FOOD CULTURES OF THE WORLD

Encyclopedia

AMERICAS

How to go to your page

This eBook contains four volumes. Each volume has its own page numbering scheme, consisting of a volume number and a page number, separated by a colon. Additionally, each volume has a separate index; index page numbers are preceded by "I-".

For example, to go to page "vi" of Volume 1, type "V1:vi" in the "page #" box at the top of the screen and click "Go." To go to page "7" of Volume 2, type "V2:7"... and so forth.

Preface

This encyclopedia is the culmination of nearly a decade's work on the *Food Culture around the World* series. As that project expanded to 20 volumes, we realized that many peoples and places, fascinating and important in their own right, had not been covered. Considering that the cultural study of food has become more sophisticated and comprehensive over the past decade, that food has become a legitimate academic topic in curricula at every level of education, and that we seem to become more obsessed with food every day, we recognized that we simply could not leave out much of the planet. The only way to satisfy this growing demand is the set you see before you, which includes material covered in the series plus new articles that span the globe. We have gathered food scholars from around the world—people whose passion and expertise have given them deep insight into the ingredients, cooking methods, and ways of eating and thinking about food in their respective countries.

A number of questions regarding breadth and depth naturally arose in planning this work, particularly about the level of analysis for each article. Could we do justice to the vast array of distinct cuisines on earth? Could we include regional coverage for well-recognized food cultures? That is, rather than the nation-state as the criterion for inclusion, why not add Alsace, Provence, and Burgundy with France, or Sichuan, Hunan, and Canton with China? It became apparent that we would need another 20 volumes or risk very brisk, superficial coverage and that as arbitrary as the construction of nation-states has been historically, in particular the way minority cultures have tended to be obscured, the best way to organize this encyclopedia was by nation. Regional variations and minority groups can, of course, be discussed within the framework of nation-based articles. On the other hand, some groups frankly demanded separate entries—those who stood out as unique and distinct from the majority culture in which they happen politically to be included, or in some cases those people who either transcend national boundaries or even those very small places, whose great diversity demanded separate coverage as truly different from the culture around them. Thus we include the Basques separate from Spain and France, and the Hmong. We have not, however, included every single people merely on the basis of national status. This should not be taken to suggest that these cultures are unimportant but merely that many places share a common culture with those around them, though divided by national borders. In such cases we have provided cross-references. This seemed a preferable solution to suffering repetitiveness or unmanageable size.

The format for each entry also raised many questions. “Eating Out,” for example, is simply not relevant in some places on earth. Would forcing each article into a common structure ultimately do injustice to the uniqueness of each culture? In the end it seemed that the ability to conduct cross-cultural analysis proved one of the most valuable assets of this set, so that one could easily compare what’s for lunch in Brazil or Brunei. Moreover, tracing the various global currents of influence has been made possible since a shared set of parameters places each article on a common footing. We can trace, for example, the culinary influence of various peoples as they spread around the world. In this respect this work is unique. There are several excellent food encyclopedias on the market, all of which cover individual ingredients, topical themes, cooking methods, and sometimes recipes. None, however, treats individual food cultures as discrete units of analysis, and for students hoping to find an in-depth but succinct description of places, or for those hoping to compare a single food topic across cultures, this is the only source to which they can turn. We anticipate that this work will be invaluable for students, scholars, food writers, as well as that indomitable horde popularly known as foodies.

The other major question in designing this encyclopedia was how to define what exactly constitutes a *food culture*. This term should be distinguished from *cuisine*, which refers only to the cooking, serving, and appreciation of food. Naturally we include this within each entry and in doing so have taken the broadest possible definition of the term *cuisine*. That is, if a people cooks and recognizes a common set of recipes and discusses them with a common vocabulary, then it should be deemed a cuisine. Thus there is no place on earth without a cuisine. A nation, continent, region, and even a small group may share a common cuisine. This encyclopedia, however, covers much more. It explores the social context of consumption, the shared values and symbolic meanings that inform food choices, and the rituals and daily routine—indeed everything that constitutes a food culture. Thus we include religion, health, mealtimes, and special occasions, as well as the way certain foods confer status or have meanings beyond simple sensory gratification. Nor have we neglected the gastronomic angle, as recipes are an essential expression of what people think is good to eat, and their popularity is the outcome of decisions made at every level of society, from the farmer who grows food, and the environment and material resources that make it possible, to the government policy that promotes certain ingredients, to the retailers who market them, to the technologies by which they are transformed, and to the individual preference of family members at the level of the household. To this end we have added food culture snapshots to each entry, which puts a human face on the broader topics under discussion.

As with the series that preceded this encyclopedia, our aim is to present the panoply of human experience through the lens of food in an effort to better understand and appreciate our differences. We will find remarkably common experiences among us, especially as the world increasingly falls under the sway of corporate multinational food industries, but we will also find deep, profound, and persistent distinctions, ones that should and must be preserved because they are essential to who we are and how we define ourselves. These are differences that should not be effaced nor lost as our tastes become increasingly cosmopolitan. I hope that in

reading these articles you find, like me, that the world is a marvelously diverse place and what people eat tells us about them in such an immediate and palpable way that in a certain sense you feel you know the people at some level. This, of course, is the first step toward understanding, appreciating, and living with each other peacefully on this small lump of turf we call earth.

Algeria

Overview

The People's Democratic Republic of Algeria is situated between the North African countries of Morocco and Tunisia. It is the largest country bordering the Mediterranean Sea and the second-largest African country, with a total landmass as large as the whole of Western Europe. Algeria is divided into 48 *wilayas*, or provinces. More than 90 percent of the population lives in the most fertile and smallest region, called the Tell, which runs the entire length of Algeria's Mediterranean coastline. The remainder of the country can be divided into three parallel geographic bands that run east–west. South of the Tell is the Tell Atlas mountain range, followed by the Saharan Atlas mountain range, and finally the Sahara desert. Algeria's Sahara comprises more than 90 percent of the country and is bordered by Western Sahara, Mauritania, Mali, Niger, and Libya.

Most Algerians are of Arab-Berber heritage; identification with either or both can depend on cultural ties or political beliefs. Arabic has been the official national language since independence from French colonial rule, as written in the constitution of Algeria in 1963. *Tamazight* (the Berber language) was recognized as a national language in 2002 by constitutional amendment. Although French is widely used in government, media, and education, it has no official status. In recent years, there has been a popular movement to emphasize a national Algerian identity, rather than regional ones.

Islam is the official religion of Algeria. The vast majority of Algerians are Sunni Muslims; Christians and Jews comprise less than 1 percent of the population. Pork and any food products derived

from pork are forbidden from the diet in accordance with Islamic dietary laws.

Algerian cuisine represents a historically unique mix of Mediterranean and African peoples. Thousands of years of immigration and conquest by, and trade with, Phoenicians, Arabs, Jews, Romans, *Moriscos* (Muslims from Spain), Ottomans, Italians, French, and Spanish have left their mark on the basic Berber foundation of Algerian cuisine. However, like Morocco and Tunisia, the single largest influence was medieval Islamic cooking. Algeria, Tunisia, and Morocco are collectively known as *Al-Maghrib* (“the West” in Arabic) to geographically and culturally distinguish the region from the Middle Eastern part of the Arab world, called *Al-Mashriq* (“the East”).

Food Culture Snapshot

Geographic location and social class play key roles in determining what Algerians eat. Lyesse and Chaima Chenna live in a middle-class neighborhood in Algiers, the capital of Algeria. Lyesse, originally from the Kabylie, is an architect; his wife, Chaima, originally from Tlemcen near the Moroccan border, is an attorney. Their lifestyle and diet are representative of educated urbanites living in a large cosmopolitan city, whose diet includes dishes from different parts of Algeria, France, Spain, Italy, and the Middle East.

Lyesse and Chaima begin their day at 7 A.M. with homemade *baghrir* (semolina pancakes) served with honey, or baguette bread, purchased from a bakery, served with jam and coffee. The Chennas eat lunch with coworkers at a diner that serves simple dishes such

Algeria, city and the main marketplace. (Corel)

as composed salads, *karantika* (chickpea pie), or lentil soup. Later in the afternoon, around four o'clock, the Chennas go to a tearoom to have traditional Algerian pastries or Ottoman-influenced baklava with mint tea or coffee. Dinner is around 8 P.M. and is the largest meal of the day. The main dish is roasted or grilled lamb or chicken (served with bread) or a *tagine*, a braised stew of lamb or chicken with vegetables served with couscous. Side dishes include salad, pan-sautéed or stewed vegetables, and lentil or chickpea dips. Dessert is typically fresh fruit.

Urbanization and globalization have brought rapid changes to Algeria. City dwellers tend to live in smaller family units away from large extended families, and urban women are more likely to work outside the home than their rural counterparts. The growing number of supermarkets in big cities not only has made shopping for meals more convenient but also provides access to a range of prepared and packaged foods that considerably reduce meal-preparation times. However, shopping in *souks* (outdoor markets) and small shops is still very much a part of daily life in Algeria. Chicken drumsticks purchased at a supermarket are seasoned with spice blends purchased at a small shop and served with vegetables purchased from a sidewalk stall.

Lysesse and Chaima have an increasing variety of restaurants to choose from when they dine out. Besides enjoying traditional Algerian dishes at small restaurants, street-food bazaars, and fast-food outlets, they go to French-style cafés for simple bistro fare and

Italian restaurants for pasta or pizza. When entertaining foreign clients for business, they go to hotel restaurants where a range of international dishes are available, even Chinese specialties.

Major Foodstuffs

Despite having an impressive share of the Mediterranean coastline, fishing in Algeria is an underdeveloped industry. Sardines, anchovies, squid, shrimp, and mussels are the most commonly available seafood. Algeria has very little fertile land; only 3.17 percent of the total land area is arable. Crop cultivation is heavily concentrated in the northernmost part of the country in the Tell region near the coast and in mountainous areas with high plateaus such as Setif and Constantine in northeastern Algeria. Major crops are wheat, barley, and potatoes. The remainder of the country is arid or semiarid and largely unsuitable for farming. The exceptions are oasis towns where dates thrive. Vast tracts of date palms in the desert create microclimates where apricot, orange, and olive trees also grow and smaller plant foods such as onions, tomatoes, and cabbages thrive.

The Algerian Sahara isn't entirely barren outside of oases; it is rich in petroleum and natural gas reserves. For the past several decades, the country's economic growth has been heavily dependent on high gasoline prices, making it one of the wealthiest African countries. Investment in the gas industry was at the detriment of other industries including agriculture, livestock, and fishing. The former breadbasket of ancient Rome has become one of the world's largest grain importers. By 2008, more than 60 percent of all foods were imported to meet demand. With falling gasoline prices, the Algerian government has recently taken measures to boost agricultural productivity.

Dietary staples are wheat in the form of couscous, bread, or pasta and chickpeas or lentils in dips or soups. Almost all Algerians eat a combination of grains and legumes daily. Common vegetables include zucchini, carrots, eggplant, cardoons, artichokes, okra, turnips, cabbage, spinach, tomatoes,

and peppers. It's difficult to imagine contemporary Algerian cooking without ingredients from the Americas such as tomatoes, peppers, and potatoes. Tomatoes were probably introduced to Algeria in two stages: first by the Spanish, who captured Algerian ports shortly after setting sail for the Americas in 1492, and then by the Italian immigrants who came almost 350 years later with French colonial rule. Evidence suggests three possible points of entry for chili peppers into Algeria: through the Mediterranean coast via the Spanish, through West Africa via Portuguese Atlantic trade, or through eastern Mediterranean land trade routes. Spanish or Italian settlers possibly introduced potatoes into Algeria.

Watermelon and other melons are valued for their high water content. Fresh grapes, apricots, apples, oranges, tangerines, lemons, kumquats, quince, and bananas are available seasonally. Fruit is dried or preserved in sugar for storage. Citrus fruits, lemons in particular, are preserved in salt and used to flavor tagines and sauces. Olives are brined or oil cured.

Algeria's growing dairy industry has failed to meet the even more rapidly increasing demand; in 2008, about 17 percent of all food imports were dairy products. The demand for powdered milk is especially high. Powdered milk is used by manufacturers in various products or reconstituted with water for drinking. Fresh milk is drunk plain, churned into butter, fermented into kefir or yogurt, or made into soft cheese. Gruyère, Parmesan, mozzarella, and spreadable processed cheeses are purchased in stores.

Lamb is the preferred meat. Beef is increasingly available because of globalization and a growing dairy industry. Chicken and eggs are relatively inexpensive sources of protein; Algerians have an astonishing array of chicken and egg dishes.

Since butter is highly perishable, it is often clarified or fermented to extend its shelf life. Clarified butter is used for cooking, and fermented butter is used as a flavoring agent. Margarine is increasingly popular as a relatively inexpensive alternative to butter. Olive oil is the most preferred cooking medium and is also highly valued for its purported medicinal properties. It is also used to flavor marinades, dressings, and dips.

Water is served with meals. Syrup-flavored water and carbonated beverages are drunk with light snacks. Coffee and tea are served at breakfast, with afternoon pastries, and after dinner. Mint tea is the national drink of Algeria.

Cooking

Algerian kitchens are simple by North American standards. Most cooking is done on stovetops or propane-fueled burners using just a few pots and pans. Pressure cookers were introduced into Algeria in the 1970s and are used frequently for their time- and energy-saving benefits. Tagines that once took hours to cook in clay vessels now take about an hour in a pressure cooker. However, even in urban areas, tagines are still sometimes cooked in clay *tagines*—the dish and the cooking vessel are both called *tagine*—outdoors over braziers.

Tagines are simply stews or soups of meat, poultry, or seafood with vegetables. There are no codified rules as to how they should be prepared. Cooking techniques and ingredients vary from region to region and family to family within regions. Some cooks add ingredients in layers: a layer of sliced onions at the bottom, followed by lamb sprinkled with spices, and then vegetables such as celery, carrots, and zucchini. Other cooks place everything into the pot at once. Tagines with thick sauces are often eaten with bread, which is used to scoop up food. Soupy tagines are usually served with couscous. Every Algerian household owns a *couscoussier* (a large pot with a steamer insert) for steaming couscous over a pot of simmering soup or stew of meat, chicken, or seafood with vegetables.

Flatbreads and *warka* pastry sheets are made at home using a flat, round griddle called a *farrah*. Since many households do not have ovens, round leavened breads known as *khobz eddar* (house bread) are cooked in deep pans on the stovetop or purchased from a bakery. Leavened breads are also baked in a *taboun* (a large outdoor oven). In rural areas, tabouns are often community owned. Small bakeries in cities charge a baking fee to patrons who bring homemade dough.

Men are typically in charge of outdoor grilling. Grills for kebabs and sausages are simple metal grates placed on top of a metal box or clay brazier filled with burning charcoal or wood. Roasting a whole lamb is a bit more complicated: The lamb is rubbed with spices and cooked on a rotisserie spit over a large fire. The lamb is frequently basted with clarified butter or olive oil to keep the meat moist and to create a crispy skin. The spit is turned every 20 minutes to ensure even cooking.

Preparing Algerian food can be labor-intensive. Middle-class to affluent families often have cooks, called *dadas*. In rural areas, where several generations of a family live in one household complex, the older women supervise food preparation while their daughters and daughters-in-law do most of the actual cooking. Nuclear families living in cities often use packaged food products and convenience items to reduce cooking times and kitchen labor needs.

Spices are purchased ground or whole from spice vendors who also sell proprietary blends called *ras el hanout* (“top of the shop”) consisting of a dozen or more spices. Whole spices are ground at home using a mortar and pestle or an electric grinder. The most widely used everyday spices are cumin, paprika, and turmeric. The use of other spices such as coriander, cinnamon, fennel, anise seeds, cardamom, and nigella seeds tends to have many regional variations. Expensive spices, for example, saffron, are usually reserved for special-occasion dishes.

Algerian cooks rarely dry-roast spices. Spices are usually added to soups and stews in several stages throughout the cooking process to create depth of flavor. Lemon juice or vinegar is sometimes added to finished soups and stews for acidity. Spice pastes and marinades are made with a mixture of spices, pounded garlic, grated onion, olive oil, chopped herbs, and citrus juice or vinegar. In wealthier kitchens saffron is used for color; sugar, honey, and dried fruits for sweetness; fresh citrus and vinegar for acidity; and nuts as thickening agents.

Tomatoes became widely used in Algerian cooking because they provided the culinary functions of quite a few ingredients, especially many that are beyond the budgets of humbler households: Chopped fresh tomatoes, fresh tomato juice, sun-

dried tomatoes, sweet tomato jam, tomato puree, and tomato sauces are used to add color, sweetness, and acidity and to thicken sauces. Sweet bell peppers are used almost as much as tomatoes. However, the use of hot peppers tends to be more localized. *Harissa*, a hot chili sauce, is more commonly used in eastern Algeria near Tunisia than in other regions of the country. Overall, Algerian foods are not hot and spicy.

Tomatoes and peppers are also stewed, grilled, or stuffed, as are most other vegetables. Algerians have a fondness for vegetables stuffed with ground lamb or rice. A range of vegetables such as cabbage, zucchini, cardoons, artichokes, and eggplant are prepared similarly. Stuffed vegetables are called by Arabic and Turkish names, *mashi* or *dolmas*, respectively.

Potatoes are ubiquitous in Algerian cooking. They are a readily available and inexpensive starch that helps compensate for grain and cereal shortages. French fries are stuffed into baguette bread with spicy lamb sausages (*sandwich aux merguez*); sautéed potato wedges are used to garnish tagines; raw potatoes are hollowed out and stuffed with ground lamb; pureed potatoes are served as an accompaniment to roasted meats; and leftover mashed potatoes are shaped and fried into croquettes.

Deep-fried foods such as beignets, a kind of doughnut, and pastries are usually purchased from

Tagine, a braised stew of lamb or chicken with vegetables, served with couscous. (Laurent Renault | Dreamstime.com)

street vendors or at restaurants as snacks. Pickling and canning is still done at home in rural areas. Tomatoes are canned or sun-dried; citrus is preserved in salt or sugar; meat is preserved in fat or dried for jerky; fruits are preserved whole in sugar syrup, cooked into jam, dried, or coated with sugar; and peppers, turnips, and cabbages are pickled in vinegar.

Typical Meals

Algerian meals vary depending on region, socioeconomic status, and urban or rural location. National economic growth during the past few decades has resulted in a growing middle class. However, Algerian society still tends to be economically stratified into two groups: the rich and the poor. Middle-class to wealthy Algerians often eat four times a day: three light meals of breakfast, lunch, and a late afternoon snack with tea, followed by a main dinner meal. Poor Algerians, particularly in rural areas, subsist on coarse grains and cereals supplemented with small portions of legumes and dates.

Couscous is the staff of life and the iconic dish for all Algerians. Couscous is often referred to simply as *ta'am* (Arabic for “food”). Couscous is the traditional meal after *salaat-ul-jumu'ah*, a congregational prayer held at mosques every Friday immediately after noon. There is no special occasion or holiday without couscous.

Traditionally, Algerians sit on the floor for meals, sometimes on a carpet or cushions. Most dishes are served at room temperature; tagines, soups, and meat dishes are served hot. A small selection of *mezze*, or appetizers, is served for guests or on special occasions. Main dishes may be served all at once or in courses. Food is eaten only with the right hand in accordance with Islamic tradition. The left hand is used for personal hygiene and thus considered unclean for eating. Couscous is eaten with the first three fingers of the right hand or a spoon, never with a fork.

The following are examples of typical meals in middle-class families in three regions of Algeria. The food of Setif in the mountains of northeastern

Algeria is simple and rustic. Spices are used sparingly, if at all. The region has a long history as a center of grain production and trade going back to ancient Rome. Farming is done on the rain-inducing plateaus, and livestock graze in hilly pastures. The diet is based on whole grains such as barley, bulgur, and millet, which are all steamed for couscous. Lamb and chicken tend to be more abundant here than in many other regions.

Agrarian families rise at dawn to a breakfast of *kesra* (Berber flatbread made with semolina flour) and buttermilk. Fresh or dried fruit is packed for snacking while working in the fields. Lunch consists of couscous with buttermilk or *kesra* with a small piece of grilled meat and a salad of fresh herbs and wild greens. Mint tea is served late in the afternoon with semolina butter cookies or biscuits.

The main meal, dinner, is eaten around sunset. Dinner consists of couscous made from bulgur. The steamed bulgur is served on a large platter surrounded by the meat and vegetables from the tagine; the tagine broth is strained and served separately in a tureen or large bowl. Other dishes are soup with chickpeas and barley, grilled or braised lamb, and several vegetable preparations. Dessert is fresh fruit, followed by a selection of fried sweets soaked in syrup.

In the Mediterranean port city of Annaba, near the Tunisian border, the foods are hot and spicy; harissa and hot peppers are ubiquitous. Breakfast is eggs poached in a spicy tomato sauce with chickpeas. Italian settlers came with the French occupation of Algeria, and their culinary influence is very apparent in Annaba. Lunch is pizza topped with spiced lamb or pasta in a tomato sauce with seafood.

Dinner, typically served at 7 p.m., is the largest meal of the day. Couscous is served with seafood in tomato broth. The presentation for couscous is similar to Tunisian and Sicilian couscous: The broth is spooned over a large platter of couscous, and the seafood is placed on top. Fruit is served for dessert, followed by semolina cake drizzled with honey syrup.

The port city of Oran has a different meal structure. From Oran, it takes only nine hours by ferry

to reach Alicante, Spain. The city provided a refuge for Moriscos after the Christian reconquest of Andalusia. In 1509 the Spanish captured the port of Oran. For the next 300 years Oran would change hands back and forth between the Spanish, Barbary pirates, and the Ottomans. Oran was also where Spanish settlers came with the French invasion of Algeria. They brought with them rice dishes such as *arroz con pollo* (chicken and saffron rice) and *paella* (rice with seafood, vegetables, and/or meats). Oran is still famous in Algeria for exceptional rice preparations.

Breakfast in Oran is a scrambled egg dish called *shakshuka*, an Ottoman-influenced dish of sautéed bell peppers and onions with eggs stirred in. Lunch consists of Spanish-influenced *cocas* (puff pastry stuffed with sautéed vegetables) or *frita*, a pizza-like baked dish topped with olives, peppers, and tomatoes. Dinner is served at 8 P.M. The main dish is *arroz con pollo* made with long-grain rice or basmati rice, which is a new “foreign” ingredient sold in supermarkets. Dessert is *baklava*, a flaky pastry with nuts, drizzled with Seville orange syrup, served with cardamom-infused coffee.

Eating Out

Algerian restaurants tend to be categorized according to specialties or type of cuisine. The capital city of Algiers, in particular, offers diners a range of Mediterranean dishes and cuisines. Restaurants serving non-Mediterranean foods are rare, although Algiers has a handful of Indian, Vietnamese, and Chinese restaurants. International dishes beyond Mediterranean cuisines are usually available in hotel restaurants.

Street food is very popular in Algeria. Vendors usually specialize in a single dish. Fried donuts called *sfenj* or *beignets* and *briks* (warka pastry stuffed with egg) are common breakfast items. Kebabs, merguez sausage sandwiches stuffed with French fries (*merguez frites*), and sandwiches of thinly sliced rotisserie-cooked lamb in baguettes are popular lunchtime fare. In the evening entire town squares are turned into street-food bazaars with vendors serving more

extravagant dishes such as *paella* and *bastila* (a pie of chicken, eggs, and almonds in many layers of flaky phyllo-like dough). Roving mint tea and coffee vendors walk the streets throughout the day.

Fast-food restaurants in Algeria are similar to casual North African and Middle Eastern places found in Europe and America. They serve vertical rotisserie-grilled meats (called either Turkish-influenced *doner* or Arab-influenced *shawerma*); falafels stuffed into pita bread; and French fries. In recent years, globalization has brought in a Belgian fast-food chain, Quick. A McDonald’s opened in Algiers in 2008.

Traditional Algerian restaurants tend to focus on a small group of related dishes such as couscous served with a choice of several tagines or soups; kebabs and *mechoui* (roasted or grilled dishes); or seafood preparations. The former European colonial presence is still very much alive in the restaurant world. French-style cafés serve simple bistro fare like *steak frites* (steak with a side of French fries) and *moules ail et persil* (mussels steamed in garlic and parsley). Italian diners serve pizzas and pastas.

Small Algerian bakeries and pastry shops typically specialize in only traditional Algerian breads and sweets. Larger bakeries in cities integrate French goods. Baguettes are ubiquitous in Algeria; croissants, éclairs, and European-style cakes are also fairly common.

Harira, a hearty soup made with lamb, legumes, grains, and spices. (iStockPhoto)

Special Occasions

Algeria is predominantly a Sunni Muslim country. A small minority of Mozabites (a Berber group) in central Algeria are Ibadi Muslims. The most important holidays for Sunni Muslims are the holy month of Ramadan and Eid al-Adha. Ramadan falls on the ninth month of the Islamic lunar calendar every year. Fasting is one of the five pillars of Islam essential to Sunni Islam. During Ramadan, Muslims do not eat or drink from dawn to dusk. The fast is broken with *iftar* (“breaking the fast”) immediately after sunset with a date and a glass of milk or *iben* (a thin yogurt drink). This is followed a large feast featuring many extravagant dishes such as *harira*, a hearty soup made with lamb, legumes, grains, and spices, or a sweet lamb tagine with dried fruits, nuts, and honey. Rich sweets such as *makroud* (a fried pastry stuffed with fig paste) and *zalabiya* (deep-fried fritters drenched with honey syrup) are common Ramadan treats. The second meal for Ramadan, *suhoor*, is eaten before dawn and morning prayers. Suhoor dishes often contain little or no salt, since salt induces thirst.

Harsha (Quick Semolina Bread for Ramadan)

- 1 c fine semolina flour
- 1 c unbleached all-purpose flour
- ¼ c sugar
- 1 tbsp baking powder
- ¼ tsp salt
- 1 c buttermilk
- ½ c water (or more as needed)
- 1 large egg
- 5 tbsp unsalted butter, melted and cooled slightly

Preheat oven to 400°F.

Sift flours, sugar, baking powder, and salt into a medium bowl. Whisk the buttermilk, water, and egg in another medium bowl; whisk in the melted butter. Add buttermilk mixture to dry ingredients; stir just until incorporated (do not overmix).

Bake for 20–30 minutes or until golden.

Serve with butter and honey.

Zakah al-fitr is a form of charitable giving at the end of Ramadan. Muslims are expected donate food to the poor at this time so that all Muslims, regardless of their means, can celebrate Eid al-Fitr, the festival of breaking the fast, a three-day celebration beginning on the first day of the month after Ramadan. On the morning of Eid, Muslims gather for morning prayer at a mosque or in large public spaces. After Eid, people visit family and friends with platters of sweets and pastries and to exchange presents.

Eid al-Adha (the Festival of Sacrifice) is celebrated in the last month of the Islamic lunar calendar after the hajj (the annual pilgrimage to Mecca), to honor the prophet Abraham’s willingness to obey and sacrifice for Allah. Muslims commemorate this day by sacrificing a lamb. Organ meats are cooked and consumed on the day of the sacrifice; the rest of the lamb is cut into portions, and much of the meat is donated to the poor. Platters of sweets, cookies, and pastries are also served.

In Algeria, sacrificing a lamb also commemorates the birth of a child, circumcision, and marriage. Traditional Algerian weddings can last three days or more, depending on the region and the family’s wealth. Algerian weddings are comprised of several events celebrated on successive days or nights: the engagement party; the henna-painting ritual; the recitation of the *Fatiha*, the first chapter of the Quran, and *durud* (blessings); and the wedding celebration. Guests are served food every day. Contemporary Algerian weddings can be as short as a single day and take place in a banquet facility or hotel.

Diet and Health

In some regions of Algeria, olive oil is highly prized for its purported medicinal value as a cure-all for minor ailments such as indigestion, headaches, and

irritated skin. Gently heated olive oil is rubbed directly onto the skin to treat problem areas. Folk remedies also include herbal infusions. For example, in the Kabylie, water infused with fresh mint is believed to be a digestive aid with antispasmodic and antinausea properties. Proper digestion is considered very important; certain foods are eaten or avoided to prevent upset stomach.

Islamic culture places great emphasis on maintaining good health through proper personal hygiene and dietary habits. Ablution (ritual cleansing) is performed before each of the five daily prayers of Islam, and food is eaten with the right hand only; the left hand is reserved for matters of personal hygiene. Foods are either *haram* (prohibited) or *halal* (permitted). Haram foods include alcohol and other intoxicants; pork and products derived from pork such as gelatin; and blood, including meat that has not been completely drained of blood. Animals must be slaughtered according to *zabiha*, the prescribed Islamic methods for ritual slaughter, to be considered halal. All plant-based foods are halal.

Angola

Overview

The Republic of Angola is the seventh-largest country in Africa and the largest of the five countries in Africa where Portuguese is the official language. It covers about 482,625 square miles and is situated south of the equator on the southwestern coast of the continent. There are great variations in the climate and geography, including rain forests in the north, fertile central highlands, deserts in the Kunene and Kuando provinces in the south, drier coastal lands, and sandy soils in the east. The climate is characterized by both dry and rainy seasons that occur at different times in the various regions. Angola is bordered by the Democratic Republic of the Congo on the north, Zambia on the east, Namibia on the south, and the Atlantic Ocean on the west. Cabinda, an enclave that lies north of the Zaire River, is surrounded by the Democratic Republic of the Congo and the Republic of the Congo. Six major rivers flow westward cutting through the coastal lowlands and providing fertile lands for extensive agriculture. They are the Congo (formerly Zaire), Cuanza (Kuanza), Cunene (Kunene), Cubango (Kubango), Zambezi, and Kuando.

The country currently known as Angola was discovered by the Portuguese navigator Diogo Cão during his first voyage of exploration in 1482–1483. The Portuguese were the first Europeans to penetrate Africa south of the Sahara. The word *Angola* comes from the title used by the rulers of the Ngongo state. The title *ngola* was first mentioned in Portuguese writings in the 16th century. Before the arrival of the Portuguese, Angola was inhabited by the peoples of a number of ethnic groups in small kingdoms in

the area known as Rio Kuanza (the Kuanza River region) from the 13th century until 1520, when the Portuguese began to impose rule over these people. At that time there were over 100 languages and dialects in Angola. Today, the three dominant ethnic groups are the Ovimbundu, Mbundu, and the Bakongo. The Ovimbundu, the largest ethnolinguistic group, are located mainly in the west-central part of Angola. Their language is Umbundu. The Mbundu comprise the second-largest group. They speak Kimbundu, and they have lived mostly in the plateau region north of the Ovimbundu. The Bakongo are concentrated in the Uíge and Cabinda provinces of the northeast, and even though their capital was Mbanza Congo in the Northwest of Angola, some members of their ethnic group are found in the present-day Democratic Republic of the Congo (formerly Zaire) and the Republic of the Congo (formerly Congo Brazzaville).

The official language of Angola is Portuguese, but many people are bilingual or even multilingual. The six most commonly spoken Bantu languages are considered national languages: Chokwe, Kikongo, Kimbundu, Mbunda, Oxikwanyama, and Umbundu. In total 40 languages are spoken in Angola. Though there is a sense of Angolan identity, the people are divided among various ethnicities, regions, and religious and racial groups, among other factors. In the 1970s there was a movement to discourage tribal identity. Out of that movement came the following, heard throughout Angola: *De Cabinda ao Cunene, um so povo, uma so nação* (“From Cabinda to Kunene, one people, one nation”). The Portuguese language has set Angola apart from its neighbors and created ties not only with Portugal but also with Brazil,

Mozambique, and the other Portuguese-speaking countries in Africa and Indonesia.

Food Culture Snapshot

Sara and José Santos live in a middle-class neighborhood of Luanda, and they own their home. José is a notary for a local bank, and Sara is a housewife. Their lifestyle and eating habits are typical of the middle class. They enjoy both traditional Angolan food and Portuguese-influenced dishes. They begin their day with a breakfast of bread (soft white rolls similar to the Portuguese *pão*) with butter, coffee, fruit, eggs, and cheese. Sometimes breakfast includes sausages or leftover fish or meat. The bread is purchased at a nearby bakery, and fruit, eggs, butter, and cheese come from the local open-air market or grocery store.

Lunch is usually the largest meal of the day and can consist of grilled fish, boiled manioc root, rice, seafood, chicken, or pork. Some of the most popular dishes are rice with fish or other seafood, meat stew, and *muamba de galinha* (Angolan-style chicken). Lunch usually ends with coffee and a dessert. Dessert can consist of cakes made with grated coconut, pineapple, chocolate, sweet potato, or bananas. Puddings are also common and are made with egg yolks, coconut, or tapioca. The egg sweets are a Portuguese influence. Coffee is prepared by placing the grounds in a muslin bag and placing the bag over an enameled coffeepot. Freshly boiled water is poured slowly into the strainer over the ground coffee. If the coffee is not strong enough, it can be poured back through the muslin strainer once again. Fish is purchased at the local fish market or the open-air market. Meat and poultry come from local farmers, small grocery stores, or supermarkets. Manioc flour and manioc

root are purchased at open-air markets, supermarkets, or corner stores.

The evening meal is usually served around 7 P.M. and consists of soup and bread or leftovers from lunch. The soup is sometimes made with rice mixed with pieces of stew beef, pumpkin, and beans, or fresh fish, dried fish, sweet potato, and spinach, all served with *funji* (a manioc puree).

Meals in many of the rural areas and small villages are quite different from those found in the urban areas. Many of the rural residents are farmers, and some of their meals are prepared with milk and curds and whey. Many dishes also consist of boiled green vegetables, beans, cereals, manioc, yams, and sweet potatoes. Most of the food is locally grown, and the milk comes from cows and goats owned by the farmers. Churned into butter in gourds, the milk of cows and goats remains part of the basic diet today. A typical menu for families of fishermen along the coast might include, for breakfast (*mata-bicho*, meaning “to kill the bug of hunger”), bread, coffee or tea, and sugar. For lunch, there would be a stew of potatoes and squid, and for dinner a beef soup.

In the interior of the southern province of Benguela, which borders the desert, breakfast for many is usually the largest meal of the day. It could consist of leftovers from the night before or a combination of the following: cereals, sweet potatoes, cassava, beans, peas, or boiled green vegetables. The more affluent enjoy a breakfast similar to that eaten in larger cities, like Luanda and Moçâmedes.

Major Foodstuffs

Until the late 15th century the principal work of the indigenous peoples of these small kingdoms was agriculture. They cultivated cereals, such as sorghum, and grew corn. Legumes and vegetables, including beans, okra, and various types of pumpkins, were also part of their diet. These crops were grown on large farms. When the fields had been overworked and could produce no more crops, farmers simply moved to another area and planted again. This method of agriculture is called itinerant farming. Both men and women worked in the fields, but the men cleared the forests and the women did the planting. The instruments used to harvest these crops were the hoe and

hatchet, both made of iron. The technique of casting iron for tools was utilized in West Africa since around 300 B.C. by the early inhabitants, who were known as Bushmen, Khosian, or San. It is believed that they came from present-day Cameroon through the old commerce routes that crossed the Sahara. They also fished and hunted to supplement their diet. This diet included wild animals and birds, insects, and domesticated animals such as chickens, goats, and cattle. The skins from the hunt were used for clothing.

In 1490, seven years after Diogo Cão “discovered” Angola, Portuguese ships arrived bringing presents from the king of Portugal to the king of the Congo, including a brick builder to construct a church. The first contact was friendly, and the king of the Congo was happy to receive the arms the Portuguese brought them. The ships then returned to Portugal with ivory, beautiful Congolese fabrics made by local artisans, and, sadly, some slaves.

In 1575, Paulo Dias de Novais arrived in the Bay of Luanda and landed on the Ilha do Cabo, which he named São Paulo de Loanda. He brought 400 soldiers and 100 Portuguese families, who came to cultivate sugar and tobacco and extract salt and palm oil for export. The salt was used as a product to trade for other necessities. European cattle, pigs, and goats were brought, which were raised in the central and southern regions. The locals drank the goat milk and also used it to make cheese. The goatskins were used for clothing, rugs, pocketbooks, and bags.

Various cereals were grown, including wheat, which was also used to make alcoholic beverages. In 1576 the Portuguese settlement moved to the mainland. Their influence in Angola was pervasive and in some cases subtle. To the African cuisine they brought the European sense of flavoring with spices and roasting and marinating techniques. The Portuguese also brought products from their gardens and orchards, some of which were influenced by Arabic culture and exotic plants from Asia and the Americas. These contributions, some more valuable than others, changed the cultural and economic face of the indigenous peoples and altered the nutrition of their population. The root from the cassava tree was one of the first plants to be brought to Angola from the New World at the end of the 16th century. One

of the advantages of this exceptional plant for many of the indigenous peoples was that the roots were able to remain in the soil as if they were in storage, without spoiling, and the by-products from these tubers—flour, tapioca, and starch—could be kept for a long time without spoiling. Corn, which originates in North America, was another food that was well received in Angola.

The Portuguese also brought the avocado, rich in fat and protein, peanuts, papayas, guavas, pineapples, and mango trees, which eventually spread throughout sub-Saharan Africa. From Asia they brought and planted lime, lemon, and orange groves along the Atlantic coast and introduced pawpaws and groundnuts into the Gambia region. They also introduced the domestic pig. It is interesting that the names of many of these foodstuffs that were brought to Africa are derived from the Portuguese language. Portuguese mariners also brought many fruits and vegetables from Brazil. Once the crops that were introduced from the New World became staples of the Angolan diet, land was developed for farming those crops, and settlements began to spring up in the forests.

Angola is one of the African territories that contributed significantly to the cuisine of the New World, especially Brazil. By 1667, Brazil, already a Portuguese colony in 1530, was also an important player in the culture and cuisine of Angola. Angola enriched Brazil with palm oil, salt, peanut oil, and coffee. Brazil supplied Angola with sugar, *aguardente* (a rumlike spirit distilled from sugar), rice, flour, dried beef, bacon, manioc flour, coffee, and beans. And both of these then-colonies supplied Portugal with these products. Slaves from the Congo-Angola region brought to Brazil such traditional Angolan dishes as *caruru* (shrimp and okra stew) and *vatapá* (shrimp and bread pudding) and condiments like *jindungo* (hot chili pepper). By 1796, most of the food products originally imported from Brazil were being produced in Angola. Angola has made contributions not only in the culinary area but also with regard to social and cultural customs in Brazil, including vocabulary such as *moleque* (street urchin), *samba*, and *macambúzio* (melancholic). As the saying goes, Angola is truly the “mother of Brazil.”

Cooking

Cooking techniques in Angolan cuisine vary throughout the country. In Luanda and all the larger cities, relatively affluent families have their meals prepared by cooks. Those meals are mainly Portuguese influenced and reflect Angola’s prolonged contact with the former colonialist regime. Most Angolan kitchens are not as elaborate as Western kitchens. Food is prepared on a gas stove fueled by a propane tank that usually lasts about a month. Many households also have a charcoal grill on which meat and seafood are cooked. A large pot is a necessity for stews and soups, and large frying pans are used for sautéing and frying. A meat grinder is needed for meat, peanuts, and onions, as well as a grater for coconut, a mortar and pestle to crush spices, and a muslin strainer to make coffee. A clay water jug with a filter for purifying water is found in almost every Angolan kitchen along with a strainer (*paneira*) for washing rice and a set of wooden spoons for stirring stews. Some cooks even own electric blenders and grinders. Aluminum pots and pans have replaced the clay pots (*panelas de barro*), including clay dishes, because it is currently difficult to obtain them. In rural areas, however, many cooks still use clay pots. The use of the clay pots gives a special flavor to certain dishes, especially beans cooked in palm oil. The clay pots also hold the heat longer than aluminum ones.

The Angolan coast is very rich with fish and other seafood. Some of the crustaceans found in the waters are lobsters, shrimp, scallops, clams, mussels, oysters, crab, prawns, and crayfish. Not only does Angola have quality seafood, but the method of preparation results in succulent and most delicious meals. Lobsters and other shellfish are often cooked in seawater. The water is brought to a boil and seasoned with lard or butter, hot peppers (*jindungo*), and salt. The lobster is dropped into the boiling water, and when the water returns to a boil, it is reduced to a simmer and the lobster is cooked for about 10 minutes, depending on its size. Meats are prepared in stews, sautéed with vegetables, or grilled over open coals. Chicken is either grilled or stewed (*guisado*) with vegetables. A sauce called *refogado*, very popular in many of the Portuguese-speaking countries, is the basis for many

stews and soups. It is made with onions, tomatoes, and garlic sautéed in olive oil.

Rice is usually served as a side dish at each meal and is cooked with a *refogado* to which parsley or cilantro is sometimes added. Rice as a main dish is cooked with beans, fish, chicken, salt cod, sausages, or cabbage. Macaroni is also very common and is usually cooked with sausage (*chouriço*), beans, or meat. Potatoes are most often boiled and served with meat, fish, or salt cod. Potatoes are also stewed with fish, sausage, macaroni, or cabbage. Peanuts are added to many cooked vegetables such as greens, as well as to fish, chicken, and desserts such as *doce de amendoim* (peanut dessert). Most homes have stoves with ovens, so baking is common. Cakes, pies, tortes, and appetizers similar to *empanadas* are all a part of the Angolan diet. Deep-frying is not very common in Angolan cooking. Most appetizers are baked, although French fries and appetizers such as empanadas and certain pastries are cooked in about two inches of oil. Olive oil, peanut oil, safflower oil, and palm oil are used for cooking. Palm oil is used mostly in traditional Angolan dishes such as *muamba de peixe* (fish ragout), *calulu* (fish with okra), *muzongue* (hangover soup), and *funji e pirão* (manioc puree).

Calulu, which is known as *caruru* in Brazil, was brought to Africa by slaves aboard Portuguese ships returning to Angola to pick up more merchandise and slaves. *Calulu* was later introduced to São Tomé and Príncipe by Angolan workers who went to work on plantations. The dish later became a part of the local cuisine. Although of African influence, *calulu* was first concocted in Brazil and then taken to Angola, where it became known as *kalulu*, today usually spelled *calulu*, but it is essentially an African dish. A prime ingredient in Brazilian *caruru*, as well as the Angolan and Santomean varieties, is okra. This vegetable pod originated in West Africa and was introduced into the Western Hemisphere in the 17th century. The word *okra* comes from Nigeria's Ibo language, and the Portuguese equivalent, *quiabo*, is a creolization of a word from Angola's Kimbundu language. Another ingredient of *caruru* and *calulu* that is of African origin is palm oil (*azeite de dendê*).

The important spices and herbs commonly found in Angolan cuisine are parsley, mint, cloves, bay leaves, garlic, nutmeg, ginger, cinnamon, cumin, oregano, paprika, cilantro, and hot chili peppers. Every kitchen has a supply of hot chili peppers (*jindungo*) hanging from a hook. These spicy peppers are essential to Angolan cooking and are usually prepared in a sauce served as a condiment with meats, fish, or other seafood or are added directly to certain dishes. Fruit preserves are also common in Angola. Preserves are made from pumpkins, papayas, mangoes, apples, and bananas and are served as desserts or with bread for breakfast. Bananas are also very popular as desserts. There are many types of bananas, but the most common for desserts is the *banana pão* (bread banana). It is usually cooked after it is very ripe and the skin is dark. *Banana pão* can also be served with manioc flour or mashed and served with meats. Most Angolan desserts consist of simple fruits, but there are also puddings like *cocada amarela* (yellow coconut dessert), an example of Portuguese influence. Its main ingredients are sugar, water, cloves, coconut, and egg yolks.

Many dishes are characteristic of the Angolan cuisine, and *muamba* is one of them. A similar dish is found in many cuisines of southwestern Africa, especially Namibia. The main ingredients are chicken, okra, pumpkin, onions, and palm oil. Palm oil is made from the red fruit of the African palm tree. Some cooks also add white potatoes to this dish. When this dish is made with fish instead of chicken, it is called *muamba de peixe*.

Muamba de Galinha (Angolan-Style Chicken)

Serves 8

Ingredients

4 lb boneless chicken thighs

2 large onions, minced

$\frac{3}{4}$ c vegetable oil

2 large cloves garlic, chopped

1 bay leaf

- ½ to ¾ c palm oil, or half palm oil and half vegetable oil
- 4 fresh chili peppers (jindungo), chopped and seeded
- 1 lb pumpkin or butternut squash, peeled and cubed
- 1 lb okra, trimmed and cut in half if large
- 3 tbsp lemon juice
- 1 tsp salt

Cut the chicken thighs in half, and place them in a large pot with the onions, vegetable oil, garlic, and bay leaf over medium heat. Stir to mix the ingredients well. Cook for 20 minutes, or until the chicken is tender and the vegetables have formed a sauce, adding a little water from time to time to keep the dish from drying out.

Add the palm oil, peppers, pumpkin, okra, lemon juice, and salt. Cook over low heat for 15 minutes to allow seasonings to permeate the sauce. Serve hot in a large serving dish accompanied by manioc puree.

Funji (Manioc Puree)

Purees are served with stews, soups, or any meat, fish, or poultry dish that has a little sauce or liquid to make the puree.

Ingredients

- 4 c chicken broth
- 1 c finely ground manioc meal

Bring the broth to a boil. Slowly pour the manioc flour into the boiling broth, stirring with a whisk to avoid lumps. Continue stirring for 3 minutes, or until the puree is the consistency of cooked cereal. Serve with muamba.

Typical Meals

Angola, with its 18 provinces, has many regional flavors and ethnic food cultures. There are some differences between the cuisine along the coast and

that found in the interior of the country. However, there are many meals that are typically Angolan and enjoyed throughout the country. The Portuguese influence is evident in dishes such as *arroz de mariscos* (rice with seafood), made with shrimp, lobster, clams, or cockles and red chili peppers (jindungo or jindungo); *caldeirada de peixe* (fish stew), prepared with thick fish steaks, potatoes, onions, tomatoes, green peppers, chili peppers, and olive oil; *guisado de bacalhau* (salt cod stew), made with salt cod, okra, jindungo, onion, tomato, and palm oil; and *rissóis Angolanos* (creamy shrimp turnovers), whose filling is prepared with shrimp, onions, tomato, garlic, and hot sauce in a white sauce. Most of the stews are served with white rice.

Dishes that are typical of Angolan cuisine include *muzongue com pirão* (hangover soup with puree), made with fresh fish, dried fish, spinach, and sweet potatoes and served with a manioc-flour puree; *couves cozidas com oleo-de-palma e amendoim* (collards cooked in palm oil and ground peanut sauce); *mariscos cozidos com jindungo* (shellfish in hot sauce), including clams, oysters, prawns, and lobsters; *muamba de peixe* (fish ragout), made with fish, potatoes, okra, and palm oil; *muamba de galinha* (Angolan-style chicken), made with chicken thighs, onions, palm oil, jindungo, pumpkin, and okra; *caldeirada de cabrito* (goat-meat stew), usually served

Caldeirada de cabrito, a goat meat stew, is typical of the Angolan cuisine. (iStockPhoto)

on Independence Day, which includes goat meat, onions, potatoes, bell peppers, port wine, and cognac; *calulu de carne seca* (dried beef stew); *galinha de cabidela* (chicken stew with blood sauce); and, for dessert, *cocada Angolana* (Angolan coconut candy), *bolo de maracujá* (passion fruit cake), and *bananas assadas* (baked bananas). A puree made with manioc flour or corn flour accompanies many meals.

The meat dishes in the Angolan cuisine are varied. The most common meats used are beef, pork, chicken, fish and other seafood, and, in some rural areas, game and goat. Soups are very common and often served as the main course of a meal. They include chicken or beef and are served with rice or funji (manioc puree). Snacks are usually eaten in the afternoon and can consist of fruit, fried manioc, fritters, sugared nuts, or pastry.

Eating Out

Eating out is a luxury for most Angolans. Many of the restaurants, including those in hotels, cater mainly to foreigners and serve mostly Continental fare but also include a few local dishes. Breakfast in most restaurants includes cereal, yogurt, scrambled eggs, bacon, tomato wedges, sausages, toast, and exotic fruits. For lunch they will serve dishes like cabbage soup with white beans, rice with vegetables, grilled meats and fish, boiled potatoes, French fries, and salt cod croquettes. For dinner the choices might include seafood soup, grilled grouper or other fish, stewed chicken, cold shrimp and crab, and grilled lobster. Usually one or two of the following local dishes will appear on the menu each day: *cabidela e galinha* (chicken stew with blood sauce), *caldeirada de cabrito* (goat-meat stew), *muamba de peixe* (fish ragout), *muamba de galinha* (Angolan-style chicken), *funji* (manioc puree), *galinha com jingub* (chicken with hot sauce), *lulas guisada* (squid sautéed with potatoes), *arroz de mariscos* (rice with seafood), *rissóis Angolanos* (creamy shrimp turnovers), *muzongue com pirão* (hangover soup with puree), *doce de amendoim com cocada* (peanut dessert with coconut), *doce de banana* (banana dessert), *cocada Angolana* (Angolan coconut candy), and *banana frita* (fried bananas).

Many small restaurants, street stalls (*barracas*), and cafés where the food is relatively inexpensive are frequented by workers during breakfast and lunch. For breakfast these places might serve rolls, coffee, cheese, or fruit. For lunch they usually serve local fare including fried fish, grilled meat and chicken, French fries, hamburgers, meat patties, and other items such as ice cream, other desserts, and pastries. The *barracas* on the beaches do a lively business selling snacks and drinks to beachgoers. Drinks at all restaurants include cola, local beer, other alcoholic drinks, and local fruit drinks with and without sparkling water. The most popular fresh fruit drinks are made with banana, pineapple, and tamarind. There are also drinks that are fermented. The process usually takes about 80 hours before the beverage can be bottled. Two popular fermented drinks are *kisangua* and *kitoto*. The former is made with corn flour and sugar, and the latter is made with corn. There are also beers made from corn: *quimbombo*, *quissângua*, and *quitoto*, each in a different province of Angola.

Special Occasions

Angola gained its independence in 1975, and the country then had a civil war that ended only in 2002. Because the majority of the population lives in poverty, many of the festivals formerly celebrated throughout the country have disappeared, are held infrequently, or now occur only in the larger cities. The public holidays are New Year's Day (January 1), National Holy Day (February 4), Victory Day (March 27), Workers Day (May 1), Independence Day (November 11), and MPLA (People's Movement for the Liberation of Angola) Foundation Day and Family Day (December 25).

Other special occasions are the end-of-term parties for students, when *arroz de mariscos* (rice with seafood) is a necessity. *Mariscos cozidos com jindungo* (shellfish in hot sauce), *rissóis Angolanos* (Angolan-style creamy shrimp turnovers), and *cocada Angolana* (Angolan coconut candy) are specialties served at weddings, parties, holidays, and special dinners. At these occasions local beverages such as maize beer and palm wine are served, along with soft drinks and other alcoholic beverages.

Angolans celebrate Independence Day with the traditional dish of caldeirada de cabrito (goat-meat stew). It is a wonderful stew made with goat meat, onions, potatoes, tomatoes, and bell peppers, enhanced with port and cognac. The stew is quite easy to prepare, and delicious.

Caldeirado de Cabrito (Goat-Meat Stew)

Serves 10–12

Ingredients

8 lb goat meat, cubed
 Boiling water to cover goat meat
 ¾ c vegetable oil
 2 lb onions, thinly sliced
 6 lb white potatoes, peeled and sliced
 4 lb tomatoes, peeled and thinly sliced
 6 green bell peppers, seeded and sliced into strips
 Salt and black pepper to taste
 2 tbsp red pepper flakes
 ½ c chopped fresh parsley leaves
 ½ c chopped fresh cilantro leaves
 2 bay leaves
 2 c port or sweet red wine
 1 c cognac

Wash the pieces of goat meat well, and place in a large pot of boiling water. Return the pot to a boil and remove the goat meat. Set aside.

In a large skillet, heat the oil and first sauté the onions, then the potatoes, goat meat, tomatoes, and bell peppers. Sprinkle with salt, pepper, and the red pepper flakes.

Sprinkle the parsley and cilantro over the ingredients. Add the bay leaves and cover with the port or red wine, 2 cups water, and the cognac. Cover tightly and cook over low heat for 30 to 40 minutes, or until the goat meat is tender. Do not remove the cover and do not stir. Just shake the pan occasionally to prevent sticking. This will keep the potatoes from breaking up. Serve hot with white rice.

Note: If you cannot find goat, most butchers will bone a shoulder or leg of lamb for this dish.

Diet and Health

The foods that are the mainstays of the traditional Angolan diet are manioc prepared in many ways (including the leaves of the plant), palm oil, peanuts, beans, rice, okra, hot chili peppers, sweet potatoes, bananas, corn, cashews, coconut, dried or fresh fish, dried or fresh beef, pork, and chicken. A majority of the Angolan population is considered to be underfed. So it is rare to find obesity. Given that 70 percent of the population lives in poverty and over half are unemployed, hunger is a serious problem. People living in the coastal areas eat a lot of seafood, in the southwest herders live primarily on dairy products and meat, and farmers consume their produce of maize, sorghum, cassava, and other crops. Gathering firewood and water in some rural areas requires a great deal of energy.

Medical care is not available everywhere despite government efforts. In rural areas clinics lack staff and basic equipment, and thus most people rely on traditional healers whose practice depends largely on herbal remedies. In the larger cities Angolans have better access to public health care at hospitals and clinics. There are also hospitals specifically to treat women's and children's illnesses. Angola recently appointed a regional director to the World Health Organization to oversee the fight against HIV/AIDS and other infectious diseases. The director will also work to provide better-quality health care to all citizens and to ensure better coordination of tracking diseases. Doctors of traditional medicine are also working with government approval to broaden their reach to people in the interior and introduce the use of medicinal plants as cures for some sicknesses.

Benin

Overview

Formerly known as Dahomey, the Republic of Benin is located on the southern coast of the West African bulge. It shares borders with Togo to the west, Nigeria to the east, and Burkina Faso and Niger to the north. Its southern coastline leads to the Bight of Benin. The country covers 112,622 square kilometers (44,484 square miles) and can be divided into four distinct geographic areas between south and north: a marshy coastal plain, the Guinean savanna, flatlands and rocky hills, and the Atacora range of mountains in the northwest along the Togolese border. The climate is hot and humid with two rainy seasons and two dry seasons a year. There are 42 different ethnic groups in the country, including the Yoruba, the Fulbe (or Fulani), and the Bariba in the northeast, the Dendi in the north-central area, the Somba in the mountainous northwest, the Fon in the south-central area and around Abomey, and the Mind and Aja on the coast. In the south there is also a sizable creolized Afro-Brazilian community descended from Africans, Europeans, and former slaves returned from Brazil. The capital is in the Yoruba city of Porto Novo, but the seat of government is located in the Fon city of Cotonou. Coastal Benin had early contact with Europeans, which led to it being one of the seats of the slave trade for more than 300 years; during this time, it was also known as the Slave Coast.

The majority of the population of 6.5 million lives in the south of the country, which, like many other countries on the West African bulge, experiences a distinction between the more westernized southern segments of the country and those to the

north. In the 2002 census 42.8 percent of the population were Christian, 22.4 percent were Muslim, and 17.3 percent practiced the indigenous religion of Vodun or Orisa worship. The remaining people practice other religions or claim no religious affiliation. More than half of the population speaks Fon, but French is the national language, and English is taught in secondary schools.

Food Culture Snapshot

Théodora and Théophile Grimaud are retirees. His career was in the airline industry, and she was a teacher and housewife. His career postings took them to various areas of western Africa and the world, and they are members of the westernized elite. Their diet combines Western dishes with traditional Beninese specialties, especially dishes from their Fon ethnicity. They may dine with friends either in their homes or in local restaurants. On special occasions or when guests are in town, they may dine in one of the larger restaurants in town. The family eats three meals a day. Breakfast is usually in the European mode—a Continental breakfast of some sort with French bread, coffee or tea, and fruit juice or fresh fruit. Théodora does the shopping, going to local and neighborhood markets where she knows the vendors based on ethnic identity or the quality of their goods. She also shops in the local French-style supermarkets and often at the larger city market in Cotonou known as the Dan Topka. Foods may be supplemented by specialties like agouti (bush rat) or land crabs that are sometimes sold on the side of the roads by young children. Local delicacies are purchased from special purveyors at local street stalls.

Major Foodstuffs

As in much of West Africa, the basic meal consists of a starch prepared as a thick mush and eaten with a soupy stew that contains vegetables along with either meat or fish. The stews are prepared from a variety of ingredients, including okra, leafy greens, eggplant, tomatoes, onions, pumpkin seeds, and chilies. Meats include goat and lamb. In the south smoked, dried, or fresh fish is often a part of the meal; beef is more commonly found in the north. Christians raise and eat pigs. Seafood includes crustaceans such as crab and shrimp as well as Atlantic and river fish. Dried smoked shrimp are ground and used to season dishes, as are chilies. Okra, squash and pumpkin seeds, and peanuts are used to thicken some of the sauces. Cubebs, referred to as *piment pays* (pepper of the country), are ground and used to season traditional dishes like *kpete*, a savory goat stew.

Moyau (Chicken Stew)

- 1 smoked chicken, skinned (about 3½ lb)
- 5 large ripe tomatoes, peeled, seeded, and coarsely chopped
- 1 large onion, thinly sliced
- 1 tbsp peanut oil
- 1 cube Maggi or beef bouillon
- 1 habanero chili, pricked with a fork

Wash the chicken and cut it into serving pieces. Pat it dry. Place the chicken and the remaining ingredients in a Dutch oven, bring to a boil, and then reduce the heat and allow to simmer uncovered for 20 minutes, stirring occasionally. When the dish has reached the desired spiciness, remove the pricked chili. Serve hot over white rice.

In the south corn, rice, and manioc are the primary starches, while sorghum, millet, and yams have preeminence in the central and northern communities. Fruits are eaten and include tropical fruits such as soursop and mangoes as well as several varieties of citrus, pineapples, and papayas.

Traditionally millet beer called *choukachou* or *chouk* is consumed in the north, while palm wine and *sodabi* (a stronger version of palm wine) are consumed in the south. French wines and brandies are drunk by the westernized elite, and gin is often used in ceremonies.

Cooking

Throughout western Africa in general the main culinary techniques are boiling, steaming, stewing, frying, roasting, grilling, and baking. All of these methods are the basis for the traditional dishes of the country that were based on the use of the traditional cookstove. In rural areas the traditional three-rock wood stoves remain the standard, and many households still cook over wood or charcoal fires. In villages communal cooking is common. In the urban areas, the Western stove is used, but many Beninese cooks still prefer to cook outdoors over a small brazier called a *feu malgache*. Pressure cookers are used to tenderize tougher cuts of meat. Refrigerators are also the norm among those with sufficient funds and access to electricity.

Many urban households have some kind of household help. It may be a relative from the country looking for employment in the city and working in exchange for lodging, or a professional paid for services. Cooking therefore is often done by another person, overseen by the lady of the house. Cooking is considered women's work. Cooking, however, remains a family activity for festive foods. Extended families combine to prepare dishes at times of feasting, with the matriarch directing the kitchen. The myriad cultures of Benin are oral cultures, and this is the manner by which the youngsters of the household learn to prepare the traditional foods. Microwaves, freezers, food processors, and the full range of other Western culinary conveniences are de rigueur among the elite. French influence prevails among the elite as well, and in their households the full European *batterie de cuisine* may be found among those with means; there, adepts at the preparation of French *cuisine bourgeois* and/or *cuisine classique* can be found in many households.

Typical Meals

Breakfast may be leftovers from the previous day's meals or something purchased from a street vendor. Alternately, in urban areas, it may be a French-influenced small meal of a hot beverage and a form of bread. The basic main meals consist of a soupy stew served with a starch that is then dipped into the stew. There is no major distinction between lunch and dinner. Alternately, the main meal may be grilled chicken or a grilled fish seasoned with chili or served in a sauce of tomatoes and onions. The Afro-Brazilian segment of the population eats dishes that hark back to Brazil, such as their own form of *feijoada*, a stew of beans and meat. In urban areas where men have traveled in search of employment, the meal may be taken at a small outdoor

restaurant or in a local market. There are also night markets called *marché de nuit* that offer traditional foods that can be served in a bowl and taken for consumption elsewhere.

Eating Out

Cotonou and Porto Novo have a number of small establishments in the style of the *maquis* (a small local restaurant of the Côte d'Ivoire). They are owned by women and specialize in serving *poisson braisé* and *poulet braisé* (grilled fish and grilled chicken) accompanied by a local starch or French fries. There are also restaurants in large and small hotels serving Beninese and European fare as well as a few French-style restaurants run by French

colonials who have remained in the country. American and West African fast-food chains are found in the major cities as well as marchés de nuit that sell local foods for takeout.

Special Occasions

Like many in western Africa, the Beninese have a well-developed sense of ceremony, and religious holidays are celebrated with feasting by Christians and Muslims alike. Religious ceremonies in both Vodun and Orisa worship call for their own ritual meals as well. Weddings, and especially funerals, always involve a feast of some sort. Traditional funerals may require several days of feasting.

Diet and Health

During the Socialist period (1972–1991) the government encouraged rural development and favored agricultural initiatives, and the country is self-

sufficient in food production. Almost half of the population is involved in some form of agriculture. An internal system of trade still functions and has the ability to ensure food distribution from one area to another. However, the lack of rural infrastructure means that intermittent food shortages are faced by about 900,000 people, mostly in the hard-to-reach northern parts of the country.

Burkina Faso

Overview

Burkina Faso, formerly known as Upper Volta (Le Haute Volta), is a landlocked country in West Africa, with an area of 105,869 square miles (274,200 square kilometers), which is about the size of the U.S. state of Colorado. The population of the country is about 15 million and steadily rising. As a former French colony, Burkina Faso's official language is French, but 3 of its more than 60 local languages are recognized as national languages: Moore, Jula, and Fulfulde. There are 63 ethnic groups living in the country, of which the most numerous are the Mossi, who make up almost half of the population and inhabit the central plateau. The country has a Sahelian climate with distinct dry and rainy seasons.

The Burkinabe are predominantly Muslim (55%); about 25 percent of the population is Christian, and the rest, around 20 percent, practice traditional African religions also referred to as animism. Religion, geography, and, to a lesser extent, also ethnic origin play a role in determining what Burkinabe eat. Muslims do not eat pork or drink alcohol, and they fast from dawn till dusk during the holy month of Ramadan. Discounting this difference, the diets of Muslim, Christian, and animist Burkinabe are very similar, with a typical meal consisting of a starchy staple served with a sauce that ideally contains a mixture of meat or fish and vegetables. Burkina Faso remains one of the least developed countries in the world, classified as a low-income, food-deficient country. The United Nations Development Program's 2006 *Human Development Report* ranked Burkina Faso 174th out of 177 countries. Over 45 percent of the population lives below the poverty line. This means

that meat and fish, both expensive foodstuffs, are not consumed regularly.

Food Culture Snapshot

The Bationo are a middle-class family, consisting of four generations living together in one compound. The first meal of the day is breakfast. At around 7 A.M., those adults in the family who have a job will have coffee or tea and bread; those who are less fortunate will either have leftovers from their previous meal, that is, dinner, or buy some millet gruel from a neighbor, or occasionally even go hungry. Children, who start school at seven o'clock, have already left and will have their first bite only during the first snack time at school, at around 10 A.M., provided they were given food money by their parents.

Lunch is the main meal, and the ingredients for it are provided by Mama Bationo, a widow in her sixties. Those of her adult children who have jobs also contribute some money for the meal, but she is the main provider. Lunch is ready at 12:30 or 1:00 P.M. at the latest, and the food is divided into several eating groups. Family hierarchy, linked to age, gender, and the individual's financial contribution to the family budget, is reflected in the portion a person receives. The portion one is served is expected to include dinner as well.

In the afternoon, those who are not at work and can afford to do so may send a child to get a snack from one of the street vendors. These foods are only occasionally shared with other members of the family. Dinner is usually the leftovers from lunch, but Mama's unmarried daughters, who both have well-paying jobs, will often prepare extra food and, depending on the

amount prepared, also share it with other people in the compound.

Major Foodstuffs

Burkina Faso is predominantly rural, and much of the food is produced locally. Most meals are made from scratch, as there is little processed food. The only processed foods used on a daily basis are tomato concentrate and stock cubes, a ubiquitous ingredient in every Burkinabe dish.

In the north and northeast of Burkina Faso, where a dry, almost desert-like climate dominates, food is less varied than in the southern and southwestern parts of the country, where the climate is subtropical and the rich soil produces a wide variety of vegetables. Foods consumed also vary greatly according to the season, there being distinct rainy and dry seasons. After the rainy season, the markets offer a great variety of vegetables. Burkina Faso has a large production of green beans, which are grown throughout the year and are mainly exported to Europe, but the main harvest is in the winter months, when the price is also affordable for the local population.

The main grains are millet, sorghum, maize, *fonio* (*Digitaria genus*), and rice. Millet, maize, and rice are the ingredients eaten by most Burkinabe on a daily basis, with rice being more a town folk's food because of its cost. Rice is grown locally, but generally people prefer the imported varieties of Thai and Indonesian rice. Sweet potatoes, yams, and potatoes are also grown locally and used as everyday food, but of these, potatoes are the most expensive and therefore are not eaten on an everyday basis.

Groundnuts (peanuts), which were introduced to West Africa as a cash crop in the colonial period, are also an important ingredient. The Bissa people are particularly well known for their taste for peanuts. Various pulses, such as beans, chickpeas, lentils, and bambara groundnut (*Vigna subterranea*), are also part of the everyday diet. The Mossi people are known as great eaters of beans (*benga*). Beans are eaten boiled and served with salt and oil.

Vegetables that are grown locally are tomatoes, zucchini, carrots, leeks, onions, beets, okra, pumpkins,

An African woman selling groundnuts (peanuts) by the roadside. (iStockPhoto)

cucumbers, and various types of lettuce. They are mostly used in sauces, apart from lettuce, which is an expensive ingredient and is eaten only at festive meals or in wealthier families. Greens—spinach, sorrel, and cabbage, among others—are important vegetables that are used in sauces that accompany the main staple food of millet or maize porridge.

Foods are seasoned using salt, stock cubes, and/or *sumbala* (African locust bean tree seeds—*Parkia biglobosa*). Hot peppers are added to sauces, but food is only mildly hot. A paste made of hot peppers can be added to the meal, especially when eating fried foods or meat. Traditional cooking fats such as shea butter and palm nut oil have largely been replaced by groundnut oil. Sunflower oil is used only in upper-class families.

Fruits are consumed as snacks and are sometimes used for making juices. Their availability depends on the seasons—mango season is from March to May or June. Water is served with meals. Milk is a drink that is popular among the Fulbe (Fulani) nomads, who also sell it at the markets. Locally produced juices made of hibiscus flowers, ginger, lemon, and baobab fruit (which looks like a coconut and contains

a sour powdery white pulp) are also popular, particularly at parties. Chinese tea prepared over several hours on small charcoal stoves, with large quantities of sugar, is very popular with men, many of whom belong to a regular tea group that meets on a daily or weekly basis.

Cooking

Food preparation in Burkina Faso is rather labor-intensive, in both rural and urban areas, although in towns and cities, the task is made easier by the fact that most compounds have access to water through a water tap or a nearby public well. While women in the countryside often have to walk far into the bush to fetch firewood for cooking food and heating water, in urban environments this can be bought from ambulant sellers. Because of the hot climate, foods for cooking need to be bought on a daily basis (very few families have refrigerators, and those who do mostly use them to store cold water and ice), which means that the women in urban areas have to go to the market to buy ingredients for the daily meal every day. In rural areas, the market takes place every five days. Most Burkinabe families are large and include several generations living within one compound, which makes the task of cooking a demanding one; it is usually overseen by the eldest woman in the family, who is aided by her daughters, nieces, daughters-in-law, and/or a live-in maid. While child maids are common in Burkina Faso, they are often not entrusted with cooking the main family meal but are instead assigned the more menial tasks of washing the dishes, sweeping the kitchen floors as well as the compound, and doing the laundry.

As Burkina Faso has a hot climate, cooking is often done outdoors in the yard, except when the weather (rain, dust, wind) prevents this. The kitchen is a small room with walls blackened from smoke. It has no furnishings other than a small stool for the cook, a stove composed of three stones used for balancing the pot (in town this would be a metal stove with a hole on one side for firewood), and sometimes pots and pans piled up in the corner. Upper-middle-class families will have a kitchen inside the house, with a sink and a stove with two or more burners

fueled by bottled gas. However, gas is expensive and thus always used frugally. When cooking for large numbers of people, wood remains the preferred fuel.

When cooking lunch, women usually use two pots, one for the staple food and one for the sauce. One of the staple foods, the millet or maize porridge known locally as *tô*, requires particular skill and strength on the part of the cook, as the flour requires vigorous stirring while being heated over the stove and the cook needs to sit close to the fire to prevent the pot from moving. The irritation from the smoke, which gets into the eyes, is something the women get used to over the years of performing this demanding task.

Preparation of rice as a staple dish is less demanding, but the rice must be carefully cleaned before cooking. Dust, stones, and other dirt must be removed and the rice carefully washed. The Burkinabe like their food well cooked, so the rice will cook for well over an hour. Similarly, when pasta is prepared it must be totally tender to be considered edible. The Western style of cooking rice or pasta *al dente* is not appreciated by the Burkinabe.

The sauce for the main meal is cooked in the following way: First, oil is heated in the pan, and then once the oil is very hot, meat or fish is added and fried well. After that the cook adds the onions and then the rest of the vegetables; water is added, and then the sauce has to simmer until all the ingredients are well cooked. In case of *ris gras* or *spaghetti gras*, rice or pasta is added to the sauce and then cooked until all the water has evaporated and the rice or pasta is well cooked. Frying is common for fish and meat especially when these are purchased outside the house or served as a side dish; otherwise, it is first fried and then cooked in sauce.

The local specialties of fonio couscous and *attieké* (fermented manioc couscous, which originates from Côte d'Ivoire but is very popular in Burkina Faso) are prepared by steaming, and so are some other cereal-based dumplings and pancakes. Other pancakes and doughnuts are either deep-fried or fried with a small amount of fat (oil or shea butter, depending on the region and the type of flour used). As oil is an expensive foodstuff, it is often used several times, as there is no belief or knowledge that

Cooking doughnuts over a wood fire in Africa. (iStock-Photo)

would forbid reheating used oil among the average Burkinabe. Oil that was used for frying meat can later also be used for seasoning salads.

Typical Meals

Breakfast is not an important meal for the majority of the population, and it is mostly eaten by those who can afford it. Breakfast can consist of either leftover food from the day before or specially prepared or purchased foods, such as bread and coffee or tea, millet gruel, or fried eggs.

For the average Burkinabe, lunch is the main meal and is based on a staple food such as millet or maize porridge or rice, always served with a sauce. Meat is a favored food item, and ideally all sauces should contain at least a small quantity of meat or fish. However, due to poverty many people cannot afford to buy meat or fish on a daily basis, so small amounts of dried fish are used to give a meaty taste to the meal. In the most hard-off families, this will be replaced by a meat stock cube. Wealthier urban families may occasionally prepare macaroni with sauce as the main dish, or a yam ragout, but rice and porridge (made of millet in the rural and maize in the urban areas) remain the dominant staple foods. Some of the more popular sauces are *sauce oseille* (sorrel sauce), *sauce feuilles de baobab* (sauce made with baobab leaves), *sauce claire* (a light sauce made with grated onion and zucchini), *sauce*

arachide (groundnut sauce), and *sauce gombo* (sticky sauce made with fresh okra), which is usually eaten together with *la soupe* (a meat-based sauce).

Lunch is eaten between 12:30 and 1:30 p.m. In rural settings, the tradition of women and men eating from separate dishes, using the right hand, is maintained, with women often eating after men. In urban areas, people often eat from individual plates, using a spoon or a fork. A full set of cutlery is used only in upper-class families. People in lower- and middle-class families don't eat sitting together at the table, nor do people in the villages. They either sit on the floor around the dish, eating together as a group, or on stools, holding their own plate. Dinner can be either a separately cooked meal or, as is often the case, the same dish as lunch, heated up on a charcoal or gas stove. It is eaten at 8 p.m. or later.

Eating Out

Street food is typical of the urban areas of the country. Ready-to-eat foods can be bought immediately outside one's house, as there are many small stands selling foods in front of people's compounds. These mostly sell fried foods. Places around town cater for every taste. Food is available at virtually any time of the day, although certain parts of town, especially the central area around the markets, cater only to lunch customers.

Early in the morning makeshift breakfast places appear on the side streets of urban Burkina Faso. These are made up of a couple of benches and a table. On a small wood or charcoal stove the vendor boils water for coffee and tea, and a large cardboard box serves as a bread bin. The more prosperous cafés are built like a small bar with a roof and bar stools around the bar. These can be locked up at night and might even have a fridge and a gas stove inside. As a rule, they are run by men serving coffee or tea alongside buttered bread. The more enterprising vendors will also prepare fried eggs or omelets, and if they possess an icebox, or even a refrigerator, they might also serve yogurt and/or cold drinks. Customers are almost exclusively male; women rarely venture into one of these places. It would be inappropriate for an unaccompanied woman to be sitting in the street

in the company of unknown men. Men, in contrast, are free to sit at the café and chat with the vendor and other customers. Breakfast places often open in the wee hours of the day, at about 4 or 5 A.M. Some of them open at dusk and stay open until the early morning hours.

As breakfast is not one of the meals provided by the head of the family, the men who go out to work often allow themselves the luxury of eating breakfast at a café instead of just having a small bowl of *la bouillie* (millet or rice gruel) bought from a neighbor, as most of their family members do. Most people will have some gruel or a cup of coffee for breakfast at home. Some families prepare *la bouillie* themselves, or they may buy it from a neighbor who prepares it for sale every morning. This is the cheapest breakfast food available. It is mostly prepared with millet flour, which is slightly sour and therefore requires sweetening, so that most people end up spending more money on the sugar than on the gruel itself.

In Ouagadougou and Bobo Dioulasso, the capital and the second-largest city respectively, there are also patisseries and bakeries that serve breakfast. Apart from bread, coffee, and omelets, they also have croissants and other pastries, yogurt, juices, and sodas, and they serve the tea and coffee in pots and cups. These places are not within the reach of the average Burkinabe, and most customers are businessmen, tourists, and higher-ranking civil servants from another part of the country who are in town on an official mission.

Most breakfast places start packing up between 10 and 11 A.M. That is the time when stands selling lunch will start appearing. They offer the usual home fare and sell it by the plate to regular customers and passersby. As the lunchtime meal is something one should normally get from one's family, these places are most often frequented by people who are visitors or passersby and have no family in town whatsoever. If people are visiting a town where distant relatives live, ones with whom their own immediate family is on good terms, they will be fed once a day at least for a few days, unless the relatives live in extreme poverty and have trouble providing even for themselves. The many people who work for one of

the numerous local and regional transport companies and travel back and forth on buses and trucks usually eat at one of the lunch places around the train station. Also, with the capital Ouagadougou growing significantly in size, people may work a long way away from their house and therefore have no choice but to eat outside, to save the money for the transport home and back to work again after the two-and-a-half-hour designated lunch break.

In the eyes of an average Burkinabe, lunch should consist of one of the staple dishes, such as maize or millet porridge or rice accompanied by a sauce, the value of which is determined by the amount of meat it contains. The types of foods that are offered at street stalls during lunch hours reflect this local concept of a proper meal. Since the types of foods sold are much like the main meal prepared by every Bobolese housewife, it is the women who prepare and sell lunchtime food in the streets. The women who sell these meals, sometimes alone, sometimes in pairs, prepare the food early every morning in their kitchens at home and then, with either a donkey cart or a taxi, transport the large pots to their vending spot. Some women have set up proper small restaurants, often linked to their own backyard, with a metal roof over some wooden tables and benches for customers to sit on and enjoy their meal. Most street stalls consist of a table on which the food is placed in large buckets, and there are a few benches for customers to sit down on while eating. A man will sit on a small wooden bench and eat from his plastic plate, usually using a fork. Women eat lunch in places like these only if they are accompanied by their husband or if they are clearly visiting from another town or village and do not have relatives who could provide for them.

Similarly to breakfast, lunch can also be eaten in restaurants that cater to a wealthier clientele. There is a great variety of restaurants around, from those serving the lower-ranking civil servants to those that are frequented only by the expatriate population and wealthy local businessmen and -women. The cheaper restaurants serve both Burkinabe and Western dishes, while the upmarket ones usually specialize in a particular cuisine. In the capital several restaurants serve Italian, French, Lebanese, or

another foreign cuisine. These places are open for lunch and dinner.

If the lunchtime foods are mostly the same as one would get at home, the evenings and nights on the streets of Bobo provide one with a true culinary experience. From the late afternoon, little street stalls selling ready-to-eat foods begin to appear. Most food stalls immediately outside compounds sell fried foods. These can include yam, sweet potato, and plantain chips; bean and sweet banana fritters; and doughnuts made from millet, corn, or wheat flour. For those who do not have the time or inclination to stop and sit down, the food is wrapped in pages of old newspaper or pieces of large paper flour bags. Those with more time to spare may decide to sit down on a bench next to the vendor and eat food off a plate and perhaps engage in some small talk with the vendor.

Since in the evening many single, and also married Burkinabe men, go out to bars with their girlfriends, or more rarely with their wives, the pavements outside these bars and clubs are packed with little food stands. At night the vendors tend to be men, but they never sell the types of foods associated with women's cooking. While women, some of whom also have stands in the street at night, sell mostly rice and sauce, tô and sauce, pasta, attieké, or sandwiches, men specialize in barbecued meat and poultry and in omelets or fried egg sandwiches. The typical location for the stands is outside popular nightclubs, so that customers can get a bite to eat.

Sometimes people leave their compounds and drive to a particular part of town in order to buy a dish that will satisfy their craving. Others walk onto the street outside their compound and buy a small plate of beans or rice with sauce if they have run out of food at home. Eating in restaurants is not a common practice for most Burkinabe, who cannot afford the expense, and even if they could, many of them prefer home cooking. People are generally very careful about where they buy the food they eat and do not trust that the restaurant food is prepared as carefully as a home-cooked meal. However, with westernization, one can now see more Burkinabe couples and families eating in restaurants than a decade ago.

Special Occasions

Feasting in Burkina Faso is mostly linked to religious holidays or celebrations—Ramadan, Tabaski (Eid al-Adha), and Mouloud for the Muslims; Christmas and Easter for the Christians; days of sacrifice among the animists—and celebrations of life-cycle milestones (christenings and naming ceremonies, weddings, and funerals). As there are few specific festive dishes, on such events what matters is the quantity of food and the quality of the ingredients, but the recipes mainly stay the same. In rural areas the dish served would still be tô, but for a feast the male head of the family usually slaughters an animal (if not a sheep or lamb, then a chicken), since meat is regarded as a particularly important ingredient of a festive meal.

In urban areas a dish that is served at every feast and celebration is *malo zaamen* (Jula), *moui nado* (Moore), or riz gras, a rice-based dish now synonymous with parties in urban Burkina Faso. Its origins may be traced back to the Senegalese rice-based dish *tiebou djen*, which is prepared with copious amounts of meat and fish. While the Burkinabe version is less elaborate than its Senegalese counterpart, it still contains large amounts of meat and vegetables (instead of fish) and is considered a rich man's dish. Good riz gras is made from top-quality ingredients and numerous stock cubes. The meat and vegetables are served on a bed of rice that has been cooked in the meat and vegetable stock.

Riz Gras

- 4 c rice
- 1 large onion, chopped
- Parsley
- Garlic
- 18 oz lamb or beef
- 1 goyo, cubed (African eggplant)
- 18 oz ripe tomatoes (or a 16-oz can of tomatoes)
- 1 green bell pepper, chopped and seeded
- 2 carrots, halved
- Half a cabbage, cut into large pieces

2 Maggi meat or vegetable stock cubes

1 tbsp tomato concentrate

Salt

Oil

Heat the oil, and add the meat, cut in small pieces. While frying the meat, add salt, and as the meat turns brown, add the chopped onion, tomatoes, and pepper and stir well. Then add tomato concentrate, chopped garlic, and parsley and stir again. After sautéing the ingredients for about 10 minutes, fill up the pot with water. Add the cabbage, carrots, eggplant, and stock cubes. Allow to simmer until the vegetables are tender and cooked. Once the meat and vegetables are well cooked, use a spoon to take them out. Keep them warm. Pour the rice into the sauce in which the meat and vegetables were cooked and check for salt. If needed, add some salt and stir the rice. Continue cooking over a low fire and stir occasionally. Once all the water has evaporated, the rice should be cooked. Serve it with the meat and vegetables piled on top.

No feast would be complete without drinks. Among the Christian and animist populations the festive drink of choice is beer, traditionally made of millet or sorghum, and in the southwest of the country also palm wine. In towns bottled beer is the drink of choice for adults and soda for children, although among the Bobo ethnic group, children are given millet beer at an early age. Muslims drink soft drinks, both homemade juices from the hibiscus flower, ginger, or lemons and bottled sodas. Some less pious Muslim men drink alcohol but never inside their home.

With Western influences particularly in the urban areas, some new foods are finding their way onto the festive menus of the Burkinabe. These foods are often referred to as “white man’s food” and are served at civil wedding receptions and in smaller quantities to a select few special guests at traditional feasts. White man’s foods can be locally grown, but when prepared in an untraditional manner, they become foreign. Salads of raw vegetables or *crudités*, popcorn, Chinese crab crackers, and vermicelli pasta

are some of the foods served on such occasions. These foods are not meant to feed but to be seen, as they are expensive and will be served only in small quantities.

During the holy month of Ramadan, when Muslims fast from dawn till dusk, special foods are prepared for breaking the fast. The fast is usually broken by first taking some liquid, water, or specially prepared herbal tea. Then one drinks millet or rice gruel, followed by millet doughnuts, called *les gallettes du mil* in French. The food consumed after breaking the fast is usually a richer version of the daily staple. There are two main meals after breaking the fast, one around 8 or 9 in the evening and one at about 3:30 A.M. before beginning the fast. On the day that celebrates the end of Ramadan, Eid al-Fitr, additional festive foods, such as riz gras, are prepared in quantities large enough to be shared with relatives, neighbors, and friends. A sheep will be slaughtered by the head of the family, and the meat is used for the festive meal and distributed to relatives and friends. The same happens on another major Islamic holiday Eid al-Adha, locally called le Tabaski. Sending gifts of food to relatives, neighbors, and friends is an important part of everyday sociality in Burkina Faso and helps people maintain important support networks.

Diet and Health

African ideas of healthy eating are very different from Western ones. Possibly due to food shortages in the past, people eat as much as they can. Fatness equals good health, life force, and wealth and is an appreciated feature. People who become rich will initially start eating larger quantities of fattening foods. They will add extra foods to the communal meal and go for particularly rich breakfasts and several daytime snacks. With time, the same people might become more health conscious and start buying better-quality ingredients instead of simply doubling the quantity of their intake. In urban areas people are becoming more weight conscious, and some women talk about reducing fat in their food intake. However, since oil is a cherished ingredient and communal cooking does not consider special

needs, those who wish to follow a special diet need to prepare their food themselves. This requires both time and money and is thus often not an option for many people. When people are unwell, meat soup and tô are considered as strength-giving foods. Tô is believed to be more easily digested than rice and thus more suitable for someone who is frail and ailing.

Central Africa

Overview

The countries considered here as part of Central Africa are the Democratic Republic of the Congo (DRC), the Republic of the Congo, Gabon, Equatorial Guinea, Cameroon, and the Central African Republic (CAR). They all border the equatorial rain forest, home to a highly diversified fauna and flora and crisscrossed by numerous waterways. The Congo River, the fifth-longest river in the world, forms with its many tributaries the world's second-largest drainage basin. The navigable parts of these rivers often offer the best way to access the region. In the north and south of Central Africa, the rain forest gives way to grasslands, whereas in the east of the DRC the mountains indicate the transition to the Great Lakes region. In contrast to the rain forest, these areas are suitable for the cultivation of cereals and cattle rearing. The western border of Central Africa is formed by the Atlantic Ocean. At the equator there are two rainy seasons and two dry seasons, while further north and south there is only one distinctive rainy and one dry season.

Central Africa is home to a high number of ethnic groups, each with its specific food habits and taboos. The national borders do not reflect ethnic boundaries. Some groups are present in two or even more countries, such as the Fang, who live in Cameroon, Equatorial Guinea, Gabon, and the Republic of the Congo. Most people in Central Africa speak Bantu or Ubangi languages, both language groups that belong to the Niger-Congo language family. In the north of the region, other Niger-Congo, Nilo-Saharan, and Afro-Asiatic languages are spoken as well. Even if these language groupings are sometimes used as

ethnic labels, this does not reflect by any means a cultural, and certainly not a racial, reality. The hunter-gatherers of the rain forest, for instance, known as *pygmies*, a derogatory term, speak Bantu or Ubangi languages but are considered culturally distinct from peoples speaking the same or closely related languages.

In the DRC the hunter-gatherers are sometimes called *autochthons*. They are considered to be the first peoples present in Central Africa. Bantu-speaking communities, who now constitute by far the majority in this region, left the Nigerian-Cameroonian borderland only some 4,000 to 5,000 years ago, from where they spread toward eastern and southern Africa. These Bantu-speaking peoples developed an agricultural system combined with the procurement of wild resources. Some of the hunter-gatherers adopted the languages of these newcomers. The Aka of the CAR, for instance, are hunter-gatherers who speak a Bantu language.

The first Europeans to arrive in the region were the Portuguese, who were exploring the coasts of the Atlantic Ocean at the end of the 15th century. They introduced some plants they had acquired in the Americas, notably Brazil. The Columbian Exchange (the exchange of foodstuffs between the New and the Old World) resulted for Central Africa in the adoption of cassava, corn, sweet potatoes, the new cocoyam, peanuts, peppers, tomatoes, pumpkins, and several fruits. During the colonial period more foodstuffs were introduced and, more important, a whole array of European food customs, such as the three-meal day. The legacy of the French colonial past in the CAR, Cameroon, Gabon, and Congo involves,

Preparing beignets in Lieki, Orientale Province, Democratic Republic of the Congo. (Courtesy of Birgit Ricquier)

among other things, the consumption of baguettes at breakfast, whereas the Belgian ex-colonizer left beer breweries in the major cities of the DRC. Globalization combined with a strong urbanization tendency ensures that the Western influence is only getting stronger. Other legacies of the colonial period are the national boundaries and the official languages, that is, French in all countries, Spanish as the first official language in Equatorial Guinea, and English as the second language in Cameroon. As a consequence, French names are used for several food items and dishes. Finally, the Europeans also brought a new religion, Christianity. Even if traditional elements have often been incorporated into the new faith, others have been lost, and this

also has repercussions on food culture, such as the loss of specific food taboos.

Food Culture Snapshot

Mengue M'obiang Geneviève lives with her husband, Ndong Essone Jean-Baptiste, in Libreville, the capital of Gabon. They have three children of their own and take care of two children of Jean-Baptiste's brother. When Geneviève goes to the market, she must make sure to get the required starch foods, proteins, condiments, and vegetables. In the first category she purchases a package of 10 cassava sticks (*chikwangue*, *bâtons de manioc*) or two to three kilograms (4.4–8.8 pounds) of plantains, a quantity sufficient for a few days. Once a month she

buys a bag of 50 kilograms (more than 100 pounds) of rice. The protein intake is ensured by approximately two kilograms (4.4 pounds) of meat, such as chicken, and two kilograms (4.4 pounds) of smoked, salted, or fresh fish. Sometimes she opts for bush meat, but this is rare and quite expensive. As condiments she purchases peppers, onions, garlic, and Maggi bouillon cubes in various flavors. Geneviève takes particular care with respect to the vegetable choice since vegetables make the difference between one dish or another. This time she chooses to prepare beans, of which she buys approximately one kilogram, but she could as well have purchased three or four bundles of greens. Occasionally she may add some seasonal fruit, such as mangoes or *safou* plums. Geneviève now has enough groceries to prepare the main meal of the day, which is served at noon. The leftovers will be served in the evening.

For breakfast the family has bread, the French-style baguette, with butter or condensed milk, coffee, and cocoa prepared with powdered milk and sugar. The kids sometimes get cornflakes and occasionally baguette with chocolate spread, which is purchased as *pain chocolaté* at the corner shop. All breakfast items can be found at the market or in small quantities at the corner shop. However, middle-class families often prefer to get these groceries from the supermarket.

When Geneviève, Jean-Baptiste, and the children visit the family in the village, both the meals and the grocery shopping are quite different. Instead of three meals, they'll have only breakfast and dinner, with snacks appeasing their stomachs during the day. The fare is much simpler. Maggi cubes, for instance, are rarely used. In the rural areas people grow foodstuffs in their fields and gather them in the forest. Hardly any food is purchased, meat, fish, and rice being the main exceptions.

Major Foodstuffs

In large parts of Central Africa starchy food consists mainly of tubers and plantains. Without any doubt the most important tuber is cassava (*Manihot esculenta*). There are “sweet” and “bitter” varieties, referring to the amount of cyanogenic glycosides. The bitter varieties require soaking in water for a few days to remove the toxins. Before the Columbian Exchange true yams (*Dioscorea*) were the most

important root crops, and they still are consumed in a large variety. Some are cultivated, such as the aerial yam (*D. bulbifera*) and the yellow yam (*D. cayenensis*). Others are simply found in the rain forest, for example, *D. burkilliana*. Some of these yams attain a weight of several kilograms, *D. mangelotiana* being one of the champions, with a possible weight of over 200 kilograms (441 pounds), but it is no longer harvested when more than 5 kilograms (11 pounds). Some yam varieties are toxic and require soaking like cassava. Two tubers of Asian origin were introduced fairly early into Central Africa: the water or purple yam (*D. alata*) and taro (*Colocasia esculenta*). Other root crops are the new cocoyam (*Xanthosoma*), the sweet potato (*Ipomoea batatas*), and several species of African origin that today have only minor importance, such as the Hausa potato (*Solenostemon rotundifolius*), the Livingstone potato (*Plectranthus esculentus*), and several wild tubers. Another important starch food is actually a fruit, that is, the plantain (*Musa paradisiaca*) in the banana family. This originally Asian plant must have been present in the area for some millennia, but scholars disagree on the time and place of its introduction. Plantains are often considered as the food of the ancestors and play an important role in festivities.

Pulverizing and sieving soaked cassava tubers in preparation of making Chikangue in the Matombi, Kouilou Province, Republic of Congo. (Courtesy of Birgit Ricquier)

The largest part of Central Africa is not favorable to the cultivation of cereals. Corn (*Zea mays*) forms the exception and is widely grown. On the fringes of the forest, however, three cereals of African origin are found: sorghum (*Sorghum bicolor*), pearl millet (*Pennisetum glaucum*), and finger millet (*Eleusine coracana*). Finally, rice (*Oryza sativa*) is cultivated in some areas, but it can be purchased at markets all over the region. These tubers, plantains, and cereals are used to prepare the starch constituent of the meal, snacks, and alcoholic beverages.

People in Central Africa grow and gather an amazing variety of greens, such as various species of amaranth (*Amaranthus*), the leaves of *Gnetum africanum*, bitterleaf (*Vernonia amygdalina*), the shoots and leaves of various *Dioscorea* and *Solanum* species, and so on. Also, the leaves of plants primarily grown for their tubers or fruits are consumed, for example, the shoots and/or leaves of cassava, sweet potatoes, taro, the new cocoyam, various legumes, and gourds. Some of these greens require extensive cooking to remove toxins.

Other vegetables include various legumes, cucurbits, eggplant, and okra. Legumes of African origins are, for instance, the cowpea (*Vigna unguiculata*), the bambara groundnut (*Vigna subterranea*), and the yambean (*Sphenostylis stenocarpa*), which also provides edible tubers. The bambara groundnut has been largely replaced by the peanut (*Arachis hypogea*), the name for the first now being used in many languages for its American successor. A recently introduced legume is, for instance, the common bean (*Phaseolus vulgaris*). In addition, the cultivated cucurbits include species from both African and American origins. A famous African gourd is the bottle gourd or calabash (*Lagenaria siceraria*), used for spoons and containers. Another example is the *egusi* melon (*Citrullus lanatus*), which is grown for its seeds. The African eggplant or garden egg (*Solanum aethiopicum* and related species) comes in many bright colors. It is somewhat smaller than its purple Asian counterpart, and its shape resembles an egg more closely. Some species can be eaten raw, and as already mentioned, the leaves are used as greens. Okra (*Hibiscus esculentus*) is one of the originally African food items that took part in the Columbian Exchange and is now also a favorite in New Orleans.

Fruits of certain trees have the same function as vegetables. This includes the safou plum (*Dacryodes edulis*), breadfruit (*Artocarpus communis*), and the African black olive (*Canarium schweinfurthii*). The same holds for the newcomers the avocado (*Persea americana*), green mango (*Mangifera indica*), and diverse citruses. Many of these can, however, also be eaten raw. Another important foodstuff is mushrooms. A high number of edible species are gathered, many of which are found on trees.

There are two main types of condiments in Central Africa: seeds and palm products. With respect to the first, the use of several cucurbit seeds as well as peanuts has already been mentioned. Other seeds are, for instance, those of the wild mango (*Irvingia gabonensis*) and sesame (*Sesamum indicum*). Seeds are usually pounded into a paste, which is added to the broth of various preparations. Two products of the oil palm (*Elaeis guineensis*) are common condiments: palm oil and palm butter. Both are extracted from the boiled palm fruits, which are pounded in a mortar, mixed with water, and filtered to remove the kernels and fruit skins. The resulting sauce is palm butter, better known as *moambe*, and from this substance the palm oil can be strained. It is also possible to extract palm oil from the kernels, but the resulting oil is rarely used in cooking (instead, it is used in medicine or cosmetics). It should be mentioned that the palm tree also provides palm wine.

A condiment that is present in almost every preparation is salt. In Central Africa salt is traditionally derived from plants. Herbs or greens are dried and burnt to ashes. These ashes are mixed with water and used as such, or boiled until the water evaporates. There is also salt from mines and sea salt, both available in the markets. Other condiments are peppers, tomatoes (often canned), onions, and garlic. In Central African cities it is common to cook with Maggi cubes.

Meat is available from domestic animals, such as goats, sheep, guinea fowl, chickens, and, to a minor extent, cattle and pigs. However, in the rural areas it is quite common to hunt or trap game: various mammals such as antelopes and monkeys, birds such as pigeons and herons, and reptiles such as crocodiles and snakes. This bush meat is a sought-after product for those who procure it at markets at the side of

the main roads. The trade in bush meat has become such a lucrative business that it threatens wildlife in some areas. Apart from the meat, also the entrails and sometimes the skins of these wild animals are prepared for food, and for antelopes and buffalo the contents of the second stomach. Thanks to the many rivers and the Atlantic Ocean, there is also a large variety of fish, as well as some shellfish like crab and prawns. People also gather caterpillars, beetles, and termites. The fat and nutritious larvae of the palm weevil (*Rynchophorus* sp.) are particularly popular, and the adult beetles are also eaten. Dairy products are not commonly consumed. Eggs occasionally appear on the menu, but the consumption of milk products is restricted to the grassland regions where cattle can be kept. It must be observed, however, that powdered milk is currently available all over the region. A final animal product is honey. This highly valued resource is, among others, used to prepare *hydromel*, a fermented alcoholic drink like mead.

Finally, several products are eaten raw as a snack. Those include various wild fruits, for example, the African star apple (*Chrysophyllum* sp.), gumvines (*Landolphia* sp.; a sour fruit about the size of an orange with seeds in a stringy pulp), monkey oranges (*Strychnos* sp.), and junglesop (*Anonidium mannii*; an odd light green fruit that looks something like a segmented artichoke). Many cultivated fruits have also been introduced, for example, the sweet or desert banana (*Musa* sp.), pineapple (*Ananas comosus*), and papaya (*Carica papaya*). The stalks of several cereals and grasses, like sorghum, corn, sugarcane (*Saccharum*), and elephant grass (*Pennisetum purpureum*), are chewed for the sweet sap, especially by children. Cola nuts are another popular snack, reputed to have stimulating and aphrodisiac qualities.

Cooking

Whereas the labor to procure food (cultivating, hunting, trapping, fishing, and gathering) is divided between men and women, cooking is foremost a female activity. Some foods, however, can be eaten only by men, and they often prepare these themselves on a separate fireplace in separate pots. In addition, some preparatory activities like butchering are men's tasks,

but the remaining cooking activities are performed by women.

The organization of the cooking area in Central Africa is different from one ethnic group to another. Some kitchens are a separate building, for example, among the Yassa and Mvae of southern Cameroon. Others, such as the Songola (central DRC), prepare food under a veranda that also serves as the living room, whereas the kitchen of the Shi (eastern DRC) is situated in the hut, next to the bed. In all cases, the cooking area consists of one or a few fireplaces, a smoking shelf, and shelves to store food and cooking utensils. The fireplace is made up of three stones placed in a triangle with firewood in between. Cooking equipment consists of wooden mortars and pestles in various sizes, a wooden board for kneading cassava, aluminum pots (rather than the traditional ceramics), a long stirring stick or spatula used in making *fufu* (a thick starchy porridge), knives, and so on. In most villages all over the region a large number of preparatory activities are performed in the courtyard, where a large drying shelf is usually also placed. City dwellers have Western-style kitchens, but these often contain Central African elements as well, such as a wooden mortar, and urban cooks equally perform certain cooking activities outside, such as roasting meat on a fire placed under the veranda.

Chikwangué, or cassava sticks (*bâtons de manioc*), ready for steaming in Malemba, Kouilou Province, Republic of Congo. (Courtesy of Birgit Ricquier)

Few food items are stored. In the case of cassava, plantains, and wild yams storage isn't necessary, since these plants can be harvested year-round. Cultivated yams and taro, in contrast, have a harvest season and are sometimes stored in granaries. Meat and fish are often smoked to be preserved. Other items with a long storage time are the dried pastes of seeds and vegetable salt. Most food items are simply procured seasonally. Shorter-term storage does occur more often, in order to better organize the work. Women will, for instance, make an amount of chikwangue or flour that will suffice for several days. These are then stored in baskets. Of course, city kitchens usually have a refrigerator, thus expanding storage possibilities.

In rural areas meals are made from scratch. This implies that cooking is a time-consuming and labor-intensive task. Instead of simply purchasing cassava flour at the market, women in the countryside first need to harvest the tubers, peel them and leave them in water for several days, and then put the soaked tubers on a shelf to dry, after which these can be pounded into flour and sieved. Only then can the flour be used to prepare the staple food of the region, called fufu. Fufu, also called *nshima*, *bidya*, or *bukari*, is a sticky porridge made by stirring flour into boiling water with a long spatula or stirring stick. It is usually prepared with cassava or corn flour, but flour from plantains, rice, and millet can be used as well. This is the same dish as the East African *ugali* or Zimbabwean *sadza*.

Fufu

This version of fufu is made with cassava flour. You can replace it with another type of flour, but then the amount of water has to be modified. Some brands give indications for the quantities on the package.

5 c water

5 c cassava flour

Bring 5 cups water to a boil. When large bubbles appear, take 1 cup of the boiling water and set aside. Add the flour, and stir well with a long wooden spatula. To have better control of the kneading, remove

the pot from the fire, sit down, place the pot between your feet, and stir with two hands. Add the remaining water as necessary. Scrape the sides and bottom of the pot while kneading. Keep on turning the porridge until it gets sticky and translucent and no lumps remain.

Fufu can also be made by mashing boiled plantains or tubers, such as yams. Another elaborate starch preparation made of cassava is chikwangue or bâton de manioc. In the south of Congo, it takes one to two weeks to prepare this staple. After several days of soaking, the tubers are pulverized by hand in water, passed through a sieve, and the fibers removed with a knife. Next, the water is drained off, and the remaining cassava paste is poured into a bag to drip for one or two days. The paste is kneaded on a wooden board, by hand and with a wooden roller. It can be left to rest for another day but often is immediately steamed, kneaded for the second time, and shaped into sticks, which are then wrapped in leaves, and finally these are steamed again. Chikwangue can be stored for several days and thus makes an ideal travel supply. Other, though less popular, starch foods take little time, for instance, boiled taro or fried plantains.

The foodstuffs served with fufu or chikwangue, be they vegetables or animal products, are usually

A liboké of fish baking on the ashes in Kimbonga-Louamba, Bouenza Province, Republic of Congo. (Courtesy of Birgit Ricquier)

boiled with diverse seasonings and in various combinations, for example, meat with eggplant, salt, and peppers. The most popular side dish, *saka-saka*, or cassava leaves, is again a time-consuming preparation, involving pounding and several hours of boiling. Another preparation method is to wrap a mixture, for instance, fish with salt and peppers, in banana or other leaves and steam, boil, or roast the package. The choice of the leaves used for wrapping is very important because of the flavor they add to the preparation. Other methods include frying and several ways of roasting, for example, on skewers or on the warm ashes of the fire.

Typical Meals

As already mentioned, people have three meals a day, with a European-style breakfast, a main meal at noon, and leftovers in the evening. In villages, people have a small breakfast, snacks during the day, and the main meal in the evening, with breakfast often consisting of the leftovers of the meal they had the previous day. Beignets also make a popular breakfast food, especially among children. The main meal consists of a starch served with a stew or relish. For some ethnic groups, such as the Gbaya (CAR), there is no meal without the flour-based fufu. Elsewhere, the starch served can also be chikwangue, boiled or roasted plantains and root crops, or rice. With the starch a large variety of stews or relishes may be served. A popular dish known in Congo and the DRC as *moambe* consists of meat, fish, and/or greens prepared in a sauce made of pounded palm nuts.

Poulet à la Moambe (Chicken with Palm Butter)

Like all recipes, *poulet à la moambe* exists in many variations. You can replace the cassava leaves with other greens, okra, eggplant, and so on, or the chicken with salted or smoked fish. The palm oil, canned moambe (palm butter), and saka-saka can be found in African stores. Of course, this is an expatriate version. In Central Africa, the moambe and saka-saka are made from scratch.

1 chicken, cut in bite-size pieces
 Palm oil, for frying
 2 onions, finely chopped
 2 chili peppers (to taste), finely chopped
 5 ripe tomatoes, chopped
 1 large can of moambe (approximately 28 oz)
 1 can saka-saka (approximately 14 oz), drained
 1 or 2 Maggi cubes, chicken flavor (or cubes of another brand)
 Salt

Fry the chicken in some palm oil until brown but not done. Heat some more palm oil in a large pot, add the onion, peppers, and tomatoes, and cook for about 5 minutes. Add the meat and 1 cup of water. Then pour in the canned moambe and dilute the sauce with an equal amount (1 can) of water. Finally, stir in the drained saka-saka and season with salt and Maggi cubes. Cover the pot and let simmer for 30 to 40 minutes. The moambe is ready when oil appears on the surface. Serve with fufu, chikwangue, plantains, or rice.

Another popular Central African dish is chicken or fish in peanut sauce, often with tomatoes and onion. Fish, shrimp, or greens can also be prepared *à la pépé-soupe*, the name pointing to the addition of peppers. In Cameroon one might be served *ndolé* soup, which consists of bitterleaf, shrimp, fish and/or meat, peanuts, and various spices. A particular dish from Equatorial Guinea is *pangolin con chocolate*, pangolin meat stewed with onion, garlic, and “chocolate.” *Chocolate* refers to the grated nut of the wild mango, and this sauce is also used to prepare fish and other meat in Equatorial Guinea, Cameroon, and Gabon. A final example is *libóké*, which is a Lingála word meaning “package” that refers along the Congo River to the preparation of fish or meat in broad leaves. All these dishes come in a high number of variations.

In rural areas men and women usually eat separately. The small children eat with their mothers, but older children form a third group. Each group shares the served starch foods and relishes. Sometimes

children have their own plates, just like the sick and the elderly, who eat alone. It is not considered polite to watch visitors eating, so they too eat alone. Children often have the liberty to prepare their own meals, and they gather, trap, or even hunt (for small animals) the necessary foodstuffs themselves. In the cities, as well as among certain ethnic groups, such as the Aka (hunter-gatherers from the CAR), the social organization is entirely different, the meals being shared by the nuclear family. A simple matter of hygiene is washing the hands before eating. Often a bowl of water is passed around, and every person has to offer the bowl, the towel, and soap (if present) to the next person. This is all the more important since the meal is eaten with the hands. People will take a bit of fufu and use it as a spoon to scoop up the relish. Nowadays, forks and spoons are used as well.

The snacks eaten during the day can be simply fresh fruits. When preparation is necessary, most often one cooking technique is involved and no seasoning. As such, tubers, plantains, corn on the cob, vegetables like gourds, various seeds, and legumes are either boiled or roasted. More elaborate snacks are, for instance, diluted porridges, sweet or savory, and preparations in leaves. A Cameroonian favorite is *koki*, a “pudding” made of ground beans, palm oil, pepper, and the tender inner cocoyam leaves that is mixed, wrapped in the outer cocoyam leaves, and boiled or steamed. In the south of Congo *mbwaata*, a diluted cassava porridge commonly served with roasted peanuts, is quite popular.

In many places, it is not the custom that drinks accompany the meal. However, especially in the cities, European habits have set in. Coffee and cocoa accompany breakfast, for instance. Traditional drinks include various juices (e.g., from monkey oranges), infusions (e.g., from lemongrass or ginger), soups (e.g., from peppers and eggplant), and several alcoholic beverages. Hydromel is made by dissolving honey in water and leaving the mixture to ferment for several days. It is a seasonal product, depending on the blossoms and flowers. Palm wine is the fermented sap of a palm tree (oil palm, raffia palm, etc.). It can be collected by two methods: tapping the sap from the inflorescence in the top of the tree or

Palm nuts boiling to extract palm oil in Bomane, Orientale Province, Democratic Republic of the Congo. (Courtesy of Birgit Ricquier)

felling the tree. Fermentation of the sap takes only a few hours and is accomplished by exposure to the sun or by the addition of various plants or types of bark. Palm wine has a low percentage of alcohol and stays fresh only a short while, about 30 hours. There are many types of traditional beers, brewed with finger millet, sorghum, corn, cassava, and bananas, sometimes in combinations. The cereal beers are very different from European-style beers since they do not contain hops, which add bitterness and allow a longer shelf life. When fruits are in season people make wine of them, adding coloring, yeast, and sugar, for example, grapefruit wine. Wine can also be made of sugarcane. Spirits are distilled from various ingredients, such as corn and cassava (e.g., *lutuku*), palm wine, rice, pineapple, and sugarcane. Many European alcoholic beverages have become popular. Some are imported, such as red wine. There

is, however, an important beer industry in Central Africa, especially in the DRC. Congolese beers include Primus, Skol, Tembo (“elephant” in Kiswahili), and Simba (“lion”). Finally, the omnipresent sodas like Coca-Cola and Fanta should be mentioned. In Lubumbashi these are called *sucrés* (“sugared” in French).

Eating Out

There is virtually no restaurant culture in Central Africa, but people still eat out. Eating out usually consists of visiting friends or relatives, and in the villages the men like to discuss the events of the day around some palm wine. These palm-wine gatherings

are replaced by drinking (bottled) beer at the pub in the cities. A popular snack taken with the beer is roasted goat meat and onion served with chili powder and optionally slices of chikwangué. This snack is called *cabri* (French for “goat”) in Kinshasa and *mícopo* in Lubumbashi, the second-largest city of the DRC. Another way of eating out is buying a snack from a street vendor, which varies from roasted corn, sweet potatoes, and peanuts to cookies, candy, ice cream, and so on.

There are some restaurants in Central Africa. People like to eat there on special occasions, and they are also frequented by foreigners. Many restaurants serve exotic food, mostly European. One can have French-style croissants and milkshakes for

Pounding cassava leaves, or saka-saka, in Bomane, Orientale Province, Democratic Republic of the Congo. (Courtesy of Birgit Ricquier)

brunch in a patisserie or Italian pizza for dinner. Fast-food restaurants have made their entry, such as the Katanga Fried Chicken [sic] in Lubumbashi. In other restaurants local foods can be ordered.

Special Occasions

As anywhere in the world celebrations are paired with an abundance of food, especially rare and expensive products, such as bush meat and imported items like rice and red wine. Some preparations are indispensable at festivities, such as ndolé on the coasts of Cameroon. People celebrate many occasions, for example, the events of the Christian calendar year such as Christmas and New Year. Sometimes small things, like freshly prepared hydromel, are enough reason to throw a party. But it is the important moments in life—for example, birth, initiation, engagement, marriage—that require special attention. What foodstuffs are served depends largely on the ethnic group. The engagement ceremony of the Gbaya (CAR), for instance, involves preparations of chicken and smoked fish.

Other ceremonies are held for the ancestors. According to the Ambuun (western DRC), bananas are the food of the ancestors and hence are deposited at crossroads as an offering. And in the southern DRC people drink and offer sorghum beer during the commemoration of the famous 19th-century mwami M’Siri, king of the Yeke Kingdom.

Diet and Health

Variation in the menu is considered the key ingredient of good health. The seasonality of many foodstuffs (vegetables as well as insects) is the first step toward a balanced diet, and women will juggle the seasonal products to prepare a different dish every day. Starch dishes rarely vary; only the relish changes.

There are many food restrictions in the Central African diet, all depending on the ethnic group. Some are permanent, others only temporary. Permanent restrictions can be taboos linked to the clan. They usually concern certain types of game that are rare anyway, for example, lion, heron, or python. Sometimes the prohibition is only on the killing, and the

Soaking cassava tubers in a pond to remove the toxins in Musana, Pool Province, Republic of Congo. (Courtesy of Birgit Ricquier)

meat in question can be consumed if killed by another person. Women are prohibited certain foods, again usually scarce meat, such as baboon and crocodile. These items are linked to strength and masculinity. A taboo can also be linked to religion. Adherents of the Kimbanguist church, a Congolese branch of Christianity, don’t eat pork or monkey and don’t drink alcohol. Temporary restrictions are linked to pregnancy and giving birth, to initiation, and to mourning. In the case of pregnancy the prohibition is often linked to a characteristic of the food item. Pangolin, for instance, is a mammal covered with scales that moves slowly and rolls up in a ball as a defense mechanism. The Gbaya (CAR) fear that if the parents eat pangolin, the child will have skin problems and difficulty walking. In some places women who have their periods cannot prepare food for their family. Finally, food restrictions can be used as a remedy in case of illness.

Côte d'Ivoire

Overview

The Republic of Côte d'Ivoire (Ivory Coast) is located on the southern coast of the West African bulge. The country shares borders with Mali and Burkina Faso to the north, Guinea and Liberia to the east, and Ghana to the west. The country's southern coast is a long shoreline on the Gulf of Guinea. The greater part of the country is a vast plateau, but the Guinea Highlands in the northwest have peaks that rise over 3,280 feet (1,000 meters). Like many countries in western Africa, the country is divided geographically between north and south. The coastal areas have two rainy and two dry seasons: one short and one long. The coastal area was formerly rain forest, but much of that has been cut down to make way for increased exploitation of cash crops such as cacao and coffee.

In 2008, the population was estimated at 18,373,060. The capital city is Yamoussoukro near the country's center, but the largest city and former capital is coastal Abidjan, which with a population of over three million is the most populous city in French-speaking western Africa. Metropolitan Abidjan is, after Paris and Kinshasa, the third-largest French-speaking city in the world. While French is the country's lingua franca, 65 different languages are spoken among what are usually divided into five major ethnic groups: the Akan, Southern Mande, Northern Mande, Kru, and Senoufo/Lobi, with the Akan group comprising 42 percent of the population. The population is 40 percent Muslim and 30 percent Christian, with another 30 percent practicing indigenous religions. Since 1999 ongoing conflict and a civil war have transformed what was once

the jewel of French-speaking western Africa into a country with an uncertain future.

Food Culture Snapshot

Maurice and Simone Yaba are westernized Ivorians who live in Abidjan. They are a part of the country's developing middle class. Maurice works in upper management at a private enterprise, and Simone is a housewife. They live in the upper-class suburb of Cocody, and their lifestyle is influenced not only by the traditional customs but also by international trends. Their diet crosses ethnic and national boundaries. In European fashion, they eat three meals a day. Breakfast is usually influenced by French culture and consists of a cup of coffee or hot chocolate with French bread or toast with butter and jam. Other meals may range from Vietnamese takeout from one of the many small local restaurants to a traditional *sauce claire* (a tomato-based fish stew) served with *foufou* (a thick starchy mush). Occasionally the family will drive out to purchase a local delicacy like *aloko* (deep-fried plantains) from street stalls.

The ingredients for the meals come from the local supermarket, a neighborhood street market, or the Marché de Cocody—the traditional market area. Like Abidjan's largest market, which is located in Treicheville, the Marché de Cocody offers an array of products ranging from fresh produce to live poultry. Nearby shops sell imported and manufactured foods. Most Ivorian households of any means usually have a household servant of some sort, and the Yabas do as well. But Simone likes to cook, and so she usually does the shopping.

Abidjan market, Cote d'Ivoire. (Corel)

Aloko (Deep-Fried Plantains)

Serves 6

6 firm yellow plantains

Oil for frying (traditionally this is red palm oil, but any vegetable oil may be substituted)

Pour 4 inches of oil into the bottom of a heavy saucepan or a cast iron Dutch oven and heat it to 375°F. Cut the plantains lengthwise, then into ¾-inch pieces. Place half of the plantains into the oil and fry, turning if necessary, until they are golden brown. Remove and drain, then repeat with the second batch. Serve immediately. In the Côte d'Ivoire, they are usually served with a sprinkling of chili pepper and cooked onions as an accompaniment to grilled fish.

Major Foodstuffs

The diversity of the Côte D'Ivoire has led to many different diets throughout the country. In the more westernized southern section of the country, commercial agriculture is an important industry, and farmers grow cacao and coffee for the world market as well as vegetables and fruits such as avocados and pineapples, among others, for export to France. Throughout the country, Ivorians generally rely on grains and tubers as the basis of their diet. Yams, plantains, rice, millet, corn, and peanuts are staples throughout the country. Those living near the coast have a wide variety of seafood available, including tuna, sardines, bonito, and shrimp. Those more inland depend on local game like guinea hen, bush rat, or agouti, another ratlike rodent (although game is eschewed by most Muslims); chicken is the most popular animal protein. The amount of meat served at any given table indicates how affluent a family is (or how honored the guest is at a festive meal). Fermented cassava forms the basis for *attieké*, a couscous-like starch that serves as the basis for many of the traditional sauces. Okra is much used, as are eggplant, tomatoes, onions, and leafy greens. Cayenne pepper, allspice, curry, garlic, caraway, cloves, ginger, and a range of chili peppers are used to season the dishes, as are traditional West African peppers like *melegueta* peppers and cubebs. Many homes use French *cubes Maggi* (Maggi bouillon cubes) to season stews and sauces. Fresh fruits such as mangoes, soursops, pineapple, mandarins and clementines, and pomegranates are typical snacks and may also serve as the basis for desserts in more westernized households where French culinary influence is felt. Flag beer (a West African brand) is consumed throughout the country by those who are not Muslim, as are manufactured local beverages, like white palm wine called *bangui*. There are also homemade beverages sold by street vendors like ginger beer or *nyamakoudji* (a drink prepared from pineapple peelings). Among the westernized, French wines are also consumed.

Cooking

Throughout western Africa in general the main culinary techniques are boiling, steaming, stewing, frying,

roasting, grilling, and baking. All of these methods are the basis for the traditional dishes of the country that used the traditional cookstove. Even today, many households cook over wood or charcoal fires. Kerosene stoves have supplanted many of the wood-burning ones, but in the rural areas the traditional three-rock wood stoves remain the standard. In the urban areas, the Western stove is used, but for some dishes cooks still prefer to cook outdoors over a small brazier called a *feu malgache*. Pressure cookers are used to tenderize tougher cuts of meat. Refrigerators are also the norm among those with sufficient funds and access to electricity.

Most households have some kind of household help. It may be a relative from the country looking for employment in the city and working in exchange for lodging, or a professional paid for services. Cooking, therefore, is often done by another woman, overseen by the lady of the house. Cooking, however, remains a family activity for festive foods. Extended families will combine to prepare dishes at times of feasting, with the matriarch directing the kitchen. The myriad cultures of Côte d'Ivoire are oral cultures, and this is the manner by which the youngsters of the household learn to prepare the traditional foods. Microwaves, freezers, food processors, and the full range of the other Western culinary conveniences are *de rigueur* among the elite. French influence prevails among the elite as well, and in their households the full European *batterie de cuisine* may be found among those with means; there, adepts at the preparation of French *cuisine bourgeois* and/or *cuisine classique* can be found in many households.

Typical Meals

Given the regional diversity of the country, it is difficult to generalize about a typical meal. It can be said that in traditional rural households the typical heavier meals of the day consist of a soupy stew of some sort served over or accompanied by a starch such as the fermented cassava known as *attiéké* or the pounded cassava known as *foufou*. The starch may be dipped in the stew, or the stew may be scooped up with it. Rice is also an accompaniment for several dishes.

Foufou (Boiled Cassava)

Yields about three foufou balls

2½ c cassava, peeled, with the fibrous center removed

5 ripe plantains, peeled

Prepare the cassava and the plantain as directed, then cut them into chunks and place them in a large saucepan with water to cover. Bring to a boil, then lower the heat and simmer for 25 minutes or until the vegetables are tender. Drain them and return to the pan over very low heat. Then, with a potato masher, pound, mash, and stir the mixture for 15 minutes or until it becomes elastic and smooth. (You may need to sprinkle it with water from time to time to keep it from sticking.) Form the *foufou* into balls and serve immediately.

Eating for some traditional Ivorians is a ritual act that situates them within their community and within the universe. For that reason, in some rural villages, the community will still eat together in a common area. Seated on a mat on the ground they eat from a communal bowl using their right hands. It is considered rude to grab or act greedy. Women and girls eat as a group, men as another group, and young boys as a third group. The eldest are served first, and during the meal talking is discouraged. It is a time of commensalism thought to build community.

Alternately there may be the European paradigm of three meals a day, but traditionally it is often replaced with a different one that includes one or two meals plus a lighter meal or two to three meals with snacks. In urban areas, breakfast may follow the French mode and include French bread from a local bakery or toasted leftover bread with jam and butter. Coffee and hot chocolate are the usual drinks. In more traditional areas, alternately, the daily diet might include one of the more traditional breakfasts like the fried bean cakes known as *kosai* that are eaten by the Hausa in the north of the country.

Lunch and dinner for the westernized are often interchangeable and range between European fare or Ivorian favorites like grilled or roasted fish or

chicken served with a piquant sauce and more traditional Ivorian dishes like *kédjenou* (a chicken stew).

Kédjenou de Poulet

Serves 4–6

1 frying chicken, cut into serving pieces

1 large onion, chopped

2 large tomatoes, quartered

1 tbsp red wine vinegar

¼ c red wine

½ c water

1 Maggi bouillon cube

1 pricked habanero chile, or to taste

Salt and freshly ground pepper to taste

Place all of the ingredients in a pot over a medium flame, cover, and cook for 1 hour, shaking the pot occasionally to make sure that the ingredients do not stick. Serve hot with white rice.

Eating Out

Unlike many of their West African neighbors, the Ivorians have a tradition of eating out in small local restaurants known as a *maquis*. Taking their name from the Corsican underbrush and the French resistance during World War II, these small restaurants often began as clandestine dining spots for the male migrant workers who flocked to the city. As their fame for various dishes grew, they became more public spots, and now no self-respecting Ivorian in any urban area would not know about at least a few of these small eateries where local specialties are served. They may be as simple as a terrace in someone's yard or can be a more commercial spot complete with a limited menu and a selection of beverages. The requirement for designation as a *maquis* seems to be that the food served is grilled over a low fire, so grilled chicken and grilled fish are the usual standbys; both are served with a sauce of onions and tomatoes and accompanied by rice, *foufou*, and *attiéké*. Meals are usually accompanied by beer, French wine, or *bangu*.

In the larger urban areas, there are white-tablecloth restaurants located in tourist hotels and the occasional colonial restaurant run by a homesick Frenchman where the clock seems stuck in the French provincial life of the 1950s. Sidewalk cafés exist in Abidjan's more European zones, while the more local areas have *maquis* and, in the evening, clubs where traditional grilled foods are served to the accompaniment of live music played by local bands. The influx of migrant workers means that surrounding most of the markets, bus depots, and taxi stands, women vendors hawk street foods that may range from plastic bags filled with beverages to entire meals that can be eaten while sitting on a stool or can be put in an enameled bowl and taken home. In the Abidjan suburb of Cocody, near the university, a night market exists where several vendors offer grilled fish or chicken and *aloko* to students.

Special Occasions

As is true for many of their West African compatriots, Ivorians have a highly developed sense of the ceremonial. Funerals call for shows of family solidarity and often end in a communal meal shared by all. Roman Catholics celebrate all of the Christian holidays with ceremony, and the cathedral at Yamoussoukro has been visited by the pope more than once. Muslims feast and fast during the period of Ramadan and thereafter, and those following traditional religions, as well as others who combine the traditional with their other beliefs, celebrate events like the Yam Festival (*Fete des Igname*) in Agboville in the east of the country. Like the Akan festivals of neighboring Ghana, this festival celebrates the food that has traditionally been the community's mainstay with dancing, drumming, and feasting.

Diet and Health

The Côte d'Ivoire still suffers from the effects of its ongoing internal conflict. In 2006 the World Health Organization *Country Health System Fact Sheet* indicated that about 15 percent of the population was undernourished and added that 21.2 percent of the children under age five were underweight and more

than 25 percent were considered short for their age, or “stunted.” In March 2008 the country, along with others in western Africa, experienced food riots protesting the rising cost of staples. The country’s north/south divide coupled with the urban/rural one means that rural dwellers in the northern part of the country are more subject to interrupted food supplies in the rainy seasons. The same happens in the dry season if drought occurs. The southern regions are closer to seaports and have more stable climactic conditions. The more developed economy means that there are methods of food storage, and most people can afford to purchase food from

markets and other sources if their individual food supplies are destroyed.

Egypt

Overview

Egypt is geographically situated in northern Africa, bordering the Mediterranean Sea, between Libya and the Gaza Strip, and the Red Sea north of Sudan; it includes the Asian Sinai Peninsula. To the east of the Sahara desert, the Nile carves out a route to the sea. The river provides fertile silt and refuge from the arid land that surrounds the valley, and it was a welcoming environment to early populations. Egypt is comprised of 386,660 square miles of land. Natural resources include petroleum, natural gas, lime, phosphorous, manganese, potassium, zinc, iron ore, and more. Egypt is the most populous state in the Arab world, with over 80 million inhabitants. One out of every three Arabs is said to be Egyptian, and Cairo is Africa's most densely populated city. The median age of Egyptians is 24 years.

More than 43 percent of Egypt's inhabitants are urban dwellers living in the cities of Cairo, Alexandria, Port Said, Ismalia, Mansoura, Tanta, Luxor, Aswan, and other cities in the Nile Delta. Ninety percent of the population is Sunni Muslim, and 10 percent is Christian (a majority of whom are known as Copts). Most Egyptians are employed in the agriculture, manufacturing (textiles, pharmaceuticals, food products), and tourism sectors. Growing domestic sectors including technology, transportation, telecommunications, retail, and construction are also major sources of employment. Important agricultural crops include cotton, rice, corn, wheat, beans, fruit, vegetables, cattle, water buffalo, sheep, and goats. Sugarcane cultivation and fishing play important roles in rural and sea-

side communities where subsistence agriculture is still important.

Egypt has the longest continuous history of any country. To this day, 99 percent of the population resides in the Nile Valley and the Delta. Ancient Egypt was powerful and gave rise to a great civilization with relatively little interference from the rest of the world. The ancient Egyptian empire once spanned from northern modern-day Sudan all the way to Lebanon. As Egypt became increasingly wealthy, it continued to gain increasing attention from the outside world, which became tempted to invade. Subsequently, Egypt lost her autonomy to a succession of powerful empires: the Persians, the Greeks, the Romans, the Copts, the Ottomans, the French, and the British. The interplay between the native population and those of the occupying forces enriched the nation's culture. Even the official language of Egypt, Arabic, has its own dialect that includes influences from various cultures.

Since the exploration and documentation of the archaeological remains during Napoleon's Egyptian Campaign (1798–1801), the Western world has been gripped by Egypto-mania, the fascination with ancient Egyptian culture and history. Egypt has had a significant impact on the cultural imagination of all Western cultures. Today, many aspects of Egypt's ancient culture exist in interaction with newer elements, including the influence of modern Western culture, itself with roots in ancient Egypt. Much as Egypt physically bridges the gap between Africa and Asia, she is culturally doing the same for the Western and Islamic worlds.

Market stall, Aswan, Egypt. (Corel)

🍴 Food Culture Snapshot

Soad El Tanbedawy is the mother of three children and a retired mathematics professor living in a town named Shiben El Khom in the province of El Menofia in northern Egypt. Her daughter, Asma' Khalifa, is a doctor, her son Ahmed Khalifa is an information technology specialist, and her son Ossama Khalifa is a senior in college. Since none of her children is married, they live at home with Soad and her husband. Before her two eldest children began working and her husband, Mohamed Khalifa, was promoted in his municipal position, it was easy for everyone to enjoy most meals together at home. With increasingly demanding schedules, Soad has made alterations to her schedule so that everyone can eat together. She begins and ends her day with breakfast preparations. Since the typical Egyptian breakfast consists of *fuul medammes*, or pureed fava beans, which require eight hours of slow cooking, she

soaks them the day before and puts them on a low fire before going to sleep at night. The next morning she arises, makes eggs, and sets out plates of tomatoes, watercress or arugula, carrots, cucumbers, and sheep-milk cheeses on her kitchen table to accompany the beans. Her husband buys fresh *aish baladi*, a healthful, bran-rich bread baked fresh in local bakeries, daily to accompany the breakfast. Prior to eating, everyone in the family washes their hands. After eating, they wash them again. Next, warm tea with milk is made and enjoyed only after the conclusion of breakfast. Since lunch is eaten at home and most members of her family can't return before 4 P.M., Soad often packs them light snacks such as cheese sandwiches and fruit.

Once everyone leaves the home, Soad begins her daily tasks of preparing her family's lunch. Since lunch is the main meal of the day, it is the one that most thought goes into. Most home meals begin with a soup, which can consist of a consommé and orzo or contain

vegetables or lentils. The main course usually consists of a variety of different rice-based dishes with fish, beef, lamb, or poultry. Small salads are placed around the table to accompany the meal, as are pickles and bread. Little dishes full of a mixture of salt, cumin, and ground crushed red pepper are also placed on the table. It is common for the family members to dip each piece of food in this mixture, if they desire more seasoning. At the table, dishes are never passed; everyone simply helps themselves to whatever they would like more of. For larger gatherings, Soad puts multiple serving dishes of the same food at different ends of the table so that everything is within reach.

Sometimes Soad makes her specialty dishes liked *mahshi*—a combination of stuffed baby eggplant, zucchini, peppers, cabbage, and vine leaves that she serves with roasted meat and chicken. Another family favorite is *koushari*, which consists of rice, elbow macaroni, lentils, chickpeas, spicy tomato sauce, and fried onions. Koushari is so filling that it is served by itself. When Soad needs to make a dish that she can rely on to reheat well later, she makes *macarona béchamel*, layers of pasta with a thick broth-and-egg-infused béchamel sauce and savory minced beef that is an Egyptian home staple similar to Greek *pastitsou*. It can be made up to a day in advance and baked the day of serving. When she doesn't feel like cooking, Soad asks her husband to stop at the local falafel (*t'amaya* in Egyptian) stand and pick up fava falafel batter that she forms and fries at home. Most days, desserts consist of fresh seasonal fruit, which could be mangoes, guavas, oranges, bananas, strawberries, grapes, pears, pomegranates, or coconuts. On special occasions or for the weekly congregational prayer day, Friday, Soad usually prepares a sweet. She may make *k'nafeh* (a shredded phyllo pastry filled with nuts or cream pudding and topped with a simple syrup), rice pudding, or baklava. For the Eid al-Fitr, or Feast of the Fast Breaking, a three-day holiday that marks the end of Ramadan, Soad makes butter cookies known as *petits fours* in Egypt along with *Eid kahk*, a crunchy cookie that dates back to Pharaonic times and used to be stuffed with gold coins and distributed to the poor by the caliph during the Fatimid era. Her family greatly appreciates her cooking, which they see as directly linked to their good health, happiness, and close relationship with one another.

Soad's love of cooking and willingness to let the importance of communal meals dictate her daily life are increasingly uncommon in Egypt. Most young women do not learn to cook, because it is not viewed as an important part of their cultural identity. Long work schedules and difficult traffic in cities make it almost impossible for urban women to cook. There is also a bit of a cultural stigma (North America suffered the same attitude when women began working in the 1940s) that promotes the idea that "smart" and "upper-class" women shouldn't be bothered with cooking. As a result, many women employ maids or order out instead. The popularity of foreign food chains also makes preparing traditional cuisine less enticing to young people. Even those who do cook are constantly searching for foreign types of recipes to try. Egyptian émigrés, however, often use the cuisine as a link to their homeland and culture while they are abroad. They, and their families, will continue to spread traditional Egyptian foodways, along with tourists who return from their trips craving "a taste of the Nile" from abroad.

Major Foodstuffs

The main sources of the Egyptian diet are similar to others in the Mediterranean. Grains, bread, beans and other legumes, fruits and vegetables, dairy, and corn, olive, and other oils make up the majority of the diet. Seafood, meat, poultry and fowl, and nuts are also enjoyed. Both fresh herbs and dried spices are used in large quantities for daily cooking. Sweets consist of phyllo-based pastries, cookies, puddings, and European-style cakes and ice creams.

Grains

Popular grains and breads include wheat, rice, and barley. Wheat is usually used to make pita bread called aish baladi, which consists of whole wheat and the bran layer. Refined white flour is used to make small hotdog bun-shaped fresh breads called *aish fino*. Kaiser rolls and European breads and pastries are also made with wheat. White flour is also used to make sheets of phyllo dough for pastry and a delicious Egyptian specialty known as *fateer*. Fateer is a homemade puff pastry that is made in special shops similar to pizzerias. They can be made with

Egyptian bread at a market. Similar bread has been made in Egypt since ancient times. (Shutterstock)

multitudes of sweet or savory fillings, or served plain with black molasses and an Egyptian clotted cream called *ishta* and honey. They are traditionally made in wood-burning ovens.

Whole wheat berries are boiled and made into a cereal called *bileela* with milk, raisins, sugar, and nuts. Cracked whole wheat, bulgur, is used to make *kobeeba* (meat and cracked wheat croquettes), *taboola* (a salad of cracked wheat, herbs, tomato, and cucumber), and other dishes. Hulled grain is made from newly harvested wheat, which has a green color and smoky flavor. It is called *freakh* and is typically used to stuff chickens, pigeons, ducks, and turkey. The heart of the wheat grain (semolina) is used to make cookies and pastries. Egyptian rice is a short-to medium-grain starchy rice (sometimes called Calrose rice) used to stuff vegetables, made into pilaf-style dishes, and cooked with vermicelli and served as an accompaniment to roasts, stews, or kebabs. It is also used to make rice pudding or is made into rice flour, which is used as a thickener in other puddings. Barley is used to make cereals, soups, and stews. Egyptian rice was introduced into southern Spain in the 10th century and is the grandfather of modern Spanish paella and Italian risotto rices.

Beans and Legumes

Fuul medammes, a variety of fava bean known to be the world's oldest agricultural crop, is said to be Egypt's national dish. The dried beans are soaked in water overnight and then stewed for hours with cumin, coriander, oil, and additional spices. They are usually served for breakfast with

accompaniments like chopped tomatoes, hard-boiled eggs, lemon juice, olive oil, tahini sauce (sesame puree), and other things. The skinned beans are also used to make Egyptian falafel (which is also eaten at breakfast—or any time).

Legumes including red, brown, and black lentils are used to make soups, stews, and dishes during the Christian fasting period. During antiquity, Egypt was the chief exporter of lentils in the world. One of the most popular Egyptian lentil dishes is called koushari. It consists of rice, pasta, lentils, chickpeas, a spicy tomato sauce, and fried onions. It is a typical street food that can be found anywhere. It is an inexpensive, delicious, vegan dish loved by locals and tourists alike.

The word *hommus* means “chickpeas” in Arabic. Chickpeas are widely used in soups and stews or as a puree. They are also roasted and spiced and served as a snack like nuts and popcorn. White beans are used in stews, soups, and easy purees as well.

Fruits

The history of Egyptian fruits is both ancient and modern. Dates are said to have been the first fruits grown in Egypt, with a 5,000-year history. Pomegranates, figs, and grapes also flourished in the desert heat. Strawberries, bananas, tamarinds, kiwis, apricots, coconuts, peaches, oranges, lemons, limes, apples, pears, and blackberries are all very popular. In the 19th century, mangoes and guavas were introduced from India. They adapted well to the Egyptian soil and have been important parts of the culinary landscape ever since. Egyptians prefer to eat their fruit fresh, while it is in season. Fruit is usually enjoyed as a snack or after dinner in place of or prior to dessert. The fresh, in-season fruits are also displayed at street-side fruit juice stands where fresh fruit “cocktails” are made to order. Grape, tamarind, pomegranate, and strawberry juices are boiled and reduced into syrups and molasses, which are used to make drinks and flavor pastries.

Vegetables

Leeks, cucumbers, lettuce, arugula, watercress, carrots, herbs, peas, okra, and green beans were all present in Egypt in ancient times. Depending on the

season, eggplant, zucchini, peppers, artichokes, cauliflower, turnips, potatoes, rutabagas, spinach, cabbage, onions, and garlic are all integral parts of daily meals in Egypt.

Fats

The preferred traditional fat for cooking in Egypt is *samna*, a cultured, clarified butter similar to Indian ghee. Deeply rich and flavorful, *samna* can be made with sheep, cow, or water buffalo milk. There are also vegetable versions similar to shortening. In rural communities, some women still prepare *samna* at home. In urban areas, many people are opting to use olive oil for health reasons and corn oil for its convenience and economical price. Butter is used for pastries and for specific foreign recipes that call for it.

Seafood

Seafood was the first form of sustenance in ancient Egypt. In antiquity, festivals would be held in honor of the Nile god named Hapi. No one was allowed to fish from the Nile during the festival, which often lasted for weeks. Instead, they would place flowers, food offerings, and prayers into the Nile to honor the god who allowed the river to flood twice a year and provide adequate irrigation, and therefore sustenance. Only when the festivals were over were people allowed to eat the fish. Since then, fish has held a special place in the hearts and palates of Egyptians and other Mediterranean communities that were influenced by ancient Egypt. Even though not as expensive as meat, it is prized and appreciated. Nowadays, seafood from the Mediterranean, Nile, and Red Sea and imports from around the globe are all enjoyed in Egypt today. Shrimp, squid, sea bass, bream, red mullet, prawns, and Nile perch, known as *bulti*, are the most common. Famous Egyptian seafood recipes include kebabs, fried fish with cumin, and seafood soups and stews, as well as roasted fish. *Saadilaya*, or “the fisherman’s wife,” is a rice and fish skillet infused with spices like turmeric. The northern Mediterranean coastal towns are especially famous for their seafood dishes, and fish can be purchased fresh from the boats that come in to shore.

Meat

Ever since ancient times when nomadic tribes roamed the desert and meat was served only during important celebrations or to honor guests, it has held a special, ceremonial place at the Egyptian and Arab table as a whole. Beef, mutton, lamb, veal, and goat meat are all eaten in Egypt. Since meat is extremely expensive, many people cannot eat it every day. Traditional meat recipes include stews, roasts, kebabs, ground meat stuffing for vegetables, and meatballs. Serving meat to guests is a sign of respect and a way to honor them. Animals can be purchased live to custom slaughter, or meat can be purchased from butcher shops on the day of slaughter. Many butcher-shop owners also own and operate kebab shops. In Egypt, halal meat is available for purchase everywhere. *Halal* is an Arabic word that means “permissible.” Permissible meat in the Islamic tradition comes from animals that have been treated kindly and killed in a way that minimizes the animal’s suffering. The words *In the name of God, most beneficent, most merciful* must be uttered at the time of its death. All blood must be drained from the animal, and it must be cleansed before being eaten. Animals are not allowed to be killed for sport, and all parts of the animal are to be consumed. Sheep and cattle milk is used for dairy: milk, yogurt, and cheese making. Typical Egyptian cheeses have been made since at least 3200 B.C. and are similar to what we now refer to as Greek feta cheese and Spanish manchego cheese.

Poultry and Fowl

Chickens, quails, pigeons, and ducks are all part of the Egyptian table. Pigeons and quails have been served grilled and stuffed since Pharaonic times when they were served to brides and grooms at wedding ceremonies. Egyptian pigeons and quails are raised in special environs specifically for culinary purposes. Chicken is served grilled, as part of kebabs, stewed, roasted, and fried. Ducks are also eaten roasted, grilled, and fried. Ducks from the El Fayyoun Oasis are known for their delicious taste and there are special recipes just for them. Eggs are a popular breakfast dish.

Herbs and Spices

Most Mediterranean herbs such as cilantro, dill, mint, parsley, basil, thyme, chamomile, caraway, and oregano are used in Egypt. Multitudes of spices can be used. The most traditional are cinnamon, cumin, cloves, crushed red pepper, cardamom, paprika, black pepper, coriander, anise, turmeric, and nigella seeds. Hibiscus petals are sold at spice shops all across Egypt. Nubian in origin, these leaves are boiled and sweetened to make a delicious and nutritious drink that can be served hot or cold. Known as *karkade*, this drink is the best known of all Egyptian traditional medicinals. Rosemary, curry powder, allspice, and others are becoming increasingly popular in cooking. Egyptians drink herbal tisanes made from mint, anise, cinnamon, chamomile, and caraway for their health properties and taste.

Coffee and Tea

Egyptians drink Turkish coffee with cardamom made in stovetop filterless pots called *kanaka*. Coffee shops are also called *ahwa*, which is the Egyptian-dialect version of the Arabic word *coffee* itself. Coffee made its way to Egypt by the 16th century, where hundreds of coffeehouses existed long before Europeans ever tasted it. Nowadays, Nescafé and European-style espressos are also very popular in Egypt.

Tea is by far the most common drink in Egypt. Egyptians drink black tea that is served with mint. Both coffee and tea are sweetened while they are made, with one to three teaspoons of sugar per person. Tea and coffee are traditionally served without sugar only at funerals.

Nuts

Egyptians love to spend the late nights of Ramadan, visits with family and friends, and movie-watching nights with a variety of nuts. Peanuts, cashews, almonds, pistachios, and walnuts are all popular. Watermelon and sunflower seeds, popcorn, and spiced roasted chickpeas are all sold at street-side stores and vendors.

Cooking

Popular contemporary cooking methods in Egypt are baking, grilling, roasting, frying, stewing, and salt curing. Many of the methods were developed during antiquity. The ancient Egyptians began salt curing, smoking, and sun-drying foods to make them last longer. They also invented sieves, pestles, mortars, and knives to aid in food preparation. Tomb scenes from the Old Kingdom (2700–2600 B.C.) depict bread being shaped and produced in mass quantities. Clay pot cooking is also very traditional. The word *tajin* (sometimes spelled *tajine*) is used to describe a clay baking dish in the Arabic-speaking world. In Egyptian dialect, the “j” sound is pronounced like a hard “g” so the word is pronounced *TAH-gin*. Clay baking dishes are a traditional way of baking and serving stews. Families serve meals in large ones, while restaurants serve individual portions in small ones. Keep in mind that only the tajines of northwestern Africa (namely, Moroccan and Tunisian ones) have conical lids. Before air-conditioning and home ovens were commonplace in Egypt, housewives and cooks would have children take their stews to the bread baker to have them cooked in the cooler portions of the oven while the bread baked. On their way home from school, children would stop at the bread shop and pick up their bread and stew for lunch. This method was very cost and energy efficient. In a hot climate like Egypt, it would take a lot of air-conditioning to cool down a home after turning the oven on. Sometimes, in very densely populated urban areas in Egypt, one can still see children navigating their way through the labyrinthine maze of shops in the *souk* (marketplace) to bring their tagins to the bread baker.

T'amaya (Egyptian Fava Falafel)

Serves 4 (three falafel per person)

This recipe became popular after the fourth century A.D., when Egyptian Christians (Copts) had to fast for 55 days during Lent. The Coptic fasting period prohibits meat, dairy, and seafood, so vegan diets are required. Being a meat-loving culture, the

Egyptian Christians developed ingenious ways of using beans and legumes to make enticing, hearty dishes that rival their typical meaty mains.

Ingredients

1 c peeled dried fava beans (broad beans),* soaked overnight in water and drained
 ¼ c fresh dill leaves
 ¼ c fresh cilantro leaves
 ¼ c fresh parsley leaves
 1 small yellow onion, diced
 8 cloves garlic, chopped
 1 tsp ground cumin
 1 tsp ground coriander
 Pinch of cayenne pepper
 Salt
 Freshly ground black pepper
 1 tsp baking powder
 Expeller-pressed corn oil, for frying
 ¼ c white sesame seeds

Variation

4 white pita breads
 2 roma tomatoes, thinly sliced
 1 cucumber, thinly sliced
 ¼ lb feta cheese, crumbled

Preparation

Place beans, dill, cilantro, parsley, onion, and garlic in a food processor and mix until a smooth paste forms. Mix in ½ cup water (or enough to make mixture wet and loose—it should resemble a thin paste). Add cumin, coriander, cayenne, and some salt and pepper to taste. Stir in baking powder and mix to incorporate. Spoon mixture into a bowl and let stand at room temperature for 1 hour.

Pour 3 inches of corn oil into a large frying pan over medium heat. When oil is hot enough to fry, a piece of bread dropped in it will turn golden and float to the top immediately. Using two teaspoons, gather a heaping teaspoonful of the paste in one spoon and

carefully push it off with the other spoon, forming a round patty in the oil. Repeat the process until the pan is full—leaving a ½-inch space between the falafel. While falafel are cooking, sprinkle a few sesame seeds on the uncooked sides. Fry until falafel are dark golden brown, approximately 5 minutes; turn over, and fry the other sides until they are the same color. Line a platter with paper towels. Using a slotted spoon, lift falafel out of oil and drain on paper towels. Repeat with remaining dough.

Shorbat Maloukhiya (Jew's Mallow Soup)

Serves 4

This soup is called Jew's Mallow in English because its main ingredient was the traditional bitter herb used on the Egyptian Jewish Seder plate. Jew's mallow, or *maloukhiya*, is a healthful green herb that grew in abundance in ancient Egypt. During the ninth century, when Caliph Al Muizz li Din Allah (a Fatimid ruler who founded Cairo) arrived in Egypt from Tunisia, he was very sick. The locals served him a bowl of *maloukhiya*, and he was instantly cured. He declared the soup a “royal broth.” The name *maloukhiya* comes from the word *malook*, meaning “kings” in Arabic. Even though it is inexpensive, it is still coveted and beloved by Egyptians everywhere.

Ingredients

4 c homemade or good-quality chicken stock
 1 (14-oz) package frozen *maloukhiya**
 Salt
 Freshly ground black pepper
 1 tbs clarified butter (ghee)
 6 cloves garlic, minced
 1 tsp ground coriander

Preparation

Bring chicken stock to a boil in a medium saucepan. Add frozen *maloukhiya* and some salt and pepper to taste. Bring back to a boil, reduce heat to low, and simmer for 5 minutes.

In a small saucepan over medium heat, melt clarified butter. Add garlic and coriander and cook, uncovered, until garlic begins to turn color. Stir garlic mixture into maloukhiya soup, taste, and adjust salt and pepper, if necessary. Serve hot.

*Can be found in Middle Eastern specialty markets.

Typical Meals

Egyptian breakfasts consist of protein-packed staples. Pureed fava beans, eggs (usually in the form of an omelet), falafel, vegetables, and cheeses are usually followed by tea with mint. Many Egyptians like to eat a small sweet or pastry at the end of breakfast. Wheat-based cereals, toast, and sweet cakes served with Nescafé are increasingly popular. Breakfast is eaten early in the morning at home before work and school, or on the street or in a restaurant anytime before noon. Hotels offer seemingly endless buffet bars of sweet, savory, and traditional items and are usually open from 6 to 10 A.M.

Egyptian lunches are usually served between 2 and 6 P.M. This is the important meal of the day, and families like to gather together to eat it. Because of increasingly busy schedules, the lunch time continues to get later. This also reinforces the importance of a hearty breakfast. Typical lunches consist of a lentil soup or pasta and consommé-based soup to start, Egyptian rice with vermicelli and/or grilled or roasted meat or poultry, or a seafood and vegetable stew, stuffed vegetables, salads, and fruit. Desserts are usually reserved for special occasions.

Egyptian dinners can be served very late in the evening, typically from 10 P.M. to 2 A.M., although the time may be earlier when entertaining or during the month of Ramadan when the meal to break the fast is served at dusk. The same types of dishes as for lunch may be served and eaten outside of the home. At home, lighter meals, leftovers, sandwiches, or bread, cheeses, pickles, and salads may be served. There is usually no distinction made between lunch and dinner foods, but the time of lunch and the amount of food eaten then will determine what a person or family eats for dinner.

Eating Out

Dining options in Egyptian cities are endless. One can choose from street-side shops offering freshly squeezed fruit juices, falafel, koushari (lentils, rice, and pasta with a spicy tomato sauce), kebabs and *shwarma* (roisserie-style shaved lamb served on a sandwich), fateer (homemade puff pastry filled with sweet or savory fillings like pizza), pastries, and much more. There is also a good selection of cafeteria-style restaurants, which are similar to American diners and offer endless menu options ranging from local and traditional dishes to burgers and fries.

In large cities, foreign fast-food, midrange, and upscale restaurants abound. French, Italian, Chinese, Turkish, Lebanese, and Japanese cuisine can also be found. Hotels and touristy restaurants serve endless buffets of “international” cuisine. In addition, many authentic restaurants serve grilled foods and traditional home-style Egyptian cuisine. These range in decor, price, and location from very inexpensive to five-star restaurants.

Special Occasions

Religion has always been an important aspect of Egyptian life. Egyptians have believed in monotheism since antiquity. The country’s three major religions—Judaism, Christianity, and Islam—all have deep-rooted traditions and customs surrounding their holidays in Egypt. There are many monuments, tombs, and shrines dedicated to important religious figures in Egypt. Today, mosques, churches, and synagogues are an integral part of Egyptian life and constant reminders of the divine. Egyptian culture combines a spiritual zeal with a zest for life in its seasonal festivities. Christmas, Easter, Ramadan, Eid al-Fitr, Eid al-Adha, *moulids* (birthdays of important religious figures—Jewish, Christian, and Muslim), and national holidays like the “Smell of the Fresh Breeze” spring holiday are all part of the modern Egyptian scene. Marriages and birth celebrations are also extremely important community events in Egypt.

Diet and Health

The diet and health of all Egyptians cannot be easily categorized or explained. Personal tastes, lifestyles, religion, and socioeconomic factors determine what individual Egyptians eat on a daily basis. Farmers and fishermen have the healthiest diets, consisting of grains, produce, pulses, fish, and small amounts of meat. Their active lifestyles help them maintain healthy body weights, and they have low stress-related issues. Unfortunately, even though the traditional Egyptian diet is healthful and balanced, it is increasingly less popular due to working women's time constraints and the affluent's new taste preferences. Meat is the most prized item at the dinner table, and it is extremely expensive in Egypt, which deepens its image as a luxury item. Since it contains fat and cholesterol, it is not as healthy as whole grains, fruits, vegetables, and legumes. High cholesterol and heart

complications are on the rise in Egypt. Four or five pounds of meat in Egypt can cost the entire week's salary of a lower-class worker. For this reason, many people joke that the poorer people are healthier. Healthful traditional whole-grain breads are increasingly being replaced by white store-bought breads, and healthful herbal and flower-based drinks are being eschewed in favor of colas. Because the culture holds a strong respect for foreign (especially American and European) products, it is widely believed that American foods are better than Egyptian ones—even if they are of poor, mass-produced quality.

Ethiopia and Eritrea

Overview

Until 1993, Ethiopia and Eritrea were one national entity. Thus, in discussing food culture, it is useful to consider the two countries together. This is particularly true when considering historical and cross-cultural influences. Ethiopia (the Federal Democratic Republic of Ethiopia), located on the Horn of Africa, is an East African nation of about 437,600 square miles. The Great Rift Valley, running from southwest to northeast, divides a high central plateau into northern and southern lowlands. The largest river in Ethiopia is the Abay or Blue Nile. Ethiopia has three climate zones: cool, above 7,875 feet (freezing to 61 degrees Fahrenheit); temperate, at 4,920–7,875 feet (61–86 degrees Fahrenheit); and hot, below 4,920 feet (81–122 degrees Fahrenheit).

The population of Ethiopia was estimated to be more than 73.9 million in 2007. Most of the population is found in the highlands. The urbanized population makes up only about 15 percent of the total population. The government is attempting to relocate some highland farmers in an attempt to relieve population pressure on depleted lands.

Ethiopians are divided into at least 100 ethnic groups speaking 70 or more languages. Most of the languages spoken belong to the Semitic, Cushitic, or Omotic families of the Afro-Asiatic language family. A small number of Ethiopians speak languages belonging to the Nilo-Saharan family of languages.

The Amhara and Tigray are plow agriculturalists. Some of the Oromo are farmers, and some are pastoralists, while the Somali are pastoralists. The

Sidama and the Gurage are hoe cultivators of *ensete* (a root crop in the banana family) and coffee. The distinctions between plow and hoe cultivation and pastoralism frame food culture.

Eritrea, on the northern and eastern borders of Ethiopia, has an area of about 46,774 square miles. Eritrea can be divided into three main areas: a north-central plateau region, plains in the western region bordering Sudan, and an arid coastal strip along the Red Sea. The only perennial river is the Setit River along the western border. There are other rivers, but they are seasonal. The highlands of Eritrea are cool, with temperatures averaging 60°F. The climate of the coast is semiarid, and temperatures average 86°F but can reach 122°F, while the Danakil Depression is one of the hottest places on earth. Eritrea also has 596 miles of coast along the Red Sea, which has fostered a long history of trade and interaction with other nations, particularly with Yemen, which lies only 20–80 miles across the Red Sea.

In 2004, the United Nations estimated the population of Eritrea at about 4.3 million. The urban population of Eritrea is about 20 percent. Nine major ethnic groups are recognized; however, as in Ethiopia, there is great ethnic and linguistic complexity. The ethnic breakdown is as follows: Tigrinya, 50 percent; Tigre and Kunama, 40 percent; Afar, 4 percent; Saho (Red Sea coast), 3 percent; and other, 3 percent.

Agriculturalists include the Tigray (central and southern plateaus), the Kunama (between the Gash and Setit rivers), and the Saho, who are agriculturalists or pastoralists depending on whether they live

Table 8.1 Ethnic Groups

	Ethnic Group	Language	Population (%)
<i>Semitic</i>			
	Amhara	Amharic	30.10
	Tigray	Tigrinya	6.20
	Gurage	Gurage	1.74
	Argobba		0.18
<i>Cushitic</i>			
	Oromo	Oromo	36.23
	Somali		6.31
	Afar or Denakil		1.89
	Sidama	Sidamo	4.55
	Agew (including Falasha)		1.20
<i>Omotic</i>			
	Welaita		2.29
<i>Nilo-Saharan</i>			
	Anuak		0.09
	Nuer		0.19
	Berta		0.28
	Gumuz		0.24

on the escarpment or the coastal plain. Pastoralists include the Afar (Red Sea coast), the Tigre speakers (northern hills and lowlands), and the Rasha'ida (Sudan border), who are Arabic speakers from the Arabian Peninsula.

Eritrea recognizes three official languages: Arabic, English, and Tigrinya. Arabic and Tigrinya are the most commonly spoken, though English is also widely known and is used as the language of instruction in middle and secondary schools and in higher education. As in Ethiopia, languages belong to three linguistic families: Semitic, Cushitic, and Nilo-Saharan.

Most of the people of Ethiopia and Eritrea are Orthodox Christians or Muslims. Protestants make up about 10 percent of the population. Smaller groups include Roman Catholics and Ethiopian Jews (Falasha), and those who practice traditional religions. Each religion has its own impact on dietary practices and food taboos.

Food Culture Snapshot

Makeda Abraha prepares breakfast (*qurs*) between 7 and 8 A.M. for her husband, Tefere, and their three children. Breakfast is often leftover *injera* (a fermented flatbread), shredded and mixed with spices (*berbere*) to make a dish called *fitfit*, accompanied by tea or coffee. Or they might have *kitta fitfit*, made with an unleavened flatbread (*kitta*) and *berbere* and served with yogurt. Lunch (*mesa*) is the most substantial meal of the day, eaten at midday. Lunch is typically *injera* served with a variety of stews (*wat*), followed by coffee. The family eats a smaller meal (*erat*) in the evening.

Makeda shops for the ingredients for their meals both at the traditional markets where produce, especially, is always fresh and at a neighborhood shop or one of the supermarkets springing up in Addis Ababa. At the supermarket Makeda can find not only traditional Ethiopian foods, some now prepared and packaged, but also a range of imported foods, especially canned goods, powdered whole milk, pasta, and cookies and sweets. Meat may be purchased from a butcher shop or at the supermarket.

In agricultural villages mealtimes follow the same pattern, although breakfast is likely to come earlier and be a very light meal. Much of what Louame uses to prepare meals for herself, her husband, Bekele, and their five children comes from her house garden or wild greens she has gathered. Grains and other foodstuffs are purchased at the weekly outdoor market. Louame and her family eat meat only infrequently, when she might slaughter a chicken or when there is a special occasion for which Bekele slaughters a goat.

Major Foodstuffs

The geography of Ethiopia has led to a wide diversity in agricultural production, practiced by peoples with equally diverse cultural systems. These range from people who practice intensive agriculture with ox-drawn plows (the Amhara and Argobba) to horticulturalists with hoes (the Gurage and Sidama) to pastoral nomads (the Rasha'ida). The staples of Ethiopia are dominated by cereals, pulses, and root crops. Although some crops are indigenous to Ethiopia, Ethiopian farmers have largely adopted

Oxen pull a plow in rural Ethiopia. (Shargaljut | Dreamstime.com)

the Sudanic agricultural complex of sorghum, millet, and cowpeas. Ethiopian farmers have, however, improved the crops, introduced new varieties, and experimented with wild plants as new crops. Ethiopians were the first to cultivate teff, ensete, coffee, fenugreek, castor, safflower, *ch'at* (qat), and the oilseed *nug*. Until recently teff and ensete were not cultivated anywhere else in the world. Maize, potatoes, and cayenne pepper are the only New World crops added to Ethiopian agricultural production.

Among the cereals, teff is most important to the Amhara, though it is highly desirable in the cuisine of much of Ethiopia. Barley is foremost in Eritrea and Shoa, sorghum in the regions of the Harrar and Somali, and maize in the southwestern section of the country. All of the cereals are used to make porridge, fermented or unfermented flatbreads, raised breads, or hard bread balls carried by travelers.

Some of the cereals have other uses, for example, in the making of beer (*talla*).

Since it is unique to Ethiopia, teff (*Eragrostis teff*) requires special note. It is a grass with extremely tiny seeds, making it labor-intensive to harvest and process and, thus, expensive. Its value is in its high nutritional qualities, far superior to other grains. It contains 11 percent protein, 80 percent complex carbohydrates, and 3 percent fat, and it has more lysine than barley, millet, or wheat. It is also an excellent source of iron and fiber and has much more calcium, potassium, and other essential minerals than other grains. It is nearly gluten-free, so it cannot be used to make raised breads. However, the short fermentation period used to produce the yeast for flatbreads (*injera*) generates more vitamins.

Next to cereals, ensete (*Ensete edule*) monoculture provides an important dietary staple. Known

as the “false banana,” ensete is native to Ethiopia, some regions of Sudan, and the Great Lakes area of East Africa. Although it grows to a height of 43 feet, only the underground shoots and stem are utilized for food. Its banana-like fruit is inedible, though the seeds of the fruit are sometimes boiled and fed to children. Ensete is used for food only in Ethiopia, where it is cultivated by the Gurage and Sidama (Cushitic speakers) of the southern plateau. It is grown in huge plantations surrounding homes and villages. The nutritional value of ensete is not high nor balanced and is comparable to other starchy foods like manioc flour. In the areas of ensete cultivation, protein is derived from milk, meat, and legumes.

Pulses in the diet of Ethiopians include lentils (*Lens abyssinica*; Amharic *misir*), green peas (*Pisum abyssicum*; Amharic *ater*), chickpeas (*Cicer arietinum*; Amharic *shimbra*), horse (or fava) beans (*Vicia faba*; Amharic *bak'ella*), and haricot beans (*Phaseolus vulgaris*; Amharic *adanguarey*). Vegetables and fruits are grown but do not make up a large part of the traditional Ethiopian diet due to their high cost. Some of the vegetables included in the diet are the Galla potato (*Coleus edulis*; Amharic *dinitch*), squash (*Cucurbita pepo* and *C. maxima*; Amharic *dubba*), onions, shallots (*Allium ascalonicum*; Amharic *shinkurt*), Amharic cabbage or leaf mustard (*Brassica juncea*; Amharic *gomen*), peppers, carrots, tomatoes, spinach, radishes, eggplant, beets, taro (*Colocasia antiquorum*), yams (*Dioscorea*), and sweet potatoes (*Ipomoea batatas*). Wild greens are also gathered and incorporated in the diet as vegetables. Fruits include peaches (*Prunus persica*; Amharic *kwok*), oranges (*Citrus aurantium*; Amharic *bur-tikan*), lemons (*Citrus limonum*), citron (*Citrus medica*), pomelo (*Citrus decumana*), figs (*Ficus sycomorus*), and pomegranates (*Punica granatum*).

Spices are extremely important to Ethiopian cuisine. Among those used are cayenne pepper (*Capsicum frutescens*; Amharic *berberi*), cone pepper (*Capsicum conoides*; Amharic *shirba*), Amharic cabbage seeds, black mustard (*Brassica nigra*; Amharic *sonafitch*), cardamom (*Aframomum coracima*; Amharic *kororima*), coriander (*Coriandrum sativum*; Amharic *dimbilal*), basil (*Ocimum basilicum*;

Amharic *zaccavi*), black pepper (*Piper nigrum*; Amharic *k'ondo berberei*), ginger (*Zingiber officinale*; Amharic *jinjibil*), black cumin (*Nigella sativa*; Amharic *azmud*), fenugreek (*Trigonella foenum graecum*; Amharic *avish*), and garlic (*Allium sativum*; Amharic *mech'shinkurt*). The leaves of the shrub *gesho* (*Rhamnus prinoides*) are used much like hops to give a bitter taste to beer, mead, and *arak'i*, a distilled liquor.

Several oilseeds are important in Ethiopian cuisine, both for their oil and as seeds. Oilseeds include nug (*Guizotia abyssinica*; Amharic *nug*), sesame (*Sesamum indicum*; Amharic *salit*), and safflower (*Carthamus inctorium*; Amharic *suf*). Flaxseed (*Linum usitatissimum*; Amharic *telba*) is also used in cooking.

Animal foods include cattle, sheep, goats, and chickens and their eggs. Some Ethiopians avoid eating eggs. A taboo on the eating of pork is observed by Muslims and the Falasha Jews. Pork is also not eaten by Amhara and Tigrean Christians or by some other groups like the Qemant, Galla, and Sidama. Another food most Ethiopians avoid eating is fish. Only those groups living on the Red Sea coast or around Lake Tana consume much fish.

Milk and milk products are also utilized in Ethiopian cuisine. Milk may be drunk fresh or as a sort of yogurt; the liquid part of the yogurt is separated for drinking. This drink is called *arera*. Yogurt (*irgo*) is also a part of the diet, as is a sort of cottage cheese called *ayib*. Butter is also made and used, though it is usually kept in the form of clarified butter for preservation. The pastoral nomadic peoples of Ethiopia depend much more on milk and milk products, in addition to grains.

Coffee (*Coffea arabica* L.) is another important part of Ethiopian cuisine and hospitality. It is said to have originated in the Kaffa region, whence its name. This is an important coffee-producing area. Several alcoholic drinks are made and drunk. Beer (*talla*), made from barley and flavored with leaves of the *gesho* shrub, is made by women. Mead (*tedj*), sometimes known to Westerners as honey wine, is made from honey and water fermented with the leaves and bitter roots of *saddo* (*Rhamnus saddo*) or *gesho* (*Rhamnus gesho*). Mead is highly alcoholic. A

distilled beverage, arak'i, begins as beer made from finger millet. The typical Ethiopian arak'i is a clear liquid that tastes like Italian *anice*. It is very strong and is drunk only in small amounts. Both mead and arak'i are also made by women.

Cooking

The hearth is central to Ethiopian home life. In addition to preparing food and cooking there, members of the family traditionally ate in the hearth area. It was the place for socializing within the family, and visitors also gathered there. The traditional stove is the well-known three stones, on which the cooking pot or the stone or metal griddle used to cook flatbreads is balanced. The fuel is wood or charcoal. A charcoal brazier might also be used, especially in the preparation of coffee. Urban homes have Western-style ranges, fueled by bottled gas.

Cooking is the responsibility of women, who prepare and serve the food. In villages it is also women's responsibility to gather fuel and fetch water. Although women should have food ready when their husbands come home, it is also the responsibility of the husband to be there to eat what his wife has prepared.

Meal preparation involves making a flatbread, usually injera made from a slightly fermented batter of teff flour, and the stews (*wat*) or other vegetable dishes that accompany the flatbreads. These foods are cooked in two different processes. Traditionally, flatbreads, fermented or unfermented, are baked on a stone slab or iron-sheet griddle (*mogogo*) supported by the stones of the hearth. Urban housewives now have an electric griddle (*mitad*) on which to bake injera. Stews are boiled or simmered.

Making injera requires advanced planning. The first step is to mix the flour, usually teff or sorghum, with water. This mixture is then put into a pottery jar and stored for three or four days to ferment. After it is fermented, more water is added to make a batter the consistency of pancake batter. The griddle, which has been heated to a high temperature, is greased. Then, to make the large, thin injera (about 20 inches in diameter), batter is poured and spread onto the griddle, which is over an open fire. It takes

Injera is a pancake-like bread made out of teff flour. It is traditionally eaten in Ethiopia, Eritrea, Somalia, Yemen, and Sudan. (iStockPhoto)

a great deal of skill to spread a thin layer of batter over the griddle without tearing the injera. The batter must also be spread completely before the first edge of the injera burns. When it is done, the injera is peeled off the griddle and stacked on a tray. The finished injera is thoroughly cooked but not crisp. It should be full of bubbles and spongy. Other flatbreads, called *kitta*, are prepared in much the same way, except that the batter is not fermented.

Injera

This recipe is adapted for Western cooks.

1½ c teff flour*

2 c lukewarm water

Salt

Vegetable oil for the griddle

1. Mix the teff flour with the water and let the mixture stand at room temperature (covered lightly)

until it ferments, 2–3 days. The mixture should be bubbly and the consistency of thick pancake batter. Set aside about $\frac{1}{3}$ cup of the batter to make the starter for another batch of injera. The starter can be stored in the refrigerator for up to a month.

2. Add salt until you can just taste it.
3. If the batter is too thick, add more water until it is the consistency of thin pancake batter.
4. Heat a griddle or skillet, preferably an iron skillet, until a drop of water skips over the surface. Then, oil the griddle with a small amount of vegetable oil.
5. Pour about $\frac{1}{4}$ cup batter onto the griddle, quickly spreading it. It should be thicker than a crepe but thinner than a pancake.
6. Cook until the injera has bubble holes across the entire surface, about 2 minutes. It should be firm but not browned, and cooked on one side only.
7. Remove the injera from the griddle and stack it on a plate. A piece of plastic wrap or foil may be placed on each one to keep them from sticking together.
8. Continue until all the batter is used.
9. Serve by placing one injera on each plate and topping with the stews. Or serve Ethiopian style, with the injera on a pizza pan placed in the middle of the table, with the stews around the edge of the injera in front of each person. Makes about 10 eight-inch injera.

*If teff flour is unavailable, whole wheat or barley flour may be substituted. However, neither of those flours will ferment as teff does. In this case, in place of the fermentation step, add 1 tbs baking powder, and substitute 2 cup club soda for the water, adding about $\frac{1}{4}$ cup lemon juice to approximate the sour taste of fermented teff. Sorghum flour will ferment like teff and is a good substitute, in which case you can proceed with the recipe as for teff. The result will be the Sudanese version of injera.

The next part of meal preparation is to make whatever stews are to accompany the injera. The stews, or wat, might be a combination of meat and vegetables or only vegetables or pulses. Typically these dishes are highly spiced, well beyond

the endurance of the average Westerner. Onions or shallots are a typical ingredient in most stews, so these must be prepared and chopped. Vegetable ingredients must also be cleaned and chopped. If lentils or dried beans, such as cowpeas, are to be used, they must be sorted, examined for small stones, and washed.

If meat is to be an ingredient in the stew, it must also be prepared, with the amount of preparation depending on whether the cook is a villager or an urbanite. A village woman planning on adding chicken to her stew is likely to begin by slaughtering, cleaning, and butchering the chicken herself. Other animals would likely be slaughtered by her husband for her to butcher and further prepare. Townswomen would be able to purchase meat ready for them to cut up for their stews.

Some stews include hard-boiled eggs. If eggs are to be part of the stew, they must be prepared ahead, ready to be added when the stew is almost finished cooking. Other ingredients, especially spice combinations, are also prepared ahead, ready to be added during the cooking process. One such spice combination is *berbere*, an almost ubiquitous requirement for most stews.

Berberé

- 1 tsp ground ginger
- 2 tsp ground cumin
- $\frac{1}{8}$ tsp ground cloves
- $\frac{1}{8}$ tsp cinnamon
- $\frac{1}{2}$ tsp ground cardamom
- $\frac{1}{8}$ tsp ground allspice
- $\frac{1}{4}$ tsp ground nutmeg
- 1 tsp ground fenugreek
- $\frac{1}{2}$ tsp ground coriander
- $\frac{1}{3}$ tsp turmeric
- 2 tbs onions, finely chopped
- 1 tbs garlic, minced
- 2 tbs ground cayenne pepper
- 2 c Hungarian paprika
- $\frac{1}{2}$ tsp ground black pepper

1 tbsp salt

1½ c water

Toast the ginger, cumin, cloves, cinnamon, cardamom, allspice, nutmeg, fenugreek, coriander, and turmeric in a small frying pan (cast iron is good) over low heat for about 2 minutes, stirring constantly. Remove from heat and cool for about 5 minutes. Combine the spices, onion, garlic, and 3 tablespoons water in a blender and blend until smooth. Combine the cayenne pepper, paprika, black pepper, and salt in a skillet and toast over low heat for about 1 minute. Stir in water, ¼ cup at a time. Then stir in the blended mixture. Stirring vigorously, cook over the lowest possible heat for 10–15 minutes. Transfer berbere to a jar. Cool to room temperature, then cover with a film of oil. Store in the refrigerator in a tightly sealed jar.

Doro Wat, or Zegeni (Chicken in Red Pepper Paste)

Ethiopian National Dish

2½ lb chicken (a cut-up whole chicken, or use legs and thighs)

2 tbsp lemon juice

2 tsp salt

2 onions, finely chopped

¼ c *niter kibbeh* (spiced butter; recipe follows)

3 cloves garlic, minced

1 tsp fresh ginger, finely minced

¼ tsp ground fenugreek

¼ tsp ground cardamom

⅛ tsp ground nutmeg

¼ c berbere

2 tbsp paprika

1 c water

6–8 hard-boiled eggs

Freshly ground black pepper

Rinse and dry chicken pieces. Rub with lemon juice and salt, and let sit at room temperature for 30 min-

utes. In a heavy pot or Dutch oven, cook onions over moderate heat for about 5 minutes. Do not let brown or burn. Stir in the *niter kibbeh*. Then add garlic and spices. Stir well. Add berbere and paprika, and sauté for 3–4 minutes. Add water and bring to a boil. Cook briskly, uncovered, for about 5 minutes. Pat the chicken dry, and drop it into the simmering sauce, turning each piece until it is well covered. Reduce heat, cover, and simmer for 15 minutes. In the meantime, peel the hard-boiled eggs and pierce them with a fork. After the chicken has cooked, add the eggs, turning them gently in the sauce. Cover and cook for an additional 25 minutes. Add black pepper to taste. Serve a piece of chicken, an egg, and sauce to each person, placing them on top of the injera.

Niter Kibbeh (Spiced Butter)

2 lb unsalted butter, cut into small pieces

1 onion, coarsely chopped

3 tbsp minced garlic

4 tsp fresh ginger, finely minced

4 tsp ground turmeric

¼ tsp ground cardamom

1 cinnamon stick (1 in. long)

1 whole clove

⅛ tsp ground nutmeg

In a large saucepan, melt butter slowly over medium heat. Do not let it brown. Bring butter to a boil. Stir in remaining ingredients. Simmer uncovered and undisturbed for 45 minutes. The milk solids in the bottom of the pan should be brown, and the butter on top should be transparent. Slowly pour the clear liquid into a bowl, straining through a cheesecloth. No solids should be left in the *niter kibbeh*. Transfer *niter kibbeh* to a jar and store in the refrigerator.

Almost all stews, or *wat*, begin with lots of onions. But not all include berbere. Some, the *alecha wat*, are milder. Stews can be made with chicken,

beef, fish, or lamb and a variety of vegetables. They may also be vegetarian, like *mesir wat*, which is a red lentil puree. Meat may also be sautéed to make *tibbs*. Tibbs can be “normal” or “special,” the latter meaning it is served on a hot plate with a vegetable salad mixed in. Another favorite Ethiopian dish is *kitfo*, which is made with raw, minced beef marinated in *mitmita*, a spicy chili powder, and niter kibbeh. Other dishes include chickpea fritters made with chickpea flour, lentil salad, eggplant salad, *gomen sega* (mustard greens and beef), *sega wat* (Ethiopian lamb), *temiser w’et* (spicy lentil soup), *sambussa* (vegetable- or meat-filled pastries), *atkilt wat* (cabbage, carrots, and potatoes in sauce), or *inguday tibbs* (mushrooms sautéed with onions). The cooking techniques for all of these are similar, but there is great variation in the ingredients and the combinations of ingredients.

The cooking described so far focuses on cereals, pulses, and vegetables. The cuisine of the ensete complex requires some different techniques. The false stem and young shoots of the ensete plant are sometimes boiled and eaten as a vegetable. But the main consumption of ensete involves a long process. The mature ensete plant has a huge root (*wahta*) that is harvested, then scraped to extract the starchy pulp, which is edible. This starchy substance is buried in deep pits where it is left to ferment for at least two months and sometimes several years. The Gurage say that burying the ensete improves the taste, making it more highly favored than freshly harvested ensete. After fermentation the ensete is made into a heavy bread (*kocho*), about one inch thick. The bread is baked in an ensete leaf and tastes sour, rather like injera. This bread is eaten with *kitfo*, the raw meat dish already described, mixed with niter kibbeh and *mitmita*, a spiced chili powder made with the hottest of chilies. Fresh cottage cheese (*ayb*) is served with the *kitfo*. Another dish served with *kocho* is *gomen kitfo*, made by boiling collard greens, drying them, then serving the greens finely chopped and mixed with niter kibbeh. Ensete root is also powdered and prepared as a hot drink called *bulla*.

Ethiopians drink several types of beverages. Coffee is made in homes and in *buna bets*, or coffee-houses. Ethiopian coffee is made much like Turkish

coffee, thick and prepared in a pottery pot (*jebena*). Sugar or sometimes honey may or may not be added to the brew. Coffee beans are typically roasted as a part of coffee preparation, pounded in a mortar (*mukecha*) with a pestle (*zenezena*), and then boiled in the *jebena*. Each person is served three rounds, known as *abol*, *tona*, and *baraka*, in small, handleless cups. Ethiopians say the first two cups transform the spirit, while the third gives a blessing (*baraka*) to the person drinking it. Sometimes the youngest child serves the first cup of coffee to the eldest guest.

The Majangir and Gurage, among others, serve coffee with niter kibbeh, clarified butter prepared with spices and onions. The Majangir prepare their coffee brew (*kari*) from the leaves of the coffee tree, which grows wild in the forests around their villages. Leaves of the coffee tree are infused in hot water, and niter kibbeh is added to the brew. Sharing is very important to the Majangir, and, interestingly, the sphere of sharing is delineated by the term *kari omong*, or “the same coffee,” that is, the persons in the neighborhood close enough to share coffee drinking.

An Ethiopian woman grinds coffee by hand. (Johan Bernspång | Dreamstime.com)

Other beverages include several types of *chilka*, each made from a different seed: nug, flax, sesame, or safflower. The recipe for *chilka* is 1 cup of seeds, 6 cups of water, and 1–2 tablespoons honey. First, the seeds are dry-roasted in a skillet for about 5–10 minutes and then, after cooling, ground to a powder. The powdered seeds are then added to the water and allowed to sit for about 20 minutes until the solids have settled out. Once the solids have settled, the liquid is strained into a pitcher, the honey is added, and it is chilled.

Chilkas are nonalcoholic beverages, but as mentioned earlier, Ethiopians make and drink three main alcoholic drinks: mead (*tedj*), beer (*talla*), and *arak'i*. Mead is fairly simple to make. Honey is put into a pot with *gesho* (*Rhamnus pauciflorus*) leaves and water. The pot is covered and left to stand for 3–10 days, depending on the temperature. After the mixture has fermented the pot is opened, the *gesho* removed, and the liquid filtered, making it ready to drink. The process of making both beer and *arak'i* is more complicated and time-consuming. To make beer, first the leaves of *gesho* are dried, crushed, and soaked in a jug of water for three days. In the meantime, barley is used to make malt by soaking the grain in another jug for 24 hours. The water is then poured off the barley, and it is put between two layers of leaves and put into the house rafters until the sprouts reach 1½ inches. After it has sprouted, the barley is crushed until the grains are broken open. Then, the barley is placed in the sun on a metal sheet or a skin for a day, after which it is ground into flour. Flour from unsprouted barley is made into a paste, allowed to stand for three days, and then cooked on a metal griddle on an open fire. The resulting cake is broken into pieces, mixed with the sprouted barley, and added to the pot of *gesho* and water. The mixture is fermented for four days, then more water is added and the pot is allowed to stand for several days. The final step is to filter the beer from the fermentation pot into a freshly smoked clay pot. The resulting beer is a gray liquid with some grain floating in it and with a low alcohol content.

Making *arak'i* uses the same process as for making beer. But at the final dilution, only half the amount of water typically added to beer is added.

The thick brew is put into a large pot, and the top is sealed with a mixture of cow dung, mud, and straw. Next, a bamboo tube is inserted into a small hole near the top of the pot, sealed with mud. Then the pot is placed over a fire; as the liquid boils, steam escapes down the tube and condenses into a special copper or brass kettle set in water.

Typical Meals

Most Ethiopians eat three meals a day: breakfast (*qurs*) between 7 and 8 A.M., lunch (*mesa*) at noon, and supper (*erat*) after dark. They might also have a late afternoon snack with beer or coffee. Breakfast is usually a small meal and may consist of parched grain or porridge and coffee. Egg dishes may also be served. Lunch is the most substantial meal of the day, with *injera*, a main stew (*wat*), and perhaps several smaller accompanying dishes. Ethiopians may drink milk or beer with lunch and coffee after the meal is finished and cleared. Supper is a smaller meal, perhaps of leftover *injera* and stew.

Before meals are served a basin of water and soap are brought in for everyone to wash their hands and mouth. After the meal the hands and mouth are washed again. Meals are served on a low table (*mesob*) made from or topped with a flat basket, which also serves as the base for the *injera*. *Injera* serves as the plate, the utensil, and food. Several layers of *injera* are put on the *mesob*, and the various *wats* and other dishes are ladled onto the *injera* in front of each person. Small pieces of *injera* are broken off with the hands and used to scoop up the stews, vegetables, or salads. Only the right hand is used for eating. Food is scooped with two or three fingers. One should always chew with the mouth closed and along only one side of the jaw. Chewing on both sides is considered gluttony. A person eats slowly and with restraint in terms of how much is consumed. But others, particularly guests, are urged to eat. Women guests may show great reticence, claiming they have eaten already or are not hungry. During a meal with friends a person may tear off a piece of *injera*, dip it into the *wat*, then roll it up and put it into the mouth of a friend. This ritual is

called *gorsha* and is an act of cementing the friendship. Sharing meals incorporates a great deal of symbolism, as in most cultures, with commensality reinforcing bonds with kin and forging bonds with neighbors and strangers. The practice of eating in a circle, from a common round “plate,” is rife with social meaning. If the meal is a family one, husband and wife will eat together, then the children. If the people sharing the meal are outside the family circle, men and women eat separately.

Younger Ethiopians are making more use of processed or prepackaged foods that are becoming more readily available in urban markets. These foods include packaged berbere, bread, and cookies. “European” foods are also more readily available now, like pasta, macaroni, and rice. Partly prepared or processed foods have helped women save time in meal preparation. These foods not only help women who are joining the labor force but are also partly an outcome of wage labor.

Eating Out

Traditionally Ethiopians did not eat out, but meals outside the home were available. Until more recent times foods typically available in a market or street setting were mostly snacks (*maksas*). These street foods include boiled eggs or potatoes, boiled or roasted cereals, beans or peas, and breads. Street vendors might sell wats wrapped in a piece of injera. Drink stands serve a variety of fruit drinks, especially in larger towns and cities. In all cultures some accommodation must be made for travelers and other people unable to eat at home, so traditional market areas are likely to have clusters of open-air “restaurants.”

These days a dining-out culture has been established in cities, where a range of restaurants from upscale to fast food can be found. Besides offering diners traditional Ethiopian fare, these establishments offer a variety of European cuisine. As with

A group of women cooking on the street in Ethiopia, 2008. (Tiziano Casalta | Dreamstime.com)

globalization in all parts of the world, Western chains, like McDonald's, Pizza Hut, Kentucky Fried Chicken, and Dunkin Donuts, can be found. There are also Ethiopian versions of Western fast food, catering primarily to teenagers and young adults but also to families.

Special Occasions

The diversity of Ethiopian cultures means hundreds of celebrations and rituals celebrated with special foods, fasting, and feasting. The focus here is on the main festivals and holidays celebrated by the Ethiopian Orthodox Church and Ethiopia's Muslims. Practitioners of traditional religions also have their own rituals involving food practices.

Besides celebrating Christmas, Easter, and other familiar Christian holidays, the Ethiopian Orthodox Church practices fasting. The clergy of the Ethiopian Orthodox Church fast about 250 days per year, while the laity fast about 165 days per year. In addition to special fast days, fasting is observed every Wednesday and Friday. On fast days, observers have nothing to eat or drink until after 3 P.M. During Lent practitioners abstain from meat, eggs, and milk, eating fish instead. The Lenten fast is for 56 days. Christmas (celebrated on January 7) is also preceded by a fast of 40 days. Orthodox practitioners also observe many saints' days as well as a personal saint's day, on which they give small feasts. In addition, local voluntary associations (*maheber*) honor their patron saint with special services and feasts two or three times a year.

Muslims observe the Ramadan fast, during which practitioners refrain from eating from dawn to dusk. Since the Islamic calendar is based on a lunar calendar, Muslim holidays come earlier each subsequent year. At dusk on each day of the 28-day fast Muslims break the fast with special foods and drinks. At the end of Ramadan come the Eid al-Fitr and the Eid al-Adha holidays, both of which are celebrated by slaughtering a sheep or goat and feasting with family, friends, and neighbors.

Diet and Health

Even though the elements of the Ethiopian diet are quite nutritious, the food supply is not sufficient to meet the energy requirements of most of the population. Both man-made and environmental factors result in food insecurity. Food insecurity affects almost half the population. About 84 percent of the population is engaged in rain-fed agriculture; however, few households can produce all they need. There are few roads, and markets are not integrated, making the distribution of any surpluses across the country almost impossible.

Ethiopians do not eat much meat, eggs, or fish. Ethiopia has an abundant supply of fish, but the consumption of fish is low due to cultural taboos as well as inability to transport fish far from its original locale. Although the consumption of fruits and vegetables has increased over the past 10 years, it remains low. The per-capita supply of milk and eggs has also increased but remains low.

On the positive side, 96 percent of infants begin life being breast-fed. Most infants were found to be given the breast within one hour of birth, which is a crucial statistic because some cultures believe an infant will be harmed by the mother's first milk production. Interestingly, it has been found that Ethiopian mothers with no education were more likely to practice early initiation of breast-feeding. The median duration of breast-feeding is 26 months, though there is wide variation, and the duration of breast-feeding among urban mothers is much shorter.

Another dietary deficiency is the lack of iodine, particularly in mountain regions. Vitamin A deficiency is also a problem that affects young children and mothers. Anemia is another health problem due to the low consumption of animal foods. Anemia is also compounded by endemic malaria and other parasitic diseases. The consumption of teff protects against iron deficiency because the grain is high in iron. A Food and Agriculture Organization report (United Nations, 2008) suggests that food aid to Ethiopia, which primarily consisted of wheat, actually contributed to iron deficiency because

wheat, low in iron, was substituted for the traditional inclusion of teff in the diet.

Ghana

Overview

Ghana is situated on the southern part of the western bulge of the African continent. It shares borders with neighbors Togo to the east, Côte d'Ivoire to the west, and Burkina Faso to the north, and it has a coastline on the Gulf of Guinea. The country has an area of 92,100 square miles (238,540 square kilometers). The country's population of over 22 million people is comprised of more than 60 different ethnic groups. Based on language and culture the people of Ghana are usually divided into five major groups: the Akan, the Ewe, the MoleDagbane, the Guan, and the Ga-Adangbe. Each has its own distinctive culture. No area of the country, however, is ethnically homogeneous, and no single group can be found in only one area. Ethnic groups are mixed in all urban areas. The Ghanaian government does not recognize any official national religion, but roughly 62 percent are Christians. The country has the largest percentage of Christians in West Africa. Fifteen percent are Muslim, and the remainder of the population practices various traditional forms of religion.

The main division of the country, as with many states on the Gulf of Guinea, is from north to south. The south, where Ghana's capital Accra is located, had the first contact with European culture, when the Portuguese arrived in 1471. Citizens of this region, therefore, are likely to have had a form of westernized education and are likely to be Christian. This is also true in the country's urban areas. Moving northward, the country becomes more rural, and Islam becomes the predominant cultural influence.

The climate is tropical with two rainy seasons: April through June and September through November. Northern Ghana has more extreme weather conditions than the south, which can lead to food shortages.

Food Culture Snapshot

Kofi and Grace Armah are westernized Ghanaians who live in the capital, Accra. He is in private industry, and she is a teacher. Their lifestyle is that of the urban elite, and they are influenced not only by the traditional customs of their ethnic group but also by international trends. Their diet crosses ethnic and national boundaries. Ghanaians traditionally eat three meals a day, and each meal generally is comprised of only one course. The ingredients for their meals come from the local supermarket, a local street market, or from Osu, the traditional shopping area, or Makola market, Accra's largest market, where fresh produce as well as imported and manufactured foods is available. Most Ghanaian households of any means usually have a household servant of some sort, and so do the Armahs. The shopping is frequently done by the houseboy based on consultation with Grace unless a special dish is to be prepared, in which case she will do the shopping for particular ingredients. Grace also supplements the larder daily with items seen in markets as she commutes to and from work. Local delicacies are also purchased from street stalls.

Major Foodstuffs

The cuisine in Ghana is a relatively simple one that depends on seasoning and preparation more than

Subsistence farmer stands behind palm nuts drying in the sun. (Corel)

on a variety of foodstuffs. The culinary paradigm for the country is a well-seasoned soupy stew served with an accompanying starch. The stews are prepared from a variety of vegetables and meats including leafy greens of many sorts (the country boasts over 47 varieties of edible greens, each with its own distinctive flavor), peanuts, eggplant (called *garden eggs*), cocoyam, cassava, and the true yam, which is so popular that it plays an important role in many traditional Ghanaian religious observances. Ghanaian food gets its flavor complexity from a variety of spices, including cayenne pepper, allspice, curry, garlic, caraway, cloves, ginger, and a range of chili peppers that are used to season the dishes. There are also traditional West African peppers like the *melegueta* pepper and cubebs. Other ingredients such

as *egusi* or melon seeds, red palm oil, the palm nuts themselves, and a range of dried, smoked, and salted fish and mollusks are also used to season dishes.

Rice is a staple starch throughout the country, but there are regional as well as ethnic preferences. In the northern part of the country, millet, yams, and corn are more frequent, while the south shows a preference for plantains, cassava, and cocoyam (a tuber). Meat remains the food of the affluent and is relatively expensive, with beef, lamb, and goat predominating. Fish is readily available and may include sea bream, mackerel, sole, eel, herring, and more. Crustaceans such as crab, crayfish, and mollusks including mussels and oysters are also consumed. Snails are a particular delicacy, and Ghana boasts some of the world's largest. Fish and meat are often mixed in traditional dishes. Vegetables include tomatoes, avocados, green peppers, cucumbers, cabbage, and more. Fruits are widely available and include guavas, papayas, oranges, mangoes, pineapples, and bananas. Sorghum is used in the north and is the basis for a fermented beverage known as *pito*. In matters inebriating, the south shows a preference for palm wine, while the entire country (with the exception of the Islamic north) loves beer.

Cooking

The most common types of cooking in Ghana are boiling, steaming, stewing, frying, roasting, grilling, and baking. All of these methods are the basis for the traditional dishes of the country that used the traditional cookstove. In the 1950s, Ghanaian households cooked over wood or charcoal fires. Kerosene stoves supplanted many of the wood-burning ones, but in the rural areas the traditional three-rock wood stoves remain the standard. In the urban areas, the Western stove is used, as are pressure cookers, which are used to tenderize tougher cuts of meat. Refrigerators are also the norm among those with access to electricity and sufficient funds. Microwaves, freezers, food processors, and the full range of other Western culinary conveniences are de rigueur among the elite.

Most households have some kind of domestic help. It may be a relative from the country looking for

employment in the city and working in exchange for lodging, or a professional paid for services. Cooking, therefore, is often done by another woman and not the lady of the house. It is done, though, in full consultation with her and is often overseen by her. Cooking, however, remains a family activity for festive foods. Extended families will combine to prepare dishes at times of feasting, with the matriarch directing the kitchen. The myriad cultures of Ghana are oral ones, and this is the manner by which the youngsters of the household learn the traditional foods.

Typical Meals

Given the regional diversity of the country, it is difficult to generalize about a typical meal. In general, it can be said that the typical heavier meals of the day traditionally consist of a soupy stew of some sort served over or accompanied by a starch such as the fermented cornmeal known as *kenkey*. The starch may be dipped in the stew, or the stew may be scooped up with it. Rice is also an accompaniment for several dishes, as is the boiled, pounded yam known as *fufu*. There may be the European paradigm of three meals a day. That is often replaced with a different one that includes one or two heavy meals and a lighter meal or some snacking.

In urban areas, breakfast may follow the British mode and include a porridge of some sort like traditional European oatmeal, an omelet, or a sweet bread known as sugarbread, usually accompanied by the British legacy of tea with milk. Alternately, it might include one of the more traditional Ghanaian breakfast preparations like *ampesi*, a dish of cassava, yam, and plantain that is boiled with fish and onion and then pounded in a mortar and boiled again. Street breakfasts are also available around the country and usually consist of some form of an omelet and tea.

For the westernized, lunch and dinner are interchangeable and range between European and American fare like grilled or roasted chicken served with a piquant sauce and more traditional Ghanaian dishes like pepper soup or groundnut stew.

Groundnut Stew

3 tbsp vegetable oil

1 c chopped onion

½ c chopped carrots

Frying chicken, cut into serving pieces

½ lb fresh okra, topped, tailed, and cut into 1-in. rounds

1 large (28-oz) can tomatoes and their liquid

3 c chicken stock

3 c water

Salt to taste

1 habanero chili, pricked

1 c chunky peanut butter

Heat the oil in a large saucepan over medium heat. Add the onions, carrots, and chicken and sauté, stirring occasionally, until the vegetables have softened and the chicken has browned. Add the okra, and continue to cook for 5 minutes. Stir in the tomatoes and their liquid, the chicken stock, and the water. Salt to taste and add the pricked habanero chili. Then lower the heat, cover, and allow it to simmer for about 45 minutes or until the chicken is cooked through. Taste occasionally and, when desired piquancy is reached, remove the chili. Finally, stir in the peanut butter and continue to cook for 10 minutes. Serve hot accompanied by the starch of choice. Usually the starch is boiled yam, cassava, cocoyam, or sweet potato, called *ampesi* in Twi and Fanti, *nuko* in Ewe, or *agwao* in Ga. It can also be served with *kenkey* (fermented corn dough wrapped in leaves) or *banku* or fermented, boiled cornmeal that is the ancestor of the *coocoo* and *fungi* of the Caribbean.

Eating Out

Restaurants in the Western sense of the term are relatively new to Ghanaian culture. They are limited to the larger urban areas, and those that might be categorized as “white-tablecloth” restaurants are often located in the luxury hotels. Others are smaller

and not as fancy, and they serve local specialties or dishes prepared by women who are known for certain dishes. Sundays in the Christianized south of the country are often times for eating out. There is a nascent fast-food culture, with American imports and also Mr. Bigg's, a Nigerian chain of fast-food restaurants boasting four Ghanaian locations. There are also Chinese restaurants run by Chinese who hark from Asian areas of the former British Empire. Here, fried rice is a staple and is often served with noodles as well as fried chicken. There may even be the particularly British touch of baked beans. Clubs featuring various local dishes and live Ghanaian music are fixtures of urban areas throughout the country. Finally, for eating out throughout the country, there is the country's street food, accessible to all except the poorest.

The street food is based on the local cuisine and includes spots such as street stalls and pedestrian and market vendors as well as lower-priced establishments called *chop houses* that are also places for the growing middle classes; they, too, specialize in local favorites and in dishes like grilled fish, fried chicken served with savory sauces, and beef kebabs dusted with peanut flour and hot pepper called *kyinkyinga*, which are also sold by ambulatory vendors. Fresh seafood predominates along the coast. Also notable in this country where the water is not always drinkable are the street beverages. Alcoholic drinks are sold only in licensed establishments, and carbonated drinks are sold only in permanent shops that can collect the bottles for recycling and refilling. Coconuts, therefore, are popular, as are small plastic bags filled with purified water or different flavored juices.

Special Occasions

Traditional life is extremely important to Ghanaians, and the country can boast that over 100 festivals take place annually. Many of them celebrate the harvest and pay tribute to ancestors. All festivals, even funerals, involve dancing, singing, and eating. Some of the most impressive festivals are the yam festivals like the Akan festival Odwira, the presentation of the new harvest of yams to the ancestors.

It is a weeklong festival in September or October that celebrates the harvest of yams, which are a traditional staple. The major Christian holidays of Christmas and Easter are national holidays, while in the northern sections of the country and in Muslim households, Ramadan is celebrated according to Islamic tradition.

Diet and Health

In 1995, the World Bank stated that 11 percent of the population was undernourished and added that 27 percent of the children under age five were underweight and more than 25 percent were considered short for their age, or "stunted." Between 1990 and 1995 one-third of all Ghanaian children had some form of goiter, which is indicative of thyroid disease. The country's north/south divide coupled with the urban/rural one meant that rural dwellers in the northern part of the country were more subject to interrupted food supplies in the rainy seasons when flooding might interrupt food sources. The same happened in the dry season if drought occurred. The southern regions are closer to seaports and have more stable climactic conditions. The more developed economy means that there are methods of food storage, and most people can afford to purchase food from markets and other sources if their individual food supplies are destroyed. The University of Ghana's Faculty of Science has a department of Nutrition and Food Science to address these issues, and the regional African office of the Food and Agriculture Organization of the United Nations is based in Accra, Ghana.

Guinea

Overview

Guinea is a French-speaking country with a population of about 9.5 million people. The Republic of Guinea, or *La République de Guinée* in French, sits nestled between the Atlantic Ocean, Senegal, Côte d'Ivoire (Ivory Coast), Sierra Leone, Liberia, Guinea-Bissau, and Mali. It is sometimes called Guinea-Conakry to distinguish it from its neighbor to the north, Guinea-Bissau. Guinea has almost a quarter of the world's bauxite reserves and plentiful gold and diamond mines. There are four distinct geographic areas in Guinea—highlands in the interior, coastal plains and mangrove swamps, savanna, and rain forest. The capital, Conakry, is situated in the very wet, humid zone of southwestern West Africa located along the Atlantic coast. The area has a monsoonal climate and can easily receive over 157 inches of rain a year. The mountainous Fouta Djallon region also gets a lot of rain; the headwaters of three major rivers, the Niger, the Gambia, and the Senegal, are all located there.

The country has a young population—almost 50 percent of the people are 15 years old or younger—and it is quite ethnically diverse. The three largest ethnic groups are the Fulani (also known as the Peul or the Fula), the Susu, and the Malinké (also known as the Mandigo, Mande, or Maninke). Guinea is predominantly Muslim, with a smaller number practicing traditional religions and Christianity.

Food Culture Snapshot

Lamine and Salamata Bâ are Fulani. They live in Dalaba near the city of Mamou in the Fouta Djallon; they

have a five-year-old daughter. Like many Fulani, Lamine raises cattle and Salamata is a homemaker who tends the family's garden plot and gathers what they need from the nearby mountains.

The couple usually eats two meals each day, usually at midday and in the evening. Should Lamine and Salamata start the day with breakfast, they eat bread with a cup of tea or instant coffee (usually Nescafé) sweetened with condensed milk or fresh fruit. Lunch is a much heartier dish of *maffe hacco*, a sauce of pureed leafy greens—most often cassava or sweet potato leaves—cooked with palm oil and a bit of meat, usually beef or chicken, and served over rice. The couple will eat leftovers for dinner if food remains, or they may eat steamed millet, sorghum, or *fonio* (a kind of millet, *Digitaria exilis*) with buttermilk or cream.

The climate and a lack of refrigeration or reliable electricity due to a crumbling infrastructure and the government's mismanagement of resources generally mean that people do without rather than make frequent trips to the market for ingredients. Only the wealthy, usually government workers or expatriates, may have refrigeration. Supermarkets are rare for the average person, but the markets carry just about everything a Guinean cook needs in the kitchen. On a typical trip to the market, Salamata would purchase meat and fish to prepare grilled *brochettes* (kebabs) or to add to the many leaf and vegetable sauces she prepares. People buy seafood directly from fishermen where access permits, but those like Salamata who live far from the coast buy dried fish to flavor their food while cooking. Maggi cubes (*bouillon*), salt, chilies, and dried shrimp are essential ingredients available in the market.

Major Foodstuffs

Most Guineans work in the agricultural sector in this predominantly rural country. The most important agricultural products are rice, cassava, oil palm fruit, plantains, and cattle. Meals in Guinea are generally higher in carbohydrates than protein, because typical starchy carbohydrates like rice, cassava, and plantains are cheaper than meat. The most common meal in Guinea is a vegetable-based sauce flavored with meat and seafood and always served with rice or cassava.

Rice is the most important staple crop, produced here in rice paddies in coastal areas where mangrove swamps have been cleared to accommodate them. Cassava is valued for the starchy tuber as well as the leaves of the plant, and Guineans also make a version of *fufu* from cooked cassava flour. (Fufu is a common West African dish that can be made from boiled, pounded tubers like yams, cocoyam, cassava, or plantains or from the flours of these products; it is eaten as an accompaniment to various soups, stews, and sauces.) The common potato, which is indigenous to South America and spread to the African continent through initial European contact, is known locally as the Irish potato and has made its way into sauces and other dishes. Sweet potatoes—the hard white variety and the softer orange one—are also grown for their flesh and their leaves, much like cassava. Millet and the indigenous West African grains sorghum and fonio are important as a bed for sauces or are eaten as porridges or, particularly by the Fulani, with thick, sweetened buttermilk. People tend to eat different grains or starchy staples at different times of the year.

Potato leaves are important ingredients and show up in dishes like *maffe hacco*, which can be translated from Fulani as “leaf sauce” and generally refers to cassava. Sweet potato leaves (*pouté* in Fulani), spinach, and jute leaves with their mucilaginous texture are also common in sauces. Okra, beloved throughout West Africa for the slippery texture and thickening properties it lends to dishes in which it is cooked, appears in Guinea in a pureed okra sauce. Onions and tomatoes are essential to preparing leaf sauces and the tomato-based sauce known in Fulani

as *maffe soupou* (*soupou* means “tomato”). Fulani cooks use chilies sparingly, but they are essential to the fiery versions of leaf, peanut butter, and tomato sauces prepared in Malinké and Susu kitchens.

Maffe Hacco (Cassava-Leaf Sauce)

African food is really regional food; even within the vast region of West Africa where ingredients and techniques tend to be fairly similar, there are almost subregional differences. Leaf sauces are common in southwestern West Africa, particularly in Liberia, Sierra Leone, and, of course, Guinea. Here is the Guinean version of cassava-leaf sauce. The basic technique includes finely chopping or pounding leaves to puree them. Cassava leaves taste a bit like spinach with slightly tougher texture. Guineans may use any type of leafy greens as a substitute, often sweet potato leaves, which would make the dish *maffe pouté*. You can substitute collards, kale, mustard or turnip greens, spinach, or other preferred greens for the leaves in this recipe.

Ingredients

- 2 8-oz packages frozen, chopped cassava leaves or three medium bunches cassava leaves
- 1 large onion, finely chopped
- 1 tbsp red pepper flakes or chopped chilies to taste (optional)
- 1 c palm oil
- 1–1½ c water
- 2 tbsp dried, ground shrimp
- 1 bouillon cube

Thaw and drain frozen cassava leaves in a bowl and set aside. If using fresh leaves, wash, dry the excess water, and roll into a tight bundle. Using a sharp knife cut thin strips of the leaves to create very fine shreds. Finely mince onion while heating palm oil in a medium-large pot until it begins to smoke. Add minced onion and fry 1 minute. Add leaves and fry an additional minute. If using frozen leaves add liquid drained from leaves and 1 cup of water; if using fresh leaves use 1½ cups of water. Add dried shrimp

and stir well. Add bouillon cube and red pepper, if using, then stir. Cover tightly, and reduce heat to medium low. Leave mixture simmering about 30 minutes or until liquid has cooked away and mixture is moist but dry on top, stirring occasionally. Serve with rice.

The tropical environment affords Guineans access to fresh fruits such as pineapple, papayas, mangoes, bananas, guavas, mangosteens, and sugarcane, all of which are grown commercially; people eat fresh fruits as snacks and prepare them as juices. Oil palm fruits, the source of both palm oil and palm butter, are another key crop. Palm oil is an important source of vitamins and perhaps the most important cooking oil. It is prized for the deep orange hue it imparts and the very distinctive flavor it adds to dishes.

Primary sources of protein are beans and meat, with one of the most regionally important being the peanut, called *l'arachide* or *le cacahuète* in French. Cowpeas (black-eyed peas), yambeans, and peanuts are important varieties of legumes in Guinea. Peanut butter is the key ingredient in a peanut butter-based sauce known as *maffe tegga* in Fulani. Beef, chicken, and goat and bush meat are sold in the market and eaten regularly by Guineans. Bush meat is wild game, usually from forested areas, and can include everything from snakes and rodents to wild pigs; it is an important and much-beloved addition to the Guinean table. Because Guinea is predominantly Muslim, most Guineans generally do not eat pork; however, bush pigs are a particular delicacy in the forest region. People tend to keep their own chickens in their yards; the breed tends to have tough flesh with a gamy flavor.

Seafood is an important part of Guinean cuisine. It may be purchased directly from a fishing boat on the coast and fried, grilled, or added to sauces, or it is consumed in dried, salted, or smoked forms by people living further inland where access to fresh seafood is limited or nonexistent due to a lack of refrigeration. Popular fish include tilapia, mackerel, black bass, and cod along with shrimp and crayfish. One very important seasoning that is a key flavoring in sauces is dried, ground shrimp or crayfish; it also

appears across the Atlantic in the West African-influenced cuisine of northern Brazil.

Milk and milk products are important to the Guinean diet because the Fulani, one of the country's largest ethnic groups, are traditionally cattle herders. Newborns are generally given fresh milk while adults are more likely to eat products like butter, yogurt, buttermilk, and cream, usually eaten with grains. Sweetened buttermilk and thick cream are often eaten with steamed grains like millet and fonio.

Guineans drink coffee and tea throughout the day as well as soft drinks. Because Guinea is a Muslim country, alcohol is prohibited just about everywhere except in the forest region, which is predominantly Christian and animist. There, people may drink beer and locally produced palm wine.

Cooking

Ingredients and cooking techniques are similar throughout West Africa. Foods are primarily boiled, fried, roasted, or grilled and are generally made from scratch, as Guinea does not have a developed food-processing industry. Few prepared ingredients are available. Those that are include smoked, salted, or dried fish and meat; dried herbs; various flours; sugar; condensed milk; tea; and instant coffee. Most food preparation takes place outdoors over a fire or in a separate building adjacent to a family's living area. Most households don't have stoves or ovens. Families generally do not have cooks—the wives and daughters in a family prepare meals. In polygamous households, women may share cooking and other household duties. Spices and grains are crushed or ground in mortars and pestles; a household may have several in various sizes designated for specific purposes.

Typical Meals

Guineans typically eat from a communal bowl with spoons, exclusively with the right hand, because the left one is reserved for personal hygiene. Guineans, rich and poor, are very hospitable and welcome guests with food as budgets permit. Anyone visiting a family at or around mealtimes will be invited to

A woman cooks at a market in Gueckedou, Guinea. Gueckedou is a town in the south of Guinea, near the border with Sierra Leone. It has a large weekly market that attracts many traders, including those from across the border. (Travel Ink | Getty Images)

sit down and eat, and as a sign of hospitality they may also be given a kola nut to chew. It is polite for guests to leave a bit of food on their plates to show gratitude and satisfaction with the meal that has been provided.

While Guinea boasts a great deal of ethnic diversity, food and cooking are very similar among the groups, with the exception of flavor profiles. Of the three major ethnic groups, the Fulani tend to prefer less spicy dishes and may provide chili sauce on the side to add to taste. The food of the Malinké and the Susu is generally very spicy with chilies added directly to a particular dish while cooking. A traditional Susu dish is *achecké*, grated, fried cassava, which is usually used as a bed for grilled fish or meat, often served with chopped onions and tomatoes. A dessertlike porridge of steamed fonio is eaten with thick, sweetened buttermilk, much like the Senegalese dish *sow*, while fresh corn kernels are

sometimes eaten in bowls of fresh milk. The dairy in these dishes shows the influence of the cattle-herding Fulani.

Eating Out

There are plenty of restaurants in cities and towns throughout Guinea; however, dining in restaurants is not a common practice. At local *cookhouses*, people can find traditional sauces served with rice or cassava. One entrée commonly featured on the menus of these establishments is *riz gras*, a hearty dish of cooked rice fried in oil and piled with vegetables like carrots, cabbage, and squash. The dish is common throughout Senegal, Burkina Faso, Benin, and Guinea. It can sometimes contain meat and be cooked with tomato paste. There are also many Lebanese restaurants in larger cities and towns, where people can get Lebanese specialties.

Special Occasions

Guineans celebrate religious holidays according to their faith, although recently Muslims have begun to hold small Christmas celebrations. Tabaski, the Islamic holiday Eid al-Adha (known in English as the Festival of Sacrifice), is an important celebration for Muslims throughout the country. For this holiday in Guinea, livestock, usually a goat or a cow, is slaughtered for a feast that is shared among community members, particularly the poor. Milestones in life, like engagements, births, weddings, and funerals, are celebrated with parties, feasts, and music among family and friends.

Diet and Health

The Guinean diet is a healthy one with plenty of fresh fruit, seafood, and healthy palm oil. Minimal food processing and essentially no access to fast food have limited many diseases related to the overconsumption of highly processed, unhealthy foods. However, years of sporadic armed conflict along with governmental neglect and corruption have exacerbated poverty and accelerated the deterioration of the country's already-fragile infrastructure. Poverty has also caused ethnic tensions, while explosive population growth coupled with underdevelopment of the country's agricultural production systems has made malnutrition a real issue in Guinea, contributing to the problem of limited access to food even though a high percentage of the population works in the agricultural sector.

Overcrowding of the few hospitals and medical centers and a lack of doctors make treatment

difficult even with large numbers of nongovernmental organizations running programs that target health. Only about half of all Guineans have access to clean water, and fewer than 20 percent have access to adequate sanitation. Poverty and corruption make maintaining adequate health programs a difficult task.

Kenya

Overview

Kenya straddles the equator in East Africa, bordered on land by Ethiopia, Somalia, Sudan, Uganda, and Tanzania and by bodies of water: the Indian Ocean in the east, Lake Victoria to the west, and Lake Turkana to the north. A bit smaller than Texas, Kenya has several, varied types of terrain: central highlands that are relatively cool and well watered; Mount Kenya, the second-highest mountain in Africa; hot and arid lands in the east, north, and northeast; and in the west the Great Rift Valley, through which many migrants and invaders have passed. Another conduit of invasions and influences—Islam and Christianity, for example—is the hot, wet, tropical Indian Ocean coastal strip and adjacent islands.

Kenyans are renowned for their hospitality, kindness, and industriousness. Kenya has long been a popular tourist destination for game-viewing safaris and beautiful Indian Ocean beaches. Nairobi, the cosmopolitan capital, has served for years as the regional headquarters of organizations like the *New York Times*, the World Bank, and United Nations agencies. Kenya is a center of scientific interest on many fronts, including important archaeological sites such as Koobi Fora, where fossils of *Homo habilis*, possibly the first of the genus *Homo*, were found.

In Africa the population is drawn to the cities for economic reasons, yet 75 percent of the Kenyan population is still agricultural (2003 estimate). Literacy is upwards of 85 percent. However, there is an unemployment rate of 40 percent (2008 estimate), and fully 50 percent of the population is below the poverty line (2000 estimate).

Swahili (called Kiswahili when one is speaking the language) and English are both official languages. Each ethnic or cultural group also has its own language—indeed, much of the categorization into groups is done on a linguistic basis. The wide variety of Kenyan languages, coming as they do from an array of unrelated language families, speaks volumes about the numerous migrations that brought people to what would later be called Kenya.

Swahili is a much-misunderstood language. A simplified, stripped-down pidgin version became the lingua franca—a language of intergroup communication—when East African groups had no other common trading language. This pidgin variety gets little respect as it is inelegant and able to discuss only commerce and work, with limited grammar and vocabulary: It is no one's native language. This pidgin should not be confused with the “real” Swahili language, spoken as the native language of the Swahili people who live on the Indian Ocean coast, which is grammatically very complex and subtle. Swahili has had a rich, mostly poetic literature for several centuries; the language was first written in Arabic script, but for the past 100 years has been written almost entirely in the Roman alphabet.

The people of Kenya are diverse: Depending on the criteria used, there are some 40 to 70 different African linguistic or cultural groups, whom anthropologists have traditionally categorized as either hunter-gatherers, pastoralists, or agriculturalists. Since populations of hunter-gatherers have unfortunately been greatly reduced over the course of the last century, the focus will be on the other two groups in the discussion of traditional foods. These belong to

the Bantu, Nilotic, Nilo-Hamitic, and Cushitic language groups.

Kenya's population in 2009 was almost 34 million, about 3 million of whom lived in the sprawling capital, Nairobi. The approximate breakdown of ethnic groups is Kikuyu, 22 percent; Luhya, 14 percent; Luo, 13 percent; Kalenjin, 12 percent; Kamba, 11 percent; Kisii, 6 percent; Meru, 6 percent; other African (Swahili, Maasai, Samburu, Gabbra, Okiek, and many more), 15 percent; and non-African (Asian, European, and Arab), 1 percent.

Kenya's culinary situation has come about from an amalgam of influences. The British, Kenya's colonial rulers for most of the 20th century, are important from a culinary standpoint. They tried to recreate English customs, dining rituals, and food anywhere they lived in the world. Colonial-age cookbooks attest to extensive experimentation with recreating their dishes using local ingredients—with widely differing degrees of success. British food is still popular in Kenya. Fish and chips, pasties, full English breakfasts, cheddar cheese, beef Wellington, and more can still be found.

Also of great importance are the people of the Indian subcontinent, referred to in East Africa as

Bananas growing wild in Kenya. (iStockPhoto)

Asians. The effect of Indian cuisine on the food of East Africa cannot be overstated. The most popular gravy or sauce is curry; the national snack is the samosa; the favorite bread is a chapati; the most festive rice dish is *biryani*, showing pan-Islamic origins as well. Some of this is due to the influence of the British, too. The British Empire (the Raj) produced a pan-Raj set of standards, language, and, to a degree, food. Additionally there is Arab—or at least Muslim diaspora—influence, through Swahili food, and Italian influence, through the global ubiquity of pizza and a continually healthy number of Italian tourists, and also an influence of Somalis. Ethnic Somalis occupy a portion of northeastern Kenya that was previously part of the Italian colony of Somalia, which was taken from the Italians after World War II.

🍴 Food Culture Snapshot

Grace and Joseph Matheka, a mechanic, live on a farm in the rural Mua Hills outside of Machakos, the capital of Eastern Province, in a semiarid area. Grace rises before dawn, and she and her nine-year-old daughter, Rose, take their jerrycans and walk a mile to a stream where they draw water and then, using tumplines on their foreheads, carry the heavy jerrycans back to their homestead. They make a simple breakfast of tea for Joseph and the seven-year-old son, Wambua, who enjoy it with some *mandazi* (fried donuts) or leftover food from last night's dinner. The main meal of the day is the evening meal, which they have around 8 P.M. when Joseph returns.

To celebrate today's public holiday, the family will have a special dinner; Grace has had Wambua chase down one of their chickens that has stopped laying eggs. She cuts off its head, lets the blood drain off, plucks it, cuts it open, and cleans the carcass. She retains the liver and gizzard and gives the rest to the dogs that are quietly seated a yard from her watching with anticipation. Grace cooks a large pot of *ugali* (cornmeal porridge). To accompany it she makes *sukumawiki* (kale) and a stew of the chicken, which she flavors with *dania* (cilantro leaves) and a packet of *bizari* (curry powder). They have grown the corn and paid the shop owner down the road to grind it into

meal with his gasoline-powered grinder. Grace grows her own greens and onions. She goes the six miles into Machakos town on market days with her cowife Maria, who lives in the house down the hill from her, and sells her extra produce, using some of the cash to buy sugar and tea.

With the meal the children usually drink water and the adults tea, but sometimes Joseph will buy Fanta for Grace and the children and three Tusker beers for himself. Grace sends Rose out to her father with a basin of cold water so that he can wash his hands before he starts on his dinner, which Grace brings to him in his favorite chair where he is listening to the evening news on BBC World Service. Joseph calls out for Rose to bring him some more water and soap to clean his fingers. Joseph insists that eating ugali with a spoon makes it tasteless and prefers the common method of eating with his hand. Afterward, he goes to a neighbor's house where the wife brews and sells *uki* (honey wine), and a group of men come to sit and talk for a couple of hours, drinking the illegal *uki* and smoking Sportsman, Rooster, and Embassy cigarettes, until it is time for them to return home.

Major Foodstuffs

The staple corn—the main source of calories for most Kenyans—as well as the tomato was originally from the Americas, brought to Africa. The rice in East Africa is *sativa*. Asian rice came via migrants from the Indonesian region through Madagascar perhaps 1,200 years ago. Other important carbohydrate staples of Kenyans, if not grains, are cassava (also called manioc or yucca), sweet potatoes, and potatoes, all three foods from the Americas.

Kenyans grow many types of bananas, both sweet and cooking types, as well as mangoes, passion fruit, pineapples, papayas, avocados, many types of legumes (including cowpeas, black beans, and kidney beans), millet, rice, cassava (manioc/tapioca), onions, garlic, and coriander. Fishing is an important food source as well as an export earner. Other main crops are wheat and dairy products. Kenya's colonial past resulted in a cheese-making tradition not shared by most other African countries. It produces, for example, superb Camembert.

Unlike the Western conception of what is the essence of a meal, usually a protein, Kenyans consider the grain (ugali, rice, or chapati) to be the main food of the meal, and the meat, fish, vegetable, or a stew of these to be the *kitoweo*, or accompaniment. Upcountry (away from the Swahili coast), the word *mboga*, literally “vegetable,” but also “cabbage” (as the prototypical upcountry vegetable) or “pumpkin,” is used in the same undifferentiated sense as *kitoweo*, as “something to accompany the main starch,” even if the *mboga* be meat.

Important starches in addition to maize, rice, and breads are *viazi* (potatoes), *matoke* (plantain), and *muhogo* (manioc). Other main vegetables are *bir-ingani* (eggplant), *saladi* (lettuce), *pilipili hoho* (hot peppers), *pilipili baridi* (sweet peppers), *ukwaju* (tamarind), *nyanya* (tomatoes), *karoti* (carrots), *kabichi* (cabbage), *sukuma wiki* (kale or collards), *mchicha* (spinach), *parachichi* (avocado), *vitunguu* (onions), and *vitunguu saumu* (garlic). Fruits (*matunda*) are varied and of high quality: *paipai* (papaya), *ndizi* (bananas), *tende* (dates), *pasheni* (passion fruit), *stafeli* (soursop), *madanzi* (grapefruit), *machungwa* (oranges), *mananasi* (pineapple), *ndimu* (limes), *dafu* (unripe coconut, for drinking), and *nazi* (ripe coconut, used for *tui*, or coconut cream). Also grown is *miwa* (sugarcane).

Mchuzi is the general word for sauce or gravy and sometimes, by extension, soup. *Supu* means only soup, a popular breakfast on the Indian Ocean coast (and many other places in the world). A common menu item in Mombasa restaurants is “special morning soup,” usually made with goat. *Mchuzi* can also mean curry (sometimes called *kari*). Curries, for example, of *kuku* (chicken), *ng'ombe* (beef), *kima* (ground meat), *kofta* (meatballs), or *samaki* (fish), are probably the most popular type of *mchuzi*. *Masala*, or *mchuzi mzito* (“heavy *mchuzi*”), is *masala*, which in Kenya differs from curry most obviously in being heavier and drier. *Bizari* is the general term for curry powder, and premixed packets can be bought in any shop. A popular brand is *Mchuzi Mix*. However, at least on the coast, one can buy whole or ground spices, notably *pilipili manga* (black pepper; literally, “pepper of Oman”), *tangawizi* (ginger), *iliki* (cardamom), *jira* (cumin), *mdalasini* (cinnamon), *manjano*

(turmeric), and *karafuu* (cloves). (The punishment in neighboring Zanzibar for smuggling cloves, so important was the spice to the local economy, was death, well into modern times.) Salt is *chumvi*.

Popular meats are *nyama ya ng'ombe* (beef), *nyama ya ndama* (veal), *nyama ya mbuzi* (goat meat), *nyama ya kondoo* (lamb or mutton), *kuku* (chicken), and in some places *nyama ya ngamia* (camel meat). *Karanga* is a menu term for beef stew, and *ng'ombe* (“beef”) is the menu term for a beef stew with less beef than *karanga*. *Nyama choma* is roast meat, and *mishkaki* is roasted skewered meat.

Muthokoi (a Kamba word) is dehulled maize, usually served with legumes like *kunde* (cowpeas). Other important legumes are *maharagwe* (kidney beans), *pojo* (green gram, or mung beans), *dengu* (lentils), *njegere* (chickpeas), and *mbaazi* (pigeon peas). Popular nuts are *njugu karanga* (peanuts), much used in cooking, and *korosho* (cashews). The

latter plant also bears the tart and refreshing fruit called *kanju* or *bibo*, the cashew apple.

Some Kenyans do not eat fish or seafood of any kind, though some groups that traditionally did not have now started eating these. Coastal people have always eaten from the sea. Popular foods from the Indian Ocean are *pweza* (octopus), *ngisi* (cuttlefish or squid), *kole kole* (pompano), *changu* (emperor's glory snapper), *tafi* (rabbit fish), *mkesi* (mullet), *tewa* (grouper), *papa* (shark), and *nguru* (kingfish), as well as *ng'onda* (semidried fermented fish). *Kamba* means either shrimp or lobster (if necessary, one distinguishes between *kamba mdogo*, “little kamba,” for shrimp and *kamba mkubwa*, “big kamba,” for lobster). Swahilis and other coastals eat shrimp, but, though called by the same name as shrimp, lobster is not eaten. Swahilis also do not eat *kaa* (crab) or *chaza* (oysters), all of which are, however, enjoyed by many *wageni*, the Swahili word

Locals buying fish on the beach in Mombassa, Kenya. (iStockPhoto)

for visitors, strangers, and guests. Tilapia, a fish, is raised in ponds and, like other freshwater fish, is taken from the inland lakes.

Beverages

Kenyan tea (*chai*) and coffee (*kahawa*) are famous and shipped worldwide. Kenya is now the third-largest global producer of tea, after China and India. Tea is the cornerstone of much Kenyan hospitality in the home and a common beverage in a restaurant. The normal *chai* one orders in a restaurant is made from tea leaves boiled with milk and sugar, sometimes with some spices like cardamom added. (To get black tea one orders *chai kavu*, literally “dry tea,” and asking for *chai ya china*, literally “Chinese tea,” will obtain a larger proportion of milk to water.) Also popular are bottled soda drinks such as Coke and Orange Fanta. Coca-Cola is an important and powerful industry. Soda can be found in the most rural, out-of-the-way places but is relatively expensive for much of the population, as is bottled beer. Kenya Breweries makes several varieties of pilsner-type beer (*bia*) much like those made worldwide. It can survive the long journey to the hinterlands that an unpasteurized beer never could. Also, some home brews are popular in Kenya, but they are technically illegal. *Uki*, *busaa*, and *muratina* are various (now-illegal) local brews, *cha'ngaa* is moonshine (illegal alcoholic spirits like gin or whiskey), and *mukoma* is tapped palm sap allowed to ferment into alcoholic palm wine. *Pombe* and *tembo* are the terms for alcoholic beverages in general. *Tembo* is also a word for elephant, and this play on words has resulted in Tusker (Elephant) brand beer (Tembo brand tembo). In a bar one orders *bia* either *baridi* (cold) or *moto* (hot, that is, room temperature). Many Kenyans never drink cold beverages, including soda.

Kenyan coffee is well known, though in the United States one often sees only “peaberry.” A great deal of less expensive robusta (as opposed to arabica) coffee is grown and processed into instant coffee. A common restaurant drink is *kahawa maziwa* or *kofi*, instant coffee in hot milk. *Maji tamu*, literally “sweet fluid,” is the term for fruit juice, of

which there are *maji ya machungwa* (orange juice), *maji ya ndimu* (lime juice or lemonade), *maji ya nanasi* (pineapple juice), and *maji ya pasheni* (passion fruit juice). These are found fresh but often tinned. In addition, *maziwa* (milk) is also a popular beverage, most likely to be drunk in milk tea. Fermented foods are important and include locally fermented milk, *maziwa lala* (literally, “milk sleep”), beer, honey wine (*uki*), *uji* porridge (made from millet, corn, and/or sorghum flours), and distilled spirits, as well as European-style industrially produced yogurt, pilsner beer, spirits, and wine.

Cooking

In more traditional houses, food is cooked on a three-stone (*jiko*) hearth, in aluminum cooking pots with rims (*sufuria*) on a fire of wood or charcoal. The family might use an “improved *jiko*,” an insulated sheet metal cooker that will use less fuel (but also throws off less heat into the living space). It is the women and children’s job to supply water, and this may be a difficult task requiring hours of walking to a water source and back carrying heavy containers of water. Similarly firewood is the women’s purview. More urban or middle-class families will use kerosene or gas cookers.

In cooking *dania* is the typical flavoring. In English the seed is called coriander and the leaves cilantro. Especially upcountry (away from the Swahili coast), *dania* leaves are often the only spice or herb used.

Food and drink in Africa are changing rapidly. Many traditional foods are disappearing because of change from ecological degradation, population pressure, westernized tastes, and other agricultural and cultural change. One such food, actually a drink, is *uki* (pronounced *oo-key*), honey wine made by the Kamba (Akamba in their language) people of Kenya. Its production and consumption were in the past subject to clearly defined rules that wove *uki* into the dense symbol structure of a highly organized community. The beverage still has much traditional meaning, but *uki* is on the wane. As an emblem of the old, tribal order, *uki*’s decline was probably

inevitable given the drastic upheavals of traditional society and the eagerness of young people worldwide for the new, the modern, the Western. But uki is a case where the demise of a traditional foodway was greatly expedited by the government, specifically, the hunger of a nation-state for tax revenue. Uki is hard to tax because its production is too hard to control. Beer and whiskey produced industrially are much more straightforward to tax.

In the past, pastoralists eschewed cultivated food and relied on food from their herds: milk, meat, and blood. Meat but especially milk, fresh or as a fermented product, provided the most nutrients and calories, with some essential nutrients provided by small additions of blood taken from live animals with a special arrow with a quite shallow half-moon arrowhead. This was shot at point-blank range into the vein of an animal and caused a shallow cut through which blood was collected in a gourd.

Settlement schemes, national borders, overgrazing, lack of water, encroachment on territory, and other influences have undercut the traditional culinary reliance on the herds and their milk. In the past, during famine Samburu would turn more to blood and to wild fruit. Nowadays, Samburu rely on store-bought food—cereals such as corn (or the more civilized rice), beans, tea, and sugar. These they refer to as “gray food,” which is cooked and eaten by the family domestic unit together. Morality, social distance, discipline, and respect were in the past bound up in separate eating. Milk could be taken at any time and not in a group—except a *moran* warrior’s obligation to eat with an age-mate (another *moran*). Meat strongly showed appropriate separateness

Typical Meals

The prototypical Kenyan meal—and here Kenya is similar to much of the world—consists of a grain and a sauce. For many Kenyans the grain is rice, or wheat flatbreads, but, most commonly, a thick, stiff porridge of cornmeal (maize), served with a sauce of greens like collards or kale with the addition of onion and tomato and, if possible, fat and meat.

Sukuma Wiki

This is a popular and inexpensive staple dish of greens to accompany ugali, chapati, or another starch. It is made from any type of collards, kale, spinach, turnip leaves, or other edible greens.

One can read on many Web sites that *sukuma wiki* means “push the week,” the idea being that this poor person’s dish of greens can get one through the week. *Sukuma* does mean “push” and *wiki* does mean “week,” but that fanciful origin is unlikely, among other reasons because pay is not weekly but monthly in Kenya—indeed, the term *mwisho wa mwezi* (end of the month) is a common phrase to explain why one is *waya* (broke). More likely is that *sukuma wiki* is close to the name for greens in some other language—there are over 40 languages in Kenya—and when Swahili speakers heard the word it sounded like *sukuma* and *wiki* to them. Whatever the history, it is a nutritious, inexpensive, and quite tasty dish.

1–2 lb greens

2 tbsp cooking oil or shortening

1 onion, sliced

1 hot chili, sliced (optional)

1 tomato or 2 tbsp tomato paste (optional)

1 tbsp curry powder or other seasoning powder (optional)

1 c any type of meat, raw or cooked, chopped (optional)

Salt

Wash a large bunch of greens well. Holding the cleaned bunch firmly in one hand on a cutting board, cut thin (½-inch) slices through the greens to produce shreds.

Sauté onion in oil till translucent. Add chili if using, and stir for a minute. Add meat (if raw), if using. Add tomato and curry, if using. Mix well and allow to heat through. Add greens, and mix well. Add meat (if already cooked), if using. If the mixture is dry and threatens to burn, add a half cup water. Cover and simmer for a few minutes till greens are tender. This

time will vary considerably with the toughness of the greens used. Salt if necessary. Serve with ugali, chapati, bread, or rice.

Ugali, cornmeal (maize) porridge cooked till stiff, is the most common daily food. Typically a diner breaks off a piece, dimples it with a thumb, and uses it to scoop up the accompaniment of sauce, greens, or meat. On the Indian Ocean coast this corn porridge is called *sima* and *bodo*, cooked not as stiff as ugali but used essentially the same way for eating. Muslim coastal people and many others use only the right hand for eating. It is considered good form to use only the fingertips, though a very common technique is to roll the ugali or sima (or rice or other grain) using one's fingers and palm to form a ball (*kitonge*). *Wali* is (cooked) rice. Uncooked husked rice is *mchele*, while the rice plant and unhusked rice are called *mpunga*.

Eating Out

In cosmopolitan Nairobi there are many different types of restaurants. A standout among Nairobi restaurants has for decades been the superb French restaurant Alan Bobbé's Bistro. Two other popular restaurant cuisines are Italian and Indian. Nairobi has many superb Indian restaurants. The Carnivore is a well-known all-you-can-eat meat restaurant and

Ugali, a cornmeal (maize) porridge, cooked till stiff, is the most common daily food in Kenya. Here, it is served with sukuma, or kale. (iStockPhoto)

reflects the esteem in which Kenyans hold nyama choma, or roast meat. Their original logo was a man swallowing a whole live cow. The Carnivore's format appears to have come from the Churrascaria, a Brazilian cowboy restaurant. Format aside, the Carnivore caters to an important Kenyan tradition: A true feast involves eating quantities of meat, a highly desired food and a mark of status, sharing, and respect. Nyama choma, often washed down with beer or a local brew, is perhaps the most popular form of this. Many Kenyans are essentially vegetarian but not by choice. The economic situation of the vast majority—recall that half of Kenya is below the poverty line—places meat virtually out of their reach but makes it no less desirable. The Carnivore opened in 1980, to, as their ads say, “instant success.” Indeed it is simply the most famous and upscale of the many nyama choma centers around the country.

The popular Nairobi Java House coffee shops provide a different angle on globalization. Their menu is indistinguishable—not virtually but literally indistinguishable—from that of similar coffee shop lunch places in any downtown in North America. The coffees on offer are house coffee, espresso, americano, macchiato, café au lait, cappuccino, café latté, mocha, and Malindi macchiato. The breakfast selections include cinnamon rolls, chocolate croissants, and Danish pastries; bagels toasted with cream cheese; guacamole and salsa; home fries; and a Denver omelet with ham, cheese, tomato, onion, and green chili. This is not a foreign food restaurant, as is a local Chinese or even an Ethiopian restaurant; it simply an urban Kenyan coffee shop.

An interesting contrast with the more upscale and middle-class restaurants is provided by local street foods sold in kiosks and other street-food outlets in lower-income neighborhoods in greater Nairobi. Few foods overlap with the upscale foods. Among cereals are chapati, the panfried unleavened bread made from wheat; mandazi, deep-fried, leavened buns like doughnuts made from wheat; *mahindi chemsha*, boiled corn on the cob; *mahindi choma*, corn on the cob grilled over charcoal; ugali; uji, a fermented porridge made from cereal flours; and *biskuti*, or cookies. Animal products include nyama

(roasted, fried, or stewed meat) and samaki (fish), usually deep-fried. Mixed dishes are, for example, *githeri* (a Kikuyu word), made from a mixture of maize and beans. In street kiosks, tea is common as well as *irio* or *mokimo*, a mix of corn, potatoes, greens (such as kale, collards, or spinach), and sometimes beans, mashed together. This is served in almost all urban areas to go along with nyama choma. Also popular are samosas or *sambusas*, Indian-derived deep-fried triangular meat or vegetable patties with a pastry crust. On the coast they are served with lime, and diners often bite off a corner of the crust and squeeze the lime into the filling inside.

Special Occasions

Many Kenyans celebrate Christmas, and it is a period of travel and gathering of families in the ancestral home areas. Other important celebrations include naming ceremonies for children and weddings, and all have special food traditions attached. Food plays a central role in the important Muslim month of Ramadan. Devout Muslims fast during daylight hours. They are forbidden to eat food, chew *miraa* (a stimulant leaf, known elsewhere as khat), smoke cigarettes, or drink water. People rise before the morning prayer to eat a breakfast to sustain them throughout the day of fasting. The evening call to prayer signals each day that the fast is over. Restaurants in largely Muslim areas are closed during the day, as are many businesses. A special set of recipes are made and eaten at home during Ramadan. Eid al-Fitr is a festive holiday that ends the month.

Diet and Health

There are severe nutrition problems for much of the nation, made worse by the fact that 50 percent of the population is below the poverty line (2000 estimate). About 80 percent of Kenyan land gets very little rain. Less than 20 percent of the land is good for agriculture, and this 20 percent feeds 80 percent of the population. This land is overused and is being degraded. Kenya's food supply is limited, and

a third of the country is undernourished. Things are getting better but only slowly. Most people get their calories each day from cereals, sugar, and vegetable oil, but the availability of fruit, vegetables, and milk is increasing.

Young children are often malnourished. Although universal breast-feeding helps greatly, it is often mixed with nonbeneficial practices such as bottle-feeding, which are made more damaging by poverty. The Food and Agriculture Organization has concluded that long-term strategies are needed such as putting additives in common food to attempt to ensure that vitamins and other micronutrients get in the diet, promoting the consumption of more diverse foods such as fruit and vegetables, and in general educating the population about good nutrition.

Liberia

Overview

The Republic of Liberia lies in the heart of West Africa, bordered by Sierra Leone, Guinea, and Côte d'Ivoire. It and neighboring Sierra Leone are the only two countries created as a destination of resettlement for formerly enslaved Africans repatriated to the continent from the United States and the Caribbean. With a 360-mile coastline stretching along the Atlantic Ocean, the country has a population of about 3,500,000 people. The country is extremely hot and wet, with its capital Monrovia holding the title of wettest capital city in West Africa along with Freetown, the capital of Sierra Leone. Like the rest of West Africa, the dry winter season is signaled by the harmattan, the cool, dry, dusty wind that blows south from the Sahara desert and provides a bit of relief from West Africa's heat and humidity. In 2007, the citizens of Liberia elected the continent's first female president, Ellen Johnson-Sirleaf.

Liberia's recent history is one of an almost-continuous 20-year civil war among indigenous groups and descendants of freed formerly enslaved people of African descent from the United States, who refer to themselves as Americo-Liberians. In 1822, the American Colonization Society (ACS), a group of whites dedicated to returning black people (freedmen and escaped slaves) to Africa, sponsored the first group to establish a resettlement colony for free African Americans, and by 1847, the Republic of Liberia was born. Today, the descendants of this group still live in the country as a small but powerful minority among the 15 different ethnic groups in the country, which include the Grebo, Mende, Gola, Kru, Krahn, Mandingo, Bassa, Kpelle, Loma, and

Vai. The country's history has led to difficult and tragic interactions among the Americo-Liberians and indigenous groups, most notably civil war that lasted throughout the 1990s. The official language is English, but a creolized form of English is the primary form of communication among people who speak more than 20 different indigenous languages throughout the country.

Liberia is Christian, but many people also practice various forms of indigenous religion. Islam accounts for the beliefs of the remainder of the population. Liberia was never colonized by European powers, but due to its unique history it has a close connection to the United States and has had positive diplomatic relations with the U.S. government for most of its history.

Food Culture Snapshot

Matina Kabba makes trips to Monrovia's Duala market almost daily for the provisions she needs to prepare meals for herself and her children. Matina is a seamstress and a single mother of two children; her husband was killed during the last of the civil conflicts, which ended in 2007. She is of mixed Americo-Liberian and Grebo heritage. Like most Liberians, Matina and her family usually eat only two full meals a day, but in the Americo-Liberian tradition, they sometimes eat a full breakfast of bacon and eggs with a cup of tea or coffee. More frequently, however, she and her family begin the day with a light meal of tea and bread or fresh fruits like pineapple, bananas, or mangoes that Matina purchases at the market.

An African woman beating cassava root in a mortar in Liberia, West Africa. (iStockPhoto)

Because most dishes contain palm oil or palm butter, which is prepared from palm fruit, Matina purchases both in bulk at the market and prepares various stews and sauces with them. A very simple lunch or dinner dish consists of red palm oil and rice, okra, chilies, and smoked fish. To prepare other dishes, Matina will purchase cassava and cassava flour, to prepare *dumboy* or *fufu*, respectively. *Dumboy* is a starchy dish of boiled fresh cassava root pounded until soft and pliable and eaten with various soups, while cassava *fufu* is generally made with cassava flour. *Dumboy* can also be made from plantains and breadfruit. Plantains can be eaten ripe or unripe; in either state, they are usually fried as snacks or accompaniments to a main meal. Unripe plantains have green skins, while ripe plantains are sweet and have skins that range from yellow to black; both are inedible raw.

Matina will stock up on the dried and smoked fish used to flavor the soups and stews that so frequently grace her table. Preserved ingredients are usually purchased in bulk while fresh ingredients such as meats, fruits, vegetables, and other perishables are purchased the day that they are used due to a lack of refrigeration.

Major Foodstuffs

The staples of the Liberian diet are palm oil, rice, cassava, and fish or meat; these ingredients are usually cooked together in various combinations. Almost 70 percent of the population is employed in the agricultural sector, in which cassava and rice are the major cash crops. Liberia also produces a number of other important food crops such as cacao, coffee, sugarcane, palm oil, and bananas.

Palm oil and palm butter are important foods that are both culturally and nutritionally significant in Liberia and throughout West Africa. Palm oil is a deep red-orange color with a high percentage of beta-carotene. It is one of the few vegetable oils with a high percentage of saturated fat—about 44 percent. Palm oil is used for frying, flavoring, and coloring foods and is also an important ingredient in Brazilian cooking, having traveled with captured Africans to the Americas during the transatlantic slave trade. The oil remains semisolid in more temperate climates because of its high level of saturated fat. Palm butter is prepared by soaking the pulp of palm nuts, then cooking the liquid extracted from them. It is used as the main ingredient in palm butter soup or is simply eaten with rice or cooked with leafy greens. Burnt or boiled palm oil loses its red-orange color and much of its nutritional value but is also an important cooking oil.

Liberians favor leafy greens in their cooking; they are generally referred to as “leaves.” Sweet potato and cassava leaves are used most often in the preparation of soups and stews, better known as sauces. *Palava sauce* is made from a puree of slippery *plato* leaves, also known as bitterleaf; the leaves have a mucilaginous texture much like okra. Collard greens and spinach are also frequently eaten. All greens may be boiled, finely chopped or pureed and stewed with meat, or fried. Other vegetables such as

bitter balls (eggplant); *pumkin*, which is similar in flavor and texture to butternut squash; cucumbers; mushrooms; and okra are prepared in various ways and provide great variety and essential nutrients in the Liberian diet.

Rice is an essential element of any Liberian meal and is often eaten for breakfast, lunch, and dinner. While rice paddies do exist within the country, indigenous rice is rarely eaten. Instead, cheap Asian rice is imported and consumed. *Jollof rice* is a beloved rice dish with many variations; it usually contains chicken and shrimp with vegetables like peas, carrots, and corn cooked in a spicy tomato sauce. It is a bit like West Africa's version of fried rice. Rice is also ground into flour and used to make *rice bread*, which is a heavy and cakelike bread that also includes mashed ripe bananas or plantains. Starchy foods are valued in Liberian cuisine because they are filling and nutritious and cut the richness of dishes that are oily from the prodigious use of palm oil mixed with herbs, spices, and other flavorings like chilies, onions, and dried or smoked fish or shrimp. Native to tropical South America, sweet potatoes (*Ipomoea batatas*) made their way to the African continent during the transatlantic slave trade and are eaten and cultivated throughout the region as an important food source for animals and humans. The tubers can range in color from white to pink, purple, yellow, and the familiar orange.

In other parts of West Africa, yams (*Dioscorea* spp.) are favored, but in Liberia the sweet potatoes are preferred and are eaten boiled, roasted, or fried and also make their way into dishes reflective of strong connections to the cooking of the American South, such as sweet potato pie and sweet potato pone made from grated sweet potatoes, ginger, and burnt palm oil. Sweet potato leaves are finely chopped and then cooked with ground shrimp, meat or fish, palm oil, and chilies in a dish called potato-leaf sauce; cassava leaves are prepared similarly. Cassava is a secondary staple in Liberia; it can be fried in palm oil, roasted, mashed, or processed into flour. Roasted cassava is grilled or roasted and then eaten with palm butter.

Liberians favor dishes with meat and fish cooked together and tend to consume all parts of an animal.

Pig's feet, cow skin, and other viscera, collectively known as offal, are prized for the flavors and textures they bring to a dish. Typical of this style of preparation is *okra sauce*, a sauce that calls for pig's feet, chicken, beef, and dried fish in addition to chili peppers and fresh okra. Unlike in many countries throughout the region, pork is used to flavor sauces and is consumed frequently. Goat, chicken, and beef make frequent appearances in dishes, with goat soup being a dish prepared for very special occasions. Meats are boiled together with chilies, onions, and tomatoes for flavor, then left to simmer slowly in the resulting broth to develop the rich, intense flavors so typical of the cuisine. While most dishes do contain meat, it is often not considered the centerpiece of a meal but rather an essential flavoring component that may not be omitted. The heavy use of pork in Liberian cooking also reflects the influence of Americo-Liberians whose cookery is so closely tied to that of the American South. Pork can be the primary ingredient of a dish or used as a flavoring when it is smoked or salted.

Smoked and salted fish are used to flavor sauces and even consumed as the primary protein in dishes such as yam or cassava porridge, which is boiled yams or cassava cooked with onions, tomatoes, chilies, and fish until soft. For such purposes, cod is preferred, but salt cod on its own is the basis for a dish in which the cod is soaked, seasoned, fried, and then simmered in a chili-spiked tomato sauce. The long Atlantic coastline makes fresh seafood abundant and important to the Liberian diet, and fish, shrimp, crayfish, and other shellfish are eaten regularly, fried, grilled, and stewed in the ubiquitous sauces.

Peanuts (*groundpeas*) and peanut butter are important sources of protein and used in dishes such as groundnut soup. Pigeon peas and cowpeas, of which black-eyed peas are a well-known variety, are also stewed and eaten regularly. Kidney beans, a legume native to South America, are often mashed and used as soup thickeners. The beans were brought to Liberia during the slave trade.

A penchant for savory and sweet baked goods and desserts reflects the influence of southern U.S. food culture on Liberian cuisine. Rice bread, a

A Liberian boy balances his catch of fish on his head.
(<http://www.travel-images.com>)

much-loved specialty, is but one cakelike bread that holds a place in the Liberian culinary repertoire. Cakes and pies are filled with all manner of fruits (e.g., pineapple, mango, pawpaw—of the American *Asimina* spp.—or papaya) and, of course, sweet potatoes. *Liberian cake*, heavy, sweet, and studded with raisins, is another favorite. Shredded cassava and sweet potatoes are also transformed into cakes spiced with cinnamon and nutmeg; other sweets include stewed fruits like mango, pineapple, and pawpaw. Savory baked goods include cornbread, once again reflecting the roots of the repatriated former slaves who resettled among local indigenous groups.

Cooking

The most common cooking techniques in the Liberian kitchen are stewing, boiling, and frying. Preparing meals is labor-intensive because most things are made from scratch. Dishes like dumboy, fufu,

and palm butter all require much pre-preparation. In general, soaking, pounding, peeling, boiling, drying, and crushing of basic ingredients are often the first steps to be taken before any actual cooking can be done. Few processed foods are available for use by the home cook, and when they are, the preference is for homemade.

Mortars and pestles are used to crush spices and pound tubers like cassava and yams to the correct consistency for dishes like dumboy and fufu. Most cooking is done outside over a fire or in a building adjacent to the main living area. Wealthier families may have cooks, but it is primarily the women and girls of a family who prepare meals.

Typical Meals

Throughout English-speaking West Africa, including Liberia, food is referred to as *chop*. *Chop* refers to food in general and to entrées of main meals, while *small chop* refers to snacks and smaller meals. Civil war crippled agricultural production during the 1990s, which changed typical eating habits throughout the country and made access to adequate nutrition difficult. Liberia is slowly recovering. Typically Liberians might eat two meals a day, usually lunch and dinner; however, wealth determines the number of meals a family might eat. Liberians eat many dishes with their hands. It is customary to wash hands well before meals and use only the right hand when eating, since the left hand is used for personal hygiene. A sauce with a starchy staple will be the focus of the main meal of the day, and if a second meal is taken, it will usually consist of leftovers. Rice, the country's main staple, might be eaten in some form or another for all meals, since few Liberians would consider a meal complete without it.

Breakfast might be fresh fruit or baked goods like coconut bread with tea or coffee or perhaps a bowl of rice eaten with milk and sugar. Lunch and dinner will consist of stewed sweet potato leaves with a bit of meat and tomato sauce spiced with chilies and served with rice, fufu, or dumboy. The average main meal in Liberia will be a spicy tomato-based stew or puree of leafy greens with meat, poultry, or offal, eaten with a cooked starchy dish.

Palm Butter Soup

Palm butter is a thick cream extracted from boiled, crushed palm fruits. In Liberia, people usually make it from scratch, but it is also commercially available. Palm butter soup, or palm butter stew as it is sometimes called, is a very simple dish once the palm butter has been prepared. It is a rich dish with a complex flavor that is most commonly prepared with a mix of seafood, just chicken, chicken and seafood, or chicken and beef.

2 28-oz cans palm nut cream

1 lb chicken pieces, cut small

1 c shrimp

1 c crabmeat

1 Scotch bonnet or habanero chili, finely chopped

1 medium onion, finely chopped

Salt and pepper

Fish stock (optional)

Season the chicken and shrimp with salt and pepper and set aside for 30 to 60 minutes. When the chicken is ready, place palm nut cream in a pot to melt. When the cream has melted, it will be rather thin. Add the chicken, onions, and chili and simmer over low heat until the chicken is done and sauce begins to thicken, about 25 minutes. Add shrimp, crabmeat, and all other ingredients and simmer 2 to 3 more minutes. If using fish stock, add to pot with seafood.

Small chop can be anything from a small fried sweet or savory fritter to roasted corn or pieces of fried cassava, yam, or plantain. Fresh fruit is frequently eaten as a snack along with freshly roasted peanuts or groundnuts. Cakes and stewed fruit are also considered small chop.

In Liberia changes in economic status and particularly the growth of white-collar employment in urban areas can affect mealtimes as men and women shop, prepare, and consume meals based on a much different daily schedule than in more rural

areas, where most people are farmers. The physical demands of a particular job also determine the nature of mealtimes and food preparation in modern Liberia.

Eating Out

While there are restaurants and food stands throughout the country, there is not a strong tradition of eating out in Liberia. Purchasing small chop in markets or on the streets of cities, towns, and villages is a common practice.

Special Occasions

Food is always a central element of celebrations in Liberia. Aspects of Christian, traditional, and Islamic religious traditions blend with cultural elements of the various indigenous and Americo-Liberian groups to form a vibrant amalgam of culture that is uniquely Liberian. Independence Day, celebrated on July 26, marks the day of full independence from the United States with celebrations around the country. Christian, Muslim, and traditional religious holidays are celebrated with feasts, as are life's milestones such as marriages, births, and deaths. Liberians celebrate Thanksgiving on the first Thursday of November each year, as well as Flag Day and Armed Forces Day.

Diet and Health

Liberians eat a variety of meats, fresh fruits, and vegetables; however, the starchy staples of rice and cassava that accompany nearly every meal make the cuisine a heavy one. With civil war and unrest, the diet and health of Liberian citizens have suffered immeasurably. The civil war left the country reeling, affecting all aspects of life, particularly food production and infrastructure, which has made it even more difficult for the Liberian government to feed its citizens. As such, malnutrition is a serious issue facing the country.

Maasai

Overview

The Maasai are an indigenous African ethnic group, until recently seminomadic but now largely settled, located in Kenya and northern Tanzania. They speak Maa, a member of the Nilo-Saharan language family that is related to Dinka and Nuer. Maasailand today straddles the border of southern Kenya and northern Tanzania. Census figures for Kenya estimated 377,089 Maasai in 1989. Figures based on Maa speakers estimated 453,000 in Kenya (1994) and 430,000 in Tanzania (1993) for a total population estimate of close to 900,000 between the two countries.

According to their own oral history the Maasai originated in North Africa and migrated along the Nile River down to East Africa, arriving near Lake Turkana around the 15th century A.D. They subsequently spread southward, conquering other groups on the way, some of whom they displaced and some of whom they incorporated into their own group. By the end of the 19th century, the Maasai ranged an area of grassy plains 700 miles north to south, from Marsabit in northern Kenya to Kiteto on the south of the Maasai steppe in what is now Tanzania.

European contact from Germany and Britain did not occur until the 1840s. As a consequence of European contact at the end of the 19th century the Maasai suffered severe losses of people and livestock from diseases, such as smallpox and rinderpest, introduced by Europeans and exacerbated by severe famine.

Sections

Under British Colonial rule Maasai groups in northern areas such as Laikipia were forced to move

out of the highlands, which were earmarked for white settlers. The Maasailand Reserves were divided into separate geographically based sections: Ilkisongo, Ilpurko, Iloitai, Imatapato, Iloodokilani, Ilkeekonyokie, Ilkaputies, Ildamat, Ilsiria, Ilwua-sinkishu, Ildalalekutuk, and Ilaitaytok. The largest sectional group was the Ilkisongo, who occupied parts of southern Kenya and Tanzania. Each section occupied a specific territory with well-defined boundaries within which all members of the section were free to graze their cattle; to cross into another section with cattle, permission had to be sought from that section. Theoretically, the section was the largest political unit, but, in practice, it seldom functioned as such except in disputes with other sections or other groups.

Each section was divided into localities (*enkutoto*, pl. *inktot*): self-contained ecological units with contiguous areas of wet-season pastures to which camps dispersed during the rains. In each locality the ruling elders formed a local council (*engigwa enktoto*) that had regular meetings to discuss and act on the public affairs of the locality.

Clans

Maasai belong to any one of five clans whose members are dispersed throughout Maasailand, thus providing a wide network of potential support and obligation that supersedes section boundaries. Inheritance passes through the paternal line, and families usually acknowledge and remember a lineage of three generations, back to the father of the oldest living man. Clans have no formal clan leaders and

are not organized as geographically cohesive local groups.

In addition, Maasai are organized according to age-grade and age-set systems, and each age-set has its own spokesman appointed from among the group. Men proceed through different age-grades as members of named cohorts or age-sets that are formed every 14 or 15 years. Age-grades determine the formal political structure, and the system is based on the primacy of elder males over younger males and men over women. Women do not have an independent age-set system but automatically join the age-set of their husbands when they marry.

Food Culture Snapshot

The ole Koringo family is a large extended family occupying several *engang* (bomas, a mud and cow dung-covered hut) in the vicinity of Loitokitok and Rombo in southern Kenya. Maasai are generally polygynous. Ole Koringo has two wives and many children and grandchildren. Each wife occupies her own house, to which her husband has access. Children live in their mother's house but often share in food from other households.

Little food is purchased except for grains to supplement the largely milk diet. Tea and sugar are highly prized and can be purchased or obtained in exchange for milk. Milk is also exchanged for some foods such as vegetables at the weekly markets. Honey is often acquired in exchange for milk or meat.

Major Foodstuffs

The traditional Maasai diet consisted of milk, meat, animal fats, and blood as well as wild plants, such as berries or wild greens. In recent times, these are being supplemented by tea sweetened with sugar; a variety of grains such as maize, rice, and wheat; and a limited range of cultivated vegetables. As in many pastoral groups, the symbiotic relationship between the Maasai and their livestock is reflected in specific behaviors that provide for the nutritional needs of herders' families while simultaneously ensuring the continued productivity of the herds. For example,

herders rarely cull large stock for meat except on special occasions, when meat is normally shared among a larger-than-family group. They rely on dairy products, supplemented by occasional culling of small stock, for their daily needs. In Maasai society, men control the allocation of meat, while women control dairy products.

Most of the Maasai's food comes directly from their animals, in the form of milk, meat, blood, and animal fats. Milk is often sold on market days, and the proceeds are used to purchase vegetables such as cabbages, beans, and onions or grains such as maize, rice, or wheat flour. Milk may be exchanged directly with horticulturalists for a variety of vegetables to be cooked with meat in stews or with maize or rice.

Although individual yields of milk from cows in arid and semiarid zones of eastern Africa are low, the milk is of high quality. The fat content is as high as 5.5 percent, compared with the average of 4.8 percent reported for yields from sedentary herds in more humid areas of Africa or the average in European herds of 3.5 percent fat. The main deficiencies of milk are the absence of iron and vitamin C. However, if milk is drunk fresh without further processing, 1 kilogram (a little over a quart) of milk can supply 20 milligrams of vitamin C. Milk also lacks vitamin D, but this is hardly a problem in the tropics since vitamin D can be produced in the human body when it is exposed to sunshine.

Maasai depend on milk for a high percentage of their dietary energy, anything from 94 percent in the wet season to 30 percent in the dry season. Milk is plentiful from just after the rains until just before the dry seasons begin. If a Maasai mother has a son who is a *morán* (warrior), she will allocate one to two calabashes of about three quarts each to him; if she has two moran sons they would be given two quarts or more each. Moran eat with their peers and move from one house to another, each moran leading the others to his mother's house. A child of about 8 to 12 years would take 1.2 quarts in the morning before going out herding and 1.2 quarts in the evening when he gets back. A younger child will take about half a quart but spread throughout the day.

In addition, the moran and elders take about three quarts of yogurt per week, boys and girls about

A proud Maasi herdsman with his cattle in Kenya. (iStockPhoto)

two quarts, and women and older men one to two quarts. This is when the season is relatively good and the number of lactating cows averages 5 to 10 per household. In a time of severe drought at Ol Girra in January 2006, the women were subsisting on one quart of milk a day with no other supplementation from meat or grains. Children would fare relatively better because, according to the women, the children are fed first in times of crisis and both women and men will go without to favor the children.

There are times when there is more than enough milk; allocations would be high, and even the dogs would be fed milk. Passersby would be called to drink since storage and handling become a problem and the family would like to get rid of the surplus before the next milking. Things have now changed because there is a ready market for milk in the towns.

Maasai, like many other pastoral groups, consume limited amounts of blood from living animals. Cattle

blood contains 7.6 percent protein, 0.06 percent fat, and 0.05 percent glucose. It also contains some valuable minerals such as iron as well as small amounts of calcium and phosphorus. An arrow is shot into the animal's jugular vein, and the blood is collected in a gourd. Later it is mixed with milk to make a protein-rich drink, often given to senior elders when they are ill and to women after giving birth, but all ages drink blood and milk during times of scarcity. Although consumed as snacks, fruits constitute a major part of the food ingested by children and women looking after cattle as well as morans in the wilderness.

Cooking

Maasai men slaughter and butcher cattle at a kill site, which also is the site where the carcass is roasted

and some choice parts are given to the cooks. Only men roast meat, and it is they who divide and allocate the cooked meat. Meals prepared at the homestead are organized by the women and can include meat from goats and/or sheep and various types of stews. All milk products are controlled and allocated by the women.

Typical Meals

Just before dawn the woman of the house rises and relights the fire, which has been left smoldering overnight. She then goes out to begin the milking. Calves are brought out one by one from the calf enclosure or house and led to their mothers. The calves are allowed to suckle from two teats while the milker milks the other two teats into a gourd. After enough milk is

taken from any one cow, the calf can continue suckling its mother while the milker fetches the next calf. Milking can take an hour or hour and a half for each household. The woman of the house will then prepare breakfast, consisting of a thin porridge of milk and maize flour for the herdboys and other children; and milk, milky porridge, or tea for her husband and any of his guests. Warriors are given pure milk as specified by their status. Younger herders who may be away from the homestead until evening are given a calabash of milk or porridge to carry with them. Older herders may take breakfast and then go without eating until evening. After the herds have left the settlement, the women and girls clean their gourds with burning charcoal from special aromatic woods that give Maasai milk its characteristic flavor. When the herds return in the evening, the morning milking ritual is repeated.

A study of the Maasai diet among the Laitokitok-Kisongo in 2007 included food diaries for adult male and female Maasai over a period of three weeks. The days were divided into five segments: daybreak, 10 A.M., lunch, 4 P.M., and dinner. All began the day with tea with milk prepared by the wives around daybreak. At 10 A.M. some but not all consumed tea with milk; yogurt; boiled fresh milk; or maize-meal porridge with yogurt. Lunch tended to be more varied, for example, boiled fresh milk, tea with milk, maize porridge with yogurt, *ugali* (maize) with bean stew, rice and meat, boiled banana and fresh milk, goat-meat stew with *ugali*, *ugali* with cabbage, *ugali* with beans, wheat chapati and tea, chapati with bean stew, or *ugali* with yogurt. Most took tea with milk at 4 P.M. At dinner, ingredients included chapati, rice, or *ugali* mixed with goat meat, beans, cabbage, potatoes, and/or fresh milk or yogurt. If milk was plentiful some took only fresh boiled milk for dinner.

Eating Out

Maasai seldom eat out unless they are in town at the market or doing other errands. If they can afford to, they may purchase roast meat with *ugali* and green vegetables, onions, and hot peppers at a café or bar. They are, however, invited to share food at any settlements they visit. They may be offered fresh milk, yogurt, sweet tea with milk, milk with maize meal or rice, soup with meat (with or without vegetables), or roast meat.

Special Occasions

Meat Feast

Meat is just one of a wide range of primary and secondary products supplied by Maasai cattle herds. Although cattle provide herders with meat, they are seldom slaughtered to supply food for the family alone; instead, they tend to be part of a ceremony or celebration, with the meat shared among a number of participants. For example, during the ceremony of Eonoto, which marks the passage of a moran to elderhood, three steers are donated for the feast, including the required pure black steer for the ritual

sacrifice. These are slaughtered and butchered by the moran. The meat is slowly broiled over smoldering fires of aromatic wood. The Eonoto ceremony occurs every 10 to 15 years, after the moran have spent the required amount of time together in a *manyatta* (warrior village). The ceremony itself lasts for over a week, with feasting and celebration. Lesser feasts include the initiation of boys or girls, weddings, burials, or hosting of important visitors.

Mature, fattened steers are chosen for most ceremonies. Slaughter of a malnourished animal is avoided unless the animal is near death and likely to die anyway. Every effort is made to keep animals alive, even through severe drought, so that they can be fattened later for more nutritive consumption. If an animal does die or is close to death due to disease or malnutrition, its meat will be consumed. A steer would be slaughtered for a number of occasions: the ritual feasting surrounding the initiation of morans or their subsequent passage to elderhood, the initiation of girls, dancing festivals, women's festivals, burial ceremonies, judgment of crimes, or a time of need. Traditionally, ceremonies for circumcisions and marriages were held during the "green" seasons, June/July and January, when everyone moved around to any home with an occasion to celebrate. Today, these ceremonies are held during the school holidays in August and December.

Men make all decisions on slaughter, cooking, and sharing of meat from cattle. Women can select small stock (sheep and goats) for family consumption and can give small stock as gifts to special recipients, such as new wives, daughters-in-law, or siblings. Under normal circumstances a family will slaughter about two goats and one sheep monthly and perhaps one steer every six months.

An ox is slaughtered and butchered in a prescribed fashion, and the meat is shared following a particular pattern of allocation. Even when the steer is slaughtered in a time of need and not for any ceremonial purpose, the pattern is followed. Most meat elements are paired, such as forelimb X being allocated to elders (or the moran cooks) and forelimb Y to wives. Some cuts can be allocated to elders or wives depending on the ceremony; however, out of 10 ceremonies listed, only 4, all involving women,

would allow wives to receive the choicest cuts. In contrast, women are automatically entitled to inner thigh X, forelimb Y, the meat around the hips, and the midspinal strip X. Boys and girls tend to be allocated the paired element of an elder's or a wife's allocation; for example, ribs for boys or inner thigh for girls. It does, however, seem that women may be discriminated against in regard to taste since they are allocated the neck meat, thigh bones, liver, spleen, rumen lining, and reticulum, which are so despised by the elders that they will not cook them. On a taste rating of 1 to 8, the Matapato rated tongue and flank as a 1, the choice of the elders, while the liver, spleen, and reticulum, allocated to women, rate a 7. The rumen, allocated to women, and the brain, allocated to dogs, are equally rated as an 8. Despite these taste rankings the women are not necessarily nutritionally deprived. The liver of a steer, weighing on average six-and-a-half to eight-and-a-half pounds, supplies iron necessary for women during their childbearing years. During the ceremonial feasting, everyone partakes of the daily stews, which are heavily loaded with fat. Two meat cuts, lung and heart, that might be expected to be relegated only to women or to children, are given to the cooks in some ceremonies or presented to the moran as they pass from moranhood to elderhood.

Taste is not necessarily a measure of nutritional value. However, the relative value of the hindlimb (taste-rated 2), which is allocated only to elders, and the forelimb (also taste-rated 2), which is the highest-ranking element allocated to women, suggests that Maasai men do have access to considerably more meat and fat by weight and quality than women or children.

Exceptions to the meat-allocation pattern occur when an animal dies away from home, when all members of the group (elders, wives, children) are not present, or when moran retire to the bush to slaughter and consume meat during their time in the man-yatta (the ritual warrior village). Several moran may get together, beg animals from their fathers, and seclude themselves for up to a month or more, eating meat daily. Digestion of such large quantities of meat is aided by special plant-derived digestives. During this time of feasting the moran do not drink milk.

Estimates of how much meat by weight elders, moran, women, and children might consume in a day of feasting suggest that elders could consume up to 8.5 pounds, women up to 4.5, children six to eight years of age about 1 pound, older children up to 2 pounds, and moran 13 to 17.5 pounds, the highest amount.

Fats

Fat is greatly valued in the pastoralist diet. When the carcass of a steer is cut up, the fat is separated from the meat and grouped into three categories: (1) The hard white lumps from the stomach region and rump (taste-rated 7 or 8) have no ritual uses and are regarded with distaste by the elders. These, along with other stomach parts, are relegated to the women. (2) Fat from the ribs and hump gets a taste-rating of 2 and goes to the elders to be used as a relish. (3) A rating of 1 is given to the brisket fat, which is allocated to the father of the elder hosting the feast. This is the most sought-after fat as it will keep indefinitely once the fat has been separated from the tissue. The scrotal fat is allocated to the mother of the host. Other sources of fat come from bone grease and bone marrow. The absolute yields of bone marrow vary with the size, species, age, sex, and nutritional status of the animal, hence the preference for mature, fattened steers. Sheep are slaughtered for their fat, especially in the dry season, when sheep retain fat longer than cattle or goats do. Fat also comes from milk and butter. Infants are encouraged to drink melted butter to build up their strength.

Blood

At the special rite-of-passage ceremonies such as entry into elderhood, blood is gathered in the dewlap of the slaughtered steer, mixed with milk. Each new elder is required to drink from it.

Diet and Health

High blood pressure, cardiac disease, and diabetes would be expected to be common among Maasai given their high-fat diet, but this is not the case as long as they continue to exercise, mostly walking

long distances every day. Many Maasai succumb to disease when they give up the lifestyle of a pastoralist.

Soups are probably the most important medium for consumption of wild plant food by the Maasai. *Olkiloriti* (*Acacia nilotica*), a powerful digestive, is the most frequently used soup additive. The root or stem bark is boiled in water and the decoction drunk alone or added to soup. The Maasai are fond of taking this as a drug; it is known to make them energetic, aggressive, and fearless. Soups prepared during the time of a meat feast are laced with bitter bark and roots containing cholesterol-lowering saponins. Some that are added to the finishing stew on the last day of feasting have strong purgative or emetic effects.

Medicines derived from trees and shrubs are used in the treatment or prevention of a wide range of diseases and include remedies or prophylactics for malaria, sexually transmitted diseases, tuberculosis, diarrheal disorders, parasitic infestations, prostate problems, arthritis, and respiratory disorders. Particular attention is given to women's health during pregnancy and childbirth.

Madagascar

Overview

The Republic of Madagascar is an island located in the Indian Ocean, about 250 miles off the southeastern coast of Africa. The nation sits just south of the equator and is separated from Africa by the Mozambique Channel. It is the fourth-largest island in the world, with an area of 227,000 square miles (587,000 square kilometers). The population in 2009 was estimated at 20.6 million, making it the 55th most populous country worldwide. Although three languages are officially recognized—Malagasy, French, and English—Malagasy, a derivative of Malayo-Polynesian languages, is the most commonly used.

Madagascar is divided into six provinces (*faritany*): Antananarivo in the central highlands, Antsiranana in the north, Fianarantsoa in the southeast, Mahajanga in the northwest, Toamasina in the northeast, and Toliara in the southwest. Antananarivo is the name of the capital city as well, which is located in the central highlands and the largest, most developed part of the country. The climate of the island is primarily tropical, especially along the coast. Inland areas tend to be more temperate, particularly the highlands surrounding the capital. To the south is an arid environment. Due to its relative isolation, Madagascar has an abundance of plant and animal species that are found only on the island, something that has attracted the attention of botanists, environmentalists, and tourists alike.

The people of Madagascar (the Malagasy) are of mixed ethnic descent including Indonesian, African, Arab, and European heritage. Evidence suggests that the first inhabitants of Madagascar were Malayo-

Indonesian, arriving sometime around 500 A.D. Afro-Arabians are said to have appeared sometime thereafter, likely around 1000 A.D. Until it became a French colony in 1895, Madagascar had an independent kingdom, governed by indigenous ethnic groups, namely, the Merina and Sakalava tribes, who occupied the territory in the central highlands and along the western coast, respectively. Following independence from France in 1960, Madagascar became a democratic republic, but political instability ensued and government control fluctuated wildly, sparking widespread economic decline in the 1970s and 1980s. In 1992, a parliamentary democratic constitution was passed, yet political turmoil persists even to this day. In 2009, following the resignation of President Ravalomanana, a new leader, Andry Rajoelina, assumed control, backed by military support. Economic decline and political unrest have transformed Madagascar into one of the poorest nations in the world. Reports show that roughly 70 percent of the population lives on less than one dollar (U.S.) a day.

The history, people, and diverse terrain of the island have all played a role in shaping Malagasy culture and cuisine. Religion has also profoundly impacted the way people live, interact, and eat in Madagascar. Roughly 52 percent practice traditional beliefs (ancestor worship), 41 percent are Christians (both Protestant and Roman Catholic), 7 percent are Muslims, and a very small number are Hindus. The most common religiously based dietary restrictions imposed are food taboos (*fady*). Since many practicing Christians still observe ancestral rituals surrounding burials, and most of the remaining

population strictly adheres to traditional beliefs, *fady* have become commonplace in society. Variation occurs from one ethnic group to another, and between women, men, children, and expectant mothers. One such *fady*, originating in the Sakalava tribe, prohibits the consumption of pork. Another, belonging to the Antandroy tribe, forbids the eating of sea turtles or cows without horns.

Food Culture Snapshot

The average household in Madagascar is made up of approximately six people, with a male and female head, children, and sometimes grandchildren. It is not uncommon to find an extended family living under one roof. Single females represent 12 percent of household heads; few of them are single men. Most of the time, meal preparation is the responsibility of women, although children are encouraged to help from a relatively young age. Young females begin to assist in cooking as early as five years of age.

Madagascar has an abundant market culture where the majority of foods are purchased. Supermarkets do exist on the island, but most of them are expensive and limited to urban areas. Daily markets run in cities and towns, and weekly rotating markets are held in rural areas. Men, women, and children participate in selling products, each with their own specified role according to gender and age. For example, men tend to sell meat whereas women sell dried fish and produce. Most of the goods sold at these markets are locally sourced, either harvested directly by the seller or bought from a nearby larger market. Teeming with activity, a Malagasy market represents an important part of social life.

The typical Malagasy family does nearly all its food shopping in local markets. Foreign residents, tourists, and affluent households may choose to patronize the supermarkets, but in rural areas markets may be the only substantial option for food. In some cases, small stores (*epiceries*) offer basic needs such as cooking oil, sugar, and matches. Everything else is found in the market.

A variety of meats may be purchased including beef (*zebu*), chicken (*akoho*), pork (*henan kisoa*), goat, and lamb. For everyday use, meat is bought in small quantities

and served as an accompaniment to rice or used to make broths and stews. Larger portions are reserved for special occasions. Fish (*hazan drano*) and shellfish are plentiful on the island; thus it is common to find vendors selling lobster, prawns, squid, crayfish, octopus, eels, sea turtles, oysters, and sea cucumbers, as well as various kinds of fish. Much like meat, the average household uses seafood regularly albeit sparingly, with the exception of special occasions.

As a tropical island, fruits, vegetables, and spices grow in abundance on Madagascar, and markets are the best place to find them. Fruits such as mangoes, bananas, coconuts (the flesh and the milk are common in cooking), papayas, oranges, lemons, lychees, pineapple, and strawberries are everywhere. Among the many vegetables available, leafy greens (*bredes*) and tubers predominate. Cassava root and its leaves form an important part of the Malagasy diet, as do other types of leafy greens, sweet potatoes, corn, and taro. Additional vegetables may include tomatoes, beans, hot peppers, ginger, garlic, onions, and the like. Spices, nuts, and aromatics like vanilla, cloves, cinnamon, black pepper, peanuts, and cashews are used frequently, taking a prominent position in any market.

A typical Malagasy family cultivates their own rice, but since it is consumed in such enormous quantities, supplementing what is grown at home is necessary. Also, there are a few areas where rice is not grown, and markets may be the only place to find the staple. Additionally, (cow) milk may be sourced from within the household, provided the family has its own cattle. Otherwise, it can be found in markets or grocery stores.

Major Foodstuffs

Madagascar's rich biodiversity makes it a place where food crops grow in abundance, and, consequently, the economy is largely agriculturally driven. Approximately 26 percent of the nation's gross domestic product is made up of agricultural products, employing nearly 80 percent of the domestic labor force. Surprisingly, many crops are grown almost exclusively for export. They do serve as ingredients in everyday Malagasy cuisine, but the finest of the harvest is reserved for the international market. Mad-

agascar produces more vanilla than any other country in the world, for example, yet its appearance in the local cuisine is not as prevalent as one might think. Some other examples are cacao, coffee, sugar, black pepper, cloves, and cinnamon. Cultivation typically occurs on large plantations introduced to the island in the 19th century.

The most abundant crop is rice, which alone accounts for around 13 percent of the gross domestic product. Unlike the cash crops, rice (*vary*) is grown mostly for domestic consumption and is the basis of the Malagasy diet. Many households cultivate their own rice fields. It represents nearly half of all calories consumed and about two-thirds of all available cropland. The average person eats more than 308 pounds of rice per year (2000 figures), an amount so high that Madagascar is now a net importer of rice to meet that demand. The Malagasy people perceive rice as a sacred gift and chief above all other foods, often appearing in religious rituals and festivals. The old saying “rice is a god” (*vary andriaminitra*) demonstrates the reverence with which it is regarded. The colloquial Malagasy word used for eating a meal (*mihinanabary*) literally translates as “to eat rice.” The Malagasy believe they cannot in fact survive without it. Abundant yields of rice are seen as a sign of social status, a reflection of the blessing of God and the ancestors.

Rice is eaten at every meal—three times a day—and is considered the main dish. Any other food served is thought to be an accompaniment or relish (*laoka*). Several kinds are grown on the island, but those most commonly used are the partially refined “red rice” (*vary mena*) and the completely refined white variety. Rice is served at different consistencies depending on the time of day or the occasion. The dry method uses just enough water to cook the rice (*ampangaro*). When milk is used it is called *vary amin-dronono*. Alternatively, the wet or soft version is made using excess water, resulting in a soupy consistency (*sosoa*). Rice is sometimes ground into a coarse flour to be used in a variety of recipes. One such dish calls for the meal to be cooked in banana leaves, resulting in something akin to dumplings (*betrosa*). Roasting and crushing the grain (*lango*) is a traditional way of preparing rice, making it good food for traveling.

Rice even serves as the basis for a common beverage (*ranonapango*), where water is boiled in a pot of leftover browned rice. It is enjoyed either hot or cold.

In Malagasy cuisine, beef (zebu) is second only to rice in importance. It is a local breed of humpback cattle that forms a substantial part of social and economic activity. Though sources vary regarding the origin of the animal—some believe it came to the island from southern Asia, and others insist it is African—zebu’s place in Malagasy culture is in any case significant. Since it, too, is considered sacred, cattle is often slaughtered as a sacrifice to the ancestors at funerals, reburials (*famadihana*), and other special occasions. Much like rice, zebu is perceived as an indication of wealth. Furthermore, no part of the animal goes unused: The finest meat is eaten on special occasions; the tough, cheaper cuts are used daily in soups or stews; the hide is used for leather; and the horns are used in traditional medicine or as an offering at burial sites. Most of the time, zebu is used sparingly, as a relish for the rice. There are various ways of preparing the beef including traditional recipes and those that have been brought by immigrants. One common Malagasy snack (*sambos*), fried dough stuffed with beef and/or other meat and vegetables, suggests an Indian influence, even in the name (in India they are called samosas). An example of a traditional preparation for zebu calls for the meat to be boiled in water with onions and then grilled until brown (*varenga*). Since the consistency of the meat is relatively dry, it is usually served with soft or wet rice (*sosoa*).

Varenga

Ingredients

2 lb beef, deboned and cut in 1-in. strips

1 tbsp salt

1 medium clove garlic, minced

1 small onion, sliced

Water to cover

Combine all the ingredients in a medium saucepan and bring to a boil. Cover the pan, and reduce the heat to low to maintain a simmer. Be sure to add

water as necessary to keep the meat covered. Cook the beef for about 2 hours, or until it falls apart with a fork. Remove the meat from the pan, drain, and shred using a fork. Spread evenly on a baking sheet and roast at 400°F until the meat is golden brown, about 30 minutes. Alternatively, the stewed meat can be grilled until brown (about 10 minutes depending on the heat), using a heat-proof basket or aluminum foil to prevent it from falling into the fire.

In some areas of Madagascar rice is not cultivated; it is replaced by sweet potatoes, cassava, and corn. It is widely accepted that cassava found its way to Madagascar from the Americas via Africa, and corn from the Americas by way of the Portuguese. Meals might be accompanied by boiled cassava, sweet potatoes, or a cornmeal mush very much like grits. The leaves of the cassava plant (*brades*) are used all over the island to flavor soups and other dishes. One of Madagascar's national dishes is a stew made with pork and ground cassava leaves (*ravitoto sy henakisoa*). Another very typical dish is a broth made with water and leafy greens (*romazava*), especially those from the cassava plant. Sometimes zebu is added to the soup as a flavoring agent.

The everyday mealtime rice drink (*ranonapango*) is unequivocally the most customary of Malagasy

Romazava, a typical dish of Madagascar, is made with water and leafy greens (*romazava*), especially those from the cassava plant. (Mark Waddle | Dreamstime.com)

beverages, but other interesting choices can be found all over the island. Along with the introduction of sugar plantations came the production of a potent local rum (*toaka gasy*), sometimes homemade and always present on special occasions. Other alcoholic beverages typical of the island are lychee liquor (*Litchel*), local Three Horses Beer (*THB*), fermented sugarcane juice (*betsabetsa*), fermented coconut milk (*trembo*), and local wine from the southeastern province of Fianarantsoa. Coffee is becoming popular in urban areas and is locally grown. If someone asks for it “white,” it is served with sweetened condensed milk. Lemongrass tea (*citronelle*) serves as an alternative to *ranonapango* at breakfast or following a meal. Many roadside restaurants (*hotelys*) offer fresh fruit juices including orange, mango, pineapple, strawberry, and the like. Sodas (both local and international) and bottled water are gaining popularity in cities throughout Madagascar.

Cooking

Traditionally, the cooking area of most Malagasy homes was located in a kitchen outside the house to minimize the threat of fire. In some cases, this is still true today, but in urban areas houses will have kitchens. The dishes are prepared using various cooking methods including grilling, frying, or boiling in liquid (water, meat or vegetable broth, milk, and coconut milk). Milk is considered the most valuable of cooking liquids and is typically used to make a sort of rice pudding (*vary amin-dronono*) that is sometimes flavored with honey and vanilla. Foods may be grilled directly over the fire or on skewers (*tsatsika*), buried in the coals (root vegetables), wrapped in banana leaves and boiled, or cooked in a pot. Earthenware bowls were the preferred choice for cooking prior to the introduction of metal and cast iron pots. Most food is cooked on portable stoves made of metal or stone. The most typical fuel for home cooking is wood and charcoal. Historically, the chaff of rice grains made for excellent fuel in areas where wood was scarce.

Because rice is such an important part of the Malagasy diet, there is always a granary nearby where

rice is milled and stored. Granaries are elevated above ground to prevent excess moisture and rot of the grains. Mortars and pestles (*leona*) made of earthenware are equally prevalent as they are used to grind rice into a coarse meal, as well as spices, nuts, and other starches.

Smoked and dried meat or fish (*kitoza*) are popular and characteristically served with a cornmeal porridge or soft (*sosoa*) rice for breakfast. The protein is cut into strips and hung to dry before being browned over a fire. The result is something reminiscent of beef jerky. Pickling is another common method of preserving foods in Malagasy cooking. A variety of fruits and vegetables are used to make these sides (*achards*) served alongside rice at lunch or dinner. The ingredients are first rubbed in salt and left to sit overnight, then heated in a mixture of vinegar and spices. They are left to macerate for a minimum of three days before serving. One of the most popular is made with green, unripe mangoes (*lasary manga*).

Typical Meals

In Madagascar, meals (*sakafo*) can vary from one household to another depending on ethnic identity, religion, social class, and locality, making it difficult to define a typical meal pattern. Nevertheless, some practices are common all over the island. Most Malagasy families, for example, eat three meals a day and two snacks. Broadly speaking, everyday dining tends to be light in fare, featuring a substantial amount of vegetables and broth flavored with meat. Heavier meals are enjoyed on special occasions and may include dishes with coconut milk and more expensive cuts of meat.

A traditional breakfast might consist of soft rice (*sosoa*) and dried meat (*kitoza*). When rice is not available, boiled cassava or soft cornmeal is eaten instead. Sometimes leftovers from lunch or dinner are enjoyed for breakfast the following day. Today, many Malagasy eat small fried rice cakes (*mokary*) or fried doughnut rounds (*mofogasy*) with coffee. In cities, bread might be served with honey or jam and coffee, and in some cases eggs as well (in hotels), a reminder of the French influence. Typical beverages

Women work in the rice fields of Madagascar. Rice is the nation's largest food crop. (United Nations)

might include water, local citronelle tea (made from lemongrass), coffee, or a sort of browned-rice tea (*ranonapango*).

Lunch is most often the largest meal of the day, featuring the obligatory bowl of rice and at least three relishes (*laoka*). Hot chili paste (*sakay*) is always present, along with pickled vegetable and fruit relishes (*achards*). *Sakay* is made with spicy chilies (*pilypily*), ginger, garlic, and oil and is very spicy. Malagasy food is not particularly hot compared to that of Indonesia or other African countries, and thus *sakay* is not used for cooking but as a condiment, added based on the diner's preference. An additional meat or stew might be served, as in the national dish *romazava*, made with beef and an assortment of leafy greens (*bredes*). The term *ro* literally means "juice" and is used to classify any dish with a sauce, or a soup. Some of the greens used have a slightly spicy flavor (*anamalaho*), somewhat like mustard greens but more pungent, while others are mild in flavor (*mamy*). Seasonal fruit may be served for dessert, sometimes flavored with vanilla and/or coconut milk.

Romazava

Although this dish is traditionally made with beef, other meats may be substituted, including chicken or pork.

Ingredients

2 tbsp vegetable oil
 ½ large onion, diced
 1 lb boneless beef, cut into 1-in. pieces
 1 clove garlic, minced
 2 tsp ginger, minced
 1 chili pepper, diced
 1 c canned tomatoes, diced
 1 small bunch fresh spinach
 1 bunch fresh watercress
 1 small bunch mustard greens
 Water, to cover
 Salt and pepper to taste

In a large stockpot, sweat onions in oil over medium heat until translucent. Add beef and cook for approximately 10 minutes, stirring occasionally. Add garlic, ginger, and chili and cook for an additional 3 minutes. Add tomatoes and simmer for another 10 minutes. Add water and bring to a boil. Add greens and reduce heat to low. Simmer 1 hour or until meat is tender when pierced with a fork, stirring occasionally. Season with salt and pepper to taste.

Dinner follows a similar pattern to the lunchtime meal but is sometimes slightly lighter. In addition to rice, sakay, and achars, meats or vegetables might also be served. A typical vegetable dish (*vary amin anana*) calls for mixed leafy greens, tomatoes, and onions to be simmered in water together with a small amount of meat. Fresh salads (*lasary*) also accompany the meal. Dessert usually consists of seasonal fruit mixed together with sugar and vanilla. Rice tea (*ranonapango*) is the beverage of choice served with both lunch and dinner, but water or lemongrass tea may be substituted.

Snacks are very popular in Madagascar and can be found in markets, street stalls, or roadside restaurants (*hotelys*). They can include rice flour and fruit cakes cooked in banana leaves (*koba ravina*), skewered beef (*masikita*), Indian-style meat or vegetable fritters (*sambos*), fried locusts and other insects, small doughnuts (*mofa menakely*), sweet rice and peanut

cakes baked in banana leaves (*koba*), sliced fresh coconut, fruits and their juices, yogurt, and grilled cassava. In cities it is not uncommon to find French bread and pastries like croissants, cakes, and baguettes available throughout the day.

As in any culture, the way a meal is eaten in Madagascar is significant and shaped by social norms. Traditionally, all meals were served on the ground using mats for the food and for seating. In some rural communities this is still a common practice, but Malagasy people living in cities prefer to sit at tables during a meal. Typically, there is no progression of courses, as in many Western meals, with the exception of fruit and rice tea (*ranonapango*), which follows the meal because it is made from the browned rice left at the bottom of the cooking pot. Before the introduction of modern dinnerware, earthenware pottery was used for cooking and serving food. Historically, gourds were used as bowls for storing food and for individual use at mealtime, but in contemporary Madagascar the use of modern plates and bowls is the norm. All components of the meal were eaten together on the same plate or even shared out of a communal pot in the past, but today individual plates are favored. Spoons are the eating utensils of choice, traditionally made from zebu horns or pottery but mostly from stainless steel today.

In traditional Malagasy culture, social hierarchy surrounded the meal, dictating the order in which food was served to each person. When families ate together, older men were always served first and received the best share of the meal. Likewise, the youngest children were served before their older siblings to ensure adequate nourishment. When food was passed from one person to another, it was considered polite to hold the wrist with the opposite arm. It was not unusual for male and female family members to eat separately, and the eldest always received first dibs. Roles of men and women are somewhat less stratified today, but many of the old customs prevail in spite of these changes.

Eating Out

Eating out is a relatively recent phenomenon in Malagasy culture, having been introduced by the French and other foreign inhabitants. The tourism industry

has also played a key role in its growth. However, many Malagasy people still believe the best food is found in the home. Restaurants (*restos*) are virtually exclusive to cities and towns, with only a few in rural areas. While they are becoming popular among Malagasy urbanites, the overwhelming majority of them cater to tourists, featuring a variety of Western foods like French or Italian cuisine. *Steak frites* (French-style zebu with fries), locally produced foie gras (French-style duck liver), pizza, and pasta feature prominently on menus. Chinese restos are beginning to appear as a popular alternative to traditional cuisine. Here, bowls of fried noodles with vegetables and meat (*mi sao*) and noodle soup with fish, chicken, or vegetables (*soupe chinoise*) are typical menu offerings. Indian restaurants are appearing in various cities and towns as well. Regardless of the type, every restaurant has something in the way of traditional Malagasy cuisine available. Many restaurants offer an assortment of beverages including local tea, wine, beer, and liquors. Some of the more expensive French restaurants carry a selection of French wines.

Malagasy locals tend to patronize small roadside eating huts (*hotelys*), as they offer fast service, inexpensive traditional foods, and a more casual atmosphere. Some can be found in smaller towns and less populated areas. These small stands serve classic fare including rice (vary) with assorted accompaniments (*kabaka*) like beef, chicken, pork, fish, or vegetables. In coastal areas they might serve boiled and roasted crayfish and other seafood dishes. Apart from the market, *hotelys* are the best place to find snacks. Fruit juices, local yogurt, and Three Horses beer might be available as well.

In the largest cities, especially Antananarivo, tea cafés (*salons de the*) have become prevalent, thanks to the French cultural influence. Most offer a selection of French breads and pastries, and sometimes sandwiches or light meals. Locally grown tea and coffee are always available.

Malagasy chocolate is highly regarded in places like Europe or the United States but is surprisingly scarce in local cuisine. It can be found in Malagasy markets, but the majority of the harvest is sent overseas. There is one French bakery in Antananarivo called Chocolate Robert that offers high-quality pastries, candies, hot chocolate, and the like. It is said

to rival any patisserie (pastry shop) found in Paris and is very popular with Malagasy natives, foreign residents, and tourists alike.

Special Occasions

Celebrations, festivals, and religious holidays are an important part of life in Madagascar. With such a large population of Christians, holidays like Easter and Christmas are celebrated as national holidays. Baptisms, circumcisions, and first communions are considered special as well. Traditional ancestral rituals have given rise to a number of other festivals and celebrations. And every special occasion in Madagascar is not complete without great feasts and plenty of singing and dancing.

One of the most celebrated events in Malagasy life is the Turning of the Bones festival (*famadihana*), in which the bodies of ancestors are exhumed from their burial sites, re-dressed, and then moved to the ancestral tomb, where they are buried a second time. In Malagasy culture, the worship of ancestors (*razana*) is based on the belief that they oversee the lives of the living, rewarding or punishing them accordingly. At least one zebu cow is slaughtered during the festival, as it is considered an offering to the ancestors. The horns are used to decorate the tombs of the dead, and the meat is eaten during the celebrations. The local homemade rum (*toaka gasy*) is seen as an offering and is consumed by participants in copious amounts. Drunkenness is not unusual. In fact, a glass of *toaka gasy* might even be served to the ancestor's remains after they are exhumed from the tomb, a custom that is meant to show honor to the dead. As with other celebrations, a feast is served including plenty of beef, rice, and accompaniments; it is followed by singing and dancing.

The Festival of Rice falls sometime in April or May every year and is intended as a celebration of the rice harvest. In the past, each family performed a ceremony in which prayers, various parts of the rice plant, and the toasted rice meal *lango* were given as offerings of thanks to the ancestral gods. For this reason, the rice harvest became a sign of wealth and prosperity. It was taboo (*fady*) for any rice to be consumed before the ceremony. Although the festival is

not as strictly followed today, it remains a period of great celebration where extended family and friends gather together to eat, sing, dance, and enjoy one another's company. Dishes with fatty cuts of meat and coconut milk are enjoyed. One such recipe might be chicken stewed in coconut milk with tomatoes and onions (*akoho sy voanio*).

Akoho sy Voanio

Ingredients

- 2 tbsp vegetable oil
- 1 whole chicken, cut up
- 2 onions, diced
- 2 cloves garlic, minced
- 2 tsp ginger, minced
- 1 can diced tomatoes
- 1 can unsweetened coconut milk
- Salt and pepper to taste

In a large stockpot, heat oil over medium heat. Season chicken with salt and pepper, then sauté for about 10 minutes, turning occasionally. Remove the chicken from the pot and set aside. Add onions to the pan and sauté until golden brown, about 10 minutes. Add garlic and ginger, and continue to sauté another 3–4 minutes, stirring frequently. Add the tomatoes to the mixture, and cook for 10 more minutes, stirring from time to time. Return the chicken to the pot and add the coconut milk. Bring mixture to a gentle boil and immediately reduce heat to low, being careful not to curdle the coconut milk. Simmer for at least 30 minutes and adjust the seasonings.

Diet and Health

Madagascar has a long history of traditional medical practices (*fanafody*) that are strongly linked with the worship of ancestors. Although modern, Western hospitals and clinics are beginning to appear, they are mostly located in cities and towns, making access difficult for those living in rural areas.

In addition, many Malagasy people view Western medicine, as a relatively new form of health care, with suspicion. Consequently, traditional health care is still commonplace, particularly in remote locations. Regional variations occur in methodology and treatment, but most adhere to the belief that illness is a punishment for behavior not pleasing to God—the traditionally accepted God (*Zanahary*) or the God of Christianity (*Andriamanitra*)—or the ancestors.

Traditional healers (*ombiasy*) are employed for both physical and spiritual healing, relying heavily on herbal remedies. An ombiasy is believed to have the powers of divination—connecting with the ancestors and the spirit world—to help individuals suffering from spirit possession and diagnose a variety of other illnesses. Indigenous plants and leaves are commonly used, often steeped in water as a tea or bundled and placed under the patient's bed. These herbs are believed to remedy a number of maladies including headaches, common colds, nausea, toothache, and many others. The greens (*bredes*) so prevalent in cooking today, for example, were first used as medicine, slowly earning a place in everyday life. Spices, roots, and animal bones are part of the ombiasy medical repertoire as well. Markets are the best place to find them; stalls overflowing with various herbal concoctions are everywhere, overseen by ombiasy eager to find patients to purchase their wares.

Rice, too, is believed to have healing properties; the soft version (*sosoa*) is typically served to the sick. The Malagasy believe that children are well only if they eat enough rice. Toasted, ground rice flour (*lango*) is considered the food of the ancestors and thought to be restorative to the health.

Perhaps the greatest threat to Malagasy health is malnourishment and the lack of potable water. As one of the poorest nations in the world, sanitation standards and access to electrical power, transportation, and running water are well below those of the West. And with 70 percent of the population living on less than one dollar a day, access to food is a serious problem. Thirty-eight percent of the population is undernourished, mostly from insufficient caloric consumption and protein deficiencies. Forty-five percent of children under the age of three have

stunted growth, a result of their mothers' poor diet during pregnancy. The average life expectancy is only 55 years. Cities have the best living conditions and access to plenty of food by comparison to rural areas.

Mauritania

Overview

The Islamic Republic of Mauritania is a country in northwestern Africa. Its western border is the Atlantic Ocean; to the southwest is Senegal; Mali is on the east and southeast, Algeria to the northeast, and the Western Sahara to the northwest. Mauritania was named after the ancient Berber kingdom of Mauretania. It was part of French West Africa from 1860 until gaining its independence in 1960. It is sparsely populated, with about three-quarters of its land being made up of desert or semidesert. The majority of the population is of Berber, Arab, Tuareg, and Fulani descent and still lives a nomadic or seminomadic existence. However, many of these nomadic people have been driven into urban areas from long periods of drought. Almost all of the population is of the Islamic faith.

Food Culture Snapshot

Lina lives in Mauritania's capital city, Nouakchott. Lina and her daughter, Hawa, go to the market in the Ksar. Lina must go to the market every day to buy food because little to no refrigeration is available. In the hot season, it is necessary to go to the market to buy food for each meal because food can spoil after only a few hours. Many of Mauritania's people still rely on subsistence farming to live. Lina and Hawa live in an urban area, so most of what they consume is purchased in the market. Lina and Hawa are lucky to live in Nouakchott because they have a greater variety of items available to them than if they lived in a smaller town or village.

The market is organized in sections. Different boutiques and vendors specialize in specific products. There are separate sections where butchered meat, vegetables, fruits, bread, and housewares are available. Small grocery stores are rare but may be found in larger cities like Nouakchott. These are typically for Mauritians who are better off or are Western expatriates. The grocery stores are unique in that their prices are fixed. In the market, people are expected to bargain for the price of the item they are buying.

Major Foodstuffs

Rice is a staple in the Mauritanian diet. It accompanies many dishes of fish, meat, and vegetables and is often mixed into stews. Mauritania's coastline is one of the world's richest fishing grounds, and there are many preparations of fish in the Mauritanian cuisine. Mauritanians in general prefer to eat dried fish, which is often served alongside rice. Lamb and camel meat are most often eaten. Dates are an integral part of Mauritanian cuisine because they provide both calories and minerals. They are typically eaten at the end of the meal or as a snack. Dates are available in abundance; Mauritanians consume all the dates that are grown there and do not export any.

The type of food Mauritanians eat largely depends on location and ethnic group. In the north, there is a more limited variety of foods, and the food itself is typically blander than in the south due to the influence of the nomadic Moors. The Moors relied mostly on food that traveled well and did not have to be cultivated, which limited the variety in their diet. In the north, Mauritanians eat mostly meat,

Women sit on the beach with their freshly cleaned fish in Nouakchott, Mauritania. (Attila Jandi | Dreamstime.com)

rice, and couscous. In the south, they have an abundance of fish, vegetables, and some fruits—mainly due to climate. The northern part of Mauritania is dry and arid, while in the south they have the Senegal River as a water resource and higher average rainfall. This environment is much more conducive to land cultivation, which accounts for the variety of fruits and vegetables in the diets of Mauritians living in the south.

Cooking

How one cooks in Mauritania is largely determined by where and how one lives. Nouahdibou has a higher standard of living due to higher economic development from fishing industries. Many of the better-off people in this city cook in Western-style kitchens with electric appliances and running water. In smaller, more rural areas, the kitchen may be located outside or in a separate area of the home.

Oftentimes the kitchen is merely a covered structure. A small burner or burners, set on the ground and fueled by gas, is often the only means by which to cook. Nomads may use an open fire to cook their food, which usually involves a tripod that has a wok-like vessel hanging in the center over an open fire. Mauritians use a lot of vegetable oil in their food preparation because it increases the calories in the meal. In addition, the high quantity of oil allows the food to be compressed so that it is easy to pick up and put in one's mouth.

Typical Meals

The variety of dishes in Mauritania is quite limited. Typically, a family will eat the same foods for breakfast every day, and even lunch and dinner may vary little. For breakfast, people eat a porridge made of millet and served with milk and sugar. French bread

and butter is also a favorite breakfast food. It is usually served between 7 and 8 A.M.

The main meal of the day varies by culture. Black Africans prefer to make lunch the main meal, whereas Arab-Berbers have their main meal in the evening. In the south, the favorite lunch item is a Senegalese dish, *chub u gin* or *chubbagin*, which consists of rice and fish. It may be accompanied by vegetables such as eggplant, carrots, peppers, potatoes, and/or a green leaf called *bissap*. If fish is not available, goat or lamb may be substituted. *Yassa*, a simple dish of rice with onion sauce, is also popular. Lunch is usually served between 2 and 3 P.M.

Dinner is often couscous, which may be accompanied by goat or lamb. For special occasions, at dinnertime, people will have a plate of couscous with a goat's head on top. Dinner is usually served between 8 and 10 P.M. During Ramadan, dinner may be served as late as 11 P.M.

Camel meat is a Mauritanian specialty. The following is a traditional version of the national dish.

Chubbagin

1 lb camel meat, cut into cubes (lamb may be substituted)

$\frac{3}{4}$ c vegetable oil

2 tbsp tomato paste

1 onion, coarsely chopped

1 small eggplant, cut into chunks

2 carrots, cut into chunks

1 small cabbage, cut into wedges

1 large sweet potato, peeled and cut into chunks

1 smoked and dried fish

1 tbsp red pepper flakes, or to taste

1 garlic clove

1 small handful hibiscus leaves

2 lb rice

1 bouillon cube

Salt and black pepper to taste

Fry the meat in the oil to brown on all sides. Add the tomato paste and a little water. Stir to coat the

meat. Add the onion, and season. Cook until the onion softens, then add the other vegetables, including the garlic. Continue to cook, adding more water if necessary. Finally, flake the dried fish and add to the pot. Add the red pepper and hibiscus leaves. Cover and cook for 30 minutes. Carefully remove the meat and vegetables and place in a bowl. Pour the rice into the remaining liquid, add the bouillon cube, and cook until rice is tender. Remove the rice to a serving tray, and place the meat and vegetables on top to serve.

The ritual way of eating is important in Mauritania. There are no utensils—the meal is eaten with the right hand. The left hand is forbidden by Islam since it is seen as unclean. Food is usually served in a large bowl or plate that is placed on the floor, with everyone gathering around the dish. If there are a lot of people, there may be two or three dishes. Each person has an area of the dish that is considered his to eat. One must eat only the portion of food that is directly in front of one. If a desirable piece of food is lying outside this portion, one must ask if one may have it. Others will usually oblige and place it on one's portion of food. The meat is usually placed in the center of the dish, and the host will tear off the best pieces for visitors and guests.

The tea ceremony is very important in Mauritania. It is seen as a social event and a show of hospitality. It is believed to alleviate hunger, thirst, and fatigue. Tea is served at every meal. Green tea from China is typically consumed, or sometimes mint tea. The ritual of preparing and drinking tea can often take three hours. Three glasses of tea are usually drunk. There are three conditions in the ceremony of making tea: *ijmari*—placing the teapot on the charcoal embers; *jar*—slowly infusing tea leaves, serving, and drinking; and *jmaa*—assembling people. Each glass symbolizes a different aspect of life. The first glass is strong and bitter to represent death. For the second glass of tea, the pot is set back on the fire with mint and sugar in it. The flavor of the second glass is strong and sweet, symbolizing love. The last glass is a combination of the first two and is meant to symbolize life.

The actual act of serving the tea is also quite time-consuming and symbolic. The amount of foam in one's glass is indicative of how welcomed one is by the person who is preparing the tea. If there is a lot of foam—perhaps half the glass—one is welcomed, and the host greatly enjoys one's company. Very little or no foam means that the host is merely serving the tea to the guest as a hospitable, moral obligation. The foam is created by pouring the tea from one glass to another, often holding the glasses far apart and letting the tea cascade down into the glass. Foam in the tea is important because it takes time and care to produce it, showing that the host enjoys one's company.

Eating Out

In Mauritania, eating mostly takes place in the home. That being said, there are restaurants of many ethnicities such as Moroccan, Lebanese, Chinese, and French located in the larger cities like Nouakchott. Foreign cuisines generally dominate the restaurant scene in the larger cities. Local cuisine like lamb, goat, and rice is available at restaurants throughout the country. Restaurants have improved in recent years due to better distribution of food. A typical meal may cost US\$7 to \$10. Eating on the street is also popular. One can buy nuts, fritters or donuts, cooked meats, and tea.

Special Occasions

Festivals are celebrated all over Mauritania. Many of them are religious celebrations, such as the New Year, as well as more secular festivities like Independence Day. Often the feasts at these celebrations include a whole roasted goat or lamb. Sometimes, the head of the goat is roasted whole and served on top of couscous.

Animal sacrifice is a food custom that often takes place at ceremonial occasions. At the end of Ramadan, a married man is expected to offer a lamb. The meat of the lamb must be eaten within three days. It is also traditional to offer an animal on occasions like name-giving, initiation, marriage, and funeral ceremonies.

Diet and Health

Religion influences Mauritanian dietary practices in many ways. Almost all Mauritians are Sunni Muslims. Sunni is the largest denomination of Islam and means the words, actions, or example of the Prophet Muhammad. Mauritians consume only halal food, which Islamic law dictates is the only food that is permissible to eat. Halal meat must be slaughtered in the way set out by Islamic law. The animal must be killed quickly, with the knife slitting the throat while a prayer is said and the name of Allah is spoken. The Quran explicitly forbids the consumption of the following foods: pork; blood; carnivorous birds of prey; animals slaughtered to anyone other than the name of Allah; carrion; an animal that has been strangled, beaten (to death), killed by a fall, gored (to death), or savaged by a beast of prey; fish that have died out of water; food over which Allah's name is not pronounced; and alcohol.

In Mauritania, the cultural ideal of beauty encourages young women to eat foods high in fat so that they gain weight. A person who is overweight by Western standards is instead considered beautiful in Mauritania. This practice is slowly diminishing as the influence of Western culture through television shows and movies takes effect.

Morocco

Overview

Morocco is in North Africa. It is bordered by the Atlantic Ocean on the west, the Mediterranean Sea on the north, and Algeria on the east and southeast. The southwestern border of the country is in dispute, because Morocco and Mauritania both claim the arid, sparsely populated Western Sahara territory. The country is dominated by mountains, primarily the Rif chain along the Mediterranean coast and the three much higher Atlas ranges (from northeast to southwest, the Middle Atlas, High Atlas, and Anti-Atlas), which roughly parallel the Atlantic coast some 100 to 150 miles inland. The population is largely concentrated around the Mediterranean coast in the northeast, in the plains running inland from the Atlantic north of Rabat, and in the central plateaus of the Atlas. The least populous part of the country is the southeastern slopes of the High Atlas and Anti-Atlas mountains, which lead down to the Sahara desert.

Before the coming of Islam in the seventh century, North Africans spoke languages of the Berber family. At present, the overwhelming majority of Berber speakers are concentrated in Morocco; scattered islands of Berber speech survive as far east as Egypt. Though three-quarters of Moroccans are of Berber ancestry, only perhaps 40 percent still speak the language, most of them in the highlands and the far south, with the rest of the country now speaking Arabic. Culturally, there is little difference between Arabs and Berbers. Many city dwellers also speak French.

Food Culture Snapshot

Lahsen and Fatma Ben Hammoud; their son, Merwan; and Fatma's mother, Meryem, live in a four-room house in Fez, the country's fourth-largest city. Lahsen works as a tourist guide in Fez's huge and mazelike medieval *souq* (market). Their diet is typical of the lower middle class. They shop for meat, dairy products, and vegetables in the *souq*, but they also raise herbs, a few vegetables, and four chickens in their small backyard.

Major Foodstuffs

The Moroccan diet is based on grains, primarily wheat and, to a smaller degree, barley, which provide about two-thirds of the daily calorie intake. Wheat is made into couscous, bread, and pastries, and both wheat and barley appear as porridges and soups. Morocco is no longer self-sufficient in grain and imports about one-third of the wheat it consumes.

The country raises 17 million sheep, 5 million goats, and nearly 3 million cattle. Beef and veal are eaten somewhat more often than in other Arab countries. Poultry, primarily chicken but also pigeon, is as important as red meat in the Moroccan diet. The advantage of pigeons is that, because they are free, once one has gone to the trouble of building a dove-cote for the semiwild birds to live in, they don't need to be fed. Near the coasts, fish is a major food.

Milk is mostly consumed in the form of *rayeb* (a sweetened custardlike product made by curdling milk with wild artichoke) and *jebna* (cheese), made from sheep, cow, or goat milk curdled with sheep rennet.

Spices and herbs at Marrakesh bazaar. (Corel)

Cheese is usually eaten fresh, but it may be pressed to make a longer-keeping cheese called *ma'sura*. Yogurt is not traditional in Morocco.

The principal fats are olive oil, from Morocco's extensive olive groves, and butter, which is always clarified of its solids and whey into butterfat. This clarified butter (*smen*) can be flavored with spices and aged for months, even years, to achieve a highly prized rancid aroma, which in older examples suggests an aged cheese. The flavor of aged *smen* is essential to certain dishes such as the stews called *qedra*. In the south of the country, the nuts of the *argan* tree are pressed for their oil, which has a light, pleasant, hazelnut-like taste.

Pulses such as lentils, chickpeas, and fava beans are a significant source of protein. Chickpeas are added to many stews, and all the pulses are used in bean soups and *bisar*, a bean paste flavored with

herbs and spices that is eaten with bread. Vegetables include tomatoes, peppers, zucchini, artichokes, cauliflower, fennel bulbs, and cardoons. Eggplant and leafy greens play a somewhat smaller role in Morocco than in Arab countries farther to the east. Cabbage, turnips, and pumpkins are also important. Morocco is the world's third-largest consumer of olives. In most countries south of the Mediterranean, olives are consumed only as snacks, but Moroccan cooks often throw them into cooked dishes.

A striking feature of Moroccan food is the very extensive use of herbs, above all cilantro, and especially of spices, often a dozen or more in a single dish. The famous spice mixture *ras el hanout*, for which there are countless recipes, may contain 30 spices along with other flavorings such as rose petals.

Because of its wide range of climates, Morocco produces fruits ranging from subtropical bananas

to temperate-climate fruits like apples and plums. The important fruits include grapes, plums, peaches, apricots, quinces, pomegranates, lemons, and oranges. Grapes are eaten fresh or dried, and raisins are a very common ingredient in stews. Lemons that are not consumed fresh are pickled in brine, which gives them a sweet, plush, somewhat pinelike aroma. Pickled lemons (*lim mraqqed*; literally, “lemons put to sleep”) are added to salads and stews.

Cooking

A Moroccan kitchen needs only a small range of pots and utensils: a brazier (*mijmar*) for frying, boiling, and grilling; the earthenware casseroles *tajine* and *qedra*; and a steamer called a *keskas* (in French, *couscoussier*), rounded out with a few knives, a mortar and pestle, and some sieves. Modern electrical appliances such as refrigerators and mixers are available in stores. Many people buy meat and produce in small quantities and cook it the same day. Any leftover food is covered and eaten at the next meal.

Couscous, the Moroccan staple food, is called *kesksu* in Arabic and *seksu* in many Berber dialects. In the center of the country it is often called *tt'am*, which is simply the Arabic word for “food.” It is neither a whole grain nor a noodle but granules of flour, created by a special process that does not involve kneading. To make them, the cook sprinkles salted water into a bowl of flour and moves the fingers through it in circles so that granules form. From time to time, the flour is sieved to remove the granules and sort them into different sizes for drying. This is a time-consuming process, so factory-made couscous has been available for nearly a century. Many women of the older generations still make their own.

Whether packaged or homemade, the couscous is cooked by moistening it with cold water and then steaming it several times in the top of the couscoussier, alternating periods of steaming with more cold-water moistening and rubbing with butter or oil. The bottom of the couscoussier is filled with boiling water or, to conserve fuel, the stew that will be served with the couscous. Since the flour has never been kneaded, the gluten, the tough protein that creates

the firm texture of noodles and bread, has not been activated, so the couscous granules are only loosely held together. This means that couscous must be steamed—if it were boiled, the granules would turn mushy. It also means that the granules can absorb far more water as they steam than noodles do in boiling, so couscous has a light and delicate texture. It can even be made from flours that totally lack gluten, such as barley flour, cornmeal, or, in a few places, acorn meal.

Rice is rarely served as a side dish. It more often appears as rice pudding or in the stuffings of roast birds and *bestilas* (large pies), for which it is steamed like couscous. A kind of pasta called *she'riya*, resembling short lengths of vermicelli, is likewise cooked by steaming, though it can also be boiled in soup.

Typical Meals

Simple pastries are often served at breakfast. One is a sort of pancake called *beghrir*, which is fried on only one side. Various shaped pastries collectively known as *rghayef* are made from leavened dough rolled thin and folded to create a few layers. They are cooked by frying in olive oil until brown and puffed and are then dipped in honey. Other foods that might appear at breakfast are cheese, olives, bread, and the bean paste *bisar*.

The beverage will be green tea, usually flavored with mint and sometimes with orange blossoms, and nearly always served very sweet. Mint tea is drunk not only at breakfast but also throughout the day; Moroccans rank ninth in the world for tea consumption. For serving to guests, tea is prepared in a ceremonious way, and at the end the tea is poured with a flourish from a height of a foot or more above the teacup.

Lunch is a relatively large meal, typically consisting of a soup, several salads of raw or cooked vegetables, and a *tajine* (chicken, lamb, or fish stewed with vegetables), followed by fresh or dried fruit. It comes with round, dense-textured loaves of bread an inch or so thick that are flavored with anise. Many Moroccans knead the bread dough and shape it into loaves at home and then send it to a local bakery for baking.

Couscous is commonly served at lunch, and it is the traditional meal on Fridays after men return from morning prayer at the mosque. Moroccan meals are eaten sitting on the floor, with the diners taking food from a common dish, using only the right hand. The etiquette of eating couscous is to gather the granules into a ball with the fingertips and pop it neatly into the mouth. The stewed meat or vegetables that accompany it are transferred to the mouth separately. The leftover juices of any dish may be soaked up with a piece of bread. Soups are eaten with a spoon.

Dinner is ordinarily a less important meal than lunch. The characteristic foods are hearty soups, but salads, tajines, and couscous may be served. However, when guests have been invited, dinner may be a very grand meal.

Morocco is the only major Arab country that was never part of the Ottoman Empire. As a result, its cuisine shows little Turkish influence—there are no stuffed vegetables or baklavas—and it has its own traditional haute cuisine, which arose in the royal courts. Though everyday meals may be rather simple, for special occasions Moroccan cooks have a repertoire of grand dishes, some of which go back to medieval times, such as *mruziya* (a tajine of lamb with prunes and raisins) and *tfaya* (lamb stewed with almonds).

The grandest dish of all is the *bestila*, a large pie a foot or more in diameter, typically filled with stewed pigeon, toasted almonds, curdled eggs, and spices. Its name comes from the Spanish word *pastel* (pie), and the basic concept was probably brought to Morocco by Moorish Muslims who left Spain in the 16th century, or perhaps earlier, because there had been considerable traffic between Morocco and Spain since the Moors conquered the latter in the seventh century.

The *bestila* now bears little resemblance to anything in Spain, because its crust is made from *warqa* (“leaf”), a paper-thin pastry sheet somewhat like phyllo or strudel dough but stiffer and crisper. It is made by tapping a large lump of dough against a heated metal dish (*tebsi*) and removing the thin sheet that sticks once it’s cooked. Sheets of *warqa* are also

used for making pastries other than *bestila*. Most often they are wrapped around a filling (usually almond paste) to make small packets called *brawat* (“envelopes”), which are cooked by frying. A strudel-sized roll of *warqa* with an almond-paste filling—but baked rather than fried—is called *mhannsha* (“snake-shaped”).

In the north of the country, the *bestila* is usually flavored with lemon, and in the south it is usually sweetened. The north and south also have different tastes in couscous. Throughout the country couscous is most often served with a tajine of lamb, raisins, and chickpeas, but couscous with lamb, caramelized onions, and honey is traditional in Rabat, and in Essaouira on the Atlantic coast, couscous may come with fish and turnips. Throughout the country, people make a dish known as *couscous au sept légumes*, which is served with a tajine of mixed vegetables and, if possible, some lamb. Despite the name, the tajine needn’t include exactly seven vegetables. A typical mixture might be carrots, onions, turnips, tomatoes, sweet peppers, zucchini, and pumpkin.

In addition to couscous granules of the usual size, larger and smaller varieties are also made. Extra-large couscous, called *mhammsa* in Arabic and *berkukes* in Berber, is popular in the south. Northerners make an extra-small couscous called *seffa* or *mesfuf*, which they serve with butter, sugar, and cinnamon.

Whole spit-roasted lamb (*meshwi*, often spelled the French way as *méchoui*) is particularly characteristic of southern Morocco and rural Berber regions. City dwellers often make a stripped-down version of *meshwi* using smaller cuts of lamb and sending them to a bakery, rather than roasting the whole animal on a spit.

Soupe aux Carottes (Carrot Soup)

Serves 2

Fez was the capital of Morocco for four centuries and had a long connection with wealthy and sophisticated Moorish Spain. As a result, it is renowned for elegant cuisine. This dish—something

between a cold soup and a sweet salad—shows the delicacy and refinement for which Fez is known. Fez is also a major citrus-growing area and, citrus fruits play an important role there.

4 carrots

Juice of 4 oranges

1 tsp orange blossom water

Sugar

Cinnamon

Peel and trim the carrots. Quarter them lengthwise and cut out the bitter, woody core. Having discarded the core, grate the carrots as finely as possible. Divide the grated carrots between two soup bowls.

In a mixing bowl, mix the orange juice and orange blossom water, and add sugar to taste. Pour it into the soup bowls. Pick up a pinch of cinnamon between the thumb and index finger and deposit a thin line across each bowl of soup, then repeat to make another line crossing it at right angles.

Serve cold.

Eating Out

Moroccans usually eat at home. There are grand restaurants in large cities that cater largely to foreign visitors who otherwise would have no place to sample the unique dishes of the country. Otherwise, when away from home, people eat street foods such as fried fish (*hut mqalli*) and the local variety of shish kebab, known as *qotban* in Arabic and *brochettes* in French.

Qotban (Brochettes)

Serves 8–10 as a snack or appetizer

Qotban (literally, “sticks”) are typically made by marinating the meat with vinegar, onions, and pepper. This version from the Atlantic coast is more elaborately flavored, giving an idea of the variety of spices used in Morocco.

3 lb leg of lamb

2½ tsp cumin

2 tsp paprika

1½ tsp white pepper

1 tsp black pepper

1 tsp turmeric

1 tsp oregano

3 bay leaves, crumbled

½ onion, minced

3 cloves garlic, minced

¼ c olive oil

1 tbsp red wine vinegar

2 oz (½ stick) butter, melted

1 tbsp cumin

Cut the lamb into about 15 (¾-inch) cubes. In a mixing bowl, mix the cumin, paprika, white pepper, black pepper, turmeric, oregano, and bay leaves. Add the meat and rub with the spices. Toss with the onion, garlic, oil, and vinegar. Cover and refrigerate 24 hours.

Arrange the chunks of meat on skewers and grill until done to taste, about 7–8 minutes, basting with melted butter every 5 minutes. Dust with cumin and serve.

Qotban, a typical Moroccan dish. (iStockPhoto)

Special Occasions

Nearly all Moroccans are Sunni Muslims and observe the usual Muslim religious occasions: the Ramadan fast and the Feast of the Sacrifice. Since the Muslim calendar is strictly based on the phases of the moon, the Muslim year is shorter than the solar year and the months of the calendar fall about 10 days earlier every year. The foods served at Muslim feasts (*eids*) tend to be the usual special-occasion foods of the particular time of year.

During the month of Ramadan, Muslims are required to abstain from food and drink during the daylight hours but are permitted to eat and drink from dusk until dawn. Eid al-Fitr (the Feast of the Fast Breaking) is a three-day celebration that follows the last day of fasting. The most traditional way of breaking the fast—whether during Ramadan or at Eid el-Fitr—is to eat dates, but the dish particularly associated with breaking the fast is a hearty soup called *harira*. It is basically a meaty broth slightly thickened with a flour-and-water slurry (*tedouira*), enriched with chickpeas or lentils, tomato paste, and any choice of vegetables and flavored with spices, always including some red pepper. Moroccans consume *harira* at any time of year, but it is particularly welcome after a day of fasting—and above all when Ramadan falls in summer, because of its thirst-quenching qualities.

The Feast of the Sacrifice, Eid el-Kebir (“the great feast”), takes place on the 10th day of the month of Dhu ’l-Hijja, the day that the pilgrims to Mecca sacrifice a sheep (or arrange with a butcher to sacrifice a sheep). Muslims around the world are expected to do the same if they can afford to and to distribute part of the meat to those who can’t. As a result, the foods of Eid el-Kebir tend to involve meat. One dish particularly associated with the occasion is couscous with a tajine of sheep’s head, carrots, and fava beans.

Couscous is served at both Eids. In fact, couscous is the universal dish at special occasions, such as

weddings and the celebrations of births and circumcisions. During the period of mourning after a death, friends and relatives send couscous to the home of the bereaved, who distribute it to the poor.

Diet and Health

Moroccans consume a Mediterranean diet featuring many fruits and vegetables. Fish is a major food in coastal regions, and garlic and olive oil figure in many dishes. The oil of the indigenous argan tree is high in unsaturated fats. However, it is laborious to produce and too expensive for most Moroccans.

On the whole, the Moroccan diet is rather high in carbohydrates, and in recent decades there has been a growing but not well-understood problem of obesity in urban areas, particularly among women, 18 percent of whom are now obese, as opposed to 5.7 percent of men. This rate is more than triple what it was in 1980, when male and female obesity were roughly equal. The traditional dietary problem had been malnutrition, which still exists to some extent, particularly among children in rural areas.

A more serious problem in rural regions is availability of safe drinking water. In the countryside, only 58 percent of people have access to safe water, and many people suffer from gastrointestinal infections. In the cities, 100 percent of the water is considered safe.

Mozambique

Overview

The Republic of Mozambique is located on the southeastern coast of Africa and stretches for 1,535 miles along its eastern coast. The country is nearly twice the size of California, with about 309,475 square miles and a population estimated in 2009 to be about 21 million. It borders Tanzania, Zambia, and Malawi to the north; Zimbabwe to the west; South Africa and Swaziland to the south; and the Mozambique Channel of the Indian Ocean to the east. The terrain ranges from rain forests and swamps to mountains, grasslands, sand dunes, and beaches. However, the country is generally a low-lying plateau traversed by 25 rivers. The largest river, the Zambezi, an important resource, flows west to east and cuts the country into northern and southern regions. It supplies power through the Cahora Bassa Dam, one of Africa's largest hydroelectric projects. The capital, Maputo, formerly Lourenço Marques, is located on the coast in the southern part of the country. There are two main seasons: the wet season from November through March and the dry season from April through October.

The official language of Mozambique is Portuguese, a legacy of the country's colonizers, but various indigenous languages are also spoken, particularly in rural areas. After independence in 1975, there was an attempt to remove Portuguese as the official language, but no other language was spoken by a majority of the people. Mozambique's numerous African languages, all of which belong to the Bantu family, can be divided into three groups: Macua-Lomwe languages, spoken by more than 33 percent of the population, mostly in the north; Sena-Nyanja lan-

guages, in the center of the country; and Tsonga languages, in the south of Mozambique.

The population is divided among nine major ethnic groups. The largest group is the Macua, in the provinces of Nampula, Niassa, and Zambézia and the southern part of Cabo Delgado. In the northern part of Cabo Delgado and into Tanzania we find the Maconde peoples. The Tsonga are mostly in the provinces of Maputo, Gaza, and Inhambane. The Shona, Sena, and Ndaou are mostly in Tete, Sofala, and Manica provinces. Roughly 3 percent of the population is European, Indian, Chinese, Pakistani, or mestizo (mixed race, mainly European and African). These people live mostly in the large coastal cities and are usually doctors, teachers, or shopkeepers or are employed in industry.

The earliest inhabitants, Bantu-speaking peoples from the Niger Delta in West Africa, moved slowly through the Congo basin about 3,000 years ago, in one of the greatest population migrations on the African continent. Over centuries they journeyed into eastern and southern Africa, reaching present-day Mozambique sometime around the first century A.D., where they made their living fishing, farming, and raising livestock. These groups also knew how to make iron. This enabled them to make tools and develop farming techniques that gradually led them to absorb the population of nomadic hunter-gatherers.

By the eighth century, sailors from Arabia arrived and began establishing trading posts along the coast. They intermarried with the indigenous Bantu speakers and created a hybrid culture and language called Swahili. These Arab traders and slave traders

also brought with them the spicy cooking styles of the East. This culture still prevails and exerts a strong influence throughout Mozambique. The name *Mozambique* is thought to have come from the Swahili *Musa al Big*, or *Musa Mbiki*, the name and title of an ancient Arab sheikh via the phrase *Ilha de Moçambique* (Island of Mozambique). The most important of the Arab trading posts was at Sofala, near present-day Beira. Other important coastal ports and settlements were Ilha de Moçambique, Quelimane, and Ilha de Ibo. These ports were the main link between the old kingdoms and the inland gold fields.

In 1498 the Portuguese explorer Vasco da Gama was the first European to set foot on the territory that is today Mozambique. After rounding the Cape of Good Hope he landed on an island off the coast and claimed it for the Portuguese. By 1510 the Portuguese controlled all of the trading posts, from the town of Sofala in the south to what is now the country of Somalia; and by 1515 they had expanded their control east to Tanzania and Zimbabwe.

Over the next century the Portuguese subdued the inhabitants, whom they forced to work on their farms and in their gold mines. Their rule was finally recognized by the Mwene Matapa group in 1629. The Portuguese called the area *Terra da Boa Gente* (Land of the Good People). Slavery existed in the area before the Portuguese came, but they introduced the practice of exporting slaves, and by 1790 approximately 9,000 people were being shipped out each year. Even after slavery was outlawed by the Portuguese in 1878, it continued for many years.

During the Portuguese rule, the *prazeiros* (Portuguese landowners) formed the wealthiest and most powerful class. Below them were the mestizos, those of mixed African and Portuguese descent; and at the bottom were Africans, who constituted the vast majority of the population. Today, the way people dress reflects the confluence of different cultures as well as an individual's economic standing. In the cities, men wear Western-style suits to work. Women wear Western-style dresses and dresses made from fabric with brightly colored African patterns. Women in rural areas, however, generally have kept their traditional dress of *capulanas* (long pieces of traditional

fabric that are wrapped around the lower body). These *capulanas* are also used to hold their small children around their bodies. They also have retained the traditional head scarf or turban made from traditional fabric.

Today, the country is still divided along both ethnic and linguistic lines. But despite ethnic and linguistic differences, there is little conflict among the various groups. The greatest disparities are those that divide the north of the country from the south. The groups north of the Zambezi River follow a system of matrilineal descent. Many of them are seminomadic, moving every few years to more fertile soil. Because they are far from the capital and most urban areas, these groups show less influence from the Portuguese. South of the Zambezi River, in the Zambezi Valley, the tribes follow a patrilineal descent. To an extent, however, they have adopted Portuguese dress, language, and Christianity, especially the Catholic faith.

Mozambique is divided into 10 provinces: Maputo, Gaza, Inhambane, Sofala, Manica, Tete, Zambézia, Nampula, Niassa, and Cabo Delgado. Maputo, formerly called Lorenzo Marques, is the national capital. Its main products are citrus, sugar, and limestone. Gaza's capital is Xai-Xai. It is located between the Limpopo and Changane rivers and has a rich wildlife. Gaza Province is known as the granary of Mozambique due to the fertility of the Limpopo Valley, where there is extensive cereal and rice cultivation. Its main products are cashews, cotton, rice, and maize. Inhambane was established as a permanent settlement by the Portuguese in 1534. It is one of the oldest settlements in southern Africa. The province is characterized by its extensive coconut palms and cashew trees. The main products are cashews, coconuts, and tangerines. Sofala is one of the richest Mozambican provinces, producing primarily shrimp and sugar. The provincial capital, Beira, is built on a plain below sea level. It is also the location of Gorongosa National Park and Marromeu Buffalo Reserve. The province of Manica is essentially agriculturally based and an important producer of a wide range of vegetables and fruits. Its capital, Chimoio, is the center for the trade of agricultural products from the surrounding fertile areas.

Its main products are gold, tobacco, citrus, and vegetables. Tete Province is known as the location of the colossal Cahora Bassa Dam, which is the fifth largest in the world. The city of Tete is in one of the warmest areas of Mozambique and lies on a plateau 1,640 feet (500 meters) above sea level. This province also has the largest number of baobab trees, which are spread throughout the area. Fishing is one of its main products. Zambézia is an agricultural mountain region of extensive coconut and tea plantations. Quelimane, its capital, is an important river port located on the Rio de Bom Sinais (“river of good signs”). The area is famous for its traditional cooking, which is quite spicy. Zambezian chicken, grilled with palm oil, is known all over Mozambique. Products are coconut, tea, and shrimp. Nampula’s capital, also called Nampula, is an inland town surrounded by flat plains. Mozambique Island, located off the coast, where buildings are constructed of

coral, was declared a World Heritage Site in 1992. Nampula is also known for the Makua tribe, where women paint their faces white with *muciro*, an extract from a root that is also used to paint houses. The area is also known for its cooking utensils made from black clay. Niassa province is the largest and most sparsely populated region of the 10 provinces. Its main products are cotton, maize, hardwoods, and precious stones. Cabo Delgado, the northernmost province of the country, is home to the famous Makonde people, who are known for their sculptures in hardwoods and ivory. The Makonde are also known as a fearless people and ardent followers of initiation rituals. Another cultural characteristic is the tattooing of the body and sharpening of the teeth, both for aesthetic purposes.

Music is a very important cultural tradition. Song serves several purposes, including religious expression, and the relating of current events. Most

Women in the Tete province of Mozambique fishing with nets. (Andrea Basile | Dreamstime.com)

musicians make their own instruments. Their drums have wooden bases covered with stretched animal skins. Wind instruments known as *lupembe* are used by the Makonde peoples and are made from animal horns, wood, and gourds. The gourds are dried and hollowed calabashes, which produce a sound similar to that of a trumpet. The *marimba*, a kind of xylophone that has been adopted in the West, originated in Mozambique, where it is popular in the south among the Chopi peoples. Chopi musicians also use the *mbira*, an instrument made from a hollow box with strips of metal attached to it and plucked with the fingers.

Dances are sometimes linked with religion, and the Chopi are known for their hunting dance, when they dress in animal skins, carry spears and swords, and act out battles. In the north, the Makua men dance around the village on tall stilts, wearing colorful masks and outfits. On Mozambique Island, women perform a dance that combines rope jumping with complex footwork. The *marrabenta*, a form of dance and a type of music, is very popular in the cities.

Food Culture Snapshot

João and Maria Mutemba are a typical middle-class couple in Maputo. They live in a middle-class neighborhood and have two children, a boy age 12 and a girl age 10, who attend private schools. João and Maria's lifestyle and eating habits are typical of the middle class. They enjoy both Mozambican and Portuguese-influenced dishes. Their day begins with a breakfast of coffee; Portuguese rolls; papaya, mango, or bananas; and preserves. Sometimes breakfast will include eggs, sausages, fried manioc root, and/or leftover meats. Their bread is purchased at the bakery, and the fruit, preserves, and eggs come from the local grocery store.

For lunch their meal might consist of any of the following: grilled chicken or fish with fried potatoes and a salad, *lumino* (fried fish and manioc stew), *matapa* (a stew made from pumpkin leaves, peanuts, shrimp, and coconut milk), *quiabos fritos com camarão* (fried okra with shrimp), or *feijoada de mariscos* (seafood stew). The lunch usually ends with coffee and a dessert such

as *doce de papaia* (papaya dessert, a fruit pudding). Snacks, usually eaten around 4 P.M., include *bolinhos de amendoim* (peanut balls), *chamuças* (spicy chicken or shrimp turnovers), *croquetes de mandioca* (manioc croquettes), *camarão grelhada* (grilled shrimp), and pastry with coffee.

The evening meal, usually served around 8 P.M., might consist of a soup made from pumpkin, corn, or manioc; *caril* (the Portuguese word for curry) with seafood, fish, or chicken; *camarão à laurentina* (shrimp in coconut milk); *frango à Moçambicana* (grilled chicken); or *churrasco Moçambicana* (grilled meats) with salads. Dessert follows, with *doce de batata doce* (sweet potato pudding), *bolo de ananás* (pineapple cake), or *doce de papaia*, served with coffee.

Major Foodstuffs

Most of the crops originally cultivated in the region have been supplanted by European imports. The exception is millet, a grain that is sometimes made into beer. The diet of rural residents is based on the cassava root, which is called *mandioca* in Portuguese. It is an edible tuber root and a main source of nutritional starch. When pounded, it is a useful sauce thickener. Its importance is testified to by its name, which translates as “the all-sufficient.” This malleable food source can be baked, dried in the sun, or mashed with water to form porridge. To substitute for rice and/or potato, cassava can easily be cooked by cutting it into pieces and frying, similar to French fries. In its most common form, it is ground into coarse flour along with corn and then mixed with cassava leaves and water. The resulting dough is served in calabashes. Cassava leaves have a high nutritional value, and their use in many Mozambican dishes makes them a favored food. Corn is the other staple food; both corn and cassava were introduced from the Americas by the Portuguese. Cashews, pineapple, and peanuts, other important foods, found their way to Mozambique in the same manner.

Fish and seafood are some of the delicacies that Mozambique has to offer. Fishing along the coast accounts for one-third of the country's exports. The rivers also provide fish, and several fisheries produce mackerel and anchovies. Maputo is known for its

excellent prawns, lobsters, and crayfish. Calamari (*lulas*) is also very popular and usually served grilled or fried. Crabs, cockles, clams, and various fish such as tuna, red snapper, rockfish, and swordfish (*peixe serra*) from the coastal waters are savored and prepared in a variety of ways, but the most common is grilled over coals. Fish is often just served with a simple sauce made by combining lemon juice, chili peppers, and salt and heating them for a few minutes. The oils used to cook these delicacies are peanut, olive, and sunflower.

Beans are a staple in Mozambique and are used in many traditional dishes. The most common are *nhemba* (a type of black-eyed bean), *feijão-manteiga* (butter bean), and *feijão soroco* (a green split pea). The Mozambican secret to perfect beans is not to stir them until they finish cooking.

Agriculture is by far the largest industry. Rice, also a major food product, is grown in the province of Gaza. The Limpopo River, which runs through the southern part of the province, creates a wide, fertile plain where rice is cultivated. Coconuts, tangerines, and sugarcane are also major crops. The spices that are most commonly used in Mozambican cooking are garlic, parsley, onions, mint, cinnamon, cloves, saffron, coriander, cumin, and red peppers.

Cooking

Cooking techniques vary throughout the country. In the rural areas most food is cooked over an open fire. Chicken is grilled over coals, and any leftovers are made into another dish and eaten with rice. Vegetables and stews are cooked over the coals in clay or metal pots. In the central and northern regions goats are raised by many farmers and are part of their diet. The goat meat is cooked over coal fires and eaten with vegetables and a white doughlike mixture made from ground maize flour. This dough is used instead of utensils to scoop up the meat and vegetables.

In the larger cities, middle-class families have their meals prepared by cooks. Those meals are mainly Portuguese influenced, although the Goan (Indian) influence is very evident. Most meals are prepared on gas stoves fueled by propane tanks. Charcoal grills are also popular for grilling meats and sea-

food. The utensils that are essential in a Mozambican kitchen include a *pilão* (mortar and pestle) to pound peanuts and corn, a straw strainer to sift out the small stones and husks from flour, a small mortar to crush garlic and chili peppers, an *mbenga* (clay pot) to soak corn, and a good wooden spoon. Also found are a large pot for soups and stews; a large frying pan; a meat grinder for meats, peanuts, and greens; and a grater for garlic and other spices. Nowadays, steel and aluminum pans are used, but in the countryside good pans are made from clay.

Piripiri, the hot chili pepper, is a major contribution to the art of cooking. It is particularly prevalent in the cooking of the provinces of Maputo and Beira. All Mozambican cooks have their own way of preparing the piripiri sauce. The most common way is to begin by squeezing lemons, passing the juice through a sieve to remove the pulp, and simmering the juice in a pan with the piripiri peppers. The peppers are then removed and pounded to a paste with salt in a mortar and pestle. The paste is then returned to the pan with the lemon juice and simmered until thickened. The sauce can be served brushed over steak, fowl, fish, or shellfish that has been cooked on the grill. It is also used to season many dishes.

Refogado, a sauce that is the basis of most soups and stews, is made with onions, tomatoes, garlic, and green peppers sautéed in olive oil. Rice is usually served at each meal and sometimes combined in a dish with fruit such as *arroz de papaia* (rice with papaya) and *arroz integral com manteiga de amendoim e bananas* (brown rice with peanut butter and bananas) and served with grilled meats. Rice is also mixed with vegetables as in *arroz verde* (green rice), which calls for the rice to be cooked with a refogado made from onions, bell peppers, cilantro, garlic, salt, and pepper with chicken broth. *Mucapata* (rice with split peas) is an enticing combination of rice, green split peas, and coconut milk from the Zambesia region in central Mozambique. It is prepared in a clay pot and is usually served with *frango à cafreal* (African-style grilled chicken). Peanuts are a main ingredient in many Goan and Mozambican recipes. They are usually ground to a powder and used to thicken the sauce. *Matapa saborosa* (collard greens with peanut sauce) calls for the collard greens to be

cooked with shrimp, coconut milk, ground peanuts, and chili peppers. It is usually served with pork loin and white rice. Another very popular dish is *caril de amendoim e galinha* (chicken with peanut sauce): Chicken is served in a spicy curry sauce that calls for the piri-piri pepper.

The Portuguese influence is very evident, mostly in the large cities, particularly in the use of wine in cooking, egg yolk desserts, and salads. Thousands of immigrants from the former Portuguese province of Goa, on the west coast of India, settled in Mozambique, adding a permanent Indian element to the culture. The Indian (Goan) influence is most evident in the southern part of the country. Caril (curry) is prepared using chicken, fish, or seafood. It is usually accompanied by mango chutney (*manga achar*), a hot chutney sometimes served with side dishes such as chopped peanuts, grated coconut, sliced cucumbers, and bananas. The chutney is also served with *chamuças* (samosas—triangular wedges of fried pastry filled with chicken, shrimp, meat, or vegetables). In the rural areas of the country and in restaurants and homes in the larger cities, we find African dishes such as African-style grilled chicken (*frango à cafreal*), cassava leaves cooked in a peanut sauce (*matapa*), chicken in lime-juice sauce (*galinha à Zambeziana*), and grilled meats, Mozambican style (*churrasco Moçambicano*). Along the coast the cuisine is more Portuguese influenced than in the interior, and in most restaurants excellent fish and seafood are available. In addition to grilled prawns, lobster, crayfish, and calamari (*lulas*), seafood dishes such as *macaza* (grilled shellfish kebabs), *bacalhau* (dried salted cod), and *chocos* (squid cooked in its own ink) are items on the menu. The food is seasoned with peppers, onions, and coconut.

Traditional drinks abound, and each region has its favorite. Some of the more common ones are made using cashew fruit, manioc, mango, and sugarcane. Normally, the fruits are gathered and washed and left to ripen completely. The fruits are then opened to loosen the seeds and rind, and everything is put into a large receptacle for a day or two. The mixture is then passed through a sieve, and the liquid is bottled and is ready for drinking. *Maheu*, a beverage commonly served at ceremonies or as a snack, is made with corn

flour and water. After cooking it resembles a thick porridge. It is then refrigerated and sugar is added. Another popular drink served with food is *shema* (palm wine).

Chamuças (Chicken Turnovers)

Chamuças are one of Mozambique's most famous appetizers. They are of Indian origin and are common in much of southeastern Africa. But because of the Goan influence over centuries in Mozambique, this dish is now considered Mozambican. It can also be prepared with a shrimp filling.

Filling

- 2 lb bone-in chicken thighs
- 2 tbsp vegetable oil
- 2 large onions, minced
- 1 large tomato, chopped
- 1 tbsp curry powder
- 1 tbsp grated fresh ginger
- 1 tbsp red pepper flakes
- 1 tbsp garam masala
- 1 tsp salt

Pastry Dough

- 2 c all-purpose flour
- $\frac{3}{4}$ tsp salt
- 1 $\frac{1}{2}$ tbsp oil or clarified butter
- $\frac{1}{2}$ – $\frac{3}{4}$ c water
- Vegetable oil for frying

For the Filling: Place the chicken thighs in a large pot, cover with water, and bring to a boil. Reduce the heat and simmer until the thighs are cooked through, about 30 minutes. Remove from the heat, and cool the thighs in the broth. When the chicken is cool, remove the skin and bones and shred the meat. Heat the oil in a large skillet. Add the shredded chicken and all the other filling ingredients to the skillet and simmer for 30 minutes, stirring frequently. Add a little of the broth if the mixture becomes too dry. Set aside.

For the Dough: Stir the flour and salt together. Make a well in the center of the mixture and pour in the oil and water. Stir briskly until combined, gradually adding more water if necessary. The dough should be slightly moist and stick together. On a lightly floured surface, knead the dough for about 10 minutes, until smooth and elastic. Cover with a damp cloth.

Preparation: Break off pieces of dough and shape them into balls the size of walnuts. Roll each ball into a circle about $\frac{1}{16}$ of an inch thick and 4 inches across. Cut the circle in half and place a heaping tablespoon of filling on one side of the half circle. Fold over the half circle to form a triangle. Brush a bit of water along the edges and pinch to seal. Continue in the same manner until all the dough and filling have been used.

Heat 2 inches of oil in a large skillet. The oil is ready when a piece of dough sizzles when dropped in. Fry 3 or 4 *chamuças* at a time until golden and crisp on each side. Drain them on paper towels. Serve at room temperature with mango chutney.

Variation: You can also use wonton wrappers in place of the pastry dough. In this case, place a tablespoon of the filling in the center of each wonton, brush the edges with egg wash, fold in half diagonally, and press the edges together to form a triangle. Fry in hot oil until golden on all sides.

Typical Meals

Mozambique with its 10 provinces has many regional flavors and ethnic food cultures. There are some differences in the type of food eaten in the interior and the major cities, but there are many meals that are typical and enjoyed throughout the country. Mozambican influence is evident in dishes such as peanut balls (*almondegas de amendoim*); collard greens with peanut sauce (*matapa saborosa*); rice with split peas (*mucapata*), which is prepared in a clay pot and served with grilled chicken or fish; African-style grilled chicken (*frango à cafreal*); fish and shrimp stew (*peixe à lumbo*), papaya pudding (*doce de papaia*); and sweet cassava (*doce de mandioca*). Goan influence is evident in dishes such as chicken

curry (*caril de galinha*), chicken with peanut sauce (*caril de amendoim e galinha*), shrimp curry sauce (*molho de camarão com caril*), steamed rice bread (*sanna*), and chicken turnovers (*chamuças*).

Breakfast in rural areas is often different from what is eaten in urban areas (see Vignette). It might consist of *mealie*, corn ground into flour and prepared like porridge and mixed with goat milk. The cassava root is also eaten, either baked or mashed with water to form porridge. Other dishes include grilled meats, rice or potatoes, fruit, or leftovers from the previous evening meal. Occasionally omelets and scrambled eggs are served with a bit of meat and bread.

Lunch in rural areas might consist of stews, grilled meats, and manioc. All meat is cooked over an open fire. What is not eaten at lunch is often mixed with rice and served for another meal. Vegetables such as onions, potatoes, cabbage, and tomatoes, grown in home gardens, are cooked as side dishes or combined with leftover meats for stews. The evening meal might consist of leftovers from lunch, soup and bread, or grilled meats with cooked vegetables.

Maguinha and *upswa* are similar food staples that are widely consumed. *Maguinha* is made with cassava, and *upswa* is made with corn. Both are quite filling and are best eaten with a sauce, but when times are difficult and food is scarce, especially in the dry season, people will eat *maguinha* without a sauce.

In the rural areas, because of a frequent lack of electricity and gas for refrigeration, *meringues* are used to hold water. They are small containers made from clay and shaped like a balloon with a long neck and a lid. They are usually kept in the kitchen and will keep water fresh for at least three days.

Eating Out

Most restaurants and hotels in larger towns and provincial capitals offer Continental, Portuguese, and local fare. In villages and rural areas one might find only *barracas* (small food stalls). These small stalls are also found in the large cities and usually serve local fare such as *maguinha* or *upswa* and sauce, fried fish, grilled chicken, and local beverages. In hotels and restaurants in the larger cities the fare is varied.

A barracas, or street vendor, in Mozambique. (Amitai | Dreamstime.com)

There will usually be one or two local dishes on the menu along with dishes like *caldo verde* (a green vegetable soup) and other soups, grilled meats, chicken, seafood, fish, fruit salads, French fries, and sandwiches. There are also ethnic restaurants: Italian, Portuguese, Brazilian, Greek, and Indian. Most cities have cafés, *pastelarias* (bakeries), or *salão e cha* (tea parlors) where one can purchase tea, coffee, pastry, snacks, or light meals.

Special Occasions

Food is a part of many celebrations, and it is customary to serve a meal at parties, rituals, and other social gatherings. At private parties such as weddings

and funerals, a variety of foods are found. Regional dishes as well as dishes with Portuguese, Chinese, and Indian influence are very popular at buffets. People celebrate festivals differently across the country, depending on the family's financial resources, regional foods, or religion. For instance, Tete Province, which is inland and separated from northeastern Mozambique by Malawi, has an estimated 1.8 million goats. Locals celebrate festivals by slaughtering a goat and preparing *caldeirada de cabrito* (goat stew made with potatoes, onions, tomatoes, carrots, peas, beer, curry powder, and lemon juice). In Zambézia Province, located southeast of Malawi, a celebration would not be complete without *mucapata* (rice with green split peas, coconut milk, and chili peppers, served with rice cooked in coconut milk).

In southern Mozambique, animals such as cows, goats, and pigs are slaughtered during Christmas or Family Day and New Year's Eve or Day. These two holidays bring families together more than any of the others, which are public and political events. Usually it is the religious holidays when special foods are eaten. For example, on Easter, meat is not eaten, and most who celebrate eat salt cod, other fish, and seafood. On Christmas Eve, because of Portuguese influence, bacalhau (salt cod) is the fish of choice for those who can afford it. Other dishes that are served for festivals are *caril de galinha à Moçambicana* (curried chicken, Mozambican style), *feijoada Moçambicana* (Mozambican bean stew), *lumino* (fried fish and manioc stew), *matapa* (collard or pumpkin greens in peanut sauce), *frango à cafreal* (African-style grilled chicken), and *churrasco Moçambicano* (Mozambican grilled meats).

Apart from national holidays—most of which are celebrated with parades, songs, and dance performances—Mozambique has few festivals. The public holidays and special events include New Year's Day (January 1), Mozambican Heroes' Day (February 3; commemorating the country's revolutionary heroes), Women's Day (April 7), International Workers' Day (May 1), Independence Day (June 25; commemorating Mozambique's independence from Portuguese rule in 1975), Victory Day (September 7; commemorating the signing in Lusaka of the treaty granting Mozambique its independence), Revolution Day (September 25; commemorating the initiation of Mozambique's independence struggle in Chai, Cabo Delgado Province), Day of Peace (October 4; commemorating the signing of the 1992 peace accords), and Christmas or Family Day (December 15). Each city or town also has its day commemorating its founding. Local businesses are closed on this day, and the city celebrates with parades and song and dance performances. Maputo Day is November 10.

***Caril de Galinha à Moçambicana* (Curried Chicken, Mozambican Style)**

Curried chicken, Mozambican style, is very popular throughout the country and is served at many parties and formal ceremonies. This dish is one of a

number of examples of the influence Indian food has had on Mozambican cuisine.

Chicken

½ c olive oil
 1 large onion, chopped
 2 cloves garlic, chopped
 ½ c chopped fresh parsley
 1 whole chicken (3–4 lb), cut into 8 pieces, or 8 bone-in thighs

Curry Sauce

½ c olive oil
 2 cloves garlic, minced
 1 large onion, minced
 2 medium tomatoes, peeled, seeded, and chopped
 1 tbsp curry powder
 1 tsp salt
 1 tbsp flour
 1 tsp red pepper flakes
 2 c unsweetened coconut milk

For the Chicken: Heat the oil in a large skillet and sauté the onion, garlic, and parsley, stirring until the onion becomes transparent. Add the chicken pieces; cover with water, and cook over medium heat until the chicken is cooked through. Set aside (see note).

For the Sauce: In another large skillet, heat the olive oil over medium heat; add the garlic and onion. When the onion turns lightly golden, remove it from the skillet and puree in a food processor. Return the puree to the skillet, and add the tomatoes, curry powder, and salt. Stir well. Mix the flour with 2 tablespoons of water and add to the skillet along with the pepper flakes; mix well. Cook over low heat for 1 hour, adding ½ cup of coconut milk every 15 minutes. Add the chicken pieces, cover, and cook another 10 to 15 minutes, until the sauce thickens. Serve with white rice.

Note: After cooking the chicken you can remove the skin and bones and cut it into large pieces before adding it to the curry sauce.

Diet and Health

In 1975, when Mozambique gained its independence, the government created a free, nationalized health care system. Its goal was to improve the population's health through preventive medicine. They employed nurses to give vaccinations and to educate the population about sanitation and other basic health care issues. They established clinics throughout the country, many of which unfortunately were destroyed during the civil war. In 1992, when the civil war ended, the government began rebuilding those clinics. The government also abandoned a law prohibiting private practice in an effort to increase the number of doctors, whose numbers had dwindled due to the exodus at the beginning of the civil war. Today, the main health threats are malaria, AIDS, and sleeping sickness, which is transmitted by the tsetse fly.

Malnutrition is also a concern and is the most common health problem, mainly because there is a lack of a variety of foods in many residents' diets, and they do not consume an adequate amount of protein, vitamins, and other essential minerals. There is a movement for the population to introduce new

crops and change their diet to a much healthier one. As a result, vegetable gardens are being encouraged, and beans, tomatoes, onions, potatoes, and cabbage are being planted. Many people would have to borrow money to buy the seeds to plant these crops because most Mozambicans do not have a bank account. Bananas and cashews grow well in most parts of the country and are part of the local diet. Goats are kept by many, and therefore goat milk is available. For those living along the coast and near rivers, fish and other seafood are an important part of their diet. Corn, which is often ground into flour, is eaten by people in the rural areas for most of their meals. Rice is not grown in the northern region, which means that villagers have to purchase it. Many cannot afford to do so.

Namibia

Overview

Namibia is a country in southern Africa with a land area of 318,148 square miles. It is a little less than twice the size of the state of California. It has a population of just over two million, making it the second least densely populated country in the world, after Mongolia. Namibia shares borders with five countries: Angola, Zambia, Zimbabwe, Botswana, and South Africa. The country has over 900 miles of Atlantic Ocean coastline, much of it comprised of the western reaches of the Namib Desert, which encompasses over 31,000 square miles and is believed to be 55 million years old. The northern coastline of Namibia includes the notorious “Skeleton Coast,” named for many shipwrecks and whale bones that washed to shore during the height of the whaling industry, due to dangerous ocean conditions created by cold water currents, surf, and thick fog.

Namibia gained its independence from South Africa in 1990, ending a long era of occupation that had begun with colonial Germany in 1884. While the Germans conceded claim to Namibia after World War I, their imprint of enforced segregation, relocation, and subjugation of indigenous tribes still echoes in contemporary Namibian society. German occupation was followed by South African control (initially as a British colony, then as a sovereign nation), which brought the system of apartheid to Namibia, further entrenching deep divisions between races by institutionalizing a system of disenfranchisement and discrimination. In 1966, the People’s Liberation Army of Namibia formed a guerrilla military response to South African rule, demanding independence. The war was fought until 1988, when

South Africa agreed to relinquish its administration of the country. Today, Namibia is a presidential representative democratic republic.

Whites and mixed-race Namibians (Coloured and Baster groups) together make up nearly 14 percent of the population, but the majority of Namibians are black Africans. The largest tribe is the Ovambo, which constitutes nearly half of the black African population of Namibia. The original inhabitants of Namibia are the Bushmen (San), who are hunter-gatherer nomads. English is the official language, though the multinational origins of Namibian society contribute to a country where German, Afrikaans, and Oshiwambo are widely spoken and often represent first languages for many citizens. Namibia is an interdenominational country but with Christians comprising 80 percent of the population.

Food Culture Snapshot

Joyce Udjombala is married, with two children. She works as a librarian at a public branch in the Katatura Greenwell neighborhood of Windhoek, Namibia's capital city. Her husband, Thomas, is a middle manager at a power plant in the suburbs. Both Joyce and Thomas are ethnically Ovambo and grew up in northern Namibia but moved to Windhoek for postsecondary education. Joyce's oldest, a daughter named Maria, is an undergraduate at the University of Namibia, studying law. Her youngest, a daughter named Letha, is still in high school. Both daughters live at home with their parents.

Joyce grew up just outside Oshakati, the second-largest city in Namibia, located in the far north of the country. She grew up watching her mother and aunts prepare traditional dishes like *oshifima* (boiled millet) and *potije*, a vegetable and meat stew cooked in a three-legged metal pot. Now, living in Windhoek, Joyce prepares *oshifima* with cornmeal, more widely sold in the southern part of the country. She makes the thick cornmeal porridge with milk and often serves it with cooked meat. While Joyce and her family all eat their lunches at work or school, they gather most nights for a shared dinner. Provisions for the meal are purchased at the local supermarket on the way home from work and include a meat roast and gravy, canned or fresh vegetable sides, and bread. On special occasions, Joyce and her family will enjoy one of Windhoek's many restaurants, which specialize in everything from Cameroonian curry to *braai*, a grilled-meat tradition from South Africa that has spread through Namibia so widely that it is considered a national dish.

Major Foodstuffs

In Namibia, a main meal for all ethnic groups is not complete without meat. While cattle are raised and consumed widely in Namibia (the number of cows far exceeds the number of humans in the country), wild game such as springbok, zebra, and oryx is also very popular. Two preparations are most common, the first being the traditional grilled meat called *braai*, an Afrikaans word from South Africa, where the dish originated. This dish is so thoroughly woven into Namibian society that they have made it their own. The second preparation, called *biltong*,

involves air-drying small pieces of meat into strips of jerky. While *braai* makes a meal, *biltong* is seen in the cities as a snack, though in rural areas it is an important preparation to preserve meat for future consumption. Finally, German sausage varieties are widely available in Windhoek and other urban areas across the country.

With its long coastline, Namibia also boasts an array of seafood dishes. Fresh oysters are popular, along with fillets of hake and kingklip. Namibia exports horse mackerel and pilchard, a species of sardine. Recreational fishing is popular in Namibia, and licenses are available for enthusiasts. A seasonal Ovambo delicacy is the mopane caterpillar, or *omangungu*, which is fried with vegetables and often served with *oshifima*. The caterpillars can also be dried to eat as snack, much like *biltong*.

Grains and Starches

Grains are grown and prepared widely throughout Namibia. In the north, millet, or *mahangu*, is the staple crop. Millet is more drought resistant than other grains and can thrive in the unforgiving climate in much of the north of Namibia. Once harvested, millet is pounded and winnowed to release the chaff. It is typically prepared as *oshifima*, by boiling it with milk and water, and then served alongside a meat stew.

In southern Namibia, white maize is the common crop, so cornmeal often replaces millet when making *oshifima*. While the wheat industry exists in Namibia, it is a much smaller crop compared to white maize and millet. Wheat pasta dishes are popular in much of urban Namibia, but the pasta is often imported from South Africa, which has much more robust wheat production.

Oshifima

Serves 4–6

1¼ c white cornmeal or millet

1 c milk

1 c water

Heat a cup of water to boiling in a medium-sized saucepan. Meanwhile, in a bowl, gradually add ¾ cup

of the cornmeal to the milk, stirring briskly to make a smooth paste. Add this mixture to the boiling water, stirring constantly. Cook for 4 or 5 minutes while adding the remaining cornmeal. When mixture begins to pull away from the sides of the pot and stick together, remove from heat. Transfer oshifima into a lightly greased bowl. With damp hands, shape it into a smooth ball, turning in the bowl to help smooth it. Serve immediately.

To eat in the traditional manner, tear off a piece of oshifima and make an indentation in it with your thumb. Use this hollow to scoop up stew or sauce from a communal bowl. Alternatively, the oshifima can also be shaped in the bowl as a vessel, and the meat stew can be poured in and over it and then served.

Many groceries and markets in urban Namibia offer a range of fruits (bananas, grapes, and oranges) and vegetables (tomatoes, onions, pumpkins, and potatoes), most of them imported from neighboring countries with longer growing seasons and more suitable climates. Much of Namibia is arid and particularly challenging for providing crops the irrigation that they require. However, there are indigenous fruits that thrive in pockets of Namibia, namely, the northeastern Caprivi Strip of fertile floodplain bordering Zambia and Zimbabwe. The *marula* tree bears a plum-sized fruit of the same name with a light yellow-green rind, which is rich in vitamin C. The dark orange *eembe* berry is also prized and is known by the term “bird plum.” Both these fruits can be used for making jellies, jams, fruit juices, and even cakes.

While yellow maize and varieties of beans are grown in parts of Namibia, the yield is for feeding livestock, not humans. Nearly half of Namibians depend on subsistence farming for their livelihood, so small-scale gardens and crop cultivation in rural areas are the norm. Groundnuts (peanuts) are cultivated in Namibia but mainly for export to South Africa.

When the Germans arrived in the late 1800s, they brought their culture of beer brewing, which today manifests in the Namibian Breweries’ popular brand Windhoek Lager, which, along with an assortment of other lagers and drafts, is sold throughout the

country. In addition to imported drink traditions, Namibia has a number of indigenous alcoholic beverages. *Walende* is a distillate made from palm fruit, while *mataku* is a wine made from watermelon. Millet is used to prepare a fermented drink known as *oshikundu*, sold widely in northern Namibia in both alcoholic and nonalcoholic varieties. The German influence on cuisine is not limited to beer and bratwurst. German pastries and cakes are widely available in bakeries and restaurants in urban areas such as Windhoek and Swakopmund.

Cooking

The most common Namibian dishes are grilled over heat or fire, as opposed to baked. In the countryside, cooking is typically done over a fire, though efforts are underway to introduce solar stoves to take advantage of a plentiful natural resource. Cooking in some exclusive Windhoek neighborhoods largely takes place in kitchens that are outfitted with the full range of appliances one might expect in any industrialized nation: refrigerator, oven and stovetop, microwave, and dishwasher. Across town in more impoverished areas of the city, kitchens would more resemble their relatives in the countryside than their city counterparts. In the most arid climates of Namibia, which is much of the country, both meat and fruit are prepared for storage through a drying process that keeps the food preserved for months.

Outdoor cooking in a small village in Namibia. (iStockPhoto)

Typical Meals

For rural Namibians farmers, who make up roughly 70 percent of the population, meals revolve around an agricultural lifestyle. A porridge breakfast of *os-hifima* might start their day at dawn before the heat of late morning and midday sends people into the shade of trees or indoors for lunch, which would likely involve a meat dish—fish for coastal dwellers, game or cattle in much of the north and south. Dinner would be taken after a second shift either herding or tending to crops. While both men and women work in the fields, it is expected that women will prepare the meals.

In Namibian cities, many families eat breakfast at home so as to arrive at work between 8 and 10 A.M., depending on the job. Toast, coffee, tea, eggs, and boxed porridge are common dishes. Families with European heritage likely add cold meat slices and cheese to the breakfast menu. Alternatively, some urbanites enjoy *kapana*, or a skewer of beef or other red meat, sold in roadside stands in many neighborhoods of metropolitan Windhoek. These inexpensive sticks of grilled meat are not limited to breakfast, as the vendors fire up their coals in the morning and then sell throughout the day into the evening. While some urbanites return home for lunch, many grab a quick take-out sandwich or salad in the neighborhood where they work at around noon. Dinner is served at home between 6 and 8 P.M. and is typically prepared by the matriarch of the household.

Eating Out

In rural Namibian villages there are no traditional restaurants, so eating out would involve an invitation by another household, most likely as part of a celebration of life (birth or marriage) or death (a funeral). In towns across Namibia, small eateries sell biltong, simple foodstuffs, and braai. In addition to small-scale restaurants, a range of street vendors offer everything from *kapana* to fresh fruit.

Windhoek, like any large capital city, has restaurants that run the gamut from fine dining to dives. Many of the most expensive ones line Independence Avenue and feature cuisines that have been

introduced to Namibia, such as German, Cameroonian, Chinese, and U.S. Western barbecue. Independence Avenue is also home to malls that offer up dozens of coffee shops and fast-food eateries that sell pizza, sandwiches, and sweets. Joe's Beerhouse is a short drive from the city center and specializes in the array of meat dishes Namibia is famous for, from *sosatie*, the South African term for skewered meat in a spicy sauce, to classic braai. The restaurant Luigi and the Fish specializes in preparing the array of seafood found in Namibia.

Special Occasions

Namibian Independence Day, March 21, is marked with celebrations across the country. Families will mark the day with a braai, and parties are known for “sunrising,” as the festivities continue through the night until the break of dawn. As a predominantly Christian country, a number of holidays are observed widely in Namibia and typically involve meals and traditional dishes. Christmas and Easter often involve meals following church services, where a centerpiece red meat dish would be joined by vegetable and pastry side dishes, followed by dessert. Turkey or goose, while popular in a few households in Namibia, is not common. Rural celebrants would most likely prepare a slaughtered goat. Specialty baked goods such as *veldt bread*, made with cinnamon, allspice, and cloves, grace many a table. In German Namibian households, Christmas would be celebrated on December 24, whereas in non-German Namibian households, the celebration would take place on the 25th.

Diet and Health

While urbanization has meant exposure to processed foods, supermarkets, and chain eateries for many Namibians, the majority of the country lives and eats in rural villages and towns where their diet has remained relatively unchanged for generations. Namibia has one of the widest gaps between rich and poor in the world, which affects diet and health indicators. While life expectancy in Namibia is an average of 51 years, if calculated along class and

race lines, a more divergent set of ages would be revealed.

Nigeria

Overview

Nigeria is located on the western coast of Africa in the central region. Its name is taken from the Niger River, which is not only an important food source but also an important form of transportation. The country is quite large, approximately twice the size of California, and has a mostly humid, tropical climate. The majority of the topography is plains and plateaus; however, there are mountains to the eastern side of the country and the Sahara desert is to the north. These landscape differences introduce variation in the types of foods that may be grown. The rivers also enabled trading of foodstuffs and the migration of people. The slave trade was established in Nigeria by the Portuguese around 1400, with other European traders and eventually the British taking control and establishing Nigeria as a territorial entity in 1914. As a result, the food of the southern United States has been influenced by the traditional foods of Nigeria through the slave trade, while traders coming into the region introduced Asian spices such as cinnamon and nutmeg.

Nigeria has the largest population in Africa (148 million people) and accounts for just less than half of the total West African population. There are approximately 200 different ethnic groups, and around 500 different languages are spoken; most residents are multilingual. The largest ethnic groups are the Hausa-Fulani in the north, the Igbo in the southeast, and the Yoruba in the southwest. These ethnic groups also provide the lingua franca for each region, and their languages are designated as national languages. Government business is conducted and written in English. Despite this ethnic and linguistic

diversity, the country is dominated by just two religions (90% of the total population). The northern region is largely Sunni Muslim although there are a number who belong to Sufi orders. Likewise, the Christians in the south may belong to a number of individual church sects, including Catholic, Methodist, Lutheran, Anglican, and Pentecostal.

Although one of the poorest countries in the world, the country is rich in natural resources, including oil and gas but also productive agricultural land able to produce a wide range of fruits and vegetables and support livestock. Nigeria has the second-largest African economy and accounts for 41 percent of the sub-Saharan gross domestic product. Over half of the country's population (54%) lives on less than one U.S. dollar a day. Life expectancy within the country is just 47 years. Families tend to be large, with an average fertility rate of 5.5 children per woman, and nearly 13 percent of teenage women have children. The infant mortality rate is high, at 19 percent (giving the country a ranking of 13 in the world). Literacy rates in Nigeria are better than for sub-Saharan Africa as a whole (69% compared to 59%), but boys are more likely to be enrolled in school (100%) than are girls (87%), and they attend school for a longer period (the average length of time in school for boys is nine years compared to seven years for girls). Economic data from 2007, however, suggest that inflation has fallen in recent years to around 5.5 percent (consumer prices) and that the current balance of payments is positive (exports exceeding imports). Most farming involves animal husbandry as well as crop production, and the majority of farmers operate small-scale farms

One of many street markets in Ibadan, Nigeria's second-largest city. Located about 100 miles from the Atlantic coast, Ibadan is an important commercial center that serves as the capital of Oyo state. (Corel)

of five acres or less that can be managed by hand. The Nigerian government argues that oil is now the primary foreign-exchange earner; however, there has been unrest in the region where oil is produced (the Niger Delta), which has reduced oil exports.

Despite the poverty, this is a country full of hope, creativity, and invention. In the recent past the country was ruled by the military; however, in 1999 the transition from military to democratic governance began, and in May 2007 the Umaru Musa Yar'Adua was sworn in as the third democratically elected president. This event is the first instance in Nigeria of a peaceful handover from one civilian government to another. Like the United States, the national governance structure is that of a federation, with a federal government presiding over 36 states.

🍴 Food Culture Snapshot

Adé and Şadé Òyélówò live in an affluent area of Lagos. Adé is a headmaster, and Şadé is a teacher. They have three children, a relatively small family by Nigerian standards. Abení, a daughter, is 14 years old. Tunde, their son, is 11 years old. The youngest child, Grace, is 8 years old. All of the children attend their father's school. The family is Christian and is Yoruba. Their house reflects their more affluent standing and has a kitchen with a gas range and a refrigerator. There is a veranda on the house that overlooks their garden, which has mango and orange trees and a small vegetable patch where Şadé grows yams, carrots, greens, peppers, and onions. The two girls help her with this.

Şadé prefers to go to the local market to purchase most of what she needs. She likes the markets because

she can meet and talk with the market women and she feels that the food is better quality because it is fresh. For example, buying food in the market means she can also buy whole animals and then cut them up herself at home or live chickens that she can then kill when she is ready to use them. She can also get whole spices, such as nutmeg and pepper, that she then grinds in her mortar and pestle at home. Sometimes she will send the girls to the market after school to buy things for her. The market is not just a place to buy fresh food. She can also buy things like cooking oil for frying meat and plantains, sugar, and tea. She buys rice secretly from a woman who also has a stall at the market, because it is now illegal to import rice, so it must be smuggled into Nigeria.

Each day the family gets up at about 5 A.M. They have a small breakfast of thick toast or a porridge made of ground dry maize. The adults drink tea, while the children have hot chocolate. It is Abeni's job to prepare this meal, but Şadé serves it to Adé on the terrace, where he will eat on his own until Tunde is 15 and will join him. The others eat together in the living area, where there is a table. Although school does not start until 8 A.M., Adé and Şadé leave earlier, as they must be at the school by 7 A.M. to prepare. The three children clean up the house and walk to school together later. The school day finishes at 2 P.M., when the three children walk home together unless they have a church or other function after school. The children have a snack on the way home that they purchase from one of the roadside vendors. This snack will often be *dodo* (fried plantains with chili), as this is a favorite, or *chinchin* (fried dough) if they want something sweeter. The snack is important because no lunch is served at the school. Şadé arrives home around 4 P.M. after stopping at the market. Şadé then starts preparing the evening meal, which consists of stew and either rice, if it is available, or a *gari* (ground cassava root) that is made into a thick porridge. The girls help with dinner preparations as it is part of their chores. Adé arrives home about 7 P.M. Once dinner is ready, at about 8 P.M., Şadé serves Adé his dinner on the terrace, bringing it to him on a tray. She and the three children then eat together at the dining table.

Major Foodstuffs

While a traditional Nigerian meal would consist of a thick stew and a starch, individual wealth, regional location, religion, and tribal affiliation play a key role in determining the specific character of these items. Meat and fish feature in Nigerian cooking; however, apart from those whose livelihood is through farming or fishing, these foods are affordable only to the very wealthy. As a result, a large proportion of Nigerians are vegetarian out of necessity. For those who have access to meat, this would include goat, cow, chicken, turkey, goose, guinea fowl, and pigeon. The country also has a good source of freshwater fish, such as carp available from the Niger and Sokoto rivers, and seafood, including shrimp and crabs. Various varieties of palms are widely available, and as a result palm oil, made from ground palm kernels, is used extensively. There is an abundance of fresh fruit in Nigeria; papayas, pineapple, coconuts, plantains, and mangoes are plentiful. The Muslims in the north do not drink alcohol as those who are caught drinking face strong penalties under sharia law. Non-Muslims sometime drink a fermented palm drink produced locally or wine, beer, or spirits that are imported. Throughout the country men are more likely to drink than women.

While Western foods are available in supermarkets, these are also frequented only by the very wealthy. Ordinary Nigerians tend to purchase traditional foodstuffs from local markets and roadside stalls. Because of this provisioning behavior, combined with the diversity of the physical geography of the country, foods take on a regional character. For example, people from the north, who are also mostly Muslim, have diets based on beans and sorghum; those in the eastern part of the country eat pumpkin, dumplings, and yams (not the same as the American sweet potato); the southern people, who are mainly Christian, eat groundnut (peanut)-based stews (see following recipe) and rice as well as pork; and those in the southwestern and central areas (Yoruba people) tend to eat cooked *gari* (cassava root powder) with okra stews, groundnuts, mushrooms (which are also a harbinger of the ripening of new yams), yams, and rice dishes such as

jollof rice. Finally, those living on the coasts are more likely to have seafood stews instead of meat stews, while those near rivers will include freshwater fish stew in their diets. Foods made with milk and milk products are not common, except in the northern parts where the Fulani ethnic groups live. Women and girls from this region will hawk boiled cow milk (*mein-shanu*), which is then used in cooking. People also use milk in tea and on their breakfast porridge.

Groundnut Stew

Serves 6

1 stewing chicken or chicken parts (2–3 lb)
 2–3 tsp oil for frying
 1 tsp salt
 A pinch of cayenne pepper
 1 yellow onion, chopped finely
 1–2 garlic cloves, chopped
 4 c water
 1½ c natural peanut butter (preferably with low sugar content)
 Cooked rice for 6
 Toppings: Chopped tomato, onions, pineapple, orange, papaya, banana, and grated coconut

In a large heavy-bottomed pan heat the oil and fry the onion and garlic until soft (5–10 minutes). Add the cayenne pepper. Once the onions and garlic start to caramelize, add the chicken and cover with water to form a broth. Simmer until tender. Once the chicken is cooked, remove the chicken from the broth and debone. Add the peanut butter to the cooking broth and stir until smooth. Return the deboned chicken to the broth and simmer for a half hour or more. If a thicker sauce is desired it can be thickened with cornstarch. Adjust seasoning to taste. Serve over cooked rice (as you would a curry) and sprinkle with fruit toppings.

Jollof Rice

Serves 6

½ tsp grated fresh ginger
 ½ tsp cinnamon

1 tsp thyme leaves
 ½ tsp salt
 ¼ tsp cayenne pepper
 1¼ c chicken broth
 16 oz chopped tomatoes (if using fresh tomatoes add 1 c water and 1 tsp tomato paste; otherwise, use the juice from the can)
 2 tbsp peanut or cooking oil
 2–3 lb chicken pieces
 1 medium onion, chopped
 1 clove garlic, chopped
 1 bay leaf
 1 c uncooked long-grain rice
 Parsley, chopped

First, crush the ginger, cinnamon, thyme, salt, and cayenne pepper with a mortar and pestle. Combine the chicken broth, tomatoes, and either the juice from the can or, if using fresh tomatoes, the water and tomato paste. Add the crushed herbs and spices to this liquid. Set aside.

Next, in a large skillet heat the oil on high heat. Brown the chicken pieces on all sides (about 15 minutes). Once browned, remove the chicken from the skillet. Reduce heat to medium, and add the onion to the pan and cook in the same oil in which the chicken was browned. Soften the onion and add the garlic. Cook until tender but do not brown. Drain off the fat and return the chicken to the pan. Add the broth and tomato mixture to the chicken and the bay leaf. Do not stir. Bring to a boil, then reduce the heat and simmer for 30 minutes, covered. Skim off any fat. Add the rice, making sure the rice is covered in the liquid. Cover and simmer for an additional 30 minutes, until rice is cooked. Remove the bay leaf. Sprinkle with parsley and serve.

A vegetarian version of this dish can be made by omitting the chicken and substituting vegetables such as green pepper and okra and by using vegetable broth instead of chicken broth.

Food in Nigeria is often well seasoned with salt, pepper (*atalodo*), and chilies. Refined sugar, however,

is not traditionally an important part of the Nigerian diet, as many snacks are savory rather than sweet and the norm is to drink water or fruit juice with meals. Examples of snack foods that may be made at home or purchased from street vendors include fried bean cakes, *kulikui* (deep-fried peanut butter), chinchin, and dodo. Where there is a dip, it is often made from chilies. Children buy and sell small, hard candies on the street. Globalization has meant the availability of sugary soft drinks, which are now increasingly consumed with meals instead of water or juice.

Cooking

Most Nigerian meals are made up of one course consisting of a starch and a soup or thick stew. Frying food in oil as part of the preparation of the stew is very common. Food is cooked on a small portable stove or hearth. The better off may have a gas or electric stove. In modern houses, the kitchen would be part of the house and have similar features to Western kitchens, with a stove, refrigerator, cupboards for storing things, and so forth. In rural areas, however, the kitchen may be separate from the main living area and include an area for the cooking fire with a support for a cooking pot. In these kitchens, where there may be no oven, baking is accomplished by wrapping the food in leaves and cooking it in the hot coals. Indeed, banana leaves serve many functions as a cooking utensil. The leaves are also used as lids for the cooking pot to keep steam in, as well as baking pans. All Nigerian kitchens will also have a mortar and pestle, which may be made of wood or stone, for crushing spices and mashing yams.

In Nigeria cooking is women's work. It is the wife's responsibility to teach young girls how to cook. This teaching is done through demonstration, as cookbooks are rare. Women tend to cook from memory, and a good mastery of timing and volumes is considered a valuable skill that relies on the ability to understand how dishes should taste, how much to prepare, and how long it should take. This practice of cooking by memory and intuition also means that each cook imposes her own tastes on the

food. Because food is frequently shared, women aim to achieve a reputation as a good cook among family and friends. Indeed, a number of epigrams are directly related to acknowledging the importance of women's cooking, such as "the way to a man's heart is through good food."

Polygamy is common and legal for all men in Nigeria, though those who are Christian are less likely to adopt this practice. In a polygamous family, wives take turns feeding the husband, but each wife is primarily responsible for feeding and caring for her own children. Particularly in rural areas, however, families live in extended units, and the wives along with aunts, female cousins, sisters, and so forth will often help each other when needed. Because men and women tend to keep their money separate, in order to support their children, women take on jobs to enable their provisioning such as tending the family garden, processing palm oil, or selling vegetables in the local market. Young boys and female children help their mothers with these tasks after school.

Typical Meals

Breakfast, eaten at five or six in the morning, may be leftovers from the previous day, rice and mangoes, dodo (fried plantains), stewed soybeans, or a porridge made from *gari* (ground cassava root). In wealthier urban households breakfast may be a cup of tea and toast with butter. Lunch may then be eaten around 11, and in many rural areas it is the main meal. In the evening a lighter meal may be taken. Throughout the day snacks are eaten, and for many children snacks are the only time when they are able to eat food without having to share it with their siblings.

While dining tables and cutlery are increasingly present in both rural and urban Nigerian households, this is a relatively recent phenomenon introduced by the wealthy. Traditionally Nigerians would eat with their right hand (use of the left hand is considered unhygienic) sitting around a mat placed in the central living area. This includes soups, which are eaten with a cupped hand. Because many Nigerians think that the eating experience is diminished

A group of men in Nigeria eating lunch. It is customary for the men to eat before the women and children. (FIFA | Getty Images)

by the use of utensils, traditional practices are still observed despite the availability of these items.

Nigerian households continue to be sharply divided along gender lines. This extends into eating practices, whereby the males would eat first and separately from the women and children. It is the wife's job to serve her husband his evening meal on a tray. In the poorer families, what is left on the plate is then eaten by the women and children. In wealthier families, where there is more food, women and children may eat at the same time as men, but they are still separate from the men. Very young children will share their mother's plate, but as they get older they will share a plate with other children of the same sex. When children reach adulthood, in wealthier households they are given their own plate. In households where men eat first, it is considered bad manners for

the male householder to eat all the food and leave nothing for the women and children. These gendered eating practices occur throughout Nigeria.

Eating Out

Because of poverty, most Nigerians tend to eat at home rather than eating out at a restaurant. Restaurants tend to be in the cities and are the domain of foreign visitors and the wealthy. There is the possibility of purchasing cooked food from market traders or small eateries (*bukas*) that serve local foods. Those eating this food are most likely to be men eating while at work during the day, rather than people eating out as a social or family event. Women who work prefer to bring food from home that they have prepared rather than purchase food out, as for

many women it is considered disgraceful to have to buy cooked food.

While eating out in the commercial sense is limited, it is not uncommon for Nigerians to eat out at a friend's or relative's house. Indeed, there is an expectation that enough food should be made to feed visitors, who may arrive unannounced. Within Nigerian custom, all visitors are to be fed, and the more generous the meal, the greater the affection that is being shown by the host. Guests are not expected to eat all the food they are given; instead, this generosity should be reciprocated by the giving of gifts. If a person is invited to dinner at a Nigerian home, it is appropriate to bring fruit, nuts, or chocolates for the host and a gift for the children.

While it is often common to see Americans and British people eating "on the go," Nigerians, partly because of the nature of the food but also because of custom, tend to sit and relax while eating. Indeed, it is viewed as bad manners to eat while doing something else, including when eating food purchased from street vendors.

Special Occasions

As with most cultures, food is an important part of all Nigerian celebrations. While some celebrations are directly linked to the Muslim or Christian religions, others are linked to ethnic groups or particular regions, while still other celebrations are more national in their practice. The Christian holidays of Christmas, Good Friday, and Easter, as well as Muslim holidays of Eid al-Fitr, Tabaski, and Eid al Moulid, are all officially recognized. Eid al-Fitr celebrates the last day of Ramadan, which is the month-long observation of fasting (occurring in September). During daylight hours, those who are Muslim must not eat or drink. After dusk, families will buy food from street vendors to break the fast. For those who celebrate Christmas, this often involves traveling to be with relatives. Children will open presents in the afternoon. A typical Christmas feast will include *obe didin* (roasted goat), jollof rice, yams, liver, and other dishes.

Many of the regions have festivals to celebrate the various foodstuffs that are indigenous to that area. Examples include the Rgingu Fishing Festival, which takes place in Arungo in Kebbi state. Arungo is a village along the Sokoto River, and the festival marks a visit by a dignitary that occurred in 1934. While the original visit was in August, the festival is celebrated each year in February or March to mark the end of the growing season. Thousands of men enter the river with nets or in boats and for 45 minutes harvest perch and balloon fish. The largest fish that is caught is offered to the organizers of the event. What is caught is then grilled (barbequed) and eaten in a communal feast.

Perhaps more widespread are the New Yam Festivals, *Iri-ji*, celebrated in August, and the Second Yam Festivals, celebrated in November to January. These festivals are primarily celebrated by the Igbo communities. Each community will have its own day, much like European and North American communities that have harvest festivals or country fairs. The day symbolizes the conclusion of a work cycle and the beginning of a season. Only dishes made of newly harvested yam are served on this day. Prior to the festival, any old yams, which may have been stored whole or ground up, are disposed of. Before the celebration, new yams are offered to the god or yam spirit, Ifejioku, and ancestors first. Then the eldest and highest-ranking male member of the village will have the first taste of the new yam crop, as this position carries with it the privilege of being an intermediary between the gods and the community. Finally, the community and anyone who is visiting, not just those who grow and harvest the yams, will be invited to eat the new yam dishes, which are different from those that use old yams. The ritual of the new yam is meant to express thanks for the harvest to the gods. Yams are also considered a male crop signifying sustenance, strength, and endurance.

Similar to the New Yam Festival is the Benin Festival, which is held at the end of the rainy season after the harvests have been gathered. Unlike the other festivals, this festival is also intended to introduce marriageable (as defined in terms of wealth) girls to boys. While not all youth of marriageable age

may participate in the festival matching, all of the villagers will participate in the feast. In some places the festival is held only every four years.

At the family level, most Nigerians will celebrate marriage, naming, and death with food. Kola nuts are used in wedding ceremonies to bless the marriage, and guests are invited to taste the symbolic foods used in the ceremony as well as to join in a meal afterward. Eight days after a child is born there is often a naming ceremony, when the child is given its names by its parents. After the ceremony there is a celebratory meal. Likewise, those who attend a funeral will also be invited to share a meal with the family afterward. Meat dishes will often be served at these events, even by poor families. In fact, celebrations may be the only times when less-well-off households eat meat. The purchase of a whole steer is not uncommon for such occasions, but unlike many westerners, Nigerians will use the whole animal, including the organs, feet, and head. What is not edible will be used in other ways.

Diet and Health

Given the relative productivity of the land and the possibility of growing a large variety of fruits and vegetables, the country offers the potential for providing access to a good, well-rounded diet. Indeed, recent estimates suggest that the average Nigerian's daily calorie supply is around 2,700. However, the extreme poverty of so many can be linked to health inequalities that are directly related to or are impacted on by diet. Of children under the age of five, about 39 percent are underweight, and over 39 percent are stunted (short for their age). Just over one-quarter of all children under five (27%) are estimated to be malnourished. Many in Nigeria also suffer from vitamin A deficiencies, which can result in blindness; these deficiencies result from inadequate access to greens, orange fruits and vegetables, and protein. As is the case with food supplies, access to clean drinking water is also divided by class. Just 51 percent of the population has access to safe drinking water, while the remainder are susceptible to waterborne diseases such as bacterial and protozoal diarrhea, hepatitis A and E, and typhoid fever.

Nigeria is also in a malarial zone. These diseases can also contribute to vitamin A deficiency.

Finally, while malnutrition and water-related illness certainly contribute to the short life expectancy, AIDS also takes its toll. Today, the estimated life expectancy of Nigerian men and women is 47 years. Nearly three million adults in Nigeria are living with AIDS or HIV. Antiretrovirals, which are used to treat AIDS, are costly and require doctor support; also, the person must take the drugs with food and must take them several times a day. Access to food and water plays an intrinsic role in the life chances of Nigerians today, because without access the cycle of poverty is further exacerbated.

Intergenerational transfer of illnesses such as AIDS and illnesses related to vitamin and mineral deficiencies such as goiter, night blindness, and rickets are also linked to poverty. The estimated infant mortality rate was over 7 percent, or about 74 infant deaths for every 1,000 live births. Importantly, newborns in Nigerian societies are regarded with pride. They represent a community's and a family's future and often are the main reason for many marriages (a large proportion of Nigerian households are characterized by polygamy). Throughout Nigeria, the bond between mother and child is very strong. During the first few years of a child's life, the mother is never far away, and Nigerian women place great importance on breast-feeding and the bond that it creates between mother and child. Children are often not weaned off their mother's milk until they are toddlers. If a mother is infected with AIDS or HIV or is vitamin deficient herself, then her milk will not be sufficient to adequately feed her child.

Both Western and traditional forms of medicine are available in Nigeria. The health care system is sponsored by the government; however, because corruption is high and there is a shortage of trained health care professionals, ordinary Nigerians' access to health care is limited. Traditional medicine, also known as *juju*, is commonly practiced and involves the use of a variety of plants and herbs in the cures. Most families also have their own secret remedies for minor health problems. Juju can also involve adhering to food taboos; for example, when suffering from breathing difficulties one should avoid hot

food, kola nuts, and coconuts. Likewise, “slimy” food (e.g., okra soup) should be avoided when recovering from a wound because it is thought that the wound needs to dry out to heal and the texture of the foods will slow this process down. Some traditional remedies involve avoiding foods that, while not related to the characteristics of the malady, when eaten are thought to anger the gods. For example, smallpox is thought to worsen if chicken and grains are consumed because for some these foods are forbidden and the gods will not heal the patient if they are eaten. Finally, the character of the overall diet is also linked to understandings that combine taste with health benefits. Pepper, for instance, is not just used to improve the flavor of the dish but also because it is thought to act as a natural preservative and antibacterial agent and also to reduce the body temperature of the eater, which is important in a hot climate.

Senegal

Overview

The Republic of Senegal is located at the westernmost point of the African continent at the intersection of trade routes connecting Africa, Europe, the Americas, and the Arab world. It is bordered by the Atlantic Ocean on the west, Mauritania to the north, Mali to the east, and Guinea and Guinea-Bissau to the south. The country of Gambia lies almost entirely within Senegal's borders, separating the southern tropical region of Casamance from the dry Sahelian regions in the north and northeast of the country.

Due to high rates of urban migration since the 1970s, nearly half of Senegal's 11.9 million inhabitants live in major cities, including the capital Dakar, Touba Mbacké, Thies, Mbour, Kaolack, Ziguinchor, and St. Louis. The official language of Senegal is French, but national languages Wolof, Sérère, Diola, Pular, Malinké, and Soninké are commonly spoken.

Eating habits vary based on region and ethnicity, with the largest differences occurring between rural and urban areas and between northern Senegal and the Casamance region. Though many common dishes can be found throughout Senegal, each ethnic group has its own specialties and unique ways to prepare common dishes. Senegalese dishes generally consist of a cereal base accompanied by sauce. At lunch the base is almost always rice, especially in urban areas. In rural regions, millet continues to be frequently consumed, though, there too, consumption of imported rice is gaining popularity. In coastal regions, fresh fish is the main source

of protein, but beef, chicken, dried fish, and beans are also commonly eaten, especially further inland. Pork, although obtainable, is rarely eaten, because the vast majority of Senegalese are Muslim and thus abstain from pork.

Food Culture Snapshot

Aissatou and Malik Sarr live with their two young daughters in Pikine, a suburb of Dakar. Although they have their own apartment, they eat meals and spend most of the day at Malik's parents' house a few streets away. The Sarrs' eating habits are typical of lower-middle-class urban citizens. They mainly eat Senegalese dishes and a few from other regions of West Africa. Western influence can be seen, especially at breakfast and dinner, though they always have a distinctly Senegalese feel.

Around 9 A.M., Aissatou brings her daughters to their grandparents' house for breakfast. By that time, Malik has already left for work, grabbing a coffee from a street vendor on the way. When she arrives, water is already hot for *café touba*, a spiced coffee, and *quinquiliba*, a tealike infusion. The family eats a French baguette with butter or a chocolate-peanut butter spread before Aissatou walks to the market.

Lunch is the largest and most important meal of the day in Senegal. Aissatou decides what to prepare based on the ingredients available at the market. She carefully chooses the fish or beef, carrots, onions, eggplant, okra, cabbage, potatoes, and cassava (a root vegetable common in tropical climates) that she'll need for lunch and dinner. She chooses spices among tiny bags of

A local market in the region of Casamance, Senegal. (Torsius | Dreamstime.com)

salt, pepper, vinegar, mustard, and dried hot peppers hanging above the tables of meticulously stacked vegetables. Once back home, she begins cooking, since preparation takes over three hours. She boils the meat and vegetables for hours, adding bouillon cubes, garlic, parsley, tomato paste, and peppers to flavor the meal. Aissatou prepares enough for her husband's immediate and extended families. She shares the responsibility of cooking with an aunt, each woman cooking for four days at a time. The Sarrs eat lunch around three in the afternoon. If family members are not present at lunchtime, a portion of the meal is set aside for them. Dinner is a lighter meal served around 8 or 9 P.M. Rice is generally avoided in the evening in favor of millet, the traditional grain staple in Senegal; Moroccan-style couscous; or European dishes such as pasta, omelets, or French fries.

Major Foodstuffs

Even though Senegal is mainly rural, environmental and infrastructural issues paired with politics that favor cheap international products have left the country dependent on imports for the majority of its food needs. Rice and wheat are most heavily imported, followed by products like powdered milk, bouillon cubes, and oil.

Rice is the main staple in Senegal, especially in urban areas. It has been cultivated in Casamance since the 11th or 12th century. However, most of Senegal is too arid for rice, better suited for growing coarse grains such as millet, sorghum, and *fonio* (an indigenous kind of millet). Today, despite significant political efforts to enhance the production of rice, cultivators are unable to keep up with the country's growing demand, linked to changing

eating habits among groups who once favored millet and to growing urban populations. Senegalese generally eat broken rice, a by-product of rice processing that is less valued on the international market but preferred in Senegal.

Certain processed foods are gaining importance in the Senegalese diet. Bouillon cubes and mustard are used to flavor sauces. Breakfast is dominated by industrialized foods: bread, butter, cheese, instant coffee, and powdered milk. Although drinking beverages during the meal is uncommon, Senegalese often buy sodas (Western brands and local varieties) to serve while entertaining guests.

Senegal has a wide variety of fish, ranging in quality from the highly valued marlin to the bony and inexpensive sardinella, called *yaboy*. In coastal areas, fresh fish is the main source of protein, affordable for all social classes. Dried fish is also commonly consumed, especially farther inland. Beef consumption is widespread, and Senegalese regularly eat mutton, in part because sheep sacrifice is essential for Muslim celebrations. Chicken is mainly eaten among the middle and upper classes or for special occasions, due to its price and the fact that one is generally obligated to purchase an entire chicken. *Niébé*, a bean native to Africa, also provides a significant source of protein, especially among lower social classes.

Vegetables are a part of nearly every Senegalese dish. However, they are often regarded as an accompaniment to the sauce that adds color and flavor, rather than a principal part of the meal. Alongside vegetables native to Africa, like okra, bitter eggplant, and cassava, one finds vegetables introduced by Europeans, including onions, potatoes, cabbage, tomatoes, eggplant, and carrots.

Senegal has a wide variety of tropical fruits, including mangoes, papayas, oranges, grapefruit, bananas, and coconuts. One can also find native fruits like *madd* (*Saba senegalensis*), which could be mistaken for an orange from the outside but inside has seeds surrounded by a bitter, slimy fruit. Madd is sugared, or salted and spiced, before it is eaten.

Many fruit juices are produced in Senegal. The most common, *bissap*, is made from dried hibiscus flowers that give the juice a deep purple color similar

to that of wine. Another common juice is made from the fruit of the baobab tree, called *bouye* or monkey bread. When dried, this fruit is chalky with a pinkish-cream color. It makes a sweet, viscous juice of the same shade. *Ditkah* (*Detarium senegalensis*) is a firm, round fruit the size of a small plum that makes a bright green juice. It has a brown shell that is easily peeled to expose a green, fibrous fruit. Juice is also commonly made from ginger, which can be extremely tart or sweet. Like the tea and coffee served in Senegal, fruit juices are often flavored with large amounts of sugar. Members of the Catholic minority also commonly drink wine and other alcoholic beverages, whereas Muslims generally avoid alcohol.

Milk products are most commonly consumed in the form of *lait caillé*, literally, “spoiled milk.” This milk is slightly less viscous than yogurt and is sweetened. Most Senegalese primarily consume powdered milk, but the Peulhs, a traditionally nomadic ethnic group of herdsmen, keep dairy cows. Those with family in Peulh villages can often easily access liquid milk.

Cooking

In nearly every Senegalese household, two to three hours per day are devoted to the preparation of lunch. Senegalese tend to have large families and many generations live together, meaning there is nearly always a female family member at home who prepares the family meal. It is also common to hire a maid to help with housework and cooking, even among middle- and lower-middle-class families.

Little is done to minimize cooking time, because the care that a woman puts into the elaborate preparation helps to maintain her family’s reputation. Attempting to save time when washing ingredients, mixing spices, or leaving the sauce to boil would be interpreted as cutting corners, which Senegalese presume could not produce a good meal and would furthermore not be considered respectable.

Girls begin to learn how to cook between ages 9 and 12, starting with simple tasks like grinding spices in the mortar. It is considered imperative among all social classes that women know how to cook, even in families where maids prepare the meal

the majority of the time. The idea that a girl would marry without knowing how to cook all the basic Senegalese dishes is considered absurd and embarrassing. Girls take over cooking duties from their mothers in their teenage years, though only during vacation periods and on weekends if they go to school. Daughters-in-law who live with their husband's family are generally in charge of cooking. Though cooking is mainly a female task, as young men increasingly move out of the familial house before marriage, more Senegalese men are learning to prepare basic dishes.

Cooking often takes place in a courtyard outside the house. Meals are prepared in huge cooking pots

Members of various families eat a dish served during the mid day meal in the village of Merine Dakhar in Senegal, 2008. (AFP | Getty Images)

on burners atop gas cylinders. Wood charcoal is sometimes used because it is less expensive, though more time-consuming, than gas. Small woodstoves or grills are also frequently used. Many middle- and upper-class families have kitchens built into their houses, and some have Western-style cooking ranges, including an oven. Stainless steel pots, large metal spoons, and knives are the most-used items. Onions and other vegetables are skillfully sliced with one hand while they are held with the other. Even in the wealthiest households, spices are ground up by hand in a wooden pestle and mortar. Preparation often includes multiple methods of cooking. Fish is quickly fried before boiling, and meats are often both boiled and grilled for the same dish. Rice and couscous are steamed and are sometimes then added to the boiling sauce.

Typical Meals

In Senegal, people of different regions, religions, and socioeconomic classes share a surprising number of dishes. Meals are prepared in two forms: *ñari cin* and *been cin*. *Cin* refers to a marmite, a large cooking pot; *been* means “one,” and *ñari*, “two.” *Ñari cin* dishes consist of steamed white rice, cooked in one pot, accompanied by a sauce cooked in another. *Been cin* dishes do not include a separate sauce, because the rice is boiled in the sauce of the other ingredients. All Senegalese dishes blend a variety of bold flavors: garlic (often an entire head per meal), onions, black pepper, chili peppers, dried fish, and tamarind (the flesh of a sour pod native to Africa).

The national dish, *ceebu jën*, which originates from the colonial capital of St. Louis, is by far the most popular dish in Senegal. Eating and preparing this meal is perceived to symbolize a true Senegalese. Families often eat *ceebu jën* twice a week or more, switching off between the red and the white varieties (the former includes tomato paste). The preparation of other types of *been cin* dishes resembles that of *ceebu jën*, except that red meat is substituted for the fish in *ceebu yapp*, and *ceebu keccax* uses dried fish.

Ceebu jën

Serves 6

4 carrots

4 turnips

Large piece of cassava

1 small green cabbage

1 eggplant

5–6 okra

2 large onions, chopped

½ head garlic

Small bunch parsley

20 black peppercorns

1 bouillon cube

1 tamarind, pulp removed from pod, soaked in hot water and strained

1 small chili pepper or ¼ tsp cayenne pepper

2 or 3 lb whole fish (tilapia, or sea bass) or marlin steaks

1 lb dried, salted, or smoked fish such as cod or herring

½ c oil

6½ c white rice

1. Peel all the vegetables, then cut them into large pieces (halves or fourths). Clean fish, but leave whole (including the heads, which add flavor).
2. Grind the garlic, parsley, pepper, bouillon cube, tamarind pulp, and the chili or cayenne pepper (to taste) until it forms a paste, using a mortar and pestle or food processor. Cut 2–3 small slits in each fish and stuff them with the spice mixture.
3. Heat oil in a large pot. Fry the onions and the dried fish for a few minutes, then blanch the fish in the oil, frying on both sides for 1–2 minutes. Remove the fish and set aside.
4. Add the carrots, turnips, and cassava and enough water to cover them, and bring mixture to a boil. Add salt and pepper as needed. Reduce heat and let simmer for 30 minutes or more. Add the other

vegetables and the fried fish. Simmer another 20 minutes until the vegetables are soft.

5. Remove the vegetables from the pot (you should be able to easily pinch off pieces with your fingers). Add the rice to the bouillon that's left (there should be twice as much liquid as rice). Bring water to a boil again. Cover, and let the rice cook for 15 to 20 minutes, lowering heat toward the end. Cook until the rice has completely absorbed the water.

6. Serve on a large platter with the vegetables and fish arranged in the middle, on top of the rice, which is spread out evenly.

After *ceebu jën* (called *ceeb* for short), the most common dishes are *ñari cin*. The sauces for these dishes vary greatly, and each originates from a specific ethnic group or region. The peanut butter-based *mafè* sauce is a Bambara dish. *Yassa*, based on onion, oil, and lemon juice, comes from Casamance. *Domoda* is a thick sauce made from peanut oil, tomato paste, onions, and flour. The *soupkànj* is an okra-based sauce that includes shrimp. When okra is ground up, it makes a thick, sticky paste to which red palm oil and vegetables are added. Besides these common Senegalese dishes, Senegalese often eat other West African specialties like *athiékké*, a dish from Côte d'Ivoire made from cassava.

Yassa

Serves 6

2 medium-sized chickens

2 c white vinegar

Salt

1 head garlic

1 bouillon cube

1 tsp Cayenne pepper or to taste

Pepper

8 tbsp lemon juice

6–10 large onions, chopped into rings or large slices

½ c peanut oil

- 2 bay leaves
- 2 tbsp Dijon mustard

1. Cut chicken into pieces. Remove the skin if you wish. Place chicken in a bowl with 1 cup vinegar and salt.
2. Grind the garlic, 1 bouillon cube, cayenne pepper, and 2 teaspoons of black pepper together with a mortar and pestle or food processor.
3. Remove the chicken from the vinegar. Cut slices (about 2–3 per piece) in the chicken, and stuff them with the spice mixture. Put the chicken back in the bowl with the vinegar and cover with the lemon juice. Add onions and another cup of vinegar to the mixture. Let marinate 10 to 20 minutes.
4. Heat grill or set oven to broil. Grill or bake the chicken until lightly browned but not done, making sure to cook all sides.
5. Heat oil in a large pot. Add onions, and cook for 10 to 15 minutes, until golden. Add the marinade the chicken was soaking in, bay leaves, mustard, and a cup of water to the pot. Cover and cook 20 minutes over medium heat. Add chicken and cook another 15 to 20 minutes.
6. Serve on a large platter over steamed rice, spreading the sauce evenly over the rice and arranging the chicken in the middle.

Senegalese generally eat around a large common bowl, seated on the ground or a low stool. This arrangement makes the meal easily divisible and is thus conducive to sharing. Guests, both expected and unannounced, are commonplace and (generally) welcome in Senegalese households. Food is eaten with the right hand, using either the fingers and palm to roll the rice into a ball or a spoon. The mother, or another member of the family (usually female), reaches into the middle and tears off little pieces of the fish or meat and vegetables, tossing them toward each family member. This way, everyone gets a fair portion, and guests receive the best bits.

Senegalese meals do not usually include a series of dishes but focus on one main dish. Dessert is relatively uncommon, although fruits are occasionally shared, and in some families French desserts

are eaten from time to time. Certain families eat at Western-style tables, using plates and utensils. While this is more common among middle- and upper-class families, this practice is not generalized even among the upper classes.

The dinner meal varies from family to family more than breakfast or lunch, especially depending on economic level. In middle- and upper-class families, dinner has distinct foreign influences. Some common evening dishes include omelets eaten with baguette, pasta, Moroccan couscous served with Senegalese-style sauces, and steak with French fries. Millet-based meals are more common in the evening. While in some rural areas millet is eaten multiple times each day, in cities it is almost exclusively consumed at dinner. Residents of Dakar claim that eating millet at lunchtime seems so bizarre that it would throw off their perception of time. Millet can be eaten in a couscous or in porridge.

Evening meals often consist of a porridge-like substance made from boiled rice or millet flour that is served in either sweet or savory form. Among the savory dishes is *mbaxal*, a rice porridge prepared with fish or meat and vegetables that necessitates very little oil (unlike the dishes common at lunch, which oftentimes use half a quart of oil). *Daxin* is a thick dish prepared with peanut butter or niébé beans, cooked with peppers and onions. Other porridges are sugared and served with lait caillé (soured milk/yogurt). *Sombi* is a sweet porridge made from rice, and *fondé*, *caakry*, and *laax* are also porridges made from millet flour. Though these dishes are sweet, they constitute the evening meal and not a dessert. People of all socioeconomic classes eat these dishes, especially on Sundays or the day after a celebration, when Senegalese say they prefer something light. However, among many poor families, the evening meal is consistently a cup of *fondé* or *laax*, due to its inexpensiveness.

Eating Out

In villages, one's options for eating out are generally limited to a neighbor who sells snacks that she's prepared, while in urban areas the possibilities for dining outside the home are increasingly varied.

Vendors push moving stands through the streets, selling coffee and snacks. Others set up small tables in the road to sell peanuts, fruit and candies, or sandwiches and skewers of grilled meat. Plates of Senegalese dishes can be bought in restaurants, which sometimes consist of only a tent or a shack set up around a picnic table. There are many fast-food restaurants that sell hamburgers, hot dogs, pizza, and *chawarma* (a gyrolike pita sandwich of meat that has been cooked on a spit). But none of the franchised chains common throughout the world exist in Senegal. There are also a variety of sit-down restaurants that serve Senegalese dishes among European and sometimes Asian favorites.

Since the 1990s there has been increase in restaurants due in part to the introduction of the “continuous day,” a bureaucratic change in the public school schedule that significantly decreased the length of the lunch break. This change also inspired transformations in employees’ work schedules and thus led to an increase in consumption at university and company cafeterias, and at restaurants and sandwich shops near places of employment and schools.

The continuous day has made eating out a common activity for many urban residents, yet it continues to be viewed by many as a necessary evil. While people may enjoy restaurants, the underlying assumption is that eating at home would be preferable if it were possible. Some Senegalese favor home-cooked meals so much that they avoid taking a lunch break, preferring to eat leftovers from the family lunch when they return home at five or six in the evening.

The dislike of eating out is in part related to the strength of the value of community in Senegal. Social meals tend to be eaten with family inside of households, and eating out is often an individualized activity. There are also taboos against eating food prepared by strangers and fears that food outside the house is unhygienic. However, these beliefs are becoming increasingly uncommon, and exceptions are often made for certain types of restaurants or foods. Nonetheless, Senegalese mothers are often proud to announce that no one in their family eats in restaurants, even if certain members do sometimes eat out.

In general, restaurants are increasingly viewed as acceptable and even valued as a luxury. Certain families eat together in sit-down restaurants. This is especially common among those with relatives who live in Europe or the United States. Eating out with friends or siblings allows youth a sense of independence. Couples often go on dates to fast-food restaurants. Buying snacks from street vendors is widespread even among children, who receive a small allowance from their parents for this purpose. An afternoon snack could be prepackaged cookies, candy, Chinese-style egg rolls, *fatayas* (small fried pastries filled with spiced meat), or sandwiches filled with Nutella, tuna, or cream cheese.

Special Occasions

Religious holidays, baptisms, weddings, and funerals are all commemorated with a large gathering of family and friends accompanied by a feast. These festivals are very common, due in part to their extended guest lists. Some Senegalese attend two or three festivals per week. Children sometimes go from festival to festival, supplementing their diets with food provided at these feasts, especially in poorer neighborhoods. Thanks to Senegal’s warm climate, celebrations take place outdoors under large tents set up in the street or a courtyard. Family members mill about, moving between the main house, the tent, the street, and the houses of close family members who live nearby and have opened their homes for this event.

Food is prepared in huge marmites (metal or earthen cooking pots with covers) by hired workers. Before, families tended to rely on *griots* both to provide the entertainment and to prepare food at festivals. Griots are the musicians and historians of West Africa. Traditionally, they would memorize songs that told of a particular village’s history, genealogy, and great deeds. Today, those who prepare feasts are sometimes of the griot caste.

Meat at festivals is sometimes served with sauce and eaten with pieces of baguette, but other times it is cooked into a *ceebu yapp*. Food is served on a large platter, like at family meals. Guests gather around a nearby platter to eat under the tent or inside the

house. Like at daily meals in Senegal, feasts generally focus around one main dish. Fruit juices and soda are served before and/or after eating, while guests mingle. Snacks, such as fataya, egg rolls, or meat on a skewer, are sometimes served while guests await the main dish.

The vast majority of Senegalese are Muslim. Islamic holidays like Tabaski (Eid al-Adha), Ramadan, Korité (Eid al-Fitr), and Tam Xarit (the Muslim New Year) are celebrated with a mixture of Islamic and Senegalese customs. Tabaski is the Muslim Feast of Sacrifice. It is essential that every family sacrifice at least one sheep on this day. The number of sheep sacrificed depends on the size of the family and their economic means. All parts of the sheep are consumed and are cooked in a variety of ways, including a tripe soup. The Muslim commitment to giving alms ensures that no one goes hungry on Tabaski; entire legs of mutton are given to neighbors or the poor.

During Ramadan, Muslims refrain from eating and drinking between dawn and dusk. Once the sun sets, the fast is broken with a small meal called *ndougu*. Senegalese drink hot tea or coffee and eat dates and foods commonly eaten at breakfast. A large meal is eaten later in the evening, which includes common Senegalese dishes. Senegalese often report that they spend more money on food during the month of Ramadan than at other times because they buy juices and more expensive ingredients than usual, indulging themselves slightly when they are allowed to eat.

The month of fasting is concluded with the festival of Korité. This day of feasting begins with the millet porridge *laax*. Sometimes Senegalese prepare variations of this dish with peanut butter and/or bouye. In early to midafternoon an elaborate lunch is prepared, which often includes chicken. Ingredients of particularly high quality and extra garnishes are used for both lunch and dinner on Korité.

Millet is considered the traditional grain of Senegal and is a critical part of many celebrations. In Senegal, the Muslim New Year is commemorated by eating millet couscous. Like on Korité, *laax* is served on the morning of baptisms, shared with those close to the family, who arrive early and spend the entire

day at the celebration. In addition to *laax*, baptisms necessarily include two other symbolic foods: a sacrificial sheep and kola nuts. Sacrificing a sheep for a newborn is prescribed in the Quran. If parents cannot afford a sheep for their child's baptism, they borrow money or family members chip in to ensure that a sheep is purchased. If a sheep is not sacrificed, Senegalese believe that this will harm the growth and development of the child.

The kola nut is a small bitter red or white nut that contains stimulants and is the original flavoring of the soft drink cola. It is exchanged at many important events in Senegal. At baptisms, kola nuts are often distributed alongside candies made from rice and millet. Baptisms in Senegal take place eight days after a child is born and are also the day that a baby is named. Because guests cannot attend the naming ritual, the exchange of kola nuts is a symbolic way to connect the baby, the parents, and the guests at this celebration. Kola nuts are also distributed at weddings and funerals. At each event their exchange symbolizes social connections. At funerals the symbolic exchange of kola nuts and candies plays a central role.

Festivals in Senegal are generally elaborate and often expensive. Senegalese themselves often describe their celebrations as ostentatious but fail to see a way to change these rituals because they are part of a system of obligatory exchange. It would be considered disreputable to avoid or lessen the expenses associated with festivals. People often spend all their savings or borrow large sums to celebrate a baptism or wedding.

Diet and Health

Malnutrition has historically been and continues to be a serious concern in Senegal. In turn, calorie-dense foods like oil and meat are highly valued, because they are believed to give strength and to symbolize wealth. Until recently, in many parts of Senegal, it was said that when eating a good *ceebu jën*, one should have oil running down one's arm. The energy-filled carbohydrate bases of meals vary little, whereas the quantity of vegetables, fish, and

meat lessens significantly in times of economic downturn.

Foods that are very sweet, salty, and oily are highly appreciated in Senegal, perhaps in part related to the constant threat of malnutrition. But diet-related noncommunicable diseases are increasingly widespread and are transforming ideas concerning health and nutrition. Diabetes and cardiac disease are extremely prevalent in Senegal and are a significant cause of death in the country. These degenerative diseases have been the subjects of many public awareness campaigns. Senegalese are thus increasingly familiar with problems related to obesity and consuming too much fat, cholesterol, and sugar.

However, awareness does not necessarily equate to transformations in eating habits. Senegalese often lament that their food is excessively oily, salty, or sweet but often feel that it is unalterable. This is, in part, due to the social role of eating in Senegalese society. Meals are a time of social exchange. Families eat together and welcome guests; meals link social networks. If one person or one family drastically changed their eating habits, this could isolate them and would seem individualistic and selfish.

The social difficulties of changing one's eating habits for health are obvious in the experiences of diabetics. Diabetics often explain that it is extremely difficult to avoid drinking sugary beverages because these play a critical role in welcoming a guest. To turn down food or drink one has been offered is considered discourteous. Familial celebrations pose a similar problem. To avoid appearing rude or ungrateful,

diabetics often hide their illness and eat the foods offered, regardless of their nutritional content.

The price of ingredients and the cultural perception of ideal body size also play important roles in nutritional choices. It is cheaper to feed a large family a diet based on rice and oil than one based on vegetables. Many Senegalese simply don't have the economic means to consume the daily recommended amount of fruits and vegetables. In addition, heaviness is often associated with wealth, motherliness, and health. In turn, Senegalese women often prefer body sizes that are considered overweight by Western medical standards and make dietary choices based on these cultural perceptions rather than health considerations.

Despite the many cultural obstacles that inhibit proper nutrition, more and more Senegalese are attempting to make healthful changes in their diets. Many are trying to incorporate more fruits and vegetables into their diets and to avoid consuming excess rice, oil, salt, and sugar. These changes are mainly taking place in middle- and upper-class families, whose economic means allow them a certain nutritional flexibility that lower classes do not have.

Sierra Leone

Overview

The Republic of Sierra Leone is a coastal West African country bordered on the south by Liberia and on the east and west by Guinea. The capital, Freetown, was established in 1787 by the British as a settlement for repatriated Africans and the descendants of those formerly enslaved during the transatlantic slave trade with the United States and the Caribbean. With an estimated population of six million, Sierra Leone is divided into four provinces comprising 12 districts that lie in environmental areas that range from mangrove swamps and the sandy beaches of the Atlantic coast to the savanna and mountainous highlands further inland. Locally, the country is known as Salone and its inhabitants as Saloneans.

There are about 18 different ethnolinguistic groups represented in the country with the predominant groups being the Mende, Limba, Temne, and Krio. Other smaller but no less significant groups include the Fula or Peuhl, Kuranko, Sherbro, and Mandingo. English is the official language of the republic, but Mende, Timba, Limba, and Krio are widely spoken. Sierra Leone and neighboring Liberia are the two African countries whose population boasts a significant number of descendants of formerly enslaved Africans. This group, known as the Krio, also speaks the Krio language, which is a creolized form of English mixed with elements of various West African languages. Inherent in Krio culture are strong elements of Western European culture due to the Krio history of enslavement in the Americas. These manifest themselves in food, cooking, dress, and speech, making the Krio quite different from

the other indigenous ethnic groups. Large groups of Lebanese and Indians and their descendants add even more diversity to Sierra Leone's ethnic mix, and no one group claims majority status. Sierra Leone is predominantly Muslim, with about two-thirds of the population practicing Islam. Approximately one-quarter of the country is Christian, with the remainder adhering to traditional religions.

Sierra Leone is a rural country, and the majority of people are subsistence farmers. In urban areas, many grow vegetable gardens. Even so, food security is an issue due to the 11-year civil war (1991–2002) that stymied agricultural production from 1996 to 2007. The staple food of Sierra Leone is rice, predominantly varieties imported from Asia though indigenous rice production does occur in Sierra Leone.

Food Culture Snapshot

Manja and Edward Dauda are Mende and live in Kenema in southeastern Sierra Leone. They are a typical working-class Sierra Leonean couple with two small children. Edward runs a repair shop that also sells used auto parts. Manja's trip to the market yields purchases of rice, cassava, and plantains, all starches typical of the average Sierra Leonean diet. Fresh fruits like pineapple, pawpaw (papaya), citrus fruits, bananas, or soursop are purchased to eat or prepare as juices.

The family's day starts with breakfast, which may consist of fresh fruit like mango, pineapple, or pawpaw (papaya) with freshly squeezed lime juice or mashed butter pears (avocados) spread on bread or toast. A more elaborate way to start the day would be with a dish

like rice pap, a cooked porridge made from rice flour, flavored with sugar and lime juice, and eaten with milk. Rice pap without milk is sometimes served to children as a snack. For lunch, Manja might buy rice at the market to be eaten with a groundnut (peanut butter) stew with chicken or beef and a side of *akara*, fried bean fritters made from indigenous ground cowpeas, of which black-eyed peas are a variety.

An evening meal might consist of a main dish like *jollof rice*, a one-pot dish of rice prepared throughout West Africa. It is cooked with a tomato-based sauce and any combination of mixed vegetables, often peas with chicken, meat, or fish. It is usually flavored with onions and plenty of hot chilies. *Plasas* is a stew of pureed leafy greens, usually cassava or sweet potato leaves, cooked with meat, smoked fish, chilies, tomatoes, and sometimes even pig's feet for flavor. It is known as *palaver* or *palava sauce* in other West African countries.

Manja, like most others, generally does her shopping at open-air markets where everything from cooking pots and cloth to shrimp or spices is sold. Because electricity can be unreliable or is nonexistent around the country for the majority of people, refrigeration is not always a viable option for most families, so food tends to be purchased on the same day it is eaten.

Major Foodstuffs

Many Sierra Leoneans raise chickens or have vegetable gardens and citrus or banana trees in their yards. They look to their local markets for meats, grains, and spices. The staple food is rice, and few consider a meal complete without it. There are permanent rice fields in the northwestern part of the country, where mangrove swamps dot the landscape. In other swampy areas of the country, rice production is also being developed, as imported rice accounts for nearly two-thirds of all rice consumed in Sierra Leone. Rice is even ground into flour for use in baked goods and other dishes.

Cash crops are produced by small farmers and include coffee, cassava (manioc), peanuts, cacao, millet, sweet potatoes, and palm kernels, which are used in the production of palm oil for cooking as well as beauty products that are important to the

local and global marketplaces. Despite the presence of various waterways throughout the country and its location on the Atlantic coast, the commercial fishing industry is not developed, having been devastated by the civil war; the country is still struggling to rebuild it.

Besides rice, staples of the Sierra Leonean diet include cassava, palm oil, and groundnuts (peanuts). Cassava is often pounded into the ubiquitous West African dish *fufu*, a dish usually made from a starchy tuber that is boiled, then pounded in a mortar and pestle until it forms a sticky dough. Cassava root is also used as a base for spicy soups and stews. Cocoyam (taro) is a secondary staple and also an important cash crop, and it can also be used to make *fufu*. Sierra Leoneans also eat sweet potatoes (*Ipomoea batatas*) roasted and fried and have a preference for the leaves of the plant, which are cooked in thick sauces with palm oil. Yams (*Dioscorea* species) are also a significant food but much less important to the diet and culture than they tend to be in West African countries to the south, such as Ghana and Nigeria.

The fruits from which Africans produce their palm oil. (iStockPhoto)

Fresh fruits and vegetables are important to the Sierra Leonean diet, but vegetables in particular are very rarely eaten raw; they are most often part of a slow-cooked dish. Leafy greens such as leaves from the sweet potato and cassava are most common. Finely chopped, they are stewed with meat, chicken, or fish, flavored with chilies, and served with rice. Leafy greens are also valued for their mucilaginous qualities and added as thickeners to soups, much like okra. Okra, a vegetable indigenous to West Africa, is a much-beloved element in the Sierra Leonean diet and can be fried or stewed on its own or added to soups and stews for thickening and additional flavor. Corn, another important vegetable, is usually grilled and eaten as a snack. Fresh fruits like butter pears (avocados), bananas, papayas, pineapples, and citrus fruits are usually eaten raw, while fruits like soursop and passion fruit are most often used for refreshing juices. Plantains are a staple, eaten ripe or unripe. When ripe they are usually fried and served as a side; when unripe, they can be prepared similarly or boiled as part of a dish.

Plasas

This stew is the Sierra Leonean version of palaver sauce that tends to be found throughout West Africa. Meat and leafy greens are simmered in a tomato sauce. Any kind of greens can be used in the dish, although in Sierra Leone, cassava or sweet potato leaves might be preferred.

2 large bunches shredded collard greens

1 large onion, chopped*

1–2 Scotch bonnet chilies, chopped* (habaneros can be substituted)

$\frac{2}{3}$ c palm oil

1 lb beef stew meat

1 28-oz can crushed tomatoes

1-in. piece of ginger

2 c water

$\frac{1}{2}$ piece of smoked fish, cleaned and deboned

$\frac{1}{4}$ c dried shrimp

$\frac{1}{4}$ c natural unsweetened peanut butter

Salt to taste

*These two ingredients can be chopped together in a food processor.

Wash and shred collards by piling leaves atop one another and cutting thin strips; set aside. Chop onion and Scotch bonnet chilies. You may reduce the amount of chilies but use either habaneros or Scotch bonnets. Alternatively you may pulse the onions and chilies in a food processor; a very fine chop or puree will work well for this dish. Heat the palm oil in a large pot and fry the beef stew meat briefly. Add the tomatoes and the onion and chili mixture; grate the ginger, add to the pot, and cook for a few minutes more. Add 2 cups of water to the mixture and add salt. Reduce heat to medium low, and allow the mixture to simmer slowly for 20 minutes or until meat is fully cooked. When meat is done add shredded greens, smoked fish, and dried shrimp. Stir in the peanut butter and correct the seasonings. If liquid has reduced, add the rest of the water. Simmer 15 minutes more and serve.

The indigenous grain *fonio* (a kind of millet) is cultivated and eaten on a small scale. Corn and millet are commonly eaten. Corn is roasted or eaten fresh. It is also ground into meal for fritters or porridge. Rice is prepared in a similar manner.

Sierra Leoneans cook with coconut and peanut oil, but palm oil is the most important cooking oil. As in much of the rest of West Africa, the fruits of oil palms are harvested in Sierra Leone, and the intensely flavored, deep orange-red palm oil is extracted from those fruits. As much as the oil is valued for cooking, it is as highly valued for flavoring and coloring food. Palm butter is also extracted from the nuts and is a key ingredient in palm butter stew. The oil and butter are rich in beta-carotene, and it is one of the few vegetable oils high in saturated fat. It is, along with rice and cassava, one of the most important ingredients in Sierra Leonean kitchen.

Beans are important sources of protein. Indigenous cowpeas and pigeon peas are widely eaten, and white beans are also eaten on their own and used to thicken stews. Black-eyed peas form the base of highly seasoned bean fritters fried in palm

oil and eaten as *small chop*, another name for snacks and appetizers.

Goat, chicken, and beef are popular meats, but pork makes an appearance in a fair number of dishes. Pork is often used to flavor soups and stews; pig's feet are the cut of choice. Afterward, the meat is usually chopped and then added to the finished dish; in the Sierra Leonean kitchen, nothing is wasted. The consumption of pork in Sierra Leone, a predominantly Muslim country, is most likely connected to the history of Freetown as a colony for formerly repatriated Africans from the United States and the Caribbean, where pork—smoked, salted, and fresh—was the primary meat made available for enslaved Africans to eat.

Smoked and salted fish flavor many dishes and are added to dishes as the focus of a dish or as a flavoring cooked along with other types of meat. Fresh fish, shrimp, and giant snails are also popular fried or cooked in spicy stews. Sierra Leoneans, like Africans across the continent, tend to use all parts of an animal, from nose to tail, including organs, known as *offal*. Trotters (cow's or pig's feet) are popular, as is cow skin, which is usually boiled in a soup.

Tomatoes, onions, and chilies are the base for many dishes; garlic is almost never used. Ginger and other herbs also flavor various dishes, but people like chilies above all. Generally, complex blends

of flavors result from a *mélange* of spice, meats, and dried or smoked fish or shrimp slow-cooked together.

Cooking

Sierra Leonean cooking is labor-intensive, with most ingredients requiring a great deal of manual processing before cooking. Soaking, pounding, peeling, boiling, drying, and crushing of ingredients to be used in a dish are often the first steps to be taken before any actual cooking can be done. The most common cooking techniques are stewing, boiling, and frying. By and large, most things are made from scratch as Sierra Leonean cooks use convenience or processed foods infrequently, although some are widely available to the home cook: powdered plantain, yam, or cassava flours and canned meats.

Typical Meals

The average Sierra Leonean might awaken and drink tea or coffee and perhaps eat fruit or a piece of bread or cake to get the day rolling, but breakfast is not an important meal. Traditionally, people have tended to eat two meals a day—at midday and in the evening. These larger meals are referred to as *chop*.

A main meal might consist of a highly spiced soup or stew accompanied by rice or perhaps another starchy dish; food in Sierra Leone shares this general characteristic with food throughout much of the rest of the region. Dishes like *plasas*, pepper soup, or groundnut stew might be served, always with rice, cassava, cocoyam, or another starchy dish. The main meal of the day is generally served at midday and often eaten from a communal bowl, while leftovers from the midday meal are eaten in the evening for dinner. Like most West Africans, Sierra Leoneans snack frequently throughout the day on fresh fruit, roasted corn, plantains, and coconut. *Small chop*, as snacks are called, can also consist of baked or fried meat pies; savory and sweet fritters; or *suya*, kebabs of spicy grilled meat.

In Sierra Leone factors such as one's socioeconomic status and location, that is, whether one lives in an urban or rural area, affect the preparation and

A woman cooks rice over an open flame in Sierra Leone. (iStockPhoto)

consumption of meals. In cities, there is a shift toward more middle-class, white-collar jobs, and people may eat three meals a day in order to meet the demands of office hours. In rural areas the hard physical labor of agricultural work in fields may necessitate a heavier midday meal after the bulk of the day's work has been done. Because of poverty and food scarcity issues in Sierra Leone, two lingering effects of the 11-year civil war, many people eat only one meal a day—dinner. Because it is a very diverse country, many of the dishes are the same, but particular ingredients or slightly different cooking styles may be favored by a particular group.

Eating Out

There is little tradition of eating out in Sierra Leone, but cities and towns will have at least one cookery, which serves larger meals of the most traditional kind with rice, cassava, or plantain and grilled meat or fish. Restaurants generally serve only one or two dishes and plenty of different options for chop. One uniquely Sierra Leonean establishment is the *poyo house*. *Poyo* is fermented palm wine.

Special Occasions

Food plays an important role in celebrations throughout Sierra Leone. Everything from the unexpected visit of a stranger to special occasions like weddings, births, and funerals may be acknowledged with parties or celebratory dinners. As a country that has a Muslim majority and a significant Christian population, religious holidays such as the Eid al-Fitr, Ramadan, Christmas, and Easter are all celebrated, with feasting (or fasting) playing an important role in these celebrations. Sierra Leoneans celebrate Independence Day (April 27, 1961) with feasts, music, and dancing. *Awujoh* is a thanksgiving feast intended to acknowledge ancestors. It is also intended as a way for people to display gratitude and celebrate good fortune with family and friends.

Diet and Health

Sierra Leoneans have a varied diet that includes seafood, meat, many fresh fruits and vegetables, and very limited amounts of processed or sugary foods. Even with high amounts of rice and palm oil in their diets, most health problems do not stem from the typical diet itself. Rather, lack of food and subsequent malnutrition and inadequate sanitation are the primary causes of health problems in Sierra Leone. Civil war and governmental abuses have caused crushing poverty and a crumbling infrastructure. Basic food production and health care systems have been neglected, making it impossible to meet the needs of the growing population. While things are stabilizing slowly, hunger and malnutrition continue to be issues facing the people and government of Sierra Leone.

Somalia

Overview

The Republic of Somalia is a country located in eastern Africa in an area known as the Horn of Africa. To Somalia's west and northwest is Ethiopia, to the southwest is Kenya, and to the north is Djibouti. The country's total land area is 246,090 square miles, about the same size as Texas.

Many of the people of Somalia live a nomadic or seminomadic lifestyle. They are organized by clans. The lifestyle of the nomad plays a major role in what foods they consume and how the food is cooked. Somalia has been a colony of England, France, and Italy. The influence of these countries can still be seen in their food and cooking. Religion plays a major role in the diet of Somalis, the vast majority of the population being of Islamic faith. They adhere to a halal diet, in which the consumption of pork and alcohol is forbidden and fasts are observed.

Food Culture Snapshot

Ubah and her husband, Arale, live in Garas Balley, a small town northwest of Mogadishu. Some mornings, Ubah makes the journey to Mogadishu to go to the market. Mogadishu is about seven miles from her rural home, and it takes a little under two hours to walk there. Even so, she enjoys going to the market. Her two daughters, Amina and Nadifa, often make the journey with her. Not only is it a place where she can buy the food she needs to feed her family, but it is also an opportunity to socialize and enjoy the displays of handicrafts made from camel bone, wood, and fabric in the small shops located around the market.

The food at the market is fresh and local. A good variety of fruits and vegetables are available at a large market like the one in Mogadishu. She may also buy sorghum, rice, tea, sugar, dates, and pasta at the market. Ghee, which is butter that has been melted and its milky solids removed, is also purchased at the market. Ubah brings containers with her to the market so that she can buy milk. She will go from vendor to vendor, tasting the milk to find the one she likes best.

Major Foodstuffs

Vegetarianism is relatively rare in Somalia, so meals are mostly meat based. Nomadic groups raise livestock to sell to the rest of the population, and they also depend on the animals as a source of food. Mutton is favored, with goat meat also being quite popular. Beef is also eaten but rarely. The popularity of each kind of meat is largely dependent on its availability. A small amount of chicken is consumed, but Somalis don't generally eat any other fowl. Fish is consumed along the coast but is not a part of the diet of Somalis living further inland due to the lack of cold storage and transport. Camel meat is considered a delicacy and is reserved for special guests. The milk of the camel is prized for its health benefits and is usually given to children to promote health and growth.

Carbohydrates are a large part of Somalis' diet. Rice is one of the staples and usually accompanies the main meal. Corn, beans, sorghum, and pasta are also consumed. Spices are used throughout Somali cooking. For sweets, cinnamon, nutmeg, cardamom, cloves, and ginger are used. For savory cooking,

black pepper, chilies, cumin, and parsley are commonly used. While most of these spices are not indigenous to Somalia, their common place in Somali cuisine illustrates the interaction Somalis have had with Asians and Middle Easterners. Somali farmers are able to produce a variety of fruits and vegetables including grapefruit, papaya, guava, pomegranate, mango, and citrus fruits. The selection of fruit available varies by region. Bananas are a very important fruit because they are one of Somalia's largest exports.

Cooking

Women do the cooking in the Somali household because it is perceived as a feminine role. Often, the women living in a village will gather together to prepare food and socialize. With very limited technolo-

gies at their disposal, cooking is a time-consuming and labor-intensive task. Grinding the grains to make traditional breads like *anjeero* and *muufo* is done by hand, with the women of villages or clans collectively sharing in the labor. The grinding is done with a Somali version of the mortar (*kal* or *tib*) and pestle (*mooye*), which is made of wood. It is done each day to make the bread. A small piece of the previous day's bread dough is saved for the next day as a source of leavening. Bread is baked in a covered, wood-burning clay oven or on a hearth.

The majority of the population lives in rural areas where kitchens often have no running water or electricity. In some areas, there are no kitchens, and food is prepared outdoors. In big cities and villages, the stove most commonly used is made from clay and stone and uses charcoal for fuel. In some villages, the stove is made of tin and uses charcoal and wood

A Somali woman holds her baby as she prepares breakfast over an open fire. (AFP | Getty Images)

for fuel. The most common method of cooking in Somalia is frying, which is often done in ghee. Cooking meats that have been dried and then fried in ghee is a traditional method used by nomads. Meat may also be grilled over an open fire, broiled, or stewed.

Typical Meals

Somalis typically begin their day with *canjeero*, which is a pancakelike bread. They are usually eaten a few at a time with ghee and sugar. *Canjeero* is given to children—mixed with tea and sesame oil—to encourage growth. Liver and onions may also be eaten with the *canjeero*. *Boorash* or *mishaari*—a kind of porridge made of ground wheat and cornmeal—may be eaten for breakfast in the south. It is very similar to the polenta eaten in Italy. Somalis prefer to eat it with butter and sugar for flavor. Breakfast in the north might consist of shredded *canjeero* mixed with spices. Also popular is a spicy mixture of beef parts served with *canjeero*.

Canjeero

This bread is a staple in the Somali diet. It can be eaten with every meal. Traditionally, it is made with corn or sorghum flour.

2 c sorghum or corn flour
2 $\frac{2}{3}$ c lukewarm water

Whisk together the flour and water until a smooth batter forms. Let the batter rest.

Grease a nonstick or cast iron pan with ghee and heat over medium low. Pour the batter into the center of the pan and rotate the pan so that the batter evenly coats the bottom. Cook until the batter has set and is no longer sticky. Do not flip the bread to cook on the other side. Simply remove it from the pan and serve it as an accompaniment to a meal or plain with sugar and ghee.

Qado, or lunch, is the largest meal of the day and can often be elaborate. It usually consists of a type

of starch like rice or, in the south, *baasto*, or pasta, accompanied by a *maraq*, or stew of vegetables with meat served on the side. In the south, a mixture of rice and vegetables called *iskudhexkaris* is often eaten.

Dinner is often served as late as 9 P.M. and is a lighter meal than lunch. During Ramadan, dinner is eaten after the saying of the Tarawih prayers, which can be as late as 11 P.M. *Cambuulo* is a dish of slow-cooked adzuki beans mixed with butter and sugar. *Qamadi* is cooked in a similar way, with wheat replacing the beans. *Muufo* is another popular dish, similar to cornbread. It is baked in a clay oven and eaten by adding sugar and tea, then mashing it up. The evening meal may also be accompanied by a salad and is always served with *canjeero*. It is common to drink a glass of milk with cardamom before bed.

Throughout the day, many cups of sweetened tea or coffee are consumed by Somalis. They are drunk before or after a meal but never during it because many Muslims do not like to mix food and drink. Islam forbids the consumption of alcohol, so coffee, tea, water, and fruit drinks are the main beverages consumed.

Sambuusa, a popular Somali snack, are very similar to the Indian samosa. They are usually filled with ground meat and spiced with hot green pepper. *Bajjiye* is also a popular snack. These deep-fried fritters are usually a mixture of maize, vegetables, meat, and spices and are usually eaten with hot sauce. Fresh fruits or homemade cakes may also serve as snacks throughout the day.

Gashaato or *qumbe* is a popular sweet consumed in Somalia. It is made of coconut, oil, sugar, and cardamom. In the south, *lows iyo sisin*—which is a bar made from peanuts, sesame seeds, and caramel—is a popular treat. *Jalaato*, which comes from the Italian word *gelato*, is a popsicle-like frozen fruit treat. Many varieties of cookies and cakes are also available, but these are usually reserved for holidays or special occasions. Table manners or rituals of eating are important to the Somali meal. First, before eating the meal, people wash their hands in a bowl of soapy water. Somalis often eat with their fingers or by using bread as a sort of utensil. Only the first three fingers are used. The left hand is never used for

eating because Muslim tradition considers it the unclean hand.

Eating Out

The cities of Somalia have restaurants offering a wider variety of food. In the larger cities, such as Mogadishu, restaurants offering cuisines from other countries—such as Chinese, Italian, Middle Eastern, and American—can be found. Along the coast of Somalia, restaurants might offer freshly caught fish. Due to the influence of the Arabs over the seventh century, some restaurants offering traditional Arab food like kebabs might be found. By Western standards, Somali restaurants are quite inexpensive—a very nice meal costs about \$10, and the cheapest meal costs only around \$2 to \$5.

Teahouses and coffeehouses are also popular places for people (mostly men) to gather and eat, drink, and socialize. Until recently, women seldom went to restaurants because women who were seen there were regarded as improper or as having a bad reputation. Many women still avoid restaurants in favor of socializing at friends' homes.

Special Occasions

Nearly all festivals and celebrations have religious significance in Somalia. Family, friends, clan members, and villages gather together to celebrate births, weddings, public events, and holidays. In Somalia, as in all other Islamic nations, the Muslim lunar calendar dictates the dates of religious festivals.

During the holy month of Ramadan, Muslim Somalis observe a month of fasting. Through fasting, they show a true devotion to Allah and Muhammad. During this month, from dawn until sunset, Somalis refrain from eating, drinking, smoking, and indulging in anything that is in excess. In the morning, they have to rise before dawn to eat *suhoor*, the meal used during fasting to replace the traditional breakfast, lunch, and dinner. It typically tends to be heavy and is highly regarded by Islamic traditions to avoid the typical side effects of fasting, such as fatigue and ill temperament. After the meal is eaten, prayers must be said, and fasting continues through

the day until *iftar*, which is the evening meal. On the last day of Ramadan, the fast is broken. This festival is called Eid al-Fitr and lasts for three days. Somalis don their best clothes, which are often bought for the occasion, to attend communal prayer in the early morning. Prayer is followed by feasting and visiting relatives and friends. Food is usually plentiful at this time, with many dishes of meat, vegetables, home-made bread, and rice being served. Food is also donated to the poor.

Wedding festivities are also great times of feasting. Depending on what the families are able to afford, the festivities can last for three days. The first two days and nights of the festivities are attended by those of the younger generations. On the last day, everyone comes together for eating, drinking, and dancing. Circumcision ceremonies are also events where festivities take place. Male and female Somali children are circumcised. Parents invite friends, relatives, and neighbors for a feast that takes place after the ceremony.

Bur Katuunboow

Bur katuunboow are a type of fritter or donut. They are usually served during the month of Ramadan.

2 c all-purpose flour

½ c sugar

½ tsp active dry yeast

¼ tsp ground cardamom

Salt, to taste

1 c water

Vegetable oil to fry

Combine all dry ingredients. Add the water to the dry ingredients while stirring, being careful that lumps do not form. Cover directly with plastic so a skin does not form on the surface, and let rest overnight in the refrigerator. Heat the oil to 325°F. Using a small ice-cream scoop, form balls of dough and drop carefully into the oil. Let brown on one side, then turn gently. Remove the fritters from the oil and let them drain on a paper towel. Serve hot and fresh from the fryer.

Diet and Health

Religion influences Somali dietary practices in a number of ways. Nearly all Somalis are Sunni Muslims. Sunni is the largest denomination of Islam and means the words, actions, or example of the Prophet Muhammad. Muslim Somalis consume only halal food, which Islamic law dictates is the only food that is permissible to eat. Halal meat must be slaughtered in the way set out by Islamic law. The animal must be killed quickly, with the knife slitting the throat while a prayer is said and the name of Allah is spoken. The Quran explicitly forbids the consumption of the following foods: pork; blood; carnivorous birds of prey; animals slaughtered to anyone other

than the name of Allah; carrion; an animal that has been strangled, beaten (to death), killed by a fall, gored (to death), or savaged by a beast of prey; fish that have died out of water; food over which Allah's name is not pronounced; and alcohol.

South Africa

Overview

The Republic of South Africa occupies the southernmost part of the African continent and includes an area known as the “cradle of humankind,” where three-million-year-old skeletons of the extinct hominid species *Australopithecus* have been found. Modern South Africa was not recognized as a unified territory until the early 20th century, after years of conflict chiefly between rival European colonists fighting to control the region’s valuable resources, notably the Cape’s strategic position as a layover for spice merchants traveling to and from the East, and the reserve of gold and diamonds discovered in the late 1800s, which led to the development of what is today a leading mining industry.

Following British defeat of the Boers, or Dutch settlers (also known as Voortrekkers), in the Second Boer War (1899–1902), the Union of South Africa began under British rule in 1910 and lasted until the country was granted independence in 1931. In 1948 the National Party took leadership of South Africa and legally instituted the system of racial segregation known as apartheid. South Africa was named a republic in 1961, and the National Party remained in power until 1994, when Nelson Mandela was inaugurated as the first president of the “new” South Africa after the country’s first democratically held elections. Today, South Africa is a constitutional democracy, made up of a central government (parliament and the executive authorities of the president and his ministers), local governments representing each of South Africa’s nine provinces, and traditional leaders (like King Goodwill Zwelithini, monarch of the Zulu people).

Its long history of political and social conflict has contributed to making cultural diversity one of the distinguishing features of the “rainbow nation” that is present-day South Africa. This is particularly evident in its many food cultures. Beyond European influences (mainly British and Dutch but also French from the Huguenots who arrived as Protestant refugees in the late 1600s, as well as some German and Portuguese influences), what is now considered traditional South African food includes richly spiced dishes based on those introduced by Malay slaves brought from Java and Indonesia to the Cape in the 17th century, and later by Indian laborers brought to work in sugarcane fields in the province now known as KwaZulu-Natal. Yet the most widespread food culture in South Africa belongs to the black majority who inhabited the country long before settlers from Europe and slaves from Asia arrived. Numbering almost 80 percent of a population of 49 million people, black South Africans are the main speakers of 9 of the country’s 11 official languages, apart from English and Afrikaans. Though individual linguistic groupings have distinctive food cultures, black South African food traditionally consists of hearty portions of grains (maize, millet, barley, sorghum), vegetables (such as amaranth, known locally as *morogo*), beans (kidney, *jugo*, cowpeas), and meat when available.

The diversity of people and cultures represented by 11 official languages (which do not include the languages of the aboriginal Khoi and San people) gives some indication of the great variety of foods eaten in South Africa, although cultural groupings are not always accurate predictors of what individual

A student of the Rockefeller Foundation-funded African Center for Crop Improvement at the University of Kwa-Zulu-Natal, South Africa, inspects her maize project in July 2006. (Sharon Farmer | Bill and Melinda Gates Foundation)

South Africans eat. The combined effects of industrialization and internationalization, for example, have made more mass-produced convenience items (and fast food) available to a greater number of people, meaning that some traditional foodstuffs and preparation methods have been replaced. Also, while the boundaries between different traditional foods and those who eat them have never been static, social and political transformations in recent decades have made these lines even more permeable, particularly when it comes to eating in some of the many restaurants that now offer both traditional and/or modernized versions of foods from all cultural groups. Most important, South Africa remains a country not just of cultural diversity but also of great

economic inequality, meaning that those with financial means have a wide variety of food choices (particularly in cosmopolitan areas, where sushi is as standard as pizza and “Mexican” food), while approximately half of South Africans live under the poverty line and must eat whatever is cheap and available.

Food Culture Snapshot

Thabi and Lauren live in Cape Town with their two daughters, Naomi (age five) and Bianca (age three). They met at the university, where they both majored in English. Thabi went on to study communications and now works as a consultant for a new media firm. Lauren

stayed at the university to complete her doctorate and now teaches in the English Department. Although they both have full-time jobs, their schedules are flexible, and they both do a fair amount of work from home. The university has a day-care facility that is open all day, though Lauren prefers to collect the children in midafternoon when she can.

They do most of their shopping for meat and dry goods like pasta, rice, and cereal on a weekly basis, but it often happens that they run out of something, so on most days Lauren stops at the local mall on her way home. When she does, the girls normally get a small treat like an *ice lolly* (popsicle), a piece of *biltong* (jerky), or a biscuit (cookie). The family subscribes to an organic vegetable box that gets delivered to their house every week, so they seldom buy vegetables from the supermarket. Their daily shopping generally consists of fruit, milk, and fresh bread.

When she has time, Lauren makes herself a fruit and yogurt smoothie for breakfast, while the girls have cereal or porridge (either oats or their favorite, Malta-bella, a malted sorghum porridge that now comes in convenient portion packs that only take one minute to cook in the microwave). Thabi is only interested in coffee first thing in the morning, so he buys a muffin at around 10 A.M. from the coffee shop close to his office. The day-care center provides the children with a mid-morning snack, but their parents need to send packed lunches, so Lauren makes sandwiches and cuts up fruit for their lunchboxes while everyone else eats breakfast.

Lauren gets her lunch from the food court on campus (usually a salad and sushi, or soup on cold days), and if Thabi is not at a business lunch, he picks up a chicken pie or a sandwich, which he eats at his desk. They employ Thelma three days a week to clean their house and do their laundry, so they also need to make sure there is enough bread on those days for her to fix herself lunch. If they have leftovers from dinner, Lauren usually gives them to Thelma to take home with her because she knows that Thelma has a big family to feed and struggles to make ends meet. For their evening meal Lauren and Thabi take turns cooking. Their standard weekday dinner is some combination of meat or fish, vegetables, and either rice, pasta, or noodles.

It is always fast and easy to prepare: They do a lot of stir-frying, and they use a range of sauces and condiments to turn otherwise-bland food into something more interesting. If the meal is very spicy, like when Thabi makes his favorite Thai green chicken curry, they simply cook a small portion of meat and vegetables separately for the children.

On Saturday mornings they enjoy going to the local organic market for breakfast and to buy interesting breads and meats for an afternoon *braai* (barbecue). They have a circle of friends who also have small children, and they regularly get together on Saturdays in one of their backyards where the adults can relax with a beer or a glass of wine while the children play. On Sundays they go to Lauren's parents' house for a traditional Sunday lunch with the whole family, including Thabi's parents when they are free. Lauren's mother always makes a roast of some sort, which she serves with rice, potatoes, gravy, at least two kinds of vegetables, and a salad, followed by one of her famous desserts, like trifle, lemon meringue pie, or a hot sticky pudding with custard. Lauren and Thabi are rarely hungry on Sunday evenings, so the children get something easy from the freezer, like fish fingers (fish sticks) or chicken nuggets.

Major Foodstuffs

Despite vulnerability to drought and an arable landmass of less than 15 percent, South Africa is self-sufficient in most of its major foodstuffs and also exports many agricultural goods to neighboring countries and overseas. Subsistence farming dominates in small rural communities, while commercial agriculture was deregulated in 1994, meaning that state-run cooperatives could be privatized and that, coincident with the withdrawal of international trade sanctions, South African commercial farmers could compete in the global market.

Maize (corn) is the country's main crop and also the national staple, followed by wheat, sugarcane, and sunflowers, used for cooking oil. *Mielie meal*, or ground maize, forms the basis of a number of starch-rich meals, including breakfast porridge, *pap* (thicker and drier than porridge, normally eaten with

meat and/or vegetable stew), and *phutu* or *krummel pap* (cooked for longer and with less water until it reaches a crumblike consistency, also eaten with stew). Less finely ground than mielie meal, samp is made from boiling dried, chopped maize kernels and is often served with beans (*umngqusho*, or “samp and beans,” is reputedly Nelson Mandela’s favorite dish). Fresh maize cooked on an open fire is a popular roadside snack and also often an accompaniment to a braai, while fresh kernels mixed with flour and steamed in maize leaves produce *mielie bread*. Maize is also a main ingredient in *umqombothi*, a beer brewed with sorghum and yeast. Less traditional, but as popular, are the thousands of boxes of popcorn eaten in the country’s cinemas on a daily basis. Beyond domestic consumption and mercantile exports, the maize industry is supported by government and private-sector subsidies that fund the distribution of food relief in South Africa and in surrounding countries.

Meat is consumed in great amounts in South Africa, whether simply braaied (barbecued) over coals (and no braai is complete without a ring or two of *boerewors*, “farmer’s sausages,” a combination of beef and pork flavored with coriander seed), oven-roasted, cooked into a number of stews or curries, or eaten as a snack in the form of biltong or *droëwors* (dried boerewors). Cattle, sheep, and poultry farming provide up to 85 percent of meat for domestic consumption with the remaining 15 percent being imported.

Fruits are also important, both as a major export item and for local consumption. Deciduous fruit like apples, pears, and grapes makes up 15 percent of agricultural earnings from export and are eaten locally either fresh, dried, baked into puddings, or preserved in the wide variety of jams (*konfyt*) and chutneys that South Africans eat regularly. Dried fruit also features in a number of savory dishes such as *bobotie* (curried meatloaf with raisins or sultanas and sometimes flaked almonds, topped with an egg custard before baking) and yellow rice with raisins. The country’s most important fruit is the grape, first introduced by the Dutch settler Jan van Riebeeck in the 17th century and now indispensable to South Africa’s position as one of the top 10 wine-producing

Lamb kabobs on a grill. The act of barbecuing, known as braai, is a popular social custom in South Africa. (Shutterstock)

countries in the world. With annual exports of over 300 million liters, the wine industry contributes significantly to the country’s economy and to providing world-class wines for South African tables.

Beyond these key national industries, South Africa has several major regional foodstuffs, many of which are transported and consumed around the country but remain characteristic of particular areas. With approximately 1,750 miles of coastline, seafood is sourced from the Cape’s western coast (where the cold Atlantic yields predatory fish like tuna, yellowtail, and *snoek*) all the way along the east coast to the northern border with Mozambique, where the warmer Indian Ocean provides sole, calamari, and pilchards. Crayfish (spiny rock lobster) are a South African delicacy, as is *perlemoen*, a local abalone. Oysters are naturally abundant (the West Coast town of Langebaan is famous for having one of the largest oyster graveyards in the world) but have also been commercially farmed since the mid-20th century. Other popular seafood includes mussels, hake (a favorite for fish and chips), linefish such as kingklip and *geelbek* (also known as Cape salmon), and small fish like *harders* (sold dried and salted as *bokkoms*, a snack food) and whitebait, typically deep-fried whole and served with lemon and tartar sauce.

The inland aridity of the northern Cape makes it a prime area for sheep and ostrich farming, where local delicacies include sheep’s testicles, *potadders*

(puffadder is usually refers to a venomous snake, but these are sheep's intestines filled with offal, grilled over coals), *skilpadjies* ("tortoises," lamb or sheep's liver wrapped in caul), and *kaaings*, cracklings made from sheep fat. The area is also home to the Kalahari truffle (a species of *terfezia*, or desert truffle) and to much of South Africa's *rooibos* ("red bush") tea cultivation.

Bordering the landlocked Kingdom of Lesotho, the Free State has been known as South Africa's bread basket, thanks to extensive wheat cultivation. The area also produces potatoes, groundnuts, and asparagus, as well as hosting an annual cherry festival. Citrus, nut, and tropical fruit (mango, lychee, banana, avocado) farming are key to the province of Mpumalanga, while visitors to Limpopo can expect fried mopane worms, porridge made from the fruit of the baobab tree, and home-brewed *marula* beer.

Cooking

One result of industrialization in South Africa is that much traditional food preparation has been simplified and/or displaced. Making pap or porridge used to involve hand-grinding the dried maize kernels, whereas now a majority of people rely on factory-processed mielie meal (the practice of hand-grinding continues in rural areas, where subsistence farmers also grow and dry the kernels themselves). Where available, presliced factory bread (or "government loaf," so named because of legally instituted price controls and tax exemption) has largely taken over as a main staple, and for those with refrigeration facilities, frozen, chopped vegetables provide a convenient alternative to hand-chopping, particularly for food at large gatherings like funerals and weddings.

In rural areas, and in many traditional households across all racial groups, cooking remains the women's domain. This reflects both African custom and the class-based divides introduced by Dutch settlers, who hired Malay slaves as cooks in their homes in the 17th century. Dating from the colonial era and later throughout apartheid, it is still common for middle- and upper-class South African households

to employ domestic help to clean their homes, look after children, and, often, do the cooking. Known colloquially as *chars*, domestic workers are invariably women: Men have historically been employed to work in gardens, if not as migrant laborers in mines and other industries.

One notable exception to the norm of women cooking is the braai. Men are typically designated braai masters, and for many it is the only form of cooking they do. The task involves getting the coals ready, grilling meat, and declaring it ready—everything else is usually prepared by women. Cooking on a fire is an age-old practice in South Africa, beginning with the Khoi and San people (though now collectively referred to as the Khoisan, the two groups had distinctive ways of life: The Khoi were herders with domestic livestock, while the San were hunters), followed by the so-called Bantu tribes who migrated south from the Great Lakes region in central Africa to become "native" South Africans, and finally to the Voortrekkers, who introduced the three-legged cast iron pot known as a *potjie* ("little pot"). *Potjiekos* (*kos* is the Afrikaans word for food) continues today and refers to a stew (generally meat, vegetables, and potatoes) cooked slowly in a potjie set over coals. Potjies are also used to bake *potbrood*, or "pot bread," while *roosterkoek* ("grid cake") refers to bread buns cooked on the grid and *askoek* ("ash cake") to bread baked directly on the embers. Apart from steaks, chops, ribs, and boerewors, *sosaties* (kebabs, or marinated pieces of meat on a skewer, often interspersed with dried fruits and chunks of onion) are popular braai items, as is whole fish brushed with a jam-based glaze.

Frying is another common form of cooking in South Africa, from deep-fried foods like fish and chips to a number of savory snacks such as samosas, *slangetjies* ("small snakes," fried strands of a spiced pea-flour batter, sometimes mixed with nuts), *dhaltjies* (or chili bites, spicy puffs made from chick-pea flour), and *vetkoek* ("fat cake," small pieces of fried bread dough, eaten either with sweet toppings like honey or savory fillings like curried mince). Deep-fried sweet foods include the Afrikaner *koek-sisters* (twisted or plaited doughnuts dipped in ginger-and-lemon-flavored syrup) and the Malay

variant, *koesisters*, small round doughnuts made from a spiced dough, dipped in a simple syrup, and rolled in dried coconut. Pumpkin fritters with cinnamon sugar are also enjoyed on their own or, following the practice of pairing sweet with savory, as an accompaniment to a meal. *Smoor* (“smother,” or braise) refers to foods braised in a pan with onions. *Smoorsnoek* traditionally calls for dried, salted snoek, flaked and fried with onions, cabbage, potato, chili, and garlic, though smoked fish is more often used nowadays. Rice, cabbage, and other vegetables like eggplant are commonly smooed.

Typical Meals

A South African breakfast can be as simple as cereal, porridge, and/or *amasi* (curdled milk, prepared by natural fermentation in rural areas or available as a cultured dairy product from the supermarket). In traditional Afrikaner households, homemade baked goods are common, ranging from muffins and rusks (oven-dried biscuits typically dunked in coffee or tea; rusks provided useful sustenance for Voortrekkers and soldiers because they did not spoil) to breads. *Seed loaf*, referring to a whole-grain bread with a variety of seeds (sunflower, sesame, poppy, linseed), is widely eaten as toast with butter and preserves. A “full” South African breakfast, still eaten by some on a daily basis though more frequently reserved for weekend brunches in urban areas, mimics the traditional English breakfast with toast, eggs, bacon, fried tomatoes, mushrooms, sausage, and sometimes kippers, a piece of steak, or a lamb chop.

Apart from a Sunday roast, lunch is generally not the main meal of the day and often consists of a sandwich or other food item that can be eaten on the run, particularly for the large group of blue-collar workers. A typical lunch for many construction workers and other physical laborers is half a loaf of bread and some form of cooked or cold meat from a supermarket, if not something from one of the many corner cafés that sell hot foods like fish and chips, toasted sandwiches, savory pies, sausage rolls, and “Russians” (thick pork sausages). A favorite Cape fast food is the *gatsby*, a large hot dog bun filled

with cooked or processed meat, French fries, and sauce, or a *salomi*, curry wrapped in a roti flat bread. The *bunny chow*—half or quarter of a hollowed-out loaf of bread filled with curry and topped with the *virgin*, or the bread from the middle (the virgin is eaten first with the curry, followed by the gravy-soaked sides of the hollow loaf)—originated in KwaZulu-Natal as a convenient way of selling food without cutlery to indentured laborers, but it can now be found in most major South African cities.

In traditional Malay and Indian households, the evening meal typically consists of some form of curry served with rice and/or breads, and *sambals* (accompaniments like chutney; *atjar*, a spicy relish; and *raita*, a yogurt-based condiment). Malay curries are milder than Indian curries and often have a sweet element to them, like in *bobotie*, a recipe for which was selected to represent South Africa in a United Nations international cookbook published in 1951. Other Malay specialties include *denningvleis* (lamb stew flavored with cloves, allspice, and tamarind) and *bredie*, a lightly spiced tomato-based stew, the most unique version of which uses *waterblommetjies* (the flowers of water hawthorn, an aquatic plant that grows wild in the Cape). Lamb, mutton, and chicken are popular meats for curries, though the Malay community uses only halal meat (and therefore never pork).

The braai is the most typical South African meal because it is the one that most, if not all, South Africans are familiar with—so much so that the annual public holiday on September 24, previously known as Shaka Day (in commemoration of the Zulu king’s assassination by his half brothers in 1828) and later renamed Heritage Day, has been dubbed National Braai Day (or Braai4Heritage Day), with Emeritus Archbishop Desmond Tutu as its patron. Both a noun (“let’s have a braai”) and a verb (“let’s braai”), the occasion is most often a social one that can suit any demographic or income group. A braai can be a lavish affair with crayfish, fillet steak, and fine wine or a more casual gathering with virtually any form of meat (including chicken and venison), vegetables, boerewors, and plenty of beer. In addition to pap and grilled corn on the cob, a number of condiments are usually served with *braaivleis* (braaied meat),

like chutney, pickles, and *chakalaka*, a spicy tomato-and-onion relish.

Eating Out

South Africa has a thriving restaurant industry that caters to most of its population and also to the tourist market, which has a wide choice of world-class restaurants to dine in. Le Quartier Français and La Colombe are notable as two restaurants (both in the Cape winelands) that have repeatedly been voted among *Restaurant* magazine's 50 "Best Restaurants in the World," though as their names suggest, the food they serve is inspired by French (or broadly international) trends. In the global market in which they participate, this class of restaurants offers extremely competitive value, but from a South African perspective only a minority can afford to spend more money on a single meal than many people earn in an entire month. Yet this relatively small market manages for the most part to sustain the high-end dining industry, and several South African chefs are recognized as celebrities in their local contexts. In 2009, Cape Town welcomed the country's first signature restaurants by foreign celebrities with the opening

of Gordon Ramsay's maze and Nobuyuki Matsuhisa's Nobu.

Cosmopolitan areas do offer a wide variety of places to eat out that are affordable on a regular basis to the middle to upper classes. Wine and tapas bars, delis, and sushi restaurants have become popular in recent years, while less casual restaurants continue to be well populated for business lunches and dinners. Cities also abound in all kinds of middle-of-the-road eateries, from Italian to Chinese to burger restaurants, all of which are particularly successful in student neighborhoods (where street food also thrives, especially hot dogs made with boerewors). In suburban areas with a higher population of middle- to lower-income groups, franchised fast-food and family restaurants are very popular, including South African franchises like Spur Steak Ranches (burgers, steaks, and ribs), Nando's (Portuguese-style chicken), the Ocean Basket (seafood), a number of pizza chains, and global brands like McDonald's and KFC.

Eating out in rural areas generally falls into one of two categories that echo the historical divides set in place by apartheid. In traditional black communities, as well as in townships on the outskirts of most

A number of restaurants and store fronts along the coast of the Victoria and Albert Waterfront in South Africa. (Monkey Business Images | Dreamstime.com)

cities, restaurants often combine a butcher shop with braai facilities, so patrons first buy a piece of meat and then have it cooked for them on the fire, while pap, stews, and other accompaniments are available to order on the side. Mzoli's in the Cape township of Gugulethu has become a popular tourist destination for those looking for an "authentic" black experience, which here involves many people standing around their cars, playing loud music, and drinking copiously while enjoying Mzoli's meat and his famous secret sauce. In contrast, there are farm stalls along highways in sparsely populated agricultural areas. Originally small roadside stores selling fresh produce from (white-owned) neighboring farms, today farm stalls are sophisticated delis with an adjoining coffee shop or restaurant where travelers stop for refreshments and *padkos* ("road food") and also for hearty country meals.

Special Occasions

In traditional black communities, special occasions like weddings and funerals typically involve feasting, beer drinking, and often the ritual slaughter of a cow or goat. Cattle have long been a symbol of wealth, and the practice of using cattle for *lobola* (the bride price, with the main aim of establishing a relationship between two families) remains common in rural areas. Some wedding customs also include food taboos, such as the bride not being allowed to eat until a certain time. Similarly, where male initiation rites are still observed, boys undergo a period of fasting and isolation before the final feast, which also includes the slaughter of an animal.

Food, and its restriction, is also important to Muslim celebrations, and several lavish dishes are reserved for special occasions. During the fasting period of Ramadan it is customary for children in Muslim communities to take plates of sweets like *koesisters* to their neighbors to break the fast at sundown. *Boeber*, a spicy drink of milk and sago (a starch extracted from palm), is often served before the main evening meal and is typically drunk on the 15th day of Ramadan to mark the middle of the fast. The celebration of Eid to mark the end of the fasting period of Ramadan usually features expensive

dishes like crayfish curry and a host of elaborate puddings and sweets. *Breyani* (adapted from the Indian *biryani*) is a typical wedding dish that is assembled in various stages, beginning with marinating mutton or chicken for a few hours in a mixture of yogurt, tomato, and spices (cardamom, cinnamon, chilies, turmeric, cloves, saffron). The final dish consists of meat, rice, lentils, fried potatoes, and onions, layered in a pot and cooked slowly. Etiquette requires the lid of the pot not to be lifted until the time of serving, when halved hard-boiled eggs are often added as a final garnish. *Doopmaal*, the naming ceremony for Muslim babies, is always followed by tea and cakes, and sometimes savory snacks or a more substantial meal.

With a Christian majority, South Africa observes the major Western holidays like Christmas and Easter. These are celebrated with the same commercial flourish as in many parts of the world, with supermarkets stocking Christmas cakes, hams, and turkeys from October, and Easter eggs from soon after Christmas. Beyond these ritualized festivities, special occasions like birthdays and anniversaries are celebrated in nonspecific ways across the country but generally with due attention to food and drink, be it at a fancy restaurant, at a Spur Steak Ranch (where the staff will sing "Happy Birthday" on request), or simply having a braai with friends.

Diet and Health

Echoing all other spheres of South African life, people with financial means can benefit from first-rate private health care, while the majority of South Africans currently have access only to the very rudimentary health care that the government provides free of charge. One result of this is an average life expectancy of 49 years, concentrated in the 80 percent majority who do not have access to adequate health services.

HIV is the biggest health challenge that South Africa faces, with a prevalence of close to 20 percent and over five million people living with the virus. It has also been the subject of the most notorious link between diet and health, when, in the period 2000–2005, then-president Thabo Mbeki denied the

causal relationship between HIV and AIDS and publicly recommended eating a diet rich in fruit and vegetables to fight the disease, rather than prioritizing access to antiretroviral drugs. It is estimated that 350,000 people died unnecessarily during that time.

As cattle are a symbol of wealth, excess body weight is also traditionally regarded as a sign of prosperity. This continues in many black communities and is exacerbated by high rates of HIV and AIDS, now commonly considered a “slim disease” because of its associated weight loss. But the principle that being fat is healthy is also complicated by escalating rates of diabetes and related health complications resulting from overweight and obesity. While increasingly Western lifestyles in urban areas, involving higher consumption of fast food and convenience foods, have contributed to this development, it is also the result of traditional ways of life across most racial groups, as eating substantial portions of meat and starch, often coupled with large amounts of beer, is not confined to black communities (white men count among the most obese in the country).

In cities the opposite trend is widespread, with a visible increase in the number of gyms, many of which work in partnership with medical insurance

companies to offer reduced membership rates. Also on the rise are healthy fast-food options, from chains like Kauai (which also operate in the ubiquitous Virgin Active gyms) and Osumo, both of which specialize in smoothies, salads, sandwiches, and wraps and offer nutritional information with their menus. Leading supermarkets also have health sections that offer a number of “lite” and “low-carb” snack and meal-replacement products under leading diet brands like Weigh-Less, as well as a full array of gluten- and sugar-free foods.

Sudan

Overview

Sudan is a country in northeastern Africa with a land area of 2.3 million square miles, roughly the same size as the United States east of the Mississippi River. It has a population of 41 million. Sudan shares borders with nine countries and enjoys coastal access along the Red Sea. Two strands of the Nile, the White Nile and the Blue Nile, converge in the capital city of Khartoum and continue north to Egypt and eventually the Mediterranean Sea. Sudan's strategic location on the African continent has made it desirable to outside occupying forces, and both the United Kingdom and Egypt laid claim to parts of modern Sudan during the 19th and 20th centuries. The legacy of colonization is manifest in aspects of Sudanese culture today, from religion to food and language.

The contemporary history of Sudan is one of conflict. Two civil wars between Sudan's northern and southern states were fought for over 40 of the 50 years following independence from the United Kingdom in 1956. A peace accord was signed in 2005, but it was overshadowed by violence in the western Darfur region of Sudan, where it is estimated that hundreds of thousands have lost their lives since 2003. The combination of war and natural disasters has resulted in mass migration and displacement of the Sudanese subsistence-agriculture population. As such, Sudan has experienced rapid urbanization, with an estimated 40 percent of Sudanese living in cities today.

Given its land area and varied terrain, Sudan is home to a rich collection of indigenous tribes—over 100 of them—with an equal number of languages

spoken. The official languages of Sudan are Arabic and English. Arabic is spoken widely in the north, while English is spoken in much of the south, a result of the British presence in the region during the 20th century. The majority of Sudanese are Sunni Muslims (70%), followed by indigenous and animistic faiths (25%) and a small minority of Christians (5%). Because of the strong Muslim influence in Sudan, alcoholic beverages are forbidden, as is the consumption of pork. The Sudanese economy has experienced tremendous growth because of its deposits of crude oil, which it began to export in 1999. While the standard of living has improved for some due to this new revenue stream, more than a third of Sudanese live on less than a dollar a day. In addition to disparities in household income, the population of Sudan is defined by the generation under the age of 14, who make up 40 percent of the population. In 2011, a southern Sudanese independence referendum is scheduled for a vote, which could potentially result in southern Sudan declaring itself a sovereign nation.

Food Culture Snapshot

Selma Hassan Mustafa is married with three children. She works as a director at the federal Ministry of Finance in Khartoum. Her husband, Mustafa Adelrahman, is a professor of economics at the University of Khartoum. While Selma's mother was one of multiple wives to her father, she and Mustafa do not practice polygamy, which is still common in parts of Sudan. Selma's oldest son, Mohamed, is a physician and is married and working in Saudi Arabia. Her middle child,

People try to earn some money by selling peanuts and sugar outside of their shelters in East Darfur, Sudan. (David Snyder | Dreamstime.com)

a daughter named Amel, is an elementary school teacher. Amel is unmarried and still lives at home with her parents. Selma's youngest son, Hisham, is still in college in Khartoum, studying urban planning.

Selma grew up outside of the capital in Blue Nile State, located eight hours south of Khartoum by car. She learned to cook from her mother and grandmother, who prepared traditional dishes like breaded and fried river fish and *waika*, a dish made with dried okra flour, which she still prepares for her family in Khartoum. While her children are no longer living under one roof, Selma continues to cook dinners for her husband, Amel, and Hisham, who look forward to suppertime and the dishes she prepares.

As a practicing Muslim, Selma looks forward to the religious festival marking the end of the month of Ramadan when devout Muslims fast from sunrise to sundown each day. To celebrate, her eldest son and his wife return from overseas, and the family is reunited for a feast that includes roast mutton or goat and *bellah*, or dates, for dessert.

Major Foodstuffs

Many standard Sudanese dishes have a grain as their main ingredient. In the west, millet is grown widely and is the base for *aseeda*, or boiled millet flour. This filling dish has the consistency of thickened polenta and is typically enjoyed with a *moullah*, or stew. Central Sudan produces sorghum, which is ground into

flour called *fetareetah*. This flour is then used to form a batter that is fried into thin pancakes called *kisra* that are also served along with stews and cooked vegetables. In the north, wheat is produced and harvested for bread flour, used to make *gurassah*, flat unleavened bread fried in a pan. Cassava was introduced to southern Sudan in the 1830s by the British colonizers in an attempt to provide a crop that was more drought resistant and grew underground so that pests that fed on aboveground stalks would not damage the crop. This tuber is now a staple of southern Sudanese cooking.

In much of Sudan, meat makes the meal. The most common meats are lamb, mutton, and beef. Goat, camel, chicken, and fish are also consumed regionally. Meat can be prepared simply on skewers over a grill, or as a component of a stew or rice dish. Many meat varieties are ground and formed into kebabs, which are then served with bread and a spicy yogurt sauce called *shohta*.

Peanuts, or groundnuts, are a favorite ingredient and key export item for Sudan. Vendors serve roasted peanuts on streets across the country, and the nut is incorporated into fresh salads that accompany Sudanese barbecue, such as *salata dugwah*.

Salata Dugwah (Peanut-Paste Salad)

Serves 4 as a side dish

Ingredients

4–6 medium tomatoes

½ c finely diced purple onion

1 tsp salt

⅛ tsp ground cloves

⅛ tsp ground curry leaves

½ tsp ground coriander

1 tsp minced garlic

⅓ c ground fresh peanuts (unsweetened peanut butter can be substituted)

Dash of sugar

Wash and dice the tomatoes and place them in a mixing bowl. Add the diced onions and incorporate thoroughly. Stir in the salt, cloves, curry leaves, co-

riander, and garlic. Finally, add the peanut paste and a dash of sugar and mix well.

Fava beans, or *fuul*, are known for the classic dish of the same name that is widely eaten throughout Sudan and much of northern Africa and the Middle East. An excellent source of protein, fuul is often served as a morning or midday meal.

Date palm trees are cultivated along the banks of the Nile from the northern state of Sudan down south of Khartoum to Sinnar state. Sudanese dates, or bellah, are prized for their size and flavor and are found in snacks such as *bellah madeedah*, a smoothie made from wheat paste, clarified butter, milk, yogurt, sugar, dates, and honey. While not native to Sudan, mangoes were introduced 6,000 years ago and many varieties flourish today. The Sudanese town of Shendi is particularly famous for its mangoes. Banana trees are plentiful in parts of southern Sudan, and they are consumed in many parts of the country. Dates, mangoes, and bananas are all rich sources of essential vitamins. Sudanese recipes often call for onions, tomatoes, cucumbers, and green peppers. These ingredients are either incorporated into hot entrées or highlighted in salads or side dishes. Another popular leaf vegetable is arugula, served fresh as a side salad.

Among the popular drinks, *karkaday* is a magenta-colored juice or tea made from dried hibiscus flowers. The dried petals are prepared as either a cold or a hot drink rich in vitamin C. The *tibeldi* trees in southern Sudan produce fruit that is dried to a chalky, wrinkled consistency and creates a thick juice when mixed with water. The dried tibeldi fruit is sold widely in markets across Sudan.

Cooking

Most Sudanese dishes are cooked over heat as opposed to baked, regardless of whether one lives in the city or the countryside. Urban kitchens typically have a stovetop but might not include a proper oven. In cities, bakeries that produce cookies and popular breads are plentiful. In the rural areas, cooking is typically done over a fire. Finding fuel can mean seeking wood from a far distance, given the deforestation and desertification of much of Sudan. In

southern Sudan, charcoal grills have replaced wood-fueled grills as the most popular cooking mechanism. In the most arid climates of Sudan, meat and fruit are preserved through a drying process that keeps the food edible for many months.

Typical Meals

Urban Sudanese often take only a cup of milk tea and a simple cookie (referred to by the British term *biscuit*) at home in the early morning before starting their workday at 8 or 9 A.M. Some might stop for a potent espresso-sized cup of *jebena*, or spiced coffee, on the way to work. Alternatively, a tray of such coffee might be fetched for an office from one of the many jebena vendors after the workday is underway. The coffee tradition in Sudan is strong, as it is neighbors with Ethiopia, the birthplace of the bean. The meal referred to as breakfast is eaten at around 10 or 11 A.M. and might consist of a simple sandwich made of a round individual-size loaf of white bread stuffed with *tamaaya* (falafel) or fuul. Lunch therefore comes much later in the day, usually sometime between 2 and 5 P.M. The meal is more robust than breakfast and could involve takeout from a growing number of fast-food establishments that sell kebabs, French fries, and, in Khartoum, even pizza. Workmates sometimes share a spread of *gurassah* (the flatbread) dipped in *sharmut moullah*, a meat stew. Given the later dining times for lunch, dinner is typically taken well into the evening, between 8:30 and 11 P.M. Women are expected to do the cooking, and while some might employ hired help, many still handle the task on their own. Bread is a component of the meal that would likely be purchased, while others, like *sheearia*, a sweet noodle dish, would be made at home. Simple salads of sliced tomatoes, purple onions, and cucumber are common.

Fuul Sudani (Sudanese Fava Bean Stew)

Serves 4

Ingredients

1 lb fava beans
Salt to taste

- 1 tbsp sesame oil
- 1 medium onion, diced
- 1 green pepper, diced
- 1 medium tomato, diced
- 1 tsp chili powder
- 1 tsp cumin
- Juice of 1 small lemon
- 3 tbsp feta cheese

Soak the beans overnight (at least 3 hours), then boil them in water until they are tender. While the beans are cooking, heat a large skillet over medium-high heat, and add the sesame oil, then cook the green pepper and onion until they wilt, about 2–3 minutes. Then add the tomato and a dash of salt, cooking just until the tomato is warm but not cooked so much it loses its shape. Turn down the heat to simmer. Once the beans are soft, drain them, retaining 1½ to 2 cups of the cooking water, and place the beans in a mixing bowl. Then, with the back of a flat wooden spoon or curved spatula, mash the beans so that they break apart. Sprinkle with the remaining salt, chili powder, and cumin to taste. Add the beans and the reserved water to the skillet and combine thoroughly, incorporating the lemon juice and salt to taste. Turn the heat back up to medium high until it almost begins to bubble, and then take it off the heat and serve the *ful* in bowls with the feta crumbled generously over the top.

For rural Sudanese farmers or herders, the rhythm of their day creates an alternative meal structure. In addition, different regions of Sudan produce distinct crops, which are reflected in the meals. Millet may be their staple, or it could be wheat. Dairy is emphasized in the west, where cattle are plentiful. Fish play a more central role in the fertile communities that line the White and Blue Nile rivers. Dates are grown in the north and feature prominently in their cuisine.

Eating Out

In rural villages, eating out involves being invited to another family's home for a meal, either as a gesture

of friendship or because of a shared celebration. The Sudanese pride themselves on their hospitality, which is most often demonstrated by feeding guests. In towns and midsize cities, small eateries sell grilled meat, salads, and bread for eating in or takeout. In addition to restaurants, these locales have a collection of street vendors offering everything from roasted corn to *bakoumbah*, a sweet porridge made from boiled millet, yogurt, clarified butter, custard powder, sesame paste, and sugar.

Khartoum has a thriving restaurant scene, from fancy rooftop dining at the best hotels to corner restaurants in residential neighborhoods that serve a Sudanese favorite, *koftah*, or grilled meatballs. Lebanese, Egyptian, Chinese, Indian, Ethiopian, and Italian restaurants are popular with both locals and non-Sudanese residents of the city. The Kenyan restaurant chain Carnivore opened a branch on prime real estate facing the Nile and serves a wide range of meat that includes the traditional (beef and lamb) and the more adventurous (crocodile and camel). In addition to restaurants, Khartoum also has a vibrant street-food scene, where customers can enjoy *kisra* and *moullah*, or a grilled meat technique called *salat* that involves searing meat over hot river rocks and salt, to name just a few.

Special Occasions

For practicing Muslims in Sudan, there are two major holidays that involve food: Ramadan Bairam and Kurban Bairam. Ramadan Bairam is also known as Eid al Ramadan. Ramadan refers to the Muslim month of fasting, determined annually by the lunar calendar and lasting roughly 30 days. All Muslims are required to not eat or drink anything from sunrise until sunset. Pregnant women, the sick, children under the age of 13, and those in transit are exempt. The nights of Ramadan involve *fatour*, or the social breaking of the daily fast with a shared meal. Ramadan culminates with the Eid al Ramadan, which marks the end of the month of Ramadan. The celebration extends for three or four days and involves eating and visiting with family and friends.

Kurban Bairam, also known more widely as Eid al Kabier, is another Muslim lunar holiday that marks the 10th month called Zu al Hajj, the designated month of the year in which Muslims from around the world make a pilgrimage to Mecca. Eid al Kabier marks the day when those in Mecca will have journeyed to the neighboring city of Medina, where each pilgrim will perform an animal sacrifice. In Sudan, Eid al Kabier lasts for four to five days and is a celebratory time for shared meals and family visits. Every Muslim family with the means to do so will slaughter a ram to mark the occasion.

Diet and Health

While the introduction of fast food and large supermarkets in the urban areas has meant a shift in diet for some Sudanese, most Sudanese still live in small villages and towns, and their diet remains largely the same as that of their ancestors. As Sudan continues

to urbanize, this trend will shift accordingly. The life expectancy in Sudan is an average of 51 years, not as a result of diet but instead because of a continuous cycle of food scarcity, war, diminished health facilities, and disease.

Swahili City-States

Overview

The Swahili (WaSwahili) are a Muslim people who live on the coast of East Africa. In some respects Swahilis differ significantly from other East Africans. They have always typically lived in city-state towns rather than in nomadic groups (like the Maasai or Samburu) or in dispersed farming settlements (like the Kamba or the Luyia). Among the Swahili, a prime differentiation is whether they are from a “stone town” or a “country town.” The former exhibit more orthodox Islamic customs and claim more Persian and Arab ancestry.

Lamu is an ancient stone town, a Swahili city-state in the Indian Ocean off the north coast of Kenya. It is the main town of the traditional *Swahilini*—the original geographic crucible of Swahili culture. In December 2001, the United Nations Educational, Scientific and Cultural Organization granted World Heritage status to Lamu’s Old Town, citing the fact that the old town had retained its traditional functions for over 1,000 years.

The Swahili language (called KiSwahili in the language itself) is the national and official language of Kenya and Tanzania and is probably the African language most widely studied outside of Africa. Swahili is spoken as a first language by the Swahili people on the Kenyan and Tanzanian coasts and the adjacent islands: Zanzibar, Pemba, Mombasa, Lamu, and more. This Swahili is a full and complex language (with 15 grammatical genders), but there is also a trade language based on simplified pidgin Swahili. The simplified version has led to a false reputation Swahili sometimes has as not being a real language. Swahili is spoken as a second (or third

or fourth) language by tens of millions of people, mainly in Kenya, Tanzania, Uganda, and Congo (Democratic Republic of the Congo). There are also speakers in Mozambique, Rwanda, Burundi, Somalia, Zambia, Malawi, and the Comoros, and even in southern Arabian countries such as Yemen and Oman.

When the Europeans arrived in the 1600s, they found an urban, Muslim people who lived in stone houses, conducted trade with India and China, and had an active written literature. They viewed the Swahili as so different from other Africans that they assumed the culture to be a foreign transplant, for example, Arabic. But Swahili culture, while Islamic, is not Arabic: It is a unique, syncretic, African-based culture.

Swahili towns stretch along the eastern coast of Africa from Somalia to Mozambique. The East African coast has been important to Indian Ocean trade for the past 1,000 years, and small boats or dhows have sailed on the seasonal monsoon winds, which have blown ships from Arabia, Persia, and India toward the Swahili coast and then later in the year blown them back again toward home. Swahili food shows influences from Africa, India, Arabia, and Europe—not surprising, for the Swahilis have been the contact group, trading the goods of inland Africa and the rest of the world for many centuries. The group of greatest modern influence is undoubtedly the people of the Indian subcontinent. Swahilis’ default seasoning is curry, and Indian spices are common; important snacks are samosas, *bhajia* (a kind of deep-fried onion fritter), and other Indian snacks; the default bread is a chapati; the most festive rice dish is *biryani*, a mixed pilaf (showing pan-Islamic origins as well).

A grove of coconut palm trees. Mnazi, the coconut palm, occupies a special place in Swahili culture. (Jonathange | Dreamstime.com)

In the modern day, Swahili meals center around *wali* (rice), chapati flatbreads made with white flour (*unga*) and whole-grain flour (*atta*), or cornmeal porridge (*sima*, *bodo*, or *ugali*), eaten with a *kitoweo*, an accompaniment of fish, meat, or vegetables. *Mchuzi* is the word for a sauce-based *kitoweo*; it is variously translated into English as gravy, soup, sauce, or curry. *Supu* (from English) is also used for soup.

Food Culture Snapshot

Sawiti bin Mohamed rises early, performs his *alfajiri* (morning) prayers, and arrives at the Lamu market just after dawn. He and other men (only men come to the market) congregate around the butcher, who is sectioning, cutting, and dispensing parts of the cow that was slaughtered just earlier. He orders a half pound of meat with bone. The butcher cuts what he thinks will

be about a kilo and puts it on a sheet of newspaper on one side of a balance scale, then puts a kilo weight on the opposite pan. In the vegetable area of the market Sawiti buys three onions, chilis, garlic, two European potatoes, a carrot, bananas, and coriander leaf (*cilantro*). He will cook a *mchuzi wa ng'ombe* to accompany the rice he plans to serve.

If he were cooking an extraspecial dish for this evening's meal—grilled meat—he might buy boneless *sarara* (filet), then find someone with a papaya tree that has a fruit, buy one, and marinate the meat, cut up, in the shredded papaya and a combination of spices. This will tenderize the meat to the point it can be chewed, as the cattle that have been coming to the market these days have been Somali cattle that have walked many miles on their way to slaughter. This meat makes good *mchuzis*, though, especially pieces with bone.

He exchanges lengthy greetings and news for a long while with the other men. They are dressed alike: a

kofia (cylindrical hat), a *shati* (a collared shirt) or a *kanzu* (a full-length white shirt), and a *saruni* (a sarong), with rubber or leather *viatu* (sandals). He then leaves and stops at a *duka* (general store) to buy a small two-tablespoon tin of tomato paste and a packet of *bizari*, premade curry powder. Other days he will buy individual spices from bins and grind them himself on a grinding stone. He also buys two ripe coconuts and drops them off at his sister's house.

She cracks them in half, disposes of the water inside, then sits on an *mbuzi*, a seat of two crisscrossed boards with a sharp C-shaped saw blade—with the teeth on the outside of the C—stuck in the end of one board. She grinds the white part of the coconut with this blade, catching the result in a bowl underneath. She puts the ground coconut into a bag woven from fine palm fronds called a *kifumbu*, pours water into it, and squeezes out *tui* (coconut cream) into the bowl. She separates the first output from the second and third and will give them to Sawiti when he passes by again later.

Sawiti is a master professional *mpishi*, a cook. He is expert at Swahili, Indian, and European cuisines. Born in the area by the border with Somalia, he is a Bajuni Swahili and has lived up and down the Swahili coast. He has worked in restaurants and as the personal live-in chef for well-to-do Indians and Europeans. He can cook on a modern propane gas range using a batterie de cuisine and can make the same high-quality food when he needs to with only firewood and a battered *sufuria* pot if on safari (Swahili for “journey”), for example, on a sailing dhow trip to the northern islands of the Lamu Archipelago.

He is cooking with two friends and has no kitchen to speak of—not even a cutting board, only a knife, a kerosene cooker, one large spoon, and some *sufuria* pots. He peels the vegetables in a continuous single peel with the knife. One of the friends then holds the knife immobile, sharp side toward Sawiti, who grasps the meat and saws off pieces against the knife. Sawiti takes an empty tin can, puts peeled garlic and salt into it, and uses a stick to mash the garlic into paste. He mixes this with the meat and fries it with a piece of cooking fat from a small tin, adding the onion, *bizari*, and later the tomato paste. He adds water, the cut-up vegetables, and later the heavy *tui* and *dania* (coriander leaf). When the stew is done, he takes it off the

heat and covers it. There is no refrigerator, but this dish will be good to eat even the next morning if it is kept covered and no one eats from it with his hand.

It is nearly noon, time for the *adhuhuri* prayer, and Sawiti heads toward one of the many mosques in Lamu town. On the main street, Usita wa mui, a block behind the seafront, he passes and greets groups of men on benches talking, drinking from small cups, and smoking; children carrying and eating from trays of deep-fried foods their mothers have made for sale; and men eating meals at outdoor tables while meat is charcoal-grilled nearby. A group of women enter a restaurant to eat snacks and drink fruit juice while passersby purchase sweets from a shop to take home. There are no wheeled vehicles in Lamu; the streets—mostly so narrow that if one spreads one's arms out, one will touch the adjacent buildings—are left to pedestrians, donkeys, and handcarts.

Sawiti returns for a midday nap. Later, that evening, he cooks rice using the lighter second and third *tuis*. He turns the hot rice onto a *sinia*, a platter. The three men set out a mat on the floor and wash their hands with soap and water. They sit around the platter on the floor. Sawiti uses a large spoon to make a depression in the rice in front of each diner and ladles in some *mchuzi*. On top of the mound he places some peeled banana and whole chilies for those who want a bite now and again. The men say “bismillahi” and eat with their right hands, occasionally placing some choice piece of meat in front of their friend if they think they have gotten too many good pieces. From time to time Swahili replenishes the *mchuzi* from the pot.

After the meal they go across to a *hoteli*, a café or restaurant, to have a cup of chai (milk tea), or they stroll down the main street to a *tambuu* (betel-leaf) seller and sit on benches on the street side chewing *tambuu* while others smoke cigarettes and drink *kahawa tungu* (strong cardamom-scented coffee) and pass the news of the day.

Samaki wa Kupaka

A signature dish of the Swahili is *samaki wa kupaka* (also called *samaki paka*), fish coated with a paste of coconut cream and spices and usually cooked over charcoal. One could also bake or oven-broil it.

2–3 lb whole firm-fleshed fish like red snapper, scaled and cleaned, head on, tail and fins removed

Spice mix: ginger (a 2-in. piece), 1 head of garlic, and 2 hot chilies, all ground or mashed and chopped together (this is a common Swahili spice mixture—Swahili *sofrito*, so to speak—that one can make in quantity, storing the extra in a refrigerator)

About 2 c *tui mzito* (coconut cream; see note at end of recipe)

1 tbsp curry powder

½ c lemon juice or tamarind pulp or juice

1 tbsp turmeric

1 tsp chili powder, if desired

Slash one or two deep diagonal cuts in each side of the fish. Rub spice mix into the cuts and the inside cavity of the fish. Let sit for 30 minutes to an hour. Grill in a fish basket over a charcoal fire.

Meanwhile, combine *tui mzito* with curry powder, lemon juice or tamarind pulp or juice, turmeric, and chili powder, if using. Simmer together in a small saucepan until thick, about 10 minutes. When the fish is almost done, spoon coconut cream mixture onto the fish, letting it cook slowly into the flesh.

Serve with rice, chapati flatbreads, or *sima* (cornmeal porridge).

Tui mzito: If using canned coconut cream, do not shake the can; open and spoon off the creamy heavy part on top. If making your own, use only the first squeezings from each coconut. In either case you will need several cans or several coconuts.

Major Foodstuffs

Tui, coconut cream, is an important element in Swahili food culture. Largely because of the nature of its fats, it can transform what might otherwise be humdrum foods into dishes of depth, complexity, and richness. Tui deepens spices, blends flavors, and corrects asymmetries. Grated coconut is put inside a *kifumbu*, a woven bag, and water is added. The bag is wrung out over a bowl, which catches the fluid. One

can use cheesecloth, or a potato ricer also produces excellent tui. Typically one does three squeezings. Classic meal preparation uses the first, most fat-rich squeezing in the *mchuzi*, and the second and third squeezings to make *wali wa nazi* (coconut rice). Others cook the *mchuzi* with the second squeezing and only put the first in to finish the dish.

Mnazi, the coconut palm, occupies a special place in Swahili culture. Conversations about the coconut caused the great poet and cultural historian Ahmed Sheikh Nabhany to present to this writer *Umbuji wa Mnazi* (The grace of the coconut palm), his book of first-rank Swahili *mashairi* poems extolling the coconut palm. Swahilis say that if people own a certain number of coconut trees they can retire happy, because the trees will furnish them with everything they need to live. The palm fronds are the roofing material of thatched *makuti* roofs. The husks are excellent firewood; the sap can be tapped and in a day or so becomes palm wine, which in a few days becomes *siki*, palm wine vinegar. And from the ripe coconut one can get tui. Tui is the richest substance in traditional Swahili culture, and there are proverbs and sayings with tui as their central theme.

Indeed, the coconut is king. (*Maji ya Dafu*, “milk/juice (lit., fluid) of an unripe coconut,” is a popular drink in the plantation fields and in towns is sold from pushcarts in the street. The husk and shell are whittled away from the top of the nut with repeated upward strokes of a knife (or just lopped off with a *panga*, or machete) until a small hole in the inner husk reveals the milk. Sometimes a straw is provided, though usually the customer drinks straight from the coconut. If the customer also wants to eat the meat of the nut (and many do not), the seller opens the hole wider and cuts a *kijiko* (spoon) from a piece of husk, which either he or the buyer uses to scrape the meat free. With the curved part facing the center of the nut, the spoon is used as a wedge between the meat and the husk. The meat drops into the bottom of the nut and the spoon is turned over, curved side down, and used to convey the meat to the mouth. It is acceptable to sit at the curb on a street to consume a *dafu*.

Swahili cuisine is a coastal one, and finfish is an important foodstuff, as are shrimp, squid, octopus,

and cuttlefish. Swahilis do not typically eat crab or shellfish, nor lobster, though these are served to foreign guests (as opposed to, say, pork, which is never eaten, cooked, touched, or countenanced at all). The meat of cattle, chickens, and goats is widely used.

Fruits such as limes, pineapple, soursop, oranges, mangoes, tamarinds, and papayas are used widely, the papaya often for its meat-tenderizing properties. In Lamu for years the best *mishkaki*—meat on a skewer—was made by marinating the beef in a mixture of papaya and spices. The cattle were Somali animals that had been driven great distances, and yet the meat was tenderized by this mixture. Cabbage, onions, squash, and tomatoes are among the main vegetables.

Swahilis are Muslims, prohibited from drinking alcohol. Palms are tapped and the liquid is allowed to ferment, but it is proper to wait the few days until

it turns to vinegar (*siki*) to use it, even in cooking. Other fermented foods include *maziwa lala* (yogurt) and *ng'onda* (salted, dried, slightly fermented fish). Popular drinks, apart from Western-style, fizzy bottled sodas, are tea, coffee, and a cinnamon beverage. Sweetened tamarind and lime juice are popular as well.

Eating Out

Swahilis normally eat meals at home. Restaurants are typically for those who are traveling, on pilgrimage, or working far from where they live. Tourists sometimes puzzle over why Swahili restaurants do not attempt to serve food in the fashion it would be served in a home. The reason is apparently that the intent of a restaurant is not to try to recreate the privacy and intimacy of home.

A Tanzanian woman carries a basket on her head while shopping at a street market on Lamu Island. (Christopher Pillitz | Getty Images)

As recently as 1985 there were essentially no restaurants other than in a tourist resort set away from the town. This was a period when Zanzibar was just about to open up to tourism and other outsiders, yet there was as yet no real impetus for restaurants. There were many snack vendors in the waterfront gardens in the evening, since a stroll (*matembezi*) and a snack are a common form of entertainment.

Lamu is a different story, for tourists and many government workers and others from non-Swahili areas now live there. Thus, there are cafés and restaurants (*hoteli* in Swahili) catering to them and to Swahilis looking for *matembezi*. There are complex rules concerning eating in restaurants. In Swahili culture, it is only fit for small children to eat while walking on the street. There is even a saying warning against such behavior, *Kula kitu kitamu kinjianjia mtu atasibiwa na shetani* (One who eats delicious food while walking will be possessed by a devil). One cannot eat in the street, but men may eat outdoors if seated. Such outdoor seating is normally separated from the street, if only symbolically, by a fence.

Women do not sit at outside tables. If women eat at a restaurant—a fairly uncommon occurrence—it is often in an all-female group in an inner, enclosed room away from the other patrons. One sometimes sees exceptions in restaurants that cater to travelers. Indeed, travelers are an exception to many rules. A Swahili proverb says *Msafiri kafiri*, “A traveler is (lowered to the level of) an unbeliever”; that is, one must do all sorts of things in the course of traveling that one would not do normally: Eat unclean foods and break other taboos.

Special Occasions

Food behavior comes under intense scrutiny during the month of Ramadan when all devout Muslims fast during daylight hours. They are forbidden to eat food, chew the stimulant *miraa*, smoke cigarettes, drink water, or even swallow their saliva. The signal that the fast is over each day is the evening call to prayer. Women break the fast at home. Many men, however, break the fast in the street. In preparation for breaking the fast, table upon table of food, sweets, and savories are set up right in the street in Lamu

and Mombasa. Kahawa and *maji tamu* (fruit juice; literally, “sweet liquid”) are also set ready. Men buy their food and drink and in Lamu sit opposite it and wait for the call to prayer that will signal the end of the day. In Mombasa men sit or stand in groups on the street and pool the food they will break the fast with. After breaking the fast, the men then go quickly off to the mosque to pray, and then home to eat a full meal. Ramadan cooking is often special and festive, with many special dishes made during that time only. Eid al-Fitr ends Ramadan, and it is a public holiday in Kenya. Gifts are exchanged, new clothes are given as presents, and festive foods are abundant.

Diet and Health

Although many nutrition problems remain, Swahili have more access to protein than many other groups in the region given their routine eating of fish and other marine protein sources. This undoubtedly helps as well with ensuring enough iodine in the diet, a severe problem in some parts of East Africa.

Swaziland

Overview

The Kingdom of Swaziland, one of Africa's last remaining monarchies, lies landlocked between South Africa and Mozambique. Swaziland is a small country, both in population and in geographic size. It is divided into four different regions: Highveld, Middleveld, Lowveld, and Lubombo. The landscape is mostly mountainous with hills in lower-lying areas. The climate is temperate with more tropical temperatures in lower-lying areas in the Lowveld. The majority of the population lives in the Middleveld where rainfall is less frequent than in the mountains. Its largest city and capital is Mbabane, located in the northwestern part of the country, in the Highveld. The food and diet of the Swazi traditionally were and still are affected greatly by seasonality.

Swaziland gained its independence from Great Britain in 1968 with its precolonial political system still relatively intact. The population of Swaziland is estimated around 1.2 million inhabitants. The population has, however, grown slowly due to the prevalence of HIV/AIDS, with 26 percent of its population being infected, the highest rate in the world. Its two official languages are SiSwati and English. Sixty-nine percent of the population is Christian, and the remainder practices traditional indigenous faiths. Religion has had an effect on food culture and eating. Swaziland's economy is made up mostly of subsistence farming and mining.

Food Culture Snapshot

Ndoro and Sikose live outside of Manzini on Swazi Nation Land. They have four children, all of whom

attend a nearby school. With rising food prices, Ndoro is finding it hard to afford basic foods, especially since losing his job in the mining sector in South Africa last year. To help pay the children's school fees, Ndoro has planted some vegetables on his small plot of land. The rain of the previous summer helped them grow, whereas the previous year had been very dry and large amounts of the maize crops were lost. What vegetables he does not use to feed his family, he sells. In his garden he grows green leafy vegetables and pumpkins. Ndoro owns no livestock and therefore must buy his milk and meat from the grocery store. Every day, Sikose buys bread, and twice a week they buy milk because they don't have refrigeration. Meat is bought only for special occasions or when it can be afforded. Once a month and depending on the family's financial situation, Sikose will buy canned items, such as tinned tuna. The family doesn't eat much fruit, but last year Ndoro planted a banana tree for the family's consumption and also for income.

Major Foodstuffs

Traditionally, sorghum and maize were the main staples in the Swazi diet. Indigenous leafy greens and legumes accompanied the grains. While the base of the Swazi diet remains relatively the same, Western foods have been added due to availability and/or scarcity of indigenous plants and a shift from a hunting and gathering lifestyle to food purchasing. Western foods that have made their way into the Swazi diet as main staples are bread, rice, cabbage, tomatoes, and onions. Vegetables, such as carrots, spinach, beetroot, potatoes, peppers, chilies, okra,

An unidentified girl buys dried fish from a trader before a traditional Reed dance ceremony in Ludzidzini, Swaziland, 2009. About 80,000 virgins from all over the country attended this yearly event, which goes on for a week and which is the biggest in Swazi culture. (Getty Images)

pumpkins, and gourds, are also consumed. Fruit is limited due mainly to its price and availability. Some families may plant their own fruit trees, such as orange, guava, banana, and apple. Wild fruits indigenous to Swaziland have decreased in availability but can still be found. The most common are the monkey orange (*Strychnos cocculoides*), quinine berry (*Petalostigma pubescens*), and marula fruit (*Sclerocarya birrea*), a tart round fruit with a light yellow skin. The marula fruit (sometimes spelled merula) is fermented to make the traditional strong Swazi beer.

Meat, especially beef, is not eaten on a regular basis but generally reserved for special celebrations and ceremonies. Rural families keep their own livestock including cattle, goats, and chickens. Chicken is the most frequently consumed. Traditionally, game and birds would have been hunted; however, these

species have now decreased in numbers and are hunted less frequently. Insects, such as caterpillars, termites, and locusts, were traditional delicacies. Newer generations are aware of their edibility but do not have a taste for them. Fish has become a regular part of the Swazi diet, whereas traditionally it was not consumed due to an old belief that it was linked to snakes. Over the past 30 years, with the increasing availability of canned fish, it has become a popular food because it does not need refrigeration, an important consideration in rural areas.

Cow milk is consumed regularly. Fresh milk is available; however, sour milk called *emasi* is preferred. Emasi was traditionally ripened in a gourd. A hole at the bottom was plugged with a root. When the milk was ripe, the whey was drained from the hole in the base.

Cooking

Boiling, stewing, frying, and roasting are the most common cooking methods. Baking soda is used when boiling leafy greens to tenderize them, especially when the leaves are tough. The ash of aloe was traditionally used for the same effect. Legumes are boiled as well, with onions and tomatoes added as flavorings. Beans may be cooked with soup bones for added flavor. Meat is boiled, stewed, roasted, or fried. Fresh fish, caught in reservoirs near homes in rural areas, is generally fried, and tinned fish is cooked with fried onions and tomatoes.

The use of cooking fats, specifically oil, has aided in advancing cooking techniques among the Swazi people. This has allowed for more frying of foods, whereas before most items were stewed or boiled. Cooking equipment has also facilitated meal preparation. Prior to stoves and running water, firewood and water had to be brought to the kitchen, often from very long distances.

The traditional Swazi kitchen would have been inside a kitchen hut, called the *lidladla*. Cooking also took place outside over an open fire when the weather permitted. Inside the *lidladla*, a depression was created in the center of the hut floor, and a piece of iron was used to line the hearth. Iron rods were placed together to form a tripod to hold the pot over the flames. Today, food is prepared in a kitchen over either a coal stove or a portable camping-type stove. An open fire is also still used on occasion to prepare items like tea or porridge. To reduce the time spent preparing meals, as well as to save on fuel, the majority of meals are prepared once a day and then reheated as needed. Refrigeration is common in urban areas, but in rural areas not everyone has access to it. Cooking utensils were traditionally carved out of wood or gourds. Today, the use of aluminum, iron, and enamel pots and pans is common, as well as china or ceramic plates.

Typical Meals

Traditionally two meals were eaten during the day, one in the morning and one in the evening. The morning meal was informal and eaten midmorning.

Different age-groups and genders ate at different times. The evening meal was shared together at sunset and eaten in the *indlunkula*, the great hut.

Today, however, meals are eaten at unspecific times due to busy schedules. When possible, families eat together. Age and gender no longer specify meal-times. Three meals are common today. Breakfast is usually eaten between eight and nine in the morning once the children have left for school. Lunch is eaten in the midafternoon around two once the children have returned from school, and supper is between six and seven. The main meal of the day is lunch, at which time food for the evening will be prepared. This helps save on food and water. Snacking between meals is not common. If something is consumed it is usually a soda or cordial. When the consumption of two meals was common, snacking was prevalent. *Jugo* beans (Bambara groundnut) would be boiled and carried to the fields as well as sugarcane, wild indigenous fruits, roasted groundnuts (peanuts), and *amahewu*, a fermented maize-meal beverage.

A typical breakfast consists of soft sour porridge with sugar, tea or coffee with creamer, and bread. Bread is spread with peanut butter or jam and sometimes margarine. Bread is replaced on occasion by scones or *vetkoek*, a traditional Afrikaner pastry that is deep-fried and filled with mincemeat or left plain and spread with honey or jam. Eggs are eaten when available but traditionally were restricted to women after the age of puberty, as it was believed that they would make them desire men.

Lunch is a stiff maize-meal porridge that is replaced at times by rice, mealie rice, or *phutus*, a maize meal cooked in such a way that it takes on the consistency of breadcrumbs. *Phutus* is served with fresh or sour milk (*emasi*) and sometimes relish. Relish in this sense refers to a side dish of leafy greens, meat, fish, eggs, or legumes. Maize is eaten daily. Dinner is leftovers from lunch. The maize-meal porridge is reheated and served with a different relish than what was served at lunch. A lighter supper without porridge would include a cup of tea with bread or scones. Tea is not part of the traditional Swazi diet. Its prevalence in today's diet is from British influence during the occupation.

The Sunday lunch is considered the culinary highlight of the week. Nontraditional foods, especially Western foods, are served to mark the special occasion. The Sunday lunch includes a fried, stewed, or roasted chicken served with rice and fresh and cooked salads, as well as pumpkin, mashed potatoes, or cabbage.

Meals are usually eaten with the right hand only, and utensils are used for softer or more liquid dishes that would be difficult to eat with the hands. The meal is an important way to express gratitude and hospitality as well as status. Meals are also used to perform rituals and mark certain celebrations. Children are taught from an early age to share their food with others. Food is often brought as a gift when visiting or given to guests upon their departure for the trip home. Food is always served to guests, and it is considered impolite to decline food when offered. It is also considered impolite not to serve food to a guest. Important guests are served meals similar to those served on Sunday. It is an important mark of status and shows respect for the distinguished guest. This meal includes rice, chicken, cooked and fresh salads, and a dessert that consists of jelly, canned fruit, and custard. Traditionally, men would be served in their own bowl, whereas the hostess and female guests would have to share the same dish.

The most prestigious foods in Swazi culture are beef and beer. Cattle are the main symbol of the accumulation of wealth. Green vegetables are regarded as women's food and suitable to serve to guests. Milk is regarded as a health food and used as a purifying medicine.

Eating Out

Eating out is reserved for the wealthy and tourists. More than half the population of Swaziland lives on less than \$2.00 U.S. a day. However, a restaurant culture does still exist. Most restaurants are located in the town or on the outskirts of the towns. Mbabane, the capital city, Manzini, Lobamba, and Big Bend are among the places offering the widest selection of restaurants. While it is possible to eat local or traditional Swazi fare at some of these establishments, most restaurants boast French or Portuguese-inspired dishes.

Special Occasions

Food is also used to mark celebrations, for example, religious events, harvest, birthdays, and weddings. Foods associated with celebrations are often regarded highly. This is because these foods are often scarce, expensive, and time-consuming to prepare and are reserved for special occasions. Meat is an example of a food usually reserved for celebrations. An entire animal will be slaughtered and then consumed with all of the guests. For example, during *lobola*, the ceremony that marks the handing over of the bride's dowry, meat is consumed in large quantities along with strong beer. Cattle are associated with marriage and goats with birth. An exception to having to feed guests was traditionally during a funeral, when the family is considered to be too bereaved to have to cook and relatives and friends will bring food. Today, however, this is less widely practiced, and the family of the deceased will usually roast an entire animal and serve it with scones and bread.

The biggest and most important festivals are the *incwala* and the *umhlanga*. The *incwala* festival is a six-day celebration at the end of December or the beginning of January depending on the crops. It marks the beginning of the harvest. The consumption of the new crops is forbidden until the ceremony is performed. On the fourth day of the six-day festival the king, who has been in seclusion up until this point during the festival, must first taste the new crops before anyone else. On the final day a huge feast of cow meat and vegetables from the new harvest is eaten. The *umhlanga*, or the reed dance, is held in August and lasts five days. Unmarried girls gather to pay homage to the Queen Mother. These occasions are marked with the slaughter of a beast.

Impala (African Antelope)

Serves 12

1 impala leg (venison may be substituted)

4 cloves garlic, sliced thinly

1 c green olives, halved

Cooking oil

3 large potatoes, diced
 3 large carrots, diced
 4 onions, diced
 1 c beef broth
 10 dried prunes, pitted
 Salt and pepper to taste

Directions

1. Rinse the meat and pat dry.
2. Remove the lower shank bone and set leg aside. Place the lower shank bone into a pot, and add water to cover. Set to simmer until reduced by half.
3. With a sharp paring knife cut slits throughout the leg. Into the slits place the garlic and olives. Season the leg with salt and pepper.
4. Place the leg into a roasting pan lightly coated with oil and cook at 325°F for 25 minutes per pound.
5. When done, remove the leg from the pan and set aside to rest.
6. Meanwhile, sauté the vegetables in cooking oil until they are soft and translucent but not browned. Add the prunes and cook until soft. Strain and set the vegetables aside.
7. Add the broth to the juices remaining in the pan and reduce by half. To serve, place the leg on a dish with the vegetables and prunes surrounding it, and drizzle the gravy over the top.

Diet and Health

Food restrictions in the Swazi diet are adhered to but not as commonly as before. Within the culture there is a strong awareness of the relationship between food, health, and body fat. Weight is a sign of prosperity. An underweight or thin person is a sign of poor diet. Milk is seen as an important beverage. It is drunk daily and seen as purifying during ritual occasions. While women are allowed to drink milk throughout most times in their lives, they are restricted from, or have limited contact with, the cows themselves. Depending on the woman's stage of life, contact between her and cattle is believed to affect the breeding and milk production of the cow.

Food restrictions were common. For example, adults who were still able to bear children were not to eat the meat of an aborted animal because it was believed that if they became pregnant they would have a miscarriage. Only the elderly were allowed to eat liver because, if younger people consumed it, it was thought that they would become forgetful. Men and older adults were not to eat soft porridge because it would cause them to become weak and lazy. Sugarcane and groundnuts were not to be consumed by pregnant women because of the belief that these would affect the baby once it was born. Sugarcane is said to cause a mucus-covered baby once it is born. Groundnuts are thought to cause the mother to give birth to a dirty baby. Some of the older generations still abide by these rules; however, the younger generations do not follow many food restrictions, as they cannot remember them.

Since the new millennium, food prices have been on the rise, making it difficult for the average Swazi family, especially when taking into account the prevalence of HIV/AIDS in the society. Many of those infected with the disease require well-balanced diets to facilitate the effectiveness of their antiretroviral treatments. With the increase in food prices it is difficult for these families to obtain the proper foodstuffs.

Uganda

Overview

Uganda is a country in equatorial East Africa measuring 241,000 square miles, a little smaller than the state of Oregon. Its population is about 32.3 million. Although Uganda is completely landlocked, a great proportion of the land lies adjacent to fresh water. There are many lakes such as Victoria, Kyoga, and Albert as well as the Nile River, and thus the land is extremely fertile in many places. This was one of the reasons the British designated the area a protectorate in the 19th century; their legacy is still apparent, in some food preferences if not in people of European descent, since white settlers were not permitted. Indians and others from throughout the British Empire were allowed to emigrate and have left a permanent culinary legacy. The population today on the whole remains relatively impoverished, and a large proportion of the wealth remains in the hands of a minority. Uganda is also a very young country, with a median age of 15 years (half the population is under 14 years old) and a life expectancy of 53 years. This is largely owing to widespread mortality associated with HIV.

The people of Uganda fall into dozens of separate ethnic groups, none of which constitutes a majority. The most powerful, centered around the largest city of Kampala, have historically been the Baganda. Their kingdom (officially recognized by the national government) is called Buganda, and an individual of this group is called a *muganda*. The Baganda comprise 17 percent of the total population. Other groups include the Banyakole with 9.5 percent, the Basoga with 8.4 percent, the Bakiga with 6.9 percent, and

the Iteso with 6.4 percent, plus many others. As a legacy of colonial rule, English is an official language, though Bantu languages are widely spoken as well as Luo among the northern Nilotic peoples and Swahili as a kind of lingua franca in the north. Uganda has been an independent country since 1962 and has suffered great political vicissitudes, most notably under Idi Amin, who ruled for eight disastrous years in the 1970s. Its economy is growing rapidly today, however, despite the recent contraction of the economy globally. It is nonetheless still among the poorest nations on earth.

Roughly 80 percent of Ugandans work in agriculture, with coffee the largest and most important export. Tea, cotton, tobacco, and refined sugar are other important agricultural and industrial products. Many people still practice subsistence agriculture, though in larger cities and especially the cosmopolitan capital Kampala a large segment of the population works in public service and the service industries.

Most Ugandans are Christian, with 42 percent Catholics, 36 percent Protestants (mostly Anglican), 12 percent Muslims, and 10 percent other or none. Many indigenous practices have been melded with Christianity, though few still fully practice the traditional religions. There is also a tiny community of Jews, or Abayudaya (people of Judah), who live around Mbale.

Food Culture Snapshot

Madiina Nakazzi is the mother of six children and works at Makerere University in Kampala. The eldest

A family of coffee farmers in Uganda begin to husk their coffee beans. (Brian Longmore | Dreamstime.com)

of her children, Annette Nanziri Clark, is married to an American and lives in Atlanta. The two oldest boys, Roger Serunyigo and Douglas, live and work in Kampala but no longer with their mother. The three youngest children, Susan Nansamba, Enock Kakeeto, and Rose Nankya, still live at home. Rose is in her second year studying economics at Makerere University. The children have different fathers, and extended families are quite common, though monogamy is a growing trend.

Madiina is well known for her excellent cooking, of which her children are especially proud. They enjoy eating together when they can, though the pressures of work often mean the entire family gets together only on special occasions, especially birthdays. The older boys, who work in offices, often resort to street food or fast-food joints such as Zanzi, which specializes in pork and serves beer. But everyone appreciates the opportunity to eat traditional meals cooked at home by Madiina.

Major Foodstuffs

A great variety of starch staples are available in Uganda, though these differ according to ethnic group and also factors such as soil fertility, which determines which staple will grow well in a given area. People are largely identified by which staple they prefer, though several may be commonly served and most people enjoy a wide range of starchy foods.

Matooke is the starch staple of the Baganda. It is made from a green banana (considered overripe if yellow) not dissimilar to a green plantain. In the Luganda language the word *mmere* means simply “food,” but it also refers universally to matooke. There is a strict procedure governing its preparation. The bananas are peeled and soaked. They are then tied into packages made of banana leaves, placed in a pot, and steamed until soft. The bundle is then squeezed and massaged until mashed and smooth. Matooke is often served with a sauce that is steamed in the same pot. This sauce may consist of ground peanuts or smoked catfish (*mukene*) or silverfish (*nkejje*). A mushroom sauce (*butikko*) is also popular. It is said that the flavor of matooke is best when cooked over a charcoal fire rather than on gas or electric burners, which don’t lend a subtle smoky aroma to the finished dish. *Katogo* is another dish similar to matooke, but the bananas are left whole and unmashed.

Many of the now-popular staples were introduced to Africa from the Americas. One is called *posho*, which is made from white corn or maize flour. It is the dominant staple of the Samya tribe from the Mbale District in eastern Uganda, and it is usually eaten with fish, either fried, roasted, or steamed, and with groundnut sauce. It is similar to the *ugali* eaten in Kenya and throughout East Africa. It is essentially a thick corn-flour mush eaten by pinching off a round ball in the hand, creating a depression on one side to serve as a scoop, and then dipping it into sauces and stews. The whole seasoned ball is then placed in the mouth and eaten. In West Africa a similar dish is known as *foufou*.

Another import from the Americas is cassava. Similar to *posho*, the root is cooked and mashed into

A young African man is transporting a load of bananas on his bicycle on a dirt road. The meal called *matooke*, made of green cooking bananas, is the most important food for the rural people in Uganda, Rwanda, Burundi, and Congo. (iStockPhoto)

a thick porridge. This starch has largely displaced the native yam, a huge starchy white tuber not to be confused with the sweet potato, although the latter has also been brought from the Americas. Equally important is the potato, or Irish potato as it's called in Uganda, though it, too, originated in the Andes. It is eaten especially by the Bakiga people, though historically they depended more on local greens, gourds, and other vegetables.

The most important of native African grains historically are sorghum and millet. Sorghum looks like corn when growing, but instead of ears it has small round seeds at the top. Millet is a similar grain, familiar in the West as birdseed; it can be very tasty. These are eaten especially by the Banyankole ethnic group. *Kalo* is a thick mush made from millet flour

that is eaten much like posho, except that it is dark and heavy. Nonetheless, it is very nutritious and can keep a person energized all day. In the north the staples among the Alur and Lugbara are wheat flour and *simsim* flour, which is made from ground sesame seeds. In the north especially, *simsim* is cooked with spinach.

Groundnuts, or simply *g-nut*, are perhaps the most important flavoring in Ugandan sauces. The native African bambara groundnut has been largely replaced by the New World peanut, but they are similar and the name *groundnut* remains for both species. It is used in soups or in a sauce called *binyebwa*, which is served with *matooke*.

Ugandans eat a wide variety of meats and especially love beef, chicken, and goat, though there are

many pork dishes as well. The following recipe is probably the most famous of Ugandan dishes; it can be made with any meat.

Luwombo

Serves 4

Ingredients

- 1 chicken (can also be made with beef or goat)
- 2 c roasted peanuts
- 2 yellow onions
- 1 tbsp grated ginger
- 4 tomatoes
- Salt and pepper to taste
- Banana leaves (available frozen)

Cut up a chicken (breast, thighs, and legs) into large bite-sized pieces without bones. Season with salt and pepper, and grill chicken until it begins to brown but is not cooked through. Next, crush the peanuts into a fine powder with a mortar and pestle. Chop the onion and sauté in oil until golden. Add the ginger. Dice the tomatoes and add to the onions. Cook until the liquid reduces, and then add the crushed peanuts and finish cooking the sauce. Add salt and pepper to taste. Place a few pieces of chicken, enough for a whole serving, with sauce in the center of a banana leaf. Draw in the edges, completely enclosing the ingredients, and tie at the top with a strand of banana leaf. Make four such packages. Place a few banana leaves at the bottom of a stockpot and arrange the bundles on top. Add a little water to the pot and steam for 1 hour or longer, checking to make sure the water hasn't evaporated. It is best cooked over a charcoal fire. When done, unwrap the bundles and serve one opened leaf package per plate. Serve with matooke—mashed steamed green banana. Plantains will work, but smaller green bananas from Southeast Asia are a better option. Men are advised to consider marrying only women who can properly prepare luwombo.

There are also a number of unique dishes, for example, cow's hooves, which are called *mulokoni* or *kigele*, often served with cassava. This is a popular meal late at night or at drinking parties. Probably the most unique food is green grasshoppers (katydids), which appear in the rainy season and are called *nseene*. The name is probably onomatopoeic in origin based on the sound they make. They are caught in huge funnels, the legs and wings are removed, and they are fried in oil, salted, and served as a snack. In many rural places collecting *nseene* dramatically enhances the household income.

Beans and peas are also a very important source of protein; the black-eyed pea and various relatives in the *Vigna* genus are native to Africa. Today, many varieties of beans and peas are grown and commonly included in stews and sauces. They can also be ground into a batter and fried. Fish are also very important to Ugandans who live near lakes and rivers, and smoked fish is eaten everywhere in cooked stews. Fresh fish, especially roast tilapia or other fish that is deep-fried or boiled with sauce, is a favorite at the beaches along Lake Victoria, such as at Entebbe.

A remarkably wide variety of greens provide essential vitamins in the Ugandan diet. There is *nakati*, a kind of spinach, either green or red, as well as *dodo* and dozens of other wild leafy greens. There is also a dish comparable to the Kenyan *sukuma wiki*, which is greens cooked down to a mushy and slightly gelatinous consistency that is highly appreciated. It is much like the consistency of well-cooked okra, another native African plant, which is also popular. The distant relatives of such dishes can still be found in the collard greens and gumbo of the U.S. south. There is also a small bitter eggplant called *ntula* as well as cucumbers, avocados (served in a salad reminiscent of guacamole), and many other native vegetables, which once formed the bulk of the diet. Among fruits Ugandans especially enjoy pineapple, which is grown extensively, as well as watermelons, pawpaws, mangoes, apples, jackfruit, and passion fruit. The juice of the latter is a popular accompaniment to meals.

The Banyankole also drink a lot of milk. Ironically, tea is the preferred local drink, a colonial legacy, despite the huge coffee production. Most

Ugandan coffee is exported and can even be bought in high-end coffee shops in the United States. Ugandans drink a lot of soda and also brew beer, most notably Nile Beer from Jinja, which is now owned by SABMiller. There is also a fiery liquor distilled from bananas called Uganda Waragi.

Typical Meals

Ugandans eat three meals a day: breakfast, lunch, and dinner. Many people eat a very small breakfast between 7:30 and 11 A.M. that consists of tea, with or without milk, and bread or fried cassava sticks or perhaps the Indian flatbread chapati—the legacy of a once-large Indian community who were exiled in the 1970s but have since been allowed to return. *Mandazi* is a kind of donut strip also eaten for breakfast. Some people, especially workers who may not have a long lunch break, eat a larger breakfast called *katogo*, which is matooke mixed with beef or beef chitterlings or offal. It is a heavy dish and thus can keep a person satiated until dinnertime.

Lunch is a relatively late meal, eaten between 1 and 4 P.M., though in rural villages usually later in the afternoon since they will have spent much of the day tending gardens. City dwellers may go home for a lunch break, though increasingly they resort to fast-food and junk-food outlets that sell fried chicken, fries (called chips), and *chaps* (roasted ground meat in a kind of patty), or chapati and rice *pilawo* (another Indian dish, a kind of pilaf). Office employees without long breaks often resort to quick junk food.

Dinner is eaten very late, between 8 and 11 P.M., especially for those who work late and have no one at home who can cook. The cooking at home is almost always done by women, either the mother of the family or, if the family is affluent, a housemaid, and usually over a charcoal stove. Increasingly people do buy takeout from restaurants, which may sell rice, French fries or potatoes, chaps, beef, liver, kebabs, or sausages, which are all quickly cooked using gas stoves.

Eating Out

Chinese, Indian, and even Korean restaurants are popular for parties and special occasions. Often

Ugandan families will prepare food at home and then transport it to weddings, birthday parties, and even sporting venues. There are also many restaurants specializing in pork products, like Zanzi, Outlook, Nicodemus, Yakobo's, and Rise and Shine, to name a few. Kebab stands were introduced by Parsis—Zoroastrians from India who came under British colonial rule.

There is also a flourishing street-food scene. One can purchase sausages, a chapati rolled around eggs and sometimes tomatoes called a *rolex*, or *kikomando*, a chapati with beans. There is also a version of the Indian samosa, or *sambusa*, which is a delicate triangular pastry filled with beans and spices. Roasted bananas called *gonja* are another popular street food as well as roasted chicken and the like. Street vendors usually come in from poorer suburbs into the center of town with their equipment and ingredients. Ironically, it is often the more affluent families and professionals who resort to street food and junk food, while traditional dishes are more common among the poorer classes, mostly because they are cheaper. There are also a number of Ugandan snack foods, such as nsenene, as well as fried sweet dough strips called mandazi and roasted corn, roasted peanuts, and olives.

Special Occasions

Among Christians special attention is given to holidays like Christmas and Easter, during which huge quantities of food are cooked for family gatherings, including matooke, beef, vegetables, chicken, beans, posho, and rice. Muslims celebrate their holidays with special foods such as a pilawo of fried rice and beef. They, of course, abstain from pork as do other Muslims. There are also secular celebrations such as the giving away of the bride, rites for the deceased, anniversaries, and birthdays. In the cities there are also office parties, which mostly include snack foods, fries and sausages, liver, and so forth.

Diet and Health

While many Ugandan adults over the age of 45 take health into consideration and have given up

meat and fried foods, and instead resort to boiled food and low-sodium dishes, the young continue to eat both traditional foods and a wide array of Western junk foods high in fat, sodium, and refined sugar.

Zimbabwe

Overview

Despite having once been described as Africa's breadbasket, Zimbabwe, formerly known as Rhodesia, is now a country on the edge of starvation. While drought is part of the history of famine, the current situation is more the result of politics. Colonial exploitation by the British created an unequal farming system whereby the best and most productive lands were occupied by a minority of white farmers. These farmers, with the help of male, black farmworkers, were able to produce crops such as wheat, coffee, tea, and tobacco for export. The less productive land was largely subsistence farmed by women, which formed the backbone of Zimbabwean provisioning among the lower classes in both urban and rural areas, as rural women would trade their surplus in the cities. Recent land-reform efforts by President Mugabe, which reallocated plantations owned by white farmers to black Zimbabweans, did not redress the inequalities but instead had the effect of rendering much of this once-productive land unusable. This is largely because reallocation did not also come with training in large-scale agricultural practices. At the same time, efforts to "clean up" urban areas (operation Murambatsvina) resulted in the obliteration of the markets where women once sold their surpluses to poorer city dwellers and left millions, mainly women and children, homeless. Just less than 40 percent of the total population lives in the urban areas. Harare and Bulawayo are the largest cities.

Located in the southeastern part of Africa, Zimbabwe is a landlocked country whose borders are primarily formed by the Limpopo and Zambezi riv-

ers. The climate is tropical, although this is moderated in much of the country by the altitude afforded to it by mountains that run the length of the country. From May to September the country's climate is cold and dry, which is usually offset by a rainy period between November and March. The most fertile areas are in the north of the country, leaving only about 8 percent of the whole area arable. In addition to the loss of productive agriculture in the country, the Zimbabwe Conservation Task Force estimates that 60 percent of Zimbabwe's wildlife has died since 2000. This is largely the result of poaching, as families are desperate for food after the collapse of farming caused by land reform.

Unlike many other African countries, Zimbabwe is relatively homogeneous in its ethnic and religious makeup. The largest ethnic group are Shona (77%), followed by the Ndebele, who comprise 18 percent of the population. Whites, mostly of British descent, are a very small minority at just under 1 percent of the total population. The vast majority of people (85%) consider themselves Christian, though like many who live in locations where Christianity was introduced by missionaries, Christianity is often practiced alongside or modified by more traditional forms of religion, which place particular emphasis on ancestor worship. Instead of religion or ethnicity, it is class that divides this country. The colonial expansion of the British South Africa Company introduced a class system that has profoundly influenced foodways. Those with greater incomes eat dishes that are more akin to what might be found in any British household. A considerably larger proportion of the remainder are lucky if they eat more than

one meal of *sadza*, a ground-corn dish that has a texture similar to mashed potatoes, per day. Food insecurity is particularly high for those living in the southern parts of the country.

The recent past has been particularly difficult for the vast majority of Zimbabweans. Even those with professional employment struggled to feed themselves and their families as inflation reached unimaginable proportions. In 2008, the only legal currency was the Zimbabwean dollar, and at one point inflation was so severe that prices changed by the hour. Not only could people not afford to buy anything, but there was also very little to purchase. There were reports of people standing in line for hours to buy cooking oil or a loaf of bread. As a result people smuggled basic goods such as vegetable oil, cornmeal, and soap from South Africa. The Zimbabwean dollar is still very weak but has stabilized since changes in currency laws now provide for wages in

A child begins preparation for a meal in Zimbabwe, 2008. (GRANT NEUENBURG | Reuters | Corbis)

U.S. dollars and it is no longer illegal to sell and buy goods in other currencies.

🍴 Food Culture Snapshot

Mapfumo is trained as a teacher. He used to live in Harare with his wife, Saki, and his three children. He now lives in Francistown, Botswana, just over the Zimbabwean border, working as a mechanic. Saki and his two youngest children, Fari (age 7) and Kati (age 12), still live in Harare. His other daughter, Rita (age 16), lives in the United Kingdom with her aunt, Saki's sister. Mapfumo makes the long journey back to the family home in Zimbabwe every weekend to be with his family. He moved to Botswana in 2005, when things in Zimbabwe started to become very bad, though not as bad as they would later become. He stopped teaching because the Zimbabwean government was not paying teachers regularly or enough to buy basic goods. One day he went to collect his pay packet hoping to be able to buy a hamburger for lunch. At that time the hamburger was \$50,000 (Zim), or about \$3 (U.S.). His total pay was only \$25,000 (Zim) for a month's work teaching. He started going to Botswana to buy food and other goods, like soap, which he then brought back for Saki and the children. He and Saki also traded currency, but this became precarious when the government cracked down on market traders and the black market currency traders in 2005. He then decided to find work with some friends in Botswana, working as a garage assistant and tutoring privately. Until very recently he still brought back goods for his family from over the border, but now he can just bring money, as the shops are starting to sell goods again and it is legal to do business in currencies other than the Zimbabwean dollar.

Daily life for Saki is improving after the last hard years, though she has been forced to change the way she makes her livelihood. Now that it is possible to purchase goods in the stores again, and do so legally with the U.S. dollar, the Botswanan pula, and the South African rand, she is facing competition from legal businesses for the greens and vegetables she sells in the market. But at least she has a stall. Many lost their stalls when the government came through the suburbs in 2005 and removed what were identified as illegal buildings. This was not just stalls but also extensions

people had built onto their homes and garden sheds that were rented out to poorer families who could not afford their own home. Saki counts herself as lucky. She has a husband who is faithful and has not given her AIDS. He also gives her money. She is able to feed her family something more than bread each day. She can also send her two children to school. Her sister in the United Kingdom also sends her money regularly, though when it is transferred she spends the entire day waiting in line at the bank to get it out as no one trusts the banks. She misses Rita very much and knows she does not like living in the United Kingdom, but sending her to live with her aunt was the only way she could get formal schooling while the teachers were on strike for so long.

Saki starts the day at 5 A.M. She gets the children up and ready for school and gives them some sadza (ground corn mealies) left over from the previous evening. Sometimes there are leftover sweet potatoes. When she has milk, she boils some of this to pour over the sadza. It is best with a bit of sugar as well, but that is a luxury, as is the cup of tea that she likes in the morning. Mapfumo sometimes brings her red bush tea from Botswana, but she prefers the English-style black tea with milk and sugar that she used to have when she was younger. By six in the morning, she must be out of the house and waiting by the road for the farmer who brings her produce to sell in the market, so she is gone before the children start school. They leave together, and Kati drops Fari off at his school before heading on to her own. When the children finish school they will come to help Saki at the market. They tie bundles of amaranth leaves together to sell for the stew that goes with sadza. Sometimes they help grind peanuts into peanut butter. Kati stays with her mother now, although she used to sell roasted nuts at the bus station until a group of boys tried to take her away. A neighbor was also there and helped her get away from the boys. In the evening the family will have sadza with relish made from peanut butter and greens, which is better than a year ago, when all they would have was bread.

Saki is saving money to take a cooking class so she can work as a cook in a wealthy house. While she is a good Zimbabwean cook and her sadza has no lumps and is always the right consistency, wealthy people want cooks who can prepare English food. Saki doesn't understand why anyone would want to eat like that,

as traditional food, when there is enough, is healthy, fills one up, and is not difficult to make once you get the sadza right. She even read that a chef at one of the hotels won a competition for all of Africa with his traditionally inspired dish. This is not what the wealthy want, but working for one of them would mean more money. Saki dreams that, one day, her husband and all her children will be with her again in Zimbabwe. Mapfumo will be able to work as a teacher, and her children will have good jobs.

Major Foodstuffs

As in many other African countries, the traditional Zimbabwean meal consists of a starch and some form of stew or meat. The starch is usually sadza, which is made by mixing mealies (imported white corn) or mealie-meal with water to form a thick paste. Other grains such as millet are also used. The paste is cooked for a while, and then either more cornmeal is added to thicken it, or the water is squeezed out. What is left is a very thick, grayish porridge. When eaten, a chunk of sadza is taken and rolled into a ball. This ball is then dipped into the stew (referred to as relish). This relish might be some sort of leafy green, like spinach, amaranth, or collard greens, with squash and beans or nuts. Peanuts are very commonly made into a stew.

When Zimbabwe was more prosperous, meat (*nyama*) would be stewed with the vegetables and beans or grilled. Beef (*nyama ye mombe*) and goat (*nyama ye mbudzi*) were common, and to a lesser extent chicken (*nyama ye huku*), but also game animals such as springbok, kudu, impala (all types of venison), crocodile, and warthog. Freshwater fish, such as catfish, bass, and bream, are also available to those who can afford them or who live near a river or lake where they may be caught, something unavailable to most urban dwellers.

Dovi (Peanut Butter Stew)

Serves 6

Oil or butter for frying

2 medium onions, chopped finely

Garlic, crushed

1 tsp salt
 ½ tsp pepper
 ½ tsp cayenne pepper
 2 green peppers, chopped
 Chicken pieces (optional)
 3–4 tomatoes
 2 c water
 6 tbsp peanut butter
 1 large bag spinach or some other green leafy vegetable or okra

In a large heavy-bottomed pot, brown the onions over medium heat in the oil or butter. When the onions are just brown, add the garlic, salt, pepper, and cayenne, and cook for a further 3–4 minutes, stirring. Add the chopped peppers and chicken, if using. Cook for about 5 minutes or until the chicken is browned. Add the tomatoes and the water, and simmer for 10 minutes. Add the peanut butter, and continue to simmer for 5 minutes. Add the spinach or other greens, and cook briefly until the leaves are limp and tender. Serve immediately.

Because the seasons are distinctly divided, some foods are available only at certain times of the year, whereas others must be preserved. In rural areas in the summer mopane worms (flying termites) are caught and either eaten raw or fried (*modoro*) or made into a relish that includes baobab fruit (which looks like a coconut and has a sour pithy white interior), cassava, and nuts. Food is also preserved for the dry season in winter by drying it in the sun. *Biltong* (jerky made of seasoned meat that is hung to dry) and *kapanta* (dried fish) are two examples. Vegetables are also dried to be used in the winter dry season. *Nyemba* (a type of bean) leaves, pumpkin leaves, and tomatoes are all dried.

Cornmeal is sometimes made into a drink, called *whawha*, that is fermented and like beer. This and Chibuku beer, made from sorghum, are drunk by the poor, whereas those with more money may drink Lion or Castle brand beers. Lion beer is the stronger of the two. For those who do not drink alcohol, Rock Shandy (bitters, lemonade, and soda) or

Malawi Shandy (ginger beer and bitters) are popular choices.

Cooking

The traditional way to cook is using a series of three cooking pots. The sadza pot is made of clay or cast iron and is balanced on a tripod of three stones set in an open fire, although those in urban places have gas or paraffin cookers in their homes instead of an open hearth. The other two pots, also cast iron or clay, are for cooking the stew. All children, including boys, are taught to cook sadza from the age of 10. People are judged on their ability to cook sadza. A good sadza is not lumpy and is neither too hard nor too soft. Cornmeal, along with other grains and nuts (especially peanuts), is often ground at home with a large rock and grinding stone. Larger pieces of meat will be barbecued using a spit or roasted slowly over a low fire. Recently, “hot box” cooking has been introduced into the country as an inexpensive and environmentally friendly way to cook with limited use of cooking fuel. The method involves cooking the food for 10 minutes in a lidded cooking pot. This hot pot is then placed in an insulated container, which may be as simple as a cardboard box stuffed with pillows or hay. The food in the pot will continue to steam and will be ready to eat in three or four hours. This method is particularly effective for cooking tough cuts of meat.

Typical Meals

While the norm for the majority of Zimbabweans is just one meal of sadza a day, the more traditional approach to mealtimes is to eat three meals a day. In the morning this may be sadza with jam, fruit, peanut butter, or sour milk and sugar, or a thinner porridge (*bota*) or bread (*pot brood*) with peanut butter. Tea or coffee are drunk with breakfast. Lunch and dinner are also likely to feature sadza dipped into a relish, which almost always includes some tomato. Sadza eaten at lunch is referred to as *sadza re masikati*, which means “sadza in the afternoon.” Likewise, *sadza re manheru* means “sadza in the evening,” or dinner. Many will also have a cup of tea at 10 A.M. and 4 P.M., a holdover from the British.

Before eating, a dish of water is provided for cleaning hands. The host or senior male member of the family will hold the bowl, and water is poured over the hands, which are then dried on a cloth. While utensils are available, typically people eat their food with their right hand. Serving of food varies and is culturally dictated. In some places food is served in a communal dish, usually wooden, on the floor, around which diners sit in a circle. Polite manners indicate that everyone eat at the same pace so that everyone has their share. More often, however, the order of eating is dictated by gender and age. Men eat first, starting with the husband, followed by older men, then younger men, then older women, then other women, and then children. The best parts of the meal are also given to the men; for a chicken this would mean the dark meat (thighs, wings, legs) is given to the men. Men will sit on benches if they are available, while women will sit on the floor.

The wealthiest are also the most likely to adopt the English diet. This typically consists of a meat and two vegetables. While ordinary Zimbabweans, including the middle classes, stick to one-course dishes of sadza and relish, the wealthy adopt multiple courses that include a starter, a main course, and a sweet course, but there may also be a soup and fish course prior to the main, much as the Edwardian colonizers would have done. Chicken roasted with bacon and served with apples, roasted potatoes, cheese, and grain mustard is an example of one dish that may be served as a main course. Victoria sponge cake may be served for dessert.

Eating Out

The woman is responsible for providing food for her children and paying for their schooling. As women are less likely to be formally employed, eating out would be reserved for the few and is most often not a family activity. There are restaurants in Harare, the capital of Zimbabwe, for tourists and elites. In Harare, one can find all types of cuisines, ranging from Italian to Chinese and Indian, as well as fusion cuisines that adapt local ingredients to foreign cuisines. Beer is available and the most widely consumed beverage, although in the hotels wine and other spirits

may be purchased. When dining in a restaurant, table service is the norm. Licensing hours for bars are from 10:30 A.M. to 3 P.M. and then from 4:30 P.M. to 11 P.M. Street food is available, but it is technically illegal. Nonetheless, children and women will walk along the road or through the bus station with baskets of bread, fruit, boiled or roasted corn, peanuts, beans, and hard-boiled eggs, which they sell.

If invited to eat in a Zimbabwean home, one should expect to have one's hands washed first and to be served a separate portion of food rather than to help oneself from the communal dish. It is polite to leave a small portion of the food that is served, as this indicates that the host has provided sufficiently for his guests. The most likely occasion when one would be invited to a Zimbabwean home for a meal would be for an event like a wedding, christening, or funeral. Moreover, some guests will receive special food such as dried chicken because it is particularly expensive. In this case, the chicken is slowly roasted over an open fire and served with sadza and peanut butter.

Special Occasions

Zimbabwe is largely a Christian country and as such celebrates the major Christian holidays such as Christmas and Easter with food. Because of its location in the southern hemisphere, Christmas in Zimbabwe falls in summer and corresponds to the harvest. Fresh fruits and vegetables such as leafy greens and corn are eaten along with sadza. A roast is traditionally prepared using cow or goat, or perhaps game such as ostrich, kudu, or warthog. Additionally, the national day of Zimbabwe is celebrated in early April. In addition to sadza, the food that accompanies these celebrations may include squash soups or wild mushroom stews.

Weddings, christenings, and funerals are also marked with food. The size and scope of the wedding celebration largely depends on how much the family can afford to spend and may include a spit-roasted animal. A christening may be celebrated in a similar manner. Funerals, however, are not marked with special food. Instead, older family members and more distant relatives, such as a sister-in-law, will

bring food to those who are mourning. It is expected that chief mourners, that is, the immediate family, will not be able to cook at this time because they are in mourning.

Diet and Health

The traditional rural diet is nutritionally sound in that it has few fats, uses natural rather than processed sugar, and incorporates many of the fruits that are able to grow in the country. Indeed, in the not-so-distant past, Zimbabwe was a net exporter of food. This diet has sometimes been impacted significantly by drought and crop failure, but the structural adjustment policies of the 1990s, and the more recent economic and agricultural mismanagement, have meant that this is a country plagued by an inadequate food supply. Lack of food contributes to a host of health problems that subsequently arise from starvation and malnutrition, such as blindness as a result of vitamin A deficiency and goiter due to lack of iodine in the diet. Children are stricken with kwashiorkor, a form of malnutrition linked to a lack of protein in the diet. Kwashiorkor usually affects children under five and exhibits symptoms such as a swollen belly or swollen ankles. Adults are more likely to exhibit pellagra, identified by dermatitis, diarrhea, and distemper, which is caused by niacin deficiency resulting from a diet solely of corn. Nearly two out of every five people are considered undernourished, and nearly one in every six children under age five is underweight, while one in five is stunted.

The life expectancy in Zimbabwe was identified as the lowest in the world in 2006. Men are expected to live to the age of 37 and women to the age of 34. This represents a drop in the life expectancy from 60 years in 1990. The infant mortality rate is also high, at 13.5 percent; about one in every eight children dies before reaching age five. Much of the decline in health is due to the prevalence of AIDS and HIV. Approximately one-fifth of those age 20–49 are currently infected with HIV. Additionally, the low life expectancy coupled with the economic disadvantages of women (employment is concentrated in the informal and illegal trading sector, and women are responsible for paying for their children's food) means that poverty is disproportionately borne by

children. Just over a third of the country's total population is composed of children under the age of 14, a large proportion of whom are orphans. Estimates in 2007 were 1.3 million orphans as a result of AIDS. They must fend for themselves or rely on an ever-shrinking pool of elderly relatives.

Unlike its neighbors, until recently Zimbabwe has had relatively safe drinking water. However, in 2008, large areas of the country were struck by cholera, which infected over 10,000 people. Typhoid fever, malaria, and schistosomiasis (a parasite-derived disease) are also present throughout the country, with those in rural areas more susceptible, as only 37 percent of those in rural areas have access to sanitation, compared with 63 percent of those in urban areas. Generally, access to water is increasingly under stress as a result of more frequent droughts brought on by global warming.

In Zimbabwe, the health system has largely failed. By the end of 2008, only one of the four major hospitals within the country was still open, and the medical school had closed. As a result, many turn to traditional healers for medical help. Traditional medicine is holistic and is concerned with healing the root cause of an illness rather than just the symptoms. The illness may be the result of having angered the ancestors by failing to follow socioreligious obligations and taboos such as those against elder abuse and promiscuity. Diet and herbs are important for curing these unnatural diseases. For example, among the Ndebele, eating food that shares one's name is prohibited. For instance, if a man's last name is "cow," then he should avoid all beef.

Arabian Peninsula

Overview

The Arabian Peninsula, encompassing Bahrain, Kuwait, Qatar, Saudi Arabia, and the United Arab Emirates (UAE), is approximately one-third the size of the United States. Much of it is a desolate, waterless desert with meager stretches of pasture, mainly scrubby saltbush plants, occasionally enriched with other short-lived plants following the scanty rainstorms that occur only in the winter and spring. Mountain ranges, which have a pleasanter climate, run parallel to the southwestern and southeastern coasts. The Rub' al-Khali (Empty Quarter), one-fourth of Saudi Arabia, is so arid that even most nomads avoid traversing it, as it contains little grazing for their flocks. In some places, the exact boundaries between countries have not been determined because the land is so inhospitable.

The Kingdom of Saudi Arabia covers approximately three-fourths of the peninsula and is about one-fourth the size of the United States. The Kingdom of Bahrain, an archipelago of 33 islands off Saudi Arabia's coast in the Arabian Gulf (as Arabs call the Persian Gulf), is the smallest of the countries in this region, about one-fourth the size of Rhode Island.

The Kingdom of Saudi Arabia is a monarchy; the Kingdom of Bahrain and the Kingdom of Kuwait are constitutional monarchies; the state of Qatar is an emirate; and the UAE is a federation of seven absolute monarchies. King 'Abd al-'Aziz al-Saud brought together Saudi Arabia's four provinces in the first third of the 20th century, uniting several independent tribes with a combination of fighting

and democracy (although tribal affiliations remain strong in all countries of the peninsula). Bahrain, Kuwait, Qatar, and the UAE were once British protectorates; that is, they made a treaty with Great Britain that Britain would help them against their enemies, in return for which they would not do business with any other foreign rulers without getting permission from Britain. Kuwait became independent in 1961. The other three areas became independent in 1971 when Britain pulled out of the Gulf. Six of the seven emirates (Abu Dhabi, Ajman, Dubai, Fujairah, Sharjah, and Umm al-Quwain) then united to form the UAE; the seventh, Ras al-Khaimah, joined them in 1972. People who are unfamiliar with Qatar may have heard of its television station, Al Jazeera. Many Westerners first heard of Kuwait when Iraq invaded it in 1991, precipitating the first Gulf War. Kuwait has mostly recovered from the depredations of that invasion.

In an area this large, many different regional food habits exist; however, geography and climate, similar throughout most of the peninsula, played a major role in the original food habits in the area. Since the mid-20th century, the ready availability of imported foods of all kinds has greatly expanded food choices on the peninsula. Improved communication and mobility have contributed to homogenization of the diet. Most of the many foreign nationals working in the peninsula eat the traditional foods of their own countries.

Oil was discovered in Bahrain in 1932, in Saudi Arabia and Kuwait in 1938, in Qatar in 1939, and in Abu Dhabi in 1959. Before World War II, life on the

A traditional fishing dhow at dock in Waqrah, Qatar. (iStockPhoto)

peninsula was relatively primitive compared to the West, with the majority of the population being Bedouin. The discovery of oil led to increased contact with the West and a huge upsurge in the standard of living. Governments have moved many Bedouin into settled communities. Nomads still exist, but they often travel in sport-utility vehicles, and a camel is as likely to be riding with folded legs in the back of a pickup truck as walking in a caravan. Before World War II, if boys had any education, they attended religious schools that focused on memorizing the Quran; schools for girls didn't open until the 1960s. Now, all children attend modern schools, and many attend colleges and universities at home or in other Middle Eastern countries, Europe, or the United States.

The peninsula was not entirely isolated from the outside world before the oil companies arrived.

Ships sailing the spice routes from India to the Levant passed through both the Red Sea and the Gulf. Camels carried goods on the Incense Route from Yemen along the Red Sea coast. Experts disagree about whether early people living on the peninsula used the spices: Some assume they must have done so; others doubt they could have afforded them.

Beginning in the 620s A.D., after Muhammad founded Islam, Muslim armies fanned out through the peninsula, through North Africa into Spain and France, and along the north side of the Gulf and the Arabian Sea to the area that is now Afghanistan and Pakistan. They took Arabic foodways with them, and the foodways of the conquered countries filtered back to the peninsula. Once Muhammad instituted the pilgrimage (hajj) to Makkah (or Mecca, as it is usually spelled in the West), pilgrims came from far-flung countries of the Muslim empire. Some re-

mained, making Makkah a cosmopolitan city. When the Muslim empire shrank, the Ottoman Empire moved in and occupied the Red Sea coast through modern Yemen, and the Arabian Gulf coast through present-day Qatar, bringing new food influences. ‘Abd al-‘Aziz al-Saud drove the Ottomans out shortly after World War I. Arabs who go to other countries for schooling, vacations, or jobs often enjoy foreign foods and add them to their diet. Add items from the Columbian Exchange, like tomatoes and peppers, and the peninsula’s food demonstrates global influences.

The Arabian American Oil Company (Aramco, now Saudi Aramco) discovered oil in Saudi Arabia in 1938. World War II delayed development, but after the war, Saudi Arabia grew to dominate world oil production. The oil industry brought many foreigners whose food cultures have affected food habits in the area, as local merchants sell foods these people want. In its early days, to cut the expense of providing food to its employees, Aramco worked with local farmers, teaching them modern agricultural methods and introducing them to fruits and vegetables not formerly available in the area. Much of the peninsula receives five or less inches of rain per year, but the Saudis and other Arabs have developed sophisticated irrigation techniques, including using fossil groundwater and desalinated seawater. They now grow much of the food the country uses, and they export items like cucumbers, dates, grapes, tomatoes, watermelons, and wheat.

Bahrain raises some produce, goats, cattle, and sheep and eats local seafood, but it must import most of its food. Kuwait and Qatar grow few crops but raise livestock and catch fish off their coasts. The UAE produces foodstuffs such as cabbages, citrus fruits, cucumbers, dates, eggplant, mangoes, squash, and tomatoes; chickens and eggs; milk and dairy products; and local fish. However, it must import about three-fourths of the food it needs.

Food Culture Snapshot

Ali and Nura Abdulrahman live in Ali’s family’s compound in Riyadh, Saudi Arabia’s capital. The compound’s occupants include Ali’s parents, his grandmother, his

brothers and their wives and children, and his unmarried sisters. Ali and Nura eat breakfast at 6:30 A.M., as their workday starts early. Breakfast includes a grain porridge, fruit (often dates), and coffee. They both eat lunch at work: a light meal of meat (usually lamb or chicken), rice with pine nuts or raisins, and fruit. Most family members eat together in the evening. The meal consists of salad, rice, meat, vegetables, fruit, and occasionally a sweet dessert. The women of the household cooperate on the cooking; those who work outside the home usually come to the kitchen after work to help with final preparations and exchange news about their day and family developments.

Traditionally, meals were coordinated with some of the five daily prayers: breakfast after dawn prayers, lunch after midday prayers, and dinner after sunset prayers (sometimes much later). Mealtime schedules are now driven more by the needs of the modern business timetable, although Muslims still follow the traditional prayer schedule.

In some areas on the peninsula and in more traditional families, women are discouraged from shopping for food, with men or servants doing the shopping. People shop in both modern mega-supermarkets and local *suqs* (markets). *Suqs* often have a larger and fresher selection of fruits, vegetables, and fish, as well as live sheep and other animals. *Suqs* also sell whole, fresh spices, in contrast to the already-ground, bottled spices in stores.

Supermarkets offer the convenience of one-stop shopping, carrying both local and imported foods. Many products in the supermarkets are familiar to Westerners—but then there’s fresh camel meat, packaged in the butcher section. Products from abroad cater to the tastes of foreigners. Supermarket owners must be careful in selecting items to import to be sure none of them contains any pork or alcohol. Imported meat must have been slaughtered according to Islamic requirements. Saudi consulates certify slaughterhouses in countries that wish to export meat to Saudi Arabia. Because large doses of nutmeg can be hallucinogenic or even cause death, Saudi Arabia classifies it as a drug, and stores there cannot import whole or ground nutmeg unless it is in a spice mix where nutmeg composes 20 percent or less of the mixture (presumably, this would allow for prepared mixtures

of the popular spice mix *baharat*, which includes nutmeg). Poppy seeds are also banned.

Major Foodstuffs

Many people of the peninsula trace their ancestry to Bedouin who roamed the desert seeking pasture for their camels, goats, and sheep, and Arab food culture is rooted in that of the Bedouin. Their main foods were dates, bread, and the milk of their livestock, with occasional meat, usually for a celebration, to honor a special guest, or if they were lucky enough to catch some small wild animal (e.g., a hare or *gerboa*).

Ancient literature from the Gilgamesh Epic to the Bible to the Quran speaks reverently of dates and date palms. Scholars believe the date palm originated in the Arabian Peninsula. During the spread of the Muslim empire, armies and traders took along dates and, on purpose or by accident, planted date palms throughout the empire. Date trees are either male or female. Arabs hand-pollinate trees and tie paper

A man harvesting dates in Bahrain. Dates play an important role in the economies and cultures of the Arabian Peninsula. (StockPhotoPro)

bags around the flower clusters to protect growing dates from birds and insects. Birds nest in the trees, and many ground crops depend on their shade in hot oases.

Resourceful Arabs use every part of the palm. Arabs eat dates fresh and dried, and sometimes ground into meal that is mixed with water to make bread. Date seeds can be fed to livestock or be ground and made into flour. Syrup (*dibis*) pressed from dates can sweeten pastries or be poured over puddings. Dates are a good source of energy and contain several essential nutrients. With milk, they make a complete meal. Dried dates keep well for long periods of time because their high sugar content discourages spoiling and they are easy to transport.

Young date palm leaves, cooked, can be eaten as a vegetable. Hearts of palm are a delicacy, but Arabs rarely eat them, because the heart is the tree's growing tip, and cutting it out kills the tree. Woven fronds from the leaves become baskets or mats; the center ribs of the leaves make strong sticks (*jareed*) to build huts. The Arabs use palm wood for building. If anything is left, they use it for fuel. Arabs have many words to describe dates—not only names of different species, but also names for dates in different phases of growth.

Flatbreads are another staple food, and the Arabs have many varieties. Generically, bread is called *khubz*, but Arabs also refer to it as *'aysh*, meaning "life" (some also refer to rice as *'aysh*). Bedouin often cook bread by burying it under the embers of their fires. When it is done, they pull it out, brush the sand off, and eat it. Some Bedouin use a convex or flat piece of metal on top of the fire to cook bread. In villages, some women bring their bread to a communal oven. Some breads are cooked on stones on the oven floor; others are slapped onto the walls of the domed oven. If the oven isn't hot enough, the bread falls off into the fire. Some women stay by the oven and watch to be sure that their bread remains in what they consider the best place for it to cook. Some common breads in Arabia are *khubz 'arabi*, the simple pocket flatbread; *tamis*, a larger and crustier flatbread; *shurayak*, a soft, golden bread; *'aysh samuli*, a more loaflike bread; and *khubz ruqaq*, paper-thin bread that includes date syrup.

Before the increase in contact with the West, Bedouin derived most of their protein from goat or camel milk. If they had more than they could use, they made it into *samna* (clarified butter; the Indian name ghee is more familiar to Westerners) or yogurt. It is usually made from goat milk because the composition of camel milk's fat makes it difficult to make butter from it. To make *samna*, one heats butter until it boils, the curds float to the surface, and the remaining liquid is transparent. The curds can be skimmed off or strained out and eaten; the remaining *samna* will keep for several months without refrigeration. Arab cooks often use *samna* for frying or add it to breads and desserts for richness. Bedouin allowed the liquid to drain from yogurt, leaving a hard substance that kept for a long time. When they were ready to use it, they pounded it into powder with a mortar and pestle and mixed it with water. If necessary, they ate the hard dried yogurt. They would also add salt and olive oil to yogurt, which made it keep for a longer time.

Coffee (*qahwah*) holds a place of honor in the Arab lifestyle as a major element of the hospitality ritual. Arabs prefer their coffee strong and bitter. They usually flavor it with cardamom but sometimes with cloves, rose water, saffron, or other spices. These spices impart some sweetness and help mask coffee's natural bitterness. Although most of the Arab world's cardamom used to come from India, much now comes from Guatemala. For everyday purposes, cardamom is added in a ratio of 1/50th to 1/25th the amount of coffee, but for an honored guest, a host may add much more. Because harvesters must pick each pod individually, cardamom ranks with saffron as one of the most expensive spices; thus, adding a large amount to coffee shows how much the host values his guest. Arabs also drink large amounts of tea throughout the day. They prefer sweet mint tea, sometimes with coriander seed added, which they drink from small glass mugs.

One must be a Muslim to be a citizen in all these countries, and Muslim practices, based on the Quran and subsequent Muslim teachings, govern food habits. Muslim eating traditions charge believers to exercise moderation in eating. Muslims are prohibited from eating blood and unclean animals, in-

cluding pigs, mice, bats, monkeys, birds of prey, carnivorous animals such as dogs and cats, and land animals with no ears, such as frogs and snakes. Some schools of thought forbid eating any seafood that doesn't have fins and scales, but others allow Muslims to eat shrimp. Muslims may eat only animals that have specifically been killed for food (i.e., no carrion or animals that have died naturally), and the person killing the animal must say, "Bismillah, Allahu akbar" ("In the name of God, God is great"), when slaughtering it. Meat killed in the name of a pagan god is also forbidden. The slaughterer slits the animal's throat and allows all the blood to drain from it. Meat killed according to Islamic law and foods that are acceptable to eat are designated *halal*. Forbidden and unclean items are called *haram*. Although coffee is a symbol of hospitality strongly associated with the Muslim world, some schools of thought say it is not permitted because it is an intoxicant.

Alcohol is also forbidden to Muslims. It is not available at all in Kuwait and Saudi Arabia (although one can purchase malt beverages, i.e., nonalcoholic beer). Liquor is available on a limited basis to foreigners in Bahrain, Qatar, and the UAE, usually in the restaurants of large hotels. Foreigners living in these countries sometimes make alcoholic beverages. For the most part, governments ignore this activity as long as it is done circumspectly. The explosion of a still, public drunken behavior, especially drunk driving, or the discovery that a foreign national has given or sold liquor to a Muslim can result in jail and whipping or swift deportation. Visitors to these countries who are offered homemade alcoholic beverages should be cautious. Homemade liquor is often much stronger than commercial liquor, and it sometimes has impurities that make drinkers ill.

Cooking

Cooking is women's work. People traditionally live in extended matriarchal family groups, and all women in a family cooperate in food preparation, with the social aspect being as important as the nourishing aspect. At feasts or holidays, visiting women help in the kitchen. Until the mid-20th century, most women in the peninsula couldn't read or write. Girls

started helping in the kitchen at a young age and learned to cook from their mothers. By the time they were old enough to marry, cooking was second nature—and besides, when they married, they moved into their husband’s matriarchal family, where they joined other women who cooked together.

With growing industrialization, some families have left the traditional matriarchal mode and live in Western-style groupings of parents, children, and perhaps one or two other family members. Thus, some young women no longer have older women to help them with cooking. Toward the end of the 20th century, women began to publish cookbooks from various parts of the peninsula. Migration of families around the peninsula has encouraged the spread of regional recipes. Women who have spent time outside the peninsula have encountered the cooking of other countries and may try cooking foreign as well as Arab food. Television cooking shows, both from the region and from outside, have helped women learn recipes from all over. All these factors have increased the global influences on food in the peninsula.

Kitchens range from totally modern, Western-style kitchens in relatively new houses and apartment buildings to traditional kitchens or even a fire pit in a courtyard in older buildings. Pans and utensils may be Western style or may be traditional brass, copper, or wooden items. Bedouin still cook over a campfire, but that campfire may now be a camp stove.

Typical Meals

Traditionally, food is served on large communal platters set on a cloth laid on the floor or ground, usually on top of oriental rugs. People eat only with their right hands, preferably with only the thumb and the first two fingers. The left hand is considered unclean, as it is used for hygienic (toilet) purposes. Some families still eat this way; some use Western tables, dishes, and flatware; and some alternate between the two styles.

Men and women of a family eat together, although women may hold back until men have eaten. When there are guests, women, including female guests, eat separately from the men. Famously, on a 1979 visit, Queen Elizabeth of Great Britain was declared an

honorary man so that she could eat with King Khalid of Saudi Arabia.

Arabs are famous for their elaborate rules of hospitality. This code developed from the Bedouin life, lived on the edge of starvation. Hospitality in the desert could mean the difference between life and death for the potential guest. Therefore, when a stranger came to a man’s tent, even if he was an enemy, the man had to treat him with courtesy and extend protection to him for three days. The Arabic traditional greeting exchange that translates to “Peace be with you”—“And with you, peace” may now seem like a courteous formality, but at times, it had the power of a treaty. In exchange for hospitality, the guest would share news of weather conditions (especially rainfall), pastures, and other Bedouin he had encountered.

Since, in earlier days, a guest had probably made a long ride across the dusty desert, a host offered his guest a cool drink such as fruit juice. In modern times, even some shopkeepers continue this ritual, offering those who come in a soft drink or fruit juice. Customs regarding coffee figure strongly in the rituals of hospitality. A man shouldn’t offer coffee to a guest too early in a visit, lest the guest think he was expecting him to leave. When the host did offer coffee (or food), the guest would refuse several times before allowing the host to persuade him to receive his generosity and partake. An Arab in the desert, having ground coffee with a brass mortar and pestle, uses the pestle to ring the mortar like a bell. The sound carries a great distance and might reach a weary traveler and guide him to a safe haven.

Before a meal, the host says the simple prayer, “Bismillah” (“In the name of God”), and when the meal is over, the host says, “al-Hamdu lillah” (“Thanks be to God”). Often, a host waits to eat until his guest has finished, serving the guest and scooping up choice morsels and balls of rice for him. Although hosts are supposed to provide for their guests according to their means, legends tell of hosts who essentially bankrupted themselves by killing their only goat/sheep/camel in order not to fail in hospitality.

Arabs do not separate out savory foods for the main course and sweet foods for dessert. Spices and

fruit make many main-course dishes sweet (e.g., rice mixed with dates, cinnamon, and cloves), and some desserts contain items such as carrots. Although food in this part of the peninsula is often spicy, generally it is not hot. Flatbreads accompany all meals, since they serve as eating utensils.

Breakfast is usually a light meal—for example, bread with butter or *samna*; olives; eggs; fruit; and soft cheese or yogurt. In winter, it often includes a porridge such as *hunayua* (ground dates mixed with butter, semolina, and cardamom). *Balaleet*, a breakfast from Qatar, is a casserole of noodles or vermicelli cooked with sugar, cardamom, and saffron, topped with a flat omelet. Eaters use pieces of the omelet to scoop up the pasta. In the UAE, breakfast might be a pudding with saffron. Some people eat Western-style breakfasts.

The midday meal was once the main meal, but with the advent of Western-style work schedules, it

is lighter, and the evening meal is becoming the main meal. Lunch is often a salad or vegetables; a mixture of meat or fish with rice; and fruit or pastries. Some people go to American fast-food restaurant chains for lunch. Dinner is similar to lunch but more elaborate. It begins with a salad (perhaps cucumbers and tomatoes), *meze* (a variety of foods served on small plates that are shared), or soup (lentil soup is popular). Arabs have imported the concept of *meze* from Lebanon, including hummus, *baba ghanoush* (a dip made of mashed eggplant, sesame paste, olive oil, lemon juice, and garlic), and *tabbouleh*. Soups tend to be thick rather than broth based.

The popularity of one-dish main courses in the peninsula stems from Bedouin cooking, where heat sources were limited, and also from the Arab tradition of hospitality. If extra guests show up, the cook can easily stretch the meal by adding more of some ingredient, or even just by adding water. So the main

Saudis gather around a traditional dinner. Saudi Arabia is home to a remarkably homogenous population; the peoples of Arabia are 90 percent Arab and 100 percent Muslim. (Corel)

course is often a stew, or meat served over rice. Other possibilities include lamb stuffed with rice, eggs, onions, and nuts; shish kebabs; or fried or grilled fish, especially in coastal areas. Popular seafood types include *hamur* (grouper), *shfri* (porgy), *kan'ad* (mackerel), *hamra* (red snapper), *zubaidi* (pomfret), crab, lobster, and shrimp.

Machbous

Machbous is the national dish of different countries on the peninsula.

2 tbsp samna (clarified butter) or butter

2 large onions, peeled and chopped

½ tsp turmeric

¼ tsp ground pepper

¼ tsp ground cardamom

¼ tsp chili powder

1 clove garlic, minced

2 lb lamb, on the bone

3 tomatoes, peeled and chopped

1 stick cinnamon

2 cardamom pods

2 tsp salt

1 bay leaf

1 clove

½ tsp dried lime (*loomi*), finely chopped, or 1 tbsp lime juice

2½ c water

2 c basmati rice

1. Fry chopped onions in samna until transparent. Stir in the first five spices, and cook for 2 more minutes.

2. Add the lamb; brown lightly.

3. Add tomatoes, remaining spices, and salt. Cover and simmer for 10 minutes.

4. Add water, cover, and simmer for 2 to 2½ hours until meat is tender.

5. Stir in rice. Cover and simmer 20 minutes.

6. Stir, remove from heat, and let stand covered for 5 minutes.

7. Remove the whole spices. Spoon rice onto each plate. Place pieces of meat on top of rice.

The most popular vegetables are those that thrive in warm weather, such as cucumbers, eggplant, olives, peppers, pumpkins, tomatoes, and zucchini and other squashes. Vegetable dishes are usually simple, emphasizing freshness. Often, larger vegetables (tomatoes, squash, peppers) are stuffed with a meat or rice filling. Lentils, chickpeas, fava beans, and black-eyed peas appear in many dishes. Fruits also tend to be tropical ones: bananas, citrus, dates, grapes, figs, mangoes, melons, and others. However, virtually all fruits and vegetables are available. If the Arabs can't grow it, they import it.

Desserts may be fresh fruit or a sweet pastry or custard. Some popular sweets are *halwa* (sweet sesame paste), *muhammar* (sweet rice served with dates or sugar), *Umm Ali* (a bread pudding), and *mehal-abiya* (rice pudding with rose water).

Most dishes contain several spices. Traditional spice mixes, whose ingredients may vary somewhat, include *bahar* (cinnamon, cloves, nutmeg, and sometimes ginger or pepper); *baharat* (black pepper, cardamom, cassia, cloves, coriander, cumin, nutmeg, and paprika); *za'atar* (the Arabic word for thyme but also a popular spice mix of thyme, sumac, sesame seeds, and perhaps another spice or two). The sumac is deep red and not the same as America's poison sumac, though edible staghorn sumac is also native to North America. Cooks use large quantities of garlic and onions.

Arabs usually drink coffee and tea with meals; other favorite drinks are fruit juices and juice mixtures; goat, sheep, or camel milk; buttermilk; *laban*, a mixture of water and yogurt; mineral water; and soft drinks. Some favored snack items are baba ghanoush, falafel, *shawarma* (meat, usually lamb or chicken, spiced and roasted on a spit), kebabs, hummus, fruit, and *sambousas* (pastries with a sweet or savory filling).

Eating Out

Before the 1970s, almost no restaurants existed in the Arabian Peninsula except coffeehouses and those in the few hotels. Since then restaurants have proliferated, but natives of the countries rarely eat out. Restaurants range from formal eateries to fast-food outlets. High-end restaurants offer all types of cuisine, including Middle Eastern (more likely to be generic Levantine food than food specifically of the country), European, Indian and Pakistani, Indonesian, Chinese, Thai, Mexican, and many more.

Many American chains such as McDonald's, KFC, Pizza Hut, and so on have franchises in the Middle East. McDonald's even developed a special sandwich to appeal to Middle Eastern tastes: the McArabia, a sandwich of either grilled spiced chicken or spiced *kuftah* (ground meat) with lettuce, tomato, onions, and garlic mayonnaise, wrapped in flatbread. Shawarma shops offer a Middle Eastern fast food. The server cuts off thin slices of shawarma and folds them into flatbreads with vegetables such as cucumber, eggplant, onion, and tomato and dressings such as hummus or tahini. Traditional coffeehouses serve coffee, other drinks, and pastries and offer water pipes with flavored tobacco. Most restaurants in these countries have segregated eating areas: one for men only, one for families, and sometimes one for women only. Restaurants usually close during the day for Ramadan and on Muslim holidays.

Special Occasions

Dating back to Bedouin life, the traditional dish for Arab festive occasions, celebrations, and special guests is a sheep or camel roasted on a spit and served on a bed of rice. Roasting a sheep yields a delicacy that hosts bestow on the guest of honor: the eyeball.

Three major observances in Islam have strong associations with food, of which Ramadan is the best known. Ramadan, the ninth month of the Muslim year, in which the Quran was revealed to Muhammad, is set aside for fasting. This fast is one of the five pillars of Islam, the five duties enjoined on Muslims. Unlike fasting periods in many other religions, Muslims fast only from sunrise to sunset,

whose exact times a religious official determines each day. Until recently, a cannon shot announced the beginning and end of fasting. Now, people are more likely to hear the news over the radio or television.

At sunset, Muslims break their fast, often with a few dates and water, a tradition initiated by the prophet Muhammad. In Makkah, the water is preferably from the well of Zamzam, traditionally the well that God showed to Hagar when she and Isma'il (Ishmael) almost died of thirst in the desert. In Bahrain, they may drink fresh lime juice. In other places, a drink made by dissolving apricot leather in water is popular. After prayer, Muslims eat a large dinner (*iftar*). Often, this starts with soup, to ease the empty stomach back into eating; an alternative is *harissa*, a porridge of pounded meat and grain. The cook soaks wheat overnight to soften it and pounds it until it is mushy. She debones the meat (poultry or red meat) and cleans it of fat. Then she boils the meat and grain together until they form a homogenized paste. Finally, she sprinkles cooked onions, dried lime powder, black pepper, cardamom, and other spices on top.

Iftars usually include more and richer dishes and desserts than meals at other times of the year. One popular dessert is dried fruits, sometimes soaked in rose or orange blossom water. Shops, especially pastry shops, remain open late, because some people party until late at night. Others spend part or all of the night meditating, praying, and reading holy books. Mosques schedule extra gatherings for prayer during Ramadan. A few hours before sunrise, people rise for another meal, *suhur*. This meal may be dates and barley porridge, or leftovers from the evening meal. In some areas, a town crier with a drum walks the streets a few hours before sunrise to wake people up for *suhur*.

While many Westerners understand Ramadan as a time of fasting alternated with feasting, the most visible aspect, the daytime fast, prohibits not only eating and drinking but also gum chewing, smoking, and sexual activity, the goal being to cleanse the soul. Some extremists go so far as to spit out, rather than swallow, their own saliva during the fast. Muslims say that fasting puts them in touch with the plight

of the poor, who don't have enough food, and includes inviting people to one's home for iftar. These may be friends and relatives or strangers who pass by the house or whom the host meets in the street. Ramadan is also a time for discipline in other areas, including additional prayer and reflection. Muslims are exhorted to be more spiritual, to practice additional charity, to resolve outstanding arguments, and to reconcile with their enemies. While people are expected to work as usual during Ramadan, some people take time off, especially those who have prayed or partied through the night. Another Ramadan regulation concerns women who prepare food for the nightly feasting. Women may taste food they are cooking during the daytime in Ramadan but may not swallow.

Certain people are exempted from fasting: girls younger than 12 and boys younger than 15; pregnant, nursing, and menstruating women; travelers; soldiers; the sick; and the elderly. Those who do not fast may make up for it by fasting at another time or by giving food or alms to the poor. While non-Muslims living in Arab countries are not required to fast, it is considered extremely impolite, and in some of the countries it is illegal, for a non-Muslim to eat, drink, chew gum, or smoke in public in the daytime during Ramadan.

Because Muslims use a lunar calendar, with a year of about 354 days, Ramadan comes slightly earlier each year when matched with the Gregorian calendar, in a roughly 33-year rotation. Thus, it can fall in winter (short days, long nights), summer (long days, short nights), or anywhere in between. Obviously, Ramadan is easier in winter. In summer, not only are the days long, but the temperature on the Arabian Peninsula can be well over 100 degrees Fahrenheit—even occasionally over 120 degrees—and going without food, and especially liquids, is an extreme hardship.

In most religions, a feast follows a ritual fast, and Islam is no exception. The three-day 'Id al-Fitr (or Eid al-Fitr, the Feast of Breaking the Fast) celebrates the end of Ramadan. Following a light breakfast, Muslims go to the mosque for prayers. Either immediately before the prayers or a few days earlier, they donate food or money, which are given to the

needy so they can celebrate the 'Id. Dressed in their best clothes, they then visit friends and relatives. During the 'Id, people eat many sweet dishes, often flavored with rose water, giving the feast the nickname "the Sweet 'Id."

Religious leaders determine the start date of the 'Id al-Fitr based on sighting the new moon, and while it is narrowed down to one or two days, they must actually see the moon to determine that the 'Id will fall on the next day. This makes planning cooking for the 'Id difficult. Women must be prepared to start the feast on a particular day but also to hold the food over until the next day if the new moon doesn't appear. Since the feast often involves cooking a lamb or other large piece of meat that takes a long time to cook, women wait up to find out whether the new moon has been sighted and they should start cooking, or whether they must wait for the next night.

One of the rituals of the pilgrimage to Makkah, the hajj, is celebration of the three-day 'Id al-Adha (or Eid al-Adha, the Feast of the Sacrifice). This commemorates the willingness of Ibrahim (Abraham) to sacrifice his son Isma'il to God (the book of Genesis names Abraham's son Isaac as the one almost sacrificed, but the Muslim exegesis of this story says that the child, not named in the Quran's version of the story, was Isma'il). Muslims who are unable to make the pilgrimage also celebrate the feast in unity with those who are on the hajj. Each family sacrifices an animal, usually a sheep but possibly a goat, camel, or cow. The animal must be at least a year old and of good quality. The family gives part of the meat to the poor and keeps part for their own feast. Someone who, for whatever reason, doesn't wish to, or can't, sacrifice an animal can compensate by making a donation to charity. People on the hajj take their animal to a slaughterhouse in Miná. The meat from these animals is frozen and distributed to the poor in the Muslim world.

The hajj itself presents a major logistical challenge for Saudi Arabia: providing basic amenities, health care, and so on to over two million people, most of whom want to be in the same general area at the same time, to perform the prescribed hajj rituals. The government has an entire ministry devoted to it. Among other things, the ministry contracts with

A Saudi man carries his newly bought sheep prior to the Eid al-Adha, the four-day Muslim Festival of Sacrifice, December 29, 2006. The holiday, which marks the end of the the hajj pilgrimage, is celebrated by hundreds of millions of Muslims around the world by slaughtering goats, sheep, and cattle in commemoration of the prophet Abraham's readiness to sacrifice his son to show obedience to God. food vendors to provide food for the pilgrims. The employees of these vendors work long, hard days during the hajj.

Ma'mul, cookies made of a farina and samna dough stuffed with a mixture of sweetened dates, cinnamon, and sometimes chopped walnuts, and formed in a traditional wooden mold, are a time-honored part of both 'Ids.

Weddings involve a long period of festivities, mostly for the bride. Technically, the marriage happens when the groom and the bride's father sign the marriage contract. However, there is then a 40-day period when the bride stays at home. A week before the wedding, she and her friends have a henna party,

where they paint intricate henna designs on each other. Traditional foods for this party are sweets, harissa, breads, cheese, and olives. These are now ordinary foods but were once luxurious. Both the bride and the groom get new clothes to symbolize casting off their old life.

The actual wedding feast is quite different from Western weddings, because men and women have separate feasts, which start sometime after evening prayers and last into the early morning hours. Traditionally, these parties were held at home, but for those who can afford them, modern wedding parties take place in hotels or special wedding halls, although the groom's party may be in a tent, harking

back to the Bedouin past. The bride's feast includes all female members of both her and her husband's family, plus female friends. The groom's feast, likewise, includes all male members of both his and his wife's family, plus male friends. The groom's feast is usually rice with sheep or camel meat, side dishes, and desserts. A more elaborate dish for wedding feasts is *khouzi*. This starts with a chicken stuffed with rice mixed with spices, nuts, and raisins and shelled hard-boiled eggs. The chicken and more rice are then stuffed into a lamb, which is then baked or roasted on a spit. *Khouzi* is one of several dishes that Middle Eastern food writers describe as a "national dish" of the Arabian Peninsula.

The bride's feast is more elaborate. It also includes rice and meat, but this is supplemented with meze, salads, vegetable dishes, and more. Desserts feature elaborately decorated cakes, imported chocolates, and other sweets. These feasts have grown more and more elaborate, to the point that a movement to scale them back has begun; some couples would rather spend less on the festivities and have money available to buy a home and furnishings. Currently, charitable organizations give money to help people afford weddings (especially the bride's dowry, given by her husband, which finances much of the feast), and some of the governments of these countries have started giving subsidies to men who want to marry, provided they marry a native of the country.

Around midnight, the men at the groom's feast escort him to the bride's feast. The women there put on their veils before the men come in. Once the men bring in the groom, they leave, and the bride and groom cut the wedding cake together.

Stuffed Camel

Serves approximately 100 people

Versions of this recipe have circulated among expatriates in the Middle East for years. Stuffed camel is also reputed to be the appropriate feast for a major Bedouin wedding.

1 medium camel

1 large sheep

20 medium chickens

1 gal samna

10 lb onions, chopped

5 lb almonds

5 lb pine nuts

2 lb pistachio nuts

2 lb raisins

2 c baharat spice mix

25 lb basmati rice, cooked

60 eggs, hard-boiled and shelled

Skin and clean the camel, sheep, and chickens. Brown the chopped onions in the samna. Mix in the nuts, raisins, and baharat, and add this mixture to the rice. Put an egg in each chicken, and add rice to fill it. Stuff the sheep with 5 chickens, and add rice and eggs to fill it. Put the sheep into the camel, and add rice and eggs to fill it. Roast the stuffed camel on a spit until done, and roast the remaining chickens. Put remaining rice on a large tray, and place the camel on top. Place the chickens and remaining hard-boiled eggs around it.

The Arab coffee ritual for guests rivals the Japanese tea ceremony. They roast the coffee beans on a specially designed flat pan, then cool them. They grind the beans into powder with a wooden or brass mortar and pestle. The host boils a pot of water over the fire, then adds the ground coffee. He allows it to boil again, pulls it off the fire, then heats it to another boil. He then places cardamom or other spices in a gracefully shaped brass coffeepot (*dallah*) and pours in the coffee. Palm fronds in the pot's spout filter out the coffee grounds and spices. He pours the coffee into small, delicate ceramic cups without handles (*finjans*), which are often white with colored or gilt decorations. Even the small cups are filled only about a third full. The host tastes the coffee to show that it isn't poisoned and then serves it to his guests and others who are present. Guests should drink at least three cups. After that, if they don't want more, they wiggle the cup from side to side, indicating that they are finished.

Diet and Health

The basic diet of the Arabian Peninsula is a healthy one, relatively like the modern Mediterranean food pyramid, featuring meat in moderation and an emphasis on fruit, vegetables, and grains. However, the area has developed an epidemic of obesity and related health problems. Causative factors include the social nature of eating, leading to long stays around the table; the relative abundance of food in the area since World War II; the extremely hot climate, which discourages outdoor exercise; and the prevalence of televisions and computers, encouraging a sedentary lifestyle.

Before the advent of the oil companies, for the most part, Arabs depended on traditional medicine, which made use of herbs, spices, and other natural ingredients. Some of these items were local plants; others are spices from India, China, and other remote parts of the world. Even petroleum, which was found in seeps in some areas, was used for medicinal purposes, both as a salve and taken by mouth. Even today, petroleum jelly is an ingredient in ointments and cosmetics.

Since the discovery of oil, the availability of modern medical care has increased greatly, with hospitals providing all the medical services found in the West, including organ transplants. In Saudi Arabia, the average life expectancy at birth in 1975 was 54 years, when good medical care was already available, and it has risen to the seventies. Other countries on the peninsula have similar numbers.

Berbers and Tuaregs

Overview

The Berbers are the original indigenous people of North Africa and often refer to themselves as *Imghizen*, which means “free” or “noble.” Today, they live predominantly in Algeria, Morocco, Libya, and Tunisia. They have a long history stretching back to ancient times: They were mentioned by the Egyptians, flourished under Carthaginian rule when it was the most powerful seafaring state in the Mediterranean, and succumbed to Roman rule—in fact, there were many prominent Romans of Berber origin such as the poet Apuleius and St. Augustine of Hippo. The kingdoms of Numidia and Mauretania were Berber client states of Rome. In the seventh century the Berbers converted to Islam and made up a significant portion of those who eventually conquered and ruled Spain and northwestern Africa. The great medieval explorer Ibn Battuta was of Berber origin. In the early modern period North Africa fell under the sway of the Ottoman Empire, and in the 19th century Algeria was ruled by France.

In 1990, a department for the study of Berber culture and language was established at the University of Tizi Ouzou, and the following year another was opened at the University of Bejai; both schools are in the Kabyle. Liamine Zérroual, president of Algeria from 1994 to 1999 and a Berber from Batna, created the Haut Commissariat à l’Amazighité to help initiate policy and procedure for teaching Berber in schools and for its use in public spheres. In 1995, the Congrès Mondial Amazigh was established as an international Berber association

based in Paris; in 1998 the Congrès adopted the Berber flag created by the Académie Berbère as the flag of the Berber people. In 2002, Tamazight, as it is called locally, was finally recognized as a national language in Algeria by constitutional amendment. Berber began being taught in schools the same year. Morocco, which has had similar issues with Berber language rights, also began formally teaching Berber in 2003.

The Tuaregs are also a Berber people. They live to the south in the Saharan desert, mostly as nomads and pastoralists, in Algeria, Niger, and Mali and to some extent in Burkina Faso. In the 11th century the Tuaregs founded Timbuktu, in present-day Mali, as a seasonal settlement. Timbuktu was an important city for the successive West African empires of Ghana, Mali, and Songhay. It flourished as a crossroads city between North and West Africa for trade and scholarship.

The largest concentrations of speakers of the Berber languages are found in Algeria and Morocco. Estimates vary, but they make up approximately 20 to 25 percent of the population in Algeria and 40 percent of the population in Morocco. Tunisia and Libya are predominantly Arab or Arabized, with small concentrated Berber populations on the island of Djerba in Tunisia and Jebel Nefousa in Libya. The largest population of Berbers outside of Africa lives in France; most are of Algerian or Moroccan heritage, and many are French born. Algerians from Setif and the Kabyle are often second-generation French citizens.

🍴 Food Culture Snapshot

Ahmed and Lilia Boudra live in Setif City in the second-largest province in Algeria. Although Setif is on the edge of the Kabyle, many residents refer to themselves as Chaoui, after the Shawiya Berbers of the Aures Mountains; however, everyone is a Staifi (Setifienne). The local dialect, or *derja*, is a Berber-Arab synthesis, not easily understood in other regions of Algeria.

Ahmed is the manager at a couscous and pasta factory. Lilia is a medical student at the University of Setif, where her classes are taught in French. At home, they speak their local *derja*; Khaled, their six-year-old son, is learning Modern Standard Arabic in elementary school. The Boudras begin their day at 6 A.M. with a breakfast of homemade *ghraif* (thick semolina pancakes) served with espresso. Khaled has a croissant purchased from a pastry shop and a glass of *Iben* (buttermilk). Lilia packs lunches for the entire family. She and Khaled will have *kesra* (semolina bread) and a thick chickpea soup; Ahmed will eat a sandwich of grilled meat and salad rolled into flatbread. Ahmed and Lilia meet in town for afternoon tea or coffee at a café.

Dinner is around 7 P.M. and is the largest meal of the day. Lilia prepares pasta with a dough of barley flour and water, which she kneads and rolls into thin sheets, then cuts into little squares for steaming in a couscoussier. The pasta is served with a sauce of buttered turnips, peas, and carrots, a specialty of the Kabyle region that she learned from her mother. They have oranges for dessert.

The main meal on Fridays, often couscous, is eaten with members of their extended family after *salaat-ul-jumu'ah*, a congregational prayer held immediately after noon at the mosque. The local way of preparing couscous is called *berboucha*; it is made with lamb, chicken, and root vegetables. Lilia sometimes hand-rolls the couscous and sometimes uses an instant variety from the factory where Ahmed works; both are prepared by steaming. North Africans never cook couscous using the absorption method found on directions for packaged couscous in the West. Watermelon is the traditional dessert after couscous.

Setif City hasn't been affected as much by globalization as Mediterranean coastal cities. The Boudras shop for food at *souks* (outdoor markets) and *hanouts*

(small shops); they purchase prepared foods from small vendors. Bakeries and pastry shops sell North African and European specialties. Most cooking is done from scratch. Small restaurants serve a limited range of regional dishes.

Major Foodstuffs

Political definitions of the Maghrib have shifted historically with changing seats of power and the birth of nations. It has been said that a culinary measure of the Maghrib, separating it from the Arab east, is found in an imaginary north–south line somewhere in Libya; rice is the staple food to the east, and couscous is the staple food to the west. Couscous is a Berber invention and the staff of life in the Maghrib countries of Tunisia, Algeria, and Morocco. Although there is theoretical unity through couscous, arguments about what constitutes a real couscous can range from lighthearted to fierce.

There is some evidence that the method for steaming couscous has a West African genesis. The prototypical couscous steamer was probably woven from grass; basket-type couscoussiers are still made in some rural areas of North Africa. In West Africa and Saharan North Africa, couscous is made with crushed millet or sorghum. The Maghribine (North African) Berber word for sorghum, *illan* or *ilni*, is

Chicken and couscous, or barboucha. (Typhoonski | Dreamstime.com)

related to the West African Songhay word for the same grain, *ille*. Couscous is also made with barley or cornmeal.

The most common and best-known couscous is actually a type of pasta made with durum or semolina flour. A mixture of coarse and fine semolina flour is lightly moistened with water while moving the flour in a circular motion with the right hand until tiny pasta “grains” are formed by aggregation. Adding more water and applying a heavier hand while rolling makes large pasta balls, called *berkoukes*, better known as Israeli couscous in North America or *Maghribiyya* (“make like the Maghrib”) in the Middle East.

Couscous and derivative dishes were diffused widely during medieval Islamic times and the European age of exploration. One of the earliest written references to couscous is in an anonymous 13th-century Moorish cookbook. A 13th-century Syrian historian describes four recipes for couscous; one of them is called *Maghribian* (North African). The Moors of Spain and the Saracens of Sicily ate couscous.

During the Spanish Inquisition, couscous was banned as a symbol of Muslim behavior, but a derivative dish called *migas* (made of breadcrumbs) is still eaten in Spain. The Mexican dish *migas* or *migajas* differs from the North African and Spanish versions but is conceptually similar in that crumbs or tiny pieces of tortilla are used rather than bread as in Spanish versions. A Portuguese recipe for couscous from the 17th century calls for “flour of the earth,” either maize or manioc, and looks very much like a modern Brazilian *cuzcuz*, a kind of steamed cake or pudding.

The North African and Arab influence in Sicily is still celebrated in what is called *cucina-arabica sicula* (Arab-Sicilian kitchen). The island hosts an annual event, Cous Cous Fest, that draws over 100,000 visitors. Sicilian *cuscusu* is usually prepared with fish. North African Jews introduced couscous to Israel. Today, semolina couscous is widely available as an instant food in Europe and North America.

The distinction between hard wheat (semolina or durum) and soft wheat (bread wheat) is important. Hard wheat has more gluten and less moisture than

soft wheat, which makes it less prone to breakage during the drying process for pasta and gives it a longer shelf life than bread-wheat products. The capacity for extended storage and transportation would have been historically significant in eras of perennial famines and empire expansion. In some regions of North Africa, semolina flour and foods made from it, such as *kesra* (semolina bread), are strongly associated with Berber cultural identity.

In modern North Africa, pasta dishes tend to be concentrated in Tunisia and eastern Algeria. Berbers make rudimentary pastas with semolina flour, which are steamed or sometimes boiled. North African cookbooks often categorize pasta with either couscous or bread as related dishes or cooking techniques. Italian settlers introduced newer varieties of pasta during the colonial era. Pasta dishes that are categorized with couscous include *tlitli* and *dwidat* (orzo). The method for making them is similar to the method for *berkoukes*, a rather tedious process of tearing off tiny pieces of dough and shaping each piece of pasta by hand.

Trid, or the diminutive *tridet* (derived from *trid* pastry sheets), are pasta squares. This shape of pasta is also called *m'kartfa* or *nawasar* (plural of *nasra*, square silver coins used during the Almohad dynastic period), and it is identical to Italian *quadrantini*. *Tiftitine* are pasta strips made with semolina or bread flour. *Rechta* and *shariya*, vermicelli pastas, entered North Africa during the medieval Islamic period, and *fidwash* (fideos, a thin pasta still common in Spain) are Hispano-Moorish. *Maqaron* (macaroni) specifically refers to durum-wheat dried pastas.

Olives, olive oil, dates, figs, and semolina flour or a local grain are important regional staples. Chickpeas, lentils, or fava beans are added to many soups, stews, and *tagines* (stews simmered in a clay pot with a conical lid). Dairy products are primarily from cow, goat, or sheep milk. In sparse desert regions, camel milk is drunk as the primary source of protein. *Smen* is clarified or preserved butter. Clarified butter is used for cooking. Preserved *smen* tastes a bit like blue cheese and is used as a flavoring agent for couscous and tagines. Mint tea, herbal infusions, and *lben* are regional specialties.

Cooking

The word *couscoussier* is a French word derived from North African *kiskas*, which refers only to the steamer insert. The pot itself is called a *gdrah*, and the stew cooked in it, over which the couscous grains or pasta steam, is called *marga* or tagine. This ingenious method of cooking allows two dishes to be cooked over a single source of heat, a very important feature in a region that has historically dealt with shortages of wood for cooking. Some couscoussiers have two stacking steamer inserts. Couscous grains or pasta are usually steamed two or three times. Meat, poultry, seafood, and vegetables are also steamed in a couscoussier. Steaming foods is a very common North African cooking technique, used even for pasta.

The Arabic word *tajin* is derived from the Greek *teganon*, meaning “frying pan.” Regional use of the word *tagine* varies in North Africa; in Algeria *tagine* refers to various pots and pans. The most common use for the word *tagine* is for meat and vegetable casseroles cooked in clay cooking vessels with conical lids. The cooking vessel and the finished dish are both called a tagine. The conical lid stays relatively cool during cooking and creates a kind of water cycle: Evaporated water from the meat and vegetables collects in the conical lid, then flows back down into the dish. The deliciously succulent results distinguish tagines from other casseroles.

Breads called *khobz tagine* are cooked on griddles also called tagines. Bread isn’t as universally iconic as couscous, but it is more frequently eaten. And in some regions it is as significant as couscous. Meats and poultry are braised, stewed, roasted, or grilled. There is a preference for well-cooked meat; tagines and stews, in particular, are cooked until the tender meat is falling off the bone. Vegetables are grilled, roasted, or stewed, or added to soups, stews, and tagines.

Typical Meals

Berbers live throughout North Africa in vastly different economic, political, and geographic zones: in

rugged mountainous regions, on islands, deep in the Sahara at desert oases, and in large cosmopolitan cities. Many have become assimilated into local or regional cultures.

There is no coherent Berber cuisine as such, since like the rest of North Africa, Berbers have been exposed to various influences. As for people everywhere, Berbers’ meal choices are shaped by local availability of foods and personal finances more than anything else. Describing meals as “typically Berber” is impossible—at best, they are samples of what is eaten in different regions by Berber families. Berbers are predominantly Muslim and follow the same dietary laws and hygiene requirements as other Muslims. *Dadas* are female Berber cooks who work for wealthy families in North Africa. The tradition is especially strong in Morocco, where *dadas* have become important cultural icons as gatekeepers to traditional regional recipes.

Legend has it that the island of Djerba off the coast of Tunisia is the land of lotus eaters in Greek mythology. Today, the island’s economy benefits from international tourism. The cooking style here is hot with *harissa* (chili paste) and fragrant with spices, like Tunisian cooking in general. Breakfast is *la bissara*, an egg poached in a spicy broth with fresh fava beans. Lunch is fish marinated in *chermoula*, a mixture of cilantro, onions, garlic, lemon juice, and olive oil, served with bread. Dinner is fish couscous with red peppers. The couscous is served in a large bowl, with the fish and peppers decoratively placed on top in a circular pattern and some of the fish broth poured on the top; the remainder of the broth is served in bowls. Harissa is stirred into the broth to taste. Dessert is *samsa* (fried pastry triangles) stuffed with dried fruit.

Kabylia is part of the Atlas Mountain range in northeastern Algeria. The region is known for olive trees, and many families make their own olive oil. Mint tea is rarely served in this region; proper coffee service is a matter of pride and considered an Ottoman influence. Herbal infusions made with fresh and dried herbs are very common. The Kabyle is a relatively poor region. The cooking is very simple, and expensive spices are rarely used; herbs and wild

greens are plentiful. *Avrum* (flatbread) is made daily from semolina flour and is ubiquitous. Avrum is served for breakfast with olive oil for dipping and for lunch with *h'miss* (grilled pepper salad). Couscous is made several times a week; it is served for breakfast or lunch with lben (buttermilk), for dinner with a soup or stew, and even for dessert sprinkled with sugar and raisins. Dinner is *tikerbabin*, large semolina dumplings in a light soup of tomatoes, zucchini, and turnips. Watermelon is ubiquitous during the summer. Fresh and dried figs are also served for dessert.

Shawiya Berbers live in the Aures Mountains and parts of Setif. The style of cooking is very much like that in the Kabyle, as the landscape and resources are similar. The same or similar dishes have different names. Breakfast is kesra (a semolina bread like avrum) and a glass of lben. The meat of choice for Shawiya pastoralists is lamb. Lunch is *chorba* (soup) made with lamb and root vegetables. Dinner is lamb steamed in a couscoussier; the lamb is rubbed with olive oil and garlic and seasoned with salt. Bread is also served, with a salad and braised cardoons.

Tuaregs are perhaps the most romanticized of Berbers, not just by Europeans, but by other Berber groups as well. The “Blue Men of the Desert” are regarded for a fine sense of aesthetics that seems to permeate their lives; their elaborate style of dress, artistic craftsmanship, and poetry tend to be a focus of documentation. However, they are not known for their cooking. *Taguella*, bread made from millet flour, is traditionally cooked in hot ashes covered with sand. Millet is also made into porridge or couscous and served with a basic sauce of tomatoes and onions, or goat and camel milk. Meat is scarce due to the loss of huge numbers of cattle to drought.

Mint tea is called *eshahid* by the Tuaregs of Niger; it is an integral part of social life, and the finer points of tea making and service are of utmost importance. The preferred base for mint tea is strong Chinese green tea; the British introduced gunpowder tea into North Africa in the 18th and 19th centuries via two routes, Morocco and Algeria.

Twice a year, Tuareg salt caravans travel from Timbuktu, Mali, to the salt mines of Taudenni, Mali,

and from Iferourane, Niger, to Salah, Algeria. Caravans are an important economic activity for Tuaregs; others depend on livestock for their livelihoods. However, erratic enforcement of national borders frequently severs trade routes; droughts and land degradation have left many Tuareg pastoralists even more impoverished. The Tuaregs of Niger live in what the United Nations calls the “ground zero of climate change.”

Libyan Berbers, like Tuaregs, cook bread in hot ashes covered with sand. The dough is spiced with sesame seeds, fennel seeds, and aniseed, shaped into a round loaf with a hole in the center, and then baked. The bread is eaten with a thick green or black tea. Tea drinking is a social occasion involving several courses. A tea course might include roasted and ground peanuts or almonds mixed into the tea.

The Siwa Oasis, located in the Egyptian desert near the Libyan border, is famous for date palm agriculture and olives. For thousands of years, the main economic activity in the oasis has been exporting these products to the Nile Valley and beyond. The salinity of the soil and mineral content in the water are thought to produce exceptional dates. Until the early 1900s, caravans originating in West Africa or the North African Sahara used the oasis as the last stop in their northern routes. The Siwa Oasis is being developed for tourism. A typical meal is comprised of bread, olives, dates, and goat cheese.

Tetouan is located south of the Strait of Gibraltar. Fatima R’Houni wrote the first book of Tetouanese recipes in the 1960s. Tetouanese Moroccan cooking shares many similarities with Tlemcen, in western Algeria. The cooking is noted for the kind of elaborate medieval-influenced dishes that North Africa is perhaps most famous for. Both are very Andalusian cities that also had significant Jewish populations. Ottoman influences, which are considered very refined, entered the city via Algerian refugees during the French colonial period. *Tagine t’afia* is a chicken casserole perfumed with ginger and saffron, garnished with sliced hard-boiled eggs and toasted almonds. *Seffa* couscous is made with semolina couscous or broken vermicelli, doused with butter, sweetened with sugar and raisins, and

Tuaregs prepare a meal by a campfire in the Sahara desert, Algeria. (StockPhotoPro)

sprinkled with fried almonds. *Mhancha*, a sweet pastry made with phyllo dough and ground almonds, is an Algero-Ottoman influence.

Eating Out

Restaurants in Berber regions vary widely, and there is no Berber restaurant as such. Restaurants that market themselves as serving Berber specialties simply serve regional variations of general North African cuisine. On the island of Djerba, a Tunisian Berber chef with a culinary degree and international work experience serves a range of North African specialties at his restaurant. In the Aures and the Kabyle, a few regional dishes are served in mom-

and-pop-type establishments. Moroccan *dadas* prepare elaborate regional specialties. Tea stops in the Sahara function as resting points and serve a limited number of refreshments.

Special Occasions

The vast majority of Berbers are Muslim to one degree or another. They celebrate the same holidays as larger North African society. There are, however, specialties that various groups or regions are known for, but that does not mean that that group invented the dish or that the dish is exclusive to a group.

Couscous is a celebratory dish for all North Africans, regardless of religion or region. Couscous with

seven vegetables is a Berber dish; the number seven is considered to be lucky. Bedouin, who came to North Africa during the Hilalian invasion beginning in the 11th century, also make this dish. Various Bedouin groups are now considered Berber in North Africa.

Historically, North Africa had fluid borders between the Muslim, Christian, and Jewish worlds of the Mediterranean. The earliest evidence of Jewish presence in North Africa dates to late Roman times in Carthage and surrounding areas. Berber converts to Judaism have been documented even in relatively remote regions. The Shleuh of the Atlas Mountains in Morocco speak Judeo-Berber and claim to be descendants of Hebrew tribes who came to North Africa before the Christian era. The island of Djerba in Tunisia is predominantly Berber and still has a significant Jewish population, who trace their origins back 2,500 years. For Rosh Hashanah, they make a round challah baked with a piece of dough cut out in the shape of an open hand. *Adafina* (Arabic for “buried treasure”) is a Jewish Sabbath stew of chickpeas, meat, potatoes, and whole eggs in the shell, made on Friday nights and left to cook slowly overnight. The dish is called *dafina* or *tafina* in Algeria and Tunisia, where it is still eaten.

North African Jews and Muslims have only nominal differences regarding religiously prescribed dietary rules. Both religions forbid pork. Wine is *haram* (forbidden) for Muslims but not for Jews. Shellfish and consumption of meat and milk together are *treif* (nonkosher) for Jews but *halal* (permitted) for Muslims. These differences are rarely encountered in North African cuisine: Pigs are scarce, wine is available in limited contexts, shellfish is only a minor component of coastal cooking, and yogurt marinades for meats are a nominal Ottoman influence.

Diet and Health

Berbers follow the same Islamic dietary principles as other North Africans. Regional folk beliefs tend to be just that, and not particularly Berber in nature or even shared by all persons in a region. As in many regions of North Africa, folk remedies are being lost to globalization and urbanization. Many older

people in rural areas know how to identify edible and medicinal wild greens, a skill that is disappearing with younger generations due to lifestyle shifts and changes to various ecosystems.

- Chamomile is collected in the spring and is used as an infusion for gastrointestinal problems. The leaves and stems are crushed and used to filter fresh butter to help preserve it.
- Musky bugle (*Ajuga iva* [L.] Schreb) is collected in the spring and summer in Morocco and sold as a dried herb. It is taken as a prophylactic against general illness and specifically as a detoxifying and purgative agent.
- In the sandy steppes of Tunisia, the perennial rose garlic is taken fresh to cure colds and used as a condiment for foods.
- Bishop’s weed grows all over North Africa in wheat and barley fields. It is an invasive plant that is currently being cultivated by pharmaceutical companies. Bishop’s weed is used as an antiseptic.

Currently, various academics and conservation organizations are cataloguing or trying to preserve local knowledge of medicinal plants. Conservationist-operated small farms exist in Algeria to support local economies by cultivating and selling medicinal plants.

In the Kabyle and in Setif, olive oil is highly valued as a locally abundant source of nutrition during times of scarcity. Infusions of herbs steeped in water are drunk regularly for general health and taste, as well as to cure specific ailments. An infusion of basil is believed to control flatulence and reduce stress. An infusion of thyme is drunk to detoxify the digestive system or inhaled to relieve sinus congestion.

Argan trees are native to the Souss Valley of southwestern Morocco and the Tindouf region of Algeria. Argan oil is valued as a flavoring in foods and as a beauty oil for protecting and softening skin. Cosmetic products containing argan oil are marketed in Europe.

In the Sahara, dates—often abundant and free—are prized for their nutritional value and caloric density. Dates from Biskra in the Mozabite region

in particular are highly regarded for their flavor and texture.

Iran

Overview

Although widely considered part of the Middle East, Iran is a country in Near Asia with a landmass that is roughly one-third the size of the United States. Largely mountainous and hilly in the north, the country gradually gives way to arid lowlands, a large desert in its center, and finally more lush, tropical climes at its southern border in the Persian Gulf. In the north, the area around the inland Caspian Sea is verdant and cooler.

Iran shares borders with Turkey, Iraq, Afghanistan, Baluchistan, and the former Soviet bloc countries of Azerbaijan, Armenia, and Turkmenistan. At its largest, early Iran, or the Persian Empire, encompassed all of those nations within its environs. As a result, the cooking styles throughout the nation have been duly influenced by those who lived in the larger empire. Later, Greek conquest of Iran brought foodstuffs including stuffed items such as grape leaves, while skewered marinated meats like *souvlaki* are thought to represent Persian influence on the Greeks.

Throughout this period and earlier, the Silk Road brought spices and goods from India and China into Iran. Through both trade and conquest, Iran influenced the cuisine of northern India. At its height in the Mughal dynasty, which lasted from the mid-1500s to the early 1700s, northern India demonstrated an artistry of food in the Persian style including prodigious use of lamb, elaborately layered rice dishes, and savory preparations that featured fruits, the use of saffron, and warm aromatic spices such as cinnamon. Today, Iranian food can best be

described as most similar to northern Indian cuisine minus the use of spicy peppers.

Food Culture Snapshot

Maryam Haghanifar, 27, is a typical 21st-century urbanite living in Tehran. She was raised in the northwestern city of Kermanshah, once a rural Kurdish stronghold but now a booming metropolis in its own right. Maryam's education brought her to Tehran, where she works as a sales analyst. Stylish clothes and jewelry are her passion, and like many young Iranian women who live in the city, she pushes the limits of Iran's Muslim sharia laws about *hejab*, or traditional dress for women.

Maryam and her husband, Farshad, 32, a musician, enjoy spending time in fashionable Western-style coffee shops or international-cuisine restaurants with friends, eating everything from sushi to pizza to Israeli falafel and fast food in the American style. At home the couple often eats take-out food for dinner, which is usually around seven or eight o'clock, because their hectic schedule doesn't allow for much cooking. Maryam, like so many Americans and Europeans, has adopted the habit of simply drinking coffee for breakfast while Farshad sticks to the more traditional tea and freshly baked bread with butter and jam. For both, lunch still follows traditional lines of being the larger meal of the workday and is usually a dish of rice with one of the many vegetable- and meat-based stews that are standard fare in Iranian cuisine.

When they do not purchase take-out food, the couple shops in Western-style supermarkets for their

An Iranian boy holds flatbread in a bakery in Tehran.
(<http://www.bigfoto.com>)

staples. Tehran has a number of excellent bakeries, from the very traditional bread bakeries to patisseries in the French style, and like most people Maryam and Farshad get their breads and sweets in one of those two venues. The bazaar remains a traditional place to do all manner of shopping, particularly for spices and dried fruits.

For special occasions, such as weddings or feast days, Maryam enjoys specialties from both Kermanshah and Tehran. *Koreshte-khalal*, or a stew of lamb and sweet orange slices, is typical in Kermanshah and indicative of the Persian habit of using a variety of fruits in savory preparations, and *koreshte geymeh* is a beloved stew of lamb, split peas, and fried potatoes.

Maryam says she has noticed a change in the desire to cook and eat at home among Iran's younger generation. They prefer to eat out and are unaware of some of the nation's most traditional dishes. She notes that she is less interested in "old-style" dishes, and she mentions steak and pizza as high on her list of favorite foods.

Major Foodstuffs

Iran produces a wide variety of fruits and vegetables, thanks largely to a system of underground irrigation that brings water from mountainous areas through the drier areas of the country. Since ancient times, Iran has been noted for an abundance of fruits like pomegranates, mulberries, persimmons, quinces, and melons of various types. Peaches and plums originate in Iran, and in the tropical south,

oranges of many types are grown as well as a particularly succulent date that is prized throughout the Middle East. Up to 30 different varieties of grapes grow in Iran. In ancient times, these were used for prodigious wine production. As an Islamic republic, the consumption of alcohol is forbidden in Iran, so the grape harvest is eaten fresh, dried, and even pickled as an ingredient in various dishes. Even today, the classic Persian garden written about by both ancient historians and modern-era travelers still exists, and abundant and myriad fruit trees are a core part of its layout.

Iran grows a variety of vegetables including the slender Persian cucumber that is often served as a fruit, many different squashes, and eggplant, which is so ubiquitous in use that it is often called the potato of Persia. Pistachios are a major crop, and Iranian pistachios are widely exported to aficionados the world over. Almonds are grown and well used, as are English walnuts, which are Persian in origin. Saffron is also largely produced in Iran and considered to be the finest quality to be had on the market. Tea is also produced in Iran and is drunk in large amounts throughout the day. It is often spiced with cardamom.

Caviar is another major Iranian export and is largely considered to be the finest in the world. A traditional and beloved food in Iran, caviar fell under the strict eye of Muslim clerics soon after the 1979 revolution that changed the country from a monarchy to a theocracy. The clerics declared caviar *haram*, or forbidden, but both culture and economy made that an unpopular edict. Soon thereafter, a series of intricate studies as to the nature of caviar-bearing sturgeon, including a treatise on the scales of the fish, finally led them to declare this national food product permissible under sharia law.

Since wheat grows throughout much of the country, a wide variety of breads are made throughout Iran and often vary from region to region. Breads are cooked in a tandoor, a clay-lined oven, or in a brick oven. Flatbreads such as *lavash* or *taftun* will be familiar to those accustomed to eating wraps, tortillas, or flatbreads. More unique items, like *barbari*, a long, ovular flatbread that is slightly risen, and *sangak*, flatbread cooked over hot stones, are

unique to Iran and best eaten hot. It is still common to see Iranians congregate at bakeries to obtain a daily supply of fresh hot bread.

The most important food to Iranians by far is rice; a long-grain basmati type is grown natively in the Caspian region. Called *domsiah* (black tail) for its black-tipped kernels, the rice is highly aromatic. Local production is supplemented by purchase of basmati rice from India. Rice is so ubiquitous in Iranian cuisine that it is eaten daily, sometimes at more than one meal. This varies according to income, and it is not uncommon for the poor, particularly in rural areas, to eat bread more often than rice.

Lamb and sheep are the major livestock in Iran because of their native adaptation to mountainous terrain, and Iranian sheep tend to be lean, carrying most of their fat stores in their tails. They are used not only for meat but also for milk, from which yogurt, a daily condiment in Iran, and cheese, akin to feta, are produced. Chicken is fairly popular as the number of chicken dishes demonstrates. Beef is eaten in small quantities, although it serves as the most common substitute for lamb for Iranians living and cooking outside of Iran. Pork is forbidden by Islamic dietary laws. In the north and south, a variety of fish—from the Caspian Sea and the Persian Gulf, respectively—is also consumed and throughout the rest of the country as procured from freshwater rivers and streams.

Cooking

In Iran, cooking is as much a matter of artistry and etiquette as of culinary skill. Except in large cities like Tehran, where multinational takeout is rapidly becoming a norm, Iranians prefer home-cooked meals, and even “simple” everyday fare usually comprises four or five different dishes including rice or bread, stewed meat and vegetables, salad, yogurt, fresh greens, and pickled vegetables. Food is cooked abundantly, particularly for guests, so that the utmost hospitality is demonstrated.

The skill of a cook, particularly in more affluent families, is first gauged by his or her ability to master rice, the most precious part of any Iranian meal, followed by mastery of the preparation of complex items such as layered rice dishes or long-simmering stews. This extends to making one’s own jams, pickles, and yogurts. It is not uncommon for an Iranian housewife to begin lunch or dinner preparation as soon as she has cleared the table for breakfast.

Rice is cooked one of two ways: The first is the more difficult *chelo*, in which rice is parboiled, then drained and mounded into a pot with oil or butter and a small amount of water, then covered and steamed. Chelo is fluffy with distinct grains, ideally featuring a crust of golden brown rice at the bottom, which is served separately. A second method, *kateh*, is made from boiling rice with oil or butter and salt until the water is absorbed, then allowing it to continue to cook over low heat. This is common for everyday meals. The *kateh* is overturned on a plate and sliced into like a cake. The crust is crunchy, but inside the rice is plump and fluffy, though not as separate as in *chelo*.

Chelo

Serves 4

1 c aged basmati rice (Koh I Noor and Lalquila are two good brands)

2 tsp salt

¼ c olive oil or clarified butter (melted)

1. Place the rice in a deep bowl and add enough cold water to cover by 1 or 2 inches. Swirl the rice

around with your hand until the water becomes cloudy, then gently pour off the water, being careful to not inadvertently discard any rice. Repeat this process four or five times or until the water runs clear.

2. After pouring off the last rinse water, fill the bowl with enough cold water to cover the rice by 2 inches. Add 1 teaspoon of the salt to the bowl as well. Set aside for at least two hours but preferably overnight.

3. When you are ready to cook the rice: Bring a saucepan (preferably nonstick) of water to a boil, and add the remaining salt. Pour off the soaking water from the rice. You can also pour the rice into a fine mesh strainer. Add the soaked rice to the boiling water.

4. Boil for 10–12 minutes on medium high, and remove from heat. Drain the rice into a fine mesh strainer.

5. Add 1 tablespoon of the oil or butter and 1 tablespoon water to the bottom of the same pan in which you boiled the rice. Swirl it around to coat the bottom of the pan.

6. Using a large spoon, carefully spoon the rice into the center of the pot to form a pyramid.

7. Mix 2 tablespoons water with the remaining oil or butter, and pour this mixture evenly over the rice pyramid.

8. Place a clean dishcloth over the pot and then place the pot lid over that, pressing down to secure it firmly and make a seal. Fold up the edges of the cloth over the top of the lid so they do not hang down and touch the burner. Alternatively, you may layer two pieces of paper towel and place them over the pot and then secure the pot lid on top of that.

9. Place the pot over low heat for 20 minutes. Remove lid and fluff rice. Once you spoon out the rice onto a platter, there should be a golden crust of rice on the bottom of the pan. This is called *tahdig*. Invert the pot onto a plate so the *tahdig* comes out in one golden crust. Serve alongside the rice. Serve with *koresh* (see following recipe).

Koresh *Geymeh*

½ tsp saffron, dissolved in ½ c boiling water

1 tbsp olive oil or clarified butter

1 medium onion, thinly sliced,

2 lb lamb, cut into 1-in. cubes

1 tsp turmeric

½ tsp cinnamon

1 tsp salt

Freshly ground black pepper to taste

1 tbsp tomato paste

2 *limou omani* (dried Persian limes) or ¼ c lemon juice

¼ c split peas

4 small Yukon Gold potatoes, peeled and sliced into matchsticks

Canola oil, as needed, for frying potatoes

1. Dissolve the saffron in the boiling water and set aside for at least half an hour but preferably overnight. The longer it steeps, the darker the hue.

2. Heat the olive oil or butter in a Dutch oven or heavy-bottomed saucepan on medium-high heat and add the onion. Sauté the onion until translucent, about 3–4 minutes.

3. Add the lamb pieces to the onion mixture, and stir well. Fry until the lamb is browned on all sides, about 8 to 10 minutes.

4. Reduce the heat to medium low, and add the turmeric, cinnamon, salt, and pepper and cook, stirring, for 30 seconds. Add the tomato paste and mix well. Cook, stirring, for 3 to 4 minutes.

5. Add enough water to cover the lamb pieces by 2 inches and reduce heat to a simmer. Add the *limou omani*, if using, and simmer uncovered for 40 minutes. If using fresh lemon juice, add in the last 10 minutes of cooking.

6. While the lamb mixture is simmering, place the split peas in a small saucepan with enough water to cover. Simmer on medium-low heat for 20 minutes or until tender. Drain and set aside.

7. Heat a large frying pan with 2 inches of canola oil. Test the oil by adding one small potato stick. If it bubbles and fries, it is ready. Add the remaining potato sticks and fry until golden brown on all sides. Remove from the pan with a slotted spoon and place on a tray lined with paper towels or on a rack set over a sheet tray to drain.
8. Mix the split peas into the lamb mixture in the last 10 minutes of cooking.
9. Serve koreshte in a deep bowl or serving dish and arrange fried potato sticks on top of the stew. Serve with chelo and tahdig, garnished with a tablespoon of the koreshte.

Most dishes start with some version of *piaz dogh*, or cooked onions. Stews follow the same method of preparation: Onions are fried, to which meat, most likely lamb, is added and browned. The mixture is then spiced, and a vegetable or fruit is then added to simmer for some time. This stew, or koreshte, is served with rice, and the form is commonly called *chelo koreshte* (steamed rice and stew). Iranian stews are named after the predominant vegetable since the meat tends most often to be lamb and is relatively little in relation to the vegetable or fruit. *Koreshte badamjun* (eggplant stew), for example, comprises meat and eggplant, but it is named after the eggplant. *Koreshte kadu* (squash stew) is named for the squash in the dish. *Ashe*, or soups, are incredibly popular and tend to be thick pottages that are mostly vegetarian in nature, thickened with yogurt or whey.

Layered rice dishes are very commonly cooked and are called *polloh*. They feature either a mixture of small pieces of meat and vegetables, in the nature of a *biryani* (a mixed rice pilaf), or nuts and dried fruits such as *zereshk* (barberries), a tart red berry that is used for culinary purposes mostly in Iran. As with koreshte these dishes are generally named according to the vegetable or fruit ingredient, including *al-baloo* (cherry) *polloh*, *zereshk* (barberry) *polloh*, and so on. Pollohs are created using a method of steaming in which parboiled rice is layered alternately with cooked ingredients, then tightly covered and

steamed over a low flame. Alternatively, sometimes pollohs are made by adding ingredients to steamed rice after both are cooked; “jeweled rice” is one example in which *zereshk*, dried fruits, and nuts are added after the rice is cooked.

Grilling, particularly of marinated meats, is a common cooking method and is most often used during picnics. It’s not uncommon to see whole families picnicking on fine days with a portable hibachi-type grill, cooking kebabs. Baking of bread is most often left to the numerous bakeries throughout every city and village. Sweets, which include both traditional items made with nut and bean flours, rose water, and saffron and also Western-style cookies, cakes, and pastry, are most often purchased, though it is not uncommon for items like rice cookies and baklava, containing pistachios rather than walnuts, to be prepared at home, particularly around holidays.

Pickling vegetables is another skill that the Iranian cook must master. Collectively called *torshi*, or “sours,” these pickled vegetables, ranging from pickled garlic or shallots to mixed vegetables and even herbs, are a condiment on the everyday table. Vinegar and a variety of spices are used, from angelica to nigella seeds and an allspice mixture called *advieh*, comprising ground rose petals, cinnamon, cardamom, pepper, turmeric, nutmeg, coriander, and cumin. This, too, can be made within the home by grinding whole spices or bought in the bazaar from a spice vendor.

Jams, compotes, and fruit syrups are other items cooked equally at home as well as purchased out, and they most often feature seasonal fruit, sugar, rose water, and spices, such as cinnamon or cardamom. Cold beverages called *sharbats* are made from various fruit purees, lightly spiced, or fruit syrups added to water. *Dugh*, a mixture of yogurt, mint, and flat or carbonated water, is also often made at home though bottled varieties are readily available.

Tea, the national beverage, is traditionally prepared using a samovar, a metal urn-shaped vessel with a heating chamber in the center that keeps the surrounding liquid hot. It steeps the tea leaves with

a consistent gentle steam. Because a samovar is not practical for everyday use, Iranians use a system of two tea kettles: Hot water is added to tea leaves, often with cardamom, in a small kettle and placed on top of a larger kettle to gently steam. The resulting tea is strong and dark and is added to small glasses, in which additional hot water is added to thin it out. The tea is typically served with a bowl of fresh fruit, a mixture of dried fruit and nuts called *ajil*, and, perhaps, small cookies or pastries.

Typical Meals

An Iranian breakfast always features hot tea, though coffee is not uncommon. Breads such as lavash, tافتون, or *barbari* are heated or preferably purchased fresh and warm and eaten with cheese or butter and jams. Eggs—cooked, fried, or in simple omelets—can be had as well.

As in most of the Middle East and part of Europe, lunch is the biggest meal of the Iranians' day, usually featuring chelo koreshte of some kind. The lunch hour, even for business, tends to be long to allow for some rest after the consumption of the heavy meal. Lunch (and dinner) is most often preceded and followed by the drinking of tea, which is consumed by placing a sugar cube in the mouth and taking small sips of the hot tea. Dinner features much of the same foods as lunch and is eaten fairly late in the evening, sometimes as late as eight o'clock.

Both lunch and dinner were traditionally served on a *sofreh*, or tablecloth, laid directly on the floor, around which diners would sit. A multiplicity of dishes are offered in addition to the main course, including *sabzi khordan*, or a plate of fresh herbs including mint, tarragon, parsley, basil, and scallion that are taken up with the fingers and eaten between bites of food. Radishes are also often included on the plate. Varieties of pickles, plain yogurt, and yogurt mixed with herbs or vegetables also dot the *sofreh*.

In modern times, most families eat at a dining table, though it is not uncommon for Iranians of all classes and level of urbanity to return to the *sofreh*

during large gatherings or for special occasions. On a daily basis, dinner is increasingly more akin to the traditional lunch in its variety and length, as it is, like in the West, often the only time family members get to enjoy a relaxed meal together.

Snacks of dried fruit, nuts, fresh fruit, and small sweets are often eaten throughout the day, usually with tea. Savory snacks served in profusion are called *mezzeh*, similar to the Turkish, Arabic, and Greek styles. Desserts, while not typical daily fare, would be eaten with the postmeal tea and usually include small cookies, date-based confections, or even ice cream, commonly topped with compote or jam. *Paludeh*, or Iranian ice cream, has a unique taste as it is made with rose water and cardamom.

Eating Out

Until the 20th century, the most common manner of eating outside the home was in teahouses, at street-food stalls, and in *chelo kebabis*, or restaurants that exclusively served kebabs and rice with its accompaniments. The chelo kebabi remains popular today, as the method of preparation using the tandoor is often not present in the modern home, especially in major cities like Tehran, where most people live in some manner of apartment. While street stands or stalls are not common, smaller indoor eateries, usually without seating, prepare other items not normally prepared at home, usually because of the cooking method: the use of a direct flame, as with grilled lamb liver, or deep-frying, as for falafel.

Teahouses have always been popular in Iran and were at one time a male-only gathering place. Today, teahouses range from the most simple takeout to high-end establishments featuring decor in the classical style, including Persian rugs and throw pillows on which to sit. A variety of mixed fruit, nuts, and pastries accompany the tea.

Today, a large number of multinational cuisines are available in the larger Iranian cities, from fast-food joints in the American style to Indian, sushi, Chinese, other Middle Eastern cuisines, pizza, Italian, and much more. In urban areas, takeout is increasingly used to “solve” mealtimes, particularly

dinner or for a quick midday meal during the workweek, although most Iranians prefer something more traditional like *chelo koreshte* for lunch, reserving takeout for the smaller dinner or as a treat. Increasingly, “foreign” eateries are taking on the tenor of traditional *chelo kebabis* or teahouses as places most valued for socialization. Sweets such as pastries and ice cream are common foods that are purchased and eaten out, particularly around festive occasions.

Perhaps the most prized form of eating out for Iranians is eating *al fresco* in the form of a picnic. Picnics usually feature grilled kebabs, which are traditionally cooked by men whereas women cook nongrilled foods. This is true both in the restaurant setting and within families, not dissimilar to the tradition of the backyard cookout in the United States. Breads, salads, fruits, pickles, and *sharbats* are typical. Picnics are common not only during good weather but also as an integral part of celebrations, particularly the 13th Day Festival of the Persian New Year.

Special Occasions

Foods for special occasions in Iran must follow the rule of extreme hospitality that is ingrained in the culture. A special occasion might range from the visit of a single guest to a wedding or celebration of a religious or national holiday. Regardless, the custom of *tarof* is key to meal preparation, serving, and consumption at those times.

The system of *tarof* is based on extreme selflessness and politeness on the part of both the preparer and the receiver of the food. A guest will enter an Iranian home and immediately be offered tea, fresh fruit, cookies, and bowls of dried nuts and fruit. The guest is expected to politely refuse the offer of refreshment, lest the host be put to any trouble. The entreaty to partake and refusal must pass back and forth at least three times until the host simply goes ahead and serves the items, to the guest’s extreme thanks. When sitting down to eat the main meal, the host serves guests first, and guests, in turn, thank the host profusely for his or her generosity. As part of

entreating guests in the home, meals must be as expensive and generous as the host can afford. Guests should not be made to feel that they must curtail their eating, even if they want seconds or thirds, although it would be rude to eat that much.

The dishes prepared for special occasions must be elaborate enough to demonstrate the skill of the cook; layered rice dishes are popular. Also served are complex dishes that showcase the cook’s ability to meld a variety of delicate spices and flavors, particularly, in many cases, showcasing the Iranian love for the sweet and sour.

Food is an important part of holidays in Iran. Not only are very specific dishes cooked but, in some cases, such as weddings and Noruz, the Persian New Year, ceremonial tables that use foodstuffs to highlight larger philosophical themes are the norm. At Noruz, an ancient Persian holiday that constitutes an ecumenical New Year on the first day of spring, a table is set with a *sofreh haft-sin*, or the “tablecloth of seven Ss.” The Ss comprise items that begin with the letter S in Farsi and may include apples (*sib*), sumac powder (*sumogh*), garlic (*sir*), jujube fruit (*senjed*), vinegar (*serkeh*), and sweets (*shirini*), as well as coins (*sekkeh*), hyacinth (*sonbol*), or other items starting with an *s*. Each represents the possibilities for the year to come, including sweetness, abundance, wealth, spice, and even, at times, bitterness.

A table decorated with *sofreh haft-sin* or “tablecloth of seven Ss” in celebration of Noruz, an ancient Persian holiday that constitutes an ecumenical New Year on the first day of spring. (StockPhotoPro)

The Noruz dinner always features *ash reshteh*, a thick vegetarian noodle soup, as noodles represent long life, and whitefish served with herbed rice (*sabzi polloh va mahi*), as herbs represent the green and rebirth of spring. Noodle rice (*reshteh polloh*) and an herb omelet (*kookooyeh sabzi*) are served for the same reasons. Sweets abound at Noruz and are an integral part of the feast. Traditional cookies made from rice, chickpea, and almond flour abound, as do baklava and other treats, such as *gusht-e-fil*, or elephant ear cookies, and *zulubia*, a fritter of yeast dough dipped in sugar syrup perfumed with rose-water essence. It is very similar to the Indian *jalebi*. Thirteen days after Noruz is the celebration of *seizdah bidar*, or “the giving of 13,” when families leave their homes for an elaborate picnic in a beautiful spot. Those who do not picnic try at least to eat their main meal outside the home.

Weddings are also an occasion for plentiful sweets similar to those served at Noruz. These include *noghle* (sugar-coated almonds) and *sohan assali* (honey almonds), which are placed on platters on a special *sofreh* that also features a plate of herbs, cheese, and bread to serve to the guests immediately after the ceremony to bring the couple good luck. Other items on the *sofreh* include a bowl of eggs to symbolize fertility, a bowl of honey for a sweet future, and other nonfood items—such as a needle and thread to “sew up the mother-in-law’s mouth”—to represent a healthy and happy marriage. The wedding feast comprises the most intricate dishes that are within the families’ means to provide. *Shirin polloh*, or “sweetened rice,” is always served and is a layered rice dish featuring orange peel, carrots, pistachios, almonds, and *zereshk*. A whole roasted lamb is served as at most major feasts.

Ramadan, or Ramazan, as it is called here, is celebrated in Iran. In this Muslim fasting month, the daily fast is broken with a date and a traditional dinner. During this month housewives would have a large predawn breakfast prepared for their family, most often featuring foods more traditionally eaten at lunch or dinner, to fortify them for the day ahead. On the last day of the fast, the feast-day

Iftar, a variety of both complex and humble dishes are placed on the table.

Diet and Health

The Iranian diet is particularly well balanced given that meat is eaten in relatively small proportion to vegetables and fruits, even when combined in the same dish. Sweets are eaten moderately, except during celebrations, and a variety of grains, in addition to rice and bread, including barley and whole-wheat germ, are consumed as well, providing additional sources of fiber.

According to the United Nations Food and Agriculture Organization, Iran’s average proportions of dietary energy from protein (11%), fat (22%), and carbohydrates (67%) are desirable from a nutritional point of view. Food is considered a major part of health and well-being in Iran, not simply based on diet but based on its believed effect on personality and psychological well-being. A system of “hot” and “cold,” called *garm* and *sard*, is similar to Ayurvedic and yin-yang principles of eating.

With a clear basis in seasonal availability the premise of *garm* and *sard* is an ancient one, believed to have originated thousands of years ago with Zoroaster, the founder of the Persian monotheistic religion of Zoroastrianism. The basis of the religion is the epic battle between good and evil, a battle that is thought to be waged within the human body and spirit as well. Foods must be used to balance the humors for best health, so, for example, if someone is “hot-natured,” he or she must eat cold foods, and vice versa.

Garmi, or hotlike food, thickens weak blood and speeds up the metabolism, while *sardi*, or coldlike food, thins the blood and slows down the metabolism. It is important to note that those classifications have nothing to do with temperature or spiciness but rather a system that was developed millennia ago. Beef, for example, is “cold,” while lamb is “hot.” Duck is “hot,” but turkey is “cold.” Corn is “hot,” but pumpkins are “cold,” and so on. The classification applies to all manner of food, from meat to fish,

fowl, grains, beans, vegetables, dairy, spices, herbs, and even beverages.

Iraq

Overview

Iraq is a little more than twice the size of Idaho, with a population around 27 million, sharing borders with Iran, Turkey, Syria, Jordan, Saudi Arabia, and Kuwait. Its sole access to the Arabian Gulf is through the southern city of Basra. Topographically and ethnically, Iraq is diverse. The mountainous north is inhabited by Kurds, who make up 15–20 percent of the population. A bit farther south dwell the majority of the Turkomans and Assyrians, approximately 5 percent of the population. The central and southern zones make up a fertile alluvial plain inhabited mostly by Arabs, who constitute 75 percent of the population. There is also a small ethnic minority of Armenians, largely concentrated in Baghdad and Basra. The western and southwestern region is a desert sparsely populated by nomadic Bedouin. Iraqis are predominantly Muslims, about 97 percent, and the rest are Christians and other minorities such as Sabians and Yazidis.

Food Culture Snapshot

Ahmed is a 12-year-old boy who lives in Baghdad with his family of seven. Today is his turn to accompany his mother to the neighborhood marketplace, something to which he looks forward. He enjoys the sight and aromas of fresh vegetables and fruits, and he feels flattered that his mother needs him to carry home the grocery bags with her. These days she does grocery shopping more often than she used to because refrigeration is not dependable due to frequent power outages. She looks tired but never complains, and Ahmed is happy to help.

The first stop they make is at the butcher's. His mother purchases lamb chunks on the bone, which usually go into the stew pot. She also asks for chunks of beef to be ground for her, at which Ahmed gets excited. Ground meat is used to make delicious elaborate stuffed foods such as *dolma*, an assortment of vegetables stuffed with meat and rice, and *kubba*, disks of rice, potato, or bulgur stuffed with meat. Since they are expecting guests for dinner, they also stop at a fish place, where river fish varieties, such as *shabbout* and *bunni* of the carp family, are displayed. She also buys small inexpensive fishes called *zoori* at Ahmed's request. He loves them fried. The bigger fishes will either be cut into pieces and then fried or be baked whole in the clay oven (*tannour*) that Ahmed's father built outside the house in a corner of their small garden. Ahmed has already started fantasizing about the golden yellow rice with raisins and almonds that his mother usually cooks with fish.

Their next stop is the vegetable and fruit stalls, a place so much alive with the hustle and bustle of shoppers, the earthy aromas, and vendors' loud chants and catchy phrases to attract customers. Ahmed's mother buys okra and fresh fava beans. "These are for the stews," she tells him. She further purchases eggplant, gourds (similar to zucchini), cucumbers, potatoes, tomatoes, peppers, green onions, white radishes with the leaves on, and small bundles of parsley, mint, basil, *kurrath* (similar to Korean leeks), and *rishshad* (garden cress). Most of the vegetables will be used for *dolma*, and Ahmed is hoping his mother will make his favorite, *poteta chap*, fried *kubba* made with potato. The herbs will be washed and served whole on a large platter with the main dishes. Were it wintertime, his mother

would have bought spinach, Swiss chard, lettuce, and fresh green beans.

For fruit, they buy grapes, sweet pomegranates, a small cluster of fresh dates, and the locally grown small white apples. A large watermelon would have necessitated hiring a taxi to go home, but they already have one at home. In winter, fresh fruits of choice would have been oranges and mandarins, and perhaps imported apples and bananas if available and affordable.

Next, they make a short stop at the grocer's to buy tomato paste and dried white beans. For the fish dish, Ahmed's mother needs to buy some *noomi Basra* (dried lime). She further purchases a small bottle of pickled mango (*amba*), eaten as a relish with the meal. But Ahmed loves to have it stuffed in bread with slices of boiled eggs and tomatoes. The last stop is at the confectioner's, where they purchase a box of the syrupy pastries *baklava* and *zlabya* (fried fritters), much to Ahmed's excitement.

Major Foodstuffs

To a large extent, Iraqi cooking is defined more by topography than by ethnicity, diverse as it is. The country is primarily agricultural. In the northern zone, it is cold in winter, and heavy snow sometimes falls on the mountains. Growing crops depends on rain, which falls in winter and spring. The central and southern parts are dry. There, the winter is mild and the summer is hot and completely rainless. The two major rivers, Tigris and Euphrates, are the main source for irrigating crops.

Grains, primarily wheat and barley, are the most important crops. They are planted in the fall and harvested in spring. Barley is more tolerant of salinity than wheat. Therefore, it is grown more in the middle and south than in the north, which is the land of wheat. In Iraq several varieties of rice are grown, the best of which by far is the aromatic *timman anbar*. It grows in paddies in the southern marshlands. In the course of the 20th century Iraq increasingly became more dependent on imported necessities to meet domestic demands, such as rice, wheat, vegetable oil, and sugar, among many other things, but they were all subsidized and hence affordable. That is why the economic sanctions after

1990 were devastating in their effects on the daily lives of ordinary people.

Meat comes from sheep, goats, and cattle. Iraqi sheep are distinguished by their fat tails (*liyya*), which have been a valuable source of fat, only recently shunned for health considerations. Mutton and lamb are preferred to other meat, particularly for dishes that require meat on the bone, such as *marag* (stew) and *thareed* (a stew with bread soaked in it). It is not cheap; therefore, quantities used depend on one's means. But since meat is a social gauge of some sort, when cooking for guests, more meat is thrown into the pot than usual. Goat meat is mostly eaten in the mountainous region, where goats abound. Beef is used for ground meat dishes, for kebab, both grilled and fried, and the endless stuffed dishes of *kubba* and *dolma*. Pork is hard to find since the majority of people are Muslims. Domestic poultry is not enough to meet the demand. Its meat is tough, and people always boil the chicken before doing anything else with it. Before the economic sanctions, substantial amounts of frozen chicken and eggs used to be imported.

Fish used to be plentiful in the Tigris and Euphrates and their tributaries. Fish dishes are more popular in the central and southern regions than in the north. Basra is the source for shrimp and *zubaidi* (pomfret), which, unlike river fish, has few bones. Southern marsh dwellers in Ahwar still salt and dry fish like their ancient ancestors used to do.

Traditional mutton briyani. (Paul Cowan | Dreamstime.com)

The richest yogurt, made from sheep and goat milk, is available in the northern region in springtime when the pastures are lush. Yogurt from the Kurdish city Arbeel is legendary. The best *geymer* (clotted cream) is made from buffalo milk. Fresh soft white cheese made from cow milk is called Arab cheese. Kurdish cheese made from sheep and goat milk is harder and saltier because it is aged.

The major fruit is the date. It grows in the central and southern regions. The north is too cold for it. Dates are eaten as fruit, both fresh and dried, and syrup, called *dibis*, is also extracted from them. In the northern region honey is more common. Fruits and vegetables are mostly locally grown and are all seasonal.

Basra has a long trade history with India, from where the best spices were imported. The basic *baharat* is a brownish spice mix of many ingredients including cardamom, cinnamon, ginger, cloves, and allspice. The yellow spice mix called *bahar asfar* is similar to curry powder. Iraqi cooks, mostly in central and southern Iraq, are fond of using the delicately tangy dried lime called *noomi Basra* (lemon of Basra), imported from Oman.

Cooking

Cooking with water was an advanced stage in the history of humans' attempts to make their food more palatable. This stage was already perfected in ancient Iraq millennia ago. One of three excavated cuneiform clay tablets written in 1700 B.C. in Babylon, south of present-day Baghdad, deals with 24 recipes for stew cooked with meat and vegetables, enhanced and seasoned with rendered fat from sheep's tail, leeks, onion, garlic, and spices and herbs like cassia, cumin, coriander, mint, and dill. Stew has remained a mainstay. Extant medieval Iraqi recipes and modern-day cooking attest to this. However, the introduction of tomatoes from the Americas around the 16th century revolutionized the way stew is cooked. They gradually replaced most of the thickening, souring, and coloring agents used in making the stews, such as nuts, sour fruit and vegetable juices, saffron, and pomegranate juice. Remnants of the medieval way of cooking tomatoless

stew can still be seen in the *summaqiyya* (soured and colored with sumac berries) of the northern city of Mosul and the *fasanjoun* (soured with pomegranate and thickened with walnut) of Najaf and Karbala, south of Baghdad. The preferred meat is lamb chunks on the bone, sometimes replaced with small, spicy meatballs called *ras il-'asfour* (sparrows' heads). Relatively recently, the saturated animal fat of rendered sheep's tail has been replaced with vegetable oil. Generally, the stews of the southern city of Basra are made spicier than the rest. The city is also known for its fish and shrimp stews and curries.

Related to stew is the traditional dish thareed, also called *tishreeb*, in which bread is soaked, because that was how stew was always served before rice became an affordable option through importation of American and Far Eastern varieties. Thareed prepared with chunks of lamb or chicken, *pacha* (a broth of sheep trotters, tripe, and head), and the meatless *tashreeb bagilla*, made with dried fava beans, are quite popular.

White plain rice is commonly served with stew, but it is also prepared in a variety of ways, depending on the occasion and affordability. It is garnished with almonds, raisins, and vermicelli noodles; made red with tomato juice; or colored yellow, most commonly with turmeric rather than the expensive saffron, and served with a whole browned chicken sitting in the middle. Rice is also offered as an independent dish, usually served with plain yogurt, as in *timman bagilla* (green rice with dill and fresh fava beans), *maqlouba* (upside-down eggplant dish), *timman tacheena* (with diced vegetables and meat), *mtabbag simach* (fried fish layered with rice), and *biryani*, which is a spicy mix of meat, vegetables, and rice reserved for festive occasions. Kurdish cooks in northern Iraq give biryani an elaborate touch by encasing the rice mix in thin sheets of dough and baking it in the oven. They call it *parda palaw*. Bulgur sometimes replaces rice, but this is more common in the northern region.

It is not customary to serve soup before the meal because it is a meal itself, eaten with some bread and salad vegetables. Unlike stew, soup does not have to contain meat. More commonly, it is prepared with

grains and legumes. The most popular soups are *shorbat 'adas* (lentil) and *mash* (mung beans). For a treat, sometimes small meatballs of *ras il-'asfour* are added.

Bread consumed with the meals can be the flat variety baked in the commercial or household domed clay oven, the *tannour*. *Sammoun* bread is commercially baked in brick ovens. It is diamond-shaped, similar in texture and taste to the Italian *ciabatta*. In the north, *rqaq* is the bread to have with meals. It is made by flattening simple dough into a large thin sheet using a dowel, and baking it on a heated, large, domed metal plate called *saj*. In the southern marshlands where rice grows, *khubuz timman* is made by pouring a batter of ground rice onto a heated plate, resulting in thin sheets of rice bread.

Nawashif (literally, “dry”) dishes are usually reserved for smaller meals, especially supper, or more conveniently offered, among many other things, at dinner parties. Most of them are fried, such as varieties of *kubba*, meat patties of *kufta* and kebab, and stuffed pastries like *boureg* and *sanbousa*.

The Iraqi cuisine is distinguished by the variety of stuffed dishes it offers. *Kubba* tops the list. The northern city of Mosul is especially renowned for its thin and huge flat disks of *kubbat Mosul*, usually boiled in wide pots. It is time-consuming and requires special skill; therefore, most cooks prefer to serve it as boiled small disks and balls. In northern Iraq, where it is more common to use yogurt in cooking, this sort of *kubba* is sometimes added to a delicate yogurt soup. *Kubbat hamudh shalgham* is rich soup made with chunks of lamb, cubed turnips, and chopped Swiss chard (which may be replaced with squash and mint in the summer) and thickened with crushed or ground rice. Then small balls of rice *kubba* are added to the pot. Iraqi Jews make it red by replacing the turnips with beets, and instead of rice flour, *farina* is sometimes used. They also add these *kubba* balls to *okra* stew.

Vegetables are stuffed in dishes like *dolma* and *sheikh mahshi*. For *dolma*, vegetables like cored eggplant and gourds, onion layers, and leaf vegetables like grape leaves and Swiss chard are stuffed with a mix of rice and ground meat and simmered in liquid until it all evaporates. For Lent, Iraqi Christians

cook *dolma* without meat and use olive oil. For *sheikh mahshi* no rice is used, only meat, hence the name “master of all stuffed dishes.” It is simmered in tomato sauce until it thickens nicely.

Most of the traditional desserts are simmered on top of the stove, since ovens in households did not become common until perhaps the middle of the 20th century. Light and thickened puddings are made with cornstarch, vermicelli noodles, dates, carrots, and other ingredients. Fried syrupy pastries like *luqmat il-qadhi* (“judge’s morsel,” deep-fried dough balls soaked in syrup) are also popular. Desserts are flavored with cardamom, rose water, or orange blossom water.

Typical Meals

All meals are served with warm bread, preferably purchased just before the food is served. To wash down the meal, several rounds of sweet hot tea are served in *istikan*, the small transparent glasses. A typical summer breakfast would be sandwiches stuffed with cheese along with watermelon or slices of peeled cucumber. In winter, it might be *bastirma* (Iraqi cured sausage) with eggs, or slabs of *geymer* (clotted cream) with date syrup or honey. Brunch on weekends can sometimes be elaborate, such as *tashreeb bagilla*. Dried fava beans are simmered to tenderness, and then broken pieces of flatbread are simmered for a while in the broth and then ladled onto a large platter. The fava beans are scattered all over it, and a generous amount of crushed dried *butnij* (river mint) is sprinkled over it. Then it is drizzled liberally with sizzling hot oil or clarified butter. Another typical brunch could be *kahi*, purchased from specialized bakeries. It is made of simple dough flattened into a large, thin disk, brushed liberally with oil, and then folded and baked. *Kahi* is eaten drenched in light syrup with a generous slab of *geymer* on top.

Lunch is the main meal for most families. Stew and rice (*timman w'marag*) are served almost daily, and the possibilities for variety within this category are endless. *Okra* stew is the most-liked summer stew, and for winter, white dried beans (*fasoulya yabsa*) and spinach (*spenagh*). Stew is customarily

served in a big bowl. It is spooned out and mixed with some rice and eaten with condiments, such as pickles, amba (pickled mango), and plenty of herbs. A refreshing drink served with the meal in summertime is *shineena*. It is plain yogurt diluted with water, seasoned with a pinch of salt, whipped until frothy, and served chilled with ice cubes. On cold winter days, it is common to serve rich and hearty soups that stick to the ribs for lunch.

In the afternoon, the family gets together for a round of freshly brewed tea served with simple dunking cookies purchased from specialized bakeries, such as *ka'ak* and *bakhsam*, or *churek*, which is lightly sweetened yeast pastry. The afternoon is also fruit time.

Supper, usually served around seven or eight o'clock, is the time for *nawashif* (dry dishes), such as *kubbat halab* (rice dough stuffed and fried) or *'uroug*, which is fried patties of ground meat mixed with chopped onion and parsley. The family is often treated to simple puddings or the richer and thicker *halawa* (a fudgelike sweet made from nuts or sesame seeds).

Margat Bamyā (Okra Stew)

Serves 4

To get rid of most of the slime inside okra, cut off both ends and wash it briefly. Fill three-quarters of a medium pot with water and bring it to a quick boil. Add okra and let it boil briefly (no more than 5 minutes). Then strain it and use or freeze for future use.

4–6 chunks of lamb on the bone (2–2½ lb)

2 tbsp oil

5–6 cloves garlic, whole

3 heaping tbsp tomato paste (one 6-oz can), diluted in 4 c hot water

1½ tsp salt

1 tbsp pomegranate syrup, or ½ tsp sugar and 2 tbsp lemon juice

1 lb fresh or frozen okra

2–3 small dried hot peppers (optional)

In a medium-heavy pot, sauté meat pieces in oil until browned, about 10 minutes. Add enough hot water to cover the meat. Bring to a quick boil, skimming as needed, and then let simmer gently, covered, on low heat until meat is tender and moisture evaporates, about 45 minutes. If meat is cooked and there is still some liquid in the pot, strain it and use it as part of the liquid required in the recipe. To the meat pot, add garlic cloves and stir for 30 seconds. Stir in the rest of the ingredients, and bring pot to a quick boil, skimming as needed, then reduce heat to medium low, and simmer gently, covered, until sauce is rich and somewhat thickened (35 to 40 minutes).

Serve the stew with a side dish of plain white rice or bulgur along with slices of onion and green pepper. Another popular way of serving okra stew is having it as *tashreeb*: Put bite-size pieces of flatbread in a deep dish and drench it with the stew sauce. Arrange meat pieces and garlic on top.

Eating Out

The first European-style restaurant opened in modern-day Baghdad in the 1920s. It boasted a menu, the first one in Baghdad, which offered Italian, Greek, and Lebanese dishes. However, Iraqis, even those who could afford it, were very slow to develop the habit of dining out for leisure, not doing so until the late 1960s.

For the majority of the population, the best option for dining out would be carry-out foods from stalls and small shops. A treat on an outing on a cool summer evening might be warm sandwiches of grilled meat, such as *mi'lag* (liver), *tikka* (cubed lamb), and kebab (skewered ground meat). Other options are *guss* (*shawirma*, similar to gyro) or grilled hamburger slathered with yellow mustard and *sos* (steak sauce similar to A1). At small specialized bakeries, succulent *lahm b'ajeen* might be another tempting option. It is flatbread topped with a thin layer of a spicy mix of fatty ground meat with chopped onion, tomatoes, and parsley. Cold sandwiches of sliced pot roast or boiled beef tongue are popular movie theater snacks.

An Iraqi family has a picnic at the Shrine of the Ezekiel. (StockPhotoPro)

A much more expensive summertime treat would be the famous Baghdadi *masgouf* fish barbecued and served in the open-air cafés scattered along the bank of the river Tigris. Customers are allowed to choose the fish themselves from small fish tanks. The fish is split open, washed, and sprinkled with coarse salt. Then it is impaled with other fishes on sticks arranged in a circle around a flaming wood fire. After an hour or so the fishes are placed flat on the smoldering fire so that their skins may crisp. Since river fish is riddled with numerous small, prickly bones, people usually eat it with their fingers.

The major bulk of the business of the small restaurants and food stalls that abound in the bustling city centers comes from the regular customers who work far from home for the day, or travelers. They usually serve the familiar staples of rice and stew or warm sandwiches of grilled kebab and guss. A hearty breakfast or a whimsical late-night

meal might be the traditional dish *pacha*—a broth made with sheep’s head, stomach, and feet. On cold winter days, passersby might find the aroma emitted from the steaming cauldron of *kubbat burghul* (stuffed disks made with bulgur wheat) at a street-corner stall too tempting to pass. The steaming pots of *lablabi* (boiled chickpeas) and *mayi’ il-shalgham* (tender boiled turnips) might be equally hard to resist.

Special Occasions

During Ramadan, which begins and ends with the first appearance of the crescent moon, Muslims abstain from food and drink from sunrise to sunset. They usually break their fast first with a few dates and yogurt or water, in emulation of a tradition set by the Prophet many centuries ago. *Iftar*, which is the daily Ramadan meal, usually begins with soup,

mostly lentil, followed by rice and stew, and platters of dolma, perhaps some kubba, or other nawashif dishes. A favorite drink with the meal is *sherbet qamar il-deen*, a refreshing, thirst-quenching beverage made from sheets of dried apricot. A few hours later, it is customary to enjoy some of Ramadan's favorite desserts, baklava and zlabya. Before sunrise, a simple light meal called *suhour* is consumed.

The appearance of the new crescent moon announces the end of Ramadan and the beginning of one of the two major Muslim holidays, the Small Feast. It is a three-day celebration during which Muslims exchange visits and share meals. A variety of rice dishes with lamb or chicken and stews are prepared for guests, as well as dolma and kubba. Cookies called *kleicha* are offered to guests with sweet tea. The second major religious holiday is the Big Feast, which lasts for four days. It celebrates the end of the ceremonies of hajj (pilgrimage) to holy Mecca. Sheep are usually slaughtered to honor the occasion. Most of the meat is distributed to the needy, and with the rest some traditional dishes are prepared, such as pacha.

The dishes Iraqi Christians prepare for Christmas and Easter are not much different from the ones already mentioned. For Lent, a succulent meatless version of dolma is made with olive oil. Before the mid-20th century there was a thriving community of Jews in Iraq, who prepared special dishes for their own religious days and feasts. For the Sabbath, *tiby-eet*, also called *tannouri*, was cooked. It is a rich chicken dish with rice simmered overnight in the clay oven (tannour). Both Christians and Jews share the Muslims' fondness for the festive *kleicha* cookies. The Christians bake them for Christmas and Easter, and the Jews for the joyous festival of Purim, which occurs in springtime. They call them *ba'ba' bil-tamur* (date-filled disks).

In Iraq, March 21 is a national holiday celebrating spring. The feast is called Norouz, and it is an essentially Kurdish festival, deeply rooted in the ancient Mesopotamian New Year spring celebrations. Typically, families would spend the day out in picnic areas enjoying huge pots of dolma.

The Muslim New Year, which occurs at the beginning of the lunar month of Muharram, is not

Date-filled cookies called Kleichat Tamur. Christians bake them for Christmas and Easter, and Jews bake them for the joyous festival of Purim, which occurs in springtime. (iStockPhoto)

celebrated by Iraqi Muslims the way Christians do the first day of January. Specifically, for Shiite Muslims, it begins a period of religious ceremonies that mourn the martyrdom of the Prophet's grandson al-Hussein, who was killed in battle on *'ashoura*, the 10th day of this month. For this occasion, wheat porridge called *hareesa* is cooked in huge cauldrons on wood fires set in the street. Pearled wheat is simmered with fatty lamb all night long, and neighbors take turns stirring and mashing it almost constantly until it looks like smooth, thin paste. Early in the morning it is distributed to the neighbors and offered to passersby, drizzled with sizzling hot clarified butter and liberally sprinkled with sugar and cinnamon.

Offering meals for the spirits of the deceased is customary. The family of the deceased Muslim offers evening banquets the first three days after the burial rites are concluded. The beverage offered on such occasions is sugarless Arabic coffee served in small cups. On happy occasions like weddings, guests are greeted with a sweet drink called *sherbet*. It is made by diluting syrupy condensed fruit juice (similar to cordial) with chilled water. As for the wedding feast itself, the centerpiece will typically be *qouzi*, a whole lamb stuffed with rice and roasted and served with different kinds of stew. Other elaborate dishes are also offered, mostly of the nawashif (dry) type, such

as varieties of kubba, stuffed pastries (boureg and sanbousa), grilled meats, and so on.

When social gatherings were still strictly gender segregated, perhaps in the 1980s and earlier, women used to hold afternoon parties called *qaboul*. They would discard their *abayas* (black cloaks covering the body from head to feet) and have a good time, singing, belly dancing, cracking toasted watermelon and pumpkin seeds, and enjoying the dunking cookies *ka'ak* and *bakhsam*, along with *kleicha* and *khubz 'uoug* (traditional flat tannour bread with meat and vegetables).

Men sometimes get together to share alcoholic beverages, such as the indigenous *'arag* (distilled date wine) and beer. They are usually consumed with the familiar little *mezza* dishes of *tabboula* and hummus, or simmered dried fava beans (*bagilla*) and chickpeas (*lablabi*), along with some *nawashif* dishes like grilled meat. In springtime, a favorite *mezza* dish in northern Iraq outside the city of Mosul would be grilled sparrows (*'asafeer*). They were particularly popular in medieval drinking sessions, as they were believed to be an aphrodisiac.

Kleichat Tamur (Date-Filled Cookies)

Makes about 25 pieces

3 c all-purpose flour

1 tbsp sugar

½ tsp each of baking powder, cardamom, and ground aniseed

¼ tsp each of cinnamon, crushed nigella seeds, and salt

¾ c oil or melted butter

⅔ c water, room temperature

1 egg, slightly beaten, for glaze

Preheat oven to 400°F. In a big bowl, combine dry ingredients. Add the oil or butter, and rub mix between the fingers until it resembles breadcrumbs. Add water, and knead for about 5 minutes to form a pliable dough of medium consistency.

Take a piece of dough, the size of a walnut, and flatten it with fingers into a disk. Put a heaping teaspoon of date filling (recipe follows) in the middle, and gather the edges and seal well to prevent the date from showing. Put the stuffed piece into a wooden mold (available in Middle Eastern stores), press it in well, and tap it out. Repeat with the rest of dough. Arrange the cookies on a baking sheet, brush them with beaten egg, and bake them in a preheated oven until golden brown, 15 to 20 minutes.

Date Filling

2 c pitted dates

About ¼ c water

2 tbsp butter

½ tsp each cinnamon, cardamom, and coriander seed, all ground

¼ c toasted sesame seeds

1 tsp rose water or orange blossom water

Put dates, water, and butter in a heavy skillet. Cook over low heat, mashing with the back of a spoon, until the dates soften. Add the rest of the ingredients, and mix well. Allow to cool and use as directed.

Diet and Health

It is difficult to generalize about the diet and health of the Iraqi people today as the country has been going through trying times for at least 20 years. Years of economic embargo and military attacks have left most of the population, especially children, malnourished. These adverse circumstances are also believed to be the cause for an increase in diseases, especially cancer, and environmental pollution.

Under normal circumstances, however, the Iraqi diet is reasonably healthy and balanced, with more emphasis on vegetables than meat, which is indeed mostly dictated by economic constraints rather than health concerns. The majority of cooks have embraced vegetable oil and abandoned saturated animal fats, such as *dihin hurr* (clarified butter) and

liyya (sheep's tail fat). Still, most of the traditional foods, collectively called *nawashif*, are fried, a vice Iraqis share with other Middle Eastern cooks.

Dessert is not served after a meal on a daily basis. People are more accustomed to having dates and melon, for instance, than rich pastries. The favorite beverage to drink after meals is black tea, which indeed has been acknowledged to possess healthy properties. But people usually prefer to have it very sweet. While this might offset the tea's benefits, it does, nonetheless, satisfy the sweet tooth of many.

During medieval times, the predominant dietary theory in the region was influenced by the classical doctrine of the four elements, that is, that the world, including food and the human body, is basically composed of fire, air, water, and earth, each of which possesses innate qualities. For instance, fire is hot and dry, while water is cold and moist. To maintain good health, the elements need to be kept in harmonious balance. Although this theory is now obsolete, remnants of its practices can still be recognized in the way Iraqis look at food. For instance, gourds are considered an ideal summer vegetable because they are cold. People with short tempers should not consume eggplant in excess because it is hot. Iraqis eat a lot of dates, and to balance their hot properties, they are usually served with cucumber or yogurt, both of which are cold.

Israel

Overview

The State of Israel, founded in 1948, is a Middle Eastern country located on the Mediterranean Sea. Lebanon and Syria form its northern border; Jordan is to the east and Egypt to the south. Israel is a democracy with slightly over seven million citizens. The vast majority are Jewish while approximately 20 percent are Arabs. Two languages are primarily spoken in Israel, Hebrew and Arabic, but a large portion of the population is fluent in English and/or Russian. Throughout the history of modern Israel, waves of Jewish immigrants have arrived from all over the world. From the 1990s on, close to a million Jews from the former Soviet Union have arrived in Israel. In smaller numbers, Jews from Ethiopia, Argentina, and France have also moved to Israel. Thus, Israel has become culturally and gastronomically a heterogeneous society as each group of immigrants have brought with them unique culinary traditions.

Israel is identified as the Jewish State, and therefore all its public institutions are required to follow the traditional Jewish dietary laws of *kashrus*. Kashrus, or “keeping kosher,” involves compulsory rules for the slaughter of animals and food restrictions including avoiding pork products and shellfish and refraining from mixing dairy and meat products. Fifty-three percent of Israeli Jews identify themselves as keeping the ritual dietary laws. On certain holidays such as Passover, Jews abstain from eating leavened bread. Although the majority of Israelis are secular Jews, many still abide by some or all of the rules of kashrus. For example, it is not unusual for a family to keep a kosher kitchen but

eat nonkosher meals outside the home. Nonkosher food is available throughout Israel in certain food chains, open-air markets, small delicatessens, and restaurants. However, all kosher restaurants are required to be closed on the Sabbath.

In general, the Israeli diet is rich in fresh fruits and vegetables, along with a variety of grains, bread, poultry, and milk products. These foods are readily available at reasonable prices. Certain items are under price control by the Ministry of Commerce and Trade in order to assure that everyone in Israel can afford to purchase white bread, flour, sugar, margarine, oil, eggs, and milk. Israelis have a wide variety of dietary practices based on income, ethnicity, education, and level of religious observance. Therefore, it is difficult to talk about the typical Israeli diet.

Food Culture Snapshot

Naomi and Dan Cohen can be found on late Thursday afternoon at the local supermarket doing their weekly shopping in a Tel Aviv suburb. Naomi is buying the favorite foods of her family (husband, two children, and a dog). Their typical cart is filled with two or three kinds of bread or rolls and a box of sweetened breakfast cereal along with milk and milk products such as flavored yogurt, yellow cheese, and a large variety of white cheeses. Vegetables and fruits take up considerable space in the cart. Most are fresh, although frozen and canned are available. It should be noted that consumption of fruits and vegetables is on the decline in Israel, as these are being replaced by convenience foods and snacks. At the meat counter, Dan chooses

fresh chicken and turkey breast. A carton of eggs and packages of frozen fish fillets and chicken cutlets are also added to the cart. Other foods like pizza and hot dogs along with rice, noodles, and potatoes are part of the weekly shopping. Middle Eastern foods such as hummus spread and tahini sauce are eaten by the family regularly. If the family is planning a weekend picnic at a local park, the Cohens will buy prepared eggplant and cabbage salads along with kebabs, steaks, and pita bread. Snack foods are quite popular. The adults prefer roasted sunflower seeds, nuts, energy bars, and dried fruit, while the children choose potato chips, cookies, candies, and locally produced peanut doodles (*bamba*). Every week a case of mineral water and a case of soft drinks are also purchased. Next to the supermarket is a small store specializing in organic foods. Some of the Cohens' friends prefer this store or frequent local farmer's markets. However, the prices for organic foods tend to be high and choice is limited.

The Hatib family, Ibrahim and Suhad, live in an Arab town near the city of Hadera, a medium-sized city in central Israel. Although some of their shopping is done in a large supermarket, they tend to purchase much of their food from smaller shops in their town. Meat (chicken, turkey, and beef) is purchased from the family butcher, who is considered a trustworthy merchant. Spices and legumes are also bought in stores that cater to this sector of the population. Bread is bought fresh daily at a local bakery. Often, one of their children will go to a nearby restaurant to purchase hummus. Suhad is often busy preparing dishes at home and devotes significantly more of her time to cooking than her Jewish counterparts do. She often pickles olives, eggplants, cucumbers, and turnips for her family and purchases most of the family foods as basic ingredients rather than in prepared forms.

Major Foodstuffs

Israel is a modern developed country and produces almost 70 percent of its food requirements. Due to the global nature of the world food market, food is exported to Europe and America, and products from around the globe can be found in most Israeli supermarkets. Fruits and vegetables are locally grown and are available in season. In the winter,

common fruits are citrus, kiwi, apples, persimmons, quince, and bananas, and, in the summer, strawberries, peaches, apricots, mangoes, cherries, cantaloupe, watermelon, plums, figs, dates, and grapes are available. Vegetables are grown in greenhouses and are often available year-round. The tomato is probably the most popular vegetable, with cucumbers and peppers coming in close behind. Carrots, fennel, turnips, parsnips, eggplant, cabbage, zucchini, beets, yellow squash, onions, spinach, potatoes, broccoli, cauliflower, mushrooms, lettuce, radishes, artichokes, okra, and string beans are all found in the produce section. A new trend is purchasing fresh herbs, which are sold prewashed and packaged.

Although Israel is a small country, there is a large diversity of climates, soils, and weather. Consequently, agronomists have worked hard to develop methods to produce high yields of crops in desert soil and have used innovative technologies to grow grapes in saline water and melons and citrus in sandy soil. Israel is a leader in agricultural development, and on its markets' shelves new products can be found, such as peppers in virtually every color, red curled parsley, and pagoda cauliflower.

The dairy industry in Israel is well known for its production of a rich variety of yogurt and cheeses. Unlike in Europe, most of the cheeses are white cheeses similar to a curdless cottage cheese that can be spread on bread or crackers or put in salad. These cheeses range in fat content from 0 to 30 percent, with the most popular being 5 percent fat. Some of the cheeses are made with spices and vegetables for additional flavor. Yogurt is sold plain or with added fruits, candies, or granola, and new varieties and flavors are continually appearing on market shelves. Israelis also enjoy milk-based flavored puddings and creams.

Meat or poultry dishes are eaten daily, with chicken and turkey being the most popular. Surveys show that Israel consumes the highest amount of turkey per capita in the world. Unlike the typical 10-pound American turkey, Israeli turkeys are significantly larger and not sold whole. Turkey legs, breasts, necks, and wings are sold separately and used in foods ranging from cold cuts to *shawarma*

(shaved turkey cooked on a skewer). Beef, lamb, and pork are all eaten but in smaller quantities. Commonly, beef is imported frozen from South America, while poultry, pork, and lamb are raised locally. Fish is also part of the Israeli diet and sold fresh, pickled, or frozen as fillets. Some fish are imported, and others are raised locally in both fresh- and salt-water ponds. Eggs are an important part of the Israeli diet. On average, Israelis consume one egg per day. Sources of fat include soy, canola, and olive oil along with margarine and butter. Common grains eaten in Israel are rice, corn, and wheat (bulgur, semolina, and pasta). Legumes are part of many traditional foods, but their popularity is decreasing. Chickpeas (hummus) and lentils (*majadara*—rice with lentils and onions) remain popular in both Jewish and Arab homes. Beans are consumed more in winter months and are eaten as part of the overnight cooked Sabbath stew (*cholent*). Israel has a well-developed soy-food industry, and imitation meat and milk products are very popular.

The most distinctive feature of the Israeli diet is diversity. It is impossible to characterize Israeli cuisine as a genuine entity as one might describe French food or Italian food. Within the Israeli diet, there are North African dishes, Asian dishes, South American foods, and Eastern European delicacies. There is also a strong Middle Eastern and American influence on locally eaten foods. The majority of Israelis are first- or second-generation immigrants, many of whom arrived as refugees; therefore, little attention has been given to the development of a hedonistic ethos of dining. Cooking and eating have served a functional role until more recently, when Israel has become more exposed to global culinary trends and fast foods. The younger generation of Israelis is well traveled and attempts to produce at home the exotic dishes consumed abroad. In addition, Israeli television broadcasts a multitude of cooking shows from around the world, and Internet access is widespread.

Israel has a hot climate, and it is important to consume sufficient amounts of liquids. Many Israelis drink large amounts of tap water, while others opt to purchase mineral water. This is available in small bottles or home coolers. Expensive filter systems are

Pizza being made at a Jewish restaurant in Israel. (iStockPhoto)

sold for personal and office use that dispense both hot and cold water. Common beverages include soft drinks, coffee, and tea. Coffee preferences range from a quick cup of instant to gourmet varieties of cappuccino and espresso. Beer, wine, *arak* (a clear spirit flavored with anise), vodka, mixed drinks, and cocktails are all consumed in Israel.

Cooking

Preparation of traditional foods is time-consuming and labor-intensive. As in most cultures, it was customary for women to prepare food for their families. Israel was founded on an egalitarian ethos and socialism. The early pioneers living on *kibbutzim*, socialist collective communities, strived for equality between men and women. Both genders were

equally responsible for food preparation in collective dining halls. However, in more religious homes and in the Arab community, women retained the role of domestic cooks. Today, a large portion of the workforce is female, and less time is available for food preparation in the home. Consequently, microwaving is popular, and slow cooking is most often done, if at all, on the weekend, for the Sabbath meal and for religious holidays. Baking is rare, and ready-to-eat cakes and cookies are sold in bakeries and supermarkets. In some homes, a revival of home-baked bread can be found, often with the aid of bread machines.

Modern Israeli homes are outfitted with the latest cooking equipment, from microwave ovens to food processors and espresso machines. Expensive cookware from around the world is available in local stores. A wide variety of cooking methods are used in homes, including boiling, roasting, broiling, sautéing, stir-frying, and deep-frying. Israelis enjoy outdoor grilling, and on national holidays and weekends it is common to see families enjoying a cook-out. As in the case of barbequing, men are most often the chefs on these occasions.

In the Arab community, home cooking is much more common. Regardless of their level of education and employment status, most women cook on a daily basis. Modern cooking devices are employed to save time and labor, but traditional foods are still eaten regularly. Local bakeries produce pita bread, which is bought fresh. Grilling and broiling are not commonly performed for cultural reasons. It is thought that serving a guest broiled meat is an insult, as it takes little effort to prepare and thus suggests that the guest was not worthy of being served foods that were specially prepared.

Typical Meals

Israel is ethnically and socially heterogeneous, yet there are some typical eating patterns and meals that have arisen over time. During the week most Israelis eat breakfast on the run. Readily available foods such as yogurt, breakfast cereals with milk, toast and white cheese, a slice of cake with coffee, or fruit often make up the first meal of the day.

Many have a 10 A.M. snack, in particular school-age children. This snack most frequently consists of a sandwich, fruits, yogurt, cookies, or pretzels. It also may be a fresh roll and chocolate milk sold in small plastic bags. In the Arab community, the traditional breakfast is no longer common, and many families eat breakfast cereals, flavored yogurts, or white bread with chocolate spread.

Lunch is the major meal of the day and usually contains a serving of protein-rich food. Most popular are chicken or fried breaded chicken cutlets (schnitzel), meatballs (chicken, turkey, or beef), fish (breaded and fried, baked, formed into fish cakes, or grilled), or soy meat (hot dogs, hamburgers, tofu). This is accompanied by two side dishes, one a carbohydrate and the other a cooked vegetable or salad. The carbohydrate is rice, potatoes, or pasta alongside a wide variety of seasonal vegetables. A dessert of fresh fruit or cake is also common. Schools in Israel do not have cafeterias, and most children return home for a midday hot meal. Others are served a hot meal by catering companies at afterschool programs. Adults also eat the main meal of the day during work hours, either in a company cafeteria or in small restaurants.

In Arab families, a hot meal is served at home upon return from work or school. Fewer women work outside the home in this community, and even if they are employed, they are still expected to prepare a home-cooked meal every day. Legume and rice dishes are more common, and traditional Middle Eastern foods are often served. However, more and more families are imitating the Jewish food practices and incorporating dishes such as fried breaded chicken cutlets (schnitzel), pizza, pasta dishes, casseroles, and vegetable soups into their meals. Commercial soup powder and ketchup are now used in most homes.

During the workweek, dinner is a lighter meal consisting of salads, sandwiches, eggs, hummus, pizza, grilled cheese, and milk products. This fits in well with the hot climate. On Friday night, the Jewish Sabbath, a special dinner is prepared (see the following).

Traditionally, Jewish families ate all meals together. This was an important aspect of daily life and helped to build strong connections among

family members. In modern-day Israel, where much of the workforce is female and working hours are longer than in the past, there is less time for the luxury of family meals. Today, it is common to see latchkey children who return from school and are responsible for heating their own lunch. Although families do make an effort to eat dinner together, work schedules and afterschool activities often interfere. In Arab families the men traditionally ate separately from the women and children. Even today, in some homes, women eat with their children and serve their spouses a meal when they return from work.

Eating Out

Israelis eat out for many reasons. A growing portion of the workforce chooses to eat lunch either at work cafeterias, which are often subsidized, or at small restaurants that serve inexpensive, home-style meals. Eating out has also become a form of leisure activity, and many families dine out on a weekly basis. Special occasions are often celebrated in restaurants. Every variety of cuisine in all price ranges can be found: Chinese, Eastern European, Italian, Indian, American, Mexican, Argentinean, Romanian, Russian, Ethiopian, Thai, French, Japanese, Spanish, Brazilian, Turkish, Middle Eastern, and more. These restaurants are designed to capture the atmosphere of similar ethnic restaurants in other countries. Many of the dishes served have been modified to meet the local tastes, while others claim to provide authentic versions.

Fast food is also available on most street corners, and falafel stands compete with the large American chains. Pizza, hamburgers, tortillas, ice cream, fried chicken, frozen yogurt, pasta, crepes, and noodle dishes are all easy to find in most Israeli cities. In the last 15 years, there have been dramatic changes in the culinary scene. This has been fueled by an ever-increasing number of tourists and a growing number of middle-class Israelis who have been exposed to foods and restaurant culture around the world. A small number of gourmet restaurants with internationally trained chefs serve food that can compete with some of the best restaurants in the world.

Cafés are an institution in Israel. Israelis spend much of their time sitting in outdoor cafés, leisurely drinking coffee and eating light meals. The clientele includes professionals with their wireless computers, students, pensioners, businessmen, and, of course, the traditional coffee klatch. In the evenings one may find young couples on a date or groups of friends spending the evening together. On the weekend it is not uncommon to find families dining with their children. The café tends to be less expensive and more relaxed than other eateries. Cafés in Israel fulfill a similar function to the European pub.

Israeli breakfasts, served in hotels and many cafés, have a reputation for being unique. The most modest of these breakfasts consists of two eggs prepared to order, an Israeli salad, two or three varieties of cheese, tuna salad, freshly baked hot bread with butter, jam and honey, fruit juice, and coffee. This is often expanded to include a large buffet with several types of bread and rolls, numerous types of vegetable salads, fruits, smoked and pickled fish, breakfast cereals, and yogurts, alongside cakes and puddings. On Friday mornings (the Israeli weekend is Friday to Saturday) the cafés are filled with people enjoying a late Israeli breakfast. The meal is substantial enough to tide one over until the traditional Sabbath meal.

Israeli Salad

Ingredients

- 3 large tomatoes
- 3 cucumbers, unpeeled
- 3 scallions or 1 small red onion
- 1 green or red pepper
- Parsley and *nana* (mint leaves), to your liking
- Olive oil
- Freshly squeezed lemon juice
- Salt and pepper

Chop the vegetables. Before serving, add the herbs, olive oil, lemon juice, and spices to your liking. Serve with an omelet, fresh bread, olives, and cheese.

Shakshuka (Eggs with Tomatoes)

There are many variations on this recipe, but this is the basic dish.

Ingredients

1 large onion (not a red onion)

Olive oil

3–4 large ripe tomatoes or 5–6 plum tomatoes

1 red, green, or hot pepper, or a bit of each

A spoonful of fresh herbs to your liking (optional)

Salt, pepper, hot paprika (chili pepper is optional but go easy on it), and turmeric (optional)

2 eggs

Chop the onion, and fry it in olive oil until it turns translucent. Chop the tomatoes (you may want to peel them first), and add to the pan. Add herbs and spices. Cover, reduce the heat, and let cook until tomatoes are cooked but not as cooked as you would cook them when preparing a tomato sauce (15–20 minutes). Make two holes in the mix, crack eggs, and pour an egg into each hole. Cover and let cook until the eggs are firm (around 5 minutes).

Serve with fresh bread, pickles, and an Israeli salad.

Special Occasions

In the Jewish tradition, most holidays and celebrations are centered on food. Life-cycle events, births, bar or bat mitzvahs, and weddings are all accompanied by lavish amounts of food. Even in mourning, it is traditional to serve refreshments. There are no set menus for these events, and the food served reflects both the socioeconomic status and ethnic background of the family.

In most homes, a special Sabbath meal is prepared each week, and often the extended family and close friends gather to eat together. There are many ethnic and class-related variations on what is served; however, it is always different from what is served during the week. In many households this is the one day that is devoted to home-cooked

meals. In religious or traditional families the meal will begin with the ritual blessings over the Sabbath bread (challah) and sweet red wine. This is followed by a serving of fish, either gefilte fish (ground carp in jelly) or *hriime* (a North African dish of fish in a spicy red sauce). Chicken or vegetable soup is served with soup almonds (*shkedei marak*, a kind of crouton made of flour and palm oil, sometimes called *mandlach* in the United States). The rest of the meal is usually a meat dish (often chicken) with side dishes and salads. Summer desserts are often fresh fruits, but compote (stewed fruits) and cake may also be served. Variations of the traditional Friday night dinner are common. Some families use this opportunity to prepare new recipes and entertain friends. In families where children return home for the weekend (soldiers, students, etc.), many mothers make an effort to prepare their favorite dishes.

There are long lists of Jewish holidays, each of which has its own traditional foods. For the most part, these foods are part of large festive meals with many servings. On the Jewish New Year it is traditional to eat apples, honey, and honey cake to symbolize the wish for a sweet and good year to come. Hanukkah is known for its fried potato pancakes and doughnuts, and on Passover unleavened bread (matzo) is served. New traditions have also emerged, and the Israeli state likes to mark its annual Independence Day with outdoor barbecues with kebab, skewered meats, hamburgers, and steak.

Latkes are one of the traditional foods of Hanukkah, the Jewish eight-day festival also known as the Festival of Lights. (iStockPhoto.com)

Diet and Health

Overall, Israelis enjoy good health, and over 50 percent defined their health state as “very good” in a national survey. The life expectancy for women and men is 82 and 78.5 years, respectively. This is among the highest in the world. These statistics are commonly attributed to the national health care program, in which every citizen is insured and has access to primary care doctors, inexpensive medications, and hospitals. However, many health care professionals feel that Israelis, on the whole, do not practice healthy lifestyles and that the next generation of Israelis will suffer from considerably more chronic diseases than their parents. The once-healthy Israeli diet is rapidly deteriorating and is mimicking other developed countries that consume high quantities of processed foods, simple sugars, and saturated fats. Women in the workforce have less time to prepare home-cooked meals, and the availability of prepared products and fast food plays a large part in these dietary changes. Obesity is on the rise, and a disproportionate number of older Arab women are overweight. Along with dietary changes, Israelis are less active than ever before. Most families have cars, and the use of computers and television viewing are common nationwide. Fewer and fewer individuals work in jobs that require manual labor, and despite two to three years of army service for most young adults, the lifestyle is quite sedentary. There is a trend to increase physical activity for all ages, and health clubs are popular. However, only a small percentage (~20%) of the population actually exercises regularly.

Overnutrition does not guarantee adequate nutrients. Iron-deficiency anemia is not uncommon in small children, teens, and female adults. Surprisingly, in sunny Israel, vitamin D deficiency has also been documented. This is most evident in sectors of the population that dress modestly, including religious populations, both Muslim and Jewish, and Ethiopian women with dark skin and modest dress. Despite the availability of a wide variety of dairy products, calcium intake in every sector of the population has been shown to be significantly lower than recommended daily intakes.

There is great interest in the connection between diet and health, and most newspapers and magazines have columns reporting the most recent findings in nutritional research. Alternative eating practices such as vegetarianism, vegan diets, and fruitarianism are popular. Diet books written by local authors, but also translations of fads from around the world (Atkins, Blood Type, South Beach, and Weight Watchers), can be found in bookstores or purchased on the Internet. In addition, yoga lessons, Pilates, and Feldenkrais lessons are offered in studios and community centers. However, there is a large gap between the population’s knowledge and their practices. There are definite attempts to improve nutritional consumption at both individual and national levels. Organic foods are available, and a wide selection of new products has been marketed by the food industry: eggs with omega-3 fatty acids; low-fat cheeses and mayonnaise; reduced-calorie cookies, crackers, and cereals; soy hotdogs, hamburgers, and tofu; whole-grain breads; and dietetic ice cream. This reflects the population’s awareness of the connection between diet and health, but purchase of these products is not sufficiently widespread. If supermarket shelf space reflects the consumption patterns of a community, soft drinks, candies, cookies, cakes, and salty snacks still fill a large proportion of market shelves. There are attempts by the Ministry of Health and the Ministry of Education to improve knowledge and attitudes regarding a healthy diet, but major changes still need to be made to improve the overall diet quality of the Israeli population.

Jordan

Overview

The Hashemite Kingdom of Jordan is a young country that occupies a region with a tremendous amount of ancient history. Situated in the Middle East and bordered by Israel, Saudi Arabia, and Syria, Jordan was the location of several Bronze Age settlements, numerous Old Testament events, a number of Roman cities, and the remarkable “lost city” of Petra, once part of the huge Nabataean spice-trading network.

Most of the country was abandoned after the fall of the Roman Empire, left to small bands of wandering Bedouin herders. There was some habitation in the slightly more arable north, and a Crusader castle shows that more than just Ottoman Turks fought over the area. However, there was no urban center or area of greater population around which to build a state. Much of the interior, including Jordan’s capital, Amman, was not inhabited from the time of the ancient Romans until the late 1870s, when Circassians—a Muslim group from the Caucasus Mountains—settled here after fleeing persecution in Russia. The Circassians introduced both wheeled carts and settled agriculture on previously uncultivated pastureland. They also engaged in commerce. Their success began to draw others to Jordan. This was the seed that would lead to the growth of the new country. Today, there are approximately 40,000 Circassians in the Amman area, but they are now a minority in a country whose population has grown explosively to more than six million.

The emergence of Jordan as a political entity began after World War I and the Arab Revolt against Turkish occupation. After the war, the Hashemite

princes, believed by Muslims to be descendants of the prophet Muhammad, were given positions of authority in the newly liberated region, though under the protection of the British. King Faisal, who hoped to unite all Arab states into one, was declared king of Syria by the Syrians and was given authority over Iraq by the British. Abdullah, brother of King Faisal, was declared ruler of the region of Transjordan (so called because it was beyond the Jordan River). Abdullah made Amman his capital. By 1928, Transjordan had gained its independence, and after the Arab-Israeli War of 1948, having seized the West Bank, Abdullah declared himself king and renamed the country the Hashemite Kingdom of Jordan. Palestinians were outraged that Jordan kept control of the Palestinian land it had captured during the war, and in 1951, one angry Palestinian assassinated Abdullah. The throne, and the responsibility for establishing Jordan and its place in the world, passed to Abdullah’s popular 17-year-old grandson, Hussein. King Hussein, supported by Britain and the United States, ruled Jordan until his death in 1999. He helped to stabilize the region and build a country that was the safest and most peaceful in the volatile Middle East.

At 34,277 square miles, Jordan is slightly smaller than Indiana. Its population is 98 percent Arab, with almost half of that number made up of recent Palestinian and Iraqi refugees. The population is approximately 92 percent Sunni Muslim, 6 percent Christian, and 2 percent “other.” About 75 percent of the population is urban. Bedouin who retain their traditionally nomadic lifestyle make up close to 10 percent of the population. However, many Bedouin

have been made to live in cities, and urban residents who trace their roots to the Bedouin make up more than one-third of Jordanians. The rest of the population lives in rural areas, where small villages perch on the edges of fields and orchards.

Most of Jordan is rocky desert, with a rainy season only in the west. Water is a rare and precious commodity. There is only a 16-mile shoreline, at Aqaba, where the country's hem brushes the Red Sea. Only 3.32 percent of the land is arable, and just under 3 percent of the population works in agriculture. The primary agricultural products are citrus, tomatoes, cucumbers, olives, sheep, poultry, stone fruits, strawberries, and dairy.

While there are Roman ruins at the center of the city, Amman is a clean, bright, modern city, in sharp contrast to the ancient capitals of surrounding countries. The dominant influences on both the culture and cuisine of Jordan are Syria, Lebanon,

Palestine, and the traditional Bedouin who have so long wandered across this region. While those familiar with Middle Eastern food will recognize many of the dishes on offer in Jordan, there are still specialties that are particularly identified with the country.

🍴 Food Culture Snapshot

Maryam and Asef Bani Sakhr live in one of the older parts of Amman. The parents of both live in the same neighborhood, but their grandparents had not been city dwellers. On a typical day, Maryam was in the kitchen, watching her daughter, Nour, working with the yogurt. Nour was putting it to drain, to make *labneh*, the yogurt cheese that was a favorite breakfast item. Nour was now old enough to make it without Maryam's guidance, but Maryam still loved working alongside her daughter. Maryam poured bulgur into a

Grove of date palms in the Jordan River Valley. (Photo courtesy of Zev Radovan, Land of the Bible Picture Archive)

bowl and added water, to allow it to soak, and checked the chickens roasting in the oven. Her boys, Salah and Sameer, should be home with the groceries soon, and preparations for lunch would begin in earnest.

Maryam knew that an increasing number of Jordanian women actually left the home to do their own shopping, at least in the city. Women were even beginning to have jobs outside the home, but that was still not terribly common, especially among married women. For most families, the women did not go out unaccompanied. Maryam imagined that the world into which Nour was growing would be different. Nour even went to school. Most of the girls in the neighborhood did these days. However, the family remained traditional about Maryam going out alone, and that included for shopping.

In wealthy families, the women just sent the servants to the supermarket, Safeway. The prices were high there, but many foreign items were available. For most families, however, the husband and sons shopped locally or in the *souk*, or market, downtown. Almost everything Maryam needed could be purchased nearby. Every neighborhood had almost as many shops as residences. There was a bread baker pulling fresh bread out of his brick oven, a butcher with lamb and mutton hanging in the window, a chicken seller with cages of live chickens piled high, herb and spice shops, fruit vendors, nut and sesame seed sellers, tahini shops, milk and yogurt vendors, and more, plus there were little markets on almost every corner.

Maryam knew the boys might stop and talk to their friends, perhaps buying falafel at one of the many street vendors, especially as there were so many shops to visit. However, they could be relied on to remember everything. Asef had brought home lemons, zucchini, eggplant, okra, and fresh chickpeas last night from the souk, as well as chickens from the shop down the street. She had roasted the eggplant already, and the chickpeas had been cooked and pounded with tahini for the hummus they would enjoy this evening. She had coffee and cardamom, tea, and most of the spices she needed—cumin, coriander, garlic—plus rice, sesame seeds, yogurt, eggs, sugar, flour, clarified butter, and olive oil. However, the parsley, tomatoes, cucumber, sumac, parsley, mint, apricots, and maybe a watermelon would arrive with Salah and Sameer. Then they

would not need to shop again for another week, except possibly for bread and some fresh produce.

Major Foodstuffs

Jordanian food is essentially an Arab cuisine, and it has much in common with other Middle Eastern countries, as well as Arab-dominated North Africa. Dishes such as baba ghannouj, falafel, hummus, and *bourek* (cheese-filled pastries) appear here as well as in most surrounding countries. Olives and olive oil are consumed at every meal. Eggplant, bulgur (also often called *burghul*), tomatoes, yogurt, mint tea, garlic, and unleavened bread are staples throughout the region. However, the influence of the nomadic Bedouin has contributed to the cuisine of Jordan, and among the country's Arab neighbors, Lebanon, Syria, and Palestine have had the strongest influence. Because of the Ottoman Empire, foods one often associates with Turkey and Greece have also spread throughout the region, including baklava and gyros-style meats (called *shawarma* in Jordan, where it is made as often with chicken as with lamb).

Because Jordan is a Muslim country, there is no pork. Most main-course dishes include chicken or lamb. Fish is available as well, though it is more common in the south, nearer the port of Aqaba, and goat is eaten on occasion, though most goats are kept for milk. Eggs, milk, yogurt, cheese, fava beans, and chickpeas are other important protein sources.

The bread one sees most often in Jordan, as throughout the Arab world, is the round, unleavened, pitalike loaves called *khoubiz* (also spelled *khobz*). One is served *khoubiz* in homes and in restaurants; it is found at neighborhood street-food vendors and fine hotels; and bakers everywhere can be seen piling it high in displays or on carts or trays. It is a little thicker than pita but is similar, including having the pocketlike quality that makes it ideal for making sandwiches with falafel or shawarma (or *shwarma*). The second kind of bread, seen somewhat less often, is Bedouin sheet bread, called *shrak* (also spelled *shirak*), which is about 13 inches in diameter and ¼-inch thick, and as soft and flexible as a child's blanket.

Tahini, a paste made from sesame seeds, appears at almost every meal, including breakfast, alone or incorporated into one of the many dishes for which it is a key ingredient, including the nearly ubiquitous pureed chickpea dip, hummus, and the smoky eggplant dip, *baba ghanouj*. Yogurt is another staple. It can be bought at the local market, but in more traditional homes, it is homemade, with mothers handing down recipes to their daughters. Yogurt is used plain and in sauces, or it is drained to create the creamy yogurt cheese called *labneh*.

Rice can be a bed for roasted meats, a *pilaf*, or part of the stuffing for cabbage rolls. Bulgur, or cracked wheat, is featured in many recipes, including the popular bulgur-and-parsley salad called *tabbouleh*. It is also a key ingredient in *kibbeh*, a tremendously popular dish that combines the bulgur with finely ground lamb, which, depending on the version of *kibbeh* being prepared, may be served raw (like steak tartare), baked, fried, stuffed, or in soup.

Coriander, cumin, cinnamon, and black pepper are common spices, but the most distinctive regional spice is sumac (also spelled *sumaq*). This is not the poison sumac of North America, though it is a distant relative. The spice is ground from the berry of a shrubby tree that grows wild in the Middle East. It has a deep rusty-red color and a tart, astringent taste that adds a pleasant sourness to dishes. In addition to being added to recipes or used to add a splash of color to an appetizer, sumac is a key ingredient in the spice mix *za'atar*. *Za'atar* is a flavorful blend of sumac, toasted sesame seeds, salt, thyme, oregano, and marjoram. Amounts of each ingredient may vary, and blends may appear red or green, depending on the proportion of sumac to herbs. Also, basil and/or savory may be included in the blend, as this can be very personalized. While it can be purchased commercially, *za'atar* is often blended at home. Two of the most popular applications are sprinkling *za'atar* on bread that has been spread with olive oil and sprinkling it on *labneh*. Even breakfast buffets in hotels will include a large bowl of *za'atar* for diners. The word *za'atar* can also refer simply to the herb thyme, but it far more often refers to the spice blend—and thyme is always a featured ingredient in any *za'atar*.

Flatleaf parsley is used so heavily that it actually constitutes a vegetable or salad green rather than a mere herb. It does sometimes appear as a garnish, but it is a major ingredient in such salads as *fatoush* (a bread salad) and often dominates the bulgur in *tabbouleh*. Mint appears almost as commonly, in salads and other recipes, and is also almost always used in tea.

Fuul is the garlicky, lemon-scented, stewed fava bean dish that is Egypt's national breakfast, but it is most often found as an appetizer on lunch or dinner menus in Jordan. Lentils appear in soups, and chickpeas most commonly appear in hummus or in *falafel*, the fried veggie balls that are among the Middle East's most common snack foods.

Lebanese influence is most responsible for Jordan's splendid pastries. Delicate, layered, honey-drenched sweets and rich cookies laden with pistachios, walnuts, and/or sesame seeds line the shelves of pastry shops. Pastry is usually both baked and exhibited on a large, round baking tray called a *sanieh*.

Cooking

Modern homes are beginning to get modern conveniences, such as food processors, but few in Jordan are wealthy enough to have such appliances, and many simply do not believe they are as effective as traditional tools. The cornerstone of most traditional kitchens is a range of mortars and pestles: a large, heavy one, usually made of stone, for making *kibbeh*; and smaller ones of stone or brass for making hummus, *baba ghanouj*, and other purees and pastes. Generally, anything that will be put in the oven is cooked on a *sanieh*. Heavy pots and pans are used for thick soups and dishes containing yogurt.

Bedouin sheet bread is cooked on a *sorj*, which is a large metal dome that looks something like a shield or an inverted wok. It is put over a fire and the dough is stretched out over its surface. The bread cooks in only a few minutes. Skewers (for *shish kebab*, among other dishes) and grills are common everywhere, as are spits for roasting racks of chickens or whole lambs.

In urban homes, cooking gas is used for cooking, but it is not piped in; individual tanks are delivered to homes. Gas company trucks cruise the neighborhoods each day, playing cheerful tunes to announce their presence, much as an ice cream truck would do. Water must be delivered as well. Jordan is among the most water-scarce nations on earth, so water is strictly rationed and must be conserved, because one must make the water last until the next delivery. Amman's recent rapid growth has further strained resources, and the government is looking for ways to ensure a regular water supply for all, regardless of economic status.

Typical Meals

Breakfast for most Jordanians comes after the dawn prayers that start the day throughout the Muslim world. Lunch is usually eaten around 2 P.M. and is frequently the biggest meal of the day. Dinner is generally eaten late, around 9 P.M. However, this schedule alters during the month of Ramadan, when Muslims are required to fast from sunrise to sunset; lunch is skipped, and dinner becomes the big meal of the day.

All meals include rounds of unleavened Arabic bread. Breakfast usually includes eggs (as omelets, hard-cooked, or baked with yogurt and garlic) and labneh, a soft, tangy yogurt cheese that is spread on the bread and often sprinkled with za'atar. The main meal will almost inevitably include hummus, soup, bread, yogurt, olives, salad, vegetables (cauliflower, eggplant, potatoes, okra, tomatoes, or cucumbers, or some mixture of these, often stuffed or with a sauce), a main course with rice and lamb or chicken, and fruit (apricots, apples, bananas, melons, and oranges are most common). However, depending on the occasion and whether there is company, lunch can expand to a lavish affair that spans hours. The hummus may be joined by a whole range of other *mezze*, or appetizers, including kibbeh, tabbouleh, bourek, spiced olives, beef sausage, fuul (cooked fava beans), stuffed grape leaves, baba ghannouj, and more. The *mezze* offerings are often so elaborate that this course seems like a feast on its own.

Generally, for meals, a covering is placed on the floor, and a large tray with the main course is placed in the center, surrounded by platters of bread and bowls of yogurt, salad, and whatever other dishes are being served. Often, the bread is the primary utensil for eating the food, torn in pieces, folded, and used as a scoop. Often, even at home, the genders do not mingle at meals. Men and older boys sit in a circle around one array of food, women and older girls sit in another circle, and, if the family is large, the youngest children, boys and girls, might be in yet another circle. This will usually occur even when there are guests. While seasonal fruit is the most common dessert, the presence of guests will usually find the meal ending with decadent pastries, either homemade or from one of the local pastry shops.

Nothing is wasted. Recipes abound for brain omelets, lamb-tongue salads, and stuffed tripe. Even day-old bread finds a second life in the flavorful, refreshing salad known as fatush. Fatush, a bread and vegetable salad, is identified most commonly as Jordanian/Palestinian or Lebanese/Jordanian. These countries are so close, and their populations are so intermingled, that many dishes don't change names or recipes as they cross borders. Because of differences in the types of unleavened bread available, especially for Jordanians living overseas, some recipes simply call for "local bread." Others will specify Arabic bread or pita. Any good unleavened flatbread will work.

Fatush (Flatbread Salad)

Serves 6

- 1 pita
- 1 heart of romaine lettuce, shredded
- 2–3 tomatoes, roughly chopped
- 1 cucumber, peeled and cut into ¼-in. chunks
- 3–4 scallions, white and light green parts, thinly sliced
- 1 sweet pepper, red or green, chopped
- ¼ c chopped parsley
- ¼ c chopped mint leaves

1 clove garlic
 1 tsp salt
 1 tbsp sumac
 ½ c lemon juice
 ½ c extra virgin olive oil
 Freshly ground black pepper

Preheat oven to 400°F.

Cut the pita into approximately ¾-inch squares. Place on a baking sheet and toast in the oven until golden brown, about 8–10 minutes.

Put the lettuce, tomatoes, cucumber, scallions, sweet pepper, parsley, and mint in a bowl, and toss to combine.

Crush the garlic clove in a bowl with the salt and mix into a paste. Add the sumac and lemon juice, then whisk in the olive oil. Just before serving, add the toasted bread to the vegetables, pour the dressing over everything, and toss to combine. Chopped radishes or purslane are also common additions to this salad. Grind black pepper over to taste.

Eating Out

Wonderful, savory street food is found on almost every block of Jordan's cities. Most common among the offerings of the small food shops are falafel (balls of mashed chickpeas mixed with herbs and spices and deep-fried) and shawarma (slowly rotating pillars of spiced lamb or chicken, where the outside is shaved off as it roasts). Both of these are usually stuffed into pockets of khoubiz, that round, unleavened flatbread of the Arab countries. Shops selling roasted chickens are also close to ubiquitous.

Restaurants are increasing in number in rapidly modernizing Amman. However, even here, Islamic law generally keeps the sexes apart. Coffee shops and bars usually have all-male clientele, though some foreign-run establishments (usually with obvious names like Irish Pub) welcome women. Still, women from traditional families would be unlikely to ever go to a bar. While an increasing number of restaurants in big cities, such as Amman, allow

Za'atar and other typical breakfast items from Jordan. (iStockPhoto)

gender mingling, especially if the diners are foreigners, many eateries are for men only. Often, these restaurants will have a family room set aside for women and children.

There are a few American-style restaurants, mostly popular with homesick tourists, some excellent Mediterranean places, and a few good Asian restaurants, and most of the nicer hotels have restaurants that offer a range of “Continental” cuisine. Pizza, wraps, and smoothies are available for upscale Jordanians who are more familiar with Western culture, either through association or travel. However, even when dining out, most Jordanians are looking for traditional foods, though perhaps on a grander scale than is possible at home. The mezze spread can be fairly astonishing, and the national dish of Jordan, *mansaf* (lamb cooked in a dried yogurt sauce

served on a big platter over flatbread and rice, and garnished with almonds and pine nuts), is eaten for all special occasions. It is the specialty of many restaurants offering traditional fare. One can even dine in a traditional “hair house,” as the Bedouin call their camel-hair tents, in the courtyards of some popular restaurants. For a special occasion, this recalling of one’s roots is a popular option. One does not sit on the ground in restaurants, as one does in homes, but low chairs surround low tables. As at home, myriad small dishes and platters are passed, and everyone dines from the huge trays in the center of the table.

Dining out, other than street food, even at relatively modest places, is generally the domain of the middle class or wealthy. Most Jordanians do not go to restaurants, or go rarely. However, as the middle and upper classes grow, this is changing. Some hip, high-end places not only allow women but also don’t even require head coverings. At these places, the food may be European or fusion but is just as likely to be the same food found at more traditional spots. However, while some younger, better-educated Jordanian professionals are pursuing greater freedoms, Jordan is still a country where most women stay home until they’re married and still often accept arranged marriages. So it seems likely that the restaurant scene will not change dramatically in the foreseeable future.

Special Occasions

Jordanians follow the Islamic calendar. Religious holidays include Ramadan, Eid al-Fitr (the end of Ramadan), Eid al-Adha (the Feast of the Sacrifice), Ras as-Sana (the Islamic New Year), the birthday of Muhammad, and Leilat al-Meiraj (the Ascension of Muhammad). National holidays include Arbor Day (January 15), Arab League Day (March 22), and Independence Day (May 25). Celebrations also surround engagements, weddings, and births.

Mansaf, the national dish of Jordan, is served for all important holidays and special occasions, as well as to honor the visit of a relative or guests. Of course, the usual mezze are served first, though more abundantly for a celebration, and strong, cardamom-

scented coffee—the wine of the Arab world—will flow more generously. In some homes, real wine, or possibly *arak*, the strong anise-flavored spirit of the region—will be served, despite the fact that Islam forbids the drinking of alcohol.

Mansaf is a lavish feast dish that appears at special occasions everywhere, from Bedouin tents to high-end restaurants in Amman. This feast is taken seriously, with hours going into its preparation—and heated discussions often erupting over differences of opinion as to precisely how it should be made.

Mansaf

Many of the traditional ingredients in mansaf are not widely available outside of the Middle East. One key ingredient is *jameed*, a defatted sheep- or goat-milk yogurt that is formed into a ball, salted, and dried in the sun until rock hard. Then, when needed, it is soaked in water and heated, to reconstitute it. Mansaf is cooked in this reconstituted yogurt, which gives mansaf its distinctive, slightly gamy taste. Plain cow-milk yogurt cannot simply be substituted, as it curdles with long cooking. However, goat-milk yogurt is available at many ethnic grocery stores, and it will work in the recipe without curdling, or one can stabilize the cow-milk yogurt—directions follow the recipe. Also, liquid jameed can be found at some Middle Eastern stores.

Other essential ingredients, besides the jameed, include a spice mixture known as *bahārāt* and the cooking fat called *samneh*. Bahārāt always includes black pepper, cinnamon, and allspice but may also include cardamom, nutmeg, coriander, or cumin. In the United States, it can be found premixed in many Middle Eastern markets, but in this recipe, the individual spices are used. Samneh is clarified goat- or sheep-milk butter, but any clarified butter, including Indian ghee, can be used.

Normally, an entire sheep is cooked, and the boiled head is prominently displayed in the middle of the mound of food. The recipe has been revised for a more reasonable, and headless, amount of lamb. For the presentation, Bedouin sheet bread is mounded on a large tray, rice is piled on top, the

lamb is piled on the rice, the yogurt sauce is poured over everything, and then the dish is sprinkled with pine nuts. Almonds may also be sprinkled on the dish.

Mansaf is traditionally eaten in the Bedouin style, from a large, communal platter, with people sitting or standing around the mansaf, with the left hand behind the back, using the right hand instead of utensils. A piece of lamb is pulled off the bone (it is cooked until it is falling apart, so this is easy), and then a bit of rice, bread, and some of the yogurt sauce are gathered around it. This is rolled into a ball and popped into the mouth, without having the fingers touch the mouth. This is traditional good manners but also a good health tip when everyone is eating from the same platter. In restaurants serving mansaf, chairs are more usual, rather than sitting on the ground, and forks are available, as well as individual plates, for diners (usually foreign guests) not accustomed to Bedouin dining.

Mansaf

Serves 6

3 lb lamb shoulder on the bone, cut into
6 similarly sized pieces

Water

1 tsp salt

¼ c clarified butter

¼ c pine nuts

1 large onion, coarsely chopped

1½ tsp ground turmeric

½ tsp freshly ground black pepper

½ tsp ground allspice

½ tsp ground cinnamon

1 batch stabilized yogurt (see following)

3 c cooked, buttered rice

2 sheets Bedouin bread or 3 pitas, split

Additional salt and pepper, as needed

Place the lamb in a large pot and cover with cold water. Bring slowly to a boil, skimming as needed.

When no more scum is forming and the water is boiling, add 1 teaspoon salt, or to taste. Cover, reduce heat, and let simmer for 30 minutes.

In a frying pan, heat the clarified butter. Add the pine nuts and fry, stirring frequently, until golden brown. Remove the nuts with a slotted spoon, leaving the butter in the pan. Set nuts aside. In the remaining butter, fry the onion until it is transparent. Stir in the turmeric, pepper, allspice, and cinnamon, and cook for an additional 2 minutes.

Add the onion and spice mixture to the lamb in the pot, and let the lamb continue to simmer, covered, for another hour. Then remove the lid and let the liquid reduce until it half-covers the lamb.

When the liquid has reduced sufficiently, add the stabilized yogurt (or goat yogurt, if you've found it), shaking the pan to blend the yogurt evenly into the liquid. Let the lamb simmer gently on low heat until the lamb is tender and the sauce thickens, about another 30 minutes. If the sauce does need to be stirred, do so gently and in one direction, to avoid breaking up the lamb. Add salt and pepper to taste.

To serve, line a large platter with the bread, mound the rice on top of the bread, and put the lamb on top of the rice. Pour the sauce over the lamb and rice, and sprinkle the fried pine nuts over the whole dish.

To stabilize cow-milk yogurt: Put 2 cups plain, full-fat yogurt in a heavy saucepan. Beat with a fork until smooth. Beat an egg white until frothy, then beat it, along with 2 teaspoons cornstarch and ½ teaspoon salt, into the yogurt. Put the saucepan over high heat. Stir with a wooden spoon as it heats, stirring in only one direction. Stir constantly until it starts to bubble. Reduce the heat to medium, and let it boil for about 3–5 minutes, or until thick. It is then ready to use in the mansaf.

Diet and Health

Before Jordan was a country, many people in the region were poorly nourished, unless they had herds or farms, but this was due to poverty and the scarcity of food, rather than flaws in the food traditions.

As the country grew and food was more widely distributed, whether through aid, as at the beginning, or later, as the economy improved, the traditional diet was essentially wholesome, with a good balance of meat, dairy, vegetables, legumes, nuts, and fruit. Also, like other Mediterranean countries, Jordan relies heavily on olive oil in its cuisine. With increased urbanization, sugar consumption increased, which had its biggest impact on dental health. A bigger concern for most health organizations was the long-standing cultural encouragement of smoking. Even today, approximately 62 percent of males smoke, though fewer than 10 percent of females smoke.

As with many countries, nutrition has declined with increased education, urbanization, and modernization, especially among the young. While fast food and soft drinks are not often consumed by adults or those in rural areas, they have been adopted by students in cities. In the past, the consumption of sweets was at least partially offset by a high consumption of dairy products, but with soft drinks increasingly replacing milk, health is suffering. Students who focus on fast food, modern snacks, and soft drinks are rarely getting enough vegetables and meat. Health organizations are making an effort to

get nutrition programs into schools to help stop the deterioration of health.

Lebanon

Overview

Lebanon is bordered by Israel on the south, Syria on the north and east, and the Mediterranean Sea on the west. It consists of a relatively narrow coastal plain, the Lebanon mountain chain just inland, and the Bekaa Valley between the Lebanon and the Anti-Lebanon mountains, which form the Syrian border. It has a Mediterranean climate of mild summers, with rain concentrated in the winter months. Because of its mountains, Lebanon receives sufficient rainfall that three-quarters of its cropland needs no irrigation. The largest river is the Litani, which flows through the Bekaa Valley and enters the Mediterranean between the southern cities of Tyre and Sidon. A quarter of the country's land is agricultural, and the only foodstuffs Lebanon imports in any quantity are meat and dairy products from Syria. Despite its agricultural productivity, the population of 3.8 million is 87 percent urban.

The mountains have also influenced the country's religious makeup. After Sunnite Islam became the majority religion of the Middle East in the 11th century, Christians and other religious dissidents retreated to mountainous areas. The Lebanon Mountains are home to the largest Christian population in the Arab world (mostly Maronite Catholics but also Orthodox and other eastern Christian denominations) and to many Druze, members of an offshoot of Shiite Islam. The base population of the Bekaa is Shiites, locally called *mitwalli*, while Beirut is dominated by Sunnites. This uncomfortable diversity of faiths has contributed to a number of conflicts in Lebanon's history, notably the disastrous civil war of 1975–1990.

Food Culture Snapshot

Maroun and Afifa Nader and their daughter, Brigitte, live in a new apartment house in Kesrouan, a busy and prosperous area east of Beirut that has exploded into suburbs since the 1970s. Maroun works at a design firm; Afifa supplements the family income with a small Internet business trading in traditional craft jewelry. They are representative of the professional class. As Maronites, the most Europeanized segment of the population, they have a cosmopolitan lifestyle, but they often visit Maroun's relatives in the mountains and bring home village specialties such as the paper-thin bread *marqouq* and various gathered foods, including hawthorn (*za'rur*) and wood sorrel (*khubbaizi*). Afifa does not visit her family's ancestral village, which they left because of bitter fighting during the civil war.

The war devastated Beirut's market quarter. As a result, Beirut is the only sizable Arab city without a traditional *souk*, or marketplace, and Beirutis now shop in American-style supermarkets. The Naders live conveniently close to one of the largest, which uses as its symbol a giant shopping cart 40 feet high. It stocks the usual Mediterranean produce—tomatoes, eggplant, zucchini, potatoes, spinach, chard, olives, citrus fruits, grapes, apples—and a few items more typical of the Arab world: grape leaves for stuffing, fresh chickpeas in season, and a grain delicacy known as *friki*, which is unripe wheat grains scorched to give them a smoky flavor.

This market also has a fish department, a butcher shop (mostly lamb and chicken, with some beef and goat meat), a dairy section, and a wide selection of imported goods such as wines and cheeses. It also stocks Lebanese wines from the Bekaa. It sells frozen foods

and an extensive selection of ready-to-eat dishes. When she's in a hurry, Afifa can pick up a carton of chard and lentil soup and another of lamb and okra stew, leaving nothing to make for her family's dinner but rice and salad.

Outside Beirut, people still shop in traditional souks, where the choices are more limited but prices are commensurately lower. Rural people eat less meat, getting a higher proportion of their protein from dairy products and pulses, consumed as bean soups and porridges.

Major Foodstuffs

The favorite meats are lamb and chicken. Beef is available to a limited degree, and so are pork products in Christian districts. Wheat and rice are the chief grains. Pita bread (called simply *khubz*, “bread”) is eaten at most meals, even when rice is served. Wheat is also consumed as *burghul* (bulgur): Wheat grains are boiled until the starch gelatinizes and are then dried and crushed, making a product that can be made ready to eat simply by boiling or even soaking in water. Bulgur soaked in yogurt and then sun-dried makes *kishk*, a sort of instant soup mix with a tart, slightly musty flavor. Wheat is also used in sweet and savory pastries.

The leading cooking fats are olive oil, vegetable oil, and butter. Lamb fat, from fat-tailed sheep

Grape leaves stuffed with rice, a common Lebanese dish. (Shutterstock)

(which have been bred to deposit their body fat in their tails), plays a minor role; bits of tail fat are often threaded between the chunks of meat in shish kebab, and a little tail fat is traditionally added to the butter in baklava to give a subtle gamy tang.

Milk is rarely consumed fresh (except as ice cream). Mostly it's soured into yogurt (*laban*) or processed further by straining the yogurt to make the even more noticeably tart *labni*, which has the consistency of a soft cheese. Both keep quite well in the warm climate. Fresh milk is also curdled to make cheese, mostly consumed fresh as *jibneh baida* (white cheese) or preserved in brine, but a cheese called *musanara* is made from a boiled curd, like mozzarella or string cheese. Some cheeses are flavored with spices such as *mahleb* (ground cherry pits).

Butter is nearly always clarified of its solids and whey to make pure butterfat (*samni*), mostly used in making sweets. A product called *qaymaq* is made by simmering whole milk so that a skin of rich cream forms on the surface, being removed as it forms to make a very rich product comparable to English clotted cream—it can be eaten by itself or used as a filling for pastries. Other dairy products include *shanklish*, which is dried balls of yogurt cultured to produce an aged-cheese flavor, and *ayran*, a tart drink made by diluting yogurt with water.

While the civil war was destroying the old souk and paving the way for supermarkets and convenience foods, it had the ironic side effect of reviving some traditional homemade foods, because people often had to rely on themselves during the war. Today, Lebanese food lovers patronize shops that specialize in once-endangered foods such as *qawirma* (fried lamb preserved in jars under a layer of lamb fat) and homemade pickles, preserves, and cheeses.

The eastern Mediterranean is not particularly rich in fish, but Lebanon does have a fishing industry and a repertoire of fish dishes. Fish is most often fried in olive oil and eaten with rice and a squeeze of lemon, accompanied by rice and a salad, or as *sayyadiyyi*, the dish of fish, fried onions, and rice prepared throughout the Arab Mediterranean, but there are also fish kebabs, stews, and casseroles, even fish *kibbi* (fish pounded to a paste with bulgur wheat).

Samak bi-Tahini (Fish in Tahini Sauce)

Serves 4

This is a rich special-occasion dish using the sesame paste tahini, which also flavors dips such as *hummus bi-tahini* and *baba ghannouj*, the smoky eggplant dip. Traditionally it's made with a whole fish, but these days some cooks use fish fillets instead to avoid having to pick through a lot of fish bones. It's served at room temperature.

Note: For frying, Lebanese cooks don't cut onions crosswise into rings. They make cuts from the top of the onion nearly to the bottom to produce narrow wedges about ¼ inch at the widest. These separate into lengths known as "wings" (*ajniha*).

1 fish (about 2–2½ lb)

Salt

4 tbsp olive oil

2 onions

1 clove garlic, crushed

1½ c tahini

¾ c lemon juice

Water

½ tsp cumin

Clean the fish and rub inside and out with about 1 tablespoon salt. Refrigerate for at least 2 hours to firm up the flesh.

Rinse the fish and pat dry with paper towels. Spread 2 tablespoons olive oil in a baking dish, place the fish in it, and bake at 350°F until the flesh flakes when poked with a fork, about 20 minutes. Remove the baking dish from the oven.

Meanwhile, cut the onion lengthwise into "wings" and fry in 2 tablespoons oil until just starting to turn golden. Remove and set on paper towels to absorb oil.

Place the garlic and the tahini in a bowl, and add the lemon juice and ¼ cup water. Stir, adding more water as needed, until it has the consistency of thick cream. Stir in the cumin, ½ teaspoon salt, and the

fried onions. Pour this sauce over the fish and return to the oven until the sauce is thickened and bubbling, 20–25 minutes.

Remove from the oven and allow to cool to room temperature.

Cooking

City people use gas or electric ranges, though villagers may still cook on a wood-fired range made of brick or stone. The cooking utensils of a Lebanese kitchen are much the same as in Europe, with one notable exception: the *siniyya*. This is a round baking pan about 16 inches in diameter with sides about an inch high. It's used for baking baklava-type pastries, a sort of flat meatloaf called *kibbi bi-siniyya*, and certain stews, such as *masbahet al-darwish* ("the beggar's rosary"), made with summer vegetables and tomatoes.

The *siniyya* owes its existence to the fact that traditional kitchens did not have ovens, so dishes to be baked were sent to the village bakery to cook after the day's bread baking was over. Its flat shape made it possible to fit a number of these pans into a brick oven at the same time. In villages it's common to see children balancing *siniyyas* on their heads on the way to the local bakery; it was not uncommon even 30 or 40 years ago in Beirut. These days city people more often use the *siniyya* in the oven of a home range. By its nature, cooking in a *siniyya* exposes a large amount of the food's surface to heated air, so stews baked in one develop a special flavor because of evaporation and browning.

Traditional kitchens have a large marble mortar (*jorn*) and a pestle (*mdaqqqa*) about the size of a baseball bat, which are used for making *kibbi*, a versatile paste of meat, bulgur, and onions. In the Bekaa Valley, the mortar is replaced by a flat grinding stone (*rahaya*). Making *kibbi* with either utensil is a laborious process requiring an hour or more. Many people own a food processor, which reduces the process to a matter of minutes.

One notable feature of Lebanese food is the heavy use of lemon juice and olive oil. Fish and even eggs are fried in olive oil; the most usual salad dressing

is lemon juice and olive oil (often with the addition of mint). Since medieval times, olive oil has been a particular feature of Christian fast-day dishes, such as vegetables slowly stewed in oil. Grape leaves (*waraq 'inab mahshi*) may be stuffed with meat, but the vegetarian version, stuffed with rice and tomatoes, is served cold with olive oil.

Mjaddara (Pockmarked Rice and Lentils)

Serve 4–6 as a main dish with salad or 10–15 as a dip. This filling vegetarian dish is often eaten by Christians on fast days, but it belongs to the general repertoire of Arab cooking. In fact, it is recorded in several 13th-century cookbooks. The name means “pockmarked,” because of the grains of rice among the lentils. The addition of onions well browned in flavorful olive oil makes the dull-sounding combination of rice and lentils very attractive.

1 c lentils
 7¼ c water plus more for washing the lentils
 2 onions
 ¾ c olive oil
 ½ c rice
 ½ tsp allspice
 ½ tsp cinnamon
 Salt

Wash the lentils by putting them in a bowl and covering them with water. Remove any floating debris and any stones or other extraneous matter. Drain. Put 6 cups of water in a 2-quart saucepan, bring to a boil, add the lentils, and cook until soft, about 35 minutes.

Meanwhile, peel the onions and slice into “wings.” Put the olive oil into a pan and fry the onions over medium heat, stirring often, until distinctly brown (but do not let them burn). Drain onions on paper towels.

When the lentils are done, drain them and set aside. Put 1¼ cup water in the saucepan, bring to a boil, throw in the rice, allspice, and cinnamon, reduce the

heat, and cook over low heat, covered, for 10 minutes. Stir in the lentils and add salt to taste. Stir in the fried onions and oil, and cook uncovered over medium-low heat for another 10 minutes.

Typical Meals

A usual breakfast for city people would be flatbread (plain or perhaps topped with *zaatar*, a mixture of wild thyme, sesame seeds, and tart ground sumac berries) and white cheese along with a handful of olives. Croissants, an imported soft cheese, and the rather syrupy local fruit preserves (*mrabba*) are typical. Turkish coffee is usually served with breakfast. Farmers often start the day with a hearty soup of kishk and qawirma fried with a good deal of garlic.

Lunch for city people is often a hasty kebab or falafel sandwich, but on more leisurely occasions a lamb and vegetable stew or kibbi baked in the *siniyya* might be served, or just a spread of the appetizer dishes known as *mezzeh*, such as hummus, falafel, tabbouleh, stuffed grape leaves, lebni (a kind of yogurt cheese), and pickled turnip spears. *Mezzeh* also appear at picnics and feature at afternoon parties.

A typical dinner might be lentil soup, followed by lamb stewed with a vegetable, accompanied by plain pilaf (*rizz mfalfal*) or pilaf garnished with toasted vermicelli (*rizz bi-sha'riyyi*). Tomato and cucumber salad is likely to appear on the side. Rural people eat the same sort of dinner so far as their budgets allow. Urbanites sometimes cook international recipes (mostly French, Italian, Iranian, and Indian) from their favorite cooking magazines. The traditional beverages are water, ayran, or (among Christians) *'araq*, an anise-flavored liqueur, but some people prefer wine. Coffee and fresh fruit end the meal. The famous Middle Eastern pastries are not usually served with a meal but consumed as snacks during the day.

Two features of Lebanese food survive from medieval cookery, though in an altered form. In the Middle Ages, most Arab stews contained a sour

fruit juice, such as lemon, pomegranate, or even rhu-barb juice, and all were flavored with complex spice mixtures. Both practices are still known, but all fruit juices except lemon have been replaced by tomato juice, and allspice, or a mixture of allspice and cinnamon, usually substitutes for the old spice mixtures. Other spices such as cumin, coriander, and saffron, when used, usually appear alone rather than mixed with other spices. On the table, salt and allspice appear instead of salt and pepper.

Kibbi is one of the most versatile Lebanese foods. The meat, bulgur, and onion paste can be rolled into meatballs and grilled on a skewer, baked in a *siniyya* with a filling of fried onions and lamb fat, made into tangerine-sized, torpedo-shaped meatballs with the same filling and then deep-fried, or made into meat-stuffed flying-saucer disks and grilled or fried. It can even be served raw, and often is at important dinners, because raw kibbi can be made only from the best-quality lamb.

Lebanon is a small country, but it does have regional specialties. The Sunnite grandees of Beirut were known for their fine food (a nearby village, Dfoun, traditionally provided their cooks), and the best hummus, falafel, and tabbouleh are still considered to come from Beirut. A specialty of the mountains is *fattoush*, a salad of tomatoes, cucumbers, purslane, and crisp croutons made by toasting pita

Fattoush, a traditional Lebanese salad made with tomatoes, cucumbers, purslane, and crisp croutons made by toasting pita bread. (Edward Karaa | Dreamstime.com)

bread. The mountain village of Ehden has a specialty of raw kibbi made with goat meat. Fish kibbi is a dish of the northern coastal region, and the northern city of Trablus is known for making elegant, miniaturized versions of baklava and other pastries.

Eating Out

The end of the civil war led to an explosion of restaurants in Lebanon, and today it has restaurants serving a wide variety of Asian and European cuisines. Still, most public eateries serve traditional roast meat dishes such as shish kebab (*lahm mishwi*) and *shawerma* (thin-sliced meat arranged on a vertical spit; browned portions are sliced off for serving as they are done). The meat may come with rizz bi-sha'riyyi, turnip pickles, and a tomato-cucumber salad, or it may be sold in pita bread with garlicky tahini sauce. These places also offer dips such as hummus bi-tahini and baba ghannouj and various salads. One new development after the civil war was a sort of restaurant/dance club called *taksh-wa-faksh*, where people eat the usual mezzeh snacks and then dance to disco music, on the tabletops if there's no dance floor.

Lebanon has a famous restaurant village, Zahle, located in a shady gorge at the western edge of the Bekaa Valley. Open-air restaurants extend out along a little creek for about a quarter of a mile up the gorge. They specialize in mezzeh and above all in roast chicken, which is served with a strong garlic sauce.

As everywhere in the Arab world, coffeehouses are a male preserve. They serve much the same function that bars do in Europe or America: as a place for male socializing. They serve Turkish coffee and a variety of pastries. More westernized men of the more affluent classes, however, are likely to patronize modern (and sexually integrated) espresso shops instead.

Special Occasions

The chief religious celebrations of the Muslim majority are Eid al-Adha (the Feast of the Sacrifice),

which falls on the last day of the pilgrimage to Mecca, and Eid al-Fitr (the Feast of the Fast Breaking) at the end of the month of Ramadan. Eid al-Adha is the day when Muslims around the world, as well as those on the pilgrimage, sacrifice sheep (or other animals) in remembrance of Abraham's faithful willingness to sacrifice his son at the command of God, who allowed him to sacrifice a sheep in his place. It is a festive time of year when people dine and make sociable visits to family and friends.

Some Muslims do slaughter their own sheep for the occasion, but most arrange with a butcher shop for meat. Those who can afford to buy meat are expected to distribute some of it to families who can't. Naturally, Eid al-Adha spotlights meat dishes. Because the Islamic calendar is based entirely on the phases of the moon, Eid al-Adha can fall at any time of year, so on the whole the dishes served are the usual dishes of the season, rather than dishes unique to the Eid.

One of the principal religious obligations of Islam is abstaining from food and drink during the daylight hours of the month of Ramadan. From sunset to sunrise, in contrast, the faithful are permitted to eat and drink whatever they wish. They tend to avoid salty foods, which would make them thirstier during the following day. At the end of Ramadan, Eid al-Fitr is a day of feasting and socializing. In distinction from Eid al-Adha, it emphasizes pastries and other sweets, rather than meat dishes.

The Shiites observe Ashura, the 10th day of the month of Muharram, with bitter mourning for the seventh-century martyrdom of the imam Husain ibn Ali. *Ashura* is also the name of a dish associated with this day; it consists of boiled whole wheat enriched with raisins and nuts. Grains and other seeds symbolize rebirth and/or the afterlife, and a similar dish is prepared by Christians at Easter and the feast of St. Barbara. Christians abstain from meat on Fridays, during Lent, and on other days of abstinence. They have a repertoire of meatless dishes such as fish or lentil kibbi.

Happy occasions such as weddings and births are celebrated with sweet foods—puddings and pastries. By the same token, sweet foods are considered in-

appropriate at sad occasions. After a funeral, guests are always poured bitter coffee.

Diet and Health

The Lebanese diet is rich in fresh fruits and vegetables, so vitamin deficiency is not a serious problem. In particular, it uses lemon juice more abundantly than most cuisines. It also provides other healthful ingredients such as fish, nuts (which figure in the fillings of both pastries and stuffed vegetables), yogurt, and garlic.

Because of the availability of fish and olive oil, the Lebanese diet is lower in saturated fats and higher in omega-3 oils than that of some of its neighbors. However, although the Lebanese diet is the classic Mediterranean diet in many ways, sedentary city people tend to consume large amounts of sugar, butter, and refined wheat. Men who socialize in coffeehouses are at particular risk, because nothing but pastries is regularly served there, posing the danger of diabetes and cardiovascular problems. Many Lebanese are aware of these problems and explore health-food options.

Traditional medicinal concepts were derived from ancient Greek and Persian medicine and analyzed most complaints as due to an imbalance of the bodily humors. Medical treatments aimed to correct this supposed imbalance. All foods were held to have medicinal qualities, so medieval doctors often prescribed particular dishes—they even gave recipes, which cookbook writers eagerly plagiarized. These theories no longer exert much influence on diet, if any. Lebanon was the first Arab country to have modern medical schools, and it uses up-to-date pharmaceuticals and techniques. Folk remedies survive, however. Tea and yogurt are often recommended to those suffering from diarrhea, and mothers brew bitter medicinal teas for sick children.

Palestinian Territories

Overview

Palestine occupies the area between the eastern shore of the Mediterranean and the Jordan River and includes the Palestinian territories of the West Bank, the Gaza Strip, and East Jerusalem—though East Jerusalem is under full Israeli jurisdiction. The West Bank is inhabited by some 2.46 million Palestinians, the Gaza Strip by approximately 1.55 million. Palestine occupies, in total, only 4,163 square miles (6,700 square kilometers) of territory. Palestine has several distinctive languages, ethnicities, cultures, and cuisines.

Palestinians follow many religious traditions, but the main demographic, 98 percent, is Sunni Muslim. A significant minority is Christian—2.6 percent—with even smaller groups such as Druze and Samaritans. Cultural displacement means that many of the original Bedouin population of Palestine have transmigrated to Israel, Egypt, and Jordan. The current number of Bedouin accounts for 0.5 percent of the population, an Armenian community makes up 0.1 percent, and a Jerusalem-based Indo-Aryan Dom community (Gypsies) less than 0.1 percent. Palestinians represent a highly homogenized community who share one cultural and ethnic identity: South Levantine Arabic.

The output of the Palestinian economy is almost exclusively agricultural; there is some minor expansion in small-scale industry, but unemployment is widespread. Fifty-seven percent of the population lives below the poverty line.

The upsurge in the consumption of processed food as a result of westernization and altered work

patterns has meant a move beyond the home and the basis of fresh fruits and vegetables that underlay the Palestinian diet. As yet, none of the organizations working in this area has conducted comprehensive surveys of the impact of the geographic, socioeconomic, or political situation on the Palestinian diet. According to a 2007 “Food Security and Vulnerability Assessment” study by the World Food Program, 34 percent of Palestinians could not afford a balanced meal. In 2009 the United Nations World Food Program began a food voucher system to help 30,000 people in urban areas of the West Bank. This was a response to the nearly 70 percent increase in the price of basic food commodities such as oil and milk. A similar smaller-scale project is planned for the Gaza Strip. Such voucher schemes are the result of a 2008 study by the World Food Program, which found that residents of Gaza and the West Bank were particularly vulnerable, due to their dependence on imports, to the repercussions of global food prices on domestic markets.

Palestinian food culture can be aligned to eastern Mediterranean Levantine food culture, a culture that also exists in Syrian, Jordanian, and Lebanese cuisine. Historically, Palestinian food originates in the many diverse civilizations that colonized or resided in Palestine, with particular lines of inheritance drawn from the Arab Umayyad conquest and its establishment of a caliphate. This can be traced back to the food cultures of Mecca and then Damascus. Further influence comes from Abbasid Caliphate, with its Turkish, Syrian, and Iranian food strands, and Turkish food culture via the Ottoman Empire.

🍴 Food Culture Snapshot

Yasir and Reem Abbas live in an affluent area of the West Bank city Nablus. Yasir, originally from Ramallah, is a civil servant; his wife, Reem, indigenous to Nablus, is a teacher. Their food choices typify middle-class urbanites whose diet is very Western as well as Palestinian. Yasir and Reem start their day at 6:30 with breakfast. This is a light meal of omelets, called *iljeh*, and Jenin fig jam, with both eggs and jam bought from the local minimarket. The *khoubz* bread they eat is bought by Yasir from a modernized bakery. The Abbases will meet again for lunch, the largest meal of the day, eating rice with a *yakhneh* stew of a small amount of lamb with squash and *mahasi* (stuffed vegetables). For the *mahasi* they will have bought eggplant. They bought the lamb and squash in a supermarket, although the spices that Reem used for the dish were from a reliable *'atar* in the local *souk* (spice market). If guests drop by, they may drink coffee, bought ready-ground in the *souk*. After work, at 8 P.M., Reem prepares a dinner of *shakshuka*, prepared using eggs and tomatoes bought from the minimart. Later, after dinner, comes *'hilew*, which is a light snack of *kanafeh* (a confection made of a shredded wheat-like pastry, cheese, and syrup) with mint tea, the mint coming from the *souk*. The pastry will have been bought from a local specialized Nablusi pastry shop in the Old City. Nowadays, there is more processed and fast food available to the Abbas family than in the past. They eat out more now than before, with wider choices, but often as part of their wider family unit. Westernization is more clearly evident in cities: Hamburgers replace *kiftah* (the traditional ground lamb dish), pizza replaces *sfeeha* (a flatbread topped with peppers, tomatoes, and lamb).

Major Foodstuffs

From the humid coastal strip of Gaza, to the landlocked hilly lands of Bethlehem and snow-capped Beit Jala, to the West Bank, with its high rainfall and mountainous highlands, to the desert landscapes of Jericho: All of these landscapes shape Palestinian food culture. Predominantly, though, more than 90 percent of Palestinian dishes are made of vegetables, but vegetarianism, as a discrete cultural

choice, is rare. Meat consumption spikes at seasonal, religious, and cultural events. The differences between the interior and the coast alter food culture: The proximity of the north to Lebanon means that many dishes are yogurt based (using the dried yogurts of *jameed* and *kishk*); tomato-based sauces appear in the south and center of the country. Gaza's coastal reaches mean that fish and vegetables predominate, but the Egyptian culinary influences mean that dried hot red peppers and fresh green peppers are featured. Lamb is the main protein in the interior: Their complex meat dishes distinguish Nazarenes. Rural and urban differences can be seen.

Urban food is open to global food influences: The northern West Bank city of Nablus is home to wealthier, more cosmopolitan Palestinians, and so the food culture of Nablus tends to be aligned to that of cities such as Lebanon's Damascus. The settlement of Europeans from the mid-19th century through to the further demographic changes of the last 50 years has affected urban food culture. Furthermore, the closed borders of the Palestinian Occupied Territories can result in food shortages and

Shakshuka, a traditional dish made with eggs and tomatoes and often served for dinner. (iStockPhoto)

imbalances: Staples such as flour and pulses have been estimated by the United Nations to meet only about half of the population's immediate needs. Food insecurity has a dramatic impact on Palestinian access to food, affecting the majority of people. For example, nearly 40 percent of Palestine's inhabitants live in Gaza, on only 6 percent of the total land area, making access to adequate food precarious.

Agriculture is a central sector of the Palestinian economy, a buffer in times of economic difficulty. However, agriculture also needs access to land, water, and markets, none of which are givens. Agricultural production in Gaza and the West Bank has declined steadily. Only 6 percent of the land cultivated by Palestinians in the West Bank is under irrigation. Rain-fed cultivation accounts for around 95 percent of cultivated land but is dependent on climatic conditions and is found in its highest concentration in the northern West Bank Jenin area.

Vegetables, including onions, cucumbers, tomatoes, cauliflower, squash, and okra, provide minerals, vitamins, and trace elements. In excess of 30 different vegetable crops are grown in Palestine, the number accounted for by plant diversity and varied planting times. A number of green leafy plants, bought in the market or often acquired gratis—even picked by the roadside—are popular but preponderate in the area of Jericho: Strong-tasting *jarjeer* (arugula) appears in abundance in winter, while in spring the grasslike *hindbeh* (wild chicory), *hwerneh* (mustard greens), and *khubbeizeh* (wild mallow) appear. Jarjeer and hwerneh are eaten raw in salads, while *hindbeh* and *khubbeizeh* are fried. Tomatoes flourish in the cooler, more northern climes in Palestine. Areas to the north of the West Bank, with their fertile soils and high rainfall, like Jenin, Tulkarm, and even Ramallah, lying in the middle of the West Bank, enjoy varied crops. In contrast, in the Gaza Strip, the capacity of agricultural production has been outstripped by consumer demand, and the last of the sand dunes has been leveled for intensive horticulture. The fertile West Bank lands of Jenin, far north of Nablus, are home to palm and fig trees, and also produce watermelon, a useful source of thirst-quenching water in a dry climate. The culinary tra-

dition of mahasi, the stuffing of vegetables such as pumpkin and eggplant, continues. Vegetables are cored and stuffed with rice and meat. Cabbage leaves and chard may be stuffed, or vine leaves to make *waraq al-'ainib*. Vegetable soups are also popular, based on such combinations as potatoes, Swiss chard, dried beans, and cauliflower. Zucchini can be used all year round, as these can be preserved dried.

Only small numbers of *fallahat*, women farmers, continue to sell domestically produced, rainwater-irrigated vegetables, purportedly low on pesticides, known as *baladi* vegetables, grown by *fellahin* (peasant farmers) on small plots in villages beyond the city. Vegetables include prized Rihâwi eggplant, fresh bush tomatoes, garlic, and onions. Despite displacement and urbanization, the persistence of vestigial fellahin culture means there is still an emphasis on the private cultivation of vegetables, even in urban areas. Seasonal vegetables and the fellahin who supply them still alter the food available: The spring brings apricots, the summer cucumbers, the autumn apples and olives, the winter bitter oranges and lemons. Many fellahin offering baladi-grown food must enter cities by circuitous back routes in order to avoid checkpoints, as the Israelis prefer to supply Israeli-grown vegetables to the Palestinian Occupied Territories. Za'atar is also one of the Palestinian foodstuffs that have become politicized. In 1977, ecologists ruled that overharvesting had left wild za'atar endangered: The Israelis declared it a protected species and banned its collection from the wild. Offenders would be heavily fined. The Israeli authorities have placed a similar ban on gathering za'atar in the West Bank. Palestinians, objecting to this, claimed an ancestral knowledge of how to preserve the yield of wild za'atar. Since 2006, Israel Defense Force checkpoints confiscate za'atar plants.

Dietary products derived from animal milk are a key source of protein. *Laban*, meaning "milk" or "white," is a fermented-milk yogurtlike product, often processed to allow year-round storage. Historically, the Bedouin have supplied the Palestinian market with goat and sheep meat and dairy products. After the rain of winter, fresh green pasture opens up in spring, and with it comes the production of white goat- or ewe-milk cheese, like *jibneh baida*, and cow

milk-based, increasingly popular *ackawi*. Unfortunately, Bedouin food culture has suffered from the impact of droughts and lack of mobility: Restricted access to traditional grazing land in the West Bank has compelled the Bedouin to buy fodder for their livestock. This, then, has escalated in cost, forcing some Bedouin to give up their traditional livelihood or sell portions of their livestock. Cheeses derived from ewe and she-goat milk are made using gum Arabic or mastic (gum acacia, a pistachio-tree resin) and can be flavored with the aromatic spice *mahlep*, made from ground cherry kernels. The cheese is preserved in salted water. The production of *laban jameed* is staged: Once the milk has been churned to extract the butter, the buttermilk is left to drip through a cheesecloth for several days; the resulting sour paste is kneaded and mixed with such spices as turmeric, cumin, mahlep, nutmeg, and cinnamon (the Bedouin in the area of Bethlehem use fenugreek instead of cumin), then shaped into small balls. After being dried, the cheese is stored in cloth bags. The individual balls are rehydrated for cooking. Laban jameed is a staple in many Palestinian dishes, used in *mahashi* (stuffed cabbage), *fatteh* (stock and dates on leftover flatbread), *mansaf* (stewed lamb) for sauces, and in many stews. *Labaneh*, another yogurt derivative, is a ubiquitous side dish on the Palestinian table and, as *labaneh wa za'atar*, is served with olive oil and *za'atar* (a herb compound of dried thyme, hyssop, sumac, sesame, and sometimes oregano).

Butter is also derived from ewe milk, and clarified butter, *samneh baladieh*, is strained after being boiled with *burghul* (bulgur) wheat, the musky spice turmeric (giving *samneh* its distinctive taste and iridescent yellow color), and nutmeg. Where *samneh* would have been used for the deep, rich flavors it affords, because of heightened awareness of the dangers of saturated fats, its use is limited. Urbanized young people may prefer instead to use olive oil or vegetable oil in cooking.

Staple foods such as rice, bread, and wheat are grouped together under the term *aish*, from the Arabic verb “to live,” and *arruz* (rice) is derived from *araza*, “to be miserly or tight-fisted”—the starch in rice, when cooked, huddles together in balls, like the fists of the miser. Rice is not cultivated in Palestine, a

fact that bears testimony to Palestine’s position as a point of intersection for trade routes. Rice appears during ceremonial eating and in dishes such as the Gaza-based dish *sumaggiye* (a stew of beef, chickpeas, and chard flavored with sumac and tahini paste) and the upside-down meat and rice dish *makloubet* or the stuffing for *mahasi*.

Wheat-derived products are the oldest aish foods in Palestine, served cracked in the form of burghul wheat, derived from durum wheat, in dishes like *tabbouleh* and *kubeh* (ground lamb dish). *Freekeh*, roasted young green wheat, can supplant rice in *makloubet* and *mahasi*, while semolina, the kernel of the durum wheat, is used to make the sweet Palestinian *harisseh*. Many wheat-based products are steamed, like *maftool*, popular in Gaza, where it is served like a couscous with a sauce flavored with dried sour plums, but *maftool* may also be shaped into tiny peppercorn-sized balls and steamed over a savory stew or broth. Pulses incorporated into soups are often used as a staple food among poorer eating communities. *Adas majroosh* is a popular seasonal winter soup, using crushed lentils (*majroosh*), chopped fried onion, and cumin. *Freekeh* is a second cereal type: Harvested yellow wheat, with soft inner seeds, is placed into piles and set on fire. This process leaves only the seeds, which are then thrashed or rubbed (from which the word *freekeh* is derived).

The next key staple, bread, may be homemade but is most often store-bought from modern bakeries. Commonly consumed, *kmaj* is a double-layered flatbread with a pocket of air inside, and this double-layering technique becomes multiple layering when *mtabbak* (meaning “folded”) is made. Bread such as *mabsoos* is kneaded with olive oil and *za'atar*. Taking its name from the *tabun* oven, *tabun* bread is a combination of whole-meal and white flours. *Tanoor*, a thinner version of *tabun* made solely of white flour, is baked on the outside of the *tabun*. The hot, dry back of a type of local wok is used for pitalike *saj* bread. At most street corners in Jerusalem, circular breads called *ka'ek* are sold, sprinkled with sesame seeds.

Key herbs and spices recur. *Za'atar* is the generic name for a number of herbs and for Palestine’s distinctive spice compound. *Za'atar* and other spices

used include cumin, allspice, cardamom, and cinnamon. Fresh spices are readily available from a spice vendor, or *'atar*; herbs such as mint, dill, thyme, coriander, parsley, and rosemary can be grown in the garden, although thyme and rosemary grow wild. Ideally, the herbs and spices used in Palestinian food should meet the required level of sourness, or *hmudah*. Spices and spice compounds such as dark red bitter sumac, unsweetened tamarind, or pomegranate molasses give this taste, as in the Gazan dish *rummaniyya* (made with eggplant, tahini, peppers, and lentils). Immature fruit can contribute to *hmudah*, such as the green fruit of the almond tree, *el-khader*, sold in the markets in early April. Several spice-based pastes and oils like *za'atar*, *samneh* (spiced, clarified butter), or *baharat* (a Levantine mix of allspice berries, cinnamon, black peppercorns, and nutmeg) inform the deeper tones of Palestinian food.

The culture of the olive tree is central to Palestinian food, although land confiscation has impacted olive cultivation. Home-pickled olives go with every meal. Olive oil is a base for stews and frying; integral to the construction of appetizers and salads, it also moistens *hummos* (hummus) and adds sharpness to *m'tabbal*, a pungent eggplant dip. Early morning workers in Palestine might douse their *tabun* bread in olive oil and a little sumac to ease the “dizziness” of an early morning start, while a small cup of olive oil can aid digestion. The highest density of olive orchards under irrigation is in the Tulkarm district in the northern West Bank region, which produces greenish oil, as opposed to the lighter, yellowish olive oil of Ramallah. Olive harvesting in October and November remains a key social, communal, and familial event in Palestine. Sesame oil, *sirej*, used in frying, is an element in the ubiquitous *tahineh* (sesame paste), and a tablespoon is added to dishes such as *mahasi*. *Sirej*, when combined with pistachios and sugar, makes the sweet *halaweh*.

Lamb, mutton, chicken, and beef dominate meat consumption in Palestine, although such meats are pricey and hard to come by in certain restricted areas, such as the Gaza Strip—lamb smuggling occurs in the occupied territories, but cattle smuggling less so. Lamb, its slaughter, and its presentation intersect with the fabrics of ritual, celebration, and daily

Harvesting olives in Palestine. The olive tree is not only a source of livelihood and a symbol of the people's connection to the land, but it has also been employed as a symbol of cooperation between peoples. (iStockPhoto)

life, fitting as it does with the concept of sacrifice in the twin traditions of Christianity and Islam, and the key theistic celebrations of Easter and Eid al-Adha.

Fish is a main element in the staple diet of specific regions of Palestine, namely, in coastal regions such as Gaza. Freshwater fish include carp, grey and golden mullet, tilapia, salmon, and freshwater prawns. Fish farming is a developing industry, as pollution, particularly in the Red Sea and the Jordan River, is increasingly problematic, as are falling water levels in the Sea of Galilee. Sardines and sole, *arous* (similar to sea bream), tuna, sea bass, turbot, slipper lobster, and a wide array of shellfish including squid, shrimp, and crab are representative of saltwater fish. Gaza was the traditional supplier of saltwater fish, but this is now under serious threat. According to

the United Nations Office for the Coordination of Humanitarian Affairs, from 2000, the number of nautical miles from the coast in which fishing was permitted was limited to six. By 2008 fishing accounted for merely 1.5 percent of Gaza's economy (agriculture accounts for a further 8.5%). Most recently, a three-kilometer (about 2-mile) restriction has been enforced, limiting fishing to the overfished spawning grounds of shallow coastal waters. Gaza's fishing authority is trying to establish fish farms. Lack of fuel has also had a detrimental effect on the fishing industry. Popular fish dishes are the fish broth of *sayyadiyah* and *zibdiyit gambari*, shrimp stewed with fresh dill, peppers, olive oil, tomatoes, chili, and garlic. Grilled fish, rubbed with or marinated in lemon juice, coriander, cumin, and chili, is popular.

Water is often used with meals; Arabic or Turkish coffee is popular at informally established times: in the morning, during the private time of siesta after afternoon prayer at around 3:30 P.M., or when visitors call. Coffee may be spiced with cardamom and sweetened or unsweetened. Mint tea is most often consumed in the evening, made with fresh green mint (*na'ana*) leaves infused in hot water; fresh sage (*maramiyyeh*) may also be infused. Coca-Cola is encroaching on mint tea consumption: Soft drinks can be found in most Palestinian homes. Hebron, Nablus, and Gaza have distribution centers for Coca-Cola (though Gaza's was shut down in 2007), and Ramallah has a Coca-Cola bottling plant.

While alcohol is not widely consumed, less conservative Muslims and Palestinian Christians drink light beer (the West Bank town of Taybeh has the only beer brewery, producing Tayibeh but also alcohol-free beer for conservative Muslims). Scotch whisky or the clear aniseed digestive *arak* may be consumed. Arak is diluted and made milky with water and is consumed with meze (small dish appetizers) and at high points in the cultural calendar. Christian monasteries may produce wine.

In winter, *sahlab*, warm milk thickened with *salep* starch, which is derived from the orchid bulb, and sweetened with orange blossom or rose water, appears. *Sharabat* is a category of soft drink made by adding ice and cold water to fruit syrups, such as the lemony orange citrus syrup *khushhash* and *toot*

made from mulberries. At key celebratory points such as Ramadan—or in periods of hot weather—people make drinks from the following: tamarind (*tamar hindi*, meaning “Indian dates,” an Arabic appellation for tamarind), a licorice drink called *sous*, carob, and *mishmash* (apricot) juice. The pulp from carob is also used as a sweet substitute among children of poorer communities.

Cooking

Women are chiefly responsible for home food preparation, with a higher concentration of women rurally. However, social forces have impacted on this as women have joined the public workforce, and more food is processed. Traditionally, the centerpiece of cooking in the Palestinian household was the tabun, a cone-shaped oven of yellow clay and straw, fueled by wood or, more traditionally, by dried sheep or camel dung, situated in the open backyard of the home. The tabun featured in both public and private spaces in rural Palestinian villages, with families taking turns to use the tabun for bread making, as communal property. The use of the tabun has decreased substantially, almost disappearing, with a few exceptions in rural communities. Ironically, there has been some resurgence in its use, as supplies of more modern cooking fuels have become subject to restrictions. Predominantly, though, as shown by a survey by the Palestinian Bureau of Statistics in 2006, 96.1 percent of households use petroleum gas as the main fuel for cooking, while 9.4 percent depend on electricity as a secondary fuel and 8.5 percent on wood as a secondary fuel. Many Palestinians buy ready-made bread at local markets. Modern bakeries fueled by gas have replaced the tabun, and these can now be found on every corner. In this context, tabun use can be accounted for more by restaurants and bakeries aiming to attract customers who are nostalgic for old-fashioned tabun bread. However, many of the new so-called tabun are often operated by gas and bear no resemblance to the old-fashioned tabun. Fuel for cooking has been a compromised commodity: The illegal piping of cooking gas has been attempted, particularly beneath the

southern Gaza Strip and Egypt. It was estimated that in the border town of Rafah, as many as 400 illegal pipes were laid. Fuel disputes led to some unexpected developments: Cooking oil has been used to fuel cars, which led to unexpected profits for restaurant owners. Much of this came about because Israel, once the sole supplier of cooking gas and fuel to Gaza, imposed sanctions following a spate of violence that disrupted a six-month ceasefire in November 2008.

Cooking utensils in modern Palestine are very similar to Western utensils, replacing the earthenware dishes such as the *zibdieh* or tagine-like *fukhar*. Various traditional implements were used in the past for grinding, but the most commonly used device is a mortar and pestle—although electric blenders and grinders are popular. Most Palestinians buy their spices from the souk or shops. A core set of spices like turmeric and nutmeg arrive in Palestinian dishes through other elements of the dish like *samneh* or *laban jameed*. Others are newcomers: Traditionally, coriander seed, with its delicately fruity undertones, has been used, only to be upstaged in recent years by an increased use of fresh green leafy cilantro. Coriander seed is used for such dishes as *mulukhia* (bitter leafy green), *bamiah* (okra), and *yakhni fasuliah* (beans).

Pickling, a means of extending the shelf life of seasonal foodstuffs, is common, with chilies, olives, turnips, and cucumbers being pickled in a multitude of different styles. Green olives not sent for oil production are lightly cut by the farmer, and then water with salt, sugar, or vinegar is poured over them and they are stored. Common also are techniques for drying and preserving; for instance, the many jams popular in regions such as Gaza are all ways of extending the shelf life of fruits: These can be fig, orange (*khushkhash*), or sour plum (*arasiya*). With only a short two-week season in July, the cherry-sized plums are sold in local markets and jammed or dried, in their dried form enriching the flavor of dishes like beef and pumpkin stew, *ari' bi tahina*. Jam making is, again, prevalent in West Bank cities such as Hebron, where grapes are a primary crop in spring and summer. Grapes are dried to make raisins, a molasses *dibs*, and jams.

Typical Meals

There is a central daily ritual of eating that Palestinians will adhere to, given the economic means to do so. There are four meals a day: breakfast (*iftur*), lunch (*gheda*), a predinner snack ('hilew), and dinner ('*asha*). The largest meal of the day is lunch, which may be anytime between 12 and 2, and, as eating is so integral to family life, meals may well take one or two hours.

Meals are sites of family connection and cultural identity for Palestinians. Traditionally, the family group, seated on the floor, would eat around the *tabliyeh*, a round table. In a more contemporary setting, food will always be placed on a surface above ground level. Nuts and olives, sometimes mixed with fresh rue, and cheese will already be on the table. The traditional notion of Palestinians eating with their right hands, seated in a circle around a dish (as is still practiced at weddings), is outmoded; many modern Palestinians will sit at a table to eat, using a knife and fork, with the fork in the right hand. The etiquette of right-handed eating is firmly and immovably established across Arab Christian and Arab Muslim food cultures. Traditionally, though, if guests and family are to eat using their hands, the right hand is used to scoop up food (always solely from the section of the communal plate directly in front of the diner), which is then shaped with the right hand into a golf ball-sized piece.

Bread is also ubiquitous: The bread is torn, shaped into a scoop with the fingers, and used instead of utensils to scoop up dips, salads, meats, and sauces. Bread dough also reappears in *manaqeesh* (flatbread covered with cheese or herbs); *sfiha*, with its crust of minced lamb; or *fatayer* (stuffed dough pastries). Pizzalike bases spread with pastes are popular, for instance, *manaqeesh jibneh*, when goat cheese is combined with oil and garlic; or *manaqeesh bi za'atar*, flatbread covered with the spice mixture za'atar; or *manaqeesh beid*, when eggs replace the za'atar.

Various salads and vegetables will be served: *salatat bandura* (tomato salad), *fattoush* (bread salad), *dagga* (tomato and chili pepper salad), and *tabbouleh*. Mahasi would also be served. A key element in typical meals is beans, such as broad beans, fava

(*ful*) beans, and chickpeas in falafel. The chickpea-paste hummos, of which the most popular is *hummos bi tahineh*, comes in many varieties for both lunch and dinner. Chickpeas can also be combined with *ful* to make the brownish *mukhluta*. Other dips such as the eggplant *baba ghanoush* are popular, as is the spicier version of this, *m'tabbal*. Depending on where one is in Palestine, it is customary to serve a sweet such as *baklava*, made by layering honeyed walnuts and pistachios with sheets of unleavened dough, or a West Bank favorite from Nablus, *kanafeh*, with honeyed Nablusi cheese beneath the finely shredded noodlelike pastry, dyed orange and sprinkled with crushed pistachios. A sweet milk pudding such as *hey talliyeh* or *muhlabiyeh* might be served after meals.

Breakfast (*iftur*) may be eaten on the move from street vendors selling *manaqesh bi za'atar* and *jibneh baida*; in its more sedentary form, breakfast is a quick, light meal of eggs (boiled, fried, or in *iljeh*), hummos, *foul mudammas* (stewed fava beans), cucumbers, tomatoes, olives, *labaneh*, and *khoubz* bread and quince, carob molasses, or *safarjil* (sweet lime) jam. In Jerusalem, breakfast may be the local specialty of a boiled egg and sachet of *za'atar* with the ring-shaped, sesame-seed bread *ka'ek bi simsim*. Hot tea infused with mint leaves accompanies breakfast. At its most basic, breakfast can be hot *tabun* bread, drenched in olive oil.

Lunch (*gheda*) lies later in the afternoon. Characteristically, lunch would be rice with a *yakhneh* stew, based on a single vegetable and sometimes lamb; *mahasi* or *waraq al-'ainib*, rice wrapped in vegetable leaves, is also popular—but the labor-intensive nature of *waraq* means its appearance can be limited to festivity. *Kubeh*, such as the pounded lamb and burghul wheat *kubeh bi-saniyeh*, are served warm. Lunch comes with an array of small dishes of pickles, salads, olives, and dips. Increased affluence and times of economic boom have meant that urban Palestinians are attracted to Western eating styles. However, Palestine's vigorous and indigenous street fast-food culture thrives, with inexpensive *shawarma* in *khoubz* bread and *fatayer*. For *shawarma*, lamb is grilled on a vertical spit, shaved, and then rolled up, with pickled turnip, onions, cucumber, tomato, and *tahineh*, in a long roll of *khoubz* bread. However,

most offices will shut down over lunch, to allow workers to have lunch at home with their families. It is often the case that all courses are served together.

A brief eating interlude called *'hilew* acts as a satellite snack to dinner, coming before or after. *'Hilew* consists of pastry shop-bought *baklava* or home-made *muhlabiyeh*. Dinner, *'asha*, can be eaten after 8 P.M. and includes small, light dishes, such as little omelets or *shakshuka*, eggs cooked in tomatoes, peppers, and spices; soups; and unleavened dough cakes, sweetened with syrup and stuffed with nuts, called *fteereh*.

The following are examples of typical meals in middle-class families in three regions of Palestine: the Triangle (incorporating Galilee), Gaza, and the West Bank.

The Triangle

Cities such as Nazareth, Haifa, and Akka are counted as part of northern Israel. The Triangle, as this is referred to, is a contested area of land. The food culture of Galilee, or the Triangle, places an emphasis on *kubeh*, the combination of burghul wheat and meat, revealing its close affinity to Lebanese cuisine. The practice of serving burghul wheat raw reveals a direct affinity. A main dish would be *kubeh bi-siniyeh*, which uses burghul wheat as a crust encasing minced lamb or beef, baked in the oven. *Kubeh* is associated with mood, particularly happiness, and its inclusion in a meal can signify the end to a time of mourning. *Manaqesh* appears as a popular breakfast food, as does *lahm bi ajeen*, spiced ground lamb on a thin dough base, accompanied by tea or a yogurt drink, *labaneh*, and olives. *Meze* also predominate, accompanied by skewered meat. Roast lamb would be the focal dish for special occasions. *Ackawi* cheese, originating in the city of Acre, now part of Israel, on the coast of Galilee, is popular.

Gaza

Eighty percent of Gaza's occupants are refugees, bringing food traditions from throughout Palestine. Nonetheless, there is a distinct Gazan food culture: reliance on fish, on cheap foods such as chickpeas, or on free seasonal wild foods such as mustard greens

(hwerneh). Variations in the ingredients used in Palestinian staples also appear: Okra or fresh chopped basil may be added, and a side dish of green chilies is ubiquitous in Gaza. The distinctive tastes brought to Gazan food through chilies, dill, and cumin, as well as the sour fruit taste of tamarind, pomegranates, and plums, distinguish it in dishes such as the summer and autumn vegetarian dish *rummaniyya*, named after the pomegranate. Late autumn sees the harvest of root vegetables and squash, and the bright red dish *mahashi jazar ahmar*, plump, short, stuffed carrots in a tamarind stock.

Ironically, the artificially isolated nature of life in the monitored and check-pointed Gaza Strip means that it maintains a very distinctive food culture: This, the sea, and culinary connections to Egypt influence Gazan eating. For instance, *dagga*, a salad with distinctively hot peppers, dill, crushed tomatoes, olive oil, lemon juice, and raw garlic, is distinctively Gazan, as is the seasonal chard and lentil stew *fukharit adas*. Economic deprivation has determined the preponderance meatless dishes such as *bisara* (made of dried beans) or *saliq was adas* (chard and lentils). The price of fish is making it unaffordable for most inhabitants of Gaza, but calamari (*habbar*) remains plentiful. An emphasis on chilies and garlic in fish cookery exposes the Egyptian connection, as does the use of *shatta*, a hot pepper paste. A dish often associated with Gaza is the meat-based *sumaggiye*. The dish derives its name from its main ingredient, sumac seeds or powder. Sumac, soaked in water, is mixed with tahini. This is then combined with chard (another sign of Egyptian influence and a chief ingredient in much Gazan food), pieces of beef, chickpeas, garlic, dill, and chili. It is eaten with *khoubz* or *kmaj* bread. Popular during the Muslim Eid al-Fitr holiday, each family will distribute its own *sumaggiye* to friends and neighbors, who will, then, fill the bowl with their own bespoke version of *sumaggiye*—or some cinnamon, nutmeg, and date cakes, *ka'ek bi ajwah*.

The West Bank

With a population in excess of 33,000, including the refugee camp, Jericho has a moderate climate and a high degree of agricultural production, its most

noted products being citrus, bananas, and dates. A heavier diet is consumed on the West Bank, with more meat protein and rice. In the northern cities of Tulkarm and Jenin the layered chicken, onion, sumac, and tabun dish *musakhan* originated. *Ma'lube* typifies the region and is an upside-down braised lamb, tomato, eggplant, and rice casserole. When turned, the casserole has a scarlet red top from the tomatoes (which are placed in a solid layer at the base of the casserole). As it is customary never to eat food dry—*nashef*—*ma'lube* is dressed with lemon juice or yogurt. In the West Bank region, grapes are the second-largest fruit crop, with Hebron being the greatest producer and, hence, supplier of grape leaves for *waraq al-'ainib*. Beit Jala, in close proximity to Bethlehem, and the village of Jifna are renowned regionally for their apricot harvest and jam, while Tulkarm is famous for olives. Seasonally, Artas, south of Bethlehem, is famous for its lettuce crop, and the seasonal dish to accompany this is lettuce leaves stuffed with *tabbouleh*.

Eating Out

Although much eating is domestic, eating out has become more popular. Restaurants still widely focus on Palestinian food, and, instead of single people or couples, whole families will eat out. Pickles and *meze* will often function as the starter courses, followed by kebabs and grilled meat and fish as a main. There is a vibrant food subculture that often involves the use of the grill, as opposed to the stove-based stews of home cooking: Kebabs, falafel, and shawarma are available. Western cuisine is popular, and most hotels, restaurants, and cooking schools explore a weak array of Palestinian food while offering French, Italian, and European dishes. Jacir Palace Intercontinental in Bethlehem has tortellini and gorgonzola or chicken breast *dijonnaise*. Focaccia bars and pizzerias are very popular. Hamburgers are widely popular, and Jerusalem has seen a huge expansion of restaurants serving French fries and European sandwiches. Ramallah sandwich shops such as the *Ziryab Café* have westernized fillings inside processed white bread rolls. *Meze* remain popular, with their staples of hummos and grilled or fried eggplant. Coffee shops still remain the province of

Two traditional food stalls selling beigle breads and Palestinian pastries in Old Town Jerusalem. (StockPhotoPro)

men but non-gender-specific coffee shops have proliferated in the newer areas of urban centers. These do tend to have a generational attraction, favored as they are by a younger clientele. Located in the souks of urban centers are cake and sweet shops, *mahal 'hilewayet*, selling baklava, cookies, and kanafeh; some focus on one particular sweet.

Special Occasions

Celebratory traditions vary regionally and in terms of religious observance in Palestine. Traditionally, lamb would be at the core of the celebration, with its many metaphorical resonances, but it can turn up in celebrations for many things, from recovery from an illness through to the acquisition of a new car. The appearance of lamb as a trope for sacrifice is most clearly seen in the feasts of Adha and Easter.

A centerpiece at many celebrations, and particularly weddings, is *mansaf*, a leg of lamb or sections of lamb, served on tabun bread with yellow rice. Although the use of Western tableware is widespread, mansaf is traditionally served on a *sidr*, a large communal dish. *Mansaf* means “to finish off food,” and its inclusion on the table signifies respect for a guest. Another key thread in Palestinian food culture emerges, too: This food culture’s fidelity to traditional food practices can be a determined act of cultural expression within the more hegemonic culture of Israel.

During Lent, Christian communities will eat specific dishes, although the more Orthodox a Palestinian Christian is, the more likely it is that they will eat a nondairy and vegetarian diet. Ramadan comes with a clearly discernable food culture. Fasting is central to religious obedience, a central tenet of the five pillars of wisdom of Islam, and the ceremony of breaking the fast at sunset is deliberate and controlled. Daily iftars, the breaking of the fast, are marked with a drink of water or a mixture of strained tamarind and rose water, *fatteh*, a combination of clear stock and bread, and dates. After fasting, traditional drinks are based on bitter almonds, dried apricots, carob, and licorice; these may be prepared at home but are also sold in the market, sometimes offered free to children by costumed vendors playing cymbals and calling out. Various soups are also used to rehydrate. Larger quantities of meat may be consumed during Ramadan. Rice, vegetables, salads, falafel, and hummos are also consumed. Of key importance is the preparation of additional food for distribution to the poor and one’s neighbors: Like for like, the same amount of food eaten by a house must go to the needy. Christians are included in Ramadan as well: It is a cultural signpost, a holiday also. Christian and Muslim alike anticipate the delicate sweet pastry making that occurs, such as the fragile pastry *barazek na'mine*, flavored with sesame seed. Only in Ramadan are *katayif* sold; they appear on the first day of Ramadan. These resemble pancakes, but only the batter base is cooked, and the top is filled either with sweetened, unsalted goat cheese or sugar, crushed walnuts, and cinnamon.

Small pancakes stuffed with cheese, folded over to make sealed packets and fried. These qatayef pancakes are only made during the Muslim holy month of Ramadan as a special treat. (Paul Cowan | Dreamstime.com)

Eid al-Adha, the Feast of Sacrifice, which comes at the end of March, commemorates Abraham's obedience in his willingness to sacrifice Ishmael (rather than his brother Isaac, as in the Hebrew Bible), with the substitution of a lamb for Ishmael, and is marked with religious observance based on the sacrifice of an animal. But the consumption of lamb at times of religious celebration is not limited to the Muslim community: To celebrate Easter, stuffed lamb and lamb ribs are eaten by the Christian Orthodox community. Both Easter and Eid al-Adha are marked by the consumption of round semolina date- or walnut-filled ka'ek, with wreath-shaped ka'ek bi ajwah (date cake) intended to resemble Christ's crown of thorns. Food as metaphor

further exists in the traditional stuffed kubeh that is popular at Easter, symbolizing as it does the spear that pierced Christ's side. Palm Sunday, the Annunciation, and the Transfiguration are points in the Christian calendar when fish may be consumed in Orthodox families.

Religious veneration is offered through food on various days in the Palestinian Christian year: For the feast of the Virgin Mary on August 28, semolina is combined with fenugreek seeds to make *hilbeh*. December sees the Saint's Day, the Feast of St. Barbara, and the making of *burbara*, a pudding based on wheat because, reputedly, after her imprisonment, St. Barbara would eat only wheat or gave wheat to the poor. Wheat is soaked overnight to soften it, after which it is boiled. Aniseed, sugar, and raisins are combined with it. This is then decorated with pomegranate seeds, almonds, and nuts. The dish is then left out all night in the hope that St. Barbara would visit the house and try a mouthful with three fingers. Children would, then, look for this indentation on the burbara on the morning of St. Barbara's Day. September's Feast of the Cross comes with anise cookies and an eggplant and pomegranate dish, while Epiphany is marked with macaroons and sweet *zalabieh*, deep-fried balls of batter, which are then dropped into orange blossom syrup.

Secular celebrations are also marked through the presence of other sweet stuffs: *Knafeh* (a sweet made with cheese and shredded phyllo pastry) is traditionally associated with the New Year. Dishes with white sauces and gravies can signal the New Year. Birth and death are ritualized in food. A pudding made from spiced ground rice and sugar, sprinkled with almonds, and called *mughli* is made when a baby is born, to thank the guests for coming and to stimulate the flow of milk from the nursing mother. Even the baby cutting its first tooth can be celebrated with bowls of *snounieh*, sweetened wheat. After circumcision baklava will be eaten. Mourning can be marked through a number of food devices: Unsweetened Arab coffee accompanied by dates may be served in Muslim households, while Christians use a *rahmeh*, a special bun, to accompany such coffee, functioning as a memory of the loved one and as a metaphorical blessing on the deceased's soul.

Diet and Health

Various herbs and spices in Palestinian food are associated with health and well-being. Maramiyyeh (sage), *babunej* (chamomile), and za'atar (thyme) are all herbs that have medical applications to alleviate discomfort associated with stomach pains, colds, and so on. A number of medical practices are centered around the use of fenugreek, *hilbeh*. Hilbeh paste functions as a poultice for boils. An infusion of hilbeh leaves is sipped to ease digestive complaints such as inflammations and cramps. Stomach complaints are also addressed through the misnomer “white coffee,” or *qahwa beyda*, an infusion of sweetened orange blossom water or rose water in hot water. This lacks any coffee—hence the whiteness alluded to in its name. Plants such as hilbeh have found their way into pharmaceutically produced capsules that are retailed to address glucose imbalance in older diabetic patients. Hilbeh seeds, when infused, are thought to ease menstrual pain and increase lactation in breast-feeding mothers. Cumin is noted as preventing flatulence, while za'atar, in its incarnations as both thyme and the dried mixture, is used in an infusion as a sore throat medicine, while combined with olive oil and rubbed on joints it is used to alleviate rheumatism. This same combination kept in a house augurs good fortune. An interesting submythology adheres to za'atar: The dried powdered leaves, when consumed, will guarantee safety from serpents for 40 days.

Syria

Overview

Syria is bordered by Turkey on the north, Iraq on the east, Jordan on the south, and Israel, Lebanon, and the Mediterranean Sea on the west. The primary agricultural region is a strip about 100 miles wide: a coastal plain around Latakia, the Jebel Ansarieh Mountains just inland, and, east of the Jebel Ansarieh and the mountains that form the Lebanese border, a corridor of farmland irrigated from wells and rivers that mostly originate in Lebanon. The northern city of Aleppo gets its water from the Turkish highlands, as does a secondary agricultural area extending east from Aleppo to the Iraqi border. The country has been investing in projects to expand agriculture in the east, particularly in the Euphrates Valley. The rest of the country consists of sparse grassland and the rocky Syrian Desert, which extends eastward into Iraq and south through Jordan to the deserts of the Arabian Peninsula. Outside of scattered oases, the arid region is inhabited by a small population of sheep- and goat-herding nomads.

Syria's 18 million people are about equally divided between urban and rural. The population is 76 percent Sunnite Muslim, 10 percent Christians (largely the Nestorians of the northeast, along with Greek Orthodox, Armenians, and other eastern churches), and 14 percent Shiites, including two Shiite offshoots, the Druze in the south and the Alawites of the Jebel Ansarieh.

Food Culture Snapshot

Ma'an and Maysim Hamwi and their children, Yusuf and Lamy, live in Damascus, in an apartment block built

in the 1970s on former farmland within walking distance of the ancient walled city. Ma'an is a clerk in a government agency. They are typical of the urban middle class. The Hamwis buy their food from various shops in the neighborhood: a butcher, a bread bakery, a pastry shop, a dairy goods shop, one specializing in dry foods (grain, flour, beans, nuts, and dried fruit), and one selling syrups, preserves, and canned goods. They buy their fruits and vegetables in a produce market, Damascus's traditional wandering street vendors with their colorful cries (e.g., "Bride of the frying pan," indicating eggplant) having become somewhat rare.

Maysim herself is of part Turkish ancestry, and Ma'an's late mother grew up next to a Turkish family, so the Hamwis' cookery is a little more Turkish than most. One of Ma'an's mother's specialties was *oturtma*, a Turkish dish belonging to the vast Near Eastern repertoire of lamb, tomato, and eggplant stews. The name means "settled," which is close to the sense of the name of a Damascus specialty called *mnazzli*, "lowered, cooked down."

Major Foodstuffs

The Syrian diet is based on much the same vegetables as in any Mediterranean country, particularly tomatoes, onions, eggplant, zucchini, turnips, and potatoes, but including less common ones such as cardoon (*kangar*) and kohlrabi (*karamb*) and some specifically Middle Eastern vegetables, such as grape leaves for stuffing and mallow (*molukhiyyi*), a coarse green that cooks up with a slightly sticky texture. Other greens include lettuce, cabbage, spinach, and Swiss chard. Some produce vendors sell

gathered foods such as *'akkub*, a sort of rugged wild thistle cooked much like artichokes.

The main meats are lamb and chicken, and to a lesser degree goat, but more of Syrians' protein comes from dairy products and pulses, particularly chickpeas and lentils, than from meat. People living in the villages rely even more on dairy products and pulses. Fish is rarely eaten in Syria except on the Mediterranean coast and is not a major food even there.

Wheat and rice are the chief grains. Pita bread (called simply *khubz*, "bread") is eaten at most meals, even when rice is served. Wheat is also consumed as *burghul* (bulgur): Wheat grains are boiled until the starch gelatinizes and then dried and crushed, making a product that can be made ready to eat simply by boiling or even soaking in water. Bulgur soaked

in yogurt and then sun-dried makes *kishk*, a sort of instant soup mix with a tart, slightly musty flavor. Wheat is also used in sweet and savory pastries.

The leading cooking fats are olive oil, butter, and lamb fat. The olive does not flourish away from the coast, so in the inland cities it is partly replaced by other fats. Lamb fat comes from sheep varieties bred to deposit their body fat in their tails (*liyyeh*), which look as a result somewhat like beaver tails. This fat has a low melting point, giving it a pleasant mouth feel, so bits of tail fat are often threaded between the chunks of meat in shish kebab or used as a stuffing for meatballs to produce a spurt of hot lamb fat in the mouth. A bit of tail fat is traditionally added to the butter in baklava to give a subtle gamy tang.

Milk, principally from sheep and goats, is rarely consumed fresh except in ice cream. Mostly it's

Groats seller at the Hamidiyyah souq (marketplace) in Damascus, Syria. Groats are hulled cereal grains used in many staple dishes. (Shutterstock)

soured into yogurt (*laban*). Yogurt can be strained to make *labni*, an even more noticeably sour product with the consistency of a soft cheese. Both yogurt and *labni* keep better than milk in the absence of refrigeration. Fresh milk is curdled to make cheese, mostly consumed as *jibni baida* (white cheese), which is stored in brine like feta. The curd can also be boiled to make a sort of mozzarella called *musanara*, and this can also be twisted into *mudaffara*, which resembles Armenian string cheese. A sort of cheese called *qarish* is made by boiling yogurt until it curdles and then straining out the solids.

Butter is nearly always clarified of its solids and whey to produce pure butterfat (*samni*), mostly used in making sweets. A product called *qaymaq* is made by simmering whole milk so that a skin of rich cream rises to the surface, being skimmed off as it forms to make a very rich product comparable to English clotted cream. It can be eaten by itself or used as a filling for pastries. Other dairy products include *shanklish*, which is dried balls of yogurt or *qarish* cultured with mold to produce something a little like blue cheese, and *ayran*, a tart drink made by diluting yogurt with water.

Cooking

City people use gas or electric ranges, though villagers may still cook on a wood-fired range made of clay or stone. In the western part of the country, bread is baked in European-type brick ovens, but the *tannur*, the ancient Mesopotamian clay oven, survives in the east. This is essentially a clay jar two or three feet high with an opening at the bottom for feeding a fire. Flatbreads are cooked by slapping them onto the inside of the neck of the jar, where they cook very quickly in the high heat.

The usual cooking utensils of a home kitchen are much the same as in Europe, with the notable exception of the *siniyya*. This is a round baking pan about 16 inches in diameter with sides about an inch high. It's used for baking baklava-type pastries and a variety of homey stews. The *siniyya* owes its existence to the fact that traditional kitchens did not have ovens, so dishes to be baked were sent to the village bakery, where enough heat would remain in the

oven's bricks after the day's bread baking to cook them. The *siniyya*'s flat shape made it possible to fit a number of these pans into one of these ovens at a single time. Occasionally, one will still see children even in big cities balancing *siniyyas* on their heads on the way to a local bakery. These days, city people more often use the *siniyya* in the oven of a home range. By its nature, cooking in a *siniyya* exposes a large amount of the food's surface to heated air, so stews baked in one develop a special traditional flavor because of evaporation and a slight browning of the vegetables, including tomatoes.

Traditional kitchens may have a large stone or marble mortar (*jorn*) and a pestle (*mdaqqa*) about the size of a baseball bat, which are used for making *kibbi*, a versatile paste of meat, bulgur, and onions. Making *kibbi* in the *jorn* is a laborious process taking an hour or two. The Hamwis own a food processor, which reduces the process to a matter of minutes.

Typical Meals

A usual breakfast for city people would be flatbread (plain or perhaps topped with *zaatar*, a mixture of wild thyme, sesame seeds, and tart ground sumac berries) and cheese—white cheese or *qarish*—along with a handful of olives. Some city people have a Continental breakfast of croissants, an imported soft cheese, and the rather syrupy local fruit preserves (*mrabba*). Turkish coffee is usually served with breakfast. Farmers might start the day with a hearty soup made from kishk or lentils.

When possible, people prefer to eat lunch at home. Those who can't because their workplace is at the other end of town may go out to a shish kebab restaurant. On weekends, people will have a simple lunch—say, roast chicken or stuffed eggplant accompanied by pilaf and salad. Lunch is accompanied by water or *ayran*, or sometimes a soft drink.

A typical dinner would be lentil soup followed by lamb stewed with a vegetable, accompanied by plain pilaf (*rizz mfalfal*) or pilaf garnished with toasted vermicelli (*rizz bi-sha'riyyi*). Tomato and cucumber salad is likely to appear on the side. Rural people eat the same sort of dinner so far as their

budget allows. Coffee and fresh fruit end the meal. The famous Middle Eastern pastries are not usually served with a meal but consumed as snacks during the day.

Two features of Syrian food survive from medieval cookery, though in an altered form. In the Middle Ages, most Arab stews contained a sour fruit juice such as lemon, pomegranate, or even rhubarb juice, and all were flavored with complex spice mixtures. Both practices are still known, but in many cases the fruit juice has been replaced by tomato juice and the spice mixtures reduced to cinnamon and allspice, or even allspice alone. On the table, salt and allspice appear instead of salt and pepper.

Kibbi is one of the most versatile Syrian foods. The meat, bulgur, and onion paste can be rolled into meatballs and grilled on a skewer, baked in a *siniyya* with a filling of fried onions and lamb fat, made into tangerine-sized, torpedo-shaped meatballs with the same filling and then deep-fried, or made into meat-stuffed flying-saucer disks and grilled, fried, or even poached.

In the 16th century, most Arab countries entered a period of economic stagnation, partly because the region's middleman trade declined after the European voyages of exploration to the Far East. Aleppo, however, continued to have a vigorous economy. One sign of this is that some of its caravanserais (*khans*), which served as hotels and warehouses for traveling merchants in the Middle Ages, are still in

service as warehouses, while in other countries caravanserais have mostly been converted to other uses such as museums.

As a result, Aleppo has long been the most prosperous city in Syria, and it has developed an opulent and distinctive cuisine. It often uses pomegranate juice or tamarind in place of lemon juice, making for particularly aromatic stews. The medieval tradition of cooking meat with fruits such as quinces is still quite lively. Unlike the rest of Syria, which is not particularly fond of red pepper, Aleppo uses large quantities of a medium-hot dried pepper known throughout the area as Aleppo pepper. To Syrians from other parts of the country, the Aleppines seem to substitute this crushed pepper wherever possible for fresh herbs such as parsley or mint. The city has long had a substantial Armenian population, and until the mid-20th century it was home to an ancient Jewish colony; both groups had their own culinary specialties.

The proverbial expression is *Halab, ahl il-mahashi wal-kibab* (Aleppo, the people of stuffed vegetables and varieties of kibbi). Aleppo cooks stuff cabbage leaves the way grape leaves are stuffed elsewhere in Syria (and with red pepper in the filling). They even stuff laboriously hollowed-out carrots. As for kibbi, Aleppo kebab shops regularly offer *kibbit banjan*, which is kibbi meatballs alternating on the skewer with slices of eggplant. The most famous version is *kibbi halabiyyi*: stuffed disks of kibbi poached in a lemony sauce. Among sweets, a local specialty is *halawat jibn*, a stretchy sweet dough kneaded with butter and cheese, which can be eaten as is or rolled around a filling of *qaymaq* or ground nuts.

Bedouin in the Syrian desert baking bread in the sand. (Styve | Dreamstime.com)

Mhammara

Serves 6–8 as an appetizer

This is Aleppo's best-known dish. It shows the city's characteristic use of medium-hot crushed pepper (*filfil halabi*) and pomegranate molasses (*dibs rumman* or *rob-e anar*), a concentrate of tart pomegranate juice. Both ingredients are available at Middle Eastern markets, as are pine nuts. Do not use the sweetened pomegranate syrup called grenadine, which is only for making cocktails.

3 tbsp breadcrumbs
 3 tbsp hot water
 1½ tbsp pomegranate molasses, or substitute
 ¼ c unsweetened pomegranate juice and omit the water
 1 tbsp olive oil
 3 tbsp Aleppo pepper, or substitute 1 tbsp crushed red pepper and 2 tbsp sweet paprika
 ½ tsp cumin
 1 c crushed walnuts
 Salt
 ¼ c pine nuts
 2 oz (¼ c) vegetable oil
 3 loaves pita bread, each layer separated, cut into 8 wedge shapes and toasted until stiff, or substitute crackers

Mix the breadcrumbs with the hot water, and stir in the pomegranate molasses, olive oil, Aleppo pepper, and cumin. Add the walnuts, and process into a slightly coarse puree in a blender or food processor. It should have about the thickness of mashed potatoes; add a bit of water or breadcrumbs as needed. Season with salt to taste.

Put the pine nuts and oil in a frying pan and toast over medium heat, shaking often to prevent scorching, until the nuts are golden and fragrant. Drain and sprinkle lightly with salt.

Mound the mhammara on a serving dish and sprinkle with the pine nuts. To eat, scoop up with the pita bread croutons.

The other great city of Syria is Damascus. Before World War I, it was a center of administration under the Ottoman Empire. As a result, its food has a distinct Turkish tinge, even though Damascus is farther from Turkey than Aleppo is. It is known for making the best baklava-type pastries in the Arab world.

The Turkish dishes known in Damascus include *jazzmazz* (fried meatballs; in Turkish, *cizbız*), *tirli* (mixed vegetables fried and then stewed with garlic and tomato juice; Turkish *türlü*), and *bashmishkat*.

This last dish, though it has a Turkish name (*başmış kat*, “pressed layer”), is not known in Turkey itself, so it may be a creation of the Damascus Turks. It requires a particular thin layer of muscle from the lamb’s shoulder blade, which is flattened, stuffed with a filling of rice and fried meat, sewn up like a baseball, and cooked in a lamb and tomato stew.

Mnazzlit Ahmar wa-Aswad

In Lebanon and elsewhere in Syria, *mnazzli* is a stew of lamb, eggplant, and tomatoes. Damascus makes several varieties, including a meatless one of kohlrabi, so it distinguishes its tomato and eggplant version by calling it “mnazzli of red and black.” Some people toast the eggplant in a pan rather than frying it in fat, so that it develops a flavor that faintly recalls roasted corn. Despite the foreign ingredients of tomato and allspice, this stew has a rather medieval flavor.

If *mnazzli* is made with olive oil instead of butter, it is called *mqalli*.

2 oz (½ stick) butter
 1¼ to 1½ lb eggplant
 1 lb ground lamb
 1 tsp salt
 ½ tsp allspice
 ⅛ tsp cinnamon
 12 cloves garlic, peeled and coarsely chopped
 4 lb tomatoes
 1½ c chopped cilantro
 Water or tomato juice

Melt the butter and skim the solids off the surface. Separate the clear butterfat from the liquid underneath and transfer it to a saucepan.

Slice the eggplant ⅛ to ¼ inch thick. In a frying pan, fry the slices without butter until softened and brown in patches and beginning to become translucent, a minute or so on a side. Set aside.

Mix the meat, salt, allspice, and cinnamon and roll into meatballs ¾ to 1 inch in diameter. Place the

meatballs in the pan with the clarified butter and fry over medium-high heat until they are stiff and turning brown. Add the garlic and continue frying, stirring often, until the garlic is softened and off-white.

Slice the tomatoes and add to the pan of meatballs, then add the eggplant and cilantro. Bring the contents to a boil, reduce the heat to medium, and cover the saucepan for 10 minutes. Remove the lid; the tomatoes should have given up their liquid. If the liquid level is not enough to cover everything, add a little water or tomato juice. Reduce the temperature, cover the pan, and simmer for 1 hour.

Add salt to taste. Serve with rice pilaf.

The cooking around Latakia on the Mediterranean coast resembles Lebanese food, with its free use of olive oil and lemon juice. The northeastern area of the country, like neighboring northern Iraq, makes lots of hearty soups and stews and often cooks disks of kibbi by poaching them in a vegetable stew.

Nomad food revolves around yogurt and flatbread, but for special occasions the Bedouin roast a whole lamb (*quzi*) stuffed with rice. They are famous for making an elaborate ceremony of roasting, grinding, and boiling coffee to honor a guest. They like to flavor their coffee with cardamom, and the closer a city is to the desert, the more likely settled people are to do the same. Coffee is an essential part of hospitality in all parts of society, and throughout Syria visitors are typically welcomed with Turkish coffee and a sweet. When finished with their coffee, guests politely say, “Qahwi daimi,” that is, “May there always be coffee (in your house).”

Eating Out

In big cities such as Damascus and Aleppo, it is possible to find restaurants serving French or Italian food, and even hamburgers. However, most public eateries serve traditional roast meat dishes such as shish kebab (*lahm mishwi*) and *shawerma* (thin-sliced meat arranged on a vertical spit; browned portions are sliced off for serving as they are done). The meat

may come with rizz bi-sha’riyyi, turnip pickles, and a tomato-cucumber salad, or it may be sold in pita bread with garlicky tahini sauce. These places also offer dips such as *hummus bi-tahini* and baba ghanoush and various salads, including tabbouleh.

Except in the most westernized segment of society, women rarely go to restaurants unaccompanied. Many restaurants have two sections—the regular section, serving men, and a separate room (*‘ailat*), often on the second floor, serving families. Coffeehouses are even more of a male preserve. They serve much the same function that bars do in Europe or America, or teahouses in Iran and Central Asia: as a place for male socializing. They serve Turkish coffee and a variety of pastries.

Special Occasions

The chief religious celebrations of the Muslim majority are Eid al-Adha (the Feast of the Sacrifice), which falls on the last day of the Meccan pilgrimage, and Eid al-Fitr (the Feast of the Fast Breaking) at the end of the month of Ramadan. Eid al-Adha is the day when Muslims around the world, as well as those on the pilgrimage, sacrifice sheep (or other animals) in remembrance of Abraham’s faithful willingness to sacrifice his son at the command of God, who allowed him to sacrifice a sheep in his son’s place. It is a festive time of year, when stores are filled with decorations to welcome home the pilgrims who will soon return from Mecca. On Eid al-Adha, people dine and make sociable visits to family and friends.

Some people do slaughter their own sheep for the occasion, but most arrange with a butcher shop for some quantity of meat. Those who can afford to buy meat are expected to distribute some of it to families who can’t. Naturally, Eid al-Adha spotlights meat dishes. Because the Islamic calendar is based entirely on the phases of the moon, Eid al-Adha can fall at any time of year, so on the whole the dishes served are those of the season rather than dishes unique to the Eid.

One of the principal religious obligations of Islam is abstaining from food and drink during the daylight hours of the month of Ramadan. From sunset

to sunrise, in contrast, the faithful are permitted to eat and drink whatever they wish. They tend to avoid salty foods, which would make them thirstier during the following day. At the end of Ramadan, Eid al-Fitr is a day of feasting and socializing. In distinction from Eid al-Adha, it emphasizes pastries and other sweets rather than meat dishes.

The Shiites observe Ashura, the 10th day of the month of Muharram, with bitter mourning for the seventh-century martyrdom of the imam Husain ibn Ali. *Ashura* is also the name of a dish associated with this day; it consists of boiled whole wheat enriched with raisins and nuts. Grains and other seeds symbolize rebirth and/or the afterlife, and a similar dish is served among Christians at Easter.

Happy occasions such as weddings and births are celebrated with sweet foods—puddings and pastries. By the same token, sweet foods are considered inappropriate at sad occasions. After a funeral, guests are always poured bitter coffee.

Diet and Health

The Syrian diet is rich in fresh vegetables and notably in nuts, which figure in the fillings of both pastries and stuffed vegetables, so vitamin deficiency is not a serious problem. It is also rich in other healthful ingredients such as yogurt and garlic. However, it is low in fish and relatively high in saturated fats such as butter and lamb fat. This poses the danger of cardiovascular problems for sedentary city dwellers. At all levels of society, grain foods are a very

important part of diet. Many urban men consume more simple than complex carbohydrates, because of the social institution of the coffeehouse and its tempting variety of baklavas.

Traditional medicinal concepts were derived from ancient Greek and Persian medicine; most complaints were analyzed as due to an imbalance of the bodily humors. Medical treatments aimed to correct this supposed imbalance. All foods were held to have medicinal qualities, so medieval doctors often prescribed particular dishes—they even gave recipes, which cookbook writers eagerly plagiarized. These theories no longer exert much influence on diet, and Syrian doctors now use modern medicines and techniques. Folk remedies survive, however. Tea and yogurt are often recommended to those suffering from diarrhea, and mothers brew bitter medicinal teas for sick children.

Turkey

Overview

Turkey connects the southeastern tip of Europe with Asia and the Middle East; it has a population of 75 million that is predominantly Muslim. To the north of the country lies the Black Sea and to the south is the Mediterranean. The Aegean Sea lying to the west between Greece and Turkey connects to the Black Sea via the straits of the Dardanelles and Bosphorus and the inland Sea of Marmara. The straits define the geological boundary between Europe and Asia: The European part of Turkey is called Thrace, and the Asian part is called Anatolia (Asia Minor). The present-day capital is Ankara, but the largest city is Istanbul, previously capital of the Byzantine and Ottoman empires. The country has nine neighbors: Georgia, Armenia, Azerbaijan, and Iran to the east; Iraq and Syria to the southeast; the island of Cyprus to the south; and Greece and Bulgaria to the west and northwest.

The literature on Turkish food culture generally begins with a reference to its Central Asian Turkic origins and continues with the legacy of the Seljuk and Ottoman empires. However, Turkey's cuisine is also heir to ancient Anatolian culture, whose roots lie in the Neolithic period, when farming began in this region, and which was subsequently shaped by a series of civilizations, including the Hittites, Urartians, Phrygians, Lydians, Greeks, Romans, and Byzantines. Persian and Arab influences have also been significant. The Turks came to Anatolia in the 11th century and continued to move westward, settling in the Balkans and pushing their way deep into Europe, reaching the gates of Vienna in the 16th century. The Ottoman Empire also extended southward to

the Middle East and Africa. Consequently, today's Turkish food culture has a very varied and complex historical legacy, fostered by bountiful geography. Central Asian, Iranian, Middle Eastern, Mediterranean, and Balkan traditions echo in rituals, celebrations, cooking techniques, and eating habits, while recent archaeological studies reveal that some crops, harvesting and food-preparation methods, cooking techniques, and dishes have remained unaltered since Neolithic times. Stone mortars found in Çatalhöyük, a Neolithic settlement dating back to 7500 B.C., are almost identical with the ones still in use in the vicinity.

Turkey also hosts many ethnic cuisines including Circassian, Georgian, Armenian, Jewish, and Greek, but regionality rather than ethnicity dominates the kitchen. In the eastern city of Malatya, for example, people of Turkish, Armenian, Kurdish, and Arabic origin share the same foodways, such as the local specialty of stuffed cherry leaves, and their culinary culture is very different from that of a Kurd of southeastern Anatolia or an Armenian of Istanbul. Even within the Sephardic Jewish cuisine there is great regional diversity. There are also examples of localized communities with cuisines very different from those around them, as in the case of Tatar Turks in the central Turkish city of Eskişehir. Likewise, Circassian communities tend to keep their distinct cuisine intact wherever they live.

Food Culture Snapshot

Zeynep and her husband, Mehmet Yılmaz, live in Ankara, the capital of Turkey. They have two children, one

Famous Turkish appetiser imam bayaldi, baked stuffed eggplant, with turkish pide, or flatbread. The name literally means “the priest fainted”, apparently due to the dish being so delicious. (iStockPhoto)

working in Istanbul, the other a university student still living at home. They met years ago in eastern Turkey, where Mehmet was working as an engineer and Zeynep as a teacher. Mehmet, originally from the southeastern agricultural city of Gaziantep, still receives an annual supply of homemade tomato paste, cracked wheat, dried vegetables, and so on from his family. Zeynep is from the small town of Ayvalik on the North Aegean coast and is still not reconciled to her husband’s taste for meat and hot spices, as she comes from the land of olive oil and fresh greens. Her parents were migrants from Crete. The family usually spends their summer vacation in Ayvalik, where they get their year’s supply of cured black and green olives and tins of olive oil from local producers.

Early each morning the family begins the day by putting the kettle on for the tea. The janitor of the block of flats where they live leaves a fresh loaf of bread at the door, along with the daily newspaper. Breakfast is almost always the same: white cheese, yellow cheese, black olives, jam, honey, butter, and some sliced tomatoes accompanied by bread and glasses of tea. Zeynep also likes to have a dip of olive oil on the table. Mehmet usually buys cheese from a charcuterie, as he likes to sample it before making a selection. Zeynep laments that the taste of greenhouse tomatoes is not as good as traditional field-grown varieties. Recently she joined a nonprofit seed-exchange Internet group and started to grow heirloom tomatoes on their balcony. If it is a Sunday, Mehmet walks across the road to a nearby *bakkal*, a small grocery store, to buy extra newspapers and *sucuk*, spicy cured sausage. He also buys a couple of crusty *simit*, sesame-covered bread rings, from a street seller to accompany an extra Sunday treat of fried eggs with *sucuk*.

Zeynep, who is now retired, does the shopping. She buys fresh vegetables and fruits from the neighborhood market held twice weekly but makes an extra journey to the district where they used to live, to the butcher she has been accustomed to since they were first married, to buy meat and sometimes ready-made meatballs. However, many of their friends who have moved to new homes in the suburbs now buy packaged meat from supermarkets. When there is an urgent need or if a better selection is desired, she also shops from the *manav*, the pricier greengrocer. About twice weekly she buys freshly rolled *yufka*, thin pastry sheets similar to phyllo dough, to prepare *börek*, layered pastries. Since Mehmet comes from Gaziantep, the baklava capital of Turkey, he frequently brings a box of baklava from his favorite sweet shop. He also likes to buy a selection of meze (appetizers) from a good charcuterie if friends are invited for a meal accompanied by *raki* (anise-flavored spirits) or wine. Until recently they used to buy thick yogurt from the street yogurt seller. Nowadays, Zeynep and Mehmet cannot resist regularly driving out of town to one of the large supermarkets to stock up on staples.

On the rare occasions when they go out to eat, the family usually opts for fish restaurants, since Zeynep has at last won her battle against Mehmet’s preference

for kebab restaurants, on the grounds of healthier eating. This once-sleepy town in Central Anatolia now has numerous fish restaurants, and many people argue that the best fish is to be had there because freshly caught fish from the Black Sea is transported to Ankara within hours.

Major Foodstuffs

Turkey is an important agricultural producer with a strong food industry. Climatic conditions vary widely from region to region. Except for high mountainous terrain the land is generally suitable for a wide range of agriculture and animal husbandry. There are some tropical microclimatic spots in unexpected corners of the country, such as the town of Rize on the northeastern Black Sea coast, where tea is a major crop, followed by kiwis and tangerines. The central and southeastern regions are the granaries of Turkey, while maize is the principal cereal grown in Thrace and the Black Sea coastal region. Rice is grown in the inland Black Sea region and northern central Turkey, and the Aegean is a major center of grape and fig cultivation. Turkey is the foremost world producer of hazelnuts, raisins, dried figs, dried apricots, cherries, and quinces. Turkey's Mediterranean region, especially the environs of Antalya, is the center of greenhouse production in Turkey, with year-round cultivation of fresh tomatoes, cucumbers, peppers, and other salad greens. A large range of other crops are grown in this region, including bananas and citrus fruits. Turkey's wide climatic diversity means that a very extensive range of different vegetables and fruits are grown in different parts of the country.

Wheat is the most important cereal, grown predominantly in central and southeastern Anatolia. Other cereals such as millet, barley, oats, and rye have mostly given way to wheat, while barley is on the rise again for beer production. Wheat is widely consumed as bulgur, parboiled and dried cracked wheat. Bulgur comes in many varieties and grades, fine for meatballs, coarse for pilafs, and so on. The earliest evidence of wheat agriculture is recorded in Anatolia and Upper Mesopotamia, in contemporary

southeastern Turkey, and both wild species and the early cultivated wheat species einkorn (*Triticum monococcum*) and emmer (*Triticum dicoccum*) are still found in the region. Einkorn and in some regions emmer are known as *siyez*, apparently from the Hittite word *zez* for wheat. A regional wheat product is parched unripe wheat grains known as *firik*. Maize is grown mostly in the Black Sea region and Thrace. In the former region dried corn and cornmeal are major staples. Rice is popular throughout the country, as an ideal Turkish meal cannot be considered complete without rice pilaf. Bread of all sorts is also an indispensable staple food. Yufka, leaves of paper-thin pastry, is freshly produced in almost every neighborhood in cities to be baked into savory börek, a layered pastry dish with meat, cheese, or spinach fillings. *Yufka ekmeği* is unleavened flatbread dried for winter consumption.

Legumes constitute another major part of local diets. Lentils and chickpeas are among the most ancient Anatolian crops. Both appear in many dishes like soups, pilafs, casseroles, and stews. Roasted chickpeas are a popular snack called *leblebi*. Dried beans, such as black-eyed peas and fava beans, have always been an indispensable part of Turkish cuisine, although the *Phaseolus* species introduced following the Columbian Exchange is the main type grown today.

Vegetables of all sorts constitute an important part of the daily diet in Turkey. King of vegetables in Turkish cuisine is the eggplant, a native of India that arrived in Anatolia in the medieval period. It is cooked in many forms, usually fried and then braised with other ingredients, or char-grilled in the skin. It is also pickled and made into a sweet preserve. Famous eggplant dishes include *musakka* (sautéed eggplant, green peppers, onions, and ground meat, though not layered like its Greek cousin), *imam bayıldı* ("imam fainted"—braised eggplant stuffed with onions and tomatoes), *karnıyarık* ("split belly"—similar to imam bayıldı though with ground meat), and *hünkar beğendi* ("sultan's delight"—eggplant puree with cheese). Among other popular vegetables are zucchini, peppers, green beans, peas, and okra. A regional favorite of Istanbul and the Aegean region is artichokes, whose hearts are used

to make several elaborate dishes. The use of garlic and onions is abundant. Root vegetables like celery, carrots, Jerusalem artichokes, beets, and potatoes dominate during the winter, along with leeks, cabbage, and cauliflower. Tomato is used abundantly in many dishes; when reduced to a sauce it lends a tang to all braised dishes. The concentrated tomato paste *salça* is a basic condiment that goes into most hot dishes.

Green leafy vegetables like spinach, chard, purslane, and wild purslane are very popular, the latter two also consumed raw as a salad. Anatolian foraging culture is deep-rooted, and local wild greens are consumed in all regions. Though there is a common perception that wild greens are a feature of Aegean cuisine, all regions have a wide variety and profound knowledge of using wild greens and herbs, as both food and folk medicine. Wild greens that can also be found in local markets include nettle, sorrel, mallow, borage, knotweed, *rumex* (a type of sorrel), mustard greens, wild chicory, wild fennel, wild asparagus, wild rhubarb, cardoons, poppy leaves, pennyroyal, arum, smilax, and wild lily shoots. Many vegetables and greens are dried for winter consumption.

Dairy products are also a major part of Turkish cuisine, as animal husbandry plays a prominent role in food production. Yogurt is a staple product for both rural and urban families throughout the country, consumed plain, as an accompaniment to dishes, or as a cooking ingredient in a wide range of dishes, from soups (*yayla çorbasi*) to desserts (*yoğurt tatlisi*). Milk is drunk cold or hot, especially for breakfast. It is also used in soups, some savory dishes, and a large number of *sütlü tatlilar*, milk puddings. *Peynir*, cheese, ranges from fresh curd cheese to matured varieties. The most popular cheese is *beyaz peynir*, white cheese in brine. Other major cheeses include *kaşar*, hard yellow cheese; *lor* and *çökelek*, both types of curd; and *tulum* (cheese cured in goat- or sheepskin). *Kaymak*, clotted cream, is either served with honey at breakfast or added as a topping to desserts.

Butter is one of the principal cooking fats and in the past was clarified to prevent it from going rancid. This custom has now largely died out with the introduction of refrigerators. Other widely used

cooking fats include sunflower oil and corn oil, and more recently hazelnut and peanut oils have become available. The once-popular sesame oil has totally vanished from the food scene, but sesame paste, *tahin*, is as popular as ever. Likewise, poppy oil consumption declined after the restrictions imposed on poppy cultivation (it is the source of illegal opium), but the much-loved poppy seed paste is used abundantly in the poppy-growing city of Afyon. Turkey is the second-largest producer of the opium poppy, which is cultivated under strict control.

Olive oil is the major type used in the Aegean region, and it is becoming increasingly popular in other parts of the country. Turkey is the fourth or fifth (depending on the year) olive oil-producing country in the world, and the second in cured olives after Spain. Olive oil is the essential ingredient in a large category of dishes known as *zeytinyağlı* (literally, “with olive oil”), the generic name for a vegetable or legume dish cooked with olive oil and eaten cold or at room temperature. These dishes were favored particularly by the Christian communities of the Ottoman Empire during the long Lenten fasts. Their cooling effect makes these dishes very popular during hot summer months.

All sugar in Turkey is made from sugar beets. Sugar beet production was introduced in the early years of Turkish Republic, and the establishment of sugar factories was like a manifesto of economic independence.

Meat is important in Turkish cuisine; some think meat dishes predominate. This is partially true, but in reality, for the majority of the population, meat is hard to afford. Still, it is not easy to be a vegetarian in Turkey as it is customary to put at least a handful of cubed or minced meat into most hot vegetable or pulse dishes. Meat is also consumed in the form of *kebap* (meaning roasted meats), which can be grilled or oven baked, or slow cooked in a pot. Another very popular category is *köfte*, meatballs of all varieties, and almost every town claims a specialty of its own. The meat of preference is lamb or mutton, although beef is now very common. Goat and kid remain a regional and seasonal specialty. Pork is forbidden for Muslims and Jews, so pork

Market, Kas, Mediterranean coast. (Corel)

products are very rare, with only very few farms catering to Christians and those who do not observe the religious ban. Poultry, mainly chicken, is also widely consumed and very popular. Game is restricted to regional cuisines and is not a part of the urban culinary scene. Meat is also preserved in various ways, dried, cured, or dry fried. Preserved meats like *pastırma* (cured dried beef coated with a spicy paste), *sucuk* (spicy cured sausage), and *kavurma* (potted meat) are consumed on their own or as a lavish ingredient upgrading various dishes from baked beans to fried eggs, or as a topping for *pide*, thin, pizzalike flatbreads.

Offal is still much appreciated, though getting rarer. There are specialized eateries for offal dishes. *Kelle* (lamb's head), *paça* (trotters), *ciğer* (liver), *işkembe* (tripe), *beyin* (brain), *böbrek* (kidneys), and *koç yumurtası* (lamb's testicles) are admired by

enthusiasts. Lamb's intestines are grilled as a popular street food called *kokoreç* and are stuffed to make the regional specialty *bumbar*.

Eggs are used in many dishes. Whether scrambled with tomatoes, green peppers, and sometimes onion to make the dish known as *menemen* or *şakaşuka*; fried with spinach, minced meat, or cured meats; or poached and served with garlic and yogurt sauce (*çulbur*), eggs constitute a quick meal. It is very common to consume wild greens scrambled with eggs in rural areas.

Sea fish and other seafood are mostly confined to coastal areas, although freshwater fish features in regional cuisines. The Black Sea region is renowned for *hamsi*, fresh anchovies. Istanbulites claim that fish caught in the Bosphorus Strait are the finest of all. Sea bass, red mullet, bream, sole, turbot, bonito, mackerel, swordfish, and sardines are the most popular

types. Mussels, squid, octopus, and shrimp are among the most widely consumed types of seafood.

Herbs and spices are very important in Turkish cuisine; however, they are used sparingly, to enhance the flavor of the dish, never to mask or to dominate. Parsley, dill, and mint are the major herbs used fresh, and dried mint and thyme are at hand in every kitchen. Dried purple basil (*reyhan*), dried tarragon, basil, and bay leaf are mainly used in regional cuisines. Chili flakes, paprika, black pepper, sumac, allspice, cumin, cinnamon, and cloves are the most common spices. Nigella seeds (the seeds of the plant known in the West as love-in-a-mist) and sesame seeds are sprinkled on buns and breads. Rarer flavorings are *mahlep* (the kernel of the *mahaleb* cherry) and *damla sakızı* (the resin of the mastic tree), which are added to breads, savory buns, and sweet cookies. The latter is also added to ice creams along with *salep* (the powdered root of flowers in the *Orchis* genus). Pomegranate concentrate is used as a souring agent. Pickles usually appear as a condiment on the table. Cabbage, green chilies, green tomatoes, cucumbers, carrots, unripe melons, and eggplants stuffed with chopped vegetables are most commonly pickled.

Fruit is abundant in Turkey, and white mulberries, black mulberries, strawberries, cherries, loquats, apricots, peaches, cherries, sour cherries, plums, damsons (a kind of plum), pears, apples, melons, watermelons, grapes, figs, quinces, pomegranates, persimmons, medlars, jujubes, bananas, oranges, grapefruits, and tangerines are consumed fresh seasonally. Many fruits are dried and consumed as snacks or stewed into compotes; mulberries, figs, grapes (as well as raisins), apricots, and prunes are among the most popular. The pulp of fruits such as apricots, plums, mulberries, and grapes is dried in sheets known as *pestil* (fruit leather). The juice of many fruits, above all grapes, is made into *pekmez*, molasses, which is still a very popular sweetener. Strings of nuts dipped several times in grape must boiled with starch make a sweet delicacy called *cevizli sucuk*, literally, “walnut sausage.” Walnuts, pistachios, almonds, and pine nuts are much liked in both sweet and savory dishes. Hazelnuts and peanuts are used more in regional cooking or consumed

as snacks along with sunflower and melon or pumpkin seeds.

Water is served with meals. Turkey is very rich in spring and mineral waters, and many people pride themselves on being able to differentiate between water from different springs. After water, ayran (diluted salted yogurt) is the most popular beverage. Packaged fruit juices of all kinds have become popular in recent years, replacing the traditional *sherbets* made of various fruits, flowers, or spices. Fermented turnip juice, *şalgam suyu*, is a popular accompaniment to kebab. Despite having a history of only one and a half centuries, tea has become a national drink, brewed strong and served in tulip-shaped glasses. Herbal teas of all sorts are consumed widely, with linden flower, sage, and thyme being the most popular. Turkish coffee is served in-between meals or after lunch. It is made with finely ground coffee boiled and served unfiltered in a small cup in which the solids settle. In winter a sweet hot milk drink called *salep*, made from ground orchid root and sprinkled with cinnamon or ginger, and a thick drink known as *boza*, made from fermented grain, are popular.

The national alcoholic drink is rakı, anise-flavored grape spirit. Beer is very popular, and the selection of local wines keeps increasing every year. Wine producers have been giving emphasis to reviving native grape varieties recently. Anatolia is home to one of the oldest wine cultures in the world, a complete set of legislation being dedicated to vineyards and wine making back in the Hittite period (ca. 1650–1100 B.C.).

Cooking

Turkish cuisine involves many preparation and cooking techniques that range from simple to very labor-intensive. Most cooking is done over a burner. Many Turkish dishes start by sautéing onion in butter or olive oil. For hot dishes salça (tomato paste) and minced or cubed meat are also fried briefly. Other ingredients and water are added, and cooking is completed by simply braising and reducing the cooking juices. This method mingles and

concentrates flavors, and the tasty cooking juice is mopped up with bread. Cold olive oil–based dishes are also cooked using the same technique but omitting the tomato paste and meat and reducing the cooking liquid almost completely. *Kavurma*, pan-frying meat and vegetables in their own juices with a little fat or oil, is another common method. Others include boiling, deep-frying or shallow frying, oven baking, embedding in hot embers, and grilling.

The traditional oven, the *tandır*, is a large earthenware pot sunk into the ground. Most towns still keep the tradition of stone-lined wood-burning communal ovens, called *taş fırın*. In the past it was common to take dishes that required baking to the local bakery, but nowadays most urban households possess a gas-fired or electric oven. One important utensil related to the oven is the earthen pot called *güveç*. A vegetable stew baked in the pot is called by the same name, *güveç*. Rural households have a trio of special equipment for preparing and cooking flatbreads and pastry: *hamur tahtası*, a low circular wooden table; *oklava*, a long, slim rolling pin; and *sac*, a domed tin griddle.

Some dishes involve skills that require experience and patience. *Sarma*, wrapped vine, chard, cabbage, or wild green leaves filled with meat or rice; *dolma*, vegetables such as bell peppers, red peppers, eggplants, squash, and tomatoes with a similar filling; and *mantı*, tiny pasta dumplings with a minced meat and onion filling, are among the most demanding examples.

Sauces are not common as the reduced cooking liquid serves as a sauce of its own. Some dishes, particularly soups, are perked up with a drizzle of butter sizzled with crushed dried mint and paprika. Cold garlic yogurt is a popular accompaniment for many hot vegetable dishes like meat-stuffed dolma or wrapped sarma. Garlic yogurt sauce is poured on mantı or on poached eggs, in the case of *çilbir*, and then drizzled with hot sizzling paprika butter.

Preparing foodstuffs for winter is a very important activity even in urban households. Most households prepare their own jams, preserves, pickles, and grape leaves in brine during the summer months. Many urban families still have connections with their native villages and return to the countryside

Kadayif, or Kanafeh, is a very fine vermicelli-like pastry used to make sweet pastries and desserts. Kanafeh is also found in the Balkans and is a feature of Lebanese, Turkish, Greek, and Levantine cuisine. (iStockPhoto)

to help with the harvest and winter preparations. Communal labor sharing is a common practice. Tomato paste and red pepper paste are among the essential end-of-summer preparations. Vegetables of all kinds are dried for winter. Hollowed-out eggplant, squash, bell peppers, and red peppers are dried to be used in stuffed dishes. Vegetables like okra, green beans, and wild greens are also dried. Another widespread dried preparation is *tarhana*, a fermented mixture of grains or flour and yogurt, and in some cases tomatoes and peppers, used as a ready soup mix, either crumbled or in the form of flattened patties to be reconstituted to a grainy soup.

Typical Meals

First thing in the morning tea is brewed. Breakfast is always accompanied by tea served in tulip-shaped glasses. Breakfast consists of fresh bread, black and green olives, beyaz peynir (white cheese in brine), kaşar peyniri (yellow cheese), reçel (homemade fruit preserves), honey, and butter. Usually fresh tomato and cucumber slices and fresh green peppers accompany the cheese. For a more elaborate table, kaymak (clotted cream) is served along with honey and jams. The most popular fruit preserves are vişne (sour cherries), kayısı (apricot), çilek (strawberry), incir (fig), and gül (rose). Sunday breakfast would also include fried eggs with sucuk (cured spicy garlic sausage) or pastırma (cured pressed beef). Breakfast in rural areas could be just a bowl of soup or flat unleavened bread rolled up with some wild greens, spring onions, or salty cheese.

For the midmorning break some people take tea with simit (bread rings sprinkled with sesame seed). This is called kuşluk, literally meaning “a bite fit for a bird.” Others take Turkish coffee, traditionally served with a single piece of Turkish delight (lokum)—fruit-flavored jellies, though they come in many different flavors, sometimes studded with nuts.

Lunch is around noon and usually taken at a local eatery catering to working people. Students have a set lunch provided by their school canteens. Lunch usually consists of soup; pilaf made with either rice or bulgur; and a stew of beans, chickpeas, or lentils, or a meat and vegetable stew. A dried fruit compote or yogurt may accompany the main dish, sometimes replaced by a salad or cacık, a cold dish of yogurt mixed with diced cucumbers. Dessert may follow the meal or be eaten separately as an afternoon treat in a pudding shop or patisserie. Lunch for peasants working in the fields is often a wrap of flatbread with salty cheese, spring onions, and wild greens, usually accompanied by a jug of ayran, a diluted yogurt drink.

A midafternoon snack is known as ikindi, after the time of the afternoon prayer. Schoolchildren are sometimes served ikindi kahvaltısı, an afternoon “breakfast” that can be a mini-replica of breakfast,

or poğaç, a savory bun, or börek. Housewives take this opportunity to arrange gatherings called gün, meaning “day,” at which they take turns inviting friends. Dinner normally consists of soup, a meat and vegetable dish, rice or bulgur pilaf, a cold vegetable dish made with olive oil, and a salad, followed by dessert. Tea is again drunk after the dinner, and later at night fruit can be shared while watching TV.

Eating Out

Turkey has a deep-rooted tradition of public kitchens called imaret, established as institutions of charity. During the Ottoman times, imarets became an inseparable part of the urban landscape in most cities, offering free food for the needy. The institution is still functioning to a certain extent. Many eateries are formed around bazaars, another typical feature of Ottoman cities. Today, in many shopping and business areas, there are little eateries called esnaf lokantası, mainly catering to shop owners and shoppers, and often serving only lunch. The food on offer is mostly a choice of soups and a wide range of hot tencere yemeği (ready-braised hot dishes) laid out warm for the customers to choose from. The range includes legume/vegetable and meat stews, eggplant dishes, stuffed vegetables with minced meat, chicken stew or a slow-cooked meat dish, and rice pilaf. For dessert, hoşaf, dried fruit compote, is almost always present and can also be sipped alongside the meal as a palate cleanser. Depending on the season, pumpkin or quince desserts topped with walnuts or clotted cream and a milk dessert like rice pudding (sütlaç) are available.

For those who do not have the time to sit down for a full meal, another ubiquitous feature of modern Turkish cities is the büfe, sandwich bar, which offers toasted sandwiches with cheese or sucuk, spicy cured meat sausage, and döner, meat slices piled on a large vertical spit, roasted, and shaved into slivers. These places offer a variety of freshly squeezed fruit juices or limonata (lemonade).

In addition, a variety of specialized eateries offer one kind of food only. A köfteci is a place to have

meatballs, often served accompanied by assorted pickles and *piyaz*, a bean and onion salad. The *pideci* serves pide, which is thin, oblong flatbread topped with cheese, meat, spinach, or eggs, or a mixture of these. The *işkembeci* sells *işkembe çorbasi*, tripe soup, and is usually open overnight, as tripe soup is considered to be an ideal hangover remedy. The *çorbacı* is a soup (*çorba*) restaurant, which again remains open until late at night. The *börekçi* has a variety of börek (layered pastries), often served chopped up on small plates to be eaten quickly on the spot. The *muhallebici* specializes in milk puddings. Curiously, many milk-pudding shops also sell chicken soup and rice pilaf with chicken as a by-product of the signature pudding of the place, *tavuk göğsü kazandibi*, a milk pudding made of pounded chicken breast and caramelized on the bottom. Pastries of many varieties soaked in syrup are also sold in specialist shops, the favorite being baklava, a multilayered pastry filled with pistachios, walnuts, or cream. Others include *tel kadayıf* (pastry threads stuffed with nuts), *ekmek kadayıf* (rusks topped with clotted cream), *künefe* (pastry threads stuffed with cheese and served hot), *tulumba tatlısı* (fritters made of batter squeezed from a syringe), *lokma* (ball-shaped fritters), *revani* (cake made with semolina), and *şekerpare* (domed cookies).

A *kebabçı* can range from a modest eatery to an upmarket restaurant specializing in a wide range of grilled meat dishes. A *kebabçı* may also offer *lahmacun*, thin, round flatbread with minced meat topping; *çiğ köfte*, spicy raw meatballs; or *içli köfte*, fried or boiled fist-sized balls of bulgur filled with minced meat and chopped walnuts. Traditional eateries almost never serve alcoholic drinks, with a few exceptions in major cities.

Though prohibited by Islam, alcoholic drinks are widely enjoyed, especially in large cities and coastal regions. Drinking is considered a social occasion enjoyed at a table for long hours, the most typical location being a *meyhane*. The *meyhane* typically offers a selection of small platters of meze to be shared. The range of the meze on offer varies greatly from region to region; wild greens and seafood feature in the Aegean region, and hot and spicy spreads and dips in the southeast, with the greatest diversity

found in Istanbul. The national drink is rakı. The essential basic mezes are white cheese and melon. Others include *ezme*, crushed tomato spread; *haydari*, yogurt and herb dip; *fava*, broad bean paste; *humus*, chickpea paste with tahini; *tarama*, salted carp roe; *lakerda*, salted bonito; *çiroz*, dried mackerel; *midye dolması*, mussels stuffed with rice; *Arnavut ciğeri*, Albanian-style fried liver; fried eggplant; char-grilled eggplant salad; roasted red peppers; grape leaves stuffed with rice; octopus salad; and so on. Although a typical meze table spread is generally conceived as an array of cold dishes, there are also hot appetizers, which generally include fried börek, *kalamar tava* (fried calamari), and *midye tava* (fried mussels). It is possible to continue drinking through a main course, which can be either fish or an assortment of grilled meats. A *meyhane* dinner often concludes with a plate of fruit and Turkish coffee.

When eating out for recreation, Turkish families always prefer places serving dishes that cannot be prepared at home, such as specialties requiring a wood-fired oven or a special cooking technique. However, a modern Western restaurant culture has also developed in major cities. White Russian immigrants escaping the revolution had a major impact on Turkish restaurant culture as they established European-style dining venues, mainly in Istanbul and in the new capital, Ankara. International eating venues ranging from fast-food chains to coffee joints are common in many towns and cities. The Turkish response to this has been the recent phenomenon called *simit sarayı*, sesame-ring palaces, offering varied ways to consume the ubiquitous simit, the sesame ring bun. High-end restaurants that used to serve French cuisine seem to have switched to Italian or even to sushi. There is a recent trend of discovering lost local values, like reviving Ottoman court cuisine and the quest for regional foodways. Some young Turkish chefs are keen on experimenting to create a connection between the historical and the contemporary. Places to pass the time between meals are mainly the *kahve*, the coffeehouse, where men traditionally congregate, or the more family-friendly *çay bahçesi*, or tea garden.

Special Occasions

Turkey has a strong tradition of celebrations, whether religious, seasonal, or related to life transitions. Certain foods mark each such occasion. Life transitions are often marked by eating special foods. The engagement, *nişan*, can be celebrated like a small-scale wedding. Sugary cookies like *kurabiye* or *çörek* can be sent to the house of the bride to symbolize a commitment on the part of the groom. A box of chocolate has in many places taken the place of traditional sweets. Before the wedding there is a series of events, especially in rural areas. The houses of the groom and the bride hold different all-male and all-female gatherings. The bathing ritual at the *hamam* (Turkish bath) gets transformed into a party with lots of food and drinks served. The *kına gecesi* (henna night), held the night before the wedding, is an all-female event, involving the dyeing of the hands and feet with henna. Sherbets and sweets are essential at these events. The wedding ceremony is called *düğün* and is a big feast for all. Weddings usually take place in the summer and often after the harvest in rural areas.

At most celebrations and traditional weddings, four main dishes are important: soup, meat, rice, and dessert. Soup is preferably *düğün çorbası* (wedding soup—a meat-and-vegetable-based soup thickened with egg yolk and lemon), the meat can be *kavurma* or spit-roasted or oven-baked lamb. Rice pilaf can be prepared with chicken or meat stock. *Helva* (sesame paste, but there are also other varieties) or *baklava* is favored as a sweet. The meat and grain dish used to be *keşkek*, a long slow-cooked wheat-berry and meat stew, cooked to a porridge-like consistency. This tradition still prevails in some rural areas.

Births are celebrated by *lohusa şerbeti*, the purperal sherbet, a very sweet pinkish-red-colored warm drink. Strongly flavored with cinnamon and cloves, almonds or pine nuts are floated on top. The first tooth of the baby is celebrated by *diş buğdayı*, literally translated as “tooth wheat,” which is boiled wheat berries tossed with sugar, sprinkled with cinnamon, and sometimes topped with a handful of crushed walnuts.

The *sünnet düğünü*, circumcision feast, is another important occasion. The father takes particular pride in this feast and uses the chance to show off his wealth. As well as abundant food there is entertainment for the children, such as the traditional shadow theater *Karagöz*. Vendors of sweets that are children’s favorites like *pamuk helva* (cotton candy), *elma şekerli* (sugar-glazed apples), *kağıt helva* (wafer disks), *horoz şekerli* (rooster-shaped lollipops), and *macun* (assorted flavored sugar paste twirled on a stick) cheer up the crowd.

Death is commonly associated with *helva*, a generic name for many sweets but in this case made of semolina or wheat flour. Semolina or flour and some pine nuts are slowly pan-roasted in butter; syrup is added and stirred till the mixture reaches the desired consistency. It is important to take turns and recall all the deceased loved ones while stirring the *helva*. No cooking is done in the bereaved house; instead, abundant food is brought in by neighbors and relatives for the family and all those paying their condolences. Prayers are held on the evening of the 40th day following the death, and *mevlut şekerli* (a paper cone filled an assortment of *akide şekerli*, pulled sugar, topped with a plump *lokum*, Turkish delight) is distributed to the guests. *Lokma* (fried fritters soaked in syrup) is another sweet often distributed in memory of the deceased person.

Seasonal transitions are also celebrated. *Nevruz* on March 24 and *Hıdrellez* on May 6 are two rituals celebrated to welcome the spring. White dishes or milk-based dishes wish for a bright future at *Nevruz* and greens for a fresh beginning at *Hıdrellez*, which used to be the day when the first lamb of the season was spit-roasted. Both celebrations take place in the open air like a picnic, preferably near the seashore. Spring onions and boiled eggs are essentials of the picnic meal.

Religious festivals follow the Islamic lunar calendar. Ramadan, the month when most Muslims fast from sunrise to sunset, is a time of the year when eating becomes a focus of life. Certain foods mark Ramadan. Bakeries start making a special type of pide, leavened bread in flattened circles, which people line up to buy before sunset. Dinner following the fast is known as *iftar*. The fast is generally broken

with dates or olives, and dinner continues with a soup and *iftariyelik*, a breakfast-like assortment of small bites including pastırma, followed by a main meat dish and rice pilaf, and then börek. The custom of having fried eggs before the meat dish has almost vanished. The foremost dessert of Ramadan is *güllaç*, a sweet prepared with paper-thin starch wafers, milk, and rose water. Ramadan is followed by a holiday that in Turkey is called *Şeker Bayramı*, meaning “the feast of candy.” Gifts of candies are given to children, and sweets are served to guests. The other Islamic holiday is Kurban Bayramı, the feast of sacrifice, three lunar months after Ramadan. Distributing the meat of the sacrificed lamb to needy families is an important part of this feast. The month of Muharrem, which is the first month of Islamic calendar, is the time for *aşure*, a pudding of wheat berries, beans, chickpeas, dried fruit, and nuts.

Diet and Health

The relation between food and health was central to Ottoman medicine both as a preventive measure and as a method of treatment. Ottoman medicine was based on Islamic medicine, which also followed the theories of the Greeks Hippocrates and Galen. Based on Galenic theory, as well as further knowledge developed by the Islamic physician İbn’i Sina (Avicenna) and the Andalusian botanist and pharmacist İbn-i Baytar, Ottoman medicine simply posited a direct causal connection between food and health. According to the system of thought, the human body has four humors or a combination of them, namely, blood, phlegm, yellow bile, and black bile, relating to the four elements of air, water, fire, and earth. Each represented qualities like hot, cold, moist, and dry. All foodstuffs carry these qualities, and one has to take care as to which combination of foods is to be consumed for one’s health. This approach also gives much importance to seasonality, specifying what kinds of food have to be consumed to restore one’s health.

This thought system is nowadays not known, but its influences still prevail. Turkish cuisine attaches

Turkish coffee in a *zarf*. Taken from the Arabic word meaning container, the *zarf* gained popularity in Turkey as the serving of coffee became complex and ritualistic. (Shutterstock)

much importance to seasonality and a balanced meal. Many dishes are automatically associated with seasons. A typical meal has a balanced distribution of proteins and carbohydrates and is accompanied by vegetables or wild greens. Two major healthy food items in Turkish cuisine are bulgur and yogurt. Bulgur is parboiled, dried, and cracked wheat berries, and this process enables the nutrients in the grain to be more easily absorbed. Dried fruit and nut snacks contribute to a healthy diet, along with the popular combination of *tahin-pekmez*, sesame paste and grape molasses.

Yemen and Oman

Overview

The Sultanate of Oman and the Republic of Yemen are on the southeastern coast of the Arabian Peninsula. Oman, about the size of Kansas, is a hereditary sultanate with an elected advisory council, and Yemen, midway in size between California and Texas, is a presidential republic.

From 1507 through 1742, Oman was occupied by the Portuguese. After Omanis drove out the Portuguese, they built up the country until in the 1800s, it was the most powerful country in the Arabian Peninsula. However, things deteriorated. The ruler from 1932 to 1970, Sultan Said bin Taimur, was suspicious of the outside world to the point of paranoia, and he did his best to isolate the country from outside, especially Western, influences. He restricted travel within the country, and Omanis who managed to leave were seldom allowed to return. Worried that his people might rebel against him, he even abolished schools. Although he had sent his son, Qaboos bin Said, to school and university in Britain, once Qaboos returned, Said kept him under house arrest, fearing that he might try to take over. In 1964, oil was discovered in Oman. In 1970, unhappy Omanis rose up against Said bin Taimur and, with British help, established Qaboos bin Said as Sultan. Qaboos built schools, hospitals, and other infrastructure to bring the country up to modern Western standards and also developed a tourism industry. Oman has little arable land but produces fruits and vegetables such as bananas, dates, melons, and tomatoes and raises camels, cattle, and goats. Unlike the rest of the peninsula, it receives rainfall in the summer from the monsoons.

Yemen has the most history of unrest on the Arabian Peninsula. It was part of the Ottoman Empire from the 1500s until the British gained control of part of the country in the 1800s. North Yemen and South Yemen were established in 1904. These two countries went through various changes of name and uprisings, including driving the British out of South Yemen in 1967. In 1984, oil was discovered in Yemen, and reunification talks began. Unification occurred in 1990. Yemen has not yet built itself up to the point reached by other countries on the peninsula. Yemen is the only country on the Arabian Peninsula that opposed the 1991 Gulf War against Iraq, leading to poor relations with the United States and other countries. In 2000, terrorists attacked the USS *Cole*, docked off the Yemeni town of Aden. The relationship between Yemen and the United States continues to be tense.

The kidnappings of several tourists over the years have hampered Yemen's efforts to develop a tourist industry. Yemen has good agricultural land and raises a large amount of the products its inhabitants use, including apricots, bananas, dates, eggplant, figs, grapes, mangoes, melons, okra, onions, and tomatoes, plus barley, millet, sorghum, wheat, chickens and eggs, cattle, goats, and sheep. Yemen also produces and exports honey, a major ingredient in many Arab desserts. Anticipating modern trends, Yemenis value local food highly.

Yemen's most famous agricultural product is coffee, considered by many the finest in the world. Although coffee originated in Ethiopia, scholars believe that it was first cultivated in Yemen and that the beans were first roasted there. The word *mocha*

comes from *al-Makhâ*, the Yemeni port from which coffee was exported. Until the 18th century, Yemen dominated the world coffee trade; then, Dutch coffee enthusiasts obtained coffee beans to grow in Indonesia (hence the slang term *java*), and other countries developed coffee crops. Yemen no longer ranks even among the top 10 world coffee producers.

Oman and Yemen were famous in ancient times for their frankincense trees, and they supplied incense and myrrh to the Roman Empire at its height. Although their foods have some similarities with those of the other countries on the peninsula, geography has created some differences as well. They are more accessible from the sea coast than from land. Many of their food influences have come from India, Iran, and western Africa, leading to Omani and Yemeni foods being hotter and spicier than those of the other parts of the peninsula, and to the use of Indian breads.

🍴 Food Culture Snapshot

Khadija lives in a small village in Yemen. Every morning, she and her two daughters bake rounds of flatbread for the family's meals that day. They grind the sorghum that they prefer for bread and mix it with water, yeast, and salt. The oven is a *tannur*, a traditional clay oven shaped like a truncated cone. It takes practice to slap the bread quickly onto the inner sides of the tannur and remove one's hand before it gets uncomfortably warm. A grate rests on the open top to hold pots where Khadija boils rice, vegetables, and meat. A small hole in the oven's side allows her to insert fuel (charcoal or wood). A charcoal brazier, for warming the coffeepot, sits in a corner. The kitchen windows are closed, to keep dust out, making the kitchen almost unbearably warm in the summer. The windows are high in the wall, so men passing the house cannot look in at the women.

Both Oman and Yemen have modern supermarkets in the major cities, but residents also shop for food in traditional *sucs* (markets). Rural areas have smaller food shops and also *sucs* with merchants specializing in different kinds of foods and spices. In Yemen, men usually do the shopping.

Major Foodstuffs

Meals in these two countries are usually simple, but marinades and spices are used to add flavor. Most meals include meat, mostly chicken, fish, or mutton, as well as rice, vegetables, soups, and salads. Curried vegetables reflect the Indian influence. Oman grows limes that are dried (*loomi*) and used throughout the Middle East. Grated into powder or pierced and added to a stew, they give a tangy, musky taste. Food in Yemen is hotter than that in the rest of the peninsula, with liberal use of chilies and hot peppers. A typical Yemeni condiment is *zhug*, a spicy bread dip and relish often added to salads and main dishes. Yemeni cooking is particularly differentiated from the remainder of the peninsula by the use of the spice fenugreek. Another popular condiment is *hilbeh* or *hulba* (regional variations of the same name, with regional variations in the ingredients). It includes fenugreek, hot chilies, coriander, garlic, onions, tomatoes, cayenne pepper, salt, and black pepper. Sorghum and millet are the two most popular grains for bread.

Zhug

This spicy mixture is popular in Yemen as a dip or a flavoring for stews. Yemenis believe it aids health and long life.

- 3 cardamom pods
- 1 tsp black peppercorns
- 1 tsp caraway seeds
- 4 hot chilies
- 1 c parsley
- 1 c fresh cilantro
- 6 cloves garlic

- 1 tsp ground cumin
- ½ tsp salt
- ½ tsp pepper
- 2 tbsp olive oil

With a blender or food processor, grind the first three ingredients. Add the remaining ingredients and blend into a coarse puree. Store the *zhug* in the refrigerator.

Between meals, especially in the afternoon, many Yemeni men (and some women) chew the leaves of a plant called *qat*, not swallowing, but keeping a ball of it in their cheek. *Qat* contains an amphetamine-like chemical, which is a mild stimulant and appetite suppressant. It may cause insomnia, is addictive, and, worse, may be carcinogenic and cause other health problems. In Saudi Arabia, the United States, and other countries, growing and using *qat* is illegal. Use of *qat* has increased greatly in Yemen since 1970. Because it is popular and easy to grow, it is one of Yemen's major agricultural products. Some Yemenis are concerned about the effects of *qat*, both in terms of lost human productivity and because growing the plant uses water resources and acreage that could better be used for growing other crops the country needs. Farmers have increased *qat* production using land where coffee formerly grew, so coffee production has dropped.

Cooking

Because oil was found later in this area, it is not as developed as the other parts of the peninsula and so has fewer new houses and apartment buildings. Although many kitchens in the big cities have modern appliances, the kitchen of an older house has one or more tannurs, used as both oven and cooktop. In some areas, kitchens are roofed, semi-enclosed areas in the courtyards of houses, allowing the cooks better ventilation. An older house may have a traditional food-cooling system, based on evaporative cooling. A niche in the wall, with doors into the kitchen and holes in the outside walls, contains a stone or clay jar of water. Wind blowing through

the holes evaporates water, cooling the air and any food that is in the niche. Traditionally, Yemenis used cooking pots made of iron and also shallow pots carved of soapstone. Now they are just as likely to use modern pots and pans.

Typical Meals

Most Omanis and Yemenis still eat in the traditional Arab style, with food served on communal platters placed on a cloth on the floor or ground. People serve themselves using pieces of flatbread as scoops or taking small pieces of meat or balls of rice with their fingers. As elsewhere in the Muslim world, they use only their right hands. In Yemen, even soup is presented in a single bowl; diners drink it from a common ladle. Omanis serve soup in glasses. Men eat first, and then women and children eat. They often eat the main part of the meal in relative silence, then move to another room for dessert, coffee, and conversation. All meals include dates, flatbreads, *laban* (a yogurt drink), and usually rice.

Breakfast includes stewed or fried beans, fried eggs with onion and tomatoes, or bread dipped in *laban*. Yemenis drink coffee with ginger or other spices in the early morning, then switch to *qishr*, a tea made from ground coffee husks, ground ginger, and sometimes cinnamon, cardamom, and/or sugar.

The main meal is usually the midday meal. It begins with a salad or raw vegetables, such as onions, radishes, or eggplant. On special occasions, Yemenis begin their meal with *bint al-sahn*, a dish made of a stack of very thin flatbreads with *samna* (clarified butter) between the layers, baked and served with honey and more *samna*. The main course includes vegetables, possibly spiced or curried, and rice with meat, fish, or chicken. Kebabs are popular. Another popular Yemeni dish is a stew called *saltah*. The cook simmers lamb, lentils, onions, potatoes, salt, cilantro leaves, and water together. When the stew is cooked, she adds *hulba*. Soups usually contain vegetables, meat, and lentils. With their long coastlines, both countries have an abundance of fish and shrimp. Omanis enjoy shark.

Bint al-Sahn

Serves 8–16

1 packet active dry yeast (0.25 oz), dissolved in ½ c warm water with 1 tsp sugar
 4 c flour
 1 tsp salt
 5 eggs, beaten
 ¾ c *samna* (clarified butter), divided

For Serving

Melted *samna* or butter

Warm honey

1. Dissolve yeast in the warm water with the sugar.
 2. Sift the flour and salt into a large mixing bowl.
 3. Make a well in the center of the flour mixture. Pour eggs and the yeast mixture into the flour mixture.
 4. Blend well, and turn out onto a board.
 5. Slowly knead in ¼ cup of the *samna*. Continue kneading until dough is smooth and elastic.
 6. Divide the dough into 12 balls.
 7. Place a dough ball on a lightly floured board and form into a very thin round shape, about 8 inches across, using the heel of your hand or a rolling pin. If you haven't shaped such things by hand before, a rolling pin will work much better. Don't obsess about making perfect rounds.
 8. Brush a baking sheet with *samna*.
 9. Place the completed round on the baking tray, and brush well with melted *samna*.
 10. Make 5 more rounds. After completing each round, place on top of the previous round, press the edges with fingertips, and brush well with *samna*.
 11. Make a second stack of 6 more rounds. Brush the last round with the *samna*.
 12. Let rest in a warm place for 45 minutes.
 13. Preheat oven to 350°F.
 14. Bake for 25–30 minutes until light brown. Don't overbake.
 15. Serve with *samna* or butter and warm honey.
-

At the end of a meal, Yemenis take whatever food is left over, put it into a pot with sauce, and mix and heat it to create a stew, which they then eat with bread. Many Yemeni desserts include local honey. Popular desserts in Oman include *halwa* and *lokhemat*, fried pastry balls drizzled with lime and cardamom syrup. Coffee spiced with cardamom ends the meal in Oman. As in other Arab countries, Omanis and Yemenis drink large amounts of sweet tea, often spiced with mint, ginger, lemon, or cinnamon.

The evening meal is a lighter meal, similar to breakfast, or smaller amounts of the foods eaten at midday. For snacks, people in this area eat things like flatbread with hummus, falafel, kebabs, *shawarma* (similar to gyros), boiled potatoes, boiled eggs, fried fish, fruit, juice, or pastries.

Breads in Oman and Yemen include not only Arab breads such as *khubz* and *mardouf* (made with

dates) but also Indian breads such as chapatis, *parathas*, and *pooris* (flatbreads made in a tandoor oven, or fried and puffed). One of Yemen's specialties is *kutma*. It includes equal parts of wheat and sorghum flour and is made into a roll that is thicker than most flatbreads. *Lahuh*, a thin sourdough bread, is made with sorghum. Yemenis also eat samosas (Indian filled pastries, both savory and sweet), although they have developed some with Arab-style fillings such as cheese and mint.

Eating Out

Restaurants offer a variety of foreign cuisines, including European, Indian, and Oriental. American fast-food chains like Burger King, KFC, and McDonald's have franchises in the larger cities. As in the other peninsula countries, restaurants have segregated areas: an area for families, an area for men only, and sometimes an area for women only.

While Yemen is a dry country, non-Muslims may bring two bottles of alcoholic beverages into the country. They must consume these on private property. In Oman, alcohol is sold (to visitors only) in large hotels and is expensive. As with the other Arabian Peninsula countries, the natives of the country are Muslims and not allowed to drink. Visitors to the country should not offer liquor to Muslims.

Special Occasions

In Oman, a variation on the tradition of breaking the Ramadan fast with dates, obviously modern, is to freeze dates and break the fast with cold dates. Omanis also make *suh*, which is dates mixed with samna, sesame seeds and aniseed, cardamom, cumin, and/or fennel, a candy that they give as gifts during Ramadan. Other traditional Omani Ramadan foods are *sakhana*, a porridge made of dates, milk, molasses, and wheat, and *fattah*, a mixture of meats, vegetables, and bread. Omanis enjoy drinking laban, a yogurt-based drink, to break the fast, or perhaps lemonade with mint and rose water, watermelon juice with rose syrup, or tamarind juice with rose water. In Yemen, qishr is traditional for breaking the fast.

A man sells fenugreek at a street market in front of Nakhil Fort in Oman. (Styve | Dreamstime.com)

A popular dish for the Eid al-Fitr is *shuwa*, a labor-intensive dish that several families make together. A whole cow or goat is marinated in spices—cardamom, cinnamon, cloves, cumin, garlic, *loomi* (dried limes), red pepper, and turmeric—and date paste. This is wrapped in mats made of banana or palm leaves, buried in an underground pit oven lined with hot charcoal, and sealed so the smoke cannot escape. After 24 to 48 hours it is removed and served with rice.

In Oman, modern weddings for the more affluent include a party for the women at a hotel or wedding hall. As in other parts of the peninsula, the wedding party starts in the late evening and goes on until early morning. Buffets include items like flatbread, cheese, hummus, baba ghanoush, stuffed grape leaves, and other meze (little appetizer plates). When the groom comes to claim his bride at the end of the party, they cut the cake. Old-style weddings are simpler. Each family holds a party at its own house, with traditional foods including whole roasted sheep on platters of rice.

In Yemen, at the conclusion of the marriage contract, the father of the bridegroom throws raisins on the carpet. Male guests try to pick up as many raisins, representing future happiness in the marriage, as possible. The actual Yemeni wedding feast, with men and women in separate groups, features sheep and perhaps a calf. After the meal, the men chew qat or smoke water pipes.

Diet and Health

Modern medicine has come to Oman and Yemen relatively recently. Traditional medicine included herbs, spices, and honey. Yemeni honey has a reputation for curing all ills, from sore throats to ulcers to insomnia. Both countries now have modern hospitals. Obesity is less of a problem in these two countries than in the rest of the peninsula, partly because Western influences have not been around so long and partly because of the use of qat, an appetite suppressant, in Yemen.

About the Editor and Contributors

Ken Albala, Editor, is professor of history at the University of the Pacific in Stockton, California. He also teaches in the gastronomy program at Boston University. Albala is the author of many books, including *Eating Right in the Renaissance* (University of California Press, 2002), *Food in Early Modern Europe* (Greenwood Press, 2003), *Cooking in Europe 1250–1650* (Greenwood Press, 2005), *The Banquet: Dining in the Great Courts of Late Renaissance Europe* (University of Illinois Press, 2007), *Beans: A History* (Berg Publishers, 2007; winner of the 2008 International Association of Culinary Professionals Jane Grigson Award), and *Pancake* (Reaktion Press, 2008). He has co-edited two works, *The Business of Food* and *Human Cuisine*. He is also editor of three food series with 29 volumes in print, including the Food Cultures Around the World series for Greenwood Press. Albala is also co-editor of the journal *Food Culture and Society*. He is currently researching a history of theological controversies surrounding fasting in the Reformation Era and is editing two collected volumes of essays, one on the Renaissance and the other entitled *The Lord's Supper*. He has also coauthored a cookbook for Penguin/Perigee entitled *The Lost Art of Real Cooking*, which was released in July 2010.

Julia Abramson has visited France on a regular basis for more than 25 years to study, research, travel, and eat. She has published essays on aspects of food culture from vegetable carving to gastronomic writing and is the author of the book *Food Culture in France*. Abramson teaches French literature and culture and food studies at the University of Oklahoma, Norman.

M. Shahrin Al-Karim is a senior lecturer of food service and hospitality management at the Universiti Putra Malaysia. His research interests include food and culture, culinary tourism, food habits, and consumer behavior. He received a BS in hotel and restaurant management from New York University; an MBA from Universiti Teknologi MARA, Malaysia; and a PhD in hospitality and tourism from Oklahoma State University, United States.

E.N. Anderson is professor emeritus of the Department of Anthropology, University of California, Riverside.

Laura P. Appell-Warren holds a doctorate in psychological anthropology from Harvard University. Her primary focus of research has been the study of

personhood; however, she has also studied the effects of social change on children's play. She has done research among the Bulusu' of East Kalimantan, Indonesia, and among the Rungus Momogon, a Dusunic-speaking peoples, of Sabah, Malaysia. In addition, she has traveled widely throughout Arctic Canada. She is the editor of *The Iban Diaries of Monica Freeman 1949–1951: Including Ethnographic Drawings, Sketches, Paintings, Photographs and Letters* and is author of the forthcoming volume entitled *Personhood: An Examination of the History and Use of an Anthropological Concept*. In addition to her current research on cradleboard use among Native North Americans, she is a teacher of anthropology at St. Mark's School in Southborough, Massachusetts.

Heather Arndt-Anderson is a Portland, Oregon, native who draws culinary inspiration from many world cuisines but prefers cooking from her own backyard. She is a part-time natural resources consultant and a full-time radical homemaker; in her (rare) spare time she writes the food blog *Voodoo & Sauce*.

Michael Ashkenazi is a scholar, writer, and consultant who has been researching and writing about Japanese food since 1990. In addition to books and articles on Japanese society, including its food culture, he has written numerous scholarly and professional articles and papers on various subjects including theoretical and methodological issues in anthropology, organized violence, space exploration, migration, religion and ritual, resettling ex-combatants, and small arms. He has taught at higher-education institutions in Japan, Canada, Israel, and the United Kingdom, directing graduate and undergraduate students. He is currently senior researcher and project leader at the Bonn International Center for Conversion in Germany, with responsibility for the areas of small arms and reintegration of ex-combatants. He has conducted field research in East and Southeast Asia, East and West Africa, the Middle East, and Latin America.

Babette Audant went to Prague after college, where she quickly gave up teaching English in order to cook at a classical French restaurant. After graduating from the Culinary Institute of America, she worked as a chef in New York City for eight years, working at Rainbow Room, Beacon Bar & Grill, and other top-rated restaurants. She is a lecturer at City University of New York Kingsborough's Department of Tourism and Hospitality, and a doctoral candidate in geography at the City University of New York Graduate Center. Her research focuses on public markets and food policy in New York City.

Gabriela Villagran Backman, MA (English and Hispanic literature), was born in Sweden and raised in Mexico and the United States; she currently lives in Stockholm, Sweden. She is an independent researcher, interested in food studies, cultural heritage, writing cookbooks, red wine, and the Internet.

Carolyn Bánfalvi is a writer based in Budapest. She is the author of *Food Wine Budapest* (Little Bookroom) and *The Food and Wine Lover's Guide to Hungary: With Budapest Restaurants and Trips to the Wine Country* (Park Kiado). She contributes to numerous international food and travel publications and leads food and wine tours through Taste Hungary, her culinary tour company.

Peter Barrett is a painter who writes a food blog and is also the Food & Drink writer for *Chronogram Magazine* in New York's Hudson Valley.

Cynthia D. Bertelsen is an independent culinary scholar, nutritionist, freelance food writer, and food columnist. She lived in Haiti for three years and worked on a food-consumption study for a farming-systems project in Jacmel, Haiti. She writes a food history blog, *Gherkins & Tomatoes*, found at <http://gherkinstomatoes.com>.

Megan K. Blake is a senior lecturer in geography at the University of Sheffield. She has published research that examines the intersections between place and social practices. While her previous work focused on entrepreneurship and innovation, her recent work has examined food practices and family life.

Janet Boileau is a culinary historian who holds a master of arts degree in gastronomy from Le Cordon Bleu Paris and a doctorate in history from the University of Adelaide.

Andrea Broomfield is associate professor of English at Johnson County Community College in Overland Park, Kansas, and author of *Food and Cooking in Victorian England: A History*.

Cynthia Clampitt is a culinary historian, world traveler, and award-winning author. In 2010, she was elected to the Society of Women Geographers.

Neil L. Coletta is assistant director of food, wine, and the arts and lecturer in the MLA in gastronomy program at Boston University. His current research includes food and aesthetics and experimental pedagogy in the field of food studies.

Paul Crask is a travel writer and the author of two travel guides: *Dominica* (2008) and *Grenada, Carriacou and Petite Martinique* (2009).

Christine Crawford-Oppenheimer is the information services librarian and archivist at the Culinary Institute of America. She grew up in Ras Tanura, Saudi Arabia.

Anita Verna Crofts is on the faculty at the University of Washington's Department of Communication, where she serves as an associate director of the master of communication in digital media program. In addition, she holds an appointment at the University of Washington's Department of Global Health, where she collaborates with partner institutions in Sudan, Namibia, and India on trainings that address leadership, management, and policy development, with her contributions targeted at the concept of storytelling as a leadership and evidence tool. Anita is an intrepid chowhound and publishes on gastroethnographic topics related to the intersection of food and identity. She hosts the blog *Sneeze!* at her Web site www.pepperforthebeast.com.

Liza Debevec is a research fellow at the Scientific Research Centre of the Slovene Academy of sciences and arts in Ljubljana, Slovenia. She has a PhD in social anthropology from the University of St. Andrews, United Kingdom. Her research

interests are West Africa and Burkina Faso, food studies, Islam, gender, identity, and practice of everyday life.

Jonathan Deutsch is associate professor of culinary arts at Kingsborough Community College, City University of New York, and Public Health, City University of New York Graduate Center. He is the author or editor of five books including, with Sarah Billingsley, *Culinary Improvisation* (Pearson, 2010) and, with Annie Hauck-Lawson, *Gastropolis: Food and New York City* (Columbia University Press, 2009).

Deborah Duchon is a nutritional anthropologist in Atlanta, Georgia.

Nathalie Dupree is the author of 10 cookbooks, many of which are about the American South, for which she has won two James Beard Awards. She has hosted over 300 television shows on the Public Broadcasting Service, The Food Network, and TLC. She lives with her husband, Jack Bass, who has authored 9 books about the American South and helped with her contribution to *Food Cultures of the World*.

Pamela Elder has worked in food public relations and online culinary education and is a freelance writer in the San Francisco Bay area.

Rachel Finn is a freelance writer whose work has appeared in various print and online publications. She is the founder and director of Roots Cuisine, a non-profit organization dedicated to promoting the foodways of the African diaspora around the globe.

Richard Foss has been a food writer and culinary historian since 1986, when he started as a restaurant critic for the *Los Angeles Reader*. His book on the history of rum is slated for publication in 2011, to be followed by a book on the history of beachside dining in Los Angeles. He is also a science fiction and fantasy author, an instructor in culinary history and Elizabethan theater at the University of California, Los Angeles, Extension, and is on the board of the Culinary Historians of Southern California.

Nancy G. Freeman is a food writer and art historian living in Berkeley, California, with a passion for food history. She has written about cuisines ranging from Ethiopia to the Philippines to the American South.

Ramin Ganeshram is a veteran journalist and professional chef trained at the Institute of Culinary Education in New York City, where she has also worked as a recreational chef instructor. Ganeshram also holds a master's degree in journalism from Columbia University. For eight years she worked as a feature writer/stringer for the *New York Times* regional sections, and she spent another eight years as a food columnist and feature writer for *Newsday*. She is the author of *Sweet Hands: Island Cooking from Trinidad and Tobago* (Hippocrene NY, 2006; 2nd expanded edition, 2010) and *Stir It Up* (Scholastic, 2011). In addition to contributing to a variety of food publications including *Saveur*, *Gourmet*, *Bon Appetit*, and *epicurious.com*, Ganeshram has written articles on food, culture, and travel for *Islands* (as contributing editor), *National Geographic Traveler*,

Forbes Traveler, *Forbes Four Seasons*, and many others. Currently, Ganeshram teaches food writing for New York University's School of Continuing Professional Studies.

Hanna Garth is a doctoral candidate in the Department of Anthropology at the University of California, Los Angeles. She is currently working on a dissertation on household food practices in Santiago de Cuba. Previously, she has conducted research on food culture, health, and nutrition in Cuba, Chile, and the Philippines.

Mary Gee is a medical sociology doctoral student at the University of California, San Francisco. Her current research interests include herbalism and Asian and Asian American foodways, especially with regards to multigenerational differences. Since 1995, she has actively worked with local and national eating disorders research and policy and advocacy organizations as well as for a program evaluation research consulting firm.

Che Ann Abdul Ghani holds a bachelor's degree in English and a master's degree in linguistics. She has a keen interest in studying language and language use in gastronomy. She is currently attached to the English Department at Universiti Putra Malaysia. Her research interests range from the use of language in context (pragmatics) to language use in multidisciplinary areas, namely, disciplines related to the social sciences. She also carries out work in translation and editing.

Maja Godina-Golija is research adviser at the Institute of Slovenian Ethnology, Scientific Research Centre of Slovenian Academy of Science and Arts, Ljubljana, Slovenia.

Annie Goldberg is a graduate student studying gastronomy at Boston University.

Darra Goldstein is Frances Christopher Oakley Third Century Professor of Russian at Williams College and the founding editor-in-chief of *Gastronomica: The Journal of Food and Culture*.

Keiko Goto, PhD, is associate professor at the Department of Nutrition and Food Sciences, California State University, Chico. Dr. Goto has more than 15 years of work experience in the field of nutrition and has worked as a practitioner and researcher in various developing countries. Dr. Goto's current research areas include food and culture, child and adolescent nutrition, sustainable food systems, and international nutrition.

Carla Guerrón Montero is a cultural and applied anthropologist trained in Latin America and the United States. She is currently associate professor of anthropology in the Department of Anthropology at the University of Delaware. Dr. Guerrón Montero's areas of expertise include gender, ethnicity, and identity; processes of globalization/nationalism, and particularly tourism; and social justice and human rights.

Mary Gunderson calls her practice paleocuisineology, where food and cooking bring cultures alive. Through many media, including the sites HistoryCooks.com

and MaryGunderson.com, she writes and speaks about South and North American food history and contemporary creative living and wellness. She wrote and published the award-winning book *The Food Journal of Lewis and Clark: Recipes for an Expedition* (History Cooks, 2003) and has authored six food-history books for kids.

Liora Gvion is a senior lecturer at the Kibbutzim College of Education and also teaches at the Faculty of Agriculture, Food and Environment at the Institute of Biochemistry, Food Science and Nutrition Hebrew University of Jerusalem.

Cherie Y. Hamilton is a cookbook author and specialist on the food cultures and cuisines of the Portuguese-speaking countries in Europe, South America, Africa, and Asia.

Jessica B. Harris teaches English at Queens College/City University of New York and is director of the Institute for the Study of Culinary Cultures at Dillard University.

Melanie Haupt is a doctoral candidate in English at the University of Texas at Austin. Her dissertation, “Starting from Scratch: Reading Women’s Cooking Communities,” explores women’s use of cookbooks and recipes in the formation and reification of real and virtual communities.

Ursula Heinzelmann is an independent scholar and culinary historian, twice awarded the prestigious Sophie Coe Prize. A trained chef, sommelier, and ex-restaurateur, she now works as a freelance wine and food writer and journalist based in Berlin, Germany.

Jennifer Hostetter is an independent food consultant specializing in writing, research, and editing. She has degrees in history and culinary arts and holds a master’s degree in food culture and communications from the University of Gastronomic Sciences in Italy. She also served as editorial assistant for this encyclopedia.

Kelila Jaffe is a doctoral candidate in the Food Studies Program at New York University. Originally from Sonoma, California, and the daughter of a professional chef, she has pursued anthropological and archaeological foodways research since her entry into academia. She received a BA with distinction in anthropology from the University of Pennsylvania, before attending the University of Auckland, where she earned an MA with honors in anthropology, concentrating in archaeology. Her research interests include past foodways, domestication, and zooarchaeology, and she has conducted fieldwork in Fiji, New Zealand, and Hawaii.

Zilkia Janer is associate professor of global studies at Hofstra University in New York. She is the author of *Puerto Rican Nation-Building Literature: Impossible Romance* (2005) and *Latino Food Culture* (2008).

Brelyn Johnson is a graduate of the master’s program in food studies at New York University.

Kate Johnston is currently based in Italy, where she is an independent cultural food researcher and writer and a daily ethnographer of people’s food habits. She

has a degree in anthropology from Macquarie University in Sydney, Australia, and a recent master's degree in food culture and communication from the University of Gastronomic Sciences, Italy. She was also editorial assistant for this encyclopedia.

Desiree Koh was born and raised in Singapore. A writer focusing on travel, hospitality, sports, fitness, business, and, of course, food, Koh's explorations across the globe always begin at the market, as she believes that the sight, scent, and savoring of native produce and cuisine are the key to the city's heart. The first and only female in Major League Eating's Asia debut, Koh retired from competition to better focus on each nibble and sip of fine, hopefully slow food.

Bruce Kraig is emeritus professor of history at Roosevelt University in Chicago and adjunct faculty at the Culinary School of Kendall College, Chicago. He has published and edited widely in the field of American and world food history. Kraig is also the founding president of the Culinary Historians of Chicago and the Greater Midwest Foodways Alliance.

R. J. Krajewski is the research services librarian at Simmons College, where among other things he facilitates discovery of food-culture research, especially through the lens of race, class, and gender. His own engagement with food is seasonally and locally rooted, starting in his own small, urban homestead, much like his Polish and German ancestors.

Erin Laverty is a freelance food writer and researcher based in Brooklyn, New York. She holds a master's degree in food studies from New York University.

Robert A. Leonard has a PhD in theoretical linguistics from Columbia. He studies the way people create and communicate meaning, including through food. He was born in Brooklyn and trained as a cook and *panaderia-reposteria* manager in the Caribbean; his doctoral studies led him to eight years of fieldwork in language, culture, and food in Africa and Southeast Asia. In the arts, as an undergraduate he cofounded and led the rock group Sha Na Na and with them opened for their friend Jimi Hendrix at the Woodstock Festival. Leonard is probably one of a very few people who have worked with both the Grateful Dead and the Federal Bureau of Investigation, which in recent years recruited him to teach the emerging science of forensic linguistics at Quantico.

Jane Levi is an independent consultant and writer based in London, England. She is currently working on her PhD at the London Consortium, examining food in utopias, funded by her work on post-trade financial policy in the City of London.

Yrsa Lindqvist is a European ethnologist working as the leading archivist at the Folk Culture Archive in Helsinki. Her research about food and eating habits in the late 1990s, combined with earlier collections at the archive, resulted in 2009 in the publication *Mat, Måltid, Minne. Hundraår av finlandssvensk matkultur*. The book analyzes the changes in housekeeping and attitudes toward food. She has also contributed to other publications focusing on identity questions and has worked as a junior researcher at the Academy of Finland.

William G. Lockwood is professor emeritus of cultural anthropology at the University of Michigan. His central interest is ethnicity and interethnic relations. He has conducted long-term field research in Bosnia-Herzegovina and the Croatian community in Austria and also among Roma and with a variety of ethnic groups in America, including Arabs, Finns, and Bosnians. He has long held a special interest in how food functions in ethnic group maintenance and in reflecting intra- and intergroup relations.

Yvonne R. Lockwood is curator emeritus of folklife at the Michigan State University Museum. Her formal training is in folklore, history, and Slavic languages and literatures. Research in Bosnia, Austria, and the United States, especially the Great Lakes region, has resulted in numerous publications, exhibitions, festival presentations, and workshops focused on her primary interests of foodways and ethnic traditions.

Janet Long-Solís, an anthropologist and archaeologist, is a research associate at the Institute of Historical Research at the National University of Mexico. She has published several books and articles on the chili pepper, the history of Mexican food, and the exchange of food products between Europe and the Americas in the 16th century.

Kristina Lupp has a background in professional cooking and has worked in Toronto and Florence. She is currently pursuing a master of arts in gastronomy at the University of Adelaide.

Máirtín Mac Con Iomaire is a lecturer in culinary arts in the Dublin Institute of Technology. Máirtín is well known as a chef, culinary historian, food writer, broadcaster, and ballad singer. He lives in Dublin with his wife and two daughters. He was the first Irish chef to be awarded a PhD, for his oral history of Dublin restaurants.

Glenn R. Mack is a food historian with extensive culinary training in Uzbekistan, Russia, Italy, and the United States. He cofounded the Culinary Academy of Austin and the Historic Foodways Group of Austin and currently serves as president of Le Cordon Bleu College of Culinary Arts Atlanta.

Andrea MacRae is a lecturer in the Le Cordon Bleu Graduate Program in Gastronomy at the University of Adelaide, Australia.

Giorgos Maltezakis earned his PhD in anthropology with research in cooperation with the Institute Studiorium Humanitatis of the Ljubljana Graduate School of the Humanities. His dissertation was on consumerism, the global market, and food, which was an ethnographic approach to the perception of food in Greece and Slovenia.

Bertie Mandelblatt is assistant professor at the University of Toronto, cross-appointed to the departments of Historical Studies and Geography. Her research concerns the early-modern French Atlantic, with a focus on commodity exchanges at the local and global scales: Her two current projects are the history

of food provisioning in the Franco-Caribbean and the transatlantic circulation of French rum and molasses, both in the 17th and 18th centuries.

Marty Martindale is a freelance writer living in Largo, Florida.

Laura Mason is a writer and food historian with a special interest in local, regional, and traditional foods in the United Kingdom and elsewhere. Her career has explored many dimensions of food and food production, including cooking for a living, unraveling the history of sugar confectionery, and trying to work out how many traditional and typically British foods relate to culture and landscape. Her publications include *Taste of Britain* (with Catherine Brown; HarperCollins, 2006), *The Food Culture of Great Britain* (Greenwood, 2004), and *The National Trust Farmhouse Cookbook* (National Trust, 2009).

Anton Masterovoy is a PhD candidate at the Graduate Center, City University of New York. He is working on his dissertation, titled “Eating Soviet: Food and Culture in USSR, 1917–1991.”

Anne Engammare McBride, a Swiss native, food writer, and editor, is the director of the Experimental Cuisine Collective and a food studies PhD candidate at New York University. Her most recent book is *Culinary Careers: How to Get Your Dream Job in Food*, coauthored with Rick Smilow.

Michael R. McDonald is associate professor of anthropology at Florida Gulf Coast University. He is the author of *Food Culture in Central America*.

Naomi M. McPherson is associate professor of cultural anthropology and graduate program coordinator at the University of British Columbia, Okanagan Campus. Since 1981, she has accumulated over three years of field research with the Bariai of West New Britain, Papua New Guinea.

Katrina Meynink is an Australia-based freelance food writer and researcher. She has a master’s degree in gastronomy through Le Cordon Bleu and the University of Adelaide under a scholarship from the James Beard Foundation. She is currently completing her first cookbook.

Barbara J. Michael is a sociocultural anthropologist whose research focuses on social organization, economics, decision making, and gender. Her geographic focus is on the Middle East and East Africa, where she has done research with the pastoral nomadic Hawazma Baggara and on traditional medicine in Yemen and is working on a video about men’s cafes as a social institution. She teaches anthropology at the University of North Carolina Wilmington and has also worked as a consultant for several United Nations agencies.

Diana Mincyte is a fellow at the Rachel Carson Center at the Ludwig Maximilian University-Munich and visiting assistant professor in the Department of Advertising at the University of Illinois, Urbana-Champaign. Mincyte examines topics at the interface of food, the environment, risk society, and global inequalities. Her book investigates raw-milk politics in the European Union to consider the production risk society and its institutions in post-Socialist states.

Rebecca Moore is a doctoral student studying the history of biotechnology at the University of Toronto in Ontario, Canada.

Nawal Nasrallah, a native of Iraq, was a professor of English and comparative literature at the universities of Baghdad and Mosul until 1990. As an independent scholar, she wrote the award-winning *Delights from the Garden of Eden: A Cookbook and a History of the Iraqi Cuisine* and *Annals of the Caliphs' Kitchens* (an English translation of Ibn Sayyar al-Warraq's 10th-century Baghdadi cookbook).

Henry Notaker graduated from the University of Oslo with a degree in literature and worked for many years as a foreign correspondent and host of arts and letters shows on Norwegian national television. He has written several books about food history, and with *Food Culture in Scandinavia* he won the Gourmand World Cookbook Award for best culinary history in 2009. His last book is a bibliography of early-modern culinary literature, *Printed Cookbooks in Europe 1470–1700*. He is a member of the editorial board of the journal *Food and History*.

Kelly O'Leary is a graduate student at Boston University in gastronomy and food studies and executive chef at the Bayridge University Residence and Cultural Center.

Fabio Parasecoli is associate professor and coordinator of food studies at the New School in New York City. He is author of *Food Culture in Italy* (2004) and *Bite Me: Food and Popular Culture* (2008).

Susan Ji-Young Park is the program director and head of curriculum development at École de Cuisine Pasadena (www.ecolecuisine.com); project leader for Green Algeria, a national environmental initiative; and a writer for LA WEEKLY'S Squid Ink. She has written curriculum for cooking classes at Los Angeles Unified School District, Sur La Table, Whole Foods Market, Central Market, and Le Cordon Bleu North America. She and her husband, Chef Farid Zadi, have co-written recipes for *Gourmet Magazine* and the *Los Angeles Times*. The couple are currently writing several cookbooks on North African, French, and Korean cuisines.

Rosemary Parkinson is author of *Culinaria: The Caribbean*, *Nyam Jamaica*, and *Barbados Bu'n-Bu'n*, and she contributes culinary travel stories to Caribbean magazines.

Charles Perry majored in Middle East languages at Princeton University, the University of California, Berkeley, and the Middle East Centre for Arab Studies, Shmolan, Lebanon. From 1968 to 1976 he was a copy editor and staff writer at *Rolling Stone* magazine in San Francisco, before leaving to work as a freelance writer specializing in food. From 1990 to 2008, he was a staff writer in the food section of the *Los Angeles Times*. He has published widely on the history of Middle Eastern food and was a major contributor to the *Oxford Companion to Food* (1999).

Irina Petrosian is a native of Armenia and a professional journalist who has written for Russian, Armenian, and U.S.-based newspapers. She is the coauthor of

Armenian Food: Fact, Fiction, and Folklore and holds degrees in journalism from Moscow State University and Indiana University.

Suzanne Piscopo is a nutrition, family, and consumer studies lecturer at the University of Malta in Malta. She is mainly involved in the training of home economics and primary-level teachers, as well as in nutrition and consumer-education projects in different settings. Suzanne is a registered public health nutritionist, and her research interests focus on socioecological determinants of food intake, nutrition interventions, and health promotion. She has also written a series of short stories for children about food. Suzanne enjoys teaching and learning about the history and culture of food and is known to creatively experiment with the ingredients at hand when cooking the evening meal together with her husband, Michael.

Theresa Preston-Werner is an advanced graduate student in anthropology at Northwestern University.

Meg Ragland is a culinary history researcher and librarian. She lives in Boston, Massachusetts.

Carol Selva Rajah is an award-winning chef and food writer currently based in Sydney, Australia. She has written 10 cookbooks on Malaysian and Southeast Asian cuisine. Her book *The Food of India* won the gold award for the Best Hardcover Recipe Book at the prestigious Jacob's Creek World Food Media Awards.

Birgit Ricquier is pursuing a PhD in linguistics at the Université Libre de Bruxelles and the Royal Museum for Central Africa, Tervuren, Belgium, with a fellowship from the Fonds de la Recherche Scientifique (FNRS). The topic of her PhD project is "A Comparative Linguistic Approach to the History of Culinary Practice in Bantu-Speaking Africa." She has spent several months in central Africa, including one month in the Democratic Republic of the Congo as a member of the Boyekoli Ebale Congo 2010 Expedition and two months of research focused on food cultures in Congo.

Amy Riolo is an award-winning author, lecturer, cooking instructor, and consultant. She is the author of *Arabian Delights: Recipes and Princely Entertaining Ideas from the Arabian Peninsula*, *Nile Style: Egyptian Cuisine and Culture*, and *The Mediterranean Diabetes Cookbook*. Amy has lived, worked, and traveled extensively through Egypt and enjoys fusing cuisine, culture, and history into all aspects of her work. Please see www.amyriolo.com, www.baltimoreegypt.org, and diningwithdiplomats.blogspot.com for more information and further reading.

Owen Roberts is a journalist, communications instructor, and director of research communications for the University of Guelph in Guelph, Ontario, Canada. He holds a doctorate of education from Texas Tech University and Texas A&M University.

Fiona Ross is a gastrodetective whose headquarters is the Bodleian Library in Oxford, United Kingdom. She spends her time there investigating the eating foibles of the famous and infamous. Her cookery book *Dining with Destiny* is the

result: When you want to know what Lenin lunched on or what JFK ate by the poolside, *Dining with Destiny* has the answer.

Signe Rousseau (née Hansen) is Danish by birth but a long-term resident of southern Africa and is a researcher and part-time lecturer at the University of Cape Town. Following an MA in the Department of English and a PhD (on food media and celebrity chefs) in the Centre for Film and Media Studies, she now teaches critical literacy and professional communication in the School of Management Studies (Faculty of Commerce).

Kathleen Ryan is a consulting scholar in the African Section of the University of Pennsylvania Museum of Archaeology and Anthropology, Philadelphia. She has carried out research in Kenya since 1990, when she began a study of Maasai cattle herders in Kajiado District.

Helen Saberi was Alan Davidson's principal assistant in the completion of the *Oxford Companion to Food*. She is the author of *Noshe Djan: Afghan Food and Cookery*; coauthor of *Trifle* with Alan Davidson; and coauthor of *The Road to Vindaloo* with David Burnett; her latest book is *Tea: A Global History*.

Cari Sánchez holds a master of arts in gastronomy from the University of Adelaide/Le Cordon Bleu in South Australia. Her dissertation explores the global spread of the Argentine *asado*. She currently lives in Jacksonville, Florida, where she writes the food and travel blog *viCARIOUS* and is the marketing manager for a craft brewery.

Peter Scholliers teaches history at the Vrije Universiteit Brussel and is currently head of the research group "Social and Cultural Food Studies" (FOST). He studies the history of food in Europe in the 19th and 20th centuries. He co-edits the journal *Food and History* and is involved in various ways in the Institut Européen d'Histoire et des Cultures de l'Alimentation (Tours, France). Recently, he published *Food Culture in Belgium* (Greenwood, 2008). More information can be found at http://www.vub.ac.be/FOST/fost_in_english/.

Colleen Taylor Sen is the author of *Food Culture in India; Curry: A Global History; Pakoras, Paneer, Pappadums: A Guide to Indian Restaurant Menus*, and many articles on the food of the Indian Subcontinent. She is a regular participant in the Oxford Food Symposium.

Roger Serunyigo was born and lives in Kampala, Uganda. He graduated from Makerere University with a degree in urban and regional planning, has worked in telecommunications, and is now a professional basketball player for the Uganda National Team. He also coaches a women's basketball team (The Magic Stormers).

Dorette Snover is a chef and author. Influenced by French heritage and the food traditions of the Pennsylvania Dutch country, Chef Snover teaches exploration of the world via a culinary map at her school, C'est si Bon! in Chapel Hill. While the stock simmers, she is writing a novel about a French bread apprentice.

Celia Sorhaindo is a freelance photographer and writer. She was the editor of the 2008 and 2009 *Dominica Food and Drink Guide* magazine and content manager for the Dominica section of the magazine *Caribbean Homes & Lifestyle*.

Lyra Spang is a PhD candidate in the Department of Anthropology and the Food Studies Program at Indiana University. She has written about food, sex, and symbolism; the role of place in defining organic; and the importance of social relationships in small-scale food business in Belize. She grew up on a farm in southern Belize and is a proud promoter of that country's unique and diverse culinary heritage.

Lois Stanford is an agricultural anthropologist in the Department of Anthropology at New Mexico State University. In her research, she has examined the globalization of food systems both in Mexico and in the U.S. Southwest. Her current research focuses on the critical role of food heritage and plant conservation in constructing and maintaining traditional foodways and cultural identity in New Mexico. In collaboration with local food groups, she is currently developing a community food assessment project in the Mesilla Valley in southern New Mexico.

Aliza Stark is a senior faculty member at the Agriculture, Food, and Environment Institute of Biochemistry, Food Science, and Nutrition at the Hebrew University of Jerusalem.

Maria “Ging” Gutierrez Steinberg is a marketing manager for a New York City–based specialty food company and a food writer. She has a master's degree in food studies from New York University and is a graduate of Le Cordon Bleu. Her articles have appeared in various publications in Asia and the United States.

Anita Stewart is a cookbook author and Canadian culinary activist from Elora, Ontario, Canada.

Emily Stone has written about Guatemalan cuisine in the *Radcliffe Culinary Times*, and she is at work on a nonfiction book about chocolate in Central America. She currently teaches journalism and creative writing at Sun Yat-sen University in Guangzhou, China.

Asele Surina is a Russian native and former journalist who now works as a translator and interpreter. Since 1999 she has worked at the Institute of Classical Archaeology at the University of Texas on joint projects with an archaeological museum in Crimea, Ukraine.

Aylin Öney Tan is an architect by training and studied conservation of historic structures in Turkey, Italy, and the United Kingdom. Eventually, her passion for food and travel led her to write on food. Since 2003, she has had a weekly food column in *Cumhuriyet*, a prestigious national daily, and contributes to various food magazines. She was a jury member of the Slow Food Award 2000–2003, with her nominees receiving awards. She contributes to the Terra Madre and Presidia projects as the leader of the Ankara Convivium. She won the Sophie Coe Award on food history in 2008 for her article “Poppy: Potent yet Frail,” presented

previously at the Oxford Symposium on Food and Cookery where she's become a regular presenter. Currently, she is the curator of the Culinary Culture Section of Princess Islands' City Museum. She is happy to unite her expertise in archaeology and art history from her previous career with her unbounded interest in food culture.

Nicole Tarulevicz teaches at the School of Asian Languages and Studies at the University of Tasmania.

Karen Lau Taylor is a freelance food writer and consultant whose food curriculum vitae includes a master's degree in food studies from New York University, an advanced certificate from the Wine and Spirits Education Trust, and a gig as pastry cook at a five-star hotel after completing L'Academie de Cuisine's pastry arts program. She is working toward a master's degree in public health while she continues to write, teach, test recipes, eat, and drink from her home in Alexandria, Virginia.

Thy Tran is trained as a professional chef. She established Wandering Spoon to provide cooking classes, culinary consultation, and educational programming for culinary academies and nonprofit organizations throughout Northern California. Currently, she is a chef instructor at the International Culinary Schools at the Art Institute of California–San Francisco and Tante Marie's. She is also the founder and director of the Asian Culinary Forum. She co-authored *The Essentials of Asian Cooking*, *Taste of the World*, and the award-winning guide, *Kitchen Companion*.

Leena Trivedi-Grenier is a Bay-area food writer, cooking teacher, and social media consultant. Her writings have appeared in *The Business of Food: Encyclopedia of the Food and Drink Industry*, *Culinary Trends* magazine, and the *Cultural Arts Resources for Teachers and Students* newsletter and will be featured in several upcoming titles by Greenwood Press. She also runs a food/travel/gastronomy blog called *Leena Eats This Blog* (www.leenaeats.com).

Karin Vaneker graduated from the AKI Academy of Visual Arts in Enschede, the Netherlands. She later attended Sint-Lukas Hoger Instituut voor Schone Kunsten in Brussels, Belgium. She has written for numerous Dutch newspapers and magazines, specializing in trends and the cultural and other histories of ingredients and cuisines, and has published several books. Furthermore, Vaneker has worked for museums and curated an exhibition about New World taro (*L. Xanthosoma* spp.). At present she is researching its potential in domestic cuisines and gastronomy.

Penny Van Esterik is professor of anthropology at York University, Toronto, where she teaches nutritional anthropology, advocacy anthropology, and feminist theory. She does fieldwork in Southeast Asia and has developed materials on breast-feeding and women's work and infant and young child feeding.

Richard Wilk is professor of anthropology and gender studies at Indiana University, where he directs the Food Studies Program. With a PhD in anthropology from the University of Arizona, he has taught at the University of California,

Berkeley; University of California, Santa Cruz; New Mexico State University; and University College London and has held fellowships at Gothenburg University and the University of London. His publications include more than 125 papers and book chapters, a textbook in economic anthropology, and several edited volumes. His most recent books are *Home Cooking in the Global Village* (Berg Publishers), *Off the Edge: Experiments in Cultural Analysis* (with Orvar Lofgren; Museum Tusculanum Press), *Fast Food/Slow Food* (Altamira Press), and *Time, Consumption, and Everyday Life* (with Elizabeth Shove and Frank Trentmann; Berg Publishers).

Chelsie Yount is a PhD student of anthropology at Northwestern University in Evanston, Illinois. She lived in Senegal in 2005 and again in 2008, when performing ethnographic research for her master's thesis at the École des Hautes Études en Sciences Sociales in Paris, on the topic of Senegalese food and eating habits.

Marcia Zoladz is a cook, food writer, and food-history researcher with her own Web site, *Cozinha da Marcia* (Marcia's Kitchen; www.cozinhadamarcia.com.br). She is a regular participant and contributor at the Oxford Symposium on Food and History and has published three books in Brazil, Germany, and Holland—*Cozinha Portuguesa* (Portuguese cooking), *Muito Prazer* (Easy recipes), and *Brigadeiros e Bolinhas* (Sweet and savory Brazilian finger foods).

Preface

This encyclopedia is the culmination of nearly a decade's work on the *Food Culture around the World* series. As that project expanded to 20 volumes, we realized that many peoples and places, fascinating and important in their own right, had not been covered. Considering that the cultural study of food has become more sophisticated and comprehensive over the past decade, that food has become a legitimate academic topic in curricula at every level of education, and that we seem to become more obsessed with food every day, we recognized that we simply could not leave out much of the planet. The only way to satisfy this growing demand is the set you see before you, which includes material covered in the series plus new articles that span the globe. We have gathered food scholars from around the world—people whose passion and expertise have given them deep insight into the ingredients, cooking methods, and ways of eating and thinking about food in their respective countries.

A number of questions regarding breadth and depth naturally arose in planning this work, particularly about the level of analysis for each article. Could we do justice to the vast array of distinct cuisines on earth? Could we include regional coverage for well-recognized food cultures? That is, rather than the nation-state as the criterion for inclusion, why not add Alsace, Provence, and Burgundy with France, or Sichuan, Hunan, and Canton with China? It became apparent that we would need another 20 volumes or risk very brisk, superficial coverage and that as arbitrary as the construction of nation-states has been historically, in particular the way minority cultures have tended to be obscured, the best way to organize this encyclopedia was by nation. Regional variations and minority groups can, of course, be discussed within the framework of nation-based articles. On the other hand, some groups frankly demanded separate entries—those who stood out as unique and distinct from the majority culture in which they happen politically to be included, or in some cases those people who either transcend national boundaries or even those very small places, whose great diversity demanded separate coverage as truly different from the culture around them. Thus we include the Basques separate from Spain and France, and the Hmong. We have not, however, included every single people merely on the basis of national status. This should not be taken to suggest that these cultures are unimportant but merely that many places share a common culture with those around them, though divided by national borders. In such cases we have provided cross-references. This seemed a preferable solution to suffering repetitiveness or unmanageable size.

The format for each entry also raised many questions. “Eating Out,” for example, is simply not relevant in some places on earth. Would forcing each article into a common structure ultimately do injustice to the uniqueness of each culture? In the end it seemed that the ability to conduct cross-cultural analysis proved one of the most valuable assets of this set, so that one could easily compare what’s for lunch in Brazil or Brunei. Moreover, tracing the various global currents of influence has been made possible since a shared set of parameters places each article on a common footing. We can trace, for example, the culinary influence of various peoples as they spread around the world. In this respect this work is unique. There are several excellent food encyclopedias on the market, all of which cover individual ingredients, topical themes, cooking methods, and sometimes recipes. None, however, treats individual food cultures as discrete units of analysis, and for students hoping to find an in-depth but succinct description of places, or for those hoping to compare a single food topic across cultures, this is the only source to which they can turn. We anticipate that this work will be invaluable for students, scholars, food writers, as well as that indomitable horde popularly known as foodies.

The other major question in designing this encyclopedia was how to define what exactly constitutes a *food culture*. This term should be distinguished from *cuisine*, which refers only to the cooking, serving, and appreciation of food. Naturally we include this within each entry and in doing so have taken the broadest possible definition of the term *cuisine*. That is, if a people cooks and recognizes a common set of recipes and discusses them with a common vocabulary, then it should be deemed a cuisine. Thus there is no place on earth without a cuisine. A nation, continent, region, and even a small group may share a common cuisine. This encyclopedia, however, covers much more. It explores the social context of consumption, the shared values and symbolic meanings that inform food choices, and the rituals and daily routine—indeed everything that constitutes a food culture. Thus we include religion, health, mealtimes, and special occasions, as well as the way certain foods confer status or have meanings beyond simple sensory gratification. Nor have we neglected the gastronomic angle, as recipes are an essential expression of what people think is good to eat, and their popularity is the outcome of decisions made at every level of society, from the farmer who grows food, and the environment and material resources that make it possible, to the government policy that promotes certain ingredients, to the retailers who market them, to the technologies by which they are transformed, and to the individual preference of family members at the level of the household. To this end we have added food culture snapshots to each entry, which puts a human face on the broader topics under discussion.

As with the series that preceded this encyclopedia, our aim is to present the panoply of human experience through the lens of food in an effort to better understand and appreciate our differences. We will find remarkably common experiences among us, especially as the world increasingly falls under the sway of corporate multinational food industries, but we will also find deep, profound, and persistent distinctions, ones that should and must be preserved because they are essential to who we are and how we define ourselves. These are differences

that should not be effaced nor lost as our tastes become increasingly cosmopolitan. I hope that in reading these articles you find, like me, that the world is a marvelously diverse place and what people eat tells us about them in such an immediate and palpable way that in a certain sense you feel you know the people at some level. This, of course, is the first step toward understanding, appreciating, and living with each other peacefully on this small lump of turf we call earth.

Argentina

Overview

The Argentine Republic is located in South America and is the second-largest Latin American country. It is divided into several culinary zones, each distinguished by individual gastronomic characteristics that are difficult to find elsewhere in Argentina. In the central region and las Pampas, dishes with a strong Italian influence, such as pizza, pasta, and polenta, are consumed on a daily basis. Pre-Hispanic dishes and ingredients, such as corn, potatoes, and chilies, are common in the northwestern provinces, while Welsh and Central European immigrants have influenced the gastronomy of the Tierra del Fuego region.

At the same time, the renowned Argentinean barbecue, the *asado*, which always starts with a *picada*, an aperitif, most often Vermouth and cold cuts, cheese, and olives; the preference for drinking red wine and yerba maté instead of other beverages; the passion for eating *dulce de leche* (thick caramelized sweetened milk); and the famous empanadas (small semicircular pies) are culinary examples present in all Argentinean households.

Food Culture Snapshot

The Russo family manages several hotels in Necochea, a port city on the southern coast of Buenos Aires Province, where they have lived all their lives. Maria del Carmen and Alberto have four grown-up children: two daughters, also in the hotel-management profession, and two sons, the youngest living in Italy. The Russos exemplify a middle-class, Buenos Aires Province

lifestyle, with very conservative culinary practices shown in part by a skeptical view not only of foreign cuisines but also of other regional Argentinean dishes.

Alberto and Maria del Carmen start their days with yerba maté (a hot drink made from the leaves of *Ilex paraguariensis* and drunk from a gourd vessel with a metal straw, or *bombilla*) followed by a light breakfast of *café con leche* (coffee with warm milk) and freshly baked *flautas*, a similar though smaller version of the French baguette, richly covered with butter and marmalade. Lunch is usually eaten around one o'clock and consists of an entrée, often just a steak or oven-baked chicken, with a salad on the side, accompanied by a red wine spritzer. Maria del Carmen's grandchildren are served another light meal called *merienda*, a custom common to countries with Spanish influence, consisting of a glass of milk and sandwiches or something sweet such as cookies or pastries. Adults might join the children with some yerba maté and a small bite of *algo dulce*, "something sweet."

Dinner is the most important meal of the day and is usually eaten at 9:00 P.M. Most often it consists of a single dish with vegetables or a salad on the side. At least twice a week, the Russos have home-delivered empanadas for dinner accompanied by a couple glasses of red wine. Maria del Carmen is enthusiastic about the new time-saving home-delivery services that have become part of their daily lifestyle and finds that the empanadas taste just like homemade. To round off dinner, a light dessert, such as flan (crème caramel), is served along with a cup of coffee or tea. The Russos follow the traditional custom of eating a simple

pasta dish on Tuesdays and a homemade, often-filled pasta entrée on Sundays. All generations look forward to the Saturday asado, when family and friends meet for an extended lunch of barbecued beef, spicy pork sausages, blood sausages, salad of lettuce, tomato, and onion, fresh bread, and red wine. A couple of bites of quince fruit paste (*membrillo*) and cheese may round off the meal.

Major Foodstuffs

Argentina is an urban country, with approximately 90 percent of the population living in cities. It is also a mostly self-sufficient nation that has little need to import foodstuffs and exports a surplus of animal products, milk, corn, wheat, sorghum, soybeans, oilseeds, some fruits, and wine.

Beef is the most important staple in Argentina, accounting for the highest consumption rate in the world. Since the arrival of the Spaniards, cattle have thrived on the Pampas, the central flatlands of the country, where the humidity and soil quality result in high-quality grass. Nowadays, Argentinean cattle may be grain or grass fed, but there is an increasing awareness that the meat of grass-fed cattle is healthier. Lamb and young goat's meat are also popular choices for the barbecue, particularly in the Patagonian region. Chicken is often oven-baked or made into the traditional Spanish *arroz con pollo* (chicken with rice), a favorite in the northwestern parts of Argentina.

Grains such as corn and wheat play an important role in Argentinean cuisine. Corn is a staple of the Andean region and is the base ingredient in *locro*, a pre-Hispanic corn, vegetable, and meat stew, and in *polenta*, an Italian cornmeal dish sometimes served with tomato sauce and cheese or accompanying beef stews. Wheat is used to produce pasta and as flour for baking bread and a wide variety of pastries and cookies.

Cow milk is inexpensive and the primary ingredient in *dulce de leche*, a caramelized milk spread similar to toffee and a favorite filling in pastries. Cheese, both fresh and ripened, is an important staple. Argentinean provolone and *reggiano*, a regional Parmesan cheese, are two of the most popular in the

Argentinian barbecue featuring beef asado. (Claus Mikosch | Dreamstime.com)

country. Other dairy staples are *mendicream*, similar to cream cheese, and yogurt, categorized as children's food.

One of the most important beverages in Argentina is maté, a hot infusion made of yerba maté (*Ilex paraguariensis*) leaves grown in the northern part of the country. The leaves are steeped in a small gourd and drunk by sucking the liquid through a *bombilla*, or strawlike metal rod with a sieve on the bottom, which ensures that the leaves stay in the container. Drinking yerba maté, or *matear*, must follow certain rules: The host fills the gourd with hot water, sucks the liquid, refills the gourd, and passes it clockwise to the next person, who does the same. The gourd is refilled and passed around until the infusion becomes tasteless. This is an important social custom in the country, where friends and family often meet to share a gourd of the infusion. There are several kinds of yerba maté, including ones that are bitter, sweet, or flavored with orange rinds.

The consumption of legumes is not widespread in Argentina, aside from a few dishes such as the *fainá*, an oven-baked chickpea pancake usually eaten with pizza in Buenos Aires. Lentils and beans are used in soups and salads.

Red wine is one of Argentina's largest exports, and grapes are most commonly grown in the regions of Mendoza and San Juan. Climate and geography have played an important role in the cultivation of grapes in these regions. Due to drier weather conditions and higher altitudes, grapes in Argentina do

not suffer from as many diseases as their European counterparts. Malbec, Bonarda, Cabernet Sauvignon, Merlot, and Shiraz varieties, among others, thrive in the area. More recently, organic red wine has become very popular.

Cooking

Traditionally, women in Argentina are in charge of feeding their families. However, men may sometimes cook more elaborate pasta dishes and take care of the Saturday barbecue. Families that are able to afford it have a cook. Argentinean cooking methods are simple and straightforward. In cities, kitchens have gas stoves and ovens, and most dishes are prepared by frying, stewing, or baking. Since microwaves are very rare, leftovers are often warmed in ovens. Wood-burning stoves are commonly found in more rural areas of the country.

Barbecuing is an art in Argentina, and two different methods may be used. For smaller cuts of meat, sausages, and vegetables, a regular grill is preferred, but when barbecuing a whole animal (a pig, cow, lamb, or goat), an open pit is used. Seasonings are used sparingly; most often, some salt and nothing else is sprinkled on the meat. However, *chimichurri*, a spicy sauce, accompanies all barbecued meats.

Chimichurri

1 c olive oil

1/3 c white wine vinegar

1/3 c finely chopped onion

3 finely chopped cloves garlic

1/2 tsp cayenne pepper

1 tsp dried oregano

1 tsp salt

A pinch of black pepper

Put the ingredients in a container with a lid, and blend well. Put in a cool place or in the refrigerator, and let the chimichurri rest for a couple of days so the flavors really blend. Serve as a sauce with barbecued meats and vegetables.

Typical Meals

Even though Argentina is large, the structure of meals, if not the contents, is very similar throughout the country. Usually, Argentineans have three meals a day, breakfast, lunch, and dinner, but children and some adults may also eat a light meal in the middle of the afternoon. Lunch and dinner are the main daily meals, with some kind of meat being the main ingredient.

Breakfast consists of crackers or toast with cream cheese or jam and a cup of coffee or tea. Children may also eat packaged cereals with milk or sometimes have a pastry and drink chocolate milk. Argentinean lunches are eaten around 1 P.M. Since meat is a major staple, most menus are planned according to the type of meat served. A great favorite is beef or veal Wiener schnitzel (flattened breaded cutlets), though sometimes it is made with chicken. It is served with French fries or mashed potatoes, sweet potatoes, or pumpkin. Salads consist of tomatoes and lettuce. Vegetables on the side may include boiled broccoli or cauliflower. Or simple pasta dishes such as boiled spaghetti with melted butter and freshly grated provolone or Parmesan cheese may be served. Red wine spritzers or mineral water are the drinks of choice.

Dinner, eaten at 9 P.M., is the most important meal of the day and a chance for the family to get together after a long day. There are few dishes reserved for dinner menus, and unless it is a special occasion, Argentineans dine on roasted chicken and potatoes. A common starter is *matambre*, literally “hunger killer,” made by filling a flank steak with carrots, spinach, and hard-boiled eggs, seasoned with oregano, garlic, and paprika; it is served cold. In the Buenos Aires metropolitan area, gnocchi are a must on the 29th of the month, and many people still maintain this tradition.

Eating Out

Argentineans love eating and will gladly visit restaurants often, if affordable. Recently, Buenos Aires has seen a surge of restaurants driven by young chefs inspired by international cuisines. However,

Argentines love their meat and are content if they are served a good steak and great bottle of red wine. Regional food restaurants, serving *locro*, fried empanadas, and other local dishes, are very popular in Buenos Aires. Going out for a pizza with friends is also common, and in this case Argentines prefer a glass of cold beer instead of wine to accompany their meal. The most popular pizza is a plain mozzarella cheese pizza with a slice of *fainá* (the flat chickpea bread). Argentinean pizzas are similar to Italian ones, but the crust is thicker and they have a lot more cheese on top. In Buenos Aires all the different regional Italian pizzas are available in the same city. It is thus easy to enjoy a piece of Ligurian *fainá* (in Italian *farinata*), an Umbrian cheese and onion pizza, and the traditional Neapolitan tomato and mozzarella pizza in the same restaurant.

Empanadas are often served at parties as a starter or main course, or in festivals. Shops specialize in freshly made empanadas, with many flavors and fillings. (Viktorija Kuprijanova | Dreamstime.com)

Eating on the go is considered bad manners in Argentina; therefore, there are few street-food stands. However, the popular *choripán*, a chorizo-filled baguette seasoned with chimichurri, is sold only on the street. Still, this must be eaten by the stand and is not considered take-out food. American-style fast food has become popular during the last few years, and the younger generation often prefers to eat at McDonald's. However, *roticerías*, serving take-out barbecued chicken and vegetable and potato croquettes and empanadas, are still very popular. Other quick meal solutions that have appeared in the last few years are home-delivery services, which range from breakfast served at the home to a wide selection of empanadas. Sushi and Chinese food are recent popular take-out choices in Argentina today.

In Buenos Aires, the tradition of meeting friends for an espresso or cappuccino with grilled ham on toast is still very much alive and has spread to other parts of the country. Going out to ice cream parlors where ice cream from the Italian tradition is served in many varieties is also very popular.

Special Occasions

With a strong Catholic heritage, most Argentinean festivities are related to Christian celebrations. However, some yearly events are celebrated nationally or regionally. Christmas is usually a family affair. Most families attend mass late at night on Christmas Eve and eat dinner around midnight. Christmas menus are flexible, but some dishes are a must on the Argentinean table such as the main course, an oven-baked stuffed turkey or a barbecued piglet. Cider (a carbonated alcoholic drink), Spanish *turrón* (an almond or nut confection that may be either soft or hard), and *pan dulce* (a sweet egg-laden bread similar to the Italian panettone) are irreplaceable elements in Argentinean homes. Cider and *pan dulce* are also essential on New Year's Eve.

During Easter, Lenten empanadas filled with tuna or sardines are eaten throughout the week. Cod stews are also a part of Easter meals and may be eaten with chickpeas and potatoes. The Ligurian *torta pascualina*, a deep vegetable pie, is often served as a first course. On Easter Sunday hard-

boiled colored eggs are used to decorate the table, and children receive candy-filled chocolate eggs. Dessert consists of a *rosca de Pascua*, a sweet Easter bread, which is also eaten on other religious celebrations such as All Saint's Day.

In some parts of Argentina, midsummer, or the Night of Saint John, is celebrated by making huge bonfires in towns and villages. Traditionally, sweet potatoes are cooked in the ashes and then eaten warm. Spring Day, which coincides with Students' Day, is celebrated in all parts of the country on September 21. On this day, high school students converge on parks and have daylong picnics and concerts. They drink maté and eat *sanwiches de pebete con jamón y queso*, sandwiches of ham and cheese on sweet bread.

Diet and Health

Recently, Western health recommendations have become popular in Argentina, though it is difficult for these meat lovers to reduce their intake of meat and add more fish and vegetables to their diet.

Those living in urban areas are more health conscious, and many avoid eating too much fat. The younger generations are great fans of American-style fast food, and visiting Starbucks, McDonald's, and Burger King has become a way of life for teenagers and young adults. Still, culinary traditions are very strong, and even though take-out sushi may be the rage at the moment, empanadas and choripán are still a part of the daily life of Argentineans.

Aruba and Bonaire

Overview

Procuring salt, conducting the slave trade, and establishing ports of trade—rather than developing sugar plantations—were the goals of the Dutch explorers who made the six islands of the Netherlands Antilles their colonies. Aruba and Bonaire are part of the ABC islands (Aruba, Bonaire, and Curaçao) that sit 15 miles north of the Venezuelan coast. Saba and Saint Eustatius (and Saint Martin) lie further east, bordered by the British Virgin Islands to the north and the British-held islands of Saint Kitts, Nevis, and Montserrat to the south.

Aruba was discovered and claimed for Spain in 1499, well before the 70-square-mile island was acquired by the Dutch in 1636. This Spanish past influences cuisine on Aruba almost as much as the Dutch ownership. At one time gold and oil dominated the island's economy. Today, tourism supports the population of 100,000.

Bonaire's population is 14,000. Bonaire's present fame comes from its dive sites rather than its sandy white beaches, which are rated the best in the Caribbean and in the world. The jewel of Bonaire's culinary crown lies high up in the hills far inland; the village of Rincon boasts a market of local food.

The Caiquetios, an Arawak tribe, were the original inhabitants of these islands. Before the Africans, the Caiquetios were enslaved by Europeans and forced to cultivate maize (corn) and dyewood (a tree that produces red dye for textiles). The slaves also harvested evaporated salt. The stone hovels in which they lived, less than four feet high and much too short for a man to stand in, are still evident on Bonaire around Rincon and along the saltpans

where flamingos are drawn to the brackish water, which harbors their favorite dish, pink shrimp.

Saba, at five square miles, is the smallest island in the Netherlands Antilles; it is a dramatic volcanic island with its highest point, Mount Scenery, dominating the island's profile. Directly south of Saba, Saint Eustatius has a population of 2,900 and is under 12 square miles. Saint Eustatius—often referred to as simply Statia—lies 38 miles south of the jointly held French and Dutch island called Saint Martin or Sint Maarten. In the last decades the Netherlands Antilles have seen a tremendous boom in the tourism industry. This is particularly true for Aruba, Bonaire, and Curaçao, which sit below the hurricane belt.

Food Culture Snapshot

Mama Lou lives on the hill overlooking Kralendik in a semirural single home with her family—her husband and two daughters, both still in school. She has her own goats—which she raises for meat—and works at Buddy Dive Resort, about a 10-minute drive from her home. If she has breakfast before she drives to work, she may have a sweet bread she has baked herself, plus a fruit such as a banana or mango, and coffee. If there is a special occasion she might shop at Cultimara, the largest traditional grocery store on Bonaire, to pick up a variety of sweet and savory *pasteche* (pies) to share with her coworkers at Buddy Dive Resort. While at Cultimara she might also shop for ingredients for her renowned goat stew: potatoes, tomatoes, green peppers, hot peppers, onions, and *ketjap* (an Indonesian sweet soy sauce) as well as plantains to fry

as an accompaniment. She makes this quite spicy with Scotch bonnet peppers and brings it to share with her fellow workers.

On weekends she might prepare a breakfast called *wentelteefjes*, also known as *pain perdu* or French toast, made from day-old bread. However, her husband, Bobby, a dive instructor, prefers to add a Gouda cheese sandwich to his breakfast of fruit and coffee. When lunchtime comes around, the largest meal, they both might be found at a catering truck that stops by just outside the resort and serves ribs and various *stobas*, or stews.

Mama Lou shops three times a week to make dinner for her family. Her favorite is fresh fish. The fish might come from the local fishmonger Doeï Diaz next to Richard's Restaurant. Or, if her husband has had time away from diving instruction, he prefers to catch his own fish. This might be snapper, wahoo, or mahi-mahi. She might make a simple fish marinade with lime juice, garlic, peppers, and olive oil.

One of the most looked-forward-to times on Bonaire is the sorghum harvest, or Simadan, in April. A communal feast is prepared that includes *repa*—a pancake made of sorghum meal often served with goat stew, goat soup, or *giambo* (okra soup much like gumbo) and *boontji kunuku*, which is local beans. All these dishes are part of the Bonairean staple diet, although the availability of sorghum meal and boontji kunuku depends on the rainy season. It is held in the village of Rincon, near the Mangasina di Rey (the “Storehouse of the King”), which years and years before had been the main storage place for the island's food stores. Flour is brought, and eggs are collected to prepare the *repa* for the feast. If the bean harvest is good, the area's kunuku owners bring the beans to Rincon in celebratory processions. After the baskets are blessed at the church, the beans are given to the priest for storage in the Mangasina di Rey.

Major Foodstuffs

Local fruits available on Aruba and Bonaire often include bananas, pineapple, carambola (or star fruit), and *maracudja*, or passion fruit. Vegetables available include pigeon peas or congo peas and *belangere* (eggplant). The vegetable known as the

christophene in other parts of the world is called chayote squash on the islands and are frequently included in a *mélange* or a curry dish. Unique to the locale is an indigenous root called *dashene* or *dachine*. Malanga, another starchy root, can be cooked as we might cook potatoes: boiled and mashed and served as a side dish. *Giraumon* is a local pumpkin or hard-skinned squash. Peppers are available in many varieties and are more often on the superhot scale such as Scotch bonnet peppers.

Beef, pork, and lamb are less available and are quite expensive because they are imported. Poultry is often raised by the locals. *Cabri* refers to goat, which is also a local favorite. Fish is caught fresh and is frequently featured on tables at home and in restaurants. Such varieties found include *chadron* or *oursin*, which is sea urchin; *chatrou*, small octopus; and *balalou*, which can mean any variety of small local fish. *Crevettes* (shrimp) are caught and denoted as *gambas* if quite large. Also appearing are *ecrevisse* or *ouassous*, freshwater crayfish that are rarer than the *z'habitants*, or marine crayfish, a cousin of the lobster. *Lambi* (conch) is harvested as well as *langouste* (lobster). *Morue* (codfish) and *moules* (mussels) find their way onto menus, often with *palourdes*, which signifies clams. If *vivaneau* appears on the menu, this means snapper, that is, the fish rather than a snapping turtle.

Prepared local seafood specialties include *blaff*, a highly seasoned soup of local fish, followed by *chiquetaille*, a shredded, spicy codfish. For shellfish lovers *crabe farci* is a spicy stuffed crab, and if listed as *columbo* this crab is also prepared with curry. *Feroce* is a fiery avocado with chiquetaille. Court bouillon is a steamed fish specialty. Sauce *chien* is a spicy sauce served with fish. Non-fish-oriented dishes might include *calalou*, or callaloo, a stew of herbs and greens, and homemade boudin, a spicy blood sausage. For drinks, there is a *planteur*, which is rum with tropical juices, or *ti-punch*, which is a liberal portion of rum mixed with cane syrup and lime.

Cooking

The Amerindians had a fondness for gathering and therefore often ate such things as turtle and iguana

eggs. Sometimes these delicate foods were preserved by smoking, pickling, and salting. If these were not available, then even termites, ants, grubs, and caterpillars appeared on the table. They also developed a cooking method called *brabicot*, which was a wooden framework that held food over hot coals. The Spanish then improved this method, calling it *barbacoa*, and in English this is more familiar as the cooking method called barbecue. The most popular cooking methods include barbecuing (pork is especially prized), followed by stewing for the tougher, more economical meats (goat, lamb, and iguana), coupled with an affection for frying (especially for chicken).

In the past families had to decide on a single source of heat; usually this was wood, and the cooking area was at the rear of the house, for safety and also to allow smoke to leave quickly. Modern conveniences in the form of refrigeration and running water are moderately found outside of the major cities. People do not store much food. Whether this is due to lifestyle or the preference for fresh food is uncertain. Where the temperature is quite warm most of the year, fish is best when at its freshest and cooked immediately. Today, in rural areas it is not uncommon to see a small plot being cultivated for vegetables and herbs.

Keshi Yena, traditional delicacy from the Dutch Caribbean involving the shell of a scooped Edam. (Dreamstime)

Keshi Yena

One of the most typical Dutch-influenced and historical dishes is *keshi yena*. Frugality was the keynote of island living in earlier times, when provisions had to last from the visit of one sailing ship to the call of another. In this classic recipe the shell of a scooped Edam (the thin rind remaining after a family had consumed the four pounds of cheese) is filled with spiced meat, then baked in the oven or steamed in the top of a double boiler. For these methods of preparation the red wax must be removed from the empty shell after it has been soaked in hot water. In a more dramatic version the filled Edam, with the red wax intact, is tied in cheesecloth and suspended in boiling water for 20 minutes. The wax melts away in the hot water, leaving a delicate pink blush on the cheese. Use chicken or beef for the filling.

Serves 10–12

1 entire Edam cheese ball, about 2–2½ lb

For the Chicken Filling, Rub with the Juice of Several Limes

1 lb chicken breasts

1 lb chicken thighs

Season the Breasts and Thighs with

Salt and pepper

Poultry seasoning

Minced onion

Let them stand for several hours. Then either arrange the pieces in a shallow baking dish, brown the chicken under the broiler, and then bake it for 1 hour at 350°F, deboning it when cool enough to handle; or choose this more frugal method of preparation: Brown the chicken in 3 tablespoons butter, then place it in a heavy kettle with:

4 qt water

2 tsp salt

12 peppercorns

1–2 onions

1 celery stalk with leaves

Bay leaf, bruised

Bring to a boil, reduce heat, and simmer for 20 minutes, or just until chicken is tender. Strain and reserve the broth, discarding the vegetables. Debone the chicken and set aside.

After the chicken has been prepared by one of the preceding methods, sauté in 2 tablespoons butter:

3 tomatoes, peeled and chopped

4 onions, sliced

1 large green pepper, chopped

1 tbsp parsley, minced, or a few drops Tabasco sauce

Salt and pepper

Add and stir in well:

2 tbsp ketchup

¼ c pimento olives, sliced

1 tbsp capers

¼ c raisins

2 tbsp piccalilli (a sweet, spicy pickle relish that typically includes tomatoes, sweet peppers, onions, cucumber, or other garden vegetables. It gets its bright yellow color from turmeric or sometimes mustard.)

The chicken (or substitute 1 lb ground beef, lightly browned, for the chicken)

Simmer until the tomatoes are reduced, about 20 or 30 minutes. Remove from the fire and permit mixture to cool. If keshi yena is to be baked, pre-heat oven to 350°F. If it is to be steamed, begin heating water in the bottom of a double boiler.

Beat 3 eggs, reserving about 6 tablespoons for brushing the top, and add the rest to the meat mixture. Generously butter a casserole or the top of a double boiler. Before placing the Edam cheese shell in it, spoon 3 tablespoons of the reserved beaten egg into the bottom of the container. Half fill with the meat mixture and add 1 or 2 hard-cooked eggs.

Fill shell to the top with remaining meat and cover with the original cap of the Edam, from which the wax has been removed, or a few slices of cheese.

Never use soft young cheese for keshi yena; firm cheeses are required for a successful dish.

Drip the remaining 3 tablespoonfuls of beaten egg over the top of the cheese as a sealer. (Place the lid on the double boiler.) Set the casserole in a pan of hot water, or the double boiler top over the simmering water. Cook for 1¼ hours. Invert keshi yena on a heated platter, and keep warm, for the cheese becomes hard and unappetizing if permitted to cool.

In place of the cheese shell, 2 pounds of sliced Edam or Gouda may be used to line the cooking container. The slices should overlap and create the same effect as the shell. Add filling, cover with additional slices of cheese, and set the casserole in the oven at 350°F for 1½ hours. The traditionalist with a great deal of time and patience may scoop out a 4-pound Edam or Gouda, taking care not to pierce the shell.

The open-air market in Rincon on the first Saturday of the month offers at least six stalls of prepared foods such as *kabritu stobá* (a goat stew with vegetables), *kabes ku higra* (a mix of goat brains and liver), and *sòpi di yuana* (iguana soup). Other cooking includes the Dutch-inspired *bokijow*, cod marinated in vinaigrette with hot peppers. *Sopa di banana* is the Dutch term for banana soup, which is often seen on Bonaire and Aruba. *Pika siboyo* is a pepper sauce with onions, vinegar, and two kinds of pepper; one is a hot pepper called Madam Jeanette, and the other is a Scotch bonnet from Venezuela.

Typical Meals

For breakfast, the locals might enjoy fresh tropical fruit and coffee. Sweet pastries are also featured. For lunch the versatile pasteche might appear. This is a plump little pastry filled with spicy meat, shrimp, or fish. It can be found everywhere, around the clock: with coffee, tea, or cocktails; at beach parties; or on the most formal buffet tables. *Bitterbal* are fried meat croquettes served with mustard.

At dinner locals enjoy keshi yena. This dish is sometimes served with *funchi*, a cornmeal pancake, or *pan bati*, a corn pudding formed into pies.

Soppi di pisca, a very popular soup, is actually fish chowder flavored with coconut and also, occasionally, meat. For travelers who enjoy seafood, there are several unique ways of having it prepared. *Keri keri* is a dish of shredded barracuda infused with the South American spice annatto. This is what the Dutch first adopted from their Indonesian colonies, where it is called curry.

Drinks available on Aruba are unique Caribbean soft drinks. Desnoes and Geddes is a company that makes something called *kola champagne* and the more familiar ginger beer. Mixed drinks are also popular, particularly the island's famous rum punch, which is comprised of several types of rum mixed with orange and pineapple juices, sweet and sour mix, and grenadine.

A popular dessert might be *pan bollo*, an Aruban bread pudding that is served with rum sauce, or a cake called *bolo di tres lechi* made with three forms of milk—condensed milk, evaporated milk, and cream.

Funchi

Serves 6

- 1¼ c cold water
- 1½ c cornmeal
- 1 tsp salt
- 1½ c boiling water
- 1 tbsp butter

Funchi is a staple of the Dutch islands. A polenta-like dish made from cornmeal, it is often served with soup.

Mix the cold water, cornmeal, and salt in a heavy saucepan. Stir in boiling water and butter. Bring to a brisk boil over high heat and cook for 3 minutes. Continue cooking an additional 3 minutes, stirring the funchi vigorously with a wooden spoon.

When the mixture is very stiff and pulls away from the sides of the pan, remove from the fire. Turn out into a deep, well-buttered bowl and cover with a plate. Shake the funchi down into the bowl, and then invert it onto a serving platter.

For a special Sunday breakfast, fry sliced funchi in butter and serve with crisp bacon and scrambled eggs.

Eating Out

Meals eaten outside the home by locals differ substantially from those eaten by tourists. It is certainly possible to visit the resorts and never have local food. Cheeseburgers and French fries are widely available, and even the locals are beginning to be more inclined to eat these than take the time to prepare such time-consuming cooked dishes as goat stew. It is even possible, on Aruba, to find such chain restaurants as Hooters and Benihana to please the myriad tourists.

Special Occasions

Monthly market days or even the smaller weekly version (*marshé chikitu*) are celebrations of their own in this arid climate. So are the Simadan (harvest) festival, Día di San Juan, Día di San Pedro, Día di Rincon, and the Bari Festival. Of particular note is the dance known as the Bari, which is still performed during the harvest festival of the same name, as well as during the Simadan festival, and in the period following New Year's (Mascarada). The Bari is led by a solo singer who, very much like a Calypsonian, improvises satirical lyrics based on recent events and local figures.

Typical foods during Simadan include funchi (similar to grits but less coarse) and repa (pancakes made of sorghum meal), served plain or with goat stew, goat soup, giambo (okra soup, similar to gumbo), and boontji kunuku (local beans). All of these dishes are still an integral part of the Bonairean diet, although the availability of sorghum meal and boontji kunuku depends on the rainy season.

In April, Coronation Day and the Queen's Birthday are celebrated. On Antillean Day in October there is a festival commemorating the island's Dutch heritage. In December, holidays are Christmas and Boxing Day, a public holiday exhibiting the island's special flavors of pepper-pot soup with lots of pork, okra, and onions.

A woman selects fruit at one of the many outdoor markets in Aruba. (StockPhotoPro)

Diet and Health

The chief diet and health concerns on Aruba center on obesity and diabetes. For the last 20 years insight and proactive plans have been sought. Focusing on youth, a program called Extreme H Games began. Long-term goals aim to teach children the impact of nutrition and physical activity on health. In 2008 the National Plan for Aruba (2009–2018) for the Government of Aruba for the Fight against Overweight, Obesity, and Other Related Health Issues was launched. The plan was endorsed by the European Public Health Alliance in Brussels, Belgium.

Approximately 6 percent of all deaths are related to diabetes—with poor eating habits being targeted as the main cause. The improvement of these is suggested as the care and cure for 96 percent of cases.

Increased consumption of simple and refined sugars and fried foods paired with a tendency toward little physical activity, or at least not enough to ward off this imbalance, contributes to this problem. With Aruba's inherent Arawak culture and love of dance—calypso, soca, merengue, and a mélange known as *socarengue*, vigorous dancing some might consider risqué, it seems possible that a revitalization of dance for all might hold the key to resolving both diet and health concerns.

Barbados

Overview

Barbados is situated on the easternmost side of the Lesser Antilles with the west coast of the island on the Caribbean Sea, the east on the Atlantic Ocean. Formed less than a million years ago, the island is believed to have been created by the collision of the Atlantic crust and Caribbean plates during a volcanic eruption. With the formation of coral that accumulated to approximately 300 feet, Barbados is actually two landmasses that merged together over years.

The total landmass of Barbados is 267 square miles (430 square kilometers) and is mostly gently sloping land with some rolling hills and sharp elevations toward the northeastern coastline. Although the island is surrounded by coral reefs, its basic topography consists mainly of coral and limestone with some deposits of clay toward the northeastern side of its coastline. There are many underground caves with streams that create freshwater springs on land. Because of its coral makeup, the island's freshwater is noted to be one of the best on the Caribbean islands. Swept by northeast trade winds, Barbados enjoys a tropical climate and a soil with coralline limestone features that is suited to the growth of sugarcane and most tropical agricultural produce.

A parliamentary democracy, Barbados received its colonial independence in 1966 under the leadership of the prime minister at that time, the Right Honorable Errol Walton Barrow, now a national hero. Up until that time it had been a colony of the British Isles. Approximately 270,000 people live on the island. Quite distinct from others in the

Caribbean chain, it follows Jamaica in terms of its uniqueness in expression, culture, and cuisine.

With average temperatures ranging from 75 degrees Fahrenheit (24 degrees Celsius) to 84–86 degrees Fahrenheit (29–30 degrees Celsius), Barbados boasts a climate that is mostly sunny with scattered showers and the occasional hard rainfall. With strong easterly breezes coming off the Atlantic Ocean beating on its east coast, with large rolling waves and a wind that seems interminable, nights are slightly cooler, more so from November to February. Barbados's economy is mostly based on tourism, with sugar and rum being its major exports.

While Barbados is one of the most developed and affluent islands within the Caribbean chain, it has over the years become a society of mixed races. Although traces of Amerindian existence go back thousands of years, there are no documented living descendants of these first inhabitants. With the arrival of the English in 1625 came African slaves, hence Barbados was known as one of the few islands that had both white (English and Irish, with a smattering of Dutch) and black people (Africans). More recently, Barbados became known as the island of opportunity, seeing the arrival of Dutch and Sephardic Jews, Middle Easterners, Indians, and political refugees from Pakistan. Add to this the new arrivals of moneyed North and South Americans, English, Irish, French, Italians, and even Arabs, together with sprinklings of Caribbean people that include mostly Guyanese, Jamaicans, Saint Vincentians, and Trinidadians, and this basically makes up the local society.

An outdoor market in Bridgeport Barbados, 2009. (StockPhotoPro)

🍴 Food Culture Snapshot

Ena and Norris “Fishmout” Scantlebury live above Consetts Bay in St. John on the east coast of Barbados. Ena was born in Panama to a Barbadian mother and Grenadian father, who sent the child to Barbados to live with her maternal grandmother in the capital parish of St. Michael. Many islanders left their homeland during those days for economic reasons. Ena spent her formative years in Barbados, attending school, then leaving for her father’s homeland to teach.

Years later, Ena and Norris would meet in Grenada. Norris’s fishing boat, having taken off from Consetts Bay one fine morning toward the south coast, found itself in trouble when the seas began to swell and a harsh easterly high wind rocked the boat from side to side. The ensuing rain blasted the little vessel’s only engine as he managed to round the corner of the east coast and the south coast. But by this time the

boat was far out to sea, and the raging winds and strong current pushed the boat further and further southeast, until he landed on the shores of Grenada. Fishing can be treacherous work, so if an island boat washes up, help is usually given without a thought. Norris was taken in by villagers while his boat was repaired. Sitting at a local makeshift hut where men gathered after a hard day’s work to share in a couple of bottles of white rum, slap a domino or two, and talk of perilous days at sea, Norris spotted Ena taking a walk, and the rest was history. Norris, once home, saved enough money to bring Ena back to Barbados for marriage.

Norris had purchased an acre of land next to the chattel house his parents had bequeathed to him, and with his savings he also got rid of the outdoor latrine and added on a “proper” toilet and bath to greet his new wife. People in the area were proud of Norris; there was a lot of respect for this fisherman who not

only had beaten death at sea but also had planned his life carefully when it came to his bride and his home. Now he had even managed to acquire three boats that employed two villagers each.

The village was a serene but cheerful place to live, and Ena spent her days happily there doing remedial work with the odd child who was being kept back at the local school. She loved her acre of land that had turned into a full-time agricultural exhibition, the produce of which went with her every Saturday morning to Cheapside Market in Bridgetown on the other side of the island. It allowed her to mingle with her cultured city folk and reap some extra money to give to the church come Sunday. She grew tomatoes, cabbage, cucumbers, okra, and pigeon peas, as well as yams, cassava, and sweet potatoes. One enormous pumpkin vine never let her down. Nearer to the back of the house where the bathwater flowed easily into the yard, Ena had all the “seasonings” possible—chives, normal thyme and broad-leaf thyme, basil, marjoram, parsley, dill, and, of course, several Scotch bonnet pepper trees. Ena would pick and grind the first six to make “Bajan seasoning,” then bottle it. She would keep a bottle or two for herself, save one for the priest at St. John’s church, and take the rest for sale in the market. The last six feet to the back of the acre were planted with one breadfruit, two lime, a golden apple, a grapefruit, two guava, three pawpaw, one avocado, one coconut, and approximately 12 to 14 banana trees. Interspersed in the garden were various pigeon pea trees. A trumpet tree stood away from these, a passion fruit vine attached to its trunk. To the side of that in a separate area were the plants required to make bush tea or bush baths, such as cerasee, fever grass, and leaf of life, and those to help in healing, such as aloe vera.

Early every morning Ena prepared a good hot herbal tea for her husband. While Norris sipped his tea, Ena would bring out the fresh salt bread from the brick oven at the back of the house, add a good chunk of cheese or even some sardines to it, and place it before her husband. If the chickens in the yard had left extra eggs, he also got one hard-boiled. Some mornings Norris was treated to porridge made from ground oats, drizzled with Bajan molasses, or two bakes (a kind of bun) made of flour, water, and spice, one of

which she would fill with her homemade guava jelly. Ena would pack his *breakfass* in a three-tiered tin canister for the journey. There would be slices of sweet potato and yam, a little rice, and peas; and although he mostly ate fish such as dolphin (not the mammal but mahimahi), marlin, or kingfish, sometimes she would prepare a chicken (if she had killed one) or perhaps a lamb or beef stew. He sometimes got salt fish and *coucou*, and this was Norris’s favorite meal. English tea thickened with condensed milk, placed hot in a Thermos, accompanied this feast for the seas.

At six o’clock in the evening they would sit together over a bowl of delicious Bajan soup in which various “provisions” floated, with pumpkin, carrots, and christophene (chayote) for color, a piece of salt pork or beef for taste, and dumplings for the “man-hood.” As a drink Ena would always serve juice made from her garden fruits, sweetened with the golden brown sugar received from a nearby sugar plantation just after the crop season had ended. Norris, being a fisherman, would take a bagful of the much-sought-after sea egg (a kind of sea urchin now getting scarcer by the minute) for the nearby plantation owners, and they paid in sugar. Sometimes the exchange of sea egg for sugar produced more, and Norris also returned with a bundle of canes in the back of his truck. These would be squeezed of their juice. There was nothing like an ice-cold glass of cane juice after a hard day’s work in the sun.

Every Friday Ena prepared her produce for the market, leaving the herbs, lettuces, and tomatoes for picking at dawn. And every Saturday Norris and she woke up at 2 A.M., packed the back of the truck neatly, and took off for Bridgetown. By 5 A.M. the market was open, and Ena was behind her counter selling her goods, chatting, and getting in touch with the world. Norris would retire upstairs to the food court. Here, Miss Dora ensured that Ena got her share of the delicious Saturday-morning Bajan special—pudding and souse. Norris would prefer to have Miss Harriett’s fish broth to start with—later on enjoying one of her dishes of the day: macaroni pie with lamb stew, Creole marlin with peas and rice, flying fish (steamed or fried) and corn coucou, baked pork with green banana, or stewed lamb with sweet potato pie. To wash down these delicious meals, there was always Debbie’s *mauby*—a drink made from the bark of a tree. Later

he would sit under the trees to the side of the market and slap some dominoes with the men, sharing a flask of rum among them “neat” in plastic cups with a little water on the side.

On Sundays they went to church and invited their grown children for a family meal. Sunday lunch always began with grace. Ena forced Norris to give the prayer every time. She felt he needed to pray more, especially as he was still, in his old age, going out to sea “like eff you is a young gully-boar” she would say. Once that was over, the feast began, and a feast it always was: roast pork with cracklings and thick gravy, roast chicken with stuffing, steamed dolphin or baked snapper, peas and rice, macaroni pie, breadfruit slices, and cornmeal coucou, the yellow butter melting over the golden mound in the dish and the pieces of okra peeking through as if to get a look at the rest of the fare. Sometimes Ena went real traditional, slicing a boiled egg and some cucumbers over the coucou. Coleslaw was also there, as well as salad with fresh lettuce from the garden, sprinkled with chives and herbs. On occasion, if she could save a little from Saturday, Ena would also produce pudding and souse—she knew the children hardly ever ate “the good one,” preferring to meet friends at the over-popular Lemon Arbor on a Saturday morning. “It not like ours,” Ena would say, even though she had never tasted it. Jugfuls of freshly squeezed lime juice, and passion fruit mixed with a touch of ginger, always sat on the table for anyone to help themselves. Pepper sauce made by Ena from extra peppers always graced the table too. No Bajan worth their life in salt would eat a meal without that good old Bajan pepper sauce, the mustard giving it that traditional yellow color. Dessert depended on Ena, and she loved to surprise everyone, including Norris. Some Sundays it would be bread pudding—a trickle of Red Label sherry giving it that edge—drizzled with Tate & Lyle golden syrup, other times a beautifully decorated rum trifle. Some days the dessert would be two pies baked to perfection, filled with something from the garden like golden apples with cinnamon or mango and bananas. Her favorite, however, was fresh coconut cream pie. She labored with cutting out the flesh from the dried brown coconut, grating it, and squeezing it through a muslin sieve until all the milk was drawn out. She then boiled it, sweetened with condensed milk,

until it was thick, ready to be placed into the pie crust and into the fridge. Later, sprinkles of grated coconut would decorate her specialty. Needless to say, after a lunch like this the family would sit around, sometimes with a cup or two of coffee, talking about the week that had passed. Ena always praised God for her blessings.

Major Foodstuffs

Barbados is one of the most populated islands within the Caribbean. Many years ago, it was covered in organic agricultural land, but this is sadly no longer so. Because of its beauty, as well as its steady economy and governance, Barbados has also become the home that all the rich and famous wish to have. Add to that the average Barbadian, whose interest in owning land and a house continues, and one finds more and more housing developments taking over the rich soil and, therefore, more and more imports happening foodwise. The importation of fertilizers and pesticides to the island in order to push the crops forward has taken its toll as well. Taking into consideration that Barbados is considered one of culinary stops of the Caribbean, with restaurants dotting most of the coastline, one would think that steps would have been put in place a long time ago to allow the island to be self-sufficient in food.

There is, of course, hope. Recently, more and more attention is being paid to culinary tourism and the health of the Barbadians. More and more systems are being put in place to encourage local farming. More and more farmers want to become “organic.” The health of the soil is, however, in question now. The Ministry of Agriculture works closely with farmers, and the Inter-American Institute for Cooperation in Agriculture is very much part of this new agricultural drive. Fridays and Saturdays at the various markets across the country see a resurgence in buying local. Although the seas are also showing extreme stress, the fish markets continue to bring in good hauls just about all year round, and fresh fish is very much part of the Barbadian diet. Barbados is still sugarcane country, and the rolling hills of the island are covered with this crop, hiding the few

Tropical coastline and sugar cane plantation in Barbados. (iStockPhoto)

remaining working plantations in-between. Sugar factories have been reduced to two, but during the crop season, from January to June or July, one can see cane cutters—both human and mechanical—working the fields and the canes being taken to the sugar factories. Special tours allow visitors to watch the process.

The island is known for its rum, 99 percent made from molasses, and Barbados was the first in the Caribbean to produce it. Today, Barbados has several brand-name rums, and Barbadians are very loyal in this regard. If a particular brand is favored, they stick with it no matter what. Mount Gay, Cockspur, Alleyne Arthurs, and Old Brigand are but a few of the many available. Falernum, concocted on the island from rum, lime, almonds, ginger, cloves, and vanilla, is a liqueur that is added to many cocktails. Corn & Oil is a traditional drink made with Falernum, rum, Angostura bitters, and a twist of lime. Banks is the Barbadian beer, and Guinness is a drink purported

to give strength and is, therefore, a favorite. Plus is a sweet drink concocted by the Banks Beer Brewery that many locals drink for energy or for “putting it back” after a hard night or day.

The soft drink industry is big in Barbados, with bottling companies creating carbonated drinks in all colors of the rainbow with names like Kola Champagne, Grape, Orange, Banana, and Frutee. Fruit juices of all types, sweetened and unsweetened, are made at the island’s well-known and time-honored Pine Hill Dairy, mostly from imported concentrate. The dairy also produces fresh milk, chocolate milk, and vanilla milk—all enjoyed by Barbadians. Evaporated and condensed milk can be found in most homes, the latter used in inordinate proportions. Syrups are also available to be used in the hotel industry or at home; adding water makes a refreshing drink. Mauby is a traditional drink with a slightly bitter taste, made from the bark of a tree and reputed to cleanse the kidneys. Ginger beer and

Brightly painted red “Rum Shop” in Oistins fishing village, Barbados. (StockPhotoPro)

sorrel, the latter usually a Christmas drink, are now served year-round. Mauby, ginger beer, and sorrel can be found in syrup form, to which one just adds water, but these are not as healthy nor as popular as the homemade variety. There are other traditional “strengthening” drinks purported to help men perform their duties better, such as *seamoss* (made by boiling seaweed, then removing the weed and mixing the remaining gel in a blender with condensed milk, water, and spices such as cinnamon and nutmeg). To this all manner of other ingredients such as linseed, oats, eggs, and stout are added for further strength.

In terms of traditional dietary staples, when the English arrived, the Amerindians had actually left for other shores, but there might have been some remnant of their culinary existence, such as cassava, sweet potatoes, corn, and Scotch bonnet peppers. The movement of food began with the island’s

new settlers, and plantation owners had to feed the slaves who toiled in the canes and those who lived in the great houses. Breadfruit arrived from Tahiti (Captain Bligh’s voyage is of note here); yams came from Asia through Africa. This movement created a base of English/African cuisine. Today, Barbados still grows yams, dasheen, and sweet potatoes in abundance, as well as some English potatoes and *eddoes* (a kind of taro root); recent yields of cassava have been excellent. Rice is imported from Guyana, Trinidad, and the United States.

Vegetables and fruit grown on the island are now influenced by the arrival of other Caribbean people, including the Guyanese from the coast of South America, and also by the requirements of the tourism industry (hotels and restaurants). Vegetables include carrots, normal pumpkins and the slightly pear-shaped garden pumpkin, squash, cabbage as well as Chinese cabbage or *pachoy*, okra, christophene (*cho-*

cho), cauliflower, sweet peppers (red, yellow, and green), eggplant, broccoli, tomatoes, cucumbers, onions, various types of green beans, pigeon peas, corn, avocados, and various mixtures of lettuce and microgreens, the most popular for locals being Bajan lettuce. Two types of hot peppers are grown and used widely—the Scotch bonnet is farmed, while the smaller bird pepper grows wild in backyards and sometimes even on the side of the road.

Golden apples (*Spondias cytherea*) are grown as well mangoes, bananas (used ripe and green), plantains, grapefruit, oranges, shaddocks (a large citrus fruit), limes, sour oranges, sweetsops, soursops, and carambola. Growing wild are the famous Bajan cherry, tamarinds, *dunks* (jujubes), sea grapes (not related to grapes but in the genus *Coccoloba*), *ackee* (not Jamaican ackee but *guinep*—a green oval fruit with a pink interior), hog plums, gooseberries, cashews, and fat pork (*Chrysobalanus icaco*—a plum-like fruit). Barbados has a season for some fruits—mangoes, avocados, golden apples, and nearly all items sold in the markets, supermarkets, and small shops are priced according to the season. At times limes are out of season, meaning mostly that the fruit has been reaped and the next lot will take time to blossom and bear; meanwhile, imported ones with little juice that are more expensive take their place. Most householders know the importance of having a lime tree in their yard. Apart from being used to wash and season meats, lime is a staple juice—lemonade is favored by children and adults above all drinks. Today, a lot of juices are also being made with combinations of greens such as herbs, cucumbers, pumpkin, and carrots, and juice bars are popping up offering all manner of health drinks.

Fish consists of various types. Flying fish is the national darling, with its roe and melts (eggs) being much in demand. Dolphin (mahimahi), kingfish, marlin, yellowfin tuna, billfish, and swordfish are the larger fish brought in by the fishermen. Shark has begun to tickle the taste buds of Barbadians, although in the past it was not considered to be part of the average diet; the odd shark caught was used as dog food. Various types of snapper are offered, and barracuda is also found and revered. “Pot fish” or reef fish such as chub are also enjoyed. Jacks and

sprats are caught by net off the shores. Conch and *seacat* (octopus) are eaten with gusto when available and are considered to have aphrodisiac properties. Lobster is enjoyed, but there are very few left on the reefs. Although salt fish is very much an integral part of the Barbadian diet, introduced by the Portuguese traders, sadly not much is salted on the island, and this remains mostly an imported product.

Barbados is known for its pork, which is, after fish and chicken, one of the most consumed meats. Turkey comes next. Several processing plants make ham and ham products including sausages, and fresh pork can be had in all supermarkets, small shops, and fresh from the market. Salt pork, beef, and pig tails are imported in brine and are an integral part of Bajan soup or used in the flavoring of white rice. The chicken industry is by far the largest, with chicken farmers introduced to fast-growing chickens. Although cattle are reared on the island, and the meat is organic, beef imports have harmed the industry. However, enough cattle are still reared for local beef to be sold in the markets. Duck and rabbit are two other traditional meats, usually served stewed. There is a game bird farm that supplies specialized restaurants. There are still a few man-made ponds and private clubs where members spend time during the northern migration of birds for a shoot—these birds are considered a secret delicacy. Blackbelly sheep (a Barbadian breed), although exported for its meat, is also now considered a treat by Barbadians. Although the average Bajan will say this is not so, monkey is eaten “stewed down” as a delicacy in certain parts of the island, particularly on the eastern coast.

Bakeries abound. The small local bakery is fast disappearing with the advent of large modern ones. Barbadians have always enjoyed their breads. The traditional one is the small rounded salt bread baked in ovens, each loaf decorated with a piece of banana leaf (the leaf is also fast disappearing). Salt breads are used for the traditional Bajan *cutter*—a salt bread filled with shop cheese (cheddar), fish, fish cakes (also served alone, these are circular balls of salt fish [salted cod], flour, seasonings, and finely chopped pepper that are fried in hot oil), ham, egg,

or pork, doused with yellow pepper sauce (made with mustard). All manner of sweet breads and pastries are consumed such as raisin loaves (called sweetbread), coconut bread, banana bread, currant rolls, Swiss rolls, jam puffs, coconut turnovers, rock cakes, and the well-known lead pipe—the last being a heavy four-inch-long and two-inch-wide rectangle-shaped staple made of pure hard dough—it is said you can give a heavy blow with a lead pipe. Used as a stomach filler when money is not handy, it certainly fulfills its job when downed with a soft drink. Various sponge cakes and cookies are also popular, with supermarkets carrying these made either by the larger bakeries or by small businesses at home. Cassava or cornmeal pone (with the consistency of a hard pudding and made with cassava and coconut) is eaten heartily. Bread pudding, sponge cake, fruit or great cake, rum cake, coconut cream pie, and lemon meringue pie are traditional, although all manner of pastries and cakes can now be found at specialized bakeries and supermarkets. Guava stew and crème caramel are traditional favorites. *Conkies*, made from sweetened cornmeal, pumpkin, coconut, and spices, wrapped in steamed banana leaf, are traditional at Christmas.

A *one in two* is a cutter with two salt fish cakes. Cutters are sold in most rum shops all week long or at specialized spots around the island. There are many savory pastries as well—beef, chicken, and vegetable patties or sausage rolls (a wiener or sausage meat is rolled in a pastry dough and baked). One of the best-known places for these is Beefeaters Ltd. on Swan Street. Roti, which is originally from Trinidad, has become a favorite. The bake made with *dhal* (yellow split peas), it is filled with curried chicken, beef, potatoes, chickpeas, pumpkin, or any combination of these.

Favored snacks range from salted plantain, cassava, or sweet potato chips to corn curls, Chee-Weez, peanuts, and cashews. Local companies and small home businesses do a roaring trade with these, as Barbadians enjoy snacking. Traditional sweets are tamarind balls, sugar cakes (white, brown, and pink, made from sugared grated coconut and colored with vegetable coloring), caramel and chocolate fudge, guava cheese (made from stewing down

the fruits with lots of sugar and spices, placing it in baking pans until gelled, then cutting it in squares and rubbing it in white sugar), peanut brittle, mints, and governor plums. Not seen so much but still loved and returning slowly into the area of “exotic” sweets are ginger candy, shaddock rind, and paw-paw candy, just to name a few. Many Indian sweets are finding their way onto the shelves as the population of Indians has increased on the island. Snow cones are a favorite—shaved ice in a cup doused in different colored syrups with flavors of pineapple, strawberry, lime, and so on with an option to have condensed milk poured over that.

Barbados Coucou and Flying Fish

Serves 6

Please note that any fish can be used. Traditionally it is flying fish, but this may not be available readily to others. Salt fish (codfish) can be used instead of fresh fish. Yellow butter is equivalent to the red Irish cooking butter, but if it is not available, normal butter may be used.

Coucou

7 c water

1 small piece of pig tail, salt beef, or salt fish (optional)

2 tsp salt

14 okras, sliced thinly

3 c cornmeal

½ Scotch bonnet pepper, finely chopped, seeds removed

2½ tbsp yellow (red Irish) butter

In a large pot bring water (and pig tail, salt beef, or salt fish if using—this is not traditional but does give taste; if using, reduce salt by ½ teaspoon) and salt to a boil. Add okra, and continue to boil until very soft. Cool 2 cups of this water to room temperature, and stir into a bowl with the cornmeal. Add water if necessary; the cornmeal should be able to be poured. Do not put hot water in with the cornmeal.

Add pepper to the pot of boiling water. Slowly pour the cornmeal into the pot with the boiling water, stirring continuously with a coucou stick or with a large wooden spoon until the mixture is smooth and is turning easily. Add the butter and continue to turn. When mixture begins to stick slightly to the pot it is ready. Grease a glass bowl with butter, and add coucou. Taste for salt. Garnish with more butter, sliced hard-boiled eggs, or finely sliced cucumbers. Serve hot with steamed flying fish (or any other suitable fish).

Steamed Flying Fish

12 filets flying fish, washed in lime and saltwater and patted dry

½ tbsp yellow butter

2 medium onions, sliced in rings

½ red pepper, ½ yellow bell, and ½ green bell pepper, cut in julienne strips

1 whole Scotch bonnet tied in muslin cloth

2 large cloves garlic, finely chopped

1 sprig thyme—whole

1 sprig marjoram—whole

4 large tomatoes, cut in chunks

2 c water

½ tbsp tomato paste

Juice of one lime

Salt and pepper to taste

Seasoning

1 medium onion, finely chopped

2 large cloves garlic, finely chopped

4 sprigs chives, finely chopped

1 tbsp parsley, finely chopped

½ tsp marjoram, finely chopped

1 tsp fresh lime juice

½ Scotch bonnet pepper, finely chopped, seeds removed

¼ tsp each salt and pepper

Make the seasoning by either combining the ingredients in a bowl or using a blender. Spread season-

ing over the grooved side of each flying fish fillet, roll like a roll mop, securing it with a toothpick, and set aside. In a large frying pan, melt half the butter and sauté the onions, all the peppers, and the garlic. Add the tomatoes and water. Add salt and pepper to taste. Tie the thyme and marjoram together and place whole into the pan. Add lime and tomato paste. Cover and bring to a boil. Add the rest of the butter. Add the flying fish, allowing it to simmer for approximately 20 minutes, so that the gravy can penetrate it. A teaspoon of rum can be added to the gravy for taste (optional). Place hot in a dish and serve with coucou. When using other fish, use a fillet to make it easier to roll. However, a fish steak can be used; in that case, just place seasoning into grooves made into the fish—this allows the fish to be well seasoned and tasty.

Cooking

Traditional Barbadian cooking cannot be described as labor-intensive; it is, however, particular to the household cook. Everyone has a little secret, a touch of the hand that is seldom disclosed and that makes the food taste just that little bit different. Many Barbadian men pride themselves on their ability to cook and love of cooking—one prime minister, the late Honorable Errol Walton Barrow, even wrote a now-famous cookbook, *Privilege*. Women are, however, traditionally the cooks in the home.

While gas or electric stoves are now the norm, coal pots with their corresponding black buck (iron) pots or huge frying pans are still used in some households, although mostly on the side of the road at night in special areas/streets for frying fish or chicken. In the old days the kitchen was always built on the west side of the house so that smells would not bother the living areas, but this has now changed, the aromas of home cooking being more welcomed these days. Large cooking spoons and pots were and still are a must in the kitchen; a coucou stick had to be, and still is, a part of the cooking utensils. A coucou stick is a flattened spoon used to stir the thick mass of cornmeal and okra that

becomes coucou—a dish that originated in Africa and was brought to the island by the slaves. Coucou and steamed fish is a traditional Friday dish.

Barbadians like to season their meats and wash their rice. Seasoning consists of finely chopped chives, onions, garlic, thyme, parsley, marjoram, a touch of Worcestershire sauce, vinegar, cloves, salt, pepper, and hot chili peppers (Scotch bonnet or bird peppers). In the market one can buy bundles of the required fresh ingredients for seasonings. Seasonings are used in most dishes, although primarily it is particular to fish or chicken. Washing consists of placing rice in a sieve and washing it in cold water until the water runs clear; sometimes a little lime juice is used to help this procedure along and to take away the “rawness” of the rice. Rice is usually cooked with some kind of peas—pigeon peas; yellow, green, or brown lentils; red beans (really a pea)—to make a dish that is simply called peas and rice.

Bajans (as Barbadians are called) also love to marinate their meats overnight in the fridge, so that they are ready for frying, baking, or stewing the following morning in time to be served for lunch or dinner. Salt pork, salt beef, pig tail, and salt fish will always be part and parcel of a Bajan kitchen unless one is a vegetarian.

Fish and chicken are both washed with salt, lime, and water before seasoning. Holes are made in both these meats, and these are stuffed with the seasoning. Jars of Bajan seasoning have also become popular as they contain all that is required in the kitchen without the tedious job of all the fine chopping. Flying fish is treated differently; these come already cleaned and boned (mostly) from the fish market, but they are still washed and/or marinated in lime, salt, and water before their grooves are filled with seasoning and they are dipped in egg and a seasoned mixture of breadcrumbs and flour. They are then placed skin down into hot oil and fried until crispy before being turned over and fried on the other side. All fish is served steamed, fried, grilled, or baked. In steamed flying fish the fish is rolled into a sort of roll-mop position, kept in place with a toothpick, and then steamed. Steak fish (filets/steaks of fish, whether boned or not) or flying fish when steamed requires onions, tomatoes,

garlic, chives, and peppers as well as a most important ingredient that is used in a Bajan kitchen to add a taste to just about everything—yellow butter better known as *mello-kreem* or just *shop butter*. It is bright yellow in color, has the consistency of ghee, and is purportedly made from fish oils. Some yellow butters give the ingredients as the same as margarine with coloring added, but the original traditional one was indeed made from fish oil. Fried fish and chicken are usually dusted with seasoned flour before being placed in hot oil to fry on both sides until well cooked. Barbadians do not like their fish undercooked, and of course chicken follows the normal worldwide rules.

Conch and octopus are both treated much the same. Both of them are found on the reefs that surround the island and are revered. The conch animal is removed from its shell, beaten with a wooden mallet, and usually eaten raw with lime and pepper, or it is deep-fried or made into curry, stew, soup, or souse. The shell is then sold to tourists as a decoration. Octopus is cleaned carefully of its ink, chopped into fine pieces, and boiled until soft, deep-fried, or soured. Another seldom-seen item is *wilks*, which are still eaten traditionally on the east side of the island. These are found close to the shores on rocks, plucked from the alabaster shell, and eaten raw, curried, or stewed.

Chicken, as well as other meats such as pork, lamb, beef, rabbit, and duck, is stewed; the first three meats are also baked or roasted. Stewed means the meat is browned first—oil and sugar are caramelized, and the meats are browned in this. Seasonings such as Bajan seasoning and/or onions, garlic, tomatoes, and chives are added, and then later carrots (sometimes potatoes for thickening) and dumplings (made from flour, water, cinnamon, and salt) are added if required.

Chicken is usually cut into quarters for baking, and many times there is a light barbecue sauce that is basted on the meat, basically made up of Bajan seasoning with some ketchup and pepper sauce, or it is roasted whole with stuffing until crispy (usually for a Sunday lunch). Stuffing is made with bread, crackers, the innards of the chicken, and seasonings; some people add nuts and raisins to this. *Steppers*,

or chicken feet, are used in soup or in souse (pickled in lime, cucumber, and parsley).

Baked pork is done in chops much in the same way as chicken, seasoned only sometimes or in a barbecue sauce as well. Similarly, lamb is baked in chops, but the seasoning is usually a little different, using rosemary or thyme. Sometimes a little water is added to both pork and lamb just before the baking ends to create a little gravy. Lamb legs or a shoulder or leg of pork are also roasted, usually as a Sunday lunch treat. In the case of the pork leg, crackling is made with the outer skin by rubbing salt and lime over it before scoring it into squares. Nearly all meats except for fish are sometimes curried, but this is not traditionally Bajan.

Ham (the two large processors on the island produce good ham) is always baked, after being marinated with the householder's or cook's special recipe; some use orange marmalade, for instance. If there is a bone it is usually saved for soup. Ham bone soup is made with "peas"—really yellow lentils—boiled down with seasoning until thick.

Breadfruit, yams, sweet potatoes, eddoes, cassava, and English potatoes are usually boiled; for breadfruit, sometimes a piece of pig tail, salt pork, or beef is added for taste. Breadfruit is sometimes roasted in its skin, and the blackened skin is removed once the breadfruit has been cooked. English potatoes and sweet potatoes are also roasted. Breadfruit and yams are also baked. Breadfruit and English potatoes are also fried or deep-fried. Recipes for these will be dealt with in the typical meals section. Rice is boiled, sometimes with pig tail or a piece of salt pork or beef for taste, and sometimes okra is added with seasonings, a dish called *privilege* by the older folk. The latter version is used as a meal. Cornmeal is an integral part of most Barbadian kitchens and is used in savory and sweet dishes.

There are many Barbadians who to this day still pickle or make their own pepper sauces, chutneys, jams, and jellies with much of the available fruit in season, but with the advent of so many good processors of these, this is becoming a dying household art.

Saturday morning is pudding and souse day. Pudding used to be made traditionally with pig's blood, but this has now been discarded and it has been

replaced with sweet potato, coloring, and spices. Although some still use the pig's intestine as the casing for the pudding (more like a sausage), this is also a fast-dying art, and it is easier to prepare steamed pudding in a bowl. There is white pudding and black pudding (blood sausage), with the white having no or very little coloring. Souse is traditionally made from pork "features" (nose, ears, cheeks, and tongue), trotters (pig's feet), and bits of the meat itself. Now chicken feet, chicken breast, octopus, and fish souse can be found in specialized places. Today, one can ask for it lean, with fat, or without bone, with the last meaning the trotters. The pork is boiled in seasoning and drained. The pickle is made—finely chopped onions, grated cucumbers, parsley, chives, and hot peppers are placed into lime with some of the water from the boiling of the meat. The pork is placed into the pickle, with some of the latter being reserved for serving. This dish is served with slices of breadfruit, sweet potato, or avocado depending on the season.

Typical Meals

The cuisine of Barbados traditionally is a mixture of colonial and African influences. The Indian influence was the first to peep into the cuisine, and now with Caribbean people integrating a lot more, there is a definite influence of their cooking creeping into what was very much just typically Barbadian. Meals depend on the family's social standing and financial means, and helpers and cooks are the norm for those who can afford it—labor in this area is still fairly inexpensive.

Breakfast or Tea

Barbadians traditionally called breakfast *tea*. And they called lunch *breakfast*, while *dinner* refers to supper. This is now heard only among the older folk or villagers in the countryside. We can safely divide breakfast into *English local* or *local-local*, depending on the family's financial means and/or the social standing, as mentioned earlier. An English breakfast starts with fresh fruit of the season and continues with a cereal such as cornflakes, muesli,

or a porridge with milk, honey, or golden syrup, followed typically by eggs to order (scrambled, Creole [with onions and tomatoes], fried, hard-boiled or soft-boiled, poached, or omelet style), bacon, sausage, and toast. Marmalade, guava jam, or any other fruit jam and butter or margarine are served. English tea or coffee is served. Evaporated or condensed milk and brown or white sugar are used.

A local breakfast might include cereal or porridge, eggs, bakes (made of flour, water, and salt, either deep-fried or baked in the oven), and bush tea or English tea sweetened with condensed milk. There might also be salt bread, sweet bread of some kind, or sliced toasted bread with butter and/or fruit jams or jellies. Cutters would be served, as well as various canned fish.

All the preceding choices will be eaten with a juice (homemade or packaged) or a soft drink. Apart from the usual fruit juices, juice is also considered to include mauby, sorrel, or ginger beer.

Midmorning Snacks

Depending on what was had for breakfast, the snack may include a cutter or a sandwich of some sort made with white bread or whole wheat bread; salt fish cakes; or an assortment of fruits; or a combination of these. All are accompanied by a drink. Many do not participate in having a snack at a particular time. Munching on various types of nuts; dried fruits; fresh fruit such as imported apples or local bananas; banana, yam, or potato chips (processed); or bagged salted snacks is normal.

Lunch or Breakfast

Eating in Barbados depends on the financial means of the household. Lunch is usually the heavy meal, although some people still cook early in the morning and then cover the pots, leaving them on the stove to be warmed and eaten in the evening after work. Because of concerns about diet and bacteria, this is a dying art, and light meals are eaten in the evening if a big lunch was had. If not, then food is cooked fresh.

Lunch is eaten at home or in small eateries or restaurants, or it is obtained from van ladies who drive around with a full buffet in the back. For the middle class and more affluent, lunch can consist of a choice of starch and meat. Perhaps it would be easier here to say that Barbadians love a buffet with choices. So defining what a buffet consists of allows the reader to understand the choices that Barbadians might have in their daily feedings. Sunday lunches are usually the big meal of the week and might include several of these dishes.

Soups could be pea, pumpkin, vegetable, beef, or fish. One meat option is pepperpot, originally a Guyanese dish using *cassareep*, a thick black liquid derived from cassava that is used to cure the meats. If reboiled every day, this dish can remain out of the fridge for years. Pepperpot is now embedded in Barbadian buffet culture. Other meats include roast or stewed beef (with potatoes, carrots, and onions); suckling pig with stuffing; roast, stewed, or braised pork or lamb; baked, grilled, fried, or steamed fish (catch of the day); steamed or fried flying fish; and roast, baked, or fried chicken. Accompaniments might be stuffing, the respective gravies, peas and rice, macaroni pie, and boiled and sliced dasheen, yams, and sweet potatoes. Sweet potatoes are often made into a pie with pineapple and baked. Yams can also be found baked, sometimes in their shells, covered with cheese. Breadfruit is either boiled

A typical Caribbean lunch, including fried flying fish, cucumber salad, stewed pork, and macaroni salad. (StockPhotoPro)

or pickled. Breadfruit coucou is also served—it is boiled with salt beef, then mashed with a little milk, and stirred until the smooth and creamy consistency of the cornmeal coucou is reached. Other dishes include cornmeal coucou (just known as coucou), mashed green banana, pumpkin and spinach fritters, baked eggplant, green banana souse (served with pickle), and pork souse (traditionally served only on Saturdays, it is seen on buffet tables during the week). Pickle is a mixture of finely chopped onions, chives, parsley, cucumber, and lime juice. Vegetables such as carrots and christophene are usually served together boiled. Christophene is often seen in a cheese sauce. Mixed salad is always available, as is coleslaw. Beets in their own brine and cucumbers in lime are often served separately. Lunch is usually accompanied by juices as described earlier, or by wine or alcoholic beverages. Desserts can consist of several options as indicated earlier.

Tea

In the traditional great houses of the plantation, a tea similar to an English tea was served, with all the various cookies, cakes, and pies to choose from. Today, very few people drink tea at teatime although the ritual does still exist among the well-to-do. In offices those at work may enjoy a cup of tea or coffee around 3 P.M. High teas are still served around 4 P.M. on Sundays or even later, depending on when lunch was served.

Dinner or Supper

Barbadians have gone from traditionally being at-home eaters to being outside eaters. Dinner is usually picked up at a fast-food outlet, and this may include fried chicken and chips (French fries), fish and chips, or pizza. Chinese food is also very popular. Restaurants are finding more and more locals eating out to avoid having to cook at home. As the pace of life has picked up, the Barbadian diet has suffered. Many villagers still eat in the same way as described in the vignette, but many families very rarely sit and eat together anymore, as television and video games are taking over.

Eating Out

Until the 1970s, Barbados did not really have a huge restaurant culture. Barbadians ate and entertained at home. Businessmen went to a restaurant occasionally for business lunches, and families went on special occasions. Today, although many Barbadian still entertain and eat at home, facilitated by the fact that many middle- to high-class homes have helpers and cooks, the number of restaurant has grown in such proportions that Barbados is being touted as “the Caribbean’s culinary island.” Tourism, a new influx of residents from other lands, and a growing affluent society of locals have influenced the opening of a bevy of restaurants that are visited by all with gusto, such as Chinese restaurants. Japanese sushi and sashimi bars are becoming popular using local fish. A few restaurants serve Mediterranean fare such as falafel and pita souvlaki. Thai food is also popular. Italian cuisine has always had its place, with lasagna having been incorporated into Bajan fare. One of the first restaurants on the island was Italian. Pizza is much loved, and the New York pizza on the south coast is excellent. Jamaican cuisine has found its place in the hearts of Barbadians, and jerk seasoning has managed to infiltrate Bajan seasoning as the next-best choice. Brazil has made its mark on the island as has India. The many Indians who settled in the Caribbean, having been brought to the islands as indentured slaves to take over when slavery was abolished, particularly in Guyana, Jamaica, and Trinidad, have a vibrant Caribbean Indian cuisine. Caribbean curries are slightly different from real Indian curries but nevertheless infused with wonderful spices. There has been a lot more interest of recent, mostly started by foreign chefs, in using local ingredients to fuse into these gourmet dishes, and this has become what is now known as “Caribbean fusion.”

The average Barbadian still prefers good Bajan staples, and to give the fast-food outlets a run for their money, van ladies have cropped up in built-up areas. They have full buffets at the back of the van offering delicious homemade Bajan take-out fare at affordable prices. Small eateries are also dotted around the countryside. With the influence of the

A beach restaurant in Barbados. (Robert Lerich | Dreamstime.com)

Rastafarian movement *ital* (vegetarian) food has become a popular food source for those who consider meat to not be an option, and even raw-food dishes are increasing in popularity.

There are three fast-food chains: TGI Fridays, Kentucky Fried Chicken (KFC), and the local Chefette. The latter serves up pizza, hamburgers, and broasted chicken, with some offering the Bar-BCue Barn with salad bar; grilled steak, fish, or chicken; and baked potatoes. Chefette is locally owned, has 15 outlets around the island, and has managed to stave off other American fast-food businesses by providing colorful, clean, well-organized outlets with drive-through facilities and children's indoor playgrounds.

Special Occasions

Barbados as a small island is definitely on the list of the islands with many festivals. Almost every

other weekend there is something going on that denotes food and drink. Clubs and bars abound. Rum shops are plentiful. Jazz, reggae, soca, or gospel on De Hill at Farley Hill brings out all manner of local foods and a bevy of alcohol. New Year's Day (January 1), Errol Barrow Day (January 21), Heroes' Day (April 28), Labor Day (May 1), Emancipation Day (August 1), Kadooment Day (the first Monday of August), Independence Day (November 30), Christmas Day (December 25), and Boxing Day (December 26) are all official holidays in Barbados.

On most days except Christmas Day and Kadooment Day, excursions take place in which families, their baskets filled with all manner of culinary delights, a cooler in hand, board special buses to take them to a particular picnic area—sometimes on a public beach or in special parks allotted for just this purpose. Typically *pelau* is precooked—sugar is burned in oil, seasoned chicken with onions and garlic is added, this is stirred until brown, and then

water is added, brought to a boil, and peas and rice are added. Sometimes raisins and nuts are placed into the finished pelau. Fried chicken and fish are also popular picnic foods, served with peas and rice, macaroni pie, coleslaw, and salad. Pig or chicken souse can also be added to the picnic basket. On these days many flock to the beach and then eat at home later, while others take their picnic baskets and coolers with them.

On May Day the celebrations are islandwide, but the biggest one takes place on Bay Street on the beach. The traditional Tukk Bands, Landship, Stilt Walkers, and Junkanoo (dressed in costumes made of bright pieces of cloth sewn up to cover the whole body) perform on stage and in the crowd, while grills sizzle with hot dogs, hamburgers, pork chops, and chicken or fish, and the oil in the buck pots on wood or coal fires bubbles with salt fish cakes or fried chicken parts. Vendors selling cotton candy, snow cones, or peanuts ply their trade. Banks beer and brand-name rums open their tents with cold drinks for sale. Huge speakers begin blasting soca, calypso, and dancehall in between the performances, and there is much festivity and frolicking in the sea for the day.

The yearly Agrofest is attended by people from all over the island. This is a weekend where all local food processors and anyone involved in the agricultural and animal-farming sectors come together at Queen's Park in Bridgetown for a huge fest of food, produce, exhibitions, and sales of flora, as well as competitions for various categories of animals bred on the island. On this day the Inter-American Institute for Co-operation in Agriculture, apart from its general involvement in the fest itself, puts on a Sunday Caribbean breakfast/brunch with various different island dishes; it is usually sold out before the first dish is served.

Another major festival is Crop Over. Based on the days of slavery when the crop had ended and the slaves were allowed a small celebration, it has now become a full-fledged carnival, a celebration of the end of the sugarcane crop season. The festivities that lead to the major costumed frenzy parade on the first Monday in August begin weeks in advance.

Although Christmas Eve and Christmas Day bring special menus offered by hotels and restaurants

across the island, they are usually spent at home with family or friends. The fare may consist of any of the following depending on the financial means of the household: split pea and pumpkin soup, roast stuffed turkey, stuffed suckling pig with cracklings (or a roast pork leg or shoulder), baked ham with pineapple rings, roast stuffed chicken and/or duck, and a selection of all the dishes mentioned in the preceding sections. Dessert is usually plum pudding with brandy or rum sauce, rum cake, or black Christmas cake. Eggnog, sorrel, and ginger beer are served. Conkies are eaten throughout the season.

Old Year's Night begins with a dinner at home or at the various restaurants that serve up a special menu, moving on to home parties, clubs, and hotels for the traditional midnight countdown and ensuing fireworks across the island. New Year's Day involves an excursion or picnic or is a quiet day.

Easter Sunday follows the fashion of Christmas except for the Christmas pudding or cake. Hot cross buns are fashionable, and chocolate Easter bunnies fill the supermarkets.

Weddings follow the traditional English wedding but with typical Caribbean flair. They are particularly huge on the island, no matter how affluent the household is. The fruit for the wedding cake (as is done with the Christmas cake) is soaked in rum, brandy, and sherry for months before baking, and then the cake is pricked at intervals for one month prior to the wedding and before the icing is put on. Buffet lunches or dinners are the norm, and most of the dishes already mentioned are found on the tables. Alcoholic beverages and champagne flow like water. Depending on finances the guest list could be from 50 up to 1,000. Some weddings take place in churches, and others at the beach or any particularly specified place—those who can marry a couple will go anywhere on the island including out to sea.

Funerals are huge across the island. People who do not even know the deceased appear from nowhere to attend. Traditionally, the family of the deceased will have a gathering at a home that could be either just a few family members and friends enjoying snacks, full buffet lunches, or a distinctively Caribbean fete (a massive party with music and dancing).

Diet and Health

Barbadians have always been known for their centenarians coming from all walks of life and from all financial sectors of the society. The problem now stands as to whether this reaching of such a ripe old age will continue, for it was attributed to the healthy diet before the influx of imported goods and fast-food outlets. Although Barbadians do lead a fairly healthy lifestyle compared to people who live in big cities, they are subjected to American cable television with its adoration of processed, unnatural, and fast foods. There is also the problem of pollution of the soil through the fertilizers and pesticides imported from the United States (in some cases those banned in that country); through the sudden massive amounts of construction of hotels and homes; and generally through the people's use of everything plastic, including foam containers for fast food, and bad waste and garbage practices.

Today, there is much concern about the diet and, therefore, the health of the average Barbadian. Heart disease, diabetes, and cancer are becoming almost the norm, and health and diet are in such question that government officials and those in the health care sector (doctors, nurses, etc.) have been finally forced into action. Far more information is

available on keeping healthy, and an ever-growing number of people are following vegetarian or vegan diets, or simply eating less meat and more fish, fewer carbohydrates and more greens and salads. However, the fight has only just begun.

Organic farmers are popping up, but the soil itself is still in question. Help has also come with the setting up of recycling plants and educational material on problems of pollution. Exercise is now becoming a priority for many, as can be seen on the various boardwalks on the south and west coast, around the Garrison (a race course in Christ Church), or simply in neighborhood streets or in the many gyms across the island. But there is still much work to be done.

Belize

Overview

Belize is an English-speaking country located in the heart of Central America and measuring 8,866 square miles, slightly smaller than the state of Massachusetts. Its small population numbers about 308,000 people. It is bordered by Mexico to the north and Guatemala to the west and south. The Caribbean Sea demarcates its extensive eastern coastline, which is characterized by over 200 small *cayes* (islands) and has the world's second-largest barrier reef, which runs the length of the country. On land, the country is characterized by diverse ecosystems ranging from open pine forest and seasonally flooded grass wetlands to the low but rugged Maya Mountains, which run parallel to the coast, as well as dense tropical hardwood forest in some portions of the southern and western regions of the country.

Belize was occupied by at least four different Mayan-speaking groups before the arrival of the Spanish in the 1540s. The Spanish never exercised full control, allowing buccaneers and refugees from elsewhere in the Caribbean to settle the coast, exploiting marine resources like manatees and turtles and cutting logwood (used for dyeing clothing in Europe) for export. These early "Baymen" imported African slaves and in the early 1700s began cutting mahogany in the rain forest, which remained the major export until the 20th century. The mercantile export-oriented colonial culture, which centered on natural-resource extraction, led to specific culinary traditions that can be seen in Belize today.

The people of Belize are a varied blend of descendants of immigrants and native groups. The ethnically diverse population encompasses an array

of peoples, including three Mayan groups (Yucatec, Mopan, and Kekchi), Afro-European Creole descendants of slaves, the Afro-Carib Garifuna, East Indian, Chinese, Mennonites, and many others. Mestizo or "Spanish" people have replaced the Creole as the majority population during the past 30 years, now making up 48.7 percent of the populace. English is the official language, while Kriol is the lingua franca for much of the population. Spanish, various Mayan languages, Garinagu, and other languages are spoken as well. The population is relatively young, with 37.9 percent under the age of 15. The country is almost evenly divided between rural and urban dwellers, and is now rapidly urbanizing at a rate of 3.1 percent per year. Belize City is the largest settlement, with 25 percent of the nation's population. This rural/urban divide is expressed in many aspects of Belizean culture including food. Full independence from Britain was achieved on September 21, 1981, although the country was given limited self-government in 1964.

Forestry has been succeeded by agriculture and a rapidly growing tourism-based economy. While Belize is better off than its neighbors, its economy was strongly affected by the global recession, and the country has experienced increasing poverty and a broadening income gap in recent years. About 10 percent of the population is involved in agricultural production, with 71 percent in services, including tourism. The tourism sector has been extensively promoted by the government and private sector. Fishing and fish farming as well as the production of sugarcane, bananas, and citrus are complemented by expanding niche markets in organic

products such as cacao, spices, and tropical fruits including papaya and *pitahaya* (sold in the United States as dragon fruit).

Food Culture Snapshot

Linda Flowers is an urban Creole, a full-time single maternal grandmother and legal guardian of two teenagers, Janelle and Lewis. She is also raising a neighbor's son, James, whose parents migrated to New York and are planning to fetch James once they have good jobs. Such arrangements are common because so many Belizeans move back and forth to the United States. Janelle and Lewis's parents, Natalie and Don, are separated but live in Los Angeles, where Natalie works in a hospital as a nurse's aide and Don is unemployed. Natalie sends money home on a semiregular basis to help raise the children. James is not in school and often eats outside the house, but Janelle and Lewis are students, so they can come home every day to have their grandmother's rice and beans for lunch. The entire family appreciates her early-morning johnnycakes with jam, butter, and honey. On Sundays and special occasions such as Easter and Christmas, Linda cooks large meals and makes special desserts to celebrate the season.

Far to the south in the rural district of Toledo, Emilia Choc, a Kekchi Maya mother of seven children, three girls and four boys, lives with her husband, Eduardo, in Blue Creek, a small agricultural village with a mixed Maya population. All but her eldest son, Lorenzo, are in school; Lorenzo works in the tourism industry at the beach town of Placencia in the north and regularly sends money home to help pay for his siblings' schooling and other expenses. Eduardo farms rice and organic cacao for sale, and corn and beans for subsistence, while Emilia tends a garden near the house to provide vegetables and root crops for the kitchen. Every morning she gets up early with her eldest daughter, Teresa, to prepare corn tortillas for the entire family. Often for the evening meal she cooks stew beans and tamales accompanied by the ubiquitous corn tortillas and hot pepper. The youngest children come home from grammar school for lunch, but the older ones have to travel to reach the nearest high school, and so

they buy food there or bring a few corn tortillas along instead of returning home.

Major Foodstuffs

Urban Belizeans in places like Belmopan and Belize City may buy groceries at supermarkets, but most Belizeans purchase their foodstuffs at open-air markets and dry goods stores, and some farmers grow a significant portion of their own food. Because of the broad diversity of Belize's people, there is a lot of variety in foodstuffs and recipes across the country. However, certain dishes are omnipresent. Rice and beans and stew beans and rice (dishes distinguished on the basis of predominance of one ingredient or the other) are two popular staple foods that can be found in every corner of the country. The beans are almost always red kidney beans, initially imported into Belize from New Orleans but adopted as the nation's favorite bean, over the native black beans.

Rice, another introduction from the Old World, was quick to replace corn among urban Belizeans, although rural farmers and Maya groups still depend on corn, in the form of corn tortillas, as a staple. Mestizos and other urban folk consume factory-made corn tortillas and other corn-based street foods, such as tamales, *garnaches* (a fried tortilla topped with refried beans, cheese, cabbage, and other garnishes), and *panades* (fried corn dumplings stuffed with shredded shark or catfish). Imported wheat flour is also used, especially in towns, to make flour tortillas. Wheat flour is also used to make fry jacks and johnnycakes, which are both eaten as breakfast breads; yeast breads such as coconut-based Creole bread; and holiday treats such as black fruit cake.

The Garifuna people make a staple bread from cassava, which is grated, washed, and processed to remove poisons, then cooked on a griddle into durable large round wafers. Declining in popularity, it is still sold in places such as gas stations and eaten as a snack. Cassava is also eaten extensively in soups and stews, along with other root crops like cocoyam, soup yams, sweet potatoes, and potatoes. Green plantains and bananas are grated or cooked, mashed, and made into dumplings called *maltilda foot* or

bundiga by the Garifuna. They and other cooking bananas are fried when ripe and commonly served alongside rice and beans, stew beans and rice, and other entrées as a side dish.

Belizeans enjoy a wide range of meat and fish. Especially along the coast, fish, lobster, conch, and shrimp have long been a part of local cuisine. Along the rivers freshwater fish are commonly consumed. Chicken, pork (including imported salted pork such as pig tail, which is used to flavor beans), and some beef are the most common meats. All three are often prepared stewed and served with rice and beans or stew beans and rice. Cow-foot soup and chicken *escabeche* (a vinegar and onion soup) are other common and popular meat dishes. Various large wild birds, deer, large rodents such as *gibnut* and agouti, armadillos, iguanas, and peccaries (similar to a wild pig) are eaten in the countryside and valued by all at holidays. Imported canned meats such as corned beef, Spam, and Vienna sausages are also eaten, though they have become relatively expensive as the price of chicken has gone down.

Almost all Belizeans love spicy food and enthusiastically apply hot sauce or hot peppers to every dish. The most famous Belizean hot sauce is Marie Sharps, made from fiery habaneros. Pepper plants are often grown around doorways or in yards to provide spice on demand. People make their own hot sauce with vinegar, onions, and hot peppers; it is kept in a jar on the table.

Until recently, all dairy products were imported, with canned milk a regular feature of the diet and an ingredient in most desserts. In recent decades the Mennonite farmers have established a local dairy industry, and fresh milk, yogurt, and some cheese are now available, while imports have also rapidly increased. Coconut milk and oil have traditionally been used instead of butter and milk. Lard, and now vegetable shortening, is another staple fat. Coconut oil is used in rice and beans and to flavor meat and fish dishes, while coconut milk is used to flavor breads and in many Garifuna soups and stews. Coconut is also used to flavor desserts and candies. Lethal yellow disease has been killing most coconut trees since the mid-1990s, so imported dried or canned coconut milk has become popular.

Belizeans eat a variety of vegetables including Old World introductions such as cabbage, carrots, onions and garlic, and okra, as well as tomatoes, peppers, and others from the Americas. Other popular vegetables include callaloo (amaranth) leaves, chayote, cucumbers, tomatoes, onions, carrots, and, in the countryside, a variety of wild leaves, mushrooms, and vegetables. Coleslaw made from cabbage is associated with Creoles and is served in most Belizean restaurants, and various salads are increasing in popularity as they are promoted as healthy foods and demanded by tourists.

Belizeans love and regularly eat a wide variety of fruits including pineapple, bananas, mangoes, watermelon, citrus fruits, and lesser-known tropical fruits such as golden plums, soursops (*guanábana*—a prickly green fruit), mameys (a kind of sapote that is round and light brown with a creamy interior), custard apples, cashew fruit, tamarind, and *craboos* (a small round yellow fruit). Children especially relish green fruits dipped in salt and chili powder.

Many of these fruits are used to make beverages; lime juice is especially common and often served with meals. Tamarind drink is also quite popular. Many fruits are fermented to make homemade wines. Cashew wine is particularly famous and is also commercially produced. A strong corn beer called *chicha* is also made at home, especially by the Maya groups. A thick beverage made with seaweed is often sold in markets or on the street as sexual fortifier. Sodas of various flavors, called soft drinks, are very popular, as are imported beers, especially Jamaican Red Stripe and Guinness. Locally produced Belikin Beer is the brew of choice for most, and rum is the traditional hard liquor, locally produced from sugarcane. Black tea, a colonial legacy, is popular, as is instant coffee, both served with imported sweetened condensed milk. Herbal teas, especially lemongrass (*fevergrass*), are also popular as both medicine and drink.

Rice and Beans

1 lb dried red kidney beans

½ lb salted pig tail, salt pork, or cured pork hock

- 8 c water
- 2 cloves garlic
- 1 large onion, chopped
- 12 oz coconut milk (fresh or 1 can)
- 1 tsp black pepper
- 1 tsp salt
- ½ tsp thyme or ground allspice
- 2 lb long-grain white rice

Soak beans overnight or for a minimum of 4 hours. Boil the pig tail or salt pork once for about 5 minutes to remove salt, and discard the water. Repeat if necessary. Cook the beans in a covered pot in the 8 cups of water, with garlic, chopped onion, and pork, until tender. Add the coconut milk, black pepper and salt, and thyme or ground allspice, then cook for about 10 more minutes. Add the dry rice, and stir thoroughly. Cover well, and cook over a low flame until all the water has been absorbed and the rice is tender (about 25 minutes). Add a small quantity of extra water if needed, but don't worry if a crust forms on the bottom.

This is typically served with some type of stewed meat, fried plantain (*bluggo*) or another type of cooking banana called *flaggo*, and coleslaw made with carrot and cabbage and dressed with imported "salad cream."

Typical Meals

Most Belizeans eat three meals a day: breakfast, lunch, and supper, which is often called tea. Breakfast can vary from a few fresh corn tortillas and leftover beans to more elaborate fry jacks (puffed fried dough), refried beans, eggs, cheese, and fried bacon or canned meat. Biscuits like johnnycakes and powder buns are often hawked on the street or sold door to door by children. Breakfast is usually eaten quite early, especially in rural areas.

Lunch is normally eaten at noon, particularly in urban areas, when school lets out and government offices close. The meal is traditionally the heaviest of the day, with rice and beans providing the bulk

of the calories, usually accompanied by fried bananas, potato salad, and fried or stewed fish or meat. This is often followed by a brief siesta. While traditionally students and workers go home for lunch, nowadays it is often more convenient for some of them to buy food from street vendors. In agricultural areas men may return home for lunch or, if they are working far from the house, may pack a lunch of corn or flour tortillas and cheese or meat. Convenience foods like canned soup and soda crackers have been used for many years, and now ramen noodles have also become common.

Supper is eaten relatively early, usually between 6 and 8 P.M., although in the cities this dinner may be later. This meal is usually much lighter than lunch and may consist of leftovers or even just a couple pieces of bun and cheese, often served with tea, either imported black tea or local herbal infusions, often mixed with milk and heavily sweetened.

Eating Out

Urban Belizeans often purchase street food during the day, especially if they live too far from home to return for lunch or if there is no one at home to cook. Small "cool spots" serve cold drinks and plates of rice and beans, barbecued chicken, fish, and stewed meat, or "Spanish" foods such as garnaches; while vendors in the street hawk tamales, panades (small crescent-shaped pies), conch fritters, *dukunu* (a green corn tamale), and various breads and buns. These same vendors cater to rural Belizean families on market days and to men drinking together in town bars (which often serve conch fritters, ceviche, or other snacks). In Belize City a wide range of different restaurants, including many Lebanese and Chinese, as well as Mexican, Indian, pizza, and Japanese restaurants, may be found. The influence of East Indians means that many Belizean restaurants serve curried chicken along with rice and beans. Chinese fast-food shops, known for their fried chicken, are a fixture of Belize City street corners. Especially on Saturdays the smell of barbecued chicken fills the air in many towns as grills are set up along roads and beaches.

The Shak, one of many beach restaurants in Placencia, Belize. (StockPhotoPro)

Special Occasions

Most Belizeans are Christian, with 49.6 percent Catholic and 27 percent Protestant. Fourteen percent espouse other religions, including Islam and the Baha'i faith, while 9.4 percent do not claim any religion. Christianity has blended with Maya and Garifuna religions to create hybrid practices and beliefs. An offering of food and drink to the ancestors is a common practice in Garifuna ritual.

Christmas is an especially important holiday for most Belizeans and is typically celebrated with imported goods and food. This tradition dates back to the logging days, when the holiday was marked by mahogany crews streaming back to town from distant camps to spend their earnings. Special drinks such as *rum popo*, a very strong eggnog, and foods like turkey, ham, and black fruit cake, are essential parts of the festivities. Imported grapes, apples, and pears are sold at extravagant prices and are purchased for stockings and treats for children. The old custom of the "Christmas Bram" involved a crowd of merrymakers wending their way from house to house, eating and drinking at each one. The custom has been adapted into a two-week-long celebration where most work in the country comes to a halt.

Easter, which falls during the beautiful weather of the dry season, is associated with trips to the islands for those living near the coast, and fishing or barbecuing for those inland. A special dish made with river turtle (*hicatee*) and parboiled rice is a customary Easter dish in the Belize River valley.

Secular holidays such as the September Celebrations commemorating independence and the Battle of Saint George's Caye Day are occasions with high levels of alcohol consumption, in addition to street celebrations and parades. Many vendors congregate to sell food, drink, and snacks to the celebrants.

Diet and Health

Lifestyle diseases are common in Belize, especially heart disease, stroke, and diabetes. Today, many Belizeans, especially those of middle age, try to eat healthier although the most popular foods still contain too much sugar and saturated fat. The sudden death of the Belizean world music star Andy Palacio from a heart attack in 2008 shocked the entire nation and dramatized the problem of a sedentary lifestyle and unhealthy diet. The influence of American relatives and mass media such as television on Belizean attitudes toward food and bodily health and appearance is also apparent, especially in more cosmopolitan places such as the capital Belmopan and Belize City, where even diet television dinners can be purchased at American-style supermarkets.

Bolivia

Overview

Bolivia, one of the poorest and least developed countries in South America, is one of the hemisphere's highest, most isolated, and most rugged landlocked nations. Bolivia is bordered by Brazil to the north and east, Paraguay and Argentina to the south, and Chile and Peru to the west.

Bolivia's topography and climate are varied, from the peaks of the Andes in the west to the eastern lowlands, situated within the Amazon basin. Its topography includes some of the earth's coldest, warmest, windiest, and steamiest locations: the dry, salty, and swampy natural landscapes of the dry salt flats of Uyuni; the steaming jungles of the Amazon; and the wildlife-rich grasslands of the southeast.

Bolivia is a democratic republic, divided into nine regions, and it is home to more than seven million people. Bolivia has a concentrated indigenous population (60%) with heritage including Aymará, Quechua, Guaraní, and over 30 other ethnic groups. Famous since Spanish colonial days for its mineral wealth, modern Bolivia was once a part of the ancient Inca Empire. After the Spaniards defeated the Incas in the 16th century, Bolivia's predominantly Indian population was reduced to slavery. The remoteness of the Andes helped protect the Bolivian Indians from the European diseases that decimated other South American Indians. But the existence of a large indigenous group forced to live under the thumb of their colonizers created a stratified society that continues to this day. Wealthy urban elites, who are mostly of Spanish ancestry, have traditionally dominated political and economic life, whereas

most Bolivians are low-income subsistence farmers, miners, small traders, or artisans.

Bolivia is a country rich in natural resources, with key exports including gas and zinc. The country's agricultural exports include soybeans, coffee, sugar, cotton, corn, and timber, as well as coca, sunflower seed (for oil), and organic chocolate. Despite these rich resources, Bolivia continues to be one of the poorest countries in Latin America, with almost two-thirds of its people, many of whom are subsistence farmers, living in poverty. Population density ranges from less than 1 person per square mile in the southeastern plains to about 25 per square mile (10 per square kilometer) in the central highlands. The annual population growth rate is about 1.45 percent (2006).

Bolivia's estimated 2006 gross domestic product (GDP) totaled \$10.3 billion. Economic growth was estimated at about 4.5 percent, and inflation was estimated at about 4.3 percent. The average annual earnings are around US\$900, and GDP per capita is around US\$2,900 (2005 estimate).

The economy of Bolivia has had a historical pattern of a single-commodity focus. From silver to tin to coca, Bolivia has enjoyed only occasional periods of economic diversification. Political instability and difficult topography have constrained efforts to modernize the agricultural sector. Similarly, relatively low population growth coupled with a low life expectancy and high incidence of disease has kept the labor supply in flux and prevented industries from flourishing. Rampant inflation and corruption have also thwarted development. The mining

industry, especially the extraction of natural gas and zinc, currently dominates Bolivia's export economy.

There is widespread underemployment; a large percentage of the underemployed supplement their income by participating in coca production, mainly in the Yungas, and in the informal street-market economy. The government remains heavily dependent on foreign aid. A large part of agricultural revenue comes from the illegal growing and processing of coca leaves. The Bolivian government has tried to have coca replaced by other crops, but this has given rise to a number of problems, and the coca leaf remains one of the major sources of national revenue.

Food Culture Snapshot

Acarapi and Claudia live in La Paz, one of the more affluent areas of Bolivia. Acarapi works in the local mines, while Claudia is the primary domestic provider, looking after their four children and managing the household and all other household duties including the cooking. Their lifestyle is common among the more affluent neighborhoods of La Paz, and their diet is made up of a combination of meat and potato dishes.

For Claudia, shopping for food to prepare meals is a daily ritual. Bread is purchased daily fresh from a street vendor or bakery. Breakfast is taken in the local market or in the home and is a simple preparation of coffee, tea, or a hot maize beverage (*api*) served with bread.

For Acarapi and Claudia, following Bolivian tradition, lunch is the main meal of the day. According to Acarapi, because of the altitude and work ethic in Bolivia, most people don't eat dinner until very late, and they don't like to go to bed on a full stomach. Acarapi returns home every day to eat lunch with his family. Lunch typically consists of soup, up to three "main" dishes, and sometimes dessert. Most lunches would include some potatoes—fried, boiled, or whipped together with other foods.

Meat, normally beef, chicken, or sausage, accompanies most dishes, and vegetables usually include red onions, tomatoes, shredded lettuce or cabbage, carrots, peas, and broccoli. All meals are usually accom-

panied by *llajhua*, a hot spicy salsa made from tomatoes and hot peppers ground on a large stone.

Claudia begins making lunch around 10:30 and continues preparation for several hours. Meals in Bolivia are a big challenge, with no premade ingredients available, so lunch takes considerable time to prepare. Around 5 P.M. the family may have a snack of tea and rolls with jam or *dulce de leche* (caramel sauce). A light dinner is usually served around 9 P.M.

Major Foodstuffs

Though Bolivia is currently self-sufficient in sugar, rice, and beef, it still has to import certain foodstuffs. The chief Bolivian crops are potatoes, cassava, sugarcane, coffee, maize, rice, and soybeans with a major share of farm income derived from the illicit growing and processing of coca leaves, the source of cocaine. The relationship between access to land, poverty, and food security appears to be a kind of vicious cycle, particularly for the rural altiplano population in Bolivia. In the context of widespread poverty and limited access to institutional social security, access to land is a crucial factor in creating favorable conditions for subsistence agriculture and hence food security.

The typical diet is abundant in carbohydrates but deficient in other food categories. In the highlands, the primary staple is the potato (dozens of varieties of this Andean domesticate are grown), followed

Two women harvesting in their potato field in Bolivia. (iStockPhoto)

by other Andean and European-introduced tubers and grains (e.g., *oca*, quinoa, barley, and, increasingly, rice), maize, and legumes, especially the broad bean. Freeze-dried potatoes (*chuño*) and air-dried jerky (*ch'arki*) from cattle or Andean camelids (llama, alpaca, and vicuña) are common, although beef forms an insignificant part of the daily diet.

Bolivia is self-sufficient in almost all food staples with the exception of wheat. Highland crops include tubers, maize, and legumes. Other crops (e.g., peanuts, citrus fruits, bananas, plantains, and rice) are grown in the Oriente, while large cattle ranches are prominent in the departments of Beni and Pando. In eastern Santa Cruz, large agricultural enterprises supply most of the country's rice, sugar, eating and cooking oils, and export crops such as soybeans. Enormous forests provide the raw materials for the lumber and wood-products industry (deforestation is an increasing problem). The coca leaf, which is fundamental in Andean ritual, social organization, and health, has always been cultivated in the eastern regions, but the international drug trade has made Bolivia the third-largest coca-leaf producer and exporter in the world.

The simultaneous processes of demographic transition and urbanization currently underway in Bolivia are having a significant impact on cooking traditions and the use of traditional recipes and ingredients in the family home. Food preparation is an important daily ritual for Bolivian families, with family meals playing a critical role in family relationships and socialization. Until the mid-1970s, the average Bolivian family consisted of close to seven children per woman, and the average family as of 2008 is estimated at four children. Food preparation and cleanliness are closely associated with national folklore and taboo; the family kitchen is a space where food is the focus, and the rituals associated with making the raw cooked and the dirty clean are primarily the responsibility of female family members.

Bolivia is in a situation of chronic food insecurity, which seems to be particularly acute in the traditional rural settlements of the altiplano and the valleys. Heavy-handed state intervention has resulted in some improvement in the food supply in recent years, with families being able to enjoy fixed

prices for staples such as flour, bread, and oil. Purchasing groceries is increasingly occurring at specialized shops set up by the government where rice, flour, red meat, poultry, and oil are sold at lower prices. The availability of produce significantly influences the family meal and its preparation, as do the strong social and cultural mores of the Bolivian people.

Cooking

Bolivia is home to numerous culinary styles, each with its own personality representative of the nation's diverse climatic and geographic conditions. Bolivian dishes consist mainly of meat, fish, and poultry blended with herbs and spices. The diet also consists of fresh fruit and vegetables. When using meat, every part of the animal (particularly cows) is consumed. Tongue, kidney, stomach, and all cuts of meat are used during cooking.

Bolivians typically prepare and eat *salteñas* in the morning and empanadas in the afternoon (both of these are meat or vegetables pies) and can have up to five small meals a day. Meals generally consist of potatoes, meat, a large assortment of breads made from corn or quinoa, and pastries. Fresh fruit juices are also abundant and can include blackberry, peach, and lemonade. In the more traditional rural areas, coca leaf is often chewed in the evening after a meal. Bolivian food preparation is dominated by meat dishes, accompanied by potatoes, rice, and shredded lettuce, and food is often accompanied by traditional hot sauces made from tomatoes and pepper pods.

Some typical Bolivian dishes include *aji de lengua*, spicy cow's tongue; *lechón al horno*, roast pig, served on New Year's Day; *fritanga*, spicy pork and egg stew; *majao*, a rice-and-meat dish served with fried egg, fried plantain, and fried yucca (tapioca); *cuñapes*, a bread made of cheese and yucca starch; *pan dulce*, a sweet bread served at Christmas; *chuño phuti*, freeze-dried potatoes; *escabeche*, pickled vegetables; *cicadas*, coconut candies; *leche asada*, roasted milk (a dessert); and *helado de canela*, cinnamon sorbet.

Some traditional dishes include *majao*, *silpancho* (meat served with rice and potatoes), *pacumutu* (a

rice dish with grilled beef, fried yucca, and cheese), salteñas and empanadas, *locro* (a soup made with rice, chicken, and banana), and *chicharrón de pacu* (made with the local Pacu fish, rice, and yucca).

Some potatoes are freeze-dried after they are harvested. Bolivians cover raw potatoes with a cloth and leave them outside during the cold nights and dry days of early winter. The potatoes freeze at night, and the next day the people stomp on them to press out the water the vegetables retained. After a few days, the potatoes have been freeze-dried and are called chuño (CHEW-nyo). They last for months, even years, and can be cooked after being soaked overnight in a pot of water.

Corn is also used to make the fermented maize drink called chicha (CHEE-chah). It is a sacred alcoholic drink for the Incas. They drink it from bowls made from hollowed gourds. Before and after drinking it, Bolivians spill a few drops onto the ground. This gesture is meant as an offering to the Inca earth goddess Pachamama, to ensure a good harvest.

Traditional cooking methods revolved around use of a fire for the majority of dishes. Meals were prepared by placing food directly on the heat or grilling it on wooden sticks in order to smoke it. Food is sometimes placed over the embers or on flat pottery or covered with leaves and buried to cook over stones heated from the fire. The subsequent influences of numerous global cuisines have seen these traditional cooking methods replaced or adapted in some areas, particularly the more urban centers.

***Picante de Pollo* (Chicken in Spicy Sauce)**

Picante de pollo is chicken in a special spicy sauce, and there are many variations of this traditional Bolivian dish.

Ingredients

- 3 lb chicken, cut into medium-size pieces
- 2 c white onion, cut into small strips
- 1 ¼ c carrots, julienned
- 1 c turnip, diced
- 1 tbs salt

3 c chicken stock

¼ c fresh *locoto* or chili pepper, finely chopped

1 tsp ground cumin

1 tsp ground coriander

1 tsp ground black pepper

2 garlic cloves, peeled, chopped

In a large casserole dish combine the chicken pieces with the onion, carrot, turnip, and salt. Pour the chicken stock over this, until all ingredients are covered. Cook over high heat until the dish is bubbling. Turn heat to low and simmer for 90 minutes until the chicken is soft. Stir occasionally and continue to check on the level of chicken stock. If it seems low, add more stock, as you need some liquid to serve the dish. Add the fresh *locoto* or chili pepper, cumin, coriander, ground black pepper, and garlic, and stir and cook for 30 minutes. Serve with steamed rice.

Typical Meals

Like the people of the other nations of the Andean highlands such as Peru, Colombia, and Ecuador, Bolivians prefer to eat a good breakfast, a substantial lunch, and a small dinner. As the main meal of the day, lunch is eaten with family whenever possible and often consists of soup, a main dish, and perhaps dessert. Bolivian meals are heavy on the pork and potatoes, with chicken, rice, and vegetables also being popular choices. The potato is the main staple, served at most meals, sometimes with rice or noodles. Potatoes, originally cultivated by the Incas in this region, are often served with meat. They are the country's number one crop, and more than 200 different varieties are grown. The most popular meat is beef. No part of the cow is wasted, not even the tongue, which is used to make a popular spicy cow-tongue dish. Bolivians also enjoy chicken and llama—they even eat llama jerky. In rural areas, rabbits and guinea pigs are also eaten.

Bolivian food is not often spicy, with the majority of heat and spice found in condiments such as a sauce *la llajhua* which is made with tomato and *locoto* (hot chilies). Maize beer (*chicha*) is a traditional and ritually important beverage in the highlands.

In the Oriente, rice, cassava, peanuts, bananas, legumes, and maize constitute the cornerstone of the daily diet, supplemented by fish, poultry, and beef. Favorite national delicacies include guinea pig (also consumed during important ceremonial occasions) and deep-fried pork (chicharrón). Meals are served with hot pepper sauces.

The people of Bolivia start their day with a light breakfast. Many people eat empanadas—cheese- and meat-filled turnovers. People often wash them down with *api*, which is a sweet breakfast tea made from corn, lemons, cloves, and cinnamon. This is common in the cities and towns, with the *api* often served with bread. Breakfast is followed by a mid-morning snack of *salteñas* (sawl-TAY-nyahs). Similar to empanadas, *salteñas* are sweet meat pastries filled with a wide variety of ingredients such as diced meat or chicken, vegetables, potatoes, raisins, and

hot sauce. Along with empanadas, *salteñas* can be purchased from many street vendors, and in marketplaces hot meals and stews are also consumed. In the countryside, breakfast sometimes consists of toasted ground cereals with cheese and tea, followed by a thick soup (*lawa*) at 9 or 10 A.M.

The most important meal of the day is lunch (*almuerzo*), which in upper-class urban households and restaurants typically is a four-course meal. It usually includes soup and a main dish. The soup typically contains beef, vegetables, potatoes, and quinoa. Peanut soup is also popular. The main dish that follows the soup usually includes meat, potatoes, rice, and vegetables. Favorites include *pique macho* (PEE-kay MA-cho)—grilled chunks of meat, tomatoes, onions, and hot peppers. The spicy chicken dish *picante de pollo* is also popular. *Silpancho*, beef that is pounded thin and served on a bed of rice or

Street vendors sell bananas, melons, and a variety of potatoes, including chuno (preserved potatoes), at an open air market in the mining town of Oruro, Bolivia. (Anders Ryman | Corbis)

potatoes with a fried egg on top, is another favorite. Lunch for those living near Lake Titicaca may include fresh lake trout. Bolivians in this region tend to enjoy fish grilled, fried, stuffed, steamed, or served covered in a spicy sauce. Frogs' legs from the lake's frogs are also eaten and are considered a delicacy. Peasants and lower-income urban dwellers have a lunch of boiled potatoes, homemade cheese, a hard-boiled egg, and hot sauce (llajhua) or a thick stew with rice or potatoes.

Corn, a major crop in Bolivia, is the main ingredient in *humitas* (ooMEE-tahs), which are a popular side dish. Corn kernels cut off the cob are combined with spices and wrapped in a small package made from corn husks. The package is tied with string and steamed in a pot of simmering water. Another popular meal choice is quinoa. Quinoa grows well in Bolivia's cold and arid climate. For meals the outer

coating is removed to reveal seeds, which are ground or boiled in water and used for baking breads or as an ingredient in soups and stews.

A much lighter meal is eaten at around seven in the evening. Bolivians also snack on locally grown fruits including oranges, grapes, apples, peaches, cherries, papayas, pears, and avocados. Sweeter options include sweet pastries, ice cream, sorbets, and coconut candies called cicadas.

Eating Out

Eating out is not a common occurrence in Bolivia, with most families eating in the home. Bolivians tend to eat out when celebrating major occasions, or if they have traveled, there is a tendency to eat out more often or entertain friends at home. Typically the restaurants in La Paz and other affluent

A meat vendor at an outdoor market in La Paz, Bolivia. (Shargaljut | Dreamstime.com)

areas in Bolivia, such as the tourist resort areas, are not restricted to traditional Bolivian dishes. Increasingly, cuisine from all over the world can be found in Bolivia including Asian, Indian, Middle Eastern, and other international tastes. Fast-food chains are also increasing due to their convenience and family-oriented style. The cost point also makes the eating-out experience more accessible for the less-affluent Bolivians.

Special Occasions

There are many holidays and festivals held throughout Bolivia. Many holidays celebrated in Bolivia are of religious or political origin, usually celebrating a Catholic or Indian saint or god, or an event such as a historic battle. Festivals or carnivals typically feature local music, bands, costumes, parades, dancing, fireworks, alcohol, and food.

The most elaborate and hearty meals, with abundant fresh vegetables and beef, chicken, or pork, are eaten at ceremonial occasions, such as the life-cycle events of baptism, marriage, and death. Public displays of generosity and reciprocity, offering abundant food and drink not often available at other times of the year (e.g., bottled beer, cane alcohol [*trago*], and beef), are an important cultural imperative. On All Souls' Day, meals are prepared for the recently deceased and those who are ill. Many important meals mimic those of upper-class restaurants in the major cities, including dishes such as *aji de pollo* (chicken smothered in hot chili sauce and served with rice and/or potatoes).

Social life is punctuated by many rituals that coincide with major agricultural seasons and/or are linked to the celebration of Christian deities, with specific foods associated with many of these rituals. For example, Epiphany or the Twelfth Night on January 6 is a celebration where gifts are given to children to celebrate the Day of the Kings. Children place their shoes outside the door, and the Three Kings (usually the family) fill them with candy and pastries at night. These can include sweet fritters, or *tawa-tawas*. The Bolivian version is unique in the use of cane syrup in the final product.

In Bolivia, Christmas (Navidad) continues to be deeply religious, maintaining the original meaning and purpose of the holiday. Most families set up a *pesebre* (nativity scene) in their homes, and families gather to feast together at midnight after mass, others on Christmas Day. As these holidays take place during the hottest time of year (summer in the Southern Hemisphere) meals usually feature *picana*, a soup made of chicken, beef, corn, and spices that is eaten traditionally on Christmas. The table is also set with salads, roast pork or roast beef, and an abundance of tropical fruit. For the same reasons, the table is usually adorned with fresh flowers. At midnight the families toast with champagne or wine and eat taffy-filled wafer cookies called *turrón*.

The *canastón* is another important holiday tradition. A large gift basket, it is given by employers to their employees on the day prior to taking their vacation. The *canastón* is a simple but usually large basket (sometimes a plastic washtub is used) filled with the basic food staples such as ketchup and mustard, bread, jam, crackers and cookies, sugar, rice, flour, and sometimes chocolates or candy. These *canastones* are almost never decorated, except for a clear plastic covering closed off with a large red bow. A *panetón* (a delicious traditional holiday sweet bread with raisins and nuts) and a bottle of *cidra* (sparkling nonalcoholic cider) are included.

On New Year's Eve the family gathers again, feasts at midnight, and toasts with champagne. Each family member must also eat 12 grapes at midnight.

Bolivians celebrate All Saints' Day on November 1 to honor the Catholic saints. This has been combined with Día de Todos Santos, also known as the Día de los Muertos, or the Day of the Dead. Like many other Catholic celebrations, this melds existing indigenous festivities with the "new" Catholicism and "old" pagan beliefs. The dead are honored by visits to their grave sites, often with food, flowers, and all family members. In Bolivia, the dead are expected to return to their homes and villages. During this time, families and guests, who enter with clean hands, share in traditional dishes, particularly the favorites of the deceased. Tables are laden with bread figurines called *t'antawawas*, sugarcane, chicha, candies, and decorated pastries. At

Coca leaves are often used in Bolivia for their medicinal properties. (StockPhotoPro)

the cemeteries, the souls are greeted with more food, music, and prayers. Rather than a sad occasion, the Día de Todos Santos is a joyous event.

Death, marriage, and almost any other social or religious ritual in Bolivia will include an offering of coca. “Guard its leaves with love,” warns the “Legend of Coca,” an 800-year-old oral poem. “And when you feel pain in your heart, hunger in your flesh and darkness in your mind, lift it to your mouth. You will find love for your pain, nourishment for your body and light for your mind.”

Diet and Health

Most Bolivians, particularly in the rural areas and low-income neighborhoods surrounding the large cities, lack access to basic medical care, with most sick people cared for by family members. While Bolivia has improving trends in terms of food supplies, these have not been sufficient to overcome widespread poverty, particularly in rural areas, and there is still a high incidence of hunger and malnutrition.

Many only partially understand and accept Western biomedical ideology and health care, as Bolivian health beliefs and practices typically revolve around rituals and ritual practitioners such as diagnostic specialists, curers, herbalists, and diviners. Divination, rituals, and ritual sacrifices are important in treating illness, as is the use of coca leaves,

alcoholic beverages, and guinea pigs. Traditional medicine attaches importance to the social and supernatural etiology of illness and death, which often are attributed to strained social relations, witchcraft, or the influence of malevolent spirits. Dozens of illness categories, many psychosomatic, are recognized. Many curing rituals emphasize balanced, reciprocal relations with deities, who are “fed” and offered drink to dissipate illnesses.

The coca leaf is used extensively for traditional medicines for a supply of nutrients and natural energy. For high-altitude dwellers of the Andes, the leaf, when chewed or brewed into tea, acts as a palliative and stimulant, and a certain amount of cultivation is allowed for local use. Chewing of coca leaf is a common practice among peasant farmers, miners, laborers, and night workers. Soothsayers and indigenous priests use it in rituals passed down by their ancestors. And in many hotels in La Paz, foreign guests are welcomed with a cup of coca-leaf tea, which helps to relieve altitude sickness. Ancestral beliefs, confirmed by scientific research, credit coca-leaf chewing with alleviating hunger, fatigue, and sleepiness.

Bolivia has one of the highest infant mortality rates in South America—between 68 and 75 per 1,000 live births. Major causes of infant and child mortality include respiratory infections, diarrhea, and malnutrition; almost 30 percent of infants under age three suffer from chronic malnutrition. In Bolivia, more than one-quarter of infants are stunted. But between 1994 and 1998 the number of overweight women increased 9 percent, with the greatest increases seen among women with less education. The infant death rate is between 68 and 75 per 1,000 births, higher than anywhere else in Latin America. Life expectancy is 62 years, compared to the Latin American average of 69. Indigenous women prefer to deliver at home because they do not feel confident in hospitals, mainly because their customs are ignored or denied in such health services.

In Bolivia, a culture of rural midwifery known as *partera* is adopted, where midwives speak the local language. Some of them understand the importance of evaluating risks, and for that purpose they use a

sort of oracle, based in coca leaves. In traditional deliveries, women can choose the position. Most of them choose to squat, with their family around, and drink infusions of medicinal plants. Soon after the childbirth, women must keep warm and avoid contact with cold water.

Many projects supported by international organizations have been implemented over the past decades with very low success in terms of decreases in maternal mortality. Currently, the Bolivian government is developing a new strategy based on an intercultural reproductive health care approach, which incorporates the religious and traditional medicinal approach of the Bolivians with Western technologies and practices, uses the indigenous languages, takes advantage of the regional resources, and respects the habits and traditions of the people.

The annual expenditure for health care in Bolivia is \$125 per capita. Health care providers are scarce, with only 3.2 physicians per 10,000 people and even fewer nurses. It has been estimated that 80 percent of the curable diseases in Bolivia are caused by polluted water. Although the country has abundant supplies of water, very little drinkable water is available to the people. Privatization of water delivery has resulted in price increases and “water wars” among providers.

Brazil

Overview

In a letter written in 1500, the first document describing the land and the native people of what later became Brazil, scribe Pero Vaz de Caminha reported to the king of Portugal, D. Manuel I, that apparently the new land had so many riches and the nature was so exuberant and well favored that “rightly cultivated it would yield everything.” The Portuguese explorers landed on the Brazilian seacoast in April 1500. At the time, it was inhabited by roughly five million native people, with different cultures and languages, in a territory spanning from the equator to well below the Tropic of Capricorn.

The new arrivals settled down with the objective of extracting the riches and exploiting the land; to this end, they slashed down forests, at first for brazilwood, used as a red dye during the Renaissance, and later for huge sugarcane, cotton, and tobacco plantations. Coffee, for which seeds were smuggled in from French Guiana, and cocoa beans, a native species from the Amazon rain forest, became export products only in the 18th century. Because of its climate the country was a major haven for many new plant and animal species, and nowadays almost nobody is aware, for example, that bananas and coconuts were transplanted from India and Sri Lanka and are not native trees. The new settlers brought a variety of Mediterranean fruits and vegetables, such as oranges and sugarcane, which had been brought to the Iberian Peninsula by the Arabs. Today, Brazil and the United States are the world’s biggest producers of concentrated orange juice.

The new colonial inhabitants were, in turn, introduced to corn, prepared in many different ways, by the natives. Some roots, such as manioc, were ground into flour; the capsicums pepper, either wild or cultivated in small quantities, was used for medicinal purposes. Peanuts, sweet potatoes, pumpkins, and beans of different colors and sizes, all native species that had migrated from different regions of the Americas, soon became staple foods for the newcomers. The beaches, devoid of coconut trees, were thickly populated with huge cashew trees, a source of vitamin C. In the 16th century, the Portuguese settlers introduced rice.

The Portuguese learned how to hunt and tame wild animals that did not exist in Europe, such as *capivaras* (capybaras—a rodent the size of a small pig), *pacas* (spotted caviés—a kind of guinea pig), *tatus* (armadillos), *cotias* (agoutis—a relative of the guinea pig), deer, and *antas* (Brazilian tapir). The newcomers brought chickens and dairy cows, as well as horses and mules for transportation. The native population did not use salt systematically for seasoning or for food conservation. Brazil’s extensive seacoast became the location of salt works that are still producing salt.

The Portuguese colonizers came to Brazil to develop a large colonial business. To this end, they brought slaves from Africa, who introduced to their new country their foods and eating habits. The slave trade between the two continents, especially between the state of Bahia and Angola, was very active from the 16th until the early 19th century, when the transport of slaves was banned.

Rice, beans, and manioc flour, the key foods of Brazilian cuisine, originally the nourishment of the native population, became staples in the course of the first two centuries after the arrival of the Portuguese settlers. The Brazilian diet is still based on these three ingredients. Ever since then, the combination of native, Iberian, and African foods has been enriched by the influence of Spanish, German, Polish, Turkish, Greek, Lebanese, Palestinian, Syrian, Hungarian, Bolivian, Argentinean, Japanese, Chinese, Korean, and Russian immigrants.

Food Culture Snapshot

Nowadays, since the majority of the population lives in cities, Brazilians buy their dried goods and the very basic items of their local kitchen in large multinational supermarket chains. A typical shopping list will include coffee and milk (for breakfast), either dark brown or black beans, rice, manioc flour and its different starches, corn flour (which can be found in many grinds, some very soft, known as *fubá mimoso*, “delicate flour,” used in a very traditional cake), wheat flour, sugar, onions, garlic, bay leaves, red pepper (*capsicums*), and a typical cheese from Minas Gerais, in the central region, to be served with guava paste as dessert. Fresh food is bought at the supermarkets, too, although local street markets still have a very good reputation as providers of better produce. Bread is bought in huge bakeries.

A typical visit to a street market begins with a stop at a *pastel* stall. The *pastel* is a dumpling made of a thin dough with a filling; these are fried right in front of the customers in huge oil woks. The most popular flavors are hearts of palm (*palmitos*), chicken with olives, cheese, cheese and banana spiced with cinnamon, and pizza (cheese, tomatoes, and oregano). These open-air markets, with their exuberant colors and smells, attest to the variety of nature in the tropics. The stalls sell all sorts of very fresh fruit in large amounts, such as mangoes, papayas, bananas, apples, pears, persimmons, grapes, and different kinds of citrus fruits. Shoppers can buy vegetables, legumes, roots, fish, chicken, dried and cured meats, and beautiful flowers; because of the mild climate, seasons are extended, and most produce is available all year long.

Everyday meals, both lunch and dinner, in the large cities consist of a mix of rice and beans, one vegetable, and either red meat or chicken, prepared either grilled or stewed. The use of seasonings and herbs varies according to regional preferences. Fish is eaten along the extensive Brazilian coast, which measures 5,592 miles (9,198 kilometers), while the Amazon River basin offers many delicious freshwater fish like the *pintado* (*Pseudoplatystoma corruscans*), the *pirarucu* (*Arapaima gigas*), and piranhas (*Serrasalmus* spp.), the ferocious meat eaters. The South Atlantic has a wide variety of cold-water fish (sardines, flounder, and sole), shrimp, crab, and squid, which are regularly consumed. However, because of the price difference, a typical family would generally eat shrimp for dinner or serve it at a special occasion and have fried fish for lunch.

The cooking may seem labor-intensive, but the food has acquired a specific preparation methodology throughout the years that still makes it possible to eat a full traditional meal at home. Beans are cooked in a pressure cooker and frozen, rice takes no more than 20 minutes to be ready, and the meat of choice is grilled as the family members sit down to eat.

Major Foodstuffs

The structure of each meal, regardless of social class, is supported by only five ingredients: rice, beans, manioc flour, coffee, and sugar. Meals are planned around them. Rice and beans is the staple dish for daily meals at home and at popular restaurants. Cooked beans mixed with only manioc flour are an important part of the menu in the surrounding countryside. The type of beans and the ingredients added during cooking vary from one region to another. Coffee has been a traditional drink in Brazil since the 19th century. In some regions, it is mixed with manioc flour to make a kind of porridge. Corn, especially in the central and southern regions, is used to make sweets and snacks.

Manioc, or cassava, is a native root that was readily adopted by Brazil’s European and African populations. In colonial times, the roots would be washed to remove the hydrocyanic acid they contain, then toasted over live embers and eaten with salted butter, as a substitute for bread. The natives

ate peanuts and cultivated manioc roots and corn, which had migrated from Central America. They used each of these plants to make different products such as flour, tapioca, alcoholic beverages, or lightly fermented beverages for rituals.

Brazil has many kinds of native beans. Since precolonial times, fresh or dried beans have been cooked to soften them. Excellent hunters and fishermen, the natives cooked fish and game over small fires. As the natives were always roaming around the countryside, they taught the foreign conquerors who explored the hinterlands how to feed themselves and prepare the food they would have to take on their reconnaissance expeditions into the wild country, where they went first to search for gold and later to occupy land for farming. The natives showed the newcomers how to preserve different kinds of meals for traveling or for daily consumption, like the *paçoca*—a combination of salt-seasoned jerked beef and manioc flour. Paçoca was the main staple food for those long trips. Brazilians ate it frequently well into the 20th century. Today, every child will eat a small sweet with the same name that is a mix of ground peanuts with sugar.

Cattle became part of the national diet later on. In the beginning, the Spaniards established huge cattle ranches in the south of Brazil, a region that is now Uruguay. Soon thereafter, cattle ranches began to migrate northward and provided beef for Brazil's other regions. In the northeast, which had been settled much earlier, cattle were raised in the semi-arid climate of its hinterlands, and the meat was processed as jerked beef to be sold in large cities. As in many other countries, milk and cheese are part of the diet. Cheeses are often country-specific, and many typical specialties are the result of the need to preserve them for longer periods of time. One very popular cheese is *requeijão*, or twice-coagulated cheese, a version of cream cheese. The coagulated curds are broken and stirred until a creamy consistency is obtained. It is found in all supermarkets, and Brazilians spread it on bread at breakfast or eat it with fruit compotes for dessert.

Brazil has been one of the leading sugar producers of the world since the 16th century, and the availability of sugar in large amounts has led to an

excessive love for sweetness in confectionary, cakes, fruit pastes, and compotes. Although one shouldn't generalize—given that taste is something very individual—there is a common consensus among Brazilians that sweets must contain a high amount of sugar, much higher than is accepted in European countries, for instance. The excessive availability triggered the creation of typical desserts such as guava or banana paste and syrupy desserts with eggs and all sorts of fruits.

Because Brazil is one of the world's largest soybean producers, many soy by-products are readily available in supermarkets. Food is usually cooked with soybean oil or margarine, and the beans are sold for cooking or salted as appetizers. However, the oriental soy sauce and tofu, although easily found in chain stores, especially in the southeast of the country, are not part of the everyday diet. There are many

A Campesinho pressing sugar as his son looks on. (Corel)

other uses such as for heavy oils for machinery or polymers for making plastic objects, and so on.

The traditional Portuguese cuisine includes a wide variety of pastries, prepared with a high content of eggs and sugar. Most of these recipes can also be prepared with additions of coconut milk and grated coconut. *Cocadas* (coconut wafers), pies, *bolos de aipim com coco* (manioc cake with coconut), tapioca puddings, luxurious creams made with egg yolks cooked in coconut milk and sugar and served with almond cakes, *beijus* (fine tapioca pancakes), and fruit preserves are some of the best-loved sweets in Brazil, which has a delicious and rich tradition.

Typical Meals

Each region in Brazil has its own specialty, and in some cases these regional specialties are served in other parts of the country as well, such as the *churrasco* (meat barbecue), which is typical of the very large plains on the frontier with Uruguay and Argentina. The cuisine of many regions has an African influence, especially in recipes that call for *azeite de dendê* (palm oil), used mainly in Bahia in the northeast. A large number of cakes and desserts mix native ingredients and Portuguese cooking techniques, like the recipes for egg-based desserts. Many Portuguese desserts took on a Brazilian nature through the addition of coconut milk to the list of ingredients, as is the case for *ovos moles*, a traditional egg-cream recipe from Portugal's Aveiro region, the Brazilian version of which is called *baba-de-moça* (ladies' dribble—there are quite a few sweet dishes with ribald names like this one, and they are part of the Catholic tradition not only in Brazil). Many of the dishes served in Brazil on special occasions stem from the ritual foods of the Candomblé, an Afro-Brazilian religion that has many followers. The following list of dishes shows the richness of Brazilian cuisine and its regional variations.

From Pará in the north, there is *pato no tucupi*, a delicious duck stew cooked in a scalded cassava broth called *tucupi*, a liquid extracted from cassava. Tucupi contains hydrocyanic acid, but when cooked for several hours, the liquid becomes harmless.

Jambu leaves are added to the dish when the duck is ready to be served. *Jambu* (*Spilanthes oleracea*) is a low-growing plant whose leaves cause numbness of the lips when they are eaten.

Caruru, originally a Candomblé ritual dish, was brought to Bahia in the northeast together with slaves from Africa. To avoid being punished for religious practices that differed from Catholicism, the official religion, the Africans created deities that corresponded to the Catholic saints. For example, the martyr saints Cosmos and Damian are honored in the month of September. But when the children of the local community are served *caruru*, as tradition dictates, the people are actually honoring the *Erês*, free and innocent spirits that exist in each one of us. *Caruru* is a stew made with okra, smoked shrimp, peanuts, cashew nuts, and palm tree oil.

Moqueca is a savory stew prepared with fish, shrimp, and herbs such as parsley, basil, onions, garlic, and cilantro; it comes from Espírito Santo in the southeast.

Grouper Moqueca

Serves 4

4 or 5 lb grouper or any fish that will not break up as it cooks

Juice of 1 lime

2 onions

1 red pepper

1 yellow pepper

1 jalapeño pepper

8 tomatoes, seeded

1 big garlic bulb

3 or 4 large basil leaves

8 sprigs fresh cilantro (optional)

1 bundle each parsley and chives

2 bay leaves

Salt to taste

Black pepper to taste

Ask the fishmonger to gut the fish and cut it crosswise into four or five large pieces, the head included.

At home, wash the grouper in running water, and rub it with the lime juice and a bit of salt. Place the pieces of fish side by side in a clay or iron pot big enough to fit all the pieces in one layer.

Shred and mix the peeled onions, the peppers (seeds and ribs removed), and the tomatoes in the food processor. Cover the fish with this mixture. Spread the herbs on the top, side, and bottom. Add the whole peeled garlic cloves. Place a lid on the pan and cook the stew at low temperature for roughly 15 minutes. The pieces of fish must remain covered with the sauce. Taste the sauce and add salt if necessary. Cook for 5 more minutes. Serve with white rice and pepper sauce.

The story goes that slaves on coffee plantations created the black-bean stew *feijoada*, cooked with pork parts that are usually rejected, such as ears and tails, plus different kinds of sausages. Allegedly, the prime cuts were reserved for the landowners. These stories are somewhat exaggerated, as each culture has its own bean-stew dish cooked with different kinds of meats and sausages made from the leftover meat of local animals. The French have cassoulet, made with goose legs, whereas foie gras and goose *magret* are sold in luxury food markets. The Portuguese have their own baked bean casserole, made

Feijoada, the national dish of Brazil, is a typical Brazilian dish made with black beans and several kinds of meat, mainly pork. (iStockPhoto)

with white beans and sometimes with seafood and small fish left over from the day's catch, or with regional sausages. Feijoada has become a national favorite despite its regional origin in Rio de Janeiro in the southeastern part of the country.

Eating Out

For centuries, ships would stop at Brazilian ports to replenish their supplies before sailing for Africa and India or when traveling south to cross to the Pacific Ocean. From the 20th century on, a cosmopolitan way of life spread throughout the coastal cities, always ready to welcome their visitors. Associations, clubs, theaters, cabarets, hospitals, and restaurants serving a variety of cuisines opened. Nowadays, places like São Paulo, with its 18 million inhabitants, offer a wide range of options to cater to all kinds of tastes.

There is a wide array of different kinds of restaurants in Brazil. The food ranges from traditional cuisine, with a strong Portuguese influence, to French and Italian cuisine, to the *churrascarias*, the barbecue palaces that serve tons of meat nonstop. The churrasco is the typical dish of the pampas, the frontier region on the borders of Brazil, Uruguay, Argentina, and Paraguay. New restaurants and young chefs have added a new twist to the traditionally heavy food from Brazil's rural regions, and they look for forgotten—albeit important for local culture—ingredients from Brazil's history. Leaves of native palm trees are used to add a finishing touch to sauces; fruits from the Amazon region, such as the *açaí* (*Euterpe oleracea Mart*), are used to make soups and ice cream.

In addition to traditional restaurants, bistros, and restaurants where one can eat “today's specials,” there are two kinds of restaurants that are specific to Brazil, the so-called *por quilo* and *rodízio* restaurants. At the first kind, people help themselves to a buffet lunch, weigh their full plates on a special scale, and sit at tables while waiters bring drinks and desserts. These restaurants are normally open only for lunch. Patrons can select what they want from a wide variety of dishes, which include different kinds of salads, rice, beans, meat stews, steamed

vegetables, and even Japanese food. The equally creative rodízio is somewhat different: Patrons choose the side dishes when they are already seated at the table, while waiters offer slices of different kinds of meat, fish, or pasta nonstop.

Pizza parlors are one of the most popular spots for eating out in São Paulo, in the country's southeastern region. The enormous influence of the Italian immigrants ensures excellent restaurants, but the pizzeria is the restaurant of choice to celebrate birthdays, to get a bite to eat after a soccer game, or to take the kids out for Sunday dinner. Some Brazilians proudly insist that Brazilian pizza is the best in the world.

For a romantic dinner, restaurant goers can choose from a wide selection of French, Spanish, or Japanese restaurants. The city of São Paulo is home to more than 300,000 Japanese descendants, many of whom live in a typically Japanese neighborhood and celebrate many traditional Japanese feasts. The Japanese influence on daily meals is attested to by the many sushi and *temaki* fast-food restaurants in the city.

One of the most popular activities all over Brazil is to go to a bar and eat delicious *salgadinhos*, which are small savory snacks. They come in a huge variety, each one tastier than the next—*bolinhos de bacalhau* (small, round codfish cakes), delicate chicken croquettes shaped like a chicken leg, and *empadinhas* (small, delicate pies filled with palm heart, shrimp, or meat), among many other tasty delicacies, which taste wonderful with ice-cold beer. Ice cream made from regional fruits is also a popular delicacy, because of Brazil's warm weather during most of the year.

Fresh fruit juice bars are found everywhere. There is a huge variety of fruits all year round—oranges, passion fruit, guavas, watermelons, mangoes, strawberries, açai, *mangabas*, *sapotis*, coconuts, cacao, and tamarinds, among other varieties. *Erva-mate* (known in the United States as yerba maté or *Ilex paraguariensis*) and *cachaça*—fermented sugarcane juice—are the original beverages. In the south, *erva-mate* is prepared as a hot infusion and people drink it like tea; in Rio de Janeiro, people drink ice-cold mate. *Cachaça*, a distilled beverage made from

fermented sugarcane juice, differs from rum, which is made from molasses. *Cachaça* can be consumed pure and young, usually a white-colored beverage, or it can be aged and golden-colored. Today, the *cachaças* on the market vary from very plain ones to others aged in oak barrels in order to add a certain depth to their bouquet. They sometimes also have flavors added. But the favorite way of drinking them is as a summer drink with ice and fruit juices—they are called *batidas*. The combination of *cachaça* and fruit juice results in a typical cocktail called *caipirinha*, prepared with lime in its conventional flavor.

Caipirinha

1 small glass of the kind used for whiskey on the rocks

1 average-size lime

1 tsp sugar

Ice to fill the glass

40 mL (1.3 oz) *cachaça*

Cut the top and bottom of the lime off and then slice it into four equal wedges; remove the seeds and the rind; cut each one in half. Place them in the chosen glass with the pulp facing upward; sprinkle the sugar over them, and mash the two ingredients with a muddler to release the juice. Fill the glass with crushed ice, and pour the *cachaça* on top.

Special Occasions

Such a rich regional culinary tradition means that delicious and decoratively arranged food is served all over the country on special occasions. There are many religious feasts in Brazil, and very frequently saints' days and different religions' meaningful dates are celebrated by everyone. In the northeast and in the state of Minas Gerais, the São João (Saint John's Day) festivities last throughout the month of June, and special dishes made from fresh and young corn are served during these celebrations, since it is also its harvest time. Before the corn is dried, the kernels are baked in cakes; churned with cream for

ice cream; cooked into different porridges, called *curau*, some with hard batter and other softer and mixed with coconut; and fermented with water and sugar to be served as a beverage with a low alcohol content.

In Bahia, *caruru*, a stew made with okra, dried shrimp, peanuts, and pepper, is served in September to honor Cosmos and Damian; actually, these are a Roman Catholic representation of a spirit of the Afro-Brazilian religion, the Erês or Ibejis. In Bahia, where the African culinary influence is stronger, there is a series of stews with shrimp and fresh fish, called *moquecas*, which are traditionally served on Sunday lunch for family gatherings.

In the former capital of Rio de Janeiro, New Year's Eve is one of the biggest celebrations. A lentil salad, grapes, and pomegranates are served for good luck. It is also the occasion when the population near the sea honors Iemanjá, the Brazilian goddess of the sea, with gifts and songs at the beaches. Family festivities, celebratory dinners, birthday parties, and Sunday lunches follow the same ritual, when an array of sweet and salty dishes is served.

The most beloved sweet is usually served at children's parties, and adults and kids love it. It is a very small chocolate sweet, similar to a truffle, called the *brigadeiro*, meaning "air marshal." The name honors a former military officer who was a presidential candidate during the 1940s. This sweet is made with a mixture of chocolate and sweet condensed milk cooked until caramelized and then rolled into small balls.

Diet and Health

The Brazilian diet and consequently the population's health are guided by regional cultures and the different levels of economic development, which demonstrates a tremendous variation, although the country is one of the 10 most industrialized in the world. As Brazil's territory lies within several climate zones, there is not one single common diet, and there are also different food consumption levels, which depend on the highly heterogeneous availability of foods. People in the south plant extensive apple tree groves and will eat fruits and vegetables

of European origin, such as spinach, red beets, lettuce, and carrots, to name a few. In the northeast, where the climate is drier, fruit consumption tends to be low, with the exception of the local tropical fruits, such as the wonderfully scented *seriguelas*, *pitombas*, *graviolas* (soursop fruit), and cashews.

It is important to notice that fruits play a very significant role in the local diets due to the variety of the species, whether native or introduced in the last 500 years. The same cannot be said of vegetables. Large areas do not consume them as part of their everyday lives. There is instead a preference for starches: potatoes, cassava, sweet potatoes, and yams as a side dish. A significant part of the northeast lies in a semiarid zone, where the climate resembles that of a desert. The Amazon rain forest is the northernmost region, and the Amazon territory also includes part of the Pantanal, the vast area of wetlands with seasonal inundations. Each region has its own specific plants and animals, both native and immigrant populations. Eating habits were influenced by the farm production of the colonial period and evolved according to the migration of people within Brazil, a constant event in Brazil's history. For instance, maté tea, which is a beverage in the pampas, the region that lies on the border with Uruguay and Argentina, is also widely consumed in Roraima, which lies on the border of Venezuela. This is due to the migration of people from the south to the far north as they followed the expansion of soybean plantations.

The preference for a specific type of bean might vary according to the region, but beans, which are full of iron, vitamin B, and amino acids, are a staple food all over Brazil, even though they are prepared in many different ways. Manioc flour is also produced and consumed from north to south, on the seacoast and in the countryside. Manioc flour is used in different ways, in both sweet and savory dishes, much like rice.

The fact that core nourishment is based on cooked beans, either accompanied by meat or, in very hard times, served with cassava flour, made it possible to avoid huge famines from historical times. Unfortunately, today their consumption is diminishing, and a new dietary parameter is establishing itself, more

Tropical fruit being sold in the market. (Corel)

as a consequence of the country's urbanization and industrialization: high consumption of saturated fats and industrialized sugars, as well as a more

sedentary life, resulting in a lower consumption of fresh vegetables and fruits, which are replaced by small industrialized snacks that are leading to obesity. The local dishes are losing importance in everyday life and more and more are turning into restaurant fare, as in most places in the Western world.

Canada

Overview

Covering about 5.6 million square miles (almost 10 million square kilometers), Canada has the second-largest landmass of any country in the world. Its climatic and geographic variety is as vast as the land itself—mountainous terrain, great plains, three seacoasts (Atlantic, Pacific, and Arctic), fruitful valleys, and northern tundra. The food culture is likewise diverse.

The 2006 agricultural census indicates that only 1 percent of the nearly 33 million Canadians are involved in agriculture, working on approximately 230,000 farms. Over the course of the country's relatively short history, Canadians have slowly but steadily moved from the countryside to the city, a move that has impacted both what Canadians eat and how they produce it. The majority of the Canadian population can be found in the urban centers of southern Ontario, British Columbia, and western Quebec. As more people leave the bounty of the countryside for the bustle of the city, not only have eating patterns changed but farms have continued to grow in size to meet increasing demand.

Despite the changes that have occurred since Canada was founded in 1867, the Canada of today is strongly influenced by its colonial history: The French and British competed for eastern and central Canada—what is now Ontario through to the Atlantic provinces—beginning in the 1400s. The Treaty of Paris established British rule over what became New France (now Quebec) in 1763. British and French culinary traditions still strongly influence these areas and were adapted to the available foodstuffs of the regions. They were sometimes fused with the culinary

traditions of Canada's three indigenous peoples—the First Nations (as Native Americans are called in Canada), Inuit (formerly referred to as Eskimos), and Métis (those of mixed heritage now accorded aboriginal status, with a distinct culture).

Following colonization, years of immigration from the world over have led to an unusually diversified food culture. When the Germans arrived in Ontario, the Scottish in Nova Scotia, the French in Quebec, the Chinese in British Columbia, and the Ukrainians in Alberta, the bounty of the Canadian soil meant that their cultural and culinary traditions were adapted to the available ingredients, creating a unique nutritional and cultural milieu.

Food Culture Snapshot

Joan and Ken Craig live comfortably in Guelph, a bedroom community of 130,000 people west of Toronto, Canada's biggest city. Housing is expensive in Toronto; the average price in November 2009 for a home in Toronto was CDN\$420,000, compared to around CDN\$280,000 for Guelph, turning people such as Ken into commuters. Mass transit leading into Toronto from Guelph is underdeveloped, so Ken drives about an hour a day, depending on traffic. Financially, Joan and Ken are comfortable—he's a national marketing manager for an imported-auto manufacturer, earning CDN\$190,000 annually along with a company car. Joan works as an administrative assistant at the local university, earning CDN\$40,000 a year. They have two children, Lilly, age five, and Watson, age three.

Ken is usually harried, so his morning diet is often poor and built on fast food. Typically, he hits the main

highway into Toronto at 5:45 A.M., to avoid as much rush hour traffic as he can. Just before the on-ramp, he stops at a drive-through coffee shop called Tim Horton's—started by a famous Canadian hockey player—for a “double-double” (two spoonfuls of sugar, two portions of milk) American-style coffee and a blueberry or bran muffin, or a chocolate doughnut on Fridays as an end-of-the-week treat. That might be all he eats until noon, at which time he will have a ham or peanut butter sandwich he slapped together on whole-grain bread at home that morning. Or he will run across the street to a fast-food shop for a submarine sandwich or perhaps a lettuce salad with raspberry vinaigrette. Another coffee follows in the afternoon, around 2:30 P.M., likely from the office dispenser, and possibly a snack, such as a granola bar. Then at about 5:30–6 P.M. Ken fights traffic for at least another hour on the way home.

Joan, a lacto-ovo vegetarian, has the main food-preparation responsibilities. She can get an excellent selection of fruits and vegetables whether in or out of season (citrus, root vegetables, etc.) at any of the five major grocery stores in the city. She may go to the local health-food store for her whole grains, such as oatmeal and brown rice. But she may also run to discount stores, which have the fastest-rising market share. Joan will try to buy as much as a week's worth of food at a time, especially in the winter. It is not unusual for a city such as Guelph to get hit with a major snowstorm that shuts down the city for one to three days, and householders need to stock up.

Joan works five days a week, but she does not start until 8:30 A.M. and she is done at 4:30 P.M. sharp. So she often has time to get the kids from the daycare and still get home to cook something for supper, which they will eat around 6:30 P.M. One of the family's favorite dishes is Elora Road butternut squash soup, adapted from Anita Stewart's *Flavours of Canada*.

Elora Road Butternut Squash and Buttermilk Soup

Makes 6 to 8 Generous Servings

Butternut squash has deep orange-colored flesh. Buttercup or Hubbard squash may also be used. This

is such an intensely flavored autumn soup that it can be garnished with yogurt. The name comes from a road near where butternut squash are grown.

2 tbsp canola oil
 1 large onion
 2 cloves garlic, peeled and minced
 1 tbsp minced fresh ginger
 ½ tsp black mustard seeds
 1 tsp cumin seeds
 1 tbsp garam masala
 4 c diced butternut squash
 4 c chicken stock
 Salt and freshly ground pepper to taste
 2 small cobs of corn, husked or 1 c frozen corn
 1 sweet red pepper, seeded and minced
 1 c buttermilk or half and half cream (10%)
 Plain yogurt, as needed for garnish

Heat oil in a large soup pot over medium heat. Add onions, garlic, and ginger; cook and stir for 3–5 minutes or until beginning to turn golden. Add mustard seeds and cumin. Stir and cook for 30–60 seconds until the mustard seeds begin to pop. Add garam masala, and stir the entire mixture thoroughly for another 30 seconds. Stir in squash, tossing to coat with the spice mixture. Add chicken stock, cover, and bring to a boil. Reduce heat to low, simmering till squash is tender. Season to taste and remove from the heat. Let cool for 10 minutes before pureeing either with a hand blender or in a food processor. Return to medium heat. While soup is reheating, carefully cut kernels from the corn. Add to simmering soup with red pepper. Cook, covered, for 3–4 minutes. Stir in buttermilk or cream, and reheat till steaming.

Serve in heated soup bowls, topping with a spoonful of yogurt.

In some countries, vegetarians such as Joan would insist on organic produce. Canadians are less fussy. Canada was one of the first countries in the world to embrace genetically modified food. Here, organic

food's market share is growing, but it still accounts for just 2 percent of the total production.

On days when Joan is too busy to cook, she might pop a frozen pizza in the oven. In Canada, the demand for frozen pizza has skyrocketed since just before the new millennium, jumping more than 400 percent. That makes it the leading frozen food in Canada, in terms of growth. If the Craigs do have pizza, however, vegetarian Joan might have to pick hers apart: Pork-based ingredients take the top three positions as the most-menus sources of protein on pizzas. At the top of the list is bacon, which appears on 18 percent of offerings.

Major Foodstuffs

Food production is not important solely for meeting the demands of the domestic market; agricultural products are one of Canada's main exports, and food has always been vital to the economy. In 2006, the agricultural and agrifood system contributed almost CDN\$90 billion to the country's gross domestic product, or 8 percent of the Canadian economy. Its relevance is increasing. The agricultural and agrifood system has been growing at an average rate of 2.4 percent per year over the past decade. The sector employs more than two million individuals, representing almost 13 percent of Canadian active human resources and directly providing one in eight jobs.

The predominance of agriculture and food in the economy is all the more remarkable given that little more than 7 percent of the nation's landmass is used for agriculture. That is almost microscopic compared to a nation such as Britain, where nearly 70 percent of land is dedicated to agricultural production. The relatively low land-use percentage is, to a large extent, due to the Canadian climate, which varies considerably across the nation's large landmass, limiting the amount of arable land.

Canada's history also explains why very few truly local foods exist—in fact, most foods came from abroad and were planted in Canada's fertile soil. About a millennium ago, aboriginal peoples brought corn, beans, and squash from the south along the well-established, intricate trading routes that spanned North America. In turn, Canada's foodstuffs have

Saint John City Market (built in 1876), New Brunswick, Canada. (Jamie Roach | Dreamstime.com)

influenced international cuisine; Basque sailors harvested the Grand Banks off Newfoundland and took shore-salted cod home to France and Spain in the 1500s, offering the basis for regional specialties that can still be tasted in those nations today. In the 1800s, Canadian cheddar cheeses and Westphalian-style hams went back to Great Britain, and today, ingredients such as mustard, flour, and oils all head to Europe and Southeast Asia.

Canada is also the number-one producer of mixed grains, linseed, and oats and the second in blueberries, mustard seed, canola, and cranberries. That means fine Italian pastas are made with Canadian durum wheat (semolina). In fact, Ireland's Guinness beer is founded on Canadian malt barley.

Canada's agrifood system is best understood by breaking the country into five regions, moving from west to east: the province of British Columbia; the prairies (the provinces of Alberta, Saskatchewan, and Manitoba); Ontario and Quebec; the Atlantic

provinces (Prince Edward Island, Nova Scotia, New Brunswick, Newfoundland); and the northern territories (Yukon, Nunavut, and the Northwest Territories).

British Columbia

Situated on the beautiful Pacific shore, the food production of British Columbia reflects both its bountiful coast and fruitful interior. Foods originating from the coast include Pacific salmon, which has become a staple food in British Columbia since it was first harvested by the indigenous peoples of the region and, eventually, its settlers. Currently, farmed Atlantic salmon is relied on to meet the demand for British Columbian salmon, both domestically and internationally. Clams, oysters, and kelp are also farmed in the coastal waters of British Columbia.

Just west of the Rocky Mountain range, the Okanagan Valley provides an excellent climate for fruit production, including grapes. The Okanagan is at the heart of British Columbia's expanding viticulture industry. The Fraser Valley is also an important agricultural-production area, providing an ideal location for growing vegetables and berries and supporting the production of fresh milk, eggs, chickens, turkeys, and pork. Cow/calf operations are also common in the interior of British Columbia.

The Prairies

The provinces of Alberta, Saskatchewan, and Manitoba make up Canada's prairie region, the nation's breadbasket. The west was initially opened in Canada when the trans-Canada railway was constructed in the second half of the 19th century. The fertile grasslands of the southern prairies are contrasted with the fish-filled lakes of the north, which eventually give way to northern tundra. Despite the diversity of the prairie climate, it is the grasslands of the prairies that often characterize the region, supporting grain, oilseed, and wheat production, as well as cattle ranches. The cattle of today have replaced the great plains bison of yesteryear that sustained the indigenous populations for thousands of years

before large-scale bison drives eventually collapsed the population.

Canadian prairie farmers are one of the world's main producers of canola, a staple high-oil-yielding and nutritionally improved variant of rapeseed, developed in Canada, with reduced erucic acid. Canola production has become a cornerstone of Canadian agriculture and is used to produce oil low in saturated fat.

Canada is also one of the world's largest producers and exporters of pulses, the edible seeds of legumes, including dry peas, dry beans, lentils, chickpeas, and fava beans. The Canadian pulse and specialty-crop industry produces and exports more than CDN\$1 billion worth of products to thousands of customers in over 150 countries each year. About 75 percent of the Canadian pulse production is exported. Most of this production comes from Saskatchewan.

Ontario and Quebec

Like many Canadian provinces, Ontario is best analyzed with a north/south view, for nearly anything. For example, in Ontario's north, game hunting (deer, moose, ducks, and geese) is a way of life and sustenance, as the growing season is shorter. In contrast, the fertile soils of southern Ontario have been supporting agricultural production for more than a millennium. The Iroquois people had grown corn in what is now southwestern Ontario since 500 A.D. They expanded their agricultural production to include beans and squash in the centuries after their first crops were planted. Crops grown now in Ontario are varied and include soybeans (the biggest cash crop, with two million acres), corn, wheat, and a variety of legumes. Vegetable production is also strong, with asparagus opening the growing season. The fall harvest begins in September and includes root vegetables, squash, and corn, to name a few cultivars.

Within the province of Ontario is another of the nation's main fruit-producing regions—the Niagara Peninsula. Similar to the Okanagan, the Niagara Peninsula is a prime area for tree-fruit production

and is known for its plums, pears, peaches, apples, and grapes. Like the Okanagan, Niagara is one of the few areas in Canada that can support a substantial wine industry. Ice wine is a Canadian delicacy, and although it was first vinified in British Columbia, it has become one of Ontario's most widely recognized alcoholic beverages. To make it, grapes are allowed to ripen fully, then freeze on the vine. They are then pressed, and the juices are vinified, producing a sweet signature product for the Niagara Peninsula.

Another great Canadian signature food is maple syrup, which is made from the sap of the maple tree (the leaf of which is found on the Canadian flag). The sap is collected throughout the maple forests of eastern Canada but primarily in Quebec, where the food traditions are notably different and strongly influenced by the French settlers who came to Canada. Settlement occurred along the majestic Saint Lawrence River, with agricultural plots extending on either side of the river. Today, Quebec is home to a strong culinary tradition that has merged French cuisine with the available foodstuffs of the region. Situated on the Canadian Shield, the harsher climate and less-hospitable soil mean some of the staple crops grown in Ontario cannot be found

Held from April 2 to 6 in the Beauceron region of Quebec, the Beauceron Maple Festival celebrates the area's traditional production of maple syrup and includes stands that sell stacks of syrup-laden pancakes. (Corel)

throughout Quebec. Instead, Quebec is known for its unique ingredients and artisanal foods. Maple syrup production is still a strong cultural heritage, drawing many Quebecers to *les cabanes au sucre*, or sugar shacks, in the early spring. Dairy production is also important, and Quebec is well known for its yogurt production and artisan cheese makers. The eastern coast of Quebec, the Gaspé region, ushers in the Atlantic Ocean and is well known for its seafood, including lobster.

The Atlantic Provinces

Lobster is really the possession of the Atlantic provinces, but it is not as readily available as might be expected. The fisheries of the Atlantic provinces are strictly regulated to ensure fish stock sustainability. Conservation efforts have been only marginally successful. Fish, such as cod, have been mercilessly hauled out of the Atlantic, and the stock is significantly depleted.

Atlantic Canadians are great foragers and rely on the natural bounty of the earth, which includes berries, other wild fruits, and mushrooms. Fiddleheads are a special spring treat. Young ferns that have not unraveled and exposed their leaves are eagerly sought in May and June.

Northern Canada

Traditional farming is a challenge for much of the Canadian north as the growing season is short, or sometimes absent altogether. However, the long daylight hours in the summer months (the average is 20 hours, but some regions enjoy 24 hours of sun in the peak of the summer season) and sufficient frost-free days mean that the climate is favorable for growing short-season crops. That is especially true in the western regions of the northern territories, which are more hospitable to agriculture. But despite the ability to grow some grains, berries, and vegetables (often in greenhouses), agriculture in the Canadian north is mostly seen as an act of import substitution, as most of the food for the region's inhabitants is imported from the rest of Canada

and internationally. Local agriculture is a means by which to reduce the dependency on imports.

Other forms of agriculture, including wild game herding (such as caribou and musk ox), are also practiced. Food production is new to the north, which has been historically populated by small groups of aboriginal peoples, particularly the Inuit, who have their own food culture that includes hunting seal, whale, and game animals. Canada's governor general Michaëlle Jean caused an international stir when she obligingly ate raw seal heart, an Inuit tradition, on a visit to Nunavut in 2009.

Cooking

The Canadian culinary tradition of fusing international influence with local flare began with the first French in L'Acadie, in what is now known as Nova Scotia, and lives on today. The Acadians began harvesting *dulce* (seaweed), samphire (sea asparagus), and goose-tongue greens, as they once had done in France. Soon the dishes of old France began to appear on the maritime tables but with a twist: The flour was the maritimers', the vegetables were grown on small farms, and the meat was slaughtered communally.

Despite the proliferation of regional cuisine and all its intricacies, there is only one cooking method that is indigenous to Canada—that is, the bentwood box on the north coast of British Columbia. Planks of cedar are notched, soaked, and bent before being lashed to form a tight cooking vessel. Four to five hours before cooking, a fire is lit, and rocks are placed into it. The hot rocks are then picked up with a split alder branch and placed into the water-filled box; seafood is added—prawns, scallops, clams, chunks of halibut or salmon—and a woven mat is placed over it to hold in the steam.

Otherwise, Canadians roast, boil, bake, stir-fry, microwave, pickle, freeze, preserve, pit cook, and barbecue ad infinitum. During the Canadian growing season (between April and September, depending on the region) a great plethora of grains, fruits, and vegetables are produced. The Canadian winter demands that the bounty of the growing season be saved for survival over the long winter months.

Before the increased globalization of food trade, Canadians stayed fed all year round by tapping into prepared preserves. Canning is a great Canadian tradition in which the summer's fruits and vegetables are preserved for storage over winter. Pickled beets, beans, and cucumbers, as well as canned peaches, pears, apples, apricots, and tomatoes, meant that the Canadian pioneer would have a supply of fruits and vegetables over the long winter months.

While the plight of Canadian settlers is long past, remnants of their food culture persist today. Typical Canadian kitchens are set up for food storage and cooking that reflects the tendency to hoard food for survival. Canadians typically buy groceries to last for several days, meaning most kitchens are equipped to handle long-term food storage, including a large refrigerator, freezer, and cupboard space for dried goods. Most food is cooked either

Two women preparing fruit to can in New Brunswick, Canada. (Alanpoulson | Dreamstime.com)

on an electric or gas stovetop or in the oven, or it is warmed up in the microwave. With constant food availability, fewer Canadians use fruit cellars (a cool, dry room, usually in the basement) where preserves and vegetables were typically stored in the winter months. Canadians now expect a great variety of fresh fruits and vegetables to be available all year. Imported fruits and vegetables come from progressively further away as the winter wears on: tomatoes from California, then Mexico, and apples from Canada, then the southern United States, and, finally, New Zealand. In 2005 the Food and Agriculture Organization ranked Canada 12th among importing nations, bringing in more than CDN\$15.5 billion of food into the country that year. But the bounty of Canada was shipped internationally as well. In the same report, the Food and Agriculture Organization ranked Canada 9th among exporting nations, sending CDN\$21 billion outside its borders.

The increased globalization of food has had far-reaching consequences in Canada. Some Canadians argue that it has resulted in a homogenization of food, as processing increases and taste decreases. Environmental concerns regarding the distance food needs to travel to make it to people's plates, and the resulting mental separation between the individual and the origin of the food, have contributed to a growing grassroots movement to reassess existing food systems. A manifestation of this reassessment is the burgeoning eat-local movement, sometimes called the 100-mile diet.

Typical Meals

Canadians mostly eat three meals a day: breakfast, lunch, and dinner ("supper"). While the meal structure is reasonably consistent, there is little uniformity regarding what is actually found on any given Canadian's plate. The Canadian Food Guide recommends that available foods be broken down into four categories: vegetables and fruit, grain products, milk and alternatives, and meat and alternatives. Canadians are encouraged to eat a balanced diet with a focus on fresh fruit and vegetables as well as whole grains and low-fat, low-sugar options.

However, there is a growing disparity between what is recommended, and Canadians' eating habits. For example, there is a strong emphasis on fresh fruits and vegetables, but many Canadians eat a high percentage of processed foods. The Canadian food- and beverage-processing industry had sales of approximately CDN\$78 billion in 2006, with CDN\$68 billion accounting for food purchases alone.

Breakfast is typically eaten in the early morning before the beginning of the workday. It usually involves a cereal or grain of some kind—either processed or cooked—as well as fruit, yogurt, or eggs. A hot drink, such as coffee or tea, usually accompanies the meal. On weekends, brunch (a late breakfast combined with lunch) is popular. Hearty meals are always in vogue such as a combination of fried eggs, sausage or bacon, toast, pancakes, and/or fruit.

The changing socioeconomic terrain means that many Canadians are working longer hours in offices than ever before. This often results in a quick lunch that is eaten out or packed to take to work. For most Canadians, lunch is a light meal, and the emphasis is placed on dinner. Dinner is usually eaten at the end of the workday, between 6 and 7 P.M.

Vegetarianism is on the rise in Canada, with approximately 4 percent of the population following a vegetarian lifestyle. While the cultural diversity of Canada guarantees that some of the vegetarian choices are based on religious reasons, much of the vegetarian population has made changes based on lifestyle and moral concerns.

Eating Out

The history of Canadian restaurant culture reflects the country's history and liberal immigration policy, which has long encouraged and invited newcomers. The variety of cuisine available reflects the nation's diversity—Italian, Chinese, Greek, East Indian, Thai, Vietnamese, and more can all be found. British Columbians eat out the most. The province has 27.3 food-service locations per 10,000 inhabitants, compared to the national average of 25.2. At the other end of the scale is Manitoba,

with 18.2 units per 10,000 people, the lowest in Canada.

The local-food movement is sparking some dining activity. One of the best examples in Canada is the Borealis Grille in Guelph, with its commitment to local foods and beverages. Chefs try to source more than 95 percent of the food from Ontario. Steaks, flatbreads, fish, pasta, and barbecue items make up the main menu. Olive oil has been replaced by cold-pressed soy, canola, and sunflower oils from the province. The beverage selection is almost exclusively local. The wines are predominantly Ontario VQA with some Okanagan wines and a few brands from the United States and South America to round out the list. All the draft beers are microbrewed within a 100-kilometer (62.1-mile) radius.

Despite the growing market for locally sourced restaurants, some ingredient providers are at loggerheads with buyers. For example, the Canadian Restaurant and Food Services Association, a lobby group, is pushing hard against a long-standing and highly political Canadian tradition called supply management, which it says distorts food prices, especially dairy, and exaggerates the price of restaurant meals. Under supply management, the amount of milk, poultry, and eggs that can be produced and their price are tightly controlled by legislation, as are imports of these commodities. Farmers say border protection is necessary; otherwise, they will get swamped by imports. They argue that cheap food is not necessarily safe food. For their part, Canadians do not seem to mind paying more for peace of mind and supporting Canadian farmers.

Special Occasions

Canadian diversity means that nationally celebrated feasts are few and far between; however, there are a couple notable celebrations that attract the participation of a large number of Canadians. Thanksgiving (the second Monday in October) and Christmas (December 25) are the main culinary-related holidays in Canada, usually recognized from a culinary perspective with a feast centered on roast turkey. For birthdays, people normally get a birthday cake. The same goes for weddings. Owing to Canada's multicultural nature, many other religious, secular, and ethnic holidays are also recognized, many with their own food traditions.

A food-related event called the World's Longest Barbecue, which is expanding into Food Day Canada, dubbed "a coast to coast to coast celebration of great regional foods," is informally recognized on the first weekend in August, traditionally a national holiday in Canada (Civic Holiday). The barbecue started in 2003 to help beef farmers rebound after an animal with bovine spongiform encephalopathy was found among the Canadian herd, prompting the United States, Canada's biggest trading partner, to close the border. Now, tens of thousands of Canadians light their grills on that weekend in support of farmers and Canadian food.

Diet and Health

Canadians have a culture of eating "pioneer" food—high protein, high fat, high carbohydrates—and lots of it. This pattern dates back to the relatively recent settling of the land, and the hard-working rural and farm population. Now, only a fraction—less than 1 percent—of the population lives on farms. But some Canadians eat as if they still routinely drove a horse-drawn plow (which they do not).

Health Canada, a branch of the Canadian government, is entrusted with Canadians' good food and nutrition. The Canadian government calls maintaining the safety of the country's food supply a "shared responsibility" among government, industry, and consumers, based on what it calls evidence-based nutrition policies and standards. These policies and

standards are reflected in Canada's Food Guide. The guide makes recommendations by suggesting food options rather than daily allowances of nutrients. Offering choices from four basic food groups is intended to supply Canadians with the proper intake of nutrients, but it does not account for the specific needs of all individuals, such as women who need more iron.

Furthermore, Health Canada recommends to Canadian consumers that they eat at least one dark green and one orange vegetable each day; have vegetables and fruit more often than juice; make at least half of grain products whole grain each day; drink skim, 1 percent, or 2 percent milk each day; have meat alternatives such as beans, lentils, and tofu often; eat at least two Food Guide servings of fish each week; include a small amount of unsaturated fat each day; and, lastly, satisfy their thirst with water. These messages do not seem to be getting through to the public, though.

Despite—or perhaps because of—Canadians' limited adherence to health precepts, new crops aimed at better health are constantly being monitored, trialed, and introduced into the food system. Value-added crops continue to be an area of exciting development, particularly those with health benefits. For example, Canadian-grown oilseeds such as canola, sunflower, and flax are known today for their health benefits, and the industry has successfully developed a strong market based on these qualities. Canola was developed in Canada and is often the nation's most valuable crop, with annual exports of canola seed, oil, and meal valued at more than CDN\$3 billion. Canola is an achievement of Canada's research community and is a testament to how responding to consumer demands for quality and nutrition pays big dividends over time. Canadian wheat is renowned the world over for its quality as well. Looking into the future, an organization called the Advanced Foods and Materials Network is Canada's front line of research and development in the area of advanced foods and biomaterials, including improved frozen-food quality and reduced salt intake.

Chile

Overview

The Republic of Chile has 15 provinces; it stretches 2,640 miles in length but is little more than 100 miles wide, and it is bordered by the Pacific Ocean and the Andes range. Its geographic extremes range from the Atacama Desert, the Earth's driest place, to the fertile Central Valley, from where produce and wines are shipped around the world, to the south, where volcanoes and virgin forests give way to Patagonia's glaciers and Antarctica. Stories vary as to the origin of the country's name. *Chile* may refer to an Inca word, to a Peruvian valley, or to indigenous Mapuche Indians' word *chilli*, possibly translated "where the land ends."

About 85 percent of Chile's 16 million people live in its Central Valley, and almost a third of those live in Santiago, the capital. About two-thirds of Chileans claim mixed indigenous and European descent. The indigenous Mapuche make up about 10 percent of the country's population and are among the poorest of Chileans.

Allowing for some regional specialties, the same foods are enjoyed and the same eating habits are practiced throughout the country. There's an abundance of seafood from the country's endless coastline, and beef, pork, and chicken are popular. The produce is excellent and plentiful. Chile's thriving wine industry continues to expand to new areas.

Chile's oldest cooking traditions come from the Incas, whose agriculture and irrigation methods in turn influenced the Mapuche. The Spanish intermarried freely with the indigenous cultures from their arrival in the 1500s and contributed their

eating habits and some foods to the cuisine. In the following centuries, French cooking techniques were embraced, as was the food influence of those who came from Britain, Germany, Italy, and other countries.

Food Culture Snapshot

Juan and Cynthia live in Santiago's upscale suburb of Barrio Los Condes. Juan works in his family's fruit export business. Cynthia is a housewife. They have two children, ages 8 and 12. Juan's family history has British roots that date back to the early 1800s, mixed with both Indian and Spanish ancestry from the 1500s and before. Cynthia is from the south of Chile, where her family's German ancestors settled in the late 19th century.

Cynthia shops several times a week in both the nearby supermarket and the *feria*, the open-air markets. Daily meals are planned around fish (shrimp, mussels, and conger eel, as well as farm-raised salmon), beef, or chicken, served alone and in soups and stews, often with rice or mashed potatoes and fresh vegetables, especially salads with lettuces, avocados, tomatoes, carrots, green beans, and others. Cynthia serves such fresh fruit as apricots, peaches, cherries, plums, *lúcuma* (a fist-sized green or yellowish fruit with a big brown pit), pears, grapes, strawberries, and cherimoyas, which grow in abundance in Chile's Central Valley. Fruit is served at every meal except breakfast, alone or with pudding or cake for dessert.

During the week, the family eats breakfast together. Juan eats the midday meal out with business associates, and the children eat lunch at school. Cynthia has a sandwich or salad at home. When the children return from school, Cynthia sits down with them for *onces*, a light teatime snack. Cynthia and Juan have a maid who comes in daily to help prepare meals and do household work. The family eats together in the early evening. Occasionally, Cynthia and Juan go out for dinner out about 9:30 in the evening.

On weekends, *almuerzo*, the midday meal, is a relaxed dinner, sometimes consisting of several courses. Often, they invite their siblings and their families or friends, or they join them as guests. Guests may be invited for weekend *onces*, a heartier version of the weekday snack, including a selection of pastries, as well as bread and cheese, desserts, and tea and coffee.

Major Foodstuffs

Chilean cooking draws on thousands of years of food traditions. The rugged *altiplano* in Chile's

north is still home to the Aymara and Atacama Indians, who herd llamas, alpaca, and sheep in the high desert adjacent to Bolivia and Peru and grow potatoes, quinoa, and barley. Today, quality olive oil and Chile's famous *pisco* (distilled alcohol) come from this region.

In the south, the Mapuche cook from the ancient food trilogy of potatoes, corn, and beans. The Mapuche also raise livestock and gather the *piñon*, the pine-cone seed of the *araucaria*, or monkey puzzle tree. These ingredients, as well as squash, the grain quinoa, and chilies, are found in many of Chile's most popular modern dishes; the style is called *Chile Criolla*. Chilean Creole cuisine grew out of the melding of Spanish and indigenous foods and cooking methods.

The Spanish introduced grapes, citrus and other fruits, olives, nuts, rice, sugar, and garlic to Chile, as well as chicken, cattle, sheep, pigs, and rabbits. Milk, cheese, and chorizo were all Spanish contributions. Spanish food had already been influenced by medieval Moorish cuisine when the Spanish arrived in Chile in the 1500s. The fried bread *sopaipilla*, made with pumpkin and lard, has Arab pastries as its ancestor, for example.

Fruits and vegetables in Chile, largely grown in the Central Valley, are of the best quality and widely available throughout the country. Grapes, plums, apples, cherries, peaches, nectarines, berries, and avocados are diet staples. Native Andean fruits include *cherimoya*, the custard apple; *lúcuma*, a fruit with orange flesh, a sweet aroma, and a slightly bitter-sweet flavor that is pureed for creamy fillings and ice cream; and the *pepino dulce*, related to the tomato but with a mild melon flavor. The modern strawberry has a berry ancestor native to Chile.

The country's unusual geography means that fresh fish and seafood are never more than 100 miles away from most of the population. However, it's bread that the Chileans eat most often, about 200 pounds per person per year, second only to the Germans worldwide. About 80 percent of the bread is purchased fresh daily from bakeries, often carried warm from the shop. Fresh bread is the basis of breakfast and of the late-afternoon *onces*. Pasta is a diet staple in Chile. Rice is eaten less often.

Fish and seafood choices abound in Chile. Paleontologists have found and studied piles of shells from ancient meals of clams, abalones, and mussels, dating back 12,000 to 14,000 years. The diversity of Chilean fish and seafood is owed to the Humboldt Current, which carries frigid water from Antarctica northward along the west coast of South America. Chileans enjoy *centolla* (the king crab), *albacora* (albacore tuna), *pejerreyes* (whiting), *bacalao* (cod), *róbalo* (haddock), *merluza* (hake), *almejas* (clams), *choritos* (sea barnacles), *erizo* (sea urchin), and *jurel* (mackerel). Among the species distinct to Chile are *machas* (clams), *congrío* (conger eel), *cholgás* (mussels), and *locos* (Chilean abalones).

Fish is an important export, both as whole fish and as processed fishmeal. Salmon and trout are farmed intensively in southern Chile, raising concerns about disease and pollution, even while Chile has become the second-largest exporter of salmon worldwide after Norway. *Corvina* (Chilean sea bass) has been overfished to the point of concern about extinction.

Seaweed has been eaten in Chile for as long as seafood has. Seaweed varieties are nutritional powerhouses, being excellent sources of iodine, iron, protein, and such trace elements as cobalt copper, and manganese. Traditionally, seaweed was an inexpensive meat substitute. The variety *chochayuyo* grows up to 50 feet long among the coastal rocks and is a substitute for meat in the stew *charquicán*, which is renamed *charquicán de chochayuyo* when made with seaweed.

Grass-fed Chilean beef is leaner and less tender than the beef raised across the border in Argentina. Beef, pork, and chicken often are grilled or used as the basis for soups and stews. In southern Chile, there are excellent hams and sausages, a result of the area's German food traditions. Patagonian lamb is prized for its flavor due to the grass varieties on which the sheep graze. Chile's most popular cheese is the semihard, ripened *chanco*, known for its sour-salty flavor and tiny holes. It accounts for half of all the cheese sold in the country.

The traditional indigenous tea, *maté*, is served in a special cup with a filtered straw designed especially for the drink. The cup's shape is based on the

gourds that people used for the drink hundreds of years ago. Yerba *maté*'s dried green leaves are high in vitamin C and antioxidants. The drink is enjoyed throughout South America, in Brazil, Argentina, Paraguay, and Uruguay, as well as in Chile.

Chilean cuisine has several ingredients, spices, and seasonings distinct to the country. Caramelized sweetened condensed milk, *manjar*, is spread on bread and poured over fruit. The Mapuche spice *merquén* (*merken*) is enjoying a resurgence in contemporary dishes as chefs and home cooks find new ways to use this mixture of dried, smoked chilies, cumin, coriander, and salt. Chili peppers are used in Chilean cooking but only lightly. The cuisine is not spicy hot, though the ground, hot Andean chili pepper, *ají*, is a common ingredient but in small amounts. *Ají de color* is Chile's paprika and a necessary ingredient in the traditional dishes. Chileans serve the salsa *pebre* in restaurants and at home with empanadas, sopaipillas, scrambled eggs, and grilled chorizo. In short, *pebre*'s combination of finely chopped garlic, chilies, onions, cilantro, salt, oregano, vinegar or lemon juice, and tomatoes goes with everything.

Wines

Long before the Spanish arrived, the Mapuche and other indigenous people made fermented beverages from fruit, potatoes, and the grains corn and quinoa. The Mapuche called it *chichi*. Today, it's made from lightly fermented grapes or apples and widely drunk in rural areas and for Chilean Independence Day.

A Spanish priest planted the first vineyard in Chile in 1548 to fulfill the sacramental need for wine. Wine production grew far beyond the needs of the Catholic Church, and wine was even exported to Peru and Mexico during colonization. Chile's ideal combination of hot, sunny summers, frost-free winters, good soils, and optimum humidity proved to be splendid; it is now considered one of the best wine-growing regions in the world.

Spanish grapes gave way to French vines in 1851, with more sophisticated wines resulting from the Old World Cabernet Sauvignon, Cot (Malbec),

Foods typically found in Chile including cazuela, bread, fruit, and pebre. (Ene | Dreamstime.com)

Merlot, Pinot Noir, Sauvignon Blanc, Sémillon, and Riesling varieties. By the late 1800s, Chilean wines won acclaim in Europe as the vineyards thrived. When the tiny phylloxera aphid infested and destroyed the original plants in France, Chile's geographic isolation proved an advantage, leaving its vineyards untouched. The industry was further aided when French, Italian, and Spanish winemakers brought their expertise to Chile as immigrants in the late 1800s. Chilean winemaking stagnated under political constraints in the mid-20th century.

In 1979 a Spanish winery introduced state-of-the-art winemaking technology. When democracy returned to Chile in 1990, the wine industry was poised for innovation and success. There are at least dozen wine-growing valleys in Chile, the newest just a few miles from the Pacific Ocean. In the 1990s DNA testing proved that one grape variety considered to be Merlot was actually Carmenère, a grape believed lost in the aphid devastation a century

earlier. A further distinction for Chilean wines is research that has shown that its Cabernet Sauvignon has the highest levels in the world of antioxidant flavonols, which have a protective effect against heart disease.

Another Chilean signature, also claimed by Peru, is pisco, the basis for the cocktail *pisco sour*. Named for a pre-Incan bird, pisco has been produced since the 1500s, at first from the inferior grapes not used for wine. Peru's pisco, generally, has a more refined flavor. Chile's robust, clear, brandy-like liquor is produced from Muscat, Torontel, and Pedro Jiménez varieties in the microclimate valleys of the Atacama Desert and Coquimbo. Chileans and Peruvians both claim, as well, the cocktail pisco sour, made by blending pisco, lemon juice, powdered sugar, and ice. Finally, Chile has a wealth of *bajativos*, liqueurs made from the whole range of Chilean fruits: raspberries, strawberries, blackberries, peaches, plums, and even celery. These after-dinner drinks are meant to be sipped and aid digestion.

Cooking

Chileans have modern kitchens separate from the dining area. Middle- and upper-class families hire household help, who may do the cooking with or without added help from the woman of the house. Kitchens have gas or electric ranges with ovens; only upscale homes have dishwashers. Kitchens are stocked with the pots and pans that are familiar to North Americans.

Common cooking techniques are roasting, baking, stewing, and frying. Knives are kept sharp for chopping fresh vegetables for the variety of Chilean salads. Small kitchen appliances such as food processors are uncommon. However, green beans have their own tool, a tiny hand-held gadget that shreds a single bean at a time.

An *asado* (roast) is a relaxed outdoor meal in Chile. The open gas or charcoal grills are the man's domain. Chilean asado calls for large, boneless cuts of meat and long cooking times. *Choripán*, literally *chorizo en pan*, or sausages in bread, are grilled alongside the meat and served while the main-dish meat cooks.

Typical Meals

Chileans' daily eating habits are much more alike than the dramatically diverse geography of the country would suggest. Chileans eat three to four meals a day, starting with *desayuno* (breakfast), followed by the day's large midday meal, *almuerzo* (lunch), *onces* (afternoon tea), and *la cena* (supper) in the evening. Evening restaurant dining is always late, about 9:30 P.M.

Desayuno is built around bread, either rolls or toast, often warm from the bakery and eaten with cheese, butter, and thick fruit jams. The most popular bread in Chile is *marraqueta*, also known as *pan batido*, a French-style roll with a fold in the middle. It has a soft center and medium crust. Dimpled rolls called *hallalás* are a richer version of the same white-flour bread but made with lard. When bread is made at home, *pan amasado* is the classic recipe. Even one of Chile's national dishes is bread based. The meat-filled empanada uses tender yeast dough as the wrapping. Fruit is not universal at breakfast. Across a range of backgrounds, fruit is considered detrimental to digestion in the morning if eaten with milk products.

Chileans drink coffee or tea with breakfast and for afternoon tea, as well as after meals. Chileans' coffee of choice is instant Nescafé, usually prepared with hot milk and served as *café con leche*. When Nescafé was introduced in Chile in the 1970s, it became an instant hit as a large number of people chose it over brewed coffee, now called *café-café*. Brewed coffee is available in the growing number of coffee shops, including international chains, as well as upon request in restaurants.

Traditionally, the midday meal has been the centerpiece of an afternoon break from school and work between 1 and 4 P.M., allowing time for a leisurely lunch and a nap. Urban dwellers in Santiago and increasingly in Valparaíso have adopted a schedule that omits the afternoon break. Children eat lunch at school, and working Chileans eat *almuerzo* away from home. The tradition continues in smaller cities and in rural areas during the week. In urban centers on weekends, *almuerzo* remains a relaxed break in the day.

Families sit together at the table for the meal. Meals can be relaxed or served in several courses, including an *entrada* (appetizer), perhaps *sopa* (soup) or pasta before the *plato de fondo*, a hearty main course with meat or fish, followed by a *postre* (dessert) and coffee or tea. Wine may be served with the meal and a *bajativo* (liqueur) afterward.

Main dishes are as simple as grilled fish or meat or a casserole or stew. *Chile Criolla* dishes are popular for family meals. *Pastel de choclo* is a classic with its layer of *pino* (seasoned beef filling laced with raisins, olives, and quartered hard-boiled eggs) and whole pieces of chicken topped with sugar-crusted corn pudding. Chile's empanadas may be baked or fried and filled with *pino*, seafood, or cheese. The chicken soup called *cazuela de gallina* is filled with chicken, potatoes, and pumpkin. Chile's tamale is called *humita*. The bean dish *porotos granados* is made with dried beans, pumpkin, corn, garlic, and onions.

Pastel de Choclo

Serves 8–10

6–8 medium ears corn on the cob, or 3½ c fresh or frozen, defrosted corn kernels

4 tbsp butter

¼ c milk

2 eggs

8 basil leaves, thinly sliced

4 tbsp vegetable oil, divided

1 lb boneless chicken breasts, cut in 3-in. pieces

Salt and pepper to taste

1 lb very lean ground beef

2 medium onions, chopped

2–3 cloves garlic, minced

2 tsp paprika

1–2 tsp ground cumin

1 tsp salt

½ tsp ground black pepper

¼ c raisins, soaked in hot water for 20 minutes and drained

- 12 black olives
- 2 hard-boiled eggs, quartered
- ¼ c confectioners' sugar

If using corn on the cob, grate corn into a bowl. Or process corn kernels in batches in a food processor. In a medium saucepan, heat butter and milk, add corn, and cook over medium heat until mixture boils and thickens, about 5 minutes. Remove from heat. Whisk the eggs in a bowl. Spoon a few tablespoons of the warm liquid into the eggs and whisk again. Then stir into the corn mixture, all at once, along with the basil leaves. Stir until thickened and bubbly, about 7 minutes. Set aside.

In a large skillet, heat 1 to 2 tablespoons oil, add chicken, seasoned with salt and pepper to taste, and sauté over medium heat until browned on all sides and cooked through, about 15 minutes. Remove and keep warm.

In the same skillet, heat 1 to 2 tablespoons of the remaining oil. Add ground beef and cook until lightly browned. Drain if necessary. Stir in onions and cook until translucent. Stir in garlic, paprika, cumin, salt, pepper, raisins, and olives, and let cook about 5 minutes to blend flavors.

To assemble: Place beef filling in a 3-quart casserole and press chicken into filling. Distribute hard-boiled eggs over the surface. Top with the corn pudding to seal the edges. Sift confectioners' sugar over the top. Place in a 350°F oven and bake for 30 to 40 minutes or until golden brown and bubbly.

Chile's seafood inspired the Nobel Laureate Pablo Neruda to write "Ode to Conger Chowder" in honor of *caldillo congrio*, with its oniony-tomato broth. *Chupe de mariscos* is a rich casserole of shellfish baked with bread and cheese. Chilean clams are enjoyed baked as *machas de la Parmesana*. The seafood platter *mariscal* joins a selection of fresh seafood with an irresistible chopped green sauce of green onion, cilantro, parsley, chilies, and salt.

Chile's fresh vegetables are as ubiquitous as its fruits and often served as salads. Chile's signature salad, *ensalada Chilena*, is simply fresh tomatoes and slices of onion dressed with oil and vinegar

and a sprinkle of cilantro or parsley and salt and pepper.

Desserts often feature Chile's wonderful fruits. One of the simple favorites is sliced bananas, apples, or peaches with either sweetened condensed milk or the caramelized version called *manjar*. Other fruit desserts include ice cream, compotes, baked flan (custard) mixed with fruits, and crisp meringues topped with fruit and whipped cream.

The late-afternoon *onces* ranges from a quick snack after school to a more substantial meal including bread, cheese, meats, butter, and jam, along with hot chocolate, *maté*, *café con leche*, or tea. A hearty *onces* may be the day's final meal. For a home evening meal, Chileans have vegetable salads, pizza, pasta, *empanadas*, or lighter fish, meat, or chicken dishes. Fruit, again, is dessert.

In the Andean highlands, the regional specialty is *charqui*, dried meat, from llamas, goats, or cattle. The English name *jerky* for dried, seasoned meat comes from *charqui*, coined by the Spanish. The stew of vegetables and jerky called *charquicán* is considered a Chilean original.

Residents of Chiloé, an island in the south of Chile, keep alive an outdoor seafood bake tradition called *curanto*, similar to a New England clambake and many Native American earth oven traditions. The process starts with stones, spread in a hole in the ground and covered with a blazing wood fire. Once the stones are hot, the cook assembles layers of *nalca* (Chilean rhubarb) or cabbage leaves,

Typical Chilean dish named *curanto*, based on shellfish. (Francisco Javier Espuny | Dreamstime.com)

chorizo, mussels, clams or other seafood, pork chops, chicken legs, potatoes, other vegetables, and the dense potato-wheat bread called *chapaleles*, finishing with a layer of leaves before covering it with earth to seal in the heat while the food cooks. Cooks steam smaller proportions in a pot on the rangetop.

Eating Out

In the mid-19th century wealthy Chileans brought French chefs to cook for their families. Later the chefs opened restaurants. Santiago's elegant Restaurant del Hotel Crillon embodied the ideal led by Chef Carlos Aranda, who published a cookbook in 1951. The introduction promises foods from the "heroic land" of the Three Musketeers including cassoulet, coq au vin, and *tripes a la mode*.

French and Continental European influence dominated Chilean restaurants until recently. While those traditions continue in high-end places, Chile's economic prosperity has fueled a wider restaurant bonanza especially in Santiago and Valparaiso. To the benefit of both adventurous chefs and appreciative diners, creative cuisine is thriving in Chile alongside the quality of its wines.

Many Peruvians have immigrated to Chile during the economic expansion and have opened restaurants featuring a cuisine that is one of the world's oldest and most diverse. The restaurants are among Santiago's most popular, ranging from inexpensive to highly sophisticated. Chilean Peruvian food tends to be less spicy than in Peru. Celebrated *cebiche*, citrus-marinated fish laced with onions and seasonings, comes in many forms. The potato holds a place of honor in Peruvian cooking in such dishes as *causa rellena*, yellow potatoes mashed with lime and hot pepper and stuffed with chicken or fish. Diners love *lomo saltado*: sautéed beef with onions, tomatoes, and chilies over French fries. *Suspiro limeño* is a meringue-topped vanilla custard.

Chilean *parrilladas* are grill restaurants offering meats, sweetbreads, and sausages cooked over an open fire. They are another restaurant category that ranges from the cheap to the most expensive ones, which feature seared meats or fish over foie gras. In

the middle range, Italian and Middle Eastern restaurants are abundant, as are Cantonese Chinese places. There are a growing number of Japanese, Southeast Asian, Indian, and Korean restaurants as well.

Renewed interest in indigenous foods and the *Chile Criolla* tradition is influencing the country's chefs. Chefs from a selection of the country's restaurants are promoting Chilean food products abroad, and their energy, in turn, is bringing fresh interpretations back to familiar dishes. The *picadas* (small joints) are the places to find such home cooking as *arrollado* (pork roll) and delicious *cazuelas* (stews). Then there's the famous pork sandwich, *lomoito*: slow-cooked, marinated pork with avocado, tomato, and mayo, and even cheese and sauerkraut, piled high on a six-inch-wide bun.

Locals still eat at the *picadas* in Santiago's Central Market, operated continuously since 1872 in a classic art nouveau structure. The market has seafood restaurants and stalls selling fresh fish, fruits, vegetables, free-range poultry, goat cheese, local olives, and Chilean wine. Markets with good food for diners and shoppers are found elsewhere in Santiago and the length of Chile in the larger cities. Valparaiso has the Cardonal and Bombay Port, La Serena's market is called Revoca, and Angelmo is near Puerto Montt. Temuco, the heart of Mapuche culture, has the Municipal Market. Markets are also found in Coquimbo, Chillan, Concepción, and other cities of size.

In general, restaurant diners find salt but not pepper on restaurant tables. Usually, there's a cruet of vegetable oil to drizzle on potatoes and other side dishes. Salads are dressed simply with vegetable oil and vinegar or lemon juice. Many restaurants provide two napkins: one for the lap, the other for daubing the mouth during dining.

Special Occasions

The highlights of the national Chilean calendar are Christmas, New Year's, and September 18, Chilean Independence Day. Fiesta Patrias commemorates Chile's 1810 independence from Spain. The official date is September 18, but in reality, the celebrations

go on for a week or more in homes and in fairs set up across the width and length of the country. The holiday centers around the asado, the outdoor barbecue, and the foods highlight the indigenous-Spanish Chile Criolla traditions. Menus feature empanadas, the meat pies filled with meats, seafood, or cheese; choripán, grilled sausage on a French roll; *anticuchos*, skewers of grilled beef, pork, chicken, and onions; bowls of pastel de choclo; and even whole roasted pig and lamb. For dessert there's *mote con huesillo*, a drink made of wheat berries and dried peaches. Chileans wash it all down with wine, beer, the lightly alcoholic *chicha*, soft drinks, coffee, and tea.

Chile remains largely a Catholic country, if a less strictly observant one than during much of its 450-year history. Christmas is a warm-weather holiday with beach vacations. The cultural symbols have been adapted from the Northern Hemisphere including nativity scenes of the Holy Family, Christmas trees, and snow suggested by puffs of cotton. Children anticipate the arrival of the *Viejito Pascuero* (Old Man Christmas) in full costume by reindeer-drawn sleigh. The bearer of gifts enters homes through the window instead of the chimney.

On December 24, families gather for midnight mass. Then, the holiday feasting begins, which may include roast turkey, beef, or chicken, or salmon or shrimp, accompanied by fresh vegetable salads, potatoes, tomatoes, avocados, peas, carrots, celery, green beans, and, of course, fresh bread. Chile's Christmas bread is *pan de Pascua*, packed with nuts, raisins, candied fruit, and spices. It resembles Italian panettone. In the south of Chile, there's always the German Christmas bread, stollen. While children open presents, the adults share glasses of *cola de mono* ("monkey's tail"), a rum- and milk-soaked coffee drink, served cold with a cinnamon stick. Holiday desserts range from *buche de noel* (Yule log cake) and Black Forest cake to layered meringue cakes filled with creamy cherimoya, raspberry, or lúcuma fillings. Strawberries, blueberries, and raspberries are stirred into mousse and layered into trifles.

A week later, families celebrate *Feliz Año Nuevo*. Traditionally, serving lentil stew with chorizo or

lentil soup brings good luck for the coming year. Besides wine, Chileans toast with wine-and-fruit mixtures such as *borgoña* (red wine with strawberries) or white wine with peaches, ending with *bajativos*, the after-dinner liqueurs made from Chile's endless selection of fruits.

In addition to birthdays, saint's days have traditionally been celebrated in Chile. A saint's day notes the birth date of a saint in the Catholic Church. For example, Saint Francis was born on October 3, and that is the saint's day for those named Francisco or Francesca. When families gather in honor of a birthday or saint's day, the centerpiece is *torta de mil hojas*. The cake starts with either wafer-thin cookie slices, thin layers of baked cake, or pancakes that are layered with a creamy *dulce de leche* (cooked-down caramelized milk), often homemade, frosted with meringue, and finished with fresh fruit or flowers.

Diet and Health

Chile's traditional diet—the blend of indigenous foods and those introduced by the Spanish—forms the basis of a diet with plenty of fruits and vegetables, legumes, grains, dairy foods, abundant seafood, and some meat. Until the late 20th century, many Chileans practiced this variation of the nutrient-dense, lower-fat Mediterranean diet coupled with a lifestyle that brought families together at the table for meals. During the midday meal break from 1 to 4 P.M., offices and schools closed, giving a relaxing break from school and work. At the same time, among Chile's poorest citizens, malnutrition and infant mortality were high.

Chile's growing economic prosperity from the 1990s on fueled a radical change in eating habits across the entire population. Malnutrition practically disappeared, infectious diseases decreased, and life expectancy increased to one of the highest in South America. The Chilean story is similar to the one in many countries where the abandonment of traditional foods and lifestyle choices and the choice of more highly processed foods and faster-paced urban lives have been followed by an increase in childhood obesity (at 20.8% for primary-school students in 2008) and risk for cardiovascular disease.

A vendor at the fish market in the Pacific port of Puerto Montt, Chile. (StockPhotoPro)

Heart disease is the cause of 28 percent of deaths, topping all other causes.

Chronic illness, including high blood pressure and obesity related to cardiovascular disease, increased significantly. Researchers are limited by the fact that Chile doesn't collect nationwide nutrition data. They rely on targeted studies, including a 2003 *National Health Survey* reporting that 38 percent of adult Chileans were overweight and 23 percent were obese, with higher rates among women and in lower socioeconomic groups. A third of Chileans had high blood pressure.

Chileans are selecting more energy-dense foods and meat for an average 25 percent increase in both calorie and fat consumption between 1988 and 1998. Per-capita consumption of soft drinks and tea is among the highest in the world. More people in Chile have moved to the cities, and rates of alcohol and drug abuse have increased. Add to that the high incidence of smoking (42% of adults) and

the serious air pollution in Santiago, one of Latin America's most polluted cities. Chileans are also not keen to exercise: 90 percent of adult Chileans report a sedentary lifestyle.

One unusual finding in Chile's nutrition transition has been among the indigenous rural populations, who continue a traditional diet along with plenty of physical activity growing crops and tending animals. Despite being among the poorest of Chileans, the Mapuche in southern Chile and the Aymara in the north have each been found to have a very low incidence of diabetes. However, when the Mapuche move to an urban setting (about 60% of Mapuche are urbanites), the numbers of diabetics doubles from 4.1 to 9.8 percent, as does obesity. Among the rural Aymara, the incidence of diabetes was 1 percent. Researchers are intrigued because, unlike the rural Aymara and Mapuche, North American Indians, rural as well as urban, have epidemic rates of diabetes. Preliminary data point to the preventive

effect of the traditional diet and the activity it takes to produce it.

Chile does have a well-established national public health system with a succession of rural posts, public health centers, and hospitals. Since the mid-1990s, those involved in nutrition programs and academia have been actively advocating to better link that system with a stronger nutrition policy. Through that system, health-promotion messages have increased across the country, and programs have begun in schools to promote exercise and better eating habits. Advocates are pushing for laws to restrict advertising for cigarettes and alcohol and to limit advertising for energy-dense, nutrient-poor foods on television, especially during children's prime viewing times.

Colombia

Overview

Among the cuisines of South America, Colombia is second only to Peru in combining the culinary traditions of the native populations with those of the Europeans who arrived in the 1500s. The country's long coastline and historical trade routes have also fostered a strong Afro-Caribbean influence. That hybridization, along with the varied produce of a country with several distinct climatic regions, makes Colombian cuisine particularly interesting to study.

The volcanic Andes Mountains divide into three roughly parallel ranges as they enter Colombia, so that broad plateaus and valleys of high fertility occupy the center of the country. Those valleys, called the *tierra templada*, comprise only 6 percent of the land area but support over a quarter of the country's population. Along the Pacific coast are the world's rainiest tropical jungles, a sparsely populated area broken up by slow-moving rivers. The Caribbean coast is more dry and hospitable and includes relatively temperate zones, vast marshy lowlands, and a desert peninsula. The Andean foothills extend to this area, and the majority of the country's population is in this region where the central highlands slope to the Caribbean. Colombia also has sovereignty over a Caribbean archipelago that has an Anglo-African culture with no Spanish roots.

The natural flora of most of the country is thick jungle, which provided abundant fruit and game to hunter-gatherers, and there are still tribes that live in the same way as their Neolithic ancestors. The principal preconquest tribes of Colombia were the Tairona (or Tayrona) along the Caribbean coast

and the Muisca in the highlands to the south. Both the Muisca and Tairona developed urban centers, and a Spanish chronicler of 1538 noted extensive plantings of potatoes, maize, and cassava in the highlands. The natives also raised beans, chili peppers, *arracacha* and malanga roots, and squashes. The coastal Tairona ate seafood, tortoises, manatees, tapirs, and iguanas and raised cassava. Their diet included fruits such as the tamarillo, papaya, guava, *guanábana* (soursop), and passion fruit, but whether these were actively cultivated before the arrival of Europeans is open to question. Lake and river fish were caught; insects, including snails and ant queens, were eaten; and they may have raised animals to supplement the birds and game that they hunted. There was some commercial activity in food and spices; coastal Taironas developed a salt trade with the interior tribes, though not with the Muisca, who had their own mines in the highlands.

About the only cooked item in modern Colombian cuisine that we can be certain is the same as a Mesoamerican dish is the arepa. This corn pancake probably gets its name from a word for corn in the Chibcha language, which was spoken by the Muisca and other tribes. (It is hard to tell because speaking Chibcha was illegal from 1770 until 1991.) In its most basic form an arepa is a thick fried cake made of ground corn, water, and salt, but modern arepas are often stuffed with cheese or topped with salad. A relative of the arepa, called the *casabe* and made from cassava root, is native to the area around the border between Colombia and Venezuela. Though it is now associated with Venezuela, it was probably eaten all along the southern Caribbean seaboard.

Arepa, breads made of corn flour popular in Colombia and Venezuela, usually filled with egg or cheese. (Raphael Chay | Dreamstime.com)

The natives also brewed a kind of corn beer and, in the highlands, made both alcoholic and nonalcoholic versions of *chicha*, a beverage incorporating corn and fruit. The latter caught on with the Spanish, who added citrus; in 1627, when Fray Pedro Simon first recorded it, he noted that the Spanish had “made it cleaner, more curious and gifted.”

The colonial era brought Spanish techniques and ingredients that became integral to Colombian cuisine. The tierra templada of Colombia was the only part of northern South America suited to large-scale cattle ranching, and the importance of this industry led to the establishment of the Viceroyalty of New Granada, centered at Santa Fe de Bogotá, in 1739. The administrators in Bogotá were primarily from the Spanish regions of Andalusia, Aragon, and Valencia, and they brought a taste for paella and blood pudding that survives to this day. Though they initially tried to keep their culture and cuisine as Spanish as possible, in time native foods became part of their diet and a cuisine called *criolla* was born. This used Spanish foods such as pork, beef, chicken, and cheese along with imports from other parts of the empire such as plantains, rice, carrots, and sweet potatoes.

Bogotá’s rival for cultural precedence was Cartagena, the gateway to the Caribbean, which had the advantage of being the port of call for the Spanish galleons and the disadvantage of frequent raids by pirates and enemy forces. Cartagena developed

a distinctive seafood-heavy cuisine that uses the locally popular *sabalo* fish as well as shrimp, sea bream, carp, and the tiny local oysters. Among the signatures of Cartagena-style food is abundant use of coconut milk and rice. Plantains, originally imported by Portuguese missionaries from Southeast Asia, are eaten in many ways, including the delightfully named “kitten’s head,” in which they are baked and mashed with fried pork and pork skin.

The exceptional example of Afro-Caribbean cuisine in Colombia is the Raizal cuisine of the San Andrés and Providencia islands, which are owned by Colombia even though they are far closer to Nicaragua. The typical dish here is *rondón*, consisting of fish, sea snails, breadfruit, yucca root, and plantain boiled in coconut milk.

🍴 Food Culture Snapshot

Santiago and Carolina live in a high-rise building on the edge of Bogotá and wake up every workday at 6 A.M. when the radio plays the national anthem. Like most of the inhabitants (who refer to themselves as *Santafereñas*), they enjoy a breakfast of *changua*, soup made from eggs poached in milk with scallions, cilantro, and bread. This they wash down with locally grown coffee, strong and black. They feed their children—Alvaro, Ernesto, and Maria—the same breakfast before sending them to school, though instead of coffee, the children drink fruit juice. It isn’t necessary to pack a lunch for them, because, as in many schools, a lunchroom serves healthy meals. The children would rather run to a nearby stand that sells *perro caliente Colombiano*—the Colombian hot dogs that are topped with coleslaw, pineapple, ketchup, mustard, mayonnaise, and potato chips—but Carolina does not approve of junk food.

Santiago drives to his job in the accounting department for a coffee broker, while Carolina takes a bus to the hospital where she is an administrator. Her mother is old-fashioned and would prefer that she stay at home, but like almost half the women in the country, Carolina prefers to work. She doesn’t expect to rise to executive level nor to join the men who are at that level for social occasions, but she takes her

morning snack, known as a *medias nueves*, with coworkers at a similar level in the hierarchy. The *medias nueves* is likely to be a roll with coffee or a glass of *aguapanela*, a drink made from sugarcane and water.

Santiago and Carolina have their main meal of the day around one in the afternoon, both dining with their coworkers. Since Carolina works for a hospital, her place of business does not close, but like most of Colombia, Santiago's department closes for lunch. She eats at the hospital's canteen, while he dines at a fine restaurant, but both have similar meals; they start with a bowl of *sancocho*, meat or fish stewed with yucca, plantain, and vegetables. The second course, called *el seco*, or the "dry dish," is usually a grilled fish or meat, and it is followed by a glass of juice and coffee. After lunch, anyone who can fit it into their schedule takes a brief nap, the *siesta*, awakening refreshed by 3 P.M. to go back to work.

Both Santiago and Carolina are home by 7 P.M. and help the children with their homework while drinking glasses of passion fruit or mango juice. Carolina doesn't start to make dinner until after 8—they won't be eating until 10 P.M. When they do, it is a light meal: arepas or empanadas, savory little corn-flour turnovers; fried green plantains called *patacones*; and a small portion of the soup called *ajiaco*, made with chicken, several kinds of potatoes, and the aromatic herb called *guasca*. Santiago prefers his *patacones* with a spoonful of *aji picante*, the vinegary hot sauce made with habanero peppers, but the rest of the family likes them plain or with a dusting of cheese. The adults have coffee, the children hot chocolate, and after dinner Santiago enjoys a glass of rum mixed with water, lime, sugar, and cinnamon.

On weekends the family invites friends over for an afternoon meal of empanadas, followed by *parrillada*, the traditional barbecued mixed grill. This is served with grilled or boiled corn on the cob, yucca or potatoes, and spicy green garlic sauce. Afterward, while the children play, the adults enjoy glasses of fermented *chicha*, the corn-based fruit punch that turns mildly alcoholic after a night in the refrigerator. They have to drink it all that day, since it turns sour quickly, but the sweet, fruity taste is so enjoyable that there is rarely any left. When Santiago and Carolina can get an aunt to watch their children, they enjoy going out to dine,

usually at restaurants featuring food from Colombia rather than from other parts of the world. They enjoy the food of their own country and don't see a reason to go beyond its culinary borders.

Major Foodstuffs

Though the climate and altitude variations in Colombia are extreme, an extensive road system means that produce from all areas of the country is available in the cities. This has been true even during period of insurgency and civil unrest; it was dangerous for the drivers and transport workers, but fresh ocean fish was available in the highlands, and beef went from the plateaus to the lowlands.

This is especially impressive because Colombia's largest crops, bananas and coffee, are both grown more for export than local consumption. Colombians prefer green plantains to the yellow bananas that are popular overseas, and though they are voracious coffee drinkers, the greater part of the crop is grown with overseas sale in mind. In fact, though the coffee business employs fully one-fourth of the country's agricultural labor and coffee is the country's largest cash crop, the coffee served in cafés in Colombia is often not very good, since the best beans are exported. Lower-value beans stay at home and are often overroasted.

Colombia's lowlands produce sugarcane for both export and local consumption, but the sugar that stays in the country is not mixed into coffee—most Colombians drink theirs black and bitter. The sugar is refined into *panela*, a solid mass of fructose and sucrose sugars that is used in drinks and desserts, and the leftover molasses is made into local rum and *aguardiente*, a distilled clear spirit.

Other major lowland crops are rice, plantains, cassava, cocoa beans, tobacco, and fruit for both export and local consumption. The most popular fruits in Colombia are the coconut, passion fruit, orange, guanábana (soursop), mamey, mango, and varieties of guava, though star fruit, tamarillos, limes, cherimoyas, and others are eaten widely or made into juice drinks. Avocados are widely grown and used in soups and beverages, and tomatoes are a minor crop.

Colombian coffee farmer harvesting their coffee, 2006.
(Hsahjd 2010 | Dreamstime.com)

As the land rises from the Caribbean coast into the foothills of the Andes, cattle ranches and family farms growing corn, beans, yucca, and squash take over. Colombia exports beef and some cheese, but the country makes few aged cheeses; instead, there are soft farmer cheeses, cottage cheese, and the crumbly, slightly acidic *queso fresco* (fresh cheese). Milk is drunk by both adults and children, usually mixed with juices or cinnamon and other spices.

In the highlands, the staple is the potato—or rather, many different varieties of potatoes, each suited to different climates, altitudes, and purposes. Potatoes in Colombia come in colors from almost pure white and yellow to red and deep purple, and they vary in size from tiny spheres to large and irregular.

Fish, mussels, shrimp, and lobster from both the Caribbean and Pacific coasts are popular throughout the country, and the *mojarra* (tilapia) is offered

in almost every restaurant. The tuna fishery on the west coast has long been important, but concerns about sustainability have led to restrictions and decline. Freshwater fish from the tributaries of the Amazon is also widely available. There are over 800 known species of freshwater fish in Colombia, but the most popular is catfish, which sometimes reaches colossal size. The *bocachico* fish used to be eaten widely, but the construction of a dam almost wiped out the species, causing concern about how ongoing water projects affect the sustainability of freshwater fisheries.

Pigs and chickens are raised and eaten everywhere, and in the mountains barbecued *cuy*, a breed of guinea pig, is regarded as a delicacy. Wild tapirs are eaten by natives of the Amazon but are not raised commercially, and their numbers have been falling due to overhunting.

Colombian cuisine is not highly spiced as a rule, though chili peppers and garlic are used in moderation in many dishes. The most distinctive native Colombian herb is guasca, which is slightly similar to basil. Other commonly used spices are cilantro, chives, cumin, onion, and achiote (annatto seed).

Cooking

Colombian cuisine is simple, and Colombian kitchens are comparatively free of the special gadgetry that is popular in many countries. Daily meals are rich in soups, and most kitchens will have many well-used large pots. In rural areas and in old-fashioned families, or among gourmets who have embraced traditional ideas, cooks will use “Tolima” clay pots of the type made by the Chamba people of the Magdalena River basin. This pearl-gray cookware has become a prestige item and is often displayed where guests may see it. Like all well-made clay cookware, it is naturally nonstick, holds heat, and heats food evenly. Since Chamba cookware has been discovered by outsiders and praised by modern cooking gurus such as Paula Wolfert in her book *Clay Pot Cooking*, the price of the best clay pots has risen to the point that many Colombians can’t afford them.

Many Colombians believe that even soups and other items that never touch a fire will taste better when cooked over wood, so woodstoves are popular even where gas and electricity are available. Until the early 1990s, when tax laws designed to keep out imported items changed, electric kitchen appliances were very expensive. Their popularity has grown slowly but steadily, and one particular item has taken off—the electric arepa maker. Traditionalists scoff at these contraptions, which are similar to waffle irons, and claim superior flavor for old-fashioned arepas made in a cast iron skillet or using a special perforated grill that is set on a wood fire.

There will be a variety of skillets in any household, including a very large one that is used for *fritanga*, fried assorted meats. Most homes will also have an outdoor grill for making parrillada, or grilled meats. Large households may have a fire pit with a spit or a vertical roasting rack for this purpose.

Typical Meals

Though there are regional differences between the Afro-Caribbean-influenced northeast and the Andean-influenced southwest, some things about any Colombian meal are universal: There will be soup, there will be corn or rice, and fruit or fruit juice will make an appearance somewhere. This is not a society with a profound difference between the meals of the rich and the poor; the wealthy will have better-quality ingredients, eaten from nicer dishes and in more formal circumstances, but except among the very poorest or the tribes who are subsistence farmers or hunter-gatherers, the general pattern will be the same.

Poor people live like their remote ancestors on a diet of beans and rice supplemented with vegetables, small amounts of meat, and the fruit that grows wild and abundant in the jungles. The national bean of Colombia is the *cargamanto*, a large red bean with white flecks that is nutritious and high in protein. Black beans are fried and served with rice in a style similar to the Cuban dish “Christians and Moors,” and white canary beans are boiled with onions and served as a side dish or used in soups.

***Sopa de Frijoles Canarios* (Canary Bean Soup)**

This is a traditional Colombian dish. *Sazón preparado* is a popular seasoning mix throughout the Caribbean. The Goya brand is most popular in Colombia, but it contains more monosodium glutamate than many other versions.

Serves 6–8

Ingredients

1 garlic clove
 ¼ c onion, chopped
 ¼ c red bell pepper, chopped
 ¼ c green pepper, chopped
 1 scallion, chopped
 1 lb canary beans (or kidney, pinto, or cranberry beans), soaked overnight
 2 lb pork ribs, cut into pieces
 14 c water
 2 c grated carrots
 1 cube chicken bouillon
 ½ tbsp ground cumin
 ½ tbsp sazón preparado with saffron
 ½ c chopped cilantro
 1 large potato, peeled and diced
 Salt and pepper

1. In a food processor, combine garlic, onion, red bell pepper, green pepper, and scallion and process until finely chopped.
2. In a large pot over medium heat, combine the processed vegetables, beans, pork ribs, water, carrots, and chicken bouillon. Slightly cover and simmer for 1½ hours.
3. Add the ground cumin, sazón preparado, cilantro, and potato. Simmer for 30 to 40 minutes more, or until the beans are tender.
4. Season with salt and pepper. Serve with white rice and hot sauce on the side.

Even simple meals may begin with empanadas as an appetizer. Though savory turnovers

called empanadas are found from Mexico all the way to Argentina, Colombian empanadas are different. First, they are usually fried rather than baked, and, second, they are made with a mixture of corn and wheat flour. Colombian empanadas are usually filled with a mixture of minced chicken and onion but may also be filled with beef or cheese. In the Caribbean region you might also have *carimañolas*, yucca fritters stuffed with meat or cheese and served with garlicky hot sauce. Plantains feature throughout Colombian meals and may be served as an appetizer, either cut into pieces and fried; sliced lengthwise and baked with cinnamon; or mashed, salted, and fried (called patacones).

The first main course is almost always soup, of which there are many varieties. The most popular nationwide is sancocho, originally from the Tolima region. The iconic version is made with a whole cut-up hen, sliced green plantains, yucca, corn, and potatoes. It is seasoned with salt, black pepper, cilantro, and a seasoning paste called *aliños* that is made from green and red bell pepper, onion, scallions, cumin, garlic, and saffron. *Aliños* is used as a soup base throughout Colombia, and every family has its own recipe.

There are other bases as well, such as *mazamorra*, ground corn soaked in fern ash or lye (similar to American hominy grits, and also known as *peto*). This features in *mazamorra chiquita*, a soup made of beef ribs, tripe, onions, green peas, lima beans, carrots, several types of potatoes, garlic, pepper, and cumin.

The Caribbean coast is home to the spiciest food in Colombia, which in practice often means the soups contain a larger amount of *aliños*. On both the long Caribbean coastline and the shorter and sparsely populated Pacific coast, soups with coconut milk, rice, and fish are popular. The most exceptional example of this type of soup is from the San Andrés and Providencia islands, which are owned by Colombia but are actually far closer to Nicaragua. The people and cuisine here are called Raizal, and their signature dish is *rondón*, made from fish, sea snails, breadfruit, yucca, and plantain simmered in coconut milk.

In a Colombian meal, following the soup is the *seco*, the dry dish. In coastal regions this will usually

be fried or grilled seafood with coconut fried rice on the side. Inland, roasted chicken or beef is extremely popular. As with coffee, much of the best Colombian beef is exported, but the cuisine is rich in techniques for making the most of tougher cuts. A specialty of Bogotá is *sobrebarriga*, flank steak simmered in beer until it is extremely tender, then rolled in breadcrumbs and broiled. It is then served half-submerged in the beer broth, thus a steak served in soup.

Sobrebarriga Bogotá (Flank Steak)

Ingredients

2 lb flank steak
 2 medium tomatoes, chopped
 1 white onion, chopped
 1 carrot, chopped
 2 cloves garlic, chopped
 1 tbsp Worcestershire sauce
 1 tbsp prepared mustard
 1 tbsp lime juice
 1 bottle dark beer
 Beef stock or water
 2 tbsp melted butter
 1 c breadcrumbs

Preparing the Roll (Prep Time: 15 Minutes; Marinating Time: 24 Hours)

1. Lay out flank steak on a cutting board and trim off excess fat.
2. In a bowl mix together tomatoes, onion, carrot, garlic, Worcestershire sauce, mustard, and lime juice.
3. Spread the mixture on the steak, and roll along the grain so that when you slice it, you will be cutting across the grain.
4. Secure the steak with butcher's twine. The easiest way is to tie a slip knot once every couple of inches.
5. Place the steak in a large freezer bag, pour over any filling that has leaked out, and allow to sit in the refrigerator for at least a day.

Cooking the Steak (Cooking time: 2 Hours, 15 Minutes)

1. Place steak in a large saucepan, and add the beer. Fill the pot with enough beef stock or water to fully submerge the steak.
2. Bring to a boil, and then reduce heat to low and allow to simmer for 2 hours.
3. Preheat broiler 15 minutes before the steak is ready.
4. Remove steak from the cooking liquid, and increase the heat to reduce the liquid to a sauce while you broil the steak.
5. Place the steak on a baking sheet and drizzle melted butter over the top of the steak, then sprinkle with breadcrumbs. Place under the broiler until the breadcrumbs have browned, about 10 minutes.
6. Remove from the broiler, remove twine, allow to sit for 10 minutes, and slice across the grain.
7. Skim any particles from the top of the cooking liquid, and then pour it into a gravy bowl.

Among the nontraditional but popular methods of cooking beef are marinades using Coca-Cola; the citric acid helps tenderize meat and also adds a touch of sweetness. Beef in Colombia is usually sliced very thin and served medium-well—a Colombian steak covers a plate but is still a modest portion compared with an English or American portion of roast beef or prime rib.

The quintessential celebratory dinner is *parillada*, a mixed grill that might be composed of beef, pork, tripe, *morcilla* (a blood sausage similar to boudin), sweet pork *longaniza* sausage, chorizo sausage heavily flavored with coriander, and other meats, served with corn and potatoes. If this same assemblage of meat is served fried instead of barbecued, it is called *fritanga*. By any name, it is an imposing spread that makes a siesta afterward seem like a wonderful idea.

Another dish with an impressive variety of meats is *bandeja paisa*, a combination of meats and vegetables from the region around Medellín in the northwest. This is a mixed grill distinguished by its accompaniments—the thinly sliced steak, pork skin with attached meat, and sausage are always

accompanied by rice, beans, avocado, sweet fried plantains, arepas, and a fried egg.

To finish, Colombians enjoy simple desserts that are often based on milk, coconut milk, or fruits. Among the baked sweets is *flan* (custard), either plain or mixed with guava, pear, or other fruits. Fruit desserts include preserved *uchuva* (a type of gooseberry), tree-tomato juice, chopped fruit mixed in soda or orange juice, and fruit-stuffed crepes. Finally, there are simple sweet breads topped with *arequipe* caramel (the local version of *dulce de leche*) or ice cream. An unusual after-dinner sweet is candied *hormigas*, the queens of the world's largest species of ant. While the Guane Indians eat these ants fried as a savory, city dwellers prefer them enrobed in caramel or chocolate.

Bandeja paisa, a mixed grill distinguished by its accompaniments—the thinly sliced steak, pork skin with attached meat, and sausage are always accompanied by rice, beans, avocado, sweet fried plantains, arepas, and a fried egg. (StockPhotoPro)

Colombians of all ages enjoy fruit juices, either straight or mixed with milk, or aguapanela, sugarcane juice mixed with water. The other homemade soft drink is *chicha morada*, the traditional Andean fruit punch with corn and cinnamon. Chicha is usually homemade, but despite problems with a short shelf life, bottled versions have entered the market in the last decade. Colombians also enjoy sweet carbonated sodas, the most popular of which, Cola-Champaña, has been made by the Postobón company since 1904. Other popular bottled soft drinks are Pony Malta, a sweet nonalcoholic beer, and Kola Roman, a very sweet fruity drink popular in the Caribbean region. Colombiana, a tart soda made with tamarind, is also popular along the coast. In the mornings or on cool evenings, Colombians enjoy hot chocolate. In Bogotá this frequently has cheese melted into it and is called *santafereño*.

Among alcoholic drinks, the alcoholic version of chicha is popular, but there are no commercial producers due to its very short shelf life. Alcoholic chicha is drinkable for only about a week after it has finished fermenting—after that it turns very sharp and sour. Multiple attempts have been made to stabilize and commercialize chicha, but as of this writing none has been successful.

As might be expected in a hot country, beer is popular, with light lagers dominating the market. Rum drinks are popular, especially those that use local fruits, but it is also drunk with Coca-Cola or on the rocks. The other popular strong drink is aguardiente, a strongly flavored variant of rum that often contains anise. There is some regional market segmentation, with aguardiente most popular inland and rum drunk mainly along the coast.

Finally, there is coffee, the country's national beverage, which is drunk from morning to night by almost every adult. As might be expected, alcoholic coffee drinks involving rum or aguardiente and milk or cream are very popular as a nightcap.

Eating Out

While Colombians enjoy dining out, they are not generally adventurous, and the overwhelming majority of restaurants serve regional Colombian

cuisine. The exception is at the high end, where the most expensive places boast their fidelity to traditional Spanish cuisine. In the last decade other European cuisines have achieved a foothold in major cities, but they are still struggling to find a market beyond business dinners and the most sophisticated younger people.

Restaurants are patronized at all times of day, with cafés specializing in breakfast, called *desayuneras*, opening very early. The slang word for restaurants serving home-style food is *corrientazo*, literally meaning “a place to get energy.” Whether a simple corrientazo or a top-notch restaurant, the evening pattern is similar—they open for dinner at about 7 P.M., but the rush begins around 9, and people will still be dining until almost midnight. Tourists are often amazed that they can be seated in the best places at 7 or 8 and don't realize that by local standards that is ridiculously early. Tourists also stand out because they are excessively casual; at all but the most modest restaurants, people are expected to dress up for dinner. In most restaurants, as at Colombian homes, the oldest person will always be served first, and it is expected that even finger-friendly items like empanadas will be eaten with a knife and fork.

Special Occasions

As is the case throughout Central America, special versions of tamales appear at Christmas and Easter. One is the tamale Tolimense style, made with beef, pork, chicken, and vegetables with ground corn, boiled or steamed in corn-husk casings. Fruit and dessert tamales are also made. Colombian tamales are usually milder than Mexican versions but are otherwise similar and are almost always accompanied by hot chocolate.

Many Christmas pastry treats are deep-fried instead of baked. These include cheese fritters called *buñuelos* and *bolillas*, fried round doughnuts that are served with chocolate or coffee. *Hojuelas*, flat fried cookies topped with powdered sugar, are almost identical to the Polish Christmas cookie called *kruschicki*, though it is hard to establish a connection between the two seasonal treats. Other

seasonal treats are *natilla*, a coconut-milk custard that is sometimes fortified with rum or aguardiente, and *champús*, a drink similar to chicha but with chunks of fruit, extra spices, and orange leaves added.

Diet and Health

The most famous living Colombian artist, Fernando Botero, famously portrays his countrymen as pudgy sensualists who are obsessed with food. His sometimes cruel, sometimes sympathetic portraits are an exaggeration of a fact; a 1999 study showed that over 40 percent of the country's citizens are obese, and that figure may be rising. It is ironic that a government that has historically focused on getting its rural and native citizens enough to eat now must change its focus to convincing them to switch to healthier foods. The popularity of sugary sodas and a diet heavy in meat, coconut milk, and cream, plus the increasing use of motor vehicles instead of walking for everyday tasks, are probably to blame. Colombians who can afford it often get weight-loss surgery rather than change their diets, and more of these operations are performed there than anywhere else in South America.

When Colombians do fall ill, traditional practices that are based on a diet of scarcity are actually counterproductive. Traditional ideas of health prescribe aguapanela, the mix of sugarcane juice and water, for almost any illness, and especially in diabetic people this can make things much worse. Colombians also ascribe characteristics of hot and cold to many foods and give beef broth the kind

of reverence accorded to chicken soup in eastern European cultures.

There is a specific regimen called the *dieta* that mothers are supposed to observe for 40 days after giving birth. Besides never being exposed to direct sun, a new mother is supposed to eat sancocho and hot chocolate; at the end of this period, she takes a bath in herbs before going outside and resuming normal life. If the baby becomes sick at any time, putting slices of cucumber on its head is supposed to help protect it from sinus infection.

The influence of Colombian traditional healers has been growing, and the commercialization of their remedies based on Amazonian plants has been a boon for people who want to preserve jungle regions. Colombian culture is very macho, and there are many recipes for aphrodisiacs. Some of these involve eating insects such as leafcutter ant queens, a logical choice for someone obsessed with fertility, since ant queens are literally egg machines. Since leafcutter ant queens are high in protein and have low levels of saturated fat, this at least does no harm, unlike more toxic alternatives.

Costa Rica

Overview

Costa Rica is located at the crossroads of three distinct geographic regions: Mexico and Central America, South America, and the Caribbean. Costa Rican foodways have transformed over time as different cultural groups (Europeans, former Caribbean slaves, and Americans) have arrived and intermingled, creating new tastes. Costa Rica is often separated into three cultural sections: the Mesoamerican-influenced Guanacaste to the north, the Hispanic-based Central Valley, and the Afro-Caribbean Atlantic coast. Socioeconomic status also plays an important role, both contemporaneously and historically, in the development of Costa Rican taste. Today, international fast-food chains and cooking products compete with local ones, often garnering a place in the new eating habits of the middle class and wealthy and in the minds of those without the economic capital to partake.

Food Culture Snapshot

Midmorning on Saturdays, Hilary typically bursts into the family home, arms laden with plastic grocery bags, with a taxi filled with more bags waiting outside beyond the gate. At 35, Hilary is the oldest daughter still living with her parents in their lower-middle-class home in Puntarenas, the southern province of Costa Rica. Another grown sister, Sandra, and brother, Mau, also live in the home of their parents, Don Mauricio and Doña Pilar, as well as two grandchildren, Jonathan and Gabriel, who are the sons of another daughter who does not live in the home. The daughters support

the family through their work, one as an environmental educator and the other as a social security associate. Though nuclear families exist in Costa Rica, this household, comprised of multiple generations who at times contribute to the economic and social reproduction of the household, is equally common.

Outdoor markets are rare in Costa Rica, although a few farmers often bring some goods to town plazas once a week to sell. Instead, Costa Ricans purchase the bulk of their goods from chain supermarkets, with last-minute supplements from neighborhood *pulperías* (corner stores). Hilary's weekly purchases are dominated by large bags of white rice and red beans (though most Costa Ricans favor black beans). Knotted white bags contain cuts of pork, beef, and chicken, which poorer families rarely eat and middle-class families serve at least once a day. Two cartons of eggs are bought, though neighborhood families with roaming chickens often sell or share their eggs. Coffee, palm oil (used for frying), boxes of milk, bunches of green and ripe plantains, a carton of strawberry yogurt, flour or corn tortillas, boxes of gelatin, bologna, and packets of tomato paste, dehydrated soups, and spices are purchased weekly. Yellow onions and sweet red peppers are ubiquitous, and red cabbage, lettuce, carrots, papayas, apples, pineapples, potatoes, chayotes (vegetable pears), yucca (a starchy tuber), and *limones* (lemon-lime hybrid) will occasionally appear. Most Costa Ricans who live in the countryside grow their own fruit (*limones*; *mamonos chinos*, which have mild-tasting, fleshy fruit; and mangoes) and spices (cilantro and oregano). Those who have enough space grow corn, beans, and other vegetables. Snack foods and sweets are purchased in small portions from *pulperías*.

Major Foodstuffs

As has been the case for centuries, maize remains the staple food and gastronomic marker of identity for many of Costa Rica's northern Mesoamerican neighbors: Guatemala, El Salvador, and Honduras. Archaeological data in Costa Rica point to a similar history of maize-based foodways, although an influx of foods from other populations over time has downplayed corn in current usage. Outsiders often assume that Costa Rican foodways align closely with those of the country's northern neighbors. Tourists are often overwhelmed by the national culinary emphasis on rice and beans and the comparably scant attention paid to maize-based foods. Costa Rican foods also tend toward the use of savory aromatics (onion, garlic, sweet red pepper, cilantro, oregano) as opposed to the spicy or stronger tastes of Mesoamerica.

The Spanish influence on Costa Rican and other Latin American cuisines is indisputable. Perhaps no single food has been more influential on Costa Rican foodways than rice. Unlike beans, rice is not a domesticated, native food in the Americas. In Costa Rica, the cultivation of rice, albeit in small quantities, dates to the late 1700s among the Spanish. Today, the dish of mixed rice and beans is one of the principal meals of the culturally diverse region. The meal likely originated among emancipated slaves who migrated in the late 1800s to Costa Rica's Atlantic coast to work on railroads, banana plantations, and the Panama Canal. Bread and sugarcane are other important European contributions.

Central Valley cuisine has become the mainstay in Costa Rican food. *Gallo pinto* is the national dish. On the Atlantic coast, *gallo pinto* is called "rice and beans" in English; there, the rice is prepared with coconut milk instead of water, and red beans (although black can be used as well) and a special *pimienta roja* (locally grown spicy red pepper) that gives the dish a kick are used. Notably, the rice-to-bean ratio greatly favors the rice, which is different from other versions in Costa Rica, which have a roughly even mixture. In Guanacaste, *pinto* is often toasted to a crisp and called the full name, *gallopinto*. In the Central Highlands, locals say only

pinto and include plenty of oil to make the mixture moister. Some families cook with red beans, but most Costa Ricans prefer black beans.

Gallo Pinto (Beans and Rice)

Remove any small stones from the dry beans, and wash them. Cover the beans with a lot of water (later to be eaten as a soup), and add cilantro, sweet red pepper, onion, and garlic, all finely diced. Also add salt. Cook until tender.

Rinse the rice several times. Cover it with water, and add cooking oil, salt, and sweet red pepper, onion, and garlic. Bring to a boil, then simmer about 20 minutes until done.

Prepare the frying pan to mix the rice and beans together. Dice onion, sweet red pepper, and garlic, and fry them in cooking oil. Add the cooked beans, a small bit of their broth, and salt, mixing them with the aromatics. If desired, mash the beans a bit. When the beans have dried to your satisfaction, add the cooked rice and chopped cilantro. Stir the rice and beans together and heat thoroughly. If desired add Salsa Lizano (which tastes like Worcestershire sauce).

Serve for breakfast with coffee, sour cream, eggs, fresh cheese, fruits, bread, tortillas, or meats.

While most Costa Ricans currently do not base their diets on maize-based foods, such foods remain integral to their conceptions of themselves as members of a Central American culture. In learning about Costa Rican foodways, or those of any culture, one must pay attention to the difference between typical and popular foods. Typical foods are those eaten daily, perhaps with little thought as to why such foods are consumed, whereas popular foods are often invested with considerable outwardly symbolic meaning. Corn is such a food in Costa Rica. In Guanacaste, however, maize more closely approaches ubiquity. Costa Ricans differentiate the northern province of Guanacaste as culturally separate from the rest of the country, perhaps owing to its recent acquisition in 1828 from Nicaragua. Many present-day residents are of Nicaraguan

descent or are Nicaraguan immigrants, further casting the territory as a borderland between the two nations. In addition to daily tortillas (flatbread), other maize-based foods include empanadas (turnovers) made with masa (corn flour) and fresh cheese, *atoll* (a purple, gelatinous drink), *chorreadas* and arepas (hotcakes made with masa), and various tamales (masa filled with meat such as pork and steamed in plantain leaves, as opposed to the Mesoamerican tradition of corn husks).

Contemporary alimentary strategies of indigenous peoples in Costa Rica stem from and make use of ancient practices. In southern Costa Rica, the Chibchan practice slash-and-burn agriculture and plant polyculture fields, referred to as “homegardens.” The most commonly cultivated crops include plantains, cacao, oranges, peach palms, *manzanas de agua* (watery apples), mangoes, and *Inga* species (pod fruit). Bananas and plantains are grown as monoculture crops. Of the foods cultivated by the Chibchan, oranges, bananas, and plantains are the principal nonnative crops. On the Caribbean coast among the Bribri and Cabecar nations, plantains have recently overtaken cacao as the most common crop. Maize nearly ties plantains in its popularity among the Bribri and Cabecar peoples, followed by rice. Beans figure less prominently in the diet when compared to other Costa Rican populations because of the region’s high humidity. *El ñame*, *el yuca*, and *el tiquisque* are other commonly eaten tubers. Meats include pacas (large rodents known

Ripe cacao pods ready for harvest. (Pindiyaht100 | Dreamstime.com)

locally as *el tepezcuintle*), deer, freshwater shrimp, and iguanas.

Cooking

Cooking is a domestic task primarily undertaken by the grown women in a family. In a household comprised of a mother and grown daughters, the daughters take on an equal share of the responsibility for preparing foods. Family members cherish the traditional foods made by mothers and grandmothers, such as handmade corn tortillas. In contrast, daughters often include more modern foods, such as spaghetti and cakes, in their repertoire.

Cooking revolves around the preparation of rice and beans. Women prepare rice fresh each day, often using an electric rice maker. Beans are frequently cooked on the stove or range once every few days using a pressure cooker. Poorer families in the countryside continue to cook with open fires outdoors, and Costa Ricans agree that food cooked this way always tastes better. Rice and beans are rarely refrigerated but are reheated as needed. The large pot of beans is brought to a boiling temperature daily to kill bacteria.

Costa Ricans love fried foods. For economic reasons, few people own ovens. Those who do tend to use the ovens to store already-cooked foods. Meats are always fried. Traditionally, pork lard was used for frying, but increasingly palm or vegetable oil is preferred. Frozen or prefabricated foods are uncommon, particularly among working- and middle-class families. Aside from the occasional use of dehydrated broths or packages of spices, foods are prepared from scratch, and Costa Ricans often disparage American culture for its reliance on fast foods.

Typical Meals

At breakfast, gallo pinto comes accompanied by some combination of fried or scrambled eggs, fried sausage or bologna, fried or plain salty cheese, store-bought corn tortillas, toast or bread with sour cream, fried green or ripe plantains, fresh fruit (pineapple, mango, papaya, or watermelon), avocados bathed in salt, and coffee with plenty of sugar

Central valley coffee region in Costa Rica. (Corel)

and perhaps milk. Occasionally, fresh corn tortillas, arepas, or empanadas will appear. Despite its popularity in cultural discourse, gallo pinto does not appear on the breakfast table in the homes of all Costa Ricans, and when it does, economic resources dictate which foods sit beside it on the plate. Wealthier Costa Ricans or the children of middle-class Costa Ricans often prefer cereal with milk. Poorer Costa Ricans subsist on bread or tortillas and coffee.

Lunches in Costa Rica are large and follow a standard prescription. Lunches cooked at home revolve around a large plate of rice that has been prepared fresh that morning with finely diced sweet red pepper, yellow onion, garlic, and cilantro. If beans have been cooked that day, a favorite food is *sopa negra*, or a bowl of the broth with some beans and a hard-boiled egg. Another popular soup, one that stems from the colonial era and can be traced to Spain, is known as *olla de carne*. This dish contains large pieces of stewed beef on the bone and several large pieces of vegetable, including corn on the cob,

carrots, green plantains, yucca, potatoes, and chayote. Other popular entrées include *picadillos*, comprised of cooked vegetables (potatoes, green beans, or chayote) and finely chopped meats stewed together in a hash; rice with chicken; and spaghetti. A small portion of beans and a light salad often accompany the meal. To drink, Costa Ricans prefer freshly made fruit juices, often from fruits gathered from their own trees. Flavors include *cas* (guava), blackberry, pineapple, mango, strawberry, lemon, carambola (star fruit), and tamarind (pod fruit). Drinks made from oatmeal and rice are also popular.

Dinners vary by family custom, though the foods are the same as those served at lunch and often are whatever was served for lunch that day reheated. Sometimes Costa Ricans add a freshly prepared side dish, such as *patacones* (fried green plantains). Between lunch and dinner, many Costa Ricans enjoy a quiet time called *cafecito*, in which they sit alone or gather with family or friends to share a fresh coffee and possibly sweet or salty breads, crackers, tamales,

or cookies. Desserts rarely follow meals directly, but they are served with *cafecito* or as snacks. Rice pudding, *tres leches* (three-milk cake), flan (custard), and *pudin* (gelatinous cake) are all popular.

Eating Out

Restaurants in Costa Rica primarily feature the same foods that are cooked at home. Working Costa Ricans eat out most often for the midday meal. When bought on the street from small restaurants, called *sodas*, these meals are called *casados*. Separate rice and beans are accompanied by a *pica-dillo*, salad (often cabbage and grated carrot), and a choice of meat, whether pork, chicken, or fish. A soft drink or a fresh juice accompanies the meal.

In the past decade young professional couples have begun to dine out together after work, most frequently in American chain restaurants. As has been occurring in other countries, the McDonaldization of foodways in Costa Rica is a current trend. Pizza Hut, Taco Bell, Papa Johns, KFC, and McDonalds dominate the urban restaurant-scape, with their bright, multicolored buildings and multistory plastic playgrounds. In the 21st century, Costa Rican allegiance to American fast food is mixed, as resistant discourses argue that such food is unhealthy and does not speak to Costa Rican culture, even though McDonalds does serve *gallo pinto*. Furthermore, not all of Costa Rica's residents have access to these food choices (because of geographic or economic disparity), pointing again to the elusive difference between daily alimentary practices and desirable imagined foods. Rural and poor Costa Ricans may claim to love pizza and hamburgers, without consuming them at regular intervals.

In the urban areas of Costa Rica's Central Valley, a variety of upscale, ethnic restaurants exist. Chinese eateries are perhaps the cheapest, most commonly frequented, and most likely to be accessible in less urban areas. Costa Rican Chinese food involves plentiful portions of fried rice or *lo mein* with a few vegetables and mixed meats.

One final type of desirable restaurant cuisine can be found in Costa Rican bars. *Ceviche* (in coastal towns), *patacones* with refried black beans, *nachos*, fried *yucca*, and fatty fried pork cuts called *chicharrones*

are the most popular. Beer is the near-ubiquitous alcoholic beverage, although men and women will occasionally order whiskey, wine, or *cacique* (a sugarcane-based liquor) with ginger ale and *limón*.

Special Occasions

Holy Week and Christmas Eve are the two Costa Rican special occasions with the most well-known foods. The female members of an extended family often plan get-togethers during Holy Week to prepare various corn-based snacks. Palm-sized baked rings called *rosquillas* are popular, as well as *empanadas* filled with sweetened *chiverre*, a large gourd. Families gather together for large dinners on Christmas Eve, where pork tamales take center stage. Egg-nog is a common drink at this time of year. While many Costa Ricans grew up preparing these foods at home, today many people prefer to purchase ready-made holiday treats at the supermarket.

Diet and Health

The Costa Rican diet, grounded in a protein-laden rice-and-bean mix and supplemented by proteins from meats, eggs, and cheeses, as well as fruits and vegetables, seems quite healthy, aside from a tendency to prefer frying over other cooking methods. Additionally, Costa Ricans favor generous portions at lunch and breakfast, and light dinners. A simple diet combined with a national health care system fosters a relatively healthy population. Costa Rica even boasts one of the longest-living communities in the world, in the country's northern province, Guanacaste.

Nonetheless, changes in lifestyles and increases in unhealthy globalized foodways have spurred health concerns. Costa Ricans complain of constant gastritis and constipation. Better infrastructure and access to cars and public transportation mean that many Costa Ricans do not benefit from daily exercise. Recently, gyms and workout classes have come into fashion, but not all socioeconomic classes can afford such luxuries. Instead, rates of dieting, eating disorders, and self-medication with expensive medicines and health products are growing. A

discourse of healthy eating and favoring natural foods and medicine has grown in the media and on the ground, though practices are slower to follow.

Cuba

Overview

Cuba is the largest country in the Caribbean. Cuba has almost as much land area as the rest of the Caribbean islands combined. It is north of Jamaica, west of Haiti, and southwest of the Bahamas. The northernmost point of Cuba is located just 90 miles south of Key West, Florida. The island contains three mountain ranges: the Sierra de los Organos, the Sierra del Escambray, and the Sierra Maestra in the southeast. However, the majority of the country is flat plain. Cuba has a tropical climate, but trade winds keep the temperatures relatively cool, with averages between 70 and 78 degrees Fahrenheit. The dry season is from December to April, and the rainy season is from May to November. Cuba is often hit by tropical storms and hurricanes from July to October.

Since 1962 Cuba under Communist rule has had a national food-rationing system. Under this system the Cuban national government centrally collects food and redistributes it in an equal manner, so that every Cuban family has the same basic foods that they need to survive and no one goes hungry. All Cuban citizens are eligible for a ration card, and with this card they can get their monthly allotment of food items. They do still have to pay for this food, but the prices are very heavily subsidized so it is only about 25 Cuban pesos, or one dollar. The food provided in the monthly ration varies; they try to provide people with the scarcest food items and do not include items that are readily available, such as bananas, mangoes, and other tropical fruits. A typical month's food ration would include 5 eggs,

5 pounds of refined sugar, 5 pounds of raw sugar, 5 pounds of white rice, 5 pounds of beans (black beans, red beans, or split peas), 0.4 pints cooking oil, and 200–500 grams (7–17 ounces) of pork or ground beef mixed with soy. Additionally, everyone gets one roll of bread per day, which is delivered to the house each evening. Children under the age of 7 get a liter (about a quart) of milk per day, and children from ages 7 to 14 get a liter of yogurt. The food ration is essential for basic nutrition in most Cuban households, but many people need to supplement their monthly food rations by buying food in other places as well. Cubans supplement their monthly food rations through state-run stores that sell in the Cuban national peso, and state-run stores that sell in Cuba's second currency, known as the CUC, which is worth about 25 times what the national peso is worth. They also get food at farmers' markets, through workplace cafeterias, and through the black market.

Cuban food on the island has some similarities to Cuban cuisine in the diaspora, including in American cities such as Miami and New York, but there are also many differences. The major differences between Cuban food on and off the island are due to the fact that Cuban food is rationed on the island, so many ingredients that were once a part of Cuban cuisine either are very difficult to access or are simply not available. For example, many Cuban dishes call for beef, but since beef is usually available to Cubans only as ground beef and rarely in other forms, Cuban beef dishes are rarely served in Cuban homes.

Typical state run grocery store in Havana, Cuba, with almost empty shelves. (Ulita | Dreamstime.com)

🍴 Food Culture Snapshot

Pati lives in the heart of downtown Santiago, Cuba. She lives in a three-bedroom house with her five-year-old son, Gorgi; her mother, Susi; and her father and brother. They have lived in this house for many years. Pati's grandfather first moved into the house in the 1920s. Pati works as a secretary for the state legal services, her father works in construction, and her brother is in school studying to be a dentist. Her mother stays at home with Pati's son and does most of the household food preparation. Their lifestyle is typical for a relatively well-off urban household in Cuba.

For breakfast, the family starts off the day with strong Cuban coffee made with lots of sugar and served without milk. Gorgi drinks milk instead of coffee for breakfast. The family also eats half of a loaf of bread, which they either dip in the coffee or eat with homemade jam made with seasonal fruits. An assortment of seasonal fruits will also be served, including

fresh mangoes, bananas, papayas (*fruta bomba*), grapefruit, cherimoya, passion fruit, and pineapple.

After breakfast Pati and her father head off to work, her brother goes to school, and Susi will take Gorgi out to pick up the ingredients for the day's food. First, they will stop at the ration station to pick up any dry goods, such as beans, and eggs. Then they will go to the *carnicería*, or butcher, where they pick up the ration of meat products. Susi picks up pork, because it is what is available, and she can use it for both the day's lunch and dinner. At both of the ration pickups, they may have to wait in line for up to an hour before it is their turn. Then Susi will head to the state market to pick up onions, garlic, and any other fresh herbs, vegetables, and fruit that they may need. Susi will buy whichever products are inexpensive, and she will have to buy whatever is in stock, since there is often not much variety.

Lunch is a big meal in Cuba, although not as big as it used to be. Some Cuban workers are able to go

home for lunch, and many Cuban children will come home from school or someone will drop off a hot meal for them. Lunch breaks are not as long as they are in other Latin American countries, and most Cubans do not take a siesta after lunch as people do in many other Latin American countries. Susi prepares white rice and pork for lunch for herself, her husband, and Gorgi. The rice is prepared in a rice cooker that was provided to each Cuban family by the government; these cookers help save electricity. Pati and her brother do not come home for lunch because they eat a free meal at their workplace cafeterias.

For dinner Susi will prepare a stew. To flavor the stew she will use the leftover pork pieces and the drippings from lunch and add chopped onions and garlic to prepare a roux. Adding water, she puts the roux ingredients into the pressure cooker, also provided by the government to help conserve electricity. She adds the beans from the ration, and if she has some potatoes or taro, she will cut them up and add them. This will simmer in the pressure cooker until later in the evening when everyone is home from work. The stew is served over rice. Susi prepares enough rice for both lunch and dinner at the same time.

Moros y Cristianos (Cuban Black Beans and Rice)

- 1½ c dry black beans
- 2½ c chopped green peppers
- 3 c chopped yellow onions or shallots
- ¼ c olive oil
- 4 cloves garlic, crushed
- 1 8-oz can tomato paste
- 2 tsp oregano
- 3 tsp ground cumin
- 1 bay leaf
- 3 tbsp white vinegar
- Salt and pepper to taste
- 3 c white rice, cleaned and washed
- 4½ c chicken stock

Place beans in a saucepan, cover with water, and bring to a boil for about 5 minutes. Remove from

heat and let stand for 1 hour. Drain and rinse the beans, place back in the saucepan, and add enough water to cover them again; bring to a boil, reduce heat to low, and cook for about 45 minutes or until tender. Once the beans are tender, drain them, and run cold water over them until they are clean.

In a large pot with a lid, sauté the onions or shallots with the green peppers and olive oil until tender. Add black beans, garlic, tomato paste, oregano, cumin, bay leaf, and vinegar. Cook about 7 minutes, stirring continuously.

Add the cleaned rice, and stir in the chicken stock. Bring to a boil, and then reduce to a simmer, cover, and cook for about 30 minutes or until rice is done. Add salt and pepper to taste. Place in a serving dish, and drizzle some olive oil over the dish before serving.

Major Foodstuffs

Cuba's tropical climate and rich soil allow a wide variety of crops to grow on the island. Since colonization by the Spanish, sugar has been one of the most important crops for the Cuban economy. Sugar, tobacco, coffee, citrus fruits, and fish are among the top commodities exported from Cuba. Despite these rich resources agriculture makes up less than 5 percent of the Cuban gross domestic product. Currently, many of the foods eaten in Cuba are imported from countries such as Venezuela, China, and Spain.

Rice is a very important part of Cuban cuisine. Cubans eat rice with lunch and dinner nearly every day. Rice is provided in the ration. Currently, Cuba imports most of its rice from Vietnam. Beans are also a very important dietary staple in Cuba. Different kinds of beans are provided in the food ration, including black beans, red beans, chickpeas, and mung beans. Beans are almost always served with rice. In eastern Cuba, also known as Oriente, the most popular way of preparing beans and rice is called *conгри*. To prepare *conгри*, first a *sofrito* is prepared. A *sofrito* is a sauce made with finely chopped onions, garlic, tomato, and sometimes bell peppers. These ingredients are slowly sautéed in olive oil

and added to the rice and beans, which are cooked together. In western Cuba, a very similar dish, referred to as *Moros y Cristianos* or *Arroz Morro*, is the preferred way to prepare rice and beans.

In addition to rice and beans, root crops known as *viandas* are an essential part of Cuban cuisine. The category *viandas* includes yucca, sweet potatoes, yams, potatoes, pumpkin, some squash, and plantains. *Viandas* are almost always served with lunch and dinner. *Viandas* can be prepared in many different ways. Although they are often boiled, many families prefer to slice them up and fry them. Others prefer to have mashed *viandas* with cream and sugar added, or they might take little balls of the mashed *viandas* and deep-fry them to make *tos-tones*. *Viandas* are rich in many different important nutrients and amino acids, including potassium, magnesium, manganese, and vitamins A and C.

Pork is the most commonly eaten meat in Cuba and a very important source of protein. Pork is prepared in many different ways, but it is rarely cured or prepared into forms such as bacon, pepperoni, or sausages. Pork is often bought and served on the bone. It is sometimes prepared with a sauce called a *mojo* sauce or *mojito* (not to be confused with the drink). The *mojo* sauce is thought to have been brought to Cuba by slaves and slave traders, who learned to make it in the Canary Islands. A *mojito* sauce is made of oil, garlic, paprika, and cumin. These ingredients are all sautéed together, and sometimes vinegar or the juice of a lemon, lime, or orange is added for additional flavoring. Stuffed pork is also a popular Cuban dish; in this case the bone is removed and the pork is tenderized, marinated, flattened out, and then wrapped around the stuffing. The stuffing might include ham and cheese or some other savory combination.

Chicken dishes are also popular in Cuba, although chicken is somewhat less available than pork in Cuban cities because pork is provided in the ration more often than chicken is. Chicken is often prepared in the same manner as pork by marinating and cooking the meat in a *mojo* sauce. Beef is rarely eaten in Cuban homes. Although beef dishes were once an important part of Cuban cuisine, currently beef is very difficult to find in Cuba. Cattle farming

A traditional Cuban feast of roast suckling pig (*lechón asado*), complete with signature Cuban rice and beans (*conгри*), *yuca con mojo*, *malanga*, and a variety of side items. (Ted Henken)

uses a lot of resources, so beef is difficult to produce in Cuba. Cubans get beef in their diet through the ground beef provided in the food rations; this ground beef is often mixed with soy to help stretch the limited supply on the island. Cubans in the diaspora are more likely to eat beef dishes, such as *ropa vieja*, a shredded beef dish.

Fish is another important part of the Cuban diet and is also a great source of protein. Mackerel, or *jurel*, is a type of fish often available in the food rations. Canned fish such as sardines are available for purchase at the state food stores. Recreational fishing is relatively uncommon in Cuba, compared to other island nations. Furthermore, many of the fish from commercial fishing are exported; therefore, fresh fish is a less common source of protein in Cuba compared to other island nations.

Cuban food is often prepared using the same basic ingredients to flavor the dishes. Cuban food is not usually very spicy, but the flavors are rich and savory. Onion, garlic, salt, and oil or pork fat provide the basic flavoring for many Cuban dishes. Sugar is added to many dishes as a flavoring and is a very important part of Cuban cooking. Sugar has been a central part of the Cuban economy and everyday Cuban life since colonization.

Tropical fruits grow very well in Cuba. Cubans have access to fruit throughout the year, eating

different fruits as they are in season. Many urban and rural families have fruit trees in their patios and yards from which they get fruit for much of the year. Families will often have more fruit than they can eat on their own, and they will share or trade fruit with extended family and friends. Mangoes are a very common fruit in Cuba; there are many different varieties of mangoes on the island. Other common fruits include bananas, papayas, grapefruit, cherimoyas, passion fruit, and pineapple. Fruit is eaten as a snack, as breakfast, or as a dessert after meals. These tropical fruits are also used to make fresh fruit juices.

Water is usually served with meals in Cuba. Sodas and packaged juices are served only on special occasions or in more affluent households. Malta is a Cuban favorite. It is a nonalcoholic carbonated malt beverage made from barley, hops, and water. Malta is often served mixed with condensed milk for an ultrasweet drink. Cubans often make smoothies as a snack or special drink. The smoothies will often use the milk or yogurt provided in the children's ration, mixed with whichever fruits are in season. Cubans drink small cups of coffee made with a lot of sugar, served without milk, a few times a day. Coffee is a very important beverage in Cuba.

Cooking

Cooking in Cuba can take several hours and is usually done by an older woman in the household. Younger women will often help with various cooking-related tasks. Some families have cooks or paid workers who help with food preparation. In recent years, Cuban kitchens have changed drastically. Whereas before most people cooked on kerosene gas stoves with one burner or with charcoal over an open fire, today most Cuban households use many different kitchen appliances to cook their food. In an effort to save on fuel and electricity the Cuban government distributed many of these appliances to Cuban households. The rice cooker is one of the most important appliances. Soups, stews, and meat dishes are often prepared in the “multipurpose cooker,” which is an energy-conserving electric pressure cooker. Blenders are also very important

kitchen appliances for making smoothies and fresh juices.

In addition to these electric kitchen appliances, many Cuban dishes are prepared on the stovetop. Most Cuban households have old gas stoves from the 1950s or earlier, although some have newer imported gas stoves. Sautéing and deep-frying are used to prepare many Cuban dishes. Pans are often made of aluminum or stainless steel. Because it requires a lot of gas and gas is expensive and difficult to access, baking is rarely done at home; usually baked goods are purchased from a neighbor who makes baked goods for extra cash or from small local bake shops. Bread is provided in the rations and delivered to each Cuban household daily.

In some households charcoal fires are the predominant cooking method. Charcoal is often cheaper than gas and will sometimes be used in situations where there is no electricity. Some families prefer the taste of foods cooked over charcoal over that of foods cooked over gas, so they choose to make a charcoal fire. To cook with a charcoal fire, a big cast iron pot is used. Usually soups and stews are slow-cooked over charcoal in a large outdoor area.

Typical Meals

Although there is a great deal of diversity in what Cubans eat in different regions of the island and in the diaspora, many elements of Cuban cuisine are found in most, if not all, varieties of Cuban food. Most Cubans eat three meals a day—breakfast, lunch, and dinner—as well as a small snack in the afternoon. Cuban meals do not usually arrive in courses; everything is placed on the table and usually mixed together on each individual's plate and eaten together. The exception to this is dessert, which is served after the meal. Very few Cubans are vegetarian, since meat is a mainstay in the Cuban diet.

For most Cubans, breakfast is a relatively light meal, consisting of bread and coffee. Sometimes jam will be spread on the bread, or the bread will be lightly toasted on the stovetop. Many enjoy dipping the pieces of bread into coffee. Coffee in Cuba is made with a lot of sugar, but milk is added

only when it is available. Sometimes fruit or eggs will be eaten at breakfast as well. In the countryside breakfasts tend to be heartier than in Cuban cities; rural families are more likely to enjoy eggs or meat with their breakfast as well as some rice for carbohydrates.

Some Cubans eat lunch at work, at school, or on the go during their workday. In these cases, they will stop at their workplace cafeteria or a government cafeteria for a subsidized meal. These meals might consist of a sandwich with ham or ham spread and mayonnaise on a bun, along with some fruit and a coffee. Other cafeterias will service rice and beans with a small piece of pork and plantains. Some Cubans are able to eat lunch at home. Lunch at home will often be a heartier meal, and it is eaten more slowly since it is eaten in the company of friends and family. Home lunches will include rice and a bean-based soup with some fruit or vegetables on the side.

Cuban dinners consist of pork, chicken, or fish dishes with sauces, served with rice, beans, and viandas. Dinners often include the popular Cuban salads. Two of the most common salads are the tomato salad, which consists of sliced tomatoes and sliced raw onions doused in olive oil, and the avocado salad, made of sliced avocados and sliced raw onions doused in olive oil. Sometimes salt is sprinkled over the salads for extra flavoring. Cubans rarely eat leafy lettuce salads, but during the late summer months when lettuce is in season, lettuce salads may appear on the Cuban dinner table. *Picadillo*, or ground beef cooked in a sofrito sauce, served over white rice, is another common Cuban dinner.

Between meals, Cuban snacks are popular ways to ward off hunger. *Bocaditos* are small bite-sized sandwiches with ham spread. *Pastelitos* are small pastries filled with meat, cheese, guava, or guava and cheese. While street vendors sell bocaditos and pastelitos, many people also sell them out of the window or front door of their houses. Little personal pizzas are also a common snack food, sold in government cafeterias and out of neighborhood houses. Croquettes, made of deep-fried minced pork, are very popular Cuban snacks, but they are

more likely to be eaten at a street fair or festival than for everyday snacking.

Although most Cuban households are able to eat three meals a day along with a snack, some households may not have adequate resources to do so. Hunger and malnutrition are rare in Cuba, but some evidence shows that due to the lack of iron-rich foods in the Cuban diet, rates of anemia in eastern Cuba can be as high as 56 percent among children under two years old and 20 percent among children between two and five years old.

Although historically the cuisines in different regions of Cuba varied a lot, today with the nationalized food-rationing system, much of the food eaten in Cuba is the same across the island. There are a few exceptions to this, however. People are eating the same thing, but the items may have different names in different parts of the island. For example, in western Cuba a banana is called a *plátano*, but in eastern Cuba it's called a *guineo*. In central Cuba, it is common to have flatbread made out of cassava served with meals, but this is very rare in other parts of the island.

Picadillo

Ingredients

- 1 lb ground beef
- 1 tsp oregano
- 1 tsp cumin
- Salt and pepper
- 2 yellow onions
- 1 green pepper
- 7 cloves garlic
- 1 c tomato sauce
- ½ c water
- 1 tbs olive oil

Combine ground beef, oregano, and cumin, and add salt and pepper as desired. Chop onions and green pepper, and mince the garlic. In a saucepan on the stove, heat the olive oil, and sauté the onions, green pepper, and garlic. Cook until soft. Add tomato sauce and water, stirring continuously, then

simmer for 10–15 minutes. After the beef is cooked, remove the cover, and cook for an additional 5 minutes or until the liquid has evaporated. Serve over warm white rice.

Eating Out

In Cuba, there are many ways to eat outside of the home. In addition to foods and snacks from street vendors, Cubans also eat at government-owned restaurants or at privately owned restaurants called *paladares*, and on rare occasions Cubans may eat at hotels where many foreigners and tourists are likely to eat. In some cities, such as Havana, there is a vibrant Chinatown area where Cubans can eat excellent foreign dishes, but for the most part Cuban restaurants serve only Cuban food.

There are many privately owned restaurants, or *paladares*, all over Cuba. The Cuban government started allowing private restaurant ownership in 1997. The *paladares* are essentially a way for Cuban families to open up their homes and sell food to foreign or Cuban guests. *Paladar* owners must purchase and apply for a permit, and they must pay a monthly fee to keep their business going. *Paladar* menus often consist of a wide range of traditional Cuban dishes, but most of the time only a few of the menu options are available. Some patrons find this frustrating about *paladares*, while others have simply grown accustomed to always asking which menu items are available that day. Many *paladares* are known for having very slow service, but a few stand out because of their polite waitstaff and relatively quick service. *Paladar* prices vary widely: Some are quite affordable for most Cubans, while others have set prices

A Cuban man drinks at Bilbao, a bar in Havana. (StockPhotoPro)

that only foreign clientele can afford. Many paladares will have two different menus, one with affordable prices for Cubans and another with the same menu items set at high prices for foreigners.

Cuban Chinese food is a popular type of cuisine that many Cubans eat in restaurants. Many Cuban cities have Chinese restaurants, and Havana has the largest Chinatown of any country in Latin America. Over 100,000 Chinese people immigrated to Cuba in the 1800s as migrant workers, and many of their ancestors remain in Cuba. Chinese Cuban food is somewhat different from other Chinese foods since the ingredients are quite different due to Cuba's food-rationing system and the types of foods that the Cuban government is able to import. Nonetheless, many Cubans feel this is the best food to experience when eating outside the home since the dishes are not easy to make and are not common in Cuban home cooking. The prices at Chinese restaurants in Cuba tend to be very reasonable, making this an affordable option for the occasional dining-out experience in Cuba.

There are some government-owned fast-food restaurants in Cuba; El Rapido and Burgui are two of the most common chains. El Rapido sells hamburgers, hot dogs, pizza, and sandwiches along with Cuban-made soft drinks. Most Cubans rarely eat fast food both because they do not find it to be a filling or satisfying meal and because the prices are somewhat high.

Special Occasions

Cubans celebrate many different occasions throughout the year. Many Cubans follow the Christian calendar as well as celebrating some of the saints of Santería or other Afro-Cuban religions. In every Cuban city, Carnival and the anniversary of the 1959 Revolution are celebrated, as well as weddings, births, and deaths. Fasting is uncommon in Cuba; most celebrations involve feasting.

During Carnival many Cubans will celebrate by attending and eating at the local festivals. During this time street vendors set up along the streets with whole roasted pigs from which they sell sandwiches. Croquettes and bocaditos are also for sale during

this time. Others vendors sell sweets and desserts such as sugar-roasted peanuts, candies, or cotton candy. During this time state-subsidized beer is also sold from very large kegs placed along the streets. The beer is very cheap, but all must bring their own cups because these are not provided. Some Cubans celebrate Carnival with a special dinner at home. It is common to share a roasted pork leg served with a tomato salad and boiled or fried viandas. After dinner, family members and guests might also have a few glasses of rum as they share stories and listen to Cuban music.

During Christmas and New Year's, Cubans will also celebrate with a special meal. This meal might include croquettes or tostones as appetizers along with marinated olives. The main meal consists of black beans and rice, viandas, Cuban salad, and roasted pork. Desserts for these holidays are often much more elaborate than everyday desserts. Many families serve rice pudding (*arroz con leche*), Cuban flan, *tres leches* cake, or homemade jams and jellies with cheese. Rum is usually shared following special-occasion meals, and smokers will enjoy a good Cuban cigar. For New Year's Eve, some Cubans will eat 12 grapes at the stroke of midnight to celebrate the 12 months of the year.

Birthdays and wedding celebrations are also very important in Cuba. Usually, these occasions are celebrated at home with a special meal rather than by going out to celebrate. At a typical birthday or wedding celebration the host will serve a macaroni or potato salad with lots of mayonnaise, chunks of cheese, and ham. Smoothies or fruit juice will be served along with a cake bought from a local cake maker. At weddings and adult birthday parties, guests will drink Cuban beer or rum together throughout the celebration.

Diet and Health

Recently, in Cuba, the government has tried to encourage people to eat more vegetables and less fatty foods. Many Cubans claim that this is very hard for them, as they have grown accustomed to eating fried foods and a lot of pork, which can be a very

fatty meat. For a long time fresh vegetables were hard to find in Cuba, so many Cubans are not used to eating vegetables daily. However, fresh fruits have always been an important part of a healthy Cuban diet, and most Cubans eat several servings of fruit everyday. Nearly all of the grains Cubans eat—mostly rice—are refined grains. The white rice that is eaten daily has far less nutrients in it than brown rice would; however, brown rice is nearly impossible to find in Cuba and, even if it were, Cubans are not accustomed to eating it.

In addition to encouraging healthier eating, the Cuban government encourages Cubans to get plenty of exercise and take part in healthy physical activity. Eating more fresh vegetables and exercising daily is thought to help reduce the chances of getting heart disease or acquiring other related health problems.

Curaçao and Sint Maarten

Overview

The five islands of the Netherlands Antilles are divided geographically into the Leeward Islands (northern) group (Saba, Saint Eustatius, and Sint Maarten, which is the Dutch half of the island shared with France, known as Saint Martin) and the Windward Islands (southern) group (Bonaire and Curaçao). In October 2010 the Netherlands Antilles was broken up. Curaçao and Sint Maarten became autonomous territories of the Netherlands, and the remaining smaller islands were given the status of cities.

Curaçao was first settled 6,000 years ago when the Arawak Indians journeyed to an island 35 miles to their north, Curaçao, the middle island in what is known as the ABC islands (Aruba, Bonaire, and Curaçao). The group of Arawaks that settled on Curaçao were the Caiquetios, who some historians believe gave the island its name. Others trace the name to the island's reputation as a place to cure scurvy-stricken sailors. The indigenous population was followed by large numbers of Spanish who settled on the island. However, by the early 16th century the Spaniards abandoned the island because of the lack of a freshwater supply and valuable minerals.

In 1634, long after the Spanish had abandoned Curaçao, the Dutch West Indies Company claimed the island. The natural harbor of the capital, Willemstad, was ideal for trade. Commerce and shipping became the center of Curaçao's most important economic activities. Curaçao played a pivotal role in the Atlantic slave trade. During this period, the local language, Papiamentu, a mixture of Portuguese,

Spanish, Dutch, and African dialects, began to develop, and it became the primary means of communication between slaves and their owners.

The capital city of Willemstad became a UNESCO World Heritage Site in 1997, putting it on the list of some of the world's most famous landmarks. Willemstad's Saint Anna Bay became one of the busiest ports in the Caribbean. Raw materials from South America were traded for finished goods from Europe and North America.

The end of slavery in 1862 led to an economic downturn that lasted until Shell built an oil refinery on the island in 1915. Curaçao became the seat of government for the newly autonomous Netherlands Antilles in 1954. However, the 1970s oil crisis ended the long economic boom and reduced international investment, leading to further economic decline. Shell closed the refinery in 1985. Curaçao's government took over the refinery in the 1990s and leased it to a Venezuelan company. Other industries like tourism, offshore banking, shipping, and ship repair all make a considerable contribution to the economy.

Curaçao's population of 192,000 spreads out over 182 square miles. The official language is Dutch, but English, Papiamentu, Spanish and Portuguese are also spoken. With respect to religious affiliation, 85 percent are Catholic, while the remainder are Methodists, Seventh-Day Adventists, Pentecostals, and other Protestant denominations. The Jewish congregation on Curaçao dates back to 1651 and is the oldest in the Americas.

Curaçao is the largest island of the Netherlands Antilles, whereas the island of Saint Martin is the

smallest landmass in the world to have been harmoniously shared for 350 years by two independent countries; the French owned Saint Martin and the Dutch the territory of Sint Maarten. The border between north and south is all but invisible, and in most ways Saint Martin/Sint Maarten is simply a strikingly beautiful neighborhood with two distinct cultures.

The French side (Saint Martin) has first-class beaches and exclusive restaurants. Marigot is their “Mediterranean resort,” with yachts in the harbor and open-air markets lining the waterfront. On the north side, Grand Case is known for the island’s best restaurants. The Dutch side (Sint Maarten) also boasts white sand beaches and offers casinos, historical sites, shopping venues, and lots of night-life. Philipsburg, a duty-free port, is the main entry point for cruise ship passengers.

Food Culture Snapshot

For breakfast a Curaçaoan might rise early and search out the “schooner” market along the Ruyterkade in Willemstad, the capital. Here, Curaçaoans may shop for melons, pineapples, plantains, chilies, limes, oranges, papayas, mangoes, potatoes, tomatoes, peppers, okra, fresh nutmeg, and cinnamon sticks for the next few days’ menus filled with *stobas* (stews). More so than 50 years ago, the tourist trade has increased the choices at open-air markets, grocery stores, and the docks.

While shopping Curaçaoans may opt for a stand-up breakfast of *pastechi*, fried pastries filled with savory cheeses, tuna, ham, chicken, or, more rarely, beef. In addition to shopping for supplies, a small percentage of islanders raise a few chickens or iguanas and/or enjoy fishing for their own supper.

At the modern grocery store they would purchase other staples such as coarse-ground cornmeal and peas for such dishes as *tutu*, which is cornmeal with black-eyed peas, or *funchi*, a cornmeal porridge much like *fufu* or the African *ugali*. Because of the humidity, cornmeal and any flour or sugar items are stored in refrigerators, but the dried beans are shelved in kitchen pantries. At times these pantries are still called closets, like in Europe.

Caribbean people are descendants of Europeans and Africans, among other groups. Those of European descent have typically been the ruling classes. Though European customs prevail in terms of shopping a little each day, the spirit is decidedly Caribbean. Wealthy families dine late in the evening, sipping on wine and scotch as well as the ubiquitous rum and, of course, Curaçao liqueur, which is a sweet lurid blue drink flavored with the peel of the Lahara citrus fruit, a descendant of the Valencia orange. The name of Curaçao may have originated in part due to the “cure” part of the drink’s reputation. No actual Curaçao liqueur made in Curaçao is imported into the United States.

Later in the day after work, Curaçaoans may stop at a fishmongers as the fresh catch is brought in, to prepare a *guiambo*, a seafood and okra stew. If it is Christmas time they may purchase salt cod to make *pekele*, a dish similar to the *bacala* eaten elsewhere in the Caribbean—a dish of cooked salt cod and potatoes. Another very specialized holiday ritual dish is *hallaca*, which are cornmeal cakes stuffed with beef, pork, chicken, olives, capers, and raisins, then wrapped in plantain leaves, tied with string, and boiled or steamed. Recipes and ingredients appear in the local papers in early December to give ample time to gather the long list. The true hallaca are made during a matriarchal family fest that produces hundreds to last the entire season.

It is favorable for Curaçao, as well as Bonaire and Aruba, that the island is located below the hurricane zone, but it can still be challenging to receive any fresh produce and meats from Venezuela if a hurricane is rolling through the Caribbean.

Major Foodstuffs

Market women (“hucksters”) offer tubers, including yams, potatoes, dasheen, *tannia* and *eddoes* (both small starchy root vegetables), and cassava (the flour of which is used to make farina), as well as citrus, bananas and plantains, and breadfruit, in the floating local markets. An 18th-century soldier’s diary mentions “syrup beer and a country drink called mawbey,” a bittersweet drink made from the bark of a tropical tree. *Mauby*’s taste is perfect with the

salty sea urchins called sea eggs. Slave markets offered a significantly broader range of items than the historical record has suggested. Staples such as rice, wheat flour, beans, corn, and salted meats were imported, both from Europe and the United States, except during interruptions caused by war.

Various herbs are sold and used for both culinary and medicinal purposes; in Obeah, Voudun, and other Afro-Caribbean religious ceremonies; and in the past as a poison against slave masters and in rebellions. Tropical and semitropical fruits include bananas, mangoes, citrus fruits, papayas, guavas, and pineapples. Dietary staples like potatoes, tomatoes, and green peppers were brought by the Dutch. Families who live on Curaçao often raise goats, iguanas, chickens, rabbits, and pigs. Fresh fish found in the waters and used extensively include kingfish (*mala*), sea bass (*mero*), king dolphin (*dradu*), and

some very fine shrimp and warm-water (i.e., tropical) lobster. Dairy products are all imported. Salt is an important part of Sint Maarten's history, as it is for Bonaire.

Cooking

On Curaçao, cooking is a bit more Spanish than on Sint Maarten but still filled with common key local foods. Oil is involved in making the all-time favorite breakfast, *mangú*, a green plantain puree with fried eggs, fried cheese, or sausage. Variations include other tubers and vegetables as well as potatoes and bread. Strong coffee with milk is part of the daily morning ritual.

The roots and tubers used in the local cuisine are preferably cooked, and that is more the focus rather than presenting fresh vegetables, even tomatoes and

The famous floating market market at Willemstad in Curacao. (Dreamstime)

peppers, raw in salads. Noon is considered lunch-time. Lunch is the largest meal of the day. Again, the preferred cooking technique is stewing with generous use of fresh ingredients and spices. The mainstay is rice, either cooked with beans or served with any type of bean on the side. Beans are stewed in a flavorful liquid to a creamy state and served over the rice. Meat, perhaps served only twice a week (from leftovers), is either chicken, beef, pork, or goat, generally stewed in Creole fashion with pimentos and tomatoes.

Dinner is at 7 to 8 P.M. and is similar in proportion to breakfast. Plantains are served mainly, but variations do include boiled roots and bread, accompanied again by bread or sausage, eggs, or leftovers from lunch. Because of the weather, meal patterns remain similar, except for holidays, throughout much of the year. Spicy braised pork and hot peppery stews of seafood as well as barbecuing are popular.

Guavaberry is the legendary folk liqueur of Sint Maarten. It was first made here hundreds of years ago in private homes. People made as much as they needed to serve family and friends. Guavaberry became and still is an integral part of the local island culture. The word itself conjures up memories of the olden days, folk songs, and stories. The guavaberry itself is a wild local berry that is found in the warm hills at the center of the island. Guavaberry fruits are rare and seasonal, making the liqueur even more unique.

There are Curaçao cucumbers, which are small spiny vegetables with a long stem, not to be confused with cucumbers used in salads, which are used in the classic stew *stoba di komkomber*. Prickly pears grow wild, as do *melon di seru*, or mountain melons.

Iguana Stew

Fresh tuna or chicken can be substituted for the iguana. This is a rough approximation of the dish. This stew is quite hot.

Serves 4–6

2 lb iguana meat (if unavailable, substitute tuna or chicken, in large chunks)

Juice of 1 lime
 3 c water
 1 c coconut milk
 10 small potatoes, diced
 3 tomatoes, chopped
 3 bell peppers, cut into 1-in. pieces
 1 c noodles, such as macaroni
 2 bay leaves
 ½ tsp oregano
 1 sprig parsley
 1 sprig thyme
 3 stalks celery, cut into ½-in. pieces
 2 habanero chilies, seeds and stems removed, chopped
 3 cloves garlic, chopped
 Salt and pepper to taste
 1 oz whiskey of choice

In a bowl, toss the meat with the lime juice. Cover; while the meat is marinating, combine all the remaining ingredients, except the whiskey, in a large pot or stockpot, and bring to a boil. Reduce the heat, cover, and cook over low heat for 45 minutes.

Add the marinated meat, adjust the consistency if necessary with coconut milk, cover, and cook over low heat for the following times: iguana, 1 hour; tuna, 20 minutes; chicken, 40 minutes.

Just before serving, add the shot of whiskey and stir well.

Other dishes may include local green papaya, a special kind of cucumber, or cabbage, this being stewed with corned beef. Okra and cactus soup is also part of the local cooking as well as a sweet soup made from plantains and vegetables seasoned with peppers and cinnamon. *Ayaca* are savory meat tamales wrapped in banana leaves. *Keshi yena* is a Dutch holdover and is a whole Edam cheese stuffed with stewed meat, raisins, olives, and capers and baked until the cheese melts. Then come the Dutch favorites of pickled fish, salted herring, salmon, and mackerel marinated with onions, hot peppers, and

spices. Pickled pig's ears and feet are cut into thin strips, soaked in brine, and flavored with onion and spicy peppers. *Bolo pretu*, the black cake, is reputed by the islanders to be the world's best fruitcake. Another dessert is *sunchi*, or meringue "kisses" made from sugar, egg whites, and food coloring. *Panseiku* is a praline of toasted peanuts and almond essence cooked in a brown-sugar brittle. *Djente kacho* ("dog's tooth") is coconut cooked in sugar syrup. *Kokada* are patties of freshly grated coconut. *Tentalaria* is ground peanuts or cashews cooked till tender in a sugar cream, and *zjozjoli* are chewy sesame seed bars.

Curaçao is known and recognized the world over for its Curaçao liqueur, which was discovered by accident. The liqueur is made from the peels of the bitter Lahara orange. The Spaniards had brought juicy sweet Valencia oranges to the island, but the

fruit was unable to flourish because of the very different climate, which changed the flavor, transforming the sweet Valencia orange into the sour Lahara orange. Decades later, it was discovered that the peel of Lahara oranges contains sweet-smelling oils that could be used to make the Curaçao liqueur. These oils were combined with exotic spices, which results in the familiar liqueur millions recognize and enjoy. Amstel Brewery makes its home on Curaçao too.

Typical Meals

Breakfast embraces the breads that are an important part of Sint Maarten's culture. *Pan dushi* (often made for New Year's) or *pan serra* (a dense loaf of bread with a Holland heritage) are common, as are *pastechi*.

A typical roadside restaurant in Sint Maarten specializing in krioyo. (Dreamstime)

For lunch there is the wide variety of local cuisine, called *krioyo*. Roadside stands, called *truki pan*, on Sint Maarten are quite sought after. Dishes offered include *morro*, which is rice and beans, often served with fried plantains or banana *hasa* (*gebakken banaan*, baked banana). *Sopa pika* is fish stew; if made with shellfish, it is called *zarzuela*. *Kadushi* is a hearty soup made of the kadushi cactus with fish, more vegetables, and herbs. *Ayaca* is chopped beef wrapped in banana leaves. *Cachapas* is a cornmeal and beef tamale with a huge reputation for being delicious. *Stoba* are stews. They can be made of goat or lamb and include such ingredients as capers, cumin, celery, garlic, ginger, olives, limes, sweet peppers, hot peppers, cucumbers, and shallots. *Berehein na forno au aubegine* (eggplant) in coconut milk is also popular on Sint Maarten. Often by 1 P.M. the roadside stands have shuttered their windows as they are completely sold out.

At dinner time *sopito* may be featured; this is a seafood chowder made with coconut milk, salt pork or corned beef, onions, tomatoes, garlic, peppers, fresh cream, and a variety of spices as well as whatever seafood the boats have brought to shore that day. Though a Curaçao meal often centers around fish or meat, many a Curaçao meal ends with sweets, a custom stemming from the colonial era that aided the northern Europeans by giving the body sugar to help in tolerating the extreme heat.

Eating Out

Restaurant culture began after the Dutch arrived. Foreign travelers to Curaçao and Saint Martin are likely to come in contact with a broad range of dishes professed to be authentic in character. Most food produced for tourists reflects the particular tradition of transatlantic shipping from which not only the foodstuffs but also the contemporary populations emerged. Perhaps the most contentious debate among contemporary scholars of the Caribbean concerns the origins of the region's cultural influences. Many argue that African cultural influences define the region.

Resort restaurants feature dishes as worldly as the tourists who arrive into Curaçao, but the Dutch

influence can be seen in such dishes as Dutch pea soup. A few restaurants even boast authentic windmills that were dismantled and shipped from Holland and reconstructed on the premises. *Callaloo*—which means “herb porridge”—is served often, even at lunchtime roadside stands or shacks. Another favorite dish on Sint Maarten is *christophene farci*, which is stuffed chayote squash. Chinese restaurants serve the traditional *rijstaafel*, a 21-course meal created by Dutch colonial rulers in Indonesia, since there are few Indonesians here. French fries are served with an African-influenced peanut sauce.

Special Occasions

For special occasions, two culinary traditions may still be found in well-to-do households. The birthday reception is basically an open house held from sunup to sundown on the day in question. It should be well attended by everyone who even slightly knows the person having a birthday. Another social time well anointed with cultural significance and food is teatime. When in the past circles of friends and acquaintances were more manageable, this was a very important time. The servants of these households often whispered that this was the gossip hour, and in Papiamentu this would be called *awa di redu*, or gossip water. Such a traditional teatime menu would include *pastechi*, *cachapas*, and also another chopped beef delicacy stuffed inside banana leaves.

Curaçao's fine restaurants provide for vacationing tourists, and as such the locals struggle to preserve traditions. They are often so busy working that they cannot celebrate, at least not with the vigor they used to have.

For weddings they make a cake called *bolo pretu*, which includes nuts, figs, citron, almonds, raisins, currants, dates, prunes, Angostura bitters, brandy (both regular and apricot), vermouth, cherry cordial, Curaçao liqueur, rum, and spices. It is important to bake the cake a day or two before the wedding. It is baked in round pans and iced with fondant. The decorated cakes are cut into squares, wrapped in wax paper, and placed in a small tin for guests to take home.

Diet and Health

Pork- and fat-laden “resort” food is consumed on Curaçao and Sint Maarten. It is recommended that locals return to their original foods and seafood and avoid the trap of fast foods, which, while quicker to consume, also pose greater health and long-term risks as well as leading to a loss of food culture. When eaten, chicken, goat, and iguana are high in protein and, depending on the cooking method, may contain less fat. As on many of the Dutch Antilles, iguanas are now protected and are now often raised on farms instead of depleting the already-challenged wild population.

Irish moss is a beverage consumed for health and aphrodisiac purposes. It is made with Malta, a non-alcoholic beverage and a seaweed. It is thought to aid in the cure of bronchitis, tuberculosis, and intestinal dilemmas. Ginger beer is often offered as a tonic for digestion and menstrual cramps and as an alternative to aspirin.

Dominica

Overview

Officially the Commonwealth of Dominica, Dominica is nestled between two of the last vestiges of French Caribbean colonialism, Guadeloupe to the north and Martinique to the south. The most northerly of the Windward Islands, at 15° north and 61° west, Dominica is 291 square miles (750 square kilometers) in area, 29 miles (47 kilometers) long and 18 miles (29 kilometers) wide.

The island was formed by volcanic action, evident in the verdant majestic mountains as well as numerous volcanic fumaroles and hot water springs. With two-thirds of the island covered in a lush rain forest canopy hiding towering waterfalls and rivers flowing through valleys, as well as boasting an array of colorful and interesting flora and fauna, Dominica is paradise for nature lovers and a top scuba-diving destination. Warm but sometimes very wet, the temperature in this tropical climate ranges from 80 degrees Fahrenheit (26 degrees Celsius) in January to 90 degrees Fahrenheit (32 degrees Celsius) in June. The heaviest rainfall occurs between July and November, and the interior has the highest average annual rainfall at around 275 inches (700 centimeters).

Dominica was first claimed by France in 1635 and, after a period as a neutral island, was ceded to the British in 1760. Now a republic within the British Commonwealth, Dominica became an independent island nation on November 3, 1978. With a small population, challenging topography, historical dependence on agriculture, and devastating hurricanes, Dominica's economy has suffered many setbacks. Agriculture, especially banana exports,

was the dominant sector, but recent decisions by the World Trade Organization heralded an end to the preferential treatment given by the United Kingdom. This has led to a sharp decline in the sector. The island is now trying to diversify its economy and is expanding tourism, focusing on ecotourism and attempting to vary its agricultural exports.

The population, estimated at around 72,000, is an ethnic mix, the majority of whom are descendants of West African slaves brought to work the plantations. The remainder consists of Amerindian descendants and a small percentage of Europeans, Lebanese, Syrians, and Asians. Dominica is one of the few places in the Caribbean that still has a population of pre-Columbian indigenous people, the Kalinago (Caribs). Numbering around 3,000, the Kalinago mainly live in the east, in an area secured for them in 1903. This dedicated Kalinago Territory, unique in the Caribbean, is communally owned. The remainder of the population mainly resides in the coastal villages, with the capital Roseau on the southwestern coast being the most densely populated, and Portsmouth on the northwestern coast being the second-largest town. This vibrant synthesis of French, African, Amerindian, and British influences has created a unique but distinctly Creole culture that is evident in the language (French Creole or patois), traditional dress, customs, music, dance, and cuisine.

Food Culture Snapshot

John and Sylvia Charles live in the Roseau Valley village of Trafalgar with their children, Robert (age 13),

Zoe (age 8), and Joshua (age 4). Sylvia's mother, Petula, also lives with them. It is 6:30 A.M. on Friday, and Sylvia, who works as a bank clerk in Roseau, has already returned from her morning walk, has eaten her perfunctory two oranges under the tree in the yard (a knife is kept tucked away in the branches for this purpose), and is now preparing breakfast. At the same time she is getting the lunch ingredients ready for when the helper arrives later in the morning.

Lunch will be tuna in Creole sauce, which she already seasoned last night. Yesterday John picked some lettuce and tomatoes from their little backyard garden, and his brother David, who lives nearby, brought over carrots and string beans from his garden earlier in the week. Sylvia puts a bag of white rice on the kitchen counter, checks the pot of lentils left soaking on the cooker overnight, and gets the last of the figs (as green bananas are called here) from the pantry.

She then writes her shopping list. They don't need much, as it's nowhere near payday and things are already tight. Some garlic, onions, butter, ultrapasteurized and evaporated milk, and macaroni, perhaps. She will, however, have to pick up some whole wheat bread from the depot even though she knows the children will complain. Making a start on breakfast, the thought crosses her mind how this meal has become a trial. The children no longer want to eat her usual offerings of porridge oats—Joshua in particular refuses to eat anything but the very expensive chocolate-flavored cereal he saw on TV. She and John will have fried plantains and boiled eggs and share the leftover bread with the children.

Sylvia begins to prepare cocoa tea for the kids, grating the rolled chocolate her husband's brother brought in fresh the week before, boiling the water, and adding the chocolate to "melt" before pouring it into hot milk and placing a couple of teaspoons of brown sugar into the mixture. Milk would have to do today for the cocoa tea although dried coconuts sat on the counter ready for the inner hard flesh to be removed, which would then be grated; the far more nutritious milk would then be forced out by repeatedly pouring hot water over the grated coconut. Sylvia herself has already downed her ginger tea, made fresh from the grated ginger that she had grown in the garden.

Suddenly, the morning peace is shattered by the sound of the boys running down the wooden stairs. Zoe is good girl and has always given Joshua his breakfast before getting him ready for school. Robert, however, is a typical teenager, as sullen as his grandmother, so he arrives fretting as usual. John, a forestry officer at the nearby Trafalgar waterfall, walks in and tells the children to be quiet—peace is required before his daily routine of ensuring the forests and its wild animals are kept safe. Hunters out of season are penalized severely for catching *manicou* (opossum) and agouti (wild meat revered by Dominicans) on this island—even the now-almost-extinct "mountain chicken" (an edible frog)—but although these laws have worked well as a deterrent, one still has to keep a sharp eye out for the odd criminal.

During breakfast Sylvia plans out the weekend in her head. The family will probably go to the local barbecue stall in the village after grocery shopping tonight. She can almost taste the deliciousness of that well-seasoned chicken. Tomorrow, Saturday, John will go to the Roseau market, make his social rounds, and pick up some hot stone-oven bread, blood sausage, and souse for their breakfast. He will also buy what vegetables, fruit, provisions, and herbs they need for the week and whatever fish is available from the nearby fisheries complex. On Sunday they might visit John's parents in Castle Bruce village and take a tour of the Kalinago model village on the way. Sylvia has always wanted to go there and hopes they have fresh cassava bread. Or maybe if the weather is fine they will join friends for a picnic on Mero beach after mass. She makes a mental note to add some Irish potatoes and mayonnaise for potato salad and chicken for frying to her shopping list, just in case. Sylvia has always insisted that weekends become a special treat for her family.

Major Foodstuffs

Dominica has small-scale farming including traditional subsistence horticulture or backyard gardens; the fertile volcanic soil lends itself to growing a large variety of crops. The most common include bananas, plantains, "provisions" (these include root crops such as yams, dasheen, *tannia*, cassava, and sweet potatoes, as well as other starchy foods such

as breadfruit and green bananas, known locally as figs), chayotes, seasoning peppers, hot peppers, avocados (known locally as pears), lettuce, carrots, tomatoes, pumpkins, ginger, coconuts, and a variety of pulses. A selection of seasoning herbs are also grown, like chives, thyme, parsley, celery, and bay leaf as well as an assortment of herbs for bush or herbal tea, like vervain and sacred basil (basilic).

In an effort to diversify the agricultural sector, cacao is one of the crops being targeted for increased production, and coffee cultivation is likely to grow with talk of a Venezuelan-funded coffee plant. The local Café Dominique, a pure ground coffee made from the roasted arabica bean, is produced by PW Bellet & Co. Limited.

Fruit trees are all over, and local fruit juices are drunk on a regular basis. Fruits include citrus, such as oranges, limes, grapefruit, and tangerines, and exotic fruits, like passion fruit, West Indian cherry,

carambola, soursops and sweetsops, sapodillas, guavas, tamarinds, pawpaws (papaya), and a variety of mangoes. Pineapples and watermelons are mainly grown on the drier west coast.

Native rums are produced by Belfast and Shillingford Estates. The Shillingford *macoucherie* rums are distilled from pure sugarcane juice using sugarcane that is still cultivated on the old estate lands. These rums form the basis of a wide variety of punches, bush rums, and cocktails. Bush rums are overproof rums infused with spices or herbs—these are usually found in every home or bar.

Cattle and poultry are reared for local consumption, including beef, chicken, pork, lamb, mutton, goat, and, more recently, rabbit. Across the island the sound of the queen conch shell being blown signifies that fishermen have returned or that a truck with fish is nearby. The catch can include tuna, marlin, or dorado (also known as mahimahi, and locally

A small backyard farm on the island of Dominica. (StockPhotoPro)

as *dolphin* or *dowad*) and flying fish. Jacks, snapper, and *balao* (a thin fish with a long pointy beak) are caught inshore, and during hunting season there is fresh river crayfish. Spear fishermen hunt for reef fish, lobster, and octopus. Imported codfish (salt fish) is also used in a variety of dishes. The tiny *titiri* is revered. Caught three to four days after the quarter moon using huge nets at the mouth of the rivers (particularly the Layou River), it is washed of sand, seasoned well, and made into *titiri accra* (spoonfuls of a seasoned fish/flour mixture are fried in buck pots of hot oil).

Crab Backs

Ingredients

- ¼ c oil
- ½ tbsp soy sauce
- 2 cloves fresh garlic, grated
- 1 large onion, finely chopped
- 2 mild chili peppers, finely chopped
- 1 stalk fresh celery, finely chopped
- 1 sprig parsley, finely chopped
- 5 sprigs chives, finely chopped
- 2 sprigs thyme, finely chopped
- 1 tbsp lime juice
- ¾ lb crabmeat, fresh or canned
- 2 tbsp tomato paste
- 1 hot Scotch bonnet pepper, seeded and finely chopped
- 3 tbsp breadcrumbs
- Salt and black pepper to taste
- 6 crab back shells, cleaned and scrubbed

Heat oil in a deep frying pan. Add soy sauce, garlic, onion, chili peppers, celery, parsley, chives, and thyme. Stir and let steam for just a few seconds. Add lime juice. Let steam for another 5 minutes. Add enough water to cover ingredients. Add all the crabmeat. Stir. Add tomato paste and hot pepper, and sprinkle breadcrumbs over the mixture, stirring constantly until a good thick consistency is reached.

More crabmeat than breadcrumbs is preferred. Add salt and pepper to taste. Reduce heat. Let steam for another 2 minutes just to get rid of excess water. Place mixture into crab backs, sprinkle with more breadcrumbs, and brown under a grill just before serving. Crab backs can also be prepared and frozen; when ready for use, remove from freezer, defrost, and use same way as described. Serve with a sprig of parsley as garnish. Two crab backs are usually served per person.

Bread is a major staple, and there are several family-owned bakeries with satellite bread depots in most of the populated areas. A few still bake using the traditional stone oven. The bread types include *mastiff* (a long, dense bread), *jackery* (a small square bread with small holes on the surface), and *butterflap* (a roll that is folded and filled with salted butter). Rolls and sandwich loaves, including whole wheat, are also available.

Most bakeries also bake meat pies, pasties, and a selection of sweet breads, cakes, and pastries such as raisin bread or buns, coconut cake or turnovers, sponge cakes, and bread pudding. Cassava bread and *kanki* (a sweet made with cassava/manioc roots, sugar, and spices and steamed in banana leaves) can be found in the Kalinago territory.

There is currently no local dairy, and all dairy products are imported. Milk is predominantly evaporated, ultrapasteurized, or powdered. Items such as rice, sugar, flour, pasta, garlic, onions, and Irish potatoes are additional major imported foodstuffs.

Cooking

The native Carib Kalinago influence can still be seen in some culinary styles and dishes such as smoked meat and fish or even in the traditional cooking method of the island, in which large black iron pots sit above a wood fire or coal-fired coal pots (iron or earthenware pots). The word *barbecue* is in fact derived from *barbacoa*, the indigenous method of cooking meat or fish over a fire. The use of *roucou* (annatto) as a natural food coloring and of cassava flour (known locally as *farine*) to make bread also stems from Kalinago culture.

One of the most important steps in Creole-style cooking, influenced by the French, is the use of seasoning and the marinating of meat and fish prior to cooking. Seasonings, including seasoning peppers (these are slightly different in shape from hot peppers and have flavor and no heat), garlic, ginger, thyme, parsley, celery, salt, and sometimes onion and chives, are chopped and used in meat preparation and to flavor a variety of dishes. Meat and fish are washed with salt, lime, and water and marinated in seasonings overnight.

Chili peppers are widely used, both in dish preparation and sprinkled over cooked food. The main varieties grown are the West Indian red and Scotch bonnet, and households and eating establishments will have a bottle of one of the locally produced hot pepper sauces. Curry is also used to season, and although not a traditional Dominican dish, curried goat is common.

Caribbean jerk chicken served with red beans, rice, and plantains. (Eddie Lepp | Dreamstime.com)

The main dishes usually consist of meat or fish, a mixture of fresh seasonal vegetables, salads or coleslaw, rice or pasta, and pulses and are cooked in the following manner: Seasoned and marinated meat, largely chicken, pork, lamb, mutton, and beef, can be stewed in a light curry or Creole sauce or roasted. Chicken and pork can also be baked plain or in a barbecue sauce, and chicken can additionally be served fried. Fish is served steamed, fried, grilled, or baked and often in a Creole sauce.

Pulses including kidney beans, black-eyed peas, and lentils are bought dry, soaked overnight, and boiled with seasonings or heated from cans. Rice, normally white rice, is washed to remove excess starch, seasoned, and boiled, and sometimes pulses are added. Vegetables are served boiled, and provisions are served as boiled chunks or sometimes in the form of a deep-fried seasoned “puff” or *accra* (fritter).

Light stews such as goat, fish, or *shatou* (octopus) water and soups made of vegetables, cow heel, or pumpkin are eaten in the early evening. These are also considered to be aphrodisiacs—soups to “put it all back in.” *Callaloo* soup is made from young dasheen (taro) leaves or spinach and is sometimes cooked with land crab. Flour-and-water dumplings can be added to soups. The ears, nose, tail, and trotters of the pig are boiled in seasoned brine for a traditional dish called *souse*. It is served with a mixture of cucumbers with lime juice.

Putting all the ingredients into one pot is a common cooking style. The one-pot *braf* (a broth made from a variety of provisions, dumplings, and seasonings, flavored with smoked meat or fish and cooked in a large iron pot over an open fire) and stewed chicken *pelau* (a seasoned rice dish) are examples.

Wild meat such as maniocou (opossum), agouti, and wild pig is revered but available only during hunting season. Land crab also comes under this heading. The mountain chicken (*Leptodactylus fallax*) has almost become extinct because of a viral infection affecting these frogs, and efforts are underway to study not only the problem but also the solution, as this meat (frog legs) was a staple in most Dominican households.

Manicou or Agouti (Dominican Game)

Any smoked or unsmoked meat or wild meat can be used for this recipe.

Serves 4

- 1 whole smoked manicou or agouti
- 2 tbsp vinegar
- ¼ tsp crushed fresh garlic
- ¼ lb onions, peeled and chopped
- 1 tbsp soy sauce
- 1 tsp thyme
- 1 tsp celery powder
- ½ tsp fresh grated ginger or ground ginger
- 3 mild chili peppers
- 1 slice hot pepper or ½ tsp cayenne
- 1 sweet pepper
- 1 tbsp butter
- 2 bay leaves
- ¼ c red wine
- 1 tbsp tomato paste
- 1 c water
- 1 c cornstarch

Cut the manicou or agouti into small pieces with a sharp Chinese chopper and wash with vinegar. Season with garlic, onion, soy sauce, thyme, celery powder, ginger, and chili peppers. Melt butter in a heated iron pot on the stove. Add the meat, bay leaves, and red wine, and stir vigorously. Stir in tomato paste and water. Cover the pot and let boil over moderate heat for 15 minutes or until meat is tender. In a separate bowl make a paste of the cornstarch and a little water. Add the paste to the pot and boil for another 30 seconds. Serve with plain boiled rice or slices of boiled dasheen. Boil a plantain in its skin, peel and slice, and serve with the meal.

Rastafarians who are Italists (eating a vegan diet that also excludes canned and dried food and often alcohol) and other vegans and vegetarians in the community prepare similar dishes, but the meat is replaced with vegetables, pulses, nuts, tofu, soy chunks, or mushrooms.

Baking is another traditional form of cooking, and baked or roasted dishes (in addition to meat, bread, cakes, and other desserts) are macaroni and cheese, yam and sweet potato pies, vegetables au gratin, casseroles, and roasted breadfruit. These days, although coal pots and open fires are still used, most households cook on propane gas or electric stoves and use microwaves.

Typical Meals

The average person would start their day with one or more of the following: Cereal or porridge made from oats, figs (green bananas), farine, or arrowroot; bread filled with local fruit jam, boiled egg, smoked herring, codfish, tuna, or cheese; plain *bakes* (deep-fried dough made of flour, water, and salt) or bakes stuffed with smoked herring, codfish, tuna, corned beef, or cheese; farine and pear (cassava/manioc flour mixed with avocado); fresh fruit; and cocoa tea (made with grated cocoa sticks, nutmeg, cinnamon, water, and milk or coconut milk), herbal bush tea, or coffee. If a more substantial breakfast is required, then boiled provisions, fried breadfruit, or plantain may be included.

Coconut water fresh from a jelly coconut, blood sausage, pork souse, and deep-fried accras (made with codfish, tannia, or *titiwi*) are Saturday favorites. On Sundays, smoked herring, codfish, or tuna may be cooked Creole style with onions, garlic, and tomato and eaten with boiled eggs and salad. Codfish *sancoche*, made with coconut milk, or ground and boiled codfish, seasoned and fried with onions and sweet pepper (codfish *bulljaw*), are also eaten on a Sunday morning or for lunch.

Daytime snacks include local plantain or breadfruit chips; plain or stuffed bakes; accras, meat or fish pies and patties; barbecued or roast chicken, corn, or plantains; or imported crisps, chocolate bars, and biscuits. Roadside stands sell children's favorite sweets: tamarind balls, coconut cheese/tablet (a kind of sweet coconut fudge), guava cheese, gooseberry sticks, shaddock rind, and peanut brittle as well as fruits like *kenips* (*genips* or *mamoncillo*, a little, oval green fruit) and governor plums. On hot days, snow cones (flavored syrup poured

over shaved ice in a cup), frozen joys (sweet, fruit-flavored frozen ice pops sold in small plastic bags), and locally made ice cream are welcome treats.

Lunch is normally the heaviest meal of the day, and many families get up early to prepare the meal so it is ready when they come home between 1 and 2 P.M. It typically consists of meat or fish, provisions, fresh vegetables, salads, rice or baked macaroni and cheese, and some sort of pulse. Lighter lunches include pelau, soup, sandwiches, or roti (a flatbread stuffed with curried chicken, fish, or vegetables). As Dominica is a primarily Catholic country, many Dominicans eat only fish on a Friday. Beverages such as carbonated drinks, imported and local fruit juices, natural spring water, coconut water, sugarcane juice, sorrel, sea moss (made from seaweed, milk, and spices), and ginger beer complete the meal. Sunday lunch is traditionally a sit-down meal with roast meat or fish and a selection of the mentioned accompanying dishes. The last meal of

the day, supper, is usually very light. It could consist of soup, bread or toast, and English or herbal bush tea.

Eating Out

Dominicans rarely eat out in the evening, but over the last few years this has been changing. There is a good selection of dining establishments to suit all budgets, commonly serving traditional cuisine. The majority are located in or near the capital Roseau and in the second-largest town, Portsmouth.

Snackettes are the most prevalent eating establishment, very casual and inexpensive, serving everything from snacks to full lunches. The larger hotels and restaurants offer both local and international dishes. Ross University, a U.S. offshore medical school located in Picard, Portsmouth, has meant that eating establishments in that area normally offer a more varied international menu. There are also

Restaurants line the water on the port of Roseau in Dominica. (Richard Goldberg | Dreamstime.com)

several Chinese restaurants and a few French restaurants, extending the variety of what's on offer.

Fast-foods outlets, although not as prevalent as on other Caribbean islands, are slowly making their way to Dominica, and Kentucky Fried Chicken, pizza franchises, coffee shop franchises, and Subway ready-made sandwiches are available. Friday night is barbecue night, and in most of the towns and larger villages, vibrant roadside barbecue stalls will offer barbecued chicken, fish, and pork ribs, accompanied by various side dishes like chips, green salad or chow mien, and potato salad.

Special Occasions

Throughout the year Dominicans celebrate a range of religious, community, and national events, most of which involve a strong emphasis on food. Village feast days are associated with a patron saint; after a church service and procession through the village, the music, drinking, and eating begin. Weddings, christenings, first communions, and confirmations, as well as funerals, normally offer buffet-style fare. At Carnival and during Independence time, Dominica's culinary heritage is really in the spotlight. Traditional Creole favorites include crab callaloo, crab back (flesh of a land crab is mixed with a secret blend of spices and served in its shell), breadfruit and codfish, *fachine* (cattle skin boiled in seasoned brine), and the stewed or smoked bush-meat delicacies of agouti and manicou. The island's national dish, "mountain chicken," Dominica's largest frog or *crapaud*, would normally be a delicacy at this time, but due to the decimation of the population by the chytrid fungus, it is strictly forbidden to eat or hunt the mountain chicken.

Recent additions to the calendar of celebrations include the community-based Titiwi Festival held in Layou village and Cochrane's Rabbit Festival. At these events, against a backdrop of music and other entertainment, residents and visitors get to sample titiwi (a tiny translucent fish) or rabbit cooked in a variety of different ways. Most bank holidays and some weekends often involve a family outing or beach picnic. On these occasions lunch is prepared and packed, or goat water, fish braf, or

breadfruit is cooked in the open air, over a fire made with branches and twigs.

Christmas is another special time for food. Blood sausage, pork souse, and braf are served after midnight mass together with *chaudo* (eggnog), ginger beer, and sorrel. The main course on Christmas Day would be similar to meals during the rest of the year, with the addition of smoked pork, baked ham, and roast turkey or chicken. For dessert, there would be a slice of rich, dark fruitcake made with currents and sultanas soaked in cherry wine or other liqueur for several months.

Alcoholic beverages such as spirits, ginger wine, and Guinness are found at most social occasions or celebrations. Rum punch is also common and normally made with a lime or passion fruit base. Beer selections are the local Kubuli or imported Heineken, Carib, and sometimes Corona.

Diet and Health

The nutritious local food, the use of herbal remedies and bush teas, the more traditional methods of cooking, and Dominica's clean natural environment, which is more conducive to a healthy lifestyle, all contribute to the island's fast-growing reputation as a center for mental and physical well-being. The high ratio of healthy centenarians per capita is testimony to this.

But there is doubt whether this phenomenon will last very much longer, as the lifestyle of younger Dominicans is changing and many do not lead the same active lifestyle as their parents and grandparents or follow the same healthy diet. Tobacco smoking is on the increase, as is drug and alcohol abuse. Food imports are also on the rise, as local food production has begun to decline. The largely unregulated diversion of former agricultural land into real estate development raises concerns about the nation's long-term ability to feed itself.

The prevalence of noncommunicable diseases is rising. Stroke, heart disease, diabetes, and cancer account for a high percentage of deaths. Initiatives such as healthy eating campaigns, screenings, and government proposals to combat noncommunicable diseases, as well as organizations like the

recently established Dominica Organic Agriculture Movement, will likely help reduce some of the underlying causes of ill health.

Dominican Republic

Overview

Christopher Columbus arrived on an island in the Greater Antilles during his first voyage in 1492. He named the island Hispaniola, and it figured prominently in the Spanish conquest of the Caribbean and the Americas. However, the French gained control over the western third of the island, and this portion was named Haiti in 1804 when the African slaves revolted and successfully achieved independence. The remainder of the island, then known as Santo Domingo, tried to gain independence in 1821. They were not successful and were conquered by the Haitians, who ruled them for 22 years. By 1844, the Spanish on the eastern portion of Hispaniola gained independence and named it the Dominican Republic.

The original inhabitants of Hispaniola were the Arawak/Taino Indians, a group believed to have arrived from as far away as South America, island-hopping until they found themselves on the island of Hispaniola. The Taino built canoes, some large enough to carry 100 people, used for deep-sea fishing as well as for trade among the islands. Long-distance travel by canoe was done from March to August, guided by the North Star and the constellations of the Milky Way.

Subsequent Spaniards who arrived brought no women. The children they had with Taino women resulted in a mix called mestizo. The Carib Indians had been fierce enemies of the Taino, forcing them northeastward in gradual retreat. In time the Taino were devastated by diseases, which gradually forced their assimilation into the Spanish culture.

The Dominican Republic, the second-largest country in the Caribbean, is equal in size to Ver-

mont and New Hampshire combined. The country has over 1,000 miles of shoreline, bordering the Caribbean to its south and the Atlantic Ocean to its north. Possessing a variety of highland and lowland areas, the Dominican Republic has a favorable amount of land suitable for agriculture. The country, a representative democracy, has a population of nearly 10 million. The capital city, Santo Domingo, is also the largest city in the country, with nearly three million people, and it is also the oldest European city in the New World.

The Dominican Republic itself has four rugged mountain ranges bisecting it from the northwest to the southeast. The highest is the Cordillera Central; its Pico Duarte is the highest point in the Caribbean, at over 10,000 feet. Three large, agriculturally friendly valleys lie between the ranges. One, in the southwest, contains Lake Enriquillo, a saltwater lake with crocodiles.

Annual temperatures in the Dominican Republic average 77 degrees Fahrenheit. Any change in seasons is determined by amounts of rainfall. The summer months, May to October, are the hottest, reaching around 87 degrees during the day with nighttime temperatures around 72. The high humidity makes it feel hotter than it is. Annual rainfall is close to 58 inches per year, and the western part receives the most rain. The heaviest tourist season is from December through April.

The Dominicans have relied on agriculture as a base for their economy, and sugarcane is their most important crop. Other major crops are coffee, cotton, cacao, tobacco, and rice. The mining of minerals is growing in importance. The country has deposits

of nickel, bauxite, gold, silver, and limited amounts of other minerals. There has been an increase in light manufacturing of textiles and clothing thanks to free-trade zones. Tourism is also important for the economy. Outward migration from the Dominican Republic has been large due to globalization. The United States, only 600 miles away, is already home to a million Dominicans. There is also a large population of former Dominican citizens in Puerto Rico, Canada, the Netherlands, Spain, and Venezuela.

Food Culture Snapshot

every day in their home in Santo Domingo. “The mornings start with breakfast at 7:00, and we usually have a cup of hot chocolate with a piece of bread called water bread in English (*pan de agua*). The typical chocolate milk is made with a hard chocolate bar called Embajador. To make it we have to boil it in water to dissolve it, then we add sugar, a stick of cinnamon for flavor, and a very small amount of salt. We buy the fresh bread from the store. Sometimes we add butter and cheese, but not usually because the typical way was just wetting the bread with the chocolate. Some people add milk to the chocolate, but again, the typical way was just dark chocolate with water.

“Then lunch is about noon, and the typical white rice is made with boiled water with some oil and salt. We just add the rice, simmer it for a few minutes, turn it off, and wait till it is dry. We have it with red beans. The beans are boiled for a few hours because they are dried, not canned, and then we add a seasoning called *recaito*, which is made from lots of condiments and vegetables. If we don't use the *recaito* from the store, we fry a big onion till it burns a little (is caramelized), then add tomato paste, tomatoes, peppers, garlic, other vegetables, and salt.

“For the evening meal, at about 7:00, we mostly have chicken with the same seasonings as for the beans. In a hot pan we put oil and sugar till it burns a little. Once it is really hot, we put the chicken into the pan and watch it, adding water when needed. Once it has a nice color and taste, the chicken is ready. We also have yellow sweet plantain. We peel each of them, cut them into six pieces, and then we fry them. Sometimes we will make sweet white rice (*arroz con leche*), made by boiling water with lemon and salt in it, adding the clean, white rice, and then, once it is soft, adding sugar, a stick of cinnamon, and canned Carnation milk. After it is on the plate, we sprinkle it with powdered cinnamon. This was also used as dessert once in while.”

Major Foodstuffs

Before Columbus, the Tainos arrived in the Dominican Republic with *barbacoa* (barbecue), yucca or cassava, and cassava bread. Other cultures contributed foods as well. African slaves brought plantains and bananas, as well as the custom of eating the organs of animals; the ears, feet, and heads of pigs;

and cows' intestines. People from the British West Indies brought johnnycakes, the Middle Easterners brought kibbe (ground lamb and bulgur) and tabbouleh (bulgur, parsley, and vegetables), and the Chinese a chicken and seafood stew.

As the early Tainos settled in, they were fortunate to have their skills as canoe makers, fishermen, and sailors and navigators. Thanks to their seamanship skills, they hunted ducks and turtles and fished with homemade nets made from cotton they grew. On land, there was a scarcity of wild animals, so they relied on birds, snakes, rodents, and any other small animals.

The Taino's early system of agriculture was far from labor-intensive. Crops were raised in *conucos*, large farming mounds they protected from erosion with a system of stacked leaves. They also planted a wide variety of foods to ensure an adequate harvest, no matter the type of growing season they experienced. Crops planted were a lot of cassava (also known as yucca or manioc), a staple in their diet; this is a root crop that contains a poisonous juice that needs to be extracted. It is then baked in a slab, resulting in flat bread. It was used as a wrap for fish, meat, and vegetables. They also planted garlic, potatoes, *yautias* (a root vegetable), mameys (or sapotes, a fruit), and guavas. The early Dominicans also grew corn (maize), squash, beans, chili peppers, sweet potatoes, yams, and peanuts, and they cultivated fruits such as guavas, papayas, and pineapple. Besides cotton, their other nonfood crop was tobacco, used in religious ceremonies.

Today, rice is the country's most important crop, while sugar is the Dominicans' largest crop, and as many as 30 percent of the population work in it. Additionally, many thousands of cane cutters, frequently Haitian immigrants, are necessary for harvesting. Other major food crops included starchy staples such as plantains and an assortment of tubers such as cassava, taro, sweet potatoes, and yams, which are easy to grow. Plantains are usually fried and are popular due to their sweet taste. Grains planted were usually corn, sorghum, and wheat, which they exported. Much of the corn is used for animal feed. Fresh ingredients raised by Dominicans are fruits, vegetables, and spices. These include bananas, peanuts, guavas, tamarinds, passion fruit,

soursops, coconuts, tomatoes, carrots, lettuce, cabbage, scallions, cilantro, onions, and garlic.

The Dominicans take much pride in their coffee production. They drink coffee in small cups, very strong and with lots of sugar. In fact, most brew their coffee together with sugar. It is usually served alone at any hour. Their arabica coffee is grown in the southwestern and northern sections of the country. Regardless of social class, Dominicans are eager to share it with guests. They also export their coffee, and the demand for it is increasing. The coffee bushes need the shade of trees, which is discouraging deforestation in the region. A local brand, Santo Domingo, is affordable, in demand, and considered smooth and rich.

Cooking

The cuisines of the Dominican Republic, Cuba, and Puerto Rico are similar because they are all based on available foods and Iberian influences. Because their foods are mostly fresh, cooks do not rely heavily on spicing. Popular pantry items include achiote oil, an oil that has been flavored with achiote (annatto) seeds. This makes the oil bright yellow. It is used in yellow rice and as a coloring for other dishes. *Achiotina* is lard flavored and colored with achiote seeds.

Adobo is a mixture of garlic, herbs, and spices used dry as a rub for meats or used wet with a little oil as a marinade. *Sazón* is blend of seasonings available in small foil packets. It is used with annatto for yellow rice. *Sofrito* is a sauce that is added to many dishes. It can be purchased, but it tastes better if made at home from crushed canned tomatoes, Anaheim-type peppers, yellow onions, garlic, olive oil, sweet paprika, and cilantro or parsley. These are sautéed and then simmered for about 10 minutes. *Recaito* is basically the same as sofrito but without the tomatoes. Dominicans' favorite spices include anise, *bija* (annatto), cinnamon, *clavo* (cloves), *malagueta* (allspice—not be confused with the chili pepper or *melegueta* pepper from West Africa), *nuez moscada* (nutmeg), oregano, *sal en grano* (sea salt), and *tomillo* (thyme).

Dominicans also eat a lot of beans. Beans are high in protein and low in fat, calories, and salt, as well

as being cholesterol free. The most commonly used beans are black beans, chickpeas, pink beans, kidney beans, navy beans, and pigeon peas. The popular Dominican beans and rice dish is also called *LaBandera* for their national flag. The rice used is long-grain white rice. Frequently, instant rice is used. Shorter-grain rice is used for paella and rice desserts. Most fresh fruits, vegetables, and herbs have a short shelf life in the tropics and are purchased close to the time of use.

Dominicans also use a wide variety of utensils. A *caldero* is a cast iron cooking pot, similar to a Dutch oven, with a tight-fitting lid. A flan mold is used to make flan, an extremely popular caramelized custard dessert; various molds exist to make it into interesting shapes. Fryers are electric pots that hold deep fat heated to a controlled temperature. Seasoned cooks use their calderos and adjust the heat based on the food's appearance. Rice cookers are often used. These are a small electric pot that cooks rice automatically until the rice is soft and the liquid has been absorbed by the rice. Experienced cooks accomplish this in their basic caldero.

The *pilón* (mortar and pestle) is also essential. In Latin Caribbean cooking, it is used to crush, grind, and mash ingredients, herbs, and seasoning. Mortars and pestles can be made of ceramic, metal, stone, or wood. Some use a coffee grinder for dry items or a food processor for wet ones. A plantain press, or *tos-tnera*, can be made from wood, plastic, or metal. One type is used to flatten sliced plantains for frying. The other is used to stuff plantains. It has a ball on one end and a hole on the other. Many cooks improvise and don't have one. *Loco con los platanos* is a three-piece unit that comes with a plantain peeler, a smasher, and a cookbook.

Some sandwiches are pressed, like Italian panini sandwiches, in a special gadget. One can invest in a panini press or a handheld grill press. As a substitute, one can use a cast iron skillet to press down the sandwich or place a heavy foil-wrapped brick on top.

Typical Meals

Most Dominicans, who are not rich, get their calories from rice and fried plantains, as well as fruits

like papayas, pineapples, bananas, and avocados. They get very little of their protein from beef, most of which is exported, and some pork when they can afford it. More plentiful sources of protein are chicken and fish, usually shrimp, marlin, mahimahi (dorado), or lobster. Dominicans' diet is less spicy hot than food in most other Latin American countries. They depend on onions, garlic, cilantro, oregano, and sweet *cubanelle* peppers for flavoring. Their one exception to this is *chivo picante*, a goat stew. They also avoid cold gazpachos based on the theory that hot soups eaten in hot weather cause perspiration, which is more cooling to the body.

Typical breakfasts consist of eggs or meat, and maybe some cheese; a strong favorite is mashed plantains (*mangu*).

Mangu

4 large plantains, peeled

2 tbsp oil

2 large onions

2 tsp salt

1 tbsp vinegar

4 tbsp butter

1 c cold water

Boil plantains in salted water until very tender. Meanwhile, put oil in a skillet, and sauté the onions, then add salt and vinegar. Reserve. Drain plantains and mash with butter and cold water until smooth. Garnish with onion, and serve with eggs or meat.

Another popular way to serve plantains is called *monfongo*. Here, green plantains are fried, seasoned with garlic, olive oil, and pork cracklings, and mashed with a little liquid. Still another favorite plantain recipe is fried plantains or plantain chips. Unripe ones are peeled, cut into pieces, and fried in deep fat. They are then flattened with the base of a bottle and quickly fried once more.

Lunch is usually a mix-all dish they term *LaBandera Dominicana*, the Dominican flag. When possible, workers return home for this meal. This dish is

usually composed of white rice with beef, pork, chicken, or goat, accompanied by beans, sometimes white, red, or black. The following dish has three variables—the meat, the beans, and the vegetable—and it can be the base for almost all lunches.

LaBandera Dominicana (Basic Beans, Meat, and Rice)

4 tbsp oil
 2 c boiled or canned beans
 2 c squash, cut into small cubes
 ½ lb pieces of meat
 3 bay leaves (optional)
 1 tsp thyme leaves
 2 tsp cilantro, finely diced
 1 chicken stock cube (optional)
 1 large green pepper, diced
 3 tsp crushed garlic
 2 tbsp tomato paste
 4 c water
 Salt
 4 c rice

Heat half the oil in an iron pot, and add beans, squash, meat, seasonings, stock cube, green pepper, and garlic. Sauté until well combined. Add tomato paste and water. Bring to a boil, adjust salt, add rice, and stir regularly to prevent sticking. When water has been absorbed, add remaining oil, cover, and place over low heat for 15 minutes. Remove from heat, cover, and wait 5 minutes. Rice should taste done. Remove any bones and bay leaves. Serve hot.

The following fish dish is a favorite and very popular during Lent. It is made with potatoes; however, it is also served with rice. The salted codfish must be soaked in many changes of fresh water overnight.

Bacalao a La Criolla (Codfish a La Dominicana)

2 lb salted dried codfish
 1 lb potatoes

2 tbsp oil
 1 small red onion, sliced
 ¼ c pitted olives, sliced
 2 green bell peppers, diced
 4 plum tomatoes, each cut into 4 quarters
 ½ tsp mashed garlic
 2 tsp Tabasco sauce (optional)
 2 tbsp tomato paste
 Salt
 2 lemon wedges (optional)

Boil the codfish and potatoes in 2 quarts of water until tender. Flatten the codfish, and peel and dice the potatoes. Set aside. In a skillet, heat oil, and sauté onion, olives, pepper, tomatoes, and garlic. Add 1 cup water and simmer for 3 minutes. Stir in codfish, Tabasco sauce, and tomato paste. Add another cup of water and the potatoes. Let simmer until potatoes are cooked, and there is a thin sauce. Season to taste. Serve with rice and garnish with lemon wedges.

A suitable luncheon dish utilizing eggplant and eggs can be made simply on the stovetop. To sautéed onions, peppers, tomatoes, garlic, and vinegar, add roasted, skinned, and mashed eggplant and simmer until the liquid is absorbed. Next, add four eggs and simmer until they harden.

Camarones Guisados (Shrimp Stew)

2 tbsp oil
 1 small onion, cut into strips
 4 plum tomatoes, cut into strips
 2 bell peppers
 8 chopped, pitted green olives
 ½ tbsp crushed garlic
 2 lb shrimp, peeled and cleaned
 1 tbsp tomato paste
 1 c water
 Tabasco to taste
 Salt

Heat oil, and sauté onion, tomato strips, peppers, olives, and garlic. Add shrimp, tomato paste, and water. Simmer for 3 minutes. Add Tabasco and salt to taste. Serve with fried plantains or rice.

A conch stew can also be made using the preceding recipe: Just omit the olives and cook the conch about six minutes until tender.

The heartiest meal is at lunchtime, and evening meals are light and simple, often variations of breakfasts. Usually there are also leftovers available. Fresh fruits and fruit beverages are also evening favorites.

Holiday foods are elaborate in the Dominican Republic. Besides personal family days of joy and celebration, every February is Carnival time and the celebration of Dominican independence. The end of August is the annual Merengue Festival, and on June 24 they celebrate the feast of St. John the Baptist. These are in addition to the Christian holidays of Easter and Christmas Eve, which is celebrated on January 5. At these times everyone eats and drinks heavily.

A favorite is banana-leaf bundles (*pasteles en hoja*, similar to tamales). Sautéd chopped vegetables, spices, and minced beef is simmered with tomato paste and water until the liquid is reduced. In a separate bowl they combine. A mixture of cooked, mashed yautía root, *name* root, plantains, and bouillon powder is spread onto a banana leaf, and then it is topped with some of the meat mixture. The leaf is then folded, tied, and placed in boiling water for 35 minutes. They are served with hot sauce and ketchup.

Another popular dish at Easter is *habichjuhelas con dulce*, described later, but no holiday season is complete without pork roast:

Puerco Asado (Pork Roast)

- 1 5-lb shoulder roast of pork
- ½ c sliced pitted olives
- ½ c capers
- 1 large onion, diced

- 4 tbsp mashed garlic
- 1 tsp parsley, finely diced
- 4 tbsp ground oregano
- 2 tbsp ground black pepper
- 1 c green peppers, diced
- 2 tbsp vinegar
- 2 tbsp oil
- ¼ c salt

Mix all the ingredients for the seasoning. With a sharp paring knife carve deep holes in the meat, each a few inches apart. Using a teaspoon, stuff the holes with the seasoning mixture, and spread the remaining seasoning on the surface of the meat. Marinate for at least 5 hours before cooking. Put in a 350°F oven. Baste every 30 minutes. A meat thermometer should register at 170°F when it is done. Serve with pigeon peas with rice and coconut, as well as a green salad.

The most celebrated holiday dish is a seven-meat stew called *sancocho*. This dish is expensive due to the amount of meat required, as it calls for lemon-rubbed beef bones, goat meat, *longaniza* sausage, pork, chicken, pork ribs, and smoked ham bones. These are browned and simmered with root vegetables, plantains, lemon, vinegar, and many spices. Near the end cheese-filled fritters are added. *Sancocho* is served with white rice.

An almost-universal holiday and family-occasion favorite is Dominican cake (*biscocho Dominicano*). Its status is also heightened because the cake is difficult to make. There are three parts to it. First, there is the very rich cake, and then comes the equally rich pineapple filling. The cake is then topped with a caramel-infused meringue.

Beverages are important in a hot climate. Most milk is reconstituted from powdered milk. Smoothies (*batidas*) are popular and are made from fresh fruits and condensed milk. Particularly favored is ginger and lemongrass tea, as well as thick hot chocolate drinks. Their coffee is strong and served in three-ounce cups. The local beer is Presidente, and local rums are Barcelo and Brugal.

Empanadas, johnny cakes, and fritters. (Dreamstime)

Eating Out

The culture of the cuisine of the Dominican Republic is referred to as *Comida Criolla*, a blend of Spanish, African, and Taino heritage adapted to the availability of local ingredients, cooked with ancient methods. Besides formal restaurants, there are three distinct venues to in which to eat out: (1) Comedors, popular with locals, can be a room in a private home where plain Dominican foods are served. (2) Basic cafeterias are found on almost every street, some of them in chain supermarkets. These specialize in the locals' favorites of red beans and rice, and also meat stews. These are also very popular with locals. (3) Food stands serve street food, both snacks and small meals. Some sell barbecued pork, while others specialize in local-style hamburgers, pork skins, fried meats, and homemade sausages. Sandwiches are popular from store fronts. Barbecue stands serve chicken with yucca or ba-

nana. Other establishments serve *chimichurri* (*chimmi*), which are Dominican-style hamburgers, hot dogs, and pork sandwiches.

Ice cream (*helados*) is very popular in the Dominican Republic and is made with tropical fruit. It is sold in a cone or in a cup with a plastic spoon. Candy is called *dulces* and may have the consistency of fudge but be flavored with pineapple, coconut, or guava. Their peanut brittle is very popular as well.

The Dominican diet rests heavily on healthful fresh fish, seafood, and locally grown vegetables and exotic fruits. Beef is expensive, which makes pork and goat more popular. Locally made rum and beer are cheaper than hard liquor, which must be imported. Some favorite foods are red beans and rice, pork rinds, fried chicken, and soup with meat and vegetables.

Local restaurants fall into the categories of barbecue, seafood, Dominican, international, Mexican, Italian, Middle Eastern, Chinese, and Caribbean. Most resort menus reflect what management believes will cater to U.S. and Continental tastes. However, a few local influences may be evident.

Special Occasions

Music is a way of life in the Dominican Republic. Births, weddings, deaths, comings-of-age, all victories, falling in love, planting, harvest—these are all gala excuses for music, singing, and dancing. Merengue, salsa, and *bachata* ring forth in many public spaces, either live with homemade instruments, over the radio, or from professional musicians.

Every February is Carnival time with even more dancing, singing, and music. It is also a celebration of Dominican independence. The annual Merengue Festival is at the end of August and in early September. Every Easter each town's patron saint is celebrated widely, and June 24 is a very special day celebrating the feast of St. John the Baptist.

Dominican national holidays include January 1, New Year's Day; January 6, Three Kings Day (Dominican children receive their gifts on this day, not on December 25); January 21, Feast of Our Lady of Altagracia (Dominican patroness); January 26, Duarte's Birthday (first of the three founding fathers);

and February 27, Independence Day. Dates vary for Good Friday, Easter Sunday, the National Carnival Celebration at Malecon, Labor Day, Corpus Christi Day, Independence Restoration Day, Lady of Mercedes Day, and Constitution Day. Note that Christmas Day is casual for most Dominicans. The real Dominican nativity celebration takes place on January 5, when families get together to share a heavy late-night dinner and have a lot to drink.

The following are some celebratory dishes served on holidays:

Pasteles en Hoja (Banana-Leaf Bundles)

Combine chopped green pepper, onion, oregano, salt, and pepper with minced beef. Cook evenly in oil. Add a small amount of water and tomato paste, and simmer until the meat is cooked and liquid is reduced. In a separate bowl, combine yautía root, name root, plantain, chicken bouillon powder, and salt. Place 2 tablespoonfuls of this mixture in the center of a banana leaf, add 1 teaspoon of the meat mixture, and cover with 2 more tablespoons of grated root mix. Fold shut and fasten all sides with string. Place in boiling water and boil over medium heat for 35 minutes. Cool, unwrap, and serve with hot sauce and ketchup.

Habichuelas con Dulce (A Popular Easter Dish)

Puree red kidney beans in a food processor until smooth. Combine beans, coconut milk, and some milk in a pot and boil. Add more milk, sugar, cinnamon sticks, raisins, and sweet potatoes, and cook over low heat for 20 minutes. Add coconut milk and cloves, and simmer until smooth. Serve chilled over browned cassava bread.

Sancocho (Holiday Stew)

This is a special, hearty, seven-meat stew served throughout the holiday season. Brown and combine goat meat, pork sausage, pork meat, beefsteak, chicken, pork ribs, and smoked ham. Season with lime, garlic, oil, bell peppers, thyme, yam, celery, cas-

sava root, potatoes, plantain, oregano, coriander, cilantro, and hot sauce. Stew all until tender. Serve with avocado slices and rice.

Pudín o Bizocho (Special Dominican Holiday Cake)

This dish is probably the one way to declare a totally festive occasion. It is made in four parts: the cake itself, its filling, caramel icing, and a stiff meringue.

The cake is composed of butter, margarine, lime peel, orange juice, flour, sugar, vanilla, baking powder, and eggs. The caramel icing is made of sugar and water. The filling is cubed fresh pineapple, water, sugar, and vanilla extract. The meringue is made with five egg whites, fine granulated sugar, salt, and cream of tartar. Beat until peaks are formed, then very slowly add in the caramel icing.

Popular beverages are eggnog (*poncho de huevo*) with or without rum. As an after-dinner drink, monkey anise (*anis del mono*) is enjoyed. A gingerroot beverage (*jengibre*) is made of boiled gingerroot, cinnamon, and lots of sugar.

Diet and Health

Type 2 diabetes is prevalent in the population of the Dominican Republic. This is no doubt aggravated by diets high in rice, sugar, starchy roots, fatty meats, and sugars from many fresh fruits. Additionally, dietary problems in the Dominican Republic tended to be concentrated in the areas of deficiencies in iodine, vitamin A, and iron, and approximately 5 percent of school-age children have goiter problems. The severity varies regionally, and the World Health Organization has enforced use of iodized salt in cooking since 1920.

Ecuador

Overview

Ecuador lies on the equator in western South America, bordered by Colombia to the north, Peru to the south, and the Pacific Ocean on the west. The Galapagos Islands also belong to Ecuador. It measures 283,561 square miles and has a population of about 14.5 million people. This region enjoys an incredibly rich biodiversity with a remarkable number of unique species, especially on the Galapagos. The country is divided into three distinct regions: the coast, which is tropical and very humid; the Sierra, or highlands, which is cooler and drier and spans a section of the Andes Mountains; and, lastly, the Oriente, a part of the Amazon basin that is rain forest. The altitude is also a crucial factor in determining which crops can be grown, with tubers more common in higher areas and rice in the lowlands. More than half the population lives in cities, the largest of which is Guayaquil on the coast, but the capital is Quito, which sits at 8,464 feet and has a beautifully preserved historic center.

People of mixed heritage (Spanish and Native American), or mestizos, make up 65 percent of Ecuador's population, with indigenous Amerindians making up 25 percent. The latter come from a variety of groups, the majority of which in the highlands are Quichua, but there are also Caranqui, Otavaleños, Cayambi, Pichincha, and others. There are also many indigenous peoples of the Amazon. A small number of white, mostly Spanish, inhabitants comprise 7 percent, and there is a smaller number of people of African and mixed African descent, at 3 percent. Most people speak Spanish, but there is a large number of people who also speak Quichua (as

it is called there). About 95 percent of Ecuadorians worship officially as Roman Catholics, though historically in practice this religion has incorporated many elements of indigenous religious beliefs and festivals. There is also a great disparity of wealth in Ecuador, with marked social inequality. Many people, especially the indigenous population, live well below the poverty line.

The cuisine of Ecuador, like its people, is a mix of indigenous and European components, with many native New World species forming the basic staples and many Old World plants and animals combined with these. Likewise, the culinary techniques span a broad range of styles, some of which are clearly descended from medieval Spanish cuisine, while others are still completely indigenous, in addition to many completely unique combinations of the two. It is also important to remember that what is today Ecuador entailed many indigenous cultures through history, only the last of which, centered in Quito, was engulfed by the Inca Empire in 1463. Not long after this, the Incas in turn were conquered by the Spanish under Francisco Pizarro in 1533. In 1809 Ecuador was also the first Latin American country to declare independence from Spain, but it did not become an independent republic until 1830.

Food Culture Snapshot

Hector González Vargas and his wife, Concepción, live in the city of Guayaquil. They have a two-year-old daughter named Manuela. Hector has a university education and works as a petroleum engineer for a large multinational company. His wife works in the

home, does all the cooking, and takes care of the baby. Her mother still lives in the northern highlands, in a small village called Atuntaqui, which is known for its textiles. Concepción learned to cook from her mother, so she knows many traditional dishes, but Hector prefers modern international cooking and sometimes eats fast food in the city for lunch with his colleagues. As an educated urbanite, Hector is anxious to buy modern appliances for his household, though his wife prefers cooking at a leisurely pace, taking time to make traditional dishes. She fears that expensive imported foods not only will drain the household budget but will also make Hector fat. Concepción is often found making *humitas*, a kind of tamale from Ecuador that she folds delicately in corn husks and ties with a torn strip of husk, then steams in a special pot that her mother gave them as a wedding present. Sometimes she fills them with onions and cheese, or sometimes she makes them sweet, studded with raisins and a pinch of cinnamon. She hopes some day to pass on her love of cooking to her own young daughter.

Major Foodstuffs

The starchy staples of Ecuador, sometimes grains and sometimes tubers, depend primarily on the region, though most are enjoyed to some extent throughout the nation. The most important indigenous plants are potatoes, corn, quinoa, and yucca (or cassava). Potatoes were domesticated in the Andes and represent this area's greatest contribution to the world food supply. One of the unique Ecuadorian dishes, which derives from the highlands, bears the delightful name *llapingachos*. They consist of boiled potatoes, mashed and rolled into balls that are filled with cheese. These are flattened and cooked on a griddle. They are usually colored yellow with achiote (annatto) and can be served with a peanut sauce (*salsa di mani*) or with sausages on the side. They are now enjoyed throughout the country practically as a national dish.

Maize, or corn, was domesticated to the north but may have been introduced to this area and cultivated here as early as 10,000 years ago, making its

A vendor cooks potatoes at a market in Otavalo, Ecuador. (iStockPhoto)

cultivation roughly contemporaneous with the development of agriculture in the Middle East. Corn features in many dishes, often simply roasted on the cob or sliced into rounds on the cob and cooked in soups. This is not the sweet corn with which North Americans are familiar but instead *choclo*, a huge-grained, chewy, and very flavorsome variety that is used extensively in soups and stews. Preparations familiar elsewhere in Latin America are common too, though. Freshly ground corn is steamed in corn husks to make *humitas*, which are something like tamales from Mexico and can be either savory or sweet. Field corn that has been nixtamalized—soaked in lye or calcium hydroxide so that the kernel swells and the outer pericarp comes off—is ground into dough and cooked in various ways. The whole kernels, called *mote*, similar to hominy in the United States, are also cooked into various dishes, like *mote pillo*, in which they are mixed with eggs, chives, and cilantro. An even more unique corn dish is *cancha*, which is a fried corn kernel that puffs up a little and becomes crunchy, familiar in the United States as corn nuts. Popcorn is also a familiar food, served interestingly with the raw fish dish of ceviche.

Quinoa was in precolonial times one of the most important grains, though its connection to fertility rites and indigenous religion meant that the Spanish did everything they could to eradicate it. This is a shame since it has one of the highest protein contents of any grain on earth; it has recently enjoyed a

resurgence outside of South America among health-food enthusiasts.

Yucca, also known as cassava, is a starchy root, used primarily in the rain forest. It is familiar in the United States only as tapioca, which is made from the starch. There are both bitter (poisonous) and sweet varieties of the plant, and it is remarkable that indigenous peoples learned to process it thousands of years ago as a staple food.

Bananas, introduced ultimately from Southeast Asia, apart from being one of the principal agricultural products of Ecuador and one of its main exports, are also used in cooked dishes, especially green plantains, which are starchier than the types eaten out of hand. These may be simply fried, squashed, and refried as a snack called *patacones*, known throughout Latin America under various names. Plantain chips are also known as *chifles*, eaten as a snack. The more interesting plantain variants include the *bolon de verde*, a fried plantain dumpling that is also featured in soups, as discussed later on.

Surprisingly, rice, another Asian plant, is today one of the most popular side dishes in Ecuador. It is often served as *arroz amarillo*, meaning yellow rice, with achiote (annatto seeds) taking the place of saffron, which would have been used in Europe.

Squash in the Cucurbitaceae family were almost certainly the earliest domesticated plants in this region, though archaeologists debate exactly how their cultivation developed and what connection it might have to permanent dwellings and the use of ceramics. Today, squash is added to many soups and stews or even made into fritters called *pristinos*. The pumpkin (*calabaza*) is first cooked, then combined with flour, baking powder, and cheese to make a dough that is then rolled out, cut into circles, and fried. They are sometimes served with cinnamon syrup as well. This is a perfect example of a native plant being used in a thoroughly European recipe. Squashes like zucchini are American and are used throughout Ecuador.

Beans are one of the most important sources of protein historically, and the lima bean is native to western South America. Beans are used in countless soups and stews, as are other members of the

Phaseolus genus, as well as chickpeas and lentils. The latter are used in the popular soup referred to simply as *menestra*. There is even a kind of bean called *nuñas* that is used specially for popping like corn. Peanuts, in the same large family of legumes, are another very important South American native and are used extensively in Ecuador in sauces (*salsa di maní*) as well as in a soup made with potatoes, onion, and ground peanuts. For flavorings there are all the familiar herbs and spices, but everywhere one finds chili peppers used in *ají*, a hot sauce, though in general Ecuadorean cooking is not very spicy.

Although the *cuy*, or guinea pig, is probably the domesticated animal most readily associated with Andean cuisine since ancient times, Ecuadoreans enjoy a broad range of proteins including beef, pork, goat, and to a lesser extent chicken and turkey, though the latter is an American native. Beef can be sliced thinly and served with onions and tomatoes as a *lomo salteado*, but more often it appears in stews; likewise, pork is used in stews like *seco de chanco* and chicken in a *seco de pollo*. These usually also include a variety of vegetables, perhaps beans or grains, and are filling, especially when served with rice, avocado, and perhaps a slice of lime.

On the coast, seafood is the favorite, with various fishes such as tuna, sea bass, shark, and snapper finding their way into soups and stews, as well as a

Guinea pigs (*conejos de indias*) or *cuy* as they are called in Ecuador, are cooked over an outdoor grill. (David L Amsler)

wide array of shellfish such as shrimp (which form one of Ecuador's major industries), clams, mussels, squid, octopus, and scallops. Perhaps the dish most readily associated with the South American coast is ceviche, and justly so. Ceviche is a kind of fish salad marinated in lime juice, which "cooks" it by firming up the proteins and killing the bacteria. Its history is a matter of speculation, and it has been suggested that before the introduction of citrus fruits by the Spanish it was soured with *chicha*, a fermented corn drink. The dish also bears some relation to a medieval Spanish dish called *escabeche*, which was cooked, but cold, fish marinated in vinegar. The fish is soaked in lime anywhere from 30 minutes to a couple of hours, along with chili peppers, cilantro, often tomatoes in Ecuador or some tomato sauce, and pickled onions (*cebollas encurtidas*). It is light and refreshing and in the heat of summer can form a meal unto itself.

There are dozens upon dozens of fruits native to Ecuador. Apart from those familiar in the United States, there is the *naranjilla*, a small fruit in the Solanaceae family related to tomatoes, which is eaten fresh or juiced. There are several kinds of passion fruit: the standard *maracuya*, as well as the *taxo*, or banana passion fruit, so called because it is longish and yellow, as well as the smaller round, yellow *granadillo*. The tamarillo, or tree tomato (*tamat de árbol*), is used for juice as well as in a spicy salsa. Cherimoyas are also popular.

Cooking

Most familiar cooking methods are used in Ecuador, with some having a longer pre-Columbian history and some having been introduced in the past five centuries. Roasted foods (*horneado*) are especially appreciated, in particular, pork with potatoes. Grilled foods (*a la brasa*) and steamed food (*al vapor*) are also common and of ancient use. The most popular dishes, however, are stews like *seco*, while deep-fried foods (*brosterizado*) and breaded fried foods (*apanado*) are more recent introductions. The following is a simple recipe that can be made with practically any fish and variety of vegetables on hand:

Chupe de Pescado (Fish Soup)

Serves 4

- 2 stalks celery
- 1 green bell pepper, chopped
- 1 onion, chopped
- 2 large tomatoes, finely chopped
- ¼ tsp annatto
- 2 carrots, peeled and cut into slices
- 2 parsnips, peeled and cut into slices
- 2 small waxy potatoes
- 8 oz hominy (or 1 can)
- 1 bay leaf
- Pinch of oregano
- 1 8-oz container fresh lump crabmeat
- ½ lb shrimp, raw in shell
- 1 egg per person

Sauté the first three ingredients in olive oil until lightly browned. Add the tomatoes and stir vigorously. Then add the annatto. Add 4 cups of water or more as desired, and bring to a boil. Add all the other vegetables and herbs, and lower to a simmer for about 15 minutes. Before serving, add the crabmeat and shrimp and just cook through. Serve hot with a little of each vegetable in each serving and a few shrimp on top. Just before serving crack in the egg raw. It will cook in the soup. You can use any fresh fish with this recipe as well. You can also sprinkle crumbled fresh white cheese on top if you like.

Typical Meals

Ecuadorean meals usually comprise three parts: a soup, main dish, and dessert. Breakfast is usually small, consisting of a basic starch or bread, pastry, fruit, and coffee, though laborers may often sit down to a bowl of chicken stew with rice or a hearty seafood stew to fortify them for the day. Lunch and dinner are usually larger meals, with lunch (*almuerzo*) usually the larger of the two. Dinner may even be as light as bread and coffee, or steamed humitas.

Soups are perhaps the most important range of dishes in the Ecuadorean repertoire. There is a very popular potato soup with cheese and avocado called *locro*, as well as a potato soup sprinkled with lamb's blood called *yaguarlocro*. There are fish soups with vegetables like *chupe de pescado*, and one particular soup, noted for its ability to promote virility, is made with boiled cow's hooves and called *caldo de pata*. On the coast there are various *menestra* made with lentils or chickpeas simmered in a *refrito*, or sauce of tomato, peppers, and onion. Soups can even be extremely elaborate like the *caldo de bolas* from Guayaquil, which includes plantain dumplings stuffed with meat served in a beef broth with corn segments and other vegetables. Likewise, there is *encebollado* with onions, tuna, yucca, and tomatoes with a dash of lime for acidity. The most popular soup is eaten on Easter, a vegetable soup called *fanseca*. Stews are equally important and can be made of virtually any combination of meats, vegetables, and grains or tubers.

Drinks that accompany meals include the familiar soft drinks, imported wine, and beer, but there are unique indigenous drinks as well. The most important of these is *chicha*, made with corn that traditionally had been chewed and mixed with saliva to start the fermentation. Today, the corn is ground, and bacterial cultures are added. *Chicha* can also be made with rice or yucca, and it is essentially a kind of thick creamy beer that is light in alcohol.

Ecuador also produces distilled *aguardiente*, which is a legacy of Spanish influence. It is normally made of sugarcane or the by-products of sugar manufacture (i.e., molasses) and thus can be similar to rum, but it tastes quite different and is normally unflavored. It literally means "burning water" and can be drunk straight but is more often found in mixed drinks like *canelazo*, which is made from boiling water, lemon, sugar, cinnamon, and *aguardiente*. This spirit can also be distilled from virtually any grain or fruit, but the best is from sugar. Fruit juices are also very popular and can be made of virtually anything, though the most familiar kinds are pineapple and passion fruit.

Coffee is one of Ecuador's principal cash crops as well as one of the most significant causes of en-

vironmental degradation and loss of rain forest. Some regions have turned to coffee as their sole monoculture industry, leaving them particularly vulnerable to fluctuations in price on the international market.

Eating Out

Street foods are very popular in Ecuador, and one finds a variety of fritters and fried doughs like *buñuelos*—a kind of donut—and other pastries. Much simpler is *choclo*, the large chewy Andean corn barbecued, though this corn also features in *empanadas* (small pies), which include meat or other vegetables.

There are many restaurants in Ecuador, whose height of business is the lunch hours since many people eat out at midday. In rural areas restaurants may even be closed at night. Some serve local food or cater to tourists in larger cities. In recent decades many fast-food restaurants have also appeared, including all those common in the United States as well as McDonalds, which is very popular. One can also find various ethnic restaurants, most notably Chinese. In fact, there is still a Chinese community that originated in the 19th century, and most Ecuadoreans would be familiar with dishes like fried rice with chicken, which goes by the name *chaulafan de pollo*.

Special Occasions

Since the majority of Ecuadoreans are Roman Catholic, they follow traditional fasting restrictions during Lent and on other fast days, when meat and meat products are prohibited, as well as celebrating Christian festivals such as Christmas and Easter. Celebrations are nonetheless often syncretically mixed with indigenous religious practices so that holidays like All Saints' Day may bear little resemblance to the holiday elsewhere. Certain foods are associated with holidays, especially *fanseca* for Easter. *Guaguas de pan*—stuffed breads shaped like children—are eaten on November 2, the *Día de los Fieles Difuntos* (Day of the Dead), and *colada morada* is drunk, a sweet purple drink made from

blackberries, a kind of blue berries called *mortiños*, pineapple, and spices and thickened with corn flour. On this day families dress up and visit cemeteries, where they make offerings of flowers, crosses, and paper crowns as well as fruits, cooked eggs, and bowls of cooked food.

Diet and Health

Ecuador is a country of great disparities in income and food security. While a privileged minority enjoys general good nutrition and health, a significant proportion of the indigenous rural population as well as the urban poor is undernourished. This has partly been the result of failed government policies to implement equitable food distribution, but it means that iron-deficiency anemia is a serious problem and as many as 15 percent of children's growth is stunted. There is also an extremely high infant mortality rate. Water-borne illnesses are a serious

problem, and many people have no access to clean water. Parasites are also a problem, as are malaria, hepatitis, and typhoid.

El Salvador

Overview

El Salvador is the smallest country in Central America, sandwiched between Guatemala and Honduras, and the only one without an Atlantic coastline. The country was originally inhabited by Native Americans, specifically the Pipil tribes. The Spanish controlled the area from the 1500s until the 1821 revolt for independence.

Nearly 97 percent of the 7,185,218 inhabitants of El Salvador are mestizos, or a blend of Native American and Spanish descent. The remainder of the population is comprised of indigenous Americans, Africans, and Creoles, or people of unmixed European descent. There is a large income gap between the country's wealthiest and poorest citizens, with nearly 50 percent of the population subsisting below the national poverty line. The country survived a 12-year civil war that ended in 1992, which had a definite impact on Salvadoran cuisine with respect to availability and the division of cooking labor within the home.

Food Culture Snapshot

Julia Garcia is a single Salvadoran mother raising her three children, Jesus, Juanita, and Pedro, in a rural town north of San Salvador, the capital, near the foothills of Mount Guazapa. The town is a new *comunidad* (community) given to the leftist Farabundo Martí National Liberation Front (FMLN) guerrilla organization and their land-poor families as part of the peace agreement signed to end the civil war in 1992. Julia was a guerrilla with the FMLN during the war and

was rewarded with a small bit of land, materials, and money to restart her life. Although it is rural and surrounded by dirt roads, Julia has enough space in her 30 by 10 foot cement dwelling for beds for herself, her children, and her mother and father, who also live with her and help run her *milpa*, or farm.

The Garcias grow corn, rice, and beans and raise the occasional chicken or cow. Not only does this provide income for the family but also their daily food. The morning starts early for Julia, who wakes up at 6 A.M. to start grinding the maize (corn) for the day's tortillas. Most meals in the Garcia household revolve around tortillas and beans. For breakfast, Julia fries up leftover beans and rice from the previous night's dinner into a dish called *casamiento*, which she serves to her family with tortillas that are still warm from the griddle and coffee.

Lunch is made of freshly cooked black beans with more warm tortillas and slices of banana from her neighbor's *milpa*. Dinner is more beans and tortillas accompanied by *sopa de pata*, or a soup made with tripe, cow feet, and corn, flavored with lemon and chili. The family recently butchered their cow, and the extra pieces that are not sold in the market are saved for family dinners. On the weekends, Julia's mother treats the family by making a *semita*, a coffee cake filled with papaya jam.

Major Foodstuffs

Indigenous American populations in El Salvador were mainly vegetarian prior to European settlement, cooking with little fat and eating meat only on special occasions. When the Spanish took control

of the country in the 1500s, they brought along with them a variety of new cooking methods like frying and sautéing and ingredients like animal fat and rice that influenced the native cuisine.

The climate in El Salvador is tropical, with a rainy season between May and October and a dry season between November and April. Mountains encompass most of the terrain, along with a central plateau region, as well as slender coastlines. The focus of food production in El Salvador revolves around coffee, rice, beans, and corn, as well as shrimp and grass-fed beef. All of these ingredients figure into the average daily diet of a Salvadoran depending on their social class. For example, beef is highly prized and part of at least one meal a day for middle- and upper-class families, but it remains a rare indulgence

A girl picks coffee beans on the San Salvador Volcano in San Salvador in October 1997. El Salvador's economy, heavily dependent on agriculture, has been weakened during the 1990s and into the 2000s because of civil war and weather phenomena. (AP | Wide World Photos)

for the poor. Seafood and pork are also eaten, and rural diets can be enhanced with *cusuco*, a breed of armadillo. Corn is used daily to make tortillas, *pupusas* (stuffed tortillas), tamales, drinks, and desserts.

Volcanoes are found all across Central America, and they have made the soil incredibly rich in nutrients and ideal for growing many kinds of produce. These include but are not limited to mangoes, watermelons, papayas, guavas, lettuce, coconuts, tamarinds, cabbage, bananas, squash, yucca, peppers, and tomatoes. The plantain is a staple starch in El Salvador, even more so than potatoes, and can be used unripe (green) in savory applications or ripe (black) in sweet applications.

An important ingredient in Salvadoran and Central American cooking is annatto seeds, which come from an indigenous tree known as achiote and were used by the indigenous population for special rituals, body and pottery painting, and even currency. Today, the seeds are ground into a paste with salt, pepper, lime or sour orange juice, and vinegar to be used as a marinade for meats. Before refrigeration, achiote paste prevented the meat from spoiling, and although flavorless raw, the flavors are emphasized through the application of heat.

Salvadorans value fresh, seasonal produce and prefer making food from scratch, so shopping at an open-air market is often a daily occurrence. Community marketplaces are considered to be social venues where one can catch up with family and friends. Most Salvadoran culinary traditions are passed down orally, and the marketplace is where families share and trade cooking tips. In middle- and upper-class families, which tend to have a family chef, one member of the family is assigned to help the chef cook the family's style of cooking, so the home kitchen is another place where Salvadoran oral culinary history and traditions are passed along.

Purified drinking water is not available to the entire population, and tropical, sugary fruit juice drinks called *aguas frescas* are popular. Kolachampán is a sugarcane-flavored soda, and *ensaladas* (literally, "salad") are blended mixed-fruit juices. Corn is used to make several different drinks, including a warm glass of *atole*, a filling drink served salty or

sweet, and *chicha*, an indigenous alcoholic beverage. Pilsner is the beer of choice in El Salvador.

Cooking

Corn is a popular Salvadoran ingredient, but it takes a great deal of work to make it usable. Dried corn is soaked in a lime-water solution until soft, then ground (with an appliance or by hand) into masa, a soft corn dough that is used as the base for tortillas, tamales, empanadas, and more. To make tortillas, a small bit of dough is rolled or pressed out into a circle of the desired size, then quickly cooked on a hot griddle. The same dough can be made into tamale dough with a slight adjustment of ingredients, filled with meat or cheese, then wrapped in banana leaves before being steamed or boiled.

Another well-liked Salvadoran dish that uses masa is the pupusa. Said to be created by the Pipil tribe that used to inhabit El Salvador, a pupusa is a stuffed tortilla, a common street food. The method is similar to that for making tortillas, except that the dough is wrapped around a range of fillings including cheese, *chicharrones* (pork rinds), beans, squash, and so on before being griddled. It is served with *curtido*, a spicy pickled mix of cabbage, carrots, and chili peppers that is said to enhance the pupusa's subtle flavors.

Cheese-Stuffed Pupusas

Serves 4 people (1 pupusa each)

Ingredients

Dough

2 c masa harina

1 c water

1 tbsp olive oil

Salt and pepper to taste

Filling

½ c crumbled *queso fresco* (fresh cheese)

½ c white melting cheese, like Chihuahua

Method

Mix the masa harina, water, and olive oil in a bowl until combined into a soft dough. Taste for flavor, and then adjust seasonings with salt and pepper to your preference.

Split the dough into 8 evenly sized balls, roughly 2 inches in diameter. Roll out each ball into a 6-inch circle. Sprinkle cheese evenly over the middle of the tortilla, then top with another rolled-out tortilla, pinching the edges to seal the filling inside. Place the stuffed tortilla on a preheated ungreased griddle, and cook on both sides until the tortilla is crispy and the cheese is melted and warm, a few minutes. Serve with spicy, room-temperature *curtido* (recipe follows).

Curtido

Ingredients

¼ head red cabbage, thinly sliced

¼ head green cabbage, thinly sliced

1 carrot, peeled and grated

2 scallions, thinly sliced

1 c water

1 jalapeño pepper, minced

1 ½ c apple cider vinegar

½ tbsp salt

1 tsp brown sugar

½ tsp Mexican oregano

Place the cabbage, carrots, and scallions in a large bowl. Bring the water, hot pepper, vinegar, salt, sugar, and oregano to a boil in a small pot. Pour the hot pickling liquid over the bowl of vegetables, and stir. Cover and let sit for at least 24 hours, then pack into a container and store in the refrigerator for 2 to 3 weeks. Let the *curtido* come to room temperature before serving with pupusas.

Rice is another important staple ingredient in Salvadoran cooking, and it is said that cooks are judged by the fluffiness of their rice. After the rice has been

rinsed, the grains are browned in oil with some onion, which allows the rice to remain fluffy after it is cooked and flavors it as well. Most meat is marinated in citrus juices, which help to flavor and tenderize the meat, especially in dishes like *carne asada* (roast meat).

Cooking was traditionally handled by the woman of the house, especially if the man of the house (if there was one) worked outside of the home. It wasn't until after the civil war ended in 1992 that women's rights became an important cause in Central America. Women gained a right to education and began working outside the home. Another positive result of the war was that men started helping out more at home, especially in the kitchen. Fathers, husbands, and sons are pitching in to assist with grinding the daily corn, helping to cook a family meal, and even cleaning up, as the civil war emphasized the importance of all people, men and women, rich and poor, being considered equal.

Typical Meals

For breakfast, beans and tortillas are the most common and affordable dish in El Salvador. Tropical fruits are also served, such as bananas, papayas, and mangoes. *El huevos picados* (scrambled eggs with vegetables) is a popular dish, along with cheese. *Plátanos fritos* is another popular breakfast dish,

Traditional tamales, a mix of meat and vegetables with rice or corn folded in a banana leaf and then steamed. (Raphael Chay | Dreamstime.com)

made from deep-fried plantains, which can be served savory (unripe plantains) or sweet (ripe plantains).

For lunch and dinner, a variety of popular Salvadoran dishes can be made or purchased, depending on the situation. Pupusas are stuffed tortillas, a popular street food that is quick and cheap. Other popular street foods include empanadas (flour pastries stuffed with meats or vegetables) and tamales, which are stuffed with meat or sweet corn and wrapped in banana leaves before being steamed.

Sopa de pollo (Salvadoran chicken soup) is another common dish, made from chicken, chickpeas, potatoes, yucca, cilantro, onions, and lime. Beef is a standard meat for those who can afford it, and Salvadorans grill it in *carne asada* (grilled skirt steak) and cook it in *bistec encebollado* (beef simmered with onions). Since El Salvador is a coastal country, seafood and fish are commonly eaten, typically in stew or soup form. Snacks are often fried, like *chicharron* (pork rind), *yucca frita* (fried yucca), and *pacalla* (cornmeal-breaded palm flowers fried and served with tomato sauce).

Hot chocolate and coffee are the most popular drinks in the country, along with *refrescos*, or fruit drinks. Common Salvadoran desserts include *tres leches* cake (cake made with three kinds of milk), *arroz con leche* (rice pudding), and *semita* (coffee cake-type pastry filled with different jams or preserves). The Salvadoran quesadilla is another famous dessert, essentially a sweet cheese pound cake flavored with sour cream, sesame seeds, and queso fresco or Parmesan cheese.

Eating Out

In major cities throughout El Salvador, fast-food restaurants and more expensive, sit-down restaurants thrive. Subway, Pizza Hut, Burger King, and several other American fast-food chain restaurants have made their way down to major Salvadoran cities. Outside of the cities, the most common style of restaurant is the *comedores*, which function like cafeterias with either a menu to order from or a buffet to choose from, and a waitress that brings the food to the table. Also, street-food vendors are popular all over El Salvador; they sell items like pupusas

with curtido for busy workers with no time to cook. Pupusas are also sold in *pupuserías*, or restaurants that specialize in making pupusas.

Special Occasions

Much of El Salvador is Roman Catholic, so Christmas and Semana Santa, or Holy Week (the week before Easter), are especially important occasions in the average Salvadoran life. Tamales are one traditional food made for such celebrations, as are pupusas with curtido and *panes con chumpe*, which are Salvadoran turkey sandwiches typically made on Christmas Eve or New Year's Eve.

Diet and Health

The general diet of El Salvador, which consists of corn and beans supplemented with meat, dairy, and fresh produce, is healthy. Tortillas and beans provide more than enough complex protein for the body; beans provide fiber, magnesium, and vitamin B, among other nutrients, and tortillas gain zinc and iron from being ground on a grinding stone. Tropical fruits that are native to El Salvador, such as mangoes, bananas, sour oranges, and papayas, offer plenty of carotenoids and vitamin C.

With almost half of the population living below the national poverty level, financial distress often prevents families from getting a well-balanced, healthy diet in El Salvador. Fresh fruits and meats like beef and chicken are not affordable to all income levels, and the little meat purchased by the poor tends to be high in fat and low in nutrition, like sausages. Food security in El Salvador has been

threatened by natural disasters (including an earthquake and a mudslide), rising food prices, little education, lack of food production, and financial hardship. Sixteen percent of rural families do not make enough money to buy food. A civil war in the 1980s displaced rural communities that had been relied on to produce cereals for the country, which has led to reduced food supplies. Malnutrition in children under the age of five has led to an increase in stunted growth among Salvadoran children.

French Guiana

Overview

French Guiana, called La Guyane in French, has a complex and intriguing history that has had a direct effect on the country's food culture. It is an overseas department of France (*département d'outre-mer*, or DOM). Located on the northeastern Atlantic coast of South America, between Suriname and Brazil, it is a small country in terms of area and has a population of approximately 220,000. The capital and largest city is Cayenne, with a population of a little over 60,000. The country has a tropical climate, with coastal access, low plains, mountains, and dense rain forest that covers the majority of the land.

Historically and culturally, French Guiana is more akin to the Caribbean rather than other countries in South America. The area was originally inhabited by Amerindians (predominantly Carib, Arawak, and Kali'na tribes), long before European colonization. The Amerindians gave the area an appropriate name based on the ocean and many rivers, as *Guiana* means "land of many waters."

Christopher Columbus explored the coastal area near French Guiana on his third voyage in 1498, but it was the French who began to settle the region during the first half of the 17th century, albeit with pushback from the Portuguese. They managed to establish Cayenne in 1643 as a trading port, along with setting up some small plantations in the region. Facing more attacks, the French made Cayenne a permanent settlement in 1664. Throughout the latter half of the 17th century, the area switched hands a number of times between the Dutch, French, British, and Portuguese. The regular fighting over the

land hindered the area that is now French Guiana from developing as substantially as in the rest of the Guianas, where the Dutch had more control. Sugarcane, though, was the main product here as well, which saw slaves from West Africa being brought over to work the plantations.

The territory was seized by the combined British-Portuguese forces based in Brazil in 1809, and it was under Portugal's control until 1814, when the French regained the land after the signing of the Treaty of Paris. The plantations almost collapsed after the abolition of slavery in 1848, but, as in the rest of the Guianas, laborers were brought in from India and China to fill the void.

Devil's Island, off the coast of French Guiana, became home to a penal colony from 1852 until the mid-20th century, with convicts from mainland France being sent there to carry out their prison terms. The infamy of the prison was captured in the book and movie *Papillon*, based on the life of an inmate there. French Guiana became an overseas department of France in 1946.

Demographically, the country is very diverse. Today, the population of French Guiana consists of Creoles (those with African ancestry), Europeans (not surprisingly, mostly French), Chinese, East Indians, and Amerindians, as well as immigrants from Haiti, Suriname, and Brazil. The majority of the population lives in the coastal towns. There are also Hmong refugees from Laos, who arrived in the 1970s and settled in smaller rural farming communities, such as Javouhey and Cacao. Most are market farmers, growing fruits and vegetables that they

sell in the cities, and actually supply the country with the majority of its produce. Maroons (escaped slaves) established themselves deep in the interior rain forests, preserving a lifestyle and culture closely tied to their African roots. These communities, descendants of the original Maroons, still exist today.

French Guiana's economy is dependent on France, relying on subsidies, which makes the standard of living one of the highest in South America, at least in the cities. The rural villages are poorer, and the Amerindians and Maroons live a subsistence lifestyle inland. Unemployment is high.

Even though the soils are fertile, a small percentage of the land is cultivated; a good amount of the food in French Guiana is imported. Fishing is one of the main industries, particularly for shrimp. Rice, manioc (cassava), sugar, rum, livestock, gold, and timber are among other important industries. The space center, Centre Spatial Guyanais, was established in 1964 near Kourou and accounts for about 25 percent of the gross domestic product (GDP).

🍴 Food Culture Snapshot

Jean-Claude, Marie, and their children live in Cayenne, the largest city in French Guiana. They start the day with a stop at the local bakery to buy croissants for breakfast. Today is market day, so they go to the open-air market, as do most residents in Cayenne. There, they purchase fresh fruits and vegetables for their meals from a Hmong family who grew the items themselves and brought them in from Cacao. While at the market, Jean-Claude and Marie also look for fresh seafood and chicken to round out their upcoming meals. Rice and other staples are purchased at the supermarkets.

Major Foodstuffs

Starches, such as cassava (also called manioc or yucca), sweet potatoes, yams, taro root (dasheen), and plantains, are staples in the French Guianese diet. Rice is also an important staple, eaten with

A shrimp trawler in the early morning in French Guiana. (StockPhotoPro)

most meals. With the majority of the population living near the coast and the many rivers, the incredibly wide variety of seafood is a major part of the diet. Shrimp is one of the main industries in French Guiana and as such is widely eaten. Snapper, tuna, shark, and anchovies are among the fish found in the country, as well as many native South American species, such as *acoupa*, *atipa*, *jamais goûté*, *machoiran*, *pirai*, and *pacu*. Chicken and other meats, such as duck, beef, pork, lamb, and local wild game, are also consumed as protein sources but do not hold the same place as seafood does in the French Guianese diet.

Vegetables in the diet include tomatoes, zucchini, cucumbers, bitter melons, Chinese long beans, red (kidney) beans, eggplant, and pumpkin. Tropical fruits are plentiful, including mangoes, papayas, coconuts, bananas, and citrus fruits, such as oranges and lemons. Fruits not common in other areas of the world grow in French Guiana, too, such as the sugar apple, the Cayenne cherry, and the acerola cherry.

Cooking

French Guianese cuisine is a reflection of the various ethnic and cultural groups that have, over the history of the country, contributed and adapted their dishes and techniques with local ingredients, merging them into a unique food culture. A strong theme in French Guianese cooking is using French technique with local ingredients. An example is the many soups and stews that feature the country's variety of fish and meat. Aromatics, such as onion and garlic, are often used in them. Soups and stews often simmer on the stove for most of the day. These stews also have their roots in African foodways. A carbohydrate-rich starch is inevitably a part of the meal, served along with the protein. Vegetables can be either included in the dish or served on the side. Root vegetables are also prepared as gratins, another nod to combining local ingredients with French technique.

When prepared other than in soups or stews, seafood or meats are sautéed, grilled, broiled, poached, or fried. Herbs and spices, such as cinnamon, cloves, nutmeg, ginger, and hot peppers, flavor many dishes. A popular way to serve fish and meats, such as

chicken, is to wood-smoke it (*boucané*). This technique is believed to date back to the Amerindians in the region, as a way of preserving their protein sources.

Typical Meals

Breakfast is similar to the Continental French breakfast, usually coffee and a baguette, croissant, or pastry, either eaten at home or found at the cafés and bakeries in the towns and villages. Lunch may be anything from a sandwich or crepe to Asian noodles. For dinner, cod fritters (*accras*) and blood sausages (*boudin*) are often served as appetizers, as well as marinated fish or shrimp. Smoked chicken or fish boucané is often served cold, on salads. The main dishes, including the soups and stews, are almost always served with rice. *Couac*, toasted cassava flour, is an alternative staple served with meals. Red (kidney) beans often accompany the main dish. *Blaff* is a court bouillon (broth) made with celery, onion, garlic, herbs, and spices in which fish or shrimp is poached. *Pimentade* is similar but contains tomatoes. *Colombo* is a well-liked stew with vegetables and chicken or pork in a spicy curry sauce. Fricassees, meat stews in a rich sauce, are considered specialties here. Wild game from the forests is especially popular prepared this way.

Bouillon d'awara (also spelled *aouara* or *awarra*) is considered French Guiana's national dish, served only on Easter and Pentecost. It is a dish of vegetables, cured meats, smoked fish, crab, prawns, and chicken, made with the fruit of the awara (*Astrocaryum vulgare*) palm tree that grows in the savannas in French Guiana and nearby regions. According to legend, anyone who tries this will be certain to come back one day to French Guiana.

Bouillon d'Awara

Serves 10

Cooking time: 7 hours plus overnight soaking

Ingredients

1 lb corned beef, diced

1 lb salt-cured ham

- 1 lb pig tails
- 3 lb *awara* (*ouara*) paste
- 1 lb smoked bacon, diced
- 1 lb roast chicken
- 1 lb roast pork
- 2 lb green or white cabbage, chopped
- 2 lb green beans
- 1 lb cucumbers, chopped
- 1 lb eggplant, cubed
- 1 lb shrimp
- 1 lb crabmeat
- 1 lb smoked fish
- 2 lb spinach
- Salt, pepper, and assorted spices, to taste

Instructions

1. Soak the corned beef, ham, and pig tails in water overnight. Change the water in the morning, and leave them in the clear water for another 2 hours.
2. Fill a very large soup pot about halfway with hot water. Mix in the awara paste until dissolved.
3. Put the cured meats, including the bacon, in the awara liquid, and cook over low heat for 2 hours.
4. Add the chicken, pork, cabbage, green beans, cucumbers, and eggplant to the bouillon.
5. Stir, and cook over low heat for 6 or 7 hours. The bouillon will be very thick and reduced.
6. Add the shrimp, crab, smoked fish, and spinach, and season with salt, pepper, and spices. Cook for 5 minutes more, or until the shrimp are cooked through and the spinach is wilted.

Considering the history of sugar production in French Guiana, rum is popular and is made into various drinks and cocktails. A local favorite is *ti'punch*, a mixture of rum, sugar syrup, and lime juice. It is usually served as an aperitif, without ice, and drunk in one shot. *Punch planteur* is another rum drink, made with fruit juice.

Eating Out

Restaurants are found mainly in larger cities in French Guiana, such as Cayenne and Kourou. The range of cuisines reflects the population, so one can find Creole, French, Brazilian, Laotian, and Chinese restaurants, to name a few. French cafés and restaurants serve typical Continental French dishes, along with wine imported from France. Inexpensive food stalls are found in and around the city markets. Asian noodles and fried rice are sold, as well as foods such as French crepes and sandwiches.

Special Occasions

Many of the holidays and special occasions in French Guiana center on religious and national festivities. As the majority of the population is Roman Catholic, holidays such as Christmas and Easter are an important part of the culture. Bouillon d'awara is made only during Easter and Pentecost. Carnival in French Guiana is considered one of the liveliest, including costumes, music, parades, and dancing, stretching from Epiphany to Ash Wednesday. *Galette des rois* (king cake) represents the Three Kings and Epiphany and kicks off Carnival. Blaff is commonly eaten during Carnival, seen as a means of sustenance during the celebrating.

Bastille Day (the national French holiday, July 14) is cause for a big celebration each year in French Guiana, with plenty of food and wine. The capital city holds its own yearly celebration, Cayenne Festival, every October 15. Abolition Day is celebrated countrywide on June 10, to commemorate the end of slavery. In the areas with Asian communities, holidays such as the Chinese New Year are celebrated.

Diet and Health

The French Guianese diet is rich in fresh fruits and vegetables and seafood, yet with a poor economy, some may not have access to a healthy, balanced diet. Relying too heavily on inexpensive starches, such as rice, could deprive one of important nutrients and lead to malnutrition, especially among

children. With the country's geography, access to a safe water supply is also an issue. The country's status as a French overseas department means that the population has access to health care that otherwise would not be available, including implementation of public health services and health education.

The Hmong, in the smaller villages, have been able to maintain some of their traditional ways of life and culture, including religious beliefs such as shamanism, even if they have converted to Christianity. Appeals to shamans for improving health often involve animal sacrifices. The Hmong are also fairly healthy, growing and eating their own fruits and vegetables and keeping fit through the physical demands of farming.

Grenada

Overview

Grenada is located in the eastern Caribbean at the southernmost tip of the Windward Islands between Saint Vincent and the Grenadines to the north and Trinidad and Tobago to the south. The nation of Grenada comprises three main inhabited islands plus around 30 islets and rocky pinnacles.

Grenada is the principal island of the three; the capital of the entire country is Saint George's, which is located on the southwestern coast. Grenada is about 21 miles (34 kilometers) long and around 11 miles (18 kilometers) wide. It has a mountainous, forest-covered interior, and its coastline has an abundance of attractive beaches and bays. Known as the "Isle of Spice," Grenada became world famous for its nutmeg and mace, though these spice crops were severely impacted by two devastating hurricanes in 2004 and 2005, leaving the industry in disarray. Today, the island is still in the process of recovering and successfully combines its traditional spice and agricultural industry with a thriving tourism sector.

Carriacou and Petite Martinique are Grenada's other two main islands. Carriacou is located some 23 miles (37 kilometers) to the north of Grenada. It is approximately 7 miles (11 kilometers) long and 3 miles (5 kilometers) wide. Largely dry, this pretty island has undulating hills, a number of idyllic beaches and bays, and a national park. Carriacou is famous for its tradition of boat building, sailing, and its Big Drum Dance festivals. Petite Martinique is a tiny island located 3 miles (5 kilometers) to the northeast of Carriacou. Just 1.2 square miles

(2 square kilometers) in size, it also has a tradition of boat building and fishing.

Grenada was granted full independence from Britain in 1974. In 1979 the incumbent prime minister, Eric Gairy, was overthrown in a bloodless coup by the People's Revolutionary Government, led by the enigmatic Maurice Bishop. In October 1983, Bishop himself was overthrown and, together with a number of his supporters, executed on the orders of his former comrade, Bernard Coard. In a move to rid Grenada of its Cuban-backed regime, the United States initiated Operation Urgent Fury just a few days later. This military action lasted just a week. Free elections were held a year later, in 1984, and Grenada has been a peaceful place since then.

The majority of Grenadians are the descendants of slaves that were brought to the islands by the British and French from the 1700s to work plantation estates that grew sugar, coffee, cacao, and later nutmeg. Like most of the Caribbean, the islands were originally inhabited by Amerindian people, collectively referred to by the Europeans as Caribs. These indigenous people migrated from the Amazon River delta and were proficient canoe builders, hunters, and fishermen. With the arrival of Europeans, most Caribs were enslaved, murdered, or absorbed into the new society. Many died of diseases against which their bodies had no immunity. Following emancipation, many plantation estates were abandoned, and in their place villages were formed and a new nation built. Today, the islands of Grenada are English-speaking, and the government, judicial, and education systems are still based on the

old British model. Grenadian culture is shaped by a combination of African and European heritage, as indeed is its cuisine.

Food Culture Snapshot

Louisa decided to cook a traditional *oil-down* (pronounced *oil-dong*) for her four guests. Right now they were off hiking to the island's pride and joy—the very pretty Concord Falls—and she planned to meet them on their return for a cook-up on the beach close by. Though her guesthouse was quite small and unassuming, she had developed a good reputation for attention to detail and for taking care of “her people.” Today would be no exception.

Michael, a local gardener, had brought yams, coconuts, plantains, green bananas, and sweet potatoes early this morning just as Louisa was seasoning the chicken wings with garlic, thyme, onions, and seasoning peppers that grew in her kitchen garden. She had the salt fish (cod) plumping overnight in water, and that sat on the counter, waiting to be drained and later added to the pot. During the early hours of the morning, Louisa had peeled and chopped the ground provisions (starchy staples), cut open the coconuts, and squeezed the pulp in a muslin cloth to extract the delicious milk. She now packed all these things into a cooler, together with a dozen bottles of Carib beer and three bottles of rum punch—she was revered for this traditional West Indian drink that followed the recipe one of sour (lime), two of sweet (sugar syrup), three of strong (rum), and four of weak (water), although she tended to cheat a little, adding only three of weak and relying on ice to make up the four. Nutmeg and Angostura bitters had to come along as well.

By the time her guide, Gerry, arrived with her four guests, a fire was burning and the ingredients were all cooking in a large pot. The waterfall hike had been great fun, and now all her guests were ready for something to drink. Knowing her rum punch well, they chose this readily. Louisa poured the punch into plastic cups filled with ice, added a dash of Angostura bitters, and, with her little portable grater, grated the fresh nutmeg straight into the same. Traditions are

not to be messed with. Two drinks each, and it was time to take a bath in the sea—this allowed her guests and herself to freshen themselves up. The waters of the Caribbean were warm and gentle, but Louisa had her pot that needed attention now. Leaving her guests, she clambered to her duty, tasting her oil-dong every now and then to ensure perfection. Once all the ingredients had boiled down, the turmeric giving the dish just that slight nutty flavor and a touch of yellow color, the coconut oil and the shop butter now coating the fish, chicken, provisions, and dumplings, all cooked to perfection, Louisa called out to her guests and opened a beer for each one as they gathered around the pot, their bowls being filled with the goodness of this Grenadian dish, its sweet aroma of pepper and spice filling the air. She remembered the first time this lot had tasted her oil-dong and how they had never heard of plantain before and couldn't imagine eating cooked unripe bananas. With full stomachs, weary limbs, and a liqueur in hand—Louisa had not forgotten the bottle of De La Grenade nutmeg liqueur they so loved after this heavy meal—they all sat in comfortable silence on the beach, watching the sun now setting, the skies slowly bursting into flames of yellow and red.

Major Foodstuffs

Grenada's volcanic soil is very fertile, and a variety of crops are grown on the hillsides of the island's mountainous interior. Though no longer a significant export, grown largely for domestic consumption, bananas are cultivated all around the island. In addition to the banana we all recognize, several other varieties are farmed, including plantains and *bluggo*, which are usually cooked before eating. Ground provisions such as yams and dasheen are also very traditional and commonly grown foodstuffs.

It is for its spices that Grenada has become famous, and despite recent hurricanes, nutmeg, cacao, cinnamon, allspice, cloves, star anise, and black pepper are still farmed in the island's lush green interior. Nutmegs thrive in a cooler, more elevated habitat, which unfortunately makes them vulnerable to severe weather. It is said that nutmegs were

first planted as an experiment in the mid-1800s and were so successful that, just 100 years later, Grenada was the second-largest exporter in the world behind Indonesia, where the crop originated. When ripening, the roundish, thick yellow pods that cover this evergreen tree begin to split open, revealing a tough kernel. Within this kernel is the nutmeg itself, and around the nutmeg is a reddish, lacy coating called mace. After harvesting, the mace is removed from the nutmeg and dried. It is used in cooking and also as a natural meat preservative. Nutmegs are usually ground into a powder and used for flavorings, often in desserts. They also contain an essential oil that is used in the cosmetic and pharmaceutical industries. Bay leaf is native to the Windward Islands, and although also used in cooking, it is primarily used in bay rum. Not to be imbibed, bay rum is an essential in every home's medicine cabinet, used as an after-shave lotion. Turmeric and ginger are also grown. Cacao is grown both on smallholdings and on large estates. The Belmont Estate on the east of the island grows organic cacao that is used to make Grenada's very own chocolate.

Carriacou and Petite Martinique are both dry, and water is usually in scarce supply. This means that the variety of crops is quite limited. Traditional staples are pigeon peas and maize, which are often seen growing together in smallholdings and back gardens. These gardens also tend to house a small chicken shed and may also be home to a goat or two.

Grenadian Oil-Down

- 3 dry coconuts or 6 cans coconut milk
- 1-in. x 2-in. piece fresh turmeric, peeled and grated
- ½ c vegetable oil
- 2 lb chicken wings
- 1 lb salt fish, soaked in water overnight
- 1 salted pig tail, whole
- 6 green bananas, peeled and cut in half
- 1 whole breadfruit, peeled and cut into chunks
- 12 medium-sized leaves of callaloo bush
- 1 leaf *chadon bennie* (also known as *shadow-bennie*), finely chopped (or a handful of cilantro can be used instead)
- 4 onions, peeled and finely chopped
- 6 cloves garlic, finely chopped
- 3 sprigs parsley, finely chopped
- 6 stalks fresh chives, finely chopped
- 3 leaves broad-leaf thyme, finely chopped
- 4 fresh mint leaves, finely chopped
- 6 leaves fresh basil, finely chopped
- 1 red hot pepper or Scotch bonnet, seeded and finely chopped
- 2 red hot peppers or Scotch bonnets, whole
- 2 seasoning peppers, finely chopped
- 1–2 tbsp butter
- Salt and pepper to taste

Dumplings

- 2 c flour
- ½ c butter
- 1 tsp salt
- 1 tsp ground cinnamon

Break the coconuts, and remove and grate the hard interior white flesh. Add the turmeric to the grated flesh. Pour hot water over this mixture and squeeze through a muslin bag until all the coconut milk has been extracted. When substituting this method

with 6 cans of coconut milk (unsweetened), add the turmeric, bring to a boil, and still put the liquid through a sieve in order to remove the grated turmeric, just keeping the coloring, which should be a bright yellow in both cases.

Place a large iron pot on the fire. Add vegetable oil. When hot, add chicken wings and brown slightly. Add the turmeric coconut milk. Add all other ingredients except the whole peppers. If there is not enough coconut milk to cover these, add a little water or normal milk. Add the whole peppers, tied in muslin cloth in case they break. Cover until mixture begins to boil.

Meanwhile, in a bowl, begin the dumplings by mixing the flour and butter. Crumble the mixture. Add the salt and cinnamon and mix well. Add enough water to make a sticky but firm dough, form the dough into small balls, roll into 4-inch lengths, and set aside.

Allow the oil-down to slowly boil for approximately 45 minutes, adding the dumplings 20 minutes before it is finished, while there is still liquid. Cover for 5 minutes. Remove cover, stirring now to ensure that the bottom of the oil-down does not begin to burn. When finished and all ingredients are cooked but not mushy, serve in calabash bowls (or ceramic bowls) and eat with a spoon. The pepper can now be removed from the muslin cloth and mashed, and a little can be placed on the oil-down for those who can tolerate the pepper. Salt and pepper can be added to taste.

In addition to pigeon peas and maize, vegetable plots will also usually include carrots, cabbages, potatoes, peas, and beans. Fruit trees grow in the wild and in orchards. Common fruits include several varieties of mango, grapefruit, lime, pawpaw (papaya), guava, passion fruit, pineapple, watermelon, and breadfruit.

The sea provides Grenadians on all three islands with a variety of fish and crustaceans. Tuna, mahimahi (dorado), marlin, and kingfish are regular catches. Queen conch, known as *lambie*, and lobster are caught to supply Grenada's restaurants and hotel resorts. Both are also revered by locals.

A Rastafarian man cooks oil-down, a traditional dish in Grenada. (Dreamstime)

Cooking

Caribbean Creole is the predominant culinary style in Grenada and is a combination of African and European influences. Traditional dishes are usually quite simple and are a good reflection of seasonal fruits, vegetables, and fish catches. Staples are rice and ground provisions. Grenada also has an Indo-Caribbean community, particularly on the east coast, and some spiced curry dishes, such as roti (a circular Indian-type bread wrapped around fillings), reflect the diversity of the island's heritage. The preparation and cooking of meals usually take place in an indoor kitchen over a gas stove, though many still enjoy an outdoor "cook-up" on a beach, especially as a weekend treat.

Meats are usually seasoned in advance, either with prepared, dried seasonings or with a combination of seasoning peppers, garlic, thyme, salt, and pepper. Fish and chicken are often washed with lime before cooking. Marinating meats is a common

practice and may often be done the day before. Vegetables and ground provisions are either bought from local markets or roadside stalls or harvested from gardens. Queen conch (or lambie) is extracted from its shell and beaten with a wooden *cosh* to tenderize before it is cooked, often in a curry or hot Creole sauce.

The national dish of Grenada is pronounced oil-dong but written as oil-down. Its traditional ingredients include a selection of spices, turmeric, ground provisions, breadfruit, green (unripe) bananas, and plantains combined with pig trotters (feet) and salt fish, with callaloo (young dasheen leaves—taro) placed on top to retain steam and add flavor. Today, the recipe has changed little except for the meats, which could be one or a combination of beef, pork, the more inexpensive chicken wings, salt pork (pig tail), or salt beef. Everything is cooked in one large pot together with coconut milk and spices until the liquid reduces down to leave an oily residue at the bottom of the pot that coats the meat and provisions. Often cooked outdoors over a fire, oil-dong is typically eaten on special occasions or as a weekend picnic.

Another very traditional dish that also employs coconut as an ingredient is *cou-cou*. Again cooked in a single pot and usually outdoors over an open fire, cou-cou is made from cornmeal, flour, a selection of seasonings, and coconut milk. Everything is cooked together and continually “turned” until the mixture thickens. In Carriacou, cou-cou is often eaten with fresh fish and pigeon peas.

Typical Meals

Lunch has traditionally been the main meal of the day in the Caribbean, though with modern lifestyles and the introduction of fast food, the increasing variety of restaurants, and prepacked sandwiches in plastic lunch boxes from well-stocked supermarkets, things are steadily changing. Whether it is lunch or dinner, the typical main meal in Grenada will consist of meat or fish accompanied by a selection of vegetables, rice cooked with peas, and ground provisions. Perhaps one of the most popular

accompaniments is callaloo, the stewed young green leaves of the dasheen plant.

Because of Grenada’s appeal to overseas visitors, investors, and returnees, not to mention the impressive St. George’s University medical school, traditional cooking is now far more entwined with international culinary influences. This is particularly true along Grenada’s southwestern peninsula where luxury resorts, boutique hotels, yachting marinas, supermarkets, bars, and haute cuisine restaurants line the powder-white sand beaches and sublime natural anchorages. Elsewhere in Grenada, particularly in the more remote villages of the north, a traditional breakfast of locally baked bread, local jams, and fresh fruits may be followed by a lunch of meat or fish, rice and peas, provisions, and vegetables. Dinner or supper is often a lighter affair, perhaps consisting of leftovers or a freshly stewed callaloo soup.

Eating Out

Grenada’s southwestern peninsula offers an excellent choice of high-class and local restaurants. Finding somewhere to eat in the rest of the island can, however, prove to be a little more challenging, though there are some hidden gems. In Carriacou there are some very nice restaurants in and around Hillsborough and along the waterfront at Tyrell Bay.

Some of Grenada’s restaurants are truly world class, serving a sumptuous selection of international and traditional Creole dishes. Many profess to use local ingredients and locally caught fish and shellfish. The renowned British chef Gary Rhodes has a restaurant on the L’Anse Aux Épinés peninsula, and several others have been the recipients of international culinary awards. On Carriacou, dining options reflect the island’s love affair with the sea, and queen conch, or lambie, is a particular favorite.

For those looking for something a little more casual or inexpensive, Grenada’s southwestern peninsula offers plenty of variety, from bar meals to local snackettes. A fabulous option for anyone traveling on a budget is roti, a dish with East Indian influence that is comprised of a flatbread that is stuffed with either curried vegetables, chicken, or fish. Roti

and a range of local snacks such as fried chicken, fish, and *titiwi* cakes (a seasoned, fried fritter containing small fish) can be found at eateries all over Grenada.

Fish Friday takes place every week from around 7 P.M. in the village of Gouyave on Grenada's west coast. A vibrant atmosphere fuses with a wonderful selection of seafood dishes, including freshly caught and barbecued lobster. It is a lovely way to pass an evening, eating delicious food, sampling local rum, and enjoying the sounds of a steel pan band.

Special Occasions

Village maroon festivals on Carriacou are cultural occasions where communities come together for an outdoors cook-up, some drinks, and a traditional Big Drum Dance. Commonly referred to as a *saraca*, a village maroon (cook-up) usually consists of smoked meats, cou-cou, ground provisions, rice, and pigeon peas. Traditionally, it is held to give thanks for a bountiful harvest or to pray for one, along with rain, ahead of planting.

A rather haunting occasion, and also very traditional on Carriacou, is the tombstone feast. On the first anniversary of a burial, the deceased's headstone is carried to the grave site and put in place. Rum and water are sprinkled around the tomb, and sometimes an egg is broken to symbolize a new beginning for the surviving family. The ceremony is followed by a traditional *saraca*, drumming, and

dancing. A parent's plate is a food offering to ancestral spirits. At a village maroon and a tombstone feast, a plate of food rests on a white tablecloth along with a candle. After midnight, when the spirits have had their fill, the plate is removed and people eat from it.

Diet and Health

Despite the arrival of fast-food franchises in Grenada, the typical diet is a healthy one. Fresh fruits, vegetables, and ground provisions have not yet become foods that are scorned by the young in favor of hamburgers and southern fried chicken. With fishing villages along the coastlines of all three islands, fresh seafood is also a healthy staple of the Grenadian diet. Combine this fresh food with sunshine and the great outdoors and there is no reason why anyone should put on too many extra pounds—though some of those wonderful restaurant desserts may indeed prove too much to resist.

Guatemala

Overview

With a land area of about 42,000 square miles and a population of 14 million, Guatemala is one of the largest of the small countries on the isthmus of Central America. Guatemala borders on and shares many features of its culture, climate, and topography with Mexico, Belize, Honduras, and El Salvador. At the same time, the natural and social landscape within Guatemala is varied enough that highland Mayan farming communities and Caribbean fishing villages can exist at the same latitude, and door-to-door tortilla vendors and trendy *baristas* can be residents of the same city.

Guatemalan legal documents officially recognize the country as “multiethnic, pluricultural and multilingual,” and not only does Guatemala have the largest Maya community in the Americas but indigenous Maya make up anywhere from 40 to 60 percent of the population. (Some surveys classify only those who speak a Mayan language and wear traditional Mayan dress, or *traje*, as indigenous, while others include all Guatemalans who chose to identify themselves as such.) Guatemala’s population encompasses more than 20 distinct Mayan ethnic groups (the most populous among them are the K’iche, Mam, and Kaqchikel) and as many as 50 distinct languages and dialects. By many accounts from both within and outside Guatemala, mixed-race, mixed-culture *ladinos* (or mestizos) make up the majority of the population. Some Guatemalans of European descent choose to identify themselves as white or *criollo*. Other ethnic groups in Guatemala include the non-Maya indigenous Xinca, the Afro-Caribbean Garifuna, and recent immigrants

from Asia, the Middle East, and elsewhere, though all of these groups together make up only about 1 percent of the population. The majority of Guatemalans identify themselves as Catholic, but up to 20 percent of the population has joined an evangelical Protestant movement that began in the late 20th century.

Guatemala’s history has been one of voluntary and often-involuntary cultural and economic exchange. In pre-Columbian eras, cacao (or chocolate) traveled complex routes from lowland Mayan villages to the highland Maya and Aztec kingdoms in the region. Spanish colonists established an international trade in Guatemalan cacao and also replanted indigenous squash, tomatoes, chilies, and maize in Europe. Over several centuries, European conquistadors, entrepreneurs, scholars, and missionaries introduced crops from colonies in Africa and Asia to Central America; rice (most often combined with beans) has become a definitively Guatemalan food, and once-foreign crops such as bananas and coffee have shaped Guatemalan trade, particularly with the United States, from the 19th through the 21st centuries.

Food Culture Snapshot

Sandra lives on a busy street in Antigua, a small, volcano-surrounded town at an elevation of 5,000 feet that has the dual distinction of being Guatemala’s colonial capital and—with its cobblestoned streets and striking Spanish churches partially demolished by an 18th-century earthquake—the contemporary tourist capital of the Central American country. Of

her immediate family, only Sandra's 25-year-old daughter lives with her, but the house is always buzzing with students from the United States, Germany, Holland, and elsewhere in the world who attend a nearby Spanish-language school and who board with Sandra for several weeks or even a few months at a time.

On a typical day, Sandra is up well before 6 A.M., slicing fruit for breakfast. From the abundantly available local produce, she often selects papayas and bananas though she avoids berries, which are more expensive and more likely to be contaminated by food-borne illnesses. She lights the gas on the stove and begins to cook the beans that have been soaking overnight. A woman selling corn tortillas comes to the house around this time, and Sandra buys at least a dozen, transferring them from their large straw basket to a smaller one of her own and wrapping them in a kitchen towel to prevent them from drying out. Before noon, Sandra will walk five blocks to Antigua's traditional market (where dozens of individual produce, meat, and dry goods vendors set up their stalls under a heavy tarp) to buy a particular variety of squash indigenous to the region. She will also buy a few avocados (the vendor will ask if they are for today or tomorrow and help her select ones with the appropriate ripeness), a few other vegetables, and small bunches of the herbs cilantro and *hierba buena*. Since she's not cooking meat today, Sandra doesn't visit her regular butcher in the market. Next, she buys *pan francés*, a basic white bread, at a bakery nearby but not inside the market; she buys just enough bread for tonight—it will be stale tomorrow, good only for making breadcrumbs or dunking in tea or coffee. Antigua has two supermarkets, both within walking distance of Sandra's house, but she shops there only for staple processed foods like ultrapasteurized milk and chicken bouillon powder. In rural areas—where about 60 percent of the population lives—supermarkets are not available at all, while the capital, Guatemala City, is home to several branches of an upscale supermarket chain now owned by the American giant Walmart.

At lunch, Sandra reheats last night's *caldo* (a general word for stew), choosing to serve the tender chicken and potatoes without the broth today, accompanied by rice (fried lightly with carrots, tomatoes, onions, and garlic) and the black beans that she cooked this

morning and pureed in the blender immediately before the meal. Along with lunch, she serves the fresh tortillas and a Guatemalan-style *guacamol*, which differs from Mexican guacamole in that it contains no ingredients other than avocado, lime juice, and salt. For dinner, Sandra follows a recipe she clipped from a magazine for *soufflé de güicoyitos*, a crustless quiche made with the squash she bought this morning. She places a salad of thinly sliced tomatoes and cucumbers on the table, along with the *pan francés*. Much of Guatemalan cuisine, like tonight's dinner, is not spicy, though it is common to pass around a small dish of pickled chilies.

Major Foodstuffs

The religious book the *Popol Vuh*, often called the bible of Guatemala's K'iche Maya, presents a creation story in which the ancestors of all human beings were molded by the gods from maize dough. Such a dough—made by soaking corn in lime (calcium oxide) to remove the tough outer coating of the kernels and then grinding it either by hand or by machine—is still the basis for Guatemala's essential tortillas (flat cakes cooked on a griddle, smaller and denser than North American supermarket varieties) and tamales (dense packets stuffed with sweet or savory fillings, wrapped in corn husks or banana leaves, and steamed). Today, Guatemala produces over a million metric tons of corn annually. A study carried out in the rural region of Tecpán found that 98 percent of households in that particular area grew corn and beans on subsistence plots known as *milpas*.

Major cash crops grown in Guatemala's fertile volcanic soil, such as coffee, bananas, and cardamom, are produced almost exclusively for export. Cacao (an indigenous crop) and sugar, both grown in Guatemala's balmy lowland Pacific coastal region, were historically strong export crops but are now primarily consumed locally (the production of sugar also allows for the distillation of a wide variety of rums). Animal husbandry practices, along with meat and cheese production, bear the influence of European settlers, including not only the

Spanish colonists but also German and Swiss coffee farmers who arrived in the late 19th and early 20th centuries. Nontraditional crops like broccoli, snap peas, and French beans are increasingly a part of Guatemala's export economy but have yet to make a significant impact on local cuisine, while cabbage (a cousin of broccoli) came to Guatemala with the Spaniards and is now an important part of the pickled slaw called *encurdito* used as a topping for many snacks. Guatemala's extremely varied terrain is responsible for some striking variations in cuisine; fish and seafood stews made with coconut milk are common on the Caribbean coast near the Belizean border, while the sparsely populated jungle in Guatemala's northern Petén region borrows culinary traditions from Mexico's Yucatán Peninsula.

Cooking

The ancient Mayan technique of grinding ingredients into a powder or paste by using a slightly concave stone slab, called a *metate*, together with a matching piece that resembles a rolling pin, called a *mano*, is still an essential part of Guatemalan cooking. Tortillas and tamales are made from treated and ground maize. Cacao is ground together with sugar and cinnamon (European introductions) and then whisked into water or milk to make chocolate drinks. Peanuts, sesame seeds, and squash seeds are often ground up and used in recipes for beverages called *atoles* and *pinoles* and in a variety of stews. Households in very remote areas without a lot of income may rely on metates and manos as the only

A vegetable market in Chichicastenango, Guatemala. (Shutterstock)

technology for preparing ingredients in this way. In more central and financially stable villages, commercial grinding services (by machine instead of by hand) are available. Affluent homes have easy access to food processors, though they may keep a metate or a mortar and pestle for special recipes.

Purchasing purified water is routine in Guatemala, except in impoverished homes that cannot afford to do so, because municipal water supplies are not reliably potable. Running water is not universal, and many houses have only a single tap in a central courtyard rather than a sink in the kitchen. The Guatemalan culinary tradition is one in which fresh produce is readily available and refrigeration is limited and unreliable, so menus tend to emphasize cooking from scratch instead of reheating leftovers. Several appliances are standard in Guatemalan kitchens, including blenders and pressure cookers. Even modest homes may hire a worker (almost always a woman) to help with cooking and cleaning, and affluent families normally employ a household staff, something that is no longer either the social norm or an economic possibility in most European and North American homes.

Typical Meals

Guatemalan food can best be described as a constellation of traditional ingredients: maize, beans, and squash. Several rich stews combine indigenous and European ingredients and flavors to create singular dishes that are distinctly Guatemalan. *Pepián* is slow-cooked beef in a smoky and flavorful combination of spices. *Jocón* is a chicken stew in a tangy green sauce made with *mil tomates* (usually called tomatillos in Mexico and the United States). *Kakik* is a restorative soup traditionally made with a wild turkey.

Pepián

Serves 8, with rice and tortillas

- 1 whole small onion, peeled
- 4 whole garlic cloves, peeled
- ½ c whole tomatillos

- 1 whole small ripe tomato
- 2 dried chilies, such as *guajillos*
- 2 corn tortillas
- 2 lb beef chuck, cut into 2-in. cubes
- 5 c water
- 1 tsp salt
- 2 oz sesame seeds
- 2 oz squash or pumpkin seeds (*pepitas*)
- 10 peppercorns
- 1 1-in. cinnamon stick, broken up
- 1 leafy stalk of cilantro, chopped
- 1 *güisquil*, chayote, or zucchini, cut into ½-in. cubes
- 1 small potato, peeled and cut into ½-in. cubes

Char the onion, garlic, tomatillos, tomatoes, and chilies either by holding them directly over the flame of a gas burner (turning them regularly) or by heating them in a dry skillet.

Quickly char the tortillas by holding them over the flame of a gas burner with tongs (turning them over a few times), or toast them in the oven or toaster oven until they are crispy.

Bring the water and salt to a boil, add the beef, and simmer for about 1 hour, until tender.

While the beef cooks, add the tortillas to the boiling water for 5 minutes, then remove the tortillas, tear them into pieces, and set them aside.

Toast the sesame and squash seeds in a dry skillet until they are dark but not burned. Grind the seeds into a fine powder in a coffee grinder or food processor. Add the peppercorns and cinnamon, and process the mixture until everything is finely ground.

Combine the ground seed mixture, the moistened tortillas, the chopped cilantro, and the charred onion, garlic, tomatillos, tomatoes, and chilies with 1 cup of the cooking liquid from the beef in a food processor or blender until smooth.

When the beef is almost tender, add the cubed potato and *güisquil* or other squash, and continue simmering until the vegetables are cooked through, about 10 minutes.

Add the sauce to the beef and vegetables, and simmer for an additional 10 minutes, or until the sauce is thick and chocolate brown.

Small items such as green beans (*ejotes*) or hot peppers stuffed with ground beef (*chiles rellenos*) dredged in egg batter and fried make popular snacks and side dishes. In addition to the *atol* drinks made from ground seeds and nuts, there are several common soft drinks or *refrescos*, including limeade, steeped hibiscus flower, and a tamarind-infused drink. Eating *camotes* (sweet potatoes) in honey or syrup as an after-dinner treat is probably a millennia-old tradition, and the candy makers of Antigua have been selling molded marzipan and condensed milk sweets at least since 1613, when they formed a confectioners' guild.

What constitutes an everyday meal varies from household to household, region to region, and income level to income level. By some estimates, 80 percent of Guatemalans live below the poverty line, and for many Guatemalans eating is more a matter of survival than pleasure.

Eating Out

The elegant restaurants run by charismatic chefs and the convenient restaurant chains in Guatemala City, Antigua, and a few other pockets of the country take their cues from global rather than local culinary culture. European travelers and speculators who arrived with the coffee trade in the mid-19th century were surprised to find that Guatemala had so few cafés or salons where people could meet, and visitors to Guatemala today may have a similar reaction. In the 21st century, social gatherings are still less likely to be in restaurants than in someone's home, a custom influenced both by the cultural importance of hospitality and by a persistent occurrence of violent crime in public places in the wake of a heavily armed 36-year civil war that ended only in 1996. Most towns and urban neighborhoods have at least one *comedor* serving simple meals to workers who cannot return home for lunch and other passersby. While Guatemalans have access to several American chains, by far the most popular

fast-food restaurant is the nationally owned Pollo Campero, which specializes in fried chicken; in recent years, several branches of Pollo Campero have opened in the United States. Some of the tastiest and most traditional foods consumed outside the home are served at informal stalls or stands on busy streets. Common street foods include roasted corn, sliced mangoes coated in powdered chili and salt, the same *pupusas* that are popular in El Salvador (thick tortillas stuffed with cheese or another filling before they are cooked), and *enchiladas*, which bear no resemblance to the food of the same name in Mexico (here, they are a crisp tortilla topped with cabbage-and-beet *encurdito*, tomato sauce, and salty cheese).

Special Occasions

The ancient Mesoamerican tradition of preparing specific kinds of tamales for special occasions continues into the present day at Mayan festivals and during Catholic holidays like Christmas and Easter. Meat grilled over a charcoal fire or roasted on a spit, accompanied by guacamol or a condensed tomato sauce called *chirmol* along with grilled scallions, fresh bread or tortillas, and cold beer is a popular celebratory meal for a large crowd. Without a doubt, the most distinctive Guatemalan holiday meal is *fiambre*, a vibrant and pungent salad whose seemingly endless list of ingredients includes the local stinky vegetable *pacaya*, just-caught shrimp, imported capers, and Spanish-style chorizo, all mixed together with several different broths and pickling agents that take days to prepare; *fiambre* is served during the consecutive Catholic holidays of All Saints' Day and All Souls' Day in November, and the meal is sometimes eaten as a picnic at the local cemetery to commemorate the lives of parents, grandparents, and past generations of ancestors.

Diet and Health

Healthy communities in Guatemala are tied both physically and metaphorically to healthy maize harvests. For thousands of years, Maya households have blessed a single ear of corn, which is neither

planted nor eaten for the entire season, at the beginning of the harvest. To this day, corn is a symbol of life and health, and many families continue to practice the ancient birthing ritual of cutting the umbilical cord above an ear of corn. Contemporary Maya shamans make use of carefully guarded herbal recipes employed for both religious and medicinal purposes.

Today, lack of access to clean water severely compromises good health for many Guatemalans. While Guatemala's traditional staple foods are the core of a healthy diet (beans combined with maize to make up a complete protein, a diversity of vitamin-rich vegetables, little meat, and many dishes prepared without animal fat of any kind), struggles related to diet in Guatemala and throughout Central America include diabetes provoked and agitated by increased consumption of processed foods and rampant malnutrition as a consequence of extreme poverty.

Guyana

Overview

Guyana is a land of diversity geographically, ecologically, and culturally. Situated on the northeastern coast of South America, Guyana has a history and culture that are distinct from the rest of the continent. The country is surrounded by Venezuela, Suriname, Brazil, and the Atlantic Ocean. It is the only English-speaking country in South America. With a tropical climate, Guyana's geography is a combination of the coastal region and nearby low plains, mineral-rich hills inland, and dense rain forests still further in.

The history of Guyana has shaped its food culture, influenced by the diverse ethnic groups that have come to the country. Guyana is considered to be part of the Caribbean, based on a common culture and history, despite it being in South America. Guyana was originally inhabited by Amerindians (Arawak and Carib tribes), long before Europe entered the picture. The original name for the area, *Guiana*, is said to come from an Amerindian word meaning "land of many waters"—fitting, based on the number of rivers that run through it.

Although the area that is now Guyana saw various European explorations over the 16th century, including the Spanish and the British (Sir Walter Raleigh went in search of the fabled El Dorado), it was first colonized by the Dutch toward the end of the 16th century. In 1616, they set up a permanent trading post in Essequibo that became part of the Dutch West India Company. The Dutch expanded their settlements in the area, including Berbice and Demarara, throughout the 17th century, with agriculture, mainly sugarcane, the focus. As

the production grew, the Dutch began bringing in slaves from West Africa in the mid-16th century to fill the void in labor. Slavery on the sugarcane plantations and the resulting sugar, molasses, and rum production remained the backbone of the economy in Guyana and of Dutch rule throughout the 18th century. The area was fought over and changed hands several times between the Dutch, British, and French in the late 1700s, with the British taking control in 1796. After it returned to the Dutch for a short period of time, the British took over once again, with the colonies being ceded to them in 1814. The colonies were united as British Guiana in 1831 and remained so for over 130 years.

Although the slave trade was abolished in 1807, full emancipation was not reached until 1838. With the freeing of the slaves, the plantation owners began desperately looking elsewhere for a workforce, first in Madeira, Portugal, then for indentured laborers from India and China. The country gained independence from Britain on May 26, 1966, with its new name, Guyana, and on February 23, 1970, Guyana became a republic.

Today, Guyana's population is approximately 770,000, with people of East Indian heritage at 43.5 percent of the population, followed by people of African heritage at 30.2 percent, people of mixed heritage at 16.7 percent, Amerindians at 9.2 percent, and others, including Portuguese, Chinese, and whites, making up the rest of the population. The coastal towns are home to the majority of the population. Georgetown, the capital, is the secretariat headquarters of the Caribbean Community (CARICOM). With a per-capita gross domestic product

(GDP) of about \$4,000 per person, Guyana ranks as one of the poorer countries in the world. Guyana's main economy centers on agricultural exports, in particular, sugar and rice. Shrimp and livestock are significant industries, along with gold, bauxite, and timber. Production of molasses and rum, derivatives of the sugar industry, also plays an important role in Guyana's export economy. The different ethnic backgrounds and cultures that have shared in the history of Guyana have contributed to and influenced the food culture of Guyana today. Guyanese cuisine is similar in some ways to that in other parts of the Caribbean, based on a shared history and foods grown in the area.

Food Culture Snapshot

Sam, Betty, and their two children live in Georgetown. They start the day with a trip to Bourda Market, a large open-air market in town. There, they purchase fresh fruits and vegetables for their meals, as do most people. Another stop for buying food and other household items in downtown Georgetown is Stabroek Market. They also look for meat, especially chicken, and fresh seafood at the open-air markets. These markets also allow people to purchase food at better prices than in the supermarkets. They do stop by the supermarket, though, for food staples, such as rice, seasonings, and hot sauces. When visiting relatives in a smaller village on the coast, the family is able to buy fresh seafood directly from the fishermen.

Major Foodstuffs

Ground provisions (a term used to describe root vegetables and fruits) are staples in the Guyanese diet and are part of or served with most meals. These include cassava (also called manioc or yucca), sweet potatoes, *eddoes* (also called taro root or dasheen), and plantains. Rice is also an important staple and is eaten with most meals. Corn plays a dominant role in the diet, as do beans, peas, and other legumes (such as pigeon peas).

Chicken is eaten often as a protein source and is found in many Guyanese dishes. Seafood is plentiful,

Chandana Jagunandan cooks vegetable pakoras in her Queenstown home in Guyana. (AFP | Getty Images)

given the coastal access and many rivers. Shrimp, tilapia, snapper, and trout are among the fish found in Guyana. Salt cod is also consumed. Other meats, such as beef, pork, and goat, are eaten but in smaller amounts than chicken and fish.

Vegetables in the Guyanese diet include okra (often called *ochroes*), tomatoes, cucumbers, pumpkins, squash, *bora* beans (also known as Chinese long beans), eggplant (called *boulanger*), and breadfruit. Tropical fruits abound, such as guavas, pineapples, mangoes, papayas, bananas, soursops, and citrus fruits. Coconut is used extensively in Guyanese cooking, including the meat, water, and coconut milk as a flavoring in some soups and rice dishes.

Cooking

The foodways in Guyana have become a true melting pot. The different ethnic and cultural groups that came to the country, many by force, contributed their own familiar ingredients, dishes, and techniques that have melded into the Guyanese cuisine that is now consumed by everyone, regardless of their origins. So, dishes that originated in India, for example, are now prepared and enjoyed by those other than just the Indo-Guyanese.

Food and cooking in Guyana typically revolve around the family, especially on the weekends. Hearty one-pot dishes, stews, and soups are often cooked, simmering on the stove for most of the day.

A thick split pea soup is an example, made with chicken, beef, or pig tail as well as ground provisions, such as potatoes, yams, cassava, or plantains made into dumplings. A carbohydrate-rich ground root vegetable or starch, like rice, is almost always a part of the meal, many times incorporated into or used as the basis for a dish. A smaller amount of protein, such as chicken, fish, salt pork, or beans, and vegetables and seasonings are cooked with the carbohydrate. Alternatively, chicken and fish are often fried and served over rice.

Herbs and spices, such as thyme, cinnamon, cloves, ginger, and fresh hot peppers, flavor many dishes. Aromatics, such as onion and garlic, are often used in one-pot dishes. Bottled hot pepper sauces are always on the table and used as a condiment.

Guyanese do use certain methods in cooking that are particular to their dishes. When preparing bitter cassava, for example, it must be grated, the juice squeezed out of it, and allowed to dry in order to make it edible. A *matapee*, which is a long, cylindrical basket that originated with the Amerindians and is used to squeeze out the juice, is still used today. When making roti flatbreads, Guyanese use a *tawah* (also called *tawa* or *tava*), a round, cast iron flat plate, which is East Indian in origin.

Typical Meals

Guyanese typically eat three meals a day. Breakfast is usually fairly hearty—a hot cereal or porridge made from a starch such as cornmeal, cassava, plantains, or rice, made with milk or water and brown sugar, and served with tea or coffee and bread. Eggs are also commonly eaten at breakfast. One of the most popular Guyanese breakfasts is salt fish and bake (bakes are bread dough that is fried, not baked). Dried, salted codfish has been eaten in Guyana since colonial times. It was imported from North America, and slaves on the plantations were given an allowance of it to last throughout the week. While some start their day with hearty stews and one-pot meals, these mainly make their appearance at lunch and dinner. *Pepperpot*, a stewed meat dish that originated with the Amerindians, is considered the national dish of Guyana. *Cassareep*, a sauce made from the liquid of the bitter cassava, which is poisonous

until cooked, is a key ingredient. (It is also sold in stores.) Cassareep is used as a preservative for the stew. It is said that through the addition of more cassareep and meat to them, pepperpots can last indefinitely. There are rumors of the stews lasting 25 years or more. Pepperpot is always served at Christmas.

Pepperpot

Serves 8

Ingredients

1 cow heel, quartered, or 2 pig trotters
 2 lb beef stew meat
 2 lb oxtail
 1 c cassareep (recipe follows, or use bottled)
 1 large onion, chopped
 3 cloves garlic, chopped
 2 red hot peppers
 1 cinnamon stick
 3 cloves
 2 tbsp brown sugar
 1 bunch fresh thyme, or 1 tsp dried thyme
 Salt to taste

Instructions

1. Clean meat. Place the cow heel or trotters in a large, covered soup pot. Cover with water, and bring to a boil. Cover with lid, reduce heat to a simmer, and cook for about 1 hour. Skim any accumulated fat off top.
2. Add beef and oxtail. Add more water to cover. Cover with lid and cook for about 1 hour.
3. Add remaining ingredients, and simmer until meat is tender. Serve hot.

Cassareep

Makes about 1 cup

Ingredients

4 lb bitter cassava
 1 c water

- 1 tbsp brown sugar
- 1 cinnamon stick
- 1 tbsp cloves

Instructions

1. Peel and grate the cassava.
2. Place grated cassava in a dishtowel or cheese-cloth. Twist and squeeze to extract liquid into saucepan. Discard the solids, or reserve for another use. (The liquid at this stage is poisonous until cooked.)
3. Add water, brown sugar, cinnamon, and cloves. Bring to a boil, reduce heat, and simmer, stirring occasionally, until the mixture becomes thick and syrupy.

Other one-pot dishes include *cookup rice*—the Guyanese version of rice and peas, made with coconut and salt pork—and *metemgee*, a stew made with plantains, yam, okra, coconut, meat, and salt fish.

Curry with roti, East Indian in heritage, is a very popular meal for lunch or dinner. The curry may be meat, fish, or vegetarian, such as *dhaal* (peas). Roti is a flatbread made of flour and a little fat. The curry is often stuffed inside and eaten as a wrap. The Chinese introduced their noodle dishes, lo mein and chow mein, into Guyanese cuisine. Made as an entire dish, they contain vegetables and sometimes meat. Chinese fried rice is another popular complete dish, often served with fried chicken.

Pastries, found in all shapes and sizes and made with a variety of ingredients, are no doubt a British influence. Examples of popular Guyanese pastries are *pine* (pineapple) tarts, cheese rolls, cassava pones, *salara* (coconut roll), meat patties, and tennis rolls (which are sweet rolls flavored with lemon).

Black cake is made around Christmastime. It is similar to fruitcake in the United States and western Europe, although it is closer to, and stems from, British plum pudding. Fruits such as raisins, prunes, and cherries, considered luxuries compared to the local tropical fruits, are soaked in rum for several weeks to several months, even up to a year. The

fruit is then ground and, along with brown sugar and spices, made into a dense cake.

Most Guyanese prefer homemade beverages, with soft drinks made out of local fruits and spices. Ginger beer, sorrel drink, and *fly* (made with sweet potatoes or mangoes) are popular, especially during Christmastime. *Mauby*, made from the bark of a local tree, is a favorite. Homemade wine is made out of anything from potatoes and rice to mangoes and corn. Rum is ubiquitous in Guyana, considering the history and prevalence of the sugar plantations and rum factories.

Eating Out

Many Guyanese can rarely afford to eat out; it is much more common to visit family and friends for entertainment, rather than going to restaurants. Restaurants in Guyana usually serve foods similar to what people make in their homes. Nonetheless, there are street snacks, like fried plantains and *channa* (roasted chickpeas) and casual takeout-type places, often for lunch, serving things like curry and roti, macaroni pie, and Chinese fried rice and chicken.

Special Occasions

Religious and national holidays and festivals mark times to celebrate in Guyana. Christmas is one of the biggest celebratory times of the year, and food plays a major role. Peppercorn is always made; ham is a special treat, along with black cake. Ginger beer, mauby, and sorrel drink are especially popular this time of year. There are always huge parties on Christmas Eve, Christmas Day, and Boxing Day (the day after Christmas), influenced by British culture.

The season's parties continue into the New Year, with celebrations happening on New Year's Eve, New Year's Day, and the day after New Year's. As the holiday party season comes to a close, Guyanese tend to rev up the intensity of their parties, in a sort of competition, putting everything into a party before the end of the holiday season.

For entertainment year-round, people usually have parties at home and invite family and friends over, rather than going out. Social occasions revolve around food and music. Guyanese parties include day-to-day foods, but the mark of a successful party is the quantity and variety.

Religious customs around food are observed by the various groups in Guyana. For example, fasting is observed during Lent by Christians, and Hindus and Muslims in Guyana observe various religious holidays and festivities. Hindus celebrate Phagwah, or Holi, the Festival of Colors, in the spring. Another Hindu celebration, Diwali, the Festival of Lights, takes place in October. The sharing of sweets is a significant part of this celebration. With the melting-pot culture of Guyana, non-Hindus also participate in these celebrations. Guyana has a notable number of Muslims, and Eid al-Fitr is a celebration marking the end of Ramadan, the holy month of fasting.

Republic Day, also called Mashramani (or “Mash” for short), is celebrated on February 23. Established in 1970, the day commemorates Guyana becoming a republic. It is a colorful, festive day, with parades, costumes, music, and dancing. Food is, of course, a big part of the celebration. Guyana also celebrates Independence Day and Emancipation Day.

Diet and Health

The Guyanese diet is full of a variety of foods, but the goal is to maintain a healthy, balanced diet, which can be difficult, particularly in rural areas. With a poor economy, relying too heavily on inexpensive and plentiful ground provisions may mean missing out on important nutrients, which could lead to malnutrition, especially among children.

The Food and Nutrition Unit of Guyana’s Ministry of Health is working hard toward making sure the country’s citizens have access to and maintain a healthy diet.

Haiti

Overview

Covering a total of 10,700 square miles, only 28 percent of which is arable land, the republic of Haiti comprises 10 departments (*departements*) and lies adjacent to the Dominican Republic on its eastern border. Both countries cohabit the island of Hispaniola in the Caribbean Sea. Formerly a French colony called Sainte Dominique, in 1804 Haiti became the only nation in the world to have undergone a successful slave rebellion. Haiti is the poorest country in the Western Hemisphere: Over 80 percent of Haiti's 8,400,000 inhabitants live in poverty. Most Haitians live in rural areas, with a large proportion of the population centered in the capital of Port-au-Prince, though this is less the case since the devastating earthquake in January 2010. Many wealthy Haitians and foreigners live in Petionville, a French-like suburb located north of Port-au-Prince high in the mountains surrounding the city. Exports traditionally have been based on the major agriculture and industries in Haiti: baseballs and clothing manufacturing, coffee, sisal, sugar, bananas, cacao, cotton, textiles, rice, rum, and fish. Deforestation contributes to soil loss and subsequent problems with cropping, agriculture, and food supplies.

With respect to religious affiliation, the population includes 80 percent Roman Catholics and 16 percent Protestants; the remainder follows other practices. Over half the population practices vodun (voodoo), regardless of their primary religious beliefs.

The average caloric intake in Haiti runs around 1,730 per day, in contrast to the 3,330 average in the United States. Most Haitians eat a vegetarian diet, not because they choose to, but because they cannot

afford meat. The percentage of calories from meat comes to about 0.8 percent of total intake. Grains provide approximately 43.8 percent, while roots chip in 10.6 percent, milk and eggs 1.8 percent, and beans 9.6 percent.

Haitian cooking results in a true melting pot—French, West African, native Indian, and Spanish, sprinkled with a bit of Syrian and Lebanese tastes from waves of immigration in the 19th century. Some regionalism is apparent, as in the use of nuts like cashews in the north around Cap Haïtien and fish and seafood in the south near Jacmel and on down to Jeremie. Geographic isolation and seasonal factors have affected the diet of Haitians over the centuries, and still do. In 2010 a catastrophic magnitude-7 earthquake struck near Port-au-Prince, killing thousands and leaving perhaps a million people homeless.

Food Culture Snapshot

Claude and Marie-Louise Latortue live off John Brown, a major thoroughfare in Port-au-Prince, Haiti. Claude works for one of the many nongovernmental organizations offering humanitarian assistance to Haiti, and Marie-Louise teaches at a local high school. Their four children range in age from 2 to 15 years. Living with the Latortues is Claude's mother, Celeste, who does most of the food shopping and the cooking, although three times a week a young woman named Ritha comes to help with house cleaning and the laundry.

Celeste still likes to shop at the huge Marché en Fer (Iron Market), also called Marché Vallières, in the

center of Port-au-Prince, built from iron girders originally destined for India but delivered instead to Port-au-Prince, another twist in the turbulent history of Haiti. If she doesn't have time to shop at the *Marché en Fer*, Celeste goes to the street next to the cathedral in Petionville, where the “Madame Saras” (female street vendors) set up their wares on the ground. Following local custom, Celeste always buys from the same vendor and, therefore, in return for her loyalty, receives excellent quality for less money. Bargaining often helps Celeste to bring the prices down considerably. Celeste also shops occasionally at a French butcher shop on Delmas, another busy street leading down from Petionville to central Port-au-Prince. When she needs certain special foods, she goes to

the only large Western-style supermarket, the “Caribbean,” also located in Petionville.

A wide range of foods—both local and imported—are available to the Latortues, many of which they buy only for holidays and feast days. Celeste usually fills a typical weekly market bag—a large basket-like bag modeled on those of French country housewives—with the following foods: salted fish, beef, pork, chicken, evaporated milk, red beans, white rice, cornmeal, smoked herrings, spaghetti, hot dogs, yams, cassava, Scotch bonnet peppers, seasonal fruits, plantains, avocados, peanut butter, a pumpkin-like squash called *joumou*, okra, onions, shallots, garlic, thyme, parsley, Maggi bouillon cubes, sweetish Haitian bread, and oatmeal.

The Iron Market gate's cupolas rise above a sea of stalls and vendors, Port-au-Prince, Haiti. (National Geographic | Getty Images)

Major Foodstuffs

Because Haiti is so mountainous and arable land is so scarce, Haitians use ingenious methods of terracing to increase the land available for planting. The most important Haitian food is *diri*, rice. The old saying goes that without rice in the meal, “*Nou poko manje*” (we haven't eaten). Other grains of importance include corn, wheat, and millet, although only the extremely poor eat millet (*piti mi*). The majority of the calories available to the average Haitian come from grains and other carbohydrates, eaten as porridges, noodles, and mush. One interesting item illustrating the fusion of foodstuffs in Haiti is the bulgur wheat brought to the islands by Syrian and Lebanese immigrants in the 19th century. Although in the larger cities, and particularly in the capital Port-au-Prince, bakeries provide French-style baguettes, the bread of choice for most Haitians regardless of class is bread baked in a square shape, with a slight sweet taste and a fluffier texture than the French bread.

Beans, or legumes, play a vital role in the Haitian diet. A daily favorite of Haitians from all economic levels, rice and beans together form the bulk of the diet for many Haitians. The flavor of the beans, and the different colors (red, pinto, black, petite, pigeon, Congo), cause people to feel they're not eating the same thing again and again. In addition to beans,

Men and women winnowing rice in Haiti. (StockPhotoPro)

peanuts add protein and flavor to the Haitian diet, chiefly as spiced peanut butter and in the form of peanut brittle.

Pork and other meats form only a small part of the diet for most Haitians. In 1978, because of fear of African swine fever, the United States and the U.S. Agency for International Development eradicated the native Haitian black pigs, the *cochons noirs* sacred to the *loas*, or vodun gods. The newly introduced pink American pigs never really took the place of the beloved black pigs, because they ate everything with no discrimination. Other meat—in the form of beef, goat, and lamb or mutton—appears on Haitian tables, regularly for the wealthy and only occasionally for the poorer citizens.

Griyo (Glazed Pork)

Serves 4

- ¼ c peanut oil
- 2 lb boneless pork, cut into 2-in. cubes
- 1 c finely chopped onions
- ¼ c finely chopped shallots
- 1 c fresh orange juice
- ¼ c fresh lime juice
- ¼ c water
- ½ tsp crumbled dried thyme
- 1 tsp salt

½ tsp freshly ground black pepper

½ small Scotch bonnet pepper

In a large, wide, heavy stainless steel pot, heat the oil over medium heat until almost smoking. Add pork cubes and turn them frequently with a wooden spoon to brown them on all sides. Stir in the onions, shallots, orange and lime juices, water, thyme, salt, black pepper, and hot pepper. Bring mixture to a boil over high heat, cover, and reduce heat to low. Simmer for about 30 minutes. Uncover the pot, turn heat up to high once more, and stir often to keep meat from sticking. Cook for about 10 minutes, or until the sauce thickens to a syrupy glaze.

Poultry plays an important role in Haitian cooking; chiefly chicken is used, but turkey, duck, and guinea fowl end up in pots and frying pans, too. Eggs tend to be sold in the markets rather than eaten by people in the rural areas.

Because Haiti enjoys a long 1,100-mile coastline, seafood figures prominently in the diet of some of the population. Most coastal dwellers include some fresh fish in their diets: shrimp, conch, and *tri-tri*, a small, almost-invisible fish that some say resembles plankton, only larger, used to flavor rice. Lobster, prized for its succulent white flesh, often ends up sold to tour companies for beach parties, grilled on racks set right on the sand over flaming wood fires. Dried, smoked, and salted fish also augment the Haitian diet, much as they did during the days of slavery and early years of freedom, and they remain one of the very West African-influenced components of the Haitian diet.

As a country situated on a tropical island, Haiti enjoys a rich variety of fruit. Mangoes, oranges, loquats, mandarins, *quenepa* or *mamoncillo* (a small, tart, oval green fruit), pineapples, bananas, papayas, coconuts, passion fruit, limes, lemons, cantaloupes, soursops, star apples (a purplish fruit with a star-shaped seed pattern inside), watermelons, and even strawberries from the mountains of Kenscoff high above Port-au-Prince—all contribute to the astonishing variety of the Haitian diet and form the basis for many delicious drinks.

Many types of vegetables grow in Haiti, most brought from elsewhere, joining some of the native varieties. Root vegetables like malanga, yams, sweet potatoes, and cassava provide another source of carbohydrates other than bread in the Haitian diet. Other vegetables include beets, corn, cabbage, pumpkin-like squash (joumou), eggplant (*aubergine, bélangère*), hearts of palm (*chou palmiste*), okra (*gombo*), green beans, carrots, tomatoes, green peas, watercress, sweet bell peppers, christophene (mirilton, chayote), and breadfruit.

Flavorings run the gamut from the usual black pepper and salt to onions, shallots, garlic, parsley, thyme, cilantro, Scotch bonnet peppers, cashew nuts, cloves, and tiny black mushrooms called *djon-djon*, usually added to rice to turn it black. *Picklises*, vegetables cut up and pickled in vinegar with hot peppers, turn up in a multitude of dishes, but diners also add spoonfuls of picklises (or *pikliz*) to their food at the table. Fats used in Haitian food preparation include lard, shortening, peanut oil, and vegetable oil. Butter appears in some European pastries and in upscale restaurants catering to the wealthy and to foreigners.

Sugarcane served as the mainstay of the slavery-driven economy of the French colony of Sainte Dominique. Nowadays, most of the sugarcane on the island grows in the Dominican Republic, but Haitians still chew sugarcane stalks and suck out the juice from the fibers. Haitian sugarcane forms the basis for some of the best rum in the world. Another product that comes from sugarcane is *clairin*, a clear, raw alcohol produced only in Haiti and drunk by many rural people and poor people in the cities. Haitians also use raw clairin and drinks called *trempés*, steeped with medicinal herbs, in vodun ceremonies and practices. *Tafia* is another strong drink made from sugarcane.

Cooking

Haitians say of a woman who is a good cook, “*Li gen dis dwet li*,” or “she has her 10 fingers.” History has influenced modern Haitian cooking considerably. A veritable cauldron of culinary stew, Haiti’s

cuisine hints of Africa, France, Spain and the Middle East, and native Taino and Arawak Indians.

The Black Code of 1685 of Louis XIV decreed the following for food per week for the slaves over age 10: 2.5 pots of manioc, 3 cassavas, and 2 pounds salted beef or 3 pounds salted fish. Salted fish was one of the ways in which slaves were paid for, other than rum and Spanish coins. Slave dishes still part of the Haitian diet include *diri ak djon-djon* (rice with djon-djon), *diri ak pwa kole* (rice with beans in their own sauce), *lambi* (conch), *griyo* (*griots*, or fried pork cubes), and *akra de mori* (salt cod fritters) mixed with malanga (*yautia*). *Pen patat* (*pain patate*), a popular pudding-like dish, is made with sweet potatoes. Cooks make *thiaka*, a stew of corn and beans, which is also called *mange-mete* and thought to be a favorite of Azzaca, the vodun god of agriculture. *Akassan*, a beverage made with corn, resembles the *horchatas* of Mexico and Spain. Slave names stuck with these despised foods, particularly names for animal parts. Food-gathering traditions common to all slaveholding areas—gardening, fishing, salting, and smoking—persist in Haiti.

Wealthy families employ cooks. They may also have a few *restaveks* (from the French *rester avec*, “to stay with”), a modern version of child slavery. Poor families hand over their children to a wealthier family in return for small fee and the added relief of not having another mouth to feed. In families with *restaveks*, the *restaveks* cook their own food, generally cornmeal with the heads of dried herring. The *restaveks* assist the other servants in their chores, including cooking.

Aside from the wealthier families, who possess Western-style kitchens but don’t always use them for cooking typical food, most Haitians cook over small one-burner grills called *rechos*, fueled with small gas or propane tanks or charcoal (*charbon*). The need for this traditional cooking fuel is the chief reason for the devastating deforestation all over Haiti.

Because of the simplicity of most Haitian kitchens, the most used cooking techniques are boiling, sautéing, frying, and grilling. Pots generally are aluminum, and except in very remote areas, plastic tubes, bottles, and other equipment help cooks in meal preparation. Measuring utensils include dis-

Typical cooking equipment in a makeshift kitchen in Haiti. (iStockPhoto)

carded cans. Large wooden mortars and pestles, similar to those still used in Africa, provide a mechanism for pulverizing corn, millet, and other foods. Long wooden spoons carved from tree branches serve as stirrers for corn porridge.

A number of flavoring methods assist in making blander foods like cornmeal more palatable. As is the case with many cuisines, Haitians prepare a sort of mirepoix, or aromatic base that flavors many dishes, called *zepis* (derived from the French word *épices*, or spices), consisting of garlic, bell peppers, onion, scallions, cilantro, parsley, and oil. Pickliz (pickles, pickles) provide another flavoring agent with a bite. Essentially pickled Scotch bonnet peppers, the mixture also includes shredded vegetables—cabbage, carrots, onions—as well as other vegetables like green peas or green beans, garlic, black peppercorns, cloves, and vinegar. Cooks use Maggi cubes of differing flavors, including one manufactured with the flavor of *djon-djon*, the beloved Haitian black mushrooms.

Typical Meals

In Haiti, people tend to follow a pattern of three meals a day. In rural areas, people tend to share utensils, and not everyone can eat together at the same time because of the lack of utensils for each person. Because tables and chairs are also in short supply, the oldest people sit (or the father sits),

while others squat down and eat off of a plate or from a dish made out of a calabash. The poor eat a mixture of red beans, corn, and yams with their fingers and might utilize old cans as drinking glasses. Manioc bread takes the place of the more expensive wheat bread usually found in the larger towns and cities.

Sos Pwa Rouj (Red Beans in Sauce)

Serves 8

- 2 c small red beans, cleaned and picked over
- ½ small white onion
- 3 tbsp peanut oil
- 2 cloves garlic, peeled and finely chopped
- ¾ c fresh flat-leaf Italian parsley, finely chopped
- Salt
- Freshly ground black pepper to taste

Put beans and half onion in a large pot with enough water to cover the beans by 2 inches. Bring to a boil. Cover pot, reduce heat to low, and simmer about 1½ to 2 hours, or until beans are very tender. Drain, retaining the cooking liquid. There should be about 3 cups of liquid. If there is too much liquid, boil it down. If too little, add water to reach 3 cups of liquid. Take 1½ cups of cooked beans, and put into a blender or food processor along with 1 cup of bean liquid. Puree. Stir the puree into the remaining liquid and remaining whole beans.

Heat the oil in a heavy frying pan. Add the garlic and ½ cup of the parsley and cook briefly, making sure to avoid burning the garlic. Stir in the bean mixture, and season with salt and about ½ teaspoon of ground black pepper. Heat the sauce gently, until the raw garlic taste is no longer apparent and the sauce is the consistency of thick buttermilk. Stir in the remaining parsley and check for seasoning. Serve over white rice with griyo and hot sauce.

Breakfast usually occurs between 6:30 and 7:30 A.M., before people rush off to school or work.

The meal generally always includes sweetened coffee (café au lait) and could consist of bread with spiced peanut butter called *mamba*; cornmeal mush with sliced avocado and smoked herring; oatmeal; breakfast spaghetti with a light tomato sauce and sliced hot dogs; rice pudding; small boiled breakfast plantains with hard-boiled eggs and smoked herring with onions and tomato sauce; or yams or cassava served with hot dogs in a tomato sauce. Cold, dried breakfast cereals are perceived as food for the wealthy.

The big meal of the day, lunch, takes place when people come home from work or school during the midday break, which usually lasts several hours. The menu is generally rice and beans cooked with ham hocks if the family is wealthy enough, peas, and meat in a sauce (chicken, goat, pork, turkey). Occasionally there is fish or some wild game. Dumplings made with wheat flour are also added to stews at times. Families might place a Scotch bonnet pepper on the table so people can cut off a bit to put on their own plates to eat with the meal. Otherwise, jars of pikliz or bowls of *sauce ti-malice*—a hot pepper sauce made with peppers, tomato paste, garlic, and onions—provide the fire that many Haitians love so much.

The evening meal is small and consists of simple foods, such as sweetened oatmeal or a fried rice-like dish, plantain puree (a sweetened porridge-like dish), or boiled sweet potatoes with rice and beans. Generally cornmeal is not eaten at night.

Eating Out

Haitians living in rural areas eat at home. Occasionally, they might eat something on the street made by the numerous women cooking fried dough like *marinades* or *patties* and other street snacks. Eating street food most often is a trend in cities and larger towns. The cries of the vendors—*Akasan cho* (hot corn drink) and *Mayi bouyi* (cornmeal mush with red beans)—ring through the air, adding to the chaotic cacophony of sound. Another popular dish eaten on the street is griyo (griots), fried pork cubes drenched in a lime sauce.

One long-standing Haitian custom, the weekly Saturday parties or get-togethers called *bamboches*, allows people the opportunity to eat outside the home. Friends and families gather to drink, eat, and tell stories. *Legim* (*legumes*, or vegetables) is eaten on Saturdays, rich with beef stewing in it. Eaten with rice, cornmeal, or boiled root vegetables, eggplant, and/or cabbage, legim is a dish influenced very much by African cooking traditions.

In Port-au-Prince and Cap-Haïtien, restaurant-going plays a larger role in the daily food experience, especially among the wealthier classes. A number of high-class French restaurants always remain open and serve menus that anyone could find on the Boulevard St. Germain in Paris. One of the most famous of these restaurants was located in the arty gingerbread-facaded Hotel Oloffson, made famous in English novelist Graham Greene's *The Comedians* (1966). Lebanese restaurants also serve a wealthier clientele, and the food appears to be the same as that served in Beirut or elsewhere in the Middle East—lamb kebabs, kibbe, and hummus, accompanied by pita bread. Pizza places like Domino's Pizza in Petionville provide Italy's most famous dish as well.

Other opportunities exist for eating out at the various beach resorts dotted across the country but mostly located in Jacmel and south of Gonaïve. Like the restaurants in Port-au-Prince, the fare leans toward French cuisine with a Caribbean twist, including lambi (conch) creole or breadfruit beignets.

Special Occasions

Haiti, because of its Roman Catholic heritage, follows the feast-day calendar of the Roman Catholic Church and celebrates a large number of holy days. Several other major holidays occur throughout the year, including many associated with vodun. In addition to the official church or national holidays, birthdays, weddings, christenings, and funerals provide people with special festive food.

On January 1, New Year's Day (also Haitian Independence Day), *soup joumou* appears on menus across the country and wherever Haitians live

around the world. Made with a pumpkin-like squash and beef, this thick minestrone-like soup is usually served with homemade grenadine sherry. The following day, January 2, is Ancestors' Day, when Haitians pay tribute to those who fought for Haiti's independence from the French in 1804. Families serve turkey as they prepare the largest meal of the year in a feast not unlike the American Thanksgiving feast but cooked very differently from the U.S. manner—piquant pikliz vinegar seasons the turkey.

Carnival-like festivities take place on January 6, the day of Epiphany in the Roman Catholic Church, and again in May. Just before Lent, on Mardi Gras, *benye* (beignets) or fried fritters satiate appetites. Roving *rara* bands dance and sing in the streets, asking listeners for food and money during Carnival and Lent and on Good Friday. People give them whatever they have. On Good Friday, cooks prepare meals featuring the white beans usually cooked on Sundays. For breakfast, people might eat herrings, boiled eggs, and bread, while the dinner menu includes fish, root vegetables, salad, white rice, and more white beans.

A summer pilgrimage celebration of the Virgin Mary takes place on July 16—also the day of Our Lady of Mount Carmel—in Saut d'Eau, a site where an apparition of the Virgin Mary appeared in the 1800s. This celebration also commemorates Erzulie, the vodun goddess of love. A number of cows and goats are sacrificed, and people drink a lot of clairin, dance, and throw themselves into the water.

The Day of the Dead, November 2, is the Roman Catholic All Souls' Day, as well as a vodun feast day, Fete Gede, which honors the family of *loa* or spirits associated with death and fertility. In Fete Gede celebrations, people rub themselves with hot pepper juice for "possession" and drink coffee and peppered alcohol. Fete Gede is like a New Year's Day for the dead; the practice originated with slaves brought from Dahomey, Yorubaland, Congo, and Angola. A typical menu, subject to variation, features greens, yams, macaroni and cheese, cornbread, red beans and rice, cabbage, baked chicken, fried red snapper, and sweet potato pudding. People also eat thiaka (also called mange-mete) or

cornmeal mush with red beans. The day serves as a way for Haitians to get in touch symbolically with their familial roots.

As in the Mexican Day of the Dead practices, Haitians celebrating Fete Gede build altars for remembering their dead and all the good things they liked while alive. A typical altar in honor of Gede might include cigarettes; clarin spiced with Scotch bonnet peppers; a picture of a small white skull; white, black, and purple candles and satin cloth; numerous crosses; a miniature coffin; sequined bottles; and a portrait of St. Gerard, the Catholic saint associated with Baron Samedi, the vodun god of death, along with the mandatory top hat and cane, symbols of the baron. In November, along with the Day of the Dead celebrations, Manje-Yam, a harvest festival celebrating the yam, takes place.

Christmas Eve celebrations tend to follow the French pattern of *veillon*, or "reawakening," with a large meal after midnight mass. Children are allowed to drink anisette. On the following day, Christmas, families offer guests *kremas*, a type of eggnog often made with pineapple; fried pork (*griyo*); pickles (*pikliz*); fried plantains; and sweet potato pudding (*pain patate*).

Other special occasions include all the family-related events like Sunday dinners and get-togethers, when white beans, macaroni and cheese, and chicken or Haitian turkey load down the tables in wealthier families. Weddings, first communions, funerals, and wakes see such traditional foods as *akra* (fried patties) made with malanga, patties, and roasted or fried goat being served. Traditionally, goats were slaughtered for family reunions, first communions, and confirmations.

Birthdays bring out the best in cooks. A typical menu in a wealthier household might include fried plantains, *tassot* (beef), chicken, green salad, *macaroni au gratin*, potato salad, *gratin pomme de terre* (potatoes au gratin), and *diri ak djon-djon* (rice with djon-djon mushrooms) with shrimp and green peas.

Another special occasion for Haitian villagers is the *coumbites*, or common work parties, when people work together on a community project. Either

Flowers are sold to observers of Day of the Dead celebrations at the National Cemetery in Port-au-Prince, Haiti. (Getty Images)

yams with milk or cornmeal covered with red bean sauce are served at the end of days spent working on coumbites.

Diet and Health

Aside from some of the foods associated with vodun, Haitians profess beliefs about food as it relates to health. In Haiti, bread soup is said to have properties similar to those of chicken soup in U.S. culture. Pineapple-skin juice is thought to be a blood and body cleanser, while people believe that drinking beet juice will rejuvenate and invigorate people, by putting more red in their blood, and give them strength for difficult and trying times.

Humoral medical theories, based on ancient Greek ideas passed down through the centuries by

groups throughout the Mediterranean, still hold sway in Haiti, particularly in rural areas. Many people in rural Haiti suffer from varying degrees of malnutrition. Hot-cold beliefs impact greatly on nutritional status, particularly that of pregnant and lactating women. One practice illustrating the poverty of Haiti is the eating of clay by pregnant women, which may increase their calcium intake, a practice also common in parts of Africa.

Clay eating is not limited to pregnant women. Mudcakes, called *teh*, are eaten in conditions of extreme hunger. People take what vegetables they can find and mix these with mud that has been strained to get out the stones and other debris. They form the mud and vegetables into flat cakes and then dry them in the sun. People eat them like that, without further cooking or preparation. In contrast, obesity

is becoming a problem among those Haitians with more money to spend on food.

Hawaii

Overview

Hawaii is an isolated archipelago in the Pacific Ocean located thousands of miles from the nearest continent. Of the hundreds of islands comprising the chain, only seven are occupied by humans: Ni‘ihau, Kaua‘i, O‘ahu, Moloka‘i, Lana‘i, Maui, and Hawaii. Polynesians originally settled the Hawaiian Islands more than 1,000 years ago, bringing with them many of their principal foodstuffs. Western contact began in 1778, when Captain Cook encountered Hawaii for the first time. The independent Kingdom of Hawaii was eventually annexed by the United States and, in 1959, became America’s 50th state.

Since contact, subsequent settlers have added foods from their homelands to Hawaiian cuisine. Hawaii has a diverse population, with no single ethnicity constituting a majority. Many Hawaii residents have mixed ethnic backgrounds and claim numerous modern ethnicities as their own. The population is roughly 56 percent Asian, which includes a mixture of Japanese (39%), Filipino (36%), Chinese (10%), and Korean (5%). Caucasians make up 34 percent of the population. Only 11 percent of Hawaii’s population now claims Pacific Islander descent. Hawaii’s mixed heritage is reflected in the eclectic local foodways common throughout the islands.

Food Culture Snapshot

The Baker family live in Mililani, on the island of O‘ahu. Katie Baker is an attorney who commutes

to downtown Honolulu for work. Her husband, Nic Baker, is a chemist and works for a local diagnostic laboratory. Their young daughter, Eleanor, attends preschool. Like most middle-class Hawaiian residents, the Bakers’ foodways are diverse and, despite personal preferences, fairly representative of contemporary Hawaiian foodways.

The Bakers do most of their grocery shopping at one of the large supermarkets. Dry goods, produce, meats, and dairy are all readily available from any one of the chains located near their house. Nic takes Eleanor to a farmers’ market every Sunday morning to shop for additional veggies and fresh bread. The Bakers also make occasional trips to specialty shops, such as a fish store, wine shop, bakery, or chocolatier.

Much of what the Bakers buy are foods that they prepare at home themselves. This includes basic ingredients such as meats, vegetables, and staples like flour, sugar, and eggs, as well as commercial products like dried pasta, bottled sauces, and canned or frozen goods. They also buy some prepared foods, like bread. Additionally, child-friendly foods are purchased for Eleanor, such as animal-shaped crackers or fruit juice. These foods are only supplementary; Eleanor usually eats the same foods as her parents. The Bakers, who are environmentally conscious, buy many items in bulk with reduced packaging and employ reusable containers for portioning these foods and beverages.

Breakfast is made and eaten at home, early in the day, after which point Katie and Nic pack lunches for themselves, often including leftovers from the preceding night’s dinner that they will reheat at work. Both Katie and Nic occasionally eat out for lunch, frequently with colleagues or clients. A hot lunch

consisting of typical local food is provided for Eleanor at preschool. Dinner, which Nic usually cooks, is eaten together as a family in the evening. Meals are somewhat health conscious, to encourage Eleanor to develop healthy eating habits. The Bakers also eat dinner out at least once a week. The Bakers' routine is relaxed on weekends, when mealtimes change, foods may be more elaborate and/or luxurious, and snacking is more common.

Major Foodstuffs

Hawaii produces very little of its own foodstuffs. Once the host of pineapple and sugar plantations, Hawaii now produces very little of these products. High land values and the cost of labor have made Hawaii unattractive for agricultural use. Specialty goods, which fetch higher prices, have managed to remain successful in Hawaii. There is some commercial coffee production and a large grass-fed beef industry on Hawaii Island. Most of these products, however, are exported. Small-scale production of fruit and vegetables is becoming more common and provides farmers' markets and fruit stands with their goods. Beyond this, almost all of the food residents of Hawaii consume is imported.

One exception is fish. Hawaii has a multi-million-dollar fishing industry that is one of the largest in the United States. Hawaii residents fish recreationally, as well as commercially, with more than a quarter of the population participating in some form of fishing annually. While fish is one of the chief exports, it is also one of the most popular local foods. Hawaiians, on average, consume more than twice as much fish per person per year as other Americans. Although most of the seafood consumed is locally caught, some cold-water varieties, such as salmon and mussels, are imported to Hawaii.

Salmon Poke

- 1 lb raw salmon, cut into bite-sized cubes
- ½ c soy sauce
- ¼ c green onion, diced
- ½ tsp Hawaiian salt

- 1 tsp honey
- 1 tsp sesame oil
- 2 tbsp orange juice
- ¼ tsp orange zest
- ½ tsp fresh ginger, grated
- ½ tsp minced garlic
- 3 tbsp *yasai fumi furikake* (Japanese rice seasoning)

Mix ingredients in a bowl. Cover and refrigerate at least 3 hours. Stir and serve chilled.

Tropical fruit is also consumed in large quantities in Hawaii. Some of these fruits were introduced from tropical Asia, while others are South American in origin. Many fruits, such as bananas and papayas, are grown on a small scale for year-round consumption. Locals favor petite apple-bananas, which have a firmer, sweeter, but also slightly tangier flesh than the common Cavendish bananas, known in Hawaii as “mainland bananas.” Papayas are often cultivated but are also known as an invasive weed species. Several types of guavas are available, including common guavas, lemon guavas, and strawberry guavas, the last of which are also considered a weed fruit. Tart yellow passion fruit, called *lilikoi* in Hawaii, is a more seasonal fruit that is popular for its strong flavor but is also an invasive vine in the wild. Mangoes are one of the most popular seasonal fruits in Hawaii, ripening in the late summer and early fall. Hadens are, by far, the most common variety of mangoes, although dozens of others can be found as well. Mangoes are not exported from Hawaii due to the prevalence of mango seed weevils in the state. Coconuts, both green and ripe, can also be found, but derived coconut products are more common than the actual fruit. A firm pudding made of coconut milk, called *haupia*, is a popular dessert often served at luau or as part of a traditional Hawaiian meal.

Wheat and rice are the most important grains in Hawaii. Wheat flour is used for bread as well as for noodles. Bread is eaten on its own, as an accompaniment for meals, or as the basis for sandwiches, much like in the continental United States. White bread made from refined flour is predominant, but

healthier whole wheat and multigrain breads are gaining popularity as Hawaii residents become more health conscious. Wheat noodles, such as the thin ramen-like *saimin* noodles, are a regular part of the Hawaiian diet and reflect Japanese and Chinese influences. A strong Asian influence is also witnessed in the preference for short-grain white rice, which has become a staple in Hawaii, accompanying many, if not most, meals.

Many native Hawaiian foods are still eaten. The most important of these foods is taro, known as *kalo* in Hawaiian. The *kalo* plant has several edible parts, including the leaves, the stems, and the corm, which is the starchy bulbous portion of the stalk found underground. All parts of *kalo* must be cooked well to break down the calcium oxalate crystals, which can cause an itching or burning sensation in the mouth and throat if not treated properly. *Kalo* is distinguished by the color of the corm (white, pink, yellow, purple) and whether it was grown in a marshlike wetland field system or a dryland field system. *Kalo* is prepared in a number of different ways, but *poi*, a paste of cooked and mashed corm, was the cornerstone of the Hawaiian diet and is still eaten by locals. *Poi* can be eaten

Poi being scooped by two fingers, the traditional way to eat it, on a tea leaf. (808isgreat | Dreamstime.com)

when it is freshly prepared, but it may also be left to ferment for several days so that it requires a stronger sour flavor and a more favorable texture.

The other principal native Hawaiian food still eaten today is the sweet potato (*'uala*), which was introduced to Hawaii from Polynesian contact with South America hundreds of years before Western contact. Other native Hawaiian foods, such as *'ulu* (breadfruit), a starchy arbor crop; bananas (*mai'a*); coconuts (*niu*); and mountain apples (*'ohi'a 'ai*), are all still part of the modern Hawaiian foodscape. The native Hawaiians also cultivated *ko*, a grassy plant originally domesticated in Southeast Asia and Papua New Guinea. Eventually *ko* was commoditized and became an important part of the emerging global economy. Although *ko* production has all but vanished from Hawaii, it is still, at least in the United States, strongly associated with the Hawaiian Islands. *Ko*, more widely known by its English name, sugar, is still a large part of the modern Hawaiian diet but in an increasingly less healthy way.

Cooking

The cooking techniques of Hawaii are the same as those found in most westernized kitchens in developed countries. Electric rice cookers are commonly employed to make the steamed white rice that is one of the islands' staples, as already discussed. Baking, roasting, and broiling are done in modern ovens, and boiling, steaming, sautéing, and frying are done on modern gas or electric ranges. Quick cooking techniques, such as sautéing and broiling, are favored due to Hawaii's largely tropical climate, which makes the heat from slow cooking methods unpleasant, especially in summer months.

The warm weather also results in the relishing of cold and raw foods. Frozen and iced desserts are especially popular, and fresh fruit is a readily available room-temperature treat. Hawaii has indigenous raw-fish traditions, as does Japan, whose culture has so heavily influenced the Hawaiian Islands. *Poke* consists of chopped, usually raw, seafood, which is marinated and eaten, similar to ceviche. *Poke* is featured at most local picnics and cookouts, and it can be purchased at any supermarket or fish shop.

The climate also favors outdoor cooking. Outdoor grilling and roasting are common practices in the evening on weekdays or for lunch or dinner during weekends. Self-contained grills, either gas or charcoal, are used for this purpose. Portable grills are also popular and are set up at beaches or in parks so hot meals can be prepared away from home, often as part of a social gathering or celebration. Occasionally food is roasted over a small open fire or a beach bonfire, usually whole fresh-caught fish, but this practice is becoming rare as restrictions on fires become more stringent.

Another outdoor cooking method is the use of an *imu*, or underground earthen oven. *Imu*, one of Hawaii's most traditional ways to cook, were common in precontact times. *Imu* are now reserved for special occasions because their use requires more labor and time than do other cooking methods. To construct an *imu* a large hole is dug in the ground, into which parcels of food are placed with hot stones from a fire and then buried, allowing the food to steam-roast for hours. Many of the native Hawaiian foods favored for celebrations were cooked using this method, which is still occasionally used today.

Prior to Western contact, cooking was the provenance of native Hawaiian men. Many foods were considered *kapu*, or sacred, and were, therefore, not thought suitable for consumption by women. Women were not allowed to handle *kapu* foods because it was believed that contact with *kapu* items might endanger those women. There was also a fear that women might contaminate *kapu* foods they had contact with and the men who consumed them. To safeguard consumers from supernatural peril, men prepared not only their own food but also the women's food as well, keeping men's foods and women's foods separate. Today, after decades of American and Asian influence, women do the majority of domestic food preparation. Men, however, still dominate professional cooking.

Typical Meals

Hawaiian food habits result from the combination of cultures that make up the islands' mixed

population. Forks and knives, along with spoons, are the most common eating implements, although chopsticks are also ubiquitous. Most locals learn to use chopsticks as children and will use them for Asian, or predominantly Asian, foods.

Meals are typically eaten socially. Until relatively recently eating took place at a table surrounded by chairs or at a *chabudai*, a low table where diners sit on mats or cushions on the floor. Tables and chairs were set in designated eating areas in kitchens, in dining rooms, on *lāna'i* (outdoor porch areas), or in a living room. Gathering around a table for a social meal is becoming increasingly less common, mirroring the trends found on the mainland and elsewhere. Many meals are now taken individually, on the go, and/or in front of the television. The meal pattern in Hawaii is also very similar to that of the American mainland. Breakfast is eaten in the morning, followed by lunch at midday and dinner in the evening. Snacking has become increasingly common and can take place at any time before, after, or between meals.

Breakfast ranges from simple to elaborate and can be either sweet or savory. The most common breakfast is cold cereal, eaten with milk. It is a fast meal, popular with both children and adults, and is often eaten with quick accompaniments such as toasted bread and fruit juice. Many of these cereals are high in sugars, although healthier options are also available. Other sweet breakfast items include assorted pastries, French toast, or pancakes. Tropical ingredients, such as bananas and macadamia nuts, are frequently incorporated into such dishes, which are served with tropical fruit sauces, such as coconut or guava syrup. Many sweet dishes are accompanied by savory side dishes of meat products, such as Spam or Portuguese sausage. Eggs are the basis for many savory breakfasts, alongside meat-based dishes such as corned beef hash. Savory breakfasts combine American and Asian elements. Rice is usually served in lieu of potatoes. White rice is the most common, but fried rice or kimchi fried rice is also sometimes available. *Loco moco*, a dish made of rice, hamburger patties, and fried eggs, topped with brown gravy, not only is eaten for breakfast but is popular for lunch and dinner as well.

Lunch is a variable meal that is eaten outside of the home more often than not. Workday lunches are brought from home or are purchased from restaurants, cafés, or cafeterias. Brownbag lunches often feature a sandwich or leftovers from a previous dinner. Pre-prepared items offered by stores, such as sushi sets, are frequently purchased items. Restaurant offerings are almost innumerable. Fast-food chains are also numerous, which offer their standard fare as well as some local adaptations, such as Hawaiian burgers, which include teriyaki sauce and pineapple. Most schools offer catered lunch options, which, like fast food, are criticized for the less-than-ideal nutrition they offer. Many parents opt to pack lunch for their children in order to provide a healthier meal. Weekend lunches vary greatly. Lunch may be eaten in the home, at a restaurant, at the beach, on the go, or not at all.

Dinner is typically the most substantial meal of the day and is arguably the most variable. It is eaten in the evening and often provides leftovers for future meals. Dinner is most commonly eaten in the home or at one of the thousands of restaurants in Hawaii. Local foods are eaten as well as a wide variety of ethnic food from all over the world. Many people in Hawaii finish dinner with a sweet dessert, which can be anything from simple desserts like fresh fruit or ice cream to elaborate cakes and pies.

Periodic snacking has become increasingly common in Hawaii, and there are a number of snack items frequently offered there that are not common to the rest of the United States. Favored Asian snack items include the small Japanese rice crackers called *arare*, wasabi-coated peanuts, dried shredded cuttlefish, and a variety of candies coated in salty-tart Chinese *li hing mui* powder. *Li hing mui*-coated fruit, both fresh and dried, is also popular, as well as a variety of pickled fruits. *Mochi*, made from sweetened rice dough, are flavored or stuffed with a variety of fillings and sold fresh or packaged. These items are found alongside typical American snack foods in grocery, drug, and convenience stores, as well as in specialty snack shops, known locally as “crack seed stores.”

Many people in Hawaii are coffee drinkers, and although coffee may be drunk throughout the

day, coffee is most typically an accompaniment of breakfast, regardless of what breakfast may be. Iced coffee beverages are popular in Hawaii due to its tropical climate. Tea is also consumed with meals or on its own, and like coffee, tea may be served hot or cold. Green and oolong teas are the most common. Soda is very popular, as well as sweetened juice drinks that feature local flavors such as guava, lilikoi, and lychee. Meals are typically served with a beverage, even if that beverage is plain tap water. The tap water in Hawaii is potable.

Eating Out

Eating out has become common practice in Hawaii, and there are restaurants that cater to almost every taste and budget. Inexpensive and midrange restaurants make up the majority of dining establishments, although fine dining options are available as well. Local tastes are largely represented, but restaurants catering to tourists are also prevalent, especially in the major hotel zones.

Restaurants representing Asian cuisines are numerous in Hawaii, as are many American-style restaurants. These range from cheap take-out counters to expensive restaurants that serve as special-occasion destinations. European and Latin American foods are rare and relatively expensive, while offerings from elsewhere, such as Africa, are nonexistent. Native Hawaiian food can be purchased from a number of specialty restaurants, although some of the more common Hawaiian foods, such as *lau lau*, a ti-leaf-wrapped package of fish, pork, and kalo leaves, can be purchased at many local-style restaurants. (The ti plant was introduced from Polynesia and has broad, sturdy leaves, also used to make hula skirts.)

Hawaii has many local-style restaurants that enjoy great popularity. Diner-like restaurants, sometimes called drive-ins, serve Hawaiian plate lunches. They typically include two scoops of white rice, a scoop of macaroni salad made with a mayonnaise base, and a choice of meat, such as chicken *katsu* (a fried dish based on the Japanese *tonkatsu*), fried fish, or *kalbi* (Korean-style grilled spareribs). Chili is usually also on offer at plate-lunch establishments,

where it is eaten with rice or as a sauce for a plate lunch. These meals tend to be heavy, with large amounts of starch and protein. Many plate-lunch establishments have responded to health-conscious trends by offering smaller portions, grilled options, and brown rice. Despite the name, plate lunches are not eaten only at lunch. Many plate-lunch restaurants offer breakfast and dinner as well. Saimin shops are common, and ramen shops serving Japanese-style noodle soups are an inexpensive favorite with locals and tourists alike.

Street food is uncommon in Hawaii, but occasionally vendors offering marinated grilled or smoked meats, like *huli huli* chicken, can be found. O‘ahu’s north shore is also known for the shrimp vendors near the towns of Haleiwa and Kahuku, who sometimes sell live prawns from the local farms in addition to shrimp sautéed in garlic sauce. Sweets are often purchased as well. Baked goods, such as guava cream pies and haupia cakes, are sold both whole and by the slice. Shave ice, known elsewhere as snow cones and consisting of fluffy snowlike ice topped with flavored syrups, is especially popular in hot weather and is often eaten with azuki beans, ice cream, and a drizzle of sweetened condensed milk called a “snow cap.”

Hawaiian-Style Kalbi

4 lb beef short ribs, sliced thin

2 c shoyu (soy sauce)

2 c sugar

3 cloves garlic, minced

1 tbsp fresh ginger, grated

1 tsp sesame oil

$\frac{3}{4}$ c green onion, diced

1 tsp toasted sesame seeds

Mix beef, shoyu, sugar, garlic, ginger, sesame oil, and $\frac{1}{2}$ cup green onions in a bowl. Cover and refrigerate overnight. Remove short ribs from marinade, and grill over high heat until well cooked. Remove from heat, and sprinkle with sesame seeds and remaining green onion. Serve hot.

Fine-dining restaurants are most commonly found in the larger cities or luxury resorts. These restaurants tend to be more informal than their mainland counterparts but just as expensive. Most Hawaiian diners prefer a relaxed atmosphere and dress code. Hawaii boasts several internationally acclaimed chefs who have helped develop the Pacific Rim fusion offered in most of these high-end restaurants. American, Asian, Hawaiian, and European elements are blended to create Hawaii’s fancier food, much in the same way everyday Hawaiian cuisine has been formed. These restaurants rely heavily on tourism as Hawaii residents tend to reserve such dining for special occasions.

Special Occasions

Special occasions are celebrated in a number of ways. As on the mainland, dining out at nice restaurants is popular for small or intimate celebrations. When a larger celebration is desired, a party is held, either at a home, at the beach, or in a park. These are Hawaii’s most famous form of celebration: the luau. A luau is a festive gathering with native Hawaiian roots that includes feasting. Similar to an American cookout, a luau is normally held outside, sometimes under a party tent. Family and friends gather to eat and drink and, more often than not, sing and dance. Local-style food is served in copious amounts. It is common for guests to bring a dish or beverage to share, although the hosts typically provide a full meal. Luau dishes often include chicken long rice (a noodle dish similar to Korean *japchae*), poke, rice, *lomi lomi* salmon (made from minced salt-cured salmon massaged with diced tomatoes and onions), roasted sweet potatoes, adobo (a savory Filipino stew), spareribs, squid *lu‘au* (made from squid and taro leaves cooked in coconut cream), sweet bread (like the Portuguese *pau doce*), macaroni salad, lau lau, poi, and haupia. Luau are held for birthdays, graduations, anniversaries, and even weddings. Some of the largest luau are held to celebrate a child’s first birthday, which is given special significance in Hawaii.

Commercial luau offered by hotels and tourism outfits are an entirely different affair. These luau

Traditional food that would likely be served at a luau in Hawaii. (StockPhotoPro)

are Polynesian dance showcases performed by professionals for tourists. Such events may or may not include dinner, depending on the package. When dinner is served it usually includes a variety of native Hawaiian, local, and American dishes.

Many major religious and secular holidays are celebrated in the same manner in Hawaii as they are on the U.S. mainland or elsewhere. The food served at such events often demonstrates some local variation but is in keeping with the parent tradition. Thanksgiving turkeys, for example, may be basted with soy sauce, called by its Japanese name *shoyu*, and dressed with rice stuffing. The day prior to Ash Wednesday, known elsewhere as Fat Tuesday, is known in Hawaii as *Malasada Day*. Warm *malasadas*, a fried doughnut of Portuguese origin, are eaten in revelry on this day in preparation for Lent, at which time luxuries, such as sweets, are given up by members of some Christian orders. Bon season, or Obon, is also celebrated in Hawaii. Many Hawaii residents enjoy attending Bon dances, a

Japanese Buddhist custom that honors one's ancestors. Many temples host food festivals to showcase Japanese food during Bon. Watermelon and other summer foods are offered to both ancestors and festival participants alike.

Makahiki, however, is a festive period unique to Hawaii. Sometimes called Hawaiian New Year's, Makahiki celebrates the return of Lono, the god of agriculture, rain, and prosperity. Makahiki, which lasts approximately four months, was a time of peace for native Hawaiians. Offerings were made to the chiefs, religious ceremonies were conducted, family was visited, and feasts were held. Makahiki is still celebrated by native Hawaiian practitioners today, although on a much smaller scale. Traditional native Hawaiian foods are served, and food offerings may be given to Lono. Makahiki is related to other traditions in Polynesia, such as the Matariki celebration in Maori culture.

Diet and Health

Prior to Western contact native Hawaiians enjoyed relatively good health. The combination of regular light manual labor and a diet high in nutrients and low in fat was beneficial to the majority of the population. Kalo and 'uala are good sources of vitamins, minerals, and dietary fiber. Native Hawaiians supplemented these starchy foods with fruit, vegetables, and fish. Necessary fats were provided by regular consumption of food such as coconuts and the occasional consumption of pork, dog, and chicken.

Western contact had catastrophic effects on the native Hawaiian population, who had no resistance to the illnesses common to Europe and Asia. Many died in a short period of time, and much was lost. The introduction of new foodways has also been detrimental to native Hawaiians' health. Many new foods, such as white rice, are high in calories and low in nutrients. Eaten in moderation they pose no threat, but these foods have been incorporated into daily life, and Hawaiian portion sizes remain large despite an increasingly sedentary lifestyle. This new diet has led to a number of health problems that continue to plague the native Hawaiian community.

Native Hawaiians are significantly more likely to suffer from obesity, heart disease, and diabetes than members of the other major ethnic groups in Hawaii. These conditions have been directly linked to diet. Native Hawaiians are also more likely to suffer from many forms of cancer, including breast, lung, colon, rectal, and prostate cancer. Native Hawaiians are among the poorest Hawaii residents and some of the most underserved in terms of health care. They are less likely to receive preventative care, diagnostic care, or treatment than other ethnic groups.

Overall, Hawaii's population is relatively healthy when compared to the rest of the United States. Hawaii has one of the lowest overall rates of adult and childhood obesity. This reflects the active, healthy lifestyle associated with the local culture. Eating patterns in Hawaii are moderate, and dietary excess is offset, in part, by outdoors activities, such as hiking, swimming, and surfing. The obesity rate, however, is following the national trend and

increasing. Hawaii's population needs to embrace a healthier diet, but it doesn't necessarily need to give up tradition to do so.

Honduras

Overview

Honduras, or *Guaymura* as it was originally called, covers approximately 43,000 square miles, with 510 miles of coastline, in Central America. Bordered by the Gulf of Fonseca on the south coast and the Caribbean Sea on the north coast, Honduras abuts El Salvador in the west, Guatemala in the north, and Nicaragua in the south. Honduras resembles the U.S. state of Tennessee in size, with a total population of almost eight million, 48 percent of whom live in urban areas. Only 9.53 percent of Honduras's land is arable, due to the mountain ranges cutting through the center of the country.

History, as well as geography and tropical climate, also affected the cuisine of Honduras. Christopher Columbus landed in the Bay Islands on his fourth and last visit to the New World. The Spanish brought numerous Old World foods to the area. English pirates settled the Bay Islands, and people there still speak an archaic form of English. Later, U.S.-based multinationals—United Fruit Company and Standard Fruit Company—moved in to grow and export bananas, tying Honduras to U.S. culture. Another cultural infusion came from the Lebanese and Palestinians who settled in Honduras in the early 20th century.

In spite of its Mayan heritage, amply illustrated by the classic Mayan ruins at Copán, where a stone for grinding corn for *nacatamales* (large square tamales nowadays wrapped and steamed in banana leaves) dates to 1300 B.C., Honduras today is 90 percent mestizo, or mixed Spanish and Native American. Modern-day Native American groups make up only 7 percent of the total population. Some of the

cultural groups include Pech or Payas, Lenca, Xicaques, Miskitos, Chortí, and Tawahka. Another group, the Garifuna, or Black Caribs, live mostly along the north coast and contribute unique flavors to the cuisine in that region.

Religious beliefs influence some culinary practices, most centering around the 97 percent of the Honduran population professing Roman Catholicism, with the other 3 percent Protestant. The Black Caribs, or Garifuna, who live along the north coast, retain certain deities resembling those of Africa, including Liwa Mairin, a sea goddess and protector of lobster fishermen.

Caloric intake varies with social class. Over 50 percent of Hondurans live in poverty. An average of 2,400 calories per day is available to the wealthy class, in contrast to 1,972 calories per day for the poorer strata of society. Grains supply 50 percent of total calories in the Honduran diet, with fats providing 11 percent and dairy 7.4 percent.

Food Culture Snapshot

Juan and Elvira Sanchez live in a *colonia*, or neighborhood, in Tegucigalpa, the capital and Honduras's largest city. Juan works for a bank as a loan officer, and Elvira enjoys her secretarial position with another bank. Their three children attend a Catholic parochial school not far from their house. Elvira counts on her maid, Clara, to keep the household running by cooking, shopping, and cleaning.

Clara shops in the traditional open-air San Isidro market most of the time, but she will go to the modern Paiz supermarket as well, if she needs an ingredient

not readily available at the open-air market. Clara buys a number of local foods for the Sanchez pantry, including small red beans, oil, white rice, *mantequilla crema* (a slightly soured cream with a consistency between sour cream and heavy cream), wheat flour for making bread and wheat tortillas, beef, pork, chicken, cilantro, limes, tomatoes, cabbage, salty white cheese like farmer cheese, chicken- and beef-flavored Maggi bouillon cubes, ground corn masa for making tortillas, oranges, papayas, eggs, sugar, and coffee. She prefers the big cones of sugar, called *rapadura de dulce*, which she grates for the corn-based drink *atol*, unless she makes it using the instant *Maizena El Bebe* or *pinol* mixture made with ground toasted corn kernels and cacao beans. She sometimes buys beef to make *salpicón*, a shredded beef filling for tortillas; ground beef for *picadillo*, a filling reminiscent of many Arab meat fillings; or *chuletas*, pork chops. Occasionally she buys fish or shellfish, because she likes to cook some of the dishes she learned growing up as a child in La Ceiba on Honduras's north coast. If she's in a rush and pressed for time, Clara buys the thin, ready-made tortillas at the *tortillería* around the corner from the Sanchez house.

Major Foodstuffs

Honduras's geography and history influence what foods appear on Honduran tables. Its rich bounty has changed little since pre-Hispanic times. Grains play a vital role in Honduran cuisine. Corn, native to the Americas, forms the hub around which the Honduran diet revolves. In the form of corn on the cob, it is a snack, and, in ground form, it provides tortillas and other similar breadlike foods. Ground corn thickens stews and, when toasted, adds even more flavor. Rice and wheat also contribute tremendously to the cuisine, with rice being almost as important as corn in some areas and among certain social strata of the country. Wheat-flour tortillas and bread are major staples, as are noodles made from wheat flour.

Beans, along with corn, are central to the Honduran diet, serving as a source of protein for those without the means to eat animal protein on a daily basis. Most people choose the red bean for their

meals, but black beans grace their tables at times. Beans can be eaten boiled or refried (that is, mashed and then cooked briefly in oil, generally lard).

Meat is a highly desired food item in Honduran culture, a major source of animal protein. Cattle, their importance stemming from the Spanish emphasis on herds and horses, provide beef. Pork and chicken appear frequently in recipes on tables, chiefly those of the wealthier classes. *Carne asada* (grilled meat) is one of the most popular Honduran dishes. Chorizo sausage is another highly desired food. Iguanas also are eaten, but Honduran law prohibits this; in fact, conservation projects attempt to protect iguanas. Game animals provide protein in some areas but do not form a regular supply of food.

Carne Asada

Serves 4–6

2–3 lb flank or skirt steak

1–2 medium onions, thinly sliced

Juice of 2–3 oranges

Juice of 1 large lime

Salt and freshly ground black pepper, to taste

¼ c extra-virgin olive oil

In a large stainless steel or glass mixing bowl, coat the meat with the onions, orange and lime juice,

Carne asada grilling at a Latin American food festival in Honduras. (Andrea Skjold | Dreamstime.com)

salt, pepper, and oil. Cover and marinate at least 1 hour or overnight.

Heat the grill, using mesquite charcoal if possible. Remove the meat from the marinade. With paper towels, pat dry. Grill over a hot flame until well browned on one side, about 5 to 7 minutes. Flip the meat over, and grill on the other side until cooked to desired doneness. Place on a clean platter, and let sit for about 5 minutes. Serve with rice, beans, *chilmol* (salsa), and *tajadas* (plantain chips).

Apart from the coastal areas, seafood doesn't play a big role in Honduran cooking. Fish, shrimp, spiny lobster (caught in traps baited with cow hides preserved in salt), conch, dried salted fish, turtle, and sometimes clams add protein and flavor to the cooking of many Honduran households.

Honduras's geographic location assures the growth of a vast choice of tropical fruit. Coconuts, papayas, mangoes, *guayaba* (guavas), limes, lemons, sour oranges, pineapples, *zapotes*, passion fruit, avocados, cherimoyas (custard apple), plantains, and bananas all provide much-needed vitamins, calories, and sweetness in the diets of many Hondurans. People turn these fruits into a wide variety of juices and other drinks.

Baked Sweet Plantains with Cheese

Serves 4–6

2 ripe plantains (*plátano maduro*; the skin should be almost black)

1/3 c butter

1 c mantequilla crema or crème fraîche

2 tbsp brown sugar

¼ tsp cinnamon

¼ c *queso fresco* or farmer cheese, crumbled

Preheat oven to 350°F.

Peel plantains and slice in half lengthwise; cut each slice in half. There will be 8 slices.

Heat 2 tablespoons of the butter in a heavy skillet until just foaming. Add the plantains and fry lightly

until just golden brown. Remove from heat. Drain on paper towels.

Place the 8 slices of plantain in a greased baking dish just large enough to hold them. Cut the remaining butter into small pieces and distribute it on top of the plantains. Cover the plantains with the mantequilla crema, sugar, and cinnamon. Sprinkle the cheese on top. Cover with foil and bake at 350°F for 25 minutes, remove foil, return to oven, and bake another 5 minutes or until bubbly and golden brown.

Vegetables grow well in Honduras, and markets abound with cabbage, carrots, squashes of various types, green peppers, hot peppers, greens, onions, garlic, tomatoes, and chayote. Cassava, white potatoes, malanga (taro), yams, and sweet potatoes all add calories and substance to the Honduran diet.

Milk products in Honduras tend to be somewhat limited. Mantequilla crema, a sour cream–like condiment, is used on refried beans and in numerous other dishes, including baked ripe plantains. *Queso blanco* (salty, crumbly white cheese), *quesillo* (white cheese similar to jack cheese), and *dulce de leche* (formed from thick, caramel-flavored, boiled-down whole milk) round out the roster of common Honduran dairy products. Ice cream, especially a home-made type called *paletas*, is very popular.

Flavorings commonly used in Honduran cooking include ground cumin, cilantro, *culantro*, chilies, salt, black pepper, achiote, cinnamon, cloves, vanilla, citrus juices, vinegar, and lard. Other fats used include palm oil, mostly on the north coast; shortening; and vegetable oil. Sugar flavors food as well and ranges from the raspadora type to fine sugar for cakes and frostings.

As in many areas close to the Caribbean, Honduras has many alcoholic beverages and products. With respect to rum, there's Flor de Caña and Bacardi, made from molasses or sugarcane juice. *Aguardiente* derives from sugarcane as well but is a rawer, less expensive product than rum. *Guaro* is another strong drink, clear and slightly sweet, made from sugarcane. When United Fruit Company owned half the north coast of Honduras, every male employee at a certain level received a bottle of Johnny

Walker Black Label scotch for Christmas. *Chicha*, made from fermented pineapple slices, is a household product, accessible to anyone with pineapples. The Garifuna make *giffity*, a liquor made with herbs and spices.

Cooking

Cooking typically takes place on a small burner over a charcoal- or propane-fueled fire, sometimes in an outdoor kitchen or fire pit, unless a family possesses a modern Western-style kitchen. And even in those cases, the taste of the food is thought to be better if cooked in the traditional way with its smoky aura. Eye and lung damage from cooking smoke caused the government to start a program among indigenous groups like the Pech to ensure that people installed chimneys called *lorenas* in their houses. Among groups like the Pech, cooking equipment consists of wooden bowls and spoons, plastic and metal utensils, and terra-cotta and metal pots.

Boiling, baking, frying, stewing, roasting, and grilling—all cooking methods commonly used around the world—are techniques called on by cooks every day in every sort of Honduran kitchen. The principal foods of the country, tortillas and beans, both begin the cooking process by boiling. The corn is treated with *cal*, a form of lime (not the fruit but an alkali called calcium hydroxide), and ground to make masa, a process called nixtamalization. With the freshly ground masa, women traditionally spent hours patting out tortillas by hands. Thicker than the commercially produced tortillas, the hand-patted ones are becoming a thing of the past. To cook beans, cooks add water to beans and cook them until tender, a process that requires a lot of fuel.

Honduran cooks prepare foods with several different flavoring agents. One such agent is a simple *recado*, similar to the Caribbean *sofrito*. Consisting of garlic, onions, bell peppers, garlic, and perhaps achiote (annatto), this mixture goes into hot oil first. Some cooks add *aiguaste*, or toasted ground squash seeds, which thickens the liquid in a dish, an ancient practice found in many cuisines. Then cooks add the *recado* to meat, soups, stews, rice, or

beans. On the coast, palm oil is used, as is just plain vegetable oil.

Another flavor generator is *chilmol*, a fresh salsa very similar to Mexico's *pico de gallo*, made with tomatoes, onions, peppers, and salt. Cilantro, ground cumin seeds, and oregano flavor a number of dishes. Thick fuzzy culantro leaves are used for meat. Cinnamon, sugar, chocolate, and vanilla flavor sweet dishes. Coconut, and coconut milk, imparts its unique flavor into numerous dishes, including soups and stews, as well as desserts. Turmeric adds yellow coloring instead of the more expensive saffron. Some local, native plants—unknown to cooks outside Central America—provide flavor. *Juniapa* (*Piper auritum*), with its heart-shaped leaves, flavors fish dishes on the north coast of Honduras.

Cooking techniques also add flavor. In Honduras, cooks fry dry rice first in *recado*, or just with onion. Then they add water and salt and cook the rice until tender. The pre-frying adds a layer of taste absent from just plain white rice. Leaves add flavor as well. The ubiquitous tamales come wrapped in plantain leaves, which add a nutty and fresh flavor to the corn dough surrounding the various fillings used for tamales. Grilling is popular, as in the case of *carne asada*, or roasted meat. *Pinchos*, or grilled kebabs, are also popular and easy to prepare.

Cooks take discarded pineapple skins and make pineapple vinegar or an alcoholic beverage called *chicha*. Another preservation method is found in *encurtidos*, or pickled vegetables, using pineapple vinegar.

Typical Meals

Meals in Honduras tend to follow fairly strict patterns on a daily basis, reflecting what's in the market and what culinary skills the cooks possess. Rice, beans, and tortillas form the core of meals. Breakfast begins early, around 6:30 A.M., and generally consists of the *plato típico*: fried eggs, refried beans, fried plantains, *mantequilla crema*, sausage, tortillas or bread, and thick sweet coffee. Some people eat milk soup for breakfast, which is boiled milk flavored with cinnamon, sugar, and lime wedges to which small cubes of bread are added.

At noon, people make their way home, if they can, and eat lunch, another version of the plato típico: meat (beef, pork chops, chicken), beans, rice, salad, tortillas or bread, and juice. Or they may just eat *sopa de olla*, a stewlike soup made with whatever meat and vegetables might be in the pantry. A jar of *encurtidos* (vegetable pickles) usually sits on the table to be enjoyed in small bites with the meal.

The evening meal, or *cena*, starts very late in the evening because people generally do not get home from work until around 6 or 7 P.M. The meal can be similar to lunch, but meat dishes may be *encebol-leada* (smothered in onions) or *entomatada* (smothered in tomatoes) instead of grilled or roasted. Or they might just eat a simpler meal of *enchiladas* (more like Mexican tostadas, with the fillings on top), *quesadillas* (cheese-filled tortillas), or tortillas with beans, *mantequilla crema*, and a small salad of shredded cabbage. Soups like *mondongo* (tripe soup) or chicken soup with tortillas often suffice. Rice is always served, along with bread or tortillas.

Another common dish is rice and whole beans, called *Moros y Cristianos*, a linguistic tribute to Spanish history and Spain's fight to drive out the Arabs, or Moors, around the time Columbus discovered the New World. *Casamiento* (marriage) is yet another name for rice and beans, not used as much now as in the past. Stews and soups also appear often on Honduran tables. In the north, along the coast, fried fish with lime and garlic joins *bando*, a fish stew, and *sopa de hombre*, a fish soup thought to be excellent for curing hangovers. *Sopa de caracol* (conch soup) is another favorite and practically a national dish. *Picadillo* (ground meat scented with ground cumin and sometimes enriched with chopped zucchini-like squash) adds zest to plates of beans and rice, as well as serving as a filling for tortillas.

Like people in many countries bordering on the Caribbean, Hondurans utilize tropical fruits and tubers in unique and flavorful ways. Shredded coconut or coconut milk appears in many dishes, including rice and stews, but especially in desserts like coconut flan or coconut bread, a specialty of the Garifuna (Black Caribs) on the north coast. Another bread baked by the Garifuna is *casabe*, made with cassava. Guavas, made into a thick paste and

Moros y Cristianos, the Honduran version of black beans and rice. (StockPhotoPro)

served with salty white farmer cheese, form a simple dessert with Spanish roots that is well loved by many Hondurans. Plantains, both green and mature, augment many meals. *Tajadas* (fried plantain chips; also called *caras de gata*), salted lightly, make a tasty snack with drinks, both those made with alcohol and fresh fruit juices.

Snacks such as *fritas*, cornmeal mixed with milk and sugar and fried on a griddle, are popular, as are the various drinks called *pozols* or *horchatas*, similar to those made in Mexico, made with ground rice, corn, or seeds for thickening. *Tamales*, filled with various ingredients, provide a hearty snack, a simple meal, or a ritualistic dish for special occasions. Another snack, often prepared for men going off to work all day in the fields, is the *burra* or *pupusa*, thick tortillas with beans and a little meat, if available, and a little piece of rapadura or cone sugar used traditionally in *torrejas* (a sweet dessert made with roasted fresh corn kernels). Placed in a square of clean cloth tied at all four ends, the burra can ride

on a person's belt, leaving the hands free. Another popular tortilla-based snack is the *baleada*, a tortilla filled with beans, cheese, and many other things. On the north coast, ceviche made from fresh seafood appears on many tables. And *pastelitos*, fried corn-crust turnovers, crackle with their rice and meat fillings. For dessert, there might be a simple *arroz con leche* (rice with milk) or *tres leches*, a yellow cake made with three different types of milk.

Eating Out

With modernization, eating outside the home has become more common in Honduras, where most people still eat at home for the main meal of the day. In the past, and still, small eateries called *comedores* served the plato típico to travelers and tourists. Now, in the larger cities of Tegucigalpa and San Pedro Sula, U.S.-based fast-food chains provide quick food.

In Tegucigalpa, a number of upscale restaurants serve a wide range of foods, including sushi, Chinese fare, French haute cuisine, Middle Eastern kebabs, and Italian dishes, as well as Honduran specialties like carne asada and *anafres*, little braziers filled with refried beans and topped with mantequilla crema. Open-air restaurants along the north coast feature fried fish and fish stews made with coconut milk.

Street food is especially popular. Vendors selling *licuados* (smoothies), *jugos* (juices), and small plastic bags filled with chunks of fresh fruit set up shop on street corners. Other sell pinchos (grilled meat kebabs), baleadas (bean- or meat-filled tortillas), grilled corn on the cob, *chicharrones* (fried pork rind), tajadas (plantain chips), pupusas (bean- or cheese-stuffed tortillas), *semitas* (sweet bread), and *rosquetes* (corn dough rings, also called *rosquillas*). Shops sell *sambuseks*, a Middle Eastern meat-filled pastry, as well.

An old tradition still exists of meeting at friends' houses at 3 P.M. for a *cafecito* (little coffee) and sweet breads. Bar-going, particularly for men, offers another opportunity for eating and socializing outside the home. Beers commonly drunk include Salva Vida, Port Royal, Barena, and Imperial.

A vendor grills corn on the streets in Tegucigalpa, Honduras. (Owen Franken | Corbis)

Special Occasions

The predominance of Roman Catholicism in Honduran culture ensures that most holidays revolve around the major religious holidays of Easter and Christmas. Other holidays include baptisms and christenings, wakes and funerals, weddings, and birthdays. Nowadays, often no special food is prepared since most meals are Americanized buffets catered by companies hired by families, particularly wealthier families. Nacatamales, or tamales, are one of the major special-occasion foods, served for many events, including weddings, Sunday family get-togethers, and Christmas. Elaborately decorated cakes are another food item commonly served on many special occasions.

Birthdays merit very special preparations, with piñatas (candy- and toy-filled papier mâché in the

shape of animals and other objects) and fancy decorated cakes for young children. The traditional girls' party, the *Quinceañera*, celebrates young women's arriving at womanhood at the age of 15. Caterers generally provide the food, and the parties tend to be held by wealthier people.

In the villages, people celebrate the Day of the Dead (November 2) in a manner similar to that of Mexico, visiting cemeteries and cleaning ancestral graves. In the larger cities, particularly among the wealthier classes, U.S. Halloween customs hold sway. Nine days after funerals, families get together for coffee and *panes dulces* (sweet breads).

Christmas is one of the biggest holidays of the year. Like Mexicans, Hondurans also follow the idea of *posadas* (similar to caroling), but this practice tends to be limited. Some smaller villages have *posadas* and serve *ponche infernal*, which is served hot and contains pineapple and aguardiente, or *rompopo* (an eggnog-like drink imbued with rum) to the singers. On Christmas Eve, families prepare punch and other foods, including tamales to hand out to people who come by singing. Feasting after midnight mass generally includes banana or plantain leaf-wrapped nacatamales filled with chicken or pork and some combination of rice, potatoes, garbanzos, peas, and green olives. People drink *rompopo* and eat grapes and apples. A typical Christmas dinner can include roasted pork leg. A special dessert associated with Honduran culture is dough called *torrejas*, fried and soaked in syrup flavored with cinnamon and brown sugar. Or the family may serve *rosquetes* (corn dough rings) with the same syrup. Stuffed ham with a beef/pork meat filling is popular. Some families serve dried-fish soup, yucca appetizers, stuffed turkey, chicken, meringue sweets, and *horchata de arroz*, a drink made with sweetened rice. Other foods commonly served on Christmas might be *carne asada* (grilled meat) and *plátanos fritos* (fried plantains). The day after Christmas, most Hondurans take the opportunity to visit relatives and friends. Food is secondary; people eat leftovers or go to restaurants.

At Easter time, artists create elaborate sawdust carpets in Comayagua during Holy Week. Cooks, especially in the north, prepare *sopa de pescado* (fish

soup) with fish and egg patties cooked in a broth made with fish heads and garlic, *pan de yema* (egg-yolk bread), and *torrejas de piñol* (fried dough), glazed with boiled honey. Some families spend time at the beach on the north coast, where both men and women of the Garifuna (Black Caribs) make *casabe*, a flat cassava bread eaten spread with butter.

For folkloric, and national, festivals called *Fiestas Catrachas*, celebrating the Honduran nation, menus consist of *carne asada*, beans, tamales, *baleadas*, cassava with *chicharrones* (fried pork skins), and tortillas. Different ethnic groups within Honduras celebrate their own special days. The Miskitos, for example, celebrate July 23 as their Day of the Dead, called the *Parayapti*, similar to the Garifuna's *Novenario*. To feed all the people, at least three cows are slaughtered.

In western Honduras, particularly in the towns of Gracias, Lempira; Ilama, Santa Barbara; and Texiguat, El Paraiso, a corn-based drink called *chilate* is made for use in a ceremony called the *guacaleo*, or "ceremony of peace," dating to Mayan times. Starting with *atol*, people add cacao and perhaps a little chili pepper to this slightly fermented drink.

Diet and Health

As is the case in many cultures, Hondurans associate various foods and dishes with good health and with cures for sick people. Some of these beliefs include the idea that meat tenderizers like papaya cause stomach ulcers. Sick people, including those with ulcers, should eat *leche dormida* ("sleeping milk"), made with part of a rennet tablet and sweetened to taste, resulting in a dish very similar to yogurt. Many old beliefs—such as the old hot-cold theory—no longer hold, but some people still drink sour orange juice when they don't feel well to balance out their systems. Drinking lemongrass tea for nerve problems is still common in some areas. Folk belief has it that drinking a tea made from *kalaica*, a plant that grows wild in Honduras, will help anemia, as will drinking an infusion made with beets. Many beliefs surround the states of pregnancy and lactation, including the exclusion of certain foods from the diets of pregnant and lactating mothers.

In Honduras, people still experience severe malnutrition, particularly children. One out of four Honduran children under the age of five still suffers from life-threatening bouts of malnutrition, exacerbated by diseases like chickenpox and measles.

Inuit

Overview

Inuit is a general term for a group of culturally similar indigenous peoples inhabiting the land above the Arctic Circle in Canada and Greenland. In 1977 the term *Inuit* replaced the term *Eskimo* in Canada and Greenland based on the erroneous belief that the term *Eskimo* has pejorative associations. In English the word *Eskimo* is of uncertain origin. It is believed by some to have come from the French word *Esquimaux*. Others believe that the term *Eskimo* comes from an Ojibwa word that is translated as “eater of raw meat,” hence the pejorative connotations. However, linguists now believe that the term *Eskimo* was actually derived from a Montagnais name, *ayassime’w*, a name that refers, in the upper western North Shore dialect, to the Micmac and, in the central and lower North Shore dialect, to the Eskimo. Regardless of the origins of the term, *Eskimo* is no longer used in Canada and Greenland but is still used in Alaska to refer to the Arctic peoples of that state. While the indigenous peoples of Alaska prefer to be called by their autonyms, for example, the Yup’ik, they do not mind being collectively referred to as Eskimo. They do, however, object to being referred to as Inuit. The term *inuit*, in the native languages of Greenland and Arctic Canada, is the plural of *inuk*, meaning “real, genuine person.”

Three-quarters of Canada’s Inuit population lives in Nunavut, a territorial subdivision of the former Northwest Territories. Nunavut comprises the part of the Canadian mainland and Arctic Islands that lies north and northeast of the tree line as it runs from the west end of the Dolphin Strait to 37 miles

(60 kilometers) south of the point where the Thanne River flows into Hudson Bay. The Inuit of Greenland are descendants of the Dorset and Thule cultures who moved into Greenland from Canada between 900 and 1500 A.D. The population of Greenland is 55,000, the majority of whom are Inuit.

The Inuit are subsistence hunters and gatherers and are therefore seasonally nomadic. In preparation for the seal-hunting season, during which the Inuit move out onto the ice to hunt, the Inuit start building large dome-shaped snow houses in early winter. The snow houses feature a central workspace; radiating from the sides of the central workspace are tunnels. At the end of each tunnel are family living quarters. In the spring season, nuclear family groups spend the summer hunting and gathering on the tundra. Housing in the spring and summer is traditionally caribou-skin tents; however, in the modern era tents are typically made of canvas. In addition, small, semipermanent huts of plywood are built on the tundra for use during the inland hunting season. During the spring and summer the Inuit also travel great distances to trade and to obtain the raw materials needed for carving. When fall comes the Inuit begin the trek to the wintering grounds where they congregate in larger groups to prepare their winter clothing and hunting equipment. Despite the availability of modern winter clothing, most outer winter clothing continues to be homemade. Traditional Inuit clothing is made from seal pelts, seal intestines, caribou skins, animal fur (including polar bear), and canvas. The traditional materials are warmer and more adaptable to the environment in which the

Inuit are working. Clothing is layered, with an inner jacket of fur facing inward and an outer jacket of fur facing outward. Outer fur jackets may also be layered with jackets made of down or duffle cloth.

Inuit religion is based on the relationship between humans and the spirits of the animals on which the Inuit depend for their food and livelihood. It is therefore important to the Inuit that they observe proper rituals and taboos when hunting. An animal spirit who is offended through the violation of a taboo, through the omission of a ritual, or through a lack of proper respect might take revenge on the group. Illness, starvation, and death can occur. Conversely, an animal that is treated properly by a hunter will share the good news with other animals, bringing good fortune to the hunter.

Today, the Inuit live in a modernized world. They regularly use snowmobiles and all-terrain vehicles to get to their hunting and fishing grounds. Many Inuit live in settlements in housing provided by the Canadian and Greenland governments. In the towns, amenities, such as running water, are provided, as are social services and education. While the traditional subsistence hunting, fishing, and gathering lifestyle is still highly valued among the Inuit, more and more young people are choosing to enter the wage economy. The options for employment in the towns are limited; therefore, young Inuit may choose to cater to the tourist industry by becoming hunting and fishing guides. Other Inuit turn to arts and crafts as a living and carve soapstone statues and create other art forms for sale in the southern cities. There is also an increasing demand for designer clothing made from sustainably harvested seal pelts. Students at the Nunavut Arctic College are learning to be furriers, and the fur design industry in Nunavut is seen as an example of the melding of traditional cultural heritage with a modern economic strategy. Regardless of the choice of occupation and place of residence, traditional Inuit food remains a central focus of Inuit identity and culture.

Food Culture Snapshot

Jimmy Nirlungayak and his wife, Elisapee, live in the Arctic near a small town in Nunavut. They are among

the respected elder members of the community and pride themselves in being traditional Inuit. The Nirlungayaks eat what some call “Inuit style” and most others call “country food.” This means that they continue to eat a traditional Inuit diet and depend primarily on subsistence hunting and gathering for their food supplies. Their annual income does not provide enough ready cash to purchase all their food from the Northern or from the Co-Op Store, especially given that the cost of buying groceries in the north can be two or three times higher than the cost in the south. Therefore, the Nirlungayaks’ store purchases are limited to flour, baking powder, sugar, and tea. To get the money needed to purchase these staple supplies, the Nirlungayaks used to process and sell sealskins and carve small soapstone carvings. However, the Nirlungayaks are among those Inuit impacted by the antisealing campaigns that started in 1983. While these campaigns were primarily targeting commercial sealers around Newfoundland and the Gulf of Saint Lawrence, the banning of imports of seal products into the United States has impacted the Inuit economy. In 2009 the European Union also moved to ban the import of seal products, an action that caused the market to experience a further decline. As a result, the Nirlungayaks now rely more and more on their carvings as a source of income, and they have joined the many Inuit who depend on welfare.

Major Foodstuffs

The environment of the Inuit peoples dictates that the majority of their foods will consist of meat and fish; however, the local environment, which varies greatly for the different Inuit groups, as well as resource availability, ultimately dictates what the Inuit will be able to eat in any given season. During the winter season the Inuit depend primarily on seals. A seasonal shift from seal hunting in the winter to fishing in the spring and summer to caribou hunting in the fall is common. The Inuit will also hunt, either seasonally or year-round, a variety of land and sea mammals as well as ptarmigan and waterfowl. In addition, and only during the summer months, they will gather roots, greens,

and berries. The discussion of foods here gives a representative sampling of the kinds and varieties of food that the Inuit eat.

Seal is the primary, and most important, food of the Inuit, and they make use of the many seal varieties that live in the Arctic. Seal hunting is conducted with the help of snowmobiles, and seals are hunted along the edges of the ice floes and at their breathing holes. The bearded seal (*Erignathus barbatus*), the harp seal (*Phoca groenlandica*), and the ringed seal (*Phoca hispida*) are all hunted by the Inuit. And, as with all animals hunted by the Inuit, all parts of the seals are either eaten or used. The blubber and meat of the seals are eaten raw, while the intestines are either boiled or eaten raw. At times the Inuit will also boil the meat and blubber of the seals; however, the liver of the bearded seal is never eaten because the high levels of vitamin A found in the liver are toxic to humans and can cause acute hypervitaminosis A. Ringed seal blubber may also be liquefied and aged, and the meat may also be aged. The ringed seal's liver, heart, brain, eyes, and blood are eaten raw. The pups of the ringed seal are also taken, and the meat is eaten either raw or boiled.

The beluga whale (*Delphinapterus leucas*) and the narwhal (*Monodon monoceros*) are both toothed whales living in the Arctic and are hunted by the Inuit. The blubber of the beluga is eaten either raw or boiled, and the meat is often eaten raw or dried for later use. The *maktaaq*, or skin and underlying blubber, of the beluga is eaten raw or boiled. Beluga whale oil is kept and aged for later use. Narwhal blubber and *maktaaq* are eaten raw, boiled, or aged, and the *maktaaq* of the flippers is aged. The blubber may also be aged. The meat of the narwhal is dried for later use.

The walrus (*Odobenus rosmarus*) is another of the sea mammals eaten by the Inuit. Walrus blubber is either aged, boiled, or eaten raw. The liver is eaten raw, and the meat is eaten raw, boiled, or aged. The *maktaaq* of the walrus is eaten raw or aged. More and more often, however, walrus meat is being cooked before it is eaten because of the presence of *Trichinella*, a tiny parasitic roundworm, in the meat. *Trichinella* can cause trichinosis, a gastrointestinal illness with flulike symptoms that, in severe cases,

Subsistence hunting for narwhal whales remains an integral part of the Inuit culture in Alaska. (Corel)

can cause death. Alternatively, walrus meat is being stored until it can be tested by laboratories in Kuujuaq, Quebec, for the presence of *Trichinella*. Walrus meat is digested slowly, and an individual may eat large quantities of walrus meat without getting sick. This ability is adaptive and allows the Inuit, who may go a long time without any food, to remain out on the ice hunting.

Among the land mammals eaten by the Inuit, the polar bear (*Ursus maritimus*) is certainly the most dangerous animal hunted. Polar bears are hunted primarily for their fur. However, when a bear is taken, it is eaten so as not to waste the food. The fat is boiled or eaten raw. Polar bear meat would traditionally be eaten raw; however, as with walrus, there is concern about the parasite *Trichinella* in the meat, so polar bear meat is most often boiled. The liver of the polar bear, like the liver of the bearded seal, is never eaten because the concentration of vitamin A in the liver is toxic to humans and can cause acute hypervitaminosis A.

Another large mammal that the Inuit depend on for food is the caribou (*Rangifer tarandus*). As with all animals hunted by the Inuit all parts of the caribou are used. Caribou meat is prepared in a variety of ways. It may be eaten raw, or it may also be aged, dried, boiled, or roasted. The liver and tongue of the caribou are also eaten raw or baked. The stomach, brains, heart, lungs, and kidneys may be eaten raw, and the brain, heart, and kidneys may also be

boiled or roasted. The bone marrow is collected and eaten raw or aged. The fat is eaten raw.

Other large mammals that are hunted by the Inuit are the moose (*Alces alces*), the musk ox (*Ovibos moschatus*), and the black bear (*Ursus americanus*). Moose meat is eaten raw, cooked, smoked, or dried. The fat and bone marrow may be eaten raw or cooked, and the fat may also be dried. Moose kidneys, livers, lungs, and blood are eaten raw. Musk ox meat, blood, and fat are eaten raw. Bear meat is eaten raw or smoked.

Many small mammals are also hunted and eaten. The Inuit will eat muskrat (*Ondatra zibethicus*), rabbit (*Lepus* sp.), and beaver (*Castor canadensis*). The meat of all these animals is eaten raw or baked. Beaver meat may also be dried.

Among the birds eaten are the black scoter (*Melanitta nigra*), the Canada goose (*Branta canadensis*), duck (*Anas platyrhynchos*), ptarmigan (*Lagopus mutus*), and grouse (*Dendragapus canadensis*). The meat of these birds is all eaten raw or either oven- or fire-roasted. The innards of the Canada goose may also be boiled, and the lungs of the goose are roasted. In addition, the eggs of the fowl are eaten.

Traditionally, fishing grounds would have been accessed by foot. Today, however, all-terrain vehicles are common, and a network of trails now exists in the tundra. Among the fish that Inuit eat are arctic char (*Salvelinus naresii*), cod (*Boreogadus saida*), inconnu (*Stenodus leucichthys*), burbot (*Lota lota*), salmon (*Oncorhynchus*), sculpin (*Myoxocephalus* ssp.), whitefish (*Coregonus clupeaformis*), lake trout (*Salvelinus namaycush*), and grayling (*Thymallus arcticus*). Fish are eaten either raw, dried, salted, smoked, boiled, or baked. The Inuit also gather shellfish, and the meat is eaten raw or boiled. Among the shellfish gathered are mussels (*Mytilus edulis*) and clams (*Mya* sp.).

During the long summer days the Inuit take full advantage of all the plants and fruits that grow in the northern environment to supplement their diet. Among the favorite foods gathered are the many berries that grow in the tundra and northern woodlands. These include blackcap berries (*Rubus leucodermis*), black hawthorn berries (*Crataegus douglasii*), blueberries (*Vaccinium uliginosum*), bog

blueberries (*Vaccinium uliginosum*), gray blueberries (*Vaccinium ovalifolium*), watery blueberries (*Vaccinium alaskaense*), mountain bilberries (*Vaccinium membranaceum*), red huckleberries (*Vaccinium parvifolium*), cranberries (*Vaccinium vitis-idaea*), rosehips (*Rosa nutkana*), bunchberries (*Cornus canadensis*), crowberries (*Empetrum nigrum*), high bush cranberries (*Viburnum edule*), kinnikinnick berries (*Arctostaphylos uva-ursi*), red elderberries (*Sambucus racemosa*), salmonberries (*Rubus spectabilis*), wild raspberries (*Rubus idaeus*), saskatoonberries (*Amelanchier alnifolia*), soapberries (*Shepherdia canadensis*), stink currant berries (*Ribes bracteosum*), swamp gooseberries (*Ribes lacustre*), green gooseberries (*Ribes oxycanthoides*), purple gooseberries (*Ribes oxycanthoides*), wild currants (*Ribes laxiflorum*), thimbleberries (*Ribes parviflorus*), wild strawberries (*Fragaria vesca*), and cloudberry (*Rubus chamaemorus*). Of these berries, only the elderberry and wild “green gooseberries” are usually cooked; all the others are eaten raw. Some berries may also be used in bannock (flatbread). And, although not a berry, the fruit of the wild crab apple tree (*Pyrus fusca*) is also eaten.

The greens most commonly gathered and eaten are mountain sorrel leaves and stems (*Oxyria digyna*), cow parsnip (*Heracleum lanatum*), fireweed shoots (*Epilobium angustifolium*), lamb’s-quarter (*Chenopodium album*), salmonberry shoots (*Rubus spectabilis*), thimbleberry shoots (*Ribes parviflorus*), wild “green gooseberry” leaves (*Ribes divaricatum*), sheep sorrel (*Rumex acetosella*), stinging nettle (*Urtica dioica*), seaweed (*Porphyra perforata*), and kelp (*Rhodomenia* and *Laminaria* sp.). All the greens, including kelp, are eaten raw with the exception of the seaweed, which is dried.

In addition to greens and berries, the Inuit also eat a variety of roots. Among the roots eaten are those of cinquefoil (*Potentilla pacifica*), clover (*Trifolium wormskioldii*), wood fern (*Dryopteris expansa*), licorice fern (*Polypodium glycyrrhiza*), lupine (*Lupinus nootkatensis*), and riceroot bulbs (*Fritillaria camsc-hatcensis*). The ferns are either eaten raw or steamed. The cinquefoil and clover are steamed, and the lupine, licorice fern, and riceroot are eaten raw. The Inuit also eat the inner bark of cottonwood trees

(*Populus trichocarpa*), the dried leaves of Labrador tea (*Ledum decumbent*), and parts of the arctic willow (*Salix arctica*) and the netted willow (*Salix reticulata*).

Cooking

The Inuit eat only two main meals a day, although they do snack between meals. Traditionally, much of Inuit meat and fish is eaten raw or frozen. After a hunt the hunters are served first, eating their prey raw where it has been caught. Their first choices of foods to eat are liver and blood. Another delicacy is brain mixed with seal fat. The women and children eat after the hunters. Their food of choice is the intestines and any remaining liver. No fish or meat can be cooked where it is caught.

Food that is to be cooked must be transported far away from where it was caught, and when it is cooked the Inuit have taboos that prohibit cooking products of the land and sea in the same pot. This taboo extends to the storage of products of the land and sea as well. Thus, seal meat may not be placed next to caribou meat when stored. Traditional Inuit cooking was done over the central fire of the igloo or tent, and the cooking vessels were made of carved soapstone. Currently cooking pots are available in the stores, and cooking is done over camp stoves when out in the bush or in modern kitchens in their homes in the towns. When cooked, meat is often stewed in a large pot, with very few spices or other seasonings. In the winter the pot would be packed with snow and meat and left over the fire or on the stove until the snow melts and the meat is thawed and warmed.

Arne Lange, a 39-year-old Inuit fisherman and his family have a family seal meat barbeque. (Getty Images)

Typical Meals

Country food, or Inuit-style meals, consists mostly of meat or fish with bread, jam, and fruit on the side. When fresh meat or fish is eaten, slices of raw meat or fish are simply sliced off the whole animal or fish by each individual and eaten. When dried fish is eaten it is commonly dipped in a dish of aged seal blubber to moisten it. With the easy availability of soup seasonings and cooking pots, fish heads can now be stewed as an additional way of using as much of the fish as possible.

Other Inuit meals consist of bearded seal flippers soaked in blubber for two weeks, after which the flesh is stripped from the flippers and eaten. Maktaaq, the outer covering of the whale including the skin and blubber, which is one to two inches thick, is cut in blocks from the whale. The maktaaq is left hanging to dry for two days and then cut into smaller pieces. The maktaaq is then boiled until tender and stored in a cool place in oil in a 45-gallon drum.

Bannock, a typical home-prepared bread product consumed by the Inuit, as well as other First Nations peoples of Canada, is one of the staples of the Inuit diet and can be fried in a small amount of fat or baked in an oven, over a campfire, or on a camp stove in a covered pot. However, Inuit bannock is typically prepared in large rounds that will fit in a cast iron frying pan, and these are cut into wedges or squares for individual servings. While many different recipes for bannock exist, it is typically prepared from two cups of white flour, a half teaspoon of salt, a quarter cup of sugar, two teaspoons of baking powder, a quarter cup of fat (oil, lard, vegetable oil, or shortening), and a half cup of milk, reconstituted powdered milk, or water. Other recipes for bannock include one egg, berries, dried fruit, and nuts. When baked in a conventional oven the temperature is set at 350 degrees, and the bread is baked for 15 to 20 minutes.

During the summer months, when berries can be found, *akutuq*, sometimes called “Eskimo ice cream,” is a favorite treat for many. This delicacy is a dessert made with whipped fat and berries. To make this dessert one recipe calls for grated reindeer tallow, seal oil, and water. All the ingredients are

whipped until white and fluffy, and then the fresh berries are added.

During an Inuit meal the chunks of food will be presented on sheets of cardboard, metal, or plastic, and guests are invited to use their own knives or to borrow a knife to slice off a portion of the raw meat or fish. The meal is typically eaten sitting on the ground or on the kitchen floor with the food in the middle of the circle.

Eating Out

Given the isolated nature of their traditional hunting and gathering territories, Inuit people do not have a history or culture of eating out that is comparable to that of their white neighbors. Acculturated Inuit living in northern Arctic towns will visit the various fast-food restaurants that have proliferated in places such as Whitehorse and Yellowknife. In addition, there are a variety of small cafés and family restaurants, not to mention the ubiquitous Chinese restaurants, which Inuit families will frequent when visiting or living in town. Also present in many northern towns are more expensive restaurants catering to the tourist clientele; these restaurants focus on northern game meats and country food such as musk ox, caribou, arctic char, pickerel, whitefish, whale meat, clams, turbot, shrimp, and waterfowl.

Special Occasions

Winter is the season for festivities. Traditionally, ceremonial snow houses, called *qagli* among the Copper Inuit, were built for the festivities. Because of the winter storms and blizzards that frequently sweep across the Arctic tundra, many days are spent indoors. Playing games, drum dancing, and observing shamanic performances therefore passed the time.

Traditionally, food is shared among the Inuit, and distribution occurs with both kin and non-kin and follows a preestablished pattern. For example, among the Copper Inuit, each seal that is caught is divided into 12 to 14 parts, and each part is given to a predetermined exchange partner who would then reciprocate in the future with the same body part. A

hunter's parents determined the hunter's *piqatigiit*, or seal-sharing partners, at the time of the hunter's first kill. The partners are all members of the same generation as the hunter, which helps forge a bond among age-mates. Other forms of food distribution, which function on a volunteer or ad hoc basis, also occur. Some food-distribution forms involve giving meat to a hunter who did not make a successful catch during a hunt or giving food to a member of the kin group who has no food because of age or illness, while other forms involve communal eating after a hunt. Today, food distribution appears much more idiosyncratic than in the past; however, it has been found that modern sharing continues to take forms that range from highly formalized gift giving to the informal sharing of prepared meals.

Faced with rapid social change the Inuit see food as the connector to everything that surrounds Inuit culture. The hunting and gathering, preparation, and eating of country food are an especially key aspect of Inuit identity. The sharing of food reminds the Inuit of their cultural heritage and serves as a connector to their past. In addition, food sharing highlights the interconnectedness between Inuit families and households. Hunting is seen as being more than simply providing food for families; hunting is also about sustaining the Inuit language and culture. The teaching of hunting skills from one generation to another is a way to build solidarity between generations and within families and remains an important part of a young person's maturation process.

Diet and Health

Increased modernization and the availability of *qal-lunaat*, or white people's food, has had an impact on the health of the Inuit. The shift from the traditional diet of meat and fish to a diet of processed foods high in sugar and carbohydrates has caused an increase in obesity, cardiovascular disease, acne, anemia, dental cavities, and type 2 diabetes. To try and understand the paradox of the Inuit diet—the fact that eating a diet of seal meat, which is high in fat, prevents the very diseases that are common throughout much of the Western world—researchers at McGill University's Centre for Indigenous

Peoples' Nutrition and Environment have carefully documented the traditional foods eaten by Inuit peoples, complete with a nutritional and caloric analysis of each of the different Inuit foods.

What has been discovered is that is that there are no essential foods, only essential nutrients. And the Inuit get these nutrients in their traditional diet. Vitamin A, for example, which is usually found in fruits and vegetables, is available to the Inuit in the oils of cold-water fish and sea mammals, as well as in the animals' livers, where fat is processed. These dietary staples also provide vitamin D, another oil-soluble vitamin needed for bones. Vitamin C is found in raw caribou liver, seal brains, and maktaaq, and in even higher levels in kelp. The traditional Inuit practices of freezing meat and fish and eating them raw conserve the vitamins, which are easily cooked off and lost in food processing.

The Inuit are genetically well adapted to process a diet that is high in protein. However, protein can't be the sole source of energy for humans; anyone eating a high-protein diet that is low in carbohydrates must also have fat. While fats are considered to be detrimental to Western health, it is the kind of fat that is eaten that is important. Processed and farm-animal fat is high in trans fats, whereas wild animal fat is healthier because it is less saturated and more of it is in a monounsaturated form. In addition, the traditional Inuit diet consists of cold-water fish and sea mammals that are high in omega-3 fats, while a Western diet is high in omega-6 fats. Omega-3 fats help raise high-density lipoprotein (HDL) cholesterol, lower triglycerides, and are known for anticlotting effects. These fatty acids are believed to protect the heart from life-threatening arrhythmias that can lead to sudden cardiac death. In addition, omega-3 polyunsaturated fats help prevent inflammatory processes, which play a part in atherosclerosis, arthritis, diabetes, and other diseases commonly associated with a Western diet.

While the positive aspects of eating traditional Inuit food have been accepted, data also show that there is an increase in the levels of cadmium, lead, and mercury in the traditional meat and fish eaten by the Inuit. Increased levels of PCBs (polychlorinated biphenyls) and DDT (dichlorodiphenyltrichloroethane) have also been found in traditional Inuit

foods. The ingestion of metals and chemicals has been found to affect the neurological development of fetuses and children and can affect the immune systems of children. The primary foods that account for a higher level of intake of metals and chemicals are ringed seal meat and liver, caribou meat, narwhal maktaaq, beluga meat, and beluga maktaaq.

Despite the potential dangers of eating country food, the Inuit remain strongly tied to their traditional diet. For the Inuit the connection between eating seal and Inuit beliefs about health, physiology, and identity is stronger than the fears associated with the contaminants found in Arctic foods, and thus country food remains the main diet choice for Inuit today. The traditional Inuit diet is more nutritious and less expensive than commercial food, and it is believed to have healing properties. If an Inuit is feeling well, then he can eat store-bought food with no ill effects, but if he is ill or depressed, he needs country food to make him well. The Inuit believe strongly that their diet of seal meat is life giving. Inuit blood is believed to be thick and dark like seal blood, so when one eats seal blood and seal meat, one is rejuvenating one's blood supply. Eating seal meat, they believe, warms them in the cold Arctic weather, and when the body is warmed by seal blood, then the Inuit's soul is protected from illness and harm.

Jamaica

Overview

Jamaica is a Caribbean island located about 90 miles south of Cuba. It is the third-largest island in the Caribbean and exhibits beautiful natural features such as world-famous coastal lowlands, a limestone plateau, and the Blue Mountains, which are famous for producing high-quality coffee. Jamaica's diverse terrain has contributed to producing a wide variety of crops.

Jamaica is an English-speaking country, although it has a Creole dialect called Patois, which is influenced mostly by West African languages. Approximately 95 percent of the country's population is of African descent, and nearly the whole population is native-born Jamaican.

Jamaicans enjoy the country's tropical maritime climate. The mean daily temperature ranges from a seasonal low of 79 degrees Fahrenheit in February to a high of 86 degrees Fahrenheit in August, averaging around 80 degrees Fahrenheit. Jamaica's tropical climate and its miles of beautiful white beaches have attracted many tourists from all over the world. The island is also constantly exposed to hurricanes and recently suffered more than \$210 million in damage when Hurricane Gustav hit in 2008.

As for religions, Christianity is the dominant religion in Jamaica. The main denominations in Jamaica include the Church of God, Seventh-Day Adventist, Baptist, Pentecostal, and Anglican. The Rastafari movement, a religious movement that originated in Jamaica, contends that Haile Selassie I, the former emperor of Ethiopia, is the incarnation of God. The lifestyle the Rastafarians follow has created a unique food culture. Some adherents

follow the dietary laws of the Old Testament; others are strict vegetarians, eat only natural foods, and abstain from alcohol.

Jamaica is proud of its unique culinary history. Enid Donaldson, author of *The Real Taste of Jamaica*, argues that Jamaica's culinary evolution, described as "out of many one pot," reflects the history of the island. The Taino, a group of the Arawak Indians who had inhabited the Greater Antilles in the Caribbean Sea before Columbus's arrival, came from South America about 2,500 years ago. The Tainos named the island *Xaymaca*, which meant "land of wood and water." They grew various crops such as cassava, sweet potatoes, maize, fruits, vegetables, callaloo (a green, leafy, spinach-like vegetable), beans, cotton, and tobacco. Fish and shellfish, along with wild animals such as iguana, were also a major part of their diet. The *barbacoa*, which is a wooden grate standing on four forked sticks placed over a slow fire, was a special technique Tainos used. Jamaicans nowadays call it *jerk*. In addition, Tainos created a habit of making a soup pot with meat, vegetables, and seasonings. Saturday beef soup is still served in most Jamaican households.

The arrival of the Spanish in Jamaica in 1494 greatly influenced the further creation of a modern Jamaican cuisine. The Spaniards brought cattle, goats, pigs, horses, and lard to the island. Not only animals but also plant products, such as citrus fruits, ginger, date palms, coconuts, plantains, grapes, sugar, and bananas, were brought by the Spaniards. Some popular dishes such as *escoveitched fish* (a variation of Latin American ceviche) originated in Spain.

After the Spanish, the English started controlling Jamaica in 1655. The English settlers started growing crops that could easily be sold in England, such as tobacco, indigo, cacao, and sugar, which became the main crop for the island. Sugar, rum, and molasses were taken back to England and were also traded for flour, pork, and salt fish, a present staple food of Jamaica. The English, who also had colonies in different parts of the world, brought important food items such as breadfruit, ackee, mangoes, spices, and coffee to Jamaica.

Africans who were brought to Jamaica as slaves also contributed greatly to the creation of today's Jamaican cuisine. The Spanish turned to trading slaves from Africa's west coast for labor. The slaves brought with them okra, peanuts, and a variety of peas and beans, all of which are considered staples in today's Jamaican cuisine. Africans blended their traditional foods with foods that were already available locally in Jamaica. Some signature dishes of Jamaica, such as ackee and salt fish or Jamaican *rundown*, were invented by African peasants.

Many slaves, unhappy with their harsh conditions, escaped from the plantations and joined the Maroons in the remote mountains of Jamaica. Later, trading in African slaves was declared to be unlawful. The British made into law the Emancipation Act in 1834, and full freedom was granted to the slaves in 1838. After the abolition of slavery, Indians and Chinese were brought to the country by the British as cheap laborers. Just like Africans, these two ethnic groups blended their culinary traditions with food products available in Jamaica and created popular dishes such as curry goat.

In 1962, Jamaica was finally granted its independence from England. The constitution provides for freedom, equality, and justice for all who dwell in the country. Just like the country itself, Jamaican culinary art continues to evolve with its rich history and diversity that Jamaicans are proud of.

Food Culture Snapshot

Natalie and Michael Campbell live in a suburb of Kingston. Natalie is a secretary for a food company,

and Michael works as a sales representative for the same company. Natalie is originally from Port Antonio, a beautiful town located 62 miles (100 kilometers) northeast of Kingston. Michael is a native of Kingston.

They get up early to avoid Kingston's notorious heavy morning traffic. At 6:30 A.M., they eat chicken patties and drink instant coffee with condensed milk. They occasionally eat ackee (an indigenous fruit with a texture and color like scrambled eggs) and salt fish, a typical Jamaican breakfast, with *bammy* (cassava bread). They leave home around 7 A.M. and arrive at their offices around 7:30 A.M. They get fresh coconut juice from a street vendor in front of their office building in New Kingston. Sipping fresh coconut juice is a great way to start their work.

They have a quick lunch at a local cafeteria near their company around noon. Although there are numerous fast-food chains in New Kingston, they prefer to eat traditional Jamaican foods rather than hamburgers and fries. Natalie's favorite is curry goat. Michael likes to have callaloo and salt fish. When they are on the go, they get light meals to go from roadside vendors. For a dessert, they enjoy chewing fresh sugarcane, which is cut into smaller pieces by the street vendor with his sharp machete.

After getting back home, Natalie goes to a local market to buy various food items. At the local market, she buys popular fruits and vegetables including callaloo, *chocho* (chayote), ackee, breadfruit, green bananas, and mangoes. She also realizes that she is almost out of kidney beans, the important ingredient for "rice and peas." There is a new supermarket three bus stops away from their house. Although the supermarket sells some imported foods Natalie has seen in television commercials, Natalie prefers to go to the local market where she can chat with the vendors she knows.

Michael's friend Damian is a Rastafarian from Port Antonio, and he has invited the couple for dinner. Damian doesn't use salt in his *ital* cooking due to his Rastafarian beliefs, which demand that nothing impure or processed be put in his body. Out of his thick clay pot, Damian serves a small fish dish flavored with a large amount of coconut milk and various herbs and spices such as pimento (allspice) and thyme that he grows in his backyard. Callaloo and boiled green banana

are also served with the dish. Damian also serves a sweet herb tea in the beautifully carved calabash bowls his Rastafarian friend made for him. In rural areas such as Port Antonio, people still enjoy cooking foods from scratch.

Major Foodstuffs

Starches

Jamaican dishes almost always consist of some roots, tubers, or starchy fruits such as breadfruit, yams, cassava, plantains, and green bananas. Breadfruit, native to the Pacific Islands, was brought to Jamaica in 1793 by Captain Bligh and was an inexpensive food for slaves. Breadfruits can be roasted or baked. They are often made into puddings. Yams are also popular in Jamaica. There are different types of yams, such as the yellow yam, renta yam, St. Vincent yam, sweet yam, and Tau yam. Cassava is another tuber that was once the Arawaks' staple food. A round, flat bread called bammy is made from grated cassava and can be served with escovitched fish and other dishes. Bananas are eaten ripe or green. Ripe bananas can be eaten raw or grilled. Jamaicans enjoy baked ripe bananas with coconut milk for dessert. Boiled green bananas are often served with meat and fish.

Animal Protein

Chicken is a popular meat in Jamaica. Both locals and tourists enjoy highly seasoned chicken barbecued on a sweltering pimento wood grill over a small pit: jerk chicken! Boston Beach, located in Port Antonio, is considered the birthplace of the spicy jerk seasoning and is known for authentic jerk pork and chicken. Other meats commonly consumed in Jamaica include beef and goat. Curry goat was introduced by the East Indians.

Fish and Shellfish

Fish is also commonly consumed in Jamaica. Codfish, kingfish, blue marlin, and mackerel are popular. Popular fish dishes include ackee and salt fish (salted codfish), mackerel rundown (fish simmered

Proper readying of Jamaican pepper shrimp. (Corel)

in coconut milk with tomatoes, onions, scallion, and pepper), jerk fish, and escoveitched fish, which is a variation of Latin American ceviche, except that the fish is seasoned and fried. Kingfish or snapper is often used for escoveitched fish. Shrimp, lobster, crab, and conch (sea snails) are popular shellfish in Jamaica. They are boiled, frittered, or grilled and are often part of delicious soup dishes.

Plant Sources

Just as in other Caribbean countries, coconut is central to Jamaican food culture, used for many types of dishes. Jamaicans seem to know how to take advantage of every part of the coconut. They enjoy refreshing coconut water that is sold on the street. Coconut milk is used for numerous dishes such as rice and peas, curried goat, and mackerel rundown. Coconut oil is a popular oil that gives foods a nice authentic flavor. Jamaicans make soup out of *copra* (a by-product of coconut). Jamaicans enjoy cooking kidney beans together with rice in coconut milk. The dish is called rice and peas and is often served as a side dish.

Callaloo may mean different things in different countries of the Caribbean. For example, callaloo is a green leafy vegetable stew made with okra in Trinidad and Tobago. Callaloo is quite important in Jamaica, where it refers to a green, leafy, spinach-like vegetable served as a side dish or in dishes. It is also used as a popular filling in patties. Besides its use for dishes, callaloo is also well known for its

ritual and spiritual use. Chocho, also called chayote in some Latin American countries, is a pear-shaped, light green, light-flavored squash and is a nice accompaniment for famous Jamaican dishes such as escoveitched fish.

Jamaicans enjoy many tropical fruits grown on the island. There are fruits unique to Jamaica. Ackee, native to West Africa, is the national fruit of Jamaica and is used to make ackee and salt fish, the Jamaican national dish. Ackee must be harvested, prepared, and cooked properly since raw ackee contains toxins that can be fatal. Because it is illegal to export raw ackee to the United States, canned ackee has become a major export product in Jamaica. Ugli fruit is another fruit unique to Jamaica. It appears to be a cross between a Seville orange, a tangerine, and grapefruit. It is mainly grown in Jamaica and is exported to the United States and Europe. Ugli fruit has a rough, lumpy, greenish-yellow skin and is sweeter than grapefruit.

Spices

Jamaica is a spice island. The culinary history of Jamaica shows that people from different parts of the world, such as Africans, Indians, Chinese, and others, brought their culinary traditions accompanied by their unique use of various spices. Jamaicans enjoy using many kinds of spices including pimento (allspice). Jamaica grows the majority of the world's supply of allspice. Allspice is used for a numerous dishes including jerk dishes. Jerk flavor comes from meat seasoned with pimento placed on top of a grill made of pimento leaves and wood and slowly cooked.

East Indians brought their traditional habits of using many spices for cooking to Jamaica. Curry powder, often a mixture of turmeric, fenugreek, coriander, cumin, anise, and pepper, is used for various curried dishes, such as curried chicken, goat, and shrimp. Ginger, often used in Chinese dishes, is also used for making ginger beer. *Escallion* (a Jamaican culinary herb similar to scallions) and thyme, which grow well in Jamaica, are used together for Jamaican meat dishes. The essence of Jamaican cuisine is the use of herbs such as thyme, according to Norma

Group of spices and other condiments commonly found in Jamaican cooking, including allspice. (Dreamstime)

Shirley, who is often referred to as the Julia Child of the Caribbean. Finally, the Scotch bonnet pepper is one of the hottest varieties in the world and is used for many dishes including jerk dishes.

Coffee

In 1728, Sir Nicholas Lawes, then governor of Jamaica, imported coffee into Jamaica from Martinique, and it was discovered that the island was suitable for growing coffee. Today, blue mountain coffee, cultivated in the area of the Blue Mountains located in the northeastern part of the country, is considered one of the highest-quality coffee crops in the world. Blue mountain coffee is exported to other countries. Many locals drink instant coffee with condensed milk.

Rum

Jamaica produces a great variety of types and flavors of rum, and Jamaican rum is famous for its high quality. The history of rum in Jamaica is closely associated with the nonsweet history of British colonization. In the 17th and 18th centuries, sugar was at the center of the triangle trade: Molasses was produced by African slaves on the Caribbean sugar plantations. Molasses was transported to New England for distillation into rum, which was shipped to Africa in exchange for the slaves. Today, rum is

the spirit of Jamaica. Jamaicans enjoy a shot of rum on different occasions, and no Jamaican Christmas is complete without sorrel made from rum. Sorrel is a punch made with hibiscus and ginger.

Cooking

One of the unique cooking methods native to Jamaica is called jerk. To make jerk, meats are rubbed or marinated with spices such as allspice and Scotch bonnet peppers. The history of jerk has been well documented. Taino, who had inhabited the Greater Antilles in the Caribbean Sea before Columbus's arrival, would build a platform of sticks above a shallow pit of ashes of pimento (allspice) wood and place the meat on the grid and cover it with pimento leaves and seeds to enhance the flavor of allspice.

Jamaicans also use preparation methods commonly found in other parts of the world, such as boiling, roasting, seasoning, drying, baking, and frying. Many stews are specialties in Jamaica. The use of spices and coconut is a unique cooking style in Jamaican cuisine.

The cooking style among Rastafarians is quite different from that of non-Rastafarians in Jamaica. Because of their beliefs that follow the laws of nature, many Rastas avoid foods that contain food additives such as artificial colorants, flavorings, and preservatives, as well as salt. Devout Rastas avoid canned or dried foods and even prohibit the use of metal cooking utensils; instead, clay and wood cooking pots, crockery, and cutlery are used. Ital food, which reflects a natural and healthy way of life, is served as a one-pot stew made without meat, salt, or other preservatives. The stew is often served in carved calabashes accompanied by calabash spoons.

Typical Meals

Breakfast

Jamaicans enjoy a hearty breakfast that consists of a main dish accompanied by delicious side dishes. Ackee and salt fish is a popular breakfast menu. Salt fish is also served with callaloo or okra. Mackerel rundown and escoveitched fish are other breakfast

A round flat bread called bammy is made from grated cassava. Here, it is topped with breaded grouper. (Rui Dias Aidos | Dreamstime.com)

dishes. Codfish fritters can be served for breakfast or as an appetizer. *Bully beef* (a corned beef dish) is also a typical Jamaican breakfast dish.

Dumplings, breadfruit, bananas, potatoes, and yams go well with Jamaican breakfast dishes. Bammy (cassava bread) is a wonderful accompaniment to fish dishes, and rice and peas goes well with any main course.

Among the poorer families, the morning meal frequently consists of just a cup of bush tea prepared by steeping the leaves in hot water. A small portion of carbohydrate-rich foods such as a piece of bread or a little cornmeal porridge may be served along with the tea.

Lunch

The dishes for breakfast can also be served for lunch. However, the most popular Jamaican lunch item would be *patties and coco bread*. Patties, delicious crescent-shaped flaky pies, are Jamaicans' favorite choice for lunch. There are a number of patty shops across the island where patties are made into a sandwich with coco bread, which despite the name is just a sweet soft bread roll that does not contain coconut. In Kingston, one sees a line of people at a patty shop during lunchtime when people want something quick and delicious. There are spicy beef patties, curried chicken patties, and vegetable

patties that contain callaloo and other vegetables. Meat dishes accompanied by rice and peas are other popular lunch items in Jamaica.

Dinner

A variety of dishes are served for dinner. Rice and peas with either chicken or beef are served with some side dishes. Curried chicken, curried shrimp, escoveitched fish, steamed fish, oxtails, stew peas, stew pork, tripe and beans, and cow feet are all popular. Curry goat may be served, but it is mostly reserved for special occasions.

Chicken, rice and peas, raw and cooked vegetables, and a fruit drink are typical Sunday dinner menu items among most Jamaicans. More vegetables are consumed on Sundays than on weekdays. In addition, desserts are consumed on Sundays, mainly potato and cornmeal puddings or ice cream.

Eating Out

Jerk dishes (chicken, pork, fish) are popular, and jerk-dish stands are everywhere. Locals enjoy stands and casual restaurants that serve traditional Jamaican foods. For snacks, patties are one of the most popular food items.

Today, there are numerous fast-food restaurants in Kingston and popular resort areas such as Montego Bay. There are also restaurants that serve international cuisines including Italian, Japanese, and Thai. In addition, there are elegant and innovative Jamaican cuisine restaurants such as those run by Norma Shirley, which are famous for their use of fresh and local ingredients.

Special Occasions

Jamaicans enjoy celebrating various special occasions; curried goat is often served for celebrating a special occasion. *Mannish water* is a spicy goat-head soup that also contains a goat's intestines, green bananas, and a variety of root vegetables like yams or potatoes. Believed to be a tonic, mannish water is often served at wedding receptions.

Christmas Day is a special occasion for many Jamaicans who follow Christian faiths. On Christmas Day common dishes served include chicken, oxtail, curry goat, roast ham, roast beef, and rice and *gungo* peas, which are in season in December. One or two weeks prior to Christmas Day, Jamaicans begin soaking fruits in rum to prepare Jamaican-style Christmas cake, another special food for Christmas. The cake is eaten with sorrel, a popular drink for Jamaicans during the Christmas season. It is made from sorrel sepals (hibiscus), cinnamon, cloves, ginger, sugar, orange peel, and rum. As a favorite Easter dish, *bun* is a spicy bread that is eaten with cheese. Popular fish recipes for Easter include Jamaican escoveitched, fried, and stewed fish.

Nine nights, influenced by African religious and cultural traditions, is an extended wake to give comfort and support to the relatives of the deceased. Fried fish and bammy are served along with 100-proof Jamaican white rum.

Easter Spice Bun

- 2 c brown sugar
- 1 beaten egg
- 1 tbsp butter
- $\frac{3}{4}$ c whole milk
- 3 tsp baking powder
- 1 tsp grated nutmeg
- 1 tsp cinnamon
- Pinch of salt
- 1 tbsp vanilla
- 1 c raisins
- $\frac{1}{2}$ tsp lime juice

Grease a loaf tin and line it with greased paper.

Preheat oven to 350°F for about 15 minutes.

Add sugar to beaten egg, and then add melted butter and milk

Add all dry ingredients, and beat until smooth.

Add vanilla and the fresh raisins to the mix, plus lime juice, and then pour into the lined and greased tin.

Bake for approximately 1 hour.

Glaze

½ c brown sugar

½ c water

Boil water and sugar until thick.

Spread the glaze on the Easter bun, and return to the oven for an additional 5–8 minutes.

If desired, press a few whole cherries into the top of the bun.

Diet and Health

Various medical and belief systems from the indigenous Arawak Indians, African slaves, and Europeans, primarily Spanish and British, have influenced the contemporary Jamaican folk medical system. Indigenous people developed knowledge of medicinal herbs that were available on the island. The Europeans brought the Hippocratic humoral system, based on the idea that the body is regulated by four fluids, blood, phlegm, black bile, and yellow bile, each of which is described as being hot or cold and wet or dry.

During the slavery era, slaves adapted and utilized the concept of obeah, a morally neutral spiritual power, folk magic, or sorcery, which was derived from Central and West African origins. Later, obeah practitioners, yard healers, and bush doctors or herbalists, who normally combine their spiritual and herbal knowledge, became primary healers during the postemancipation era.

Today, most Jamaicans employ both Western biomedical and folk medical systems. Jamaicans attempt to treat an illness first at home using their herbal knowledge or with help from herbalists or bush doctors. Some herbs are linked to the supernatural roles they play in healing. A number of herbs that have been recognized as medicinal are available in Jamaica. “Duppy” (spirit) coconut, “duppy cherry,” and “duppy cotton” are some examples of herbs that are related to spirits. If the home remedy is not effective, Jamaicans go to the biomedical doctor that practices Western medicine. If this does

not work, some of them ask spiritual practitioners for help or use both biomedical and folk medicine concurrently. Physicians and patients often have different concepts about causes of illness, symptoms, treatment, and lifestyle factors such as diet, which often creates miscommunication.

Besides the use of plants to prevent or treat illnesses, Jamaicans perceive that diet is associated with their health. The Rastafarians are a group of people who generally follow strict guidelines regarding diet. Eating pork and crustaceans is universally prohibited among Rastas. They also tend to be vegetarians and avoid eating other meats such as beef, chicken, and goat. Many Rastas also avoid consuming fish with no scales or large fish, which are perceived to have more developed souls. Most Rastas believe in not killing other creatures and, therefore, prefer a vegan lifestyle, which is referred to as ital, meaning a natural and healthy way of life. Because of their adherence to nature and their belief that their bodies are the temple of the living God, most Rastas also avoid processed foods, which are not ital and pollute their bodies. The use of any added salt is discouraged among Rastafarians.

Because Rastafarians believe in nature’s magical healing properties, they rely on herbs and trees instead of pharmaceuticals. Religious healers called Rasta doctors practice in their “balm” yard, an herbal healing garden where the doctors practice their magic, utilizing different herbs as nature (herbs) provides remedy to any illness.

Obesity has become a major public health issue in many developed and developing countries including Jamaica. Diet has been identified as a major factor associated with onset of obesity in those countries. Recent studies have demonstrated that increased fiber intakes in women, as well as increased vegetable consumption in both genders, were associated with a lower body mass index, indicating that promoting a traditional food culture that emphasizes the consumption of fiber-rich vegetables, fruits, and grains may be important to prevent obesity and noncommunicable diseases in Jamaica. At the same time, child undernutrition, especially stunting, is still a public health issue in Jamaica. Researchers in Jamaica recently revealed that stunting

was associated with poor psychological functioning in late adolescence. Just like other middle-income countries, Jamaica is experiencing the coexistence of under- and overnutrition, and globalization and lifestyle changes appear to play an important role in Jamaica's nutrition transition.

Martinique and Guadeloupe

Overview

Martinique and Guadeloupe are two of France's four overseas departments (the other two are French Guiana, on the mainland of South America, and Réunion, an island in the Indian Ocean). Martinique and Guadeloupe are thus fully French territories that fly the French flag, and their inhabitants are French citizens who speak French and Creole. Both are islands in the Caribbean Sea, part of the Lesser Antilles island chain located to the east of Puerto Rico, Hispaniola (Haiti and the Dominican Republic), Jamaica, and Cuba. Martinique is a single island with an area of 417 square miles and a population of 399,000. Guadeloupe is considered an archipelago. The two main islands, Grande-Terre and Basse-Terre, resemble a single butterfly-shaped island whose sections are divided by a narrow sea channel called la Rivière Salée. The other smaller islands of the Guadeloupe archipelago are Désirade, the Saintes, Marie-Galante, Saint Martin, and Saint Barthélemy. All together, the Guadeloupe archipelago has an area of 687 square miles and a population of 458,000. Martinique and the main islands of Guadeloupe are separated from each other in the Lesser Antilles chain by the island of Dominica.

The two islands were home to Arawak and Carib populations who were largely killed or chased off the islands by the French, who first settled there in the 17th century. The islands supported tobacco and then sugar and indigo plantations through the period of slavery (1635–1848) and later. Export agriculture based on crops and products such as bananas, sugar, and rum is still a major sector of the economy of both islands. The current inhabitants (Martiniquais

and Guadeloupians) are the mixed descendants of native Caribs and Arawaks, small numbers of original French settlers, much larger numbers of African slaves brought by the French to work the plantations, Indian and Chinese indentured laborers who were brought in the 19th century for the same reason, and other European, Carib, and African mixed peoples of neighboring Caribbean islands and the American mainlands. The culinary practices of Martinique and Guadeloupe's inhabitants thus reflect the tropical Caribbean geography of the islands themselves and this colonial global history that resulted in the transplantation of both people and foodstuffs. For instance, French supermarkets selling metropolitan French dietary staples are common on the islands, where open-air market vendors also sell a mix of local foodstuffs, *local* in this case meaning both native crops and those imported across oceans long ago to feed both captive and free populations. Through this mix, the culinary cultures of Martinique and Guadeloupe contribute in clearly identifiable ways to the vast panoply of cuisines of the African diaspora.

Food Culture Snapshot

Odile and Maximilien Chivallon live in central Fort-de-France, the capital of Martinique since 1902 when Mount Pélée erupted, destroying the historical capital of Saint Pierre. Odile, who grew up in Gosier, a small town close to Point-à-Pitre, Guadeloupe, is an account advisor at the local branch of BNP Paribas, a major French bank, and Maximilien, who was raised in a Martiniquais family in Seine-Saint Denis, a suburb of Paris,

is an archivist with the Archives départementales de la Martinique, located in Schœlcher, a short distance from Fort-de-France. Both start the day with typically small breakfasts: Maximilien has the remainder of a coconut cake that Odile prepared the week before, accompanied by strong black espresso coffee with sugar, and Odile has the same coffee at home before she leaves and then picks up a *pain au chocolat* (chocolate-filled pastry), croissant, or other pastry (*viennoiserie*) at a bakery close to her workplace.

When working, both Odile and Maximilien often buy lunch from nearby bakeries: sandwiches such as baguettes filled with flaked dried cod, grated carrot, and sliced tomatoes, dressed with a mustard-based vinaigrette, or perhaps two or more *petits pâtés salés*, small, savory wheat-flour pastries stuffed with spicy pork, chicken, or crab fillings, or with guava or other fruit fillings for dessert. Both finish their lunches with more espresso coffee. More substantial evening meals at home, featuring dishes such as lentils with marinated salt cod, or octopus fricassée, both served with plantain or pumpkin or both, are eaten at 8:30 P.M. or later.

When buying food to prepare at home, Odile and Maximilien shop at open-air markets, large supermarkets, and neighborhood grocery stores. Open-air markets such as the Lafcadio Hearn market in Fort-de-France are ideal and inexpensive sources for coconuts, fruit, many varieties of bananas and plantains, ginger and other spices, peppers, and a large range of locally grown tubers. In large supermarkets, Odile and Maximilien can find many products imported from France: canned vegetables (beans, peas, carrots, soups), cheeses, yogurt, butter, other dairy items, biscuits and cookies, dried sausages, canned fish, lentils, rice, and pasta. Supermarkets also have fresh meat sections selling a variety of both imported and local meat. As well as selling convenience food such as canned goods, smaller neighborhood grocery stores often carry a range of local manufactured products such as coffee, dried cod and other fish, fruit juices, and sugar syrups.

Major Foodstuffs

The dietary staples of Martinique and Guadeloupe, like those of many of the other Caribbean islands,

are the extensive range of local tubers and roots that have supported populations since before the arrival of Europeans in the 15th century; although the two islands share similar histories and tropical climates and ecosystems, the names of some crops differ. These crops provide the essential carbohydrate base for the dietary regimes that developed historically and that have adapted to the significant transformations brought about by French colonization and settlement over the last five centuries. The historically dominant tuber is manioc, of which there are two main types: The larger bitter manioc is intensively processed to produce a range of edible goods: a thick starch used for baby food and as a thickener for soups and stews, a coarse meal that can be cooked like rice, a finer meal that can be sprinkled on top of other dishes, and the flour that is the base of cassava bread, one of the region's best-known specialties. The smaller sweet manioc (*kanmanioc* in Guadeloupe), which needs no processing other than peeling, is simply chopped and boiled in salted water and then eaten as an accompaniment to main dishes.

Other important tubers include the many varieties of yam (*igname*; both native American varieties such as *couscouche* and the African varieties that had served as provisions for slave ships during the Middle Passage); sweet potatoes (*patate* or *patate douce*); taro, originally from Asia (*madère* in Guadeloupe from its transatlantic associations with the island of Madeira, and *dachine* in Martinique, literally meaning “from China”); malanga (*chou caraïbe*), whose leaves are eaten as well as its roots; and Jerusalem artichokes (*topinambours*).

Legumes such as beans and peas also play a vital role in the carbohydrate complex of Martinique and Guadeloupe, much as they do in other African diasporic cuisines. Again there is a vibrant mix of local varieties such as *pois-savon* (a kind of butter bean), lima beans, red kidney beans (*haricots rouges*), and peanuts (*cacahuète*, from the Aztec *cocohuat*), in addition to African varieties such as pigeon peas (*pois d'Angole*) and black-eyed peas (*pois de canne* in Guadeloupe and *pois-chique* in Martinique). In addition, this carbohydrate base includes foodstuffs technically classified as fruits, such as the

many types of banana (starchy green and sweeter yellow ones) and plantains, as well as breadfruit (*fruit à pain*) with its edible seeds, *chataigne-pays*, or “local chestnuts.” Although cultivated and eaten, rice and maize are less significant on the islands than on the mainlands of the Americas.

Other vegetables eaten widely on the islands are okra (*gombo*), onions and garlic, a wide range of peppers (*piments*), squashes such as *christophine* (chayote) and *giraumon*, and a plethora of leafy green vegetables, often derived from the tubers already described and other local plants, as well as those imported from Europe during the first generations of colonial settlement, such as lettuce and sorrel (*oseille*). These leaves are often cooked together in a kind of stew known as *calalou*, a name that also refers to a specific plant whose leaves are typically used in its preparation. Herbs and spices such as thyme, cinnamon, allspice (both leaves and berries), and vanilla are grown locally and used widely. The best-known French Caribbean spice mix is Colombo powder, also associated with Réunion, the French overseas department in the Indian Ocean, and it contains *curcuma* (turmeric), cumin, coriander, fenugreek, pepper, cloves, mustard, and ginger; cardamom, saffron, fennel seed, and anise are other spices that can be added. This spice mix is directly related to the Indian populations of the islands, particularly on Guadeloupe, and it is used in the preparation of several classic dishes such as *colombo au poulet* (stewed chicken with Colombo powder) or *riz jaune* (yellow rice).

Like other Caribbean islands, Martinique and Guadeloupe are home to a vast number of fruit trees and plants. Here again are local or mainland American fruits such as pineapples, several types of guavas, papayas, apricots, avocados, passion fruit (*maracuja*), star apples (*caïmite*) and sugar apples (*pomme cannelle*), the purple *mombin* (*prune-chili*), sea grapes (*raisins bord-de-mer*), and sapodillas (*sapotille*) growing today next to nonnative varieties. Fruits imported across the Atlantic or Pacific oceans from the colonial period on include the bananas, plantains, and breadfruit already mentioned, as well as mangoes, figs, jackfruit, and, importantly, the many varieties of citrus fruits now growing there,

including grapefruit, lemons, limes, pomelos, and sour oranges, first introduced to the Caribbean by Columbus in 1493.

The native Arawak and Carib diets of Martinique and Guadeloupe traditionally supplemented this array of tubers, other vegetables, and fruit with the mollusks, crustaceans, fish, and other seafood that are abundant in the Caribbean Sea, and this is still the case today. Widely consumed shellfish include sea urchins (*oursin*) with their eggs (*chadron*), conch (*lambi*), clams (*palourdes*), shrimp of various sizes (*z’habitant* and *ouassou*), langoustine, and small octopus called *chatou*. A wide range of fresh fish also makes its way into common dishes: Well-known types include red snapper (*vivaneau* or *poisson rouge*), sea bream (*daurade*), shark (*requin*), and,

Vendor at the fruit market in Fort-de-France, Martinique. (Corel)

especially in Martinique, the flying fish (*poisson volant*) and king mackerel (*thazard*). Lesser-known fresh fish such as *coffre* and *balaou* are caught by artisanal or small-scale fishermen and are difficult to find in large markets. In the realm of seafood, colonial history also lives in the present day, here in the form of dried cod, which is a ubiquitous filling for sandwiches and other savory baked goods and can appear as a main dish as well. This cod originated in the North Atlantic fishery off of Newfoundland and in the Gulf of the Saint Lawrence, first developed by the British and the French in the 17th century, largely to feed their slave populations in the West Indies.

Although large quantities of meat and poultry are imported, there are also local sources that provide the basis of several Martiniquais and Guadeloupian specialties, beef cattle, goats, and pigs all having been introduced to the islands by the Spanish. Goats, in particular, are raised on a small scale, and goat meat (*cabri*) is found in many stews and fricassees and is eaten in dried form (*cabri salé*). Pigs are also raised on a relatively small scale, making local pork available today, *cochon créole* being particularly prized in Guadeloupe. Pig tails, trotters, blood (in boudin), and offal such as tripe make up a substantial portion of pork consumption, and there is a well-established tradition of sausage and ham production (*charcuterie*). Although the great majority of beef consumed on the islands is imported, beef cattle are raised on Guadeloupe (*bovin créole*) and are used in stews and roasts; the Martiniquais specialty *peau saignée* is made from frying or slowly simmering a dice of the flesh and skin of the cow's head.

Cooking

There is a range of typical ways of preparing dishes on Martinique and Guadeloupe. Both islands have long traditions of baking, beginning with cassava bread, which depended on the processing of bitter manioc in order to rid the tuber of its poisons. The traditional labor-intensive process that the French and Africans learned from the Arawaks and Caribs involves peeling, soaking, and grating the tuber,

after which the grated mass is pressed, then dried and sifted. Liquid and other products including starch and flavorings are added to the meal, which is then formed into cakes and roasted in metal vessels placed over a fire. The process of drying grated pulp to produce flours that then serve as the base of baked goods is common to other tubers, roots, and fruit as well; examples include sweet potatoes, yams, coconuts, and bananas. These manufactured flours are available in local grocery stores. The ubiquity of refined and unrefined sugar, sugar syrups, and rum and the deeply rooted French baking traditions—evident in the many *boulangeries* and *pâtisseries* (bakeries selling bread and pastry)—have also contributed to the large assortment of sweet and savory baked goods available on the two islands. As well as the baguettes and *flûtes* familiar to all Frenchmen and Frenchwomen, local specialties such as *zacharie*, *pain au beurre*, *galette moussache*, and *jalousies* abound. Also, because of the easy availability of local fruits and their involvement in sugar production, the islands have a long history of candy and jam making (*confiserie*).

One-pot cooking is very common on Martinique and Guadeloupe: Main dishes are often rich stews or fricassees in which onions, garlic, aromatics, and seasonings such as peppers are added to the pieces of meat and often vegetables, which are then cooked together for a long time in stock or water, producing a gravy. Sometimes the meat has been marinated beforehand to tenderize it: In Martinique and Guadeloupe these marinades almost always include lime or lemon juice, peppers (*piments*), and thyme. This stew or fricassée is commonly accompanied by what can be a surprising amount of quite bland carbohydrates: Small quantities of plain boiled yam, plantain, banana, breadfruit, and taro can be found on the same plate as a small portion of pasta and cheese and/or rice and peas.

Another important method of cooking is deep-frying, which is used in preparing the wide array of fritters and croquettes available on the islands. The most well known are *accras de morue*, small deep-fried battered salt cod fritters, often spiced with Scotch bonnet peppers, but *accras* in general can be based on any other seafood or vegetable such

Accras de morue, small deep-fried battered salt cod, spiced with Scotch bonnet peppers. (StockPhotoPro)

as giraumon or taro. Unlike the rice-based accra found elsewhere in African diasporic and French New World cuisines, such as those traditionally prepared in New Orleans, on Martinique and Guadeloupe, the batter is made from wheat flour.

Soups also play a vital role in the cuisines of Martinique and Guadeloupe: There are a number of widely known bean soups—*soupe z'habitants* and *soupe à congo*—in which local beans are cooked in combination with a large quantity of other vegetables (giraumon—a kind of squash, sweet potatoes, yams), seasonings, and sometimes meat. Calalou, another dish common throughout the African diaspora, is made of a large quantity of different leafy green vegetables, four or five or more varieties. These greens are often the tops of tubers and roots eaten separately; the greens are cooked in water, often in combination with a small quantity of lard or smoked ham, garlic, piments and other seasonings, and okra.

Typical Meals

The structure and frequency of meals in contemporary Martinique and Guadeloupe resemble those in metropolitan France, particularly for middle-class and urban residents. Most people begin the day with a light breakfast, often of baked goods such as coconut or banana cake, if not packaged cereal,

followed by strong coffee. Indeed, breakfast often takes the form of a pastry bought at a local bakery. However, much heartier breakfasts based on local foodstuffs were traditionally consumed in the past by agricultural workers: One classic example is *ti-nain morue*, a dish in which small, starchy green bananas are stewed with soaked salt cod and seasonings such as garlic, lemons, and cloves; toasted manioc meal is often sprinkled on top. A traditional breakfast beverage would be coconut water (*dlo coco* in Creole), considered to have a very high vitamin and mineral content; or a tea called *té péyi* (“country tea” in Creole) made from infusing the bark and leaves of a local tree (*Capraria biflora*) in hot water.

Lunch and dinner meals are often based on a one-pot stewed or fricasseed dish accompanied by a selection of boiled tubers such as yams, breadfruit, plantain, and rice and peas. In recent generations pasta such as macaroni cooked in a cheese sauce and then cut into squares formed another common accompaniment to main dishes.

Blaff de Poisson Blancs (Fish Blaff)

Blaff de poisson blancs, a dish common to both islands, is cooked in another style: It is fish poached in a classic French court bouillon although the dish itself is associated with early Dutch settlers to the Caribbean. The word *blaff* derives from the sound that the fish apparently makes as it is lowered into the poaching liquid. This dish is traditionally accompanied by a selection of boiled yam, breadfruit, sweet potatoes, taro, and so on.

2 to 3 lb firm-fleshed white fish (such as swordfish, sea bream, or king mackerel), scaled, gutted, and cleaned; they may be left whole if small or cut into thick slices if large

4 limes

4 garlic cloves

1 allspice leaf (or bay leaf)

1 Scotch bonnet pepper, chopped finely after removing the seeds and inner veins (use latex or other kitchen gloves and pay special attention to not touch your face or eyes after preparing)

1 French yellow onion (regular cooking onion), diced

3 local onions (these resemble American shallots; use French shallots—*échalotes*—if not available), chopped

1 bouquet garni (a sprig of thyme, an allspice or bay leaf, and 3 sprigs of flat-leaf parsley tied in cheesecloth)

1 tbs neutral vegetable oil such as grape seed

3 sprigs flat-leaf parsley, finely chopped

Salt and pepper to taste

Limes and Scotch bonnet peppers, for garnish and/or consumption

1. Rub the fish, or slices of fish, with the cut halves of one of the limes, paying special attention to the insides of the fish if left whole. If the whole fish are thick, make small slices at regular intervals so that the seasoning penetrates. Place fish in a shallow dish with the juice of 3 limes (including the one you have already sliced), one minced garlic clove, the allspice or bay leaf (roughly crushed), the diced Scotch bonnet pepper, and salt and pepper. Add a little water until just covered, and let marinate in the refrigerator for 1–2 hours.

2. Ten minutes before the end of the marinating time, prepare the court bouillon by bringing all of the onion (both types if available), 2 crushed garlic cloves, the bouquet garni, salt (in Guadeloupe the blaff is always very salty), and pepper to a boil in a large stew pot or Dutch oven in 1½ quarts of water. Simmer for 10 minutes on a medium flame.

3. Remove the fish from their marinade, drain them, and immerse them in the court bouillon, putting in the largest whole fish or fish slices first. Bring the court bouillon back to a boil, and let simmer for 5 to 15 minutes, depending on the type and size of the fish. Remove the fish or fish slices as soon as they are cooked through, and keep warm.

4. Place all of the poached fish on a large shallow plate. Discard the bouquet garni from the court bouillon. Mash the remaining garlic clove with the tablespoon of oil, the juice of the last lime, and the chopped parsley. Add this mixture to the

court bouillon, and when all is well blended, pour the court bouillon over the poached fish so as to present it bathed in its cooking liquid. On a separate plate, arrange quartered limes and peppers for presentation (and consumption for those who wish).

The evening meal in contemporary Martinique and Guadeloupe often begins with an aperitif (before-dinner drink), in the French style, served with a selection of small appetizers such as spicy fritters, croquettes, small crepes, or puffs made from a variety of vegetables such as sweet potatoes or from seafood such as salt cod or crab. The most common aperitif on the islands is *ti'punch* (“small punch”), a cocktail made of sugar syrup, sections of lime, and rum, with the proportion of syrup to rum ranging from 1:3 to 1:8. Purists prefer the cocktail without ice cubes, but it is often served with them as well. A large variety of sugar syrups are available, ranging from dark ones that can resemble molasses in taste and appearance (*sirop de batterie*) to syrups that are clearer in color and lighter in taste (*sirops de canne à sucre*). There is an even larger range in the varieties of rum available: Rum is one of the most important exports of both islands, and there are many *rhummeries* producing rums of differing tastes, ages, and qualities. The two main categories of rum are *rhum agricole*, a more artisanal product distilled directly from the fermented liquid of the crushed sugarcane; and *rhum industriel*, a larger-scale product distilled from the fermented molasses, a by-product of the refining of sugar. As well as these two categories, rum is also distinguished by the number of years it has been aged, ranging from 3 to 15 years, or even older, and the French system of *appellation d'origine contrôlée* is in place for rum from Martinique and Guadeloupe, restricting the use of names, geographic identifiers, and manufacturing terms according to strictly regulated criteria.

Féroce D'avocat

Féroce d'avocat, a spicy avocado and salt cod dish, is a common appetizer served with the aperitif.

Serves 4

Step 1: *Morue en Chiquetaille* (Shredded Codfish)

1 lb dried salt cod (choose a piece that is as thick as possible and preferably from the tail)

1 French yellow onion (regular cooking onion), finely diced

3 local onions (these resemble American shallots; use French shallots—*échalotes*—if not available), finely diced

2 cloves garlic, finely diced

2 sprigs flat-leaf parsley, finely chopped

2 sprigs thyme, leaves removed and stems discarded

1 Scotch bonnet pepper, chopped finely after removing the seeds and inner veins (use latex or other kitchen gloves and pay special attention to not touch your face or eyes after preparing)

Juice of 2 limes

5 tbsp neutral vegetable oil

1. Scrape the cod before soaking in order to remove as much surface salt as possible. Cut into strips and grill directly over a gas flame, browning the strips lightly. Then place cod strips in a bowl, cover generously with cold water, and soak for 1 hour. Drain them carefully and shred the strips as finely as possible, making sure to remove all the skin and fine bones you find.

2. Place the shredded cod in a salad bowl with the aromatics (onions, garlic, parsley, thyme, pepper). Mix carefully to fully combine all ingredients, sprinkle with the lime juice, and then slowly add the vegetable oil. Let marinate for at least 2 hours

Step 2: *Féroce D'avocat*

2 large ripe avocados

1 Scotch bonnet pepper, prepared as in Step 1 (optional: this will make the dish extremely spicy)

$\frac{3}{4}$ c cassava (manioc) meal

Salt and pepper

1. Slice avocados lengthways, remove the pit, and scoop out the flesh, keeping the skins intact and putting aside. Mash the avocado flesh, and add the *morue en chiquetaille* and the second Scotch bonnet pepper, if desired, combining until you obtain a smooth texture.

2. Add the cassava meal and combine again. Taste for salt and pepper, and mound the mixture into the avocado skins for presentation. Another common method of presentation is to shape the mixture into small balls and place on a plate.

Eating Out

There are many options for eating outside of the home on Martinique and Guadeloupe. Traditionally, there has been a wide selection of casual eating establishments in the marketplaces of towns and urban centers; these serve stews, fricassees, boiled roots, rice and peas, fresh fruit juices, and baked goods, alone or in combination, particularly at lunchtime. These eateries are often partially or wholly out of doors. In addition, there are many indoor cafés and casual restaurants that serve similar dishes away from marketplaces during the daytime; some combine them with extensive baking facilities. Full bakeries are a well-established institution on the islands. In addition to selling French breads, cakes, pies, and pastries, they prepare sandwiches for lunchtime crowds. All of these places typically close in the evening.

Tourism is an extremely important sector in the economies of Martinique and Guadeloupe, with many metropolitan French visitors owning second homes on the islands and spending their annual vacations there. Their presence and that of other international tourists have encouraged the development of a range of mid- and upscale restaurants that cater to them in towns, cities, and resorts and on beachfronts throughout the day, but especially for evening meals. The growing number of middle-class Martiniquais and Guadeloupian are also clients for these businesses. Many of these restaurants, and the network of formally trained chefs who invest and work in them, consciously offer dishes with

A bakery van filled with bread on the streets of Le Diamant, Martinique. (Philip Gould | Corbis)

traditional touches reflecting the islands' creolized history and in this way support the blossoming of a *cuisine antillaise* that is continuing to gain in popularity and recognition.

The large fast-food chains such as McDonalds, Kentucky Fried Chicken, Pizza Hut, and Quick (a French hamburger restaurant) have not implanted themselves on Martinique and Guadeloupe as they have in metropolitan France, although there is a Hippopotamus (a French fast-food chain) on each island. Nevertheless, there are local versions of fast-food restaurants in most urban centers on both islands that are open in the evening. These establishments sell a combination of Western fast food that has both Caribbean and French touches: French fries (*frites*), grilled brochettes of conch and other seafood, pizza, hamburgers and other hot sandwiches, and couscous.

Special Occasions

Festivals and other special occasions, often linked to harvests or the Catholic calendar, are celebrated on Martinique and Guadeloupe with special foods or food rituals. One of the most important is Christmas, which is celebrated with a *réveillon* (Christmas Eve party) before going to midnight mass on December 24. Three traditional foods commonly eaten as appetizers at this party are small, spicy blood sausages (*boudin*), savory stuffed pastries (*petits pâtés salés*), and Christmas ham (*jambon de Noël*). All three make extensive use of pork: Boudin is prepared from pork blood, seasonings, manioc, sweet potato meal or breadcrumbs, and lime juice, which are stuffed into casings after being cooked together and the casings are tied off with string at four-inch intervals. The strings of boudin are then boiled until

cooked through. Cooks jealously guard their recipes for boudin as there can be much variation in the ingredients, particularly in the seasonings. Petits pâtés salés make use of spiced chopped pork filet, which is seasoned, covered with classic French *pâté brisée* (short crust pastry), and then shaped into two-inch rounds before being baked. The majestic Christmas ham is characterized by its large size, 10–15 pounds on the bone, by its time-consuming preparation, and by its reddish sugar glaze, which was traditionally enhanced by the application of a clothes iron to the outside after the cooking.

One of the most important food-related festivals on the two islands is the long-standing annual Fête des Cuisinières (Festival of the Women’s Cooking Association) on Guadeloupe. This event takes place in mid-August in honor of Saint-Pierre, the patron saint of the organization, and entails a parade in Point-à-Pitre, the capital, led by the 250 or so members of the Women’s Cooking Association dressed in traditional skirts, scarves, and headdresses. The parade finishes with a celebratory lunch of local specialties for all participants.

There are also local agricultural or seafood festivals on both islands that celebrate and highlight specialties, such as the Fête du poisson et de la mer (Festival of Fishing and the Sea) on Guadeloupe in late April or early May, and the Semaine Gastronomique de Sainte-Marie (Week of Gastronomy in Saint Marie) on Martinique at the end of April, which provides culinary histories and recipes for traditional Caribbean foodstuffs such as yams, pineapple, coconut, and squashes.

Diet and Health

For French citizens residing in the overseas departments of Martinique, Guadeloupe, and French Guiana, life expectancy has continued to rise during the 2000s so that it now matches that of metropolitan France: 77 years for men and 84 years for women in 2005. This rise in life expectancy is almost entirely due to a decrease in infant mortality. In terms of health, high blood pressure, cancer, and cardiovascular disease are the most important threats to

life expectancy on the islands, as they are in metropolitan France and in the West, generally. One enormous difference in the health of metropolitan and overseas French citizens is caused by endocrinal diseases, which kill at double the rate on Guadeloupe, Martinique, and French Guiana compared to the metropole. All of these pathologies are linked to diet, and endocrinal disease in particular is connected to type 2 or sugar diabetes, which can develop in those whose diets feature too much starchy and sweet food. Diabetes affects women in the overseas departments at a higher rate than men.

The rates and nature of alcohol-related problems also differ between the metropole and the islands. While alcoholic psychosis kills at a higher rate overseas, cirrhosis of the liver kills at a lower rate, with Guadeloupe being the island most affected by all alcoholic disorders. The reason for this discrepancy lies in the type of alcohol consumed: rum on the islands and wine in the metropole. These statistics notwithstanding, female alcoholism is lower on Martinique and French Guiana than in the metropole.

While health is assessed and medical care is provided on the islands in institutionally similar ways to metropolitan France, there exists nonetheless in the French Antilles an extensive body of folk remedies that rely on local plants for the production of botanical tonics (*rimèd raziè*). Considered part of the legacy of slaves’ knowledge of healing, this body of knowledge is currently experiencing a renewal of interest. On Guadeloupe, for example, the Association pour la promotion et le développement des plantes médicinales et aromatiques de Guadeloupe (Association for the Promotion and Development of Medicinal and Aromatic Plants of Guadeloupe) has inventoried 625 varieties of medicinal plants that can be used to create remedies. While some of these remedies are familiar to all localities where the particular plant grows—for instance, using cloves to soothe toothaches—there are many specific to the islands. Examples include a flower called *atoumo* in Creole (“against all evils”), whose petals in combination with rum and honey are considered to bring down fevers; the bark of the red gum tree (*gommier rouge*) macerated with allspice berries in rum, which is thought to soothe rheumatism; and a bath

containing the leaves of the sugar apple (*pomme cannelle*), which is reported to lift fatigue.

Mexico

Overview

The Republic of Mexico forms part of the North American continent; nonetheless, culturally and linguistically, it has greater affinity with Latin America. Some consider it part of Central America, which includes Guatemala, Belize, Honduras, Nicaragua, and Panama. Mountains form the backbone of the country and divide it into three geographic precincts: a central highland located in south-central Mexico, a southern highland in southern Mexico, and a southeastern highland in the southeastern part of the country. Economically and politically, the most important of these precincts throughout history has always been the central highland, where Mexico City is located at 7,000 feet above sea level. Throughout history the country has always been controlled from some seat of power in the central highland.

The population of Mexico is over 100 million, divided into 30 states. Catholicism is the predominant religion, making up 87 percent of the population, while Protestant evangelical groups form 7 percent of the population, with other religions making up the remainder. Geography plays an important role in determining the diet of Mexicans. The country occupies an area of 2,000 miles from north to south, with diverse plant and animal life, which is reflected in the food traditions of the various regions. Gastronomically, the country can be divided into six regional areas, based on local food traditions: northern Mexico, the Pacific Coast, western Mexico, central Mexico, the isthmus of Tehuantepec, and the Maya area.

The Mexican diet has a common substratum throughout the country, based on corn, beans, and chili peppers. There are many ways of preparing corn, different varieties and methods of preparing beans, and a great diversity of chili peppers and sauces that are popular in each region. Mexico produces a plenitude of fresh fruits and vegetables, whose preparation is also regional.

Food Culture Snapshot

Felipe and Aurora Urrutia live in an apartment in a middle-class neighborhood of Mexico City, known as La Irrigacion. Felipe is an engineer from Celaya, Guanajuato, and works at Teléfonos de Mexico. Aurora is from Guadalajara, Jalisco, and works in the accounting department of a local department store, El Palacio de Hierro. Their combined incomes allow them to live a comfortable life, without luxuries, but after the bills are paid, there is little money to save toward the purchase of their own home or for starting a family.

Their diet is simple Mexican and international-style food. They seldom eat out at good restaurants, because of the extra expense. Like most immigrants to Mexico City, they rely on friends, rather than family, for their social contacts. To save time, Aurora purchases nearly all of their food products at a nearby supermarket.

A typical day's food consumption for the Urrutias is as follows: Their day begins at about 6 in the morning with a cup of strong, black coffee to wake them up. This may be followed by a sweet roll, *pan dulce*, if there is time. Around 10 A.M., during their morning coffee

break, they consume an *almuerzo*, or small breakfast, which Felipe buys from a street vendor and Aurora purchases at her place of work. This small meal may consist of juice or fresh fruit, along with any of the following: eggs, meat, beans, *chilaquiles* (a tortilla-based dish), tortillas, chili sauce, and coffee. Mexican sweet rolls are a favorite for this time of day.

The most important meal of the day is served in midafternoon, anytime between 2 and 4 P.M. Felipe and Aurora generally do not have enough time to go home on their lunch hours, so Aurora usually takes a hard-roll sandwich, called a *torta*, and a salad or leftovers from the previous night's dinner, which she can warm up in the microwave oven in her office. Pizzas are a popular take-out food for lunch. Felipe generally eats in a *fonda*, an inexpensive restaurant with a fixed menu that caters to office workers, or he may choose to resort to street vendors to sell him tacos or other fast food from a mobile street cart.

Felipe and Aurora eat a more substantial dinner than do middle-class people who have a heavy meal at midday. Their evening meal, served around 9 P.M., may consist of meat and a salad, tacos and beans, *enchiladas*, or tortilla-based dishes, such as *sopes*, *tlacoyos*, or *panuchos* (these are snacks but quite filling). Those who have a heavy meal at midday may prefer a light meal, or *merienda*, at night. This may consist of any of the following: soup, fruit, sweet bread, or tamales. A more ample dinner, or *cena*, may be shared with friends or family on more formal occasions.

During the past 50 years, supermarkets have become a favorite shopping center for housewives, who previously had to shop at several small specialty stores or buy at open-air markets. Today's supermarkets sell freshly baked breads, newly made tortillas, fruits and vegetables, and all products needed for cooking a complete meal. Large fruit and vegetable markets are still frequented by many housewives who have the time to shop there. Shopping at supermarkets saves valuable time.

Major Foodstuffs

The most important food product in Mexico is corn. Many Mexicans eat corn or maize products at every meal in a variety of ways and as snacks between

meals as well. It makes up over 50 percent of the caloric intake of middle-class Mexicans and up to 80 percent of the indigenous diet. There are many ways of preparing corn. It can be boiled, toasted, roasted, ground into a fine corn flour, or used as whole kernels and added to a variety of stews. The most common use of corn in present-day Mexico is in the form of tortillas and tamales.

Fresh corn can be purchased year-round; it dries well and can be ground into cornmeal for making tortillas, tamales, and *atoles* (corn-based drinks). Mexican housewives can buy cornmeal to make their own tortillas or purchase ready-made tortillas at the supermarket or the *tortillería* (tortilla shop). Tortillas must be made every day, since they do not keep well overnight. Women in urban Mexico City are not willing to spend the necessary hours grinding corn to make handmade tortillas, although some purchase ready-prepared masa and make tortillas for special occasions. The corn gruel *atole* can be purchased in the supermarket as a semiprepared product. Corn tortillas are preferred in central and southern Mexico, while wheat-flour tortillas are popular in northern Mexico.

Beans have been an important ingredient in the Mexican diet throughout history. They are a good complement to corn in the diet and contain the amino acids lacking in corn. When consumed together, corn and beans provide the necessary protein requirements for a healthy diet. There are more than

Authentic Mexican dish of tamales with red peppers and pinto beans. (Shutterstock)

20 varieties of beans on the Mexican market; these are commonly known to the public by the color of their seeds, their shapes, or the region where they are grown. Beans are sold in a variety of colors, such as black, pink, white, and beige (*bayo*). Spotted (*pinto*) and mottled (*moteado*) beans are also distinguished, as are particular shapes, such as goat's-eye beans and peanut-shaped beans. Quick-cooking beans called *instantaneos* have become popular in recent decades. They are easily and quickly prepared by adding a small amount of water to the ground beans and frying them as refried beans. Beans are consumed daily by a majority of the Mexican population at any or all of the three meals.

Vitamins and minerals are provided by a variety of fruits and vegetables, some native to the country and others of European origin. Tomatoes, squash, onions, chili peppers, and tomatillos are the most consumed vegetables in the diet. A pear-shaped member of the squash family, called a chayote, is popular, as are cactus paddles, known as *nopales*. Avocados and jicamas, a tuber with white flesh and a radishlike texture, often eaten as a snack or in salads, are other vegetables native to Mexico that have been part of the Mexican diet since pre-Hispanic times. When the Spaniards arrived in the 16th century, they introduced vegetables from the Mediterranean area such as carrots, lettuce, cabbages, onions, garlic, cauliflower, broccoli, eggplant, radishes, okra, spinach, and many other vegetables that have become part of the Mexican diet over the years.

Citrus fruits play an important role in the Mexican food tradition. Sweet and sour oranges, grapefruit, tangerines, sweet and sour lemons, and limes arrived in Mexico soon after the Spanish conquest and adapted easily to the Mexican soil and climate. Many other fruits were brought to Mexico from other parts of the world. Apples, pears, cherries, mangoes, grapes, strawberries, plums, peaches, bananas, melons, and watermelons all arrived in the 16th or 17th century. Mangoes were brought from the Philippines by merchants on the Manila Galeon, which traded between Manila in the Philippines and Acapulco for 250 years. In Mexico, the finest mangoes are known as “manila mangoes.” Mexico contributed many tropical fruits to the

international diet, such as the papaya, as well as fruits from the *Anona* family like the custard apple, called cherimoya, and the *guanábana*. The *zapote* family includes the mamey, sapodilla (*chicozapote*), and several varieties of zapote distinguished by the color of their pulp, which are popular Mexican fruits, as are guavas. Fruits from the cactus plant include the prickly-pear fruit called *tuna* and the *pitahaya*. Their use in the Mexican diet dates from ancient times.

Special meat shops called *carnicerías* are popular for purchases of all kinds of meat products, as are meat stands in markets or in supermarkets. In Mexico beef is known as *carne de res* and is considered the highest-status meat available and the most expensive as well, making it out of reach for many Mexicans. Pork is a popular meat product and is used in many traditional Mexican dishes. Mutton is appreciated for roasting in a barbecue pit, and roast kid is a popular dish in northern Mexico. Chickens are inexpensive and probably the most popular meat on the market. Eggs are consumed widely and are a good source of protein. Fish is plentiful but more expensive than meat, making it a less popular choice for economy-minded housewives. It can be purchased at special fish shops called *pescaderías*, in markets, or in supermarkets.

Rice is a popular carbohydrate in the Mexican diet and is consumed on a daily basis as an accompaniment for the main dish. It can also be served as a “dry soup” with fried plantains on top or as an ingredient in liquid soups. *Arroz a la mexicana* is red rice, prepared with pureed tomatoes. In addition to white rice, green rice made with fresh cilantro, parsley, and roasted poblano-type peppers that have been pureed and added with the liquid to the cooking rice is a festive method of preparing rice. Black rice is prepared with black bean broth from the bean pot, known as *frijoles de olla*. White rice is also used for making rice pudding, *arroz con leche*, a typical and popular Mexican dessert of Spanish origin.

Sugar found new uses when it was introduced into Mexico in the 16th century. The sugar industry was established early in Mexico on land belonging to Hernán Cortés, at his great hacienda in the

state of Morelos. It became a popular ingredient for making Mexican sweets and candy in the convents and nunneries and was also employed in the manufacture of rustic rum, called *chinguirito*, with a high alcohol content. The most important use of sugar today is in the manufacture of soft drinks, making Mexico the highest consumer of sugar in the world. Soft drinks are also manufactured with a fructose base. Mexican desserts are very sweet, but they are eaten only on special occasions, not on a daily basis. The candy industry is well developed in Mexico, often as an artisan product. Several regions of the country are known for the particular type of candy they produce.

Mexican cooking is well known for its spicy flavor, which mainly comes from the use of hot chili peppers; nonetheless, many other spices are also used for flavoring food. Black pepper, cinnamon, cumin seeds, sesame seeds, aniseed, oregano, cloves, and nutmeg are only a few of the spices on the market that are regularly used in cooking. Mexicans are especially fond of cinnamon, which is used in desserts, coffee (*café de olla*), hot chocolate, and cinnamon tea, as well as in breads and cookies. Mexico is the principal consumer of cinnamon in the world. Local spices include annatto (achiote) seeds, used almost exclusively in Yucatecan cooking. Green or white pumpkin seeds (*pepitas de calabaza*) are popular for cooking or eating as snacks. Chili peppers, garlic, onions, and tomatoes make up a seasoning often referred to as *a la mexicana*.

Cooking

Throughout Mexican history, the preparation of food has always been considered women's work. Men sometimes took part in outdoor cooking, such as barbecuing meat on a framework of sticks over an open fire or preparing the underground ovens called *pibs* in the Maya area, used for cooking large animals, massive tamales, or large fowl. Men may also have participated as cooks for feasts, banquets, and funerary rites; however, the principal role in everyday cooking was assigned to women.

Many cooking utensils found in present-day Mexican kitchens are cultural remnants of pre-Hispanic

implements. Some are still being manufactured and used today. A typical example of this would be the griddle, or *comal*, used to heat tortillas. They are now manufactured from metal, rather than clay, but they serve the same purpose. *Metates* for grinding corn and spices can still be found in more traditional kitchens, as well as *molcajetes*, better described as a stone mortar and pestle, for grinding seeds, tomatoes, and chili peppers for salsas. Clay pots have a long tradition in food preparation in Mexico and can be found in many kitchens as storage vessels for water or grains. Small braziers, called *anafres*, are now made of tin rather than clay, but they are still being manufactured and used in Mexico.

Traditional Mexican cooking is labor-intensive and time-consuming. The cooking is generally done on gas stoves as electricity is expensive. Kitchens are fairly well equipped except in the poorer neighborhoods of Mexico City, where one can find only basic implements such as blenders for soups and salsas, pots and skillets, and sometimes a small refrigerator or icebox to avoid a daily trip to the marketplace.

Kitchens in middle- and upper-class homes in Mexico City are as well equipped as many American kitchens and include dishwashers, microwave ovens, blenders, hand beaters, garbage disposals, gas or electric ovens, toasters, electric coffeepots, and any other equipment they may find useful. Upper-class women are not known for their interest in the kitchen and hire household help for daily meals

Mixture of ingredients on a metate ready to grind into a Mexican paste-sauce called mole. (Leon Rafael | Dreamstime.com)

and use caterers when they invite guests to their homes.

Sautéing and deep-frying are the most common cooking techniques and are carried out in cast iron skillets. Boiling and soup making are done in deep pots; beans are cooked in pressure cookers, and electric blenders are necessary for preparing soups and salsas. Tortillas and spices are heated on cast iron griddles, or *comales*. Ovens are not a required item in Mexican kitchens, as they consume a lot of gas and cooks prefer stovetop cooking, when possible. Most middle- and upper-class kitchens do have ovens, but they are not used on a daily basis.

Typical Meals

The definition of a typical Mexican meal depends on the cultural group, setting (rural or urban), age group, social and economic level, and geographic region. One can, however, speak in general terms about Mexican food traditions. Corn is combined with beans, squash, chili peppers, tomatoes, and tomatillos to form the basic diet of the country. Secondary foods, which are eaten less frequently but are consumed throughout the country, are represented by native vegetables such as cactus paddles, avocados, vegetable pears, jicamas, and greens, known as *quintoniles*, *verdolagas*, or *quelites*. Peripheral foods may include seasonal crops such as insects, mushrooms, chokecherries, the fruits of the prickly pear, and small cactus fruits known as *biznagas*. These foods are produced during the rainy season and are generally collected by the rural population.

Tortillas and hot chili sauces accompany meals throughout Mexico at all social levels. These two elements can be considered a common food denominator among social classes. Small plates of salt and cut limes are common table accessories. Meals are eaten two, three, or more times a day, depending on the occupation and resources of the family and how one defines a meal. Rural Indian groups are at considerable nutritional risk, especially those who live in the southern states of Guerrero, Oaxaca, and Chiapas. The daily diet of some of the elderly members of these groups consists of tortillas, chili sauce, and little more.

Food and meal schedules in rural Mexico vary considerably according to local activities, resources, and customs. Breakfast may be eaten any time between 5 and 7 A.M. Farmers usually rise very early and have a light breakfast of atole or tortillas and chili. They take their midday meal, which may consist of corn prepared as *pozol*, made of fresh or fermented corn and water, into the cornfield. After they return home in the afternoon, a meal that includes hot tortillas, beans, chili sauce, and coffee or atole is eaten between 4 and 6 P.M. These are the general guidelines of an Indian diet.

In urban Mexico City, many Mexicans start the day with a cup of coffee, herbal tea, or hot chocolate. These beverages may be accompanied by a sweet roll. The beverage is followed later by a heavier meal called an *almuerzo*. This may be eaten around 10 A.M., depending on the work schedule and whether it is taken at home, on the street, or in a restaurant. A variety of dishes can be served at this meal. Juice and fresh fruit are popular dishes to begin the meal. Eggs, meat, beans, stew, salsa, and tortillas are the general elements of the *almuerzo*.

The most important meal of the day is served in midafternoon, sometime between 2 and 4 P.M. In provincial Mexico, families try to take the main meal of the day together; however, in large urban areas, it is generally no longer possible for the family to gather at home to eat because of work schedules and heavy traffic at this time of day. The meal may begin with an *antojito* (appetizers), such as a quesadilla, or directly with a bowl of hot soup. The custom of serving both a liquid broth or creamy soup, and also a dry soup, such as rice or pasta, has become less popular in recent years due to the extra calories two soups represent. The main course may be meat, fish, or chicken, served with a salad or vegetables. The most popular carbohydrate for accompanying meat dishes is rice. Beans may be served with the main course or as a separate dish following the principal dish. Desserts include fresh fruit, ice cream, rice pudding, or a custard called *flan*. The most common after-dinner beverage is coffee. Plain water or fruit-flavored water are common beverages for a meal. The younger crowd prefers soft drinks at any time of day.

After eating a substantial meal in midafternoon, most people do not feel like a heavy meal at night. A light meal, or *merienda*, may be served around 9 P.M., when light snacks, *antojitos*, tamales, soups, sweet rolls, or fruit may be eaten. A more formal dinner, *cena*, may be shared with family and friends on special occasions. This gastronomic scheme is by no means standard throughout the country. The majority of the population does not have sufficient resources to eat on such an elaborate scale. Life in provincial Mexico is less hectic than in Mexico City, and people enjoy their meals at a more leisurely pace.

A typical evening dish for the *merienda* are *sincronizadas*, or tortilla ham and cheese sandwiches. *Sincronizadas* may be considered fast food, but they can be very good, depending on the cheese used.

Sincronizadas

1 tbsp oil

12 small corn tortillas

6 slices Port Salut cheese

6 slices ham

6 tsp chili salsa

Heat a frying pan over medium heat, and add the oil. Top 6 of the tortillas with a slice of cheese and a slice of ham. Spread 1 teaspoon of salsa over the ham. Cover with a second tortilla and place in the hot skillet. The tortilla edges may be held together with a toothpick, so that they do not separate. Toast over medium heat until the cheese begins to melt and the tortilla begins to brown. Flip over and toast the other side. Transfer to a plate and keep warm. Serve guacamole sauce on the side.

Provincial Mexico

The typical Yucatecan dietary pattern is somewhat different than that in other parts of the country. In Mérida a businessman or white-collar office worker may begin his day with a cup of coffee or juice before rushing off to the office; then, around 10 A.M. he may order an *almuerzo* or *tentempie* (literally, a little something to keep him on his feet until lunch). This may consist of a *torta* with a *cochinita*

pibil (a pork-based dish) filling or some other meat filling. The food can be purchased at a market stand near his place of work. This is an important time to share experiences with fellow employees, although some comment that it is not healthy because of the high fat content in food eaten during this early morning recess.

If it is Monday, his midday meal will probably be a dish of beans with pork (*frijol con puerco*), as this is the typical Monday menu in middle- and upper-class homes and restaurants in Mérida. The dish may be accompanied by a vegetable soup, rice and tortillas or bread, and fruit-based water or a soft drink. The evening meal, taken at home or at a nearby restaurant, may consist of a Yucatecan *antojito* such as *panuchos* (small bean-stuffed tortillas, fried and topped with shredded chicken, pork, or turkey and pickled red onions), served with Yucatecan hot sauce. A dark Yucatecan beer usually accompanies this dish.

In northern Mexico a cattle rancher may begin his day with a hearty plateful of *machaca con huevos*, which is dried and shredded beef fried with tomatoes, onions, and green chili peppers and cooked with scrambled eggs. The dish may be served with pinto beans (*frijoles charros*), flour tortillas, and a mug of strong, black coffee. If he is in Monterrey for lunch, he may be served a cheese soup (*caldo de queso*), pickled shrimp (*camarones en escabeche*), and broiled kid (*cabrito al pastor*) with guacamole, onion, tomato, cilantro, and chili peppers and served with pot beans (*frijoles de olla*) sprinkled with cheese and *pico de gallo* sauce. A good selection to accompany this meal would be a cold Bohemia beer.

The evening meal would no doubt include a broiled strip of beef (*carne a la tampiqueña*) served with red enchiladas, beans, and guacamole, to be washed down with another cold Monterrey beer. Northern Mexican men are noted beef eaters and beer drinkers.

Frijoles con Tequila (Beans with Tequila)

Traditionally, *frijoles borrachos* (drunken beans) are made with beer and pieces of pork and bacon. In this recipe, tequila replaces the beer and is added

twice—during the last stage of cooking and again just before serving.

- 1 lb pinto beans
- 10 c water
- 3 tbsp lard
- 1 tbsp salt
- 1 medium onion, chopped
- 1½ c tomatoes, seeded and chopped
- 4 serrano chilies
- ½ c tequila
- 2 tbsp chopped cilantro

Simmer the beans covered with water with 1 tablespoon of lard for about 2 hours or until soft (or cook them in a pressure cooker). Add 1 tablespoon salt after the first hour. Drain the water from the beans, reserving 1 cup of the broth.

Heat the remaining 2 tablespoons of lard in a large pot over high heat until it starts to smoke. Add the onion, tomatoes, chilies, and a little salt. Cook until the fat rises to the surface and the vegetables are soft, about 10 minutes. Add the beans and cook for 5 minutes, stirring constantly. Add the reserved broth and half the tequila. Continue cooking until almost all of the liquid has evaporated. Just before serving, add the remaining tequila and sprinkle cilantro leaves over the top.

Oaxaca is a gourmet's paradise. It is famous for serving seven different types of mole, and all are exceptionally good. One of the best places to try traditional Oaxacan food is in the main market, which begins serving meals very early in the morning. Clients sit at long, rustic wooden tables, covered with plastic tablecloths, with other clientele. There is nothing exclusive about eating in the Oaxaca market. A breakfast menu usually begins with fresh orange juice, followed by roasted cheese in green sauce (*quesillo oaxaqueño*); black turtle beans seasoned with avocado leaves, which gives them a distinctive flavor; large, hot corn tortillas called *tlayudas*; and coffee with brown sugar and cinnamon or hot chocolate. Oaxaca produces a variety of sweet rolls,

which are also favorite breakfast items. Lunch at the same market may include a cactus paddle and shrimp soup (*caldillo de nopales y camarón*) or an appetizer of tacos, made of corn tortillas filled with Oaxaca cheese and a sauce. Fried-grasshopper tacos with guacamole are also a favorite first course. Pork in yellow mole sauce is also popular, simply called *amarillo* (yellow) due to the yellow chili, *chilcoztli*, used to prepare it. Black beans usually accompany this dish. The meal may end with ice cream, for which Oaxaca is famous, and black coffee. The evening meal in Oaxaca is often Oaxacan tamales wrapped in banana leaves and served with atole or hot chocolate.

Mexican food is hearty and not for those who are watching their weight. Much of the food is fried and has a high calorie content, and ample portions are served. This is reflected in the obesity problem, which may contribute to diabetes and has become a serious health problem in the country.

Eating Out

Good food and good cooking have become fashionable in Mexico in recent years. The number of eating places, from simple *taquerías* that offer unpretentious fare to elaborate, upscale restaurants, where clients gather both to eat fine food and to see and be seen, have increased 10-fold since the early 1980s. In the past few years Mexico City has become a gourmet's delight.

The number of food stalls, *taquerías*, *torterías*, *fondas*, *loncherías*, *cafés*, and elegant restaurants catering to different social and economic levels is truly prodigious. Until the economic crisis of 2008–2009, people were increasingly eating outside the home, because women's increasing involvement in the labor force gives them less time and energy to spend in the kitchen.

Street foods play an important role in providing food for a large percentage of the Mexican population. Mexico has a long tradition in selling street food, which is food and drink sold on public streets, ready for consumption, and offered by nonpermanent sellers. Long before the arrival of the Spanish conquistadores, Aztec vendors were setting up their

stalls in the Tlatelolco Market to serve the public. They sold a variety of stews, sauces, insects, fish dishes, and tortillas, prepared daily for the buyers and sellers of the great market. This custom continued throughout colonial times and is now more prevalent than ever. It also reflects the unemployment and underemployment Mexico City is experiencing due to the economic crisis.

Street food offers a good option for those workers who cannot afford to eat in a restaurant or fonda, as they sell inexpensive food with fast service. Street foods are sold on city corners, in markets, outside bus or train stations, in public parks, near factories or office buildings, or wherever there are plenty of people looking for a good, quick lunch. The preferred type of food sold in the stands is typical Mexican food such as tacos that can be eaten with the fingers, so no cutlery is needed. Some offer a complete meal of soup, served in a cup, with a meat stew, Mexican red rice, beans, and tortillas, served on a plastic

plate. A soft drink, to be drunk straight out of the bottle, and a hot chili sauce complete the meal. This type of food is nutritious, filling, and probably cheaper than a housewife could prepare at home.

Fondas are another option for eating away from home. They are small, inexpensive restaurants that cater to office workers and set up their establishments near office buildings or wherever large groups of potential customers congregate. Many offer fixed menus, posted at the entrance. These usually include a soup, pasta or rice, tacos, enchiladas, beef stew or stuffed vegetables, and a simple dessert. These small restaurants are quite economical if one considers the amount of food received.

Mexican markets sell almost all of life's necessities, including good food. Market food stands open early for breakfast but really get into full swing about 10:30, when the almuerzo crowd arrives. They offer good, simple, inexpensive food such as tostadas, tacos, hearty broths, meat, eggs, and fruits and

A fast food stall in Papantla, Mexico specializing in antojitos. (StockPhotoPro)

fruit juice. One gets good value for one's money at a market stand.

Tacos are Mexico's favorite fast food. They can be eaten at any time of day and are sold in all types of eateries or in taquerías that specialize in tacos and other corn-based *botanas* or antojitos. Tortas are the Mexican equivalent of sandwiches, made with a hard roll called a *telera*, sliced horizontally and stuffed with a variety of fillings. Special restaurants called *torterías* prepare and sell thousands of tortas every day to people who must eat outside their homes. Tortas are also sold in baskets on the street, at bus stations, or near subway stations. They are an easy-to-eat finger food.

In recent decades Mexico City has become a cosmopolitan city where restaurants that specialize in food from all parts of the world can be found. Asian, African, Mediterranean, Caribbean, South American, European, North American, Middle Eastern, and Mexican restaurants abound throughout the city. Japanese sushi bars have become very popular in the past decade. Japan is also represented by fine restaurants that charge according to their status. French-style bistros are also popular eating places. Peruvian food has been discovered by the Mexican public, and the city has several fine Peruvian restaurants. Many restaurants belong to consortiums, with several restaurants, which may be owned by the same group of investors, sharing publicity and other expenses. There are a few top-notch restaurants that specialize in serving fine Mexican food. These are no doubt the finest Mexican restaurants in the world.

Special Occasions

Mexicans love a good fiesta and readily admit to being a fun-loving people when they say, "Somos muy fiesteros" (We are a very festive people). They have many opportunities to celebrate throughout the year, as the Mexican calendar is full of official, unofficial, and religious holidays. Rite-of-passage fiestas such as baptisms, first communions, coming-out parties for 15-year-olds, weddings, and funerals, as well as birthdays, saint's days, graduation parties, and fiestas on many other occasions give one a good

panorama of Mexican social life. The fiesta cycle can be considered one of Mexico's most distinctive cultural traits. Some festive occasions have become customary throughout the country and are considered national fiestas. These may coincide with religious or civic fiestas.

Rite-of-passage celebrations are carried out on a personal or family level. These include the baptism ceremony, confirmation in the Catholic Church, first communion events, coming-out parties for young girls when they turn 15, weddings, and funerals.

Some religious fiestas involve the participation of the entire community. Rural harvest festivals are held in early autumn, when most agricultural produce is harvested or harvests are about to begin. The rural population may give thanks for a particularly good harvest or ask for the protection of their crops until they can be gathered. To these activities, one must add a list of civic fiestas such as the Day of the Constitution, celebrated on February 5; the Battle of Puebla on May 5 (i.e., Cinco de Mayo); Independence Day festivities on September 15 and 16; and the Day of the Revolution, on November 20.

Food and drink are important elements in the fiesta cycle. Specific dishes may be associated with certain celebrations and are traditionally served at those functions. Typical fiesta dishes include tamales in all shapes, sizes, and flavors; a variety of mole dishes served with turkey, chicken, or pork; a codfish stew called *bacalao*; poblano-type chili peppers stuffed with chopped meat and dried-fruit stuffing and topped with a nut sauce, called *chiles en nogada*; barbecued kid, lamb, and beef; a pork and hominy dish called *pozole*; and many, many others.

When food is prepared for a community fiesta, the responsibility is shared by several members of the community. Every family in the community has to pay their share of the fiesta; if they do not cooperate, they are ostracized by the rest of the community. Festive food may depend on the customs of the particular region of the country preparing the celebration. It also depends on the economic resources of the participants and the social level of those involved.

One of Mexico's most colorful fiestas marks the Day of the Dead (*Día de los Muertos*) on November

1 and 2. It is one of the most important rituals in the Mexican fiesta cycle. It can best be described as a festival to welcome the return of the souls of the dead and provide them with the pleasures they enjoyed during their lifetimes. The fiesta incorporates elements of pre-Hispanic religious beliefs and practices, which differentiates it from other more orthodox Catholic fiestas on All Saints' and All Souls' Day. In Mexico, it is celebrated like in no other Catholic country in the world.

A unique bread called *pan de muerto* (bread of the dead) is baked especially for this occasion. It is generally a round, domed loaf with extra dough filleted on top in the shape of a head and extremities to symbolize a skeleton. Breads are also produced in the shape of skeletons and ghosts.

The Day of the Dead is essentially a private or family affair, as the core of the celebration is carried

out within the family and takes place in the family home or at the family plot in the cemetery. Each household prepares its offerings of food and drink for their dead, which traditionally consist of the deceased person's favorite dishes. A temporary altar is set up on a table where the food is served in clay dishes, along with vases of marigolds (*cempasúchil*), white candles, and photographs of the dead and of the saint to which they were devoted. Small dishes of salt, glasses of water, and a plate of incense sanctify the ceremony. Hollow skulls made of sugar paste display the name of the dead person across the forehead.

November 1 is the day to celebrate children, particularly those who died during the year. The ringing of church bells on October 31 at 8 p.m. announces the arrival of the "spirits of the children." By this time altars have been set up where the food

Offerings being sold as part of the celebration of the Day of the Dead or Dia de los Muertos, Mexico City, Mexico. (Jesús Eloy Ramos Lara | Dreamstime.com)

Sugar skulls are seen in a store window in Mexico City as part of celebrations for its Days of the Dead beginning on October 31. (AFP | Getty Images)

is placed. This consists of Day of the Dead bread, sweet tamales, fruit, ears of corn, atole, milk, candied pumpkin, and fruit jam, accompanied by yellow marigolds and sugar skulls. Fast foods, such as potato chips, Doritos, Coca-Cola, candy, and cookies, as well as plastic toys, may also be placed on the children's altars, demonstrating the change in the diet of Mexican children.

The main ceremony is held on November 2, when the souls of the adults are celebrated and given the most splendid offering the family can afford. Tamales are always included, as is a loaf of Day of the Dead bread and chicken or turkey in a mole sauce. Other dishes may include enchiladas and *chalupas* (small boat-shaped tortillas filled with beans and hot sauce), or other favorite dishes. Beverages range from coffee, chocolate, and atole to whatever alcohol the deceased preferred. A bottle of beer or a shot glass of tequila or *mezcal* (a distilled liquor from Oaxaca) will form part of the offering. If the person was a smoker, a package of his favorite cigarettes will be included. There is an element of pride and status in providing an elaborate offering for relatives.

The deceased's souls are believed to be present as spirits who have returned from the other world. The spirits are not seen; however, their presence is sensed. They do not physically consume the food

and drinks but rather absorb their essence. When the souls have had their fill, it will be the turn of the living members of the family to share the offering. Some of the food will be taken to the cemetery to be placed on the graves of the deceased and consumed by family members at the grave site. Sometimes a path of marigold petals is laid out to lead the souls to their proper destination in the cemetery. The sight of thousands of candles lighting up the night cemetery on November 2 is indeed impressive.

Federal and city governments and cultural organizations now promote the celebration of the Day of the Dead as a way for Mexicans to express their identity. Contests are organized by these groups to encourage the population to set up altars in town squares, markets, or public buildings, and a prize is often awarded the most well-made display. Banks, hotels, supermarkets, public buildings, businesses, and cultural organizations have begun to offer a display of the altar of the dead to stress their commitment to this most Mexican of all customs. This celebration is not disappearing; rather, it is becoming more and more important in Mexican cultural life.

Diet and Health

Mexico is a country of profound and often conflicting contrasts. At the same time as government and health officials attempt to cope with malnutrition and anemia in rural Mexico, one in every three adults in urban Mexico is overweight, making obesity the most serious health problem in the country today. Solving the problems of malnutrition and anemia is proving to be easier to resolve than obesity, which has risen to epidemic levels during the past decade.

Mexican food habits have changed substantially in the past few years. Nutritionists have observed an increase in the consumption of wheat products, replacing corn, in the form of breads, cereals, pastas, cookies, and pastries. This is in part caused by the transition from a rural to an urban diet due to the heavy migration from the countryside to urban areas during the past few decades. The general availability of refined, high-fat, and high-sugar products in urban areas makes fast-food products convenient purchases.

The new products available on the market, introduced by the North American Free Trade Agreement in 1994, often replace rather than complement Mexican ingredients in the diet. The increased participation of women in the labor force results in less time for women to prepare family meals and forces them to rely on ready-made foods, which may be higher in fats and simple carbohydrates than home-made meals. There is also a tendency to accept the new food imports because of their higher status compared to the traditional diet, especially for those at middle and high income levels. The external influence is less dramatic on rural diets; however, the migration of undocumented Mexican laborers to the United States has proved detrimental to the rural diet as well, when workers return with a preference for diets high in animal fats and sugars. The frequency of obesity, diabetes, and cardiovascular problems as a result of the change to a more refined diet high in fats and sugars can be observed in both urban as well as rural Mexico.

For several decades, the Mexican government has carried out various programs in an attempt to improve the diet and nutrition of the Mexican population. These have included changes in economic policies, control of food prices, subsidies for the production of food, retail sale of government-subsidized foods, and programs of food distribution. These include free primary-school breakfasts in rural schools and food boxes or baskets containing products that make up the basic diet.

One of the most noted deficiencies in the Mexican diet at all social levels is iron, which reflects an inadequate diet. This has been shown to cause anemia in both children and expectant mothers, as well as retarded growth patterns in children. School-age children who are affected by an iron deficiency show less interest in learning, a reduced attention span, and chronic fatigue. Anemia is more prevalent in rural Mexico than in urban communities.

Nutrients have been added to industrialized food products in the form of vitamins and minerals since 1987 in an effort to improve the Mexican diet. The addition of vitamins and minerals to both wheat and corn flour plays an important role in the Mex-

ican diet, as many products are made from these basic ingredients.

Obesity represents the most serious health problem in Mexico today. One in every three urban adults in Mexico is overweight or obese, and the prediction is for these numbers to continue rising for both children and adults in coming years. The increase in excessive weight and obesity is associated with chronic diseases such as type 2 diabetes mellitus, hypertension, atherosclerosis, high cholesterol, certain types of cancer, cardiovascular diseases, and orthopedic, respiratory, and psychological problems. Coping with the health costs that result from obesity is a heavy burden for the Mexican health system to carry. Thirty percent of obesity is attributed to cultural factors, such as the high-fat diet popular in Mexico and a general lack of discipline in food habits. Soft drinks, such as Coca-Cola and Pepsi, contribute heavily to obesity, because Mexicans drink on average more than a 12-ounce can of soda every day. Forty-five percent of the cases of obesity are attributed to nontransmissible environmental factors. The consumption of processed foods with a high oil content and of simple and refined carbohydrates, with less fiber and complex carbohydrates, plays a role in the surge in obesity.

Recent statistics indicate that 10.75 percent of Mexicans between the ages of 20 and 69 are afflicted by some type of diabetes mellitus, which is equivalent to more than 5.5 million persons. Almost 23 percent of those affected with diabetes are unaware they have the illness. It is one of the principal causes of death in Mexico, along with cardiovascular problems and cancer. Obesity has become one of the major factors in the risk of acquiring the disease. A diet high in carbohydrates, lack of exercise, excess weight, chronic stress, and inheritance all play a role in the disease.

Anorexia is a growing problem in Mexico and has increased considerably in the past five years. It is more prevalent among young women than in young men and affects mostly young people between the ages of 11 and 25. Food deprivation is not a novelty in Mexico. It was common behavior in Catholic convents, where food was considered a spiritual

element that converted eating into a ritual act. The convent dining room was a space of penitence and purification, where food was transformed into something sacred through which the nuns could expunge their sins and purify their spirits. Fasting and penitence were methods by which they attempted to attain purification of their bodies and souls. To leave a morsel of their favorite dish on their plate for the guardian angel was considered a manifestation of high spirituality.

Native Americans

Overview

The term *Native American* encompasses an extremely broad spectrum of peoples spread across the various regions of the United States; it is therefore impossible to speak of Native Americans as one monolithic entity or cultural group. Among the thousands of extant tribes in America are the Iroquois (Six Nations) of upstate New York; the Narragansetts, Micmacs, Pequots, and Mohegans of the northeastern United States; the Plains tribes, including the Blackfoot, Lakota, Sioux, Comanche, Apache, Pawnee, Wichita, and Osage; the Navajo, Hopi, and Pueblo in the Southwest; the Coeur d'Alene and Nez Perce in the Pacific Northwest; the Paiutes in the West; the Cherokees, Seminoles, and Choctaws of the Southeast; the Caddo of Texas and Louisiana; and the Inuits and Tlingits in Alaska. Additionally, the term *Native American* can also apply to the First Nations people of Canada and the various peoples of Central and South America.

Therefore, when speaking of Native American foodways, it is necessary to take each tribe's regional ecosystem into account, as food procurement and preparation, agricultural methods, and hunting techniques vary widely depending on each tribe's geographic location. However, one could argue that traditional Native American foodways of any stripe should serve as the model for locavorism, as much of their food practices are tied inextricably to their natural surroundings.

Food Culture Snapshot

Lucinda Crow is a 48-year-old Ojibwe who lives in northern Minnesota. She was recently diagnosed with diabetes, and her doctor has stressed the importance of changing her diet in order to manage this disease. Like 70 percent of Native Americans, Lucinda is overweight, which likely contributed to her developing diabetes. As she faces her important and very necessary lifestyle change, Lucinda must reconsider every meal and snack of every day.

Rather than purchase a box of pricey sugary cereal for her breakfasts, Lucinda instead chooses a box of plain oatmeal. With its high fiber content and low glycemic index, the oatmeal will keep Lucinda satisfied longer and keep her blood sugar in check. She also purchases some bananas and skim milk to round out a nutritious and diabetes-friendly breakfast.

Lucinda is a schoolteacher on her reservation, so she needs to pack healthy, filling lunches to take with her to work. She used to take microwavable frozen dinners, which are full of fat, salt, and unhealthy fillers. These days, she chooses a loaf or two of multigrain bread, some lean turkey lunch meat, some low-fat cottage cheese, a head of lettuce, carrots for a crunchy alternative to potato chips, and some apples or other seasonal fruit for a sweet finish to her meal.

For dinner, Lucinda plans balanced meals featuring a lean protein, at least one green vegetable, and a grain. Where she once would have purchased frozen potpies and pizzas, Lucinda instead buys salmon and chicken breasts, broccoli, and brown rice. The days of white

breads and pastas are behind her now, as are prepackaged, processed desserts like cupcakes and brownies. If Lucinda wants a sweet treat, she purchases a low-fat frozen yogurt to enjoy in moderation.

Many Native Americans find that they have limited access to fresh foods, their choices circumscribed because their reservations are somewhat isolated. Often, grocery shopping takes place at convenience stores, supplemented with government-subsidy foods like cheese and beans. However, with careful planning and scrupulous attention to details like portion control, Native Americans like Lucinda can eat healthfully for life.

Major Foodstuffs

After a long, complicated, and painful history including displacement onto reservations and forced integration into mainstream America, most Native American tribes eat the same diet as non-Natives, like soft drinks, pizza, and so on. However, many Native American tribes have a particular food item that is integral not only to their diet but also to their tribal identities, reaching back to precontact times; this section provides an overview of some of these significant food items.

It is widely understood that, regardless of region or tribal affiliation, the most important Native American foodstuff is corn (maize). Many tribal origin stories, particularly among the southeastern tribes, feature the Corn Woman, who is responsible for the continued presence of corn on the American landscape. The foodstuffs most commonly associated with Native American foodways are the Three Sisters: corn, beans, and squash. The primary agricultural technique for these crops is companion planting, in which the three crops are planted in clusters on mounds, with corn occupying the central spot in the mound. The stalks provide poles for the climbing beans, while the squash plants spread out along the bottom of the mound to help prevent weeds; the squash leaves also act as mulch for the companion mound. Expert farming tribes include the Hopi and the Navajo in the Southwest and the Cherokee in the Southeast.

A traditional set-up for growing the Three Sisters—corn, beans, and squash—is utilized in this Cherokee garden. (Marilyn Angel Wynn | Nativestock.com)

The Ojibwe of the Great Lakes region rely on fishing, growing squash and maize, and cultivating *manoomin* (wild rice, which is actually a grass rather than a grain). Manoomin is an important part of the Anishinaabe (the larger umbrella group of Native peoples to which the Ojibwe belong) migration stories, in addition to being a dietary staple, a commodity to be sold, and a vital component of sacred ceremonies. Manoomin is native to the Great Lakes region and is harvested by canoe. Ricers bend the stalks of the rice plants over the side of the canoe and knock the ripe grains loose. After it is harvested, the rice is dried, roasted, and then “danced” in a process reminiscent of grape stomping in order to remove the husks.

Winnebago Wild Rice

1 c wild rice
 1½ tsp salt
 2½ c water
 4 strips bacon
 6 eggs
 ¼ tsp pepper
 ⅓ c melted butter or bacon fat

Put rice, 1 teaspoon salt, and water in a saucepan. Bring to a boil and reduce heat to a simmer until all water is absorbed. Cook bacon until crisp, and break into small pieces. Beat eggs with ½ teaspoon salt and pepper until fluffy. Cook eggs in the same skillet where the bacon was cooked. Combine bacon, eggs, and butter or bacon fat with wild rice. Serve warm.

Chokecherries are another plant-based staple in Native American foodways, particularly for the Plains tribes; they were especially important to the Blackfoot and Cheyenne. The cherries were pounded out, seeds included, then dried in the sun.

The Iroquois (Six Nations), based primarily in upstate New York, are credited with discovering the edible properties of maple syrup as early as the 1600s. One tribal legend credits the discovery of the sap to Chief Woksis, who, in frustration at having failed to successfully hunt for his family's food, threw his tomahawk into a tree, which caused sap to flow into his water bucket. His wife mistook the sap for water and used it to cook deer meat, which lent it a sweet taste and made the chief realize what had actually been in his pail. In actuality, the Iroquois likely discovered maple syrup by eating frozen icicles hanging from the sugar maple trees on their lands. They would set up winter sugaring camps amid groves of sugar maple trees and devote the cold months to harvesting the sap. To procure the sap, they would cut V-shaped slashes into the trees and collect the sap in a vessel of some sort. They would boil down the sap into solid hunks of maple sugar, which they would then use to season grains

or to sweeten water for a special drink; they would also use the sugar for gifts or to trade.

Many Native American tribes have diets comprising mainly hunted proteins like fish and game. For example, the Inuit of Alaska and the Northwest Territories of Canada eat a very protein- and fat-heavy diet comprising whales, walrus, caribou, and seals. In fact, the seal is a prized catch for the Inuit, in that its meat is a valuable source of fat, iron, and vitamins A and B₁₂; additionally, the pelt provides much-needed warmth in the bitterly cold winter months. While seal hunting is an extremely controversial topic in Western culture, the Inuits' practices are protected in governmental bans and proscriptions against commercial seal hunting. When an Inuit boy kills his first seal or caribou, a feast is held in his honor.

The Salish (or Coast Salish) peoples of Oregon, Washington, and western Canada relied primarily on fishing but also maintained inland grasslands, which provided a variety of small game animals, as well as vegetables, roots, berries, and ferns such as bracken. Salmon and a freshwater fish called *kakane* were staples, as well as shellfish like clams and cockles. The Salish hunted in the sea, air, and land for whale, fowl, and game.

The Tlingit of southern Alaska and the Yukon have a saying, "When the tide goes out, the table is set," which illustrates this people's heavy reliance on the sea for their primary diet. Among the foods available for harvest on the beach are razor clams, mussels, seaweed, oysters, and crabs. However, to eat "beach food" exclusively is to earn the contempt of tribesmen and is considered a sign of poverty. Salmon is the central foodstuff of the Tlingit, with seal and game closely following. To provide their bodies with essential vitamins and minerals alongside the protein found in the fish and game, the Tlingit eat every part of the animal; bones used in soup stock supply calcium as well as vitamin D and iron. Stomachs and intestines provide vitamin E and the vitamins in the B complex. Vitamin C can be found in plant matter. The Tlingit are also very fond of packaged and processed food like Spam and ice cream.

Bison was the primary game for the nomadic tribes among the Plains Indians; their weapon of

Buffalo meat dries at an Arapaho camp near Fort Dodge, Kansas in 1870. Once an agricultural people, the Arapaho migrated from Minnesota to the Great Plains in the late 1700s, when they began to hunt buffalo. (National Archives)

choice in hunting bison was the bow and arrow. Bison were a major source of several usable goods for tribes like the Blackfoot and the Sioux. In addition to being a primary source of food, the animals provided warmth, clothing, and shoes from their pelts; the makings of knives, arrowheads, and tools from their bones; and material for cups, rattles, ornaments, and switches from the horns, hooves, and tails. The edible parts of the bison such as the meat, bone marrow, tongue, liver, blood, and intestines were either cooked into a stew, using the stomach as a cooking vessel, and eaten right away, or preserved and made into jerky. Unfortunately, the U.S.

government began hunting bison, which numbered around 60 million, and encouraged commercial hunters to do the same in the 19th century (approximately 1872–1874) as a means of starving the Natives into extinction. Thousands of bison carcasses, stripped of their pelts, were left rotting on the plains, rendered worthless to the Natives who relied on them so heavily for food, trade, and culture. Only a few hundred bison remained in North America by the late 19th century; thanks to the efforts of a few private ranchers in the West and northern Plains states, the American bison was brought back from the brink of extinction. In fact, bison meat has be-

come very popular, praised for its low fat content and nutritional qualities.

Buffalo Stew (Lakota)

Ingredients

Buffalo stew meat, cut into bite-sized chunks

Tsinpsila (prairie turnips)

Onions, sliced

Get a large pot and put in the meat, *tsinpsila*, and onions. Cover with water and boil until done.

Pemmican was another important foodstuff for Native American tribes, especially as the winter months or long hunts approached. The primary ingredient was lean meat from large game animals like elk, bison, or deer. The meat was cut into thin slices and dried until brittle. It was then pounded into a powder and mixed with melted fat; some recipes included dried and powdered cranberries, while blueberries, cherries, and/or chokeberries were used exclusively in ceremonial pemmican. The mixture was stored in rawhide pouches; if stored correctly, pemmican could last for very long periods.

The Caddo Indians of Texas and Louisiana were farmers who cultivated the Three Sisters crops. Additionally, the women would gather wild plant matter like blackberries, persimmons, and acorns while the men would hunt small game like deer, turkey, and rabbits in their local area. The men would also gather periodic hunting parties to hunt buffalo in the west.

Perhaps the most legible edible reminder of the troubled relationship between the Native peoples and the settlers is the Navajo fry bread. Many tribes have their own recipes for fry bread, but the Navajos are credited with inventing this beloved treat with a sad history. In the summer of 1863, the U.S. Army failed to elicit surrender from the Navajos, who had been raiding army forts that had infiltrated their lands in eastern Arizona and western New Mexico. The army then scorched the areas surrounding Navajo lands in order to starve the Natives and force them to surrender; the tactic worked, and thousands

of Navajos surrendered. In January 1864, the army began a series of long walks from Navajo territory to the Bosque Redondo camp near Fort Sumner in southeastern New Mexico. Hundreds of Navajos died on these long walks. While they were interred in Bosque Redondo, the government supplied the Navajos with commodity foods like flour, lard, powdered milk, salt, sugar, and baking powder; the Navajo made fry bread out of these ingredients. It was adopted and adapted by many southwestern tribes and is now a common foodstuff found at powwows and restaurants across the Southwest, in addition to being a potent symbol of Indian solidarity and perseverance. Native author Sherman Alexie has said, “Frybread is the story of our survival.”

Fry bread is the foundation of the Navajo or Indian taco, which contains a combination of beans or ground beef, chopped lettuce, tomatoes, and cheese, with green chili as an optional topping. After the fillings are added, diners roll up the plate-sized fry bread and eat the taco with their hands.

Fry Bread

4 c flour

2 tbsp baking powder

1 tbsp powdered milk

1 tsp salt

1 tsp cinnamon (optional)

½ c shortening

1 c warm water

Mix flour, baking powder, powdered milk, salt, and cinnamon. Add in the shortening and water gradually, until the dough sticks together. Knead dough until smooth, and make into large balls. Roll or pat them out into circles about the size of a small plate. Fry in hot cooking oil until brown on both sides. Drain on paper towels or blot to remove excess grease.

First Nations people know fry bread as bannock, and it does not carry the same political and cultural weight as it does for peoples like the Navajo.

Cooking

Native American women, regardless of tribe or geographic location, were tasked with the job of preparing food, in addition to gathering berries, plants, and roots for their families. They were extremely innovative in the wide variety of dishes they concocted out of maize, including mixing it with meat, fish, nuts, maple syrup, and berries. They did this using a variety of different cooking vessels and tools.

Common cooking utensils and tools included tongs, stirring sticks and paddles, ladles, and scrapers, often made from the horns and antlers of hunted game. *Metates* are flat surfaces used to break down grains, and mortars and pestles (called *molcajetes* in Central and South America) are still used today to grind herbs and spices, as well as maize; they were even sometimes used on meats.

One central cooking vessel was the kettle, as boiling was a primary preparation technique. Boiling took place either over a direct fire or by placing extremely hot stones into a kettle along with the food to be cooked. Sometimes the kettle was edible; as previously mentioned, the stomach of the bison could be used as a cooking vessel and then consumed along with the stew that was cooked in it. Other types of cooking vessels included clay bowls in the Southwest and tightly woven baskets among the southwestern Apache and the northwestern tribes.

Cherokee Succotash

- 2 lb fresh or dry lima beans
- 3 qt water
- 3 c fresh corn cut from cob
- 2 pieces smoked ham hock
- Salt to taste
- Pepper to taste (optional)
- 4–6 onions (wild or pearl)
- 2 tbsp melted bacon fat

Soak beans, if using dry ones, for 3–4 hours. Bring the water to a boil, then add the beans. Cook at a moderate boil for 10 minutes, then add the corn, ham hocks, salt and pepper, and onions. Add the

bacon fat. Reduce heat, and cook for 1 hour on low heat.

Hopi (Arizona) women used a special griddle called a *piki* stone to prepare their revered blue-corn *piki* bread. Women prepared the stone in individualized rituals involving smoothing it with gravel and moistening it with cottonseed oil; it was then placed on four legs over a fire. The stone was handed down through generations, just as many women pass on their cast iron skillets to their daughters and granddaughters. The *piki* was made in a special house that contained the stone. The women would combine the blue maize meal, hot water, and ash, knead this into a batter, and then smear the batter toward their bodies across the hot *piki* stone. After a short time, the bread was ready, and it was peeled off the stone, rolled up like a crepe, then stacked and stored. A woman who was skilled in making *piki* was held in very high regard, much as a talented male hunter would be.

Because corn is still a central cultural and dietary staple for many Native American peoples, certain preparation rituals are still observed, such as roasting corn. At harvest time, Native Americans will dig a pit in the ground, which is then lined with rocks. They then burn wood on top of the rocks until it is reduced to embers and cover the embers with corn husks and stalks. They then place ears of corn on this heated bed, cover up the ears with more husks and stalks, pour water on the pit, bury it, and leave it for several hours. Southwestern Native Americans are credited with developing the process of making popcorn out of maize.

The Aztecs and Mayans of Mexico are credited with developing the process of nixtamalization, which is soaking corn in lime. This process breaks down the walls of the corn kernels and makes the protein inside more accessible. Once those thick walls have been broken down, the kernels can be ground into meal, which is then used in tortillas, tamales, cornbread, and so on.

Baking was another commonly employed cooking technique. The *horno* is an adobe oven used by Native peoples in the Southwest to bake breads, roast corn, and cook meats. It is shaped like a beehive and is heated by wood. To prepare the oven for

use, the wood is burned until the horno has reached the appropriate cooking temperature. The embers are removed, and the bread is inserted. For preparing meats, the oven is brought to about 650 degrees Fahrenheit, the embers are moved to the back of the oven, and the meat is placed inside. Because the oven is made from adobe (dried mud), it is a naturally moist environment and results in tender, succulent, juicy meat.

Some Native peoples also steamed their food; in fact, the clambake is often attributed to certain tribes in Massachusetts who steamed their clams in large rock circles within which the mollusks were layered with rockweed (a type of seaweed) and heated until the clams broke open and steamed in their own juices.

Native Americans had to develop many methods of food preservation in anticipation of lean times and winter months. Drying food by laying it out in the sun or placing it close to a fire was the most common preservation method. Meat that wasn't consumed at the site of a successful hunt or fishing expedition was dried right away for later consumption. In the Pacific Northwest, women dried huckleberries for year-round use to sweeten various dishes and bitter plants. Smoking was also used to preserve meat, particularly salmon in the Pacific Northwest. In the Northeast, Native people preserved meats by sprinkling salt on fish or game and drying it near a fire. Other East Coast and Northern Plains tribes

A Pueblo woman in San Juan Pueblo, New Mexico, bakes bread in an adobe oven. (Marilyn Angel Wynn | Nativestock.com)

used the vinegar produced from fermented maple syrup to preserve venison.

Typical Meals

Due to the nearly complete assimilation of Native Americans into mainstream American culture, despite the geographic isolation of many reservations, the typical Native American meal looks identical to the average meal of a low-income family. (This is not to suggest that all Native Americans are of low socioeconomic status but to speak to the realities of life on the typical contemporary Native American reservation.) Portion sizes are typically very large, with fat intake between 30 and 40 percent of dietary calories. Typical foods are low in fiber and extremely heavy in refined carbohydrates and starchy vegetables like potatoes.

Breakfast begins much like any other American morning, with a bowl of cereal like Cheerios or Cocoa Puffs, or fried eggs with processed meats and coffee. Lunch might consist of a sandwich on white bread with Spam or lunch meat, cookies, chips, perhaps a can of fruit cocktail, and a sweetened soda to drink. For dinner, the menu might consist of a taco made with flour tortillas or fry bread, or macaroni with canned vegetables.

Where traditional Native American foodways once consisted of wild game, foraged wild greens, cultivated gourds, and other fruits, the reservation and government-subsidy systems have dramatically altered Native American lifestyles and effected a profound loss of culture, as reflected in their contemporary eating habits. The emphasis on processed foods devoid of proper nutrition, along with a shift away from a highly physically active to a largely sedentary lifestyle, has contributed to what might be described as an epidemic of obesity and obesity-related diseases among Native American and First Nations populations in the United States and Canada.

Eating Out

Most Native Americans who do not live in remote, rural areas practice the same dining-out habits as other Americans. They are just as likely to go to

McDonald's or any other restaurant as any other American. Most Native food is shared at home, but even then, more mainstream fare populates the plate. While Native American culture is not a restaurant culture per se, a number of restaurants across the country specialize in and focus on Native American foods, from dives in the Arizona desert to grilled seafood in the Pacific Northwest to fine dining in Santa Fe.

The Frybread House in downtown Phoenix is owned and operated by members of the Tohono O'odham tribe, and it specializes in various iterations of fry bread and Indian tacos. Diners can order fry bread loaded with refried beans, green or red chili beef, or chorizo, topped with lettuce, tomato, and cheese. Also on the menu is a variety of stews, including the ubiquitous southwestern specialty, green chili; hominy stew; and menudo. Dessert options include fry bread drizzled with honey or chocolate and butter. The average price for menu items is \$6.

Also found in Phoenix is Kai, a fine-dining restaurant located in the upscale Sheraton Wild Horse Pass resort on the Gila River Indian Community reservation. Taking its name from the Pima word for "seed," Kai features Native ingredients, honoring the local Pima and Maricopa tribes and emphasizing sustainability via produce and other ingredients sourced from the Gila River Indian Community farms. The menu is presented in oral tradition and storytelling terms: Appetizers are labeled "The Birth," salads are named "The Beginning," and entrées, which range in price from \$39 to \$52, are "The Journey." The tasting menu, priced at \$140, is called "Short Story."

Across the country at the National Museum of the American Indian, the Mitsitam ("let's eat" in the language of the Delaware and Picasatwney tribes) Native Foods Café showcases Native foods and ingredients from five discrete regions across the country. This includes buffalo burgers representing the Plains tribes, venison steak from the Pacific Northwest, and turtle chowder with pickled ramps from the Northern Woodlands.

In response to the relative dearth of Native chefs in American restaurants, the Native American Program at the Classic Cooking Academy in Phoenix,

Arizona, recruits and trains Native American youth in its specialized culinary program. The six-month course focuses on classical French training, while a major component centers on Native American culinary history and the role of indigenous foods in contemporary diets.

Observant and informed diners may notice Native American foods and cooking practices reflected on the menus of their local restaurants. Salmon grilled on a cedar plank or fiddlehead fern salads are two such examples. Many Native dishes have been adapted into mainstream culinary culture. Dishes like chili, wild rice, gumbo, succotash, cornbread, fried green tomatoes, and even corn on the cob have their roots in early Native American food practices as well.

Special Occasions

At traditional weddings, rather than exchange rings, the bride and groom gifted one another with food. The groom would bring venison or other meats as a symbol of his commitment to provide for his family. The bride brought corn or bean bread to symbolize her commitment to nurturing her household. The wedding feast menu at a traditional Native American wedding includes fry bread, venison, squash, beans, corn, and fresh fruits like blueberries, raspberries, and strawberries, if available and in season. The food is placed on a blanket and served buffet style. After the food is blessed, the elders and officiant eat first, followed by the bride, groom, and guests. Any leftover food is given to the elders.

When a baby is born among the Pueblo of New Mexico, the baby's family rubs cornmeal on his or her body. The Hopi conduct naming ceremonies featuring maize rituals. When a girl comes of age among the Hopi, she must perform maize-grinding ceremonies (recall that the Hopi women are revered for their maize-handling skills at the piki stone). Later, when she wants to propose to a boy, she makes piki bread and, accompanied by her mother and an uncle, presents it to the boy's family; if they accept it, the betrothal is official, and the girl would next bring a basket of white cornmeal and blue piki bread.

One unusual (to contemporary minds) feast food was dog. The Oglala Sioux prepared and ritually consumed dog on three occasions: to honor prominent men, in healing ceremonies called *Yuwipi*, and at fraternal society rituals. The Chippewa boiled dog in bear grease in order to recognize the adoption of white captives or visitors. The Ojibwe annually stewed a dog in wild rice as part of a sacred feast.

Native American spirituality and religious beliefs are intimately connected to the land and to food and aim to ensure a continued supply. Even mundane activities like hunting and planting corn were considered sacred and holy. Therefore, many, if not the majority, of Native celebrations prominently feature food and its consumption or abstention from it. Every tribe has a number of ceremonial feasts with sacred foods attached to them. Here are just

a few examples, many of which are feasts of first food, honoring the new seasons of corn, fish, and a variety of local agricultural products.

In the Pacific Northwest, many tribes practiced First Salmon rituals in the spring. In these rituals, the shaman would place the first catch of the season, which had been caught by a specially selected fisherman, on an altar, where it would be welcomed as an honored guest and then cooked over a newly built fire. The head of the fish would be placed up-river so that it could find its way home. After all in attendance had tasted of the fish, its head and bones would be returned to the river so that it could be reborn and continue its way upstream. This ritual marked the commencement of fishing season, and the people were careful to treat the salmon with respect to ensure its continued return to the river.

The interior of a traditional Nez Perce longhouse during the feast of roots, bulbs, salmon, and venison. This canvas and pole longhouse was built specifically for use in celebrating the First Fruits and First Salmon Rites ceremony by the Looking Glass Band of Nez Perce in Kamiah Idaho. (Marilyn Angel Wynn | Nativestock.com)

In June, the Iroquois held a Green Bean Ceremony, honoring the first crops of one of the Three Sisters. The Oneida held Strawberry Ceremonies in June as well, feasting on a wide variety of dishes featuring the summer fruit, including drinks, fry bread, and strawberry-flavored corn soups.

In the southeastern United States, the Creek and Seminoles observe Posketv, a Green Corn festival that emphasizes fasting in anticipation of celebrating the new year, marked by the midsummer growth of new corn. The Cherokees also celebrate Green Corn days; their festivities include feasting on roasted corn. Indeed, many tribes across North America hold Green Corn festivals, which are the most important harvest festivals of the year and feature fasting, dancing, games, sacred fire building, and feasts that ended the fasts.

The Miwoks of northern California held an acorn festival in late September, as the tree nut was a staple of their diet. The gathering was called the Big Time, and tribal members would come from their villages and harvest the nuts, feast, exchange news and supplies, and perform ceremonial dances. Acorns are traditionally pulverized on a grinding rock, then leached in water to remove the bitter tannins.

Acorn Griddle Cakes

Makes 12–15 cakes

$\frac{2}{3}$ c unbleached flour

$\frac{1}{3}$ c finely ground leached acorn meal

1 tsp baking powder

$\frac{1}{3}$ tsp salt

1 tbsp honey

1 egg, beaten

$\frac{3}{4}$ c milk

3 tbsp melted butter

Combine dry ingredients. Mix together honey, egg, and milk, and add dry ingredients, forming a smooth batter. Add butter. Drop batter onto a hot greased griddle, and cook until browned and slightly puffy.

Diet and Health

Many of the most common causes of death among Native Americans are directly related to diet. Many medical and nutrition experts agree that the radical changes in Native diets due to displacement to reservations have had a direct effect on the physical health of this population. Heart disease is the leading cause of death among Native Americans, and diet-related obesity, high blood pressure, high cholesterol, and diabetes are all risk factors associated with heart disease. Experts indicate that, on average, 30 percent of Native adults are obese. In some areas, like Arizona, nearly 95 percent of Native diabetics are also overweight.

Fry bread is often scapegoated as a primary cause for obesity and diabetes in Native populations. Because it is fried bread drenched in grease, it has nearly no nutritional value and is ultimately a delivery mechanism for 25 grams of excess fat and 700 empty calories (U.S. Department of Agriculture). Fry bread, along with other government-supplied commodity foods like potted meats, lard, and processed cheese, is often blamed for the widespread obesity and diabetes “epidemic” among Native populations. Many Native activists feel that these problems are a direct result of government programs of relocating tribes to reservations, thereby cutting them off from their traditional lifestyles, which lent the Native American diet a natural form of regulated caloric intake, an optimal balance of nutrients, and survival-inspired dietary adaptations.

In addition to having extremely high-fat diets and sedentary lifestyles, malnutrition is also a problem among Native American peoples; studies show that a mere 21 percent eat the recommended amount of fruit on any given day, while 34 percent eat the recommended amount of vegetables. The extreme poverty of reservation life also leads to prevalent hunger: Native Americans are also four times more likely to report not having enough to eat than other U.S. households. Proper nutrition education would help to mitigate this problem.

Other, more obscure threats to Native diets present themselves in genetically modified organisms

(GMOs). While naturally growing wild rice crops in Wisconsin and Minnesota have dwindled to half in the past century, agricultural firms and food corporations have developed a way to grow cultivated or paddy “wild” rice, which poses a threat to the Ojibwe, who rely on proper wild rice for income and preservation of their culture and traditions. There is fear among the Ojibwe that genetically modified rice may come to contaminate the naturally occurring wild rice they depend on; residents of the White Earth reservation in Minnesota have launched the Save Wild Rice campaign to prevent this from happening.

Nicaragua

Overview

With 46,430 square miles of area, Nicaragua is the largest country in Central America. The name of the country comes in part from the Nahuat-speaking Nicarao people, who inhabited the shores of Lago de Nicaragua at the time of the conquest, and in part from the Spanish word for water, *agua*. The country occupies the eastern portion of the Central American subcontinent and is comprised of three distinct geographic regions. A range of volcanic mountains defines an upland portion that divides the Pacific coastal plains from the Atlantic lowlands, an extensive underdeveloped and sparsely populated area known as La Mosquitia consisting of inland savanna with swamps and mangrove forest. The Corn Islands (Islas del Maíz) skirt the east coast of the country out in the Caribbean Sea. Nicaragua is bordered on the north by the Gulf of Fonseca and Honduras and on the south by Costa Rica.

Present-day Nicaragua includes over five million people, most of whom are considered mestizo, or of mixed ethnic ancestry. There are smaller populations of Europeans, Asians, and Afro-Antilleans as well as indigenous groups such as the Miskitu and Sumu, who inhabit La Mosquitia and neighboring areas. Nicaraguans often refer to themselves as *Nicas* but also as *pinoleros* in reference to the popular toasted maize and cacao beverage, *pinolillo* (see the following), which is an emblem of national identity. Almost half of all Nicaraguans live in rural areas and work in agricultural activities for their livelihood. The rural sector has an especially high incidence of poverty and malnutrition.

The abundant land and water resources and a relatively low population density have in Nicaragua accommodated an extensive, export-oriented agricultural sector since the time of the conquest. Production is differentiated across the country: Bananas, peanuts and soybeans, sesame seeds, sugarcane, sorghum, and livestock are produced in the Pacific region, whereas almost all the coffee, beans, and rice are produced in the Central region. In the Atlantic region, some rice, beans, and sugarcane are also grown. Agricultural holdings are unevenly distributed into a small number of commercially oriented, extensive private estates and a large number of very small subsistence-oriented family plots, creating two tiers in the farming sector. Most rural Nicaraguans are either landless agricultural laborers or small holders with plots (*milpas*) of 3.7 acres (1.5 hectares) or less. Farmers and farmworkers alike grow maize, beans, rice, and sorghum primarily for local use. Cacao, yucca, plantains, and other fruits and vegetables are also produced for household consumption and for sale in the local markets. In good years, it is possible to plant and harvest two crops; the first, or *siembra de primera*, is planted in June and harvested in August, providing food and income for the household. The second crop, *la postrera*, is planted in August and harvested in October. This latter crop provides seed for the next year's plantings, and any excess is sold to purchase chemical inputs, supplies, and equipment.

Food Culture Snapshot

Throughout the Northern Autonomous Region of the Atlantic (RAAN) on the Caribbean coast of

Nicaragua are towns such as Waspam overlooking the Rio Coco. Here, Miskitu Indians have made their living raising crops in small gardens, hunting in the forest, fishing in the river, and turtling in the nearby Miskito Keys since precontact times. Ernesto and Sylvia Kaisni share an elevated, two-room wooden frame house with their three children. Like many Miskitu men from Waspam, Ernesto works as a commercial lobster diver and is away from home for long periods of time. In a manner favored by Miskitu custom, Sylvia looks after the house and children and coordinates food purchasing, preparation, and parenting chores with her sisters and mother, who live nearby.

Miskitu custom also includes very clear ideas about food; some foods are taboo, and others are thought to have curative properties. Ideally, proper Miskitu meals must include two complementary elements, *tama* and *upan*. *Tama* includes all the starchy foods: cassava, cocoyam, sweet potatoes, maize, rice, and plantains. *Tama* must be complemented by *upan*, the protein component that provides a contrasting taste, texture, and nutrients not found in the *tama*. The most common form of *upan* in the Miskitu region is turtle meat. Fish and other wild game animals as well as beef and chicken are readily accepted by the Miskitu and are consumed with relative frequency. Fish, turtle, and other animals are butchered occasionally, but as there is no refrigeration, all meat foods must be consumed immediately. By custom, Miskitu give away meat foods to close relatives and friends and sell them to others. The demand is always greater than the supply, and much of the conversation and daily activity about food centers on locating the ephemeral *upan* foods. When *upan* foods are not included, the meal is said to be “sad,” and such meals are often the cause of discord and unhappiness.

When at home, Ernesto will start his day around 6 A.M. and go to the plantation (*milpa*) to tend to the food plants or go to the river to fish with a seine net. He does not eat breakfast at home but may carry along fruit or partake of the ripe fruit found in the plantation. Miskitu do not regard fruit as a real food; rather, they snack on it opportunistically throughout the day. Those remaining in the house will have a breakfast of sweetened coffee and bread with an occasional egg. All cooking is done in a stand-alone kitchen house, on

a wood-burning, horseshoe-shaped, baked clay stove known as a *kubus*. After the breakfast is prepared and served, the children leave for school and Sylvia begins her housework. Twice a month she travels to the central marketplace to buy rice, beans, flour, coffee, sugar, and lard. With a blend of store-bought and locally accessed provisions, she prepares the main meal, which ideally includes some form of *upan*—a fried fish or turtle meat. Boiled plantains or cassava serve as the *tama* for the meal along with an accompaniment of rice and beans or homemade bread, prepared with coconut milk. Ernesto and other adult men eat first and in silence. Conversation is reserved for other settings. Children and others eat in the second seating, and the women who have prepared the meal eat separately, often during the course of their housework. In the evening, leftover food from the main meal is served along with coffee. Afterward, people visit with family and friends and converse for a time before going to bed.

Major Foodstuffs

Many of the important Nicaraguan foods are produced locally. White maize, for instance, is well adapted to the climate and soil conditions and is a highly nutritious plant; it features prominently in the diets of all Nicaraguans. Typically, maize is harvested, dried, processed into masa flour, and consumed fresh, or processed into the forms of tortillas, tamales, or maize-based beverages such as pinolillo, which are enjoyed by people in all social groups.

Pinolillo

Ingredients

3 ears fresh maize on the cob

½ c cocoa powder

½ tsp cinnamon

½ tsp salt

2 tsp ancho chili powder

Sugar to taste

1. Remove husks and silk from maize, and boil ears of maize for approximately 12 minutes or microwave at high heat for 6 minutes (long enough to allow the kernels to be removed from the cob easily). Remove kernels from cobs and spread on a baking sheet; sprinkle lightly with salt and place in a 325°F oven for approximately 10 minutes, or until the kernels appear lightly toasted. Monitor closely to guard against burning.
2. Place all ingredients into a blender or food processor, and blend on low speed for about a minute or until the corn kernels are pulverized.
3. Pour mixture over ice or add to ½ glass of cold milk, and sweeten to taste.

Beans and rice are important foods in the field and on the table. Rice is grown in a wide range of climates, soils, and moisture conditions, with about a third of the crop grown in irrigated paddies. The greater part of the rice crop is grown under rain-fed conditions in upland areas, where it is planted either as monocrop or in mixed fields alongside other food crops including beans, which provide dietary fiber, calcium, iron, and vitamins and serve as a cheap source of protein when meat is unattainable.

Meat consumption conveys social status in Nicaragua. It was once customary for a middle-or upper-class family to have beef at least once a day, and beef was and remains a luxury for the poor. As consumers, Nicaraguans are thrifty, using organ meats, skin, hooves, and blood in various dishes. Nicaraguans also eat turtle eggs, lizards, armadillos, and other game animals, but poultry remains the most popular form of animal food.

While less significant in terms of overall consumption, Nicaraguans do eat fruits, including pineapples, bananas, plantains, mangoes, guavas, breadfruit, and coconuts. The consumption of root vegetables such as cassava provides an important source of calories, and other vegetables such as avocados, tomatoes, peppers, squash, cabbage, and carrots provide vitamins, minerals, and trace elements in the Nicaraguan diet. Cabbage is commonly consumed and is featured in the preparation of a staple

Nicaraguan side dish or condiment known as *curtido de repollo*.

Curtido de Repollo

Ingredients

- 1 cabbage head (shredded)
- 1 c water
- 1¼ c white distilled vinegar
- 1 tbsp salt (if using a giant cabbage head or a fairly large one, use 2 tbsp)
- ½ tsp sugar
- 2 serrano chili peppers or other green chili peppers
- 2 medium tomatoes, diced
- 1 medium or small onion, minced
- 2 spicy serrano chili peppers or other green spicy chili pepper, minced finely
- 1 medium lime, sliced

Place shredded cabbage in a large bowl. Combine water, vinegar, salt, sugar, and 2 chili peppers in a blender or food processor. Blend until peppers are liquefied, and pour over shredded cabbage and toss well together. Cover and refrigerate for 2 hours or more. Toss occasionally to pickle evenly. Drain all the excess liquid. Moments before serving, add the fresh ingredients: tomato, onion, and the remaining chilies. Dress liberally with lime juice y ¡*buen provecho!*

Cooking

The processes and techniques used to prepare Nicaraguan dishes arise from various cultures and places. Some methods and materials are indistinguishable from those used in North America; others originate in South America and Mesoamerica, mirroring the ancestry of the Nicaraguan people. Some cooking equipment followed in the wake of European contact, while other methods and implements are likely blends of two or more ideas from varied origins. The most common form of food preparation in pre-Hispanic Nicaragua was likely cooking over an open fire. Contemporary grill cooking—*a la parrilla*

or *asada*—is a direct descendant of this method, favored especially for cooking beef or poultry. Grilled *elotes* (ears of corn on the cob) are widely available as street food, served on a stick and seasoned with a smear of butter or mayonnaise, and then a topping of salt, lime juice, or chili powder. As there were few sources of animal fats in pre-Hispanic Nicaragua, frying was an unknown cooking technique but one readily adopted and favored by contemporary Nicaraguan cooks. Deep-frying in oil is the preferred method for preparing many foods ranging from plantains to yucca. Rice, too, is often fried in oil, often with finely diced red chilies or onions.

Typical Meals

As in other parts of Central America the daily meals in Nicaragua are designated *desayuno*, *comida*, and *cena*. The *desayuno* is eaten early in the morning and usually consists of eggs, cheese, rice and beans, and plantains, served with bread or tortillas. Fresh juice or coffee accompanies most Nicaraguan breakfasts. The main meal of the day is a late lunch known as the *comida*; many try to take this meal at home with their family. A characteristic *comida* might feature *indio viejo*—a stewed dish of shredded beef, onions, tomatoes, and peppers fried with shredded stale tortillas, then thinned with orange juice and broth and flavored with mint. The meal is often accompanied by deep-fried plantains, rice and beans, and *curtido* (see the preceding). There is great variety in the execution of the final meal of the day, the *cena*. In some cases the term is used to describe a formal meal shared with friends or family on special occasions; in other uses the *cena* is simply the family meal eaten very late in the evening. In the rural areas, this would be based on the staples of tortillas and *frijoles* (beans) and may include a stew of vegetables seasoned with garlic, onions, tomatoes, and chilies.

Eating Out

In Nicaragua the demand for eating out is proportional to the size and complexity of the settlement.

In small villages, “eating out” may mean eating at a friend or family member’s house, whereas in the large towns or cities a range of establishments provide food for sale to the public. When Nicaraguans eat out in the city it typically means visiting street-food vendors or similar very casual dining establishments. Take-out foods available from itinerant vendors on the street include *quesillos* (a white corn tortilla topped with creamed cheese, salt, chopped pickled onions, and sour cream), roasted *elotes*, and *vigoron* (boiled yucca topped with *chicharrones*—crunchy pork rinds—and *curtido*) served up on a banana leaf. Eating out in the bigger cities does offer more variation, including restaurants that serve Nicaraguan cuisine along with other Latin American, European, and Asian cuisines. An influx of fast-food restaurants in recent years has affected the landscape of urban Nicaraguan food culture as well.

Beef and stewed yucca with banana tree leaves and vegetables available for sale in a street market in Leon, Nicaragua. (Shutterstock)

Special Occasions

Many Nicaraguan fiestas are focused on the Roman Catholic liturgical calendar. Christmas, Easter, Lent, and the saints' days are widely celebrated holidays. The Christmas cycle begins on December 7, with a celebration of the Immaculate Conception known as La Purísima. The festivities include la Noche de Gritería (the Night of the Screaming) as children and young adults roam the streets and sing for the Virgin Mary. They stop at each house, where treats are offered, including *rosquillas* (donuts similar to biscotti), oranges, lemons, and chopped *caña* (sugarcane). The height of the Christmas celebration comes on Nochebuena (Christmas Eve). Family and guests gather for the holiday and are served *gallina rellena navideña*—a chicken stuffed with papaya, chayote squash, capers, olives, raisins, and tomatoes.

The Easter holidays begin with Carnival, the celebration of excess preceding the austere Lenten period. Carnival (*carne vale*) is thought to derive from an expression meaning “farewell to meat.” Per the fasting tradition, meatless dishes abound in Nicaragua during the 40 days of Lent. During the colonial period the Catholic Church declared the iguana a type of fish and therefore acceptable for consumption on meatless days. Throughout Lent and Holy Week, Nicaraguans cook dishes made from the meat and eggs of the iguana. Its popularity has placed the species under threat of extinction, and measures have been put in place to protect the lizard whose unfortunate nickname is “the chicken of the tree.”

Diet and Health

Poverty is the main social determinant of the quality of diet and overall health status in Nicaragua, and the traditional diet has undergone a transition, fueled by globalization and urbanization. Major changes in trade and exchange among nation-states have meant for people on the ground an increased use of processed foods including sugar, refined flour, hydrogenated fats, and animal products coupled with a decline in the intake of whole grains, fruit, and vegetables of local provenance. Despite the availability of

many healthful foods, the average Nicaraguan's diet is unbalanced. Various data concur that more than a fifth of the overall population is malnourished, and approximately one in four children in Nicaragua is stunted due to malnutrition. Paradoxically, Nicaragua has witnessed a growing incidence of obesity, diabetes, and cardiovascular disease in the same era. A health problem related to diet is the lack of access to sanitation and safe drinking water. Most rural dwellers in Nicaragua rely on contaminated water sources, and a significant proportion of the overall population does not have access to basic sanitation. Both factors amplify various health problems originating in poor diet.

Good health in Nicaragua is challenged by a wide array of health problems including a high prevalence of malaria and other parasitic diseases, various respiratory ailments, diarrheal diseases, anemia, periodic natural disasters, malnutrition, and high rates of maternal and infant mortality. The Sandinista regime substantially increased spending on health care, broadening and equalizing access to services. There was a substantial drop in infant mortality and the transmission of communicable diseases. However, the system was increasingly strained by shortages of funds. The current health care system aligned against these challenges mirrors the stratified nature of Nicaraguan society. Members of the upper classes rely on private physicians and hospitals, and often travel abroad for specialized care. The Nicaraguan Social Security Institute provides health care to the small segment of society employed in government and industry. The vast majority of the population is served at public facilities, and some 40 percent of Nicaraguans have no access to any health care services due to the uneven provision of services and the locations of health care facilities.

Various governmental and nongovernmental programs have taken aim at overall health status by improving people's food security and nutritional health. For instance, a program of free school meals for all primary-school children provides daily meals of rice, beans, corn, oil, and cereal, which are prepared by parents in rotation as part of a school-supervised food-aid program. Likewise, the government has

distributed food-production packages including livestock, seeds, and agricultural inputs to families in rural areas of Nicaragua to boost food production and stabilize rural communities.

Panama

Overview

Panama is a nation-state located in Central America. It borders on Costa Rica on the west and Colombia on the southeast. Panama is considered one of the “crossroads of the world.” During colonial times, Panama was a strategic place for the Spanish Empire, as a barrier between the Caribbean and the Pacific Ocean. In the 19th and 20th centuries, it became a commercial point of connection in the Americas. In 1821, Panama was incorporated into Gran Colombia after its independence from Spain; it became a republic when it declared its independence from Colombia in 1903. Panama has been the location of large and significant infrastructural projects, including the Panamanian Railroad (1850–1855), the French efforts to build a canal

(1880–1889), and the U.S. construction of the Panama Canal (1904–1914).

Throughout its history as a nation-state, Panama has emphasized its Spanish roots. In fact, as a result of its geopolitical location, Panama’s peoples represent a great diversity of cultures and ethnicities, including eight indigenous groups (Ngöbe, Buglé, Naso, Bokotá, Kuna, Emberá, Wounan, and Bri-Bri), five different waves of migration of peoples of African descent (connected to slavery in the 16th century and to voluntary migration from the British, Spanish, and French West Indies in the 19th and 20th centuries), and sizable numbers of immigrants from China, Greece, Spain, and India, among others. This ethnic diversity has produced a multiplicity of foodways as well as some dishes that are generally viewed as characteristic of the “national cuisine,” such as *sancocho* (soup), *arroz con pollo* (rice with chicken), and *arroz con frijoles* (rice and beans).

🍴 Food Culture Snapshot

Beatriz is an Afro-Antillean woman who lives with her youngest son in Bocas Town, Colón Island (Archipelago of Bocas del Toro). She is the mother of five children; her four daughters are married and have children of their own. All but one also live in the archipelago or the province of Bocas del Toro. Beatriz works as a cook and administrator of a bed and breakfast owned by a permanent resident expatriate. She cooks every day for herself and her family, in addition to working at the bed and breakfast. She also runs a small informal food business, preparing spicy sauce and other food

items based on her own recipes. She sells these items at her home and in the few stores that cater specifically to tourists and resident expatriates.

A common meal that Beatriz cooks for her son and herself is a hearty meat-and-tubers soup. As is common among Afro-Antilleans, Beatriz prizes deep-fried food and uses large quantities of vegetable or coconut oil to fry her food. Some of the common dishes Beatriz cooks include rice and beans with coconut milk, *rondón* (fish soup with coconut milk and tubers), *michilá* (boiled ripe plantain with coconut milk), *chicheme* (boiled hominy with coconut milk, condensed milk, and spices), *bragadá* (fried codfish cake made with flour), ackee (the fruit of a tree brought to Bocas del Toro from Jamaica) with codfish, ackee with eggs, pig's tail, *sauce* or *souse* (pig's feet cooked with cucumber and vinegar), *patí* (a turnover of spicy meat), and *janny* cake (flour bread made with coconut and baked), also known as *journey cake*.

Beatriz is extremely proud of her cooking abilities and the opportunities her extensive knowledge of Afro-Antillean cuisine has brought her. She is praised by all the tourists who stay at the bed and breakfast where she works. Beatriz is particularly generous in sharing her knowledge and secrets with friends, particularly resident expatriates. This is not common in Bocas, as women who keep their cooking secrets may acquire status within the community through them. Accordingly, most women prefer to guard their cooking secrets, handed down from their grandmothers or neighbors, for themselves. These secrets become their personal intellectual and cultural wealth, as they guarantee their prestige in the community and further opportunities to be hired as cooks.

Major Foodstuffs

City- and town-dwelling Panamanians consume three main meals daily. A hearty breakfast with fish or other types of meat, *hojaldras* (deep-fried dough), *patacones* (fried plantains [*Musa paradisiaca*]), and fried rice is common. People eat lunch (either at home or out) between noon and 2 P.M. Lunch is generally composed of either soup or rice

with meat (beef, pork, or chicken) and beans or lentils; tubers such as yucca, *ñampi* (a small gnarled yam [*Dioscorea* sp.]), *ñame* (yam), *otoe* (*Xanthosoma* sp., similar to taro), and dasheen (taro [*Colocasia* sp.]); and an occasional salad. Fried fish is also a common option for lunch, dinner, or a snack. Dinner is lighter and might include fried snacks. It is customary to eat a *bolsita* (literally, “small bag”) in the afternoon, as an appetizer or in lieu of dinner. A *bolsita* consists of a piece of fried chicken with approximately three pieces of patacones, three pieces of fried yucca, or a few French fries. *Bolsitas* are sold in small restaurants or on the streets in a small paper bag (hence the name) for one to two dollars.

Processed snacks (colloquially known as *burundanga*) and Panamanian snacks are eaten very commonly. They include maize empanadas (fried corn-flour cakes filled with meat or cheese), *carimañolas* (fried yucca rolls filled with ground beef or chopped eggs), and tortillas (fried maize patties that are much thicker than the Mexican tortillas). These snacks are available on street corners and small restaurants, or they can be bought frozen in supermarkets to be fried at home.

Rural Panamanians and indigenous groups often do not follow a regular three-meals-a-day regimen, but the foodstuffs they consume on a daily basis do not vary much from those already listed, except that processed snacks are uncommon. Also, meat is consumed less frequently, not for lack of desire but for lack of availability.

As already noted, Panamanians have a cuisine understood to be the “typical” or “national” cuisine, along with regional cuisines, including indigenous, Afro-Antillean, Indian, Chinese, Greek, Spanish, and Italian, among others, represented by the larger minorities in the country. A recipe for one of those typical or national dishes, the soup *sancocho de gallina*, follows. Depending on the region of the country, the same dish will include fewer (if cooked among indigenous peoples) or more (if cooked among Afro-Antilleans) ingredients, transforming the consistency and flavor of the soup.

Sancocho de Gallina (A Recipe from Panama's National Cuisine)

Ingredients

- 1 chicken (3 lb), cut in pieces
- 1 medium-size onion
- 4 cilantro leaves (often called “Chinese parsley” in the United States)
- 2 sweet chilies
- 1 tsp oregano
- ½ c annatto seed water
- Salt
- 2 lb ñame

Cook the chicken in pieces with the onion, cilantro, chilies, and oregano. Add annatto seed water. (To make the annatto seed water, boil the water and add 1 teaspoon of annatto seeds. Wait 20 minutes, then strain out the seeds.) When the chicken is tender, add salt and ñame in pieces, and wait until the ñame becomes tender.

Eating Out

It is common for city- and town-dwelling Panamanians of all social classes to eat out often. Whereas members of the middle and upper classes in Panama City visit upscale restaurants that offer international cuisine (Korean, Japanese, Chinese, Indian, French, Greek, Italian, Spanish, North American, Australian, Peruvian, Chilean, Argentinean, Brazilian, and Colombian food, just to name a few), members of the lower classes have access to inexpensive restaurants offering Chinese food, North American fast food, and Panamanian snacks.

Special Occasions

Panamanians celebrate special occasions by preparing and consuming dishes that are regarded as traditional and part of the national cuisine. Secular and religious festivities as well as life-transition events

are marked by the consumption of these dishes; old-time favorites are sancocho and stewed, roasted, or fried chicken with rice and fried bananas. Among Afro-Antilleans in the provinces of Bocas del Toro and Colón, special occasions call for a hearty soup (including the Afro-Antillean version of sancocho) or rice and beans prepared with coconut milk and accompanied by chicken, fish, or turtle (in Bocas del Toro). Because of the overexploitation of marine resources—partly as a result of the growth of tourism—dishes that were considered daily meals, or *comida corriente*, are now considered delicacies, or *comida de fiesta*, and thus can be consumed only on special occasions. This is particularly true of lobster, octopus, and snails, among others. These resources are also scarce throughout the country and, thus, have become more commonly consumed for special events.

Diet and Health

Studies conducted in connection to the dietary practices of Panamanians indicate that excess consumption of oil and salt among most ethnic groups has produced frequent cases of hypertension and obesity, in both urban and rural areas. Exceptions include the diets considered traditional for rural populations and indigenous peoples, such as the Kuna, whose diet has been studied from nutritional and cultural perspectives recently. The Kuna who have moved to urban areas and away from their *comarcas* (administrative regions with substantial indigenous populations) have tended to adapt to the less healthy dietary norms of mainstream Panama. A similar situation occurs with the largest indigenous group in Panama, the Ngöbe. Among the Ngöbe, greater involvement in the cash economy and greater availability of cash, due to government subsidies and more people working for wages, have produced a substantial shift away from the traditional diet, which was nutritionally balanced overall. The Ngöbe diet now includes large quantities of purchased polished white rice and white sugar and less of the traditional healthy foods. Consequently,

rates of undernutrition and malnutrition have risen substantially.

Paraguay and Uruguay

Overview

Paraguay and Uruguay are located in the Southern Cone of South America and are two of the smallest countries on the continent. Paraguay is a landlocked country of 5.2 million inhabitants, bordered by Argentina, Brazil, and Bolivia. The country is divided by the Paraguay River into two unequal and distinct portions. To the west is the Chaco prairie, an inhospitable and sparsely populated region that makes up over half of Paraguay's land area. Less than 3 percent of the population lives in the Chaco. The capital city of Asunción is located east of the Paraguay River, where most Paraguayans live. The country has suffered from isolation, civil war, dictatorships, and periods of extreme political and economic instability.

An important factor in Paraguay's food culture is the influence of the native Guaraní Indians, who likely lived in the region for thousands of years before the arrival of the Spanish conquerors in the 16th century. Today, over 90 percent of Paraguayans are considered mestizos, descendants of the native Guaranís and the Spanish colonists. Paraguay is unique in South America in that both Spanish and Guaraní are official languages, and the country's indigenous language is more widely spoken than its European one. Ninety percent of Paraguayans speak Guaraní, which they usually learn before Spanish. Today, Paraguayan gastronomy is a hybrid of European and Guaraní ingredients, cooking methods, and customs.

Uruguay is a Spanish-speaking country of 3.5 million people. Uruguay's only land border is with Brazil, to the north. The Río de la Plata and Uruguay

River form the border with Argentina to the west, and to the southeast is the South Atlantic Ocean. Almost a third of the population lives in metropolitan Montevideo, the capital and largest city. Due to its advanced education system including a high literacy rate, large urban middle class, and relatively even income distribution, Uruguay is often said to have one of the highest standards of living in Latin America.

Uruguay was a Spanish colony until independence in 1828. It is a country of immigrants, mainly of European and chiefly of Spanish and Italian descent. Uruguayan food culture is therefore primarily European with minimal indigenous influence. Beef is the most fundamental element of Uruguayan cuisine. The country is one of the world's top per-capita consumers of red meat, often grappling with neighboring Argentina for the top spot.

Most Uruguayans are nominally Roman Catholic although most do not actively practice a religion. Church and state are officially separated, making it one of the most secular countries in Latin America. Religion therefore does not play a major role in the daily diet of Uruguayans. However, many European food traditions are practiced on major Christian holidays such as Easter and Christmas.

Food Culture Snapshot

Pedro Luis and Lucía Spagnolo live in a suburb of Montevideo. Their lifestyle is similar to that of a well-off Paraguayan family living in the capital city of Asunción. The Spagnolos have two children, Jimena and

Martín, who both live at home. Martín is in high school, and Jimena is in her mid-twenties (unmarried women tend to live at home). Family is important to the Spagnolos, and even some longtime friends are considered a part of the extended family. The Spagnolo household is always bustling, with friends and family frequently coming over for afternoon tea and snacks or a late dinner.

Lucía stays at home and is responsible for the bulk of the food shopping and preparation. She makes a trip to the supermarket a couple times a week to stock up on coffee, tea, pastas, potatoes, milk, eggs, cheeses, soft drinks, and dry goods. Most days she visits a local produce market to pick up fresh lettuce and tomatoes for salads and fruits for dessert, and she stops at the butcher down the street for fresh cuts of beef or chicken for making breaded cutlets, panfried steaks, or stews. Lucía tries to make a homemade lunch every day during the week, as it is important to her that the family eat together for this biggest meal of the day. However, sometimes Pedro Luis cannot make it home from work for lunch, instead eating a fixed-price meal at a favorite restaurant near his workplace, and Martín often picks up a quick sausage or steak sandwich at a café with friends. After lunch, Lucía visits a local bakery where she purchases breads or pastries with sweet or savory fillings to accompany the afternoon tea. For dinner, Lucía uses leftovers from lunch to make a soup or stew, orders take-out pizza and empanadas (savory turnovers) from a nearby pizzeria, or serves pasta with a sauce purchased at the supermarket.

While Lucía performs the daily shopping duties, Pedro Luis is in charge of visiting the local butcher on weekends to procure the meat for the Sunday *asado*, or barbecue. Because he is the man of the family, the *asado* is his domain. Pedro Luis has purchased meat from the same trusted butcher for many years. The *asado* is the most important and anticipated meal of the week, and Pedro Luis takes great pains to ensure its success.

Major Foodstuffs

The major foodstuffs of Uruguay are primarily of European, rather than indigenous, origin. The greatest European culinary influences come primarily

from the countries of Italy, Spain, and France, but the cuisines of Germany, England, and other countries also play a role. These influences are due to the great waves of European immigration into Uruguay beginning in the mid-19th century. The largely European population solidified a food culture based on Old World culinary habits. Today, the foodstuffs that appear most on the tables of Uruguayans are beef, dairy, wheat, sugary pastries, and wine. The two other important foodstuffs in Uruguay, potatoes and yerba maté, are indigenous to the continent.

Paraguayan cuisine, or *tembi'u paraguái* as it is known in the Guaraní language, is a result of the combination of European culinary techniques and ingredients with those native to the region. The names of Paraguayan specialties often use both Spanish and Guaraní terms. Spanish colonists adapted European foodstuffs to use ingredients they found in the New World, such as substituting corn and yucca flours for wheat flour to make breads, and adding peppers and other native vegetables to stews. The major foodstuffs of Paraguay are beef, yucca, corn, dairy products, and yerba maté, plus squash, peppers, and beans.

When European colonists arrived in Uruguay, they found a land with a temperate climate, grasslands, and fertile coastal lowlands. The domesticated breeding animals they brought in the 17th century,

A traditional corn soup made in Paraguay. (Shutterstock)

such as cattle, pigs, sheep, and goats, thrived on the Pampas grasslands. Today, the Pampas are still important cattle-raising land and are home to large estancias and cattle ranches. Beef is the largest export and a main driver of the Uruguayan economy. Beef is also the central element of the Uruguayan diet and a marker of national identity as it is tied to the culture of the gauchos, Uruguayan cowboys. Indigenous wildlife plays a much smaller role in the diet of Uruguayans, but the native, flightless *ñandú* (rhea) is today raised on Pampas farms and has become an export item. The majority of land is devoted to raising livestock, but the fertile soil also supports food crops. Today, the main food crops in Uruguay are wheat and rice, followed by corn, potatoes, barley, sugarcane, and soybeans. Due to the small size of the Uruguayan population, a large percentage of meats and crops are exported.

Agriculture is also economically significant in Paraguay, especially cattle ranching and the industries with which it is associated. The traditional meat-based diet is reminiscent of a time when beef was cheap and abundant. While chicken, pork, and to a lesser extent lamb are eaten in Paraguay, beef is undoubtedly the most popular meat used for typical Paraguayan meals. Beef exports are substantial for such a small country, and Paraguay also produces cotton and soybeans for export. Due to increasing prices, many Paraguayans cannot afford to eat as much beef as is traditional.

The staples of the Paraguayan diet are two native ingredients: yucca and corn. Yucca (known as *mandioca* in Paraguay but variously called manioc or cassava) is a starchy tuber that is highly poisonous and must be properly processed before consumption. It was cultivated and processed by the Guaraní centuries before the arrival of the colonists and continues to be grown throughout the country. Yucca processing yields three distinct edible derivatives that are all used in Paraguayan cuisine: *fariña* (flour), *ty-pyraty* (a dry, fibrous residue), and *almidón* (starch). Corn (maize) is similarly used in many forms and at different stages of maturation: *choclo* or *maíz tierno* (young, fresh corn), *choclero* or *maíz cau* (semimature corn), and *maíz* (dried corn). Many of the traditional foods of Paraguay are prepared from these

staple grains. Yucca appears boiled as a common side dish, in dough for empanadas (turnovers), in fried fritters called *bolitas de mandioca*, and in many other preparations. Corn also takes various forms, from toasted dried corn eaten as a snack, to a hominy-based stew called *locro*, to various forms of polenta (*mbaipy* in Guaraní). A uniquely Paraguayan polenta preparation is *kivevé*, a sweet pumpkin polenta served with grilled meats or as a dessert. Another classic is *mazamorra* (dried corn stew), one of the oldest and simplest indigenous dishes.

Chipás are Paraguayan breads that accompany most meals. There are over 80 different types of chipá, which range from crisp flatbreads to corn custards and use a range of ingredients such as peanuts or anise seeds. They are most frequently shaped like bagels or rolls and are made from yucca starch, cornmeal, fresh cheese, eggs, lard or butter, and/or milk. Common variants include *sopa paraguaya* (Paraguayan cornbread), made with cornmeal and fresh cheese; *chipá guazú* (big chipá), a creamy corn custard flavored with onion; *mbejú* or *mbeyú*, an unleavened fried pancake made from a crumbly dough of fresh cheese and yucca starch; and *chipá caburé*, which is cooked around a stick. Sometimes chipá are filled with ground meats or vegetables, like *chipá so'ó*.

Dairy plays a large role in Uruguayan and Paraguayan food culture. Milk, eggs, yogurt, cheese, and *dulce de leche* (caramelized sweetened condensed milk) are consumed daily. The Uruguayan cheese industry produces local versions of famous European cheeses such as mozzarella, Gouda, provolone, Brie, Camembert, and Parmesan. Cheese-making techniques were brought to Uruguay by immigrants chiefly from Italy, France, and Switzerland. The cheese most used in Paraguay is a salty cow-milk farmer cheese called *quesú paraguái* (Paraguayan cheese). It is used in a number of traditional dishes including breads and soups and is often the only variety of cheese available in the countryside.

For a country surrounded by water on three sides, seafood plays a surprisingly small role in the repertoire of traditional Uruguayan dishes, although along the Atlantic coast the Spanish culinary influence can be seen in the preparation of dishes that feature cockles, mussels, and shrimp. Beef remains

paramount, however, especially in the interior. Although Paraguay is landlocked, the country's extensive river and lake system provides freshwater fish such as the dorado (a firm-fleshed white fish), the coveted *surubí*, and the popular *bagre* (catfish). Fish in Paraguay is grilled, fried, or stewed in soups and most often eaten in areas around the rivers and lakes.

The large number of Italian immigrants to Uruguay in the 19th and 20th centuries accounts for the popularity of fresh and dried pastas. Pasta is served with a variety of sauces including the popular *tuco* (meat sauce) and the Uruguayan Caruso sauce made from cream, beef stock, onions, ham, and mushrooms. Ravioli, lasagna, gnocchi, and baked cannelloni are also popular, and polenta and mashed potatoes are often topped with meatballs or braised meats. Italian-style pizza is also widely eaten in Uruguay, as well as *lehmeyun*, an Armenian pizza topped with ground meat and vegetables. Pies and turnovers abound, such as empanadas in a huge range of sizes and fillings and *pascualina* (spinach or Swiss chard pie).

The most popular vegetables and fruits in Uruguay and Paraguay are a combination of European and indigenous products. In Uruguay, the most-eaten vegetables are Swiss chard, red bell peppers, onions, spinach, lettuce, tomatoes, carrots, and squash. The most popular fruits are citrus, apples, and bananas. The Paraguayan diet incorporates indigenous foodstuffs such as squash, pumpkins, beans, and peanuts, all foods that were cultivated by the Guaraní before colonization. Onions, garlic, and various herbs and spices of European origin are also important to the Paraguayan diet. A wide variety of tropical fruits are also found and eaten in Paraguay.

The Spanish colonists introduced techniques for harvesting and processing sugarcane to the New World. Before the conquest, sweetness was provided by honey and fruits. Today, Uruguayans have a sweet tooth, and their desserts are rich and often very sweet. French pastries are especially popular in Uruguay, such as those incorporating meringues, mousses, soufflés, and cream. A typical Uruguayan dessert is *chajá*, a layered sponge cake with cream, jam, peaches, and meringue.

Postre Chajá

- 1 thin sheet of purchased sponge cake
- 2–3 tbsp orange liqueur
- 2 c heavy whipping cream, whipped to soft peaks
- 2–3 large peaches, peeled and sliced
- 1 lb purchased dry meringues, lightly crushed

Using a large round cookie cutter, cut circles from the sponge cake and brush each circle with liqueur to moisten the cakes. Top half of the rounds with a dollop of whipped cream and a few peach slices. Place the remaining rounds on top of the peaches and cover the cakes with whipped cream. Top each cake with pieces of meringue and the remaining peaches. Refrigerate for a few hours before serving.

Dulce de leche (caramelized sweetened condensed milk) is a national obsession in both Uruguay and Paraguay and is used to fill cookies, cakes, pastries, crepes, and *alfajores* (shortbread cookies), or as a topping for flan, a rich custard dessert originating in Spain. Sweet fruit pastes called *dulces* are popular in both countries and are used as fillings for empanadas, pastries, or cakes. A sweet quince paste called *dulce de membrillo* is especially popular in Uruguay and fills mini-shortbread cakes called *pasta frola*. A typical treat for breakfast, dessert, or a snack is *Martín Fierro*, named after an epic gaucho poem. It consists simply of a slice of cheese and a slice of dulce de membrillo.

Uruguay has produced its own beer and wine since the late 19th century. The country's wine industry is indebted to French and Italian immigrants and is the fourth largest in South America. Most Uruguayan wine is produced in the southern coastal departments. A red wine called Tannat is produced exclusively in Uruguay and southern France. In Uruguay, as in neighboring Argentina and coastal Chile, there exists a vast wine culture that is not found on the rest of the continent. Wines are consumed not only solo but also mixed in the form of *medio y medio*, a mixture of white wine and sparkling wine, or *clericó*, a mixture of fruits, fruit juice, and white wine. Often considered the Uruguayan

national spirit, *grappamiel* claims Italian roots and is a potent spirit made with alcohol and honey. Gin Fizz is popular, especially in Montevideo, as is *limoncello*, an Italian lemon liqueur. In Paraguay, beer and a locally produced dark sugarcane spirit called *caña* are the most widely consumed alcoholic beverages.

A drink universally enjoyed in both Paraguay and Uruguay, regardless of geographic location or socioeconomic situation, is a bitter tea called *maté*. The drink is native to Paraguay and is made from the dried leaves of the *Ilex paraguariensis* shrub, which grows wild along the upper reaches of the Paraguay River. In pre-Columbian times, yerba *maté* was harvested by the Guaraní Indians. The Spanish subsequently adopted the beverage, and Jesuit missionaries in Paraguay and northeastern Argentina were the first to cultivate the shrub. Today, *maté* is consumed in vast quantities in Paraguay, Uruguay, and Argentina in a communal ritual that attests to the social nature of the culture of these countries.

Cooking

Cooking habits can differ greatly between urban and rural areas, although women are usually in charge of daily culinary tasks. Uruguayan and Paraguayan kitchens, especially those in cities, make good use of modern appliances like microwaves and blenders to ease the culinary workload. In Uruguay, most dishes involve techniques that originated in Europe, such as rolling fresh pastas and doughs, baking cakes and pies, making vinaigrettes, and pickling vegetables, meats, or seafood. The French culinary influence can be seen in the frequent use of *salsa blanca* (béchamel) and puff pastry. Today, many of these foodstuffs are available ready-made in supermarkets.

Traditional Guaraní cooking techniques and names are still reflected in the Paraguayan kitchen. Today, urban Paraguayans use a gas or electric stove, but a brick-and-clay oven called a *tatakua* (“fire hole” in the Guaraní language) was traditionally a fundamental part of Paraguayan food preparation. It is still widely used, especially in rural areas and for special occasions, for baking the breads called

chipá or roasting meats. Many traditional dishes are available ready-made or partially made, canned, frozen, or packaged in supermarkets in urban areas. In rural areas, many families cannot afford the luxury of convenient ready-made products, so dishes are made from scratch.

Soups, stews, and braises are especially popular in Paraguay and Uruguay and combine European and native techniques and ingredients. They often begin with a *sofrito* of tomatoes, bell peppers, onions, garlic, and other aromatics. Various vegetables and beans are then added, as well as meats, depending on the economic means of the family. Soups and stews are traditionally prepared in cast iron or earthenware pots, but some modern kitchens use pressure cookers to speed cooking time.

Typical Uruguayan soups and stews include *buseca*, a winter tripe soup, and stews called *locros* or *pucheros*, made with meat, beans, lentils, and vegetables. The native ñandú (rhea) is used in stews, in either fresh or dried form. *Carbonada criolla* is a typical Uruguayan beef or veal stew with vegetables and fruit and is usually served in the shell of a winter squash.

In Paraguay, soups and stews are often finished with a handful of rice, milk, beaten eggs, or fresh cheese to stretch the dish. The popular *borí borí* is a meat soup with cornmeal and cheese dumplings. To make the much-loved traditional *so’o yosopy* (beef and rice soup), popularly called *soyo*, ground beef and rice are traditionally mashed together in a mortar to form a paste. This paste forms the base of the soup and is cooked with onions, peppers, tomatoes, and other aromatics in an iron pot with beef or pork fat. Today, many simplify the process by grinding the meat and rice in a blender and have made it healthier by using vegetable oils instead of animal fats.

So’o Yosopy (Beef and Rice Soup)

- 1 lb ground beef
- 2 tbsp white rice
- 2 medium onions, chopped
- 1 tomato, chopped

1 green bell pepper, chopped
 3 tbsp lard or oil
 1 tbsp flour
 1½ qt cold water
 1½ tbsp parsley, chopped
 Salt

Pound meat and rice in a mortar or grind in a food processor until a paste forms. Remove, and then grind the onion, tomato, and pepper until smooth.

Heat the oil in a large, heavy-bottomed pot. Cook the vegetables until they begin to brown. Add the flour and stir for a minute. Then add the meat paste and water. Stir until the soup comes to a boil, and then cook for a few more minutes, just until the meat is cooked. Add parsley and salt to taste.

Typical Meals

The Uruguayan meal structure is similar to that in southern Europe, with three meals, an afternoon teatime, and snacks. Uruguayans eat a simple breakfast at home or in a café, most often consisting of coffee with milk or maté tea and simple pastries or croissants. Lunch is the main meal of the day and is traditionally homemade and eaten at home with the family, even on weekdays. A typical lunch involves three courses: an appetizer; a main dish of meat (usually beef) accompanied by potatoes, bread, and a simple green salad; and a simple dessert. Appetizers might be cold marinated beef tongue or *matambre*, a cold beef or veal roulade stuffed with vegetables, served with Russian salad (potatoes, peas, and carrots bound together with mayonnaise). The main-course meat dish is often steak, *milanesas* (fried breaded cutlets), stews, meat pies, *estofados* (braised meats), hamburgers, or pastas. Dessert might be fresh or canned fruit, or ice cream. Since lunch is the heaviest meal of the day, Uruguayans often take a siesta (nap), then return to work until 7 or 8 in the evening. At night they will have a light dinner, usually around 10 or 11. Dinner is usually low-fuss, with families eating take-out pizza, empanadas, or *bocatas* (sandwiches of cold

cuts on a baguette) or repurposing leftovers from lunch into stews, soups, or casseroles. Milanesas or other simple beef dishes can also be eaten for dinner. Soft drinks, beer, and wine are commonly served at lunch and dinner, and juices and *licuados* (juices mixed with milk or water) are also popular in Uruguay.

Between lunch and dinner is the *merienda* (tea-time) when people drink maté, a very important custom in both Uruguay and Paraguay. Maté is a tea that is sipped from a gourd using a metal straw in an elaborate ritual shared among family and friends. It is enjoyed everywhere—at work, at school, at home, or in the street. In Uruguay, maté is accompanied by snacks called *bizcochos*, which are buttery, flaky pastries of European origin with many sweet and savory variations. Paraguayans often drink a cold infusion of yerba maté leaves called *tereré*. Tereré is excellent for mitigating the intense heat of the Paraguayan summer.

In Paraguay, typical meals and mealtimes vary between the countryside and urban areas. Urbanites are likely to follow a European meal structure similar to that in Uruguay: a simple breakfast, a large lunch followed by a siesta, an afternoon teatime, and a light dinner. Rural Paraguayans are more likely to eat two meals a day, including a more substantial breakfast and a large lunch. The typical meal structure involves meat-based dishes such as milanesas or *bife koyguá* (steak topped with onions and fried eggs) accompanied by yucca, chipá, and simple salads.

Uruguayans and Paraguayans get together most weekends with family and friends to enjoy an asado, an event similar to the American barbecue that traces its roots to the culture of the gaucho. The asado is considered the national dish of Uruguay. The centerpiece of the asado is simply seasoned grilled beef, variety meats, and sausages, all cooked slowly over wood embers at a low temperature until well done. A generous one pound of meat per person is usually allotted, and the meat is handled almost exclusively by men. In Uruguay, the asado is accompanied by simple salads, sauces, bread, and fresh fruit or fruit salads for dessert. Yucca and chipá are also present at the Paraguayan asado. Wine, beer,

and maté are always on hand, and music, dancing, and card games are enjoyed throughout the day.

Eating Out

While eating out is popular in the cities, country towns have limited options. Both Paraguay and Uruguay have their fair share of local fast food and street food that easily rivals competition from global multinational chains. Hamburgers and hot dogs (called *panchos*) are popular, but beef sandwiches called *chivitos* in Uruguay and *lomitos* in Paraguay, along with *milanesa al pan* (fried cutlet sandwiches) and *choripán* (sausage sandwiches), can be found on the streets, in bus or train stations, and, in Uruguay, in cafélike establishments called *confiterías*.

Other popular urban snacks sold on street corners or at stalls in Uruguay include *garrapiñada*, a mixture of peanuts, cocoa, vanilla, and sugar, and *tortas fritas*, fried cakes that are often topped with sugar, dulce de leche, or marmalade. The European influence on eating out in Uruguay can be seen in the popularity of cafés and pizzerias. Apart from pizzas cooked in wood-fired ovens, Uruguayan pizzerias typically offer a variety of empanadas and a specialty called *faína* (chickpea-flour bread).

In Paraguay, chipás are sold as inexpensive roadside snacks, on buses, or by vendors called *chiperas* who ride bicycles around town or walk door-to-door selling their fresh breads in the late afternoon. *Asadito* stands are found in the streets offering roasted meat on a stick served with yucca. Paraguayan markets sell traditional ingredients and foods that are not available at the major supermarkets, such as fresh artisanal cheeses and game meat like ñandú (rhea) or deer. Vendors in these markets also sell many prepared traditional dishes, such as soyo with *tortillitas* (beef soup with fried cakes).

Uruguayans are mainly traditional in their eating habits, and most restaurants offer some combination of pastas, pizzas, salads, meat platters, and local beers and wines. The most expensive and exclusive eateries in Montevideo tend to offer French cuisine. It has been said there is a lack of ethnic eateries even in cosmopolitan Montevideo, and vegetarians often feel left out of the local cuisine. This

is especially true at the ubiquitous *parrilla*, the most popular type of restaurant in the country. It is here that the asado is served in a public setting. Another specialty restaurant is the gaucho club, which specializes in typical gaucho dishes such as *asado con cuero* (beef cooked in its skin) and *mazamorra* (dried-corn stew). In Uruguayan cities and resorts along the Atlantic coast, restaurants offer freshly caught seafood.

Traditionally, meals have been eaten in the home with family, and this continues to hold high value in Paraguay, even though many living in big cities are forced to eat out at least once a day as urban sprawl and work schedules prevent a trip home. Restaurants continue to remain out of the budgetary reach of many Paraguayans, especially in rural areas where diners are conservative in their tastes and prefer traditional dishes and ingredients. Urban Paraguayans have a more adventurous palate, and Asunción has its fair share of eateries offering foreign food. The contribution of Paraguay's immigrant groups is seen in restaurants offering Italian, French, Chinese, Japanese, Korean, German, and Arab fare, as well as foods from neighboring Brazil and Argentina. Parrillas are a popular place to eat grilled meats as well as traditional Paraguayan dishes like chipá guazú, sopa paraguaya, and breaded and fried surubí. Until recently, typical Paraguayan foods were enjoyed almost exclusively in the home, but recently specialized restaurants and shops in urban areas have begun selling uniquely Paraguayan dishes in a "local" atmosphere.

Special Occasions

Because of the social nature of Uruguayan and Paraguayan culture, holidays and special occasions make great excuses for friends and families to gather and enjoy a special meal. In general, traditional special-occasion dishes are prepared by women, with the exception of the asado. Families in both countries hold asados to celebrate private events like birthdays, weddings, or the christening of a newborn. In Paraguay, chipá is considered a festive food and can be found at every popular religious celebration. Sopa paraguaya is the traditional

dish served at weddings, for holidays, and on special occasions.

In Uruguay, the two major holidays are Christmas and Easter. Christmas falls at the height of summer in southern South America, so meals are light, with cold meats, salads, and seafood playing a central role. The most traditional Christmas dishes are *pan dulce* (sweet bread) and English pudding with dried fruits and nuts. Uruguayan Easter festivities begin in February with Carnival, a monthlong, countrywide celebration involving street parties, musical theater, masquerades, parades, music, dancing, singing, drinking, and eating.

For Christmas in Paraguay, the main celebratory meal occurs after midnight mass on Christmas Eve, and most Paraguayans prepare a mixture of traditional Paraguayan specialties along with more modern fare like a turkey or rice and meat dishes. Clericó, a mixture of fruit, wine, and sugar, is drunk throughout the day, and the arrival of Christmas is celebrated with a champagne toast. Holy Week calls for major celebration and features traditional Paraguayan dishes, especially various *chipás*, which are made more “special” by shaping them like animals and baking them in the traditional *tatakua* oven. During the days leading up to Easter, meatless preparations of traditional dishes are consumed, such as the corn-based *locro de Cuaresma* (Lent stew) or *locro blanco* (white stew). *Kyrype*, a fried tortilla of starch, cheese, egg, and onion, is also typically eaten during this time, as well as meatless *empanadas de Vigilia* (abstinence turnovers), which are typically filled with a tuna stuffing. After mass on Easter Sunday, families gather to celebrate and eat a festive meal centered on meat.

Another major Paraguayan holiday is the Feast of Saint John. It is enthusiastically celebrated all over the country on June 24, during Paraguay's winter. The day begins with mass, and many typical winter specialties such as polenta, *chipá asador* (chipá wrapped around a wooden dowel or broomstick and roasted over coals), or *payaguá mascada* (Indian fried fritters stuffed with ground beef, also known as *lampreado*) accompany the festivities. Pagan rituals and contests are enjoyed throughout the day, especially in the countryside, and include

pelota tata (kicking around a ball of fire), fire walking, climbing up greased posts, and the burning of Judas Iscariot in effigy.

Diet and Health

Uruguay has one of the best health systems in South America, and life expectancy is high for the region. The country has one of the lowest poverty levels on the continent, and energy and protein malnutrition are not serious threats. Most of Uruguay's health problems are those associated with excess. Obesity is quite prevalent and is caused by a high consumption of beef and dairy products, which lead to a diet rich in saturated fats. The Uruguayan diet also includes high consumption of sugars and carbohydrates in the form of potatoes, pastas, breads, sodas, alcoholic beverages, and sugary desserts. The major causes of death in Uruguay are diet related and include heart disease, cancer, and digestive disorders. Uruguay has the highest percentage of diabetics in South America. Studies suggest that Uruguayans' knowledge, attitudes, and practices concerning food and nutrition are inadequate, and measures are being taken to influence dietary choices to include more fruits, vegetables, fish, and fiber.

In Paraguay, access to proper health care and fresh drinking water varies greatly from city to countryside. Paraguay also has among the lowest rates of undernourishment and malnutrition in Latin America, yet deficiency disorders do occur, especially among the lowest-income population and in rural areas. The typical Paraguayan diet includes a high amount of carbohydrates and saturated fats. Yucca is the main source of carbohydrates, but corn products, sodas, fruit juices, sugar, and beer also contribute. Saturated fats come in the form of meat, especially beef, and animal fats used in cooking. Due to changing dietary trends and increasing knowledge among some sections of the population, some Paraguayans are changing traditional recipes by substituting vegetable oils for animal fats such as suet or lard. Cardiovascular diseases are among the leading causes of death for Paraguayan adults.

The botanical-medicinal heritage of the indigenous groups of Paraguay has been preserved to

some extent, particularly in rural areas. Paraguayans frequently add herbs to the water used to brew tereré to heal minor ailments such as headaches or stomachaches. Certain traditional dishes are also believed to provide specific health and nutritional benefits. An example is *itacurú cué* (tripe soup), believed to restore health to the ill, provide strength to the frail, and increase milk production for women who are nursing.

Peru

Overview

Peru stretches from the Pacific coast of South America east to the Brazilian jungle. Ecuador and Colombia border Peru to the north, Chile to the south. Bolivia, formerly known as Upper Peru, lies southeast of Peru. Bolivia separated from Peru to become its own country in 1825. The capital of Peru, Lima, is located in the arid coastal section of the country and has its own world-renowned cuisine, sometimes called *cocina criolla*. The cuisines of the Andes Mountains, both the traditional indigenous cuisine and the more modern *cocina novoandina*, are also popular. The *selva* (jungle) region around the Amazon River is less developed but provides the country with beverages made from its exotic tropical fruits.

The Andes Mountains run north to south through Peru in at least three chains, with valleys and plateaus at different altitudes between them. The resulting vertical landscape, made up of diverse microclimates, has been under cultivation for centuries. Fertilization, natural pest-control techniques, cross-breeding, and crop development are practiced simultaneously in different climatic zones, perpetuating an agro-organic system that is better adapted to this geography than a monocrop plantation system, though there are large sugar and cotton plantations in the coastal area.

The Inca Empire, an empire made up of various indigenous tribes, existed for roughly 100 years before the Spanish conquest in 1532. After the conquest, indigenous foodways intersected with Spanish culinary traditions to form the basis of Peruvian cuisine. Labor shortages during the colonial period were addressed by the importation of slaves from

Africa. Afro-Peruvians working in coastal agriculture, livestock production, and food preparation impacted Peruvian cuisine significantly, especially as it developed in the colonial period. In fact, the burst of creative culinary experimentation that eventually produced Peruvian cuisine was a result of the coming together of these three ethnicities—indigenous Peruvians, Spanish, and Africans. The introduction of new ingredients as a result of the Columbian Exchange and the growth of Lima, the capital and trade center of South America for much of the 16th, 17th, and 18th centuries, also impacted the development of Peruvian cuisine.

In the 19th century, immigrant groups like the Chinese, Japanese, and Italians inserted their food traditions into the Peruvian culture and influenced the cuisine. In Peru, new culinary ideas are embraced with a spirit of innovation. Peruvian Chinese food and Peruvian Japanese food are subgroups of Peruvian cuisine. Dishes from these traditions combine flavors from their ethnic roots with distinctly Peruvian tastes.

Food Culture Snapshot

Felipe and Giannina Quevedo live in a spacious apartment in the Surco district of Lima. Felipe is an industrial engineer, and Giannina is a professor of hospitality administration at St. Ignacio de Loyola University. They have two young children.

Felipe and Giannina have a simple breakfast of rolls and coffee each morning before going to work. If possible, they will both return home for the midday meal, which consists of typical Peruvian dishes, such as *arroz con pato* (rice with duck), *aji de gallina* (shredded

chicken in a spicy sauce), or *carne asada* (grilled beef). A British-style afternoon tea is served around 5 P.M. It usually consists of tea, small sandwiches, and/or sweets. The family has a light supper later in the evening, which may include a soup or *tortilla de patata* (potato omelet).

Giannina buys most of their food and household supplies at a supermarket. She also shops at local specialty stores for items such as bread, milk, and meat. On Sundays, the family goes to Giannina's mother's home for a large meal with her brothers and sisters and their children. For this meal, they may purchase fish directly from the fishermen at the port of Callao, or they may visit the open-air market in Lima where they can purchase fresh produce or prepared specialty foods.

Major Foodstuffs

The potato and its distant relative the sweet potato are native to Peru and were unknown to the Old World before the Spanish conquest in 1532. The number of potato varieties grown in Peru may be as high as 4,000, not including the 2,000 varieties of sweet potatoes. Of all the varieties, the buttery, soft, and starchy yellow potato (*papa amarilla*) is one of the most popular. Before mills for grinding flour and baking ovens were widespread in Peru, Spanish nobles served platters of different-colored potatoes at banquets in place of bread. Today, many dishes, such as ceviche (raw fish marinated in lime), are typically served with a piece of boiled potato or sweet potato as a garnish. *Escribano*, a dish from Arequipa, is a type of potato salad soaked in *chicha de jora* (corn beer). *Causa* is a cold "torte" made out of layers of colorful vegetable or seafood salads and pureed potato. *Huanacayna* sauce, a creamy egg-based sauce, is always served over potatoes, as is *ocopa*, a sauce made with *huacatay* (Peruvian black mint).

Huanacayna Sauce

Sauce for 6 servings of *papas a la huanacayna*

1 tbsp *aji amarillo* paste

½ lb *queso fresco*

A variety of potatoes being sold at a Peruvian market. (Dreamstime)

½ lb ricotta

1 oz fresh breadcrumbs (no crusts), soaked in milk

1 egg, hard-boiled

1 c oil

3 lemons, juiced

2 saltine crackers

Salt and white pepper to taste

In a food processor, mix the *aji* paste, cheeses, soaked bread, and yolk from the hard-boiled egg. Add the oil and lemon juice to the cheese mixture slowly while food processor is on. Add the remaining milk from the soaked bread and saltine crackers. Thin the sauce with milk or thicken with saltines as needed; it should have the consistency of a light

sauce to coat the potatoes. Season with salt and pepper.

Pour over cold potatoes and decorate with bibb lettuce, Peruvian olives, and hard-boiled eggs.

Corn (maize) was cultivated in Peru perhaps as early as 3000 B.C. There are 35 varieties of maize found today in Peru. *Choclo* is the Peruvian name for the large-kernel maize that is used in Peruvian cuisine. Like potatoes, choclo is often used as a garnish for traditional Peruvian dishes, such as ceviche. *Humitas* are soft maize pastes folded into leaves and cooked in steam, similar to Mexican tamales. Purple maize is boiled to provide a richly colored juice base for the dessert *mazamorra morada* and for the refreshing purple drink *chicha morada* (now sold in the United States as “natural Peruvian purple corn-based drink”). The juice of the purple maize is known to be high in antioxidants.

Quinoa, which is native to Peru, is a pseudograin containing all eight essential amino acids. Its high protein content made it a valued grain in the starch-based pre-Columbian diet of the Incas. Its recent popularity in the United States has led to an increase in production for export. Taking advantage of its newly acquired popularity, *novoandina* chefs use quinoa in haute cuisine preparations, creating such dishes as wild mushroom quinoa pilaf, “quinnotto” (quinoa risotto) with truffle oil and *pallares* (giant lima beans), and quinoa-crusted flounder with grilled vegetables.

Quinoa contains saponins, toxins that leave a bitter taste on the grain. To remove the taste and the effects of the toxin, quinoa must be pre-rinsed or quick-boiled before cooking. Agricultural engineers have produced genetically modified strains of quinoa without saponins; however, this quinoa attracts pests and birds. Peruvian farmers prefer to sell the quinoa with its natural toxin rather than introduce pesticides into their agricultural practices.

Peruvian chili peppers are called *ají*. Their flavor is more subtle than the biting hot chili peppers found elsewhere in Latin America. Most Peruvian dishes contain *ají* in some form, though the cuisine, on the whole, is not overly spicy.

The Peruvian guinea pig, *cuy*, is a traditional meat item in Peru, especially in the Andean regions. *Cuy* are often kept in and around family homes, where they breed and require very little maintenance. They are slaughtered and prepared at home. The meat of the *cuy* is usually rubbed with an *ají*-spice mix, then roasted, stewed, or grilled. In Peru, *cuy* is considered a delicacy preferable to rabbit or suckling pig.

A large array of domesticated animals came into Peru’s food supply as a result of the Columbian Exchange, including cows, pigs, goats, sheep, chickens, and rabbits. In the colonial period, the inability of cattle to reproduce at high altitudes, which persisted for some years after the conquest, as well as the indigenous Peruvians’ fears of these large animals, kept the beef industry on the coast near the city of Lima, where it was also closer to the wealthier, beef-eating population of Europeans. From these early times, the beef industry was manned mainly by Africans. Cattle slaughterhouses were located in the San Lazaro district, the African section of the city, near the slave quarters and the slave market. Even today, the majority of the slaughterhouses are staffed by Afro-Peruvians. *Anticuchos*, Peruvian street food at its best, are made from beef hearts macerated in a spicy marinade, then threaded on skewers and grilled over a wood fire. Afro-Peruvians took advantage of their proximity to the slaughterhouses to create beef dishes like *anticuchos* that they could sell on the streets. Many bought their freedom with money earned from food-related side businesses. Dairy products were unknown in Peru before the Spanish conquest. Peruvian cuisine takes advantage of the textural qualities of cheese and evaporated milk but rarely exploits these ingredients for their flavor.

European plant foods that influenced Peruvian cuisine include wheat, grapes, olives, garlic, lemons, rice, and sugar. Peruvian *botija* olives were derived from a Spanish breed of black Alfonso olives. The name *botija* comes from the type of clay pot in which they were originally cured. Their purple color and creamy flavor come from a unique system that involves fermentation with live bacteria. *Botija* olives have become a specialty food export product. They are served in a type of olive mayonnaise with octopus in the Peruvian dish *pulpo al olivo*.

Peruvian lemons are similar to key limes. They are bright green and aromatic. Their flavor is smooth and sour, not quite as bitter as lemons. Peruvian lemons are important ingredients in ceviche and the cocktail *pisco sour*.

The closest Pacific port to the city of Lima is the Port of Callao. The particular way in which the Humboldt Current passes by this port draws in large quantities of plankton, making it a perfect feeding ground for a wide variety of fish. Before the conquest, indigenous *chasquis* (runners) had an established relay system whereby they delivered fresh fish, and other goods, from the Pacific coast to the Inca royalty in Cuzco at an altitude of 10,000 feet above sea level in less than 24 hours. The most famous Peruvian dish is ceviche, made from raw fish marinated in Peruvian lemon juice, similar to lime juice. Ceviche is usually served with a slice of sweet potato and a few kernels of choclo as a garnish.

Ceviche

Serves 6

2 lb wild striped bass or fresh grouper

25 limes or 50 key limes

Salt and pepper

Red onions, julienned and rinsed in cold water

Ají amarillo to taste, minced

Large-kernel corn, boiled

Sweet potato, boiled and cut in rounds

Cut fish into bite-size pieces. Place them in a glass or ceramic bowl. Add lime juice, salt, and pepper. (If using American limes, you may need to add a little orange juice concentrate if the acidity level is too high.) Add onions and ají. Garnish with sweet potato and corn. Keep cold in an ice bath. Serve refreshingly cool.

Peru's rivers also provide fish for dishes such as *chupe de camarones*. Large Peruvian freshwater crayfish are cooked whole to make this one-pot meal that includes breadcrumbs, garlic, onion, tomato, corn, peas, potatoes, rice, cheese, milk, stock, ají, and chicha de jora.

In the Andean highlands, the dry mountain air and dramatic temperature changes from day to night facilitated the development of techniques for producing freeze-dried and air-dried foods. Indigenous dried foods that are still present in Peruvian cuisine include *chuño* and *papas secas* (two types of dried potato), *charqui* (dried meat), dried, salted fish, and *cancha* (toasted, dry corn kernels). *Papas secas* are the main ingredient in the traditional dish *carapulcra*, a meat stew similar to chili.

Catholic European settlers, who used wine in the celebration of their religious liturgy and enjoyed it as a beverage as well, were eager to produce wine in the New World. However, it was not until 1560, when the fertile grape vineyards of the Ica region of Peru were fully developed, that the first vintage of New World wine was produced. Peru had a flourishing wine export industry until it was shut down in 1614 due to complaints from competing wine producers in Spain. The grape harvest was then used to produce *pisco* (Peruvian grape brandy), which became the main ingredient for the famous Peruvian cocktail, the *pisco sour*. Another pisco cocktail is *algarrobina*, made with pisco, condensed milk, and the sweet sap of the Peruvian *algarroba* tree.

Even when wine was abundant and cheap in Peru, the indigenous people preferred their own traditional drink, *chicha de jora* (maize beer). Euro-Peruvians from the colonial period also enjoyed *chicha*; the aristocratic Doña Josepha Escurrachea put a recipe for *chicha de jora* in her 1776 cookbook, listing it after a series of fruit drinks also called *chichas*. Contemporary Andean women continue to make *chicha de jora* at home. A red stick outside the door of one of their dwellings indicates that there is *chicha* for sale there. Modern chefs use *chicha de jora* for marinades and salad dressings.

Rice came to Peru from Spain via the Moors, who introduced it there in the Middle Ages, though strains of African rice breeds have been found among the Peruvian rice crops as well. In Peru, rice is often served with potatoes.

Olluquito con charqui is a traditional Peruvian dish that illustrates the blending of cultures in the cuisine. *Olluco* is a small tuber, native to Peru, with moist, juicy flesh. *Olluco* is popular with indigenous

Aymara, who liken it to “drops of rain.” *Olluquito* is *olluco* with the Spanish diminutive *ito* attached. Charqui is dried meat. The word *charqui* is similar to the Quechua word for “dry,” but it is also an Arabic word. In *olluquito con charqui*, the *olluco* and the *charqui* are cut in a fine julienne and cooked in an ají-garlic sauce. Ají is from Peru; garlic is from Europe. *Olluquito con charqui* is always served with rice, which indicates that the dish probably has Moorish or African roots, or both.

Three Peruvian tubers, *olluco*, *mashua*, and *oca*, are frost-resistant and grow together with potatoes in the highlands of Peru in an agro-organic system that controls pests and diseases. Although these tubers are part of the Andean diet, only the *olluco* is used in popular Peruvian cuisine. From the temperate highlands comes *lúcuma*, a tuberous fruit with a high starch content and flavor somewhat like coffee or maple. *Lúcuma* is the most popular ice cream flavor in Peru. *Lúcuma* is also used to flavor puddings and dessert beverages. Fresh *lúcuma* pulp can be frozen, making it useful for export along with other fruit purees.

Cooking

One-pot meals cooked in Spanish *ollas* (covered cooking pots) over wood fires are called *chupes* in Peru. *Ollas de barro* (clay pots) are traditional and are valued for the flavor they impart to food cooked on the wood fire. Wood-fired stoves are important for grilled dishes as well, such as *anticuchos* and *pollo a la brasa* (roisserie chicken). Peruvians like to cook *chicharrón de cerdo*, pork fried to a crisp in its own fat, in large *sartenes* (pans) on open-air wood-fired stoves. Among the hardwoods that are used to fire these stoves, the wood of the Peruvian *algarroba* (a cousin of the mesquite) is valued. Since city dwellers rarely have wood-fired stoves in their homes or apartments, these dishes are usually enjoyed in restaurants or at vacation homes in the country.

Fried foods are popular in coastal cuisine. *Jalea* is a fried fish platter that includes fried plantains, fried yucca, and a corn salsa called *chalaca*. *Tacu tacu* is a fried “tortilla” made out of day-old rice and beans. It is used as a bed for meat, eggs, and/or

ripe plantains. *Lomo saltado* is a Peruvian stir-fry of beef tenderloin, onion, tomato, cilantro, soy sauce, garlic, and ají. It is served with rice and French fries. The stir-fry technique was introduced by Chinese immigrants in the 19th century. *Lomo saltado* is cooked in an extremely hot pan to produce a crisp, slightly charred flavor. Sometimes the pan is flamed with pisco as a finish to the dish.

For centuries in the high Andes, at the time of the potato harvest, indigenous families have met in the fields, where they cook *humitas* and new potatoes on heated stones buried in a pit. The festive meals cooked in these rustic outdoor cooking pits are called *pachamanca*. A large *pachamanca*, organized to celebrate the anniversary of a hacienda (ranch), may include meats, corn, potatoes, native tubers,

Lomo saltado, a Peruvian steak dish. (iStockPhoto)

and humitas. Coastal pachamancas use yucca and plantains. Harvest-time *huatias* are outdoor meals cooked in fires built under mounds of earth. Potatoes and fava beans cooked under these mounds are said to take on the deep, rich flavors of the minerals in the soil.

Potatoes and sweet potatoes are often served in their simplest form: boiled. Boiled potatoes of all colors are mashed or left whole to serve as the base for refreshing salads and spicy cold sauces. To prepare sauces, the *batan*, a large concave stone with a matching oval stone, used to grind grains, herbs, and ajís, is sometimes used. The *batan* is favored in Peru over the mortar and pestle for many culinary tasks.

Typical Meals

Typical breakfast fare in Peru is hard rolls, a cheese platter, butter and jam, and hot milk with coffee extract. *Almuerzo* is the main meal of the day. It usually falls between 1:30 and 2 P.M. and consists of two courses and a dessert. More recently, so as to adapt to the modern workday schedule, Peruvians have abandoned the traditional midday meal on weekdays. This means that the weekend *almuerzo* has become even more important. On workdays, people eat a small meal in the middle of the day and a heavier supper than usual in the evening.

For a weekend “family meal,” the following are some popular first courses: *solterito* (a salad of fava beans, choclo, olives, and fresh cheese with a light vinaigrette), *causa*, *papas a la huancayna*, *ceviche*, *anticuchos*, or *papas rellenas* (meat-stuffed potato croquettes). In colder weather a soup, such as *parihuela* (Peruvian-style bouillabaisse) or *chupe de camarones*, may be served. The main course would be a heavier meat or fish dish, of which there are many in the classic repertoire of Peruvian cuisine. The cooking techniques, sauces, and accompaniments for most of these traditional main dishes are well known and well defined owing to the long food history of the country.

Desserts might include *suspiro a la Limeña*, which means “sighs of person from Lima” (a pudding of condensed milk, butter, and cream), *arroz con leche* (rice pudding), *milhojas* (layered pastry crisps with

manjar blanco—caramelized reduced milk like *dulce de leche*), or ice creams flavored with native Peruvian ingredients such as *lúcuma*, *cherimoya*, *guanábana*, purple maize, or *algarrobina*.

Merienda is the common Spanish and South American name for the snack taken around 5 P.M.; however, in Peru it is often referred to as *el té* and resembles British afternoon tea. Foods may be salty or sweet, formal or informal, depending on the day or the family traditions.

Supper is served sometimes as late as 9 P.M. It is a simple, one-course meal. Soups, *sangos* (porridges), or *locro* (a thick soup/stew made from Peruvian squashes and cheese) are popular. Sandwiches or cold cheese and meat platters may also be served.

Eating Out

Peruvians love to eat in public places, especially on weekends, surrounded by friends and relatives. Long-standing traditions of making, selling, and serving food outside of the home have created a varied, thriving restaurant and prepared-food industry. Perhaps the oldest type of Peruvian restaurant is the rustic *picantería*, typical of Arequipa. These family-run eateries are usually known for their spicy dishes and *chichas*.

Cocina criolla refers specifically to the traditional cuisine of Peruvian-born Europeans, but it can also refer to the cuisine of Lima. There are many restaurants in Lima, expensive and less expensive ones, where traditional *cocina criolla* is served. First courses almost always include *ceviche*, *anticuchos*, *papas a la huancayna*, and *causa*. Main entrées could be *ají de gallina*, *olluquito con carne*, *carapulcra*, *jalea*, *chicharrón*, or *lomo saltado*.

The most famous haute cuisine restaurant in Peru is superchef Gaston Acurio’s *Astrid y Gaston* in Lima. Acurio is a French-trained chef who is determined to put Peruvian cuisine on the map. The restaurant is one of the first of several restaurants in Peru that have developed high-end standards and modern presentation styles for *cocina criolla*. These restaurants have also embraced the *novoandina* style of cooking, which showcases native Peruvian highland crops and indigenous cooking traditions

in a haute cuisine setting. A high-end novoandina restaurant may serve the low-brow Afro-Peruvian staple *tacu tacu* (fried beans and rice) with seared yellowfin tuna, orange-endive salsa criolla, and a gooseberry–ají amarillo sauce.

Family-run sandwich shops in Lima, called *chicharronerías*, sell classic Peruvian fried pork sandwiches. *Cevicherías* are usually quaint, fun, family-owned seaside restaurants. The decor is unpretentious. Often, the owner is the fisherman, and his wife is the cook. *Cevicherías* compete with Japanese sushi bars, which serve sushi, sashimi, and Peruvian-style sushi called *tiraditos*. There are many inexpensive Chinese restaurants in Lima and other coastal cities. They have been an important presence in the country for over 100 years. Italian restaurants serving pasta dishes, like ravioli, are also familiar. The Miraflores district of Lima has a street dedicated almost entirely to pizzerias.

Street vendors have been a fixture in the plazas of Lima since the 16th century. Many of Peru's most beloved dishes, like anticuchos and chicha morada, were first sold as street food. Famous 19th-century street vendors include Erasmo, the “negro” sango vendor, and Ña Aguedita, who wrapped herself in woven scarves and dished out *fresceras*, *mazamorras*, and *champus* from three stone pots in Lima's open market. These colorful characters became iconic representatives of the multiethnic cuisine of Peru. In the more recent past, attitudes toward street vendors have been both positive and negative. With the increase in poverty and crime in the later 20th century, the streets and their vendors became less attractive than they once were. Nevertheless, recognizing the economic potential inherent in a quality street-food industry, the government has begun to make it easier for food businesses in the informal sector to legalize their enterprises and become more profitable.

Many of the famous Peruvian sweets were invented in convents, which competed with one another for the business of wealthy Peruvians, especially in the colonial period. Peruvian sweets often contain *manjar blanco* (Peruvian dulce de leche). Peruvian sweets are usually dense, very sweet rectangular confections that are cut into small squares and served in the afternoon or as a dessert after the main meal.

International fast-food chains such as McDonald's, Burger King, and Starbucks can be found in Peru only in the city of Lima. Tourist sites in the Andes and Amazonia tend to focus on ecotourists and those who desire an “authentic” Peruvian food experience. Local Peruvians prefer Peruvian food to all other foods. One of Gaston Acurio's goals is to market fast-food operations that will sell *pan con chicharrón* (Peruvian fried pork sandwiches) internationally as an alternative to the hamburger.

Peruvians have such a strong sentimental attachment to their cuisine that they welcome packaged and frozen foods that enable them to experience the flavors of Peru when they are elsewhere. Powdered versions of huancayna, ocopa, and other sauces are available. Ají can be purchased dried or canned. Frozen kits for making anticuchos can be found in Latin markets in the United States. One can even purchase a microwaveable vacuum-packed pachamanca, complete with choclo; yellow potatoes; Peruvian roots such as olluco, oca, mashua, *yacón*, and *maca*; along with humitas, as far away from Peru as Germany.

Special Occasions

Approximately 82 percent of Peruvians are Roman Catholic. While Catholic feasts, such as Christmas and Holy Week, are celebrated in Peru, days of fasting and abstinence are less common than in other countries because of *la bula*, a papal bull that gave privileges, including exemption from fasts, to Spain and her colonies. The bull was discontinued in the 1960s, but the spirit of feasting is still dominant in Peruvian culture.

El Señor de los Milagros is a specifically Peruvian feast celebrating a 17th-century mural painted by an Afro-Peruvian of a dark-skinned Christ on the cross. The mural stimulated popular piety but was not appreciated by local authorities, who made several unsuccessful attempts to have it removed from its prominent location. In 1655, when an earthquake reduced the entire section of the city in which the mural was located to rubble, the mural was found standing perfectly intact. The feast commemorating this event is celebrated on

October 18 after a number of days of penance in which people wear purple-colored penitential garments. On the actual feast day, copies of the mural are carried through the streets by crowds of people dressed in purple. These processions are followed by dinners that conclude with *turrone de Doña Pepa*, a pastry made of anise cookie logs bathed in a molasses-fruit glaze and covered with (purple!) sprinkles. Legend claims that Doña Pepa, a 17th-century Afro-Peruvian, made the first turrone to commemorate this feast after receiving the recipe in a dream from an angel.

The November feasts of All Saints' and All Souls' coincide with the returning rains of spring in Peru. During this time, guests visit family and friends to eat traditional dishes, particularly the favorite dishes of the deceased. Foods are also brought to cemeteries, where the dead are remembered with a joyful picnic. In Cuzco, the All Saints' Day feast traditionally includes a suckling pig and humitas (tamales).

Festivals of the saints and of the Blessed Virgin Mary are celebrated similarly throughout the country with processions, religious and folkloric ceremonies, traditional foods, and chicha. A feast that is popular among mixed-race Peruvians is that of the mulatto Peruvian saint Martin de Porres (1579–1639). Also called Fray Escoba (Friar Broom), St. Martin de Porres is known for his work feeding people and cleaning up after them. Many Peruvian homes have a small broom in the corner of their kitchen as a symbol of their devotion to this native Peruvian saint. He is known for having planted a famous olive grove in Lima, for preparing picnics and salads for the Dominican brothers in his convent, and for feeding the poor, especially the indigenous people, many of whom were homeless.

The Inca feast of Inti Rayni takes place in Cuzco at the winter solstice. It is a celebration in thanksgiving to the Sun God. The feast was banned in 1572 by the Catholic authorities, but it is celebrated today as a historical, folkloric, and religious festival. Among the festivities are many reenactments of Inca rituals, including a great feast consisting of meat, cornbread, chicha, and coca tea.

Christmas in Peru is a time to enjoy sweets. Sweet mango juice, bakery rolls, and *churros con chocolate* (fried donuts dipped in chocolate sauce) are popular. A common Christmas treat is imported Italian panettone and Peruvian-style chocolate milk made from evaporated milk, a chocolate bar, and cinnamon.

Carnival, the last day of feasting before the penitential season of Lent, generally does not include the kind of excessive eating and drinking often associated with this holiday in other countries. It is a day of “tricks” involving surprising people by bursting water balloons on them. In Cajamarca, guests are welcomed into family homes for *papas a la huancaína*, other traditional foods, and *chicha de jora*.

Holy Week is celebrated everywhere in Peru, but the most famous celebration is in the mountain city of Ayacucho. There, on the eve before Easter, it is customary to have a feast consisting of 12 typical Peruvian dishes. One of the dishes almost always included is *chiriuchu* (spicy roasted cuy). *Chiriuchu* is also served with beer, *chicha*, and cornbread on the vigil of the feast of Corpus Christi in June.

Diet and Health

Archaeological remains of preconquest indigenous Peruvians indicate that they were in good health. Protein sources included cuy (Peruvian guinea pig), game, fish, and quinoa. Dried foods and multiclimatic agricultural practices ensured food security. Moreover, recent analysis of the preconquest indigenous diet reveals that ingestion patterns increased nutrient absorption. The “appetizer” for the midday meal was *cancha* (dried maize). The rough texture of this foodstuff opened the alimentary passages, preparing them for increased nutrient absorption. Custom prevented the drinking of *chicha de jora* (maize beer) until the end of the meal, when enzymes in this fermented beverage could aid in the digestion of the complex carbohydrate-rich menu. This eliminated the danger of losing nutrients due to excess liquid or fiber pushing food through the digestive system too quickly.

Coca leaf vendors sell the leaves out of large bags in a Peruvian market. The cultivation and use of the coca leaf in Peruvian culture is a way of life. However, because the leaves are also the raw material used in the production of cocaine, the tradition has come under fire from the Peruvian and United States governments as Peru is one of the largest providers of coca leaves to Colombia, a country that provides cocaine to the rest of the world. (Corel)

Indigenous Peruvians have chewed the leaves of the coca plant, which are used to make the narcotic drug cocaine, for centuries. When the leaves are chewed alone, they produce a mild burst of energy. When they are chewed with an alkaline agent, usually in the form of vegetal ashes, the effect is heightened. The chewing of coca leaves does not have the extreme narcotic effect of the chemically pure alkaloid cocaine, nor does it seem to be addictive. It seems to help relieve the symptoms of altitude sickness.

Puerto Rico

Overview

Puerto Rico is an archipelago located between the Caribbean Sea and the North Atlantic Ocean. It is composed of the main island of Puerto Rico, the smaller islands of Culebra and Vieques, and many uninhabited islands like Mona, Desecheo, and Caja de Muertos. Politically it is an unincorporated territory of the United States, or Estado Libre Asociado (Associated Free State). The food culture of Puerto Rico has been formed through centuries of adaptation, blending, and creation based on elements originating in Taino Arawak, Spanish, African, and U.S. cultures.

The precolonial indigenous inhabitants of Puerto Rico were Taino Arawaks, whose basic staple was yucca. They processed yucca by peeling and grating it, squeezing out the juice and its poisonous components, and drying it to form flour with which they made a flatbread called *casabe*. Yucca was supplemented with fish and shellfish, and with beans, maize, fruits, and vegetables that the Taino Arawaks cultivated in small plots of land called *conucos*.

The Spanish colonizers arrived in 1493, starting a colonial period that lasted four centuries. It redefined the ecosystem and the food culture of the archipelago. The Spanish learned local fishing and food-cultivation and -preparation techniques from the indigenous inhabitants, and they also introduced new foods and culinary techniques. Many of the foods considered essential by the Spanish were hard or impossible to produce in the Caribbean. Whereas pigs and cattle thrived on the islands, wheat flour, olive oil, *bacalao* (salt cod), and wine had to be constantly imported. These foods became

an important part of Puerto Rican food culture even though they are not local foods. The Spanish successfully introduced many vegetables and fruits from Europe, Asia, and Africa, and today it is hard to believe that they did not originate in the Caribbean region. These include plantains, bananas, coffee, breadfruit, sugarcane, tamarinds, and mangoes. Dishes from different regions of Spain, including Moorish dishes, were slowly transformed as they were constantly adapted and reinvented using new ingredients and taste ideals. Contemporary Puerto Rican rice dishes like *asopao* (soupy rice) and *arroz con pollo* (chicken with rice) are based on *arroz caldoso* and Valencian paella, which have different versions all over Latin America and the Caribbean.

During the Spanish colonial period, Puerto Rico produced coffee and sugar for the Spanish market, and the food supply depended on subsistence agriculture and products imported from Spain. Thousands of slaves were imported from different regions of Africa. The Africans introduced vegetables like okra and *ñames* (true yams as opposed to sweet potatoes) as well as food-preparation techniques like the pounding and grating of plantains and other starchy vegetables to form savory cakes.

Contemporary specialties like *mofongo* (pounded fried plantains) clearly show an African lineage. As cooks on the plantations and in affluent homes, Africans had a formative role in the shaping of Puerto Rican cuisine. They were in charge of assembling and creating a new cuisine with disparate ingredients, techniques, and taste memories from diverse regions of the world.

When the United States invaded Puerto Rico in 1898, a distinctive cuisine already existed in the archipelago, but the local food culture continued to develop under U.S. colonial rule and its project of modernization. Important staples like rice and beans were increasingly imported from the United States, and the diet of Puerto Rican peasants in the U.S.-dominated sugar economy became more and more limited. Food aid and home economics instruction in the public school system helped to speed up the incorporation of cheap processed foods like oatmeal, dried milk, canned Vienna sausages, Spam, and canned corned beef. These and other U.S. products have been localized and incorporated into the matrix of Puerto Rican cooking. *Arroz con salchichas* (rice with Vienna sausages) and Thanksgiving turkey stuffed with mofongo are very common dishes. A more recent dimension of the impact of the relationship with the United States is the effervescence of a restaurant culture fueled by tourism, diasporic Puerto Ricans with professional culinary training and work experience acquired abroad, and the ambition of transforming Puerto Rican cuisine into the “grand cuisine” of the Caribbean. Another important aspect of contemporary Puerto Rican food culture is its resilient Caribbean character, constantly reinforced by cultural nationalism and by vibrant Cuban and Dominican communities that keep the Caribbean fusion constantly evolving.

Food Culture Snapshot

Middle-class Puerto Ricans do most of their food shopping at supermarkets. Many families supplement supermarket purchases with produce from the *plaza del mercado* (traditional food markets) and with a few items grown at home or received from relatives and friends who cultivate small plots. In rural areas many people keep chickens and pigs, and in coastal areas noncommercial fishing is common.

The Rivera family—Yesenia, David, and their three kids—go to the supermarket together. In the produce area they choose from a variety of imported fruits and vegetables like apples, peaches, and plums, as well as local and imported tropical fruits like coconuts, mangoes, papayas, and different varieties of bananas.

From the fresh vegetable area they get onions, garlic, tomatoes, potatoes, yucca, and *yautías* (the underground stem of a *Xanthosoma* plant), but they do not buy plantains and traditional flavoring ingredients like *ajies dulces* (sweet chilies) and *recao* (long-leaf cilantro) because David grows them in their suburban backyard. From the refrigerated section they buy milk, eggs, sliced processed cheese, and several cartons of juice drinks including orange, passion fruit, and guava. From the dry foods aisles they pick up coffee, many bags of rice, canned and dried beans, canned tomato sauce, pasta, boxed cereals, and sandwich bread.

When looking at the meat section, the kids ask for hamburgers, but Yesenia shuns premade patties in favor of fresh low-fat ground meat, which she will season with an onion and garlic *adobo* (seasoning rub) to make her own burgers. She also selects packaged pork chops and chicken parts. At the frozen aisle they buy ice cream, fish sticks, and ready-made turnover wrappers to make savory *pastelillos*. Finally, in the bakery section they buy a loaf of *pan criollo* (Puerto Rican bread), which they will enjoy at breakfast the next day, and a lemon meringue pie, which the kids requested.

Sometimes Yesenia prefers to shop at her local plaza del mercado. She thinks that it is good for her children to experience the small-town atmosphere of the old-fashioned market, and she also likes the fresh local fruits and vegetables sold there. She buys three different varieties of *yautía*, one breadfruit, and a bunch of *guineos manzanos* (a short and fat variety of banana), which are rarely available at the supermarket. Before leaving they stop at the prepared-food stands where they eat *bacalaitos* (codfish fritters) and drink fresh fruit *batidas* (shakes).

Major Foodstuffs

Rice and beans are the main staples of the Puerto Rican diet even though the diet has become more diversified in recent decades. Coffee is a necessity for breakfast, and it is also enjoyed throughout the day and after meals. Rice could be of the short- or long-grain variety, but together with beans it is the center of most meals. Many people consider that they have not eaten a full meal if they have not eaten rice

and beans, so it is not unusual to see pasta dishes like lasagna served with rice and beans on the side. A popular expression for making a living is *ganarse las habichuelas*, or “earning the beans.” Red kidney beans and pink beans are the most common, together with chickpeas and *gandules* (pigeon peas).

Pork, chicken, and beef are the favorite meats. Many Puerto Ricans enjoy specialty dishes made with offal, like *mondongo* (tripe) and *mollejas* (gizzards), but there are many who dislike them. Canned meat products are very popular because their low price makes eating meat every day possible. Seafood is also appreciated, although at home it is not consumed as frequently as meat. Fresh fish is not widely available so people buy imported frozen fillets. Bacalao remains an important component of Puerto Rican cuisine, but nowadays imitation crabmeat is taking its place in many traditional dishes. Conch and octopus are well liked, and they can be found in many stores.

Viandas is a category of starchy foods that includes yucca, different varieties of yautía, ñames, *batatas* (white sweet potatoes), breadfruit, plantains, and green bananas. Viandas can be simply boiled and served as a side dish dressed with olive oil, or they are transformed into dishes like *mo-fongo*, *alcapurrias* (grated viandas stuffed with meat and fried), and *pasteles* (grated viandas stuffed with

meat, wrapped in plantain leaves, and boiled). Simple lettuce and tomato salads, or salted avocado slices, are ways in which other vegetables are consumed. Fruits like oranges and bananas also have staple status, whether eaten for breakfast, dessert, or a snack.

Another important category of foods includes the items necessary to make *sofrito*, a seasoning made with ground ingredients, used in beans, rice, stews, and meat dishes. A basic sofrito contains onions, garlic, *ajíes dulces*, and *recao*. However, each cook adds one or more additional ingredients, making the sofrito unique. Possible additional ingredients include *cubanelle* or bell peppers, roasted red bell peppers, cilantro, oregano, pimento-stuffed olives, capers, ham, or olive oil. Lightly frying the sofrito in olive oil or lard that has been colored and flavored with achiote (annatto seeds) is the first step in Puerto Rican cooking, and it gives dishes their distinctive taste and aroma.

Fruits like mangoes, bananas, guavas, and oranges are grown in many backyards, and they are frequently eaten as a snack. Coconuts are prized for their refreshing water and for their sweet flesh, which is used grated or in milk form to make innumerable desserts. Some less widely available but equally popular fruits include *parcha* (passion fruit), *guanábana* (soursop), pineapples, papayas, *acerolas* (West Indian cherries), and *quenepas* (a round green fruit with a thin brittle skin and a large pit covered by sweet pulp).

Cooking

Daily Puerto Rican cooking combines traditional techniques with the use of modern equipment. Grating and pounding are two fundamental food-preparation techniques that are best performed with traditional tools. A simple hand grater (*guayo*) is indispensable when grating green plantains to make dumplings (*bollitos de plátano*) or when grating all kinds of viandas for *alcapurrias* and *pasteles*. Grating in a blender or in a food processor does not release enough stickiness in the viandas, which is necessary for them to form a cohesive dough or batter. Although it is indeed possible to make the batter

A sign for a restaurant featuring mondongo, a Puerto Rican tripe dish. (iStockPhoto)

for pasteles and alcapurrias in a food processor, purists insist that this method produces inferior results. The *pilón* (wooden mortar and pestle) is another essential kitchen tool, particularly to make mofongo. Only the *pilón* makes plantains and other viandas come together with the right balance of softness and chunkiness, and it also gives mofongo its domed shape. In restaurants it has become commonplace to serve mofongo in the *pilón*, sometimes with a meat or seafood stuffing. Another important food-preparation tool is the *tostonera*, a wooden press used to flatten plantain slices between the first and second frying to make *tostones*. Newer *tostonera* designs shape the plantain slices into cups that can be filled with meat or seafood to make *tostones rellenos*.

Gandules con Bollitos de Plátano (Pigeon Peas with Green Plantain Dumplings)

Serves 4

Ingredients

For the Bollitos

- 1 green plantain
- ½ tbsp olive oil
- ½ tsp garlic, crushed
- ¼ tsp salt
- ¼ tsp ground black pepper

For the Gandules

- 1½ tbsp olive oil
- 1 small onion, chopped
- 1 clove garlic, crushed
- 2 oz smoked ham, cubed
- 2 tbsp sofrito (available in the Latin American foods aisle of most supermarkets)
- ¼ c tomato sauce
- 1 can pigeon peas, drained
- 2½ c water
- 1 bay leaf
- Salt and pepper to taste

Procedure

Peel the plantain, and grate it using the smallest holes of a box grater. The result should be wet and sticky. Mix the grated plantains with the oil, garlic, salt, and pepper. Take teaspoonfuls of the mixture and shape into small balls. Cover until ready to use.

Heat the oil in a large pot, and sauté the onion, garlic, and ham until the onion is translucent. Add the sofrito, stir, and cook for 3 minutes. Add the tomato sauce, stir, and cook for 3 more minutes. Add the pigeon peas and stir well. Add the water, bay leaf, salt, and pepper, and simmer for 15 minutes. Drop in the dumplings one at a time, and stir carefully after 5 minutes. Simmer for 30 minutes, or until the broth has thickened and the dumplings are cooked through. Serve with white rice.

The blender has become an important tool in the Puerto Rican kitchen primarily to make sofrito. Making sofrito in a blender rather than in the *pilón* is less labor-intensive and also gives excellent results. Additionally, the blender can easily make enough sofrito for a few weeks, which significantly reduces cooking time. Blenders, mixers, and food processors are used to make the occasional cake or flan (caramel custard), and microwave ovens are used mostly for reheating leftovers or for quick cooking of rice and beans.

The most important cooking vessel is a *caldero*, a thick and heavy pot similar to a Dutch oven. Cooking rice in the *caldero* produces *pegao*, a layer of crispy rice that sticks to the bottom of the pot and is considered a treat. Electric rice cookers have not become popular in Puerto Rico because they do not produce *pegao*. The *caldero* is also the preferred vessel for deep-frying *tostones*, *alcapurrias*, and many other snacks and appetizers. *Calderos* or regular pots are used to cook beans, soups, and stews. Pressure cookers are favored among many for their ability to cook dried beans and chickpeas quickly, which allows them to have home-cooked instead of canned beans.

Another important cooking vessel is a saucepan for making coffee. Water is heated to just below boiling before adding at least one heaping tablespoon of espresso coffee grounds for each cup of coffee desired. The coffee is stirred constantly for one minute without letting it boil, and finally it is strained with a *colador* (cloth strainer). The coffee can be drunk black or returned to the saucepan after heating up some milk in it. This technique produces coffee that is strong but not bitter, and most people prefer it to drip or espresso machines.

Today, the food industries offer many alternatives for busy Puerto Rican home cooks. Peeled and cut viandas are available frozen. Tostones and other fritters are available frozen and ready to fry. Many households use canned beans, chickpeas, and gandules rather than fresh, dried, or frozen ones. Canned tomato sauce is ubiquitous, as well as bouillon cubes, seasoning packets, and ready-made adobos. Sofrito is sold in jars or in frozen plastic tubs, and even those cooks who do not like to depend on these products keep one around just in case they run out of their own.

Typical Meals

Puerto Ricans do not eat traditional meals every day. Many people have eclectic food habits and like to experiment with new flavors and cuisines that they have come to know about from the media, travel, and restaurants. However, certain patterns remain easy to identify. Breakfast consists of coffee with bread or pastries like bakery-bought *quesitos* and *tornillos* (puff pastry cylinders stuffed with cream cheese or pastry cream). Other breakfast options include eggs, pancakes, and French toast. Cereals can be of the boxed variety, but hot cereals like oatmeal, farina, and cornmeal and custards made with cornstarch are still popular. Lunch is often eaten outside of the home, and it can be either a fast version of dinner or just a sandwich or fast-food items like burgers, fried chicken, or pizza.

Dinner more often than not consists of rice, beans, and a meat dish. Rice can be white rice that is simply cooked with salt and oil or lard. Yellow rice

is cooked with sofrito, achiote, and tomato sauce, and sometimes it includes beans and/or meat. Rice becomes a one-pot meal when cooked as *asopao*, a thick soup with plenty of meat or seafood. *Asopao* is considered the ideal meal to warm up on a rainy day or to fight a cold. Beans are stewed with sofrito and tomato sauce. Different versions can include cubes of pumpkin, potato, ham, or fresh pork hocks. The most common meat preparations are pork chops, boneless pork loin cubes, or chicken parts rubbed with adobo and fried. Beef cubes, Vienna sausages, Spam, and canned corned beef are stewed following the same procedure of adding sofrito, tomato sauce, bouillon cubes, and potatoes. Beefsteak is served as *bistec empanado* (breaded and fried) or as *bistec encebollado* (cooked in vinegar and onions).

The rice, beans, and meat dinner is sometimes complemented by side dishes and snacks, mostly made with viandas. Green plantains are served as tostones or *arañitas* (crispy clusters of shredded plantain) on the side or as bollitos de plátano in a gandules stew. Ripe plantains, sliced lengthwise and fried, are another common side dish. Ripe plantain slices are also used to make *pastelón*, a layered ripe-plantain casserole with a beef, chicken, or pork filling. Other viandas appear as side dishes simply boiled or as mofongo.

Arañitas (Shredded Green Plantain “Spiders”)

Yields 6 to 8 pieces

1 green plantain

1 clove garlic, crushed

¼ tsp salt or adobo

Oil for frying

Peel the plantain, and grate it using the medium-sized holes of a box grater. Sprinkle the salt or adobo evenly over the thin, long plantain strands. Heat 2 inches of oil to approximately 350°F. Take a heaping tablespoonful of plantain strands and press lightly with your fingers until the strands stick together forming a cluster. They should look like

spiders with plenty of “legs” sticking out. Fry until golden and crispy. Sprinkle with salt to taste, and serve with a dipping sauce.

Dessert is served often but not daily. Traditional dessert options might include fresh fruit and homemade or store-bought flan, bread pudding, *dulce de lechosa* (semiripe papaya slices in syrup), or guava paste with *queso del país* (fresh cheese). Ice cream, cakes, pies, and pastries are other possibilities.

Eating Out

Many coffee shops are open for breakfast. They offer coffee, batidas, and freshly squeezed orange juice. These drinks can be accompanied by toasted bread with butter or by pressed sandwiches made with ham, cheese, and/or fried egg. A special treat of some old Spanish cafeterias and bakeries is the *mallorca*, a brioche-like bun covered with powdered sugar. Mallorcas are usually split, spread with butter or margarine, and toasted in a sandwich press.

The most popular places to eat lunch are *fondas* (cafeterias) and fast-food outlets. Fondas serve traditional Puerto Rican food at low prices and with no-frills service that allows working people to enjoy a full meal during their lunch hour. Customers choose from food counters that contain the menu items of the day, which typically include white and yellow rice, stewed beans, and a few meat options. Side dishes might include *pegao*, *tostones* (fried, squashed, and refried plantain), *mofongo*, *amarillos* (fried ripe plantain slices), and French fries. Puerto Rican-style spaghetti and lasagna are other possible options, as well as dishes that are not generally made at home like *mondongo* and goat stew. Competing with fondas are fast-food outlets like McDonald’s, Burger King, KFC, and Taco Bell, which can be found everywhere. Most fast-food restaurants have made concessions to the Puerto Rican palate and include items like rice, beans, *tostones*, and flan in their menus.

Festivals are occasions for eating out in Puerto Rico. Whether the theme is music, art, dance, agriculture, or a specific food item, all festivals offer

plentiful amounts of traditional food and drink. Festival food vendors have created new versions of traditional snacks, many of which are supersized versions of their predecessors. *Bacalaítos* are made dinner-plate size, and *arañitas* have become *nidos*, large grated plantain nests stuffed with meat or seafood salad. Ironically, the names of the original dishes mean “little codfish” and “little spiders,” making their supersized versions seem incongruent. *Piña colada*, with or without rum, is always present at festivals, sometimes served inside a hollowed-out pineapple. Another favorite food item sold at festivals are traditional sweet confections made with guava, sweet potato, coconut, bitter orange, papaya, sesame seeds, or caramelized milk. Thanks to festivals many traditional foods that were unknown to younger Puerto Ricans are now easy to sample. These include *guanimes con bacalao* (boiled cornmeal dumplings with salted codfish salad) and the sweet treat called *gofio* (toasted cornmeal mixed with sugar).
