol, which is also mountainous, is known for its fortifying foods as well. These include dumplings made with ham, spinach, and *Graukäse*, or Tyrolean mountain cheese. *Kaspressknödel*, a cheese dumpling, is served in soup or with sauerkraut. *Tiroler Gröstel*, a hashlike mixture of meat, potatoes, onions, and herbs, and *Melchermuas*, a large dessert pancake, are two dishes that are traditionally served in the heavy cast iron pans in which they're cooked. *Kiachl*, doughnut-like fried cakes, are another favorite specialty of the region.

The federal state of Salzburg encompasses the beautiful Salzkammergut Valley with its many beautiful lakes. The northern part of Salzburg leans toward Bavarian influence, whereas the southern part is alpine and Tyrolean influenced. Because of its long independence under the rule of Catholic archbishops until 1816, the cuisine of Salzburgerland has been influenced greatly by church practices, particularly during Lent.

In the southern part, meals are cheese-centric with very little meat or fish, with the exception of *Tiroler Leber mit Polenta*, or calf liver fried with onions and served over cooked cornmeal. Tyrolean mountain valleys produce wild mushrooms that are popular in dishes such as wild mushroom stews. Local fruits and berries are blended into sweet dumplings of Bohemian origin. *Nidai*, or fried potato dough, and *Schlutzkrappen*, or spinach ravioli with butter and Parmesan cheese, are also specialties of the region.

Salzburgerland's northern lakes yield fresh fish and crayfish. The best Austrian beers are produced here. Perhaps the most famous Salzburger specialty is *Salzburger Nockerl*, a light, sweet soufflé that is dusted with vanilla-flavored powdered sugar.

Upper Austria's specialties include its dumplings, which may be made of wheat flour or potato and are filled with sweet or savory fillings. Sauerkraut and cabbage salads and potatoes are frequent Upper Austrian accompaniments. *Linzertorte*, a raspberry jam-filled almond-flour cake from Linz, is a popular pastry that is served throughout the country. Schnapps and *Most* (apple or pear cider) are also specialties of the region.

Specialties of Carinthia, Austria's southernmost province, include *Schlutzkrappen*, cheese ravioli with mushrooms; *Kasnudeln*, potato ravioli filled with Quark and mint; *Ritschert*, a bean and barley stew flavored with smoked meat; and *Reindling*, a traditional cake filled with cinnamon, sugar, and raisins.

In Styria there are vast vineyards and pumpkin fields. Light omelets, both savory and sweet, that are torn before serving are a specialty. Collectively, they are known as *Schmarrn* and include the most popular, *Kaiserschmarrn*, a sweet pancake-like omelet with raisins that is served with fruit preserves. Savory specialties include *Steirisches Wildschweinerne*, or wild boar simmered with onion, root vegetables, and spices; and *Heidensterz*, or fried buckwheat groats with cracklings. Pumpkin seeds and pumpkin oil are produced in Styria and used for salads and to garnish pumpkin soup. Many fruits and nuts are grown in Styria.

Lower Austria possesses world-famous vineyards along the Danube Valley. The region's specialties include white asparagus, venison, pheasant, boar, rabbit, poppy seeds, and apricots.

Burgenland's broad plains came under Hungarian administration in the days of the Austro-Hungarian Empire. Carp, pike perch, chicken, duck, and goose are popular dishes. Wild mushrooms, wild asparagus, and polenta are widely used in this wine-producing region. A favorite dish is *Eszterhazy-Rostbraten*, filet of beef with a root vegetable and sour cream sauce. *Mohntorte*, or poppy seed cake, is also a specialty.

Kaiserschmarrn, a sweet omelette with raisins and served with fruit preserves. (Shutterstock)

Eating Out

Stift St. Peter Weinkeller in Salzburg, founded in the year 803, is the oldest inn and restaurant in Europe. The monastery and wine cellar are chronicled in the writings of Alcuin, Charlemagne's leading adviser. Austria has long been a mecca for dining and today offers many excellent restaurants from which to choose.

Many types of restaurants can be found, and although most meals are prepared at home, Austrians love to dine out and usually have favorite local restaurants they especially enjoy. A *Heuriger* is a rustic wine tavern, often associated with a winery. Many can be found in the suburbs of Vienna such as Stammersdorf, Grinzing, Semmering, Nussdorf, Neustift, and Ottakring, as well as in other wine-producing areas throughout the country. Foods served at these pleasant wine-garden restaurants are generally limited to cold buffet items and are accompanied by the slightly spritzy new wine of the latest vintage. Folk music known as *Schrammelmusik* is featured in many Viennese Heurige. Few evenings in Vienna can be more memorably spent than with good food and wine, and the lovely Austrian tunes one enjoys at a Heuriger.

For a light meal, there is a *Kaffeehaus* or *Konditorei*. Similar to a café, a coffeehouse is a social gathering place that specializes in coffee drinks and pastries but often offers light lunches as well. A *Konditorei* specializes in pastries and confections,

though many such shops have expanded their menus and now resemble cafés.

Biesl are cozy restaurants where typical Viennese specialties are served. These might include Tafelspitz (boiled beef with horseradish applesauce), *Beuschel* (stewed organ meats: calf lung and heart served with a bread dumpling), *Leberknödel* (liver dumplings), or other dishes. A *Wurstlstand* is a street stand at which steaming sausages with rolls and mustard and other condiments may be bought throughout the evening. They are mostly found in the larger cities. In addition to various casual dining choices such as these, there are fine-dining restaurants as well, and many Austrian chefs have been recognized around the world for their creativity and skill. There are numerous Michelin-starred and other highly rated choices.

Special Occasions

Austria is nearly two-thirds Roman Catholic, and the church's holy days are observed, with Easter, Advent, and Christmas being special times for family gatherings. For Easter, braided breads with raisins are enjoyed at the Easter dinner, for which a whole suckling pig, ham, lamb, or rabbit may be roasted. Dessert might be a special cake such as Sachertorte, a chocolate cake with apricot filling and dark chocolate frosting.

At Christmastime, a pre-Christmas fast may be observed, and on Christmas Eve and Christmas Day, families celebrate with special meals, mulled wine, and Christmas cookies shaped like stars. For Christmas Eve supper, a light meal of clear or vegetable soup, fried carp, potatoes, cucumber salad, and mushroom rice may be served before the family attends midnight mass. On Christmas Day, some families still serve the traditional roast goose with red cabbage, potato dumplings, and dried fruit-studded Christmas breads and sweetmeats. But in some homes, turkey or Wiener schnitzel may be substituted.

For New Year's Eve, the extended family will gather for a noisy and fun celebration. Good-luck charms such as marzipan pigs may be given, followed by champagne or sparkling wine at midnight, and dancing. New Year's Day will be quieter, with many enjoying the annual Vienna Philharmonic

Orchestra's New Year's concert from Vienna on television.

Many cities also celebrate patron saints' feast days. In Burgenland, for example, roast goose is served on Martinsdag, or St. Martin's Day, on November 11. In fall, vintage festivals are held in various wine-producing areas.

Diet and Health

An old Austrian epithet advises against eating too much and too late: "Frühstücken wie ein König, zu Mittag essen wie ein Bürger und zu Abend essen wie ein Bettler" (Eat breakfast like a king, lunch like a townsman, and dinner like a beggar). During World War II and the subsequent occupation, rationing was severe and Austrians didn't have much to eat at all. Following the war, sugar, butter, and other goods became available, and some Austrians overcompensated for their wartime deprivation. The national sweet tooth grew with increasingly available and excellent pastries and confections. Although the daily consumption of sugar in Austria remains somewhat higher than in many other European countries, it has declined in recent years.

The Austrian diet today is generally well balanced, although still excessive in carbohydrates and fats in some regions, leading to the development of diabetes, high blood pressure, and heart disease in some people. Austrians in general, however, are very active and healthy. Many Austrians today, particularly younger, better-educated, and health-conscious citizens, enjoy sweets in moderation and engage in activities such as walking, hiking, cycling, skiing, and other cardiovascular exercise in order to maintain their energy intake/output balance. With their high life expectancies, most Austrians live long, productive lives. Many might gladly admit that they also live very well.

Basque Territory

Overview

The Basque territory occupies an area that spans adjacent sections of northern Spain and southwestern France, and the population is around three million. It comprises three provinces in France: Lapurdi (Labourd), Nafarroa Beherea (Basse Navarre), and Zuberoa (Soule), and four in Spain: Bizkaia (Vizcaya), Gipuzkoa (Guipúzcoa), Araba (Alava), and Nafarroa (Navarra). The first three Spanish provinces are autonomous, having a large degree of self-rule at the provincial level. Navarra has a different legal status, allowing it to join the other three by a popular vote. Thus far that has not happened. The Basque word for Basque country is *Euskadi*, meaning “land of the Basque speakers.”

The Basque civilization is ancient and enigmatic. Its exact origins are unknown, and the Basque language (Euskara) is unlike any other spoken on Earth. Research suggests that Basques may descend from the earliest human settlers of the region, predating Indo-European arrivals, since the Basque language is the only surviving pre-Indo-European language in Europe. The Basque people have never had a country of their own, although the medieval Kingdom of Navarre might qualify, yet they have managed to preserve their language and rich culture over the course of millennia. Throughout history they have existed with various degrees of autonomy from and varying levels of hostility toward different rulers and the many invading armies that have passed through the region, all of which have influenced their culinary traditions.

Much of the terrain in Basqueland is rugged, so agriculture has historically mostly been limited to

small plots and grazing, though the river valleys are quite fertile. The relative austerity of the land has made the sea a central focus for Basque culture and food. Basques have been famous throughout history as mariners and anglers; they made early contact with Vikings and may have had a significant presence in the Americas before Christopher Columbus arrived. Several members of Columbus’s crew were Basque, as were many of the men who crewed the Spanish Armada.

Food and cooking are centrally important to Basque culture; a passion for cooking and eating is a defining characteristic of the Basque people, and they are fiercely proud of their culinary traditions and accomplishments. Basque cuisine has benefited from many influences. The cuisines of France and Spain are obviously important, and before them the Romans and Moors brought ingredients and cooking techniques. From the Vikings, the Basques learned about cod and the location of the great fisheries off of northeastern North America. Basques eagerly adopted peppers, both sweet and hot varieties, as well as tomatoes, chocolate, and spices from the Americas into their cooking. The very inclusive and open-minded attitude toward ingredients and an improvisational streak that always tinkers with and tests new possibilities accounts for the quick adoption of New World foods.

Food Culture Snapshot

María and Esteban Etxeberria live in Bilbao. María works as the office manager for an architecture firm, and Esteban is an accountant. They have two sons in grade school. As middle-class residents of a bustling city,

their dietary habits are broadly reflective of their fellow urban citizens. Their day typically begins with coffee or hot chocolate with croissants, cold cereal, or a baguette with butter and jam. Most Basque families eat lunch together every day; schools let out for two hours at lunchtime, busing kids home, and many businesses close for the same period. Lunch will usually be a soup, freshly made or reheated, followed by sandwiches or, time permitting, a fish or meat stew, with cheese and fruit to finish. After the family returns from work and school at the end of the day, they have a snack: a simple sandwich, or tea and cookies or pastry. Dinner might be a whole grilled fish, a roast chicken with rice, or *marmitako* (a fish stew with potatoes). On a weekend, a slow-cooked lamb stew might make an appearance, or the family would go out to meet friends at a local bar for *pintxos* (as tapas are called here). Both parents shop for food, and it's often a challenge, since many stores are closed during the lunch break. They stock up on fresh produce, cheese, bread, fish, and meat as needed and make sure that the pantry is never without dried peppers, *bacalao* (salt cod), olive oil, and other staples.

As in the rest of Europe, supermarkets are gradually supplanting the traditional open-air markets, with shopping now done less often than the previous norm of every day. Supermarkets also tend to stay open throughout the day, allowing more opportunities for working people to shop there. As more women enter the workforce, traditional roles and institutions are changing in response. Home cooking was traditionally the exclusive territory of women, while restaurants, cider houses, and the all-male gastronomic societies gave the men a forum in which to cook for each other. Today, the traditional gender roles are much less strict than they used to be, especially in the more urban areas, but for the most part Basque women still spend an average of nearly twice as much time cooking and doing housework as men. These roles are best viewed in the larger context of Basque tradition, which is nuanced; women controlled domestic and civic finances and sat in the nave in church, while men had to sit up in the balcony.

Major Foodstuffs

Basque cuisine, like much of the territory, faces the sea. The areas farther inland feature more meat,

but it is from the sea that Basque civilization gained its sustenance and fortune. Basque country can roughly be divided into three geographic regions, each of which has a different type of cuisine. The coastal areas feature seafood of all types, treating it with a light touch so that the beauty of the catch can shine: usually grilled, baked, or sautéed with a simple sauce. This simplicity—letting the freshness and quality of ingredients speak for themselves—is a trademark of Basque cooking from any region and has proved very influential for modern chefs worldwide. Farther inland, in the mountains, meat (especially mutton and lamb) and game feature more prominently, along with cheese, foraged mushrooms, and legumes. The inland regions share more foods with Castilian Spain, especially beef, pork (including cured ham and sausage, like the famous chorizo), and the red wines of Rioja. The ease of transport today has allowed each of these formerly distinct culinary regions to borrow liberally from each other, making for a somewhat more homogeneous cuisine than in the past.

Seafood is central to Basque cooking, especially in the coastal regions. Tuna, cod, squid, crab, eels, and shellfish are all prized. Onshore, where other ingredients are more easily available, more complex preparations evolved. *Marmitako* is a traditional stew made from tuna, potatoes, onions, and peppers and is a perfect example of a now-classic dish that originated on fishing boats. Fresh tuna is gently stewed with the precooked vegetables so that all the ingredients are perfectly tender upon serving. Squid (*txipirones*) are often grilled or stewed in their own ink. Baby eels (*angulas*) are prized and very expensive due to scarcity and demand. The eels, hatched in the Atlantic, swim thousands of miles back to the same rivers their parents lived in. Caught in the fall, at about three inches long, they are usually quickly cooked *a la Bilbaina*, or Bilbao-style, in hot garlic-infused olive oil and then served immediately.

Salt cod, or *bacalao*, is one of the most important foods of the Basque people. Basques were originally whalers, hunting in the Bay of Biscay. Their success depleted the whale population, so they ventured farther north, where they met and traded with Vikings who told them of the great cod fishing grounds off of Newfoundland. One of cod's defining characteristics

is its lack of fat, meaning that if salted it will not go rancid over time. As a result of this, salt cod became both a crucial commodity and a means by which a ship could stay at sea for long periods without any fresh food. Salt cod offered a versatile meat substitute after the Vatican imposed a ban on Friday meat consumption, and it quickly became a staple all over Europe. Basques developed a wide range of dishes using salt cod that elevated this humble ingredient to luxurious heights. This, combined with their legendary marketing prowess and business acumen, helped to popularize cod all over Europe. As a result of cod, the ports, and manufacturing, the Basque provinces continue to be the wealthiest in Spain.

Basques were among the first Europeans to embrace the foods that colonists brought back from the Americas, among them tomatoes, peppers, and potatoes, all of which now form the basis of many dishes, including the classic *pipérade* (*piperrada*), a sauce of peppers, tomatoes, and onion, seasoned with dried hot Espelette peppers, and sometimes with eggs cracked in toward the end. Various kinds of peppers can be seen drying all over the region in the summer and fall, and they form an essential component of all kinds of Basque food. Fire-roasted *piquillo* peppers in jars are a principal export of the town of Lodosa in Navarra, and they are often stuffed with everything from seafood to sausage to cheese. *Piparras* are long, thin, slightly hot green peppers, often pickled like Italian *peperoncini*; they are natural accompaniments for ham and sausage. Probably the most famous Basque pepper is the *piment d'Espelette* (Espelette pepper), grown in the eponymous town in Labourd. Dried and ground, the complex heat and flavor of the peppers form an integral part of many Basque dishes, including the cured hams of Bayonne. Espelette peppers have received the *appellation d'origine contrôlée* (AOC) designation, in common with fine wines, that regulates exactly where any peppers bearing the name must be grown.

Corn and beans—two other imports from the Americas—were also thoroughly embraced by Basque cooks. Especially in Guipúzcoa, corn and beans are still often grown together in the American Indian fashion, allowing the beans to climb the cornstalks. *Talos* are thick corn tortillas used by farmers and shepherds to wrap their lunch, and

cornmeal is used in a variety of cakes. Beans are eaten both fresh and dried in a multitude of preparations. Among the most prized are beans that are mature but not yet dry; called *pochas*, during their short season they are often featured in a stew with quail. In Tolosa, the local black beans are called *alubias* and are so revered that the town holds an annual festival to celebrate them and vote for the best grower. The traditional Tolosan method of preparation is to simmer the beans in an earthenware crock with garlic and olive oil and then serve them on braised cabbage.

The varied landscape and climate of the Basque region are ideal for many species of edible mushrooms. Many Basques are avid mushroom hunters, especially in the spring and fall when the best conditions make for bountiful harvests. Among the most cherished species are truffles, *cèpes* (*porcini*), and a delicate species called *perretxiku*, which grow in the spring, but there are many more. Traditionally, and in keeping with the practice of minimal intervention, mushrooms are served simply: grilled, scrambled in eggs, or added to soup.

The Pyrenees and Cantabrians are home to deer, wild boar, and a number of species of game birds. Venison is a popular ingredient in sausage and is also often grilled and served with one of the traditional sauces. Boar is also used in sausages and to make *civets*, or stews. In the steep mountain passes, a unique method of bird hunting has evolved: White decoys—which doves mistake for hawks—are thrown into the air. The birds respond by flying down close to the ground, where they are caught in nets stretched across the narrow ravines. The doves are usually served grilled or stewed.

Basques have been shepherds since before recorded history. Goats are rarely kept, which explains the relative scarcity of Basque goat cheeses, but sheep are ubiquitous. Lamb is an integral part of any special meal, often roasted whole or quartered on iron stakes driven into the ground next to a large fire. Lamb is also commonly made into stews and sausages. A dish using both methods, and highlighting the resourceful frugality at the core of traditional Basque food, is *txuri-ta-beltza*, or “black and white.” The small intestine of a lamb is cooked, chopped with garlic and onions, bound with eggs,

and stuffed into the large intestine. The sausages are then gently stewed in the lamb's blood. Poultry is widely raised, though eggs tend to feature more prominently in Basque cooking than do the birds. The pink-and-black Basque pig was very nearly extinct in 1981, with only 20 left in the world. A few enterprising producers brought the breed back into widespread use, and now many of the great hams of Bayonne are made from Basque pigs.

Bayonne ham (*jambon de Bayonne*) has received a Protected Geographical Indication from the European Union and is thus carefully regulated in all aspects of its production. The pigs from which the jambon de Bayonne is made are free-range, foraging for tree nuts to supplement their grain. After slaughter, their legs must be rubbed with local sea salt and cured for at least seven months, though many are cured longer, for up to a year. They are often rubbed with ground Espelette pepper during curing to impart a slightly piquant complexity. Bayonne ham is expensive but extremely popular both as charcuterie and as an ingredient in many dishes. The ham shank bones are prized for soups.

Basque sheep cheeses are famous, and several have received either AOC or *denominación de origen* (DO) designation, depending on which side of the border they are made. *Idiazábal*, made in Guipúzcoa, is probably the best-known Basque cheese. Made mostly from Latxa sheep, after aging, it is often smoked to add complexity and deepen the flavor. Other well-known examples include Roncal (from Navarra) and Etorki, Ossau-Iraty, and P'tit Basque (from the French side). Roncal is a semi-hard cheese made from the milk of Latxa and Aragonese sheep grazed around the seven villages in Navarra's Valle de Roncal. Etorki, made from the milk of black-headed Manech ewes in Mauléon, has an orange rind and a smooth texture with a subtle flavor and notes of burnt caramel. P'tit Basque is a mild, semisoft cheese developed in 1997 and marketed aggressively as an alternative to stronger-flavored sheep-milk cheeses.

Cheese, along with quince paste (*membrillo*), fruit, and nuts, traditionally concludes a meal. Sweets are more often eaten in the late afternoon around teatime, or an hour or so after dinner. Traditional

Basque desserts range from *mamia*—a junket with fruit originally made in wooden milk pitchers by shepherds, who heated the milk with hot rocks—to simple walnut, chestnut, or rice puddings and custards flavored with seasonal fruit. In addition to grapes, apples, and cherries, other berries and tree fruits are widely grown in gardens and on farms, and walnuts, almonds, and chestnuts are all traditional staples still used whole, roasted, or ground into flour for both sweet and savory preparations. Honey is also produced all over the region, though not traditionally used much in cooking. Chocolate came to the Basque territory with Jews who fled the Inquisition in Spain and Portugal and settled in Bayonne. These refugees had learned to sweeten and emulsify the cacao and soon had mastered making solid bars; prior to this, chocolate had only been drunk. As a result, Bayonne became famous for its chocolates, a reputation that endures. Probably the best-known dessert on the French side is the *gateau Basque* (*biskotx*): two layers of pastry baked with either pastry cream or cherry jam between them. The cherries, if used, should be from Itxassou, which is famous for them. There are as many versions of the recipe as there are Basque bakers and much good-natured disagreement about which filling is superior. Cherries are also often made into *gerezi beltza arno gorriakin*, a soup of the fruit poached in sweetened wine.

Cider has historically been as important as wine, if not more so; every Basque farmhouse had an orchard. Dozens of varieties of apples thrive in Basqueland, and the *sagardotegi* (cider houses) are important institutions. Over the years, they have evolved from simply being houses where cider was made into something closer to a restaurant; patrons would originally bring some food along when stopping in to buy cider, since the drink is meant to accompany food. Over time, a traditional meal took shape around the tasting, and the cider houses began to prepare food themselves. Now they are something like brew pubs, offering a three-course meal of a salt cod omelet, then a grilled steak, and then cheese with nuts and quince paste for dessert.

The cider is stored in large barrels with a tap about six feet from the floor. Periodically during the meal,

patrons are called to gather at the barrel, catching the thin stream from the tap in their glasses, which aerates the cider. This is called a *txotx*. Since Basque cider is almost all still, this aeration helps to enliven the flavor and gives some temporary effervescence to the drink. The cider season lasts from mid-January through May, after which the cider houses close. Other times of the year, cider is bought in bottles. Bottles are traditionally held high while the cider is poured into glasses held low, mimicking the effects of the *txotx*. Most Basque cider is produced and consumed in Guipúzcoa.

Over time, as Basque tastes were influenced by outsiders, production of wine far exceeded that of cider. Txakolí, a slightly fizzy, low-alcohol white wine meant to be drunk in the year it is made, is the most famous Basque wine. Made mostly from the Hondarribi Zuri grape, it is produced in Alava, Vizcaya, and Guipúzcoa. Each region uses different grapes to supplement the Hondarribi, and differences in climate and terrain between the regions also make for variations in flavor and quality. Some red is made, from Hondarribi Beltza, but the vast majority of Txakolí production is white. It is also an ingredient in many dishes, especially seafood, which take advantage of its bright acidity to build sauces.

Irouleguy is the only Basque wine made on the French side to have received AOC status. Reds (about 70% of the total production) are made mostly from Tannat, Cabernet Franc, and Cabernet Sauvignon grapes, as are the rosés, making up another 20 percent. Some whites are made from Corbu and Manseng grapes. The best reds can age well for up to 10 years. Wine production dates back at least to the Romans and used to be far more widespread; in the Middle Ages the great pilgrimage routes led through this area, and the pilgrims required a great deal of wine. Though the quantity produced has declined dramatically since then, there is no doubt that the quality has improved a great deal both before and since the AOC designation. Some producers of note include Brana, Abotia, and Ilaria, where grapes are grown organically.

Much of Basqueland's southern border is defined by the Ebro River, along part of which lies

the famous Rioja wine region. Though not specifically Basque, Rioja is commonly drunk throughout the area, as it complements the more meat-oriented food found farther from the coast. Rioja Alavesa, the northernmost of the three areas within the Rioja DOC (Denominación de Origen Calificada—a legal protection of the wine's origin), falls within the Basque province of Alava. The wines tend to be lighter and more acidic than those made farther downstream where the climate is hotter, but the poor soil and low yields make for wines with strong character. Rioja is made primarily from Tempranillo grapes, with Garnacha (Grenache), Mazuelo, and Graciano added to tailor the blend. White Rioja consists mostly of Viura grapes, blended with smaller amounts of Malvasia and Garnacha Blanca. Most *rosados* (rosés) are made from Garnacha, which has lighter flavors than Tempranillo and is better suited to rosés. Some Rioja rosés can age well for a remarkably long time.

Patxaran is an old liqueur from Navarra that originated as sloe berries (wild plums or blackthorn) macerated in anise-flavored liquor. Over time the recipe was refined and now usually includes a few coffee beans and vanilla to round out the flavor. *Patxaran* (*pacharán* in Spanish) is popular throughout Spain. On the French side, Izarra is a digestif made in Bayonne that is flavored with mixtures of local herbs and botanicals. It comes in green or yellow. The green is minty, with a higher alcohol content, while the sweeter almond-based yellow version includes saffron and honey. It is usually drunk neat or on ice, though more recently it has found favor as an ingredient in cocktails and desserts, including chocolates and ice creams.

Cooking and Typical Meals

A typical meal near the coast might begin with *porrusalda*, a leek and potato soup, followed by a fish stew: *marmitako*, *bacalao a la vizcaina* or *bacalao al pil-pil*, or *txipirones* (squid) stewed in their own ink. *Bacalao al pil-pil* is a signature Basque dish, embodying the refinement and alchemy borne of humble ingredients for which the cuisine is renowned. It features salt cod, the longtime staple around which

much of the Basque economy and foodways were built. The desalinated fish fillets, cut into pieces, are gently sautéed in olive oil in which garlic and peppers have been lightly browned. The trick to the dish is creating a silky emulsion between the olive oil and the juices given off by the fish, an operation that involves gently agitating the pan over heat for some time. Gelatin from the skin of the fish helps with the emulsification, so cod with the skin on is essential. The name of the dish comes from the popping sound that results from adding wet fish to hot oil. When properly prepared, bacalao al pil-pil transcends its simple components to become something extraordinary and thus exemplifies the Basque approach to cooking.

Marmitako

2 dried *choricero* chilies (substitute ancho if needed)

1 lb tuna steak

2 lb potatoes, peeled

½ c olive oil

1 Spanish onion, chopped

1 green bell pepper, julienned

2 cloves garlic

2 teaspoons *pimentón* (smoked paprika)

Soak the chilies in warm water to soften. Remove and discard seeds and chop flesh coarsely. Cut tuna into roughly 1-inch cubes. Cut potatoes into similar cubes. Heat olive oil and add onion, pepper, chilies, and garlic, and sweat them for 5 minutes until soft. Add potatoes, paprika, and enough water to just cover, and simmer for 20 minutes until the potatoes are soft. Add tuna and cook gently for 5 more minutes, then remove from heat and let sit, covered, for 30 minutes or so to marry the flavors and thicken a bit. Reheat if needed before serving.

Basque seafood sauces are deceptively simple. They are often made with just a few ingredients, but proper execution requires attention to detail and much practice. *Merluza en salsa verde* (hake in green sauce) is a perennial favorite, where hake

steaks are quickly browned and then finished in a garlicky herb sauce flavored with parsley, chives, and peas. Potatoes and clams are also frequently prepared in green sauce. *Vizcaina* is another classic Basque sauce, made from rehydrated *choricero* peppers, onions, and ham simmered with garlic, olive oil, parsley, and wine and then blended smooth. It is used for salt cod, cod-stuffed peppers, and many other dishes.

Farther inland, the ingredients shift to those from the farm: birds and mammals, vegetables, and legumes. Dinner might begin with an omelet—with ham, peppers, or asparagus—or a pipérade, then feature a steak or roast bird with foraged mushrooms, or a stew of lamb or game with chorizo or other sausage. Corn and beans are much more likely to make an appearance, whether as talos to mop up the sauce or slow-simmered beans in or apart from the stew. Cheese with nuts and membrillo is a standard dessert. Pipérade, like the seafood preparations, is deceptively simple. Onions, peppers, and tomatoes are humble ingredients, but the quality thereof and the subtleties of cooking technique can transform them into a dish of great depth and richness. The freshness of the vegetables is paramount; produce not in season is simply not used. The olive oil, the herbs, and the dried peppers are all from the region, and the result is an encapsulation of the flavor of the place. Letting the ingredients speak for themselves through artful, reverent manipulation is probably the most important and influential aspect of Basque cooking.

After fisherman, shepherds have had the biggest influence on Basque cuisine. Lamb is as centrally important to the inland food tradition as seafood is to the coast, appearing as meat (whole and sausage) and as sheep-milk cheese in a wide variety of subtly different variations. *Sauce Basquaise* is a variation on pipérade that is pureed smooth and used in many meat dishes, especially with lamb. Nuts—almonds, walnuts, and hazelnuts—are often paired with lamb as part of a pesto or as flour to thicken a stew. Easter lamb is traditionally stuffed with olives and almonds, and lamb holds a special status as the meat of special occasions. Steaks are fixtures on the standard cider house menu, and pork, especially

ham and chorizo, is also ubiquitous. Many farms still hold an annual communal winter hog slaughter, called a *txarriboda*, at which the whole animal is processed into ham, chorizo, chops, and other cuts. Nothing, not even the blood, is wasted.

There are some differences in ingredients between the French and Spanish sides. The wines tend to be consumed fairly close to where they are produced, so one is unlikely to find much Txakolí used in French cooking, for example. Bayonne ham is not common in Spain, where there is plenty of *jamón ibérico* instead. Most fresh vegetables do not travel far from their source, so regional differences are still significant, setting towns apart from each other in terms of what they are best known for making. The French side of Basqueland is smaller and more culturally integrated into France than the Spanish side is into Spain—the Basque language is much less used in France—but the food remains distinct from that in the rest of the country. In Spain, the dietary divide increasingly is more between urban and rural rather than between coast and mountains; the urban population has access to all of the ingredients and restaurants (Basque and foreign) common to any European city, while residents of smaller, more rural towns tend to eat more traditionally.

Eating Out

Eating out is an integral part of the social fabric of Basque culture; Basques spend twice as much of their discretionary income on food outside the home as Americans do. Pintxos (the Basque word for tapas, from the Spanish *pinchar*, “to skewer”) represent the essence of Basque cooking: the freshest ingredients, combined in nearly infinite ways using refined technique and playful imagination, and served as many small courses along with drinks. A common evening ritual is *ir de pintxos*—to go from bar to bar, having a plate and a drink or two at each before moving on. It’s a mix of conviviality and competition, as the patrons socialize and the bar owners try to outdo each other with creative and delicious preparations.

Pintxos are traditionally served on a slice of bread, the topping held in place with a toothpick: hence

the name. More recently, though, especially in and around San Sebastián, presentations have become decidedly more adventurous, and ingredients can get quite exotic as chefs experiment with ingredients and techniques from around the world. This is a logical continuation of the history of Basque cuisine, which has assimilated so many ingredients and made them quintessentially Basque. Most eating outside the home will be casual, in bars, with more or less perambulation depending on the mood of the group. For more formal events, there are many restaurants offering more refined interpretations of standards as well as adventurous departures from tradition. In urban areas, options like pizza, Chinese food, and sushi are now normal, especially for young people.

Influenced by the French *nouvelle cuisine* of the 1970s, which featured lighter, smaller-portioned interpretations of classic dishes, Basque chefs responded by updating some traditional dishes and inventing many new ones. Their efforts, along with those of some equally talented Catalan chefs from northeastern Spain, were crucial to the development of the *Nueva Cocina* (“new cooking”) in Spain. Recently, this approach further evolved to propel Spain into the vanguard of cutting-edge culinary techniques and presentation. Basque chefs preside at several Michelin-starred restaurants, and the guide rates Juan Mari Arzak’s three-star restaurant Arzak in San Sebastián as the third-best restaurant in the world. Martin Berasategui, chef and owner of the

eponymous three-star restaurant outside San Sebastián, has another in the Guggenheim Museum in Bilbao and recently opened a new one in Shanghai. These two chefs are hugely influential and revered in Spain and around the world for their understated virtuosity at combining traditional Basque dishes with the exotic ingredients and technological techniques of contemporary haute cuisine. Not all chefs embrace the status such awards convey; some have expressed concern after receiving a star that the attention might pressure them to change their very personal and nonaristocratic approach to cooking.

Another unique and important component of Basque culinary culture is the widespread presence of *txoko*, or gastronomic societies. Traditionally limited to men (though women are now allowed into some, especially at lunchtime), they are communally owned places where men can gather and cook for each other on a regular basis. The societies originated in 19th-century San Sebastián when friends rented a space in which to eat and drink outside the home and unfettered by cider house hours. All members had keys to the space, and all costs were shared communally. The idea spread quickly, and most sizable towns now have several. Members sign up to cook on a given night and may invite guests. Each member is responsible for purchasing any main ingredients for the meal but may use anything from the communal pantry. He must make a careful accounting of all communal ingredients used so that supplies can be replenished.

The gastronomic societies combined dishes and techniques from the two main influences on Basque cuisine: fishing boats and farmhouses. Over time they have grown into influential institutions that keep old recipes alive while also constantly innovating, with both new twists on standard fare and bolder, more experimental efforts. Though amateurs, many members are very skilled and put enormous effort into the meals they prepare; some societies have influenced professional chefs, spurring them to innovate. The gastronomic societies make annual trips to vineyards to taste the new vintages and place orders, and they are active in the community, hosting parties and organizing festivals.

Special Occasions

Basques are a celebratory people, and most foods, no matter how humble, are honored with an annual festival in some town or another that produces a key ingredient. Even the simplest dishes are treated with respect, and since festivals mostly include competitive cooking, the techniques and recipes are preserved throughout the years. No festival, saint's day, or party is complete without a feast. *Garbure* is a vegetable soup that features white beans, cabbage, and ham. At different times of the year, other seasonal vegetables are added depending on what is available. The town of Anglet, near Biarritz, holds an annual garbure festival. Olite, a town in Navarra, celebrates *menestra*, a spring vegetable stew with ham, every April. Tolosa celebrates its beans, Tudela its artichokes, Itxassou its black cherries, and Espelette its peppers, featuring them in *axoa*, a beef or veal stew. Mardi Gras, or Jueves Gordo, is enthusiastically celebrated by Basques. They are the most devoutly Catholic of Spain's citizens, and yet they also embrace the pagan roots of the festival with raucous dancing and feasting. The Tamborrada is a festival held every year on January 20 in San Sebastián. Adults dress as chefs and soldiers and parade through the town beating drums. All of the gastronomic societies participate and open their doors to all for the one night. The combination of military and culinary imagery symbolizes the degree to which the cultural pride and fierce independence of the Basque people are connected to their food.

Diet and Health

The increasing popularity of processed convenience foods has made healthy eating more difficult; obesity and the resulting illnesses are increasing among Basques as they are in the rest of Europe. Street markets, a central Basque commercial and social institution, are losing customers to supermarkets. Daily shopping at outdoor markets is exercise; weekly shopping at supermarkets is not. As the traditional roles gradually break down and yield to more European norms, the health problems that beset modern

Western societies are tending to increase. While the traditional Basque diet and lifestyle are extremely healthy, it remains to be seen how they will adapt to the pressures and changes of 21st-century life.

Belarus

Overview

The Republic of Belarus is a landlocked nation in eastern Europe. It is bordered by Russia, Poland, Ukraine, Lithuania, and Latvia. For much of its history it has been a part of either the Polish–Lithuanian Commonwealth or the Russian Empire, and later the Soviet Union. It has a population of almost 10 million people, about 80 percent of whom are native Belarusians. Its two major religions are Russian Orthodox Christianity (80%) and Roman Catholicism (almost 20%). Until World War II Belarus had a significant Jewish population (8% of the total population, and up to 40% of the urban population), which by the end of the 20th century became as small as 0.3 percent of the population. There is also a small but significant Muslim Tartar population (0.1%), which has also influenced Belarusian cuisine. The official languages are Russian and Belarusian. About 70 percent of the population lives in cities. Belarus is flat and heavily forested. It has many lakes and three major rivers: the Dnepr, the Neman, and the Pripyat'. It also has significant marshland.

The position of Belarus between Russian, Baltic, Ukrainian, and Polish lands, as well as the influence of two major branches of Christianity and Judaism, profoundly affected its cuisine. Belarusian food features ingredients and recipes familiar to all eastern Europeans—potatoes, beets, rye bread, borscht, and porridge. The climate, forests, marshes, and relatively poor soil ensured that Belarusian cuisine emphasizes mushrooms and game, potatoes and river fish. Many dishes have been borrowed from western Europe through the influence of its westernized, Catholic nobility and from the Caucasus

and Central Asia during the Soviet period. What distinguishes Belarusian cuisine from those of other eastern European countries is the great emphasis on potatoes and mushrooms, as well as some unique methods of preparing these ingredients.

Food Culture Snapshot

Alesya Kupala and her husband, Vasil' Kupala, live in Minsk's Serabranka neighborhood. Alesya works for the Minsk Kristall wine and liquor factory. Vasil' used to work for the electrical repair plant nearby but now runs a computer sales and repair business from their apartment. Their son, Serhiy, studies at the Belarusian National Technical University and, like many other young Belarusians, lives at home with his parents. The Kupala family meals include both traditional Belarusian foods that Vasil' and Alesya's parents prepared, as well as foods introduced through Soviet influences and the global economy. They have three major sources of food: modern supermarkets, farmers' markets, and a garden plot just outside of Minsk.

All members of the family do some shopping, but it is mostly Alesya who shops for food and cooks the family meals. On a typical day, she is likely to stop at the local supermarket to buy bread and milk. The family shops together at a large "hypermarket" at the edge of Minsk. For this weekly shopping trip they use their car. At the hypermarket, they stock up on meat and poultry, cheese, and sausage, as well as grains such as buckwheat and oats. The men of the family also buy recently introduced convenience foods such as ramen noodles that they prepare when Alesya is not home. She buys most of the vegetables for the family at the

Belarus woman and her husband pick potatoes in the field in the village of Pererov, 2010. (AFP | Getty Images)

farmers' market, hoping that these will be tastier grown in soil that is not polluted. She is careful to ask where the farmers come from, trying to avoid areas known for their industrial pollution.

Major Foodstuffs

Belarusian soil is poor, and the climate is relatively cool. Therefore, the traditional source of grain for bread was rye, not wheat. Oats and buckwheat are also commonly used for flat cakes, soups, and porridges. Wheat bread was traditionally reserved for the nobility and became more commonly accessible only in the 20th century. Oats were used for almost all foods requiring flour that are not bread. From the 19th century on Belarus has been dominated by the potato, its most common and iconic ingredient. It is used to prepare soups, main dishes, and snacks. Among other vegetables, beets are used, but to a lesser extent than in the Ukraine. Carrots are

also often added to dishes. Cabbage is extremely common—both fresh and fermented as sauerkraut. It is used in soups, stews, and stuffed with various fillings. Sorrel and beet greens are used in soups as well. Mushrooms are, along with potatoes, one of the most distinctive elements of Belarusian cuisine. Depending on the type of mushroom used, they are marinated, salted, dried, or cooked fresh. Traditionally, they were used as a flavoring agent in soups and other dishes, but today they are also used in salads and main dishes, and often combined with meat and fish. Berries are another traditional ingredient in Belarusian cuisine, with cranberries a common ingredient in the marsh Palesye region. Fruit such as apples, pears, and cherries is used to sweeten dishes, to stuff dumplings, and to make drinks that are either fermented (kvass) or thickened with potato starch or flour. Belarusians collect birch sap in the spring and drink it as a healthy and refreshing beverage (*biarozavik*), sometimes after fermentation.

Meat has been generally a food for the well-to-do, becoming gradually more common in the 20th century. Pork is the most popular meat, often eaten roasted and stewed. Blood and meat are used in sausages. Pork fat, like elsewhere in eastern Europe, is salted or smoked and then used as a flavoring agent for starches, as a cooking fat, and, in more recent years, as an appetizer and a delicacy. Game, small and large, has also been a popular ingredient. Belarus has a large population of the *zubr*, or European bison, which are under government protection today but in the past were hunted along with boar. Boar, or domestic pork instead, along with cabbage, sausage, mushrooms, and spices, is used in the traditional hearty stew, *bigas*, that is common in Poland and Lithuania as well. Pork is not eaten by Belarusian Tartars and Jews.

Unlike Tartars who live elsewhere in eastern Europe, Belarusian Tartars do not eat horse meat, which, therefore, has not been a part of Belarusian cuisine. Beef became more popular thanks to the Soviet influence, but it was also common in Jewish cooking, often prepared in a sweet and sour sauce. Jewish influences are also seen in the preparations of poultry with fried chicken fat and stuffed necks of chicken and geese, popular dishes introduced by

Jewish innkeepers. The Catholic influences are seen in the popularity of roast geese, especially on St. Martin's Day. Until the 20th century, Belarusians ate only river fish and salted fish from the Baltic, particularly herring. While fresh fish was made into soups or baked, it was also used as a stuffing for dumplings prepared in the marshes of Palesye. Herring is especially associated with the Jewish culinary heritage in Belarus, but it has passed into the cooking of all ethnicities. Fish would be commonly eaten during the numerous Catholic and Orthodox fasts and Lent.

Milk and eggs also play an important role in Belarusian cuisine. Milk was used as a condiment to "whiten" soups, stews, pierogi, and potatoes. It is also used to prepare soft farmer's cheeses (*tvaroh*), which are either eaten plain or in dumplings and fritters. Eggs are eaten as well, added to soups and fried, often with pork fat. Painted eggs form an important part of Easter celebrations.

Generally, the flavors of Belarusian cuisine are quite mild. Salt, pepper, onions, garlic, bay leaf, dill, and occasionally coriander and caraway seed are the primary spices, and these are used sparingly. Most of the flavors in food are derived from the cooking techniques and not spices.

Cooking

Traditional Belarusian cuisine divided ingredients into five categories according to the role they played in the recipe. The main ingredients, usually vegetables or grains, constituting the bulk of the dish, were known as *privarki*, while meat, mushrooms, or fish, which imparted the dish its main flavor, were called *zakrasy*. *Zakolota*, or the thickening agent, consisted of flour or pieces of potato, and *vologa* were liquid fats added to moisten the dish. Finally, spices were called *prismaki*. This system of five categories of ingredients is directly related to the traditional preparation of many Belarusian dishes: the stewing of all ingredients in one pot inside a large oven, producing a kind of thick soup or stew. The simplest example is *zatsirka*, a soup of the poor, made of water and flour, with milk added as flavoring. Today, this soup is prepared with milk and egg dumplings.

Other cooking techniques are also important. Some of the oldest recipes call for the preparation of large pieces of meat or fish, while the relatively newer recipes, borrowed from Polish cooking, use finely minced ingredients, for either dumplings, fritters, sausages, or stuffing. An entire goose stuffed with porridge and mushrooms and then roasted remains an exemplary dish. *Piachisto* is the general name for a large part of an animal or an entire bird or fish that is stewed, usually in the same pot with peeled whole potatoes. A stuffed *yutz* is a stuffed stomach of a cow, pig, or sheep, prepared similar to a Scottish haggis. Instead of oats, however, buckwheat is used. A good example of a dish using ground meat is *zrazy*, baked or fried chopped meat or potato, usually wrapped around some stuffing. These can also be prepared with thin meat strips rolled up around the filling. *Kalduny*, a kind of stuffed dumpling, similar to Italian ravioli or Russian *pel'meni*, are also popular; these are stuffed with a finely chopped filling of meat, fish, mushrooms, or vegetables. The local Muslim Tartar population favored particularly large *kalduny* in their cooking. Contact with the Western, Catholic world brought a pasta casserole similar to the Italian lasagna, known as *lazanki*. Remnants of past contact between the Slavs and the Greeks can still be seen in the Belarusian preparation of cucumbers with honey. A traditional snack of white or black radish with honey, oil, or Jewish-style with chicken fat is also very popular.

Food is often preserved, since the growing season is fairly short. Fish and mushrooms are dried and then used during the cold seasons of the year. Belarusian Tartars also dry lamb and beef. Herbs are dried as well, to be used in medicinal teas. Salted and marinated mushrooms were introduced from Russia and Poland and are now common. Fruit and berries are dried or are made into fruit preserves.

Many otherwise-simple ingredients are subjected to lengthy preparatory processes before becoming part of a dish. Thus, many dishes call for a fermented solution of oat flour and water called *tsezha*. Milk and buttermilk are also often fermented. Fruit and grains are used to produce fermented malt beverages, kvass. Potatoes are either boiled or stewed with lard. For some recipes, raw

potato is grated and used with the resulting potato juice; for others, the raw, grated potato is drained in a cheesecloth bag (*klinok*). The third method is to use boiled and mashed potatoes. These three types of preparation can also be combined for some recipes. *Dranniki*, an iconic Belarusian dish, are fritters made from drained raw, grated potato. Dumplings, or *galki*, are made of mashed potato with some egg and flour added or with mushrooms or fish and then boiled. Potato *babka*, a baked pudding made out of potato and eggs, with or without additional ingredients, is a popular dish originating with Jewish Belarusians. Tvaroh, like potatoes, may be additionally processed, strained, and hung in the *klinok* bag. The curds are then dried and used to flavor foods, rather like Parmesan.

A plate of traditional dranniki. (Shutterstock)

Desserts are not common in Belarus. Pies and cakes were introduced fairly late. Sweet dishes are usually simple preparations of baked fruit or berries with cream or honey. *Kaldunki*, a smaller version of the kalduny dumplings, are filled with sweet cheese or cherries and served as dessert, particularly during holidays. Fruit juices are boiled and thickened with starch to make *kissel*. *Kulaga* is a mixture of apples and berries cooked in water with rye flour, left to ferment, and then cooked again. For weddings a large sweet bread (*karavay*) is baked. Everyday treats may also be baked crispy cookies called *korzhiki*, common to Russian and Ukrainian cuisines as well. Modern Belarusians have absorbed Russian and Western-style desserts as well. Rich cakes and pastries are popular, as are chocolate candies produced by large factories such as Spartak in Minsk.

Typical Meals

Traditional peasant meals in Belarus would be simple and as high in calories as the family could afford. Like their neighbors, Belarusians would eat plenty of bread with kvass or, in the 20th century, tea. Lard on bread, fried or boiled potatoes, porridge with milk, and eggs fried with lard or simply boiled could all serve as breakfast. *Vierashchanka* or *machanka*, a meat and flour gravy used as a dip for pancakes made of oats, potatoes, or later wheat flour, was another traditional breakfast food. The rich families' version of this dish contained more spices, as well as sausages. The main meal of the day in poor and well-to-do families would include a rich soup and a main dish, usually a stew cooked in a pot. Kvass, a very lightly fermented beverage made from rye bread, sometimes flavored with fruits, would serve as a main beverage, but vodka (*harelka*) could also be served, as could fermented birch juice. The poorest would eat bread and perhaps zatsirka. Supper would be similar to breakfast, including porridge, bread, potatoes, and milk. The noble upper class would usually identify with the monarch and so would eat either as the Polish nobility did or, later, as the Russian nobles would. However, many Belarusian nobles adapted traditional recipes for more elegant meals. Hence, kalduny à la

Count Tyshkevich is similar to normal Belarusian dumplings but has a rich filling of eggs, ham, and mushrooms.

Modern Belarusians still tend to have a filling breakfast. They are likely to eat bread, either spread with butter or as sandwiches with pâté, sausage, and cheese. Porridge made of buckwheat, farina, or oats with milk or sugar is also eaten. Eggs, boiled or scrambled, are also popular breakfast foods. Western-style dry cereal is growing in popularity. Tea or coffee is the drink of choice. Lunch was still the main meal of the day for much of the 20th century. A salad or herring was served as an appetizer, along with a thick soup such as *borshch* (cooked in Belarusian, Russian, or Ukrainian style), then a main course with a meat and a starch, followed by a simple dessert. Today, more people are likely to have a smaller, Western-style lunch. Instant convenience foods such as ramen noodles are becoming more popular. Dinner is now more commonly the largest meal of the day. The food can be similar to either breakfast or lunch, with bread, porridge, eggs, soup, and especially potatoes served. Following a common Soviet tradition, grilled shish kebabs (*shashlyk*) are cooked when picnicking outdoors or when eating at the summerhouse, called a *dacha*.

Dranniki (Potato Fritters)

- 2¾ lb potatoes
- ½ c rye or wheat flour
- 1–2 eggs
- 1 tbsp rye bran or fine breadcrumbs
- 3 tbsp vegetable oil (preferably sunflower)
- ½ c sour cream

Wash, peel, and grate the potatoes raw. Do not drain the liquid. The rye flour in this recipe will make it the proper consistency. Mix the potatoes with flour and eggs. Form into small, thin patties. Cover on both sides with bran or breadcrumbs, and fry in oil on both sides until cooked through and nicely browned. Place into a warm dish until all dranniki are cooked. Serve topped with sour cream.

Kalduny (Dumplings)

For the Dough

- 2 c flour
- ¼ c warm water
- 1–2 eggs
- Salt

Mix ingredients well into a strong, thick, and elastic dough. Chill slightly. Roll out very thin. Cut out small circles, place a small ball of filling (following) in the middle, fold the dough pocket into a half-circle, and pinch closed. Place prepared kalduny into salted boiling water. The kalduny are ready 5 minutes after they float to the surface. Serve with melted butter.

Tyshkevich-Style Filling

- 5 oz dry porcini mushrooms
- 2 onions, minced
- Some fat (bacon fat or oil) for frying
- 7 oz ham, finely chopped
- 2 hard-boiled eggs, finely chopped
- 1 raw egg
- Salt and pepper

Soak mushrooms in warm water for 3–4 hours. Strain the mushrooms, reserving the liquid. Rinse the mushrooms well, and boil in the soaking liquid for 1½–2 hours until soft. Chop the mushrooms finely. Sauté the onions in fat until they become translucent, add the mushrooms, and sauté together for a minute or two. Remove from heat and cool. Add the ham and the hard-boiled and raw eggs. Season and mix well.

Eating Out

In the 19th century and earlier, eating out in Belarus generally meant eating in a tavern. Many of these were kept by Jewish Belarusians, who were barred from many other professions. Along with alcoholic drinks, they served foods that have now

been absorbed into Belarusian cuisine: *sheykas*, stuffed goose neck, various preparations of herring, and sweet-savory *tzimmes*, or carrot stew. Jewish emigrants have spread Belarusian cuisine as well. Dranniki, for instance, are more commonly known as latkes in the United States.

In modern Belarusian cuisine, traditional recipes are prepared for special occasions in cities and more often in the countryside. Since the 19th century, Belarusian cuisine has been greatly influenced by Russian food. In the 20th century, foods from the rest of the Soviet republics reached Belarus. Today, Belarusian cuisine is more influenced by Russian and modern Western traditions than by the past. This is especially noticeable in foods served outside the home in Belarus. At the same time, patriotic and nostalgic restaurants serving traditional foods have become common.

There are plenty of Soviet-style cafeterias left, serving dishes borrowed and simplified from Slavic, Caucasian, and Central Asian cuisines. The same menu could contain Ukrainian borshch as well as *azu*, Tartar-style sliced steak served with pickles. Restaurants serving food from the Caucasus are very popular. They specialize in grilled meats and make much more prominent use of spices than Belarusian cuisine. Central Asian foods, especially from Uzbekistan, are served in many restaurants. Recently sushi restaurants have also appeared. This variety of restaurants can be found primarily in the capital city of Minsk, as Belarus remains fairly poor and its regions isolated from the globalized economy. Most Belarusians still do not eat out in restaurants very often.

Various forms of fast food are affordable and common. Belarusian fast food developed in the Soviet period and featured baked or fried pies with meat, egg, cabbage, or potato fillings. *Bul'bianki*, Belarusian-style pies made of potato dough with fillings similar to Russian pies, were and remain very popular. Today, Belarus has a few very popular branches of McDonald's restaurants. Pizza can also be found, along with European-Turkish *doner kebabs* (ground meat on a vertical rotisserie, similar to gyros). *Bliny* stands serve crepes with various fillings, sweet and savory. Finally, inexpensive but

high-quality, high-fat ice cream made from recipes developed during the Soviet period remains a popular treat to eat on the go.

Special Occasions

Special occasions in Belarus can be classified as traditional, usually religious, holidays; Soviet-introduced holidays; and life events. All holidays are likely to have both traditional holiday foods and also Soviet-period holiday foods served. Christmas is a holiday celebrated with feasting, caroling, and fortune-telling. Homes are decorated with straw, in remembrance of Jesus of Nazareth's birth in a manger. Christmas dinner features stuffed carp, fancy borshch with mushroom-filled dumplings (*vushki*), and desserts. These are fragile cookies called *lamantsi* and traditional barley or wheat-berry pudding with poppy seeds and honey, called *kuttsia*, often served with an almond soup-sauce *poliuka*. Shrovetide, or Mas'lenitsa, is celebrated by Orthodox Christians but has recently become popular among otherwise-secular Belarusians. An equivalent to Western Mardi Gras, this holiday is a week of feasting and carnivals, with revelers eating pancakes, butter, and eggs but no meat, which is forbidden during this week for believers. During Lent, rich foods, especially meat, are forbidden for Orthodox and Catholic Christians alike. Potato and mushroom dishes dominate the menu during this time. Fish, especially herring, is eaten by itself or with potatoes. In the past, beaver tails, due to their fishlike appearance, were allowed to be eaten during Lent and were seen as a delicacy. On Easter, *babka*, a rich egg bread with raisins, is served. Eggs are served as well, some decorated to become *pisanki*. Egg and cheese dishes, such as cheesecake-like *syrniki* fritters, are also served, along with springtime favorites like sorrel soup and birch sap. Catholic-influenced holidays bring other special foods to the Belarusian table.

Kupalle, or St. John's Eve, is an ancient festival related to the sun and fertility. Today, it is marked with a mixture of pagan and Christian elements. Catholic Belarusians celebrate the holiday on the night between June 23 and 24, while the Orthodox celebrate between July 6 and 7. The day following

Babka, a spongy yeast cake that is traditionally baked for Easter Sunday in Belarus. (Mariusz Jurgielewicz | Dreams time.com)

the celebration is meant to commemorate the birth of John the Baptist, but the celebrations of the night before hark back to pre-Christian fertility rituals. The holiday is directly related to food, as its rituals are meant to help the harvest. Women go into the ripening fields and gather wildflowers for wreaths. At night, fires are lit and many games are played, all involving jumping over the flames. These rituals are meant to please the sun, which will warm the crops as they grow. Dishes of fried eggs—cooked on a fire and resembling a burning sun—are cooked, along with fruit-filled dumplings. On All Saints' Day (November 1) sheep are slaughtered and prepared, while on St. Martin's Day (November 11) geese are eaten, with their giblets cooked in plum sauce.

Weddings feature a rich, large bread called *karaway*, similar to an Easter *babka*. *Kuttsia* since ancient times was served not only at Christmas but also during funeral meals. A rich egg and flour dish, *drachena*, has often been served in villages on special occasions. It is part omelet and part pancake and can be either sweet or savory. Its rich ingredients made it a special-occasion food. Belarusian Tartars prepare *bialushi*, round meat pies stuffed with fatty lamb and spices. These became popular quick snacks during the Soviet period. Otherwise, the Tartar population has been largely integrated into the ethnic Belarusian population and eats similar foods during their own holidays such as the Bairam festival.

Soviet holidays have become very important to modern Belarusian identity. The New Year now has essentially replaced Christmas as the most important holiday of the year. It is celebrated with gift giving, a decorated pine tree, and a large celebratory meal. The meal is likely to include traditional winter holiday foods, as well as Soviet celebratory classics, such as *olivie* or *stolichnyi* salad made with potatoes, meat, carrots, peas, and pickles and generously dressed with mayonnaise. A similar salad, sometimes called *Minskyi*, is made with potatoes, chicken, grated cheese, and mushrooms and is also dressed with plenty of mayonnaise. All celebrations now tend to feature imported wines and domestically produced *harelka*. Soft drinks, both the traditional *kvass*, *syta* (honey and water combination), and *uzvar*, a drink made of dried fruit and oat flour, are supplemented by mineral water and sodas. A similar menu is served to celebrate Victory Day (May 9), marking the defeat of Nazi Germany—an extremely important event to Belarusians, who suffered greatly under German occupation.

Diet and Health

Food has been seen as medicinal in Belarus. For instance, combinations of vegetable or herb juices with honey and alcohol are common folk remedies for many illnesses. Many medicinal plants were gathered on Kupalle night, as it was believed that their power is then at its peak. These beliefs remain today as well. Major newspapers, books, and calendars contain articles, often submitted by the readers themselves, about various folk remedies. Mint or lime-tree tea is considered helpful for dizziness. A plaster made of hot mashed potato mixed with vodka and honey applied to the chest and back is said to prevent colds and coughs.

Belarusians eat many starchy foods and a lot of fatty pork. In the past, heavy work in the fields made this traditional diet a necessity. In the past, access to fresh herbs and berries from the woods aided Belarusians in obtaining enough vitamins in their diet. Today, most of the population lives in cities and is relatively poor. Belarusians rely on inexpensive foods to provide most of their daily energy intake.

Due to the fairly cold climate they have little access to or inclination to eat more fresh fruit and vegetables out of season, and poor exchange rates prevent their importation. Heavy drinking and smoking, imported from the former Soviet Union, remain serious problems. These factors lead to about half of Belarusians dying in their mid-sixties from cardiovascular diseases.

Industrial pollution and remaining radiation from neighboring Ukraine's Chernobyl nuclear disaster in 1986 have tainted some Belarusian farming land, water, and the food supply. The concern about pollution remains strong for many people, who ask farmers about the origins of food in farmers'

markets. These concerns are also addressed by the marketing of many food brands as coming from "ecologically pure" sources.

Belgium

Overview

Bordered by the Netherlands in the north, Germany and Luxembourg in the east, France in the south, and the North Sea in the west (with England nearby), the Kingdom of Belgium (12,500 square miles) has three distinct geographic regions: lower, central, and upper Belgium. Lower Belgium is flat (under 350 feet above sea level), with 40 miles of coast and very fertile lowlands. Central Belgium (up to 700 feet above sea level) has very fruitful clay plateaus and many gentle hills. Upper Belgium (700 feet or more above sea level) is full of woods, with large, fertile valleys and plateaus.

Belgium gained its independence from the Netherlands in 1830. This brought together two regions into the Belgian nation: Flemish-speaking Flanders in the north and French-speaking Wallonia in the south. The new state had a long-standing urban and trade tradition, with Roman, medieval, and early-modern cities like Tongeren, Tournai, Bruges, Ghent, and Antwerp. Later, industrial areas around Mons and Liège and the service city of Brussels generated huge wealth as well as social inequality. Today, Belgium is one of the most urbanized and densely populated countries of Europe, ranking as the 15th-richest nation in the world. Antwerp is the third most important harbor of Europe, and Brussels hosts the headquarters of many international organizations and corporations. Once an essentially Catholic country, religious control has greatly diminished since the 1950s, except for moderately growing Muslim influence that came with migrants. State reforms reorganized the nation into three communities based on

language (Flemish, French, and German) and three regions (the Flemish region, the Brussels Capital region, and the Walloon region), with each having a parliament and government. Reforms did not abolish the federal parliament and government, so this little country of about 10 million people now has seven parliaments and six governments.

Food Culture Snapshot

Sylvie Delfosse, from Liège, and Hans Martens, from Bruges, have lived in Brussels since university. They fell in love, easily ignoring linguistic and cultural differences. She is a teacher, and he works in the advertisement business. They earn enough, but the children (Jaak, seven years old, and Evy, four years old) cost more than Sylvie and Hans expected. They rent an apartment in a trendy neighborhood, regularly set aside time for themselves, and are trying to save money to buy a house. The family represents the average European urban lifestyle of a couple with young children.

Weekdays begin in chaos. Everybody needs to be somewhere by 8 A.M., and breakfast is often limited to a cup of coffee for the parents, orange juice for the children, and a piece of toast with jam for all. Consequently, Sylvie, Hans, Jaak, and Evy need a snack around 11 A.M. (a chocolate bar or a waffle). Lunch is eaten in cafeterias or sandwich bars, although Hans occasionally has a business meal in a fancy restaurant. The children pay a small amount for a hot school meal (soup, a meat dish or pasta, and dessert), Sylvie uses the salad bar at her school, and Hans is happy

with the sandwiches he purchases near his firm. Returning from her school at 4 P.M., Sylvie fetches the children and buys food in the supermarket, which offers a very rich variety. Around 6 P.M. the family is home. Sylvie and Hans cook together, serving fresh and healthy food every day. They try to limit meat, although Evy and Jaak like hamburgers, sausages, and chicken nuggets. The evening meal is limited to a hot dish, but occasionally there's dessert, mostly fruit. The children drink water or soda; Hans is keen on a glass of beer, but Sylvie prefers wine.

On weekends the family takes more time for cooking and eating, although outdoor activities sometimes take precedence. Sunday breakfast consists of fresh croissants. Sylvie loves to experiment for lunch and often reads through cookbooks from around the world. A treat on weekends is visiting the local open market where exotic food is sold. Occasionally, the family goes to a restaurant; before they had children, Sylvie and Hans very often ate in restaurants, which they adored.

Major Foodstuffs

As in most European countries bread forms a staple food in Belgium. Not that long ago, most of the tilled land was utilized to grow grain, mostly wheat, but today it occupies only 20 percent of all agricultural land. Importation of grain has always been significant. Bakers sell diverse sorts of bread and are continuously expanding their offerings. For a long time, the most common bread (*pain de ménage*, a 1¾-pound oval bread) was made of highly refined wheat flour. Until 2004 the government controlled its price by setting a maximum. Gradually, customers began to prefer so-called improved or special bread made of a mix of grains or containing raisins, nuts, or honey. Within a couple of decades, the hierarchy of bread types has totally reversed: Today, dark bread is much more appreciated and expensive than the wheat bread that had been the bread of the rich people until the 1950s.

For a long time, turning milk into cream and then into butter was time-consuming and very costly, so until the 1950s many people spread lard on bread. When more milk was produced and dairy machines

appeared, the price of butter fell, and specialized dairy factories produced more and more cheese, cream, and, later, desserts like ice cream. Butter comes in diverse forms. Some people could not do without salted butter, but others profoundly dislike the salty taste. Margarine is available in numerous brands and types, and it is marketed as a health-conscious choice (for example, advertised as lowering cholesterol). Belgium produces three types of cheese: cottage cheese, soft cheese, and hard cheese. Quite popular is cottage cheese mixed with salt and pepper and garnished with thin slices of radish. Pungent, soft cheese made with unpasteurized cow milk, *fromage d'Herve*, has had the European Union's certificate of Protected Designation of Origin since 1996. Belgian hard cheese is similar to Gouda. Processed meats, such as ham, salami, sausages, pâté, or *kipkap* (minced, seasoned meat), are much appreciated. These have a very long tradition that catered to both affluent consumers, in the case of ham and salami, and more modest ones, with preparations made of offal. The latter, enriched in various ways, are gaining new appreciation recently.

***Konijn met Pruimen or Lapin Aux Prunes* (Rabbit with Plums)**

1 rabbit (about 2½ lb)

1 tbsp butter

Salt and pepper

5 shallots

1 bottle dark beer (1½ c)

Thyme and bay leaf

Prepared mustard

1 slice bread

½ lb dried plums (about 2 c)

Cut the rabbit into large pieces, and fry in butter until the meat is brown; sprinkle with some salt and pepper. Then, chop the shallots and add them. After 10 minutes, put in the beer, thyme, and bay leaf; spread the mustard on the bread and add to the meat. Simmer for at least 40 minutes on a very moderate flame, then add the plums. Cook for an-

other 15 minutes. Serve with floury potatoes or croquettes.

Before 1800 potatoes were eaten with reluctance as they were seen as pig fodder, but by 1850 they had become a staple food, eaten by rich as well as poor people. Nowadays, *pommes frites* (French fries) are very popular. In particular, the “fries shack,” mostly small, separate constructions with a window on one side where the fries are sold in paper cones and eaten while standing outside, is typical of Belgium. Rice and especially pasta have become popular but do not challenge the potato’s position.

Belgians see meat as the centerpiece of a hot meal. Pork, beef, and poultry are very popular. Lamb, horse meat, and goat are rarely eaten, while game, rabbit, and other sorts are limited to particular seasons or social groups. Ground meat, mostly a mixture of pork and beef, gained great importance because of its use in sausages and hamburgers. All meat together adds up to an annual consumption of 220 pounds per person. Meat has always been a strong marker of social status, which is also true of fish: Rich people consume expensive species (like turbot or crustaceans), but poorer people buy cheap ones (like herring or mussels). Mussels have become very popular among all classes since the 1920s.

Carrots, turnips, and cabbage were the ingredients of a simple, hot meal, forming the base of today’s well-liked *hutsepot* (stew). Gradually, other vegetables like cauliflower, asparagus, brussels sprouts, and witloof (Belgian endive) have been increasingly consumed, marking largely present-day Belgian identity. Most vegetables are bought fresh, leaving the canned and deep-frozen supply far behind.

Chocolate in Belgium is a matter of both daily and special consumption. It is everywhere: in shops, advertisements, people’s minds, and household cupboards. The 1.4-ounce chocolate bar is a classic. In addition to plain milk chocolate and dark (*fondant*) chocolate bars, there is an enormous selection: white, extra dark, with nuts, and with fillings (cream, banana, strawberry, cherry, and more). Pralines, or small filled chocolate bonbons, are particularly popular and have long been considered the perfect gift.

Table display of chocolate-covered nuts, almonds, and raisins at a chocolate shop in Brussels, Belgium. (Jborzicchi | Dreamstime.com)

There are dozens of brewers and hundreds of beers in Belgium, together with many beer museums and beer restaurants. Belgian beers are famous worldwide, with several brands appearing in recent top 100 lists of best beers. Their international success contrasts with the continually declining consumption in Belgium over the last century. Of all the beer consumed in Belgium, about 70 percent is plain pilsner beer. Then come the renowned Trappist beers made by monks and abbey beers, the specialty beers (regional varieties), and the *lambics* (fruit beers). Declining beer consumption is due to the success of wine and soft drinks.

Cooking

The way Belgians obtain and prepare food is constantly changing, depending on such factors as agriculture, imports, manufacturing, retailing, and kitchen technology. Because of its open, international character, Belgium quickly picks up new trends and serves as a region for market testing. Hence, Belgian foodways are particularly sensitive to international changes. Today, most Belgians buy food in supermarkets of various types, where they make 94 percent of total food purchases, with the remaining 6 percent of sales coming from traditional (“corner”) shops, open markets, and farmers. Almost all towns and villages have a weekly market

offering vegetables, dairy products, and fruit. Individual bakers and butchers are able to compete with the huge sale of bread and meat in supermarkets by offering highly specialized products. Within Belgian supermarkets the supply differs, but all sell food: the bigger the supermarket, the more choice, variety, and price diversity. Apart from their size and supply, the hierarchy between brands of supermarkets is equally important. Crucially, because of their scale and international network, supermarkets are the places of food innovation. Through purchases in supermarkets, many people for the first time experience frozen products, convenience foods, foreign spices, unfamiliar fish or meats, organic and health foods, beverages, and other items.

Today, almost 80 percent of Belgians regularly buy ready-made food. Frozen pizza is extremely popular. Buyers of convenience food are primarily young families with little children, who appreciate the taste, the speed and ease, the variety, and the recent price decrease. However, most consumers think convenience food is too sweet, salty, and fatty; still quite expensive; not very healthy; and of average quality. The rapid growth of ready-to-heat dishes goes along with new technological devices that have become very familiar in many Belgian kitchens. Microwaves embody this. Yet traditional home cooking remains the rule. Today, almost two-thirds of Belgians cook with electric stoves and ovens, while the remainder use gas.

Home cooking in Belgium is primarily done by women, and most learned their cooking skills from their mothers by watching and imitating. However, they do not follow recipes or procedures exactly: Most interpret, modify, and innovate. In the 1990s, women reacted to the industrialization and globalization of the food business by revalorizing their mothers' techniques. Since mothers and daughters take less time for cooking, daughters have to learn the skills elsewhere. Most women rely on cookbooks to experiment and learn. Belgian cookbooks have been published since the 1850s, and some were particularly successful, such as *Ons Kookboek* (Our cookbook), which has the reputation of being present in every Flemish household. In many Belgian bookstores the gastronomy section is one of the

largest. In addition to cookbooks, housewives may find recipes, ideas, and ingredients in magazines and newspapers and on daily television programs and numerous Web sites. Relatively new are the very popular cooking classes for adults.

Professional cooking is taught in so-called hotel schools, and today Belgium has about 35 of these. Boys and girls between 12 and 18 years of age are trained as cooks, pastry chefs, waiters, or butchers and may receive one year of further training (in *cuisine gastronomique*, for example). Pupils of these schools often win international prizes. Also, they are invited to provide the catering for special occasions. Belgian restaurants are highly appreciated by both Belgians and foreigners, to which the many stars, forks, or *toques* in international eating guides testify. Some of these guides claim that Belgium is, in gastronomic terms, the “best-kept secret of Europe.”

Typical Meals

Since the late 19th century, cookbooks and school manuals have presented a three-meal pattern as traditional and optimal: breakfast (*petit-déjeuner* or *ontbijt*), lunch (*diner* or *middagmaal*), and dinner (*souper* or *avondmaal*). Four to five hours between each meal are recommended, which implies breakfast around 7:30 A.M., lunch around noon, and dinner at 6 P.M. Eating between these meals is discouraged. Rigid eating times were highly encouraged as enhancing digestion and thus promoting good health. In general, eating hours are shifting, and more and more people skip breakfast and eat lunch and dinner later in the day than they used to.

The proportion of total family expenditures spent on food eaten at home fell from 17.6 percent in the late 1970s to 12.3 percent in 2006 (whereas housing, communication, and leisure expenses rose significantly). The lowest-income groups spent 3.2 times less on food than the highest-income groups. Compared with a decade earlier, this gap has widened.

Breakfast time is between 7:30 and 10 A.M., which is later than in the mid-1980s. On average, Belgians take 11 minutes for breakfast (a couple of minutes more on the weekends). Only one-fifth of Belgians

have a regular breakfast, which worries nutritionists, since they assume that breakfast is the most important meal of the day. This should consist ideally of light and varied food that should be consumed in a relaxed setting. A glass of milk, some yogurt, two to three slices of whole wheat bread with a little jam, cheese, or ham, and some fresh fruit make the perfect breakfast. In fact, most Belgians limit themselves to coffee, some bread, or a bowl of cornflakes with canned orange juice. A sweet snack later in the morning often replaces the breakfast. On Sundays, Belgians love to have a full breakfast with fresh coffee and croissants, *pistolets* (a little, round, crusty bread), and other *viennoiseries* (little sweet breads) bought at the bakery.

Lunch may be eaten hot or cold. Many Belgians prefer a hot lunch, although outdoor activities force people to have a cold lunch in a cafeteria or a sandwich bar. A typical hot lunch is still considered ideal. One-third of Belgian people eat a meal at home between 12 and 1 P.M., and in general, lunch takes about 25 minutes. Since the 1960s, lunch has been later and shorter. Belgians tend to linger at the table on Sundays. As with breakfast, nutritionists advise people to pay ample attention to lunch and to reinstate it as the freshly prepared family meal that it once was supposed to be. Soup is a classic opener. Then comes the main dish, which includes the “golden trio” of potatoes, meat, and vegetables, all put onto one plate and covered with gravy. Plenty of potatoes are crucial, and these come in many forms, including steamed, fried, boiled, simmered, mashed, and baked. *Pommes frites* (fries) are increasingly viewed as an identity marker for the nation. Vegetables form another part of the hot meal, although many Belgians, particularly those with lower incomes, eat only small portions out of a feeling of obligation (caused by dieticians’ great emphasis on the nutritive and digestive value of vegetables). Perhaps Belgians’ low enthusiasm for vegetables should be explained by the fact that plain, overcooked vegetables formed the core of hot meals for most people in past centuries. The Belgian top three vegetables are tomatoes, carrots, and various types of lettuce. Quite popular is the combination of mashed potatoes with carrots, beans, or leeks.

Meat is the central part of the typical Belgian hot midday meal. It has always been highly valued by all social classes. Even today, after the weakening of meat’s status since about 1980, there are still noticeable differences in family expenditures, with high-income families spending more on meat than low-income households. After World War II, beef and veal became popular, reaching a peak in the 1970s, but now poultry has taken over. Nutritionists see fish as a healthy alternative to meat, but although average fish consumption rose recently, meat’s position remains largely unaffected. Commonly, light beer is drunk with the hot meal, but recently wine and sodas have challenged beer’s position. A small dessert ends the lunch. This may consist of fruit, but increasingly dessert is bought in the supermarket, which offers an astonishing supply, including a gigantic variety of containers of yogurt, ice cream, puddings, sweet rice, and cheese.

Blinde Vinken or Oiseaux Sans Tête **(Blind Finches)**

½ lb minced pork

Salt, pepper, and nutmeg

1 lb veal

3½ tbsp butter

1 onion

Bay leaf and thyme

Flour

3 tbsp Madeira wine

1 tbsp tomato puree

Mix the minced pork thoroughly with some salt, pepper, and nutmeg. Cut four to five thin slices of the veal, put the minced pork on it, and roll to make cylinder-like shapes. Bind each piece with a thin thread, and brown the meat in a hot pan with butter (2 teaspoons). Dice the onion, and put it in the pan, together with the thyme, bay leaf, and some salt and pepper. Add half a cup of water, and simmer for half an hour. Meanwhile, prepare the sauce: Melt the remaining butter, add flour, and stir well, adding some water if the sauce is too thick. Gently

pour in the Madeira, add the tomato puree, and leave on low heat for about 5 minutes. Serve with potato croquettes.

Belgians tend to eat their dinner much later nowadays than they used to, while they also take less time for it, about 25 minutes. Nutritionists worry about Belgians eating late, having television dinners, and snacking individually, and they recommend eating varied, light foods, with little or no sweet toppings or fillings. Many Belgians limit their dinner to slices of bread with ham, bacon, pâtés, salami, or meat salads with mayonnaise, with hardly any salad or fruit. Several times a year, freshly made pancakes or waffles with sugar, whipped cream, or jam may replace the bread meal. Light beer, but especially coffee, is drunk.

Eating Out

As in most European countries, since about 1970, Belgians increasingly eat out. A reliable indicator of this increase is the share of total household expenditures spent on eating out. This reached 1.9 percent in 1961, rising to 3.3 percent in 1978, to attain 5 percent in 1990. Since 1990, this proportion has remained fairly stable. Urban dwellers, couples without children, and big earners eat out the most. The 1.9 percent of 1961 reflects a very different way of eating out than the recent 5 percent does, with the big change being that since about 1970 many more people eat out for pleasure. Before then, this had been the privilege of richer people, whereas eating out related to work has long been common for many people.

There are crucial differences with regard to the location and style of eating out. In the late 1980s, 27 percent of meals eaten out were eaten in restaurants, 8 percent in snack bars, 57 percent in the cafeterias of schools and companies, and 8 percent in other places such as milk bars or fries shacks. Most eating out is thus work related. White- and blue-collar workers away from home buy snacks in a sandwich bar. This is a small shop with a large display

window, divided into two parts by a counter, selling slices of bread or baguette with cheese, meat, or fish salads and drinks such as coffee or soda. Other snack bars sell simple dishes such as *roll mops* (salted herring fillet), *oeuf à la Russe* (hard-boiled egg with cold chopped vegetables and mayonnaise), *tomate aux crevettes* (fresh tomato with North Sea grey shrimp), or *filet américain* (raw minced beef with capers, Worcestershire sauce, pickles, small onions, salt, and pepper). Snacks may also be eaten at fries shacks, which sell fries in paper cones, with salt and mayonnaise and some meat. The coming of American-style fast-food outlets in the early 1970s only added to the wide choice for snacking. School and company cafeterias appeared in the 1950s in response to the desire to have a hot lunch at noon. Initially, they served a cheap, often overcooked lunch, but nowadays they offer a growing choice of tasty, healthy, and relatively cheap food.

Eating out for pleasure is relatively new. Many of the aforementioned eateries offer food also during nonwork occasions. Shoppers, students, theatergoers, or soccer supporters may enjoy a cone of fries, a cheeseburger, or a sandwich with tuna salad before, during, or after their activities. In the entertainment districts of the big towns one may indeed find a wide assortment of food almost 24 hours a day. About two centuries ago, however, a new form of eating out appeared in Europe, one that was exclusively oriented toward enjoying gourmet eating: the restaurant. This became such an extraordinary event that it made a special trip to another city or country worthwhile. The legendary Michelin guide labels this as *vaut le détour* (worth taking the detour). For decades now, Belgian restaurants are worth the detour.

Belgium followed closely the Parisian restaurant model because of its close bonds with France. By 1820, French chefs and waiters owned restaurants in Brussels, cooks from Paris worked in Belgium, and Belgians moved to France to learn the French way of cooking. Today, many restaurants in Belgium depict themselves as serving Belgian-French cuisine. This French character has always been highly appreciated by travel guides, which have assigned French

French-inspired restaurants, bars, and coffee shops along the old streets of Brussels, Belgium. (Rostislav Glinsky | Dreamstime.com)

cuisine the highest status. Belgian restaurants generally have done well in these guides.

Not all restaurants in Belgium have been influenced by French cuisine, however. Throughout the 19th century many restaurants, brasseries, cafés, and cabarets had a German, English, or Swiss ambiance. In the 1890s fancy Italian and Jewish restaurants appeared in Antwerp and Brussels, and in the course of the 20th century many more ethnic restaurants were opened. Today, there are about 80 different ethnic cuisines in Belgium.

Until the 1890s, gastronomic restaurants disregarded any reference to local dishes, ingredients, or methods of preparation, the French influence being absolutely dominant. This changed by 1900. More popular restaurants opened and were appreciated by tourists, while fancy cuisine became aware of

local ingredients and foodways. Culinary reviewers then described these restaurants as places where Belgians and foreigners adored eating informally and copiously, enjoying mussels with fries, *carbonnades à la flamande* (a beef stew with beer), or *waterzooi de poulet* (a souplike chicken dish with vegetables). Beer was typically drunk, and prices were moderate. Many other old and new *plats belges typiques* (typical Belgian dishes) are served nowadays, some of which had been prepared in the *estaminets* (small cafés) of the poorer town quarters in the early 19th century and some in *petit bourgeois* kitchens, although others are quite recent creations that are promoted as authentic and traditional. Belgian chefs eagerly responded to the increasing interest in Belgian cuisine, and they readily incorporated local ingredients and ways of preparation in the fancy cuisine.

Stoemp met Spruitjes or Stoemp Aux Choux de Bruxelles (Mashed Potatoes with Brussels Sprouts)

This is a typical Belgian dish that is prepared in many homes but increasingly also in Belgian top restaurants.

4 medium-sized onions
 1 green cabbage (about 1 lb)
 10 big carrots
 5 big turnips
 4 stalks celery
 About ½ lb leeks
 1 lb brussels sprouts
 7 tbsp butter, melted
 6 c chicken stock
 Bouquet garni of thyme, bay leaves, and parsley
 Salt and pepper
 2¼ lb potatoes

Clean and wash the vegetables. Mince the onions and the green cabbage very fine, and chop the carrots, turnips, celery, and leeks into coarse chunks. Cut the brussels sprouts in two. Put a large pot on low heat, and melt the butter, then add all the vegetables to sweat (*suer*) for 10 minutes. Meanwhile, stir regularly. Then add the chicken broth, the bouquet garni, and some salt and pepper. Heat until boiling, cover the pot, reduce the heat, and leave for about 30 minutes. Peel and cut the potatoes into little pieces, and put these into the pot; cook for another 20 minutes, stirring regularly. Finally, heat the pot and stir well, and add salt and pepper. Serve really hot. Salted bacon is a typical accompaniment.

There are common features of eating out in Belgium. Bread is always abundant and close by, second helpings of *pommes frites* are free, and the choice is wide. But there is more. Fancy restaurants affect the way food is prepared, presented, and named in snack bars and cafeterias. Haute cuisine seems to be everywhere: not just in the street but also in the media and the everyday talk of the common people.

This presence leads to a diffusion of the restaurant culture, to which even the food in sandwich bars and cafeterias testifies.

Special Occasions

In the past, stringent traditions regulated eating and drinking during celebrations in Belgium. Restrictions on drinking alcohol were mostly connected to the numerous Catholic festivities throughout the year. There were about 40 “high days” in Belgium in the past, but regulations in the 1780s limited this number. Today, only six Catholic celebration days remain as public holidays. Belgians now have 10 official holidays when shops, schools, and firms are closed. Of course, Belgians do not celebrate only the official holidays. In addition to these, which aim to foster religious and regional communities, local and private feasts are celebrated, which contribute to regional and intimate group identity. A renewed wave of local celebrations emerged in the early 1950s and particularly in the 1970s, which has led to a “feasting culture” nowadays, meaning that virtually every village and city district has its feast.

All of these public and private occasions include food in diverse forms and quantities. An average year means 10 festive dinners for the Belgians, with at least 5 grand meals for Christmas Eve, New Year’s Eve, one’s birthday, Easter, and a life-cycle ritual like a first communion or wedding. The highest-income group spends 6.3 times more on feast eating than the lowest-income group does, and a lot of this money is spent on champagne, of which Belgians are the fifth-highest per-capita consumers in the world.

Since the mid-1990s, the traditions and rules of the older celebrations have tended to disappear totally. Fasting and its corollary, excessive eating, are virtually gone, whereas only traces remain in the link between feasts and the eating of particular foods, such as fresh eggs on Easter. Old traditions remain or are rediscovered during carnival feasts (*Mardi Gras*), which are organized in about one-third of the Belgian communes in February, including famous parades such as those of Aalst (East Flanders, going back to the 16th century but with an annual parade since 1851) and Binche (Hainault, maybe appearing

in the 14th century; in 2003 it was put on UNESCO's World Heritage list). While making fun of the rich and famous via decorated floats, funny masks, and clothing, thousands of people eat pancakes, waffles, and pies but also eels, mussels, *smoutebollen* (doughnut balls; called beignets or *croustillons* in French), and sausages in little breads, while they consume quarts of beer.

Smoutebollen or Beignets (Doughnut Balls)

1 tbsp yeast
 1/3 c milk
 1 2/3 c flour
 1 egg
 1 tsp sugar
 1/2 tsp salt
 1 small bottle **witbier** (white beer, Hoegaerden type)
 2 tbsp butter
 Oil for deep-frying

Dissolve the yeast in the lukewarm milk, and add the flour, sifting it well. Separate the egg, and add the egg yolk, sugar, salt, and beer to the milk-and-flour mixture; stir well, and add the melted butter. Then, beat the egg white and fold it gently into the dough. Cover the dough, and let rise until its volume has doubled. Keep it out of the cold. Heat the oil to 350°F. Very gently stir the dough, then drop teaspoonfuls of the dough gently into the frying oil and fry until golden brown, which takes about 1 minute. Use a slotted spoon to remove the doughnuts from the fryer, lay on a plate covered with a paper towel to absorb excess oil, and serve with powdered sugar.

In general, rites of passage give rise to plentiful eating and drinking, providing the opportunity for families to gather and to renew or intensify ties. Christian families celebrate First and Holy Communion, whereas nonbelievers have the Spring Feast and the Feast of the Secular Youth. Today, there are no longer fixed rules with regard to the food at

communion feasts, which may mirror perfectly well the persisting trend toward innovation.

Belgian's declining religiosity implies the loss of traditional eating and drinking associated with Easter, Christmas, and other Catholic holidays. Since the 1950s the increasing purchasing power of Belgians has allowed them to abandon the traditional fasting and the correlated short-lived excesses after breaking the fast, while growing individualization has freed people from long-established community constraints. Yet Catholic high days are still moments of special eating.

The biggest festive meals in Belgium are those around Christmas and New Year's. Generally, Christmas Eve, Christmas, and New Year's Day are spent with family and close friends at home, while New Year's Eve is often spent eating out with friends. In December 2007 a survey found that 89 percent of the interviewees celebrated Christmas, and 77 percent celebrated New Year's Eve. Most people prepare familiar food, although they search for inspiration in cookbooks, Web sites, and magazines, which pay a lot of attention to grand feasts. Christmas dinners are rather traditional, with turkey, shellfish, salmon, game, and foie gras, along with wine and champagne. Since the 1970s, however, magazines and newspapers emphasize innovation with regard to the December feasts: the latest aperitif, an out-of-the-ordinary soup, or a fashionable dessert. In general, New Year's Eve dinner is less elaborate than the Christmas meal.

The food eaten on special occasions not only mirrors the general development of the Belgian diet but also shapes it in that many home cooks wish to excel in preparing special food. This leads to a continuous quest for new tastes, combinations, dishes, and ingredients when the festive days come into sight. Web sites, magazines, television programs, books, and specialized sections of newspapers are oriented toward guiding the home cook in this search. Often, new festive dishes have been tried out on the close family. If the meal was a success, particular dishes or ingredients may make their way into the daily cooking of the family. Festive eating thus introduces and diffuses new things. This contrasts with old traditions, when most feasts were linked to particular

Belgians eat and shop during the annual International Christmas Market in Belgium. (Richard Elliott | Getty Images)

foods. Still, many people prefer to stick to familiar festive food with such classics as asparagus, game, lobster, croquettes, salmon or turbot, cranberries, foie gras, and, most certainly, champagne.

Diet and Health

Today, in Belgium, food is on sale 24 hours a day, and most Belgians may eat whatever, whenever, and wherever they want. Compared with the past, this is a drastic change. If the pre-World War II food-related problems are viewed in terms of shortage and imbalance, with lack of calories, vitamins, and protein, leading to loss of weight and strength, edema, anemia, lethargy, and, for children, slow growth, the post-1950 abundance has caused problems of a new kind related to body shape and health: Being

overweight and obese increases the risk of diabetes, cardiovascular diseases, hypertension and stroke, and some cancers.

Today, 52 percent of the Belgians are considered to have a “normal” weight according to the body mass index (BMI, or the relation between a person’s weight and height). The number of obese people, however, is growing slowly but constantly, and about 13 percent of Belgians are considered obese (with a BMI over 30). This worries nutritionists, doctors, and health workers, and public organizations regularly launch information programs aimed at convincing Belgians to move more such as by using the stairs instead of the elevator, while eating less sweet and fat food. Belgians have many ways of trying to lose weight. Slimming products such as laxatives are popular, but starting exercise, or simply more physical effort, is rarely considered. A minority of Belgians calls on a physician for help with losing weight, and stomach reduction has gained popularity. However, the most popular way of losing weight is dieting. This takes many forms: eating less in general, eating less sweet and/or fat food, eating more fruit and vegetables, skipping meals, starting to use diet products, and/or following, strictly or loosely, the latest fad in dieting.

Slimming is not necessarily prompted by health concerns but may be purely cosmetic, to attain the ideal body. Slim ideals appeared among the higher social classes in Belgium in the 1920s but spread to all classes in the 1950s. By the end of the 1930s, many cookbooks suggested a reduction in consumption of meat, cheese, and eggs, for both health reasons and slimming. Calories started to rule the lives of thousands of people.

The public authority’s influence on what Belgians eat has largely increased in terms of safety monitoring, information, and recommendations. Belgians nowadays eat more safely than ever before, and, above all, they are much more informed about the tiniest food risk, food-safety procedures in supermarkets, organic foods in cafeterias, and dieting schemes. Yet despite the greater sensitivity regarding health and safety of food, recent crises have shown the very feeble trust most people have in the

food chain. For some, eating copiously provides the badly needed security in today's uncertain times.

Bosnia and Herzegovina

Overview

Bosnia and Herzegovina, one of the six federal units constituting the former Socialist Federal Republic of Yugoslavia, has been an independent nation since 1994. It is located at the center of the Balkan Peninsula with an area of some 19,741 square miles and a population of about four million. Bordered by Croatia, Serbia, and Montenegro, Bosnia and Herzegovina is landlocked, except for about 15 miles of Adriatic Sea coastline around the town of Neum. Bosnia makes up about four-fifths of the country, Herzegovina the remainder. The capital and largest city is Sarajevo.

Bosnia and Herzegovina became independent during the civil war of the 1990s and the breakup of Yugoslavia. The country is currently divided into the Federation of Bosnia and Herzegovina and Republika Srpska. The 1991 census, before the civil war, reported 43.47 percent Muslims (1,902,958), 31.21 percent Serbs (1,366,104), 17.38 percent Croats (760,852), 5.54 percent Yugoslavs (242,682), and 2.38 percent other (104,439). According to 2000 data, Bosnia and Herzegovina comprises 48 percent Bošnjaci (Bosnian Muslims), 37 percent Serbs, 14.3 percent Croats, and 0.6 percent other. There has not been a census since the war, but estimated figures show a significant loss of population. All speak the same language, though each group calls it by its own name; because of historical circumstances, groups have different religious affiliations. Serbs are associated with Serbian Orthodoxy, Croats with Roman Catholicism, and Bošnjaci with Islam. Each group also includes nonbelievers. The declared Yugoslavs in the census are those who ranked their citizenship in the nation

over their ethnicity, and “others” refers to Roma, Jews, Albanians, and other minorities. The term *Bosnian* refers to all residents of the country, but with the rise of nationalism spurred by the civil war, Muslims are now referred to as Bošnjaci, the term used in the Ottoman period and in modern Turkey.

If one discounts the pre-Islamic medieval state that preceded the Ottoman conquest, the area now comprising Bosnia and Herzegovina was never an independent state until the recent civil war. This means that the area has always been open to the free exchange of cultures, including food and foodways. The region has served as a crossroads between East and West for armies, invaders, migrations, and travelers. Slavs arrived in the region in the late sixth and early seventh centuries, and before and after settlement, control over the region was frequently contested by outside forces. There is an overlay of Ottoman culture throughout the Balkans, but it is particularly thick in Bosnia and Herzegovina, where Ottoman rule lasted from the mid-15th century until the area was occupied by the Austro-Hungarian forces in 1878 and annexed in 1908. Ottoman cultural influence was not just Turkish as is so often assumed. The Turks were a nomadic people until their conquest of Anatolia and the Byzantine Empire and sedentarization. It can be assumed that much of the foodways they carried throughout the Balkans were Byzantine in origin. But the Ottoman Empire also incorporated cultural elements of the various components of the empire. Examples in foods are many, such as pilaf (originally a Persian rice specialty), *burek* (a Persian word for *pita*, while the word for pita dough, *jufke*, is Arabic), and *musaka* (known in the United States

Burek, a Bosnian specialty made with pita and meat. (Blacksnake | Dreamstime.com)

as a Greek dish, spelled moussaka, but Arabic in origin). Regardless of origins, however, the foods are Bosnian today. Austro-Hungarian rule lasted until World War I. Austrian culinary influences were much less evident in Bosnia and Herzegovina than in nearby Croatia, where their rule lasted much longer. The best examples can be found in pastry.

The Yugoslav period, both the Kingdom of Yugoslavia, established in 1929, and the Socialist state (1945–1990), was a time of South Slavic integration, particularly during Tito’s life, when great attention was paid to “brotherhood and unity” (*bratsvo i jedinstvo*) and free cultural exchange between the various constituents of the nation. In the post–World War II period, with increased travel abroad and work in western Europe, there was greater openness to the cultures, including the foodways, of the wider world. In the 1970s, for example, a cultural exchange between China and Yugoslavia resulted in the first Chinese restaurant in the country, located in Sarajevo. A Chinese chef was brought to teach local chefs about Chinese food, after which the Chinese chef returned to China and the restaurant was left in the hands of local chefs, with a rapid Balkanization of Chinese dishes.

Food Culture Snapshot

In Sarajevo, the weekly food purchases for the Dudo family—two working adults and three school-age children—include bread (15.5 pounds) and other starches

such as flour, rice, potatoes, pasta, rice pasta, cornflakes, and manufactured jufke. They buy dairy products, including not only milk, cream, brined cheese, fresh cheese, premade ghee, and soured milk (*kiselo mleko*) but also imported Gouda cheese and flavored yogurts. Meat might include ground beef, hot dogs, baked chicken, several varieties of beef sausage, mutton, veal, beef steak, canned chicken pâté, and sardines. They also purchase eggs. Even in January, the Dudos’ access to fruits and vegetables exceeds what is available to villagers. Fruits include a variety of citrus, bananas, and dried figs. Besides the basics of cabbage, carrots, and onions, the vegetables also include tomatoes, spinach, red peppers, and mushrooms. Other essentials are garlic, lentils, kidney beans, pickles, granulated and cubed sugar to serve with coffee, sunflower oil, Hellman’s mayonnaise, peach marmalade, mustard, sea salt and other salt, chicken soup mix, chicken bouillon, coffee beans, Nescafé, and cocoa. Snack foods consist of raisins, peanuts, and candy, and beverages include sodas, mineral water, and concentrated and powdered fruit juices.

In contrast to villagers, the Dudos’ diet includes many imported foods, a fair amount of processed food, and some industrial food. In cities and towns, many residents like the Dudos maintain close ties with family in villages, from whom they often receive meat, vegetables and fruits, *šljivovica* (plum brandy), and other home-produced supplements to their diet.

Major Foodstuffs

Except for the Islamic prohibition against alcohol and pork, there is little difference between ethnic groups in the major foodstuffs. In Bosnia and Herzegovina, the prohibition of pork is much more rigorously observed than that of alcohol. People eat seasonally. Fruits and vegetables are very important in the diet, and vegetable gardens are very popular; on the smallest plots of ground, people find space for a garden. There is also a widespread system of periodic markets that provide both local products and those from other regions of Bosnia and Herzegovina and the former Yugoslavia. In the summer, melons, especially watermelon, are very popular. In

late summer women buy large quantities of peppers that they stuff, freeze, pickle, make into *ajvar* (a red pepper spread, also eaten as a condiment and salad), and roast and freeze for future salads. Cabbage is put up as sauerkraut, to be cooked or used as salad, and the fermented liquid (*raso*) is drunk between and at meals and in the summer as a thirst quencher. Whole-head sauerkraut is used for cabbage rolls (*sarma*). Fruits are preserved for winter use as compote; fruit butter (*pekmez*), which is especially made from prunes; and fruit syrups. Northeastern Bosnia is known for its smoked prunes from which a distinctive pekmez is made. Fruit brandy (*rakija*) is a very popular use of fruit; in particular, plums are used for šljivovica. Milk and milk products are important in the diet, especially in those zones given to sheep husbandry. This includes sweet milk, soured cultured milk (*kiselo mleko*), yogurt, sour cream, fresh white cheese, and brined white cheese (often made of sheep milk or a mixture of cow and sheep milk), butter, and *kajmak* (cream skimmed off heated milk, used sweet or soured). The whey left after churning butter (*mlačenica*) is very important to the diet of families who keep sheep and cows.

Bread is the most essential component of everyday meals; it is said that without bread, one has not eaten. At every meal, except with pita and burek (see the following), slices of bread are placed at each table setting and eaten without butter. In cities and small towns, bread is often purchased, and locals know when bread comes out of bakery ovens. In villages bread is often baked at home. In isolated villages of western Bosnia, at elevations where wheat was not adapted, the everyday bread was of barley; wheat bread was also made, especially for holidays. Cornbread, too, was a favorite food. When these villagers went to market, they would often treat themselves by buying a loaf of white wheat bread for lunch.

Certain foods are emblematic of Bosnia and symbolic of Bosnian identity. These foods include *Bosanski lonac*, pita, stuffed vegetables, and certain sweets such as *halva* and *urmašice* (biscuits soaked in syrup). They are eaten in most homes and found on both everyday and ceremonial tables. The national dish of Bosnia, *Bosanski lonac*, is a stew of combined meats (typically lamb, veal, and beef) and

vegetables slowly cooked for many hours or overnight in a special covered earthenware pot. The pot (*lonac*) is so much a part of the dish that the dish is named after it. Pita is the generic name for ingredients rolled into a very thin, stretched dough (*jufke*). The dough is made at home or can be purchased in two thicknesses, depending on the dish to be prepared. Common fillings are spinach, fresh cheese, squash, potato, and cabbage. Pita made with meat (chunks or ground) is called burek. Without filling, it is *maslenica* or *maslenjak*. There are many variations. Spinach and white cheese, for example, are often combined; Christians make a potato and pork pita; and one can improvise with fillings such as chopped lamb intestines. Stuffed vegetables are very popular, of which cabbage rolls (*sarma*) are the most common. A meat and rice mixture is wrapped in cabbage leaves to form a sausage-like shape no

Sarma, a traditional Bosnian dish made with cabbage and meat. (Shutterstock)

bigger than a fat thumb. This beloved dish is favored throughout the Balkans as well as in Bosnia. Other stuffed vegetables include peppers (*punjene paprike*), onions (*sogan dolma*), eggplant, and tomatoes. Balkan peppers are light green, thick walled, and very flavorful, the opposite of bell peppers. Bosnians like sweets, and most households have sweet pastries on hand for guests. Mass-produced cookies and cakes are available at supermarkets, but homemade sweets are favored.

Buying in the marketplace from the growers and producers of products is the preferred way and a natural part of daily life. There are also small grocery stores and, today, supermarkets where staples are obtained. Traditionally, women shopped every day for food, but as refrigerators and freezers became more available and larger and more women entered the workforce, weekly shopping has become more prevalent for urban dwellers.

Cooking

Bosnian traditional cuisine has certain distinguishing characteristics: Dishes are not made with a roux; strong and hot spices are seldom used; spices are used in small amounts to enhance, not hide the taste of the meats and vegetables; foods are lighter because most are cooked in their own juices rather than in fat; and a wide variety of sweets are consumed. Cookery styles do change, and contemporary cooking styles may modify these generalizations.

The primary home cook is the female head of the household, whose tasks are to plan and prepare the meals. This is especially the case in traditional regions of Bosnia and Herzegovina; however, in contemporary urban settings, more and more men can be found in the kitchen.

Hearth cooking was still viable into the 1970s in isolated mountain villages of western Bosnia. In one example, the stone hearth was approximately 10 feet long and 4 feet wide and stood about a foot high off the ground. It was backed by a stone wall; the smoke from the hearth escaped through the roof of the passageway that divided the lived-in rooms and the storerooms. Wood was stacked at the end of the hearth; a fire burned in the center of it. When

they had burned down, the glowing embers were swept aside, the hearth was carefully cleaned, and the ready bread dough was placed on the hot hearth and covered with a *sac* (a convex metal cover similar in function to a Dutch oven), which was then covered with the glowing embers from the fire. Pita and other foods were also baked under the *sac*. Foods such as eggs (*cimbur*) and soup (*corba*) were cooked in pans over low fires. For long slow-cooking foods, a pot was hung from a heavy chain over the hearth. Eventually, villagers acquired wood-burning sheet metal stoves with ovens. The *sac* is still available in Bosnia, and sometimes in Bosnian markets in the United States, though it is now seldom if ever used in daily cooking.

In contemporary Bosnia and Herzegovina, both rural and urban stoves are electric, burn wood or coal, or use bottled gas. Grills and barbecues are popular, and Bosnians can follow their passion for grilled meats. Spit-roasted sheep is everyone's favorite, and meat, sausage, and cheese are smoked in backyard smokehouses to provide popular accompaniments to *rakija*. Suckling pig, spit-roasted or roasted in the oven of the local bakery, is popular among Christians.

Sarma, possibly the food that most symbolizes Bosnia and Herzegovina, is one of those dishes that frequently appears on everyday tables and is requisite at celebratory meals. The rolls are made with ground pork, or a mixture of pork and beef, and rice by Christians, and with beef or lamb (or a mixture) and rice by Muslims. The cabbage- or sauerkraut-wrapped rolls are stacked in a pan, which ideally is lined with bones or ribs, to which tomatoes or tomato sauce is added; they are then simmered until done. When whole-leaf sauerkraut is not available, chopped sauerkraut can be added to the pan.

Also symbolic of Bosnia and Herzegovina, pita is the most common dish. It is eaten throughout the former Yugoslavia, but Bosnians are especially known for theirs. Like sarma, pita is eaten every day as well as at celebratory meals. When making pita, it is traditional to place the filled dough into a large round pan with sides about one to two inches high (*tevsija*), starting in the center and coiling it around itself until the pan is full. It is cut into wedges for

serving to individuals, but if it is eaten from the *tevsija*, people break off pieces with the right hand. It can also be made in individual servings.

Trahana or *tarhana* is a special food prepared in Muslim homes, and it is considered a specifically Muslim food, a belief reinforced by a traditional saying, *tarana, Turska hrana* (tarana, Turkish food). Regardless, some Christians buy it from Muslim families. Trahana is a small granular dumpling used in soup and as gruel for babies. Production takes about a week for the dough to sour before it is forced through a traditional sieve (*sito za trahanu*) to form the grains. It is then dried and stored in a dry place.

Typical Meals

A similar meal pattern can be defined for most of Bosnia and Herzegovina, regardless of ethnicity. The diversity is greatest when comparing rural with urban dwellers. Sunday meals often differ from those on weekdays, and what one eats depends on the season.

The same raw materials are available to every group, with the exception of pork and alcohol, which are prohibited by religious law to Muslims, and the cuisine shows only slight differentiation. A few dishes are, or at least are regarded as, specific to one group or another. Sometimes these foods are linked to distinctive practices; for example, a mixture of a shortening and sugar was traditionally eaten and used for divination by Serbs at Christmas. More commonly, the differentiation occurs in daily diet. Pudding-like dishes such as cooked fruit thickened with flour (*eksija*) and rice pudding (*sutlijaš*) are regarded as typical Muslim sweets, as is halva, a cooked paste of flour, sugar, and oil or butter. As already discussed, trahana is another food closely associated with Muslims. Christians, more so than Muslims, prepare a variety of cakes and cookies.

Of the meals, breakfast varies the most. Coffee is commonly the first thing consumed in the morning, but many Christian men, especially in villages, will start the day with a shot of *šljivovica*. Children rushing off to school might have a bowl of cold cereal, such as cornflakes, now available throughout

the country. A favorite breakfast, if time permits, is pita without filling (*maslenjak* or *maslenica*), which is eaten alone or might be accompanied with fresh cheese or eggs (*cimbur*). This is a typical Sunday breakfast. In cities, few women know how to make *maslenjak* anymore, or, because they work, they do not have time to make it. A common urban breakfast is coffee with milk and bread with jam. There are, however, frequent coffee breaks throughout the workday. Urban coffeehouses send boys with coffee to businesses. Coffee is usually Turkish, although espresso is increasingly common in urban centers.

The midday meal depends on where one lives and whether one goes to school or works in town or on a farm. Many families eat their largest meal at midday. Some might go home from 12 to 3 P.M. for the largest meal of the day. They might have stewed chicken or *Bosanski lonac*, one-dish meals that can be prepared the evening before and quickly reheated. If a family works the fields, the woman left at home may bring hot food to the field. Working individuals who do not go home to eat might take leftovers from home or buy something to eat. When they get home after a day at work, they attempt to make a quick meal, the main one of the day for them—soup, fish or meat, a starch, and bread—or they reheat one-dish meals made the evening before.

Sunday dinner is eaten in early afternoon, and it is usually larger than those during the week. It might begin with soup followed by an entrée or two: chicken baked with rice or potatoes, vegetables cooked with meat (*djuvec*), sarma or another stuffed vegetable, and bread. It is fairly common to have more than one meat dish. A salad of greens or raw vegetables would be dressed with sour cream or oil and vinegar. There is always something to drink, such as mineral water, pop, beer, or wine. Dessert is seldom eaten, but coffee usually follows the meal.

When the main meal is eaten at midday, the evening meal is usually light, often consisting of leftovers from midday or possibly the day before, or soup with bread, sometimes with a red pepper spread (*ajvar*). Desserts are not commonly part of a meal, but rather sweets and pastries are enjoyed as snacks and with coffee or other beverages. Ceremonial meals are an exception to this pattern.

A complex of distinctions exists in drinking habits. Coffee, the variety called Turkish coffee in the United States, is prepared by all groups throughout the former Yugoslavia, but it is especially typical in Bosnia and Herzegovina and has the greatest importance among Muslims. Bosnian Muslims would say that when Yugoslavia again acquired access to coffee after World War II, the first shipments were sent to Bosnia and Herzegovina “because Tito [the former leader of Yugoslavia] knew how much we liked it.”

The importance of coffee seems related to the Islamic prohibition on alcohol rather than to differential diffusion. Plum brandy (*šljivovica*), the national drink of the former Yugoslavia and widely consumed in Bosnia, has strong ritual use in Christian homes. It is served to all guests and at all ceremonies, and elaborate codes of serving and drinking behavior have evolved. Although many urban and lowland Muslims drink alcohol, the *šljivovica* syndrome is much less elaborate among them and carries little of the ritual importance. Muslims in Bosnian and Herzegovina generally are less observant than those in the Middle East, although a revival followed the civil war.

Upon arriving in a Serbian household, guests traditionally are served a spoonful of a whole-fruit preserve (*slatko*) with water, followed by *šljivovica* and coffee. In an observant Muslim home the place of alcohol was traditionally filled by sherbet (*serbe*), cold water sweetened with sugar and flavored with lemon or fruit syrup, served in small glasses and drunk immediately, followed by coffee. The ritual significance of *serbe* in Muslim homes was just as important and as elaborate as that of *šljivovica* in Christian homes. *Serbe* is never served in Christian homes, except perhaps for a Muslim guest. Today, in Muslim and Serbian homes, especially in urban centers, *serbe* and *slatko* seem to have been replaced by pastries served with coffee. Ideally, women always have pastries and sweets on hand for guests. Bošnjaci might serve Turkish delight (*rahat lokum* or *rathuk*) instead of pastries.

Most of the differences between ethnic groups are unrelated to differential diffusion of Turkish patterns. Turkish influence in all cultural spheres was greatest in the urban centers where Ottoman power

An assortment of Turkish delight or lokum. (Alaettin Yildirim | Dreamstime.com)

was centralized. Like many other aspects of culture, Turkish influence on eating habits follows a rural-urban dichotomy rather than a Muslim-Christian one. Turkish-style dishes, traditionally cooked and served in tinned copper utensils, are perhaps most commonly prepared in the homes of urban Muslim families, but they are more prevalent on the tables of small-town Christians than those of rural Muslims. The exception to this pattern is the use of pork and pork products. The cooking fats among Muslims are butter, clarified butter, and vegetable oil, whereas Christians usually use lard and vegetable oil. Therefore, Christians commonly claim that Bošnjaci have a distinctive body odor because they cook with butter.

One distinction most prevalent among Muslims in small towns and villages rather than in large urban centers is the use of a *sofra*. A *sofra* is a low, round table large enough to seat 8 to 10 people around it on the floor. Traditionally, people would eat from a common dish, using only a spoon, and Muslim etiquette required that individuals take food only from directly in front of them. In village homes in western Bosnia in the late 1960s, village Muslims used only *sofras* for eating and some food preparation. When not in use, they were hung on the wall. These villagers did not use table and chairs. Christian villagers in the same area used tables and chairs except for large celebratory meals when they, too, brought out the *sofras*.

Traditionally, coffee was served in small handle-less cups (*findzani*). Coffee is made in a special long-handled copper or brass pot (*džezva*) with a lip but no lid that is used only for coffee. Christians tend to make coffee with sugar, while the Bošnjaci style is without sugar, but the coffee is otherwise the same. Bošnjaci serve sugar cubes with coffee; these are either dipped into the coffee cup, or they are placed in the mouth and coffee is drunk through them. Granulated sugar is also available for those who stir sugar into the cup. These distinctions are highly variable.

Eating Out

Bosnians go to restaurants, but the most popular establishments are eateries that specialize in specific dishes. One food that most if not all Bosnians eat outside the home is the much-loved *ćevapčići* or *ćevapi*, for which one goes to a *ćevabdžinica*. This is finger-sized ground meat grilled and served in a split *lepinjelsomun* (Bosnian yeast bread about 10 inches in diameter) and eaten with chopped onions. Typically an order comes with either 6 or 10 *ćevapi*. This food is so tightly integrated into Bosnian culture that some of the first restaurants established by post-civil war immigrants to the United States usually sold nothing but *ćevapi*. There are many opinions on what makes the best *ćevapi*; some say it should be a mix of veal and lamb, others that it should also include beef. In the United States packaged *ćevapi* are available wherever Bosnians settled, and although it is now grilled at home and is a favorite picnic food, Bosnians also eat it at local Bosnian American restaurants. There has been a general replacement of lamb with beef among Bosnian Americans, and this has included *ćevapi*, which are generally all beef.

Some restaurants are known for having an exceptional mixed grill: *ćevap*, a meat patty with onion (*pljeskovicica*), shish kebab (*šiš-ćevap*), small pieces of veal on a skewer (*ražnjići*), pork cutlets (*culbastija*), and lamb kidney. Bosnians are not big meat eaters, but they like meat and mixed grill is a treat. Proportionally, meat makes up about 40 percent of the Bosnian diet.

Another eatery popular in urban Bosnia is the *aščinica*, which some believe appeared in Sarajevo with the Ottomans in the mid-15th century. Like the historical *aščinica*, which consisted of a butchery, bakery, and restaurant, today's *aščinica* offers a buffet with precooked foods, many of which are meat and vegetable one-dish offerings, kept warm in hot water baths. The food is inexpensive, familiar Bosnian fare.

Bosnians like sweets, and to fulfill their wants, they go to special sweet shops (*slastičarnice*), where they choose from a variety of Turkish-style sweets, Austrian-style pastries and cakes, and ice cream. In the fall, one of the specialties is pureed chestnut topped with whipped cream, and on cold winter days one can indulge in *salep*, a hot, sweet drink made from orchid roots. Most of the *slastičarnice* in the former Yugoslavia were owned and run by Albanians, regarded as specialists in making sweets.

Special Occasions

The most important celebratory, ritualized occasions in Bosnia and Herzegovina are Ramadan (Ramazan), Eid al-Fitr (Ramazanski Bajram), and Eid al-Adha (Kurbanski Bajram) for Bošnjaci, Christmas and saint's days for Christians, and, in the case of the Serbs, Krsna Slava. These occasions are commemorated with tables overflowing with carefully prepared, often special foods.

Ramadan, the monthlong Muslim fast, is the major event in the Bošnjaci ritual calendar. Believers do not eat, drink, smoke, or have sex between sunrise and sunset. Families wake while it is still dark and eat a larger-than-usual breakfast, often including types of dishes served at midday and evening meals. Their evening meals also consist of more dishes than usual and often include dessert, which is not part of everyday meals. Ramadan is a period of intense devotional activity centered in the mosque and with much socializing in homes in the evenings. The evening meals, which break the day's fast, for example, are often shared with friends and neighbors. Eid al-Fitr is the celebration of the end of Ramadan, and Eid al-Adha is the commemoration, 40 days after Ramadan, of the saving of Abraham's

son through the sacrifice of a lamb instead. Both commemorations consist of three days of lavishly prepared meals shared with friends. For Eid al-Adha, an animal, usually a lamb that is perfect in every way, is sacrificed and the meat distributed to the poor and needy. According to Greater Islamic tradition, one-third is given to the poor, one-third is given to friends or relations, and one-third (the right front shoulder) is retained by the family.

Meals for the Eids are elaborate, with as many as 20 or more dishes. A traditional meal began with a soup (corba) with trahana and lamb. This was followed by dishes served one at a time to the men seated on the floor around the sofra, who ate from the common dish using soup spoons. When everyone stopped eating, the dish was removed and another was put in the center of the sofra. After the soup came eggs (cimbur), bread soaked with lamb juice and covered with pieces of cooked lamb (*potkriža*), unfilled pita (maslenica), cookies soaked with sugar syrup (urmašice), cabbage rolls (sarma), rice pudding (sutlijaš), sauerkraut cooked with dried lamb (*kalja*), cheese pita (*sirnjava*), a pudding-like dish (eksija) with prunes, buttermilk (mlačenica), coffee, and serbe. The alternation of sweet and savory dishes is traditional in Muslim feasts.

Urmašice (Bosnian Dates)

Among Bosnians this sweet is also known as *hurmašice*, *nabrdnjace*, *brdarice*, and *hurmadzik*. The word derives from *hurma*, meaning “date,” and the shape of the sweet is somewhat like that of a large date. Urmašice should be made at least 24 hours before needed.

Dough

- 1 c yogurt
- 1 lb unsalted butter
- 2 egg yolks
- 1 lb flour

Use cheesecloth to drain all the water off the yogurt, which can be done in a sieve over a bowl. This will require about 1 hour. Cream the butter. Mix

in the yogurt and egg yolks. Add as much flour as the mixture will take (about 1 pound). The dough should hold together and be firm. Break off pieces of dough the size of an egg, and with your hands form into a ball. On a floured grater, press the dough into the shape of a date. Lift the date off the grater and place grater-side up in a pan with sides at least 2 inches high. Bake in a hot oven until a light golden brown, about 20 minutes.

Syrup

- 1 ½ lb sugar
- 2½–3 c water
- 1 tsp vanilla
- Juice of ½ lemon

While urmašice are baking, prepare the syrup. Simmer sugar, water, and vanilla until it forms a light syrup. Add the lemon juice. When the urmašice come out of the oven, let them cool for a couple of minutes. Then, with the syrup simmering, slowly ladle it over the pan of urmašice. Keep urmašice in the pan until all the syrup is absorbed, about 24 hours. They should not be dripping with syrup.

After the meal, the host and other men of the family brought well wishes to their closest neighbors and kin. By custom they were supposed to visit each household in the village during the three days. The visits were seldom longer than 30 minutes, and at each home they would be served coffee, serbe, cigarettes, and Turkish delight (rahat lokum). The next two days the women visited from house to house.

For Eid today, the meal begins with corba (a lamb or chicken soup with vegetables, noodles, or trahana). Subsequent dishes in the order served are cimbur (an egg dish), *djulnari* (a sweet soaked with sugar syrup), okra (*bamija*) with veal, lamb with quince (*ćevap sa djunjama*), pita with spinach, baklava, rose-flavored serbe, stuffed onions (sogan dolma), *gurabije* (a cookie-like sweet), rice and lamb (*janjeci pilav*), rice pudding (sutlijaš), and sour cherry compote (*hošaf od višanja*). All the dishes remain on the table throughout the meal. Bread is taken for granted. After the meal, coffee is served.

A lavish, plentifully laden table is also integral to the most important Serbian celebration, the Krsna Slava, an annual commemoration of the day a family's ancestors were baptized and became Christian and a celebration honoring the saint on whose day this conversion took place. Serbian Orthodox churches, families, and communities have their own Krsna Slava. This celebration requires the presence of an icon of the patron saint and four ritual symbols: a lighted candle, a dish of cooked sweetened wheat kernels (*Slavsko žito* or *koljivo*), a special round loaf of bread (*Slavski kolač*), and red wine. The bread is decorated on top with a large cross. On its Slava, the family attends church for communion, after which the priest is invited to the family's home, where he blesses the bread, cutting a cross into the bottom and pouring wine onto the cut edge. The bread is then torn in half and everyone present tears off a small piece. The *koljivo* is shared by all guests, who each take a spoonful. A table is laden with food, which is replenished throughout the day and into the night for well-wishers who stop in. Traditional appetizers to be consumed with *šljivovica* and wine included bite-sized pieces of roasted suckling pig, raw bacon, cooked ham, pickled peppers, homemade fresh cheese, *baklava*, *urmašice*, mixed cookies, and white bread. The meal that follows often includes spit-roasted lamb or suckling pig and a large variety of pastries.

The most important day of the year for Croats is Christmas. A traditional serious celebration began on Christmas Eve and continued through the three subsequent days. A meal began with toasts and considerable *šljivovica* served with appetizers of white cheese and roasted sheep. Food was brought to the *sofra* in the following order: noodle soup, *burek*, *sarma*, unfilled *pita* sweetened with sugar, cheese *pita* (*sirnjaca*), cabbage and ham, boiled wheat with chicken, *sutlijaš*, and a variety of homemade cookies. Coffee was served at the end.

A very old traditional food, once a common dish of Dinaric herders regardless of ethnic affiliation, has become a ritual dish among Bosnian Christians with the introduction of a cash economy and migrations; it is called *cicvara* or *masla* in Bosnia and Herzegovina and *gotovac* in Montenegro. Corn, rye,

or, less often, wheat flour is poured into a mixture of water and milk into which butter and cheese are melted. Even today, some Croats in western Herzegovina and Serbs in eastern Herzegovina prepare *cicvara* for Christmas.

Secular occasions, such as hosting visiting in-laws or family members from overseas, a work bee (mowing hay or building a house), and a village son's return from military service, are important events that call for roasting a sheep. Throughout the former Yugoslavia, a spit-roasted whole sheep is an integral part of most festive occasions. The act itself, usually accompanied by jovial visiting, drinking, and singing, is as important as the food prepared. It is no wonder that Bosnian immigrants to the United States, with jobs that afford some luxuries, are roasting sheep more frequently than they did in Bosnia. Aside from these festive occasions, spit-roasted sheep is a favorite food anytime. It is not unusual for restaurants in market towns to roast lamb on market day, and shoppers eagerly wait for it to be done. It is usually eaten with bread and fresh green onions or a salad of chopped onions and tomatoes. Marketgoers buy roasted sheep by the kilogram to eat while in town or to take home. Roasting sheep on water-driven spits are prominently placed in front of special restaurants located along well-traveled roads.

Diet and Health

The traditional Bosnian diet is basically healthful. Instead of being fried, for instance, meats are often simmered, and vegetables are cooked in the meat juices. These vegetable and meat one-dish meals are very common. The diet is grain based; bread, whether made of wheat, barley, or corn, is an essential part of nearly every meal, and polenta (*pura*) and buckwheat mush are surviving traditional foods. Meat makes up about 40 percent of the national diet, though in mountain villages the amount may be far less. In villages fresh meat generally is eaten on auspicious occasions but otherwise used sparingly. Milk products are essential to the diet. Soured cultured milk is heavily consumed in urban centers, and whey from churned butter in villages. Bosnians shop regularly at open markets where

they buy seasonal fruits and vegetables, which they eat fresh and preserve for winter. Buying local without being particularly conscious about it is a Bosnian tradition.

Bulgaria

Overview

Lying between Romania and Turkey but also sharing borders with Macedonia and Serbia, Bulgaria lies on the western edge of the Black Sea with 220 miles (354 kilometers) of coastline. Bulgaria is a southeastern European country on the Balkan Peninsula. Bulgaria's terrain is mountainous, although lowland plains occupy 30 percent of the landmass in the north and southeast. Bulgaria's temperate, warm climate, fertile lands, and diverse environments (a third of the country is forested, and there are deep, fertile valleys and lowland plains) mean that Bulgarian food culture is diverse. Greek and Turkish culinary influences predominate. South Slavic and rooted in southeastern Europe, Bulgarian food is similar to Balkan food in general. The long period of association with other Balkan countries aligned under the dominance of the Ottoman Empire in the 16th and 17th centuries is evident in the presence of baklava, moussaka, and *gyuvetch* (an eggplant dish). Bulgarian food culture is a confluence of influences, coalescing into Balkan-style food in which one can taste the influence of the Greeks, Slavs, Bulgars, Romans, and, even further back, the Thracians.

Within a total population of 7,204,687, ethnic Bulgarians constitute 83.9 percent of the population, Turks are 9.4 percent, and Roma, Tartars, Macedonians, Circassians, and Armenians make up the remaining 6.7 percent. The religious demographic of Bulgaria is as follows: Bulgarian Orthodox, 82.6 percent; Muslim (Pomaks), a sizable 12.2 percent; and remaining Christian denominations (Protestants, Roman Catholics) and other theistic (such as Armenian Orthodox Christianity), agnostic, and atheistic

groups, the remaining 5.2 percent. In 2003 it was estimated that 14.4 percent of the population lived below the poverty line.

Bulgaria's main agricultural output (agriculture accounts for 7.3% of the gross domestic product, using 7.5% of the labor force, while the majority of the population—57%—works in the service industries and 35.5% in industry) consists of the following crops: fruits and vegetables, barley, wheat, sunflowers, and sugar beets. The challenges faced by the Bulgarian agricultural industry include deforestation, industrial waste products and heavy metal contamination from metallurgical plants, the pollution of rivers with raw sewage, damage to forested land from acid rain and air pollution, and industrial emissions and the air pollution associated with these. However, the prohibitive costs of chemical fertilizers and pesticides mean that food products are generally free-range or organic. In contrast, for urban centers of agricultural production, the many decades of collectivization and state planning under the erstwhile Socialist regime in Bulgaria mean that these sites of agriculture are more conformist and less diverse in their produce.

The fall of Communism in 1989 caused a seismic disruption in Bulgaria's economy. In consequence, agricultural production declined following the dispersal of cooperative farms, unemployment increased, and the real monetary value of wages decreased; this was coupled with exponential growth in private-sector activity. Although Bulgaria is capable in principle of self-sufficiency in food production, the demise of collective farming has led to a decline in the agricultural production of key crops such as

Traditional Bulgarian moussaka before baking.
(Shutterstock)

wheat, as have unpredictable weather patterns. Following further economic change in the 1990s, substantial increases can be seen in the production of food needed for individual household subsistence.

Although there is very little vegetarianism as a lifestyle choice, Bulgarian food culture (*bulgarska kuhnya*) tends to involve lower meat consumption than in other European countries. New European Union member states consume twice as much meat; the monthly per-capita average meat consumption in Bulgaria is 6.7 pounds (3.06 kilograms).

Food Culture Snapshot

George and Anna live in Sofia, the capital city of Bulgaria. As a middle-class couple, George works in information technology, and Anna is an administrator. George's day starts at 7 A.M. The impact of modern, fast-paced living means that they travel to work separately, working slightly different shifts. The amount of time George spends commuting and working outside the home means that he buys coffee for his breakfast, to drink as he travels. This he buys from a café not far from his work, along with a cheese *banitsa* (pastry). Anna, because she has a later start, at 9 A.M., and because her work is not in the distant business district of Sofia, has yogurt, *kifli* (a flaky pastry made from sweet dough with a jam filling), and coffee at home, all bought in advance from one of the small supermarkets that now proliferate in large cities in Bulgaria.

Lunch, for which they both go to Anna's mother's house, is at midday. As this is the largest meal of the

day, Anna's mother has made a starter of *sa'lati shopska* (shopska salad, made from tomatoes, cucumber, onion, and white cheese called *sirene*, similar to feta), meatballs stewed in a *kavarma* (stew with tomatoes and paprika), boiled *kartofi* (potatoes), peppers stuffed with cheese, bread, and yogurt. Anna's mother bought the ingredients for these dishes from the supermarket: The supermarkets have taken a bigger market share, so more processed food is now available and eaten, although most people still cook their evening meal from scratch. The local markets typically sell fruit and vegetables, and as more and more of the Bulgarian ones are exported, more and more is imported from Turkey, with a lower quality. However, Anna's mother bought the meat for the *kavarma* from a local specialized shop for meat and the *sirene* cheese for the *shopska* from a minimarket run by an individual owner.

For dinner, George and Anna return home and eat a light meal of *meze* (small plates)—this means Anna has to prepare rather than cook the meal, although she did make the baked eggplant the weekend before. The cod roe appetizer and the *pasterma* (air-dried, pressed, and cured beef, flavored with paprika) they eat, along with cornmeal *kačamak* balls, were bought in the small local market, although the *pasterma* was bought in a large supermarket. As the intricate nature of some *meze* dishes involves more intensive kitchen-based labor than Anna has time for during the workweek—and it is still the expectation that Anna will take responsibility for domestic arrangements—Anna opts instead to buy in some meals. In Bulgaria, both lunch or dinner can begin with *meze*, the series of small dishes that link Bulgaria to Turkey: Some *meze* are baked eggplant, pickles, and the carp or cod roe appetizer *tarama* that resembles Greek *taramosalata*. Bulgarian *pasterma* is a centerpiece of *meze* along with other cured meats such as dark Dalmatian ham. Hot cheese, meat, or spinach *banitsa* may also follow *meze*. Savories such as *kačamak* balls, cornmeal-based snacks, stuffed with a local ewe-milk cheese, such as *bryndza*, also feature in *meze*.

Major Foodstuffs

Although key staples and ingredients inform the corpus of Bulgarian food, regional culinary differences are apparent and mirror localized environmental

conditions. Along the coastline of the Black Sea, a food culture that depended on fish consumption is evident, despite the diminishing fish stock of the Black Sea. The mountainous landscapes of Bulgaria are a source of dairy products, while fertile plains supply Bulgaria's substantial fresh-vegetable consumption. The everyday diet of Bulgarians is founded on seasonal, local products.

The northern reaches of Bulgaria provide root crops, while the south yields the summer crops of peppers, tomatoes, okra, zucchini, and eggplant. This range of vegetables figures largely in Bulgarian food culture. An extensive array of vegetables is grown locally in Bulgaria and appears on a seasonal basis. The seasonality of vegetables and food means, for instance, that spring sees a rise in the use of wild and domesticated green plants for food, such as dock leaves, sorrel, nettles, and spinach. There has been an increase in the domestic production of vegetables, and some of this produce reaches the open market. These include varieties of potatoes, onions, tomatoes (*domati*), garlic, okra, peppers (*piperki* and *chushki*), carrots, cauliflower, lettuce, cucumbers (*krastavitsi*), cabbage (*zele*), peas, mushrooms, celery, eggplant, zucchini, radishes, spinach, lima beans, pumpkins, turnips, green beans, and olives.

Major fruits include blueberries, melons, apricots, blackberries, raspberries, quinces, medlars, watermelons, muskmelons, strawberries, plums, peaches, cherries, grapes, and pears. Early summer sees the harvest of strawberries and cherries, followed by the harvest of apricots, figs, and numerous other fruits.

In preparation for winter, and the increase in price and decrease in availability of vegetables, vegetables can be canned, bottled, preserved, and stored through the production, for example, of sauerkraut. Indeed, the processing of vegetables into meals can reveal the many influences on Bulgarian food. Turkish nuances are evident in dishes such as stuffed vine leaves; Greek and Turkish tones are clear in zucchini stuffed with rice. The tradition of *turshiya* or *torshi* unites Bulgaria in the pickling of vegetables with wider Balkan and Middle Eastern food culture. Persian influence can be found in the etymology: The Persian word *torsh* means “sour.” *Turshiya* is an appetizer of dried aromatic herbs, peppers, ginger, vinegar, and salt—acting as antibacterial agents—and

various proportions of chili, celery, beets, cauliflower, cabbage, garlic, and small onions. Its two most popular incarnations are *selska turshiya* (country pickle) and *tsarska turshiya* (king's pickles). Turkish-style *turshiya*, called *tursu*, uses a higher concentration of salt. In contrast, Persian-style *turshiya*, known as *torshi*, has a higher vinegar content. It can be made within the home—much domestic industry goes into its production in the autumn, even in urban centers—but a processed version of *turshiya* can be bought in large supermarkets. Served both at home and in restaurants, *turshiya* will be placed in a bowl alongside the main dishes on the Bulgarian table. Vegetables can also figure in popular vegetable mixtures or relishes such as *lyutenitsa*, which is particularly popular in the summer in northern Bulgaria. Tomatoes, roasted peppers, onions, garlic, and sunflower oil are combined in a mortar and pestle until they are of a rough texture. Parsley is added. The distinctively pungent taste is what stands out most clearly about *lyutenitsa*—etymologically, *lyut* means “piquant.” The mass production of *lyutenitsa* has flourished in recent years.

High in antioxidants and nutrients, walnuts and almonds are harvested in abundance in Bulgaria. They find their way into the pastry-making industry in such pastries as *baklava* with its interlayering of phyllo pastry and chopped nuts, sweetened with honey or syrup. *Baklava* consumption spans food cultures from Turkey to the Middle East, the Balkans, and parts of Central Asia.

Dairy products, in many different forms, are widely consumed but with a particular emphasis on white cheeses preserved in brine, as well as types of yogurt. Feta cheese, popular throughout southeastern Europe, is associated in popular consciousness with Greece, but in fact it originated in the Trakia region, currently designated as southern Bulgaria. Existing in Bulgaria under the appellation *sirene* and made from sheep milk, goat milk, or, more frequently, from cheaper cow milk, with a fat content of 40–45 percent, this brined, grainy-textured white cheese is featured in *banitsa* and *shopska* salad. *Kashkaval*, a hard, yellow ewe-milk cheese, also predominates. Popular when dipped in egg and rolled in breadcrumbs, then fried, *kashkaval* is, in this incarnation, known as “fried cheese.”

Yogurt (*kiselo mlyako*, meaning “sour milk”) is an integral part of much Bulgarian food and is sold in various grades and qualities. A particularly buttery version, found most often in mountainous regions, such as Shipka and Gabrovo, is the water buffalo–milk yogurt called *bivolsko mylako*. *Arjan*, a mixture of water and yogurt, is also popular, particularly at breakfast. Purportedly, yogurt originated in Bulgaria, when the ancient inhabitants, the Thracians, carried sheep milk in lambskin bags; *yog* and *urt* translate in Thracian as “thick” and “milk.” The high number of centenarians in the Bulgarian population was attributed to the high yogurt consumption in Bulgaria, related to the *Lactobacillus bulgaricus* bacteria used in the process. Although yogurt consumption has decreased in Bulgaria, it still exports some 200,000 tons of yogurt annually to Japan.

Rice cultivation in Bulgaria dates from the 14th century, although rice consumption predates this by some thousand years. Rice is mainly grown in the Pazardjik and Plovdiv regions, due to their proximity to the Maritsa (or Evros) River—at 298 miles (480 kilometers), the longest river in the Balkans’ interior—and the Chaia and Gaiolnitsa rivers. In relation to grain prices, meat prices have risen markedly, making it financially advantageous to buy grain for family consumption. Rice dishes often incorporate spinach or zucchini in contemporary Bulgaria.

Staples include rice, corn, beans, and lentils. Cornmeal-based *kačamak* (known as *mămăligă* in Romania) is a traditional Bulgarian dish, made from dried, ground corn grown near the Black Sea. Cornmeal and salt are boiled in water and mashed to a variety of consistencies, but in every incarnation it is a bread substitute and is similar to Italian polenta. In its drier version it can be sliced like bread, and in its more watery version it resembles a thick ochre-colored porridge and is served dotted with sirene cheese, or with fried pork crackling, *prăzhki*. It can also be accompanied by yogurt and sour cream. It is also baked with meat or with yellow kashkaval cheese (similar though often superior to Italian *cacciocavallo*). *Kačamak* balls containing cheese, salami, or ham are a popular snack. Traditionally, *kačamak* was a staple food for impoverished sections of the population, but it has now

reemerged as a hip and stylish appetizer dish available in upmarket restaurants.

A key staple is bread, eaten with every meal—Bulgarians consume more than 22 pounds (10 kilograms) per person monthly—but rather than being home baked, bread is often purchased. Such bread would be both leavened and unleavened and uses millet, rye, and, predominantly, wheat. A type of plain donut is also consumed, called *mekitsi*, and a croissant-type roll filled with sweet preserves is popular, called *kifli*.

Core herbs and spices inform Bulgarian food culture. Summer savory, *čubrica*, is commonly used in Bulgaria and is preferred to winter savory. Similar in taste to oregano, *čubrica* is dried or ground and sprinkled on soup just before eating. It can be used as a spread on bread in a manner similar to the use made of *za’atar* in Palestine. The Bulgarian table does not have the simple duality of salt and pepper but will, instead, have a triad of condiments: salt, paprika, and dried summer savory. Mixed together, this is called “colorful salt” (*sharena sol*). Parsley, *magdanoz*, is used throughout Bulgarian cuisine, as is thyme, euphemistically also called “shepherd’s basil” and “granny’s soul;” thyme is used both fresh and dried as a seasoning in such dishes as broad bean stew. Also used sparingly for flavoring soups, and in a number of other dishes, is dried mint, called *djodjen* (*Mentha spicata*). The type of oil most frequently used for cooking is sunflower oil, but olive oil and cow-milk butter are available.

Meat consumption in Bulgaria is relatively low and, per capita, is among the lowest in Europe. Commonly used meats are pork (*svinsko*), chicken (*pile*), and veal (*teleshko*). Beef, however, is less commonly consumed, as cattle breeding focuses on milk as opposed to meat production. This means that veal is readily available and recurs throughout Bulgarian food culture. The availability of meat products shows some seasonal differentiation: lamb during the production period in the spring (Bulgaria is a net exporter of lamb); chicken in the summer; and pork during the winter months. Despite the minority Muslim population’s objection to eating pork, it remains the most prevalent meat consumed in Bulgaria. Some explanation is offered in

that, during the period in which the Ottoman Empire dominated Bulgaria, the only livestock animal to be exempt from the “natural tax” was the pig. Meat is stewed with vegetables in *kavarma*, a stew served in earthenware pots; stewed lamb and vegetables are *gyuvech* dishes; or meat is minced and shaped into spicy meat patties (*kyufteta*) or sausage-shaped grilled meat like *kebabcheta*.

Fish predominates in the coastal region of the Black Sea but is eaten widely throughout Bulgarian cuisine. Fried, grilled, or stewed, varieties such as a bream, grey mullet, and scad predominate, as do freshwater varieties such as carp and trout. Shellfish attracts only limited consumption—mussels are a case in point. In 2009, construction of Europe’s most extensive black mussel farm began in the Bay of Kavarna: Ironically, mussel output will be channeled to export, as Bulgarian consumption is very limited.

The rivers of Bulgaria produce freshwater fish such as carp, which may then be baked with walnut paste or poached with caraway seeds. Trout caught in a river may be wrapped in dampened leaves or paper, packed beneath hot ashes, and cooked.

Coffee consumption follows the Turkish model of imbibing intensely flavored and thick coffee, often with an accompanying sweet. Hot tea is, additionally, a popular beverage. Lying between the alcoholic and nonalcoholic is roseate sweet-sour *boza*, or millet ale, a fermented drink with a very low alcohol content (1%), made with a millet-flour base. *Boza*, unusually, occupies a special place as a winter breakfast dish, ideally accompanied by a pastry (*banitsa*).

Bulgarians consume a variety of wines and often region-specific alcoholic drinks such as *mastika*, *menta*, and *rakiya*. *Mastika*, which is 90 proof, derives its name from “to chew or gnash the teeth” and

A traditional wine cellar in the village of Melnik in Bulgaria. The village has been famous for its wines for centuries, especially during the Soviet regime. (Asafta | Dreamstime.com)

is usually made from grapes, figs, plums, or raisins. Mastika derives its flavor from resin produced by the small, evergreen Mediterranean Chios mastic tree. The method used for extracting mastic sap is very similar to that of extracting maple sap: collection of sap dripping from incisions made in the tree's bark. Menta is a liquor flavored with spearmint oil. Contrary to the expectations set up by its name, rakiya is not an aniseed-flavored liquor like Turkish raki but instead a fruit brandy, usually based on fermented grapes (*pomorska rakiya*), but also on plums (*slivova rakiya*) and apricots (*kaisieva rakiya*), which are then twice distilled. The Stara Planina region produces the notable Elena plum brandy. Vodka is also produced and a cognac called *pliska*. The most popular types of beer are *zagora*, *pleven*, and *astika*.

There are several main wine-producing regions, each distinctive, and there are approximately 12 producing wineries in Bulgaria, exporting to over 70 countries. The southwestern region is famed for *melnik*, a red wine—and red wine remains the most popular Bulgarian wine type. The southern reaches of the Middle Balkan mountain range are grape-rich. Intersecting Bulgaria from east to west is the Valley of the Roses, established in the 17th century by the Turks and now the core producer of rose attar, a rose water that is the basis for a small-scale industry in rose liquor and soap.

Cooking

Women do the majority of household cooking, in both urban and rural contexts. Traditional cooking pots of clay for oven baking, called *gyuvech*, are used to make the eponymous slow-cooked dish. Western-style cooking utensils and pans are used, in fact, for most cooking. Purportedly, a feature of Bulgarian food culture is that the cooking of one course can be accomplished in one saucepan. To a large extent, sautéing and deep-frying are rare activities: Many Bulgarian dishes are oven-baked, stew-based, or, when called for, steamed. Grilling is also a common practice both in the preparation of fish for the table and in the treatment of varieties of meat, for instance, the preparation of *kébabchés* (kebabs).

Typical Meals

Bulgarian food culture dictates that the majority of Bulgarians will eat at home but much more so for Bulgarians in a rural context. As the service industry sees restaurants and fast-food outlets grow and expand in cities, so, too, do opportunities for eating beyond the home. Domestic food in Bulgaria tends to emphasize the production of soups, salads, stuffed vegetables, and stews, while bread, sausage, and cheese might be more frequently produced and purchased outside the home.

While there are regional and socioeconomic factors to take into account, most Bulgarians eat three meals a day—breakfast, lunch, and dinner—although these meals may well be supplemented by a midmorning snack and coffee in the afternoon. Breakfast is a light meal, combining yogurt, cheese-based pastries, and fruit. A strudel-like *banitsa* (pastry) is eaten, which is an interlayering of sirene cheese with phyllo pastry—though it may also contain leeks or spinach (*spanachena banitsa*). There is also a sweeter version of *banitsa* stuffed with pumpkin (*tikvenik banitsa*) and a milk-based *banitsa* called *mlechna banitsa*. Another breadlike product, *krenvirshka*, a frankfurter-style sausage in a light pastry, may also be eaten, as well as the breadlike *kozu'nak*, sprinkled with sugar, accompanied by coffee and yogurt or thick, slightly acidic *boza* or *airan*, a yogurt drink. A breakfast for children might have, as part of it, *popara*, made from bread soaked in hot milk and mixed with butter, sugar, and sirene cheese or clotted cream called *kajmak*.

Midday is the time for lunch. This is the preferred point for a family meal; if it is such, then it will follow the three-fold linear structure of a salad or soup, followed by a main course, and then dessert. Bulgarian soup has both hot and cold incarnations, the most famous of which is *tarator* soup. Most popular in the summer, this appetite-stimulating cold soup is based on a combination of soured milk (yogurt), walnuts, cucumber, dill, water (which can occasionally replace the sour milk entirely), and sunflower or olive oil. Bread can be used instead of walnuts to thicken this soup, and the soup may even be served with ice in order to keep the *tarator's* temperature

down. Tarator may be served alongside shopska salad, although a tarator-based salad does exist in the form of *salata snezhanka* (snow-white salad), made using the same constituents and with thicker yogurt and less finely chopped ingredients. Vegetable-based soups (*zelenchukova supa*) dominate, and forest mushrooms appear in *gubena supa*. Bean soups feature in Bulgarian food culture, the most famous being *smilyanski fasul* using Smilyan beans. *Bob chorba*, Bulgarian hot bean soup, is a combination of dried white beans, such as haricot or fava beans, with tomatoes, peppers, chili, onion, and djodjen (mint) or even *čubrica* (summer savory). Indeed, bob chorba was a favored staple in Bulgarian monasteries. Sourness can be added to produce some of Bulgaria's distinctive hot and sour soups, such as *pacha* soup, a sour lamb's-trotter soup, through adding pickles, bitter fruits, or even vinegar to the broth. Other offal-based soups are also popular, such as *shkembe chorba*, made with tripe and milk.

Sa'lati shopska, typically the salad first course for lunch or eaten with meze or to accompany an aperitif such as rakiya, is made of a core combination of chunks of tomatoes (*domati*), onion, and cucumber (*krastavitsi*), with, sometimes, a yogurt dressing. Additionally, cabbage (*zele*) and peppers (*piperki* or *chushki*) can be added. This can then be garnished with a topping of grated white ewe-milk cheese. If dressed with yogurt and nuts and made with ingredients resembling those in tarator soup, this is called *mlechna salata*, and if consisting only of yogurt-dressed pickled cucumbers, this is called *snezhanka*. Furthermore, if a sa'lati comes with the trio of cucumbers, tomatoes, and peppers, this is a *meshana sa'lati*. The salad is often a communal dish, eaten by all participants from a common platter, with diners using their own forks to eat from it. When individual plates are used, the emptiness of the diner's plate will be taken as the signal for more food; a small amount left discreetly on the plate indicates the eater's appetite is sated.

The central course may be kavarma, which may come as casseroled veal or pork with onions and mushrooms, or pork with paprika (*slav gyuvech*). Or it might be spicy pork or veal sausages grilled on skewers with onions and peppers or beef patties

in their own sauce, called *kyufte*. All of these grilled meats come under the generic title kebapcheta but vary regionally from Sofia to Dobrudja. Kebapche may consist of minced chicken or veal, combined with onion and cumin and served with fried potato. Also on the table may be rice-stuffed cabbage, chard, or vine leaves, called *sarmi* (derived from the Turkish word *sarmak*, meaning "to wrap or roll"). Potatoes (*kartofi*) or some stewed, hot vegetable dish such as *gyuvech zarzavat* will be served, accompanied by bread.

Dessert may be a Turkish-style pastry such as baklava (a confection of phyllo pastry with crushed pistachios and sugar syrup) or *kadayif* (a pastry of shredded wheat with syrup and nuts). Peaches may come dotted with butter, baked, spiced with cloves,

Traditional Bulgarian kavarma in a gyuvetcha. (Shutterstock)

and drizzled with a brandy, such as *kaisieva rakiya* (apricot brandy). Rice pudding–style desserts also feature and may be scented with rose water, laced with cinnamon, or flaked with lemon: all distinctively Bulgarian flavors. This lunch structure can always be abbreviated with the impact of modern living, making lunch a lighter meal, eaten at a fast-food outlet, such as a café or kiosk, although such fast-food venues remain relatively uncommon in Bulgaria, concentrated mostly in urban areas.

Dinner is eaten between 7 and 8 P.M. As it is not the central meal, dinner is light; it may include the same foods as at lunch, sometimes excluding the first and third courses: the soup and the dessert. If dinner is a meat stew, fruit may be cooked with the meat, for instance, pork with quince.

Both lunch and dinner may be accompanied by a dish of the spicy vegetable relish *lyutenitsa*, made from a mixture of peppers, eggplant, and tomatoes, or the similar relish *ajvar*, which is slightly less spicy in Bulgaria than in other Balkan countries.

Western eating styles are most common: Eaters will sit around a table, and each will hold a fork in the left hand, a knife in the right. Meals can last for variable lengths of time—although it is always a given that lunch lasts the longest—except on celebratory occasions, when meals can span several hours and are accompanied by *nazdrave* (toasting), which will occur sporadically throughout the meal.

Although Bulgaria is a small country, there are regional differences in food culture. The Black Sea coast influences the food culture of this coastline in the wealth of fish dishes and the wide range of fish available. Dishes such as the tomato-based mackerel stew *skumriya n keremidi* or a batter-encased whitefish served with fried potatoes (*tsatsa*) appear, as well as turbot, mussels, crab, and shellfish soups, and swordfish steaks grilled with lemon and oil. Dishes utilize the many varieties of fish sourced in the Black Sea such as scad (resembling whitebait) and grey mullet, used in onion and mullet casserole. Nessabar, lying on the Black Sea coast, produces a famous fish soup, made from four or five different kinds of fish, while Sozopol, on the southern section of the Black Sea coast, produces renowned mussel soup.

The southwestern mountainous Pirin region produces its own regional dishes: for instance, Bansko's unusually named sausages *starets* (old man) and *babek* (old woman). Bankso has a reputation for its meat stews such as *kapama*, a stew that combines pork, veal, and chicken, or the veal, onion, and potato dish *chomlek*.

The central Plovdiv region produces sausages, primarily in Karlovo, namely, the red-brown, square shaped semidried sausages *karlovski sudjuk* and *karlovska lukanka*. Made of chopped or minced cumin-spiced beef, pork, and grainy fat, when it is finely sliced, *lukanka* functions as an appetizer. Cooked *sudjuk* is used as a breakfast dish, fried like bacon and accompanied by eggs. The central Bulgarian Stara Planina mountain area, particularly centering

Traditional Bulgarian meal made of spinach, feta, and kori (phyllo). (Shutterstock)

on the town of Elena, is famed for its production of the national delicacy *elenski but*, a dry-cured ham, its taste accounted for in part by the climatic conditions of Stara Planina.

The Rhodope mountain region, close to the border with Greece, has many distinctive local dishes. The Rhodope town of Smilya is famed for the beans produced in the upper Arda Valley: a large white or purple streaked bean, used in salads or fried in a light batter; and a smaller brown bean with blue streaks that is a key ingredient in corn and bean *trahna* stew. Also from Rhodope are vegetarian dishes such as *patatnik*, a pulverized potato cake, in which some sheets of potato act as banitsa-style layers, all of which is flavored with mint and summer savory and may be interspersed with crumbled sirene cheese, peppers, and grated onions. *Rodopski klin* is a phyllo pastry dish, enclosing rice and white cheese. Regional varieties of pancakes are popular in this area, too; Rhodope inhabitants make thick pancakes called *marudnitsi* and *katmi*.

Eating Out

In urban areas and large cities, such as Sofia, Varna, Burgas, or Plovdiv, there are many multicultural restaurants. In Sofia alone it is possible to eat Italian, Russian, Korean, German, Japanese, and Vietnamese food. There is even an Indian restaurant in Sofia: Ramayna, in the Lozenets quarter of Sofia. The roadsides are dotted with stands selling Bulgarian street food in the form of kebapcheta and kyufteta. Patisseries sell tea, coffee, pastries, and cakes such as the chocolate cake *garash*. Along with coffee bars and pubs, these outlets remain popular meeting places. McDonald's and other fast-food outlets are taking hold in Bulgaria, and a recent study published in *USA Today* revealed that as many as 68 percent of Bulgarians interviewed admitted to fast-food dependence.

Traditionally, be it in an urban or rural context, *mehana*, traditional Bulgarian hostelries, would be popular sources of food, along with offering folk dancing and folk music. The *mehana* also exists in cultures connected to that of Bulgaria, such as Turkey, where such restaurants and drinking

establishments are called *meyhane*, with both names deriving from the Persian *may*, meaning “wine,” and *χāna*, meaning “house.”

Special Occasions

Fasting is central to the observance of two of the religions of Bulgaria: the dominant theism of Orthodox Christianity and the minority religion of Islam. Orthodox Christians may adhere to the observance of the Lenten fast before Easter, while Muslims may observe the daylight fast of Ramadan (Ramazan). Specific dishes are exchanged at the end of each fasting day: Sugared delicacies are exchanged in the nondaylight eating hours of Ramadan. Both religions also mark celebration, devotion, and rebirth through food. The willing sacrifice of Ishmael by Abraham is relived through food metaphor in the Eid al-Adha (Kurban Bairam) practice of preparing a spit-roasted sheep or goat. This religious observance is the Turkic equivalent to the Muslim “feast of sacrifice,” Eid al-Adha (Arabic). Indeed, the word *kurban*, meaning “sacrifice,” also denotes a ceremonial meat dish. Spanning the whole year is the Muslim refusal of pork.

The rebirth of Easter is celebrated in the visual extravaganza of braided and dyed *kozunak* bread, dotted with dyed eggs and tasting of warmed rum, raisins, and lemon zest. The joy of Christmas and the Nativity is expressed through a greater number of vegetarian dishes, such as stuffed vine leaves (*sarmi*) and stuffed peppers, and through visual food “tricks,” surprises, and games, such as hiding slips of paper within banitsa. There is the familiar danger of swallowing one's fortune or luck as one of the coins or charms hidden in cakes and pastries made for Christian holidays. Cabbage will be consumed on New Year's Eve. On St. Barbara's Day, December 4 (to honor the saint who protects against smallpox), it is customary to bake unleavened bread, spread it with honey, and offer pieces of this on the roadside to passersby, with the salutation to strangers of “May God bless you, your family, your people, your cattle and all!” The morning of St. Barbara's Day should be marked by an odd number of children boiling kidney beans in a

broth with salt and onion; when ready, the youngest child would put three of the beans on the knees of each of the other children. They then had to eat the beans without using their hands.

On the day of the great winter festival, December 6, Nikulden (St. Nicholay's Day), fish—blessed carp baked in pastry (*ribnik*)—is consumed, having been baked with two loaves of bread per household, and the table is open to all guests. Carp is considered the saint's servant. As St. Nicholay is the saint of the seas, fishermen offer the day's catch to the saint, and the first fish caught will be cooked and eaten, ritually, on the shoreline by the fishermen. After the fish has been blessed, and after incense has been given, the local priest is, traditionally, offered the tail end of the carp. The cross-shaped *krakhche* bone of the carp used to be sewn into children's caps to guard them against malevolent spirits. The bones of the carp must be either burned, buried, or returned to the river. In a similar way, on May 6, Gergyovden Day (St. George's Day, the most popular name day in Bulgaria: Over half of Bulgarian men are named after St. George, farmers bake round bread in honor of the patron saint of farming, and roast lamb is on the table. There is even a special liquor for the day: *rakia Gergyovden*. All of the dishes mentioned should be cooked by the participants: Store-bought, ready-to-cook foods are not examples of genuine veneration.

Diet and Health

While herbalism has long held an honored place in Bulgarian home treatment, the economic hardships

of the 1990s placed Western prescription medicines beyond the financial reach of many Bulgarians, leading many to look inwardly to traditional methods of medical care once again. For instance, *čubrica*, summer savory, is said, when rubbed on an insect sting, to soothe the skin's painful reaction, but it is also used more generally as a pick-me-up, as an expectorant to help clear phlegm in the lungs and sinuses, and as a preventative of diarrhea and reliever of colic and flatulence. Although there has been debate in Bulgarian food culture about whether the onion should be considered a spice, its efficacy is not questioned. Onion is considered to have some medicinal properties and to stimulate the secretion of gastric juices. It appears raw in salads and travels through Bulgarian cookery, appearing in stews, sauces, and preserves. Bulgaria has great resources of mineral waters, most notably the spring-fed water in a number of towns that cluster around Plovdiv: Brasigovo and Hisarja. Used to treat gastrointestinal disorders, such water is also bottled and distributed commercially. Soup also holds a place in the panoply of anecdotal food "cures" in Bulgaria: The tripe soup *shkembe chorba* reputedly alleviates the gastrointestinal problems associated with hangovers.

Croatia

Overview

As with every aspect of life in the Balkans, cuisine in Croatia has political and cultural connotations. During the period of government-enforced harmony when the Serbs, Croats, Slovenes, Bosnians, ethnic Albanians, and Macedonians were all enveloped in Yugoslavia, cultural differences were officially minimized and almost invisible to outsiders. Since the breakup of Yugoslavia into separate republics, partisans have made exaggerated claims for the uniqueness of each ethnic and religious group's foodways. Although the foodways are superficially similar, Croatia's history and geography have given it a cuisine with subtle differences from its neighbors'.

All cuisines of the former Yugoslavia were influenced by three occupiers: the Ottomans, the Austro-Hungarians, and the Venetians. Though known by different names in the various languages and dialects of the Balkans, Turkish-influenced kebabs such as *čevapčići* and *ražnjići* are enjoyed everywhere. They are made with beef and pork in Croatia, lamb in Bosnia and Macedonia, and all three in Serbia, but the spicing and preparation are essentially the same. All are served either plain or in a domed bread loaf, a *somun*, with or without onions on the side. Similarly, each country has its own version of schnitzel, with only the most minor differences in preparation to distinguish one from the other.

The situation with Croatia is more complex than with most other states of the former Yugoslavia because from medieval times until less than 100 years ago, the coastal and inland regions were often ruled by different empires that fostered cultural ties with

faraway capitals. Inland Croatia was occupied by the Austro-Hungarians longer than any other part of the Balkans, and there is a correspondingly strong Germanic influence in the cuisine of that region. Meanwhile, the coastal counties of Istria and Dalmatia were part of the Venetian Republic and later the Kingdom of Italy, and as late as 1910, more than a third of the population of the coastal regions spoke Italian as their native language. Only a tiny section of the coast around the city of Dubrovnik and a few offshore islands, collectively known as the Republic of Ragusa, remained independent and under native Croatian control for any substantial period.

The ease of travel by sea, the wealth of nearby Venice, and the relative difficulty of crossing the Balkans meant that trade links from the sea to the interior were few, and luxury goods and imported spices were more plentiful on the coast. Inevitably, the coastal cuisine contains more complex and sophisticated dishes using seafood, while the cuisines of the mountains and the Pannonian Plain near the Hungarian border are simpler and use more meat.

Food Culture Snapshot

Dusan and his wife, Dijana, start their day with an early and modest breakfast, rolls with some cheese or smoked meat, yogurt, and a small cup of very strong coffee. She grew up on the Adriatic coast and considers a bowl of soft polenta the best way to start the day, but he is from Zagreb and prefers bread. After he leaves for work, Dijana checks the pot of pork and

Goulash, often made with pork and pumpkin, is a popular Croatian dish. (Shutterstock)

potato stew that was left on low heat overnight. Their apartment is modern and has gas, but through the open window she can hear the neighbor raking out the embers from the stone hearth in their medieval house. She envies that neighbor sometimes for the beauty of her old home, but the sound of the hearth being shoveled out every morning reminds her of the virtues of new construction.

Dijana works part-time, and she spends a few hours around the house in the morning. When she is just about to go shopping for groceries, her neighbor invites her in for *marenda*, the traditional late-morning snack. A meal with a friend is a more attractive proposition than stopping at a street stall at the market, so she gratefully accepts. After fruit and a cup of *jota*, the minestrone-like soup, her neighbor pours a glass of *bevanda*, wine diluted with water. Her husband

can't have this traditional accompaniment to *marenda* because he works for a multinational company that frowns on any consumption of alcohol during working hours. She has no such problem, and she sits over a glass and chats with the neighbor for a few minutes before going to the market.

Although modern supermarkets (often called hypermarkets, in the European fashion) are nearby, she prefers the traditional street market because the selection of fresh fish is usually better. She gets fresh sardines at an excellent price, but the find of the day is at a nearby vegetable stall. There is *blitva*, fresh young Swiss chard, a specialty of the Croatian islands, which will be a good accompaniment to dinner. At another stall an old farmer sells *misanca*, a mix of wild onions, forest herbs, and edible flowers. With a few salted anchovies, a sliced hard-boiled egg, some capers, and olive oil, it will make an excellent salad for dinner.

Dijana makes it home in plenty of time to increase the heat under the stew, mix the *misanca* into a salad, and make a few quick side dishes before Dusan comes in for lunch. He arrives just after 2 P.M., and they sit down for the largest meal of the day. Dusan mentions that his company's new manager, who is not Croatian, will be hosting important American clients for dinner tomorrow and wants him to join them. The Americans often are confused by the tradition of the *marenda* and taking the main meal in the middle of the day, and Dusan and the other Croatian managers have to make allowances for their odd habit of having the main meal late. The Croatians think it is unhealthy to eat heavily at night, but business is business.

Dusan goes back to work, and Dijana heads to her job at a local computer store. Like most urban retail businesses, it closes at 7:30 P.M., and she and Dusan are both home by 8 P.M. She fries the sardines in olive oil and herbs, puts them on a bed of sautéed chard, and serves it with some of the leftover stew and glasses of wine. They finish with slices of cherry strudel that she picked up in the market—a simple, light, and satisfying meal to finish the day. Dusan has some friends coming over to play *belot* and other card games, so she sets out glasses and a bottle of *rakija* (a strong clear liquor). Some of the men who are coming don't drink, but offering alcohol is part of hospitality. Dijana knows

that the brass coffee grinder and the ensuing Turkish-style coffee will be popular with everyone.

Major Foodstuffs

Coastal Croatia is a continuous Mediterranean-type ecosystem with Slovenia and Italy to the north and Macedonia, Albania, and Greece to the south, and all the Adriatic cuisines share the same elements. Ocean fish of many kinds is abundant, particularly tuna, mullet, sardines, squid, octopus, and mackerel, as well as shellfish such as shrimp, mussels, clams, crabs, and lobster. Frogs, eels, and river crabs are all eaten in Dalmatia. Fish is also popular inland, with freshwater species such as carp, catfish, and pickerel predominating.

Pigs and sheep are raised everywhere in the country, while cattle are raised mainly on the inland and northern plains. Venison is a specialty of the alpine and coastal regions, and rabbit is widely eaten in the north. *Prst*, the local version of prosciutto, based on beef, mutton, goat, venison, or goose and turkey, is a popular appetizer.

Cow-, goat-, and sheep-milk cheeses are made throughout the country, mostly by small producers, but the salty, hard sheep-milk cheese from the island of Pag, called *Paški sir*, is the most prized. The taste and texture are similar to Parmesan, and it is eaten as an appetizer with olives and used in cooking. Several soft cheeses and cottage cheeses are used for vegetable casseroles that are a popular side dish. *Kajmak*, a fatty, crumbly cheese based on cream, is universally encountered, even, occasionally, on so-called cheeseburgers.

The principal vegetables include bell peppers, onions, eggplant, green beans, cabbage, and tomatoes. Potatoes are boiled, roasted, fried, used in soups, and pounded into flour for gnocchi (*njoki* in Serbo-Croatian). Other common vegetables and pulses/legumes include beans, peas, lentils, carrots, artichokes, mushrooms, and asparagus. The Istria region produces small amounts of white truffles, which are highly prized. A type of seaweed known as *motar* (rock samphire or sea fennel in English) is a delicacy along the coast; it fell out of favor for many years but has recently enjoyed a rediscovery.

City families often have a *vikendica* (weekend place), where they may grow vegetables and fruits, as well as harvest wild plants, or they may have a city allotment. Spring and summer weekends are usually spent at the *vikendica*, and fresh foods are brought home either from the family plot or from visits to country cousins.

High-quality wheat is grown in inland areas of the country, and Croatia is a net exporter of winter wheat, spelt, and related products such as pasta. Corn (maize) is widely cultivated and eaten locally, and production has been increasing. Street vendors may be found selling corn on the cob. Buckwheat has been cultivated in Croatia since the Neolithic period and is a staple in the mountainous regions. Modest soybean and barley crops are grown for domestic consumption.

Croatian cuisine as a whole is not highly spiced, but almost any meal might include paprika and other red pepper-based condiments. Other spices that will be found in any kitchen are rosemary, parsley, salt, and pepper. Apples, almonds, chestnuts, plums, cherries, walnuts, grapes, raisins, and elderberries are all used in desserts and in some savory dishes.

Cooking

The center of a traditional Croatian kitchen is a woodstove known as a *commine*, which is under a domelike hood called a *peka*. Here, pots and skillets sit right on the embers of the fire or hang from hooks, and meat can be roasted on spits or smoked by hanging it in the chimney. Meats prepared in this fashion are known as *na pekara*.

Most families also have a *kotao* (boiler), a wide, shallow cauldron built on top of an iron pot-bellied charcoal stove, usually used outside. Modern homes might have a gas *kotao*. Items cooked on this stove are called *kotlovina*, meaning “food from the cauldron.” Many *kotlovina* recipes are slow-cooked all day, and a few require more than one day to prepare. Another outdoor cooking method that is popular in the coastal regions is cooking lamb or fish on spikes at the edge of a fire.

Inland parts of the country are famous for pickling in vinegar, and there are many regional varieties

of sauerkraut. Cabbage leaves are also pickled whole and used for the stuffed cabbage called *sarma*. Other vegetables that are pickled are cucumbers, onions, eggplant, beets, and bell peppers. Large plastic tubs of pickled winter vegetables, *zimnica*, are found stored on patios throughout the country. Meats are pickled, too, or made into sausages, dried, or smoked. In the colder parts of the country people still keep a *lodrica ili tiblica*—literally, “big wooden bowl”—with cooked meats preserved under a layer of lard.

The northwest is noted for jams and jellies, particularly from plums, cherries, and rose hips. These are used to spread on bread or are sandwiched in cookies, some of which are then coated in chocolate. Brewing, winemaking, distilling brandy, and making the mead known as *gvirc* are all popular hobbies. In winemaking season, the smell of crushed grapes fills the air in many neighborhoods. It sometimes seems that everyone who owns a plum tree—or knows somebody who has one—is making *slivovitz* (brandy) in their cellar. *Dedo's* (Grandpa's) is always the best.

Typical Meals

In common with other cultures throughout the eastern Mediterranean and Adriatic, on the coast all but the simplest main meals begin with appetizers similar to the Greek *meze*. Favorite items are olives, pickled octopus, slices of sausage or cured meats, and bread. A popular starter anywhere in Croatia is *Štrukli*, cheese raviolis that are fried with butter and breadcrumbs in Zagreb, boiled in the Alps, and usually baked along the coast. A variant on the *Štrukli* is the *borek*, a baked turnover made with phyllo dough and stuffed with cheese or ground meat.

The Italian influence on Istria and Dalmatia has left a legacy of mildly spiced but rich seafood dishes, including risottos, squid ink pasta, seafood ravioli, and various permutations of grilled fish with olive oil, garlic, and herbs. The most interesting and characteristic Dalmatian dish is *bakalar*, a stew of dried salted codfish and potatoes that is similar to some Iberian preparations. Codfish are caught in the North Atlantic rather than the Adriatic, and

this traditional Christmas specialty is a legacy of the maritime tradition during the era when Ragusan sailors traded between the Ottoman Empire and Spain. Other rustic seafood specialties include mussels poached in olive oil with parsley and garlic, finished with white wine, sea salt, and pepper (*dagne na buzaru*).

Besides seafood, coastal Croatian cuisine uses vegetables that thrive in the mild Mediterranean climate, and local olive oil is used liberally in marinades and sautés. Arborio rice is imported from Italy and used in risottos and the locally popular *rizi-bizi*, rice cooked with peas, butter, onions, and herbs.

The stuffed cabbage known as *sarma* is made throughout Croatia, but while it contains chopped meat and rice in the inland versions, in Dalmatia it has no rice, just ground meat spiced with cloves, cinnamon, and pine nuts. Here it is called *arambašiči*, named after Turkish soldiers—*harambaše*.

Sarma (Stuffed Cabbage)

Ingredients

For the Cabbage

- 1 whole head cabbage
- 1 qt water
- 8 tbsp salt
- ¼ c vinegar

For the Filling

- 1 lb finely chopped pork (not ground)
- 1 lb finely chopped beef
- 1 large onion, chopped
- 1 garlic clove, chopped
- 1 egg
- ½ tsp cloves
- ½ tsp cinnamon
- ½ c pine nuts
- Juice of 1 lemon
- Salt and pepper
- 1 8-oz can tomato sauce

To Pickle Cabbage

Remove the core from the whole head of cabbage, and place cabbage in a bowl. Add water, salt, and vinegar. Make sure the cabbage is submerged under the liquid, held down with a plate. Keep covered in a cool place for 2–3 weeks. The longer it pickles, the sourer it will be. When ready to assemble, drain and rinse the cabbage and carefully separate the individual leaves from the head.

To Stuff

Mix all the ingredients except the tomato sauce, and add salt and pepper to taste. Fill each cabbage leaf with a few tablespoons of the mixture. Roll them up into tidy cigar shapes and line a greased casserole. Cover them with the tomato sauce, adding salt and pepper to taste. Cover the casserole and bake at 350°F for 1½ hours.

Other meat specialties include Dalmatian dried ham, game dishes made with pheasant and wild duck, and *janjetina*—spit-roasted lamb prepared with Mediterranean herbs.

One of the signature dishes of Istria is jota, a soup of beans, onions, sauerkraut, and garlic boiled in an earthenware pot with whatever shreds and ends of bacon and pork are handy. The oldest written jota recipe dates from 1890, from an octogenarian named Bagatina, who described it as a dish of her childhood. Though this soup probably evolved as a way to use up leftovers, in the 1980s gentrified versions of jota became popular in upscale restaurants. Another peasant dish that has flourished in upscale variants is *Dalmatinska pašticada*, a hearty braised dish similar to a French daube. It consists of beef marinated overnight in vinegar, lemon, and rosemary, then stewed with spices and red wine.

One legacy of the long Italian influence on the coast is the popularity of wine there, while all the country's major breweries are inland. Wine production is an ancient tradition, and both the Zinfandel and the Primitivo grape are cultivars of the Crljenak grape that originated in coastal Croatia. During the Soviet era winemakers were instructed to focus on volume rather than quality, and the reputation of Croatian wine has not entirely recovered. White

wines make up the majority of the production inland, while red and white wines are both produced near the coast. Grape and plum brandies known as rakija or slivovitz are common and of highly variable quality, and liqueurs are also made from figs and other fruits. The most famous alcohol from the region is maraschino liqueur from cherries and almonds, which has been made in the Dalmatian town of Zadar since the 1500s.

Coastal Croatia is rich in desserts, of which the most famous is probably the Rab cake (*Rapska torta*) of marzipan and spices rolled in short pastry and folded into a spiral. It is claimed that this confection has been made since 1177, and the exact recipe is a secret known only to a few women on the island of Rab. For everyday meals, people enjoy *palascintas*, crepes filled with jam, cheese, or fruit. Other desserts abound—sour cherry strudels, wal-

Traditional Rab cake from the Rab region in Croatia. (Jasna01 | Dreamstime.com)

nut spiral rolls, spicy pepper cookies, and locally made chocolates.

Palascintas

Ingredients

For Pancakes

3 eggs
 9 c flour
 1 c milk
 1 c mineral water

For Filling

3 eggs, separated
 ½ c sugar
 Peel of one lemon, grated
 12 oz cream cheese

Directions for Pancakes

Beat eggs with a pinch of salt. Gradually add flour, milk, and mineral water until the mixture forms a thin batter.

Heat a small amount of oil in a small frying pan. Pour about ¼ cup of batter into the pan, and cook the pancake until small holes appear in the surface. Loosen the edges of the pancake and flip it over carefully. Cook on the other side for about 30 seconds.

Directions for Filling

Separate eggs, pouring the yolks and whites into two different bowls.

Beat egg yolks and sugar together until thick. Add grated peel from a lemon. Beat in softened cream cheese.

Beat egg whites until they form stiff peaks. Carefully fold (mix using a gentle stirring motion) egg whites into cheese mixture.

Directions for Assembling Pancakes and Filling

Spread about 2 tablespoons of filling near one side of the pancake. Roll the pancake up to enclose the

filling. Place the filled pancakes, side by side, in a buttered baking dish or casserole. Keep warm in a 250°F oven until ready to serve.

Serve warm. May be topped with jam (a Croatian favorite is plum jam), powdered sugar, or sour cream.

There is only one pass from the Adriatic across the beautiful but sparsely populated Dinaric Alps to inland Croatia, and it leads to Zagreb, seat of the viceroys during the long Austro-Hungarian domination. While this is now the capital of Croatia and the largest city in the country, the linkage to the coast is relatively recent. Roads and rail lines between the two areas had been rudimentary until the 20th century, and the first modern paved highway from Zagreb to the Adriatic was not built until the 1970s.

It is therefore no surprise that seafood plays little part in the inland dishes. Game from the mountains and beef from the Pannonian Plain that extends toward the Hungarian border are major elements of this cuisine. Hungarian-influenced dishes are popular, including *game cobanac* (shepherd's stew), *gulyas* (goulash) and other paprika-laced stews, garlicky pickled vegetables, and poppy seed or cottage cheese strudels.

Zagreb specialties hark back to the days of empire, with heavy, bland main dishes like *Zagrebacki odrezak* (stuffed veal schnitzel with gravy) and venison cooked with prunes. These are paired with the local sauerkraut and other pickled vegetables; Zagreb is famous for mild, sweetish sauerkraut, which is served with almost everything. Another accompaniment is buckwheat groats, which are grown throughout the alpine regions and are eaten with mushrooms in soup and casseroles. They also feature in goose Medimurje-style, which is stuffed with buckwheat and nuts.

Mlinci, torn pasta fried in turkey, duck, or goose fat, is native to the area near the Slovenian border but popular throughout Croatia. It is usually a side dish with roasted meats but is occasionally served as a main dish with chunks of poultry.

Desserts are usually pastries in the style of an Austrian *Konditorei*—sweet cheese, sour cherry, or

poppy seed strudels and buns, and other flaky, sweet confections. *Kremsnite*, custard topped with flaky pastry sprinkled with powdered sugar, is among the richest sweets, typically washed down with many cups of strong coffee.

The most famous edible product of the Zagreb region is the *licitar*, beautifully decorated gingerbread cookies that are often bought as souvenirs and used as wall hangings. Licitar making originated in Hungary but was brought to a high art in Zagreb, and the gift of a heart-shaped licitar to someone one admires is part of traditional courtship. This practice has been celebrated in popular culture, including a ballet called “Licitar Heart” by Krešimir Baranović. To drink, Zagreb natives enjoy beer, mead, and fruit brandies such as *slivovitz*, all widely available in home-brewed versions.

As one goes to the north and east from Zagreb into Slavonia, the land becomes flatter, the people poorer, and the cuisine simpler. Beans, potatoes, bell peppers, and cabbage are rounded out with fresh or smoked meats and brittle, garlicky, air-dried sausage. The Hungarian influence is strong here, and popular dishes include stuffed peppers and gulyas stew made with lake fish, beef, chicken, or rabbit. This area has the spiciest food in Croatia, such as the *kulen*, a hot paprika-laced salami. Sausages, blood puddings, and pickled meats use every part of the pig; an example is *hladetina*, a Pannonian headcheese made of jellied meat with hard-boiled eggs, salt, pepper, garlic, and paprika. Offal such as liver and kidneys features in soups and in *svargl*, a kind of Croatian haggis. This consists of a pig’s stomach filled with minced meat, pig’s blood, and herbs, then air-cured—it is an acquired taste even in the region where it is made. The turkey is an import that has become very popular and is roasted in the same way as is traditional in the United States, including the giblet gravy. Only the accompanying sauerkraut and *mlinci* would remind one that this is Croatia rather than New England.

In the 20th and 21st centuries, a new Croatian nationalism led to an emphasis on cultural and national unity. The quest for a distinct pan-Croatian cuisine has been explicitly reflected in a recently invented dessert called *croaterra*, made by a

commercial bakery of the same name. This cake uses ingredients from everywhere in the country; the principal ingredients are spelt grain, olive oil, walnuts, honey, fruit, and fennel. The first three items are associated with Slavonia, Istria, and Pannonia, respectively, and the remaining items come from the Croatian coast and islands. The company’s promotional literature is explicitly nationalist and advises giving *croaterra* cakes to foreigners as a symbol of Croatian unity.

As political arguments simmered in the former Yugoslavia, local commentators discerned or invented differences between inland Croatian and Serbian cuisines. This trend has occasionally resulted in international friction with Serbia, particularly involving a company called *Podravka*, headquartered in Koprivnica in northern Croatia. *Podravka*’s most famous product is a mix of dried vegetable, herbs, monosodium glutamate, and salt called *Vegeta*. *Vegeta* went on the market in 1959 and is the most popular seasoning among both local and overseas Croats. In 2002 Serbia briefly banned the sale of *Vegeta* in that country, claiming it was unfit for human consumption. The real differences between modern Croatian and Serbian food is that Serbian food is generally blander, uses less seafood, and has more Germanic and pan-Balkan and less Italian influence.

Eating Out

The expanding tourist industry has made a growth industry of traditional-style restaurants in Croatia, and all over the country old residences and shops have been remodeled into replicas of antique inns. Coastal Croatian-style restaurants have become popular in inland cities like Zagreb, especially the Dalmatian-style taverns called *konobas*. These are similar to Spanish tapas bars and serve fried sardines and anchovies, vinegary octopus salad, smoked ham, fried olives, and similar salty dishes that encourage the consumption of alcoholic beverages. The popularity of *konobas* and other coastal cuisines in the inland regions has been a one-way cultural transfer, and few restaurants in the coastal areas offer only inland cuisine.

More sophisticated versions of coastal, Italian, and Hungarian cuisine are also popular throughout the country and are served at establishments called *restaurants*. A lively dining scene in Zagreb and other cities means that young Croatians are also exposed to cuisines that are not available elsewhere in the Balkans, including Chinese, Indian, and Mexican food. Croatians are also innovating on traditional cuisine. The naming of chef Lida Bastianich, who was born in Istria, as America's Top Chef in 1994 was a cause for national pride, and the international success of other Croatian-born chefs has inspired many restaurants that go outside traditional paths. Fast food is hugely popular, and pizza and kebab places selling *cevapčići* (*cevapi*) are full at all hours. A few sell horse burgers, a specialty of Slovenia, along with international standard sandwiches and snacks.

One beverage that has spread across Croatia is *bambus*, an unlikely mixture of half red wine, half Coca-Cola. Exactly where and when this concoction was created is a matter of debate, but bars in the Istrian region probably deserve the credit or blame. While *bambus* began as a way for bars and restaurants to use up otherwise-undrinkable harsh red wine, it has become popular nationwide and has a reputation as a ladies' drink.

Special Occasions

The population of Croatia is overwhelmingly Catholic, and the calendar of the saints offers plenty of excuses for feasts and festivals that are popular even with nonreligious Croats. Easter is celebrated with braided breads called *primorski uskršne bebe*, which are often in the shape of a baby with a colored egg for the head. Otherwise, there are few ritual traditions that are associated with a specific food; the feast day of St. Blaise, patron of Croatia, is celebrated everywhere but with lavish portions of everyday foods. There are a few exceptions, such as Christmas Eve, when codfish stew is the traditional meal, and the *makovnjaca*, a poppy seed roll, and the fruitcake known as "bishop's bread" are made nearly everywhere. In inland Croatia, goose and duck are specialties for St. Martin's Day. This

Cookies called *breskvica*, which are shaped like peaches and filled with jam, are often served at Croatian weddings. (Landd09 | Dreamstime.com)

celebration comes at the end of the harvest season and is celebrated by winemakers, who stage elaborate ritual feasts at which mock bishops "christen" their new wines.

There are also special dishes for weddings, mostly sweets. A cookie called *breskvica*, which is shaped like a peach and filled with jam, is a must; while these were traditionally filled with jam, Nutella is now far more popular. Other secular celebrations that involve food include the completion of a house, which is celebrated with wine and cakes.

During the Yugoslav period, the government fostered nonreligious food and music festivals, many of which have remained popular even after the breakup of the country. These often combine culinary interests with the Soviet mania for all things oversized. At the asparagus festival in April, a highlight is an omelet made with 1,000 eggs and 66 pounds (30 kilograms) of asparagus. The cherry festival in Lovran in May is celebrated with a 33-foot- (10-meter-) long cherry strudel, and other events feature similar outsized entrées.

Diet and Health

Croatia has a long tradition of folk medicine and home remedies, many of which are still adhered

to among the highly educated elite. In June 2009, health minister Darko Milinovic surprised his colleagues by saying at a press conference that honey, tea, and lemon along with frequent showers was a cure for swine flu. He retracted that claim almost immediately, but it did reveal a typical belief that a simple good diet promotes health.

Croatia has a long tradition of using herbs such as caraway, juniper, and walnut kernels for intestinal problems; mallow, chamomile, mint, and lemon balm for sore throats and cough; and elderflower to improve circulation. Other remedies have more of a magical aspect, as in the burning of alecost with wormwood and rose petals; supposedly, inhaling the smoke has special healing powers. *Raki*, the grape brandy, is used to make herb infusions and also externally to heal wounds or bruises. Wrapping a sore throat in a towel soaked in *lozovac*, a locally produced brandy, is said to aid in healing.

Still, the best folk remedies in the world are powerless against unhealthy modern dietary practices. Changes in the Croatian diet have had a strong negative effect on coastal Croatians; a study conducted in 2003 showed that the percentage of overweight people among residents of Dalmatia had increased to 54 percent of men and 48 percent of women, and 27 percent of both genders were obese. The authors of the study theorized that this was because the islanders now eat much more meat than their ancestors and have not changed their lifestyle accordingly.

Islanders are still healthier than inland Croats. Cardiovascular disease is the leading cause of death in Croatia, and a study from the Croatian Public Health Institute in 2005 showed that inland Croats were far more likely to suffer a heart attack. A poor diet was cited as a major factor. A 2009 study of multiple sclerosis and cancers in Croatia showed that both diseases were twice as common in the inland areas where the diet is rich in meat and fat and suggested that the high intake of olive oil among

coastal residents was protecting them from the same fate. The government has been trying to encourage a return to traditional healthy practices such as increased consumption of fish instead of meat. This includes financing a campaign called *Srdela snack*, encouraging people to eat sardines instead of other fast food. It has been relatively successful, but sardine sandwiches still have not replaced hamburgers and *cevapi* as the most popular quick meals.

Regardless of their region, Croatians have a very high rate of smoking and consumption of alcohol, and the government is taking steps toward discouraging these unhealthy practices. A tobacco ban in restaurants went into effect in 2009 but has been widely ignored; nevertheless, a study by Euromonitor predicted that this ban, combined with an increase in tobacco taxes, will start to reduce tobacco use. An increase in the tax on hard alcohol went into effect in 2007 but has had little social effect for several reasons. It doesn't apply to wine and beer, can't be imposed on the brandy and other liquors that are widely homemade, and, even when it is applicable, is widely avoided. These statistics aside, the general level of health in Croatia is superior to that in most of the other former Yugoslav republics, and the life expectancy of 73 years is not far from the European Union average.

Cyprus

Overview

A small nation with a big history, Cyprus lies at the eastern end of the Mediterranean between Europe, Asia, and Africa, an island gatekeeper to three continents. Its position has proven an irresistible draw to larger and more powerful empires throughout history. Egyptians, Assyrians, Persians, Phoenicians, Greeks, Romans, Franks, Venetians, Turks, and Britons invaded or annexed the island seeking outposts for military use and trade.

Cyprus today is a divided country. In 1960, the Republic of Cyprus attained independence from Britain, but intervention by both Greece and Turkey provoked over a decade of violence and division. Today, the Republic of Cyprus, occupying the southern two-thirds of the island, is recognized internationally and is a member of the European Union. The Turkish Republic of Northern Cyprus occupies the north and is recognized internationally only by Turkey.

Years of settlement, occupation, and interaction with other civilizations have left Cyprus with a rich culinary tradition. Though close association with Greece has left an obvious imprint, it is geographically closer to Turkey, Syria, Lebanon, and Egypt, and much of its food culture betrays strong Middle Eastern influences. But Cyprus brings a great deal of its own to the table. Slashed east to west by two mountain massifs, this small country harbors numerous ecosystems and a rich biodiversity including edible plants unknown elsewhere. Foraging remains a way of life in the countryside and a popular activity for townsfolk.

Today, a new kind of international influence flourishes in the larger towns and cities. With modernization, supermarkets have blossomed beside or instead of traditional markets. Meanwhile, tourism has spawned American-style fast-food restaurants like McDonald's, Pizza Hut, T.G.I. Friday's, and Kentucky Fried Chicken. But the interior villages preserve Cypriot cuisine in its purest forms, and, even in town, family meals and traditions reflect a culinary culture shaped over millennia by indigenous ingredients and the influences of civilizations near and far.

Food Culture Snapshot

It is a Saturday in springtime, and the market is bursting with fresh vegetables and fruit. The Demetriou family heads out to select the very best for the next several days: chard, spinach, cauliflower, and artichokes. Some of the artichokes will be shredded fine and eaten raw, while others will be cooked. This is citrus season, which means oranges, grapefruit, and mandarins are plentiful. They select some of each, along with lemons, a necessity in Cypriot cooking year-round.

For Sunday's dinner, the Demetriou hunt down a Cyprus anomaly, *kolokassi*, known elsewhere as taro, a root product that has migrated all the way from the Pacific Islands. Stewed with pork, it is one of the country's favorite dishes. Then the yogurt supply must be replenished. In Cyprus it is made from the milk of goats and sheep, which thrive much more easily here than cows. The family stops to pick up some freshly made *halloumi*, the country's signature cheese. Traditionally

served either grilled or fried, this cheese maintains its shape even when heated.

Then they are off for a foraging expedition, a favorite Cypriot activity. Out in the countryside, both herbs and greens are there for the taking. *Rigani* (wild oregano or marjoram) grows in multiple varieties. Arugula, fennel, purslane, nettles, dandelion, and amaranth fill up the foraging baskets. Like the vegetables from the market, they will be eaten raw in salads, sautéed simply, perhaps with eggs, or mixed with staples from the family's pantry.

Major Foodstuffs

A typical Cypriot family keeps its larder well stocked with legumes such as lentils, garbanzos, black-eyed peas, and dried fava beans. Grains of choice are cracked wheat (or bulgur) and rice. Other staples include pastas and *trachanas*, wafers made of ground wheat and soured milk used for porridges and soups in the winter. A plentiful supply of local olive oil is a must.

Many of the spices kept on hand reflect the country's proximity to the Middle East. They include coriander, cinnamon, cumin, and black pepper, along with the less-known mastic—a resin from a small evergreen tree—and *mahlepi*, kernels from the pit of the tiny black cherry. Sesame seeds are used in various ways by themselves, crushed into tahini paste, or pressed for their oil. Favorite herbs, grown at home, foraged, or purchased from the market, are oregano, marjoram, cilantro, parsley, thyme, bay leaf, and mint, which is used both fresh and dried. Important flavoring agents for sweets are rose water, orange flower water, and carob syrup.

Vegetables are key to the country's diet, and Cypriots eat what the seasons offer. In addition to spring's bounty, favorites include tomatoes, eggplant, summer and winter squash, peppers, potatoes, okra, beets (both roots and tops), many members of the cabbage family, and greens, both cultivated and wild. Dairy products are essential to the diet, not only yogurt and halloumi, but other cheeses such as feta and *anari*, which is made from whey.

Residents of this island nation are great lovers of seafood, which is no longer as abundant as it once

Traditional halloumi cheese being grilled in Cyprus. (Ron Zmiri | Dreamstime.com)

was. Still, calamari, shrimp, octopus, cuttlefish, and finfish of all sorts find their way onto the table in homes for special occasions and in restaurants. Meats, too, are eaten only once or twice a week at home, though they star on special occasions. Pork is the favorite of the Christian southerners, while the Muslims of the north prefer lamb for religious reasons. Cypriots also produce a delicious variety of sausages and preserved meats.

Cooking

Frying, braising, baking, roasting, and grilling are all important techniques in preparing Cypriot food, but many of the most popular dishes require little to no cooking at all because Cypriots are great lovers of salads. Their own version of what is known in the United States as “Greek salad” is called “village salad,” and it often contains wild greens, shredded cabbage, arugula, or purslane in addition to the predictable cucumber, tomatoes, olives, and feta cheese. Ingredients are sometimes chopped, a Middle Eastern tendency. Other simple raw salads include artichoke hearts, carrots, and kohlrabi that are shredded and tossed with olive oil. Vegetables like beets are boiled first, then receive similar treatment.

Cypriots are also great lovers of dips and spreads. *Skordalia* mixes garlic, breadcrumbs, olive oil, and lemon juice. *Tzadziki* combines yogurt, cucumbers,

garlic, and olive oil. Hummus, a Lebanese or Syrian import, blends mashed, cooked chickpeas (garbanzos) with tahini paste, lemon juice, and garlic.

Grains, legumes, and vegetables dominate the daily menu, but there is much variety in their preparation. Legumes are used in stews, soups, and purees. Bulgur pilaf is a delicious accompaniment to any meal. The cooked grain is also made into *koupes*, or cigars, and stuffed with ground meat. Vegetables are baked, stuffed, fried, sautéed, or braised. Greens are scrambled with eggs. Potatoes, mushrooms, cauliflower, and artichoke hearts may be seared, then simmered in red wine and coriander to make a stew called *afelia*.

Cypriots use a similar range of techniques for cooking seafood and meats, but roasting and grilling are usually reserved for holidays, celebrations, and family outings. Essential to every kitchen is a *tava*, a terra-cotta oven fitted with a tight lid, often shaped like an old-fashioned beehive. Once used outdoors over coals for long, slow cooking of meats, it has successfully made the transition indoors to the oven. Most households also keep a portable grill outfitted with electrically powered spits that turn slowly to produce pork or lamb kebabs or souvlakia, whether at home or off in the countryside.

Souvlakia Me Pitta (Kebabs in Pita Bread)

Serves 6

This preparation is equally good with pork or lamb. Be sure to purchase high-quality, tender meat.

- 2 lb pork or lamb in 2-in. cubes
- 4 cloves garlic, crushed
- 2 medium-sized onions, quartered
- 2 bay leaves
- 2 tsp plus 1 tbsp dried oregano
- 1 tsp cinnamon
- 3 tsp salt, divided
- Red wine to cover
- 2 tbsp olive oil
- Juice of 1 lemon
- 1 large tomato, chopped

½ cucumber, chopped

Leaf lettuce, shredded

Pita bread

Lemon wedges and yogurt

Place the meat in a large nonreactive bowl. Add garlic, onions, bay leaves, 2 teaspoons oregano, cinnamon, and 2 teaspoons salt. Cover with wine, and toss. Marinate for 2 hours to overnight.

Blend olive oil and lemon juice. Mix 1 tablespoon oregano and 1 teaspoon salt. Mix vegetables together and set aside.

Thread meat and large onion pieces onto either metal skewers or wooden skewers that have been soaked in water for 20 minutes. Grill over moderate heat or broil 5 inches from the heating element, turning from time to time. When meat has lost its color, baste with olive oil/lemon juice mix and sprinkle with the salt/oregano mix. Continue basting and sprinkling every 15 minutes or until meat is done.

Cut the pita bread in half, grill briefly, and remove.

To serve, fill pita halves with meat. Top with vegetable mix, and serve with lemon wedges and yogurt on the side.

Typical Meals

Everyday meals in Cyprus consist of grains, legumes, vegetables, fruit, and dairy products, with fish or meat appearing on the menu once or twice a week. Vegetable entrées include an assorted variety layered with cheese and baked in addition to stuffed peppers, eggplants, tomatoes, and squash. As with stuffed grape leaves, or *koupepia*, the essential fillings are rice, onion, and herbs, while meat is optional. Mixing sweet and savory flavors in a single dish does not appeal to the Cypriot palate, so addition of raisins and other dried fruits is rare.

Legumes, simply prepared, are the primary source of protein in everyday meals. A puree of split peas and potatoes, a soup of sharply flavored lentils, a rich fava bean stew, or a mound of black-eyed peas studded with chard makes for a hearty meal, particularly when accompanied by a plate of

seasonal vegetables, bulgur or rice, and a slice of crusty bread.

For a springtime dinner the Demetriou family begins with a lentil soup flavored with cilantro, scallions, and vinegar. But this is the last of the individual courses; family-style service prevails in Cyprus. All remaining dishes are spread on the table at once. Anchoring the meal is a bulgur pilaf.

Tonight's *pièce de résistance* is mushrooms *afelia*, a dish in which browned mushrooms are simmered in red wine and crushed coriander seeds. Also on the table are uncooked artichoke hearts shaved finely and tossed in olive oil and lemon juice, as well as sliced beets with *skordalia*, a sauce made with garlic, bread, ground almonds, and olive oil. A dish of goat-milk yogurt drizzled with olive oil completes the spread. A bowl of mandarins is passed around the table for dessert.

Black-Eyed Peas with Chard

1 c black-eyed peas, picked over to check for stones or debris and rinsed

5 c water

1 lb chard, washed

2 cloves garlic, pressed, or chopped and mashed with salt in a mortar

¼ c olive oil

Juice of 1 lemon

Salt and pepper to taste

Additional olive oil and lemon wedges for serving

1. Add enough water to cover the black-eyed peas by an inch, bring to a boil, drain, and throw away the water. Add the 5 cups of water, and bring back to a boil. Begin checking for tenderness at 30 minutes. Peas should be tender within 40 minutes.

2. Meanwhile, trim chard stems, and remove them from the leaves. Slice the stems into ½-inch pieces and shred the leaves.

3. When the peas are just tender, add chard stems along with salt and pepper to taste. Simmer for another 10 minutes. Add shredded leaves, and simmer for 10 minutes more until chard is tender.

4. Drain peas; whisk garlic with olive oil, and drizzle over peas and chard, gently tossing. Pour lemon juice over the dish, and toss again. Adjust salt and pepper. Serve with additional olive oil, lemon wedges, a bowl of whole-milk yogurt, and slices of rustic bread.

Eating Out

Dining out in Cyprus means a visit to a nearby *taverna* for a riot of *mezedhes*. These small plates of food are known throughout the eastern Mediterranean, but in other countries they serve as appetizers to the main event. Not so in Cyprus, where a *meze* means an entire meal consisting of 20 to 25 different dishes. The parade begins modestly with olives, dips, and spreads, moves to salads, and finally ends with hot preparations. In many places, the diner has the option of ordering a seafood or a meat *meze*. In either case, the preparation will become more elaborate as the evening proceeds, with a skewer or two of *souvlakia* toward the end.

As recently as 1960, *mezedhes* were the property of men, the regular *taverna* customers. These small bites provided nibbles to accompany *zivania*, the native spirit distilled from the pomace of grapes pressed in the winemaking process. With the loosening of social restrictions and the growth of tourism, *tavernas* have become the principal dining establishments, welcoming everyone, young and old, men and women, and the beverage accompanying the meal is likely to be one of the local Cyprus wines.

Special Occasions

The Cypriot diet may be largely vegetarian, but weddings, birthdays, name days, and holidays in Cyprus call for meats and sweets. The smell of pork and lamb wafts through the air, either roasting in the oven or turning on the spit. Celebratory dishes include kebabs, *souvla* (skewered bone-in lamb chunks), and *sheftalia* (ground meat sausages bound together with pork caul).

The biggest holiday of the year is Easter with its attendant buildup of Carnival and Lent. The first

day of Carnival is known as “Smelly Thursday” because of the amount of meat grilling throughout the towns and cities. Other Carnival specialties include small cheese-stuffed pastries, known as *bourekia*, and *ravioles*, a gift of the Venetians during their 15th- to 16th-century occupation.

With the beginning of Lent, meat, fish, and dairy disappear from the menu. Tahini cakes and little pies filled with pumpkin and spinach are popular at this time. The first post-Lent meal in the early hours of Easter Sunday is *avgolimono* soup, broth swirled with egg and flavored with lemon juice. Later in the day, the feasting begins. Souvla is the main dish, while the classic pastry is *flaounes*, cheese-stuffed buns sprinkled with sesame seeds.

Christmas in Cyprus once called for the slaughter of a carefully fattened pig, which was turned into hams and sausages to create a supply for the year. Today, the tradition continues in the countryside, but even city dwellers are likely to buy meat for *loukanika*, traditional sausages soaked in red wine. On Christmas Eve, families share a specially baked bread flavored with raisins, nuts, brandy, and orange rind called *Christopsomo*. On Christmas Day,

Baking bourekia in preparation for Easter celebrations in Cyprus. (Shutterstock)

a favorite treat is a spicy cake studded with dried fruits and nuts, inherited from the British.

Diet and Health

Traditional Cypriot cuisine is an ideal example of the widely praised Mediterranean diet. Its foundation is a healthful mix of grains, legumes, vegetables, and fruits, with meat and fish eaten sparingly once or twice a week. Holidays and celebrations call for richer, more indulgent foods throughout the island, but they are balanced in both the north and the south by religious days of fasting and abstinence, such as Ramadan in the north and Lent in the south.

That pattern is likely to be challenged, however, now that tourism has become an important driver in the country's economy. Today, restaurants supply holiday foods every day of the week to visitors and Cypriots alike. As the Cypriot standard of living rises, this temptation will become increasingly difficult to resist.

Czech Republic

Overview

The Czech Republic's food and foodways are a fine balance between its folk traditions and cosmopolitan culture. The country's history, geography, and ethnicity have influenced the "meat and potatoes fare" and a rapidly evolving Continental cuisine brought on by its recent entrance into the European Union.

The Czech Republic for much of the 20th century was the first part of the famous portmanteau, Czechoslovakia. In 1993, it peacefully split with Slovakia in what is called the Velvet Divorce. Now, the country is a parliamentary democracy with a population of 10.3 million, split into two regions, Bohemia and Moravia, with 14 administrative districts. The country has 30,449 square miles (78,864 square kilometers) of landlocked, hilly, and low mountainous terrain and is bordered by Poland, Austria, Slovakia, and Germany. Traditional Czech foods are heavy, simple dishes that reflect the cultivation and preservation of a strong national folk culture but with influence from the changing empires of its neighbors. Schnitzel from Austria, sausages from Poland, goulash from Hungary, and roast goose from Germany are commonly found in Czech cuisine.

Unlike its former counterpart, Slovakia, the Czech nation was an established state until the 16th century, when it came under Hapsburg rule, lasting until 1918. The Czech national movement started with the pre-Reformation leader Jan Hus and came to head in the Czech national revival of the early 19th century when Czechs upheld cultural markers such as language, poetry, and literature as tools to unify all Slavs in the country. These markers tie Czechs to folk traditions, which in turn value home

food preservation, household animal husbandry, and gardening.

The 45 years under Soviet influence, from after World War II until 1989, limited the amount of commercial food goods into the country as the food chains were incorporated into an organized economy. As such, food lines, uniform prices, and limited amounts of meat and fresh produce became common. This period drastically changed the cuisine, and only since 1990 has a diverse food retailing and restaurant culture revived as the country draws tourists and business leaders from within the European Union and around the world. Today, Prague is the sixth most visited city in Europe, and foods from around the world are available for foreigners and residents. The country joined the Schengen area (border-free zone) in 2007, and the free flow of people and goods across borders pulls the cuisine of western Europe into the Czech Republic.

The Czech Republic was one of the first nations to industrialize in the early 19th century, losing a large part of its agricultural labor force to mining and manufacturing facilities. Today, agriculture makes up less than 5 percent of the gross domestic product. Since few people are involved in modern commercial farming, rural food nostalgia is tied to an identity cultivated centuries ago in the hills and fields of Bohemia and Moravia. However, harvest festivals, cottage gardens, and simple countryside fare are still valued as strong Czech identifiers.

Only 39 percent of the population considers themselves Roman Catholic, while 40 percent are confirmed atheists and 16 percent more are religiously uncertain. Despite this, many Catholic traditions

are still popular during Lent and Christmas. Meatless fasting meals consist of various vegetable soups and freshwater fish. The Easter meal eaten throughout the country has strong Catholic symbols.

The Czech Republic has had many ethnic groups move and settle throughout the region, but today the country is ethnically uniform, with 94 percent of the country claiming Czech nationality. The repatriating of its large prewar German population was forced by the harsh Beneš Decrees, which economically punished foreign, specifically German, settlers and encouraged Czechs to move back within its borders. As such, strong German food traditions have disappeared. Currently, the significant minority ethnic groups are Roma, Slovak, Polish, German, and Vietnamese.

Many Czechs recognize Vepřo-Knedlo-Zelo as the national dish of the country and will serve it at family meals or special celebrations. (Ingrid Heczko | Dreamstime.com)

🍴 Food Culture Snapshot

Martin is a 46-year-old father of two sons, who lives in an apartment in Prague with his girlfriend, Katarina. Since he finished his mandatory military service as a young man, he has worked in the growing hospitality industry. He recently left his work as a manager at an international hotel chain to open a small café in the middle of a newly renovated shopping center in the center of the city, serving espresso coffee drinks and panini sandwiches in the style of an Italian eatery.

Martin's breakfast includes black tea with muesli and milk, bread, ham, and cheese, followed by an espresso in midmorning. As Martin works in the busy city center, he chooses to eat at a cafeteria for lunch. This cafeteria has selections of food from around the world, including Indian, Chinese, Italian, and Thai. Lunch is the heaviest meal of the day. For dinner he eats a lighter meal at home with his family.

Martin saves his long lunches for the weekend when he cooks with his family. He prefers to cook international foods such as Chinese noodles or Thai chicken, while Katarina makes traditional Czech fare, specializing in the complex baked goods such as *vánočka*, a spiced yeast bread commonly served at Christmas. Martin always drinks Czech beer, his favorite being Pilsner Urquell, with these meals.

Vepřo-Knedlo-Zelo (Pork Dumplings and Vegetables)

Part of the influence of the Czech national revival is the naming of certain national foods. Many Czechs recognize *vepřo-knedlo-zelo* as the national dish of the country and will serve it at family meals or special celebrations.

For the Meat

2 lb pork roast

2–3 cloves of garlic

Salt

1 tsp caraway seeds

½ c water

1. Preheat oven to 325°F.

2. Rub the meat with crushed garlic and salt. Sprinkle with caraway seeds. Put in a roasting pan with the water.
3. Roast in the oven for approximately 2 hours until the internal temperature reaches 160°F.
4. Let it rest and slice open.

For the Dumplings

- 1½ c milk, divided
- 1 package yeast
- 1 tsp sugar
- 1 egg
- ½ tsp salt
- 3½ c flour
- 3 slices white bread, cubed

1. Take ½ cup milk, and scald it on the stove, then let it cool. Add the yeast and sugar, and let stand for 10 minutes.
2. Heat the remaining milk until warm. Add this to the yeast mixture with the egg and the salt.
3. Mix the flour and bread cubes in a dry bowl. Add the liquid to the flour, and knead it like you would regular bread dough.
4. Leave it in a warm place to rise for 2 hours. It should double in size. Knead again, dividing the dough into three long loaves, each about 2 inches thick. Let these rise for 45 minutes.
5. Boil salted water in a large pot. When the dough has risen, drop one of the loaves into the water and cook for 15 minutes. Remove with a slotted spoon onto a greased platter. Repeat with the two remaining loaves.
6. To slice, take a thread, loop it around the loaf, and pull it together. Each slice should be about 2 inches thick.

For the Vegetables

- 1 head cabbage
- 2 tbsp lard
- 1 small onion
- 1 tsp caraway seeds

- 1 tsp salt
- 2 tbsp vinegar
- 1 tbsp sugar

1. Boil water in a pot. Cut the cabbage into thin strips, and blanch in boiling water and strain.
2. Melt lard in a frying pan. Add chopped onion, and sauté until translucent. Add cabbage and caraway seeds, and cook until strips are tender. Season with salt, vinegar, and sugar.
3. Put warm dumplings on the plate, topped with pork and cabbage.

Major Foodstuffs

Food-retailing structures in the Czech Republic look very different from 1990 and before. The former Communist government demanded a minimum profit margin in the retailing sector; therefore, food marketing was virtually nonexistent: Grocery stores on average had one-third of the space of their Western counterparts, and food goods were priced uniformly across all of Czechoslovakia. So when in 1992, Globus opened its first store in the center of the Czech Republic's second-largest city, Brno, the hypermarket format became an instant success. Leading European retailers, such as Tesco, Ahold, Globus, and Kaufland, quickly moved into the country, and these retailers are still in heavy competition for a market share in the region. In addition, traditional farmers' markets populate the centers of most cities, offering wholesale produce and locally processed and harvested foods. Smaller grocery stores, convenience stores, and fruit stands can be found in most residential neighborhoods.

In general, Czech food is simple and rich with limited spices and heavy sauces. But it is also extremely seasonal and tied to local food production. Meat dishes dominate Czech entrées, with beef, pork, and venison as the proteins of choice. A popular beef dish is *svíčková*, marinated beef served with spiced cream sauce and preserved fruit. Pork is processed into smoked sausages and a wide range of deli meats and bacons. Poultry is more and more popular as a healthy alternative protein. As the Czech Republic is a landlocked country, saltwater fish is

rare, but river fish such as trout and carp are commonly eaten.

Potatoes and wheat flour provide most of the starch on the plate. Rice is commonly served with chicken and fish. Soups and dumplings are made from potatoes. The wheat is processed into pasta and rye and brown breads. Children especially enjoy spaghetti topped with ground poppy seeds and powdered sugar.

Traditionally, vegetables were pickled or processed or eaten only during the harvest season, but this is changing with the availability of more fresh produce from the new retailing structures. More Czechs are eating fresh vegetables and salads with their meals. In the summer and fall, Czechs use the forests to forage for mushrooms for soups and casseroles. Fruits are eaten fresh when they are in season, while most are saved for preserving and pickling. Long gone are the lines for bananas and mandarins, which were available only during the Christmas season, but tropical fruits are still valued as a holiday treat because of their past scarcity.

Lard is the most traditional cooking fat. A slice of brown bread spread with lard and topped with onions, salt, and paprika is a common dish found in pubs and markets. Recently, with the increased knowledge of the health benefits of monounsaturated fats, olive and vegetable oils are becoming more popular. Butter is used in baked goods.

Czech cuisine is not particularly known for its spices except for caraway, paprika, and poppy seeds. These usually make up the only spice for the dishes, other than salt and pepper. Garlic is liberally used in most meat dishes and makes a very popular soup, *cesnekova polevka*.

Cesnekova Polevka (Garlic Soup)

- 6 cloves garlic
- 3 tbsp butter
- 14 oz chicken stock
- 1 egg per person
- Spring onions, sliced
- 3 oz semisoft, mild cheese, like Gouda

3 oz ham, diced

1 c hard white bread, diced and fried for croutons

Fry the garlic in butter until aromatic, add stock, and bring to a boil for 10 minutes. Turn the burner to low. Add the egg(s) softly to the pot, and let sit for 5 minutes. Spoon eggs with broth into serving bowls. Add spring onions, cheese, and ham. Add croutons to the soup.

Cooking

Most Czechs have modern kitchens with stoves, refrigerators, and sinks with potable water. As such, the cooking methods reflect the Continental style found in western Europe. But many city dwellers like to keep country homes with the traditional kitchens for weekend vacations. They can have wooden stoves and open fires to make stews, roasted fatty meats and root vegetables, and preserves.

Frequently, these small homes have gardens and kitchens with tools to preserve food by canning, pickling, and distilling alcohol. Popular preserves include cherry, peach, and plum jams; pickled beets; horseradish; and pickles. Alcohols are distilled into brandies, more specifically eau de vies, made from plums (*slivovice*), apples (*jablakovice*), pears (*hruskovice*), and peaches (*broskovice*).

Typical Meals

Czechs usually eat three meals a day: breakfast, lunch, and dinner. Tradition calls for all meals to be eaten at home, but many people take weekday lunches at school or work. It is not customary to eat a meal alone. Even at the workplace or at school, there is one lunch hour in which everyone eats together.

Breakfast can be savory or sweet. Ham and cheese sandwiches on *roky*, fresh-baked white-flour rolls, are served with mustard. The breakfast sausage, *parky*, is also served with mustard. Children eat sweeter breakfasts of rolls with butter and honey or cereals that are found in the aisles of the large supermarkets.

Lunch and dinner fare are similar. Both meals have two courses, a soup and an entrée, and both are served hot. Potato, garlic, and cabbage soups are popular starters. This can be followed by a stewed meat such as *svíčková*, spiced beef, with *knedlicky*, potato-flour dumplings, or by roasted chicken with rice or pasta. Usually, lunch is a larger meal than dinner.

Midday Sunday, the family gathers for a large meal and eats more traditional Czech fare such as *vepřo-knedlo-zelo* and *Wiener schnitzel*. Beers and spirits are included in this meal along with dessert pastries and cakes made from poppy seeds, nuts, dried fruits, or chocolate. Coffee and tea are served after all leisurely meals.

Eating Out

Restaurants essentially died under Communist control, and today the heart of Czech cuisine is not to be found in the restaurant but in the home. Due to the opening of trade with the West, Czech restaurants have experienced a renaissance in both the variety and the quality of the foods. Visitors to the city centers have dined in Japanese, French, and Italian restaurants since soon after the Velvet Revolution, but more recently classically trained chefs are transforming humble Czech fare into fine dining. These chefs have taken the traditional ingredients like mushrooms, organ meats, and venison and applied French cooking techniques for the modern diner.

The pub is the true gathering place outside the home. The country has a long tradition of beer brewing that is well respected around the world. Western European and American corporations bought many of the most famous Czech beer brands, such as Pilsner Urquell, Staropramen, and Zlatopramen. Furthermore, many pubs in the city centers have exclusive tapping contracts with these large labels. A growing independent beer movement, *čtvrta pipa*, “the fourth pipe,” embraces the local microbrewery. Still, Czechs are loyal to these large brands. Beer will always be an intimate symbol of the Czech eating experience whether it is mass-produced or microbrewed.

A sign outside a Czech pub for the popular beer, Pilsner Urquell. Nine out of 10 beers produced and consumed worldwide are made according to a method directly derived from the Pilsner style of brewing. (Sepavo | Dreamstime.com)

Special Occasions

Wedding celebrations are long events with an abundance of food. A three- or four-course sit-down meal is served, starting with soup. The bride and groom are bound together and must eat the soup with one spoon. It is common for the wedding party to go well into the next morning, and another meal will be served around 1 or 2 A.M. It is usually a simple stew to sustain the guests for the party. In the countryside, some homes may slaughter their own pigs and prepare homemade dishes and desserts for months preceding the wedding. In the city, it is more common for these affairs to be catered.

Easter is tied to strong Catholic traditions. A wicker basket is brought to the church to be blessed by the priest. Different foods represent elements of the Easter story such as joy, mercy, moderation, resurrection, and generosity. This basket includes *paska*, a sweet, rich yeast bread, marked with a cross; *hrudka* or *sirets*, a type of bland spread of cheese and eggs; *šunka*, ham; *maslo*, butter shaped to look like a lamb; *kolbasi*, sausage; and bacon, eggs, salt, and horseradish.

Diet and Health

Traditional Czech cuisine is heavy in salt and saturated fats. As such, the Czech Republic has one of the highest rates of death due to cardiovascular disease in the developed world. As more awareness is given to health and diet, more and more Czechs are dieting or watching their weight.

To eat dietetically, Czechs increase their consumption of fresh fruits and vegetables. Grapefruit and pineapple are considered “fat eaters” and are popular diet foods eaten at breakfast. This is in contrast to eating foods that have the fat or sugar removed. Cheeses, potato chips, milks, and yogurts are all full fat. It is believed that the fat is more natural in these foods.

Czechs have a long tradition of using spas as a health and wellness resource, both for treatment of chronic medical conditions as well as for relaxing vacations. These spas, mostly located around natural mineral springs, take advantage of mountainous forested areas. These resorts have special spa food with more fresh vegetables and lower-fat meats and fishes. It is not uncommon to go to one for several weeks to a month to recover from an illness.

Denmark

Overview

The northern European kingdom of Denmark is one of the oldest surviving monarchies in the world. It was first recognized as a unified territory in the 10th century under the rule of Gorm the Old, said to be a direct ancestor to Denmark's present monarch, Queen Margrethe II. Gorm was succeeded by his son, Harald Bluetooth, who erected runestones in the town of Jelling to commemorate his parents' death and to celebrate Denmark's conversion from paganism to Christianity. Dating from around 965, the Jelling Stones represent Denmark's "birth certificate" and are today recognized as a UNESCO World Heritage site. Denmark's first constitution was introduced in 1849.

The smallest country in Scandinavia, Denmark is made up of three main landmasses (the Jutland Peninsula, connected to Germany, and the islands of Funen and Zealand), as well as a number of smaller islands, including Bornholm, off the south coast of Sweden. The former colonies of Greenland and the Faeroe Islands continue to be Danish protectorates but are now both governed by politically autonomous parliaments.

Denmark's location between the North and Baltic seas secures a rich source of seafood, which features prominently in its food culture. Its temperate climate and largely flat landscape also account for Denmark's long agrarian history, particularly dairy, livestock, and cereal farming. Evidence of animal husbandry and grain cultivation in the area dates to the Neolithic period (3900–1700 B.C.), while the famous "Tollund" man (the fourth-century body found preserved in Jutland's peat reserves in 1950)

was found to have soup containing seeds in his digestive tract.

Now predominantly an industrial economy, with agriculture accounting for less than 20 percent of Danish exports and remaining exports mainly dedicated to machinery, pharmaceuticals, electronics, and environmental technology, Denmark is at once a thoroughly modern and a proudly traditional country. Denmark was twice rated the Best Country for Business by *Forbes* magazine (2008–2009) and twice voted the "happiest" country in the world (2006, 2008). Visitors to Denmark will find global brands and products well represented in cosmopolitan centers, including the predictable array of food franchises like McDonald's, KFC, Subway, and Pizza Hut, not to mention a thriving sector of "ethnic" eateries. Immigrants constitute almost 10 percent of Denmark's population of 5.5 million.

Visitors will also find a strong sense of history in the cobbled streets where pretzel signs heralding Danish bakeries outnumber the golden arches and where one hardly ever needs to walk more than a block to find another *pølsevogn* (hot dog stand), a century after they were first introduced in 1910. Inside modern homes, tradition continues in the form of *hygge*, that famously untranslatable sense of comfort and well-being that Danes thrive on creating. Both a verb and a noun, *hygge* can describe a feeling, a situation, or an activity, but more often than not it takes place around a table, where candles may be lit day or night, in summer or in winter, for special occasions and for simple family meals.

Just a few decades ago there existed a clear polarity between "fancy" food—typically the kind

Windmill in a field of barley in Denmark. Sixty percent of land in Denmark is used for agricultural development, but the industry contributes only to just over 4 percent of the gross domestic product. (Corel)

served in restaurants, inspired by French haute cuisine (Queen Margrethe’s husband, His Royal Highness the Prince Consort, is French)—and the more hearty “traditional” fare, often in the form of meat, potatoes, and gravy, if not the time-honored *smørrebrød* (open-faced sandwiches), which continue to feature fish and meat toppings preserved by salting, smoking, and brining, techniques probably used by the Vikings. Today, the so-called New Nordic Cuisine is fast gaining the world’s attention, particularly after Copenhagen’s Noma was voted *Restaurant* magazine’s Best Restaurant in the World in 2009. The manifesto of the New Nordic Cuisine stresses local and seasonal cooking and eating. With initiatives such as these—and others, like *smushi*, the playful combination of sushi and *smørrebrød* pioneered by the Royal Cafe in Copenhagen—Denmark’s food culture is fast coming to entail more

than pork and potatoes, and rye bread and herring. But in the tradition of the fairytales that Denmark is equally proud of, these culinary innovations are not so much novelties as they are retellings, with a modern twist, of age-old stories. Whether plated old- or new-style, the flavors of sea, smoke, and earth continue to dominate Danish food.

Food Culture Snapshot

A young couple with small children in Copenhagen, Thomas and Bente both work full-time, so they do most of their shopping on Saturday afternoons. A standard part of their shopping is for *pålæg* (“put on top,” or bread toppings), both sweet and savory. Their two children insist on bread with Nutella or *pålægsschokolade* (wafer-thin sheets of chocolate) for breakfast whenever they can, but Bente tries to make

them eat cereal more frequently. For her own breakfast she prefers one of the many cultured dairy products available, like yogurt or buttermilk, with a little muesli or the combination of toasted rye crumbs and sugar known as *drys* (“sprinkle”). Apart from Sunday mornings, when he cooks American-style pancakes with maple syrup for the family, Thomas eats a toasted bread roll with cheese and jam for breakfast. He likes the wide variety of ready-to-heat bread now available in supermarkets, so he alternates between ciabatta-style rolls one week and something “healthier,” like carrot and bran, the next.

Thomas and Bente both eat lunch at their workplace canteens, but the children take packed lunches to school, as well as a midmorning snack of fruit or a dried fruit stick and a flavored drinking yogurt (chocolate milk when they are lucky). For lunch they generally have open sandwiches, so a packet of presliced rye bread is always on the shopping list, along with their favorite toppings. Hans, age six, gets either salami topped with rémoulade (a tartar-like relish) and crispy onions, liver pâté, or a sliced *frikadelle* (meatball) on his bread. His eight-year-old sister, Pernille, prefers fish and white meat—her favorite is tinned mackerel with a liberal squeeze of mayonnaise, or any kind of herring. But fishy toppings do not travel well, so these mostly stay at home for weekend lunches, and she gets turkey, chicken, or ham sandwiches for school. Sometimes they get leftovers like pasta or lasagna.

Dinner usually consists of meat and some form of vegetable, so the family buys a selection of products that can be stored in the freezer if not used right away, especially minced meat, which can easily become *frikadeller*, *hakkebøf* (hamburger patties served with fried onions), or a pasta sauce. Bente does occasionally buy fresh vegetables on her way home from work, but they rely mostly on frozen vegetables. They also buy frozen pizza bases that at least once a week they have fun building into “gourmet” pizzas with whatever pålæg needs using.

They do not generally eat sweets, but Thomas and Bente do sometimes enjoy a few pieces of dark chocolate with their evening coffee after the children have gone to bed. On Saturdays Hans and Pernille each choose a DVD to watch in the afternoon, when they are also allowed a small bowl of sweets and maybe

some potato chips or microwave popcorn, so there are always some goodies in the shopping cart along with the week’s supply of food, coffee, and fruit juice. Thomas and Bente rarely feel like cooking when they come home with their purchases, so on Saturdays the family typically gets a take-out meal in the evening for a bit of *hygge* in front of the television. They take turns choosing what everyone eats, and the cycles are predictable enough: Thomas likes his *döner kebab* (meat on a vertical spit, similar to gyros), Bente her pizza, Pernille chooses Chinese food, and Hans invariably requests McDonald’s.

Major Foodstuffs

Denmark is famously home to more pigs than people and, in addition to dairy, is probably best known for its pork. These are arguably two of its most important foodstuffs, both on Danish tables and in terms of agricultural exports. Denmark prides itself on a highly efficient and technologically advanced agricultural sector that produces enough food annually to feed 15 million people, approximately two-thirds of which is exported, mainly to the European Union. The industry is dominated by large, mechanized farms run by cooperatives, meaning complete ownership by Danish farmers, whose annual turnover contributes 10 percent to the country’s gross domestic product. The Danish Agricultural Council puts a high priority on food safety and animal welfare.

Danish Crown, a cooperative comprising 15,000 farmers and 25,000 employees, is one of the largest companies in Denmark and the world’s leading meat exporter. It represents 8 percent of the European Union’s total pork production, with two million tons of pork processed annually, as well as 150,000 tons of beef. The joint Danish-Swedish Arla Foods is Denmark’s biggest dairy cooperative and one of the few remaining after nationwide mergers decreased the number of cooperatives from almost 1,500 in 1935 to just 12 in 2007. Arla is also the world’s largest producer of organic dairy products and counts Lurpak butter and Buko cream cheese as some of its most popular products, both at home and abroad.

Whereas the country's soil used to be poorly suited to grain cultivation, years of applying livestock manure have helped to fertilize the land to the extent that Denmark no longer relies exclusively on grain imports. Now, more than half the arable land is devoted to cultivating grains: some rye and rape but mainly wheat and barley, which are important for the bread industry and for that other Danish favorite, beer. Sugar beet farming occupies less than 2 percent of agriculture, though imported sugar has remained an important foodstuff since it was brought over in the 1600s, when Denmark began to occupy the Virgin Islands, which most certainly helped to fuel a nationwide sweet tooth that can today be satisfied by a number of proudly Danish specialties ranging from pastries to cookies, sweets, marzipan, and chocolate.

Potatoes have featured heavily in the Danish diet since they were introduced from France in the 18th century. For years they have been the main starch of a “proper” meal, and many of the older generation would today still prefer potatoes over rice, pasta, or noodles. Danes are particularly fond of new potatoes, or the first crop of the season, which produces delicately flavored small tubers. The island of Samsø is well known for its new potatoes, although with modern farming and transport, potatoes from the island are available in Danish supermarkets throughout the year. Potatoes have also historically been used in the production of *snaps*, or aquavit, but the spirit is now mostly grain based.

Beyond bread, meat, potatoes, and dairy (and beer and snaps to wash it all down), fish continues to be an important component of the Danish table, with evidence of herring and oyster consumption dating to the Stone Age. The Baltic Sea provides herring—the island of Bornholm is famous for its herring smokehouses—and the North Sea a variety of cold-water fish, like cod, mackerel, plaice, eel, and crustaceans, while the Limfjord Sound is renowned for its oysters. Despite these local resources, Denmark still imports fish, including herring from Norway and shrimp from Greenland, though European Union fishing quotas have made seafood generally more expensive and less abundant in recent years.

A smokehouse and restaurant on Bornholm Island, Denmark. (Collpicto | Dreamstime.com)

A final significant foodstuff in Denmark is fruit. While not a major component of domestic industry, fruit picking on private smallholdings is both a popular tourist activity and a form of seasonal employment for young travelers who help to make the season's best fruit available for Danish consumers. Strawberries are plentiful in summer, as are a number of other berries such as black currants, red currants, blueberries, and cherries, which are enjoyed fresh or made into jams and compotes, if not frozen for later in the year. Hibiscus fruits are popular for making jam, and rhubarb for compotes that are eaten as a dessert with cream or milk or served as an accompaniment to grilled meat or fish. Rhubarb is also a possible ingredient of *rodgrød med fløde*, “red pudding with cream,” probably more famous as a Danish phrase that is notoriously difficult for

foreigners to pronounce. Essentially a mixture of lightly stewed fruit—mostly red berries—slightly thickened with corn or potato starch and served with a drizzle of cream, *rødgrød med fløde* is the perfect expression of Danish summer *hygge*.

Cooking

Despite the increased availability of fast, convenience, pre-prepared, and frozen foods, cooking continues to be an important and widespread activity in Denmark. Danish women who work or go to school full-time reflect a variety of attitudes toward cooking: Some cook for pleasure, some as a chore, some to ensure optimal healthiness. Consistent is the regularity of some form of cooking, even if the category of homemade is becoming more ambiguous with the convenience of prepared components of a meal that simply need to be assembled or finished at home. The popular birthday *lagkage* (layer cake), for instance, is often assembled at home using store-bought sponge cake and powdered custard, while potatoes are available by the jar, peeled and preboiled. So while it is entirely possible to produce a lot of food at home with minimal cooking from scratch, or even with minimal cooking skills, the act of regularly preparing food at home remains an essential part of Danish food culture—particularly when it comes to *smørrebrød*, basically an act of assembly.

Even when made entirely from scratch, cooked Danish food is not traditionally time- and labor-intensive in the style of haute cuisine or other food cultures that rely on heavy spicing and/or marinating. Joints of meat or whole chickens are roasted with minimal preparation, while fish, steaks, and patties are panfried and typically served with boiled potatoes and a simple gravy of cooking juices, cream, and coloring. Salt and pepper are the most important seasonings in a Danish kitchen, and dishes are often finished with a garnish of herbs like chives, dill, or parsley. Baking of bread, cakes, and cookies is perhaps the most time-consuming kitchen activity and also the most popular, although the very labor-intensive pastry making is generally left to professional bakers. When a general strike shut down bread

factories for two weeks in 1998, fresh yeast was the first commodity to be sold out in supermarkets, and the event was dubbed the “yeast strike.” Most Danes may prefer to buy bread for the sake of convenience, but this episode suggests that a majority of them can bake if they need to.

Following widespread industrialization at the turn of the 20th century, when it became normal to buy bread rather than to bake it (rye bread, in particular, takes a very long time to bake), home-baked bread became fashionable again only in the 1960s and 1970s when Denmark, like many other Western countries, began paying more attention to both flavor and healthiness. In 1972 the Dairy Board published the first of a very popular series of cookbooks called *Karoline's Køkken* (Caroline's kitchen). Compiled from recipes developed to promote the use of dairy products, eight new cookbooks (complete with nutritional information and meal plans) were published between 1980 and 2001, all distributed free of charge to Danish households. Free distribution was discontinued after the firm was taken over by Arla in 2003, but these cookbooks remain the most comprehensive account of Denmark's changing food culture in the final decades of the 20th century. Most obvious is the increasing number of “exotic” recipes as Danes began to embrace and exhibit a more comfortable relationship to food from around the world as a combined result of increased travel, immigration, and access to foreign ingredients and restaurants in Denmark. Changing attitudes about health are also evident in the recipes themselves, as they begin to include less cream and butter and more low-fat dairy products, as well as in the loss of the friendly cartoon cow that was *Karoline's* icon from the first edition until the 1990s, when she was dropped because a cow was considered inappropriate for connoting good health.

Long before *Karoline's Køkken*, the first Danish cookbook was published in 1616. As with many early cookbooks, the first century or so of Danish culinary guides were written mostly by men for other male chefs, after which women became more common as authors of largely didactic volumes aimed at young housewives. By the end of the 19th century, cookbooks were most frequently authored

by women, written with a less moralizing tone, and included general household tips for an audience presumably more at ease in their kitchens. The most popular book from the early 20th century was *Frøken Jensen's Kogebog* (Miss Jensen's cookbook, written by Kristine Marie Jensen), which went through 75 editions by 1975, in addition to a special centenary edition in 2001. *Frøken Jensen's Kogebog* may be old-fashioned, but it is not outdated. A number of the classic dishes she included continue to be cooked and eaten by many Danes, and perhaps increasingly by non-Danes around the world, thanks to globally best-selling cookbooks like Trine Hahnemann's 2009 *The Scandinavian Cookbook*, which includes a recipe for *ableskiver* (small, round doughnuts traditionally eaten around Christmas) that is only marginally different from Miss Jensen's century-old recipe for the same.

Typical Meals

Open-faced sandwiches are extremely versatile in Denmark, extending beyond smørrebrød proper to be a potential component of every meal: a slice of bread or a bread roll eaten as two separate halves with cheese and jam at breakfast, for instance, followed by rye bread with toppings for lunch. Alternatively, if lunch has been a main warm meal, then it is not unusual to have a light dinner of bread or *knækbrød* (crispbread) with cheese and a cup of tea.

Unless it is oatmeal porridge, a Danish breakfast is seldom a hot, cooked meal. Following a general preference for reserving the heavier rye bread for lunch, *morgenbrød* ("morning bread") is a blanket term that refers to bread eaten for breakfast—typically some form of white roll from a bakery. Given the cost of bakery bread, *morgenbrød* is often a weekend treat, or it is reserved for special occasions like birthdays and anniversaries when it is also standard to bring bakery bread or pastries to work to share with colleagues. Although recent surveys suggest that one in four Danes skip the first meal of the day, a typical everyday breakfast is as likely to feature store-bought bread, cereal, and some form of cultured dairy product.

Denmark's equivalent to the Swedish *smörgåsbord* is the *kolde bord*, or "cold table," which also signals the main difference between them: Most of the items on the Danish table are cold—or if not, just *lune*, or gently heated—rather than properly hot like some dishes on a Swedish table. The cold table, traditionally served at lunch, is a spread of bread and toppings required to make and eat smørrebrød and includes a range of seafood (pickled herring; smoked salmon, eel, or herring; boiled shrimp; crumbed fillets of plaice), cold meats (salami, roast beef, corned beef, ham, roast pork, liver pâté), and a number of condiments including prepared salads (including Italian salad, a mixture of mayonnaise, carrots, peas, and asparagus; Russian salad, with beets; mackerel salad, canned mackerel in tomato sauce topped with mayonnaise; curry salad, mayonnaise mixed with chopped, hard-boiled eggs, apple, and mild curry powder); and rémoulade, sliced beets, capers, onions (raw and fried), bacon, mushrooms, pickled cucumber, red cabbage, and grated horseradish. Warm foods may include panfried slices of pork loin, meatballs, and beef patties. Cheese, including the Funen specialty of smoked curd cheese, is often served with grapes as an end to the meal.

To the uninitiated, this cornucopia can be as confusing as it is tantalizing, but there are strict sequences and combinations to be observed. As a general rule, fish is eaten before meat, and rye bread is used for herring, whereas white bread is reserved for shrimp and cheese. Beyond these, a number of classic combinations exist that Danes seem to know instinctively: Crumbed plaice needs rémoulade, as do salami and roast beef, both of which are topped with crispy onions; liver pâté is topped with bacon and mushrooms and maybe beets; Italian salad goes with ham, roast pork with red cabbage, and so on. Beer and snaps are the traditional accompaniments to a cold table, together with regular toasts. The oft-repeated *Skål!* requires everyone to lift their glasses and drink.

This typical meal is not an everyday meal, but it does contain elements of the kinds of foods that many people eat on a daily basis, either as a packed lunch or from work cafeterias, where employees can choose a few pieces of prepared smørrebrød if not

the salad buffet or a hot meal of the day. Eating smørrebrød for lunch on the job began as a worker's habit in the early 19th century, and it was not until it appeared on the first restaurant menu in 1883 at Nimb, in Tivoli Gardens, that it became fashionable as a high-class restaurant food as well. Now it exists as both, with many high-end restaurants in Denmark serving classic combinations, and the profession of being a *smørrebrødsjomfru* (literally “virgin,” *jomfru* refers to young maidens who were historically trained in the art of constructing smørrebrød) continues as a respected trade in Denmark.

Dinner is usually a hot meal and often features some of the same foods that, as leftovers, can be reused as bread toppings, such as meatballs, roast pork, beef, or chicken, with potatoes or other vegetables. In more rural areas, it used to be common to begin the evening meal with some form of porridge or gruel to curb the appetite—at Christmas it was fairly common to eat pudding before the main meal—but this has given way to the more universal practice of an early dinner followed by coffee

Brændende kærlighed (“burning love,” mashed potatoes topped with crispy bacon and fried onions). (Jörg Beuge | Dreamstime.com)

and a slice of cake or a few cookies later in the evening. Other traditional evening meals include *åbleflæsk* (pork fried with apples and onions), *forloren hare* (“mock hare,” or meatloaf), *boller i karry* (pork dumplings in a mild curry sauce), and the evocatively named *brændende kærlighed* (“burning love,” mashed potatoes topped with crispy bacon and fried onions). A favorite light summer meal is *koldskål* (buttermilk flavored with eggs, sugar, vanilla, and lemon) sprinkled with *kammerjunkere* (small vanilla cookies). Whatever the food or occasion, two phrases are important to any meal: *tak for mad* (“thank you for the food”) and *velbekomme* (“you are welcome”).

Eating Out

Given a price structure that includes taxes, service fees, and staff wages, dining in restaurants has generally been considered expensive in Denmark and therefore a regular habit only for the very wealthy, and otherwise reserved for special occasions—the older generation commonly celebrates so-called round birthdays (50, 60, 70) at great expense by reserving an entire restaurant to cater for a family party. The restaurant business nevertheless continues to thrive, thanks to both locals and tourists, who have the choice of newer establishments like Noma and also historic sites like Det Lille Apotek (The small apothecary), the oldest restaurant in Copenhagen, founded in 1720 and said to have been regularly patronized by author Hans Christian Andersen.

Added to these are the now-countless options for eating out offered by international franchises, smaller foreign restaurants, and an abundance of local pavement cafés, which are particularly trendy during summer. The historical *kro*, or inn, typically located outside major towns and often the main attraction of smaller towns, is also a popular place to eat out and typically specializes in traditional Danish fare. The ubiquitous hot dog stands and “grill bars,” offering a variety of foods from hot dogs to hamburgers and fries, toasted sandwiches, and ice cream, represent the more casual and affordable side of eating out, as do the many fast-food

outlets selling döner kebabs, pizza slices, and Chinese food.

Special Occasions

No special occasion in Denmark is observed without special attention to food and drink, and some foods also denote special occasions. Christmas Eve is the biggest food event of the year, although items from the Christmas table are often eaten repeatedly in the preceding months. The November 11 celebration of Morten's Aften (Martin's Evening, named after the French St. Martin of Tours, who tried to hide in a goose pen to avoid being anointed bishop), for instance, looks very much like a Christmas table, with roast duck, caramelized potatoes, red cabbage, and pickled cucumber. Duck is also eaten at Christmas, if not turkey, goose, or pork. *Julefrokost* (Christmas lunch) refers not to lunch on December 25 but to end-of-year parties arranged by employers, students, or any other social group. Generally hosted at lunch, and generally entailing the big "cold table" (which can be used for any festivity), it is not unheard of for a julefrokost to be held in the evening, nor for it to feature the hot meal traditionally eaten on Christmas Eve.

Birthdays are celebrated with lagkage, a cake layered with custard, cream, and fruit, or the more traditional *kringle*, a large pretzel-shaped cake filled with fruit or custard and made with a similar yeast dough to Danish pastries called *wienerbrød*, or Vienna bread, after the 19th-century baker's strike that brought a number of Germans and Austrians to work in Danish bakeries, who introduced the flaky, buttery dough that Danish bakers would later appropriate. Special events like anniversaries are often marked with an open house where friends and family can visit throughout the day to enjoy a piece of pastry or cake with a cup of coffee and a small glass of *Gammel Dansk* ("Old Danish"), an herbal bitters. Another sweet item for special occasions is the *kranssekage*, or wreath cake, an elaborate pyramid of cake rings made from ground almonds, egg whites, and sugar. Today, smaller *kranssekager*

are widely available from bakeries and supermarkets and generally offered with champagne at midnight on New Year's Eve, but for many years it was splendid enough to mainly be a wedding showpiece. Like many special and everyday events in Denmark that are no longer restricted to Danish food alone, guests at modern weddings, christenings, and confirmation parties are as likely to feast on "foreign" food as they are on anything specifically Danish.

Diet and Health

With an average life expectancy of 78 years, low infant-mortality rates, and an HIV prevalence of less than 1 percent, Denmark has a generally healthy population. Cancer is the leading cause of death, followed by heart disease. This good health is thanks in large measure to a highly efficient public health system, partly funded by Denmark's global leadership in diabetes treatment, antibiotics, and psychotropic medication. It is also thanks to a general lifestyle that includes a fair amount of physical activity—cycling is the most common mode of transport, for children and adults alike, and large parts of most cities are reserved for pedestrians. However, in recent decades, Denmark has also experienced increasing numbers of people who are overweight or obese, particularly children. This is most often explained as a result of increased consumption of fast food, sweets, and convenience products.

The country does have a long history of monitoring food and diets in the interests of public health. The first major study of the nutrient values of foods was undertaken by physiologist and pathologist P. L. Panum in the 19th century. Panum's work was developed by a number of scientists over the next century or so, notably Christian Jürgensen (author of the first table of "Common Recommendations for the Healthy and the Ill" in 1888) and Richard Ege, whose 1932 nutrition tables incorporated the then–newly discovered vitamins and who continued to publish significant work until the 1970s, when Peder Helms's computerized tables paved the way for the first national Danish Food Composition Database, which published its first official tables in the

1980s. These nutritional databases have been instrumental in compiling dietary recommendations for the Danish population.

The first official food pyramid was launched in 1976 by FDB, a retail cooperative that has been involved in consumer welfare for more than a century. In 1996 they introduced the “S” symbol on supermarket products that were certified as healthy choices (*sundhed* is the Danish word for health). In 2009, following a merger with other Nordic countries, this was replaced by the keyhole symbol that had been introduced in Sweden some years earlier. Criteria for the keyhole include acceptable amounts of fat, sugar, fiber, and salt. Its effectiveness is yet to be measured. As the rest of the world tunes in to not just the gastronomic delights but also the supposed healthfulness of the so-called new Nordic diet with its emphasis on local grains, berries, and fish, it remains to be seen whether Danes themselves will find the fairytale compelling enough to prefer rye bread and herring to a frozen ready-made portion of Moroccan-spiced chicken from the supermarket.

Finland

Overview

Finland is said to be a country between East and West, a small nation sharing a border with Russia in the east and the Scandinavian countries in the west. Cultural influences have come from both sides, sometimes dividing the country east to west when it comes to architecture, customs, religion, and food. Also politically Finland has a western and an eastern history, belonging to Sweden until 1809 and then being a part of Russia until 1917. Even so, national borders don't necessarily create new customs or habits; it is more a question of contacts between people, trade routes, migration, and geographic features that form the culture. The Baltic Sea has, for example, been an important area for trade, and some influences have come from Germany, especially feast traditions.

The climate in the north and the traditional dispersion of the population in rural areas are, however, the most essential factors influencing Finnish food culture. Large forest areas have offered hunting opportunities (birds, hare, moose), berries to gather (blueberries, cowberries, cloudberries), mushrooms, and even bark to mix with flour for baking bread in times of famine. Finland is also known as the land of the thousand lakes, and therefore fish has been an important part of the meal not only for the coastal population but also for the inlanders. Potatoes came to Finland with Swedish officers in the 18th century and soon became an important base for every meal. Before that, the turnip was the main root. Meat, milk, and butter are also traditionally important products from cattle breeding among the agricultural population. Since self-sufficiency was a

fact for the majority nearly until World War II, islanders also kept cows for milk and butter even if fish dominated as the main food in the archipelago. In the north of Finland both Finns and the Saami population (once referred to as Lapps, though this is considered derogatory) have kept reindeers as their main industry, which is naturally reflected in the diet.

Food Culture Snapshot

Pekka (38) and Mari (36) live in Helsinki with their two children, Seppo (7) and Satu (5). After a quick breakfast of coffee and two sandwiches, on his way to work, Pekka takes Satu to kindergarten, where she also gets her breakfast, a sandwich and hot chocolate. Mari sends Seppo, who has eaten cereal for breakfast, off to school and then gets ready for work. During the day Pekka eats fried whitefish with potatoes for lunch at a nearby restaurant, whereas Mari chooses to eat a take-out shrimp salad at her desk since she was a little late for work in the morning. Seppo eats sausage soup at school and Satu a spinach crepe at her kindergarten.

On her way home Mari hurries to the nearest market to buy milk, bread, fruit, and some minced meat. She picks up Satu (Seppo is already home from school) and starts to prepare dinner, which is spaghetti and meat sauce. When Pekka arrives, dinner is ready; they eat together, but since Mari takes Satu to her gymnastic lesson this evening, Pekka is left with the quite messy kitchen to take care of.

Pekka and Seppo go by car to a supermarket in a mall outside town and do some shopping for the weekend. In the supermarket Pekka calls up Mari to check if she

thinks it would be a good idea to buy chicken fillets as they are on sale and also whether he also should buy wine for Friday and Saturday. Before they drive back home, Pekka and Seppo eat ice cream in the mall. Back home from the gymnastics lesson, Mari makes Satu porridge for her evening meal before bedtime. The rest of the family eats sandwiches and drinks tea before it is time for sleep.

Cooking

In old times both fish and meat were mainly salted, as a conservation method, to last through the winter. In western Finland bread was baked only a couple of times a year, and therefore it was dry most of the time. In eastern parts of Finland bread was baked more often, perhaps every week, and therefore eaten fresh. Cooking over an open fire in a pot was the norm until the iron stove became more common in the 1920s in the countryside. At the same time, during the period of independence after 1917, national awareness grew strong and many organizations that took an interest in the welfare of the population started to propagate a healthier and more diversified diet. New schools focusing on giving youngsters education in practical tasks were founded, and the girls participated in cooking courses and in this way spread new recipes and food habits to their families. Since the 1950s both girls and boys have been educated in housekeeping and cooking as a school subject. Since the majority of Finnish women work outside the home, the responsibility for the family cooking, at least among young and middle-aged men and women, is shared quite equally.

Boiling, frying, and baking are still the main cooking methods. The oven has an important role when preparing food. Many common dishes are baked, today mostly in electric ovens. The Finns have quite easily accepted new technology. The microwave oven became a big hit in the 1980s. Since Finland is an industrialized Western country, time is always too short; everything has to be done in a hurry, even cooking. At first, cookbooks for how to cook with microwaves were published, but soon the traditional electric stove and oven proved better for cooking. Gas is also used in Finland but mostly in some areas

in bigger cities and in the many holiday cottages used during the summer and on weekends. The microwave oven is still, however, an important article in nearly every Finnish kitchen and has come to stay. The market offers a lot of ready-made food that can be heated quickly, even by the children in the family. Another important use for the microwave oven is to defrost food, since nearly every family has a freezer, not only for ice cream and ice for drinks but also for berries and mushrooms gathered in the forests, garden products, or fish and meat. Finns still love to make their own food supply for the winter, to have raw material of their own, and to take advantage of what nature can offer for free.

Typical Meals

Since Finland has been mainly a receiver of cultural influences, not much can be seen as typically Finnish when it comes to food. However, typical Finnish bread is made of rye. Every Finn who lives abroad, or even just stays abroad for a vacation, at some point misses dark rye bread. It is eaten in both the morning and the evening as a sandwich with butter and cheese or ham, or as a complement to the main dish, usually then also spread with butter. Not all bread is made of rye, but some kind of whole grain is often preferred. Bread completely made of wheat is not very popular except for sweet coffee bread called *pulla*.

Finns are known as heavy drinkers, but when it comes to everyday meals a typical drink to go with the food is milk, even for adults. Water and nonalcoholic malt liquor or beer are also common, while wine has been accepted among the general public quite recently during the last decades, and even then merely at festive occasions and weekend dinners. A more traditional way to mark a festive dish is to drink a shot of vodka, in Finnish called *ryyppy* and among the Swedish-speaking population known as *snaps*; it is drunk after singing a special snaps song.

Domestic fish is no longer a cheap ingredient for everyday meals. The traditional wild fishes, such as Baltic herring, northern pike, pike perch, whitefish, and pollan, called *mujkku*, are more and more being replaced by imported, mostly Norwegian salmon or

trout grown in net cages by local fishermen in the archipelago; this imported fish is actually cheaper. The latest statistics show that Finns eat 26.5 pounds (12 kilograms) of foreign fish and 11 pounds (5 kilograms) of domestic fish a year. Salmon and trout are used in the same way: baked in the oven, grilled, smoked, or fried, and very often just raw, salted, and served in thin slices with potatoes or rye bread. Salmon and trout are also used for soups and as fillings in pastries, often mixed with rice. It is, however, very popular to catch one's own fish, as the lakes are many and the seashore long. At people's vacation cottages fishing is an important way to relax and to spend time, especially among men, in a way that usually results in food on the table. Depending on what kind of fish one catches, it can be grilled or fried and eaten with potatoes and perhaps with a sauce made of sour cream and herbs (for grilled fish) or a warm sauce made of butter, cream, and white wine (for fried fish). Fish soup is also popular. In the supermarkets highly refined products such as fish nuggets and other ready-made frozen fish dishes are available. These are popular especially among children because the possibility of swallowing fish bones is eliminated. There is also an environmental and ethical question today when choosing frozen fish. Finnish salmon are sent by airplane to Asia for processing and then returned to the Finnish market, requiring a considerable expenditure of fossil fuels and causing unnecessary pollution. This is, of course, a global problem and not significant only for Finland.

Many tourist guides recommend that visitors eat bear when visiting Finland. There may be a few restaurants, mainly in Helsinki, that occasionally do have bear on their menus, but it is definitely rare. Big wild or semiwild animals are indeed served, especially moose and reindeer. The moose population is reduced every year, or at least officials try to keep it in control, by a special moose hunt that many men in the countryside participate in. Moose meat can be bought in the autumn in market halls or well-supplied supermarkets, but mostly it is a product that the participants in the hunt share among themselves and fill their freezers with. It is used like any other meat, in a casserole, in soups, or as minced

meat. Reindeer is often marketed as typical for Finland. In the north of Finland reindeer is a natural product, but farther south mainly one dish, called *poronkärstys*, or sautéed reindeer, is really common. It consists of a thin sauce with a lot of very thin slices of reindeer meat, eaten with mashed potatoes and cowberries. A reindeer steak can also be an alternative to beefsteak and is then often served warm or cold-smoked.

Like in many other countries, meatballs are popular among both children and adults; on the whole minced pork, beef, or most often a mix of both is used a lot. Ground meat is quite cheap, easy, and fast to make a sauce of, eaten with spaghetti or potatoes. Pork is common as well, especially grilled in summertime. Both pork and beef are often used in casseroles. Ground meat mixed with rice forms the

Poronkärstys, a thin sauce with a lot of very thin slices of reindeer meat, eaten with mashed potatoes and cowberries, common in the south of Finland. (Shutterstock)

filling for cabbage rolls, a popular dish in autumn. About the same taste, but with less skill needed, can be achieved by mixing cabbage, minced meat, milk, and egg together in a mold and baking it in the oven. Both are served with cowberry jam. Sausages are a popular everyday food as well. A typical Finnish sausage seldom contains much meat, however, and is therefore jokingly even said to be the most popular vegetable in Finnish cuisine.

In almost every supermarket there are ready-to-eat grilled hens and broilers. Mostly, chicken is a cheap product sold in slices, as parts, or breasts, either plain or in different marinades. Poultry is often seen a lighter form of meat and therefore healthier. As for so many products mass-produced as food, ethical considerations now influence people's decisions, however. Broilers are produced and forced to grow quickly, an ethical question, but also a question of taste. Especially when it comes to egg production, eggs from "happy hens" are sold, meaning hens are free-range and not kept in small cages.

Fish, meat, and sausage are all ingredients for making soups. They are traditional everyday dishes, but the younger generation is not so enthusiastic about these, especially if it involves cooking their own dinner. Pea soup is, however, very common and even has its own day, when it is served at lunchtime and in workplace restaurants. Thursday is the day for pea soup, which in Finland is green, compared with a yellow pea soup in Sweden. It is the most common canned soup as well and often eaten in conditions where the cooking facilities are limited.

Pancakes with jam are traditionally served as a dessert after the pea soup. The jam can be made of strawberries, raspberries, blueberries, or cloudberries and is often homemade. Berries are an important part of Finnish food culture. There are 37 edible species of wild berries in Finland, of which about 20 species are picked for consumption. The tradition of picking berries in the woods or home gardens or buying them at the market is well preserved, even among younger generations. Berries are eaten alone or with cream, milk, and a little sugar. A Finnish specialty is *leipäjuusto*, a kind of cheese baked in the oven or warmed in a frying pan and eaten with cloudberries. A cake with strawberries and whipped

cream is the ultimate symbol for summer and a must at birthday parties in June and July. Blueberry pie is also a must for most people, eaten with vanilla cream. A specialty originating in Russia is frozen cranberries eaten with hot caramel sauce called *kinuski*. Berries of any kind are also eaten with *Quark* (a smooth sour-milk cheese like yogurt) or ice cream. Ice cream is extremely popular. Among Europeans, Finns eat the most ice cream, despite their northern and mostly cold climate.

Eating Out

Eating out usually means going out with friends or family. Eating is, of course, an important task, but equally important is the social dimension: One goes out to spend some time together. Finland is one of very few countries where schoolchildren, from first grade to high school, are served a free lunch every day. It is considered the most important part of the national health plan. This means that every child can eat at least one warm, nutritious meal a day. Most Finns are used to eating lunch at noon. Some workplaces have their own cafeterias, and if not, there are dishes with special prices at restaurants during lunchtime. A typical menu for one week at a lunch restaurant in Helsinki can be as follows: Monday—fried salmon with spinach and egg sauce, Tuesday—black salsify soup, Wednesday—sausage soup, Thursday—meatloaf with mushroom sauce, Friday—fried Baltic herring with chive sauce.

Otherwise, the tradition of eating out is quite young in Finland. There are, of course, restaurants with old and fine traditions that the bourgeoisie, civil servants, businessmen, and other groups higher up in society have frequented as long as restaurants have existed. Families have also celebrated special occasions by eating out. Still, a bigger change in eating-out habits has occurred only since the late 1980s. An economic boom and a new generation with money to spend in a new way found their way to the restaurants, not only for feasts and family celebrations but also as a way to spend time, enjoy good food and wine, and relax, even in the middle of the week. Despite the recession in the 1990s, eating together as a

form of social act had come to stay. A pizza or a meal at the gas station is an inexpensive option. There are alternatives for everyone. Ethnic restaurants have a quite young tradition, due to the fact that immigration was very limited until the late 20th century. The first pizzeria opened in the 1960s, but they became common in the 1980s. Indian, Chinese, Turkish, and other restaurants became more common about the same time. The first hamburger restaurant, Carrols, was established in Helsinki in the late 1970s, and McDonald's came about 10 years later.

Today, Helsinki and the larger towns elsewhere in Finland are like any other town in the Western world, and it can be hard to find something special and local when it comes to eating out. Chefs are influenced by international cuisine and follow the same trends worldwide. One new trend is to promote the use of local products for both ethical and ecological reasons. Despite that, in Finland, exotic dishes are commonly served at restaurants such as tuna fish, pilgrim scallop, or even ostrich meat. One specialty of Finland before the “new” ethnic restaurants was a proliferation of Russian restaurants. They were, and perhaps still are to a certain degree, for tourists, when the Iron Curtain made Russia quite exotic but difficult to visit. Finland, as a neighbor, could offer good Russian cuisine and thereby something of the exotic atmosphere as well, at least inside restaurants. Cabbage, mushrooms, pickled cucumber, and of course vodka are ingredients in both countries. There are still a few popular Russian restaurants with a good reputation in Helsinki.

Special Occasions

Christmas and Easter are the most food-centered festivities in Finland, like in so many other Western countries. There are, however, occasions during the year with culinary traditions and delicacies such as special dishes, pastries, early vegetables, crayfish, and so forth. January and February are a time for blini, a small pancake with Russian origins made of buckwheat and eaten with caviar, *smetana* (sour cream), and chopped onion. These months are also a time for fishing burbot from underneath the ice

on the lakes. Burbot is eaten in soup or with white sauce.

A special tart, called Runeberg tart after Johan Ludvig Runeberg, who is the national poet of Finland, is sold some weeks before February 5, his birthday. It is a small cake made of breadcrumbs with a dab of raspberry jam inside a ring of frosting on the top and moistened with arrack liquor.

On Shrove Sunday and Shrove Tuesday, it is time for another pastry, a cream bun with almond paste, lately also sold with jam, and eaten plain or with warm milk from a plate. Pea soup is the natural main dish these days. On Annunciation Day there is an old tradition of eating waffles, not perhaps common in every family but still known in some regions.

The Easter traditions reflect influences from both West and East. Perhaps the only thing really unique to Finland is *mämmi*, a malt-flavored oven-baked pudding, black in color and eaten with cream and sugar. Mämmi originates from the western parts of Finland, while *pasha* (molded sweetened curds with raisins and almonds) originates from Russia and the eastern parts of Finland. Today, these two delicacies are eaten in both western and eastern parts and are sold in markets all over the country. Pasha and a bun called *kulitj* belong to the Orthodox tradition, the Orthodox Church being the second state church in Finland beside the majority Lutheran church. Traditionally, hens started to lay eggs again at Easter time after a long, dark winter, and eggs still play a central role in Easter meals. Other typical things to eat on Easter are lamb, smoked ham, and fish, especially on Good Friday. For children, but also very popular among adults, are Mignon eggs, real eggshells filled with chocolate.

The first of May is celebrated with mead and a kind of fried pastry called *tippaleipä*, similar to funnel cakes. It is also time to welcome springtime and come together, eat a buffet meal, and drink a lot. Summer is the high season for all kinds of fresh vegetables, new potatoes, pickled herring, foods grilled outdoors, smoked fish, strawberries, rhubarb, and later on mushrooms, apples, and things to pick from the forests or home gardens. Midsummer in late June is the biggest summer festival, celebrated with a lot of food and drinks, and nearly everybody

escapes the cities for a weekend in the countryside. In summertime Finns enjoy eating outdoors if possible; they improvise and eat lighter fare and just enjoy the time of nearly endless daylight. The long daylight hours give vegetables, berries, and fruits grown in the north an especially good flavor. A popular vegetarian dish is “summer soup,” consisting of potatoes, carrots, cauliflower, peas, and spinach. These are cooked in milk, thickened with flour and egg yolk, and topped with a pat of butter and parsley and sprinkled with salt.

Crayfish season starts on July 21. Once many lakes and creeks hosted a lot of crayfish, but a disease, easily spread by fishing tackle from lake to lake, has made the original crayfish rarer. Another more resistant species has been brought into lakes, but still crayfish parties are a quite expensive feast to arrange considering that the size of the local crayfishes is small and the guests can be hungry. An alternative to domestic crayfish are much cheaper frozen ones, imported mostly from Spain or China. One can also eat crayfish as a starter and then move on to a mushroom tart and berries for dessert. The magical feeling at a crayfish party comes, however, not only from the eating but also from a lot of lights and decorations in the darkening evening; a lot of vodka, beer, or white wine; songs; and happy friends being together. Dill and toasted bread are also essential ingredients for a crayfish party.

Autumn is hunting season. Wild duck and moose are most common to hunt, and lately the deer population has increased. Mushrooms and berries are free to collect for everyone everywhere under a special law. In the cities along the coast special fish markets are held, where fishermen sell pickled and salted herring, a special dark and sweet bread, and even some handicrafts. The fish market is a popular event with over 100 years of history, a time when fishermen and town dwellers meet.

The greatest focus on food is, however, concentrated in December and Christmastime. Gingerbread and mulled wine, served with raisins and almonds, are served both in homes and at restaurants. Friends, business associates, colleagues, and society and club members meet for pre-Christmas lunch or dinner,

either at restaurants or for covered-dish suppers at club rooms. The time from Christmas Eve until Boxing Day is reserved for the family and close relatives. Because one is supposed to be surrounded by dear ones, Christmas socially can be quite a hard holiday for single people, of whom there are many in Finland. Typical ingredients on a Christmas table, often served as a buffet similar to the Swedish smorgasbord, are pickled herring, freshly salted or cold smoked salmon, roe with smetana (sour cream), pâtés, and *rosolli*, which is a salad of boiled beets, potatoes, carrots, onions, apples, and pickled cucumber. Then follows Christmas ham, potato casserole, carrot casserole, rutabaga casserole, meatballs, and for some also boiled ling *lipeäkala* (lutefisk), with white sauce, and so forth. The lutefisk can, however, be left for another day if it seems like too many dishes at the same time. Some people can't stand the odor of the lye used to preserve the fish; others love it. In the archipelago the old tradition is to eat pike instead of Christmas ham. Every family has its own specialties with small but ever so important differences, and it is said to be quite difficult to agree on what should be on the Christmas table when a young couple moves in together and both want to take their old family traditions from childhood into the new household.

Rice porridge can be served for lunch at Christmastime but also as a dessert together with cinnamon, sugar, and cold milk or with a sweet fruit soup made of dried apples, prunes, and pears. Puff pastries formed as a star with prune jam in the middle are called *joulutorttu* and are served at every occasion where mulled wine, coffee, or tea is drunk in December. Chocolate, marmalade, raisins, nuts, dates, figs, and cranberries rolled in egg white and icing sugar are all sweets that are associated with Christmas as well.

When New Year finally comes, everyone is tired of Christmas food, and it is time for something fancy and delicious, perhaps a starter of shrimp and lobster salad, a spinach-filled hen with rosemary potatoes as a main course, and a lime cheesecake for dessert. The New Year starts fresh, with promises of a healthier life in the coming year.

Diet and Health

Diet and health are important issues in Finnish society and are often mentioned when talking about food. In the 1960s mortality due to heart disease was very high among men, and a major health-promoting project to prevent cardiovascular disease in North Karelia started in the 1970s. It was a big success. Butter, whole milk, and fatty dishes were abandoned in favor of lighter oil-based products, vegetables, and fibers. Still, as in so many Western countries, being overweight is a big problem that causes many health problems such as diabetes. The Development Program for the Prevention and Treatment of Diabetes (DEHKO, 2000–2010) is a national program, the first worldwide to include and implement the prevention of type 2 diabetes. Life has become easier in a way; food is everywhere, and most people don't burn all the calories they take in. Physical work is replaced by sitting still all day long

in an office, and people need a lot of information to be able to take care of their health.

Finland is a pioneer developer of health-enhancing foodstuffs. Nutrition research is internationally recognized at a high level, and also many remarkable inventions in functional food development have been made. Probiotics, prebiotics, plant flavonoids, plant sterols, dietary fiber, and more are important ingredients in functional food, seen as a new possibility to promote well-being by using “tailored” foods. Benecol, Xylitol, and Lactobacillus GG are officially approved examples of Finnish food innovations.

Finnish researchers have also pointed out several products that are naturally health enhancing such as rye bread, berries, rapeseed oil, oat products, and buckwheat products. Finnish meat, grain, vegetables, and berries are considered to be very clean. Pollution is limited, and not many insecticides are used compared with many other southern countries because of cold winters and strict regulations. There are also about 4,500 organic farms in Finland, representing 6 percent of all farms. The organic food production has a reliable reputation since the authorities enforce strict regulations throughout the whole organic food chain.

There is an increasing demand for special diet food as well. Many clients in restaurants, patients in hospitals, and students in school need a special diet because of their diseases. High cholesterol, diabetes, celiac disease, and many food allergies have united developers in the food industry and medical scientists to find solutions for dietary needs in society. In fact, Finland has one of the oldest dietary industries in the world.

The reason public authorities focus on nutrition and eating habits is for the prevention and treatment of diseases. The National Nutrition Council in Finland makes statements and recommendations, but Finns wonder about the relationship between food and pleasure and health. In the south of Europe, food and eating are considered to be pleasurable. The Nordic tradition is more spartan; food has for a long time been merely a nutrient, something one needed to survive but not for pleasure. If one is

really enjoying a meal, there must be some reason to feel guilty. Something being both healthy and good tasting seems impossible.

France

Overview

Located in western Europe, metropolitan France occupies an area smaller than the size of Texas and has a population of only 62 million. Yet the country has long enjoyed an outsized reputation for its cuisine. Historical, geographic, political, and social factors account for the rich gastronomic and culinary culture, a key element in the French way of life.

The fertility but also the diversity of the geography and climate permit a broad scope in agricultural production. Coasts along the cool North Sea, English Channel, and Atlantic Ocean, and also along the warmer, saltier Mediterranean Sea, yield fish, shellfish, and aquatic plants. Landscapes range from alpine mountains to continental plains, with a full third of the land area considered arable. Climates include the temperate oceanic west but also the drier Mediterranean south.

The agricultural tradition in France is ancient and has been continuous up to the present day. The cultivation of wheat, grapes, and olives for bread, wine, and olive oil—the basis of the ideal diet of classical antiquity, the forerunner of today's Mediterranean diet—is traceable to Greek settlements of around 600 B.C. at Massilia (Marseille) and Agde. Over the centuries, successive migrations to the territory broadened the agricultural traditions and diet. Contemporary to the Greeks, Celts migrated from the area of Hallstatt, Austria, bringing their agriculture and animal husbandry as well as hunting. Celts raised animals for milk, cheese, butter, and lard as well as meat. They preserved fish and meat, especially pork, by drying, smoking, and salting. Today, the taste for charcuterie (cured meat products, es-

pecially from pork) remains pronounced. By the Roman era, the lands inhabited by Celtic peoples were famous for their agricultural potential.

The victory of the Roman army over Gallic forces in 52 B.C. resulted in the division of the fertile Celtic territories into Gallo-Roman provinces. The Roman administration opened up the provinces to trade routes extending as far as India and China. Thus, elite diners in what would later become France had early access to exotic spices, such as black pepper, and to foreign foods, which were soon adapted to local cultivation, such as Persian peaches and Numidian guinea fowl. Wealthy Gallo-Romans followed the Roman custom (drawn from Greek precedent) of eating meals in two to seven distinct courses, a practice that would prove lasting. Sophisticated and wealthy eaters tracked local specialties such as coastal shellfish and yearly variations in wine production, their discernment prefiguring that of today's knowledgeable *fines gueules* (gastronomes or food connoisseurs). Barbarian (from the Greco-Roman perspective) Frankish or Germanic tribes that migrated into the Gallic provinces further cultivated the taste for meat, ale (beer without hops), apples, hard cider, spelt, rye, butter, and poultry.

As the Roman Empire declined in the early centuries of the Common Era, Christianity penetrated into Gaul from the south, where the pagan Germanic traditions held less sway. With Christianity came a revitalized emphasis on bread and wine, now symbols of sacrifice and redemption in the communion ritual, and a new asceticism. The ninth-century Carolingian emperor Charlemagne embodied the full, if sometimes uneasy, merging of the primary

cultures—Gallo-Roman, Frankish, and Christian—in early-medieval France. Charlemagne encouraged agriculture with the aim of renewing the achievements of imperial Rome within the Christian empire. His biography shows the effort to negotiate customs from Frankish warrior feasts, which featured meat and alcohol in quantity, along with classical moderation but also Christian asceticism.

In the 15th and 16th centuries, European voyages resulted in the import of New World foods that would become staples in French cooking, such as potatoes, tomatoes, and turkey. The French drive toward overseas territorial and economic conquest began in the 17th century. At this time, Mexican chocolate, African coffee, Chinese tea, and sugar cultivated in Atlantic colonial outposts became fashionable, initially among elites. France's greatest colonial expansion occurred during the 19th through the mid-20th centuries. Rapid contraction followed, and France ceded territories in North Africa and Asia; however, the old politics of imperialism informs the postcolonial era. Beyond metropolitan or European France, the tentacular reach of today's French Republic includes the overseas departments Guadeloupe, Martinique, Réunion, and French Guiana. The population of metropolitan France includes about 9 percent immigrants, of whom about 40 percent trace their origins to the former colonies of the Maghreb.

Contemporary French culture and cuisine have continued to assimilate exotic elements, while attitudes remain ambivalent. Contact with extra-European territories has made such dishes as *accras*, or Caribbean fried codfish balls, into familiar appetizers. Couscous, or semolina-flour pasta that is steamed and served with a choice of meats, fish, seafood, pulses, greens, and vegetables, is eaten in the former colonies of Tunisia, Morocco, and Algeria. So familiar and so popular is couscous across France that it has become a *plat national*, a national dish. Yet exotic foods can also stigmatize. Consider the characters of North African origin in the film *La graine et le mulet* (*The Secret of the Grain*, 2007, directed by Abdellatif Kechiche). They identify themselves as French, yet their food marks them as foreign—and as outsiders and interlopers—to

the characters of European origin. Ironically, such staples as tender young haricots verts (French green or string beans) depend on economic ties inherited from the colonial past; today, most French beans are in fact grown in northern and western Africa and imported into the Hexagon (a nickname for France). Tension between the politics of assimilation and the experience of difference is a constant in France today. Nowhere is this clearer than at the table.

A distinguishing feature of food culture in France is the grand cuisine that has been elaborated over centuries. In the 17th century, cooks working for distinguished patrons emphasized tastes and techniques that differed noticeably from court cooking elsewhere in Europe and from older practices. Their recipes show the emerging preference for plants, such as onions, garlic, and herbs, rather than spices, for flavoring, a feature that remains typical. Court cooks developed sauces and broths that combined in a modular fashion to produce a range of dishes. In the 18th century, the court ceded its role as the center for cultural production, and cooks employed in the great bourgeois houses took up the tradition of grand cuisine. In the 20th century, Auguste Escoffier installed fine cooking as a feature of commercial luxury hotels. Professional chefs still consult Escoffier's cookbook as the reference for standard techniques and recipes. His repertoire, with its lineage to that of the court cooks, underpins the *cuisine gastronomique*, or elaborate fine restaurant cooking, that is now the most prestigious, highly worked expression of French food culture. Following the Revolution of 1789, shifts in the social structure and the acceleration of consumerism birthed a newly powerful figure: the food critic. The mutual dependence between producer and consumer, chef and informed diner, fostered by Grimod de la Reynière, avatar of contemporary food critics, continues to characterize gastronomic culture. The American animated film *Ratatouille* (2007, directed by Brad Bird with Jan Pinkava), set in Paris, amusingly parodies but also quite accurately depicts the prestige and pratfalls of grand cooking and its critics in France.

Essential, yet often overlooked, factors in shaping the contemporary French diet and food culture are the transition to industrial agriculture, combined

with the completion of urbanization and modernization, in the mid-20th century. In the 18th century, four-fifths of the population of France lived in villages and rural areas. As recently as the late 19th century, two-thirds of the population still lived in or near the countryside. In rural areas, bread and vegetables from the kitchen garden—especially turnips, carrots, and cabbages—were the building blocks of daily meals. Animal protein was likely in the form of eggs, milk, or cheese, although meat consumption varied by region. Throughout the 19th century, meat consumption increased in cities, but prices fluctuated. During World War II, rationing and the export of meat and dairy products to the German Reich reduced the average caloric intake and drastically diminished life expectancies. In the mid-20th century, hunger and diseases that result from dietary deficiencies persisted, public health was at a low point, and the food supply was unstable.

Beginning in the late 1940s, postwar rebuilding heralded a shift in agricultural practices and the dietary paradigm. Under the Common Agricultural Policy of 1962, the European Union began subsidizing French grain, dairy, and beef farmers. The subventions, along with new industrial agricultural practices, resulted in overproduction and a reliable, inexpensive supply of beef, dairy products, and grains. Now, about 77 percent of the population lives in urban and ex-urban settings, while the country's gross domestic product ranks in the top 10 among nations worldwide; France is now an affluent, urban, modern consumer society. It is also the foremost agricultural producer in Europe and a net exporter, although less than 4 percent of the population works in the agricultural sector. Meat competes with bread for the central place in the diet and as the dominant alimentary symbol. Although France is a pillar of the European Union, it has maintained a strongly protectionist stance regarding agricultural production. Against the liberal European approach to free trade and privatization, France has notoriously refused to relinquish European farm subsidies in place since the 1960s. In 2009 it continued to defend its farmers and fishermen, who received French subventions during the 1990s and the early years of the 21st century.

Regional specialization in cuisine is both a fact and a nostalgic idea in contemporary France. Travelers have long remarked on regional variations in French cuisine, while in the 19th and 20th centuries, regionalist movements and then the tourism industry set out self-consciously to cultivate these differences. Lyonnais *quenelles* (poached fish dumplings), heavy Jura wines, *boeuf à la Bourguignon* (beef stew from Burgundy), or an Auvergnat or Aveyronnais *aligot* of potatoes whipped with cheese to a smooth elastic texture can certainly be found in their places of origin. But a Parisian restaurant and the table of a creative home cook anywhere in France are nearly as likely venues. France is the premier tourist destination in the world, receiving approximately 75 million visitors annually. The gastroculinary arts—in their local variations but also their national and international forms—play a major role in the tourism industries, while the appreciation for good food is a distinguishing feature of the culture.

Food Culture Snapshot

Solange and Denis live outside of Paris in a community of professional and working-class residents. Originally from Bordeaux, Denis attended university in Paris, then stayed to pursue his career. He is a computer programmer who works at a multinational firm outside the city. Solange, a native of Paris, is a lawyer who advises a branch of the police force in the capital. Their lifestyle and foodways exemplify those of the middle and upper-middle classes. When it comes to food, quality but also convenience are primary considerations.

On weekdays, Denis and Solange eat lunch with colleagues at their workplaces or nearby restaurants. After work and on weekends, they shop for the meals they eat at home: breakfast, dinner, and weekend lunches. On weekends, they drive to a supermarket to buy staples and items that will keep for several days in the refrigerator: ground coffee to brew and cartons of milk to heat up for the morning *café au lait*, butter and fruit jams to spread on bread at breakfast, sunflower oil for cooking, olive oil and vinegar for dressing salads, dried pasta, yogurt, eggs, and bottles of table wine. Thinking ahead to the busy weeknights that leave little time for cooking, Denis and Solange stop at Picard, the

chain store specializing in frozen meal components. Here, they pick up raspberry ice to eat with fruit for dessert and puff pastry shells to fill with cheese or vegetables, such as mushrooms, for a tasty appetizer.

The couple most enjoys the shopping they do on foot on an as-needed basis. Upon returning from work at about 6:30 P.M., they have just enough time to walk to the shops in the town center. Denis and Solange buy fresh bread daily at the *boulangerie* located a few blocks from their townhouse. A baguette, a long, crusty, white bread, accompanies dinner. For breakfast they may try a country loaf made with whole wheat flour, a *pain aux noix* enriched with walnuts, or, for a weekend treat, a buttery yeasted *pain brioché* or a *pain de mie* (white bread).

A stop at the cheese shop follows. They rely on their *affineur* (specialist in aging and storing cheeses) to tell them which cheeses are at their seasonal peak. The couple usually prepares a cheese plate to conclude dinner and the weekend lunches. At the cheesemonger's, they choose a flavorful goat cheese, a semisoft cheese with a white-mold rind made from cow milk, a hard cheese made of sheep milk, and a blue cheese.

At the grocer's shop, Denis and Solange find the quality better than at the supermarket. The fruits are unblemished and ripened to a fine bouquet. The vegetables are flavorful and selected with regard for the season. They purchase a head of lettuce for salad; onions and garlic to use in cooking; green peas, fava beans, and new potatoes to serve as vegetables; and cherries and apricots for dessert.

The last stop is a visit to either the butcher's or the *traiteur*, the caterer specializing in prepared foods. At the butcher's, the couple selects steaks to be panfried for a main course. On the butcher's recommendation, they have tried his rotisserie chicken, which they found to be excellent. When time is short, the caterer can provide further components for the evening meal. They relish his prepared seafood salads and pasta dishes. Both work as main courses, which the couple will supplement with vegetables, a salad, cheese, and bread.

Major Foodstuffs

France is the premier wine producer in the world, responsible for a fifth of global production. As

recently as the late 1930s, wine consumption averaged 45 gallons per person yearly, or the better part of a pint each day. Today, the average stands at about just under 16 gallons yearly, or less than one glass per person per day. Wine has long been practically synonymous with France, as a staple beverage and a symbol, along with bread, associated with the Catholic communion. For the French, wine sets off food, and vice versa; each brings out the taste and textures of the other to best advantage.

For centuries, bread was a staple of the diet, as well as a powerful religious symbol and symbol for life itself. White wheat bread has always been considered the most desirable. Recently, health concerns and the revival of artisanal bread making have created interest in whole wheat and in spelt, rye, and buckwheat. In the last 100 years, average bread consumption has declined from one to two pounds per person per day (historical estimates vary) to about three or four slices. Despite the radical decline in consumption, fresh bread appears on the table for almost every meal. Bread satisfies the French appetite—physical but also psychological—as nothing else can.

Despite the historical, symbolic, and psychological importance of bread, meat is now the centerpiece for most main meals and the cornerstone of the contemporary diet. France is the foremost producer of meat in the European Union, yet the country must import additional meat to meet demand for choice cuts such as chops, steaks, and roasts. On average, each person eats about 220 pounds yearly, slightly behind America and Australia as the biggest consumers of meat in the world. The French eat beef, lamb, goat, horse, pork, and game such as venison. Offal such as veal liver and veal, pork, and lamb kidneys is appreciated. France exports more chicken than any other country in the world. Other popular fowl are turkey and goose for holidays but also guinea fowl, capon, duck, and quail. Rabbit and hare are sold alongside fowl.

Fish and shellfish are popular, particularly in the coastal regions, where specialties vary by location. Markets across the country sell standbys such as cod, monkfish, salmon, sole, skate or ray, trout, mullet, and hake. The tradition of eating snails is

A sprawling vineyard in Alsace, France. France is the premier wine producer in the world, responsible for a fifth of global production. (Shutterstock)

ancient, while eponymous frogs enjoyed a surge in popularity during the 18th and 19th centuries. Neither snails nor frogs can be considered a staple of the modern diet, however.

In the past, *légumes à gousses*, or pulses, were staple foods. Peas and beans provided protein when eaten in combination with grains, contributing to a healthful diet with little or no meat. Today, pulses along with legumes are considered vegetables. Vegetables appear in the entrée course, as side dishes to a meat-based main course, and in salads. Orchard fruits and berries, both European and exotic ones such as bananas, mangoes, and kiwis, are eaten out of hand and as desserts. Fruits figure prominently in pastry making.

Cheese, like wine, immediately evokes France. Dairy products have long been cheaper than meat, while providing protein and, in the case of cheese,

preserving milk over time. Today, the taste for cheese, milk, and cream is general. Cheese and cream are used in cooking and baking. Cheese appears as a distinct course in the typical meal.

Cooking

Cooking at home was long the province of women. The education of women, their entry into the professions, and contemporary notions of gender equality have brought men, as well, into the home kitchen as cooks and nurturers for families and households. Nonetheless, nostalgia centered around home cooking retains an association with mothers and grandmothers. *La cuisine grand-mère* (grandmother's cooking) describes dishes thought to be old-fashioned and soul-satisfying, familiar and comforting, such as the simple dessert *compote de pommes*

(stewed apples) and homey meat stews. Traditional roles still continue in cooking outside the home. Despite the entry of women into the workforce and the prominence of a few female chefs, men dominate professional cooking.

In home kitchens, quick dishes have largely replaced the economical, slow-simmered soups or stews of past centuries. Modern cooking technology, affluence, and time pressures factor into this trend. Searing or sautéing, baking for items that do not require long exposure to heat, steaming for vegetables, and pressure cooking are preferred methods.

Supermarkets sell items suited to the fast cooking methods, such as fish in fillets, meat in fillets and chops, and produce that can be eaten raw in salads. Ready-made, prepared, and semiprepared elements further facilitate the task of cooking and serving meals at home. Bread is almost never made at home, although it is a part of nearly every meal. Other staples purchased ready-made include jams, yogurt, cheese, charcuterie, and mustard, used in vinaigrettes and as a condiment for meat. Home cooks take advantage of fresh preparations from specialty shops, such as a butcher's mixture of fresh, loose, raw sausage meat or ground pork seasoned with spices and herbs. At home, one simply spoons the flavored meat into hollowed-out tomatoes or zucchini, then gives the stuffed vegetables a turn on the stove in an inch of liquid or pops them into the oven. Minimal fuss yields a fresh, home-cooked main dish.

As in the United States, the media extension of food and cooking in France is vast and influential. Food shows appear on television. Web sites catalog and celebrate food and cooking. Food and cooking periodicals have multiplied. Formerly, families owned one or two cookbooks used as references. In contrast, recent years have seen a marked increase in the sale of books on French cooking but also on the cuisines of Thailand or Japan and on foreign foods, such as British muffins, Moroccan tagines, and the Chinese stir-fry. The phenomenon indexes the social prestige of food connoisseurship in the affluent society.

Typical Meals

Three meals each day is typical in France. This pattern has been common across the population since the mid-20th century. Through the late 19th century, eating schedules varied widely to reflect the profession, region, and income of individuals; season and religion also played a role. Elites might eat twice daily and manual laborers up to four times each day; however, the pattern was inconsistent. Now, school and work schedules are arranged in broad synchrony. Most people eat meals at about the same time, resulting in a strong shared feeling of the day's rhythm.

The *petit déjeuner* (breakfast), eaten in the morning before school or work, is insubstantial. Adults drink café au lait, heated milk mixed with strong, hot, brewed coffee. A section of baguette spread with butter, jam, honey, or Nutella to make a *tartine* is eaten along with the coffee. For a treat, pastry such as a croissant replaces bread. Children drink hot chocolate. Adults wishing to avoid caffeine stir powdered roasted chicory root into their morning hot milk.

A main meal, eaten at noon or in the evening at about 8 P.M., or both, has a typical structure: Dishes appear in a succession of separate courses. An entrée, or first course, might consist of a potage (soup), a plate of *crudités* (raw vegetables) served with an oil and vinegar dressing, or a cooked salad of warm lentils or carrots. This is followed by a *plat principal*, or main dish. The main dish usually contains animal protein: meat, poultry, fish, shellfish, or eggs. Home cooks prepare sautéed chops with a light sauce made from the pan juices, a chicken stewed in wine, or a grilled or baked fish. Eggs appear as an omelet flavored with chives or bits of *lard* (fat bacon). The main course may be accompanied by a cooked vegetable, potatoes, or beans. Afterward comes a green tossed salad, a cheese course (some substitute yogurt as a lighter alternative), and perhaps a fruit or sweet to finish. Bread is placed on the table throughout the meal, and people take a slice or break off a piece of the loaf as desired. For a main meal, portions are relatively small. The

Cooking the traditional French summer stew.
(Shutterstock)

appetite is not overwhelmed by the succession of different edibles.

Because both men and women work outside the home, dinner is often the only weekday meal for which the whole family can gather together. In this case, to accommodate busy working schedules, the luncheon may well consist of a sandwich eaten on the run. For children, an effort is made to serve a full meal at noon, either at the school canteen or at home if it is feasible for the child to return over the lunch recess.

Ratatouille (Summer Vegetable Stew)

This is a typical entrée for cooking and eating at home.

7 tbsp olive oil

1 lb zucchini and/or yellow crookneck squash, sliced into rounds

2 green or red peppers, seeded, membranes removed, and sliced

1 eggplant (about 1 lb), cut into 1-in. cubes

1½ c chopped onion

2 tbsp chopped garlic

2 lb tomatoes, halved and seeded

6 sprigs thyme, leaves stripped from the stems

6 tbsp chopped parsley

8 tbsp chopped basil

Salt

Ground black pepper

Heat 2 tablespoons of the olive oil in a large skillet over moderate heat. Sauté the zucchini about 6 minutes until lightly browned. Using a slotted spoon, transfer to a large bowl.

Add 1 tablespoon of oil to the skillet, then sauté the sliced peppers for 5 minutes, and transfer to the bowl.

Add 3 tablespoons of oil to the skillet, then put in the eggplant. Stir to prevent the eggplant from sticking to the pan. Cook until the eggplant is soft, light-colored, and smooth in texture (about 8 or 9 minutes). Add to the bowl with the other vegetables.

Pour the last tablespoon of olive oil to the pan, and sauté the onion and garlic for about 3 minutes, watching carefully to prevent them from browning much. Add the tomatoes, thyme, and half the parsley. Simmer for 10 minutes. Return all the vegetables in the bowl back into the pan with the tomatoes, stir gently to mix, and cook for 10 more minutes. The vegetables should be cooked through and tender but not mushy.

Take the pan off the heat. Stir in the rest of the parsley and the basil. Season with salt and pepper. Serve hot, cold, or at room temperature.

Poulet Aux Poireaux (Chicken with Leeks and Tarragon)

This is a typical entrée for cooking and eating at home.

2 large leeks

Salt

Ground black pepper

6 individual chicken breasts on the bone

2 tbsp unsalted butter

2 tbsp olive oil

4 c chicken stock or white wine

1 tbsp chopped fresh tarragon

Cut away the bearded root and tough, dark green end of the leeks. Slit the leeks in half lengthwise and wash them under cold running water, removing any dirt trapped between the leaves. Slice the leeks thinly.

Salt and pepper the chicken breasts. Heat the butter and olive oil in a large skillet over moderate heat. Cook the chicken skin side down until brown (about 10 minutes), then turn and cook 5 minutes more. Transfer chicken to a plate.

In the same pan, sauté the leeks until soft. Add 3 cups of stock and the tarragon. Bring the liquid to a simmer and cook until stock reduces by about half.

Return the chicken to the pan, and add the remaining cup of stock. Bring to a simmer, then reduce the heat to medium low and cover the pan. Cook until the chicken is done, basting occasionally with the pan juices (about 15–20 minutes).

To serve, ladle the sauce and leeks over the chicken. Serve with rice or noodles.

Balance and harmony are sought when planning a meal. The French palate prefers rich, deep flavors over sharp or spicy ones. Edibles seek complements. A course or finished dish is more than the sum of its parts. For a summer entrée, crisp peppery radishes are balanced with creamy dairy butter spread on bread and finished with a sprinkle of salt. For a main dish, the clean acidity of tomato and the aroma of aniseed complement the marine flavors in a fish soup. Durable combinations of flavors and textures are sought. A hot main dish may be followed by a crisp, cool salad. The mixing of sweet and salty flavors within a single dish is unusual. Sweets appear at the end of a meal.

A sense of leisure and conviviality is prized as integral to meals. This is true across the population. The French value sociability and community. Eating is considered a convivial activity par excellence. The community aspect of meals strengthens social ties and expresses shared values. The family meal or meal with friends or colleagues is a central feature of daily life, despite circumstances that mitigate against it, such as fast-paced work schedules and larger numbers of people living alone.

In addition to the main meals, two smaller meals are served primarily to children. For the *collation du matin* (morning snack) at about 10:30 A.M. and the after-school or late-afternoon *goûter*, at about 4:00 P.M., children eat a tartine, a piece of fruit, or a yogurt, and in the afternoon perhaps a pastry. Adults may take a coffee or tea break and in the afternoon eat a light snack such as fruit or yogurt, although snacking between meals is otherwise frowned upon.

Eating Out

Eating at home is the norm, yet traditions of eating out go back centuries, and the practice is typical. In the Middle Ages, especially in urban areas, people purchased foods from street stands and boutiques. They ate out in taverns and inns and at *tables d'hôte*, which featured meals served at common tables, at fixed times, and with a single menu, giving diners hot food but no choice in the matter of what they ate. Establishments calling their products and then themselves *restaurants* emerged in France in the 1760s. Here, the diner ate at a private table but in a public venue, choosing foods and beverages from a menu, or list of what the kitchen offered, for a price.

With the spread of industrialization in the 19th century came inexpensive restaurants where workers could eat a full meal in two to four courses but without breaking the bank. The end of the century saw the development of the extensive *cantine* or cafeteria system in businesses and schools. Today, many French employees eat their daily noon meal in the *restaurant d'entreprise* (in-house work cafeteria). As a separate or a substitute benefit, they receive *tickets* (restaurant coupons) from their employer. Schoolchildren who cannot return home for the noon meal eat in the school canteen.

Today, the average person eats 120 meals outside the home each year, or one meal out approximately every three days, and spends just over a fifth of his or her total food budget on eating out. The French eat outside the home less frequently than residents of some nations with a comparable standard of living, such as the United Kingdom. Yet the trend from

about 1970 has been to spend less on food to be prepared and consumed in the home. The modern trend to eat outside the home results from affluence but also from the fast pace of life and the incursion of work into mealtimes.

The prominent restaurant culture offers extensive choices for eating out. Bistros and brasseries, formerly associated with beer brewing, tend to offer an informal dining experience. Restaurants serving foreign cuisines reflect the presence of the dominant immigrant groups in France, such as Algerians, Moroccans, Vietnamese, and Chinese. In the cities, restaurants serve cuisines hailing from Tibet to Peru, attesting to the influence of the global economy, migration and immigration, and the interest in foreign cultures associated with travel. A renowned feature of the French restaurant scene is the high-end *restaurant gastronomique*, with its refined, complex cooking. An equally remarkable element of the French restaurant scene is the general availability of a reasonably high-quality meal. The system of apprenticeships for cooks under the early-modern trade guilds, and the development in the 19th century of organized cooking schools, contributed to the robust tradition of professional cooking and *restauration*. In turn, the French population maintains high expectations, looking for an advantageous ratio of *qualité* (quality) to *prix* (price) when eating out.

Eighteenth-century Paris saw the rapid rise not only of restaurants but also of urban cafés. Cafés provided a meeting place for people from all walks of society, as well as a space to read newspapers and debate the latest in politics and the theater. The café remains an institution in French life, as a welcoming spot to drink coffee or an aperitif, eat a light meal, socialize, and watch people and the world go by. Cafés are widespread, although statistics from 2009 indicate that they are seeing a slow decline in popularity and in viability as businesses.

The media have extensively covered protests against fast-food restaurants, symbols for the French of the American way of life that is publicly deplored and highly controversial. Yet both French and foreign fast-food chains have been successful within France and continue to grow.

Special Occasions

The care, interest, and enjoyment that the French bring to cooking and eating can add a certain reverence and revelry to nearly any meal. This is typical *savoir-vivre* (knowing how to live well) applied at the table on a daily basis. A holiday atmosphere prevails for the Sunday family lunch and at the dinner party given on a Friday or Saturday evening for close friends. These meals begin with a leisurely aperitif and feature the full sequence of courses. They center around a large dish such as a roast leg of lamb studded with garlic and perfumed with sprigs of rosemary, or a *pot-au-feu*. Pot-au-feu, or mixed boiled meats, yields a soup that appears as a first course. The succulent sliced meats are served as the main course, along with pickles, horseradish, and mustard as garnishes. Holidays and special occasions have their rituals marked with particular foods. The holiday calendar attests to France's history as a strongly Catholic country but also its contemporary identity, which is officially secular.

Varzy, Burgundy: Preparing the festive lunch sponsored by the village to celebrate the national holiday on July 14, 2008. Méchoui, spit-roasted lamb typical of the Algerian Berbers, is the centerpiece. The meal includes ham and melon for an entrée, the lamb along with fried potatoes and beans, apple cake, wine, and coffee. The mix of local and naturalized exotic elements is typical. (Photo courtesy of Julia Abramson.)

The federal government mandates 11 holidays. July 14, popularly called Bastille Day, is the national holiday. The day brings tremendous collective celebration, including municipal meals, parades, fireworks, and outdoor concerts and dancing. Since *le quatorze* falls during the heat of summer when people turn out of doors, menus often feature grilled *merguez* (North African lamb or beef sausages), steaks, lamb chops, pork cutlets, spit-roasted fowl, and even whole spit-roasted pigs and lamb.

Like the other Christian holidays, Christmas, celebrated on December 24, was formerly a day of abstinence or fasting in Catholic France. Like nearly all holy days, it is now marked with a feast rather than a fast. The old lean dishes are replaced by festive foods that suggest prosperity and sensual indulgence but are now within reach of many wallets. Oysters and foie gras often appear as appetizers, despite the controversial status of the latter; the ancient practice of gavage, or force-feeding geese to produce the unctuous, silky, fatted liver, is held by some to be inhumane, by others to be a defensible part of the *patrimoine*, or cultural heritage. For the main course there is roasted turkey stuffed with chestnuts. Wines accompany the meal, with champagne saved for the dessert. Many families eat a *bûche de Noël*, or rolled cake decorated to resemble a Yule log. Traditional dishes vary by region, such as the group of 13 Provençal desserts based on local winter fruits, dried or preserved summer fruits, and nuts.

Epiphany, or the *fête des Rois*, demands a *galette des Rois*, or 12th-night pastry, a puff pastry shaped into a crown that may be filled with a semi-sweet almond paste. The Chandeleur (Candlemas) on February 2 and Mardi Gras (Shrove Tuesday) preceding Lent are marked with egg-, butter-, and oil-rich treats such as stuffed crepes, butter cookies, and, for Fat Tuesday, beignets (doughnuts). Easter brings a new round of celebrations with spring foods such as roast lamb, *blanquette de veau* or *blanquette d'agneau* (white stew with veal or lamb), and, in the south and on Corsica, roasted kid goat. Eggs, symbolizing renewal, appear in rich breads and pastries and in omelets, hard-boiled in salads, and baked whole into savory dishes. November 11, the Saint-

Martin, marking the traditional end of the harvest season, is celebrated with a thanksgiving meal of roast goose and new wine.

New Year's Eve, *la fête de Saint-Sylvestre*, is as often spent with friends as with family. An elegant festive meal concludes at midnight with popping corks from champagne bottles to bring in the New Year. The meal repeats many of the Christmas foods. It may feature a roast beef or ham instead of a large fowl.

People used to observe their saint's day or name day as a religious holiday. Given the trend toward secularism and the emphasis on the personal in modern life, families and circles of friends now celebrate personal days such as birthdays and wedding anniversaries. Milestone birthdays are often celebrated with a large party for family, friends, and colleagues. The birthday person plays host and offers a formal celebration dinner served in several courses.

Progress through the old religious cycle of sacraments, including baptism, communion, and marriage, brings festive luncheons or dinners crowned by a *pièce montée*, or showy dessert. A typical example is the *croquembouche*, an assemblage of puff-pastry balls filled with cream or custard that are built up into a pyramid. At wedding feasts, like at feasts for Christmas and the New Year, foods are high-status items presented as elegantly as possible. Menus often include foie gras, lobster, roasted monkfish, and boned and stuffed fowl such as a guinea hen or capon. A dessert of layer cake or the pyramidal *croquembouche* includes champagne.

Since the 1990s a trend to revive traditional agricultural and regional celebrations has served to affirm local identity and maintain the sense of history. Most villages and small towns have a *fête votive*, *fête patronale*, *fête du pays*, or *kermesse* celebrating the town's patron saint. The festivals usually take place on a Sunday during the warm season (May through October). In the past, such celebrations marked the communal agricultural events of planting and harvest. Today, they are valued as community and civic events, and as a way of preserving and teaching about local customs from dress and dancing to gastronomy.

Diet and Health

Variety has characterized the French way of eating since the end of World War II. The diet is relatively high in fruits, vegetables, grains, and legumes, in addition to meats, cheeses, and other dairy products. The use of butter fats, animal fats such as lard and goose fat, and vegetable oils used to vary largely by region. At present, the broad preference for cooking with vegetable oils such as sunflower oil stems from their lower prices, on the one hand, and information about health benefits associated with unsaturated vegetable oils and the Mediterranean diet, on the other. Wine was long viewed as a healthful, strengthening beverage and in this sense was perceived as different from distilled alcohols. Despite this perception, rates of alcoholism and diseases such as cirrhosis of the liver were high through the mid-20th century. In this nation of wine drinkers, the *crise de foie* (liver crisis) was a classic complaint, extensible to nearly any malaise. The view that wine is healthful has not disappeared, but consumption has declined. Water is the most widely consumed beverage.

The French associate eating the full three-course meal with a sense of well-being and with good health. The structured family meal provides nutritional balance. It conditions daily eating while contributing to the highly valued quality of life. The benefits of eating the full three-course family meal are thought of in a holistic fashion. The American practice of counting calories and weighing portions would seem strange to most French. Rather, eating a broad selection of fresh foods is understood as key to *une bonne nutrition* or *une alimentation saine* (good nutrition, a healthful diet). And variety is precisely what characterizes the full meal with its complement of three or four different dishes.

Beyond nutrition, culinary quality and the appreciation of food are essential to the perception of eating well. Conviviality and social connection to family and friends are equally necessary ingredients. The respite imposed by the slow rhythm of the full meal cannot be discounted. People use the terms *équilibre* (balance), *modération* (moderation), and *plaisir* (enjoyment, pleasure) to name the salient

A long-time French delicacy, foie gras is the liver of a duck or goose that has been fattened through the process of force-feeding. Although popular, the process remains controversial. (Shutterstock)

features of eating well, and *harmonieuses* (harmonious) to describe the ensemble of practices that go into eating well. These ideas guide practical aspects of cooking and serving, such as determining the relatively small portion sizes for meal components.

In the past, most health care was given at home, including for severe illnesses. Home cooks and cookbooks had a repertoire of foods for the sick, such as “pectoral” broths to strengthen the lungs. Today, there remains little concept of specific foods appropriate for the ill. Adjustments are made to the diet, such as excluding greens and salads, in favor of plain boiled rice and cooked carrots, until a stomach ailment has passed, or reducing protein on a daily basis in the case of a chronic kidney problem. To improve digestion, people take mineral waters

high in magnesium, salads, fresh fruits and vegetables, yogurt, or a drink of pastis (anise liquor).

The general health of the population is relatively good. To be sure, as in other affluent nations, abundance, the modern lifestyle, and agricultural and manufacturing practices create dietary dilemmas. For some, *grignotage* (snacking) replaces or augments the cycle of three daily meals. The sedentary lifestyle combined with an unbalanced diet contributes to rising levels of obesity and diabetes. Pathological behaviors related to eating and having psychological causes, such as anorexia and bulimia, are on the rise. Genetically modified foods and agribusiness practices are perceived as threats to health. Yet other indicators remain quite positive. The life span for women is more than 83 years, the longest in Europe. The national health system, which provides nearly universal access to high-quality medical care, emphasizes prevention. The state, which regulates health care, has stressed intervention, such as removing vending machines from public schools in 2005 to reduce young people's consumption of sugar, salt, and fat as empty calories in junk food. In France, the precautionary, preventive, and interventionist attitude plays a role in maintaining public health, while the shared strong emphasis on food culture enhances *la vie à la française*—the French way of life.

Georgia

Overview

Geographically part of Asia yet professing Christianity, the tiny nation of Georgia has for centuries stood at the confluence of East and West. The capital city of Tbilisi (Tiflis) was situated on the major trade routes between the Caspian and Black seas and in the 19th century was celebrated as the Paris of the Caucasus for its elegance and sophisticated tastes. Thanks to the country's agricultural riches and long tradition of hospitality, Georgia has long been an object of desire for outsiders.

The Georgians date the beginnings of their culture to the sixth century B.C. The ancient Greeks established colonies along the Black Sea coast in a region they called Colchis. In 66 B.C., when the Roman general Pompey invaded and brought the area under Roman rule, Greek control came to an end, but the outposts in Colchis remained important links in the trade route to Persia. Tbilisi was founded in the fifth century A.D. According to legend, King Vakhtang Gorgaslani, on a hunt near the Kura River, killed a pheasant, which he retrieved fully cooked from the hot springs where it had fallen. Toasting his good fortune, Gorgaslani vowed to create a city on this auspicious site. He called it Tbilis-kalaki, or "Warm City" (hence the name Tbilisi; outside of Georgia, the city was known as Tiflis into the 20th century).

Following a mid-7th-century invasion, Tbilisi fell under Arab control, and between the 8th and 11th centuries the city was controlled successively by Arabs, Khazars, and Seljuks, even though the populace remained Christian. By the early Middle Ages Tbilisi had become a major stopover on the medi-

eval trade routes, a midpoint between the Muslim East and the Christian West.

As an important stopover on the trade routes, Tbilisi both benefited and suffered from repeated waves of migration and invasion, each of which left its traces on Georgia's cuisine. By the late 16th century, the country was effectively split in two, with western Georgia falling under the Turkish sphere of influence and eastern Georgia politically part of northwestern Iran. Repeated attacks by the Persians, the Turks, and Muslim tribesmen in Dagestan finally caused the Georgians to turn for help to Russia, their mighty Christian neighbor to the north; in 1801 Russia incorporated Georgia into its empire. The Russian presence in Georgia lasted until 1918 when, following the October Revolution, Georgia declared its independence. But in 1921 Bolshevik troops invaded, and once again Georgia was incorporated into the empire of its more powerful northern neighbor, this time the Soviet Union.

Until the dissolution of the Soviet Union in 1991, Georgia existed as a constituent republic of that country, with its economy dependent on the Soviet system. Georgia's citrus fruits, fresh vegetables, herbs, tea, and wines found a ready market in Russia and the other Soviet republics, and the Georgian economy flourished. When the Soviet system collapsed, the country suddenly experienced severe economic distress, which was exacerbated by political conflicts in the breakaway regions of Abkhazia and South Ossetia. These conflicts have led to continued unrest. In 2005 Russia embargoed Georgian agricultural products, including citrus fruits and the Borzhomi mineral water

Weighing section at a tea factory in Chakva, Georgia. Under Soviet leadership, Georgian farmland was collectivized. The region specialized in growing such export crops as tea, citrus fruits, and grapes, making farmers dependent on importing such necessities as meat and grains. (Library of Congress)

that provided an important source of export revenue; in 2006 Russia extended the embargo to Georgian wines, claiming that they had been adulterated. This move was, in fact, political retaliation for Georgia's desire to ally itself with the West by seeking membership in the North Atlantic Treaty Organization and the European Union; the Russians were further displeased by the Baku-Tbilisi-Ceyhan oil project and the Baku-Tbilisi-Erzurum natural gas pipeline, both of which bypass Russian territory. Nevertheless, Russia's attempts to control Georgia must be seen in historical perspective, as the Russians are only the latest in a series of outsiders to covet this rich land.

🍴 Food Culture Snapshot

Georgian society is rapidly changing, but until the 21st century most families followed traditional patterns of eating. Even urban dwellers had country cousins or a small plot of land outside the city to supply them with fresh produce and meat, by necessity organically grown, as there was no money for chemical fertilizers. Because there were no mega-supermarkets, people

frequented local specialty purveyors or the central farmers' market in their town for items they could not produce themselves. Typical of this largely self-sufficient way of life is the Lataria family, Guram and Gulisa, who, until being forced to relocate due to the war with Abkhazia, lived in the town of Khobi, near the Abkhazian border. Today, the Latarias live in Tbilisi, where they run a beautiful guesthouse. In Khobi their table was always amply spread with vegetables harvested from their backyard garden; in Tbilisi they shop at the city's produce markets, where they have developed close relationships with purveyors who set aside their best produce, meats, and cheeses for them.

Their daily breakfast is leisurely, featuring shimmering yogurt made from water buffalo milk, aromatic orchard fruits (plums and apricots in summer, apples in the fall), and crusty bread baked in a *toné*, a tandoor-like clay oven. Lunch typically consists of a soup or stew—perhaps a tart summer lamb soup with eggplant, green beans, and handfuls of fresh herbs, or spicy *kharcho* (meaty soup) seasoned with the classic Georgian spice mixture, *khmeli-suneli*. Dinner is the grand meal of the day, especially when guests are present. The table is laid with an array of local specialties like cabbage, carrot, and eggplant slices stuffed with walnuts, spices, and pomegranate seeds; *adzhapsandali*, a ratatouille-like mélange of eggplant, peppers, potatoes, and tomatoes; *khachapuri*, the famous Georgian cheese bread; chicken *satsivi*, which is roasted, then topped with a sauce of ground walnuts; boiled kid; and *gomi*, a cornmeal pudding. Bread again accompanies this meal. Although supermarkets now offer packaged bread, most Georgians still prefer the traditional *shoti* and *lavash* baked in a *toné*. In Khobi, Guram and Gulisa had a *toné* in their backyard; in Tbilisi they buy bread from a traditional bakery or at the farmers' market.

Adzhapsandali

Adzhapsandali is a spicy Georgian vegetable medley, like ratatouille with a bite.

Serves 6

1 small eggplant (1 lb)

1 large boiling potato

1 medium onion, chopped

- 2 tbsp vegetable oil
- 1½ lb ripe tomatoes
- 1 medium green pepper, seeded and chopped
- 3–4 garlic cloves, minced
- 3 tbsp minced dill
- 3 tbsp minced cilantro
- 3 tbsp minced parsley
- 3 tbsp minced basil
- ¾ tsp salt
- ¼ tsp paprika
- ¼ tsp cayenne (or less, to taste)
- Freshly ground black pepper to taste

Pierce the eggplant, and bake in a preheated 375°F oven for 35 to 40 minutes, until soft. Allow to cool.

Meanwhile, boil the potato in salted water until just tender. Cool, then peel and cube.

Sauté the onion in the oil until soft.

Drop the tomatoes into boiling water and cook them until soft, about 10 minutes. Drain, then force through a sieve to make a puree. Add the tomato puree to the onion, along with the chopped green pepper and the minced garlic. Simmer uncovered for 10 minutes, until slightly thickened.

Peel the eggplant and cut it into cubes. Add the cubes to the tomato mixture along with the cubed potato. Stir in the remaining ingredients and heat gently for 5 minutes more. Cool to room temperature before serving.

Major Foodstuffs

Remarkably, through all the invasions, sieges, and subjugations, Georgia has maintained a strong national identity and a distinctive national cuisine, even though the presence of so many outside rulers and visitors inevitably introduced foreign ways. Georgian food is reminiscent of both Mediterranean and Middle Eastern tastes, the result of a rich interplay of culinary ideas carried along the trade routes by merchants and travelers alike. Some borrowed practices are easily recognizable. The pilafs of southeastern

Georgia echo those of neighboring Iran, and the meats simmered with fruit are similar to variations of Persian *khores* (stew), though to yield the tart taste they prefer, the Georgians more often stew meat with sour plums or pomegranates than with sweeter fruits like quinces or prunes. Many savory dishes are flavored with *khmeli-suneli*, Georgia's aromatic mixture of ground coriander, basil, dill, summer savory, parsley, mint, fenugreek, bay leaf, and marigold. Like the turmeric used in curry blends, the dried marigold petals—known as Imeretian saffron for the region where the flowers are grown—add a rich yellow cast to many foods; their use may reflect a culinary legacy from the Moguls. The prized Georgian *khinkali*—the overstuffed boiled dumplings of the mountainous zones—reveal the culinary influence of Central Asian Turks. Along the Black Sea coast in western Georgia, the stuffed vegetable *tolmas* resemble Turkey's various dolmas. But the Georgians never developed a taste for the elaborate oriental sweets from Turkish, Persian, or Armenian kitchens; instead, they limit dessert mainly to fresh fruits and nut preparations.

Not yet fully documented is the kinship of Georgian food with that of northern India. The ruling Moguls of northern India invaded Georgia in the 13th century. The correspondences in culinary terminology between contemporary Georgian and Hindi are especially notable in a language like Georgian, which is not even Indo-European but South Caucasian, an entirely separate linguistic group. The Georgian word for bread, like the Hindi word, is *puri*; and the Georgians use the *toné* for baking bread and roasting, much as Indians of the Punjab use the *tandoor*. The Georgian *tapha*, a special pan for making the succulent, flattened chicken *tabaka* that is so emblematic of Georgian cuisine, is related to the cast iron skillet, or *tava*, of northern India.

But differences often reveal more than similarities. What most distinguishes Georgian cuisine from that of its neighbors is the use of walnuts, not merely as garnish, but as an integral component in a wide variety of dishes. To offset what might otherwise be a cloying richness from the nuts, many recipes call for a souring agent. Yogurt (*matsoni*), pungent cheese, and immature wine (*machari*) often serve as counterpoints

to ground walnuts; vinegar or fruit juices and fruit leathers similarly lend balance. Marigold lends an earthy depth to Georgian dishes and sets them apart from those of other culinary cultures. For instance, cinnamon and vinegar regularly flavor meat in the Georgian diet, just as they do in Middle Eastern cuisines, but marigold rather than true saffron adds the distinctive touch.

Other differences are visible in the staple foods. Where Persian cooks turn to rice and Armenians use bulgur, Georgians rely on wheat and corn. And instead of the legumes typically found in the Middle East and the Mediterranean—lentils, chickpeas, and favas—Georgians favor kidney beans, like corn a New World crop. Walnuts predominate over pine nuts and almonds. So well loved are walnuts that many standard dishes prepared without nuts, such as the spicy beef soup *kharcho* or the chicken stew *chakhokhbili*, often include walnuts in their western Georgian renditions. Freshly pressed walnut oil provides a necessary supplement of fat, as do the rich *suluguni* and *imeruli* cows' milk, served in place of butter with cornbread in western Georgia.

Stretching as it does from the Black Sea nearly all the way to the Caspian, the Republic of Georgia has numerous climatic zones, from the mountainous to the subtropical. Western Georgia, bordering on the Black Sea, endures high precipitation and steamy temperatures. Here, tea and citrus fruits thrive. Eastward the climate grows progressively drier, until sere Central Asian winds buffet the plateaus to the east of the Likhi chain. This hot, dry atmosphere produces the lush stone fruits and grapes of the Kartli and Kakheti provinces. The boundary between east and west is also visible in the relative degree of spiciness in the food. Eastern Georgians prefer a cool, fresh taste, thanks in part to their hot, arid summers, while western Georgians add generous amounts of fresh and dried hot pepper to their food, consuming nearly twice as much as eastern Georgians. A second difference lies in the western Georgian preference for corn over wheat. Here, *mchadi*, or corncakes, are prepared instead of *puri*. In the mountainous regions, when wheat flour is scarce, the roots of wild plants are first dried and then ground for use as bread additives, creating a rather coarse, though tasty loaf.

As is evident from their reliance on such ingredients as corn, peppers, and beans, western Georgian cooks put crops originating in the Americas to good use. Another transplant from the Americas, the tomato, is highly appreciated by eastern and western Georgians alike. Kartli, the eastern province in which Tbilisi is located, is known for its orchard fruits, especially apples and peaches, the best of which come from the environs of Gori, where dictator Joseph Stalin was born. The local markets abound with seasonal golden lady apples, pink gooseberries, red and black currants, many varieties of plums (sweet and sour; purple, yellow, green, and red), apricots, pears, berries, sweet cherries, and sour *shindi* or cornelian cherries, the juice of which Georgian warriors once drank before battle to fortify their blood. Mounds of dried fruits and locally grown walnuts, almonds, and hazelnuts are available year-round.

Cooking

Georgian dishes evolved naturally from the produce available, and traditional methods of preparation have hardly changed over the years; high tech does not yet have a solid place in the Georgian kitchen. To an extraordinary degree, Georgians still integrate the outdoors into their lives when they cook and eat. Grilling remains a preferred way to cook meats in Georgia—recalling the Promethean legend: Prometheus is said to have given fire to mankind when he was chained to a rock on Mount Elbrus in the Caucasus. Georgians frequently cook not only meats and vegetables but also breads and stews over an open flame.

A second standard method of preparing food is by slow cooking, and Georgian cuisine has an extensive repertoire of soups and stews. The heat remaining in the *toné* after bread baking is used for dishes like *purnis mtsvadi*, lamb braised slowly in a clay pot. In western Georgia, *chkmeruli* (fried chicken) and corncakes are baked in special red clay dishes called *ketsi*, which range in diameter from 6 to 12 inches. The use of *ketsi* is another way in which the Georgians continue to practice time-honored cooking methods. This technique can be

traced back to the ancient Egyptians, who stacked earthenware pots filled with food atop one another to seal in moisture—creating an oven, in effect—before baking the food over an open fire. Today, in urban apartments, the foods traditionally prepared in *ketsis* can successfully be made indoors on the cooktop.

Perhaps the single most important implement in the Georgian kitchen is a mortar and pestle for grinding nuts and spices. Although many affluent families now have food processors, the best Georgian cooks swear by labor-intensive hand-grinding, which yields the finest texture.

Bread is still baked in the traditional round *toné*, for which a very hot fire is made from dried grapevines on the oven floor. By the time the flames die down, the sides of the oven have been coated with black ashes, which soon turn white, indicating that the oven has reached the proper temperature. Salted water is then splashed against the sides of the oven to test the temperature. When it instantly sizzles, a metal lid is placed over the burning vines. Water is sprinkled onto old ashes to make a rather dry mix that is spread over the lid to cool down the fire. The baker then runs a piece of wet burlap along the sides of the *toné* to clean it of ashes. Ovals of dough are sprinkled lightly with salted water and slapped directly onto the inside walls of the oven. The bread bakes on one side only. When it is done, taking less than 10 minutes in the first round of baking, each loaf is secured with a hook before being removed from the oven wall with a spatula.

Typical Meals

The most typical and distinctive Georgian meal is the formal feast, or *supra*, which is organized at the slightest excuse—a birthday celebration, a good report card, or the arrival of a guest. The *supra* is a ritual affair that calls for the skillful exercise of moderation in the face of excess—no small feat, considering the meal's extravagances. The shared table is meant, above all, to promote a feeling of kinship and national unity. Centuries of gathering around the table to affirm long-standing traditions have helped the Georgians preserve their culture even

under foreign subjugation. The *supra* represents the collective public face the Georgians proudly present to the world even as it reflects the honor of an individual household.

The rules for commensal celebration are strict. Most important, a *tamada*, or toastmaster, is chosen to orchestrate all but the most informal meals. This practice may have evolved from the ancient Greek custom of choosing a symposiarch to guide the progression of the feast. The role of the *tamada* is taken very seriously, and he is accorded great respect, for it requires skill to keep all the guests entertained, ensure that the meal is proceeding apace, and see to it that no one drinks or eats to excess, as drunken guests bring shame on the host. The best *tamadas* are renowned for their wit and eloquence, including an ability to improvise. The *tamada* guides the company through a series of toasts, which can be brief or complex. Each calls for downing a glass of wine. Georgians do not sip, and drinking out of order or at random is not allowed. A *merikipe* is appointed to make sure that diners' glasses are filled at all times.

The rules of the Georgian table call for uplifting toasts, so that each occasion, even a sad one, becomes an affirmation of life. Traditionally, toasting begins with glasses raised heavenward in acknowledgment of God's presence. Then the host family is toasted, particularly the lady of the house responsible for the meal. The *tamada's* ability to pace the evening is crucial. Each time a toast is pronounced, whether by the *tamada* or someone else, wine is drunk as a mark of honor. But if inebriation seems likely, the *tamada* must slow down the succession of toasts. The traditional meal is punctuated by breaks for entertainment, often a cappella singing, a hold-over from medieval patterns of feasting when entertainments were actual diversions.

Given such ritualized drinking, the apparent chaos of the food service can seem surprising to outsiders. Courses are not always presented in the fixed order of the *service à la russe* that western Europeans, and later Americans, adopted in the 19th century, and which still prevails in Europe and America today. By contrast, the Georgian style of service is intended to dazzle the eye and pique the

palate through contrasting colors, textures, and flavors. When diners sit down to eat, the table is already laid with a wide variety of dishes. As the meal progresses, the hostess does not remove serving plates that still contain food but rather continues to pile new dishes on the table, balancing some on the edges of others, so that by the end of the evening the table is laden with a pyramid of plates, ensuring plenty at every stage.

Georgian Wine

If food is the heart of the Georgian feast, then its spirit resides in wine. For a Georgian, wine evokes both culture and community. Based on evidence of grape pips unearthed from archaeological sites, viticulture is an ancient art in Georgia, practiced as early as the fourth millennium B.C. Scientists believe that the species *Vitis vinifera*, the original wine

grape, is native to the Caucasus region, and many linguists consider the Georgian word for wine, *ghvino*, the prototype for such Indo-European variations as *vino*, *vin*, *wine*, and *Wein*. The grapevine symbolizes life and faith, a belief that Saint Nino of Cappadocia adapted to Christian doctrine when she introduced it to Georgia in the fourth century. Bearing a cross plaited of dried vines and tied with her own hair, Saint Nino seemed to represent divine approval for the winemaking that had been practiced for centuries. The vine and the cross became inextricably entwined, each an object of devotion.

The center of wine growing in Georgia is Kakheti, in the eastern half of the country. The region is known for its traditional method of winemaking, which differs considerably from standard European practices because it is so labor-intensive; it is dying out as a commercial process. After the grapes are pressed, the juice is fermented together with the

skins, stems, and seeds to yield distinctive wines of a lovely, deep amber hue and a raisiny taste with a hint of Madeira.

Traditionally, wine was made in large, red clay amphorae known as *kvevri*. Nearly every Georgian country household has a *marani*, a place where the temperature remains cool and steady. Here, the *kvevris* are buried up to their necks in the earth. If the house lacks an earthen cellar, the *kvevri* are buried directly in the ground outdoors. To make wine by the Kakhetian method, the freshly pressed juice, along with the skins, stems, and seeds, is poured into the buried amphorae and stirred four or six times a day for three to five months. The resulting new wine is called *machari*. When the wine has achieved the desired degree of fermentation, it is drawn off from the lees. If produced commercially, the wine is transferred to oak barrels to age for at least a year, but homemade wine is usually ladled by means of a special long-handled gourd from the first *kvevri* into smaller ones for aging. These *kvevris* are topped with a wooden lid, then sealed with mud. Dirt is mounded all around the lid to keep air out, lest it spoil the wine. Whenever wine is taken off from a *kvevri* in any quantity, the remainder is transferred to progressively smaller vessels.

Some Georgian families still use special vessels to bring wine to the table, such as the *chapi*, a two-handled jug with a squat neck and bulbous body tapering to a narrow base. From this transitional vessel the wine is poured into a variety of other containers intended either for pouring or drinking. Quite common are a single-handled pitcher and the more elaborate “mother jug” (*deda-khelada*) composed of a central pitcher with several smaller pitchers affixed to the sides, like a mother with numerous breasts.

The most widespread red wine grape of Georgia is Saperavi, which, depending on its treatment, can yield wines ranging from dry to semisweet. For white wines, the indigenous Rkatsiteli grape makes nicely acidic wines with a fresh, green taste. Both varieties predominate in Kakheti’s Alazani River valley, which lies between the high peaks of the Greater Caucasus to the northeast and the foothills of the Tsvi-Gombori Range to the southeast. They are made into wines bearing such controlled

appellations as Mukuzani, Kindzmarauli, and Tsinandali. Today, artisanal producers like Mildiani make some extraordinary wines that blend ancient traditions with modern technology.

Eating Out

The great 19th-century Russian poet Alexander Pushkin once said that “every Georgian dish is a poem.” Similarly, nearly every occasion offers cause for celebration. Most gatherings still take place in private homes, although since the collapse of the Soviet system a lively restaurant culture has developed in Tbilisi. Most villages and towns feature at least one hole-in-the-wall café offering tasty local food such as *khinkali*, the famous oversized dumplings that are a specialty of taverns along the old Georgian Military Highway. As soon as the weather turns nice, Georgians like to gather for impromptu picnics, even just by the roadside. They consider *al fresco* dining the best way to eat, a chance to appreciate nature while consuming its gifts. Georgians also enjoy street food. Appealing stands along the Black Sea coast offer corn on the cob, which is either grilled or boiled to order. The national fast food is *khachapuri*, a cheese-filled bread that comes

Khachapuri, a cheese-filled bread that comes in a variety of shapes and sizes and national fast food of Georgia. (Sergey Zavalnyuk | Dreamstime.com)

in a variety of shapes and sizes. One specialty is the Adzharian version, *adzharuli khachapuri*—an open, boat-shaped loaf brimming with fresh sheep-milk cheese, with a still-runny egg baked on top. It is a meal in itself. To eat it, a piece of crust is broken off and dipped into the near-liquid cheese in the center of the loaf.

Khachapuri

Most cafés sell the appetizer khachapuri made with yeast dough—Georgia’s answer to pizza. At home, baking soda, a European import, or yogurt is often used to tenderize the dough, resulting in a rich, flaky pastry.

Serves 16

2 c unbleached white flour

½ tsp salt

12 tbsp cold butter, cut in pieces

2 eggs

¼ c plain full-fat yogurt

1¼ lb mixed Muenster and Havarti cheeses

1 egg yolk, beaten

Put the flour and salt in a medium bowl, and cut in the butter until the mixture resembles coarse cornmeal. Beat 1 egg, and stir in the yogurt, then add to the flour mixture. Form into a ball, and chill for 1 hour.

Grate the cheeses coarsely, beat the other egg, and stir it into the cheese. Set aside.

Preheat the oven to 350°F. Grease a large baking sheet. On a floured board roll the dough to a rectangle about 12 x 17 inches. Trim the edges. Spread the cheese mixture over half the short side of the dough. Then fold the other half over to enclose it. Roll the extra dough on the edges up over the top and pinch the edges decoratively to seal.

Transfer the bread to the baking sheet and brush with beaten egg yolk. Bake for 50 minutes, until nicely browned. The bread is best served slightly warm, cut into small squares.

Diet and Health

Throughout most of Georgia’s history, meat was a luxury, so the Georgians took great advantage of copious fruits, vegetables, and herbs. The bulk of the Georgian culinary repertoire is made up of preparations for vegetables, both cultivated and wild. Over 100 varieties of such wild greens as sarsaparilla, nettles, mallow, ramp, and purslane are still gathered in season and prepared in a surprising number of ways—cooked, marinated, dried for seasoning, or steeped in water for a nutritious drink. But above all, the Georgians enjoy their greens fresh, and no Georgian table is complete without a large platter of leafy cilantro, dill, tarragon, parsley, basil, summer savory, and peppery *tsitsmati*, or falseflax (*Camelina sativa*, similar to arugula). Often there is also *dzhondzholi* (Colchis bladder nut, *Staphylea colchica*), an edible ornamental plant with long stems of tightly furled, beadlike tendrils redolent of garlic. The greens, which are rich in nutrients, provide a refreshing counterpoint to the heavier foods in the meal.

These foods are washed down with wine and local mineral waters like Borzhomi and Nabeghlavi, which have long been touted for their health benefits. To diners used to the mild taste of Perrier or Pellegrino, these waters seem heavy and salty (so much so that Borzhomi is now bottling a Borzhomi Light), but Georgians have traditionally put them to therapeutic use in addition to serving them at the table. Certain foods are also considered especially nutritious. The benefits of yogurt have been touted by Madison Avenue in ads featuring the long-living inhabitants of the Caucasus. Georgians more frequently prescribe *khashi*, a much-loved tripe soup, for digestive problems; it is also a favored hangover remedy when consumed early in the morning following a drinking bout. The marigold petals used in place of saffron are also said to aid in digestion, while *nadugi*, the delicious whey derived from cow milk and often served mixed with fresh herbs, is virtually fat-free and is considered a sclerosis preventative. The traditional Georgian diet is notable for its high amount of omega-3 fats, found in walnuts, walnut oil, and purslane. Purslane contains more omega-3s than any other leafy green vegetable.

The 1991 collapse of the Soviet Union ushered in an era of civil unrest and economic pressure. A new generation of Georgians is working to overcome the problems that still plague the country after so many years of dependence on the larger Soviet economy, which provided a ready market for Georgian produce and prepared foods. Although small-scale farms never died out in Georgia, there was plenty of industrial farming to supply the needs of the Russian market, and activists are now working to reestablish sustainable agricultural practices and revive the legendary wines that had either disappeared from the market or been restyled for the Russian palate. In the 21st century Georgia is a small country with a shattered infrastructure, but it is placing a good measure of economic hope on fairly traditional, organic agriculture.

Germany

Overview

Germany is situated in the middle of the European continent: east of France, west of Poland, north of Switzerland, and south of Denmark, between Slavs and Romans, cold and heat, sea and mountains. Over the course of history it has been enormously influenced from all sides—one could even say it is composed of those influences. Although Germany is not particularly large (in terms of land area, it is slightly smaller than Montana), its culture is very complex. In addition to geographic, climatic, and religious reasons, this is mainly due to migrations throughout history, with new peoples bringing their foods and foodways with them, as well as the fact that until the declaration of the German Empire in 1871, Germany was composed of countless small individual kingdoms, fiefdoms, and free cities. This made for a variety of regional cuisines. Unlike, for instance, its neighbor France, Germany has no single national, overarching haute cuisine, not even a national dish.

When industrialization reached Germany around 1850, compared with almost a century earlier in England, the effects were far-reaching. In the process, agrarian Germany was quickly and thoroughly urbanized and came to rely more and more on “modern” food industries. As 19th-century industrialization gave way to 20th- and 21st-century globalization, German food culture shifted once more to contend with worldwide food trends. Despite heated debates about the rights and wrongs of fast food versus “real” food, world cuisine versus home-style regional cooking, food scares, and one of the highest standards of living worldwide, culinary

Germany today at last seems to have reached a more balanced normality.

Germany is no agricultural idyll—with more than 81 million inhabitants it is densely populated, thoroughly urbanized (72% of Germans live in towns of more than 10,000 inhabitants, 32% in large cities of more than 100,000), and heavily industrialized. Although the general standard of living is high, differences in income are rising steadily. Competition is steep because of the European single market as well as imports from non-European Union countries. With strong trade unions, labor is expensive and, in spite of high unemployment, difficult to find (today, viticulture and asparagus cultivation, for instance, would be unthinkable without foreign workers from Poland and Russia), which leads to further attempts to increase efficiency through concentration, mechanization, and rationalization.

Food Culture Snapshot

Petra and Jan are in their mid-thirties and live with their children Paul, seven, and Maria, three, in a leafy Berlin suburb. Jan comes from Hamburg; Petra is a Berliner. They are both architects, running an office in the center of town together with a colleague. Since they are freelance, their income varies quite a lot, but they have learned to adapt to that and prefer to forgo long, expensive vacations rather than stint on food. Like many other Germans, they make a big shopping trip with the car to a large supermarket once a week, mostly on Friday afternoon, to stock up on basics like flour, sugar, cereals, yogurt, ice cream, frozen pizza, dried pasta, canned tomatoes, and the like, as

well as mineral water, beer, and fruit juice. Petra used to have a subscription to have a box of fresh vegetables delivered every week from an organic farm not far from Berlin, but recently going to the farmers' market in their neighborhood has become a family ritual on Saturday mornings. Here, they buy vegetables, fruit, eggs, bread, meat, and cheese from the vendors they have come to know and trust, after which they meet friends for a coffee and a pastry. During the week, they tend to combine shopping with driving to work and dropping the children off at school and kindergarten. For fresh food like bread, milk, and vegetables, they frequent an organic store that is situated near their office, and on their way home, they often stop at a small independent wine shop. Both Petra and Jan remember many more independent butchers and bakers from their childhood, and for special occasions like dinner parties with friends they sometimes drive to one of the few remaining ones. On the whole they feel that shopping has become much more relaxed since shop hours are no longer strictly regulated. Until the end of the 20th century, shops had to close at 6:30 P.M. on weekdays and 1 P.M. on Saturdays, and were completely closed on Sundays and public holidays. As they often worked late before having the children, a small store run by a Turkish family was frequently their last resort, as those shop owners tended to take their time closing up. Now most stores stay open until 8 or 9 P.M. (6 P.M. on Saturdays), and some are even open on Sundays.

Major Foodstuffs

Bread is arguably the most significant German food. The traditional multitudinous variety of bread and rolls is based on different grains (wheat or rye, pure or in all possible mixtures with oats, spelt, buckwheat, linseed, and millet), coarse or finely ground flours, and varying fermentation methods (sourdough or yeast) and baking methods, as well as shapes and seasonings in the form of nuts, seeds, or spices, all developed through specific regional conditions. All over Germany, darker, whole-grain breads have seen a renaissance during the last decades through the organic and health movements. For breakfast, fresh rolls are for many people almost a necessity.

Next to bread, potatoes are the most important staple food. Although the potato repertoire includes ever more finished products like chips, fries, dumplings, ready-to-serve fried potatoes, or dried mashed potatoes, Germans still see themselves as potato eaters and distinguish between *fest*, *halbfest*, and *mehlig kochend* (waxy, semiwaxy, and floury) varieties. Broadly speaking, in the north, potatoes are regarded as a staple food, a starch in the same league as rice or pasta, traditionally served with every warm meal on principle. In the south, however, they are treated as a vegetable. Potato soup is perhaps the most German of all soups, sometimes refined with cream and often served with small rounds of *Frankfurter* or *Fleischwurst* (a larger type of scalded sausage).

Kartoffelsuppe (Potato Soup)

1 onion, diced
 2 tbsp bacon, diced
 2 tbsp butter
 1 carrot, diced
 1 small leek, sliced
 2 tbsp celeriac or celery, diced
 1 tsp dried marjoram
 Sea salt
 White pepper
 Nutmeg
 1 lb floury potatoes, peeled and diced
 1 qt water
 ½ c heavy cream (optional)
 Fresh parsley, chopped

Sauté onion and bacon in butter until translucent, adding carrot, leek, and celeriac or celery after a little while, together with seasonings. After some minutes, add potatoes, cover, and let cook for 10 minutes. Add water, and bring to a slow boil. When vegetables are soft, add cream, if desired, and puree the soup in a blender to the desired consistency—it should not be too smooth. Serve with parsley and possibly sliced frankfurters.

Dumplings are found mostly in southern and central Germany. In their countless versions and variations, they are comparable to the multitude of pasta shapes and uses in Italy. They are made from flour and/or potatoes. Confusingly, they are occasionally called *Nudeln* (noodles), which also designates Italian-style pasta, also widely consumed in Germany (15.65 pounds per person in 2006). Rice is not grown in Germany but has long been imported. German stores carry all the usual varieties of mostly Italian and Asian rice, with risotto being very popular.

Pork is the favored meat of Germans, although since World War II, beef and poultry consumption has risen with affluence and health awareness, and mutton and goat meat are slowly gaining ground. *Schlachteplatte* is the German version of Alsatian *choucroûte*, combining all kinds of salted and boiled pork cuts, served with sauerkraut and boiled potatoes. In spite of the low pork prices of today, *Schweinebraten* (pork roast, frequently a leg) with crackling crust is still considered something special in the southeast, whereas beef is more common in the north, center, and west. Panfried meat patties that are called *Buletten* (in Berlin), *Frikadellen* (all over Germany), or *Fleischpflanzerl* (in Bavaria) are very popular eaten warm or cold, often as a snack with beer. Ground meat is also made into all kinds of dumplings served in sauce.

Sausages served with sauerkraut, a popular German dish. (Shutterstock)

Following the same model as sugar, poultry was once considered a high-prestige item, but its consumption has soared with cheaper, industrial production. Erstwhile festive dishes like *Hühnerfricassee* (chicken fricassee) are still popular but have become much less special. Offal can be everything from a lowly substitute for “real” meat to an expensive delicacy. Although the gusto for eating steak in modern Germany rivals Texas or Chicago, there is no particular tradition for raising and maturing beef that corresponds to that in the United States. Veal is often panfried as *Schnitzel* and roasted as *Kalbshaxe* (shank). Although venison is widely available and affordable today—also with imports of farmed venison from New Zealand—the meat of roe, red, and fallow deer, as well as wild boar, is still seen as special, and a venison roast is a marker for festive occasions. Besides that, *Gans* (goose) and *Ente* (duck) account for a large part of festive winter roasts and often take pride of place on Christmas dinner tables.

The variety of sausages and ham in Germany is overwhelming and dominated by pork. Ham and sausage are mostly eaten as cold cuts with bread, but some varieties are also served warm. Very broadly speaking, *Wurst* (sausage) in the north tends to be made from raw meat. In the south, many sausage varieties are made from finely cut meat, possibly with larger pieces of ham or pickled tongue added afterward, and scalded in a fashion similar to mortadella or bologna. *Würstchen* (smaller, individual sausages like frankfurters) are served heated and whole, often in pairs. All over Germany, sausage is also made from cooked meat, often seasoned with marjoram and/or onion. *Leberwurst* (liver sausage) is always spreadable, resembling chopped liver. Ham is mostly made from pork leg or shoulder and smoked or cooked; some types are boiled or baked, as the climate permits air-drying only for smaller sausages rather than larger cuts like in Italy or Spain. There are versions matured on the bone and deboned varieties like *Schwarzwälder Schinken* from the Black Forest.

Germans are not great fish eaters, consuming only about 30 pounds per capita annually, about a sixth the amount of meat consumed. Although with

modern transportation, fresh and frozen fish of all international varieties is readily available throughout Germany, northerners still consume more than southerners. Most offerings today come from aquacultures around the world. Of the fish consumed in Germany, 85 percent is imported, and *Lachs* (salmon) is as common as chicken. *Karpfen* (carp) is perhaps the most traditional fish dish and still plays a role on special occasions, especially those historically related to fasting. *Salzhering* (salted herring) today mostly survives as *Matjes* (caught young and fat).

Dairy farming is generally highly industrialized. Except for a very small number of estates that, under strict controls, offer untreated *Rohmilch* (raw milk) and *Vorzugsmilch* (special milk) for sale, milk in Germany (by definition cow milk; other kinds have to be designated as such and do not play an important role) has to be pasteurized and most often is homogenized as well. Milk is still seen as a healthy product, important for infants and children, whereas adults consume less than 0.53 pints per day. *Schlagsahne* (whipping cream) is used for cooking and eaten with cake. Yogurt in all its modern forms is a favorite for breakfast and snacks and seen as very healthy. In contrast to American-style cottage cheese (in Germany less common and called *Hüttenkäse*), *Quark* is smooth and homogeneous in texture with a more or less pronounced acidic tang. A multitude of regional names for Quark attest to its traditional importance in the daily diet. It is also used for *Käsekuchen* (cheesecake), which is either baked or made with gelatin, and combined with all kinds of fruit for desserts.

Germans eat 48.28 pounds of cheese per capita annually; the cheese ranges from industrial, rubbery slices to the most sophisticated imports from France and Italy. Traditionally, cheese is consumed on bread as cold cuts, but more and more it is also taking the place of dessert. German cheese culture was so quickly overwhelmed by industrial production at the end of the 19th century that it has only very recently begun to search for a distinctive character. A growing number of German dairy farms, predominantly small and organic, are developing new regional cheeses. Prior to industrial farming methods, butter was considered a luxury product.

With the onset of modern technology, it became more affordable but kept its high reputation. Most German butter, which is always made of cow milk and rarely salted, tastes rather bland and is quite soft to assure good spreadability. Germans consume 14.77 pounds of butter per person per year, spreading it on bread and rolls with jam and cold cuts, as well as using it in baking and cooking. Until butter became widely affordable, most of the fat consumed was in the form of *Talg* (suet) and *Schmalz* (lard). *Schmalz* in Germany is made from the rendered flare, back, and belly fat of pigs as well as the much softer goose fat. It is still popular, often homemade, but also commercially available. Margarine, introduced as a cheaper butter alternative in the 1870s, now covers all sorts of lower-fat spreads and butter substitutes and is mostly promoted as a healthier alternative to butter. However, in that respect, it cannot beat *Olivenöl* (olive oil) in German kitchens. Olive oil is seen as very healthy and is offered at all price levels. Consumption of olive oil stands at 1.8 pints per person per year, which puts Germany significantly behind Mediterranean countries. Besides other seeds and nuts, *Mohn* (poppy seed) is especially popular in eastern Germany and is used for cooking and baking.

Eggs are used in pastries and desserts but are also eaten boiled or as scrambled eggs for breakfast, or as an alternative to meat. Today, consumption averages 290 eggs per person per year. However, eggs are constantly surrounded by concerns about production methods and scares about food safety, raw eggs now being considered very risky.

Vegetables in general accompany meat or fish as a side dish, are eaten raw as *Rohkost*, or are made into salads or soups. The proverbial Germanic preference for cabbage reaches back at least to the Middle Ages. Round white and red cabbages are traditional standard fare all over Germany during autumn and winter. Sauerkraut is found throughout Germany.

Kohlrouladen (Cabbage Rolls)

½ lb ground meat (half pork, half beef)

1 egg

1 onion, finely diced
 Half a stale white roll, soaked in water or milk,
 squeezed dry, and torn into small pieces
 Sea salt
 Black pepper
 1 tbsp parsley, chopped
 2 small or 1 large head white cabbage or savoy
 cabbage
 2 tbsp butter or lard
 4 thin slices bacon
 1 c water
 1 tbsp dried porcini mushrooms

Mix the meat with the egg, onion, and bread, and season well with salt and pepper. Add the parsley, and divide into four parts. Cut cabbage(s) in halves, and cut out the core liberally, taking out enough of the heart of the cabbage as well to create a hollow for filling. Season cabbage with salt and pepper. If working with two small heads, fill each of the four halves with one part of the stuffing, fold gently to form rolls and tie with string. If using one large head, the halves first need to be gently separated into two layers. Brown rolls on all sides in butter, cover each with a bacon slice, add water and mushrooms, and cover and braise for about 1 hour. Serve with boiled potatoes. Optional: Cooking liquid can be slightly thickened with some potato starch.

Besides cabbage, root vegetables such as beets and turnips as well as French beans play an important role. Legumes are seen as time-consuming to prepare and hard to digest and have never been as popular in Germany as they are, for instance, in India. For Germans they rather represented an answer to the problem of storage and winter food supply. *Spargel* (asparagus), however, is a national passion in Germany. It is cultivated in all the states, but Schwetzingen near Heidelberg and Beelitz southwest of Berlin arguably enjoy the highest reputation. Although the green version is now produced and eaten as well, and fresh spears are imported from Israel, California, and Peru in the off-season, asparagus in Germany is still clearly defined as white, something

special, and strictly seasonal. Omnipresent today, albeit mostly in an industrialized, robust, long-life version, tomatoes count among the most popular vegetables. Bell peppers, eggplant, zucchini, and fennel are all common (mostly imported) and available year-round. *Kürbis* (designating both pumpkin and squash) has recently been experiencing a culinary renaissance, furthered by the offerings of organic gardeners growing smaller, more flavorful varieties. *Salat* (lettuce, although in German *Salat* also means salad) is omnipresent, with all the modern varieties available, increasingly also in ready-to-eat bags. Fresh herbs, most commonly parsley, chives, and dill, are used as a garnish, as well as in all kinds of dishes, and are widely available commercially in small bunches or pots. *Cèpes*/porcini, chanterelles, and bay bolete are seen as very special, either gathered privately or bought in the market, where they are often imported from eastern European countries.

As for seasoning, the salt shaker is an essential part of the table setting in Germany. More often than not it is joined by a pepper shaker or mill. Otherwise, spices are used sparingly compared with practices in other countries. Apart from salad dressings, vinegar is used in traditional cooking for purposes of seasoning, preserving vegetables and meat, or tenderizing. Mustard above all is an important accompaniment for all kinds of sausages. In the south, freshly grated, pungent horseradish often replaces mustard with boiled beef or sausages.

As with fresh vegetables, fresh fruit was deemed not very nourishing in the 19th century, and it was even more perishable than vegetables and thus difficult to store and transport. Consumption really picked up only toward the end of the 19th century. Today, Germans annually consume about 165 pounds of fresh fruit, about a quarter of which is produced in Germany, mostly around Hamburg and on Lake Constance, plus about 88 pounds of citrus fruit, much of it in the form of juice. Apples are probably seen as the most “German” fruit, with local varieties enjoying a revival, but strawberries are the great favorite (at least strawberry is Germany’s favored yogurt flavor) and a symbol of spring or early summer. For jam—on buttered rolls or bread a

necessity for breakfast and often homemade rather than purchased—strawberry seems to top an enormous variety of other flavors in popularity.

Sugar in Germany is commonly white refined beet sugar. Brown, unrefined cane sugar is perceived by some as healthier although it is more expensive, and thickened fruit syrup is used in health food. However, as in other Western cultures, sugar generally has a negative image and is seen as a major culprit in obesity and related health problems. Artificial sweeteners are widely available, as are sugar-free diet versions of soft drinks and all kinds of food. Honey is spread on buttered bread as an alternative to jam and is used to sweeten herbal tea as well as in baking gingerbread for Christmas.

Although tea has a long tradition in the north, coffee is the hot caffeinated drink of choice in Germany. It is drunk at breakfast, during numerous breaks throughout the day, and especially for *Kaffee und Kuchen* (coffee and cake) in the afternoon. Italian espresso machines have become fashionable, but the standard is less concentrated *Filterkaffee* (filtered coffee), drunk with milk or condensed milk and sometimes sugar. International coffee chains as well as most bakeries offer take-out coffee in all the modern latte versions. With few exceptions, tea is prepared using bags of undifferentiated black tea, with various herbal types as a healthier alternative, lately joined by green tea and caffeine-free rooibos tea from South Africa, also available in a multitude of flavored versions.

Beer has been *the* German drink since ancient times. Today, an average of 274.84 pints per person are drunk annually, whether with meals or on its own, at home or in pubs and bars. Most beer today is bottom-fermented and sold in bottles, although draft beers are more highly valued by connoisseurs. *Pilsner* (frequently shortened to *Pils*) is almost a synonym for beer in the north and tastes in general much bitterer than the light *Kölsch* of Cologne. Brown *Altbier* is the specialty of Düsseldorf, and there are various local specialties like *Gose* in Leipzig or *Berliner Weisse*, both slightly sour wheat beers, the latter served flavored with a dash of red or green fruit syrup. In Bavaria, where beer consumption is the second highest (following Saxony),

beer is considered a food more than an alcoholic beverage, and Bavarian varieties tend to be lighter than in the north.

Generally, wine complements beer in regional consumption, with the exception of the north, where spirits play a more important role in total alcohol consumption. Riesling is the most important variety of German wine in terms of quality. Traditionally, and in complete contrast to Roman culture, wine, produced in Germany at least since the first century A.D., was and to some extent still is drunk by itself, for instance, in the afternoon or after dinner, and in general does not require food as an accompaniment. Since the 1990s, Germans have developed a keen interest in all kinds of wines from around the world, as well as wine and food combinations. Wine service and wine lists in restaurants have become much better, and wine shops with a very good international selection are common now.

German amber beer being poured into a glass. (Shutterstock)

Around Frankfurt and in the southwest, traditional apple and sometimes also pear cider is made and mostly consumed locally like beer. Most spirits, commonly called *Schnaps*, are drunk in the north in the form of a clear grain spirit often flavored with juniper. They are often accompanied by beer. In the southwest, all kinds of fruits are distilled to make fruit brandy, of which *Kirsch(wasser)*, a type of cherry brandy, is perhaps the best known.

In 2006 Germans drank 627.27 pints of alcohol-free beverages on average (up 3% from the previous year, and second behind Spain for all of Europe) and spent slightly more on them than on alcoholic beverages. Although tap water is perfectly safe everywhere and unchlorinated, today many prefer to buy bottled mineral water. Apple juice is a big favorite, followed by orange juice, often available freshly squeezed.

Cooking

In Germany, as in most societies and cultures worldwide, the private kitchen where cooking and related tasks take place has traditionally been women's domain. According to a time budget study from 2001–2002, German women on average still invest one hour and six minutes daily in household tasks, of which 45 minutes are spent on food preparation. German men spend just 23 minutes daily on food preparation and directly related tasks like setting the table and washing the dishes. In families with children and working mothers, fathers contribute even less time, and almost half of the male population is being looked after by women. Young people show the same gender pattern, with 72 percent of young men between 20 and 25 years of age not getting involved at all in food preparation. At least there seems to be a tendency for retired (pensioner) couples to share food-related tasks more evenly. Obviously, these numbers would have been much higher in the past. The decrease in food-preparation time is related on the one hand to the availability and use of prepared food and meals—ever less is prepared from scratch or made into preserves—and on the other hand to the logistics and technicalities of the kitchen and its equipment.

In spite of the dominant pattern in which women are responsible for the food, cooking and eating are changing from a pure necessity to a freely chosen option of how to spend one's time. In the 1970s, men discovered cooking as a hobby with high prestige. Most of these *Hobbyköche* (hobby cooks) are not interested in the everyday routine of the kitchen but instead plan and produce complicated meals on the weekend. However, younger Germans have a more relaxed approach; they see cooking not as a task but as a trendy, relaxed, and delicious pastime of choice, to indulge in during free time or on the weekend. Meeting with friends to cook or inviting them for meals is a popular social activity. In recent years, cooking schools and courses have become very popular.

In German apartments and houses, the kitchen is seen as the second most important room after the living room: It is often described as the most used room, with the best atmosphere or feeling, and it is the room most used to receive visitors. Younger Germans especially use the kitchen in a very multi-functional way; many a party ends there. The *Einbauküche* (fitted kitchen) still is the ideal for the majority. However, most of them like to combine its functionality and technical potential with more *Gemütlichkeit* (homey contentment). Most people have at least breakfast in the kitchen, and often a separate dining room is used only for more formal or festive occasions or when guests are invited.

Germans love electric kitchen gadgets, and kitchens are generally fitted out well. Although many everyday dishes are made without consulting a recipe, cookbooks are deemed essential, with a multitude of cookbooks published every year, directed at all social groups, ages, and budgets. Most households own a liter measure as well as (electric) scales for baking, as recipes are given in (kilo)grams and (milli)liters.

The techniques used to prepare food in Germany are by and large the same as in other Western cultures. *Dünsten*, which is stewing in its own juice with a little fat and some liquid like wine, stock, or simply water added, is perhaps the method most commonly used for vegetables and meat. It combines dry heat for roast flavors with wet heat to tenderize and

yield some sauce. This is also the case with *schmoren* (braising), most often used for ragouts, goulash, and large cuts of meat: The meat is browned, and then some vegetables like carrots, celeriac, and onions are added and lightly sautéed as well before the *ablöschen*, when a little liquid is added. Then a lid goes on the pan, and the meat is slowly finished, often in the oven, where it yields the gravy deemed essential for a traditional “real” meal with dumplings or potatoes.

Typical Meals

Frühstück (breakfast) is mostly eaten at home, consisting at its most basic of a hot beverage, more often coffee than tea, with milk and hot chocolate as alternatives, in particular for children, and some kind of starch. This can be—depending on the preference for sweet or savory—bread or rolls spread with butter, then topped with jam or honey, cheese, Quark (sometimes with herbs), sausage, ham, or, more luxuriously, smoked salmon. Sweet pastries are also popular as are various cereals with milk.

At school or at work, a break is taken during the morning around 10 A.M. It could be just a *Kaffee-pause* (coffee break) for a cup of coffee and perhaps a cigarette. Schoolchildren might have a sandwich they brought from home, but in rural areas, where there is a greater number of manual laborers, more solid fare is consumed. *Brotzeit* might consist in Bavaria of *Weißwurst und Brezel* (scalded white veal sausages and a pretzel) or in Swabia of a slice of freshly baked *Leberkäse* (baked meatloaf) in a roll. Both might be washed down with a beer.

In rural areas and traditional households, *Mittagessen*, the meal around noon, is on principle a warm meal, and more importance is given to it than to dinner. At its most classic, Mittagessen consists of meat or fish accompanied by a vegetable and a starch, often preceded by soup or a salad and followed by a dessert like stewed fruit, yogurt, custard, or ice cream. A recent survey of favorite dishes among Germans aged 14 to 60 years produced a hit parade that is headed by global dishes like spaghetti Bolognese but dominated by regional fare like asparagus and sauerbraten.

Traditionally, meatless dishes, like soft-boiled or fried eggs on spinach with boiled potatoes, are served on Fridays, although today they are probably chosen by vegetarians rather than for religious reasons. In urban surroundings and among office workers, long breaks for an extended meal at lunchtime are rather unusual. Most people have time only for a snack—the business lunch offered by many restaurants is by definition quick. Sunday lunch tends to be a more sumptuous and family-oriented affair than meals during the week, often accompanied by a glass of wine.

In the afternoon, two very different in-between meals are possible. On the one hand, between 3 and 4 P.M., it is time for *Kaffee und Kuchen*, that is, coffee (or exceptionally tea, mostly in the north) and cake. On the other hand, a bit later, between 4 and 5 P.M., especially in the southern, more rural areas, *Vesper* or *Brotzeit* is taken after the day’s work, traditionally between the day’s work in the fields and the evening milking of the cows. This cold snack can consist of all kinds of sausages, ham, or brawn (headcheese-like sausage); bread, rolls, or *Brezeln*; sliced and salted long white radish (in Bavaria); and/or cheese, and it is often accompanied by beer or wine.

Abendessen or *Abendbrot*, the evening meal, can either be cold, resembling the afternoon snack, or warm, above all on days and occasions when lunch has been cold. It tends to be structured similarly to a warm meal at lunchtime but will probably evolve in a more leisurely fashion and be eaten in a larger group, with family or friends. This is the occasion for enjoying food and drink in a relaxed way.

Table manners became much more relaxed in Germany during the last decades of the 20th century. However, some basics still apply. It is considered bad taste to start eating before the head of the family or the person of highest rank at the table says *Guten Appetit* (bon appétit), wishing all an enjoyable meal.

Roughly one out of every nine people in Germany is not of German heritage and thus probably eats differently, to varying degrees. The Turkish are by far the most numerous of this group, making up more than 25 percent of immigrants, followed by

immigrants from Asia (12.2%), Italy (8.0%), and Greece (4.6%). Most Germans are of Christian background, and Christian traditions still dominate foodways, although religious rituals, especially in urban surroundings, are superseded by a secular lifestyle. Only 0.013 percent of all Germans are Jewish, and their influence on the food available and consumed in Germany is hardly noticeable. Their number is currently increasing, however, because of Jewish immigrants, mainly from Russia.

Eating Out

For most Germans, eating out in a restaurant is not just another everyday meal option but is widely regarded as something special. Generally it is a luxury to be indulged in only when the most important status symbols like a nice home, car, and vacations are already guaranteed. Although Germany is generally perceived as an almost-classless society, the strong opinions and delicate decisions about who eats out where and with whom, as well as anxiety about being at the “wrong” place or not dressed “right” for the occasion, betray the subliminal existence of a distinctive social hierarchy. In fact, the term *ausgehen* (to go out) still designates both eating out and entertainment such as concerts or the theater.

Whereas in West Germany until today schools tend to end around midday with no meals provided, day schools—and with that school cafeterias—used to be the norm in East Germany but are currently on the rise throughout the country. However, eating in cafeterias or schools is regarded as an unavoidable necessity when studying or working. The same applies for food in hospitals and nursing homes: Its quality obviously varies, but its overall reputation is bad.

But in general the profession of chef has become very attractive, with stereotypes changing from unreliable drunkard to star artist. New technical equipment has made kitchen work less physically demanding, and during the 1980s the almost exclusively male profession slowly opened up to include women, although they are still in the minority. Some German chefs are as much influenced by

the Spanish chef Ferran Adrià and his futuristic cuisine, commonly called molecular cuisine, as their colleagues in other Western countries, but most of them are very aware of their origins and surroundings. They use all kinds of ingredients, elements, and styles but tend to integrate them into a regional culinary pattern, striving for a clear, straightforward taste. Beginning as a necessity for travelers, eating out in Germany has developed into a plethora of possibilities.

Hot food is served in most places during fixed lunch and dinner hours. It is the exception for German restaurants to do two seatings in the evening as is common in American cities, and guests decide for themselves how long to linger after the meal. Be it in the beer gardens in Bavaria, in the traditional *Ausflugsgaststätten* (gastronomic day-trip destinations) around the larger cities, or in their own gardens and on their balconies, Germans love to eat and drink outside. When the weather permits in the summer months, many German meals on the weekend revolve around the barbecue. Younger Germans and Turkish citizens flock to public parks for this occasion, loaded down with a grill, table, and chairs as well as victuals. However, the majority of Germans prefer to retreat to their private yards. Weekend barbecues are a good occasion to invite neighbors and friends, as they are much less formal than normal dinner invitations.

Café culture is not quite as developed as in the Austrian *Kaffeehaus*, but most cafés in Germany open in the morning and offer breakfast and some menu of simple hot and cold food all day long. Some double as a bar and stay open until late. Affordable, informal restaurants in Germany are often run by immigrants, and in spite of all regional influences, the chances of finding a pizzeria or a Greek or Asian restaurant are probably higher in most of Germany than those of coming across a traditional inn. Even in the southwest with its more indulgent food culture and higher density of restaurants of all categories, people love to go *zum Italiener* or *zum Griechen* (to the Italian or the Greek). Besides Italian and Greek restaurants, French, Austrian, Chinese, Thai, Vietnamese, Lebanese, Japanese (sushi), and many other ethnic eateries abound.

Until about a decade ago, with the exception of ice cream and food at fairs, eating while walking in the street was considered unacceptable behavior and was rarely seen. Drinking from a beer bottle in public was just one step further down the social ladder and a sure sign of a homeless person. Today, it is quite normal and socially acceptable to walk around German streets eating or with a drink in one's hand, although admittedly most take-out and street food is offered in busy city centers, in open-air markets, around large department stores, near tourist attractions, and in or around train stations, largely replacing the *Bahnhofsrestaurant* (train station restaurant) of old.

Today, fast food carries with it notions of fun and social freedom. It is an affordable alternative, especially for allowing young people to escape family restraints and meet with friends over a meal. Turkish *Döner Kebab* (meat on a vertical spit, similar to gyros), Lebanese falafel, Berlin *Currywurst* with French fries, and pizza dominate the offerings.

Special Occasions

The differentiation between *Alltag* (everyday) and *Festtage* (holidays or special occasions) used to be much more marked in Germany. It was mostly based on Christian religious rules and prohibitions. One used to dress better, go to church, and eat differently and more sumptuously on holidays or special occasions. However, with the onset of industrialization and the dominance of mechanical production, new time patterns and eating groups emerged. New developments were furthered by general affluence: Modern wealthy people moved away from religious holidays spent with the family or a larger social group toward a more globalized and nation-transcending celebratory culture (witness the rise of Halloween in Germany, unknown until a few years ago), accompanied by a loosening of social taboos and peer pressures.

There are relatively few nationwide public holidays in Germany besides those celebrated on weekends. As religion plays less of a role in most Germans' lives, many originally religious holiday rituals survive as almost-secular events, including

Christmas. Furthermore, the wide availability of most foodstuffs nearly throughout the year makes it difficult for distinctive food traditions related to holidays to survive. But even if the reasons might not be as clear as they once used to be regarding holiday fare, special occasions—which, of course, also include personal festivities such as birthdays or weddings, more official occasions like fairs, and private gatherings, mostly on the weekend—still include special food.

As a general rule that remains valid until today, however, holiday meals tend to involve larger gatherings than weekday meals and tend to be richer and longer, for instance, including a more sumptuous dessert. Sweet baked goods, such as pastries, cakes, and cookies, are the most obvious and continuing markers for special occasions in Germany. They range from a *süßes Stückchen* (sweet pastry), eaten as a private treat on the go, to Sunday afternoon cake, traditional Christmas cookies, and extravagant wedding cakes. Before private households were generally equipped with an oven, all the baking was done at a communal oven or at the bakery. Deep-frying pastries in lard was the housewife's alternative then and represents a category of its own, above all associated with Carnival time.

For most Germans the weekend is experienced as a short holiday, as the contrast between work and free time tends to be strongly felt. Friday night, Saturday, and Sunday, when most people do not work, are a highlight to look forward to. Besides household chores, gardening, do-it-yourself car and house projects, and larger shopping trips, these days are spent going out (Friday and Saturday are the busiest nights in German restaurants), meeting friends, or going on day trips to the countryside or other destinations.

Kaffee und Kuchen is the least formal way to mark a special event with a meal. Unlike most American cakes, German *Torten* tend to be somewhat lighter, favoring whipped cream and some buttercream over the popular American cream icing. The best-known German Torte, without doubt, is *Schwarzwälder Kirschtorte* (Black Forest cherry gâteau), at its best a glorious combination of chocolate sponge cake, tart cherries, Kirschwasser (cherry brandy), and freshly whipped cream. However, frequently

it is only a poor imitation of the real item, relying on cheap and longer-lasting buttercream and maraschino cherries.

Christmas undoubtedly is the most important holiday of the year, connected to special foods of all kinds. At its core, its present form goes back to the bourgeois families of the 19th century. It is still very much a rather quiet family affair, *eine besinnliche Zeit* (a time of contemplation), but also the occasion for a *Weihnachtsfeier* (Christmas party) at businesses and offices during the Advent weeks. During the whole Advent period, *Weihnachtsbäckerei* (Christmas baking) plays an important role. It is often an occasion for friends to gather, with children joining in the mixing and stirring and especially the cutting and decorating of cookies. The most traditional German Christmas cake is the *Stollen*. Looking at today's recipe, heavy with butter, almonds, and dried fruit, it is hard to believe that Stollen originally started as a cake for the Advent fasting period

before Christmas. *Lebkuchen* (gingerbread) is rarely made at home. Its tradition goes back to when the crusaders brought exotic spices home with them. Marzipan (almond paste) is generally regarded as special. For Christmas it mostly takes the shape of *Marzipankartoffeln* (literally, marzipan potatoes), small balls coated in cocoa powder, or other imitations of fruits and vegetables. Christmas lunch on December 25 is for most Germans quite a grand affair, depending on personal means. Restaurant dining is more of an option than on Christmas Eve, but, for the most part, geese, ducks, or venison legs or saddles are roasted in private ovens, to be served with brussels sprouts or red cabbage.

A multitude of *Volkstfeste* (fairs) all over Germany offer a mix of fun rides, amusements, and food and drink, the most important being Oktoberfest in Munich, which centers around huge amounts of beer and accompanying *Schmankerl*, hearty fare like grilled chicken and pork shanks.

Diet and Health

For most Germans, diet and health are closely linked. This could be traced back to the holistic approaches to medicine that were practiced in medieval times, and thus to its roots in India, where it is still alive in the Ayurvedic school. But with collective morality loosening, moral obligations have become more individualized and today include the obligation to eat right, that is, healthily.

Life expectancy in Germany is increasing; currently, it is at more than 75 years for men (of which more than 68 years are spent in good health) and more than 81 for women (of which 72 in good health). But it is still thought that nutritional knowledge is insufficient. Overall alcohol consumption is decreasing, and there is a trend toward eating poultry and fish instead of red meat, but fat consumption remains too high and not enough vegetables and fruit are eaten. Varying levels of education, financial means, and gender make for different patterns. The higher social classes and women have significantly better nutritional knowledge than the lower classes and men, respectively.

According to a survey conducted in 2003, 66.9 percent of all German men are overweight, with a body mass index (BMI) of 25 or above, including 17.1 percent who are obese, with a BMI of 30 or above. As in most Western countries, slimness is seen as an ideal and is projected as such in the media. In its most excessive forms, for instance, in fashion advertising, it is also publicly criticized. The link to eating disorders, which are seen as psychological in origin, is widely accepted. Seventy percent of girls between 14 and 15 years are thought to have a diet history. Indeed, diets are an ever-present subject in newspapers, magazines, and books.

Food production, preparation, and trade are strongly regulated in contemporary Germany. The *Lebensmittelrecht* (food law) is a federal law falling under the jurisdiction of both the Ministry for Consumer Protection and the Ministry for Health. Its main purpose is to guarantee food safety as well as a certain level of quality. Looked at rationally and put into a larger perspective, most food scares and scandals seem somewhat overblown when set against

the actual casualties. Undoubtedly, objective food safety in Germany has never been as high as today, and the crisis surrounding bovine spongiform encephalopathy (mad cow disease), for instance, became a turning point in German food politics, as from that point transparency and organic agriculture were heavily promoted.

Genetically engineered food is a very controversial topic in Germany, where the first experimental plantings have only recently been allowed. Another discussion concerns ingredients seen as potential allergens or for those who are subject to lactose, gluten, and other food intolerances.

Insecurity and angst resulting from the inability to understand the often-complex interrelations between diet and health combine with a romanticization of supposedly pure natural food versus artificial human-made food. This has led to a rise in vegetarianism—these days about 8 percent of all Germans are vegetarians—as well as growing environmental awareness, apparent in a multitude of ecological groups, notable among them the Green Party.

But many today apply *gesunder Menschenverstand* (literally, healthy common sense) to seek a balance between human-scale artisanal and industrial perfection in food. Healthy alternatives take different forms for different people. Abstention from smoking, alcohol, and/or sweets during Lent (the weeks leading up to Easter) is not necessarily linked to religious practice. Homeopathic treatment is gradually being recognized by health insurers. Pharmacies expand to become health centers. Ayurvedic treatment is in, and yoga schools are booming. But most important is the growing market for organic and biodynamic food, led by small chains of organic supermarkets. Customers are mainly families with young children from the middle to upper classes, but generally, in spite of discussions about what is acceptable as such, the organic alternative, though not affordable for all, is seen as the better option for reasons beyond personal health.

Great Britain

Overview

Great Britain is an island with a heavily indented coast situated on the northwestern continental shelf of Europe, with Ireland to the west. It contains three countries, England, Wales, and Scotland, which, together with the Province of Northern Ireland, make up the United Kingdom. Colloquially, Great Britain refers to the political unit of the United Kingdom as well as to the island. Global interaction through trade and empire has affected food and taken British ideas about it to former colonies. In the 1970s the United Kingdom joined the European Union, whose policies on agriculture have had a significant impact on food production.

The population of the United Kingdom is about 61,383,000; between 4.5 and 5 million are of Asian, Caribbean, African, Chinese, or other non-British origin. The country is heavily urbanized and industrialized and dominated by London as a source of new ideas.

Southeast Britain is a mixture of flat or rolling land and low hills; the west and north contain areas of low mountains, the highest just over 4,000 feet. Soil types are varied, reflecting a complex geology. The climate is temperate, although the west and north are significantly wetter. About 25 percent of agricultural land in Great Britain is arable, principally in southern and eastern England, and northward up the east coast into Scotland. In the west and north, the emphasis is on cattle and sheep.

Agriculture is intensive but fulfills only about 60 percent of the country's food needs and employs under 1 percent of the labor force. Processing,

distributing, and retailing food are important sources of employment, as is catering. Food production generally is industrialized. Dependent on imports, both of raw ingredients and ideas, current food trends tend to be inspired by other cultures and subject to fashion, and they spread across the country in a few years. British food culture has changed markedly since the 1960s, as interest in dishes and ingredients from all over the world and a vibrant restaurant scene displaced an earlier reputation for plain, bland, poor-quality food.

The traditional diet is based on bread, potatoes, dairy produce, and meat. Regional ideas related to food survive but are nuanced and sometimes difficult to detect. More obvious is a reliance on imported food, including many tropical crops and fruit and vegetables. Migrant communities, cheap foreign vacations, media interest in food, and supermarkets' marketing strategies have influenced and altered eating habits significantly. Personal taste is important in food choice; ideas relating to health or to ethics about production systems and animal welfare are influential among some groups. Religion has a weak influence, except among minorities, for instance, those from religious backgrounds such as Hinduism or Islam.

Economics are important. Money spent on food as a proportion of income, and in real terms, has fallen over the past 50 years. It has also declined as a proportion of household expenditure. Food and drink accounted for about 25 percent of consumers' total spending in 1976 but in 2001–2002 was down to about 16 percent.

🍴 Food Culture Snapshot

John and Kate Smith live in an outer suburb of London. John works in information technology for the local council and walks to work; Kate commutes into central London. Her journey takes an hour each way, and she sometimes works late, until 7:30 P.M. Neither was born in London. Like many of their friends, they have little time for shopping and food preparation and rely on the supermarket, take-out food, and eating out. Their weekly one-stop shopping trip includes bread, milk, tea, coffee, pasta, rice, breakfast cereal, fruit juice, yogurt, biscuits (cookies), cheese, margarine, and meat or fish, usually in portions—steaks, chops, chicken pieces, salmon steaks. Vegetables include peppers, tomatoes, onions, carrots, frozen peas, and prewashed salad in bags; they stock the fruit bowl with bananas, apples, and oranges or buy whatever soft fruit (strawberries, raspberries, blueberries) is on special offer. Pre-prepared meals, chilled or deep-frozen, also go into the basket.

On working days Kate rises at about 6:30 A.M. and leaves the house an hour later. John eats cereal or toast and drinks tea at home; Kate buys a pastry and a cappuccino at the station and sees this as a reward for early starts and long days. She packs a lunch; it might be sandwiches filled with cheese and chutney or cold roast chicken, or a salad based on pasta or rice from the previous evening. John eats a subsidized lunch in the work cafeteria. He tries to make a healthy

choice from the salad bar but often ends up with chips (French fries) on his plate.

On weekday evenings, they eat dinner when Kate returns. They tried not to rely on expensive pre-prepared meals, but new or exotic-sounding dishes in the supermarket freezer are tempting. Otherwise, they favor pasta or rice dishes, quick-to-prepare heat-and-serve pizzas, or meat such as chicken portions baked in a ready-made curry sauce. When Kate works late, she often collects a take-out meal from a nearby Indian or Chinese restaurant on her way home, and they consume it with a bottle of wine while watching a cookery program on television. They rarely eat dessert or pudding during the week, except ice cream, fruit, or yogurt, although both are fond of biscuits and chocolate. On weekends they look through their collection of cookbooks and shop for fresh ingredients for more ambitious fish or meat dishes, or they make a Sunday roast of beef, lamb, or chicken, followed by apple crumble or a chocolate cake, or eat out at a favorite pub.

They would like to cook more and are conscious that their diet is reliant on processed food and tends to be high in fat and salt, but long working hours seem to leave little time and energy for this or for local shopping. There are few of these local shops left, although a street market still thrives about a mile away. This reflects a recent influx of migrants from sub-Saharan Africa, and sometimes they look at the stalls and wonder how to cook cassava.

Major Foodstuffs

Diversity is the only word to describe contemporary British food. The most obvious influence is multiculturalism, and cuisines from all over the world are raided for ingredients and techniques. The growth of vegetarianism, foreign travel, and the work of chefs and writers inspired by other cultures have influenced choices, as have changes in retailing and an intense media interest in food. The long-standing reliance on wheat, potatoes, meat (especially beef), and dairy produce was evident well into the 1970s, and these are still important, but their proportions in the diet have fallen, while intakes of poultry, rice, and pasta have risen.

Flour always means white wheat flour, unless otherwise stipulated, and products made from it are important sources of carbohydrates. It is used in bread, cakes, pastry, biscuits, sauces (for thickening), and many other items. Bread means white wheat bread, the popular choice, in the form of soft, oblong, thin-crust loaves, sold presliced and wrapped. As toast or sandwiches, together with related products—rolls, buns, teacakes—it is the basis for snacks and light meals. Other important items are scones, crumpets or pikelets, and muffins (all types of griddle breads, i.e., what are called English muffins in the United States).

Breads made using continental European and eastern recipes are popular: croissants, focaccia, ciabatta, pita, nan (a flat, tear-shaped leavened bread), and chapati (thin, circular, unleavened bread); pizza is also common. Rich fruitcake made with flour, butter, eggs, sugar, and dried fruit, covered with marzipan and icing, is a celebration food. Cakes and pastry are treats and the basis for some puddings (desserts). Many types of sweet biscuits are made commercially and at home and are eaten with tea or coffee.

Oats are used in traditional baking and for breakfast porridge. Barley is important in brewing beer and making whiskey. Maize is little used, although its derivatives have numerous applications in the food industry. Other important cereal products are breakfast cereals, pasta, and rice; quickly prepared, they fit in with a perceived time shortage in British life and with growing tastes for Italian and Southeast Asian food.

Pulses are most popular as canned baked beans, usually eaten on toast. Dried peas and beans are used in soups, and interest in vegetarian and ethnic foods has stimulated interest in dishes such as dal, a staple of Indian cuisines, and hummus. Soybeans are less popular, although tofu is used to a limited extent.

For centuries meat has been eaten by all who could afford it, and nutritional theories about the importance of it as a protein source enhanced its status. Attitudes are also influenced by price, farming methods, and perceptions of health risks. Beef, lamb, and pork provided the basis for most main

meals in the mid-20th century; poultry and game were luxuries. Chicken is now inexpensive and the basis of many routine meals, and beef and lamb have become more costly.

Roast beef is a dish for Sunday dinners; steaks are also, as a treat. Beef goes into stews, pies, burgers, and sauces for pasta, but veal is little used. Lamb or mutton (from older sheep) is also used as roasts, chops, or steaks, or in stews and in dishes inspired by French, Middle Eastern, or Indian cookery. Fresh pork is used for roasts or is grilled or fried as chops or steaks. Pork products include pies that are prepared with pastry made using lard melted into hot water and mixed with flour, filled with chopped pork and jellied stock. Fresh sausages are made from lean and fat pork, seasonings, and rusk. Salted, the meat becomes bacon and ham, the former essential for a traditional British breakfast and in sandwiches eaten as snacks or quick meals.

Chicken is cheap and ubiquitous. It is roasted, baked with a bought or homemade sauce, or made into stews, curries, or stir-fries. It is especially popular in curries developed by Indian restaurants, and one of these, chicken tikka masala, is quoted as the nation's favorite dish. Thai dishes, especially green chicken curry, are popular, too. Convenience foods, from supermarket versions of curries to heat-and-serve nuggets, use chicken as a base, and cold cooked chicken is used in salads and sandwiches. Turkey is mostly served roasted at Christmas but is also made into convenience products for a year-round market. Guinea fowl, quail, and duck are available, but consumption is relatively small, and goose is restricted to Christmas.

Game, once a high-status food, is widely available and compares well in price with farmed meat. Venison, hares, rabbits, pheasants, partridges, grouse, and several other bird species are all available in season. Offal (internal organs) from all meat animals is eaten but has declined in popularity over recent years. Beef, lamb, and chicken are used in curries, *kofta* (meatballs), and kebabs by ethnic minorities, especially Muslims from the Indian Subcontinent. Versions of these, and of Chinese-influenced stir-fries, have been adopted by the wider population.

Fish, another source of protein, has become less important. Cod, haddock, and herring, once important, are all overfished, and salmon, much farmed off northern Britain, is now relatively inexpensive and used in many routine meals with different sauces and flavors. The taste for smoked fish like kippers has declined, but smoked salmon, formerly a luxury, is easily available. Shellfish are popular but vary widely in price, with crabs, prawns, and mussels being relatively cheap, and lobsters and oysters expensive. Tastes generally have moved toward convenience. Fish products such as frozen fish fingers or fish cakes are popular. Commonly used canned fish types include salmon, tuna, sardines, pilchards, and anchovies.

Eggs cooked in various ways are a component of a full breakfast and the basis for light meals. They are essential ingredients in baked goods, puddings, and other dishes, as bindings, batters, food coatings, and pastry glazes.

Milk (mostly cow milk) and milk products are important, though changes in agriculture induced by European Union policies have increased interest in sheep and goat milks and their products. Liquid milk is available as whole milk (about 3.5% fat), semiskimmed, and virtually fat free, although consumption of it is declining. It is used as a drink, poured over breakfast cereal, and much used in cooking for sauces and custards.

Cream of various thicknesses is used in or to accompany many desserts and in cooking. Clotted cream is very thick and rich, a traditional product of southwestern England. Yogurt was virtually unknown until the 1960s but is now widely consumed, as are various dairy desserts such as ice cream, mousses, and *fromage frais* (a cultured semiliquid dairy product not unlike yogurt).

Cheese is eaten alone or as an ingredient. Cheddar is most important. Much cheese, especially the “territorials” (nine traditional recipes for hard cheese), is made in creameries (factories). Changes in the dairy industry led to the growth of artisan cheese making, and hundreds of recently developed cheeses, including sheep- or goat-milk ones, are now produced. Cheese is also imported, both from former colonies and from continental Europe.

Fats and oils include butter and margarine, spread on bread and used for frying and as ingredients, especially in baking. Choice is dictated by price, flavor, and perceptions of healthiness. Other solid fats include lard for frying and pastry, drippings (rendered beef fat, for frying), and suet in pastry and puddings, but these are losing importance and vegetable oils have gained ground. Olive, corn, sunflower, soy, and rapeseed (canola) oils are all used for frying and in dressings.

Vegetables are recognized as providers of vitamins and minerals but received little attention in traditional British cookery. Potatoes are most important, cooked in many different ways and popular as products such as crisps (potato chips). They are most important as a source of carbohydrates but are often eaten in large enough quantities to contribute useful amounts of vitamin C to the diet.

Green vegetables, mostly belonging to the cabbage family, are important. Beans and peas, whether homegrown, flown in from warmer countries, or frozen, are also popular, as is asparagus. Onions, celery, and garlic are important for flavoring. Carrots, turnips, and parsnips are winter staples, often added to soups or stews or used as accompaniments.

Mushrooms are usually cultivated, although an interest in wild ones has developed recently. Fresh salad leaves and herbs of many kinds are used, including the traditional English specialty of watercress. A taste for green cilantro is recent, stimulated by the taste for Indian and Thai food. Tomatoes and vegetables that were once highly seasonal or exotic, such as peppers, eggplant, zucchini, and squash, are readily available. Supermarkets have helped to develop the market for exotic vegetables. Some vegetables, especially onions and beets, are pickled in vinegar, and others are made into chutneys (spiced sweet-sour relishes). Tomato products are important in sauces and flavorings.

Fruit is consumed raw, cooked, and as juices or is made into sweet puddings, preserves, and jams. Apples are a quintessential British fruit. There are many varieties, but in practice only a few commercially successful ones grown in southern England or abroad reach the market. The best known is Cox's Orange Pippin. Some are grown specially

for cooking; these varieties, such as Bramleys, are acidic and used in sweet dishes such as pies and crumbles. Apples are also pressed for juice, and special varieties are grown for cider, which is always a fermented drink.

Pears are also grown for both eating and cooking. Many are imported, as are most species of stone fruit, though some plums and cherries are grown in southern England. Damsons (a small, acidic, juicy plum) grow well over much of the country but reach the market in relatively small quantities. Peaches, nectarines, and apricots are imported from continental Europe and further away.

Strawberries and raspberries are popular, both homegrown and imported. They are eaten with cream for dessert and are used for filling cakes and to make jams. Red and black currants are also used in desserts and jams. Gooseberries (*Ribes grossularia*) grow easily throughout Britain and are cooked for puddings. Pink forced rhubarb is a delicacy available only in the late winter and early spring.

Citrus species (oranges, lemons, limes, and grapefruit) are vital and have been imported fresh or preserved for centuries. Most are consumed raw, as fresh fruit or juice, or are used in desserts and some savory dishes. Lemons are especially important in flavoring sweet dishes such as lemon meringue pie, lemon curd, syllabub, mousses, and ice creams. Seville (bitter) oranges are grown in southern Europe for the British market and make orange marmalade essential for breakfast.

Other imported fruits include grapes, figs, melons, dates, bananas, pineapples, mangoes, papayas, kiwi fruit, avocados, and other tropical species such as lychees, some of which have a limited market among ethnic minorities. Fruit-based preserves are widely used, both alone and as flavorings.

Baking includes dried fruit: Sultanas, raisins, currants, prunes, dates, and candied orange, lemon, and citron peel are all essential for fruitcakes, traditional enriched breads, plum puddings, and mince pies. Nuts—hazelnuts, almonds, walnuts, Brazil nuts, pistachios, and pine nuts—are also essential. Almonds are the most important and are the basis for marzipan, which is used for decorating fruitcakes. Coconut is another popular flavoring.

Sugar is the principal sweetener. Cane sugar is imported from tropical countries; beet sugar is produced within the European Union. Its use in hot drinks, as a preservative for jams, and a bakery ingredient has declined, but soft drinks, processed food, and confectionery keep the intake relatively high. Corn syrup and other sweeteners are used in industry. Black treacle and golden syrup give characteristic flavors and textures to some baked goods. Honey is mostly used as a spread on bread and toast.

Vinegar is an essential souring agent and pickling liquid. Malt vinegar (made from malted barley), with a characteristic flavor and brown color, is used to pickle vegetables and eggs as well as in chutneys, and it is sprinkled over chips, fried fish, and other foods. Wine or cider vinegar is used for salad dressings and dishes in which a gentler flavor is required.

Spices of many types are widely used. In traditional cookery they are most important in sweet foods. Cinnamon, nutmeg, allspice, and cloves are used in baking. Vanilla is used for flavoring sugar, custards, and ice creams, and ginger is used in biscuits and gingerbreads. Pepper is ubiquitous in sauces and stews, and a mixture of black and white peppercorns, mustard seeds, and whole dried chilies flavors pickling vinegar. Allspice and pepper occur in mixtures for salting meat. A little chili powder and mustard are often added to cheese dishes. “English” mustard is a fine, pungent yellow flour, mixed to a smooth paste with water to accompany cold ham and beef; milder coarse-grain mustards and French mustards are popular as well.

Curry powders, originally arriving with the East India Company, have been a part of British food culture for over 200 years. Recent immigration from India and Southeast Asia has brought new ideas about spice mixtures. Sauces and pastes, bottled or chilled, are sold as convenience products for use with meat, vegetables, and rice or noodles. Varieties include tikka or tandoori pastes and *rogan josh*, derived from Indian traditions, and Thai green curry paste. Chinese mixtures such as sweet and sour sauces and Italian-type cook-in sauces based on tomatoes, cheese, or pesto are also common.

Another British tradition is the use of bottled sauces such as Worcestershire sauce and mushroom

ketchup, used for savory dishes, and brown sauces such as HP, which is thick, sweet-sour, and spicy and is used as a table condiment, as is tomato ketchup. Commercially produced chutneys and pickles, soy sauce, and mixes for making gravy, stuffing, custards and other desserts, cakes, and breads are all to be found.

Hot drinks include tea, closely identified with British food culture. It is drunk with food, after meals, and any time in-between. Most is black tea of Indian origin, purchased as teabags. Coffee, mostly instant, is equally important. Chocolate-based drinks are also common, although consumed with less frequency, and chocolate confectionery (often very sweet and low in cocoa solids) is ubiquitous. Sugar confectionery is also widely consumed.

Alcoholic drinks are widely purchased, ranging from canned lager-type beers to artisan-produced

real ales, including bitter, porters, and dark beers. Wine is mostly imported, though a small amount is produced in the United Kingdom. Of spirits, whiskey (closely associated with Scottish and Irish cultures) and gin (frequently consumed as an aperitif with tonic water) are perhaps the most typically British. Alcoholic drinks are also used in cookery, as liquids or flavoring agents. Bottled mineral waters and soft drinks, both as cordials for dilution and as carbonated products, are also widely consumed. Neither drinks nor confectionery are seen as food in the sense that meat, bread, and potatoes are, but, with the exception of mineral water, they contribute energy, and sometimes other nutrients, to the diet.

Cooking

Domestic cookery was always considered to be women's work, and it is still largely a female

A traditional British pub in Cornwall. (Shutterstock)

responsibility to maintain basic stocks of food and put meals on the table at the expected time. However, men are more willing to cook than formerly, particularly for special occasions, and restaurant chefs are often men.

In practice, much cooking is now actually heating of purchased prepackaged meals. These have been developed by an innovative and powerful food-retailing sector exploiting a desire for convenience, long working days, a rise in car ownership, and a tendency to dislike or feel inadequate about cooking as a task. Ethnic minorities tend to have more obviously gendered and traditional food cultures and to adhere more to their communities' food traditions.

Despite this, kitchens are important rooms, often expensively fitted and equipped. Gas or electric cookers are usual, but ranges such as Agas have a following. Microwave ovens are common, usually supplementing conventional ones. Perishables are generally stored in a fridge. Small appliances always include a kettle, usually electric, for heating water for tea and other drinks, and a toaster or grill for bread. Ownership of cake mixers, bread makers, slow cookers, pressure cookers, espresso machines, spice grinders, rice cookers, food processors, juicers, and liquidizers depends on individual means and interests. Their presence does not always mean that they are used. Meals are often eaten in the kitchen, or in front of the television.

Basic kitchen utensils are similar to those from much of the Western world: pots, pans, casseroles, and roasting pans of various sizes and shapes. A traditional emphasis on baking means that most kitchens have bowls and pans for mixing and shaping cakes, pies, and tarts, as well as a wooden rolling pin for pastry. Scales are routinely used for measuring. Metric measurements are officially used, but imperial ones of pounds, ounces, and pints (20 fluid ounces) are still quoted. Nonindigenous communities such as the Chinese and groups from the Indian Subcontinent have brought their own utensils, and some of these are found in the wider British domestic sphere; the wok is probably the most widespread.

Recipes are as likely to come from television chefs, magazines, newspapers, or promotional leaflets as

from previous generations. Quick and easy preparation is favored. Many basic raw ingredients can be bought in a semiprepared state, for instance, peeled potatoes vacuum-packed in plastic, ready-washed salad leaves, or trimmed and ready-cut beans or carrots, all reducing the time taken to cook a meal but not the expense.

Roasting is always the first choice for prime cuts of meat, such as beef sirloin, a leg of lamb or pork, and birds such as chicken or turkey. This usually takes place in an enclosed oven and is, more correctly, baking, but it is usually called roasting. Gravy, based on the sediment left by the meat in the roasting pan, often augmented by a packaged mix containing thickeners and flavorings, is an important part of a roast meal. The remains of a roast are often expected to provide one or two subsequent meals, eaten cold or reheated in various ways with or without sauces.

A perceived shortage of time means that steaks and chops, or convenience foods such as sausages, bacon, or burgers, are popular, grilled or fried. These methods are also used with fish. Frying is used for cooking eggs, as well as vegetables such as tomatoes, mushrooms, and potatoes, and also for reheating leftovers. Beef, pork, and chicken are now used extensively in stir-frying, and barbecues have become increasingly popular for cooking in summer.

Boiling is a common method for cooking vegetables. Braising or pot roasting is sometimes used for large pieces of meat. Poaching—cooking gently in water, milk, or wine—is often used for fish, with the cooking liquid being used in a sauce (fish pie is usually this type of recipe, topped with mashed potatoes). Meat is often cooked in casseroles and stews, usually flavored with onions, herbs, and sometimes other vegetables. More complex methods and seasonings derived from southern European or Indian cookery, or marinades or sauces, either home-prepared or purchased, are used by more ambitious cooks. Fish and vegetables are also cooked this way, as are beans for vegetarian dishes.

Baking is a traditional culinary strength. Until the 1970s, the making of bread and yeast products varied across the country as to whether this was carried out at home or by a professional baker. The

further one was from the southeast and metropolitan influence, the more likely this was to be practiced at home, and the more varied the products, with numerous regional types of bread rolls and buns. Soda bread, leavened with baking powder, is regarded as an Irish specialty, and *girdle* (griddle) baking as characteristic of Wales, Scotland, and the northernmost part of England.

Cakes and other products raised with baking powder were frequently made at home and still are, though in smaller quantities. There are numerous recipes for fruitcakes, sponge cakes, tea breads (plain cakes of the banana-loaf or date-and-walnut type), scones, gingerbreads, and biscuits, all enormously popular. They were eaten as snacks, offered to guests, and served for evening teas; now, they are more likely to be occasional treats or are made when guests are expected.

Another branch of sweet cookery in which the British have a long interest is making puddings or desserts. Pudding can refer to any sweet item eaten at the close of a meal, including fruit or ice cream, but it also denotes a cooked dish, often some combination of fruit with a sweetened cereal mixture. Typical examples are crumbles (apples, rhubarb, gooseberries, or any other fruit with a topping of flour, butter or margarine, and sugar); fruit baked under a cake or gingerbread mixture; concoctions of fruit, custard, and cream; or suet puddings, now best known as Christmas plum pudding, but also including sweetened mixtures of suet, flour, and fresh fruit, spices, or jam. Pastry is used for both sweet and savory dishes, mostly pies of fruit or meat. A basic short type is often made at home, but puff pastry is usually purchased ready-made.

Home preserving has been rendered less important by the year-round availability of frozen or imported fresh fruit but was another traditional skill, and many people still make small amounts of sweet fruit preserves. Orange marmalade is perhaps the most characteristically British of these items.

Typical Meals

Food is organized into several named meals. Breakfast begins the day; lunch is always a midday meal,

although older people and those from provincial and rural backgrounds sometimes refer to this as dinner. This word implies the main meal of the day, once routinely taken at midday but now much more likely to be an evening meal. Those who eat dinner at midday call their evening meal tea—not to be confused with afternoon tea, which is essentially a snack between lunch and a midevening dinner.

Breakfast eaten at home on a working day is usually a snack of fruit juice, coffee or tea, and breakfast cereal with milk or yogurt, or toast with butter or margarine and jam or marmalade. On weekends or vacations, especially if staying in a hotel, breakfast is often a cooked meal. Fried bacon and eggs are most important in this; sausages, black pudding (blood sausage), fried bread or potatoes, mushrooms, tomatoes, and baked beans are added in any combination, and toast and marmalade are expected as well. Alternative cooked breakfasts include eggs in various forms and fish such as kippers or kedgeriee (a mixture of smoked fish, rice, and fried onions, derived from Indian *kichri*, a mixture of rice and lentils).

Lunch depends entirely on individual means, tastes, and schedules. Sandwiches are probably most common; light meals of salad, soup, or a pastry-based snack are also common choices, but in practice the meal can range from a chocolate bar and a drink to an elaborate meal of several courses. Dinner is the largest meal. British food culture contains

A typical breakfast in England including blood pudding, baked beans, bacon, eggs, and sausage. (Shutterstock)

the notion of a “proper meal” or a “cooked dinner.” At its most basic, this is meat, potatoes, and vegetables. A sweet pudding often, but not invariably, follows. The savory course could stand as a meal on its own but not the pudding.

The idea of a proper dinner is most developed in the “roast”—roast meat, gravy, roast potatoes, and boiled green vegetables, closely associated with Sundays, although less of a ritual than it once was. The format is relatively stable. Accompaniments are Yorkshire pudding, horseradish sauce, and mustard for beef; mint sauce for lamb; and applesauce and sage and onion stuffing for pork, which is cooked to ensure the skin makes crackling. Pudding for Sunday dinner is often trifle, a layered dish of wine-soaked sponge cake, fruit preserves, custard, and cream.

Roast Beef and Yorkshire Pudding

About 5 lb beef sirloin or rib, preferably from a traditional breed fed on grass

Salt, pepper, and a little dry mustard powder mixed with about 1 tbsp flour

For the Pudding

4 oz (1 scant cup) all-purpose flour

Pinch of salt

2 eggs

5 fl oz milk and 5 fl oz water, mixed

Dust the fat of the meat with the flour mixture. Put the joint in a roasting pan and start in a very hot oven (475°F), for about 20 minutes. Turn the temperature down to 375°F, and cook for 15 minutes per pound (rare), plus 15 extra minutes (for medium-rare), plus 30 minutes extra (for well-done). Remove the meat from the oven, and put it on a heated plate in a warm place. Leave to rest for 30 minutes before carving.

While the meat cooks, put the flour for the pudding in a bowl, and add a pinch of salt. Break in the eggs, and stir well. Add the milk and water slowly, stirring well. The batter should be the consistency of light cream. When the meat comes out of the oven, take a roasting pan and add about a table-

spoonful of drippings from the meat. Heat it in the oven for a few minutes at 450°F. Remove the pan from the oven, and pour in the batter (wear oven gloves, as the fat may spit). Return to the oven, and bake for 30–40 minutes, until golden and rumped. Cut into squares for serving.

Make the gravy in the pan the meat was cooked in. Pour all the fat and juices into a small bowl. Spoon off the fat, and reserve the juices. Add about a tablespoon of fat back to the pan, and stir in a tablespoon of flour. Stir over gentle heat until the mixture is lightly browned. Then blend in the juices from cooking the meat and some stock (or water from cooking vegetables or a gravy mix) to make a thin sauce. Cook gently for a few minutes, adjust the seasoning, and serve with the beef and Yorkshire pudding.

Choices for weekday meals include meat pies, sausages, chops or steaks, meat stews, and fish, egg, or cheese dishes. Salads are unusual as main meals. Choices for dinner now also include many nontraditional foods: pasta or rice dishes, stir-fries, or curry for cooking meat. These have sometimes been adapted to the idea that the meat and carbohydrates are most important, with vegetables in third place. Purchased fish and chips, or hot food from a take-out place (usually relating to an ethnic minority community), is often chosen as a minor treat or when time is short.

Afternoon tea, like cooked breakfast, now survives mostly in hotels, but snacks consisting of drinks, especially coffee or tea, or soft drinks, plus biscuits, crisps, confectionery, or fruit are taken at almost any time of day.

Eating Out

In the 1980s, the nation’s favorite meal out was prawn cocktail, steak, and chips followed by Black Forest gâteau; it is now claimed to be curry, especially chicken tikka masala, a dish developed from Indian tandoori cooking under the influence of British tastes, but these clichés disguise the extraordinary complexity, dynamism, and eclectic nature of eating out in contemporary Britain.

A table set with tea and sweets for a classic British afternoon tea. (Dreamstime)

London has an especially vibrant and interesting eating-out culture, with numerous excellent restaurants, cafés, and pubs. The capital sets the fashions for Britain generally, but recently provincial restaurants have shown more interest in reflecting their locality. The other side of this picture is one of a nation that can be sold the latest fad and that consumes fast food in enormous quantities.

Places to eat out take many forms: pubs, hotels, sandwich bars, coffee bars, tea shops, carveries (where they carve large roasts buffet style), pizzerias, kebab houses, snack bars, fast-food outlets, motorway service stations, and restaurants from basic to Michelin starred, plus a substantial noncommercial sector providing food in institutions. Eating out is seen on one level as a pleasurable, social activ-

ity. Drinking, on the other hand, is often seen as a pastime that does not necessarily involve food.

Inevitably, income plays a part in choice. Lower-income groups tend to spend more on takeout than other groups, but eating out has accounted for a steadily increasing percentage of household expenditures over the last 50 years. Most money is spent on eating out in southeastern England, where both wealth and premium-priced restaurants are concentrated.

Restaurants identify themselves in terms of cuisine (French, Italian, Indian, Mediterranean, modern British), type of food (pizzeria, kebab house, steakhouse), or mode of operation (fast-food restaurant, carvery). They can be independent or part of a large chain. Being a chef is now seen as a route to celebrity and a lucrative media career. The food in the best restaurants is excellent in quality and expensive; wine is also expensive. Most restaurants offer vegetarian options on their menus.

Ethnic restaurants began to spread during the 1950s, as Chinese and Italians, followed by Indians (mostly Punjabis) and Greek or Turkish immigrants, opened eating places. Most communities bigger than villages have restaurants serving Chinese, Indian, or Thai food. The success of these restaurants lies partly in the ability to adapt their cuisines to dishes that suit the British palate and notion of a proper meal, with large portions of meat in sauce and less emphasis on the smaller dishes that make up a meal in their native traditions.

Indian restaurant menus include kormas (mild and creamy), vindaloos (hot with chili), and tandooris (spiced meat cooked in a tandoor, a clay oven) as well as rice, Indian breads, *pakor*as (vegetable fritters), and samosas (deep-fried pastries). “Going for a curry” is an inexpensive night out with friends or a good way to round off an evening’s drinking. Balti houses, developed in Birmingham, offer *baltis*, curry sauces containing onions, tomatoes, and sweet peppers and meat such as chicken, served in *karhais*, traditional cooking dishes shaped like small woks.

Bar meals in pubs have become an increasingly important element in eating out. Food provides additional profit and has made pubs, traditionally a masculine environment concerned with beer, more

attractive to women. The flippant term *gastropub* indicates a place with the character of a pub that also offers good and imaginative food at reasonable prices. Menus include classics such as sausages and mash, steak pies, calf's liver and bacon, or fish and chips, as well as more exotic items. Some pubs specialize in Thai food.

Fish and chips (French fries) have been street food since the late 19th century. Usual options are cod or haddock fried in batter. Sprinkled with salt and vinegar and wrapped in paper, they are usually carried out, either consumed with the fingers while walking down the street or taken home. Mushy peas (dried peas cooked to a puree), curry sauce, chicken portions, sausages, squid (popularized by cheap vacations to the Mediterranean), pies, and, in Scotland, sausage-like puddings are usually available as well.

Special Occasions

The most important calendar festival is Christmas, on December 25. A typical Christmas Day menu is imposed by tradition. Usually a midday meal, it involves roast turkey with stuffing, gravy, bread sauce, sausages, rolled-up bacon rashers, roast and boiled potatoes, brussels sprouts, and other vegetables. A minority favor alternatives such as goose, game, or a large piece of beef. A steamed Christmas pudding made with suet, breadcrumbs or flour, dried fruit, eggs, and sugar follows. This is flambéed with brandy and contains a coin, which is lucky for the finder. The Scots have their own version, *clootie dumpling*, cooked by wrapping it in a *cloot* (cloth) and boiling.

Other Christmas foods include mince pies, small double-crust pies filled with currants, raisins, sultanas, candied peel, sugar, spices, apples, and suet minced together, offered with coffee, sherry, or mulled wine at almost any gathering between late November and early January. New Year is important in Scotland; food plays a secondary role to drink, although shortbread (a rich shortcake) and black buns (raisins, currants, almonds, candied peel, and spices, wrapped in pastry) are midwinter specialties.

Other foods associated with the season are nuts, dried fruit, candied fruit, oranges, and sweets and chocolates generally. Certain cheeses are also important, especially Blue Stilton, which is sold in vast quantities at this time, as is Christmas cake, a rich fruitcake. Decorated with appropriate motifs, this is also important for other celebrations, such as Easter, weddings, christenings, and birthdays.

Rich Fruitcake

- 12 oz (2¾ c) flour
- Pinch salt
- 1 tsp ground cinnamon
- 1 tsp mixed spice (similar to pumpkin pie spice)
- 10 oz butter
- 10 oz caster sugar (superfine sugar)
- 6 large eggs
- 2 tbsp brandy or rum
- 4 oz mixed candied peel, chopped
- 4 oz blanched almonds, chopped
- 1 lb currants
- 1 lb seedless raisins
- 8 oz sultanas
- 4 oz glacé cherries, halved

Line a cake pan about 8 inches in diameter with a double thickness of greased paper. Sieve flour, salt, and spices together. Put the butter and sugar in a large bowl, and beat until light and fluffy. Beat the eggs in separately, blending each well before adding the next. Stir in the dry ingredients and the spirit. Add a little milk if the mixture seems stiff. Turn into the prepared pan. Bake in a slow oven at 300°F for about 1½ hours, then reduce the heat to 275°F and bake for a further 4–5 hours. When fully cooked, the cake should be coming away from the sides of the pan a little, and a fine skewer inserted in the center will come out clean. Wrap and store in an airtight tin; the cake can be unwrapped and a little brandy sprinkled over it at intervals. Before eating, cover with a layer of marzipan or almond paste, and ice and decorate as desired.

Other calendar festivals include Burns Night dinners of haggis, neeps, and tatties (turnips and potatoes, boiled and mashed), washed down with whiskey, held around January 25 to celebrate the life of Scottish poet Robert Burns. Shrove Tuesday, immediately before Lent, is a time for pancakes. Easter is celebrated with hot cross buns (light, spiced, and yeast-leavened, marked with a cross) on Good Friday, and chocolate eggs and simnel cake, fruitcake with a layer of marzipan in the center, on Easter Sunday. Gingerbread and toffee are traditional autumn foods for the time around Halloween and November 5 in some parts of the country. Ethnic communities celebrate their own festivals, including Diwali, the Chinese New Year, and several other community-specific events.

Births, marriages, and deaths also have special foods. Weddings are the most visible. The cake (generally rich fruitcake, piled up in tiers) is important. Wedding breakfasts have no specific menu but are composed with the disparate tastes of different generations in mind; they are generally either of the roast dinner type or a cold collation of meats and salads, followed by creamy desserts.

Christenings are generally low key and vary widely, from drinking sessions for the father and his friends to a decorous tea party for family and older relatives. A funeral, too, is generally followed by a gathering involving eating and drinking. It is generally impossible to predict the number of guests, so an afternoon tea or finger buffet-type meal is usually provided.

Most families celebrate birthdays, especially for small children, with a birthday cake and candles appropriate to the birthday on top. Families celebrate other events as individual tastes and inherited customs dictate. Engagements, graduations, and anniversaries all provide an excuse for parties, but there are no traditional forms for these to follow.

Diet and Health

There are variations in diet according to region and income group—the Scots eat especially high levels of salt, sugar, and fat, while people in the south-east of England spend the most on fruit and vegetables. Low-income families tend to resist change

and avoid experiments with new foods. Substantial minorities observe special diets, based on religious (kosher, halal, Hindu) or ethical (vegetarian, vegan) requirements.

A lack of food is rare, as are diseases due to dietary deficiencies, although nutritionists express concern over intakes of certain micronutrients, particularly vitamin D and iron in some groups of the population. More problems are related to overnutrition including high intakes of fat, refined carbohydrates, and salt and the associated obesity, cardiovascular disease, diabetes, and hypertension. Levels of obesity (a body mass index of over 30) have increased significantly in the past three to four decades, especially among children and adolescents. Cardiovascular disease is a major cause of premature death in the United Kingdom, and there is evidence for a link to diet, as with the high incidence of type 2 diabetes. High alcohol intake among some groups is also a concern.

The official advice is to reduce the proportion of energy derived from fat and increase that from complex carbohydrates in the diet, and to increase intakes of vegetables and fruit. Encouraging higher consumption of these is an official priority, promoted in various ways, including provision of fruit in primary schools and a campaign called “Eat Five a Day” (five portions of fruit or vegetables).

Consciousness of food hygiene has become increasingly important, as more food is pre-prepared and held in a partially or fully cooked state; intensive farming and industrial processing have also given rise to concerns about pathogens ranging from salmonella in eggs to bovine spongiform encephalopathy (BSE, or mad cow disease) in beef. Responses have ranged from public health measures, such as tightening legislation relating to food safety, to individual choice in pursuit of organically grown food. Most food-borne illnesses are probably related to *E. coli* 0157, salmonella, *Listeria monocytogenes*, campylobacter, and *Clostridium perfringens*. Less quantifiable threats are BSE, pesticide residues, irradiation, and genetic modification, all recurrently the subject of intense debate and suspicion.

Relative perceptions of the risk to health from diet vary between health professionals, the media,

and the public. Health professionals consider poor diet and food-borne bacteria or viruses as the highest risks. The media concentrate on “scares” and stories with sensational and sinister implications. The public, nervous of an industrialized food supply and cynical of advertising, tends to choose on the basis of personal likes and dislikes, fashion, and convenience.

Greece

Overview

Greece is located in the south of Europe and makes up the majority of the Balkan Peninsula. Its size is 50,949 square miles (131,957 square kilometers), and it falls within the Mediterranean climatic zone. Greece as a geographic region is characterized by 1,400 islands as well as the mainland. In addition, it is located at the meeting point of the continents of Europe, Asia, and Africa. Its neighboring countries are Italy to the west, Albania, Bulgaria, and the former Yugoslav Republic of Macedonia to the north, Turkey to the east, and Libya and Egypt to the south. Greece has an estimated population of 11,262,539, of whom approximately five million live in the capital city, Athens. The population is rather homogeneous, with 93 percent being Greek and only 7 percent of different ethnic and cultural backgrounds, mostly Albanian, Bulgarian, some African, and some Pakistani and Indian. As a nation, Greece is relatively new. Its present geographic form was established right after World War II in 1947. The current constitution was formed on June 11, 1975, under the presidency of Konstantinos Karamanlis, who was also head of state in 1981 when Greece entered the European Union.

Keeping in mind the geographic location of Greece, its long history, and its current state, one can argue that it is the place where Western cuisines and Eastern cuisines meet. In historical terms, the ancient Greeks were avid traders, which acquainted its people with new foodways and exotic ingredients. Historical accounts refer to the regions where one was able to find the best products. One example is by Archistratos, who gives a detailed description

of the best place to find the top-quality *amia* (small tuna fish) and how to prepare it. He claimed that the best specimens were found around Byzantium and that it should be cooked as simply as possible. Greek cuisine was also influenced by Asia, especially after the conquests of Alexander the Great, who introduced to the Greeks new fruits and vegetables as well as spices from as far as India.

After the fall of the Roman Empire and its division into eastern and western parts, Greece was part of the Byzantine Empire, which encompassed much of the Middle East. This relationship brought together various cuisines and exotic ingredients in different parts of Greece. At the same time some islands of Greece were under the influence of the Venetians, who brought their own cultural and culinary traits. Finally, with the fall of the Byzantine Empire in 1452, the Ottoman Turks took over Greece for approximately 400 years, and they in turn introduced many culinary traditions. After the Greek revolution in 1821, Greece started to regain its autonomy, and in 1922 the creation of the state of Turkey brought to Greece thousands of ethnically Greek immigrants from Asia Minor who in turn brought with them their cultural and culinary traditions.

Food Culture Snapshot

Greek dietary habits are similar throughout the country. People usually start their day at around 7 to 7:30 A.M. with a cup of coffee, which is a crucial beverage in Greek culture. It can be cold or hot. Cold coffee is referred to as *frappe*, which is shaken instant Nescafé

Shaving gyro meat into a pita. (Shutterstock)

and is never made from any other kind of coffee. Among younger generations cold variations of coffee may also include *fredo*, which is iced espresso, and *cappuccino freddo*, which is iced cappuccino. Hot coffee is mainly consumed in winter months and includes all the Western forms of coffee (cappuccino, instant coffee, filtered coffee, and so on) and also Turkish coffee. Greek people refer to Turkish coffee as Greek coffee, and they are very sensitive about that. Waiters will refuse to serve it if not ordered as Greek coffee. Whatever the name, Greek coffee is consumed frequently, and Greek people prefer to buy it fresh. Coffee for Greeks is not considered just a drink. It is thought to be part of a meal. It is perceived as highly nutritious (especially Greek coffee) although somewhat difficult on the stomach by itself. For this reason Greeks take their coffee with a cookie or a piece of cake.

For Greeks, the first proper meal is at about 11 A.M. and includes a fresh *tiropita* (cheese pie), *spanakopita* (spinach pie), or *koulouri* (bagel), which they purchase from bakeries or various snack places on the street. These products, together with fresh orange juice, compose the first meal of the day. Lunch is served between 2 and 4 P.M. This is the time of day when everything closes in Greece. It is the first more important meal of the day, and it is highly valued. Lunch will usually include bread, salad, cheese, a main course, and some fruit at the end. Lunch being the first complete meal of the day, there is an effort to include all nutrients in it, from protein to carbohydrates and fat. In between lunch and dinner, people might enjoy another cup of coffee and some fruit to keep them going. Between 8 and 9:30 P.M. dinner is served. Dinner is the final meal in a Greek person's day. It is usually made up of small *meze*, which are small plates of various kinds of foodstuffs. These include bread, cheese (just like with lunch), light varieties of some spreads like *tirokafteri* (spicy cheese salad) or *tzatziki* (yogurt sauce with cucumber and garlic), maybe some small meat *meze* like *keftedakia* (meatballs) and *bekri meze* (pork chunks; literally translated as the "drunken snack"), and always some fruits and vegetables.

It is normal for routine shopping to take a long time. Shopping is done predominantly by women. While supermarkets are modern and designed to satisfy all consumer needs, Greeks prefer to divide their shopping among various stores. Supermarkets are used for dry staples such as pasta or flour, or for products that are very specific, such as cheese for sandwiches or ham. Shopping for fresh produce is done in specialized shops. For fresh fruits and vegetables people go to the *manaviko*, a shop that specializes in fruits and vegetables. For meat, they go to the *kreopolio* (meat shop), for fish to the *psaras* (fisherman) or the *psaradiko* (fish shop), and for bread to the *fourno* (bakery). The reason for this is not that the products found there are necessarily of better quality than those found in a good supermarket. Instead, sale of fresh products in Greece is very much based on personal relations. These shops are found locally in one's own neighborhood, and each neighborhood has its own *manaviko*, *fourno*, and so forth, or they are found in a concentrated block of similar shops,

in which case the entire neighborhood is named after the shops: *perasa apo ta psaradika gia na ertho* (To come I passed the neighborhood of fish shops).

Major Foodstuffs

Greeks have three basic ingredients that have throughout history been used in their cuisine: bread, wine, and olive oil. Since ancient times they were considered to be the essential elements of Greek cooking. The ancient Greek god Apollo had three daughters: Spermio (Grain), Elaia (Olive), and Oeno (Wine). Even today among Orthodox Christians, who make up 98 percent of the population, it is believed that Jesus especially blessed *arton* (bread), *oinon* (wine), and *eleon* (olive oil). These three ingredients are the foundation for modern Greek cooking as well. Everyone buys them and uses them as is, or they add them to recipes. Olive oil especially is the essential ingredient for cooking. Greeks use oil to fry, add it to boiled dishes, and even baste meat or fish before roasting. It is used in practically every recipe, whether cooked or raw.

Bread is also an integral part of Greek cuisine. It is the companion to every food. Greeks often eat bread for breakfast with some cheese. Different varieties of bread are used, such as *xoriatiko* (bread from the village), *lefko* (white), *polisporo* (with different seeds), *mavro* (black), and so on. Greeks are very fond of dry bread as well. In this case fresh bread has been sliced up and put back in the oven to dry at low temperatures. This is a technique people used so they did not waste any bread that was left-over and going stale. Bakeries are always busy, and a good bakery can make a fortune just by selling good bread. Bread symbolizes life, and even prayers of the Orthodox Church use bread as a metaphor for life, especially in Holy Communion.

Proteins come from various sources in Greek cooking. People usually consume sheep or goat meat, but beef and pork are also widely used. Fish on the islands and anywhere near the sea is a principal protein source and may be prepared in various ways. The occupations of shepherd and fisherman are still very common in the country. People tend

to look for and appreciate homegrown meat products, believing that since the animals run free in the lands, they must be cleaner and healthier. The same goes for fish. Local fishermen are very much trusted, and fish consumption is based on how fresh the fish is. In the majority of cases fishermen will not have every kind of fish but only what they can catch, and thus buyers adjust their purchase accordingly.

Meat has not always been the main protein source for Greeks. In the recent past, poverty was widespread across the country, and not everyone had the financial means to buy meat. Thus an essential element of Greek cuisine that contains the necessary nutrients is *ospria* (legumes—beans and peas). *Fasolia* (beans), *fakes* (lentils), fava beans, and other, similar legumes were known to Greeks from ancient times. Today, they exist in almost every household together with later arrivals such as snap peas, sweet peas, chickpeas, and so on. Even more recently a wide array of beans, such as the kidney bean, arrived from the Americas. They are prepared in various ways and are very popular during the fast of Lent and other times when consumption of meat is forbidden by the church.

Cheese is also found in every grocery store and supermarket. Greeks are enthusiastic consumers of cheese, and several varieties are native to Greek cuisine. Every location has its own unique type, but there are some varieties that are used across the country—from the well-known fresh sheep cheeses like feta, which are soaked in brine, to others such as *kefalotiri*, *graviera*, *anthotiros*, and *mizithra*. Cheese can also be used as part of a recipe like *saganaki* (fried breaded cheese). Every Greek refrigerator has a chunk of cheese in it, and it is a main part of all meals of the day.

Greeks pay special attention to the fruits and vegetables they consume. Shopping for fresh ingredients is seasonal and highly localized. It is very rare to see a Greek person buy nectarines, watermelons, or grapes in winter or oranges, apples, and mandarins in summer. This means that Greeks do not trust fruits and vegetables that come from abroad unless they do not exist in Greece. Vegetables are

also bought only when in season. Tomatoes, for example, are not eaten in winter as often as in summer, nor cabbage in summer. Each region has its own special products that are highly valued in the rest of the country. Peaches from northern Greece and parts of Greek Macedonia are greatly appreciated, and the same applies to tomatoes from Crete and cherries from Aigio.

Herbs and spices are considered very important in Greek cuisine. Major flavorings include oregano, thyme, coriander, cumin, and rosemary. Some of these ingredients can be found growing in almost every uninhabited rocky space in the country since the climatic conditions and the soil are perfect for them. Other spices are used only in particular areas of Greece but are not common everywhere. Saffron, for example, is widely used in Kozani (northern Greece) and is most widely known in Greece as *krokos Kozanis*, which means the flower that comes from Kozani. Bay leaves, parsley, fennel, basil, and sage are also used widely for their special taste and aroma.

Last but not least are olives and olive oil. Olive trees are grown throughout Greece along with vineyards. Olives have been considered sacred and the essence of life since ancient times. The myth suggests that when it was time to name Athens, there was a battle between the goddess Athena and Poseidon. The one that would offer the most important present to the city would be the one to give it its name. First, Poseidon knocked the rock of Acropolis, and fresh water started to spring forth. Then it was Athena's turn, and she threw a seed that turned into an olive tree. Athenians thought of the olive tree as the most important gift since it symbolized wisdom and prosperity, and thus they named their city Athens. Olives and olive oil are still central to Greek cuisine, and Greeks use olive oil everywhere. It is highly appreciated for its nutritious and healthy properties. Different varieties of olives are grown around the country, but not all of them are used for olive oil. Some of them are just for eating, while others are cultivated only for making olive oil. There are many expressions in Greek that emphasize the importance of olive oil. Such expressions are used when people go to eat and suggest *pame na*

Men enjoy fine bread, wine, and a spread of olives, classic ingredients in Greek food. (Shutterstock)

fame gia na ladosi to anteraki mas (Let's go eat, so some oil will go to our intestines).

Cooking

Most cooking in Greece is done by women, and it involves a great deal of time and skill. It is very common for someone to hear conversations between people praising their mother's or grandmother's cooking. Cooking skills are considered as something to be very proud of. Kitchens in Greece are perceived as the areas where meals take place and women do their magic. Greek women are very proud of their kitchens and, most important, their cooking, even among those who work outside the home and consider themselves equal to men.

Kitchen appliances are modern and electric. Kitchen stoves are also electric since Greece has

only recently started to import natural gas from Russia. In the recent past stoves used propane from very big, heavy, external cylinders. In addition, cooking was also done outside in the garden or the front yard, where a fire was made and pots or grills were put on it in order to prepare food.

Many different cooking techniques are used, and there is no distinctive way of cooking in Greece. Boiled, fried, oven-baked, and grilled food is prepared everywhere. Greeks are not fond of raw food, though. A raw or medium beef steak is not considered a food cooked at home in Greece. Possibly the only raw protein Greeks consume is sea urchin eggs or the red fish egg pastes called *taramas*.

Garlic and onion are essential in cooking as well. Tomatoes, although from the Americas, arrived via Italy in 1815, and they are now essential in Greek cooking. The combination of tomatoes and onions is referred to in Greek cooking as *stifado*; if tomatoes are the dominant taste in the sauce, then it is called *kokinisto* (“made red”). Other cooking techniques involve frying (*tiganito*) or baking in the oven (*psito*). All techniques use olive oil as a basis, and the seasoning changes according to the recipe. Preparation of food through salting and air-drying is also common in Greece. Usually dry salamis and sausages such as *salami aeros* or *pasturma* are air-dried. Salted preparations involve foodstuffs such as haddock (*bakaliaros*) and are referred to as *pastos* because of the technique used.

Kitchen utensils vary depending on the technique, but they are the same as in any other modern European kitchen. Frying pans (*tigani*), pots (*katsaroles*), and pans (*tapsi*) are the predominant kitchen tools. In addition, pressure cookers (*hitra taxititos*) are used to shorten the cooking time of products such as fresh beans or goat meat. However, Greeks use another pot that is not widely used in Europe, used only to cook Greek (Turkish) coffee. This is called *briki* and is a small pot that can hold 8.5 ounces (250 milliliters) of water. After water is put in the *briki*, it is placed on a hot fire to boil. Immediately after the water is put on the fire, coffee and sugar are added, and it is stirred well. Once the mixture starts to rise, the coffee is ready to be served. Because of this cooking technique Greeks ask people

whether they should cook them a coffee rather than make them one.

Typical Meals

Greeks have two main meals, lunch and dinner, and two supplementary snacks in the late morning and early afternoon. The two main meals take place either in the kitchen, which is the most common eating place, or in the dining room. In addition, every house in Greece has small shot glasses for *raki* (alcohol made of distilled grape pomace left over from winemaking) or *tsipouro* (similar to grappa) and slightly taller and wider ouzo glasses. Ouzo is similar to *raki* but is flavored with aniseed and may be single or double distilled. Also, coffee glasses are found in every household for serving Greek coffee. These glasses are somewhere between a mug and an espresso cup.

There are a few typical meals in Greece. This is due to different climatic conditions, which affect the natural resources and thus culinary practices. Furthermore, migration, especially from Asia Minor and Pontus, together with the dominance of many different empires in the country (Roman, Venetian, Byzantine, and Turkish), has affected what Greek people eat in various locales. In northern Greece and Greek Macedonia, for example, there is an extensive use of pies. The pastry used is phyllo pastry, and the pies can be filled with anything from meat, to cheese, to vegetables and several different kinds of wild green leaves. In addition, food in this part of the country is much spicier than in the rest of Greece. In Epirus, in contrast, people eat more meat of all kinds. The climatic conditions there favor rearing of cattle, as well as pigs, lambs, and sheep. Thus, meat is the main ingredient in almost every dish. In the Peloponnese and Crete consumption of vegetables and wild herbs is most common. People use products that come from the earth since the ground is very fertile. There is widespread production of olives and grapes; thus, meals based on olive oil and vegetables are available. With the exception of Crete all the people who live on the islands of Greece eat fish most often. Due to their surroundings and the strong winds in the Aegean

and Ionian Sea the soil is not very fertile. Thus, the sea itself provides much of the necessary foodstuff for people on the islands to survive.

Recipes typical of this cuisine are common everywhere, though it varies from place to place. Fish is consumed everywhere, and so are vegetables. One such example of a typical Greek meal that is consumed all around the country is *gemista* (stuffed vegetables). One can find it in households as well as restaurants and tavernas. The word *gemista* in Greek means “stuffed,” and it refers to tomatoes, zucchini, eggplant, and even occasionally potatoes that are stuffed with a mixture of rice, herbs, and vegetables.

Gemista (Stuffed Vegetables)

- 4 medium-sized ripe tomatoes
- 2 large zucchini
- 2 medium eggplants
- 1 medium green pepper
- 1 onion
- 1 carrot
- 3 tbsp olive oil
- 1½ tsp oregano
- Salt and pepper
- ½ c parsley
- 1 tsp celery
- 1 c basmati rice
- 1 tsp vinegar

Take the tomatoes, zucchini, eggplants, and green pepper, and cut the tops off so you have access to the inside, but do not throw the tops away. Take a soup spoon and scoop out the inside of each vegetable carefully, making the walls as thin as possible without cutting through to the outside. Discard only the ribs and seeds of the pepper, but keep everything else. For the zucchini, slice off a thin top lengthways and scoop out the insides like a canoe. Scoop out the inside of the vegetables into a bowl. Arrange the hollowed vegetable shells in an oven-proof pan or a baking dish.

Chop or thinly slice the onion and the carrot, and add the vegetables’ insides with olive oil, oregano, salt, and pepper. Chop the parsley and celery, and add. Finally, add the rice and vinegar, and stir well. Be careful not to use more rice than the amount listed; otherwise, when the rice starts to cook, the vegetables will split and the stuffing will go everywhere. Once the mixture is well stirred, use the spoon to stuff the vegetables. Fill the vegetables only $\frac{3}{4}$ full so the rice has enough space to expand. Cover the vegetables with their tops, and add some olive oil on the top. Once they are ready, put them in a pre-heated oven at 350°F for an hour and a half.

Optional: For a better visual effect you can add some breadcrumbs on top of the vegetables to make a tasty crust.

Another typical and highly characteristic meal consumed in Greece is an omelet called *sfougato*. This literally translates as something that becomes spongelike: Its texture and appearance when ready make it look like a big yellow sponge.

Sfougato (Omelet)

- 1 large potato
- 1 onion
- 4 eggs
- Oregano, salt, and pepper
- ½ c milk
- 1 c salty cheese (white or yellow) with rind trimmed, diced
- 1 tomato

Cut the potato in pieces as for French fries or in round slices, and fry them in oil. Just before they are crispy take them out and drain them on a plate covered with a paper towel or kitchen towel. Sauté the onion, and add the potatoes. Then take the eggs, oregano, salt, pepper, and milk, and mix them in a bowl all together. Add this to the onions and potatoes, and cook over very low heat. Make sure the mixture has solidified in the frying pan and then turn it so it gets crispy on the other side. Add the cheese and some slices of tomato. Cook on low

heat for another 10–15 minutes, and serve on a large platter.

In general, there are many dishes that could be argued to have great importance in Greek cuisine. Dishes such as moussaka and *pastitsio* (macaroni casserole) are very popular. However, products such as okra (*bamies*) are very widely used. There are also several types of foods that combine vegetables or legumes with meat, such as beef cooked with green beans in tomato sauce in a casserole or lamb cooked with artichokes in egg and lemon sauce.

Sweets are also important in Greek culinary culture. One such sweet is baklava. Although there is an argument whether it comes from Greece or Turkey, Greek people love it. Baklava is a sweet made of several different layers of phyllo pastry and nuts

Stuffed vegetables in the Greek style filled with meat and rice and served with French-fried potato chips. (Paul Cowan | Dreamstime.com)

of different kinds (commonly walnuts, almonds, and pine nuts) and the addition of syrup. A very similar sweet but with different pastry is *kadaifi*. The main difference between baklavas and kadaifi is that in the latter the dough is shredded phyllo.

Other syrup-based sweets are also predominant in Greece, such as *ravani* (semolina cake), but as a general rule all these sweets fall under the category of *syropiasta* due to the syrup that adds the sweetness. Another popular sweet in Greece is *glika tou koutaliou* (“sweets of the spoon”). The name derives from the serving size, since they are so sweet that they are served in small amounts. These sweets are usually ripe fruits and vegetables boiled in water and then cooked again with sugar syrup. Most famous are sweet figs, grapes, oranges, carrots, and young eggplants.

There are non-syrup-based sweets in Greece also. Greeks enjoy *koulourakia* with their coffee. These are sweet small cookies of different shapes made from a mixture of flour and water, sugar, and nuts. They are fast and easy to make. Other types of sweets come in different seasons. For example, *kourampiedes* and *melomakarona* are types of sweets mainly cooked for the Christmas holidays. *Kourampiedes* are sweet cookies with almonds covered with powdered sugar. *Melomakarona* are honey and spice cookies with the addition of semolina, cinnamon, and orange juice, which gives them a special soft texture.

Another very popular Greek sweet is *mpogatsa*. This sweet is very similar to the *tiropita*, but instead of cheese cream is added. In some regions in northern Greece they eat *mpogatsa* with a salty stuffing as well, but the most common way is with cream and sugar or cinnamon. A very similar variation of *mpogatsa* is *galaktompoureko*, with the difference that the cream is much sweeter and it is served with honey.

Eating Out

Eating out has always been very popular in Greece. Even in difficult times under Turkish rule there were many small places where men could gather and enjoy a glass of wine with some food. In addition to

those places there were *hania*, or inns, where travelers could stop and enjoy a warm meal and some rest. Although eating out used to be the privilege of men, after World War II women became entitled to spend time eating out.

In modern Greece eating out is part of the local culinary culture. For this reason there are several different types of places where people can enjoy good food outside their homes. The most popular are the *giradika* or *souvlatzidika*, which sell a very popular Greek dish, gyros, or the widely known souvlaki. Gyros is made out of pork and more specifically out of the meat that surrounds the shoulder blade, which is ground with the addition of several different spices such as cumin, oregano, thyme, and rosemary. (In the United States, it is usually made with ground lamb.) It is formed around a vertical rotary spit, which is heated slowly by burners from behind as it turns. Meat is sliced off as it cooks. It can be served on its own with fried potatoes or, the most popular way, in Greek pita bread with potatoes, yogurt or tzatziki (a yogurt, garlic, and cucumber sauce), fresh tomatoes, onions, and parsley. Souvlaki, on the other hand, is made out of the leg of the pig cut into cubes and placed on small skewers. It is prepared on the grill, and it can also be served on its own with some fried potatoes or in the same way as gyros. Places that sell this food are very busy. They are a meeting point for young people who want to eat cheap and heavy food full of taste or for people who need something to eat after a night of heavy drinking.

Other popular places for Greek people to eat out are tavernas. These are medium-sized restaurants that offer cheap, homemade food. They used to be very popular between the 1970s and 1990s because they offered good food at very reasonable prices. Now, although still popular, they have to compete with modern restaurants and gourmet choices that are advertised by the mass media. Similarly, there are the meze restaurants. These are something like a tavern, but instead of serving food in big portions or personal dishes, they offer small menus with several different tastes that accompany drinks. When someone visits a *mezedopolio* (meze restaurant), the first thing to notice is that drinks arrive first, which

can be wine or raki, tsipouro, or ouzo, and then the food. Some meze restaurants do not have a menu and serve whatever is prepared for the day, in this way making sure that they always serve fresh food.

A custom that has become popular since the 1990s is fine restaurants. Greeks, especially the younger generations, enjoy eating out in restaurants. The haute cuisine of famous chefs, despite being expensive, is nonetheless popular. In addition, there are restaurants offering international cuisines such as Italian, Chinese, or Mexican. However, restaurants that offer alternative or refined Greek food are more popular.

Eating out also receives great attention by the Greek mass media. There are many publications about what defines good food, and almost every magazine offers an article on the best places to visit based on what one can afford. Television shows are dedicated specifically to places to eat, and these are very popular.

Special Occasions

In Greece food is connected to special occasions in every way, shape, or form. From social events to religious celebrations food is integrated with expressions of every emotion. Special types of food are prepared according to the type of celebration, both in the home and outside the home. On some occasions, markets adjust to the occasion and sell food products that are appropriate to the time of the year and what is being celebrated.

One such occasion is what Greeks call Kathara Deftera, which is literally translated as “Cleansing Monday,” that is, the beginning of the 40-day fast of Lent leading up to Easter. On this day the Greek Orthodox Church prohibits olive oil and all kinds of animal products from the table. Although modern Greeks do not strictly follow this rule, almost everyone abstains from meat and uses vegetables and grains, as well as seafood, instead. Because of the restriction on olive oil, a different type of bread is sold on this day: *lagana*. This bread is made from just flour, water, and sesame seeds. It is flat and drier than regular bread. Mostly bakeries produce this bread and sell it in large quantities.

Another special religious occasion connected with food is Easter. The entire Great Week (Megalobdomada) and Easter Day (Pasha) are characterized by activities in the kitchen. The most significant days with regard to food are Great Thursday, Friday, Saturday, and Easter Sunday. On Great Thursday eggs are painted red to symbolize the coming Resurrection. In addition, this is the day when *dolamdes* (vine leaves stuffed with rice and vegetables) are prepared. This is a very typical food eaten in Greece, but on this day it initiates the beginning of summer since it is the first point in the year when fresh vine leaves can be collected. On Great Saturday there is a very lengthy preparation of food. Greeks celebrate Easter not only on Sunday but also on Saturday after midnight. In the Greek Orthodox Church, Easter mass is performed on Great Saturday at midnight, and there is a second celebration on Easter Sunday afternoon. However, the most popular one takes place on Saturday. Thus the entire day is spent in preparation for that evening and the day that follows. In the early morning *tsourekia* are prepared. These are Easter breads that take a rather long time to prepare and are made of sweet dough. In some parts of Greece *tsourekia* take the form of *kalitsounia* or *diples*. These are sweets made out of sweet dough stuffed with white sweetened cheese and mint. Once the *tsourekia* are made, the typical midnight food called *magiritsa* is prepared. This is a soup made out of the boiled kidneys, liver, and stomach of a sheep or goat with the addition of fennel, parsley, and young onions. Once they are boiled, lemon juice is added as well as eggs, which thicken the soup.

The peak of celebrations takes place on Great Easter Sunday. Men start the day early with roasting a whole lamb. The entire animal is skewered on a big iron spit and fastened on with wires. Once it is stable it is placed on the fire for five to six hours where it roasts as it turns. Men suggest that to properly cook the lamb, the fire has to be situated most prominently beneath the head and the legs of the animal so the heat is evenly distributed all over. During cooking men smear the skin with a mixture of olive oil, oregano, and lemon, using branches of rosemary so all the aromas of the herbs are transferred to the meat.

A special type of food is prepared for all religious and personal occasions. Marriages and funerals or memorials have special food. For example, at all memorials for people, even years after their death, *koliva* are distributed. *Koliva* is boiled wheat that is left to dry for a couple of days. Once it is dried, pomegranates, raisins, cinnamon, almonds, walnuts, and granulated sugar are added, and this makes a very sweet mixture. It is served outside the church after the memorial.

Diet and Health

For Greeks, food is basic for the healthy balance of the body and mind. This is obvious in the relationship that Greek cuisine has with natural products. Fresh produce and ingredients are fundamental to Greek cuisine not only for their better taste but also for their nutritional value.

Greek food is highly seasonal and localized. Greeks believe that local products are always best. In addition, the long history of farming and well-established traditions assure its people that the products they get are appropriate for their health. The diet has even been recognized throughout the world as the so-called Mediterranean diet, which is based on fresh local products, eaten in moderation. Modern industrialized farming makes Greek people unsure about the quality and safety of products since, according to their beliefs, when money is involved in such mass production, there is little personal care by the farmers for their products.

Greeks believe that healthy food means cooked food and that the longer it cooks, the better it is. It is only recently that Greek people might enjoy a medium-cooked steak, and even now it is highly unlikely to find this as a home-cooked meal. For Greeks, the application of fire kills any type of bacteria or germs that might exist on vegetables.

In addition, religion is highly connected with diet and health in Greece. In the Greek Orthodox Church there are several long periods of fasting (*Sarakosti*). There is a period before Christmas for about 30 days; the *megali sarakosti* (Lent) before Easter, which lasts for a bit longer than 40 days; and finally the 15-day *sarakosti* before August 15, when

the Virgin Mary is celebrated. Although many people do not actually believe in these long periods of abstinence from animal products, they do follow it since they believe that it is very good for the body and cleans out all the toxins. At the same time, the church has carefully devised the diet so people get all the necessary nutrients.

A healthy diet and the use of natural products are also important for medical purposes. Greeks are generally aware of the nutritious properties of foods. For example, they know that tomatoes, lentils, and beets contain a lot of iron. Thus they try to combine or use ingredients so as to include all the important nutrients in their diet. However, certain combinations are used for various more serious health issues. Greek coffee dissolved in lemon is highly recommended for diarrhea. *Glistrida* (purslane) is considered to be medicine for high cholesterol, onions for people with high blood pressure, garlic for those with low blood pressure, and so on.

Evidently, although Greece is a modern, westernized, progressive country, people have a special bond with food and as a consequence with nature. They follow the seasonal life cycles with the celebration of different occasions, and they understand

food as the transformation of nature into something tasty that fulfills, follows, and emphasizes important phases of life.

Gypsies

Overview

After their departure from India sometime around 1000 A.D., Gypsies dispersed throughout Europe and beyond. In the process they were fragmented into a great number of national and tribal groups lacking sustained contact, and consequent cultural exchange, with one another. Therefore, one finds little if anything in common between what is eaten, for example, by Gitanos in Spain, Romnichals in England, and American Kalderash. Much of the descriptions that follow of Gypsy food are true only of the particular group being described and cannot be generalized.

The very name by which Gypsies call themselves is a good example of this cultural heterogeneity. The majority of Romani speakers are properly called by the name they call themselves, Roma (singular Rom, masculine, or Romni, feminine). With the development of greater Romani political consciousness, this has gained wider usage, both among other Romani groups and among the general public. But a number of other groups, including those that speak one of the several creolized Romani languages, use other terms. Most Anglo-Romani speakers prefer to be called Romnichals, Romanies, or simply Travelers. Almost all Spanish Gypsies identify themselves as Gitanos. Most Sinti and Manouche, the majority of whom are located in Germany and France, respectively, strongly object to being called Roma. There is no term in Romani that denotes all these people despite their common history, hence the use of the term Gypsies here, which many consider pejorative.

Despite the general misconception that Gypsies are nomadic, only a minority are. Ever since their arrival in Europe, the majority have been settled, sometimes in cities, sometimes on the periphery of peasant villages or in separate hamlets. Of those who were nomadic, some traveled more or less fixed annual routes, while others wandered internationally to the extent they were allowed. Then and now any nomads travel only seasonally.

Gypsies remained in the Balkans for 200 years before some dispersed throughout western Europe during the 14th and 15th centuries. Those in Romania and some adjacent regions were enslaved until the mid-19th century. This period in the Balkans left an indelible imprint on the culture, including the foodways, of many contemporary groups of Gypsies. Others, like the Gitanos of Spain or the Romnichals of England, eat a variant of the national cuisine of the country they live in. There is often an evident culture lag, in which the elements of the cuisine are more reflexive of the foodways of a nation in which they used to live than of that in which they live now. Kalderash Americans still prefer a Russian-style tea, drunk from glasses with pieces of preserved fruit. Some still use an heirloom Russian samovar to prepare it.

Each Gypsy community developed its own distinct foods and foodways, often completely unrelated to one another. Nevertheless, there are some common patterns that can be broadly, if not universally, applied. Those groups that are still nomadic place a natural emphasis on stewing and frying, rather than baking, steaming, or roasting,

other than whole animals on a spit. They also incorporate into their diet wild foodstuffs, both vegetable and animal, to which they have ready access. Romnichals have a reputation, in part deserved, of poaching rabbits and game birds from private property. All over Europe, nomadic or recently nomadic Gypsies will collect young nettles in the spring, which they cook as a green.

By far the most important and far-reaching factor shaping what Gypsies eat and how they prepare their food is a complex of beliefs concerning pollution and ritual purity that originated in India. These are more stringently held in some groups than others, and specific practices vary from one group to another, but all Gypsy life has been shaped to some degree by these beliefs, and this is particularly true of food and food preparation. American Roma (including Kalderash, Machwaya, and Kunéshti) are particularly strong adherents and serve as a good example.

Roma believe in a bifurcated world divided into Gypsy and non-Gypsy, men and women, ritually clean (*wuzho*) and unclean (*marime*). The body above the beltline, especially the head, is considered sacred; that below, especially the genital area, is *marime*. A woman is *marime* during and six months after childbirth and during menstruation. A *marime* woman

A Gypsy woman cooking stew over an open fire. (Shutterstock)

cannot cook or serve food to men. She cannot step over anything belonging to a man or allow her skirt to touch his things. For a woman to throw her skirt at a man or to lift her skirt to him is a defiling act. Women's and men's clothing must be washed separately. Upper garments must be washed separately from lower garments. A tablecloth would never be washed with underwear. Dishes could never be washed in the same sink or washpan as clothing. All food is prepared, served, and eaten with the greatest concern for ritual quality. Anything brought into the home from outside is considered possibly polluted and is, therefore, scrutinized with care. Only freshly grown foods are considered safe, but everything, including meat, is cleansed thoroughly before use. People who, for some infraction, have been declared *marime* cannot eat with others. Roma do not eat with strangers or with those they don't trust. To refuse to eat with a Rom is a sign of distrust, implying that he is not ritually clean. Non-Gypsies follow none of these proscriptions and are, therefore, considered *marime*. Many Romani households will keep a separate coffee cup and other tableware that they reserve for the use of non-Gypsy guests. Some will destroy or discard a cup that a non-Gypsy guest has used.

There are also certain qualities of lifestyle that are emphasized in most Gypsy communities, though these are not necessarily true for all groups or for all members of any group. These include spontaneity, adaptation, improvisation, and extravagance even in the face of poverty. These can be seen as adaptive strategies that have allowed Gypsies to cope more easily with problems such as discrimination, poverty, and pariah status. These qualities are present throughout Romani culture, including food and foodways.

Spontaneity in Gypsy cultures is such that dishes are never exactly the same. One uses what is available or what comes to mind. No one uses a cookbook or written recipe, so recipes are never standardized. Moreover, the common practice of not storing foodstuffs ahead of time, either because of not having money to build up stores or through lack of facilities to store them, means fewer options when cooking. One must think creatively.

While there is a strong tendency to hold onto tradition, Gypsies are very quick to adopt and adapt those features of mainstream culture that fit into their own way of life. Thus, in some areas, Gypsies more quickly adopted the cell phone than did their non-Gypsy neighbors. In England, Romnichals took the notion of the travel trailer and adapted it to their own needs along the lines of their traditional horse-drawn, highly ornate *vardos* (living wagons). So, too, in food. Bosnian Xoraxane in Italy, used to produce purchased in farmers' markets, quickly learned to make use of tubes of tomato paste and bouillon cubes produced in Italy.

There are Romani lawyers, doctors, university professors, and well-to-do businessmen, but a disproportionate number of Gypsies are poor, some extremely poor. Nomadic Xoraxane in Bosnia expect some sort of meat at every meal, while the villagers among whom they wander, who raise the meat they eat, tend to reserve meat for special occasions. Nomadic Kalderash in Sweden eat only butter, never margarine, no matter how poor they might be. On special occasions Kalderash Americans produce lavish displays of food, including numerous whole roasted animals, that put the Thanksgiving and wedding feasts of non-Gypsies to shame.

Food Culture Snapshot

Halil and Hanifa Salkanović are Xoraxane (Muslim) Čergaši (nomads) from Bosnia. They speak the Gurbeti dialect of Romani but are equally fluent in Bosnian and Italian and speak a number of other European languages to some degree. Like other members of their group, Halil was a peripatetic coppersmith who traveled from village to village, market town to market town, repairing and retinning the copper utensils that were traditionally used in Bosnia for cooking and serving. Hanifa told fortunes by reading palms. When these copper utensils were replaced by plastic and enamelware in the late 1960s and early 1970s, they and many of their relatives moved into western Europe seeking other forms of livelihood. Almost none have been able to obtain regular employment because of discrimination, lack of education and marketable skills, and

government obstructions. Halil and his family manage by buying and selling various objects and by collecting scrap metal, and they benefit from some social services. Several members of the larger group make fanciful copper vessels sold as mantle pieces rather than cookware. Children beg or wash car windows at traffic lights.

After much traveling, including in North Africa, and extended stays in Germany and the Netherlands, they settled down in a rough campground designated for Gypsies on the outskirts of Rome. Their dwelling is similar to others in the camp: a travel trailer, now immovable, with extensions built of scrap lumber and sheets of plastic. Their four surviving sons and their daughter, all now adults with their own families, are settled in adjacent campsites. There is no kitchen or special area set aside for food preparation. There is a propane cookstove in one corner, but much of the cooking in good weather is done at the campfire in front. Similarly, there is no special area for eating. Usually, diners will just take their plate to a chair or upturned bucket to eat by the campfire. There is no refrigerator, and there is a strong tendency to shop for each meal. Leftovers are often discarded. Meals are very irregular, with no set schedule and not everyone eating at the same time. Each of the six adult women of the extended family shops and cooks individually, but food, both raw and cooked, is very commonly shared.

The day starts with coffee, if there is any. In camp, the women prepare Turkish-style coffee. The men will very often go to a nearby café for espresso, both upon rising and repeatedly throughout the day. This was especially true before the acquisition of cell phones, when the café telephone was essential for keeping in touch with family members scattered throughout Europe. Those who want breakfast will eat leftovers from the previous day's supper and perhaps a piece of fruit.

Halil will often drop by Rome's central market, sometimes making a purchase that strikes his fancy, such as some turkey wings, a chicken, or some fatty cuts of beef. The younger women of the extended family will go to the market just prior to closing time to ask for items of produce, most often seconds or items that may spoil before the next day. They usually return with enough for a mixed bowl of fruit and a

combination of vegetables to comprise the stews that are the most common dish prepared. In mid- to late afternoon, when all have returned to camp, supper will be prepared. If a man or a family group is hungry before they can return, they might stop for pizza, but restaurants are seldom patronized otherwise.

Supper may consist of a stew of turkey, potatoes, string beans, and tomatoes heavily seasoned with black pepper, or “pasta *suta*,” consisting of a package of *zita* mixed with a couple of cans of Campbell’s *ragu di carne* and a cube of margarine. Eggs are much used for their convenience and low cost. One preparation is to crack half a dozen eggs into a melted cube of margarine flavored with garlic and cook them sunny side up. Supper almost always includes a typical Bosnian salad of tomatoes, cucumbers, peppers, and onions dressed with vinegar, oil, and salt, but they will make do with whatever combinations of these vegetables is available. If they are out of vinegar, the salad is dressed with oil and salt; if there is no oil, then just salt. In a pinch, just a raw onion will suffice. There is always bread. Beer, or more often wine, is drunk before, during, and after the meal by the men and sometimes the women. Most evenings conclude with the men seated around the campfire drinking wine while the women do household chores.

Trgance

Trgance is considered a Bosnian Xoraxane Čergaši specialty. Mix 3–4 eggs into 2 double-handfuls of flour. Meanwhile, prepare a chicken or meat broth. On the day observed, the cook used a chicken carcass left from the previous day’s dinner. It is said to be even better to add a couple of packages of the commercial soup base “Brodo Ricetta Sapore” instead of salt. For a change of taste, some tomato paste can be added. The broth is thickened with flour fried in lard or oil. When the broth is boiling, add irregular lumps of the trgance dough, varying in size. Cook approximately half an hour.

Major Foodstuffs

The culinary raw materials used by Gypsies are as unlimited as those of the nations they live in. Even

international nomads are quick to adapt to local availabilities. There are few restrictions governing what they can or cannot eat. Some groups refuse to eat horse meat, presumably because of their close association in the past, but other groups do. American Roma consider birds that fly, such as doves or pigeons, marime and therefore inedible, while chickens, turkeys, and other fowl that do not usually fly are edible.

Meat is of special importance in the diet of most Gypsies. Many Gypsies of many groups expect some sort of meat at every meal. Meat is especially important at any Gypsy feast. The feast (*slava*) honoring the patron saint of a New Jersey family that was attending the annual pilgrimage at the Basilica of Sainte-Anne-de-Beaupré, near Quebec, included roast beef, turkey, salmon, hot dogs and hamburgers, and spit-roasted sheep and pigs. Another family’s feast at the same event included nine sheep roasted on spits in the parking lot. Spit-roasted meat, either sheep or pigs, is obligatory at any feast in many Romani communities.

Fatty meat is generally preferred to lean. Except among Muslim Gypsies, who generally observe the Islamic prohibition, there is a widespread preference for pork. The many poor Gypsies often make use of cheaper cuts: turkey wings instead of breast, calf lungs, pig tails and feet, sheep’s heads, soup bones, and offal such as tripe and kidneys. Historically, some groups in eastern Europe ate “dead meat” (*mulo mas*), a pig or some other livestock that they secretly poisoned and then offered to dispose of for the hapless owner.

A meat that is iconic in the cuisine of many European Gypsies is the hedgehog, though it is seldom if ever eaten today. It is now a protected species in many European states, though its decreasing importance in the Romani diet may have less to do with its rarity than with Gypsies’ increasing sedentarization in urban places and other modernization processes. Various ways of preparation have been reported, but the most common is packing the gutted but unskinned animal in clay and burying it in the coals. When the fire dies down, the clay is cracked off, taking the skin and quills with it. Others report laying the carcass on its back in the coals, after which the quills can easily be removed. The animal can then

be cut into pieces and fried or roasted on a stick over the fire.

Vegetables are not particularly important in most Gypsy diets, though some groups or individuals greatly appreciate them. American Roma believe black pepper, red pepper, salt, vinegar, garlic, and onions to be lucky (*baxt*) foods, and they make much use of all of these. Many Gypsies like spicy food, and this is especially true of American Roma. Celery is believed by American Roma to promote virility. At feasts, a stalk of celery is laid at every place setting. Bread is essential at every meal, and there is a general appreciation of quality bread. There are a number of home-baked traditional breads, including some made by nomads without the benefit of an oven. Kalderash in Mexico have adopted tortillas (along with many other items from the Mexican menu), though they have not given up bread.

Cooking

In an extended-family household, the most recently arrived daughter-in-law is usually expected to do the cooking. Otherwise, the mother or eldest daughter may be the designated cook. Although cooking is generally considered woman's work, men are not restricted from the kitchen or from cooking when called upon, as when the usual female cook is prohibited to do so because of marime conventions. Some men take great pride in their cooking abilities. Among American Roma, men cook all festival food, thereby ensuring that the food is ritually safe.

Gypsies of many groups, both travelers and semisettled, prefer to cook outside. Many travelers, from Xoraxane Čergaši to English Romnichals, will cook outside even when they have a perfectly good stove inside their caravan.

Gypsy cooks seldom if ever employ cookbooks. Although illiteracy rates vary from country to country, until recently Romani women could not have used Romani cookbooks even if they had existed. Gypsy cooking tends to be spontaneous, and recipes are very loose. Australian Romnichal Rosemary Lee-Wright, in what is apparently the first cookbook by a Gypsy, explains that Gypsy measurements are “a handful,” “a palm” (level or heaped), and “a pinch.” For a number of years, Lee-Wright's

was the only authentic Gypsy cookbook, though it was quite limited in the contextual information provided with the recipes. Several other books by non-Gypsies were extremely fanciful and offered no sources for their recipes, which appear not to have had ethnographic validity. Since 2000, however, a number of Gypsy cooks have provided authentic pictures of Romani food in a variety of countries, such as England, Spain, Palestine, and the United States. Elsewhere, sympathetic and knowledgeable non-Gypsies have worked together with Gypsy cooks to collate and publish their recipes, such as in France, Italy, and Slovakia.

Stews are a particularly common dish. They are convenient, especially for travelers—a one-pot meal incorporating a wide variety of available foodstuffs. Stews can be lavish, utilizing a variety of meats, or very inexpensive. They can be cooked on a single burner or a campfire. Frying is also common. Roasting tends to be reserved for festive occasions. Steaming or oven roasting is rare, though the latter is becoming more popular as Gypsy populations become more settled with modern kitchen stoves.

Cooking pots were sometimes suspended from a tripod of iron stakes driven into the ground around the campfire. Romnichals also used the *chitty*, an iron rod in the shape of a shepherd's crook that was driven into the ground with a chain suspended from the crook at the top. Cast iron pots with a bale were preferred. Romnichals also used a cast iron skillet with a fixed bale with a ring at the top so it could be

A typical Gypsy stew made with vegetables and beans. (Shutterstock)

suspended from a tripod or chitty. These also came in the form of a griddle. An alternative mode of cooking that was sometimes utilized by Romnichals was the hay pit. A hole was dug a foot deeper and wider than the cookpot and lined with hay or straw. The hot pot was placed in the hole, and more hay or straw was packed tightly around. A sack stuffed with more hay or straw was placed on top. In this way the family could be gone for the day, reheating the pot prior to eating.

Typical Meals

There is little or no resemblance between the meals typical of one group and those of another. Some examples from specific groups follow:

An American Romnichal. His ancestors came to the United States from England in the mid-19th century. He grew up on the road but now is long settled in Ohio, where he works as a painter of barns, a traditional American Romnichal occupation, and commercial buildings.

Breakfast: coffee, frozen waffles or Special K cereal

Lunch: on the job, goes to a fast-food restaurant

Supper: fried pork chops, fried potatoes with onions, bread and butter, iced tea

Sedentary basketmakers in Izmir, Turkey.

Breakfast: *Simit* (sesame rolls that a street vendor delivers every morning), rolls filled with sweetened sesame paste, tomatoes, cucumbers, olives, honey, and tea

Gitanos in Barcelona.

Dinner, around 2 or 3 P.M.: bean soup with noodles (*fideos*), garlicky *bacalao* (dried salt cod) and potatoes, tomato salad, bread, stewed fruit, red wine

Eating Out

The amount of eating out varies considerably from group to group, though in general eating in

restaurants is not particularly common among most Gypsies. Those still forced to live in poverty, as in eastern European ghettos and western European designated camps, seldom have the funds for more than an occasional snack at a marketplace stand or a local shop. At the same time, many wealthier Gypsies, like the Kalderash and Machwaya of North America, try to avoid food prepared by non-Gypsies because of presumed impurity. They will usually not eat in non-Gypsy homes or eat food prepared by non-Gypsies and brought to their homes. If forced to buy cooked food while traveling, they prefer food wrapped in plastic or clean paper rather than food on plates. If forced to eat in a restaurant, many will avoid eating utensils, preferring to eat with their fingers. Often they will ask for paper or plastic cups, which they can be sure have not been used previously by a non-Gypsy. If food is suspect for any reason, it will be rejected. The preference is for well-lit restaurants where the food preparation can be observed.

Special Occasions

Special occasions among Gypsies, as among other groups, call for special foods. Even the poorest will do their best to provide as lavishly as they can. Bosnian Xoraxane, both when they were still peripatetic coppersmiths in Yugoslavia and now, when they are currently encamped semipermanently in western Europe, consider a spit-roasted sheep essential for any wedding.

The Balshaldra (sometimes called Slovak-Hungarian in the literature) came to the United States from villages in Slovakia, which was then a part of Hungary. Most settled in Midwestern industrial cities, at first in Hungarian neighborhoods. Most of the men are professional musicians, and music, both as professionals playing for others and for their own community, is an important unifying factor. They are unusual among American Gypsies in the emphasis they place on education, including but not limited to advanced musical training. Music has been instrumental in their maintaining a strong Romani identity, even though an increasing number are now entering other professions. Their cuisine,

including that for special occasions, does not vary greatly from that of other fourth- and fifth-generation Americans of eastern European background. A wedding feast provides a good example: roast chicken, pasta with tomato sauce, cabbage rolls, mashed potatoes, string beans, green salad, Jell-O salad, relishes (including celery, carrot sticks, dill pickles, and pickled beets), walnut torte (purchased from a local Hungarian baker), wedding cake, coffee, and an open bar.

It is among American Roma that Gypsy feasting reaches its highest expression. Of special importance is the *slava*, a saint's-day feast most often fixed according to the Orthodox calendar. A *slava* feast brings good luck, good health, and prestige to the family that gives it. Over time, some *slavas* have become traditional for some families or groups of related families. In other cases, a *slava* is given because of a promise to a saint for curing a person in ill health. Food for a *slava*, which must be of the utmost ritual purity, is prepared the night before by the family giving the *slava* (an occasion called *tšinašara* by Kalderash and *večera* by Machwaya). Each *slava* features a specific meat: roast pig for Saint John's Day, fish for Saint Nicholas, roast lamb for Saint George, Saint Mary, Saint Anne, and Easter. A *slava* feast should also include certain auspicious foods: *gushvada* (cheese strudel), *pirogo* (noodle cake), and especially *sarmi* (stuffed cabbage). An excess of food is very important, and great attention is paid to its display. Lavish feasts are also obligatory at weddings, funerals (*pomana*), baptisms, *pakiv* (a feast honoring some important individual), and *kris romani* (the trials at which laws governing social behavior are resolved). Newly arrived Romani immigrants were also quick to adopt Thanksgiving and New Year's celebrations. Some Romani families like feasts so much they will celebrate both Catholic and Orthodox Christmas and Easter. Photographs from special-occasion feasts, especially weddings, are commonly displayed on YouTube. Feasts have great social significance. Guests number in the hundreds and may come from across North America. The sharing of food at a feast table expresses mutual respect, friendship, and acceptance of one another's ritual cleanliness.

Pork stuffed cabbage rolls, or sarmi. (Shutterstock)

Over the last several decades there has been a steady conversion to evangelical Protestantism. The majority of American Roma are now members of evangelical churches with Romani pastors. Since saints are not recognized in these churches, those who have converted no longer celebrate *slava*, though the other feasts are still held.

Sarmi

The most important dish of the American Romani menu, served at all feasts, is stuffed cabbage (*sarmi*). There is much variation, but the following is typical. Core and boil a large head of cabbage together with ½ pound lard, 2 cups vinegar, and sufficient water to cover. When soft, remove the cabbage, saving the water. Cut pork into small pieces, and fry with rice in lard until slightly brown. Add chopped bell peppers, jalapeño peppers, onion, celery, parsley, and black and red pepper, and sauté briefly. Add a can of tomato paste and some of the reserved water, and cook until rice is about half done. Roll mixture in cabbage leaves, one handful to a leaf. Place *sarmi* in a pot, cover with reserved water, 3 more cans of tomato paste, and a can of tomatoes. Cook till done, an hour or longer.

Diet and Health

The many impoverished Gypsies of eastern Europe and the camps of western Europe have poor health due to inadequate and unbalanced diets as

well as generally poor living conditions and poor health care. But even middle-class and wealthier Gypsies often have health problems resulting from unhealthy diets and lifestyles. Studies of American Roma have demonstrated that the diet, which is high in salt, sugar, and animal fat, together with a lack of aerobic exercise and a nearly universal prevalence of smoking, leads to very high levels of blood cholesterol, triglycerides, and blood sugar. Abnormally high blood pressure usually begins before 30 years of age. By age 50, nearly 100 percent are afflicted with diabetes and vascular disease. Roma generally are considered old if over 55. Heart attacks occur in the early thirties, even the late twenties. Some Romani families eat only fish and vegetables for Lent, but there is a general opinion in the community that this Lenten diet is unhealthy, even for patients with cardiovascular disease. In recent years there has been some improvement as many members of the community have become more health conscious and as smoking has somewhat decreased, but as yet there are no recent studies to confirm this.

Dietary problems have been compounded historically by a cultural bias for obesity. To be fat was to be powerful; thinness was a sign of weakness. The term in Romani for a traditional leader is *Rom Baro*, or “big man.” While meant in the sense of political power, it is also almost always literally true.

Hungary

Overview

The Republic of Hungary is in central Europe, landlocked between seven neighbors: Romania, Ukraine, Austria, Croatia, Serbia, Slovenia, and Slovakia. Hungary is a parliamentary democracy, consisting of 19 counties. The country's population is nearly 10 million, and about one-fifth of the population resides in Budapest, the capital city.

Hungary is roughly the size of the U.S. state of Indiana, and much of the country consists of flat to rolling plains and some low mountains. Though Hungary is blessed with fertile soil—nearly half of the country consists of arable land—and agriculture plays an important role in the economy, cooking with fruits and vegetables takes a back seat to meat. Hungarians are avid meat eaters, with pork being the preferred meat. Very few Hungarians are vegetarians, and at traditional Hungarian restaurants, vegetarian dishes are rare.

Slightly more than half of Hungarians are Roman Catholic, about 16 percent are Calvinist, and small percentages are Lutheran, Greek Orthodox, and Jewish. Religion does not have a major effect on eating habits in Hungary, although Catholics do not eat meat on Good Friday and Christmas Eve. Very few Hungarian Jews follow a kosher diet.

Hungary has the distinction of being one of Europe's unhealthiest countries, largely due to the traditional diet, which is high in animal fat, cholesterol, sugar, and salt and is generally low in fiber, fruits, and vegetables. Obesity is an increasing problem. There is a sharp difference, however, between the lifestyles and eating habits of the younger generations of Hungarians and those of the older generation

who came of age during Communism. There is also a clear difference between the eating habits of those in Budapest and those in the countryside.

Food Culture Snapshot

Katalin and László Kovacs live in an affluent Budapest suburb with their three young children. Katalin—originally from a village called Bőny in northwestern Hungary—is currently in graduate school. László—originally from the town of Kecskemét in central Hungary—owns a midsized software-development company. Although they can afford to spend a significantly higher amount than the average on food, their diet still reflects the traditional elements that they grew up with in the countryside. But they eat significantly less sugar, salt, and fat than their parents' generation did. They do occasionally splurge on expensive imported food, but for the most part, their daily meals consist of typical Hungarian dishes and ingredients. Unlike their parents' generation, Katalin and László enjoy dining out at restaurants on a fairly regular basis, while the children stay at home, with either their grandparents or a babysitter.

Breakfast in the Kovacs' household is at around 7:30 A.M., when Katalin and the children eat toast, cold cuts, biscuits, or cereal. László rarely eats breakfast at home during the week since he leaves early for work. During the week the children eat lunch at school, which consists of two courses: a soup followed by a main course, which is often a vegetable stew (*főzelék*). During the week, Katalin doesn't cook lunch for herself. She will eat whatever is around, such as leftovers from the night before. Like many who work in offices, László

eats at restaurants for lunch. Dinner is served around 7 P.M., and it usually consists of something warm but uncomplicated: warm sandwiches, ham and eggs, or a homemade stew or soup pulled from the freezer.

On weekends, when the whole family is at home together, the Kovacs eat big lunches together as a family, which include a soup and a meaty main course accompanied by rice and either pickled vegetables or a salad. When the family hosts guests, Katalin will prepare something special and more time-intensive such as a roasted duck with red cabbage, foie gras, and a cake.

As is common in Hungary, both Katalin's mother and László's mother, who both live in the countryside, often come to visit to help with the children. While they are in town, the two mothers do all of the family's cooking, even preparing extra dishes to store in the freezer. Katalin and László also frequently travel to the countryside to visit their families, and their mothers always send them home with several containers full of leftovers, baked goods, and fruit, vegetables, and eggs from the garden.

Katalin does the grocery shopping every two or three days. She shops at a mid-sized supermarket where she can do one-stop shopping for things like dairy products (yogurt, kefir, butter, milk, cheese, and sour cream), kitchen staples (flour, rice, sugar, and salt), and meat (sausage, cold cuts, various cuts of pork). When she has time, she goes to the neighborhood farmers' market, where she prefers to buy her fruit and vegetables. Although Budapest has a variety of international food shops, Katalin doesn't shop at them. She prepares mostly the same traditional foods as her mother did, although with a lighter touch.

Major Foodstuffs

Agriculture is an important element of the Hungarian economy, and a significant amount of the produce for sale at the markets is grown in Hungary. The most important agricultural products are wheat, corn, sunflower oil, potatoes, sugar beets, pork, beef, poultry, and dairy products. Hungary has no sea, but water is important to the Hungarian psyche, and the main rivers—the Danube and the

Tisza—essentially split the country into three vertical sections. Hungary's Lake Balaton is the largest lake in central Europe, and Hungarians are fond of their local freshwater fish such as carp, catfish, trout, and pike perch.

The diet in Hungary is meat-centric, and meat is often accompanied by potatoes, which are abundant in Hungary. By far the most popular meat is pork, and a wide variety of types of bacon and sausage are available. Other commonly eaten meats are chicken, duck, goose, foie gras, beef, and mutton. Lamb, veal, and game are less common but are easily available at the markets. Butchers and markets in Hungary carry all parts of the animal, and offal, tripe, and other cuts infrequently seen in the West are easy to find and commonly used in Hungary. The preferred cooking fat is pork lard, but sunflower oil is gaining popularity.

Important vegetables include root vegetables, particularly for soups (celeriac, carrots, parsley root, kohlrabi, etc.); squash and zucchini; peppers; and tomatoes. Plums and apricots are plentiful and are eaten plain, as well as turned into jam and *pálinka* (fruit brandy). For many home cooks, particularly older ones, canning fruits and vegetables is still an important part of their cooking routine. They turn fruit into jams, sugary syrups, and compote; peppers into paprika paste; and tomatoes into juice. They can *lecsó* (stewed peppers and tomatoes) to last the whole year.

A man makes sausage by hand in a Hungarian deli. (Shutterstock)

Milk products are an important part of the Hungarian diet. Sour cream is a common addition to soups and salads, and some stews and even meat dishes are topped with it. Yogurt and kefir are also commonly eaten. *Túró*, curd cheese, is made from both sheep and cow milk and is a major ingredient in many Hungarian dishes, both savory and sweet. It is served with pasta and lecsó in a dish called *túrós csusza*; used as a filling for a ravioli-like pasta called *derelye*; or turned into a spread spiked with paprika and garlic, called *kőrözött*. Desserts featuring it include *rétes* (strudel), *túró gomboc* (dumplings), and *palacsinta* (crepes).

Paprika is, by far, the most important spice in Hungarian cuisine. It is used in abundance in many of the best-known Hungarian dishes. As the saying goes, “All good Hungarian recipes begin by sautéing onions in bacon and then adding paprika.” Most commercially produced Hungarian paprika comes from the southern towns of Szeged and Kalocsa. It is never smoked in Hungary, and it comes in a range of varieties from sweet through hot, and finely ground through coarse. At home, people make paprika by simply grinding peppers. Hungarian cuisine has a reputation for being hot, but in reality it is not. Sweet paprika is always used in cooking, and hot paprika or paprika paste is provided at the table for diners to individually add heat. Caraway seeds, nutmeg, and cinnamon are also frequently used. The most common herbs are flat-leaf parsley, dill, and marjoram.

Hungarians like to say that anywhere one drills in Hungary, thermal water will be found. Mineral water is abundant in Hungary, and there are dozens of commercially bottled varieties. Additionally, in some areas there are public springs where locals can bring bottles to fill. Hungarian mineral water is known for its high mineral content. In restaurants it is common to drink mineral water, while at home Hungarians drink both mineral water and tap water.

Hungary is a wine-drinking country, with 23 different wine regions producing a wide range of wines. The wine industry has grown up considerably in the past two decades, and Hungarian wine is being increasingly recognized for its quality.

Cooking

Hungarian food is generally uncomplicated to prepare. There are no laborious sauces or preparation methods. Throughout Hungary’s history cooks were forced to be economical with ingredients, and they developed ingenious ways of doing things when little was available. This is still evident in the way that most people cook at home, which is why there are animal parts like tails, necks, and feet at the markets in Budapest. Many of the most typical—and traditional—Hungarian dishes require long, slow cooking, such as stews (*pörkölt*) made from beef, pork, or other meats and roasts made with the less-tender cuts.

Many Hungarian recipes begin with onions slowly cooking in fat, with a healthy portion of paprika stirred in. It’s a combination that gives off a distinctively Hungarian aroma. Then the meat is added and browned, and a variety of dishes can result. Hungarian food has a bad reputation for being heavy and greasy. But it doesn’t have to be. *Pörkölt* and goulash (*gulyás*), for example, use very little fat. Deep-frying is a common technique, as are pan-frying and roasting.

Soups are thickened with either sour cream or a *rántás* (roux) of flour slowly browned in hot lard. Sour cream is a favorite Hungarian ingredient—in addition to soups, it’s also added to stews like *paprikás* (made with paprika), *székelykáposzta* (a stew with sauerkraut), *főzelék* (vegetable stew), and even some sweets. Vinegar is often added to soups at the table.

Hungarians generally do not use as many kitchen utensils and appliances as Americans do. Most Hungarians have a battery of aluminum pots, but Hungarian cuisine doesn’t require any special utensils (other than a *spatzele* plane—a device that batter is passed through, into a pot, to make rough noodle-dumplings. Since kitchens tend to be small, avid home cooks often have large cutting boards that they pull out to use as temporary additional counter space when preparing large meals. Grilling is not common in Hungary, but during the warm months Hungarians like to cook soups and stews outdoors in a cauldron. Another outdoor cooking event is the

szalonnasütés, in which a fire is built and participants stick slabs of bacon along with onions on the ends of sticks, hold them in the fire, and catch the drippings on pieces of bread. Traditionally, bread was baked in an outdoor wood-burning oven (*kemence*), but these days most people buy bread from the grocery store. Pickling is important and is done in abundance with both fruits and vegetables. During the summer, cucumbers are also fermented in large jars set out in the sun to make *kovászos uborka*.

Typical Meals

Hungary is a small, relatively homogeneous country, with few regional specialties or differences. But typical meals for Hungarian families will vary greatly depending on their economic and social standing, age, and location such as rural or urban. Traditionally, breakfast in Hungary has been a substantial meal, typically consisting of a “cold plate” of a variety of sliced cheeses; cold cuts, dried sausage, and salami; Hungarian banana peppers and tomatoes; bread and butter; and strong espresso-style coffee. For those living in the countryside as well as for many blue-collar workers in cities, breakfast still looks like this. But urban Hungarians will often have a more westernized breakfast such as cereal, eggs, or yogurt. Or they will buy scones (*pogácsa*) or sweets from a nearby pastry shop to eat on the way to work. Increasingly, as lifestyles become more hurried, Budapesters will do what was unthinkable not long ago: get their coffee in a to-go cup rather than sitting and relaxing with it. A midmorning snack called the *tíz órai* is customary in Hungary and generally consists of coffee or tea and either something sweet to eat or something simple like toast.

Lunch at around noon is typically the main meal of the day in rural Hungary, where, if they are able to, people go home for a home-cooked family lunch. Increasingly, however, this habit is eroding. In Budapest, most workers either bring something from home or have a restaurant lunch. Many restaurants specialize in delivering hot prepared lunches to offices. Eating a large Sunday lunch, however, remains an important family custom, in both cities and rural areas. Children generally eat hot lunches at school, which are fairly nutritious and varied.

Traditionally dinner was a lighter meal than lunch, eaten around 7 P.M., and often it was a cold plate, similar to breakfast. In rural areas, this is still typical. In Budapest, dinner habits have become more westernized, with a large dinner becoming the main meal of the day, around 7 or 8 P.M. Hungary produces a significant amount of wine, and wine or beer is usually drunk with dinner.

Soup is an important element in a Hungarian meal, and no Hungarian meal is complete without it. Bread is never served on its own, but it is always served with soup. Despite the stereotypes, very few Hungarian dishes feature hot paprika. However, a bit of hot paprika powder or paste is always placed on the table for diners to add heat to their food individually. Vinegar and sour cream are also added to soups at the table.

Traditional Hungarian goulash, or beef stew, served from a crock pot. (Shutterstock)

Gulyás (Goulash)

Goulash is an everyday dish served at nearly every Hungarian restaurant. It is so simple to make that any Hungarian who cooks can do it. Many also cook it over an open fire in a *bogrács* (cauldron), which adds a smoky flavor. Some cooks add pinched pasta (*csipetke*) before serving. If you were to continue cooking the meat without adding water or potatoes, the resulting dish would be *pörkölt*, which is the stew that foreigners tend to think of as goulash. Gulyás is an everyday meal, eaten with thick-crusted white bread.

4 tbsp sunflower or canola oil

2 yellow onions, chopped

1½ lb beef chuck, trimmed and cut into ½-in. cubes

Kosher salt and freshly ground black pepper, to taste

¼ c sweet paprika

2 tsp dried marjoram

2 tsp caraway seeds

2 cloves garlic, finely chopped

2 medium carrots, cut into ½-in. cubes

2 medium parsnips, cut into ½-in. cubes

1½ lb medium-sized new potatoes, peeled and cut into ½-in. cubes

1 tomato, cored and chopped

1 Italian frying pepper, chopped

Heat the oil in a pot over medium heat. Add the onions, cover, and cook, stirring occasionally, until soft and translucent, about 10 minutes. Increase the heat to high. Add the beef, and season with salt and pepper. Cook, uncovered, until the meat is lightly browned, about 6 minutes. Stir in the paprika, marjoram, caraway, and garlic, and cook until fragrant, about 2 minutes. Add the carrots, parsnips, and 5 cups water. Bring to a boil; reduce heat to medium. Simmer, covered, until the beef is nearly tender, about 40 minutes. Add the potatoes, and cook, uncovered, until tender, about 25 minutes. Stir in the tomatoes and pepper; cook for 2 minutes. Season with salt and pepper to taste.

The main course of a Hungarian meal is always a big portion of meat—whether it is a roast, a stew, or vegetables such as cabbage or peppers stuffed with meat. Potatoes are the most common accompaniment, and sometimes these are even served with rice. Stew (*pörkölt*) has historically played an important role in the Hungarian meal. Stews can be accompanied by buttered parsley potatoes, flour and egg dumplings (*galuska*), or tiny pieces of pasta the size of barley (*tarhonya*). Almost always, they are served with a few pieces of *savanyúság* (pickled vegetables) to aid the digestion of so much fat and starch. Leafy salads are rarely eaten, although Hungarians do eat salads made of sliced cucumbers or sliced tomatoes in a briny dressing made with vinegar, salt, and sugar. Salads are always served with the meal, never as an appetizer.

Lunch will nearly always end with coffee. Hungarians have a legendary sweet tooth, and leisurely meals will nearly always end with cake, strudel, cookies, or some other home-baked sweet. *Pálinka* (fruit brandy) is a traditional spirit in Hungary, made both commercially and at home. In traditional Hungarian households drinking shots of *pálinka* is common and done in a variety of situations: to welcome guests, to begin a meal, or to end a meal.

Depending on location and affluence, the types of meals eaten will vary. Hungarians who are well traveled are more likely to add non-Hungarian recipes to their repertoire, while rural Hungarians and those with little exposure to international cuisine will rely more on the diet laden with pork and potatoes. Likewise, the less educated and less affluent will rely on a diet of processed and prepared foods, which are also abundant in Hungary.

The following are examples of typical meals in middle-class families in Budapest and in rural Hungary. Budapest is a bustling, cosmopolitan city of nearly two million people. Life for many residents is fast-paced, which is reflected in the differences between the eating habits and diet here and in the countryside. In Budapest, breakfast varies from the traditional cold plate of sliced meats, vegetables, and cheeses to simple toast and jam or a quick bite on the way to work. There are bakeries and pastry shops on nearly every corner, where people often stop in for *pogácsa* (savory scones), cheese rolls, or

some other type of baked goods. Hungarians tend to drink lots of strong coffee, made at home with a stovetop coffeepot or purchased at a café. A mid-morning snack at around 10 A.M. can simply be coffee or tea, a crescent roll (*kifli*), or a sandwich.

For workers, lunch in Budapest is usually eaten at a restaurant, an *étkezde*, a type of restaurant open only for lunch and serving inexpensive, simple Hungarian dishes, or at a *büfe*, where prepared food sits under heat lamps in chafing dishes. Many who work in offices will order food daily from a delivery service. Restaurants in Budapest cater to workers, with inexpensive and quick two- or three-course lunch menus.

A family dinner now serves the function that lunch once did in Budapest, with most families eating a dinner that is larger than lunch. Some examples of common everyday dinners include pasta with curd cheese and lecsó (stewed peppers and tomatoes with paprika), roasted or fried pork, or beef *pörkölt* (stew) with potatoes. Dinner may also include foods that are typically considered breakfast foods in Western countries: ham and eggs, savory French toast, rice pudding, and semolina pudding. With the arrival of ethnic ingredients, international cooking shows, and scores of international restaurants, Budapesters are apt to experiment with cooking more exotic types of food.

In the countryside, no matter the region, eating habits are similar. Hungarians tend to rise early, eat breakfast as a family, and, whenever possible, have lunch together. Breakfast is a hearty but cold meal, with smoked bacon, paprika-spiked dried sausage, and salami served alongside sliced banana peppers and tomatoes, cheese, bread, and coffee. Bread with butter, jam, and honey might also be served.

Lunch in rural Hungary is traditionally the main meal of the day and consists of a first course of soup and then a meat-centric main course, usually accompanied by potatoes and pickled vegetables. Dessert could be *almás lepény* (apple tart), a yeasty cake, or walnut cake.

Dinner in rural Hungary is typically served around 7 P.M. and is lighter than lunch. It sometimes features sweet dishes such as pasta with poppy seeds or *palacsinta* (crepes) with apricot jam, sweetened

curd cheese, or ground walnuts. Alternatively, it could be a cold plate, similar to breakfast. Local wine is typically drunk with dinner. Often, *pálinka* (fruit brandy) is drunk before or after dinner.

Paprikás Csirke (Paprika Chicken)

Paprika chicken is one of the most classic of Hungarian dishes. Named for the large amount of paprika that goes into the sauce, the *paprikás* method can also be applied to veal. In Hungary, this dish is usually eaten with *galuska* (or *spaetzle*—a kind of ragged noodle made by dropping batter into boiling water) and a cucumber salad. The best type of pot to use is a cast iron casserole, but any pot with a tight-fitting lid will do. Cooking the chicken with the skin intact greatly benefits the flavor. For best results use a high-quality Hungarian sweet paprika.

2 tbsp lard (or oil)

2 large onions, peeled and minced

1½ tsp salt

2–3 tbsp sweet paprika

1 or 2 tomatoes, chopped

2 lb chicken pieces

1 banana pepper, sliced into rings

2 tbsp sour cream, plus more for garnish if desired

1 tbsp flour

2 tbsp heavy cream

Heat the lard (or oil) in the pot, add the onions, sprinkle with half of the salt, and cook, covered, over very low heat until the onions are glossy but not browned. Turn off the heat (so the paprika doesn't burn and become bitter), and stir in the paprika. Add the tomatoes and ½ cup of water, and mix. Turn the heat back on low, and place the chicken pieces in the pot. Sprinkle the remaining salt on the chicken, cover, and cook for about 30 minutes, checking every few minutes to see whether it needs more water. Remove the lid, add the sliced pepper, and cook for 10 more minutes. In a small bowl, mix the sour cream, flour, and heavy cream. Remove the pieces of chicken, and place the pieces on a serving platter. Add the sour cream mixture to the paprika

sauce, and stir until blended. Cook for a minute or two, but don't let the sauce come to a boil. Pour the paprika sauce over the chicken pieces. Garnish with a spoonful of sour cream, if desired, and sprinkle with paprika.

Eating Out

Restaurant culture in Hungary suffered horribly during Communism. Businesses were privatized, the quality was poor, and most people wouldn't have had the money to eat out even if there were restaurants. Now, Budapest has a sophisticated restaurant scene with an increasing number of ethnic eateries to cater to both foreigners and Hungarians. There are Western fast-food chains, as well as a few local Hungarian fast-food chains specializing in *főzelék*. In the countryside, however, restaurants haven't advanced as much. Traditional Hungarian restaurants reign, and the quality is usually not as high.

There are several types of restaurants in Hungary, but these days the lines between them have been blurred. An *étterem* (the most common word for restaurant) can mean anything from a fancy white-tablecloth place to a fast-food eatery. Originally it referred to a more upscale restaurant, but it has now taken on a more all-encompassing meaning. Historically, a *vendéglő* was a step down from an *étterem*, in terms of both price and decor. It was the kind of place that served hearty portions of classic Hungarian food, and now it might still be decorated with folksy knickknacks and have red-and-white-checked tablecloths.

Étkezdes and *kifőzdes* are simple no-frills places that serve lunch on weekdays, and sometimes Saturdays. They're usually one-room restaurants with little decoration and a home-style menu. These types of restaurants have loyal regulars who share tables when needed. Coffee and alcohol are rarely served since the idea is to eat quickly and leave. The short menu usually changes daily, offering a few soups, ready-made dishes like stew or roasted meat, freshly prepared dishes like big slabs of fried meat, pickled salads, *főzelék*, a pasta, and one or two desserts. There are many simple fast-food stands (*büfé*), which are basically snack counters serving basic

things like cold sandwiches, drinks, and sweets. Chinese buffets (*kínai büfé*) are ubiquitous and usually serve Hungarianized Chinese food. Butchers (*húshentesáru*) serve sausage and bread, and possibly roasted chicken or pork belly, at stand-up counters.

Hungary is also famous for its coffeehouse culture. A *kávéház* can be a trendy place serving breakfast, lunch, and dinner along with an extensive wine list. Or it can be a classic *kávéház* where coffee is served on silver trays with tiny glasses of mineral water and the decor is lavish with gold gilt, fancy plasterwork, and crystal chandeliers. These are the places that were plentiful at the end of the 19th and the beginning of the 20th century, popular with writers, artists, and revolutionaries. During the 1930s the elegant *kávéház* was replaced by the simpler *eszpresszó* (also called *presszó*), which was (and still is) a smoky, unattractive place, serving cheap alcohol and strong coffee. *Cukrászdas*, pastry shops, are usually small places with a few tiny tables just big enough for a cup of coffee and a piece of cake. A *pékiség* is a bakery, but there are few dedicated bakeries left, since most people buy their bread in the supermarkets.

Special Occasions

In Hungary it seems as if festivals with food or wine as their focus are constantly taking place throughout the country. Villages and regions hold festivals honoring important crops, ingredients, or dishes, and there are competitions for cooking *gulyás* and fisherman's soup (*halászlé*) in many regions. Holidays are closely associated with traditional foods, and the food can be more important than the holiday itself. In Budapest, holiday traditions and customs are generally less elaborate than in the countryside, but customs differ with every family.

The Christmas (*karácsony*) season kicks off in Hungary with *Mikulás nap* (St. Nicholas's Day) on December 6, when children polish their shoes and set them out for Mikulás (St. Nick) to fill with chocolate and toys. If they've been bad, Mikulás's helper, Krampusz, will leave twigs instead. In December bakeries and home cooks bake enormous amounts of roulade cakes filled with walnuts or poppy seeds

(*bejgli*), which are a crucial part of the holiday season. December 24 is the big celebration, when the children are banished from the living room, and the angels and Jézuska (baby Jesus) bring the presents and decorate the tree with shiny pieces of *szaloncukor* (candies wrapped in colorful foil wrappers). It's customary to abstain from meat on Christmas Eve, so dinner revolves around fish. The meal most often starts with halászlé, followed by whole roasted fish or breaded carp and potato salad with tartar sauce. Christmas Day dinner was traditionally turkey, but these days it is anything from stuffed cabbage to roasted duck. Dessert is *bejgli* or *mákos guba* (bread pudding with poppy seeds).

Hungarians greet the New Year (called *Szilveszter*, because it falls on St. Szilveszter's feast day) with sparkling wine. Traditionally, roast suckling pig with horseradish and braised red cabbage was eaten on New Year's Day. Now, the most significant

Bejgli, a traditional Hungarian folk cake. (Shutterstock)

food to consume is some form of lentils, which are said to bring money in the coming year. *Korhelyleves*—a tangy sauerkraut and sausage soup with sour cream—and sausages (more commonly frankfurters) are also eaten in the early morning hours. At midnight everyone gathers around to sing the Hungarian national anthem.

The Easter (*húsvét*) meal is one of the biggest of the year, with boiled smoked ham, freshly grated horseradish, boiled eggs, deviled eggs in homemade tartar sauce, light and fluffy Easter bread (*tejes kalács*, similar to challah bread), potato salad in tartar sauce, pickled vegetables, and *bejgli*. Most Catholics abstain from eating meat on Fridays during Lent, and they often give up something else throughout the Lenten period.

Harvest festivals and processions are held throughout the country during September and October, but the harvest in Tokaj for the famous sweet wine only begins at the end of October, when many festivities are held. November 11 is the feast day of Saint Martin (Szent Márton nap), who was born in what is now Hungary but was then the Roman province of Pannonia. Legend has it that Martin was a devout hermit when he was asked to become the Bishop of Tours. He refused, hid in a goose pen, and then killed and ate one of the geese after their squawking gave away his hiding place. Ever since, it has been a Hungarian tradition to mark the day by eating goose (*liba*) and drinking the season's first wine (*újbor*).

Diet and Health

Like much of central and eastern Europe, Hungary is struggling with the long-term effects of its traditional diet, as well as of the Communist-era agricultural policies and lifestyles that resulted in meat-centric and fat-heavy diets. Obesity is the number-one public health problem in Hungary, according to studies, with some estimates putting the number of obese adults at more than 15 percent of the population.

Both age and location greatly affect the way that Hungarians cook and eat. Hungarians living in rural areas tend to eat in the most traditional

manner and, ironically, often have less access to a variety of fresh fruit and vegetables, as well as the many organic food shops that stock whole grains, than Budapest residents do. Although sunflower oil is increasingly being used, pork fat remains heavily used by many older people who don't take advantage of healthier options now available.

Age is also an important factor in determining lifestyle and health. While the older generation is fairly set in its ways in terms of cooking and eating, younger Hungarians, particularly those living in urban areas, are more likely to cook non-Hungarian and lower-fat recipes. They tend to avoid the abundance of deep-fried dishes and sugary sweets, and they like to shop at organic shops and markets when they can afford to.

In addition to the diet, since the fall of Communism, experts have noted that lifestyles have become less active—in part due to the easier access to cars and the arrival of multiple television channels—with people walking less and not exercising enough.

Alcoholism, too, is a serious health problem in Hungary, with mortality due to alcoholism three times higher than the European Union average for males and 2.5 times higher for females.

Iceland

Overview

Iceland is a 40,000-square-mile island country of 320,000 people, which in 2007 the United Nations named the world's best country to live in. It was one of the first to establish a parliamentary democracy; its capital, Reykjavik, is one of the most fashionable urban enclaves on earth; and Icelanders write, publish, purchase, and read the most books per capita globally. The country boasts a landscape of spectacularly unspoiled scenery that includes mountains and oceans, wildlife and glaciers, not to mention volcanoes.

The Norse settlers who founded Iceland between 874 and 930 A.D. came upon mostly the same geography present today, which is 63 percent tundra, 14 percent lakes and glaciers, and only 23 percent vegetation. Located as far north up the Mid-Atlantic Ridge as it is, Iceland saw few ships and explorers at that time, which meant very few imported goods made it to the island. The lack of fertile, arable land also made sustainable agriculture a huge challenge and forced locals to subsist on whatever they were able to forage. And so the way Icelanders eat is mostly a result of the way they were, and are—the cold climate and long winters result in a typical Icelandic diet that is low in vegetables and high in cereals, seafood, and lamb meat, as well as a bounty of preserved foods.

Food Culture Snapshot

Pétur Galdur and Freyja Andersson are a couple in their early thirties living together in Reykjavik's Old

Town neighborhood, an upscale, happening district where shopping, culture, and late-night cafés thrive. Pétur is an architect; he grew up in the suburbs of the city and easily absorbed its progression from an old-world reputation to a hip center of music, nightlife, and cosmopolitan cuisine. Freyja is from Ísafjörður, known for its charming dining culture, and embraces traditional Icelandic cuisine as much as the fusion options available in the capital. While many typical local dishes may seem old-fashioned and very much off the beaten path to visitors, they are a mainstay of urban dining, despite the variety of Asian and other European options available. It's typical for big city dwellers such as Pétur and Freyja to embrace what they ate in their childhood as comfort food while continuing to explore new palates.

Breakfast in Pétur and Freyja's modest one-bedroom loft takes place a little before 8 A.M. It is a hearty affair that includes cold cuts of meat, cheese, *sild* (pickled herring), cottage cheese, and wheat toast or oatmeal, with nibbles of dried fruit and, on the colder days, a banana for an extra boost of energy to battle the icy temperatures. Because Iceland runs on coffee, Pétur and Freyja without a doubt would have already had a cup or two of the country's world-class, gourmet *kaffi* from delicately roasted beans, which come in handy when days are short and dusk falls early. For lunch, eaten around noon, they have an easy meal of soup, bread, and salad from a deli or café near their respective offices, or a hot dish of meat or fish with potatoes, followed by a sweet fruit soup and accompanied with a glass of milk. Between 2:30 and 4 P.M., they will grab an afternoon break of an open-faced sandwich or bread and butter with some sweets, typically selecting from

layer cakes, tortes, or cookies. Because dining out is expensive in Iceland, Pétur and Freyja often cook and eat in, saving trying a new restaurant or visiting a favorite for a fun night out every two weeks or so. Dinner is similar to lunch and finishes with *skýr*, a yogurt topped with sugar and cream. With some of the freshest meats, seafood, and produce in the world, it's easy to shop nutritiously at supermarkets or special produce markets for a fulfilling home-cooked meal. Before they head to bed, coffee and pastries are enjoyed at about 9:30 P.M., sometimes with friends over, other times during a sojourn to one of Reykjavik's beloved coffee shops, which run the gamut from bohemian to trendy, sometimes with live music, but always a comfortable home away from home.

When they do eat out, Pétur and Freyja are never at a loss for where to go. A culinary destination, Iceland has the most wine stewards per capita, and innovative young chefs know no bounds in fusing and creating

ingredients to produce wildly new interpretations of global cuisine. Freyja is always amazed at dishes such as pizza topped with alfalfa and snails at Elðsmijan, herring sushi at Apótek, and tuna tandoori at Thorvaldsen—Iceland's famously fresh seafood taking a worldly stage.

Major Foodstuffs

The two key items on any Icelandic menu are lamb and fish. In a country where sheep outnumber people by four to one, lamb is never lacking, and few parts of the sheep are left out of the kitchen. And with the Atlantic Ocean and the Arctic Ocean as the perimeter, fish of all varieties is a common sight all year round.

The low industrial output and high environmental consciousness in Iceland mean that Icelandic meat and seafood are some of the healthiest in Europe and entirely organic. In fact, this slogan exists

A commercial salmon fishing facility in Iceland. Fishing is the country's economic staple. (Corel)

in a bid to attract interest in exports and tourism: “Sustainable Iceland since 874.” Because the waters around the island are unpolluted, the fish is delicious and fresh—most common are cod, haddock, catfish, monkfish, halibut, trout, arctic char, and salmon in the local catch. The lamb has a distinctly wild flavor due to being raised free-range in the country, free of hormones, and purists insist you can taste the wild berries, moss, and herbs the flock feeds on. Apart from lamb, beef and reindeer are robust alternatives, and seabirds such as puffins and guillemots often feature in local dishes.

Dairy makes up a large part of the Icelandic diet as well, with more than 80 types of cheeses produced in the country, Camembert and blue cheese being the most famous. With milk just as wholesome as the cows they come from, it is a popular beverage that accompanies most meals and skýr, a yogurt-like product, is de rigueur daily.

Although agriculture is more challenging than in other parts of the world, hothouse technology has given rise to a decent range of vegetables and some fruit, particularly tomatoes, cucumbers, and bell peppers. That being said, salads in Iceland tend to be a by-the-way sideshow rather than a main attraction.

Cooking

Because of the country’s history and lingering cold climates, preserving food is a long-standing tradition in Iceland—any meat, fish, and produce not eaten fresh are pickled, preserved, and spiced using all possible means. It’s no surprise that Icelanders typically like their food saucy, salty, and well seasoned and that traditional cooking methods transform meat and seafood into hearty, heavy dishes. Fish is typically dried, smoked, salted, or baked, with garlic as a common ingredient. The pinnacle of Icelandic preservation practices must be the *hakarl*, shark meat that is buried from anywhere between three and six months until putrefied, breaking down the high levels of toxins in the flesh. While connoisseurs liken the taste to strong cheese, the flavor often makes the eyes water, and chasing a bite with *brennivín* (brandy) is often recommended, although

it is too overwhelming even for many locals. A favorite way of serving lamb is in a mustard sauce or cut into filets, as well as in stews, roasts, grilled dishes, and cutlets. Of course, it wouldn’t be Iceland if there were not an outstanding way of presenting lamb—*svid* is sheep’s head that is first singed to remove the wool, then cut in two to remove the brain, and then boiled to be eaten fresh or pressed into jelly (*svidasulta*).

With bread and pastries an important complement to meals and coffee breaks, baking is a significant part of Icelandic cooking. Milk is also a common ingredient, to add a robust and wholesome taste, and cheese is very popular as a side dish or addition, as well as the ubiquitous skýr. In addition to milk as a drink with meals, strong alcoholic drinks are favored, such as *brennivín* and other types of vodka.

The utensils in an Icelandic kitchen are similar to those used in other Western cultures, since few traditional dishes require innovative methods of preparation. Consistency is characteristic of Icelandic cooking, as a local cuisine that has thrived on homogeneity with few exterior influences.

Typical Meals

The structure of meals in an Icelander’s day is not unlike that in many European countries, consisting of three main meals with an afternoon snack and a nightcap to top things off. Eating takes place at tables with individual settings of the usual silverware. The long winters and unusually cold temperatures necessitate hearty meals to stay strong and robust, and to keep the chill out, which explains the long tradition of heavy meals. Conveniently enough, the lack of a wide variety of agriculture does not make much of a difference since grains, breads, meats, and seafood are key nutritional items for Iceland’s climate. As Iceland’s cuisine grows more cosmopolitan, pastas and pizza have become a popular option for carbohydrates.

Interestingly enough, despite how quickly Iceland’s culinary scene has been elevated on an eclectic scale, strong traditions remain, such as the constant imbibing of *kaffi* and skýr for dessert. The

latter is now available in all sorts of berry varieties, shakes, and even a more liquid form to complement cereals. And what may appear to be delicacies, such as *fillsegg* (seabird eggs), *lundi* (puffin), *hreindýr* (reindeer), *hrútsprungar* (pickled ram's testicles), *slátur* (leftover lamb parts cooked like haggis), and *hestur* (horse), are common ingredients in the daily repast. In fact, *harðfiskur* (wind-dried haddock or cod) is a popular snack and the local equivalent of gum, eaten by tearing off a piece and chewing away, sometimes with a spread of butter.

Eating Out

The exorbitant price tag attached to dining out in Iceland, mainly because of high labor costs, makes it challenging for the typical local to regularly sample the burgeoning gourmet scene in major cities such as Reykjavik, which leads the charge (a midscale meal begins at 3,125 kr, or \$50). However, when Icelanders do venture into restaurants, the eclectic and innovative range of options, running from contemporary spins on traditional dishes to a fusion of international tastes, is endless. The hallmark of real Icelandic restaurants can still be found in cities outside of Reykjavik, especially in coastal areas, where these are identified by their nautical decor and wide selection of seafood and seabirds, always served with potatoes, familiar vegetables, and rich sauces in large portions and dramatic presentations. These traditional restaurants serve the dishes that are harder to create at home as well as fancier, more expertly prepared versions of comfort favorites.

The focus on modern Icelandic dining is strong and conspicuous—in Reykjavik restaurants, the waitstaff passionately introduce and engage in discourse about their specialties. Service is impeccable and welcoming, the warmth an immediate antidote for the climate, and a fantastic entrée into this wild new (for Iceland) art. Dining hours tend to run on the late side, with most breakfast places opening only after 10 A.M. on weekends and dinner service starting no earlier than 8 P.M.

There is perhaps no better indication of how far the Icelandic culinary scene has come than the Reykjavik Food & Fun Festival, held yearly in February

(note that winter does not prevent Icelanders from going out and indulging in great food). Now one of the city's major events, prominent chefs from all around the world descend on the city to collaborate with their local counterparts to produce one-time-only prix fixe menus, at regular prices, in Reykjavik's best restaurants, infusing local Icelandic ingredients with global spices, flavors, and methodology.

In a country where delicacies come all the way out from left field, and with an abundance of fresh meats and fish, it is surprising that hot dogs are revered as an epicurean icon. After dancing a Saturday evening away, with more than a few nips of brennivín, many Reykjavik dwellers can be found in line at Bæjariús Beztu Pylsun, which literally translates as “the best hot dog in town,” in the country that considers its hot dogs the best in the world. For only \$2, you get lamb, pork, and beef in a supersnappy casing—the addition of lamb mellows and deepens the flavor—and crunchy fried onions, rémoulade, chopped raw onions, ketchup, and mustard nestled in a sweet, soft, and light white bun, the basic construction for *ein með öllu* (“one with everything”).

Special Occasions

There's perhaps no better time than *Þorramatur* to see a parade of Iceland's finest foods. *Þorramatur* is a selection of local dishes comprising meats and fish cooked in the ways already described and served with *rúgbrauð* (dense and dark rye bread), butter, and brennivín, usually buffet-style. *Þorramatur* is usually eaten from January through March, particularly during the midwinter feast of *Þorrablót*, but it is interesting to note that Icelanders enjoy their delicacies so much—the sheep's head, putrefied shark, pickled ram's testicles, and so on, all highlights of *Þorramatur*—that it is not uncommon to see this served any time the mood arises, particularly since locals truly embrace tradition.

Christmas Eve is a big occasion in Iceland, when a maelstrom of baking is done leading up to the holiday, featuring special spicy cookies. Each family will have at least 10 different types of cookies to offer visiting guests, and the centerpiece on the Christmas

Eve dinner table is usually ham, *hangikjöt* (smoked lamb), or *rjúpa*, a grouselike ptarmigan that takes the place of turkey. It is also a long-standing tradition for the family to make *laufabrauo* together, a pancake eaten at Christmas. Pudding with hidden almonds is served for dessert, and the person who gets the portion with the nuts wins a prize.

Although the smell of *hangikjöt* cooking is a sure sign of yuletide, the feasting begins on the eve of Christmas Eve, St. Thorlakur's Day, celebrated with a skate lunch. Originally eaten to mark the end of the Catholic Christmas fast, the tradition of the skate lunch continued even after Iceland converted to Lutheranism because this was a busy day and a dish that was easily and quickly cooked was needed. Beginning in the fall, skate is pickled and fermented to be ready by December 23 and is then served in chunks with boiled potatoes on the side. While the

odor of ammonia is strong and the taste must be acquired, the skate lunch remains one of the most celebrated events of the holiday season.

Diet and Health

There is no better indication that the Icelandic diet has been lauded and commended for its organic, hormone-free nature than the fact that many countries are importing its meats and fish—in fact, with Whole Foods Market in the United States heavily marketing its selection of Icelandic lamb and *skýr*, these mainstays of the country's diet have indeed entered mainstream popular culture.

The strong reliance on fish, pasture-raised lamb, and wild game for food means the Icelandic diet is rich in omega-3 fats; some experts attribute the low depression rates, despite the bleak climate, to this.

Some traditional Icelandic food (plate to the left: *Hangikjöt*, *Hrútsprungar*, *Lifrarpylsa*, *Blómör*, *Hákarl*, *Svid*; plate to the right: *Rúgbrau*, *Flatbrau*). (Shutterstock)

By consuming geothermally grown vegetables, wild berries, and whole grains such as barley and rye, Icelanders absorb a lot of antioxidants, which keep them healthy during the icy months.

Ireland

Overview

Ireland is the most westerly country in Europe and part of the British Isles. For many centuries, the British Crown has exercised dominion over parts of the island and at times the whole. The island of Ireland has 32 counties, 6 of which form Northern Ireland, which is part of the United Kingdom. The other 26 counties gained independence from Great Britain in 1921, and the division of the island into two countries has been contentious ever since. Ireland has a mild temperate climate in which grass grows nearly all year long. Ireland also has over 3,500 miles of coastline, which is teeming with fish. It has been suggested that the Irish are more connected to the land than any other western European nation. Although there are only 5 million people living on the island of Ireland, more than 80 million people around the world claim Irish lineage.

Ireland has one of the most interesting culinary traditions in western Europe, which has been influenced by the interaction of climate, geographic location, geology, tradition, conquest and colonization, and commerce. Ireland was the first European country to adopt the potato as a staple crop, which transformed Ireland from an underpopulated island of 1 million in the 1590s to the most densely populated country in Europe in 1840, with 8.2 million inhabitants. The overdependence on the potato, particularly on one variety, the lumper, which was not resistant to the fungal disease *Phytophthora infestans*, led to the disaster known today as the Great Famine (1845–1849), with the result that, by 1851, at least one million of the Irish poor had died and another million had emigrated. Long before the

introduction of the potato to Europe, however, the Irish were renowned for their tradition of hospitality, which was enshrined in the ancient Gaelic laws. Parallel food traditions existed in Ireland before, during, and after the famine, in which the middle classes and the Anglo-Irish gentry enjoyed a varied diet that would be hard to surpass in contemporary rural France or Britain. Traditional Irish food is essentially solid country cooking using the freshest of ingredients and treating them simply, letting the food speak for itself. The traditional fresh home-baked breads and scones served with butter, jams, and marmalades form a staple of Irish cuisine. The Irish attitude toward food has transformed dramatically, particularly since the early 1990s. In 2005, Irish people for the first time in history spent more on food to eat outside the home than they did on eating in the home.

Food Culture Snapshot

Fergus and Niamh Dunne are a typical middle-class family with two children; they live in Dublin. Their breakfast consists of either porridge (oatmeal) or breakfast cereals such as shredded wheat, which is served with milk and sugar. Beverages at breakfast time include orange juice and either tea or coffee. Lunch for both the children and Fergus normally consists of a sandwich (with a ham or cheese filling) served with a fruit smoothie (fruit pureed with natural yogurt and fruit juice) and perhaps some popcorn. Niamh would normally eat some pita bread with hummus or some cream cheese, apple, and crackers for her lunch. As a family they go through phases of using their fruit juicer

Shepherd's pie served with sautéed potatoes and broccoli. (Shutterstock)

or the bread maker but then don't use them again for a while. Like in many families, the evening dinner follows a weekly pattern in which meat, potatoes, and vegetables (for example, chicken breasts, mashed potatoes, and broccoli) would be served around three times a week, with either spaghetti Bolognese or lasagna on another day, fish (salmon normally) served with potatoes and vegetables on Wednesdays, and pizza on Thursdays. One day a week, they would eat dinner from either a fish and chip shop or an Indian or Chinese take-out place. Dinner is usually completed by a cup of tea and some biscuits (cookies) or a slice of cake. Once a week, the children might also eat pasta, chicken nuggets, or slices of pizza when they return from school.

The Dunnes do their main supermarket shopping online and have it delivered. This includes their breakfast cereals, milk, sugar, oil, rice, pasta, fruit (apples, oranges, and bananas), fresh vegetables, frozen foods (peas, sweet corn), jams, and cleaning products. This main weekly shopping is supplemented by about four visits to smaller local shops, including a local butcher, a convenience store, and a weekly farmers' market. During the summer months, salads feature within their diet, and they grow lettuce in the back garden. The children dictate much of the diet; Niamh and Fergus don't eat as much of the ratatouilles or stir-fries they used to eat before the children came along. Fergus makes homemade soup once a week, and they

entertain friends for dinner about twice a month. Daily guests, however, are always offered a cup of tea or coffee, which would normally be accompanied with some biscuits or a slice of cake.

Major Foodstuffs

Potatoes, dairy produce, cereals, meat, and vegetables remain the staples of Irish cuisine, despite the wave of immigration the country experienced in the last two decades. Ireland is now a truly multicultural country where dishes such as lasagna, chicken tikka masala, fajitas, or Thai green curry are as much part of the Irish culinary canon as bacon and cabbage, Irish stew, or shepherd's pie. Ireland's residents are among the highest per-capita consumers of tea, butter, potatoes, pig meat, and milk in the world. Some foodstuffs, which historically had been luxury items, such as chicken, beef, and salmon, have become increasingly popular and affordable in the last few decades. Oatmeal porridge, which has been eaten in Ireland since ancient times, remains a popular breakfast dish, often served with cream and honey. Despite Ireland's island location and the richness of its coastal waters, the Irish have never fully exploited its marine resources. The majority of the Irish catch is exported, and Ireland is on par with landlocked Austria in per-capita consumption of seafood.

Irish cuisine has been influenced by history over the centuries. The Vikings helped to popularize seafood, whereas the Normans introduced new varieties of animals, birds, and fish, including the white-fleeced sheep, domesticated duck, mute swan (as opposed to the native Hooper swan), pike, rabbits, pheasants, pigeons, and fallow deer.

By the late-medieval period, a number of dietary systems were in place in Ireland, according to social rank, region, and access to the market. Areas of direct Norman influence aligned their palate to the medieval European norm. Trade records testify to the use of imported luxury goods like spices, sugar, almonds, pepper, figs, verjuice, and rice. Almonds were used on fast days to make almond milk as a substitute for dairy milk. The older Gaelic diet of

dairy produce, oats, and salted meats coexisted with the newer, more elaborate Norman diet.

Detailed accounts of food eaten before the arrival of the potato in the 17th century exist. Among the vegetables listed, both wild and cultivated, are watercress (*biolar*), sorrel (*samhadh*), nettles, celery, parsley, charlock (*praiseach*), kale and cabbage, shamrock, wild garlic, leek, onion, chives (*foltchep*), peas and beans, carrot and parsnip (*meacan*), beets (*biatas*), dulse (*duileasc*), and sloke (*sleabh-cán*). Fruits listed include the blackberry, sloe, wild cherry, raspberry, strawberry, rowan, crab apple, elderberry, whortleberry, and cranberry. Native hazelnuts and imported walnuts are mentioned, but the most frequently mentioned fruit in the early Irish documents is the apple. Orchards were widely distributed, particularly in Leinster but also in the counties of Donegal, Mayo, Armagh, and Fermanagh. Apple tarts and crumbles remain extremely popular as sweet dishes with the Irish, with rhubarb, strawberries, and blackberries also popular when in season.

Potatoes

There were four main phases in the potato's acceptance into the general Irish diet. Stage one (1590–1675) saw the potato used as a supplementary food and standby against famine; in stage two (1675–1750), the potato was viewed as a valuable winter food for the poorer classes; in stage three (1750–1810), the poorer classes became dangerously reliant on the potato as a staple for most of the year; and stage four (1810–1845) saw mounting distress as localized famines and potato failures became commonplace. Two centuries of genetic evolution resulted in yields that grew from 2 tons per acre in 1670 to 10 tons per acre in 1800. The potato was useful for cleaning, restoring, and reclaiming the soil and also for fattening pigs. It has been suggested that increased potato consumption may simply and paradoxically reflect the fact that cereal cultivation intensified in the 1750s and 1760s, resulting in a growing reliance on the potato as a cleaning and restoring root crop. The potato provided food for the growing labor force needed for the move from

pasture to tillage that occurred at this time, but this shift resulted in high levels of unemployment following the Battle of Waterloo (1815) when the demand for grain exports fell. During the 18th century there was a steady export demand for Irish salt beef and butter. As dairy herds grew, cattle were drawn out of the poorer household, denying them an important food source, but this gap was filled by the potato, which was a noncommercial subsistence crop.

By the 19th century the potato had established itself as a staple of one-third of the population, an overdependence that led to the devastation of the famine in the 1840s when successive harvests failed. The period 1810–1845 saw the adoption of new, inferior varieties of potatoes, notably the lumper, which promised excellent yields. With this new variety, a family of six could exist for a whole year from one acre of even the poorest land that had been well manured. However, the lumper was not resistant to the potato blight, and this resulted in the dramatic potato failures of 1845, 1846, and 1847.

The potato was enjoyed by rich and poor alike. The custom of preparing potato puddings, both sweet and savory, was particularly noticeable among the wealthy, where extra ingredients like saffron, sugar, and spices differentiated this potato dish from the plain boiled potatoes of the cottiers. Among the poorer classes, who consumed an average of 11 pounds (5 kilograms) of potatoes each a day, it was not uncommon, it was said, to see individuals “eating one potato, peeling a second, have a third in his fist and an eye on the fourth.” Boiled potatoes were eaten with a restricted variety of foods—butter, buttermilk, occasional bacon, herring, and seaweed (dulse and sloke) and shellfish in coastal areas. The Irish have traditionally favored floury potatoes over waxy potatoes. Mashed potato dishes such as *champ* (with spring onions), *colcannon* (with shredded cabbage), and *kala* (with onions and soft-boiled eggs) were popular with those of moderate means and have become very popular in recent times on the menus of Irish restaurants. Another traditional Irish potato dish that remains most popular in the northwestern counties of Ireland is *boxty*, which is made from a mix of cooked

and grated raw potatoes. In 1845 there were over 2 million acres (829,875 hectares) under potato cultivation, but this had fallen to about 50,000 acres (20,000 hectares) in 1991. Popular potato varieties in Ireland include Kerr Pinks, Wexford Queens, Records, Pentland Dells, and Golden Wonders, but the most widespread variety is an all-purpose potato called the Rooster, which was developed in Oak Park, County Carlow. However, pasta, rice, and noodles are beginning to challenge the dominance of potatoes on the carbohydrate front.

Pork

In Ireland today, pork is the most commonly eaten meat. It is eaten in a number of forms, including fresh pork steaks and chops, pork sausages, bacon, hams, rashers (bacon), and both black and white puddings. Historically, potatoes were cooked as feed for pigs. Pigs were also fed whey, the by-product of both butter and cheese making. Some of the pigs were kept for home consumption, but the rest were a valuable source of income and were shown great respect as the “gentleman who paid the rent.” Until the early 20th century most Irish rural households kept some pigs. From around the mid-18th century commercial salting of pork and bacon grew rapidly in Ireland. Irish bacon was the brand leader, and the Irish companies exported their expertise to countries like Denmark and Russia. Nowadays, pigs are reared mostly in large factory farms. Pork features strongly in the Irish breakfast, on sandwiches at lunchtime, and in the famous Dublin dish *coddle*. The popularity of pork products became particularly apparent through the amount of empty shelf space in Irish supermarkets in December 2008 when there was a food scare concerning dioxins in pork and all products were recalled.

Dublin Coddle

Serves 4

½ lb sausages (cocktail sausages are nice)

½ lb bacon (cut in chunks)

½ lb onion (cut in chunks)

1 lb potatoes (cut in chunks)

1 large carrot (peeled and cut in chunks)

34 oz chicken stock or water

½ leek, finely sliced (using green and white of leek)

3.5 oz cream (about ½ c)

Seasoning (mostly ground pepper as little salt is required due to the salt in the meat and stock)

Put all ingredients (except leeks, cream, and seasoning) into a pot, and bring to a boil. Reduce heat and simmer for 25 minutes. Skim any impurities that rise to the top. Add the cream and the chopped leeks, and cook for a further 3 minutes, then season and serve.

Milk and Dairy

Ireland traditionally has excelled in the production of dairy produce—milk, sour milk, butter, butter-milk, curds, and both soft and hard cheeses. Evidence of the Irish fondness for *bánbidh*, “white foods,” is found in the 12th-century poem *Aislinge Meic Con Glinne*, where reference is made to a delectable drink “of very thick milk, of milk not too thick, of milk of long thickness, of milk of medium thickness, of yellow bubbling milk, the swallowing of which needs chewing.” In both the medieval and the early-modern periods, the Irish were the highest per-capita consumers of butter in the world. Irish butter is sold under the Kerrygold label all around the world. Cheese making has an ancient tradition in Ireland, but it had all but disappeared until the resurgence of an artisan farmhouse cheese industry, led by a number of farmers’ wives who had more milk than the European Union quotas allowed them to sell. Prior to this, the cheese industry in Ireland was almost exclusively confined to large-scale production of mainly cheddar cheese in factories, which were mostly owned by dairy cooperatives. Ireland today has over 300 types of farmhouse cheese, which on a per-capita basis is higher even than the production in France. The most popular of these are Cashel Blue, Gubbeen, Milleens, Ardsallagh, Gabriel, Durrus, and Coolea.

Tea, Breads, and Cakes

From ancient times in Ireland, oatcakes, flatbreads, and griddle breads were popular staples. There was no evidence of the built-up oven until the Norman arrival, and leavened yeast bread was common only in areas of Norman influence. During the latter half of the 19th century, there was a general growth in food-related stores and in the number of commercial bakeries and dairies in particular. During this time two items that had been the prerogative of the wealthy, white yeast-leavened baker's bread and tea, became increasingly popular among the working classes. White bread was held in esteem over homemade bread and was offered at special occasions such as wakes, Christmas, and Easter, or when special guests such as a priest visited the home.

A parallel development was the appearance of raised wheaten soda bread that was produced on the open hearth in a *bastible* pot (a type of Dutch oven), due to the increased availability of chemical leaveners (particularly bicarbonate of soda), which along with the soft flour and buttermilk produced a product that is considered to be uniquely Irish. The addition of other ingredients—eggs, butter, dried fruit, and spices—led to the growing repertoire of Irish breads, scones, and cakes. Some regional variation was also evident, with potato breads such as *boxty* most popular in the northwestern counties. A yeast-leavened bread *bap* (*bun*) called *blaa* is considered to be unique to Waterford and may be Norman in origin. Soda farls (a type of scone cooked on a hot plate rather than in the oven) are particularly popular in Northern Ireland and form part of the famous Ulster fry, along with fried bread. Two Irish brands of tea, Barry's and Lyons, have dominated the market from the early 20th century to the present day, and the Irish are still the highest per-capita consumers of tea in the world today.

Cooking

Roasting, boiling, baking, stewing, and frying are the main methods of cookery used in Irish cuisine. The prime cuts of meat (beef, lamb, pork) are roasted and often served with roasted potatoes and

Traditional Irish soda bread. (Shutterstock)

roasted root vegetables (carrots, parsnips, and turnips). Most vegetables are boiled, although some people prefer to steam floury potatoes. Bacon and corned beef are boiled, and the cooking liquor is often used to cook the accompanying cabbage or as an addition to the parsley sauce. Stewed meats are particularly popular in wintertime, with the most famous Irish stew classically containing only mutton, onions, potatoes, and water. Stewed apples are very popular as a sweet, scented with some cloves and served with custard. The frying pan holds pride of place in the Irish household, for it is used to fry sausages, rashers, eggs, black pudding (blood sausages), and tomatoes for the famous Irish cooked breakfast, commonly called a “fry.” The more health-conscious broil their breakfast, and some lamb cutlets with butter, pepper, and mustard are also commonly cooked under the broiler. Many children learn to bake by making fairy cakes (little buns) and gradually progress to sponge cakes, apple tarts, and crumbles. It is hard to beat the taste of oven-fresh scones with fresh butter and strawberry jam, washed down with a nice cup of tea.

Typical Meals

The typical meals in Ireland are breakfast (7:30–9 A.M.), lunch (1–2 P.M.), and dinner (6–7 P.M.). Some people also take a supper (9:30–10 P.M.). There have been changes in the mealtimes and structure in recent years due to the rising female participation in

the workforce. Many families ate their main meal in the middle of the day and then took a meal they called tea in the evening. The main family meal is now most commonly eaten in the evening, albeit sometimes in front of the television.

Breakfast can include one or many of the following: fruit juice, breakfast cereal (cornflakes, Weetabix, Special K, Rice Krispies, and so on), oatmeal porridge, toast, scones, brown or white soda bread with butter, jam or marmalade, yogurt, fruit, croissants, and Danish pastries. A full hot Irish breakfast includes sausages, rashers, fried eggs, grilled tomato, black and white pudding, and mushrooms. The Ulster fry also includes soda farls and fried bread. Boiled or poached eggs are also popular breakfast items, served with toast and butter. Omelets are occasionally served for breakfast as are fried kippers or dishes such as kedgeree. This would be more common on weekends, particularly as a form of brunch on Sunday. Breakfast beverages include tea, coffee, and fruit juices.

The traditional main meal based around meat and two vegetables has not disappeared despite the growing popularity of ethnic dishes such as Thai curry, lasagna, or chili con carne. The most popular meats are bacon (with parsley sauce), chicken (normally roasted with stuffing and gravy), beef (with horseradish sauce), lamb (with mint sauce), and pork (with applesauce). Smaller cuts of meat are also popular, such as beef steaks, pork chops, lamb chops and cutlets, and individual chicken breasts, thighs, or drumsticks. Minced beef is very popular and is used by most families at least once a week to make burgers, shepherd's pie, spaghetti Bolognese, lasagna, meatballs, or chili. Mutton is not as widely available or as popular as in previous times. There has been a decrease in the consumption of offal (liver, kidneys, heart, oxtail, tongue, pig's trotters) among the native Irish since 1990, but they have become more visible in butcher's shops due to the growing multiethnic population (or the new Irish, as they are known), who still value offal for both culinary and economic reasons.

Potatoes are served boiled, steamed, baked, and mashed. Deep-fried chipped potatoes, known as chips, are particularly common but are usually

purchased alongside fried fish in batter from fish and chip shops. Common vegetables include cabbage, carrots and parsnips, turnips, broccoli, cauliflower, French beans, and peas. Onions, celery, and carrots are particularly popular as a base for stews (both brown and white). Casseroles are also popular one-pot dishes, particularly in wintertime. It is customary to finish dinner with a cup of tea, which is normally accompanied by a biscuit or a slice of cake. Apple tarts or crumbles might be served with whipped cream or with custard. Sponge cakes and fruit cakes are also popular.

Children are increasingly being fed separate food from what their parents eat, with pizza, pasta, noodles, chicken nuggets, chips, and potato waffles well established as foods most Irish children regularly eat. Another regular snack for children are crisps (potato chips), which come in cheese and onion, salt and vinegar, prawn cocktail, and barbecue beef flavors mostly. Most elementary schools now take part in a government program in which the children grow some food in their schoolyard or classroom. Milk is also delivered free of charge to primary schools to encourage dairy consumption for calcium intake and healthy bones. Childhood obesity and related diseases are, however, becoming an increasing issue in Ireland.

Eating Out

There has always been a market for eating outside the home in bars, taverns, eating houses, restaurants, cafés, canteens, and clubs. This market grew dramatically from the 1970s, and in the last 15 years, eating out moved from an occasional event to a regular pastime for most Irish people. In 2005, for the first time in history, Irish people spent more money on food consumed outside rather than inside the home. Many Irish public houses (pubs) sell food as well as alcoholic beverages. The most common form is the *carvery*, where roast meats are carved to order and served with potatoes, vegetables, stuffing, and gravy. Wet dishes such as stews and curries are also served at a carvery. The carvery provides the most authentic public form of Irish cuisine. Most Irish people prefer to go to a Chinese, Thai, Italian, Indian, or

French restaurant when dining out. There is also a gradual growth in sushi bars and bagel bars in the large cities. Ireland now has some excellent restaurants and is steadily building a reputation as a culinary destination for travelers. A growing number of restaurants serve what is called modern Irish cuisine, where the best Irish produce is cooked and served using contemporary techniques. There has been a long tradition of a café culture in Irish cities, but in recent years the famous cafés such as Bewley's, where a pot of tea and an almond bun might be consumed, have been replaced by smaller cafés where cappuccinos and Danish pastries or muffins are more popular.

Fast-food restaurants such as McDonald's, Burger King, and Kentucky Fried Chicken are popular in Ireland, but some indigenous chains such as Supermac's and Abrekebabra have proved to be equally popular, serving particularly Irish versions of fast-food items, such as curry chips, taco fries, or garlic and cheese fries. Most Chinese and Indian restaurants also offer take-out menus. The most common take-out place in Ireland is the fish and chip shops, which are mostly run by Italian families. These establishments serve deep-fried fish in batter, battered sausages and onion rings, burgers, southern fried chicken, and sometimes also kebabs. Chips are usually served with salt and malt vinegar. Another source of food outside the home that has become extremely popular in recent years is the deli counters in convenient shops, where fresh sandwiches, rolls, and wraps are made to order. At lunchtime, there are regular queues at such counters throughout the country. A particularly Irish morning offering popular in such establishments is the jumbo breakfast roll, which is two sausages, two slices of bacon, and black pudding placed in a buttered bread roll with tomato ketchup.

Special Occasions

There are a number of special occasions within the year or social calendar that call for specific foods. Christmastime revolves around the family; the traditional Christmas dinner of roast goose has been replaced by turkey and ham with stuffing, cranberry

sauce, roast potatoes, vegetables, and gravy. This meal is often preceded by some smoked salmon on brown bread or a prawn cocktail (cooked prawns on shredded lettuce topped with a cocktail sauce). The Christmas meal is followed by Christmas pudding, also known as plum pudding, which is a rich fruit-based boiled or steamed pudding served with either brandy butter or custard. Later on, with a cup of tea or coffee, you might be offered a slice of Christmas cake, which is a rich baked fruitcake topped with both almond and royal icing. Another popular Christmas food is spiced beef, which was traditionally eaten on Christmas Eve. Both the spiced beef and the turkey and ham are excellent for either cold salads or sandwiches when guests come to visit at Christmastime. Another popular sweet served at Christmas is sherry trifle.

The turkey and ham meal is also often served at family occasions such as weddings or at funerals. Families often invite mourners back to a hotel for either soup and sandwiches or a sit-down meal after a funeral. At other occasions such as christenings, first communions, confirmations, or 21st-birthday parties, it is more common to serve either a cold salad buffet or a hot dish such as chicken curry with rice.

The next food-related date in the calendar is Shrove Tuesday, which marks the beginning of Lent (40 days of fasting from Ash Wednesday to Easter Sunday). On this day it is customary to eat pancakes, a custom that originated to use up eggs, which would not be eaten again until Easter Sunday. Pancakes were eaten with sugar and lemon or with honey, but nowadays children increasingly prefer Nutella (a hazelnut chocolate spread) on their pancakes. Ash Wednesday, Good Friday, and Holy Thursday were all traditionally black fast days when no meat was consumed. Fridays were also traditionally fast days when fish was normally consumed, but these traditions are quickly being lost in an increasingly secular Ireland. Many Irish people continue the tradition of abstaining from some foodstuff during Lent, normally sweets, sugar, cakes, or alcohol. Saint Patrick's Day falls in the middle of Lent, and Irish people are given a special dispensation from whatever they avoided for Lent on this day. On Good Friday, it is customary to eat hot cross

buns (yeast-leavened spiced fruit buns topped with a cross of pastry), and the tradition of eating many eggs on Easter Sunday has been almost replaced by the gifts of chocolate eggs for children. On Easter Sunday it is customary to eat roast leg of spring lamb, which is seasonal.

The arrival of summer is marked with the availability of fresh strawberries and of new potatoes, which are as welcomed in Ireland as the *Beaujolais nouveau* celebrated by the French. New potatoes are often eaten simply with their skins still on, with butter and salt. Summer is also about eating wild salmon, which is becoming less available due to overfishing. Rhubarb and blackberries are at their best in the summer months also. The tradition of eating goose at Michaelmas (September 29) has all but disappeared, but the game season (venison, pheasant, grouse, etc.) in the winter months is still influential in the diet of the countryside and in gourmet restaurants.

The next special occasion for food is the festival of Halloween (October 31/November 1). Many foods and food rituals are associated with this festival. Many of the traditions are linked to divining the future. From the mid-18th century, colcannon, a dish made from mashed potatoes with curly kale or cabbage, was a traditional supper dish on Halloween night, often containing items such as a coin, stick, or rag to predict the future prospects of the consumers. Another traditional foodstuff at Halloween is *barmbrack*, which comes from the Gaelic *bairín breac*, or speckled loaf. The fruit loaf traditionally contains charms that foretell future events. Finding a ring in the cake meant marriage within the year, a rag symbolized poverty, a bean meant riches whereas a pea meant poverty, a stick forecasted a future beating by one's spouse, and a thimble discovered by an unmarried girl indicated life as a spinster. Most barmbracks nowadays contain only a ring. The American Halloween tradition of the jack-o'-lantern made from a pumpkin is Irish in origin. The Irish used to carry a sod of turf from a sacred fire to their houses inside a hollowed-out turnip (rutabaga), and this tradition was carried on by Irish immigrants in America, using the pumpkin where no turnip was available.

A dish of colcannon. (Shutterstock)

Diet and Health

Cardiovascular disease is the main cause of death in Ireland, accounting for 36 percent of all deaths and including heart attacks, strokes, and other circulatory diseases. The government has been working with the food industry to reduce salt levels in processed food and is involved in promoting a more active lifestyle among the population. Research shows that certain segments of the community are more likely to suffer from diet-related illnesses. In a study, the contribution of fat to total energy intake increased as socioeconomic status decreased, a finding reflective of the higher consumption of foods high in fat by respondents from socially disadvantaged groups. Energy from carbohydrates was greatest among those from socially advantaged groups and was close to the recommended 50 percent of the total energy intake. Conversely, energy from protein decreased with increasing social status in groups. The mean intake of vitamins and minerals was generally close to or above the recommended values. Another diet-related health issue in Ireland is the amount of alcohol consumed, which is significantly higher than the European average.

Italy

Overview

Italy is located at the heart of the Mediterranean Sea. After years of relative underdevelopment, the country has become one of the most industrialized countries in the world, despite its dysfunctional political structure. Various areas differ in terms of economic activities, social structures, and culture, although some habits, especially those connected with Catholicism, are widespread and widely followed. Because of its long history, the diverse and prolonged influences of neighboring populations, and local differences, Italian cuisine presents a stunning variety of products, foods, and dishes. Italians are usually quite knowledgeable about foods and dishes that have nationwide diffusion and distribution, but they are also very proud of their local products and traditions. In recent years, local foodways, and above all artisanal products, have been rediscovered. However, large sections of the population are abandoning the traditional Mediterranean diet, mainly based on carbohydrates and vegetables, and adopting a diet rich in protein, fat, and sugar; as a consequence Italy is experiencing a growth in obesity and heart disease.

Food Culture Snapshot

Massimo and Francesca live in downtown Rome with their four-year-old daughter, Caterina. It is Saturday, and on weekends they take the time to go grocery shopping. Like most Romans, they buy different things in different places, depending on what they are looking for. They start early at the outdoor market, the best place for fresh fruit and vegetables. Some

produce comes from the central wholesale market, but some stalls belong to farmers from the nearby villages on the hills, who have been bringing their products into the city for years. Now, immigrants manage many stalls, but they are familiar with their Italian clients' foodways and habits. Massimo and Francesca decide to get some fresh fish, too; the best day to buy it is Friday, but today it is still good, and they trust their fishmonger. For meat, although it can be bought at the outdoor market, they prefer to go to the neighborhood butcher's, where they can get the cuts they need in a quieter environment. They also like to patronize the local bakery, where they buy fresh bread and also pizza by weight: Caterina loves it. After taking care of the fresh food, Francesca and Massimo drive to the supermarket, where they buy products that can be stored: canned and frozen food, flour, cookies, and pasta, which are cheaper at the supermarket. Tomorrow they are having friends over, so on their way back they decide to stop at their favorite gourmet shop and get some cheese and cold cuts for the guests. It is expensive, but for special occasions they do not mind spending a little more. A final stop at the wine store to get some good bottles, and they are good to go.

Major Foodstuffs

Grains, such as wheat, rice, and corn, constitute the main staple in Italian cuisine. Wheat, both the hard and soft varieties, provides the bulk of dietary calories in the form of flour, bread, pasta, pizza, and such. Breads, both salted and unsalted, vary in size from single-portion breads to big loaves. They are used during meals, and single-portion breads

(*panini*), filled with all kinds of food, are eaten as a snack or a light meal. Leavened dough is also used to make pizza, which can be baked in the oven and simply seasoned with a dash of olive oil, salt, and some herbs or enriched by all kinds of toppings. Pizza can be either eaten at a restaurant, in which case it is round and served on a dish, or bought from shops, where it is cut according to the client's request and sold by the weight.

Pappa al Pomodoro (Tuscan Tomato and Bread Soup)

- 1/3 c extra-virgin olive oil
- 1 medium onion, finely minced
- 1 stalk celery, finely minced
- 1 medium carrot, finely minced
- 1 clove garlic, finely minced
- 1 tbsp parsley, finely minced
- 3 c stale Italian bread, crust removed, cut into 1-in. cubes
- 1 1/2 lb red tomatoes, peeled, seeded, and chopped
- 3 c chicken broth
- Salt and pepper
- 4 basil leaves, minced

Heat the olive oil in a soup pot over medium heat. Add the onion, celery, carrot, garlic, and parsley, and sauté until the vegetables are soft. Add the bread, and stir for a couple of minutes. Add the tomatoes, let cook for 5 minutes, and then add the warm broth. Season with salt and pepper. Reduce the heat and let simmer, uncovered, till the bread dissolves into a thick, creamy soup. Remove from the heat and allow the soup to rest for 20 minutes. Serve at room temperature, garnishing each portion with a drizzle of extra-virgin olive oil and a sprinkling of basil.

The main Italian staple made with wheat flour is certainly pasta. Fresh pasta used to be made at home, but it is now available in shops. The most common types are fettuccine or tagliatelle, shaped

with a knife into long ribbons. Local specialties include *tajarin* (long, flat egg noodles) in Piedmont, *garganelli* (ridged quill shapes) in Romagna, *orecchiette* (ear shapes) in Puglia, *spaghetti alla chitarra* in Abruzzo, and *bigoli* (thick hollow strands) in Veneto. There are also many types of fresh *pasta ripiena*, or filled pasta, such as ravioli, *agnolotti*, *tortelli*, and *tortellini*; *lasagne* and *cannelloni*, rolled squares filled with meat, mozzarella, or vegetables, are also common. Although most *pasta secca*, or dried pasta, is industrially produced, artisanal varieties are also very popular, despite being more expensive. Different shapes of pastas tend to be used with different sauces and condiments according to local tradition or nationwide habits.

Italian rice grains tend to be more rounded and release more starch than varieties from other countries and thus are particularly apt for local recipes. In the north, a traditional way of cooking rice is risotto: The grains are first sautéed in butter and onion until translucent, then hot meat broth is added slowly. The most famous is probably *risotto alla milanese*, cooked with saffron and broth. In recent years, fish-based risotto has also become very popular. In the south, there are fried balls of rice stuffed with various ingredients, like *suppli* in Rome and *arancini* in Sicily. Rice is also widely used in thick soups.

Maize was introduced into Italy in the 16th century. Although corn on the cob is appreciated and corn kernels have found their way into salads, maize is mainly consumed in the form of polenta,

A traditional Italian saffron risotto. (Shutterstock)

similar to American grits, seasoned with various sauces. Other grains used to make pastas or cooked in soups are buckwheat, barley, and *faro*, a whole grain similar to spelt.

Pulses, both fresh and dried, are important in the dietary pattern of Italian populations, the most common being beans, lentils, chickpeas, fava beans, and peas. Pulses are also used in vegetable soups, or *minestre*; other ingredients may include pasta, vegetables, and herbs. When pasta is absent, soups are called *zuppa*. Chestnuts, although a fruit, were used like a legume in the past; that is to say, they were boiled in soups or ground into flour.

Introduced in the 16th century, potatoes can be mashed into a puree, fried, sautéed, boiled, roasted, and baked. The most renowned potato-based dish is gnocchi, little dumplings made by adding flour and sometimes eggs, which are boiled and then seasoned with melted butter and cheese, light tomato sauces, or pesto. Other root vegetables, like beets or radishes, are not common, with the exception of carrots.

Together with legumes and potatoes, vegetables play an important role in Italian dietary patterns. Besides fresh salads, there are onions, garlic, celery, scallions, leeks, eggplant, sweet peppers, chili peppers, tomatoes, cucumbers, zucchini, asparagus, artichokes, fennel, chard, spinach, broccoli, broccoli rabe, and all kind of cabbages. Vegetables are consumed fresh, or pickled and conserved in olive oil, vinegar, or salt. Mushrooms and their more expensive relatives, truffles, are appreciated all over Italy. Herbs like oregano, basil, rosemary, mint, bay leaves, and parsley are commonly used to season dishes. Thyme, myrtle, dill, tarragon, and juniper berries are less frequent. Spices such as pepper, cinnamon, nutmeg, cloves, and saffron are also widely used.

Fruits play a very important role in the Italian diet, eaten all day long as a snack and consumed regularly at the end of every meal. The most common fruits are oranges, tangerines, pears, and apples in winter; strawberries and cherries in spring; peaches, plums, apricots, figs, melons, and watermelons in summer; and persimmons, grapes, and chestnuts in the fall. Tropical fruit is now widely available, especially bananas, pineapples, grapefruit, and coconuts. Almonds, hazelnuts, pine nuts,

walnuts, and pistachios are widely consumed; peanuts are massively imported.

Olive trees grow well in the coastal areas of the south, in Tuscany, along the coast of Liguria, and near Lake Garda. Olives are commonly pickled and cured. Varieties of olives differ in size, taste, and growing periods, making the oils deriving from them different. The mixture of olive varieties and the *terroir* (depending on the character of the soil, the weather, exposure to the sun and wind, cultivation methods) determine the character of the final product. Olive oil is a traditionally important cooking fat, together with butter in the north and pork fat all over the country.

Wine, produced in great quantities, often employing local varieties, is a basic component in everyday meals. Wine is still bought in bulk for everyday consumption, but the general appreciation for high-quality wines is growing. Some wine is traditionally fermented into vinegar, a very common condiment; balsamic vinegar, originally produced in Emilia Romagna, is now increasingly popular. Italian spirits are made either by distilling the by-products deriving from the winemaking process or by macerating herbs and fruit in different types of alcohol. The most famous distilled spirit is the grape-based grappa, mostly produced in the north. Beer, some of it produced locally, is also widely consumed.

Consumption of meat has dramatically increased in the past decades. Ways to cook meat include frying, roasting, grilling, boiling, braising, stewing, and sautéing. The most common meats are beef, veal, pork, lamb, chicken, turkey, and less frequently rabbit, duck, goose, squab, mutton, goat, venison, game, and horse. Pork meat is cured and preserved as sausages, salami, and prosciutto (both raw and roasted). Offal is still popular, although the youngest generations are increasingly less willing to consume it.

Fish is widely available, both fresh and frozen. Among freshwater fish, Italians prefer trout, perch, carp, and eels, while the most appreciated saltwater fish are sea bass, gilthead bream, sole, turbot, skate, John Dory, and red mullet. Also very popular are salted codfish and stockfish, which are dried and reconstituted. A special category is the so-called blue

fish, which includes anchovies, sardines, mackerel, tuna fish, and swordfish.

Aliciotti con l'indivia (Fresh Anchovies with Escarole)

- 2 lb escarole
- 2 lb cleaned fresh anchovies
- Salt and pepper
- 6 cloves garlic, slivered
- 2 tbsp dried breadcrumbs
- 1 tbsp extra-virgin olive oil

Slice and salt the escarole, then drain in a colander for 2 hours. Wash and pat dry the fresh anchovies with a paper towel. Rub a 9-inch round baking dish with extra-virgin olive oil. Arrange the anchovies in one layer. Salt and pepper to taste. Distribute a few slivers of garlic over the anchovies and some of the escarole. Repeat layers of anchovies, escarole, and garlic until all of the ingredients are used up. Cover with the breadcrumbs, and drizzle with olive oil. Bake in a preheated 400°F oven for 40 minutes. Serve lukewarm or at room temperature.

Fish—usually sold and served whole, and not filleted—can be grilled, roasted, boiled, stewed, sautéed, fried, steamed, or cooked in aluminum foil. Crustaceans, shellfish, and all kinds of mollusks are appreciated, especially mussels, clams, shrimp, crab, squid, and octopus. Eggs constitute a very important element of the everyday diet, cooked in various ways.

Milk is not as popular as in the United States and is mostly drunk for breakfast. Sour cream and buttermilk are quite rare, while yogurt is increasingly popular. Plain cream is sometimes used in pastry or specific recipes. Hundreds of cheeses are available in Italy, with different flavors, textures, and aromas depending on the area of production, the grass, the habits of the shepherds, traditions, and technical know-how. Industrial cheese is also widely sold. Italians consume cheese by itself or in sandwiches, use it in many recipes, or grate it on top of pasta and soups. The most popular cow-milk cheeses include

parmigiano reggiano, *grana padano*, Asiago, taleggio, Gorgonzola, fontina, provolone, mozzarella, and *scamorza*; popular sheep-milk cheeses are *scamorza*, *pecorino Romano*, *pecorino Toscano*, and *caciotta*.

Italians enjoy both mass-produced brands of ice cream, available in groceries, supermarkets, and bars, and artisanal gelato, sold in shops (*gelaterie*) that are often open year-round. A simple frozen dessert is granita, grated ice flavored with fruit, coffee, or syrups poured on top, while sorbet (*sorbetto*) is made with syrups or pureed fruit.

Pastry shops and bakeries offer a wide choice of pies, cakes, and small pastries, which vary according to the different areas. Many pastries are made of fried dough with different fillings, like *zeppole* in Naples, filled with custard cream. Doughnut-shaped fried pastries are called *frittelle*. Also, the dough for the renowned Sicilian cannoli, filled with a ricotta cheese-based cream, is fried. Baked desserts and pies are also very common, both homemade and commercial. There are many kinds of biscotto (the word means “twice-cooked”) and *crostata*, a thin layer of *pasta frolla*—quite similar to shortbread—spread over the bottom of a pan, topped with homemade jam or fruit preserves, and baked. Many desserts use a sort of sponge cake, or *pandispagna*, as a base, like the famous Sicilian *cassata*, filled with a cream made of ricotta cheese, sugar, candied fruits, and pieces of chocolate, covered with a thick frosting of white sugar and decorated with candied fruits.

Several drinks made by infusion or decoction of leaves, grains, or roots in boiling water are commonly used in Italy, the most common being coffee. Other infusions include tea, chamomile tea, linden, mint, and verbena. Chocolate in all forms is also very popular.

Cooking

Women are usually in charge of food at home, helped by appliances like electric or gas stoves, refrigerators, microwave ovens, and smaller appliances like pressure cookers, frying machines, pasta makers, toasters, mixers, and food processors. Only after World War II, with the massive immigration

toward the industrial north, the growing urbanization, the abandonment of the countryside, and the economic boom, did it become normal for women to work full-time outside the house. Although jobs that left time for cooking and housekeeping were still preferred, over the past decades it has become socially acceptable for women to dedicate themselves to their careers. However, men from older generations still expect the women to do the shopping, the cooking, and the cleaning. Among younger couples chores tend to be shared, especially when it comes to grocery shopping and the kitchen. It has become acceptable for young men to learn how to make at least some simple dishes.

Various dishes and culinary traditions that require intensive and lengthy preparations are slowly disappearing. To respond to these changes, food industries are investing in creating and mass-producing ready-made alternatives that still maintain some connection with the dishes of the past, banking on nostalgia. Curing and pickling vegetables in one's kitchen, or making jams and preserves at home, has become rare, more a hobby than a necessity.

In the past, women were in charge of transmitting their knowledge and experience in all culinary matters to the new generations. There was no desire for new recipes; the main task was to make the best of the limited resources available. Recipes and techniques were transmitted orally and by practical example. A woman with scarce culinary abilities was pitied and frowned on. From the 1960s, most working women had no time to teach their children how to cook, while young women did not want to perpetuate the social order that had forced their mothers into the kitchen. As a result, many young people, especially in urban environments, did not learn how to cook. Then came the 1990s, with the renewed interest in food and wine, finally considered as a major component of the Italian culture and society. People are interested again in learning about food and cooking but this time from cookbooks, magazines, television shows, and associations such as Slow Food, which was founded in Italy in reaction to the proliferation of fast food.

Typical Meals

The triad of meals, breakfast—midday meal—evening meal (*colazione, pranzo, cena*), is the norm all over Italy. Breakfast is often insubstantial, and often adults have only a small cup of coffee or coffee with frothed milk (*cappuccino*) on their way to work. Children usually have a slightly more structured meal, centered around a bowl of milk, often enriched with coffee, or less commonly tea, accompanied by plain or flavored cookies (*biscotti*), croissants, cake, slightly sweetened double-baked slices of bread (*fette biscottate*), or simple bread. Due to the scanty quantity of food consumed at breakfast, it is not uncommon to have a midmorning break. Brunch is a new concept in Italy. During the weekend, if people wake up late, they prefer to limit themselves to a coffee and wait till lunchtime for a more abundant meal.

The midday meal usually takes place between 12 and 3 P.M., depending on the area and the season. The traditional midday meal is structured around two main courses, called *primo* (first dish, often a pasta dish or a soup) and *secondo* (second dish, meat or fish, often served together with one or more side dishes, usually vegetables). Everyday meals usually end with some seasonal fruits, more rarely with a dessert, with the exception of ice creams or frozen desserts in summer. In the hot season, people often fix very light meals, with a preference for salads or cold dishes. Today, most people have either a *primo* or a *secondo* at midday and have both courses in the evening. A complete meal with *primo* and *secondo*, often followed by substantial desserts, also marks weekends and special occasions. Many Italians still consume their lunch at home, making it the biggest meal of the day, but children and people working 9 to 5 eat in canteens or in various kinds of eateries. It is fairly common for workers to bring their own lunches from home, consisting of a cooked dish or of a simple sandwich.

The evening meal, which in the past tended to be lighter, is now acquiring more importance, since it is often the only time of the day when the whole family can sit together. Many opt for either a *primo* or a *secondo* or prepare a single dish that includes more

than one element. Some cheese and cold cuts in the fridge can be used to fix a fast, light meal, together with a fresh tossed salad, tomatoes, or other vegetables. With a seated meal, most adults may drink beer or wine.

Eating Out

Although Italians enjoy cooking and eating their meals at home, and inviting friends and family for meals is a very common custom, eating out at *ristoranti*, *trattorie*, and *osterie* constitutes an important element in Italian social life. The meaning of these words has changed over time. Now, a ristorante is usually an establishment that offers nice decor, good service, and an upscale menu, while trattorie and osterie tend to provide simpler food and service, at more affordable prices. Restaurants are rarely patronized by persons eating by themselves,

with the notable exceptions of tourists, businessmen from out of town, or single men and women who prefer not to cook. Eating a complete meal by oneself is nevertheless considered quite unsatisfying and psychologically depressing. Restaurants thus become places to celebrate birthdays, to have dates, to mark holidays and special occasions, or just to socialize and meet friends.

With the renewed interest in traditional dishes and local ingredients, osterie and trattorie are undergoing a definite renaissance. Also, many ristoranti now offer traditional, regional, and local dishes in a more upscale environment. In this case there is greater attention to ingredients, produce, and wine, with a tangible increase in prices. Other establishments bet on new cooking styles, either by importing foreign models (as was the case for nouvelle cuisine in the 1980s and, more recently, for American steakhouses or Japanese-style sushi bars)

Café scene, Portofino, Italy. (Corel)

or by adopting a creative approach toward Italian cuisine.

Beginning in the 1950s, the younger generations found a relaxed and laidback place to gather in the new “American-style” bars, an evolution of coffeehouses, with a more modern decor and a less refined service, but still serving coffee rather than alcoholic drinks and offering a choice of food, pastry, and ice creams. However, many cities still boast elegant coffeehouses, usually more expensive than bars, offering great ambiance and a wider choice of sweet and savory small bites. These are places where clients sit down and take their time chatting with friends, reading, or having dates. They ensure calm and privacy, while bars tend to cater to people on the go, who often consume their drinks and their snacks standing. Nevertheless, bars often have tables and outdoor seating for the summer. The life of Italian bars revolves around coffee and other breakfast drinks, and not so much around liquor and alcohol, although the latter are regularly—and legally—sold in these places. Adults who prefer to have breakfast on the go make a quick stop in their favorite bar and have an espresso, often by itself, but sometimes also accompanied by some croissant or pastry. Most bars sell candies over the counter and offer ice cream and a choice of savory bites. In this case the bar is known as a snack bar and, more recently, as a bar *gastronomia*. The latter often offers cooked dishes at lunch, especially if it is located in an urban center near offices or other workplaces. The average bar displays panini (single-portion breads in different shapes, cut in two and filled with various ingredients), *tramezzini* (triangular, made of *pancarré*, a sort of upscale Wonder bread), toasts, slices of pizza, pieces of focaccia with *salumi* (cured meats), and sometimes salads and fruit salads.

Beside bars, there are plenty of other ways to get food on the go. The tradition of street and market food, although dying, is still present. Nevertheless, people are increasingly skeptical about hygienic conditions and have lost the taste for some of the most traditional street foods. Every area has its own traditions. Street foods are the legacy of a past when hunger and poverty were common for many city dwellers who did not even have a kitchen at home.

That is why many traditional street specialties are made with innards or employ the simplest ingredients, like bread, legumes, or fruit.

While home deliveries are still rare, some shops sell ready-made food to take out. They are called *tavola calda* when they offer cooked dishes, and they often have small tables for clients who want to eat on the premises. No service is provided: Customers buy their dishes, often served in aluminum containers, at the counter and bring them to their tables. They are often required to clean up when they are finished. A *rosticceria* specializes in fried or roasted foods that would take too long or be annoying to prepare at home.

Many rosticcerie also use their oven to make pizza, either in large metal pans or directly on the bottom of the oven. This kind of pizza, called *pizza al taglio*, is cut according to the customer’s request and sold by the weight. Some shops specialize in *pizza al taglio*, adding very few fried items to their offer. There are also places that sell *pizza à la carte*, where customers can sit at their table, order their meal and their drinks from a menu, and be helped by waiters. These places are called *pizzeria*, a name also used for shops selling *pizza al taglio*. Until a few years ago pizza was served at the table only in the evening. Many establishments now offer it also for lunch. Besides, many trattorie have diversified their menus by adding pizza.

In the new millennium, wine has become the object of a renewed interest from both connoisseurs

Pizza fresh out of a wooden oven in a pizzeria in Italy. (Shutterstock)

and amateurs. Some specialized shops, called *enoteca*, cater to the needs of a growing public, curious to taste new wines and to know more about a world that until a few years ago was a realm reserved to a few aficionados. These are the direct development of the wine shops that in the past used to sell bulk wine, pouring it into bottles provided by the clients. Many enoteche have an annexed wine bar, which operates under a different business license and is also allowed to serve food to be consumed on the premises. Wine bars constitute an increasingly popular alternative to other types of restaurants, especially for high-end customers who are willing and able to spend nicely on a good bottle of wine and are knowledgeable enough to do so. Partly to meet the burgeoning demand from their clients, partly to make them even more passionate about their products, some enoteche, but above all wine bars, organize tasting meetings and classes.

Beer is also enjoying a growing success, especially among young people. New establishments have developed around this trend, called pubs, using the English word, or *birrerie* in Italian. The decor is usually quite different from that in other restaurants. Wooden tables and benches are prevalent. No tablecloth is provided but only paper towels. The service is basic. Dishes of foreign origin are served, such as sauerkraut with boiled wurst (sausages), hot dogs, hamburgers with French fries, potato salads, and chili con carne. Some pubs also serve salads, pasta, and sandwiches, to satisfy all tastes.

Fast foods appeared in Italy in the late 1980s, among heated public debates. However, foreign chains have often adapted themselves to the local tastes, adding pasta salads and vegetable salads to their menus and even offering beer and wine. Some Italian entrepreneurs found the concept appealing and created chains that operate like foreign fast-food places but serve only Italian dishes and pizza. These kinds of shops are now quite common in and around train and bus stations, airports, and service areas along the highways.

Since 1990, new forms of high-end tourism focusing on food and wine as expressions of local culture and traditions have developed. An *agriturismo* is an enterprise run by a farmer who offers food and

lodging to tourists on his property, using the products from the farm and at times organizing recreational or cultural activities.

A relatively new phenomenon is the growth of ethnic restaurants. Chinese restaurants are definitely the most visible and numerous. Besides the Chinese, not many other ethnic restaurants are available: a few “African” establishments (mostly from Ethiopia and Somalia), some Moroccan or more vaguely “Arab” places, as well as some Japanese and Mexican, and very rarely Brazilian. Curiously, French restaurants are a rarity, confirming Italians’ attachment to their food traditions, especially against the eternal rivals in culinary matters, the French.

Special Occasions

Italians tend to find plenty of excuses to make a special occasion of a meal, both cooking at home and going out. Close friends and family feel free to drop by unannounced or on very short notice. As a matter of fact, this is an element that characterizes close social relationships, whereas invitations ahead of time denote that the guests are in an outer circle of friends and family. Also, coffee time after lunch is a favorite time to pay a visit and have a good chat over a steaming cup of espresso.

Sunday dinners often maintain their character as a special meal. The main courses, *primi* and *secondi*, usually become more elaborate, and cooks make an effort to prepare more side dishes. Some hosts offer more than one *primo* and more than one *secondo* to prove their cooking abilities and to show appreciation for their guests.

Many ceremonies are connected with the Catholic religion, which is still prevalent by far. Even many nonreligious people do not renounce these celebrations. Christening (*battesimo*) is the first occasion to mark most children’s lives. In the days preceding the rite, families send out *bomboniere*, little souvenirs parceled up with smooth confectionery sugar-coated almonds called *confetti*. After the christening ceremony, families invite relatives and friends to join them to celebrate the occasion with a meal, often in a restaurant. Also, the first communion and confirmation are marked by family

celebrations, generally big lunches after the ceremony, held at home or at the restaurant. A festive lunch is also organized when a young person takes religious vows as a priest, a monk, or a nun.

Weddings are also celebrated with long, abundant, and sometimes extravagant meals. The menu starts with one or two appetizers, continuing with a couple of *primi*, if not three, and two or three *secondi* accompanied by several *contorni* (side dishes). All the dishes are served one after the other, so that guests do not need choose between the two or three *primi*, or between the two or three *secondi*, but can have a portion of each. After the main courses, desserts are served. At the end, the wedding cake is brought; the couple is supposed to cut the first slice, while the guests toast to their future happiness with sparkling wine. The cake is brought back to the kitchen, sliced, and served to the guests. The meal, which ends with liquors and coffee, can last a few hours.

Other occasions that are celebrated with food at home or meals at restaurants are birthdays, saint's days (according to the Catholic tradition, every day is dedicated to a specific saint, and the people who carry his or her name are supposed to solemnize that day), and academic and professional achievements.

Catholicism being the traditional religion in Italy, liturgical and religious festivities also marked social times, with holidays that were often connected to specific foods and meals. One of most important holidays is Christmas. At the vigil, in some areas families gather for a "lean supper," that is, with no meat courses. However, the dishes can be numerous, abundant, and delicious, usually pretty much the same year in and year out, changing according to the area. Christmas Day dinner, customarily served in the early afternoon, is dominated by meat. Meat stocks and broth are very common *primi*, usually with *pasta ripiena* with meat-based fillings. All kinds of Christmas desserts are served. While in some families it is still customary to make some desserts at home, the food industries produce most of the holiday delicacies, some of which can also be bought from bakeries and pastry shops. Many Christmas desserts are actually derived from bread:

pandoro from Verona (*pan d'oro* means "bread of gold"), *panettone* from Milan (*pan di tonno*, "important bread"), *pan speciale* from Bologna ("spiced bread"), *panforte* from Siena ("strong bread"), *pan pepato* from Ferrara ("peppered bread"), *pan nociato* from Umbria ("bread with nuts"), *pan giallo* from Rome ("yellow bread"), and *parrozzo* from Abruzzo (*pan rozzo*, "rough bread"). As the names reveal, in time different ingredients were added to the bread to make it more festive, such as spices, nuts, raisins, candied and dried fruits, chocolate, and honey. The Christmas dessert in Naples is tiny balls of fried dough, dipped in honey syrup, arranged in a wreath, and decorated with colored spangles, called *struffoli*. Nougat candy, or *torrone*, is widespread all over Italy; it can be soft or hard, with hazelnuts or almonds, covered in chocolate or with some liquor.

New Year's Eve is celebrated all over Italy with parties and late suppers. The menu varies, but it is quite common to eat *zampone* (minced pork meat with spices, stuffed into the skin of a pig's foot) or *cotechino* (minced pork meat, lard, and skin made into a big sausage) with lentils, which represents money and abundance. Tradition requires that bottles of sparkling wine be opened at midnight on the dot. Many families also have a New Year's Day dinner, whose menus also vary but always feature rich and abundant dishes.

On January 6, the Catholic Church celebrates the Three Kings in a holiday called Epifania. This name

A selection of Italian chocolate Easter eggs in a shop in Rome. (StockPhotoPro)

was corrupted to *Befana*, which is also the name of an old ugly lady riding a broom. Coming down the chimney, she brings sweets, candies, and little presents to the good children and just coal to the bad ones. Children would hang socks and stockings from the hearth (over the stove in modern kitchens), while leaving some food in the kitchen to thank her and to let her get some rest.

For Carnival, the Italian equivalent of Mardi Gras, long strips of crunchy fried dough powdered with sugar (called *frappe*, *cenci*, or *chiacchiere*) and little fried balls covered in melted honey (*castagnole*) are particularly popular.

For Easter, the egg is the most evident symbol of fertility and renewal, connected to the resurrection of Christ. Boiled eggs to be eaten on Easter Day, often painted in bright colors, were brought to church to be blessed at the midnight mass. Boiled eggs are also used to decorate sweet and savory cakes. Eggs are the main ingredients in many pies. Chocolate eggs are mass-produced, containing little presents for children. All over Italy, the Easter lamb—considered a symbol of Christ sacrificing himself—is served roasted or grilled. In many areas, there is still a tradition of an Easter breakfast, featuring boiled eggs, salami, savory and sweet pies, and chocolate, together with wine. Among the desserts, *colomba* (a leavened cake shaped like a dove and covered with a sugar and almond glaze) is common all over Italy. Many desserts are still homemade, like *pastiera* in Naples (a cake filled with boiled wheat grains, ricotta, and candied fruits and flavored with orange flower water) and cassata in Sicily (the sweet ricotta cheese cake), where making little lambs out of almond paste (*marzapane*) is still a living tradition.

Diet and Health

Since the late 1950s, there have been radical changes in the amount and the composition of the foods that Italians consume. For centuries, populations around the Mediterranean Sea, including Italians, had to strive against food scarcity, tilling soils that were often less than generous and making do with what

they could grow around them. As a consequence, the diet was based mostly on carbohydrates, pulses, and vegetables, with little fat and animal protein.

Then, starting from the end of World War II, even the less-well-off became able to afford a more diverse and abundant diet. Nutrition patterns changed under the influence of new packaging and conservation techniques, industrial mass production, and more sophisticated systems of distribution. A widespread economic development that led to the actual boom in the 1960s allowed many to lead better lives and enjoy a more regular intake of food, even though it often severed the ties to their traditional ways of life, including culinary habits. The daily energy intake passed from slightly below 2,000 calories in the 1950s to almost 3,500 nowadays. Italians are consuming more meat and sugar, and coronary diseases are reaping more victims than ever before, because of fattier and higher-calorie diets. Obesity, especially in children, has become a main concern for the Ministry of Health, which has launched public campaigns aiming to educate the parents and the children themselves to eat better.

At the same time, the whole world seems to have discovered that the way the Mediterranean people had eaten for centuries in their effort to fight hunger actually constitutes a very healthy diet. The international public became aware of the advantages of the so-called Mediterranean diet in the late 1980s, when scientist Ancel Keys and a group of researchers published the results of the survey they had conducted in seven countries. Then, in 1990, the U.S. Department of Agriculture issued dietary guidelines for Americans that become the basis for the 1992 Food Guide Pyramid, clearly shaped by Keys's findings in southern Italy back in the 1950s. However, because of the way the media describe it, it is unclear whether the Mediterranean diet is considered as a cultural and historical construction, as a selection of specific foods, or, more scientifically, as a nutrient profile.

Despite the changes in their dietary patterns, and the regional differences, Italians still tend to eat more carbohydrates, legumes, and vegetables than Americans do. The distribution within these cate-

gories has changed, too: From the 1950s, the growing availability of bread and pasta marked a decrease in the consumption of other cereals considered less desirable, such as barley or rye. Rice and maize maintained a certain acceptance in northern regions. The southern regions traditionally consume larger quantities of carbohydrates and vegetables than the northern ones. With regard to the consumption of different kinds of meat, beef increased until the 1970s, reaching a constant level that suddenly decreased at the end of the 1990s, due to the mad cow scare and other health-related anxieties. In contrast, consumption of chicken, pork, and rabbit is growing, on account of the lower prices of these meats and the fact that Italians now consider them as nutritious as beef.

Dietary rules change during each individual's lifetime. A very special moment for many women is pregnancy. Gaining weight in the months preceding the birth of a baby is not only considered acceptable but even recommended. Most women opt for breast-feeding, considered better for the child, since it creates a closer connection with the mother and provides the child with all necessary nutrients and a better protection against infections and diseases. For this reason, breast-feeding in public is socially accepted.

Up to five months of age, babies are fed exclusively milk or formula. From 5 to 12 months, babies are weaned, and new flavors and foods are introduced into their diet. Between 1 and 3 years of age, the babies are supposed adapt their diet to the adults' habits. The goal is to let babies get used to the taste of real food, since there is no concept of baby food per se. At this point, babies are usually more than happy to start eating what their parents and other adults eat, especially at social occasions when many people are gathered around the table. There are no children's menus in restaurants: Children are supposed to eat small portions of the same dishes the adults are having. Children are often curious to taste adult food, and in many families it is accepted to serve them even tiny drops of coffee in their milk and also wine, often diluted in lots of water.

There is no concept of food for the old. Senior citizens are supposed to eat the way they always did, unless they have specific ailments or suffer from loss of teeth. They continue to drink wine with their meals, to have their coffee in the morning, to season their dishes with salt, and to consume fried food and sweets. Since the calorie intake does not decrease, while retirement implies a less active style of life, it is quite common for older people to gain weight and to suffer from problems connected with high levels of cholesterol in the blood, high blood pressure, and diabetes.

Most physicians in Italy are not particularly interested in matters of nutrition, unless they affect some specific ailments. With the exception of pediatricians, who are definitely more involved in the subject, also because of pressure from mothers, many of them do not even take that subject during their professional training. For this reason, the advice some medical doctors give is quite vague, often based more on common sense than on study and research. Most of the knowledge people get about their food and their nutritional needs comes from less reliable sources: the media. Most television channels, newspapers, and magazine have a section on health, which often deals with food-related issues.

Latvia

Overview

The Republic of Latvia occupies the central position among what are collectively known as the Baltic States, with Estonia to the north and Lithuania to the south. It shares borders with both Russia and Belarus to the east, and Scandinavia lies to the west, across the Baltic Sea. Latvia is a parliamentary republic divided into 26 districts. Rīga is the capital and the country's largest city. The population is just over two million people, who are mostly Latvian or Russian, with smaller percentages of Belarusians, Ukrainians, and other ethnic groups.

Geography, politics, and religion all factor into Latvia's culture and cuisine. In ancient times, native Latvians held pagan beliefs and fostered close spiritual ties to nature and seasonal life cycles. By the 13th century, German-led crusaders had forcibly Christianized the country. This paved the way for eventual Russian conquest and colonization, rendering Latvia a historical and cultural crossroads between Germanic and Slavic Europe. Latvia has been a member of the United Nations since 1991, following its independence from the Soviet Union. Though Latvia's culture and customs are inextricably linked to its history of occupation, Latvians have retained many of their ancient, pagan practices, as evidenced through their celebrations, folk songs (*dānias*), and food traditions.

Food Culture Snapshot

Imants and Nina Vilcina are newlyweds living in Rīga, and they both frequent the Central Market, one of

Europe's largest, located in dramatic hangars once used to house zeppelins. Shopping is done several times each week, as the freshness of food is imperative to Latvians. This is particularly so with fish, one of the country's best-loved resources, which may even be carried home from the market still living, stored in a newspaper cone with a small amount of water.

Meat is also important, and in Latvian homes such as the Vilcinas' people may stock up on various sausages or purchase cuts of pork or beef for making *kotletes*—flattened meat to be breaded and fried. However, dairy is the crucial component in Latvian cuisine, enjoyed in a variety of ways at every meal. The Vilcinas are never without milk, which they consume heartily each morning, along with cottage cheese, and perhaps fresh eggs and tomato or cucumber.

Ingredients for lunches and dinners are also purchased at the market, including more dairy for making rich cream sauces and the Latvian table's ubiquitous sour cream. Today, a wide variety of produce is available at the market; however, staples such as potatoes, carrots, radishes, onions, and dill remain the foundation of Latvian cuisine. Honey and fruit preserves are ever present, as is black tea, which is sometimes flavored with orange rose hips and is always taken with milk.

Major Foodstuffs

Latvia's climate is temperate, with long, cold winters and short, warm summers. The short growing season has resulted in an emphasis on grains, legumes, and dairy, with fresh vegetables being slightly less

This market in Rīga, Latvia, is held in five enormous hangers that were originally used for building the zeppelin airships. (StockPhotoPro)

common. This has also helped to produce a pragmatic cuisine that is high in fat with few spices and that features the products of resourceful farmers and fishers.

Before farming and agriculture, ancient peoples subsisted on foods that did not need to be cultivated, only gathered, so wild mushrooms and a wide variety of berries may still be found in today's cuisine. In winter months, sausages and salted pork may be stored in cellars, alongside salted cabbage and pickled cucumbers, mushrooms, and herring.

The importance of milk and milk products cannot be overstated, and these have been essential sources of protein and nourishment throughout Latvia's history. Milk is drunk by itself and throughout the

day, as are various preparations of cultured and curdled milks. Milk soups are eaten, and sauces are made from cream, served alongside hard cheeses and dishes topped with sour cream. Butter is the most common cooking fat and is spread on bread, though safflower oil and lard are also used.

Spices are few, and flavors uncomplicated, though dishes may feature dill, caraway, black pepper, or white mustard. There were no sources of salt in ancient Latvia. It was obtained through trade and used sparingly, a practice still observed in today's cooking. Condiments include mustard and horseradish, though ketchup has become popular in more recent times. Honey is the preferred sweetener, and fresh honeycomb is a particular delicacy. Natural sweetness is found in a variety of berries, including strawberries, blueberries, loganberries, cranberries, and raspberries.

Potatoes were introduced in the 19th century and may be grown almost anywhere in Latvia; they are extremely popular. Mushroom gathering is a favorite activity, and mushrooms are pickled, boiled, fried, or incorporated into sauces. Turnips, black radishes, linseed, carrots, onions, and garlic are also grown.

Bread is a staple of the Latvian diet, and respect for it is encouraged from early childhood. It is made from either rye or wheat, typically in two varieties: white (oatmeal-colored whole-grain bread) and black (dark, tangy, and sour bread). Other grains include barley, oats, millet, and hemp. Peas and beans are consumed regularly.

Coastal Latvians rely heavily on fish, while freshwater fish caught inland is considered more of a delicacy. The most common species are herring, trout, pike, eel, sprats, and salmon. Red and black caviars are also enjoyed and may be eaten with pancakes. Pork is the most important meat, followed by beef and chicken. Available game may include deer, duck, and goose.

Mineral water and fruit juices are commonplace at mealtimes, as is milk, *rūgušpiens* (a refreshing curdled milk drink), and beer. Tea and coffee are both consumed, the latter often topped generously with whipped cream. Vodka is a staple brought by the Russians, and in summertime Latvians enjoy *kvass*, a mildly sweet fermented drink made from

rye, water, yeast, and honey. A springtime specialty is *bērzū sula*—juice made from birch sap gathered each March.

Cooking

Latvian cooking is straightforward and uncomplicated, and women have traditionally prepared the meals for their families. Clay pot and hearth cookery were early techniques, followed later by bread ovens. A large pot for boiling and a large pan for frying are the primary implements.

Cold salads of potato, egg, herring, cucumber, and various meats are enjoyed alongside various pickled preparations. Soups and porridges are made from grains, peas, meat, and fish and are often laden with milk. Russian beet soup, or borscht, is eaten cold in the summer and hot in the winter. In addition to its place in soups, fish may be fried, smoked, or salted.

Meat is consumed regularly by most Latvians and may be breaded and fried, boiled into soups, or made into various dumplings. *Belashi* are a popular deep-fried snack of dough filled with beef and onions, as are *pīrāgi* (bacon rolls). Baking is commonplace and produces a variety of breads, pastries, cookies, and cakes, though these tend to be less sweet than their American or western European counterparts. Canning and preserving are methods

Rīga sprats baked in oil and served with salad. (Shutterstock)

for enjoying berries year-round. *Kisels* are produced using a technique of thickening a sweet and sour blend of juices with potato flour.

Just before the leaves appear on birch trees in the spring, some Latvians go into the country to make sparkling wine. Sap from the birch tree is filtered and then mixed with raisins, lemon peel, currants, and sugar. The blend is bottled, corked, and sealed with wax to allow fermentation to take place and is then enjoyed three months later.

A unique Latvian specialty that is still popular today is *Rīgas Melnais balzams* (black balsam), a bitter, black drink invented by a pharmacist in the 18th century. The recipe remains a secret, though among the listed ingredients are Peruvian balsam oil, arnica blossoms, raspberry juice, orange peel, oak bark, and wormwood. It is often mixed with coffee or vodka and may be served over ice cream.

Typical Meals

Latvians usually eat three meals per day, beginning with a moderate breakfast of milk, juice, coffee, or tea and either boiled eggs, sausages, or small sandwiches of cheese, cucumber, and tomato. Lunch is eaten between noon and three and tends to be served hot. It can include fried meat (pork, steak, or chicken) or fish (salmon, trout, cod), potatoes (boiled, fried, or mashed), boiled buckwheat, and salad. Sour cream is the main accompaniment. Alternatively, meat soups may be eaten. Midday drinks may be fruit juice, kefir, milk, tea, coffee, or beer.

After the workday, supper is taken at six or seven. This main meal can vary widely but could consist of soup, cold salads, a hot meal similar to lunch, or occasionally more traditional preparations such as *zivju zupa*, fish soup with potatoes and fried carrots and onions. Another traditional fish dish is *cepts lasis ar plumju kompotu*—fried salmon with plum compote. Gray peas with bacon is a cornerstone of Latvian cuisine, as is the emblematic porridge, *skaba putra*, a sour milk and barley soup that is fermented, then chilled. This may be prepared with pork fat and can contain pieces of meat or herring. Cooking large meals at home is becoming less

common, however, as frozen foods, pizza, and quick sandwiches have become increasingly popular.

Skaba Putra (Sour Barley Porridge)

¼ c finely ground cracked barley

½ tsp salt

2 c buttermilk

2 c milk (whole or skim)

⅓ c sour cream

Pork fat (or bacon), sautéed (optional)

Onions, sautéed (optional)

In a large pot, mix barley and salt with 1 cup water, and slowly bring to a boil. Reduce heat to low, cover, and simmer for 45 minutes, or until barley is tender and water has been absorbed. Set aside to cool slightly.

Add buttermilk and milk, and stir to the consistency of a thick soup. Cover and store overnight (or up to 12 hours) in a warm place so that the porridge sours slightly. Refrigerate for at least one full day to continue the fermentation, which will intensify over time.

Add sour cream before serving, as well as the optional pork fat (or bacon) and onions.

At the table, certain traditional customs and beliefs are still observed, such as to always offer food to others when eating. The end piece of a loaf of bread is called the “farmer’s son,” which young women compete for in hopes that they may marry the son of a farmer or one who owns their own home and land. Too much salt in the food means that the cook is in love, and if salt is spilled, there will be a quarrel in the house. If a spoon or fork falls to the ground, a female visitor will appear, and if a knife falls, the visitor will be male.

Eating Out

Following World War II, many rural Latvians migrated to cities, and mealtimes began to revolve around busy work schedules, causing a decline in

home cooking. Cities in Latvia today feature a vast array of European, Asian, and American cuisines, as well as traditional Latvian eateries. Eating out has become more popular in recent times, and with the emergence of pizzerias, Chinese food, and American fast food, there are more choices today than ever before in Latvia. Rural people still primarily cook at home, however.

Special Occasions

Latvian celebrations follow the rhythms of the seasons according to the solar year in the northern hemisphere and simultaneously reflect the culture’s pagan past and its Christian practices. Many traditional foods and beverages carry folk or mythological significance, though these roots have become obscured over time.

St. Anthony’s Day, on January 17, is not largely celebrated today, but it was one of the first festival dates on the ancient Latvian calendar. St. Anthony was the patron saint of domestic animals, particularly hogs. The ancient belief was that in order for one’s animals to thrive, a hog’s head must be cooked and eaten and its bones taken to the forest. The snout was boiled and typically served with apples and cabbage.

Shrove Tuesday is a movable feast day falling between February 3 and March 9 and is the equivalent to the Mardi Gras of certain nations. As the last day before the Lenten fast, it marks the end of the long Baltic winter and is the culmination of a four-day meat-eating period, called Shrovetide. For fisherman, this represents the date by which all nets and other preparations for the season should be made. In the past, if the “net-making fork” was not out of a fisherman’s home by this time, a fork would be tied to his back in symbolic shame. Fisherman would also meet with their partners on this day to celebrate the upcoming season over a plate of buckwheat pancakes.

Easter in Latvia is a telling blend of the country’s pagan and Christian heritage. It is a celebration of the sun, replete with songs and dances. One traditional preparation for Easter eggs is to blow their contents out through holes poked in the shell into a

communal bowl. After each person has contributed an egg, they are cooked over a large open fire and eaten straight from the frying pan.

Jāņi (St. John's Day) is a summer solstice celebration with pre-Christian roots. It was believed to be a time when people and gods would come together so that Latvians might ask for a bountiful harvest and for their crops and livestock to be protected from witches and devils. Men, women, children, and animals spend this day bedecked in garlands of grasses and flowers, which are saved throughout the year to ward off evil spirits. Jumping over bonfires is done to ensure luck in the coming year. *Ķimeņu siers* is a caraway cheese served especially during Jāņi; it is eaten to the health of cows, while barley beer is drunk to ensure strong horses.

The masked procession of *Kakatas* begins on November 10 with Martin's Day and culminates around Christmas. Martin's Day is a day to respect the dead, on which, in times past, farmers would kill a rooster, give its blood to their horses, and then cook the bird for dinner. Today, *kekatnieki* are dancing revelers armed with homemade noisemakers. They travel through neighborhoods, wearing costumes representing traditional folkloric figures, such as the bear and the stork. Popular dishes at Martin's are sauerkraut, poultry, and Martini balls—baked balls of cooked peas, bacon, and onions, flavored with hemp. Hemp was once popular in Latvian cooking, but it is now illegal, though hemp-seed butter is readily available.

The Christmas table can include pig snout, *pīrāgi*, barley sausage, boiled gray peas with bacon, sauerkraut, mulled wine, soured milk, and desserts such

as gingerbread and *kringel*, a sweet coffee cake. One should eat nine meals on Christmas Day to assure wealth in the coming year, though this is rarely observed today. If carp is served, the fish's scales are placed into pockets and purses, to ensure money in the new year.

Latvian weddings are associated with an abundance of foods, such as *pīrāgi*, salads, sweet pastries, fruit, and beer; the meal can also include schnitzel, rolled veal, boiled potatoes, sautéed sauerkraut, and berries with milk for dessert.

Diet and Health

In combination with a high-fat diet, modernization has led to a decrease in exercise in Latvia and therefore an increased threat of cholesterol-related health issues. Alcohol consumption is high and is one of the main causes of traffic deaths, fires, and crime. Smoking is also common, and illnesses such as emphysema, lung cancer, and asthma continue to present problems.

Lithuania

Overview

The Republic of Lithuania is a northern European country located on the southeastern coast of the Baltic Sea. Lithuania borders Latvia, Poland, Belarus, and Russia's Kaliningrad region, and, across the Baltic Sea, it faces Sweden. Its population is 3.37 million, of which 84.6 percent are ethnic Lithuanians; the remainder includes Poles (6.3%), Russians (5.1%), Belarusians (1.1%), and other nationalities/ethnicities (2.1%). Lithuania is predominantly Roman Catholic with 79 percent of the entire population belonging to the Catholic Church, while other significant religious affiliations include Eastern Orthodox (4.9%), Protestants (1.9%), nonbelievers (9.5%), and other groups.

Despite the seeming cultural homogeneity, Lithuania has four well-defined regions—Aukštaitija, Žemaitija, Dzūkija, and Suvalkija. Each of these regions has distinctive dialects, histories, traditions, and food cultures that persist mostly thanks to the relatively large number of rural and small-town inhabitants (constituting about a third of Lithuania's population), whose local identities continue to be strong and who tend to procure a sizable amount of their own food directly from their land. In Aukštaitija, various pancakes and cottage cheese dishes are most popular, while the inhabitants of Suvalkija tend to eat more smoked meat and potato dishes. Žemaitija is famous for porridges, sour butter, and gruels, and Dzūkija is the place where one finds a lot of mushrooms and wild berries, brined and dried sausages, and buckwheat dishes. Vilnius, Lithuania's capital and the largest city, and Klaipėda, the port city, are

the main melting pots featuring cosmopolitan lifestyles and international restaurants.

Lithuanian food tends to be hearty and filling. Meat (especially pork), potatoes, dairy, and dark bread are eaten almost every day in the majority of households. Of vegetarian dishes, pancakes, crepes, and dumplings filled with cottage cheese or berries are common. The most popular fish is herring, but smoked mackerel, salmon, pike, and perch are also well liked. With increasing concerns over health and diet, more fresh fruit and vegetables such as apples, cucumbers, cabbages, and tomatoes are consumed year-round.

Contemporary foodways in Lithuania have been shaped by its geography and history. The country is relatively flat with numerous lakes and rivers and rolling hills in the south. Soils range from rich loam in the north and central plains that are amenable for growing wheat, rye, and root vegetables and for pastures to poorer, sandy soil in the south, where the largest pine forests lie. After the last glacial period around 10,000 B.C., several waves of proto-Indo-European ancestors swept through the region, mixing with the older settlers and introducing their cooking methods, agricultural knowledge, tools, seeds, and, most important, animals domesticated in the Middle East and Asia. During this period Baltic tribes started to milk goats and cows, and since then milk and its products, such as curd, cheese, sour cream, butter, sour milk, and kefir (cultured milk), have been used as the key ingredients in the local cuisine. During the Viking times, Baltic tribes living in contemporary Lithuania's territory

were integrated into the Baltic trade networks and traded honey along with furs for salt and herring. In the 14th century, the Great Duchy of Lithuania was the largest country in Europe, encompassing most of what is now Ukraine, Belarus, West Russia, and part of Poland. As expected, southern and eastern European food cultures such as those of the Tartars and Karaim were brought back and melded into local diets. The most popular street food in Lithuania today, *čeburekai*, large deep-fried donuts typically filled with meat, was adopted from the Tartars, while a special cake made with poppy seeds and consumed on special occasions and another popular street food, *kybynai* (a half-moon-shaped pastry with a filling made of mutton, onion, and cabbage), were borrowed from the Karaim settlers.

Starting from the 15th century, with the spread of Christianity and with Lithuania forming a common state with Poland, local nobles were drawn into the western European cultural sphere and enjoyed fashionable meals prepared by chefs trained in western Europe's capitals, while the peasantry continued to eat poor diets consisting of coarse breads, porridges, soups, various types of dumplings, pancakes, and, on rare occasions, dried or cured meats.

In terms of other cultural influences, the sizable Jewish minority played a key role in Lithuanians' diets throughout the Middle Ages and into the modern era, especially in Vilnius, one of the cultural capitals of eastern European Jews. Jewish foods such as bagels and a potato pie known as *kugelis* have been seamlessly assimilated into the Lithuanian cuisine.

The Columbian Exchange products such as tomatoes, potatoes, and chocolate as well as coffee from Africa reached Lithuania at the end of the 17th century as the country was folded into the Russian Empire. Of these products, tomatoes and especially potatoes were adopted and became local staples by the second half of the 19th century. The adoption of the potato brought a profound change in local diets, as cereal-based meals were replaced with potato dishes. Even today potatoes occupy a central place in Lithuanian food culture with the highest rate of per-capita potato consumption among the European Union countries (2008).

The adoption and popularization of the potato in the late 19th century coincided with the national revival that led to the formation of strong national identities and the establishment of Lithuania as an independent state. Not surprisingly, the most famous national dish in today's Lithuania is a potato dumpling, called the *zeppelin*. The peculiar name of the dish refers to the oblong shape of the dumpling and its grayish color, and also to the experiences of industrialization in the early 20th century that brought new transportation technologies (e.g., zeppelins, cars, and motorcycles) and communication devices (radios). The short-lived independent state of Lithuania (1918–1940) saw the emergence of a national cuisine and supported its institutionalization with the publication of a number of cookbooks and recipes in popular magazines.

Cepelinai (Zeppelins/Potato Dumplings)

2 large raw potatoes, peeled

2 large peeled and boiled potatoes

1½ tsp lemon juice

1 tbsp salt

Cepelinai, a Lithuanian national dish made from grated potatoes. (Shutterstock)

For Meat Filling

2 onions, finely chopped

1 tbsp butter

8 oz ground meat (beef, pork, or ham); or meat can be replaced with cottage cheese, mushrooms, herring, or smoked ham

Salt

Black pepper

Marjoram

Boil a large pot of water. Grate the raw potatoes through a fine grater. Separate the juice by squeezing the grated potatoes dry through a double layer of cheesecloth and collecting the potato juice in a separate dish. Mix the lemon juice into the dry potato mass. Set it aside. When starch settles at the bottom of the dish with the potato juice, in about 5–10 minutes, collect the starch by pouring off the liquid. Then add ½ tablespoon salt, and mix in the potato mass. Mash boiled potatoes and add to the mix.

For meat filling, sauté onions in butter and add to the ground meat. Season with salt, pepper, and marjoram. Mix well.

Take about ½ cup of the potato mix, roll into a ball about the size of an egg, and flatten into a round patty that is about ¼ inch thick. Place a tablespoon of filling mixture in the center of the round, fold over, and seal seam. Roll in your hands until the surface is even by slightly pressing in the middle to make the dumpling into an oblong shape. Gently drop zepelins into boiling salted water. Make sure all the zepelins are submerged. Boil for 30 minutes, stirring gently. Remove from water and serve with melted butter and sour cream or fried bacon bits sprinkled on top.

Due to perennial food shortages under Socialism, only staple foods such as bread, milk, butter, farmer's cheese, root vegetables, organ meats, and occasionally ribs and ground meats were available in stores, while better cuts of meat and sausages quickly disappeared and were saved for special occasions. Most of the population maintained close ties with the countryside or grew vegetables and fruit in private gardens

to be preserved and eaten throughout the year. Even today, preserved foods—such as smoked and cured meats, jams, and pickled vegetables—continue to occupy an important role in Lithuanian diets. With the opening of the state borders and globalization of food markets, new cuisines were introduced. Restaurants serving pizza, sushi, tapas, steaks, and Chinese dishes have grown rapidly in Lithuanian cities over the last 20 years.

Major Foodstuffs

The most important ingredients in Lithuanians' diets are grains/cereals (rye, wheat, buckwheat, some oats), dairy, root vegetables, eggs, meats (especially pork and beef), mushrooms, and berries. In summer cold, sweet, and milk-based soups are popular. Breads are traditionally divided into two types, white bread made with wheat flour and dark bread made with rye or whole wheat or a mix of flours. There are also two types of salads. Starchy salads are a key dish for celebrations and social events; they are made with beets, potatoes, carrots, beans, mushrooms, herring, ham, and fermented cheeses and are dressed with mayonnaise or oil. Green salads are usually prepared in the summer using seasonal ingredients such as cucumber, tomato, shallots, chives, greens, and dill and are dressed with sour milk, kefir, or sour cream. Brand-name salad dressings and vinegar-and-oil dressings can be bought in supermarkets.

Milk is a popular ingredient in and of itself, as are sour cream, butter, yogurt and yogurt drinks, and fermented cheeses. Local cottage cheese, *varškė*, and farmer's cheese with or without caraway are popular and also available smoked. Sugar was a rare and expensive commodity until the third decade of the 20th century when the first sugar beet-processing factory was built. Today, sweet baked goods play an important role in Lithuanian diets. Multilayered cakes with yogurt and fruit fillings and elaborate decorations, rolls filled with jams, fruit pies, and cookies made with cinnamon, ginger, or chocolate can be found in even the smallest of food stores.

Herring is still a popular fish, eaten either as an ingredient in starchy salads, with potatoes, or in a dish prepared with caramelized onions, mushrooms,

and tomato sauce. Among other fish, mackerel, pike, eel, perch, and shrimp can be found frozen in the supermarkets, while salmon harvested in Norway or caught wild in the Atlantic is most often sold defrosted. Eggs are used for cooking as well as hard-boiled or scrambled for breakfast.

Of meats, pork is the most popular, while veal is highly valued but is often too expensive for daily consumption. Many buy ground meat such as pork, beef, or turkey or a mix thereof to prepare cutlets or meatballs for soup. Smoked pig's ears, peas with pork cracklings, and fried dark bread flavored with garlic are favorite snacks with beer. Chicken is well liked and so is turkey. Goat and lamb meats are difficult to come by outside of a few gourmet stores in major cities. Game meat is even rarer.

Mushrooms are popular and used in a wide range of dishes such as soups, salads, and dumplings as well as for sauces or various fillings. Similarly, berries (strawberries, both wild and homegrown; blueberries; raspberries; gooseberries; cranberries; and currants) and nuts have played an important role in Lithuanian diets. Wild berry picking and mushrooming are popular activities among both those living in the countryside and the urbanites. Herbs such as dill, parsley, oregano, and bay leaves are used widely to add flavor to dishes and for marinades. Chamomile, mint, and oregano are also often used for herbal teas. The most popular vegetables are potatoes, beets, carrots, and squash, as well as onions and garlic. Among the locally grown fruits, apples, pears, cherries, and plums are the most popular. Since the early 1990s, with the increase in food imports, tropical fruits and vegetables have been introduced and incorporated into daily diets, including oranges, bananas, and pineapple.

Šaltibarščiai (Cold Beet Soup)

Serves 2

2 medium-size red beets, boiled and peeled

2 hard-boiled eggs

4 c buttermilk

1 c plain, whole-milk yogurt

4 tbsp sour cream

2 cucumbers, finely chopped

Salt to taste

For Garnish

Fresh dill, finely chopped

Fresh scallions, finely chopped

Grate boiled beets coarsely, and chop hard-boiled eggs into cubes. In a bowl mix wet ingredients including buttermilk, yogurt, and sour cream. Add grated beets, finely chopped cucumber, and salt. Mix well. Add chopped eggs. Sprinkle with chopped dill and scallions for garnish. Serve with hot boiled potatoes.

Cooking

Most of the everyday dishes in Lithuania are produced on the stovetop. Potatoes along with other vegetables are boiled in a pot or cooked in a pan with oil. Searing is used sparingly, mostly for meats. Homemade smokers were popular during the Soviet times, and today, smoked meats including hams, different types of sausages, and fish such as eel and perch are still very popular. Pickled vegetables such as homemade or store-bought sauerkraut, cucumbers, and tomatoes are consumed on a regular basis. Deep-frying is not widespread, except for some sweet products such as *žagarėliai*, “twigs.” Grilling is quite trendy and is usually performed by men. The common grilled dishes include grilled chicken and a local version of shish kebabs, or *šašlykai*. Pancakes and crepes filled with cheeses, bananas, or berries are cooked in pans in vegetable oil or butter. Handmade dumplings boiled in water are also widespread.

Typical Meals

The most important meal is in the middle of the day and consists of meat or vegetable soup and a protein-based main dish such as breaded chicken, beef rolls filled with mushrooms, pork cutlets, beef stroganoff, goulash, boiled sausages, or stuffed cabbage, which would be accompanied by potatoes, pancakes,

or potato dumplings, followed by a dessert. Due to demanding schedules during the day, many are shifting from a midday sit-down meal to having a heavier dinner at the end of the day. Other meals include a breakfast that often consists of an open-faced sandwich made out of dark or white bread with butter and smoked meat such as ham, sausage, turkey, or salmon or farmer's cheese. Oatmeal and breakfast cereal are becoming increasingly popular. During weekends it is common to make more time- and labor-intensive breakfasts such as crepes, pancakes, or dumplings. For breakfast, Lithuanians drink a cup of tea or coffee. In late morning and midafternoon, many share a cup of coffee with sweet or savory snacks with their coworkers or snack at home. The traditional supper is usually light and vegetarian. It may include soup, a bowl of cereal, a potato dish, or dumplings.

Eating Out

During the Soviet times an important change took place in Lithuanians' eating habits, as many started eating their main meals outside of the household, with coworkers, with friends, or alone, on a regular basis. Factory and office cafeterias became important places for socialization. Today, eating out is usually practiced as a rather expensive leisure activity, not a necessity. The opening of the global markets in the early 1990s, and especially the massive wave of out-migration of Lithuanians to Spain, the United Kingdom, and the United States, spurred local interest in international cuisine. New restaurants were opened, including tapas bars, steak houses, Mexican grills, and sushi and sashimi restaurants as well as fast-food chains such as McDonald's. Of these, pizzerias and local coffee shop-type restaurants serving snacks and a limited range of meals are the most popular.

Special Occasions

The most important celebration in Lithuania is Christmas Eve dinner, *Kūčia* or *Kūčios*. The name of the celebration is derived from the dish called *kūčia*, made from grain and pulses. The serving of the dinner

starts when the North Star rises on the horizon. Hay is often placed under the white linen tablecloth. In Christian tradition it symbolizes the manger where Jesus was born. It is common to set a plate of food for those family members who passed away in the previous year. Dinner starts with all participants sharing Christmas wafers. Twelve dishes are prepared, both as a symbol of the 12 apostles and as a reassurance that the 12 months of the upcoming year will be plentiful. These dishes include beet soup with mushrooms; fish, including herring and pike; dumplings filled with mushrooms; cold soups made with whole wheat kernels, poppy seed extract, sugar, and water; dried fruit compotes; cranberry pudding; honey; and special Christmas biscuits.

Another celebration, Shrove Tuesday, is accompanied by Carnival and the universal sharing of pancakes. Food also plays an important role in weddings. *Šakotis*, known as *baumkuchen* in Germany, is a tall cake with spikes on the outside and hollow inside, and it is the centerpiece of the wedding table. Bread, salt, and vodka are still widely used as part of the wedding ritual of accepting the bride and groom into the kin. In weddings as at other significant social gatherings in Lithuania, alcoholic drinks are served. Beer is a traditional local drink, especially in the northern region. During the interwar period, the first Lithuanian wine factory was founded and

Vendors bake a giant pancake at a Mardi Gras celebration in Vilnius, Lithuania. (EPA Photo | Petras Malukas)

started producing wines made with berries, apples, and honey. During the Soviet times the old tradition of mead, a fermented honey drink, was brought back. Today's mead is much stronger than the medieval version as it is made using distilled spirits and honey flavoring rather than by fermenting a honey drink. Other distilled drinks include liqueurs with herbal essences such as *Trejos Devynerios* or berry-flavored vodkas.

Diet and Health

In response to the changing perceptions about healthy diets, since the early 1990s there has been a major change in local cooking methods, moving away from animal fat to vegetable oils. Even in the early 1990s, most of the food was still cooked either in pig fat or, on rare occasions, in butter. Rapeseed oil (canola) was used for frying fish. Today, extra-virgin and virgin olive oil and other vegetable oils have made inroads into everyday diets, and pig fat has disappeared from the supermarket shelves. While there is a widespread perception that fat is not good for one's health, health-conscious eating is mostly

practiced by the younger generations, who did not experience the food scarcity in the early Socialist era. As in other places around the world, dieting is usually practiced among young women, who tend to ration their daily caloric intakes following dietary fashions. There is also an increased interest in traditional medicine, especially the use of local herbs' medicinal powers for healing. While such knowledge survived in Lithuania during the early decades of the 20th century, which brought the industrialization and professionalization of medicine, and continued to be practiced in most homes under Socialism, today it is receiving a renewed interest.

Malta

Overview

The Maltese archipelago is situated in the middle of the Mediterranean, about 58 miles (93 kilometers) south of Sicily (Italy) and 180 miles (290 kilometers) north of North Africa, and covers an area of 122 square miles (316 square kilometers). The two main inhabited islands are Malta and Gozo, while a third island, Comino, mainly comprises a hotel, an ancient watchtower, and a handful of private residences.

The resident population of the Maltese Islands stands at approximately 416,000, which translates to a population density of 3,414 people per square mile (1,318 per square kilometer). This is by far one of the highest densities in the world and is further augmented by the one million plus tourists who visit the islands annually.

Through the ages, Malta has been colonized by many different nations, including the Phoenicians and Romans, the Arabs and Normans, the pan-European Order of the Knights of St. John (also known as the Knights of Malta), the French, and the British, gaining independence in 1964 and becoming a republic in 1974. Its location at the crossroads of mercantile sea routes has made the island a staging post for trade since antiquity. A long history of greeting visitors and adapting to the demands of colonizers has made the Maltese particularly open to novelty and change, also when it comes to food. Malta's proximity to Italy and the strong cultural and commercial ties between the two neighboring countries have also left their mark, which is evident in the Maltese people's affinity for Italian culture, including food. All of this, together with the most

recent influence of nearly 200 years of British domain, has molded 21st-century Maltese cuisine and eating habits. Thus, the Maltese diet can no longer be considered typical of the traditional Mediterranean diet but is a *mélange* of dishes and flavors reflecting a multicultural history.

Slightly over one-third of the total land area in the Maltese Islands is agricultural, made up of arable land or permanent crops, although there is greater agricultural activity in Gozo, which is, in fact, much more rural. About half of the cultivated land is used for fodder crops, slightly less for vegetables, and most of the remainder for vines and fruit trees. The major crops are melons, tomatoes, potatoes, pumpkins, zucchini, and cauliflower. Malta is self-sufficient in fresh vegetables, processed tomatoes, eggs, poultry, pork, and fresh milk and milk products. It produces about a fifth of its food and imports the rest.

The Maltese are predominantly Roman Catholic, although the various associated rituals are practiced to varying degrees. This is also evident in the kind of food eaten. Avoiding meat and meat products on Wednesday and Fridays is perhaps followed only by a minority of elderly people; however, choosing to abstain from certain foods, such as sweets and desserts, for the whole 40-day period of Lent is a common practice among all age groups.

Food Culture Snapshot

Claire and Karl are a young married couple with two school-age children. Claire is a teacher, and Karl works in a shipping office. The family wakes up around

A selection of local Maltese produce on display in a farming village. (Shutterstock)

6:30 A.M., and breakfast will typically consist of a cup of tea or coffee and toast for the adults and a bowl of cereal with milk and a freshly squeezed orange juice for the children. Sarah, who has just turned 13, will sometimes grab a yogurt or banana on the way out and skip breakfast if she is late for school transport. Jeremy, who is 9, also sometimes skips breakfast and then buys a croissant from one of the little shops just outside his school.

The entire family takes a packed lunch. This usually consists of sandwiches with a cheese or meat-type filling, fruit, and water. Claire will sometimes take a fresh salad, and Karl sometimes opts to buy a *ħobża biż-żejt* from a shop just around the corner from his office. This consists of a hearty, crusty bun, spread with tomato or tomato puree, drizzled with olive oil, and then filled with chopped onions, olives and capers, tuna flakes, butter beans, and a few slivers of chopped lettuce. If Sarah is still hungry, she sometimes buys a cereal bar at the school “tuck shop.” School meals are not offered in Malta, though secondary schools have little shops called tuck shops selling a variety of snack foods and drinks.

Claire arrives home first, around 2:45 P.M., followed soon by Sarah and Jeremy. The children are ready for a snack, which may consist of a slice of pizza, a sandwich, a packet soup, or leftovers from yesterday’s supper. Claire might join them or just have some tea with a biscuit (cookie) or a yogurt.

Around 4:30 P.M., the three of them may have another tea or coffee. Though biscuits are always available in

the food cupboard, sometimes Claire buys traditional teatime sweets, such as *qagħaq tal-ħmira* (soft dough rings with sesame seeds), *qagħaq ħelwien* (hard dough rings with sesame seeds), *biskuttelli* (golden brown Italian biscotti-like fingers), and *biskuttini tar-raħal* (baked rounds with an aniseed flavor topped with a piped pink or blue icing design). The children enjoy these treats, especially as they are great for dunking.

Supper is normally around 7 P.M. Staples on the menu are pastas with different sauces—tomato, white sauce, or pesto—with a meat or fish slant; or meat, chicken, or fresh or frozen fish with some mashed, fried, roasted, or boiled potatoes and raw or boiled vegetables in season.

In the colder winter months the family might have *minestra* (thick vegetable soup), *kusksu* (broad bean-based soup, with miniature pasta balls and ricotta), or *soppa tal-armla* (also known as widow’s soup—consisting of potatoes, onions, tomato, cauliflower florets, and an egg or *gbejniet*—little goat or sheep cheeses—cooked whole in the soup). Claire’s mother sometimes makes an extra batch of these traditional soups and shares it with her daughter’s family.

In the hotter summer months, the family will often opt for cold salads with a variety of vegetables, tuna or chicken, and pasta or rice. Ever since they bought their own gas-operated barbecue, summer evening barbecues have become more common, with grilled chicken, fish, and meat accompanied by fresh salads being the typical fare.

Whatever the season, fruit will always be offered as dessert with the evening meal. Puddings and other cooked desserts are typically saved for Sunday lunch or other special occasions. Wine is generally also served on the table. The children are allowed to have some mixed with a soft drink, although more often they drink water.

Major Foodstuffs

Most of the food consumed in Malta is imported. This is not a recent phenomenon. Although through the ages the Maltese are recorded as growing many of their own fruits and vegetables, hunting for wild rabbits or breeding them domestically, rearing goats and sheep for milk and for making cheese, and

starting revolts to safeguard their supply of daily bread, even during the time of the Knights and the British, a lot of the food that ended up in Maltese people's stomachs had been shipped in from abroad and was influenced in one way or another by the kitchens of the colonizers. Nowadays, supermarket shelves are laden with thousands of imported processed food items, yet, luckily, local seasonal fruits and vegetables are still widely available, as is freshly baked bread, fresh fish, and fresh milk and dairy products.

However, if one ventures to the capital city, Valletta, and asks teenagers at random to identify ingredients typical of Maltese cuisine, some would probably find themselves at a loss as to how to answer straightaway. The problem is that they are being less frequently exposed to traditional Maltese ingredients and dishes due to changes in their families' lifestyles, in the availability of foods, and in the restaurants offering certain cuisines. Despite their initial hesitation, the teenagers would eventually likely name one or more of the following: *ħobż tal-Malti* (the local soft, open-textured, "holey" bread, either with a hard crust or, if unleavened, with a softer crust), *ġbejniet* (little sheep or goat cheeses, served fresh, dried plain, or dried and pickled in vinegar and covered in black pepper), *bigilla* (a brown paste made from boiled, mashed beans, seasoned with olive oil, salt, and red pepper, typically served as a dip), *tadam ċatt* (tasty flat-shaped

Bigilla, a traditional dish found in Malta. (Shutterstock)

tomatoes with grooves, often used to spread on fresh bread), *għaġin il-forn* or *timpana* (baked macaroni with a tomato and meat sauce, sometimes encased in pastry), and *stuffat tal-fenek* or *fenek moqli* (rabbit stew or fried rabbit in wine and garlic). They might also mention garlic and onions (especially since these are often chopped and used as a base for sauces, soups, and dips) and olives and capers (which weave their way into many dishes, both traditional and more modern).

Bigilla

Ingredients

- 1 lb dried fava beans
- 6–8 cloves garlic, roughly chopped
- 2 tbsp olive oil
- Juice of 1 lemon
- 2 tbsp parsley, finely chopped
- 1 tbsp mint, marjoram, or basil
- 1 red chili pepper, finely chopped
- Salt

Wash the beans and soak for 24 hours in cold water, changing water at least three times.

Cook the beans in a little water for about 1½ hours or until soft. Drain off the excess liquid.

Mash or blend the beans, adding the garlic, olive oil, lemon juice, herbs, chili pepper, and salt.

Serve hot or cold, as a spread on crusty bread or as a dip.

The youth will likely mention the local alternative to westernized fast food—*pastizzi*. These are flaky pastries shaped like diamonds or turnovers and filled with a fluffy ricotta cheese or soft mashed peas. A heavier version—called *qassatat*—is made with short-crust pastry and shaped like a rose. This is sometimes also stuffed with a mixture of spinach and anchovies or tuna.

Interestingly, historians have stated that, for reasons of shared history and proximity leading to trading and other contact, Maltese dishes have similar if

not identical counterparts in neighboring countries. For example, the *kannoli*—pastries filled with sweetened ricotta and candied fruit—are nearly identical to those of nearby Sicily, and the *kapunata*—made with tomatoes, green peppers, eggplant, onions, garlic, capers, and olives—is similar to the *peperonata* and other such dishes found in many southern Mediterranean nations.

Also, for historical reasons, there is a clear British influence on foods still typically eaten in Malta. Potatoes were introduced to the islands as a cash crop by the British (though they were probably first seen locally in the kitchens of the Spanish knights), and they are now a staple food, being used in soups, stews, and pies, and also as an accompaniment to meat and fish dishes. For the latter, roasted potatoes or chips (fries) are the most common formats. Curry powder is often used to spice up sauces and stews. Bread is often buttered; olive oil is not so commonly used for cooking but more so for flavoring.

Cooking

In keeping with traditional Mediterranean principles, many traditional Maltese recipes involve slow cooking methods. The older generations will swear that soups, sauces, and stews benefit enormously from being simmered for a couple of hours over a low flame, whereas cooking using more modern equipment and utensils results in inferior dishes from the perspective of both flavor and texture.

Well into the early 20th century, Maltese households cooked food in earthenware pots on a *kenur*—a portable stone stove with four raised corners on which a pot could be placed and with a hole in the middle where twigs and thorns (and coal for those who could afford it) were burned as fuel. This was later replaced by a *kuċiniera*—a paraffin-fueled stove—which allowed for easy regulation of the flame. In both cases, the food would be left to cook slowly and gently for hours, filling the house with tantalizing aromas while household chores were carried out.

A habit that was common in the 20th century and still persists in a few villages is that of preparing the food, covering the dish with a clean white cloth, and taking it to be cooked in one of the local bakeries.

In the past, this was typically done to cook enough loaves of bread to last the family for a few days or to cook the Sunday lunch. Two dishes still commonly cooked in this communal fashion are *patata l-forn* (layered meat, onion, and potato slices baked in wine), or *mqarrun* or *ross il-forn* (baked macaroni or rice). The dishes cook side by side in one large oven so that the aromas mingle, giving each dish a flavor unachievable in the home oven. For bakers to recognize which dish belongs to whom, each family is given a lead identification tag matching one attached to the dish.

Typical Meals

Meals in modern households differ quite a lot, often depending on the work status of the main food provider (very often the mother), as well as a multitude of other factors (including food availability and accessibility, culinary skills, and support from elderly relatives). Whatever the circumstances, in most cases a variety of meals are offered, some of which may take a more traditional slant and others a more modern one.

The Maltese are well known for their trait of adaptability—taking what is foreign and giving it their own mark. This likely was also the case with food over the centuries. Many Maltese were employed in the different kitchens of the Knights of Malta's eight Langues (i.e., languages, from Provence, Auvergne, France, Castile, Aragon, Italy, England, and Germany) and later in the households of the British military families stationed in Malta. Their participation in the production of different dishes for these colonizers surely influenced their own repertoire of recipes and dishes cooked at home.

Currently, in households that still present more traditional fare, a meal will typically start with *brodu* (broth), followed by a plate with meat, potatoes, and vegetables cooked in the broth itself, or else steamed on top of the broth as it simmered slowly on the flame. In winter hearty soups, such as *minestra*, *kusksu*, or *soppa tal-armla*, are often served as a one-dish meal. In some cases, these soups may be followed by a slice of bread with *gobon tal-bżar* (cheese with whole black peppers). Other typical main dishes might be a variety of pies, such as *torta*

tal-irkotta (with a filling of ricotta and broad beans), *torta tal-qargħa ħamra* (with a filling of pumpkin and rice), and *torta tal-lampuki* (with a filling of dorado fish chunks, tomato, onion, cauliflower, and potato). A traditional way of using leftover vegetables (such as cauliflower and potatoes) is to use them to make *pulpetti* (fritters) with tuna. Nowadays, these are often served with a fried egg and chips (fries).

A typical meal in a more modern kitchen will consist of roasted chicken drumsticks, roasted potatoes, and some vegetables or a salad. Tabletop grills are common in many households and are used with low-fat cooking in mind. Other typical meals are based on a wholesome pasta dish, such as penne, farfalle, or tortellini with either a tomato and meat (Bolognese-style) sauce or a cream, mushroom, and bacon (carbonara-style) sauce or a simpler sauce with pesto (of which many jarred varieties are available). However, pizzas, burgers, chicken nuggets, and noodles would possibly be the more common fare on the younger generation's daily menu.

In the past, red meat dishes were reserved for Sundays, feast days, and special occasions. Fish and pasta were consumed on Roman Catholic days of abstinence from meat (Wednesday and Friday). These traditions may still be upheld in some households, especially among the older generations; but in most households they are nonexistent (with the exception perhaps of abstaining on Good Friday and Our Lady of Sorrows Day—the Friday after the third Sunday following Easter).

Sunday lunch still holds a special place in many families. As a result, more traditional and perhaps labor-intensive and time-consuming meals are prepared. One such menu may be brodu, followed by timpana, and then patata l-forn. Alternatively, *bragjoli* (stuffed rolled-up beef slices stewed in a sauce of tomatoes, peas, and potatoes) or a similar plain meat stew—*stuffat tal-laħam*—will be prepared. Spaghetti is offered as a starter, over which some of the sauce from the stew is ladled; this is then followed by a plate of the stew accompanied by plenty of crusty bread for sopping up the sauce.

Though fruit is considered the standard dessert in most households, there are a number of traditional desserts that are occasionally prepared, perhaps

more so on Sundays or feast days. These include *torta tal-marmurat* (a baked pie with a filling of almonds, candied orange peel, and chocolate) and *pudina tal-ħobż* (a baked pudding using stale bread with apples, raisins, and cocoa among the most common ingredients—though every family has its own secret recipe). A common dessert that shows traces of Malta's past British colonization is fruit trifle comprising layers of sponge cake, blancmange (and almond pudding), and fruit. Some families may also douse the sponge with a shot of vermouth. A typical traditional meal would essentially end with a variety of nuts, such as roasted peanuts, or hazelnuts and walnuts accompanied by dried figs and dates. During the Christmas season, roasted chestnuts are also popular.

Eating Out

Tourism is one of the major industries in Malta, and, possibly as a result of this, there is no lack of restaurants in Malta. In fact, eating out as a family is a common weekend and special-occasion activity. Recent years have seen a rapid expansion in the range of international and ethnic cuisine restaurants. Apart from the omnipresent Italian restaurants, the islands have also seen an increase in Chinese and Indian restaurants, as well as the emergence of African, eastern European and Baltic, Greek, Mexican, Japanese, and fusion restaurants, to name a few. Fast-food outlets are heavily patronized by Maltese families. Kiosks and take-out places selling kebabs are also becoming popular, especially among the younger generations.

There are still very few restaurants on the islands that offer truly traditional Maltese dishes. Very casual restaurants that offer what is called a typical *fenkata* meal have been around for a few decades. This meal revolves around the traditional *stuffat tal-fenek* (rabbit joints prefried in garlic and then stewed with onions, tomatoes, peas, potatoes, bay leaf, and wine). The meal may start off with an appetizer, such as crusty bread slices rubbed with tomato and olive oil (similar to the Italian bruschetta), or local *galletti* (water biscuits) served with chunks of *gbejniet* or some *bigilla* for dipping. This is then followed by a plate of spaghetti mixed with some of the sauce ladled out from the pot of rabbit stew.

Restaurants along the waterfront in Marsaxlokk, Malta. (StockPhotoPro)

The main dish is the rabbit stew itself, served with baskets of fresh crusty local bread. Dessert consists of a variety of seasonal fresh fruit. Then the meal ends with roasted peanuts, which all the diners shell at the table.

A recent phenomenon has been the opening of wine bars, particularly in the narrow winding roads of village cores and old fortified cities. These wine bars offer both local and foreign wines, yet a staple item on their menu is a platter consisting of local traditional appetizers such as the *ħobż biż-żejt*, galletti, ġbejniet, bigilla, and parsley-laced butter beans.

Special Occasions

The yearly calendar in Malta is punctuated with a number of public holidays, including many special *festa* days linked to the Roman Catholic religion.

Although a turkey dinner and Christmas pudding have taken over as the meal for Christmas in many households, several other festa days have retained their associated traditional dish or sweet. For example, it is not uncommon for a family to order a young lamb or kid to be roasted for Easter lunch. Easter also brings with it *figolli* (a sweet pastry filled with an almond paste and generally coated with glacé icing or chocolate). These pastries were traditionally shaped as a lamb or fish, though over the years other less religiously symbolic shapes have emerged, such as butterflies, hearts, and cars.

Carnival is celebrated just before the beginning of Lent—the period of fasting before Easter. *Prinjolata* is a sweet made from cake crumbs, sugar, egg whites, and nuts, coated with icing and decorated with glacé cherries and piped chocolate, which is typically sold as a little mound or by weight and cut from a larger mound during Carnival days.

Karamelli tal-harrub (carob sweets) are readily available on both Our Lady of Sorrows Day and Good Friday, two days of strict fasting. A very common meal on these days is ricotta-filled ravioli or torta tal-irkotta in observance of the no-meat rule. Either as a sign of respect or perhaps as a show of morbid humor, November 2, which commemorates All Souls' Day, is characterized by shop windows displaying trays of *ghadam*—pastries in the shape of bones.

Throughout the year the various churches in the towns and villages celebrate their patron saints. These festivals involve street parades with bands and a statue of the saint carried high on men's shoulders. The main streets and especially the square in front of the church are typically lined with little wooden ornately decorated kiosks selling different types of *qubbajt* (nougat). One can choose from either a soft white nougat containing roasted nuts or a rock-hard, dark brown caramel nougat also containing nuts or sesame seeds. Now and again, one might also find a mobile vendor selling *mqaret*. These are deep-fried diamond-shaped, date-filled pastries served piping hot. Over the years, the festas have become heavily commercialized and westernized, with mobile kiosks selling hot dogs, burgers, kebabs, chips, ice cream, cotton candy, and all sorts of fast food.

Diet and Health

Since the latter half of the 20th century, Malta has witnessed a shift toward westernized dietary patterns, with an increased consumption of meat, dairy products, and processed high-fat, high-sugar, high-salt foods and a decreased consumption of pulses. Common foods in children's diets are chicken nuggets, burgers, pizzas, and packet noodles, together with a variety of packaged salted snacks, chocolate or jam-filled croissants, and cookies.

In 1988, the "National Nutrient Goals and Dietary Guidelines" document specifically recommended that Maltese eat less meat and consume fish and poultry in preference to beef; replace high-fat dairy products with low-fat alternatives; and eat fewer eggs and more fresh fruit and vegetables and whole-grain cereal products.

Following a traditional Maltese diet would go some way toward meeting these recommendations. For example, rabbit is one of the meats lowest in fat, whereas fish is used in several recipes ranging from *aljotta* (a broth-type fish soup containing rice and some vegetables), to *pulpetti*, to *torta tal-lampuki*. Moreover, fresh seasonal vegetables are used, raw or boiled and then cooled, to make vegetable salads, as well as a variety of soups. *Tadam mimli* (stuffed tomatoes), *brunġiel mimli* (stuffed eggplants), and *bżar mimli* (stuffed bell peppers) are three common traditional dishes in which the vegetables are filled either with rice and meat or with rice, tuna, olives, and capers and then baked.

Fruit, which is lauded for its health benefits, is luckily a staple in the diet. Different local fruits are available year-round, including plums, peaches, nectarines, apricots, pears, oranges, tangerines, strawberries, melons, watermelons, and grapes. Some claim that one of the best local fruits is prickly pears, which grow on the side of country lanes. Cut first thing in the morning and peeled after they have been soaked in water to tame the spines, prickly pears are delicious eaten cold from the refrigerator. They come in shades of red, green, and orange and are a feast for the eye when presented on the table in a bowl.

Local grapes are also pressed to make a variety of wines, and the elders insist that a glass of wine daily proffers many health benefits. Interestingly, some local entrepreneurs are using prickly pears, pomegranates, and various herbs to make liquors that all have a distinctive Mediterranean aroma and are marketed with an emphasis on their natural ingredients.

Moldova

Overview

The Republic of Moldova is a landlocked country that lies between the Ukraine and Romania in eastern Europe. The official language is Moldovan, which many linguists say is the same language as Romanian. The population of Moldova in 2009 was 4,320,748. With 29 percent of the population living below the poverty line, Moldova rates as one of Europe's poorest countries. Moldova gained independence in 1991 after 44 years of Soviet rule. Previous to this, the territory had been annexed into two areas, one Russian and the other Romanian. Consequently, Moldovan food culture shows clear Russian and Romanian elements. Originally, Moldova was part of the principality of Moldova. In the 14th and 15th centuries the Ottoman Empire ruled Moldova. Moldova was also part of an ongoing cultural exchange that has typified eastern Europe from the Middle Ages to the present day. The result is a cuisine that brings together Russian, Romanian, Turkish, Bulgarian, Greek, German, Jewish, and Ukrainian elements. History, agriculture, poverty, and religion all play defining roles in Moldovan food culture.

Fertile land covers most of Moldova's 13,070 square miles (33,851 square kilometers), three-quarters of which are dedicated to agriculture. Agriculture is considered the main pillar of Moldova's economy and accounts for half of Moldova's exports and a third of its labor force. Moldova has supplied food and wine to Russia, Romania, and Turkey at different times in history. Today, Moldova exports produce mainly to nearby countries. Wine is one of Moldova's most significant industries.

Grapevines, maize, wheat, and a range of fruit trees and vegetables grow in Moldova's rich soils, and animals are kept for dairy and meat products.

Food Culture Snapshot

With half the population living rurally and half in urban settings, the variety of foods available is different for these two demographics. What is common is the use of produce markets to buy food. Produce markets are located in most places, from small towns to large cities like Chisinau. Cornmeal will be bought in large quantities to make into a variety of dishes served throughout the day. In a rural setting families grow much of their fruit and vegetables, and animals are reared for meat, eggs, and milk. Flour will be purchased to make pastry and bread. Food items, such as coffee, sugar, salt, and pepper, will be purchased from a supermarket or store. Since the transition to a free market economy, supermarkets selling a wide range of well-known food brands have become common in urban locations.

Major Foodstuffs

Most of what Moldovans eat is supplied domestically. Historically Moldova supplied the Soviet Union with much of its agricultural products. Today, considering the size of the country, exports are generally high. However, political and environmental reasons have caused fluctuations. For example, wine exports to Russia decreased dramatically in 2006 after Russia placed an embargo on wine imports from Moldova and Georgia. The average size of Moldovan farms is larger than western

A fountain of red wine in Moldova. (Shutterstock)

European farms, which allows for high productivity. The high percentage of foods produced in Moldova has meant that over the period of transition from being a Soviet state, food supplies were more stable than in some other eastern European countries. However, another consequence of this is that the population's food supply relies heavily on the stability of agriculture. This was a major problem in 2007 when Moldovan agricultural productivity dramatically decreased due to drought.

Even though meat features in many Moldovan dishes, it provides only half the dietary protein that cereals do. Cereals are not only the main source of protein but also the main source of dietary energy. The two main cereals grown are wheat and maize. Maize is eaten more frequently and at a higher consumption rate than wheat. Like in the neighboring country Romania, maize has historically played, and continues to play, a central role in the

Moldovan diet. The dish *mamaliga* (cornmeal polenta/porridge) is the most common way it is eaten. Wheat is made into bread, which holds a meaningful place in many special occasions. Wheat is also used to make pastry for foods, such as *placinta* (cheese-filled pastry). Wheat bran is used to make a fermented, pickled soup called *bors*. Homemade wheat noodles are commonly used in the popular Moldovan soup *zama* (sometimes called *zeama*) made with chicken and vegetables. Other grains that are eaten less frequently are rice and barley.

Poultry, mainly chicken, and pork are the most widely consumed meats. Chicken is made into a customary Moldovan dish of "jellied chicken." Mutton is used to make *ciorba* (sour soup), *ghiveci* (vegetable stew), or *musaca* (from Greek mousaka). Its use in Moldova is likely a legacy of the Ottoman Empire. Lamb is eaten for Easter and more regularly in southern areas. Beef is eaten to a

lesser extent but is still seen in common dishes like *mititei* (sausage-shaped grilled patties) or bors, and it is more common in regions where the cuisine has been more heavily influenced by Russia. Eggs are also a main source of dietary protein and are served on top of mamaliga, served for breakfast, or used in cooking.

Apples, pears, quinces, apricots, and some berries are grown, and all feature in Moldovan dishes. Fruits often accompany meat dishes and are made into preserves, pickles, pies, and juices. Vegetables are often used to balance meat dishes. Tomatoes, cabbage, sweet and green peppers, garlic, eggplant (aubergine), beans, onions, and potatoes are the most popular. Walnuts and sugar beets are also major crops in Moldova.

Moldovans consume a lot of milk and milk products. According to the Food and Agriculture Organization (FAO) of the United Nations, in 2003 milk accounted for 19 percent of daily protein intake. Milk is produced in Moldova and used to make cheeses, cream, butter, and sour cream. However, many of Moldova's favorite cheeses are made using goat or sheep milk. *Brinza* is a sheep cheese, also common in Romania, which accompanies many Moldovan dishes.

Above all, Moldova is known for its wine production. Even though most of the wine is produced for export, wine is served daily at the table. Moldova has been cultivating grapevines and making wine for 5,000 years. Today, the wine-producing regions located in the south, north, and east grow mainly European grape varieties, along with a smaller quantity of local varieties, such as Rara Neagra, Plavai, and Feteasca Regala. White, red, and sweet wines are made, and due to its similar latitude to France, sparkling wines and cognacs are produced as well. Sparkling wines are commonly drunk at celebrations. Grapes are also used to make juices, and they are eaten fresh or used in cooking.

Cooking

Moldovan cooking typically balances sour tastes with some spice and aromatic herbs. Women do most of the cooking. Moldovan cooking makes use of many utensils familiar to a European or

American kitchen. Kitchens are generally more basic and don't always contain the time-saving tools that are found in the West. Meat is often grilled over charcoal, which is similar to Balkan cooking. The *ceaun* (cast iron pot that is sometimes rounded at the base) is an important element to the kitchen and is used to make soups, stews, and mamaliga. Mamaliga is commonly placed on a wooden board after it is cooked, and then once it has cooled, it is cut into pieces and served.

Zama (Chicken and Noodle Soup)

Zama is a hearty but well-balanced soup made in a *ceaun* or large pot, and it forms the foundation for many Moldovan meals.

Ingredients

- 1 small whole chicken
- Approximately 12 c water
- Salt and black pepper
- ½ medium onion
- 1 carrot
- 1 medium tomato
- 1 medium celery stalk and some of the young leaves, finely chopped
- 2 c egg noodles (preferably homemade)
- 3 tbsp lemon juice
- 3–4 small branches of thyme
- ¼ c finely chopped parsley
- ¼ c chopped fresh dill

Wash the chicken, place it in a large pot or deep saucepan, and add water. Season with salt and pepper. Boil on medium-low heat until froth rises to the top. Meanwhile, clean and chop the onion, carrot, tomato, and celery stalk. Using a skimmer, remove all the froth. Then reduce to a simmer, cover, and cook for 40 minutes, or until meat is tender. Remove the meat from the pot, then chop and return to the pan along with the vegetables. Season to taste, then return to a simmer and cook for 10 minutes. Then bring to a boil and add the noodles. Continue cooking for 8 minutes, or until the noo-

dles are just tender. Add the lemon juice, herbs and finely chopped celery leaves. Cover pot and remove from the heat. Let the soup stand for 5 minutes. Serve with cornbread.

Breads, pastries such as placinta (pastries filled with egg and brinza or curd), and pies are all baked in the oven. Baked mamaliga is a popular way to eat cornmeal; it is served topped with brinza, and sometimes with egg, bacon, sour cream, or cottage cheese.

Most rural and some urban houses have access to produce right at their door. The amount of produce available can vary depending on whether it comes from a small vegetable garden, a small plot, or a small semisubsistence farm. Preserving produce for consumption throughout the cooler months is a very common method of food preparation. Fruits are preserved in syrup, frozen, pickled, or made into beverages, either juice or brandy. Vegetables are pickled. Canning is also a popular form of preserving.

Typical Meals

Meals vary in quantity and variety depending on occupation, income, and location. Breakfast is often light and may include bread, cornmeal porridge, a pastry, eggs or cheese, and usually coffee or tea. For many people lunch is the main meal of the day. Generally lunch will start with soup. There are many different types of soups: *ciorba* (sour soup), *zama cutia* (wheat soup with honey), bors, and goulash. Soups contain meat, vegetables, herbs, spices, and often noodles, too. A meat dish will usually follow the soup. Meat can be roasted, baked in a pot, or grilled, for example, grilled mititei (sausage-shaped meat patties) or baked chicken. Meat is often accompanied by fruit, such as *torca* (pork stew) with apricots. *Sarmale* (stuffed cabbage leaves) are also common for lunch or dinner, as are jellied chicken, *ghiveci* (meat and vegetable stew), and fish. Wine is served with most meals.

At the center of most meals is maize. Having been a vital staple in times of food shortage over the

last few centuries, it is now an established part of Moldovan cuisine and considered a national dish. Maize in the form of mamaliga is made into bread; it can also be served as porridge for breakfast, as an accompaniment to main dishes, or topped with cheese.

Mamaliga (Polenta)

This dish is well known in both Moldovan and Romanian cuisines, and it is very similar to Italian polenta. There are numerous ways it can be cooked, and it is served as an accompaniment in a variety of ways. This recipe makes it into a bread; therefore, it will be thicker than Italian polenta.

Ingredients

3½ c water
Salt to taste
1 c cornmeal
4 tbsp butter

In a caun or a pot bring water and salt to a boil. In a steady stream, sprinkle about 2 tablespoons cornmeal into the boiling water, stirring constantly. In the same manner gradually add the rest of the cornmeal while stirring continually. With the heat still on low, add small pieces of butter, one at a time, and continue to stir for about 5–10 minutes more. The mixture will start to separate from the sides of the pot. Flatten the surface with the wooden stirring spoon, remove from the heat, and let rest for 5 minutes. Turn the pot over onto a wooden cutting board to remove the mamaliga. Cut into wedges using a taut string. Serve instead of bread with meat, vegetables, or stew. It can also be served with cheese sprinkled on top. Use either brinza, feta, or a sharp, crumbly cheese.

Eating Out

There is little tradition of eating out in Moldova. The reality is that many people do not have the financial means, even though restaurants and cafés are extremely cheap compared with Western standards. A variety of restaurants and cafés are found,

mainly in the large cities. In Chisinau, Moldova's capital, a number of international cuisines as well as Moldovan food can be found. Food venues range from simple street vendors to fine restaurants. Pizza is ubiquitous in Chisinau, and there are also increasingly more fast-food establishments. In urban settings it is more common to eat out for lunch, when on a work break.

Special Occasions

Food is central when people gather for all major life events, such as birth, marriage, and death, as well as religious holidays. Also, in times of much poverty and turmoil, food and coming together have been very important for Moldovans. When Moldova was a Soviet state, many of these celebrations were forbidden; however, they are still practiced widely today.

Eastern Orthodox Christianity is practiced by 98 percent of the population. Celebrations and commemorations are common occurrences and involve fasting and feasting. The year is structured by many religious holidays. Christmas and Easter are the most relevant to Moldovan food culture. At Christmastime, as in Romania, pork is commonly eaten. In rural settings, a pig is usually slaughtered especially for Christmas. On Christmas Eve an exchange of food takes place. Children go to the houses of relatives and friends with food parcels, as gifts, containing *lichelliipi* (cakes, biscuits, unleavened bread), apples, and other sweets. The host, having prepared food parcels, then gives a parcel of food to the children. On the eve of Easter, special food baskets are brought to the church to be blessed. The baskets usually contain chicken eggs painted red, lamb, *pasca* (a round cake made especially for Easter), cheese, and salt. As in many other Orthodox religions, lamb, usually grilled, is eaten on Easter Sunday.

There are over 200 different shapes of ritual bread in Moldova. This bread is similar to *colaci*, which is a braided or cross-shaped sweet bread from Romania, something like challah. Different shapes are used for specific occasions; for example, the figure eight is commonly made for Christmas Eve. Ritual

bread is central to ceremonies. At births, deaths, marriages, and christening ceremonies, ritual bread is used at certain points in the ceremony. It is also given to guests. Bread accompanied by a candle is given to guests at “meals for the dead,” which take place at intervals for seven years after someone's funeral.

Diet and Health

Like many other ex-Soviet states, the population of Moldova does not score as well as most western Europeans in many key health indicators. Also, like many other countries dealing with post-Soviet stresses, many of the health issues are related to lifestyle, including smoking, alcohol consumption, and diet. Food shortages are, and have been, a reality for many people and often result in inadequate nutritional intake. An example of this occurred during the recent 2007 drought, which drastically reduced food reserves. This in turn led to a national health problem because the Moldovan population relies heavily on the food it produces.

Even though Moldova produces a large amount of fruit and vegetables and these also feature heavily in the cuisine, at times consumption has been low and nutrient intake poor due to poverty and poor yields. In the time of large collective farms, Moldova had a high use of pesticides and herbicides. There may be environmental remnants from this time, but today produce is often cleaner and more organic, since Moldova now has a low use of pesticides and fertilizers. For many households, the fruit and vegetables that they grow or buy are likely to be of high quality.

The Netherlands

Overview

The Kingdom of the Netherlands is located in the northwest of the European mainland, bordering the North Sea. In the south the country borders Belgium, and in the east Germany. The Netherlands is a modern, industrialized country and a large exporter of agricultural produce. It has around 16.5 million inhabitants and has been a member of the European Union since 1951. With Amsterdam as its official capital, the government of the monarchy, which was founded in 1830 when Belgium separated, is seated in The Hague. *Dutch* refers to both the inhabitants and the language officially spoken within the country's 12 provinces. Often, and incorrectly, the Netherlands is called Holland, which refers to the (northwestern) provinces of North and South Holland. All 12 provinces have specific characteristics in regard to culture, cuisine, inhabitants, and dialects. The province of Friesland is unique in that, apart from Dutch, Frisian is also an official language. Not only the provinces but also Dutch cuisine originated in the Middle Ages. Due to the moderate climate with cool summers and mild winters, cookery traditionally follows the seasons, and until today dinner centers around potatoes, vegetables, and meat. After World War II the down-to-earth Dutch approach toward cooking changed drastically, and apart from potatoes, staple foods such as rice and pasta started to appear regularly on the dinner table. Vegetables and legumes are commonly boiled in water and remain a more important food choice than meat, fish, or meat alternatives. This is reflected in popular language, as dinner is

many times referred to as *agv*—*aardappel, groente, vlees* (potato, vegetables, meat).

Apart from geography, until late into the 20th century poverty and religion strongly influenced Dutch eating and drinking habits. After the prosperous *Gouden Eeuw* (Golden Age, a period roughly spanning the 17th century), the country was struck by poverty, and as a result the already-existing gap and vast differences in the diets of the rich and poor grew wider. Dating back to the 16th and 17th centuries, segregation, religious freedom, and tolerance became “typical” Dutch characteristics. Toward foreigners and foreign religious dissenters, certain forms of religious freedom and tolerance were practiced, but Dutch citizens who themselves deserted religion or openly practiced otherwise were persecuted and discriminated against. Religious tolerance resulted in many people seeking a haven in the Netherlands, including Jews and French Protestant Huguenots, who could practice their beliefs openly, as well as several new religious sects, such as the Mennonites and Anabaptists. Until the late 1960s Christianity predominated in various forms of Calvinism (the Dutch Reformed Church above all), plus other denominations of Protestantism and Catholicism. Although most of the population was religious, a substantial increase in prosperity, mobility, education, and television sets resulted in secularization but never in a homogeneous nation. Still today around 60 percent of the Dutch population is faithful to religion, including more recently arrived Muslims, Hindus, and Buddhists. In the past, the Dutch diet was well intertwined with religion.

Subsequently, a large number of foods and dishes were prepared and eaten according to religious calendars, laws, and requirements. The well-known Dutch expression “fish on Friday,” for instance, reflects the Catholic prohibition of eating meat during fasting days.

Central aspects of the economy are agriculture and international trade, which together with industrialization and the ongoing national and global changes strongly influenced postwar cooking. Also, migration and migrants influenced the diet and eating habits. At present approximately 3.5 million inhabitants are of non-Dutch origin. The independence of the former colonies Indonesia (in 1948) and Suriname (in 1975) resulted in a massive influx of expatriates, and as of the 1960s migrants from southern Europe started to join the workforce.

Food Culture Snapshot

Together with their two-and-a-half-year-old daughter Sophie, Sandy de Roos (38) and Bart van Dijk (45) live in an apartment in a new neighborhood in Amsterdam. Their lifestyle and foodways are typical for many young middle-class cosmopolitan urbanites in the Netherlands. Both are food, wine, and gastronomy enthusiasts and devoted hobby cooks. On holidays and weekends they enjoy eating out in modern and upscale restaurants, as well as visiting food-oriented markets and festivals.

During the week their day starts at around 7:00. Sophie eats her hot porridge followed by a *beschuitje hagelslag* (a Holland rusk with chocolate sprinkles), and she drinks a cup of hot steamed milk. Sandy eats a bowl of cereal with milk. Apart from drinking fruit juice and coffee with milk, Bart breakfasts on slices of bread with either different types of cheeses or cold cuts. After breakfast Bart leaves to work at an advertising agency where lunch is catered between 12:30 and 1:30. Together with his colleagues, Bart lunches on breads and salads. Sandy’s lunch many times consists of sandwiches or a roll with melted cheese or cold cuts with a cup of tea. Sophie loves sandwiches of sliced bread with *pindekaas* (peanut butter) and a mug of semiskim milk.

The most important meal of the day is dinner, when the family gathers around the dinner table. On weekdays the cooking is shared by both; the food is prepared in 45 minutes and served around 7:30. For the preparation fresh ingredients are used, as, according to Sandy, these are more appetizing. Boiled, fried, panfried, steamed, or cooked as French fries, potatoes are prepared approximately three times a week. In wintertime, together with vegetables, potatoes are mashed into *stamppot* (hotchpotch). During the week meals vary from mussels with French fries, to Indonesian vegetarian or meat dishes, to Italian pasta, Middle Eastern bulgur, and Moroccan *tajines*. Depending on what’s on the menu, supermarkets and specialized or exotic stores are frequented. As during the weekend many times friends are entertained by cooking a three- or four-course dinner with complementary wines, food shopping for leisure consumes more time.

Major Foodstuffs

The most important dietary staples in the Netherlands are dairy (milk, yogurt, cheese), bread and grains, meats, vegetables, and potatoes. A substantial part of the country’s crops, dairy products, and livestock is traded and exported internationally. The country has a moderate rainy climate, and due to its position by the sea, where it can be very windy, the differences in winter and summer temperatures are not great. The draining of land has resulted in an extensive network of waterways, dams, and dikes. The overall flat country has fertile soils on which major food crops such as barley, corn, potatoes, sugar beets, and wheat are cultivated openly. Dutch agriculture is highly specialized and technologically sophisticated, which also applies to the country’s intensive livestock and dairy production.

Dairy

The average consumption of dairy is very high. Milk and buttermilk are drunk by all ages, and yogurt and milk-based desserts are consumed on a daily basis. Besides for their butter, the Dutch are renowned for their yellow cheeses from cow milk that are produced in factories and by farmers. Gouda,

Edam, and Leerdammer are among the most popular varieties. Most semihard and hard cheeses have the shape of a small soccer ball or cartwheel and are sold cut in pieces. Whether young, mature, or very old, Dutch cheese is eaten thinly sliced with a cheese slicer for breakfast and lunch and on sliced bread spread with butter or margarine. Cut into dice, Dutch cheese traditionally also serves as an appetizer with drinks. Furthermore, the dairy self-sufficient country exports tons of cheese, butter, and condensed milk.

Potatoes and Vegetables

As dinner centers around potatoes, vegetables, and meat, and the Dutch cuisine and diet very much follows the seasons, the average diet is relatively high in potatoes but also in animal, processed, sweetened, and refined foods. Apart from potatoes a substantial

amount of energy and carbohydrates comes from staple foods such as bread, cereals, pasta, rice, and dried legumes.

All sorts of vegetables are available year-round: fresh, frozen, and canned. Potatoes and vegetables such as carrots, leeks, cabbages, and onions are grown in the open fields, but tomatoes, cucumbers, lettuce, green beans, spinach, zucchini, eggplant, and peppers are often cultivated in greenhouses. Generally, tomatoes, cucumbers, cauliflower, and lettuce are the most consumed vegetables, but in season locally cultivated produce such as carrots, spinach, beans, peas, endive, leeks, onions, brussels sprouts, or one of the various kinds of cabbages is very popular.

Fruit

Particularly in the summer and the autumn many kinds of domestically grown apples, pears, plums,

Alkmaar Cheese Auction, Amsterdam, Holland. (Corel)

strawberries, cherries, and berries are eaten fresh. Imported bananas, citrus fruit, melons, pineapple, grapes, peaches, and kiwis are sold year-round and primarily eaten fresh. Canned fruits such as mandarin oranges, peaches, and apricots are common, and pineapple especially is very popular.

Meat, Poultry, and Game

Although most Dutch do not eat meat everyday, for most of the population meat remains the most important source of protein. Pork and beef, but also chicken, are the most popular meats; in particular, minced meats and easy-to-prepare meats such as sausages, fillets, chicken breasts, and schnitzel (cutlets) are preferred over larger cuts of meat. Veal, lamb, mutton, goat, horse meat, and turkey are also consumed. In autumn and winter, and especially for festive occasions, all sorts of game (rabbit, hare, pheasant, duck, ostrich, and deer) are served. Eggs, cheese, and meat replacements from soy are popular among the small group of vegetarians (2%) and people who avoid meat regularly.

Fish

All over the Netherlands fresh saltwater fish from the North Sea is available, in particular herring; eel, mackerel, and shrimp are also popular. Besides mussels, cod and plaice are also cultivated, and wild “exotic” fish such as salmon, tuna, tilapia, and *pangasius* (a kind of catfish that looks like a shark) are widely consumed. Smoked eel, wild salmon, and oysters are considered a delicacy. Apart from being prepared at home and in restaurants, fried fish and especially raw salted herring are popular street (snack) foods.

Spices

Roasted, ground, fresh, or dried herbs, spices, and flavorings are traditionally common but used sparingly in Dutch cooking. A wide range of so-called typical Dutch as well as exotic herbs and spices are available. These are commonly purchased in supermarkets, grocer’s, and specialty stores that also sell all kinds of spice mixtures. Like most herbs and

spices, they are sold in small bags, cans, or plastic and glass bottles or containers. Curly parsley, flat celery leaves, and chives are among the most used fresh herbs. Parsley and chives are finely chopped, and parsley is particularly popular for all kinds of soups, salads, and sandwiches. Together with the celery root, celery leaves are primarily boiled and used for *erwtensoeep*, a thick soup of dried peas. Due to globalization in the 1960s, foreign fresh herbs such as rosemary, thyme, oregano, basil, and cilantro became popular and nowadays are reasonably common. Most households own a salt and pepper set, and many people use a pepper mill. A number of savory and sweet dishes are traditionally prepared with both whole and ground spices such as cloves, nutmeg, and cinnamon. A dash of nutmeg on vegetables and a bit of cinnamon in desserts, cookies, and apple tarts is quite common. The Dutch spice cabinet also contains varieties of mild or spicy paprika and *kerriepoeder* (curry powder). Also widely available are ready-made dried spice mixtures for a large number of Dutch and foreign dishes such as the traditional *gehaktbal* (meatball), *hachée* (meat stew), fish, chicken, chili con carne, and a large number of potato dishes, rice, and pasta. The use of vanilla pods and cinnamon sticks is common. Typically Dutch are *koek- en speculaaskruiden*, which is a mixture of spices made from cinnamon, coriander, nutmeg, cloves, ginger, cardamom, and dried orange peel, used especially in winter for all kinds of cookies, cakes, and desserts.

Condiments

Apart from a salt and pepper set, favorite condiments are mustard, mayonnaise, vinegar, and Maggi seasoning sauce (a substitute meat extract), as well as sweet and sour pickled gherkins and onions. Popular, too, are tomato ketchup, piccalilli and garlic sauce, and *saté-saus* (peanut butter sauce).

Preserving

Until the beginning of the 20th century, since most of the population was self-supporting, food preservation was a necessity. Common methods used to preserve fish, meats, vegetables, and fruits (for

example, herring, ham, bacon, and apples) were salting, curing, drying, smoking, and sugaring. At the end of the 19th century freezers were introduced and eagerly adopted by households and the growing food industry. Subsequently, mass-produced preserves started to replace homemade produce and a number of traditional preservation techniques.

Cooking

In the middle of the 19th and the first decades of the 20th century, the interior of the Dutch house started to modernize drastically. Until then most people prepared one-pot dishes on top of a coal stove. After the introduction of gas, electricity, and a separate room for the kitchen, cooking became less time-consuming. Nowadays, middle-class households have modern kitchens that contain at least a four-burner gas range, a microwave, and conventional oven. Also common are a broad variety of electronic household appliances such as a mixer, blender, coffeemaker, espresso machine, toaster, egg boiler, juicer, and water heater.

The standard kitchen equipment is the *pannenset* (set of pans). This collection of saucepans in different sizes is mostly purchased together and traditionally used for cooking potatoes, vegetables, soups, and desserts. Sautéing larger cuts of meat is done in an enameled *braadpan* (casserole). All kinds of flat cast iron and Teflon frying pans with handles are used for the preparation of panfried meats, eggs, and pancakes. Since stir-frying has gained in popularity, most households own a Teflon wok. Typical Dutch kitchen equipment is a potato knife or peeler, a potato masher, and a cheese slicer.

Potatoes, vegetables, and also fruits such as apples and pears are commonly boiled in water with salt or sugar. Meats and eggs are traditionally sautéed in margarine or butter but also in sunflower, olive, peanut, or soy oil, or a combination. Furthermore, lard and bacon are often used for sautéing. The oven is commonly used for baking a traditional *appeltaart* (apple pie), cakes, and cookies but also for savory dishes such as lasagna, pizza, and quiche. Fun cooking and eating together for the *gezelligheid* (sociability) is gaining popularity. In wintertime

electric household appliances such as a table wok, grill, or fondue set are put on the dinner table, and in summer more and more people gather around a barbecue or are eating outdoors.

Breakfast, lunch, and dinner are consumed at the dinner table, which is dressed with a cloth, paper, or plastic tablecloth or place mats. Either pans or serving dishes are placed on the table. Soup is eaten from bowls or plates, the main dish is served on flat plates, and dessert is served in separate bowls. The standard tableware is a spoon, fork, and knife. The style of eating is “Continental,” with the fork to the left and the knife to the right of the plate. If dinner is followed by dessert, dessert spoons are placed on the table, above the plate. Table manners are influenced by the French; thus, it is considered impolite to chew food with an open mouth, to eat food from someone else’s plate, or to leave the table before all have finished eating.

Vast amounts of local and foreign beers and wine are consumed. Although drinking wine has gained in popularity, apart from on the weekend and in restaurants, drinking alcohol or any other beverages at the dinner table is not very common and usually restricted to special occasions.

At present the average middle-class Dutch woman spends around 30 minutes in the kitchen. Inspiration many times comes from a wide range of women’s and specialized magazines, daily recipes in newspapers, the Internet, the television, and cookbooks. Shopping for groceries is mostly done once a week, in particular, on Friday and Saturday. During the week women usually do most of the cooking. As cooking and gastronomy have become more popular, many men and middle-class cosmopolitan urbanites engage in food and wine shopping for leisure, especially on the weekend.

Typical Meals

Since the poverty-stricken 1800s and beginning of the 1900s, the Dutch diet has improved substantially. The year-round availability and variety of food have never been greater. Also, television shows, celebrity chefs, cookbooks, and magazines have added to the development and globalization of domestic cooking

and gastronomy. In the 20th century, together with industrialized foods, new and exotic products, foods, and ingredients increasingly modernized the diet. From the 1960s on, alongside the potato, rice, pasta, pizza, and quiche, a large variety of ingredients and dishes from around the world started to appear on the menu. Although Dutch cuisine and meals always have been internationally oriented, especially the younger (urban) generation prepares meals that can vary from Chinese to Italian, Moroccan to Indian.

For most people the main meal is dinner, but especially the older generation and rural families keep the traditional mealtimes. Around lunchtime they eat a hot meal starting with soup, followed by potatoes, vegetables, and meat, and a dessert. Around 6 P.M. often just a cold light meal of sliced bread with cold cuts and cheese or soup is consumed. This supper is many times followed by a cup of coffee with a cookie around 8 P.M. On Sunday afternoon many families gather around the dinner table or eat in restaurants, where they have either an extensive lunch or brunch or a three-course dinner. Especially during weekends, it is popular to order take-out food from eateries or Chinese-Indonesian restaurants.

During the week, a cold or hot breakfast and lunch are followed by a hot dinner around 6 P.M. Commonly a snack or a cookie is consumed during the 10 A.M. coffee break and 3 P.M. tea break. Both at home, at work, and in the streets, sweet and savory snack foods are very popular. A vast variety of traditional and exotic snacks such as French fries and the *kroket* (croquette) but also Vietnamese spring rolls and Middle Eastern *shoarma* (shawarma—similar to Greek gyros and served in a flatbread) are available in most cities.

Breakfast is generally consumed between 8 and 9 A.M. before people start school or the workday. Apart from convenience products such as cereal, it sometimes consists of oatmeal porridge, but more common are slices of (white or brown) wheat bread that are spread with margarine or butter and jam, sliced cheese, or cold cuts. Most kitchen cabinets and refrigerators contain an ample supply of strawberry, apricot, and other kinds of fruit jams. Popular, too, are pindakaas (peanut butter), *chocoladepasta* (chocolate spread), *appelstroop* (apple treacle),

hagelslag (chocolate sprinkles), old and young semi-hard cheeses such as Gouda and Edam, and many types of cold meats and sausages. Also, *beschuit* (rusk) and *ontbijtkoek* (breakfast cake) are typical for breakfast. To drink, orange juice, tea, milk, or coffee is considered suitable.

Eating lunch in a restaurant or eatery is not very common; most people take their own sandwiches to work in a lunch box. The Dutch very often refer to lunch as *boterhammen uit de broodtrommel cultuur* (sandwiches from the lunch-box culture). Between 12:00 and 1:00 schoolchildren and a large part of the workforce consume a few sandwiches, soup, or a snack in a canteen, home, or workplace, or in the street.

The main meal of the day is eaten between 5:30 and 6:30 P.M. Traditionally, dinner is a sequence of three courses: soup, a main dish, and a dessert. Serving soup as a starter has lost its popularity, but dessert is rarely skipped. What is served at dinnertime many times is decided in the supermarket and day by day. Most families use dinnertime as the opportunity to sit, eat, and talk together. Apart from potatoes, vegetables, and meat, a few times each week pasta or rice is prepared. Most supermarkets carry a wealth of convenience desserts ranging from the more traditional (fruit) yogurt, vanilla or chocolate *vla* (custard), and *griesmeelpudding* (semolina pudding) to foreign desserts such as chocolate mousse and *bavarois* (Bavarian cream).

Even though vast numbers of slices of bread and rolls are consumed for breakfast and lunch, the preferred source of carbohydrates is the potato. For every taste and dish there's a Dutch potato. Of the around 90 potato varieties available, the so-called mealy types with a yellowish or red-brown skin are the favorites. Potato types are often given girl's names, such as Bintje, Irene, and Marijke. Potatoes are usually served peeled and boiled. If potatoes are eaten together with vegetables, panfried meat, and gravy, the vegetables are boiled in water and served with a *roomsaus* (literally, "cream sauce," but actually prepared with butter, flour, and milk).

Although eaten all year round, the ultimate Dutch winter foods are stamppot (hotchpotch) and soups of dried beans. In winter, soups with boiled potatoes,

vegetables, meats, dried brown beans, and (broken) dried green peas are popular as *maaltijdsoup* (dinner soup). Well known are *bruine bonensoep* (brown bean soup) and *erwtensoup* (pea soup).

From fall to the beginning of spring, stampot is commonly prepared by boiling and mixing potatoes together with vegetables. A few well-known local varieties, such as *hete bliksem* (hot lightning, with apples) and *blauwe bliksem* (blue lightning, with pears), are made with potatoes and fruit. In spring and summer, mixing cooked potatoes with raw vegetables such as endive is also popular. Today, there are numerous recipes for and variations of stampot, but overall the most traditional versions include endive with bacon and meatballs, *hutspot* (carrots with onions) with *klapstuk* (boiled beef), *zuurkool met spek* (sauerkraut with bacon), and *boerenkool met rookworst* (kale with smoked sausage). Hotchpotch is commonly served with *rookworst* (smoked sausage) and/or fried bacon on the side.

The best-loved stampot is made with *boerenkool* (kale, or “farmer’s cabbage”). This is also a strictly cold-weather dish, as kale is best once the frost has softened the leaves, thus improving their taste. Most kale is purchased finely chopped in plastic bags. As a primitive version of cabbage, kale is certainly not the world’s most elegant vegetable. Given its popularity stampot boerenkool can be considered a national Dutch dish.

Vegetable hotchpotch served directly from the pan. (iStockPhoto)

Stampot Boerenkool (Kale with Sausage and Potato)

In most parts of the Netherlands boerenkool is prepared in the same manner—by putting the potatoes on top of the kale and boiling these together—but it is eaten with a variety of condiments and in many different manners. The most common way is to serve it with a smoked sausage and fried bacon. Gherkins and/or pickled onions and yellow *Amsterdamse uien* (yellow pickled onions) are popular on the side, and because sour combines well with it, a dash of vinegar is a well-known addition. Mustard commonly accompanies the sausage. Still, some people prefer to serve kale with meatballs or fried sausages or modernize the traditional recipes by putting nuts, little pieces of cheese, duck, and even olive oil into the stampot boerenkool.

Ingredients

- 2 lb mealy potatoes
- 1 bunch finely chopped kale
- 1 tsp salt
- 1 smoked sausage
- 5 slices smoked bacon in pieces (optional)
- 2 tbsp butter
- ½ c milk

Peel the potatoes, and cut them in half. Place the potatoes on top of the kale in a pot with about 3 cups of water and salt. Put the sausage on top, and cover. Bring to a boil, and boil for about 25 to 30 minutes. Meanwhile, fry the bacon on very low heat. Remove the sausage from the pot, and drain the cooking liquid. Set this aside. Heat milk, add the milk and butter to the potatoes, and mash the kale and potatoes until mixed well. Make sure the stampot boerenkool remains moist. One by one, add a few tablespoons of the reserved cooking liquid, and if desired some extra tablespoons of butter. Stir in the fried bacon. Serve with the sausage.

Apart from being boiled in water or mixed into hotchpotch, vegetables and fruits are stewed or served pickled. Traditional stewed vegetable side

dishes are red cabbage, endive, Brussels endive, spinach, and leeks. Boiled red beets are sliced and pickled in a sweet and sour dressing with oil, vinegar, and spices. Red cabbage is commonly stewed with vinegar, sugar, cinnamon, cloves, raisins or currants, and pieces of apple. Apples and pears also serve as side dishes. Popular with all ages is *appelmoes* (applesauce), for which apples are stewed with sugar and cinnamon. Pears are boiled in water or red wine, with the peel of a lemon, cinnamon, and sugar.

In spring and summer, fresh vegetables, and especially lettuce, are commonly used for salads that many times also contain thinly sliced tomatoes, cucumber, and small pieces of spring (orange) carrots, red peppers, and onion. Salads are either dressed with *slasaus* (literally, “salad sauce”) or a mayonnaise- or yogurt-based dressing with mild (sunflower, soy, or peanut) oil, vinegar, salt, pepper, and a bit of mustard. Olive oil-based vinaigrettes and other foreign dressings are popular. Furthermore, together with easy-to-prepare packages of mixed vegetables for Mediterranean and Eastern dishes, finely chopped mixed vegetables are commonly used for vegetable soups.

Since the 1950s all kinds of minced meat (beef, pork, or a mixture of the two) have become popular and are used for pasta sauces, oven-baked casseroles, and hamburgers but especially for the traditional *gehaktbal* (meatball). Apart from being served for supper with potatoes, vegetables, and gravy, meatballs are a very popular snack. Ranging from tennis to golf ball size, and served with mustard and white bread, they are always present on the menus of eateries and bars and are sold via snack-food vendors.

Overall, pork and the easy-to-prepare parts of beef and chicken are favorites. Traditionally Dutch butchers divide meat into many more parts than elsewhere. Popular pork parts are *karbonades* (pork chops), *speklappen* (slices of fresh bacon), and *slavink* (minced beef wrapped in bacon), in addition to minced meat. Larger cuts of meats, and especially beef, are prepared on Sundays and festive occasions. Furthermore, *rollade* (rolled meat), *hachée* (a slow-cooked stew with onions, vinegar, and bay leaf), and (Hungarian) goulash from beef are commonplace. Soup is made from the whole (old) chicken, but for

supper panfried chicken parts (legs and wings) and especially the easy-to-prepare breast are far more popular. Eggs are hardly consumed for dinner but are commonly eaten boiled for breakfast or lunch and are also a regular in the *uitsmijter* (literally, “bouncer”—panfried eggs with bacon and cheese on slices of white bread). Especially in autumn and for Christmas, game such as rabbit, pheasant, and venison is prepared. For the more elaborate Christmas dinner, turkey and goose are popular.

Bordering the North Sea, the Dutch eat a lot of fresh and smoked fish. Most notable is the *zoute haring* (raw, salted herring). Although herring is consumed all year round, the herring season begins in June; the first herring of the season is called *Hollandse Nieuwe*. Herring is served with finely chopped raw onions and gherkins. Although also sold in supermarkets, traditionally herring is bought at outdoor markets and the *haringstal* (herring stall). These vendors also sell the national delicacy smoked eel, sliced smoked salmon, and shrimp, which are often eaten on the spot on a white bread roll. Many kinds of fish are fried on the spot. Furthermore, typically Dutch are *panharing* (marinated fried herring) and *rolmops* (pickled herring), cold and hot smoked herring, and mackerel. Also popular, and considered festive foods, are fish salads with herring, shrimp, or tuna and a mayonnaise-based dressing. Fresh fish such as plaice and cod are commonly filleted and panfried. The most popular crustaceans and shellfish are oysters and cooked mussels, served together with sauces and a French baguette or fries.

Typically Dutch are pancakes and *poffertjes* (silver dollar-sized pancakes). Plate-sized pancakes are eaten as a meal but considered a treat. The classic way to eat them is topped with butter and powdered sugar. There are numerous sweet and savory toppings but most common is bacon and molasses (a dark syrup from sugar beets).

Apart from apple pie, which is typically baked at home, specialty stores and supermarkets carry a wealth of cookies, cakes, and pies. Almost every city has its own pastry; well known are *stroopwafels* (treacle wafers) from Gouda, Deventer *koek* (honey cake), and the *Bossche bol* (chocolate-coated choux pastry filled with whipped cream). Another national

delicacy is licorice, often quite salty compared with that found elsewhere. The annual licorice consumption averages three pounds per person.

Apart from a national cuisine, most provinces have a typical cuisine and local products. The north-eastern provinces are known for rye bread, potato dishes, dried farmer's sausages, and the use of mustard. Saltwater fish such as herring, mackerel, and English whiting is eaten all along the coastal area, and the province of Zeeland is famous for mussels, oysters, and sea vegetables such as *salicornia*, *lamsoor* (*Limonium vulgare*, or sea lavender), and *zee-aster* (*Aster tripolium*—a spinach-like plant that grows in marshes). The southern province of Limburg is known for its *vlaai* (fruit pie), asparagus, and mushrooms.

Eating Out

With a down-to-earth approach to food, cooking and entertaining guests at home as a leisure activity was neither very common nor well established in the Netherlands until the middle of the 20th century. Eating out foremost was considered a necessity, and it was mostly restricted to eating in hotel restaurants, eateries, bars, and caterers' shops, in addition to snack foods available via street vendors and stalls. In the 1900s and especially in Amsterdam the entertainment industry and eating out as a luxury started to become popular. Besides establishments serving Dutch food, French-style restaurants appeared. Until the late 1960s the quality of the service was of greater importance than the cooking skills of the chef. The upper-middle class often dined in hotel restaurants, and eating out was restricted to weekends and special occasions such as birthdays and other celebrations.

In the 1920s in larger cities such as Rotterdam and Amsterdam a handful of poor Chinese immigrants started selling peanuts on the street, and eventually a few of these vendors started Chinese eateries and restaurants. With the postwar influx of Indonesian expatriates, in the 1960s and 1970s the Chinese restaurants were transformed into Chinese-Indonesian restaurants. By offering cheap foods, and with take-out and dining-room facilities, these

restaurants lured Dutch middle-class families into their establishments, especially during the weekend. Today, most Dutch cities and shopping malls have a Chinese-Indonesian restaurant. The growing postwar middle class that was raised on take-out Chinese food still considers dining at *de Chinees* (the Chinese) a festive occasion.

For centuries the French culture and language have been well established and held in high esteem. When France became a popular holiday destination in the 1960s, the country's food and wine started to become available. French cuisine became popular among the more educated middle class via the bistro and cookbooks. In the same period self-employed immigrant entrepreneurs from Greece, Italy, Spain, and Turkey opened eateries and snack bars and started street-vending ice cream. As the Mediterranean became a popular holiday destination, eating Greek moussaka, Spanish paella, and Italian pizza and pasta became popular.

When in the 1970s the first McDonald's opened its doors, American fast food and hamburgers started to conquer the Netherlands. Subsequently, a growing number of American-inspired fast-food chains have opened, and nowadays numerous places successfully sell American pizza, muffins, chocolate chip cookies, and bagels. Ironically, McDonald's offers the Dutch-inspired Mac Krokot.

Numerous restaurant sites and guides reflect the ongoing and growing popularity of eating out and gastronomy. Especially since the 1950s, the number of restaurants and the quality of gastronomy increased significantly, and today both Gault-Millau and Michelin publish special Dutch editions. In these guides the approximately 100 best restaurants are listed. Apart from 2 restaurants with three Michelin stars, there are over 10 restaurants with two stars. Also, a number of Chinese, Japanese, and Indonesian chefs, and even a Surinamese chef, have been rewarded with Michelin stars. Chefs are educated according to the French gastronomic model as introduced by Auguste Escoffier in the early 20th century; especially in the most expensive restaurants, kitchens are organized according to the French model. Cooking is inspired by global gastronomic trends and influenced by the leading

foreign chefs such as Alain Ducasse, Michel Bras, Jean-Georges Vongerichten, Ferran Adria, and Heston Blumenthal. Due to a growing number of ambitious chefs, the quality of Dutch gastronomy is steadily improving.

Special Occasions

As the prevailing religion and cultural heritage is Christian, traditionally a wide range of typical foods and dishes mark Christian holidays such as Carnival, Easter, and Christmas. Birthdays and a number of other festivities and special occasions, such as Queen's Day, festivals, and fairs, are also times for eating and drinking well and abundantly.

New Year's

For most of the population New Year's Eve starts with *oliebollen*, doughnut balls that are prepared with and without currants and raisins and eaten fresh, lukewarm, or cold, often sprinkled with powdered sugar. Oliebollen and other fritters such as *appelflappen* (apple fritters), *wafels* (waffles), and pineapple fritters are common and often bought at one of the many temporary stalls that start to appear in cities and towns in autumn. Especially in the provinces the postwar generation remains fixed on a vast number of New Year's dishes and customs. These can vary from eating red cabbage to special stamppot (hotchpotch), herring, and rice pudding, or the paying of New Year's calls to neighbors, friends, and family. Instead of sending each other greeting cards, the Dutch spend the first two weeks of the new year visiting each other and serving olie-bollen and (alcoholic) beverages.

Oliebollen (Doughnut Balls)

- 1 c raisins and/or currants
- 2 c all-purpose flour
- 1 tsp salt
- 1 tbsp dry yeast
- 2 tbsp sugar
- 2 c lukewarm buttermilk

New Year's Eve in the Netherlands with champagne and the traditional oliebollen. (iStockPhoto)

5–6 c frying oil, such as canola

Powdered sugar

Soak the raisins and/or currants in hot water.

Combine the flour and salt in a large mixing bowl, and add the yeast and sugar. Make a hole in the center, and slowly pour the buttermilk into it. Use a wooden spoon or electric mixer to stir the ingredients into a smooth batter. Put the raisins and/or currants in a sieve, and then pat them dry. Mix them into the batter.

Cover the bowl with plastic wrap and a kitchen towel, and let the batter rise for about an hour and a half in a warm spot. The batter should double in size. Heat the oil to 350°F. Stick a soup spoon into the oil for a couple of seconds (this prevents the batter from sticking to the spoon), then fill the spoon with the batter. Carefully dip the batter into the oil. Re-

peat this process four to five times, and fry the *oliebollen* for about 4 to 5 minutes, until golden brown. If necessary, after three minutes, rotate them with a fork. Remove the *oliebollen* from the oil with a skimmer.

Repeat this step until all of the batter is used.

Put the *oliebollen* on a plate lined with some paper towels. Serve them hot, sprinkled with powdered sugar.

Carnival

The major rivers, the Lower Rhine, Waal, and Maas, divide the country in two parts, with a largely Calvinist part in the north and primarily Catholic areas in the south, where the beginning of Lent is celebrated with Carnival. Carnival is three days of processions, masquerades, singing, drinking beer, and feasting. At the end of Carnival on Tuesday night, called *Vastenavond*, pancakes, sausages, and cakes are consumed, as the next day, Ash Wednesday, starts a period of 40 days of fasting, and *Vastenavond* offers a last chance to eat meat, eggs, and dairy products.

Easter

Easter, the most important religious holiday, is celebrated with eggs and breads. Before Easter, to mark the end of the fast that started on Ash Wednesday, Palm Sunday is commemorated. On Palm Sunday children walk in procession to church carrying sticks that are decorated with sprigs of boxwood, candy, eggs, and a bread rooster on top. *Het Paasontbijt* (Easter breakfast) is the most abundant breakfast and the culinary highlight of the religious calendar year. For Easter, shops, houses, and dinner tables are abundantly decorated with yellow flowers, branches of trees, decorated eggs, chickens, rabbits, and other signs of spring and fertility. In elementary schools and at home, vast quantities of boiled, colored, and chocolate eggs; *paasbroden* (raisin breads); jams; cold cuts; cheeses; and smoked salmon are consumed. Prominent at the Easter breakfast table are round matzo. The Dutch spread the unleavened

Jewish Passover flatbread with butter and sprinkle it with sugar.

Queen's Day

Established in 1885, Queen's Day became a national holiday of unity and togetherness. In honor of the queen, most cities organize children's games, concerts, flea markets, and fireworks. Many times the festivities are organized by the local *Oranje vereniging* (Orange society), a group that supports the Dutch monarchy, which is also known as the House of Orange. Orange became the national color, and for Queen's Day and national sports events, many people nowadays are dressed in orange. Apart from commercial "orange" products, orange candies, cakes, beverages, and snack foods are sold. Best known are the orange *tompouce* (literally "Tom Thumb," this is pastry filled with custard) of the department store HEMA and *Oranje Bitter* (a liqueur).

Fairs

Once a year most cities and towns have a fair. Fairs are held particularly in summer and during holidays, and they are traditionally organized on market squares, except for in western Friesland, where the fair traditionally is held next to the local bar. At most fairs beer is consumed in vast amounts. Apart from all sorts of attractions, fairgoers eat *kaneelstok* (literally, "cinnamon stick"). These sticks are sold in all kinds of flavors such as cinnamon, licorice, and cherry at stalls that sell candy (*Oud-Hollands snoepgoed*). A regular feature is also the *gebakskraam* (stall that sells baked goods), and many times there are special vendors for cotton candy and popcorn.

Sint Maarten and Sinterklaas

From November until the end of the year, an abundance of *speculaas* (spiced cookies), biscuits, pastry in the shape of letters, chocolate and marzipan figures, *borstplaat* (fondant), and other seasonal specialty sweets, pastry, and confectionery becomes available. On November 11, especially in

northwestern parts of the country, on the night of Sint Maarten (Saint Martin) children walk the streets with lanterns they have made. Knocking on doors and singing songs, they are rewarded with all kinds of sweets and candy. Around a week later Sinterklaas (Saint Nicolas) arrives by boat from Spain. “Who behaves sweet gets candy, who behaves bad gets salt” is a line from one of the many songs children sing for Sinterklaas. From his arrival until his departure on December 6, Sinterklaas and his aid, *Zwarte Piet* (Black Pete), hand out lots of specialty sweets and confectionery such as *pepernoten* (spice nuts), *taai taai* (literally, “tough tough”; chewy little cakes), marzipan, confections, chocolate coins, and letters from the alphabet. The highlight of the visit is on December 5, when children receive presents.

Christmas

For the two-day celebration of Christmas, houses are decorated with Christmas trees and lights. On the night of December 24 and on the morning of December 25 many people attend a church service. Baked goods such as *kerststol* (a Christmas loaf with dried fruits and almond paste), *kerstkransjes* (spiced cookies with almonds), or a *kerstkrans* (pastry filled with almond paste) are served. After days of shopping, preparation, and cooking, on the first day of Christmas, most people dine lavishly at home. The 26th, the second Christmas day, is often spent visiting family and friends. In wintertime, if the weather permits, outdoor skating becomes a national sport. On the ice, stalls sell *koek en zopie* (cake and a hot punch that is a mixture of beer and rum), hot chocolate, pea soup, hot smoked sausages, and cakes.

Birthdays

In the past, *beschuit* (rusk) was considered a rich man’s delicacy, but nowadays they are handed out to celebrate a newborn. For the occasion the fragile twice-baked round rusk is spread with butter and sprinkled with pink (for a girl) or blue (for a boy) *muisjes* (literally, “mice,” this refers to aniseed sprinkles). One’s birthday is celebrated by treating family

and friends to cake, drinks, and food, rather than being treated oneself, which is the origin of the expression “Dutch treat.” Special breads and cakes in the shape of the biblical figures Abraham or Sarah are presented to people who turn 50. Also typically Dutch is a “do not feel like cooking” party. Nowadays, a pizza or Chinese, Thai, or Surinamese take-out or delivery is ordered, but on days when women do not feel like cooking, they usually prepare pancakes or serve ready-made French fries.

Diet and Health

In the Netherlands, traditionally, nutritional value is considered more important than gastronomic pleasure and the palatability of food. Before and after World War II, many middle-class women were educated in domestic science at schools. Apart from home economics and hygiene, these schools taught and advocated a frugal diet with a high nutritional value. The schools published highly popular cookbooks that greatly influenced domestic cooking and future generations of domestic cooks.

At the same time, so as to prevent chronic diseases, the Dutch government’s food policy started strongly focusing on health and food-safety issues. Due to food shortages during World War II and the need to feed the nation, historically the Dutch government and governmental organizations are well enmeshed with the local food industries and factories. Nowadays, a healthy diet is often advocated via media campaigns that promote the consumption of national agricultural produce and industrial products.

During the postwar era, Het Voedingscentrum (the Nutrition Center) became the most important and best-known governmental organization for nutritional information for citizens. Connecting scientific insights with a healthy diet and the daily practice of consumers, in the 1950s it successfully developed a food classification system that informs the general population on how to eat healthy and safely. Nutrition information is provided through *De Schijf van Vijf* (the five disks), via which the so-

called whole food assortment is divided. It is comparable to the U.S. Food Pyramid. Depending on the group, the focus is on the amount of dietary fiber, saturated fat, energy, and/or specific micronutrients contained in the food products.

In comparison to other European countries, there are considerable differences in dietary patterns and consumption. Although during the postwar period, the availability of foods and food consumption were subject to drastic changes, the Dutch diet remains relatively high in potatoes but also in animal-derived, processed, sweetened, and refined foods. The consumption of vegetables and fruit is similar to the rest of Europe.

The average Dutch citizen is living a longer and a healthier life than in the past. Like elsewhere in the Western world, consumers are tempted by a huge variety of foods available in a growing number of places and in advertising. Subsequently, the pleasures and palatability of food are becoming more important, but today the risks of chronic diseases such as cancer, diabetes, and obesity, and campaigns that focus on health and food safety, remain dominant issues in the minds of Dutch consumers and food policy makers.

Norway

Overview

Norway occupies the western part of the Scandinavian Peninsula in the north of Europe. It has a long coast on the Atlantic, high mountains, large forests, rivers and valleys, fjords and glaciers, and only 3 percent arable land. With 4.8 million inhabitants spread out over about 118,000 square miles (305,000 square kilometers), Norway has the lowest population density in Europe after Iceland. Only 2.5 percent of the population is working in agriculture, whereas most of the workforce is in the service sector. The standard of living is very high, and life expectancy is 83 years for women and 78 years for men.

Norway is a monarchy with a democratic constitution and a parliamentary system. Norwegian is a Germanic language in the Indo-European group. Among the aboriginal Saami population, different dialects of a language in the Finno-Ugric group are spoken. Eighty percent of the population belongs to the national Lutheran church, which has dominated in Norway since the 16th century.

Food Culture Snapshot

Jon and Kari Anderson live in the Oslo region and have two children, Katrine (14) and Fredrik (12). Both parents work outside the home, and they try to concentrate shopping on weekends in one of the big supermarkets. But Kari takes most of the responsibility for both the shopping and the preparation of meals. For weekdays they buy ground meat, sausages, frozen fillets of cod, potatoes and carrots, and bottled sauces. For weekends, pork chops or chicken breasts

are popular, particularly in the summer when they are barbecuing in their little garden. Sometimes they buy a pizza to eat with their kids in the evening. They buy mostly coarse-grain brown bread, brown and yellow cheese, salami, and liver paste for breakfast and supper. They also buy apples and bananas and encourage the children to eat more fruit instead of potato chips, pastry, and sweets. To drink they buy milk and coffee, and occasionally beer, and sometimes they go to the state monopoly store and buy a bottle of wine for Saturday night.

Major Foodstuffs

In the area of ingredients available in the Norwegian kitchen, some aspects seem relatively stable, for example, the high consumption of bread, potatoes, milk, and coffee. But a closer look reveals rapidly changing patterns, for example, in the choice of different breads and curdled milk products and in the preparation of potatoes. More important is the increasing variation in fruits, vegetables, and spices. Many ingredients were not on the market only a few decades ago: Some of them were hardly known at all, others were considered exotic foods, consumed only during vacations or on business trips to foreign countries.

Bread is still the fundamental foodstuff: dark bread from rye, as well as white bread and a lot of cookies and biscuits from wheat. One general tendency is to use more whole-grain flour than before. The traditional Norwegian *flatbrød*—unleavened, flat, thin, and crisp breads—and *lefse*—soft, thin breads—are rarely baked at home anymore but are instead produced by small local bakeries. A special small variety

of the soft bread is *lompe*, partly used for coffee with a cheese or jam filling but above all known as a wrapping for hot dogs instead of bread.

Fresh meat plays a much more important role than earlier, when preserved products were more common. As a result of growing wealth the consumption of meat has risen since the latter part of the 20th century. There has been a strong increase in pork and chicken consumption, but whole cuts of beef and mutton hold a higher prestige. Reindeer meat from the domestic reindeer flocks owned by Saamis in the northernmost areas is very popular, but the products are rather expensive and not easily available. The total consumption of game per person is of minor importance, but this meat is highly appreciated in the cuisine, above all, red deer, moose, and ptarmigan (similar to partridge). Even if the consumption of preserved meat has dropped, such products are still produced and appreciated, for example, *fenalår*, cured leg of lamb.

Norway has rich fishing grounds with unpolluted water. Of the total ocean fish caught, the most important for human consumption is the Atlantic cod, other codfishes, herring, mackerel, and different flatfish. Sprat (*brisling*) is sold canned in oil under the name of sardines. Of shellfish, prawns or shrimp are very popular, crab and lobster are caught along the coast in summer, and blue mussels and other crustaceans are farmed. Fish farming, which has developed into a big industry since the last part of the 20th

Smoked salmon on bread, a Norwegian delicacy. (Shutterstock)

century, has made trout and salmon, exclusive products in the past, available to everybody. The catches of high-quality wild salmon in Norwegian rivers are minimal compared with the farmed salmon.

Fish is sold fresh, frozen, canned, or preserved using old methods. The dried cod from Lofoten (*stokfish*) and the salted and dried cod from the west coast (*klipfish*) are widely exported. A special preservation method is fermentation, which gives the fish a certain soft consistency and a strong aroma. In the valleys of eastern Norway there are lakes and rivers with trout and other fat freshwater fish well suited to such fermentation (*rakefisk*).

Consumption of milk, both fresh and cultured, is very high in Norway, today with emphasis on low-fat products (skim and semiskim). The most common cheeses are the yellowish semihard or hard cheeses of Swiss and Dutch types made from cow milk. The traditional *gammelost* (“old cheese”), produced without the use of rennet, is semihard, with a grainy texture and a brown or dark brown color, often with a pungent flavor reminiscent of ammonia. Another traditional cheese, produced by boiling whey, is the brown cheese (*gjetost*), looking like a small brick. Today, the whey is boiled with cream and milk from cows and goats, so the cheeses are fattier and have a richer, sweet, caramel-like taste.

There has been a sharp rise in vegetable consumption. The rough climate and short seasons made it difficult to grow certain plants in Norway, and the most common were turnips and rutabagas. During the 19th century potatoes conquered the central place in the Norwegian diet, which they still hold.

Partly due to campaigns by the health authorities there has also been a general increase in the consumption of fruits, in particular, fresh fruits. Apples are the most consumed of homegrown fruits. Among the citrus fruits oranges are by far the most important product and are eaten fresh. Oranges are also important in the juice and the marmalade industry. The most appreciated tropical fruit is the banana, with about as large a consumption as apples.

Norway is a coffee-drinking nation; tea plays a very small part in the daily diet. There has been a strong increase in the sales of carbonated soft drinks, but there is also a growing market for uncarbonated

bottled water, surprisingly enough in an area where water can be drunk from the tap almost everywhere.

Many different beers are produced in Norway, mostly of the pilsner type. There is also a wide selection of beers with a low alcoholic content and in recent years of types with no alcohol at all. This is necessary since driving under the influence of alcohol is severely penalized. Drivers are considered to be under the influence of alcohol if the amount of alcohol in their blood is more than 0.2 per thousand. The characteristic strong alcohol drink is *akevitt*, distilled from potatoes and spiced with caraway seeds.

As producers of beers and spirits, Norwegians have traditionally consumed these drinks to a much higher degree than wine. But in recent years the most characteristic change in alcohol consumption is the increasing part played by imported wines. Norway has a long history of state intervention and control of the importation, production, and distribution of alcoholic beverages. Retail stores selling beverages with high alcoholic contents for off-premises consumption are run by the state monopoly, Vinmonopolet.

Cooking

Most existing cooking methods in Western cuisine are used in Norway: boiling, frying, roasting, baking, grilling, poaching, steaming, sautéing, deep-frying, stir-frying, and so forth. The tendency over the last 150 years has been a decrease in the traditional boiling and an increase in frying and roasting.

Several dishes are still boiled, particularly highly appreciated traditional one-pot dishes. Even if boiling primarily was applied to preserved meat, some fresh meat dishes are also boiled, for example, *fårikål*, a dish with alternating layers of cabbage and chunks of lamb shoulder, sprinkled with peppercorns.

A lot of Norwegian cooking is done with ground meat; in fact, more and more dishes are based on this ingredient. Meatballs are today regarded as a national dish, but ground meat has also met with new types of dishes from abroad, many of them introduced through fast-food culture: taco shells, pitas, pizza crusts, lasagna, and others. These dishes are particularly popular with the younger generation and with children, partly because they represent

something new and partly because they may be eaten without the traditional staples and garnishes of potatoes and vegetables, some of them also without a knife and fork.

The cooking of fish differs according to the kind of fish, the size of the fish, the region, the season, and the day of the week. Whole fish, poached or baked, is particularly popular on Sundays. Steaks of cod, halibut, salmon, and many other fish are also poached, as well as baked or steamed. Steaks of halibut, monkfish, and salmon are fried like beefsteaks. In northern Norway “saithe steak” is particularly popular, made from a fillet of saithe that is dredged in flour, fried, and served with browned onion slices, just like the old-fashioned beefsteaks. Fish soups are also widely used; most famous among them is the Bergen recipe:

Palesuppe (Bergen Young Saithe Soup)

Many Bergen citizens will insist that the stock has to be made from the entire fish, not only the trimmings, and that a little veal stock should be added to round out the flavor. Some insist that the vegetables have to be cooked separately, and some that the soup is not complete without small fish balls. There are many ways to make a Bergen fish soup, but one common denominator is the *rømme*, the sour cream.

If saithe is not available, other fishes of the cod family may be used. Instead of or in addition to celeriac, parsnip or leeks may be used.

3 lb young saithe (pollack)
 3 pt water
 1 tsp salt
 2 medium-sized carrots
 1 parsley root
 1 knob celeriac (celery root)
 $\frac{1}{3}$ c flour
 1 $\frac{1}{3}$ c milk
 $\frac{1}{2}$ c rømme (sour cream)
 Chives

Clean and wash the fish, and remove the gills and the eyes. Cut the head in two, and put it in a pot

with the tail. Pour in cold water and salt, and bring to a boil. Cut the rest of the fish in slices an inch thick, add to the pot, and let them simmer for a few minutes, then put them aside. Strain the stock. Cut the vegetables into ½-inch dice, and let them boil 5 minutes in the stock. Whisk flour smooth in cold milk, and beat it into the boiling stock. Let it simmer for 5 minutes. Whisk in the sour cream, and sprinkle finely chopped chives over the soup, if desired. Serve the soup first, then the fish with boiled potatoes.

Ground-up fish is used to make a lot of cakes, balls, and puddings. One-third of all fish dishes served on weekdays are based on ground-up fish. Even if more and more people prefer to buy these products canned or frozen in the supermarkets or fresh at the fishmongers, some enthusiasts continue the old tradition, people along the coast in particular, who do a lot of sport fishing. The fish is ground up in a food processor or in a mortar if a coarser dough is preferred. Codfishes and monkfish make cakes of a light color; saithe, mackerel, and herring make darker and generally coarser cakes.

Since the 1980s there has been an explosion in the sales of barbecues, from the simplest types to big garden installations. Even in a region with such unstable weather conditions, grilling has conquered a unique position in summer cooking. On sunny afternoons and evenings, the aroma of grilled meat (and the stench of fuel) is floating in the air from gardens, terraces, and balconies all over Norway.

In some regions in the north, the Saami population had their own culinary traditions, based on the special conditions of a nomadic life. Today, most Saami people live like other Norwegians, in houses with all possible modern equipment and with access to all sorts of food and cooking methods. Many Saami, however, have continued some of the old culinary traditions, and even outside Saami circles, several of the dishes are popular. The Saami based their food on three products: reindeer meat, reindeer milk, and fish from the rivers and lakes. But they added berries and certain wild plants and thereby got the necessary vitamins. The Saami never roasted their meat. They boiled most of it, often with the

offal or other parts of the animal, such as heart, lungs, liver, tongue, udder, marrow, bone, and even blood. Some of the most tender parts were dried or smoked and are considered delicacies today, for example, smoked leg of reindeer. Dried or smoked heart and boiled tongue were cut in fine slices and are still eaten this way, even served in restaurants.

Typical Meals

The Norwegian morning meal is generally based on bread, prepared as a so-called open sandwich, made with butter or margarine and various toppings and spreads. Jams and marmalades are common, cheese is a standard spread, and there are pots with herrings in brine or in different spicy mixtures, or cans of mackerel in tomato sauce and sprat in olive oil. Cod roe and other caviar substitutes are also widely used. Cold cuts of salami and other cured sausages are popular besides boiled or cured ham and liver paste.

An increasing number of people eat packaged cereals with yogurt. Eggs are fairly rare on weekdays, but on Sundays a boiled egg or fried egg with bacon may be served. Fruit is not common except in the form of canned orange juice. Coffee stands out as the number-one morning drink. Coffee is also taken at irregular intervals between meals and snacks during the day. Milk is, according to a survey, the breakfast drink for half of the Norwegian population.

Midmorning or afternoon is the time for a light snack, for example, a sweet pastry. Fruit, ice cream, chocolate, peanuts, or potato chips may also be eaten as a snack. For people constantly on the move, such as taxi drivers, truck drivers, messengers, and couriers, the gas stations offer more and more tempting combinations of coffee with hot or cold snacks.

In Norway most people have a cold lunch, often a lunch pack brought from home or a salad or sandwich bought in a canteen or in a café. Only 6 percent eat two hot meals a day. The hot meals very often consist of only one course: a main component of meat or fish, accompanied by potatoes, vegetables, and a sauce. Ground meat and fish are very popular, fried as cakes or balls. Fish is eaten about one out of four days. Rice and pasta are increasingly

substituting for the potatoes. Most vegetables are boiled, and carrots are the most popular for dinner. Many dinners also consist of a one-pot dish or a pizza, combining different animal and vegetable ingredients.

Fårikål (Mutton-in-Cabbage)

2 lb lamb or mutton, preferably from the shoulder or breast

2–3 lb cabbage

2 tbsp whole black peppercorns

2 tsp salt

2 c water

Cut the meat into pieces 2–3 inches square. Rinse the cabbage, and cut into small chunks. Put the fattiest pieces of meat in the bottom of the cooking pot, then cabbage over them, and so on in alternate layers. Sprinkle salt and pepper between the layers. Pour in boiling water. Bring to a boil, and let simmer in 1½–2 hours or until the meat is tender. Serve with boiled potatoes.

Some people keep the peppercorns in a perforated metal container or in a cloth, but much of the charm is in picking the peppercorns out of the cabbage. With the warnings against too much animal fat in mind, one may cut away some of the fattiest parts of the meat.

With hot meals, most people drink water or soft drinks, and to a lesser degree milk and hot beverages. Alcoholic beverages are drunk by only 12 percent of Norwegians on Sundays, 7 percent on weekdays. It seems, however, that this is changing; there is a strong increase in the consumption of wine.

Typical dinners vary according to the occasion and day. Everyday dinner is usually eaten in the kitchen around 5 P.M. from Monday through Thursday. This meal might consist of minced-meat patties, meatballs, meat casserole, or sauce Bolognese, served with boiled potatoes, pasta, or rice. A weekend evening meal might be served in the “cozy corner” of the living room around 8 P.M. on Fridays and Saturdays. Typical dishes are tacos, enchiladas,

hamburger, pizza, risotto, lasagna, or something similar. Sunday dinner is served in late afternoon, perhaps in the dining room. Common dishes are homemade meatballs or cabbage rolls with boiled potatoes and boiled root vegetables.

One special form of hot meals eaten at home is the dish delivered to the door or picked up at a take-out outlet. According to a recent Norwegian study, 9 percent of the population eats such hot meals delivered to the door (for example, Chinese, Indian, pizza) at least once a month. A little more, 13 percent, eat food bought at a take-out outlet. But there is a striking contrast between the generations. About three-quarters of the population over 60 years of age never eat this kind of food, compared with 28 percent of the younger group between 16 and 24 years.

The ideal of a family meal is strongly implanted. A family meal is a hot meal eaten in the home in the company of all the other family members. Most Norwegians eat most of their meals in their own home, and approximately half of the population eats all their meals at home. The house is, in other words, the dominant location for Norwegian meals, a different situation from that in the United States, where far less eating takes place in the home.

Eating Out

Eating out does not constitute an important part of Norwegian food consumption or social life. This may partly be explained by historical factors. The country never had the broad restaurant tradition found from the early 19th century on in many European countries with a strong urban culture and a wealthy bourgeoisie. People who had to travel through the country had inns at their disposal along the roads, and, later, hotels grew up in urban centers along the ever-expanding railways. There were also a lot of beer cellars and wine cellars and other watering holes of varying quality and social status, mainly for men, and later also cafés and bars, but most of the important eating was done in the home, as it still is.

However, important changes have taken place in recent years. For most Norwegians, a meal in a fine restaurant is still something special, but more and

A fancy restaurant in Asker, Norway. (Shutterstock)

more are eating out and a greater proportion of the disposable income is spent in cafés and restaurants than ever before. There is a wide choice of alternatives: top gourmet restaurants, cafeterias, hamburger restaurants, and so on. There is, however, a difference in the purpose of eating that also decides the choice of place. In most cases people eat out for practical reasons, out of necessity, because they have to be away from home, not out of a wish to enjoy food.

Most professional people eat their lunch away from home, and they constitute an important segment of the eating-out population. Most people who eat their meals at work or school do so in a cafeteria or, in smaller enterprises, in a room specially designed for lunch and coffee breaks. In a study from 2007, only 4 percent of respondents said they were eating lunch in a café or restaurant once a week or more.

Eating out in the evenings may also be related to work, such as dining with business associates or visitors from abroad, but for most people an evening dinner in a restaurant with family or friends is a treat, often a celebration of an important event. One reason for this is that restaurants are expensive, with a

combination of high prices for ingredients, good wages to staff, high taxes, and the service tips included in the total amount on the bill. This is particularly true of the finer and more exclusive restaurants. Young people, couples without children, and single men and women, who eat out often as part of their leisure time and who have been instrumental in prolonging the nightlife by several hours, choose also among the more inexpensive bars and cafés that have grown up in cities and towns in recent years.

The younger generation are among the most frequent visitors to restaurants, when all types of establishments for eating out are considered. A survey found that a very high number of people under 25 years of age eat in pizza restaurants or buy snacks in kiosks, but in the finer restaurants they represent a smaller portion of the customers, whereas people 40 years old and up represent well over the average, and their part is increasing.

Gourmet restaurants and other exclusive restaurants are easy enough to distinguish from the rest, and so are many of the fast-food venues, hamburger restaurants, and pizza restaurants. But between these two groups there are a lot of different concepts, with food of varying quality, and it is difficult to put them

into distinct categories. The food they offer at relatively moderate prices is a mixture of traditional home cooking (sausages, meatballs, meat patties, fried battered fish), traditional restaurant dishes (steaks, Wiener schnitzel, cutlets, poached fish), and dishes more recently integrated into Norwegian food culture (pasta, pizza, hamburgers).

A difficulty in classification is that the total restaurant picture is changing, so a typology based on people's perception of different restaurants and the part they play in their lives is more helpful. When people must have something to eat and don't have much time, they frequent fast-food restaurants and kiosks. When it is important to meet and spend time with friends, cafés, pizza restaurants, and ethnic restaurants are chosen. Sometimes Norwegians want something innovative, surprising, or untraditional, for example, organic food, vegetarian dishes, or new and unknown dishes from abroad or from the local area. Finally, for a unique eating venue, when a complete break with everyday life and food is expected, and price is subordinated to the desire for an extraordinary experience, a gourmet restaurant is chosen. Places for drinks, alcoholic or nonalcoholic, hot or cold, are also changing. There are new types of pubs and beer cafés, wine bars, and coffee bars.

In Norway a lot of old seaside hotels, fjord hotels, and mountain hotels have been made into modern establishments with classy restaurants and facilities for conferences and seminars. Many of these restaurants have tried to make their reputation through an excellent cuisine, but they know that quality is not enough; they have to offer something special, a combination of international and local cuisine. In one such hotel in Norway, the cook Arne Brimi in the 1980s developed "nature's cuisine," inspired by French cooking techniques but using Norwegian ingredients, often ignored in classic urban restaurant gastronomy.

The "gourmet" restaurant is an expression from recent decades, when Norwegian cooks have won prizes and awards in Europe, for example, in the competition Bocuse d'Or initiated by French star chef Paul Bocuse. The president of the European Bocuse d'Or, Norwegian chef Eyvind Hellstrøm was the first Scandinavian with two Michelin stars.

Special Occasions

Food has always played a prominent part in the celebrations of rites of passage in the family as well as in the annual festivals based on the secular or the religious calendar. The most important holiday associated with food is Christmastime. Never is so much emphasis put on food and on old habits and customs from the 19th century and earlier.

The weeks immediately before Christmas are filled with baking activity; sweet breads, buns, cakes, and cookies have to be ready when the Christmas bells toll. The small, hard cookies made from an unleavened dough of rye flour, honey, and strong spices (pepper nuts) are popular, as are cookies baked in irons with geometric patterns or fried in liquid fat.

Berlinerkranser (Norwegian Berlin Wreath Cookies)

2 boiled egg yolks (8 minutes)

2 raw egg yolks

½ c sugar

1½ c flour

9 oz butter

Glaze

2 egg whites

Pearl sugar

Crush the boiled egg yolks, mix them with the raw yolks, and blend to a smooth paste. Beat in the sugar. Work in flour and soft butter, but handle the dough carefully. Chill in the refrigerator. Make the dough into rolls about ⅓ inch thick and 5 inches long. Shape them into wreaths. Brush with lightly whipped egg whites and sprinkle with pearl sugar (coarse sugar). Put them on a baking sheet and bake in oven for about 10 minutes (350°F).

Few people eat fish as their main dish on Christmas Eve, but some still eat lutefisk (mainly in the north) or fresh cod (mainly on the south coast). Lutefisk—dried cod softened in a solution of water and lye and then boiled—plays, however, an important part in

the pre-Christmas season in the whole country and is served in restaurants and private homes from late October on.

Another traditional dish, porridge, has also changed in form and function throughout history. Since Christmas was a special feast, the grain was supposed to be of better quality than the daily barley or oat flour. Rice was very exclusive but became the rule among the elite in the 18th century, and around 1900 the price of rice was so low that rice porridge became a common festive dish among most people, particularly on Christmas Eve. It used to be strewn with ground cinnamon and sugar, and a lump of butter was put in the middle. A newer dessert variety is served with a red sauce made from berries.

December 24, Christmas Eve, represents the real climax of the season. The social element is still considered as the most important part of the celebration. The extended family gets together, several generations are present, and they distribute Christmas gifts and enjoy the typical Christmas food. The main Christmas meal is served in the late afternoon. Between half and two-thirds of the Norwegians, mainly in the eastern part of the country, eat roast pork rib. The rind is cut up in a pattern of one-inch squares with a sharp knife that cuts through the rind without going into the fat underneath. The goal is to make the rind crackling crisp with a golden color.

In the communities along the western coast of Norway dried and salted (and in some places smoked) rib of lamb is eaten, and in recent decades this Christmas dish has been taken up in other parts of the country, either for Christmas Eve or for one of the other Christmas dinners. The rib is cut into single pieces that must be soaked in water for about 24 hours to soften the meat and drain it of salt. The meat is ready after about two to two and a half hours of steaming, depending on the age of the animal.

New Year's Eve has no set menu. Turkey has become one of the most popular dishes for this evening. Lobster and seafood in general are increasingly popular, as either a starter or a main dish. A special festival cake built as a tower, the *kransekake*, is also often served on this evening.

The old festival drink is beer, well suited to the fatty and salted foods, often followed by a shot or two of akevitt. The temperance movements gained a strong position in the last part of the 19th century, and this led many families to abstain from all alcoholic drinks. Bottled carbonated soft drinks and fruit juices were drunk instead.

For many people most holidays have lost their original connections with the Christian religion. The Shrovetide bun (*fastelavnsbolle*) is the only important culinary remnant of the "Carnival," the last "fat" days before Lent, the fasting period before Easter. The bun is made from sifted wheat flour and filled with whipped cream and raspberry jam. Confectioners' sugar is sprinkled on the top. Some people still bake their own Shrovetide buns, but all bakeries provide them, and consequently they are easy to get.

The most important saint's feast takes place on June 23, celebrating St. John the Baptist. June is a very special month in this region with its long, "blond" nights. In the northernmost areas the midnight sun shines for a shorter or longer time depending on the latitude, but even in the south the night lasts no more than a couple of hours. The feast often includes dancing and, along the coasts, enormous bonfires. In Norway traditional fare at this time is cold cuts of cured meat and *rommegrøt*, the sour cream porridge.

Initiation rituals to important new stages in a person's life are marked with different ceremonies. Except for weddings, most of these celebrations are rather low-key family occasions. Even the funerals, once big events, have been replaced by a simple get-together after the funeral ceremony has taken place.

A wedding may also be a very simple event, a civil ceremony followed by a lunch for the closest friends, the maid of honor, and the best man. But traditional "romantic" weddings on Saturday afternoon are still extremely popular, with brides in white in the church or the city hall, followed by a big banquet in a restaurant or a hotel, or perhaps at home if there is enough room but then with food served by a catering firm.

Diet and Health

Norwegians are increasingly aware of how important a healthy diet is to prevent serious diseases, for instance, cardiovascular diseases and cancer, which account for the majority of deaths for both men and women. Public campaigns encouraging reductions in the intake of fatty foods and recommending a more substantial consumption of vegetables have made some progress. In general, the diet has improved since 1990, but Norwegians still eat too little greens, fish, and whole-grain bread and too much fat and sugar.

Health authorities recognized the basic problems in diet and nutrition early on. They have made efforts to influence food consumption and eating patterns in accordance with the scientifically elaborated norms for a healthy diet. Norway was one of the first in the world to have an official nutrition policy, established in 1975.

Today, the rapid growth in the food-processing industry has led to an increased demand for legal measures to guarantee certain nutritional standards. The technological development within food production has created new processes and made new additives necessary. One consequence is problems with hygiene and the presence of certain toxic bacteria, for instance, salmonella.

Since 1960, health authorities have worked systematically to reduce the intake of fat and, more particularly, to reduce the percentage of fat in the total energy intake. According to the official recommendations a maximum of 30 percent of the total energy intake should come from fat. There has, in fact, been a real reduction in fat intake since the mid-1980s, from about 40 percent down to about 35 percent, or a little less. Since 2000, there seems to have been no further reduction. This means there is still a long way to go before the ideal goal of 30 percent is reached.

The most important sources of fat in the food consumed by Norwegians are milk and milk products, meat and meat products, and various sorts of household fats, margarine in particular. There has been an increase in the consumption of meat over the last decades, but at the same time, there has been a reduction

in the consumption of margarine and in the use of lard and tallow in cooking. The fat intake from milk products has been relatively stable. Fats from milk and butter play a far less important part than before, but the consumption of cream and cheese is up.

According to the Nordic Nutrition Recommendations, people should not get more than 10 percent of their total energy from sugar. The actual percentage has decreased in recent years but is still as high as 14 percent, partly a result of an extraordinarily strong increase in the consumption of sweet carbonated drinks, fruit juices, and confections.

There is clear evidence today supporting the hypothesis that consumption of fruits and vegetables

A young girl eats fresh raspberries in Norway. (iStockPhoto)

has a protective effect against diseases such as cancer, coronary heart disease, stroke, and diabetes. Fruits and vegetables have a high content of vitamins, minerals, antioxidants, and dietary fiber. A doubling of the consumption of vegetables is assumed to reduce the risk of cancer and cardiovascular diseases substantially. Increased intake of fruits and vegetables may also have an extra effect in replacing less favorable foods in the dietary pattern.

Between 1999 and 2007 there was an increase in the yearly per-capita consumption of fruits from 152 to 189 pounds (69 to 86 kilograms) and of vegetables from 132 to 141 pounds (60 to 64 kilograms). However, Norwegians still are not eating enough vegetables, particularly as the highest increase was for tomatoes and cucumbers, that is, vegetables with a high water content. Authorities recommend more fiber-rich vegetables and deeper-colored vegetables. The increase in fruit consumption is primarily due to an increase in the intake of fruit juices.

The consumption differs within populations. Women eat more vegetables, fruits, and berries than men. The consumption is higher in the old-age groups than in the young. Men and women with a higher education eat more fruits and vegetables than people with less education. This has to be taken seriously both in the way educational campaigns are run and also politically in price policies. The increase in the price of fruits and vegetables is high enough to discourage certain low-income groups.

The consumption of potatoes has declined during the last decades. But the health authorities are not so much concerned with the total amount of potato consumption as with the way potatoes are consumed. Today, an increasing amount of potatoes are sold as French fries, chips, and other processed potato products. In Norway only half of the potato consumption is of fresh potatoes. The processed products have high amounts of unhealthy saturated fat.

Campaigns for increased consumption of fish have been going on for several decades. There is clear evidence that high consumption of fish has beneficial effects on health. The main reason is the content in fish of omega-3 fatty acids, even if the contents of iodine, selenine, and vitamin D are also considered

important. Omega-3 fatty acids from fish reduce the risk of fatal coronary disease (sudden cardiac death).

Fish is the main dish about seven times a month in Norway, but only 21 percent of the population eats fish three times a week. The consumption of fish is lower than that of meat and far below the recommended quantity. The value of the high consumption is also to some extent reduced because fish is often eaten with saturated fats (margarine, butter).

Experts recommend an increase in the intake of carbohydrates, primarily from whole-grain foods. In addition to vitamins and minerals whole-grain cereals provide natural dietary fiber. A high consumption of such cereals seems to have a beneficial role in reducing the risk of coronary heart disease and a protective effect against the development of hypertension and diabetes. Cereals are the most important source for dietary fiber. Even if more than half of the intake of cereals consists of whole-grain products, the intake is below the recommendations from health authorities.

There is a very high awareness in Norway of the importance of adequate intake of vitamins and minerals, and in some foodstuffs vitamins and minerals are added, to make sure the population gets the necessary amount. In general, a varied diet will cover the necessary intake, and the increased consumption of fruits and vegetables has helped in recent years. But the reduced consumption of fish and increased sugar intake work in the opposite direction.

Most Scandinavians eat too much salt, about 10 grams a day. Too much salt increases the blood pressure and may be a contributing factor to heart disease and stroke. Whereas consumption of meat and fat partly is dependent on individual choice, this is not the case with consumption of salt. How much salt is added during cooking or at the table is not so important, when 75 percent of the salt intake comes from industrially produced foods. This means that the higher the consumption of convenience foods, the higher the intake of salt, and to reduce salt involves far more drastic changes in the food habits.

Poland

Overview

Located in central and eastern Europe, Poland has a unique cultural identity that is due in large part to its turbulent political past. Poland's political borders have shifted, dissolved, and reformed frequently over the last 1,000 years. The story begins in the 9th and 10th centuries, when the group known as the Polians began to dominate the land now known as Poland. In 966 A.D., Mieszko I of the Piast dynasty established a state in the western part of modern Poland at a time when other Slavic groups were beginning to form identifiable states. The next major event in the history of Poland was the royal marriage of a Lithuanian grand duke and a Polish princess. The resulting unified Polish-Lithuanian state would prosper for the next 400 years. Neighboring countries, specifically Austria and Russia, took advantage of decline and internal strife. In 1795, as a result of a series of partitions, the political designation of Poland was dissolved and not fully restored until the end of World War I. World War II saw another division, this time between Nazi Germany and the Soviet Union. After the war, the Polish state was again restored, though as a Soviet vassal. Finally, in 1989, Poland's dependence on the Soviet Union ended, and the country emerged as a completely independent, democratic state with an open, free market economy.

As could be expected, the populace of Europe has changed throughout history, infused with new residents from conquering armies, forced immigrants, and willing relocators from all over the world. Ethnic Poles are the descendants of the founding population, the Slavic group known as the Polians, who

adopted Christianity at the same time they established their statehood. In the 13th and 14th centuries, military alliances and battles expanded the boundaries and infused the population with Germanic people. During this time protectionist policies allowed Jews to thrive within Poland's borders. Both of these ethnic groups were mainstays of the population until World War II during the 20th century. Throughout Poland's history, Russians, Lithuanians, Prussians, Ukrainians, and other ethnic groups passed through or settled within Poland's borders. However, shifting borders and political movements of people in Europe, specifically during World War II, have led to a population that today is among the most homogeneous in the world—98 percent are Poles. Similarly, about 95 percent are Roman Catholic. Despite its varied past—or perhaps because of it—Poland today has a distinct and recognizable cultural heritage, including a unique and strong food culture.

Food Culture Snapshot

Like so much of Polish culture, traditional foodways fit nicely into the lives of modern Poles. Maria and Tomasz Jablonski are office workers in Warsaw, where they live with their four school-age sons. They shop for their food in both traditional open-air markets as well as shiny, new supermarkets. In both kinds of stores, they are able to choose from an abundance of produce, meats, dairy products, and other foodstuffs produced in the fertile lands of Poland and all over the world. The Jablonskis are a young family living in a major urban center, so the food they eat is both traditional and new, Polish and foreign. Polish food culture

has always been compatible with new and diverse flavors, ingredients, and dishes.

The family eats their breakfasts of fresh bread with wild berry jam and farmhouse cheeses together each morning at home. Most days they will pack a lunch of smoked meat sandwiches to eat at work or at school. They may, on occasion, dine out for this late-morning meal, similar to lunch in other cultures. The cafés serve cold sandwiches and salads, hot soups, and grain dishes; both typically Polish and ethnically diverse foods are available in restaurants.

Each afternoon, the Jablonskis return home after work, school, and other activities to the biggest meal of their day. Dinner is typically eaten in the late afternoon or early in the evening, much earlier than the third meal of the day in most cultures. This meal, more than any other, is where the diversity of the modern Polish diet is revealed. Traditional meals include hearty soups and stews, meat with vegetables and potatoes, and pierogi. While all of these are enjoyed in traditional Polish preparations, they also can incorporate ingredients and flavors introduced from outside Poland.

Major Foodstuffs

Poland's physical geography is as diverse as the history of its political and social geography. The terrain includes three mountain ranges, four major rivers, a Baltic shoreline with three active ports, many lakes, and plenty of forest; at least half of its land is arable for food production. Interestingly, even while Poland was a Communist state, most of its food was produced on small, private farms. Post-Communist changes in the agriculture of Poland include the consolidation of smaller farms into fewer, larger farms and the modernization of tools and techniques. What has remained the same, though, is the fertile soil, moderate climate, and diverse geography that allow Poland to produce the ingredients of a rich cuisine.

Throughout Poland, there is an abundant variety of foodstuffs that are the foundation of the national cuisine. Wheat and other grains, poppies, mushrooms, root vegetables, fruit, domesticated animals and wild game, dairy, and fish are all part of the agricultural bounty of the temperate climate and fertile soil of Poland.

A wide variety of grains and cereals are available that feature heavily in Polish food culture. Among the cereals grown and used in Poland are rye, buckwheat, barley, oats, lentils, and millet. The grains are used to make breads. Sourdough rye and pumpernickel are especially popular and traditional varieties of bread. Grains are also used in a popular porridge dish called kasha (*kasza*) and as an ingredient in sausage and stuffing.

The cool, temperate climate of Poland is suitable for growing many vegetables, especially cole crops such as kohlrabi, cauliflower, turnips, and cabbage. Other common vegetables grown and enjoyed in Poland are beets, carrots, onions, cucumbers, beans, peas, tomatoes, and potatoes, an ingredient that features in many traditional meals.

Like people in any place that experiences cold winters when plant food is not readily available, Poles have had to learn how to preserve vegetables for the lean times. The favorite method for doing so in Polish food culture is pickling. In fact, the taste for the sour flavor of pickling brine is so great that Poles actually make a pickle soup. Pickled vegetables accompany many dishes in Polish cuisine. Pickled cabbage, or sauerkraut, is the most common, but Poles also enjoy pickled cucumbers, beets, cauliflower, fish, and mushrooms.

In addition to the fertile farmland that Poles use to grow the grains and vegetables that are so important to their cuisine, various geographies throughout the country are suitable for raising a number of different animals including pigs, cattle, sheep, goats, and poultry. Popular preparations for Poland's favorite meat—pork—include breaded cutlets (*kotlet shabowy*) and prune-stuffed roast loin (*shab z sliwkami*). Other roasts of beef, lamb, duck, and goose are also popular. Additionally, regions with heavy forests are populated by game animals that have long been hunted and incorporated into the food culture. Today, game meats like rabbit, pheasant, and boar are more commonly enjoyed in restaurants than prepared at home.

Poles are quite fond of smoked meat in general. In fact, smoke-cured bacon is more common than its salt-cured cousin. Even the meat preparation Poland is known for, kielbasa, is often smoke-cured. *Kielbasa* is actually the generic word for sausage in

Polish, and there are many traditional varieties to be found throughout the country. Sausage is usually eaten cold in Poland, and as pork is the favorite meat in Polish cuisine, most sausage is made entirely or partly of pork. Common varieties include a juniper berry–flavored beef and pork sausage called *mysliwska*, blood sausage with pork and buckwheat called *kiszka*, and a long, thin pork sausage called *kabonosy*. Sausage could be eaten by itself, but it is also a common ingredient in dishes like pierogi, stuffing, and sandwiches.

Domesticated animals in Poland are also raised for their milk. Depending on the region, the milk may come from cattle, sheep, or goats. Poles are fond of the sour flavor of fermented dairy, so sour milk, buttermilk, Polish-style yogurt (kefir), and especially sour cream are quite common in the Polish diet. Sour cream turns up everywhere in Polish cooking. It is used to garnish roast meat, dress salads, thicken soups, bind cakes, flavor kasha, and more. One would be hard-pressed to find a food that a Pole would not enjoy more with at least a dab of sour cream. The varieties of cheeses that are made in Poland vary by region, but one that is common to all Polish cooking is farmer's cheese, or fresh cheese curds made with sour milk. This is the cheese used in cheesecake, cheese fillings, and Polish cheese soup (*polewka z serwatki*).

Foraging, especially in the heavily forested regions of Poland, has always been common. As a result,

A butcher in Poland makes kielbasa by hand. (iStockPhoto)

wild mushrooms and honey are popular ingredients in the cuisine. Mushrooms are used in meat dishes, pierogi, kasha, and sauces. Dried mushrooms are generally available in markets. Popular varieties found in Poland and used in the cuisine are the bolete (*borowik*), morel (*smardz*), milky cap (*rydz*), and golden chanterelle (*kurka*). Wild honey is used to sweeten breads, cakes, and other pastries. It is also fermented into wine (*miod pitny*) and distilled into honey liqueur (*krupnik*).

Poland's many rivers and lakes, as well as its Baltic Sea shoreline, provide an abundance of fish. From the freshwater lakes and rivers, Poles enjoy fish like perch, bream, whitefish, European catfish, salmon, and tench (*lin*), a minnow-like panfish. From the Baltic Sea come flounder, carp, herring, eel, cod, and salmon.

In Polish cooking, a few herbs flavor many of the recipes. Of course, dill, which is used throughout eastern and central Europe, is the most popular herb and is found in just about every Polish kitchen. Many Polish recipes call for parsley. Poles prefer root parsley, which is very versatile because both the leaves and the root of the plant can be used as flavoring. Other common herbs in Polish cuisine include caraway seeds and marjoram, an herb related to oregano though with a subtler and earthier flavor. Juniper berries are utilized in meat sauces and marinades, as they are a great complement to the rich, gamey meats that are still very popular in Poland. Finally, in the grain fields throughout Poland, red poppies are cultivated for their seeds, which are used extensively in Polish cooking, especially in desserts.

Cooking

Cooking in Poland is traditionally done by women. It is through the lineage of mothers teaching daughters and daughters-in-law traditional recipes and foodways that Old Polish cuisine has survived a tumultuous and tenuous history. While the flavors of Polish cuisine are complex, the techniques and ingredients are simple. Time and care are the most essential ingredients in good Polish cooking. Slow-roasting meat and fish, pickling vegetables, souring milk and cream, kneading breads and pastries, and stuffing sausages are all techniques that infuse foods with rich flavors.

Typical Meals

While Poland strongly identifies with the rest of modern Europe and the West, it emerged from Communism with a desire to retain what was uniquely Polish about its culture. As a result, Poland's culture and the lifestyle are a mix of traditional practices and modern conveniences. Life in Poland is not primitive or old-fashioned, but a strong sense of traditions and culture remains.

As was always the case in Poland, most people enjoy four meals a day. As Poland has always been an agrarian economy, mealtimes align with the rhythms of a farm. A typical day begins early with a breakfast, called *śniadanie*, which usually consists of bread with butter and jam, as well as cold meats and cheeses. Most people drink coffee or tea with this meal. This meal is typically eaten at home, before work, just as it would have been eaten in the home before leaving for work in the fields on a farm.

Later in the morning, workers will break for what is generally considered a second breakfast (*drugie śniadanie*). Similar to a lunch in other cultures, this meal consists of a small breakfast that is eaten with coffee, tea, or milk. Unlike a lunch in other countries, the second breakfast is eaten in the late morning and is the smallest of the three meals of the day. It derives from the practice of farmers breaking from their work in midmorning to enjoy a quick snack in the fields.

The third meal is the largest of the day. Dinner (*obiad*) is the meal eaten after work, in the late afternoon. Again, this is slightly different from what is done in the United States and other countries, where dinner is an early evening meal. In Poland, the practice of eating earlier again derives from a farm culture where workers would return from the fields famished and ready to eat as early as 3 P.M. Today, it is usually eaten closer to 5 P.M. A dinner will usually consist of three courses, starting with a hearty soup or stew. Next, diners will enjoy meat and potatoes or pierogi. As is typical in many European cultures, the entrée will be followed by a salad. If dessert is served, it is usually cake with coffee or tea.

In the traditional farm culture of Poland, people likely went to bed with the sun, so even today in

smaller villages it is impossible to find food for sale in restaurants after 8 P.M. However, most people will have a fourth meal later in the evening, usually in their homes. This fourth meal, called *kolacja*, is very similar to the early breakfast, with emphasis on cold meat instead of the bread and jam.

Since the fall of Communism, when cultural heritage was suppressed, Poles have taken a renewed interest in their traditional foods. There is a now a whole movement within Polish food culture called old Polish cuisine (*kuchnia staropolska*), emphasizing traditional and sometimes forgotten foodstuffs, recipes, and traditions. Polish food is in many ways typical of all Slavic cuisines, but it is also heavily influenced by other cuisines, particularly Austrian, Hungarian, Russian, Jewish, and German cooking. Poles enjoy little dishes, or appetizers, called *zakaski*, as do Russians. The prevalence of sour cream and dill is also a taste borrowed from Russia. Sausage, potatoes, and sweet and sour flavors found in Polish recipes are familiar to Germans. Paprika is the hallmark of Hungarian cuisine and is also common in Polish recipes. Honey cakes, jellied carp, and other fishes were introduced to Polish cuisine from Jewish culture. And, of course, cakes and pastries come to Poland by way of Austria.

These influences have melded with existing foodways and transformed to create a distinctly recognizable Polish food culture. Among the dishes considered quintessentially Polish are various soups and stews, smoked meats, sausages (*kielbasa*), pasta

Pierogi, traditional Polish dumplings. (iStockPhoto)

dumplings (pierogi), grain-based dishes (kasza), fish dishes, and pastries. The beverages traditionally enjoyed in Poland include beer and vodka.

Hearty soups play a central role in Polish cooking. Hunter's stew, called *bigos*, is considered by many to be the national dish of Poland. *Bigos* is traditionally served as an appetizer but may also be eaten as a main course.

Bigos (Hunter's Stew)

Ingredients

½ lb pork shoulder, cubed
 ½ lb beef chuck (or other stew meat), cubed
 ½ lb veal, cubed (optional; increase quantity of other meats to ¾ lb if not using veal)
 3 medium onions, coarsely chopped
 ¼ c tomato paste
 2 lb Polish sauerkraut
 Water
 About ½ lb *boczek* (Polish pork belly), chopped (salt pork or bacon may be substituted)
 ½ lb, or 1 foot of links, kielbasa (Polish-style sausage), chopped
 1 c reconstituted dried mushrooms (reserve soaking liquid for stew)
 2 stock cubes (not actual stock, as that would be too much liquid)
 Peppercorns
 1 bay leaf
 1 tbsp caraway seeds
 10 pitted prunes, chopped
 1 c red wine

In a very large pot, brown pork, beef, and veal over high heat, and set aside. Put the onion, tomato paste, and sauerkraut in the pot and just barely cover with water. Bring to a simmer, turn the heat way down, and add all the meats, the *boczek*, the sausage, the mushrooms and soaking liquid, stock cubes, peppercorns, bay leaf, caraway seeds, and prunes. Simmer on very low heat for 1 to 1½ hours. Stir occasion-

ally. Add red wine, and simmer for another 2 to 3 hours. Turn off the heat, cover, and place in a cool place. The next day, reheat and serve in individual bowls with sour cream.

While Poles enjoy vegetable barley, pea, fermented rye (*zurek*), beer (*zupa piwna*), pickle (*zupa ogorkowa*), and other soups, beet soups are the most popular and common in Polish cooking. Hot beet soup (*barszcz*) was traditionally made with fermented beet juice, but today it is often soured with citrus or vinegar.

Barszcz (Beet Soup)

Ingredients

2–3 lb beets, plus 2 large beets
 2 qt warm water
 1 slice rye bread
 1 clove garlic
 1 medium onion, chopped
 1 stalk celery, sliced
 1 lb butter
 1 lb mushrooms
 1 tsp salt
 1 bunch parsley, chopped
 2 tbsp sour cream

To Ferment Beet Juice

Peel and dice beets, setting 2 aside for later. Place in a covered dish with warm water and rye bread. Place in a warm place to ferment for 10 days.

To Make Soup

Sauté garlic, onion, and celery in butter in a medium pot until onions are transparent. Add 2 reserved beets, mushrooms, salt, and parsley to pot, and cover with water. Bring to a boil. Reduce heat to simmer, and cook until beets are soft. Pour contents of the pot through a strainer into another pot. Retrieve beets from the strainer and grate into strained beet stock. Just before serving, add 1 pint fermented beet juice. Serve in individual bowls with 2 tablespoons sour cream.

Another popular beet soup is *botwina*, made with baby beets and their greens. This is usually prepared in early summer when beets are young and small. In summer, Poles eat a cold beet and raw vegetable soup called *chlodnik*. Another iconic Polish dish is stuffed pasta called *pierogi*. Pierogi are usually half-moon shaped and may be filled with anything including mushrooms, potatoes, onions, sausage, and farmer's cheese. The dish is served with sour cream, sautéed onions, dill, or broth. It can be served as a main dish or a side.

The grains that are abundantly grown in Poland are used in a number of ways that are central to Polish cooking. For example, most meals feature porridge—grain-based dishes called *kasha*, or *kasza*. These may be served as a main dish, side dish, or part of a thick, hearty soup. Buckwheat *kasha* is the most popular variation, but Poles also enjoy dishes of this sort made with barley, lentils, millet, and corn.

Cabbage rolls, called *golabki*, are a signature Polish dish that includes many of the foodstuffs of the cuisine. Cabbage, pork or beef, and barley are the standard ingredients of this dish.

Golabki (Cabbage Rolls)

Ingredients

- 1 medium onion, minced
- 2 tbsp butter
- 1 lb ground beef
- 1 lb ground pork
- 2 c barley or rice
- 2 eggs
- 1 sprig fresh thyme (or 2 tsp dried thyme)
- Salt and pepper to taste
- 2 c pureed tomatoes
- 1 c chicken stock
- 1 head green cabbage, core removed

Sauté the onion in butter until translucent. Remove to a large bowl and cool. Add the ground meats, barley, eggs, thyme, salt, and pepper to the sautéed onions, and mix well.

Mix the tomatoes and stock, and add salt and pepper. Place about $\frac{1}{4}$ of the sauce in the bottom of a large baking dish.

Remove 10–12 whole leaves from the cabbage, and boil in salted water for about 5 minutes, until just wilted. Remove the leaves to a colander, and rinse them with cold water to stop the cooking process. Press the large vein on the back of each leaf to make it flush with the surface of the leaf. Lay a cabbage leaf out on a work surface, vein side down, and put about $\frac{1}{4}$ cup of meat mixture in the center of the leaf. Fold the bottom of the leaf up over the filling, fold each side in, and roll the leaf up over the mixture. Be careful not to roll up the cabbage tightly around the mixture as the barley will expand as it cooks.

Place all of the cabbage rolls, seam side down, tightly into the baking dish. Pour remaining sauce over the rolls. Cover and bake for 2 hours. Add stock to the dish as needed to keep it from drying out as the barley will soak up liquid as it cooks. Serve hot with sour cream.

Poland has developed its own repertoire of delicious desserts. The most well-known Polish cake is a bundt cake called *babka*. Another popular dessert is *mazurek*, a flaky crust topped with nuts, jam, or poppy seeds. Glazed doughnuts called *paczki* are filled with rose marmalade or plums and are especially popular during Lent. Polish cheesecake has a unique texture and taste because of the famous farmer's cheese used in its making. Poland has its own spin on cream-filled puff pastry that is popular throughout eastern and central Europe.

Like most of the rest of the world, Poles enjoy coffee and tea; however, in Poland, tea is the more popular of the two. Polish vodka is a traditional beverage that is still enjoyed in Poland today. Beer, especially pilsner style and other lagers, is also brewed and drunk in Poland. A popular beverage that is somewhat unique is fruit stewed in sugar water, called *kompoty*.

Like any cuisine, Poland enjoys regional variations that are the result of history and geography. However, it should be noted that the country is

not that large, so the cuisine throughout Poland is similar, with regional specialties. Great Poland is the region in the western part of the country that is the original hub of Poland since its inception in the 10th century. The region is a flat, lowland river basin that is known for its fertile soil and has always been a major agricultural center. Because this region had been consumed and colonized by Prussia, German influence on the food here is especially strong. Some of the regional specialties include soft sausage (*kielbasa tatarowa*) and sweet and sour pork and prune soup (*kwasna*). The southeastern part of the nation, called Little Poland, consists of fertile lowlands, plus highlands, valleys, and the foothills of the Carpathian Mountains. The longtime home of shepherds, dairy—specifically cheese—is an important ingredient of the regional food culture. Two in particular are *oszczypek*, an aged, ewe-milk cheese, and *bryndza*, a soft, salty cheese. Kefir, a milk product similar to yogurt, also features in many of the dishes of the local cuisine. Silesia, or Slask, in the southwestern part of Poland, is the country's largest industrial area. Heavily influenced by Prussian and Austrian inhabitants throughout its history, Silesia is known for German-style dishes like mashed potato dumplings (*kluski slaskie*), sour wheat soup (*zurek stryszewski*), and potato pancakes with goulash (*jadlo drwali*). Silesia is also the major brewing region of Poland. Pomerania lies in northwestern Poland along the Baltic Sea and is heavily influenced by its proximity to the sea. Regional specialties include herring and cream (*kartofle w munturkach*) and tench (lin). Mazovia and Podlase lie in the east-central part of Poland. This region has the least arable land in the country, though it is heavily forested and therefore suitable for hunting and foraging. Wild honey, green-capped mushrooms, and wild game are important ingredients in the region's cuisine. Signature dishes include cabbage rolls (*golabki*), tripe with vegetables and cream sauce (*saska warsawska*), and potato pancakes with sour cream (*placki ziemniaczane po mazowiecku*). The region is also known for a sweet, wild grass-flavored vodka called *zubrowska*. Masuria and Warmia are located in the northeastern part of Poland on the border with Russia. Like Mazovia, they are heavily

forested. The area contains many lakes, so freshwater fish like perch, salmon, and tench are common ingredients in local recipes. Regional dishes include baked perch and bacon (*okon po mazursku*) and creamed carrots with dill (*marchew po mazursku*).

Eating Out

Today, there are dining-out options for every taste and budget, especially in urban areas of Poland. As Polish food culture has always been about comfort and family, it is typical for diners to choose a seat or table in a restaurant rather than being seated by a host. Similarly, diners tend to take their time eating and drinking in Polish restaurants, so meals can last several hours.

Most Poles eat breakfast at home, so most restaurants, even those that serve breakfast food, don't open until 9 A.M. In addition to formal and more home-style restaurants and cafés offering full menus of traditional and neo-Polonaise cuisine, there are restaurants throughout Poland that serve Italian, French, Asian, and even American-style cuisine.

A unique kind of dining facility in Poland is the *bar mleczny*, or milk bar. Inexpensive food can be found at canteen-style facilities. These are often still state subsidized, so everyone from workers on break to tourists to homeless people can be found eating in milk bars.

Special Occasions

As most of the people living in Poland are Roman Catholic, important celebrations are traditional church holidays. Easter, of course, is the most important feast day, around which Poles have developed a rich food culture. Food has become part of the rite of Easter in Polish culture. The formal food ritual begins the day before Easter, on Holy Saturday, with a ceremony called *Swieconka*, or the Blessing of the Basket, in which some of the foods that will be served on Easter are brought to the local parish to be consecrated by the priest. The blessed foodstuffs include butter sculpted into a lamb's shape, cross-shaped Easter bread, smoked meats, salt, horseradish, and hard-boiled eggs. The ceremony includes a blessing

for cakes and breads, one for meats, and another for eggs. Each item holds a symbolic meaning, the most important of which is the egg, representing the Resurrection. It will be the first thing eaten at the Easter feast. The meal begins with a ceremonial Sharing of the Egg, or *Dzielenie Sie Jajkiem*. A hard-boiled egg is divided and shared with everyone present, who in turn share well wishes with one another. Most Poles will have fasted for the 40 days of Lent and spent all morning at mass, so the Easter feast that follows is eagerly anticipated. The hungry feasters arrive home from church to a traditional spread that includes all of the items consecrated the day before, as well as many others. To accommodate morning worship, most of the foods at the feast are prepared ahead of time and are served cold. The meal will feature colored eggs, sausages, ham, smoked bacon, yeast cakes, pound cakes, poppy seed cakes, and the butter or sugar lamb. In addition to the cold spread, the feast will feature Polish Easter soup (*zurek*).

The other important feast day in Polish food culture is Christmas. As for most Europeans, the major Christmas celebration occurs on Christmas Eve. On the day before Christmas, Poles will fast until the evening star—the Star of Bethlehem—rises. At this point, a feast called *wigilia* begins. Traditionally, this is a meatless feast and is served in 13 courses representing the 12 apostles and Jesus. Not every family can pull off a 13-course feast, so tradition allows for any odd number of courses. Conversely,

Pickled herring with olives and onion on a festive Christmas table in Poland. (Shutterstock)

the number of guests seated at the meal should be an even number.

Much like the Sharing of the Egg at Easter, the Christmas Eve meal begins with thin wheat wafers called *oplatki* that are distributed to all the diners. Each guest offers a blessing and piece of wafer to the rest of the diners. The foods served at the Christmas Eve meal include pickled creamed herring, smoked salmon, caviar, pickled vegetables and mushrooms, dried fruit compote, clear beet soup (*barszcz z uszkami*), a fish dish, sauerkraut, noodles, and grain-based dishes.

Diet and Health

Traditional Polish food is rich and heavy. Foods are thickened, flavored, and garnished with dairy, especially sour cream. Meats, including fatty sausages, are daily staples of the national diet. And hardly a dinner is served and eaten without potatoes, pierogi, or both. Time was that most people worked hard to produce the food they ate, and they needed the fat, calories, and protein these foods afforded to survive.

However, modern Poles are not unlike people in the rest of the Western world. They no longer toil each day in the fields. Most Poles are now office and factory workers and don't need the high fat and calories of their culture's traditional diet. Also, most Poles are as concerned with fitness as they are with health; they value thin waistlines more than hearty meals. So Poles now eat much less meat than they once did, and their consumption of sour cream and dairy is also down.

Interestingly, though, many elements of traditional Polish cuisine are quite compatible with a modern, healthy diet. For example, in the middle of the last century, the kasha that had long been a staple in Polish diets started to fall out of favor as an old-fashioned, peasant food. Recently, it has experienced a resurgence in popularity due to the increased concern Poles have about dietary fiber and health. Similarly, the traditional cooking oil made with the rapeseed grown on Polish farms is high in the unsaturated fats favored for keeping unhealthy cholesterol levels down. Also, Polish yogurt called

kefir has been rediscovered and is gaining popularity among health-conscious Poles.

Portugal

Overview

The Republic of Portugal lies at the southwestern corner of continental Europe and includes the autonomous regions of the Madeira Islands and Azores, which lie hundreds of miles to the west and southwest, respectively. Continental Portugal is bordered on the north and east by Spain, while its 1,114 miles of Atlantic coastline beckon westward and southward. At a latitude of 39°30'N, it enjoys a temperate climate. It is one Europe's smaller countries. Having a total area of 35,503 square miles (92,090 square kilometers), it is slightly smaller than the state of Indiana. It is poorer than most fellow European Union member nations, though its standard of living has risen considerably since the country attained European Union membership in 1986.

Fewer of Portugal's 10.4 million citizens live in urban areas than in other European Union countries: only 63 percent, compared to the European Union average of approximately 77 percent. Many still make a subsistence living from fishing or from small family farms. But industry and technology are growing at a rapid rate, and the Portuguese share a deep pride in their country, its history, and its heroes.

In earliest historic times, Portugal's mainland, which is surrounded on its northern and eastern borders by its larger neighbor Spain and situated at the western edge of the Iberian Peninsula, was settled by various groups. The earliest settlements were established by the Phoenicians in the third century B.C. Later, Romans, Celts, Germanic tribes, Visigoths, and Muslim North Africans also settled in Portugal. Even today, one will encounter a greater number of fair, blond, blue-eyed Portuguese in the northern

part of the country than in the southern part, where more have darker skin and hair, though the general population is fairly homogeneous. Immigrants from Portugal's former African colonies and an influx of Brazilians and western and eastern Europeans have added to the mix in recent years. The national language is Portuguese, and although religious freedom is guaranteed by law, most citizens are Roman Catholic.

From the Romans came the roots of Portugal's language, its olive groves, and viticulture. From the Moors came almonds, sugar, art, and architecture. Under the leadership of ambitious royals, Portuguese sailors discovered valuable new sea routes throughout the world and gained riches for their kings and country through the trading of spices, Asian goods, and African slaves. Until the 1400s, Arabs ruled the Indian Ocean trade. It was Portugal's Prince Henry (1394–1460) who envisioned a possible sea route to India and, toward this end, established a naval school at Sagres around 1418. There, sailors were trained in navigation, astronomy, and mapmaking. Swift-sailing Portuguese caravels were dispatched in every direction in a quest for sailing routes to the Spice Islands and the treasures of Africa and the Far East.

Successful explorations by Bartholomeu Dias (ca. 1457–1500), Vasco da Gama (ca. 1469–1524), and Pedro Álvares Cabral (ca. 1460–1520) and subsequent conquests in Africa, India, the Americas, and the Far East brought Portugal fabulous wealth. They also paved the way, navigationally speaking, for Spain's future explorations, led by Christopher Columbus (1451–1506), Vasco Núñez de Balboa (1474–1519), and Ferdinand Magellan (1480–1521). Magellan, a Portuguese sea captain hired by Spain to seek a naval

passage around the world, was killed en route, but his goal of global circumnavigation was completed by his crew and proved the theories proposed at Sagres.

These courageous explorers first opened global trading routes toward the exchange of goods and ideas that has continued to the present, as well as an era of Portuguese colonization in Africa, South America, and Asia. But it was Portuguese traders who first introduced many of the New World plants, animals, and African and East Asian herbs and spices that flavor its own cuisine and that of the entire world today. Portuguese traders monopolized the trade in cinnamon, nutmeg and mace, pepper, grains of paradise (a peppery spice from the West Coast of Africa), and other spices.

Under weak leadership over the following centuries, Portugal lost its prominence and wealth. To this day, in Portuguese cabarets and clubs, the *fado*, a national type of ballad, can be heard. It echoes ancient Arabic and North African tones and is at once sadly haunting and melancholic. It has been likened by some to the American blues, in that it reflects the common people's collective sensibility, or *saudade*. The word is difficult to translate but roughly means a melancholic longing for those things that make the soul complete. One place where the Portuguese do find and celebrate fulfillment today is at the table, in the love of family and good food that reflects the country's illustrious past and all the world's flavors.

Food Culture Snapshot

Eduardo and Vitoria de Oliveira Beirão live in a flat in Oeiras, near the coastal bay formed at the mouth of the Tagus River. Eduardo is a pharmaceutical researcher, and Vitoria works part-time in marketing for a computer firm. They have two school-age boys, aged 7 and 10. They enjoy seaside sports as well as their proximity to Lisbon, which can be reached in less than half an hour by car or public transportation.

Vitoria learned to cook from her mother and grandmother, whom she helped in the kitchen as the eldest daughter with four siblings. She enjoys cooking with the wide variety of fresh produce and seafood available in Oeiras. She most frequently shops at a well-stocked supermarket, where, when Eduardo is traveling on

business, she sometimes picks up prepared foods such as mild pepper-roasted chicken for herself and the boys. She also frequents small specialty shops, where she buys salted cod and specialty produce, and a local bakery whose fresh-baked breads and *pastéis de nata* (custard tarts) are family favorites.

On weekends, when Eduardo is home, the family enjoys barbecuing sausages and *sardinhas* (sardines) on their small patio in good weather or goes to a favorite café near the park or beach to meet friends. Holidays as well as some feast days and birthdays are generally spent with Vitoria's family at her parents' home outside Lisbon, when large midday meals are enjoyed. Most of Eduardo's family lives near Porto, Portugal's second-largest city, which is several hours north by car or train, and visits with them are less frequent.

Eduardo eats lunch at his company's cafeteria, as do the boys at their school. Their evening supper, served around 7:30 or 8 P.M., is the main meal at home. It is lighter, without as many courses or as large portions as Vitoria and Eduardo grew up with during their own childhoods, mainly because help is more expensive and not as readily available, food costs are higher, and the family's lifestyle is more active. But Vitoria still enjoys making traditional soups, and she freezes extra portions to keep on hand.

In its 2001 national population census, the average Portuguese family consisted of 2.8 persons, very near the average of 2.4 for all European Union countries. Larger families that include several generations may sometimes live in the same home, however, particularly in rural areas or where unemployment is high.

Women's traditional roles have eased over the past several decades as increasing numbers of them have gained employment and increased economic equality. Still, it is generally the wife and mother's responsibility to see to all things domestic, including all homemaking and childrearing tasks. Although the father remains the traditional head of the family, the family home remains the mother's domain, and food shopping and home cooking are a woman's job. Meal preparation is taken seriously because the Portuguese have a choice of high-quality, fresh ingredients, and they enjoy long meals that feature many simply prepared, delicious traditional dishes.

Major Foodstuffs

Mainland Portugal is divided into three parts: northern, central, and southern Portugal, with district divisions within each of these. The Madeira Islands and Azores are politically autonomous, with their own regional governments. Of Portugal's 35,503 square miles of land, about 30 percent is arable. Current efforts by the government, tourist industry, and private groups aim to identify specific regional specialties in order to enhance marketing and promote gastronomic tourism.

Major food crops include almonds, corn, olives, potatoes, rice, tomatoes, and wheat. Commercial and independent fishing produce a great variety of Atlantic fish and shellfish for Portuguese tables, most notably sardines and tuna. Codfish, long a staple of

Fresh mussels, a traditional Portuguese dish, in Cataplana. (iStockPhoto)

the Portuguese diet, is now imported principally from Norway and Iceland due to threats to the sustainability of the Atlantic's Grand Banks fisheries. Beef, poultry, lamb, and pork are raised in Portugal. Still, given the area and climate, the country's agricultural production lags behind the European Union average, due to the need for increased agricultural education and modernization of farming practices.

Caldo verde, Portugal's closest thing to a national soup, hails from northern Portugal's Minho region. Trout, salmon, and lampreys thrive in the Minho's rivers, and the latter are prepared in a popular regional rice dish, *arroz de lampreia*. Other specialties from the area include *caldeirada de peixe*, a hearty fish soup made with the day's catch of firm white fish; *canja*, a brothy chicken soup with rice, lemon, and mint; *arroz de pato*, a duck and rice dish; and *bacalhau à moda de viana*, one of the country's favorite salt cod offerings, with onions, white wine, and cabbage.

In the Douro and Trás-os-Montes regions, also to the north but below the Minho, one will see miles of vineyards, for the Douro is the home of port and other Portuguese wines. In addition, however, there will be cattle and pig farms in the rugged Trás-os-Montes, and smoked ham and sausages from the region are superb. Specialties from these regions include *cozida à Portuguesa*, a meat, vegetable, and sausage soup that is considered to be another national dish; *tripas à moda do Porto*, tripe with chicken, *chouriço* (a spicy sausage), and beans; *arroz com lebre*, or hare with rice; and *bolo de castanhas*, a chestnut cake.

In the Beiras region of central Portugal there will be egg cakes and pastries, ham, sausages, and the world-famous Serra da Estrela, a raw ewe-milk cheese. Kid or goat may be served roasted, and a sunken but delicious sponge cake, *pao de-ló*, is a frequent dessert.

In the Estremadura, also in central Portugal and with an Atlantic coastline, fish of all kinds will be prepared. *Escabeche*, or marinated and preserved fish such as sardines, mackerel, or tuna, is popular. Shellfish soups and *caldeirada de peixe* are common fare. The salt cod specialty here is *bacalhau à brás*, a casserole of shredded dried salt cod with French-fried potatoes and scrambled eggs.

The Ribatejo region is a rich agricultural land where melons, tomatoes, rice, olives, olive oil, market garden produce, livestock, figs, and, of course, grapes are grown. Some of the area's specialties include pork sausages and smoked ham, eel, potato cakes, and dumplings made with cornbread.

In the coastal Lisbon region, fishing, rice growing, and salt panning are the primary agricultural endeavors. Pastries here are most tempting, and national favorites that hail from the area are pastéis de nata, or egg-custard tarts.

In southern Portugal, there is the Alentejo district. Olives, olive oil, wheat, wines, oranges, and wild boar come from this area. Specialties include *requeijão*, a breakfast of ricotta cheese and honey cake, sausages, and cheese; chicken empanadas (pies or turnovers); *açorda à Alentejana*, a garlicky bread soup flavored with coriander, olive oil, greens, and eggs; *carne de porco à Alentejana*, another nationally favored dish of pork with clams and coriander that is steam-cooked in a hammered copper *cataplana*, a pan that itself looks like a clamshell.

In the southernmost region of the Algarve, where tourism has taken over and culinary internationalism prevails, fewer and fewer traditional dishes are found. Still, there is excellent seafood to be found, with grilled sardines at their peak, as well as clams, oysters, mussels, squid, and octopus. Arabic-influenced sweetmeats such as *morgados*, made of almonds and figs, can be found in local confectioners' shops.

For home cooking, the Portuguese pantry is well supplied by farmers' markets, specialty shops, and, in larger towns and cities, supermarkets or even hypermarkets. Among the ingredients commonly used are *bacalhau* (salt cod) and a variety of other fish and shellfish; meat and poultry; bread; olives and olive oil; rice and beans; herbs and spices; eggs, butter, and cheese; potatoes, vegetables, and fruits; and condiments.

Salt cod is said to be prepared in 100 ways in Portugal. Other fish and shellfish are extremely popular as well. Sardines, tuna, squid, red mullet, swordfish, sea perch, cuttlefish, eels, octopus, prawns, lobster, and clams can be bought fresh in fish markets. Rabbit, ham, pork sausages (*chouriço* and *linguiça*, the latter a thinner version of the former), and blood

sausage (*morcelas* or *chouriços de sangue*) are cooked in various ways, as are chicken, turkey, and duck.

Bread and potatoes are traditionally served at every meal. Bread is usually a wheat loaf with a chewy crust, though in the Minho, cornbread, *broa*, will be served. Bread is used in soups as well as at the table. Potatoes are kept on hand or grown throughout the year in home gardens or farms. Kale is also a popular home garden crop and is used in the national soup, *caldo verde*. Rice is kept on hand for use in soups, stews, and desserts. Goat and ewe-milk cheeses are served frequently as appetizers, in sandwiches, or with fruit at the end of a meal.

Among condiments, olive oil is by far the most popular. It is served, usually along with wine or cider vinegar, to flavor soups, fish, and salads. *Piri piri*, a red pepper sauce, is often available for seasoning. Honey is harvested in the Alentejo, and the home cook from that region may often substitute it for sugar in sweet desserts. Herbs and spices most commonly found in Portuguese kitchens include salt and pepper, saffron, cumin, curry powder, paprika, cinnamon, cloves, nutmeg, allspice, rosemary, garlic, coriander, mint, bay leaves, parsley, sage, oregano, and red chili peppers.

The home cook will most often use garlic and onions in her cooking but also prepare pumpkins, squashes, carrots, cauliflower, onions, kale, spinach, green beans, broad beans, turnip greens, and tomatoes for use in a variety of soups or dishes or to accompany meats and fish. With its mild, temperate climate, and the semitropical Madeira Islands and Azores nearby, Portugal produces many fruits for home cooks to purchase in season throughout the year. These include grapes, apricots, peaches, plums, figs, oranges, lemons, strawberries, cherries, pineapple, and bananas. Chestnuts, peanuts, pine nuts, and walnuts are served in dishes and eaten out of hand.

Pastries can be purchased from many bakeries and tea salons; they are often very sweet and egg-filled. Today's home cook will buy them mainly for special occasions. Wine is used in cooking and is commonly served with lunch and dinner. Beer is also a popular beverage. Espresso, coffee, and tea are widely enjoyed throughout the day. Mineral water is also kept on hand for serving with meals.

Cooking

Most kitchens are fairly small and basically equipped, with cookstoves powered by natural gas, propane, or electricity. Decades ago, ovens might not even have been found in the home kitchen; in rural homes a *forno* (wood-burning outdoor oven) was instead located in the yard behind the kitchen. For this reason, many dishes are boiled, fried, stewed, or pan-braised on the cooktop. Today, modern appliances may be found throughout the country. Modern kitchens with the latest amenities may be found in newer construction or in renovated older homes in more affluent areas.

Long cooking methods such as simmering or braising are required for the success of many Portuguese dishes. Many popular dishes that are served daily in most homes are soups and stews that have been allowed to cook slowly so that flavors develop fully. If salt cod is to be used in a dish, and it often is, it must be soaked in water, usually overnight, with the water being changed at least twice to remove the salt before cooking. Meats may be roasted, grilled or stewed, and cooked in soups. Chicken, or *frango*, that is marinated in a piri piri (hot pepper) marinade and then grilled, is a popular dish. Fish are usually grilled, oven-roasted, or panfried and are often cooked in soups as well.

For roasting and simmering, earthenware cooking dishes are used as well as metal pots and pans. A small earthenware spirit-burning grill may be used to cook chouriço or other sausages atop the table. Some mixing bowls and stew pots may also be made of earthenware. The *cataplana*, a clamshell-like hammered copper-clad pan, is particular to Portugal. It can be likened to a pressure cooker of sorts, as it allows dishes to be slow-steamed to completion. It is most often used in preparing shellfish and rice dishes.

In traditional home cooking, salads are not served as often as cooked vegetables. They are usually simple combinations of lettuce, tomatoes, and sliced onions served with olive oil and wine or cider vinegar. Egg desserts are popular and are often made with a curd made from egg yolks cooked with sugar syrup. *Membrillo*, or quince paste, similar to that in

Spain, is made by slowly stewing quinces with sugar, then pouring the mixture onto a plate until it congeals into a solid gel, owing to the fruit's high pectin content.

Dinnerware utensils, especially at fine restaurants but also in some homes, may include fish knives and forks.

Caldo Verde (Kale and Potato Soup)

Serves 12

12 oz chouriço or linguíça sausages

1 large bunch kale

2 tbsp olive oil

1 large onion, chopped

2 cloves garlic, minced

3 large russet potatoes, peeled and diced into large pieces, to yield 3 c

2 large (49-oz) cans chicken broth

½ tsp freshly ground pepper

Score each sausage lengthwise with a sharp paring knife, and peel off and discard its casing. Cut the sausages lengthwise in half, then slice crosswise into ¼-inch-thick slices. (They'll be half-moon shaped.) In an 8-quart soup pot, sauté sausage slices slowly until lightly browned, stirring often. Drain off the fat that renders out, and wipe excess from pan and sausage with paper towels. Remove sausage to a plate. Strip green leaves from hard stems of kale, and discard stems. Chiffonade leaves (cut into thin strips). This should produce about 2 quarts of shredded greens.

Add oil to pan, and sauté onion until translucent, then add garlic and continue sautéing for another minute or two. Add kale, and stir-fry for a minute or two until the leaves begin to wilt. Add potatoes, chicken broth, sautéed sausage, and pepper. Bring to a boil, then reduce heat and simmer, covered, at least 30 minutes. With back of spoon or potato masher, mash potatoes to thicken soup. Remove lid and continue simmering for about another ½ hour. Season with salt and pepper to taste.

Typical Meals

Pequeno almoço, or breakfast, will be a quick, light meal. For most people, it is just a piece of bread or buttered toast accompanied by coffee with milk. Many people stop at a bakery or café to get a quick cup of coffee and a roll on their way to work. A full breakfast with rolls, cheese, fruit, butter, and preserves, and perhaps dry cakes, will usually be found only in a hotel.

For *almoço*, or lunch, the traditional three-hour break at midday in which a hearty meal can be enjoyed at home or in a restaurant still occurs for some. Today's workers, however, often have less time to take for lunch, but even so, that time is spent eating. Lunch may include soup, meat and sometimes seafood, potatoes or occasionally rice, and a vegetable or small, simple salad. Beverages will be wine and mineral water. At a small workers' restaurant, there will usually be a fixed-price menu of the day in addition to à la carte choices, and tables may be shared by strangers. At home, it is customary for the meal to be served with bread and to end with a simple dessert such as fruit and cheese, followed by coffee.

Jantar, or dinner, will be another hearty meal. It is served late, perhaps not quite as late as in Spanish homes, but from 7:30 or 8 P.M. until perhaps 10 P.M. In many restaurants, however, especially on weekends, dining begins around 10 P.M. Dishes similar to those at lunch will be served, and they will be accompanied by wine. Dessert, if served, may be followed, perhaps, by a glass of port or *aguardiente* (brandy).

Weekend dinners are an important time for family to gather for long meals. Meals take time because the Portuguese not only enjoy their food but also view mealtimes as a social occasion, even with family. Meals are not hurried, and everyone participates in the conversation.

Eating Out

Dining out can mean anything from stopping at a café or teahouse, or even a fast-food restaurant, of which there are an increasing number, especially in the larger towns and cities, to dining at a *típico*

Chicken piri-piri (peri-peri) with french fries, served in a restaurant in Albufeira, Portugal. (iStockPhoto)

(traditional restaurant) or a multistarred restaurant. Only the more expensive restaurants take reservations; for all others, service is on a first-come, first-served basis.

At an *adega*, or wine cellar, there may be a small restaurant where the proprietor's wine will be served with local fare. These may be open only on weekends or seasonally, or for special events. Cafés serve coffee from morning until late at night or into the early morning hours. They may also serve lunch and light snacks. The most common type of coffee ordered throughout the day is *uma bica*, a small espresso. *Casas* or *salons de chá* (teahouses) serve tea, coffee, juices, and soft drinks as well as pastries and snacks. They are popular for morning or late-afternoon breaks. *Pastelarias*, or pastry shops, also sometimes serve similar offerings, but they may have a greater range of pastry choices.

Inexpensive to moderately priced restaurants include *casas de pasto* (diners), *cervejarias* (beer houses), *churrascarias* and grills (barbecue restaurants), *fumeiros* (smokehouse taverns, mainly found in the Alentejo district), and *marisqueiras* (seafood restaurants). Full-service restaurants and *típicos* (regional specialty restaurants) range in price from moderate to expensive.

Special Occasions

Many festival days throughout the year require special foods and/or feasting at community gatherings

or with family. On Dia de Ano Novo, or New Year's Day, the family gathers for dinner and shares a *bolo rei*, or king's cake, which has been purchased from a bakery. In this favorite spiced fruit bread, a prize token or fava bean will have been baked. The person who gets the prize supposedly has to provide next year's *bolo rei*.

Carnival is held on Shrove Tuesday, toward the end of February, or 40 days before Easter. Similar to Rio de Janeiro's Carnival or Mardi Gras in New Orleans, it is celebrated with floats, parades, dancing, and costumes, especially in Lisbon, the Algarve, and Funchal on the island of Madeira. Seafood and *cozida á Portuguesa* are popular at this celebration. For Páscoa (Easter), the family gathers for favorite traditional dishes. This might include a roast piglet, lamb, or kid, or casseroles and breads with eggs baked into them.

In June, several summer saint's days are celebrated with *festas*, or festivals: São Gonçalo, Santo António, and, finally, São João. The latter two are the larger, more widely celebrated feast days, with roast kid or grilled sardines being special treats.

Natal (Christmas) is the biggest family festival of the year. On Christmas Eve, families gather for a traditional dinner of salt cod, boiled potatoes, bitter greens (kale or turnip greens sprinkled with olive oil and vinegar), and hard-cooked eggs. Seafood such as octopus with rice or fried salt cod fritters may also be served, along with *vinho verde*, the spritzly young

wine of the most recent vintage, and special desserts such as *arroz doce* (rice pudding with cinnamon), honey cakes, or doughnut-like fried cakes.

Two-thirds of all weddings take place in a church. They are followed by a festive gathering of family and friends. The dinner to follow will often be a feast, both for the eyes and for the digestion. Although these vary according to means and region, a wedding reception might feature a cocktail hour with wine or *vinho spumante* (sparkling wine) and hearty appetizers, many of which will feature seafoods and shellfish. The wedding party and guests will be seated, and dinner will follow, possibly beginning with soup such as *caldo verde*, followed by a fish course, then a meat course. A wedding cake will be cut, and other desserts and pastries are served as well. At a celebration following a baptism, *vinho spumante*, hors d'oeuvres, cakes, and pastries may be served in the family home.

Diet and Health

Although the Portuguese eat a basically Mediterranean-style diet, it tends to be heavy in carbohydrates and sugar. Egg-based desserts are common, and a day's food intake may be more than what is required. The diet is varied, with adequate protein and vitamins from many vegetables and fruits. Although fish is eaten often, many Portuguese may

Sliced traditional Portuguese Christmas cake, called Bolo Rei, made with candied fruits. (iStockPhoto)

Fishing bounty from Portugal's waters. (Corel)

consume excessive amounts of cholesterol from eggs and saturated fats in meats. Portugal's men have a lower rate of death by heart attacks than those in other European Union countries but a considerably higher rate of strokes.

Romania

Overview

Romania is situated in the region of eastern Europe and is considered part of the Balkans. It is bordered by Bulgaria to the south, Serbia to the southwest, Hungary to the west and northwest, Moldova and Ukraine to the north and northeast, and the Black Sea to the east. The total area of Romania is 59 million acres (23.8 million hectares), of which 60 percent is dedicated to agriculture. Romania was formed after the joining of Walachia and Moldavia in 1859. However, it wasn't recognized as a nation-state until 1878 after the Russo-Turkish War, which saw Romania as a Russian ally and resulted in Romania's freedom from the Ottoman Empire. Romania was a Warsaw Pact state under the sway of the Soviet Union until 1989, when Communism was overthrown. The population in 2007 was 21.5 million. The main ethnic minorities are Hungarian, German, Romani (Gypsy), Jewish, and diverse Slavic populations. A large population of Romanians lives outside of Romania, mainly in Serbia, Moldova, Ukraine, the United States, Canada, and Australia. Romanian food culture has been shaped over time by these historical, social, and geographic features.

The most distinctive trait of Romanian food is its diverse origins. Romanian food, on the one hand, is a mix of Balkan, Turkish, Greek, and Eastern influences and, on the other hand, has been influenced by western Europe, namely, French cuisine. It is heavily grounded in peasant cooking and its eastern European location. Many foods and food habits are shared with its neighboring country, Moldova. Variations in regional foods can be detected and are

explained by the fact that different ethnic groups throughout history have traversed or occupied the territory of modern-day Romania. For example, in Transylvania, clear Germanic and Hungarian influences can be perceived, and in the north a Russian influence is evident.

A history of occupation as well as times of political instability has played a key role in Romania's food culture. Roman colonists settled in the area in 106 A.D. and left their mark on many facets of Romanian culture, including food. From the 14th century, the Ottoman Empire had a significant impact on Romanian cuisine, and for many years Romania was its main food supplier. The Turkish influences that can be seen today include a fondness for sweet pastries, the practice of eating appetizers (meze), and foods like pilaf, meat patties, stuffed grape leaves, caviar, coffee, and many introduced spices and vegetables, as well as the cooking utensils used to prepare these foods.

The Soviet occupation also played its part in shaping Romanian food culture. This took the form of the restructuring of a largely peasant agrarian society into a centralized economy, characterized by large cooperative farms. Many food customs were undermined in this period, and obtaining basic nutritional requirements became the focus. However, in the face of food crises, Romanians have upheld a strong sense of food traditions that can be seen today. The aftermath of Communism and the opening of Romania to a free market economy have been the most recent influence on Romanian food culture. This influence manifested initially in the struggle to obtain enough food as the restructuring of

agriculture and the economy took place and then, in recent years, in the appearance of many Western food trends.

With 86 percent of the population following the Romanian Orthodox Church, religion has significantly shaped Romanian eating habits. Fasting and feasting make up the rhythm of the year and influence choices of what is eaten when. Today, however, like other aspects of Romanian food culture, the practice of traditions, such as fasting, is more common among the rural population than for urban dwellers.

Food Culture Snapshot

Romania has seen an immense shift in shopping and eating habits since the transition from a centralized market economy to a free market economy in 1989. These changes are most evident in the urban setting. International supermarket chains and fast-food establishments have entered Romania. Convenience foods, such as precooked meals, have become more popular among working city residents, replacing home-cooked traditional foods. There is evidence to suggest that Romanian food habits, along with those of other former Communist nations, will move toward a more western European pattern. However, in Romania there exist two different patterns of food shopping and eating, the rural and the urban.

Stefan and Ana Radu live in a middle-class neighborhood in Bucharest. They both work full-time; Stephan is employed by Transelectrica, and Ana works for an information technology company. Once bills have been paid, food purchases account for over half of their income. These days they have a variety of places to buy their food. They split their shopping between supermarkets and more traditional small shops and open-air markets. For fresh fruit and vegetables they go to the open-air market. From supermarkets or sometimes even larger hypermarkets (as they are called in Europe), they purchase coffee, milk, and wine; sometimes precooked meals for dinner; condiments; cornmeal for *mamaliga* (corn porridge/polenta); some canned foods; meat (mainly pork); and sugar. Bread is bought from a bakery to have for breakfast as toast with jam and coffee. Some mornings a pastry and Western-style coffee are purchased on the way to work. A small amount of their food, mainly *tuica*

(plum brandy), some wine, and occasionally meat, comes from relatives who live in the country.

Petar and Elena Ionescu live in the Apuseni Mountains in the region of Transylvania; Petar is 56 years old, and Elena is 54. They live with their son, Emil, and his wife, Daniela. They are both practicing members of the Romanian Orthodox Church and spend more than half of the year fasting. Almost half of their food is either produced by them or exchanged with neighboring farms. Their farm consists of two cows that provide them with milk. The milk is drunk fresh or with coffee, or served cold on *mamaliga* for breakfast, and it is sometimes used in cooking and is also made into cheese, cottage cheese, or sour cream, which is used frequently in their meals. The Ionescus sell their milk at a local street market and sometimes direct to customers from their farm. They keep chickens that provide them with eggs, which they eat boiled or made into an omelet for breakfast or made into baked *mamaliga* for lunch or supper. For nonfasting days, their meat comes from the chickens they raise, which may be made into a *ciorba* (sour soup) and served for lunch or supper. They also purchase pig meat from a nearby farm and on special occasions buy a whole suckling pig to roast. As they live in Transylvania, where sheep are herded, they sometimes purchase mutton as well. They grow most of the fruit and vegetables they eat, including apples, plums, potatoes, cabbage, peppers, onions, garlic, tarragon, and dill; the rest is bought from a nearby market. Sugar, cooking oil, coffee, and occasionally soft drinks and beer are bought from a small local shop. Cornmeal is purchased to make into *mamaliga*, which is eaten frequently at breakfast, lunch, and dinner. Bread is purchased from a bakery or made for special occasions. Much of their day revolves around food procurement and the cooking of food. All meals are made at home and are generally quite time-consuming. Plums from their farm are used to make *tuica* (plum brandy), and other fruits are made into jams and *dulceata* (sweet preserved fruits). Wine is bought in bulk directly from a local vineyard, and either wine or *tuica* is served with most meals.

Major Foodstuffs

With more than 60 percent of its land dedicated to agriculture, Romania is fundamentally an agrarian

Farm produce market, Baia Mare, Romania. (Corel)

society. The percentage of people employed by agriculture has decreased since 2000. However, farming is still an important means of existence for many Romanians. Nearly half of the population live rurally, and 79 percent of agricultural land is used by fully or semisubsistent households.

Cereals have always been a major foodstuff for most Romanians. Cereals account for over half of the dietary calories the population consumes, especially in rural areas. Apart from cultural reasons for the high consumption of cereals, the other main motive is economic. Romania is a country in transition from a Communist regime to a free market economy. With this transition has come a removal of food subsidies that has created fluctuating food prices. The result is a decrease in real income for most of the population and an increase in the percentage of income spent on food. On average, spending on food accounts for half of household expenditures. Thus, cereals provide a cheap source of daily calories.

Wheat and maize are the main cereals both produced and consumed in Romania. In households today, cereals are mainly consumed in the form of bread (most commonly made of wheat flour) and mamaliga. Bread is central to Romanian culture and is divided into ritual bread (*colaci*) and regular bread. Maize, in the form of mamaliga or cornbread (*turta de mamaiu*), was for a long time the dietary staple of most Romanians. Today, the consumption of wheat has increased and is more or less balanced with maize consumption. There are some demographic differences in the consumption of wheat

and maize. In the rural population, maize features more heavily than for the urban population, who are generally exposed to more Western foods.

The dairy industry is Romania's largest agricultural activity in terms of both value and quantity. Only a small portion of the milk produced is exported. Consequently, Romanians use a lot of cow milk. According to the Food and Agriculture Organization (FAO) of the United Nations, domestic consumption of whole milk in 2007 was 58 gallons (220 liters) per capita, whereas in the United Kingdom, the population consumed 33 gallons (124 liters) per capita. Milk is used in the form of sour cream, cottage cheese, *telemea* (a traditional Romanian cheese made from either cow, buffalo, or sheep milk). Milk is used in cooking, in coffee, and for breakfast, or it is drunk fresh. Some other milks, such as sheep and buffalo, are used but to a lesser extent. Sheep are raised in the north and west of the Carpathian Mountains. Sheep milk is used to make typical Romanian cheeses, such as *cascaval* (a hard, sharp cheese like Italian *cacciocavallo*) and *brinza* (a younger white cheese).

Fertile soils and a temperate-continental climate allow a wide range of fruit and vegetables to grow. Many fruit and vegetables have been grown in Romania for a long time. The cultivation and consumption of many fruits and vegetables dates as far back as the Roman period. In the past, Romania provided Europe with a significant amount of its food. Today, exports are low compared to other European nations. Vegetables are grown mainly for domestic use and include potatoes, beets, cabbage, eggplant, peppers, onions, and tomatoes, among others. Vegetables are ubiquitous in Romanian cooking, and this is perhaps a legacy of Turkish rule and Balkan influences. It may also be a result of the tradition of fasting in Romania, which prohibits the consumption of meat and meat products on specific days of the year.

Orchards cover much of Romania, especially in the south of the Carpathian Mountains. Plums, cherries, peaches, nectarines, apricots, pears, melons, and apples are grown here. In the 1930s Romania was responsible for a significant export of plums and walnuts. However, today, Romania's exports are very low. Therefore, most fruits are used domestically

and are popular in the form of preserves, syrups, and spirits. Plums are used to make *tuica* (plum brandy) as well as *cozonaci* (sweet bread).

Meat consumption in Romania has fluctuated in relation to social circumstances. It is still fairly low compared to the European average. Pork is the preferred meat for most Romanians. It is used on festive occasions, especially at Christmas, as well as being consumed regularly. Romania produces some of its pig meat; however, it is one of the country's largest food imports. Poultry, mainly chicken, is quite popular, especially among the peasant population, who often rear their own chickens. Beef is consumed to a lesser extent, although there are regional differences. Beef is eaten more frequently in the north of Romania. Other animal products eaten regularly include eggs, a small amount of mutton, and animal fats, which are used for cooking.

The Danube Delta is the second-largest delta in Europe after the Volga. The majority of the delta lies within Romania, with a small part in the Ukraine, and provides a rich source of seafood. Sturgeon, pike, carp, tuna, bream, perch, mackerel, and sterlet are all found here. Herring and mackerel are commonly eaten, often pickled, and there is a long history of eating caviar, which dates back to the Ottoman era.

In Romania wine is often served with meals. Grapes are grown mainly in the eastern part of the country and include common international varieties, such as sauvignon blanc and cabernet sauvignon, as well as indigenous varieties, such as Feteasca Alba, Grasa de Cotnari, and Feteasca Neagra. The Romanian sweet wine, *cotnari*, is compared to some of Europe's finest wines. However, *tuica* is Romania's national drink and is served for special occasions as well as with daily meals. Much of the *tuica* drunk is homemade. *Palinca*, a stronger twice-filtered plum brandy, is also commonly drunk. Soft drinks have become a popular beverage since the opening of Romania to the free market economy. Milk is also consumed fresh, especially in rural areas, where people produce much of the milk they use.

Much of Romanian food is characterized by the use of sour ingredients. Sour cream is abundant in Romanian cooking and can be served on top of

mamaliga or with crepes, stewed meat, and *bors* (sour beef soup). Sometimes sorrel or sour cabbage is added to food or used as a side dish to give it a sour tang. Spices are also frequently used, especially paprika, although there are regional differences in the strength and frequency of use.

Cooking

As with Romanian food culture in general, cooking was largely shaped by social circumstances and the customs and culture of different peoples. For example, the commonly eaten Romanian grilled meats have their origins in techniques introduced by Gypsies, who were slaves in the kitchens of the nobles up until the 19th century. A French style of cooking is evident and is a result of the culinary exchanges between France and Romania in the 19th century. During this period, many Romanians traveled to France to learn about French cuisine. Bucharest became known as "the little Paris" after French influences swept through the city in the 19th and 20th centuries. Buildings were designed by French architects, and many French restaurants opened their doors. In the 19th century French cooks were brought into many aristocratic kitchens. However, it was the Ottoman Empire that was responsible for introducing many common cooking implements as well as the use of the spices that are prevalent today.

For much of Romania's history there has been a large peasant population. This has influenced styles of cooking and the types of implements used as well as the cultural value of hospitality, which centers around the kitchen. Traditionally, women are the main cooks both in their homes and for occasions involving the community. Today, the kitchens in Romania vary from a very rustic style to standard modern ones. However, they are generally more straightforward and simple compared to the western European standards.

Soups, stews, and mamaliga are made either in a deep pot on the stovetop or in a *caldare* (large pot) on an open fire. Mamaliga is stirred continuously with a wooden spoon or stick called a *facalet* while the cornmeal is added. A typical peasant kitchen traditionally consists of an open fire in the center,

over which the mamaliga can be cooked. Mamaliga may be placed onto a wooden board, eaten hot and served directly onto plates, or left to cool and sliced. Mamaliga is also sometimes baked in the oven with cheese. Some dishes, such as pilaf, make use of both the stovetop and the oven. Foods such as *cascaval pane* (breaded cheese) are fried in a pan, although baking and grilling are more common.

In a rural setting, ovens may be wood fired inside or outside the house, or they may be standard electric or gas ovens. The oven is used widely in Romanian cooking for baking *sarmale* (stuffed cabbage leaves), *ardei umpluti* (stuffed peppers), *morun pescaresc* (baked sturgeon), and *budinca* (baked savory or sweet puddings) and for roasting meat. Breads and cakes, both ritual and daily, are baked either in regular ovens or in special wood-fired bread ovens. *Colac* molds or bread tins are used to shape the colaci, the most common ritual bread used for special occasions in Romania. The bride's colaci is ritually prepared by the groom's mother or the bride's mother, or the marriage godmother. It is often knotted or circular (special molds are used), and it is decorated with motifs.

Grilling is a common way to cook meats. The Romanian mixed grill is a popular dish containing the ubiquitous *mititei* (sausage-shaped patties of pork and/or beef) served with grilled pork ribs, pork chops, sausage, and, sometimes, grilled pig kidneys, liver, and brain. As in many other eastern European and Balkan countries, Romanians have a tradition of cooking outdoors. Temporary or permanent structures are made to roast meat, sometimes a whole pig or lamb over a wood fire. The men traditionally do this. Fishermen living near the Danube Delta sometimes cook *uha* (fish soup) over an open fire.

Preserving has its place in Romanian cooking, allowing seasonal produce that is harvested to be eaten throughout the year. Vegetables are often pickled in vinegar and served alongside meats. Fruits are made into syrups, jams, or dulceata. A traditional Romanian kitchen is well stocked with dulceata to serve with coffee in anticipation of the arrival of guests.

Stuffing is a common cooking method in Romania. Vegetables such as peppers, cabbage, mushrooms,

and grape leaves are filled with rice, meats, and spices. One of the most common Romanian dishes is *sarmale*, or stuffed cabbage leaves. This dish is commonly found in other Balkan cuisines but holds a special place in Romanian cooking and is usually accompanied by mamaliga.

Sarmale cu varza (Stuffed Cabbage Leaves)

Ingredients

- 1 large savoy cabbage
- 2 tbsp olive oil
- 2 onions, finely chopped
- 2 stalks celery, finely chopped
- 1 tbsp white rice
- ½ c hot water
- 1 ½ lb ground beef, veal, or pork
- 1 tbsp parsley, finely chopped
- Salt
- Pepper
- ½ tbsp paprika
- 5 fresh tomatoes, coarsely chopped
- 3 tbsp tomato paste
- Juice of half a lemon
- 2 cloves garlic

Break off the cabbage leaves, and cut out the hard spine of each leaf. In a large pot, bring to a boil enough water to cover the cabbage. Immerse cabbage in salted boiling water. Cover and cook over medium-high heat for 5 to 10 minutes. Gently remove leaves as they become tender. Drain well; let cool and dry.

In a large frying pan over medium heat, add oil, onions, celery, and rice, and sauté until light golden brown; add hot water and cover, allowing the rice to absorb the water. Remove from heat and let cool.

In a bowl, mix together the meat, parsley, salt, pepper, paprika, and the rice mixture. Lay out the cabbage leaves on a wooden board, reserving the small leaves. Place a spoonful of the meat filling in the center of a cabbage leaf. Fold the right-hand side of the leaf over

the filling, then roll from the base to the bottom of leaf, then with the index finger gently tuck the left-hand side of the leaf into the cabbage roll to make a nice neat roll. Repeat until all meat is used up.

Chop the small cabbage leaves and any leftovers, and place half in the bottom of a casserole dish along with half the tomatoes. Arrange cabbage rolls tightly on top of the mixture in a casserole dish, seam side down. Then sprinkle the rest of the cabbage and tomatoes on top. Dilute the tomato paste in 4 cups of water, add the lemon juice and garlic, and pour over the rolls. Cover and bake for 1 hour at 325°F. Serve with sour cream and mamaliga.

Typical Meals

Typical meals in Romania need to be divided according to two demographics: urban and rural. There are vast differences between urban and rural meal patterns in terms of what is eaten and the manner in which it is eaten. The rural population is characterized by a more traditional eating pattern. Since 2000, the urban populations have been increasingly exposed to foods typical of the West. Breakfasts in an urban setting are generally light and consist of a coffee, either Western or Turkish style, a pastry or toast, and less frequently a boiled egg or omelet. Yogurt and breakfast cereals have also become more popular recently. In a rural setting, the breakfast is more substantial. A typical rural household may serve hot mamaliga with cold fresh milk, or breakfast could consist of wheat bread, eggs made into an omelet or boiled, vegetables, cold meats, and cheese. Turkish-style coffee is common here.

Romania is still largely a religious nation, with 86 percent of the population identifying themselves as members of the Romanian Orthodox Church. Fasting is a central part of the religion, which has dramatically shaped the culture of Romanian meals. Today, it is not practiced as widely in urban settings. Up to 192 days of the year, meals without meat, dairy, or eggs must be eaten, and fish can be eaten only on some days.

Lunch has traditionally been the most important meal of the day. It is usually eaten in the early afternoon but can vary between 1 and 4 P.M. In its

complete form, lunch will consist of four courses. However, not all Romanians will partake of all four courses daily. Where people live and what their financial situation is will affect what and how much is typically eaten. Today, many people employed in urban centers do not have the time or the financial capacity for such lunches.

Lunch regularly starts with a glass of *tuica*, which is drunk with snacks called *mezea* (from the Turkish *meze*). The *mezea* was introduced by the Turks and means a selection of light foods that are accompanied by a beverage. The Romanian *mezea* often features up to eight items. Most commonly found on the *mezea* plate is *mititei*, small sausages or sausage-shaped patties of pork and/or beef that are grilled. Other *mezea* items include cheese, such as *cascaval*, *telemea*, and *brinza*, which are sometimes cooked or served as fresh slices; *pastrama* (dried cured meats, typically made with beef or mutton); caviar, which is popular; fish served in a variety of ways; ham; preserved vegetables; salads; and fruits. Often the *mezea* are followed by a soup course. *Ciorba* is the most common soup in Romania. *Ciorba* is a sour soup made in a variety of styles with many different ingredients and sometimes topped with sour cream. There is *ciorba de burta* (with tripe), *ciorba de perisoare* (spicy and made with meatballs), *ciorba de legume* (with vegetables), and more. Soup may be followed by *mamaliga* and *sarmale* (stuffed cabbage leaves) or a meat or fish dish. Either Turkish or

Decorated Easter eggs in a basket displayed for sale at a Romanian country fair. (iStockPhoto)

Western coffee is served with a dessert. Desserts tend to be sweet pastry, such as baklava or *papanasi* (cheese- or cream-filled pastry), *clatite* (crepes), *cozonac* (sweet bread served at Easter), or *kuros kalacs* (large donuts). Supper or dinner is often lighter than lunch and is eaten around 9 P.M.

Mititei (Grilled Sausage Rolls)

Mititei is one of the most common Romanian foods. They can be served as part of a mezea, in the center of a mixed grill of meats, or as a main dish.

9 oz minced pork

9 oz minced beef

1 onion, finely chopped

2 garlic cloves, crushed

½ tsp baking powder

¼ tsp thyme

1 tsp paprika

Salt and pepper

1 slice white bread, moistened with a little water

1 tbsp olive oil, for frying

3 tbsp chicken or vegetable stock

Method

Combine all the ingredients, apart from the olive oil and stock, together in a large mixing bowl. Knead for about 5 minutes. The ingredients must be very well combined. Let the mixture sit for at least 1 hour. Divide the mixture into small handfuls, and roll into small sausage shapes. Brush with oil, and grill on a barbecue or fry in a pan for 10–15 minutes. Turn them several times during cooking, and baste with a little stock to keep them moist, if you like. Serve with pickled vegetables and salad or as an appetizer.

Typical meals change from region to region, revealing some of Romania's history as well as that of its neighboring countries. In Transylvania there is a distinct cuisine that reflects the history of its inhabitants: Hungarians, German Saxons, and Romanians. Foods are commonly flavored with tarragon, dill, lovage, savory, mustard, and horseradish. A Germanic influence can be seen in dishes like *knodeln*

(dumplings), bratwurst (beef or pork sausages), and *auflauf* (baked pudding). In the regions of Maramures and Moldavia in the north and northeast of Romania, a Russian influence is evident in the greater use of beef as in dishes such as bors (beef soup) and *galusti* (Russian *galoushki*, or dumplings). Foods are generally spicier in the Banat region. In the Danube Delta region, meals typically feature a lot of fish.

Mamaliga is still considered the national dish by many Romanians. It is a versatile food, often served on the side of meat or vegetables or topped with cheese and sour cream. It is served either hot or cold and for breakfast, lunch, or dinner. It is made by cooking cornmeal with water (sometimes milk) and salt and is similar to Italian polenta. Mamaliga is commonly known as a peasant food, since during much of the 19th and 20th centuries, peasants, who made up the majority of the population, ate mamaliga on a daily basis.

Eating Out

A culture of eating out was prevalent among travelers and the elite in the 19th and early 20th centuries. Many accounts of foods in Romanian restaurants, inns, hotels, and cafés in the 19th century came from travelers, who noticed the diversity of cultural influences. They also noted sophistication and a cosmopolitan choice in large cities and good simple fare in the country. Throughout history Bucharest was a rich melting pot of cuisines and was the location where restaurants first opened in the first half of the 19th century. Many other food establishments and food merchants proliferated in Bucharest at this time. French, Romanian, and German restaurants were found, alongside Turkish and Greek cafés and street vendors, wine merchants, and bakeries. Even though the Communist regime saw the closing of many restaurants, today Bucharest is a thriving multicultural culinary destination.

For a lot of Romanians today, eating out is a luxury and reserved for special occasions. With many people struggling to provide basic food requirements, there is not much left in the budget for dining out. In many rural settings, in the past and

at present, eating out means eating at the house of family or friends, since there is a strong culture of home cooking. However, there is a growing pattern, in large cities, of Romanians working longer hours in order to increase their income. The result is that people have less time to cook at home and may rely on take-out food or sometimes restaurants for dinners. Fast-food outlets are becoming popular, which is demonstrated by the increasing number of McDonald's, Pizza Hut, KFC, and other less-known outlets. The small upper class in Romania has the opportunity to eat out more frequently. Large cities provide many options for eating out in restaurants and cafés. People living in or visiting Bucharest can choose from a range of international cuisines as well as Romanian when they eat out.

Special Occasions

In Romania, food is strongly linked to life transitions and celebrations, especially weddings, births, and deaths, and to religious holidays. In these contexts, food holds significant symbolic meaning for people. The most common foods of traditional ceremonies are colaci (ritual bread), cake, honey, milk, eggs, and wine or tuica. Where religious holidays are concerned, periods of fasting are broken with the preparation and eating of certain meats.

Ritual bread, known as colaci or *colac*, is a fundamental element of all Romanian customary events. The making of the bread as well as the breaking of bread, looking through the central hole in the bread, and the kissing of bread are all significant activities seen in traditional ceremonies. Colaci is usually circular or ring shaped and often adorned with motifs, such as flowers, birds, and the cross, or with fresh basil. In the context of a wedding, colaci, known as bride's colaci, is often pleated, and considerable time goes into its decoration. It is a principal symbol within the wedding feast and sometimes sits in the center of the wedding table. Ritual bread features at significant moments throughout the wedding, which can last up to three days.

Weddings today are varied, from traditional long weddings to more modern, simplified, and shorter occasions. However, key foods are still commonly

used. Sarmale (stuffed cabbage) is commonly part of a wedding feast. In traditional settings chicken features in a ceremonial part of the wedding called *horea gainii* (the song of the hen). The cook brings out a roasted chicken that is adorned with greenery and plates of bread, and then a series of songs and theatrical interactions follows. Toasting is also a very important part of the wedding and is usually done with wine or tuica. Sour soup, *ciorba*, is frequently served on the final day of three-day weddings to revive revelers.

In a funeral setting, colaci with a coin baked into it is sometimes placed in the coffin. In some regions small colaci are given out to the guests. The traditional food at a funeral is *coliva*, which is a cake made specifically for funerals. Coliva is made from boiled wheat, sugar, honey, and pounded nut kernels. Wine or temporarily tuica is used in funeral settings and is drunk by the mourners as well as offered to the dead. A funeral meal often takes place preceding the funeral.

The traditional Romanian year is characterized by periods of fasting and feasting. In the Communist era many of these patterns were disrupted; however, many traditions relating to food are still practiced, especially in rural settings. At its strictest, fasting can occupy 192 days out of the year. This includes 40 days leading up to Christmas, six weeks leading up to Easter, and Wednesdays and Fridays, along with other religious saint's days. Fasting is less common today, but many of the food traditions associated with the breaking of fasts are still practiced. At Christmastime a whole pig is roasted. In a rural setting the pig may be slaughtered and roasted on an open-fire spit; otherwise, it is cooked in an oven. Cozonac is a ceremonial sweet bread that is eaten at Christmas and Easter. Easter is followed in a traditional Eastern Orthodox manner. The most important food traditions include painting chicken eggs, usually in red; making and eating *pasca*, a traditional Easter cake; eating lamb; and bringing foods to church in baskets to be blessed.

Diet and Health

Many Romanians who lived through the Communist period and its aftermath know too well the

close relationship between food and health. In the harshest years of the regime, food shortages were a part of daily life. Under the presidency of Nicolae Ceausescu from 1967 to 1989, money was being spent on the development of grand buildings, and food was being exported to pay off debt, while programs such as the Rational Nourishment Commission were implemented to hide the fact that there was not enough food for the nation. Understandably, today, many Romanians view health and nutrition campaigns with suspicion. The Communist period continued to influence health in Romania even after the expulsion of Ceausescu and the opening of Romania to a free trade economy. From the early 1990s Romania had to completely rebuild systems of health care and food production and distribution. Subsidies that had been in place for many foods were removed. Real incomes were low, and food prices high. In the mid-1990s more than half the population lived below the poverty line, and many households spent as much as 70 percent of their income on food. All of this had a negative impact on the health of much of the Romanian population. Low life expectancies and high levels of diseases related to lifestyle have been reported for much of the period after the collapse of the Communist regime.

The situation today has largely improved. However, the health of Romanians, and people living in many other former Soviet states, is still below the European Union average, based on a number of health indicators. Diet plays an important part in this. Romania has registered a high number of diseases that relate to poverty and inadequate nutrition. Many studies indicate that poor diet and alcohol and tobacco consumption, particularly among men, have contributed to poor health in Romania. The high consumption of fats and oils and calories of low quality from the point of view of nutritional standards is likely to be a contributing factor.

Fruit and vegetable consumption in Romania has fluctuated and at times has been considerably lower

than the recommended daily intake. This is partly due to issues of food scarcity and high prices and partly due to the style of the cuisine. While vegetable intake has increased in recent years, the percentage of potatoes that contribute to this has, too. The higher consumption of potatoes and cereals as major caloric items means that intake of many vitamins and minerals is reduced. Low fruit and vegetable intake, according to the World Health Organization, is one of the leading factors in many of the health issues faced by Romania today. However, the produce that is eaten is normally fresh, since much of it is produced locally, and it generally contains low levels of chemicals because of the high costs of herbicides and pesticides.

Russia

Overview

Once considered a gastronomic wasteland, Russia's remarkable and delectable cuisine again is finding its way onto the world stage through commerce, travel, and media coverage. Moscow is becoming a center of culinary innovation in the early 21st century, quickly erasing bitter images of the empty food shelves and state-run restaurants of the Soviet era. Centuries of scarcity, deprivation, and hardship have shaped Slavic culinary aesthetics. Therefore, Russians approach every meal with an unrivaled gusto and sincere appreciation—be it beer and crayfish, or champagne and caviar.

Russia is an inscrutable land on many levels, beginning with the sheer quantity and quality of available foodstuffs. The size of its territory, the variety of its ethnic groups, and its stark history challenge the imagination. The 19th-century Russian Empire included Ukraine, the Baltic nations, the Caucasus, Central Asia, and Siberia. The nation was blessed with an abundance of fish from its waters; fruits and nuts from the southern regions; endless variations of grains and hearty breads; the wild game of the forest; and the rewarding berries and mushrooms of the woods. These ingredients remain in Russia today to form the basis of its extraordinary cuisine.

The Russian Federation is the political remnant of the Russian and Soviet empires. Geographically, the Russian Federation stretches from the Baltic Sea to the Pacific Ocean and spans 11 time zones. Siberia alone makes up 10 percent of the earth's inhabited landmass. Culturally, however, Russia is larger still, extending beyond its imperial boundaries via Russian-language media, established trade patterns,

and the presence of its military on the former borders of the Soviet Union.

The 2002 census counted 160 different nationalities in the country, although Russians comprise almost 80 percent of the 145.2 million total citizens. Kazan Tatars number almost six million citizens, making them the second most numerous nationality. Other ethnic groups in Russia that exceed one million people include Ukrainians, Bashkirs, Chuvash, Chechens, and Armenians. This demographic diversity allows Russians to claim most any dish as their own national foods, such as pilaf, dumplings (*pelmeni*), eggplant “caviar,” or Baltic herring. Incomes and lifestyles in Russia are very stratified, especially since the fall of Communism in 1991. Social stratification is the single most important factor in understanding Russian society throughout its history.

Food Culture Snapshot

Sergei and Katya Aleksandrov are a well-to-do married couple in their late thirties living in a suburb of Moscow with their twins, Sofia and Vassili, who are three years old. Katya works part-time as an accountant, and Sergei sells cars through one of Moscow's larger dealerships. Their combined incomes allow them to employ a full-time nanny to care for the children and help with housekeeping. Their salary also allows them to eat better-quality food and to afford occasional imported European gourmet items, but their core food choices are very mainstream and representative of the larger population. Russians are very particular about their diet and expend much energy in the acquisition

A woman makes pelmeni, a traditional Russian dumpling, by hand. (iStockPhoto)

and preparation of food. Russians, on average, spend more than one-third of their income on food, a much higher amount than in Britain or the United States.

At a minimum, the Russian pantry will always have potatoes, carrots, onions, butter, and sunflower oil. No traditional dish can be prepared without these basic ingredients. Ketchup, mustard, and spicy horseradish are popular as condiments, and mayonnaise is always on hand for use in traditional Russian potato salads. No spices are really necessary save for salt and ground black pepper, although some families, like the Aleksandrov, like to experiment with Asian ingredients and various spice mixes.

For the parents, breakfast is dominated by bread and dairy, specifically, traditional Russian soft farmer's cheese, *tvorog*, mixed with sour cream and honey. The

children eat freshly prepared hot cereal. Popular varieties of hot cereal include oatmeal, cream of wheat, and porridges made from buckwheat, barley, or millet. Hot sweet black tea is the preferred breakfast drink, although sometimes adults prepare instant coffee. The twins drink whole milk.

During the day, Katya and Sergei eat lunch at work. Most large offices have their own cafeterias with a selection of hot dishes, sandwiches, and salads. The nanny makes a hot lunch for the children, often one of the following dishes: vegetable or chicken noodle soup, meatballs with mashed potatoes, beef stew, or chicken cutlets. All main dishes are accompanied by bread and fresh tomatoes and cucumbers. Lunch concludes with a snack of fresh fruit.

Generally, everyone gathers for the main meal of the day around eight o'clock in the evening. Katya is a good cook with a well-developed repertoire of dishes that are hearty yet quick to prepare. Even with full-time help at home, Katya prefers to do most of the cooking herself. She always prepares cereal in the morning, which can take up to an hour (there is no instant oatmeal), and she makes the majority of family dinners. Sometimes the leftovers are served for lunch the next day.

Almost daily the family purchases bread, both wheat and rye, and fresh vegetables such as cucumbers, tomatoes, and dill fronds, parsley, and green onions. Broccoli and cauliflower have only recently become staples of the Russian diet. Pickled vegetables are enjoyed year-round, and cabbage, carrots, and beets dominate the winter menu. The family consumes fruits regularly until the season changes: strawberries, cherries, raspberries, apricots, and peaches in the summer; apples and melons in the fall; and oranges, apples, grapes, and bananas in winter and spring.

The Aleksandrov household would grind to a halt without sour cream and kefir (fermented milk). The amount of milk and milk products Russians consume is surpassed only by the quantity of bread they eat, whether they are city dwellers or country folk. Where the cow is sacred in India, it is part of the family in Russia. Cattle provide some of the products most dear to Russians—milk, cream, fermented drinks, cheese, butter, yogurt, sour cream, and ice cream. Dairy products are the largest segment of Russian agricultural exports after sunflower oil, namely, condensed milk and

cream, yogurt, butter and milk fats, sour milk, cheese, and curds.

The Aleksandrovs' main protein choices are usually beef, pork, lamb, and chicken. The family enjoys smoked fish as an appetizer. Another important kitchen ingredient is ground beef. The Aleksandrovs use it to make meatballs and cutlets, stuffed vegetables, and the gem of Russian cuisine, pelmeni, similar to ravioli or Chinese dumplings. In a pinch, store-bought frozen pelmeni with sour cream make for a modest dinner. The Aleksandrovs, unusual for a Russian family, have recently sworn off any kind of processed meats—sausages, hams, salami, and so on. Sausage is a daily staple of the Russian diet: for breakfast with cheese and bread, as part of a lunch, as a snack, and for appetizers. Initially, the Aleksandrovs were prompted to forgo sausage in response to their son's suspected allergic reactions, but after a while they realized that they did not miss it much and felt better without it. For a typical Russian family, several types of sausage would be among the daily food purchases.

Approximately twice a month, Sergei does bulk shopping in METRO, which is similar to warehouse stores in the United States. He buys grains, dried pasta, tea, coffee, sugar, household supplies, basic toiletries, and some canned goods. Like most Russians, the Aleksandrovs use few canned or prepared foods. They buy all their meats, dairy, fruit, and vegetables fresh on a daily basis. Usually Katya buys whatever is needed for the day on her way home from work. Produce is frequently purchased at roadside stands. Occasionally, the family will make a weekend trip to a large farmers' market for a larger selection of produce, fresh dairy, and meats.

Major Foodstuffs

The foods generally associated with Russia include hearty breads; fresh, smoked, and cured sausages; and winter vegetables such as cabbage, beets, and potatoes. Although the beverage that immediately comes to mind with Russia is vodka, the national drink is actually tea. Russians today without difficulty consider all the following foods to be part of their cuisine: Baltic herring and rye breads, Pacific salmon, Siberian ferns and pine nuts, Asian dumplings, Korean pickled vegetables, Central Asian

pilaf, shish kebabs from the Caucasus, Romanian *brynza* (feta cheese), Bulgarian peppers, and eggplant from the Middle East.

Throughout the seasons, the markets present an amazing variety of foodstuffs. Starting with the unprocessed or bulk section, the pantry traditionally contains a selection of grains and flours; pulses and dried beans; vegetable oils sold in reused plastic bottles; walnuts, almonds, and pistachios; macaroni and vermicelli for soups; rice; and dried apricots, raisins, and dates. The vegetables, in order of quantities sold, include potatoes, cabbage, carrots, tomatoes, cucumbers, beets, turnips, and radishes. Besides apples, pears, and berries, most fruits come from the southern regions or are imported. Though rarely perfect in shape, marked with minor external blemishes, and small in size, most of the fruits and vegetables have a vibrant and distinctive taste.

Pickled garlic, peppers, and cucumbers are almost always locally produced and homemade. Most markets have a Korean food section with prepared dishes of spicy pickled vegetables and fish. In the dairy-products section, vendors sell sour cream, fresh cheese (*tvorog*), aged cheeses, yogurt, and kefir by volume in recycled glass bottles or larger plastic containers.

Grains—specifically, rye, buckwheat, barley, oats, millet, and wheat—are the main staples. Cereals (seeds of cultivated grasses) are of central importance to Russia, so much so that they in many ways define the national cuisine. They form the basis for the delectable breads, filling gruels, savory pies, pancakes (*bliny*), and dumplings.

Bread buttresses the Russian diet, symbolizing sustenance and hospitality. Russians consume an amazing two pounds of bread per person a day. It is the ubiquitous delight of every meal. The very word for hospitality, *khlebosol'stvo*, derives from the roots *khleb* (bread) and *sol'* (salt), which were traditionally presented to guests as a sign of welcome, warmth, and generosity. In almost-endless varieties, most tables are graced with slices of both white wheat bread and dark rye or black bread.

Kasha, or boiled buckwheat groats, is a Russian cultural superfood, and it is difficult to overrate the symbolic importance of a food that has nourished

a people for more than 1,000 years. It can be boiled with milk or water, prepared sweet or savory, and served for breakfast or as a side dish. Smaller groats are often used to make a more liquid kasha with only milk. Buckwheat kasha can be prepared with almost anything mixed in—eggs, pork, pork fat, liver, onions, mushrooms, fruits, cheese, and so forth. The first buckwheat varieties originated in parts of Siberia and China. As the largest consumer of buckwheat worldwide, Russia is also the number-one producer of the crop. Today, kasha can refer to almost any porridge made from any groats, such as cream of wheat, rice pudding, hot oatmeal, or less commonly barley or millet porridge.

Pies (*pirogi*) in Russia come in a dizzying array of preparations and presentations. The dough can be leavened or not, salty or sweet. Pies can be round, square, triangular, open, closed, large, small, or fully enclosed like the classic salmon *kulebyaka* (*coulibiac*—a complex pastry with salmon, spinach, and rice), for example.

Bliny, one of the few Russian foods known internationally, are small pancakes a little larger in size than a compact disc (five to six inches in diameter). They are a traditional dish at the spring equinox folk festival, Maslenitsa, perhaps symbolizing the sun with their round shape. The yeast batter is what makes the taste and texture distinctive. Piled high with a pat of butter between the pancake layers, bliny provoke a festive reaction. Though traditionally made with buckwheat flour, wheat-flour bliny are now more common.

Macaroni and vermicelli are made from wheat flour and are commonly added to soups. Buttered macaroni is a common side dish that may be served with any meal. The most famous Slavic pasta dishes are pelmeni and *vareniki*, boiled, filled dumplings. *Vareniki* are usually larger and often half-moon or triangular shaped, and they come from Ukraine. During the summer, *vareniki* are filled with cherries, plums, or berries. They can also be made with potatoes, mushrooms, soft cheese, cabbage, and meat. *Pelmeni* and savory *vareniki* are generally topped with melted butter or sour cream, but vinegar, mustard, and ketchup are also possible additions.

Russians have a hearty appetite for vegetables, usually served in soups or separately as a pickled dish. Cooked vegetables are also a main component of many salads. Fresh salads are generally made with sliced cucumbers and tomatoes, not leafy greens. Turnips, cabbages, radishes, and cucumbers are considered traditional Russian vegetables. Carrots, onions, and garlic provide the flavors for many savory dishes. One salad that incorporates almost all the customary Russian vegetables is *vinegret* (made from potatoes, pickled cabbage, and beets in oil).

Potatoes, after bread, sustain the population. The most common and preferred method of preparation is peeled boiled potatoes, garnished with butter, dill, and sour cream. Fried potatoes, similar to home fries, are also widespread. They become exceptionally enticing when fried with bacon and mushrooms.

Russia and cabbage are inextricably bound, and rightfully so. No self-respecting Russian can survive long without fermented or sour cabbage (*kvashenaya kapusta*). Cabbage is an extremely versatile vegetable, great in soups, stews, salads, stuffings, and side dishes. The sulfurous scent of cooked cabbage seems to permanently saturate most modern apartment blocks in Russia. Cabbage soup (*shchi*) rates among the most popular national dishes.

Cucumbers, especially the pickled variety, also have a special place in the Russian culinary psyche. Russian pickled cucumbers, like sauerkraut, are pickled in brine and not vinegar. Fresh and pickled cucumbers are added to many hot and cold dishes. It is not uncommon to find salads that contain both pickled and fresh cucumbers.

Whereas potatoes, cabbages, and cucumbers are essential components of the Russian table, mushrooms create magic in the meal. Mushrooms, or *griby*, are neither plants nor animals, but Russians would swear they have a soul. Many civilizations, including the Slavs, have relied on mushrooms for medicinal purposes, and mushroom hunting in Russia remains a national obsession. Considering the expanse of forest and the assortment of mushrooms, many a lazy day can pass in search of the perfect mushroom patch.

The turnip (*repa*), rutabaga (*bryukva*), and red beet (*svyokla*) form the rearguard of traditional Russian vegetables. Turnips, often pureed or cooked together with meat dishes, were the staple crop of northern Russia until well into the 18th century. Beets were better known in the area of Ukraine, although they are now firmly established as part of the Russian culinary repertoire. The most famous dish from beets is borscht, a beef-based soup with beets, cabbage, and bell pepper.

Countless other vegetables are grown on private plots or at the *dacha* (small vacation house). Tomatoes, squash, zucchini, radishes, bell peppers, peas, green beans, cauliflower, and leafy greens add color and zest to the Russian table. Many vegetables, especially eggplant, are made into spreads or a “caviar,” which is a cooked mixture of vegetables with tomatoes, onions, garlic, oil, and vinegar that preserves well.

Fruit production is difficult in northerly climes. Therefore, apples, pears, and forest berries are the most common fruits in Russia. Many other fruits are brought in from the southern regions, particularly peaches, cherries, plums, and melons. Watermelons from Astrakhan on the Volga River delta near the Caspian Sea compete with those from Central Asia and the Caucasus in Russian markets. The

A Russian delicacy, borscht, is a beet root soup served with sour cream. (Shutterstock)

best melons, however, are imported from Central Asia, along with grapes, dried apricots, and raisins.

Berries and cherries are the quintessential fruits of Russia. The sour cherry (*vishnya*) and the black cherry (*chereshnya*) are the most common varieties. The bountiful assortment of berries is similar to that of Scandinavia, Canada, and the northern United States. Popular varieties include the raspberry (*malina*); the gooseberry (*kryzhovnik*); the cranberry (*klyukva*); the berry known variously as the lingonberry, bilberry, huckleberry, and whortleberry (*brusnika*); the blueberry (*chernika*); the rowanberry or ashberry (*ryabina*); and currants—red, black, and white (*smorodina*). The delicious strawberry (*klubnika*) and the wild strawberry (*zemlyanika*) are a special treat. The berries can be eaten raw as well as frozen or dried for later use. But more often than not they are made into rich preserves, jams, and jellies used in desserts and to sweeten tea.

Fish is most commonly served as a smoked, cured, or salted appetizer. Salted Baltic herring (*sel'd'* or *selyodka*), by far the most abundant and popular, is found in many cold salads or served plain with oil and onions. A mixed platter of cold smoked fish (*rybnoe assorti*) served as appetizers may include thin slices of eel, mackerel, sturgeon, whitefish, turbot (*paltus*), shad, and salmon.

Other familiar fish are prepared by panfrying, broiling, or baking, such as salmon trout (*forel'*), carp (*sazan*), perch (*sudak* and *okun'*), cod (*navaga* and *nalim*), flounder, northern pike (*shchuka*), and catfish (*som*). Caviar, or fish eggs, is the product most often associated with Russia. The familiar dark or black caviar comes from three particular species of sturgeon: *beluga*, *osetra*, and *sevruga*. The larger, bright red-orange caviar is roe harvested from the Siberian salmon (*keta*). It is considerably less expensive than black caviar. Recently, trout roe has become a popular addition to the caviar line in Russia.

A family of freshwater fish, abundant in rivers, lakes, canals, and reservoirs, the roach fish (*vobla*) is perhaps the most humble yet emblematic Russian fish. Salted and dried, it is sold in every market. Paired with beer, it is analogous to the American combination of nuts and beer. Nothing promises a

better evening than several whole dried vobla laid out on a newspaper tablecloth.

It is difficult to exaggerate the importance of meat in the Russian diet. Whether meat is served as an entrée or an appetizer, or simply a frankfurter or a sausage, no meal is considered fully satisfying without some form of meat on the plate. Russia is among the world's leading producers, consumers, and importers of meat. Beef, pork, poultry, and mutton—in order of preference and consumption—constitute the primary protein types. Shish kebabs (*shashlyk*) are the ideal method for preparing any meat or poultry in Russia. Marinated meat threaded onto metal skewers is slowly grilled, roasted, and smoked over the gentle heat of charcoal embers.

In addition to shashlyk, beef is generally prepared as fried or baked individual cuts, as part of soups and stews, or as mincemeat for meatballs or various fillings. *Zharkoe* is a stew of roasted meat, potatoes, and vegetables, traditionally baked in small earthenware pots for hours on the Russian hearth. Sautéed ground beef patties, *kotlety*, are perhaps the most common meat dish. Ground beef is mixed with breadcrumbs and diced onions and panfried. *Frikadelki*, from the German *Frikadellen*, are small meatballs simmered in broth. Ground meat mixed with onions also creates the common fillings for *pirozhki* (dumplings), *golubtsy* (cabbage rolls), and *chebureki* (Crimean Tatar fried meat pies).

Internationally, Russia is probably best known for its sausages. Although the brunt of foreign jokes and derision, Russian *kolbasa* can rival the finest Italian salami and German wurst in quality. Sausage is generally made from both pork and beef. Rows of fresh sausages, liverwurst, frankfurters, and links fill store display cases. The most prevalent is the cured sausage—smoked, dried, or both. Ham (*vetchina*) is the most common cured pork product. Among the most flavorful, however, is *buzhenina*, salted and smoked pork loin. The Ukrainian love for pork has made its way into Russia in the form of *salo*, cured pork backfat.

The primary herbs in Russian cuisine are parsley and dill (*pertrushka* and *ukrop*). They are found on almost every table in a variety of guises: as a dish of whole stalks, an ingredient in most salads, an

added flavor for soups and stews, and a garnish for these same dishes. Bay leaves and sweet paprika are often added to soups and stews. In making many Central Asian or Caucasian dishes, cilantro (fresh coriander) is essential. Seasonings are minimal; usually only salt and black or red (paprika) pepper are used in cooking and also found in shakers on the dining tables. Anise, allspice, cloves, cinnamon, and nutmeg are sparingly applied to some pastries and baked goods. Sweeteners traditionally include honey, jams, jellies, and dried or preserved fruits. The most common condiments are mayonnaise, sour cream, butter, vinegar, horseradish, mustard, ketchup, and a couple of Georgian spicy sauces. Mayonnaise is found in every sort of Russian salad, sometimes mixed with sour cream. Horseradish (*khren*) is grated and mixed with vinegar and served with meat dishes.

In marketing terms, Russia and vodka are inextricable. In reality, however, tea retains the title of the Russian national drink. Beer is the trendy and affordable beverage of choice of the younger generations, while traditional drinks such as *kvas* (made from fermented rye bread), *kisel'* (made from berries), *sbiten'* (made from honey and spices), and mead (*myod*) still hold an important, if not purely symbolic and nostalgic, place in Russian culinary thought and action. Tea (*chai*) is consumed at breakfast, lunch, and dinner. It is served in the afternoon and as a late-night drink. Russian tea, with lemon and sugar cubes, is served piping hot in porcelain cups with saucers or in glasses with metal holders. It is usually strong and well sweetened with sugar, or perhaps jam and honey. Everyone drinks tea. Even children learn from an early age to enjoy it, no doubt because it is often served with chocolate, candy, wafers, cookies, or other pastries.

Cooking

The kitchen is the principal domestic space for a Russian woman. A great part of her day is spent at the market looking for products, preparing the raw ingredients, cooking, and cleaning. Without the convenience of electric kitchen appliances, Russian women exert tremendous effort in basic kitchen

preparation work. Despite the arrival of processed foods and semiprepared dishes in the 1990s, Russians have taken to them with caution. Whether they distrust foreign products or simply prefer to cook from scratch is open to debate, but the fact is that almost all food is still made at home using only fresh ingredients. This is a time-consuming task, one that only increases as the summer draws to an end. In addition to their daily workload of meal preparation, women are also expected to pickle and preserve fresh produce to last throughout the winter months. Fruits and vegetables are purchased at the height of the season to ensure the best price. Some are eaten fresh, but most are dried, pickled, or preserved.

The staples of the Russian pantry include flour, salt, sugar, and tea. Rice, macaroni, and cereal grains are common dry goods, the culinary term for all items that do not require refrigeration. As living space is always a rare commodity and refrigerators are exceedingly small, many apartment dwellers also use their balconies for food storage. With nine months of cool or cold weather a year, the balcony offers an ideal area for keeping overflow items. Freezer space is even smaller, and most families cycle through their fresh food supplies within a week. Russians forgo putting leftovers into Tupperware or other storage containers, instead placing the cookware or serving dish in the refrigerator.

As most people in the former Soviet Union live in apartments, the kitchen occupies a very small space in terms of total square footage. In the early years after the revolution of 1917, large city houses were transformed into communal apartments, where several families would share the residence, including a kitchen and bathroom. By the 1980s, after a tremendous two-decade-long effort to house its citizens, most of the Soviet population lived in single-family apartments. The standard kitchen equipment is a sink, a gas stove, and a small refrigerator. Most of the preparatory work is done on the kitchen table since counter space is limited or nonexistent. Some wealthy families have added dishwashers if space permits, but in general, all dishes are washed by hand.

The brilliance of Russian women lies in their ability to produce delicious and healthful food with crude cookware and shoddy supplies. The most

indispensable kitchen tool in the Russian kitchen is the manual meat grinder. It is used to make ground beef and fillings for pies and pastries. The main cookware generally includes a large stockpot for soup, a cast iron skillet for fried foods, a tea kettle, and perhaps a baking dish. Knives, also made of aluminum or soft steel, quickly dull, no doubt because they also function as a hammer and can opener. Spatulas and cooking utensils are either wood or aluminum. Daily dishware is simple, and the fine china is brought out only for special occasions.

Typical Meals

The quintessential Russian lunch or dinner contains bread, soup, and hot tea. Bread is required at every meal and is placed on a plate or in a basket in the middle of the table and covered with a cloth or paper napkin. At the end of the meal, tea is regularly offered in china cups with saucers.

Breakfast can be as modest as bread and tea, or as elaborate as yesterday's dinner leftovers such as salads, pickles, fish, and cold cuts. More often than not, most Russians enjoy a simple open-faced sandwich of cheese, ham, or salami with hot tea and a boiled or fried egg. Coffee, generally instant, is also popular, and serving juice in the morning has been on the rise in recent years. Consumption of fermented dairy drinks such as kefir (fermented milk) and *prostokvasha* (sour milk) generally correlates to the age of the individual. Boiled eggs, omelets, and fried eggs are some of the more familiar offerings. Also exceedingly common, especially for children, is some sort of hot cereal, such as kasha—oatmeal, rice pudding, cream of wheat, and buckwheat. Among the first choices for sweet offerings are tvorog (farmer's cheese) mixed with sour cream and sugar and three types of pancakes—*syrniki* (made with tvorog), bliny (thin), and *olad'i* (thicker). Still, day in and day out, the overwhelming majority of Russians simply have tea and bread for breakfast, perhaps accompanied by cheese or tvorog.

Lunch generally occurs around noon on weekdays and may be served as late as two o'clock on the weekends. Many people eat lunch at work since numerous large companies and institutions have their

own cafeterias. In some new, more prosperous offices, lunch is catered. Since women often work outside the home, few men go home for lunch even if they have the opportunity. Lunch usually consists of soup as a first course (*pervoe*); a protein (meat or poultry), a starch (potatoes, rice, pasta), and a salad, sometimes with *kompot* (a dried or fresh fruit infusion) to drink, as the second course (*vtoroe*); and tea and dessert as the common third course (*tret'e*).

Dinner is served around seven in the evening, after people have had time to come home from work. The mother, or a grandmother if she lives with the family, prepares the meal. Generally it follows the same pattern as lunch: soup, a meat dish and a starchy side, finished off with tea and something sweet for dessert. The ubiquitous bread basket adds bulk and calories to the meal. Potatoes—boiled, mashed, fried, or part of a salad—serve the same satisfying function. The usual condiments for pork, beef, or chicken are ketchup, mustard, or horseradish. Hot dogs, without a bun, are a common dish, with green peas, potatoes, macaroni, or rice served on the side.

Common salads include “vinegret” or the Russian salad (*oliv'ye*) of boiled and diced potatoes and carrots, peas, pickles, and chicken, mixed with mayonnaise. Beets in oil with a hint of garlic make a superb salad, side dish, or garnish. The most universal salad, however, is made from freshly shredded cabbage, perhaps with carrots or a touch of onion, dressed with oil or mayonnaise. Fermented cabbage in salt, less stringent than sauerkraut, is made at home and always ready for the table. Cabbage can also be the primary ingredient for filling savory pies (*pirogi*) or smaller baked pastries (*pirozhki*). Mushrooms, when in season, are equally adaptable, being served as the main course, used for fillings, or eaten pickled. The most familiar appetizers are dill pickles and lightly brined cucumbers, but any pickled vegetable can stand in. Cheese, sardines, smoked fish, or cold cuts are the standby appetizers (*zakuski*) on a daily basis. The vegetable menu is generally limited to cabbage, cucumbers, tomatoes, beets, cauliflower, squash, and eggplant.

Potato and Mushroom Pirozhki

Pirozhki (sing. *pirozhok*) are the smaller, individual-sized cousins of the larger Russian savory pies, *pirogi*.

Pirozhki are a baked or fried dough with any number of fillings. They may be served with soup and stews or eaten as a snack or appetizer. Some of the more common contents are meat, mushrooms, buckwheat, potatoes, liver, cheese, eggs, and cabbage.

Filling

- 6 small potatoes
- 1 large onion, medium dice
- 1 lb mushrooms, chopped
- 6 tbsp butter
- 3 tbsp tvorog or thick yogurt
- 3 tbsp dill, chopped
- Salt and black pepper to taste

Dough

- 3 c all-purpose flour
- ½ tsp baking powder
- ½ tsp salt
- 1 ½ sticks butter
- 3 egg yolks
- ½ c sour cream
- 1 tbsp water

To Make Potato Filling

Peel and cut potatoes evenly into large cubes. Boil in salted water until tender. In a separate pan, sauté onions and mushrooms in 4 tablespoons butter. Combine potatoes with tvorog and mash in 2 tablespoons butter, leaving the potato mixture chunky. Mix with sautéed onions, mushrooms, and dill. Season to taste with salt and pepper.

To Make Dough

Mix flour, baking powder, salt, and butter until the dough is mealy. Whisk 2 egg yolks and the sour cream together. Add the liquid to the flour mixture until it forms a rich dough. Chill the dough for at least one hour.

Preheat oven to 375°F. Flatten a piece of dough to make a 3-inch circle. Put a tablespoon of filling in the center. Press the edges together to seal them, creating a football shape. Place the pirozhok on a

buttered cookie sheet, seam side down. Make an egg wash with the remaining egg yolk and water and brush on pirozhki with a pastry brush. Bake in the upper third of the oven for 15–20 minutes or until golden brown. Serve while still warm.

Eating Out

Once stereotyped as the land of shortages and sausage queues, Russia now presents an exceptional opportunity to explore dining out as an intersection of economics and culture, of consumption and national identity. From white-tablecloth restaurants to cafeterias to street food, the culinary influences of Russia, the Caucasus, and Central Asia play off each other to create a dynamic restaurant scene. Eating out in Russia is a major event—fun, fascinating, and full of surprises, mostly pleasing ones.

The types of restaurants in Russia can be roughly divided into a few sectors: exclusive restaurants and private clubs, international cuisine, fast-food chains and cafés, restaurant chains, independent midrange restaurants, and, the latest arrivals, coffee shops and beer halls. After European and American businesses' initial entry into the market, Russian companies quickly countered to dominate urban offerings. Prevailing trends include more midrange restaurants for the ever-expanding middle class, while new fast-food outlets are offering more Russian dishes in response to market demand. Restaurants are also an attractive area of investment for successful Russian businessmen seeking to diversify their holdings. International cuisine ranges from typical European fare (Italian and French) to the Asian options of Chinese, Japanese, Thai, and even Tibetan.

Russian restaurant menus follow a typical format: cold appetizers, hot appetizers, a first course (usually soup), a second or main course, garnitures or side dishes, and desserts. An extensive list of alcoholic beverages is common, including vodka, Crimean wine, brandy, and champagne. Whiskey, gin, and beer and wine from abroad are making major inroads into the beverage market. Many menus even contain sections for cigarettes and cigars.

Until recently, menus varied little. The meal begins with *zakuski*, literally “small bites,” which are both hot and cold hors d'oeuvres. The cold appetizers often include sturgeon black caviar and salmon red caviar, pickled and fresh vegetables, a dish of assorted smoked or cured fish, assorted cold cuts, mushrooms, and beef tongue with horseradish.

The first course (*pervoe*) is invariably a hot soup of borscht, cabbage soup (*shchi*), or boiled dumplings in broth (*pelmeni*). Main courses of beef, pork, chicken, lamb, and fish—baked, boiled, braised, or fried—are most common. Desserts in a typical restaurant may include fresh fruit or berries, ice cream, and a pastry or two. Sponge cake and simple chocolate candies are also fairly common. Tea and coffee are served as the final course.

Special Occasions

Ask Russians what their favorite celebrations are, and the answer varies little: New Year's, May Day

holidays, and birthdays. For children, the birthday party is the most important festive occasion of the year, rivaled only by New Year's. Even during the Communist reign of the 20th century, religiously devout people in the Soviet Union celebrated their holidays, be it Easter, Ramadan, or Passover. Religious holidays have now rebounded, yet many secular Soviet ones remain deeply embedded, too. The Russian Orthodox Church still retains the older Julian calendar system to mark the main periods of feasting and fasting. Christmas, therefore, is celebrated on January 7; it is second only to Easter in religious significance.

The typical Russian celebratory meal requires much planning and preparation. The region is well acquainted with famine and hardship, and consequently feasts are intensely appreciated. Finding all the necessary ingredients, not to mention budgeting for them, demands great sacrifice and scheduling. The hosts of a family celebration may spend a week or more getting ready for the big day. The hosts intend not only to impress their guests but also to ensure an unforgettable experience. The table, decorated with a white tablecloth, is usually wholly covered with small plates of appetizers (*zakuski*), salads, cold cuts, pickled vegetables, and bread. Selections of vodka, wine, or champagne are proudly displayed. The finest crystal and china, usually stored in the living-room cabinets, are dusted and shined for maximum pageantry. Once everyone is seated, a glass is raised in honor of the host or honored guest. Diners help themselves to the hors d'oeuvres, and the plates are passed family style. The evening is often a noisy affair as dishes clang, music or television drones in the background, conversation builds, and more toasts are offered and accepted. A main hot course follows the toasts. Hot tea with dessert completes the evening.

Grechnevye Bliny (Russian Buckwheat Pancakes/Crepes)

2 c buckwheat flour
 4 c milk
 1½ packages dry active yeast
 2 tbsp sugar

5 eggs, separated
 4 tbsp unsalted butter, melted
 1 tsp salt
 2 c all-purpose flour

Mix buckwheat flour with 1 cup cold milk. Then stir 2 cups of warm milk into the flour mixture. Mix in the yeast and only ½ teaspoon of the sugar. Cover and set aside in a warm place for 30 minutes. Blend the egg yolks with the remaining sugar, melted butter, salt, and all-purpose flour until smooth, and add to the buckwheat mixture. Adjust consistency with remaining milk. Cover and set aside for 45 minutes. Fold whipped egg whites into the batter a little bit at a time. Drop 2–3 tablespoons of batter onto a hot, buttered skillet. Cook for 1½ minutes; flip and cook other side for 30–60 seconds. Serve with the usual garnishes of sour cream, fish, jam, caviar, *tvorog*, and so forth.

Maslenitsa has become the Russian equivalent of Fat Tuesday or Mardi Gras, the pre-Lenten festival of Shrove Tuesday, arriving in February or March, depending on the Easter date. In general, Maslenitsa is a holiday of gluttony and excess that dates to the pre-Christian era. The pancake (*blin*) represents the sun, and dozens of bliny are consumed throughout the week. Bliny are eaten with liberal amounts of butter, sour cream, caviar, smoked fish, and jams. They are made with buckwheat or wheat flour, or a mixture of both, with yeast or baking soda as the leavening agent. Orthodox Christianity adopted this holiday, and it was given an additional meaning as the last week before Lent.

During the seven decades of the Communist experiment, all holidays celebrated the glory of labor as well as specific professions, special days of Communist history, and memorials to war, particularly World War II. The grandest of contemporary holidays in Russia is New Year's Eve, which has become a combination of the Christmas and the Western New Year's holidays. New Year's is considered a family holiday, and the table features all the favorite and traditional Russian dishes, including a wide array of appetizers, salads, and bread. A standard

Perestroika allowed western companies to venture into Russia. McDonald's was a huge success when it opened in Moscow on January 31, 1990. (Hulton Archive | Getty Images)

menu often includes red and black caviar, *salat oliv'ye*, *salat vinegret*, trays of assorted smoked fish and cold cuts, and pickled cucumbers and other brined vegetables. By the time the main course arrives, hunger has long since passed. Dessert and tea are obligatory at the end of every festive meal, and New Year's is no exception. The meal usually runs up to and beyond the stroke of midnight. Right before the clock strikes 12 at midnight, a toast with vodka, wine, or brandy is raised to the old year—an appreciative farewell. The first toast of the new year is made with champagne, proclaiming, “With the new year comes new happiness” (*s novym godom, s novym schast'em*).

Diet and Health

In Russia, food is not only treated as a source of nourishment and fuel but also valued for its preventative and curative role. Eating healthfully keeps a body fit and free of disease. Should they fall ill, Russians have numerous cures using a wide range of foods and medicinal herbs. The variety, purity, and freshness of food in Russia unfortunately are not enough to ensure proper health. Despite the conscious and continual efforts of mothers, wives, and grandmothers to feed and care for their families, health has generally deteriorated since 2000. Food, however, is only one part of the equation for good health.

Russians have several health-related problems in common: a short life expectancy, cardiovascular disease, and general nutritional deficiencies, as well as high rates of tobacco and alcohol use. Specific nutritional problems include the lack of affordability of certain healthful and essential food items, the suspect quality of some foodstuffs, and the absence of public awareness of what constitutes a healthful and balanced diet. Much of the overall decline in health, without a doubt, may be attributed to the social and economic disruptions since 1991. The Soviet experiment can be credited with improving the general diet of the lowest economic classes but not until well into the 1960s.

Quantity and freshness have priority over quality and finesse on the Russian table. Although restaurants and cafés are numerous in the big cities, hearty homemade meals are the ideal both in the countryside and in urban areas. A well-balanced meal should have a main course of fish or meat for flair, a starch (potatoes, pasta, or rice) for energy, and vegetables (often in the form of a cooked vegetable salad) for vitamins. Soup and tea are the bookends of a meal. Dessert would make it complete in the minds of most Russians. At least one hot meal a day is crucial to maintaining good digestion and health. Lunch, according to an earlier Russian tradition, was the main meal of the day. A light lunch is usually taken at work. The daily menu of most Russian families includes a meat or sausage dish. Therefore, the typical diet is very high in protein and animal fat, mostly from low-quality processed, smoked, or cured meats. Most people consume dairy products (usually fermented) daily, including cheese, dairy drinks (kefir, prostokvasha, *ryazhenka*), farmer's cheese (tvorog), and, more recently, yogurt. The most common vegetables are potatoes, cabbage, onions, tomatoes, and cucumbers. Vegetables are almost always cooked (and often overcooked), except for tomatoes, cucumbers, and radishes, which are used in fresh salads.

Saami

Overview

The Saami are an indigenous people of northern Scandinavia. The names *Sami*, *Sàmi*, *Saame*, and *Lapp* have all been used to describe the Saami, although the last of these is considered derogative. There are nine different recognized Saami languages, which fall into three main groups—eastern Saami, central Saami, and southern Saami—and are all of the Finno-Ugric language family. The Saami call the territory they live in Sapmi; it is sometimes referred to as Lapland or Fennoscandia. It spans four countries (northern Norway, Sweden, Finland, and the Kola Peninsula of Russia) and is part of the Arctic Circle. Sapmi is not officially recognized by the nation-states within which it exists. There are strong indications that the Saami have lived and managed resources in this territory for at least 2,000 years. There are approximately 70,000 Saami: 35,000 in Norway, 17,000 in Sweden (2,000 in Stockholm), 5,000 in Finland, and 2,000 in Russia. There are also Saami living in Canada and the United States. Rights to resources and land continue to shape the food culture of the Saami.

The Saami have developed a cuisine linked strongly to nature. The conditions in which the diet has evolved include a harsh arctic environment, where winters are cold, snow covers the land most of the year, and the sun is absent for two months in the far north. The Saami are commonly known as reindeer herders, and traditionally this along with hunting and fishing has been the primary food activity of the Saami. For centuries the Saami have led a seminomadic lifestyle following reindeer on

their seasonal migrations, but today fewer Saami are herding.

In contemporary society many Saami live in modern housing and have access to a variety of foods and cooking methods, and often their eating habits are influenced by the cuisines of the dominant countries as well as the impact of globalization on agriculture and food production. Yet tradition still plays a key role in defining a specifically Saami food culture, and often those who lead a more urban lifestyle still have links to Sapmi and their cultural heritage.

Food Culture Snapshot

A typical Saami family will differ in what they buy to eat depending on where they live and their occupation. A Saami family living in the urban environment of Stockholm has all the conveniences and variety of foods that large European cities offer. This family would typically shop and eat in a similar way to other non-Saami living in Stockholm. A typical reindeer-herding family, in contrast, has stocks of reindeer meat to eat daily. The meat is obtained from their reindeer and is eaten fresh after slaughter, and the rest is preserved. After the slaughter period, the family relies on stores of frozen and dried or smoked reindeer meat throughout the year. Reindeer herders are generally self-sufficient with supplies of reindeer meat, elk, and fish, but they will buy in other supplies such as potatoes, onions, salt, coffee, sugar, barley, milk, and flour. Reindeer meat can be bought in supermarkets throughout Sapmi and large cities in Norway, Sweden, and Finland; it is

usually bought in frozen slices to be made into sautéed reindeer or reindeer stew.

In coastal areas fish are either caught or bought directly from fishermen or frozen from a supermarket. In the past many Saami who fished also farmed, which provided a good supply of vegetables and dairy for their diet. Today, many foods that are available in large international cities in Scandinavia can also be bought in supermarkets in the north, but sometimes prices are high.

Major Foodstuffs

The landscape of Sapmi is environmentally varied, and because it spans four countries, it is also culturally varied. Changes in the dietary staples correspond to the environmental and cultural changes in territory. The Saami diet has traditionally been high in animal protein and fat, and low in carbohydrates. Reindeer-herding Saami still have a diet characterized in this way. Many other Saami have adopted a diet similar to that of the Scandinavian countries they live in. There is a commonly held assumption that reindeer meat forms the basis of protein consumption among the Saami; however, for many, protein is obtained from fish as well, especially for the people living in coastal areas, who get most of their protein from fish. The protein intake of the urban population is more balanced between fish and meat. Inland Saami consume meat, predominantly reindeer, as their main source of protein.

Reindeer meat is a central component of the Saami food culture and is symbolic for the culture as a whole. Even though not all Saami consume it today, reindeer meat is a dietary staple for reindeer herders and many other Saami. Currently only 10 percent of Saami make their living from reindeer herding, yet it is considered an important industry, since reindeer are well suited to the arctic environment and provide the main meat source here. The Saami have undertaken nomadic reindeer herding since the early 1600s; prior to this time, instead of herding, they hunted reindeer. Today, many herders use modern technology such as helicopters and snowmobiles to manage their herds, which has significantly changed the food culture associated with a

nomadic life. Reindeer herding is an exclusive Saami right in Sweden and Norway but not in Finland. In Russia, where approximately two and a half million of the world's three million reindeer live, many different indigenous groups undertake reindeer herding. Even though a large population of Saami lives in cities (Stockholm has the greatest concentration, with 2,000 Saami living there), people living in cities often have links to relatives who herd reindeer. In traditional practices the entire reindeer is used: Skins and furs can be used for clothes; the flesh, innards, marrow, blood, bones, milk, and linings for food; and bones for implements.

Many of the coastal waters, in particular, the Atlantic Ocean and Barents Sea, offer a rich source of fish that Saami and non-Saami both eat. Fishing was once a means of subsistence, but today, many Saami who live along the coast are employed outside of the fishing industry. Salmon, trout, char, whitefish, grayling, burbot, pike, and cod are all commonly eaten. Inland, there are many lakes, rivers, and marshes, which also provide a rich source of fish. The Tenjoki and Tornionjoki rivers offer a good source of salmon, a fish commonly found in the Saami cuisine. In traditional practices roe from freshwater fish are dried and then used by soaking them in water when needed. In the past fish offered more than just food for many Saami, who in the Middle Ages often paid their taxes using dried fish.

Due to climatic conditions agriculture is extremely difficult in Sapmi territory. However, attempts have been made by Norway, Sweden, and Finland since the mid-1600s to promote agriculture in the north. At best, the growing season is 110–120 days when the temperature is above 41 degrees Fahrenheit (5 degrees Celsius): Short, warm summers with six weeks of continuous sunshine allow some crops, mainly barley, potatoes, oats, turnips, and fodder, to grow. Any other cereals, such as wheat, must be brought in. Potatoes continue to form a major dietary staple for coastal, inland, and urban Saami. Most Saami who have been farmers in coastal Norway and northern Finland learned quickly to rely on a mixed economy and also undertook hunting, fishing, and berry picking, or today buy foods from supermarkets to supplement their subsistence.

Traditionally, fruit and vegetables have not featured heavily in the meals of the Saami. Potatoes, some root vegetables, sorrel, and angelica have complemented meat and fish. Berries have always offered the Saami a good local source of vitamins and minerals and have been a major element of the diet. Berries such as the cloudberry, lingonberry, bilberry, and crowberry continue to be used and are also a source of income. Berries harvested and consumed include the lingonberry, crowberry, blueberry, bog whortleberry, cloudberry, cranberry, rowanberry, raspberry, juniper berry, wild strawberry, bilberry, and arctic bramble. Today, globalization has led to an increased variety of fruit and vegetables available and consumed throughout Scandinavia.

Milk from reindeer was used traditionally to supplement meat and fish as a protein source. Reindeer milk can be made into cheese and used in cooking, and it can be mixed with cloudbberries and frozen to form a type of ice cream that preserves both the cloudbberries and the milk. It is a good clotting agent and traditionally is used in a dish called *juobmo* (*juopmu*), which combined sorrel with reindeer milk to form a thick souplike dish. Today, joubmo is sometimes made using cow milk and sweetened with sugar and served as a dessert. Today, the milking of reindeer is not common. The movement toward agriculture in the 1950s resulted in a small economy of cow and goat milk in parts of northern Norway and Finland. The Saami through much of the 20th century used goat and cow milk.

Coffee is a major beverage for most Saami; it is consumed in large quantities and is typically very strong. Reindeer herders survive long hours looking after reindeer by drinking coffee. Coffee was traditionally and sometimes still is served with reindeer cheese instead of milk.

Cooking

Today, most Saami live in modern housing, and cooking is done in modern kitchens. Equipment, cooking methods, and access to foods reflect a Scandinavian lifestyle. Traditional Saami society was based on the *siida* system. The *siida* consisted of a number of families working together to procure

food. The traditional Saami kitchen is part of the *goatte*, a tepee-like construction. The hearth is in the center of the area, and a cauldron is suspended from the roof. The smoking of meat sometimes takes place here. Men and women both undertake cooking activities. Traditionally, women were in charge of baking the bread and the overall preparation of daily household meals, and men were in charge of preserving and boiling meat. Today, men largely do the reindeer herding and husbandry, and women tend to manage activities surrounding the household.

Fire plays an important role in traditional Saami cooking. A stone slab or wooden board is placed by the fire for baking bread or cheese bread and for grilling fish. Thin cheese bread is made with cheese and potato and is eaten either hot with cloudbberries or cold with hot coffee.

“Cheese Bread”

Ingredients

- 2 gal unpasteurized milk
- 1 tbsp potato flour
- 1 tbsp salt
- 1 tbsp liquid rennet

Method

Heat the unpasteurized milk to 100°F. Mix potato flour with a small amount of milk, and add with salt and rennet to the heated milk. Stir for 1–1½ minutes, and leave to curdle for about ½ hour. Make a few slits in the curd with a ladle or long knife and leave for 10 minutes to let the whey rise to the surface. Then break the mixture up into small pieces and let stand to allow the whey to collect on the surface. Skim off the whey.

When the curds have formed a cake of cheese, pour onto a wooden cheese board with holes in it, to allow the whey to drain. Bake the curds at 500°F until the surface turns a speckled brown. Turn the cheese over onto a second cheese board, and bake the other side the same way.

Pots and frying pans are useful utensils in Saami cooking because of the large amount of boiling and frying done. Reindeer meat is most commonly boiled or fried. Thin frozen pieces of reindeer meat are often fried in a saucepan with brown sauce. A more traditional method still practiced today is carving thin slices from a frozen shoulder and frying them in a saucepan over a fire or on a stovetop.

Preserving plays a big part in Saami food preparation. Reindeer meat, fish, and sometimes cheese are smoked, salted, dried, or frozen. Historically, preserving has been necessary to provide food supplies throughout the year. Today, many households have freezers where meat can be stored, but in the past the low temperatures and snow provided a natural freezer. Meat is often smoked or dried in small hutlike constructions off the ground and outside the house or on drying racks. Dried reindeer meat is commonly taken to eat while herding reindeer. Dried meat is also boiled with barley to make

a soup. Blood is boiled or made into sausages occasionally. Entrails from reindeer and fish are more commonly boiled than fried.

Spoons used for eating porridge, soup, or milk-based foods are traditionally part of the Saami kitchen. They are made from either silver or antlers, and they are typically shaped with a wide curve and uniquely decorated. Other traditional kitchen utensils include a reindeer-milking bowl; a coffee-carrying bag; a brass coffeepot; and a cauldron or pot.

Typical Meals

Defining a typical Saami meal and eating pattern today is difficult since many Saami live like the rest of the population in Norway, Sweden, Finland, or Russia, and there are also regional and seasonal differences in Saami meals. On the coast, fish is the main component of daily meals and is often accompanied by potatoes. Meat is more widely available

today, but traditionally in northern coastal Norway it was reserved for holidays and Sundays. Porridge was a typical meal well into the 20th century, sometimes cooked with berries. In the Kola Peninsula of Russia, for breakfast, some Saami eat salted or smoked fish, or sometimes fish mashed with berries to form a type of porridge. Fish is a major part of a meal in the summer and spring for Saami who herd reindeer. Salmon, arctic char, whitefish, trout, and pike are cooked, poached, or fried for dinner and also smoked or salted. It is common to find coffee brewing on the stove or fire for consumption throughout the day.

Saami who eat reindeer meat as their main protein source often eat it daily. The way it is consumed changes with the seasons. After slaughtering, the meat is eaten fresh, and then it is frozen, dried, or smoked. Reindeer meat is often accompanied by potatoes, berries, or barley and is either sautéed or boiled and made into a soup or gruel. A typical meal, especially for herders, is sautéed reindeer. It is often served with lingonberries or cowberries and mashed potato.

Sautéed Reindeer

Ingredients

Butter or oil for frying

Reindeer, thinly sliced (This is easier when the meat is frozen. Reindeer can be bought in frozen pieces or shaved off a frozen shoulder piece.)

Water or beer

Mashed potatoes

Lingonberry jam (available in Ikea) or crushed cowberries in sugar

Method

Melt butter or oil in a pan. (Reindeer was traditionally sautéed in reindeer fat.) Add the reindeer slices, and stir so that the meat does not stick together. Put the lid on, and simmer until cooked. Add some water or beer to the pan at the end, and let reduce to a sauce. Serve with mashed potatoes and berry jam.

Eating Out

The practice of eating out that is typical throughout much of North America and western Europe today is not part of traditional Saami food culture. Historically, eating out was more likely to involve communal eating as part of the *siida* system that organized nomadic existence.

Saami living in major cities like Stockholm, Gothenburg, and Helsinki have access to a wide range of dining options from typical Western fast-food venues like McDonald's to the many lunch-time restaurants of Sweden. Similarly, large towns across the northernmost parts of Scandinavia offer a wide range of restaurants serving everything from Nordic fare and pizza to Thai food, a more recent arrival. Traditional Saami foods are also easy to come by in many towns and cities across the northern parts of Norway, Sweden, and Finland. Some restaurants and cafés serve typical national dishes alongside local Saami dishes, with reindeer featuring heavily on the menu. There are also many tourist attractions surrounding Saami food, such as eating traditional meals in a *goatte*, or reindeer herding, fishing, or hunting; however, there is controversy over the authenticity of some of these attractions and the benefit to Saami people.

Special Occasions

There are many festivals, holidays, and events in modern Saami culture. Saami and non-Saami share some special occasions, like midsummer, Easter, and Christmas. There are other occasions that are particular to the Saami culture, such as the Saami National Day on February 6. Food is a part of celebrating all of these occasions.

Many special occasions celebrated by the Saami relate to the seasons and nature. Easter is especially important since it marks the change in seasons from the harsh winter months. The time of the year when the reindeer are slaughtered also marks a special occasion when fresh meat is eaten. The bone marrow along with the tongue has for a long time been considered a delicacy. After the reindeer are slaughtered fresh meat is boiled with the bones, and the

marrow is eaten. The liver is also eaten at this time, along with blood balls, which consist of milk, flour, blood, and salt.

Diet and Health

The Saami belief system is heavily linked to nature and features shamanism and the use of medicinal plants. Today, however, shamanism is not commonly practiced, and most Saami rely on the national health system. The World Health Organization acknowledges that many indigenous populations, including the Saami, often have a higher risk of health problems, and this is partly due to social inequalities. In the case of the Saami, sociopolitical rights are closely linked to territory and resources and thus to food and health. Resources and rights to land have been issues at the heart of reindeer herding, fishing, and hunting for centuries. The outcomes for Saami people today are different in the different countries. Policies relating to the Saami have influenced their diet and well-being through herding and hunting restrictions, land disputes, and cultural oppression.

The Saami traditionally have a diet high in animal protein and fat and low in carbohydrates. Fruit and vegetable intake is low even compared with Swedish and Norwegian populations, who are already known to consume low quantities. This type of diet is contrary to most national dietary recommendations, yet there are reported low levels of coronary heart disease in Saami populations who live off a more traditional diet; it is suggested this could be partly due to a high diet of reindeer meat. Reindeer meat has high levels of α -tocopherol and selenium and has a fatty acid composition likely to aid cardiovascular

protection. Berries have high levels of vitamins and minerals and are important in areas where the sun does not rise for some months of the year.

Environmental pollutants affect the food chain that many Saami rely on. A major health problem occurred in 1986 after the Chernobyl nuclear disaster. Dangerous radioactive substances were scattered across parts of Europe, including Scandinavia. Lichens, which form the basis of the reindeer diet, absorbed high levels of radioactive substances and in return had a major impact on the Saami diet and reindeer consumption. The Arctic Monitoring and Assessment Program has recorded a decline in radioactive substances caused by past nuclear disasters but is concerned about other pollution risks in the arctic food chain.

Scotland

Overview

Scotland, a part of the United Kingdom, covers 30,414 square miles (78,772 square kilometers) of land and encompasses roughly 6,214 miles (10,000 kilometers) of coastline, 2,423 miles (3,900 kilometers) of which constitute the mainland coast. Geographically, Scotland can be divided into roughly three main regions: the Highlands, the Central Lowlands, and the Southern Lowlands. Scotland also includes upward of 800 islands, with 130 of them inhabited. The Shetland and Orkney Islands to the northeast, and the Inner and Outer Hebrides to the west, include most of the populated islands. Glasgow and Edinburgh are Scotland's largest cities and centers of government and culture. Of its 5,116,900 inhabitants, roughly 1.2 million reside in the Greater Glasgow metropolitan area, and almost 500,000 reside in Edinburgh.

Geography and climate historically have played a significant role in the Scottish diet. Rivers and the coastline supply countless varieties of fish, seafood, and edible seaweeds; the Highlands supply game as well as the barley for hundreds of whiskey distilleries; the southwestern region is known for its dairy farming; and the Lowlands supply much of the nation's soft fruits and vegetables.

Food Culture Snapshot

Ron, Sarah, and their four-year-old daughter Fiona live in the town of Peebles in the Scottish Borders. Ron is a veterinarian, and his wife, a former schoolteacher, stays at home to care for Fiona. Their diet and eating

habits are representative of middle-class, educated Scots.

Ron and Sarah start their day at 7 A.M., with porridge or a bowl of cold cereal, bananas, toast and butter, and hot tea. Their daughter usually prefers a soft-boiled egg, toast “soldiers” (strips of toast) to dip in the yolk, and a mug of warm milk. The family typically eats breakfast together before Ron leaves for his practice around 7:45. At 10 A.M., Ron often takes a short break to enjoy a cup of tea with his assistants before returning to his rounds. Sarah likewise often enjoys a midmorning break, taking her daughter with her to a local coffee shop where she meets with other young mothers and their children. While Sarah drinks a mug of coffee and talks to friends, Fiona has a hot cocoa and biscuit (cookie). Around noon, Ron takes a 45-minute lunch break, often eating a cheese and cucumber, or cheese and cress, sandwich that he brings from home, along with a bag of crisps (potato chips) and an apple. He drinks a half-liter of mineral water with his meal. Sarah eats a similar meal at home with Fiona.

Sarah begins dinner preparation around 4 P.M., often making two meals: one for her daughter and one for her and her husband. Like many families, they refer to their dinner meal as “tea” unless they are having a rare “dinner party” later in the evening for friends. Fiona likes many of the foods her parents have later for their dinner, including mashed potatoes with butter, roast chicken, macaroni and cheese, or pasta with cream sauce and peas, but oftentimes Sarah prepares a simple tea for her daughter of porridge and milk with bananas, or toasted cheese and ham with carrot sticks and applesauce. The family generally avoids sweets, but on special occasions, Sarah might make a pudding (a generic

word for a dessert) or buy a pastry from a favorite baker and give her daughter a small serving. Raspberry tart is Fiona's favorite.

Fiona's tea is at 5:30, and while she eats, Sarah prepares the rest of her and Ron's dinner, often cooking the main dish in the oven and keeping it warm until their teatime around 6:30, after Ron has returned home and the two have had a moment to sit down for a glass of wine while talking and watching Fiona play. They eat a green salad almost every night and follow it with a main dish such as pasta and mushrooms, lentil soup, grilled lamb chops with sautéed spinach, or roast chicken with carrots and potatoes. When Ron and Sarah entertain friends for dinner, they start with an aperitif and an appetizer such as pâté and French bread in the living room around 7:00, and then proceed to their formal dining room for a more elaborate meal that will include a soup, a salad, a main dish, and pudding. Sarah's favorite company dish is baked salmon with a teriyaki glaze and rice pilaf, along with fresh-steamed Asian vegetables, particularly snow peas and bok choy. To commemorate his family's Highland heritage, Ron likes to follow such dinners by serving *cranachan*, oftentimes considered Scotland's national dessert: a parfait-like concoction made with a soft cheese called crowdie, sweetened lightly with heather honey, accented with malt whiskey and toasted oatmeal, and folded in with fresh raspberries. Coffee, whiskey, and a cheese selection with oatcakes follow.

For reasons of health and economy, Ron and Sarah limit eating out to three to four times a month, often traveling into Edinburgh to take in the lively restaurant scene. Italian or Indian restaurants are Ron and Sarah's favorite choices. When Ron is particularly late at his practice or Sarah has volunteer work, Ron will sometimes stop at their neighborhood fish-and-chip shop to pick up a fish supper (fish, chips, and peas) for the sake of convenience.

Major Foodstuffs

In spite of its small geographic size, Scotland's numerous microclimates and landscapes result in an extraordinary diversity of raw foodstuffs, many of which are exported throughout the United Kingdom and Europe and also find their way into Scotland's

most famous specialties. Scotland's mild summers allow for optimal production of both barley and oats. Barley has been Scotland's main cereal crop since Neolithic times; the Romans are thought to have introduced oats. Roughly 35 percent of the country's barley is malted for whiskey production, while 55 percent is used for animal feed. In remote areas, including the Highlands and Orkney, some people still use barley flour to make bread, and Orkney is known for its *bere-meal* bannocks, a griddle cake or scone made with a variety of barley known as bere. Oats remain a popular staple throughout Scotland, with many older people eating slow-cooked porridge with milk and a dash of salt for breakfast and oatcakes with cheese for a snack. Younger people often eat instant porridge, made by emptying a serving-size packet of oats into a bowl and heating it in the microwave with water. Oats are used to make drop scones (pancakes), *skirlie* (fried oatmeal and onions), and bannocks and are a key ingredient in several of Scotland's best-known dishes, particularly haggis, a savory blend of sheep's pluck (heart, liver, and/or lungs) and oatmeal boiled in a sheep's stomach or, more likely today, in a synthetic casing. Oatmeal is also an ingredient of black pudding (a sausage of oats, suet, spices, and pork blood) and white, or mealy, pudding (a sausage of oats, suet, spices, and onion). Although wheat production is limited in Scotland because of the climate, many

Scots prefer breads, cakes, pies, and biscuits made of wheat flour.

Oatmeal Biscuits

1 c unbleached white flour
 ½ tsp sugar
 ½ tsp salt
 ¼ tsp baking powder
 1 c old-fashioned rolled oats
 5 tbsp vegetable shortening
 ¼ c heavy cream
 Water to mix

Preheat oven to 400°F. Sift the flour, sugar, salt, and baking powder together in a large bowl. Add oats. Add vegetable shortening. Rub the shortening into the flour and oats. Add heavy cream, and stir lightly. Add ice water until dough is pliable but still stiff. Roll out to ⅛ inch thick. Prick dough all over with fork tines. Cut into squares, and place on a greased baking tray. Bake approximately 12 minutes until brown and crisp. Best topped with butter and a dollop of jelly or marmalade or served with Scottish cheeses.

Scotland's rivers, lochs (lakes), and coasts provide some of the highest-quality fish and seafood in the world. The nation is best known for its salmon, trout, herring, langoustines, oysters, and mussels. Scotland's Arbroath smokies (smoked haddock) have been awarded Protected Geographical Indication (PGI) status by the European Commission (meaning the name is legally protected) and are highly sought after by locals and food connoisseurs alike. Several varieties of seaweed, including dulse and kelp, are staples in northeastern coastal communities, as well as throughout the Western Isles, Inner and Outer Hebrides, the Northern Isles, Orkney, and Shetland.

Before the Clearances of the mid-1700s, Highland clans survived by eating venison, game birds, wild boar, and dairy products from their domesticated livestock. They supplemented their diet with wild foods such as nettles and brambles (blackberries) and with the kale, onions, and leeks that families

Pairs of golden brown haddock hanging on metal rods over a barrel of burning hardwood and being smoked in the traditional manner of Arbroath smokies. (Thomas Langlands | Dreamstime.com)

planted in their *kailyards* (garden plots). Today, many Scots still eat venison, both wild and farmed, along with hare and rabbit. Butchers also sell pheasant, grouse, and partridge when these birds are in season, for those who can afford it. Hunting and fishing are both popular sports.

Scotland is also renowned for its domesticated meats, with Scotch beef having been awarded PGI status in 2004. Aberdeen Angus, Scotch Shorthorn, Galloway, and Highland cattle are esteemed breeds, and many of Scotland's roasts and rich stews depend on Scotch beef for their depth of flavor. The nation's highest-quality lamb comes from cross-bred sheep, with Cheviot one of the most important breeds. The southwest is distinguished for its dairy industry, and the by-products of cheese and butter have been used to feed pigs. The distinctive rolled Ayrshire back bacon is created from Great White premium-grade pigs that are raised in part on these dairy by-products.

Up to World War II, many Scots produced their own butter, milk, and cheese, particularly crowdie, a pot cheese still popular in the Highlands. Today, the bulk of Scotland's dairy farming is situated in Dumfries and Galloway, where pastureland is abundant. Artisanal cheese making has been revived due to the efforts of individuals intent on saving or resurrecting Scotland's culinary traditions. Bonchester

and Kelsae cheeses from the Borders; Caboc, a cream cheese from the Highlands; Dunlop from Ayrshire; Dunsyre Blue and Lanark Blue from Lanarkshire; Orkney farmhouse cheeses; and cheddar-style cheeses from the Isles of Mull and Iona are only some representatives of a thriving artisan cheese industry. Ice cream became an established part of Scottish culinary culture in the 19th century when Italian immigrants who settled in Glasgow and Edinburgh sold it first from carts and then from cafés. Scotland continues to be known for high-quality ice cream, and due to the health of their vast dairy herds, ice cream from Orkney, Dumfries, and Galloway is particularly esteemed.

Over half of Scotland's soft fruit comes from Perthshire. Raspberries—considered Scotland's national fruit—as well as strawberries, currants, gooseberries, brambles, and tayberries (a cross between a raspberry and a blackberry) are consumed throughout the United Kingdom. Many Scottish desserts blend soft fruits with cream or crowdie. Much of the country's vegetable production extends south from Lothian, through the Borders and into the southwestern region. The Solway Firth benefits from the Gulf Stream, resulting in milder temperatures. Overall, the Scottish climate lends itself to growing potatoes, onions, leeks, turnips, rutabagas, and cabbages, with these vegetables raised both on industrial and small-farm scales.

Contemporary Scottish cooks showcase the bounty of these native foods while celebrating the Norwegian, English, French, Dutch, and Italian influences that have defined this country's cuisine since the 9th century. The taste for salted, dried fish and mutton, the prevalence of cabbage in many dishes such as *kailkenny* (a savory mashed potato and cabbage dish), and recipes for pickled herring are vestiges of Viking influence, evident in the Northern Highlands, the Hebrides, Orkney, and Shetland. Scottish food also owes much to French influence in both technique and dishes, the result of the Auld Alliance formalized in 1295 when Scotland and France united against English invaders. Hotchpotch (a vegetable soup), for example, is similar in composition and name to the French *hochepot*. Italian restaurants

are among the most popular restaurants in Scotland and have been so for many decades running.

Seasonings remain straightforward and simple if one is preparing traditional Scottish specialties. Mace and nutmeg are used in a variety of sweet and savory dishes, from white sauces to puddings. Salt and pepper are the most frequent spices, with garden herbs such as thyme, parsley, sage, rosemary, savory, and chives gracing any number of dishes. Scots also prefer the sharp-sweet taste of native berries, such as rowan, as an accompaniment to game dishes.

Cooking

Up through the mid-18th century, Scots cooked by boiling food in a pot or baking it on a griddle. They preserved food by salting, drying, smoking, or pickling. Many Scottish foods, including *clootie* pudding (a sweet flour-and-suet pudding boiled in a cloth), porridge, haggis, bannocks, *cullen skink* (dried haddock and cream soup), and *tattie scones* (potato pancakes), continue to be prepared according to these ancient methods. In addition to boiling food in a pot or baking it on a griddle, today's cooks also fry, sauté, braise, grill, broil, and bake foods in an oven, on a cooker, or in a microwave.

In addition to an electric or gas cooker, oven, and microwave oven, a typical Scottish kitchen includes a sink, a refrigerator and freezer combination unit, and sometimes an electric dishwasher. People also use a variety of countertop electrical appliances, including toasters, mixers, blenders, drip coffeemakers, teakettles, and food processors. For those with large gardens (yards), an outdoor barbecue grill is also common.

From the 1990s on, the sale of convenience foods has spiked. The British Council notes that frozen meals, take-out meals, and boxed dinners (such as macaroni and cheese) were worth £11 billion in 2001 and estimated to grow by 33 percent throughout the decade. A wealth of shortcut products, such as pre-washed lettuces and preshredded cheese, have cut the average time that a person may spend preparing a meal down to around 13 minutes. These trends reflect practices in the entire United Kingdom.

Typical Meals

Traditionally, Scottish women were in charge of shopping for food, cooking it, serving meals, and cleaning up. That strict gender demarcation has waned, and in many homes, men are likely to be involved in some or all of these tasks. Contemporary Scottish families often keep diverse schedules, with teenage children and their parents working various shifts and/or involved in an assortment of daily commitments that make it hard for them to cook and eat all of their meals together. Therefore, it is difficult to describe a typical Scottish meal. But there are some commonalities. Most Scots consume three daily meals: breakfast, lunch, and dinner (which might also be called “tea” or “supper”). They likely take a midmorning and midafternoon break for tea or coffee and a snack. Breakfast can range from a substantial meal to little more than a cereal bar, as can lunch. However, most Scots treat dinner as the day’s most important and substantial meal.

Many Scottish families attempt to convene around the table for dinner, where they help themselves to a variety of foods, with meat often the main course and vegetables and a starch such as rice, pasta, or potatoes as sides. Many people end the meal with a sweet as well, perhaps a chocolate, a slice of cake, or a tart. Over the decades, however, as tastes have widely diversified and many Scots have become more health conscious, dinners might no longer feature meat, or meat plays a secondary role. Roughly 5 percent of adults in the United Kingdom identify themselves as vegetarians, with countless more limiting meat in their diets to as little as once or twice a week.

While most people drink hot tea or coffee for breakfast, their lunch and dinner might be accompanied by a wide range of beverages, from water and fruit juices to soft drinks, particularly Irn-Bru, a bright orange soda reputedly flavored with iron. Spirits such as wine and whiskey are more likely to be consumed with dinner than with lunch.

Aside from these general features of Scottish meals, what people eat and when they eat it depends on their tastes, ethnicity (especially recent immigrants),

knowledge about nutrition, age, and affluence. Because of upward mobility and the nature of a global economy, people often move throughout the United Kingdom, and increasingly throughout Europe, on the basis of where they work. Fluidity of movement disrupts or challenges regional customs as well as distinctive regional food traditions. Furthermore, irrespective of geographic location, most Scots have access to a staggering variety and quantity of food, much of it name-brand, prepackaged, and sold in nationally recognized supermarket chains. Seventy percent of Scotland’s food retailing is done in five of these chains.

The following are examples of typical meals of families living in Scotland’s Central Lowlands, a region where the population density is the highest. For those who eat breakfast at home, cold cereal and milk, instant porridge, or toast is common. Orange juice is universally popular at breakfast, as is coffee or tea. Commuters might eat in transit, buying a *buttery* (roll) and cup of coffee or tea, or a breakfast sandwich of fried egg and bacon placed inside a *bap* (a soft floury roll). On weekends, breakfast might be a more substantial affair, with some enjoying a “fry up,” or full Scottish breakfast that includes eggs, bacon, *lorne* sausage (a square sausage slice of minced beef and pork), black pudding, tattie (potato) scones, grilled tomatoes, baked beans, toast, and hot tea or coffee.

Noonday lunch often consists of no more than a sandwich, a Scotch pie (a hot pie of minced beef and gravy), a pizza slice, a salad, a kebab, or a small order of chicken tikka masala (roast chicken curry). Many workers pack a lunch to eat at work, or they order a meal in a work canteen. Others purchase something ready-made from a take-out place or sandwich bar. Occasionally, people make time for a more elaborate restaurant lunch, particularly if the meal involves business. Those remaining at home often pause around noon and eat a sandwich or snack. Primary-school children eat a prepared lunch at their cafeteria, while older children might leave the grounds to find lunch at a take-out shop.

The dinner hour (anywhere from 5 to 7 P.M.) remains an important meal, and families will often

attempt to eat together if possible. Typical meals include minced beef simmered in gravy and served with mashed potatoes and peas, poached salmon with rice and a side salad, grilled sausage with fried potatoes and brussels sprouts, pasta with sautéed mushrooms, a cheese omelet with steamed vegetables, or vegetable-lentil soup and whole-grain rolls. Likewise, a variety of ethnic foods are as typical on a Scottish dinner table as would be more traditional fare, perhaps even more so. Scots often cook or bring in ready-made Asian foods such as stir-fried shrimp, beef pad Thai, or lamb curry. Italian food, such as lasagna, minestrone soup, and spaghetti, is also popular.

Eating Out

As Europe's first industrialized nation, the United Kingdom was also the first to see its traditional culinary customs give way to consumption patterns that ultimately defined other western European nations. Thousands of rural people throughout Scotland migrated to large industrial centers to find work in factories and shipyards, and in doing so they gave up the space, time, and effort necessary to raise and cook much of their own food. In the 19th and early 20th centuries, the streets of Scottish towns and cities were thronged with food vendors selling an extraordinary variety of cheap, filling food, from eel pies to thick slices of steamed currant-studded pudding. Many 19th-century Italian food vendors were so successful selling fish and chips and ice cream that they could leave their barrows and food stalls to build restaurants, cafés, and ice cream parlors. By the 20th century, Scotland had become a restaurant nation, catering to citizens and visitors alike. Of roughly 3,500 restaurants in Scotland, 330 are Italian. Indian and Chinese immigration to Scotland has also made a strong mark on the country's restaurant scene, with over 400 Indian and 350 Chinese restaurants scattered throughout the country.

Scotland's restaurant history has also been influenced by its ties to France. The art of French pastry and confectionery making, the interest that the French have long given to haute cuisine, and the restaurant culture that has defined Paris since the 1700s

have all directly influenced Scottish gastronomy. In the 1800s, Edinburgh was as renowned for its fine bakeries as were Paris and Vienna. Many of Scotland's finest restaurants today champion the nation's abundance of high-quality fresh ingredients by showcasing them in sophisticated dishes that blend Scottish tastes and French culinary technique.

Edinburgh's oldest and most respected pubs and restaurants were initially coach stops that served meals and offered overnight accommodations to travelers. The Grassmarket District houses some of the capitol city's oldest continuing pubs and restaurants, including the White Hart Inn and the Beehive Inn, both from the early 1500s. Glasgow likewise has a famous and established restaurant history, with some of its oldest dining establishments likewise originally coach inns. Sloan's, in Glasgow's city center, was originally Morrison's Coffee House, dating from 1797, and is reputed to be on the site of the city's oldest eating establishment.

While Indian, Chinese, and Scottish-French fusion food are all popular, Scotland's restaurant culture still centers largely around the fish and chip shops, or "chippies" as they are commonly known. Italian and Jewish immigrants often established themselves in Scotland by mastering the art of frying haddock and cod in batter alongside thick wedges of potatoes. The "fish supper" (fried fish, chips, a side of mushy peas) remains for many Scots the most common and popular fast food, and several chippies have become internationally famous. Chippies also sell black and white puddings, Scotch pies, sausages, and, more recently, deep-fried Mars bars. Also very popular are Chinese and Indian take-out places and kebab stands.

Tourism enhances the Scottish restaurant business. Many hotel restaurants have become chief purchasers of traditional Scottish foods, such as oysters, mussels, and venison, that had in earlier times been produced almost exclusively for export. Creative Scottish chefs champion all manner of Scottish foodstuffs, and their consistent purchase of locally prepared gourmet cheeses, sausages, ice creams, and other specialty items in turn helps a now-thriving culture of farmers' markets and a cottage food industry.

Special Occasions

Scottish holidays and special occasions often involve an abundance of food. Scots' generosity toward their guests harkens back to the days of clans, when chieftains plied visitors with food, drink, and good will. The most important holiday is Hogmanay, or New Year's Eve. Prior to the street parties leading up to the New Year, many Scots eat a celebratory dinner with friends and family. No one dish stands out as traditional, but the time of year lends itself to hearty dishes such as steak pie or lamb stew. Shortbread, oatcakes, an array of cheeses, smoked salmon, and rich puddings are often also on offer. Wine, whiskey, and ale are popular libations. "First footing" (meaning the first person to step over the threshold) occurs after midnight and lasts into the New Year. Many communities still hold to the tradition of considering it good luck when a dark-haired male is the first through their door, bearing gifts of shortbread and whiskey.

Although Christmas was not traditionally a significant holiday, it is now one of the most popular. Christmas dinner often includes roast turkey, "kilted pigs" (*chipolata* sausages wrapped in bacon), dressing, mashed potatoes and gravy, and a variety of side dishes, perhaps *clapshot* (potatoes and turnips layered or mashed together), as well as buttered kale. Mince pies, fruitcake, gingerbread, and plum pudding are English foods also associated with the Scottish Christmas feast.

Burns Night, on January 25, is another important Scottish holiday. Started in 1801 to commemorate the birthday of Scottish poet Robert Burns, the holiday quickly built momentum and is currently celebrated worldwide by Scots, who pay homage to Scotland and its most famous bard. Upon being seated for supper, someone is selected to read Burns's "Selkirk Grace": "Some hae meat and canna eat, / And some wad eat, that want it, / But we hae meat, and we can eat, / Sae let the Lord be thankit." The first course is a Scottish soup, perhaps cock-a-leekie (chicken, leeks, and prunes) or a Scotch broth of lamb neck meat, barley, dried peas, onions, leeks, and root vegetables. After the soup is cleared and side dishes of *bashed neeps* (mashed turnips) and

champit tatties (creamed potatoes) are placed on the table, it is common for a piper to "pipe in" the haggis with bagpipes. The host then recites Burns's "Address to the Haggis," after which he plunges a knife or dagger into the steaming pudding, cutting the shape of St. Andrew's cross in the top. A celebratory sweet, typically cranachan, ends the supper. Whiskey is the beverage of choice, as guests make toasts and recite favorite poems by Burns. Restaurants, fraternal organizations, and individual families throughout Scotland participate in this event, with butchers taking orders for haggis several weeks in advance of the supper itself.

Cranachan

- 1/3 c medium oats
- 1 1/4 c heavy cream
- 1/4 c heather honey (warmed)
- 5 tbsp whiskey
- 6 oz fresh raspberries

Toast oats on a heavy baking tray for roughly 8 minutes at 400°F until lightly toasted. Cool and set aside. Whip cream until soft peaks form. Slowly add honey and whiskey as the cream thickens. Fold in the oatmeal. In four parfait glasses, put a tablespoon of raspberries at the bottom, add the whipped cream mixture, top with some more raspberries, and finish

A Burns Night supper of Cock-a-leekie soup, eel pie, smoked salmon and shortbread cookies. (Paul Cowan | Dreamstime.com)

off with more whipped cream and raspberries. Chill thoroughly.

While Burns Night is celebrated throughout Scotland, Up-Helly-Aa is Shetland's most important holiday, replete with traditional Shetland foods. This midwinter celebration is held in Shetland's capital, Lerwick, but communities throughout Shetland hold their own smaller festivals. Up-Helly-Aa involves burning a life-size wooden replica of a Viking longboat, thus commemorating Shetland's Nordic heritage. The blaze begins roughly at 8 P.M., after 800 or so local men dressed as Vikings proceed through the street carrying the boat to the town center. "Attending the halls" takes place after the burning, when residents and tourists alike go to the many parties for feasting. *Reestit mutton* (a dish of dried, reconstituted mutton), homemade mutton soup, Shetland bannocks, and oatcakes are common fare.

Weddings and birthdays are influenced by English as well as western European traditions and customs. Cake is the most important food for both events, with candles placed on top of a birthday cake to symbolize the celebrant's age. Wedding cakes are often white with white icing, although the bride and groom's personal preferences now take precedence over tradition. Because of earlier United Kingdom laws that stipulated a couple marry before noon, the wedding reception is still often called the wedding breakfast, irrespective of the time of day it occurs. Along with cake and champagne, many couples offer their guests a lavish buffet or a sit-down banquet. The bride and groom might choose to invite their families and friends to partake of the loving cup, or *quaich*, as it is called in Gaelic. Whiskey or wine is poured into the large two-handled bowl or cup (often a family heirloom), and a minister or friend blesses the couple, who drink from the cup first, and then the families and guests, who pass the quaich and take a sip in honor of the couple.

Diet and Health

A strong social welfare system ensures that few in the United Kingdom go to bed hungry; however, a lack of education, cooking skills, and limited

access to affordable, healthy food does mean that a significant portion of the population suffers from malnourishment. The government estimates that in 2005, 30 percent of patients admitted to hospitals or nursing homes were clinically malnourished. In Scotland specifically, eating habits are the second major cause of poor health after smoking.

Scotland's early industrialization not only made it more difficult for people to grow, store, and cook their own food but also altered people's understanding of their relationship to the land. The vestiges of that legacy are evident in the Scottish love of take-out, restaurants, and ready-made meals and in their penchant to eat quickly. An alarming number of Scots give set mealtimes or well-balanced meals little, if any, priority. People simply eat when they are hungry; they eat what tastes good, what is cheap, and what is readily available. While 40 percent of

In front: homemade pickled vegetables with carrot, cucumbers, peppers, cauliflower, and horseradish. Behind: red peppers in mustard and chopped roasted red peppers. (Goran Andjelic | Dreamstime.com)

the Scottish population consumes fried food two or more times a week, a mere 10 percent eats whole wheat bread. Soft drink consumption has also gone up for both men and women. Younger Scots might have no more than a quick juice-type drink for breakfast, a package of crisps and a sausage for lunch, and a microwaved Scotch pie with chips for dinner, again with a soft drink or a beer.

An aggressive effort is underway to educate the public about the dangers of malnutrition and the importance of eating vegetables, fruit, lean meat, and whole grains. The 1991 white paper, "Towards a Healthier Scotland," has set a number of goals aimed at stopping Scotland's rapidly increasing obesity and incidence of type 2 diabetes, including doubling its citizens' intake of whole-grain breads, whole-grain breakfast cereals, and consumption of fruits and vegetables.

Serbia

Overview

The landlocked Republic of Serbia is located in central Europe on the Balkan Peninsula, bordered by Hungary to the north, Romania and Bulgaria to the east, the Republic of Macedonia to the south, and Croatia, Bosnia and Herzegovina, and Montenegro to the west. Serbia has had a tumultuous history punctuated by foreign invasions, economic instability, political battles, and disputed land battles between Serbia and other former Yugoslavian states including Kosovo and Montenegro. On June 5, 2006, Serbia claimed independence, and, consequently, the state of Yugoslavia was dissolved.

Serbia has an estimated population of 11 to 12 million people; however, all data dealing with population are subject to considerable error due to the dislocations caused by military action and significant political instability. In mid-2003, Serbia's population was estimated at 10.5 million people, with 50 percent residing in urban areas and 40 percent living within rural areas. Serbia has an ethnic Serb majority with the country's population also including substantial minorities of Hungarians, Roma, Albanians, and Bosniaks. There is also a substantial number of refugees and internally displaced persons, many of them ethnic Serbs from the former war zones of Croatia, Bosnia and Herzegovina, and Kosovo. Belgrade is the capital of Serbia and is the largest city in the country, with an estimated population of 1.5 to 2 million. It takes its name, which translates as "white fortress," from the large stone walls that enclose the old part of the city. It is in the north of the country, on a cliff overlooking the meeting of the Danube and Sava rivers.

Consistency and growth in food production, processing, and distribution and in food-safety control are real challenges in the process of Serbian economic development, with the food industry making up 60–80 percent of primary agricultural production; the favorable natural and climatic conditions represent a solid basis for agricultural development. Climate and geography have a significant influence on Serbian food production. Serbia has a continental climate of cold, dry winters and warm, humid summers with well-distributed rainfall and a long growing season, as well as mountainous terrain. This facilitates extensive cereal production as well as fodder crops to support intensive beef and dairy production. The fertile plains of Vojvodina supply much of the nation's grain and sugar beets, while the hilly central areas of Serbia specialize in dairy, fruit, and livestock. Key foodstuffs include grain, cotton, oilseeds, maize, sugar beets, wheat, potatoes, chicory, grapes, plums, vegetables, tobacco, olives, rice, and fodder. Livestock include sheep, cattle, and goats.

Food Culture Snapshot

Bojan and his wife, Ljiljana, have been married for 14 years and live in the town of Novi Sad, near the Danube. Bojan works as a policeman, while Ljiljana, like the majority of Serbian women, is responsible for all domestic duties, including cooking.

Breakfast is usually taken early, around 6–7 A.M. Before breakfast Bojan and Ljiljana will almost always have a black coffee called *Turska kafa*. With breakfast they will have either tea, milk, or juice and *rakija* (clear

spirits)—both of which are homemade and in which Ljiljana takes great pride. These accompany several pastries or bread served with butter, jam, yogurt, sour cream, and cheese, accompanied by bacon, sausages, salami, scrambled eggs, and *kajmak* (clotted cream).

Ljiljana prepares the family lunch between 10 and 11 A.M. Lunch predominantly consists of three courses—soup, a meat-based dish, and a dessert, which in most cases will be a baked cake or pastry such as *baklava*. Dinner is eaten between 8 and 10 P.M. and consists of many of the same foods eaten at breakfast, unless, of course, dinner is a celebration, in which case Ljiljana and her husband will prepare a proper meal (similar to that taken at lunch).

Major Foodstuffs

The swift collapse of the Yugoslav federation has been accompanied by bloody ethnic warfare, the destabilization of republic boundaries, and the breakup of important inter-republic trade flows, resulting in serious impingements on the development of a sustainable food industry in Serbia. Consequently, current food production in Serbia is variable, closely following fluctuations in political and economic stability. Largely, Serbian food-production levels meet both direct consumption and demand from the food-processing industry, with sufficient surpluses to allow for exports. However, the low standard of living and purchasing power of the Serbian population prevent significant growth in demand for agricultural products and foodstuffs.

Despite impingements on growth, the agri-industries represent one of the most important economic footholds in Serbia, accounting for approximately 35 percent of the gross domestic product in 2005, with agricultural production at 14.5 percent and the food-processing industry at 20 percent. Crop production dominates the gross agricultural product (58%) with livestock production at 42 percent.

With well-distributed rainfall, Serbia has a long growing season for the production of fruit, grapes, and cereals as well as for livestock and dairy farming. The fertile plains of Vojvodina produce 80 percent of the cereals and most of the cotton, oilseeds,

and chicory; Vojvodina also produces fodder crops to support intensive beef and dairy production.

Cooking

Serbian cuisine is largely heterogeneous with heavy Mediterranean (Byzantine/Greek), Oriental (Turkish), and Hungarian influences. The cuisine is varied because of the turbulent historical events influencing the food and people, with each region having its own subtle peculiarities and differences in traditional dishes.

A number of foods, notably pickled fruits and jams, are made at home in Serbia. Accompaniments such as *rakija* (fruit brandy), *slatko* (fruit or rose petal preserves), jams, jellies, various pickled foods (notably, *kiseli kupus*, or sauerkraut), *ajvar* (eggplant and pepper relish), and even sausages are all homemade.

Different dishes made with beans are popular, as well as peppers and sour cabbage (sauerkraut) leaves stuffed with ground meat, rice, and spices (*sarma*). There are various salads: The most popular, *srpska*, is made of tomatoes, peppers, onions, and dressing; the variation with cheese is called *sopska*. *Pitas* are made with many fillings, salty or sweet, the most common sort being *gibanica* (pita leaves filled with cheese, cream, and eggs); those filled with paprika, cheese, and sour milk (yogurt) are also a popular cooking choice both at home and in local restaurants. Peppers are a common ingredient in many dishes.

Meat is eaten in all forms (boiled, fried, roasted), in many kinds of dishes. Traditional sausages and meat-based dishes are made of pork, beef, mutton, kid, or chicken, all of which Serbs prefer roasted on a spit. Fish is also popular, and regions along the Danube are famous for their fishermen's pots (*alaska corba*).

The national dish, called *cevapcici*, is a small meat patty, highly spiced and prepared on a grill. Other Serbian specialties include *proja*, a type of cornbread; *gibanica*, a thin, crispy dough often filled with cheese and eggs; *sarma*, cabbage leaves filled with meat; and *djuvec*, a vegetable stew. *Pita* (a type of strudel) and *palacinke* (crepes) are popular desserts. After a meal, coffee is prepared in the Turkish

style, boiled to a thick, potent liquid and served in small cups.

Family meals play an important social role in Serbian culture, with food preparation having a strong part in Serbian family tradition. Families, depending on their economic standing, will pay between 8 and 40 dollars per day on food, and the women are generally responsible for preparing meals. Food preparation often involves daily trips to the markets, with many families visiting markets after 11 A.M. to find cheaper foodstuffs, before the markets close.

Families and friends use the meal as a celebration feast and an opportunity to exchange ideas, celebrate friendships, and often sing traditional Serbian folk songs. Daily meals are often improvised in a simple manner, with lunch (the main meal) consisting of maize bread and cottage cheese, and two or three types of pork sausages with peppers, onions, and boiled eggs. Slatko and sweet bread is also common.

Celebration meals or meals for special occasions tend to be copious and consist of numerous dishes from entrée-style soups in winter to cabbage salads during summer or the sopska salad—a salad of tomatoes, cabbage, and cheese. Main dishes generally consist of grilled meats cooked on wood fires and fish such as carp, perch, and trout from the rivers of Serbia.

Typical Meals

Serbian cuisine is heavily influenced by Greek and Croatian cooking. Despite these strong influences, Serbian food items and dishes have evolved, achieving their own culinary identity. Food preparation is a strong part of the Serbian family tradition. Serbia has its own gastronomic tradition founded in processing of milk into white cheese and kajmak (a kind of cream cheese similar to clotted cream). Other specialties include *proja* (cornbread), *kacamak* (corn-flour porridge), *gibanica* (cheese and kajmak pie), *prsuta* (local smoked ham), *čvarci* (cracklings), and *pihtije* (meat aspic). Staples of the Serbian diet include bread, meat, fruits, vegetables, and dairy products.

The majority of Serbians consume three meals daily, breakfast, lunch, and dinner, with lunch being

the largest, following Mediterranean fashion. In rural areas, up to five meals are consumed particularly during the exhausting summer work in the fields. Breakfast generally consists of eggs, meat, and bread, with a dairy spread called kajmak. Lunch is the main meal of the day and usually is eaten at about 3 P.M. in the afternoon. A light supper is eaten at about 8 P.M.

Serbs eat a lot of wheat bread, made with or without yeast. Bread is the basis of all Serbian meals and is part of everyday meals as well as special celebrations and when hosting guests. Although pasta, rice, potatoes, and similar side dishes have entered everyday Serbian cuisine, bread is still served with these meals. Bread is often made in the home or purchased from bakeries and shops; making bread at home using barley, millet, and rye is more common in Serbian rural households. A traditional Serbian welcome is to offer guests bread and salt. Bread also plays an important role in religious rituals. Some people believe that it is sinful to throw away bread regardless of how old it is.

The national food of Serbia is *cevapcici*. This caseless sausage is made of minced meat, which is grilled and seasoned. Many Serbian dishes comprise various sorts of meat such as lamb, pork, and veal.

Cevapcici (Sausage)

- 1 lb minced lamb
- 1 lb minced pork
- 1 lb minced veal
- 3 cloves fresh garlic, peeled and finely chopped
- 1 large onion, peeled and finely chopped
- Salt to taste
- 2 tbsp freshly ground black pepper
- 3 tbsp hot Hungarian paprika or sweet paprika
- 1 tsp freshly grated nutmeg

Mix together lamb, pork, veal, garlic, chopped onions, salt and spices until thoroughly combined. Roll meat mixture into a long, $\frac{3}{4}$ -inch cylinder. Cut links at 4-inch intervals. Or you can use a sausage extruder. Place on a plastic wrap-lined plate, cover

with more plastic wrap, and refrigerate for 1 hour to firm. Panfry in a large nonstick frying pan for 8 minutes, turning frequently until brown on all sides. Serve with yogurt sauce.

Yogurt Sauce

1 pt plain yogurt

Juice of 1 lemon

½ cucumber, peeled, grated, and drained for 1 hour

2 cloves fresh garlic, peeled and crushed

Salt and white pepper to taste

Combine all yogurt ingredients in a bowl. Serve immediately with *cevapci*.

Eating Out

Dining out in Serbia is considered a serious opportunity for social bonding and a feast, with Serbs having a strong passion for eating meat in as many ways as they can think of cooking it. A typical restaurant meal might begin with *kajmak*—a salty cream cheese spread—on bread. This is followed by smoked meats such as ham and meat preserves such as jellied pork and garlic. For the main course, the most popular dish is meat patties, grilled and served with onion and mixed vegetables. This is usually accompanied by vegetable dishes such as chopped tomatoes with onion and cheese. Fish dishes are rare and are significantly more expensive given that the fish has to be brought in from the coastal regions. Dessert is usually a choice of fresh fruit, sweet pastries, and cakes.

Special Occasions

Food plays a central role in the cultural life of Serbians, particularly during ceremonial occasions such as Christmas, Easter, religious holidays, and weddings. The Christmas feast is an elaborate occasion. On Christmas Eve, people eat Lenten foods (no meat or dairy products) and drink hot toddies

(warm brandy with honey). The following day, the meal generally consists of roast pork and a round bread called *cesnica*. On Krsna Slava, a family's patron saint's day, another round bread, called *kolac*, is served, as well as *zito*, a boiled, sweetened wheat dish. For Easter, boiled eggs are a traditional food. The shells are dyed and decorated in elaborate patterns.

“Wedding feast cabbage” is a special dish consisting of large chunks of cabbage mixed with many different kinds of meat and spices, which is boiled for many hours. On feast days or special celebrations an abundance of different dishes are prepared and can include cheese, *kajmak*, boiled eggs, and ham (smoked or dry), which are all served as starters. These dishes may be followed by soups such as the famous Backa soup, which is made with four kinds of meat. Vegetable dishes made of string beans, potatoes, and cabbage are very popular. Dessert includes a variety of cakes accompanied by *slivovica* (plum brandy), served hot or cold depending on the season; local wines; homemade fruit juices; and coffee.

Diet and Health

Since the early 1990s Serbia has undergone considerable demographic, economic, and nutritional transitions that compromised the population's food supply, especially for low-income socioeconomic groups. Reliable food production, processing, and distribution and food safety are real challenges in the development of the Serbian economy. Consequently, during the last decades many demographic, social, economic, and political changes influenced the food supply as well as dietary patterns in Serbia and resulted in a nutrition transition with an increase in the number of noncommunicable diseases. These have been the leading causes of morbidity, disability, and mortality for decades. The available data clearly indicate that smoking, hypertension, and physical inactivity as well as obesity are responsible for the greatest mortality burden, contributing 5.5 percent of total years of life lost in males and 7 percent in females. Diet represents one of the most relevant lifestyle risk factors contributing to the double burden of diet-related noncommunicable

diseases. Overweight and obesity represent important public health challenge in Serbia.

Prevention of nutrition-related disorders is one of the major concerns of the Ministry of Health. There are several health-promotion and prevention programs in which regulation of body weight is an important issue; therefore, prevention of overweight and obesity is included as one of the high-priority objectives. According to the findings of the 2006 Serbian Health Survey, based on the body mass index (BMI), 38.3 percent of adult Serbians had an optimum body weight, while one in two adults in Serbia was overweight or obese (54.5%), with 36.2 percent categorized as pre-obese and 18.3 percent as obese.

In 2005 the Ministry of Health set up an expert task force to develop the “Nutrition Action Plan for the Republic of Serbia.” Key objectives of this action plan with respect to diet and health include ensuring a safe, healthy, and sustainable food supply and promoting healthy nutrition for all age groups. The key focus is to stop the increasing tendency toward obesity in children and adolescents, to eliminate micronutrient deficits across the population, and to monitor dietary habits.

The most frequent intestinal infectious diseases in 2006 in Serbia were diarrhea and gastroenteritis (44.55%) followed by bacterial intestinal infections (26.51%), bacterial alimentary intoxications (12.06%), and salmonellosis (9.41%)

Slovakia

Overview

The Slovak Republic has the unique distinction of being the geographic center of Europe and one of its youngest countries. Roughly halfway between the North Sea and the Urals, the Mediterranean and the Arctic seas, this country has had many different political borders and has been influenced politically and culturally by both eastern and western Europe.

A tumultuous political existence has strengthened cultural markers in the region. The Slovak nation, whether recognized politically or not, has a strong connection with language, cuisine, and religion. Slovak foodstuffs and cooking are upheld and cherished as an emblem of its people and deeply tied into folk sentiments. As the country is increasingly integrated into the European Union, the foodscape is also rapidly changing. This “meat-and-potatoes” cuisine is being supplemented with imported foods through the marketing and Western supply chains of multinational food retailers.

Slovakia’s high mountains extend across its northern border with Poland. The Danube River forms the border with Austria. The Czech Republic borders Slovakia in the northwest, and the Ukraine in the east. The southern low hills and plains that border Hungary offer rich farmland for raising livestock and growing grains as well as for a strong regional viticulture.

The Slovak Republic has been a parliamentary democracy since 1993, when it broke with the Czech Republic following the Velvet Revolution in 1990. Due to conservative leadership following the breakup, Slovakia was slower to warm to relations

with western Europe. Not until a pro-Western government was elected in 1998 did Slovakia start to track into becoming a member of the European Union. The country joined the European Union in May 2004; it has been a member of the Schengen area since 2007 and adopted the Euro at the opening of 2009. The opening up of the borders to the West has rapidly changed the foodscape. More Slovaks are commuting across borders, more students are traveling to the West to study, and more foreign workers are moving into the small country. As such, the foodstuffs that are available and being consumed are becoming more similar to those of western Europe.

While the larger cities in western Slovakia are becoming more cosmopolitan, the remote and inaccessible mountain towns remain set in traditional foodways. In central Europe, Slovakia has the most people living in rural areas. Forty-five percent of the people live in towns of 5,000 or less, and 14 percent in villages of 1,000 or less. Many Slovak dishes are tied to folk traditions of the rural regions, which are celebrated with performances of song and dance troupes in traditional dress. Regional dishes are served, such as stuffed cabbage rolls from the east, Hungarian goulash from the south, and schnitzel from the west.

Slovakia is ethnically uniform with 85.5 percent considering themselves Slovak, 9.7 percent Hungarian, 1.7 percent Roma (although some estimates put that number closer to 10%). The country is 69 percent Roman Catholic and 9 percent Protestant. There are 3,000 Jews who still remain in the country, reduced from a population of approximately 120,000 before World War II.

Each cuisine is tied closely to ethnicity. The birth of the Slovak consciousness was tied up in the revolutions in the mid-19th century. Pan-Slavism was a dominant philosophy at the time. Aiming to rebel against the Hungarian political influence, religious leaders, philosophers, and poets helped to codify the Slovak language through literature, song, religion, and other cultural markers. Cuisine is a cultural marker by which Slovaks have also made themselves ethnically distinct.

🍴 Food Culture Snapshot

Katerina and Martin Jurov live in a village of less than 1,000 people in the central southern hills of Slovakia. Martin works as a wine inspector for the government among the local vintners in the wine-growing region. The couple owns a single-family home sitting on approximately one acre of land.

Katerina's food sources come from a combination of products grown at home, grown by her friends and

A man makes wine using a traditional method in Slovakia. (Shutterstock)

neighbors, purchased in the small village market, and purchased in a large supermarket about 15 miles away. The Jurovs have a large vegetable and fruit garden as well as a small barn where they raise a few pigs a year. Their sons live in the capital, Bratislava, and in the United States. Katerina spends time in both places and eats a wide range of food from around the world, but she likes traditional Slovak meals, too.

Major Foodstuffs

Slovak cuisine is extremely seasonal and follows the harvest through the winter months with different foodstuffs. Using simple ingredients many hearty dishes are made that are appropriate to the season. For example, in the northern hills people gather mushrooms and dry them to add to soups throughout the year. Beets, peppers, peas, and cucumbers are popular vegetables.

Local fruits, such as apricots, walnuts, cherries, Italian plums, and apples, are abundant in farmers' markets during the harvest. Imported fruits are very popular as many people remember the managed food systems under Communism, which deprived people of tropical fruits throughout the year. Today, these fruits, such as pineapples and mandarin oranges, are cherished and eaten year-round.

Although the number of vegetarians is growing, meat and poultry are still nearly ubiquitous on the dinner plate. Beef, turkey, lamb, and chicken are popular, but pork makes the most regular appearance on the plate. The sausage, *kolabasa*, is used in soups and served with brown bread as pub fare. Roasted pork is served with stewed stone fruits and dumplings, and ham is a common topping on pizza. Bacon is also a common topping for dumplings and *pirogues* (stuffed dough pockets). It is also served in breakfast breads like *pagačik*, which is made from lard and bacon bits.

Staple starches are potatoes, rice, and wheat breads. Potatoes are used in dumplings, soups, and *latkes* (a fried potato pancake). Rice is not native to the country, but it is very popular. It is served beside roasted meats and usually prepared with *Vegeta*, a spice mixture made of onion, garlic, parsley, and chicken

flavoring. Wheat is found in pastas and breads in the region. Brown and rye breads are served with sausages and soups, but a dietary staple is *roshky*. These are small, oblong-shaped buns made from bleached white flour. They are served beside cold meats or are stuffed with hot dogs for snacks.

Fats used in Slovak cooking are mostly canola oil, lard, and butter. While lard was the traditional fat, many health-conscious cooks have turned to olive oil and other healthier fats in their cooking.

Slovakia produces a wide variety of regional cheeses. Cheeses have become an important folk-heritage item for which producers have gained political protection under European Union geographical status. The most popular of these cheeses are *bryndza* and Slovensky Oštiepok, a smoked sheep's cheese. A popular dish is *vyprazene syr*, or fried cheese. This is a small block of hard cheese such as Gouda that is breaded and deep-fried and served with sauce.

Cooking

Home processing is still widely practiced to preserve the flush that a harvest brings. Many city dwellers have weekend cottages with small kitchen gardens, and rural villages are composed of single-family homes with large yards. The produce from these kitchen gardens is seasonally consumed as well as preserved as jams, pickled vegetables, smoked meats, and alcohol. Equipment for preserving and processing foods is kept in these weekend homes.

Slovaks have a few pieces of equipment that are essential to traditional cooking. When the American company Kmart opened in 1993 in downtown Bratislava, the company allocated three yards of space to displaying meat grinders to accommodate Slovak cooks. They also carried special tools to grind poppy seeds and nuts for filling pastries. A special *halušky* strainer to make the small potato/wheat dumplings is also unique to the region.

Vegetables were traditionally processed or pickled for consumption, but with the rise in Western retailing, many vegetables and salads are now served fresh. Most meals in restaurants are served with some shredded cabbage with vinegar, a radish, and some corn.

Slovaks are very careful to not waste food, and processing fruit into alcohol is another means of preserving excess food. *Slivovica* and *jablakovica*, eaus de vie from plums and apples, are the most commonly made liquors. Despite being illegal, many distilleries exist in private homes. Some towns have set up local distilleries for people to process their own mash. Furthermore, in the western hills, the people make homemade wine, usually in soda bottles, to be consumed at everyday meals. Although home beer brewing is not as common, manufactured Slovak beers are popular at home and in pubs.

In the ethnically Hungarian south, the dishes are spicier, with hot paprika adding heat. Goulashes, pepper salads, and Tokaj wine are common. Although Hungary has the reputation as the major wine producer in the region, the Tokaj wines produced in the Hungarian areas of Slovakia are rivals to those of the southern neighbor. This is a white wine with a distinctly musky sweetness.

The Roma (Gypsy) population has a cuisine that is difficult to describe as the Roma exist in several different economic strata within the Slovak state and have very diverse eating habits. Most Roma live in various states of poverty. Slovakia has had a dubious human rights record in its policies aimed at the Roma populations, and this ethnic group tends to be underrepresented and given little attention in official reports. Some Roma families are fully assimilated to the foodways of modern Slovakia, shopping, eating, and celebrating within the mainline traditions, but some settlements in underdeveloped Roma villages in the east do not have modern kitchens. The cooking is done mostly in a pot over an open fire with cabbage, potatoes, and roasted meats as dietary staples, supplemented by fresh fruits and sweetened tea.

Typical Meals

Breakfast starts early, with hot coffee and tea served with cold cereals, muesli, bread, butter, and ham. Lunch is the largest meal of the day, and it is customary to take this in two courses. Soup is served as a first course followed by a larger plate with a meat, a starch, and maybe a vegetable. It is common

Traditional Slovak food—dumpling (halusky) with sheep cheese (bryndza), bacon, chives, onion, and Zincica. (iStockPhoto)

to sit together as a company or a group to take the meal. Dinner is smaller and consists of only a bowl of soup or a sandwich served around seven or eight in the evening.

Slovaks have an unofficial national dish, *bryndzové halušky*, which is tied into the shepherding traditions of the mountainous north. This dish is composed of dumplings made of potato and wheat flour, topped with lardoons (small strips or cubes of pork) or bacon, onions, and an unpasteurized sheep-milk cheese, bryndza. This cheese won European Union geographical status in 2008 as a regional food of Slovakia.

Bryndzové Halušky (Dumplings)

Serves 4

Ingredients

2 lb russet potatoes

⅓ c milk

2 eggs

1 tsp salt

1 c flour

½ lb bryndza cheese (or feta)

½ lb bacon or lardoons, cubed

1 tbsp oil

Equipment: Large pot, wooden cutting board or specialized halušky strainer

Boil water in a large pot.

Peel the potatoes, and grate them into a bowl. Mix with milk, eggs, and salt. Add flour in spoonfuls until a stiff dough forms, and knead into a ball.

Method 1: On a wet cutting board spread out dough. With a knife cut off small ½-inch pieces into the boiling water.

Method 2: Push dough through a halušky strainer into boiling water.

Boil for 4–5 minutes, until the dough comes to the surface. Scoop the dumplings out of the water. Fry the bacon until crisp. Caramelize the onion. Top dumplings with bryndza cheese, bacon, and onions.

Eating Out

The restaurant culture died during the 75 years of Communism, but it is growing back at a fast pace. Although Slovakia has a number of pubs and restaurants in many towns, it is uncommon for families to go out to dine together. The family meal is usually eaten at home. People will congregate with friends and coworkers to go to a pub or a restaurant.

Today, the streets of Bratislava are lined with Mexican, Italian, Chinese, and vegetarian choices catering to the many tourists and business travelers to the city. But smaller towns may have only a pub, which will serve a simple meal. All of this is changing with rapid globalization. With the opening of the borders, the migration of its peoples, and integration of Western supermarkets, there will be a lot more change to come into the region in the future. But for now, the foods and foodways of the Slovak republic are tied to the rich traditions of a people attached to their mountainous home.

Special Occasions

Celebrations and banquets in Slovakia are multicourse sit-down dinners. Weddings are large affairs with the celebration lasting all day into the next morning. It is traditional for a family to have

a special pig slaughter for the occasion, preparing sausages for the guests.

The Slovak Christmas is similar to that of its northern neighbors in the Czech Republic. A traditional carp meal will start at the Christmas market, where the family will buy a 10–20-pound carp from a pool in the market. The fish is then kept in the bathtub for several days before Christmas Eve, when it is then roasted or fried and served with potatoes and *kapusnica*, a spicy cabbage soup. Dessert is *vianočka*, a braided yeast cake.

Kapusnica

Serves 10

- 2 tbsp lard
- 2–3 medium onions, diced
- 1½ lb fresh pork (a fatty cut), cubed
- 2 tbsp sweet paprika
- 1 tsp caraway seeds
- 1 small ham hock
- 2 lb sauerkraut
- 2 8-in. kolabasa (Polish sausage), sliced into small rounds
- 3–4 garlic cloves, pressed
- 1 full handful dried mushrooms
- 10–12 prunes
- 2 diced apples
- 2–3 grated potatoes

1. In a large pot heat the lard over medium heat until it melts. Add onions. Cook until translucent.
2. Add fresh pork with paprika and caraway. Cook until the meat is browned. Cover with water, add the ham hock, and simmer for ½ hour.

3. Add sauerkraut and cook another 15 minutes.
 4. Add kolabasa, garlic, mushrooms, prunes, and apples, and simmer for 1 hour.
 5. Add potatoes, and cook another 15 minutes until soft.
 6. Serve this immediately, or let it sit for a day while the flavors fully develop. Serve with warm rye bread.
-

Many Slovak families in villages or with ties to villages have performed a *zabjiacka*. In this ceremony, a family or community comes together to slaughter a pig. The whole animal is used. The fresh meat and tenderloin will be eaten in the coming days, but smoked sausages made from the pig, as well as the lard, can sustain a family for months. These ceremonies take place during the late fall and winter so the slaughter can be done outside without the need for refrigeration.

Slovenia

Overview

A part of central Europe, the Republic of Slovenia is situated at the crossroads of the Alpine, Pannonian, and Mediterranean areas. Prior to its independence in 1991, it had been a part of the state known for decades as Yugoslavia. The current population of Slovenia amounts to 2,053,740 people inhabiting an area of about 7,722 square miles (20,000 square kilometers). With over 90 percent of its population being Slovene, Slovenia is not a multicultural country. Autochthonous Slovenes also live in the neighboring countries of Italy, Austria, and Hungary; about 500,000 Slovene immigrants live in other parts of the world. Since 57 percent of the population is Catholic, 2.3 percent Serbian Orthodox, and 2.4 percent Muslim, religion does not play a key role in the life of many Slovenes.

In the first half of the 20th century, Slovenia was predominantly agrarian, with most of its population living in the countryside and tilling the land. Larger towns were scarce. Although the gradual industrialization after World War I changed this situation to a certain extent, 66 percent of Slovenes still worked in agriculture in 1921. At present, their number amounts to only around 4 percent.

Food Culture Snapshot

Marko, Alenka, and Tina Novak are the members of a Slovene family living in Ljubljana, the capital of Slovenia. Marko and Alenka are university graduates, while their 14-year-old daughter Tina is in the ninth grade. At approximately 7 A.M. the family meets for breakfast. The first common meal of the day, breakfast is

usually prepared by Alenka. It consists of bread or toast spread with butter and jam, or with honey, and occasionally the bread is eaten with salami and cheese. Tina usually eats muesli, cornflakes, or another cereal with milk or yogurt. While the parents drink coffee with milk, the daughter drinks fruit tea or juice.

Between 10 and 11 A.M., each family member eats a light meal. Marko and Alenka eat at their workplace, and Tina, like all students, eats a school lunch. This meal usually consists of a sandwich or a roll with yogurt, milk, or juice. Sometimes they also eat a piece of fresh fruit such as an apple, a pear, or an orange.

The principal meal in Slovenia is lunch. After returning from work and from school, Marko, Alenka, and Tina have lunch together, which generally takes place around 3:30 or 4 P.M. It is mostly prepared by Alenka, with occasional assistance from Marko and Tina. Lunch is made up of several warm courses. Many times it starts with a vegetable, beef, or chicken soup. The main course usually consists of either pasta with meat or vegetable sauce; potatoes with fried meat or with cutlets and gravy; or risotto with chicken meat or with mushrooms. Consumed simultaneously with the main course, the most common salad is made with lettuce or with radicchio; in the summer, the salad can be made from tomatoes, cucumbers, or green peppers while in winter it is mainly made from sauerkraut or pickled garden beets. Lunch occasionally ends with fruit or with dessert such as ice cream, fruit salad, or pudding topped with whipped cream.

In Slovenia, dinner is a less important meal than lunch. Each member of the family usually eats it separately, mostly around 8 P.M. Dinner customarily does not consist of warm dishes; instead, it is often bread

with different spreads or with cheese, ham, or salami, combined with tea, fruit, or yogurt. Alenka occasionally prepares foods from her childhood that are very popular with her family: milk rice or groats; cornmeal with milk or coffee substitutes; pancakes with jam; or *Kaiserschmarrn* (a light, eggy pancake, shredded and served with fruit preserves).

In recent years, the family has tried to eat more wholesome foods. Marko frequently buys foodstuffs, particularly vegetables and fruit, in an open-air market where vendors sell their organically grown food. Family members eat less sugar, especially white sugar, and less animal fats. Dishes are often prepared with olive or rapeseed (canola) oil. They try to include sea fish, for instance, mackerel, cod, or sole, in their weekly menus at least once; the fish are usually fried or grilled. With the exception of bread, fruit, and vegetables, which are bought daily from smaller grocery stores, the family habitually purchases food in large supermarkets once a week. Believing that homegrown food is tastier and of higher quality, Alenka, Marko, and Tina are especially glad to be able to obtain certain vegetables and fruits from their country relatives.

Major Foodstuffs

Until the 1960s, Slovene farmers worked the land for their own household needs, primarily to feed their families and less to market their crops. Until this time food culture in Slovenia was still very much geographically differentiated, and staples were not yet being bought in stores. According to ethnological classification, there were traditionally four major types of food culture in Slovenia. The eastern, Pannonian type was based on crops like wheat and buckwheat. Meals made from wheat and buckwheat flour consisted of different types of pasta, leavened pies (which were often filled with cottage cheese), and breads. Dishes were flavored with sour cream and cottage cheese, red pepper powder, or poppy seeds. Abundant crops of pumpkins, not grown anywhere else in Slovenia, yielded excellent pumpkin oil, which was widely used in cooking.

The northern, or Alpine type, was typical for the hills, mountains, and forest areas of the north. With

the exception of corn and buckwheat, its harsh climate does not provide adequate conditions for agriculture but is suitable for animal husbandry and alpine dairy farming. The food culture of this region was thus based mainly on dairy products such as milk, sour milk, curd, and cheese and on corn and buckwheat mush. Venison, which was rarer in other parts of Slovenia, could also be found on the tables of local households. Game meat was also cured and made into sausages and other meat products.

In central Slovenia, farmers planted tuberous vegetables such as potatoes and turnips. Buckwheat and millet porridge, boiled in water or milk, was prepared frequently, as were cabbage and turnips. This was the first Slovene region to include the potato in its daily meals, starting in the 19th century. Prepared in a number of ways, potatoes quickly became very popular.

With its warm Mediterranean climate and karstic soil (limestone with many fissures), western Slovenia's food culture was much like that in neighboring Mediterranean countries. The barren soil, not rich enough to produce cereals, is suitable for raising sheep and for growing olive trees and certain kinds of vegetables and fruits: tomatoes, zucchini, chicory, figs, *kakis* (persimmons), and pomegranates; farmers also grow many different types of grapevines. Among the most frequently consumed foods, usually included in most meals, were polenta, which substitutes for bread; thick vegetable soups called minestrone; vegetable and meat sauces; fish; and the widely used olive oil.

Changes in the traditional food culture were introduced gradually and were connected with the growing mobility of the rural population. More perceptible changes started to take place at the end of the 1950s, and especially in the 1960s, when the rising standard of living in Slovenia resulted in an increase in its population's purchasing power.

During this period people gradually stopped baking their own bread and certain other foods themselves. Instead of making sauerkraut and sour turnips; sour milk, cream, and cottage cheese; meat products (for example, several varieties of sausages made from pigs raised and butchered at home); and

beverages such as apple cider, made from home-grown apples, people purchased these foods from stores. Like bread, which was obtained in bakeries and grocery stores, people increasingly bought meat products, for instance, salami, sausages, and cold cuts; dairy foods, such as yogurt, sour cream, and whipping cream; industrially made pasta; rice; pastries and other sweets; and industrially made beverages such as beer, mineral water, and other soft drinks, particularly sodas.

At present, Slovenes' food culture mainly consists of bread and farinaceous products, potatoes, meat and meat products, and dairy products. Vegetables, pulses, and fruit are less important. Slovenia has over 100 varieties of bread, prepared by large as well as family-owned bakeries. Wheat flour is an ingredient of pasta whose many kinds are either handmade or made by machines, for example, certain types of dumplings such as *žlikrofi*, *krpice*, and *fuži*; and noodles. There are also other popular and widely consumed wheat-based dishes, for instance, *mlinci* (dried pancakes), crepes, the Kaiserschmarrn, different strudels, and the so-called *gibanice*, leavened pies with a variety of fillings. The once widely popular porridge and mush, which in the past represented the basic Slovene dishes and were prepared from buckwheat, millet, and cornmeal, are now seldom consumed.

The potato was first used in the first half of the 19th century as a food for human rather than animal consumption, but it was already widely popular by the end of that century. Slovenes prepare it in a number of ways. It can be cut into pieces and boiled; mashed; roasted; prepared as French fries; or cooked as home fries, namely, boiled, sliced, and then fried with onions, which is by far the most popular potato dish in Slovenia.

Until approximately the 1920s, most Slovene families consumed meat and meat products only on rare occasions, generally on Sundays and holidays. The meat served at those times was inexpensive, for example, the meat of home-raised rabbits and pigs or store-bought beef. Due to their high price, venison, veal, and poultry were far too expensive for most people. Many families reared one or two pigs, which were butchered in wintertime to provide a supply of meat,

meat products, and lard. A variety of sausages—for example, blood sausages, liverwurst, the *pečenice* (sausages that are boiled and then fried), hams, prosciuttos, stuffed stomachs, salamis, and bacon—were also made. Equally important was the preparation of lard, particularly of cracklings and minced lard; as a substitute for meat, these were used in the preparation of all daily meals. Due to a higher standard of living and animal farm factories, which in the 1960s brought meat prices down, meat-consumption patterns changed considerably. Many Slovene families now eat meat several times a day. Eaten frequently, pork and various processed pork products (for example, sausages, spareribs, the shoulder blade, prosciuttos, salamis, and the like) are still very popular. There is also an increasing consumption of poultry, particularly chicken and turkey meat, whereas beef, veal, and venison can be found on Slovene dining tables more rarely.

Fish was less prominent in the diet of Slovenes. Until the 1930s, freshwater fish, for instance, trout, sheatfish, *huchen* (in the salmon family), pike, barbell, and carp, was consumed almost throughout the Slovene territory. Along the Drava and Cerknica Lake, barbell and carp were also dried to be eaten in winter. Inhabitants of the coastal region of Primorska ate mostly sea fish, particularly sardines, European anchovies, mackerel, codfish, and tuna. First preserved in salt, the fish were kept in stone receptacles or dried to be used in winter, when they were prepared in a sauce. After World War II, sea fish became widely popular throughout Slovenia, partly due to a growing interest in, and the promotion of, healthy nutrition.

In the past, milk and dairy products were more important ingredients of meals than they are today. Most milk is now consumed for breakfast and with a light snack before noon. The consumption of yogurt and whipping cream has generally increased. Sour cream and cottage cheese, which are also eaten with bread, are used to prepare many Slovene dishes such as dumplings and strudel. Slovenia also produces butter and a variety of cheeses; two of them, the *mohant* (semisoft, yellowish, and pungent) and the *tolminc* (similar to Swiss cheese), were each given the status of products with the designation of origin.

As in the past, vegetables and fruit play no major role in the food culture of Slovenia. Legumes, particularly broad beans, lentils, kidney beans, chickpeas, and green peas, which were once eaten very frequently, were no longer grown in large quantities after World War II. By far the most frequently consumed legume of today, the kidney bean is one of, or the principal, ingredient of soups, sauces, and salads. Prepared with fat, it is eaten together with sauerkraut and potatoes. Salad is eaten frequently, particularly iceberg-type lettuce, but also spring lettuce, lamb's lettuce, endive, and radicchio. Slovenes often eat kale, sauerkraut, and turnips in wintertime. In the period after World War II, Slovene menus started to include vegetables that had come to Slovenia from other parts of Europe, for example, tomatoes, green peppers, cauliflower, broccoli, eggplant, zucchini, spinach, and *mangelwurzel* (a kind of beet).

Written reports on fruit growing and fruit consumption date from as far back as the 17th century. Mentioned are apples, pears, plums, cherries, sour cherries, peaches, apricots, walnuts, quinces, currants, and gooseberries. Just as important were forest fruits, particularly raspberries, huckleberries, strawberries, and mushrooms. While most of these fruits used to be dried or boiled, they are increasingly eaten fresh. The consumption of other fresh fruits, such as imported oranges, tangerines, clementines, and bananas, is equally on the rise.

Spices were already used when the Slavs settled the territory of present-day Slovenia. In the late Middle Ages, spices used for seasoning were the following: garlic, onions, juniper berries, anise, celery, cumin, capers, mustard, mint, lovage, rue, parsley, bay leaves, and cress. More affluent families were already using expensive imported spices such as cinnamon, pepper, saffron, nutmeg, cloves, and ginger. However, until the middle of the 20th century, Slovene homemakers generally seasoned dishes with domestic herbs, most of which were grown in their own gardens or yards: yarrow, basil, parsley, cumin, marjoram, chives, tarragon, thyme, sorrel, chervil, onion, and garlic.

In the more distant past, Slovenes drank mostly water, sometimes also beer, mead, and cider. It was

A delicious cake with apple, curd, and nuts named Gibanica. (iStockPhoto)

not until modern times that wine and hard liquor became more widely drunk. Richer families also drank coffee, hot chocolate, and tea. Until the middle of the last century, Slovenes ordinarily drank only what they had at home, for example, water, homemade cider, and cheap homemade wine. After that period, the consumption of store-bought beverages, particularly beer, mineral water, sodas, and juices, has been steadily increasing. Since the 1960s, coffee has become widely popular among Slovenes.

Cooking

Before the introduction of kitchen stoves and with the exception of the western part of the Slovene territory, where food was cooked over an open hearth, food was generally cooked in ovens. The clay pots used for this purpose could be placed on a sill in front of, or next to, the stove door and pushed into the stove itself when necessary.

By far the simplest way of preparing food was boiling; it was also the least expensive because it required neither lard nor cooking oil. Needing less attention, the simmering food also enabled the homemaker to do other chores. Since most homemakers also worked in the fields and tended farm animals, the finished dishes could easily be reheated upon their return. In certain areas local homemakers prepared food solely in the morning before

leaving for the field or the family vineyard. When family members returned home the food was ready to be reheated and served. Some of the most common dishes, prepared in this manner at least until the middle of the 20th century, were gruel, mush, barley, dumplings, boiled potatoes, cabbage, turnips, soups, and sauces. Farinaceous foods, for instance, *zlivanka* (a type of cottage cheese cake), Kaiserschmarrn, leavened pies, and dumplings, were baked in the *pekva*, a clay baking pan, or in pans. Meat and meat products such as blood sausages, the *pečenice*, and the *mavžlji*, which were made of chopped pork or intestines and wrapped in pork membrane, were also prepared in the *pekva* but were consumed on very rare occasions.

Frying was not as popular as boiling and baking. Employing lard, either plain or mixed with minced meat, homemakers generally made roast potatoes, cabbage, cold mush, polenta, and occasionally offal, for example, liver. In a small part of the Slovene territory, food was cooked in kettles, suspended on a chain, over an open hearth; some dishes were baked under a large lid called the *čepnja*. Separate pieces of meat or even whole animals were spitted and roasted; this traditional way of cooking has been preserved up to the present.

First introduced in more affluent Slovene households in the middle of the 19th century, wood- and coal-burning stoves became very popular after World War I. Such modern stoves and greater availability of cooking oil, which made baking and frying cheaper and more accessible to most households, made it possible to more often prepare the dishes that up to the 1960s were made mostly on holidays. Today, the most popular types of kitchen stoves are electric and gas ranges and electric ovens. Electric or gas barbecue grills, pressure cookers, deep-fryers, and electric bread makers are also widely used.

Typical Meals

Due to their great variety it is extremely difficult to describe the daily meals typical for Slovenia in the past and in the present. Meals varied according to regions, the financial and social position of households, and their rural or urban origin. Generally

speaking, Slovenes eat three meals a day: breakfast, lunch, and dinner. Students also eat a light meal at school, while some adults consume it during their working hours. The principal meal is a hot lunch, which is the heaviest meal of the day. Dinners are generally more modest.

In the past, farmers' breakfasts usually consisted of mush or polenta with milk or sour milk and ersatz coffee made of barley. Some families also ate boiled potatoes or mush and sauerkraut. This breakfast did not significantly differ from the one eaten by poorer urban dwellers, who had mostly corn mush or bread, and ersatz coffee. White bread was consumed only in wealthier families, who also ate rolls and croissants; butter, jam, and honey; and at times eggs, cold cuts, and cheeses. The usual morning beverages in these families were coffee or cocoa.

In the second half of the 20th century, breakfast started to change significantly. The main ingredients of breakfast have become bread or rolls spread with butter or margarine, jam, or liver or other kinds of pâtés, or topped with salami, sausage, or cheese; eggs are eaten occasionally. Ersatz coffee has been replaced by real coffee or tea. Some people now include in their breakfast various kinds of cereal, yogurt, and fruit. While breakfast used to be eaten very early in the morning, it is now consumed between 6:30 and 7:30 A.M.

In the past, farmers used to eat lunch at noon. It consisted of different kinds of soups and starchy dishes made from potatoes, sour turnips, kidney beans or fava beans, barley, millet, or buckwheat. These might be made into porridge or dumplings, or some other variety of mealy dishes, for example, *zlivanka* or *kvasenica* (both are a type of cottage cheese cake). In the summertime they ate salad greens. Meat was eaten sparingly. During the period of heavy farming chores, homemakers served smoked pork. In towns, less-well-to-do families ate potato or vegetable soups with Kaiserschmarrn, dumplings, or strudels; sometimes they ate mush or potatoes served with sauerkraut or turnips. In prosperous families, soup was always followed by a main course consisting of meat dishes such as cutlets, boiled beef, or roast meat, served with potatoes or rice, bread dumplings, pasta, or vegetable side dishes

such as peas, cauliflower, spinach, or asparagus and salad. These meals always ended with dessert.

In the present, Slovene families have lunch upon returning from work, which is between 3 and 4 P.M. Since lunch is their main meal, all family members try to eat it together, which owing to the many obligations of adults and children alike is becoming increasingly difficult. Lunch is usually made by the mother. It consists of soup made from beef or chicken, potatoes, kidney beans, or kohlrabi. Soup is followed by the main course, which can be stewed meat, goulash, fricassee, cutlets, or ragout made from minced meat, and so on. Meat is served with pasta, potatoes, or rice and with a salad. Once very popular, mush, polenta, and porridge are now very seldom seen on Slovene dining tables. They have been replaced by new dishes and ingredients, particularly those that have been taken over from Italian cuisine and have become very popular: pizza, tortellini, lasagna, and gnocchi, all served with a variety of sauces. Some urban families also like Asian food.

Dinner has always been less important than lunch. Farmers used to eat dinner after they had finished their chores and returned to their house at dusk. Their dinner often consisted of dishes such as corn or buckwheat mush, boiled potatoes served with sauerkraut or turnips, salad, pumpkins prepared with flour and lard, or porridge made from millet boiled in milk. Poorer urban families ate mush with ersatz coffee; kidney bean or potato salad; or grits made with milk. Well-situated urban families ate bread, sausage, eggs, cheese, crepes, omelets, or rice pudding.

Family members now often eat dinner separately. It usually takes place between 7 and 9 P.M., depending on their hunger or when they were able to return home. Their dinner generally consists of bread with a variety of spreads or with salami, cheese, or ham. It can also be yogurt, a salad, or at times also pancakes or milk pudding.

Eating Out

Roadside inns have offered simple dishes and beverages to passing merchants and travelers since ancient times. Sources from the Middle Ages to the 18th century bear witness that the food offered to the guests in inns was bad, tasteless, and quite

expensive. More important than the food was the sale of drinks, mostly wine and low-quality beer. At the beginning of the 18th century these two commercial areas were separated. This was due to an increase in road and river traffic, and in trade. The construction of the South Railway from Vienna to Trieste in the period between 1846 and 1857 significantly influenced the development of the catering trade in the Slovene territory.

Dishes that were being offered in Slovene inns before World War II were typical of the so-called Viennese cuisine. Important were novel meat dishes, among which goulash and cutlets, particularly the Wiener schnitzel, were the most popular. Lunch at an inn noted for its “good plain family cooking” consisted of the following dishes. To start there were soups such as beef soup with homemade noodles, pea soup, soup with groats or liver dumplings, or perhaps cauliflower, spinach, or tomato soup. Then there would be meats, such as roast pork, veal, venison, Wiener and Parisian schnitzel, fried or roast chicken, capon, roast turkey, goose, or duck. Side dishes included potatoes, especially fried, mashed in skins, or French fried, which appeared at the beginning of the 20th century; boiled or stewed rice; fried potato rolls or bun dumplings; and salad. Guests could also choose among different puddings, Kaiserschmarrn, crepes with homemade jam, stewed fruit, and so on.

Certain foods were also sold in the street. Street vendors offered rolls with cooked sausages, particularly frankfurters, and rolls with sausages made of horse meat or of grilled meat, for instance the *čevapčici* (meat patties) and the *ranjii* (roasted skewered meat).

Among the most popular restaurants since the mid-1970s are those that serve Italian food, particularly pizza and lasagna. In the last decade and a half, a segment of the Slovene population started to frequent restaurants serving Chinese, Indian, Thai, and Mexican food.

Special Occasions

Until the middle of the 20th century, the food culture of the Slovene population depended on the days of the week. While Slovenes generally observed the

fast on Fridays, their Sunday diet was richer than during the week, with the meals usually including food that was pricier and of better quality. The same can be said of festive foods served on holidays; those that celebrated the end of difficult farm chores, for example, harvest and vintage; and those prepared when farmers butchered their pigs in wintertime. In contrast, birthdays and name days ordinarily did not require any special food; the only exceptions were weddings and sometimes baptism feasts.

Families tried to include in their Sunday meals richer meat dishes and farinaceous desserts generally not eaten on weekdays. Although there were people who ate meat, for example, sausages, spare ribs, or ham, even for breakfast, meat dishes were generally served only for lunch and dinner. A typical Sunday lunch started with a meat soup, usually a beef broth with homemade noodles or with grits or liver dumplings. The main course could be the beef that had been boiled to make the soup, for instance, or smoked pork with horseradish; prosperous families also ate roasted veal or pork, tenderloin, or fried chicken. The homemakers baked dessert, for example, a bundt cake, an apple or cottage cheese strudel, or a leavened pie with filling. Dinner often consisted of food that had been left over from lunch: leftover pieces of cold roast or chicken, a salad, and dessert. Many Slovene families still eat very similar dishes on Sundays.

Christmas and Easter have always been among the most important Slovene holidays. Christmas preparations started several days ahead of time with the making of Christmas bread, cookies, and the *potica* (nut roll). This was also the time when most Slovene families butchered a pig to have an abundance of fresh meat and sausages for Christmas and New Year's celebrations. The day before Christmas was traditionally a fast day that was devoutly observed. During the day, people ate only legumes, vegetable soups, or mush; some of the more affluent families had fish. On Christmas Eve, meat was allowed once again, particularly after families returned from midnight mass. Traditionally it was either blood sausages or the *pečenice*, or roasted pork; the urban middle class sometimes ate fish such as boiled trout or fried carp. The festive meal ended with the *potica*

Potica, or nut roll pound cake, with walnuts. (iStockPhoto)

(a roll filled with nuts, poppy seeds, or a chocolate filling, more rarely with a carob, hazelnut, or coconut filling), homemade festive cookies, and fruit bread. Fasting is generally no longer observed, and new dishes have become a part of Christmas menus: for example, beefsteak tartare; French salad, which is a mixture of diced potatoes, peas, cucumbers, eggs, and mayonnaise; and sponge and layer cakes.

Another important Slovene holiday is Easter. Traditionally, the foods consumed on Easter have not changed for centuries. Families prepare a basketful of Easter food, the so-called *žegen*. The *žegen* consists of boiled or baked ham, or of the *šoblek* (filled pork stomach) in alpine regions, or prosciutto in Istria; homemade sausages; white bread made with or without milk; horseradish; and the *pirhi* (boiled colored eggs). Traditional Easter pastries are the *potica*, the *ptički*, and the *menihi* (small pasties made from leavened dough made of fine flour). A typical Easter dish from central Slovenia and Primorsko is the *aleluja*. Made of dried turnip peels, the *aleluja* evokes the memory of the time of severe famine during the Easter of 1529.

Aleluja

Ingredients

- 1 lb dried turnip peels
- 1 c flour (for example, buckwheat)
- $\frac{3}{4}$ qt water

4 tbsp lard with bacon cracklings

Salt

Wash turnip peels, and soak them in water for 3 days; the water needs to be changed every day. Boil them, then strain and chop. Add them to salted water or to water in which the Easter ham was boiled. When the water starts boiling, add flour. Make a hole in the middle, and pour in hot lard and cracklings. Serve immediately.

Diet and Health

In the past centuries, the main preoccupation of the Slovene population was to ensure enough food, which, despite the meager means generally available for its purchase or cultivation, had to be prepared in a way that would provide enough energy for the heavy physical work that was required daily. Not much attention was paid to health or special diets. The two general exceptions were childbirth and severe illness. New mothers and the sick were given special food and beverages to restore their health as soon as possible so that they could return to work.

After a woman had given birth, her family had to provide adequate quantities of wine to renew her strength and vigor. The habit of giving wine to new mothers has been documented throughout the Slovene territory. She was also given a loaf of good white bread and a hen for hen soup, which was believed to possess special powers. Another dish recommended for new mothers and for those who were sick was the *tirjet*. It consisted of slices of white bread first dipped in wine and whisked egg and then fried.

Those who had problems with constipation were given pieces of dried pears or prunes soaked in water; equally recommendable were horseradish, which is a strong purgative, and lukewarm whey. Diarrhea was fought with dried huckleberries, dried

pears, the *prežganka* (soup made from water and browned flour), and water in which unhusked wheat had been boiled for several hours.

Those who were anemic had to purify their blood with raw meat, particularly horse meat, fresh sauerkraut, and turnip shoots. Certain plants and vegetables, for example, dandelion, watercress, elder shoots, and wormwood buds, were believed to help as well. In case of dropsy, swooning, bronchial disease, nerves, and worms, folk medicine advised substantial quantities of garlic. Onions helped cure pulmonary diseases, colds, and rheumatism.

Today, interest in a healthy diet has increased primarily due to a growing number of articles in the printed and electronic media. According to experts, Slovenes consume too much fat, sugar, pork, and alcohol and too little fruit and vegetables. In view of this, the Ministry of Health has organized different activities and programs to promote the consumption of fruit, vegetables, and unsaturated fats.

Spain

Overview

Spain is a country with a remarkably diverse landscape and climate, from the mountainous snow-capped north to the arid plains of La Mancha to the hot Mediterranean climate of the south, plus the Balearic Islands and Canary Islands. This climate has shaped not only the type of plants and domesticated animals that flourish but also the cooking techniques, mealtimes, and nutritional status of the population.

The culinary culture of Spain is understood through the various peoples who have settled or invaded the Iberian Peninsula through its long history. The original inhabitants may be represented by the surviving Basque culture, whose language and dominant blood type are completely unrelated to those of any other European group, who from prehistoric times utilized the native flora and fauna. Herbs that still grow wild fit the general Mediterranean flavor profile of seasonings and include oregano, thyme, rosemary, and garlic. Spain has also been suggested as a separate independent site of domestication for the fava bean, which is still eaten commonly and featured in stews like the Asturian *fabada*. While wild deer populations have dwindled in the ensuing millennia, wild boar is still highly prized, as are rabbit and hare, not to mention the bounty of shellfish enjoyed along the coasts, which were rigorously exploited by the native inhabitants in prehistoric times.

The first major civilization that settled southern Spain was the Phoenicians, who came originally from what is now Lebanon. After having settled in northern Africa they set up trading posts in Gadir,

founded in 1104 B.C. (modern-day Cadiz), and Cartagena, which was named for their African trading hub Carthage. The Phoenicians introduced one of the single most important ingredients in Spanish culture—the olive. Although these probably arrived much earlier, the Phoenicians also brought with them eastern Mediterranean wheat and most likely cattle-rearing techniques, which provided meat from sheep, goats, and cows as well as dairy products. Olives, wheat, and cattle products form the core of Spanish cuisine as they do throughout the Mediterranean.

There were also ancient Greek settlements on the northeastern coast of what is today Catalonia, and evidence suggests that it was the Greeks who introduced the cultivation of grapes and, of course, wine to Spain. Almonds also date to this period as well as cultivated fruits. Celtic groups also settled in Spain in what is today known as Galicia, whose name is cognate with both Gaul (modern-day France) and Wales. Northwestern Spain is thus distantly related also to the Irish and Scots. The tradition of curing hams has often been ascribed to the Gauls, although there is no historical evidence that they were the ones who invented the process.

Thereafter, Spain was conquered by the Romans, who apart from building major metropolitan centers—such as Italica, the remains of which lie outside Seville, replete with amphitheaters, baths, and waterworks—also introduced the large-scale slave-operated plantations known as *latifundia*. Spain not only supplied much of the empire with food but also was known for certain specialty products such as *garum*—a fermented fish sauce used extensively

in Roman cooking. Agricultural authorities such as Columella were Spanish, not to mention writers like Seneca as well as several emperors.

The Romans also encouraged migration to Spain from throughout the empire, and in the case of Jews forced them from their homeland in the province of Judaea after the destruction of the second temple in 70 A.D. For the next millennium and a half Jews would comprise a significant part of the population. They were easily identified by their food practices, in particular, their abstinence from foods considered unclean by kosher dietary laws, namely, pigs, rabbit, and shellfish. There still exist dishes in Spain ultimately descended from Jewish cuisine, particularly stews based on chickpeas, originally called *adafina*, which would have been cooked on Friday night before sundown for consumption the following day on the Sabbath, when fires were not allowed to be lit.

Christianity was another important introduction in late antiquity. Although official dogma and a liturgy had not yet been settled, Christianity introduced a wide variety of fasts and feasts. Eventually these became a set calendar of holy days during which abstinence from meat and meat products was commanded, most importantly during the period of Lent. Asceticism, the conscious denial of bodily pleasures, including food, as an act of penance, became a cultural ideal, though perhaps practiced rigorously only by the holiest of people. The celebration of the Eucharist in the form of bread and wine meant that cultivation of grapes and wheat was required, and it was often monastic communities who carried out these activities in periods of turmoil and social unrest in the wake of the collapse of Roman rule.

With the collapse of the Roman Empire in the fifth century, the Visigoths, a Germanic tribe from central Europe, invaded and set up a kingdom eventually centered in Toledo. Although they never displaced the local inhabitants, they did introduce Germanic taste preferences, such as that for beer, which is very popular in Spain to this day, although one might find that surprising in a Mediterranean culture. A good picture of Visigothic cuisine

can be found in Isidore of Seville's *Etymologies*, a mostly fanciful dictionary of the origins of words that inadvertently reveals many popular ingredients. For example, Isidore believed that the word *malum* (apple) derived from the word *malus*, meaning "evil," in Latin and thus explained the apple as the original fruit of the tree of knowledge in the Garden of Eden.

In 711 the Visigothic Kingdom was conquered by Moors from northern Africa who not only pushed much of the Christian populations far to the north in small, relatively weak kingdoms but also introduced Islam, which has its own variety of fasting (during Ramadan) and dietary laws—abstinence from pork and alcohol. Many Christians and Jews stayed behind and adopted Arabic as their language. For many centuries the three religions coexisted in relative peace in what is known as *convivencia*, exchanging ideas, especially scientific and medical knowledge, as well as recipes. The center of Moorish culture was the flourishing city of Cordoba, not only the largest and most splendid city in Europe at the time, but also a center of learning. The Moors introduced many new foodstuffs, the names of which in modern Spanish are all directly derived from Arabic. Thus, there are artichokes (*alcachofas*), eggplants (*berejenas*) and spinach (*espinacas*), lemon (*limón*), rice (*arroz*), and sugar (*azúcar*). They also used techniques of irrigation and intensive cultivation (especially for fruits), which were well beyond any developed elsewhere in Europe.

Very gradually the small Christian kingdoms in the north, Leon and Castille, Aragon, Navarre, and the County of Catalonia, began to reconquer land from the Moors in a process that took several centuries, the Reconquista. Timed precisely with the Crusades, this was seen not only as a way to gain territory but also as a kind of holy war against the infidel, which especially sought to regain the ancient capital of Toledo. While not complete until the fall of Granada in 1492, the Spanish kingdoms now found themselves ruling over a heterogeneous population of Jews and Muslims as well as culturally Arab Christians called Mozarabs. At times there was peace and continued interchange, at other times

forced conversions and persecution. In fact, the Inquisition was founded primarily as an institution to uncover less than thoroughly converted “New Christians,” or *conversos*, who might still be lighting candles on the Sabbath or keeping their kosher laws in private. Otherwise, the Middle Ages were a vibrant period in Spanish culinary history, and cookbooks were produced such as the *Libre de Sent Sovi* and eventually another by Rupert of Nola. Medieval Spanish cuisine followed some trends popular throughout Europe, including the heavy use of spices such as pepper, cinnamon, cloves, nutmeg, and ginger imported from Asia; vinegar- and sugar-laden sauces thickened with breadcrumbs; and the use of almond milk and rose water. These were in fact largely inherited from Islamic cuisine, but they would have a permanent impact on Spanish food. Some dishes descend directly from this period, like *escabeche*, fish that is fried, then preserved in vinegar and spices and served cold.

Probably the most important event influencing Spanish cooking, if not the entire world, was the discovery of the Americas by Christopher Columbus in 1492. He was, of course, not trying to discover anything new but sought a west-bound route to Asia across the ocean, which was then thought to be one ocean. This was intended as an easier route than that discovered by the Portuguese, which went around the southern tip of Africa, across the Indian Ocean, and ultimately to the spice islands in what is now Indonesia. Had there been no American continents, Columbus’s plan would have made perfect sense—and he knew, as did everyone, that the world is round. It was only the earth’s circumference that he miscalculated, and to his dying day Columbus believed his discoveries lay somewhere slightly east of China. Moreover, the long delay of his enterprise was due to the fact that Ferdinand and Isabella were busy conquering Granada and then subsequently expelling the Jews (Sephardim), most of whom went to live under Ottoman rule in Turkey and Greece and through northern Africa.

The introduction of tomatoes, peppers, squash, beans, and, although they took a long time to be adopted, potatoes would transform Spanish cuisine.

From Mexico also came chocolate, which became the preferred drink for the Spanish nobility and thereafter for everyone. Most important, it was sweetened with sugar, grown increasingly in the Caribbean by African slave labor. By the end of the 16th century Spain controlled the first global empire, including most of the Caribbean, Mexico, and Peru as well as the Philippines in Asia and much of Italy as well as the great Portuguese Empire in Africa, India, and Asia after the crowns had been united under a common ruler from 1580–1640.

The 17th century may be considered the golden age of Spanish cuisine. Even though much of the land was depopulated through emigration or natural attrition, the royal court was then the most splendid in Europe and indeed set culinary fashions everywhere. Grand cookbooks by royal chef Francisco Martínez Montañó were published as well as lesser ones like that of Domingo Hernández de Maceras. The quintessential dish of this period is the *olla podrida* (which literally means “rotten pot,” or in French *pot pourris*), a wild combination of tongue, lamb, pigeons, sausages, chickpeas, turnips, chestnuts, and other ingredients stewed down into an indistinguishable but utterly delectable stew. Recipes appeared in English, Italian, and French cookbooks as well. This age came to an end only after two civil wars in midcentury and the failure of both the economy and the Hapsburg progeny. A war of succession fought by several European powers ultimately put a French Bourbon on the throne, but it left Spain, ironically, a relatively backward and impoverished nation, as it would remain into the 20th century. The only major cookbook published in this era was by Juan Altamiras, and it was reprinted throughout the 19th century.

The invasion of the French in the 19th century left the country in turmoil and gave its colonies in South America a chance to win independence. Civil war in the early 20th century ensured that Spain would continue to be impoverished. It would not be until the second half of the century that Spain would emerge among the modern industrialized nations of Europe and once again become a world power economically.

Food Culture Snapshot

Alicia Rios was born in 1943 and grew up in Madrid; although she never suffered from hunger, she was very conscious of the misery and repression around her through the dictatorship of the Franco era. Her father was a geologist from Zaragoza in Aragon who would bring special foods home from his field trips, bought directly from farmers and fishermen. His family would send them cherries and peaches from the mountains in the north, thick red wines from Cariñena and Somontano, and vegetables from the banks of the Ebro. Her mother came from the Costa Blanca, specifically from a village named Benissa near Alicante, where she grew citrus trees, grapes, white and black figs, and melons, as well as tomatoes and eggplants, in a garden near the sea. She also kept chickens and rabbits. Here, there were as many different paellas as there are days of the year, changing from season to season, incorporating whatever mother earth had to offer.

With this love of food Alicia went on to work in vegetarian restaurants and eventually opened her own macrobiotic restaurant, La Biotika, in 1978, followed by Los Siete Jardines in 1982, both in Madrid. She was married in 1970 to a man from Andalusia, from whom she learned a whole new repertoire of traditional bourgeois cooking. He passed away in 1999.

Today, she runs a company of food-performance art (Ali&Cia) that stages edible cityscapes around the world. Participants from neighborhoods throughout the city contribute a building or block made entirely out of foods from their own ethnic traditions, and the events culminate when the whole city is consumed.

She lives by herself in Madrid. Around 9:30 A.M. she eats a breakfast of mostly fresh fruits and porridge with walnuts, a single date, honey, and a dash of extra-virgin olive oil. At 3:30 or 4 P.M. she eats lunch, which starts with raw vegetables, followed by a *potaje*, a kind of solid soup with fresh cod, chickpeas, vegetables, and sometimes lentils or meat. This is accompanied by whole-grain rice, a glass of wine or beer, and some cheese for dessert, after which she takes a brief siesta. She rarely goes out for tapas with friends, as most Spaniards do, but waits for dinner, which may include a vegetable soup, fish, or an omelet with bread, olive

oil, and ham, and perhaps some tomato. She also likes intense dark chocolate.

Major Foodstuffs

The staple grain of Spain has always been wheat, despite the cultivation of barley, oats, and other grains throughout history. Wheat is used foremost in bread, which forms the basis of practically every meal in some form, and Spanish cuisine is unthinkable without it. Interestingly, bread is usually served directly on the table rather than by putting it on little plates, nor is it served with butter. In Catalonia it is often toasted and flavored with garlic, salt, a drizzle of olive oil, and tomato, which is cut and rubbed directly onto the bread, which constitutes a kind of signature regional dish called *pa amb tomàquet*. Wheat also features in rolls (*rosclas*), many pastries, fritters, and pies (*empanadas*). The soft interior crumbs of bread are used for *migas* (fried crumbs) and as a thickener in gazpacho, which is a direct descendant of medieval soups, with the addition of tomato. The Spanish also eat noodles, especially the *fideos* of the east coast, which are thin, short lengths like spaghetti, cooked in a skillet like rice for paella in a dish called *fideuà*.

Rice is another important grain, and the technique for cooking it by frying in oil first and coloring it with saffron as in the classic paella ultimately goes back to medieval Arab cookery and is related to the pilaf and *biryani* introduced from as far away as India. The rice grown here, however, is mostly short-grained; the most revered are called Calasparra and Bomba. Paella recipes vary widely across Spain, though the classic version comes from Valencia. Paella may include shrimp and clams, a spicy sausage called chorizo, beans, and chicken. The classic version should not include fish, though, but rather rabbit and snails. What constitutes a proper paella is a hotly debated topic, and most people would distinguish this kind of mixed paella from a seafood paella. Whatever the ingredients, it must be cooked on a large metal *paellera* pan, preferably outdoors over a fire of vine cuttings. The dish should not be stirred as it cooks, but the rice is left

to gradually absorb the liquid, which results in a crispy layer at the bottom of the pan, said to be the best part.

Corn is less important historically and was used mostly for cattle feed, but today Spain is a major producer and importer of corn. Much of this still goes into fodder, corn oil, or other industrial products, but there are some cornbreads, notably in Galicia and Asturias, but most Spaniards seem to dislike corn or consider it a food of poverty or only a porridge for babies (*maizena*). This may be due to the fact that corn that has not been nixtamalized (treated with lime—the mineral calcium hydroxide) does not supply a full range of nutrients, as it would in a Mexican tortilla, and may lead to pellagra if it forms the staple starch.

Potatoes are certainly not as popular as elsewhere in Europe, but they do feature in the classic Spanish tortilla. This word merely means “little tart,” and the Mexican corn tortilla simply adopted the Spanish term. In Spain it is basically thinly sliced potatoes and onions fried in olive oil, then drained and mixed with just enough eggs to hold them together. The potato and egg mixture is then returned to the pan, cooked on one side until light brown and then flipped over using a plate and cooked on the other side. It is not really an omelet per se but closer to a frittata, though perhaps the literal translation, “little cake of potatoes,” is just as good. It can also be served cold or put on bread for a sandwich.

Beans are and always have been central to Spanish cuisine. The first types used were fava beans, black-eyed peas, and other *Vigna* species that are native to Africa. Lentils and chickpeas were introduced from the Middle East, and all other beans that are today classified in the *Phaseolus* genus come from the Americas and include kidney beans, lima beans, black beans, pinto beans, and so on. Spaniards do not generally distinguish these, and many varieties from the Americas are believed to have always been grown in Spain. Beans are featured in soups and stews, often with sausage in many regional classics, or they are served cold marinated in oil as an appetizer.

Spanish cuisine makes great use of vegetables, especially those introduced by the Moors—asparagus and artichokes, spinach, and eggplant in particular. These are usually sautéed or mixed into other dishes, but with the exception of spinach, they can also be grilled and marinated and served cold or battered and fried in fritters. Many vegetables like lettuce, endive, cucumbers, and carrots are served raw in salads. Turnips are often featured in cooked stews like *cocido* or *olla podrida*, as are mushrooms. To lend flavor, countless Spanish dishes include onions and garlic. Among the New World vegetables the tomato is the most important, but peppers and zucchini are also important, all of which are featured in cooked recipes. Along with these, olives are perhaps the most ubiquitous of Spanish appetizers. Depending on the variety they may be picked just as they begin to turn black, then lightly cracked and soaked in successive changes of water for about a week until the bitterness is gone, then brined with herbs and garlic. But green and completely black olives are also popular, as are capers, the bud of a shrub. Along with olives they are used in cooked dishes as well.

Salmorejo Cordobes (Cold Pureed Salad)

This recipe is a thicker version of the popular gazpacho, often served with ham and bits of hard-boiled egg on top. It can be made in a food processor but is much more fun to make in a big mortar, pounded with a pestle. This should not have any water added and is essentially a cold pureed salad.

Serves 2

4 or 5 perfectly ripe tomatoes

2 slices stale peasant bread with crust removed

1 clove garlic

½ c extra-virgin olive oil, preferably Spanish

A dash of vinegar

2 thin slices ibérico or serrano ham

1 hard-boiled egg

Start by pounding the tomatoes in your mortar or whizzing them in the food processor. Add the bread, torn into small pieces, and garlic, and continue pounding until you have a smooth consistency. Drizzle in the olive oil; you can add more if you like. Add salt and pepper, and a dash of vinegar to taste. Pour the thick soup into wide bowls, and cover with shreds of ham and thin slices of egg.

The most popular fruits in Spain include apples, grown mostly in the Celtiberian north. Quinces are also popular; they must be cooked, most often in the form of *membrillo*, a solid quince paste that is served with cheese. Citrus fruits like lemons and oranges are grown widely in the south largely due to Arab influence. There are also dates, figs, and pomegranates. The former are also dried, along with peaches and apricots, which are also made into jam. Among nuts, almonds are perhaps the most important, and one typically finds a plate of salted almonds, especially the delicate thin-shelled *marcona*, which have a higher oil content than U.S. almonds, alongside a plate of olives and perhaps some cheese as a favorite snack. But there are also walnuts, hazelnuts, and pistachios as well as pine nuts, which are used often as a garnish with raisins in traditional Arab-influenced dishes. Chestnuts have also been very important historically as a starchy ingredient in stews, and today they are candied.

The most common meats used in Spain are beef, including the meat of bulls that have been killed in bullfights; lamb and mutton; and especially pork. The Spanish have a particular reverence for ham, especially *serrano* and above all else the *jamón ibérico de bellota*, for which the pigs are allowed to

eat acorns, which gives their flesh an incomparable nutty flavor. Such hams are always served raw and thinly sliced, much like Italian prosciutto, but quite distinct. Many bars feature a whole ham fixed to a stand from which thin slices are carved to order. Pork is also used to make sausages ranging from spicy chorizo to varieties made from the pig's head or even blood as in the case of *butifarra*. Although familiar cuts of pork provide everyday fare, among the pinnacles of Spanish cuisine is the whole roasted suckling pig, associated mostly with Castile.

Poultry is also popular: chicken, turkey, and smaller game fowl like pigeon and quail. These can be sautéed, stewed, fried, made into broth, or featured in more complex mixed dishes. Rabbit is also very popular and used much like chicken, though its flavor is quite different.

Along with meat, dairy products are important in Spain, above all else cheese. Many types of cheese are eaten frequently, made from either cow, sheep, or goat milk. Manchego made from sheep is the most familiar in this country, but there is also Mahon from Minorca, Zamorano from Castile, Idiazábal from the Basque region, Tetilla from Galicia (in the shape of a woman's breast), and Cabrales, a pungent blue cheese.

Fish is also loved by the Spanish, traditionally eaten fresh along the coasts and rivers and more often cured and transported inland. Dried salted cod is one of the most unique; called *bacalao*, it is actually fished in the North Sea or Newfoundland, or it may be merely dried on the coast of Norway as stockfish. Bacalao provided protein during times of fasting when meat was forbidden, and it is used in many dishes such as *bacalao alla vizcaína* or codfish *pil pil*, which is made with oil, garlic, and chili peppers and served in a little clay dish. Preserved fish are also popular. Anchovies are often marinated in vinegar (*boquerón*) rather than salted and preserved in oil as in Italy. Tuna also is cooked and preserved in oil or dried (*mojana*) and eaten thinly sliced like ham. Fresh fish are also eaten everywhere today, along with squid and octopus, as are shellfish such as shrimp, crabs and langoustines, clams (including the distinctive narrow razor clam) and tiny cockles, sea urchins, conch, oysters and mussels, and

A variety of Spanish cheeses. (Shutterstock)

scallops. As the symbol of Saint James (Santiago), the patron saint of Spain, scallop shells were used by pilgrims as a kind of souvenir. Although people along the coast consume shellfish fresh, especially in tapas bars known for their seafood, most Spaniards are also happy to eat these canned and keep a stock in their cupboard.

For flavoring cooks in Spain use a wide array of herbs and spices common throughout the Mediterranean like parsley, thyme, oregano, rosemary, and basil. Fennel seeds and cumin are also used as well as imported spices like cinnamon and cloves. Saffron is the spice most readily associated with Spain, which colors dishes bright yellow. It is the stamen of a crocus flower, meticulously picked by hand, which until recently was the most expensive flavoring in the world until vanilla overtook it. Another

spice that has gained recent attention abroad is *Pimentón de la Vera*, a smoked paprika that comes in sweet and bitter varieties and lends a beautiful deep flavor and color to cooked dishes.

Wine is central to Spanish culinary culture, ranging from deep ruddy Rioja and Ribera del Duero to light effervescent *cavas*—the Catalan equivalent of champagne. But wine grapes are grown practically everywhere throughout Spain, from the far western Galician coast to Alicante on the eastern shores of the Mediterranean. There are also a number of specialty wines, the most celebrated of which comes from Xeres and Sanlúcar de Barrameda on the southern tip of Spain, popularly known as sherry. These are made using the *solera* system whereby the barrels are exposed to air and oxidized and constantly refilled as the content evaporates. Then they are fortified with alcohol, making them stronger and more durable than most other wines. They can be either bone dry (*fino*) with a woody aroma and sometimes even a hint of brinyness to medium *amontillado* and *oloroso* and sweet versions known outside Spain as cream sherry.

Spain also produces distilled liquors such as brandy, anise (flavored with the seed of the same name), and absinthe, which is made from the herb *Artemisia absinthum*. Until very recently the active component thujone was believed to be toxic and was outlawed in most of the world, though not in Spain. It is traditionally taken by putting the alcohol into a special glass on top of which sits a perforated spoon and a cube of sugar. Cold water is drizzled on top, which creates a *louche*, or swirling green clouds in the glass.

There are other unique Spanish drinks such as *horchata* made from tiger nuts—actually the tuber called *chufa* (*Cyperus esculentus*). Since the 16th century Spaniards have been avid drinkers of chocolate, made not as it was among the Aztecs with chili peppers and various flowers, but sweetened and flavored with cinnamon. It has been proposed that chocolate was an ideal drink for the Spanish nobility, whose cultural ideals included indolence and the life of leisure, as compared to the northern countries, whose Protestant work ethic led them to drink coffee. In fact, both drinks contain caffeine,

and Spaniards are as avid coffee drinkers as any people in the world. As elsewhere in the world, there is also a great variety of mass-manufactured soft drinks.

Cooking

In Spain, many pots and pans are still made of clay. There are many advantages apart from affordability and beauty. Low-fired earthenware ceramics cook food differently, mostly because the heat is evenly distributed and gently retained rather than directed powerfully from below, creating hot spots that may burn as with modern metal pots. Moreover, food must be cooked gently, so although it takes longer, the flavor is ultimately deeper and richer rather than seared or scorched. Such pans will range from small, flat, shallow pans called *cazuelas* to covered *ollas* for soups or stews to large stewpots called *pucheros*. The *cazuela* can be placed directly over a gentle fire for cooking with oil or placed in the oven, and it doubles as a serving vessel as well. Other unique vessels include the *porrón*, a glass decanter for wine with a long, straight spout that pours a thin stream of liquid directly into the mouth, and also the *bota*, a goatskin bag seasoned with pitch on the interior, which is also used to squirt wine into one's mouth.

The mortar and pestle is also an essential Spanish implement and can be made of ceramic, stone, or olive wood. It is used to make cold soups like gazpacho as well as sauces like *allioli*, an emulsified garlic sauce.

A typical way to begin a recipe is with a *sofrito* or *sofregit* in Catalan. It is chopped onions and garlic cooked slowly in olive oil with tomatoes and sometimes other vegetables like red or green peppers. This is then used as a base for soups or stews, or it can be used in fillings for empanadas or even to cook fish like snapper or tuna in a pan.

Stewing is a common and economical technique that takes little more effort than assembling the ingredients and letting them cook slowly together in a pot. The *cocido Madrileño* is a typical example, though unlike most stews, the broth or caldo is served first, sometimes with cooked rice or noodles in it, separate from the vegetables, which are served

second, and the meats, served last, arranged on a platter. The typical base is chickpeas along with vegetables like cabbage, carrots, potatoes, and turnips. With these an array of meats are cooked such as pork belly, fresh chorizo sausages, morcilla blood sausages, beef shanks and other soup bones, and a stewing hen.

Sautéing is probably the quickest and easiest cooking method, with ingredients merely placed in a pan with olive oil or rendered lard. Deep-frying is also popular for small fish or vegetables covered in batter and fried. Grilling is used most often for small fish like sardines and sausages as well as vegetables. Roast meat is very highly appreciated, whether small cuts, joints, or whole suckling pigs or lambs; roasting is best done beside an open flame, slowly turning on a spit, but it can also be done in a wood-fired oven. Normally this would be used for baking bread, but traditionally many dishes were simply cooked in an open red earthenware dish, placed directly in the *horno* until crispy and browned.

Before modern canning technologies, food would often be salted and dried for preservation or kept in oil. The former include not only hams and sausages but also dried vegetables like peppers, fish, and legumes; practically anything that could be preserved was, as a means of survival.

Spain is also home to some of the most avant-garde experimental cuisines to be found anywhere, most notably in Ferran Adrià's famed *elBulli*, often recognized as the best restaurant on earth. Here, one will find scientific instruments used to cook, to deconstruct and reconstruct food into new and exciting forms. Although these techniques have not had a great impact on household cooking, they have become popular in restaurants worldwide and are beginning to be used in homes. The *sous vide* method in which food is gently poached at a low temperature, vacuum sealed in a plastic bag, may soon become familiar.

Typical Meals

Spaniards eat a very small breakfast, or *desayuno*, that usually consists of nothing more than coffee or hot chocolate and maybe a piece of bread or pastry,

if anything. It can be eaten at home or quickly at a bar on the way to work. The equivalent of the American breakfast is *almuerzo*, eaten before noon and usually consisting of coffee and a bread roll, but it can be something a little more substantial, and even be accompanied by wine. In the past farm-workers would eat a larger meal in the morning to fortify them for the day of work ahead.

On holidays people may eat a midafternoon snack of tapas, but normally they wait for lunch, or *comida*, eaten around 2 or 3. This is a full meal and can contain several courses and last a few hours. Traditionally people would go home to eat lunch, and they would take a siesta afterward in the hottest part of the day, but increasingly they go out to restaurants and then go back to work. A *merienda*, or snack, may be eaten, mostly by children, late in the afternoon between 5 and 7, mainly because dinner is eaten so late. For the same reason people often go out for tapas (the meal being called *tapeo*) after work, between perhaps 7 and 9. This meal will almost certainly include an aperitif like sherry, wine, or beer, plus several little plates that can include absolutely anything. In Spain the place where tapas are eaten is not a restaurant but more like a bar, and one stands. Commonly the tapas are served with napkins, which are tossed on the floor, and after a crowd passes through the tapas bar, it may look like a disaster hit.

Dinner, which can be as late as 11 P.M., is usually a smaller meal eaten at home with family members,

An assortment of Spanish tapas on a cold buffet. (Shutterstock)

in structure much like lunch. On holidays, however, it can be a much larger meal, eaten out. It will also consist of several courses with soup or salad to start, a meat or fish main course, plus a dessert such as flan or cake but just as often merely a piece of fruit.

Eating Out

Restaurants in Spain range from simple neighborhood joints to Michelin-starred white-tablecloth restaurants. *elBulli* was rated the best restaurant in the world for several years in succession, and the economic upsurge of Spain has meant that people eat out a lot and demand high-quality food at every type of dining establishment. Spain is currently at the forefront of what is popularly known as molecular gastronomy, cooking using scientific implements, new combinations of unusual ingredients, and plates arranged in novel and surprising ways. Many Spanish chefs dislike this term, though, preferring to call what they do simply *nueva cocina* (new cuisine). Sometimes recipes in such restaurants are variations on traditional dishes, perhaps deconstructed, but just as often they depart completely from traditional Spanish food. Like all food trends there are many imitators whose foams, colloidal suspensions, edible menus, and the like are pale imitations of the real innovators.

Restaurants are open for full meals both late in the afternoon and very late in the evening, and formal multicourse meals are served at both seatings. The Spanish love to eat out and socialize, whether at tapas bars, taverns, *fondas* (a kind of informal restaurant), cafés, or proper restaurants. Quite recently one also finds ethnic restaurants serving Chinese, Indian, Italian, or Turkish food; these may also offer a take-out menu. There are now some fast-food chains and pizzerias, but they are not as successful as elsewhere in Europe, nor can they compete with the local tapas culture.

Tapas bars are a thriving business throughout Spain and can get extremely crowded, with people standing elbow to elbow, packed in like sardines, at the best sites. Spaniards usually visit such bars in the early evening, going in groups, and often hitting

several spots in one tapeo. One will find olives and lupins everywhere, as well as pickled vegetables on skewers (*banderillas*), little ceramic dishes of shrimp or fried squid, and slices of toast with tomato, cheese, ham, or blood sausage, but there can also be more substantial dishes that must be eaten with a fork, like cooked seafood, vegetables, or *patatas bravas*, which are fried potatoes served with spicy tomato sauce or garlic mayonnaise. The most renowned tapas bars are found in Andalusia in cities like Seville. The word *tapas* literally means “covers” and may derive from a piece of paper that covered a glass to keep out flies, or hold a little snack. Or it may mean a cover to the stomach when one drinks alcohol. Traditionally one would pay per plate, which were counted by white marks made on the wooden bar. Each plate holds only a few bites, and if one wants a larger portion one orders a *ración*. In the Basque country tapas are called *pintxos* (from the word for toothpicks, used to hold the little mouthfuls together) and nowadays may include wild experimental combinations of exotic ingredients.

Special Occasions

Spain is a largely Catholic country, though increasingly it is becoming secularized. Traditionally this has meant fasting on Fridays, during the entire season of Lent (40 days leading up to Easter, minus Sundays), and, for the especially devout, for the vigils on saint’s days, Advent, and several other holy days. To fast in this case meant abstention from meat, cheese and dairy, eggs, and any animal products, like lard for cooking. In much of Spain this was not a terrible hardship as there is abundant oil for cooking, bounteous fish and vegetables, and especially legumes. But it did mean forgoing many favorites like ham and sausages, and in rural and mountainous regions fasting periods could be austere.

The Spanish have also been known for centuries for their parsimonious diet, subsisting on much less food than other Europeans, largely because of the heat. This, at least in the minds of foreigners, was compounded with their intense religiosity, sparing use of alcohol, and preference for many small

meals scattered through the day rather than large, hearty, and substantial meals. While there may be some truth to this, the Spanish do have many celebrations. The tradition of Mardi Gras, or Carnival, a huge festival of excess preceding Lent, was abolished in the course of the Catholic Reformation in the 16th and 17th centuries. There have been revivals recently, though, which are essentially street festivals, bereft of their original religious purpose. While these are not as raucous as those of New Orleans or Rio de Janeiro, many Spanish towns manage to throw a big street party.

Street festivals are also popular during the *feria*, or bullfighting season, when stalls line the streets and people cook big pans of paella, grill sausages, and serve various kinds of street food, beer, and wine. There is usually loud music playing and flamenco dancing. The *feria* was originally solely a religious holiday, though, held during Easter week, or during Advent preceding Christmas. Christmas Day, like elsewhere, is an occasion for a big, formal sit-down meal at home with relatives. Special cookies are made as well as marzipan, nougats (*turrón*), and crumbly cakes like *mantecados*, which melt in the mouth. Candy and presents arrive on Twelfth Night, or the Feast of the Epiphany, January 5–6, when a king cake (*roscón de reyes*) is served, containing a bean or little ceramic baby. Whoever finds it is crowned king for the day.

Saint’s days are also holidays; that commemorating Saint John (San Juan) on June 24 is popular,

A pile of mantecados and polvorones, typical Spanish sweets. (Shutterstock)

as is traditionally Saint James' (Santiago) the next day. As in the rest of the Hispanic world, All Saints' Day is also celebrated, by eating chestnuts, candies in the shape of dead men's bones, puffy *buñuelos* (doughnuts), and other pastries. Likewise rites of passage—baptisms, confirmations, weddings, and funerals—are celebrated with festive foods.

Diet and Health

Much of Spain would until recent decades have been included among those people who ate a so-called Mediterranean diet, consisting of a small amount of animal protein, many fruits and vegetables, healthy oils (predominantly olive), and fish high in omega-3 fatty acids. This was not the case for mountainous parts of Spain and in particular the north, but in general the Spanish diet was parsimonious and healthy, though political turmoil certainly did add its share of poverty and malnutrition. With economic prosperity, Spain can now be said to share with other nations the problems of hypertension, obesity, diabetes, and a diet relatively high in saturated fat, salt, and processed sugar. Cardiovascular disease is on the rise. This is compounded by an increasingly sedentary lifestyle, with people working at desks in an increasingly service economy and fewer people performing manual labor. Even

agriculture, which a mere generation ago would have been physically very demanding, has been mechanized on par with industrial-scale farming in the wealthiest of countries. Ironically, the Spanish are also increasingly health conscious, and manufactured foods specifically designed for maintaining an ideal body weight, as well as low-calorie and low-cholesterol foods, are now commonly seen in grocery stores.

Sweden

Overview

Located on the peninsula of Scandinavia, the Kingdom of Sweden is one of the largest countries in Europe. Approximately 9.3 million people share a land with many natural resources, forests, mountains, rivers, lakes, and shorelines; Sweden has harsh winters in the north and mild weather in the south. Sweden is one of the least densely populated countries in Europe, and about 80 percent of its inhabitants live in cities, mostly in Stockholm, the capital, on the coast of the Baltic Sea; Malmö, in the southernmost part of the country; and Gothenburg, on the west coast. The climate varies considerably from north to south due to the country's shape, and thus the foodstuffs available to Swedes in different parts of the country also vary greatly. Sweden is divided into three general areas: Götaland in the south, Svealand in the middle, and Norrland in the north, each with its own culinary traditions, strongly influenced by climate, geography, and available foodstuffs. These three areas are in turn politically divided into 21 regions or counties characterized, in part, by their own local gastronomy.

An important aspect of Swedish culture and tradition in general is the Lutheran or Protestant heritage, even though very few Swedes regularly attend church activities. However, the strong Lutheran heritage, more specifically the belief in “not craving more than one needs,” has clearly marked Swedish culinary traditions, which may appear simple to foreigners since herbs and spices have been sparingly used. At the same time, there has been a tendency to embrace foreign dishes, which has led to an increase in the variety of herbs and spices on offer,

while more traditional Swedish menus are enjoyed during holidays and on special occasions. Since the 1960s, when pizza became a major Swedish dish, Middle Eastern kebabs, Chinese, and more recently Tex-Mex–inspired foods have been incorporated into mainstream Swedish food consumption.

Food Culture Snapshot

A mainstream family living in downtown Stockholm, the Nyströms consider themselves open to new tastes while maintaining their families' traditions. Sanna and David both work full-time, like most Swedes, and have one 10-year-old daughter, Lisa. Their neighborhood has several supermarkets in which Sanna and David buy most of their food. Several new bakeries sell sourdough bread, which has recently become very trendy; it is expensive by Swedish standards, and the Nyströms seldom buy the bread, but they love the smell that surrounds the bakeries. In the area there are also many coffee shops, all offering take-out *caffè latte* and lunches; however, during weekdays it is almost impossible to get a seat since they serve pasta, pie, and salad lunches that are very popular. Both Sanna and David go out to eat on workdays, even though a few co-workers have lunch boxes with them. The Nyströms spend little time shopping for food and cooking during the week.

Sanna, David, and Lisa usually start their day with a complete breakfast. They are similar to other Swedes who follow the Swedish National Food Administration's food pyramid and nutrition advice. They believe that a good breakfast is important and thus often eat oat porridge with low-fat milk and lingonberry jam, a

glass of fruit juice, and coffee or tea. Sometimes they have packaged cereals or toast with boiled eggs. The Nyströms do not worry about lunch since Lisa, like all children in Sweden, is served a free lunch at school. The school lunch menus are varied and include regular Swedish and international dishes, milk, bread, and salad. Since most parents work full-time, children are offered a midafternoon snack in the Child and Youth Center that is located near the school and where Lisa regularly spends her afternoons. Sanna and David arrive home around 6 P.M. and take turns making dinner. They both love food, cookbooks, and watching food programs on the television but lack the time to make elaborate recipes so they settle for ready-made meals or quick and easy dishes such as boiling potatoes and warming frozen fish fingers or Swedish meatballs in the oven.

On Saturdays, the Nyströms visit a nearby farmers' market and purchase different kinds of vegetables. Popular choices are beets, which they boil and eat with melted butter and salt; salad greens, such as spinach; and trendy vegetables, for example, *ramsoms* (a wild relative of chives), which have become very popular. Sanna, David, and Lisa eat lunch at one of the numerous restaurants that serve food from different cultures; a favorite is Lebanese food, but they sometimes purchase take-out sushi. Often, they prepare dinner at home and love to try out new recipes of modern Swedish home cooking, which are quicker to make than more traditional ones.

Major Foodstuffs

Sweden has only 5.93 percent arable land, while the rest of the country is comprised of forests, lakes, mountains, and coastlines. Fish and seafood, especially salmon and shrimp, are inexpensive; wild game is a traditional part of Swedish home cooking; locally grown vegetables are available during the summer months but otherwise are imported, along with fruits and meat.

Sweden's most important grain crops are wheat, rye, barley, and oats. Barley is mostly used for animal feed, but wheat and oats are a part of Swedish daily fare. A very popular breakfast is oatmeal with berry jams and milk, and wheat flour is used

in creamy gravies and pastries. Rye is an indispensable ingredient in Swedish *knäckebröd*, or crispbread. Rye and oats also are combined or used as the main ingredient in breakfast porridges. Sugar beets are also cultivated in the southern part of the country. Sweden is practically self-sufficient regarding sugar because of the processing of sugar beets into refined sugar. Swedes consume the most candy and sweets in the world.

Potatoes are a favorite crop in Sweden, even though the yield is not large enough to feed the whole population, and, therefore, a certain percentage is imported. Potatoes are often divided into several categories according to when the potato is harvested and the best use for it. Fresh, early summer potatoes are a must on all Swedish tables during the summer. They are small and their skin is so soft that they do not have to be peeled; just washing the dirt off is usually enough. Starchy potatoes are mostly used in mashes; less starchy, firmer varieties are often boiled or sautéed. These are more frequent during the fall and winter months.

Other root crops frequently used in Swedish cuisine are carrots, rutabagas, and beets. Carrots are often just grated and served as a salad on the side. Rutabaga mash is a traditional Swedish side dish and is sometimes mixed with mashed potatoes. Boiled summer beets are popular with butter and salt, while fall and winter beets are preserved in brine and consumed throughout the year.

All sorts of cabbages are available year-round in Sweden. Spring cabbage, with its tender leaves, is used for making *kåldolmar*, the Swedish interpretation of eastern Mediterranean dolmas. Filled with minced meat and served with creamy gravy, mashed potatoes, and lingonberry jam, this dish is one of the most important in Sweden. Cabbage is also used for making *skånsk kålsoppa*, a winter soup with homemade broth and salted pork. Red cabbage is a delicacy from southern Sweden and is irreplaceable on the Christmas table.

Pork may be the most commonly used meat in Swedish households. Many different varieties of pork sausages are eaten, such as the thick *falukorv* (Falun sausage, similar to bologna), a favorite of children, and the *isterband*, made of pork, rye, and

potatoes. Pork steaks appear regularly on Swedish tables, and bacon and salted pork are used to flavor different soups, such as the popular *ärtsoppa* (yellow pea soup), traditionally eaten on Thursdays. Beef is also eaten regularly even though it is more expensive than pork. Swedish *köttbullar*, the traditional meatballs now available throughout the world at IKEA restaurants, are made of one part minced pork and one part minced beef, depending on one's budget and taste. Swedish meatballs must be served with gravy, potatoes, and lingonberry jam.

Wild meats are a staple in the northern parts of Sweden and have seen a comeback in more urban areas. Supermarkets now have different cuts of wild boar, elk, moose, and deer for sale, so Swedes do not have to go hunting to be able to prepare wild game

A young girl eating a delicious winter meal of Swedish meatballs, served with mashed potatoes, gravy, and lingonberry sauce. (iStockPhoto)

stews, hamburgers, and steaks. Hunting is a common fall activity, and Swedish homes often have very large industrial freezers in which to preserve the game. Even in urban households, the standard refrigerator does not include a small freezer but is placed beside an independent freezer of the same size.

Several dairy products are part of Swedish daily meals. Milk is a compulsory drink for children and is also used in porridges. Cheese in Sweden is most often made from cow milk and is very popular. Many different varieties, such as *västerbottenost*, a strong aged cheese from northern Sweden, and the mild *hushållsost*, literally “home cheese,” are easily available throughout the country. *Messmör* (whey butter), a spread, and *messost* (whey cheese), a cheese, are both made from milk whey, butter, and sugar and are a must on crispbread. Cream with different quantities of fat is used almost every day in Sweden. “Cooking cream” makes gravies creamy, sour cream is used in dips and cold sauces, and whipping cream is irreplaceable in *pannkakstårta*, an easy-to-make birthday pancake cake that originated in Norrbotten (North Bothnia) and is now very popular everywhere in the country.

Pannkakstårta (Birthday Pancake Cake)

Makes 12–15 medium-sized pancakes

Ingredients

- 1 c wheat flour
- ½ tsp salt
- 2½ c milk
- 3 medium eggs
- 3 tbsp butter

In a large bowl, blend the wheat flour and the salt. Add 1¼ cup milk, and beat until the dough is smooth. Add the rest of the milk, and beat again. Add 1 egg at a time, beating well before adding the next. Melt 2 tablespoons butter, and blend it into the batter. Set aside for 30 minutes.

In a large frying pan, melt 1 tablespoon butter on medium heat. Pour approximately ¼ cup batter into the pan, and fry for about 1 minute, then turn

over and fry until golden brown. Put aside to cool on a plate.

For the Cake

2 c whipping cream

Sugar to taste

1½ c berry jam or fresh berries of your choice

In a bowl, whip the cream, and add sugar to taste. Place one pancake on a cake plate or other serving dish, spread some berry jam or fresh berries on the pancake, and top with 2 tablespoons whipped cream. Cover with 1 or 2 pancakes and repeat the process until all pancakes have been used. Decorate with whipped cream and fresh berries. Serve cool.

Fish is eaten at least once a week in Sweden, preferably on Tuesdays, and may be prepared in many different manners. Fish casseroles are often served in schools, and fish fingers with mashed potatoes are a children's favorite. Herring, both pickled and fried, has been an important staple in Sweden and is often eaten with potatoes and crispbread. Seafood, mostly shrimp and crayfish, is inexpensive. A delicacy that is available once a year is *surströmming*, fermented herring, served with bread and sometimes potatoes with a glass of milk on the side. Fish roe is also common in Swedish households, mostly in the form of *kaviar*, which, even though the names are similar, does not have anything in common with Russian caviar. Swedish kaviar is a spread eaten on bread with cheese and cucumber slices or on boiled eggs, and it may be used in fish sauces or sour cream seafood dips.

Sweden produces several kinds of alcoholic beverages, of which the most well known is Absolut vodka. Vodka and *akvavit*, the “water of life” made from potatoes, are irreplaceable on holidays. They are served with meals, cold, in small glasses, and are drunk in one shot, followed by a sip of beer. Akvavit is flavored with different kinds of spices, for example, dill, coriander, and caraway seeds; many Swedes make their own spice blends that they add to unflavored akvavit, which is then left to steep for several weeks.

Pickled herring served with tomato, cucumber, and lettuce. (Shutterstock)

Favorite nonalcoholic beverages are *saft*, a berry or fruit concentrate; water flavored with cucumber, lemon, or orange slices; tea; and coffee. Swedes are some of the world's biggest consumers of coffee, and the *fika*, coffee break, is compulsory in most workplaces in the country, where workers take coffee breaks twice a day. There are many varieties of coffee in Sweden: espresso, cappuccino, café au lait, and regular brewed coffee. Coffee shops are found on almost every corner in cities. Coffee and tea are often accompanied by an American-style muffin (called *muffins*), brownies, or more traditional Swedish pastries.

Desserts and sweets, cookies, cakes, and pastries are very popular in Sweden. Many recipes have French origins, though they have been adapted throughout the years. Others are originally foreign, such as Italian *pannacotta* (cooked sweetened cream solidified with gelatin), which is now sold in portion-sized containers in most supermarkets. A favorite in Sweden is *ostkaka*, which is very different from its literal translation of “cheesecake”: It is a pudding or curdlike cake of cream, sugar, egg, almond, and bitter almond, served warm with cloud-berry jam and sometimes whipped cream.

Cooking

Swedish cuisine has a rural heritage that is simple though time-consuming. Boiling, frying, and baking are the most commonly used techniques, and,

in summer, barbecuing meats, vegetables, and fruits has become very popular during the last few years. Most stoves and ovens are electric, though a few households have older gas-fueled stoves, which are becoming quite popular in higher-income households. Microwave ovens are found in almost all Swedish homes and workplaces, where fully furnished kitchens are often available to workers. Preserving food by pickling, drying, and smoking is part of the rural heritage, and the techniques originally became popular in order to store foodstuffs during the harsh winter. Nowadays, foods from all over the world are available in most supermarkets, and preserving food is not necessary. However, the tradition of picking wild berries and mushrooms and preserving them is still very much alive today in Sweden.

Typical Meals

Since Swedes are very health conscious, they believe in starting the day with a good breakfast consisting of at least a couple slices of bread, preferably crispbread, with ham, cheese, and some cucumber slices. Sometimes breakfast consists of boiled eggs or oatmeal porridge with berries or jam and milk. Adults drink tea or coffee, while children often have a cup of hot cocoa.

Lunch is an important meal and is usually eaten around noon. Depending on the day of the week, since Swedes maintain the custom of eating fish on Tuesdays and soup on Thursdays, restaurant lunch menus vary from Thai noodles, sushi, and Swedish meatballs as well as a vegetarian alternative dish to more traditional fish casseroles, yellow pea soup and Swedish pancakes, or light salads or pies. Submarine sandwiches are also popular lunch choices.

Ärtsoppa (Yellow Pea Soup)

Serves 6

Preparation: 2–3 hours

Ingredients

6½ c dried yellow peas

8½–12 c water

1 lb salt pork (or bacon)

2 tsp dried marjoram or thyme

Cull and rinse the yellow peas. Put in a large bowl and cover with water. Leave to soak overnight. Drain the soaking water, and put in a large pot. Cover with 8½ cups cold water, and bring to a boil. Skim. Slice the salt pork or bacon into 1-inch cubes. Add to the soup and cover. Boil on medium heat until the peas feel tender and the soup is creamy, about 2 hours. Skim often and remove any pea shells. Add dried marjoram or thyme, and serve in bowls with some spicy sweet mustard on the side.

Around 2:30 p.m., it is common in Sweden to eat fruit or have a coffee break with something sweet, which may be a couple of cookies or a pastry.

Dinner on weekdays is regularly simple, with many ready-to-heat dishes or take-out foods available. Many Swedes with tight schedules choose to cook during weekends instead. However, some dishes, such as *korv* (sausage) stroganoff with rice and all sorts of meats (beef, pork, chicken) fried with vegetables and often noodles, a Thai- and Chinese-inspired cooking method, are popular weekday meals.

Swedes are very interested in cooking, and weekends are reserved for trying new recipes or creating new menus. Weekends start on Friday evenings, when taco dinners or fajitas are a popular choice. On Saturdays and Sundays, recipes from all around the world are cooked. In urban areas, it is not unusual to make Korean *bibimbap* (rice topped with vegetables and slices of meat) or Peruvian ceviche (raw marinated fish) to share with friends. Traditional Swedish meals are often reserved for holidays.

Eating Out

Swedes often eat out, in particular in cities, where many restaurants serve weekday lunch menus. Also, there are many popular street stands that offer hot dogs, hamburgers, and kebabs that share their customers with McDonald's and Burger King. Most

pubs and local bars offer similar menus, of which steak and fries is often the most inexpensive choice, even though they also often serve Swedish home cooking such as *pytt i panna*, a hodgepodge of potatoes and meat leftovers sautéed with onions and served with fried eggs. However, dining out in Sweden is often expensive at regular restaurants, which are often led by well-known chefs, who during the last few years have been inspired by traditional Swedish home cooking to create modern versions of their grandmothers' recipes. Many restaurants specialize in fish and seafood or garlic-based dishes, while others concentrate on serving wild game or vegan food.

As Swedes are very interested in foreign foods, there are many restaurants that have Middle Eastern, Chinese, Korean, Thai, American, Greek, Indian, and Pakistani menus. One of the most popular choices for eating out with friends is restaurants that serve Spanish-inspired tapas.

Special Occasions

Sweden has a Christian heritage, and therefore Swedes celebrate Christmas, Easter, and All Saints' Day. However, Christian celebrations have been influenced by pre-Christian customs and sometimes foreign traditions, which have contributed to create very Swedish holiday festivities.

Christmas is very important in Sweden, even though it is no longer expected for families to celebrate Christmas Eve or share a meal on Christmas Day. Many younger Swedes celebrate with friends or travel abroad during the holidays. Nevertheless, some traditional Christmas customs are irreplaceable for many Swedes. In early December, restaurants begin to serve the traditional *julbord*, Christmas table, which includes many if not all of the compulsory Swedish Christmas dishes. Swedish meatballs, Christmas ham, red cabbage with raisins, several kinds of pickled herring, smoked salmon, sausages, cheese, crispbread, and boiled potatoes are just some examples of the wide variety of dishes on the Christmas table. Almost all employers invite their staff to a Christmas lunch or dinner consisting

of the traditional Christmas table. However, during the last few years new menus have become popular, and it is not unusual to share a Pakistani- or Lebanese-inspired Christmas table. Sweets are also very important during the holidays, and many children bake Swedish *pepparkakor*, gingerbread cookies, at school or at home. These are a must on the festival of Lucia, which celebrates the Italian Saint Lucia as the one who brings the light, on the early morning of December 13.

The Christmas table is a variation of the traditional Swedish smorgasbord that also is a part of the summer festival of *midsommar*, or Feast of St. John, celebrated in late June on Midsummer's Eve. Everywhere in Sweden, people celebrate summer by singing and dancing around a Maypole decorated with flowers and share a meal that consists of a great variety of herring, salmon, and shrimp dishes, the irreplaceable meatballs and boiled spring potatoes, lots of beer and akvavit, and bowls of strawberries and cream for dessert. The festivities begin around noon and stretch well into the night.

Summer is the most important season in Sweden due to the climate, which is cold and very dark through the long winter months. Therefore, starting in early June, fresh produce is a treat, and Swedes look forward to celebrating summer with strawberries and cream cakes, a favorite on summer birthdays; rhubarb pie with vanilla cream; and fresh greens. Summer is also the time for connecting with

Gingerbread cookies, often found in Swedish homes at Christmastime. (Shutterstock)

nature, and it is common to spend as much time as possible outdoors, eating most meals in gardens and on balconies. Swedish forests are rich with many kinds of berries, and families often spend their summer days picking berries and mushrooms. Fishing is also a favorite summer activity, and it is not unusual to see fishermen in downtown Stockholm, which has many good fishing spots.

In August the *kräftskiva*, crayfish party, is celebrated outdoors and in the company of family and friends. The menu is simple: lots of crayfish with dill flowers, crispbread and cheese, and akvavit and beer. The idea is to have a shot of akvavit for each crayfish claw on one's plate and to sing one of the many traditional songs before downing the shot. As the theme is crayfish, the table and its surroundings are decorated with paper tablecloths, napkins, carton plates, bibs, and plastic glasses, all decorated with crayfish and crayfish-related themes, and one or several paper lanterns representing the man-in-the-moon is hung from tree branches.

For Easter, Swedes decorate their homes with twigs and bright-colored feathers, and their children, both boys and girls, dress as *påskkärringar* (Easter witches who according to old Swedish beliefs congregated on the evening before Good Friday) and go out trick-or-treating. The Easter bunny usually makes an appearance on Easter Sunday, and both children and adults receive or trade as presents large cardboard eggs filled with candy and other sweets. Traditionally, Easter is celebrated by eating a variation of the smorgasbord, with cold shrimp, fish, and egg dishes and occasionally a lamb roast. In recent years, other dishes have become popular, and nowadays each family may create their own Easter menu; some may have Tex-Mex food, while others might make Vietnamese spring rolls.

Diet and Health

Swedes are very health conscious; many work out regularly and make mindful choices about the foods they eat. A lot of people are vegetarians or vegan,

and others avoid red meat and pork. Recently, eating foods with a low glycemic index has become very popular, and many restaurants now offer at least one dish with a low glycemic index.

A few years ago, a journalist published a book about additives and preservatives, and Swedes were shocked about the high content of unnatural ingredients in their favorite foods. Therefore, many Swedes now check the ingredients on packaged foods and try to avoid those they do not consider natural. A chain of supermarkets has taken advantage of this trend and is now marking “real food” to make it easier for their customers to find more natural products.

Another important trend is the strong movement toward organic and locally produced foods, which takes up a large part of the media discussions. Many cookbooks that deal with organic, regional, local, and unprocessed foods are published every year in Sweden. Food blogs are also very popular, and there are several that have organic and natural food as their favorite subject.

Sweden has a strong rural tradition, and many Swedes have a passion for nature and everything related to growing and cultivating plants. In many cities people may rent a small patch of land for growing their own food, and it is common for those who do to spend several days at a time in their lots, which most often have a small shed in which to spend the night. Recently, growers have organized small local markets, which have become very popular, in which they sell their surplus. Many who do not have access to arable land grow vegetables and even fruits at home, and it is common to see balconies in Sweden overflowing with cherry tomato plants and different kinds of herbs.

Switzerland

Overview

Switzerland is located in central Europe, landlocked between Italy, France, Germany, Austria, and Liechtenstein. The country is divided into three regions—the Alps, the Jura, and the Central Plateau—and 26 cantons. German, French, Italian, and Romansch are the country's four official languages. Its 7.6 million inhabitants are 65 percent Swiss German, 18 percent Swiss French, 10 percent Swiss Italian, 1 percent Romansch, and 6 percent of other origins. Immigrants are numerous in Switzerland, having come most recently from the Balkans. Serbo-Croatian is now the fourth most spoken language in the country, and 4.3 percent of the population is Muslim, compared to about 42 percent Catholic and 35 percent Protestant. The country's quality of living is high, and the average life expectancy is about 80 years.

Much of the country consists of mountains (the Alps cover 65 percent of its surface, with the Jura making up another 12 percent), with its highest peak, the Dufourspitze, towering at 15,203 feet. Many lakes adorn the landscape—the largest are Lake Geneva, Lake Constance, the Lake of Neuchâtel, and Lake Maggiore—which makes for a diet rich in fish specific to each lake and region. About a third of the country's land is farmed.

Switzerland's public transportation is abundant and efficient. The country boasts one of the world's densest rail systems, ranging from intercity express trains that go from Zurich to Geneva, with two stops in between, in about three hours to regional trains that cover medium-size towns, connecting them to larger urban areas. Postal cars serve smaller

towns and mountain villages, while boats connect cities around lakes.

What the Swiss cook and eat is still very much influenced by the ingredients found in each region, but immigration, travel, and a large variety of prepared foreign foods available in supermarkets have diversified the Swiss palate. A Chinese hot pot is as likely to be the centerpiece of a dinner among friends as cheese fondue is. Stores close at 6:30 P.M. on weeknights and 4:30 P.M. on Saturdays, and they are closed on Sundays. Convenience stores in major train stations sell a variety of foodstuffs, including fresh fruits and vegetables, allowing commuters to shop on their way home.

Rustic dishes that contain high-calorie foodstuffs, such as potatoes, cheese, pasta, and sausages (sometimes all together), and seasonal vegetables are most typical of Swiss cuisine. These long-standing traditional foods date back to a time when most Swiss worked outside, on farms, in forests, or in the mountains.

Food Culture Snapshot

Marc and Valérie Münster live in Bern, the Swiss capital, in the top-floor apartment of a three-story house converted into office and residential space near the center of town. Marc is half Swiss German, but they both grew up in the French part of the country and moved to Bern after he finished his master's degree in geology and she her doctoral degree in law. Marc works an hour away, in Bienne (Biel), as a director and area manager for a company that educates corporations and individuals on sustainable development. Valérie works for the government in Bern, as a legal officer,

and travels often. They became parents in September 2009 and as a result reduced their work schedules. Marc now stays at home on Wednesdays, while Valérie does so on Tuesdays and Friday afternoons. They are committed to eating local, seasonal foods and buy mostly Swiss-grown products, organic if possible.

Like many Swiss people, their refrigerator is on the small side, so they tend to shop several times a week for quantities of food sufficient for a day or two of meals. They mostly purchase vegetables, cheese products, rice, and pasta, limiting their meat consumption to a couple of times a week. The vegetables they buy are fresh and seasonal rather than frozen, even when shopping at the supermarket, with the exception of dried green beans, a popular Swiss product. They cook dinner every night but sometimes resort to the high-quality prepared foods that are widely available in Swiss supermarkets, such as premade *rösti* (a potato pancake), premade tart dough for savory tarts, pre-cooked vegetables, and jarred sauces.

Like most Swiss urban areas, Bern is still surrounded by agrarian land and farms, even if housing developments are also prevalent in the countryside. Farmers come to the farmers' market that takes place in front of the Federal Palace and in nearby streets every Tuesday and Saturday morning. The Münsters shop there every Saturday morning, unless they are out of town, purchasing vegetables, meat, and cheeses to use during the week, and flowers. They typically buy a variety of sausages (some of which are ground on site at the market by the butcher once they pick their meat) from the region, both fresh and cured. Local cheesemongers offer both regional specialties, such as Belper Knolle (a spreadable cheese flavored with garlic and pepper), and cheeses that come from other parts of Switzerland.

In addition to cheeses of all sorts, dairy products such as yogurt, milk, and cream figure prominently in the Münsters' refrigerator. They purchase plain or Greek yogurt to mix with cereals and muesli in the morning, and fruit-flavored yogurts to eat at the end of a meal. They rarely purchase or make dessert for weeknight meals, preferring instead to eat a yogurt and a fruit. They also frequently purchase chocolate bars, which they'll eat as an afternoon snack or after dinner.

The Münsters make their own sparkling water with a Soda-Club. They drink it throughout the day and with lunch and dinner. They drink tea and coffee with breakfast and an espresso after a meal. They often have a beer—usually from Appenzell—before or with dinner on weeknights. On weekends or when friends visit, they serve Swiss wines, which they purchase directly from the producers during tastings in Valais.

Major Foodstuffs

Each canton has its own preferred and most well-known foodstuffs, some of which are not available in other regions and might even be the specialty of only one or two producers. Other products that originated in one particular location are available—and loved—in the whole country.

True to the country's image abroad, cheese is a major Swiss foodstuff. Swiss people consume dozens of varieties of cheeses, however, not just Emmental (what is called Swiss cheese in the United States). Gruyère is usually available as salted, semisalted, mild, aged, and from the pastures (made while the cows were pasturing in the mountains in the summer, which makes it distinctly fruity). Sbrinz is another hard cheese that is eaten raw or grated onto dishes that are then cooked. Tilsiter has a softer texture that is closer to that of Emmental. Vacherin Mont d'Or comes from the canton of Vaud, but its distinct round pine box appears in cheese cases everywhere throughout the winter. It is made from lightly cooked milk and has a pale orange rind. It is eaten raw but also baked in its box with garlic and white wine until melted. Tête de Moine, from the Jura, is a round cheese that comes with its own stand and blade that turns around the top of the cheese (the *girolle*) and allows the diner to "shave" it into flower-shaped portions. Tomme Vaudoise is a small, round, soft cheese originally from Vaud that is eaten raw or baked (often breaded in the latter case). Many Swiss eat a piece or two of cheese before or in lieu of dessert on a regular basis. Cheese is also baked, melted, grated, and incorporated into other dishes, allowing for endless variations and preparations.

While cuts of meats such as steaks and roasts are expensive and as such eaten sparingly, sausages

feature prominently on the Swiss table. Raw, cured, or smoked sausages, such as the *St. Galler Bratwurst* (a boiled veal sausage that is roasted or grilled), *Landjäger* (a smoked beef and bacon sausage eaten cold), and *longeole genevoise* (a raw pork sausage that includes lard in its composition), are often served alongside röstis or another starchy dish. *Cervelas* is among the country's most beloved foods. This beef-and-pork boiled sausage is a staple of the Swiss barbecue, grilled both in backyards and at campsites. It is also prepared raw in salads, with potatoes, or on its own in the typical *Würstsalat* (sausage salad). A cold-smoked pork and cabbage sausage made in the canton of Vaud is cooked and served with boiled leeks and potatoes, in a typical dish called *papet vaudois*. Sausages of all kinds are as available at local butchers (most towns still have one) as they are in larger supermarkets, which often have a meat counter. Butchers also have stands at farmers' markets.

Bündnerfleisch is one of the most prized Swiss meat products. Legs of beef are cured in salt and spices for several weeks, before being air-dried for 10 to 15 weeks, during which they are also pressed so as to extract moisture. It is traditionally made from cows raised in Switzerland, but cheaper versions, for which the cows are raised abroad, have appeared on the market in recent years.

Thanks to its numerous lakes and rivers, fish figure prominently in the Swiss diet. Perch fillets are one of the characteristic dishes found all around Lake Geneva in the summer. The small fillets are breaded, fried, and served with a squeeze of lemon and French fries. *Ombles-chevaliers*, also from Lake Geneva, are mostly eaten poached with a white wine and cream sauce. Lake and brook trout abound. Blausee Bioforellen, located on the Blausee in the Bernese Alps, are the only organically farmed trout in Switzerland. Its highly acclaimed varieties include rainbow, river, and salmon trout. *Feras* are found in most parts of Switzerland, including the Tessin, where they are sautéed and served with a vegetable marinade, and St. Gallen, where they are served with an onion and tomato sauce.

Grains, such as rice, polenta, oats, wheat, and spelt, are popular both as side dishes and as vegetarian main dishes. Polenta and risotto are traditional

to Tessin, the Swiss-Italian canton, but appear on all tables. Most of the oat consumption comes as part of *Birchermüesli*, the traditional Swiss breakfast cereal mix. Potatoes are also used in large quantities, to make dishes such as rösti, potato gratin, and *spätzli* (ragged noodles made from a thick batter).

Bouillon cubes (most likely to be Knorr or Maggi brand) are a staple of the Swiss pantry. While some cooks undoubtedly make their own stocks, many use this shortcut for dishes such as soups, risottos, and stews. Maggi Würze, a sauce similar in color and flavor to soy sauce, is also a frequently used seasoning. A weeknight dish that most children eat consists simply of small macaroni pasta doused in Maggi Würze.

Bakeries and pastry shops abound in Switzerland; no small town is without its fresh bread supply, even if it takes the form of a bread depot where a baker from another town drops off bread for sale (at a convenience store, for example). In larger towns that have several pastry shops, each will often distinguish itself with a specialty. As a result, it is not unusual for customers to frequent several stores depending on what they need. Typical sweets found in the pastry case include *carac* (a ganache tartlet covered in green fondant and adorned with a chocolate pastille more typical of the French part of Switzerland), flaky pastries called mille-feuilles, *baba au rhum* (cylindrical sponge cakes doused in rum), fruit tartlets, and chocolate slices. Most shops also sell petits fours, and the more sophisticated ones add chocolates to their offerings.

Many pastries and cakes retain their origin in their name even though they are available elsewhere. The following are among the most popular ones, available both in mass-produced versions in supermarkets and in independent pastry shops. *Appenzeller Biberli*, a lightly spiced dough shaped as a round or a rectangle and filled with almond paste, is a specialty of Appenzell that makes its way into all treat bags given out for St. Nicholas or Christmas (alongside cookies, chocolates, mandarins, and peanuts in their shells). It is available in supermarkets year-round, but pastry shops often make it just around the holidays and press its top in a special mold that adorns it with a St. Nicholas

A baker in Switzerland makes chocolates by hand. (Shutterstock)

or other seasonal design, for example. Carrot cake (*Rüebli torte*) is a specialty from Aargau, while Zug is known for its kirsch-flavored cake (*Kirschtorte*). Kirsch is a clear spirit derived from cherries. Walnut tart, from the Grisons (*Engadiner Nüsstorte*), is widely popular around the country. All supermarkets sell mass-produced, snack-size ones, while pastry shops throughout the country make their own version, which consists of *pâte sablée* (a sweet crumbly pastry crust) and a mixture of walnuts and honey. Some versions are open-faced and others completely enclosed in dough. Pear bread (*Birnbrot*) from Glarus has also made its way to the rest of the country; its filling includes pears, kirsch, nuts, and spices, encased in *pâte brisée*. *Basler Leckerli*, originally from Basel, is a hard cookie made from a dough that includes honey, candied citrus peels, and spices.

Fruit syrups, either commercial or artisanal, are popular throughout Switzerland. Elderberry, raspberry, and black currant are among the preferred flavors for these concentrates of fruits and sugar. Because only a small amount of syrup is mixed with water, it is a favored alternative to sodas.

Rivella is among Switzerland's best-known drinks. The soda, whose classic version is Rivella Red, contains milk serum, as well as herb and fruit extracts. Its lighter version, Rivella Blue, was the first low-calorie soda in Europe. Rivella Green (green tea-flavored) and Rivella Yellow (with soy serum rather than milk serum) are more recent and not as widely

consumed. Sinalco, a German soda that is the oldest European soft drink, is also a popular beverage, as are Coca-Cola products.

Swiss wines are an important feature of the country's gastronomy. Swiss people drink wine with food rather than on its own. Hot, spiced wine is a staple of street fairs and community events in the winter. The Valais, a canton in southwestern Switzerland, benefits from a warm and dry climate that makes it ideal for wine production (it is also one of the top fruit-producing regions). As such, its wines represent 40 percent of the total Swiss production. Fendant (a white wine made with Chasselas grapes) and Dole (a blend of Pinot Noir and Gamay) are its most well-known wines, but other varietals, such as Sylvaner and Petite Arvine, are gaining in popularity. Chasselas, Pinot Noir, and Gamay are also the varietals most found in Vaud and Geneva, while Merlot is most abundant in Ticino, the other three top wine-producing cantons in Switzerland. Blauburgunder is a reputed Pinot Noir from the Grisons.

Cooking

While their reliance on ready-made products has increased, the Swiss still cook regularly. The Swiss kitchen does not include many appliances and gadgets. A handheld blender, for soups and purees, and a handheld electric whisk are more common than countertop appliances that would perform the same duties. A food processor will typically be the largest appliance in the kitchen, tucked away until needed. Many typical Swiss dishes, as well as weeknight meals, require few special techniques and can be made in one pot. Chopping onions or shallots and garlic might be the most complex task a cook will accomplish while making dinner. Many households will, however, own a fondue *caquelon* and a raclette oven—used for melting cheese, which is scraped onto toast.

Swiss cooking uses the standard techniques of the Western kitchen, including sautéing, boiling, roasting, braising, and grilling. A number of Swiss dishes are stewlike and as such are cooked for a long time on the stovetop. The oven is much used for gratins and baked goods.

Betty Bossi is an essential cooking partner in Swiss kitchens. This fictional woman represents a culinary empire that includes monthly magazines, cookbooks, utensils, and food products. The recipes range from classic Swiss dishes and their modern interpretations to international cuisines and focus on specific dishes, such as cakes. Even if they do not subscribe to the magazine, most Swiss cooks own at least one Betty Bossi cookbook. Many “family” recipes also have their origin with Betty Bossi.

Because eating out is often expensive and apartments are usually of comfortable size, even in cities, Swiss people frequently invite each other over for dinner. A weeknight dinner after work will be simple, such as a *Zürcher Geschnetzeltes* (a veal stew from Zurich), a cheese or onion tart with a salad, or pasta. A weekend meal will include appetizer, or at least hors d’oeuvres to enjoy with a beer or a glass of wine, and dessert, often homemade, but a cake from a nearby pastry shop might also make an appearance.

Zürich Veal Stew

Serves 4

All-purpose flour

$\frac{2}{3}$ lb veal cutlets, sliced by hand

$\frac{1}{2}$ lb veal kidneys, sliced by hand

Salt and freshly ground black pepper

Unsalted butter

4 shallots, finely chopped

$\frac{2}{3}$ c sliced white mushrooms

1 c dry white wine

1 c heavy cream

Beurre manié (recipe follows)

1. Lightly flour the cutlet and kidney pieces, and season with salt and pepper.
2. Heat butter in a pan over medium-high heat. Add the cutlet pieces, and cook until golden brown, 6 to 8 minutes. Remove to a plate and set aside. Repeat the process with the kidney pieces.

3. Add more butter to the pan, and add the shallots. Cook until translucent, 3 to 4 minutes. Add the mushrooms to the pan, then deglaze with the wine. Return the meats to the pan, then add the cream and stir in the *beurre manié* until completely incorporated.

4. Season with salt and pepper, and cook until the stew comes together as a creamy mixture. Serve over rösti, spätzli, or rice.

Beurre Manié

$\frac{1}{2}$ c flour

$\frac{1}{2}$ c butter

Prepare the *beurre manié* by working the flour into the butter with your hands.

Baking is as essential to the Swiss cook as knowing how to prepare meat and vegetable dishes, particularly during the holidays. The Swiss exchange homemade cookies for St. Nicholas and/or Christmas, so ovens see a flurry of activity in December. Many typical cookies include almond or hazelnut flour, which are available in all supermarkets. During the year, much of the baked goods include fruits and are eaten with coffee or tea in the afternoon and as dessert. Children often assist with the baking process, helping to perpetuate family traditions. Most people buy bread at their local bakeries but still make *Butterzopf* (*tresse*), a bread that looks like and has a texture similar to challah, on weekends.

Gardens are a popular feature of the Swiss landscape. Residents of the country or the suburbs often grow small plots of vegetables and might have a fruit tree (apple, pear, or cherry) in their backyard. Most towns and cities rent plots to apartment dwellers, who garden after work and on weekends. Neighbors often benefit from their generosity in July and August, when even a small plot results in bountiful crops of zucchini, tomatoes, greens, and fruits such as blackberries, currants, and *mirabelles* (a small, yellow plum). Blackberries and wild strawberries grow alongside less trafficked roads and in the mountains, becoming part of the menu

A small garden in a Swiss village and the Matterhorn. (iStockPhoto)

for people out on a stroll. Foraging also applies to mushrooms, which appear in many Swiss dishes, such as meat stews or on their own in a cream sauce and served over bread, for example. Much of these homegrown and foraged vegetables and fruits are cooked right away, but they are also canned (whole or processed into sauces or jams, for example) to be eaten throughout the year. While younger generations do not can as much as their parents and grandparents, food-preservation methods nonetheless are important.

Typical Meals

While not always perfectly so, typical Swiss meals tend to be fairly balanced. A green salad is often served after the main dish, which can be as simple as a vegetable gratin. The Swiss still cook many of their evening meals at home, and as such they like

simple, healthful dishes that can feed the whole family with a minimum of fuss.

Coffee, tea, and milk are equally popular for breakfast. Many Swiss households own coffee machines (Nescafé being the most popular brand), which they use in the morning and throughout the day. Nearly all workers take a coffee break at some point in the morning and in the afternoon, often going to a café or cafeteria to sit down with a coffee or espresso. Most major cities now have at least one Starbucks, but coffee on the go is nowhere near as available or popular as it is in the United States. Typical mealtime beverages include still or sparkling water, often mixed with fruit syrups, and wine. Beer is drunk more frequently separate from meals, outside of the home on a weekend afternoon or before dinner when coming back from work. A digestif, most often in the form of a fruit- or herb-based schnapps, such as kirsch, Williamine, or

Appenzeller, often appears at the end of a weekend or special-occasion meal.

Café complet (the French term is used in all languages) is a long-standing staple weekly meal in Switzerland, now often enjoyed on a Sunday night. While its name comes from coffee and that beverage or chicory was likely served, with much milk, in earlier decades, that is no longer always the case. The meal centers on bread and various types of cheeses and spreads, with no cooked items.

When making desserts, fruit- and custard-based preparations prevail among Swiss cooks. *Süssmost-creme* is a classic dessert, originally from Thurgau and mostly found in the German part of the country, that is made with apple juice, eggs (whole or yolks only depending on the versions), cream, and sugar. Crème brûlée and mousses are equally popular at home and in restaurants. Fruit tarts and cakes appear on the Swiss table at least weekly. High-quality prepared doughs are available in the refrigerator (rather than the freezer) cases of supermarkets and can be used immediately, which allows cooks to have dessert ready in minutes once they cut up fruits and spread them over the dough.

Swiss people get up early and often get to work by 8 A.M. Many sit down for a breakfast consisting of bread and jam or cereals, but others will eat a croissant on the go or wait until the morning break to have a yogurt and a fruit. When not working close enough to go home for lunch (the lunch break lasts at least one hour), Swiss workers will eat the prix fixe menu offered by a nearby, inexpensive restaurant or their company's cafeteria. Plenty of shops offer sandwiches, savory tartlets, and hot dishes to go. Because of increased commuting time, many Swiss people don't get home until 6:30 or 7 P.M., but they still take the time to cook. As a result, dinner most often consists of a hot meal, even if it is a simple one that makes use of shortcuts. A weeknight dinner often includes a salad, which is served after the main dish, and fruit for dessert.

Eating Out

Switzerland boasts nearly 19,000 stand-alone restaurants and about 4,200 restaurants located in

hotels. Half of all meat products eaten in Switzerland are consumed in restaurants. The high volume of tourists, particularly in larger cities and in mountain towns, is partially responsible for such a large number of eateries. While take-out places and cheaper ethnic eateries (often of the fast-food type) have gained in popularity over the last 20 years, a dinner out is still something that is enjoyed at most once a week, because restaurants tend to be expensive. Many Swiss also work away from home and might eat at their company's cafeteria or in a café at lunchtime. Smaller villages will have at least one tavern, where locals will stop for coffee in the morning and afternoon and beer or wine in the evening—but often after eating at home. Many of the larger taverns, some of which also offer rooms to rent, often have a rustic bar on the first floor and a more formal restaurant upstairs.

It is possible to eat in restaurants that are several hundred years old. The Hotel les Armures in Geneva, whose restaurant offers Swiss specialties, dates back to the 17th century. Landgasthof Löwen, in Heimiswil, is a tavern and inn that dates back to 1340. Their emphasis on typical dishes does not close this type of restaurants to the younger generations, who eat this type of food just as they will sushi and other more contemporary fare in trendier settings.

Pizzerias are extremely popular, thanks to their flavorful yet affordable offerings. Most are still owned by Italian immigrants, who represented the largest immigrant group for more than 100 years, until immigrants from the former Yugoslavia began arriving in larger numbers in the 1990s. Pizzas are available for takeout or delivery in most cities (albeit with limited options), but most people still go out to eat them.

While they do not allow for full meals, pastry shops are an integral part of Swiss eating-out habits. No weekend stroll would be complete without a stop for coffee or tea and a pastry at one of the town's shops.

Special Occasions

The uninitiated might not find special-occasion meals to be much different from regular ones. The

ingredients are simple; some more expensive cuts of meats might be used when cooking for a special occasion at home, for example, but seasonal vegetables and a start will accompany it.

Raclette and fondue are not reserved for special occasions, but they are not exactly typical meals that would be consumed weekly either. They are the occasion of a gathering, even if it is a casual one on a Saturday night. Many Swiss households own a raclette oven (an electric contraption that has room for eight small, square, nonstick cheese holders) and an earthenware fondue pot (a caquelon), but people still often enjoy those foods out, at one of the many rustic restaurants and inns that serve them throughout the country. The type of cheese used for raclette bears that name. It is available in supermarkets in vacuumed-sealed packages or freshly sliced from the

A quaint and cozy scene of bread being dipped into cheese fondue in front of a fire. (Shutterstock)

local cheesemonger. The type and blend of cheeses used for fondue varies from region to region. A classic combination is the half-and-half (*moitié-moitié*), which features an equal quantity of Vacherin and Gruyère and is typically associated with the canton of Vaud, even if available in other regions.

Cheese Fondue

Serves 4

If you are a real garlic lover, you can also add a clove—thinly sliced or finely minced—to the fondue itself, for a more pronounced taste.

1 clove garlic

$\frac{1}{4}$ tsp cornstarch

$\frac{2}{3}$ lb Gruyère, cut in small cubes or grated

$\frac{2}{3}$ lb Vacherin, cut in small pieces (or substitute a soft, ripe cow-milk cheese)

$\frac{1}{3}$ c dry white wine, preferably Fendant

1 tbsp kirsch or more to taste

Freshly ground white pepper

Plenty of thick-crust peasant bread, torn or cut in pieces

1. Rub an earthenware fondue pot with the garlic clove.
2. Dissolve the cornstarch in a couple of tablespoons of the wine. Place the Gruyère and Vacherin in the pot, and add the wine, the dissolved cornstarch, and the kirsch.
3. Place the pot on the stovetop over medium-low heat, and stir with a wooden spoon until the cheese melts and everything forms a homogeneous mixture.
4. Light a container of Sterno canned heat or chafing gel, and place in the appropriate receptacle in the fondue burner stand. Place the fondue pot on the stand. Make sure that the cheese doesn't come to a boil. You can control the heat dispersed by turning the cover of the burner to open or close its ventilation holes.
5. Dip the pieces of bread into the fondue by placing them on long-handled forks. Once you finish the

fondue, be sure to allow the last thin layer of cheese to crust up and form a *religieuse*. You can remove it by poking it with your fork—if you are lucky it will come out in one piece, but otherwise just enjoy the pieces you manage to get.

For special occasions, the Swiss tend to purchase desserts at the local pastry shop rather than make their own. While cakes are not heavily frosted, the ones found in most bakeries for special occasions have buttercream frosting in flavors such as chocolate, coffee, and vanilla. They can also be covered in marzipan. Guests might bring petits fours, to enjoy with coffee and a digestif after the meal.

Several dishes are served for Carnival (usually in February), such as the *Basler Mehlsuppe*, a soup made of roasted flour typical of Basel, and beignets and fried doughs of all kinds. The Bern onion fair features plentiful onion dishes. A chocolate cauldron filled with marzipan vegetables celebrates Geneva's liberation from the Savoyards every December 10, in an occasion called *l'Escalade*.

Diet and Health

Like many European countries, Switzerland has seen its obesity rate rise over the last 20 years. According to the Federal Office of Public Health, 37.3 percent of Swiss adults have a body mass index greater than 25, which makes them overweight. One out of five children is overweight—a number that has quintupled in 20 years. A decline in physical activity, as both work and leisure become more sedentary, and a diet of high-calorie foods rich in fats and sugars are to blame.

Generally, however, the Swiss lifestyle offers a better work-life balance than other Western countries. While freelancing is not very common, employees can often reduce their work schedule once they start having children or to pursue side activities. Having more time at home means that people cook full meals and bake often. Even the larger

cities are close to mountains and lakes, so outdoor activities are part of the everyday life of most Swiss citizens, from a simple walk or a multiday hike at high altitude to boating and skiing.

Grains and dairy products appear frequently on Swiss tables, as do vegetables. Because of its cost, meat is typically not consumed daily. Many still take the time to sit down for breakfast, which includes muesli or bread slices with jams rather than sweet pastries. This makes the Swiss diet a generally balanced one.

Ukraine

Overview

Ukraine is a large eastern European country. Its territory covers 233,090 square miles. It is bordered by Russia, Belarus, Poland, Hungary, Slovakia, Romania, and Moldova, as well as the Black Sea and the Sea of Azov. The Dnieper, the Dniester, and the Buh are the three major rivers in Ukraine. Ukraine is a unitary republic divided into 24 provinces (*oblasts*) centered around large cities. Its population of just over 46 million people consists of ethnic Ukrainians (77%), Russians (17.3%), Moldovans, and Romanians (0.8%). There are also significant minorities of Belarusians, Bulgarians, Tartars, Jews, Armenians, and Greeks. This diversity is also reflected in Ukrainian cuisine, its ingredients, and its culinary techniques. Ukraine, throughout its history, has been subject to numerous invasions and domination by foreign powers. These influences also led a diverse and multirooted culinary tradition.

Religion also plays an important role in Ukrainian culinary traditions. Of those Ukrainians who are religious, 76 percent are Ukrainian or Russian Orthodox Christians. Eastern-rite Catholics make up 8 percent of the religious population, while Roman Catholics and Protestants make up 2 percent each. Less than 1 percent of the population is Jewish or Muslim. Under Soviet rule, religion was strongly discouraged, and today over half of Ukrainians claim to be atheist or to belong to no faith. Despite this, religious holidays and holiday dishes remain popular.

Food Culture Snapshot

Oleh and Viktoriya Shevchuk are a young couple living in Kiev, the capital of Ukraine. Oleh owns a small construction company building summer homes outside of Kiev. Viktoriya is an economist working for a private bank. They have no children. Their eating habits have been shaped by both traditional and Soviet foods that their parents served at home, as well as modern influences. Being middle class has allowed the Shevchuks to travel to western Europe and to Mediterranean resorts. They like the gourmet foods they sampled while traveling. Since they both have busy work lives, the Shevchuks also like the new convenience foods that are available in Ukrainian supermarkets.

The Shevchuks live in a typical “bedroom” district of Kiev, on the left shore of the Dnieper River. Like most other people living in the countries of the former Soviet Union, their sources of food are the supermarket, small local shops, and farmers’ markets. The Shevchuks shop together at the markets and supermarkets. As they return home after work, they make small, everyday purchases of bread, cookies, and soft drinks at the small local shops. The Shevchuks own a car and once a week drive to the nearest large supermarket, which is a part of the MegaMarket chain. There, they stock up on porridge grains, convenience foods like instant noodles, and cold cuts, milk, and eggs. Since they are young and have had greater exposure to the western European diet, the Shevchuks purchase many items that are not traditionally Ukrainian such as dry breakfast cereal and yogurts. At the Levoberezhny

market, which is not far from where they live, the Shevchuks shop for vegetables and fresh meat. Just like their parents, they try to maintain good relationships with specific stall owners, who then supply them with the better and fresher vegetables and cuts of meat.

Major Foodstuffs

Ukraine was traditionally seen as the breadbasket of eastern Europe, and it continued to play this role under Soviet rule. Unlike the relatively cold and poor-soiled terrain of its northern neighbors, Russia and Belarus, Ukraine's land was able to support a wheat-based cuisine. Millet and rice play a popular but secondary role. Rye and oats are much less important as grains in Ukrainian culinary traditions, but sourdough rye breads are also common. Various breads, cakes, and filled and plain dumplings are all usually made of wheat flour, sometimes in combination with milled buckwheat.

Vegetables and legumes are also very important to Ukrainian cookery. Beets are the most iconic and popular of the vegetables used in Ukrainian cooking, providing a key ingredient in its most well-known dish, a rich soup known as *borsch*. Beans and lentils are used in soups but are also mashed and served mixed with fats or in combination with other vegetables. Carrots, tomatoes, pumpkins, potatoes, and corn are also very important in Ukrainian cuisine. In western Ukraine, where the influence of Balkan cuisine is quite strong, corn is a major source of starch in the form of a local version of polenta known as *mamalyga*, which is often eaten with a salty sheep-milk cheese. Potatoes are not as common as is in the cuisine of Russia, or especially Belarus, but they still are very popular and commonly presented as a side dish, often in combination with other vegetables or even fruit. Potatoes are also used to obtain starch for use in jellied desserts. Onions, turnips, and cabbage are also important, with cabbage used either raw, fermented, in soups, or stuffed and stewed. Eggplants were seen as "foreign" in the distant past but have now become quite common in Ukrainian cuisine.

Meat is also a popular ingredient. Pork is the most common meat for Ukrainians. As in other

Borsch soup served in a glass dish. (iStockPhoto)

traditional cuisines, every part of the pig is used. Lard, or *salo*, is particularly common in Ukrainian food. It is cooked or preserved, often through salting or smoking. Lard is used as an ingredient or as a fat for frying. Many Ukrainian dishes, including doughnut-like desserts, are fried in rendered lard. Lard is used with other meat ingredients to make them moist. Eating pork became an important source of national and religious identity because, in the early-modern era, Ukrainians constantly fought the Muslim Turks and Tartars. Beef became popular only in the late 19th and 20th centuries, since buffalo (traditional bovines in Ukraine, not to be confused with the American bison) were beasts of burden rather than sources of meat. In the west and the south of Ukraine, lamb is a common source of meat as well. Ukrainians do not eat horse meat, but Ukrainian Tartars still use it as an ingredient in their traditional dishes, usually served only on holidays. Chickens, turkeys, and ducks are also eaten in Ukraine. Fish, especially carp, is a popular ingredient for soups and is also prepared in aspic. Herring, salted or marinated, is a popular appetizer, often associated with Jewish Ukrainian cooking. In the south, on the Black Sea and Sea of Azov coasts, saltwater fish is caught in great variety.

Eggs are also commonly used in the rich dishes of Ukraine. They are either fried plain or prepared as rich, multi-ingredient omelets. Eggs are also an

important ingredient in dough for dumplings and holiday breads and pies. Milk is used as a base for soups or a liquid for boiling dumplings. It can be soured and drunk or made into other drinks and cheeses. Cottage cheese, *tvaroh*, is popular throughout the Ukraine, while *bryndzia*, or feta cheese, is popular in the west and in the coastal south of the country.

Fruits such as apples, pears, plums, and cherries are eaten fresh or cooked in drinks and desserts. Berries, such as strawberries, raspberries, blackberries, and currants, are also popular ingredients. Watermelons and an endless variety of other melons are eaten as desserts, preserved, or used in main dishes. Fruit can also be used in savory dishes such as soups and condiments. Sunflower seeds are popular in many dishes but are also eaten roasted as a snack. They are also used as a major source of sunflower oil, which is very common in Ukrainian cooking.

Ukrainian food is not particularly spicy but is quite flavorful. Onions, garlic, dill, caraway seeds, anise, mint, and red and black pepper, as well as bay leaf and cinnamon, are used as common spices and flavoring agents. Vinegar is also a common condiment.

Cooking

Ukrainian dishes tend to be fairly complex, including multiple ingredients that surround, modify, or amplify one central ingredient. This is particularly well illustrated by borsch, the world-renowned soup that became symbolic of Ukrainian food in general. Borsch can contain up to two dozen ingredients in addition to beets, the definitive ingredient of this soup. Borsch is generally based on pork or beef stock, to which other ingredients are added. In some cases, when borsch is prepared in the style of Odessa (a southern port city) or Poltava (a city in central Ukraine), a goose or chicken stock is used. Ukrainian cuisine, unlike Russian food, favors sautéing (*smazhennie*) ingredients before they are introduced into other dishes. Beets are either sautéed or baked before being placed in the stock. Vegetables—carrots, parsnips, tomatoes, and sometimes turnips—are also sautéed and then added to the

soup. All ingredients are added in a particular and usually precise order, depending on the recipe. Kievan borsch recipes included beet *kvass* (a fermented malted beverage). Poltava-style borsch is made with goose and wheat-flour dumplings. Chernigov-style borsch features apples, tomatoes, beans, and squash, while Lvov-style borsch, influenced by the cuisine of the Austrian Empire of which it was once a part, has sautéed frankfurter sausage added to it just before serving.

While borsch is perhaps the best-known Ukrainian dish, the cuisine also includes *kulesh*, a somewhat less famous but nonetheless traditional soup. At its most basic, *kulesh* is a millet, potato, and lard soup-porridge, originally meant to be prepared in the open field. It is very filling and easy to prepare. Since it was developed by the mobile Cossack warriors, *kulesh* can be prepared from various ingredients on hand. When moving over long distances by water, Cossacks could replace the potatoes and millet with underwater tubers of river plants, and lard could be replaced with almost any other protein.

Kulesh (Millet, Potato, and Lard Soup)

Boil 6 to 8 cups of water with 2 teaspoons of salt. Once the water boils, add half a cup of millet and cook until done. Cube 6 potatoes, add them to the porridge, and cook for an additional half hour. Meanwhile, fry 2 or 3 finely chopped onions in about 5 ounces of *speck* (or other dry-cured smoked ham). Once the potatoes are ready, add the onions, *speck*, and a tablespoon of chopped parsley to the soup, and cook for an additional 5 minutes before serving.

Ukraine has a great variety of flour-based dishes. Slavic practices, and possibly even some Turkish influences, have mixed to create Ukrainian dumplings: *vareniki*, similar to Polish pierogi. Ukrainians fill *vareniki* with cherries, sweet or savory cottage cheese, sautéed onions or *shkvarki* (fried poultry or pork skin cracklings), and fat. Almost any filling can be used, including potatoes, liver, cabbage, beans, or sweet fruit and poppy seeds. *Pampushki* are very small buns made of raised yeast dough that can be made from buckwheat or wheat flour and then either

boiled or baked. They are often served with butter or oil and garlic-flavored sauce as an accompaniment to borsch. *Halushky* are a typically Ukrainian dish, but similarly named and prepared dishes are known in the rest of eastern Europe. The simplest recipes are boiled squares of dough served with butter, oil, or lard. The dough can also be mixed with cottage cheese, potatoes, and apples.

Halushky (Dumplings)

Make a thick dough from 3 cups flour, 2 eggs, $\frac{1}{3}$ cup water, and 1 teaspoon salt. After kneading the dough let it rest for 15 to 20 minutes under a towel, and roll it out to a thickness of a little less than half an inch. Cut into small squares. The cut halushky should rest for another 20 minutes to dry. Then drop into boiling salted water. They should be ready when they float to the surface. They should be eaten hot with butter, fried speck or bacon, or melted lard and cubed ham.

Milk and eggs are important components in Ukrainian cooking. Milk is usually simply drunk or soured into yogurt-like drinks and cottage cheese. A typically Ukrainian milk dish is *ryazhenka*. This is a thick, sour milk that was baked first. This caramelizes the milk sugars, giving *ryazhenka* a color like café au lait and a lightly sweet-sour flavor. Eggs are traditionally made into *yaishni*, rich omelets with cream or sour cream and flour, with many other ingredients. Hard-boiled eggs can also be baked in sour cream or chopped, mixed with raw eggs, and fried into patties.

Meat in the past had been eaten mostly on holidays, but in the years after World War II it became much more common. Meat, particularly pork, is usually prepared in two stages: first sautéed, then stewed with vegetables and flavorings. Lard may be used as a frying fat. Water, broth, or kvass can be used as a stewing liquid. *Shpundra* is an exemplary dish of this kind: Small cubes of pork are fried in lard and then stewed in kvass with beets. Meat rolls or cabbage rolls stuffed with meat are common preparation techniques as well, producing dishes called *zavivantsy*. German and Polish culinary practices have

introduced pattylike dishes of finely chopped ingredients including meat (especially pork) or vegetables, mushrooms, and eggs. Since traditional cuisines call for every part of the animal to be used, Ukrainians prepare *kendiukh*, the stuffed stomach of a pig, filled with spiced and finely chopped head meat. Poultry, whether chickens, ducks, geese, or even turkeys, is commonly made into broths and soups and often stewed with sour cream sauce or together with rice, or halushky. Sausage is a common way to preserve meat. *Kovbasa*, homemade sausage, is made soon after the slaughter of pigs. Cleaned intestines are filled with chopped meat, lard, salt, garlic, and pepper. These sausages are either fried or smoked in ovens. Sausages are preserved by packing them into clay jars and sealing them with lard. *Kyshka*, blood sausage, is also made, as is headcheese (*zeltz*).

The fish served in Ukraine varies by region due to the country's geography. In the north and center of Ukraine, river fish, particularly carp and pike, are popular. In the south, along the Black Sea coast, saltwater fish are more common. Everywhere, salted or marinated herring is popular as an appetizer. Southern Ukrainian cuisine is well known for fresh sea fish that is fried and served very simply with a side of potatoes. Northern and central Ukrainians use a mixture of river fishes to make soups, fried fish, or fish served in aspic.

One of the most popular dishes in Ukrainian cuisine (*salo*), smoked salted pork fat with garlic and bread. (iStockPhoto)

Vegetables are common in the fertile Ukraine. They can be prepared as side dishes with meat or made into soups. Many vegetables are often mashed and dressed with onions, poppy seeds, oil, and vinegar, and served as a main course or an appetizer. Beans, beets, and squash can be prepared as “caviars” of this type. Mashed potatoes mixed with mashed beans and poppy seeds are called *tolchonka*. Vegetables can also be prepared with grains such as wheat berries, millet, or rice to make rich porridges. Finally, vegetables are often preserved in salty or spiced brines. Almost every vegetable can be preserved this way, and Ukrainians are fond of salted tomatoes and cucumbers, and even salted watermelons. Mushrooms are picked in the woods and are dried, pickled, or eaten fresh. Mushrooms are made into soups and can be fried and served with potatoes.

Fruit and berries—apples, plums, strawberries, raspberries, gooseberries, and many others—were often eaten plain. They are added to savory dishes, especially borsch, or served with meats. Fruit and berries are made into the traditional sweet dishes *uzvar*, fruit *kholodets*, and fruit *babki*. *Uzvar* is made of meticulously cleaned fruit (fresh or dried) and raisins boiled in water and sweetened with sugar or, more traditionally, honey. Spices, such as cinnamon, cloves, and lemon zest, are used to flavor *uzvar*. The whole mixture is cooked until the fruit is soft and then chilled to thicken the dish. *Kholodets* is made of fruit, sugar, and spice syrup mixed with pureed fruit and then chilled. Fruit *babki* are essentially fruit puddings made of mashed fruit mixed with eggs and flour, baked, and eaten while still warm. Fruit is also often made into a jam or *povidlo*, a thick fruit butter most traditionally made out of plums. Sugar is usually added toward the end of cooking the fruit, letting the *povidlo* remain light-colored.

Ukrainian desserts can also be made out of dough and then either baked or fried and served with a sauce or a topping. Baked pastries are usually made with choux pastry (a light, airy dough made with butter, water, flour, and eggs) rather than yeast-risen dough. These include *bubliki*, small bagels of choux pastry that are baked and topped with powdered sugar. *Puhkeniki* are doughnuts that are either fried and smothered in jam or filled with jam and then

fried and topped with powdered sugar. *Shuliki*, simple cookies made of sweet dough with poppy seeds and honey, are broken into pieces and allowed to absorb a sauce of poppy seed, milk, and honey. *Korzhyki* are a slightly thicker version of *shuliki*, or they can be made with hazelnuts and just served plain. Simple fried cookies, *verguny*, are extremely popular in Ukraine and, like borsch, have many regional variations. They are made of thick, sweet dough made with the addition of rum, brandy, or vodka. The dough is rolled out thinly, cut into small strips, and fried in melted lard. When ready, the cookies are dusted with powdered sugar and can be eaten hot or cold. *Solozheniki* are another common dessert, consisting of light, rich pancakes wrapped around a filling and then baked under a meringue. The pancake dough is runny and made with more milk and eggs than flour, while the fillings tend to be made of one of the traditional Ukrainian ingredients of fruit, fruit jam, or poppy seeds.

Traditional Ukrainian beverages can be divided into alcoholic and nonalcoholic varieties. Vodka, known as *horilka*, has been popular since the 17th century. It is often flavored, most commonly with honey and hot pepper. The Crimean Peninsula is well known for its wines such as the Masandra variety. *Medovukha*, or mead made from fermented honey and water, is an ancient beverage common across Europe and still popular in Ukraine. Beer (*pyvo*) is also very popular among Ukrainians. Nonalcoholic beverages include the traditional fermented kvass, which can be made out of a single or multiple ingredients including bread, beets, and fruit. Yeast is added to the warm mixture, which is then allowed to ferment. Tap water often is seen as unsafe, so most Ukrainians either boil the water they drink or consume the many mineral waters on sale across the country. Tea and coffee are popular beverages, as are more recently introduced sodas, including many of those consumed in western Europe and the United States.

Typical Meals

Breakfast (*snidanok*) in Ukraine traditionally tends to be fairly filling, but this has been changing. Dishes

mixing grains and fats are common. These could include buckwheat-flour- and lard-based *lemishky* (a gruel) or buckwheat cooked as porridge with the addition of butter. Farina and oatmeal are also common breakfast porridges. Various egg dishes, whether elaborate *yaishni* omelets or just eggs boiled or fried sunny-side up, are commonly eaten. French toast is a popular dish, usually served with savory toppings such as meat or cheese, rather than sugar or jam. Meat dishes such as frankfurters or meat patties are often served for breakfast. Sandwiches with sausage, cheese, pâtés, or other toppings are well liked. *Ryazhenka* and cottage cheese, or cheese fritters, are popular breakfast dishes made with milk. Milk itself, as well as buttermilk, and tea or coffee are commonly served as breakfast beverages. In recent years, yogurts and dry cereals have become more popular, particularly among younger Ukrainians.

Lunch (*obid*), the midday meal, was traditionally the main meal of the day, but with new work schedules this distinction has often been transferred to supper (*vecheria*). The main meals of the day are likely to include a soup, a main dish, and a dessert, and sometimes also an appetizer. As with every meal in Ukraine, bread is an important accompaniment. While vegetables play an important part in Ukrainian cuisine, salads of raw vegetables are less common. They are served as an appetizer, often made of cabbage or tomatoes and cucumbers dressed with salt, pepper, oil, and vinegar. Other appetizers could be salted or marinated fish such as herring or anchovies; marinated mushrooms or vegetables; or rich salads with meat and potatoes dressed with mayonnaise. The appetizer course can be accompanied or even replaced by a shot of vodka (*horilka*). Winter meals usually include a borsch or cabbage soup, such as *kapusniak*, or other soups made with grains or mushrooms. Chicken broth with rice or noodles is also popular, as are soups made with milk and pasta. If in the past a rich soup or stew and bread would be the only food served at an everyday lunch, today there is often a meat-based main dish, served with starch side dishes. Most common today are meat-based stews (especially made with pork) and fried patties (*bitkil*). These are served with a porridge (especially buckwheat), macaroni, or rice. The

stews can also be accompanied by *halushky* or *pampushki*. Desserts, depending on the meal, can range from a simple *kompot* (fruit compote), *uzvar*, or *kissel'* (sweetened juice thickened with starch, with fruit added) to fancier pastries, creams, or cakes. Drinks that are served with dinner could be the traditional *kvass*, mineral water, or soda, with coffee or tea accompanying dessert. The lighter evening meal is often similar to breakfast. Porridge, eggs, and fritters (meat or vegetable), as well as tea served with cakes, cookies, or preserves, round out the meal.

Modern Ukrainians now have lives scheduled around work patterns similar to those in western Europe or the United States, and their meal patterns have also changed. Many snack foods are now sold, including chips, popcorn, and puffed corn (like corn pops, salty and sweet), as well as the more traditional roasted sunflower or pumpkin seeds. Convenience foods, such as instant soups or noodles, have become the normal midday meal for many students and office workers.

Eating Out

Eating out has increased over the course of the 20th century. Traditionally, Ukraine had some country inns where simple meals were served along with alcohol. In the 19th century, Ukrainian cities acquired more restaurants in the European sense as well as Russian-style *traktiry*, or roadside inns with simple restaurants. In the Soviet era, eating outside the home was encouraged, and communal cafeterias sprang up both in the cities and attached to plants and collective farms. The most recent development has been the appearance of fast-food restaurants such as McDonald's.

The communal canteens and restaurants mixed traditional Ukrainian dishes with those from the rest of the Soviet Union. Ukrainians, when eating out, often expect this mixture of cuisines on the menu, which is likely to include Russian caviar appetizers, grilled meats from the Caucasus, and pilafs from Central Asia. French-influenced dishes such as mushrooms baked in cream sauce (*jullienne*) have become iconic for fancy restaurant meals. Even plain canteen-served foods are drawn from many ethnic

traditions. An example of an ethnic food served in a canteen would be the Tartar-influenced *azu*, or roasted beef served with a tomato-based sauce and pickles.

Modern Ukraine has fewer Soviet-style canteens and many more cafés serving light foods along with teas and coffees. Fast-food restaurants are very popular. McDonald's and other international chains share space with Ukrainian-owned fast-food establishments that often serve traditional foods such as *vareniki* (stuffed dumplings) or *bliny* (little pancakes). Simple snack bars selling hot dogs and drinks are often located around major public transportation stops. Beer pubs serving Ukrainian and international beers have become very popular. Kebab stands have become common in large cities, as they are in the rest of Europe.

Special Occasions

Bread, like in other Slavic cultures, is considered sacred and is used to commemorate important life events, with some special breads tied to specific occasions. In the distant past, bread baking was a ritual occasion and seen as a sacred act. Even today, when welcoming guests, Ukrainians serve bread and salt as a sign of hospitality. In addition to special breads, other ritual dishes are made to commemorate many holidays. *Paskha*, the rich Easter bread, is made out of yeast-raised wheat dough, with eggs, milk, and spices, especially ginger and saffron. Western Ukrainians tend to decorate the *paskha* with dough ornaments such as a cross and keep it low and round, while the Russian-influenced eastern Ukrainians make *paskha* into a tall but plain glazed bread. This bread is not eaten until it has been blessed in church with other Easter foods during the Easter service. The Easter meal is also the time to serve *babka*, a rich bread made with eggs, raisins, sugar, and spices, which usually includes lemon zest, saffron, and vanilla. Elaborately painted eggs (*pysanky*) are an important part of Ukrainian Easter. Other rich egg and meat dishes are served during Easter, a major ritual feast. *Shuliki* cookies are the traditional food for church holidays (such as the Feast of Transfiguration) that are celebrated in August.

Traditional decorated Easter basket lined by an embroidered towel, with Easter bread, ham, and eggs. (iStockPhoto)

The Christmas season is a major occasion for ritual foods. On Christmas Eve, meat and milk are not allowed, so the supper that evening is a collection of vegetable and fish-based dishes. Beans or peas are mashed and dressed with onions, garlic, and oil. A meatless borsch flavored with kvass is served, as well as a sauerkraut soup (*kapusniak*). Porridges, stewed fruit, and dumplings with poppy seeds are also served. The meals on Christmas Day itself are very rich and include roast meats, rich borsch, fried homemade sausages (*kovbasa*), and *studenets*, meat set in jellied aspic and served cold. Symbolically connecting the meal to the birth of Jesus in a manger, hay is spread under and on the table. As the Christmas season is symbolically connected with the life cycle, certain foods served on Christmas are also served during funerals. Most commonly, these foods include *kalach*, a round, braided bread symbolizing

the cyclical nature of life, and *kolyvo* or *kutia*, a dish of boiled grains with poppy seeds and honey. The grains and seeds allude to death, rebirth, and the harvest. Finally, fish dishes, especially carp, are a traditional part of Christmas suppers. As caroling, or *koliaduvannia*, is a common Christmas tradition in Ukraine, the carolers are rewarded with gifts of food: pastries, pancakes (*oladky*), or even whole sausages.

Weddings, with their connections to fertility, are an occasion for special breads and other foods. The *korovai*, primarily a wedding bread, is made of a rich egg dough with sugar and spices for flavoring and color. It is circular in form and has decorations made out of dough on top of it. The bride and groom go around it and are then given pieces of it to eat. In some regions of Ukraine, other traditional breads are used. In the west, *dyven* is a rich bread shaped into a circle or a wheel that is carried by the bride. She looks through it to see a bright future. In other regions, small buns called *shyshky*, or pine cones, are baked, as is *lezhen'*, a long bread made with eggs and a coin baked in.

Soviet holidays such as the New Year and Victory Day, celebrating victory during World War II, are important for many Ukrainians. Festive foods introduced during Soviet rule include the *oliv'ie* or *stolichniy* salad, a mixture of potatoes, peas, carrots, and meat dressed with mayonnaise. At family picnics, at summer houses, or on beaches, many Ukrainians like to grill marinated pork or lamb shish kebabs (*shashlyk*).

Anton Masterovoy

Diet and Health

Many younger Ukrainians see the traditional Ukrainian diet of starchy foods along with fatty pork as

unhealthy. Today, the population of Ukraine, like that of the rest of Europe, is heavily urbanized. The traditional diet, created to restore the strength of people engaged in heavy farm labor, is no longer relevant to modern work and life. Indeed, in the 20th century, a diet rich in fat and carbohydrates, along with industrial pollution, heavy smoking, and drinking, has contributed to a rise in cardiovascular disease among Ukrainians. Ukrainians also argue that the traditional diet was varied and natural and should be retained instead of consuming industrially processed and imported foods. Pollution from the 1986 nuclear disaster at Chernobyl is also a major concern.

Ukrainians retain many traditional folk remedies for various disorders, as modern medicine is poorly funded and often seen as corrupt. Herbal teas are used to soothe a system out of order. Chamomile tea is used in case of a stomachache. Black tea with honey and lemon is used to soothe sore throats. Alcohol, honey, garlic, and even hot milk are seen as medicinal for many respiratory disorders. Strong-smelling herbs and garlic have been seen as not only medicinal but also useful for scaring away evil spirits. These beliefs have been retained in the Ukrainian countryside and were resurrected after the fall of the Soviet Union.

About the Editor and Contributors

Ken Albala, Editor, is professor of history at the University of the Pacific in Stockton, California. He also teaches in the gastronomy program at Boston University. Albala is the author of many books, including *Eating Right in the Renaissance* (University of California Press, 2002), *Food in Early Modern Europe* (Greenwood Press, 2003), *Cooking in Europe 1250–1650* (Greenwood Press, 2005), *The Banquet: Dining in the Great Courts of Late Renaissance Europe* (University of Illinois Press, 2007), *Beans: A History* (Berg Publishers, 2007; winner of the 2008 International Association of Culinary Professionals Jane Grigson Award), and *Pancake* (Reaktion Press, 2008). He has co-edited two works, *The Business of Food* and *Human Cuisine*. He is also editor of three food series with 29 volumes in print, including the Food Cultures Around the World series for Greenwood Press. Albala is also co-editor of the journal *Food Culture and Society*. He is currently researching a history of theological controversies surrounding fasting in the Reformation Era and is editing two collected volumes of essays, one on the Renaissance and the other entitled *The Lord's Supper*. He has also coauthored a cookbook for Penguin/Perigee entitled *The Lost Art of Real Cooking*, which was released in July 2010.

Julia Abramson has visited France on a regular basis for more than 25 years to study, research, travel, and eat. She has published essays on aspects of food culture from vegetable carving to gastronomic writing and is the author of the book *Food Culture in France*. Abramson teaches French literature and culture and food studies at the University of Oklahoma, Norman.

M. Shahrin Al-Karim is a senior lecturer of food service and hospitality management at the Universiti Putra Malaysia. His research interests include food and culture, culinary tourism, food habits, and consumer behavior. He received a BS in hotel and restaurant management from New York University; an MBA from Universiti Teknologi MARA, Malaysia; and a PhD in hospitality and tourism from Oklahoma State University, United States.

E.N. Anderson is professor emeritus of the Department of Anthropology, University of California, Riverside.

Laura P. Appell-Warren holds a doctorate in psychological anthropology from Harvard University. Her primary focus of research has been the study of

personhood; however, she has also studied the effects of social change on children's play. She has done research among the Bulusu' of East Kalimantan, Indonesia, and among the Rungus Momogon, a Dusunic-speaking peoples, of Sabah, Malaysia. In addition, she has traveled widely throughout Arctic Canada. She is the editor of *The Iban Diaries of Monica Freeman 1949–1951: Including Ethnographic Drawings, Sketches, Paintings, Photographs and Letters* and is author of the forthcoming volume entitled *Personhood: An Examination of the History and Use of an Anthropological Concept*. In addition to her current research on cradleboard use among Native North Americans, she is a teacher of anthropology at St. Mark's School in Southborough, Massachusetts.

Heather Arndt-Anderson is a Portland, Oregon, native who draws culinary inspiration from many world cuisines but prefers cooking from her own backyard. She is a part-time natural resources consultant and a full-time radical homemaker; in her (rare) spare time she writes the food blog *Voodoo & Sauce*.

Michael Ashkenazi is a scholar, writer, and consultant who has been researching and writing about Japanese food since 1990. In addition to books and articles on Japanese society, including its food culture, he has written numerous scholarly and professional articles and papers on various subjects including theoretical and methodological issues in anthropology, organized violence, space exploration, migration, religion and ritual, resettling ex-combatants, and small arms. He has taught at higher-education institutions in Japan, Canada, Israel, and the United Kingdom, directing graduate and undergraduate students. He is currently senior researcher and project leader at the Bonn International Center for Conversion in Germany, with responsibility for the areas of small arms and reintegration of ex-combatants. He has conducted field research in East and Southeast Asia, East and West Africa, the Middle East, and Latin America.

Babette Audant went to Prague after college, where she quickly gave up teaching English in order to cook at a classical French restaurant. After graduating from the Culinary Institute of America, she worked as a chef in New York City for eight years, working at Rainbow Room, Beacon Bar & Grill, and other top-rated restaurants. She is a lecturer at City University of New York Kingsborough's Department of Tourism and Hospitality, and a doctoral candidate in geography at the City University of New York Graduate Center. Her research focuses on public markets and food policy in New York City.

Gabriela Villagran Backman, MA (English and Hispanic literature), was born in Sweden and raised in Mexico and the United States; she currently lives in Stockholm, Sweden. She is an independent researcher, interested in food studies, cultural heritage, writing cookbooks, red wine, and the Internet.

Carolyn Bánfalvi is a writer based in Budapest. She is the author of *Food Wine Budapest* (Little Bookroom) and *The Food and Wine Lover's Guide to Hungary: With Budapest Restaurants and Trips to the Wine Country* (Park Kiado). She contributes to numerous international food and travel publications and leads food and wine tours through Taste Hungary, her culinary tour company.

Peter Barrett is a painter who writes a food blog and is also the Food & Drink writer for *Chronogram Magazine* in New York's Hudson Valley.

Cynthia D. Bertelsen is an independent culinary scholar, nutritionist, freelance food writer, and food columnist. She lived in Haiti for three years and worked on a food-consumption study for a farming-systems project in Jacmel, Haiti. She writes a food history blog, *Gherkins & Tomatoes*, found at <http://gherkinstomatoes.com>.

Megan K. Blake is a senior lecturer in geography at the University of Sheffield. She has published research that examines the intersections between place and social practices. While her previous work focused on entrepreneurship and innovation, her recent work has examined food practices and family life.

Janet Boileau is a culinary historian who holds a master of arts degree in gastronomy from Le Cordon Bleu Paris and a doctorate in history from the University of Adelaide.

Andrea Broomfield is associate professor of English at Johnson County Community College in Overland Park, Kansas, and author of *Food and Cooking in Victorian England: A History*.

Cynthia Clampitt is a culinary historian, world traveler, and award-winning author. In 2010, she was elected to the Society of Women Geographers.

Neil L. Coletta is assistant director of food, wine, and the arts and lecturer in the MLA in gastronomy program at Boston University. His current research includes food and aesthetics and experimental pedagogy in the field of food studies.

Paul Crask is a travel writer and the author of two travel guides: *Dominica* (2008) and *Grenada, Carriacou and Petite Martinique* (2009).

Christine Crawford-Oppenheimer is the information services librarian and archivist at the Culinary Institute of America. She grew up in Ras Tanura, Saudi Arabia.

Anita Verna Crofts is on the faculty at the University of Washington's Department of Communication, where she serves as an associate director of the master of communication in digital media program. In addition, she holds an appointment at the University of Washington's Department of Global Health, where she collaborates with partner institutions in Sudan, Namibia, and India on trainings that address leadership, management, and policy development, with her contributions targeted at the concept of storytelling as a leadership and evidence tool. Anita is an intrepid chowhound and publishes on gastroethnographic topics related to the intersection of food and identity. She hosts the blog *Sneeze!* at her Web site www.pepperforthebeast.com.

Liza Debevec is a research fellow at the Scientific Research Centre of the Slovene Academy of sciences and arts in Ljubljana, Slovenia. She has a PhD in social anthropology from the University of St. Andrews, United Kingdom. Her research

interests are West Africa and Burkina Faso, food studies, Islam, gender, identity, and practice of everyday life.

Jonathan Deutsch is associate professor of culinary arts at Kingsborough Community College, City University of New York, and Public Health, City University of New York Graduate Center. He is the author or editor of five books including, with Sarah Billingsley, *Culinary Improvisation* (Pearson, 2010) and, with Annie Hauck-Lawson, *Gastropolis: Food and New York City* (Columbia University Press, 2009).

Deborah Duchon is a nutritional anthropologist in Atlanta, Georgia.

Nathalie Dupree is the author of 10 cookbooks, many of which are about the American South, for which she has won two James Beard Awards. She has hosted over 300 television shows on the Public Broadcasting Service, The Food Network, and TLC. She lives with her husband, Jack Bass, who has authored 9 books about the American South and helped with her contribution to *Food Cultures of the World*.

Pamela Elder has worked in food public relations and online culinary education and is a freelance writer in the San Francisco Bay area.

Rachel Finn is a freelance writer whose work has appeared in various print and online publications. She is the founder and director of Roots Cuisine, a non-profit organization dedicated to promoting the foodways of the African diaspora around the globe.

Richard Foss has been a food writer and culinary historian since 1986, when he started as a restaurant critic for the *Los Angeles Reader*. His book on the history of rum is slated for publication in 2011, to be followed by a book on the history of beachside dining in Los Angeles. He is also a science fiction and fantasy author, an instructor in culinary history and Elizabethan theater at the University of California, Los Angeles, Extension, and is on the board of the Culinary Historians of Southern California.

Nancy G. Freeman is a food writer and art historian living in Berkeley, California, with a passion for food history. She has written about cuisines ranging from Ethiopia to the Philippines to the American South.

Ramin Ganeshram is a veteran journalist and professional chef trained at the Institute of Culinary Education in New York City, where she has also worked as a recreational chef instructor. Ganeshram also holds a master's degree in journalism from Columbia University. For eight years she worked as a feature writer/stringer for the *New York Times* regional sections, and she spent another eight years as a food columnist and feature writer for *Newsday*. She is the author of *Sweet Hands: Island Cooking from Trinidad and Tobago* (Hippocrene NY, 2006; 2nd expanded edition, 2010) and *Stir It Up* (Scholastic, 2011). In addition to contributing to a variety of food publications including *Saveur*, *Gourmet*, *Bon Appetit*, and *epicurious.com*, Ganeshram has written articles on food, culture, and travel for *Islands* (as contributing editor), *National Geographic Traveler*,

Forbes Traveler, *Forbes Four Seasons*, and many others. Currently, Ganeshram teaches food writing for New York University's School of Continuing Professional Studies.

Hanna Garth is a doctoral candidate in the Department of Anthropology at the University of California, Los Angeles. She is currently working on a dissertation on household food practices in Santiago de Cuba. Previously, she has conducted research on food culture, health, and nutrition in Cuba, Chile, and the Philippines.

Mary Gee is a medical sociology doctoral student at the University of California, San Francisco. Her current research interests include herbalism and Asian and Asian American foodways, especially with regards to multigenerational differences. Since 1995, she has actively worked with local and national eating disorders research and policy and advocacy organizations as well as for a program evaluation research consulting firm.

Che Ann Abdul Ghani holds a bachelor's degree in English and a master's degree in linguistics. She has a keen interest in studying language and language use in gastronomy. She is currently attached to the English Department at Universiti Putra Malaysia. Her research interests range from the use of language in context (pragmatics) to language use in multidisciplinary areas, namely, disciplines related to the social sciences. She also carries out work in translation and editing.

Maja Godina-Golija is research adviser at the Institute of Slovenian Ethnology, Scientific Research Centre of Slovenian Academy of Science and Arts, Ljubljana, Slovenia.

Annie Goldberg is a graduate student studying gastronomy at Boston University.

Darra Goldstein is Frances Christopher Oakley Third Century Professor of Russian at Williams College and the founding editor-in-chief of *Gastronomica: The Journal of Food and Culture*.

Keiko Goto, PhD, is associate professor at the Department of Nutrition and Food Sciences, California State University, Chico. Dr. Goto has more than 15 years of work experience in the field of nutrition and has worked as a practitioner and researcher in various developing countries. Dr. Goto's current research areas include food and culture, child and adolescent nutrition, sustainable food systems, and international nutrition.

Carla Guerrón Montero is a cultural and applied anthropologist trained in Latin America and the United States. She is currently associate professor of anthropology in the Department of Anthropology at the University of Delaware. Dr. Guerrón Montero's areas of expertise include gender, ethnicity, and identity; processes of globalization/nationalism, and particularly tourism; and social justice and human rights.

Mary Gunderson calls her practice paleocuisineology, where food and cooking bring cultures alive. Through many media, including the sites HistoryCooks.com

and MaryGunderson.com, she writes and speaks about South and North American food history and contemporary creative living and wellness. She wrote and published the award-winning book *The Food Journal of Lewis and Clark: Recipes for an Expedition* (History Cooks, 2003) and has authored six food-history books for kids.

Liora Gvion is a senior lecturer at the Kibbutzim College of Education and also teaches at the Faculty of Agriculture, Food and Environment at the Institute of Biochemistry, Food Science and Nutrition Hebrew University of Jerusalem.

Cherie Y. Hamilton is a cookbook author and specialist on the food cultures and cuisines of the Portuguese-speaking countries in Europe, South America, Africa, and Asia.

Jessica B. Harris teaches English at Queens College/City University of New York and is director of the Institute for the Study of Culinary Cultures at Dillard University.

Melanie Haupt is a doctoral candidate in English at the University of Texas at Austin. Her dissertation, “Starting from Scratch: Reading Women’s Cooking Communities,” explores women’s use of cookbooks and recipes in the formation and reification of real and virtual communities.

Ursula Heinzelmann is an independent scholar and culinary historian, twice awarded the prestigious Sophie Coe Prize. A trained chef, sommelier, and ex-restaurateur, she now works as a freelance wine and food writer and journalist based in Berlin, Germany.

Jennifer Hostetter is an independent food consultant specializing in writing, research, and editing. She has degrees in history and culinary arts and holds a master’s degree in food culture and communications from the University of Gastronomic Sciences in Italy. She also served as editorial assistant for this encyclopedia.

Kelila Jaffe is a doctoral candidate in the Food Studies Program at New York University. Originally from Sonoma, California, and the daughter of a professional chef, she has pursued anthropological and archaeological foodways research since her entry into academia. She received a BA with distinction in anthropology from the University of Pennsylvania, before attending the University of Auckland, where she earned an MA with honors in anthropology, concentrating in archaeology. Her research interests include past foodways, domestication, and zooarchaeology, and she has conducted fieldwork in Fiji, New Zealand, and Hawaii.

Zilkia Janer is associate professor of global studies at Hofstra University in New York. She is the author of *Puerto Rican Nation-Building Literature: Impossible Romance* (2005) and *Latino Food Culture* (2008).

Brelyn Johnson is a graduate of the master’s program in food studies at New York University.

Kate Johnston is currently based in Italy, where she is an independent cultural food researcher and writer and a daily ethnographer of people’s food habits. She

has a degree in anthropology from Macquarie University in Sydney, Australia, and a recent master's degree in food culture and communication from the University of Gastronomic Sciences, Italy. She was also editorial assistant for this encyclopedia.

Desiree Koh was born and raised in Singapore. A writer focusing on travel, hospitality, sports, fitness, business, and, of course, food, Koh's explorations across the globe always begin at the market, as she believes that the sight, scent, and savoring of native produce and cuisine are the key to the city's heart. The first and only female in Major League Eating's Asia debut, Koh retired from competition to better focus on each nibble and sip of fine, hopefully slow food.

Bruce Kraig is emeritus professor of history at Roosevelt University in Chicago and adjunct faculty at the Culinary School of Kendall College, Chicago. He has published and edited widely in the field of American and world food history. Kraig is also the founding president of the Culinary Historians of Chicago and the Greater Midwest Foodways Alliance.

R. J. Krajewski is the research services librarian at Simmons College, where among other things he facilitates discovery of food-culture research, especially through the lens of race, class, and gender. His own engagement with food is seasonally and locally rooted, starting in his own small, urban homestead, much like his Polish and German ancestors.

Erin Laverty is a freelance food writer and researcher based in Brooklyn, New York. She holds a master's degree in food studies from New York University.

Robert A. Leonard has a PhD in theoretical linguistics from Columbia. He studies the way people create and communicate meaning, including through food. He was born in Brooklyn and trained as a cook and *panaderia-reposteria* manager in the Caribbean; his doctoral studies led him to eight years of fieldwork in language, culture, and food in Africa and Southeast Asia. In the arts, as an undergraduate he cofounded and led the rock group Sha Na Na and with them opened for their friend Jimi Hendrix at the Woodstock Festival. Leonard is probably one of a very few people who have worked with both the Grateful Dead and the Federal Bureau of Investigation, which in recent years recruited him to teach the emerging science of forensic linguistics at Quantico.

Jane Levi is an independent consultant and writer based in London, England. She is currently working on her PhD at the London Consortium, examining food in utopias, funded by her work on post-trade financial policy in the City of London.

Yrsa Lindqvist is a European ethnologist working as the leading archivist at the Folk Culture Archive in Helsinki. Her research about food and eating habits in the late 1990s, combined with earlier collections at the archive, resulted in 2009 in the publication *Mat, Måltid, Minne. Hundraår av finlandssvensk matkultur*. The book analyzes the changes in housekeeping and attitudes toward food. She has also contributed to other publications focusing on identity questions and has worked as a junior researcher at the Academy of Finland.

William G. Lockwood is professor emeritus of cultural anthropology at the University of Michigan. His central interest is ethnicity and interethnic relations. He has conducted long-term field research in Bosnia-Herzegovina and the Croatian community in Austria and also among Roma and with a variety of ethnic groups in America, including Arabs, Finns, and Bosnians. He has long held a special interest in how food functions in ethnic group maintenance and in reflecting intra- and intergroup relations.

Yvonne R. Lockwood is curator emeritus of folklife at the Michigan State University Museum. Her formal training is in folklore, history, and Slavic languages and literatures. Research in Bosnia, Austria, and the United States, especially the Great Lakes region, has resulted in numerous publications, exhibitions, festival presentations, and workshops focused on her primary interests of foodways and ethnic traditions.

Janet Long-Solís, an anthropologist and archaeologist, is a research associate at the Institute of Historical Research at the National University of Mexico. She has published several books and articles on the chili pepper, the history of Mexican food, and the exchange of food products between Europe and the Americas in the 16th century.

Kristina Lupp has a background in professional cooking and has worked in Toronto and Florence. She is currently pursuing a master of arts in gastronomy at the University of Adelaide.

Máirtín Mac Con Iomaire is a lecturer in culinary arts in the Dublin Institute of Technology. Máirtín is well known as a chef, culinary historian, food writer, broadcaster, and ballad singer. He lives in Dublin with his wife and two daughters. He was the first Irish chef to be awarded a PhD, for his oral history of Dublin restaurants.

Glenn R. Mack is a food historian with extensive culinary training in Uzbekistan, Russia, Italy, and the United States. He cofounded the Culinary Academy of Austin and the Historic Foodways Group of Austin and currently serves as president of Le Cordon Bleu College of Culinary Arts Atlanta.

Andrea MacRae is a lecturer in the Le Cordon Bleu Graduate Program in Gastronomy at the University of Adelaide, Australia.

Giorgos Maltezakis earned his PhD in anthropology with research in cooperation with the Institute Studiorium Humanitatis of the Ljubljana Graduate School of the Humanities. His dissertation was on consumerism, the global market, and food, which was an ethnographic approach to the perception of food in Greece and Slovenia.

Bertie Mandelblatt is assistant professor at the University of Toronto, cross-appointed to the departments of Historical Studies and Geography. Her research concerns the early-modern French Atlantic, with a focus on commodity exchanges at the local and global scales: Her two current projects are the history

of food provisioning in the Franco-Caribbean and the transatlantic circulation of French rum and molasses, both in the 17th and 18th centuries.

Marty Martindale is a freelance writer living in Largo, Florida.

Laura Mason is a writer and food historian with a special interest in local, regional, and traditional foods in the United Kingdom and elsewhere. Her career has explored many dimensions of food and food production, including cooking for a living, unraveling the history of sugar confectionery, and trying to work out how many traditional and typically British foods relate to culture and landscape. Her publications include *Taste of Britain* (with Catherine Brown; HarperCollins, 2006), *The Food Culture of Great Britain* (Greenwood, 2004), and *The National Trust Farmhouse Cookbook* (National Trust, 2009).

Anton Masterovoy is a PhD candidate at the Graduate Center, City University of New York. He is working on his dissertation, titled “Eating Soviet: Food and Culture in USSR, 1917–1991.”

Anne Engammare McBride, a Swiss native, food writer, and editor, is the director of the Experimental Cuisine Collective and a food studies PhD candidate at New York University. Her most recent book is *Culinary Careers: How to Get Your Dream Job in Food*, coauthored with Rick Smilow.

Michael R. McDonald is associate professor of anthropology at Florida Gulf Coast University. He is the author of *Food Culture in Central America*.

Naomi M. McPherson is associate professor of cultural anthropology and graduate program coordinator at the University of British Columbia, Okanagan Campus. Since 1981, she has accumulated over three years of field research with the Bariai of West New Britain, Papua New Guinea.

Katrina Meynink is an Australia-based freelance food writer and researcher. She has a master’s degree in gastronomy through Le Cordon Bleu and the University of Adelaide under a scholarship from the James Beard Foundation. She is currently completing her first cookbook.

Barbara J. Michael is a sociocultural anthropologist whose research focuses on social organization, economics, decision making, and gender. Her geographic focus is on the Middle East and East Africa, where she has done research with the pastoral nomadic Hawazma Baggara and on traditional medicine in Yemen and is working on a video about men’s cafes as a social institution. She teaches anthropology at the University of North Carolina Wilmington and has also worked as a consultant for several United Nations agencies.

Diana Mincyte is a fellow at the Rachel Carson Center at the Ludwig Maximilian University-Munich and visiting assistant professor in the Department of Advertising at the University of Illinois, Urbana-Champaign. Mincyte examines topics at the interface of food, the environment, risk society, and global inequalities. Her book investigates raw-milk politics in the European Union to consider the production risk society and its institutions in post-Socialist states.

Rebecca Moore is a doctoral student studying the history of biotechnology at the University of Toronto in Ontario, Canada.

Nawal Nasrallah, a native of Iraq, was a professor of English and comparative literature at the universities of Baghdad and Mosul until 1990. As an independent scholar, she wrote the award-winning *Delights from the Garden of Eden: A Cookbook and a History of the Iraqi Cuisine* and *Annals of the Caliphs' Kitchens* (an English translation of Ibn Sayyar al-Warraq's 10th-century Baghdadi cookbook).

Henry Notaker graduated from the University of Oslo with a degree in literature and worked for many years as a foreign correspondent and host of arts and letters shows on Norwegian national television. He has written several books about food history, and with *Food Culture in Scandinavia* he won the Gourmand World Cookbook Award for best culinary history in 2009. His last book is a bibliography of early-modern culinary literature, *Printed Cookbooks in Europe 1470–1700*. He is a member of the editorial board of the journal *Food and History*.

Kelly O'Leary is a graduate student at Boston University in gastronomy and food studies and executive chef at the Bayridge University Residence and Cultural Center.

Fabio Parasecoli is associate professor and coordinator of food studies at the New School in New York City. He is author of *Food Culture in Italy* (2004) and *Bite Me: Food and Popular Culture* (2008).

Susan Ji-Young Park is the program director and head of curriculum development at École de Cuisine Pasadena (www.ecolecuisine.com); project leader for Green Algeria, a national environmental initiative; and a writer for LAWEEKLY'S Squid Ink. She has written curriculum for cooking classes at Los Angeles Unified School District, Sur La Table, Whole Foods Market, Central Market, and Le Cordon Bleu North America. She and her husband, Chef Farid Zadi, have co-written recipes for *Gourmet Magazine* and the *Los Angeles Times*. The couple are currently writing several cookbooks on North African, French, and Korean cuisines.

Rosemary Parkinson is author of *Culinaria: The Caribbean*, *Nyam Jamaica*, and *Barbados Bu'n-Bu'n*, and she contributes culinary travel stories to Caribbean magazines.

Charles Perry majored in Middle East languages at Princeton University, the University of California, Berkeley, and the Middle East Centre for Arab Studies, Shmolan, Lebanon. From 1968 to 1976 he was a copy editor and staff writer at *Rolling Stone* magazine in San Francisco, before leaving to work as a freelance writer specializing in food. From 1990 to 2008, he was a staff writer in the food section of the *Los Angeles Times*. He has published widely on the history of Middle Eastern food and was a major contributor to the *Oxford Companion to Food* (1999).

Irina Petrosian is a native of Armenia and a professional journalist who has written for Russian, Armenian, and U.S.-based newspapers. She is the coauthor of

Armenian Food: Fact, Fiction, and Folklore and holds degrees in journalism from Moscow State University and Indiana University.

Suzanne Piscopo is a nutrition, family, and consumer studies lecturer at the University of Malta in Malta. She is mainly involved in the training of home economics and primary-level teachers, as well as in nutrition and consumer-education projects in different settings. Suzanne is a registered public health nutritionist, and her research interests focus on socioecological determinants of food intake, nutrition interventions, and health promotion. She has also written a series of short stories for children about food. Suzanne enjoys teaching and learning about the history and culture of food and is known to creatively experiment with the ingredients at hand when cooking the evening meal together with her husband, Michael.

Theresa Preston-Werner is an advanced graduate student in anthropology at Northwestern University.

Meg Ragland is a culinary history researcher and librarian. She lives in Boston, Massachusetts.

Carol Selva Rajah is an award-winning chef and food writer currently based in Sydney, Australia. She has written 10 cookbooks on Malaysian and Southeast Asian cuisine. Her book *The Food of India* won the gold award for the Best Hardcover Recipe Book at the prestigious Jacob's Creek World Food Media Awards.

Birgit Ricquier is pursuing a PhD in linguistics at the Université Libre de Bruxelles and the Royal Museum for Central Africa, Tervuren, Belgium, with a fellowship from the Fonds de la Recherche Scientifique (FNRS). The topic of her PhD project is "A Comparative Linguistic Approach to the History of Culinary Practice in Bantu-Speaking Africa." She has spent several months in central Africa, including one month in the Democratic Republic of the Congo as a member of the Boyekoli Ebale Congo 2010 Expedition and two months of research focused on food cultures in Congo.

Amy Riolo is an award-winning author, lecturer, cooking instructor, and consultant. She is the author of *Arabian Delights: Recipes and Princely Entertaining Ideas from the Arabian Peninsula*, *Nile Style: Egyptian Cuisine and Culture*, and *The Mediterranean Diabetes Cookbook*. Amy has lived, worked, and traveled extensively through Egypt and enjoys fusing cuisine, culture, and history into all aspects of her work. Please see www.amyriolo.com, www.baltimoreegypt.org, and diningwithdiplomats.blogspot.com for more information and further reading.

Owen Roberts is a journalist, communications instructor, and director of research communications for the University of Guelph in Guelph, Ontario, Canada. He holds a doctorate of education from Texas Tech University and Texas A&M University.

Fiona Ross is a gastrodetective whose headquarters is the Bodleian Library in Oxford, United Kingdom. She spends her time there investigating the eating foibles of the famous and infamous. Her cookery book *Dining with Destiny* is the

result: When you want to know what Lenin lunched on or what JFK ate by the poolside, *Dining with Destiny* has the answer.

Signe Rousseau (née Hansen) is Danish by birth but a long-term resident of southern Africa and is a researcher and part-time lecturer at the University of Cape Town. Following an MA in the Department of English and a PhD (on food media and celebrity chefs) in the Centre for Film and Media Studies, she now teaches critical literacy and professional communication in the School of Management Studies (Faculty of Commerce).

Kathleen Ryan is a consulting scholar in the African Section of the University of Pennsylvania Museum of Archaeology and Anthropology, Philadelphia. She has carried out research in Kenya since 1990, when she began a study of Maasai cattle herders in Kajiado District.

Helen Saberi was Alan Davidson's principal assistant in the completion of the *Oxford Companion to Food*. She is the author of *Noshe Djan: Afghan Food and Cookery*; coauthor of *Trifle* with Alan Davidson; and coauthor of *The Road to Vindaloo* with David Burnett; her latest book is *Tea: A Global History*.

Cari Sánchez holds a master of arts in gastronomy from the University of Adelaide/Le Cordon Bleu in South Australia. Her dissertation explores the global spread of the Argentine *asado*. She currently lives in Jacksonville, Florida, where she writes the food and travel blog *viCARIOUS* and is the marketing manager for a craft brewery.

Peter Scholliers teaches history at the Vrije Universiteit Brussel and is currently head of the research group "Social and Cultural Food Studies" (FOST). He studies the history of food in Europe in the 19th and 20th centuries. He co-edits the journal *Food and History* and is involved in various ways in the Institut Européen d'Histoire et des Cultures de l'Alimentation (Tours, France). Recently, he published *Food Culture in Belgium* (Greenwood, 2008). More information can be found at http://www.vub.ac.be/FOST/fost_in_english/.

Colleen Taylor Sen is the author of *Food Culture in India; Curry: A Global History; Pakoras, Paneer, Pappadums: A Guide to Indian Restaurant Menus*, and many articles on the food of the Indian Subcontinent. She is a regular participant in the Oxford Food Symposium.

Roger Serunyigo was born and lives in Kampala, Uganda. He graduated from Makerere University with a degree in urban and regional planning, has worked in telecommunications, and is now a professional basketball player for the Uganda National Team. He also coaches a women's basketball team (The Magic Stormers).

Dorette Snover is a chef and author. Influenced by French heritage and the food traditions of the Pennsylvania Dutch country, Chef Snover teaches exploration of the world via a culinary map at her school, C'est si Bon! in Chapel Hill. While the stock simmers, she is writing a novel about a French bread apprentice.

Celia Sorhaindo is a freelance photographer and writer. She was the editor of the 2008 and 2009 *Dominica Food and Drink Guide* magazine and content manager for the Dominica section of the magazine *Caribbean Homes & Lifestyle*.

Lyra Spang is a PhD candidate in the Department of Anthropology and the Food Studies Program at Indiana University. She has written about food, sex, and symbolism; the role of place in defining organic; and the importance of social relationships in small-scale food business in Belize. She grew up on a farm in southern Belize and is a proud promoter of that country's unique and diverse culinary heritage.

Lois Stanford is an agricultural anthropologist in the Department of Anthropology at New Mexico State University. In her research, she has examined the globalization of food systems both in Mexico and in the U.S. Southwest. Her current research focuses on the critical role of food heritage and plant conservation in constructing and maintaining traditional foodways and cultural identity in New Mexico. In collaboration with local food groups, she is currently developing a community food assessment project in the Mesilla Valley in southern New Mexico.

Aliza Stark is a senior faculty member at the Agriculture, Food, and Environment Institute of Biochemistry, Food Science, and Nutrition at the Hebrew University of Jerusalem.

Maria “Ging” Gutierrez Steinberg is a marketing manager for a New York City–based specialty food company and a food writer. She has a master's degree in food studies from New York University and is a graduate of Le Cordon Bleu. Her articles have appeared in various publications in Asia and the United States.

Anita Stewart is a cookbook author and Canadian culinary activist from Elora, Ontario, Canada.

Emily Stone has written about Guatemalan cuisine in the *Radcliffe Culinary Times*, and she is at work on a nonfiction book about chocolate in Central America. She currently teaches journalism and creative writing at Sun Yat-sen University in Guangzhou, China.

Asele Surina is a Russian native and former journalist who now works as a translator and interpreter. Since 1999 she has worked at the Institute of Classical Archaeology at the University of Texas on joint projects with an archaeological museum in Crimea, Ukraine.

Aylin Öney Tan is an architect by training and studied conservation of historic structures in Turkey, Italy, and the United Kingdom. Eventually, her passion for food and travel led her to write on food. Since 2003, she has had a weekly food column in *Cumhuriyet*, a prestigious national daily, and contributes to various food magazines. She was a jury member of the Slow Food Award 2000–2003, with her nominees receiving awards. She contributes to the Terra Madre and Presidia projects as the leader of the Ankara Convivium. She won the Sophie Coe Award on food history in 2008 for her article “Poppy: Potent yet Frail,” presented

previously at the Oxford Symposium on Food and Cookery where she's become a regular presenter. Currently, she is the curator of the Culinary Culture Section of Princess Islands' City Museum. She is happy to unite her expertise in archaeology and art history from her previous career with her unbounded interest in food culture.

Nicole Tarulevicz teaches at the School of Asian Languages and Studies at the University of Tasmania.

Karen Lau Taylor is a freelance food writer and consultant whose food curriculum vitae includes a master's degree in food studies from New York University, an advanced certificate from the Wine and Spirits Education Trust, and a gig as pastry cook at a five-star hotel after completing L'Academie de Cuisine's pastry arts program. She is working toward a master's degree in public health while she continues to write, teach, test recipes, eat, and drink from her home in Alexandria, Virginia.

Thy Tran is trained as a professional chef. She established Wandering Spoon to provide cooking classes, culinary consultation, and educational programming for culinary academies and nonprofit organizations throughout Northern California. Currently, she is a chef instructor at the International Culinary Schools at the Art Institute of California–San Francisco and Tante Marie's. She is also the founder and director of the Asian Culinary Forum. She co-authored *The Essentials of Asian Cooking*, *Taste of the World*, and the award-winning guide, *Kitchen Companion*.

Leena Trivedi-Grenier is a Bay-area food writer, cooking teacher, and social media consultant. Her writings have appeared in *The Business of Food: Encyclopedia of the Food and Drink Industry*, *Culinary Trends* magazine, and the *Cultural Arts Resources for Teachers and Students* newsletter and will be featured in several upcoming titles by Greenwood Press. She also runs a food/travel/gastronomy blog called *Leena Eats This Blog* (www.leenaeats.com).

Karin Vaneker graduated from the AKI Academy of Visual Arts in Enschede, the Netherlands. She later attended Sint-Lukas Hoger Instituut voor Schone Kunsten in Brussels, Belgium. She has written for numerous Dutch newspapers and magazines, specializing in trends and the cultural and other histories of ingredients and cuisines, and has published several books. Furthermore, Vaneker has worked for museums and curated an exhibition about New World taro (*L. Xanthosoma* spp.). At present she is researching its potential in domestic cuisines and gastronomy.

Penny Van Esterik is professor of anthropology at York University, Toronto, where she teaches nutritional anthropology, advocacy anthropology, and feminist theory. She does fieldwork in Southeast Asia and has developed materials on breast-feeding and women's work and infant and young child feeding.

Richard Wilk is professor of anthropology and gender studies at Indiana University, where he directs the Food Studies Program. With a PhD in anthropology from the University of Arizona, he has taught at the University of California,

Berkeley; University of California, Santa Cruz; New Mexico State University; and University College London and has held fellowships at Gothenburg University and the University of London. His publications include more than 125 papers and book chapters, a textbook in economic anthropology, and several edited volumes. His most recent books are *Home Cooking in the Global Village* (Berg Publishers), *Off the Edge: Experiments in Cultural Analysis* (with Orvar Lofgren; Museum Tusculanum Press), *Fast Food/Slow Food* (Altamira Press), and *Time, Consumption, and Everyday Life* (with Elizabeth Shove and Frank Trentmann; Berg Publishers).

Chelsie Yount is a PhD student of anthropology at Northwestern University in Evanston, Illinois. She lived in Senegal in 2005 and again in 2008, when performing ethnographic research for her master's thesis at the École des Hautes Études en Sciences Sociales in Paris, on the topic of Senegalese food and eating habits.

Marcia Zoladz is a cook, food writer, and food-history researcher with her own Web site, *Cozinha da Marcia* (Marcia's Kitchen; www.cozinhadamarcia.com.br). She is a regular participant and contributor at the Oxford Symposium on Food and History and has published three books in Brazil, Germany, and Holland—*Cozinha Portuguesa* (Portuguese cooking), *Muito Prazer* (Easy recipes), and *Brigadeiros e Bolinhas* (Sweet and savory Brazilian finger foods).
