However silent, these large, simple shapes have a wordless language. They say that the granite has grown in secure and secluded depths, guided wholly by its own laws; and that no disturbing outside influence has intervened in the slow tranquil growth of the crystals.

Conversation with the Earth (p. 105)

Alfred A. Knopf. New York, New York, USA. 1953

MINERAL: JADE

Author undetermined

When I think of a wise man, he seems like jade. Wise men have seen in jade all different virtues. It is soft, smooth and shining like kindness. It is hard, fine and strong like intelligence. Its edges seem sharp but do not cut, like justice. It hangs down to the ground like humility. When struck, it gives a clear, ringing sound, like music. The stains in it, which are not hidden and which add to its beauty, are like thoughtfulness. Its brightness is like heaven while its firm substance, born of the mountain and the waters, is like the earth. That is why wise men love jade.

In Joan M. Hartman

Chinese Jade of Five Centuries

C.E. Tuttle Company. Rutland, Vermont, USA. 1969

MINERAL: LOADSTONE

Gilbert, William 1544–1603

English scientist and physician

...the more advanced one is in the science of the loadstone, the more trust he has in the hypotheses, and the greater the progress he makes; nor will one reach anything like certitude in the magnetic philosophy, unless all, or at all events most, of its principles are known to him.

In *Great Books of the Western World* (Volume 28)

On the Loadstone and Magnetic Bodies and on the Great Magnet the Earth

Preface (p. 2)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

MINERAL: MARBLE

Twain, Mark (Samuel Langhorne

Clemens) 1835–1910

American author and humorist

Verily it is one thing to have cash and another to know how to spend it. The man ought to die a violent death that put it into people's heads to try to make cherished,

beloved, sacred homes out of such cold, ghostly, unfeeling stuff as marble — a material which God intended for only gravestones. You can build a house out of it, and put a door-plate on it, and call it a dwelling, but it isn't any use — it is bound to look like a mausoleum, after all. Stewart's house looks like a stately tomb, now, and after it is finished it will never look entirely natural without a hearse in front of it.

Letter to San Francisco *Alta California*
July 28, 1867

MINERAL: OPAL

Wilcox, Ella Wheeler 1850–1919

American poet and journalist

And lo! The beautiful Opal,
That rare and wondrous gem,
Where the moon and sun blend into one,
Is the child that was born to them.

How Salvator Won & Other Recitations

The Birth of the Opal

Edgar S. Werner. New York, New York, USA. 1891

MINERAL: PEARL

Gibran, Kahlil 1883–1931

Lebanese-American philosophical essayist

Perhaps the sea's definition of a shell is the pearl.

Sand and Foam: A Book of Aphorisms (p. 55)

Alfred A. Knopf. New York, New York, USA. 1959

A pearl is a temple built by pain around a grain of sand.

Sand and Foam: A Book of Aphorisms (p. 4)

Alfred A. Knopf. New York, New York, USA. 1959

MINERAL: SALT

Author undetermined

A Salt is a substance which has been naturalized.

Classroom Emanations

Journal of Chemical Education, Volume 2, Number 7, July 1925 (p. 611)

Boerhaave, Herman 1668–1738

Dutch chemist, physician, and botanist

Whomsoever is not acquainted with the taste of Salts will never arrive at the knowledge of our Arcana.

Elements of Chemistry (Volume 1)

Part III (p. 438)

Printed for J. & J. Pemberton. London, England. 1735

Darwin, Erasmus 1731–1802

English physician and poet

Hence with diffusive salt old Ocean steeps
His emerald shallows, and his sapphire deeps.
Oft in wide lakes, around their warmer brim

In hollow pyramids the crystals swim;
Or, fused by earth-born fires, in cubic blocks
Shoot their white forms, and harden into rocks.

The Botanic Garden

Part I, Canto II, V

Canto II, l. 120–125 (p. 29–30)

Jones & Company. London, England. 1825

Sagan, Carl 1934–96

American astronomer and author

But let us look a little more deeply at our microgram of salt. Salt happens to be a crystal in which, except for defects in the structure of the crystal lattice, the position of every sodium and chlorine atom is predetermined. If we could shrink ourselves into this crystalline world, we would see rank upon rank of atoms in an ordered array, a regularly alternating structure — sodium, chlorine, sodium, chlorine, specifying the sheet of atoms we are standing on and all the sheets above us and below us. An absolutely pure crystal of salt could have the position of every atom specified by something like 10 bits of information. (Chlorine is a deadly poison gas employed in European battlefields in World War I. Sodium is a corrosive metal which burns upon contact with water. Together they make a placid and unpoisonous material, table salt. Why each of these substances has the properties it does is a subject called chemistry, which requires more than 10 bits of information to understand.) This would not strain the information-carrying capacity of the brain.

Broca's Brain: Reflections on the Romance of Science

Part I, Chapter 2 (p. 15)

Random House, Inc. New York, New York, USA. 1979

If the universe had natural laws that governed its behavior to the same degree of regularity that determines a crystal of salt, then, of course, the universe would be knowable. Even if there were many such laws, each of considerable complexity, human beings might have the capability to understand them all. Even if such knowledge exceeded the information-carrying capacity of the brain, we might store the additional information outside our bodies — in books, for example, or in computer memories — and still, in some sense, know the universe.

Broca's Brain: Reflections on the Romance of Science

Part I, Chapter 2 (p. 15)

Random House, Inc. New York, New York, USA. 1979

MINERAL: SANDSTONE

Abbey, Edward 1927–89

American environmentalist and nature writer

The sandstone walls rise higher than ever before, a thousand, two thousand feet above the water, rounding off on top as half-domes and capitols, golden and glowing in the sunlight, a deep radiant red in the shade.

Desert Solitaire

Down the River (p. 205)
Ballantine Books. New York, New York, USA. 1968

MINERAL: SAPPHIRE

Gübelin, Eduard

No biographical data available

In the close mesh of fiction and truth sapphire is more closely ensnared than any of its noble peers. Out of mankind's long acquaintance with it, towers of Babylonian dimensions have pressed heavily on its brazen back, built out of the tough ashlar of pagan and Christian magic, which sought to make use of supernatural powers through the stone of heavenly blue.

The Color Treasury of Gemstones

Sapphire: Lord Keeper of the Seals in the Gem Kingdom (p. 46)
Crowell. New York, New York, USA. 1975

MINERALOGIST

Landes, K. K.

No biographical data available

Let there be more geological mineralogists! The only requirements, outside of educational background, are a prodigious curiosity, a vivid imagination, and a thick skin.

Geological Mineralogy

American Mineralogist, Volume 31, Number 3 & 4, March–April 1946 (p. 134)

Russell, Bertrand Arthur William 1872–1970

English philosopher, logician, and social reformer

If you ask a mathematician, a mineralogist, a historian, or any other man of learning, what definite body of truths has been ascertained by his science, his answer will last as long as you are willing to listen.

The Problems of Philosophy

Chapter XV (p. 154)

Oxford University Press, Inc. London, England. 1959

MINERALOGY

Author undetermined

Mineralogy is the Alphabet of Geology.

In William Knight

Facts and Observations Towards Forming a New Theory of the Earth
Introduction (p. 3)

Verne, Jules 1828–1905

French novelist

I loved mineralogy, I loved geology. To me there was nothing like pebbles — and if my uncle had been in a little less of a fury, we should have been the happiest of families.

A Journey to the Center of the Earth

Chapter 1 (p. 6)

The Limited Editions Club. New York, New York, USA. 1966

von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

...mineralogy is a science for the Understanding, for practical life; for its subjects are something dead which cannot rise again, and there is no room for synthesis.

In Johann Peter Eckermann

Conversations with Goethe

Friday, February 13, 1829 (p. 294)

J.M. Dent & Sons Ltd. London, England. 1970

MINING

Agricola, Georgius 1494–1555

German mineralogist

[I]f mining is a shameful and discreditable employment for a gentleman because slaves once worked mines, then agriculture also will not be a very creditable employment, because slaves once cultivated the fields, and even today do so among the Turks; nor will architecture be considered honest, because some slaves have been found skilful in that profession; nor medicine, because not a few doctors have been slaves; nor will any other worthy craft, because men captured by force of arms have practised it.

De Re Metallica

Book I (p. 23)

Dover Publications, Inc. New York, New York, USA. 1950

[I]nasmuch as the chief callings are those of the moneylender, the soldier, the merchant, the farmer, and the miner, I say, inasmuch as usury is odious, while the spoil cruelly captured from the possessions of the people innocent of wrong is wicked in the sight of God and man, and inasmuch as the calling of the miner excels in honour and dignity that of the merchant trading for lucre, while it is not less noble though far more profitable than agriculture, who can fail to realize that mining is a calling of peculiar dignity?

De Re Metallica

Book I (p. 24)

Dover Publications, Inc. New York, New York, USA. 1950

Muir, John 1838–1914

American naturalist

The drifts and tunnels in the rocks may perhaps be regarded as the prayers of the prospector, offered for the wealth he so earnestly craves; but like the prayers of any kind not in harmony with nature, they are unanswered.

Steep Trails

Chapter XVI (p. 203)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

Mining discoveries and progress, retrogression and decay, seem to have been crowded more closely against each other here than on any other portion of the globe.

Steep Trails

Chapter XVI (p. 198)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

MIRACLE**Bradbury, Ray** 1920–

American writer

We live in miracles which cannot be explained. The scientist, the theologian, the artist — each attempts impossible explanations.

In Ray Bradbury, Arthur C. Clarke, Bruce Murray, Carl Sagan, and Walter Sullivan

Mars and the Mind of Man

Ray Bradbury (p. 139)

Harper & Row, Publishers. New York, New York, USA. 1973

Dawkins, Richard 1941–

English ethologist, evolutionary biologist, and popular science writer

Evolution is very possibly not, in actual fact, always gradual. But it must be gradual when it is being used to explain the coming into existence of complicated, apparently designed objects, like eyes. For if it is not gradual in these cases, it ceases to have any explanatory power at all. Without gradualness in these cases, we are back to miracle, which is simply a synonym for the total absence of explanation.

River Out of Eden: A Darwinian View of Life

Chapter 3 (p. 83)

Basic Books. New York, New York, USA. 1995

Dürrenmatt, Friedrich 1921–90

Swiss playwright and novelist

...in the realm of science there is nothing more repugnant than a miracle.

Translated by James Kirkup

The Physicists

Act One (p. 48)

Grove Press, Inc. New York, New York, USA. 1964

Einstein, Albert 1879–1955

German-born physicist

That this [analogy of the atom with the solar system] insecure and contradictory foundation was sufficient to enable a man of Bohr's unique instinct and tact to discover the major laws of the spectral lines and of the electron shells of the atoms together with their significance to chemistry appeared to me like a miracle — and appears to me as a miracle even today. This is the highest form of musicality in the sphere of thought.

In Paul Arthur Schlipp (ed.)

Albert Einstein: Philosopher-Scientist

Autobiographical Notes (p. 45, 47)

The Library of Living Philosophers, Inc. Evanston, Illinois, USA. 1949

Haldane, John Scott 1860–1936

Scottish physiologist

The more we discover as to physiological activity and inheritance, the more difficult does it become to imagine any physical or chemical description or explanation which could in any way cover the facts as to the persistent co-ordination. From the standpoint of the physical sciences the maintenance and reproduction of a living organism is nothing less than a standing miracle, and for that reason the co-ordinated maintenance of structure and activity is inconsistent with the physical conception of self-existent matter and energy.

The Philosophical Basis of Biology: Donnellan Lectures, University of Dublin, 1930

Lecture I, Mechanistic Biology (p. 11)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1931

MIRROR**Durell, Clement V.** 1882–1968

English mathematician

...a reception was held and the science departments were on view. A young lady, entering the physical laboratory and seeing an inverted image of herself in a large concave mirror, naively remarked to her companion: "They have hung that looking glass upside down."

Readable Relativity

Chapter II (p. 12)

Harper & Brothers. New York, New York, USA. 1960

MISERY**Darwin, Charles Robert** 1809–82

English naturalist

...if the misery of our poor be caused not by the laws of nature, but by our institutions, great is our sin...

The Voyage of the Beagle

Chapter XXI (p. 500)

Heron Books. 1968

I am the most miserable, bemuddled, stupid dog in all England, and am ready to cry with vexation at my blindness and presumption.

In Francis Darwin (ed.)

The Life and Letters of Charles Darwin (Volume 1)

Letter to J.D. Hooker, July 14, 1857? (p. 461)

D. Appleton & Company. New York, New York, USA. 1896

MISTAKE**Braddon, Mary Elizabeth** 1837–1915

English novelist

We spend the best part of our lives in making mistakes, and the poor remainder in reflecting how very easily we might have avoided them.

Aurora Floyd (p. 241)

Ward, Lock & Tyler. London, England. 1875

Gombrich, Ernst Hans 1909–2001
English art historian and scholar

In order to learn, we must make mistakes, and the most fruitful mistakes which nature could have implanted in us would be the assumption of even greater simplicities than we are likely to meet in this bewildering world of ours.... To probe a hole we first use a straight stick to see how far it takes us. To probe the visible world we use the assumption that things are simple until they prove to be otherwise.

In John Pottage

Geometrical Investigations (p. 15)

Addison-Wesley Publishing Company, Reading, Massachusetts, USA. 1983

Mayr, Ernst 1904–2005
German-born American biologist

In science one learns not only by one's own mistakes but by the history of the mistakes of others.

The Growth of Biological Thought: Diversity, Evolution and Inheritance Chapter 1 (p. 20)

Harvard University Press, Cambridge, Massachusetts, USA. 1982

Miller, Henry George
No biographical data available

The more distinguished the doctor the more terrible the mistakes he has made — or will admit to.

Henry Millerisms

World Neurology, 9 April 1968 (p. 8)

Obruchev, Vladimir 1863–1956
Russian geologist and geographer

Be persistent and persevering, but never stubborn. Do not cling to your judgments. Remember that there are many clever people in the world liable to spot your mistakes. If they are right, be not reluctant to agree with them.

Words of the Wise: A Book of Russian Quotations

Translated by Vic Schneiersson

Progress Publishers, Moscow, Russia. 1979

Siegel, Eli 1902–78
American philosopher, poet, critic, and founder of Aesthetic Realism

If a mistake is not a stepping stone, it is a mistake.

Damned Welcome

Aesthetic Realism, Maxims, Part One, #139 (p. 39)

Definition Press, New York, New York, USA. 1972

MITOCHONDRION

Gould, Stephen Jay 1941–2002
American paleontologist and evolutionary biologist

Surely, the mitochondrion that first entered another cell was not thinking about the future benefits of cooperation and integration; it was merely trying to make its own living in a tough Darwinian world.

Wonderful Life: The Burgess Shale and the Nature of History

Chapter V (p. 310)

W.W. Norton & Company, Inc. New York, New York, USA. 1989

MIXTURE

Huxley, Thomas Henry 1825–95
English biologist

Mix salt and sand, and it shall puzzle the wisest of men, with his mere natural appliances, to separate all the grains of sand from all the grains of salt; but a shower of rain will effect the same object in ten minutes.

Collected Essays (Volume 2)

Darwiniana

The Origin of Species (p. 76)

Macmillan & Company Ltd. London, England. 1904

MODEL

Ball, John

No biographical data available

To make progress in understanding all this, we probably need to begin with simplified (oversimplified?) models and ignore the critics' tirade that the real world is more complex. The real world is always more complex, which has the advantage that we shan't run out of work.

Memes as Replicators

Ethology and Sociobiology, Volume 5, Number 3, 1984 (p. 159)

Bianco, Margery Williams 1880–1944
English-American author

The Rabbit could not claim to be a model of anything, for he didn't know that real rabbits existed; he thought they were all stuffed with sawdust like himself, and he understood that sawdust was quite out-of-date and should never be mentioned in modern circles.

The Velveteen Rabbit: Or How Toys Become Real

Athenaeum Books for Young Readers, New York, New York, USA. 2002

Born, Max 1882–1970
German-born English physicist

All great discoveries in experimental physics have been due to the intuition of men who made free use of models, which were for them not products of the imagination, but representatives of real things.

Physical Reality

Philosophical Quarterly, Volume 3, Number 11, April 1953 (p. 140)

Box, George E. P. 1919–
English statistician

All models are wrong but some are useful.
Apocryphal

Bronowski, Jacob 1908–74
Polish-born English mathematician and polymath

The pre-eminence of astronomy rests on the peculiarity that it can be treated mathematically; and the progress of physics, and most recently biology, has hinged equally on finding formulations of their laws that can be displayed as mathematical models.

The Ascent of Man

Chapter 5 (p. 165)

Little, Brown & Company. Boston, Massachusetts, USA. 1973

Chargaff, Erwin 1905–2002

Austrian biochemist

Models — in contrast to those who sat for Renoir — improve with age.

Heraclitean Fire: Sketches from a Life before Nature

Part III

Science as a Profession (p. 171)

Rockefeller University Press. New York, New York, USA. 1978

Cheeseman, Peter

Australian computer scientist

The apparent simplicity of a model is due to a failure of imagination and limited data, unless the domain really is simple. If the world were really random, chemistry, cooking, and credit would not be possible, so our models cannot be figments of our imagination.

In J. Shrager and P. Langley (eds)

Computational Models of Scientific Discovery and Theory Formation
On Finding the Most Probable Model (p. 91)

Morgan Kaufmann Publishers. San Mateo, California, USA. 1990

Crick, Francis Harry Compton 1916–2004

English biochemist

...no good model ever accounted for all the facts, since some data was bound to be misleading if not plain wrong. A theory that did fit all the data would have been “carpentered” to do this and would thus be open to suspicion.

What Mad Pursuit: A Personal View of Scientific Discovery

Chapter 5 (p. 60)

Basic Books, Inc. New York, New York, USA. 1988

Davies, Paul Charles William 1946–

British-born physicist, writer, and broadcaster

When it comes to very highly organized systems, such as a living cell, the task of modeling by approximation to simple, continuous and smoothly varying quantities is hopeless. It is for this reason that attempts by sociologists and economists to imitate physicists and describe their subject matter by simple mathematical equations is rarely convincing.

The Cosmic Blueprint: New Discoveries in Nature's Creative Ability to Order the Universe

Chapter 3 (p. 22)

Simon & Schuster. New York, New York, USA. 1988

The incorporation of imaginary elements into physical theories is one of the most difficult practices for a professional physicist to justify to the layman. Of course,

if a particular feature, such as isotopic spin symmetry, renders the model a brilliant success, then the physicist can simply reply, “I put it in because it works!”

Superforce: The Search for a Grand Unified Theory of Nature

Chapter 4 (pp. 66–67)

Simon & Schuster. New York, New York, USA. 1984

A model of the universe does not require faith, but a telescope. If it is wrong, it is wrong.

Space and Time in the Modern Universe

Chapter 7 (p. 201)

Deutsch, Karl W. 1912–92

Czech-born American international political scientist

Men think in terms of models.

Mechanism, Organism and Society

Philosophy of Science, Volume 18, Number 3, July 1951 (p. 230)

Eddington, Sir Arthur Stanley 1882–1944

English astronomer, physicist, and mathematician

Our model of Nature...should be like an engine with movable parts. We need not fix the position of any one lever; that is to be adjusted from time to time as the latest observations indicate. The aim of the theorist is to know the train of wheels which the lever sets in motion — that binding of the parts which is the soul of the engine.

The Internal Constitution of Stars

Nature, Volume 106, Number 2603, 2 September 1920 (p. 20)

Eigen, Manfred 1927–

German biophysicist

A theory has only the alternative of being right or wrong. A model has a third possibility: it may be right, but irrelevant.

In J. Mehra (ed.)

The Physicist's Conception of Nature: Symposium on the Development of the Physicist's Conception of Nature in the Twentieth Century

Chapter 30 (p. 618)

Reidel. Boston, Massachusetts, USA. 1973

Ferris, Timothy 1944–

American science writer

The model of the natural world we build in our minds by such a process will forever be inadequate, just a little cathedral in the mountains. Still it is better than no model at all.

The Red Limit: The Search for the Edge of the Universe

Preface (p. 8)

William Morrow & Company, Inc. New York, New York, USA. 1977

Feynman, Richard P. 1918–88

American theoretical physicist

...the more you see how strangely Nature behaves, the harder it is to make a model that explains how even the simplest phenomena actually work. So theoretical physics has given up on that.

QED: The Strange Theory of Light and Matter

Chapter 3 (p. 82)
Princeton University Press. Princeton, New Jersey, USA. 1985

Gould, Stephen Jay 1941–2002
American paleontologist and evolutionary biologist

I do not know that my view is more correct; I do not even think that “right” and “wrong” are good categories for assessing complex mental models of external reality — for models in science are judged [as] useful or detrimental, not as true or false.

Dinosaur in a Haystack: Reflections in Natural History
Part Three, Chapter 8 (p. 96)
Random House, Inc. New York, New York, USA. 1995

Greedman, D. A.
No biographical data available

Navidi, W. C.
No biographical data available

Models are often used to decide issues in situations marked by uncertainty. However statistical differences from data depend on assumptions about the process which generated these data. If the assumptions do not hold, the inferences may not be reliable either. This limitation is often ignored by applied workers who fail to identify crucial assumptions or subject them to any kind of empirical testing. In such circumstances, using statistical procedures may only compound the uncertainty.... Statistical modeling seems likely to increase the stock of things you think you know that ain't so.
Regression Models for Adjusting the 1980 Census
Statistical Science, Volume 1, Number 1, 1986 (p. 3)

The purpose of models is not to fit the data but to sharpen the questions.

11th R. A. Fisher Memorial Lecture
Royal Society 20 April 1983

Kelvin, Lord William Thomson 1824–1907
Scottish engineer, mathematician, and physicist

I never satisfy myself until I can make a mechanical model of a thing. If I can make a mechanical model, I understand it.

Baltimore Lectures on Molecular Dynamics, and the Wave Theory of Light (p. 270)
C.J. Clay & Sons. London, England. 1904

Kolb, Edward W. (Rocky) 1951–
American cosmologist

To try to ferret out the important and interesting objects from the multitude of things in the sky, every cosmologist looks at the universe through a filter of a model, for without the conceptual framework of a model the staggering number of things in the universe would overwhelm anyone.

Blind Watchers of the Sky
Chapter Eleven (p. 285)
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

If you want to know whether you should take a model seriously or just regard it as a calculational tool, you can imagine that you are building a wall out of stones. For instance, if the stones represent models for various phenomena seen in the sky, and the wall represents all of astronomy, then choosing a model to explain a phenomenon is like choosing a stone to be incorporated into the wall. Sometimes the stone seems to fit naturally into a space in the wall; more often it has to be trimmed a bit to fit in. But it is impossible to judge whether it is a “beautiful” stone or the “correct” stone for that place in the wall when it is first inserted, because the true beauty or utility of the stone can't be judged in isolation from the rest of the wall. The two real criteria to judge the stone are whether it is one on which other stones can be placed and whether it exists harmoniously with the surrounding stones. If the stone not only fulfills the function of taking up spaces in the wall but also provides a platform on which to place other stones, it a beautiful stone.

Blind Watchers of the Sky
Chapter Ten (pp. 287–288)
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

Lewis, C. S. (Clive Staples) 1898–1963
British author, scholar, and popular theologian

It is not impossible that our own Model will die a violent death, ruthlessly smashed by an unprovoked assault of new facts.... But I think it is more likely to change when, and because, far-reaching changes in the mental temper of our descendants demand that it should. The new Model will not be set up without evidence, but the evidence will turn up when the inner need for it becomes sufficiently great. It will be true evidence. But nature gives most of her evidence in answer to the questions we ask her. Here, as in the courts, the character of the evidence depends on the shape of the examination, and a good cross-examiner can do wonders.

The Discarded Image: An Introduction to Medieval and Renaissance Literature

Epilogue (pp. 222–223)

University Press. Cambridge, England. 1964

Lewis, Gilbert Newton 1875–1946

American chemist

As we continue the great adventure of scientific exploration our models must often be recast. New laws and postulates will be required, while those that we already have must be broadened, extended and generalized in ways that we are now hardly able to surmise.

The Anatomy of Science

Chapter VIII (p. 219)

Yale University Press. New Haven, Connecticut, USA. 1926

Complexity, Chaos, and Biological Evolution

The Ultradian Clock: Timekeeping for Intracellular Dynamics

(p. 51)

Plenum Press. New York, New York, USA. 1991

Maxwell, James Clerk 1831–79

Scottish physicist

As long as the training of a naturalist enables him to trace the action only of a particular material system, without giving him the power of dealing with the general properties of all such systems, he must proceed by the method so often described in histories of science

— he must imagine model after model of hypothetical apparatus, till he finds one which will do the required work. If this apparatus should afterwards be found capable of accounting for many of the known phenomena, and not demonstrably inconsistent with any of them, he is strongly tempted to conclude that his hypothesis is a fact, at least until an equally good rival hypothesis has been invented.

Tait's Thermodynamics

Nature, Volume XVII, Number 431, January 31, 1878 (p. 258)

Miall, Andrew

No biographical data available

There are those who try to generalize, synthesize, and build models, and there are those who believe nothing and constantly call for more data. The tension between these two groups is a healthy one; science develops mainly because of the model builders, yet they need the second group to keep them honest.

Principles of Sedimentary Basin Analysis

Chapter 8 (p. 363)

Springer-Verlag. New York, New York, USA. 1984

Milton, John 1608–74

English poet

Hereafter, when they come to model Heav'n
And calculate the Stars, how they will wield
The mightier frame, how build, unbind, contrive
To save appearances, how gird the Shear
With Centric and Eccentric scribbled ore,
Cycle and Epicycle, Orb in Orb.

In *Great Books of the Western World* (Volume 32)

Paradise Lost

Belitz, K.

No biographical data available

A model, like a novel, may resonate with nature, but it is not a "real" thing. Like a novel, a model may be convincing — it may "ring true" if it is consistent with our experience of the natural world. But just as we may

wonder how much the characters in a novel are drawn from real life and how much is artifice, we might ask the same of a model: How much is based on observation and measurement of accessible phenomena, how much is convenience? Fundamentally, the reason for modeling is a lack of full access, either in time or space, to the phenomena of interest.

Science, Volume 263, 1944

Paulos, John Allen 1945–

American mathematician

The once-surprising existence of non-Euclidean models of Euclid's first four axioms can be seen as a sort of mathematical joke.

Once Upon a Number: The Hidden Mathematical Logic of Stories

Appendix: Humor and Computation (p. 132)

Basic Books. New York, New York, USA. 1998

Poincaré, Henri 1854–1912

French mathematician and theoretical astronomer

We should always aim toward the economy of thought. It is not enough to give models for imitation. It must be possible to pass beyond these models and, in place of repeating their reasoning at length each time, to sum this in a few words.

Annual Report of the Board of Regents of the Smithsonian Institution, 1909

The Future of Mathematics (p. 128)

Government Printing Office. Washington, D.C. 1910

Poynting, John Henry 1852–1914

English physicist

...while the building of Nature is growing spontaneously from within, the model of it, which we seek to construct in our descriptive science, can only be constructed by means of scaffolding from without, a scaffolding of hypotheses. While in the real building all is continuous, in our model there are detached parts which must be connected with the rest by temporary ladders and passages, or which must be supported till we can see how to fill in the understructure. To give the hypotheses equal validity with facts is to confuse the temporary scaffolding with the building itself.

Collected Scientific Papers

Part VII, Article 52 (p. 607)

At The University Press. Cambridge. 1920

Sciama, Dennis 1926–99

English physicist

Since we find it difficult to make a suitable model of a certain type, Nature must find it difficult too. This argument neglects the possibility that Nature may be cleverer than we are. It even neglects the possibility that we may be cleverer tomorrow than we are today.

Building statistical models is just like this. You take a real situation with real data, messy as this is, and build a model that works to explain the behavior of real data.

New York Times, February 10, 2000

von Neumann, John 1903–57

Hungarian-American mathematician

To begin, we must emphasize a statement which I am sure you have heard before, but which must be repeated again and again. It is that the sciences do not try to explain, they hardly even try to interpret, they mainly make models. By a model is meant a mathematical construct which, with the addition of certain verbal interpretations, describes observed phenomena. The justification of such a mathematical construct is solely and precisely that it is expected to work — that is, correctly to describe phenomena from a reasonably wide area. Furthermore, it must satisfy certain aesthetic criteria — that is, in relation to how much it describes, it must be rather simple.

The Neumann Compendium

Method in the Physical Sciences (p. 628)

Russian-American scientist

Molecular biology is Cartesian in its inspiration.

The Biology of Ultimate Concern

Chapter 2 (p. 20)

The New American Library, Inc. New York, New York, USA. 1967

Kornberg, Arthur 1918–

American biochemist

Molecular biology falters when it ignores the chemistry of the DNA blueprint — the enzymes and proteins, and their products — the integrated machinery and framework of the cell.

The Two Cultures: Chemistry and Biology

Biochemistry, Volume 26, Number 22, November 3, 1987 (p. 6890)

Ludwig, Carl Friedrich Wilhelm 1816–95

German physiologist

Whenever the body of an animal is subdivided to its ultimate parts, one always finally arrives at a limited number of chemical atoms.... One draws the conclusion in harmony with this observation, that all forms of activity

arising in the animal body must be a result of the simple attractions and repulsions which would be observed in the coming together of those elementary objects.

Quarterly Review, 2nd ed.

Winter, 1858

Luria, Salvador Edward 1912–91

Italian-American microbiologist

Molecular biology deals with questions of molecular structure, and therefore is biochemistry; but it is not the classical biochemistry that emerged earlier in the twentieth century out of the concerns of medical, agricultural, and industrial researchers. Molecular biology is genetics because it deals with genes, their functions, and their products; but, in contrast with classical genetics, it has dealt mainly with organisms such as bacteria and viruses rather than peas, maize or fruit flies, whose study had established the classical rules of genetics.

A Slot Machine, a Broken Test Tube: An Autobiography

The Science Path: II. The High Reaches (pp. 83–84)

Harper & Row, Publishers. New York, New York, USA. 1984

Maddox, John Royden 1925–

Welsh chemist and physicist

...coffee-breaks in molecular laboratories are as marked by speculation as in any other field, but the published literature gives the impression that its authors are more concerned with the correctness of their observations than with their significance. Those with the good fortune to have the time to think about the data accumulated in the literature would probably reap a rich harvest of understanding. The explanation of the unreflective state of molecular biology is easily accounted for: competitiveness.

Lecture I (p. 15)

At The University Press. Cambridge, England. 1905

MOLECULE

Aldersey-Williams, Hugh 1959–

English author and journalist

A molecule is a messy thing. It has a gangling skeleton whose bones are chemical bonds and whose joints are its component atoms.

The Most Beautiful Molecule

Chapter 1 (p. 11)

John Wiley & Sons, Inc. New York, New York, USA. 1995

Ball, Philip 1962–

English science writer

Once upon a time molecular scientists had to deduce all they knew about molecules from measurements made on many billions of them simultaneously. This can be a risky business, since we cannot always be sure how such measurements are related to the properties of individual molecules, just as the noise that emanates from a football stadium or theatre hall reveals nothing of the individual conversations people are having. But advances in experimental techniques that enable studies of single molecules...what they look like, how they interact, how they move...have over the past two decades opened up an entirely new realm of molecular studies. We are starting to get to know molecules in person.

Stories of the Invisible

Chapter 5 (p. 127)

Oxford University Press, Inc. Oxford, England. 2001

...molecules are the smallest units of meaning in chemistry. It is through molecules, not atoms, that one can tell stories in the sub-microscopic world. They are the words: atoms are just the letters.... And in molecules, as in words, the order in which the component parts are put together matters: “save” and “vase” do not mean the same thing.

Stories of the Invisible

Chapter 1 (p. 13)

Oxford University Press, Inc. Oxford, England. 2001

Barrow, Gordon M.

Chemist

The chemist must learn to live in, and to feel at home in, the world of molecules. It is not enough that he knows the chemical constitution and chemical reactions of the materials around him. To be really effective and successful, he must also develop an intimacy with the molecular world. He must fit himself into the molecular scale of things. He must put that first drummed-in chemical fact that molecules are small in the very back of his mind and replace it by a consciousness that molecules are real, intricate, structural arrangements of atoms in space.

The Structure of Molecules

Introduction (p. 1)

W.A. Benjamin, Inc. New York, New York, USA. 1964

Clifford, William Kingdon 1845–79

English philosopher and mathematician

...we look forward to the time when the structure and motions in the inside of a molecule will be so well known that some future Kant or Laplace will be able to make an hypothesis about the history and formation of matter.

Lectures and Essays (Volume 1)

Atoms (p. 190)

Macmillan & Company Ltd. London, England. 1879

Crick, Francis Harry Compton 1916–2004

English biochemist

Almost all aspects of life are engineered at the molecular level, and without understanding molecules we can only have a very sketchy understanding of life itself.

What Mad Pursuit: A Personal View of Scientific Discovery

Chapter 5 (p. 61)

Basic Books, Inc., Publishers. New York, New York, USA. 1988

Dawkins, Richard 1941–

English ethologist, evolutionary biologist, and popular science writer

[Molecules of living things] are put together in much more complicated patterns than the molecules of nonliving things, and this putting together is done following programs, sets of instructions for how to develop, which the organisms carry around inside themselves. Maybe they do vibrate and throb and pulsate with “irritability,” and glow with “living” warmth, but these properties all emerge incidentally. What lies at the heart of every living thing is not a fire, not warm breath, not a “spark of life.” It is information, words, instructions. If you want a metaphor, don’t think of fire and sparks and breath. Think instead of a billion discrete, digital characters carved in tablets of crystal. If you want to understand life, don’t think about vibrant, throbbing gels and oozes, think about information technology.

The Blind Watchmaker

Chapter 5 (p. 112)

W.W. Norton & Company, Inc. New York, New York, USA. 1986

Dennett, Daniel Clement 1942–

American philosopher

Any assortment of objects, especially “sticky” objects like molecules, randomly stirred for long enough will give rise to every conceivable possible combination.

Latham, Peter Mere 1789–1875

English physician

The very existence of ultimate molecules, or atoms, with the qualities which we so confidently assign to them, is a matter of the purest conjecture; it is entirely a fiction of the mind.

An Essay on the Philosophy of Medical Science
Part I, Chapter 4
Lea & Blanchard. Philadelphia, Pennsylvania, USA. 1844

Macfie, Ronald Campbell 1867–1931

Poet and physician

Life in living tissue is like nothing perhaps so much as a candle-flame. In the candle-flame the molecules are

composed and decomposed, yet the candle-flame keeps always the same shape; but let us change the environment of these dancing, partner-changing molecules — let us conduct away their heat by means of some copper wire, or let us deprive the flame of oxygen — and out goes the candle.

Protoplasm is only a slow flame, easily extinguished. It is easy to understand how a little thing — a needle, a few grains of poison — may destroy a large organism when we remember how intricately correlated it is in its minutest parts. Break but a single thread in the warp and woof of life and the whole wonderful web, with its pictures and patterns, all comes asunder. Take but a single brick out of the great house of life and it falls into ruin. The construction of the wonderful organisms of vegetables and animals is a miracle and mystery, but their death is merely a chemical or mechanical commonplace.

Science, Matter and Immortality
Chapter 21 (p. 268)
William & Norgate. London, England. 1909

...molecules of different elements throb in different ways, and thus produce different light waves, which, when analysed by a spectroscope...give definite characteristic colours...we can discover what any substance is by heating it so as to agitate its molecules, and then analysing, by a spectroscope, the ripples of light caused by the throbbing molecules. In this way we may be said to be able to tell any substance by feeling its pulse, or by listening to its heart, and the spectroscope may be compared to a stethoscope.

Science, Matter and Immortality
Chapter 4 (p. 55)
William & Norgate. London, England. 1909

Mann, Thomas 1875–1955

German-born American novelist

For the molecule was composed of atoms, and the atom was nowhere near large enough even to be spoken of as extraordinarily small. It was so small, such a tiny, early, transitional mass, a coagulation of the unsubstantial, of the not-yet-substantial and yet substance-like, of energy, that it was scarcely possible yet — or, if it had been, was now no longer possible — to think of it as material, but rather as mean and border-line between the material and immaterial.

Translated by H.T. Lowe-Poeter
The Magic Mountain
Chapter V (p. 283)
Alfred A. Knopf. New York, New York, USA. 1966

Maxwell, James Clerk 1831–79

Scottish physicist

As long as we have to deal with only two molecules, and have all the data given us, we can calculate the result of their encounter; but when we have to deal with millions

of molecules, each of which has millions of encounters in a second, the complexity of the problem seems to shut out all hope of a legitimate solution.

July 1969

Newman, Joseph S. 1892–1960

American poet

There's none to say how carbon first
Conceived it ocy-hydric thirst —
How nitrogen, in right proportion,
And sulphur joined the strange consortion —
But close upon the tenuous verge
Where shadows end, does life emerge,
And from these elemental five
Sprang proteid molecules alive!

Poems for Penguins and Other Lyrical Lapses

Biochemistry

Greenburg. New York, New York, USA. 1941

Quite recently to be exact,
Within a billion years, in fact.
Some time before the glacial drift
Had given the planet's face a lift,
A group of shameless molecules
Broke all the inorganic rules
And (C.I.O. epitomized!)
Spontaneously organized.

Poems for Penguins and Other Lyrical Lapses

Biology

Greenburg. New York, New York, USA. 1941

O'Brien, Flann 1911–66

Irish novelist and political commentator

Did you ever study the Mollycule Theory when you were a lad? he asked. Mick said not, not in any detail.

That is a very serious defalcation and an abstruse exacerbation, he said severely, but I'll tell you the size of it. Everything is composed of small Mollycules of itself, and they are flying around in concentric circles and arcs and segments and innumerable various other routes too numerous to mention collectively, never standing still or resting but spinning away and darting hither and thither and back again, all the time on the go.

...

Mollycules is a very intricate theorem and can be worked out with algebra but you would want to take it by degrees

with rulers and cosines and familiar other instruments and then at the wind-up not believe what you had proved at all.

The Dalkey Archive

Chapter 9 (pp. 87–88)

Hart-Davis, MacGibbon. London, England. 1968

von Baeyer, Hans Christian 1938–

Physicist and author

Coiled serpents capture the essence of the molecule that is missing from mechanical models — the element of mystery. They remind us that just beneath the surface of the dazzling atomic landscape recorded by modern technology, the paradoxes of quantum mechanics lurk like venomous snakes.

Taming the Atom

Chapter 5 (p. 88)

Random House, Inc. New York, New York, USA. 1992

Wald, George 1906–97

American biologist and biochemist

I have lived much of my life among molecules. They are good company. I tell my students to try to know molecules, so well that when they have some question involving molecules, they can ask themselves, What would I do if I were that molecule? I tell them, Try to feel like a molecule; and if you work hard, who knows? Some day you may get to feel like a big molecule!

Chemist

...there is no phenomenon in a living system that is not molecular, but there is none that is only molecular, either.

Within the Gates of Science and Beyond

The Living System: Determinism Stratified (p. 270)

Hafner Publishing Company. New York, New York, USA. 1971

MOMENTUM

Descartes, René 1596–1650

French philosopher, scientist, and mathematician

We must consider motion in its two causes, the primary and universal cause, to which is due all the motion that

is in the world, and the particular cause to which it is due that various portions of matter acquire the movements which before they had not. As to the former, it is evident to me that it must be attributed to God Himself, who in the beginning created matter along with motion and rest, and ever since has preserved these in the same quantity. For, though motion is nothing but a mode in the thing which is moved, yet it is of a definite amount that remains constant for the whole universe, though it varies in regard to the several parts.

Principles of Philosophy

Part II, 36, 42

E. Mellen Press. Lewistown, New York, USA. 1988

Duhem, Pierre-Maurice-Marie 1861–1916

French physicist and mathematician

If one wishes to draw a line of separation between the realm of ancient and modern science, it must be drawn at the instant when Jean Buridan conceived his theory of momentum, when he ceased to think of stars as kept in motion by certain divine beings and proclaimed that motions, celestial and terrestrial, are each controlled by the same mechanical laws.

Études, sur Leonardo da Vinci

A. Hermann. Paris, France. 1906–09

MONKEYS AND TYPEWRITERS

Eddington, Sir Arthur Stanley 1882–1944

English astronomer, physicist, and mathematician

...If I let my fingers wander idly over the keys of a typewriter it might happen that my screed made an intelligible sentence. If an army of monkeys were strumming on typewriters they might write all the books in the British Museum. The chance of their doing so is decidedly more favourable than the chance of the molecules returning to one half of the vessel.

The Nature of the Physical World

Chapter IV (p. 72)

The Macmillan Company. New York, New York, USA. 1930

Jeans, Sir James Hopwood 1877–1946

English physicist and mathematician

It was, I think, Huxley, who said that six monkeys, set to strum unintelligently on typewriters for millions of millions of years, would be bound in time to write all the books in the British Museum. If we examined the last page which a particular monkey had typed, and found that it had chanced, in its blind strumming, to type a Shakespeare sonnet, we should rightly regard the occurrence as a remarkable accident, but if we looked through all the millions of pages the monkeys had turned off in untold millions of years, we might be sure of finding a Shakespeare sonnet somewhere amongst them, the

product of the blind play of chance. In the same way, millions of millions of stars wandering blindly through space for millions of millions of years are bound to meet with every sort of accident, and so are bound to produce a certain limited number of planetary systems in time. Yet the number of these must be very small in comparison with the total number of stars in the sky.

The Mysterious Universe

Chapter I (p. 4)

The Macmillan Company. New York, New York, USA. 1932

Koestler, Arthur 1905–83

Hungarian-born English writer

Neo-Darwinism does indeed carry the nineteenth-century brand of materialism to its extreme limits — to the proverbial monkey at the typewriter, hitting by pure chance on the proper keys to produce a Shakespeare sonnet.

The Case of the Midwife Toad (p. 30)

New York, New York, USA. 1972

Russell, Bertrand Arthur William 1872–1970

English philosopher, logician, and social reformer

There is a special department of hell for students of probability. In this department there are many typewriters and many monkeys. Every time that a monkey walks on a typewriter, it types by chance one of Shakespeare's sonnets.

Nightmares of Eminent Persons

The Metaphysician's Nightmare (p. 29)

The Bodley Head. London, England. 1954

Russo, Richard 1949–

American novelist

In a novel, two characters discuss the glitch in a computer which causes it to scroll an endless series of meaningless symbols: He sighs. "It casts serious doubt on the old theory that an infinite number of monkeys at an infinite number of typewriters would eventually write the Great American Novel, doesn't it?"

Straight Man (p. 129)

Random House, Inc. New York, New York, USA. 1996

Synge, John L. 1897–1995

Irish mathematician and physicist

"But not the sonnets?" asked the Orc, quizzically. "Yes, of course," retorted the Plumber, "The sonnets too. And the Bible. And the Koran. And that poem of mine which you have just recited...."

"But suppose," said the Orc, "that our monkey became very fond of some particular word, perhaps some naughty little four-letter word, and went on typing that word over and over again and never any other. I cannot see, in that case, how he would type even one play." "That would be quite an exceptional case," answered the Plumber. "Eddington had in mind a haphazard performance. The

monkey types the keys at random, and the outcome is governed by pure chance. And by pure chance the plays of Shakespeare emerge, after a long time of course." "Doubtless, doubtless," muttered the Orc, reflectively. "Poor monkey! How bored he would get! For he would reproduce the plays of Shakespeare not once but many times, in fact an infinite number of times."

Kandelman's Krim

Chapter Eleven (p. 145)

Jonathan Cape. London, England. 1957

MONOGRAPH

Doyle, Sir Arthur Conan 1859–1930

Scottish writer

"Oh, didn't you know?" he cried, laughing. "Yes, I have been guilty of several monographs. They are all upon technical subjects. Here, for example, is one 'Upon the Distinction between the Ashes of the Various Tobaccos.' In it I enumerate a hundred and forty forms of cigar, cigarette, and pipe tobacco, with coloured plates illustrating the difference in the ash. It is a point which is continually turning up in criminal trials, and which is sometimes of supreme importance as a clue. If you can say definitely, for example, that some murder has been done by a man who was smoking an Indian lunkah, it obviously narrows your field of search. To the trained eye there is as much difference between the black ash of a Trichinopoly and the white fluff of bird's-eye as there is between a cabbage and a potato."

In William S. Baring-Gould (ed.)

The Annotated Sherlock Holmes (Volume 1)

The Sign of the Four, Chapter 1 (p. 612)

Wings Books. New York, New York, USA. 1967

MONOPOLE

Dirac, Paul Adrian Maurice 1902–84

English theoretical physicist

From the theoretical point of view one would think that monopoles [magnets with one pole] should exist, because of the prettiness of the mathematics. Many attempts to find them have been made, but all have been unsuccessful. One should conclude that pretty mathematics by itself is not an adequate reason for nature to have made use of a theory. We still have much to learn in seeking for the basic principles of nature.

In Heinz R. Pagels

Perfect Symmetry: The Search for the Beginning of Time

Part Three, Chapter 1 (p. 284)

Simon & Schuster. New York, New York, USA. 1985

Gamow, George 1904–68

Russian-born American physicist

Two Monopoles worshipped each other,
And all of their sentiments clicked.

Still, neither could get to his brother,
Dirac was so fearfully strict!
Thirty Years That Shook Physics
Second Part (p. 202)
Doubleday & Company, Inc. Garden City, New York, USA. 1966

MONSTER

Miller, Hugh 1802–56
Scottish geologist and theologian

...the night comes on, and the shadows of the woods and
rocks deepen: there are uncouth sounds along the beach
and in the forest; and new monsters of yet stranger shape
are dimly discovered moving amid the uncertain gloom.
Sketch-Book of Popular Geology
Lecture Forth (p. 151)
William P. Nimmo & Company. Edinburgh, Scotland. 1880

MOON

Abbey, Edward 1927–89
American environmentalist and nature writer

The old moon, like a worn and ancient coin, is still hanging
in the west when I awake.
Desert Solitaire
Terra Incognita: Into the Maze (p. 289)
Ballantine Books. New York, New York, USA. 1968

Addison, Joseph 1672–1719
English essayist, poet, and statesman

Soon as the evening shades prevail,
The moon takes up the wondrous tale,
And nightly to the listening earth
Repeats the story of her birth.
In John Matthews Manley (ed)
English Poetry
Hymn (p. 220)
Ginn & Company. Boston, Massachusetts, USA. 1907

Alger, William R. 1822–1905
Unitarian minister and author

The moon is a silver pin-head vast,
That holds the heaven's tent-hangings fast.
Poetry of the Orient
The Use of the Moon
Roberts Brothers. Boston, Massachusetts, USA. 1866

Blake, William 1757–1827
English poet, painter, and engraver

The moon like a flower
In heaven's high bower,
With silent delight
Sits and smiles on the night.
The Complete Poetry and Prose of William Blake
The Moon
University of California Press. Berkeley, California, USA. 1982

Borman, Frank 1928–
American astronaut

The moon is a different thing to each of us.
From Apollo VIII
December 24, 1968

Bronte, Charlotte 1816–55
English author

Where, indeed, does the moon not look well? What is
the scene, confined or expansive, which her orb does not
follow? Rosy or fiery, she mounted now above a not dis-
tant bank; even while we watched her flushed ascent, she
cleared to gold, and in a very brief space, floated up stain-
less into a now calm sky.
Life and Works of the Sisters Brontë (Volume 3)
Villette La Terrasse (p. 214)

AMS Press, Inc. New York, New York, USA. 1973

Burton, Sir Richard Francis 1821–90
English explorer

That gentle Moon, the lesser light, the Lover's lamp, the
Swain's delight,

A ruined world, a globe burnt out, a corpse upon the road
of night.
The Kasidah of Haji Abdu El-Yezdi (p. 10)
McBride. New York, New York, USA. 1929

Butler, Samuel 1612–80
English novelist, essayist, and critic

The moon pull'd off her veil of light,
That hides her face by day from sight
(Mysterious veil, of brightness made,)
 That's both her lustre and her shade),
And in the lantern of the night,
With shining horns hung out her light.
The Poetical Works of Samuel Butler (Volume 1)
Part II, Canto I, l. 905
Bell & Daldy. London, England. 1835

He made an instrument to know
If the moon shine at full or no;
That would, as soon as e'er she shone straight,
Whether 'twere day or night demonstrate;
Tell what her d'iameter to an inch is,
And prove that she's not made of green cheese.
The Poetical Works of Samuel Butler (Volume 1)
Part II, Canto III, l. 261
Bell & Daldy. London, England. 1835

Carroll, Lewis (Charles Dodgson) 1832–98
English writer and mathematician

The moon was shining sulkily,
Because she thought the sun
Had got no business to be there
After the day was done —

The Complete Works of Lewis Carroll

Through the Looking-Glass

Chapter IV (p. 183)

The Modern Library. New York, New York, USA. 1936

Cawein, Madison Julius 1865–14
American poet

Into the sunset's turquoise marge
The moon dips, like a pearly barge;
Enchantment sails through magic seas,
To fairland Hesperides,
Over the hills and away.

Poems

At Sunset, Stanza 1

The Macmillan Company. New York, New York, USA. 1911

Collins, Michael 1880–1922
Irish soldier and politician

It was a totally different moon than I had ever seen before.
The moon that I knew from old was a yellow flat disk, and
this was a huge three-dimensional sphere, almost a ghostly
blue-tinged sort of pale white. It didn't seem like a very
friendly place or welcoming place. It made one wonder
whether we should be invading its domain or not.

In Kevin W. Kelley

The Home Planet

With Plate 39

Addison-Wesley Publishing, Inc. Reading, Massachusetts, USA. 1988

Conrad, Joseph 1857–1924
Polish-born English novelist

There is something haunting in the light of the moon; it
has all the dispassionateness of a disembodied soul, and
something of its inconceivable mystery.

Lord Jim

Chapter XXIV (p. 213)

Rinehart & Company, Inc. New York, New York, USA. 1957

Croly, George 1780–1860
German chemist and physician

How like a queen comes forth the lonely Moon
From the slow opening curtains of the clouds
Walking in beauty to her midnight throne!

Gems, Principally from the Antique

Two Leading Lights

Henry Holt & Company. New York, New York, USA. 1949

Fry, Christopher 1907–2005
English playwright

...the moon is nothing

But a circumambulating aphrodisiac

Divinely subsidized to provoke the world

Into a rising birth-rate.

The Lady's Not for Burning

Act Three (p. 66)

Oxford University Press, Inc. New York, New York, USA. 1950

Haggard, H. Rider 1856–1925
English novelist

The sky aft was dark as pitch, but the moon still shone
brightly ahead of us and lit up the blackness. Beneath its
sheen a huge white-topped breaker, twenty feet high or
more, was rushing on to us. It was on the break — the
moon shone on its crest and tipped its foam with light.
On it rushed beneath the inky sky, driven by the awful
squall behind it.

The Favorite Novels of H. Rider Haggard

She (p. 195)

Blue Ribbon Books, Inc. New York, New York, USA. 1928

Homer (Smyrns of Chios) fl. 750 BCE

Greek poet

As when the stars shine clear, and the moon is bright —
there is not a breath of air, not a peak nor glade nor jutting
headland, but it stands out in the ineffable radiance that
breaks from the serene of heaven...

In *Great Books of the Western World* (Volume 4)*The Iliad of Homer*

Book VIII, l. 555 (p. 56)

Hood, Thomas 1582–98

English poet and editor

Mother of light! how fairly dost thou go
Over those hoary crests, divinely led!
Art thou that huntress of the silver bow
Fabled of old? Or rather dost thou tread
Those cloudy summits thence to gaze below,
Like the wild chamois from her Alpine snow,
Where hunters never climbed — secure from dread?

The Complete Poetical Works of Thomas Hood

Ode to the Moon

Greenwood Press, Publishers. Westport, Connecticut, USA. 1980

Huxley, Julian 1887–1975

English biologist, philosopher, and author

By death the moon was gathered in
Long ago, ah long ago;
Yet still the silver corpse must spin
And with another's light must glow.
Her frozen mountains must forget
Their primal hot volcanic breath,
Doomed to revolve for ages yet,
Void amphitheatres of death.

The Captive Shrew and Other Poems of a Biologist

Cosmic Death

Harper & Brothers. New York, New York, USA. 1933

Ingelow, Jean 1820–97

English poet and novelist

Such a slender moon, going up and up,
Waxing so fast from night to night,
And swelling like an orange flower-bud, bright,
Fated, methought, to round as to a golden cup,
And hold to my two lips life's best of wine.

The Poetical Works of Jean Ingelow

Thurber, James 1894–1961
American writer and cartoonist

“The moon is 300,000 miles away,” said the Royal Math-
ematician. “It is round and flat like a coin, only it is made
of asbestos, and it is half the size of this kingdom.
Furthermore, it is pasted on the sky.”

Many Moons
Harcourt Brace & Company. San Diego, California, USA. 1971

Tolstoy, Alexei 1882–1945
Russian writer

“Which is more useful, the Sun or the Moon?” asks
Kuzma Prutkov, the renowned Russian philosopher, and
after some reflection he answers himself: “The Moon
is the more useful, since it gives us its light during the
night, when it is dark, whereas the Sun shines only in the
daytime, when it is light anyway.”

Quoted by George Gamow
The Birth and Death of the Sun
Chapter I (p. 1)
The Viking Press. New York, New York, USA. 1945

Verne, Jules 1828–1905
French novelist

There is no one among you, my brave colleagues, who
has not seen the Moon, or at least, heard speak of it.

From the Earth to the Moon and Round the Moon

From Earth to the Moon, Chapter II (p. 12)
A.L. Burt Company. New York, New York, USA. 1890

Williams, Dafydd (Dave) Rhys

We'll go back to the moon, this time for a much longer
period of time. We'll build lunar outposts. We'll send
a crew to Mars. There are no ifs around it. It's going
to happen.

Ground Control to Dr. Dave

MOON LANDING

Armstrong, Neil A. 1930–
American astronaut

That's one small step for a man, one giant leap for
mankind.

Men Walk on Moon
New York Times, L5, column 3, 21 July 1969

Beckett, Chris

No biographical data available

The Moon landings were not about gathering data or
testing hypotheses; they were about theatre, about the
enactment of many mythical themes that were fed and
nurtured by such a spectacular event. It was about the
power of humankind, the power of technology, our abil-
ity to overcome the apparently impossible and to con-
quer not just Earth but the whole Universe. And yet at
the same time it was about the smallness of humankind,
our vulnerability the fact that we inhabit a single small
planet, surrounded by emptiness...

New York Times, A6, column 6, 21 July 1969

Nabokov, Vladimir 1899–1977
 Russian-American writer

Treading the soil of the moon, palpating its pebbles, tasting the panic and splendor of the event, feeling in the pit of one's stomach the separation from terra...these form the most romantic sensation an explorer has ever known...this is the only thing I can say about the matter. The utilitarian results do not interest me.

Reactions to Man's Landing on the Moon Show Broad Variations in Opinions
New York Times, A6, column 5, 21 July 1969

MORPHOLOGY

Thompson, Sir D'Arcy Wentworth 1860–1948
 Scottish zoologist and classical scholar

The waves of the sea, the little ripples on the shore, the sweeping curve of the sandy bay between the headlands, the outline of the hills, the shape of the clouds, all these are so many riddles of form, so many problems of morphology.

On Growth and Form (Volume 1)
 Chapter I (p. 10)

At The University Press. Cambridge, England. 1951

MOTION

Burton, Robert 1577–1640
 English clergyman and scholar

The heavens themselves run continually round, the sun riseth and sets, the moon increaseth, stars and planets keep their constant motions, the air is tossed by the winds, the waters ebb and flow, to their conservation no doubt, to teach us that we should ever be in motion.

The Anatomy of Melancholy (Volume 2)
 Part II, Sect. II, Memb. IV (p. 80)

AMS Press, Inc. New York, New York, USA. 1973

Butterfield, Herbert 1900–79
 English historian and philosopher of history

Of all the intellectual hurdles which the human mind has confronted and has overcome in the last fifteen hundred years, the one which seems to me to have been the most amazing in character and the most stupendous in the scope of its consequences is the one relating to the problem of motion...

The Origins of Modern Science
 Chapter One (p. 3)

The Macmillan Company. New York, New York, USA. 1961

Carroll, Lewis (Charles Dodgson) 1832–98
 English writer and mathematician

"Well, in our country," said Alice, still panting a little, "you'd generally get to somewhere else — if you ran very fast for a long time, as we've been doing."

"A slow sort of country!" said the Queen. "Now here, you see, it takes all the running you can do, to keep in the same place. If you want to get somewhere else, you must run at least twice as fast as that."

The Complete Works of Lewis Carroll

Through the Looking-Glass

Chapter II (p. 166)

The Modern Library. New York, New York, USA. 1936

Dee, John 1527–1609
 English mathematician and occultist

Whatever is in the universe is continuously moved by some species of motion.

Translated by Wayne Schumaker

John Dee on Astronomy

XVI (p. 129)

University of California Press. Berkeley, California, USA. 1978

Descartes, René 1596–1650
 French philosopher, scientist, and mathematician

... God always preserves in the world just so much motion as He impressed on it at its first creation.

Principles of Philosophy

Part II, 36, 42

E. Mellen Press. Lewistown, New York, USA. 1988

Eddington, Sir Arthur Stanley 1882–1944
 English astronomer, physicist, and mathematician

We not merely deduce [a] three-dimensional world; we see it. But we have no such aid in synthesising different motions. Perhaps if we had been endowed with two eyes moving with different velocities our brains would have developed the necessary faculty; we should have perceived a kind of relief in the fourth dimension so as to combine into one picture the aspect of things seen with different motions.

Space, Time and Gravitation: An Outline of the General Relativity Theory

Chapter II (p. 32)

At The University Press. Cambridge, England. 1921

It is curious that the philosophical denial of absolute motion is readily accepted, whilst the denial of absolute simultaneity appears to many people revolutionary.

Space, Time and Gravitation: An Outline of the General Relativity Theory

Chapter III (p. 51)

At The University Press. Cambridge, England. 1921

Galilei, Galileo 1564–1642
 Italian physicist and astronomer

My purpose is to set forth a very new science dealing with a very ancient subject. There is, in nature, perhaps nothing older than motion, concerning which the books

written by philosophers are neither very few nor small; nevertheless, I have discovered by experiment some properties of it which are worth knowing and which have not hitherto been either observed or demonstrated.

Motion is the soul of the universe...

The Book of Nature Laid Open

Chapter XV (p. 173)

Joseph Milligan, Georgetown. 1822

Huygens, Christiaan 1629–95

Dutch mathematician, astronomer, and physicist

It is inconceivable to doubt that light consists in the motion of some sort of matter. For when one considers its production, one sees that here upon the earth it is chiefly engendered by fire and flame which contain without doubt bodies that are in rapid motion, since they dissolve and melt many other bodies, even the most solid; or when one considers its effects, one sees that when light is collected, as by concave mirrors, it has the property of burning as a fire does, that is to say, it disunites the particles of bodies. This is assuredly the mark of motion, at least in the true philosophy, in which once conceives the cause of all natural effects in terms of mechanical motions. This, in my opinion, we must necessarily do, or else renounce all hopes of ever comprehending anything in physics.

In *Great Books of the Western World* (Volume 34)

Treatise on Light

Chapter One. On Rays Propagated in Straight Lines (p. 553)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Jeans, Sir James Hopwood 1877–1946

English physicist and mathematician

...the laws which nature obeys are less suggestive of those which a machine obeys in its motion than of those which a musician obeys in writing a fugue, or a poet in composing a sonnet. The motions of electrons and atoms do not resemble those of the parts of a locomotive so much as those of the dancers in a cotillion. And if the "true essence of substances" is for ever unknowable, it does not matter whether the cotillion is danced at a ball

in real life, or on a cinematography screen, or in a story of Boccaccio.

Locke, John 1632–1704

English philosopher and political theorist

The parts of pure space are immovable, which follows from their inseparability; motion being nothing but change of distance between any two things; but this cannot be between parts that are inseparable; which therefore must needs be at perpetual rest one amongst other.

In *Great Books of the Western World* (Volume 35)

An Essay Concerning Human Understanding

Book II, Chapter XIII, Section 14 (p. 151)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Lucretius ca. 99 BCE–55 BCE

Roman poet

For whenever bodies fall through water and thin air, they must quicken their descents in proportion to their weights, because the body of water and subtle nature of air cannot retard everything in equal degree, but more readily give way [when] overpowered by the heavier...

The First Part of King Henry the Fourth

Act V, Scene iv

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Steele, Joel Dorman 1836–86

American educator and textbook writer

Rest is nowhere. The winds that come and go, the ocean that uneasily throbs along the shore, the earth that revolves about the sun, the light that darts through space — all tell of a universal of Nature. The solidest body hides within it inconceivable velocities. Even the molecules of garnet and iron have their orbits as do the stars, and move as ceaselessly.

Popular Physics

Chapter II (p. 19)

American Book Company. New York, New York, USA. 1896

Thierry, Paul Henri, Baron d'Holbach 1723–89

German-born French philosopher

Every thing in the universe is in motion; the essence of nature is to act; and if we consider attentively its parts, we shall see that there is not a particle which enjoys absolute repose.

Translated by M. Mirabaud

System of Nature or, The Laws of the Moral and Physical World (Volume First)

Part First, Chapter II (p. 27)

Published by R. Benson. Philadelphia, Pennsylvania, USA. 1808

Thomson, Thomas

No biographical data available

Substances may either be examined in a state of rest, or as acting upon each other and producing changes on each other. The knowledge derived from the first of these views, is called Natural History; that which we can obtain by the second, is distinguished by the name Science. But bodies cannot act upon each other without producing motion, and the motions produced by such actions are of two kinds; either so great as to be visible to our senses, and capable of being measured by the space passed over; or so small as not to be distinguishable by our senses, except by the effects produced. The phenomena connected with the first of these kinds of motions constitute what is called Natural Philosophy or Mechanical Philosophy in this country, and on the Continent, Physics. The phenomena connected with the imperceptible motion belong to the science called Chemistry.

History of the Royal Society from Its Institution to the End of the Eighteenth Century

Book III (p. 311)

Printed for Robert Baldwin. London, England. 1812

Tyndall, John 1820–93

Irish-born English physicist

But is it in the human mind to imagine motion without at the same time imagining something moved? Certainly not. The very conception of motion includes that of a moving body.

Austen, Jane 1775–1817

English writer

What are men to rocks and mountains?

Pride and Prejudice
Chapter 27
G. Allen. London, England. 1894

Austin, Mary Hunter 1868–1934

American novelist and essayist

Who shall say what another will find most to his liking
in the streets of the mountains. As for me, once set above
the country of the silver firs, I must go on until I find
white columbine.

The Land of Little Rain
The Streets of the Mountain (p. 194–195)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1903

Avicenna 908–1037

Islamic physician

Mountains may be due to two different causes. Either
they are effects of upheavals of the crust of the earth,
such as might occur during a violent earthquake, or they
are the effect of water, which, cutting for itself a new
route, has denuded the valleys, the strata being of differ-
ent kinds, some soft, some hard. The winds and waters
disintegrate the one, but leave the other intact. Most of
the eminences of the earth have had this latter origin. It
would require a long period of time for all such changes
to be accomplished, during which the mountains them-
selves might be somewhat diminished in size. But that
water has been the main cause of these effects is proved
by the existence of fossil remains of aquatic and other
animals on many mountains.

Educator

[M]ountains are always the children of the sea.

This Puzzling Planet
Chapter XIII (p. 217)
The Bobbs-Merrill Company, Indianapolis, Indiana. 1928

Burnet, Thomas 1635–1715

English cleric and scientist

There is nothing in Nature more shapeless and ill-
figur'd than an old Rock or a Mountain, and all that
variety that is among them is but the various modes of
irregularity; so as you cannot make a better character
of them, in short, than to say they are of all forms and
figures, except regular.

The Sacred Theory of the Earth (2nd edition)
Book I, Chapter XI (p. 112)
Printed by R. Norton. London. 1691

The greatest objects of Nature are, methinks, the most
pleasing to behold; and next to the great Concave of the

Heavens, and those boundless Regions where the Stars inhabit, there is nothing that I look upon with more pleasure than the wide Sea and the Mountains of the Earth.... And yet these Mountains we are speaking of, to confess the truth, are nothing but great ruins; but such as show a certain magnificence in Nature; as from old Temples and broken Amphitheatres of the Romans we collect the greatness of that people. But the grandeur of a Nation is less sensible to those that never see the remains and monuments that they have left, and those that never see the mountainous parts of the Earth, scarce ever reflect upon the causes of them, or what power in Nature could be sufficient to produce them.

The Sacred Theory of the Earth (2nd edition)

Book I, Chapter XI, Concerning the Mountains of the Earth (p. 109)

Printed by R. Norton. London. 1691

Look upon those great ranges of Mountains in Europe or in Asia, whereof we have given a short survey, in what confusion do they lie? They have neither form nor beauty, nor shape, nor order, no more than the Clouds in the Air. Then how barren, how desolate, how naked are they? how they stand neglected by Nature? neither the Rains can soften them, nor the Dews from Heaven make them fruitful.

The Sacred Theory of the Earth (2nd edition)

Book I, Chapter XI (p. 111)

Printed by R. Norton. London. 1691

Byron, George Gordon,

6th Baron Byron 1788–1824

1838–1914

American naturalist

Thousands of God's wild blessings will search you and soak you as if you were a sponge, and the big days will go by uncounted.

Our National Parks

Chapter I (p. 17)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

Fear not, therefore, to try the mountain-passes. They will kill care, save you from deadly apathy, set you free, and call forth every faculty into vigorous, enthusiastic action. Even the sick should try these so-called dangerous passes, because for every unfortunate they kill, they cure a thousand.

Mountains of California

Chapter V (p. 79)

The Century Company. New York, New York, USA. 1911

Climb the mountains and get their good tidings. Nature's peace will flow into you as sunshine flows into trees. The winds will blow their own freshness into you and the storms their energy, while care will drop off like autumn leaves.

Our National Parks

Chapter II (p. 56)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

The time will not be taken from the sum of your life. Instead of shortening, it will indefinitely lengthen it and make you truly immortal. Nevermore will time seem short or long, and cares will never again fall heavily on you, but gently and kindly as gifts from heaven.

Our National Parks

Chapter I (p. 19)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

The mountains are fountains not only of rivers and fertile soil, but of men.

Steep Trails

Chapter III (p. 47)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

Here I could stay tethered forever with just bread and water, nor would I be lonely; loved friends and neighbors, as love for everything increased, would seem all the nearer however many the miles and mountains between us.

My First Summer in the Sierra

June 6 (p. 29)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

...perhaps more than all, I was animated by a mountaineer's eagerness to get my feet in the snow once more, and my head into the clear sky, after lying dormant all winter at the level of the sea.

Steep Trails

Chapter IX (p. 128)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

Ruskin, John 1819–1900

English writer, art critic, and social reformer

[Mountains] seem to have been built for the human race, as at once their schools and cathedrals; full of treasures of illuminated manuscript for the scholar, kindly in simple lessons to the worker, quiet in pale cloisters for the thinker, glorious in holiness for the worshipper. ...[G]reat cathedrals of the earth, with their gates of rock, pavements of cloud, choirs of stream and stone, altars of snow, and vaults of purple traversed by the continual stars...

Selections from the Works of John Ruskin

The Mountain Glory (p. 16)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1908

Sedgwick, Adam 1854–1913

English geologist

My present objective is to convey some notion of the structure of the great mountain masses, and to show how the several parts are fitted one to another. This can only be done after great labour. The cliffs where the rocks are laid bare by the sea, the clefts and fissures in the hills and valleys, the deep grooves through which the water flows — all must in turn be examined; and out of such seeming confusion order will at length appear. We must, in imagination, sweep off the drifted matter that clogs the surface of the ground; we must suppose all the covering of moss and heath and wood to be torn away from the sides of the mountains, and the green mantle that lies near their feet to be lifted up; we may see the muscular integuments and sinews and bones of our mother Earth, and so judge of the parts played by each of them during those old convulsive movements whereby her limbs were contorted and drawn up into their present positions.

A finished museum is a dead museum, and a dead museum is a useless museum.

In Museums Association

The Principles of Museum Administration

Report of Proceedings, Newcastle, 1895 (p. 78)

St. Clair, George

No biographical data available

The crust of the earth, with its embedded fossils, must not be looked at as a well-filled museum, but as a poor collection made at hazard and at rare intervals.

Darwinism and Design, or, Creation by Evolution

Chapter III (p. 52)

Hodder & Stoughton. London, England. 1873

MUTATION

Crow, J. F. American geneticist

No biographical data available

...we could still be sure on theoretical grounds that mutants would usually be detrimental. For a mutation is a random change of a highly organized, reasonably smoothly functioning human body. A random change in the highly integrated system of chemical processes which constitute life is certain to impair — just as a random interchange of connections in a television set is not likely to improve the picture.

Genetic Effects of Radiation

Bulletin of the Atomic Scientists, Volume 14, Number 1, January 14, 1958 (pp. 19, 20)

Dobzhansky, Theodosius 1900–75

Russian-American scientist

...a majority of mutations, both those arising in laboratories and those stored in natural populations, produce deteriorations of...viability, hereditary disease and monstrosities. Such changes it would seem, can hardly serve as evolutionary building blocks.

Genetics and the Origin of Species

Chapter III (p. 73)

Columbia University Press. New York, New York, USA. 1951

...the mutation process alone, not corrected and guided by natural selection, would result in degeneration and extinction rather than improved adaptiveness.

On Methods of Evolutionary Biology and Anthropology

American Scientist, Volume 45, 1957 (p. 385)

Heinlein, Robert A. 1907–88

American science fiction writer

“Mutation” is never an explanation; it is simply a name for an observed fact.

Time Enough for Love

Chapter IX (p. 246)

G.P. Putnam’s Sons. New York, New York, USA. 1973

Huxley, Julian 1887–1975

English biologist, philosopher, and author

One would expect that any interference with such a complicated piece of chemical machinery as the genetic constitution would result in damage. And, in fact, this is so: the great majority of mutant genes are harmful in their effects on the organism.

Evolution in Action

Chapter 2 (p. 39)

Harper & Brothers. New York, New York, USA. 1953

Muller, Hermann Joseph 1890–1967

American geneticist

It is entirely in line with the accidental nature of natural mutations that extensive tests have agreed in showing the vast majority of them detrimental to the organism in its job of surviving and reproducing, just as changes accidentally introduced into any artificial mechanism are predominantly harmful to its useful operation.

How Radiation Changes the Genetic Constitution

Bulletin of the Atomic Scientists, Volume 11, Number 9, November 1955 (p. 331)

Pauling, Linus 1901–94

American chemist

Every species of plant and animal is determined by a pool of germ plasm that has been most carefully selected over a period of hundreds of millions of years. We can understand now why it is that mutations in these carefully selected organisms almost invariably are detrimental. The situation can be suggested by a statement by Dr. J.B.S. Haldane: “My clock is not keeping perfect time. It is conceivable that it will run better if I shoot a bullet through it; but it is much more probable that it will stop altogether.” Professor George Beadle, in this connection, has asked: “What is the chance that a typographical error would improve Hamlet?”

No More War!

Chapter 4 (p. 53)

Dodd, Mead & Company. New York, New York, USA. 1958

MUTUALISM

Pound, Roscoe 1870–1964

American jurist

It is not necessary...in order to establish mutualism to show that the organisms do no injury to each other. Mutualism of the kind we meet with in the vegetable kingdom involves sacrifice on the part of the host. The parasite is not there gratuitously. It is there to steal from its host the living it is hereditarily and constitutionally indisposed to make for itself. If the host gains any advantage from the relation, it can only do so by sacrificing — by giving the parasite the benefit of its labor that it may subsist.

Symbiosis and Mutualism

The American Naturalist, Volume XXVII, Number 318, June 1893 (p. 519)

MYRMECOLOGIST

Hölldobler, Bert 1936–

German myrmecologist

Wilson, Edward O. 1929–

American biologist and author

Like all myrmecologists...we are prone to view the Earth's surface idiosyncratically, as a network of ant colonies. We carry a global map of these relentless little insects in our heads. Everywhere we go their ubiquity and predictable natures makes us feel at home, for we have learned to read part of their language and we understand certain designs of their social organization better than anyone understands the behavior of our fellow humans.

Journey to the Ants: A Story of Scientific Exploration

The Dominance of Ants (p. 1)

Harvard University Press. Cambridge, Massachusetts, USA. 1994

MYSTERY

Asimov, Isaac 1920–92

American author and biochemist

The mysteries of the universe and the questions that scientists strive to answer never come to an end. For that we should be grateful. A universe in which their were no mysteries for curious men to ponder would be a very dull universe indeed.

The Search for the Elements

Chapter 16 (p. 152)

Basic Books. New York, New York, USA. 1962

Author undetermined

“Give me the facts,” said My Lord Judge, “thy conclusions are but the guess-work of imagination; which puzzle the brain, and tend not to solve the mystery.”

In Colin Mackenzie

One Thousand Experiments in Chemistry

On Cover page

Printed for Sir Richard Phillips & Company. London, England. 1821

Burroughs, John 1837–1921

American naturalist and writer

...after science has done its best the mystery is as great as ever, and the imagination and the emotions have just as free a field as before.

Indoor Studies Science and Literature

Science and Literature (pp. 51–52)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1889

Chargaff, Erwin 1905–2002

Austrian biochemist

It is the sense of mystery that, in my opinion, drives the true scientist: the same force, blindly seeing, deafly hearing, unconsciously remembering, that drive the larvae

into the butterfly. If he has not experienced, at least a few times in his life, this cold shudder down his spine, this confrontation with an immense, invisible face whose breath moves him to tears, he is not a scientist. The blacker the night, the brighter the light.

Heracleitian Fire: Sketches from a Life Before Nature

Part II

In the Light of Darkness (p. 114)

Rockefeller University Press. New York, New York, USA. 1978

Dawkins, Richard 1941–

English ethologist, evolutionary biologist, and popular science writer

There is mystery in the universe, beguiling mystery, but it isn't capricious, whimsical, frivolous in its changeability. The universe is an orderly place and, at a deep level, regions of it behave like other regions, times behave like other times.

Science, Delusion and the Appetite for Wonder

Richard Dimbleby Lecture, BBC1 Television, November 12th, 1996

Newton, Keats agreed with Lamb, had destroyed all the poetry of the rainbow, by reducing it to the prismatic colours.... Newton's dissection of the rainbow into light of different wavelengths led on to Maxwell's theory of electromagnetism and thence to Einstein's theory of special relativity. If you think the rainbow has poetic mystery, you should try relativity.

Unweaving the Rainbow: Science, Delusion and the Appetite for Wonder Chapter 3 (p. 39)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1998

The real universe has mystery enough to need no help from obscurantist hucksters.

The Real Romance in the Stars

The Independent, 31 Dec 1995

Mysteries do not lose their poetry when solved. Quite the contrary; the solution often turns out more beautiful than the puzzle and, in any case, when you have solved one mystery you uncover others, perhaps to inspire greater poetry.

Unweaving the Rainbow: Science, Delusion and the Appetite for Wonder Chapter 3 (p. 41)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1998

Doyle, Sir Arthur Conan 1859–1930

Scottish writer

It is a mistake to confound strangeness with mystery.

In William S. Baring-Gould (ed.)

The Annotated Sherlock Holmes (Volume 1)

A Study in Scarlet, Chapter 7 (p. 194)

Wings Books. New York, New York, USA. 1967

As a rule, said Holmes, the more bizarre a thing is the less mysterious it proves to be.

In William S. Baring-Gould (ed.)

The Annotated Sherlock Holmes (Volume 1)

The Red Headed League (p. 429)

Wings Books. New York, New York, USA. 1967

Einstein, Albert 1879–1955

German-born physicist

The most beautiful experience we can have is the mysterious. It is the fundamental emotion which stands at the cradle of true art and true science. Whoever does not know it and can no longer wonder, no longer marvel, is as good as dead, and his eyes are dimmed.

Ideas and Opinions

The World As I See It (p. 11)

Crown Publishers, Inc. New York, New York, USA. 1954

I claim credit for nothing. Everything is determined, the beginning as well as the end, by forces over which we have no control. It is determined for the insect as well as for the star. Human beings, vegetables, or cosmic dust, we all dance to a mysterious tune, intoned in the distance by an invisible player.

What Life Means to Einstein: An Interview by George Sylvester Viereck
The Saturday Evening Post, October 26, 1929 (p. 117)

Feynman, Richard P. 1918–88

American theoretical physicist

We choose to examine a phenomenon which is impossible, absolutely impossible to explain in any classical way, and which has in it the heart of quantum mechanics. In reality, it contains the only mystery.

The Feynman Lectures on Physics (Volume 1)

Chapter 37–1 (p. 37–2)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

...the idea that it [science] takes away mystery or awe or wonder in nature is wrong. It's quite the opposite. It's much more wonderful to know what something's really like than to sit there and just simply, in ignorance, say, "Oooh, isn't it wonderful!"

In Christopher Sykes

No Ordinary Genius: The Illustrated Richard Feynman

Chapter Four (p. 108)

W.W. Norton & Company, Inc. New York, New York, USA. 1994

With more knowledge comes a deeper, more wonderful mystery, luring one on to penetrate deeper still. Never concerned that the answer may prove disappointing, with pleasure and confidence we turn over each new stone to find unimagined strangeness leading on to more wonderful questions and mysteries — certainly a grand adventure.

What Do You Care What Other People Think?

The Value of Science (p. 243)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

[The law of gravity] is not exact; Einstein had to modify it, and we know it is not quite right yet, because we have still to put the quantum theory in. That is the same with all our other laws — they are not exact. There is always an edge of mystery, always a place where we have some fiddling around to do yet. This may or may not be a property of Nature, but it certainly is common to all the laws

as we know them today. It may be only a lack of knowledge.

The Character of Physical Law
Chapter I (p. 33)
BBC. London, England. 1965

It is a great adventure to contemplate the universe, beyond man, to contemplate what it would be like without man, as it was in a great part of its long history and as it is in a great majority of places. When this objective view is finally attained, and the mystery and majesty of matter are fully appreciated, to then turn the objective eye back on man viewed as matter, to view life as part of this universal mystery of greatest depth, is to sense an experience which is very rare, and very exciting. It usually ends up in laughter and a delight in the futility of trying to understand what this atom in the universe is, this thing — atoms with curiosity — that looks at itself and wonders why it wonders.

The Meaning of It All: Thoughts of a Citizen Scientist
Chapter II (p. 39)
Perseus Books. Reading, Massachusetts, USA. 1998

[T]hese scientific views end in awe and mystery, lost at the edge in uncertainty, but they appear to be so deep and so impressive that the theory that it is all arranged as a stage for God to watch man's struggle for good and evil seems inadequate.

The Meaning of It All: Thoughts of a Citizen Scientist
Chapter II (p. 39)
Perseus Books. Reading, Massachusetts, USA. 1998

...I can live with doubt and uncertainty and not knowing. I think it's much more interesting to live not knowing than to have answers which might be wrong. I have approximate answers and possible beliefs and different degrees of certainty about different things, but I'm not absolutely sure of anything and there are many things I don't know anything about, such as whether it means anything to ask why we're here...I don't have to know an answer, I don't feel frightened by not knowing things, by being lost in a mysterious universe without any purpose, which it is the way it really is so far as I can tell. It doesn't frighten me.

In Jeffrey Robbins (ed.)
The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman
Chapter 1 (pp. 24–25)
Perseus Books. Cambridge, Massachusetts, USA. 1999

Fosdick, Harry Emerson 1878–1969
American clergyman and educator

I would rather live in a world where my life is surrounded by mystery than live in a world so small that my mind could comprehend it.

Riverside Sermons
The Mystery of Life (p. 22)
Harper & Brothers Publishers. New York, New York, USA. 1958

Kelvin, Lord William Thomson 1824–1907
Scottish engineer, mathematician, and physicist

When you call a thing mysterious, all that means is that you don't understand it.

In Sir Richard Arman Gregory
Discovery; or, The Spirit and Service of Science
Chapter IV (p. 56)
Macmillan & Company Ltd. London, England. 1918

Lightman, Alan 1948–
Physicist, novelist, and essayist

A painter paints a sunset, and a scientist measures the scattering of light. The beauty of nature lies in its logic as well as appearance. And we delight in that logic: The square of the orbital period of each planet equals the cube of its distance from the sun; the shape of a raindrop is spherical, to minimize the area of its surface. Why it is that nature should be logical is the greatest mystery of science. But it is a wonderful mystery.

Great Ideas in Physics
Introduction (p. 1)
McGraw-Hill Book Company, Inc. New York, New York, USA. 1997

Lindbergh, Anne Morrow 1906–2001
American aviator and writer

Today's mystery is not the old veiling by superstition of the things man does not understand, but a new unblinking gaze at the mysteries of the universe that may never be unveiled.

Earth Shine
Back to Earth (pp. 42–43)
Harcourt, Brace & World, Inc. New York, New York, USA. 1969

Lowell, Percival 1855–1916
American astronomer

Discoveries in science have a fatal facility for lying lost in the technical publications which record them. Few persons attend to what is not alluring and columns of figures form but an uninviting protocol to the learning within. Yet these very people would take the keenest interest in scientific progress could its beauty and real simplicity be adequately set out for them. For the whole object of science is to explain and make comprehensible the universe around us. Science consists in solving mysteries not, as the layman might imagine, in making them.

In William Graves Hoyt
Lowell and Mars
Chapter 7 (p. 96)
University of Arizona Press. Tucson, Arizona, USA. 1976

Margenau, Henry 1901–97
American physicist

I recognize no subjects and no facts which are alleged to be forever closed to inquiry or understanding: a mystery is but a challenge.

Open Vistas

Chapter III Section 3 (p. 76)
Yale University Press. New Haven, Connecticut, USA. 1961

Penrose, Roger 1931–
English mathematical physicist

...once you have put more and more of your physical world into a mathematical structure, you realize how profound and mysterious this mathematical structure is. How you can get all these things out of it is very mysterious...

In Alan Lightman and Robert Brawer (eds.)
Origins: The Lives and Worlds of Modern Cosmologists
Roger Penrose (p. 433)
Harvard University Press. Cambridge, Massachusetts, USA. 1990

Peterson, Ivars
Mathematics writer

The voyage of discovery into our own solar system has taken us from clockwork precision into chaos and complexity. This still unfinished journey has not been easy, characterized as it is by twists, turns, and surprises that mirror the intricacies of the human mind at work on a profound puzzle. Much remains a mystery. We have found chaos, but what it means and what its relevance is to our place in the universe remains shrouded in a seemingly impenetrable cloak of mathematical uncertainty.

Newton's Clock: Chaos in the Solar System
Chapter 12 (p. 293)
W.H. Freeman & Company. New York, New York, USA. 1993

Richards, Theodore William 1868–1928
American chemist

No one can predict how far we shall be enabled by means of our limited intelligence to penetrate into the mysteries of a universe immeasurably vast and wonderful; nevertheless, each step in advance is certain to bring new blessings to humanity and new inspiration to greater endeavor.

Annual Report of the Board of Regents of the Smithsonian Institution, 1911 (Faraday Lecture) The Fundamental Properties of the Elements (p. 215)
Government Printing Office. Washington, D.C. 1912

Smullyan, Raymond 1919–
American mathematician and logician

...I certainly believe that some things may in principle be mysteries, but of what use is a hypothesis for explaining a mystery when the very hypothesis raises another mystery just as baffling as the one it explains?

5000 B.C. and Other Philosophical Fantasies
Chapter 13 (p. 165)
St. Martin's Press. New York, New York, USA. 1983

Wilson, Edward O. 1929–
American biologist and author

The unsolved mysteries of the rain forest are formless and seductive. They are like unnamed islands hidden in

the blank spaces of old maps, like dark shapes glimpsed descending the far wall of a reef into the abyss.

The Diversity of Life
Chapter One (p. 7)
W.W. Norton & Company, Inc. New York, New York, USA. 1992

Young John Zachary 1907–97
English zoologist

The scientist is in a better position than anyone else to see that we are set about with mysteries. It is his business to grapple with ghosts every day of his life and he must refuse to allow them to be laid by the process of labeling them with a primitive nomenclature. The mysteries of the universe are too great to be expressed by such simple comparisons as are implicit in either the words "spirit" or "matter."

Doubt and Certainty in Science: A Biologist's Reflections on the Brain
Comment on the First Lecture (p. 23)
Oxford University Press, Inc. Oxford, England. 1960

MYSTICISM

Capra, Fritjof 1939–
Austrian-born American physicist

Science does not need mysticism and mysticism does not need science, but man needs both. Mystical experience is necessary to understand the deepest nature of things, and science is essential for modern life. What we need, therefore, is not a synthesis, but a dynamic interplay between mystical intuition and scientific analysis.

The Tao of Physics: An Exploration of the Parallels Between Modern Physics and Eastern Mysticism
Epigraph (p. 297)
Shambhala. Berkeley, California, USA. 1975

MYTH

Bernal, John Desmond 1901–71
Irish-born physicist and x-ray crystallographer

Science, in one aspect, is ordered technique; in another, it is rationalized mythology.

Science in History
Preface (p. ix)
Watts. London, England. 1957

Clift, Wallace B.
No biographical data available

However, for most of us, science functions like myth in that we have no personal experience in the matter. We put our trust in the scientific view given us by our culture and enshrined in its myths. If asked why leaves are green, most of us would probably mutter something about "chlorophyll." But unless we were specialists, we would simply be repeating the story of someone else's experience.

Jung and Christianity (pp. 62–63)
Publisher undetermined

Hubbard, Ruth 1924–
American biologist

The mythology of science asserts that with many different scientists all asking their own questions and evaluating the answers independently, whatever personal bias creeps into their individual answers is canceled out when the large picture is put together. This might conceivably be so if scientists were women and men from all sorts of different cultural and social backgrounds who came to science with very different ideologies and interests. But since, in fact, they have been predominantly university-trained white males from privileged social backgrounds, the bias has been narrow and the product often reveals more about the investigator than about the subject being researched.

Women Look at Biology Looking at Women

Have Only Men Evolved? (p. 31)

Schenkman Publishing Company. Cambridge, Massachusetts, USA. 1979

Jacob, François 1920–
French biologist

...myths and science fulfill a similar function: they both provide human beings with a representation of the world and the forces that are supposed to govern it.

The Possible and the Actual

Myth and Science (p. 9)

Pantheon Books. New York, New York, USA. 1982

Mahadeva, M.
No biographical data available

Myths are errors that result [both from] scientists bringing societal preconceptions into science and...scientists feeding society ideas that masquerade as science.

From Misinterpretations to Myths
Science Teacher, Volume 56, Number 4, 1989

Popper, Karl R. 1902–94
Austrian/British philosopher of science

Thus science must begin with myths — and with the criticism of myths...

In C.A. Mace (ed.)

British Philosophy in the Mid-Century

Philosophy of Science: A Personal Report, VII (p. 177)

Science never starts from scratch; it can never be described as free from assumptions; for at every instant it presupposes a horizon of expectations — yesterday's horizon of expectations, as it were. Today's science is built upon yesterday's science (and so it is the result of yesterday's searchlight); and yesterday's science, in turn, is based on the science of the day before. And the oldest scientific theories are built on pre-scientific myths, and these, in their turn, on still older expectations.

Objective Knowledge: An Evolutionary Approach

Appendix (pp. 346–347)

Clarendon Press. Oxford, England. 1972

Whyte, Lancelot Law 1896–1972
Scottish physicist

In the ultimate analysis science is born of myth and religion, all three being expressions of the ordering spirit of the human mind.

The Unconscious Before Freud

Chapter V (pp. 82–83)

Julian Friedmann Publishers. London, England. 1978

N

NAME

Abbey, Edward 1927–89

American environmentalist and nature writer

...the itch for naming things is almost as bad as the itch for possessing things.

Desert Solitaire

Terra Incognita: Into the Maze (p. 288)

Ballantine Books. New York, New York, USA. 1968

Agassiz, Jean Louis Rodolphe 1807–73

Swiss-born American naturalist, geologist, and teacher

The first thing to be determined about a new specimen is not its name, but its most prominent character. Until you know an animal, care not for its name.

In James Orton

Comparative Zoology; Structural and Systematic

Preceding Chapter I (p. 18)

Harper & Brothers. New York, New York, USA. 1877

Every art and science has a language of technical terms peculiar to itself. With those terms every student must make himself familiarly acquainted at the outset; and first of all, he will desire to know the names of the objects about which he is to be engaged.

Principles of Zoology

Introduction (p. xiii)

Goold, Kendall & Lincoln. Boston, Massachusetts, USA. 1848

Nothing is more to be deprecated than an over-appreciation of technicalities, valuing the name more highly than the thing; but some knowledge of this scientific nomenclature is necessary to every student of Nature.

Methods of Study in Natural History

Chapter II (p. 18)

Ticknor & Fields. Boston, Massachusetts, USA. 1863

Borland, Hal 1900–78

American writer

There is folk poetry in the common names; but science, devoted to order and systematic knowledge, insists on classifying and defining. The poet's buttercup is the botanist's *Ranunculus*. If you would walk with scientist as well as poet, learn both languages.

Beyond Your Doorstep: A Handbook to the Country

Chapter 15 (p. 359)

Alfred A. Knopf. New York, New York, USA. 1962

Carroll, Lewis (Charles Dodgson) 1832–98

English writer and mathematician

"What's the use of their having names," the Gnat said, "if they won't answer to them?"

"No use to them," said Alice; "but its useful to the people that name them, I suppose."

The Complete Works of Lewis Carroll

Through the Looking-Glass

Chapter III (p. 173)

The Modern Library. New York, New York, USA. 1936

"My name is Alice...."

"It's a stupid name enough!" Humpty Dumpty interrupted impatiently. "What does it mean?"

"Must a name mean something?" Alice asked doubtfully.

"Of course it must," Humpty Dumpty said with a short laugh; "my name means the shape I am.... With a name like yours, you might be any shape, almost."

The Complete Works of Lewis Carroll

Through the Looking-Glass

Chapter VI (p. 209)

The Modern Library. New York, New York, USA. 1936

Darwin, Charles Robert 1809–82

English naturalist

...I have lately been trying to get up an agitation (but I shall not succeed, and indeed doubt whether I have time and strength to go on with it), against the practice of Naturalists appending for perpetuity the name of the first describer to species. I look at this as a direct premium to hasty work, to naming instead of describing. A species ought to have a name so well known that the addition of the author's name would be superfluous, and a [piece] of empty vanity.... Why should Naturalists append their own names to new species, when Mineralogists and Chemists do not do so to new substances?

In Francis Darwin (ed.)

The Life and Letters of Charles Darwin (Volume 1)

Letter to J.D. Hooker, October 6, 1848 (pp. 332–333)

D. Appleton & Company. New York, New York, USA. 1896

I do not think more credit is due a man for defining a species, than to a carpenter for making a box. But I am foolish and rabid against species-mongers, or rather against their vanity; it is useful and necessary work which must be done; but they act as if they had actually made the species, and it was their own property.

In Francis Darwin (ed.)

The Life and Letters of Charles Darwin (Volume 1)

Letter to Hugh Strickland, February 4, 1849 (pp. 338–339)

D. Appleton & Company. New York, New York, USA. 1896

How dreadfully difficult it is to name plants.

In Francis Darwin (ed.)

The Life and Letters of Charles Darwin (Volume 1)

Letter to J.D. Hooker, June 5, 1855 (p. 418)

D. Appleton & Company. New York, New York, USA. 1896

Doyle, Sir Arthur Conan 1859–1930

Scottish writer

Man, it's Witchcraft! Where in the name of all that is wonderful did you get those names?

In William S. Baring-Gould (ed.)

The Annotated Sherlock Holmes (Volume 1)

The Valley of Fear

Part I, Chapter 1 (p. 476)

Wings Books. New York, New York, USA. 1967

Eliot, George (Mary Ann Evans Cross) 1819–80
English novelist

The mere fact of naming an object tends to give definiteness to our conception of it — we have then a sign that at once calls up in our minds the distinctive qualities which mark out for us that particular object from all others.

The George Eliot Letters (Volume 11) (p. 251)

Yale University Press. New Haven, Connecticut, USA. 1954–78

Ellis, Havelock 1859–1939
English sexuality researcher

For even the most sober scientific investigator in science, the most thoroughgoing Positivist, cannot dispense with fiction; he must at least make use of categories, and they are already fictions, analogical fictions, or labels, which give us the same pleasure as children receive when they are told the “name” of a thing.

The Dance of Life

Chapter III, Section II (p. 94)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1923

Faraday, Michael 1791–1867
English physicist and chemist

...I am fully aware that names are one thing and science another.

Experimental Researches in Electricity (Volume 1)

Seventh Series, 666 (p. 198)

Richard and John Edward Taylor. London, England. 1839–1855

Ferris, G. F.
No biographical data available

The proper aim is not to *name* species but to *know* them.
Stanford University Publications: Biological Studies (Volume 5)
The Principles of Systematic Entomology (p. 105)
Stanford University. Stanford, California, USA. 1920–53

Gahan, A. B.
No biographical data available

Objects without names cannot well be talked about or written about; without descriptions they cannot be identified and such knowledge as may have accumulated regarding them is sealed.

The Role of the Taxonomist in Present Day Entomology

Entomological Society of Washington Proceedings, Volume 25, 1923 (p. 73)

Holmes, Oliver Wendell 1809–94
American physician, poet, and humorist

A Pseudo-science consists of a nomenclature, with a self-adjusting arrangement, by which all positive evidence, or such as favors its doctrines, is admitted, and all negative evidence, or such as tells against it, is excluded. It is invariably connected with some lucrative practical application.

The Professor at the Breakfast Table

Chapter VIII (p. 249)

Ticknor & Fields. Boston, Massachusetts, USA. 1860

Isidorus
No biographical data available

If you know not the names, the knowledge of things is wasted.

In Carl von Linné

Critica Botanica

Generic Names (p. 1)

The Ray Society. London, England. 1938

Juster, Norton 1929–
American architect and writer

Words and numbers are of equal value, for, in the cloak of knowledge, one is warp and the other woof. It is no more important to count the sands than it is to name the stars.

The Phantom Tollbooth

Chapter 6 (p. 77)

Alfred A. Knopf. New York, New York, USA. 1989

Lavoisier, Antoine Laurent 1743–94
French chemist

The impossibility of separating the nomenclature of a science from the science itself, is owing to this, that every branch of physical science must consist of three things; the series of facts which are the objects of the science, the ideas which represent these facts, and the words by which these ideas are expressed.

Elements of Chemistry in a New Systematic Order

Preface of the Author (p. xiv)

Printed for William Creech. Edinburgh, Scotland. 1790

Le Févre, Nicholas 1615–69
No biographical data available

This Principle, as well as the others, hath received several names; for it is called Oil, Natural Fire, Light, Vital Fire, Balsom of Life and of Sulphur, and besides, many other appellations have been given by the Sons of Art, which we will not fill up this Section: According to our usual custom, we will content our selves, with examining the nature of the thing, leaving the niceties of Names to the over-curious.

A Complete Body of Chymistry

Chapter III, Section IV (p. 25)

Printed for O. Pully. London, England. 1640

Linnaeus, Carl (von Linné) 1707–78
Swedish botanist

The first step of science is to know one thing from another. This knowledge consists in their specific distinctions; but in order that it may be fixed and permanent distinct names must be given to different things, and those names must be recorded and remembered.

In Sir James Edward Smith

A Selection of the Correspondence of Linnaeus and Other Naturalists from the Original Manuscripts (Volume 2) (p. 460)

Longman, Hurst, Rees, Orme and Brown. London, England. 1821

The first step in wisdom is to know the things themselves; this notion consists in having the true idea of the object; objects are distinguished and known by their methodical classification and appropriate naming; therefore Classification and Naming will be the foundation of our Science.

In P. F. Stevens

The Development of Biological Systematics: Antoine-Laurent de Jussieu, Nature and the Natural System

Chapter Nine (p. 201)

Columbia University Press. New York, New York, USA. 1994

For, even though the knowledge of the true and genuine Tree of Life, which might have delayed the coming of old age, is lost, still herbs remain and renew their flowers, and with perennial gratitude will always breathe forth the sweet memory of your names, and make them more enduring than marble, to outlive the names of kings and heroes. For wealth disappears, the most magnificent houses fall into decay, the most numerous family at some time or other comes to an end: the greatest states and the most prosperous kingdoms can be overthrown: but the whole of Nature must be blotted out before the race of plants passes away, and he is forgotten who in Botany held up the torch.

Critica Botanica

Generic Names (p. 68)

The Ray Society. London, England. 1938

Name and plant are two ideas, which ought to be so closely united that they cannot possibly be separated: in order to secure this, the plant ought to lend a hand to the name, and the name in its turn to the plant, while the name in its turn rejoices in the sound principle on which it was given: since there is no connexion between botanist and plant, there is also no sound principle in naming it after him: and so the naming is bad.

Critica Botanica

Generic Names (p. 61)

The Ray Society. London, England. 1938

Lloyd, C. G.

No biographical data available

Botanists meet and pass rules for the naming of plants, but they cannot agree on any set of rules, and never will as long as the members are vitally interested in the particular rules that perpetuate their own names and the plant names that have been proposed by themselves.

Personal Names in Nomenclature

The American Botanist, Volume 4, Number 3, March 1903 (p. 48)

Melville, Herman 1819–91

American novelist

I wonder whether mankind could not get along without all those names which keep increasing every day, and hour, and moment; till at last the very air will be full of them; and even in a great plain men will be breathing each other's breath, owing to the vast multitude of words they use that consume all of the air.... But people seem to have a great love for names; for to know a great many names seems to look like knowing a good many things.

Redburn

Chapter XIII

A. & C. Boni. New York, New York, USA. 1924

Page, Jake

No biographical data available

To name something is, in a sense, to own it.... [It] has been said that it is only by its name that anything can enter into thought and discourse. Naming, in other words, is a serious business.

Pastorale: A Natural History of Sorts

What Is in a Name? (p. 119)

W.W. Norton & Company, Inc. New York, New York, USA. 1985

Savory, Theodore

No biographical data available

...words are in themselves among the most interesting objects of study, and the names of animals and plants are worthy of more consideration than Biologists are inclined to give them.

Naming the Living World: An Introduction to the Principles of Biological Nomenclature

Preface (p. vii)

English Universities Press. London, England. 1962

Sylvester, James Joseph 1814–97

English mathematician

Perhaps I may without immodesty lay claim to the appellation of Mathematical Adam, as I believe that I have given more names (passed into general circulation) of the creatures of the mathematical reason than all the other mathematicians of the age combined.

Notes on a Proposed Addition to the Vocabulary of Ordinary Arithmetic

Nature, Volume 37, Number 946, December 15, 1887 (p. 152, fn 1)

Turnbull, Charles D.

No biographical data available

According to Genesis, "Adam gave names to all cattle and to the fowl of the air and to every beast of the field," and we have therefore authority to declare that although Father Adam named both birds and beasts, he woefully neglected the flower, and left the task to the fancy and haphazard desires of his descendants.

Concerning Nomenclature
The American Botanist, Volume 4, Number 3, March 1903 (p. 45)

Twain, Mark (Samuel Langhorne

Clemens) 1835–1910
 American author and humorist

Names are not always what they seem. The common Welsh name *Bzjxxlwep* is pronounced Jackson.
Following the Equator (Volume 1)
 Chapter XXXVI (p. 339)
 Harper & Brothers. New York, New York, USA. 1899

Whitehead, Alfred North 1861–1947
 English mathematician and philosopher

...in the garden of Eden God saw the animals before he named them: in the traditional system [of education] children named the animals before they saw them.
Science and the Modern World
 Chapter XIII (p. 285)
 The Macmillan Company. New York, New York, USA. 1929

NATURAL HISTORY

Agassiz, Jean Louis Rodolphe 1807–73
 Swiss-born American naturalist, geologist, and teacher

...Natural History must in good time become the analysis of the thoughts of the Creator of the Universe as manifested in the animal and vegetable kingdoms, as well as in the inorganic world.
Essay on Classification
 Chapter I, Section XXXII (p. 137)
 Harvard University Press. Cambridge, Massachusetts, USA. 1962

A laboratory of Natural History is a sanctuary where nothing profane should be tolerated. I feel less agony at improprieties in churches than in a scientific laboratory.
 In David Stair Jordan
Popular Science Monthly, Volume 40, 1891

Borlase, William 1696–1772
 Cornish antiquary

Natural History is the handmaid to Providence, collects into a narrow space what is distributed through the Universe, arranging and disposing the several Fossils, Vegetables and Animals, so as the mind may more readily examine and distinguish their beauties, investigate their causes, combinations, and effects, and rightly know how to apply them to the calls of private and public life.
The Natural History of Cornwall
 The Air, Climate, Waters, Rivers, Lakes, Seas and Tides, to the Nobility and Gentry of the County of Cornwall (p. iv)

Huxley, Thomas Henry 1825–95
 English biologist

To a person uninstructed in natural history, his country or sea-side stroll is a walk through a gallery filled with wonderful works of art, nine-tenths of which have their faces turned to the wall. Teach him something of natural history, and you will place in his hands a catalogue of those which are worth turning around.
Lay Sermons, Addresses and Reviews
 On the Educational Value of the Natural History Sciences (p. 91)
 D. Appleton & Company. New York, New York, USA. 1872

Smellie, William 1740–95
 Scottish encyclopedist

Natural History is the most extensive, and perhaps the most instructive and entertaining of all the sciences. It is the chief source from which human knowledge is derived. To recommend the study of it from motives of utility were to affront the understanding of mankind. Its importance, accordingly, in the arts of life, and in storing the mind with just ideas of external objects, as well as of their relations to the human race, was early perceived by all nations in their progress from rudeness to refinement.

In Buffon, Comte de Georges, Louis Leclerc
Natural History, General and Particular (Volume 1)
 Preface by the Translator (p. ix)
 T. Caldwell and W. Davies. London, England. 1812

NATURAL LAW

Adams, George 1750–95
 English instrument maker

The end of natural philosophy is to increase either the knowledge or power of man, and enable him to understand the ways and procedure of nature. By discovering the laws of nature, he acquires knowledge, and obtains power; for when these laws are discovered, he can use them as rules of practice, to equal, subdue, or even excel nature by art.

Lectures on Natural and Experimental Philosophy (Volume 2)
 Lecture XIV (pp. 100–101)
 Printed by R. Hindmarsh. London, England. 1794

Vogt, Carl 1817–95
 German physician and naturalist

The natural laws are rude unbending powers, which have neither morals nor heart.

In Ludwig Buchner
Force and Matter
 Chapter VI (p. 35)
 Trubner & Company. London, England. 1864

Whewell, William 1794–1866
 English philosopher and historian

When we speak of material nature as being governed by laws, it is sufficiently evident that we use the term in a manner somewhat metaphorical.

The Bridgewater Treatises on the Power, Wisdom, and Goodness of God as Manifested in the Creation (Treatise III)
 Astronomy and General Physics Considered with Reference to Natural Theology
 Chapter II (p. 17)
 Carey, Lea & Blanchard. Philadelphia, Pennsylvania, USA. 1833

NATURAL SCIENCE

Eddington, Sir Arthur Stanley 1882–1944
 English astronomer, physicist, and mathematician

We need scarcely add that the contemplation in natural science of a wider domain than the actual leads to a far better understanding of the actual.

The Nature of the Physical World
 Chapter XXII (p. 266–267)
 The Macmillan Company. New York, New York, USA. 1930

Faraday, Michael 1791–1867
 English physicist and chemist

I do not think that the study of natural science is so glorious a school for the mind that, with the laws impressed on all created things by the Creator, and the wonderful unity and stability of matter and the forces of matter, there cannot be a better school for the education of the mind.

In Sir Richard Arman Gregory
Discovery; or, The Spirit and Service of Science
 Chapter I (p. 13)
 Macmillan & Company Ltd. London, England. 1918

Whitehead, Alfred North 1861–1947
 English mathematician and philosopher

...science conceived as resting on mere sense-perception, with no other source of observation, is bankrupt, so far as concerns its claim to self-sufficiency. Science can find no individual enjoyment in nature: Science can find no aim in nature: Science can find no creativity in nature; it finds mere rules of succession. These negations are true of Natural Science. They are inherent in its methodology.

Modes of Thought
 Chapter III, Lecture Eight (p. 211)
 The Macmillan Company. New York, New York, USA. 1938

NATURAL SELECTION

Bateson, William 1861–1926
 English biologist and geneticist

Natural Selection is stern, but she has her tolerant moods.

In A.C. Seward
Darwin and Modern Science
 Heredity and Variation in Modern Lights (p. 100)
 University Press. Cambridge, England. 1910

Crick, Francis Harry Compton 1916–2004
 English biochemist

Once we have become adjusted to the idea that we are here because we have evolved from simple chemical compounds by a process of natural selection, it is remarkable how many of the problems of the modern world take on a completely new light.

Of Molecules and Men
 The Prospect Before Us (p. 93)
 University of Washington Press. Seattle, Washington, USA. 1966

Darwin, Charles Robert 1809–82
 English naturalist

To suppose that the eye with all its inimitable contrivances for adjusting the focus to different distances, for admitting different amounts of light, and for the correction of spherical and chromatic aberration, could have

been formed by natural selection, seems, I freely confess, absurd in the highest degree.

In *Great Books of the Western World* (Volume 49)
The Origin of Species by Means of Natural Selection
 Chapter VI (p. 185)
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

We can no longer argue that, for instance, the beautiful hinge of a bivalve must have been made by an intelligent being, like the hinge of a door by man. There seems to be no more design in the variability of organic beings, and in the action of natural selection, than in the course which the wind blows.

In Francis Darwin (ed.)
The Life and Letters of Charles Darwin (Volume 1)
 Chapter VIII (p. 279)
 D. Appleton & Company, New York, New York, USA. 1896

When we descend to details, we can prove that no one species has changed (*i.e.*, we cannot prove that a single species has changed): nor can we prove that the supposed changes are beneficial, which is the groundwork of the theory. Nor can we explain why some species have changed and others have not.

In Francis Darwin (ed.)
The Life and Letters of Charles Darwin (Volume 2)
 Chapter IV (p. 210)
 Letter to G. Bentham, May 22, 1863
 D. Appleton & Company, New York, New York, USA. 1887

Slow though the process of selection may be, if feeble man can do much by artificial selection, I can see no limit to the amount of change, to the beauty and complexity of the coadaptations between all organic beings, one with another and with their physical conditions of life, which may have been effected in the long course of time through nature's power of selection...

In *Great Books of the Western World* (Volume 49)
The Origin of Species by Means of Natural Selection
 Chapter IV (p. 52)
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

It may metaphorically be said that natural selection is daily and hourly scrutinising, throughout the world, the slightest variations; rejecting those that are bad, preserving and adding up all that is good; silently and insensibly working, whenever and wherever opportunity offers, at the improvement of each organic being in relation to its organic and inorganic condition of life. We see nothing of these slow changes in progress, until the hand of time has marked the long lapse of ages...

In *Great Books of the Western World* (Volume 49)
The Origin of Species by Means of Natural Selection
 Chapter IV (p. 42)
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

But then arises the doubt, can the mind of man, which has, as I fully believe been developed from a mind as low as that possessed by the lowest animal, be trusted when it draws such grand conclusions?

In Francis Darwin (ed.)

The Life and Letters of Charles Darwin (Volume 1)
 Chapter VIII (p. 282)
 D. Appleton & Company, New York, New York, USA. 1896

As natural selection acts solely by accumulating slight, successive, favorable variations, it can produce no great or sudden modification; it can act only by very short and slow steps. Hence the canon of "*Natura non facit saltum*" [Nature does not make jumps], [to] which every fresh addition to our knowledge tends to conform, is on this theory simply intelligible.

In *Great Books of the Western World* (Volume 49)
The Origin of Species by Means of Natural Selection
 Chapter XV (p. 235)
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

By the theory of natural selection all living species have been connected with the parent-species of each genus by differences not greater than we see between the varieties of the same species at the present day; and these parent-species, now generally extinct, have in their turn been similarly connected with more ancient species; and so on backwards, always converging to the common ancestor of each great class. So that the number of intermediate and transitional links, between all living and extinct species, must have been inconceivably great. But assuredly, if this theory be true, such have lived upon this earth.

In *Great Books of the Western World* (Volume 49)
The Origin of Species by Means of Natural Selection
 Chapter X (p. 153)
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

But just in proportion as this process of extermination has acted on an enormous scale, so must the number of intermediate varieties, which have formerly existed, be truly enormous. Why then is not every geological formation and every stratum full of such intermediate links? Geology assuredly does not reveal any such finely graduated organic chain; and this, perhaps, is the most obvious and serious objection which can be urged against the theory. The explanation lies, as I believe, in the extreme imperfection of the geological record.

In *Great Books of the Western World* (Volume 49)
The Origin of Species by Means of Natural Selection
 Chapter X (p. 152)
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

He who rejects this view of the imperfection of the geological record, will rightly reject the whole theory. For he may ask in vain where are the numberless transitional links which must formerly have connected the closely allied or representative species found in the successive stages of the same great formation?

In *Great Books of the Western World* (Volume 49)
The Origin of Species by Means of Natural Selection
 Chapter XI (p. 179)
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

As buds give rise by growth to fresh buds, and these, if vigorous, branch out and overtop on all sides many a

feebler branch, so by generation I believe it has been with the great Tree of Life, which fills with its dead and broken branches the crust of the earth, and covers the surface with its ever branching and beautiful ramifications.

In *Great Books of the Western World* (Volume 49)

The Origin of Species by Means of Natural Selection

Chapter IV (p. 64)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

I could show fight on natural selection having done and doing more for the progress of civilization than you seem inclined to admit. Remember what risk the nations of Europe ran, not so many centuries ago of being overwhelmed by the Turks, and how ridiculous such an idea now is! The more civilised so-called Caucasian races have beaten the Turkish hollow in the struggle for existence. Looking to the world at no very distant date, what an endless number of the lower races will have been eliminated by the higher civilized races throughout the world.

The Life and Letters of Charles Darwin (Volume 1)

Religion (p. 285)

Letter To W. Graham, July 3rd, 1881

D. Appleton & Company. New York, New York, USA. 1887

If it could be demonstrated that any complex organ existed, which could not possibly have been formed by numerous, successive, slight modifications, my theory would absolutely break down.

In *Great Books of the Western World* (Volume 49)

The Origin of Species by Means of Natural Selection

Chapter VI (p. 87)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...extinction and natural selection go hand in hand.

In *Great Books of the Western World* (Volume 49)

The Origin of Species by Means of Natural Selection

Chapter VI (p. 80)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

[Evolution by natural selection] absolutely depends on what we in our ignorance call spontaneous or accidental variability. Let an architect be compelled to build an edifice with uncut stones, fallen from a precipice. The shape of each fragment may be called accidental. Yet the shape of each has been determined...by events and circumstances, all of which depend on natural laws; but there is no relation between these laws and the purpose for which each fragment is used by the builder. In the same manner the variations of each creature are determined by fixed and immutable laws; but these bear no relation to the living structure which is slowly built up through the power of selection.

The Variation of Animals and Plants Under Domestication

Chapter XXI (p. 236)

D. Appleton & Company. New York, New York, USA. 1896

Dawkins, Richard 1941–

English ethologist, evolutionary biologist, and popular science writer

All appearances to the contrary, the only watchmaker in nature is the blind forces of physics, albeit deployed in a very special way. A true watchmaker has foresight: he designs his cogs and springs, and plans their interconnections, with a future purpose in his mind's eye. Natural selection, the blind, unconscious, automatic process which Darwin discovered, and which we now know is the explanation for the existence and apparently purposeful form of all life, has no purpose in mind. It has no mind and no mind's eye. It does not plan for the future. It has no vision, no foresight, no sight at all. If it can be said to play the role of the watchmaker in nature, it is the blind watchmaker.

The Blind Watchmaker

Chapter 1 (p. 5)

W.W. Norton & Company, Inc. New York, New York, USA. 1986

Darwin's achievement, like Einstein's, is universal and timeless.

A Devil's Chaplain: Reflections on Hope, Lies, Science, and Love (p. 79)

Houghton Mifflin Company. Boston, Massachusetts, USA. 2003

Maybe we are neo-Darwinists today, but let us spell neo with a very small n! Our neo-Darwinism is very much in the spirit of Darwin himself.

A Devil's Chaplain: Reflections on Hope, Lies, Science, and Love (p. 80)

Houghton Mifflin Company. Boston, Massachusetts, USA. 2003

Natural selection is the only workable explanation for the beautiful and compelling illusion of "design" that pervades every living body and every organ. Knowledge of evolution may not be strictly useful in everyday commerce. You can live some sort of life and die without ever hearing the name of Darwin. But if, before you die, you want to understand why you lived in the first place, Darwinism is the one subject that you must study.

In John Maynard Smith

The Theory of Evolution

Forward (p. xvi)

Penguin Books Ltd. Harmondsworth, England. 1958

As an academic scientist I am a passionate Darwinian, believing that natural selection is, if not the only driving force in evolution, certainly the only known force capable of producing the illusion of purpose which so strikes all who contemplate nature.

A Devil's Chaplain: Reflections on Hope, Lies, Science, and Love (p. 10)

Houghton Mifflin Company. Boston, Massachusetts, USA. 2003

It is forever true that DNA is a double helix, true that if you are a chimpanzee (or an octopus or a kangaroo) [and] trace your ancestors back far enough you will eventually hit a shared ancestor. To a pedant, these are still hypotheses which might be falsified tomorrow. But they never will be.

A Devil's Chaplain: Reflections on Hope, Lies, Science, and Love

(pp. 17–18)

Houghton Mifflin Company. Boston, Massachusetts, USA. 2003

Fisher, Sir Ronald Aylmer 1890–1962

English statistician and geneticist

We may consequently state the fundamental theorems of Natural Selection in the form:

The rate of increase in fitness of any organism at any time is equal to its genetic variance in fitness at that time.

The Genetical Theory of Natural Selection

Chapter II (p. 37)

Dover Publications, Inc. New York, New York, USA. 1958

The million, million, million...to one chance happens once in a million, million, million...times no matter how surprised we may be that it results in us.

In K. Mather

Heredity, Volume 30, 1973

Natural Selection is not Evolution. Yet, ever since the two words have been in common use, the theory of Natural Selection has been employed as a convenient abbreviation for the Theory of Evolution by means of Natural Selection.... This has had the unfortunate consequences that the theory of Natural Selection itself has scarcely ever, if ever, received separate consideration.

The Genetical Theory of Natural Selection

Preface (p. vii)

Dover Publications, Inc. New York, New York, USA. 1958

...it was Darwin's chief contribution, not only to Biology but to the whole of natural science, to have brought to light a process by which contingencies a priori improbable, are given, in the process of time, an increasing probability, until it is their non-occurrence rather than their occurrence which becomes highly improbable.... Let the reader... attempt to calculate the prior probability that a hundred generations of his ancestry in the direct male line should each have left at least one son. The odds against such a contingency as it would have appeared to his hundredth ancestor (about the time of King Solomon) would require for their expression forty-four figures of the decimal notation; yet this improbable event has certainly happened.

In J.S. Huxley, A.C. Hardy and E.B. Ford (eds.)

Evolution as a Process

Retrospect of Criticisms of the Theory of Natural Selection (p. 91)

George Allen & Unwin Ltd. London, England. 1954

Ford, E. B. 1901–88

English ecological geneticist

...organisms automatically generate their own cycles of abundance and rarity and...the changes in selection pressures with which these are associated may greatly increase the speed of evolution.

Ecological Genetics

Chapter 3 (p. 34)

Chapman & Hall Ltd. London, England. 1971

Gould, Stephen Jay 1941–2002

American paleontologist, evolutionary biologist, and historian of science

Natural selection can only produce adaptation to immediately surrounding (and changing) environments. No

feature of such local adaptation should yield any expectation of general progress (however such a vague term be defined). Local adaptation may as well lead to anatomical simplification as to greater complexity.

Full House

Chapter 12 (p. 139)

Harmony Books. New York, New York, USA. 1996

The theory of natural selection would never have replaced the doctrine of divine creation if evident, admirable design pervaded all organisms. Charles Darwin understood this, and he focused on features that would be out of place in a world constructed by perfect wisdom.... Darwin even wrote an entire book on orchids to argue that the structures evolved to ensure fertilization by insects are jerry-built of available parts used by ancestors for other purposes. Orchids are Rube Goldberg machines; a perfect engineer would certainly have come up with something better.

This principle remains true today. The best illustrations of adaptation by evolution are the ones that strike our intuition as peculiar or bizarre.

Ever Since Darwin: Reflections in Natural History

Chapter 10. Organic Wisdom or Why Should a Fly Eat Its Mother from Inside (p. 91)

W.W. Norton & Company, Inc. New York, New York, USA. 1977

Hamilton, William D. 1936–

English ethologist, evolutionary biologist, and popular science writer

To express the matter more vividly, in the world of our model organisms, whose behavior is determined strictly by genotype, we expect to find that no one is prepared to sacrifice his life for any single person, but that everyone will sacrifice it when he can thereby save more than two brothers, or four half-brothers, or eight first-cousins...

The Genetical Evolution of Social Behavior

The Journal of Theoretical Biology, Volume 7, 1964 (p. 16)

With very few exceptions, the only parts of the theory of natural selection which have been supported by mathematical models admit to no possibility of the evolution of any characters which are on average to the disadvantage of the individuals possessing them. If natural selection followed the classical model exclusively, species would not show any behavior more positively social than the coming together of the sexes and parental care.

The Genetical Evolution of Social Behavior

The Journal of Theoretical Biology, Part I, Volume 7, 1964

Monod, Jacques 1910–76

French biochemist

Drawn out of the realm of pure chance, the accident enters into that of necessity, of the most implacable certainties. For natural selection operates at the macroscopic level, the level of organisms.... In effect natural selection operates upon the products of chance and can feed nowhere

else; but it operates in a domain of very demanding conditions, and from this domain chance is barred. It is not to chance but to these conditions that evolution owes its generally progressive course, its successive conquests, and the impression it gives of a smooth and steady unfolding.

Chance and Necessity: An Essay on the Natural Philosophy of Modern Biology

Chapter VII (pp. 118–119)

Vintage Books. New York, New York, USA. 1972

Shaw, George Bernard 1856–1950

Irish comic dramatist and literary critic

For “Natural Selection” has no moral significance: it deals with that part of evolution which has no purpose, no intelligence, and might more appropriately be called accidental selection, or better still, Unnatural Selection, since nothing is more unnatural than an accident. If it could be proved that the whole universe had been produced by such Selection, only fools and rascals could bear to live.

Back to Methuselah

Preface (p. liv)

Constable & Company Ltd. London, England. 1921

Waddington, Conrad Hal 1905–75

British biologist and paleontologist

The meaning of natural selection can be epigrammatically summarized as “the survival of the fittest.” Here “survival” does not, of course, mean the bodily advance of a single individual outliving Methuselah. It implies, in its present-day interpretation, perpetuation as a source for future generations. That individual “survives” best which leaves the most offspring. Again, to speak of an animal as “fittest” does not necessarily imply that it is stronger or most healthy, or would win a beauty competition. Essentially it denotes nothing more than leaving most offspring. The general principle of natural selection, in fact, merely amounts to the statement that the individual which leaves most offspring are those which leave most offspring. It is a tautology.

The Strategy of the Genes: A Discussion of Some Aspects of Theoretical Biology

Chapter 3 (pp. 64–65)

George Allen & Unwin Ltd. London, England. 1957

Wallace, Alfred Russel 1823–1913

English humanist, naturalist, and geographer

The proof that there is a selective agency at work is, I think, to be found in the general stability of species during the period of human observation, notwithstanding the large amount of variability that has been proved to exist. If there were no selection constantly going on, why should it happen that the kind of variations that occur so frequently under domestication never maintain themselves in a state of nature? Examples of this class are

white blackbirds or pigeons, black sheep, and unsymmetrically marked animals generally. These occur not unfrequently, as well as such sports as six-toed or stump-tailed cats, and they all persist and even increase under domestication, but never in a state of nature; and there seems no reason for this but that in the latter case they are quickly eliminated through the struggle for existence — that is, by natural selection.

Variation and Natural Selection

Nature, Volume 44, Number 1144, October 1, 1891 (p. 518)

Wallin, Ivan E. 1883–1969

American biologist

Natural Selection, by itself, is not sufficient to determine the direction of organic evolution.... Natural Selection can only deal with that which has been formed; it has no creative powers. Any directing influence that Natural Selection may have in organic evolution, must, in the nature of the process, be secondary to some other unknown factor.

Symbioticism and the Origin of Species

Chapter I (p. 5)

Williams & Wilkins Company. Baltimore, Maryland, USA. 1927

Wright, Robert

American journalist and author

...natural selection “wants” us to behave in certain ways. But, so long as we comply, it doesn’t care whether we are made happy or sad in the process, whether we get physically mangled, even whether we die. The only thing natural selection ultimately “wants” to keep in good shape is the information in our genes, and it will countenance any suffering on our part that serves this purpose.

The Moral Animal: Why We Are the Way We Are

Chapter 7 (pp. 162–163)

Vintage Books. New York, New York, USA. 1994

NATURAL THEOLOGY

Butler, Joseph 1692–1752

English bishop and exponent of natural theology

...the only distinct meaning of the word “natural” is stated, fixed, or settled; since what is natural as much requires and presupposes an intelligent agent to render it so, *i.e.*, to effect it continually or at stated times, as what is supernatural or miraculous [requires] to effect it for once.

The Analogy of Religion, Natural and Revealed to the Constitution and Course of Nature

Part 2, Chapter I (p. 105)

Harper & Brothers. New York, New York, USA. 1880

NATURALISM

Dembski, William A. 1960–

Mathematician and philosopher

Naturalism is the view that the physical world is a self-contained system that works by blind, unbroken natural laws. Naturalism doesn't come right out and say there's nothing beyond nature. Rather, it says that nothing beyond nature could have any conceivable relevance to what happens in nature. Naturalism's answer to theism is not atheism but benign neglect. People are welcome to believe in God, though not a God who makes a difference in the natural order.

The Design Revolution: Answering the Toughest Questions About Intelligent Design

Preface (p. 21)

InterVarsity Press. Downers Grove, Illinois, USA. 2004

Johnson, Philip

Law professor

The assumption of naturalism is the realm of speculative philosophy, and the rule against negative argument is arbitrary. It is as if a judge were to be charged with the crime.

Evolution as Dogma: The Establishment of Naturalism

First Things, October 1990

Scientists committed to philosophical naturalism do not claim to have found the precise answer to every problem, but they characteristically insist that they have the important problems sufficiently well in hand that they can narrow the field of possibilities to a set of naturalistic alternatives.

Absent that insistence, they would have to concede that their commitment to naturalism is based upon faith rather than proof. Such a concession could be exploited by promoters of rival sources of knowledge, such as philosophy and religion, who would be quick to point out that faith in naturalism is no more "scientific" (i.e., empirically based) than any other kind of faith.

Evolution as Dogma: The Establishment of Naturalism

First Things, October 1990

The worldview of scientific naturalism preserves a place for beliefs: a place, that is, among things to be explained by science. The Christian religion thus enters the university with a status precisely that of other comparable religious systems — say, the Aztec system of human sacrifice. Any individual, even a person of eminence in science, can make a personal choice to be "religious." Such choices are made on the basis of "faith," meaning subjective preference. A problem arises only if the Aztecs or the Christians claim access to knowledge. If they do that they are claiming that their own beliefs are normative for unbelievers. Only scientists can claim that kind of authority, because what the scientific community endorses constitutes knowledge, not belief. That is why Darwinian evolution can be taught in schools as fact, however strongly parents or students object, whereas a simple prayer acknowledging God as our Creator is deemed unacceptable — because somebody might object.

How the Universities Were Lost

First Things, March 1995

NATURALIST

Abbey, Edward 1927–89

American environmentalist and nature writer

For I am not a naturalist... If a label is required say that I am one who loves unfenced country. The open range. Call me a ranger... The only higher honor I've ever heard of is to be called a man.

The Journey Home: Some Words in Defense of the American West

Introduction (p. xiii)

E.P. Dutton. New York, New York, USA. 1977

I am — really am — an extremist, one who lives and loves by choice far out on the very verge of things, on the edge of the abyss, where this world falls off into the depths of another. That's the way I like it.

The Journey Home: Some Words In Defense of the American West

Introduction (p. xiv)

E.P. Dutton & Company. New York, New York, USA. 1977

Agassiz, Jean Louis Rodolphe 1807–73

Swiss-born American naturalist, geologist, and teacher

The education of a naturalist now consists chiefly in learning how to compare.

Methods of Study in Natural History

Chapter II (p. 23)

Ticknor & Fields. Boston, Massachusetts, USA. 1863

Allen, Grant 1848–99

Naturalist

There are two kinds of naturalists, you know... The superior class live in London or Paris, examine everything minutely with a big microscope, tack on inches of Greek nomenclature to an insignificant mite or bit of moss, and split hairs against anybody with marvelous dexterity. That's science. It dwells in a museum. For my part I detest it. The inferior class live in Europe, Asia, Africa or America, as fate or fancy carries; and, instead of looking at everything in a dried specimen, go out into the woods with rifle on shoulder, or box in hand, and observe the birds, and beasts, and green things of the earth, as God made them, in their own natural and lovely surroundings. That's natural history, old-fashioned, simple, commonplace natural history; and I, for my part, am an old-fashioned naturalist.

The Tents of Shem

Chapter I (p. 8)

Chatto & Windus. London, England. 1890

Darwin, Charles Robert 1809–82

English naturalist

It is well to remember that Naturalists value observations far more than reasoning...

In Francis Darwin (ed.)
The Life and Letters of Charles Darwin (Volume 2)
 Darwin to Farrar, November 26, 1868 (p. 453)
 D. Appleton & Company. New York, New York, USA. 1896

A naturalist's life would be a happy one if he had only to observe, and never to write.

In Francis Darwin (ed.)
The Life and Letters of Charles Darwin (Volume 2)
 C. Darwin to C. Lyell, June 1st [1867] (p. 248)
 D. Appleton & Company. New York, New York, USA. 1896

Einstein, Albert 1879–1955
 German-born physicist

In every naturalist there must be a kind of religious feeling; for he cannot imagine that the connections into which he sees have been thought of by him for the first time. He rather has the feeling of a child, over whom a grown-up person rules.

Cosmic Religion, with Other Opinions and Aphorisms
 On Science (pp. 100–101)
 Covici-Fiedel. New York, New York, USA. 1931

Forbes, Edward 1815–54
 English naturalist

The naturalists of yore esteemed the ocean to be a treasury of wonders, and sought therein for monstrosities and organisms contrary to the law of nature, such as they interpreted it. The naturalists of our own time hold equal faith in the wonders of the sea, but seek therein rather for the links of nature's chain than for apparent exceptions.

The Natural History of the European Seas
 Chapter I (pp. 4–5)
 John van Voorst. London, England. 1859

Linnaeus, Carl (von Linné) 1707–78
 Swedish botanist and explorer

After he [the traveler] has commenced his journey and has become transplanted, so to speak, into a new world, he should consider it his duty to observe everything, not carelessly or at random, but so that nothing will escape his keen vision and alert attention. In describing objects he must endeavor to depict nature so faithfully that he who reads the description must needs believe he is beholding the very things himself.

In A.G. Nathorst
Annual Report of the Board of Regents of the Smithsonian Institution, 1908
 Carl von Linné as a Geologist (p. 711)
 Government Printing Office. Washington, D.C. 1909

Montagu, George
 No biographical data available

As natural history has, within the last half century, occupied the attention and pens of the ablest philosophers of the more enlightened parts of the globe, there needs no apology for the following sheets; since the days of dark-

ness are now past, when the researches of the naturalist were considered as trivial and uninteresting.

Testacea Britannica
 Introduction (p. 1)
 J. White. London, England. 1803

Muir, John 1838–1914
 American naturalist

Like Thoreau they see forests in orchards and patches of huckleberry brush, and oceans in ponds and drops of dew.

Our National Parks
 Chapter I (p. 2)
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

Pavlov, Ivan Petrovich 1849–1936
 Russian physiologist

For the naturalist everything lies in the method, in the chance of obtaining an unshakeable, lasting truth; and solely from this point of view, which for him is obligatory, the soul, as a naturalistic principle, is not only unnecessary but even harmful to his work, in vain limiting his courage and the depth of his analysis.

Experimental Psychology and Other Essays
 Experimental Psychology and Psychopathology in Animals (p. 168)
 Philosophical Library. New York, New York, USA. 1957

Riley, James Whitcomb 1849–1916
 American poet

In gentlest worship has he bowed
 To Nature. Rescued from the crowd
 And din of town and thoroughfare,
 He turns him from all worldly care
 Unto the sacred fastness of
 The forest, and the peace and love
 That beats there prayer-like in the breeze.

The Complete Works of James Whitcomb Riley
 Volume 7, The Naturalist
 P.F. Collier & Son, Company. New York, New York, USA. 1916

Thoreau, Henry David 1817–62
 American essayist, poet, and practical philosopher

Man cannot afford to be a naturalist, to look at Nature directly, but only with the side of his eye. He must look through and beyond her. To look at her is as fatal as to look at the head of Medusa. It turns the man of science to stone.

The Journal of Henry David Thoreau
 March 23, 1853 (p. 43)
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1906

Wilson, Edward O. 1929–
 American biologist and writer

For the naturalist every entrance into a wild environment rekindles an excitement that is childlike in spontaneity, often tinged with apprehension — in short, the way life ought to be lived, all the time.

The Future of Life
Chapter 6 (p. 146)
Alfred A. Knopf. New York, New York, USA. 2002

NATURE

Abbey, Edward 1927–89
American environmentalist and nature writer

There are no vacant lots in nature.

Desert Solitaire
Down the River (p. 189)
Ballantine Books. New York, New York, USA. 1968

There are enough cathedrals and temples and altars here for a Hindu pantheon of divinities. Each time I look up one of the secretive little side canyons I half expect to see not only the cottonwood tree rising over its tiny spring — the leafy god, the desert's liquid eye — but also a rainbow-colored corona of blazing light, pure spirit, pure being, pure disembodied intelligence, about to speak my name.

If a man's imagination were not so weak, so easily tired, if his capacity for wonder not so limited, he would abandon forever such fantasies of the supernal. He would learn to perceive in water, leaves and silence more than sufficient of the absolute and marvelous, more than enough to console him for the loss of the ancient dreams.

Desert Solitaire
Down the River (p. 200)
Ballantine Books. New York, New York, USA. 1968

Nature, like Maimonides said, is mainly a good place to throw beer cans on Sunday afternoons.

A Voice Crying in the Wilderness: Notes from a Secret Journal
Chapter 9 (p. 83)
St. Martin's Press. New York, New York, USA. 1989

Floating down a portion of Rio Colorado in Utah a rare month in spring, twenty-two years ago, a friend and I found ourselves passing through a world so beautiful it seemed and had to be eternal. Such perfection of being, we thought — these glens of sandstone, these winding corridors of mystery, leading each to its solitary revelation — could not possibly be changed.

Down the River
Part IV, Chapter 19 (p. 231)
E.P. Dutton. New York, New York, USA. 1982

Nature is indifferent to our love, but never unfaithful.

A Voice Crying in the Wilderness: Notes from a Secret Journal
Chapter 9 (p. 86)
St. Martin's Press. New York, New York, USA. 1989

I am here not only to evade for a while the clamor and filth and confusion of the cultural apparatus but also to confront, immediately and directly, if it's possible, the bare bones of existence, the elemental and fundamental, the bedrock which sustains us. I want to be able to look at and into a juniper tree, a piece of quartz, a vulture, a spider,

and see it as it is in itself, devoid of all humanly ascribed qualities, anti-Kantian, even the categories of scientific description. To meet God or Medusa face to face, even if it means risking everything human in myself. I dream of a hard and brutal mysticism in which the naked self merges with a nonhuman world and yet somehow survives still intact, individual, separate. Paradox and bedrock.

Desert Solitaire
The First Morning (p. 6)
Ballantine Books. New York, New York, USA. 1968

Ackerman, Diane 1948–
American writer

Nature neither gives nor expects mercy.
The Moon by Whale Light, and Other Adventures Among Bats and Crocodilians, Penguins and Whales
Chapter 4 (pp. 239–240)
Random House, Inc. New York, New York, USA. 1991

Just because we have evolved minds that crave order doesn't mean that nature is orderly. Evolution is a sleeping watchdog. It is possible for us to disturb it, or it may wake on its own. Either way, expect commotion.

The Rarest of the Rare: Vanishing Animals, Timeless Worlds
Introduction (p. xii)
Vintage Books. New York, New York, USA. 1997

[N]ature is also great fun. To pretend that nature isn't fun is to miss much of the joy of being alive...

The Rarest of the Rare: Vanishing Animals, Timeless Worlds
Introduction (p. xx)
Vintage Books. New York, New York, USA. 1997

Ackoff, Russell Lincoln 1919–
American operations research and systems scientist

Nature is not organized in the same way that universities are.

Toward an Idealized University
Management Science, Volume 15, December 1970 (p. B–127)

Adams, Abby 1939–
American astronaut and solar physicist

Nature is what wins in the end.
The Gardener's Gripe Book
What Is a Garden Anyway? (p. 10)
Workman Publishing. New York, New York, USA. 1995

Adams, George 1750–95
English instrument maker

The study of nature is as much distinguished from other subjects by the importance of its matter, as by the variety of its topics.

Lectures on Natural and Experimental Philosophy (Volume 2)
Lecture XII (p. 1)
Printed by R. Hindmarsh. London, England. 1794

Man has before him all nature, the whole world with which he is surrounded for the object of his view, and

the subject of his consideration; but his capacity is so circumscribed, his knowledge so straightened, his powers so limited, that he can by no means conceive the mechanism of so vast and complicate a structure.

Lectures on Natural and Experimental Philosophy (Volume 3)
Chapter XXXV (p. 510)
Printed by R. Hindmarsh. London, England. 1794

As you advance in the knowledge of nature's varieties, your mind will be opened, and you will find fresh ornament in truth, fresh dignity in devotion, and fresh reason in religion.

Lectures on Natural and Experimental Philosophy (Volume 2)
Lecture XII (p. 2)
Printed by R. Hindmarsh. London, England. 1794

...our views of nature are like the map of an inland country, where you see rivers without any sources continually discharging their waters without a sea to receive them; roads that you know not whence they come, nor whither they go; mountains, forests, and plains, cut off in the middle by the marginal lines of the paper: but even of those things which we know well, there is much that surpasses the extent of our faculties.

Lectures on Natural and Experimental Philosophy (Volume 3)
Chapter XXXV (pp. 510–511)
Printed by R. Hindmarsh. London, England. 1794

Addison, Joseph 1672–1719
English essayist, poet, and statesman

If there's a power above us, (and that there is all nature cries aloud through all her works) he must delight in virtue.

Cato
Act V, Scene 1
J. Dicks. London, England. 1883

Agassiz, Jean Louis Rodolphe 1807–73
Swiss-born American naturalist, geologist, and teacher

The eye of the Trilobite tells us that the sun shone on the old beach where he lived; for there is nothing in nature without a purpose; and when so complicated an organ was made to receive the light, there must have been light to enter it.

Geological Sketches
Chapter II (pp. 31–32)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1886

Lay aside all conceit. Learn to read the book of nature for yourself. Those who have succeeded best have followed for years some slim thread which has once in a while broadened out and disclosed some treasure worth a life-long search.

In David Stair Jordan
Popular Science Monthly
Volume 40, 1891

The study of nature is an intercourse with the highest mind. You should never trifle with nature. At the lowest her works are the works of the highest powers — the highest something, in whatever way we may look at it.

In David Stair Jordan
Popular Science Monthly, Volume 40, 1891

As long as men inquire, they will find opportunities to know more upon these topics than those who have gone before them, so inexhaustibly rich is nature in the innermost diversity of her treasures of beauty, order, and intelligence.

Essay on Classification
Chapter II, Section I (p. 141)
Harvard University Press. Cambridge, Massachusetts, USA. 1962

I may say that here, as in most cases where the operations of nature interfere with the designs of man, it is not by a direct intervention on our part that we may remedy the difficulties, but rather by a precise knowledge of [nature's] causes, which may enable us, if not to check, at least to avoid the evil consequences.

Annual Report of the Superintendent of the Coast Survey, Showing the Progress of that Work During the Year Ending November, 1851
Extracts from the report of Professor Agassiz to the Superintendent of the Coast Survey, on the examination of the Florida reefs, keys, and coast (p. 158)
Printed by Robert Armstrong, Washington. 1852

...it must be for truth's sake, and not even for the sake of its usefulness to humanity, that the scientific man studies Nature.

Methods of Study in Natural History
Chapter II (p. 24)
Ticknor & Fields. Boston, Massachusetts, USA. 1863

Aldrich Thomas Bailey 1836–1907
American writer and editor

Nature, who loves to do a gentle thing even in her most savage moods, had taken one of those empty water-courses and filled it from end to end with forget-me-nots.

Queen of Sheba
IX (p. 205)
J.R. Osgood & Company. Boston, Massachusetts, USA. 1877

Aristotle 384 BCE–322 BCE
Greek philosopher

Nature proceeds little by little from things lifeless to animal life in such a way that it is impossible to determine the exact line of demarcation, nor on which side thereof an intermediate form should lie.

In *Great Books of the Western World* (Volume 8)
History of Animals
Book VIII, Chapter 1
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

No one finds fault with defects which are the result of nature.

In *Great Books of the Western World* (Volume 8)
Ethics
Book III, Chapter 5
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Arnold, Matthew 1822–88

English poet and critic

Nature's great law,
and law of all men's minds? —
To its own impulse every creature stirs;
Live by thy light, and earth will live by hers!

The Poetical Works of Matthew Arnold

Religious Isolation

Stanza 4

Oxford University Press, Inc. New York, New York, USA. 1950

Man must begin, know this, where Nature ends; Nature
and man can never be fast friends.

The Poetical Works of Matthew Arnold

In Harmony with Nature, I. 12–13

Oxford University Press, Inc. New York, New York, USA. 1950

Know, man hath all which Nature hath, but more,
And in that more lie all his hopes of good.
Nature is cruel, man is sick of blood;
Nature is stubborn, man would fain adore.

The Poetical Works of Matthew Arnold

In Harmony with Nature

Oxford University Press, Inc. New York, New York, USA. 1950

Atherton, Gertrude 1857–1948

American novelist

Nature is a wicked old matchmaker.

Senator North

Book II, VII (p. 174)

John Lane: The Bodley Head. New York, New York, USA. 1900

Audubon, John James 1785–1851

West Indian-born American ornithologist and artist

From Nature! — How often are these words used, when
at a glance he who has seen the perfect and beautiful
forms of birds, quadrupeds or other objects, as they have
come from the hand of Nature, discovers that the repre-
sentation is not that of living Nature!

Ornithological Biography (Volume 1)

The Yellow-Billed Cuckoo (p. 18)

Adam Black. Edinburgh, Scotland. 1831

Bacon, Sir Francis 1561–1626

English lawyer, statesman, and essayist

Those who become practically versed in nature are, the
mechanic, the mathematician, the physician, the alche-
mist, and the magician, but all (as matters now stand)
with faint efforts and meager success.

In *Great Books of the Western World* (Volume 30)*Novum Organum*

First Book, Aphorism 5 (p. 107)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...we can command nature only by obeying her...

In *Great Books of the Western World* (Volume 30)*Novum Organum*

First Book, Aphorism 129 (p. 135)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Man, as the minister and interpreter of nature, dies and
understands as much as his observations on the order of
nature, either with regard to things or the mind permit
him, and neither knows or is capable of more.

In *Great Books of the Western World* (Volume 30)*Novum Organum*

First Book, Aphorism 1 (p. 107)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

In nature things move violently to their place, and then
calmly in their place.

Bacon's Essays

Of Great Places (p. 27)

The Macmillan Company. New York, New York, USA. 1930

Bailey, Philip James 1816–1902

English poet

The course of Nature seems a course of Death,
And nothingness the whole substantial thing.

Festus: A Poem

Scene III (p. 58)

George Routledge & Sons, Ltd. London, England. 1893

Nature means Necessity.

Festus: A Poem

Dedication

George Routledge & Sons, Ltd. London, England. 1893

Baker, Henry 1698–1774

English naturalist

That Man is certainly the happiest, who is able to
find out the greatest Number of reasonable and use-
ful Amusements, easily attainable and within his
Power: and, if so, he that is delighted with the Works
of Nature, and makes them his Study must undoubtedly
be happy, since every Animal, Flower, Fruit, or Insect,
nay, almost every Particle of Matter, affords him an
Entertainment.

The Microscope Made Easy

The Introduction (pp. xii–xiv)

Printed for R. Dodsley. London, England. 1743

Baron von Frankenstein

Fictional character

Nothing in nature is terrifying when one understands
it.

The Son of Frankenstein

Film (1939)

Beaumont, Francis 1584–1616

English playwright and dramatic poet

Fletcher, John 1579–1625

Jacobean playwright

Nature too unkind;

That made no medicine for a troubled mind!

Philaster

Act III, Scene 1

D.C. Heath. Boston, Massachusetts, USA. 1906

Beebe, William 1877–1962
American ornithologist

There was the ending still unfinished, the finale buried in the future — and in this we find the fascination of Nature and Science.

In William H. Carr
The Stir of Nature
Chapter Thirteen (p. 167)
Oxford University Press, Inc. New York, New York, USA. 1930

Beston, Henry 1888–1968
American writer

The three great elemental sounds in nature are the sound of rain, the sound of wind in a primeval wood, and the sound of the outer ocean on a beach. I have heard them all, and of the three elemental voices, that of ocean is the most awesome, beautiful, and varied.

The Outermost House
Chapter III (p. 43)
Rinehart & Company. New York, New York, USA. 1928

Nature is a part of our humanity, and without some awareness and experience of that divine mystery, man ceases to be man.

The Outermost House
Forward (p. ix)
Rinehart & Company. New York, New York, USA. 1928

As well expect Nature to answer to your human values as to come into your house and sit in a chair.

The Outermost House
Chapter X (p. 221)
Rinehart & Company. New York, New York, USA. 1928

A year indoors is a journey along a paper calendar; a year in outer nature is the accomplishment of a tremendous ritual.

The Outermost House
Chapter IV (p. 59)
Rinehart & Company. New York, New York, USA. 1928

Bishop, Elizabeth 1911–79
American poet and writer

Nature repeats herself, or almost does: repeat, repeat, repeat, revise, revise, revise.

North Haven, 1. 19–20
Farrar, Straus & Giroux. New York, New York, USA. 1984

Bloomfield, Robert 1766–1823
English poet

Strange to the world, he wore a bashful look,
The fields his study, nature was his book.

In John Aikin
Selected Works of the British Poets: In a Chronological Series from Falconer to Sir Walter Scott
The Farmer's Boy, Spring, l. 31
Thomas Wardle. Philadelphia, Pennsylvania, USA. 1838

Bohm, David 1917–92
American physicist

In nature nothing remains constant. Everything is in a perpetual state of transformation, motion, and change.

Causality and Chance in Modern Physics
Chapter One (p. 1)
University of Pennsylvania Press. Philadelphia, Pennsylvania, USA. 1957

Bohr, Niels Henrik David 1886–1962
Danish physicist

In our description of nature the purpose is not to disclose the real essence of phenomena but only to track down as far as possible relations between the multifold aspects of our experiences.

Atomic Theory and the Description of Nature
Introductory Survey (p. 18)
Cambridge University Press. Cambridge, England. 1934

Borland, Hal 1900–78
American writer

There are some things, but not too many, toward which the countryman knows he must be properly respectful if he would avoid pain, sickness, and injury. Nature is neither punitive nor solicitous, but she has thorns and fangs as well as bowers and grassy banks.

Beyond Your Doorstep: A Handbook to the Country
Chapter 13 (p. 303)
Alfred A. Knopf. New York, New York, USA. 1962

Nothing in nature is as simple as it sometimes seems when reduced to words.

The Enduring Pattern
Life — Flesh and Blood: Reptiles (p. 189)
Simon & Schuster. New York, New York, USA. 1959

Nature seems to look after her own only up to a certain point; beyond that they are supposed to fend for themselves.

The Enduring Pattern
Life — Flesh and Blood: Amphibians (p. 185)
Simon & Schuster. New York, New York, USA. 1959

Nature is an infinitely complex series of facts; it is not an object lesson, and it is not a ready-made sermon on conduct or morality.

The Enduring Pattern
A Place to Live: Time (p. 20)
Simon & Schuster. New York, New York, USA. 1959

Boyle, Robert 1627–91
English natural philosopher and theological writer

Nature always looks out for the preservation of the universe.

In Edward B. Davis and Michael Hunter (eds.)
A Free Enquiry into the Vulgarly Received Notions of Nature
Section IV (p. 31)
Cambridge University Press. Cambridge, England. 1996

It is one thing to be able to help nature to produce things, and another thing to understand well the nature of the things produc'd.

The Sceptical Chymist

The Third Part (p. 95)
Dawsons of Pall Mall. London, England. 1965

Bradley, Jr., John Hodgdon 1898–1962
American geologist

Nature flips the coin with a “Heads I win — tails you lose.” She offers her children stagnation and degeneracy on the one hand, or over-specialization and extinction on the other.

Parade of the Living
Part III, Chapter XX (p. 290)
Coward-McCann, Inc. New York, New York, USA. 1930

Bridgman, Helen Bartlett

Nature seems positively to enjoy playing pranks which turn all preconceived notions topsy-turvy.

Gems
How It Began (p. 5)
Brooklyn, New York, USA. 1916

Bridgman, Percy Williams 1882–1961
American physicist

...our conviction that nature is understandable and subject to law arose from the narrowness of our horizons, and that if we sufficiently extend our range we shall find that nature is intrinsically and in its elements neither understandable nor subject to law...

The New Vision of Science
Harper's Magazine, Volume 158, March 1929 (p. 444)

Bronowski, Jacob 1908–74
Polish-born English mathematician and polymath

Nature is a network of happenings that do not unroll like a red carpet into time, but are intertwined between every part of the world; and we are among those parts. In this nexus, we cannot reach certainty because it is not there to be reached; it goes with the wrong model, and the certain answers ironically are the wrong answers. Certainty is a demand that is made by philosophers who contemplate the world from outside; and scientific knowledge is knowledge for action, not contemplation. There is no God's eye view of nature, in relativity, or in any science: only a man's eye view.

The Identity of Man
The Machinery of Nature, Section 6 (p. 38)
Doubleday & Company, Inc. Garden City, New York, USA. 1972

A new conception was being made...that whatever fundamental units the world is put together from, they are more delicate, more fugitive, more startling than we catch in the Butterfly Net of our senses.

The Ascent of Man
Chapter 11 (p. 364)
Little, Brown & Company. Boston, Massachusetts, USA. 1973

Bronte, Charlotte 1816–55
English author

The universal mother, Nature.
Jane Eyre
Chapter XXVIII (p. 320)
Harcourt, Brace & World, Inc. New York, New York, USA. 1962

Browne, Sir Thomas 1605–82
English writer and physician

There are no grotesques in nature; not anything framed to fill up empty cantons, and unnecessary spaces.

Religio Medici
Part XV
Elliot Stock. London, England. 1883

Now nature is not at variance with art, nor art with nature; they being both the servants of his providence. Art is the perfection of nature. Were the world now as it was the sixth day, there were yet a chaos. Nature hath made one world, and art another. In brief, all things are artificial; for nature is the art of God.

Religio Medici
Section 16
Elliot Stock. London, England. 1883

All things are artificial, for nature is the art of God.

Religio Medici
Part I, Section xvi (p. 29)
Elliot Stock. London, England. 1883

Browning, Robert 1812–89
English poet

I trust in Nature for the stable laws
Of beauty and utility. Spring shall plant
And Autumn garner to the end of time.
I trust in God — the right shall be the right
And other than the wrong, while he endures;
I trust in my own soul, that can perceive
The outward and the inward, Nature's good
And God's.

The Poems and Plays of Robert Browning
A Soul's Tragedy, Act I (p. 458)
The Modern Library. New York, New York, USA. 1934

...what I call God.
...fools call Nature...

The Poems and Plays of Robert Browning
The Pope, I. 1073–1074
The Modern Library. New York, New York, USA. 1934

Bryan, J. Ingram
No biographical data available

Nature does not tolerate the whimsical and the inane; all her structures are on principles, and she allows no others.

The Interpretation of Nature in English Poetry
Chapter I (p. 6)
Kaitakusha. Tokyo, Japan. 1932

Nature is not static but dynamic; she is not now what she will be, for she moves toward a goal.

The Interpretation of Nature in English Poetry
Chapter I (p. 7)
Kaitakusha. Tokyo, Japan. 1932

Bryant, William Cullen 1794–1878
American poet

To him who in the love of Nature holds
Communion with her visible forms, she speaks
A various language.

Poems

Thanatopsis

D. Appleton & Company. New York, New York, USA. 1874

Go forth under the open sky, and list
To Nature's teachings.

Poems

Thanatopsis

D. Appleton & Company. New York, New York, USA. 1874

**Meredith, Owen (Edward Robert
Bulwer-Lytton, 1st Earl Lytton)** 1831–91
English statesman and poet

Nature is the great agent of the external universe...

The Last Days of Pompeii

Book One, VIII

George Routledge & Sons, Ltd. London, England. 1900

Burnet, Thomas 1635–1715
English cleric and scientist

SINCE I was first inclin'd to the Contemplation of Nature,
and took pleasure to trace out the Causes of Effects, and
the dependence of one thing upon another in the visible
Creation, I had always, methought, a particular curios-
ity to look back into the first Sources and ORIGINAL of
Things; and to view in my mind, so far as I was able, the
Beginning and Progress of a RISING WORLD.

The Sacred Theory of the Earth (2nd edition)

Book I, Chapter I (p. 23)

Printed by R. Norton. London. 1691

Burney, Fanny 1752–1840
English novelist and diarist

...the lifeless symmetry of architecture, however beautiful
the design and proportion, no man would be so mad as to
put in competition with the animated charms of nature.

Evelina

Letter XXIII (p. 100)

J.M. Dent & Sons Ltd. London, England. 1909

Burroughs, John 1837–1921
American naturalist and writer

The love of nature is different from the love of science,
though the two may go together.

The Breath of Life

Preface (p. vii)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1915

Nature works with such simple means! A little more or a
little of this or that, and behold the difference!

The Breath of Life

Chapter III (p. 55)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1915

Nature teaches more than she preaches. There are no ser-
mons in stone. It is easier to get a spark out of a stone
than a moral.

Time and Change

The Gospel of Nature (p. 247)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1912

Nature exists to the mind not as an absolute realization,
but as a condition, as something constantly becoming....
It is suggestive and prospective; a body in motion, and
not an object at rest.

Expression *The Atlantic Monthly*, Volume 6, Number XXXVII, Novem-
ber 1860 (p. 572)

Nature is not benevolent; Nature is just, gives pound for
pound, measure for measure, makes no exceptions, never
tempers her decrees with mercy, or winks at any infringe-
ment of her laws.

Harvest of a Quiet Eye: The Natural World of John Burroughs

The Gospel of Nature, 5 (p. 149)

Tamarack Press. Madison, Wisconsin, USA. 1976

Burton, Robert 1577–1640
English clergyman and scholar

See one promontory, said Socrates of old, one mountain,
one sea, one river, & see all.

The Anatomy of Melancholy (Volume 1)

Part I, Sect. II, Memb. IV, Subsec. 7 (p. 422)

AMS Press, Inc. New York, New York, USA. 1973

Butler, Samuel 1612–80
English novelist, essayist, and critic

That one great lie she told about the earth being flat,
when it was round all the time — and again how she
stuck to it that the sun went round us when it was we
who are going round her — this double falsehood has
irretrievably ruined my confidence in her. There is no lie
which she will not tell and stick to like a Gladstonian.
How plausibly she told her tale, and how many ages was
it before she was so much as suspected, and then when
things did begin to look bad for her, how she brazened it
out and what a desperate business it was to bring all her
shifts and prevarications to book.

The Note-Books of Samuel Butler (Volume 1)

1874–1883 (p. 74)

University Press of America, Inc. Lanham, Maryland, USA. 1984

The progress of Nature is effected by steps that are often
imperceptible and blend into one another with the utmost
gentleness...

The Note-Books of Samuel Butler (Volume 1)

1874–1883 (p. 158)

University Press of America, Inc. Lanham, Maryland, USA. 1984

**Byron, George Gordon, 6th Baron
Byron** 1788–1824

English Romantic poet and satirist

There is a pleasure in the pathless woods,
There is a rapture on the lonely shore,

There is society, where none intrudes,
By the deep sea, and music in its roar:
I love not man the less, but nature more.

Childe Harold's Pilgrimage
Canto IV, Clxxvii–clxxxiv
Cassell. London, England. 1886

Cable, George W. 1844–1925

American writer and reformer

The book of nature is a catechism. But, after it answers the first question with “God,” nothing but questions follow.

Madame Delphine

Chapter V

Charles Scribner's Sons. New York, New York, USA. 1896

Shall we ever subdue Nature and make her always submissive and compliant? Who knows what man may do with her when once he has got self, the universal self, under perfect mastery?

Bonaventure

Book III, XVIII (p. 291)

Charles Scribner's Sons. New York, New York, USA. 1888

Campbell, Jeremy C.

No biographical data available

Evidently nature can no longer be seen as matter and energy alone. Nor can all her secrets be unlocked with the keys of chemistry and physics, brilliantly successful as these two branches of science have been in our century. A third component is needed for any explanation of the world that claims to be complete. To the powerful theories of chemistry and physics must be added a late arrival: a theory of information. Nature must be interpreted as matter, energy, and information.

Grammatical Man: Information, Entropy, Language and Life

Chapter 1 (p. 16)

Simon & Schuster. New York, New York, USA. 1982

Campbell, Thomas 1777–1844

Scottish poet

There shall be love, when genial morn appears,
Like pensive Beauty smiling in her tears,
To watch the brightening roses of the sky,
And muse on Nature with a poet's eye.

The Complete Poetical Works

The Pleasures of Hope, Part ii, l. 98–101

Chadwyck-Healey. Cambridge, England. 1992

Carlyle, Thomas 1795–1881

English historian and essayist

Nature, like the Sphinx, is of womanly celestial loveliness and tenderness; the face and bosom of a goddess, but ending in claws and the body of a lioness.... Nature, Universe, Destiny, Existence, howsoever we name this grand unnamable Fact in the midst of which we live and struggle, is as a heavenly bride and conquest to the wise

and brave, to them who can discern her behests and do them; a destroying fiend to them who cannot.

Past and Present

Chapter II (p. 7)

Chapman & Hall. London, England. 1843

Nature admits no lie; most men profess to be aware of this, but few in any measure lay it to heart.

Latter-Day Pamphlets

No. 5 (p. 170)

Chapman & Hall. London, England. 1850

Carson, Rachel 1907–64

American marine biologist and writer

The “control of nature” is a phrase conceived in arrogance, born of the Neanderthal age of biology and philosophy, when it was supposed that nature exists for the convenience of man. The concepts and practices of applied entomology for the most part date from that Stone Age of science. It is our alarming misfortune that so primitive a science has armed itself with the most modern and terrible weapons, and that in turning them against the insects it has also turned them against the earth.

Silent Spring

Chapter 17 (p. 297)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1961

Exploring nature with your child is largely a matter of becoming receptive to what lies around you. It is learning again to use your eyes, ears, nostrils, and finger tips, opening up the disused channels of sensory impression.

The Sense of Wonder (p. 52)

Harper & Row, Publishers, New York 1984

A rainy day is the perfect time for a walk in the woods.

The Sense of Wonder (p. 30)

Harper & Row, Publishers, New York 1984

Cawein, Madison Julius 1865–14

American poet

I am a part of all you see
In Nature: part of all you feel:
I am the impact of the bee
Upon the blossom; in the tree
I am the sap — that shall reveal
The leaf, the bloom — that flows and flutes
Up from the darkness through its roots.

Poems

Penetratia

The Macmillan Company. New York, New York, USA. 1911

Chaisson, Eric J. 1946–

American astrophysicist

Without a brainy seat of consciousness and its inherent awareness of self and environment, galaxies would twirl and stars would shine, but no one or thing could comprehend the majesty of the reality that is nature.

The Life Era: Cosmic Selection and Conscious Evolution

Chapter 1 (p. 43)

The Atlantic Monthly Press. New York, New York, USA. 1987

Chargaff, Erwin 1905–2002

Austrian biochemist

We manipulate nature as if we were stuffing an Alsatian goose. We create new forms of energy; we make new elements; we kill crops; we wash brains. I can hear them in the dark sharpening their lasers.

The Paradox of Biochemistry

Columbia Forum, Volume 12, Number 2, Summer 1969 (p. 18)

What makes the study of nature so magnificent is its very givenness; it is because it is; it is as it is; and tolle, lege! (pick up and read!) remains its eternal admonition.

Voices in the Labyrinth: Nature, Man and Science

Chapter 3 (pp. 18–19)

The Seabury Press. New York, New York, USA. 1977

Chaucer, Geoffrey 1343–1400

English poet

Even at subatomic level nature presents images of itself that reflect our own imaginings.

The Particle Explosion

Chapter 1 (p. 15)

Oxford University Press, Inc. Oxford, England. 1987

Coleridge, Samuel Taylor 1772–1834

English lyrical poet, critic, and philosopher

And what if all of animated nature

Be but organic harps diversely fram'd,

That tremble into thought, as o'er them sweeps,

Plastic and vast, one intellectual breeze,

At once the soul of each, and God of all?

The Complete Poetical Works of Samuel Taylor Coleridge (Volume 1)

The Eolian Harp, Stanza 4

The Clarendon Press. Oxford, England. 1912

In nature there is nothing melancholy.

The Complete Poetical Works of Samuel Taylor Coleridge (Volume 1)

The Nightingale, Stanza I, l. 15

The Clarendon Press. Oxford, England. 1912

Collingwood, Robin George 1889–1943

English historian and philosopher

The only condition on which there could be a history of nature is that the events of nature are actions on the part of some thinking being or beings, and that by studying these actions we could discover what were the thoughts which they expressed and think these thoughts

for ourselves. This is a condition which probably no one will claim is fulfilled. Consequently the processes of nature are not historical processes and our knowledge of nature, though it may resemble history in certain superficial ways, e.g., by being chronological, is not historical knowledge.

The Idea of History

Part V, Section 5 (p. 302)

At The Clarendon Press. Oxford, England. 1967

Colman, George (The Younger) 1762–1836

English playwright

All argument will vanish before one touch of nature.

The Poor Gentleman

Act V, 1

J. Dicks. London, England. 1883

Coman, Dale Rex 1906–

American research physician and wildlife writer

My beloved planet has reminded me of my lowly and inconsequential place in her affairs, and I have no answer fit to offer, no excuses to give, no apologies I know how to phrase.

The Endless Adventure

The Off-Shore Islands (p. 9)

Henry Regnery Company. Chicago, Illinois, USA. 1972

Nature is neither harsh nor cruel nor sentimentally sweet and kind.

If a balance of nature exists, it has proved exceedingly hard to demonstrate.

On the Evidence Needed to Judge Ecological Stability or Persistence

The American Naturalist, Volume 121, Number 6, June 1983 (p. 808)

Conrad, Joseph 1857–1924

Polish-born English novelist

...Nature — the balance of colossal forces.... Nature — the great artist.

Lord Jim

Chapter XIX (p. 179)

Rinehart & Company, Inc. New York, New York, USA. 1957

Copernicus, Nicolaus 1473–1543

Polish astronomer

But we should rather follow the wisdom of nature, which, as it takes very great care not to have produced anything superfluous or useless, often prefers to endow one thing with many effects.

In *Great Books of the Western World* (Volume 16)

On the Revolutions of the Heavenly Spheres

Book One, Chapter 10 (p. 526)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Corbett, Jim 1875–1955

Indian-born hunter and naturalist

...for the book of nature has no beginning as it has no end. Open the book where you will at any point of your life, and if you have the desire to acquire knowledge, you will find it of intense interest, and no matter how long or how intently you study the pages, your interest will not flag for in nature there is no finality.

Jungle Lore

Chapter IV (p. 33)

Oxford University Press, Inc. New York, New York, USA. 1953

Cousins, Norman 1912–90

American editor and writer

It is unscientific to say that within the many billions of galactic systems, ours is the only planet that supports life in advanced form. Nature shuns one of a kind as much as it abhors a vacuum. Given infinite time and space, anything that occurs at one place or time in the universe will occur elsewhere or “elsewhen.”

Rendezvous with Infinity

Cosmic Search Magazine, Volume 1, Number 1, January 1, 1979 (p. 30)

Cowper, William 1731–1800

English poet

Nature, exerting an unwearied power,
Forms, opens, and gives scent to every flower;
Spreads the fresh verdure of the field, and leads
The dancing Naiads through the dewy meads.

The Poetical Works of William Cowper

Table Talk, l. 690

John W. Lovell Company. New York, New York, USA. No date

Nor rural sights alone, but rural sounds,

Exhilarate the spirit, and restore

The tone of languid Nature.

The Poetical Works of William Cowper

The Task

Book I, The Sofa, l. 181

Davy, Sir Humphry 1778–1829

English chemist

Oh, most magnificent and noble Nature!
 Have I not worshipped thee with such a love
 As never a mortal man before displayed?
 Adored thee in thy majesty of visible creation,
 And searched into thy hidden and mysterious ways
 As Poet, as Philosopher, as Sage?

In J. Davy

Fragmentary Remains

Chapter I (p. 14)

John Churchill. London, England. 1858

Dawson, Sir John William 1820–99

Canadian geologist and educator

Few words are used among us more loosely than “nature.” Sometimes it stands for the material universe as a whole. Sometimes it is personified as a sort of goddess, working her own sweet will with material things. Sometimes it expresses the forces which act on matter, and again it stands for material things themselves. It is spoken of as subject to law, but just as often natural law is referred to in terms which imply that nature itself is the lawgiver.

Some Salient Points in the Science of the Earth

Chapter XVIII (p. 481)

Hodder & Stroughton. London, England. 1893

de Fontenelle, Bernard le Bovier 1657–1757

Essays III, Chapter 13 (p. 528)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Delacroix, Eugene 1798–1863

French romantic painter

The true wisdom of the philosopher ought to consist in enjoying everything. Yet we apply ourselves to dissecting and destroying everything that is good in itself, that has virtue, albeit the virtue there is in mere illusions. Nature gives us this life like a toy to a weak child. We want to see how it all works; we break everything. There remains in our hands and before our eyes, stupid and opened too late, the sterile wreckage, fragments that will not again make a whole. The good is so simple.

Translated by Walter Pach

The Journal of Eugene Delacroix

Tuesday, June 1, 1824 (p. 92)

Covici. New York, New York, USA. 1937

Desaguliers, J. T. 1683–1744

French-born English natural philosopher

Nature compell'd, his piercing Mind obeys,
 And gladly shows him all her secret Ways;
 'Gainst Mathematicks she has no Defence,
 And yields t' experimental Consequence.

In H.N. Fairchild

Religious Trends in English Poetry (Volume 1)

Dickinson, Emily 1830–86

American lyric poet

Nature — the Gentlest Mother is,
 Impatient of no Child —
 The feeblest — or the waywardest —
 Her Admonition mild —

The Complete Poems of Emily Dickinson

No. 790 (p. 385)

Little, Brown & Company. Boston, Massachusetts, USA. 1960

How Strange that Nature does not knock, and yet does not intrude!

Letters of Emily Dickinson

Letter to Mrs. J.S. Cooper (p. 395)

Robert Brothers. Boston, Massachusetts, USA. 1894

Dickinson, G. Lowes 1862–1932

English historian and political activist

I'm not much impressed by the argument you attribute to Nature, that if we don't agree with her we shall be knocked on the head. I, for instance, happen to object strongly to her whole procedure: I don't much believe in the harmony of the final consummation...and I am sensibly aware of

the horrible discomfort of the intermediate stages, the pushing, kicking, trampling of the host, and the wounded and dead left behind on the march. Of all this I venture to disapprove; then comes Nature and says, “but you ought to approve!” I ask why, and she says, “Because the procedure is mine.” I still demur, and she comes down on me with a threat — “Very good, approve or no, as you like; but if you don’t approve you will be eliminated!” “By all means,” I say, and cling to my old opinion with the more affection that I feel myself invested with something of the glory of a martyr.... In my humble opinion it’s nature, not I, that cuts a poor figure!

The Meaning of Good

Good as the End of Nature (p. 46)

Brimley Johnson & Ince. London, England. 1906

Diderot, Denis 1713–84

French encyclopedist and materialist philosopher

Man is merely a common product, the monster an uncommon product; both equally natural, equally necessary, equally part of this universal and general order of things.... And what is astonishing about this?... All creatures intermingle with each other, consequently all species...everything is in perpetual flux.... Every animal is more or less man; every mineral is more or less plant; every plant more or less animal. There is nothing precise in nature...

Translated by Jean Stewart and Jonathan Kemp

Diderot: Interpreter of Nature

D’Alembert’s Dream (pp. 78–79)

International Publishers. New York, New York, USA. 1938

Dillard, Annie 1945–

American poet, essayist, novelist, and writing teacher

Unfortunately, nature is very much a now-you-see-it, now-you-don’t affair. A fish flashes, then dissolves in the water before my eyes like so much salt. Deer apparently ascend bodily into heaven; the brightest oriole fades into leaves.

Pilgrim at Tinker Creek

Chapter 2 (p. 16)

Harper’s Magazine Press. New York, New York, USA. 1974

The general rule in nature is that live things are soft within and rigid without. We vertebrates are living dangerously...like so many peeled trees.

Pilgrim at Tinker Creek

Chapter 6, II (p. 91)

Harper’s Magazine Press. New York, New York, USA. 1974

The creator is no puritan.... There is something that profoundly fails to be exuberant about these crawling, translucent lice and white, fat-bodied grubs, but there is an almost manic exuberance about a creator who turns them out, creature after creature after creature, and sets them buzzing and lurking and flying and flying and swimming about.

Pilgrim at Tinker Creek

Chapter 13, II (p. 233)

Harper’s Magazine Press. New York, New York, USA. 1974

Nature will try anything once. This is what the sign of the insects says. If you’re dealing with organic compounds, then let them combine. If it works, if it quickens, set it clacking in the grass; there’s always room for one more...

Pilgrim at Tinker Creek

Chapter 4, II (p. 65)

Harper’s Magazine Press. New York, New York, USA. 1974

Nature is, above all, profligate. Don’t believe them when they tell you how economical and thrifty nature is, whose leaves return to the soil. Wouldn’t it be cheaper to leave them on the tree in the first place?

Pilgrim at Tinker Creek

Chapter 4, II (p. 65)

Harper’s Magazine Press. New York, New York, USA. 1974

In nature, improbabilities are the one stock in trade.

Pilgrim at Tinker Creek

Chapter 8, II (p. 144)

Harper’s Magazine Press. New York, New York, USA. 1974

Dirac, Paul Adrian Maurice 1902–84

English theoretical physicist

It has become increasingly evident in recent times, however, that nature works on a different plan. Her fundamental laws do not govern the world as it appears in our mental picture in any very direct way, but instead they control a substratum of which we cannot form a mental picture without introducing irrelevancies.

The Principles of Quantum Mechanics

Preface to the First Edition (p. vi)

At the Clarendon Press. Oxford, England. 1935

Dobzhansky, Theodosius 1900–75

Russian-American scientist

One may detest nature and despise science, but it becomes more and more difficult to ignore them. Science in the modern world is not an entertainment for some devotees. It is on its way to becoming everybody’s business.

The Biology of Ultimate Concern

Chapter 1 (p. 9)

The New American Library, Inc. New York, New York, USA. 1967

Douglas, Andrew Ellicott 1867–1962

American astronomer

Nature is a book of many pages and each page tells a fascinating story to him who learns her language. Our fertile valleys and craggy mountains recite an epic poem of geologic conflicts. The starry sky reveals gigantic suns and space and time without end.

Annual Report of the Board of Regents of the Smithsonian Institution, 1922

Some Aspects of the Use of the Annual Rings of Trees in Climatic Study (p. 223)

Government Printing Office. Washington, D.C. 1924

Doyle, Sir Arthur Conan 1859–1930
Scottish writer

How sweet the morning air is! See how that one little cloud floats like a pink feather from some giant flamingo. Now the red rim of the sun pushes itself over the London cloud-bank. It shines on a good many folk, but on none, I dare bet, who are on a stranger errand than you or I. How small we feel with our petty ambitions and strivings in the presence of the great elemental forces of Nature.

In William S. Baring-Gould (ed.)
The Annotated Sherlock Holmes (Volume 1)
The Sign of the Four, Chapter 7 (p. 648)
Wings Books. New York, New York, USA. 1967

Draper, John William 1811–82
American scientist, philosopher, and historian

As a cataract shows from year to year an invariable shape, though the water composing it is perpetually changing, so the aspect of Nature is nothing more than a flow of matter presenting an impermanent form. The universe considered as a whole is unchangeable. Nothing is eternal but space, atoms, force. The forms of Nature that we see are essentially transitory, they must all pass away.

History of the Conflict between Religion and Science
Chapter I (p. 24)
D. Appleton & Company. New York, New York, USA. 1898

Dryden, John 1631–1700
English poet, dramatist, and literary critic

For Art may err, but Nature cannot miss.

The Poetical Works of Dryden
The Cock and the Fox, I. 452
The Riverside Press. Cambridge, Massachusetts, USA. 1949

By viewing nature, nature's handmaid, art,
Makes mighty things from small beginnings grow;
That fishes first to shipping did impart,
Their tail the rudder, and their head the prow.

The Poetical Works of Dryden
Annus Mirabilis
Stanza 155
The Riverside Press. Cambridge, Massachusetts, USA. 1949

French poet

Out of the book of Nature's learned breast.

Divine Weeks and Works
Second week, fourth day, Book III. 566
Humfrey Lownes. London, England. 1611

de Spinoza, Baruch 1632–77
Dutch philosopher

...Nature has set no end before herself, and...all final causes are nothing but human fictions.

Translated by William Hale White
Ethic: Demonstrated in Geometrical Order and Divided into Five Parts
Section 8 (p. 41)
Trubner & Company. London, England. 1883

Dulbecco, Renato 1914–
Italian-born American virologist

Nature does not abide by hard and fast rules — it follows opportunity.

The Design of Life
Chapter 4 (p. 88)
Yale University Press. New Haven, Connecticut, USA. 1987

In biology, once a door is opened, the space behind it is quickly filled.

The Design of Life
Chapter 9 (p. 190)
Yale University Press. New Haven, Connecticut, USA. 1987

Dumas, Jean Baptiste-Andre 1800–84
French biochemist

In the study of Nature conjecture must be entirely put aside, and vague hypothesis carefully guarded against. The study of Nature begins with facts, ascends to laws, and raises itself, as far as the limits of man's intellect will permit, to the knowledge of causes, by the threefold means of observation, experiment and logical deduction.

In Faraday Lectures
Lectures Delivered Before the Chemical Society
The First Faraday Lecture (p. 2)
The Chemical Society. London, England. 1928

Dunbar, Paul Laurence 1872–06
African-American poet

There is no rebel like Nature. She is an iconoclast.

The Uncalled
VI (p. 57)
International Association of Newspapers and Authors. New York, New York, USA, 1901

Durell, Clement V. 1882–1968
English mathematician

The scientists, in playing their game with Nature, are meeting an opponent on her own ground, who has not only made the rules of the game to suit herself, but may have even queered the pitch or cast a spell over the visiting team.

Readable Relativity
Chapter II (p. 11)
Harper & Brothers. New York, New York, USA. 1960

Nature is a conjurer for supermen. Generations of scientists have attempted to penetrate her secrets. Bit by bit the disguise is being torn away, but each new discovery seems only to open out fresh avenues demanding further exploration. Nature is a true woman, who will have the last word.

Readable Relativity
Chapter I (p. 9)
Harper & Brothers. New York, New York, USA. 1960

Eckert, Allan W. 1931–
American historian, naturalist and author

...in nature's book, everything has its place and its time; there exists a persistent interdependency of its creatures one upon another.

And there is never waste.

Wild Season

Epilogue (p. 244)

Little, Brown & Company. Boston, Massachusetts, USA. 1967

Eddington, Sir Arthur Stanley 1882–1944

English astronomer, physicist, and mathematician

The future is not predetermined, and Nature has no need to protect herself from giving away plans which she has not yet made.

New Pathways in Science

Chapter V, Section II (p. 102)

At The University Press. Cambridge, England. 1947

Philosophically the notion of a beginning of Nature is repugnant to me.

The End of the World: From the Standpoint of Mathematical Physics

Nature, Supplement, Volume 127, Number 3203, March 21, 1931 (p. 447)

So far as broader characteristics are concerned we see in Nature what we look for or are equipped to look for.

The Nature of the Physical World

Chapter XV (p. 330)

The Macmillan Company. New York, New York, USA. 1930

Egerton, E. N.

No biographical data available

The balance of nature has been a background assumption in natural history since antiquity.

Changing Concepts of the Balance of Nature

Quarterly Review of Biology, No. 48, Number 2, 1973 (p. 322)

Einstein, Albert 1879–1955

German-born physicist

What I see in Nature is a magnificent structure that we can comprehend only imperfectly, and that must fill a thinking person with a feeling of "humility." This is a genuinely religious feeling that has nothing to do with mysticism.

In Helen Dukas and Banesh Hoffman

Albert Einstein: The Human Side: New Glimpses from His Archives (p. 39)

Princeton University Press. Princeton, New Jersey, USA. 1979

Nature is not an engineer or contractor...

In Helen Dukas and Banesh Hoffman

Albert Einstein: The Human Side: New Glimpses from His Archives

Letter dated 12 November, 1930 (p. 92)

Princeton University Press. Princeton, New Jersey, USA. 1979

Eliot, George (Mary Ann Evans Cross) 1819–80

English novelist

Nature has her language, and she is not unvarnished; but we don't know all the intricacies of her syntax just yet, and in a hasty reading we may happen to extract the very opposite of her real meaning.

Adam Bede

Chapter XV (p. 142)

Dodd, Mead & Company. New York, New York, USA. 1947

Emerson, Ralph Waldo 1803–82

American lecturer, poet, and essayist

To the intelligent, nature converts itself into a vast promise, and will not be rashly explained. Her secret is untold. Many and many an Oedipus arrives: he has the whole mystery teeming in his brain.

Ralph Waldo Emerson: Essays and Lectures

Essays: Second Series

Nature (p. 554)

The Library of America. New York, New York, USA. 1983

The first steps in Agriculture, Astronomy, Zoology (those first steps which the farmer, the hunter, and the sailor take,) teach that nature's dice are always loaded; that in her heaps and rubbish are concealed sure and useful results.

Ralph Waldo Emerson: Essays and Lectures

Nature: Addresses, and Lectures

Discipline (p. 27)

The Library of America. New York, New York, USA. 1983

The great mother Nature will not quite tell her secret to the coach or the steamboat, but says, One to one, my dear, is my rule also, and I keep my enchantments and oracles for the religious soul coming alone, or as good as alone, in true-love.

In James Elliot Cabot

A Memoir of Ralph Waldo Emerson (Volume 2)

Letter to Mrs. Emerson, 20 May 1871 (p. 650)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1888

Nature, like a cautious testator, fires up her estate so as not to bestow it all on one generation, but has a forelooking tenderness and equal regard to the next and the next, and the fourth and the fortieth age.

The Complete Works of Ralph Waldo Emerson (Volume 10)

Society and Solitude

Farming (p. 143)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

Nothing bizarre, nothing whimsical will endure. Nature is ever interfering with Art. You cannot build your house or pagoda as you will but as you must. Gravity, Wind, sun, rain, the size of men & animals, & such other aliens have more to say than the architect. Beneath the almighty necessity therefore I regard what is artificial in man's life & works as petty & insignificant by the side of what is natural. Every violation, every suicide, every miracle, every willfulness however large it may show near us, melts quickly into the All, & at a distance is not seen. The outline is as smooth as the curve of the moon.... A writer must have l'abandon, he must be content to stand aside & let truth & beauty speak for him, or he cannot expect to be heard far.

Journals of Ralph Waldo Emerson

May 28, 1836 (p. 56)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1910

Nature, as we know her, is no saint.... She comes eating, drinking and sinning...

Ralph Waldo Emerson: Essays and Lectures

Essays: Second Series

Experience (p. 481)

The Library of America. New York, New York, USA. 1983

Nature is full of a sublime family likeness throughout her works and delights in startling us with resemblances in the most unexpected quarters.

Ralph Waldo Emerson: Essays and Lectures

Essays: First Series

History (p. 243)

The Library of America. New York, New York, USA. 1983

Nature never hurries: atom by atom, little by little, she achieves her work.

The Complete Works of Ralph Waldo Emerson (Volume 10)

Society and Solitude

Farming (p. 139)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1903

Nature is a rag-merchant, who works up every shred and ort and end into new creations; like a good chemist, whom I found, the other day, in his laboratory, converting his old shirts into pure white sugar.

Ralph Waldo Emerson: Essays and Lectures

The Conduct of Life

Considerations by the Way (p. 1088)

The Library of America. New York, New York, USA. 1983

Nature is an endless combination and repetition of a very few laws. She hums the old well-known air through innumerable variations.

Ralph Waldo Emerson: Essays and Lectures

Essays: First Series

History (p. 243)

The Library of America. New York, New York, USA. 1983

Nature is no spendthrift, but takes the shortest way to her ends.

Ralph Waldo Emerson: Essays and Lectures

The Conduct of Life

Fate (p. 961)

The Library of America. New York, New York, USA. 1983

By fate, not option, frugal Nature gave

One scent to hyson and to wall-flower,

One sound to pine-groves and to waterfalls,

One aspect to the desert and the lake.

It was her stern necessity.

The Complete Works of Ralph Waldo Emerson (Volume 9)

Xenophanes (p. 137)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Evans, Howard Ensign 1919–2002

Entomologist

One's appreciation of nature is never more acute than when a bit of nature is injected into one's flesh.

The Pleasures of Entomology: Portraits of Insects and the People Who Study them

Chapter 18 (p. 221)

Smithsonian Institution Press. Washington, D.C. 1985

Fermi, Enrico 1901–54

Italian-born American physicist

Whatever nature has in store for mankind, unpleasant as it may be, men must accept, for ignorance is never better than knowledge.

In Laura Fermi

Atoms in the Family

Part II, Chapter 23 (p. 244)

The University of Chicago Press. Chicago, Illinois, USA. 1954

Feuerbach, Ludwig 1804–72

German philosopher

Nature returns no answer to the questions and lamentations of man; inexorably it refers him to himself.

In Ludwig Buchner

Force and Matter

Chapter VI (p. 35)

Trubner & Company. London, England. 1864

Fevre, R. W.

No biographical data available

The real truth is that, not only has man failed to overcome nature in any sphere whatsoever but that at best he has merely succeeded in getting hold of and lifting a tiny corner of the enormous veil which she has spread over her eternal mysteries and secret. He never creates anything. All he can do is discover something. He does not master nature but has only come to be the master of those living things who have not gained the knowledge he has arrived at by penetrating into some of nature's laws and mysteries. Apart from all this, an idea can never subject to its own sway those conditions which are necessary for the existence and development of mankind; for the idea itself has come only from man. Without man there would be no human idea in this world. The idea as such is therefore always dependent on the existence of man and consequently is dependent on those laws which furnish the conditions of his existence.

The Demoralization of Western Culture: Social Theory and the Dilemmas of Modern Living (p. 28)

Continuum. London, England. 2000

Feyerabend, Paul K. 1924–94

Austrian-born American philosopher of science

Everywhere science is enriched by unscientific methods and unscientific results...the separation of science and non-science is not only artificial but also detrimental to the advancement of knowledge. If we want to understand nature, if we want to master our physical surroundings, then we must use all ideas, all methods, and not just a small selection of them.

Against Method: Outline of an Anarchistic Theory of Knowledge

Chapter 18 (pp. 305, 306)

Verso. London, England. 1978

Trying to understand the way nature works involves a most terrible test of human reasoning ability. It involves

subtle trickery, beautiful tightropes of logic on which one has to walk in order not to make a mistake in predicting what will happen.

The Meaning of It All: Thoughts of a Citizen Scientist
Chapter 1 (p. 15)
Perseus Books. Reading, Massachusetts, USA. 1998

There was a moment when I knew how nature worked. It had elegance and beauty. The goddam thing was gleaming.

In Lee Edson
Two Men in Search of a Quark
New York Times Magazine, October 8, 1967

People may come along and argue philosophically that they like one better than another; but we have learned from much experience that all philosophical intuitions about what nature is going to do fail.

The Character of Physical Law
Chapter 2 (p. 53)
BBC. London, England. 1965

But see that the imagination of nature is far, far greater than the imagination of man. No one who did not have some inkling of this through observations could ever have imagined such a marvel as nature is.

The Meaning of It All: Thoughts of a Citizen Scientist
Chapter 1 (p. 10)
Perseus Books. Reading, Massachusetts, USA. 1998

Fielding, Henry 1707–54

English novelist, playwright, and barrister

Nature seems to wear one universal grin.

The Tragedy of Tragedies, or, The Life and Death of Tom Thumb the Great
Act I, Scene 1
Printed by S. Powell. Dublin, Ireland. 1730

Flammarion, Camille 1842–1925

French astronomer and writer

Nature, O immense, fascinating, infinite Nature! Who can divine, who can hear, the sounds of thy celestial harmony! What can we include in these childish formulae of our young science? We lisp an alphabet while the eternal Bible is still closed to us. But it is thus when all reading begins, and these first words are surer than all the antique affirmations of ignorance and human vanity.

Popular Astronomy: A General Description of the Heavens
Book II, Chapter III (p. 112)
Chatto & Windus. London, England. 1894

Nature is immense in the little as in the great, or, to speak more correctly, for here there is neither little nor great.

Popular Astronomy: A General Description of the Heavens
Book III, Chapter II (p. 239)
Chatto & Windus. London, England. 1894

...it has been said that nature has implanted in our bosoms a craving after the discovery of truth, and assuredly that glorious instinct is never more irresistibly awakened than

when our notice is directed to what is going on in the heavens.

Popular Astronomy: A General Description of the Heavens
Book III, Chapter VII (p. 328)
Chatto & Windus. London, England. 1894

Florio, John 1553?–1625

English teacher, writer, and translator

Nature is the right law.

Florio's Firste Fruites (p. 88)
Taihoku Imperial University. Formosa, Japan. 1936

Ford, Kenneth W. 1926–

American physicist

One of the elementary rules of nature is that, in the absence of a law prohibiting an event or phenomenon, it is bound to occur with some degree of probability. To put it simply and crudely: Anything that can happen does happen.

Magnetic Monopoles
Scientific American, Volume 209, Number 6, December 1963 (p. 122)

Foster, Sir Michael 1836–1907

English physiologist and educator

Nature is ever making signs to us, she is ever whispering to us the beginnings of her secrets; the scientific man must be ever on the watch, ready at once to lay hold of Nature's hint, however small, to listen to her whisper, however low.

In J.A. Thomson
Introduction to Science
Chapter 1 (p. 16)
Williams & Norgate Ltd. London, England. 1916

Fraenkel, Aviezri S.

Applied mathematician

Nature might be somehow more powerful than a digital computer.

New York Times, March 25, 1997 (p. C5, col. 6)

Fuller, R. Buckminster 1895–1983

American engineer and architect

Nature is trying very hard to make us succeed, but nature does not depend on us. We are not the only experiment.

Minneapolis Tribune, 30 April 1978

Garth, Sir Samuel 1661–1719

English physician and poet

As distant prospects please us, but when near
We find but desert rocks and fleeting air.

The Dispensary
Canto III, l. 27
Printed by J. Lister, at St. John's Gate. London, England. 1768

Gay, John 1685–1732

English poet and dramatist

But he who studies nature's laws

From certain truth his maxims draws.

The Poetical Works of John Gay (Volume 3)

Introduction to the Fables, l. 76–77

Lawrence & Bullen. London, England. 1893

Gillispie, Charles Coulston 1918–

French writer and editor of philosophy and history of science

[T]he renewals of the subjective approach to nature make a pathetic theme. Its ruins lie strewn like good intentions all along the ground traversed by science, until it survives only in strange corners like Lysenkoism [doctrine centered on belief in acquired characteristics] and anthroposophy, where nature is socialized or moralized.

The Edge of Objectivity: An Essay in the History of Scientific Ideas

Chapter V (pp. 199–200)

Princeton University Press. Princeton, New Jersey, USA. 1960

Gould, Stephen Jay 1941–2002

American paleontologist and evolutionary biologist

The need to distinguish sturdy facts (pervasive pattern) from shaky factual claim (single cases with dubious documentation) has never been more evident to me than in the current debate between evolutionists and so-called “scientific creationists.” The fact of evolution is as sturdy as any claim in science. Its sturdiness resides in a pervasive pattern detected by several disciplines — for examples, the age of the earth and life as affirmed by astronomy and geology, and the pattern of imperfections in organisms that record a history of physical descent.

Hen’s Teeth and Horses Toes

Quaggas, Coiled Oysters, and Flimsy Facts (p. 384)

W.W. Norton & Company, Inc. New York, New York, USA. 1983

I do not believe that nature frustrates us by design, but I rejoice in her intransigence nonetheless.

Hen’s Teeth and Horses Toes

What, if Anything, Is a Zebra? (p. 365)

W.W. Norton & Company, Inc. New York, New York, USA. 1983

Gray, George W.

Freelance science writer

Our knowledge of nature is limited by our ability to apprehend the materials and the forces which meet us — both those of the Earth, which we encounter in their hurrying to and fro, and those of the Universe outside, which beat upon us from the stars and the darkness beyond the stars.

The Advancing Front of Science

Chapter I, Section 5 (pp. 20–21)

Whittlesey House. New York, New York, USA. 1937

Gray, Thomas 1716–71

English poet

E’en from the tomb the voice of nature cries,
E’en in our ashes live their wonted fires.

The Complete Poetical Works of Gray, Beattie, Blair, Collins, Thomson, and Kirke White

Elegy in a Country Churchyard

Stanza 23

J. Blackwood. London, England. 1800

Greene, Brian 1963–

American physicist

You must allow Nature to dictate what is, and what is not, sensible.

The Elegant Universe: Superstrings, Hidden Dimensions, and the Quest for the Ultimate Theory

Part II, Chapter 5 (p. 111)

W.W. Norton & Company, Inc. New York, New York, USA. 2003

Gregory, Dick 1932

American comedian and social activist

Nature is not affected by finance. If someone offered you ten thousand dollars to let them touch you on your eyeball without your blinking, you would never collect the money. At the very last moment, Nature would force you to blink your eye. Nature will protect her own.

The Shadow that Scares Me

Chapter VIII (p. 175)

Doubleday & Company, Inc. Garden City, New York, USA. 1968

Gregory, Sir Richard Arman 1864–1952

British science writer and journalist

The study of Nature is elevating, and its material value is of the highest, yet it is deplorably neglected with the result that only very rarely is the simplest scientific subject referred to accurately in the works of literary men.

Discovery; or, The Spirit and Service of Science

Chapter I (p. 13)

Macmillan & Company Ltd. London, England. 1918

Nature, like the rich man of the parable, requires importunate pleading before she will bestow any of her riches upon a suppliant at her temple.

Discovery; or, The Spirit and Service of Science

Chapter I (p. 12)

Macmillan & Company Ltd. London, England. 1918

Nature must be loved for herself and not for her dowry.

Discovery; or, The Spirit and Service of Science

Chapter III (p. 54)

Macmillan & Company Ltd. London, England. 1918

Haeckel, Ernst 1834–1919

German biologist and philosopher

The anthropomorphic notion of a deliberate architect and ruler of the world has gone forever from this field; the “eternal iron laws of nature” have taken its place.

The Riddle of the Universe

Chapter XIV (p. 267)

Watts & Company. London, England. 1900

Hales, Stephen 1677–1761

English physiologist and clergyman

...our reasonings about the wonderful and intricate operations of Nature are so full of uncertainty, that, as the

wise-man truly observes, hardly do we guess aright at the things that are upon earth, and with labour do we find the things that are before us.

Vegetable Staticks

Chapter VII (p. 181)

The Scientific Book Guild. London, England. 1961

Harkness, William 1837–1903

Scottish-American astronomer and surgeon

All nature is one, but for convenience of classification we have divided our knowledge into a number of sciences which we usually regard as quite distinct from each other.

Annual Report of the Board of Regents of the Smithsonian Institution, 1896

On the Magnitude of the Solar System (p. 93)

Government Printing Office. Washington, D.C. 1896

Hartwell, Leland H. 1939–

American genome scientist

Sometimes nature rewards foolish optimism.

Lex Prix Nobel. The Nobel Prizes in 2001

Nobel banquet speech for award received in 2001

Nobel Foundation. Stockholm, Sweden. 2002

Harvey, William 1578–1657

English physician

Nature...is the best and most faithful interpreter of her own secrets; and what she presents either more briefly or obscurely in one department, that she explains more fully and clearly in another.

In *Great Books of the Western World* (Volume 28)

Anatomical Exercises on the Generation of Animals

Dedication (p. 329)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Hazlitt, William Carew 1834–1913

English bibliographer

Nature is stronger than reason: for nature is, after all, the text, reason but the comment.

In W. Carew Hazlitt (ed.)

The Round Table; Northcotes Conversations; Characteristics

Characteristics, CXXXV (p. 476)

George Bell & Sons. London, England. 1884

Heine, Heinrich 1797–1856

German poet

Nature, like a true poet, abhors abrupt transitions.

The German Classics of the Nineteenth and Twentieth Centuries (Volume 6)

Translated by Charles Godfrey Leland

The Journey to the Harz (p. 73)

The German Publication Society. New York, New York, USA.

1913–1914

Nature knows how to produce the greatest effects with the most limited means.

The German Classics of the Nineteenth and Twentieth Centuries (Volume 6)

Translated by Charles Godfrey Leland

The Journey to the Harz (p. 73)

The German Publication Society. New York, New York, USA.

1913–1914

Heinlein, Robert A. 1907–88

American science fiction writer

He shut up, realizing that grim old Mother Nature, red of tooth and claw, invariably punished damn fools who tried to ignore Her or repeal Her ordinances.

Time Enough for Love

Chapter VI (p. 205)

G.P. Putnam's Sons. New York, New York, USA. 1973

Heisenberg, Werner Karl 1901–76

German physicist and philosopher

The laws of nature [that] we formulate mathematically in quantum theory deal no longer with the particles themselves but with our knowledge of the elementary particles.

Daedalus

Volume 87, 1958 (p. 99)

Natural science does not simply describe and explain nature; it is part of the interplay between nature and ourselves; it describes nature as exposed to our method of questioning.

Physics and Philosophy: The Revolution in Modern Science

Chapter V (p. 81)

Harper & Row, Publishers. New York, New York, USA. 1958

Henley, William Ernest 1849–1903

English poet

What Nature has writ with her lusty wit

Is worded so wisely and kindly

That whoever has dipped in her manuscript

Must up and follow her blindly.

Echoes of Life and Death

Number XXXIII

T.B. Mosher. Portland, Maine, USA. 1908

Heraclitus 540 BCE–480 BCE

Greek philosopher

The real constitution of things is accustomed to hide itself.

In G.S. Kirk and J.E. Raven

The Pre-Socratic Philosophers: A Critical History with a Selection of Texts

Fragment 211 (p. 193)

At The University Press. Cambridge, England. 1963

Nature loves to hide.

Fragments

Fragment x (p. 4)

Publisher undetermined

Herschel, Sir John Frederick William 1792–1871

English astronomer and chemist

From the least of nature's work he may learn the greatest lesson.

A Preliminary Discourse on the Study of Natural Philosophy
Part I, Chapter I, Section 10 (p. 14)
Printed for Longman, Rees, Orme, Brown & Green. London, England. 1831

...Nature builds up by her refined and invisible architecture, with a delicacy eluding our conception, yet with a symmetry and beauty which we are never weary of admiring.

The Cabinet of Natural Philosophy
Part III, Chapter II, Section 292 (p. 263)
Longman, Rees, Orme, Brown & Green. London, England. 1831

Herschel, Friedrich Wilhelm 1738–1822
English astronomer

The phenomena of nature, especially those that fall under the inspection of the astronomer, are to be viewed, not only with the usual attention to facts as they occur, but with the eye of reason and experience.

An Account of Three Volcanoes in the Moon
Philosophical Transactions of the Royal Society of London, Volume 67, 1787 (p. 229)

Holton, Gerald 1922–
Research professor of physics and science history

The study of nature is a study of the artifacts that appear during an engagement between the scientist and the world in which he finds himself.

The Roots of the Complementarity
Daedalus, Number 4, Fall 1970 (p. 1019)

Hooke, Robert 1635–1703
English physicist

...the footsteps of Nature are to be trac'd, not in her ordinary course, but when she seems to be put to her shifts, to make many doublings and turnings, and to use some kind of art in endeavoring to avoid our discovery.

Micrographia
Preface (third page)
Printed by Jo. Martyn and Ja. Allestry. London, England. 1665

Horace (Quintus Horatius Flaccus) 65 BCE–8 BCE
Roman philosopher and dramatic critic

You may turn nature out of doors with violence, but she will still return.

Satires, Epistles, and Ars Poetica
Epistles, Book I, Epistle 10, l. 24
W. Heinemann. London, England. 1929

Housman, Alfred Edward 1859–1936
English poet, scholar and satirist

For nature, heartless, witless nature,
Will neither care nor know
What stranger's feet may find the meadow
And trespass there and go.

Last Poems
Number XL (p. 76)
Henry Holt & Company. New York, New York, USA. 1922

Hudson, William Henry 1841–1922
Argentinian/English ornithologist, naturalist, and author

Here Nature is unapproachable with her green, airy canopy, a sun-impregnated cloud — cloud above cloud — and though the highest may be reached by the eye, the beams yet filter through, illuming the wide spaces beneath — chambers succeeded by chamber, each with its own special lights and shadows.

Green Mansions
Chapter 2 (p. 28)
Grosset & Dunlap. New York, New York, USA. 1931

Huggins, Sir William 1824–1910
English astronomer

Since the time of Newton our knowledge of the phenomena of nature has wonderfully increased, but man asks, perhaps more earnestly now than in his days, What is the ultimate reality behind the reality of the perceptions? Are they only the pebbles of the beach with which we have been playing? Does not the ocean of ultimate reality and truth lie beyond?

Annual Report of the Board of Regents of the Smithsonian Institution, 1891
Celestial Spectroscopy (p. 102)
Government Printing Office. Washington, D.C. 1893

Hugo, Victor 1802–85
French author, lyric poet, and dramatist

Nature eludes calculation. Number is a grim pullulation. Nature is the thing that cannot be numbered.

Translated by Isabel F. Hapgood
The Toilers of the Sea
Part II, Book Third, Chapter III (p. 416)
The Heritage Press. New York, New York, USA. 1961

Nature has no candor. She shows herself to man with her face turned away.

Translated by Isabel F. Hapgood
The Toilers of the Sea
Part II, Book Third, Chapter III (p. 415)
The Heritage Press. New York, New York, USA. 1961

Because of nature's unity it has been concluded that she is simple. An error.

Translated by Isabel F. Hapgood
The Toilers of the Sea
Part II, Book Third, Chapter III (p. 405)
The Heritage Press. New York, New York, USA. 1961

Hutton, W.
No biographical data available

Every page of the volume of Nature is fraught with instruction.

The Book of Nature Laid Open
Chapter I (p. 1)
Joseph Milligan. Georgetown, Virginia, USA. 1822

Huxley, Thomas Henry 1825–95
English biologist

There is not throughout Nature a law of wider application than this, that a body impelled by two forces takes the direction of their resultant.

Collected Essays (Volume 2)

Darwiniana

The Origin of Species (p. 32)

Macmillan & Company Ltd. London, England. 1904

To every one of us the world was once as fresh and new as to Adam. And then, long before we were susceptible of any other mode of instruction, Nature took us in hand, and every minute of waking life brought its educational influence, shaping our actions into rough accordance with Nature's laws, so that we might not be ended untimely by too gross disobedience. Nor should I speak of this process of education as past for any one, be he as old as he may. For every man the world is as fresh as it was at the first day, and as full of untold novelties for him who has the eyes to see them. And Nature is still continuing her patient education of us in that great university, the universe, of which we are all members — Nature having no Test-Acts.

Collected Essays (Volume 3)

Science and Education

A Liberal Education; and Where to Find It (p. 84)

Macmillan & Company Ltd. London, England. 1904

Those who take honours in Nature's university, who learn the laws which govern men and things and obey them, are the really great and successful men in this world. The great mass of mankind are the "Poll," who pick up just enough to get through without much discredit. Those who won't learn at all are plucked; and then you can't come up again. Nature's pluck means extermination.

Collected Essays (Volume 3)

Science and Education

A Liberal Education; and Where to Find It (p. 85)

Macmillan & Company Ltd. London, England. 1904

The investigation of Nature is an infinite pasture-ground, where all may graze, and where the more bite, the longer the grass grows, the sweeter is its flavor, and the more it nourishes.

Collected Essays (Volume 1)

Method and Result

Administrative Nihilism (p. 282)

Macmillan & Company Ltd. London, England. 1904

Education is the instruction of the intellect in the laws of Nature, under which name I include not merely things and their forces, but men and their ways; and the fashioning of the affections and of the will into an earnest and loving desire to move in harmony with those laws.

Collected Essays (Volume 3)

Science and Education

A Liberal Education; and Where to Find It (p. 83)

Macmillan & Company Ltd. London, England. 1904

The student of Nature wonders the more and is astonished the less, the more conversant he becomes with her opera-

tions; but of all the perennial miracles she offers to his inspection, perhaps the most worthy of admiration is the development of a plant or of an animal from its embryo.

Collected Essays (Volume 2)

Darwiniana

The Origin of Species (p. 29)

Macmillan & Company Ltd. London, England. 1904

Nature is never in a hurry, and seems to have had always before her eyes the adage, "keep a thing long enough and you will find a use for it.

Collected Essays (Volume 8)

Discourses, Biological and Geological

On the Formation of Coal (p. 159)

Macmillan & Company Ltd. London, England. 1904

Harmonious order governing eternally continuous progress — the web and woof of matter and force interweaving by slow degrees, without a broken thread, that veil which lies between us and the Infinite — that universe which alone we know or can know; such is the picture which science draws of the world, and in proportion as any part of that picture is in unison with the rest, so may we feel sure that it is rightly painted.

Collected Essays (Volume 2)

Darwiniana

The Origin of Species (p. 59)

Macmillan & Company Ltd. London, England. 1904

...the "Law of Nature" is not a command to do, or to refrain from doing, anything. It contains, in reality, nothing but a statement of that which a given being tends to do under the circumstances of its existence; and which, in the case of a living and sensitive being, it is necessitated to do, if it is to escape certain kinds of disability, pain, and ultimate dissolution.

Collected Essays (Volume 1)

Method and Result

Natural and Political Rights (p. 349)

Macmillan & Company Ltd. London, England. 1904

Huygens, Christiaan 1629–95

Dutch mathematician, astronomer, and physicist

Nature seems to court variety in her Works, and may have made them widely different from ours either in their matter or manner of Growth, in their outward Shape, or their inward Contexture; she may have made them such as neither our Understanding nor Imagination can conceive.

The Celestial Worlds Discover'd, or, Conjectures Concerning the Planetary Worlds, their Inhabitants and Productions

Book the First, Not to be imagin'd too unlike ours (p. 22)

Printed for T. Childe. London, England. 1698

...we may mount from this dull Earth, and viewing it from on high, consider whether Nature has laid out all her cost and finery upon this small speck of Dirt. So, like Travelers into other distant Countries, we shall be better able to judge of what's done at home, know how to make a true estimate of, and set its own value upon every thing.

The Celestial Worlds Discover'd, or, Conjectures Concerning the Planetary Worlds, their Inhabitants and Productions
Book the First, These Studies useful to Religion (p. 10)
Printed for T. Childe. London, England. 1698

Irwin, Keith Gordon

No biographical data available

It is nature, of course, that is the great chemist. Every growing plant is a marvelous chemical factory, every living thing a brilliant shifter of atoms from one bewildering compound to another. And down in the depths of the earth enormous forces operate to create the minerals that someday may be close to the earth's surface.

The Romance of Chemistry

Forward (p. xi)

The Viking Press. New York, New York, USA. 1959

James, William 1842–1910

American philosopher and psychologist

Visible nature is all plasticity and indifference, — a moral multiverse... and not a moral universe. To such a harlot we owe no allegiance; with her as a whole we can establish no moral communion; and we are free in our dealing with her several parts to obey or to destroy, and to follow no law but that of prudence in coming to terms with such of her particular features as will help us to our private ends.

The Will to Believe and Other Essays in Popular Philosophy

Is Life Worth Living? (p. 43)

Dover Publications, Inc. New York, New York, USA. 1956

It seems a priori improbable that the truth should be so nicely adjusted to our needs and powers.... In the great boarding-house of nature, the cakes and the butter and the syrup seldom come out so even and leave the plates so clean.

The Will to Believe and Other Essays in Popular Philosophy

The Will to Believe

Section VIII (p. 27)

Dover Publications, Inc. New York, New York, USA. 1956

Juvenal (Decimus Junius Juvenal)

Roman poet

Nunquam aliud Natura aliud Sapientia dicit.

Nature never says one thing, Wisdom another.

Satires

Chapter XIV, 321

Indiana University Press. Bloomington, Indiana, USA. 1958

Kant, Immanuel 1724–1804

German philosopher

...in every study of nature there can be only so much genuine science as there is a priori knowledge, by the same token, natural philosophy will contain genuine science only to the extent in which mathematics can be applied to it.

Translated by James Ellington

Metaphysical Foundations of Natural Science

Preface (p. 7)

The Bobbs-Merrill Company, Inc. Indianapolis, Indiana, USA. 1970

Kepler, Johannes 1571–1630

German astronomer

...the closer I approach her [Nature], the more petulant her games become, and the more she again and again sneaks out of the seeker's grasp just when he is about to seize her through some circuitous route. Nevertheless, she never ceases to invite me to seize her, as though delighting in my mistakes.

Translated by William H. Donahue

New Astronomy

Part IV, 58 (p. 573)

At the University Press. Cambridge, England. 1992

Kingsley, Charles 1819–75

English clergyman and writer

Nature's deepest laws, her own true laws, are her invisible ones.

Alton Locke, Taylor and Poet

Chapter XXXVIII (p. 289)

Macmillan & Company Ltd. London, England. 1911

...there is no lie in Nature; no discords in the revelations of science, in the laws of the Universe.

Alton Locke, Taylor and Poet

Chapter XVIII (p. 141)

Macmillan & Company Ltd. London, England. 1911

Kolb, Edward W. (Rocky) 1951–

American cosmologist

Nature, as read by patient observation and experiment, is the ultimate philosopher.

Blind Watchers of the Sky

Chapter Three (p. 59)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

Krutch, Joseph Wood 1893–1970

American naturalist, conservationist, and writer

To those who study her, Nature reveals herself as extraordinarily fertile and ingenious in devising means, but she has no ends which the human mind has been able to discover or comprehend.

The Modern Temper

Chapter Two, Section iii (p. 27)

Harcourt, Brace & Company. New York, New York, USA. 1929

Lamarck, Jean-Baptiste Pierre Antoine 1744–1829

French biologist

Do we not therefore perceive that by the action of the laws of organization...nature has in favorable times, places, and climates multiplied her first germs of animality, given place to developments of their organizations... and increased and diversified their organs? Then...aided by much time and by a slow but constant diversity of circumstances, she has gradually brought about in this respect the state of things which we now observe. How

grand is this consideration, and especially how remote is it from all that is generally thought on this subject!

In Alpheus Spring Packard

Lamarck, the Founder of Evolution: His Life and Work

Chapter 16 (p. 259)

Longmans, Green & Company. London, England. 1901

Nature has produced all the species of animals in succession, beginning with the most imperfect or simplest, and ending her work with the most perfect, so as to create a gradually increasing complexity in their organisation; these animals have spread at large throughout all the habitable regions of the globe, and every species has derived from its environment the habits that we find in it and the structural modifications which observation shows us.

Translated by Hugh Elliot

Zoological Philosophy: An Exposition with Regard to the Natural History of Animals

Chapter VII (p. 126)

The University of Chicago Press. Chicago, Illinois, USA. 1984

Laplace, Pierre Simon 1749–1827

French mathematician, astronomer, and physicist

Nature is so various in her productions and phenomena, that it is extremely difficult to ascertain their causes, hence it is requisite for a great number of men to unite their intellect and exertions in order to comprehend and develop her laws.

System of the World (Volume 2)

Book V, Chapter IV (p. 286)

Longman, Rees, Orme, Brown & Green. Dublin, Ireland. 1830

...[if] the result of a long series of precise observations approximates a simple relation so closely that the remaining difference is undetectable by observation and may be attributed to the errors to which they are liable, then this relation is probably that of nature.

Pierre Simon Laplace 1749–1827: A Life in Exact Science

Chapter 16 (p. 130)

Princeton University Press. Princeton, New Jersey, USA. 1997

Lawrence, Louise de Kiriline 1894–1992

Canadian naturalist, author, and nurse

Nature is a deep reality and whether we understand it or not it is true and elemental.

The Lovely and the Wild

Chapter Three (p. 33)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1968

Leclerc, Georges-Louis, Comte de Buffon 1707–88

French naturalist

Nature turns upon two steady pivots, unlimited fecundity which she has given to all species; and those innumerable causes of destruction which reduce the product of this fecundity...

Natural History, General and Particular (Volume 5) (p. 88)

T. Caldwell and W. Davies. London, England. 1812

Nature is that system of laws established by the Creator for regulating the existence of bodies, and the succession of beings. Nature is not a body; for this body would comprehend every thing. Either is it a being; for this being would necessarily be God. But nature may be considered as an immense living power, which animates the universe, and which, in subordination to the first and supreme Being, began to act by his command, and its action is still continued by his concurrence or consent.

Natural History, General and Particular (Volume 6)

Of Nature, First View (p. 249)

T. Caldwell and W. Davies. London, England. 1812

Lederman, Leon 1922–

American high-energy physicist

The laws of nature must have existed before even time began in order for the beginning to happen. We say this, we believe it, but can we prove it?

The God Particle: If the Universe Is the Answer, What Is the Question?

Chapter 9 (p. 401)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

Lewis, C. S. (Clive Staples) 1898–1963

British author, scholar, and popular theologian

If ants had a language they would, no doubt, call their anthill an artifact and describe the brick wall in its neighborhood an a natural object. Nature in fact would be for them all that was not “ant-made.” Just so, for us, nature is all that is not man-made; the natural state of anything is its state when not modified by man.

Studies In Words

Nature (pp. 45–46)

The University Press. Cambridge, England. 1960

Linnaeus, Carl (von Linné) 1707–78

Swedish botanist and explorer

It is the exclusive property of man, to contemplate and to reason on the great book of nature. She gradually unfolds herself to him, who with patience and perseverance, will search into her mysteries; and when the memory of the present and of past generations shall be obliterated, he shall enjoy the high privilege of living in the minds of his successors, as he has been advanced in the dignity of his nature, by the labours of those who went before him.

In Thomas Steele Hall

A Source Book in Animal Biology (p. 32)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1951

Longfellow, Henry Wadsworth 1807–82

American poet

Nature with folded hand seemed there,
Kneeling at her evening prayer!

The Poetical Works of Henry Wadsworth Longfellow

Voices of The Night

Prelude, Stanza 11

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

No tears

Dim the sweet look that Nature wears.

The Poetical Works of Henry Wadsworth Longfellow

Sunrise on the Hills, l. 35

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

So Nature deals with us, and takes away

Our playthings one by one, and by the hand

Leads us to rest so gently, that we go,

Scarce knowing if we wish to go or stay,

Being too full of sleep to understand

How far the unknown transcends the what we know.

The Poetical Works of Henry Wadsworth Longfellow

Nature, l. 9

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

And Nature, the old nurse, took

The child upon her knee,

Saying: "Here is a story-book

Thy Father has written for thee."

"Come, wander with me," she said,

"Into regions yet untrod;

And read what is still unread

In the manuscripts of God."

Fiftieth Birthday of Agassiz

Sackett & Wilhelms Lithographing Corp. New York, New York, USA. 1935

Lorenz, Konrad 1903–89

Austrian zoologist

Much of the beauty and wonder of nature is based on the fact that organic life is directed towards goals — towards survival, reproduction, and the attainment of higher perfection.

In Niko Tinbergen

The Herring Gull's World: A Study of the Social Behavior of Birds

Foreword (p. vi)

Basic Books, Inc. Publishers. New York, New York, USA. 1960

Lubbock, Sir John 1834–1913

English banker, writer, and scientist

...we are not the only tenants of our farms — that the fields and hedges, woods and waters, all around us, teem with a complex, rich, and interesting life. ...[N]ature will speak only to those who listen with love and sympathy...

In Henry C. McCook

Tenants of an Old Farm; Leaves from the Note-Book of a Naturalist

Introduction (p. vi)

George W. Jacobs & Company. Philadelphia, Pennsylvania, USA. 1895

Lucretius ca. 99 BCE–55 BCE

Roman poet

This terror then and darkness of mind must be dispelled not by the rays of the sun and glittering shafts of day, but by the aspects and the law of nature; the warp of whose design we shall begin with this first principle, nothing is ever gotten out of nothing by divine power.

In *Great Books of the Western World* (Volume 12)

Lucretius: on the Nature of Things

Book One, l. 146 (pp. 2–3)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Luther Standing Bear 1868–1939

Oglala Lakota chief, 1905–1939

Only to the white man was nature a "wilderness" and only to him was the land "infested" with "wild" animals and "savage" people. To us it was tame. Earth was bountiful and we were surrounded with the blessings of the Great Mystery. Not until the hairy man from the east came and with brutal frenzy heaped injustices upon us and the families that we loved was it "wild" for us. When the very animals of the forest began fleeing from his approach, then it was that for us the "Wild West" began.

Land of the Spotted Eagle

Boyhood (p. 38)

University of Nebraska Press. Lincoln, Nebraska, USA. 1978

Lyell, Sir Charles 1797–1875

English geologist

So in Geology, if we could assume that it is part of the plan of nature to preserve, in every region of the globe, an unbroken series of monuments to commemorate the vicissitudes of the organic creation, we might infer the sudden extirpation of species, and the simultaneous introduction of others, as often as two formations in contact include dissimilar organic fossils. But we must shut our eyes to the whole economy of the existing causes, aqueous, igneous, and organic, if we fail to perceive that such is not the plan of Nature.

Principles of Geology (Volume 3)

Chapter III (p. 34)

John Murray. London, England. 1830

Macfie, Ronald Campbell 1867–1931

Poet and physician

Nature never errs in the long-run. She made man from a shred of the Milky Way, and she may be trusted to look after the creature she has made.

Science, Matter and Immortality

Chapter XVIII (p. 224)

William & Norgate. London, England. 1909

Mach, Ernst 1838–1916

Austrian physicist and philosopher

In the infinite variety of nature many ordinary events occur; while others appear uncommon, perplexing, astonishing, or even contradictory to the ordinary run of things. As long as this is the case we do not possess a well-settled and unitary conception of nature.

The Science of Mechanics (5th edition)

Introduction (p. 6)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Maclaurin, Colin 1698–1746
Scottish mathematician and natural philosopher

The processes of nature lie so deep, that, after all the pains we can take, much, perhaps, will remain undiscovered beyond the reach of human art or skill. But this is no reason why we should give ourselves up to the belief of fictions, be they ever so ingenious, instead of hearkening to the unerring voice of nature...

An Account of Sir Isaac Newton's Philosophical Discoveries, in Four Books

Book I, Chapter I (p. 12)

Printed for the Author's Children. London, England. 1748

A strong curiosity has prompted men in all times to study nature; every useful art has some connexion with the science; and the unexhausted beauty and variety of things makes it ever agreeable, new and surprising.

An Account of Sir Isaac Newton's Philosophical Discoveries, in Four Books

Book I, Chapter I (p. 3)

Printed for the Author's Children. London, England. 1748

Manning, Richard

No biographical data available

Now I take this thought as necessary to humble our science, to understand that everything we know was taught us by nature, but nature gave us brains evolved to their niche, so they are limited in their understanding. All that we know we have learned from nature, but we do not know all that nature knows.

Grassland

Chapter 12 (p. 263)

The Viking Press. New York, New York, USA. 1995

Marsh, George Perkins 1801–82

American scholar, writer, and statesman

Nature, left undisturbed, so fashions her territory as to give it almost unchanging permanence of form, outline, and proportion, except when shattered by geologic convulsions; and in these comparatively rare cases of derangement, she sets herself at once to repair the superficial damage, and to restore, as nearly as practicable, the former aspect of her dominion.

The Earth as Modified by Human Action: A New Edition of Man and Nature

Chapter I (p. 26)

Scribner, Armstrong & Company. New York, New York, USA. 1874

Mason, Frances

No biographical data available

Nature shows nothing finished and perfect in the beginning; she shows orderly divergence and an advance from lower to higher levels of creation.

Creation by Evolution

Editors Preface (p. vii)

The Macmillan Company. New York, New York, USA. 1928

McKibben, Bill 1960–
Freelance writer

The end of nature sours all my material pleasures. The prospect of living in a genetically engineered world sickens me. And yet it is toward such a world that our belief in endless material advancement hurries us. As long as that desire drives us, there is no way to set limits.

The End of Nature

A Path of More Resistance (p. 173)

Random House, Inc. New York, New York, USA. 1989

McLennan, Evan

No biographical data available

There is a charm for man in the study of Nature. It elevates his soul to real greatness. It frees his mind from stormy life, and thrills him with the purest joy.

Cosmical Evolution: A New Theory of the Mechanism of Nature

Introduction (p. 23)

Donohue, Henneberry & Company. Chicago, Illinois, USA. 1890

Meldola, R.

No biographical data available

It is only the active worker — the original investigator — who, by personal appeal to Nature through artificially imposed considerations, *i.e.*, experiment, or through observation, *i.e.*, ready-made phenomena, has come to understand fully what a fact really means in the scientific sense; to realise how laborious is the process of wooing truth and ambiguous are the answers often given by Nature to his cross-examinations.

In Sir Richard Arman Gregory

Discovery; or, The Spirit and Service of Science

Chapter III (p. 40)

Macmillan & Company Ltd. London, England. 1918

Melville, Herman 1819–91

American novelist

...nature is an immaculate virgin, forever standing unrobed before us.

Typee, Omoo, Mardi

Mardi

Chapter 137 (p. 1094)

Gems of Genius in Poetry and Art

Jeannie Morrison

Thompson & Thompson. Chicago, Illinois, USA. 1899

Muir, John 1838–1914

American naturalist

Then to think of the infinite numbers of smaller fellow
mortals, invisibly small, compared with which the smallest
ants are as mastodons.

My First Summer in the Sierra

June 13 (p. 62)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

Thus review the eventful past, we see Nature working
with enthusiasm like a man, blowing her volcanic forges
like a blacksmith blowing his smithy fires, shoving gla-
ciers over the landscapes like a carpenter shoving his
planes, clearing, ploughing, harrowing, irrigating, plant-
ing, and sowing broadcast like a farmer and gardener,
doing rough work and fine work, planting sequoias and
pines, rosebushes and daisies; working in gems, fill-
ing every crack and hollow with them; distilling fine
essences; painting plants and shells, clouds, mountains,
all the earth and heavens, like an artist, ever working
toward beauty higher and higher.

Our National Parks

Chapter II (p. 73)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

When we are with Nature we are awake, and we discover
many interesting things and reach many a mark we are
not aiming at.

In Linnie Marsh Wolfe (ed.)

John of the Mountains

Chapter VII, Section I, June, 1890 (p. 300)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1938

None may wholly escape the Good of Nature, however
imperfectly exposed to her blessings.

Steep Trails

Chapter III (p. 48)

Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

None of Nature's landscapes are ugly so long as they are
wild.

Our National Parks

Chapter I (p. 4)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

One is constantly reminded of the infinite lavishness and
fertility of Nature — inexhaustible abundance amid what
seems enormous waste. And yet when we look into any
of her operations that lie within reach of our minds, we
learn that no particle of her material is wasted or worn

out. It is eternally flowing from use to use, beauty to yet higher beauty.

Gentle Wilderness (p. 139)
Ballantine Books. New York, New York, USA. 1968

Nature...leading us with work...yet cheers us like a mother with tender prattle words of love...

In Linnie Marsh Wolfe (ed.)
John of the Mountains
Chapter II, Section 2, Undated (pp. 66–67)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1938

Nature has always something rare to show us...and the danger to life and limb is hardly greater than one would experience crouching deprecatingly beneath a roof.

Mountains of California
Chapter X (p. 249)
The Century Company. New York, New York, USA. 1911

[I]n every walk with Nature one receives far more than he seeks.

Steep Trails
Chapter IX (p. 128)
Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

How fiercely, devoutly wild is Nature in the midst of her beauty loving tenderness.

My First Summer in the Sierra
July 29 (p. 177)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

Musser, George

The basic rules of nature are simple, but their consummation may never lose its ability to surprise.

From the Editors
Scientific American, Volume 280, Number 1, January 1999 (p. 6)

Newton, Sir Isaac 1642–1727

English physicist and mathematician

For Nature is very consonant and conformable to herself.

In Eugene Hecht
Optics
Book III, Part 1, Question 31 (p. 531)
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

I wish we could derive the rest of the phenomena of Nature by the same kind of reasoning from mechanical principles, for I am induced by many reasons to suspect that they may all depend upon certain forces by which the particles of bodies, by some causes hitherto unknown, are either mutually impelled toward one another, and cohere in regular rigors, or are repelled and recede from one another.

In *Great Books of the Western World* (Volume 34)
Mathematical Principles
Preface to the First Edition (p. 2)
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Oliver, Mary 1935–

American poet

Nature, the total of all of us, is the wheel that drives our world; those who ride it willingly might yet catch a glimpse of a dazzling, even a spiritual restfulness, while those who are unwilling simply to hang on, who insist that the world must be piloted by man for his own benefit, will be dragged around and around all the same, gathering dust but no joy.

Blue Pastures
A Few Words (p. 92)
Harcourt Brace & Company. New York, New York, USA. 1995

Oppenheimer, J. Robert 1904–67

American theoretical physicist

Despite all the richness of what men have learned about the world of nature, of matter and of space, of change and of life, we carry with us today an image of the giant machine as a sign of what the objective world is really like.

Science and the Common Understanding
Chapter 1 (pp. 14–15)
Simon & Schuster. New York, New York, USA. 1954

O'Rourke, P. J. 1947–

Political satirist

Worship of nature may be ancient, but seeing nature as cuddlesome, hug-a-bear and too cute for words is strictly a modern fashion.

Parliament of Whores: A Lone Humorist Attempts to Explain the Entire U.S. Government
Dirt of the Earth (p. 196)
Vintage Books. New York, New York, USA. 1992

Orton, James 1830–77

Explorer

The Kingdom of Nature is a literal Kingdom. Order and beauty, law and dependence, are seen everywhere. Amidst the great diversity of the forms of life, there is unity; and this suggests that there is one general plan, but carried out in a variety of ways.

Comparative Zoology; Structural and Systematic
Chapter XXI (p. 222)
Harper & Brothers. New York, New York, USA. 1877

Pagels, Heinz R. 1939–88

American physicist and science writer

Nature avoids infinities.

Perfect Symmetry: The Search for the Beginning of Time
Part Four, Chapter 1 (p. 354)
Simon & Schuster. New York, New York, USA. 1985

Nature has been generous to astronomers, offering an abundance of different stars and galaxies at all stages in their lives to look at.

Perfect Symmetry: The Search for the Beginning of Time
Part One, Chapter 1 (p. 28)
Simon & Schuster. New York, New York, USA. 1985

Peattie, Donald Culrose 1896–1964

American botanist, naturalist and writer

Futile for science to try to discover what the forces of Nature are; it can only discover how they operate.

An Almanac for Moderns

March Twenty-Eighth (p. 10)

G.P. Putnam's Sons. New York, New York, USA. 1935

It is Nature herself, as we grow in comprehension of her, who weans us from our early faith.

An Almanac for Moderns

March Thirtieth (p. 12)

G.P. Putnam's Sons. New York, New York, USA. 1935

Peters, Ted

No biographical data available

Nature as we daily experience it is ambiguous, fraught with benefits and liabilities.

Playing God?: Genetic Determinism and Human Freedom

Playing God with DNA (p. 20)

Routledge. New York, New York, USA. 1997

Petrarch (Francesco Petrarca) 1304–74

Italian poet and humanist

There are fools who seek to understand the secrets of nature.

In Richard Olson

Chapter 7 (p. 210)

University of California Press. Berkeley, California, USA. 1982

Planck, Max 1858–1947

German physicist

In all cases, the quantum hypothesis has given rise to the idea, that in Nature, changes occur which are not continuous, but of an explosive nature.

Translated by R. Jones and D.H. Williams

A Survey of Physics: A Collection of Lectures and Essays

New Paths of Physical Knowledge (p. 51)

Methuen & Company Ltd. London, England. 1925

If one wishes to obtain a definite answer from Nature one must attack the question from a more general and less selfish point of view.

Translated by R. Jones and D.H. Williams

A Survey of Physics: A Collection of Lectures and Essays

The Unity of the Physical Universe (p. 15)

Methuen & Company Ltd. London, England. 1925

Pliny (C. Plinius Secundus) 23–79

Roman savant and writer

Hail, Nature, mother of all creation, and mindful that I alone of the men of Rome have praised thee in all thy manifestations, be gracious to me.

Natural History

Volume 10, Book XXXVII, sec 205

Harvard University Press. Cambridge, Massachusetts, USA. 1947

Poincaré, Henri 1854–1912

French mathematician and theoretical astronomer

The scientist does not study nature because it is useful; he studies it because he delights in it, and he delights in it because it is beautiful. If nature were not beautiful, it would not be worth knowing, and if nature were not worth knowing, life would not be worth living.

The Foundations of Science

Science and Method, Book I

Chapter I (p. 366)

The Science Press. New York, New York, USA. 1913

Pope, Alexander 1688–1744

English poet

See plastic Nature working to this end,
The single atoms each to other tend,
Attract, attracted to, the next in place
Form'd and impell'd its neighbor to embrace.

The Complete Poetical Works (Volume 2)

An Essay on Man

Epistle III, l. 9

Houghton Mifflin Company. New York, New York, USA. 1903

Eye nature's walks, shoot folly as it flies,
And catch the manners, living as they rise;
Laugh where we must, be candid where we can,
But vindicate the ways of God to man.

The Complete Poetical Works (Volume 2)

An Essay on Man

Epistle I, l. 13

Houghton Mifflin Company. New York, New York, USA. 1903

All are but parts of one stupendous whole,
Whose body Nature is, and God the soul;
That chang'd thro' all, and yet in all same,
Great in the earth as in th' ethereal frame;
Warms in the sun, refreshes in the breeze,
Glows in the stars, and blossoms in the trees;
Lives thro' all life, extends thro' all extent,
Spreads undivided, operates unspent;
Breathes in our soul, informs our mortal part,
As full, as perfect, in a hair as heart.

The Complete Poetical Works (Volume 2)

An Essay on Man

Epistle I, l. 267

Houghton Mifflin Company. New York, New York, USA. 1903

All nature is but art, unknown to thee.

The Complete Poetical Works (Volume 2)

An Essay on Man, Epistle I, l. 289

Houghton Mifflin Company. New York, New York, USA. 1903

Poynting, John Henry 1852–1914

English physicist

While the investigation of Nature is ever increasing our knowledge, and while each new discovery is a positive addition never again to be lost, the range of the investigation and the nature of the knowledge gained form the theme of endless discussion.

If nature and earth, those kindest of mother-goddesses, were so aroused as to annihilate cities, men could only conclude that the fault was theirs.

Translated by Richard and Clara Winston
Vanished Cities
Part One (p. 4)
Alfred A. Knopf. New York, New York, USA. 1962

Schrödinger, Erwin 1887–1961

Austrian theoretical physicist

As our mental eye penetrates into smaller and smaller distances and shorter and shorter times, we find nature behaving so entirely differently from what we observe in visible and palpable bodies of our surroundings that no model shaped after our large-scale experiences can ever be “true.” A complete satisfactory model of this type is not only practically inaccessible, but not even thinkable. Or, to be precise, we can, of course, think of it, but however we think it, it is wrong; not perhaps quite as meaningless as a “triangular circle,” but more so than a “winged lion.”

Science and Humanism

The Nature of Our “Models” (p. 25)

At The University Press. Cambridge, England. 1952

Sears, Paul Bigelow 1891–1990

American plant ecologist and conservationist

Nature is not to be conquered save on her own terms. She is not conciliated by cleverness or industry in devising means to defeat the operation of one of her laws through the workings of another.

Deserts on the March

Chapter I (p. 3)

University of Oklahoma Press. Norman, Oklahoma, USA. 1935

Selye, Hans 1907–82

Austrian-American endocrinologist

To me nature created man, and nature is superior.

Book II, Canto VI

Houghton Mifflin Company. Boston, Massachusetts, USA. 1908

Steele, Joel Dorman 1836–86
American educator and textbook writer

In Nature all is common, and no use is base. She keeps no selected elements done up in gilt papers for sensitive people.

A Fourteen Weeks Course in Chemistry

Conclusion (p. 223)

A.S. Barnes & Company. New York, New York, USA. 1870

Stevenson, Adlai E. 1900–65
American political leader and diplomat

Nature is neutral. Man has wrested from nature the power to make the world a desert or to make the deserts bloom.

High Fidelity Record Annual 1955

Speech (p. 338)

30 April 1946, House of Commons

J. B. Lippincott & Company. Philadelphia, Pennsylvania, USA. 1956

Nature is indifferent to the survival of the human species, including Americans.

Adlai's Almanac: The Wit and Wisdom of Stevenson of Illinois (p. 27)

H. Schuman. New York, New York, USA. 1952

Swann, William Francis Gray 1884–1962
Anglo-American physicist

There are times...in the growth of human thought when nature, having led man to the hope that he may understand her glories, turns for a time capricious and mockingly challenges his powers to harmonize her mysteries by revealing new treasures.

In Bernard Jaffe

Crucibles: The Story of Chemistry

Chapter XVI (p. 322)

Dover Publications. New York, New York, USA. 1976

Swift, Jonathan 1667–1745
Irish-born English writer

He said that new systems of nature were but new fashions, which would vary in every age; and even those who pretend to demonstrate them from mathematical principles, would flourish but a short period of time, and be out of vogue when that [system of nature] was determined.

In *Great Books of the Western World* (Volume 36)

Gulliver's Travels

Part III, Chapter VIII (pp. 118–119)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Teale, Edwin Way 1899–1980
American naturalist

Nature is shy and noncommittal in a crowd. To learn her secrets, visit her alone or with a single friend, at most.

Circle of the Seasons

May 4 (p. 85)

Dodd, Mead & Company. New York, New York, USA. 1953

Tennyson, Alfred (Lord) 1809–92
English poet

Who trusted

God was love indeed

And love Creation's final law —

Tho' Nature, red in tooth and claw

With ravine, shriek'd against his creed.

Alfred Tennyson's Poetical Works

In Memoriam A.H.H., LVI, Stanza IV

Oxford University Press, Inc. London, England. 1953

Nothing in Nature is unbeautiful.

Alfred Tennyson's Poetical Works

Lover's Tale, I. 348

Oxford University Press, Inc. London, England. 1953

A void was made in Nature;

all her bonds

Crack'd; and I saw the flaring atom-streams

And torrents of her myriad universe

Ruining along the illimitable inane,

Fly on to clash together again...

Alfred Tennyson's Poetical Works

Lucretius, I. 37–39

Oxford University Press, Inc. London, England. 1953

Thierry, Paul Henri, Baron d'Holbach 1723–89
German-born French man of leisure

Man is only unhappy because he is ignorant of nature.

Translated by M. Mirabaud

System of Nature or, The Laws of the Moral and Physical World (Volume 1)

Preface by the Author (p. vii)

Published by R. Benson. Philadelphia, Pennsylvania, USA. 1808

...man disdains the study of nature, to pursue phantoms, which resemble the Will with the Wisp, which at once

terrifies and dazzles the benighted traveler, and which make him quit the simple road to truth, without pursuing which, he can never arrive at happiness.

Translated by M. Mirabaud

System of Nature or, The Laws of the Moral and Physical World (Volume 1)

Preface by the Author (p. vii)

Published by R. Benson. Philadelphia, Pennsylvania, USA. 1808

Thomson, J. Arthur 1861–1933

Scottish biologist

When we are thrilled with the wonder of the world, the heights and depths of things; when our Nature-feeling is informed with knowledge; when our science leaves us with a conviction of the mysteriousness of Nature — the unfathomed universe; when our philosophical outlook leads us towards a realisation of a meaning behind the process; then there may be a total reaction on our part worthy of the name of Natural Religion.

The System of Animate Nature (Volume 1)

Lecture I (p. 42)

William & Norgate. London, England. 1920

In her manifold opportunities Nature has thus helped man to polish the mirror of [man's] mind, and the process continues. Nature still supplies us with abundance of brain-stretching theoretical puzzles and we eagerly tackle them; there are more worlds to conquer and we do not let the sword sleep in our hand; but how does it stand with feeling? Nature is beautiful, gladdening, awesome, mysterious, wonderful, as ever, but do we feel it as our forefathers did?

The System of Animate Nature (Volume 1)

Lecture I (p. 25)

William & Norgate. London, England. 1920

Thomson, James 1700–48

Scottish poet

O nature!...

Enrich me with the knowledge of thy works;

Snatch me to Heaven.

Seasons

Autumn, l. 1,352

Printed by John Mycall. Newburyport, Massachusetts, USA. 1790

I care not, Fortune, what you me deny;
You cannot rob me of free Nature's grace,
You cannot shut the windows of the sky,
Through which Aurora shows her brightening face;
You cannot bar my constant feet to trace
The woods and lawns, by living stream, at eve.

Castle of Indolence

Canto II, Stanza 3

William Smith. London, England. 1842

Thoreau, Henry David 1817–62

American essayist, poet, and practical philosopher

Nature will bear the closest inspection; she invites us to lay our eye level with the smallest leaf, and take an insect

view of its plain. She has no interstices; every part is full of life.

The Writings of Henry David Thoreau (Volume 9)

Natural History of Massachusetts (p. 132)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Nature must be viewed humanly to be viewed at all; that is, her scenes must be associated with humane affections, such as are associated with one's native place. She is most significant to a lover. A lover of Nature is preeminently a lover of man. If I have no friend, what is Nature to me? She ceases to be morally significant...

The Journal of Henry David Thoreau (Volume 4)

June 30, 1852 (p. 163)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1906

I love Nature partly *because* she is not man, but a retreat from him. None of his institutions control or pervade her. There a different kind of right prevails. In her midst I can be glad with an entire gladness. If this world were all man, I could not stretch myself, I should lose all hope. He is constraint, she is freedom to me. He makes me wish for another world. She makes me content with this.

The Journal of Henry David Thoreau (Volume 4)

January 3, 1853 (p. 440)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1906

I have a room all to myself; it is nature.

The Journal of Henry David Thoreau (Volume 4)

January 3, 1853 (p. 446)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1906

I sit in my boat on Walden, playing the flute this evening, and see the perch, which I seem to have charmed, hovering around me, and the moon traveling over the bottom, which is strewn with the wrecks of the forest, and feel that nothing but the wildest imagination can conceive of the manner of life we are living. Nature is a wizard. The Concord nights are stranger than the Arabian nights.... Heaven lies above, because the air is deep.

Journal (Volume 1: 1837–1844)

May 27, 1841 (p. 311)

Princeton University Press. Princeton, New Jersey, USA. 1981

If we knew all the laws of Nature, we should need only one fact, or the description of one actual phenomenon, to infer all the particular results at that point. Now we know only a few laws, and our result is vitiated, not, of course, by any confusion or irregularity in Nature, but by our ignorance of essential elements in the calculation. Our notions of law and harmony are commonly confined to those instances which we detect; but the harmony which results from a far greater number of seemingly conflicting, but really concurring, laws, which we have not detected, is still more wonderful. The particular laws are as our points of view, as to the traveler, a mountain outline varies with every step, and it has an infinite number of profiles, though absolutely but one form. Even when cleft or bored through it is not comprehended in its entirety.

The Writings of Henry David Thoreau (Volume 2)
Walden
Chapter XVI (p. 448)
Houghton Mifflin Company, Boston, Massachusetts, USA. 1893

Thurlow, Lord Edward, 1st Baron

Thurlow 1731–1806
English jurist and statesman

Nature is always wise in every part.

Russian novelist and dramatist

Nature is no temple, but a workshop, and man is the worker therein.

Translated by Bernard Guilbert Guerney
Fathers and Sons
Chapter 9 (p. 58)
The Modern Library, New York, New York, USA. 1961

However much you knock at nature's door, she will never answer you in comprehensible words because she is dumb. She will utter a musical sound, or a moan like a harp string, but you don't expect a song from her.

On the Eve
Chapter I (p. 10)
Charles Scribner's Sons, New York, New York, USA. 1903–04

Tuttle, Hudson 1836–1910
American medium

We find in the constant harmony of nature a sufficient proof in favor of the immutability of its laws. Every miracle would involve their infraction; a process to which nature would submit as little as to any other intervention in its empire; in which every thing, from the gnat which dances in the sunbeam up to the human mind which issues from the brain, is governed by fixed principles.

In Ludwig Buchner
Force and Matter
Chapter VI (p. 38)
Trubner & Company, London, England. 1864

Twain, Mark (Samuel Langhorne Clemens) 1835–1910

American author and humorist

Architects cannot teach nature anything.

The Complete Essays of Mark Twain

Chapter XXIII (pp. 255–256)
Harper & Brothers, New York, New York, USA. 1935

Voltaire (François-Marie Arouet) 1694–1778

French writer

What are you, Nature? Live in you? But I have been searching for you for fifty years, and have never been able to find you.

The Works of Voltaire (Volume 12)
Philosophical Dictionary (Volume 8)
Nature (p. 48)
The St. Hubert Guild, Akron, Ohio, USA. 1901

von Baeyer, Adolf 1835–1917

German research chemist

What makes a great scientist? He must not command but listen; he must adapt himself to what he hears and reshape himself accordingly.... The ancient empiricists already did this. They put their ear to Nature. The modern scientist does the same.... Coming nearer to Nature has a very special effect on people. They develop very differently from someone who confronts Nature with preconceived ideas. Someone who approaches Nature with set ideas will, so to speak, stand before it like a general. He will want to issue orders to Nature.

In Richard Willstätter
From My Life: The Memoirs of Richard Willstätter
Chapter 6 (p. 140)
W.A. Benjamin, New York, New York, USA. 1965

von Baeyer, Hans Christian 1938–

German-born physicist and author

Not the scientist, but nature has the last word.

Rainbows, Snowflakes, and Quarks: Physics and the World Around Us
The Measure of Things (p. 189)
McGraw-Hill Book Company, Inc. New York, New York, USA. 1984

von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

When a man of lively intellect first responds to Nature's challenge to be understood, he feels irresistibly tempted to impose his will upon the natural objects he is studying. Before long, however, they close in upon him with such force as to make him realize that he in turn must now acknowledge their might and hold in respect the authority they exert over him.

Goethe's Botanical Writings

Formation and Transformation (p. 21)

University of Hawaii Press. Honolulu, Hawaii, USA. 1952

We live in her midst and know her not. She is incessantly speaking to us, but betrays not her secret. We constantly act upon her, and yet have no power over her.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

Nature, Volume 1, Thursday, November 4, 1869 (p. 9)

Whoever wishes to deny nature as an organ of the divine must begin by denying all revelation.

In D. Miller (ed.)

Scientific Studies (Volume 12)

Chapter VIII (p. 303)

Suhrkamp. New York, New York, USA. 1988

That which is most unnatural is still Nature; the stupidest philistinism has a touch of her genius. Whoso cannot see her everywhere, sees her nowhere rightly.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

Nature, Volume 1, Thursday, November 4, 1869 (p. 9)

She tosses her creatures out of nothingness, and tells them not whence they came, nor whither they go. It is their business to run, she knows the road.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

Nature, Volume 1, Thursday, November 4, 1869 (p. 9)

She loves herself, and her innumerable eyes and affections are fixed upon herself. She has divided herself that she may be her own delight. She causes an endless succession of new capacities for enjoyment to spring up, that her insatiable sympathy may be assuaged.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

Nature, Volume 1, Thursday, November 4, 1869 (p. 9)

She rejoices in illusion. Whoso destroys it in himself and others, him she punishes with the sternest tyranny. Whoso follows her in faith, him she takes as a child to her bosom.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

Nature, Volume 1, Thursday, November 4, 1869 (p. 9)

She creates needs because she loves action. Wondrous! that she produces all this action so easily. Every need is a benefit, swiftly satisfied, swiftly renewed. Every fresh want is a new source of pleasure, but she soon reaches an equilibrium.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

Nature, Volume 1, Thursday, November 4, 1869 (p. 10)

She has always thought and always thinks; though not as a man, but as Nature. She broods over an all-comprehending idea, which no searching can find out.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

Nature, Volume 1, Thursday, November 4, 1869 (p. 9)

Every instant she commences an immense journey, and every instant she has reached her goal.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

Nature, Volume 1, Thursday, November 4, 1869 (p. 10)

Each of her works has an essence of its own; each of her phenomena a special characterisation: and yet their diversity is in unity.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

Nature, Volume 1, Thursday, November 4, 1869 (p. 9)

The one thing she seems to aim at is Individuality; yet she cares nothing for individuals. She is always building up and destroying; but her workshop is inaccessible.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

Nature, Volume 1, Thursday, November 4, 1869 (p. 9)

Nature goes her own way, and all that to us seems an exception is really according to order.

In Johann Peter Eckermann

Conversations with Goethe

Thursday, December 9, 1824 (p. 75)

J.M. Dent & Sons Ltd. London, England. 1970

Her crown is love. Through love alone dare we come near her. She separates all existences, and all tend to intermingle. She has isolated all things in order that all may approach one another. She holds a couple of draughts from the cup of love to be fair payment for the pains of a lifetime.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

Nature, Volume 1, Thursday, November 4, 1869 (p. 10)

Her mechanism has few springs — but they never wear out, are always active and manifold.

Translated by Thomas Huxley

Nature: Aphorisms by Goethe

Nature, Volume 1, Thursday, November 4, 1869 (p. 9)

It is not easy for us to grasp the vast, the super colossal, in nature; we have lenses to magnify tiny objects but none to make things smaller. And even for the magnifying glass we need eyes like Carus and Nees to profit intellectually from its use. However, since nature is always the same, whether found in the vast or the small, and every piece of turbid glass produces the same blue as the whole of the atmosphere covering the globe, I think it right to seek out prototypal examples and assemble them before me. Here, then, the enormous is not reduced; it is present within the small, and remains as far beyond our grasp as it was when it dwelt in the infinite.

In D. Miller (ed.)

Scientific Studies (Volume 12)

Chapter VIII (p. 304)

Suhrkamp. New York, New York, USA. 1988

We shall never succeed in exhausting the immeasurable riches of nature; and no generation of men will ever have cause to boast of having comprehended the total aggregation of phenomena.

Cosmos: A Sketch of a Physical Description of the Universe (Volume 1)
Introduction (p. 73)
Harper & Brothers. New York, New York, USA. 1869

Mere communion with nature, mere contact with the free air, exercise a soothing yet strengthening influence on the wearied spirit, calm the storm of passion, and soften the heart when shaken by sorrow to its inmost depths.

Cosmos: A Sketch of a Physical Description of the Universe (Volume 1)
Introduction (p. 25)
Harper & Brothers. New York, New York, USA. 1869

In order to depict nature in its exalted sublimity, we must not dwell exclusively on its external manifestations, but we must trace its image, reflected in the mind of man, at one time filling the dreamy land of physical myths with forms of grace and beauty, and at another developing the noble germ of artistic creations.

Cosmos: A Sketch of a Physical Description of the Universe (Volume 2)
Description of Nature by the Ancients (p. 20)
Harper & Brothers. New York, New York, USA. 1869

von Schelling, Friedrich Wilhelm

Joseph 1775–1854
German philosopher

What then is that secret bond which couples our mind to Nature, or that hidden organ through which Nature speaks to our mind or our mind to Nature? For what we want is not that Nature should coincide with the laws of our mind by chance (as if through some third intermediary), but that she herself, necessarily and originally, should not only express, but even realize, the laws of our mind, and that she is, and is called, Nature only insofar as she does so.

Nature should be Mind made visible, Mind the invisible Nature. Here then, in the absolute identity of Mind in us and Nature outside us, the problem of the possibility of a Nature external to us must be resolved.

Translated by Errol E. Harris and Peter Heath
Ideas for a Philosophy of Nature as Introduction to the Study of this Science
Introduction (pp. 41–42)
Cambridge University Press. Cambridge, England. 1988

The purest exercise of man's rightful dominion over dead matter, which was bestowed upon him together with reason and freedom, is that he spontaneously operates upon Nature, determines her according to purpose and intention, lets her act before his eyes, and as it were spies on her at work. But that the exercise of this dominion is possible, he owes yet again to Nature, whom he would strive in vain to dominate, if he would not put her in conflict with herself and set her own forces in motion against her.

Translated by Errol E. Harris and Peter Heath
Ideas for a Philosophy of Nature as Introduction to the Study of this Science
Book I (p. 57)
Cambridge University Press. Cambridge, England. 1988

von Siemens, Werner 1816–1892
German inventor and entrepreneur

The deeper the insight we obtain into the mysterious workings of nature's forces...the more we are convinced that we are still standing in the vestibule of science; that an unexplored world still lies before us; and however much we may discover, we know not whether mankind will ever arrive at a full knowledge of nature.

The form of Christianity differs from the form of nature because in the Church and in its spiritual atmosphere we are in a universe that has been made. Outside the Church we are in a universe that has grown.

Nature, Man, and Woman

Part I, Chapter 1 (p. 40)

Vintage Books. New York, New York, USA. 1970

For the notion that the interrelatedness of nature is complex and highly detailed is merely the result of translating it into the linear units of thought. Despite its rigor and despite its initial successes, this is an extremely clumsy mode of intelligence. Just as it is a highly complicated task to drink water with a fork instead of a glass, so the complexity of nature is not innate but a consequence of the instruments used to handle it. There is nothing complex about walking, breathing, and circulating one's blood. Living organisms have developed these functions without thinking about them at all.

Nature, Man, and Woman

Part I, Chapter 2 (p. 62)

Vintage Books. New York, New York, USA. 1970

The rush of waterfalls and the babbling of streams are not loved for their resemblance to speech; the irregularly scattered stars do not excite us because of the formal constellations which have been traced out between them; and it is for no symmetry or suggestion of pictures that we delight in the patterns of foam, of the veins in rock, or of the black branches of trees in wintertime.

Nature, Man, and Woman

Part I, Chapter 5 (p. 124)

Vintage Books. New York, New York, USA. 1970

Webber, Charles Wilkins 1819–56

American explorer and journalist

God's own presence is felt lingering yet, as if, in love with his own work, he stayed to touch it again — creating new charms in multiplied duration.

Harper & Brothers. New York, New York, USA. 1848

Wells, H. G. (Herbert George) 1866–1946

English novelist, historian, and sociologist

Has anything arisen to show...that where the life and breeding of every individual of a species is about equally secure, a degenerative process must not inevitably supervene?...Natural Selection grips us more grimly than it ever did, because the doubts thrown upon the inheritance of acquired characteristics have deprived us of our trust in education as a means of redemption for decadent families. In our hearts we wish that the case were not so, we all hate

Death and his handiwork; but the business of science is not to keep up the courage of men, but to tell the truth.

Bio-Optimism

Nature, Volume 52, Number 1348, August 29, 1895 (p. 411)**Weyl, Hermann** 1885–1955

German mathematician

Once and for all I wish to record my unbounded admiration for the work of the experimenter in his struggle to wrest interpretable facts from an unyielding Nature who knows so well how to meet our theories with a decisive No — or with an inaudible Yes.

Translated by H.P. Robertson

The Theory of Groups and Quantum Mechanics

Introduction (p. xx)

Methuen & Company Ltd. London, England. 1931

Wheeler, John Archibald 1911–

American physicist and educator

...nature at the quantum level is not a machine that goes its inexorable way. Instead what answer we get depends on the question we put, the experiment we arrange, the registering device we choose. We are inescapably involved in bringing about that which appears to be happening.

In John Archibald Wheeler and Wojciech Hubert Zurek (eds.)

Quantum Theory and Measurement (p. 185)

Princeton University Press. Princeton, New Jersey, USA. 1982

Whitehead, Alfred North 1861–1947

English mathematician and philosopher

The primary task of a philosophy of natural science is to elucidate the concept of nature, considered as one complex fact for knowledge, to exhibit the fundamental entities and the fundamental relations between entities in terms of which all laws of nature have to be stated, and to secure that the entities and relations thus exhibited are adequate for the expression of all the relations between entities which occur in nature.

The Concept of Nature

Chapter II (p. 46)

At The University Press. Cambridge, England. 1920

Thus we gain from the poets the doctrine that a philosophy of nature must concern itself with at least these five notions: change, value, eternal objects, endurance, organism, interfusion.

Science and the Modern World

Chapter V (p. 127)

The Macmillan Company. New York, New York, USA. 1929

You cannot talk vaguely about Nature in general.

Nature and Life

Part I (p. 1)

At the University Press. Cambridge, England. 1934

We have to remember that while nature is complex with timeless subtlety, human thought issues from the

simple-mindedness of beings whose active life is less than half a century.

An Enquiry Concerning the Principles of Natural Knowledge

Part I (p. 15)

At the University Press. Cambridge, England. 1919

Nature, even in the act of satisfying anticipation, often provides a surprise.

Adventures of Ideas

Chapter VIII (p. 161)

The Macmillan Company. New York, New York, USA. 1956

...nature gets credit which in truth should be reserved for ourselves: the rose for its scent: the nightingale for his song: and the sun for his radiance. The poets are entirely mistaken. They should address their lyrics to themselves, and should turn them into odes of self-congratulation on the excellence of the human mind. Nature is a dull affair, soundless, scentless, colorless; merely the hurrying of material, endlessly, meaninglessly.

Science and the Modern World

Chapter III (p. 80)

The Macmillan Company. New York, New York, USA. 1929

Whitman, Walt 1819–92

American poet, journalist, and essayist

The fields of Nature long prepared and fallow,
the silent, cyclic chemistry,

The slow and steady ages plodding, the unoccupied
surface ripening, the rich ores forming beneath.

Complete Poetry and Collected Prose

Song of the Redwood Tree

The Library of America. New York, New York, USA. 1982

Wright, Thomas 1711–86
English cosmologist

...three of the finest Sights in Nature, are a rising Sun
at Sea, a verdant Landskip with a Rainbow, and a clear
Star-light Evening...

An Original Theory or New Hypothesis of the Universe
Letter the Fifth (p. 37)
Printed for the Author. London, England. 1750

Yogananda, Paramahansa 1893–1952
Indian yogi

Because modern science tells us how to utilize the powers of Nature, we fail to comprehend the Great Life in back of all names and forms. Familiarity with Nature has bred a contempt for her ultimate secrets; our relation with her is one of practical business. We tease her, so to speak, to discover the ways in which she may be forced to serve our purposes; we make use of her energies, whose Source yet remains unknown. In science our relation with Nature is like that between an arrogant man and his servant; or, in a philosophical sense, Nature is like a captive in the witness box. We cross-examine her, challenge her, and minutely weigh her evidence in human scales that cannot measure her hidden values.

Autobiography of a Yogi
Chapter 35 (pp. 337–338)
Self-Realization Fellowship. Los Angeles, California, USA. 1971

Young, Edward 1683–1765
English poet and dramatist

The course of nature governs all!
The course of nature is the heart of God.
The miracles thou call'st for, this attest;
For say, could nature nature's course control?

But miracles apart, who sees Him not?

NEANDERTHAL

Constable, George 1941–
No biographical data available

Place him in a landscape of tall, waving grass, with the sun shining down and the bubbling music of summer in the air. Who is this man? He is an evolutionary bridge, just shy of fully modern status. He is a true human — our ancestor. We should regard him with honour, because almost everything that we are springs directly from him.

The Neanderthals
Chapter Five (p. 134)
Time-Life Books. New York, New York, USA. 1973

Margulis, Lynn 1938–
American cell biologist and evolutionist

Sagan, Dorion 1959–
American science writer

Neanderthalers, whatever else they were, were people. They were artists and poets and buriers of the dead.

Microcosmos
Chapter 12 (p. 225)
Summit Books. New York, New York, USA. 1986

Wells, H. G. (Herbert George) 1866–1946
English novelist, historian, and sociologist

Hairy or grisly, with a big face like a mask, great brow ridges and no forehead, clutching an enormous flint, and running like a baboon with his head forward, and not, like a man, with his head up, he must have been a fearsome creature for our forefathers to come upon.

The Grisly Man
Storyteller Magazine, April 1921

NEBULA

Flammarion, Camille 1842–1925
French astronomer and writer

These are lights which glimmer on the frontiers of creation; they are the beginnings which show us the birth of other universes; they are the voices of the past which speak to us from the depths of the vanished ages.

Popular Astronomy: A General Description of the Heavens
Book VI, Chapter X (p. 668)
Chatto & Windus. London, England. 1894

Herschel, Friedrich Wilhelm 1738–1822
English astronomer

On the 15th of February, 1786, I discovered that one of my planetary nebula, had a spot in the center, which was more luminous than the rest, and with long attention, a very bright, round, well defined center became visible. I remained not a single moment in doubt, but that the bright center was connected with the rest of the apparent disk.

On Nebulous Stars, Properly So Called
Philosophical Transactions of the Royal Society of London, Volume 81, 1791

Hubble, Edwin Powell 1889–1953
American astronomer

The term nebulae offers the values of tradition...the term galaxies, the glamour of romance.

In Timothy Ferris
The Red Limit: The Search for the Edge of the Universe
Chapter 1 (p. 41)
William Morrow & Company, Inc. New York, New York, USA. 1977

Huggins, Sir William 1824–1910
English astronomer

On the evening of August 29, 1864, I directed the spectroscope for the first time to a planetary nebula in Draco. I looked into the spectroscope. No spectrum such as I had expected. A single bright line only!...The riddle of the nebulae was solved. The answer, which had come to us in the light itself, read: Not an aggregation of stars, but a luminous gas.

Clarendon Press. Oxford, England. 1986

Crane, H. Richard

No biographical data available

Not everyone would be willing to say that he believes in the existence of the neutrino, but it is safe to say there is hardly one of us who is not served by the neutrino hypothesis as an aid in thinking about beta-decay process.

The Energy and Momentum Relations in the Beta-Decay and the Search for the Neutrino

Review of Modern Physics, Volume 20, Number 2, March 1948 (p. 278)

Eddington, Sir Arthur Stanley 1882–1944

English astronomer, physicist, and mathematician

The neutrino is just barely a fact.

The Two-Neutrino Experiment

Scientific American, Volume 208, Number 3, March 1963 (p. 60)

In an ordinary way I might say that I do not believe in neutrinos. But I have to reflect that a physicist may be an artist, and you never know where you are with artists. My old-fashioned kind of disbelief in neutrinos is scarcely enough. Dare I say that experimental physicists will not have sufficient ingenuity to make neutrinos? Whatever I may think, I am not going to be lured into a wager against the skill of the experimenters under the impression that it is a wager against the truth of a theory. If they succeed in making neutrinos, perhaps even in developing industrial application of them, I suppose I shall have to believe — though I may feel they have not been playing quite fair.

The Philosophy of Physical Science

Chapter VII, Section II (p. 112)

The Macmillan Company. New York, New York, USA. 1939

NEUTRON

Chadwick, James 1891–1974

English physicist

I think we shall have to make a real search for the neutron.

In Henry Abraham Boorse and Lloyd Motz

The World of the Atom

Letter to E. Rutherford (p. 1293)

Basic Books, Inc., Publishers. New York, New York, USA. 1966

It is to be expected that many of the effects of a neutron in passing through matter should resemble those of a quantum of high energy, and it is not easy to reach the final decision between the two hypotheses. Up to the present, all the evidence is in favor of the neutron, while the quantum hypothesis can only be upheld if the conservation of energy and momentum be relinquished at some point.

Possible Existence of a Neutron *Nature*, Volume 129, Number 3252,

February 27, 1932 (p. 312)

Gamow, George 1904–68

Russian-born American physicist

The Neutron has come to be.

Loaded with Mass is he.

Of Charge, forever free.

Pauli, do you agree?

Thirty Years That Shook Physics

Finale (p. 213)

Doubleday & Company, Inc. Garden City, New York, USA. 1966

Heisenberg, Werner Karl 1901–76

German physicist and philosopher

The basic idea is: shove all fundamental difficulties on to the neutron and practice quantum mechanics inside the nucleus.

In Abraham Pais

Inward Bound

Letter to Niels Bohr, 20 June 1932 (p. 413)

Clarendon Press. Oxford, England. 1986

Pauli, Wolfgang 1900–58

Austrian-born physicist

Dear Radioactive Ladies and Gentlemen,

As the bearer of these lines, for whom I pray the favor of a hearing will explain in more detail, I have...hit upon a desperate remedy for rescuing the “alternation law”.... This is the possibility that there might exist in the nuclei electrically neutral particles, which I call neutrons...

In Charles P. Enz

No Time to Be Brief

Chapter 6 (p. 215)

Oxford University Press, Inc. Oxford, England. 2002

NEWTONIAN MECHANICS

Davies, Paul Charles William 1946–

British-born physicist, writer, and broadcaster

However much we may feel free, everything that we do is, according to Laplace, completely determined. Indeed the entire cosmos is reduced to a gigantic clock-work mechanism, with each component slavishly and unflinchingly executing its preprogrammed instructions to

mathematical precision. Such is the sweeping implication of Newtonian mechanics.

The Cosmic Blueprint: New Discoveries in Nature's Creative Ability to Order the Universe
Chapter 2 (p. 11)
Simon & Schuster. New York, New York, USA. 1988

NIGHT

Ackerman, Diane 1948–
American writer

It is nighttime on the planet Earth. But that is only a whim of nature, a result of our planet rolling in space at 1,000 miles per minute. What we call “night” is the time we spend facing the secret reaches of space, where other solar systems and, perhaps, other planetarians dwell. Don't think of night as the absence of day; think of it as a kind of freedom. Turned away from our sun, we see the dawning of far-flung galaxies. We are no longer sun-blind to the star-coated universe we inhabit.

A Natural History of the Senses
Vision, How to Watch the Sky (p. 245)
Random House, Inc. New York, New York, USA. 1990

Amaldi, Ginestra Giovene

The night sky looks like a giant fistful of glittering diamonds flung carelessly upon a black carpet.

Our World and the Universe Around Us (Volume 1)
The Universe (p. 13)
Abradale Press. New York, New York, USA. 1966

Atwood, Margaret 1939–
Canadian poet, novelist, and critic

Night falls. Or has fallen. Why is it that night falls, instead of rising, like the dawn? Yet if you look east, at sunset, you can see night rising, not falling; darkness lifting into the sky, up from the horizon, like a black sun behind cloud cover. Like smoke from an unseen fire, a line of fire just below the horizon, brushfire or a burning city. Maybe night falls because it's heavy, a thick curtain pulled up over the eyes. Wool blanket. I wish I could see in the dark.

The Handmaid's Tale
Chapter 30 (p. 201)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1986

Beston, Henry 1888–1968
American writer

With lights and ever more lights, we drive the holiness and beauty of night back to the forests and the sea; the villages, the crossroads even, will have none of it.

The Outermost House
Chapter VIII (p. 168)
Rinehart & Company. New York, New York, USA. 1928

For a moment of night we have a glimpse of ourselves and of our world islanded in its stream of stars — pilgrims

of mortality, voyaging between horizons across the eternal seas of space and time.

The Outermost House
Chapter VIII (p. 176)
Rinehart & Company. New York, New York, USA. 1928

It is dark to-night, and over the plains of ocean the autumnal sky rolls up the winter stars.

The Outermost House
Chapter I (p. 18)
Rinehart & Company. New York, New York, USA. 1928

...today's civilization is full of people who have never even seen night. Yet to live thus, to know only artificial night, is as absurd and evil as to know only artificial day.

The Outermost House
Chapter VIII (p. 169)
Rinehart & Company. New York, New York, USA. 1928

de Saint-Exupéry, Antoine 1900–44
French aviator and writer

Night, the beloved. Night, when words fade and things come alive. When the destructive analysis of day is done, and all that is truly important becomes whole and sound again. When man reassembles his fragmentary self and grows with the calm of a tree.

Translated by Bernard Lamotte
Flight to Arras
Chapter I (p. 23)
Reynal & Hitchcock. New York, New York, USA. 1942

Diamond, Neil 1941–
American pop/folk singer, composer, and musician

I thank the Lord for the night time
To forget the day...

Classics: The Early Years (1966–1967)
Thank the Lord for the Nighttime
Columbia Records #38792. 1983

Murdin, Paul
British astronomer

Astronomers, literally, and human beings in general, figuratively, need the interruption of the night.

In Derek McNally
The Vanishing Universe
The Aims of Astronomy in Science and the Humanities: Why Astronomy Must Be Protected (p. 19)
Cambridge University Press. Cambridge, England. 1994

Stevenson, Robert Louis 1850–94
Scottish essayist and poet

Night is a dead monotonous period under a roof; but in the open world it passes lightly, with its stars and dews and perfumes, and the hours are marked by changes in the face of Nature.

Travels with a Donkey in the Cevennes
A Night Among the Pines (p. 79)
C. Kegan Paul & Company. London, England. 1879

Tagore, Rabindranath 1861–1941
Indian poet and philosopher

The night is like a dark child just born of her mother day. Millions of stars crowding round its cradle watch it, standing still, afraid lest it should wake up.

Personality

The World of Personality (p. 57)

The Macmillan Company. New York, New York, USA. 1917

NOCTURNAL

Holland, W. J.

No biographical data available

There are whole armies of living things, which when we go to sleep, begin to awaken; and when we awaken, go to sleep.

The Moth Book: A Popular Guide to a Knowledge of the Moths of North America

The World of the Dark (p. 77)

Doubleday, Page & Company. New York, New York, USA. 1904

There are two worlds; the world of sunshine, and the world of the dark. Most of us are more or less familiarly acquainted with the first; very few of us are well acquainted with the latter. Our eyes are well adapted to serve us in the daylight, but they do not serve us as well in the dark, and we therefore fail to know, unless we patiently study them, what wonders this world of the dark holds within itself.

The Moth Book: A Popular Guide to a Knowledge of the Moths of North America

The World of the Dark (p. 77)

Doubleday, Page & Company. New York, New York, USA. 1904

NONSENSE

Eddington, Sir Arthur Stanley 1882–1944
English astronomer, physicist, and mathematician

That which in the physical world shadows the nonsense in the mind affords no ground for its condemnation. In a world of aether and electrons we might perhaps encounter nonsense; we could not encounter damned nonsense.

The Nature of the Physical World

Conclusion (p. 345)

The Macmillan Company. New York, New York, USA. 1930

NOTATION

Brough, J. C.

No biographical data available

Though Frankland's notation commands admiration,
As something exceedingly clever,
And Mr. Kay Shuttleworth praises its subtle worth,
I give it up sadly for ever:
Its brackets and braces, and dashes and spaces,

And letters decreased and augmented
Are grimly suggestive of Lunes to make restive
A chemical printer demented.
I've tried hard, but vainly, to realize plainly
Those bonds of atomic connexion
Which Crum Brown's clear vision discerns with precision
Projecting in every direction.

In C.A. Russell

The History of Valency

Chapter V (p. 106)

Humanities Press. New York, New York, USA. 1971

Cajori, Florian 1859–1930

Swiss-born American educator and mathematician

The miraculous powers of modern calculation are due to three inventions: the Arabic Notation, Decimal Fractions, and Logarithms.

A History of Mathematics

Europe During the Sixteenth, Seventeenth and Eighteenth Centuries (p. 149)

The Macmillan Company. London, England. 1919

Defoe, Daniel 1660–1731

English pamphleteer, journalist, and novelist

I cut every day a notch with my knife, and every seventh notch was as long again as the rest, and every first day of the month, as long again as that long one; and thus I kept my calendar, or weekly, monthly, and yearly reckoning of time.

Robinson Crusoe (p. 46)

Dodd, Mead & Company. New York, New York, USA. 1946

Dieudonné, Jean 1906–92

French mathematician and educator

This difficulty lead very gradually to the recognition of the need for a shorthand to make the sequence of operations easily comprehensible: here we have the problem of notation, which crops up again after every introduction of new objects, and which will probably never cease to torment mathematicians.

Mathematics — The Music of Reason

Chapter III, Section 7 (p. 49)

Springer-Verlag. Berlin, Germany. 1992

Frayn, Michael 1933–

English dramatist

We look at the taciturn, inscrutable universe, and cry,
“Speak to me!”

Constructions

Number 7

Wildwood House. London, England. 1974

Glaisher, James Whitbread Lee 1848–1928

English mathematician

I have great faith in the power of well-chosen notation to simplify complicated theories and to bring remote ones near and I think it is safe to predict that the increased

knowledge of principles and the resulting improvements in the symbolic language of mathematics will always enable us to grapple satisfactorily with the difficulties arising from the mere extent of the subject.

Presidential Address, British Association for the Advancement of Science *Nature*, Section A, Volume 42, Number 1089, September 11, 1890 (p. 466)

Holland, John 1929–
American computer scientist

Mathematical notation is for the scientist what musical notation is for the composer.

Emergence: From Chaos to Order

Chapter 1 (p. 15)

Addison-Wesley Publishing, Inc. Reading, Massachusetts, USA. 1998

Russell, Bertrand Arthur William 1872–1970
English philosopher, logician, and social reformer

...for a good notation has a subtlety and suggestiveness which make it seem, at times, like a live teacher. Notational irregularities are often the first sign of philosophical errors, and a perfect notation would be a substitute for thought.

In Ludwig Wittgenstein

Tractatus Logico-Philosophicus

Introduction (pp. 17–18)

Routledge & Kegan Paul Ltd. London, England. 1922

Whitehead, Alfred North 1861–1947
English mathematician and philosopher

Before the introduction of the Arabic notation, multiplication was difficult, and the division even of integers called into play the highest mathematical faculties. Probably nothing in the modern world could have more astonished a Greek mathematician than to learn that, under the influence of compulsory education, the whole population of Western Europe, from the highest to the lowest, could perform the operation of division for the largest numbers. This fact would have seemed to him a sheer impossibility.... Our modern power of easy reckoning with decimal fractions is the most miraculous result of a perfect notation.

An Introduction to Mathematics

Chapter 5 (p. 39)

Oxford University Press, Inc. New York, New York, USA. 1958

NOVAE

Gaposchkin, Sergei 1898–1984
Russian-born astronomer

When the greatest, the cosmic,
And the most fascinating explosion
Has been probed by the fabulous light
Of the human (but god-like) mind,
It will be remembered
That you shouldered the task
Of exploring the Novae

With intrepid boldness
And richness of thought.

In Arthur Beer

Vistas in Astronomy (Volume 2)

Novae Observed (p. 1506)

Pergamon Press. New York, New York, USA. n.d.

NUCLEUS

Cudmore, Lorraine Lee
American cell biologist

Despite its comparatively prosaic name, like the unassuming nanny who turns out to be the head of the espionage network, the nucleus is the structural and actual center of the cell.

The Center of Life: A Natural History of the Cell

Cellular Evolution (p. 50)

New York Times Book Company. New York, New York, USA. 1977

Rutherford, Ernest 1871–1937
English physicist

It is my personal conviction that if we knew more about the nucleus, we should find it much simpler than we suppose. I am always a believer in simplicity, being a simple fellow.

Guttingen Lecture

December 14, 1931

NULL HYPOTHESIS

Dunnette, Marvin D.

...most of us still remain content to build our theoretical castles on the quicksand of merely rejecting the null hypothesis.

Fads, Fashions, and Folderol in Psychology

American Psychologist, Volume 21, 1966 (p. 345)

Fisher, Sir Ronald Aylmer 1890–1962
English statistician and geneticist

In relation to any experiment we may speak of this hypothesis as the “null hypothesis,” and it should be noted that the null hypothesis is never proved or established, but is possibly disproved, in the course of experimentation. Every experiment may be said to exist only in order to give the facts a chance of disproving the null hypothesis.

The Design of Experiments

II, 8 (p. 16)

Hafner Publishing Company. New York, New York, USA. 1971

Tukey, John W. 1915–2000
American statistician

The worst, i.e., most dangerous, feature of “accepting the null hypothesis” is the giving up of explicit

uncertainty.... Mathematics can sometimes be put in such black-and-white terms, but our knowledge or belief about the external world never can.

The Philosophy of Multiple Comparisons

Statistical Science, Volume 6, Number 1, February 1991 (p. 100–101)

NUMBER

Aeschylus 525 BCE–426 BCE

Greek playwright

...but utterly without knowledge

Moiled, until I the rising of the stars

Showed them, and when they set, Though much obscure.

Moreover, number, the most excellent

Of all inventions, I for them devised,

And gave them writing that retaineth all,

The serviceable mother of the Muse.

In *Great Books of the Western World* (Volume 5)

The Plays of Aeschylus

Prometheus Bound, 457

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Archimedes of Syracuse 287 BCE–212 BCE

Sicilian mathematician

There are some, King Gelon, who think that the number of the sand is infinite in multitude; and I mean by the sand not only that which exists about Syracuse and the rest of Sicily but also that which is found in every region inhabited or uninhabited. Again there are some who, without regarding it as infinite, yet think that no number has been named which is great enough to exceed its multitude.... But I will try to show you by means of geometrical proofs, which you will be able to follow, that, of the numbers named by me, and given in the work which I sent to Zeuxippus, some exceed not only the number of the mass of sand equal in magnitude to the earth, but also that of a mass equal in magnitude to the universe.

The Works of Archimedes

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Asimov, Isaac 1920–92

American author and biochemist

Human beings are very conservative in some ways and virtually never change numerical conventions once they

grow used to them. They even come to mistake them for laws of nature.

Foundation and Earth (p. 376)

Doubleday & Company, Inc. Garden City, New York, USA. 1986

Auster, Paul 1947–

American writer

I've dealt with numbers all my life, of course, and after a while you begin to feel that each number has a personality of its own. A twelve is very different from a thirteen, for example. Twelve is upright, conscientious, intelligent, whereas thirteen is a loner, a shady character who won't think twice about breaking the law to get what he wants. Eleven is tough, an outdoorsman who likes tramping through woods and scaling mountains; ten is rather simpleminded, a bland figure who always does what he's told; nine is deep and mystical, a Buddha of contemplation.... Numbers have souls, and you can't help but get involved with them in a personal way.

The Music of Chance

Chapter 4 (p. 73)

Viking Penguin. New York, New York, USA. 1990

Bacon, Sir Francis 1561–1626

English lawyer, statesman, and essayist

...insomuch as we see in the schools both of Democritus and of Pythagoras, that the one did ascribe figure to the first seeds of things, and the other did suppose numbers to be the principles and originals of things.

In *Great Books of the Western World* (Volume 30)

The Advancement of Learning

Second Book, Chapter VIII, Section 1 (p. 46)

...number theory...is a field of almost pristine irrelevance to everything except the wondrous demonstration that pure numbers, no more substantial than Plato's shadows, conceal magical laws and orders that the human mind can discover after all.

New Answer for an Old Question

Newsweek, 5 July, 1993 (p. 53)

Bell, E. T. (Eric Temple) 1883–1960

Scottish-American mathematician and educator

Roughly it amounts to this: mathematical analysis as it works today must make use of irrational numbers (such

as the square root of two); the sense if any in which such numbers exist is hazy. Their reputed mathematical existence implies the disputed theories of the infinite. The paradoxes remain. Without a satisfactory theory of irrational numbers, among other things, Achilles does not catch up with the tortoise, and the earth cannot turn on its axis. But as Galileo remarked, it does. It would seem to follow that something is wrong with our attempts to compass the infinite.

Debunking Science

University of Washington Book Store. Seattle, Washington, USA. 1930

The algebraic numbers are spotted over the plane like stars against a black sky; the dense blackness is the firmament of the transcendentals.

Men of Mathematics (p. 569)

Simon & Schuster. New York, New York, USA. 1937

The next fundamental assumption of the Pythagoreans lies much deeper, so deep in fact that civilized man can scarcely hope to fetch it up to the full light of reason. Odd numbers are male; even numbers, female. We can only ask why, expecting no answer except possibly a hesitant allusion to a vestigial phallicism or a forgotten Orphism.

The Magic of Numbers

Chapter 14 (p. 155)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1946

The theory of numbers is the last great uncivilized continent of mathematics. It is split up into innumerable countries, fertile enough in themselves, but all the more or less indifferent to one another's welfare and without a vestige of a central, intelligent government. If any young Alexander is weeping for a new world to conquer, it lies before him.

The Queen of the Sciences

Chapter VII (p. 91)

The Williams & Wilkins Company. Baltimore, Maryland, USA. 1931

Berry, Daniel M.

In the beginning, everything was void, and J. H. W. H. Conway began to create numbers. Conway said, "Let there be two rules which bring forth all numbers large and small. This shall be the first rule: Every number corresponds to two sets of previously created numbers, such that no member of the left set is greater than or equal to any member of the right set.

And the second rule shall be this: One number is less than or equal to another number if and only if no member of the first number's left set is greater than or equal to the second number, and no member of the second number's right set is less than or equal to the first number." And Conway examined these two rules he had made, and behold! they were very good.

The Conway Stones: What the Original Hebrew May Have Been

Mathematics Magazine, Volume 49, Number 4, September 1976 (p. 208)

Boethius ca. 475–524

Roman philosopher and statesman

...in the science of numbers ought to be preferred as an acquisition before all others, because of its necessity and because of the great secrets and other mysteries which there are in the properties of numbers. All sciences partake of it, and it has need of none.

Eco, Umberto 1932–

Italian novelist, essayist, and scholar

With numbers you can do anything you like. Suppose I have the sacred number 9 and I want to get a number 1314, date of the execution of Jacques de Molay — a date dear to anyone who, like me, professes devotion to the Templar tradition of knighthood. What do I do? I multiply nine by one hundred and forty-six, the fateful day of destruction of Carthage. How do I arrive at this? I divided thirteen hundred and fourteen by two, by three, *et cetera*, until I found a satisfying date. I could also have divided thirteen hundred and fourteen by 6.28, the double of 3.14, and I would have got two hundred and nine. That is the year Attalus I, king of Pergamon, ascended the throne. You see?

What would I do without numbers?

A 7 there and a 3 here,

days in a month

months in a year

AD and BC

and all such symbols.

In Ernest Robson and Jet Wimp

Against Infinity

Numbers (p. 22)

Primary Press. Parker Ford, Pennsylvania, USA. 1979

Ferguson, Kitty

Science writer

Letting numbers take us where we can’t go in person — whether that’s to the top of a windmill or to the origin and borders of the universe — has been and still is one of humankind’s favorite intellectual adventures.

Measuring the Universe: Our Historic Quest to Chart the Horizons of Space and Time

Prologue (p. 3)

Walker & Company. New York, New York, USA. 1999

Feynman, Richard P. 1918–88

American theoretical physicist

You know...there are about a hundred billion stars in the galaxy — ten to the eleventh power. That used to be considered a huge number. Today it’s less than the national debt. We ought to call them “economical numbers.”

In David L. Goodstein and Judith R. Goodstein

Feynman's Lost Lecture: The Motion of Planets Around the Sun

Chapter 2 (p. 62)

W.W. Norton & Company, Inc. New York, New York, USA. 1996

Gass, Fredrick

No biographical data available

Adam, did you find a good system for naming ordinals?

A: Ordinals? I thought you said “animals.”

Constructive Ordinal Notation Systems

Mathematics Magazine, Volume 57, Number 3, May 1984 (p. 131)

Gibran, Kahlil 1883–1931

Lebanese-American philosophical essayist

And he who is versed in the science of numbers can tell of the regions of weight and measures, but he cannot conduct you thither.

For the vision of one man lends not its wings to another man.

The Prophet

On Teaching (pp. 56–57)

Alfred A. Knopf. New York, New York, USA. 1969

Ginsey, Gurney

No biographical data available

There are numbers I don’t trust...take

One — too proud, too pointed, much too

Sure that all begins with him — and
Two, that sits cross-legged on the
Path and sneers as though he knows all secrets...

Numbers

Mathematics Magazine, Volume 38, Number 3, May 1965 (p. 168)

Gould, Stephen Jay 1941–2002

American paleontologist and evolutionary biologist

Numbers have undoubted powers to beguile and bembur,
but critics must probe behind numbers to the character of
arguments and the biases that motivate them.

An Urchin in the Storm: Essays About Books and Ideas

Chapter 8 (p. 144)

W.W. Norton & Company, Inc. New York, New York, USA. 1987

Hales, Stephen 1677–1761

English physiologist and clergyman

...since we are assured that the all-wise Creator has
observed the most exact proportions, of number, weight,
and measure, in the make of all things; the most likely
way therefore, to get any insight into the nature of these
parts of the creation, which come within our observation,
must in all reason be to number, weigh and measure.

Vegetable Statics

The Introduction (p. xxxi)

The Scientific Book Guild. London, England. 1961

Hardy, G. H. (Godfrey Harold) 1877–1947

English pure mathematician

The elementary theory of numbers should be one of the
very best subjects for early mathematical instruction. It
demands very little previous knowledge; its subject mat-
ter is tangible and familiar; the processes of reasoning
which it employs are simple, general and few; and it is
unique among the mathematical sciences in its appeal to
natural human curiosity. A month's intelligent instruc-
tion in the theory of numbers ought to be twice as instruc-
tive, twice as useful, and at least ten times as entertaining
as the same amount of calculus for engineers.

An Introduction to the Theory of Numbers

Bulletin of the American Mathematical Society, Volume 35, 1929 (p. 818)

Henle, James M.

American mathematician

Belief in a large number is no more daring, I should think,
than belief in Tolstoy's *War and Peace*.

The Happy Formalist

The Mathematical Intelligencer, Volume 13, Number 1, Winter 1991

(p. 14)

Hofstadter, Douglas 1945–

American cognitive scientist and author

People enjoy inventing slogans which violate basic arith-
metic but which illustrate “deeper” truths, such as “1 and
1 make 1” (for lovers), or “1 plus 1 plus 1 equals 1” (the

Trinity)... Two raindrops running down a window pane
merge; does one plus one make one? A cloud breaks up
into two clouds — more evidence for the same? ...Num-
bers as realities misbehave. However, there is an ancient
and innate sense in people that numbers ought not to mis-
behave. There is something clean and pure in the abstract
notion of number...and there ought to be a way of talk-
ing about numbers without always having the silliness
of reality come in and intrude. The hard-edged rules that
govern “ideal” numbers constitute arithmetic, and their
more advanced consequences constitute number theory.

Godel, Escher, Bach: An Eternal Golden Braid

Part I, Chapter II (p. 56)

Basic Books, Inc. New York, New York, USA. 1979

Holmes, Oliver Wendell 1809–94

American physician, poet, and humorist

Dr. Hooke, the famous English mathematician and phi-
losopher, made a calculation of the number of separate
ideas the mind is capable of entertaining, which he esti-
mated as 3,155,760,000.

Pages from an Old Volume of Life

Chapter VIII (p. 274, fn a)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

Hume, David 1711–76

Scottish philosopher and historian

...I observe that when we mention any great number,
such as a thousand, the mind has generally no adequate
idea of it, but only a power of producing such an idea
by its adequate idea of the decimals, under which the
number is comprehended.

A Treatise of Human Nature

Book I, Part I, Section VII (p. 70)

Penguin Books. Baltimore, Maryland, USA. 1969

Huxley, Aldous 1894–1963

English writer and critic

A million million spermatozoa,

All of them alive:

Out of their cataclysm but one poor Noah

Dare hope to survive.

And among that billion minus one

Might have chanced to be

Shakespeare, another Newton, a new Donne —

But the One was Me.

Stories, Essays, and Poems

Fifth Philosopher's Song (p. 410)

J.M. Dent & Sons Ltd. London, England. 1937

Jacobi, Karl Gustav Jacob 1804–51

German mathematician

The God that reigns in Olympus is Number Eternal.

In Tobias Dantzig

Number: The Language of Science (4th edition)

Chapter 10 (p. 179)

The Macmillan Company. New York, New York, USA. 1954

Jevons, William Stanley 1835–82

English economist and logician

Number is but another name for diversity.

The Principles of Science: A Treatise on Logic and Scientific Method
Book I, Chapter VIII (p. 156)
Macmillan & Company. London, England. 1887

Johnson, Samuel 1696–1772

English critic, biographer, and essayist

Round numbers, she said, are always false.

In Mrs. Piozzi, Richard Cumberland, Bishop Percy and other book
Johnsoniana
Apothegms, Sentiment, Opinions, &c
G. Bell. London, England. 1884

Juster, Norton 1929–

American architect and writer

“How terribly confusing,” he cried. “Everything here is called exactly what it is. The triangles are called triangles, the circles are called circles, and even the same numbers have the same name. Why, can you imagine what would happen if we named all the twos Henry or George or Robert or John or lots of other things? You’d have to say Robert plus John equals four, and if the four’s name were Albert, things would be hopeless.”

The Phantom Tollbooth
Chapter 14 (pp. 173–174)
Alfred A. Knopf. New York, New York, USA. 1989

Kaminsky, Kenneth

American mathematics professor, writer, and editor

How poor were we? Why, we were so poor we only had imaginary numbers to play with.

Professor Fogelfro
Mathematics Magazine, Volume 69, Number 4, October 1996 (p. 303)

Kelvin, Lord William Thomson 1824–1907

Scottish engineer, mathematician, and physicist

When you can measure what you are speaking about and express it in numbers you know something about it; but when you cannot express it in numbers, your knowledge is of a meager and unsatisfactory kind: it may be the beginning of knowledge, but you have scarcely, in your thoughts, advanced to the stage of science, whatever the matter may be.

Popular Lectures and Addresses (Volume 1)
Lecture, Institution of Civil Engineering
3 May 1883 (p. 73)
Macmillan & Company Ltd. London, England. 1894

Klein, William

No biographical data available

Numbers are friends, for me, more or less. It doesn’t mean the same for you, does it — 3,844? For you it’s just a three and an eight and a four and a four. But I say, “Hi! 62 squared.”

In Oliver Sacks

The Man Who Mistook His Wife for a Hat and Other Clinical Tales
The Twins (pp. 198–199)
Summit Books. New York, New York, USA. 1985

Kline, Morris 1908–92

American mathematics professor and writer

The theory of infinite numbers is only one of the creations of the nineteenth-century critical thinkers. Almost bizarre in its contents it is nevertheless both logical and useful.

Mathematics in Western Culture
Chapter XXV (p. 409)
Oxford University Press, Inc. New York, New York, USA. 1953

Kronecker, Leopold 1823–91

German mathematician

Number theorists are like lotus-eaters — having once tasted of this food they can never give it up.

In Howard W. Eves
Mathematical Circles (Volume 2)
Mathematical Circles Squared
302 (p. 149)
The Mathematical Association of America, Inc. 2003

Die Ganzen Zahlen hat Gott gemacht, andere ist Menschenwerk.

God created the natural numbers; everything else is man’s handiwork.

In Sir Arthur Stanley Eddington
The Nature of the Physical World (p. 246)
At The University Press. Cambridge, England. 1929

Leibniz, Gottfried Wilhelm 1646–1716

German philosopher and mathematician

There is an old saying that God created everything according to weight, measure and number.

Philosophical Papers and Letters (Volume 1)
On the General Characteristic (pp. 339–340)
The University of Chicago Press. Chicago, Illinois, USA. 1956

Some things cannot be weighed, as having no force and power; some things cannot be measured, by reason of having no parts; but there is nothing which cannot be numbered.

In G. Frege
The Foundations of Arithmetic (p. 31e)
Northwestern University Press. Evanston, Illinois, USA. 1968...a miracle of analysis, a monster of the ideal world, almost an amphibian between being and not being.
In Walter R. Fuchs
Mathematics for the Modern Mind
Chapter 7, Section 7.1 (p. 168)
Macmillan & Company Ltd. New York, New York, USA. 1967

Lichtenberg, Georg Christoph 1742–99

German physicist and satirical writer

People don’t like to choose lot #1 in a lottery. “Choose it,” Reason cries loudly. “It has as good a chance of win-

ning the 12,000 thalers as any other.” “In Heaven’s name don’t choose it,” *a je ne sais quoi* whispers. “There’s no example of such little numbers being listed before great winnings.” And actually no one takes it.

Lichtenberg: Aphorisms & Letters

Aphorisms (p. 46)

Jonathan Cape. London, England. 1969

Locke, John 1632–1704

English philosopher and political theorist

For number applies itself to men, angels, actions, thoughts; everything that either doth exist, or can be imagined.

In *Great Books of the Western World* (Volume 35)

An Essay Concerning Human Understanding

Book II, Chapter XVI, Section 1 (p. 165)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Longfellow, Henry Wadsworth 1807–82

American poet

Tell me not, in mournful numbers,
Life is but an empty dream!

The Poetical Works of Henry Wadsworth Longfellow

A Psalm of Life, Stanza 1

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

Maxwell, James Clerk 1831–79

Scottish physicist

Thus numbers may be said to rule the whole world of quantity, and the four rules of arithmetic may be regarded as the complete equipment of the mathematician.

In E.T. Bell

Men of Mathematics (p. xv)

Simon & Schuster. New York, New York, USA. 1937

Mazur, Barry 1937–

American mathematician

In the history of the concept of number, number has been adjective (three cows, three monads) and noun (three, pure and simple), and now..., number seems to be more like a verb (to triple).

Imagining Numbers

Part II, Chapter 8, Section 37 (p. 138)

Farrar, Straus & Giroux. New York, New York, USA. 2003

Parker, F. W.

No biographical data available

Number was born in superstition and reared in mystery... numbers were once made the foundation of religion and philosophy, and the tricks of figures have had a marvelous effect on a credulous people.

Talks on Pedagogics

Chapter IV (p. 64)

A.S. Barnes & Company. New York, New York, USA. 1909

Paulos, John Allen 1945–

American mathematician

The mathematician G. H. Hardy was visiting his protégé, the Indian mathematician Ramanujan, in the hospital. To make small talk, he remarked that 1729, the number of the taxi which had brought him, was a rather dull number, to which Ramanujan replied immediately, “No, Hardy! It is a very interesting number. It is the smallest number expressible as the sum of two cubes in two different ways.

Innumeracy

Examples and Principles (p. 6)

Hill & Wang. New York, New York, USA. 1988

Peirce, Charles Sanders 1839–1914

American scientist, logician, and philosopher

The rudest numerical scales, such as that by which the mineralogists distinguish different degrees of hardness, are found useful. The mere counting of pistils and stamens sufficed to bring botany out of total chaos into some kind of form. It is not, however, so much from counting as a measuring, not so much from the conception of number as from that of continuous quantity, that the advantage of mathematical treatment comes. Number, after all, only serves to pin us down to a precision in our thoughts which, however beneficial, can seldom lead to lofty conceptions, and frequently descends to pettiness.

Chance, Love and Logic: Philosophical Essays

The Doctrine of Chances (pp. 61–62)

Harcourt, Brace & Company, Inc. New York, New York, USA. 1923

Philolaus ca. 480 BCE

Greek philosopher

All things which can be known have number; for it is not possible that without number anything can be either conceived or known.

In Carl B. Boyer

A History of Mathematics (p. 60)

John Wiley & Sons, Inc. New York, New York, USA. 1968

Plato 428 BCE–347 BCE

Greek philosopher

SOC: And all arithmetic and calculations have to do with number?

GLAUCON: Yes.

SOC: And they appear to lead the mind towards truth?

GLAUCON: Yes, in a very remarkable manner.

In *Great Books of the Western World* (Volume 7)

The Republic

Book VII, Section 525 (p. 393)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Pliny (C. Plinius Secundus) 23–79

Roman savant and writer

Why do we believe that in all matters the odd numbers are more powerful.

Natural History

Volume 8, Book XXVIII, sec 23

Harvard University Press. Cambridge, Massachusetts, USA. 1947

Plotinus ca. 205–70
Egyptian-Roman philosopher

Objects of sense are not unlimited and therefore the Number applying to them cannot be so. Nor is an enumerator able to number to infinity; though we double, multiply over and over again, we still end with a finite number...

In *Great Books of the Western World* (Volume 17)

The Six Enneads

Sixth Ennead VI.2 (p. 311)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Pope, Alexander 1688–1744
English poet

As yet a child, nor yet a fool to fame,
I lisp'd in numbers, for the numbers came.

The Complete Poetical Works

An Epistle to Dr. Arbuthnot, l. 127

Houghton Mifflin Company. New York, New York, USA. 1903

Proclus 411–485
Greek philosopher

Wherever there is number, there is beauty.

In Morris Kline

Mathematical Thought from Ancient to Modern Times (p. 131)

Oxford University Press, Inc. New York, New York, USA. 1972

Russell, Bertrand Arthur William 1872–1970
English philosopher, logician, and social reformer

We are the finite numbers.

We are the stuff of the world.

Whatever confusion cumbers

The earth is by us unfurled.

We revere our master Pythagoras

And deeply despise every hag or ass.

Not Endor's witch nor Balaam's mount

We recognize as wisdom's fount.

But round and round in endless baller

We move like comets seen by Halley.

And honored by the immortal Plato

We think no later mortal great-o.

We follow the laws

Without a pause,

For we are the finite numbers.

The Collected Stories of Bertrand Russell

Nightmares of Eminent Persons, The Mathematician's Nightmare (p. 43)

George Allen & Unwin Ltd. London, England. 1972

Sagan, Carl 1934–96
American astronomer and author

Hiding between all the ordinary numbers was an infinity of transcendental numbers whose presence you would never have guessed until you looked deeply into mathematics.

Contact: A Novel

Chapter 1 (p. 21)

Simon & Schuster. New York, New York, USA. 1985

Sandburg, Carl 1878–1967
American poet and biographer

He was born to wonder about numbers.

Complete Poems

Number Man

Harcourt, Brace. New York, New York, USA. 1950

Shakespeare, William 1564–1616
English poet, playwright, and actor

This is the third time; I hope good luck lies in odd numbers.... There is a divinity in odd numbers, either in nativity, chance or death.

Where are the interns I recall?

Fountains of wisdom, one and all.

Men in white, mature and strong —

They were the Doctors, never wrong.

Something happened to them, or me;

They're not the giants they used to be.

With stethoscopes like shiny toys

They seem to me like little boys.

Excuse me for crying on your shoulder —

They're not younger — I am older.

Interns

American Journal of Nursing, November 1968 (p. 2492)

Mayo, Charles Horace 1865–1939

American physician

The trained nurse has given nursing the human, or shall we say, the divine touch, and made the hospital desirable for patients with serious ailments regardless of their home advantages.

The Trained Nurse

Collected Papers of the Mayo Clinic & Mayo Foundation,

Volume 13, 1921

Nightingale, Florence 1820–1910

English nursing pioneer and statistician

For us who Nurse, our Nursing is a thing, which, unless in it we are making progress every year, every month, every week, — take my word for it we are going back.

Address

"Nightingale Fund" School

St Thomas Hospital, 1872

Conceit and Nursing cannot exist in the same person any more than new patches on an old garment.

Address

"Nightingale Fund" School

St. Thomas Hospital, 1872

The most important practical lesson that can be given to nurses is to teach them what to observe — how to observe — what symptoms indicate improvement — what the reverse — which are of importance — which are of none — which are the evidence of neglect — and of what kind of neglect.

Notes on Nursing: What It Is and What It Is Not

Chapter XIII (p. 59)

Harrison. London, England. 1859

I use the word nursing for want of a better. It has been limited to signify little more than the administration of medicines and the application of poultices. It ought to signify the proper use of fresh air, light, warmth, cleanliness, quiet, and the proper selection and administration of diet — all at

the least expense of vital power to the patient. It has been said and written scores of times, that every woman makes a good nurse. I believe, on the contrary, that the very elements of nursing are all but unknown.

Notes on Nursing: What It Is and What It Is Not
Notes on Nursing: What It Is and What It Is Not (p. 6)
Harrison. London, England. 1859

In watching disease, both in private houses and in public hospitals, the thing which strikes the experienced observer most forcibly is this, that the symptoms or the sufferings generally considered to be inevitable and incident to the disease are very often not symptoms of the disease at all, but of something quite different — of the want of fresh air, or of light, or of warmth, or of quiet, or of cleanliness, or of punctuality and care in the administration of diet, of each or of all of these. And this quite as much in private as in hospital nursing.

Notes on Nursing: What It Is and What It Is Not
Notes on Nursing: What It Is and What It Is Not (p. 5)
Harrison. London, England. 1859

Never to allow a patient to be wakened, intentionally or accidentally, is a sine qua non of all good nursing.

Notes on Nursing: What It Is and What It Is Not
Noise (p. 25)
Harrison. London, England. 1859

It seems a commonly received idea among men and even among women themselves that it requires nothing but a disappointment in love, the want of an object, a general disgust, or incapacity for other things to turn a woman into a good nurse.

Notes on Nursing: What It Is and What It Is Not
Conclusion (p. 75)
Harrison. London, England. 1859

A nurse who rustles (I am speaking of nurses professional and unprofessional) is the horror of a patient, though perhaps he does not know why.

Notes on Nursing: What It Is and What It Is Not
Noise (p. 27)
Harrison. London, England. 1859

Osler, Sir William 1849–1919
Canadian physician and professor of medicine

...the trained nurse has become one of the great blessings of humanity, taking a place beside the physician and the priest, and not inferior to either in her mission.

Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine
Nurse and Patient (p. 156)

Compressing an hour into a half,

Busy, yet heedful

Rushes the nurse

Bringing earnest solace to the

Sick and the needful.

Who must come first? How can she know?

Inverted scope, focused by Death,

Grants new perspective as He robs breath.

Point of View
Journal of Nursing, November 1968 (p. 2492)

NUTRITION

Davis, Adelle 1904–74
Nutritionist

Nutrition is a young subject; it has long been kicked around like a puppy that cannot take care of itself. Food faddists and crackpots have kicked it pretty cruelly.... They seem to believe that unless food tastes like Socratic hemlock, it cannot build health. Frankly, I often wonder what such persons plan to do with good health in case they acquire it.

Let's Eat Right to Keep Fit
Chapter 1 (p. 3)
New American Library. New York, New York, USA. 1970

...eat breakfast like a king, lunch like a prince, and dinner like a pauper.

Let's Eat Right to Keep Fit
Chapter 2 (p. 19)

O

OBJECTIVITY

Gould, Stephen Jay 1941–2002

American paleontologist and evolutionary biologist

Objectivity is not an unobtainable emptying of mind, but a willingness to abandon a set of preferences — for or against some view, as Darwin said — when the world seems to work in a contrary way.

Dinosaur in a Haystack: Reflections in Natural History

Part Three, Chapter 11 (p. 136)

Random House, Inc. New York, New York, USA. 1995

Objectivity cannot be equated with mental blankness; rather, objectivity resides in recognizing your preferences and then subjecting them to especially harsh scrutiny — and also in a willingness to revise or abandon your theories when the tests fail (as they usually do).

The Lying Stones of Marrakech: Penultimate Reflections in Natural History

The Proof of Lavoisier's Plates (pp. 104–105)

Harmony Books. New York, New York, USA. 2000

Schiebinger, Londa 1952–

American professor and writer of science history

Objectivity in science cannot be proclaimed, it must be built.

Nature's Body: Gender in the Making of Modern Science

Chapter 3 (p. 114)

Beacon Press. Boston, Massachusetts, USA. 1993

OBSCURATIONISM

Dawkins, Richard 1941–

English ethologist, evolutionary biologist, and popular science writer

Dawkin's Law of the Conservation of Difficulty states that obscuratationism in an academic subject expands to fill the vacuum of its intrinsic simplicity.

A Devil's Chaplain: Reflections on Hope, Lies, Science, and Love (p. 8)

Houghton Mifflin Company. Boston, Massachusetts, USA. 2003

OBSERVATION

Abbott, Donald Putnam 1920–86

American marine biologist and professor

Get the experience of looking at fresh things. If you watch live animals, you gain clearer insights in shorter time than you would watching dead animals for much longer.

In Galen Howard Hilgard (ed.)

Observing Marine Invertebrates: Drawings from the Laboratory

Author's Preface (p. xvi)

Stanford University Press. Stanford, California, USA. 1987

Adams, Douglas 1952–2001

English author, comic radio dramatist, and musician

...a scientist must also be absolutely like a child. If he sees a thing, he must say that he sees it, whether it was what he thought he was going to see or not. See first, think later, then test. But always see first. Otherwise you will only see what you were expecting.

The Ultimate Hitchhiker's Guide to The Galaxy

When Moses emerged from the cloudy obscurity of Mount Sinai and stood before the people with the stone

tablets in his hand, he announced that his laws were based on direct observation. It is not recorded that any one doubted him.

Science: The False Messiah

Chapter III (p. 42)

The Bobbs-Merrill Company Publishers, Indianapolis, Indiana, USA.

1927

Baker, Henry 1698–1774

English naturalist

Beware of determining and declaring your Opinion suddenly on any Object; for Imagination often gets the Start of judgment, and makes People believe they see Things, which better Observations will convince them could not possibly be seen: Therefore assert nothing till after repeated Experiments and Examinations in all Lights and in all Positions.

The Microscope Made Easy

Part I, Chapter XV, Cautions in Viewing Objects (p. 62)

Printed for R. Dodsley. London, England. 1743

Bauer, Georg (Agricola or Georgius

Agricola) 1494–1555

German scholar and scientist

I have omitted all those things which I have not myself seen, or have not read or heard of from persons upon whom I can rely. That which I have neither seen, nor carefully considered after reading or hearing of, I have not written about. The same rule must be understood with regard to all my instruction, whether I enjoin things which ought to be done, or describe things which are usual, or condemn things which are done.

De Re Metallica

Preface (pp. xxx–xxxii)

Dover Publications, Inc. New York, New York, USA. 1950

Bernard, Claude 1813–78

French physiologist

Only within very narrow boundaries can man observe the phenomena which surround him; most of them naturally escape his senses, and mere observation is not enough.

Translated by Henry Copley Greene

An Introduction to the Study of Experimental Medicine

Part One, Chapter I (p. 5)

Henry Schuman, Inc. New York, New York, USA. 1927

Observation, then, is what shows facts.; experiment is what teaches about facts and gives experience in relation to anything.

Translated by Henry Copley Greene

An Introduction to the Study of Experimental Medicine

Part One, Chapter I, Section ii (p. 11)

Henry Schuman, Inc. New York, New York, USA. 1927

Speaking concretely, when we say “making experiments or making observations,” we mean that we devote ourselves to investigation and to research, that we make

attempts and trials in order to gain facts from which the mind, through reasoning, may draw knowledge or instruction.

Speaking in the abstract, when we say, “relying on observation and gaining experience,” we mean that observation is the mind’s support in reasoning, and experience the mind’s support in deciding, or still better, the fruit of exact reasoning applied to the interpretation of facts.

Observation, then, is what shows facts; experiment is what teaches about facts and gives experience in relation to anything.

Translated by Henry Copley Greene

An Introduction to the Study of Experimental Medicine

Part One, Chapter I, Section ii (p. 11)

Henry Schuman, Inc. New York, New York, USA. 1927

Men sometimes seem to confuse experiment with observation.

Translated by Henry Copley Greene

...yet there is a difference between scientific and artistic observation. The scientist observes to turn away and generalize; the artist observes to seize and use reality in all its individuality and peculiarity.

A Second Way of Knowing: The Riddle of Human Perception

Chapter 11 (p. 150)

Press Hall Press. New York, New York, USA. 1991

Box, George E. P. 1919–

English statistician

To find out what happens to a system when you interfere with it you have to interfere with it (not just passively observe it).

Use and Abuse of Regression

Technometrics, Volume 8, Number 4, November 1966 (p. 629)

Brownlee, Donald

American astronomer

It is no secret that our lives are patterned by personal experience, and by our observations of the experience of others. So it is with the entire human family, staring outward from a place that we know to others that we do not. Our knowledge of home helps us to understand the ways of planets beyond our ken.

In Nigel S. Hey

Solar System

How Rare Is the Earth? (p. 156)

Weidenfield & Nicolson. London, England. 2002

Burroughs, John 1837–1921

American naturalist and writer

Unadulterated, unsweetened observations are what the real nature-lover craves. No man can invent incidents and traits as interesting as the reality.

Ways of Nature

Chapter I (p. 15)

Book for Libraries Press. Freeport, New York, USA. 1971

Carlyle, Thomas 1795–1881

English historian and essayist

Shakespeare says, we are creatures that look before and after: the more surprising that we do not look round a little, and see what is passing under our very eyes.

Sartor Resartus

Book I, Chapter I (p. 3)

Ginn & Company. Boston, Massachusetts, USA. 1897

Cohen, Morris Raphael 1880–1947

American philosopher

Accidental discoveries of which popular histories of science make mention never happen except to those who have previously devoted a great deal of thought to the matter. Observation unilluminated by theoretic reason is sterile.... Wisdom does not come to those who gape at nature with an empty head. Fruitful observation depends not as Bacon thought upon the absence of bias or anticipatory ideas, but rather on a logical multiplication of them so that having many possibilities in mind we are better prepared to direct our attention to what others have never thought of as within the field of possibility.

Reason and Nature

Chapter One, Section III (p. 17)

The Free Press, Publishers, Glencoe, Illinois, USA. 1931

da Vinci, Leonardo 1452–1519

Italian High Renaissance painter and inventor

Science is the observation of things possible, whether present or past; prescience is the knowledge of things which may come to pass.

The Literary Works of Leonardo da Vinci (Volume 2)

1148 (p. 239)

University of California Press. Berkeley, California, USA. 1977

Darwin, Charles Robert 1809–82

English naturalist

Some of my critics have said, “Oh, he is a good observer, but he has no power of reasoning!” I do not think that this can be true, for the “Origin of Species” is one long argument from the beginning to the end, and it has convinced

not a few able men. No one could have written it without having some power of reasoning.

In Francis Darwin (ed.)

The Life and Letters of Charles Darwin (Volume 1)

Chapter II (p. 82)

Chapter I (pp. 29–30)
Longmans, Green & Company. London, England. 1949

Dumas, Jean Baptiste-Andre 1800–84
French biochemist

The art of observation and that of experimentation are very distinct. In the first case, the fact may either proceed from logical reasons or be mere good fortune; it is sufficient to have some penetration and a sense of truth in order to profit by it. But the art of experimentation leads from the first to the last link of the chain, without hesitation and without a blank, making successive use of Reason, which suggests an alternative, and of Experience, which decides on it, until, starting from a faint glimmer, the full blaze of light is reached.

In Sir Richard Arman Gregory
Discovery; or, The Spirit and Service of Science
Chapter VI (p. 126)
Macmillan & Company Ltd. London, England. 1918

Durkheim, Emile 1858–1917
French sociologist

Even one well-made observation will be enough in many cases, just as one well-constructed experiment often suffices for the establishment of a law.

The Rules of Sociological Method

Chapter IV (p. 80)
The Free Press. Glencoe, Illinois, USA. 1938

Eddington, Sir Arthur Stanley 1882–1944
English astronomer, physicist, and mathematician

We should be unwise to trust scientific inference very far when it becomes divorced from opportunity for observational test.

The Internal Constitution of the Stars
Chapter I (p. 1)
At The University Press. Cambridge, England. 1930

For the truth of the conclusions of physical science, observation is the supreme Court of Appeal. It does not follow that every item which we confidently accept as physical knowledge has actually been certified by the Court; our confidence is that it would be certified by the Court if it were submitted. But it does follow that every item of physical knowledge is of a form which might be submitted to the Court. It must be such that we can specify (although it may be impracticable to carry out) an observational procedure which would decide whether it is true or not. Clearly a statement cannot be tested by observation unless it is an assertion about the results of observation. Every item of physical knowledge must therefore be an assertion of what has been or would be the result of carrying out a specified observational procedure.

The Philosophy of Physical Science
Chapter I, Section IV (pp. 9–10)
The Macmillan Company. New York, New York, USA. 1939

Let us suppose that an ichthyologist is exploring the life of the ocean. He casts a net into the water and brings up a fishy assortment. Surveying his catch, he proceeds in the usual manner of a scientist to systematise what it reveals...In applying this analogy, the catch stands for the body of knowledge which constitutes physical science, and the net for the sensory and intellectual equipment which we use in obtaining it. The casting of the net corresponds to observation; for knowledge which has not been or could not be obtained by observation is not admitted into physical science.

The Philosophy of Physical Science
Chapter II, Section I (p. 16)
The Macmillan Company. New York, New York, USA. 1939

I hope I shall not shock the experimental physicists too much if I add that it is also a good rule not to put overmuch confidence in the observational results that are put forward until they have been confirmed by theory...

New Pathways In Science
Chapter X, Section II (p. 211)
The Macmillan Company. New York, New York, USA. 1935

Einstein, Albert 1879–1955
German-born physicist

It is the theory which decides what we can observe.

In Werner Heisenberg

Physics and Beyond: Encounters and Conversations

Chapter 6 (p. 77)

Harper & Row, Publishers. New York, New York, USA. 1971

A man should look for what is, and not for what he thinks should be...

In Peter Michelmore

Einstein, Profile of the Man (p. 20)

Dodd & Mead Publishers. New York, New York, USA. 1962

Euler, Leonhard 1707–83

Swiss mathematician and physicist

It will seem not a little paradoxical to ascribe a great importance to observations even in that part of the mathematical sciences which is usually called Pure Mathematics, since the current opinion is that observations are restricted to physical objects that make impressions on the senses.

In G. Polya

Induction and Analogy in Mathematics (Volume 1)

Chapter I (p. 3)

Princeton University Press. Princeton, New Jersey, USA. 1954

...in the theory of numbers, which is still very imperfect, we can place our highest hopes in observations; they will lead us continually to new properties which we shall endeavor to prove afterwards.

In G. Polya

Induction and Analogy in Mathematics (Volume 1)

Chapter I (p. 3)

Princeton University Press. Princeton, New Jersey, USA. 1954

Fischer, Martin H. 1879–1962

German-American physician

You must acquire the ability to describe your observations and your experience in such language that whoever observes or experiences similarly will be forced to the same conclusion.

In Howard Fabing and Ray Marr

Fischerisms (p. 8)

C.C. Thomas. Springfield, Illinois, USA. 1944

If in such strivings, we...see but imperfectly, still we should endeavor to see, for even an obscure and distorted vision is better than none.

On the Conservation of Force

Philosophical Magazine, Volume 13, Number 4, 1857 (p. 238)

Feynman, Richard P. 1918–88

American theoretical physicist

The principle that the observation is the judge imposes a severe limitation to the kind of questions that can be answered. They are limited to questions that you can put this way: "if I do this, what will happen?" There

are ways to try and see. Questions like, "should I do this?" and "what is the value of this?" are not of the same kind.

The Meaning of It All: Thoughts of a Citizen Scientist

Chapter I (p. 16)

Perseus Books. Reading, Massachusetts, USA. 1998

Galilei, Galileo 1564–1642

Italian physicist and astronomer

It is not in ancient tomes, but in close observations and personal consecration that a grain of truth may be found. It is so very easy to seek the significance of things in the papers of this or that man rather than in the works of nature which, ever alive and active, are constantly before our eyes.

In Helen Wright

Palomar: The World's Largest Telescope

Origin of the Telescope (p. 9)

The Macmillan Company. New York, New York, USA. 1952

Greer, Scott

No biographical data available

...the link between observation and formulation is one of the most difficult and crucial in the scientific enterprise. It is the process of interpreting our theory or, as some say, of "operationalizing our concepts." Our creations in the world of possibility must be fitted in the world of probability; in Kant's epigram, "Concepts without precepts are empty." It is also the process of relating our observations to theory; to finish the epigram, "Precepts without concepts are blind."

The Logic of Social Inquiry

Part III, Chapter 14 (p. 160)

Aldine Publishing Company. Chicago, Illinois, USA. 1969

Gregg, Alan 1890–1957

American medical educator and philosopher

...most of the knowledge and much of the genius of the research worker lie behind selection of what is worth observing. It is a crucial choice, often determining the success or failure of months of work, often differentiating the brilliant discoverer from the...plodder.

The Furtherance of Medical Research

Chapter I (p. 8)

Yale University Press. New Haven, Connecticut, USA. 1941

Gregory, Sir Richard Arman 1864–1952

British science writer and journalist

An accurate observation remains unaltered throughout the ages. Its scientific value is determined by its truth to Nature; and the more complete the testimony, the less room is there for elaboration by investigators in succeeding generations.

Discovery; or, The Spirit and Service of Science

Chapter IV (p. 70)

Macmillan & Company Ltd. London, England. 1918

In the world of natural knowledge, no authority is great enough to support a theory when a crucial observation has shown it to be untenable.

Discovery; or, The Spirit and Service of Science

Chapter I (p. 12)

Macmillan & Company Ltd. London, England. 1918

Grew, Nehemiah 1641–1712

Scientific writer and journalist

If...an inquiry into the Nature of Vegetation may be of good Import; It will be requisite to see, first of all, What may offer it self to be enquired of; or to understand, what or Scope is: That so doing, we may take our aim the better in making, and having made, in applying our Observations thereunto.

The Anatomy of Plants

An Idea of a Philosophical History of Plants (p. 3)

Printed by W. Rawlins. London, England. 1682

Hales, Stephen 1677–1761

English physiologist and clergyman

...it is from long experience chiefly that we are to expect the most certain rules of practice, yet it is withal to be remembered, that observations, and to put us upon the most probable means of improving any art, is to get the best insight we can into the nature and properties of those things which we are desirous to cultivate and improve.

Vegetable Statics

The Conclusion (p. 214)

The Scientific Book Guild. London, England. 1961

Hanson, Norwood Russell 1924–67

American philosopher of science

The observer may not know what he is seeing: he aims only to get his observations to cohere against the background of established knowledge. This seeing is the goal of observation.

Patterns of Discovery

Chapter I (p. 20)

At The University Press. Cambridge, England. 1958

...there is more to seeing than what meets the eyeball.

Patterns of Discovery

Chapter I (p. 7)

At The University Press. Cambridge, England. 1958

Harvey, William 1578–1657

English physician

...the dull and unintellectual are indisposed to see what lies before their eyes...

In *Great Books of the Western World* (Volume 28)

An Anatomical Disquisition on the Motion of the Heart and Blood in Animals

Dedication (p. 268)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Heisenberg, Werner Karl 1901–76

German physicist and philosopher

This assumption is not permissible in atomic physics; the interaction between observer and object causes uncontrollable and large changes in the system being observed, because of the discontinuous changes characteristic of atomic processes.

The Physical Principles of the Quantum Theory

Introductory (p. 3)

The University of Chicago Press. Chicago, Illinois, USA. 1930

This again emphasizes a subjective element in the description of atomic events, since the measuring device has been constructed by the observer, and we have to remember that what we observe is not nature in itself but nature exposed to our method of questioning.

Physics and Philosophy: The Revolution in Modern Science

Chapter III (p. 58)

Harper & Row, Publishers. New York, New York, USA. 1958

The idea that we do observe something already indicates something irreversible. If we draw a pencil line on a paper, for instance, we have established something which cannot be undone, so to speak. Every observation is irreversible, because we have gained information that cannot be forgotten.

In Paul Buckley and F. David Peat

Glimpsing Reality: Ideas in Physics and the Link to Biology

Werner Heisenberg (p. 12)

University of Toronto Press. Toronto, Ontario, Canada. 1996

...what we observe is not nature itself, but nature exposed to our method of questioning.

Physics and Philosophy: The Revolution in Modern Science

Chapter III (p. 58)

Harper & Row, Publishers. New York, New York, USA. 1958

A real difficulty in the understanding of this interpretation arises, however, when one asks the famous question: But what happens “really” in an atomic event? It has been said before that the mechanism and the results of an observation can always be stated in terms of the classical concepts. But what one deduces from an observation is a probability function, a mathematical expression that combines statements about possibilities or tendencies with statements about our knowledge of facts. So we cannot completely objectify the result of an observation, we cannot describe what “happens” between this observation and the next.

In T. Ferris (ed.)

World Treasury of Physics, Astronomy, and Mathematics

The Copenhagen Interpretation of Quantum Mechanics (pp. 90–91)

Little, Brown & Company. Boston, Massachusetts, USA. 1991

Herschel, Sir John Frederick William 1792–1871

English astronomer and chemist

There is scarcely any well-informed person, who, if he has but the will, has not also the power to add something essential to the general stock of knowledge, if he will only observe regularly and methodically some particular class of facts which may most excite his attention...

A Preliminary Discourse on the Study of Natural Philosophy
Part II, Chapter IV, Section 128 (p. 133)
Printed for Longman, Rees, Orme, Brown & Green. London, England.
1831

Seeing is in some respects an art which must be learnt. To make a person see with such a power is nearly the same as if I were asked to make him play one of Handel's fugues upon the organ. Many a night I have been practicing to see, and it would be strange if one did not acquire a certain dexterity by such constant practice.

In William Hoyt
Planets X and Pluto
Chapter 1 (p. 12)
The University of Arizona Press. Tucson, Arizona, USA. 1981

Hinshelwood, Sir Cyril 1897–1967
English chemist

Again and again, the key to a great discovery has been an unexpected observation.

Science and Scientists
Nature, Volume 207, Number 5001, September 4, 1965 (p. 1057)

Holton, Gerald 1922–
Research professor of physics and science history

Roller, Duane H. D. ?–1994
Science historian

All intelligent endeavor stands with one foot on observation and the other on contemplation.

Foundations of Modern Physical Science
Chapter 13 (p. 218)
Addison-Wesley Publishing Company. Reading, Massachusetts, USA.
1950

Hooke, Robert 1635–1703
English physicist

The truth is, the Science of Nature has been already too long made only a work of the Brain and the Fancy: It is now high time that it should return to the plainness and soundness of Observations on material and obvious things.

Micrographia
Preface (Fifth page)
Printed by Jo. Martyn and Ja. Allestry. London, England. 1665

Hoyle, Sir Fred 1915–2001
English mathematician and astronomer

You take a number of radioactive nuclei of a particular kind, the number being chosen so that there's an even chance of one of them going off in a certain period of time, say ten seconds. Then for ten seconds you surround them with counters, or any other detecting device you might like to use. At the end of the time the question is, has one of them decayed or not. To decide this you take a look at your counters. The conventional notion is that the state of the counters decides whether a nucleus has gone off or not...my problem now con-

cerns an individual case.... It is perfectly possible to put your counters, or your bubble chamber, your camera, all your gobbledegook in fact, into your calculations — and we know quite definitely that any attempt to get a definite answer out of calculation will prove completely fruitless. The thing that gives the answer isn't the camera or the counter, it's the actual operation of looking yourself at your equipment. It seems that only when we ourselves take a subjective decision can we improve our description of the world, over and above the uncertainty of our theories. I'm talking about quantum theories now.

October the First Is Too Late
Chapter Five (pp. 52–53)
Harper & Row, Publishers. New York, New York, USA. 1966

Hubble, Edwin Powell 1889–1953
American astronomer

...observation and theory are woven together, and it is futile to attempt their complete separation. Observation always involve theory. Pure theory may be found in mathematics, but seldom in science. Mathematics, it has been said, deals with possible worlds — logically consistent systems. Science attempts to discover the actual world we inhabit. So in cosmology, theory presents an infinite array of possible universes, and observation is eliminating them, class by class, until now the different types among which our particular universe must be included have become increasingly comprehensible.

The Realm of the Nebulae
Chapter I (p. 35)
Dover Publications, Inc. New York, New York, USA. 1958

Huxley, Thomas Henry 1825–95
English biologist

There is no question in the mind of anyone acquainted with the facts that, so far as observation and experiment can take us, the structure and the functions of the nervous system are fundamentally the same in an ape, or in a dog, and in a man. And the suggestion that we must stop at the exact point at which direct proof fails us, and refuse to believe that the similarity which extends so far stretches yet further, is no better than a quibble. Robinson Crusoe did not feel bound to conclude, from the single human footprint which he saw in the sand that the maker of the impression had only one leg.

Hume, with Helps to the Study of Berkeley (p. 123)
D. Appleton & Company. New York, New York, USA. 1896

James, William 1842–1910
American philosopher and psychologist

Round about the accredited and orderly facts of every science there ever floats a sort of dust-cloud of exceptional observations, of occurrences minute and irregular

and seldom met with, which it always proves more easy to ignore than to attend to...

The Will to Believe and Other Essays in Popular Philosophy and Human Immortality

What Psychical Research Has Accomplished (p. 299)

Dover Publications, Inc. New York, New York, USA. 1956

Jeans, Sir James Hopwood 1877–1946

English physicist and mathematician

Each observation destroys the bit of the universe observed, and so supplies knowledge only of a universe which has already become past history...

The New Background of Science

Chapter I (p. 2)

The University of Michigan Press. Ann Arbor, Michigan, USA. 1959

We can only see nature blurred by the clouds of dust we ourselves make; we can still only see the rainbow, but a sun of some sort must exist to produce the light by which we see it.

The New Background of Science

Chapter I (p. 4)

The University of Michigan Press. Ann Arbor, Michigan, USA. 1959

Jeffreys, Sir Harold 1891–1989

English astronomer and geophysicist

An observation, strictly, is only a sensation. Nobody means that we should reject everything but sensations. But as soon as we go beyond sensations we are making inferences.

Theory of Probability

General Questions (p. 412)

Clarendon Press. Oxford, England. 1961

Jones, Steve

No biographical data available

Observation and experiment are what count, not opinion and introspection. Few working scientists have much respect for those who try to interpret nature in metaphysical terms. For most wearers of white coats, philosophy is to science as pornography is to sex: it is cheaper, easier, and some people seem, bafflingly, to prefer it. Outside of psychology it plays almost no part in the functions of the research machine.

Review of *How the Mind Works* by Steve Pinker

The New York Review of Books, November 6, 1997 (p. 13)

Jonson, Ben 1573?–1637

English dramatist and poet

...let me alone to observe, till I turne my selfe into nothing but observation.

The Poetaster

Act II, Scene I, l. 193

Henry Holt & Company. New York, New York, USA. 1905

Kolb, Edward W. (Rocky) 1951–

American cosmologist

The art of science is knowing which observations to ignore and which are the key to the puzzle.

Blind Watchers of the Sky

Chapter Seven (p. 189)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

Kuhn, Thomas S. 1922–96

American historian of science

Observation and experience can and must drastically restrict the range of admissible scientific belief, else there would be no science. But they cannot alone determine a particular body of such belief. An apparently arbitrary element, compounded of personal and historical accident, is always a formative ingredient of the beliefs espoused by a given scientific community at a give time.

The Structure of Scientific Revolutions

Chapter I (p. 4)

The University of Chicago Press. Chicago, Illinois, USA. 1970

Langer, Susanne Knauth 1895–1985

American philosopher

The faith of scientists in the power of mathematics is so implicit that their work has gradually become less and less observation, and more and more calculation. The promiscuous collection and tabulation of data have given way to a process of assigning possible meanings, merely supposed real entities, to mathematical terms, working out the logical results, and then staging certain crucial experiments to check the hypothesis against the actual, empirical results. But the facts...accepted by virtue of these tests are not actually observed at all.

Philosophy in a New Key

Chapter I (pp. 19–20)

Harvard University Press. Cambridge, Massachusetts, USA. 1957

Observation has become almost entirely indirect; and readings take the place of genuine witness.

Philosophy in a New Key

Chapter I (p. 20)

Harvard University Press. Cambridge, Massachusetts, USA. 1957

The men in the laboratory...cannot be said to observe the actual objects of their curiosity at all... They sense data on which the propositions of modern science rest are, for the most part, little photographic spots and blurs, or inky curved lines on paper... What is directly observable is only a sign of the "physical fact"; it requires interpretation to yield scientific propositions.

Philosophy in a New Key

Chapter I (p. 20)

Harvard University Press. Cambridge, Massachusetts, USA. 1957

Lee, Oliver Justin 1881–1964

American astronomer

Every bit of knowledge we gain and every conclusion we draw about the universe or about any part or feature

of it depends finally upon some observation or measurement. Mankind has had again and again the humiliating experience of trusting to intuitive, apparently logical conclusions without observations, and has seen Nature sail by in her radiant chariot of gold in an entirely different direction.

Measuring Our Universe: From the Inner Atom to Outer Space
Chapter 3 (p. 33)
Ronald Press Company. New York, New York, USA. 1950

Lewis, Gilbert Newton 1875–1946
American chemist

I claim that my eye touches a star as truly as my finger touches this table.

In George W. Gray
New Eyes on the Universe
The Atlantic Monthly, Volume 155, Number 5, May 1935 (p. 608)

Longair, Malcolm 1941–
Scottish physicist

Although by now a large amount of observational material is available, the implications of these observations are far from clear.

Contemporary Physics
Quasi-Stellar Radio Sources, Volume 8, Number 4, 1967 (p. 357)

Lonsdale, Dame Kathleen 1903–71
Irish-born English crystallographer

...observation is not enough, and it seems to me that in science, as in the arts, there is very little worth having that does not require the exercise of intuition as well as of intelligence, the use of imagination as well as of information.

Facts About Crystals
American Scientist, Volume 39, Number 4, October 1951 (p. 576)

Louis, Pierre-Charles-Alexandre 1787–1872
French physician

It behooves those who devote themselves to observation to be impressed by this truth (*i.e.*, that many “facts” grow old) and to realize that the best work is only good in relation to its time and that it awaits another, more exact and more complete.

Recherches Anatomiques, Pathologiques et Therapeutiques sur la Maladie Connue Sous les Noms de Gastro-Enterite (p. vii)
Publisher undetermined

Lubbock, Sir John 1834–1913
English banker, author, and scientist

What we do see depends mainly on what we look for. When we turn our eyes to the sky, it is in most cases merely to see whether it is likely to rain. In the same field the farmer will notice the crop, geologists the fossils, botanists the flowers, artists the coloring, sportsmen the cover for game. Though we may all look at the same

things, it does not at all follow that we should see them.
The Beauties of Nature and the Wonders of the World We Live In
Introduction (pp. 3–4)
The Macmillan Company. New York, New York, USA. 1893

Mach, Ernst 1838–1916
Austrian physicist and philosopher

Everything which we observe in nature imprints itself uncomprehended and unanalyzed in our percepts and ideas which then, in their turn, mimic the processes of nature in their most general and most striking features.

The Science of Mechanics (5th edition)
Chapter I, Part II, Section 2 (p. 36)
The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Macy, Arthur

Medawar, Sir Peter Brian 1915–87
Brazilian-born English zoologist

Innocent, unbiased observation is a myth.

Induction and Intuition in Scientific Thought
Chapter II, Section 2 (p. 28)
American Philosophical Society. Philadelphia, Pennsylvania, USA. 1969

It is not methodologically an exaggeration to say that Fleming eventually found penicillin because he had been looking for it. A thousand people might have observed whatever it was that he did observe without making anything of it or building upon the observation in any way; but Fleming had the right slot in his mind, waiting for it. Good luck is almost always preceded by an expectation that it will gratify. Pasteur is well known to have said

that fortune favors the prepared mind, and Fontenelle observed, “*Ces hasards ne sont que pour ceux qui jouent bien!*” (“These strokes of good fortune are only for those who play well!”).

Advice to a Young Scientist

Chapter 11 (p. 90)

Basic Books, Inc. New York, New York, USA. 1979

Meredith, George 1828–1909

English novelist and poet

Observation is the most enduring of the pleasures of life...

Diana of the Crossways

Chapter XI (p. 104)

Charles Scribner’s Sons. New York, New York, USA. 1924

Minnaert, M.

No biographical data available

It is indeed wrong to think that the poetry of Nature’s moods in all their infinite variety is lost on one who observes them scientifically, for the habit of observation refines our sense of beauty and adds a brighter hue to the richly coloured background against which each separate fact is outlined. The connection between events, the relation of cause and effect in different parts of a landscape, unite harmoniously what would otherwise be merely a series of detached sciences.

The Nature of Light and Colour in the Open Air

Preface (p. v)

Dover Publications. New York, New York, USA. 1954

Mitchell, Maria 1818–89

American astronomer and educator

Nothing comes out more clearly in astronomical observations than the immense activity of the universe.

Chapter XI (p. 237)

Lee & Shepard. Boston, Massachusetts, USA. 1896

Morris, Richard 1939–2003

American physicist and science writer

Simple observation generally gets us nowhere. It is the creative imagination that increases our understanding by finding connections between apparently unrelated phenomena, and forming logical, consistent theories to explain them. And if a theory turns out to be wrong, as many do, all is not lost. The struggle to create an imaginative, correct picture of reality frequently tells us where to go next, even when science has temporarily followed the wrong path.

Newton, Sir Isaac 1642–1727

English physicist and mathematician

As in mathematics, so in natural philosophy the investigation of difficult things by the method of analysis ought ever to precede the method of composition. This analysis consists of making experiments and observations, and in drawing general conclusions from them by induction.... By this way of analysis we may proceed from compounds to ingredients, and from motions to the forces producing them; and in general from effects to their causes, and from particular causes to more general ones till the argument end in the most general. This is the method of analysis: and the synthesis consists in assuming the causes discovered and established as principles, and by them explaining the phenomena preceding from them, and proving the explanations.

 1946, 36 (p. 125)
 Harcourt, Brace & World. New York, New York, USA. 1968

Osler, Sir William 1849–1919
 Canadian physician and professor of medicine

Observation plus thinking has given us the bodies of living creatures in health and disease. There have been two inherent difficulties — to get men to see straight and to get men to think clearly; but in spite of the frailty of the instrument, the method has been one of the most powerful ever placed in the hands of man.

The Pathological Institute of a General Hospital
Glasgow Medical Journal, Volume 76, 1911

Note with accuracy and care everything that comes within your professional ken... Let nothing slip by you; the ordinary hum-drum cases of the morning routine may have been accurately described and pictured, but study each one separately as though it were new — so it is so far as your special experience goes; and if the spirit of the student is in you the lesson will be there.

Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine
 The Army Surgeon (p. 104)
 The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

The whole art of medicine is in observation, as the old motto goes, but to educate the eye to see, the ear to hear and the finger to feel takes time, and to make a beginning, to start a man on the right path, is all that we can do. We expect too much of the student and we try to teach him too much. Give him good methods and a proper point of view, and all other things will be added, as his experience grows.

Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine
 The Hospital as a College (pp. 315–316)
 The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

Man can do a great deal by observation and thinking, but with them alone he cannot unravel the mysteries of Nature. Had it been possible the Greeks would have done it; and could Plato and Aristotle have grasped the value of experiment in the progress of human knowledge, the course of European history might have been very different.

Man's Redemption of Man
 Address, University of Edinburgh, July 1910 (p. 22)

Owen, Ed 1896–1981
 American geologist

I wandered far and saw many things over a long time. Most of the things which I saw I did not understand. I looked about me and did not see that any others understood the complex pattern either. But as I wandered

I could not escape the feel of things and of places and of the people in them.

Thiele, T. N. 1838–1910
Danish astronomer

An isolated sensation teaches us nothing, for it does not amount to an observation. Observation is a putting together of several results of sensation which are or are supposed to be connected with each other according to the law of causality, so that some represent causes and others their effects.

Theory of Observations (p. 2)
Cahales & Edwin Layton. London, England. 1903

Thomas, Lewis 1913–93
American physician and biologist

The role played by the observer in biological research is complicated but not bizarre: he or she simply observes, describes, interprets, maybe once in a while emits a hoarse shout, but that is that; the act of observing does not alter fundamental aspects of the things observed, or anyway isn't supposed to.

The Medusa and the Snail: More Notes of a Biology Watcher
An Apology (p. 88)
The Viking Press. New York, New York, USA. 1979

Thompson, Silvanus P. 1851–1916
English physics professor and author

The seemingly useless or trivial observation made by one worker leads on to a useful observation by another; and so science advances, “creeping on from point to point.”

In Sir Richard Arman Gregory
Discovery; or, The Spirit and Service of Science
Chapter XI (p. 292)
Macmillan & Company Ltd. London, England. 1918

Thompson, William Robin 1887–1972
Canadian entomologist

The mathematical machine works with unerring precision; but what we get out of it is nothing more than a rearrangement of what we put into it. In the last analysis observation — the actual contact with real events — is the only reliable way of securing the data of natural history.

Science and Common Sense
Chapter Six (pp. 114–115)
Yale University Press. New Haven, Connecticut, USA. 1951

Thoreau, Henry David 1817–62
American essayist, poet, and practical philosopher

The question is not what you look at — but how you look & whether you see.

Journal (Volume 3: 1848–1851)
August 5, 1851 (pp. 354–355)
Princeton University Press. Princeton, New Jersey, USA. 1981

von Goethe, Johann Wolfgang 1749–1832
German poet, novelist, playwright, and natural philosopher

An extremely odd demand is often set forth but never met, even by those who make it; *i.e.*, that empirical data should be presented without any theoretical context, leaving the reader, the student, to his own devices in judging it. This demand seems odd because it is useless simply to look at something. Every act of looking turns into observation, every act of observation into reflection, every act of reflection into the making of associations; thus it is evident that we theorize every time we look carefully at the world.

Suhrkamp. New York, New York, USA. 1988

von Humboldt, Alexander 1769–1859
German naturalist and explorer

True cosmical views are the result of observation and ideal combination, and of a long-continued communion with the external world; nor are they a work of a single people, but the fruits yielded by reciprocal communication, and by a great, if not general, intercourse between different nations.

Cosmos: A Sketch of a Physical Description of the Universe (Volume 2)
Physical Contemplation of the Universe (p. 116)
Harper & Brothers. New York, New York, USA. 1869

von Liebig, Justus 1803–73
German organic chemist

However numerous our observations may be, yet, if they only bear on one side of a question, they will never enable us to penetrate the essence of a natural phenomenon in its full significance.

Animal Chemistry
Preface (p. xxxii)
Johnson Reprint Corporation. New York, New York, USA. 1964

Wells, H. G. (Herbert George) 1866–1946
English novelist, historian, and sociologist

...nothing destroys the powers of general observation quite so much as a life of experimental science.

Seven Famous Novels by H.G. Wells
The Food of the Gods
Chapter 2 (p. 540)
Alfred A. Knopf. New York, New York, USA. 1934

Westaway, Frederic William
Science writer

It is the essence of good observation that the eye shall not only see a thing itself, but of what parts that thing is composed. And if an observer is to become a successful investigator in any department of Science, he must have an extreme acquaintance with what has already been done in that particular department. Only then will he be prepared to seize upon any one of those minute indications which often connect phenomena apparently quite remote from each other. His eyes will thus be struck with any occurrence which, according to received theories, ought not to happen; for these are the facts which serve as clues to new discoveries.

Scientific Method: Its Philosophy and Its Practice
Chapter XVI, Section 3 (p. 196)
Blackie & Sons Ltd. London, England. 1919

Wheeler, John Archibald 1911–
American physicist and educator

Only by the analysis and interpretation of observations as they are made, and the examination of the larger implications of the results, is one in a satisfactory position to pose new experimental and theoretical questions of the greatest significance.

Elementary Particle Physics

American Scientist, Spring, April 1947 (p. 189)

Wheeler, John Archibald 1911–

American physicist and educator

Thorne, Kip S. 1940–

American theoretical physicist

May the universe in some strange sense be “brought into being” by the participation of those who participate?... [T]he vital act is the act of participation. “Participant” is the incontrovertible new concept given by quantum mechanics. It strikes down the term “observer” of classical theory, the man who stands safely behind the thick glass wall and watches what goes on without taking part. It can’t be done, quantum mechanics says.

Gravitation (p. 1273)

W.H. Freeman and Company. New York, New York, USA. 1973

Whitehead, Alfred North 1861–1947

English mathematician and philosopher

We habitually observe by the method of difference. Sometimes we see an elephant, and sometimes we do not. The result is that an elephant, when present, is noticed.

Process and Reality: An Essay in Cosmology

Part I, Chapter I, Section II (p. 6)

The Macmillan Company. New York, New York, USA. 1929

Wilson, Jr., E. Bright 1908–92

American physical chemist

Observations are useless until they have been interpreted.

An Introduction to Scientific Research

Chapter 8 (p. 169)

McGraw-Hill Book Company, Inc. New York, New York USA. 1952

Wöhler, Friedrich 1800–82

German chemist

My imagination is pretty active, but in thinking I am very slow. No one is less made to be a critic than I. The organ for philosophical thought I lack completely, as you well know, as completely as that for mathematics. Only for observing, do I possess, or at least I believe I do, a passable arrangement in my brain. A kind of instinct that allows me to become aware of relations among data may well be connected with [this arrangement].

In O. Theodor Benfey

From Vital Force to Structural Formulas

Chapter 3 (p. 18)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1964

Wright, R. D.

No biographical data available

Whatever happened to the terms probability and observation? Are statements of high probability now to be deified by calling them truths? Does a set of consistent observations become fact? When I teach biology to the college student, the nature of information mandates that the class and I preserve a healthy skepticism regarding both the broad generalizations and the specific statements of the discipline. Fact and truth are terms we almost never use. There is nothing shameful in describing what we know as having a certain probability, following from observations that have a degree of imprecision. That’s the nature of science, including the science of evolution.

Letters

BioScience, Volume 31, Number 11, December 1981 (p. 788)

Zinsser, Hans 1878–1940

American bacteriologist

The scientist takes off from the manifold observations of predecessors, and shows his intelligence, if any, by his ability to discriminate between the important and the negligible, by selecting here and there the significant stepping-stones that will lead across the difficulties to new understanding. The one who places the last stone and steps across the terra firma of accomplished discovery gets all the credit. Only the initiated know and honor those whose patient integrity and devotion to exact observation have made the last step possible.

As I Remember Him: The Biography of R.S.

Chapter XX (p. 332)

Little, Brown & Company. Boston, Massachusetts, USA. 1940

OBSERVATORY

Cerf, Bennett 1898–1971

American publisher and editor

Some weeks later the Einsteins were taken to the Mt. Wilson Observatory in California. Mrs. Einstein was particularly impressed by the giant telescope.

Try and Stop Me: A Collection of Anecdotes and Stories, Mostly Humorous

On the Telescope (p. 163)

Simon & Schuster. New York, New York, USA. 1944

Emerson, Ralph Waldo 1803–82

American lecturer, poet, and essayist

What is so good in a college as an observatory? The sublime attaches to the door and to the first stair you ascend; — and this is the road to the stars...

Journals of Ralph Waldo Emerson 1864–1876

November 14, 1865 (p. 118)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

Lowell, Percival 1855–1916

American astronomer

A steady atmosphere is essential to the study of planetary detail; size of instrument being a very secondary matter. A large instrument in poor air will not begin to show what a smaller one in good air will. When this is recognized, as it eventually will be, it will become the fashion to put up observatories where they can see rather than be seen.

Mars

Preface (p. v)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

Mitchell, Maria 1818–89

American astronomer and educator

There is no observatory in this land, nor in any land, probably, of which the question is not asked, “Are they doing anything? Why don’t we hear from them? They should make discoveries, they should publish.”

In Phebe Mitchell Kendall

Maria Mitchell: Life, Letters, and Journals

Chapter XI (p. 223)

Lee & Shepard. Boston, Massachusetts, USA. 1896

Rosseland, Svein 1894–1985

Norwegian astronomer

...an astronomical observatory of today looks more like a factory plant than an abode for philosophers. The poetry of constellations has given way to the lure of plate libraries, and the angel of cosmogenic speculation has been caught in a cobweb of facts insistently clamoring for explanations.

Theoretical Astrophysics: Atomic Theory and the Analysis of Stellar Atmospheres and Envelopes

Introduction (p. xi)

At The Clarendon Press. Oxford, England. 1936

Russell, Henry Norris 1877–1957

American astronomer

The good spectroscopist — to parody the old jest — might perhaps be permitted to go, when he died, instruments and all, and set up an observatory on the moon.

Where Astronomers Go When They Die

Scientific American, Volume 149, Number 3, September 1933 (p. 112)

OBSERVER

Agassiz, Jean Louis Rodolphe 1807–73

Swiss-born American naturalist, geologist, and teacher

He is lost, as an observer, who believes that he can, with impunity, affirm that for which he can adduce no evidence.

In Burt G. Wilder

Louis Agassiz, Teacher

The Harvard Graduate's Magazine, June, 1907

Cuvier, Georges 1769–1832

French zoologist and statesman

The observer listens to nature; the experimenter questions and forces her to unveil herself.

In Claude Bernard

An Introduction to the Study of Experimental Medicine

Part One, Chapter I (p. 6)

Henry Schuman, Inc. New York, New York, USA. 1927

de Chambaud, J. J. Ménéuret

No biographical data available

The name of observer has been given to the physicist who is content to examine the phenomena just as nature presents them to him; he differs from the experimental physicist who combines...and who sees only the result of his own combinations. This latter one never sees nature as it is in fact; he pretends by his labor to render nature more accessible to the senses, to raise the mask which conceals it from our eyes, but often he disfigures it and renders it unintelligible. Nature is always unveiled and bare for him who has eyes — or it is covered only by a slight gauze which the eye and reflection easily pierce — and the pretended mask exists only in the imagination, usually quite limited, of the manipulator of experiments.

In D. Diderot and J.L. d'Alembert (eds.)

Observateur

Encyclopédie, ou Dictionnaire Raisonné des Sciences, des Arts et des Métiers, Volume 23 (p. 287D)

Eddington, Sir Arthur Stanley 1882–1944

English astronomer, physicist, and mathematician

Let the observer place himself so that he is, to the best of his knowledge, at rest. If he is a normal human being, he will seat himself in an arm-chair; if he is an astronomer, he will place himself on the sun or at the centre of the stellar universe.

Space, Time and Gravitation: An Outline of the General Relativity Theory

Chapter II (p. 38)

At The University Press. Cambridge, England. 1921

OBSTETRICS

Hosmer, William

No biographical data available

The present practice of medicine, especially obstetrics, must be set down not only as having an immoral tendency, but as, in itself, a gross, abusive, and shameless immorality.

Young Lady's Book: Or, Principles of Female Education

Chapter V (p. 191)

Miller, Orton & Mulligan. Buffalo, New York, USA. 1854

OCCAM'S RAZOR

Chekhov, Anton Pavlovich 1860–1904

Russian author and playwright

It is unfortunate that we try to solve the simplest questions cleverly, and therefore make them unusually complicated. We should seek a simple solution.

Note-Book of Anton Chekhov (p. 20)

B.W. Huebsch, Inc. New York, New York, USA. 1921

Crick, Francis Harry Compton 1916–2004
English biochemist

While Occam's razor is a useful tool in the physical sciences, it can be a very dangerous implement in biology. It is thus very rash to use simplicity and elegance as a guide in biological research.

What Mad Pursuit: A Personal View of Scientific Discovery

Chapter 13 (p. 138)

Basic Books, Inc. New York, New York, USA. 1988

Dixon, Malcom

Simplex sigillum veri

Cut causes, be merry

Slash 'em and dock 'em

Said William of Ockham

Wiping his razor

On the sleeve of his blazer.

In Renee Haynes

Signs of Secrecy

Times Literary Supplement, June 18, 1981 (p. 688)

Jeans, Sir James Hopwood 1877–1946

English physicist and mathematician

When two hypotheses are possible, we provisionally choose that which our minds adjudge to be the simpler, on the supposition that this is more likely to lead in the direction of the truth. It includes as a special case the principle of Occam's razor — *Entia non multiplicanda praeter necessitatem*.

Physics and Philosophy

Chapter VII (p. 183)

Dover Publications, Inc. New York, New York, USA. 1981

Newton, Sir Isaac 1642–1727

English physicist and mathematician

We are to admit no more causes of natural things than such as are both true and sufficient to explain their appearances.

The Mathematical Principles of Natural Philosophy

Book Three, Rule 1 (p. 270)

Printed for H.D. Symonds. London, England. 1803

Oppenheimer, J. Robert 1904–67

American theoretical physicist

We cannot in any sense be both the observers and the actors in any specific instance, or we shall fail properly to be either one or the other; yet we know that our life is built of these two modes, is part free and part inevitable, is part creation and part discipline, is part acceptance and part effort.

Science and the Common Understanding

Chapter 6 (p. 88)

Simon & Schuster. New York, New York, USA. 1954

Stenger, Victor J. 1935–

American physicist

The use of Occam's razor, along with the related critical, skeptical view toward any speculations about the unknown, is perhaps the most misunderstood aspect of the scientific method. People confuse doubt with denial. Science doesn't deny anything, but it doubts everything not required by the data. Note, however, that doubt does not necessarily mean rejection, just an attitude of disbelief that can be changed when the facts require it.

Physics and Psychics: The Search for a World Beyond the Senses

Chapter 1 (p. 26)

Childe Harold
Canto IV, Stanza 182
Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

Roll on, thou deep and dark blue Ocean — roll!
Ten thousand fleets sweep over thee in vain;
Man marks the earth with ruin — his control
Stops with the shore.

The Complete Poetical Works of Byron
Childe Harold
canto IV, Stanza 179
Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

Carson, Rachel 1907–64
American marine biologist and author

There is no drop of water in the ocean, not even in
the deepest parts of the abyss, that does not know and

respond to the mysterious forces that create the tide. No
other force that affects the sea is so strong.

The Sea Around Us
Part II, Chapter 3 (p. 149)
Oxford University Press, Inc. New York, New York, USA. 1989

Unmarked and trackless though it may seem to us, the
surface of the ocean is divided into definite zones, and
the pattern of the surface water controls the distribution
of its life.

The Sea Around Us
Part I, Chapter 2 (p. 20)
Oxford University Press, Inc. New York, New York, USA. 1989

The ocean is the earth's greatest storehouse of minerals.

The Sea Around Us
Part III, Chapter 2 (p. 185)
Oxford University Press, Inc. New York, New York, USA. 1989

The edge of the sea is a strange and beautiful place. All
through the long history of Earth it has been an area of unrest
where waves have broken heavily against the land, where
the tides have pressed forward over the continents, receded,
and then returned. For no two successive days is the shore
line precisely the same. Not only do the tides advance and
retreat in their eternal rhythms, but the level of the sea it-
self is never at rest. It rises or falls as the glaciers melt or
grow, as the floor of the deep ocean basins shift under its
increasing load of sediments, or as the earth's crust along
the continental margins warps up or down in adjustment to
strain and tension. Today a little more land may belong to
the sea, tomorrow a little less. Always the edge of the sea
remains an elusive and indefinable boundary.

The Edge of the Sea
Chapter I (p. 1)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1955

The face of the sea is always changing. Crossed by col-
ors, lights, and moving shadows, sparkling in the sun,
mysterious in the twilight, its aspects and its moods vary
hour by hour.

The Sea Around Us
Part I, Chapter 3 (p. 29)
Oxford University Press, Inc. New York, New York, USA. 1989

The continents themselves dissolve and pass to the sea, in
grain after grain of eroded land...

The Sea Around Us
Part III, Chapter 14 (p. 212)
Oxford University Press, Inc. New York, New York, USA. 1989

Every living thing of the ocean, plant and animal alike,
returns to the water at the end of its own life span the
materials that had been temporarily assembled to form
its body. So there descends into the depths a gentle never-
ending rain of the disintegrating particles of what once
were living creatures of the sunlit surface waters, or of
those twilight regions beneath.

Undersea
Atlantic Monthly, September 1937

Cornwall, Barry (Bryan Waller Procter) 1787–1874

English author

The sea! the sea! the open sea!
 The blue, the fresh, the ever free!
 Without a mark, without a bound,
 It runneth the earth's wide regions round;
 It plays with the clouds; it mocks the skies;
 Or like a cradled creature lies.

In Richard Green Parker and J. Madison Watson (eds)
The National Fourth Reader
 The Sailor's Song (p. 156)
 Bams & Burr. New York, New York, USA. 1864

Dubos, René Jules 1901–82

French-born American microbiologist and environmentalist

The seas perhaps hold the highest hopes for continued life. Yet, what does man do to the seas? Not only does he grab with greed the creatures of the sea, he turns nature's cradle for life into a receptacle for garbage and filth. This is man whose life blood contains sodium, potassium, and calcium in almost the same proportions as they still exist in the environment of mother sea which encouraged his birth.

In Maurice F. Strong (ed.)

Who Speaks for Earth?

Unity Through Diversity (p. 44)

W.W. Norton & Company, Inc. New York, New York, USA. 1973

Emerson, Ralph Waldo 1803–82

American lecturer, poet, and essayist

Behold the Sea,
 The opaline, the plentiful and strong,
 Yet beautiful as is the rose in June,
 Fresh as the trickling rainbow of July;
 Sea full of food, the nourisher of kinds,
 Purger of earth, and medicine of men;
 Creating a sweet climate by my breath,
 Washing out harms and griefs from memory,
 And, in my mathematic ebb and flow,
 Giving a hint of that which changes not.

The Complete Works of Ralph Waldo Emerson (Volume 9)

Seashore (p. 242)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Forbes, Edward 1815–54

English naturalist

Moreover it is becoming the Britons, whether scientific or unscientific, who boast at all fitting occasions of their aptitude to rule the waves, should know something of the population of their saline empire, especially of those parts of it immediately in contact with their terrestrial domain, and the coasts of the Continent to which our United Kingdom appertains.

The Natural History of the European Seas

Chapter I (p. 3)

John Van Voorst. London, England. 1859

...beneath the waves there are many dominions yet to be visited, and kingdoms to be discovered; and he who venturously brings up from the abyss enough of their inhabitants to display the physiognomy of the country, will taste that cup of delight, the sweetness of whose draught those only who have made a discovery know.

The Natural History of the European Seas

Chapter I (p. 11)

John Van Voorst. London, England. 1859

Gould, Hannah Flagg 1789–1865

American poet

Alone I walked on the ocean strand,
 A pearly shell was in my hand;
 I stooped, and wrote upon the sand
 My name, the year, the day.
 As onward from the sport I passed,
 One lingering look behind I cast,
 A wave came rolling high and fast,
 And washed my lines away.

Poems

A Name in the Sand

Hilliard, Gray & Company. Boston, Massachusetts, USA. 1839

Gray, Thomas 1716–71

Henderson, Lawrence 1878–1942

American biochemist

No philosopher's or poet's fancy, no myth of a primitive people has ever exaggerated the importance, the usefulness, and above all the marvelous beneficence of the ocean for the community of living things.

The Fitness of the Environment: An Inquiry into the Biological Significance of the Properties of Matter

Chapter V, Section III (p. 190)

The Macmillan Company. New York, New York, USA. 1913

The regulatory devices of our modern laboratories have not yet succeeded in rivaling the oceans. Singly, certain conditions, for example, temperature, alkalinity, and concentration, may be more accurately regulated by man, though on a small scale only; but the regulation of all such properties together is not yet possible. The only known improvement upon the ocean is the body of a higher warm-blooded animal. Here, however, the processes of organic evolution have begun with the ocean, and in several respects merely perfected existing arrangements.

The Fitness of the Environment: An Inquiry into the Biological Significance of the Properties of Matter

Chapter V, Section III (p. 186)
The Macmillan Company. New York, New York, USA. 1913

Hess, Harry

The Omnipresence of the Deity

Part I, Stanza 20

Oxford University Press. London, England. 1849

Rossetti, Christina Georgina 1830–94

English poet

Why does the sea moan evermore?
Shut out from heaven it makes its moan,
It frets against the boundary shore;
All earth's full rivers cannot fill
The sea, that drinking thirsteth still.

In William Michael Rossetti

The Poetical Works of Christina Georgina Rossetti

By the Sea

Stanza 1

Macmillan & Company Ltd. London, England. 1911

Shelley, Percy Bysshe 1792–1822

English poet

There the sea I found
Calm as a cradled child in dreamless slumber bound.

The Poems of Percy Bysshe Shelley

The Revolt of Islam, Canto I, Stanza 15

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

Stoddard, Richard Henry 1825–1903

American critic and poet

Thou wert before the Continents, before
The hollow heavens, which like another sea
Encircles them and thee, but whence thou wert,
And when thou wast created, is not known,
Antiquity was young when thou wast old.

In Anna Ward (ed.)

Surf and Wave: The Sea as Sung by the Poets

Hymn to the Sea, l. 104

Thomas Y. Crowell & Company. New York, New York, USA. 1883

Taylor, Bayard 1825–78

American journalist and author

We follow and race
In shifting chase,
Over the boundless ocean-space!
Who hath beheld when the race begun?
Who shall behold it run?

In Anna Ward (ed.)

Surf and Wave: The Sea as Sung by the Poets

The Waves

Thomas Y. Crowell & Company. New York, New York, USA. 1883

Tennyson, Alfred (Lord) 1809–92

English poet

Break, break, break,
On thy cold gray stones, O sea!
And I would that my tongue could utter
The thoughts that arise in me.

Alfred Tennyson's Poetical Works

"Break, Break, Break"

Oxford University Press, Inc. London, England. 1953

Thoreau, Henry David 1817–62

American essayist, poet, and practical philosopher

The ocean is a wilderness reaching round the globe,
wilder than a Bengal jungle, and fuller of monsters,

washing the very wharves of our cities and the gardens
of our seaside residences.

Cape Cod

Chapter IX (p. 148)

Princeton University Press. Princeton, New Jersey, USA. 2004

von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

The sea is flowing ever,

The land retains it never.

The Works of Johann Wolfgang von Goethe

Hikmet Nameh

Book of Proverbs (p. 395)

J.H. Moore. Philadelphia, Pennsylvania, USA. 1901

Webb, Charles Henry 1834–1905

American writer

I send thee a shell from the ocean-beach;
But listen thou well, for my shell hath speech.
Hold to thine ear

And plain thou'lt hear

Tales of ships.

Vagrom Verse

With a Nantucket Shell

Ticknor & Company. Boston, Massachusetts, USA. 1889

Weisz, Paul B. 1919–

German-born American chemical engineer and biomedical researcher

The Pacific. You don't comprehend it by looking at a
globe, but when you're traveling at four miles a second
and it still takes you twenty-five minutes to cross it, you
know it's big.

In Kevin W. Kelley

The Home Planet

With Plate 64

Addison-Wesley. Reading, Massachusetts, USA. 1988

Whitman, Walt 1819–92

American poet, journalist, and essayist

To me the sea is a continual miracle,
The fishes that swim — the rocks — the motion of the
waves — the ships with men in them,
What stranger miracles are there?

Complete Poetry and Collected Prose

Miracles

The Library of America. New York, New York, USA. 1982

Wordsworth, William 1770–1850

English poet

I have seen

A curious child, who dwelt upon a tract
Of inland ground, applying to his ear
The convolutions of a smooth-lipped shell;
To which, in silence hushed, his very soul
Listened intensely; and his countenance soon
Brightened with joy; for from within were heard
Murmurings, whereby the monitor expressed
Mysterious union with its native sea.

Poems By William Wordsworth

Excursions, Book IV

Ginn and Company. Boston, Massachusetts, USA. 1897

OCEANOGRAPHY

Spilhaus, Athelstan 1911–78

South-African born American geophysicist and oceanographer

The science of oceanography is not a discipline but an
adventure wherein any discipline or combination of dis-
ciplines may be focused on understanding and using the
sea and all that is in it.

*Annual Report of the Board of Regents of the Smithsonian Institution,
1964*

The Future of Oceanography (p. 361)

Government Printing Office. Washington, D.C. 1965

ODDS

Jeans, Sir James Hopwood 1877–1946

English physicist and mathematician

Choose a point in space at random and the odds against it
being occupied by a star are enormous.

The Universe Around Us

Chapter I (p. 102)

The Macmillan Company. New York, New York, USA. 1929

Stoppard, Tom 1937–

Czech-born English playwright

Life is a gamble at terrible odds — if it was a bet you
wouldn't take it.

Act Three (p. 115)

Grove Press, Inc. New York, New York, USA. 1967

OMEGA POINT

Barrow, John D. 1952–

English theoretical physicist

Tipler, Frank 1947–

American physicist

If life evolves in all of the many universes in a quantum
cosmology, and if life continue to exist in all of these
universes, then all of these universes, which include all
possible histories among them, will approach the Omega
Point. At the instant the Omega Point is reached, life will
have gained control of all matter and forces not only in
a single universe, but in all universes whose existence
is logically possible; life will have spread into all spa-
tial regions in all universes which could locally exist,
and will have stored an infinite amount of information,
including all bits of knowledge which it is logically
possible to know.

The Anthropic Cosmological Principle

Chapter 10 (p. 676)
Clarendon Press. Oxford, England. 1986

OPINION

Adams, George 1750–95
English instrument maker

Mankind are always ready to adopt or reject what accords with pre-conceived opinions, to make reason subservient to prejudice, and to reject without examination, whatever is discordant with a received system; thus closing the door of science, and excluding themselves from the benefit of light.

Lectures on Natural and Experimental Philosophy (Volume 1)
Lecture II (p. 27)
Printed by R. Hindmarsh. London, England. 1794

Bernard, Claude 1813–78
French physiologist

...no man's opinion, formulated in a theory or otherwise, may be deemed to represent the whole truth in the sciences. It is a guide, a light, but not an absolute authority. The revolution which the experimental method has effected in the sciences is this: it has put a scientific criterion in the place of personal authority. The experimental method is characterized by being dependent only on itself, because it includes within itself its criterion — experience.

Translated by Henry Copley Greene
An Introduction to the Study of Experimental Medicine
Part One, Chapter II, Section IV (p. 40)
Henry Schuman, Inc. New York, New York, USA. 1927

Bourne, William 1535–82
English mathematician

...for that my opinion doth differ from some of the ancient writers in natural Philosophy, it is possible that it may be utterly disliked of and condemned to be of no truth.

The Treasure for Travelers
The Fyfh Booke, To The Reader (p. 3)
Publisher undetermined

Browne, Sir Thomas 1605–82
English author and physician

Where we desire to be informed, 'tis food to contest with men above ourselves; but, to confirm and establish our opinions, 'tis best to argue with judgments below our own, that the frequent spoils and victories over their reasons may settle in ourselves an esteem and confirmed opinion of our own.

Young, Thomas 1773–1829

English polymath

The object of the present dissertation is not so much to propose any opinions which are absolutely new, as to refer some theories, which have been already advanced, to their original inventors, to support them by additional evidence, and to apply them to a great number of diversified facts, which have hitherto been buried in obscurity. Nor is it absolutely necessary in this instance to produce a single new experiment; for of experiments there is already an ample store.

 Chapter XXVII (p. 399)
 D. Appleton & Company. New York, New York, USA

Davies, Paul Charles William 1946–
 British-born physicist, writer, and broadcaster

The universe contains vastly more order than Earth-life could ever demand. All those distant galaxies, irrelevant for our existence, seem as equally well ordered as our own.

In Eugene F. Mallove
The Quickening Universe: Cosmic Evolution and Human Destiny (p. 61)
 St. Martin's Press. New York, New York, USA. 1987

Eddington, Sir Arthur Stanley 1882–1944
 English astronomer, physicist, and mathematician

If you take a pack of cards as it comes from the maker and shuffle it for a few minutes, all trace of the original systematic order disappears. The order will never come back however long you shuffle. Something has been done which cannot be undone, namely, the introduction of a random element in place of the arrangement.

The Nature of the Physical World
 Chapter IV (p. 63)
 The Macmillan Company. New York, New York, USA. 1930

Frankel, Felice 1945–
 Science photographer

Whitesides, George M.
 American chemist

Order is repetition, regularity, symmetry, simplicity. It forms the spine of our efforts to measure, control, and understand.

On the Surface of Things: Images of the Extraordinary in Science
 Order (p. 63)
 Chronicle Books. San Francisco, California, USA. 1997

Huntington, Edward V. 1874–1952
 Mathematician

The fundamental importance of the subject of order may be inferred from the fact that all the concepts required in geometry can be expressed in terms of the concept of order alone.

The Continuum, and Other Types of Serial Order
 Introduction (p. 2)
 Harvard University Press. Cambridge, Massachusetts, USA. 1917

Huxley, Thomas Henry 1825–95
 English biologist

...the man of science knows that here, as everywhere, perfect order is manifested; that there is not a curve of the waves, not a note in the howling chorus, not a rainbow glint on a bubble which is other than a necessary consequence of the ascertained laws of nature; and that with sufficient knowledge of the conditions competent physico-mathematical skill could account for, and indeed predict, every one of those 'chance' events.

In Francis Darwin (ed.)
The Life and Letters of Charles Darwin (Volume 1)
 Chapter XIV (p. 554)
 D. Appleton & Company. New York, New York, USA. 1896

Kline, Morris 1908–92
 American mathematics professor and writer

Is there a law and order in this universe or is its behavior merely the working of chance and caprice? Will the Earth and other planets continue their motions around the sun or will some unknown body, coming from great distances, rush through our planetary system and alter the course of every planet? Cannot the sun some day explode, as other suns are doing daily, and burn us all to a crisp? Was man deliberately planted on a planet especially prepared for his existence or is he merely an insignificant concomitant of accidental cosmic circumstances?

Mathematics in Western Culture
 Chapter XXIV (p. 374)
 Oxford University Press, Inc. New York, New York, USA. 1953

Lewis, C. S. (Clive Staples) 1898–1963
 British author, scholar, and popular theologian

To the modern man it seems simply natural that an ordered cosmos should emerge from chaos, that life should come out of the inanimate, reason out of instinct, civilization out of savagery, virtue out of animalism. This idea is supported in his mind by a number of false analogies: the oak coming from the acorn, the man from the spermatozoon, the modern steamship from the primitive coracle. The supplementary truth that every acorn was dropped by an oak, every spermatozoon derived from a man, and the first boat by something so much more complex than itself as a man of genius, is simply ignored. The modern mind accepts as a formula for the universe in general the principle "almost nothing may be expected to turn into almost everything" without noticing that the parts of the universe under our direct observation tell a quite different story.

Present Concerns: Essays by C.S. Lewis
 Modern Man and His Categories of Thought (p. 63)
 Harcourt Brace Jovanovich. New York, New York, USA. 1986

Lucretius ca. 99 BCE–55 BCE
Roman poet

For verily not by design did the first-beginnings of things station themselves each in its right place guided by keen intelligence, nor did they bargain sooth to say what motions each should assume, but because many in number and shifting about in many ways throughout the universe they are driven and tormented by blows during infinite time past, after trying motions and unions of every kind at length they fall into arrangements such as those out of which our sum of things has been formed...

Lucretius: On the Nature of Things

Book One, l. 1020 (p. 13)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Mann, Thomas 1875–1955
German-born American novelist

...order and simplification are the first steps toward the mastery of a subject — the actual enemy is the unknown.

The Magic Mountain

Chapter V

Encyclopædic (pp. 245–246)

Alfred A. Knopf. New York, New York, USA. 1966

Miller, Jr., G. Tyler
No biographical data available

Man continually engages in attempts to create order, but only at the expense of greater disorder in the surroundings.

Energetics, Kinetics, and Life: An Ecological Approach (p. 200)

Wadsworth Publishing Company. Belmont, California, USA. 1971

Moulton, Forest Ray 1872–1952
American astronomer

To an astronomer the most remarkable and interesting thing about that part of the physical universe with which he has become acquainted is not its vast extent in space, nor the number and great masses of its stars, nor the violent forces that operate in the stars, nor in the long periods of astronomical time, but that which holds him awestruck is the perfect orderliness of the universe and the majestic succession of the celestial phenomena.

In H.H. Newman (ed.)

The Nature of the World and of Man

Astronomy (p. 30)

The University of Chicago Press. Chicago, Illinois, USA. 1927

Now we find ourselves a part of a Universal Order of which we did not dream and whose alphabet we are just beginning to learn. Instead of shrinking it to our measure, we contemplate its infinite orderliness and set no limits to the goal our race may hope to attain.

Astronomy

Chapter XVI (p. 533)

The Macmillan Company. New York, New York, USA. 1931

The orderliness of the universe is the supreme discovery in science; it is that which gives us hope that we shall be able to understand not only the exterior world but also our own bodies and our own mind.

In H.H. Newman (ed.)

The Nature of the World and of Man

Astronomy (p. 30)

The University of Chicago Press. Chicago, Illinois, USA. 1927

Oppenheimer, J. Robert 1904–67
American theoretical physicist

We cannot make much progress without a faith that in this bewildering field of human experience, which is so new and so much more complicated than we thought even five years ago, there is a unique and necessary order: not an order that we can tell a priori, not an order that we can see without experience, but an order which means that the parts fit into a whole and that the whole requires the parts.

The Constitution of Matter (p. 37)

Oregon State System of Higher Education. Eugene, Oregon, USA. 1956

One may only hope that what is at the moment just a picture of chaos will ultimately reveal again that deep harmony and order which one has always found in the physical world when one has pushed hard, and which is very beautiful indeed.

In Lincoln Barnett

Writing on Life: Sixteen Close-Ups

Physicist Oppenheimer (p. 358)

William Sloane Associates, Publishers. New York, New York, USA.

1951

Picard, Charles Emile 1856–1941
French mathematician

We no longer pretend to be able to grasp reality in a physical theory; we see in it rather an analytic or geometric mold useful and fertile for a tentative representation of phenomena, no longer believing that the agreement of a theory with experience demonstrates that the theory expresses the reality of things. Such statements have sometimes seemed discouraging; we ought rather to marvel that, with representations of things more or less distant and discolored, the human spirit has been able to find its way through the chaos of so many phenomena and to derive from scientific knowledge the ideas of beauty and harmony. It is no paradox to say that science puts order, at least tentative order, into nature.

In Lucienne Felix

The Modern Aspect of Mathematics (p. 31)

Basic Books, Inc. New York, New York, USA. 1960

Poincaré, Henri 1854–1912
French mathematician and theoretical astronomer

To obtain a result of real value, it is not enough to grind out calculations or to have a machine to put things in

order; it is not order alone, it is unexpected order, which is worth while. The machine may gnaw on the crude fact; the soul of the fact will always escape it.

The Foundations of Science

Science and Method, Book I

Chapter II (pp. 373–374)

The Science Press. New York, New York, USA. 1913

Pope, Alexander 1688–1744

English poet

Where order in variety we see,
And where, though all things differ, all agree.

The Complete Poetical Works

Windsor Forest, l. 15–16

Houghton Mifflin Company. New York, New York, USA. 1903

Reichenbach, Hans 1891–1953

German philosopher of science

...whereas inorganic nature was seen to be controlled by the laws of cause and effect, organic nature appeared to be governed by the law of purpose and means.

The Rise of Scientific Philosophy

Chapter 12 (p. 192)

University of California Press. Berkeley, California, USA. 1951

Russell, Bertrand Arthur William 1872–1970

English philosopher, logician, and social reformer

Dimensions, in geometry, are a development of order. The conception of a limit, which underlies all higher mathematics, is a serial conception. There are parts of mathematics which do not depend upon the notion of order, but they are very few in comparison with the parts in which this notion is involved.

Introduction to Mathematical Philosophy

Chapter IV (p. 29)

Dover Publications, Inc. New York, New York, USA. 1993

The notion of continuity depends upon that of order, since continuity is merely a particular type of order.

Mysticism and Logic and Other Essays

Chapter V (p. 91)

Longmans, Green & Company. London, England. 1925

Sarton, May 1912–95

American poet and novelist

I see a certain order in the universe and math is one way of making it visible.

As We Are Now (p. 38)

W.W. Norton & Company, Inc. New York, New York, USA. 1973

Shakespeare, William 1564–1616

English poet, playwright, and actor

The heavens themselves, the planets, and this centre,
Observe degree, priority, and place,
Insisture, course, proportion, season, form,
Office, and custom, in all line of order.

In *Great Books of the Western World* (Volume 27)

The Plays and Sonnets of William Shakespeare (Volume 2)

Troilus and Cressida

Act I, Scene iii, l. 85–88

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Whitehead, Alfred North 1861–1947

English mathematician and philosopher

In the first place, there can be no living science unless there is a widespread instinctive conviction in the existence of an Order of Things, and, in particular, of an Order of Nature.

German chemist

von Liebig, Justice 1803–73

German organic chemist

When in the dark province of organic nature, we succeed in finding a light point, appearing to be one of those inlets whereby we may attain to the examination and investigation of this province, then we have reason to congratulate ourselves, although conscious that the object before us is unexhausted.

American Journal of Science and Arts, Volume 26, 1834 (p. 261)

Yang, Chen Ning 1922–

Chinese-born American theoretical physicist

Nature possesses an order that one may aspire to comprehend.

Nobel Lectures, Physics 1942–1962

Nobel lecture for award received in 1957

The Law of Parity Conservation and Other Symmetry Laws of Physics (p. 394)

Elsevier Publishing Company. Amsterdam, Netherlands. 1964

ORGAN TRANSPLANT

Carrel, Alexis 1873–1944

French surgeon and biologist

Thus, while the problem of the transplantation of organs has been solved from a surgical point of view, we see that this by no means suffices to render such operations of definite surgical practicability, and it will only be through a more fundamental study of the biological relationships existing between living tissues that the problems involved will come to be solved and thereby render possible the benefits to humanity which we hope to see accomplished in the future.

Nobel Lectures, Physiology or Medicine 1901–1921

Nobel lecture for award received in 1912

Suture of Blood-Vessels and Transplantation of Organs (p. 464)

Elsevier Publishing Company. Amsterdam, Netherlands. 1967

ORGANIC CHEMISTRY

Berzelius, Jöns Jacob 1779–1848
Swedish chemist

We have reached a point where we are beginning to see a theory of organic compounds; but if, instead of letting this develop as our experience grows, we want to base it on isolated facts, considered without regard for their relations with the general system of our knowledge, and by giving explanations which do not harmonise with the principles of the science, and if, moreover, we want to conclude that this lack of agreement must lead us to reject as erroneous principles which are already well established on other grounds, then we shall never succeed in finding the truth.

Annals de chemie et de physique, Volume 71, 1839

Cram, Donald J. 1919–2001
American chemist

Cram, Jane M.

No biographical data available

No other profession is endowed with such a rich landscape, draws inspiration from so many fields of science, exercises the hand and mind in so many different ways, offers such opportunities to employ creative instincts, and mixes ideas, theory, and experiment on a daily basis. Hurrah for the science of organic chemistry, and for the joy it brings those who play the research game.

Container Molecules and Their Guests

Preface (p. vi)

Royal Society of Chemistry. Cambridge, England. 1994

Holmes, Oliver Wendell 1809–94
American physician, poet, and humorist

Drops of deliquescence glistened on his forehead,
Whitened round his feet the dust of efflorescence,
'Till one Monday morning when the flow suspended,
There was no De Sauty.

Nothing but a cloud of elements organic
C.O.H.N. Ferrum, Chlor. Flu. Sil. Potassa,
Calc. Sod. Phosph. Mag. Sulphur, Mang.? Alumin.?
Caprum?

Such as man is made of.

The Professor at the Breakfast Table

Chapter I

De Sauty (p. 33)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1890

Hopkins, Frederick Gowland 1844–89
English biochemist

A very distinguished organic chemist long since dead, said to me in the late eighties: "The chemistry of the living? That is the chemistry of protoplasm; that is superchemistry; seek, my young friend, for other ambitions."

In Joseph Needham and Ernest Baldwin (eds.)
Hopkins & Biochemistry
Report of the British Association
Some Chemical Aspects of Life
1933 (p. 245)

Kekulé, Friedrich August 1829–96
German chemist

We define organic chemistry as the chemistry of carbon compounds. In doing this, we see no opposition between organic and inorganic compounds. What has been known for a long time as organic chemistry and which more usefully may be called the chemistry of carbon compounds, is rather only a special section of pure chemistry which is dealt with separately because the large number and special importance of carbon compounds seems to make a special field of study necessary.... It must be emphasized that organic chemistry does not deal with the study of the chemical processes in the organs of plants and animals.

Lehrbuch der Organischen Chemie (Volume 1) (p. 10)

Publisher undetermined

Thompson, Sir D'Arcy Wentworth 1860–1948
Scottish zoologist and classical scholar

The mysteries of organic chemistry are great, and the differences between its processes or reactions as they are carried out in the organism and in the laboratory are many; the actions, catalytic and other, which go on in the living cell, are of extraordinary complexity. But the contention that they are different in kind from ordinary chemical operations... would seem to be no longer tenable.

On Growth and Form (Volume 2)

Chapter IX (p. 652)

At The University Press. Cambridge, England. 1951

Thudichum, J. L. W. 1829–1901
Chemist

Organic chemistry is the child of medicine, and however far it may go on its way, with its most important achievements, it always returns to its parent.

On the Discoveries and Philosophy of Leibig

Journal of the Royal Society of Arts, Volume 24, 1876 (p. 141)

Ure, Andrew 1778–1857
Scottish physician

All of the elementary principles of organic nature may be considered as deriving the peculiar delicacy of their chemical equilibrium, and the consequent facility with which it may be subverted and new modeled, to the multitude of atoms grouped together in a compound. On this view, none of them should be expected to consist of a single atom of each component.

On the Ultimate Analysis of Vegetable and Animal Substances

Philosophical Transactions of the Royal Society of London, Volume 112, 1822 (pp. 468–469)

Wöhler, Friedrich 1800–82
German chemist

Organic chemistry just now is enough to drive one mad. It gives one the impression of a primeval, tropical forest full of the most remarkable things, a monstrous and boundless thicket, with no way of escape, into which one may well dread to enter.

In Edward Franklin Degering
An Outline of Organic Nitrogen Compounds
Letter to Berzelius, 28 January 1835 (p. 5)
University Lithoprinters. Ypsilanti, Michigan, USA. 1945

ORGANISM

Bernard, Claude 1813–78
French physiologist

We may, of course strike a balance between what a living organism takes in as nourishment and what it gives out in excretions.... This would be like trying to tell what happens inside a house by watching what goes in by the door and what comes out by the chimney.

An Introduction to the Study of Experimental Medicine
Part Two, Chapter II, Section IX
The Macmillan Company. New York, New York, USA. 1927

Evans, Howard Ensign 1919–2002
Entomologist

It has been said that for every problem concerning living things there is an organism ideal for its solution. It is probable that there are still undiscovered species living that hold the answers to problems that face us now or will in the future.

Pioneer Naturalist: The Discovery and Naming of North American Plants and Animals
Naturalists, Then and Now (p. 267)
Henry Holt & Company. New York, New York, USA. 1993

Hess, Walter 1881–1973
Swiss physiologist

A recognized fact which goes back to the earliest times is that every living organism is not the sum of a multitude of unitary processes, but is, by virtue of interrelationships and of higher and lower levels of control, an unbroken unity.

Nobel Lectures, Physiology or Medicine 1942–1962
Nobel lecture for award received in 1949
The Central Control of the Activity of Internal Organs (p. 247)
Elsevier Publishing Company. Amsterdam, Netherlands. 1964

Jacob, François 1920–
French biologist

And one of the deepest, one of the most general functions of living organisms is to look ahead, to produce future as Paul Valéry put it.

The Possible and the Actual

Time and the Invention of the Future (p. 66)
Pantheon Books. New York, New York, USA. 1982

Jones, J. S.
No biographical data available

Ebert, D.
No biographical data available

No organism can do everything. Every creature is restricted by constraints of various kinds. Many of these arise from the facts of history and the nature of evolution, both of which can proceed only from where they left off.

In R.J. Berry, T.J. Crawford and G.M. Hewitt (eds.)
Genes in Ecology
Life History and Mechanical Constraints on Reproduction in Genes, Cells and Waterfleas (p. 393)
Blackwell Scientific Publications. Oxford, England. 1992

Price, P. W.

Visually stimulating organisms, the large, the colorful, the active, the aggressive, command our attention, while the secretive and insidious remain largely ignored.

Evolutionary Biology of Parasites
Chapter Eight (p. 171)
Princeton University Press. Princeton, New Jersey, USA. 1980

Savage-Rumbaugh, Sue
American psychologist

Lewin, Roger Amos
Anthropologist

All organisms with complex nervous systems are faced with the moment-by-moment question that is posed by life: What shall I do next?

Kanzi: The Ape at the Brink of the Human Mind
Chapter 10 (p. 255)
John Wiley & Sons, Inc. New York, New York, USA. 1994

Thomson, J. Arthur 1861–1933
Scottish biologist

The hosts of living organisms are not random creatures, they can be classified in battalions and regiments. Neither are they isolated creatures, for every thread of life is inter-twined with others in a complex web.

The System of Animate Nature (Volume 1)
Lecture II (p. 58)
William & Norgate. London, England. 1920

von Goethe, Johann Wolfgang 1749–1832
German poet, novelist, playwright, and natural philosopher

Basic characteristics of an individual organism: to divide, to unite, to merge into the universal, to abide in the particular, to transform itself, to define itself, and as living things tend to appear under a thousand conditions,

to arise and vanish, to solidify and melt, to freeze and flow, to expand and contract. Since these effects occur together, any or all may occur at the same moment.

In D. Miller (ed.)

Scientific Studies (Volume 12)

Chapter VIII (pp. 303–304)

Suhrkamp. New York, New York, USA. 1988

ORGANIZATION

Eddington, Sir Arthur Stanley 1882–1944

English astronomer, physicist, and mathematician

There is no doubt that the scheme of physics as it has stood for the last three-quarters of a century postulates a data at which either the entities of the universe were created in a state of high organization, or pre-existing entities were endowed with that organization, which they have been squandering ever since. Moreover, this organization is admittedly the antithesis of chance. It is something which could not occur fortuitously.

The Nature of the Physical World

Chapter IV (pp. 84–85)

The Macmillan Company. New York, New York, USA. 1930

Eiseley, Loren C. 1907–77

American anthropologist, educator, and author

Men talk much of matter and energy, of the struggle for existence that molds the shape of life. These things exist, it is true; but more delicate, elusive, quicker than fins in water, is that mysterious principle known as “organization,” which leaves all other mysteries concerned with life stale and insignificant by comparison. For that without organization life does not persist is obvious. Yet this organization itself is not strictly the product of life, nor of selection. Like some dark and passing shadow within matter, it cups out the eyes’ small windows or spaces the notes of a meadow lark’s song in the interior of a mottled egg.

The Immense Journey

The Flow of the River (p. 26)

Vintage Books. New York, New York, USA. 1957

Huxley, Thomas Henry 1825–95

English biologist

Not only are all animals existing in the present creation organized to one of these five plans; but paleontology tends to show that in the myriad of past ages of which the earth’s crust contains the records, no other plan of animal life made its appearance on our planet. A marvelous fact and one which seems to present no small obstacle in the way of the notion of the possibility of fortuitous development of animal life.

In Michael Foster and E. Ray Lankester (eds)

Scientific Memoirs of Thomas Huxley

Volume 1, On Natural History as Knowledge, Discipline and Power (p. 306)
Publisher undetermined. 1901

Needham, Joseph 1900–95

English biochemist and sinologist

Organization and Energy are the two fundamental problems which all science has to solve.

Time: The Refreshing River

The Naturalness of the Spiritual World (p. 33)

The Macmillan Company. New York, New York, USA. 1943

...organization is not something fundamentally mystical and unamenable to scientific attack, but rather the basic problem confronting the biologist.... It is for us to investigate the nature of this biological organization, not to abandon it to the metaphysicians because the rules of physics do not seem to apply to it.

Order and Life

Chapter I (pp. 7, 17–18)

Yale University Press. New Haven, Connecticut, USA. 1936

Simpson, George Gaylord 1902–84

American paleontologist

The point about explanation in biology that I would particularly like to stress is this: to understand organisms one must explain their organization. It is elementary that one must know what is organized and how it is organized, but that does not explain the fact or the nature of the organization itself. Such explanation requires knowledge of how an organism came to be organized and what function the organization serves. Ultimate explanation in biology is therefore necessarily evolutionary.

This View of Life: The World of an Evolutionist

Chapter Six (p. 113)

Harcourt, Brace & World, Inc. New York, New York, USA. 1964

Szent-Györgyi, Albert 1893–1986

Hungarian-born American biochemist

One of the most basic principles of biology is organization, which means that two things put together in a specific way form a new unit, a system, the properties of which are not additive and cannot be described in terms of the properties of the constituents. As points may be connected to letters, letters to words, words to sentences, etc., so atoms can join to molecules, molecules to organelles, organelles to cells, etc., every level of organization having a new meaning of its own and offering exciting vistas and possibilities.

Bioenergetics

Chapter 6 (p. 39)

Academic Press. New York, New York, USA. 1957

Woodger, Joseph Henry 1894–1981

English biologist

The failure to take organization seriously is perhaps but another consequence of the rapid development of physics and chemistry as compared to other sciences, and the consequent dazzling effect this had on biological vision.

Biological Principles: A Critical Study

Part II, Chapter VI, B, 5 (p. 291)
Kegan Paul, Trench, Trubner & Company Ltd. London, England. 1929

If the concept of organization is of such importance as it appears to be it is something of a scandal that we have no adequate conception of it. The first duty of the biologist would seem to be to try and make clear this important concept. Some biochemists and physiologists...express themselves as though they really believed that if they concocted a mixture with the same chemical composition as what they call "protoplasm" it would proceed to "come to life." This is the kind of nonsense which results from forgetting or being ignorant of organization.

Biological Principles: A Critical Study

Part II, Chapter VI, B, 5 (p. 291)
Kegan Paul, Trench, Trubner & Company Ltd. London, England. 1929

ORGANS

Wallace, Alfred Russel 1823–1913

English humanist, naturalist, and geographer

...We have also here an acting cause to account for that balance so often observed in nature, — a deficiency in one set of organs always being compensated by an increased development of some others — powerful wings accompanying weak feet, or great velocity making up for the absence of defensive weapons; for it has been shown that all varieties in which an unbalanced deficiency occurred could not long continue their existence. The action of this principle is exactly like that of the centrifugal governor of the steam engine, which checks and corrects any irregularities almost before they become evident; and in like manner no unbalanced deficiency in the animal kingdom can ever reach any conspicuous magnitude, because it would make itself felt at the very first step, by rendering existence difficult and extinction almost sure soon to follow.

Journal of the Proceedings of the Linnean Society, Zoology, Volume 3, 1858 (pp. 61–62)

ORIGIN OF LIFE

Goldanskii, Vitalii 1923–2001

Soviet physicist and chemist

Two properties of living systems that are unique from the standpoint of physics, namely, self-replication and homochirality, may serve as Ariadne's thread in the labyrinth of hypotheses concerning this [origin-of-life] problem.

In J. and K. Tran Thon Van, J. C. Mounolou, J. Schneider and C. McKay (eds.)

Frontiers of Life

Chirality, Origin of Life, and Evolution
Publisher undetermined

Oparin, Alexander Ivanovich 1894–1980

Russian biochemist

...when I began to be interested in the problem of the origin of life, in the early 1920s, the whole topic was in a state of crisis. It appeared as if it was a forbidden subject in the world of science. The problem was generally felt to be insoluble in principle using objective scientific research methods. It was felt that it belonged more to the sphere of faith than knowledge, and that, for this reason, serious scientists should not waste their time and effort on hopeless attempts to solve the problem.

Jubilee for Heterogenesis Research

New Scientist, Volume 142, 1974

Sagan, Carl 1934–96

American astronomer and author

Every human community has somehow or other tried to understand...deep questions of origins. Origin of our group, whatever it is, origin of our species, origin of life, origin of Earth, origin of the universe. I think you have to be made out of wood not to be interested in these questions. And there's no way to understand even the questions, much less the answers, without understanding science.

Speech

National meeting of the American Astronomical Society (January 5, 1993)

Teilhard de Chardin, Pierre 1881–1955

French Jesuit, paleontologist, and biologist

To push anything back into the past is equivalent to reducing it to its simplest element. Traced as far as possible in the direction of their origins, the last fibers of the human aggregate are lost to view and are merged in our eyes with the very stuff of the universe.

The Phenomenon of Man

Book One, Chapter I (p. 39)

Harper & Brothers. New York, New York, USA. 1959

Wächtershäuser, Günter

International patent lawyer

The chemist strives to explain the inanimate world by reference to mechanistic laws. The historian strives to understand the world of human culture by reference to a fabric of plans and purposes.... Nowhere is this encounter in sharper focus than in the problem of the origin of life.

The Origin of Life and Its Methodological Challenge

Journal of Theoretical Biology, Volume 187, 1997

ORIGINALITY

von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

Those theories to which we ascribe originality are not so easily grasped, not so quickly epitomized and systematized. An author tends toward this or that way of thinking; but it is modified by his individuality, indeed,

often simply by his presentation, by the peculiarity of the idiom in which he speaks and writes, by the change in times, by various considerations.

In Karl J. Fink

Goethe's History of Science

Chapter 9 (p. 115)

Cambridge University Press. Cambridge, England. 1991

ORNITHOLOGY

Audubon, John James 1785–1851

West Indian-born American ornithologist and artist

To render more pleasant the task you have imposed upon yourself, of following an author through the mazes of descriptive ornithology, permit me, kind reader, to relieve the tedium which may be apt now and then to come upon you, by presenting you with occasional descriptions of the scenery and manners of the land which has furnished the objects that engage your attention.

Ornithological Biography (Volume 1)

The Ohio (p. 29)

Adam Black. Edinburgh, Scotland. 1831

Author undetermined

...the philosophy of science is just about as useful to scientists as ornithology is to birds.

In S. Weinberg

Newtonianism, Reductionism and the Art of Congressional Testimony

Nature, Volume 330, Number 6147, 3–9 December 1987 (p. 433)

Darwin, Charles Robert 1809–82

English naturalist

I took much pleasure in watching the habits of birds, and even made notes on the subject. In my simplicity I remember wondering why every gentleman did not become an ornithologist.

In Francis Darwin (ed.)

The Life and Letters of Charles Darwin (Volume 1)

Chapter II (p. 32)

D. Appleton & Company. New York, New York, USA. 1896

Vidal, Gore 1925–

American essayist, novelist, and social/political commentator

To a man, ornithologists are tall, slender, and bearded so that they can stand motionless for hours, imitating kindly trees, as they watch for birds.

Armageddon? Essays 1983–1987

Mongolia (p. 131)

Vintage Books. New York, New York, USA. 1990

White, Gilbert 1720–93

English naturalist and cleric

A good ornithologist should be able to distinguish birds by their air [manner] as well as by their colours and shape; on the ground as well as on the wing, and in the bush as well as in the hand.

The Natural History of Selborne

Letter XLII

To Dianas Barrington

August 7, 1778

OSMOTIC PRESSURE

van't Hoff, Jacobus Henricus 1852–1911

Dutch physical and organic chemist

In an investigation, whose essential aim was a knowledge of the laws of chemical equilibrium in solutions, it gradually became apparent that there is a deep-seated analogy — indeed, almost an identity — between solutions and gases, so far as their physical relations are concerned; provided that with solutions we deal with the so-called osmotic pressure, where with gases we are concerned with the ordinary elastic pressure.

Zeitschrift für physikalische Chemie

The Role of Osmotic Pressure in the Analogy between Solutions and Gasses, Volume 1, 1887

OSTEOPATH

Mencken, H. L. (Henry Louis) 1880–1956

American journalist and literary critic

Osteopath — One who argues that all human ills are caused by the pressure of hard bone on soft tissue. The proof of his theory is to be found in the heads of those who believe it.

A Mencken Chrestomathy

Chapter XXX (p. 625)

Alfred A. Knopf. New York, New York, USA. 1949

OTHER WORLDS

Abbey, Henry 1842–1911

Author

When from the vaulted wonder of the sky

The curtain of the light is drawn aside,

And I behold the stars in all their wide

Significance and glorious mystery,

Assured that those more distant orbs are suns

Round which innumerable worlds revolve,

My faith grows strong, my day-born doubts dissolve,

And death, that dread annulment which life shuns,

Or fain would shun, becomes to life the way,

The thoroughfare to greater worlds on high,

The bridge from star to star. Seek how we may,

There is no other road across the sky;

And, looking up, I hear star-voices say:

“You could not reach us if you did not die.”

The Poems of Henry Abbey

Faith's Vista

Kingston. New York, New York, USA. 1895

Jackson, Helen Hunt 1830–85

American writer and poet

Who knows what myriad colonies there are
Of fairest fields, and rich, undreamed-of gains
Thick planted in the distant shining plains
Which we call sky because they lie so far?
Oh, write of me, not “Died in bitter pains,”
But “Emigrated to another star!”

Helen Jackson's Poems

Emigravit

Robert Brothers. Boston, Massachusetts, USA. 1888

Magnus, Albertus 1206–1280

Scientist, philosopher, and theologian

Do there exist many worlds, or is there but a single world?
This is one of the most noble and exalted questions in the
study of Nature.

In G. McColley

The Seventeenth-Century Doctrine of a Plurality of Worlds

Annals of Science, Volume 1, Number 4, October 15, 1936 (p. 385)**Oersted, Hans Christian** 1777–1851

Danish physicist and chemist

Dost thou perceive naught but machinery
In laws which guide the course along heaven's paths?
Look with a larger view around; behold
The unity of living thoughts, displayed
In countless varying forms. The mighty sun
Is but a twinkling star amidst the space
Infinite filled with worlds, whose suns, heaven's lamps,
Shine in our night.... Look

Upon the spangled heav'ns, there to discover
Thousands of blazing suns, encircled by
Companions numerous.... A race of beings behold
Struggling for mental power, knowledge divine.

The Soul in Nature: With Supplementary Contributions

The Balloon

H.G. Bohn. London, England. 1852

Tennyson, Alfred (Lord) 1809–92

English poet

The Moon's white cities, and the opal width
Of her small glowing lakes, her silver heights
Unvisited with dew of vagrant cloud,
And the unsounded, undescended depth
Of her black hollows. The clear galaxy
Shorn of its hoary lustre, wonderful,
Distinct and vivid with sharp points of light,
Blaze within blaze, an unimagined depth
And harmony of planet-girded suns
And moon-encircled planets, wheel in wheel,
Arch'd the wan sapphire. Nay — the hum of men,
Or other things talking in unknown tongues
And notes of busy life in distant worlds
Beat like a far wave on my anxious ear.

Alfred Tennyson's Poetical Works

Timbuctoo

Oxford University Press, Inc. London, England. 1953

And the suns of the limitless universe sparkled and
shone in the sky,
Flashing with fires as of God, but we knew that their
light was a lie —
Bright as with deathless hone — but, however they
sparkled and shone,
The dark little worlds running round them were worlds
of woe like our own.

Alfred Tennyson's Poetical Works

Despair, Stanza III

Oxford University Press, Inc. London, England. 1953

Whitman, Walt 1819–92

American poet, journalist, and essayist

Let your soul stand cool and composed before a million
universes.

Night on the Prairies

The Library of America. New York, New York, USA. 1982

OUTER SPACE**Hey, Nigel S.** 1936–

American science writer

Human minds are being pulled into outer space by a
thin, strong filament of neural energy called wonder.
And this, to me, is a very good thing. As more of us let
our sense of wonder expand into the cosmos — so that
we comprehend the delicate smallness of our planet in
the scheme of things — we are gaining a special kind
of wisdom. My dream is that, with the blessing of good
fortune, this wisdom will eventually enable us to trans-
cend the dangerous confusion of civilizations that are
maintained by coercion and misbelief. All sane persons

will comprehend their innate unity with the supernovas of which we are made. There will be no need for Utopia, for then we will have become meta-humans, siblings to all things that exist with and among the planets and the teeming stars. And then, perhaps, there will be peace at last.

Why People Need Space

Lecture, National Space Center, October 2002

MacLeod, Ken 1954–

Scottish science fiction writer

Outer space is, fundamentally, familiar. It's only the night sky, without the earth beneath your feet.

The Engines of Light

Cosmonaut's Keep (p. 1)

Tom Doherty Associates, LLC. New York, New York, USA. 2002

United Nations Treaty on the Exploration and Use of Space

The exploration and use of outer space, including the moon and other celestial bodies, shall be carried out for the benefit and in the interests of all countries, irrespective of their degree of economic or scientific development, and shall be the province of all mankind.

January 27, 1967

Webb, Jimmy 1946–

American music composer

I'll fly a starship, across the universe divine,

And when I reach the other side
I'll find a place to rest my spirit if I can
Perhaps I may become a highwayman again
Or I may simply be a single drop of rain
But I will remain, and I'll be back again
And again, and again, and again.

The Tragic (p. 405)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Hilton, John 1804–78
English surgeon

Pain the monitor, and Rest the cure, are starting points for contemplation which should ever be present to the mind of the surgeon in reference to his treatment.

Rest and Pain: A Course of Lectures on the Influence of Mechanical and Physiological Rest In the Treatment of Accidents and Surgical Diseases, and the Diagnostic Value of Pain (p. 500)
George Bell & Sons. London, England. 1892

Every pain has its distinct and pregnant signification, if we will but carefully search for it.

Rest and Pain: A Course of Lectures on the Influence of Mechanical and Physiological Rest In the Treatment of Accidents and Surgical Diseases, and the Diagnostic Value of Pain (p. 499)
George Bell & Sons. London, England. 1892

Hood, Thomas 1582–98
English poet and editor

Of all our pains, since man was curst,
I mean of body, not the mental,
To name the worst, among the worst,
The dental sure is transcendental;
Some bit of masticating bone,
That ought to help to clear a shelf:
But lets its proper work alone,
And only seems to gnaw itself.

The Complete Poetical Works of Thomas Hood
A True Story
Greenwood Press, Publishers. Westport, Connecticut, USA. 1980

Johnson, Samuel 1696–1772
English critic, biographer, and essayist

...those who do not feel Pain, seldom think that it is felt...
The Rambler (Volume 1)
No. 48, September 1, 1750 (p. 335)
Edward Earle. Philadelphia, Pennsylvania, USA. 1812

Latham, Peter Mere 1789–1875
English physician

It would be a great thing to understand Pain in all its meanings.

In William B. Bean
Aphorisms from Latham (p. 71)
Prairie Press. Iowa City, Iowa, USA. 1962

Mather, Cotton 1663–1728
American minister and religious writer

WHAT is Pain? Tis a Sensation produced on the Tension of a Nerve.

The Angel of Bethesda
Capsula IX (p. 54)

PALEONTOLOGIST

Bracker, Milton

No biographical data available

Consider the sages who pulverize boulders,
And burrow for elbows and shinbones and shoulders,
And shovel the loot from a hill or a dale of it,
And lovingly carry off pail after pail of it.

P Is for Paleontology

Journal of Geological Education, Volume 19, Number 4, September 1971 (p. 192)

Bradley, Jr., John Hodgdon 1898–1962

American geologist

The paleontologist watching the rise and fall of races sees, with only actors and setting changed, one drama repeated. Thus like the jaded critic he knows the end before the final curtain. He sees that death is the penalty for life.

Parade of the Living

Part III, Chapter XVII (pp. 237–238)

Coward-McCann, Inc. New York, New York, USA. 1930

Brett-Surman, Michael 1950–

American paleontologist

Being a paleontologist is like being a coroner except all the witnesses are dead and all the evidence has been left out in the rain for 65 million years.

In Louie Psihoyos

Hunting Dinosaurs (p. vii)

Random House, Inc. New York, New York, USA. 1994

Colbert, Edwin H. 1905–2001

American vertebrate paleontologist

Any paleontologist worth his or her salt takes a great deal of pleasure in thinking of the discoveries he has made in the field and laboratory, but true satisfaction is in the publications that describe and interpret the fossils.

Digging into the Past: An Autobiography

Chapter VII (p. 126)

Dembner Books. New York, New York, USA. 1989

Cousteau, Jacques-Yves 1910–77

French naval officer and ocean explorer

A paleontologist holds the thread of evolution in his hands by combining the biological and geological evidence in fossils.

The Ocean World of Jacques Cousteau: The Adventure of Life

Chapter I (p. 13)

The World Publishing Company. New York, New York, USA. 1973

Gaudry, Jean-Albert 1827–1908

French paleontologist

It is the proper function of paleontologists to supply some proofs to the doctrine of evolution; it does not fall to them to explain the process by which the author of the world has produced the modifications. That study of processes is what is called Darwinism.... Assuredly it is a subject quite worthy of the attention of those naturalists that study the causes of the modifications of beings; but it is up to the physiologists, who experiment on living creatures, to teach us how the changes are produced today, and must have been produced formerly.... On this subject a paleontologist can avow his ignorance. All that he can say is that the discovery of vestiges buried in the bowels of the earth teach us that a constant harmony has presided at the transformation of the organic world.

Les Enchaenements

Revue des Deux Mondes, 9th Series, Volume 23, 1877 (p. 183)

Matthew, William Diller 1871–1930

Canadian-American paleontologist

...evolution is only one aspect of the order of nature, of the relations of cause and effect, of continuity of space and time, which pervade the universe and enable us to comprehend its simplicity of plan, its complexity of detail. The paleontologist, engaged in adding year by year to the mass of documents which record the history of life, in deciphering their meaning and interpreting their significance, has no more occasion to doubt

its continuity and orderly development than the historian has to doubt the continuity and consecutive evolution of human history, or the student of current affairs to doubt that the events of tomorrow.

Natural History, Volume 25, Number 2, 1925

Morris, Simon Conway 1951–
English paleontologist

As well as being lumps of patterned stone, fossils are also historical documents. History per se has had a bit of bad press recently.... There is a tension between the documentation of history (famously referred to as “one bloody thing after another”), and the search for universal principles that are ahistoric and possibly timeless. After a period in the doldrums, the bearers of the historical tidings, the paleontologists, are making tentative movements toward the legendary High Table where, just visible through the clouds of incense (and rhetoric), the high priests of evolutionary theory smile benignly.

The Phylogeny of Life and the Accomplishments of Phylogenetic Biology
Symposium at the University of Arizona. Tucson, Arizona, USA
October 11–13, 1996

Early Metazoan Radiations: What the Fossil Record Can and Cannot Tell Us

Simpson, George Gaylord 1902–84
American paleontologist

Not long ago paleontologists felt that a geneticist was a person who shut himself in a room, pulled down the shades, watched small flies disporting themselves in milk bottles, and thought that he was studying nature. A pursuit so removed from the realities of life, they said, had no significance for the true biologist. On the other hand, the geneticists said that paleontology had no further contributions to make to biology, that its only point has been the completed demonstration of the truth of evolution, and that it was a subject too purely descriptive to merit the name “science.” The paleontologist, they believed, is like a man who undertakes to study the principles of the internal combustion engine by standing on a street corner and watching the motor cars whizz by.

Tempo and Mode in Evolution

Introduction (p. xv)

Columbia University Press. New York, New York, USA. 1944

Turney, John
No biographical data available

Take a complete, illustrated catalogue of London’s National Gallery. Shred it into tiny pieces and cast them into the wind from the gallery’s steps above Trafalgar Square. Wait a few weeks, then scour the square for surviving scraps of paper. Now try to reconstruct the history of painting from your haul. If you manage to produce a coherent story — schools, styles, genres, named painters and all — you are probably a paleontologist.

Review of “In Search of Deep Time”
New Scientist, 25 March 2000

PALEONTOLOGY

Grassé, Pierre P. 1895–1985
French zoologist

Naturalists must remember that the process of evolution is revealed only through fossil forms. A knowledge of paleontology is, therefore, a prerequisite; only paleontology can provide them with the evidence of evolution and reveal its course or mechanisms. Neither the examination of present beings, nor imagination, nor theories can serve as a substitute for paleontological documents. If they ignore them, biologists, the philosophers of nature, indulge in numerous commentaries and can only come up with hypotheses. That is why we constantly have recourse to paleontology, the only true science of evolution. From it we learn how to interpret present occurrences cautiously; it reveals that certain hypotheses considered certainties by their authors are in fact questionable or even illegitimate.

Evolution of Living Organisms: Evidence for a New Theory of Transformation

An Introduction to the Study of Evolution (p. 4)

Academic Press. New York, New York, USA. 1977

Bakker, Robert T. 1945–
American paleontologist

Paleontology is a very visual inquiry.... All paleontologists scribble on napkins at coffee breaks, making sketches to explain their thinking.

Brushing Up On Dinosaurs

Science News, October 4, 1986

Crawford, Osbert Guy Stanhope 1886–1957
English archaeologist

If archaeology is humanity revealed by its works, paleontology is life revealed by its own remains.

Man and His Past

Chapter VI (p. 70)

Oxford University Press, Inc. London, England. 1921

Dunbar, Carl O.

If they stink, the remains belong to zoology, but if not, to paleontology.

In Alan M. Cvancara

Sleuthing Fossils: The Art of Investigating Past Life

Chapter 1 (p. 1)

John Wiley & Sons, Inc. New York, New York, USA. 1990

Hillery, Herbert
No biographical data available

There is no end to paleontology, there is no end to geology; and when the morning of the resurrection shall come,

some paleontologist will be searching for some previously undiscovered species of extinct beings, and some geologist will be pecking away at the rocks to find some characteristics which have never been before ascertained. There is no end to it.

Congressional Record, Volume 23, 1892 (p. 4626)

Herzen, Aleksandr 1812–70

Russian political author

The small buds of organic chemistry, geology, paleontology, comparative anatomy have grown in our century into huge branches and borne fruit exceeding our wildest hopes. The world of the past, obedient to the mighty voice of science, has left the tomb to bear witness to the upheavals which accompany the evolution of the surface of the globe; the soil on which we live, this tombstone of the past life, is growing transparent, as it were; the stone vaults have opened, the interior of the rocks could not retain their secrets. Not only do the half-decayed, half-petrified vestiges again assume flesh, paleontology also strives to discover the law of the relation between geologic epochs and their complete flora and fauna. Then everything that ever lived will be resurrected in the human mind, will be saved from the sad fate of utter oblivion, and those whose bones have been completely decayed, whose phenomenal existence has been utterly obliterated, will be restored in the bright sanctuary of science where the temporal finds its repose and is perpetuated.

Selected Philosophical Works

Letters on the Study of Nature, Letter One (pp. 99–100)

Foreign Languages Publishing House. Moscow, Russia. 1956

Howard, Robert West

No biographical data available

The three volumes of [Lyell's] *Principles of Geology*, published between 1829 and 1833, became the essential textbook of the profession. In its discussion of fossils and the vital role they had played in the development of geology as an exact science, Lyell urged adoption of a Greek-rooted word, meaning "the science of early beings," as the professional name for research of the types of plant and animal fossils embedded in the Earth's layered crust. His suggestion was adopted throughout Europe and the Americas. Thus, three centuries after the curiosities of Leonardo da Vinci, the dawnseekers' science was given the name of paleontology.

The Dawnseekers: The First History of American Paleontology

Chapter 9 (p. 126)

Harcourt Brace Jovanovich. New York, New York, USA. 1975

Huxley, Thomas Henry 1825–95

English biologist

That application of the sciences of biology and geology, which is commonly known as palaeontology, took its origin in the mind of the first person who, finding

something like a shell, or a bone, naturally imbedded in gravel or rock, indulged in speculations upon the nature of this thing which he had dug out — this "fossil" — and upon the causes which had brought it into such a position.

Collected Essays (Volume 4)

The Rise and Progress of Paleontology (p. 24)

Macmillan & Company Ltd. London, England. 1904

Kielan-Jaworowska, Zofia 1925–

Polish paleontologist

No scientist familiar with the intellectual adventure of studying animals from times long past will have any hesitation in affirming that to travel millions of years into the past, which is what paleontological study amounts to, is much more fascinating than the most exotic geographical travel we are able to undertake today. The study of animals that lived on Earth millions of years ago is not merely a study of their anatomy, but first and foremost a study of the course of evolution on earth and of the laws that govern it.

Translated by the Israel Translation Society

Hunting for Dinosaurs

Chapter 15 (p. 176)

The MIT Press. Cambridge, Massachusetts, USA. 1969

Kitts, David B.

Evolutionist and paleontologist

Despite the bright promise that paleontology provides a means of "seeing" evolution, it has presented some nasty difficulties for evolutionists, the most notorious of which is the presence of "gaps" in the fossil record. Evolution requires intermediate forms between species and paleontology does not provide them...

Evolution, Volume 28, September 1974 (p. 467)

Medawar, Sir Peter Brian 1915–87

Brazilian-born English zoologist

It may seem that palaeontology is a science of pure speculation or inquisitiveness, and the palaeontologist the most unreal and useless of researchers; a man dedicated to retrospection, plunged living into the past, where he spends his days collecting the debris of dead things.

The Future of Man

Chapter IV, Part I, Section 3 (p. 66)

Harper & Row, Publishers. New York, New York, USA. 1964

Miller, Hugh 1802–56

Scottish geologist and theologian

Paleontology, or the science of ancient organisms, deals, as its subject, with all the plants and animals of all the geologic periods. It bears nearly the same sort of relation to the physical history of the past that biography does to the civil and political history of the past.

The Testimony of the Rocks; of, Geology in Its Bearings on the Two Theologies, Natural and Revealed

Lecture First (p. 33)

Gould & Lincoln. Boston, Massachusetts, USA. 1857

Osborn, Henry Fairfield 1857–1935
American paleontologist and geologist

Paleontology is the zoology of the past.
The Age of Mammals in Europe, Asia and North America
Chapter I (p. 1)
The Macmillan Company. New York, New York, USA. 1910

The preservation of extinct animals and plants in the rocks is one of the fortunate accidents of time, but to mistake this position as indicative of affinity [with zoology and botany] is about as logical as it would be to bracket the Protozoa, which are principally aquatic organisms, under hydrology, or the Insecta, because of their aerial life, under meteorology. No, this is emphatically a misconception which is still working harm in some museums and institutions of learning. Paleontology is not geology, it is zoology ; it succeeds only so far as it is pursued in the zoological and biological spirit.

The Present Problems of Paleontology
Popular Science Monthly, 1905 (p. 226)

Rudwick, Martin J. S.
Science historian

As paleontology now prepares for a great leap forward into a computerised age there is perhaps a danger that it may lose sight of its historic origins in the “steam age” of science and before.

The Meaning of Fossils, Episodes in the History of Paleontology
Chapter Five, Section XII (p. 266)
Macdonald. London, England. 1972

Twain, Mark (Samuel Langhorne Clemens) 1835–1910
American author and humorist

What a noble science is paleontology! And what really startling sagacity its votaries exhibit!

Collected Tales, Sketches, Speeches & Essays 1852–1890 (Volume 1)
A Brace of Brief Lectures on Science (p. 528)
The Library of America. New York, New York, USA. 1992

van der Gracht, W. A. 1873–1943
Dutch petroleum geologist

There are few subjects where there exists greater diversity of opinions regarding practically everything than in paleontology.

Fossils: The Oldest Treasures that Ever Lived
Knowledge and Museums (p. 9)
T.H.F. Publications, Inc. Neptune City, New Jersey, USA. 1985

PANSPERMIA

Kelvin, Lord William Thomson 1824–1907
Scottish engineer, mathematician, and physicist

Should the time come when this earth comes into collision with another body, comparable in dimensions to itself...many great and small fragments carrying seeds of living plants and animals would undoubtedly be scattered through space. Hence, and because we all confidently believe that there are at present, and have been from time immemorial, many worlds of life besides our own, we must regard it as probable in the highest degree that there are countless seed-bearing meteoric stones moving about through space. If at the present instance no life existed upon this earth, one such stone falling upon it might, by what we blindly call natural causes, lead to its becoming covered with vegetation.

Odham's Press. London, England. 1950

PARADIGM**Barnes, Barry**

Sociologist

...paradigms, the core of the culture of science, are transmitted and sustained just as is culture generally: scientists accept them and become committed to them as a result of training and socialization, and the commitment is maintained by a developed system of social control.

In Quentin Skinner (ed.)

The Return of Grand Theory in the Human Sciences

Thomas Kuhn (p. 89)

Cambridge University Press. Cambridge, England. 1985

Kuhn, Thomas S. 1922–96

American historian of science

The operations and measurements that a scientist undertakes in the laboratory are not “the given” of experience but rather “the collected with difficulty.” They are not what the scientist sees — at least not before his research is well advanced and his attention focused.... Science does not deal in all possible laboratory manipulations. Instead, it selects those relevant to the juxtaposition of a paradigm with the immediate experience that that paradigm has partially determined.

The Structure of Scientific Revolutions

Chapter X (p. 126)

The University of Chicago Press. Chicago, Illinois, USA. 1970

Normal science does not aim at novelties of fact or theory and, when successful, finds none. New and unsuspected phenomena are, however, repeatedly uncovered by scientific research, and radical new theories have again and again been invented by scientists. History even suggests that the scientific enterprise has developed a uniquely powerful technique for producing surprises of this sort. If this characteristic of science is to be reconciled with what has already been said, then research under a paradigm must be a particularly effective way of inducing a paradigm change. That is what fundamental novelties of fact and theory do. Produced inadvertently by a game played under one set of rules, their assimilation requires the elaboration of another set. After they have become parts of science, the enterprise, at least of those specialists in whose particular field the novelties lie, is never quite the same again.

The Structure of Scientific Revolutions

Chapter VI (p. 52)

The University of Chicago Press. Chicago, Illinois, USA. 1970

A paradigm is what members of the scientific community share, and, conversely a scientific community consists of men who share a paradigm.

The Structure of Scientific Revolutions

Postscript (p. 176)

The University of Chicago Press. Chicago, Illinois, USA. 1970

PARADISE**Abbey, Edward** 1927–89

American environmentalist and nature writer

When I write “paradise” I mean not only apple trees and golden women but also scorpions and tarantulas and flies, rattlesnakes and Gila monsters, sandstorms, volcanoes and earthquakes, bacteria and bear, cactus, yucca, bladderweed, ocotillo and mesquite, flash floods and quicksand, and yes — disease and death and the rotting of the flesh.

Act II (p. 168)

Random House, Inc. New York, New York, USA. 1936

Humphries, W. J. 1862–1949

American meteorologist and atmosphere scientist

The scientific paradox is only an exception to some familiar but too inclusive generalization. It, therefore, has both the appeal of the riddle and the charm of surprise — the surprise, the instant the truth is seen, of a sudden and unexpected discovery....

A Bundle of Meteorological Paradoxes

Annual Report of the Board of Regents of the Smithsonian Institution,

1920 (p. 183)

Government Printing Office. Washington, D.C. 1922

Kasner, Edward 1878–1955

American mathematician

Newman, James Roy 1911–66

Mathematician and mathematical historian

Perhaps the greatest paradox of all is that there are paradoxes in mathematics...because mathematics builds on the old but does not discard it, because its theorems are deduced from postulates by the methods of logic, in spite of its having undergone revolutionary changes we do not suspect it of being a discipline capable of engendering paradoxes.

Mathematics and the Imagination

Paradox Lost and Paradox Regained (p. 193)
Simon & Schuster. New York, New York, USA. 1940

Kelvin, Lord William Thomson 1824–1907

Scottish engineer, mathematician, and physicist

Paradoxes have no place in science. Their removal is the substitution of true for false statements and thoughts.

Popular Lectures and Addresses (Volume 1)

On Sun's Heat

Lecture

Royal Institution of Great Britain

January 21, 1887 (pp. 372–373)

Macmillan & Company Ltd. London, England. 1894

Rapport, Anatol 1911–2007

Russian-born mathematician and biologist

Paradoxes have played a dramatic part in intellectual history, often foreshadowing revolutionary developments in science, mathematics, and logic. Whenever, in any discipline, we discover a problem that cannot be solved within the conceptual framework that supposedly should apply, we experience an intellectual shock. The shock may compel us to discard the old framework and adopt a new one. It is to this process of intellectual molting that we owe the birth of many of the major ideas in mathematics and science.

Escape from Paradox

Scientific American, Volume 217, Number 1, July 1967 (p. 50)

Rogers, Jr., Hartley

American mathematician

It is a paradox in mathematics and physics that we have no good model for the teaching of models.

Rota, Gian-Carlo 1932–99

Italian-born American mathematician

Books on paradoxes in statistics are similar to mystery books. They have a faithful readership, and they follow a rigorous sequence in their presentation, like Greek tragedies.

Indiscrete Thoughts

Chapter XX (p. 224)

Birkhäuser. Boston, Massachusetts, USA. 1997

Russell, Bertrand Arthur William 1872–1970

English philosopher, logician, and social reformer

Although this may seem a paradox; all exact science is dominated by the idea of approximation.

In Jefferson Hane Weaver

The World of Physics (Volume 2)

K.2 (p. 22)

Simon & Schuster. New York, New York, USA. 1987

Schild, Alfred 1921–77

Physicist

Consider a pair of twins. Immediately after birth they are separated. One of them, the first one, remains on earth, the second one is put in a rocket ship and flown to Alpha Centauri at a pretty high speed, 99% that of light. Alpha Centauri is the nearest star; it is about four light-years away from us. As soon as the second twin gets to Alpha Centauri, he turns around and flies back to earth at the same high speed. When the two twins meet again, the first one, the one who stayed behind on earth, will be eight years old...he will be able to talk quite well and read a little bit. He may have finished second grade and be about to enter third. The second twin, the one who took the journey, on his return will be approximately one year old.... He will still need diapers, he will be barely able to walk, and he won't be able to talk much.

The Clock Paradox in Relativity Theory

The American Mathematical Monthly, Volume 66, Number 1, January 1959 (p. 1)

Schrödinger, Erwin 1887–1961

Austrian theoretical physicist

Attention had recently (A. Einstein, B. Podolsky, and N. Rosen, *Phys. Rev.* 47 (1935) 777) been called to the obvious but very disentangling measurement to one system, the representative obtained for the other system is by no means independent of the particular choice of observations which we select for that purpose and which by the way are entirely arbitrary. It is rather disconcerting that the theory should allow a system to be steered or piloted into one or the other type of state at the experimenter's mercy in spite of his having no access to it.

Proceedings of the Cambridge Philosophical Society, Volume 11, 1935 (p. 555)

Shaw, George Bernard 1856–1950

Irish comic dramatist and literary critic

Paradoxes are the only truths.

Misalliance (p. 142)

Samuel French, Inc. London, England. 1957

Shimony, Abner 1928–

American physicist and philosopher of science

I hope that the rigor and beauty of the argument of EPR [Einstein–Podolsky–Rosen paradox] is apparent. If one does not recognize how good an argument it is — proceeding rigorously from premises which are thoroughly reasonable — then one does not experience an adequate intellectual shock when one finds out that the experimental evidence contradicts their conclusions. This shock should be as great as the one experienced by Frege when he read Russell's theoretical paradox and said, "Alas, arithmetic totters!"

Quoted by Franco Seller

Quantum Mechanics Versus Local Realism: The Einstein–Podolsky–Rosen Paradox

PARKINSON'S DISEASE

Parkinson, James 1755–1824
English physician and paleontologist

The disease, respecting which the present inquiry is made, is of a nature highly afflictive.... The unhappy sufferer has considered it as an evil, from the domination of which he had not prospect of escape.

An Essay on the Shaking Palsy
Medical Classics, Volume 10, Number 10, June 1938

So slight nearly imperceptible are the first inroads of this malady, and so extremely slow its progress, that it rarely happens, that the patient can form any recollection of the precise period of its commencement. The first symptoms perceived are, a slight sense of weakness, with a proneness to trembling in some particular part, sometimes in the head, but most commonly in one of the hands and arms.

An Essay on the Shaking Palsy
Medical Classics, Volume 2, Number 10, June 1938

PARTICLE

Davy, Sir Humphry 1778–1829
English chemist

...the different bodies in nature are composed of particles or minute parts, individually imperceptible to the senses. When the particles are similar, the bodies they constitute are denominated simple, and when they are dissimilar, compound. The chemical phenomena result from the different arrangements of the particles of bodies; and the powers that produce these arrangements are repulsion, or the agency of heat, and attraction.

Syllabus of a Course of Lectures at the Royal Institution (p. 2)
Publisher undetermined. London, England. 1802

Fermi, Enrico 1901–54
Italian-born American physicist

If I could remember the names of all these particles, I'd be a botanist.

In A. Zee
Fearful Symmetry
Chapter 11 (p. 168)
Macmillan Publishing Company. New York, New York, USA. 1986

Feynman, Richard P. 1918–88
American theoretical physicist

We seem gradually to be groping toward an understanding of the world of sub-atomic particles, but we really do not know how far we have yet to go in this task.

Six Easy Pieces: Essentials of Physics Explained by Its Most Brilliant Teacher
Basic Physics (p. 45)
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

One of the consequences is that things which we used to consider as waves also behave like particles, and particles behave like waves; in fact everything behaves the same way. There is no distinction between a wave and a particle. So quantum mechanics unifies the idea of the field and its waves, and the particles, all into one.

Six Easy Pieces: Essentials of Physics Explained by Its Most Brilliant Teacher

Basic Physics (p. 36)
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

Feynman, Richard P. 1918–88
American theoretical physicist

Leighton, Robert B. 1919–97
American physicist

Sands, Matthew L. 1919–
American physicist

Quantum mechanics has many aspects. In the first place, the idea that a particle has a definite location and a definite speed is no longer allowed; that is wrong.

Nature, it seems is the popular name for milliards and milliards and milliards of particles playing their infinite game of billiards and billiards and billiards.

Grooks II
Atomyriades
Doubleday & Company, Inc. Garden City, New York, USA. 1969

Heisenberg, Werner Karl 1901–76
German physicist and philosopher

We can not longer speak of the behavior of the particle independently of the process of observation. As a final consequence, the natural laws formulated mathematically in quantum theory no longer deal with the elementary particles themselves but with our knowledge of them.

Nor is it any longer possible to ask whether or not these particles exist in space and time objectively...

The Physicist's Conception of Nature
Chapter I (p. 15)
Greenwood Press, Publishers. Westport, Connecticut, USA. 1958

The mathematically formulated laws of quantum theory show clearly that our ordinary intuitive concepts cannot be unambiguously applied to the smallest particles. All the words or concepts we use to describe ordinary physical objects, such as position, velocity, color, size, and so on, become indefinite and problematic if we try to [apply them to] elementary particles.

Across the Frontiers
Chapter IX (p. 114)
Harper & Row, Publishers. New York, New York, USA. 1974

In the light of quantum theory these elementary particles are no longer real in the same sense as objects of daily life, trees or stones, but appear as abstractions derived from the real material of observation in the true sense.

On Modern Physics
Philosophical Problems (p. 13)
C.N. Potter. New York, New York, USA. 1961

Johnson, George 1952–
American science writer

In science's great chain of being, the particle physicists place themselves with the angels, looking down from the heavenly spheres on the chemists, biologists, geologists, meteorologists — those who are applying, not discovering, nature's most fundamental laws. Everything, after all, is made from subatomic particles. Once you have a concise theory explaining how they work, the rest should just be filigree.

New Contenders for a Theory of Everything
The New York Times, F1, Column 1, Tuesday, December 4, 2001

Regnault, Noël 1702–62
Jesuit mathematician

The Imagination is lost here. Rather than the Minds; for if you divide a Particle into the most inconceivably minute Parts, the Mind will always find therein something that regards the West, and something that regards the East; and what regards the West, is not that which regards the East.

Collier's Weekly, Volume 36 October 7, 1905 (p. 14)**PATHOLOGY****Mencken, H. L. (Henry Louis)** 1880–1956

American journalist and literary critic

Pathology would remain a lovely science, even if there were no therapeutics, just as seismology is a lovely science, though no one knows how to stop earthquakes.

A Mencken Chrestomathy

Chapter XXX (pp. 625–626)

Alfred A. Knopf. New York, New York, USA. 1949

Virchow, Rudolf Ludwig Karl 1821–1902

German pathologist and archaeologist

Pathology has been released from the anomalous and isolated position which it has occupied for thousands of years. Through the application of its doctrines not only to diseases of man, but also to those of even the smallest and lowest of animals, and to those of plants, it helps to deepen biological knowledge, and to light up still further that region of the unknown which still envelops the intimate structure of living matter. It is no longer merely applied physiology — it has become physiology itself.

Translated by Leland J. Rathner

Disease, Life, and Man, Selected Essays

The Place of Pathology Among the Biological Sciences (p. 169)

Stanford University Press. Stanford, California, USA. 1958

Pathology also has its place in the science of biology, certainly a very honorable one, for to pathology we owe the realization that the contrast between health and disease is not to be sought in a fundamental difference of two

kinds of life, nor in an alteration of essence, but only in an alteration of conditions.

Translated by Lelland J. Rather

PATIENT

Abernethy, John 1680–1740

Irish Presbyterian minister, theologian, and dissenter

Private patients, if they do not like me, can go elsewhere, but the poor devils in the hospital I am bound to take care of.

Memoirs of John Abernethy

Chapter V (p. 37)

Harper & Brothers. New York, New York, USA. 1853

Armour, Richard 1906–89

American poet

The perfect patient let us praise:
He's never sick on Saturdays,
In fact this wondrous, welcome sight
Is also never sick at night.

In waiting rooms he does not burn
But gladly sits and waits his turn,
And even, I have heard it said,
Begs others, "Please go on ahead."
He takes advice, he does as told,
He has a heart of solid gold.

He pays his bills, without a fail,
In cash, or by the same day's mail.
He has but one small fault I'd list:
He doesn't (what a shame!) exist.

The Medical Muse

Ideal Patient

McGraw-Hill Book Company, Inc. New York, New York, USA. 1963

Cushing, Harvey 1869–1939

American neurosurgeon

Every patient, he said, provided two questions — firstly what can be learnt from him and secondly what can be done for him.

Helmuth, William Tod 1833–1902

American physician

She sent for me in haste to come and see,
What her condition for a cure might be.
Dear me! a patient — what a happy tone,
To have a patient and one all my own —
To have a patient and myself be feed,
Raised expectations very high indeed —
I saw a practice growing from the seed.

Scratches of a Surgeon

My First Patient (p. 61)

W.A. Chatterton & Company. Chicago, Illinois, USA. 1879

Heschel, Abraham J. 1907–72

Jewish theologian

The patient must not be defined as a client who contracts a physician for service; he is a human being entrusted to the cure of a physician.

The Insecurity of Freedom

The Patient as a Person (p. 31)

Farrar, Straus & Giroux. New York, New York, USA. 1966

Holmes, Oliver Wendell 1809–94

American physician, poet, and humorist

What I call a good patient is one who, having found a good physician, sticks to him till he dies.

Medical Essays

The Young Practitioner (p. 390)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

Once in a while you will have a patient of sense, born with the gift of observation, from whom you may learn something.

Medical Essays

The Young Practitioner (pp. 382–383)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

If you are making choice of a physician, be sure to get one, if possible, with a cheerful and serene countenance.

The Professor at the Breakfast Table

Chapter VI (p. 180)

Ticknor & Fields. Boston, Massachusetts, USA. 1860

Hubbard, Kin 1868–1930

American Democratic newspaper editor

Be kind t' th' henn egg. When sickness enters th' home an' th' patient comes thru th' crisis twenty pounds lighter than a straw hat, an' is propped up with pillows in th' bay window t' watch th' speedin', an' loved ones try t' tempt him with round steak, an' pickles an' near beer, he wearily waves 'em away. But with his first returnin' strength he squirms an' turns his listerless eyes toward th' kitchen an' says, in a voice weak an' scarcely audible, "Maw, I believe I could worry down an egg..."

Abe Martin: Hoss Sense and Nonsense (p. 53)

The Bobbs-Merrill Company, Indianapolis, Indiana, USA. 1926

Mayo, William J. 1861–1939

American physician

...the highly scientific development of this mechanistic age had led perhaps to some loss in appreciation of the individuality of the patient and to trusting largely to the laboratories and outside agencies which tended to make the patient not the hub of the wheel, but a spoke.

Edward Martin, M.D., 1859–1938

Collected Papers of the Mayo Clinic & Mayo Foundation, Volume 30, 1938

Morris, Robert Tuttle 1857–1945

Abdominal surgeon

It is the patient rather than the case which requires treatment.

Doctors Versus Folks

Chapter 2

Doubleday, Page & Company, Inc. Garden City, New York, USA. 1915

Newman, Sir George 1870–1948

English public health physician

There are four questions which in some form or other every patient asks his doctor: (a) What is the matter with me? This is diagnosis. (b) Can you put me right? This is treatment and prognosis. (c) How did I get it? This is causation. (d) How can I avoid it in future? This is prevention.

Preventive Medicine for the Medical Student

The Lancet, Volume 221, November 21, 1931 (p. 113)

Osler, Sir William 1849–1919

Canadian physician and professor of medicine

To study the phenomena of disease without books is to sail an uncharted sea, while to study books without patients is not to go to sea at all.

In Harvey Cushing

The Life of Sir William Osler (Volume 1)

Chapter IV (p. 67)

Clarendon Press. Oxford, England. 1925

Parrot, Max

No biographical data available

It is often been said that the technical aspects of medicine are easy. The difficult part is dealing with the personality of the patient, the so-called psychological or human factor. This takes up a great deal of the time of the practicing physician. It is harder on the doctor's constitution than all of the technical aspects of medicine. It may even cause his or her demise, in the case of a physician with an autonomic nervous system that can't take the heat.

In Irving Oyle

The New American Medical Show: Discovering the Healing Connection (p. 25)

Unity Press. Santa Cruz, California, USA. 1979

Potter, Stephen 1900–69

No biographical data available

If Patient turns out to be really ill, it is always possible to look grave at the same time and say "You realize, I suppose, that 25 years ago you'd have been dead?"

One-Upmanship

Chapter II (p. 28)

Henry Holt & Company. New York, New York, USA. 1952

Rhazes 865–925

Persian physician

The patient who consults a great many physicians is likely to have a very confused state of mind.

In Samuel Evans Massengill

A Sketch of Medicine and Pharmacy and a View of Its Progress by the Massengill Family from the Fifteenth to the Twentieth Century (p. 45)

The S.E. Massengill Company. Bristol, Tennessee, USA. 1943

Sacks, Oliver W. 1933–

American neurologist and author

There is only one cardinal rule: one must always listen to the patient.

Listening to the Lost

Newsweek, August 20, 1984 (p. 70)

Shakespeare, William 1564–1616

English poet, playwright, and actor

"How does your patient," doctor?

"Not so sick, my lord,

As she is troubled with thick-coming fancies."

In *Great Books of the Western World* (Volume 27)

The Plays and Sonnets of William Shakespeare (Volume 2)

Macbeth

PATTERN**Burns, Marilyn**

No biographical data available

Searching for patterns is a way of thinking that is essential for making generalizations, seeing relationships, and understanding the logic and order of mathematics.

Functions evolve from the investigation of patterns and unify the various aspects of mathematics.

About Teaching Mathematics: A K–8 Resource

Patterns and Functions (p. 112)

Math Solutions Publications, USA. 1992

Derry, Gregory N. 1952–

American professor of physics

In trying to understand nature, we rarely attempt to grasp completely every possible detail. If we did, we'd be overwhelmed by the mass of inconsequential information. As a result, we would miss the truly interesting patterns and relationships that give us scientific insight.

What Science Is and How It Works

Chapter 6 (p. 69)

Princeton University Press. Princeton, New Jersey, USA. 1999

Gardner, Martin 1914–

American writer and mathematics games editor

If the cosmos were suddenly frozen, and all movement ceased, a survey of its structure would not reveal a random distribution of parts. Simple geometrical patterns, for example, would be found in profusion — from the spirals of galaxies to the hexagonal shapes of snow crystals. Set the clockwork going, and its parts move rhythmically to laws that often can be expressed by equations of surprising simplicity. And there is no logical or a priori reason why these things should be so.

Order and Surprise

Chapter 4 (p. 57)

Prometheus Books. Buffalo, New York, USA. 1983

Hofstadter, Douglas 1945–

American cognitive scientist and author

Yes, I am a relentless quester after the chief patterns of the universe — central organizing principles, clean and powerful ways to categorize what is “out there.”

Metamagical Themas: Questing for the Essence of Mind and Pattern

Introduction (p. xxv)

Basic Books, Inc. New York, New York, USA. 1985

Huxley, Aldous 1894–1963

English writer and critic

The difference between a piece of stone and an atom is that an atom is highly organised, whereas the stone is not. The atom is a pattern, and the molecule is a pattern, and the crystal is a pattern; but the stone, although it is made up of these patterns, is just a mere confusion. It's only when life appears that you begin to get organisation on a larger scale. Life takes the atoms and molecules and crystals; but, instead of making a mess of them like the stone, it combines them into new and more elaborate patterns of its own.

Time Must Have a Stop

Chapter XIV (p. 145)

The Sun Dial Press. Garden City, New York, USA. 1944

MacArthur, Robert H. 1930–72

American ecologist

To do science is to search for repeated patterns, not simply to accumulate facts, and to do the science of geographical ecology is to search for patterns of plants and animal life that can be put on a map.

Geographical Ecology

Introduction (p. 1)

Harper & Row, Publishers, New York, New York, USA. 1972

Peterson, Ivars

Mathematics writer

In their search for patterns and logical connections, mathematicians face a vast, mysterious ocean of possibilities. Over the centuries, they have discovered an extensive archipelago of truth and beauty. Much of that accumulated knowledge is passed on to succeeding generations. Even more wonders await future explorers of deep, mathematical waters.

Islands of Truth: A Mathematical Mystery Cruise

Chapter 8 (p. 292)

W.H. Freeman & Company. New York, New York, USA. 1990

Stevens, Peter S.

No biographical data available

It turns out that those patterns and forms are peculiarly restricted, that the immense variety that nature creates emerges from the working and reworking of only a few formal themes. These limitations on nature bring harmony and beauty to the natural world.

Patterns in Nature

Chapter 1 (p. 3)

Little, Brown & Company. Boston, Massachusetts, USA. 1974

PAULI PRINCIPLE

Gamow, George 1904–68

Russian-born American physicist

We do not know why they have the masses they do; we do not know why they transform into another the way they do; we do not know anything! The one concept that stands like the Rock of Gibraltar in our sea of confusion is the Pauli principle.

The Exclusion Principle

Scientific American, Volume 201, Number 1, July 1959 (p. 86)

PENDULUM

Eco, Umberto 1932–

Italian novelist, essayist, and scholar

That was when I saw the Pendulum.

The sphere, hanging from a long wire set into the ceiling of the choir, swayed back and forth with isochronal majesty.

I knew — but anyone could have sensed it in the magic of that serene breathing — that the period was governed by the square root of the length of the wire and by pi, that number which, however irrational to sublunar minds, though a higher rationality binds the circumference and diameter of all possible circles. The time it took the sphere to swing from end to end was determined by an arcane conspiracy between the most timeless of measures: the singularity of the point of suspension, the duality of the plane's dimensions, the triadic beginning of π , the secret quadratic nature of the root, and the unnumbered perfection of the circle itself.

Translated by William Weaver

Foucault's Pendulum

Chapter 1 (p. 3)

Harcourt Brace Jovanovich, Publishers. San Diego, California, USA. 1988

Graham, L. A.

No biographical data available

Rock-a-bye baby in the tree top,
As a compound pendulum, you are a flop.
Your center of percussion is safe and low,
As one may see when the wind doth blow.
Your frequency of vibration is pretty small,
Frankly, I don't think you'll fall at all.

Ingenious Mathematical Problems and Methods

Mathematical Nursery Rhyme Number 2

Dover Publications, Inc. New York, New York, USA. 1959

PENICILLIN

Fleming, Sir Alexander 1881–1955

Scottish bacteriologist

I have been frequently asked why I invented the name "Penicillin." I simply followed perfectly orthodox lines and coined a word which explained that the substance penicillin was derived from a plant of the genus *Penicillium* just as many years ago the word "Digitalin" was invented for a substance derived from the plant *Digitalis*.

Nobel Lectures, Physiology or Medicine 1942–1962

Nobel lecture for award received in 1945

Penicillin (p. 83)

Elsevier Publishing Company. Amsterdam, Netherlands. 1964

PERCENTAGE

Barnes, Michael R.

No biographical data available

There's a 50 percent chance of anything — either it happens or it doesn't.

Even perfection will not bear the tedium of indefinite
repetition.

Atlantic, September 29, 1979 (p. 244)

PERIODIC TABLE

Atkins, Peter William 1940–

English physical chemist and writer

The periodic table is arguably the most important concept
in chemistry, both in principle and in practice. It is the
everyday support for students, it suggests new avenues
of research to professionals, and it provides a succinct
organization of the whole of chemistry. It is a remarkable
demonstration of the fact that the chemical elements
are not a random clutter of entities but instead display
trends and lie together in families. Anyone who seeks to
be familiar with a scientist's-eye view of the world must
be aware of the general form of the periodic table, for it
is a part of scientific culture.

The Periodic Kingdom: A Journey into the Land of the Chemical Elements

Preface (pp. vii–viii)

Basic Books, Inc. New York, New York, USA. 1995

Bolton, Henry Carrington 1843–1903

American chemist, bibliographer, and historian

The periodic law has given to chemistry that prophetic
power long regarded as the peculiar dignity of its sister
science, astronomy.

In Joseph William Mellor

Mellor's Modern Inorganic Chemistry

Chapter 9 (p. 122)

Longmans. London, England. 1967

Mendeleev, Dmitry 1834–1907
Russian chemist

I shall endeavor to show, as briefly as possible, ...how far the periodic law contributes to enlarge our range of vision. Before the promulgation of this law the chemical elements were mere fragmentary, incidental facts in Nature; there was no special reason to expect the discovery of new elements, and the new ones which were discovered from time to time appeared to be possessed of quite novel properties. The law of periodicity first enabled us to perceive undiscovered elements at a distance which formerly was inaccessible to chemical vision...

The Periodic Law of the Chemical Elements
Journal of the Chemical Society, Volume 55, 1889 (p. 648)

There must be some bond of union between mass and the chemical elements; and as the mass of a substance is ultimately expressed...in the atom, a functional dependence should exist and be discoverable between the individual properties of the elements and their atomic weights. But nothing, from mushrooms to a scientific law, can be discovered without looking and trying. So I began to look about and write down the elements with their atomic weights and typical properties, analogous elements and like atomic weights on separate cards, and this soon convinced me that the properties of elements are in periodic dependence upon their atomic weights.

In Thomas H. Pope (ed.)
Translated by George Kamensky
The Principles of Chemistry (Volume 2)
Longmans, Green & Company. London, England. 1905

By ordering the elements according to increasing atomic weight in vertical rows so that the horizontal rows contain analogous elements, still ordered by increasing atomic weight, one obtains the following arrangement, from which a few general conclusions may be derived.

David M. Knight (ed.)
Classical Scientific Papers — Chemistry, Second Series
On the Relationship of the Properties of the Elements to Their Atomic Weights (1869)
American Elsevier Publishing Company. New York, New York, USA. 1968

An established system is limited by its order of known or discovered elements. With the periodic and atomic relations now shown to exist between all the atoms and the properties of their elements, we see the possibility not only of noting the absence of some of them but even of determining, and with great assurance and certainty, the properties of these as yet unknown elements; it is possible to predict their atomic weight, density in the free state or in the form of oxides, acidity or basicity, degree of oxidation, and ability to be reduced and to form double salts and to describe the properties of the metalloorganic compounds and chlorides of the given element; it is even possible...to describe the properties of some compounds of these unknown elements in still greater detail. ...[A]t

the present time it is not possible to say when one of these bodies...will be discovered, yet the opportunity exists for finally convincing myself and other chemists of the truth of those hypotheses which lie at the base of the system I have drawn up.

A Natural System of the Elements and Its Use in Predicting the Properties of Undiscovered Elements
Journal of the Russian Chemical Society, Volume 3, 1871 (p. 25)

"I shall not form any hypothesis, either here nor further on to explain the nature of the periodic law. For first of all, the law itself is too simple; and secondly, this new subject has been too little studied yet, in its diverse parts for us to form any hypothesis."

In B. Bensaude-Vincent
Mendeléev's Periodic System (Part I)
British Journal for the History of Science, Volume 19, Number 61, March 1986 (p. 7)

Roscoe, Henry E. 1833–1915
English chemist

We must then find that these numbers regularly increase by a definite amount, *i.e.*, by the average age of a generation, which will be approximately the same in all the four families. Comparing the ages of the chemists themselves, we shall observe certain differences, but these are small in comparison with the period which has elapsed since the birth of their ancestors. Now each individual in this series of family trees represents a chemical element; and just as each family is distinguished by certain idiosyncrasies, so each group of the elementary bodies thus arranged shows distinct signs of consanguinity.

Report of the British Association of the Advancement of Science
1887 (p. 10)
Publisher undetermined

Sanderson, R. T.
No biographical data available

Students may readily be bewildered by the apparently fundamental lack of agreement among various periodic tables, and some may even acquire reasonable doubt as to whether chemists actually know what they are doing.

One More Periodic Table
Journal of Chemical Education, Volume 31, 1954 (p. 481)

PERPETUAL MOTION

Burroughs, John 1837–1921
American naturalist and writer

Physics proves to us the impossibility of perpetual motion among visible, tangible bodies, at the same time that it reveals to us a world where perpetual motion is the rule — the world of molecules and atoms.

The Breath of Life
Chapter IX (p. 190)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1915

Hugo, Victor 1802–85

French author, lyric poet, and dramatist

Scientists have searched for a perpetuum mobile; they have found it: it is science itself.

Austrian biochemist

The Ph.D. is essentially a license to start unlearning.

Voices in the Labyrinth: Nature, Man and Science

Chapter 1 (p. 2)

The Seabury Press. New York, New York, USA. 1977

Dyson, Freeman J. 1923–

American physicist and educator

The average student emerges at the end of the Ph.D. program, already middle-aged, overspecialized, poorly prepared for the world outside, and almost unemployable except in a narrow area of specialization. Large numbers of students for whom the program is inappropriate are trapped in it, because the Ph.D. has become a union card required for entry into the scientific job market.

From Eros to Gaia

Chapter 16 (p. 195)

Pantheon Books. New York, New York, USA. 1992

PHARMACIST**Eisenschiml, Otto** 1880–1963

Austrian-American chemist and historian

The surgeon who has performed scores of brilliant operations is less talked about than the one who has inadvertently killed a patient; the pharmacist who has carefully

filled prescriptions for a lifetime remains obscure, but will gain publicity by a single oversight.

The Art of Worldly Wisdom: Three Hundred Precepts for Success Based on the Original Work of Baltasar Gracian

Part Seven (p. 87)

Duell, Sloan & Pearce. New York, New York, USA. 1947

Flexner, Abraham 1866–1959

American educator

The physician thinks, decides, and orders; the pharmacist obeys — obeys, of course, with discretion, intelligence, and skill — yet, in the end, obeys and does not originate. Pharmacy therefore is an arm added to the medical profession, a specially and distinctly higher form of handicraft, not a profession...

Is Social Work a Profession?

School and Society, Volume 1, 1915 (p. 905)

PHARMACY

Ghalioungui, Paul

The word pharmakon, whence pharmacy is derived, meant in Greek not only medicament, poison, or magical procedure, but also that which is slain to expiate the crimes of a city, like the scapegoat of Biblical times.... In other words, it meant “what carries off disease.”

Magic and Medical Science in Ancient Egypt

Chapter II (p. 35)

Barnes and Nobles. New York, New York, USA. 1965

PHENOMENA

du Noüy, Pierre Lecomte 1883–1947

French scientist

When we speak of a phenomenon, we speak only of an event, or of a succession of events, arbitrarily isolated from the universe whose evolution they share. By isolating a fact in order to study it, we give it a beginning and an end, which are artificial and relative. In relation to the evolution of the universe, birth is not a beginning, and death is not an end. There are no more isolated phenomena in nature than there are isolated notes in a melody.

The Road to Reason

Chapter 2 (p. 53)

Longmans, Green & Company. London, England. 1949

Griffin Jay

Fictional character

There are some things in science which should be brought to light. There are others, doctor, which should be left alone.

The Mummy

Film (1940)

Haas, W. H.

American microbiologist

As most of us are aware, the world is now divided into two sets of phenomena, scientific and non-scientific.

The Teaching of Geography as a Science

Journal of Geography, Volume 30, 1931 (p. 323)

Hugo, Victor 1802–85

French author, lyric poet, and dramatist

Phenomena may well be suspected of anything, are capable of anything. Hypothesis proclaims the infinite; that is what gives hypothesis its greatness. Beneath the surface fact it seeks the real fact. It asks creation for her thoughts, and then for her second thoughts. The great scientific discoverers are those who hold nature suspect.

Translated by Isabel F. Hapgood

The Toilers of the Sea

Part II, Book Third, Chapter III (p. 415)

The Heritage Press. New York, New York, USA. 1961

Jevons, William Stanley 1835–82

English economist and logician

...every strange phenomenon may be a secret spring which, if rightly touched, will open the door to new chambers in the palace of nature.

The Principles of Science: A Treatise on Logic and Scientific Method

Book V, Chapter XXIX (p. 671)

Macmillan & Company Ltd. London, England. 1887

Laplace, Pierre Simon 1749–1827

French mathematician, astronomer, and physicist

The phenomena of nature are most often enveloped by so many strange circumstances, and so great a number of disturbing causes mix their influence, that it is very difficult to recognize them.

A Philosophical Essay on Probabilities

Chapter IX (p. 73)

Dover Publications, Inc. New York, New York, USA. 1951

Lederer, Charles 1906–76

American film writer and director

There are no enemies in science, professor. Only phenomena to study.

The Thing From Another World

Film (1951)

Ramón y Cajal, Santiago 1852–1934

Spanish neuropathologist

The intellect is presented with phenomena marching in review before the sensory organs. It can be truly useful and productive only when limiting itself to the modest tasks of observation, description, and comparison, and of classification that is based on analogies and differences.

Advice for a Young Investigator

Chapter 1 (p. 2)

The MIT Press. Cambridge, Massachusetts, USA. 1999

Spencer, Herbert 1820–1903
English social philosopher

Sad, indeed, is it to see how men occupy themselves with trivialities, and are indifferent to the grandest phenomena...

Education: Intellectual, Moral, and Physical

Chapter I (p. 73)

A.L. Fowle. New York, New York, USA. 1860

Wilson, Edward O. 1929–
American biologist and author

...all tangible phenomena, from the birth of stars to the workings of social institutions, are based on material processes that are ultimately reducible, however long and tortuous the sequences, to the laws of physics.

Consilience: The Unity of Knowledge

Chapter 12 (p. 266)

Alfred A. Knopf. New York, New York, USA. 1998

PHILOSOPHER

Cicero (Marcus Tullius Cicero) 106 BCE–43 BCE
Roman orator, politician, and philosopher

Somehow or other no statement is too absurd for some philosophers to make.

Translated by William Armistead Falconer

Cicero: De Senectute, De Amicitia, De Divinatione

De Divinatione, II, LVIII (p. 505)

Harvard University Press. Cambridge, Massachusetts, USA. 1938

Darwin, Charles Robert 1809–82
English naturalist

Why should the souls [of philosophers] be deeply vexed? The majesty of Fact is on their side, and the elemental forces of Nature are working for them. Not a star comes to the meridian at its calculated time but testifies to the justice of their methods — their beliefs are “one with the falling rain and with the growing corn.” By doubt they are established, and open inquiry is their bosom friend.

Collected Essays (Volume 2)

Darwiniana

The Origin of Species (p. 53)

Macmillan & Company Ltd. London, England. 1904

Faraday, Michael 1791–1867
English physicist and chemist

The philosopher should be a man willing to listen to every suggestion, but determined to judge for himself. He should not be biased by appearances; have no favorite hypothesis; be of no school; and in doctrine have no master. He should not be a respecter of persons, but of things. Truth should be his primary object. If to these qualities he added industry, he may indeed hope to walk within the veil of the temple of Nature.

The Life and Letters of Faraday (Volume 1) (p. 220)

Longmans, Green & Company. London, England. 1870

Herschel, Sir John Frederick William 1792–1871
English astronomer and chemist

...to the natural philosopher there is no natural object unimportant or trifling.

A Preliminary Discourse on The Study of Natural Philosophy

Part I, Chapter I, Section 10 (p. 14)

Printed for Longman, Rees, Orme, Brown, and Green. London, England. 1831

Lindley, David 1956–
English astrophysicist and author

As philosophers have frequently found, the real world seems to messy, too stubbornly arbitrary, to be found out by the power of thought alone, no matter how fine the guiding sense of aesthetics.

The End of Physics: The Myth of a Unified Theory

Part III, Chapter 8 (p. 231)

Basic Books, Inc. New York, New York, USA. 1993

PHILOSOPHER'S STONE

Agassiz, Jean Louis Rodolphe 1807–73
Swiss-born American naturalist, geologist, and teacher

The philosopher's stone is no more to be found in the organic than the inorganic world; and we shall seek as vainly to transform the lower animal types into the higher ones by any of our theories, as did the alchemists of old to change the baser metals into gold.

Methods of Study in Natural History

Chapter XVI (p. 319)

Ticknor & Fields. Boston, Massachusetts, USA. 1863

PHILOSOPHY

Astaire, Fred 1899–1955
American dancer, actor, and singer
I wish I had your confidence...without your viewpoint.
Holiday Inn
Film (1942)

Barthelme, Donald 1931–89
American author

But I think everyone should have a little philosophy, Thomas said. It helps, a little. It helps. It is good. It is about half as good as music.

The Dead Father (p. 76)

Pocket Books. New York, New York, USA. 1975

Bell, R. P.
English chemist

The exact verbal definition of qualitative concepts is more often the province of philosophy than of physical science.

The Proton in Chemistry

Chapter II (p. 7)

Cornell University Press. Ithaca, New York, USA. 1959

Bernard, Claude 1813–78
French physiologist

I can no more accept a philosophy, then, which tries to assign boundaries to science, than a science which claims to suppress philosophic truths that are at present outside its own domain.

Translated by Henry Copley Greene
An Introduction to the Study of Experimental Medicine
Part Three, Chapter III, Section iv (p. 223)
Henry Schuman, Inc. New York, New York, USA. 1927

Born, Max 1882–1970
German-born English physicist

A philosophy in which the notions of chance and freedom are fundamental seems to me preferable to the almost inhuman determinism of the previous epoch — but that is no scientific argument.

Les Prix Nobel. The Nobel Prizes in 1954
Nobel banquet speech for award received in 1954
Nobel Foundation. Stockholm, Sweden. 1955

Burnet, Thomas 1635–1715
English cleric and scientist

Orators and Philosophers treat Nature after a very different manner...with all her graces and ornaments, and if there be anything which is not capable of that, they dissemble it, or pass it over slightly. But Philosophers view Nature with a more impartial eye, and without favor or prejudice give a just and free account [of] how they find all the parts of the Universe, some more, some less perfect.

The Sacred Theory of the Earth (2nd edition)
Book I, Chapter IX (p. 90)
Printed by R. Norton. London, England. 1691

Clarke, Samuel 1675–1729
English philosopher

‘Tis of singular use, rightly to understand, and carefully to distinguish from hypotheses or mere suppositions, the true and certain consequences of experimental and mathematical philosophy; which do, with wonderful strength and advantage, to all such as are capable of apprehending them, confirm, establish, and vindicate against all objections, those great and fundamental truths of natural religion, which the wisdom of providence has at the same time universally implanted, in some degree, in the minds of persons even of the meanest capacities, not qualified to examine demonstrative proofs.

In H.G. Alexander
The Leibniz–Clarke Correspondence
Dedication (p. 6)
Philosophical Library Inc. New York, New York, USA. 1956

Dawson, Sir John William 1820–99
Canadian geologist and educator

It is a wise and thoughtful philosophy which can distinguish what is fixed and unchangeable from that which is fluctuating and capable of development.

Some Salient Points in the Science of the Earth
Chapter XII (p. 342)
Hodder & Stoughton. London, England. 1893

de Botton, Alain 1969–
Swiss-born English writer and television producer

Seneca believed...arguments are like eels: however logical, they may slip from the mind’s weak grasp unless fixed there by imagery and style.

The Consolations of Philosophy (p. 92)
Vintage Books. New York, New York, USA. 2000

Dewey, John 1859–1952
American philosopher and educator

What would happen to philosophy...if it ceased to deal with the problem of reality and knowledge at large?... From this point of view, the problem of philosophy concerns the *interaction* of our judgments about ends to be sought with the knowledge of the means for achieving them.

Quest for Certainty: A Study of the Relation of Knowledge and Action
Chapter II (pp. 36–37)
Minton, Balch & Company. New York, New York, USA. 1929

[Philosophy] has tried to combine acceptance of the conclusions of scientific inquiry as to the natural world with the acceptance of doctrines about the nature of mind and knowledge which originated before there was such a thing as systematic experimental inquiry. Between the two there is an inherent incompatibility.

Quest for Certainty: A Study of the Relation of Knowledge and Action
Chapter III (p. 49)
Minton, Balch & Company. New York, New York, USA. 1929

Disraeli, Benjamin, 1st Earl of Beaconsfield 1804–81

English prime minister, founder of Conservative Party, and novelist

Philosophy becomes poetry, and science imagination, in the enthusiasm of genius.

Miscellanies of Literature, by the Author of ‘Curiosities of Literature’
(p. 426)
G. Routledge. London, England. 1886

Donne, John 1572–1631
English poet and divine

And new Philosophy calls all in doubt,
The Element of fire is quite put out;
The sun is lost, and th’ earth, and no man’s wit
Can well direct him where to look for it.
And freely men confess that this world’s spent,
When in the Planets and the Firmament
They seek so many new, they see that this
Is crumbled out again to his Atomies.

An Anatomy of the World

The First Anniversary, II, 205–212

Presented for presentation to members of the Roxburge Club. Cambridge, England. 1951

Durant, William James 1885–1981

American historian and essayist

Science gives us knowledge, but only philosophy can give us wisdom.

The Story of Philosophy

Introduction (p. 3)

Simon & Schuster. New York, New York, USA. 1953

Eddington, Sir Arthur Stanley 1882–1944

English astronomer, physicist, and mathematician

The recent tendencies of science do...take us to an eminence from which we can look down into the deep waters of philosophy; and if I rashly plunge into them, it is not because I have confidence in my powers of swimming, but to try to show that the water is really deep.

The Nature of the Physical World

Chapter XIII (p. 276)

The Macmillan Company. New York, New York, USA. 1930

Einstein, Albert 1879–1955

German-born physicist

The Heisenberg–Bohr tranquilizing philosophy — or religion? — is so delicately contrived that, for the time being, it provides a gentle pillow for the true believer from which he cannot very easily be aroused. So let him lie there.

Letters on Wave Mechanics

Letter to Schrödinger, 31 May, 1928 (p. 31)

I have never belonged wholeheartedly to a country, a state, nor to a circle of friends, nor even to my own family. When I was still a rather precocious young man, I already realized most vividly the futility of the hopes and aspirations that most men pursue throughout their lives. Well-being and happiness never appeared to me as an absolute aim. I am even inclined to compare such moral aims to the ambitions of a pig.

In C.P. Snow

Variety of Men (p. 77)

Penguin Books, Harmondsworth, U.K. 1969

Foster, Hannah W. 1758–1840

English writer

You ask me, my friend, whether I am in pursuit of truth, or [of] a lady? I answer, both. I hope and trust they are united; and really expect to find truth and the virtues and graces besides in a fair form.

The Coquette: The History of Eliza Norton (A Novel) (p. 10)

Oxford University Press. 1986

Hoyle, Sir Fred 1915–2001

English mathematician and astronomer

I realized that only in music could I find the answer I was seeking to the questions of the previous evening. Argument I could follow, it weighed with me, yet I could decide nothing from it.

October the First Is Too Late

Chapter Fourteen (p. 187)

Harper & Row, Publishers. New York, New York, USA. 1966

Inge, William Ralph 1860–1954

English religious leader and author

...science and philosophy can not be kept in water-tight compartments.

God and the Astronomers

Preface (p. vii)

W.W. Norton & Company, Inc. New York, New York, USA. 1978

Lewis, Gilbert Newton 1875–1946

American chemist

The average scientist, unequipped with the powerful lenses of philosophy, is a nearsighted creature, and cheerfully attacks each difficulty in the hope that it may prove to be the last.

The Anatomy of Science

Chapter I (p. 1)

Yale University Press. New Haven, Connecticut, USA. 1926

Mach, Ernst 1838–1916

Austrian physicist and philosopher

...every philosopher has his own private view of science, and every scientist his private philosophy.

Knowledge and Error: Sketches on the Psychology of Enquiry

Chapter I (p. 3)

D. Reidel Publishing Company. Dordrecht, Germany. 1976

Maclaurin, Colin 1698–1746

Scottish mathematician and natural philosopher

Is it not therefore the business of philosophy, in our present situation in the universe, to attempt to take in at once, in one view, the whole scheme of nature; but to extend, with great care and circumspection, our knowledge, by just steps, from sensible things as far as our observations or reasonings from them will carry us in our enquiries concerning either the greater motions and operations of nature, or her more subtle and hidden works.

An Account of Sir Isaac Newton's Philosophical Discoveries

Book I, Chapter I (p. 19)

Printed for the Author's Children. London, England. 1748

Nielsen, Kai

American-born Canadian philosopher

We must be on guard against the irrational heart of rationalism and not set out on the quest for certainty.

Ethics Without God (Revised edition) (p. 47)

Prometheus Books. Amherst, New York, USA. 1990

Paine, Thomas 1737–1809
Anglo-American political theorist and writer

Natural philosophy, mathematics and astronomy, carry the mind from the country to the creation, and give it a fitness suited to the extent.
Address to the People of England
Philadelphia, March, 1780

Raether, H.

Updike, John 1932–
American novelist, short story writer, and poet

The mad things dreamt up in the sky
Discomfort our philosophy.
Collected Poems 1953–1993
Skyey Developments (p. 334)
Alfred A. Knopf. New York, New York, USA. 1993

Whitehead, Alfred North 1861–1947
English mathematician and philosopher

Philosophy begins in wonder. And, at the end, when philosophic thought has done its best, the wonder remains. There have been added, however, some grasp of the immensity of things, some purification of emotion by understanding.
Modes of Thought

Chapter III, Lecture VIII (p. 232)
The Macmillan Company. New York, New York, USA. 1938

Philosophy asks the simple question, What is it all about?
Whitehead's Philosophy
Philosophical Review, Volume 46, Number 2, March 1937 (p. 178)

PHILOSOPHY OF SCIENCE

American Institute of Biological Science 1963

What is science? Is it a body of factual information? Is it a set of theories? Is it an activity or set of procedures for finding facts and developing theories? Science is really a combination of all three of these.
Biological Science: Molecules to Man (p. 3)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1963

Asimov, Isaac 1920–92
American author and biochemist

Science is a process. It is a way of thinking, a manner of approaching and of possibly resolving problems, a route by which one can produce order and sense out of disorganized and chaotic observations. Through it we achieve useful conclusions and results that are compelling and upon which there is a tendency to agree.
"X" *Stands for Unknown*
Introduction (p. 10)
Doubleday & Company, Inc. Garden City, New York, USA. 1984

Ayala, Francisco J. 1934–
Spanish-born American biologist

Science is systematic organisation of knowledge about the universe on the basis of explanatory hypotheses which are genuinely testable. Science advances by developing gradually more comprehensive theories; that is, by formulating theories of greater generality which can account for observational statements and hypotheses which appear as *prima facie* unrelated.
Studies in the Philosophy of Biology: Reduction and Related Problems
Introduction (p. ix)
Macmillan & Company Ltd. London, England. 1974

Barrow, John D. 1952–
English theoretical physicist

The goal of science is to make sense of the diversity of Nature.
Theories of Everything: The Quest for Ultimate Explanation
Chapter One (p. 10)
The Clarendon Press. Oxford, England. 1991

Bauer, Henry H. 1931–
American chemist

Science is uniquely distinguished from other human practices: it is the only activity in which the constraints

of reality have brought to the quest for deep answers an effective consensus across all the variations that in other respects divide the human species.

Scientific Literacy and the Myth of the Scientific Method
Chapter 7 (p. 143)

University of Illinois Press. Urbana, Illinois, USA. 1992

Bernard, Claude 1813–78

French physiologist

True science suppresses nothing, but goes on searching and is undisturbed in looking straight at things that it does not yet understand.

Translated by Henry Copley Greene

An Introduction to the Study of Experimental Medicine

Part Three, Chapter III, Section iv (p. 223)

Henry Schuman, Inc. New York, New York, USA. 1927

True science teaches us to doubt and, in ignorance, to refrain.

Translated by Henry Copley Greene

An Introduction to the Study of Experimental Medicine

Part Two, Chapter II, Section VIII (p. 55)

Henry Schuman, Inc. New York, New York, USA. 1927

Bohm, David 1917–92

American physicist

Peat, D.

No biographical data available

The essential activity of science consists of thought, which arises in creative perception and is expressed through play. This gives rise to a process in which thought unfolds into provisional knowledge which then moves outward into action and returns as fresh perception and knowledge. This process leads to a continuous adoption of knowledge which undergoes constant growth, transformation, and extension. Knowledge is therefore not something rigid and fixed that accumulates indefinitely in a steady way but is a continual process of change. Its growth is closer to that of an organism than a data bank. When serious contradictions in knowledge [are] encountered, it is necessary to return to creative perception and free play, which act to transform existing knowledge. Knowledge apart from this cycle of activity, has no meaning.

Science, Order, and Creativity

Chapter One (p. 56)

Bantam Books. New York, New York, USA. 1987

Bondi, Sir Hermann 1919–2005

English mathematician and cosmologist

Science is driven forward by unexpected and surprising results emerging from new experiments or by the appearance of contradictions between theories previously thought compatible. Solving such problems as they arise is of the essence of our work. Thus science is not something strange and odd but the most human of pursuits.

The Philosopher of Science

Nature, Volume 358, Number 6385, 30 July, 1992 (p. 363)

Boulding, Kenneth E. 1910–93

English economist and social scientist

Science might also be defined as the process of substituting unimportant questions which can be answered for important questions which cannot.

Image: Knowledge in Life and Society

Chapter XI (p. 154)

The University of Michigan Press. Ann Arbor, Michigan, USA. 1956

Bushnell, Horace 1802–76

American Congregational minister

What is science, anyhow, but the knowledge of species? And if species do not keep their places, but go a masking or really becoming one another, in strange transmutations, what is there to know, and where is the possibility of science? If there is no stability or fixity in species, then, for aught that appears, even science itself may be transmuted into successions of music, and moonshine, and auroral fires. If a single kind is all kinds, then all are one, and since that is the same as none, there is knowledge no longer. The theory may be true, but it never can be proved, for that reason if no other. And when it is proved, if that must be the fact, we may well enough agree to live without religion.

Science and Religion

Putnam's Magazine, Volume 1, 1868 (p. 271)

Bronowski, Jacob 1908–74

Polish-born British mathematician and polymath

Science is the creation of concepts and their exploration in the facts. It has no other test of the concept than its empirical truth to fact.

Science and Human Values

The Sense of Human Dignity (p. 60)

Harper & Row, Publishers. New York, New York, USA. 1965

Science is not a mechanism but a human progress, and not a set of findings but the search for them.

Science and Human Values

The Sense of Human Dignity (p. 63)

Harper & Row, Publishers. New York, New York, USA. 1965

Science is a great many things...but in the end they all return to this: science is the acceptance of what works and the rejection of what does not. That needs more courage than we might think. It need more courage than we have ever found when we have faced our worldly problems.

The Common Sense of Science

Chapter IX, Section 6 (p. 148)

Harvard University Press. Cambridge, Massachusetts, USA. 1953

Carnap, Rudolf 1891–1970

American philosopher

Science is a system of statements based on direct experience, and controlled by experimental verification. Verification in science is not, however, of single statements but of the entire system or a sub-system of such statements.

The Unity of Science

Physics as a Universal Science, Section 3 (p. 42)

Thommes Press. Bristol, England. 1995

Burhoe, R. W.

Founding editor of *Zygon*

...in the usual sense a science is a discipline possessed of an empirically validated theoretical structure, which can indeed explain or account for and not simply describe, categorize, and correlate, patterns of human experience/behavior.

The Source of Civilization in the Natural Selection of Coadapted Information in Genes and Culture

Zygon, Volume 11, Number 3, September 1976 (p. 264)

Campbell, Norman R. 1880–1949

English physicist and philosopher

There are two aspects of science. First, science is a body of useful and practical knowledge and a method of obtaining it. It is science of this form which played so large a part in the destruction of war, and, it is claimed, should play an equally large part in the beneficent restoration of peace. ... In its second form or aspect, science has nothing to do with practical life, and cannot affect it, except in the most indirect manner, for good or for ill. Science of this form is a pure intellectual study. ... [I]ts aim is to satisfy the needs of the mind and not those of the body; it appeals to nothing but the disinterested curiosity of mankind.

What Is Science?

Chapter I (p. 1)

Dover Publications. New York, New York, USA. 1952

Cassirer, Ernst 1874–1945

German philosopher

Are we to be disgusted with science because it has not fulfilled our hopes or redeemed its promises? And are we, for this reason, to announce the “bankruptcy” of science, as is so often and so flippantly done? But this is rash and foolish: for we can hardly blame science just because we have not asked the right questions.

In David Hackett Fischer

Historian's Fallacies: Toward a Logic of Historical Thought

Chapter I (p. 3)

Harper & Row, Publishers. New York, New York, USA. 1970

Chargaff, Erwin 1905–2002

Austrian biochemist

The sciences have started to swell. Their philosophical basis has never been very strong. Starting as modest probing operations to unravel the works of God in the world, to follow its traces in nature, they were driven gradually to ever more gigantic generalizations. Since the pieces

of the giant puzzle never seemed to fit together perfectly, subsets of smaller, more homogeneous puzzles had to be constructed, in each of which the fit was better.

Voices in the Labyrinth

Perspectives in Biology and Medicine, VII, Volume 18, Spring 1975

(p. 323)

In science, there is always one more Gordian knot than there are Alexanders. One could almost say that science, as it is practiced today, is an arrangement through which each Gordian knot, once cut, gives rise to two new knots, and so on. Out of one problem considered as solved, a hundred new ones arise; and this has created the myth of the limitlessness of the natural sciences. Actually, many sciences now look as feeble and emaciated as do mothers who have undergone too many deliveries.

Heraclitean Fire: Sketches from a Life Before Nature

Part II

More Foolish and More Wise (p. 116)

Rockefeller University Press. New York, New York, USA. 1978

Chesterton, G. K. (Gilbert Keith) 1874–1936

English author

Science finds facts in Nature, but Science is not Nature; because Science has co-ordinated ideas, interpretations and analyses; and can say of Nature what Nature cannot say for itself.

The Resurrection of Rome

Chapter IV (p. 126)

Dodd, Mead & Company. New York, New York, USA. 1930

Clark, Gordon H. 1902–85

American philosopher

The theologians who reply to...attacks [on religious faith] are under a disadvantage. When a scientist or a philosopher argues against religion, he does not need to know much about religion; but when a theologian discusses science, he must know quite a lot. The scientist can get by if he understands no more than that Christians believe God to be an incorporeal spirit; but the theologian is called upon to discuss space, time, motion, energy, electrodynamics, the solar system, quantum theory, relativity, and other assorted items. There is something else the theologian must know, and something more important. In addition to a selection of particular pieces of information, such as the details just mentioned, the theologian must have an overall view of science as a whole. He must have a philosophy of science; that is, he must know what science is. Obviously he cannot compare, contrast, or relate religion and science unless he knows them both.... The scientific method is said to be the best, indeed, the only method for solving any problem, so that in every debate it is science, not theology, that has the last word. Since every curious and intelligent person naturally wishes to understand his own times, he must be prepared to give science sustained attention.

The Philosophy of Science (pp. 8–9)
Craig Press. Nutley, New Jersey, USA. 1964

Cohen, Morris Raphael 1880–1947
American philosopher

The certainty which science aims to bring about is not a psychologic feeling about a given proposition but a logical ground on which its claim to truth can be founded.

Reason and Nature
Chapter Three, Section II (A) (p. 84)
The Free Press, Publishers. Glencoe, Illinois, USA. 1931

Collingwood, Robin George 1889–1943
English historian and philosopher

The aim of science is to apprehend this purely intelligible world as a thing in itself, an object which is what it is independently of all thinking, and thus antithetical to the sensible world.... The world of thought is the universal, the timeless and spaceless, the absolutely necessary, whereas the world of sense is the contingent, the changing and moving appearance which somehow indicates or symbolizes it.

Essays in the Philosophy of Art
Outlines of a Philosophy of Art
Chapter 6, Section 27 (p. 142)
Indiana University Press. Bloomington, Indiana, USA. 1964

Science in general...does not consist in collecting what we already know and arranging it in this or that kind of pattern. It consists in fastening upon something we do not know, and trying to discover it.

The Idea of History
Introduction, Section 2 (p. 9)
At The Clarendon Press. Oxford, England. 1967

Courant, Richard 1888–1972
German-born American mathematician

Robbins, Herbert 1915–2001
American mathematician

A serious threat to the very life of science is implied in the assertion that mathematics is nothing but a system of conclusions drawn from definitions and postulates that must be consistent but otherwise may be created by the free will of the mathematician. If this description were accurate, mathematics could not attract any intelligent person. It would be a game with definitions, rules and syllogisms, without motivation or goal.

What Is Mathematics? (p. xvii)
Oxford University Press, Inc. London, England. 1941

The notion that the intellect can create meaningful postulational systems at its whim is a deceptive half-truth. Only under the discipline of responsibility to the organic whole, only guided by intrinsic necessity, can the free mind achieve results of scientific value.

What Is Mathematics? (p. xvii)
Oxford University Press, Inc. London, England. 1941

Davy, Sir Humphry 1778–1829
English chemist

Natural science is founded on minute critical views of the general order of events taking place upon our globe, corrected, enlarged, or exalted by experiments, in which the agents concerned are placed under new circumstances, and their diversified properties separately examined. The body of natural science, then, consists of facts; is analogy, — the relation of resemblance of facts by which its different parts are connected, arranged, and employed, either for popular use, or for new speculative improvements.

In John Davy (ed.)
The Collected Works of Sir Humphry Davy (Volume 8)
Introductory Lecture to the Chemistry of Nature (pp. 167–168)
Smith, Elder & Company. London, England. 1839–1840

Dawson, Sir John William 1820–99
Canadian geologist and educator

It is of the nature of true science to take nothing on trust or on authority. Every fact must be established by accurate observation, experiment, or calculation. Every law and principle must rest on inductive argument. The apostolic motto, “Prove all things, hold fast that which is good,” is thoroughly scientific. It is true that the mere reader of popular science must often be content to take that on testimony which he cannot personally verify; but it is desirable that even the most cursory reader should fully comprehend the modes in which facts are ascertained and the reasons on which the conclusions are based.

The Chain of Life in Geological Time
Chapter I (p. 1)
Religious Tract Society. London, England. 1888

de Unamuno, Miguel 1864–1936
Spanish philosopher and writer

Wisdom is to science what death is to life, or, if you prefer it, wisdom is to death what science is to life.

Essays and Soliloquies
Some Arbitrary Reflections Upon Europeanization (p. 55)
Alfred A. Knopf. New York, New York, USA. 1925

Dennett, Daniel Clement 1942–
American philosopher

Science does not answer all good questions. Neither does philosophy. But for that very reason the phenomena of consciousness...do not need to be protected from science — or from the sort of demystifying philosophical investigation we are embarking on.... Looking on the bright side, let us remind ourselves of what has happened in the wake of earlier demystifications. We find no diminution of wonder; on the contrary, we find deeper beauties and more dazzling visions of the complexity of the universe than the protectors of mystery ever conceived. The “magic” of earlier visions was, for the most part, a

cover-up for frank failures of imagination, a boring dodge enshrined in the concept of a *deus ex machina*.

Consciousness Explained (pp. 22, 25)

Little, Brown & Company. Boston, Massachusetts, USA. 1991

...there is no such thing as philosophy-free science; there is only science whose philosophical baggage is taken on board without examination.

Darwin's Dangerous Idea

Chapter One, Section 1 (p. 21)

Simon & Schuster. New York, New York, USA. 1995

Descartes, René 1596–1650

French philosopher, scientist, and mathematician

Science in its entirety is true and evident cognition. He is no more learned who has doubts on many matters than the man who has never thought of them; nay he appears to be less learned if he has formed wrong opinions on any particulars. Hence it were better not to study at all than to occupy one's self with objects of such difficulty, that, owing to our inability to distinguish true from false, we are forced to regard the doubtful as certain; for in those matters any hope of augmenting our knowledge is exceeded by the risk of diminishing it. Thus in accordance with the above maxim we reject all such merely probable knowledge and make it a rule to trust only what is completely known and incapable of being doubted.

In *Great Books of the Western World* (Volume 31)

Rules for the Direction of the Mind

Rule II (p. 2)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Einstein, Albert 1879–1955

German-born physicist

The aim of science is...a comprehension, as complete as possible, of the connection between the sense experience in [its] totality, and...the accomplishment of this aim by the use of a minimum of primary concepts and relations.

Out of My Later Years

Physics and Reality, I (p. 63)

Thames & Hudson. London, England. 1950

Science is the attempt to make the chaotic diversity of our sense experience correspond to a logically uniform system of thought.

Considerations Concerning the Fundamentals of Theoretical Physics

Science, Volume 91, Number 2369, May 24, 1940 (p. 487)

Although it is true that it is the goal of science to discover rules which permit the association and foretelling of facts, this is not its only aim. It also seeks to reduce the connections discovered to the smallest possible number of mutually independent conceptual elements. It is in this striving after the rational unification of the manifold that it encounters its greatest successes, even though it is precisely this attempt which causes it to run the greatest risk of falling a prey to illusion. But whoever has undergone

the intense experience of successful advances made in this domain, is moved by profound reverence for the rationality made manifest in existence.

Ideas and Opinions

Science and Religion (p. 49)

Crown Publishers, Inc. New York, New York, USA. 1954

The belief in the external world independent of the perceiving subject is the basis of all natural science.

Translated by Alan Harris

Essays in Science

Clerk Maxwell's Influence on the Evolution of the Idea of Physical Reality (p. 40)

Philosophical Library. New York, New York, USA. 1934

The grand aim of all science...is to cover the greatest number of empirical facts by logical deductions from the smallest number of hypotheses or axioms.

In Lincoln Barnett

The Meaning of Einstein's New Theory

Life, January 9, 1950 (p. 22)

Feynman, Richard P. 1918–88

American theoretical physicist

What is the fundamental hypothesis of science, the fundamental philosophy? ...[It is that] the sole test of the validity of any idea is experiment... We will invent some way to summarize the results of the experiment, and we do not have to be told ahead of time what this way will look like. If we are told that the same experiment will always produce the same result, that is all very well, but if when we try it, it does not, then it does not. We just have to take what we see, and then formulate all the rest of our ideas in terms of our actual experience.

Six Easy Pieces: Essentials of Physics Explained by Its Most Brilliant Teacher

Basic Physics (p. 32)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

Jeans, Sir James Hopwood 1877–1946

English physicist and mathematician

Science came to recognize that its only proper objects of study were the sensations that the objects of the external universe produced on our senses. The dictum *esse est percipi* was adopted whole-heartedly from philosophy — not because scientists had any predilection for an idealist philosophy, but because the assumption that things existed which could not be perceived had led them into a whole morass of inconsistencies and impossibilities. Those who did not adopt it were simply left behind, and the torch of those who did.

The Mathematical Aspect of the Universe

Philosophy, Volume VII, Number 25, January 1932 (p. 11)

Joad, Cyril Edwin Mitchinson 1891–1953

English philosopher and broadcasting personality

...the philosophising of the physicists is noticeably inferior to their physics, and eminent men are at the moment engaged in making all the mistakes which the philosophers made for themselves some three hundred years ago and have been engaged in detecting and correcting ever since. In particular it is thought that modern physics lends support to Idealism, and suggests, if it does not actually require, a religious interpretation of the universe.

Guide to Modern Thought

Chapter I (pp. 15–16)

Faber & Faber Ltd. London, England. 1936

Meredith, Patrick

No biographical data available

Hence a true philosophy of science must be a philosophy of scientists and laboratories as well as one of waves, particles and symbols.

Instruments of Communication

Chapter 2, Section 5 (p. 40)

Pergamon Press. Oxford, England. 1966

Moreland, J. P. 1936–

American philosopher

For the question What is the proper definition of science? is itself a philosophical question about science that assumes a vantage point above science; it is not a question of science. One may need to reflect on specific episodes in the history of science to answer the question. But the question and the reflection required to answer it are philosophical in nature, a point not diminished merely because a scientist may try to define science. When she does so, she is doing philosophy.

Christianity and the Nature of Science: A Philosophical Investigation
(pp. 20–21)

Baker Book House. Grand Rapids, Michigan, USA. 1989

Popper, Karl R. 1902–94

Austrian/British philosopher of science

...I shall certainly admit a system as empirical or scientific only if it is capable of being tested by experience. These considerations suggest that not the verifiability but the falsifiability of a system is to be taken as a criterion of demarcation. In other words: I shall not require of a scientific system that it shall be capable of being singled out, once and for all, in a positive sense: but I shall require that its logical form shall be such that it can be singled out, by means of empirical tests, in a negative sense: it must be possible for an empirical scientific system to be refuted by experience.

The Logic of Scientific Discovery

Part I, Chapter I, Section 6 (p. 40)

Basic Books, Inc. New York, New York, USA. 1959

We do not know: we can only guess.

The Logic of Scientific Discovery

Part II, Chapter X, Section 85 (p. 278)

Basic Books, Inc. New York, New York, USA. 1959

Shapere, Dudley

No biographical data available

...philosophy of science is immune to the vicissitudes of science — the coming and going of particular theories; for those changes have to do with content of science, whereas the philosopher is concerned with its structure — not with specific theories, but with the meaning of “theory” itself.

Philosophical Problems of Natural Science

Introduction, Section IV (p. 9)

The Macmillan Company. New York, New York, USA. 1965

Simpson, George Gaylord 1902–84

American paleontologist

It is inherent in any acceptable definition of science that statements that cannot be checked by observation are not really about anything...or at the very least, they are not science.

The Nonprevalence of Humanoids

Science, Volume 143, Number 3608, February 21, 1964 (p. 770)

Spencer, Herbert 1820–1903

English social philosopher

Every science begins by accumulating observations, and presently generalizes these empirically; but only when it reaches the stage at which its empirical generalizations are included in a rational generalization does it become developed science.

The Data of Ethics

Chapter IV, Section 22a (p. 51)

William & Norgate. London, England. 1907

Torrance, Thomas F.

No biographical data available

In natural science we are concerned ultimately, not with convenient arrangements of observational data which can be generalized into universal explanatory form, but with movements of thought, at once theoretical and empirical, which penetrate into the intrinsic structure of the universe in such a way that there becomes disclosed to us its basic design and we find ourselves at grips with reality.... We cannot pursue natural science scientifically without engaging at the same time in meta-scientific operations.

Divine and Contingent Order (p. 3)

Oxford University Press, Inc. Oxford. 1981

Toulmin, Stephen 1922–

Anglo-American philosopher

Certainly, every statement in a science should conceivably be capable of being called in question, and of being shown empirically to be unjustified; for only so can the science be saved from dogmatism.

The Philosophy of Science

Harper & Row, Publishers. New York, New York, USA. 1960

Toynbee, Arnold J. 1852–83
English historian

[T]here will be differences in the degree of approximation to scientific study, ...determined by the nature of the part or aspect of the Universe under consideration. Study will be most scientific when its object is the physical structure of the Universe. ... The object of study that will be the least amenable to scientific treatment is the non-physical facet of human nature. Students in this field had better avoid letting themselves be tempted by the present-day prestige of the word "science" into applying that label to their own work.

Occasional Paper, The Institute for the Study of Science in Human Affairs

Science in Human Affairs: An Historian's View

van Fraassen, Bas C. 1941–
Dutch-born philosopher

To develop an empiricist account of science is to depict it as involving a search for truth only about the empirical world, about what is actual and observable. ... It must involve throughout a resolute rejection of the demand for an explanation of the regularities in the observable course of nature, by means of truths concerning a reality beyond what is actual and observable, as a demand which plays no role in the scientific enterprise.

The Scientific Image

Chapter 6 (p. 203)

Clarendon Press. Oxford, England. 1990

...certain issues in philosophy of science (having to do with observation and the definition of a theory's empirical import) had been misconstrued as issues in philosophy of logic and of language. With respect to modality, I hold the exact opposite: important philosophical problems concerning language have been misconstrued as relating to the content of science and the nature of the world. This is not at all new, but is the traditional nominalist line.

The Scientific Image

Chapter 6 (p. 196)

Clarendon Press. Oxford, England. 1980

Weisskopf, Victor Frederick 1908–2002
Austrian-American physicist

Science developed only when men refrained from asking general questions such as: What is matter made of? How was the universe created? What is the essence of life? Instead they asked limited questions such as: How does an object fall? How does water flow in a tube? Thus, in place of asking general questions and receiving limited answers, they asked limited questions and found general answers. It remains a great miracle, that this process succeeded, and that the answerable questions became gradually more and more universal.

The Significance of Science

Science, Volume 176, Number 4031, April 14, 1972 (p. 143)

Whitehead, Alfred North 1861–1947
English mathematician and philosopher

The aim of science is to seek the simplest explanation of complex facts.... Seek simplicity and distrust it.

The Concept of Nature

Chapter VII (p. 163)

At The University Press. Cambridge, England. 1920

Science is simply setting out on a fishing expedition to see whether it cannot find some procedure which it can call measurement of space and some procedure which it can call the measurement of time, and something which it can call a system of forces, and something which it can call masses....

The Concept of Nature

Chapter VI (p. 139)

At The University Press. Cambridge, England. 1920

Wright, Chauncey 1830–75
American philosopher of science

Science asks no questions about the ontological pedigree or a priori character of a theory, but is content to judge it by its performance; and it is thus that a knowledge of nature, having all the certainty which the senses are competent to inspire, has been attained — a knowledge which maintains a strict neutrality toward all philosophical systems and concerns itself not with the genesis or a priori grounds of ideas.

The Philosophical Writings of Chauncey Wright

The Philosophy of Herbert Spencer (p. 8)

The Liberal Arts Press. New York, New York, USA. 1958

PHOSPHORUS

Author undetermined

Red phosphorus is used for matches so that people who are in the habit of chewing matches will not suffer.

PHYSICAL LAW

Feynman, Richard P. 1918–88
American theoretical physicist

...there is...a rhythm and pattern between the phenomena of nature which is not apparent to the eye, but only to the eye of analysis; and it is these rhythms and patterns which we call Physical Laws.

The Character of Physical Law

Chapter 1 (p. 13)

BBC. London, England. 1965

PHYSICAL SCIENCE

Huxley, Thomas Henry 1825–95

English biologist

When simple curiosity passes into the love of knowledge as such, and the gratification of the aesthetic sense of the beauty of completeness and accuracy seems more desirable than the easy indolence of ignorance; when the finding out of the causes of things becomes a source of joy, and he is counted happy who is successful in the search, common knowledge of Nature passes into what our forefathers called Natural History, from whence there is but a step to that which used to be termed Natural Philosophy, and now passes by the name of Physical Science.

The Crayfish

Chapter 1 (p. 3)

D. Appleton & Company. New York, New York, USA. 1880

Mach, Ernst 1838–1916

Austrian physicist and philosopher

Physical science began in the witch's kitchen. It now embraces the organic and inorganic worlds, and with the physiology of articulation and the theory of the senses, has even pushed its researches, at times impertinently, into the province of mental phenomena.

Popular Scientific Lectures

Why Has Man Two Eyes? (p. 87)

The Open Court Publishing Company. Chicago, Illinois, USA. 1898

Thompson, Sir D'Arcy Wentworth 1860–1948

Scottish zoologist and classical scholar

How far...then mathematics will suffice to describe, and physics to explain, the fabric of the body, no man can foresee. It may be that all the laws of energy, and all the properties of matter, and all the chemistry of all the colloids are as powerless to explain the body as they are impotent to comprehend the soul. For my part, I think it is not so. Of how it is that the soul informs the body, physical science teaches me nothing; and that living matter influences and is influenced by mind is a mystery without a clue. Consciousness is not explained to my comprehension by all the nerve-paths and neurons of the physiologist; nor do I [explain by] physics how goodness shines in one man's face, and evil betrays itself in another. But of the construction and growth and workings of the body, as of all else that is of the earth earthy, physical science is, is, in my opinion, our only teacher and guide.

On Growth and Form (Volume 1)

Chapter I (p. 13)

At The University Press. Cambridge, England. 1951

Whitehead, Alfred North 1861–1947

English mathematician and philosopher

There can be no true physical science which looks first to mathematics for the provision of a conceptual model. Such a procedure is to repeat the errors of the logicians of the middle ages.

Principles of Relativity (p. 39)

Cambridge University Press. Cambridge, England. 1922

PHYSICIAN

Alexander the Great 356 BCE–323 BCE

Macedonian emperor

I am dying with the help of too many physicians.

Attributed

Allman, David

American physician

The dedicated physician is constantly striving for a balance between personal, human values, scientific realities and the inevitabilities of God's will.

Address to National Conference of Christian and Jews

The Brotherhood of Healing, 1 February 1958

Arnaldus de Villa Nova 1235–1313

Alchemist, astrologer and physician

...the physician must be learned in diagnosing, careful and accurate in prescribing, circumspect and cautious in answering questions, ambiguous in making prognosis, just in making promises; and he should not promise health because in doing so he would assume a divine function and insult God.

In Henry E. Sigerist (trans.)

Advancement of Learning
Second Book, Chapter X, Section 2 (p. 51)
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...it is the office of a physician not only to restore health, but to mitigate pain and dolors; and not only when such mitigation may conduce to recovery, but when it may serve to make a fair and easy passage.

In *Great Books of the Western World* (Volume 30)
Advancement of Learning
Second Book, Chapter X, Section 7 (p. 52)
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Bailey, Percival

No biographical data available

The function of the physician is to cure a few, help many, and comfort all.

Perspectives in Biology and Medicine, Volume 4, Number 254, 1961

Baldwin, Joseph G. 1815–64

American writer

Nobody knew who or what they were, except as they claimed, or as a surface view of their characters indicated. Instead of taking to the highway and magnanimously calling upon the wayfarer to stand and deliver, or to the fashionable larceny of credit without prospect or design of paying, some unscrupulous horse doctor would set up his sign as “Physician and Surgeon” and draw his lancet on you, or fire at random a box of pills into your bowels, with a vague chance of hitting some disease unknown to him, but with a better prospect of killing the patient, whom or whose administrator he charged some ten dollars a trial for his marksmanship.

The Flush Times of Alabama and Mississippi: A Series of Sketches

How the Times Served the Virginians (p. 89)
Louisiana State University Press. Baton Rouge, Louisiana, USA. 1987

Bass, Murray H.

No biographical data available

The ideal physician should be a combination of three persons — a clergyman, a fireman and a scientist. He must know how to handle and console the patient and his family...he must be ready to answer an “alarm” day and night; he must know the science of medicine...using its present potentialities to the utmost of his ability.

Clinical Pediatrics, Volume 3, Number 50, 1964

Bernard, Claude 1813–78

French physiologist

Medical personality is placed above science by physicians themselves; they seek their authority in tradition, in doctrines or in medical tact. This state of affairs is the clearest of proofs that the experimental method has by no means come into its own in medicine.

Translated by Henry Copley Greene
An Introduction to the Study of Experimental Medicine
Part One, Chapter Two, Section IV (p. 43)
Henry Schuman, Inc. New York, New York, USA. 1927

...physicians, in their treatment, often have to take account of the so-called influence of the moral over the physical, and also of any number of family and social considerations which have nothing to do with science. Therefore, an accomplished practising physician should be not only learned in his science, but also upright and endowed with keenness, tact and good sense.

Translated by Henry Copley Greene
An Introduction to the Study of Experimental Medicine
Part Three, Chapter IC, Section III (p. 206)
Henry Schuman, Inc. New York, New York, USA. 1927

Blackwell, Elizabeth 1821–1910

First woman to practice medicine in the United States

The true physician must possess the essential qualities of maternity. The sick are as helpless in his hands as the infant. They depend absolutely upon the insight and judgment, the honesty and hopefulness, of the doctor.

The Influence of Women in the Profession of Medicine (p. 11)
G. Bell. Baltimore, Maryland, USA. 1890

Bonaparte, Napoleon 1769–1821

French soldier and emperor of France

You are a physician, doctor. You would promise life to a corpse if he could swallow pills...

In J. Christopher Herold (ed.)
The Mind of Napoleon
Science and the Arts (pp. 137–138)
Columbia University Press. New York, New York, USA. 1955

In my opinion physicians kill as many people as we generals.

In J. Christopher Herold (ed.)
The Mind of Napoleon
 Science and the Arts (p. 137)
 Columbia University Press. New York, New York, USA. 1955

Brackenridge, Hugh Henry 1748–1816
 American author and jurist

Gravity is the most practical qualification of the physician.

Modern Chivalry
 Part II, Volume I, Chapter X (p. 378)
 American Book Company. New York, New York, USA. 1937

Brown, Michael S. 1941–
 American physician

To apply tools of science, physicians must learn to think like scientists. They must acquire technical ability, taste in evaluating experiments, and a sense of creative adventure.

Les Prix Nobel. The Nobel Prizes in 1985
 Nobel banquet speech for award received in 1985
 Nobel Foundation. Stockholm, Sweden. 1986

Buchan, William 1729–1805
 Physician

Physicians, like other people, must live by their employment.

Domestic Medicine
 Introduction (p. xviii)
 Publisher undetermined. New York, New York, USA. 1816

No two characters can be more different than that of the honest physician and the quack; yet they have generally been much confounded.

Domestic Medicine
 Introduction (p. xvi)
 Publisher undetermined. New York, New York, USA. 1816

Burgess, Anthony 1917–93
 English novelist

Keep away from physicians. It is all probing and guessing and pretending with them. They leave it to Nature to cure in her own time, but they take the credit. As well as very fat fees.

Nothing Like the Sun: A Story of Shakespeare's Love-Life
 Chapter VIII (p. 180)
 W.W. Norton & Company, Inc. New York, New York, USA. 1964

Byron, George Gordon, 6th Baron Byron 1788–1824
 English Romantic poet and satirist

This is the way physicians mend or end us,
Secundum aartem: but although we sneer
 In health — when ill, we call them to attend us,
 Without the least propensity to jeer.

The Complete Poetical Works of Byron
 Don Juan
 Canto X, Stanza 42
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

Camden, William 1551–1623
 English historian

Few physicians live well.
Remains Concerning Britain
 Proverbs (p. 322)
 J.R. Smith. London, England. 1870

Carlyle, Thomas 1795–1881
 English historian and essayist

The healthy know not of their health, but only the sick: this is the physician's aphorism.

Characteristics, by Thomas Carlyle; Favorite Poems, by Percy Bysshe Shelley; The Eve of St. Agnes; and Other Poems, by John Keats
 Paragraph 1 (p. 3)
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1882

Clowes, William 1540–1604
 English physician

When a physician or a surgeon comes to a man that lies sick and is in danger of death, yet by his judgment and skill, promises with God's help to cure him of his griefs and maladies, then the sick patient greatly rejoices and presently compares him to a god. But afterwards, being somewhat recovered, and perceiving good amendment, he says he is but an angel and not a god. Again, after he begins to walk abroad and to fall to his meat, truly he is then accounted no better than a man. In the end, when he happily comes for his money for the curing of his grievous sickness, he now reports him to be a devil and shuts the door.

Selected Writings
 A Tragical History (p. 63)
 Harvey & Blythe. London, England. 1948

Collins, Joseph
 No biographical data available

The longer I practice medicine, the more I am convinced every physician should cultivate lying as a fine art. There are lies which contribute enormously to the success of the physician's mission of mercy and salvation.
Reader's Digest, May 1933 (p. 16)

Colton, Charles Caleb 1780–1832
 English sportsman and writer

Physicians must discover the weaknesses of the human mind, and even condescend to humor them, or they will never be called in to cure the infirmities of the body.

Lacon; or Many Things in a Few Words
 1.482
 William Gowans. New York, New York, USA. 1849

Croll, Oswald 1560–1609
 German chemist and physician

...a Physitian therefore should have both the Theory and Practice, he must both know and prepare his medicines...

Philosophy Reformed and Improved in Four Profound Tractates (p. 152)
Printed by M.S. for Lodowick Lloyd. London, England. 1657

A Physition should be born out of the Light or Grace and Nature of the inward and invisible Man...

Philosophy Reformed and Improved in Four Profound Tractates (p. 22)
Printed by M.S. for Lodowick Lloyd. London, England. 1657

Cushing, Harvey 1869–1939

American neurosurgeon

A physician is obligated to consider more than a diseased organ, more even than the whole man — he must view the man in his world.

In René J. Dubos

Man Adapting

Chapter XII (p. 342)

Yale University Press. New Haven, Connecticut, USA. 1965

Davies, Robertson 1913–95

Canadian novelist

I delivered my body into the hands of Learned Physicians this morning confiding that they may discover why I have hay fever. As soon as they got me out of my clothes I ceased to be a man to them, and they began to talk about me as though I did not understand English.

The Table Talk of Samuel Marchbanks (p. 194)

Clarke, Irwin. Toronto, Ontario, Canada. 1949

Belleville, Nicholas 1753–1831

French-born American physician

If you get one good doctor, you get one good thing, but if you get one bad doctor, you get one bad thing. If you have a lawsuit, you get a bad lawyer, you lose your suit — you can appeal; but if you have one bad doctor, and he kills you, then there can be no appeal.

In Stephen Wickes

History of Medicine in New Jersey

Part 2 (p. 143)

Martin R. Dennis & Company. Newark, New Jersey, USA. 1879

de Montaigne, Michel Eyquem 1533–92

French Renaissance writer

If your physician does not think it good for you to sleep, to drink wine, or to eat such and such meats, never trouble yourself; I will find you another that shall not be of that opinion...

Ancient and Modern, Foreign and British

No. 1428

Printed for Thomas and Joseph Allman. London, England. 1816

Commonly Physicians like beer are best when they are old; & Lawyers like bread when they are young and new.

The Holy and Profane State

Book II, Chapter I, Maxim VI (p. 50)

Printed for Thomas Tegg. London, England. 1841

Gisbourne, Thomas 1758–1846

English Anglican priest

It is frequently of much importance, not to the comfort only, but to the recovery of the patient, that he should be enabled to look upon his Physician as his friend.

An Enquiry into the Duties of Men

The Duties of Physicians (p. 398)

Printed by J. Davis. London, England. 1794

Gracian, Baltasar 1601–58

Spanish philosopher

The wise physician, if he has failed to cure, looks out for someone who, under the name of consultation, may help him carry out the corpse.

In Herbert V. Prochnow and Herbert V. Prochnow, Jr.

A Treasury of Humorous Quotations: For Speakers, Writers, and Home Reference

#4587 (p. 257)

Harper & Row, Publishers. New York, New York, USA. 1969

Gregg, Alan 1890–1957

American medical educator and philosopher

The true physician cannot remain outside the manifold of the events he observes.

Humanism and Science

Bulletin of the New York Academy of Sciences, Volume 17, 1941

Gregory, John 1724–73

Scottish physician and philosopher

I come now to mention the moral qualities peculiarly required in the character of a physician. The chief of these is humanity; that sensibility of heart which makes us feel for the distresses of our fellow creatures, and which of consequence incites in us the most powerful manner to help them.

Lectures on the Duties and Qualifications of a Physician (p. 19)

W. Strahan. London, England. 1772

Gull, Sir William Withey 1816–90

English physician

There are many good general practitioners, there is only one good universal practitioner — “a warm bed.”

A Collection of The Published Writings (Volume 2) (p. viii)

New Sydenham Society. London, England. 1894

Harrison, Tinsley R. 1900–78

American physician

No greater opportunity, responsibility, or obligation can fall to the lot of a human being than to become a physician. In the care of the suffering he needs technical skill, scientific knowledge, and human understanding. He who uses these with courage, with humility, and with wisdom will provide a unique service for his fellow man and will build an enduring edifice of character within himself. The physician should ask of his destiny no more than this; he should be content with no less.

Principles of Internal Medicine (p. 1)

Blakiston. Philadelphia, Pennsylvania, USA. 1950

The true physician has a Shakespearean breadth of interest in the wise and the foolish, the proud and the humble, the stoic hero and the whining rouse. He cares for people.

Principles of Internal Medicine (4th ed.) (p. 7)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1962

Hazlitt, William Carew 1834–1913

English bibliographer

One said Physicians had the best of it; for, if they did well, the world did proclaime it; if ill, the earth did cover it.

Shakespeare Jest Books (Volume 3)

Conceit, Cliches, Flashes and Whimzies, Number 127

Willis & Sotheran. London, England. 1864

One said a Physitian was naturall brother to the wormes, because he was ingendered out of man's corruption.

Conceit, Clichés, Flashes and Whimzies, Number 42

Willis & Sotheran. London, England. 1864

Heberden, William 1710–1801
Physician

Plutarch says that the life of a Vestal virgin was divided into three portions; in the first of which she learned the duties of her profession, in the second she practiced them, and in the third she taught them to others. This is no bad model for the life of a physician.

Commentaries on the History and Cure of Diseases
Preface (p. vii)
T. Payne, Mews-Gate. London, England. 1802

Herophilus 325 BCE–255 BCE
Greek physician

He is the best physician who knows how to distinguish the possible from the impossible.

In Samuel Evans Massengill
A Sketch of Medicine and Pharmacy and a View of Its Progress by the Massengill Family from the Fifteenth to the Twentieth Century (p. 28)
The S.E. Massengill Company. Bristol, Tennessee, USA. 1943

Heschel, Abraham J. 1907–72
Jewish theologian

What manner of man is the doctor? Life abounds in works of achievement, in areas of excellence and beauty, but the physician is a person who has chosen to go to the areas of distress, to pay attention to sickness and affliction, to injury and anguish.

The Insecurity of Freedom
The Patient as a Person (p. 28)
Farrar, Straus & Giroux. New York, New York, USA. 1966

Hippocrates 460 BCE–377 BCE
Greek physician

...physicians are many in title but very few in reality.

In *Great Books of the Western World* (Volume 10)
Hippocratic Writings
The Law, 1 (p. 144)
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

It appears to me a most excellent thing for the physician to cultivate Prognosis; for by foreseeing and foretelling, in the presence of the sick, the present, the past, and the future, and explaining the omissions which patients have been guilty of, he will be the more readily believed to be acquainted with the circumstances of the sick; so that men will have confidence to entrust themselves to such a physician.

In *Great Books of the Western World* (Volume 10)
Hippocratic Writings
The Book of Prognostics, 1 (p. 19)
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Hoffmann, Friedrich 1660–1742
German physician

The perfect physician must have not only the knowledge of medical art but also prudence and wisdom.

Fundamenta Medicinæ

Physiology, Chapter I, 10 (p. 6)
American Elsevier. New York, New York, USA. 1971

The physician is the servant of nature, not her master; the principles of nature and of art are the same and hence the physician must work and act with nature.

Fundamenta Medicinæ
Physiology, (p. 5)
American Elsevier. New York, New York, USA. 1971

Holmes, Oliver Wendell 1809–94
American physician, poet, and humorist

The life of a physician becomes ignoble when he suffers himself to feed on petty jealousies and sours his temper in perpetual quarrels.

Medical Essays
The Young Practitioner (p. 392)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

The face of a physician, like that of a diplomat, should be impenetrable.

Medical Essays
The Young Practitioner (p. 388)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

The old age of a physician is one of the happiest periods of his life. He is loved and cherished for what he has been, and even in the decline of his faculties there are occasions when his experience is still appealed to, and his trembling hands are looked to with renewing hope and trust...The young man feels uneasy if he is not continually doing something to stir up his patient's internal arrangements. The old man takes things more quietly, and is much more willing to let well enough alone.

Medical Essays by Oliver Wendell Holmes
Address
Graduating Class of the Bellevue Hospital College, March 2, 1871 (pp. 377, 395)
Classics of Medicine Library. Birmingham, Alabama, USA. 1987

But the practising physician's office is to draw the healing waters, and while he gives his time to this labor he can hardly be expected to explore all the sources that spread themselves over the wide domain of science. The traveler who would not drink of the Nile until he had tracked it to its parent lakes would be like to die of thirst; and the medical practitioner who would not use the results of many laborers in other departments without sharing their special toils, would find life far too short and art immeasurably too long.

Medical Essays
Scholastic and Bedside Teaching (p. 274)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

...a physician's business is to avert disease, to heal the sick, to prolong life, and to diminish suffering...

Medical Essays
Scholastic and Bedside Teaching (p. 274)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

The specialist is much like other people engaged in lucrative business. He is apt to magnify his calling, to make much of any symptom which will bring a patient within range of his battery of remedies.

Over the Teacups

Chapter VI (p. 129)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1892

A physician who talks about ceremony and gratitude, and services rendered, and the treatment he got, surely forgets himself...

Medical Essays

The Contagious of Puerperal Fever (p. 115)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

A man of very moderate ability may be a good physician if he devotes himself faithfully to the work.

Medical Essays

Scholastic and Bedside Teaching (p. 300)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

Howells, William Dean 1837–1920

American realist novelist

I do not know how it is that clergymen and physicians keep from telling their wives the secrets confided to them; perhaps they can trust their wives to find them out for themselves whenever they wish.

The Rise of Silas Lapham

Chapter XXVII (p. 511)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1912

Hufeland, Christoph Wilhelm 1762–1836

German physician

The physician must generalize the disease, and individualize the patient.

In Oliver Wendell Holmes

Medical Essays

Scholastic and Bedside Teaching (p. 275)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

Hutchison, Sir Robert Grieve 1871–1960

English radiologist

From inability to let well alone; from too much zeal for the new and contempt for what is old; from putting knowledge before wisdom, science before art, and cleverness before common sense, from treating patients as cases, and from making the cure of the disease more grievous than the endurance of the same, Good Lord, deliver us.

British Medical Journal, Volume 1, 1953 (p. 671)

Jackson, James

No biographical data available

I have often remarked that, though a physician is sometimes blamed very unjustly, it is quite as common for him to get more credit than he is fairly entitled to; so that he has not, on the whole, any right to complain.

Letters to a Young Physician Just Entering Upon Practice

Letter II (p. 41)

Phillips, Sampson & Company. Boston, Massachusetts, USA. 1855

Jekyll, Joseph

No biographical data available

See, one physician, like a sculler, plies,
The patient lingers and by inches dies.
But two physicians, like a pair of oars,
Waft him more swiftly to the Stygian shores.

The first requisite for a physician is spiritual character and the next requisites are sympathy and a sense of humor.

In R. Kagan (ed.)

Leaders of Medicine

Chapter V (p. 52)

The Medico-Historical Press. Boston, Massachusetts, USA. 1941

La Bruyère, Jean 1645–96

French satiric moralist

As long as men are liable to die and desirous to live, a physician will be made fun of, but he will be well paid.

The Characters of Jean La Bruyère

Characters 14.65

George Routledge & Sons, Ltd. London, England. 1929

Lamb, William 1779–1848

British prime minister

English physicians kill you, the French let you die.

In Elizabeth Longford

Queen Victoria: Born to Succeed

Chapter 5 (p. 69)

Harper & Row, Publishers. New York, New York, USA. 1964

Latham, Peter Mere 1789–1875

English physician

There are always two parties of the management of the disease — the physician and the patient.

In William B. Bean

Aphorisms from Latham (p. 21)

Prairie Press. Iowa City, Iowa, USA. 1962

We physicians had need be a self-confronting and a self-reproving race; for we must be ready, without fear or favor, to call in question our own Experience and to judge it justly; to confirm it, to repeal it, to reverse it, to set up the new against the old, and again to reinstate the old and give it preponderance over the new.

In William B. Bean

Aphorisms from Latham (pp. 93–94)

Prairie Press. Iowa City, Iowa, USA. 1962

The end of all the thought and labour of physicians is to make experiments with men's lives.

In William B. Bean

Aphorisms from Latham (p. 91)

Prairie Press. Iowa City, Iowa, USA. 1962

The best physicians have begun by being the physician of the poor.

In William B. Bean

Aphorisms from Latham (p. 25)

Prairie Press. Iowa City, Iowa, USA. 1962

Physicians are in a manner often called upon to be wiser than they possibly can be. Disease or imperfection of a vital organ is a fearfully interesting thing to him who suffers it, and he presses to learn all that is known, and often much more than is known about it.

In William B. Bean

Aphorisms from Latham (p. 26)

Prairie Press. Iowa City, Iowa, USA. 1962

Physicians, who have worthily achieved great reputation, become the refuge of the hopeless, and earn for themselves the misfortune of being expected to cure incurable diseases.

In William B. Bean

Aphorisms from Latham (p. 25)

Prairie Press. Iowa City, Iowa, USA. 1962

But Nature, in all her powers and operations, allows herself to be led, directed, and controlled. And to lead, direct, or control for purposes of good, this is the business of the physician.

In William B. Bean

Aphorisms from Latham (p. 24)

Prairie Press. Iowa City, Iowa, USA. 1962

I am persuaded that when the physician is called upon to perform great things, even to arrest destructive disease, and to save life, his skill in wielding the implements of his art rests mainly upon the right understanding of simple and single indications, and of the remedies which have power to fulfill them.

In William B. Bean

Aphorisms from Latham (p. 19)

Prairie Press. Iowa City, Iowa, USA. 1962

Longfellow, Henry Wadsworth 1807–82

American poet

You behold in me

Only a traveling Physician;

One of the few who have a mission

To cure incurable diseases,

Or those that are called so.

The Works of Henry Wadsworth Longfellow (Volume 5)

Christus, The Golden Legend, Part I (p. 144)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904–1917

Ludmerer, Kenneth M.

Physician

The thinking physician...is the one who in the practice of medicine asks not "What is there to do?" but "should it be done?"

Learning to Heal: The Development of American Medical Education

(p. 280)

Basic Books, Inc., Publishers. New York, New York, USA. 1985

Luther, Martin 1483–1546

Leader of the Protestant Reformation

Able, cautious, and experienced physicians, are gifts of God. They are the ministers of nature, to whom human

life is confided; but a moment's negligence may ruin everything. No physician should take a single step, but in humility and the fear of God; they who are without the fear of God are mere homicides.

Translated by W. Hazlitt

The Table-Talk of Martin Luther (p. 383)

The Lutheran Publication Society. Philadelphia, Pennsylvania, USA. 1868

MacPhail, Sir Andrew 1864–1938

Canadian physician

I am well aware that in these days, when a student must be converted into a physiologist, a physicist, a chemist, a biologist, a pharmacologist, and an electrician, there is no time to make a physician of him.

British Medical Journal, Volume 1, 1933

Massinger, Philip 1583–1640

English dramatic poet

1 October What art can do, we promise; physic's hand
As apt is to destroy as to preserve,
If Heaven make not the med'cine: all this while,
Our skill hath combat hell with his disease;
But 'tis so arm'd, and a deep melancholy,
To be such in part with death, we are in fear

The grave must mock our labours.

The Plays of Philip Massinger (Volume 1)

The Virgin-Martyr, Act IV, Scene I (p. 76)

G. & W. Nicol. London, England. 1805

Mather, Cotton 1663–1728

American minister and religious writer

Of a Distemper we commonly say, To know the Cause,
is Half the Cure. But, alas, how little Progress is there
yett made in that Knowledge! Physicians talk about the
Causes of Diseases. But their Talk is very Conjectural,
very Uncertain, very Ambiguous; and often times a meer
Jargon; and in it, they are full of Contradiction to One
another.

The Angel of Bethesda

Capsula VII (p. 43)

American Antiquarian Society and Barre Publishers. Barre, Massachusetts, USA. 1972

Mayo, Charles Horace 1865–1939

American physician

The definition of a specialist as one who “knows more and more about less and less” is good and true. Its truth makes essential that the specialist, to do efficient work, must have some association with others who, taken altogether, represent the whole of which the specialty is only a part.

Surgery's Problems as They Affect the Hospital

Modern Hospital, Volume 51, September 1938

The true physician will never be satisfied just to pass his therapeutic wares over a counter.

Problems in Medical Education

Collected Papers of the Mayo Clinic & Mayo Foundation, Volume 18, 1926

Mencken, H. L. (Henry Louis) 1880–1956

American journalist and literary critic

The true physician does not preach repentance; he offers absolution.

Prejudices: Third Series

Chapter XIV, Section 5 (p. 269)

Alfred A. Knopf. New York, New York, USA. 1922

Meyer, Adolf 1866–1950

American neurologist and psychiatrist

I wonder how soon we shall be far enough along to have the physician ask: How much and what, if anything, is structural? how much Functional, somatic or metabolic? How much constitutional, psychogenic and social?

The “Complaint” as the Center of Genetic-Dynamic and Nosological

Teaching in Psychiatry

New England Journal of Medicine, August 23, 1928

Miller H.

No biographical data available

The worst mistakes...must be laid at the door of the specialist rather than the general practitioner, who, from his intimate contact with sick people in their natural surroundings, often has a lively understanding of the nervous patient, and is able to see him and his problems as a whole.

The Recognition of Neurotic Illness

Practitioner, Volume 159, 1947

Molière (Jean-Baptiste Poquelin) 1622–1673

French playwright and actor

What will you do, sir, with four physicians? Is not one enough to kill any one body?

In Logan Clendening

Sourcebook of Medical History

Love's the Best Doctor

Act II, Scene I (p. 222)

General Publishing Company Ltd. Toronto, Ontario, Canada. 1942

Moore, Merrill

No biographical data available

If the average man is a harp on whom Nature occasionally plays, the physician is an instrument on whom the emotions are played continuously during his waking hours and that is not too good for any man.

In Mary Lou McDonough

Poet Physician: An Anthology of Medical Poetry Written by Physicians

Afterthought (p. 198)

C.C. Thomas. Springfield, Illinois, USA. 1945

More, Hannah 1745–1833

English religious writer

I used to wonder why people should be so fond of the company of their physician, till I recollected that he is the only person with whom one dares to talk continually of oneself, without interruption, contradiction or censure; I suppose that delightful immunity doubles their fees.

In William Roberts

Memoirs of the Life and Correspondence of Mrs. Hannah Moore (Volume 1)

Letter to Horace Walpole, 27 July 1789 (p. 317)

Harper & Brothers. New York, New York, USA. 1837

Nuland, Sherwin B. 1930–

American surgeon and teacher of bioethics and medicine

The very success of his esoteric therapeutics too often leads the physician to believe he can do what is beyond his doing and save those who, left to their own unhindered judgment, would choose not to be subjected to his saving.

How We Die: Reflections on Life's Final Chapter (p. 221)

Alfred A. Knopf. New York, New York, USA. 1994

Just as physicians must constantly admonish one another to seek the most subtle beginnings of disease, they must also forgive themselves when timing or circumstances frustrate their best intentions.

The Uncertain Art: The Whole Law of Medicine

The American Scholar, Summer, Volume 67, Number 3, 1998

Osler, Sir William 1849–1919

Canadian physician and professor of medicine

‘Tis no idle challenge which we physicians throw out to the world when we claim that our mission is of the highest and of the noblest kind, not alone in curing disease but in educating the people in the laws of health, and in preventing the spread of plagues and pestilences...

In Harvey Cushing

The Life of Sir William Osler (Volume 1)

Chapter XVI (p. 408)

Clarendon Press. Oxford, England. 1925

To wrest from nature the secrets which have perplexed philosophers of all ages, to track to their sources the causes of disease, to correlate the vast stores of knowledge, that they may be quickly available for the prevention and cure of disease — these are our ambitions.

Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine

Chauvinism in Medicine (p. 267)

The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

To investigate the causes of death, to examine carefully the condition of organs, after such changes have gone on in them as to render existence impossible and to apply such Knowledge to the prevention and treatment of disease, is one of the highest objects of the Physician...

In Harvey Cushing

The Life of Sir William Osler (Volume 1)

Chapter IV (p. 85)

Clarendon Press. Oxford, England. 1925

To prevent disease, to relieve suffering and to heal the sick — this is our work.

Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine

Chauvinism in Medicine (p. 267)

The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

Permanence of residence, good undoubtedly for the pocket, is not always best for wide mental vision in the physician.

Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine

The Army Surgeon (p. 101)

The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

No class of men needs friction so much as physicians; no class gets less. The daily round of busy practitioners tends to develop an egoism of a most intense kind, to which there is no antidote. The few setbacks are forgotten, the mistakes are often buried, and ten years of successful work tend to make a man touchy, dogmatic, intolerant of correction, and abominably self-centered. To this mental attitude the medical society is the best corrective, and a man misses a good part of his education who does not get knocked about a bit by his colleagues in discussions and criticisms...

In Harvey Cushing

The Life of Sir William Osler (Volume 1)

Chapter VXII (p. 447)

Clarendon Press. Oxford, England. 1925

Few men live lives of more devoted self-sacrifice than the family physician but he may become so completely absorbed in work that leisure is unknown... There is danger in this treadmill life lest he lose more than health and time and rest — his intellectual independence. More than most men he feels the tragedy of isolation — that inner isolation so well expressed in Matthew Arnold's line — "We mortal millions live alone." Even in populous districts the practice of medicine is a lonely road which winds up-hill all the way and a man may easily go astray and never reach the Delectable Mountains unless he early finds those shepherd guides of which Bunyan tells, Knowledge, Experience, Watchful and Sincere. The circumstances of life mould him into a masterful, self-confident, self-centered man, whose worst faults often partake of his best qualities.

In Harvey Cushing

The Life of Sir William Osler (Volume 1)

Chapter XXI (p. 588)

Clarendon Press. Oxford, England. 1925

The physician who shows in his face the slightest alteration, expressive of anxiety or fear, has not his medullary centres under the highest control, and is liable to disaster at any moment. I have spoken this to you on many occasions, and have urged you to educate your nerve centres so that not the slightest dilator or contractor influence shall pass to the vessels of your face under any professional trial.

In Christopher Lawrence and Steven Shapin
Science Incarnate: Historical Embodiments on Natural Knowledge
 (p. 171)
 The University of Chicago Press. Chicago, Illinois, USA. 1998

It may be well for a physician to have pursuits outside his profession, but it is dangerous to let them become too absorbing.

In Harvey Cushing
The Life of Sir William Osler (Volume 1)
 Chapter III (p. 67)
 Clarendon Press. Oxford, England. 1925

A physician who does not use books and journals, who does not need a library, who does not read one or two of the best weeklies and monthlies, soon sinks to the level of the cross-counter prescriber, and not alone in practice, but in those mercenary feelings and habits which characterize a trade...

Ovid with an English Translation
 Ex Ponto, Book I, iii (p. 281)
 Harvard University Press. Cambridge, Massachusetts, USA. 1924

Owen, John 1616–83
 English Puritan divine and theologian

Physicians take Gold, but seldom give:
 They Physick give, take none; yet healthy live.
 A Diet They prescribe; the Sick must for’t
 Give Gold; Each other Thus supply-support.

Latine Epigrams
 Book I, Number 53
 Louisiana State University Press. Baton Rouge, Louisiana, USA. 1997

Paracelsus (Theophrastus Phillippus Aureolus Bombastus von Hohenheim) 1493–1541
 Alchemist and mystic

The book of Nature is that which the physician must read; and to do so he must walk over the leaves.
Encyclopædia Britannica (9th edition), Volume 18 (p. 234)

Parkinson, John
 No biographical data available

The common duty required of a physician lies in the recognition and treatment of disease. If he enlarges his study to cover life as affected by disease, and masters the psychology of the individual sick in body, he will widen his usefulness and reach a fuller life himself as a physician.
Annals of Internal Medicine

The Patient and the Physician
 Address
 32nd Annual Session of the American College of Physicians, St Louis, Missouri, April 11, 1951

Percival, Thomas 1740–1804
 English physician, philosopher, and writer

The relations in which a physician stands to his patients, to his brethren, and to the public, are complicated, and multifarious; involving much knowledge of human nature, and extensive moral duties.

Medical Ethics
 To E.C. Percival (p. viii)
 Printed by S. Russell. Manchester, England. 1803

Hospital physicians and surgeons should minister to the sick, with due impressions of the importance of their office; reflecting that the ease, the health, and the lives of those committed to their charge depend on their skill, attention, and fidelity.

Medical Ethics
 Chapter I (p. 9)
 Printed by S. Russell. Manchester, England. 1803

Piozzi, Hester Lynch 1741–1821
 English writer

A physician can sometimes parry the scythe of death, but has no power over the sand in the hourglass.
 Letter to Fanny Burney, 12 November 1781

Plato 428 BCE–347 BCE
 Greek philosopher

...no physician, in so far as he is a physician, considers his own good in what he prescribes, but the good of his patient; for the true physician is also a ruler having the human body as a subject, and is not a mere money-maker.

In *Great Books of the Western World* (Volume 7)
The Republic
 Book I, Section 342 (p. 303)
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...so to in the body the good and healthy elements are to be indulged and the elements of disease are not to be indulged, but discouraged. And this is what the physician has to do, and in this the art of medicine consists: for medicine may be regarded generally as the knowledge of the loves and desires of the body, and how to satisfy them or not; and the best physician is he who is able to separate fair love from foul, or to convert one into the other; and he who knows how to eradicate and how to implant love, whichever is required, and can reconcile the most hostile elements in the constitution and make them loving friends, is a skillful practitioner.

In *Great Books of the Western World* (Volume 7)
Symposium
 Section 186 (p. 156)
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...the most skillful physicians are those who, from their youth upwards, have combined with the knowledge of their art the greatest experience of disease; they had better not be robust in health, and should have had all manner of diseases in their own persons.

Stevenson, Robert Louis 1850–94

Scottish essayist and poet

There are men and classes of men that stand above the common herd; the soldier, the sailor, and the shepherd not unfrequently; the artist rarely; rarelier still, the clergyman; the physician almost as a rule. He is the flower (such as it is) of our civilization; and when that stage of man is done with, and only remembered to be marveled at in history, he will be thought to have shared as little as any in the defects of the period, and most notably exhibited the virtue of the race. Generosity he has, such as is possible to those who practice an art, never to those who drive a trade; discretion, tested by a hundred secrets; tact, tried in a thousand embarrassments; and, what are more important, Herculean cheerfulness and courage. So it is that he brings air and cheer into the sick-room, and often enough, though not so often as he wishes, brings healing.

Thoreau, Henry David 1817–62

American essayist, poet, and practical philosopher

Priests and physicians should never look one another in the face. They have no common ground, nor is there any to mediate between them. When the one comes, the other goes. They could not come together without laughter, or a significant silence, for the one's profession is a satire on the other's, and either's success would be the other's failure.

The Writings of Henry David Thoreau (Volume 1)

A Week on the Concord and Merrimac Rivers

Wednesday (p. 339)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

It is wonderful that the physician should ever die, and that the priest should ever live. Why is it that the priest is never called to consult with the Physician? It is because men believe practically that matter is independent of spirit. But what quackery? It is commonly an attempt to cure the disease of a man by addressing his body alone. There is a need of a physician who shall minister to both soul and body at once, that is to man. Now he falls between two stools.

The Writings of Henry David Thoreau (Volume 1)

A Week on the Concord and Merrimac Rivers

Wednesday (p. 339)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Tupper, Kerr Boyce

No biographical data available

Let a physician believe with all his heart that God meant him to be a physician, only a physician, wholly a physician, always a physician, then will he be a physician indeed, uncorrupted by the love of money, untainted by infection for fame, untimidated by danger.... Have appetite for your life calling, and you will have aptitude for all its duties.

The Ideal Physician (p. 37)

Stanford University Press. Stanford, California, USA. 1958

Voltaire (François-Marie Arouet) 1694–1778

French writer

The Devil should not try his tricks on a clever physician. Those familiar with nature are dangerous for the wonderworkers. I advise the Devil always to apply to the faculty of theology — not to the medical faculty.

In Pearch Bailey

Voltaire's Relation to Medicine

Annals of Medical History, Volume 1, 1917 (p. 58)

Let nature be your first physician. It is she who made all.

The Works of Voltaire (Volume 11)

Philosophical Dictionary (Volume 7)

Medicine (p. 169)

The St. Hubert Guild. Akron, Ohio, USA. 1901

But nothing is more estimable than a physician who, having studied nature from his youth, knows the properties of the human body, the diseases which assail it, the remedies which will benefit it, exercises his art with caution, and pays equal attention to the rich and the poor.

The Works of Voltaire (Volume 12)

Philosophical Dictionary (Volume 8)

Physicians (pp. 199–200)

The St. Hubert Guild. Akron, Ohio, USA. 1901

von Ebner-Eschenbach, Marie 1830–1916

Austrian writer

Physicians are hated either on principle or for financial reasons.

Translated by David Scrase and Wolfgang Mieder

Aphorisms (p. 50)

Aridne Press. Riverside, California, USA. 1994

Webster, John 1580?–1625?

English playwright

Physicians are like kings — they brook no contradiction.

The Duchess of Malfi

Act V, Scene II, l. 69–70

Chatto & Windus. London, England. 1958

Wordsworth, William 1770–1850

English poet

Physician art thou? one, all eyes,
Philosopher! a fingering slave,
One that would peep and botanize
Upon his mother's grave.

The Complete Poetical Works of William Wordsworth

A Poet's Epitaph

Crowell. New York, New York, USA. 1888

Young, Arthur 1741–1820

English traveler

...there is a great difference between a good physician and a bad one; yet very little between a good one and [no physician] at all.

Travels in France

9 September 1787 (p. 66)

G. Bell. London, England. 19112

PHYSICIST

Up to the time of the foundation of the Institute of Physics, the physicists had hardly been recognized as a member of one of the professions.

The Institute of Physics: Objects of the Institute (p. 5)

Adams, Douglas 1952–2001

English author, comic radio dramatist, and musician

Very strange people, physicists...in my experience the ones who aren't actually dead are in some way very ill.

The Long Dark Tea-Time of the Soul

Chapter II (p. 140)

Simon & Schuster. New York, New York, USA. 1990

It startled him even more when just after he was awarded the Galactic Institute's Prize for Extreme Cleverness he got lynched by a rampaging mob of respectable physicists

who had finally realized that the one thing they really couldn't stand was a smart-ass.

The Ultimate Hitchhiker's Guide to the Galaxy

The Hitchhiker's Guide to the Galaxy

Chapter 10 (p. 60)

The Ballantine Book Company. New York, New York, USA. 2002

Adams, Henry Brooks 1838–1918

American man of letters

...the future of Thought and therefore of History lies in the hands of physicists, and therefore the future historian must seek his education in the world of mathematical physics.

The Degradation of the Democratic Dogma

The Rule of Phase Applied to History (p. 283)

Peter Smith. New York, New York, USA. 1949

Author undetermined

We seek, we study, and we stare

At particles that weren't quite there.

In H. Arthur Klein

The World of Measurements

Song for A High-Energy Physicist (p. 180)

Simon & Schuster. New York, New York, USA. 1974

Baker, Adolph

No biographical data available

Physics is engaged neither in the development of time machines nor in the fabrication of bombs. But it is the business of physicists to take flights of fancy which carry them far beyond the boundaries imposed by current technology.

Modern Physics and Antiphysics

Chapter 3 (p. 27)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA.

1970

Barnett, Lincoln 1909–79

Science writer

The young physicists are beyond all doubt the noisiest, rowdiest, most active and most intellectually alert group we have here. For them the world changes every week and they are simply delighted by it. A few days ago I asked one of them as they came bursting out of a seminar, "How did it go?" "Wonderful" he said. "Everything we knew about physics last week isn't true!"

Writing on Life: Sixteen Close-Ups

Physicist Oppenheimer (p. 378)

William Sloane Associates, Publishers. New York, New York, USA. 1951

Bergmann, P.

No biographical data available

In many aspects, the theoretical physicist is merely a philosopher in a working suit.

In Jean-Pierre Luminet

Black Holes (p. 51)

Cambridge University Press. New York, New York, USA. 1992

Birkhoff, George David 1884–1944

American mathematician

It is to be hoped that in the future more and more theoretical physicists will command a deep knowledge of mathematical principles; and also that mathematicians will no longer limit themselves so exclusively to the aesthetic development of mathematical abstractions.

Mathematical Nature of Physical Theories

American Scientist, Volume 31, Number 4, October 1943 (p. 286)

Boltzmann, Ludwig Edward 1844–1906

Austrian Physicist

$S = k \log w$

Carved on Boltzmann's gravestone

Brecht, Bertolt 1898–1956

German writer

VIRGINIA: Father says theologians have their bells to ring: physicists have their laughter.

Translated by John Willett

Life of Galileo

Scene 9 (p. 74)

Arcade Publishing. New York, New York, USA. 1994

Brillouin, Léon 1889–1969

French physicist

It is impossible to study the properties of a single mathematical trajectory. The physicist knows only bundles of trajectories, corresponding to slightly different initial conditions.

In John D. Barrow

The World Within the World (p. 277)

Clarendon Press. Oxford, England. 1988

Burroughs, William S. 1914–97

American writer

No atomic physicist has to worry, people will always want to kill other people on a mass scale.

The Adding Machine: Selected Essays

A Word to the Wise Guy (p. 29)

Seaver Books. New York, New York, USA. 1986

Crick, Francis Harry Compton 1916–2004

English biochemist

Physicists are all too apt to look for the wrong sorts of generalizations, to concoct theoretical models that are too neat, too powerful, and too clean. Not surprisingly, these seldom fit well with data. To produce a really good biological theory, one must try to see through the clutter produced by evolution to the basic mechanisms. What seems to physicists to be a hopelessly complicated process may have been what nature found simplest, because nature could build on what was already there.

What Mad Pursuit?: A Personal View of Scientific Discovery (p. 139)

Basic Books, Inc. New York, New York, USA. 1988

Cvitanovic, Predrag

Physicist

Indicative of the depth of mathematics lurking behind physicists' conjectures is that fact that the properties that one would like to establish about the renormalization theory of critical circle maps might turn out to be related to number-theoretic abysses such as the Riemann conjecture....

In C. Itzykson, et al. (eds.)

From Number Theory and Physics

Circle Maps: Irrationally Winding

Springer-Verlag New York, Inc. New York, New York, USA. 1992

Davies, Paul Charles William 1946–

British-born physicist, writer, and broadcaster

Brown, Julian R.

No biographical data available

Physicists, like theologians, are wont to deny that any system is in principle beyond the scope of their subject.

Superstrings: A Theory of Everything

Introduction (p. 1)

Cambridge University Press. Cambridge, England. 1988

Dicke, R. H.

No biographical data available

It is well known that carbon is required to make physicists.

Dirac's Cosmology and Mach's Principle

Nature, Volume 192, Number 4801, November 4, 1961 (p. 440)**Dirac, Paul Adrian Maurice** 1902–84

English theoretical physicist

Some physicists may be happy to have a set of working rules leading to results in agreement with observation. They may think that this is the goal of physics. But it is not enough. One wants to understand how Nature works.

Proceedings of the Conference Perturbative Quantum Chromodynamics

Volume 74, 1981 (pp. 129–130)

Duhem, Pierre-Maurice-Marie 1861–1916

French physicist and mathematician

The watchmaker to whom one gives a watch that does not run will take it all apart and will examine each of the pieces until he finds out which one is damaged. The physician to whom one presents a patient cannot dissect him to establish the diagnosis. He has to guess the seat of the illness by examining the effect on the whole body. The physicist resembles a doctor, not a watchmaker.

Quelques reflexions au sujet de la physique experimentale

Revue des questions scientifiques., Volume 36, 1897 (p. 55)

...if the aim of physical theories is to explain experimental laws, theoretical physics is not an autonomous science; it is subordinate to metaphysics.

The Aim and Structure of Physical Theory

Part I, Chapter I (p. 10)

Princeton University Press. Princeton, New Jersey, USA. 1954

Dürrenmatt, Friedrich 1921–90

Swiss playwright and novelist

Dear Mobius. You have visitors. Now leave your physicist's lair for a moment and come in here.

Translated by James Kirkup

The Physicists

Act One (p. 37)

Grove Press, Inc. New York, New York, USA. 1964

It's ludicrous. Here we have hordes of highly paid physicists in gigantic state-supported laboratories working for years and years and years vainly trying to make some progress in the realm of physics, while you do it quite casually at your desk in this madhouse.

Translated by James Kirkup

The Physicists

Act Two (p. 75)

Grove Press, Inc. New York, New York, USA. 1964

Dyson, Freeman J. 1923–

American physicist and educator

Theoretical physicists are accustomed to living in a world which is removed from tangible objects by two levels of abstraction. From tangible atoms we move by one level of abstraction to invisible fields and particles. A second level of abstraction takes us from fields and particles to the symmetry-groups by which fields and particles are related. The superstring theory takes us beyond symmetry-groups to two further levels of abstraction. The third level of abstraction is the interpretation of symmetry-groups in terms of states in ten-dimensional space-time. The fourth level is the world of the superstrings by whose dynamical behavior the states are defined.

Infinite in All Directions

Part One, Chapter Two (p. 18)

Harper Collins Publisher, Inc. New York, New York, USA. 1988

Eddington, Sir Arthur Stanley 1882–1944

English astronomer, physicist, and mathematician

To the pure geometer the radius of curvature is an incidental characteristic — like the grin of the Cheshire cat. To the physicist it is an indispensable characteristic. It would be going too far to say that to the physicist the cat is merely incidental to the grin. Physics is concerned with interrelatedness such as the interrelatedness of cats and grins. In this case the “cat without a grin” and the “grin without a cat” are equally set aside as purely mathematical phantasies.

The Expanding Universe

Chapter IV, Section III (pp. 103–104)

The University Press. Cambridge. 1933

Wheresoever the carcass is, there will the eagles be gathered together, and where the symbols of the mathematical physicists flock, there presumably is some prey for them to settle on, which the plain man at least will prefer to call by a name suggestive of something more than passive emptiness.

New Pathways in Science

Chapter II, Section IV (p. 39)

The Macmillan Company. New York, New York, USA. 1935

Life would be stunted and narrow if we could feel no significance in the world around us beyond that which can be weighed and measured with the tools of the physicist or described by the metrical symbols of the mathematician.

In Arthur Beiser

The World of Physics

Introduction

Simon & Schuster. New York, New York, USA. 1987

Einstein, Albert 1879–1955

German-born physicist

The supreme task of the physicist is to arrive at those universal elementary laws from which the cosmos can be built up by pure deduction.

The World As I See It (p. 22)

Philosophical Library. New York, New York, USA. 1949

Dear Schrödinger: You are the only contemporary physicist, besides Laue, who sees that one cannot get around the assumption of reality — if only one is honest. Most of them simply do not see what sort of risky game they are playing with reality — reality as something independent of what is experimentally established.

In A.P. French & P.J. Kennedy (eds.)

Niels Bohr: A Centenary Volume

Letter, Albert Einstein to Erwin Schrödinger, December 22, 1950

(p. 143)

Harvard University Press. Cambridge, Massachusetts, USA. 1985

How wretchedly inadequate is the theoretical physicist as he stands before Nature — and before his students!

In Helen Dukas and Banesh Hoffman

Albert Einstein: The Human Side: New Glimpses from His Archives

Letter dated 15 March 1922 (p. 24)

Princeton University Press. Princeton, New Jersey, USA. 1979

If you want to find out anything from the theoretical physicists about the methods they use, I advise you to stick closely to one principle: Don't listen to their words, fix your attention on their deeds.

Ideas and Opinions

On the Method of Theoretical Physics (p. 270)

Crown Publishers, Inc. New York, New York, USA. 1954

...the supreme task of the physicist is the discovery of the most general elementary laws from which the world-picture can be deduced logically.

In Max Planck

Where Is Science Going?

Prologue (p. 10)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

Feynman, Richard P. 1918–88

American theoretical physicist

A professor of theoretical physics always has to be told what to look for. He just uses his knowledge to explain the observations of the experimenters!"

What Do You Care What Other People Think?

The Cold Facts (p. 140)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

The limited imagination of physicists: When we see a new phenomenon we try to fit it into the framework we already have.... It's not because Nature is really similar; it's because the physicists have only been able to think of the same damn thing, over and over again.

QED: The Strange Theory of Light and Matter

Chapter 4 (p. 149)

Princeton University Press. Princeton, New Jersey, USA. 1985

Physicists sometimes feel so superior and smart that other people would like to catch them out once on something. I will give you something to get them on. They should be utterly ashamed of the way they take energy and measure it in a host of different ways, with different names. It is absurd that energy can be measured in calories, in ergs, in electron volts, in foot pound, in B.T.U.s, in horsepower hours, in kilowatt hours — all measuring exactly the same thing.... For those who want some proof that physicists are human, the proof is in the idiocy of all the different units which they use for measuring energy.

The Character of Physical Law

Chapter 3 (p. 74)

BBC. London, England. 1965

Foster, G. C.

No biographical data available

...from the very outset of his investigations the physicist has to rely constantly on the aid of the mathematician, for even in the simplest cases, the direct result of his measuring operations are entirely without meaning until they have been submitted to more or less [a] mathematical discussion.

Mathematical and Physical Opening Address,

Nature, Section A, Volume 16, Number 407, August 16, 1887 (p. 312)

Gamow, George 1904–68

Russian-born American physicist

Now, Physicists, take warning,
Observe this sober test...

When new fleas are a-borning
Make sure they're fully dressed!

Thirty Years That Shook Physics

First Part (p. 193)

Doubleday & Company, Inc. Garden City, New York, USA. 1966

Gibbs, J. Willard 1839–1903
American mathematician

A mathematician may say anything he pleases, but a physicist must be at least partially sane.

In R.B. Lindsay
On the Relation of Mathematics and Physics
The Scientific Monthly, December 1944 (p. 456)

Green, Celia 1935–
English philosopher and psychologist

If you say to a theoretical physicist that something is inconceivable, he will reply: “It only appears inconceivable because you are naively trying to conceive it. Stop thinking and all will be well.”

The Decline and Fall of Science
Aphorisms (pp. 2–3)
Hamilton. London, England. 1976

Greene, Brian 1963–
American physicist

Physicists are more like avant-garde composers, willing to bend traditional rules.... Mathematicians are more like classical composers...”

The Elegant Universe
Chapter 11 (p. 271)
W.W. Norton & Company, Inc. New York, New York, USA. 2003

Gribbin, John
English science writer and astronomer

Rees, Martin John 1942–
15th Astronomer Royal of England

...the fate of the Universe, like its present appearance, was imprinted right at the beginning, in the hot, dense fireball era. And to understand that era, and the nature of the relics it could have left behind, we enter the realm of the particle physicist.

Cosmic Coincidences: Dark Matter, Mankind, and Anthropic Cosmology
Part One, Chapter Three (p. 99)
Bantam Books. New York, New York, USA. 1989

Hanson, Norwood Russell 1924–67
American philosopher of science

Physicists do not start from hypotheses; they start from data. By the time a law has been fixed into an H-D [hypothetico-deductive] system, really original physical thinking is over.

Patterns of Discovery
Chapter IV (p. 70)
At The University Press. Cambridge, England. 1958

Heisenberg, Werner Karl 1901–76
German physicist and philosopher

Some physicists would prefer to come back to the idea of an objective real world whose smallest parts exist objectively in the same sense as stones or trees exist

independently of whether we observe them. That, however, is impossible.

Physics and Philosophy: The Revolution in Modern Science
July, 1992
Harper & Row, Publishers. New York, New York, USA. 1958

The physicist may be satisfied when he has the mathematical scheme and knows how to use it for the interpretation of the experiments. But he has to speak about his results also to non-physicists who will not be satisfied unless some explanation is given in plain language. Even for the physicist the description in plain language will be the criterion of the degree of understanding that has been reached.

Physics and Philosophy: The Revolution in Modern Science
Chapter X (p. 168)
Harper & Row, Publishers. New York, New York, USA. 1958

Hoffmann, Banesh 1906–86
Mathematician and educator

They could but make the best of it, and went around with woebegone faces sadly complaining that on Mondays, Wednesdays and Fridays they must look on light as a wave; on Tuesdays, Thursdays and Saturdays, as a particle. On Sundays they simply prayed.

The Strange Story of the Quantum
Chapter IV (p. 42)
Dover Publications, Inc. New York, New York, USA. 1959

Hoyle, Sir Fred 1915–2001
English mathematician and astronomer

The physicist is mainly interested in the detailed structure of the threads in our tapestry. He is less interested in the broad pattern on the tapestry itself. The broadest pattern of all, on the scale of stars and galaxies, is the business of the astronomer.

Ten Faces of the Universe
The Astrophysicist's Universe (p. 55)
W.H. Freeman & Company. San Francisco, California, USA. 1977

Jeans, Sir James Hopwood 1877–1946
English physicist and mathematician

The physicist who can discard his human spectacles, and can see clearly in the strange new light which then assails his eyes, finds himself living in an unfamiliar world, which even his immediate predecessors would probably fail to recognize.

The New Background of Science
Chapter I (pp. 5–6)
The University of Michigan Press. Ann Arbor, Michigan, USA. 1959

Johnson, George 1952–
American science writer

Trying to capture the physicists' precise mathematical description of the quantum world with our crude words

and mental images is like playing Chopin with a boxing glove on one hand and a catcher's mitt on the other.

On Skinning Schrödinger's Cat
The New York Times, Section 4, Sunday, 2 June 1996 (p. 16)

Joyce, James 1882–1941

Irish-born author

As a physicist he had learned that of the 70 years of complete human life at least 2/7, viz. 20 years are passed in sleep.

Ulysses (p. 704)
Random House, Inc. New York, New York, USA. 1946

Krauss, Lawrence M. 1954–

American theoretical physicist

For the most part, physicists follow the same guidelines that have helped keep Hollywood movie producers rich: If it works, exploit it. If it still works, copy it.

Fear of Physics: A Guide for the Perplexed
Chapter 1 (p. 4)
Basic Books, Inc. New York, New York, USA. 1993

Krutch, Joseph Wood 1893–1970

American naturalist, conservationist, and writer

Electronic calculators can solve problems which the man who made them cannot solve; but no government-subsidized commission of engineers and physicists could create a worm...

The Twelve Seasons
March (p. 184)
W. Sloane Associates. New York, New York, USA. 1949

Kuhn, Thomas S. 1922–96

American historian of science

Looking at a contour map, the student sees lines on paper, the cartographer a picture of a terrain. Looking at a bubble-chamber photograph, the student sees confused and broken lines, the physicist a record of familiar sub-nuclear events. Only after a number of such transformations of vision does the student become an inhabitant of the scientist's world.

The Structure of Scientific Revolutions
Chapter X (p. 111)
The University of Chicago Press. Chicago, Illinois, USA. 1970

Kusch, Polykarp 1911–93

German-American physicist

Our early predecessors observed Nature as she displayed herself to them. As knowledge of the world increased, however, it was not sufficient to observe only the most apparent aspects of Nature to discover her more subtle properties; rather, it was necessary to interrogate Nature and often to compel Nature, by various devices, to yield an answer as to her functioning. It is precisely the role of the experimental physicist to arrange devices and

procedures that will compel Nature to make a quantitative statement of her properties and behavior.

Nobel Lectures, Physics 1942–1962
Nobel lecture for award received in 1955
The Magnetic Moment of the Electron (p. 298)
Elsevier Publishing Company. Amsterdam, Netherlands. 1964

Ladenburg, Rudolf 1882–1952

German physicist

There are two kinds of physicists in Berlin: on the one hand was Einstein, and on the other all the rest.

In A.P. French
Einstein: A Centenary Volume
Chapter 4 (p. 125)
Harvard University Press. Cambridge, Massachusetts, USA. 1979

Lederman, Leon 1922–

American high-energy physicist

Today we have two groups of physicists both with the common aim of understanding the universe but with a large difference in cultural outlook, skills, and work habits. Theorists tend to come in late to work, attend grueling symposiums on Greek islands or Swiss mountaintops, take real vacations, and are at home to take out the garbage much more frequently. They tend to worry about insomnia.... Experimenters don't come in late — they never went home. During an intense period of lab work, the outside world vanishes and the obsession is total. Sleep is when you can curl up on the accelerator floor for an hour.

The God Particle: If the Universe Is the Answer, What Is the Question?
Chapter 1 (p. 14)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

Lichtenberg, Georg Christoph 1742–99

German physicist and satirical writer

The myths of the physicists.

Lichtenberg: Aphorisms & Letters
Aphorisms (p. 57)
Jonathan Cape. London, England. 1969

Lindley, David 1956–

English astrophysicist and author

But by tradition the physicist, having found one level of order in nature, invariably wants to know, like the archaeologist digging down into the remains of Troy, whether there is another, more primitive layer underneath.

The End of Physics: The Myth of a Unified Theory
Part I, Chapter 3 (p. 98)
Basic Books, Inc. New York, New York, USA. 1993

Lodge, Sir Oliver 1851–1940

English physicist

But, notwithstanding any temptation to idolatry, a physicist is bound in the long run to return to his right mind; he must cease to be influenced unduly by superficial

appearances, impracticable measurements, geometrical devices, and weirdly ingenious modes of expression; and remember that his real aim and object is absolute truth, however difficult of attainment that may be, that his function is to discover rather than to create, and that beneath and above and around all Appearances there exists a universe of full-bodied, concrete, absolute, reality.

Geometrisation of Physics, and Its Supposed Bias on the Michelson–Morley Experiment

Nature, Volume 106, Number 2677, February 17, 1921 (p. 800)

Marcus, Adrianne

No biographical data available

Let others lie about the universe,
make visible worlds. I am the keeper
of particles, custodian of stray
atoms.

In Steve Rasic Tem (ed.)

The Umbral Anthology of Science Fiction Poetry

The Physicist's Purpose, 1978

Umbral Press. Denver, Colorado, USA. 1982

Mermin, Norman David

1935–

Mathematician

...contemporary physicists come in two varieties. Type 1 physicists are bothered by EPR [electronparamagnetic resonance] and Bell's theorem. Type 2 (the majority) are not, but one has to distinguish two subvarieties. Type 2a physicists explain why they are not bothered. Their explanations tend either to miss the point entirely (like Born's to Einstein) or to contain physical assertions that can be shown to be false. Type 2b are not bothered and refuse to explain why.

Is the Moon There When Nobody Looks? Reality and the Quantum Theory *Physics Today*, Volume 38, Number 4, April 1985 (p. 41)

Michelson, Albert Abraham

1852–1931

German-American physicist

If a poet could at the same time be a physicist, he might convey to others the pleasure, the satisfaction, almost the reverence, which the subject inspires. The aesthetic side of the subject is, I confess, by no means the least attractive to me. Especially is its fascination felt in the branch which deals with light...

Light Waves and Their Uses

Lecture I (p. 1)

The University of Chicago Press. Chicago, Illinois, USA. 1903

Nietzsche, Friedrich

1844–1900

German philosopher

We must be physicists in order...to be creative since so far codes of values and ideals have been constructed in ignorance of physics or even in contradiction to physics.

The Gay Science

Aphorism 335

Cambridge University Press. Cambridge, England. 2001

Oppenheimer, J. Robert

1904–67

American theoretical physicist

In some sort of crude sense which no vulgarity, no humor, no overstatement can quite extinguish, the physicists have known sin, and this is a knowledge which they cannot lose.

Expiation

Time, Volume 51, Number 8, 23 February 1948 (p. 94)

Pagels, Heinz R.

1939–88

American physicist and science writer

I once heard a story that physicists when they die go to a heavenly academy where their purpose is to lay down the laws of nature. But there is a rule they must obey: Any new law they make cannot contradict ones already discovered and verified by their colleagues back on earth. The legend says that Pauli, one of the sharpest critics of physics, is there now setting intellectual traps and doing physics tricks to foul our best efforts.

The Cosmic Code: Quantum Physics as the Language of Nature

Part III, Chapter 1 (p. 339)

Simon & Schuster. New York, New York, USA. 1982

Petroski, Henry

1942–

Civil engineer

Embedded in a matrix of mistakes
And slips of sighs, his next equation lies
About its symmetry. Among the lines
Of exercise and bold heuristic thrusts
Of algebra and calculus, it takes
His magic mirror mind to recognize
A juxtaposition that unifies
His theory of another universe.
Extracting the law from the accidents,
He calls it Theorem and proceeds to prove
It logically follows from stronger laws.
He makes some definitions and extends
The theorem more and more and marvels at the rules
His universe follows, effect from cause.

The Mathematical Physicist

Southern Humanities Review, Volume 8, Number 2, 1972 (p. 184)

Poincaré, Henri

1854–1912

French mathematician and theoretical astronomer

Nothing but facts are of importance. John Lackland passed by here. Here is something that is admirable. Here is a reality for which I would give all the theories in the world." That is the language of the historian. The physicist would say rather: "John Lackland passed by here; that makes no difference to me, for he never will pass this way again."

The Foundations of Science

Science and Hypothesis, Part IV

Chapter IX (p. 128)

The Science Press. New York, New York, USA. 1913

Rabi, Isidor Isaac 1898–1988
Austrian-born American physicist

I think physicists are the Peter Pans of the human race. They never grow up, and they keep their curiosity.

In Jeremy Bernstein
Experiencing Science

Part 1. Two Faces of Physics. Chapter 2. Rabi: The Modern Age (p. 102)
Basic Books, Inc. New York, New York, USA. 1978

Rees, Martin John 1942–
15th Astronomer Royal of England

The physicist is like someone who's watching people playing chess and, after watching a few games, he may have worked out what the moves in the game are. But understanding the rules is just a trivial preliminary on the long route from being a novice to being a grand master. So even if we understand all the laws of physics, then exploring their consequences in the everyday world where complex structures can exist is a far more daunting task, and that's an inexhaustible one I'm sure.

In Lewis Wolpert and Alison Richards

A Passion for Science

Chapter 3 (p. 37)

Oxford University Press, Inc. Oxford, England. 1988

Robinson, Howard A.

No biographical data available

Because physicists are a small group, they often suffer in many ways from psychoses similar to those found in political minorities. In an effort to keep their own individuality they feel it necessary to resist pressure from the outside and the result is...that a group of physicists tend to behave like an amoebae.

The Challenge of Industrial Physics

Physics Today, June 1948 (p. 7)

Rogers, Eric

No biographical data available

The physicist who does not enjoy watching a dime and a quarter drop together has no heart.

Astronomy for the Inquiring Mind

Preliminary Introduction (p. 4)

Princeton University Press. Princeton, New Jersey, USA. 1982

Rorty, Richard 1931–
American philosopher

Here is one way to look at physics: the physicists are men looking for new interpretations of the Book of Nature. After each pedestrian period of normal science, they dream up a new model, a new picture, a new vocabulary, and then they announce that the true meaning of the Book has been discovered. But, of course, it never is, any more than the true meaning of Coriolanus or the Dunciad or the Phenomenology of the Spirit or the Philosophical Investigations. What makes them physicists is that

their writings are commentaries on the writings of earlier interpreters of Nature, not that they all are somehow "talking about the same thing"...

Philosophy as a Kind of Writing

New Literary History, Volume 10, Number 1, Autumn 1978 (p. 141)

Ruelle, David 1935–

Belgian-French mathematical physicist

What is the origin of the urge, the fascination that drives physicists, mathematicians, and presumably other scientists as well? Psychoanalysis suggests that it is sexual curiosity. You start by asking where little babies come from, one thing leads to another, and you find yourself preparing nitroglycerine or solving differential equations. This explanation is somewhat irritating, and therefore probably basically correct.

Chance and Chaos

Chapter 26 (p. 164)

Princeton University Press. Princeton, New Jersey, USA. 1991

Russell, Henry Norris 1877–1957

American astronomer

If a first-rate physicist, well versed in all the knowledge acquired in the laboratory during the last quarter century on the structure and properties of the atom, should have lived his life on a planet so enshrouded by clouds that neither he nor others had ever glimpsed the starry heavens, yet if he had the imagination to conceive that immense quantities of matter might lie beyond the clouds, he would be able to picture the heavens much as they are, tell the probable maximum masses of the stars, their minimum distances, the range of their diameters and temperatures, the differences of their spectra, and in short to duplicate by prediction, not only in general features but in many of the finest details the actual appearance of the universe forever hidden from him.

Quoted in C.G. Abbot

Annual Report of the Board of Regents of the Smithsonian Institution, 1922

The Architecture of Atoms and a Universe Built of Atoms (p. 157)

Government Printing Office. Washington, D.C. 1924

Sagan, Carl 1934–96

American astronomer and author

Physicists had to invent words and phrases for concepts far removed from everyday experience. It was their fashion to avoid pure neologisms and instead to evoke, even if feebly, some analogous commonplace. The alternative was to name discoveries and equations after one another. This they did also. But if you didn't know it was physics they were talking, you might very well worry about them.

Contact: A Novel

Chapter 19 (p. 331)

Simon & Schuster. New York, New York, USA. 1985

Singer, Kurt 1886–1962
German philosopher

...the true mathematician and physicist know very well that the realms of the small and the great often obey quite different rules.

Mirror, Sword and Jewel: A Study of Japanese Characteristics
Chapter 5 (p. 75)
Croom Helm. London, England. 1973

Standen, Anthony
Anglo-American science writer

Physicists, being in no way different from the rest of the population, have short memories for what is inconvenient.

Science Is a Sacred Cow
Chapter III (p. 68)
Dutton. New York, New York, USA. 1950

Strutt, John William (Lord Rayleigh) 1842–1919
English physicist

The different habits of mind of the two schools of physicists sometimes lead them to the adoption of antagonistic views on doubtful and difficult questions. The tendency of the purely experimental school is to rely almost exclusively upon direct evidence, even when it is obviously imperfect, and to disregard arguments which they stigmatize as theoretical. The tendency of the mathematician is to over-rate the solidity of his theoretical structures, and to forget the narrowness of the experimental foundation upon which many of them rest.

Life of John William Strutt: Third Baron Rayleigh (p. 132)
University of Wisconsin Press. Madison, Wisconsin, USA. 1968

Thomson, Sir Joseph John 1856–1940
English physicist

There is a school of mathematical physicists which objects to the introduction of ideas which do not relate to things which can actually be observed and measured.... I hold that if the introduction of a quantity promotes clearness of thought, then even if at the moment we have no means of determining it with precision, its introduction is not only legitimate but desirable. The immeasurable of today may be the measurable of tomorrow.

In John D. Barrow
The World Within the World (p. 97)
Clarendon Press. Oxford, England. 1988

Toulmin, Stephen 1922–
Anglo-American philosopher

Natural historians...look for regularities of given forms, but physicists seek the form of given regularities.

The Philosophy of Science: An Introduction
Chapter II, Section 2.8 (p. 53)
Harper & Row, Publishers. New York, New York, USA. 1960

von Goethe, Johann Wolfgang 1749–1832
German poet, novelist, playwright, and natural philosopher

...cement, patch-up, and glue together, as witchdoctors do, the Newtonian doctrine, so that it could, as an embalmed corpse, preside in the style of ancient Egyptians, at the drinking bouts of physicists.

In S.L. Jaki
Goethe and the Physicists
American Journal of Physics, Volume 37 (p. 198)

Wald, George 1906–97
American biologist and biochemist

It would be a poor thing to be an atom in a universe without physicists, and physicists are made of atoms. A physicist is an atom's way of knowing about atoms.

The Fitness of the Environment: An Inquiry into the Biological Significance of the Properties of Matter
Foreword
Beacon Press. Boston, Massachusetts, USA. 1958

Weisskopf, Victor Frederick 1908–2002
Austrian-American physicist

There are three kinds of physicists, as we know, namely the machine builders, the experimental physicists, and the theoretical physicists. If we compare those three classes, we find that the machine builders are the most important ones, because if they were not there, we could not get to this small-scale region. If we compare this with the discovery of America, then, I would say, the machine builders correspond to the captains and ship builders who really developed the techniques at that time. The experimentalists were those fellows on the ships that sailed to the other side of the world and then jumped upon the new islands and just wrote down what they saw. The theoretical physicists are those fellows who stayed back in Madrid and told Columbus that he was going to land in India.

In Heinz R. Pagels
The Cosmic Code: Quantum Physics as the Language of Nature
Part II, Chapter 1 (p. 198)
Simon & Schuster. New York, New York, USA. 1982

Self-confidence is an important ingredient that makes for a successful physicist.

In L.M. Brown and L. Hoddeson
The Birth of Particle Physics
Growing Up with Field Theory: The Development of Quantum Electrodynamics (p. 75)
Cambridge University Press. Cambridge, England. 1983

Wheeler, John Archibald 1911–
American physicist and educator

The physicist does not have the habit of giving up something unless he gets something better in return.

In Cecil M. DeWitt and John A. Wheeler
Battelle Recontres: 1967 Lectures in Mathematics and Physics (p. 261)
W.A. Benjamin, Inc. New York, New York, USA. 1968

White, Stephen

No biographical data available

[Physicists] are, as a general rule, highbrows. They think and talk in long, Latin words, and when they write anything down they usually include at least one partial differential and three Greek letters.

A Newsmen Looks at Physicists

Physics Today, Volume 1, Number 1, May 1948 (p. 15)

Wiener, Norbert 1894–1964

American mathematician

Experience has pretty well convinced the working physicist that any idea of nature which is not only difficult to interpret but which actively resists interpretation has not been justified as far as his past work is concerned, and therefore, to be an effective scientist, he must be naive, and even deliberately naive, in making the assumption that he is dealing with an honest God, and must ask his questions of the world as an honest man.

The Human Use of Human Beings

Chapter XI (p. 189)

Da Capo Press. New York, New York, USA. 1988

Zolynas, Al 1945–

American poet

And so, the closer he looks at things, the farther away they seem. At dinner, after a hard day at the universe, he finds himself slipping through his food. His own hands wave at him from beyond a mountain of peas. Stars and planets dance with molecules on his fingertips. After a hard day with the universe, he tumbles through himself, flies through the dream galaxies of his own heart. In the very presence of his family he feels he is descending through an infinite series of Chinese boxes.

The New Physics: Poems

The New Physics (p. 55)

Wesleyan University Press. Middletown, Connecticut, USA. 1979

PHYSICS**Achard, Franz Karl** 1753–1821

German chemist and experimental physicist

Everyone now agrees that a physics lacking all connection with mathematics...would only be an historical amusement, fitter for entertaining the idle than for occupying the mind of a philosopher.

In J.L. Heilbron

Electricity in the 17th and 18th Centuries: A Study of Early Modern Physics (p. 74)

University of California Press. Berkeley, California, USA. 1979

Alvarez, Luis Walter 1911–88

American experimental physicist

There is no democracy in physics. We can't say that some second rate guy has as much right to opinion as Fermi.

In Daniel S. Greenberg

The Politics of Pure Science

Book One, Chapter II (p. 42)

New American Library. New York, New York, USA. 1967

Author undetermined

The Euclidean foundation of geometry is to the Gaussian foundation of geometry as the Newton particle concept of physics is to the Faraday–Maxwell concept of physics.

Springer-Verlag. New York, New York, USA. 1991

Crease, Robert P.

Science historian

Mann, Charles C.

American journalist and science writer

On August 2, 1932, Anderson obtained a stunningly clear photograph that shocked both men. Despite Millikan’s protestations, a particle had indeed shot up like a Roman candle from the floor of the chamber, slipped through the plate, and fallen off to the left. From the size of the track, the degree of the curvature, and the amount of momentum lost, the particle’s mass was obviously near to that of an electron. But the track curved the wrong way. The particle was positive. Neither electron, proton, or neutron, the track came from something that had never been discovered before. It was, in fact, a “hole,” although Anderson did not realize it for a while.... Anderson called the new particle a “positive electron”; positron was the name that stuck. Positrons were the new type of matter — antimatter — Dirac had been forced to predict by his theory. (The equation, he said later, had been smarter than he was.)

...it does not take an idea so long to become “classical” in physics as it does in the arts.

Bell System Technical Journal
Some Contemporary Advances in Physics V, Electrical Solids, Volume 3, 1924 (p. 621)

Davies, Paul Charles William 1946–

British-born physicist, writer, and broadcaster

Physics is the most pretentious of all the sciences, for it purports to address all of physical reality. The physicist may confess ignorance about a particular system — a snowflake, a living organism, a weather pattern — but he will never concede that it lies outside the domain of physics in principle. The physicist believes that the laws of physics, plus knowledge of the relevant boundary conditions, are sufficient to explain, in principle, every phenomenon in the universe. Thus the entire universe, from the smallest fragment of matter to the largest assemblage of galaxies, becomes the physicist’s domain — vast natural laboratory for the interplay of lawful forces.

In P.C.W. Davies (ed.)
The New Physics
The New Physics: A Synthesis (p. 1)
Cambridge University Press. Cambridge, England. 1989

It is clear that for nature to produce a cosmos even remotely resembling our own, many apparently unconnected branches of physics have to cooperate to a remarkable degree.

The Accidental Universe (p. 111)
Cambridge University Press. Cambridge, England. 1984

It is no exaggeration to say that quantum mechanics had dominated twentieth-century physics and is far and away the most successful scientific theory in existence. It is indispensable for understanding subatomic particles, atoms and nuclei, molecules and chemical bonding, the structure of solids, superconductors and superfluids, the electrical and thermal conductivity of metals and semiconductors, the structure of stars, and much else. It

has practical applications ranging from the laser to the microchip. All this from a theory that at first sight — and second sight — looks absolutely crazy! Neils Bohr, one of the founders of quantum mechanics, once remarked that anybody who is not shocked by the theory hasn't understood it.

Only questions about the results of experiments have a real significance and it is only such questions that theoretical physics has to consider.

The Principles of Quantum Mechanics (2nd edition)

Chapter I, Section 2 (p. 5)

At The Clarendon Press. Oxford, England. 1935

The present stage of physical theory is merely a steppingstone towards the better stages that we will have in the future. One can be quite sure that there will be better stages simply because of the difficulties that occur in the physics of today.

The Evolution of the Physicist's Picture of Nature

Scientific American, Volume 208, Number 5, May 1963 (p. 48)

Duhem, Pierre-Maurice-Marie 1861–1916

French physicist and mathematician

The development of physics incites a continual struggle between “nature that does not tire of providing” and reason that does not wish “to tire of conceiving.”

The Aim and Structure of Physical Theory

Part I, Chapter II (p. 23)

Princeton University Press. Princeton, New Jersey, USA. 1954

Physics is not a machine one can take apart; one cannot try each piece in isolation and wait, to adjust it, until its solidity has been minutely checked. Physical science is a system that must be taken as a whole. It is an organism no part of which can be made to function without the remotest parts coming into play, some more, some less, but all in some degree.

Essays in the History and Philosophy of Science (p. 284)

Hackett Publishing Company. Indianapolis, Indiana, USA. 1996

...physics makes progress because experiment constantly causes new disagreements to break out between laws and facts, and because physicists constantly touch up and modify laws in order that they may more faithfully represent the facts.

The Aim and Structure of Physical Theory

Part II, Chapter V (p. 177)

Princeton University Press. Princeton, New Jersey, USA. 1954

A “Crucial Experiment” is Impossible in Physics.

The Aim and Structure of Physical Theory
Part II, Chapter VI (p. 188)
Princeton University Press. Princeton, New Jersey, USA. 1954

Dyson, Freeman J. 1923–
American physicist and educator

Physics is littered with the corpses of dead unified field theories.

In John D. Barrow
The World Within the World (p. 184)
Clarendon Press. Oxford, England. 1988

I am acutely aware of the fact that the marriage between mathematics and physics, which was so enormously fruitful in past centuries, has recently ended in divorce.

Missed Opportunities
Bulletin of the American Mathematical Society, Volume 78, 1972

...we have seen particle physics emerge as the playground of group theory.

D.C. Heath and Company. Lexington, Massachusetts, USA. 1994

Eddington, Sir Arthur Stanley 1882–1944
English astronomer, physicist, and mathematician

The external world of physics has become a world of shadows.

The Nature of the Physical World
Introduction (p. xvi)
The Macmillan Company. New York, New York, USA. 1930

Distance and duration are the most fundamental terms in physics; velocity, acceleration, force, energy, and so on, all depend on them; and we can scarcely make any statement in physics without direct or indirect reference to them.

In Ronald W. Clark
Einstein: The Life and Times
Part Two, Chapter 4 (p. 93)
The World Publishing Company. New York, New York, USA. 1971

I have not suggested that religion and free will can be deduced from modern physics...

New Pathways in Science
Chapter XIII, Section VI (p. 306)
The Macmillan Company. New York, New York, USA. 1935

I am afraid the knockabout comedy of modern atomic physics is not very tender towards our aesthetic ideals. The stately drama of stellar evolution turns out to be more like the hair-breadth escapades in the films. The music of the spheres has a painful suggestion of — jazz.

Stars and Atoms
Lecture I (p. 27)
Yale University Press. London, England. 1927

In the world of physics we watch a shadowgraph performance of familiar life. The shadow of my elbow rests on the shadow table as the shadow ink flows over the

shadow paper... The frank realisation that physical science is concerned with a world of shadows is one of the most significant of recent advances.

The Nature of the Physical World
Introduction (p. xi)
The Macmillan Company. New York, New York, USA. 1930

It is impossible to trap modern physics into predicting anything with perfect determinism because it deals with probabilities from the outset.

In James R. Newman (ed.)
The World of Mathematics (Volume 2)
Causality and Wave Mechanics (p. 1056)
Simon & Schuster. New York, New York, USA. 1956

Edelstein, Ludwig 1902–65
German scholar and historian of medicine

Physics...in antiquity remained closely connected with philosophy, and was predominantly concerned with the philosophical category of the “why,” rather than the scientific category of the “how.”

In Philip P. Wiener and Aaron Noland
Roots of Scientific Thought
Recent Trends in the Interpretation of Ancient Science (pp. 94–95)
Basic Books, Inc. New York, New York, USA. 1957

Ehrenfest, Paul 1880–1933
Austrian physicist

Physics is simple, but subtle.

In Victor F. Weisskopf
Physics in the Twentieth Century: Selected Essays
My Life as a Physicist (p. 3)
The MIT Press. Cambridge, Massachusetts, USA. 1972

Einstein, Albert 1879–1955
German-born physicist

Today we know that no approach which is founded on classical mechanics and electrodynamics can yield a useful radiation formula.

In B.L. van der Waerden
Sources of Quantum Mechanics
On the Quantum Theory of Radiation (p. 63)
Dover Publications. New York, New York, USA. 1968

What would physics look like without gravitation?

In Jean-Pierre Luminet
Black Holes (p. 114)
Cambridge University Press. New York, New York, USA. 1992

Physics constitutes a logical system of thought which is in a state of evolution, whose basis cannot be distilled, as it were, from experience by an inductive method, but can only be arrived at by free invention.

Out of My Later Years
Physics and Reality, Summary
Thames & Hudson. London, England. 1950

Physics is the attempt at the conceptual construction of a model of the real world and its lawful structure.

In Gerald Holton

Thematic Origins of Scientific Thought: Kepler to Einstein
Letter of November 28, 1930 to M. Schlick (p. 243)
Harvard University Press. Cambridge, Massachusetts, USA. 1973

Physics too deals with mathematical concepts; however, these concepts attain physical content only by the clear determination of their relation to the objects of experience.

Out of My Later Years
The Theory of Relativity (p. 41)
Thames & Hudson. London, England. 1950

That this insecure and contradictory foundation was sufficient to enable a man of Bohr's unique instinct and sensitivity to discover the principal laws of the spectral lines and of the electron shell of the atoms, together with their significance for chemistry appeared to me as a miracle — and appears to me a miracle even today.

Translated by Paul Arthur Schlipp
Albert Einstein: Autobiographical Notes (p. 43)
Open Court. La Salle, Illinois, USA. 1979

Reality is the real business of physics.

In Nick Herbert
Quantum Reality: Beyond the New Physics
Chapter 1 (p. 4)
Anchor Press. Garden City, New York, USA. 1985

Experience, of course, remains the sole criterion for the serviceability of mathematical constructions for physics, but the truly creative principle resides in mathematics.

In Philipp Frank
Modern Science and Its Philosophy
Chapter 16 (p. 297)
Harvard University Press, Cambridge, England. 1952

But in physics I soon learned to scent out the paths that led to the depths, and to disregard everything else, all the many things that clutter up the mind, and divert it from the essential. The hitch in this was, of course, the fact that one had to cram all this stuff into one's mind for the examination, whether one liked it or not.

In Robert H. March
Physics for Poets
Chapter 9 (p. 101)
McGraw-Hill Book Company, Inc. New York, New York, USA. 1996

I still lose my temper dutifully about physics. But I no longer flap my wings — I only ruffle my feathers. The majority of fools remain invincible.

In Sachi Sri Kantha
An Einstein Dictionary (p. 96)
Greenwood Press, Publishers. Westport, Connecticut, USA. 1996

I have become an evil renegade who does not wish physics to be used on probabilities.

In Sachi Sri Kantha
An Einstein Dictionary (p. 96)
Greenwood Press, Publishers. Westport, Connecticut, USA. 1996

In speaking here of "comprehensibility," the expression is used in its most modest sense. It implies: the production

of some sort of order among sense impressions, this order being produced by the creation of general concepts, relations between these concepts and sense experience. It is in this sense that the world of our sense experiences is comprehensible. The fact that it is comprehensible is a miracle.

Out of My Later Years
Physics and Reality, Section 1
Thames & Hudson. London, England. 1950

In the matter of physics, the first lesson should contain nothing but what is experimental and interesting to see. A pretty experiment is in itself often more valuable than twenty formulae extracted from our minds; it is particularly important that a young mind that has yet to find its way about in the world of phenomena should be spared from formulae altogether. In [this mind] physics they play exactly the same weird and fearful part as the figures of dates in Universal History.

In A.P. French
Einstein: A Centenary Volume
Chapter 11 (p. 220)
Harvard University Press. Cambridge, Massachusetts, USA. 1979

If the basis of theoretical physics cannot be an inference from experience, but must be free invention, have we any right to hope that we shall find the correct way? Still more — does this correct approach exist at all, save in our imagination? To this I answer with complete assurance, that in my opinion there is the correct path; moreover, that it is in our power to find it.

In Philipp Frank
Einstein's Philosophy of Science
Review of Modern Physics, Volume 21, Number 3, July 1949 (p. 354)

...the development of physics has shown that at any given moment, out of all conceivable constructions, a single one has always proved itself decidedly superior to all the rest. Nobody who has really gone deeply into the matter will deny that in practice the world of phenomena uniquely determines the theoretical system, in spite of the fact that there is no logical bridge between phenomena and their theoretical principles; this is what Leibnitz described so happily as a "pre-established harmony."

Bouncing a ball, flying a kite, blowing up a balloon — to a child it's play; to a scientist it's physics.

What's Physics?

The Physics Teacher, Volume 14, Number 5, May 1976 (p. 315)

Feynman, Richard P. 1918–88

American theoretical physicist

What do we mean by “understanding something?” We can imagine that this complicated array of moving things which constitutes “the world” is something like a great chess game being played by the gods, and we are observers of the game. We do not know what the rules of the game are: all we are allowed to do is to watch the playing. Of course, if we watch long enough we may eventually catch on to a few of the rules. The rules of the game are what we mean by fundamental physics. Even if we knew every rule, however, we might not be able to understand why a particular move is made in the game, merely because it is too complicated...

In P.C.W. Davies and J. Brown

The Feynman Lectures on Physics (Volume 1)

Chapter 2–1 (p. 2–1)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

The fact that I beat a drum has nothing to do with the fact that I do theoretical physics. Theoretical physics is a human endeavor, one of the higher developments of human beings — and this perpetual desire to prove that people who do it are human by showing that they do other things that a few other humans do (like playing bongo drums) is insulting to me. I'm human enough to tell you to go to hell.

In James Gleick

Genius: The Life and Science of Richard Feynman

Caltec (p. 364)

Genius: The Life and Science of Richard Feynman

Cornell (p. 250)

Pantheon Books. New York, New York, USA. 1992

Physics is to mathematics what sex is to masturbation.

In Lawrence M. Krauss

Fear of Physics: A Guide for the Perplexed

Chapter 2 (p. 27)

Basic Books, Inc. New York, New York, USA. 1993

In order for physics to be useful to other sciences in a theoretical way, other than in the invention of instruments, the science in question must supply to the physicist a description of the object in a physicist's language.

Six Easy Pieces: Essentials of Physics Explained by Its Most Brilliant Teacher

The Relation of Physics to Other Sciences (p. 64)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

...the behavior of things on a small scale is so fantastic, so wonderfully and marvelously different than anything on a large scale! You can say, “Electrons behave like waves” — no, they don't, exactly; “they act like particles” — no, they don't exactly; “they act like a kind of fog around the nucleus” — no, they don't, exactly. Well, if you would like to get a clear, sharp picture of an atom, so that you can tell correctly how it's going to behave — have a good image of reality, in other words — I don't know how to do it, because that image has to be mathematical. Strange!

I don't know how it is that we can write mathematical expressions and calculate what the thing is going to do without actually being able to picture it. It would be something like having a computer where you put some numbers in, and the computer can do the arithmetic to figure out what time a car will arrive at different destinations but it cannot picture the car.

In Christopher Sykes (ed.)

No Ordinary Genius: The Illustrated Richard Feynman

Chapter Six (p. 149)

W.W. Norton & Company, Inc. New York, New York, USA. 1994

Feynman, Richard P. 1918–88

American theoretical physicist

Leighton, Robert B. 1919–97

American physicist

In its efforts to learn as much as possible about nature, modern physics has found that certain things can never be “known” with certainty. Much of our knowledge must

always remain uncertain. The most we can know is in terms of probabilities.

The Feynman Lectures on Physics (Volume 1)

Chapter 6–5 (pp. 6–11)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

...the existence of the positive charge, in some sense, distorts, or creates a “condition” in space, so that when we put the negative charge in, it feels a force. This potentiality for producing a force is called an electric field.

Mathematics began to seem too much like puzzle solving. Physics is puzzle solving, too, but of puzzles created by nature, not by the mind of man.

In J. Dash

A Life of One’s Own

Maria Goeppert-Mayer (p. 252)

Harper & Row, Publishers. New York, New York, USA. 1973

Greene, Brian 1963–

American physicist

To open our eyes to the true nature of the universe has always been one of physics’ primary purposes.

The Fabric of the Cosmos

Chapter 1 (p. 12)

Alfred A. Knopf. New York, New York, USA. 2004

The arrow of time, through the defining role it plays in everyday life and its intimate link with the origin of the universe, lies at a singular threshold between the reality we experience and the more refined reality cutting-edge science seeks to uncover.

The Fabric of the Cosmos

Chapter 1 (p. 20)

Alfred A. Knopf. New York, New York, USA. 2004

Physicists generally do not spend their working days contemplating flowers in a state of cosmic awe and reverie. Instead, we devote much of our time to grappling with complex mathematical equations scrawled across well-scored chalkboards. Progress can be slow. Promising ideas, more often than not, lead nowhere. That’s the nature of scientific research.

The Fabric of the Cosmos

Chapter 1 (p. 21)

Alfred A. Knopf. New York, New York, USA. 2004

Physicists spend a large part of their lives in a state of confusion. It's an occupational hazard. To excel in physics is to embrace doubt while walking the road to clarity.

The Fabric of the Cosmos

Chapter 16 (p. 470)

Alfred A. Knopf. New York, New York, USA. 2004

Space and time capture the imagination like no other scientific subject. For good reason. They form the arena of reality, the very fabric of the cosmos.

The Fabric of the Cosmos

Preface (p. ix)

Alfred A. Knopf. New York, New York, USA. 2004

It took the brashness of a Newton to plant the flag of modern scientific inquiry and never turn back.

The Fabric of the Cosmos

Chapter 1 (p. 22)

Alfred A. Knopf. New York, New York, USA. 2004

Nature does weird things. It lives on the edge. But it is careful to bob and weave from the fatal punch of logical paradox.

The Fabric of the Cosmos

Chapter 7 (p. 185)

Alfred A. Knopf. New York, New York, USA. 2004

Black holes have the universe's most inscrutable poker faces.

The Fabric of the Cosmos

Chapter 16 (p. 477)

Alfred A. Knopf. New York, New York, USA. 2004

...because observations are all we have, we take them seriously. We choose hard data and the framework of mathematics as our guides, not unrestrained imagination or unrelenting skepticism, and seek the simplest yet most wide-reaching theories capable of explaining and predicting the outcome of today's and future experiments.

The Fabric of the Cosmos

Preface (p. ix)

Alfred A. Knopf. New York, New York, USA. 2004

Gross, David 1941

American particle physicist

Progress in physics depends on the ability to separate the analysis of a physical phenomenon into two parts. First, there are the initial conditions that are arbitrary, complicated, and unpredictable. Then there are the laws of nature that summarize the regularities that are independent of the initial conditions.

Proceedings of the National Academy of Science USA

The Role of Symmetry in Fundamental Physics, Volume 93, Number 25, December 10, 1996

Hanson, Norwood Russell 1924–67

American philosopher of science

Physics is not applied mathematics. It is a natural science in which mathematics can be applied.

Patterns of Discovery

Chapter IV (p. 72)

At The University Press. Cambridge, England. 1958

Hasselberg, K. B.

No biographical data available

...as for physics, it has developed remarkably as a precision science, in such a way that we can justifiably claim that the majority of all the greatest discoveries in physics are very largely based on the high degree of accuracy which can now be obtained in measurements made during the study of physical phenomena.... [Accuracy of measurement] is the very root, the essential condition, of our penetration deeper into the laws of physics — our only way to new discoveries.

Nobel Lectures, Physics 1901–1921

Presentation Speech to Michelson 1907 Nobel Award (p. 159)

Elsevier Publishing Company. Amsterdam, Netherlands. 1967

Heidegger, Martin 1889–1976

German philosopher

Modern physics is not experimental physics because it applies apparatus to the questioning of nature. Rather the reverse is true. Because physics, indeed already as pure theory, sets nature up to exhibit itself as a coherence of forces calculable in advance, it therefore orders its experiments precisely for the purpose of asking whether and how nature reports itself when set up in this way.

The Question Concerning Technology and Other Essays

Part I. The Question Concerning Technology (p. 21)

Harper & Row, Publishers. New York, New York, USA. 1977

Heinlein, Robert A. 1907–88

American science fiction writer

Physics doesn't have to have any use. It just is.

Time for the Stars (p. 138)

Charles Scribner's Sons. New York, New York, USA. 1956

Heisenberg, Werner Karl 1901–76

German physicist and philosopher

When I was a boy, my grandfather, who was a hand-craftsman and knew how to do practical things, once met me when I put a cover on a wooden box.... He saw that I took the cover and I took a nail and I tried to hammer this one nail down to the bottom. "Oh", he said, "that is quite wrong what you do there, nobody can do it that way and it is a scandal to look at." I did not know what the scandal was, but then he said, "I will show you how you could do it." He took the cover and he took one nail, put it just a little bit through the cover into the box, and then the next nail a little bit, the third nail a little bit, and so on until all the nails were there. Only when everything was clear, when one could see, that all the nails would fit, then he would start to put the nails really into the box. So, I think this is a good description of how one should proceed in theoretical physics.

In International Centre for Theoretical Physics
*From a Life of Physics. Evening Lectures at the International Centre
 For Theoretical Physics*
 Theory, Criticism and a Philosophy, My General Philosophy (p. 46)

Questions and answers, observations and determinations, are no longer directed at a general, metaphysical and theological understanding, but are delimited with modesty.... This modesty was largely lost during the nineteenth century. Physical knowledge was considered to make assertions about nature as a whole. Physicists wished to turn philosophers.... Today physics is undergoing a basic change, the most characteristic trait of which is a return to its original self-limitation.

The Physicist's Conception of Nature
 Chapter 4 (p. 105)
 Greenwood Press, Publishers. Westport, Connecticut, USA. 1958

Like all the other natural sciences, Physics advances by two distinct roads. On the one hand it operates empirically, and thus is enabled to discover and analyse a growing number of phenomena — in this instance, of physical facts; on the other hand it also operates by theory, which allows it to collect and assemble the known facts in one consistent system, and to predict new ones from the guidance of experimental research.

The Physicist's Conception of Nature
 Chapter 6 (p. 158)
 Greenwood Press, Publishers. Westport, Connecticut, USA. 1958

I remember discussions with Bohr which went through many hours till very late at night and ended almost in despair, and when at the end of the discussion I went alone for a walk in the neighboring park I repeated to myself again and again the question: "Can nature possibly be as absurd as it seemed to us in these atomic experiments?"

Physics and Philosophy: The Revolution in Modern Science
 Chapter II (p. 42)
 Harper & Row, Publishers. New York, New York, USA. 1958

Heyl, Paul R.

Physics is what a group of people who call themselves physicists do.

What's Physics?
The Physics Teacher, Volume 14, Number 5, May 1976 (p. 315)

Huxley, Thomas Henry 1825–95

English biologist

...nothing can be more incorrect than the assumption one sometimes meets with, that physics has one method, chemistry another, and biology a third.

Collected Essays (Volume 1)
Method and Result
 The Progress of Science (p. 60)
 Macmillan & Company Ltd. London, England. 1904

Icke, Vincent 1946–

No biographical data available

Physics is not difficult; it's just weird.... Physics is weird because intuition is false. To understand what an electron's world is like, you've got to be an electron, or jolly nearly. Intuition is forged in the hellish fires of the everyday world, which makes it so eminently useful in our daily struggle for survival. For anything else, it is hopeless.

The Force of Symmetry
 Preface (p. xiii)
 Cambridge University Press. Cambridge, England. 1995

Fiction writers worry about first as well as last sentences, but I don't have to do that: in the book of physics, there never is a final sentence.

The Force of Symmetry
 Chapter 14 (p. 294)
 Cambridge University Press. Cambridge, England. 1995

Jeans, Sir James Hopwood 1877–1946

English physicist and mathematician

The classical physics seemed to bolt and bar the door leading to any sort of freedom of the will; the new physics hardly does this; it almost seems to suggest that the door may be unlocked — if only we could find the handle. The old physics showed us a universe which looked more like a prison than a dwelling place. The new physics shows us a universe which looks as though it might conceivably form a suitable dwelling place for free men, and not a

mere shelter for brutes — a home in which it may at least be possible for us to mould events to our desires and live lives of endeavor and achievement.

Physics and Philosophy

Chapter VII (p. 216)

Dover Publications, Inc. New York, New York, USA. 1981

Kronecker is quoted as saying that in arithmetic God made the integers and man made the rest; in the same spirit we may perhaps say that in physics God made the mathematics and man made the rest.

Physics and Philosophy

Chapter I (p. 16)

Dover Publications, Inc. New York, New York, USA. 1981

...the tendency of modern physics is to resolve the whole material universe into waves, and nothing but waves. These waves are of two kinds: bottled-up waves, which we call matter, and unbottled waves, which we call radiation or light.

The Mysterious Universe

Chapter III (p. 77)

The Macmillan Company. New York, New York, USA. 1932

...physics tries to discover the pattern of events which controls the phenomena we observe. But we can never know what this pattern means or how it originates; and even if some superior intelligence were to tell us, we should find the explanation unintelligible.

Physics and Philosophy

Chapter I (p. 16)

Dover Publications, Inc. New York, New York, USA. 1981

Koyré, Alexandre 1892–1964

Russian-born French philosopher

Good physics is made a priori. Theory precedes fact. Experience is useless because, before any experience, we are already in possession of the knowledge we are seeking for. Fundamental laws of motion (and of rest), laws that determine the spatio-temporal behavior of material bodies, are laws of a mathematical nature. Of the same nature as those which govern relations and laws of figures and numbers. We find and discover them not in Nature, but in ourselves, in our mind, in our memory, as Plato long ago has taught us.

Galileo and the Scientific Revolution of the Seventeenth Century

The Philosophical Review, Volume 52, Number 3, July 1943 (p. 347)

Larrabee, Eric 1922–90

Historian

Some people think that physics was invented by Sir Francis Bacon, who was hit by an apple when he was sitting under a tree one day writing Shakespeare.

Humor from Harper's

Easy Road to Culture, Sort Of (p. 89)

Harper. New York, New York, USA. 1961

“What will I learn here?” you might query.

You'll learn some math and Einstein's Theory.

Ask Teacher for an illustration.

He'll explain, “It's time dilation.

Length gets less. Mass gets more.

Time decreases. That's the law.

When things go so very, very fast.

Classical physics is of the past,

And to find what's really true,

We must seek the physics new.

Learning this is lots of fun

In our course called Physics 1.

Physics Inspires the Muses

The Physics Teacher, Volume 16, Number 9, December 1978 (p. 636)

Lindley, David 1956–

English astrophysicist and author

Physics may be complex, mathematical, and arcane, but it is not capricious. The inventors of strings and twenty-six dimensional spaces did not think up these things at random, simply to give themselves a new set of toys. There is a line of rational thinking that leads from the billiard-ball atoms of classical physics to the intangible mathematical entities of today. Physics is complicated because the world is complicated.

The End of Physics: The Myth of a Unified Theory

Prologue (p. 19)

Basic Books, Inc. New York, New York, USA. 1993

If particle physics is a mess, it is because that is the way the world appears to work.

The End of Physics: The Myth of a Unified Theory

Part I, Chapter 4 (p. 124)

Basic Books, Inc. New York, New York, USA. 1993

Lodge, Sir Oliver 1851–1940

English physicist

When a thing behaves as if it were alive, physics loses interest in it and hands it over to another section; for it is incompetent to deal with motions attributable to spontaneity and free will.

Maritain, Jacques 1882–1973

French philosopher

Few spectacles are as beautiful and moving for the mind as that of physics thus advancing toward its destiny like a huge throbbing ship.

Translated by Gerald B. Phelan

Distinguish to Unite or the Degrees of Knowledge

Chapter IV, section 12 (p. 165)

University of Notre Dame Press. Notre Dame, Indiana, USA. 1995

Mencken, H. L. (Henry Louis) 1880–1956

American journalist and literary critic

...it is now quite lawful for a Catholic woman to avoid pregnancy by a resort to mathematics, though she is still forbidden to resort to physics and chemistry.

Minority Report: H.L. Mencken's Notebooks

No. 62 (p. 52)

Alfred A. Knopf. New York, New York, USA. 1956

Mephisto

Can no one laugh?

Will no one drink?

I'll teach you Physics in a wink....

BLEGDAMSVEJ FAUST

Part First, Copenhagen Spring Conference, 1932

Beware alone of Reason and of Science,

Man's highest powers, unholy in alliance.

You let yourself, through dazzling witchcraft, yield

To all temptations of the Quantum field.

Listen! As now the obstacles abate,

You'll know the fair Neutrino for your fate!

BLEGDAMSVEJ FAUST

Part First, Copenhagen Spring Conference, 1932

Millikan, Robert Andrews 1868–1953

American physicist

Physics has opened the eyes of mankind so that it can now see in a very new truth new worlds — a marvelous world of electrons, already quite well explored, which underlies our former world of atoms and molecules, a world of quanta, not yet well understood, which lies perhaps behind the ether.

Science and Life

Chapter IV (p. 67)

The Pilgrim Press. Boston, Massachusetts, USA. 1924

Mohapatra, Rabindra

Theoretical physicist

Most people who haven't been trained in physics probably think of what physicists do as a question of incredibly complicated calculations, but that's not really the essence of it. The essence of it is that physics is about concepts, wanting to understand the concepts, the principles by which the world works.

In Michio Kaku

Hyperspace: A Scientific Odyssey Through Parallel Universes, Time

Warpes, and the 10th Dimension

Chapter 7 (p. 152)

Oxford University Press, Inc. New York, New York, USA. 1995

If you want to do serious physics, sometime you just have to learn it.

As reported by Ernest Barreto, student

Quantum field theory class. 1994

Morgan, Thomas Hunt 1866–1945

American zoologist and geneticist

Physics has progressed because, in the first place, she accepted the uniformity of nature; because, in the next place, she early discovered the value of exact measurements; because, in the third place, she concentrated her attention on the regularities that underlie the complexities of phenomena as they appear to us; and lastly, and not the least significant, because she emphasized the importance of the experimental method of research. An

ideal or crucial experiment is a study of an event, controlled so as to give a definite and measurable answer to a question — an answer in terms of specific theoretical ideas, or better still an answer in terms of better understood relations.

The Relation of Biology to Physics

Science, Volume 65, Number 1679, March 4, 1927 (p. 217)

Morrow, James 1947–

American author

Her eyes sprang fully opened, and she beheld Howard's rickety bookshelves. P-h-y-s-i-c-s. A coil of radiant energy shot from the word, flooding into her skull like a sunbeam passing through glass. She closed her eyes. Her dendrites danced. Her synapses sparkled.

Only Begotten Daughter (p. 90)

Harcourt Incorporated. Orlando, Florida, USA. 1990

Newton, Sir Isaac 1642–1727

English physicist and mathematician

I do not define time, space, place, and motion, as being well known to all. Only I must observe, that the common people conceived those quantities under not other notions but from the relation they bear to sensible objects.... Absolute space, in its own nature, without relation to anything external remains always similar and immovable.

In *Great Books of the Western World* (Volume 34)

Mathematical Principles of Natural Philosophy

Definitions, Scholium (p. 8)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

It is indeed a matter of great difficulty to discover, and effectually to distinguish, the true motions of particular bodies from the apparent; because the parts of that immovable space, in which those motions are performed, do by no means come under the observation of our senses.

In *Great Books of the Western World* (Volume 34)

Mathematical Principles of Natural Philosophy

Definitions, Scholium (p. 12)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Nietzsche, Friedrich 1844–1900

German philosopher

We...want to become...human beings who are new, unique, incomparable, who give themselves laws, who create themselves. To that end we must become the best learners and discoverers of everything that is lawful and necessary in the world: we must become physicists in order to be able to be creators in this sense — while hitherto all valuations and ideals have been based on ignorance of physics or were constructed so as to contradict it. Therefore: long live physics! And even more so that which compels us to turn to physics — our honesty!

The Gay Science

Fourth Book, Aphorism 335

Cambridge University Press. Cambridge, England. 2001

Noll, Ellis D.

No biographical data available

Physics is the science whose treehouse rests on the trunk of immutable physical law.

What's Physics?

The Physics Teacher, Volume 14, Number 5, May 1976 (p. 315)

Oman, John 1860–1939

English Presbyterian theologian

Beauty...is the goal of physics as it seeks to construe the order of the universe...

The Natural and the Supernatural

Value and Validity (p. 211)

The Macmillan Company. New York, New York, USA. 1931

Oppenheimer, J. Robert 1904–67

American theoretical physicist

Time and experience have clarified, refined and enriched our understanding of these notions. Physics has changed since then. It will change even more. But what we have learned so far, we have learned well. If it is radical and unfamiliar and a lesson that we are not likely to forget, we think that the future will be only more radical and not less, only more strange and not more familiar, and that it will have its own new insights for the inquiring human spirit.

In Lucienne Felix

The Modern Aspect of Mathematics (p. 31)

Basic Books, Inc. New York, New York, USA. 1960

The only thing that we can say about the properties of the ultimate particles is that we know nothing whatever about them.

In Cecilia Payne-Gaposchkin

Introduction to Astronomy

Chapter XIII, Section 5 (p. 339)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1954

As you undoubtedly know, theoretical physics — what with the haunting ghosts of neutrinos, the Copenhagen conviction, against all evidence, that cosmic rays are protons, Born's absolutely unquantizable field theory, the divergence difficulties with the positron, and the utter impossibility of making a rigorous calculation of anything at all — is in a hell of a way.

In Alice Smith and Charles Weiner

Robert Oppenheimer, Letters and Reflections

Letter to F. Oppenheimer, 4 June 1934 (p. 181)

Harvard University Press. Cambridge, Massachusetts, USA. 1980

Pagels, Heinz R. 1939–88

American physicist and science writer

Bohr wondered how we could even talk about the atomic world — it was so far removed from human experience.

He struggled with this problem — how can we use ordinary language developed to cope with everyday events and objects to describe atomic events? Perhaps the logic inherent in our grammar was inadequate for the task. ... The end of determinism meant not the end of physics but the beginning of a new vision of reality.

In T. Ferris (ed.)

World Treasury of Physics, Astronomy, and Mathematics

Uncertainty and Complementarity (p. 103, 110)

Little, Brown & Company. Boston, Massachusetts, USA. 1991

Pais, Abraham 1918–2000

Dutch-born physicist

It was a wonderful mess at that time. Wonderful! Just great! It was so confusing — physics at its best, when everything is confused and you know something important lies just around the corner.

In Robert Crease

The Second Creation: Makers of the Revolution in 20th Century Physics

Chapter 9 (p. 177)

The Macmillan Company. New York, New York, USA. 1986

...the state of particle physics...is...not unlike the one in a symphony hall before the start of a concert. On the podium one will see some but not all of the musicians. They are tuning up. Short brilliant passages are heard on some of the instruments; improvisations elsewhere; some wrong notes too. There is a sense of anticipation for the moment when the concert starts.

Particles

Physics Today, Volume 21, Number 2, May 1968 (p. 28)

Pines, David

No biographical data available

The central task of theoretical physics in our time is no longer to write down the ultimate equations but rather to catalog and understand emergent behavior in its many guises...

In George Johnson

Challenging Particle Physics as Path to Truth

The New York Times, F5, Columns 2 and 3, Tuesday, December 4, 2001

Planck, Max 1858–1947

German physicist

The chief law of physics, the pinnacle of the whole system is, in my opinion, the principle of least action.

Translated by R. Jones and D.H. Williams

A Survey of Physics: A Collection of Lectures and Essays

The Place of Modern Physics in the Mechanical View of Nature (p. 41)

Methuen & Company Ltd. London, England. 1925

Physics would occupy an exceptional position among all the other sciences if it did not recognize the rule that the most far-reaching and valuable results of investigation can only be obtained by following a road leading to a goal which is theoretically unobtainable. This goal is the apprehension of true reality.

The Universe in the Light of Modern Physics

Section 1 (p. 15)

Unwin Brothers Ltd. London, England. 1937

Physics is an exact Science and hence depends upon measurement, while all measurement itself requires sense-perception. Consequently all the ideas employed in Physics are derived from the world of sense-perception.

The Universe in the Light of Modern Physics

Section 1 (p. 7)

Unwin Brothers Ltd. London, England. 1937

Since Galileo's time, physics has achieved its greatest success by rejecting all teleological methods.

Translated by R. Jones and D.H. Williams

A Survey of Physics: A Collection of Lectures and Essays

The Principle of Least Action (p. 73)

Methuen & Company Ltd. London, England. 1925

Modern Physics impresses us particularly with the truth of the old doctrine which teaches that there are realities existing apart from our sense-perceptions, and that there are problems and conflicts where these realities are of greater value for us than the richest treasures of the world of experience.

The Universe in the Light of Modern Physics (p. 107)

George Allen & Unwin Ltd. London, England. 1931

In endeavoring to claim your attention for a short time, I would remark that our science, Physics, cannot attain its object by direct means, but only gradually along numerous and devious paths, and that therefore a wide scope is provided for the individuality of the worker. One works at one branch, another at another, so that the physical universe with which we are all concerned appears in different lights to different workers.

Translated by R. Jones and D.H. Williams

A Survey of Physics: A Collection of Lectures and Essays

The Unity of the Physical Universe (p. 1)

Methuen & Company Ltd. London, England. 1925

...the second law of thermodynamics appears solely as a law of probability, entropy as a measure of the probability, and the increase of entropy is equivalent to a statement that more probable events follow less probable ones.

Translated by R. Jones and D.H. Williams

A Survey of Physics: A Collection of Lectures and Essays

The Relation Between Physical Theories (p. 86)

Methuen & Company Ltd. London, England. 1925

Poincaré, Henri 1854–1912

French mathematician and theoretical astronomer

The science of physics does not only give us [mathematicians] an opportunity to solve problems, but helps us to discover the means of solving them, and it does this in two ways: it leads us to anticipate the solution and suggests suitable lines of argument.

The Foundations of Science

The Value of Science

The Science Press. New York, New York, USA. 1913

Quine, Willard Van Orman 1908–2000

American logician and philosopher

Physics investigates the essential nature of the world, and biology describes a local bump. Psychology, human psychology, describes a bump on the bump.

Theories and Things

Chapter 10 (p. 93)

Harvard University Press. Cambridge, Massachusetts, USA. 1981

Rabi, Isidor Isaac 1898–1988

Austrian-born American physicist

I think that physics should be the central study in all schools. I don't mean physics as it is usually taught — very badly, as a bunch of tricks — but, rather, an appreciation of what it means, and a feeling for it. I don't want to turn everybody into a scientist, but everybody has to be enough of a scientist to see the world in the light of science — to be able to see the world as something that is tremendously important beyond himself, to be able to appreciate the human spirit that could discover these things, that could make instruments to inquire and advance into its own nature. I rate this so highly [because] with this education people would find something above their religious affiliations, and find a basic unity in the spirit of man.

In Jeremy Bernstein

Experiencing Science

Part 1. Two Faces of Physics. Chapter 2. Rabi: The Modern Age (p. 126)

Basic Books, Inc. New York, New York, USA. 1978

I think physics is infinite. You don't have to try to exhaust it in your generation, or in your lifetime.

In Jeremy Bernstein

Experiencing Science

Part 1 Two Faces of Physics Chapter 2 Rabi: The Modern Age (p. 56)

Basic Books, Inc. New York, New York, USA. 1978

Raman, Chandrasekhar Venkata 1888–1970

Indian physicist

The purpose of scientific study and research is to obtain an ever deeper understanding of the workings of nature. To the physicist falls the task of discovering the ultimate units or entities that constitute the material universe and of ascertaining the principles which govern their behavior.

The New Physics: Talks on Aspects of Science

Chapter II (p. 9)

Philosophical Library, New York. 1951

Reichenbach, Hans 1891–1953

German philosopher of science

If one knows physics for a distance only, if he hears merely strange names and mathematical formulae in it, he will, indeed, come to believe that it is an affair of the learned alone — ingeniously and wisely constructed,

but without significance for men of other interests and problems.

Atoms and Cosmos

Chapter 19 (p. 293)

The Macmillan Company. New York, New York 1933

Richardson, Owen Willans 1879–1959

English physicist

The trouble with Physics at the present time is that there are so many workers making discoveries so fast, and important discoveries too, that it is difficult for any one worker to keep a balanced view of the state of the subject.

The most brilliant discoveries in theoretical physics are not discoveries of new laws, but of terms in which the law can be discovered.

Newton and the Origin of Colours

Chapter I (p. 6)

G. Bell & Sons Ltd. London, England. 1934

Röntgen, Wilhelm Conrad 1845–1923

German physicist

To my view there are two methods of research, the apparatus and the calculation. Whoever prefers the first method is an experimenter; otherwise, he is a mathematical physicist. Both of them set up theories and hypotheses...

In Otto Glasser

Dr. W.C. Röntgen

Chapter II (p. 24)

Charles C. Thomas, Publisher. Springfield, Illinois, USA. 1945

Physics is a science which must be proved with honest effort. One can, perhaps, present a subject in such a manner that an audience of laymen may be convinced erroneously that it has understood the lecture. This, however, means a furthering a superficial knowledge, which is worse and more dangerous than none at all.

In Otto Glasser

Dr. W.C. Röntgen

Chapter VIII (p. 119)

Charles C. Thomas, Publisher. Springfield, Illinois, USA. 1945

Russell, Bertrand Arthur William 1872–1970

English philosopher, logician, and social reformer

The aim of physics, consciously or unconsciously, has always been to discover what we may call the causal skeleton of the world.

The Analysis of Matter

Chapter XXXVII (p. 391)

Harcourt, Brace & Company, Inc. New York, New York, USA. 1927

Physics is mathematical not because we know so much about the physical world, but because we know so little: it is only its mathematical properties that we can discover.

In John D. Barrow

The World Within the World (p. 278)

Clarendon Press. Oxford, England. 1988

Physics must be interpreted in a way which tends toward idealism, and perception in a way which tends toward materialism.

The Analysis of Matter

Chapter I (p. 7)

Harcourt, Brace & Company, Inc. New York, New York, USA. 1927

Naive realism leads to physics, and physics, if true, shows that naive realism is false. Therefore naive realism, if true, is false; therefore it is false.

In John D. Barrow

The World Within the World (p. 144)

Clarendon Press. Oxford, England. 1988

Broadly speaking, traditional physics has collapsed into two portions, truisms and geography.

The ABC of Relativity

Chapter XV

George Allen & Unwin Ltd. London, England. 1958

I come now to the statistical part of physics, which is concerned with the study of large aggregates. Large aggregates behave almost exactly as they were supposed to do before quantum theory was invented, so that in regard to them the older physics is very nearly right. There is, however, one supremely important law which is only statistical; this is the second law of thermodynamics. It states, roughly speaking, that the world is growing continuously more disorderly.

Scientific Metaphysics

The Scientific Outlook (p. 92)

George Allen & Unwin Ltd. London, England. 1931

It is obvious that a man who can see, knows things that a blind man cannot know; but a blind man can know the whole of physics.

The Analysis of Matter

Chapter XXXVII (p. 389)

Harcourt, Brace & Company, Inc. New York, New York, USA. 1927

Sandage, Allan 1926–

American astronomer

It is such a strange conclusion...it cannot really be true.

In Robert Jastrow

God and the Astronomers

Chapter 6 (p. 113)

W.W. Norton & Company, Inc. New York, New York, USA. 1978

Schlegel, Friedrich 1772–1829

German poet

It is in fact wonderful how physics — as soon as it is concerned not with technical purposes but with general results — without knowing it gets into cosmogony, astrology, theosophy, or whatever you wish to call it, in short, into a mystic discipline of the whole.

Translated by Ernst Behler and Roman Struc

Dialogue on Poetry and Literary Aphorisms

Talk on Mythology (p. 90)

The Pennsylvania State University Press. University Park, Pennsylvania, USA. 1968

Schrödinger, Erwin 1887–1961

Austrian theoretical physicist

Schrödinger: “Surely you realize the whole idea of quantum jumps is bound to end in nonsense...if the jump is sudden, Einstein’s idea of light quanta will admittedly lead us to the right wave number, but them we must ask ourselves how precisely the electron behaves during the jump. Why does it not emit a continuous spectrum, as electromagnetic theory demands? And what law governs its motion during the jump? In other words, the whole idea of quantum jumps is sheer fantasy.”

Niels Bohr: “What you say is absolutely correct. But it does not prove that there are no quantum jumps. It only proves that we cannot describe them, that the representational concepts with which we describe events in daily life and experiments in classical physics are inadequate when it comes to describing quantum jumps.

In Werner Heisenberg

Physics and Beyond: Encounters and Conversations

Chapter 6 (pp. 73–74)

Harper & Row, Publishers. New York, New York, USA. 1971

Research in physics has shown beyond the shadow of a doubt that in the overwhelming majority of phenomena whose regularity and invariability have led to the formulation of the postulate of causality, the common element underlying the consistency observed is chance.

What Is Natural Law

Clarendon Press. Oxford, England. 1988

Television program

Smith, Henry J. S. 1826–83

Irish mathematician

So intimate is the union between mathematics and physics that probably by far the larger part of the accessions to our mathematical knowledge have been obtained by the efforts of mathematicians to solve the problems set to them by experiment, and to create “for each successive class of phenomena, a new calculus or a new geom-

etry, as the case might be, which might prove not wholly inadequate to the subtlety of nature.” Sometimes, indeed, the mathematician has been before the physicists, and it has happened that when some great and new question has occurred to the experimentalist or the observer, he has found in the armory of the mathematician the weapons which he has needed ready made to his hand. But, much oftener, the questions proposed by the physicist have transcended the utmost powers of the mathematics of the time, and a fresh mathematical creation has been needed to supply the logical instrument requisite to interpret the new enigma.

Presidential Address British Association for the Advancement of Science *Nature*, Section A, Volume 8, Number 204, September 25, 1873 (p. 450)

Snow, Charles Percy 1905–80
English novelist and scientist

He then gave me an explanation which I could not understand, although I had heard plenty of the jargon of nuclear physics from him and Luke. “Fission.” “Neutrons.” “Chain reaction.” I could not follow. But I could gather that at last the sources of nuclear energy were in principle open to be set loose; and that it might be possible to make an explosive such as no one had realistically imagined.

The New Men (p. 11)
Charles Scribner’s Sons. New York, New York, USA. 1955

I now believe that if I had asked an even simpler question — such as, What do you mean by mass, or acceleration, which is the scientific equivalent of saying, Can you read? — not more than one in ten of the highly educated would have felt that I was speaking the same language. So the great edifice of modern physics goes up, and the majority of the cleverest people in the western world have about as much insight into it as their neolithin ancestors would have had.

The Two Cultures: And a Second Look
Chapter I (p. 15)
At The University Press. Cambridge, England. 1964

Standen, Anthony
Anglo-American science writer

“[T]he extraordinary degree of dullness that pervades the laboratory periods of physics courses...[is] so acute that for many people it is the bitterest experience of their education.”

Science Is a Sacred Cow
Chapter III (p. 83)
Dutton. New York, New York, USA. 1950

Physics is not about the real world, it is about “abstractions” from the real world, and this is what makes it so scientific.

Science Is a Sacred Cow
Chapter III (p. 61)
Dutton. New York, New York, USA. 1950

Sullivan, John William Navin 1886–1937
Irish mathematician

The present tendency of physics is toward describing the universe in terms of mathematical relations between unimaginable entities.

The Bases of Modern Science (p. 226)
Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1929

Teilhard de Chardin, Pierre 1881–1955
French Jesuit, paleontologist, and biologist

The time has come to realise that an interpretation of the universe — even a positive one — remains unsatisfying unless it covers the interior as well as the exterior of things; mind as well as matter. The true physics is that which will, one day, achieve the inclusion of man in his wholeness in a coherent picture of the world.

The Phenomenon of Man
Forward (pp. 35–36)
Harper & Brothers. New York, New York, USA. 1959

The X-Files

MULDER: [I]n most of my work, the laws of physics rarely seems to apply.

Pilot
Television program
Season 1, 1993

Truesdell, Clifford 1919–2000
American mathematician, natural philosopher, historian of mathematics

Pedantry and sectarianism aside, the aim of theoretical physics is to construct mathematical models such as to enable us, from the use of knowledge gathered in a few observations, to predict by logical processes the outcomes in many other circumstances. Any logically sound theory satisfying this condition is a good theory, whether or not it be derived from “ultimate” or “fundamental” truth. It is as ridiculous to deride continuum physics because it is not obtained from nuclear physics as it would be to reproach it with lack of foundation in the Bible.

In Clifford Truesdell and Walter Noll
The Non-Linear Field Theories of Mechanics (2nd edition) (pp. 2–3)
Springer-Verlag. Berlin, Germany. 1992

Ulam, Stanislaw 1909–84
Polish-born mathematician

I should add here for the benefit of the reader who is not a professional physicist that the last thirty years or so have been a period of kaleidoscopically changing explanations of the increasingly strange world of elementary particles and of fields of force. A number of extremely talented theorists vie with each other in learned and clever attempts to explain and order the constant flow of experimental results which, or so it seems to me, almost perversely cast doubts about the just completed theoretical formulations.

Adventures of a Mathematician

Chapter 13 (p. 261)

Charles Scribner's Sons. New York, New York, USA. 1976

van Sant, Gus 1952–

American film editor

Like a disc jockey from Paradise, Howard flips Marie over and plays her B side. Every now and then she reaches for Sissy to include her, but the laws of physics insist on being obeyed.

Even Cowgirls Get the Blues

Screenplay (p. 34)

Faber & Faber Ltd. London, England. 1993

von Bayer, Hans Christian 1938–

German-born physicist and author

When [an electron] is passing through the slits, it is a wave, when it is caught, it is a particle.... An atom, according to Bohr, represents a different reality from that of the ordinary world of our sense perceptions, and it is unreasonable to insist on forcing the language of our familiar macroscopic surroundings onto that alien mode of existence.

Taming the Atom

Chapter 13 (p. 197)

Random House, Inc. New York, New York, USA. 1992

von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

Physics must be sharply distinguished from mathematics. The former must stand in clear independence, penetrating into the sacred life of nature in common with all the forces of love, veneration and devotion. The latter, on the other hand, must declare its independence of all externality, go its own grand spiritual way, and develop itself more purely than is possible so long as it tries to deal with actuality and seeks to adapt itself to things as they really are.

Werke

Schriften zur Naturwissenschaft, XXXIX (p. 92)

Temple-Verlag. Berlin, Germany. 1963

von Weizsäcker, Carl Friedrich (Baron) 1912–2007

German theoretical physicist and philosopher

Physics begins by facing a mystery. It transforms the mystery into a puzzle. It solves the puzzle. And it finds itself facing a new mystery.

In Pekka Lahti and Peter Mittelstaedt

Symposium on the Foundations of Modern Physics: 50 Years of the Einstein–Podolsky–Rosen Gedankenexperiment

Quantum Theory and Space-Time (p. 237)

Weinberg, Steven 1933–

American nuclear physicist

Our job in physics is to see things simply, to understand a great many complicated phenomena, in terms of a few simple principles.

In Robert K. Adair

The Great Design (p. 325)

Oxford University Press, Inc. New York, New York, USA. 1987

I think that is one of the great things about physics, that it is sufficiently precise that it makes predictions which can be disproved by observation, and which occasionally are. And, when you have that experience, you know that there is something out there that is not all just coming out of your closed society of fellow physicists. It's, I think, one of the things that I love so much about physics, the dialogue with nature; and this dialogue is not one in which nature always agrees with the physicists.

Does Physics Describe Reality?

The Challenge of the Universe

From Hypermind CD-ROM

Physics is not a finished logical system. Rather, at any moment it spans a great confusion of ideas, some that survive like folk epics from the heroic periods of the past, and others that arise like utopian novels from our dim premonitions of a future grand synthesis.

Gravitation and Cosmology: Principles and Applications of the General Theory of Relativity

Part I, Chapter 1 (p. 3)

John Wiley & Sons, Inc. New York, New York, USA. 1972

Wells, H. G. (Herbert George) 1866–1946

English novelist, historian, and sociologist

The science of physics is even more tantalizing than it was half a century ago, and, above the level of an elementary introduction, optics, acoustics and the rest, even less teachable. The more brilliant investigators rocket off into mathematical pyrotechnics and return to common speech with statements that are, according to the legitimate meanings of words, nonsensical.

Experiment in Autobiography

Chapter 5, Section 2 (p. 176)

The Macmillan Company. New York, New York, USA. 1934

Wheeler, John Archibald 1911–

American physicist and educator

No point is more central than this, that empty space is not empty. It is the seat of the most violent physics.

In Heinz R. Pagels

The Cosmic Code: Quantum Physics as the Language of Nature

Part II, Chapter 8 (p. 274)

Simon & Schuster. New York, New York, USA. 1982

Whitehead, Alfred North 1861–1947

English mathematician and philosopher

Physics refers to ether, electrons, molecules, intrinsically incapable of direct observation.

The Principle of Relativity with Application to Physical Science (p. 62)

The University Press. Cambridge, England. 1922

...in the present-day reconstruction of physics, fragments of the Newtonian concepts are stubbornly retained. The

result is to reduce modern physics to a sort of mystic chant over an unintelligible universe.

Modes of Thought

Events, Laws of Nature, and Invariance Principles (p. 9)

Elsevier Publishing Company. Amsterdam, Netherlands. 1972

Physics does not endeavor to explain nature. In fact, the great success of physics is due to the restriction of its objectives: it endeavors to explain the regularities in the behavior of objects. The renunciation of the broader aim, and the specification of the domain for which an explanation can be sought, now appears to us as an obvious necessity. In fact, the specification of the explainable may have been the greatest discovery of physics so far.

Nobel Lectures, Physics 1963–1970

Nobel lecture for award received in 1963

Events, Laws of Nature, and Invariance Principles (p. 2)

Elsevier Publishing Company. Amsterdam, Netherlands. 1972

Wilczek, Frank 1951–

American theoretical physicist

In physics, you don't have to go around making trouble for yourself — nature does it for you.

Longing for the Harmonies

How Asymptotic Freedom Discovered Me (p. 208)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

Ziman, John M. 1925–2005

English physicist

Physics defines itself as the science devoted to discovering, developing and refining those aspects of reality that are amenable to mathematical analysis.

Reliable Knowledge

Chapter 2 (p. 28)

Cambridge University Press. Cambridge, England. 1978

The most astonishing achievements of science, intellectually and practically, have been in physics, which many people take to be the ideal type of scientific knowledge. In fact, physics is a very special type of science, in which the subject matter is deliberately chosen so as to be amenable to quantitative analysis.

Reliable Knowledge

Chapter 1 (p. 9)

Cambridge University Press. Cambridge, England. 1978

In the education of a physicist, we recount the bold voyages of great explorers — Newton and Einstein, Faraday and Bohr — in search of new laws of nature. They found and charted the continents on which we have built our cities of the mind and of art. Does anyone really suppose that similar vast and fertile territories are still waiting to be discovered and colonized? The unaccustomed rules that govern black holes and quasars in the cosmic deeps affect our lives no more than the icy crags of the Himalayas or the conjunctions of the planets.

Physics Bulletin, Volume 25, 1974 (p. 280)

Think of physics simply as the “fundamental” science and it is oversubscribed almost to bankruptcy. But define it as the science whose aim is to describe natural phenomena in the most mathematical or numerical language, and you will understand its past and have confidence in its future. The task of the modern physicist is to determine the mathematically comprehensible characteristics of the natural world and of human artifacts...

Physics Bulletin, Volume 25, 1974 (p. 280)

Zukav, Gary

American spiritual teacher

Unfortunately, when most people think of “physics”, they think of chalkboards covered with undecipherable symbols of an unknown mathematics. The fact is that physics is not mathematics. Physics, in essence, is simple wonder at the way things are and a divine (some call it compulsive) interest in how that is so. Mathematics is the tool of physics. Stripped of mathematics, physics becomes pure enchantment.

The Dancing Wu Li Masters: An Overview of the New Physics

Part One

Wu Li?

Chapter I (p. 31)

William Morrow. New York, New York, USA. 1979

PHYSIOGNOMY

Miller, Hugh 1802–56
Scottish geologist and theologian

Physiognomy is no idle or doubtful science in connection with geology. The physiognomy of a country indicates almost invariably its geological character.

The Old Red Sandstone

Chapter XI (p. 201)

J.M. Dent & Sons Ltd. London, England. 1922

PHYSIOLOGIST

Collingwood, Robin George 1889–1943
English historian and philosopher

A physiologist...can certainly offer a definition of life; but this will only be an interim report on the progress of physiology to date. For him, as for the beginner, it is the nature of physiology that is relatively certain; it is the nature of life that is relatively vague.

The New Leviathan: Or Man, Society, Civilization and Barbarism

Part I, Chapter I. Aphorism L.47 (p. 3)

At The Clarendon Press. Oxford, England. 1942

Mayo, Charles Horace 1865–1939
American physician

Disease at times creates experiments that physiology completely fails to duplicate, and the wise physiologist can obtain clues to the resolution of many problems by studying the sick.

La funcion del higado en relacion con la cirugia

Annals de Circulation, Volume 2, April 1930

Pirenne, M. H.

No biographical data available

The soul, the mind, consciousness, thought, sensation, being nonmaterial, are not observable in physiological investigation like, say, nerve excitation or muscle contraction. Physiology gives no direct experimental evidence for them. Yet like all men, physiologists no doubt believe they have minds. Hence a dilemma.

British Journal for the Philosophy of Science, Volume 1, 1950/1951

PHYSIOLOGY

Gee, Samuel 1839–1911
Physician

Physiology owes more to medicine than medicine to physiology. Nature in disease performs vivisections for us. The greater and better part of what we know concerning the functions of the many organs of the body is derived from pathological observation and not from physiological experiment.

Medical Lectures and Aphorisms (p. 227)
Smith, Elder. London, England. 1902

Huxley, Thomas Henry 1825–95
English biologist

There is no side of the human mind which physiological study leaves uncultivated. Connected by innumerable ties with abstract science, Physiology is yet in the most intimate relation with humanity, and by teaching us that law and order, and a definite scheme of development, regulate even the strangest and wildest manifestations of individual life, she prepares the student to look for a goal even amidst the erratic wanderings of mankind, and to believe that history offers something more than an entertaining chaos — a journal of a toilsome, tragi-comic march nowhither.

Collected Essays (Volume 33)

Science and Education

On the Educational Value of the Natural History of Science (p. 59)

Macmillan & Company Ltd. London, England. 1904

A thorough study of Human Physiology is, in itself, an education broader and more comprehensive than much that passes under that name. There is no side of the intellect which it does not call into play, no region of human knowledge into which either its roots, or its branches, do not extend; like the Atlantic between the Old and the New Worlds, its waves wash the shores of the two worlds of matter and of mind; its tributary streams flow from both; through its waters, as yet unfurrowed by the keel of any Columbus, lies the road, if such there be, from the one to the other; far away from that North-west Passage of mere speculation, in which so many brave souls have been hopelessly frozen up.

Collected Essays (Volume 33)

Science and Education

Universities: Actual and Ideal (p. 220)

Macmillan & Company Ltd. London, England. 1904

Pavlov, Ivan Petrovich 1849–1936
Russian physiologist

It is perfectly clear that the horizon of medical observation of life is immeasurably wider than the sphere of vital phenomena which the physiologists have before their eyes in their laboratories. Hence the permanent incongruity between that which medicine knows, sees and empirically applies, and that which physiology can reproduce and explain.

Experimental Psychology and Other Essays

Concerning Trophic Innervation (p. 74)

Philosophical Library. New York, New York, USA. 1957

The outer limit of physiological knowledge, its goal, is to express this infinitely complex interrelationship of the organism with the surrounding world in the form of an exact scientific formula.

In Daniel P. Todes

Pavlov's Physiology Factory: Experiment, Interpretation, Laboratory Enterprise
Chapter 5 (p. 153)
The Johns Hopkins University Press. Baltimore, Maryland, USA. 2002

Starling, Ernest Henry 1866–1927
English physiologist

In physiology, as in all other sciences, no discovery is useless, no curiosity misplaced or too ambitious, and we may be certain that every advance achieved in the quest of pure knowledge will sooner or later play the part in the service of man.

The Linacre Lecture on the Law of the Heart (p. 147)
Publisher undetermined

PI

Beckmann, Petr 1924–93
Physicist

The digits beyond the first few decimal places are of no practical or scientific value. Four decimal places are sufficient for the design of the finest engines; ten decimals are sufficient to obtain the circumference of the earth to within a fraction of an inch if the earth were a smooth sphere...

A History of Pi
Chapter 10 (p. 100)

St. Martin's Press. New York, New York, USA. 1974

Chudnovsky, David
Mathematician

Maybe in the eyes of God pi looks perfect.

In Richard Preston
The Mountains of Pi
The New Yorker March 2, 1992

de Morgan, Augustus 1806–71
English mathematician and logician

...mysterious 3.14159...comes in at every door and window, and down every chimney.

A Budget of Paradoxes
Cyclometry (p. 393)

Longmans, Green. London, England. 1872

Duffin, R. J.

No biographical data available

God created the world and the integers, all in seven days. He then ordered two of his biotechnicians, James and Francis, to construct a genetic code for the fractional numbers. Moreover, they were to give special prominence to His favorite number, pi.

The Patron Saint of Mathematics

The Mathematical Intelligencer, Volume 15, Number 1, 1993 (p. 52)

Fiddle de dum, fiddle de dee,
A ring round the moon is pi times D;
But if a hole you want repaired,
You use the formula πr^2 .

Ingenious Mathematical Problems and Methods
Mathematical Nursery Rhyme Number 1
Dover Publications, Inc. New York, New York, USA. 1959

Little Jack Horner sat in a corner,
Trying to evaluate pi.

He disdained rule of thumb,
Found an infinite sum,
And exclaimed "It's REAL, nary an I."

Ingenious Mathematical Problems and Methods
Mathematical Nursery Rhyme Number 9
Dover Publications, Inc. New York, New York, USA. 1959

Kac, Mark 1914–84
Polish mathematician

Steinhaus, with his predilection for metaphors, used to quote a Polish proverb, "*Fortunny kolem sie toczy*" (Luck runs in circles), to explain why pi, so intimately connected with circles, keeps cropping up in probability theory and statistics, the two disciplines which deal with randomness and luck.

Enigmas of Chance: An Autobiography

The Search for the Meaning of Independence (p. 55)

Harper & Row, Publishers. New York, New York, USA. 1985

Morgan, Robert

No biographical data available

The secret relationship
of line and circle, progress
and return, is always known,
transcendental and yet
a commonplace. And though
the connection is written
it cannot be written out
in full, never perfect, but
is exact and constant, is
eternal and everyday
as orbits of electrons,
chemical rings, noted here
in one brief sign as gateway
to completed turns and
the distance inside circles,
both compact and infinite.

Poetry

Pv. clxi, Number 4 (January, 1993) (p. 204)

Preston, Richard

No biographical data available

The digits of pi march to infinity in a predestined yet unfathomable code: they do not repeat periodically, seeming to pop up by blind chance, lacking any perceivable order, rule, reason, or design — "random" integers, ad infinitum.

The Mountains of Pi
The New Yorker, March 2, 1992

...pi is not the solution to any equation built from a less than infinite series of whole numbers. If equations are trains threading the landscape of numbers, then no train stops at pi.

The Mountains of Pi
The New Yorker, March 2, 1992

PILL

Crichton-Browne, Sir James 1840–1938
 English physician

If you want fame and fortune, invent a pill.
The Doctor's After Thoughts (p. 14)
 E. Benn Ltd. London, England. 1932

Fuller, Thomas 1608–61
 English clergyman and author

If the pills were pleasant, they would not want gilding.

How is it that a little pill
 Without a pair of eyes to see
 Can travel down, and round and round
 And figure out what's wrong with me?
 Needed: Remote Control
American Journal of Nursing, April 1969 (p. 902)

PLANET

Author undetermined

The discovery of a new planet in a new way, by first finding where a planet ought to be, has given a fresh impulse to the enthusiasm of astronomers. All are looking to see if the motions of heavenly bodies in some other direction does not indicate that there are more weights in the scale on that side than have yet been seen.
Scientific American, Volume 2, Issue 26, March 20, 1847 (p. 203)

A new planet, it is said, has lately been discovered. This is not correct. The planet is as “old as the hills.”
Scientific American, Volume 2, Issue 9, November 21, 1846 (p. 68)

Banks, Sir Joseph 1743–1820
 English explorer and naturalist

Some of our astronomers here incline to the opinion that it is a planet and not a comet; if you are of that opinion it should forthwith be provided with a name [or] our nimble neighbors, the French, will certainly save us the trouble of Baptizing it.
 In Constance A. Lubbock
The Herschel Chronicle (p. 95)
 The Macmillan Company. New York, New York, USA. 1933

Blackmore, Sir Richard 1650–1729
 English physician and writer

All these Illustrious Worlds, and many more,
 Which by the Tube Astronomers explore;
 And Millions which the Glass can ne'er descry,
 Lost in the Wilds of vast Immensity,
 Are Suns, are Centers, whose Superior Sway
 Planets of various Magnitude obey.
The Poetical Works of Sir R. Blackmore: Containing Creation: A Philosophical Poem, in Seven Books
 Book II, l. 536–541
 Printed for C. Cooke. London, England. 1797

In beauteous Order all the Orbs advance,
And in their mazy complicated Dance,
Not in one part of all the Pathless Sky
Did any ever halt, or step awry.

The Poetical Works of Sir R. Blackmore: Containing Creation: A Philosophical Poem, in Seven Books

Book II, l. 91–94

Printed for C. Cooke. London, England. 1797

Burroughs, John 1837–1921

American naturalist and writer

The earth is not alone, it is not like a single apple on a tree; there are many apples on the tree, and there are many trees in the orchard.

The Breath of Life

Chapter XII (p. 289)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1915

Chapman, Clark R.

Astronomer and asteroid researcher

Planets are like living creatures. They are born, full of life and activity. They mature, consume energy, and settle into established ways. Finally, they run down, become dormant, and die. On a human time scale planetary lives are virtually eternal. We see only a snapshot of each planet and can only surmise its evolution.

The Inner Planets: New Light on the Rocky Worlds of Mercury, Venus,

Earth, the Moon, Mars, and the Asteroids

Chapter 6 (pp. 88–89)

Charles Scribner's Sons. New York, New York, USA. 1977

Chaucer, Geoffrey 1343–1400

English poet

The seven bodies I'll describe anon:
Sol, gold is, Luna's silver, as we see,
Mars iron, and quicksilver's Mercury,
Saturn is lead, and Jupiter is tin,
And Venus copper, by my father's kin!

A Study in Scarlet, Chapter 2 (p. 154)

Wings Books. New York, New York, USA. 1967

Dudley Manlove

Fictional character

Do you still believe it impossible we exist? You didn't actually think you were the only inhabited planet in the universe. How can any race be so stupid?

Plan 9 from Outer Space

Film (1959)

Eddington, Sir Arthur Stanley 1882–1944

English astronomer, physicist, and mathematician

If the planets of the solar system should fail us, there remain some thousands of millions of stars which we have been accustomed to regard as suns ruling attendant systems of planets. It has seemed a presumption, bordering almost on impiety, to deny them life of the same order of creation as ourselves. It would indeed be rash to assume that nowhere else has Nature repeated the strange experiment which she has performed on the earth.

Man's Place in the Universe

Harper's Magazine, October 1928 (p. 573)

Eiseley, Loren C. 1907–77

American anthropologist, educator and author

Things get odder on this planet, not less so.

The Unexpected Universe

Chapter Ten (p. 232)

Harcourt, Brace & World, Inc. New York, New York, USA. 1969

Emerson, Ralph Waldo 1803–82

American lecturer, poet, and essayist

He who knows what sweets and virtues are in the ground, the waters — the planets, the heavens, and how to come at these enchantments, is the rich and royal man.

Essays: Second Series

Nature (p. 543)

The Library of America. New York, New York, USA. 1983

Feynman, Richard P. 1918–88

American theoretical physicist

...what makes planets go around the sun? At the time of Kepler some people answered this problem by saying that there were angels behind them beating their wings and pushing the planets around in orbit. As you will see, the answer is not very far from the truth. The only difference is that the angels sit in a different direction and their wings push inwards.

The Character of Physical Law

Chapter 1 (p. 18)

BBC. London, England. 1965

Hammond, Allen Lee

No biographical data available

With the beginning of direct exploration of the solar system, planetary science has revived to become not only respectable but one of the active, forefront areas of research. How active can be gauged by the assessment, widely agreed on, that the rate of new discoveries and the rate of obsolescence of old ideas have never been so rapid as at present. Investigators are now confronted with such an overwhelming array of new observations and theories that what amounts to a revolution in understanding the solar system is in progress.

Exploring the Solar System(s): An Emerging New Perspective
Science, Volume 186, Number 4165, 22 November 1974 (p. 720)

Herschel, Friedrich Wilhelm 1738–1822

English astronomer

It has generally been supposed that it was a lucky accident that brought this new star to my view; this is an evident mistake. In the regular manner I examined every star of the heavens, not only of that magnitude but many far inferior, it was that night its turn to be discovered.

In Constance A. Lubbock

The Herschel Chronicle (pp. 78–79)

The Macmillan Company. New York, New York, USA. 1933

Hey, Nigel S. 1936–

American science writer

Each of us is part of an endless drama that started billions of years ago, when a gargantuan cloud of cosmic gas and dust began to collect within the firmament. Then our galaxy, the Milky Way, came to be, and, within it, our solar system. The Sun is the great nucleus of this little cell, radiating incredible amounts of energy to its daughter planets, furnishing all the ingredients of life and all the analogues of life that manifest themselves as simple movement and change.

Solar System

Chapter 1 (p. 11)

Weidenfield & Nicolson. London, England. 2002

I used to wonder, why bother? The other planets and moons are too inhospitable for us ever to visit, let alone

colonize. But this is shallow thinking. Our destiny is in space. We will always want to explore new frontiers, even when separated physically by great gulfs of space and time. The need is in our genes. And who knows what wonders we may find out there.

Solar System

Introduction (p. 8)

Weidenfield & Nicolson. London, England. 2002

Homer (Smyrns of Chios) fl. 750 BCE

Greek poet

The thick tresses of gold with which Vulcan had crested the helmet floated round it, and as the evening star that shines brighter than all others through the stillness of night, even such was the gleam of the spear which Achilles poised in his right hand, fraught with the death of noble Hector.

In *Great Books of the Western World* (Volume 4)*The Iliad of Homer*

Book XXII, l. 317 (p. 158)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

At length as the Morning Star was beginning to herald the light which saffron-mantled Dawn was soon to suffuse over the sea, the flames fell and the fire began to die.

In *Great Books of the Western World* (Volume 4)*The Iliad of Homer*

Book XXIII, l. 226 (p. 163)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Huygens, Christiaan 1629–95

Dutch mathematician, astronomer, and physicist

...the rest of the Planets have their Dress and Furniture, nay and their Inhabitants too as well as this Earth of ours.

Molière (Jean-Baptiste Poquelin) 1622–1673
 French playwright and actor

We had a narrow escape, Madame, While asleep;
 A neighboring planet did pass us close by,
 Cutting a swathe right through our whirlpool;
 Had its path led to a collision with mother earth,
 She would have shattered in pieces like glass.
Les Femmes Savantes
 Act IV, Scene iii
 Oxford University Press. Oxford, England. 1974

Morrow, Jeff 1907–93
 American actor

A lifeless planet. And yet, yet still serving a useful pur-
 pose, I hope. Yes, a sun. Warming the surface of some
 other world. Giving light to those who may need it.
This Island Earth
 Film (1955)

Redfern, Martin
 No biographical data available

We are no longer the victims of our planet, we are the
 custodians of it. Through our inconsiderate greed for
 land and our disregard for pollution, we bite the hand that
 feeds us. But we do so at our own peril. We still have our
 eggs in one basket, all our people in one planet. We need
 to care for that planet and take responsibility for it. But
 we also need to progress with the search for new homes
 and the technology to take us to the stars.
The Earth: A Very Short Introduction
 Epilogue (p. 132)
 Oxford University Press, Inc. Oxford, England. 2003

Shapley, Harlow 1885–1972
 American astronomer

Millions of planetary systems must exist, and billions
 is the better word. Whatever the methods of origin, and
 doubtless more than one type of genesis has operated,
 planets may be the common heritage of all stars except
 those so situated that planetary materials would be swal-
 lowed up by greater masses or cast off through gravita-
 tional action.
Of Stars and Men: Human Response to an Expanding Universe
 Chapter 7 (p. 112)

Swedenborg, Emanuel 1688–1772
 Swedish scientist, theosophist, and mystic

[There are] many earths, inhabited by man...thousands,
 yea, ten thousands of earths, all full of inhabitants...not
 only in this solar system, but also beyond it, in the starry
 heaven.
*The Earths in Our Solar System, Which Are Called Planets, and Earths
 in the Starry Heavens*
 New Church Board of Publication. New York, New York, USA. 1876

Tagore, Rabindranath 1861–1941
 Indian poet and philosopher

Through millions and millions of years,
 The stars shine,
 Fiery whirlpools revolve and rise
 In the dark ever-moving current of time.
 In this current
 The earth is a bubble of mud...
 Translated by Indu Dutt
Our Universe (p. 43)
 Jaico Publishing House. Bombay, India. 1969

Teilhard de Chardin, Pierre 1881–1955
 French Jesuit, paleontologist, and biologist

Despite their vastness and splendor the stars cannot carry
 the evolution of matter much beyond the atomic series:
 it is only on the very humble planets, on them alone,
 that the mysterious ascent of the world into the sphere
 of higher complexity has a chance to take place. How-
 ever inconsiderable they may be in the history of sidereal

bodies, however accidental their coming into existence, the planets are finally nothing less than the key-points of the Universe. It is through them that the axis of life now passes; it is upon them that the energies of an Evolution principally concerned with the building of large molecules is now concentrated.

The Future of Man

Chapter VI, Part I, Section I (p. 114)

Harper & Row, Publishers. New York, New York, USA. 1964

Tennyson, Alfred (Lord) 1809–92

English poet

This world was once a fluid haze of light,
Till toward the centre set the starry tides,
And eddied into suns, that wheeling cast
The planets.

Alfred Tennyson's Poetical Works

The Princess, Part Second, l. 101–103

Oxford University Press, Inc. London, England. 1953

Tombaugh, Clyde 1906–97

American astronomer

Behold the heavens and the great vastness thereof, for a planet could be anywhere therein.

Thou shalt dedicate thy whole being to the search project with infinite patience and perseverance.

Thou shalt set no other work before thee, for the search shall keep thee busy enough.

Thou shalt take the plates [photographs] at opposition time lest thou be deceived by asteroids near their stationary positions.

Thou shalt duplicate the plates of a pair at the same hour angle lest refraction distortions overtake thee.

Thou shalt give adequate overlap of adjacent plate regions lest the planet play hide and seek with thee.

Thou must not become ill at the dark of the moon lest thou fall behind the opposition point.

Thou shalt have no dates except at full moon when long-exposure plates cannot be taken at the telescope.

Many false planets shall appear before thee, hundreds of them, and thou shalt check every one with a third plate.

In David H. Levy

Clyde Tombaugh: Discoverer of Planet Pluto

Chapter 12, Ten Special Commandments for a Would-Be Planet Hunter (p. 180)

University of Arizona Press. Tucson, Arizona, USA. 1991

Voltaire (François-Marie Arouet) 1694–1778

French writer

It would be very singular that all Nature, all the planets, should obey eternal laws, and there should be a little animal, five feet high who, in contempt of these laws, could act as he pleased, solely according to his caprice.

In John D. Barrow

The World Within the World (p. 55)

Clarendon Press. Oxford, England. 1988

PLANET: EARTH

Abbey, Edward 1927–89

American environmentalist and nature writer

We know so very little about this strange planet we live on, this haunted world where all answers lead only to more mystery.

The Crooked Word

Audubon Magazine, Volume 77, Number 6, 1975 (p. 24)

We are obliged, therefore, to spread the news, painful and bitter though it may be for some to hear, that all living things on earth are kindred.

Desert Solitaire

The Serpents of Paradise (p. 24)

Ballantine Books. New York, New York, USA. 1968

Yes. Feet on earth. Knock on wood. Touch stone. Good luck to all.

Desert Solitaire

Bedrock and Paradox (p. 301)

Ballantine Books. New York, New York, USA. 1968

The earth is not a mechanism but an organism, a being with its own life and its own reasons, where the support and sustenance of the human animal is incidental.

The Journey Home: Some Words in Defense of the American West

Chapter 21 (p. 225)

E.P. Dutton. New York, New York, USA. 1977

The world is what it is, no less and no more, and therein lies its entire and sufficient meaning.

A Voice Crying in the Wilderness: Notes from a Secret Journal

Chapter 9 (p. 89)

St. Martin's Press. New York, New York, USA. 1989

I am not an atheist but an earthiest. Be true to the earth.

Desert Solitaire

Down the River (p. 208)

Ballantine Books. New York, New York, USA. 1968

Ackerman, Diane 1948–

American writer

Long ago, Earth bunched its granite to form the continents, ground molar Alps and Himalayas, rammed Africa and Italy into Europe, gnashing its teeth, till mountain ranges buckled and churned, and oceans (salty once rivers bled flavor from the seasoned earth) gouged their kelpy graves. And the rest is history...

The Planets: A Cosmic Pastoral

Earth, III (p. 36)

William Morrow & Company, Inc. New York, New York, USA. 1976

Agassiz, Jean Louis Rodolphe 1807–73

Swiss-born American naturalist, geologist, and teacher

...there was a time when our earth was in a state of igneous fusion, when no ocean bathed it and no atmosphere surrounded it, when no wind blew over it and no rain fell upon it, but an intense heat held all its materials in

solution. In those days the rocks which are now the very bones and sinews of our mother Earth — her granites, her porphyries, her basalts, her syenites — were melted into a liquid mass.

Geological Structures

Chapter I (p. 2)

Ticknor & Fields. Boston, Massachusetts, USA. 1866

Airy, George Biddell 1801–92

English astronomer

Since Astronomy first assumed the form of a Science, the inquiry into the Figure and dimensions of the Earth has always excited the interest of Philosophers. It can hardly be doubted that in the mind of a reflecting man there would always be a desire to know the nature of the Planet upon which he existed; but without Science of an exalted order, it would be impossible for him to gratify his curiosity.

Encyclopaedia Metropolitana, Volume 5, 1845

Arendt, Hannah 1906–75

Political philosopher

The earth is the very quintessence of the human condition...

The Human Condition

Prologue (p. 2)

The University of Chicago Press. Chicago, Illinois, USA. 1958

Aristotle 384 BCE–322 BCE

Greek philosopher

There is much change, I mean, in the stars which are overhead, and the stars seen are different, as one moves northward or southward. Indeed there are some stars seen in Egypt and in the neighborhood of Cyprus which are not seen in the northerly regions; and stars, which in the north are never beyond range of observation, in those regions rise and set. All of which goes to show not only that the earth is circular in shape, but also that it is a sphere of no great size: for otherwise the effect of so slight a change of place would not be so quickly apparent.

On the Heavens

Book II, Chapter 14

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Ball, Philip 1962–

English science writer

What is so special about the Earth, then, is not that it is a world of water, but that the water is marine blue — we have oceans, not just glassy sheets of bright ice. Perhaps, soon after the solar system was formed, blue worlds were commonplace, until one by one they turned pearly or ruddy, or became shrouded in bright acid. And then there we were, a lone blue dot, waiting for life to begin.

Life's Matrix: A Biography of Water

Part One, Chapter 4 (p. 111)

Farrar, Straus & Giroux. New York, New York, USA. 2000

Barrell, Joseph 1869–1919

American geologist

The scheme of the Universe is more profound and the unknown is a little nearer than it was recently though to be. But such has been the progress of knowledge since man, in the days before the advent of science naively regarded the earth, his home, as firmament, created a few thousand years previously especially for his benefit.

In J.H.F. Umbgrove

The Pulse of the Earth

Chapter I (p. 2)

Martinus Nijhoff. The Hague, Netherlands. 1947

Bellamy, David 1933–

Botanist, author and broadcaster

The earth has a mass of 5.97×10^{24} kilograms... a big number and one that really matters because that is all the matter we have got.

Forces of Life: The Botanic Man

Chapter 2 (p. 24)

Crown Publishers. New York, New York, USA. 1979

Beston, Henry 1888–1968

American writer

Touch the earth, love the earth, honour the earth, her plains, her valleys, her hills, and her seas; rest your spirit in her solitary places.

The Outermost House

Chapter X (p. 222)

Rinehart & Company. New York, New York, USA. 1928

Borland, Hal 1900–78

American writer

I am not quite sure what the earth's business is, but I know it is not the nurturing of *Homo sapiens*, or any one species of animal or plant.

Borland Country

Foreword (p. 7)

J.B. Lippincott Company. Philadelphia, Pennsylvania, USA. 1971

Bradley, Jr., John Hodgdon 1898–1962

American geologist

The earth, however, never forgets. While men are sleeping she is awake, silently strengthening the cords of her influence. When men make boast of their conquests she is not concerned, for she knows that the limits of human attainment are the limits she chooses to set. When they strut through the kingdom they think they have conquered, she tightens the strings that hold them to her hand.

Autobiography of Earth

Chapter XII (p. 331)

Coward-McCann, Inc. New York, New York, USA. 1935

The Earth is a selfish mother who would keep her children forever at her breast.

Autobiography of Earth

Chapter XII (p. 331)
 Coward-McCann, Inc. New York, New York, USA. 1935

Broad, William 1951–
 Science writer

Wade, Nicholas
 British-born scientific writer

The ultimate gatekeeper of science is neither peer reviews, nor referees, nor replication, nor the universalism implicit in all three mechanisms. It is time. In the end, bad theories don't work, fraudulent ideas don't explain the world so well as true ideas do. The ideal mechanisms by which science should work are applied to a large extent in retrospect... Time and the invisible boot that kicks out all useless science are the true gatekeepers of science. But these inexorable mechanisms take years, sometimes more than a millennium, to operate. During the interval, fraud may flourish, particularly if it can find shelter under the mantle of immunity that scientific elitism confers.

Betrayers of the Truth (p. 106)
 Simon & Schuster. New York, New York, USA. 1982

Burnet, Thomas 1635–1715
 English cleric and scientist

We must therefore be impartial where the Truth requires it, and describe the Earth as it is really in it self; and though it be handsome and regular enough to the eye in certain parts of it, single tracts and single Regions; yet if we consider the whole surface of it, or the whole Exterieur Region, 'tis as a broken and confus'd heap of bodies, plac'd in no order to one another, nor with any correspondency or regularity of parts: And such a body as the Moon appears to us, when 'tis look'd upon with a good Glass, rude and ragged; as it is also represented in the modern Maps of the Moon; such a thing would the Earth appear if it was seen from the Moon. They are both in my judgment the image or picture of a great Ruine, and have the true aspect of a World lying in its rubbish.

The Sacred Theory of the Earth (2nd edition)
 Book I, Chapter IX (p. 91)
 Printed by R. Norton. London. 1691

Burroughs, William S. 1914–97
 American writer

After one look at this planet any visitor from outer space would say 'I WANT TO SEE THE MANAGER.'
The Adding Machine: Selected Essays
 Women: A Biological Mistake (p. 124)
 Seaver Books. New York, New York, USA. 1986

Byron, George Gordon, 6th Baron Byron 1788–1824
 English Romantic poet and satirist

He saw with his own eyes the moon was round,

Was also certain that the earth was square.
 Because he had journey'd fifty miles, and found
 No sign that it was circular anywhere.

The Complete Poetical Works of Byron
 Don Juan
 Canto V
 Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

Chamberlain, Rollin T.
 American geologist

Just as the written life of some famous man properly commences with a portrayal of his family antecedents, so any real history of the earth should begin with the activities of the sun and the origin of its present family of planets.

In H.H. Newman (ed.)
The Nature of the World and of Man
 The Origin and Early Stages of the Earth (p. 31)
 The University of Chicago Press. Chicago, Illinois, USA. 1927

Chief Seattle ca. 1784–1866
 Chief of the Duwamish, Suquamish, and allied Indian tribes

You must teach your children that the ground beneath their feet is the ashes of your grandfathers. So that they will respect the land, tell your children that the earth is rich with the lives of our kin. Teach your children what we have taught our children, that the earth is our mother. Whatever befalls the earth befalls the sons of the earth. If men spit upon the ground, they spit upon themselves.

Catch the Whisper of the Wind: Collected Stories and Proverbs from Native Americans
 Attributed to Chief Seattle (p. 41)
 Health Communications, Inc. Deerfield Beach, Florida, USA. 1995

Cloos, Hans 1885–1951
 German geologist

The earth gives us more knowledge of ourselves than all the books, because it resists us.

Conversations with the Earth
 Chapter VII (p. 99)
 Alfred A. Knopf. New York, New York, USA. 1953

The earth is large and old enough to teach modesty; and yet it is small enough to be comprehended and to be learned from, as our understanding of it increases.

Conversation with the Earth
 Prologue (p. 8)
 Alfred A. Knopf. New York, New York, USA. 1953

Earth: beautiful, round, colorful planet. You carry us safely through the emptiness and deadness of space. Graciously you cover the black abyss with air and water. You turn us towards the sun, that we may be warm and content, that we may wander, with open eyes, through your meadows, and look upon your splendor. And then you turn us away from the too fiercely burning sun, that we may rest in the coolness of the night from life's heat and the struggle of the day.

Conversation with the Earth

Prologue (p. 3)
Alfred A. Knopf. New York, New York, USA. 1953

Coleridge, Samuel Taylor 1772–1834
English lyrical poet, critic, and philosopher

Earth! Thou mother of numberless children, the nurse
and the mother,
Sister thou of the stars, and beloved by the Sun, the
rejoicer!
Guardian and friend of the moon, O Earth, whom the
comets forget not,
Yea, in the measureless distance wheel round and again
they behold thee!

The Complete Poetical Works of Samuel Taylor Coleridge (Volume 1)
Hymn to the Earth (p. 328)
The Clarendon Press. Oxford, England. 1912

Coman, Dale Rex 1906–
American research physician and wildlife writer

The planet Earth is a doomed ship being blown to inevi-
table disaster by the winds of universal dynamics, a
miniscule sacrifice to the attainment of that inscrutable
destiny held secret by the galaxies as they rush through
the long darkness of space.

The Endless Adventure
Once There Was a Planet (p. 181)
Henry Regnery Company. Chicago, Illinois, USA. 1972

I peer into the endlessness of space. The lights from a host
of suns leap across the millions of miles of darkness to
reach this spinning bit of star stuff we call Earth. This out-
cropping of rock has unknowingly endureth the passage of
millennia. The footpads of extinct species have pattered
over it. An Indian in moccasins once stood upon it. Forests
have appeared, disappeared and reappeared around it. It
has been washed by floods, buried in ice and baked by the
sun. Here it will lie through the ages yet to come, silently
awaiting the next phase of a planet's destiny.

The Endless Adventure
Once There Was a Planet (p. 185)
Henry Regnery Company. Chicago, Illinois, USA. 1972

da Vinci, Leonardo 1452–1519
Italian High Renaissance painter and inventor

[We] may say that the earth has a spirit of growth; that
its flesh is the soil, its bones are the successive strata of
the rocks which form the mountains, its muscles are the
tufa stone, its blood the springs of its waters. The lake of
blood that lies about the heart is the ocean; its breathing
is by the increase and decrease of the blood in its pulses,
and even so in the earth is the flow and ebb of the sea.
And the heat of the spirit of the world is the fire which is
spread throughout the earth; and the dwelling-place of its
creative spirit is in the fires, which in diverse parts of the
earth are breathed out in baths and sulphur mines, and in
volcanoes...

Leonardo da Vinci's Note Books (pp. 130–131)
Duckworth & Company. London, England. 1906

Dubos, René Jules 1901–82
French-born American microbiologist and environmentalist

The incredible beauty of the earth as seen from space
results largely from the fact that our planet is covered
with living things. What gives vibrant colors and excit-
ing variety to the surface of the earth is the fact that it is
literally a living organism.

Federal Highway Act of 1970 and Miscellaneous Bills
United States Congress. Senate. 1970

The spaceship Earth is the cage within and against which
man has developed in his evolutionary past and continues
to develop his biological and mental characteristics. As
the terrestrial environment deteriorates so does human-
ness and the quality of human life.

Reason Awake
Chapter 5 (pp. 191–192)
Columbia University Press. New York, New York, USA. 1970

Dunlap, Ellen L.
No biographical data available

The building of the earth was dramatic beyond our
imagination. The shaping of the continents and the ocean
depths required titanic convulsions. The Supreme One
did not shout the Earth into instant being any more than
an architect would order the instant erection of a sky-
scraper. The ground work must be laid, and, little by
little, the job progresses. It required several billions of
years to make the Earth what it is today, and the job is
not yet done.

From Aunt Nellie's Notebook
Nature Magazine, January 1958 (p. 17)

Eddington, Sir Arthur Stanley 1882–1944
English astronomer, physicist, and mathematician

My subject [astronomy] disperses the galaxies, but it
unites the Earth.

In Arthur Beer (ed.)
Vistas in Astronomy (Volume 2)
Meeting of the International Astronomical Union, Cambridge, Mas-
sachusetts, USA., September, 1932 (p. i)

Ehrenreich, Barbara 1941–
American social critic and essayist

Some of us still get all weepy when we think about the
Gaia Hypothesis, the idea that earth is a big furry god-
dess-creature who resembles everybody's mom in that
she knows what's best for us. But if you look at the
historical record — Krakatoa, Mt. Vesuvius, Hurricane
Charley, poison ivy, and so forth down the ages — you
have to ask yourself: Whose side is she on, anyway?

The Worst Years of Our Lives
The Great Syringe Tide (p. 55)
Pantheon Books. New York, New York, USA. 1981

Einstein, Albert 1879–1955
German-born physicist

There has been an earth for a little more than a billion years. As for the question of the end of it I advise: Wait and see.

In Eli Maor

To Infinity and Beyond: A Cultural History of the Infinite (p. 182)
Birkhäuser. Boston, Massachusetts, USA. 1987

Ficino, Marsilio 1433–1499
Early Italian humanist philosopher

We see the Earth give birth, thanks to varieties of seeds, to a multitude of trees and animals, nourish them, and make them grow; we see her cause even stones to grow as her teeth, vegetable life as hairs, as long as they remain connected to their roots, while if they are removed or unearthed they cease growing. Could we say that the breast of this female lacks life, she who spontaneously gives birth and nourishes so many offspring, who sustains herself and whose back carries teeth and hair?

Theologica plantonica (Volume 1) (p. 144)
Harvard University Press. Cambridge, Massachusetts, USA. 1917

Galilei, Galileo 1564–1642
Italian physicist and astronomer

For my part, I consider the earth very noble and admirable precisely because of the diverse alterations, changes, generations, etc., that occur in it incessantly. If, not being subject to any change, it were a vast desert of sand or a mountain of jasper, or if at the time of the flood the waters which covered it had frozen, and it had remained an enormous globe of ice where nothing was ever born or ever altered or changed, I should deem it a useless lump in the universe, devoid of any activity and, in a word, superfluous and essentially nonexistent.

Dialogues Concerning the Two Chief World Systems
The First Day (p. 58)
University of California Press. Berkeley, California, USA. 1953

Gray, George W.
Freelance science writer

Perhaps the Earth is a clod, but if so it is a vibrant clod, responsive to an endless symphony — or cacophony — of cosmic influences.

English poet and regional novelist

Let me enjoy the earth no less
Because the all-enacting Might
That fashioned forth its loveliness
Had other aims than my delight.
Collected Poems of Thomas Hardy
Let Me Enjoy the Earth
Macmillan & Company Ltd. London, England. 1920

Hillel, Daniel
No biographical data available

We have all come out of the earth, and are its children. The earth has always nurtured us, despite our scornful abuse, and we can no longer continue to behave as its ungrateful offspring. It is time for us, as *Homo sapiens curans*, to nurture the earth in return.

Out of the Earth: Civilization and the Life of the Soil
Chapter 30 (p. 283)
The Free Press. New York, New York, USA. 1991

Hoyle, Sir Fred 1915–2001
English mathematician and astronomer

...once a photograph of the Earth, taken from the outside, is available, a new idea as powerful as any in history will be let loose.

In Martin Redfern
The Earth: A Very Short Introduction
Chapter 1 (p. 1)
Oxford University Press, Inc. Oxford, England. 2003

Humphrey, Hubert H. 1911–78
38th vice-president of the United States

As we begin to comprehend that the earth itself is a kind of manned spaceship hurtling through the infinity of space — it will seem increasingly absurd that we have not better organized the life of the human family.
Speech, 26 September 1966

Hutton, James 1726–97
Scottish geologist, chemist, and naturalist

This globe of the earth is a habitable world; and on its fitness for this purpose, our sense of wisdom in its formation must depend.

The Theory of the Earth (Volume 1)
Part I, Chapter I, Section I (p. 4)
Messrs. Cadwell, Junior, and Davies. London, England. 1795

When we trace the parts of which this terrestrial system is composed, and when we view the general connection of those several parts, the whole presents a machine of a peculiar construction by which it is adapted to a certain end. We perceive a fabric, erected in wisdom, to obtain a purpose worthy of the power that is apparent in the production of it.

The Theory of the Earth (Volume 1)

Part I, Chapter I, Section I (p. 3)

Messrs. Cadwell, Junior, and Davies. London, England. 1795

Huygens, Christiaan 1629–95

Dutch mathematician, astronomer, and physicist

...how vast those Orbs must be, and how inconsiderable this Earth, the Theatre upon which all our mighty Designs, all our Navigations, and all our Wars are transacted, is when compared to them. A very fit Consideration, and matter of Reflection, for those Kings and Princes who sacrifice the Lives of so many People, only to flatter their Ambition in being Masters of some pitiful corner of this small Spot.

The Celestial Worlds Discover'd, or, Conjectures Concerning the Planetary Worlds, Their Inhabitants and Productions

Book the Second. The Immense Distance Between the Sun and the Planets Illustrated (pp. 141–142)

Printed for T. Childe. London, England. 1698

Irwin, James 1930–91

American astronaut

The Earth reminded us of a Christmas tree ornament hanging in the blackness of space. As we got farther and farther away it diminished in size. Finally it shrank to the size of a marble, the most beautiful marble you can imagine. That beautiful, warm, living object looked so fragile, so delicate, that if you touched it with a finger it would crumble and fall apart. Seeing this has to change a man, has to make a man appreciate the creation of God and the love of God.

In Kevin W. Kelley

The Home Planet

With Plate 38

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1988

Jeans, Sir James Hopwood 1877–1946

English physicist and mathematician

Standing on our microscopic fragment of a grain of sand, we attempt to discover the nature and purpose of the universe which surrounds our home in space and time.

The Mysterious Universe

Chapter I (p. 3)

The Macmillan Company. New York, New York, USA. 1932

So long as the earth was believed to be the center of the universe the question of life on the other worlds could hardly arise; there are no other worlds in the astronomical sense, although a heaven above and a hell beneath might form adjuncts to this world.

Is There Life on the Other Worlds

Annual Report of the Board of Regents of the Smithsonian Institution, 1942

(p. 145)

Government Printing Office. Washington, D.C. 1943

Jeffers, Robinson 1887–1962

American poet

It is only a little planet

But how beautiful it is.

The Beginning and the End and Other Poems

How Beautiful It Is (p. 29)

Random House, Inc. New York, New York, USA. 1963

Johnson, Lyndon B. 1908–73

36th president of the United States

Think of our world as it looks from that rocket that's heading toward Mars. It is like a child's globe, hanging in space, the continents stuck to its side like colored maps. We are all fellow passengers on a dot of earth. And each of us, in the span of time, has really only a moment among our companions.

Inaugural Address, January 20, 1965

Kahn, Fritz 1888–1958

German-born American writer and conceptual medical illustrator

This is the universe: infinity. Space without beginning, without end, dark, empty, cold. Through the silent darkness of this space more gleaming spheres, separated from each other by inconceivable distances. Around them again inconceivably far away, like bits of dust lost in immensity, circle smaller dark spheres, receiving light and life from their "mother suns." One of these little spheres in the light of one of the countless suns in endless space, is our earth. This is man's home in the universe.

Design of the Universe

Chapter One (p. 2)

Crown Publishers. New York, New York, USA. 1954

Kelvin, Lord William Thomson 1824–1907

Scottish engineer, mathematician, and physicist

Considering the almost certain truth that the earth was built up of meteorites falling together, we may follow in imagination the whole process of shrinking from gaseous nebula to liquid lava and metals, and solidification of liquid from central regions outward.

The Age of the Earth as An Abode Fitted for Life

Science, New Series, Volume 9, Number 229, May 19, 1898 (p. 706)

All these reckonings of the history of underground heat, the details of which I am sure you do not wish me to put before you at present, are founded on the very sure assumption that the material of our present solid earth all round its surface was at one time a white-hot liquid.

The Age of the Earth As An Abode Fitted for Life

Science, New Series, Volume 9, Number 229, May 19, 1898 (p. 672)

MacLeish, Archibald 1892–1982
American poet and Librarian of Congress

To see the earth as we now see it, small and beautiful in that eternal silence where it floats, is to see ourselves as riders on the earth together, brothers on that bright loveliness in the unending night — brothers who see now they are truly brothers.

Riders on the Earth
Bubble of Blue Air (p. xiv)
Houghton Mifflin Company, Boston, Massachusetts, USA. 1978

Marvin, Ursula
American geologist

In learning about the earth — a most fundamental preoccupation of man — geologists are limited to direct examination of its outermost surface and that of its nearest neighbor, the moon. All knowledge of the deep interior of our planet and of the nature of other planets in the solar system is gathered by remote sensing devices. Characteristically, the signals from these devices are interpreted differently by different scientists and every new advance tends to raise new problems, leaving us acutely aware of the limitations of our knowledge.

Continental Drift: Evolution of a Concept
Postscript (p. 207)

University of New Mexico Press, Albuquerque, New Mexico, USA. 1969

Montague, C. E.
No biographical data available

The earth with no history to it — what it would be if it had all been made only last night and were not a worn ancient face, seamed, stained, and engraved with endless cross-hatching of documentary wrinkles, its mountains the ruins of more wondrous height now all but erased.

In A.C. Seward
Plant Life Through the Ages: A Geological and Botanical Retrospect
Chapter 1 (p. 1)
Hafner Publishing Company, New York, New York, USA. 1959

Morton, Oliver
Science and technology editor

If the space age has opened new ways of seeing mere matter, though, it has also fostered a strange return to something reminiscent of the pre-Copernican universe. The life that Lowell and his like expected elsewhere has not appeared, and so the Earth has become unique again. The now-iconic image of a blue-white planet floating in space, or hanging over the deadly deserts of the moon, reinforces the Earth's isolation and specialness. And it is this exceptionalism that drives the current scientific thirst for finding life elsewhere, for finding a cosmic mainstream of animation, even civilization, in which the Earth can take its place. It is both wonderful and unsettling to live on a planet that is unique.

Mapping Mars: Science, Imagination and the Birth of a World

...the earth with its vistas of breathtaking beauty, its azure seas, beaches, mighty mountains, and soft blanket of forest and steppe is a veritable wonderland in the universe. It is a gem of rare and magic beauty hung in a trackless space filled with lethal radiations and accompanied in its journey by sister planets which are either viciously hot or dreadfully cold, arid, and lifeless chunks of raw rocks. Earth is choice, precious, and sacred beyond all comparison or measure.

In Michael Hamilton (ed.)

This Little Planet

God and His Creation (p. 59)

Charles Scribner's Sons. New York, New York, USA. 1970

Pupin, Michael

Physicist

Our terrestrial globe is a celestial casting, and he who like myself learned the language of the foundry in his early youth will ask the human question: What is the mission of this celestial casting, this old celestial wanderer through the mighty stream of chaotic solar radiation? Is it only to receive its final tempering from the solar furnace which gave it its birth, and to smooth out its jagged surface by the erosive action of the waters which solar radiation carries in ceaseless succession of cycles from the oceans to the higher continental elevations? The answer to this human question is obvious; it is this: The highest mission of this celestial casting, which we call affectionately "our mother earth," is to provide a congenial home for a new universe, "the universe of organic life."

The New Reformation: From Physical to Spiritual Realities

Chapter VII, Section IV (pp. 235–236)

Charles Scribner's Sons. New York, New York, USA. 1928

Robinson, Victor 1886–1947

Physician

Earth is her own historian, and in every age writes her story in forests and deserts, on rocks and in river-beds.

The Story of Medicine

Chapter I (p. 1)

The New York Home Library. New York, New York, USA. 1943

Sagan, Carl 1934–96

American astronomer and author

There are some hundred billion (10^{11}) galaxies, each with, on the average a hundred billion stars. In all the galaxies, there are perhaps as many planets as stars, $10^{11} \times 10^{11} = 10^{22}$, ten billion trillion. In the face of such overpowering numbers, what is the likelihood that only one ordinary star, the Sun, is accompanied by an inhabited planet? Why should we, tucked away in some forgotten corner of the Cosmos, be so fortunate? To me, it seems far more likely that the universe is brimming over with life. But we humans do not yet know. We are just beginning our explorations. The only planet we are sure is inhabited is a tiny speck of rock and metal, shining feebly by reflected sunlight, and at this distance utterly lost.

Cosmos

Chapter I (p. 5, 7)

Random House, Inc. New York, New York, USA. 1980

Our planet is a lonely speck in the great enveloping cosmic dark. In our obscurity, in all this vastness, there is no hint that help will come from elsewhere to save us from ourselves.

Pale Blue Dot: A Vision of the Human Future In Space

Chapter I (p. 9)

Random House, Inc. New York, New York, USA. 1994

If we are to understand the Earth, we must have a comprehensive knowledge of the other planets.

William R. Scott, Inc. New York, New York, USA. 1952

Scrope, George Poulett 1797–1876

English geologist and political economist

Towards the end of the last century, men of science became convinced of the futility of those crude and fanciful speculations on the original state of the earth, in which cabinet geologists had for some time indulged; and justly perceived that the only sure road to the true history of our planet lies in a minute and practical study of those portions of its surface which are open to our examination, and in their comparison with the results of those changes

and operations which the ever-active hand of Nature is still carrying on upon that surface.

The Awful Rowing Toward God

The Earth

Houghton Mifflin Company. Boston, Massachusetts, USA. 1975

Shaler, Nathaniel Southgate 1841–1906

American geologist

...earth-lore is not a discrete science at all, but is that way of looking at the operations of energy in the physical, chemical and organic series which introduces the elements of space and time into the considerations and which furthermore endeavors to trace the combination of the various trends of action in the stages of the developments of the earth. It is in these peculiarities of geology that we find the basis of its value in education and in the general culture of society.

Relations of Geologic Science to Education

Bulletin of the American Geological Society, Volume 7, Number x, 1896 (p. 319)

Taine, Hippolyte 1828–93

French critic and historian

Amid this vast and overwhelming space and in these boundless solar archipelagoes, how small is our own sphere, and the earth, what a grain of sand!

Translated by John Durand

The Ancient Regime

Book Third, Chapter II (p. 175)

Henry Holt & Company. New York, New York, USA. 1881

Teilhard de Chardin, Pierre 1881–1955

French Jesuit, paleontologist, and biologist

Without being overawed by the improbable, let us now concentrate our attention on the planet we call Earth. Enveloped in the blue mist of oxygen which its life breathes, it floats at exactly the right distance from the sun to enable the higher chemisms to take place on its surface. We do well to look at it with emotion. Tiny and

isolated though it is, it bears clinging to its flanks the destiny and future of the Universe.

The Future of Man

Chapter VI, Part I, Section I (p. 114)

Harper & Row, Publishers. New York, New York, USA. 1964

Tennyson, Alfred (Lord) 1809–92

English poet

Many an aeon moulded earth before her highest, man,
was born,

Many an aeon too may pass when earth is manless and
forlorn,

Earth so huge and yet so bounded — pools of salt and
plots of land — Shallow skin of green and azure — chains
of mountains, grains of sand!

Alfred Tennyson's Poetical Works

Locksley Hall, Sixty Years After, Stanza 103

Oxford University Press, Inc. London, England. 1953

Thomas, Lewis 1913–93

American physician and biologist

Viewed from the distance of the moon, the astonishing thing about the earth, catching the breath, is that it is alive. The photographs show the dry, pounded surface of the moon in the foreground, dry as an old bone. Aloft, floating free beneath the moist, gleaming, membrane of bright blue sky, is the rising earth, the only exuberant thing in this part of the cosmos.

The Lives of a Cell: Notes of a Biology Watcher

The World's Biggest Membrane (p. 145)

The Viking Press. New York, New York, USA. 1974

The word for earth, at the beginning of the Indo-European language thousands of years ago (no one knows for sure how long ago) was *dhghem*. From this word, meaning simply earth, came our word humus, the handiwork of soil bacteria. Also, to teach us the lesson, [came the words] humble, human, and humane. There is the outline of a philological parable here.

In Lynn Margulis and Dorion Sagan

Microcosmos

Foreword (p. 12)

Summit Books. New York, New York, USA. 1986

The overwhelming astonishment, the queerest structure we know about so far in the whole universe, the greatest of all cosmological scientific puzzles, confounding all our efforts to comprehend it, is the earth.

Late Night Thoughts on Listening to Mahler's Ninth Symphony

The Corner of the Eye (p. 16)

Viking Press. New York, New York, USA. 1983

I have been trying to think of the earth as a kind of organism, but it is no go. I cannot think of it this way. It is too big, too complex, with too many working parts lacking visible connections. The other night, driving through a hilly, wooded part of southern New England, I wondered about this. If not like an organism, what is it like, what is

it most like? Then, satisfactorily for that moment, it came to me: it is most like a single cell.

The Lives of a Cell: Notes of a Biology Watcher

The Lives of a Cell (p. 5)

The Viking Press. New York, New York, USA. 1974

Thoreau, Henry David 1817–62

American essayist, poet, and practical philosopher

The earth is not a mere fragment of dead history, stratum upon stratum like the leaves of a book, to be studied by geologists and antiquaries chiefly, but living poetry like the leaves of a tree, which precede flowers and fruit — not a fossil earth, but a living earth; compared with whose great central life all animal and vegetable life is merely parasitic. Its throes will heave our exuviae from their graves... You may melt your metals and cast them into the most beautiful moulds you can; they will never excite me like the forms which this molten earth flows out into.

Blue Ribbon Books. New York, New York, USA. 1940

Wells, H. G. (Herbert George) 1866–1946

English novelist, historian, and sociologist

Our earth... is a spinning globe. Vast though it seems to us, it is a mere speck of matter in the greater vastness of space.

The Outline of History (Volume 1)

Book I, Chapter I, Section 2 (p. 13)

Garden City Books. Garden City, New York, USA. 1961

Whipple, Fred L. 1906–2004

Pioneer in comet research

Our Earth seems so large, so substantial, and so much with us that we tend to forget the minor position it occupies in the solar family of planets. Only by a small margin is it the largest of the other terrestrial planets. True, it does possess a moderately thick atmosphere that overlies a thin patchy layer of water and it does have a noble satellite, about 1/4 its diameter. These qualifications of the Earth, however, are hardly sufficient to bolster our cosmic egotism. But, small as is the Earth astronomically, it is our best-known planet and therefore deserves and has received careful study.

Earth, Moon and Planets

The Earth (p. 60)

Grosset & Dunlap, Publishers. New York, New York, USA. 1958

Whitman, Walt 1819–92

American poet, journalist, and essayist

The earth never tires;

The earth is rude, silent, incomprehensible at first —

Nature is rude and incomprehensible at first —

Be not discouraged — keep on — there are divine things well envelop'd;

I swear to you there are divine things more beautiful than words can tell.

Complete Poetry and Collected Prose

Dutch-born American astronomer

The hypothesis of plant life... appears still the most satisfactory explanation of the various kinds of dark markings and their complex seasonal and secular changes.

In Steven J. Dick

Life on Other Worlds: The 20th Century Extraterrestrial Life Debate

Chapter 2 (p. 25)

Cambridge University Press. Cambridge, England. 1998

Leovy, Conway B.

No biographical data available

Unlike the moon, whose story appears essentially to have ended one or two billion years ago, Mars is still evolving and changing. On Mars, as on the earth, the most pervasive agent of change is the planet's atmosphere, itself the product of the sorting of the planet's initial constituents that began soon after it condensed from the primordial cloud of dust and gas that gave rise to the solar system 4.6 billion years ago.

The Atmosphere of Mars

Scientific American, Volume 237, Number 1, July 1977 (p. 34)**Longfellow, Henry Wadsworth** 1807–82

American poet

There is no light in earth or heaven
But the cold light of stars;
And the first watch of night is given
To the red planet Mars.

The Poetical Works of Henry Wadsworth Longfellow

The Light of Stars, Stanza 2

Houghton Mifflin Company. Boston, Massachusetts, USA. 1883

Lowell, Percival 1855–1916

American astronomer

To account for these phenomena, the explanation that at once suggests itself is, that a direct transference of water takes place over the face of the planet, and that the canals are so many waterways.

Mars

Canals (p. 164)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

There are celestial sights more dazzling, spectacles that inspire more awe, but to the thoughtful observer who is privileged to see them well, there is nothing in the sky so profoundly impressive as the canals of Mars.

Mars as the Abode of Life

Part II, Notes (p. 228)

The Macmillan Company. New York, New York, USA. 1908

Thus, not only do the observations we have scanned lead to the conclusion that Mars at this moment is inhabited, but they land us at the further one that these denizens are of an order whose acquaintance was worth the making. Whether we ever shall come to converse with them in any more instant way is a question upon which science

at present has no data to provide. More important to us is the fact that they exist, made all the more interesting by their precedence of us in the path of evolution.

Mars as the Abode of Life

Part I, Chapter VI (p. 215)

The Macmillan Company. New York, New York, USA. 1908

The struggle for existence in their planet's decrepitude and decay would tend to evolve intelligence to cope with circumstances growing momentarily more and more adverse. But, furthermore, the solidarity that the conditions prescribe would conduce to a breadth of understanding sufficient to utilize it. Intercommunication over the whole globe is made not only possible, but obligatory. This would lead to the easier spreading over it of some dominant creature, — especially were this being of an advanced order of intellect, — able to rise above its bodily limitations to amelioration of the conditions through the exercise of the mind.

Mars as the Abode of Life

Part I, Chapter IV (p. 143)

The Mars we are trying to explore does not exist

In William Sheehan and Stephen James O'Meara

Mars: The Lure of the Red Planet

Prometheus Books. Buffalo, New York, USA. 2001

Morton, Oliver

Science and technology editor

Yet if the Earth is a single isolated planet, the human world is less constrained. The breakdown of the equation between planets and worlds works both ways. If there can now be planets that are not worlds, then there can be worlds that spread beyond planets — and ours is doing so. Our spacecraft and our imaginations are expanding our world. This projection of our world beyond the Earth is for the most part a very tenuous sort of affair. It is mostly a matter of imagery and fantasy. Mars, though, might make it real — which is why Mars matters.

Mapping Mars: Science, Imagination and the Birth of a World

A Point of Warlike Light (p. 14)

Fourth Estate. London, England. 2002

Mars is not an independent world, held together by the memories and meanings of its own inhabitants. But nor is it no world at all. More than any other planet we have seen, Mars is like the Earth. It is not very like the Earth. Its gravity is weak, its atmosphere thin, its surface sealess, its soil poisonous, its sunlight deadly in its levels of ultraviolet, its climate beyond frigid. It would kill you in an instant. But it is earthlike enough that it is possible to imagine some of us going there and experiencing this new part of our human world in the way we've always experienced the old part-from the inside. The fact that

humans could feasibly become Martians is the strongest of the links between Mars and Earth.

Mapping Mars: Science, Imagination and the Birth of a World
A Point of Warlike Light (p. 14)
Fourth Estate. London, England. 2002

Murray, Bruce 1932–
American planetologist

The Mars we had found was just a big moon with a thin atmosphere and no life. There were no Martians, no canals, no water, no plants, no surface characteristics that even faintly resembled Earth's.

Journey into Space: The First Three Decades of Space Exploration
Chapter 1 (p. 43)
W.W. Norton & Company, Inc. New York, New York, USA. 1989

Extending out from the chaotic terrain...are some extraordinary channels, which are also found in a number of other localities on the planet. It is hard to look at these channels without considering the possibility that they were cut by flowing water.

Mars from Mariner 9
Scientific American, Volume 228, Number 1, January 1973 (p. 58)

Schiaparelli, G. V. 1835–1910
Italian astronomer

What strange confusion! What can all this mean? Evidently the planet has some fixed geographical details, similar to those of the Earth... Comes a certain moment, all this disappears to be replaced by grotesque polygonations and germinations which, evidently, attach themselves to represent apparently the previous state, but it is a gross mask, and I say almost ridiculous.

Corrispondenza su Marte (Volume 2)

PLANET: URANUS

Herschel, Friedrich Wilhelm 1738–1822

English astronomer

In the fabulous ages of ancient times the appellations of Mercury, Venus, Mars, Jupiter, and Saturn were given to the planets as being the names of their principal heroes and divinities. In the present more philosophical era, it would hardly be allowable to have recourse to the same method, and call on Juno, Pallas, Apollo, or Minerva for a name to our new heavenly body... I cannot but wish to take this opportunity of expressing my sense of gratitude, by giving the name Georgium Sidus, to a star [Uranus], which (with respect to us) first began to shine under His auspicious reign.

In James Sime

William Herschel and His Work

Chapter V, Letter to Sir Joseph Banks (p. 74)

Charles Scribner's Sons. New York, New York, USA. 1900

PLANET: VENUS

Ball, Sir Robert S. 1840–1913

Astronomer

The lover of nature turns to admire the sunset, as every lover of nature will. In the golden glory of the west a beauteous gem is seen to glitter; it is the evening star — the planet Venus... All the heavenly host — even

Sirius and Jupiter — must pale before the splendid lustre of Venus, the unrivalled queen of the firmament.

The Story of the Heavens

Venus (p. 140)

Cassell & Company Ltd. London, England. 1885

Blackmore, Sir Richard 1650–1729

English physician and writer

Venus the next, whose lovely Beams adorn
As well the Dewy Eve, as opening Morn,
Does her fair Orb in beauteous Order turn.

The Poetical Works of Sir R. Blackmore: Containing Creation: A Philosophical Poem, in Seven Books

Book II, l. 515–517

Printed for C. Cooke. London, England. 1797

Hunter, Robert 1941–

American lyricist and poet

Counting stars by candlelight, all are dim but one is bright;
The spiral light of Venus, rising first and shining best,
Oh, from the northwest corner, of a brand new crescent moon,

crickets and cicadas sing, a rare and different tune...

Terrapin Station

Terrapin Station

Arista Records. 1977

Tennyson, Alfred (Lord) 1809–92

English poet

For a breeze of morning moves,
And the planet of love is on high,
Beginning to faint in the light that she loves
On a bed of daffodil sky,
To faint in the light of the sun she loves,
To faint in his light, and to die.

Alfred Tennyson's Poetical Works

Maude, Part I, Section XXII, Stanza II

Oxford University Press, Inc. London, England. 1953

Twain, Mark (Samuel Langhorne

Clemens) 1835–1910

American author and humorist

An occultation of Venus is not half so difficult as an eclipse of the Sun, but because it comes seldom the world thinks it's a grand thing.

Collected Tales, Sketches, Speeches, & Essays 1891–1910

More Maxims of Mark (p. 945)

Kon-Tiki

Chapter 5 (p. 139)

Rand McNally & Company. Chicago, Illinois, USA. 1950

PLANT

Bailey, William Whitman 1843–1914

American botanist

Beginners almost always collect their plants too young; they have a nervous fear that they will not last.

The Botanical Collector's Handbook

Naturalists' Handy Series, Number 3 (p. 29)

Publisher undetermined. Salem, Massachusetts, USA. 1881

No division of the vegetable kingdom has attracted more deserved attention than that of the sea-weeds or sea-mosses. Throughout the world they have found their earnest students and devoted admirers. It is not alone for their intrinsic beauty that they are loved. Their collection involves the visiting of romantic cliffs — of shores strewn with the ocean's debris, of caves, and hollows, and even of the deep sea itself. The pursuit is always fascinating, and sometimes even perilous. A spice of danger does not deter the heroic algologist. Like "one who gathers sapphire, fearful trade!" he hangs suspended from crags, or ventures at low tide upon the slippery rocks over which the spray is dashing. There need not, however, be danger in the study. Many ladies have been successful gatherers of sea-weeds, and in the albums of many a watering-place belle may be seen choice specimens, self-collected. The plants need not be studied at all, if one prefers the simple collection and preservation, but it is always pleasanter to know something of the habits, uses, and even names of the objects which one treasures.

The Botanical Collector's Handbook

Naturalists' Handy Series, Number 3 (pp. 46–47)

Publisher undetermined. Salem, Massachusetts, USA. 1881

Borland, Hal 1900–78

American writer

There are no idealists in the plant world and no compassion. The rose and the morning glory know mercy. Bindweed, the morning glory, will quickly choke its competitors to death, and the fencerow rose will just as quietly crowd out any other plant that tried to share its roothold. Idealism and mercy are human terms and human concepts.

Book of Days

22 July 1976 (pp. 188–189)

Alfred A. Knopf. New York, New York, USA. 1976

Burroughs, John 1837–1921

American naturalist and writer

I know of nothing in vegetable nature that seems so really to be born as the ferns. They emerge from the ground rolled up, with a rudimentary and “touch-me-not” look, and appear to need a maternal tongue to lick them into shape. The sun plays the wet-nurse to them, and very soon they are out of that uncanny covering in which they come swathed and take their places with other green things.

Signs and Seasons

A Spring Relish (p. 193)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1886

Clute, Willard N.

American botanist

One of the redeeming features of rubbish heaps, ballast grounds and waste lands is that they furnish a lurking place for numerous wanderers and outcasts of the vegetable kingdom.

A Plant Immigrant

The American Botanist, Volume 1, Number 2, August 1901 (p. 18)

Emerson, Ralph Waldo 1803–82

American lecturer, poet, and essayist

To every plant there are two powers; one shoots down as rootlet, and one upward as tree.

The Complete Works of Ralph Waldo Emerson (Volume 8)

Letters and Social Aims

Chapter I (p. 71)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

The root of the plant is not unsightly to science...

The Complete Works of Ralph Waldo Emerson (Volume 2)

Essays: First Series

Chapter VI (p. 196)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Plants are the young of the world, vessels of health and vigor; but they grope ever upwards towards consciousness; the trees are imperfect men, and seem to bemoan their imprisonment, rooted in the ground.

Ralph Waldo Emerson: Essays and Lectures

Essays: Second Series

Nature (p. 547)

The Library of America. New York, New York, USA. 1983

Gatty, M. S. 1809–73

English writer

It was once prettily said by a lady who cultivated flowers, that she had “buried many a care in her garden”; and the sea-weed collector can often say the same of his garden — at the shore; as many a loving disciple could testify, who, having taken up the pursuit originally as a resource against weariness, or a light possible occupation during hours of sickness, has ended by an enthusiastic love, which throws a charm over every sea-place on the coast, however dull and ugly to the world in general; makes every day spent there too short, and every visit

too quickly ended. Only let there be sea, and plenty of low, dark rocks stretching out, peninsular-like, into it; and only let the dinner-hour be fixed for high-water time, — and the loving disciple asks no more of fate.

British Sea-Weeds: Drawn from Professor Harvey's Phycologia Britannica (Volume 1)

Introduction (p. vii)

Bell & Daldy. London, England. 1872

Gerard, John 1545–1612

English botanist

Among the manifold creatures of God (right Honorable, and my singular good Lord) that have all in all ages diversely entertained many excellent wits, and drawne them to the contemplation of the divine wisdom, none have provoked mens' studies more, or satisfied their desires so much as Plants have done, and that upon Just and worthy causes: For if delight may provoke mens' labor, what greater delight is there than to behold the earth appareled with plants, as with a robe of embroidered worke, set with Orient pearles, and garnished with great diversitie of rare and costly jewels?

The Herball or Generall Historie of Plantes

The Epistle Dedicatorie

Bonham and I. Norton. London, England. 1597

Although my paines have not been spent (Courteous Reader) in the gracious discoverie of golden mines, nor in the tracing after silver veines, whereby my native country might be enriched with such merchandise as it hath most in request and admiration; yet hath my labour (I trust) been otherwise profitably employed, in descrying of such a harmlesse treasure of herbes, trees, and plants, as the earth frankly without violence offereth unto our most necessarie uses.

The Herball or Generall Historie of Plantes

To the Courteous and Well-Willing Reader

Bonham and I. Norton. London, England. 1597

Gleason, Henry Allan 1882–1975

American botanist

Every species of plant is a law unto itself.

The Individualistic Concepts of the Plant Association

Bulletin of the Torrey Botanical Club, Volume 53, 1926 (p. 26)

Haldane, John Burdon Sanderson 1892–1964

English biologist

The simplest plants, such as the green algae growing in stagnant water or on the bark of trees, are mere round cells. The higher plants increase their surface by putting out leaves and roots. Comparative anatomy is largely the story of the struggle to increase surface in proportion to volume.

The World of Mathematics (Volume 2)

On Being the Right Size (p. 954)

Simon & Schuster. New York, New York, USA. 1956

Hemans, Felicia D. 1793–1835

English poet

Oh! Call us not *weeds*, but flowers of the sea,
 For lovely, and gay, and bright-tinted are we!
 Our Blush is as deep as the rose of thy bowers,
 Then call us not *weeds*, we are Ocean's gay flowers.
 Not nursed like the plants of the summer parterre
 Whose gales are but sights of an evening air
 Our exquisite, fragile and delicate forms,
 Are the prey of the Ocean, when vexed with his storms.

The Poetical Works of Mrs. Felicia Hemans

Ocean Flowers and Their teachings

Crosby, Nichols, Lee & Company. Boston, Massachusetts, USA. 1860

Linnaeus, Carl (von Linné) 1707–78

Swedish botanist and explorer

For wealth disappears, the most magnificent houses
 fall into decay, the most numerous family at some time
 or another comes to an end: the greatest and the most
 prosperous kingdoms can be overthrown: but the whole
 of Nature must be blotted out before the race of plants
 passes away, and he is forgotten who in Botany held up
 the torch.

Critica Botanica

Generic Names (p. 68)

The Ray Society. London, England. 1938

Muir, John 1838–1914

American naturalist

Found a lovely lily (*Calochortus albus*) in a shady
 adenostoma thicket near Coulterville, in company
 with *Adiantum chilense*. It is white with a faint
 purplish tinge inside at the base of the petals, a most
 impressive plant, pure as snow crystal, one of the plant
 saints...must love and be made so much the purer by
 every time it is seen. It puts the roughest mountaineer
 on his good behavior.

My First Summer in the Sierra

June 6 (p. 22)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1911

Well, perhaps I may yet become a proper cultivated plant,
 cease my wanderings and for it a so called pillar or some-
 thing in society, but if so, I must, like a revived Meth-
 odist, care to love what I hate and to hate what I most
 intensely and devoutly love.

In Linnie Marsh Wolfe (ed.)

John of the Mountains

Chapter II, Section 5. Plants and Humans (p. 90)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1938

The plants are as busy as the animals, every cell in a swirl
 of enjoyment, humming like a hive, singing the old new
 song of creation.

Our National Parks

Chapter II (p. 70)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1901

It drapes all the branches from top to bottom, hanging
 in long silver-gray skeins, reaching a length of not less
 than eight or ten feet, and when slowly waving in the
 wind they produce a solemn funereal effect singularly
 impressive.

A Thousand Mile Walk to the Gulf

Chapter IV (p. 68)

Houghton Mifflin Company, Boston Massachusetts, USA. 1916

Nuttall, Thomas 1786–1859

English botanist

To acquire a knowledge of the vegetable world, so pleas-
 ing to all observers, it may not perhaps be amiss to antici-
 pate the dry detail of technical phrases, which has but too
 often deterred, at the very portal of Flora's temple, the
 enquirer into the nature and character of this beautiful
 and useful tribe of beings, and begin, at once, by exam-
 ining plants as we naturally find them, in the manner
 our predecessors must have done, from whom we have
 received their history.

Sage-brush is a very fair fuel, but as a vegetable it is a
 distinguished failure. Nothing can abide the taste of it but
 the jackass and his illegitimate child the mule.

Roughing It (Volume 1)

Chapter III (p. 32)
Harper & Brothers Publishers. New York, New York, USA. 1899

von Goethe, Johann Wolfgang 1749–1832
German poet, novelist, playwright, and natural philosopher

We will see the entire plant world, for example, as a vast sea which is as necessary to the existence of individual insects as the oceans and rivers are to the existence of individual fish, and we will observe that an enormous number of living creatures are born and nourished in this ocean of plants. Ultimately we will see the whole world of animals as a great element in which one species is created, or at least sustained, by and through another. We will no longer think of connections and relationships in terms of purpose or intention. This is the only road to progress in understanding how nature expresses itself from all quarters and in all directions as it goes about its work of creation.

In D. Miller (ed.)

Scientific Studies (Volume 12)

Chapter II (p. 55)

Suhrkamp. New York, New York, USA. 1988

The Primal Plant is going to be the strangest creature in the world, which Nature herself must envy me. With this model and the key to it, it will be possible to go on for ever inventing plants and know that their existence is logical; that is to say, if they do not actually exist, they could, for they are not the shadowy phantoms of a vain imagination, but possess an inner necessity and truth. The same law will be applicable to all other living organisms.

Translated by W.H. Auden and Elizabeth Mayer

Italian Journey

Letter to Herder

May 17, 1787 (p. 305)

Pantheon Books. New York, New York, USA. 1962

Anyone who pays a little attention to the growth of plants will readily observe that certain of their external members are sometimes transformed so that they assume — either wholly or in some lesser degree — the form of the members nearest in the series.

Thus, for example, the usual process by which a single flower becomes double, is that, instead of filaments and anthers, petals are developed; these either show a complete resemblance in form and color to the other leaves of the corolla, or they still carry some visible traces of the origin.

If we note that it is in this way possible for the plant to take a step backwards and thus to reverse the order of growth, we shall obtain so much the more insight into Nature's regular procedure; and we shall make the acquaintance of the laws of transmutation, according to which she produces one part from another, and sets before us the most varied forms through modification of a single organ.

An Attempt to Interpret the Metamorphosis of Plants, Introduction Section 1 and Section 3

Chronica Botanica, Volume 10, Number 2, Summer 1946 (p. 91)

von Humboldt, Alexander 1769–1859
German naturalist and explorer

Even the child longs to pass the hills or the seas which enclose his narrow home; yet, when his eager steps have borne him beyond those limits, he pines, like the plant, for his native soil; and it is by this touching and beautiful attribute of man — this longing for that which is unknown, and this fond remembrance of that which is lost — that he is spared from an exclusive attachment to the present.

American paleontologist

Brownlee, Donald

American astronomer

Plate tectonics plays at least three crucial roles in maintaining animal life: It promotes biological productivity; it

promotes diversity (the hedge against mass extinction); and it helps maintain equable temperatures, a necessary requirement for animal life. It may be that plate tectonics is the central requirement for life on a planet and that it is necessary for keeping a world supplied with water.

Rare Earth: Why Complex Life Is Uncommon in the Universe
Most Crucial Element of the Rare Earth Hypothesis? (p. 220)
Springer-Verlag. New York, New York, USA. 2000

Wilson, John Tuzo 1908–93

Canadian geologist and geophysicist

Formerly, most scientists of the earth thought of as one rigid body with fixed continents and permanent ocean basins, rather scientists now consider the earth to be broken into six large plates and several smaller ones, which very slowly move and jostle one another like blocks of ice on a river that is breaking up in the spring thaw.... Each continent does not constitute one plate, but rather each is incorporated with the surrounding ocean floor into a plate that is larger than the continent, just as a raft of logs may be frozen into a sheet of ice.

An Essay on the Principle of Population (p. 9)
Houghton Mifflin Company, Boston, Massachusetts, USA, 1885–1886

POSITION

Ridley, B. K.

No biographical data available

Imagine a billiard ball as the only inhabitant of the universe. What position does it have? The question has no meaning, for position can only be defined with respect to another position, which we call an origin, and there is nothing to define where the origin is.

Time, Space and Things
Chapter 3 (p. 41)
Cambridge University Press, Cambridge, England, 1984

POSITRON

Eddington, Sir Arthur Stanley 1882–1944
English astronomer, physicist, and mathematician

A positron is a hole from which an electron has been removed; it is a bung-hole which would be evened up with its surroundings if an electron were inserted.... You will see that the physicist allows himself even greater liberty than the sculptor. The sculptor removes material to obtain the form he desires. The physicist goes further and adds material if necessary — an operation which he describes as removing negative. He fills up a bung-hole, saying he is removing a positron.

The Philosophy of Physical Science
Chapter VIII, Section II (pp. 120–121)
The Macmillan Company, New York, New York, USA, 1939

Hacking, Ian 1936–
Canadian-born philosopher of science

Now how does one alter the charge on the niobium ball? “Well at that stage,” said my friend, “we spray it with positrons to increase the charge or with electrons to decrease the charge.” From that day forth I’ve been a scientific realist. So far as I’m concerned, if you can spray them then they are real.

Representing and Intervening (p. 23)
Cambridge University Press, Cambridge, England, 1983

POSSIBILITY

Armstrong, David Malet 1926–
Australian philosopher

The Naturalist theory of possibility now to be advanced will be called a Combinatorial theory. It traces the very idea of possibility to the idea of the combinations — all the combinations — of given, actual elements.

A Combinatorial Theory of Possibility

Cambridge University Press, Cambridge, England, 1989

Eliot, George (Mary Ann Evans Cross) 1819–80
English novelist

We know what a masquerade all development is, and what effective shapes may be disguised in helpless embryos. — In fact, the world is full of hopeful analogies and handsome dubious eggs called possibilities.

Middlemarch
Book I, Chapter X (p. 82)
Clarendon Press, Oxford, England, 1986

POSTULATE

Russell, Bertrand Arthur William 1872–1970
English philosopher, logician, and social reformer

The method of “postulating” what we want has many advantages; they are the same as the advantages of theft over honest toil. Let us leave them to others and proceed with our honest toil.

Introduction to Mathematical Philosophy
Chapter VII (p. 71)
Dover Publications, Inc. New York, New York, USA, 1993

POWER

Boulton, Matthew 1728–1809
English engineer

“Ha! Boulton,” said the king. “It is long since we have seen you at court. Pray, what business are you now engaged in?”

“I am engaged, your Majesty, in the production of a commodity which is the desire of kings.”

“And what is that? What is that?”

“POWER, your majesty!”

In Ralph Stein
The Great Inventions
The Steam Engine (p. 24)
Playboy Press, Chicago, Illinois, USA, 1976

Morison, George S. 1842–1903
Civil engineer

Fire, animal strength, and written language have in turn advanced men and nations; something like a new

capacity was developed with the discovery of explosives and again in the invention of printing; but the capacity of man has always been limited to his own individual strength and that of the men and animals he could control. His capacity is no longer so limited; man has now learned to manufacture power, and with the manufacture of power a new epoch began.

The New Epoch as Developed by the Manufacture of Power
Chapter I (p. 4)
Houghton Mifflin Company. Boston, Massachusetts,
USA. 1903

PRAYER

Ayres, Clarence Edwin 1891–1972

No biographical data available

I believe in atoms, molecules, and electrons, matter of heaven and earth, and electrical energy its only form. I believe in modern science, conceived by Copernicus and borne out by Newton, which suffered under the Inquisition, was persecuted and anathematized, but rose to be the right hand of civilization as a consequence of the fact it rules the quick and the dead. I believe in the National Research Council, the communion of scientists, the publication of discoveries, the control of nature, and progress everlasting. Amen.

Science: The False Messiah
Chapter X (p. 129)

I am like a chemical compound in Your Laboratory of Life, O Lord, a compound from which the element Perfection has not yet been isolated, a compound in which the properties of the element Perfection are disguised by combination with earthly vanities. Take me then, O Lord, analyze me according to my good and evil constituents and isolate the pure element Perfection, as a chemist analyzes and separates from a substance all foreign matter. Analyze me that I may learn to know myself and that I may emerge a pure element, worthy to be included in the group of elements already freed from the bonds of their earthy life.

First, grind me in the mortar of childish whims, that I may emerge a composite sample of Your Likeness. Weigh me on the balance of Your generosity and decide how great a sample I shall be in Your Laboratory of Life. Then, ignite me in the furnace of Your love, that the carbon dioxide of earthly vanities be driven off. Cool me with the balm of Your mercy. Dissolve me in Your grace and filter me through the fine mesh of earthly trials so that Imperfections may be banished. Precipitate my evil tendencies with the strong precipitate the gelatinous silicate of earthly attachments which draw me from You. Imprison me in Your love with the mordant of sacrifice. Digest me in the length of my life, that my good deeds will grow and that self-satisfaction shall not be occluded with them. Blast out any impurities that may be introduced and finally, seal me forever, a pure substance in the container of your Eternal Happiness.

A Chemist's Prayer
Journal of Chemical Education, Volume 23, Number 10, October 1946
(p. 507)

Tukey, John W. 1915–2000

American statistician

The physical sciences are used to "praying over" their data, examining the same data from a variety of points of view. This process has been very rewarding, and has led

to many extremely valuable insights. Without this sort of flexibility, progress in physical science would have been much slower. Flexibility in analysis is often to be had honestly at the price of a willingness not to demand that what has already been observed shall establish, or prove, what analysis suggests. In physical science generally, the results of praying over the data are thought of as something to be put to further test in another experiment, as indications rather than conclusions.

The Future of Data Analysis

Wheelock, John 1754–1817

No biographical data available

Oh, Lord, we thank thee for the Oxygen Gas; we thank Thee for the Hydrogen Gas; and for all the gases. We thank Thee for the Cerebrum; we thank Thee for the Cerebellum; and for the Medulla Oblongata. Amen.

Apocryphal

PRECISION

Davy, Sir Humphry 1778–1829

English chemist

Simplicity and precision ought to be the characteristics of a scientific nomenclature: words should signify things, or the analogies of things, and not opinions.

Elements of Chemical Philosophy

Part I, Volume 1, Introduction (p. 46)

Printed for J. Johnson & Company, London, England, 1812

Herschel, Sir John Frederick William 1792–1871

English astronomer and chemist

[Precision] is the very soul of science; and its attainment afford the only criterion, or at least the best, of the truth of theories, and the correctness of experiments.

A Preliminary Discourse on the Study of Natural Philosophy

Part II, Chapter IV, Section 115 (p. 122)

Printed for Longman, Rees, Orme, Brown & Green, London, England, 1831

Queneau, Raymond 1903–76

French poet, novelist, and publisher

In a bus of the S-line, 10 meters long, 3 wide, 6 high, at 3 km 600 m from its starting point, loaded with 48 people, at 12.17 p.m., a person of the masculine sex aged 27 years 3 months and 8 days, 1 m 72 cm tall and weighing 65 kg and wearing a hat 35 cm in height round the crown of which a ribbon 60 cm long, interpolated a man aged 48 years 4 months and 3 days, 1 m 68 cm tall and weighing 77 kg, by means of 14 words whose enunciation lasted 5 seconds and which alluded to some involuntary displacements of from 15 to 20 mm. Then he went and sat down about 1 m 10 cm away. 57 minutes later he

was 10 meters away from the suburban entrance to the gare Saint-Lazare and was walking up and down over a distance of 30 m with a friend aged 28, 1 m 70 cm tall and weighing 71 kg who advised him in 15 words to move by 5 cm in the direction of the zenith a button which was 3 cm in diameter.

Exercises in Style

Precision (pp. 37–38)

New Direction Publishing Corporation, New York, New York, USA, 1981

Thompson, Sir D’Arcy Wentworth 1860–1948

Scottish zoologist and classical scholar

Dream apart, numerical precision is the very soul of science.

On Growth and Form (Volume 1)

Chapter 1 (p. 2)

At The University Press, Cambridge, England, 1951

PREDICTION

Armstrong, Neil A. 1930–

American astronaut

Science has not yet mastered prophecy. We predict too much for the next year and yet far too little for the next ten.

Address to Joint Sessions of Congress, September 16, 1969

Asimov, Isaac 1920–92

American author and biochemist

It is one thing to be able to make predictions. It is another to listen to the predictions you have made and to act upon them.

The Road to Infinity

Chapter 1 (p. 3)

Avon Books, New York, New York, USA, 1979

Bohr, Niels Henrik David 1886–1962

Danish physicist

It is very difficult to make an accurate prediction, especially about the future.

In Timothy Ferris (ed.)

The Mind’s Sky: Human Intelligence in a Cosmic Context

The Manichean Heresy (p. 181)

Bantam Books, New York, New York, USA, 1992

Comte, Auguste 1798–1857

French philosopher

The aim of every science is foresight (prevoyance). For the laws of established observation of phenomena are generally employed to foresee their succession. All men, however little advanced make true predictions, which are always based on the same principle, the knowledge of the future from the past.

In Bertrand de Jouvenel

The Art of Conjecture

Chapter 11 (p. 111)
Basic Books, Inc. New York, New York, USA. 1967

Darwin, Charles Robert 1809–82
English naturalist

Anyone who attempts to predict the history of the next ten years is a rash man, and if he attempts to make his forecast for a century he is very properly regarded as too foolhardy as not to be worth listening to at all.

The Next Million Years
Introduction (p. 13)
Doubleday & Company, Inc. Garden City, New York, USA. 1953

du Noüy, Pierre Lecomte 1883–1947
French scientist

The aim of science is not so much to search for truth, or even truths, as to classify our knowledge and to establish relations between observable phenomena in order to be able to predict the future in a certain measure and to explain the sequence of phenomena in relation to ourselves.

Between Knowing and Believing
The Road to Reason (p. 188)
McKay. New York, New York, USA. 1967

The aim of science is to foresee, and not, as has often been said, to understand. Science describes facts, objects and phenomena minutely, and tries to join them by what we call laws, so as to be able to predict events in the future.

Human Destiny
Chapter 2 (p. 13)
Longmans, Green & Company. London, England. 1947

Dyson, Freeman J. 1923–
American physicist and educator

In the long run, qualitative changes always outweigh quantitative ones. Quantitative predictions of economic and social trends are made obsolete by qualitative changes in the rules of the game. Quantitative predictions of technological progress are made obsolete by unpredictable new inventions. I am interested in the long run, the remote future, where quantitative predictions are meaningless. The only certainty in that remote future is that radically new things will be happening.

Disturbing the Universe
Chapter 17 (p. 192)
Basic Books, Inc. New York, New York, USA. 1979

Hacking, Ian 1936–
Canadian-born philosopher of science

Cutting up fowl to predict the future is, if done honestly and with as little interpretation as possible a kind of randomization. But chicken guts are hard to read and invite flights of fancy or corruption.

The Emergence of Probability
An Absent Family of Ideas (p. 3)
Cambridge University Press. Cambridge, England. 1975

Kaplan, Abraham 1918–93
American philosopher of science, author, and educator

...if we can predict successfully on the basis of a certain explanation, we have good reason, and perhaps the best of reason, for accepting the explanation.

The Conduct of Inquiry: Methodology for Behavioral Science
Chapter IX, Section 40 (p. 350)
Chandler Publishing Company. San Francisco, California, USA. 1964

Kendrew, John 1917–99
English biochemist

Scientists cannot predict the future any better than anyone else — even about their own field of research.

The Thread of Life
Chapter 10 (p. 110)
Harvard University Press. Cambridge, Massachusetts, USA. 1966

Kluckhohn, Clyde 1905–60
American anthropologist

...it is one thing to be able to make some useful predictions as to what is likely to happen.... It is quite another thing to interfere, willfully to introduce new complications into an already tortuous social maze.

Mirror for Man: The Relation of Anthropology to Modern Life
Chapter X (p. 263)
McGraw-Hill Book. New York, New York, USA. 1949

Mill, John Stuart 1806–73
English political philosopher and economist

Of all truths relating to phenomena, the most valuable to us are those which relate to the order of their succession. On a knowledge of these is founded every reasonable anticipation of future facts, and whatever power we possess of influencing those facts to our advantage. Even the laws of geometry are chiefly of practical importance to us as being a portion of the premises from which the order of the succession of phenomena may be inferred.

A System of Logic, Rationative and Inductive
Book III, Chapter 5, Section 1 (p. 212)
Longmans, Green, Reader & Dyer. London, England. 1906

Rowling, J. K. 1965–
English author

The consequences of our actions are always so complicated, so diverse, that predicting the future is a very difficult business indeed.

Harry Potter and The Prisoner of Azkaban
Chapter Twenty-Two (p. 426)
Scholastic Press. New York, New York, USA. 1999

Russell, Bertrand Arthur William 1872–1970
English philosopher, logician, and social reformer

Science is the attempt to discover, by means of observation, and reasoning based upon it, first, particular facts about the world, and then laws connecting facts with one

another and (in fortunate cases) making it possible to predict future occurrences.

Religion and Science

Grounds of Conflict (p. 8)

Our most imaginative projections will pale beside the reality that takes shape tomorrow.

The Unfinished Universe

Chapter 10 (p. 197)

Simon & Schuster. New York, New York, USA. 1986

PREHISTORIC MAN

Aeschylus 525 BCE–426 BCE

Greek playwright

How, first beholding, they beheld in vain,
And hearing, heard not, but, like shapes in dreams,
Mixed all things wildly down the tedious time,
Nor knew to build a house against the sun
With wickered sides, nor any woodcraft knew,
But lived, like sily ants, beneath the ground

In hollow caves unsunned.

There, came to them

No steadfast sign of winter, nor of spring

Flower-perfumed, nor of summer full of fruit,

But blindly and lawlessly they did all things...

In Elizabeth Barrett-Browning

Prometheus Bound and Other Poems

Prometheus Bound

Scene: At the Rocks

James, William 1842–1910

American philosopher and psychologist

Bone of our bone and flesh of our flesh are these half-brutish pre-historic brothers. Girdled about with the immense darkness of this mysterious universe even as we are, they were born and died, suffered and struggled. Given over to fearful crime and passion, plunged in the blackest ignorance, preyed upon by hideous and grotesque delusions, yet steadfastly serving the profoundest of ideals in their fixed faith that existence in any form is better than non-existence, they ever rescued triumphantly from the jaws of ever-imminent destruction the torch of life, which, thanks to them, now lights the world for us.

The Will to Believe, and Other Essays in Popular Philosophy and Human Immortality

Human Immortality (p. 33)

Dover Publications, Inc. New York, New York, USA. 1956

Leakey, Richard Erskine 1944–

Kenyan paleoanthropologist and politician

Needless to say, language and consciousness, which are among the most prized features of *Homo Sapiens*, leave no trace in the prehistoric record.

The Origin of Humankind

Preface (p. xiv)

Basic Books, Inc. New York, New York, USA. 1994

PREHISTORY

Clark, Grahame 1907–95

English archaeologist

The study of prehistory stands in no more need of justification than exploration of the physical nature and mathematical properties of the universe, the investigation of all the multifarious forms of life, or for that matter the practice of the arts or the cultivation of speculative philosophy. Each in its own way enlarges the range of human experience and enriches the quality of human life.

Aspects of Prehistory

Chapter 1 (p. 4)

University of California Press. Berkeley, California, USA. 1970

Dunnell, Robert C. 1942–

American archaeologist

Like its sister discipline, sociocultural anthropology, prehistory has a tendency to invent a term for its own sake and then argue about what it means for twenty years rather than defining the term in the first place.

Systematics In Prehistory

Introduction (p. 4)

The Free Press. New York, New York, USA. 1971

Peale, Rembrandt 1778–1860

American neoclassical painter

The revolutions which have happened on our earth, by which its original appearance has been successively changed, have, at all times, commanded the attention of the learned, and excited various speculations concerning the time, cause and manner; and although we may never learn much on a subject so extensive, so remote and so wonderful, yet as far as facts will authorize us, we may safely proceed....

An Historical Disquisition on the Mammoth

Introduction (p. 1)

Printed for E. Lawrence. London, England. 1803

Wilson, Sir Daniel 1816–92

English-born Canadian archaeologist

In the application of the term Prehistoric — introduced, if I mistake not, for the first time in this work, — it was employed originally in reference to races which I then assigned reasons for believing had preceded the oldest historical ones in Britain and Northern Europe. But since then the term has become identified with a comprehensive range of speculative and inductive research, in which the archaeologist labours hand in hand with the geologist and ethnologist, in solving some of the most deeply interesting problems of modern science.

Prehistoric Annals of Scotland (Volume 1)

Preface (p. xiv)

Macmillan & Company Ltd. London, England. 1863

PRESCRIPTION

Chekhov, Anton Pavlovich 1860–1904

Russian author and playwright

What did your uncle die of?

Instead of fifteen Butkin drops, as the doctor prescribed, he took sixteen.

Note-Book of Anton Chekhov (p. 37)

B.W. Huebsch, Inc. New York, New York, USA. 1921

Helmuth, William Tod 1833–1902

American physician

Term pain “neuralgia,” or if the man be stout,
Cry out, “Dear Sir, you have rheumatic gout.”
Tap on the chest — some awful sounds they hear,
Then satisfied, declare, “The case is clear,”
Draw forth a paper, seize the magic quill,
And write in mystic signs, “Cathartic pill.”

Scratches of a Surgeon

Medical Pomposity (p. 11)

W.A. Chatterton & Company. Chicago, Illinois, USA. 1879

Holmes, Oliver Wendell 1809–94

American physician, poet, and humorist

Pliny says, in so many words, that the cerates and cataplasms, plasters, collyria, and antidotes, so abundant in his time, as in more recent days, were mere tricks to make money.

Currents and Counter-Currents in Medical Science

Address

Massachusetts Medical Society at the Annual Meeting, May 30, 1860

Ticknor & Fields. Boston, Massachusetts, USA. 1861

Part of the blame of over-medication must, I fear, rest with the profession, for yielding to the tendency to self-delusion, which seems inseparable from the practice of the art of healing.

Currents and Counter-Currents in Medical Science

Address

Massachusetts Medical Society at the Annual Meeting, May 30, 1860

Ticknor & Fields. Boston, Massachusetts, USA. 1861

Latham, Peter Mere 1789–1875

English physician

To bring many important remedies together, and unite them by a lucky combination, and compress them within a small compass, and so place them within the common reach, all this gives a facility of prescribing which is hurtful to the advance of medical experience. The facility of prescribing is a temptation to prescribe; and, under this temptation, there is a lavish expenditure continually going on of important remedies in the mass, of which the prescribers have made no sufficient experiment in detail. In William B. Bean

Aphorisms From Latham (p. 60)

Prairie Press. Iowa City, Iowa, USA. 1962

Thoreau, Henry David 1817–62

American essayist, poet, and practical philosopher

There are sure to be two prescriptions diametrically opposite. Stuff a cold and starve a cold are but two ways.

The Writings of Henry David Thoreau (Volume 1)

A Week on the Concord and Merrimac Rivers

Wednesday (p. 338)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Twain, Mark (Samuel Langhorne

Clemens) 1835–1910

American author and humorist

It would be a good thing for the world at large, however unprofessional it might be, if medical men were required by law to write out in full the ingredients named in their prescriptions. Let them adhere to the Latin, or Fejee, if they choose, but discard abbreviations, and form their

letters as if they had been to school one day in their lives, so as to avoid the possibility of mistakes on that account.

Damages Awarded

San Francisco Morning Call, 10/1/1864

Wynter, Dr.

No biographical data available

Tell me from whom, fat-headed Scot,
Thou didst thy system learn;
From Hippocrates thou hadst it not,
Nor Celsus, not Pitcairn.
Suppose that we own that milk is good,
And say the same of grass;
The one for babes is only food,
The other for an ass.
Doctor! our new prescription try
(A friend's advice forgive);
Eat grass, reduce thyself, and die;-
Thy patients then may live.

PRESENT

Dillard, Annie 1945–

American poet, essayist, novelist, and writing teacher

Catch it if you can. The present is an invisible electron; its lightning path traced faintly on a blackened screen is fleet, and fleeing, and gone.

Pilgrim at Tinker Creek

Chapter 6, 1 (p. 79)

Harper's Magazine Press. New York, New York, USA. 1974

General Motors

The present is but an instant between an infinite past and a hurrying future.

General Motors 1964 Futurama

Audio narration accompanying the ride

PRESERVATION

Linnaeus, Carl (von Linné) 1707–78

Swedish botanist

To perpetuate the established course of nature in a continued series, the divine wisdom has thought fit, that all living creatures should constantly be employed in producing individuals, that all natural things should contribute and lend a helping hand towards preserving every species, and lastly that the death and destruction of one thing should always be subservient to the restitution of another.

Translated by B. Stillingfleet

Miscellaneous Tracts Relating to Natural History, Husbandry, and Physick (p. 32)

R. and J. Dodsley. London, England. 1759

PRIME NUMBER

Auster, Paul 1947–

American writer

Prime numbers. It was all so neat and elegant. Numbers that refuse to cooperate, that don't change or divide, numbers that remain themselves for all eternity.

The Music of Chance

Chapter 4 (pp. 73–74)

Viking Penguin. New York, New York, USA. 1990

Bombieri, Enrico 1940–

Italian mathematician

To me, that the distribution of prime numbers can be so accurately represented in a harmonic analysis is absolutely amazing and incredibly beautiful. It tells of an arcane music and a secret harmony composed by the prime numbers.

The Sciences

Prime Territory: Exploring the Infinite Landscape at the Base of the

Number System, Sept/Oct 1992

Crandall, Robert W. 1940–

Economist

Pomerance, Carl

Number theorist

Prime numbers belong to an exclusive world of intellectual conceptions. We speak of those marvelous notions that enjoy simple, elegant description, yet lead to extreme — one might say unthinkable — complexity in the details. The basic notion of primality can be accessible to a child, yet no human mind harbors anything like a complete picture. In modern times, while theoreticians continue to grapple with the profundity of the prime numbers, vast toil and resources have been directed toward the computational aspect, the task of finding, characterizing, and applying the primes in other domains.

Prime Numbers: A Computational Perspective

Chapter 1 (p. 1)

Springer-Verlag. New York, New York, USA. 2001

Davis, Philip J. 1923–

American mathematician

Hersh, Reuben 1927–

American mathematician

Some order begins to emerge from this chaos when the primes are considered not in their individuality but in the aggregate; one considers the social statistics of the primes and not the eccentricities of the individuals.

The Mathematical Experience

The Prime Number Theorem (p. 213)
Birkhäuser. Boston, Massachusetts, USA. 1981

Doxiadis, Apostolos 1953–
Writer

The seeming absence of any ascertained organizing principle in the distribution of the succession of the primes had bedeviled mathematicians for centuries and given Number Theory much of its fascination. Here was a great mystery indeed, worthy of the most exalted intelligence: since the primes are the building blocks of the integers and the integers the basis of our logical understanding of the cosmos, how is it possible that their form is not determined by law? Why isn't "divine geometry" apparent in their case?

Uncle Petros and Goldbach's Conjecture (p. 84)
Faber & Faber Ltd. London, England. 2000

du Sautoy, Marcus
English mathematician and writer

...despite their apparent simplicity and fundamental character, prime numbers remain the most mysterious objects studied by mathematicians. In a subject dedicated to finding patterns and order, the primes offer the ultimate challenge.

The Music of the Primes
Chapter 1 (p. 5)
HarperCollins Publisher, Inc. New York, New York, USA. 2003

The primes have been a constant companion in our exploration of the mathematical world yet they remain the most enigmatic of all numbers. Despite the best efforts of the greatest mathematical minds to explain the modulation and transformation of this mystical music, the primes remain an unanswered riddle.

The Music of the Primes
Chapter 12 (pp. 314–315)
HarperCollins Publisher, Inc. New York, New York, USA. 2003

The search for the secret source that fed the primes had been going on for over two millennia. The yearning for this elixir had made mathematicians all too susceptible to Bombieri's [April Fools announcement of a proof of the Riemann Hypothesis in 1997]. For years, many had simply been too frightened to go anywhere near this notoriously difficult problem.

The Music of the Primes
Chapter 1 (p. 13)
HarperCollins Publisher, Inc. New York, New York, USA. 2003

We have all this evidence that the Riemann zeros are vibrations, but we don't know what's doing the vibrating.

The Music of the Primes
Chapter 11 (p. 280)
HarperCollins Publisher, Inc. New York, New York, USA. 2003

[The Riemann] zeros did not appear to be scattered at random. Riemann's calculations indicated that they were

lining up as if along some mystical ley line running through the landscape.

The Music of the Primes
Chapter 4 (p. 99)
HarperCollins Publisher, Inc. New York, New York, USA. 2003

Prime numbers present mathematicians with one of the strangest tensions in their subject. On the one hand a number is either prime or it isn't. No flip of a coin will suddenly make a number divisible by some smaller number. Yet there is no denying that the list of primes looks like a randomly chosen sequence of numbers. Physicists have grown used to the idea that a quantum die decides the fate of the universe, randomly choosing at each throw where scientists will find matter. But it is something of an embarrassment to have to admit that these fundamental numbers on which mathematics is based appear to have been laid out by Nature flipping a coin, deciding at each toss the fate of each number. Randomness and chaos are anathema to the mathematician. Despite their randomness, prime numbers — more than any other part of our mathematical heritage — have a timeless, universal character. Prime numbers would be there regardless of whether we had evolved sufficiently to recognise them.

The Music of the Primes
Chapter 1 (p. 6)
HarperCollins Publisher, Inc. New York, New York, USA. 2003

Riemann's insight followed his discovery of a mathematical looking-glass through which he could gaze at the primes. Alice's world was turned upside down when she stepped through her looking-glass. In contrast, in the strange mathematical world beyond Riemann's glass, the chaos of the primes seemed to be transformed into an ordered pattern as strong as any mathematician could hope for. He conjectured that this order would be maintained however far one stared into the never-ending world beyond the glass. His prediction of an inner harmony on the far side of the mirror would explain why outwardly the primes look so chaotic. The metamorphosis provided by Riemann's mirror, where chaos turns to order, is one which most mathematicians find almost miraculous. The challenge that Riemann left the mathematical world was to prove that the order he thought he could discern was really there.

The Music of the Primes
Chapter 1 (p. 9)
HarperCollins Publisher, Inc. New York, New York, USA. 2003

Riemann had found a passageway from the familiar world of numbers into a mathematics which would have seemed utterly alien to the Greeks who had studied prime numbers two thousand years before. He had innocently mixed imaginary numbers with his zeta function and discovered, like some mathematical alchemist, the mathematical treasure emerging from this admixture of elements that generations had been searching for. He had

crammed his ideas into a ten-page paper, but was fully aware that his ideas would open up radically new vistas on the primes.

The Music of the Primes

Chapter 2 (p. 58)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

Armed with his prime number tables, Gauss began his quest. As he looked at the proportion of numbers that were prime, he found that when he counted higher and higher a pattern started to emerge. Despite the randomness of these numbers, a stunning regularity seemed to be looming out of the mist.

The Music of the Primes

Chapter 2 (p. 47)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

Gauss had heard the first big theme in the music of the primes, but it was one of his students, Riemann, who would truly unleash the full force...of the hidden harmonies that lay behind the cacophony of the primes.

The Music of the Primes

Chapter 2 (p. 58)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

For centuries, mathematicians had been listening to the primes and hearing only disorganised noise. These numbers were like random notes wildly dotted on a mathematical stave with no discernible tune. Now Riemann had found new ears with which to listen to these mysterious tones. The sine-like waves that Riemann had created from the zeros in his zeta landscape revealed some hidden harmonic structure.

The Music of the Primes

Chapter 4 (p. 93)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

The revelation that the graph appears to climb so smoothly, even though the primes themselves are so unpredictable, is one of the most miraculous in mathematics and represents one of the high points in the story of the primes. On the back page of his book of logarithms, Gauss recorded the discovery of his formula for the number of primes up to N in terms of the logarithm function. Yet despite the importance of the discovery, Gauss told no one what he had found. The most the world heard of his revelation were the cryptic words, "You have no idea how much poetry there is in a table of logarithms."

The Music of the Primes

Chapter 2 (p. 50)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

The primes are jewels studded throughout the vast expanse of the infinite universe of numbers that mathematicians have explored down the centuries. For mathematicians they instill a sense of wonder: 2, 3, 5, 7, 11, 13, 17, 19, 23... — timeless numbers that exist in the same world independent of our physical reality. They are Nature's gift to the mathematician.

The Music of the Primes

Chapter 1 (p. 5)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

It seems paradoxical that the fundamental objects on which we build our order-filled world of mathematics should behave so wildly and unpredictably.

The Music of the Primes

Chapter 2 (p. 45)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

Maybe we have become so hung up on looking at the primes from Gauss's and Riemann's perspective that what we are missing is simply a different way to understand these enigmatic numbers. Gauss gave an estimate for the number of primes, Riemann predicted that the guess is at worst the square root of N off its mark, Littlewood showed that you can't do better than this. Maybe there is an alternative viewpoint that no one has found because we have become so culturally attached to the house that Gauss built.

The Music of the Primes

Chapter 12 (p. 312)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

Littlewood wrote to Hardy about [Ramanujan]: "it is not surprising that he would have been [misled], unsuspecting as he presumably is of the diabolical malice inherent in the primes."

The Music of the Primes

Chapter 6 (p. 139)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

Littlewood's proof...revealed that prime numbers are masters of disguise. They hide their true colours in the deep recesses of the universe of numbers, so deep that witnessing their true nature may be beyond the computational power of humankind. Their true behavior can be seen only through the penetrating eyes of abstract mathematical proof.

The Music of the Primes

Chapter 5 (p. 130)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

...Gauss liked to call [number theory] "the Queen of Mathematics." For Gauss, the jewels in the crown were the primes, numbers which had fascinated and teased generations of mathematicians.

The Music of the Primes

Chapter 2 (p. 22)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

Erdős, Paul 1913–96

Hungarian mathematician

God may not play dice with the universe, but something strange is going on with the prime numbers.

In D. Mackenzie

Homage to an Itinerant Master

Science, Volume 275, Number 5301, 7 February, 1997 (p. 759)

Euler, Leonhard 1707–83
Swiss mathematician and physicist

Mathematicians have tried in vain to this day to discover some order in the sequence of prime numbers, and we have reason to believe that it is a mystery into which the human mind will never penetrate. To convince ourselves, we have only to cast a glance at tables of primes, which some have taken the trouble to compute beyond a hundred thousand, and we should perceive at once that there reigns neither order nor rule.

Collected Works

Serial 1, Volume 2 (p. 241)

Publisher undetermined

Gardner, Martin 1914–
American writer and mathematics games editor

The primes...[are] exasperating, unruly integers that refuse to be divided...by any integers except themselves and one.

In Eli Maor

To Infinity and Beyond: A Cultural History of The Infinite (p. 21)

Birkhäuser. Boston, Massachusetts, USA. 1987

Gauss, Johann Carl Friedrich 1777–1855
German mathematician, physicist, and astronomer

The problem of distinguishing prime numbers from composite numbers and of resolving the latter into their prime factors is known to be one of the most important and useful in arithmetic. It has engaged the industry and wisdom of ancient and modern geometers to such an extent that it would be superfluous to discuss the problem at length.... Further, the dignity of the science itself seems to require that every possible means be explored for the solution of a problem so elegant and so celebrated.

Disquisitiones Arithmeticae

Article 329 (p. 326)

Yale University Press. New Haven, Connecticut, USA. 1965

Gonek, S.
Mathematician

If there are lots of zeros off the line — and there might be — the whole picture is just horrible, horrible, very ugly. It's an Occam's razor sort of thing, you either have absolutely beautiful behavior of prime numbers, they behave just like you want them to behave, or else it's really bad.

No biographical data available

Addition and multiplication equip the set of positive natural numbers $\{1, 2, 3, \dots\}$ with a double structure of Abelian semigroup. The first is associated with a total order relation, and is generated by the single number 1. The second, reflecting the partial order of divisibility has an infinite number of generators: the prime numbers. Defined since antiquity, this key concept has yet to deliver up all its secrets — and there are plenty of them.

One of the remarkable aspects of the distribution of prime numbers is their tendency to exhibit global regularity and local irregularity. The prime numbers behave like the “ideal gases” which physicists are so fond of. Considered

from an external point of view, the distribution is — in broad terms — deterministic, but as soon as we try to describe the situation at a given point, statistical fluctuations occur as in a game of chance where it is known that on average the heads will match the tail but where, at any one moment, the next throw cannot be predicted.

Translated by Philip G. Spain
The Prime Numbers and Their Distribution (p. 51)
American Mathematical Society. Providence, Rhode Island, USA. 2000

Prime numbers try to occupy all the room available (meaning that they behave as randomly as possible), given that they need to be compatible with the drastic constraint imposed on them, namely to generate the ultra-regular sequence of integers. This idea underpins the majority of conjectures concerning prime numbers: everything which is not trivially forbidden should actually happen.

Translated by Philip G. Spain
The Prime Numbers and Their Distribution (p. 51)
American Mathematical Society. Providence, Rhode Island, USA. 2000

As archetypes of our representation of the world, numbers form, in the strongest sense, part of ourselves, to such an extent that it can legitimately be asked whether the subject of study of arithmetic is not the human mind itself. From this a strange fascination arises: how can it be that these numbers, which lie so deeply within ourselves, also give rise to such formidable enigmas? Among all these mysteries, that of the prime numbers is undoubtedly the most ancient and most resistant.

Translated by Philip G. Spain
The Prime Numbers and Their Distribution (p. 1)
American Mathematical Society. Providence, Rhode Island, USA. 2000

Weyl, Hermann 1885–1955
German mathematician

The mystery that clings to numbers, the magic of numbers, may spring from this very fact, that the intellect, in the form of the number series, creates an infinite manifold of well-distinguished individuals. Even we enlightened scientists can still feel it, e.g., in the impenetrable law of the distribution of prime numbers.

...there is no apparent reason why one number is prime and another not. To the contrary, upon looking at these numbers one has the feeling of being in the presence of one of the inexplicable secrets of creation.

The First 50 Million Prime Numbers
The Mathematical Intelligencer, Volume 0 August 1977

PRIMORDIAL

de Maupassant, Guy 1850–93
 French writer

Nothing is more impressive, nothing more disquieting, more terrifying occasionally, than a fen. Why should a vague terror hang over these low plains covered with water? Is it the low rustling of the rushes, the strange Will-o'-the-wisp light, the silence which prevails on calm nights, the still mists which hang over the surface like a shroud; or is it the almost inaudible splashing, so slight and so gentle, yet sometimes more terrifying than the cannons of men of the thunders of skies, which make these marshes resemble countries which none has dreamed of, terrible countries concealing an unknown and dangerous secret?

No, something else belongs to it — another mystery, profounder and graver, floats amid these thick mists, perhaps the mystery of the creation itself! For was it not in stagnant and muddy water, amid the heavy humidity of moist land under the heat of the sun, that the first germ of life pulsed and expanded to the day?

PRINCIPLE

Adams, John 1735–1826
 2nd president of the United States

The reasoning of mathematicians is founded on certain and infallible principles. Every word they use conveys a determinate idea, and by accurate definitions they excite the same ideas in the mind of the reader that were in the mind of the writer. When they have defined the terms they intend to make use of, they premise a few axioms, or self-evident principles, that every one must assent to as soon as proposed. They then take for granted certain postulates, that no one can deny them, such as, that a right line may be drawn from any given point to another, and from these plain, simple principles they have raised most astonishing speculations, and proved the extent of the human mind to be more spacious and capacious than any other science.

Scottish mathematician and physician

The Reader may here observe the Force of Numbers, which can be successfully applied, even to those things, which one would imagine are subject to no Rules. There are very few things which we know, which are not capable of being reduc'd to a Mathematical Reasoning, and when they cannot, its a Sign our Knowledge of them is very small and confus'd; And where mathematical reasoning can be had, its as great folly to make use of any other, as to grope for a thing in the dark, when you have a Candle standing by you. I believe the Calculation of the Quantity of Probability might be improved to a very useful and pleasant Speculation, and applied to a great many Events which are accidental, besides those of Games...

1806–71

English mathematician and logician

No part of mathematics or mathematical physics involves considerations so strange or so difficult to handle correctly, and there is no subject upon which opinions have been more freely hazarded by the ignorant, or rational dissent more unambiguously expressed by the learned.

Encyclopædia Metropolitana (Volume 2)

Theory of Probabilities (p. 393)

Deming, William Edwards

1900–93

American statistician, educator, and consultant

The statistician's report to management should not talk about probabilities. It will merely give outside margins of error for the results of chief importance.

Sample Design in Business Research (p. 13)

John Wiley & Sons, Inc. New York, New York, USA. 1960

Descartes, René 1596–1650

French philosopher, scientist, and mathematician

...when it is not in our power to determine what is true, we ought to act accordingly to what is most probable...

Discourse on the Method of Rightly Conducting the Reason and Seeking For Truth in the Sciences

Part III (p. 67)

Simpson, Marshall, and Company. London, England. 1850

Diaconis, Persi 1945–

American mathematician

Our brains are just not wired to do probability problems very well.

The Search for Randomness

Talk, March 29, 1989

Doyle, Sir Arthur Conan 1859–1930

Scottish writer

We are coming now rather into the region of guesswork, said Dr. Mortimer.

Say, rather, into the region where we balance probabilities and choose the most likely. It is the scientific use of the imagination, but we have always some material basis on which to start our speculation.

In William S. Baring-Gould (ed.)

The Annotated Sherlock Holmes (Volume 2)

The Hound of the Baskervilles, Chapter 4 (p. 24)

Wings Books. New York, New York, USA. 1967

Eddington, Sir Arthur Stanley 1882–1944

English astronomer, physicist, and mathematician

There can be no unique probability attached to any event or behavior: we can only speak of “probability in the light of certain given information”, and the probability alters according to the extent of the information.

The Nature of the Physical World

Chapter XIV (pp. 314–315)

The Macmillan Company. New York, New York, USA. 1930

But it is necessary to insist more strongly than usual that what I am putting before you is a model — the Bohr model atom — because later I shall take you to a pro-founder level of representation in which the electron, instead of being confined to a particular locality, is distributed in a sort of probability haze all over the atom...

New Pathways in Science

Chapter II, Section III (p. 34)

The Macmillan Company. New York, New York, USA. 1935

In most modern theories of physics probability seems to have replaced aether as “the nominative of the verb ‘to undulate’.”

New Pathways in Science

Chapter VI, Section I (p. 110)

The Macmillan Company. New York, New York, USA. 1935

Edgeworth, Francis Ysidro 1845–1926

Irish economist and statistician

The Calculus of Probabilities is an instrument which requires the living hand to direct it.

Metrelike, or The Method of Measuring Probability and Utility (p. 18)

Temple. London, England. 1887

Probability may be described, agreeably to general usage, as importing partial incomplete belief.

The Philosophy of Chance

Mind, Volume 9, 1884

I hope that you flourish in Probabilities.

Quoted in Stephen M. Stigler

The History of Statistics

Letter from Edgeworth to Pearson, 11 September 1893 (p. 326)

It is a useful discipline to walk in a world where, though the objects themselves are fixed, their images are ever vibrating through a large part of their own dimensions. The Calculus of Probabilities...conveys a lesson which is required for the study of social science, the power of contemplating general tendencies through the wavering medium of particulars.

On Methods of Ascertaining Variation in the Rate of Births, Deaths, and Marriages

Journal of the Royal Statistical Society, Volume 48, 1885 (p. 633)

Eliot, George (Mary Ann Evans Cross) 1819–80

English novelist

Secrets are rarely betrayed or discovered according to any program our fear has sketched out. Fear is almost always haunted by terrible dramatic scenes, which recur in spite of the best-argued probabilities against them...

The Mill on the Floss

Book V, V (p. 317)

J.M. Dent & Sons Ltd. London, England. 1908

Still there is a possibility — even a probability — the other way.

The George Eliot Letters (Volume 2) (p. 127)

Yale University Press. New Haven, Connecticut, USA. 1954–1978

But I see no probability of my being able to be with you before your other Midsummer visitors arrive.

The George Eliot Letters (Volume 2) (p. 160)

Yale University Press. New Haven, Connecticut, USA. 1954–1978

...ignorance gives one a large range of probabilities.

Daniel Deronda II

Book II, Chapter XIII (p. 136)

A.L. Burt Company. New York, New York, USA. 18??

Evanovich, Janet 1943-

American writer

I graduated from Douglass College without distinction. I was in the top 98% of my class and damn glad to be there. I slept in the library and daydreamed my way through history lecture. I failed math twice, never fully grasping probability theory. I mean, first off, who cares if you pick a black ball or a white ball out of the bag? And second, if

you're bent over about the color, don't leave it to chance. Look in the damn bag and pick the color you want.

Hard Eight (pp. 227–228)

St. Martin's Press. New York, New York, USA. 2002

Feller, William 1906–70

Yugoslavian-born American mathematician

Probability is a mathematical discipline with aims akin to those, for example, of geometry or analytical mechanics. In each field we must carefully distinguish three aspects of the theory: (a) the formal logical content, (b) the intuitive background, (c) the applications. The character, and the charm, of the whole structure cannot be appreciated without considering all three aspects in their proper relation.

An Introduction to Probability Theory and Its Applications (Volume 1)

Introduction (p. 1)

John Wiley & Sons, Inc. New York, New York, USA. 1957

All possible “definitions” of probability fall short of the actual practice.

An Introduction to Probability Theory and Its Applications (Volume 1)

Chapter I (p. 19)

John Wiley & Sons, Inc. New York, New York, USA. 1957

Feynman, Richard P. 1918–88

American theoretical physicist

Nature permits us to calculate only probabilities.

QED: The Strange Theory of Light and Matter

Chapter 1 (p. 19)

Princeton University Press. Princeton, New Jersey, USA. 1985

A philosopher once said “It is necessary for the very existence of science that the same conditions always produce the same results.” Well, they do not.

The Character of Physical Law

Chapter 6 (p. 147)

BBC. London, England. 1965

Forbes, J. D.

No biographical data available

...the ratios or probabilities of which we have been speaking have no absolute signification with reference to an event which has occurred...They represent only the state of expectation of the mind of a person before the event has occurred, or having occurred before he is informed of the results.

On the Alleged Evidence for a Physical Connection Between Stars

Forming Binary or Multiple Groups

The London, Edinburgh and Dublin Philosophical Magazine and Journal of Science, Third Series, December 1850 (p. 406)

Freeman, R. Austin 1862–1943

British physician and mystery novelist

It is a question of probabilities....

A Certain Dr. Thorndyke

Thorndyke Makes a Beginning (p. 209)

Dodd, Mead & Company. New York, New York, USA. 1928

Froude, James Anthony 1818–94

English historian and biographer

Philosophy goes no further than probabilities, and in every assertion keeps a doubt in reserve.

Short Studies on Great Subjects (Volume 2)

Calvinism (p. 51)

Charles Scribner's Sons. New York, New York, USA. 1890

Fry, Thornton C.

No biographical data available

But if probability measures the importance of our state of ignorance it must change its value whenever we add new knowledge. And so it does.

Probability and Its Engineering Uses (2nd edition)

Chapter VI (p. 145)

D. Van Nostrand Company. Princeton, New Jersey, USA. 1965

After all, without the experiment — either a real one or a mathematical model — there would be no reason for a theory of probability.

Probability and Its Engineering Uses (2nd edition)

Chapter II (p. 23)

D. Van Nostrand Company. Princeton, New Jersey, USA. 1965

Gay, John 1685–1732

English poet and dramatist

Let men suspect your tale untrue,

Keep probability in view.

John Gay: Poetry and Prose

Fables. The Painter Who Pleas'd Nobody and Everybody, I. 1

At The Clarendon Press. Oxford, England. 1974

Gibbon, Edward 1737–94

English historian

Such a fact is probable, but undoubtedly false.

In Great Books of the Western World (Volume 40)

The Decline and Fall of the Roman Empire

Notes: Chapter XXIV, 116 (p. 794)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Gilbert, William 1544–1603

English scientist and physician

Men are deplorably ignorant with respect to natural things, an modern philosophers, as though dreaming in the darkness, must be aroused and taught the uses of things, the dealing with things; they must be made to quit the sort of learning that comes only from books, and that rests only on vain arguments from probability and upon conjecture.

In Great Books of the Western World (Volume 28)

On the Loadstone and Magnetic Bodies and on the Great Magnet the Earth

Book First, Chapter 10

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Gilbert, Sir William Schwenck 1836–1911

English playwright and poet

Sullivan, Arthur 1842–1900
English composer

Of what there is no manner of doubt,
No probable, possible, shadow of doubt,
No possible doubt whatever.

The Complete Plays of Gilbert and Sullivan

The Gondoliers

Act I (p. 466)

W.W. Norton & Company, Inc. New York, New York, USA. 1976

Gissing, George 1857–1903
English novelist

Of course, if your work is strong, and you can afford to wait; the probability is that half a dozen people will at last begin to shout that you have been monstrously neglected, as you have.

New Grub Street

Interim (p. 411)

The Modern Library. New York, New York, USA. 1926

Good, I. J.
No biographical data available

Although there are at least five kinds of probability, we can get along with just one kind.

Kinds of Probability...

Science, Volume 129, 1959

Gracian, Baltasar 1601–58
Spanish philosopher

Whereas wisdom favors the probabilities, folly favors only the possibilities.

In Thomas G. Corvan

The Best of Gracian (p. 38)

Philosophical Library. New York, New York, USA. 1964

Wisdom does not trust to probabilities; it always marches in the midday light of reason.

In Rudolf Flesch

The New Book of Unusual Quotations

Harper & Row, Publishers. New York, New York, USA. 1966

It is only by mature meditation on the possibilities and probabilities of future events — that we can elude the tortuous troubles of the tomorrows.

In Thomas G. Corvan

The Best of Gracian (p. 22)

Philosophical Library. New York, New York, USA. 1964

Gumperson, R. F.
Physicist

The outcome of a given desired probability will be inverse to the degree of desirability.

Gumperson's Law

Changing Times, Volume 11, Number 11, November, 1957 (p. 46)

...the contradictory of a welcome probability will assert itself whenever such an eventuality is likely to be most frustrating.

Gumperson's Law

Changing Times, Volume 11, Number 11, November, 1957 (p. 46)

Hamming, Richard W. 1915–98
Mathematician

Probability is too important to be left to the experts.

The Art of Probability for Scientists and Engineers

Chapter 1 (p. 4)

Westview Press. Boulder, Colorado, USA. 1991

Hammond, Henry

The only seasonable inquiry is, Which is of probables the most, or of improbables the least, such.

In Robert Sanderson and Izaak Walton

Works (Volume 5)

A Letter to Dr. Sanderson (p. 319)

At The University Press. Oxford, England. 1854

Harris, Errol E.
No biographical data available

Probability is truth in some degree...

Hypothesis and Perception: The Roots of Scientific Method

The Logic of Construction (p. 342)

George Allen & Unwin Ltd. London, England. 1970

Harrison, Edward Robert 1919–2007
English-born American cosmologist

We have a wraithlike quantum world of ghostly waves where all is fully determined and predictable. Yet, when we translate it into our observed world of sensible things and their events, we are limited to the concept of chance and the language of probability. What happens at the interface of the quantum world and the observed world may be this or may be that.

Masks of the Universe

Chapter 8 (p. 124)

Macmillan Publishing Company. New York, New York, USA. 1985

Herbert, Nick
American physicist

probability = (possibility)²

Quantum Reality: Beyond the New Physics

Chapter 6 (p. 96)

Anchor Press. Garden City, New York, USA. 1985

Holmes, Oliver Wendell 1809–94
American physician, poet, and humorist

No priest or soothsayer that ever lived could hold his own against Old Probabilities.

Pages from an Old Volume of Life

Chapter X (p. 327)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1895

Hooker, Richard 1554–1600
English writer and theologian

As for probabilities, what thing was there ever set down so agreeable with sound reason but some probable show against it might be made.

In S. Austin Allibone

Prose Quotations from Socrates to Macaulay

Probability

J.B. Lippincott. Philadelphia, Pennsylvania, USA. 1903

Howe, E. W.

No biographical data available

A reasonable probability is the only certainty.

Sinner Sermons: A Selection of the Best Paragraphs of E.W. Howe (p. 23)

Girard. Kansas, USA. 1926

Hume, David 1711–76

Scottish philosopher and historian

...all knowledge resolves itself into probability...

A Treatise of Human Nature

Book I, Part IV, Section I (p. 232)

Penguin Books. Baltimore, Maryland, USA. 1969

Hunter, Evan 1926–2005

American writer

Now, your Honor; in much the same way that there are laws governing our society, there are also laws governing chance, and these are called the laws of probability, and it is against these that we must examine the use of an identical division number.

The Paper Dragon

Tuesday, Chapter 6

Delacorte Press. New York, New York, USA. 1966

Huxley, Aldous 1894–1963

English writer and critic

Magic and devils offend our sense of probabilities.

Proper Studies

Varieties of Intelligence (p. 7)

Chatto & Windus. London, England. 1957

Huxley, Thomas Henry 1825–95

English biologist

The scientific imagination always restrains itself within the limits of probability.

Collected Essays (Volume 5)

Science and Christian Traditions

Science and Pseudo-Science (p. 124)

Macmillan & Company Ltd. London, England. 1904

Huygens, Christiaan 1629–95

Dutch mathematician, astronomer, and physicist

We know nothing very certainly, but everything only probably, and the probability has degrees that are widely different.

Oeuvres

Complètes de Christiaan Huygens (p. 298)

Publisher undetermined

In such noble and sublime Studies as these, 'tis a Glory to arrive at Probability, and the search itself rewards the pains. But there are many degrees of Probable, some nearer Truth than others, in the determining of which lies the chief exercise of our Judgment.

The Celestial Worlds Discover'd, or, Conjectures Concerning the Planetary Worlds, Their inhabitants and Productions

Book the First. Conjectures Not Useless, Because Not Certain (p. 10)

Printed for T. Childe. London, England. 1698

James, P. D. 1920–

English writer

Juries hate scientific evidence.

They think they won't be able to understand it so naturally they can't understand it. As soon as you step into the box you see a curtain of obstinate incomprehension clanging down over their minds. What they want is certainty. Did this paint particle come from this car body? Answer yes or Number None of those nasty mathematical probabilities we're so fond of.

Death of an Expert Witness

Book II, Chapter III (p. 96)

Warner Books, Inc. New York, New York, USA. 1992

Jefferson, Thomas 1743–1826

3rd president of the United States

Perhaps an editor might begin a reformation in some way as this. Divide his paper into four chapters, heading the 1st, Truth. 2d, Probabilities. 3d, Possibilities. 4th, Lies.

The Writings of Thomas Jefferson (Volume 9)

Letter to John Norvell, June 11, 1807

G.P. Putnam's Sons. New York, New York, USA. 1898

Kac, Mark 1914–84

Polish mathematician

To the author the main charm of probability theory lies in the enormous variability of its applications. Few mathematical disciplines have contributed to as wide a spectrum of subjects, a spectrum ranging from number theory to physics, and even fewer have penetrated so decisively the whole of our scientific thinking.

Lectures in Applied Mathematics (Volume 1)

Probability and Related Topics in Physical Sciences, Preface (p. ix)

Interscience Publishers, Ltd. London, England. 1959

Kasner, Edward 1878–1955

American mathematician

Newman, James Roy 1911–66

Mathematician and mathematical historian

Equiprobability in the physical world is purely a hypothesis. We may exercise the greatest care and the most accurate of scientific instruments to determine whether or not a penny is symmetrical. Even if we are satisfied that it is, and that our evidence on that point is conclusive,

our knowledge, or rather our ignorance, about the vast number of other causes which affect the fall of the penny is so abysmal that the fact of the penny's symmetry is a mere detail. Thus, the statement "head and tail are equiprobable" is at best an assumption.

Mathematics and the Imagination

Chance and Chanceability (p. 251)

Simon & Schuster. New York, New York, USA. 1940

Keynes, John Maynard 1883–1946

British economist

Probability is, so far as measurement is concerned, closely analogous to similarity.

A Treatise on Probability

Chapter III (p. 28)

Harper & Row, Publishers. New York, New York, USA. 1962

It has been pointed out already that no knowledge of probabilities, less in degree than certainty, helps us to know what conclusions are true, and that there is no direct relation between the truth of a proposition and its probability. Probability begins and ends with probability.

A Treatise on Probability

Part V (p. 322)

Harper & Row, Publishers. New York, New York, USA. 1962

It is difficult to find an intelligible account of the meaning of "probability," or of how we are ever to determine the probability of any particular proposition; and yet treatises on the subject profess to arrive at complicated results of the greatest precision and the most profound practical importance.

A Treatise on Probability

Chapter IV (p. 51)

Harper & Row, Publishers. New York, New York, USA. 1962

...others have suggested seriously a "barometer of probability."

A Treatise on Probability

Chapter III (p. 20)

Harper & Row, Publishers. New York, New York, USA. 1962

Kolmogorov, Andrei N. 1903–87

Russian physicist and mathematician

The theory of probability as mathematical discipline can and should be developed from axioms in exactly the same way as Geometry and Algebra.

Foundations of the Theory of Probability

Chapter 1. Elementary Theory of Probability (p. 1)

Chelsea Publishing Company. New York, New York, USA. 1956

Kosko, Bart

American engineer

Which is easier to believe in, probability or God?...The ultimate fraud is the scientific atheist who believes in probability.

Fuzzy Thinking

Chapter 3 (p. 50)

Hyperion. New York, New York, USA. 1993

Probability has turned modern science into a truth casino.

Fuzzy Thinking

Chapter 1 (p. 12)

Hyperion. New York, New York, USA. 1993

Kyburg, Jr., H. E.

No biographical data available

Smokler, H. E.

No biographical data available

...there is no problem about probability: it is simply a nonnegative, additive set function, whose maximum value is unity.

Studies in Subjective Probability

Introduction (p. 3)

John Wiley & Sons, Inc. New York, New York, USA. 1964

Laplace, Pierre Simon 1749–1827

French mathematician, astronomer, and physicist

One of the great advantages of the calculus of probabilities is to teach us to distrust first opinions.

A Philosophical Essays on Probabilities

Chapter XVI (p. 164)

Dover Publications, Inc. New York, New York, USA. 1951

The probability of events serves to determine the hope or the fear of persons interested in their existence.

A Philosophical Essays on Probabilities

Chapter IV (p. 20)

Dover Publications, Inc. New York, New York, USA. 1951

The regularity which astronomy shows us in the movements of the comets doubtless exists in all phenomena.

The curve described by a simple molecule or air or vapour is regulated in a manner just as certain as the planetary orbits; the only difference between them is that which comes from our ignorance.

A Philosophical Essay on Probabilities

Chapter II (p. 6)

Dover Publications, Inc. New York, New York, USA. 1951

It is remarkable that a science, which commenced with the consideration of games of chance, should be elevated to the rank of the most important subjects of human knowledge.

A Philosophical Essay on Probabilities

Chapter XVII (p. 195)

Dover Publications, Inc. New York, New York, USA. 1951

Leibniz, Gottfried Wilhelm 1646–1716

German philosopher and mathematician

...the art of weighing probabilities is not yet even partly explained, though it would be of great importance in legal matters and even in the management business.

Philosophical Papers and Letters (Volume 1)

Letter to John Frederick, Duke of Brunswick Hanover (p. 399)

The University of Chicago Press. Chicago, Illinois, USA. 1956

Lewis, C. S. (Clive Staples) 1898–1963

British author, scholar, and popular theologian

We may not be able to get certainty, but we can get probability, and half a loaf is better than no bread.

Christian Reflections

Historicism (p. 111)

William B. Erdmanns Publishing. Grand Rapids, Michigan, USA. 1997

Lewis, Clarence Irving 1883–1964

American philosopher

There is no such thing as *the* probability of four aces in one hand, or *the* probability of anything else. Given all the relevant data which there are to be known, everything is either certainly true or certainly false.

Mind and the World-Order: Outline of a Theory of Knowledge

Chapter X (p. 330)

Charles Scribner's Sons. New York, New York, USA. 1929

...empirical knowledge is exclusively a knowledge of probabilities...

Mind and the World-Order: Outline of a Theory of Knowledge

Chapter XI (p. 345)

Charles Scribner's Sons. New York, New York, USA. 1929

A "poor evaluation" of the probability of anything may reflect ignorance of relevant data which "ought" to be known...

Mind and the World-Order: Outline of a Theory of Knowledge

Chapter X (p. 331)

Charles Scribner's Sons. New York, New York, USA. 1929

The only knowledge a priori is purely analytic; all empirical knowledge is probable only.

Mind and the World-Order: Outline of a Theory of Knowledge

Chapter X (p. 309)

Charles Scribner's Sons. New York, New York, USA. 1929

Lincoln, Abraham 1809–6516th president of the United States

The probability that we may fall in the struggle ought not to deter us from the support of a cause we believe to be just; it shall not deter me.

The Sub-Treasury

Speech, Springfield, Illinois, December 26, 1839

Lindley, Dennis V. 1923–

American statistician

Are we probabilists, believers, or fuzzifiers?

Comment: A Tale of Two Wells

Statistical Science, Volume 2, Number 1, February 1987 (p. 38)**Locke, John** 1632–1704

English philosopher and political theorist

Probability is the appearance of agreement upon fallible proofs.

In *Great Books of the Western World* (Volume 35)*An Essay Concerning Human Understanding*

Book IV, Chapter XV, Section 1 (p. 365)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Probability is likeliness to be true...

In *Great Books of the Western World* (Volume 35)*An Essay Concerning Human Understanding*

Book IV, Chapter XV, Section 3 (p. 365)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

The mind ought to examine all the grounds of probability, and upon a due balancing the whole, reject or receive it proportionably to the preponderancy of probability on the one side or the other.

In S. Austin Allibone

Prose Quotations from Socrates to Macaulay

Probability

J.B. Lippincott. Philadelphia, Pennsylvania, USA. 1903

Ludlum, Robert 1927–2001

American author

It was a desperate strategy, based on probabilities, but it was all he had left.

The Bourne Supremacy

Chapter 24 (p. 365)

Random House, Inc. New York, New York, USA. 1986

It wasn't a probability anymore, it was a reality.

The Bourne Supremacy

Chapter 18 (p. 256)

Random House, Inc. New York, New York, USA. 1986

Masters, Dexter 1908–89

American writer

If absolutes had disappeared under the inquiries of science, and apparently they had, ...then the only rational procedure, the only procedure consistent with man's development, was to follow where the probabilities led.

The Accident

Part I, Chapter 3 (p. 19)

Alfred A. Knopf. New York, New York, USA. 1955

Meyer, Agnes 1887–1970

American author and journalist

We can never achieve absolute truth but we can live hopefully by a system of calculated probabilities. The law of probability gives to natural and human sciences — to human experience as a whole — the unity of life we seek.

Education for a New Morality

Chapter 3 (p. 21)

Macmillan Publishing Company. New York, New York, USA. 1957

Moroney, M. J.

American statistician

There are certain notions which it is impossible to define adequately. Such notions are found to be those based on universal experience of nature. Probability is such a notion. The dictionary tells me that "probable" means "likely." Further reference gives the not very helpful information that "likely" means "probable."

Facts from Figures

The Laws of Chance (p. 4)
Penguin Books Ltd. Harmondsworth, England. 1951

Muggeridge, Malcolm 1903–90
English journalist and social critic

The probability is, I suppose that the Monarchy has become a kind of ersatz religion. Chesterton once remarked that when people [cease] to believe in God they do not believe in nothing, but in anything.

New Statesman, 1955

Pascal, Blaise 1623–62
French mathematician and physicist

Probability — Each one can employ it; no one can take it away.

In *Great Books of the Western World* (Volume 33)

Pensées

Section XIV, 193

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Take away probability, and you can no longer please the world; give probability, and you can no longer displease it.

In *Great Books of the Western World* (Volume 33)

Pensées

Section XIV, 918

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

But is it probable that probability gives assurance?

In *Great Books of the Western World* (Volume 33)

Pensées

Section XIV, 908

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Pearl, Judea
Computer scientist and statistician

Probabilities are summaries of knowledge that is left behind when information is transferred to a higher level of abstraction.

Probabilistic Reasoning in Intelligent Systems: Network of Plausible Inference

Chapter 1 (p. 21)

Morgan Kaufmann Publishers, Inc. San Mateo, California, USA. 1988

Pearson, E. S. 1895–1980
English statistician

Hitherto the user has been accustomed to accept the function of probability theory laid down by the mathematicians; but it would be good if he could take a larger share in formulating himself what are the practical requirements that the theory should satisfy in applications.

The Choice of Statistical Test Illustrated on the Interpretation of Data Classed in a 2×2 Table

Biometrika, Volume 34, Number 35, 1948 (p. 142)

Peirce, Charles Sanders 1839–1914
American scientist, logician, and philosopher

This branch of mathematics [probability] is the only one, I believe, in which good writers frequently get results entirely erroneous.

Writings of Charles S. Peirce (Volume 3)

The Doctrine of Chances, II (p. 279)

Indiana University Press. Bloomington, Indiana, USA. 1986

The relative probability of this or that arrangement of Nature is something which we should have a right to talk about if universes were as plenty as blackberries, if we could put a quantity of them in a bag, shake them well up, draw out a sample, and examine them to see what proportion of them had one arrangement and what proportion another. But, even in that case, a higher universe would contain us, in regard to whose arrangements the conception of probability could have no applicability.

The Probability of Induction

Popular Science Monthly, Volume 12, April 1878 (p. 714)

...it may be doubtful if there is a single extensive treatise on probabilities in existence which does not contain solutions absolutely indefensible.

Writings of Charles Sanders Peirce (Volume 3)

The Doctrine of Chances, II (p. 279)

Indiana University Press. Bloomington, Indiana, USA. 1986

Planck, Max 1858–1947
German physicist

Nature prefers more probable to less probable states.... Heat flows from a body of high temperature to a body of lower temperature, because the state of equal temperature is more probable than a state of unequal distribution of temperature.

Translated by R. Jones and D.H. Williams

A Survey of Physics: A Collection of Lectures and Essays

The Unity of the Physical Universe (p. 15)

Methuen & Company Ltd. London, England. 1925

Plato 428 BCE–347 BCE
Greek philosopher

I know too well that these arguments from probabilities are impostors, and unless great caution is observed in the use of them, they are apt to be deceptive.

In *Great Books of the Western World* (Volume 7)

Phaedo

Section 92 (p. 238)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Poincaré, Henri 1854–1912
French mathematician and theoretical astronomer

No matter how solidly founded a prediction may appear to us, we are never absolutely sure that experiment will not contradict it, if we undertake to verify it.... It is far better to foresee even without certainty than not to foresee at all.

The Foundations of Science

Science and Hypothesis, Part IV

Chapter IX (p. 129)

The Science Press. New York, New York, USA. 1913

The very name calculus of probabilities is a paradox. Probability opposed to certainty is what we do not know, and how can we calculate what we do not know?

The Foundations of Science

Science and Hypothesis, Part IV

Chapter XI (p. 155)

The Science Press. New York, New York, USA. 1913

Predicted facts... can only be probable.

The Foundations of Science

Science and Hypothesis, Part IV

Chapter XI (p. 155)

The Science Press. New York, New York, USA. 1913

Popper, Karl R. 1902–94

Austrian/British philosopher of science

I think that we shall have to get accustomed to the idea that we must not look upon science as a “body of knowledge” but rather as a system of hypotheses; that is to say, as a system of guesses or anticipations which in principle cannot be justified, but with which we work as long as they stand up to tests, and of which we are never justified in saying that we know that they are “true” or “more or less certain” or even “probable.”

The Logic of Scientific Discovery

New Appendices, Two Notes on Induction and Demarcation 1933–1934 (p. 317)

Basic Books, Inc. New York, New York, USA. 1959

The most important application of the theory of probability is to what we may call “chance-like” or “random” events, or occurrences. These seem to be characterized by a peculiar kind of incalculability which makes one disposed to believe — after many unsuccessful attempts — that all known rational methods of prediction must fail in their case. We have, as it were, the feeling that not a scientist but only a prophet could predict them. And yet, it is just this incalculability that makes us conclude that the calculus of probability can be applied to these events.

The Logic of Scientific Discovery

Part II, Chapter VII, Section 49 (p. 150)

Basic Books, Inc. New York, New York, USA. 1959

Pratchett, Terry 1948–

English author

Understanding is the first step towards control. We now understand probability...

The Dark Side of the Sun (p. 37)

St. Martin's Press. New York, New York, USA. 1976

“You haven't heard of probability math? You, and tomorrow you become Chairman of the Board of Widdershins and heir to riches untold? Then first we will talk, and then we will eat.”

The Dark Side of the Sun (p. 13)

St. Martin's Press. New York, New York, USA. 1976

I can't pretend to understand probability math. But if the universe is so ordered, so — immutable — that the future can be told by a handful of numbers, then why need we go on living?

The Dark Side of the Sun (p. 22)

St. Martin's Press. New York, New York, USA. 1976

Prior, Matthew 1664–1721

English poet and diplomat

In this case probability must atone for want of Truth.

The Literary Works of Matthew Prior

Solomon, Preface (p. 309)

Clarendon Press. Oxford, England. 1959

Ramsey, Frank Plumpton 1903–30

English mathematician

I think I perceive or remember something but am not sure; this would seem to give me some ground for believing it, contrary to Mr. Keynes' theory, by which the degree of belief in it which it would be rational for me to have is that given by the probability relation between the proposition in question and the things I know for certain.

In R.B. Braithwaite (ed.)

The Foundation of Mathematics and Other Logical Essays

Truth and Probability (p. 189)

Kegan, Paul, Trench, Trubner & Company. London, England. 1931

Redfield, Roy A.

No biographical data available

Good and bad come mingled always. The long-time winner is the man who is not unreasonably discouraged by persistent streaks of ill fortune, [who is] not at other times made reckless with the thought that he is fortune's darling. He keeps a cool head and trusts in the mathematics of probability, or as often said, the law of averages.

Factors of Growth in a Law Practice (p. 168)

Callaghan & Company. Mundelein, Illinois, USA. 1962

Reichenbach, Hans 1891–1953

German philosopher of science

To say that observations of the past are certain, whereas predictions are merely probable, is not the ultimate answer to the question of induction; it is only a sort of intermediate answer, which is incomplete unless a theory of probability is developed that explains what we should mean by “probable” and on what ground we can assert probabilities.

The Rise of Scientific Philosophy

Chapter 5 (p. 93)

University of California Press. Berkeley, California, USA. 1951

The study of inductive inference belongs to the theory of probability, since observational facts can make a theory only probable but will never make it absolutely certain.

The Rise of Scientific Philosophy

Chapter 14 (p. 231)

University of California Press. Berkeley, California, USA. 1951

Rota, Gian-Carlo 1932–99

Italian-born American mathematician

The distance between probability and statistical mechanics is diminishing, and soon we won't be able to tell which is which. We will be rid of the handwaving arguments with which mathematically illiterate physicists have been pestering us.

Indiscrete Thoughts

Chapter XX (p. 228)

Birkhäuser. Boston, Massachusetts, USA. 1997

Conditional probability tends to be viewed as one technique for calculating probabilities. Actually, there is more to it than meets the eye: it has an interpretation which is ordinarily passed over in silence. Philosophers take notice.

Indiscrete Thoughts

Chapter XX (p. 227)

Birkhäuser. Boston, Massachusetts, USA. 1997

According to quantum mechanics, it cannot be known what an atom will do in given circumstances; there are a definite set of alternatives open to it, and it chooses sometimes one, sometimes another. We know in what proportion of cases one choice will be made, in what proportion a second, or a third, and so on. But we do not know any law determining the choice in an individual instance. We are in the same position as a booking-office clerk at Paddington, who can discover, if he chooses, what proportion of travelers from that station go to Birmingham, what proportion to Exeter, and so on, but knows nothing of the individual reasons which lead to one choice in one case and another in another.

Religion and Science

Determinism (p. 152)

Henry Holt & Company. New York, New York, USA. 1935

Sartre, Jean-Paul 1905–80

French existentialist philosopher and novelist

When we want something, we always have to reckon with probabilities.

The Philosophy of Existentialism

Part 1. The Humanism of Existentialism (p. 46)

Philosophical Library, New York, New York, USA; 1965

...all views are only probable, and a doctrine of probability which is not bound to a truth dissolves into thin air. In order to describe the probable, you must have a firm hold on the true. Therefore, before there can be any truth whatsoever, there must be absolute truth.

The Philosophy of Existentialism

Part 1 The Humanism of Existentialism (p. 51)

Philosophical Library, New York, New York, USA; 1965

Schiller, Ferdinand Canning Scott 1864–1937

English philosopher

...it is better to be satisfied with probabilities than to demand impossibilities and starve.

In Charles Singer (ed.)

Studies in the History and Method of Science (Volume 1)

Scientific Discovery and Logical Proof (p. 272)

At The Clarendon Press. Oxford, England. 1917

Shakespeare, William 1564–1616

English poet, playwright, and actor

‘Tis pretty, sure, and very probable...

In *Great Books of the Western World* (Volume 26)*The Plays and Sonnets of William Shakespeare* (Volume 1)

As You Like It

Act III, Scene v, l. 11

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Sherwood, Thomas

No biographical data available

It is a nice idea, of course, that numbers must prove something true: after all, one patient is a case-report, two are a series. But all that numbers can do is tell us what is probable, and probability can lead us into terrible mistakes — like Bertrand Russell's chicken. Day in, day out, throughout its life, the chicken got breakfast as the farmer arrived in the morning. Thus it had clearly discovered a highly probable natural law: farmer = food — until, that is, the morning when the farmer very naturally arrived to wring its neck instead.

Science in Radiology

Lancet, Volume 1, 1978 (p. 594)**South, Robert**

No biographical data available

That is accounted probable which has better arguments producible for it than can be brought against it.

In S. Austin Alibone

Prose Quotations from Socrates to Macaulay

Probability

J.B. Lippincott. Philadelphia, Pennsylvania, USA. 1903

Stoppard, Tom 1937–

Czech-born English playwright

If we postulate...that within un-, sub- or supernatural forces the probability is that the law of probability will not operate as a factor, then we must accept that the probability of the first part will not operate as a factor within un-, sub- or supernatural forces. And since it obviously hasn't been doing so, we can take it that we are not held within un-, sub- or supernatural forces after all; in all probability, that is.

Rosencrantz and Guildenstern Are Dead

Act One (p. 17)

Grove Press, Inc. New York, New York, USA. 1967

The Bible

For our knowledge and our prophecy alike are partial...

The Revised English Bible

I Corinthians 13:9

Oxford University Press, Inc. Oxford, England. 1989

Tillotson, John 1630–94
Archbishop of Canterbury

Though moral certainty be sometimes taken for a high degree of probability, which can only produce a doubtful assent, yet it is also frequently used for a firm assent to a thing upon such grounds as fully satisfy a prudent man.

In S. Austin Allibone

Prose Quotations from Socrates to Macaulay

Probability

J.B. Lippincott. Philadelphia, Pennsylvania, USA. 1903

Toffler, Alvin 1928–
American writer and futurist

The management of changes is the effort to convert certain possibles into probables, in pursuit of agreed-on preferables.

Future Shock

Chapter 20 (p. 407)

Random House, Inc. New York, New York, USA. 1979

Voltaire (François-Marie Arouet) 1694–1778
French writer

From generation to generation skepticism increases; and probability diminishes; and soon probability is reduced to zero.

The Portable Voltaire

Philosophical Dictionary, Truth (p. 217)

The Viking Press. New York, New York, USA. 1959

He who has heard the thing told by twelve thousand eye-witnesses, has only twelve thousand probabilities, equal to one strong probability, which is not equal to certainty.

The Portable Voltaire

Philosophical Dictionary, Truth (p. 217)

The Viking Press. New York, New York, USA. 1959

von Clausewitz, Carl 1780–1831
Prussian soldier

In short, absolute, so-called mathematical factors never find a firm basis in military calculations. From the very start there is an interplay of possibilities, probabilities, good luck and bad that weaves its way throughout the length and breadth of the tapestry. In the whole range the human activities war most closely resembles a game of cards.

On War

Chapter 1, 21 (p. 86)

The Modern Library. New York, New York, USA. 1943

von Humboldt, Alexander 1769–1859
German naturalist and explorer

Whatever must be characterized as mere probability lies beyond the domain of physical description of the universe; science must not wander into the cloudland of cosmological dreams.

Cosmos: A Sketch of a Physical Description of the Universe (Volume 4)

Conclusion (p. 230)

Harper & Brothers. New York, New York, USA. 1869

von Mises, Richard 1883–1953
Austrian-born American mathematician

The theory of probability can never lead to a definite statement concerning a single event.

Probability, Statistics, and Truth

First Lecture (p. 33)

Dover Publications, Inc. New York, New York, USA. 1981

...if one talks of the probability that the two poems known as the Iliad and the Odyssey have the same author, no reference to a prolonged sequence of cases is possible and it hardly makes sense to assign a numerical value to such a conjecture.

Mathematical Theory of Probability and Statistics (pp. 13–14)

Academic Press. New York, New York, USA. 1964

Walker, Marshall John
American physicist

One can locate an octopus by giving the coordinates of his beak, but it would be unwise to forget that neighboring coordinates for two or three yards out in all directions have a considerable probability of being occupied by octopus at a given instant.

The Nature of Scientific Thought

Chapter V (p. 65)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1963

Whitehead, Alfred North 1861–1947
English mathematician and philosopher

...Positivistic science is solely concerned with observed fact, and must hazard no conjecture as to the future. If observed fact be all we know, then there is no other knowledge. Probability is relative to knowledge. There is no probability as to the future within the doctrine of Positivism.

Adventures of Ideas

Chapter VIII (p. 160)

The Macmillan Company. New York, New York, USA. 1956

Whyte, Lancelot Law 1896–1972
Scottish physicist

Only a certain probability remains of a one-to-one association of any spatial feature now with a similar feature a moment later. It is sheer luck, in a sense, that any physical apparatus stays put, for the laws of quantum mechanics allow it a finite, though small, probability of dispersing while one is not looking, or even while one is.

Essay on Atomism: From Democritus to 1960

Chapter 2 (pp. 25–26)

Wesleyan University Press. Middletown, Connecticut, USA. 1961

If the universe is a mingling of probability clouds spread through a cosmic eternity of space-time, how is there as much order, persistence, and coherent transformation as there is?

Essay on Atomism: From Democritus to 1960

Chapter 2 (p. 27)

Wesleyan University Press. Middletown, Connecticut, USA. 1961

Wilde, Oscar 1854–1900

Irish wit, poet, and dramatist

GILBERT: No ignoble consideration of probability, that cowardly concession to the tedious repetitions of domestic or public life, effect it ever.

Complete Writings of Oscar Wilde (p. 143)

Nottingham Society. New York, New York, USA. 1907

Wilder, Thornton 1897–1975

American playwright and novelist

Ashley had no competitive sense and no need for money, but he took great interest in the play of numbers. He drew up charts analyzing the elements of probability in the various games. He had a memory for numbers and symbols.

The Eighth Day

II. Illinois to Chile (p. 123)

Harper & Row, Publishers, New York, New York, USA. 1967

Woodward, Robert Simpson 1849–1924

American scientist and teacher

The theory of probabilities and the theory of errors now constitute a formidable body of knowledge of great mathematical interest and of great practical importance. Though developed largely through the applications to the more precise sciences of astronomy, geodesy, and physics, their range of applicability extends to all the sciences; and they are plainly destined to play an increasingly important role in the development and in the applications of the sciences of the future. Hence their study is not only a commendable element in a liberal education, but some knowledge of them is essential to a correct understanding of daily events.

Probability and Theory of Errors

Author's Preface (p. 4)

John Wiley & Sons, Inc. New York, New York, USA. 1906

PROBABLE ERROR

Russell, Bertrand Arthur William 1872–1970

English philosopher, logician, and social reformer

Who ever heard a theologian preface his creed, or a politician conclude his speech with an estimate of the probable error of his opinion.

In Edwin Hubble

The Nature of Science and Other Lectures

Part I. The Nature of Science (p. 10)

The Huntington Library. San Marino, California, USA. 1954

Student (William Sealy Gossett)

An experiment may be regarded as forming an individual of a “population” of experiments which might be

performed under the same conditions. A series of experiments is a sample drawn from this population. Now any series of experiments is only of value in so far as it enables us to form a judgment as to the statistical constants of the population to which the experiments belong. In a great number of cases the question finally turns on the value of a mean, either directly, or as the mean difference between the two quantities.

The Probable Error of a Mean

Biometrika, Volume 6, 1908

PROBLEM

Ackerman, Diane 1948–

American writer

Part of the irony of environmentalism is questing for solutions when you know you're part of the problem.

The Rarest of the Rare: Vanishing Animals, Timeless Worlds

Insect Love (p. 156)

Vintage Books. New York, New York, USA. 1997

Agnew, Ralph Palmer

American mathematician

Working a problem is like cutting down a tree and reading a problem is like looking at a tree. We spend part of our time swinging axes to develop our muscles, and we spend part of our time looking around to keep us from being dolts. The mathematical and scientific forests really are interesting, and we should all enjoy chopping and looking at the scenery.

Differential Equations

Chapter 1 (p. 6)

American civil rights leader and author

...you're either part of the solution or part of the problem.

Speech

San Francisco, 1968

Cohen, I. Bernard 1914–2003

American physicist and science historian

The fundamental postulate of the history of science is that the scientists of the past were just as intelligent as we are and that, therefore, the problems that baffled them would have baffled us too, had we been living then.

Franklin and Newton

Chapter Two (p. 39)

Harvard University Press. Cambridge, Massachusetts, USA. 1966

Collingwood, Robin George 1889–1943

English historian and philosopher

You can only solve a problem which you recognize to be a problem.

The New Leviathan; or Man, Society, Civilization and Barbarism

Part I, Chapter I, aphorism 2.66 (p. 13)

At The Clarendon Press. Oxford, England. 1942

Commoner, Barry 1917–

American biologist, ecologist, and educator

The freedom to choose his own problem is often the scientist's most precious possession.

Is Science Getting Out of Hand?

The Science Teacher, Volume 30, October 1963

Compton, Karl Taylor 1887–1954

American educator and physicist

Neither curiosity nor ingenuity is a modern impulse... The distinctive feature of science and technology at the present time is the accelerated pace of their development. This is partly due to continually improved techniques and organization, and it is partly due to the great accumulation of knowledge and art, because the more information and tools we have at our disposal, the more powerful can be the attack on any new problem.

A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949 (pp. 1–2)
Undergraduate Association, Massachusetts Institute of Technology. Cambridge, Massachusetts, USA. 1955

Condorcet, Marie Jean 1743–94
French philosopher and mathematician

If a scholar poses himself a new problem, he can attack it fortified by the pooled resources of all his predecessors.

In Maurice Daumas
Scientific Instruments of the 17th and 18th Centuries and Their Makers
Eulogy for J. de Vaucanson before the Academie of Sciences (p. 119)

Cross, Hardy 1885–1959
American professor of civil and structural engineering

In general the problems of civil engineers are given to them by God Almighty. They are the problems of nature. On the other hand mechanical and electrical work has problems which man, to a certain extent, has created for himself.

In Lenox H. Lohr
Centennial of Engineering: History and Proceedings of Symposia: 1852–1952
Professional Aspects of Mechanical Engineering (p. 150)
Centennial of Engineering, Chicago, Illinois. 1952

Douglas, A. Vibert 1894–1988
Canadian astronomer

It is a solemn thought that no man liveth unto himself. It is equally true that no star, no atom, no electron, no ripple of radiant energy, exists unto itself. All the problems of the physical universe are inextricably bound up with one another in the relations of space and time.

From *Atoms to Stars*
The Atlantic Monthly, Volume 144, August 1929 (p. 165)

Doyle, Sir Arthur Conan 1859–1930
Scottish writer

Every problem becomes very childish when once it is explained to you...

In William S. Baring-Gould (ed.)
The Annotated Sherlock Holmes (Volume 2)
The Adventure of the Dancing Men (p. 258)
Wings Books. New York, New York, USA. 1967

“My mind,” he said, “rebels at stagnation. Give me problems, give me work, give me the most abstruse cryptogram, or the most intricate analysis, and I am in my own proper atmosphere.”

In William S. Baring-Gould (ed.)
The Annotated Sherlock Holmes (Volume 1)
The Sign of the Four, Chapter 1 (p. 611)
Wings Books. New York, New York, USA. 1967

In solving a problem of this sort, the grand thing is to be able to reason backwards. That is a very useful accomplishment, and a very easy one, but people do not practice it much. In the every-day affairs of life it is more useful to reason forwards, and so the other comes to be neglected. There are fifty who can reason synthetically for one who can reason analytically.

In William S. Baring-Gould (ed.)
The Annotated Sherlock Holmes (Volume 1)
A Study in Scarlet, Chapter 14 (p. 231)
Wings Books. New York, New York, USA. 1967

It is quite a three pipe problem, and I beg that you won't speak to me for fifty minutes.

In William S. Baring-Gould (ed.)
The Annotated Sherlock Holmes (Volume 1)
The Red-Headed League (p. 428)
Wings Books. New York, New York, USA. 1967

du Preez, Peter

No biographical data available

The reason for the rapid advance of the problem-solving capacity of natural sciences is that scientists are trained to introduce theoretical variations, to test them empirically, and to preserve and propagate those innovations which survive whatever tests have been proposed.

To be aware that a problem exists is the prerequisite for any attempt to solve the problem.

The Dilemma of Innovating Societies

Chemical Engineering Education, Volume 4, Summer 1969 (p. 148)

Gould, Stephen Jay 1941–2002

American paleontologist and evolutionary biologist

...without a commitment to science and rationality in its proper domain, there can be no solution to the problems that engulf us. Still, the Yahoos never rest.

Ever Since Darwin: Reflections in Natural History

Chapter 17 (p. 146)

W.W. Norton & Company, Inc. New York, New York, USA. 1977

Halmos, Paul R. 1916–2006

Hungarian-born American mathematician

A teacher who is not always thinking about solving problems — ones he does not know the answer to — is psychologically simply not prepared to teach problem solving to his students.

I Want to Be a Mathematician

Chapter 14 (p. 322)

Springer-Verlag. New York, New York, USA. 1985

Hawkins, D.

No biographical data available

There are many things you can do with problems besides solving them. First you must define them, pose them. But then of course you can also refine them, depose them, or expose them or even dissolve them! A given problem may send you looking for analogies, and some of these may lead you astray, suggesting new and different problems, related or not to the original. Ends and means can get reversed. You had a goal, but the means you found

didn't lead to it, so you found a new goal they did lead to. It's called play. Creative mathematicians play a lot; around any problem really interesting they develop a whole cluster of analogies, of playthings.

In Necia Grant Cooper (ed.)

From Cardinals to Chaos

The Spirit of Play (p. 44)

Cambridge University Press. Cambridge, England. 1988

Heisenberg, Werner Karl 1901–76

German physicist and philosopher

...only those revolutions in science will prove fruitful and beneficial whose investigators try to change as little as possible and limit themselves to the solution of a particular and clearly defined problem. Any attempt to make a clean sweep of everything or to change things arbitrarily leads to utter confusion.

Physics and Beyond: Encounters and Conversations

Chapter 12 (p. 148)

Harper & Row, Publishers. New York, New York, USA. 1971

Heller, Joseph 1923–99

American writer

He was pinched perspiringly in the epistemological dilemma of the skeptic, unable to accept solutions to problems he was unable to dismiss as unsolvable. He was never without misery and never without hope.

Catch-22

Chapter 25 (p. 275)

Dell Publishing Company, Inc. New York, New York, USA. 1985

Herschel, Sir John Frederick William 1792–1871

English astronomer and chemist

The great problems which offer themselves on all hands for solution, problems which the wants of the age force upon us as practically interesting, and with which its intellect feels itself competent to deal, are far more complex in their conditions, and depend on data which to be of use must be accumulated in far greater masses, collected over an infinitely wider field, and worked upon with a greater and more systematized power than has sufficed for the necessities of astronomy. The collecting, arranging, and duly combining these data are operations which, to be carried out to the extent of the requirements of modern science, lie utterly beyond the reach of all private industry, mean, or enterprise. Our demands are not merely for a slight and casual sprinkling to refresh and invigorate an ornamental or luxurious product, but for a copious, steady, and well-directed stream, to call forth from a soil ready to yield it, an ample, healthful, and remunerating harvest.

Essays from the Edinburgh and Quarterly Reviews with Addresses and Other Pieces

Terrestrial Magnetism (pp. 110–111)

Longman, Brown, Green, Longmans & Roberts. London, England. 1857

Herstein, I. N.

No biographical data available

The value of a problem is not so much in coming up with the answer as in the ideas and attempted ideas it forces on the would-be solver.

Topics in Algebra

Preface (p. vi)

Xerox College Publishing. Waltham, Massachusetts, USA, 1964

Hilbert, David 1862–1943

German mathematician

As long as a branch of science offers an abundance of problems, so long is it alive; a lack of problems foreshadows extinction of the cessation of independent development. Just as every human undertaking pursues certain objects, so also mathematical research requires its problems. It is by the solution of problems that the investigator tests the temper of his steel; he finds new methods and new outlooks, and gains a wider and freer horizon.

Mathematical Problems

Bulletin of the American Mathematical Society, Volume 8, July 1902

(p. 438)

It is difficult and often impossible to judge the value of a problem correctly in advance; for the final award depends upon the gain which science obtains from the problem.

Mathematical Problems

Bulletin of the American Mathematical Society, Volume 8, July 1902

(p. 438)

Hodnett, Edward 1901–84

Illustration historian

You have to identify the real problem, and you have to identify the total problem.

The Art of Problem Solving

Part I, Chapter 2 (p. 12)

Harper & Brothers. New York, New York, USA. 1955

Problems often boil down to the simple form of a dilemma. A dilemma presents a choice of two solutions to a problem, both of which are unsatisfactory.

The Art of Problem Solving

Part II, Chapter 8 (p. 63)

Harper & Brothers. New York, New York, USA. 1955

An unstated problem cannot be solved. Many problems go unsolved for centuries for lack of adequate statement.

The Art of Problem Solving

Part I, Chapter 3 (p. 19)

Harper & Brothers. New York, New York, USA. 1955

...being able to predict which problems you are not likely to solve is good for your peace of mind.

The Art of Problem Solving

Part I, Chapter 1 (p. 6)

Harper & Brothers. New York, New York, USA. 1955

Hoyle, Sir Fred 1915–2001

English mathematician and astronomer

It is almost a matter of principle that in any difficult unsolved problem the right method of attack has not been found; failure to solve important problems is rarely due to the inadequacy in the handling of technical details.

Man in the Universe

Chapter 2 (p. 20)

Columbia University Press. New York, New York, USA. 1966

Huxley, Julian 1887–1975

English biologist, philosopher, and author

The time has gone by when the intelligent public needs to be reminded of the practical utility of science, or of the fact that the investigation of any problem, however apparently remote from everyday life, may be fraught with the most valuable consequences.

The Century Illustrated Monthly Magazine

Searching for the Elixir of Life, Volume 103, Number 4, February 1922 (p. 629)

Ingle, Dwight J. 1907–78

Biologist and endocrinologist

When you are trying to solve problems and are searching for new and creative ideas, let your mind be free-wheeling. Enjoy unbridled fancy. After you get an idea that seems important and plausible, it can be tested by evidence and reason.

Is It Really So?: A Guide to Clear Thinking

Chapter 18 (p. 129)

The Westminster Press. Philadelphia, Pennsylvania, USA. 1976

Kaplan, Abraham 1918–1993

American philosopher of science, author, and educator

Give a small boy a hammer and he will find that everything he encounters needs pounding. It comes as no particular surprise that a scientist formulates problems in a way which requires for their solution just those techniques in which he himself is skilled...

The Conduct of Inquiry: Methodology for Behavioral Science (p. 28)

Chandler Publishing Company. San Francisco, California, USA. 1964

Kettering, Charles Franklin 1876–1958

American engineer and inventor

A problem is not solved in a laboratory. It is solved in some fellow's head. All the apparatus is for is to get his head turned around so that he can see the thing right.

In T.A. Boyd

Professional Amateur

Part II Chapter XII (pp. 102–103)

E.P. Dutton & Company, Inc. New York, New York, USA. 1957

No one should pick a problem, or make a resolution, unless he realizes that the ultimate value of it will offset the inevitable discomfort and trouble that always goes along with the accomplishment of anything worth while. So let us not waste our time and effort on some trivial thing.

Short Stories of Science and Invention: A Collection of Radio Talks by

C.F. Kettering

Patience (p. 59)

General Motors. Detroit, Michigan, USA. 1955

As long as we try and patiently do our best to solve the problem, although we may not get the answer we are looking for, we always get something — even if it is only the valuable experience.

Short Stories of Science and Invention: A Collection of Radio Talks by

C.F. Kettering

Purple Dye, Sun Glasses and Malaria (p. 115)

General Motors. Detroit, Michigan, USA. 1955

But in picking that problem be sure to analyze it carefully to see that it is worth the effort. It takes just as much effort to solve a useless problem as a useful one.

Short Stories of Science and Invention: A Collection of Radio Talks by

C.F. Kettering

Research Is a State of Mind (p. 11)

General Motors, Detroit, Michigan, USA. 1955

I often think we have so many facilities that we lose track of the problem. Problems, as you know, are solved in the mind of some intensely interested person.

Short Stories of Science and Invention: A Collection of Radio Talks by

C.F. Kettering

Christmas Lecturer (p. 57)

General Motors, Detroit, Michigan, USA. 1955

Kiepenheuer, Karl

No biographical data available

For the astronomer, the inexhaustible store of problems in the world he has set out to conquer remains the real mainspring of all his arduous researches.

The Sun

Conclusion (p. 158)

The University of Michigan Press. Ann Arbor, Michigan, USA. 1959

Lewis, Gilbert Newton 1875–1946

American chemist

Indeed it seems hardly likely that much progress can be made in the solution of the difficult problems relating to chemical combination by assigning in advance definite laws of force between the positive and negative constituents of an atom, and then on the basis of these laws building up mechanical models of the atom.

The Atom and the Molecule

Journal of the American Chemical Society, Volume 38, Number 1, 1916 (p. 773)

Mach, Ernst 1838–1916

Austrian physicist and philosopher

There is no problem in all mathematics that cannot be solved by direct counting. But with the present implements of mathematics many operations can be performed in a few minutes which without mathematical methods would take a lifetime.

Popular Scientific Lectures

The Economical Nature of Physical Inquiry (p. 197)
The Open Court Publishing Company, Chicago, Illinois, USA. 1898

No man should dream of solving a great problem unless he is so thoroughly saturated with his subject that everything else sinks into comparative insignificance.

Popular Scientific Lectures

The Part Played by Accident in Invention and Discovery (pp. 273–274)
The Open Court Publishing Company, Chicago, Illinois, USA. 1898

Every real problem can and will be solved in due course without supernatural divination, entirely by accurate observation and close, searching thought.

Popular Scientific Lectures

On Sensations of Orientation (p. 308)

The Open Court Publishing Company, Chicago, Illinois, USA. 1898

Maddox, John Royden 1925–

Welsh chemist and physicist

The problems that remain unsolved are gargantuan. They will occupy our children and their children and on and on for centuries to come, perhaps even for the rest of time.

What Remains to Be Discovered

Conclusion (p. 378)

The Free Press, New York, New York, USA. 1998

Michener, James A. 1907?–97

American novelist

At NACA [fictional space agency] we solve everything eventually. That's our job, and now it's yours.... At NACA...there are no insoluble problems. Only time-consuming ones.

Space

Chapter III (p. 175)

Random House, Inc. New York, New York, USA. 1982

Nehru, Jawaharla 1889–1969

Former prime minister of India

It is science alone that can solve the problems of hunger and poverty, of insanitation and illiteracy, of superstition and deadening custom and tradition, of vast resources running to waste, of a rich country inhabited by starving people.

Speech

Proceedings of the National Institute of Science of India, Volume 27, 1960 (p. 564)

Nietzsche, Friedrich 1844–1900

German philosopher

There are dreadful people who, instead of solving a problem, complicate it for those who deal with it and make it harder to solve. Whoever does not know how to hit the nail on the head should [be] entreated not [to] hit it at all.

The Complete Works of Friedrich Nietzsche (Volume Seven)

Human, All Too Human

The Wanderer and His Shadow, Part Two, Number 326

Macmillan Publishing Company, New York, New York, USA. 1924

Oppenheimer, J. Robert 1904–67

American theoretical physicist

...we probably have no very good idea today of the range of problems that will be accessible to science.

The Flying Trapeze: Three Crises for Physicists

Space and Time (p. 2)

Oxford University Press, Inc. London, England. 1964

Pallister, William Hales 1877–1946

Canadian physician

Science solves life's problems, but she must solve them one-at-a-time. Her course and methods are evolutionary. She cannot solve insoluble problems; they must first become soluble. She grows, like every other plant, only from powdered fock, uses only the chemical constituents which are soluble.

Poems of Science

The Nature of Things (p. 14)

Playford Press, New York, New York, USA. 1931

Pearse, A. S.

No biographical data available

A scientist has his circulating medium in problems. He deals in and develops problems as a broker deals in stocks and bonds. When his problems are completed he "sells" them to the scientific world by publication, usually at his own expense.

Adventure, Romance and Science

Science, Volume 58, Number 1492, 3 August, 1923 (p. 78)

Pendry, John 1944–

English theoretical physicist

It has been said that tackling a new scientific problem is like going into a darkened room. First you fall over the furniture, then you collide with other people in the room; arguments might develop. With time things settle down, as you learn where most of the furniture is and don't fall over so often. Eventually someone finds the light switch and everything becomes obvious.

Positively Negative

Nature, Volume 423, Number 6935, May 1, 2003 (p. 22)

Poe, Edgar Allan 1809–49

American short story writer

The great problem is at length solved! The air, as well as the earth and the ocean, has been subdued by science, and will become a common and convenient highway for mankind.

In H. Beaver (ed.)

The Science Fiction of Edgar Allan Poe

The Balloon Hoax (p. 11)

Penguin Books, Hammondsworth, England. 1976

Poincaré, Henri 1854–1912

French mathematician and theoretical astronomer

To give a complete mechanical explanation of electrical phenomena, reducing the laws of physics to the fundamental principles of dynamics is a problem that has attracted many investigators.... If the problem admitted of only one solution, the possession of this solution, which would be the truth, could not be bought too dearly.

In Frederick Vreeland

Maxwell's Theory and Wireless Telegraphy. Part 1. Maxwell's Theory and Hertzian Oscillations. Part 2

Part One, Chapter I (p. 1)

McGraw Publishing Company. New York, New York, USA. 1904

Pólya, George 1887–1985

Hungarian mathematician

Solving problems is a practical art, like swimming, or skiing, or playing a piano; you can learn it only by imitation and practice...

Mathematical Discovery; or Understanding, Learning, and Teaching

Problem Solving (Volume 1)

Preface (p. v)

John Wiley & Sons, Inc. New York, New York, USA. 1966

Popper, Karl R. 1902–94

Austrian/British philosopher of science

Science never pursues the illusory aim of making its answers final or even probable. Its advance is rather toward an infinite yet attainable aim: that of ever discovering new, deeper, and more general problems.

The Logic of Scientific Discovery

Part II, Chapter X, Section 85 (p. 281)

Basic Books, Inc. New York, New York, USA. 1959

...a young scientist who hopes to make discoveries is badly advised if his teacher tells him: "Go round and observe" and...well advised if his teacher tells him: "Try to learn what people are discussing nowadays in science. Find out where difficulties arise, and take an interest in disagreements. These are the questions which you should take up." In other words, you should study the problems of the day. This means that you pick up, and try to continue, a line of inquiry which has the whole background of the earlier development of science behind it.

Conjectures and Refutations: The Growth of Scientific Knowledge

Chapter 4 (p. 129)

Harper & Row, Publishers. New York, New York, USA. 1963

...science should be visualized as progressing from problem to problem — to problems of ever increasing depth.... Problems crop up especially when we are disappointed in our expectations, or when our theories involve us in difficulties, in contradictions; and these may arise either within a theory, or between two different theories, or as the result of a clash between our theories and our observations.... Thus science starts from problems, and not from observations; though observations may give rise to a problem, especially if they are unexpected; that is to say, if they clash with our expectations or theories.

Conjectures and Refutations: The Growth of Scientific Knowledge

Chapter 10, Section VI (p. 222)

Harper & Row, Publishers. New York, New York, USA. 1963

...I think there is only one way to science — or to philosophy, for that matter: to meet a problem, to see its beauty and fall in love with it; to get married to it, and to live with it happily, till death do ye part — unless you should meet another and even more fascinating problem, or unless, indeed, you should obtain a solution. But even if you do obtain a solution, you may then discover, to your delight, the existence of a whole family of enchanting though perhaps difficult problem children for whose welfare you may work, with a purpose, to the end of your days.

Realism and the Aim of Science

Preface, 1956 (p. 8)

Rowman & Littlefield. Totowa, New Jersey, USA.

Porter, George 1920–2002

English chemist

To solve a problem is to create new problems, new knowledge immediately reveals new areas of ignorance, and the need for new experiments.

Nobel Lectures, Chemistry 1963–1970

Nobel lecture for award received in 1967

Flash Photolysis and Some of Its Applications (p. 261)

Elsevier Publishing Company. Amsterdam, Netherlands. 1972

Rabinow, Jacob 1910–99

Inventor

...the creating of the problem is as big an invention as the solving of the problem — sometimes, a much greater invention.

In Daniel V. DeSimone

Education for innovation

The Process of Invention (p. 84)

Pergamon Press. New York, New York, USA. 1968

Ramón y Cajal, Santiago 1852–1934

Spanish neuropathologist

The forging of new truth almost always requires severe abstention and renunciation. During the so-called intellectual incubation period, the investigator should ignore everything unrelated to the problem of interest, like a somnambulist attending only to the voice of the hypnotist.

Advice for a Young Investigator

Chapter 3 (p. 35)

The MIT Press. Cambridge, Massachusetts, USA. 1999

I believe that excessive admiration for the work of great minds is one of the most unfortunate preoccupations of intellectual youth — along with a conviction that certain problems cannot be attacked, let alone solved, because of one's relatively limited abilities.

Advice for a Young Investigator

Chapter 2 (p. 9)
The MIT Press. Cambridge, Massachusetts, USA. 1999

Rapoport, Anatol 1911–
Russian-born mathematician and biologist

...the problems scientists are called on to solve are for the most part selected by the scientists themselves. For example, our Department of Defense did not one day decide that it wanted an atomic bomb and then order the scientists to make one. On the contrary, it was Albert Einstein, a scientist, who told Franklin D. Roosevelt, a decision maker, that such a bomb was possible.

Science, Conflict and Society: Readings from Scientific American
The Use and Misuse of Games Theory (p. 286)
W. H. Freeman & Company. San Francisco, California, USA. 1969

Raymond, Eric S.
No biographical data available

Often, the most striking and innovative solutions come from realizing that your concept of the problem was wrong.

The Cathedral and the Bazaar: Musings on Linux and Open Source by an Accidental Revolutionary
The Cathedral and the Bazaar (p. 40)
O'Riley. Beijing, China. 2001

Rozak, Theodore 1933–
American social critic

If a problem does not have a technical solution, it must not be a real problem. It is but an illusion...a figment born of some regressive cultural tendency.

The Making of a Counter Culture: Reflections on the Technocratic Society and Its Youthful Opposition
Chapter I (p. 10)
Doubleday & Company, Inc. Garden City, New York, USA; 1969

Russell, Bertrand Arthur William 1872–1970
English philosopher, logician, and social reformer

I am sorry that I have had to leave so many problems unsolved. I always have to make this apology, but the world really is rather puzzling and I cannot help it.

In John G. Slater (ed.)
The Collected Papers of Bertrand Russell (Volume 8)
The Philosophy of Logical Atomism
Lecture V (p. 211)
George Allen & Unwin Ltd. London, England. 1986

Russell, Henry Norris 1877–1957
American astronomer

The unsolved problems of Nature have a distinctive fascination, though they still far outnumber those which have even approximately been resolved.

The Solar System and Its Origin
Chapter I (p. 1)
The Macmillan Company. New York, New York, USA. 1935

Shaw, George Bernard 1856–1950
Irish comic dramatist and literary critic

Religion is always right. Religion solves every problem and thereby abolishes problems from the Universe. Religion gives us certainty, stability, peace and the absolute. It protects us against progress which we all dread. Science is the very opposite. Science is always wrong. It never solves a problem without raising ten more problems.

In B. Patch
Thirty Years with G.B.S.
Chapter Twelve (p. 235)
Dodd, Mead & Company. New York, New York, USA. 1951

My business tonight will be very largely to raise difficulties. That is all the use I am really in this world.

The New York Times
Shaw Expounds Socialism as World Panacea
December 12, 1926

...all problems are finally scientific problems.

The Doctor's Dilemma
Preface on Doctors
The Technical Problem (p. lxxxiii)
Brentano's. New York, New York, USA. 1920

Simon, H.
No biographical data available

Problem formulation in science is to be understood by looking at the continuity of the whole stream of scientific endeavor.

In Robert G. Colodny (ed.)
Mind and Cosmos
Scientific Discovery and the Psychology of Problem Solving (p. 37)
University of Pittsburgh Press. Pittsburgh, Pennsylvania, USA. 1966

Simon, Herbert Alexander 1916–2001
American social scientist

The capacity of the human mind for formulating and solving complex problems is very small compared with the size of problems whose solution is required for objectively rational behavior in the real world — or even for a reasonable approximation to such objective rationality.

Models of Man: Social and Rational; Mathematical Essays on Rational Human Behavior in a Social Setting
Part IV (p. 198)
John Wiley & Sons, Inc. New York, New York, USA. 1957

The more difficult and novel the problem, the greater is likely to be the amount of trial and error required to find a solution. At the same time, the trial and error is not completely random or blind; it is, in fact, rather highly selective. The new expressions that are obtained by transforming given ones are examined to see whether they represent progress toward the goal. Indications of progress spur further search in the same direction; lack of progress signals the abandonment of a line of search. Problem solving requires selective trial and error.

The Sciences of the Artificial
Chapter 4 (pp. 95–96)
The MIT Press. Cambridge, Massachusetts, USA. 1969

...human problem solving, from the most blundering to the most insightful, involves nothing more than varying mixtures of trial and error and selectivity.

The Sciences of the Artificial

Chapter 4 (p. 97)

The MIT Press. Cambridge, Massachusetts, USA. 1969

Simpson, N. F. 1919–

English playwright

And suppose we solve all the problems it presents? What happens? We end up with more problems than we started with. Because that's the way problems propagate their species. A problem left to itself dries up or goes rotten. But fertilize a problem with a solution — you'll hatch out dozens.

New English Dramatists 2

A Resounding Tinkle, Act I, Scene 1 (pp. 80–81)

Penguin Books. London, England. 1960

Szent-Györgyi, Albert 1893–1986

Hungarian-born American biochemist

Somehow, problems get into my blood and they don't give me peace, they torture me. I have to get them out of my system, and there is but one way to get them out — by solving them. A problem solved is no problem at all, it just disappears.

On Scientific Creativity

Perspectives in Biology and Medicine, Volume 5, Number 2, Winter 1962 (p. 176)

Tatum, Edward 1909–75

American biochemist

As in any scientific research, a problem clearly seen is already half solved.

Nobel Lectures, Physiology or Medicine 1942–1962

Nobel lecture for award received in 1958

A Case History in Biological Research (p. 610)

Elsevier Publishing Company. Amsterdam, Netherlands. 1964

Thurstone, Louis Leon 1887–1955

American pioneer of psychometrics and psychophysics

Every scientific problem can be stated most clearly if it is thought of as a search for the nature of the relation between two definitely stated variables. Very often a scientific problem is felt and stated in other terms, but it cannot be so clearly stated in any way as when it is thought of as a function by which one variable is shown to be dependent upon or related to some other variable.

The Fundamentals of Statistics (p. 187)

The Macmillan Company. New York, New York, USA. 1925

Weil, Simone 1909–43

French philosopher and mystic

Our science is like a store filled with the most subtle intellectual devices for solving the most complex

problems, and yet we are almost incapable of applying the elementary principles of rational thought.

In George A. Panichas (Ed(ed.)

The Simone Weil Reader

The Power of Words (p. 271)

McKay. New York, New York, USA. 1977

Wiesner, Jerome Bert 1915–94

Educational administrator

Some problems are just too complicated for rational logical solutions. They admit of insights, not answers.

In D. Lang

Profiles: A Scientist's Advice, II

New Yorker, 26 January 1963

Wilson, Jr., E. Bright 1908–92

American physical chemist

Many scientists owe their greatness not to their skill in solving problems but to their wisdom in choosing them. It is therefore worth considering the points on which this choice can be based.

An Introduction to Scientific Research

Chapter 1 (p. 1)

McGraw-Hill Book Company, Inc. New York, New York USA. 1952

Yalow, Rosalyn 1921–

American medical physicist

We bequeath to you, the next generation, our knowledge but also our problems. While we still live, let us join hands, hearts and minds to work together for their solution so that your world will be better than ours and the world of your children even better.

Les Prix Nobel. The Nobel Prizes in 1977

Nobel banquet speech for award received in 1977

Nobel Foundation. Stockholm, Sweden. 1978

PROGRESS

Abbey, Edward 1927–89

American environmentalist and nature writer

[T]here is a cloud on my horizon. A small dark cloud no bigger than my hand.

Its name is progress.

Desert Solitaire

Industrial Tourism and the National Parks (p. 48)

Ballantine Books. New York, New York, USA. 1968

Words of the Wise: A Book of Russian Quotations

Translated by Vic Schneierson

Progress Publishers. Moscow, Russia. 1979

Boorstin, Daniel J. 1914–2004
American historian

One of the great obstacles to progress is not ignorance, but the illusion of knowledge.

The Discoverers

Part One, Chapter II (p. 86)

Random House, Inc. New York, New York, USA. 1983

Chernyshevsky, Nikolai Gavrilovich 1828–89
Russian socialist reformer

To renounce progress is as silly as to renounce the Earth's force of gravitation.

Compiled by V.V. Vorontsov

Words of the Wise: A Book of Russian Quotations

Translated by Vic Schneierson

Progress Publishers. Moscow, Russia. 1979

Clerke, Agnes Mary 1842–1907
Irish astronomer

Progress is the result, not so much of sudden flights of genius, as of sustained, patient, often commonplace endeavor; and the true lesson of scientific history lies in the close connection which it discloses between the most brilliant developments of knowledge and the faithful accomplishment of his daily task by each individual thinker and worker.

A Popular History of Astronomy During the Nineteenth Century

Part I, Chapter VI (p. 108)

A. & C. Black. London, England. 1908

Curie, Marie Sklodowska 1867–1934
Polish-born French physical chemist

...I was taught that the way of progress is neither swift nor easy...

Pierre Curie

Autobiographical Notes

Chapter I (p. 167)

The Macmillan Company. New York, New York, USA. 1926

Eddington, Sir Arthur Stanley 1882–1944
English astronomer, physicist, and mathematician

The knowledge that progress will inevitably lead to a readjustment of ideas must instill a writer with caution; but I believe that excessive caution is not to be desired. There can be no harm in building hypotheses, and weaving explanations which seem best fitted to our present partial knowledge. These are not idle speculations if they help us, even temporarily, to grasp the relations of scattered facts, and to organise our knowledge.

Stellar Movements and the Structure of the Universe

Preface (p. v)

Macmillan & Company Ltd. London, England. 1914

Feyerabend, Paul K. 1924–94
Austrian-born American philosopher of science

The only principle that does not inhibit progress is: Anything goes.

Against Method: Outline of an Anarchistic Theory of Knowledge

Chapter I (p. 23)

Verso. London, England. 1978

Galton, Sir Francis 1822–1911
English anthropologist, explorer, and statistician

If we summon before our imagination in a single mighty host, the whole number of living things from the earliest date at which terrestrial life can be deemed to have probably existed, to the latest future at which we may think it can probably continue, and if we cease to dwell on the mis-carriages of individual lives or single generations, we shall plainly perceive that the actual tenantry of the world progresses in a direction that may in some sense be described as the greatest happiness of the greatest number.

Inquiries into Human Faculty and Its Development

The Observed Order of Events (pp. 194–195)

AMS Press. New York, New York, USA. 1973

Goddard, Robert H. 1882–1945
American physicist

How many more years I shall be able to work on the problem, I do not know; I hope, as long as I live. There can be no thought of finishing, for "aiming at the stars," both literally and figuratively, is a problem to occupy generations, so that no matter how much progress one makes, there is always the thrill of just beginning.

The Papers of Robert H. Goddard (Volume 2)

R.H. Goddard to H.G. Wells

April 20, 1932 (p. 823)

McGraw-Hill Book Company. New York, New York, USA. 1970

Jastrow, Joseph 1863–1944
Polish-born psychologist

Mind in the making follows no straightforward progression; its many wanderings in the quest for truth compose a cyclopedia of error and vain solutions far more than orderly annals of successful advance.

In Joseph Jastrow (ed.)

The Story of Human Error

Introduction (p. 2)

D. Appleton-Century Company, Inc. New York, New York, USA. 1936

Lavrov, Pyotr
No biographical data available

The physical, intellectual, and ethical development of the personality and the embodiment of truth and justice in social forms — this, it seems to me, is the brief formula that encompasses everything we can regard as progress.

Compiled by V.V. Vorontsov

Words of the Wise: A Book of Russian Quotations

Translated by Vic Schneierson

Progress Publishers. Moscow, Russia. 1979

Lawrence, Ernest 1901–58
American physicist

No individual is alone responsible for a single stepping stone along the path of progress, and where the path is smooth progress is most rapid.

Les Prix Nobel. The Nobel Prizes in 1939

Nobel banquet speech for award received in 1939
Nobel Foundation. Stockholm, Sweden. 1940

Lodge, Sir Oliver 1851–1940
English physicist

The present is an epoch of astounding activity in physical science. Progress is a thing of months and weeks, almost days. The long line of isolated ripples of past discovery seen blending into a might wave, on the crest of which one begins to discern some oncoming magnificent generalization. The suspense is becoming feverish, at times almost painful. One feels like a boy who has been long strumming on the silent keyboard of a deserted organ, into the chest of which an unseen power begins to blow a vivifying breath.

Modern View of Electricity

Lecture III

The Discharge of a Leyden Jar (pp. 382–382)
Macmillan & Company Ltd. London, England. 1889

Medawar, Sir Peter Brian 1915–87
Brazilian-born English zoologist

To deride the hope of progress is the ultimate fatuity, the last word in poverty of spirit and meanness of mind.

The Hope of Progress

Introduction (p. 1)

Anchor Books. Garden City, New York, USA. 1973

Nirenberg, Marshall W. 1927–
American biochemist and geneticist

One individual alone creates only a note or so that blends with those produced by others.

Les Prix Nobel. The Nobel Prizes in 1968

Nobel banquet speech for award received in 1968
Nobel Foundation. Stockholm, Sweden. 1969

Poincaré, Lucien 1862–1920
French physicist

There are no limits to progress, and the field of our investigations has no boundaries. Evolution will continue with invincible force. What we today call the unknowable, will retreat further and further before science, which will never stay her onward march. Thus physics will give greater and increasing satisfaction to the mind by furnishing new interpretations of phenomena; but it will accomplish, for the whole of society, more valuable work still, by rendering, by the improvements it suggests, life every day more easy and more agreeable, and by providing mankind with weapons against the hostile forces of Nature.

The New Physics and Its Evolution

Chapter XI (p. 328)

Kegan Paul, Trench, Trubner & Company Ltd. London, England. 1907

Ramsay, Sir William 1852–1916
English chemist

Progress is made by trial and failure; the failures are generally a hundred times more numerous than the successes; yet they are usually left unchronicled.

Essays Biographical and Chemical

Chemical Essays

Radium and Its Products (p. 179)

Archibald Constable & Company Ltd. London, England. 1908

Sarton, George 1884–1956
Belgian-born American scholar and writer

The history of science is the only history which can illustrate the progress of mankind. In fact, progress has no definite and unquestionable meaning in fields other than the fields of science.

The Study of The History of Science (p. 5)

Harvard University Press. Cambridge, Massachusetts, USA. 1936

The saints of today are not necessarily more saintly than those of a thousand years ago; our artists are not necessarily greater than those of early Greece; they are likely to be inferior; and, of course, our men of science are not necessarily more intelligent than those of old; yet one thing is certain, their knowledge is at once more extensive and more accurate. The acquisition and systemization of positive knowledge is the only human activity that is truly cumulative and progressive.

Introduction to the History of Science (Volume 1)

Introductory Chapter (p. 3)

The Williams & Wilkins Company. Baltimore, Maryland, USA. 1927

Schmidt, O. Y.

No biographical data available

There can be no progress in science and education in the absence of political progress.

Compiled by V.V. Vorontsov

Words of the Wise: A Book of Russian Quotations

Translated by Vic Schneiererson

Progress Publishers. Moscow, Russia. 1979

Serres, Michel 1930–
French philosopher

But, irresistibly, I cannot help thinking that this idea is the equivalent of those ancient diagrams we laugh at today, which place the Earth at the center of everything, or our galaxy at the middle of the universe, to satisfy our narcissism. Just as in space we situate ourselves at the center, at the navel of things in the universe, so for time, through progress, we never cease to be at the summit, on the cutting edge, at the state-of-the-art of development. It follows that we are always right, for the simple, banal, and

naïve reason that we are living in the present moment. The curve traced by the idea of progress thus seems to me to sketch or project into time the vanity and fatuousness expressed spatially by that central position. Instead of inhabiting the heart or the middle of the world, we are sojourning at the summit, the height, the best of truth.

Conversations on Science, Culture, and Time

Second Conversation

Method (pp. 48–49)

The University of Michigan Press. Ann Arbor, Michigan, USA. 1995

Shaw, George Bernard 1856–1950

Irish comic dramatist and literary critic

Sir Patrick: Lord! Yes. Modern science is a wonderful thing. Look at your great discovery! Look at all the great discoveries! Where are they leading to? Why, right back to my poor dear old father's ideas and discoveries. He's been dead now over forth years. Oh, it's very interesting.

Ridgton: Well, there's nothing like progress, is there?

The Doctor's Dilemma

Act I (p. 11)

Brentano's. New York, New York, USA. 1909

Stoppard, Tom 1937–

Czech-born English playwright

Don't confuse progress with perfectibility. A great poet is always timely. A great philosopher is an urgent need. There's no rush for Isaac Newton. We were quite happy with Aristotle's cosmos. Personally, I preferred it. Fifty-five crystal spheres geared to God's crankshaft is my idea of a satisfying universe.

Arcadia

Act II, Scene Five (p. 61)

Faber & Faber Ltd. London, England. 1993

von Liebig, Justus 1803–73

German organic chemist

To resolve an enigma, we must have a perfectly clear conception of the problem. there are many ways to the highest pinnacle of a mountain, but those only can hope to reach it who keep the summit constantly in view. All our labour and all our efforts, if we strive to attain it through a morass, only serve to cover it more completely with mud; our progress is impeded by difficulties of our own creation, and at last even the greatest strength must give way when so absolutely wasted.

Animal Chemistry

Part II

The Metamorphosis of Tissues (p. 125)

Johnson Reprint Corporation. New York, New York, USA. 1964

Walker, Kenneth 1882–1966

No biographical data available

We travel through life with so much mental luggage that it is advisable occasionally to pause and take stock of it

in order that we may get rid of those ideas which impede our progress.

Meaning and Purpose

Chapter I (p. 14)

Jonathan Cape. London, England. 1944

Whitehead, Alfred North 1861–1947

English mathematician and philosopher

Too many apples from the tree of systematized knowledge lead to the fall of progress.

Modes of Thought

Chapter I, Lecture Three (p. 79)

The Macmillan Company. New York, New York, USA. 1938

PROOF

Auster, Paul 1947–

American writer

I had made an empirical discovery and it carried all the weight of a mathematical proof.

The Book of Illusions (pp. 9–10)

Picador. New York, New York, USA. 2002

Bell, E. T. (Eric Temple) 1883–1960

Scottish-American mathematician and educator

There is a sharp disagreement among competent men as to what can be proved and what cannot be proved, as well as an irreconcilable divergence of opinions as to what is sense and what is nonsense.

Debunking Science (p. 18)

University of Washington Book Store. Seattle, Washington, USA. 1930

Bernal, John Desmond 1901–71

Irish-born physicist and x-ray crystallographer

...the cardinal rule in science is that a statement must be provable — but that does not mean that it has to be proved now.

In S.W. Fox (ed.)

The Origins of Prebiological Systems and of Their Molecular Matrices

The Folly of Probability, Discussion (pp. 53–55)

English poet, painter, and engraver

What is now proved was once only imagined.

The Complete Poetry and Prose of William Blake

The Marriage of Heaven and Hell

University of California Press. Berkeley, California, USA. 1982

Buchanan, Scott 1895–1968

American educator and philosopher

The best proofs in mathematics are short and crisp like epigrams, and the longest have swings and rhythms that are like music.

Poetry and Mathematics

Chapter 1 (p. 36)
The University of Chicago Press. Chicago, Illinois, USA. 1975

Cabell, James Branch 1879–1958
American essayist and novelist

“But I can prove it by mathematics, quite irrefutably. I can prove anything you require of me by whatever means you may prefer,” said Jurgen, modestly, “for the simple reason that I am a monstrous clever fellow.”

Jurgen: A Comedy of Justice
Chapter 32 (p. 236)
Robert M. McBride & Company. New York, New York, USA. 1925

Davis, Philip J. 1923–
American mathematician

Hersh, Reuben 1927–
American mathematician

Proof serves many purposes simultaneously.... Proof is respectability. Proof is the seal of authority. Proof, in its best instance, increases understanding by revealing the heart of the matter. Proof suggests new mathematics.... Proof is mathematical power, the electric voltage of the subject which vitalizes the static assertions of the theorems.

The Mathematical Experience
Proof (p. 151)
Birkhäuser. Boston, Massachusetts, USA. 1981

Proof is for cosmetic purposes and also to reduce somewhat the edge of insecurity on which one always lives.

The Mathematical Experience
A Physical Look at Mathematics (p. 48)
Birkhäuser. Boston, Massachusetts, USA. 1981

He rests his faith on rigorous proof; he believes that the difference between a correct proof and an incorrect one is an unmistakable and decisive difference. He can think of no condemnation more damning than to say of a student, “He doesn’t even know what a proof is.”

The Mathematical Experience
The Ideal Mathematician (p. 34)
Birkhäuser. Boston, Massachusetts, USA. 1981

de Morgan, Augustus 1806–71
English mathematician and logician

Would Mathematics — forsooth —
If true, have failed to prove truth?
Would not they — if they could — submit
Some overwhelming proofs of it?

A Budget of Paradoxes
The Moon’s Rotation (p. 262)
Longmans, Green. London, England. 1872

Proof requires a person who can give and a person who can receive....

A Budget of Paradoxes
The Moon’s Rotation (p. 262)
Longmans, Green. London, England. 1872

Dedekind, Richard 1831–1916
German mathematician

In science nothing capable of proof ought to be accepted without proof.

Translated by Wooster Woodruff Beman
Essays on the Theory of Numbers
The Nature and Meaning of Numbers
Preface to the First Edition (p. 31)
The Open Court Publishing Company. Chicago, Illinois, USA. 1901

A Course in Mathematical Logic (p. 51)

Springer-Verlag. New York, New York, USA. 1977

Nicholas Bourbaki

Mathematical discussion group

Indeed every mathematician knows that a proof has not been “understood” if one has done nothing more than verify step by step the correctness of the deductions of which it is composed and has not tried to gain a clear insight into the ideas which have led to the construction of this particular chain of deductions in preference to every other one.

Quoted in Douglas M. Campbell and John C. Higgins

Mathematics: People, Problems, Results (Volume 3)

In Richard A. De Millo, Richard J. Lipton and Alan J. Perlos

Social Processes and Proofs of Theorems and Programs (p. 25)

Wadsworth, Inc. Belmont, California, USA. 1984

Pearson, Karl 1857–1936

English mathematician

... we must remember that because a proposition has not yet been proved, we have no right to infer that its converse must be true.

The Grammar of Science

Chapter IV, Section 17 (p. 179)

Charles Scribner's Sons. London, England. 1892

Platt, John R.

No biographical data available

There is no such thing as proof in science — because some later alternative explanation may be as good or

better — so that science advances only by disproofs. There is no point in making hypotheses that are not falsifiable, because such hypotheses do not say anything: it must be possible for an empirical scientific system to be refuted by experience.

Strong Inference

Science, Volume 146, Number 3641, 16 October 1964 (p. 350)

Shakespeare, William 1564–1616

English poet, playwright, and actor

Be sure of it: give me the ocular proof...

In *Great Books of the Western World* (Volume 27)

Othello, The Moor of Venice

Act III, Scene iii, l. 360

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

And this may help to thicken other proofs

That do demonstrate thinly.

In *Great Books of the Western World* (Volume 27)

The Plays and Sonnets of William Shakespeare (Volume 2)

Othello, The Moor of Venice

Act III, Scene iii, l. 429–431

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Stewart, Ian 1945–

English mathematician and science writer

Proofs knit the fabric of mathematics together, and if a single thread is weak, the entire fabric may unravel.

Nature's Numbers: The Unreal Reality of Mathematical Imagination

Chapter 3 (p. 45)

Basic Books, Inc. New York, New York, USA. 1995

An intuitive proof allows you to understand why the theorem must be true; the logic merely provides firm grounds to show that it is true.

Concepts of Modern Mathematics

Chapter 1 (p. 5)

Dover Publications, Inc. New York, New York, USA. 1995

Sylvester, James Joseph 1814–97

English mathematician

Divide et impera: is as true in algebra as in statecraft; but no less true and even more fertile is the maxim *auge et impera*. The more to do or to prove, the easier the doing or the proof.

The Collected Mathematical Papers of James Joseph Sylvester (Volume 3)

Proof of the Fundamental Theorem of Invariants (1878) (p. 126)

At The University Press. Cambridge, England. 1904–1912

It always seems to me absurd to speak of a complete proof, or of a theorem being rigorously demonstrated. An incomplete proof is no proof, and a mathematical truth not rigorously demonstrated is not demonstrated at all.

The Collected Mathematical Papers of James Joseph Sylvester (Volume 2) (p. 200)

At The University Press. Cambridge, England. 1904–12

Truzzi, Marcello 1935–2003
Danish-born American sociology professor

And when such claims are extraordinary, that is, revolutionary in their implications for established scientific generalizations already accumulated and verified, we must demand extraordinary proof.

Editorial
Zetetic Scholar, Volume 1, Number 1, Fall/Winter 1976 (p. 4)

Tymoczko, Thomas 1943–86
Logician

A proof is a construction that can be looked over, reviewed, verified by a rational agent. We often say that a proof must be perspicuous or capable of being checked by hand. It is an exhibition, a derivation of the conclusion, and it needs nothing outside itself to be convincing. The mathematician surveys the proof in its entirety and thereby comes to know the conclusion.

A teacher once, having some fun,
In presenting that two equals one,
Remained quite aloof

From his rigorous proof;
But his class was convinced and undone.

Mathematical Magazine, Volume 64, Number 2, April 1991 (p. 91)

PROPHECY

Clarke, Arthur C. 1917–
English science and science fiction writer

With monotonous regularity, apparently competent men have laid down the law about what is technically possible or impossible — and have been proved utterly wrong, sometimes while the ink was scarcely dry from their pens.

Profiles of the Future: An Inquiry into the Limits of the Possible
Chapter 1 (p. 1)
Harper & Row, Publishers. New York, New York, USA. 1973

Before one attempts to set up in business as a prophet, it is instructive to see what success others have made of this

dangerous occupation — and it is even more instructive to see where they have failed.

Profiles of the Future: An Inquiry into the Limits of the Possible
Chapter 1 (p. 1)
Harper & Row, Publishers. New York, New York, USA. 1973

PROPOSITION

Keyser, Cassius Jackson 1862–1947
American mathematician

If he contend, as sometimes he will contend, that he has defined all his terms and proved all his propositions, then either he is a performer of logical miracles or he is an ass; and, as you know, logical miracles are impossible.

Mathematical Philosophy: A Study of Fate and Freedom

Russell, Bertrand Arthur William 1872–1970
English philosopher, logician, and social reformer

The belief or unconscious conviction that all propositions are of the subject-predicate form — in other words, that every fact consists in some thing having some quality — has rendered most philosophers incapable of giving any account of the world of science and daily life.

Our Knowledge of the External World
Lecture II (p. 45)
The Open Court Publishing Company. Chicago, Illinois. 1914

...I wish to propose for the reader's favourable consideration a doctrine which may, I fear, appear wildly paradoxical and subversive. The doctrine in question is this: that it is undesirable to believe a proposition when there is no ground whatever for supposing it true...

Skeptical Essays
Chapter I (p. 11)
W.W. Norton & Company, Inc. New York, New York, USA. 1928

Shaw, George Bernard 1856–1950
Irish comic dramatist and literary critic

My method for examining any proposition is to take its two extremes, both of them impracticable; make a scale between them; and try to determine at what point on the scale it can best be put into practice. A mother who has to determine the temperature of her baby's bath has two fixed limits to work between. The baby must not be boiled and must not be frozen.

Everybody's Political What's What?
Chapter 20 (p. 162)
Dodd, Mead & Company. New York, New York, USA. 1944

Whitehead, Alfred North 1861–1947
English mathematician and philosopher

It is more important that a proposition be interesting than that it be true. This statement is almost a tautology. For the energy of operation of a proposition in an occasion of experience is its interest and is its importance. But of

course a true proposition is more apt to be interesting than a false one.

Process and Reality: An Essay in Cosmology
Part III, Chapter IV, Section II (pp. 395–396)
The Macmillan Company. New York, New York, USA. 1929

PROTON

Ball, Philip 1962–
English science writer

As far as atoms are concerned, protons and electrons are like knives and forks at the dinner table; no matter how big the table, there are equal numbers of each.

Life's Matrix: A Biography of Water
Part One, Chapter 1 (p. 7)
Farrar, Straus & Giroux. New York, New York, USA. 2000

Dyson, Freeman J. 1923–
American physicist and educator

The most serious uncertainty affecting the ultimate fate of the universe is the question whether the proton is absolutely stable against decay into lighter particles. If the proton is unstable, all matter is transitory and must dissolve into radiation.

Time Without End: Physics and Biology in an Open Universe
Reviews of Modern Physics, Volume 51, Number 3, July 1979

PROTOPLASM

Bradley, Jr., John Hodgdon 1898–1962
American geologist

Life carries on. Through all the tortures inflicted by a changing earth, through glacial cold and desert thirst, through flood and famine, the protoplasm has climbed with unabating vigor toward the future.

Parade of the Living
Part III, Chapter XVIII (p. 248)
Coward-McCann, Inc. New York, New York, USA. 1930

PROVINCIAL REGION

Forbes, Edward 1815–54
English naturalist

Everyone knows that the same animals and plants are not found everywhere...but that they are distributed so as to be gathered together in distinct zoological and botanical provinces, of greater or less extent, according to their degree of limitation by physical conditions, whether features of the earth's outline or climate.

The Natural History of the European Seas
Chapter I (p. 1)

On the purity of substances depends the perfection of the whole.

In Mary Elvira Weeks
The Discovery of the Elements (p. 407)
Journal of Chemical Education. Easton Pennsylvania, USA. 1956

PURPOSE

Einstein, Albert 1879–1955
German-born physicist

How strange is the lot of us mortals! Each of us is here for a brief sojourn; for what purpose he knows not, though he sometimes thinks he senses it. But without deeper reflection one knows from daily life that one exists for other people — first of all for those upon whose smiles and well-being our own happiness is wholly dependent, and then for the many, unknown to us, to whose destinies we are bound by the ties of sympathy. A hundred times every day I remind myself that my inner and outer life are based on the labors of other men, living and dead, and that I must exert myself in order to give in the same measure as I have received and am still receiving.

Ideas and Opinions

The World as I See It (p. 8)

Crown Publishers, Inc. New York, New York, USA. 1954

Townson, Robert 1763–1827

Australian scholar and scientist

Plan and design are in all Nature's works, though universal discord and confusion seem to prevail, and though certain ruin awaits her fairest productions.

Q

QUACK

Aesop ca. 620 BCE–560 BCE
Greek fabulist and author

A frog once upon a time came forth from his home in the marsh and proclaimed to all the beasts that he was a learned physician, skilled in the use of drugs and able to heal all diseases. A Fox asked him, “How can you pretend to prescribe for others when you are unable to heal your own lame gait and wrinkled skin?”

The Quack Frog

SeaStar Books. New York, New York, USA. 2000

Ames, Nathaniel 1708–64
American almanac maker

Where silly quacks are most respected, there honest doctors are neglected. Petty Attorneys and Quack Doctors are like Wolves and scabbed Sheep among the Flock. One devours and the other breeds the rot.

An Astronomical Diary, or, an Almanack for...1734

Printed for the Booksellers and sold at their shops. Boston, Massachusetts, USA. 1734

Bernstein, Al
American writer and stage performer

You can usually tell a quack doctor by his bill.

Quote, the Weekly Digest, July 28, 1968 (p. 77)

Bishop, Samuel
No biographical data available

When quacks, as quacks may by good luck, to be sure,
Blunder out at haphazard a desperate cure,
In the prints of the day, with due pomp and parade,
Case, patient, and doctor are amply display’d.
And this is quite just — and no mortal can blame it;
If they save a man’s life, they’ve a right to proclaim it
But there’s reason to think they might save more lives still,

Did they publish a list of the numbers they kill!

In William Davenport Adams

English Epigrams

Audi Alteram Partem, cclxxxv

G. Routledge. London, England. 1878

Clowes, William 1540–1604
Surgeon and medical author

Yea, nowadays, it is too apparent to see how tinkers, tooth-drawers, peddlers, ostlers, carters, porters, horse-gelders, and horse-leeches, idiots, apple-squires, broom-men, bawds, witches, conjurers, soothsayers and sow-gelders, rogues, ratcatchers, runagates and proctors of Spittlehouses, with

such other like rotten and stinking weeds do in town and country, without order, honesty or skill, daily abuse both Physic and Surgery, having no more perseverance, reason or knowledge in this art than has a goose, but only a certain blind practice, without wisdom or judgment, and most commonly use one remedy for all diseases and one way of curing to all persons, both old and young, men, and women and children, which is as possible to perform or to be true as for a shoemaker with one last to make a shoe fit for every man’s foot, and this is one principal cause [why] so many perish.

Selected Writings

Of Blind Buzzards and Cracking Cumbatters (pp. 77–78)

Harvey & Blythe. London, England. 1948

Colton, Charles Caleb 1780–1832
English sportsman and writer

It is better to have recourse to a quack, if he can cure the disorder, although he cannot explain it, than to a physician, if he can explain our disease, but cannot cure it.

Lacon; or Many Things in a Few Words

1:170

William Gowans. New York, New York, USA. 1849

Crabbe, George 1754–1832
English poet

A potent quack, long versed in human ills,
Who first insults the victim whom he kills...

The Poetical Works of George Crabbe

The Village L. 282–283 (p. 15)

Oxford University Press, Inc. London, England. 1908

Graves, Richard
No biographical data available

A doctor, who, for want of skill,
Did sometimes cure — and sometimes kill;
Contriv’d at length, by many a puff,
And many a bottle fill’d with stuff,
To raise his fortune, and his pride;
And in a coach, forsooth! must ride.
His family coat long since worn out,
What arms to take, was all the doubt.
A friend, consulted on the case,
Thus answer’d with a sly grimace:
“Take some device in your own way,
Neither too solemn nor too gay;
Three ducks, suppose; white, grey, or black;
And let your motto be, Quack! quack!”

In William Davenport Adams

English Epigrams

A Doctor’s Motto, cclxxxi

G. Routledge. London, England. 1878

Hood, Thomas 1799–1845
English poet and editor

Not one of these self-constituted saints,
Quacks — not physicians — in the cure of souls.

The Complete Poetical Works of Thomas Hood
Ode to Rae Wilson ESQ.
Greenwood Press, Publishers. Westport, Connecticut, USA. 1980

Jenner, Edward 1749–1823
English physician

I've dispatc'd, my dear madam, this scrap of a letter,
To say that Miss —
— is very much better.

A Regular Doctor no longer she lacks,
And therefore I've sent her a couple of Quacks.

In William Davenport Adams

English Epigrams

Sent to a Patient, with the Present of a Couple of Ducks, cclxxiii
G. Routledge. London, England. 1878

Lydston, George Frank 1858–1923
American urologist

The quack doesn't find out what the matter is but, to the patient's cost, he does find a lot of things that do not exist, and all because the reputable physician flouted as imaginary conditions which, to the patient's sensitive and morbid mind, are always terribly real.

Sexual Neurasthenia and the Prostate

Medical Record, Volume 81, 1912

Massinger, Philip 1583–1640
English dramatic poet

Out, you impostors!
Quacksalving, cheating mountebanks! your skill
Is to make sound men sick, and sick men kill.

The Plays of Philip Massinger (Volume 1)

The Virgin-Martyr, Act IV, Scene I (p. 78)

G. & W. Nicol. London, England. 1805

Shaw, George Bernard 1856–1950
Irish comic dramatist and literary critic

Did I hear from the fireside armchair the bow-wow of the old school defending its drugs? Ah, believe me, Paddy, the world would be healthier if every chemist's shop in England were demolished. Look at the papers! full of scandalous advertisements of patent medicines! a huge commercial system of quackery and poison. Well, whose fault is it? Ours. I say, ours. We set the example. We spread the superstition. We taught the people to believe in bottles of doctor's stuff; and now they buy it at the stores instead of consulting a medical man.

The Doctor's Dilemma

Act I (p. 27)

Brentano's. New York, New York, USA. 1920

Wycherley, William 1640–1760
English dramatist

A quack is as fit for a pimp as a midwife for a bawd: they are still but in their way, both helpers of nature.

The Country Wife

Act 1 (p. 5)
Random House, Inc. New York, New York, USA. 19—

QUALITIES

Darwin, Charles Robert 1809–82
English naturalist

I am inclined to agree with Francis Galton in believing that education and environment produce only a small effect on the mind of any one, and that most of our qualities are innate.

In Francis Darwin (ed.)

The Life and Letters of Charles Darwin (Volume 1)

Chapter I (p. 21)

D. Appleton & Company. New York, New York, USA. 1896

Gregory, Sir Richard Arman 1864–1952
British science writer and journalist

The only qualifications required for the study of Nature's story-book are devotion to truth, and sincerity of spirit; all the other qualities will come to the possessor of these, and a habit of mind will be developed that tries to face all facts squarely and honestly, despises shams and false conventions, and exposes superstition whenever it is encountered.

Discovery; or, The Spirit and Service of Science

Chapter III (p. 44)

Macmillan & Company Ltd. London, England. 1918

QUANTIFICATION

Platt, John R.
No biographical data available

Today we preach that science is not science unless it is quantitative. We substitute correlation for causal studies., and physical equations for organic reasoning. Measurements and equations are supposed to sharpen thinking, but...they more often tend to make the thinking non-causal and fuzzy.

Strong Inference

Science, Volume 146, Number 3641, 16 October 1964 (pp. 351–352)

Sagan, Carl 1934–96
American astronomer and author

Quantify. If whatever it is you're explaining has some measure, some numerical quantity attached to it, you'll be much better able to discriminate among competing hypotheses. What is vague and qualitative is open to many explanations.

The Demon-Haunted World: Science as a Candle in the Dark

Chapter 12 (p. 211)

Random House, Inc. New York, New York, USA. 1995

Whitehead, Alfred North 1861–1947
English mathematician and philosopher

Elegant intellects which despise the theory of quantity are but half developed.

The Aims of Education

Presidential Address

Mathematical Association of England, 1916

QUANTUM MECHANICS

Abbey, Edward 1927–89

American environmentalist and nature writer

Quantum mechanics provides us with an approximate, plausible, conjectural explanation of what actually is, or was, or may be taking place inside a cyclotron during a dark night in February.

A Voice Crying in the Wilderness: Notes from a Secret Journal

Chapter 10 (p. 93)

St. Martin's Press. New York, New York, USA. 1989

Barrow, John D. 1952–

English theoretical physicist

We live in the in-between world...betwixt the "devil" of the quantum world and the "deep blue sea" of curved space.

The World Within The World (p. 161)

Clarendon Press. Oxford, England. 1988

Belinfante, Frederik Jozef 1913–1991

Dutch-born American physicist

If I get the impression that Nature itself makes the decisive choice what possibility to realize, where quantum theory says that more than one outcome is possible, then I am ascribing personality to Nature, that is to something that is always everywhere. Omnipresent eternal personality which is omnipotent in taking the decisions that are left undetermined by physical law is exactly what in the language of religion is called God.

In John D. Barrow

The World Within the World (p. 157)

Clarendon Press. Oxford, England. 1988

Bohr, Niels Henrik David 1886–1962

Danish physicist

Anyone who is not shocked by quantum theory has not understood it.

In N.C. Panda

Maya in Physics (p. 73)

Motilal Banarsdass Publishers. Delhi, India. 1991

If anybody says he can think about quantum problems without getting giddy, that only shows he has not understood the first thing about them.

In Ruth Moore

Niels Bohr (p. 127)

MIT Press. Cambridge, Massachusetts, USA. 1985

There is no quantum world. There is only an abstract quantum physical description. It is wrong to think that

the task of physics is to find out how nature is. Physics concerns what we can say about nature.

The Philosophy of Niels Bohr

Bulletin of the Atomic Scientists, Volume 19, Number 7, September

1963 (p. 12)

...the fundamental postulate of the indivisibility of the quantum is itself from the classical point of view, an irrational element which inevitably requires us to forgo a causal mode of description and which, because of the coupling between phenomena and their observation, forces us to adopt a new mode of description designated as complementary in the sense that any given application of classical concepts precludes the simultaneous use of other classical concepts which in a different connection are equally necessary for the elucidation of the phenomena.

Atomic Theory and the Description of Nature

Introductory Survey (p. 10)

Cambridge University Press. Cambridge, England. 1934

Born, Max 1882–1970

German-born English physicist

[In quantum mechanics] we have the paradoxical situation that observable events obey laws of chance, but that the probability for these events itself spreads according to laws which are in all essential features causal laws.

Natural Philosophy of Cause and Chance

Chapter IX (p. 103)

At The Clarendon Press. Oxford, England. 1949

Bridgman, Percy Williams 1882–1961

American physicist

The explanatory crisis which now confronts us in relativity and quantum phenomena is but a repetition of what has occurred many times in the past.... Every kitten is confronted with such a crisis at the end of nine days.

The Logic of Modern Physics

Chapter II (p. 42)

The Macmillan Company. New York, New York, USA. 1927

Calvin, William H. 1939–

Theoretical neurophysiologist

Quantum mechanics is probably essential to consciousness in about the same way as crystals were once essential to radios, or spark plugs are still essential to traffic jams. Necessary, but not sufficient.

How Brains Think: Evolving Intelligence, Then and Now

Chapter 3 (p. 36)

Basic Books, Inc. New York, New York, USA. 1996

Captain Janeway

Fictional character

Who wanted to muck around in the dirt when you could be studying quantum mechanics?

STAR TREK: Voyager

Resolutions

Television program
Season 2, 1996

Cole, K. C. 1946–
American science writer

The introduction of quantum theory in the early 1920s marked one of the greatest revolutions in all of physical science. It could not (cannot) adequately be described in metaphors borrowed from our previous view of reality, because many of those metaphors no longer apply. This inability to imagine quantum goings-on led to the popular perception that the realm of the inner atom is fuzzy, elusive, murky, and uncertain. On the contrary, most physicists would agree that what quantum theory has brought to science is exactly the opposite — concreteness and clarity.

First You Build a Cloud and Other Reflections on Physics as a Way of Life

Chapter Seven (p. 113)
Harcourt Brace & Company, New York, New York, USA. 1999

DeWitt, Bryce 1923–2004
American theoretical physicist

Graham, Neill

No biographical data available

No development of modern science has had a more profound impact on human thinking than the advent of quantum theory. Wrenched out of centuries-old thought patterns, physicists of generation ago found themselves compelled to embrace a new metaphysics. The distress which the reorientation caused continues to the present day. Basically physicists have suffered a severe loss: their hold on reality.

Resource IQM-1 on the Interpretation of Quantum Mechanics
American Journal of Physics, Volume 39, 1971

Dirac, Paul Adrian Maurice 1902–84
English theoretical physicist

...the main object of physical science is not the provision of pictures, but in the formulation of laws governing phenomena and the application of these laws to the discovery of new phenomena. If a picture exists, so much the better; but whether a picture exists or not is a matter of only secondary importance. In the case of atomic phenomena no picture can be expected to exist in the usual sense of the word “picture,” by which is meant to model functioning essentially on classical lines. One may extend the meaning of the word “picture” to include any way of looking at the fundamental laws which make their self-consistency obvious. With this extension, one may acquire a picture of atomic phenomena by becoming familiar with the laws of quantum theory.

The Principles of Quantum Mechanics (2nd edition)
Chapter I, Section 4 (p. 10)
At The Clarendon Press, Oxford, England. 1935

Dyson, Freeman J. 1923–
American physicist and educator

...Dick Feynman told me about his “sum over histories” version of quantum mechanics. “The electron does anything it likes,” he said. “It goes in any direction at any speed, forward or backward in time, however it likes, and then you add up the amplitudes and it gives you the wave function.” I said to him, “You’re crazy.” But he wasn’t.

In Harry Woolf (ed.)
Some Strangeness In the Proportion
Chapter 23 (p. 376)
Addison-Wesley Publishing Company, Inc. Reading, Massachusetts, USA. 1980

Eddington, Sir Arthur Stanley 1882–1944
English astronomer, physicist, and mathematician

Rather against my better judgment I will try to give a rough impression of the theory. It would probably be wiser to nail up over the door of the new quantum theory a notice, “Structural alterations in progress — No admittance except on business”, and particularly to warn the doorkeeper to keep out prying philosophers.

The Nature of the Physical World
Chapter X (p. 211)
The Macmillan Company, New York, New York, USA. 1930

A very useful kind of operator is the selective operator. In my schooldays a foolish riddle was current — “How do you catch lions in the desert?” Answer: “In the desert you have a lot of sand and a few lions; so you take a sieve and sieve out the sand and the lions remain.” I recall it because it describes one of the most usual methods used in quantum theory for obtaining anything that we wish to study.

New Pathways in Science
Chapter XII, Section III (p. 263)
The Macmillan Company, New York, New York, USA. 1935

Einstein, Albert 1879–1955
German-born physicist

This theory [quantum theory] reminds me a little of the system of delusions of an exceedingly intelligent paranoiac, concocted of incoherent elements of thoughts.

In Arthur Fine
The Shaky Game: Einstein, Realism, and the Quantum Theory
Letter of July 5, 1952 to D. Lipkin (p. 1)
University of Chicago Press, Chicago, Illinois, USA. 1986

Quantum mechanics is certainly imposing. But an inner voice tells me that it is not yet the real thing. The theory says a lot, but does not bring us any closer to the secret of the Old One. I, at any rate, am convinced that He does not throw dice.

In Ronald W. Clark
Einstein: The Life and Times
Letter to Max Born, 1926 (p. 340)
The World Publishing Company, New York, New York, USA. 1971

The quantum theory gives me a feeling very much like yours. One really ought to be ashamed of its success, because it has been obtained with the Jesuit maxim: "Let not thy left hand know what thy right hand doeth."

The Born–Einstein Letters: Correspondence Between Albert Einstein and Max and Hedwig Born from 1916 to 1955

Letter to Max Born, June 4, 1919 (p. 11)

Walker & Company. New York, New York, USA. 1971

I cannot seriously believe in [the quantum theory] because it cannot be reconciled with the idea that physics should represent a reality in time and space, free from spooky actions at a distance.

The Born–Einstein Letters: Correspondence Between Albert Einstein and Max and Hedwig Born from 1916 to 1955

Letter to Max Born, March 1948 (p. 158)

Walker & Company. New York, New York, USA. 1971

[Quantum theory] If this is correct, it signifies the end of physics as a science.

In L.I. Ponomarev

The Quantum Dice (p. 80)

Institute of Physics Publishing. Bristol, England. 1993

The more one chases after quanta, the better they hide themselves.

In Helen Dukas and Banesh Hoffman

Albert Einstein: The Human Side: New Glimpses from His Archives

Letter to Paul Ehrenfest, 12 July 1924 (p. 69)

Princeton University Press. Princeton, New Jersey, USA. 1979

Ekert, Artur 1961

Polish/British quantum physicist

Possibly the best way to agitate a group of jaded but philosophically inclined physicists is to buy them a bottle of wine and mention interpretations of quantum mechanics. It is like opening a Pandora's box. I have been amused to discover that the number of viewpoints often exceeds the number of participants.

Physics World

Pet Theories of Quantum Mechanics, December 1995

Ferris, Timothy 1944–

American science writer

Gertrude Stein said of modern art, "A picture may seem extraordinarily strange to you and after some time not only does it not seem strange but it is impossible to find what there was in it that was strange." Quantum physics isn't like that. The longer you look at it, the stranger it gets.

The Whole Shebang: A State-of-the Universe's Report

Quantum Weirdness (p. 265)

Simon & Schuster. New York, New York, USA. 1996

Feynman, Richard P. 1918–88

American theoretical physicist

The theory of quantum electrodynamics describes Nature as absurd from the point of view of common sense. And it

agrees with experiment. So I hope you can accept Nature as She is — absurd.

QED: The Strange Theory of Light and Matter

Chapter 1 (p. 10)

Princeton University Press. Princeton, New Jersey, USA. 1985

There was a time when the newspapers said that only twelve men understood the theory of relativity. I do not believe that there ever was such a time. There might have been a time when only one man did, because he was the only guy who caught on, before he wrote his paper. But after people read the paper a lot of people understood the theory of relativity in some way or other, certainly more than twelve. On the other hand I think I can safely say that nobody understands quantum mechanics.... Do not keep saying to yourself, if you can possibly avoid it, "But how can it be like that?" because you will get "down the drain", into a blind alley from which nobody has yet escaped. Nobody knows how it can be like that.

The Character of Physical Law

Chapter 6 (p. 129)

BBC. London, England. 1965

Feynman, Richard P. 1918–88

American theoretical physicist

Leighton, Robert B. 1919–97

American physicist

Sands, Matthew L. 1919–

American physicist

It is possible in quantum mechanics to sneak quickly across a region which is illegal energetically.

The Feynman Lectures on Physics (Volume 3)

Chapter 8–6 (p. 8–12)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

...there are certain situations in which the peculiarities of quantum mechanics can come out in a special way on a large scale.

The Feynman Lectures on Physics (Volume 3)

Chapter 21–1 (p. 21–1)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1983

Gell-Mann, Murray 1929–

American physicist

All of modern physics is governed by that magnificent and thoroughly confusing discipline called quantum mechanics, invented more than fifty years ago. It has survived all tests and there is no reason to believe that there is any flaw in it. We suppose that it is exactly correct. Nobody understands it, but we all know how to use it and how to apply it to problems; and so we have learned to live with the fact that nobody can understand it.

In Frank Durham and Robert D. Purrington (eds.)

Some Truer Method: Reflections on the Heritage of Newton

Chapter 2 (p. 51)
Columbia University Press. New York, New York, USA. 1990

Harrison, Edward Robert 1919–2007
English-born American cosmologist

...in the impalpable and seemingly inconsequential entities of the quantum world, one finds the true music and magic of nature.

Masks of the Universe
Chapter 8 (p. 123)
Macmillan Publishing Company. New York, New York, USA. 1985

Hawking, Stephen William 1942–
English theoretical physicist

You would have to fly around the world four hundred million times to add one second to your life; but your life would be reduced by more than that by all those airline meals.

Black Holes and Baby Universes and Other Essays
Chapter Eight (p. 72)
Bantam Books. New York, New York, USA. 1987

Heisenberg, Werner Karl 1901–76
German physicist and philosopher

Quantum theory reminds us of the old wisdom that when searching for harmony in life we must forget that in the drama of existence we are ourselves both players and spectators.

In Denis Alexander
Beyond Science
Chapter Two (p. 48)
Lion Publishing. Berkhamsted, Hertz, England. 1972

Quantum theory thus provides us with a striking illustration of the fact that we can fully understand a connection though we can only speak of it in images and parables.

Physics and Beyond: Encounters and Conversations
Chapter 17 (p. 210)
Harper & Row, Publishers. New York, New York, USA. 1971

The problem of quantum theory centers on the fact that the particle picture and the wave picture are merely two different aspects of one and the same physical reality.

The Physical Principles of the Quantum Theory
Translated by Carl Eckhart and Frank C. Hoyt (p. 177)
The University of Chicago Press. Chicago, Illinois, USA. 1930

If anything like mechanics were true then one would never understand the existence of atoms. Evidently there exists another [type of mechanics —] “quantum mechanics.”

In Keith Hannabuss
An Introduction to Quantum Theory
Letter to Wolfgang Pauli, June 21, 1925 (p. 21)
Oxford University Press, Inc. Oxford, England. 1997

Joyce, James 1882–1941
Irish-born author

I am working out a quantum theory about it for it is really most tantalizing state of affairs.

Finnegans Wake
Book I (p. 149)
The Viking Press. New York, New York, USA. 1939

Kaku, Michio
Theoretical physicist

...it is often stated that of all the theories proposed in this century, the silliest is quantum theory. In fact, some say that the only thing that quantum theory has going for it is that it is unquestionably correct.

Hyperspace : A Scientific Odyssey Through Parallel Universes, Time Warps, and the 10th Dimension
Chapter 12 (p. 262)
Oxford University Press, Inc. New York, New York, USA. 1995

Kramers, Hendrick Anthony 1894–1952
Physicist

The theory of quanta is similar to other victories in science; for some months you smile at it, and then for years you weep.

In L.I. Ponomarev
The Quantum Dice (p. 80)
Institute of Physics Publishing. Bristol, England. 1993

The theory of quanta can be likened to a medicine that cures the disease but kills the patient.

In L.I. Ponomarev
The Quantum Dice (p. 81)
Institute of Physics Publishing. Bristol, England. 1993

Krauss, Lawrence M. 1954–
American theoretical physicist

...what we really should be discussing is “the interpretation of classical mechanics” — that is, how can the classical world we see — which is only an approximation of the underlying reality, which in turn is quantum mechanical in nature — be understood in terms of the proper quantum mechanical variables? If we insist on interpreting quantum mechanical phenomena in terms of classical concepts, we will inevitably encounter phenomena that seem paradoxical, or impossible.

The Physics of Star Trek
Chapter Nine (pp. 150–151)
Harp Perennial Publishers. New York, New York, USA. 1995

Lawrence, D. H. (David Herbert) 1885–1930
English writer

I like relativity and quantum theories because I don't understand them and they make me feel as if space shifted about like a swan that can't settle, refusing to sit still and be measured; and as if the atom were an impulsive thing Always changing its mind.

In Vivian de Sola Pinto and Warren Roberts (eds.)

The Complete Poems of D.H. Lawrence
Relativity (p. 524)
Viking Press. New York, New York, USA. 1973

Lindley, David 1956–
English astrophysicist and author

[I]t is misleading to say that “measurement affects the thing measured” because that can seem to imply that a quantum object was in some definite but unknown state, but was then disturbed by an act of measurement and is now in some other state. Rather, measurement gives definition to quantities that were previously indefinite; there is no meaning that can be given to a quantity until it is measured.

Where Does the Weirdness Go? Why Quantum Mechanics Is Strange, but Not as Strange as You Think
Which Way Did the Photon Go? (p. 60)
Basic Books, Inc. New York, New York, USA. 1996

Although quantum mechanics provides explanations of the results of experiments, those explanations tend not, in our minds, to add up to an understanding. But why should they? It’s the job of science to provide theories and models that give us an accurate picture of the way the world works, but we are not free also to demand that these theories should conform to our prior expectations of the way we would like the world to work, or think it ought to work. If science sometimes provides explanations without giving us what we would regard as an understanding, the deficiency belongs to us, not to science.

Where Does the Weirdness Go? Why Quantum Mechanics Is Strange, but Not as Strange as You Think
You Can Push It Around, But You Can’t Get Rid of It (p. 125)
Basic Books, Inc. New York, New York, USA. 1996

The Moon really is there, after all, when no one’s looking. In a general sense, Einstein’s comment was correct: quantum mechanics demands that a measurement be made in order for the Moon really to exist at a particular spot. But the new insight afforded by the decoherence argument is that the rain of solar photons onto the Moon’s surface is enough of a physical process to constitute a “measurement” — it’s enough to get rid of superposed states, which is what we want a measurement to accomplish. No actual observation is required, and the whole process carries on efficiently and relentlessly without any intervention of human action, let alone human consciousness. The world works in its own way, and doesn’t need us to look at it.

Where Does the Weirdness Go? Why Quantum Mechanics Is Strange, but Not as Strange as You Think
In Which Einstein’s Moon Is Restored (p. 204)
Basic Books. New York, New York, USA. 1996

The microworld is not a simple place, and physicists have therefore not been able to keep their theories of it simple.

The End of Physics: The Myth of a Unified Theory

Pagels, Heinz R. 1939–88
American physicist and science writer

Another way the old physics differs from the quantum physics is the way the determinism of a clock differs from the contingency of a pinball machine.
The Cosmic Code: Quantum Physics as the Language of Nature
Foreword (p. 13)
Simon & Schuster. New York, New York, USA. 1982

Pauli, Wolfgang 1900–58
Austrian-born physicist

Physics is a blind alley again. In any case, it has become too difficult for me, and I would prefer to be a comedian in the cinema, or something like that, and hear no more about physics.
In L.I. Ponomarev
The Quantum Dice (p. 81)
Institute of Physics Publishing. Bristol, England. 1993

I know a great deal. I know too much. I am a quantum ancient.
In Jeremy Bernstein
Experiencing Science
Part 1. Two Faces of Physics. Chapter 2. Rabi: The Modern Age (p. 102)
Basic Books, Inc. New York, New York, USA. 1978

Peat, F. David
Theoretical physicist

The choice before us is either to abandon any hope of knowing the nature of quantum reality or to accept a nonlocal universe.
Einstein’s Moon (p. 124)
Contemporary Books. Chicago, Illinois, USA. 1990

Planck, Max 1858–1947
German physicist

My futile attempts to fit the elementary quantum of action somehow into the classical theory continued for a number of years and they cost me a great deal of effort. Many of my colleagues saw in this something bordering on a tragedy. But I feel differently about it, for the thorough enlightenment I thus received was all the more valuable. I now knew for a fact that the elementary quantum of action played a far more significant part in physics than I had originally been inclined to suspect, and this recogni-

tion made me see clearly the need for the introduction of totally new methods of analysis and reasoning in the treatment of atomic problems.

Scientific Autobiography and Other Papers

A Scientific Autobiography (pp. 44–45)

Philosophical Library. New York, New York, USA. 1949

Polkinghorne, John 1930–

British physicist, Episcopal priest, and writer

Quantum theory is both stupendously successful as an account of the small-scale structure of the world and it is also the subject of unresolved debate and dispute about its interpretation. That sounds rather like being shown an impressively beautiful palace and being told that no one is quite sure whether its foundations rest on bedrock or shifting sand.

The Quantum World

Chapter 1 (p. 1)

Princeton University Press. Princeton, New Jersey, USA. 1984

Robinson, Arthur L.

No biographical data available

In short, quantum mechanics, special relativity, and realism cannot all be true.

Quantum Mechanics Passes Another Test

Science, Volume 217, Number 4558, July 30, 1982 (p. 435)

Rothman, Tony 1953–

American cosmologist

Quantum mechanics — the theory that explains phenomena on the size of atoms — is right. It is also so conceptually weird that physicists to this day feel uncomfortable with it.

Instant Physics: From Aristotle to Einstein, and Beyond

Chapter 7 (p. 159)

Ballentine Books. New York, New York, USA. 1995

Sagan, Carl 1934–96

American astronomer and author

How can light simultaneously be a wave and a particle? It might be better to think of it as something else, neither a wave nor a particle, something with no ready counterpart in the everyday world of the palpable, that under some circumstances partakes of the properties of a wave, and, under others, of a particle. This wave-particle dualism is another reminder of a central humbling fact: Nature does not always conform to our predispositions and preferences, to what we deem comfortable and easy to understand.

Billions & Billions: Thoughts on Life and Death at the Brink of the Millennium

Chapter 4 (p. 37)

Random House, Inc. New York, New York, USA. 1997

Schrödinger, Erwin 1887–1961

Austrian theoretical physicist

I don't like it, and I'm sorry I ever had anything to do with it.

In John Gribbin

In Search of Schrödinger's Cat: Quantum Physics and Reality (p. v)

Bantam Books. New York, New York, USA. 1984

If all this damned quantum jumping were really here to stay, I should be sorry I ever got involved with quantum theory.

In Werner Heisenberg

Physics and Beyond: Encounters and Conversations

Chapter 6 (p. 75)

Harper & Row, Publishers. New York, New York, USA. 1971

Stapledon, Olaf 1886–1950

English author

...whenever a creature was faced with several possible courses of action, it took them all, thereby creating many distinct temporal dimensions and distinct histories of the cosmos. Since in every evolutionary sequence of the cosmos there were very many creatures, and each was constantly faced with many possible courses, and the combinations of all their courses were innumerable, an infinity of distinct universes exfoliated from every moment of every temporal sequence in this cosmos.

Last and First Man and Star Maker

Chapter XV, 2 (p. 426)

Dover Publications, Inc. New York, New York, USA. 1968

Stenger, Victor J. 1935–

American physicist

This type of schizophrenic behavior is not confined to photons alone. Electrons, neutrons, and other entities that normally appear as localized particles also can't seem to decide whether they are waves or particles. It all depends on what you try to measure. If you look for localized electrons, neutrons, or photons, you find them. If, on the other hand, you set up an experiment designed to measure wave properties, you find these too. We look at the world through colored glasses, and so it should not surprise us that the world appears a different color when we change to another pair.

Physics and Psychics: The Search for a World Beyond the Senses

Chapter 10 (p. 215)

Prometheus Books. Buffalo, New York, USA. 1990

Trefil, James 1938–

American physicist

But...we recognize that the wave-particle duality does not arise because of anything paradoxical about the behavior of elementary particles, but simply from the fact that we have asked the wrong question. If we had asked "How does an elementary particle behave?" instead of asking "Does it behave like a particle or a wave?", we would have been able to give a perfectly sensible answer. An elementary particle is not a particle in the sense that

a bullet is, and it is not a wave like the surf. It exhibits some properties that we normally associate with each of these kinds of things, but it is an entirely new kind of phenomenon.

From Atoms to Quarks: An Introduction to the Strange World of Particle Physics (Revised edition), 1994
Charles Scribner's Sons. New York, New York, USA. 1980

Wheeler, John Archibald 1911–

American theoretical physicist and educator

There may be no such thing as the “glittering central mechanism of the universe” to be seen behind a glass wall at the end of the trail. Not machinery but magic may be the better description of the treasure that is waiting.

In Nick Herbert

Quantum Reality: Beyond the New Physics

Chapter 2 (p. 29)

Anchor Press. Garden City, New York, USA. 1985

Nothing is more important about quantum physics than this: it has destroyed the concept of the world as “sitting out there.” The universe afterwards will never be the same.

Quoted by Jefferson Hane Weaver

The World of Physics (Volume 2)

N.10 (p. 427)

Simon & Schuster. New York, New York, USA. 1987

So the quantum, fiery creative force of modern physics, has burst forth in eruption after eruption and for all we know the next may be the greatest of all.

In Franco Selleri

Quantum Mechanics Versus Local Realism: The Einstein–Podolsky–Rosen Paradox

Chapter 1, Section 3 (p. 47)

Plenum Press. New York, New York, USA. 1988

...if one really understood the central point and its necessity in the construction of the world, one ought to be able to state it in one clear, simple sentence. Until we see the quantum principle with this simplicity we can well believe that we do not know the first thing about the universe, about ourselves, and about our place in the universe.

In Francesco de Finis (ed.)

Relativity, Quanta and Cosmology in the Development of the Scientific Thought of Albert Einstein (Volume 2)

The Quantum and the Universe

Yang, Chen Ning 1922–

Chinese-born American theoretical physicist

To those of us who were educated after light and reason had struck in the final formulation of quantum mechanics, the subtle problems and the adventurous atmosphere of these pre-quantum mechanics days, at once full of promise and despair, seem to take on an almost eerie quality. We could only wonder what it was like when to reach correct conclusions through reasonings that were manifestly inconsistent constituted the art of the profession.

Elementary Particles: A Short History of Some Discoveries in Atomic Physics

Chapter 1 (p. 9)

Princeton University Press. Princeton, New Jersey, USA. 1962

von Baeyer, Hans Christian 1938–

German-born physicist and author

That, in a nutshell, is the mystery of the quantum: When an electron is observed, it is a particle, but between observations its map of potentiality spreads out like a wave. Compared to the electron, even a platypus is banal.

Taming the Atom

Chapter 3 (p. 51)

Random House, Inc. New York, New York, USA. 1992

Wolf, Fred Alan 1934–

American theoretical physicist, writer, and lecturer

The quantum is that embarrassing little piece of thread that always hangs from the sweater of space-time. Pull it and the whole thing unravels.

Star Wave: Mind Consciousness of Quantum Physics

The Macmillan Company. New York, New York, USA. 1984

Zee, Anthony

American physicist

Welcome to the strange world of the quantum, where one cannot determine how a particle gets from here to there. Physicists are reduced to bookies, posting odds on the various possibilities.

Fearful Symmetry

Chapter 10 (p. 141)

Macmillan Publishing Company. New York, New York, USA. 1986

QUARK

Author undetermined

O! O! you eight colourful guys

You won't let quarks materialize

You're tricky, but now we realize

You hold together our nucleus.

In Frank Wilczek and Betsy Devine

Longing for the Harmonies

Chapter 18 (p. 200)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

Heisenberg, Werner Karl 1901–76

German physicist and philosopher

Even if quarks should be found (and I do not believe that they will be), they will not be more elementary than other particles, since a quark could be considered as consisting of two quarks and one anti-quark, and so on. I think we have learned from experiments that by getting to smaller and smaller units, we do not come to fundamental units, or indivisible units, but we do come to a point where division has no meaning. This is a result of the experiments

of the last twenty years, and I am afraid that some physicists simply ignore this experimental fact.

In Paul Buckley and F. David Peat

Glimpsing Reality: Ideas in Physics and the Link to Biology

Werner Heisenberg (p. 15)

University of Toronto Press. Toronto, Ontario, Canada. 1996

Joyce, James 1882–1941

Irish-born author

Three quarks for Muster Mark!

Sure he hasn't got much of a bark

And sure any he has it's all beside the mark.

Finnegans Wake

Book II (p. 383)

The Viking Press. New York, New York, USA. 1939

Melnechuk, Theodore

Neuroscientist

Poor Gell-Man seeks

But fails to find

The fractioned freaks

He bore in mind.

And yet a Quark,

Yea, better, three,

Exist in stark

Reality.

The Hunting of the Quark

The Physics Teacher, Volume 7, Number 7, October 1969 (p. 415)

Stenger, Victor J. 1935–

American physicist

Today's quarks and leptons can be viewed as metaphors of the underlying reality of nature, though metaphors that are objectively and rationally defined and are components of theories that have great predictive power. And that's the difference between the metaphors of science and those of myth: scientific metaphors work.... In the pragmatic view of truth of William James, science is true because it works. Science may not be the only path to the truth, but it is the best one we have yet been able to discover.

Physics and Psychics: The Search for a World Beyond the Senses

Chapter 4 (p. 79)

Prometheus Books. Buffalo, New York, USA. 1990

Taylor, Richard E. 1929–

Canadian-born American physicist

The quarks and the stars were here when you came, and they will be here when you go. They have no sense of humor so, if you want a world where more people smile, you will have to fix things yourselves.

Les Prix Nobel. The Nobel Prizes in 1990

Nobel banquet speech for award received in 1990

Nobel Foundation. Stockholm, Sweden. 1991

QUASAR

Mundell, Carole

English astronomer

...observing quasars is like observing the exhaust fumes of a car from a great distance and then trying to figure out what is going on under the hood.

A New Look at Quasars

Scientific American, Volume 278, Number 6, June 1998 (p. 57)

QUATERNION

Bell, E. T. (Eric Temple) 1883–1960

Scottish-American mathematician and educator

...Frenchmen, Germans, and Italians, urging their respective substitutes for quaternions, added to the din. By the second decade of the twentieth century there was a babble of conflicting vector algebras, each fluently spoken only by its inventor and his few chosen disciples. If, at any time in the brawling half-century after 1862, the bickering sects had stopped quarreling for half an hour to listen attentively to what Grassmann was doing his philosophical best to tell them, the noisy battle would have ended as abruptly as a thunderclap. Such, at any rate, seems to have been the opinion of Gibbs. In retrospect, the fifty-year war between quaternions and its rivals for scientific favor, appears as an interminable sequence of duels fought with stuffed clubs in a vacuum over nothing.

The Development of Mathematics (p. 208)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1945

QUESTION

Adams, Douglas 1952–2001

English author, comic radio dramatist, and musician

"I checked it very thoroughly," said the computer, "and that quite definitely is the answer. I think the problem, to be quite honest with you, is that you've never actually known what the question is."

The Ultimate Hitchhiker's Guide to the Galaxy

The Hitchhiker's Guide to the Galaxy

Chapter 28 (p. 121)

The Ballantine Book Company. New York, New York, USA. 2002

Alvarez, Luis Walter 1911–88

American experimental physicist

Much of the work we do as scientists involves filling in the details about matters that are basically understood already, or applying standard techniques to new specific cases. But occasionally there is a question that offers an opportunity for a really major discovery.

T. Rex and the Crater of Doom

Chapter 2 (p. 42)

Princeton University Press. Princeton, New Jersey, USA. 1997

Beecher, Henry Ward 1813–87

American Congregational preacher and orator

Never ask a question if you can help it; and never let a thing go unknown for the lack of asking a question if you can't help it.

In James Orton

Comparative Zoology, Structural and Systematic

Preceding Chapter XXI (p. 222)

Harper & Brothers. New York, New York, USA. 1877

Bloor, David

English sociologist and philosopher of science

To ask questions of the sort which philosophers address to themselves is usually to paralyze the mind...

Knowledge and Social Imagery

Chapter Three (p. 52)

The University of Chicago Press. Chicago, Illinois, USA. 1991

Bohm, David 1917–92

American physicist

...it is frequently realised that half the battle is over when we know what are the right questions to ask.

On the Relationship Between Methodology in Scientific Research and the Content of Scientific

British Journal for the Philosophy of Science, Volume 12, Number 46, 12, August 1961 (p. 105)

Boltzmann, Ludwig Edward 1844–1906

Austrian physicist

If a general intends to conquer a hostile city, he will not consult his map for the shortest road leading there; rather he will be found to make the most various detours, and every hamlet, even if quite off the path, will become a valuable point of leverage for him, if only he can take it; impregnable places will be isolated. Likewise, the scientist asks not what are the currently most important questions, but, "Which are at present solvable?", or sometimes simply, "In which can we make some small but genuine advance?"

In Brian McGuinness (ed.)

Theoretical Physics and Philosophical Problems. Selected Writings

The Second Law of Thermodynamics (p. 13–14)

Reidel Publishing Company. Boston, Massachusetts, USA. 1974

...but all the more splendid is the success when, groping in the thicket of special questions, we suddenly find a small opening that allows a hitherto undreamt of outlook on the whole.

In Brian McGuinness (ed.)

Theoretical Physics and Philosophical Problems. Selected Writings

The Second Law of Thermodynamics (p. 14)

Reidel Publishing Company. Boston, Massachusetts, USA. 1974

Bombieri, Enrico 1940–

Italian mathematician

When things get too complicated, it sometimes makes sense to stop and wonder: Have I asked the right question?

Prime Territory: Exploring the Infinite Landscape at the Base of the Number System

The Sciences, Volume 32, Number 5, 1992

Chargaff, Erwin 1905–2002

Austrian biochemist

Science is wonderfully equipped to answer the question "How?" But it gets terribly confused when you ask it the question "Why?"

Voices in the Labyrinth: Nature, Man and Science

Chapter 1 (p. 8)

The Seabury Press. New York, New York, USA. 1977

Colby, Frank Moore 1865–1925

American educator and writer

Every man ought to be inquisitive through every hour of his great adventure down to the day when he shall no longer cast a shadow in the sun. For if he dies without a question in his heart, what excuse is there for his continuance?

In Hans Selye

From Dream to Discovery: On Being a Scientist

Why Should You Do Research (p. 10)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1950

Dawkins, Richard 1941–

British ethologist, evolutionary biologist, and popular science writer

There may be some deep questions about the cosmos that are forever beyond science. The mistake is to think that they are therefore not beyond religion too.

A Devil's Chaplain: Reflections on Hope, Lies, Science, and Love (p. 149)

Houghton Mifflin Company. Boston, Massachusetts, USA. 2003

Feynman, Richard P. 1918–88

American theoretical physicist

There are all kinds of interesting questions that come from a knowledge of science, which only adds to the excitement and mystery and awe of a flower. It only adds. I don't understand how it subtracts.

What Do You Care What Other People Think?

Further Adventures of a Curious Character, The Making of a Scientist (p. 11)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

So right away I found out something about biology: it was very easy to find a question that was very interesting, and that nobody knew the answer to. In physics you had to go a little deeper before you could find an interesting question that people didn't know.

Surely You're Joking, Mr. Feynman!: Adventures of a Curious Character A Map of a Cat? (p. 71)

W.W. Norton & Company, Inc. New York, New York, USA. 1985

Fischer, D. H.

No biographical data available

Questions are the engines of intellect, the cerebral machines which convert energy to motion, and curiosity to controlled inquiry.

Historian's Fallacies: Toward a Logic of Historical Thought
Chapter I (p. 3)
Harper & Row, Publishers. New York, New York, USA. 1970

Gore, George 1826–1909
English electrochemist

The area of scientific discovery enlarges rapidly as we advance; every scientific truth now known yields many questions yet to be answered. To some of these questions it is possible to obtain answers at the present time, others may only be decided when other parts of science are more developed.

The Art of Scientific Discovery
Part I, Chapter III (p. 27)
Longmans, Green & Company. London, England. 1878

Gould, Stephen Jay 1941–2002
American paleontologist and evolutionary biologist

Questions are not neutral; they presuppose a list of assumptions that may be long and complex.

Dinosaur in a Haystack: Reflections in Natural History
Part Three, Chapter 11 (p. 136)
Random House, Inc. New York, New York, USA. 1995

Supporters assume that the greatness and importance of a work correlates directly with its stated breadth of achievement: minor papers solve local issues, while great works claim to fathom the general and universal nature of things. But all practicing scientists know in their bones that successful studies require strict limitations. One must specify a particular problem with an accessible solution, and then find a sufficiently simple situation where attainable facts might point to a clear conclusion. Potential greatness then arises from cascading implications toward testable generalities. You don't reach the generality by direct assault without proper tools. One might as well dream about climbing Mount Everest wearing a T-shirt and tennis shoes and carrying a backpack containing only an apple and a bottle of water.

Writing in the Margins
Natural History, Volume 7, Number 9, 1998 (p. 19)

Greene, Brian 1963–
American physicist

Sometimes attaining the deepest familiarity with a question is our best substitute for actually having the answer.

The Elegant Universe
Chapter 14 (p. 365)
W.W. Norton & Company, Inc. New York, New York, USA. 2003

Heisenberg, Werner Karl 1901–76
German physicist and philosopher

We ask, "What does a proton consist of? Can an electron be divided or is it indivisible? Is a photon simple or compound?" But all these questions are wrongly put, because words such as "divide" or "consists of" have to a large extent lost their meaning. It must be our task to adapt our thinking and speaking — indeed our scientific philosophy — to the new situation created by the experimental evidence. Unfortunately this is very difficult. Wrong questions and wrong pictures creep automatically into particle physics and lead to developments that do not fit the real situation in nature.

The Nature of Elementary Particles
Physics Today, Volume 29, Number 3, March 1976 (p. 37)

Our scientific work in physics consists in asking questions about nature in the language that we possess and trying to get an answer from experiment by the means that are at our disposal. In this way quantum theory reminds us, as Bohr has put it, of the old wisdom that when searching for harmony in life one must never forget that in the drama of existence we are ourselves both players and spectators. It is understandable that in our scientific relation to nature our own activity becomes very important when we have to deal with parts of nature into which we can penetrate only by using the most elaborate tools.

Physics and Philosophy: The Revolution in Modern Science
Chapter III (p. 58)
Harper & Row, Publishers. New York, New York, USA. 1958

Hoffer, Eric 1902–83
American longshoreman and philosopher

To spell out the obvious is often to call it in question.

The Passionate State of Mind, and Other Aphorisms
No. 220
Harper & Brothers. New York, New York, USA. 1955

Horrobin, David F. 1939–2003
Medical researcher

One needs to be neither particularly observant nor particularly arrogant to realise that the majority of the human race is capable of understanding the nature of the universe in only the simplest and crudest terms. The truth about the universe is clearly beyond the comprehension of most men. Most human brains are incapable of framing appropriate questions, let alone of providing adequate answers.

Science Is God
Chapter 2 (p. 16)
Medical and Technical Publishing Company Ltd. Aylesbury, England. 1969

Hoyle, Sir Fred 1915–2001
English mathematician and astronomer

...in science answers are not important, it is the questions that are important.

In Philip Morrison

Nothing Is Too Wonderful to Be True

Less May Be More (p. 219)

The American Institute of Physics. Woodbury, New York, USA. 1995

Huxley, Elspeth 1907–97

English writer

The best way to find things out... is not to ask questions at all. If you fire off a question, it is like firing of a gun; bang it goes, and everything takes flight and runs for shelter. But if you sit quite still and pretend not to be looking, all the little facts will come and peck round your feet, situations will venture forth from thickets, and intentions will creep out and sun themselves on a stone; and if you are very patient you will see and understand a great deal more than a man with a gun.

The Flame Trees of Thika

Chapter Twenty-Eight (p. 272)

William Morrow & Company. New York, New York, USA. 1959

Kelvin, Lord William Thomson 1824–1907

Scottish engineer, mathematician, and physicist

Questions of personal priority... however interesting they may be to the persons concerned, sink into insignificance in the prospect of any gain of deeper insight into the secrets of nature.

In Silvanus P. Thompson

Annual Report of the Board of Regents of the Smithsonian Institution, 1908

The Kelvin Lecture: The Life and Work of Lord Kelvin (p. 752)

Government Printing Office. Washington, D.C. 1909

Kundera, Milan 1929–

Czech-born writer

...the only truly serious questions are the ones that even a child can formulate. Only the most naive of questions are truly serious. They are questions with no answers. A question with no answer is a barrier that cannot be breached. In other words, it is questions with no answers that set the limits of human possibilities, describe the boundaries of human existence.

Translated by Michael Henry Heim

The Unbearable Lightness of Being

Part Four, Section 6 (p. 139)

Harper & Row, Publishers. New York, New York, USA. 1984

Landau, Lev 1908–68

Russian physicist

Physicists have learned that certain questions cannot be asked, not because the level of our knowledge does not yet permit us to find the answer, but because such an answer simply isn't stored in nature.

In Alexandre Dorozynski

The Man They Wouldn't Let Die

Chapter 7 (p. 108)

Secker & Warburg. London, England. 1966

Leggett, A. J.

No biographical data available

In those exciting but frustrating fields of knowledge, or perhaps one should say ignorance, where physics tangles with philosophy, the difficulties usually lie less in finding answers to well-posed questions than in formulating the fruitful questions in the first place.

The Encyclopaedia of Ignorance: Everything You Ever Wanted to Know About the Unknown

The "Arrow of Time" and Quantum Mechanics (p. 102)

Pergamon Press. Oxford, England. 1977

Little, T. M.

No biographical data available

The purpose of an experiment is to answer questions. The truth of this seems so obvious, that it would not be worth emphasizing were it not for the fact that the results of many experiments are interpreted and presented with little or no reference to the questions that were asked in the first place.

Interpretation and Presentation of Results

Hortscience, Volume 16, 1981 (pp. 637–640)

MacRobert, Alan

Editor

Valid physical questions face us for which our physics is utterly inadequate. This can only be a sign that we stand at a great frontier of science, one that will form a cutting edge of inquiry for generations to come, with results we cannot guess.

Beyond the Big Bang

Sky & Telescope, Volumes 65–66, March 1983 (p. 213)

Maxwell, James Clerk 1831–79

Scottish physicist

There are some questions in Astronomy, to which we are attracted rather on account of their peculiarity, as the possible illustration of some unknown principle, than from any direct advantage which their solution would afford to mankind.

On the Stability of the Motion of Saturn's Rings

Macmillan & Company Ltd. London, England. 1859

Medawar, Sir Peter Brian 1915–87

Brazilian-born English zoologist

I do not believe that there is any intrinsic limitation upon our ability to answer the questions that belong to the domain of natural knowledge and fall therefore within the agenda of scientific enquiry.

The Strange Case of the Spotted Mice and Other Classic Essays on Science

On "The Effecting of All Things Possible"

Oxford University Press, Inc. New York, New York, USA. 1996

Midgley, Mary 1919–

English moral philosopher

The astonishing successes of western science have not been gained by answering every kind of question, but precisely by refusing to. Science has deliberately set narrow limits to the kinds of questions that belong to it, and further limits to the questions peculiar to each branch. It has practiced an austere modesty, a rejection of claims to universal authority.

Can Science Save Its Soul?

New Scientist, 1 August 1992 (p. 25)

Morris, Desmond 1928–

Zoologist and ethnologist

We never stop investigating. We are never satisfied that we know enough to get by. Every question we answer leads on to another question. This has become the greatest survival trick of our species.

The Naked Ape

Chapter Four (p. 130)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1967

Payne-Gaposchkin, Celia 1900–79

British-American astronomer

Whenever we look in nature we can see spiral forms in the uncurling fern, the snail, the nautilus shell, the hurricane, the stirred cup of coffee, the water that swirls out of a wash bowl. Perhaps we shouldn't be surprised to see spirals in the great star systems whirling in space. Yet they remain a great, intriguing question.

Why Do Galaxies Have a Spiral Form?

Scientific American, Volume 189, Number 3, September 1953 (p. 89)

Peirce, Charles Sanders 1839–1914

American scientist, logician, and philosopher

Who would have said, a few years ago, that we could ever know of what substances stars are made of whose light may have been longer in reaching us than the human race existed? Who can be sure of what we shall now know in a few hundred years? Who can guess what would be the result of continuing the pursuit of science for ten thousand years, with the activity of the last hundred? And if it were to go on for a million, or a billion, or any number of years you please, how is it possible to say that there is any question which might not ultimately be solved.

Values in a Universe of Chance

How to Make Ideas Clear (p. 134)

Stanford University Press. Stanford, California, USA. 1958

...all the followers of science are fully persuaded that the processes of investigation, if only pushed far enough, will give one certain solution to each question to which they can be applied.... This great law is embodied in the conception of truth and reality. The opinion which is fated to be ultimately agreed to by all who investigate is what we mean by the truth, and the object represented in this opinion is the real.

In H.S. Thayer (ed.)

Pragmatism: The Classic Writings

How to Make Ideas Clear (p. 97)

New American Library. New York, New York, USA. 1970

Popper, Karl R. 1902–94

Austrian/British philosopher of science

...a young scientist who hopes to make discoveries is badly advised if his teacher tells him, "Go round and observe," and he is well advised if his teacher tells him: "Try to learn what people are discussing nowadays in science. Find out where difficulties arise, and take an interest in disagreements. These are the questions which you should take up."

Conjectures and Refutations: The Growth of Scientific Knowledge

Chapter 4 (p. 129)

Harper & Row, Publishers. New York, New York, USA. 1963

Ramsay, Sir William 1852–1916

English chemist

Whosoever asks shall receive, but he must ask sensible questions in definite order, so that the answer to the first suggests a second, and the reply to the second suggests a third, and so on.

Essays Biographical and Chemical

Chemical Essays

How Discoveries Are Made (p. 128)

Archibald Constable & Company Ltd. London, England. 1908

Russell, Bertrand Arthur William 1872–1970

English philosopher, logician, and social reformer

Clearly our first problem must be to define the issue, since nothing is more prolific of fruitless controversy than an ambiguous question.

Determinism and Physics

Proceeding of the University of Durham Philosophical Society, 1936

Sagan, Carl 1934–96

American astronomer and author

There are no forbidden questions in science, no matters too sensitive or delicate to be probed, no sacred truths.

The Demon-Haunted World: Science as a Candle in the Dark

Chapter 2 (p. 31)

Random House, Inc. New York, New York, USA. 1995

Seignobos, Charles 1854–1942

French historian

It is useful to ask oneself questions, *but very dangerous to answer them.*

In Marc Bloch

The Historian's Craft

Introduction (p. 14)

Manchester University Press. Manchester, England. 2004

Shaw, George Bernard 1856–1950

Irish comic dramatist and literary critic

No question is so difficult to answer as that to which the answer is obvious.

Saturday Review, January 26, 1895

Silver, Brian L.

Israeli professor of physical chemistry

The Big Questions may be beyond the capabilities of the human computer, just as dogs will never understand jokes. We understand a very great deal about what forces do but are far from finalizing the discussion about what forces are. Maybe we never will. Newton very specifically refused to commit himself as to what gravitational force was, but he nevertheless accounted for the movements of Earth and Moon and deduced the masses of the Earth and the Sun by knowing only what gravity does. We have discovered forces that Newton never knew, but basically we still only define force by what it does.

The Ascent of Science

Part II, Chapter 3 (p. 30)

Solomon Press Book. New York, New York, USA. 1998

Steinbeck, John 1902–68

American novelist

The literature of science is filled with answers found when the question propounded had an entirely different direction and end.

Sea of Cortez

Chapter 17 (pp. 179–180)

Paul P. Appel, Publisher. Mount Vernon, New York, USA. 1982

Stewart, Ian 1945–

English mathematician and science writer

Cohen, Jack

Reproductive biologist

The history of science, broadly speaking, is the tale of a lengthy battle to dig out the secret simplicities of a complicated world. It is an astonishing story of insignificant humanity's triumph over huge mysteries.

The Collapse of Chaos: Discovering Simplicity in a Complex World

Chapter 1 (p. 28)

Viking Press. New York, New York, USA. 1994

Trefil, James 1938–

American physicist

Great questions in science — questions like the ones Herschel raised about the structure of the universe — are seldom answered by ivory-tower types engaging in pure thought. They are answered by people who are willing to get down into the trenches and grapple with nature. If that means casting your own telescope mirrors, as Herschel did, so be it.

Reading the Mind of God: In Search of the Principle of Universality

Charles Scribner's Sons. New York, New York, USA. 1989

Virchow, Rudolf Ludwig Karl 1821–1902

German pathologist and archaeologist

If only people would finally stop finding points of disagreement in the personal characteristics and external

circumstances of investigators! It does not matter at all whether someone is a professor of clinical medicine or of theoretical pathology, whether he is a practitioner or a hospital physician, if only he possesses material for observation. In addition, it is not of decisive significance whether he confronts an overwhelming or a modest amount of material, if only he understands how to exploit it. And to do this he must know what he wants: in other words, he must be in a position to put the right questions and to find the right methods for answering them.

Translated by Lelland J. Rather

Disease, Life, and Man

Cellular Pathology (p. 77)

Stanford University Press. Stanford, California, USA. 1958

Walker, Kenneth 1882–1966

Physician

We must accept the fact that the scientist can answer only a few of the questions we ask him and never the question of “why?.”

Meaning and Purpose

Chapter VIII (p. 80)

Jonathan Cape. London, England. 1944

Weisskopf, Victor Frederick 1908–2002

Austrian-American physicist

It was absolutely marvelous working for Pauli. You could ask him anything. There was no worry that he would think a particular question was stupid, since he thought all questions were stupid.

Working for Pauli

American Journal of Physics, Volume 45, Number 5, May 1977 (p. 422)

Wilde, Oscar 1854–1900

Irish wit, poet, and dramatist

Questions are never indiscreet. Answers sometimes are.

The Plays of Oscar Wilde

An Ideal Husband

Act I (p. 10)

The Modern Library. New York, New York, USA. No date

Wittgenstein, Ludwig Josef Johann 1889–1951

Austrian-born English philosopher

As long as I continue to come across questions in more remote regions which I can't answer, it is understandable that I should still not be able to find my way around regions that are less remote. For how do I know that what stands in the way of an answer here is not precisely what is preventing me from clearing away the fog over there?

Translated by Peter Winch

Culture and Value (p. 66e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

I may find scientific questions interesting, but they never really grip me. Only conceptual and aesthetic questions

do that. At bottom I am indifferent to the solution of scientific problems; but not the other sort.

Translated by Peter Winch

Culture and Value (p. 79e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

Zinkernagel, Rolf M. 1944–

Swiss immunologist and pathologist

To ask questions, to search for answers, to do research — I mean re-search in nature what is already there, but has not been revealed, so far is the most fascinating and the most exciting thing we can dream of doing and what we would like to continue doing.

Les Prix Nobel. The Nobel Prizes in 1996

Nobel banquet speech for award received in 1996

Nobel Foundation. Stockholm, Sweden. 1997

QUESTIONNAIRE

Hauge, Bernt K.

No biographical data available

[One] feature of questionnaires is that they give [an] excellent opportunity to gather useless information in such a way that it can be handled by data machines, a handling that can give a mysterious authority of exactness to the most incredible nonsense.

Etcetera

The Physics Teacher, Volume 15, Number 9, December 1977 (p. 575)

QUOTATION

Dubos, René Jules 1901–82

French-born American microbiologist and environmentalist

History is replete with anecdotes and *bons mots* relating to statesmen, soldiers, artists, philosophers, and most other types of notables; but even a well-informed man finds it difficult to enliven talk with quotations from scientists.

The Dreams of Reason

Chapter 3 (p. 40)

Columbia University Press. New York, New York, USA. 1961

R

RACISM

Huntington, Ellsworth 1876–1947
American geographer

The climate of many countries seems to be one of the great reasons why idleness, dishonesty, immorality, stupidity, and weakness of will prevail. If we can conquer climate, the whole world will become stronger and nobler.

Civilization and Climate (p. 294)
University Press of the Pacific. Honolulu, Hawaii, USA. 2001

Lewin, Roger Amos
Anthropologist

Racism, as we would characterize it today, was explicit in the writings of virtually all the major anthropologists of the first decades of this century, simply because it was the generally accepted world view. The language of the epic tale so often employed by Arthur Keith, Grafton Elliot Smith, Henry Fairfield Osborn, and their contemporaries fitted perfectly an imperialistic view of the world, in which Caucasians were the most revered product of a grand evolutionary march to nobility.

Bones of Contention
Chapter 13, Man's Place in Nature (p. 307)
Simon & Schuster Inc. New York, New York, USA. 1987

Mandela, Nelson 1918–
First president of South Africa

The doctors and nurses treated me in a natural way as though they had been dealing with blacks on a basis of equality all their lives. It reaffirmed my long-held belief that education was the enemy of prejudice. These were men and women of science, and science had no room for racism.

The Long Walk to Freedom: The Autobiography of Nelson Mandela
(p. 492)
Little, Brown, Boston & Company. Boston, Massachusetts, USA. 1994

RADIATION

Bryson, Bill 1951–
American-born travel author

Incidentally, disturbance from cosmic background radiation is something we have all experienced. Tune your television to any channel it doesn't receive, and about 1 percent of the dancing static you see is accounted for by this ancient remnant of the Big Bang. The next time you complain that there is nothing on, remember that you can always watch the birth of the universe.

A Short History of Nearly Everything
Chapter 1 (p. 12)
Broadway Books. New York, New York, USA. 2003

Eddington, Sir Arthur Stanley 1882–1944
English astronomer, physicist, and mathematician

It has been widely supposed that the ultimate fate of protons and electrons is to annihilate one another, and release the energy of their constitution in the form of radiation. If so it would seem that the universe will finally become a ball of radiation, becoming more and more rarefied and passing into longer and longer wave-lengths. The longest waves of radiation are Hertzian waves of the kind used in broadcasting. About every 1500 million years this ball of radio waves will double its diameter; and it will go on expanding in geometrical progression for ever. Perhaps then I may describe the end of the physical world as — one stupendous broadcast.

New Pathways in Science
Chapter III, Section VI (p. 71)
The Macmillan Company. New York, New York, USA. 1935

Gamow, George 1904–68
Russian-born American physicist

Radiation is like butter, which can be bought or returned to the grocery store only in quarter-pound packages, although the butter as such can exist in any desired amount (not less, though, than one molecule!).

Thirty Years That Shook Physics
Chapter 1 (pp. 22–23)
Doubleday & Company, Inc. Garden City, New York, USA. 1966

Planck, Max 1858–1947
German physicist

Either the quantum of action was a fictional quantity, then the whole deduction of the radiation law was in the main illusionary and represented nothing more than an empty nonsignificant play on formulae, or the derivation of the radiation law was based on sound physical conception.

In Jefferson Hane Weaver
The World of Physics (Volume 2)
N.1 (p. 284)
Simon & Schuster. New York, New York, USA. 1987

RADICAL

von Liebig, Justus 1803–73
German organic chemist

Dumas, Jean Baptiste-Andre 1800–84
French biochemist

...in inorganic chemistry the radicals are simple; in organic chemistry they are compounds — that is the sole difference.

In William H. Brock

Justus von Liebig

Chapter 3 (p. 81)

Cambridge University Press, Cambridge, England. 1997

Mark, Herman F. 1898–1992

Polymer chemist

The concept of “free radicals” was not known in 1920 — well perhaps in politics, but not in chemistry.

From Small Organic Molecules to Large: A Century of Progress

Chemistry Study in Vienna (p. 15)

American Chemical Society, Washington, D.C. 1993

RADIO ASTRONOMY

Christiansen, Chris

No biographical data available

Radio astronomy was not born with a silver spoon in its mouth. Its parents were workers. One parent was the radio-telescope, the other was radar.

Daily Telegraph (Sydney), August 25, 1952

Commentary

It has been demonstrated that a receiving set of great delicacy in New Jersey will get a new kind of static from the Milky Way. This is believed to be the longest distance anybody ever went to look for trouble.

The New Yorker Magazine, 17 June 1933

Davies, Paul Charles William 1946–

British-born physicist, writer, and broadcaster

It is a striking thought that ten years of radio astronomy have taught humanity more about the creation and organization of the universe than thousands of years of religion and philosophy.

Space and Time in the Modern Universe (p. 211)

Cambridge University Press, Cambridge, England. 1977

Gingerich, Owen 1930–

American astronomer

But even if radio astronomy has not so much destroyed our older astronomical viewpoint, it has enormously enlarged and enriched it. It is like that magical moment in the old Cinerama, when the curtains suddenly opened still further, unveiling the grandeur of the wide screen. Optical astronomy in the 1950s, on that narrow, central screen, offered a quiescent view of a slowly burning universe, the visible radiations from thermal disorder. But then the curtains abruptly parted, adding a grand and breathtaking vista, a panorama of swift and orderly motions that revealed themselves through the synchrotron radiation they generated — the so-called violent universe.

In W.T. Sullivan III

The Early Years of Radio Astronomy: Reflections Fifty Years After Jansky's Discovery

Radio Astronomy and the Nature of Science (p. 404)

Cambridge University Press, Cambridge, England. 1984

Kraus, John 1910–2004

Radio astronomer

The radio sky is no carbon copy of the visible sky; it is a new and different firmament, one where the edge of the universe stands in full view and one which bears the tell-tale marks of a violent past.

Big Ear

Chapter 21 (p. 166)

Cygnus-Quasar Books, Powell, Ohio, USA. 1976

Mitton, Simon

No biographical data available

During the last 20 years radio astronomers have led a revolution in our knowledge of the Universe that is paralleled only by the historic contributions of Galileo and Copernicus. In particular, the poetic picture of a serene Cosmos populated by beautiful wheeling galaxies has been replaced by a catalogue of events of astonishing violence: a primeval fireball, black holes, neutron stars, variable quasars and exploding galaxies.

Newest Probe of the Radio Universe

New Scientist, Volume 56, Number 816, 19 October 1972 (p. 138)

Unsold, Albrecht 1905–95

Astrophysicist

The old dream of wireless communication through space has now been realized in an entirely different manner than many had expected. The cosmos' short waves bring us neither the stock market nor jazz from distant worlds. With soft noises they rather tell the physicist of the endless love play between electrons and protons.

In W.T. Sullivan, III

Classics in Radio Astronomy

Preface (p. xiii)

R. Reidel Publishing Company, Dordrecht, Netherlands. 1982

RAIN FOREST

Fuertes, Louis Agassiz 1874–1920

American ornithologist

The principal sensation one gets in the tropical forests is the mystery of the unknown voices. Many of these remain forever mysteries unless one stays long and seeks diligently.

Annual Report of the Board of Regents of the Smithsonian Institution, 1915

Impressions of the Voices of Tropical Birds (p. 313)

Government Printing Office, Washington, D.C. 1916

RAINBOW

Twain, Mark (Samuel Langhorne

Clemens) 1835–1910

American author and humorist

We have not the reverent feeling for the rainbow that the savage has, because we know how it is made. We have lost as much as we gained by prying into that matter.

A Tramp Abroad

Chapter XLIII (p. 318)

Penguin Books. New York, New York, USA. 1997

One can enjoy a rainbow without necessarily forgetting the forces that made it.

Europe and Elsewhere

Queen Victoria's Jubilee (p. 210)

Harper & Brothers. New York, New York, USA. 1923

RAMIFICATION

Sylvester, James Joseph 1814–97

English mathematician

The theory of ramification is one of pure colligation, for it takes no account of magnitude or position; geometrical lines are used, but these have no more real bearing on the matter than those employed in genealogical tables have in explaining the laws of procreation.

The Collected Mathematical Papers of James Joseph Sylvester (Volume 3)

On Recent Discoveries in Mechanical Conversion of Motion (p. 23)

University Press. Cambridge, England. 1904–1912

RANDOMNESS

Cohen, John

No biographical data available

...nothing is so alien to the human mind as the idea of randomness.

Chance, Skill, and Luck

Chapter 2, Part IV (p. 42)

Penguin Books. Baltimore, Maryland, USA. 1960

Fisher, Sir Ronald Aylmer 1890–1962

English statistician and geneticist

The postulate of randomness thus resolves itself into the question, “of what population is this a random sample?” which must frequently be asked by every practical statistician.

On the Mathematical Foundation of Theoretical Statistics

Philosophical Transactions of the Royal Society of London, Volume

A222, 1922 (p. 313)

James, William 1842–1910

American philosopher and psychologist

If I should throw down a thousand beans at random upon a table, I could doubtless, by eliminating a sufficient number of them, leave the rest in almost any geometrical pattern you might propose to me, and you might then say that that pattern was the thing prefigured beforehand, and that the other beans were mere irrelevance and packing material. Our dealings with Nature are just like this.

The Varieties of Religious Experience

Lecture XVIII (p. 429)

The Modern Library. New York, New York, USA. 1967

Leucippus 5th century BCE

Greek philosopher of Atomism

Nothing occurs at random, but everything for a reason and by necessity.

In G.S. Kirk, J.E. Raven and M. Schofield (eds.)

The Pre-Socratic Philosophers: A Critical History with a Selection of Texts

Aetius I.25.4 (p. 420)

At The University Press. Cambridge, England. 1963

Peterson, Ivars

Mathematics and physics writer

We are surrounded by jungles of randomness. With our mathematical and statistical machetes, we can hack out extensive networks of trails and clearings that provide for most of our day-to-day needs and make sense of some fraction of human experience. The vast jungle, however, remains close at hand, never to be taken for granted, never to reveal all its secrets — and always teasing the inquiring mind.

The Jungle of Randomness: A Mathematical Safari

Chapter 10 (p. 203)

John Wiley & Sons, Inc. New York, New York, USA. 1998

Sophocles 496 BCE–406 BCE

Greek playwright

IOCLASTA: Nay, what should mortal[s] fear, for whom the degree of fortune are supreme, and who hath clear foresight of nothing? ‘Tis best to live at random, as one may.

In *Great Books of the Western World* (Volume 5)

The Plays of Sophocles

Oedipus the King, I. 997

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Szent-Györgyi, Albert 1893–1986

Hungarian-born American biochemist

The usual answer to this question is that there was plenty of time to try everything. I could never accept this answer. Random shuttling of bricks will never build a castle or a Greek temple, however long the available time. A random process can build meaningful structures only if there is some kind of selection between meaningful and nonsense mutations.

Molecular Evolution: Prebiological and Biological

The Evolutionary Paradox and Biological Stability (p. 111)

Plenum Press. New York, New York, USA. 1972

RANDOM DIGITS

Dickens, Charles 1812–70

English novelist

Anyone who considers arithmetical methods of producing random digits is, of course, in a state of sin.

Oliver Twist

Chapter LI

P.F. Collier & Son, Company. New York, New York, USA. 1912

RANDOM NUMBER

Coveyou, R. R.

No biographical data available

The generation of random numbers is too important to be left to chance.

Random Number Generation Is Too Important to Be Left to Chance

Studies in Applied Mathematics, Volume 3, 1970

RATIOCINATION

Keyser, Cassius Jackson 1862–1947

American mathematician

When the greatest of American logicians, speaking of the powers that constitute the born geometrician, had named Conception, Imagination, and Generalization, he paused. Thereupon from one of the audience there came the challenge, “What of reason?” The instant response, not less just than brilliant, was: “Ratiocination — that is but the smooth pavement on which the chariot rolls.”

In Columbia University

Lectures on Science, Philosophy and Art 1907–1908 (p. 31)

New York, New York, USA. 1908

REACTION

Baudrimont, A. E.

No biographical data available

A chemical reaction cannot take place without a movement of the atoms. Consequently a reaction...cannot and will never be able to indicate the arrangement of the atoms in a combination.... For a reaction, by establishing a molecular movement, destroys the preceding arrangements of the atoms. Therefore, being able to extract a compound substance from a combination does not mean that this compound already existed in this combination.

In S.C. Kapoor

The Origins of Laurent’s Organic Classification

Isis, Volume 60, 1960 (p. 493)

Hoffmann, Roald 1937–

Polish-born American chemist

there was no question that the reaction but transient colors were seen in the slurry of sodium methoxide in dichloromethane and we got a whole lot of products for which we can’t sort out the kinetics the next slide will show

the most important part very rapidly within two minutes and I forgot to say on further warming we get in fact the keynote...

The Metamict State

Next Slide Please (p. 51)

University of Central Florida Press. Orlando, Florida, USA. 1987

Lippmann, Walter 1889–1974

American journalist and author

The reaction of one chemical element to another chemical element is always correct, is never misled by misinformation, by untruth, and by illusion.

Essays in the Public Philosophy

Chapter VIII (p. 92)

Little, Brown & Company. Boston, Massachusetts, USA. 1955

READING

Bacon, Sir Francis 1561–1626

English lawyer, statesman, and essayist

Read not to contradict and confute, nor to believe and take for granted, nor to find talk and discourse, but to weigh and consider.

Bacon’s Essays

Of Studies (p. 210)

Donohue, Henneberry & Company. Chicago, Illinois, USA. 1883

Fisher, Sir Ronald Aylmer 1890–1962

English statistician and geneticist

Fairly large print is a real antidote to stiff reading.

In J.H. Bennett (ed.)

Natural Selection, Heredity, and Eugenics

Letter to K. Sisam, 31 May 1929 (p. 20)

Clarendon Press. Oxford, England. 1983

Huxley, Thomas Henry 1825–95

English biologist

I MUST adopt a fixed plan of studies, for unless this is done I find time slips away without knowing it — and let me remember this — that it is better to read a little and thoroughly, than cram a crude undigested mass into my head, though it be great in quantity.

The Life and Letters of Thomas Henry Huxley (Volume 1)

Chapter 1.1

Macmillan & Company Ltd. London, England. 1903

REAL (BEING)

Bianco, Margery Williams 1880–1944

Author

“What is REAL?” asked the Rabbit one day, when they were lying side by side near the nursery fender, before Nana came to tidy up the room. “Does it mean having

things that buzz inside you and a stick-out handle?"

The Velveteen Rabbit: Or How Toys Become Real
Athenaeum Books for Young Readers. New York, New York, USA.
2002

You become. It takes a long time. That's why it doesn't often happen to people who break easily, or have sharp edges, or who have to be carefully kept. Generally, by the time you are Real, most of your hair has been loved off, and your eyes drop out, and you get loose in the joints and very shabby. But these things don't matter at all, because once you are Real you can't be ugly, except to people who don't understand.

The Velveteen Rabbit: Or How Toys Become Real
Athenaeum Books for Young Readers. New York, New York, USA.
2002

Einstein, Albert 1879–1955

German-born physicist

The important point for us to observe is that all these constructions and the laws connecting them can be arrived at by the principle of looking for the mathematically simplest concepts and the link between them. In the limited number of mathematically existent simple field types, and the simple equations possible between them, lies the theorist's hope of grasping the real in all its depth.

Ideas and Opinions

On the Methods of Theoretical Physics (p. 275)
Crown Publishers, Inc. New York, New York, USA. 1954

REALITY

Bohr, Niels Henrik David 1886–1962

Danish physicist

The conception of the objective reality of the elementary particles has evaporated in a curious way, not into the fog of some new, obscure reality concept, but into the transparent clarity of a mathematics that represents no longer the behavior of the elementary particles but rather our knowledge of this behavior.

The Representation of Reality in Contemporary Physics
Daedalus, 87(3), 1958

...an independent reality in the ordinary physical sense can neither be ascribed to the phenomena nor to the agencies of observation.

Atomic Theory and the Description of Nature

Chapter II (p. 54)
Cambridge University Press. Cambridge, England. 1934

Born, Max 1882–1970

German-born English physicist

The simple and unscientific man's belief in reality is fundamentally the same as that of the scientist.

Physics in My Generation

On the Meaning of Physical Theories (p. 16)
Springer-Verlag New York, Inc. New York, New York, USA. 1969

Bronowski, Jacob 1908–74

Polish-born English mathematician and polymath

Reality is not an exhibit for man's inspection, labeled "Do not touch." There are no appearances to be photographed, no experiences to be copied, in which we do not take part. Science, like art, is not a copy of nature but a re-creation of her.

Science and Human Values

The Creative Mind (p. 20)
Harper & Row, Publishers. New York, New York, USA. 1965

Brooks, Harvey

No biographical data available

A more problematic example is the parallel between the increasingly abstract and insubstantial picture of the physical universe which modern physics has given us and the popularity of abstract and non-representational forms of art and poetry. In each case the representation of reality is increasingly removed from the picture which is immediately presented to us by our senses.

Scientific Concepts and Cultural Change

Daedalus, Winter 1965

Burt, E. A.

No biographical data available

Man begins to appear for the first time in the history of thought as an irrelevant spectator and insignificant effect of the great mathematical system which is the substance of reality.

The Metaphysical Foundations of Modern Physical Science (p. 80)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1954

Cerf, Bennett 1898–1971

American publisher and editor

The best of them was the conversation between Ginsberg, who demanded to know what reality was, and Garfinkle, who brazenly attempted to explain it to him.

Try and Stop Me: A Collection of Anecdotes and Stories, Mostly Humorous

Jokes About Relativity (p. 163)
Simon & Schuster. New York, New York, USA. 1944

Cromer, Alan 1935–

American physicist and educator

Reality has far more wonders than all the tales of Arabia, giving us in return for our lost feeling of omnipotence some knowledge of the external world, some control over and responsibility for our lives, and even a touch of humility.

Uncommon Sense: The Heretical Nature of Science

Chapter 10 (p. 207)
Oxford University Press, Inc. New York, New York, USA. 1993

Dampier-Whetham, William 1867–1952

English scientific writer

The physicist analyzes matter into particles, and finds that their forces and motions can be described in mathematical terms. The materialist pushes this scientific result into philosophy, and says that there is no other reality.

In Lloyd William Taylor

Physics: The Pioneer Science (Volume 1)

Chapter 14 (p. 181)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

Drees, Willem B.

Dutch philosopher of science and religion

That natural reality is assumed rather than explained is not proof for the existence of a creator. Introducing god as an explanatory notion only shifts the locus of the question: why would such a god exist? And, it is possible that the universe just happens to exist, without explanation.

In Victor J. Stenger

Has Science Found God?: The Latest Results in the Search for Purpose in the Universe

Chapter Seven (p. 163)

Prometheus Books. Amherst, New York, USA. 2003

Dürrenmatt, Friedrich 1921–90

Swiss playwright and novelist

Our researches are perilous, our discoveries are lethal. For us physicists there is nothing left but to surrender to reality.

Translated by James Kirkup

The Physicists

Act Two (p. 81)

Grove Press, Inc. New York, New York, USA. 1964

Eddington, Sir Arthur Stanley 1882–1944

English astronomer, physicist, and mathematician

It is by looking into our own nature that we first discover the failure of the physical universe to be co-extensive with our experience of reality. The “something to which truth matters” must surely have a place in reality whatever definition of reality we may adopt.

New Pathways in Science

Chapter XIV, Section II (p. 317)

The Macmillan Company. New York, New York, USA. 1935

Egler, Frank E. 1911–96

American botanist and ecologist

Reality is not what is; it is what the layman wishes it to be.

The Way of Science

Science Concepts (p. 22)

Hafner Publishing Company. New York, New York, USA. 1970

Einstein, Albert 1879–1955

German-born physicist

Pure logical thinking cannot yield us any knowledge of the empirical world; all knowledge of reality starts from experience and ends in it. Propositions arrived at by purely logical means are completely empty of reality.

In Paul Arthur Schlipp (ed.)

Albert Einstein: Philosopher-Scientist

Einstein's Conception of Science (p. 391)

The Library of Living Philosophers, Inc. Evanston, Illinois, USA. 1949

Physics is an attempt conceptually to grasp reality as it is thought independently of its being observed. In this sense one speaks of “physical reality.”

In Paul Arthur Schlipp (ed.)

Albert Einstein: Philosopher-Scientist

Autobiographical Notes (p. 81)

The Library of Living Philosophers, Inc. Evanston, Illinois, USA. 1949

Space has devoured ether and time; it seems to be on the point of swallowing up also the field and the corpuscles, so that it alone remains as the vehicle of reality.

In R. Thiel

And There Was Light (p. 345)

New American Library. New York, New York, USA. 1960

All our science, measured against reality, is primitive and childlike — good yet it is the most precious thing we have.

The Physics Teacher, April 1970 (p. 200)

Einstein, Albert 1879–1955

German-born physicist

Infeld, Leopold 1898–1968

Polish physicist

In our endeavor to understand reality we are somewhat like a man trying to understand the mechanism of a closed watch. He sees the face and moving hands, and even hears the ticking, but he has no way of opening the case. If he is ingenious enough he may form some picture of a mechanism which could be responsible for all the things he observes, but he may never be quite sure his picture is the only one which could explain his observations.

The Evolution of Physics

On Clew Remains (p. 31)

Simon & Schuster. New York, New York, USA. 1961

Mountain Interval

Henry Holt & Company. New York, New York, USA. 1949

Gribbin, John

English science writer and astronomer

Don't look here for any "eastern mysticism", spoon bending or ESP. Do look here for the true story of quantum mechanics, a truth far stranger than any fiction.... The question this book addresses is "What is reality?" The answer(s) may surprise you; you may not believe them.

In Search of Schrödinger's Cat: Quantum Physics and Reality

Introduction (p. xvi)

Bantam Books. New York, New York, USA. 1984

Heisenberg, Werner Karl 1901–76

German physicist and philosopher

[The probability wave] meant a tendency for something. It was a quantitative version of the old concept of "Potentialia" in Aristotelian philosophy. It introduced something standing in the middle between the idea of an event and the actual event, a strange kind of physical reality just in the middle between possibility and reality.

Physics and Philosophy: The Revolution in Modern Science

Chapter II (p. 41)

Harper & Row, Publishers. New York, New York, USA. 1958

Hilbert, David 1862–1943

German mathematician

It has become perfectly clear that physics does not deal with the material world or with the contents of reality, but rather, what it perceives is merely the formal constitutions of reality.

In Walter R. Fuchs

Mathematics for the Modern Mind

Chapter 10, Section 10.1 (p. 240)

The Macmillan Company. New York, New York, USA. 1967

Hubble, Edwin Powell 1889–1953

American astronomer

...sometimes, through the strangely compelling experience of mystical insight, a man knows beyond the shadow of a doubt, that he has been in touch with a reality that lies behind mere phenomena. He himself is completely convinced, but he cannot communicate the certainty. It is a private revelation. He may be right, but unless we share his ecstasy we cannot know.

The Nature of Science and Other Lectures

Part I, The Nature of Science (p. 19)

The Huntington Library, San Marino, California, USA. 1954

Jacobi, Abraham 1830–1919

Pioneer of pediatrics

It is one thing to build an educational tower in the air at your library table, and another to face its actual appearance under the existing circumstances.

In R. Kagan (ed.)

Leaders of Medicine

Chapter IV (p. 41)

The Medico-Historical Press. Boston, Massachusetts, USA. 1941

Jeans, Sir James Hopwood 1877–1946

English physicist and mathematician

...the most outstanding achievement of twentieth-century physics is not the theory of relativity with its welding together of space and time, or the theory of quanta with its present apparent negation of the laws of causation, or the dissection of the atom with the resultant discovery that things are not what they seem; it is the general recognition that we are not yet in contact with ultimate reality.

The Mysterious Universe

Chapter V (pp. 150–151)

The Macmillan Company. New York, New York, USA. 1932

Kaufmann, William J., III 1942–94

American astronomer

From the moment of birth, our daily experiences strongly enforce the notion that reality is comprehensible. The fact that a rock released from your hand always falls down or that the moon goes through its phases every 29 1/2 days implies order rather than chaos to the rational human mind. To discover this order, to understand the basic and underlying qualities of all physical objects, to comprehend the fundamental principles that dictate the behavior of reality: this is the business of science.

Introduction to Particles and Fields (p. 1)

Scientific American, Inc., 1953

Mead, George H. 1863–1931

American philosopher, sociologist and psychologist

...the ultimate touchstone of reality is a piece of experience found in an unanalyzed world. The approach to the crucial experiment may be a piece of torturing analysis, in which things are physically and mentally torn to shreds, so that we seem to be viewing the dissected tissues of objects in ghostly dance before us, but the actual objects in the experimental experience are the common things of which we say that seeing is believing, and of whose reality we convince ourselves by handling. We extravagantly advertise the photograph of the path of an electron, but in fact we could never have given as much reality to the electrical particle as does now inhabit it if the photograph had been of naught else than glistening water vapour.

The Philosophy of the Act

Chapter II (p. 32)

The University of Chicago, Chicago, Illinois, USA; 1938

Olson, Sigurd F. 1899–1982

American conservationist

Flashes of insight or reality are sunbursts of the mind.

Reflections from the North Country

Flashes of Insight (p. 131)

Alfred A. Knopf. New York, New York, USA. 1976

Pagels, Heinz R. 1939–88

American physicist and science writer

We may begin to see reality differently simply because the computer...provides a different angle on reality.

The Dreams of Reason: The Computer and the Rise of the Sciences of Complexity

Preface (p. 13)

Simon & Schuster. New York, New York, USA. 1988

Palmieri, M.

No biographical data available

Since the dawn of human intelligence man has tried to form for himself a conception of the outside world which would correspond to the truest reality. But to determine what this reality is has proved to be a task of no mean import, and we still stand bewildered and wondering at the door of what has been and remains for mankind the greatest of all mysteries: the nature of ultimate reality.

Relativity: An Interpretation of Einstein's Theory

Introduction

Forbush Publishing Company. Los Angeles. 1931

Raymo, Chet 1936–

American physicist and science writer

Science is a map of reality.

The Virgin and the Mousetrap: Essays in Search of the Soul of Science

Chapter 16 (p. 147)

The Viking Press. New York, New York, USA. 1991

Reeve, F. D.

No biographical data available

Because all things balance — as on a wheel — and we cannot see nine-tenths of what is real, our claims of self-reliance are pieced together by unpanned gold. The whole system is a game: the planets are the shells; our earth, the pea. May there be no moaning of the bar. Like ships at sunset in a reverie, We are shadows of what we are.

Coasting

The American Poetry Review, Volume 24, Number 4, July–August 1995 (p. 38)

Riordan, Michael

Physicist

Subatomic reality is a lot like that of a rainbow, whose position is defined only relative to an observer. This is not an objective property of the rainbow-in-itself but involves such subjective elements as the observer's own position. Like the rainbow, a subatomic particle becomes fully "real" only through the process of measurement.

The Hunting of the Quark

Chapter 1 (p. 39)

Touchstone Books/Simon & Schuster. New York, New York, USA. 1987

Smith, David

No biographical data available

Everything imagined is reality. The mind cannot conceive unreal things.

The Private Thoughts of David Smith

Vogue, November 15, 1968 (p. 198)

Trilling, Lionel 1905–75

American critic, author, and teacher

In the American metaphysic, reality is always material reality, hard, resistant, unformed, impenetrable, and unpleasant.

The Liberal Imagination

Reality in America, ii (p. 13)

Charles Scribner's Sons. New York, New York, USA. 1950

Wald, George 1906–97

American biologist and biochemist

A scientist lives with all reality. There is nothing better.

To know reality is to accept it, and eventually to love it.

Lex Prix Nobel. The Nobel Prizes in 1967

Nobel banquet speech for award received in 1967

Nobel Foundation. Stockholm, Sweden. 1968

Walgate, Robert

No biographical data available

...what the scientist must now admit is that in many problems of great consequence to people reality may not be accessible, in practice, through entirely manipulative and analytical methods.

Breaking Through the Disenchantment

New Scientist, September 18, 1975 (p. 667)

Weinberg, Steven 1933–

American nuclear physicist

When we say that a thing is real we are simply expressing a sort of respect.

Dreams of a Final Theory: The Scientist's Search for the Ultimate Laws of Nature

Chapter II (p. 46)

Pantheon Books. New York, New York, USA. 1992

Physical reality remains so mysterious even to physicists because of the extreme improbability that it was constructed to be understood by the human mind.

The Form of Nature

Bulletin of the American Academy of Arts and Sciences, Volume 29, Number 4, 1976

Weyl, Hermann 1885–1955

German mathematician

A picture of reality drawn in a few sharp lines cannot be expected to be adequate to the variety of all its shades. Yet even so the draftsman must have the courage to draw the lines firm.

Philosophy of Mathematics and Natural Science

Appendix D (p. 274)
Princeton University Press. Princeton, New Jersey, USA. 1949

Wheeler, John Archibald 1911–
American physicist and educator

What we call reality consists...of a few iron posts of observation between which we fill an elaborate papier-mâché of imagination and theory.

In Harry Woolf (ed.)
Some Strangeness in the Proportion
Chapter 22
Fig. 22.10 (p. 358)
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1980

Whitehead, Alfred North 1861–1947
English mathematician and philosopher

Progress in truth — truth of science and truth of religion — is mainly a progress in the framing of concepts, in discarding artificial abstractions or partial metaphors, and in evolving notions which strike more deeply into the root of reality.

Religion in the Making
Truth and Criticism (p. 127)
New American Library. New York, New York, USA. 1960

Yeats, William Butler 1865–1939
Irish poet and playwright

ILLE: The rhetorician would deceive his neighbors,
The sentimentalist himself; while art
Is but a vision of reality.

Ego Dominus Tuus (p. 159)
The Macmillan Company. New York, New York, USA. 1956

REASONING

Abbey, Edward 1927–89
American environmentalist and nature writer

Reason is the newest and rarest thing in human life, the most delicate child of human history.

A Voice Crying in the Wilderness: Notes from a Secret Journal
Chapter 10 (p. 91)
St. Martin's Press. New York, New York, USA. 1989

Arnauld, Antoine 1612–94
French philosopher, lawyer, and mathematician

We use Reason for improving the Sciences; whereas we ought to use the Sciences for improving our Reason.

The Port-Royal Logic
Preface
Printed for T.B. and J. Taylor. London, England. 1696

Barnett, P. A.
No biographical data available

...the reasoning of mathematics is a type of perfect reasoning.

Common Sense in Education and Teaching
Chapter IX (p. 222)
Longmans, Green & Company. London, England. 1899

Beaumarchais, Pierre-Augustin Caron de 1732–99
French dramatist

It is not necessary to believe things in order to reason about them.

The Barber of Seville
Act V, Scene 4
Pioneer Classics. Long Beach, California, USA. 1994

Beck, Lewis White 1913–97
American scholar in German philosophy

In the logic of science there is a principle as important as that of parsimony: it is that of sufficient reason. The "Natural Science Ideal" in the Social Sciences
The Scientific Monthly, Volume LXVIII, June 1949 (p. 393)

Bernard, Claude 1813–78
French physiologist

Pile up facts or observations as we may, we shall be none the wiser. To learn, we must necessarily reason about what we have observed, compare the facts and judge them by other facts used as controls.

Translated by Henry Copley Greene
An Introduction to the Study of Experimental Medicine
Part One, Chapter I, Section iv (p. 16)
Henry Schuman, Inc. New York, New York, USA. 1927

Reasoning will always be correct when applied to accurate notions and precise facts; but it can lead only to error when the notions or facts on which it rests were originally tainted with error or inaccuracy.

Translated by Henry Copley Greene
An Introduction to the Study of Experimental Medicine
Introduction (p. 2)
Henry Schuman, Inc. New York, New York, USA. 1927

Beveridge, William Ian Beardmore 1908–
Australian zoologist

Every experience and history teach us that in the biological and medical sciences reason seldom can progress far from the facts without going astray.

The Art of Scientific Investigation
Chapter Seven (p. 81)
W.W. Norton & Company, Inc. New York, New York, USA. 1957

The role of reason in research is not so much in exploring the frontiers of knowledge as in developing the findings of the explorers.

The Art of Scientific Investigation
Chapter Seven (p. 91)
W.W. Norton & Company, Inc. New York, New York, USA. 1957

A useful habit for scientists to develop is that of not trusting ideas based on reason only.... Practically all reasoning is influenced by feelings, prejudice and past experience, albeit often subconsciously.

The Art of Scientific Investigation

Chapter Seven (p. 87)

W.W. Norton & Company, Inc. New York, New York, USA. 1957

Brophy, Brigid 1929–95

English novelist

Reason is necessarily the language of moral, political, and scientific argument: not because reason is holy or on some elevated plane, but because it isn't; because it is accessible to all humans; because, as well as working, it can be seen to work.

In Stanley and Rosiland Godlovitch and John Harris (eds.)

Animals, Men and Morals: An Enquiry into the Maltreatment of Non-Humans

In Pursuit of Fantasy (p. 126)

Taplinger Publishing Company. New York, New York, USA. 1972

Browne, Sir Thomas 1605–82

English author and physician

Every man's own reason is his best Oedipus.

Religio Medici

Part I, Section 6

Elliot Stock. London, England. 1883

The Kasidah of Haji Abdu El-Yezdi

Part vii, Stanza xxi

Citadel Press. New York, New York, USA. 1965

Chrysostom, John 349–c.407

Archbishop of Constantinople and preacher

...there is nothing that has been created without some reason, even if human nature is incapable of knowing precisely the reason for them all.

Homilies on Genesis

7.14

Catholic University of American Press. Washington, D.C. 1986

Congreve, William 1670–1729

English dramatist

...error lives

Ere reason can be born.

The Mourning Bride

Act III, Scene I

J. Dicks. London, England. 1883

Darwin, Charles Robert 1809–82

English naturalist

It is a fatal fault to reason whilst observing, though so necessary beforehand and so useful afterwards.

The Autobiography of Charles Darwin, 1809–1882: With Original

Omissions Restored

Appendix, Quotations (p. 159)

Harcourt, Brace. New York, New York, USA. 1959

Descartes, René 1596–1650

French philosopher, scientist, and mathematician

Those long chains of reasoning, simple and easy as they are, of which geometricians make use in order to arrive at the most difficult demonstrations, had caused me to imagine that all those things which fall under the cognizance of man might very likely be mutually related in the same fashion...

In *Great Books of the Western World* (Volume 31)

Discourse on the Method of Rightly Conducting the Reason

Part II (p. 47)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

I believe that all those to whom God has given the use of reason are bound to use it mainly to know Him and to know themselves. This is where I endeavored to begin my own research, and I can say that I would have been unable to find the foundation of physics had I not sought after them in this way

In William R. Shea

The Magic of Numbers and Motion: The Scientific Career of René

Descartes

Chapter Eight (p. 166)

Science History Publications Canton, Massachusetts, USA. 1991

Dewey, John 1859–1952

American philosopher and educator

Reason is experimental intelligence, conceived after the pattern of science, and used in the creation of social arts; it has something to do. It liberates man from the bondage of the past, due to ignorance and accident hardened into custom. It projects a better future and assists man in its realization. And its operation is always subject to test in experience...The principles which man projects as guides...are not dogmas. They are hypotheses to be worked out in practice, and to be rejected, corrected and expanded as they fail or succeed in giving our present experience the guidance it requires. We may call them programmes of action, but since they are to be used in making our future acts less blind, more directed, they are flexible. Intelligence is not something possessed once for all. It is in constant process of forming, and its retention requires constant alertness in observing consequences, an open-minded will to learn and courage in re-adjustment.

Reconstruction in Philosophy

Chapter IV (p. 96)

Beacon Press. Boston, Massachusetts, USA. 1920

Doyle, Sir Arthur Conan 1859–1930

Scottish writer

You reasoned it out beautifully, I exclaimed in unfeigned admiration. It is so long a chain, and yet every link rings true.

In William S. Baring-Gould (ed.)

The Annotated Sherlock Holmes (Volume 1)

The Red Headed League (p. 438)

Wings Books. New York, New York, USA. 1967

Like all Holmes's reasoning the thing seemed simplicity itself when it was once explained.

In William S. Baring-Gould (ed.)

The Annotated Sherlock Holmes (Volume 2)

Stockbroker's Clerk (p. 154)

Wings Books. New York, New York, USA. 1967

I can see nothing, said I, handing it back to my friend.

On the contrary, Watson, you can see everything. You fail, however, to reason from what you see. You are too timid in drawing your inferences.

In William S. Baring-Gould (ed.)

The Annotated Sherlock Holmes (Volume 2)

The Adventure of the Blue Carbuncle (p. 453)

Wings Books. New York, New York, USA. 1967

I feel that there is reason lurking in you somewhere, so we will patiently grope round for it.

The Lost World

Chapter IV (p. 52).

The Colonial Press. Clinton, Massachusetts, USA. 1959

Ah! my dear Watson, there we come into those realms of conjecture where the most logical mind may be at fault.

In William S. Baring-Gould (ed.)

The Annotated Sherlock Holmes (Volume 2)

The Adventure of the Empty House (p. 348)

Wings Books. New York, New York, USA. 1967

Drummond, William, Sir

...he who will not reason is a bigot; he who cannot is a fool; and he who dares not is a slave.

Academical Questions

Preface (p. xv)

Scholar's Facsimiles & Reprints. Delmar, New York, USA. 1984

Dubos, René Jules 1901–82

French-born American microbiologist and environmentalist

Reason dreams of an empire of knowledge, a mansion of the mind. Yet sometimes we end up living in a hotel by its side.

The Dreams of Reason: The Computer and the Rise of the Sciences of Complexity

Chapter 14 (p. 333)

Simon & Schuster. New York, New York, USA. 1988

Edgeworth, Francis Ysidro 1845–1926

Irish economist and statistician

...our reasoning appears to become more accurate as our ignorance becomes more complete; that when we have embarked upon chaos we seem to drop down into a cosmos.

The Philosophy of Chance

Mind, Volume 9, 1884 (p. 229)

Einstein, Albert 1879–1955

German-born physicist

We have thus assigned to pure reason and experience their places in a theoretical system of physics. The structure of the system is the work of reason: the empirical contents and their mutual relations must find their representation in the conclusions of the theory. In the possibility of such a representation lie the sole value and justification of the whole system, and especially of the concepts and fundamental principles which underlie it. Apart from that, these latter are free inventions of human intellect, which cannot be justified either by the nature of that intellect or in any other fashion a priori.

Ideas and Opinions

On the Methods of Theoretical Physics (p. 272)

Crown Publishers, Inc. New York, New York, USA. 1954

Eldridge, Paul 1888–1982

American educator

Reason is the shepherd trying to corral life's vast flock of wild irrationalities.

Maxims for a Modern Man

2194

T. Yoseloff. New York, New York, USA. 1965

Epictetus ca. 55–135

Greek philosopher

Since it is Reason which shapes and regulates all other things, it not ought itself to be left in disorder.

Discourses

Chapter XVII

G. Bell & Sons. London, England. 1908

Fersman, A. E. 1883–1945

Geochemist and mineralogist

There are no bounds to fantasy, no limits to the penetration of reason, and none to the technical powers that conquer nature.

Compiled by V.V. Vorontsov

Words of the Wise: A Book of Russian Quotations

Translated by Vic Schneierman

Progress Publishers. Moscow, Russia. 1979

Feyerabend, Paul K. 1924–94

Austrian-born American philosopher of science

Copernicanism and other essential ingredients of modern science survived only because reason was frequently overruled in their past.

Against Method: Outline of an Anarchistic Theory of Knowledge
Analytical Index (p. 13)
Verso. London, England. 1978

Galilei, Galileo 1564–1642

Italian physicist and astronomer

SALVIATI: Now, since I wish to convince you by demonstrative reasoning rather than to persuade you by mere probabilities, I shall suppose that you are familiar with present-day mechanics...

In *Great Books of the Western World* (Volume 28)

Dialogues Concerning the Two New Sciences

First Day (p. 133)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

In science the authority embodied in the opinion of thousands is not worth a spark of reason in one man.

In Pedro Redondi

Galileo: Heretic

Chapter 2 (p. 37)

Princeton University Press. Princeton, New Jersey, USA. 1987

Gay-Lussac, Joseph Louis 1778–1850

French chemist and physicist

The scientific glory of a country may be considered in some measure, as an indication of its innate strength. The exaltation of Reason must necessarily be connected with the exaltation of the other faculties of the mind; and there is one spirit of enterprise, vigor and conquest in science, arts, and arms.

In Maurice Crosland

Gay-Lussac: Scientist and Bourgeois

Chapter 4 (p. 80)

Cambridge University Press. Cambridge, England. 1978

Gore, George 1826–1909

English electrochemist

That which is beyond reason at present may not be so in the future; but it has now no place in science for want of a basis of verified truth.

The Art of Scientific Discovery

Chapter III (p. 25)

Longmans, Green & Company. London, England. 1878

Grew, Nehemiah 1641–1712

Scientific writer and journalist

He that speaketh Reason may be rather satisfied in being understood, than believed.

John of Salisbury ca. 1115–80

English author and diplomatist

Reason, therefore, is a mirror in which all things are seen...

In John van Laarhoven (ed.)

Entheticus Maior and Minor (Volume 1)

Part II, Section I, Notes from Epicurus, l. 657

E.J. Brill. Leiden, Netherlands. 1987

Johnson, Samuel 1696–1772

English critic, biographer, and essayist

We may take fancy for a companion, but must follow Reason as our guide.

The Life of Samuel Johnson (Volume 1)

Letter to Boswell 1774 (p. 474)

Sir Isaac Pitman & Sons, Ltd. London, England. 1907

Memory is the purveyor of reason, the power which places those images before the mind upon which the judgment is to be exercised, and which treasures up the determinations that are once passed, as the rules of future action, or grounds of subsequent conclusions.

The Rambler (Volume 1)

No. 41, August 7, 1750 (p. 296)

Edward Earle. Philadelphia, Pennsylvania, USA. 1812

Joos, Georg 1894–1959

German physicist

As soon as we inquire into the reasons for the phenomena, we enter the domain of theory, which connects the observed phenomena and traces them back to a single “pure” phenomena, thus bringing about a logical arrangement of an enormous amount of observational material.

Theoretical Physics

Introduction (p. 1)

Blackie & Son Ltd. London, England. 1968

Kant, Immanuel 1724–1804

German philosopher

Mathematics and physics are the two theoretical sciences of reason, which have to determine their objects a priori.

In *Great Books of the Western World* (Volume 42)

Critique of Pure Reason

Preface to the Second Edition (p. 5)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Human reason has this peculiar fate that in one species of its knowledge it is burdened by questions which, as prescribed by the very nature of reason itself, it is not able to ignore, but which, as transcending all its powers, it is also not able to answer.

In *Great Books of the Western World* (Volume 42)

Critique of Pure Reason

Preface to First Edition (p. 1)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Kasner, Edward 1878–1955

American mathematician

Newman, James Roy 1911–66

Mathematician and mathematical historian

One of the difficulties arising out of the subjective view of probability results from the principle of insufficient reasons. This principle...holds that if we are wholly ignorant of the different ways an event can occur and therefore have no reasonable ground for preference, it is as likely to occur one way as another.

Mathematics and the Imagination

Chance and Chanceability (p. 229)

Simon & Schuster. New York, New York, USA. 1940

Lamarck, Jean-Baptiste Pierre Antoine

1744–1829

French biologist

Reason is not a faculty; still less is it a torch or entity of any kind; but it is a special condition of the individual's intellectual faculties; a condition that is altered by experience, gradually improves and controls the judgments, according as the individual exercises his intellect.

Translated by Hugh Elliot

Zoological Philosophy: An Exposition with Regard to the Natural History of Animals

Chapter VIII (p. 401)

The University of Chicago Press. Chicago, Illinois, USA. 1984

Lambert, Johann Heinrich 1728–77

Swiss-German mathematician and astronomer

Reason hates the false décor by which advocates of error try to make her more impressive. She recognizes that one should doubt where reasons are not sufficient, that one should present each reason stripped of all that makes it apparent, and then she will assist if proper tools are on hand, and reserve for herself to pronounce the sentence, or if she suspends it, to indicate what is required to proceed to the conclusion.

Translated by Stanley Jaki

Cosmological Letters on the Arrangement of the World-Edifice

Twentieth Letter (p. 186)

Science History Publications. New York, New York, USA. 1976

Medawar, Sir Peter Brian 1915–87

Brazilian-born English zoologist

...scientific reasoning is a kind of dialogue between the possible and the actual, what might be and what is in fact the case...

Induction and Intuition in Scientific Thought

Chapter III, Section 1 (p. 48)

American Philosophical Society. Philadelphia, Pennsylvania, USA. 1969

Miller, Hugh 1802–56

Scottish geologist and theologian

In the geologic, as in other departments,

What can we reason but from what we know?

The Old Red Sandstone

Geological Evidences in Favour of Revealed Religion (p. 280)

J.M. Dent & Sons Ltd. London, England. 1922

Minnick, Wayne C. 1915–2006

Professor of communications

This kind of reasoning has weaknesses, of course, as do all forms of reasoning. If the correspondence between two things compared is not complete, that is, if significant differences can be shown to exist, then the argument collapses.

The Art of Persuasion (p. 16)

Houghton Mifflin Company. New York, New York, USA. 1968

Moulton, Forest Ray 1872–1952

American astronomer

...reason and the laws of nature...have become a sort of intellectual telescope, as it were, with which modern science looks back across the geological ages and discerns, at least in outline, the chief steps of the evolution of the inanimate and of the organic world; and, similarly, penetrates the future to a time when this earth will cease to be suited for the abode of life.

In H.H. Newman (ed.)

The Nature of the World and of Man

Astronomy (p. 2)

The University of Chicago Press. Chicago, Illinois, USA. 1927

Newton, Sir Isaac 1642–1727

English physicist and mathematician

A Vulgar Mechanick can practice what he has been taught or seen done, but if he is an error he knows not how to find it out and correct it, and if you put him out of his road, he is at a stand; Whereas he that is able to reason nimbly and judiciously about figure, force and motion is never at rest till he gets over every rub.

In Richard S. Westfall

Never at Rest: A Biography of Isaac Newton

Letter to Nathaniel Hawes, 25 May 1694 (p. ii)

Cambridge University Press. Cambridge, England. 1980

Osler, Sir William 1849–1919

Canadian physician and professor of medicine

With reason, science never parts company, but with feeling, emotion, passion, what has she to do? They are

not of her; they owe her no allegiance. She may study, analyze, and define, she can never control them, and by no possibility can their ways be justified to her.

Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine

The Leaven of Science (p. 93)

The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

Parkington, J. E.

No biographical data available

The ability to sort out stone implements into “types” as one would playing-cards into suits is of minor importance compared to the reasons underlying the tendency for implements to cluster into “ideal forms.” It is not the group “handaxes” which is important but, as Plato might have said, “handaxeness.”

Stone Implements as Information

The Interpretation of Archaeological Evidence, Goodwin Series,

Number 1, June 1972 (p. 12)

Pascal, Blaise 1623–62

French mathematician and physicist

The last proceeding of reason is to recognise that there is an infinity of things which are beyond it.

In *Great Books of the Western World* (Volume 33)

Pensées

Section IV, 267

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Peirce, Charles Sanders 1839–1914

American scientist, logician, and philosopher

Every work of science great enough to be remembered for a few generations affords some exemplification of the defective state of the art of reasoning of the time when it was written; and each chief step in science has been a lesson in logic.

Inquiry and Belief

The Popular Science Monthly, Volume 12, 1877–1878

Pope, Alexander 1688–1744

English poet

What can we reason but from what we know?

The Complete Poetical Works (Volume 2)

An Essay on Man

Epistle I, l. 18

Houghton Mifflin Company. New York, New York, USA. 1903

Price, Bartholomew 1818–98

English mathematician and educator

...the reasoning process [employed in mathematics] is not different from that of any other branch of knowledge...but there is required, and in a great degree, that attention of mind which is in some part necessary for the acquisition of all knowledge, and in this branch [it] is indispensably necessary. This must be given in its fullest intensity.... [T]he other elements especially characteristic

of a mathematical mind are quickness in perceiving logical sequence, love of order, methodical arrangement and harmony, distinctness of conception.

Treatise on Infinitesimal Calculus (Volume 3) (p. 6)

At The Clarendon Press. Oxford, England. 1868

Recorde, Robert 1510?–58

English mathematician and writer

You are to farre deceived, and therefore I interrupt your woordes, for all things are to bee governed by reason.

The Castle of Knowledge

The Fourth Treatise (p. 243)

Imprinted by R. Wolfe. London, England. 1556

If reasons reache transcende the skye,
Why shoulde it then to earthe be bounde?

The witte is wronged and leadde awrye,

If mynde be maried to the grounde.

The Castle of Knowledge

The Preface

Imprinted by R. Wolfe. London, England. 1556

...who so ever will travail in the sciences with profit, must lean rather to reason, than to authority, else he may be deceived.

The Castle of Knowledge

The Fourth Treatise (p. 182)

Imprinted by R. Wolfe. London, England. 1556

Romanoff, Alexis Lawrence 1892–1980

Russian soldier and scientist

Reasoning goes beyond the analysis of facts.

Encyclopedia of Thoughts

Aphorisms 1973

Ithaca Heritage Books. Ithaca, New York, USA. 1975

Russell, Bertrand Arthur William 1872–1970

English philosopher, logician, and social reformer

Reason is a harmonizing, controlling force rather than a creative one.

Our Knowledge of the External World

Lecture I (p. 21)

The Open Court Publishing Company. Chicago, Illinois. 1914

Supposing you got a crate of oranges that you opened, and you found all the top layer of oranges bad, you would not argue, “The underneath ones must be good, so as to redress the balance”; You would say, “Probably the whole lot is a bad consignment”; and that is really what a scientific person would say about the universe.

Why I Am Not a Christian: And Other Essays on Religion and Related Subjects

Why I Am Not A Christian (p. 13)

Watts. London, England. 1927

Shakespeare, William 1564–1616

English poet, playwright, and actor

FOOL: “The reason why the seven stars are no more than seven is a pretty reason.”

LEAR: "Because they are not eight?"

FOOL: "Yes, indeed. Thou wouldst make a good fool."

In *Great Books of the Western World* (Volume 27)

The Plays and Sonnets of William Shakespeare (Volume 2)

King Lear

Act I, Scene v, l. 38–40

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Good reason must, of force, give place to better.

In *Great Books of the Western World* (Volume 26)

The Plays and Sonnets of William Shakespeare (Volume 1)

Julius Caesar

Act IV, Scene iii, l. s03

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

His reasons are as two grains of wheat hid in two bushels of chaff: you shall seek all day ere you find them, and when you have them, they are not worth the search.

In *Great Books of the Western World* (Volume 26)

The Plays and Sonnets of William Shakespeare (Volume 1)

The Merchant of Venice

Act I, Scene i, l. 115

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Spencer-Brown, George 1923–

English mathematician and polymath

The concept of randomness arises partly from games of chance. The word "chance" derives from the Latin *cadentia* signifying the fall of a die. The word "random" itself comes from the French *randir* meaning to run fast or gallop.

Probability and Scientific Inference

Chapter VII (p. 35)

Longmans, Green & Company. London, England. 1957

von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

Reason is applied to what is developing, practical understanding to what is developed. The former does not ask, What is the Purpose? and the latter does not ask, What is the source? Reason takes pleasure in development; practical understanding tries to hold things fast so that it can use them.

Scientific Studies (Volume 12)

Chapter VIII (p. 308)

Suhrkamp. New York, New York, USA. 1988

The texture of this world is made up of necessity and chance. Human reason holds the balance between them, treating necessity as the basis of existence, but manipulating and directing chance, and using it.

In Eric A. Blackall (ed.)

Wilhelm Meister's Apprenticeship

Book One, Chapter Seventeen (p. 38)

Princeton University Press. Princeton, New Jersey, USA. 1995

von Helmholtz, Hermann 1821–94

German scientist and philosopher

The iron labor of conscious logical reasoning demands great perseverance and great caution; it moves on but

slowly, and is rarely illuminated by brilliant flashes of genius. It knows little of that facility with which the most varied instances come thronging into the memory of the philologist or historian. Rather is it an essential condition of the methodical progress of mathematical reasoning that the mind should remain concentrated on a single point, undisturbed alike by collateral ideas on the one hand, and by wishes and hopes on the other, and moving on steadily in the direction it has deliberately chosen.

Vorträge and Reden

Ueber das Verhältniss der Naturwissenschaften zur Gesamtheit der Wissenschaft, Bd. 1, 1896 (p. 178)

English novelist, historian, and sociologist

Friedrich Viewig & Sohn. Brunswick, Germany. 1896

Wells, H. G. (Herbert George) 1866–1946

English novelist, historian, and sociologist

"It's against reason?" said Filby.

"What reason?" said the Time Traveler.

In Robert M. Hutchins and Mortimer J. Adler (eds.)

The Great Ideas Today, 1971

The Time Machine

Chapter One (p. 451)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1971

Whitehead, Alfred North 1861–1947

English mathematician and philosopher

The art of reasoning consists in getting hold of the subject at the right end, of seizing on the few general ideas that illuminate the whole, and of persistently organizing all subsidiary facts round them. Nobody can be a good reasoner unless by constant practice he has realized the importance of getting hold of the big ideas and hanging on to them like grim death.

In W.W. Sawyer

Prelude to Mathematics

Presidential Address to the London Branch of the Mathematical Association, 1914 (p. 183)

Penguin Books Limited. London, England. 1960

Wigner, Eugene Paul 1902–95

Hungarian-born American physicist

The great mathematician fully, almost ruthlessly, exploits the domain of permissible reasoning and skirts the impermissible. That his recklessness does not lead him into a morass of contradiction is a miracle in itself. Certainly it is hard to believe that our reasoning power was brought, by Darwin's process of natural selection, to the perfection which it seems to possess.

The Unreasonable Effectiveness of Mathematics in Natural Science

Communications on Pure and Applied Mathematics, Volume 13, Number 1, 1960 (p. 3)

Wright, Frances 1795–1852

Scottish-born American reformer

The best road to correct reasoning is by physical science; the way to trace effects to causes is through physical science; the only corrective, therefore, of superstition is physical science.

Course of Popular Lectures

Lecture 3

Published by the author. Philadelphia, Pennsylvania, USA. 1836

RECOGNITION

Oppenheimer, J. Robert 1904–67

American theoretical physicist

Whatever the individual motivation and belief of the scientist, without the recognition from his fellow men of the value of his work, in the long term science will perish.

Atomic Weapons

Proceeding of the American Philosophical Society, Volume 90, Number 1, 1946

RECORD

Coues, E.

No biographical data available

Don't trust your memory; it will trip you up; what is clear now will grow obscure; what is found will be lost. Write down everything while it is fresh in your mind; write it out in full. Time so spent will be time saved in the end, when you offer your researches to the discriminating public.

Field Ornithology (pp. 44–45)

Naturalist's Agency. Salem, Massachusetts, USA. 1874

Dickens, Charles 1812–70

English novelist

When found, make a note of.

The Works of Charles Dickens

Dombey and Son (Part I)

Chapter XV (p. 217)

P.F. Collier & Son. New York, New York, USA. 1911

Grove, Sir William 1811–96

English chemist

It would be vain to attempt specifically to predict what may be the effect of Photography on future generations. A Process by which the most transient actions are rendered permanent, by which facts write their own annals in a language that can never be obsolete, forming documents which prove themselves, — must interweave itself not only with science but with history and legislature.

Lecture

Progress of Physical Science since the opening of the London Institution, (19 January 1842)

RECOVERY

Byron, George Gordon, 6th Baron Byron 1788–1824

English Romantic poet and satirist

Despair of all recovery spoils longevity,
And makes men's miseries of alarming brevity.

The Complete Poetical Works of Byron

Don Juan

Canto II, Stanza LXIV

Houghton Mifflin Company. Boston, Massachusetts, USA. 1933

Massinger, Philip 1583–1640

English dramatic poet

O my Doctor,
I never shall recover.

The Bondman

Act I, Scene I

Printed for A. Bettesworth. London, England. 1719

Petrarch (Francesco Petrarca) 1304–74

Italian poet and humanist

I once heard a physician of high standing in his profession say: ...If a hundred men, or a thousand of the same age and general constitution and accustomed to the same diet, should all fall victim to a disease at the same time, and if half of them should follow the prescriptions of our contemporary doctors, and if the other half should be guided by their natural instinct and common sense, with no doctors at all, I have no doubt that the latter group would do better.

In M. Bishop

Letters from Petrarch

Book V, 3 (p. 250)

Indiana University Press. Bloomington, Indiana, USA. 1966

RECTANGLE

Frere, John Hookham 1769–1846

British diplomat and man of letters

Alas! that partial Science should approve
The sly RECTANGLE'S too licentious love!

In Charles Edmonds

Poetry of the Anti-Jacobin

The Loves of the Triangle, Canto II, l. 75–76

Printed for J. Wright, by W. Bulmer & Company. London, England. 1801

RECURSION

Papert, Seymour 1928–

South African mathematician

Of all ideas I have introduced to children, recursion stands out as the one idea that is particularly able to evoke an excited response.

Mindstorms: Children, Computers and Powerful Ideas

Chapter 3 (p. 71)

Young, Louise B.

Science writer

Whatever can be done once can always be repeated.

The Mystery of Matter

Introduction (p. 15)

Oxford University Press, Inc. New York, New York, USA. 1965

RED SHIFT

Boas, Jr., Ralph P. 1912–92

Consider the Pitiful Plight

Of a runner who wasn't too bright,

But sprinted so fast

He vanished at last

By red-shifting himself out of sight.

Reprinted in Ralph P. Boas, Jr.

Lion Hunting & Other Mathematical Pursuits (p. 103)

Mathematical Association of America. Washington, D.C. 1995

Gamow, George 1904–68

Russian-born American physicist

The discovery of the red shift in the spectra of distant stellar galaxies revealed the important fact that our universe is in the state of uniform expansion, and raised an interesting question as to whether the present features of the universe could be understood as the result of its evolutionary development... We conclude first of all that the relative abundance of various atomic species (which were found to be essentially the same all over the observed region of the universe) must represent the most ancient archaeological document pertaining to the history of the universe.

The Evolution of the Universe

Nature, Volume 162, Number 4122, October 1948 (p. 680)

Gray, George W.

Free lance science writer

...just as the shifting of bookkeeping accounts into the red measures disintegrating, scattering, dissipating financial resources, so the shifting of starlight into the red indicates disintegrating, scattering, dissipating physical resources. It says that the universe is running down.... To entertain this preposterous idea of all these massive star systems racing outward was to accept a radically new picture of the cosmos — a universe in expansion, a vast bubble blowing, distending, scattering, thinning out into gossamer, losing itself. The snug, tight, stable world of Einstein had room for no such flights.

Universe in the Red

The Atlantic Monthly, Volume 1151, Number 2, February 1933

(p. 233, 236)

Jeans, Sir James Hopwood 1877–1946

English physicist and mathematician

Another possibility...is that the universe retains its size, while we and all material bodies shrink uniformly. The red shift we observe in the spectra of the nebulae is then due to the fact that the atoms which emitted the light millions of years ago were larger than the present-day atoms with which we measured the light — the shift is, of course, proportional to distance.

Contributions to a British Association Discussion on the Evolution of the Universe

Supplement to Nature, Volume 128, Number 3234 November 1931 (pp. 703–704)

Stapledon, Olaf 1886–1950

English author

I noticed that the sun and all the stars in his neighborhood were ruddy. Those at the opposite pole of the heaven were of an icy blue. The explanation of this strange phenomenon flashed upon me. I was still traveling, and traveling so fast that light itself was not wholly indifferent to my passage. The overtaking undulations took long to catch me. They therefore affected me as slower pulsations than they normally were, and I saw them therefore as red. Those that met me on my headlong flight were congested and shortened, and were seen as blue.

Last and First Men and Star Maker

Star Maker, Chapter III (p. 262)

Dover Publications, Inc. New York, New York, USA. 1968

REDUCTIONISM

Commoner, Barry 1917–

American biologist, ecologist, and educator

There is, indeed, a specific fault in our system of science, and in the resultant understanding of the natural world.... This fault is reductionism, the view that effective understanding of a complex system can be achieved by investigating the properties of its isolated parts. The reductionist methodology, which is so characteristic of much of modern research, is not an effective means of analyzing the vast natural systems that are threatened by degradation.

The Closing Circle: Nature, Man and Technology

Chapter 10 (p. 189)

Alfred A. Knopf. New York, New York, USA. 1971

d'Abro, Abraham

No biographical data available

...in spite of its achievements, thermodynamics suffers from the limitations common to all phenomenological theories. Because it restricts its attention to the macroscopic properties of bodies, it fails to anticipate many phenomena which find their interpretation in the interplay

of underlying microscopic processes, and which have since been clarified by the more speculative theories of the hidden-occurrence type.

The Rise of the New Physics (Volume 1)
Chapter XXI (pp. 371–372)

Dover Publications, Inc. New York, New York, USA. 1951

Dyson, Freeman J. 1923–

American physicist and educator

My message is that science is a human activity, and the best way to understand it is to understand the individual human beings who practice it. Science is an art form and not a philosophical method. The great advances in science usually result from new tools rather than from new doctrines. If we try to squeeze science into a single philosophical viewpoint such as reductionism, we are like Procrustes chopping off the feet of his guests when they do not fit onto his bed.

The Scientist as Rebel

New York Times Book Review, May 25, 1995

Eiseley, Loren C. 1907–77 American anthropologist, educator, and author

In the end, science as we know it has two basic types of practitioners. One is the educated man who still has a controlled sense of wonder before the universal mystery, whether it hides in a snail's eye or within the light that impinges on that delicate organ. The second kind of observer is the extreme reductionist who is so busy stripping things apart that the tremendous mystery has been reduced to a trifle, to intangibles not worth troubling one's head about.

The Star Thrower

Science and the Sense of the Holy (p. 190)

Times Books. New York, New York, USA. 1978

REFEREE

Broad, William 1951–

Science writer

Wade, Nicholas

British-born scientific writer

The ultimate gatekeeper of science is neither peer reviews, nor referees, nor replication, nor the universalism implicit in all three mechanisms. It is time. In the end, bad theories don't work, fraudulent ideas don't explain the world so well as true ideas do. The ideal mechanisms by which science should work are applied to a large extent in retrospect Time and the invisible boot that kicks out all useless science are the true gatekeepers of science. But these inexorable mechanisms take years, sometimes more than a millennium, to operate. During the interval, fraud may flourish, particularly if it can find shelter under the mantle of immunity that scientific elitism confers.

Betrayers of the Truth (p. 106)

Simon & Schuster. New York, New York, USA. 1982

Magueijo, Joao 1967–

Theoretical physicist and cosmologist

Peer review is an unpaid and usually anonymous activity. Perhaps for this reason the average referee report is sloppy and sleazy. Reports usually reveal that the referee has not read the paper. Acceptance or rejection often reflects the personal relationship between authors and referee. Publishers have always been reluctant to open their files to historians of science and sociologists. Clearly they are embarrassed to reveal how little science, and how much sociology, there is in their files.

Juster, Norton 1929–

American architect and author

Once upon a time, there was a sensible straight line who was hopelessly in love with a dot.

The Dot and the Line: A Romance in Lower Mathematics
The Film (1965)

RELATION

Buchanan, Scott 1895–1968

American educator and philosopher

Science is an allegory that asserts that the relations between the parts of reality are similar to the relations between terms of discourse.

Poetry and Mathematics

Chapter 5 (pp. 96–97)

The University of Chicago Press. Chicago, Illinois, USA. 1975

Dingle, Herbert 1890–1978

English astrophysicist

...if, as we must surely do, we wish to characterize science by the elements in it that persist and grow, and not by that which continually changes, we must recognize...the progressive discovery of relations between the various constituents of our experience... Amid all the changes of theories and pictures and conceptions, the relations remain and steadily accumulate. Franklin found that lightning was a manifestation of the electric ether revealed in laboratory experiments. The electric ether has disappeared, and other theories of electricity have in turn succeeded it and disappeared also, but the relation between lightning and laboratory sparks remains. Maxwell established a relation between light and electromagnetic oscillations. His ether also has gone, but the relation stays. All permanent advances in science are discoveries of relations between phenomena, and the factor in science that shows a steady uninterrupted growth is the extent of the field of related observations.

The Scientific Adventure: Essays in the History and Philosophy of Science

Chapter One (p. 40)

Pitman. London, England. 1952

Durant, William James 1885–1981

American historian and essayist

Science tells us how to heal and how to kill; it reduces the death rate in retail and then kills us wholesale in war; but only wisdom — desire coordinated in the light of all experience — can tell us when to heal and when to kill. For a fact is nothing except in relation to a purpose and a whole.

The Story of Philosophy

Introduction (p. 2)

Simon & Schuster. New York, New York, USA. 1953

Fiske, John 1842–1901

American philosopher and historian

The ability to imagine relations is one of the most indispensable conditions of all precise thinking. No subject can be named in the investigation of which it is not imperatively needed; but it can be nowhere else so thoroughly acquired as in the study of mathematics.

Darwinism and Other Essays (p. 296)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1993

Keyser, Cassius Jackson 1862–1947

American mathematician

RELATIVITY

Asimov, Isaac 1920–92

American author and biochemist

No physicist who is even marginally sane doubts the validity of special relativity.

In Timothy Ferris (ed.)

The World Treasury of Physics, Astronomy and Mathematics

The Two Masses (p. 186)

Little Brown & Company. Boston, Massachusetts, USA. 1991

Special relativity is so much a part not only of physics but of everyday life, that it is no longer appropriate to view it as the special “theory” of relativity. It is a fact...

Was Einstein Right? (p. 246)

Basic Books, Inc. New York, New York, USA.

Davies, Paul Charles William 1946–

British-born physicist, writer, and broadcaster

Gribbin, John 1946–

English science writer and astronomer

All the implications of special relativity... have been confirmed by direct experiments. There are still people who believe it is “just a theory.” But they are wrong.

The Matter Myth: Dramatic Discoveries That Challenge Our

Understanding of Physical Reality (p. 85)
Simon & Shuster. New York, New York, USA. 1992

Durell, Clement V. 1882–1968
English mathematician

Relativity without mathematics may be compared with “Painless Dentistry,” or “Skiing without Falling,” or “Reading without Tears.”

Readable Relativity
Preface (p. ix)
Harper & Brothers. New York, New York, USA. 1960

Eddington, Sir Arthur Stanley 1882–1944
English astronomer, physicist, and mathematician

Results of measurements are the subject-matter of physics; and the moral of the theory of relativity is that we can only comprehend what the physical quantities stand for if we first comprehend what they are.

The Mathematical Theory of Relativity
Conclusion (p. 240)
At The University Press. Cambridge, England. 1930

We walk the stage of life, performers of a drama for the benefit of the cosmic spectator. As the scene proceeds, he notices that the actors are growing smaller and the action quicker. When the last act opens the curtain rises on midgets rushing through their parts at frantic speed.

The Expanding Universe
Chapter III, Section VI (p. 91–92)
The University Press. Cambridge. 1933

Einstein, Albert 1879–1955
German-born physicist

There is something attractive in presenting the evolution of a sequence of ideas in as brief a form as possible, and yet with a completeness sufficient to preserve throughout the continuity of development. We shall endeavor to do this for the Theory of Relativity, and to show that the whole ascent is composed of small, almost self-evident steps of thought.

A Brief Outline of the Development of the Theory of Relativity
Nature, Volume 106, Number 2677, 17 February 1921 (p. 782)

When you are courting a nice girl an hour seems like a second. When you sit on a red-hot cinder a second seems like an hour. That’s relativity.

News Chronicle, 14 March 1949

Ought we to smile at the man and say that he errs in his conclusion? I do not believe we ought to if we wish to remain consistent; we must rather admit that his mode of grasping the situation violates neither reason nor known mechanical laws. Even though it is being accelerated with respect to the “Galilean space” first considered, we can nevertheless regard the chest as being at rest. We have thus good grounds for extending the principle of relativity to include bodies of reference which are accelerated

with respect to each other, and as a result we have gained a powerful argument for a generalised postulate of relativity.

Translated by Robert W. Lawson
Relativity: The Special and General Theory
Part II, Chapter 20 (p. 88)
Pi Press. New York, New York, USA. 2005

I sometimes ask myself how it came about that I was the one to develop the theory of relativity. The reason, I think, is that a normal adult never stops to think about problems of space and time. These are things which he has thought of as a child. But my intellectual development was retarded, as a result of which I began to wonder about space and time only when I had already grown up.

In John D. Barrow
Theories of Everything: The Quest for Ultimate Explanation
Chapter Three (p. 68)
The Clarendon Press. Oxford. London. 1991

The meaning of relativity...has been widely misunderstood. Philosophers play with the word, like a child with a doll. Relativity, as I see it, merely denotes that certain physical and mechanical facts, which have been regarded as positive and permanent, are relative with regard to certain other facts in the sphere of physics and mechanics. It does not mean that everything in life is mischievously topsy-turvy.

What Life Means to Einstein: An Interview by George Sylvester Viereck
The Saturday Evening Post, October 26, 1929 (p. 17)

Greene, Brian 1963–
American physicist

...general relativity and quantum mechanics, when combined, begin to shake, rattle, and gush with steam like a red-lined automobile.

The Elegant Universe
Chapter 1 (p. 4)
W.W. Norton & Company, Inc. New York, New York, USA.2003

Haldane, R. B. 1856–1928
British liberal and labor politician

It is only a world embodying the principle of relativity, in the form which the doctrine entails, that can be said to exhibit the character of mind, with its exclusion of disconnected fragments and relations.

The Reign of Relativity (p. 138)
Yale University Press. New Haven, Connecticut, USA. 1921

Harrison, B.
No biographical data available

Thorne, Kip S. 1940–
American theoretical physicist

If one intends to abandon Relativity, here is the place [black holes] to do so. Otherwise one is on the way to a new world of physics, both classical and quantum. Here we go!

In Jean-Pierre Luminet
Black Holes (p. 117)
 Cambridge University Press. New York, New York, USA. 1992

Holton, Gerald 1922–

Research professor of physics and science history

The cliché became, erroneously, “everything is relative”; whereas the point is that out of the vast flux one can distill the very opposite: “some things are invariant.”

Einstein, History, and Other Passions: The Rebellion Against Science at the End of the Twentieth Century

Part 1, Chapter 6 (p. 131)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

Relativity theory, of course, does not find that truth depends on the point of view of the observer but, on the contrary, reformulates the laws of physics so that they hold good for all observers, no matter how they move or where they stand. Its central meaning is that the most valued truths in science are independent of the point of view.... Einstein did not prove the work of Newton wrong; he provided a larger setting within which some limitations, contradictions, and asymmetries in the earlier physics disappeared.

Einstein, History, and Other Passions: The Rebellion Against Science at the End of the Twentieth Century

Part 1, Chapter 2 (p. 48)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

Krauss, Lawrence M. 1954–

American theoretical physicist

Einstein was thus faced with the following apparent problem. Either give up the principle of relativity, which appears to make physics possible by saying that the laws of physics are independent of where you measure them, as long as you are in a state of uniform motion; or give up Maxwell’s beautiful theory of electromagnetism and electromagnetic waves. In a truly revolutionary move, he chose to give up neither.... It is a testimony to his boldness and creativity not that he chose to throw out existing laws that clearly worked, but rather that he found a creative way to live within their framework. So creative, in fact, that it sounds nuts.

Fear of Physics: A Guide for the Perplexed

Chapter 3 (p. 78)

Basic Books, Inc. New York, New York, USA. 1993

Indeed, long before the Star Trek writers conjured up warp fields, Einstein warped spacetime, and, like the Star Trek writers, he was armed with nothing other than his imagination. Instead of imagining twenty-second-century starship technology, however, Einstein imagined an elevator. He was undoubtedly a great physicist, but he probably never would have sold a screenplay.

The Physics of Star Trek

Grab hold of a hot pan and a second can seem like an hour. Put your hands on a hot woman and an hour can seem like a second.

Deep Blue Sea

Film (1999)

Lindley, David 1956–

English astrophysicist and author

Relativity removes from physics the authoritarian rule of classical physics, with its absolute space and time, and replaces it not with anarchy, in which all participants have their own rules, but with perfect democracy, in which the same rules govern all.... It may seem unsatisfactory to respond that there can be only one correct theory of space and time, and that Einstein’s happens to be it, but for the physicist such an answer has to suffice. Relativity, like other physical theories, is a set of rules based on a number of crucial assumptions, and experiment and observation bear it out. That is all we ever ask of physical theories, and to ask for some further statement of why the special theory of relativity supplanted absolute Newtonian spacetime is to search for a truth beyond the domain of science.

The End of Physics: The Myth of a Unified Theory

Part I, Chapter 2 (p. 60, 61)

Basic Books, Inc. New York, New York, USA. 1993

Lindon, J. A.

English writer of comic verse

When they questioned her, answered Miss Bright,
 “I was there when I got home that night;
 So I slept with myself,
 Like two shoes on a shelf,
 Put-up relatives shouldn’t be tight!”

In Martin Gardner

Time Travel and Other Mathematical Bewilderments

Chapter One (p. 9)

W.H. Freeman & Company. New York, New York, USA. 1988

Mach, Ernst 1838–1916

Austrian physicist and philosopher

I can accept the theory of relativity as little as I can accept the existence of atoms and other such dogmas.

In Stephen Pile

The Book of Heroic Failures

Routledge & Kegan Paul. London, England. 1979

Nabokov, Vladimir 1899–1977

Russian-American writer

At this point, I suspect, I should say something about my attitude to “Relativity.” It is not sympathetic. What many

cosmogonists tend to accept as an objective truth is really the flaw inherent in mathematics which parades as truth.

Ada or Ardor: A Family Chronicle

Part Four (p. 543)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1969

Oppenheimer, J. Robert 1904–67

American theoretical physicist

General relativity has very few connections with any other part of physics and, as I said, is something that we might just now be beginning to discover...

The Flying Trapeze: Three Crises for Physics

Space and Time (p. 23)

Oxford University Press, Inc. London, England. 1964

Page, Leigh 1884–1952

American physicist

The rotating armatures of every generator and motor in this age of electricity are steadily proclaiming the truth of the relativity theory to all who have ears to hear.

Filler material

American Journal of Physics, Volume 43, Number 4, April 1975 (p. 330)

Rindler, Wolfgang 1952–

German writer

Relativity has taught us to be wary of time.

Essential Relativity (p. 203)

Van Nostrand Company, Inc. New York, New York, USA. 1969

Rogers, Eric

No biographical data available

Since Relativity is a piece of mathematics, popular accounts that try to explain it without mathematics are almost certain to fail.

Physics for the Inquiring Mind

Chapter 31 (p. 472)

Princeton University Press. Princeton, New Jersey, USA. 1960

Rothman, Tony 1953–

American cosmologist

Relativity does not mean everything is relative. And the brilliance of Einstein's discoveries is so great that no amount of journalistic overkill has managed to dim it. Einstein and Bach are the only two people who deserve their reputations.

Instant Physics: From Aristotle to Einstein, and Beyond

Chapter 5 (p. 115)

Ballantine Books. New York, New York, USA. 1995

Russell, Bertrand Arthur William 1872–1970

English philosopher, logician, and social reformer

Einstein's theory of relativity is probably the greatest synthetic achievement of the human intellect up to the present time.

N.Y. Times, April 19, 1955

Sciama, Dennis 1926–99

English physicist

General relativity contains within itself the seeds of its own destruction.

In John D. Barrow

The World Within the World (p. 306)

Clarendon Press. Oxford, England. 1988

Shaw, George Bernard 1856–1950

Irish comic dramatist and literary critic

The orbit of the electron observes no law: it chooses one path and rejects another: it is as capricious as the planet Mercury, who wanders from his road to warm his hands at the sun. All is caprice: the calculable world has become incalculable.

Bernard Shaw's Plays

Too True to Be Good: A Political Extravaganza

Act III

W.W. Norton & Company, Inc. New York, New York, USA. 1970

Thomson, Sir Joseph John 1856–1940

English physicist

It [relativity] was not a discovery of an outlying island, but of a whole continent of new scientific ideas of the greatest importance to some of the most fundamental questions connected with physics.

Eclipse Showed Gravity Variation: Hailed as Epochmaking

The New York Times, November 9, 1919 (p. 6)

Weyl, Hermann 1885–1955

German mathematician

It is as if a wall which separated us from Truth has collapsed. Wider expanses and greater depths are now exposed to the searching eye of knowledge, regions of which we had not even a presentiment. It has brought us much nearer to grasping the plan that underlies all physical happening.

Translated by Henry L. Brose

Space — Time — Matter

Preface to the First Edition (p. ix)

Dover Publications, Inc. New York, New York, USA. 1922

Williams, W.

No biographical data available

You hold that time is badly warped,

That even light is bent;

I think I get the idea there,

If this is what you meant;

The mail the postman brings me today,

Tomorrow will be sent.

Einstein: The Life and Times

Part Four, Chapter 12 (p. 330)

The World Publishing Company. New York, New York, USA. 1971

RELIABILITY

Adams, George 1750–95
English instrument maker

The mind of man admits with reluctance the truth of every testimony concerning matters of fact, which happen to be repugnant to the uniform experience of his senses; hence the general backwardness to believe the miracles in the Bible: and hence the Dutchman, who informed the king of Siam that water in his country would sometimes in cold weather be found so hard, that men walked upon it, and that it would bear an elephant, was esteemed a person unworthy of credit. Hitherto, says the king, I have believed the strange things you told me, because I looked upon you as a sober man, but now I am sure you lie.

Lectures on Natural and Experimental Philosophy (Volume 1)
Lecture VI (pp. 279–280)
Printed by R. Hindmarsh. London, England. 1794

RELIGION

Barrow, John D. 1952–
English theoretical physicist

If a “religion” is defined to be a system of ideas that contains unprovable statements, then Gödel has taught us that, not only is mathematics a religion, it is the only religion that can prove itself to be one.

Between Inner Space and Outer Space (p. 88)
Oxford University Press, Inc. New York, New York, USA. 1999

Einstein, Albert 1879–1955
German-born physicist

It is quite clear to me that the religious paradise of youth, which [I] lost, was a first attempt to free myself from the chains of the “merely personal,” from an existence which is dominated by wishes, hopes, and primitive feelings.

In Gerald Holton
Einstein, History, and Other Passions: The Rebellion Against Science at the End of the Twentieth Century
Part Two, Chapter 8 (p. 172)
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

[My] deep religiosity...found an abrupt ending at the age of twelve, through the reading of popular scientific books.

In Gerald Holton
Einstein, History, and Other Passions: The Rebellion Against Science at the End of the Twentieth Century
Part Two, Chapter 8 (p. 172)
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

Ferrer, Francisco 1849–1909
Spanish anarchist

When the masses become better informed about science, they will feel less need for help from supernatural Higher Powers. The need for religion will end when man becomes sensible enough to govern himself.

In James A. Haught (ed.)
2000 Years of Disbelief: Famous People with the Courage to Doubt
Part Six: The Early Twentieth Century Chapter 52 (p. 224)
Prometheus Books. Amherst, New York, USA. 1996

Gould, Stephen Jay 1941–2002
American paleontologist, evolutionary biologist, and historian of science

I do get discouraged when some of my colleagues tout their private atheism (their right, of course, and in many ways my own suspicion as well) as a panacea for human progress against a caricature of “religion,” erected as a straw man for rhetorical purposes... If these colleagues wish to fight superstition, irrationalism, philistinism, ignorance, dogma, and a host of other insults to the human intellect, then God bless them — but don’t call this enemy “religion.”

Rocks of Ages
The Two False Paths of Irenics (pp. 209–210)
The Ballantine Publishing Group. New York, New York, USA. 1999

RENORMALIZATION

Berry, Sir Michael
No biographical data available

In The Renormalization Group method you take a structure you don’t understand and convert it to another structure you don’t understand. You keep doing it until you finally understand.

2002 Gibbs Lecture, San Diego, California, January 6, 2002

REPAIR

Adams, Douglas 1952–2001
English author, comic radio dramatist, and musician

The major difference between a thing that might go wrong and a thing that cannot possibly go wrong is that when a thing that cannot possibly go wrong goes wrong, it usually turns out to be impossible to get at and repair.

The Ultimate Hitchhiker’s Guide to the Galaxy
Mostly Harmless
Chapter 12 (p. 720)
Ballantine Books. New York, New York, USA. 2002

REPLICA

Whitehead, Alfred North 1861–1947
English mathematician and philosopher

For, whereas you can make a replica of an ancient statue, there is no possible replica of an ancient state of mind. There can be no nearer approximation [of one] than that which a masquerade bears to real life.

Science and the Modern World
Chapter IX (p. 200)
The Macmillan Company, New York, New York, USA. 1929

REPORT

Kettering, Charles Franklin 1876–1958
American engineer and inventor

Some technical reports are so dry and dusty...that if you put a pile of them in a hydraulic press and apply millions of pounds of pressure to it, not a drop of juice will run out.

Professional Amateur
Part III, Chapter XXI (p. 215)
E.P. Dutton & Company, Inc. New York, New York, USA. 1957

REPRODUCTION

Bateson, William 1861–1926
English biologist and geneticist

I know nothing which to a man well trained in scientific knowledge and method brings so vivid a realisation of our ignorance of the nature of life as the mystery of cell-division.... It is this power of spontaneous division which most sharply distinguishes the living from the non-living.... The greatest advance I can conceive in biology would be the discovery of the instability which leads to the continued division of the cell. When I look at a dividing cell I feel as an astronomer might do if he beheld the formation of a double star: that an original act of creation is taking place before me.

In Louise B. Young (ed.)
The Mystery of Matter
Aspects of Immortality, Death, and Reproduction (p. 403)
Oxford University Press, Inc. New York, New York, USA. 1965

Fisher, Sir Ronald Aylmer 1890–1962
English statistician and geneticist

We can set no limit to human potentialities; all that is best in man can be bettered...The ordinary social reformer sets out with a belief that no environment can be too good for humanity; it is without contradicting this that the eugenist may add that man can never be too good for his environment.

Some Hopes of a Eugenist
Eugenics Review, 5:309, 1914

Fletcher, Joseph 1905–91
Anglican theologian and founder of the theory of situational ethics

Our basic ethical choice as we consider man's new control over himself, over his body and his mind as well as over his society and environment, is still what it was when primitive men holed up in caves and made fires. Chance versus control. Should we leave the fruits of

human reproduction to take shape at random, keeping our children dependent on accidents of romance and genetic endowment, of sexual lottery or what one physician calls "the meiotic roulette of his parents' chromosomes?" Or should we be responsible about it, that is, exercise our rational and human choice, no longer submissively trusting to the blind worship of raw nature?

The Ethics of Genetic Control: Ending Reproductive Roulette
Chapter I. Trying to be Natural (p. 36)
Prometheus Books, Buffalo, New York, USA. 1988

Huxley, Julian 1887–1975
English biologist, philosopher, and author

The pioneers of Eugenic Insemination by Donor...will be accused of mortal sin, of theological impropriety, of immoral and unnatural practices. But they can take heart from what has happened in the field of birth control, and can be confident that the rational control of reproduction aimed at the prevention of human suffering and frustration and the promotion of human well-being and fulfillment will in the not too distant future come to be recognized as a moral imperative.

Eugenics Review, Volume 54, 1963 (p. 123)

Pearson, Karl 1857–1936
English mathematician

A majority of the community would probably also admit today that the physical characters of man are inherited with practically the same intensity as the like characters in cattle and horses. But few, however..., apply the results which flow from such acceptance to their own conduct in life.

On the Laws of Inheritance in Man
Biometrika, Volume 3, 1904 (p. 131)

Russell, Bertrand Arthur William 1872–1970
English philosopher, logician, and social reformer

...impregnation will be regarded in an entirely different manner, more in the light of a surgical operation, so that it will be thought not ladylike to have it performed in the natural manner.

As with most things in life, the debate centers on two themes: food and sex; or to give it a proper academic tone: diet and reproduction.

Sex, Sexes and Sexism in Human Origins
Yearbook of Physical Anthropology, Volume 30, 12 April 1985 (p. 11)

RESEARCH

Abbe, Cleveland 1838–1916
 American meteorologist

The ultimate goal of scientific research is not the collection of facts furnished by explorations and surveys, not even the exact data furnished by the most laborious measurements as in astronomy, geodesy, chemistry, and physics. Neither is it the framing of a few generalizations and inductions, such as the general idea of evolution; nor is it the establishment of some isolated fundamental laws, such as the attraction of gravitation, the conservation of energy, the mechanical equivalent of heat, the atomic weights and their periodic law. Research aims to go deeper than all this and show how these laws and phenomena result necessarily from a few simple premises — not premises in the sense of assumption, but axioms that are just as truly the basis of the physical universe as Euclid's axioms are the basis of geometry.

Annual Report of the Board of Regents of the Smithsonian Institution, 1907

The Progress of Science as Illustrated by the Development of Meteorology (p. 287)
 Government Printing Office. Washington, D.C. 1908

Adams, George 1750–95
 English instrument maker

The best directed and most successful researches only inform us how little is known, and give us no cause to be satisfied with the discoveries they have made.

Lectures on Natural and Experimental Philosophy (Volume 3)
 Chapter XXXV (p. 512)
 Printed by R. Hindmarsh. London, England. 1794

The more diligent our search, the more accurate our scrutiny, the more we are convinced that our labours can never finish, and that subjects inexhaustible remain behind still unexplored.

Chapter Six
The Reilly & Lee Company. Chicago, Illinois, USA. 1914

Belloc, Hilaire 1870–1953
French-born poet and historian

...anyone of common mental and physical health can practice scientific research.... Anyone can try by patient experiment what happens if this or that substance be mixed in this or that proportion with some other under this or that condition. Anyone can vary the experiment in any number of ways. He that hits in this fashion on something novel and of use will have fame.... The fame will be the product of luck, and industry. It will not be the product of special talent.

Essays of a Catholic
Science as the Enemy of Truth (pp. 226–227)
The Macmillan Company. New York, New York, USA. 1931

Beveridge, William Ian Beardmore 1908–
Australian zoologist

People in most other walks of life can allow themselves the indulgence of fixed ideas and prejudices which make thinking so much easier...but the research worker must try to keep his mind malleable and avoid holding set ideas in science. We have to strive to keep our mind receptive and to examine suggestions made by others fairly and on their own merits, seeking arguments for as well as against them. We must be critical, certainly, but beware lest ideas be rejected because an automatic reaction causes us to see only the arguments against them. We tend especially to resist ideas competing with our own.

The Art of Scientific Investigation
Chapter Seven (p. 86)
W.W. Norton & Company, Inc. New York, New York, USA. 1957

Research is one of those highly complex and subtle activities that usually remain quite unformulated in the minds of those who practice them. This is probably why most scientists think that it is not possible to give any formal instruction in how to do research.

The Art of Scientific Investigation

Preface (pp. ix–x)
W.W. Norton & Company, Inc. New York, New York, USA. 1957

The research worker remains a student all his life.
The Art of Scientific Investigation
Chapter One (p. 1)
W.W. Norton & Company, Inc. New York, New York, USA. 1957

Anyone with an alertness of mind will encounter in the course of an investigation numerous interesting side issues that might be pursued. It is a physical impossibility to follow up all of these. The majority are not worth following, a few will reward investigation and the occasional one provides the opportunity of a lifetime. How to distinguish the promising clues is the very essence of the art of research.

The Art of Scientific Investigation
Chapter Three (p. 35)
W.W. Norton & Company, Inc. New York, New York, USA. 1957

Birch, Arthur J. 1915–1995
Australian chemist

The details of a research career are dictated partly by accident, but largely by inclinations and temperament.

Easter Day, Part vii, l. 3 (p. 501)
The Modern Library. New York, New York, USA. 1934

Bunge, Mario 1919–
Argentine philosopher and physicist

Most scientists are prepared to grant that the chief theoretical (that is, nonpragmatic) aim of scientific research is to answer, in an intelligible, exact, and testable way,

five kinds of questions, namely those beginning with what (or how), where, when, whence, and why.... [T]he Five W's of Science. (Only radical empiricists deny that science has an explanatory function, and restrict the task of scientific research to the description and prediction of observable phenomena.) Also, most scientists would agree that all five W's are gradually (and painfully) being answered through the establishment of scientific laws, that is, general hypotheses about the patterns of being and becoming.

Causality: The Place of the Causal Principle in Modern Science
Chapter 10 (p. 248)
Harvard University Press. Cambridge, Massachusetts, USA. 1959

Bush, Vannevar 1890–1974
American electrical engineer and physicist

Basic research leads to new knowledge. It provides scientific capital. It creates the fund from which the practical applications of knowledge must be drawn. New products and new processes do not appear full-grown. They are founded on new principles and new conceptions, which in turn are painstakingly developed by research in the purest realms of science.

Endless Horizons
Chapter 5 (pp. 52–53)
Public Affairs Press. Washington, D.C. 1946

In these circumstances it is not at all strange that the workers sometimes proceed in erratic ways. There are those who are quite content, given a few tools, to dig away, unearthing odd blocks, piling them up in the view of fellow workers and apparently not caring whether they fit anywhere or not.... Some groups do not dig at all, but spend all their time arguing as to the exact arrangement of a cornice or an abutment. Some spend all their days trying to pull down a block or two that a rival has put in place. Some, indeed, neither dig nor argue, but go along with the crowd, scratch here and there, and enjoy the scenery. Some sit by and give advice, and some just sit.

Endless Horizons
Chapter 17 (p. 180)
Public Affairs Press. Washington, D.C. 1946

Capra, Fritjof 1939–
Austrian-born American physicist

Scientists, therefore, are responsible for their research not only intellectually but also morally...the results of quantum mechanics and relativity theory have opened up two very different paths for physics to pursue. They may lead us — to put it in extreme terms — to the Buddha or to the bomb, and it is up to each of us to decide which path to take.

The Turning Point
Chapter II (p. 87)
A Bantam Book. New York, New York, USA. 1983

Carrel, Alexis 1873–1944
French surgeon and biologist

In researches dealing with physics and chemistry, and also with physiology, one always attempts to isolate relatively simple systems, and to determine their exact conditions.

Man the Unknown
Chapter 2, Section 5 (pp. 50–51)
Harper & Brothers. New York, New York, USA. 1939

Caullery, Maurice 1868–1958
French biologist

The double danger of research into this type of phenomenon lies, on the one hand, in bringing...pre-conceived ideas of too subjective a nature, bordering on an illusory anthropomorphism, and on the other hand, trying to reduce complex facts to simple elementary reactions.

The Scientist in Action: A Scientific Study of His Methods

Four Qualities of Scientific Research (p. 29)

Williams & Norgate Ltd. London, England. 1936

Gibbs, J. Willard 1839–1903

American mathematician

One of the principal objects of theoretical research in any department of knowledge is to find the point of view from which the subject appears in its greatest simplicity.

In G. K. Batchelor

Preoccupations of a Journal Editor

Journal of Fluid Mechanics, Volume 106, 1981

Green, Celia 1935–

English philosopher and psychologist

Research is a way of taking calculated risks to bring about incalculable consequences.

The Decline and Fall of Science

Aphorisms (p. 1)

Hamilton. London, England. 1976

The way to do research is to attack the facts at the point of greatest astonishment.

The Decline and Fall of Science

Aphorisms (p. 1)

Hamilton. London, England. 1976

Gregg, Alan 1890–1957

American medical educator and philosopher

Research has been defined as a guerrilla warfare on the unknown. In the rigorous uncertainties of such campaigns the investigator must be prepared to swap horses in mid-stream and to discard some very dear items of accumulated baggage of belief or personal pride, whenever intellectual honesty calls for such sacrifices.

The Furtherance of Medical Research

Chapter III (pp. 87–88)

Yale University Press. New Haven, Connecticut, USA. 1941

Heisenberg, Werner Karl 1901–76

German physicist and philosopher

If I were asked what was Christopher Columbus' greatest achievement in discovering America, my answer would

not be that he took advantage of the spherical shape of the earth to get to India by the western route — this idea had occurred to others before him — or that he prepared his expeditions meticulously and rigged his ships most expertly — that, too, others could have done equally well. His most remarkable feat was the decision to leave the known regions of the world and to sail westward, far beyond the point from which provisions could have gotten him back home again.

Physics and Beyond: Encounters and Conversations

Chapter 6 (p. 70)

Harper & Row, Publishers. New York, New York, USA. 1971

...the subject matter of research is no longer nature in itself, but nature subjected to human questioning...

In Aldous Huxley

Literature and Science

Chapter 25 (p. 76)

Harper & Row, Publishers. New York, New York, USA. 1963

Heschel, Abraham J. 1907–72

Jewish theologian

Scientific research is an entry into the endless, not a blind alley; Solving one problem, a greater one enters our sight. One answer breeds a multitude of new questions; explanations are merely indications of greater puzzles. Everything hints at something that transcends it; the detail indicates the whole, the whole, its idea, the idea, its mysterious root. What appears to be a center is but a point on the periphery of another center. The totality of a thing is actual infinity.

Analog Science Fiction/Science Fact Magazine, Volume CIV, Number 12, December 1984 (p. 63)

Hubble, Edwin Powell 1889–1953

American astronomer

Research men attempt to satisfy their curiosity, and are accustomed to use any reasonable means that may assist them toward the receding goal. One of the few universal characteristics is a healthy skepticism toward unverified speculations. These are regarded as topics for conversation until tests can be devised. Only then do they attain the dignity of subjects for investigation.

The Realm of the Nebulae

Introduction (p. 6)

Dover Publications, Inc. New York, New York, USA. 1958

Hurston, Zora Neale 1891–1960

American author and anthropologist

Research is formalized curiosity. It is poking and prying with a purpose.

Dust Tracks on a Road

Chapter X (p. 174)

University of Illinois Press. Urbana, Illinois, USA. 1984

Jaffe, Bernard 1896–1968

American science writer

There is no last word or ultimate solution in the adventure of scientific research.

Michelson and the Speed of Light

Chapter XII (p. 171)

Doubleday & Company, Inc. Garden City, New York, USA. 1960

Jevons, William Stanley 1835–82

English economist and logician

So-called original research is now regarded as a profession, adopted by hundreds or men, and communicated by a system of training.

The Principles of Science: A Treatise on Logic and Scientific Method

Book IV, Chapter XXVI (p. 574)

Macmillan & Company Ltd. London, England. 1887

Johnson, Harry G. 1923–79

American economist

To an important extent, indeed, scientific research has become the secular religion of materialistic society; and it is somewhat paradoxical that a country whose constitution enforces the strict separation of church and state should have contributed so much public money to the establishment and propagation of scientific pessimism.

In National Academy of Sciences

Basic Research and National Goals: A Report to the Committee on Science and Astronautics Federal Support of Basic Research: Some Economic Issues

Note 4 (p. 141)

U.S. Government Printing Office. Washington, D.C. 1965

Kettering, Charles Franklin 1876–1958

American engineer and inventor

We find that in research a certain amount of intelligent ignorance is essential to progress; for if you know too much, you won't try the thing.

In T.A. Boyd

Professional Amateur

Part II (p. 106)

E.P. Dutton & Company, Inc. New York, New York, USA. 1957

Kettering, Charles Franklin 1876–1958

American engineer and inventor

Smith, Beverly

No biographical data available

[Research] may use a laboratory or it may not. It is purely a principle, and everybody can apply it in his own life. It is simply a way of trying to find new knowledge and ways of improving things which you are not satisfied with.

Ten Paths to Fame and Fortune

The American Magazine, December 1937 (p. 14)

Kline, Morris 1908–92

American mathematics professor and writer

Mathematical research is also becoming highly professionalized in the worst sense of that term. Research

performed voluntarily and sincerely by devoted souls, research as a relish of knowledge, is to be welcomed even if the results are minor. But hothouse-grown research, which crowds the journals and promotes only promotion, is a drag on science.

Why the Professor Can't Teach: Mathematics and the Dilemma of University Education

Chapter 3 (p. 67)

St. Martin's Press. New York, New York, USA. 1977

Kropotkin, Peter Alekseyevich 1842–1921

Russian revolutionary and geographer

...all great researches, all discoveries revolutionizing science, have been made outside academies and universities, wither by men rich enough to remain independent, like Darwin and Lyell, or by men who undermined their health by working in poverty, and often in great straits, losing endless time for want of a laboratory, and unable to procure the instruments or books necessary to continue their researches, but persevering against hope, and often dying before they had reached the end in view. Their name is legion.

The Conquest of Bread

Chapter IX, Section IV (p. 103)

Vanguard Press. New York, New York, USA. 1926

Lasker, Albert D. 1901–70

“Research,” he said, “is something that tells you that a jackass has two ears.”

In John Gunther

Taken at the Flood: The Story of Albert D. Lasker (p. 96)

Harper & Brothers. New York, New York, USA. 1960

Mach, Ernst 1838–1916

Austrian physicist and philosopher

The aim of research is the discovery of the equations which subsist between the elements of phenomena.

Popular Scientific Lectures

The Economical Nature of Physical Inquiry (p. 205)

The Open Court Publishing Company. Chicago, Illinois, USA. 1898

...scientific research is somewhat like unraveling complicated tangles of strings, in which luck is almost as vital as skill and accurate observation.

Knowledge and Error: Sketches on the Psychology of Enquiry

Chapter I (p. 10)

D. Reidel Publishing Company. Dordrecht, Netherlands. 1976

Mallove, Eugene F. 1947–2004

Editor

The image of a searching man held by Einstein and by Isaac Newton two hundred years before him is of a being wading in the shallows of the ocean of physical reality — trying to fathom the entirety by sampling only a part.

The Quickening Universe: Cosmic Evolution and Human Destiny

Prologue (p. xvi)

St. Martin's Press. New York, New York, USA. 1987

Human beings individually have only a brief time in this world to form an image of the cosmos. Their minds are like film in a camera of awareness. Birth and death are the opening and closing of the shutters. Yet generations of striving to understand have led to a picture of the universe far more complete than any of us alone could have hoped to develop.

The Quickening Universe: Cosmic Evolution and Human Destiny

Prologue (pp. xviii–xix)

St. Martin's Press. New York, New York, USA. 1987

Mayr, Ernst 1904–2005

German-born American biologist

...research not only brings us abundant joy but it also gives us a deep sense of humility.

In Walter Shropshire, Jr. (ed.)

The Joys of Research

Evolutionary Biology (p. 157)

Smithsonian Institution Press. Washington, D.C. 1981

Medawar, Sir Peter Brian 1915–87

Brazilian-born English zoologist

The scientist values research by the size of its contribution to that huge, logically articulated structure of ideas which is already, though not yet half built, the most glorious accomplishment of mankind.

Two Conceptions of Science

Encounter, Volume 143, August 1965

If politics is the art of the possible, research is surely the art of the soluble. Both are immensely practical-minded affairs.

The Act of Creation

New Statesman, Volume 19, June 1964 (p. 950)

Mizner, Wilson 1876–1933

American playwright

If you steal from one author, it's plagiarism; if you steal from many, it's research.

In Alva Johnson

The Legendary Mizners

Chapter 4, The Sport (p. 66)

Farrar, Straus & Young. New York, New York, USA. 1953

Oppenheimer, J. Robert 1904–67

American theoretical physicist

Research is action; and the question I want to leave in a very raw and uncomfortable form with you is how to communicate this sense of action to our fellow men who are not destined to devote their lives to the professional pursuit of new knowledge.

The Open Mind

Chapter VII (p. 129)

Simon & Schuster. New York, New York, USA. 1955

We have done the devil's work. Now we have come back to our real job, which is to devote ourselves exclusively to research.

In Karl Jasper

La Bombe Atomique et l'Avenir de L'Homme (p. 360)
Buchet-Chassel. Paris, France. 1963

Peabody, A. P.

No biographical data available

No man becomes proficient in any science who does not transcend system, and gather up new truth for himself in the boundless field of research.

In James Orton

Comparative Zoology, Structural and Systematic
Preceding Chapter XXI (p. 222)

Harper & Brothers. New York, New York, USA. 1877

Perutz, Max F. 1914–2002

Austrian-born English biochemist

...research consists of formulation of imaginative hypotheses that are open to falsification by experiment.

Is Science Necessary?

How to Become a Scientist (p. 199)

E.P. Dutton & Company, Inc. New York, New York, USA. 1989

Platt, Sir Robert 1900–78

English physician

The conventional picture of the research worker is that of a rather austere man in a white coat with a background of complicated glassware. My idea of a research worker, on the other hand, is a man who brushes his teeth on the left side of his mouth only so as to use the other side as a control and see if tooth-brushing has any effect on the incidence of caries.

British Medical Journal, Volume 1, 1953 (p. 577)

Recorde, Robert 1510?–58

English mathematician and writer

The time seemeth longe (bee it never so shorte indeed) to hym that desirously looketh for any thing: for as the obtaining of it bringeth great pleasure, namelye the thinge itselفة being profitable, so the wante thereof causeth displeasure and cotinuall grief tyll the desire be eyther fully satisfied, other partly (at the least) accomplished.

The Castle of Knowledge

The First Treatise (p. 1)

Imprinted by R. Wolfe. London, England. 1556

Reichenbach, Hans 1891–1953

German philosopher of science

The reliance on the concrete is the basis of both the charm and the power of physical research.

Atom and Cosmos

Chapter 4 (p. 75)

The Macmillan Company. New York, New York, USA. 1933

Richet, Charles 1850–1935

French physiologist

Understand this clearly; that the right method, even for obtaining a useful practical result, is not to worry about the practice, but to concentrate intensely on pure investigation, without being hampered by any parasitic considerations other than whatever conduces to greater facility for research.

The Natural History of a Savant

Chapter XII (p. 134)

J.M. Dent & Sons Ltd. London, England. 1927

The gift for investigation appears at an early age: the demon of research speaks to men whilst they are still young.

The Natural History of a Savant

Chapter VI (pp. 38–39)

J.M. Dent & Sons Ltd. London, England. 1927

Robinson, James Harvey 1863–1936

American historian

Research is mainly looking for things that are not there and attempting processes that will not occur.

The Humanizing of Knowledge

Chapter II (p. 32)

George H. Doran Company. New York, New York, USA. 1923

Romanoff, Alexis Lawrence 1892–1980

Russian soldier and scientist

Scientific research is based chiefly on creative thinking.

Encyclopedia of Thoughts

Aphorisms 219

Ithaca Heritage Books. Ithaca, New York, USA. 1975

Scientific research provides the shortest route to useful practice.

Encyclopedia of Thoughts

Aphorisms 112

Ithaca Heritage Books. Ithaca, New York, USA. 1975

Sarewitz, Daniel

No biographical data available

A lone scientist, frizzy-haired and bespectacled — the absent-minded, benevolent genius lost in thought; or perhaps the dedicated experimentalist clad in a white coat and laboring madly among the condensers, Van de Graaf generators, computers, and even electrode-covered cadavers: These are typical public images of scientific research.

Frontiers of Illusion

Chapter 3 (p. 31)

Temple University Press. Philadelphia, Pennsylvania, USA. 1996

Sarnoff, David 1891–1971

Russian-born American broadcasting executive

The wonderful thing about research is that the more of it you do, the more of it there is left to do.

Research and Industry: Partners in Progress

Address to the Board of Directors of the Stanford Research Institute
November 14, 1951 (p. 13)

Scalera, Mario

No biographical data available

There is no practical purpose here. There is simply man's insatiable curiosity, his abhorrence of the unknown — the desire to see, in the confusing phenomena of nature, the law, the order, that underlies them. This kind of urge has its own reward...the reward that comes to a man who suddenly sees order shaping out of chaos — this is what we call fundamental research.

An Industrial Research Director Views Fundamental Research
Chemical and Engineering News, April 21, 1958 (p. 85)

Schild, Alfred 1921–77

Physicist

If one can tell ahead of time what one's research is going to be, the research problem cannot be very deep and may be said to be almost nonexistent.

On the Matter of Freedom: The University and the Physical Sciences Bulletin
Canadian Association of University Teachers, Volume 11, Number 4, 1963

Schön, Donald A. 1930–97

American philosopher of practice and learning theory

He emphasizes the key issue of the starting point of research. In real-world practice, problems do not present themselves to the practitioner as givens. They must be constructed from the materials of problematic situations which are puzzling, troubling and uncertain. In order to convert a problematic situation to a problem, a practitioner must do a certain kind of work.

The Reflective Practitioner: How Professionals Think in Action (p. 40)
Basic Books, Inc. New York, New York, USA. 1983

Smith, Homer W.

Renal physiologist

On every scientist's desk there is a drawer labeled UNKNOWN in which he files what are at the moment unsolved questions, lest through guess-work or impatient speculation he come upon incorrect answers that will do him more harm than good. Man's worst fault is opening the drawer too soon. His task is not to discover final answers but to win the best partial answers that he can, from which others may move confidently against the unknown, to win better ones.

From Fish to Philosopher
Chapter XIII (p. 210)
Little, Brown & Company. Boston, Massachusetts, USA. 1953

Smith, Theobald 1859–1934

American pathologist

The joy of research must be found in doing, since every other harvest is uncertain.

Letter from Dr. Theobald Smith,
Journal of Bacteriology Volume 27, Number 1, January 1934 (p. 20)

...it is the care we bestow on apparently trifling, unattractive and very troublesome minutiae which determines the results.

New York Medical Journal, Volume lii, 1890 (p. 485)

Stewart, Ian 1945–

English mathematician and science writer

The really important breakthroughs are always unpredictable. It is their very unpredictability that makes them important: they change our world in ways we didn't see coming.... There is nothing wrong with goal-oriented research as a way of achieving specific feasible goals. But the dreamers and the mavericks must be allowed some free rein, too. Our world is not static: new problems constantly arise, and old answers often stop working. Like Lewis Carroll's Red Queen, we must run very fast in order to stand still.

Nature's Numbers: The Unreal Reality of Mathematical Imagination
Chapter 2 (p. 29)
Basic Books, Inc. New York, New York, USA. 1995

Sutherland, Jr., Earl W. 1915–74

American pharmacologist and physiologist

I am fully convinced that medical research can offer one a happy and productive life. And if one has a little Viking spirit he can explore the world and people as no one else can do. The whole medical research area is wide open for exploration.

Les Prix Nobel. The Nobel Prizes in 1971
Nobel banquet speech for award received in 1971
Nobel Foundation. Stockholm, Sweden. 1972

Szent-Györgyi, Albert 1893–1986

Hungarian-born American biochemist

Research means going out into the unknown with the hope of finding something new to bring home.... The unknown is the unknown because one does not know what is there. If one knows what one will do and find in it, then it is not research any more and is not worth doing.

Research Grants
Perspectives in Biology and Medicine, Volume 18, Number 1, Autumn 1974 (p. 41)

Terence 190 BCE–158 BCE

Roman comic dramatist

Nothing is so difficult but that it may be found out by seeking.

Translated by Alexander Harvey
Heauton Timorumenos
Act iv, Scene 2, l. 675
Haldeman-Julius Company. Girard, Kansas, USA. 1925

The Bible

...seek, and you will find; knock, and the door will be opened to you.

The Revised English Bible

Matthew 7:7

Oxford University Press, Inc. Oxford, England. 1989

Thomas, Lewis 1913–93

American physician and biologist

In science in general, one characteristic feature is the awareness of error in the selection and pursuit of a problem. This is the most commonplace of criteria: if a scientist is going to engage in research of any kind, he has to have it on his mind, from the outset, that he may be on to a dud. You can tell a world-class scientist from the run-of-the-mill investigator by the speed with which he recognizes that he is heading into a blind alley. Blind alleys and garden paths leading nowhere are the principal hazards in research.

Late Night Thoughts on Listening to Mahler's Ninth Symphony
Viking Press. New York, New York, USA. 1983

Thompson, Elihu 1853–1937

American electrical engineer

Physical research by experimental methods is both a broadening and a narrowing field. There are many gaps yet to be filled, data to be accumulated, measurements to be made with great precision, but the limits within which we must work are becoming, at the same time, more and more defined.

Annual Report of the Board of Regents of the Smithsonian Institution, 1899

The Field of Experimental Research (p. 119)

Government Printing Office. Washington, D.C. 1901

Thorne, Kip S. 1940–

American theoretical physicist

In scientific research, as in life, many themes are pursued simultaneously by many different people; and the insights of one decade may spring from ideas that are several decades old but were ignored in the intervening years.

Black Holes and Time Warps: Einstein's Outrageous Legacy

Preface (p. 18)

W.W. Norton & Company, Inc. New York, New York, USA. 1994

Veblen, Thorstein 1857–1929

Economist, social critic, and author

...the outcome of any serious research can only be to make two questions grow where only one grew before.

The Place of Science in Modern Civilization and Other Essays

The Evolution of the Scientific Point of View (p. 33)

The Viking Press, Inc. New York, New York, USA. 1942

von Braun, Wernher 1912–77

German-American rocket scientist

Basic research is when I'm doing what I don't know I'm doing.

In Jefferson Hane Weaver

The World of Physics (Volume 2)

K.6 (p. 63)

Simon & Schuster. New York, New York, USA. 1987

von Liebig, Justus 1803–73

German organic chemist

We were the first pioneers in unknown regions, and the difficulties in the way of keeping on the right path were sometimes insuperable. Now, when the paths of research are beaten roads, it is a much easier matter; but all the wonderful discoveries which recent times have brought forth were then our own dreams, whose realization we surely and without doubt anticipated.

Annual Report of the Board of Regents of the Smithsonian Institution, 1891

Autobiography (p. 267)

Government Printing Office. Washington, D.C. 1893

Weber, Robert L.

No biographical data available

Much of the misunderstanding of scientists and how they work is due to the standard format of articles in scientific journals. With their terse accounts of successful experiments and well-supported conclusions they show little of the untidy nature of research at the frontiers of knowledge.

A Random Walk in Science

Introduction (p. xv)

Institute of Physics Publishing. Bristol, England. 1973

Weisskopf, Victor Frederick 1908–2002

Austrian-American physicist

It is difficult to distinguish clearly between fundamental and applied science, and any considerations of this kind can lead to dangerous oversimplifications. The success of basic research derives to a large extent from the close cooperation of basic and applied science. This close relation — often within the same scientist — provided tools of high quality, without which many fundamental discoveries could not have been made.

Physics in the Twentieth Century: Selected Essays

The Significance of Science (pp. 354–355)

The MIT Press. Cambridge, Massachusetts, USA. 1972

Wells, Carolyn 1862–1942

American writer

I think, for the rest of my life, I shall refrain from looking up things. It is the most ravenous time-snatcher I know. You pull one book from the shelf, which carries a hint or a reference that sends you posthaste to another book, and that to successive others. It is incredible, the number of books you hopefully open and disappointedly close, only to take down another with the same results.

The Rest of My Life

Chapter 8

J.B. Lippincott. Philadelphia, Pennsylvania, USA. 1937

Wells, H. G. (Herbert George) 1866–1946

English novelist, historian, and sociologist

The whole difference of modern scientific research from that of the Middle Ages, the secret of its immense success, lies in its collective character, in the fact that every fruitful experiment is published, every new discovery of relationships explained.

New Worlds For Old

Chapter II (p. 22)

The Macmillan Company. New York, New York, USA. 1918

In a sense scientific research is a triumph over natural instinct, over that mean instinct that makes men secretive, that makes a man keep knowledge to himself and use it slyly to his own advantage.

New Worlds for Old

Chapter II (pp. 22–23)

The Macmillan Company. New York, New York, USA. 1918

Wheeler, John Archibald 1911–

American physicist and educator

There is an age-old longing to understand the inner mystery of this strange and beautiful world of ours and our own little place in the scheme of things. Whoever knows a little and can give a little to the search wants to know more and give more.

At Home in the Universe

Be the Best to Give the Most (p. 80)

The American Institute of Physics. Woodbury, New York, USA. 1994

Whitney, Willis Rodney 1868–1958

American chemical and electrical engineer

The valuable attributes of [researchers] are conscious ignorance and active curiosity.

The Stimulation of Research in Pure Science Which Has Resulted from the Needs of Engineers and of Industry

Science, Volume LXV, Number 1862, March 25, 1927 (p. 289)**Wilson, Jr., E. Bright** 1908–92

American physical chemist

Though the road may seem long and arduous, with many stretches of pure drudgery, when the end of a particular stage is reached, where the bits of evidence all fall together into a clear and unexpected pattern, there are few other human activities which can provide as much satisfaction; especially if, as is so often the case, the results turn out later to have applications in all sorts of unanticipated directions and help to give a clearer picture of the universe we live in and to make life in that universe more worth while.

An Introduction to Scientific Research

Conclusion (p. 364)

McGraw-Hill Book Company, Inc. New York, New York USA. 1952

Wittig, Georg 1897–1987

German chemist

Chemical research and mountaineering have much in common. If the goal or the summit is to be reached, both initiative and determination as well as perseverance are required. But after the hard work it is a great joy to be at the goal or the peak with its splendid panorama.

Nobel Lectures, Chemistry 1971–1980

Nobel lecture for award received in 1979

From *Diylys to Ylides to My Idyll* (p. 368)

World Scientific Publishing Company. Singapore. 1993

Wordsworth, William 1770–1850

English poet

Lost in the gloom of uninspired research.

The Complete Poetical Works of William Wordsworth

The Excursion, Despondency Corrected, l. 626

Crowell. New York, New York, USA. 1888

Yang, Chen Ning 1922–

Chinese-born American theoretical physicist

The necessary tendency toward bigness is unfortunate, as it hinders free and individual initiative. It makes research less intimate, less inspiring, and less controllable. However, it must be accepted as a fact of life. Let us take courage then in the knowledge that despite their physical bigness, the machines, the detectors, and indeed the experiments themselves are still based on ideas that have the same simplicity, the same intimacy and controllability that have always made research so exciting and inspiring.

Elementary Particles: A Short History of Some Discoveries in Atomic Physics

Chapter 2 (p. 40)

Princeton University Press. Princeton, New Jersey, USA. 1962

Yeats, William Butler 1865–1939

Irish poet and playwright

I had discovered, early in my researches, that their doctrine was no mere chemical fantasy, but a philosophy they applied to the world, to the elements, and to man himself.

Stories of Red Hanrahan, the Secret Rose, Rosa Alchemica

Rosa Alchemica (p. 192)

The Macmillan Company. New York, New York, USA. 1914

RESEARCH PLAN**van Noordwijk, A. J.** 1949

Dutch-Canadian genetical ecologist

...however excellent multiannual planning, research-project management, and time recording may be, the scientist should always have some opportunity to test the idea that he got that morning while shaving.

The Bioassayist

Perspectives in Biology and Medicine, Volume 29, Number 2, Winter

1986 (p. 307)

Richter, Curt P. 1894–1988
American psychobiologist

...good researchers use research plans merely as starters and are ready to scrap them at once in the light of actual findings...

Free Research versus Design Research
Science, Volume 118, Number 3056, July 24, 1953 (p. 92)

Waksman, Selman A. 1888–1973
Ukrainian-born American biochemist

Good scientists use research plans merely as outlines to begin their investigations and are ready to give them up once they are not justified by actual findings. Experimental designs tend to give rise to “team research”, which serves a purpose in developing and applying ideas; it rarely produces new ideas.

Searchers and Researchers
Perspectives in Biology and Medicine, Volume 7, Number 3, Spring 1964 (p. 312)

...a new problem has arisen — namely “planned research” versus the “individual investigator.” There is a place for planned research. It can take a defined body of knowledge and lay out a set of experiments which will exploit this knowledge to its foreseeable limits. It can take a set of postulates and drive them home to their logical conclusions. It can do this with exhaustive thoroughness, economy, and speed. Within its limitations, it is efficient, expeditious, and authoritative. But there is a place also and a more important place for the random investigator. The role of planned research is to consolidate ground already won; the role of the random investigator is to seek out new worlds to conquer.

Searchers and Researchers
Perspectives in Biology and Medicine, Volume 7, Number 3, Spring 1964 (p. 311)

RESIDUAL

Herschel, Sir John Frederick William 1792–1871
English astronomer and chemist

Almost all the greatest discoveries in astronomy have resulted from the consideration of what we have elsewhere termed RESIDUAL PHENOMENA, of a quantitative or numerical kind, that is to say, of such portions of the numerical or quantitative results of observations as remain outstanding and unaccounted for after subducting and allowing for all that would result from the strict application of known principles.

Outlines of Astronomy
Part III, Chapter XVI (856) (p. 584)
Longman, Brown, Green & Longmans. London, England. 1849

RESPIRATION

Lavoisier, Antoine Laurent 1743–94
French chemist

Of all the phenomena of animal economy, none are more striking, nor more worthy of attention from physicists and physiologists than those accompanying respiration. If, on the other hand, we know little of the object of this singular function, we know, on the other hand, that it is so essential to life that it cannot be suspended for any time without exposing the animal to danger of immediate death.

Experiments on the Respiration of Animals and the Changes Which Happen to Air in Its Passage Through Their Lungs
Read to the Academie des Sciences
3 May, 1777

RESPONSIBILITY

Teller, Edward 1908–2003
Hungarian-born American nuclear physicist

Beyond the scientific responsibility to search the horizon of human knowledge, the responsibilities of scientists cannot be any greater than those of any other citizen in our democratic society. The consequences of scientific discoveries are the responsibility of the people.

Better a Shield than a Sword: Perspectives in Defense and Technology
Chapter 9 (p. 85)
The Free Press. New York, New York, USA. 1987

REST

Born, Max 1882–1970
German-born English physicist

It is odd to think that there is a word for something which, strictly speaking, does not exist, namely, “rest.”

The Restless Universe
Chapter I (p. 1)
Dover Publications, Inc. New York, New York, USA. 1951

RESULT

Dante, Alighieri 1265–1321
Italian poet

Great flame follows a little spark.

In *Great Books of the Western World* (Volume 21)
The Divine Comedy of Dante Alighieri
Paradise

QED and the Men Who Made It: Dyson, Feynman, Schwinger, and Tomonaga

Chapter 10 (p. 594)

Princeton University Press. Princeton, New Jersey, USA. 1994

Poincaré, Henri 1854–1912

French mathematician and theoretical astronomer

To obtain a result of real worth it will not suffice to grind it out or to have a machine for putting our facts in order. It is not alone order but the unexpected order which is of real worth. The machine may grind upon the mere fact, but the soul of the fact will always escape it.

Annual Report of the Board of Regents of the Smithsonian Institution, 1909

The Future of Mathematics (p. 127)

Government Printing Office. Washington, D.C. 1910

Sagan, Carl 1934–96

American astronomer and author

Every scientist feels an affection for his or her ideas and scientific results. You feel protective of them. But you don't reply to critics: "Wait a minute, wait a minute; this is a really good idea. I'm very fond of it. It's done you

no harm. Please don't attack it." That's not the way it goes. The hard but just rule is that if the ideas don't work, you must throw them away. Don't waste any neurons on what doesn't work. Devote those neurons to new ideas that better explain the data. Valid criticism is doing you a favor.

Wonder and Skepticism

Skeptical Inquirer, January/February 1995 (p. 24)

Wilson, Jr., E. Bright 1908–92

American physical chemist

One of the most difficult decisions which an experimenter has to make is whether or not to reject a result which seems unreasonably discordant.... The best procedure to use depends on what is known about the frequency of occurrence of wild values, on the cost of additional observations, and on the penalties for the various types of errors.... There is often a desire to disregard negative results on the grounds that conditions were not right or that the operator was not in the right mood. This is undoubtedly responsible for much pseudo science, psychic phenomena, and similar material.

An Introduction to Scientific Research

RIEMANN HYPOTHESIS

Berry, M. V.

No biographical data available

Keating, J. P.

No biographical data available

If the Riemann Hypothesis is true...the function $f(u)$ constructed from the primes has discrete spectrum; that is, the support of its Fourier transform is discrete. If the Riemann Hypothesis is false this is not the case. The frequencies then are reminiscent of the decomposition of a musical sound into its constituent harmonics. Therefore there is a sense in which we can give a one-line non technical statement of the Riemann hypothesis: "The primes have music in them."

The Riemann Zeros and Eigenvalue Asymptotics

SIAM Review, 41, Number 2 (1999) (p. 238)

Bombieri, Enrico 1940–

Italian mathematician

The failure of the Riemann hypothesis would create havoc in the distribution of prime numbers. This fact alone singles out the Riemann hypothesis as the main open question of prime number theory.

Prime Territory: Exploring the Infinite Landscape at the Base of the Number System

The Sciences, Sept/Oct 1992

Conrey, J. Brian

The Riemann Hypothesis (RH) has been around for more than 140 years, and yet now is arguably the most exciting time in its history to be working on RH. Recent years have seen an explosion of research stemming from the confluence of several areas of mathematics and physics.

The Riemann Hypothesis

Notices of the AMS (March 2003)

du Sautoy, Marcus 1965–

English mathematician and writer

[The Riemann] zeros did not appear to be scattered at random. Riemann's calculations indicated that they were lining up as if along some mystical ley line running through the landscape.

The Music of the Primes

Chapter 4 (p. 99)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

As we shall see, Riemann's Hypothesis can be interpreted as an example of a general philosophy among mathematicians that, given a choice between an ugly world and an aesthetic one, Nature always chooses the latter.

The Music of the Primes

Chapter 2 (p. 55)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

We have all this evidence that the Riemann zeros are vibrations, but we don't know what's doing the vibrating.

The Music of the Primes

Chapter 11 (p. 280)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

As mathematicians navigate their way across the mathematical terrain, it as though all paths will necessarily lead at some point to the same awesome vista of the Riemann Hypothesis.

The Music of the Primes

Chapter 1 (p. 10)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

In an interview, Hilbert explained that he believed the Riemann Hypothesis to be the most important problem "not only in mathematics but absolutely the most important."

The Music of the Primes

Chapter 5 (p. 114)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

A solution to the Riemann Hypothesis offers the prospect of charting the misty waters of the vast ocean of numbers. It represents just a beginning in our understanding of Nature's numbers. If we can only find the secret of how to navigate the primes, who knows what else lies out there, waiting for us to discover?

The Music of the Primes

Chapter 1 (p. 18)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

Until [the RH is proved], we shall listen enthralled by this unpredictable mathematical music, unable to master its twists and turns. The primes have been a constant companion in our exploration of the mathematical world yet they remain the most enigmatic of all numbers. Despite the best efforts of the greatest mathematical minds to explain the modulation and transformation of this mystical music, the primes remain an unanswered riddle. We still await the person whose name will live for ever as the mathematician who made the primes sing.

The Music of the Primes

Chapter 12 (p. 312)

HarperCollins Publisher, Inc. New York, New York, USA. 2003

Erdős, Paul 1913–96

Hungarian mathematician

To conclude, a somewhat daunting quote about the prime numbers from someone who was as familiar with them as anyone has ever been: “It will be millions of years before we’ll have any understanding, and even then it won’t be a complete understanding, because we’re up against the infinite.”

Interview with P. Hoffman

Atlantic Monthly, November 1987 (p. 74)

Heath-Brown, R.

Mathematician

[The Riemann Hypothesis has] no longer just analytic number theorists involved, but all mathematicians know about the problem, and many realize that they may have useful insights to offer. As far as I can see, a solution is as likely to come from a probabilist, geometer or mathematical physicist, as from a number theorist.

In K. Sabbagh

The Riemann Hypothesis: The Greatest Unsolved Problem in Mathematics

Chapter 17 (pp. 267–268)

Farrar, Straus & Giroux. New York, New York, USA. 2002

Ivic, A.

No biographical data available

...I don’t believe or disbelieve the Riemann Hypothesis. I have a certain amount of data and a certain amount of facts. These facts tell me definitely that the thing has not been settled. Until it’s been settled it’s a hypothesis, that’s all. I would like the Riemann Hypothesis to be true, like any decent mathematician, because it’s a thing of beauty, a thing of elegance, a thing that would simplify many proofs and so forth, but that’s all.

In K. Sabbagh

The Riemann Hypothesis: The Greatest Unsolved Problem in Mathematics

Chapter 17 (p. 269)

Farrar, Straus & Giroux. New York, New York, USA. 2002

Klarreich, E.

No biographical data available

Proving the Riemann hypothesis won’t end the story. It will prompt a sequence of even harder, more penetrating questions. Why do the primes achieve such a delicate balance between randomness and order? And if their patterns do encode the behavior of quantum chaotic systems, what other jewels will we uncover when we dig deeper? Those who believe mathematics holds the key to the Universe might do well to ponder a question that goes back to the ancients: What secrets are locked within the primes?

Prime Time

New Scientist, November 11, 2000

Montgomery, H.

No biographical data available

So if you could be the Devil and offer a mathematician to sell his soul for the proof of one theorem — what theorem would most mathematicians ask for? I think it would be the Riemann Hypothesis.

In K. Sabbagh

The Riemann Hypothesis: The Greatest Unsolved Problem in Mathematics

Chapter 2 (p. 36)

Farrar, Straus & Giroux. New York, New York, USA. 2002

Sometimes I think that we essentially have a complete proof of the Riemann Hypothesis except for a gap. The problem is, the gap occurs right at the beginning, and so it’s hard to fill that gap because you don’t see what’s on the other side of it.

In K. Sabbagh

The Riemann Hypothesis: The Greatest Unsolved Problem in Mathematics

Chapter 17 (p. 267)

Farrar, Straus & Giroux. New York, New York, USA. 2002

Motohashi, Yoichi

No biographical data available

...the Riemann Hypothesis will be settled without any fundamental changes in our mathematical thoughts, namely, all tools are ready to attack it but just a penetrating idea is missing.

In K. Sabbagh

The Riemann Hypothesis: The Greatest Unsolved Problem in Mathematics

Chapter 17 (p. 268)

Farrar, Straus & Giroux. New York, New York, USA. 2002

Sabbagh, K.

No biographical data available

For many mathematicians working on it, \$1m is less important than the satisfaction that would come from finding a proof. Throughout my researches among the mathematicians’ tribe (I have interviewed 30 in the past year), Riemann’s Hypothesis was often described to me in awed terms. Hugh Montgomery of the University of Michigan said this was the proof for which a mathematician might sell his soul. Henryk Iwaniec, a Polish-American mathematician, sounded as if he were already discussing terms with Lucifer.

“I would trade everything I know in mathematics for the proof of the Riemann Hypothesis. It’s gorgeous stuff. I’m only worried that I’ll be unable to understand it. That would be the worst...”

Beautiful Mathematics

Prospect, January 2002

Sarnak, P. 1953–
South African-born American mathematician

Right now, when we tackle problems without knowing the truth of the Riemann hypothesis, it's as if we have a screwdriver. But when we have it, it'll be more like a bulldozer.

In E. Klarreich
New Scientist
Prime Time, November 11, 2000

The Riemann Hypothesis is the central problem and it implies many, many things. One thing that makes it rather unusual in mathematics today is that there must be over five hundred papers — somebody should go and count — which start Assume the Riemann Hypothesis, and the conclusion is fantastic. And those [conclusions] would then become theorems...With this one solution you would have proven five hundred theorems or more at once.

In K. Sabbagh
The Riemann Hypothesis: The Greatest Unsolved Problem in Mathematics
Chapter 14 (p. 222)
Farrar, Straus & Giroux. New York, New York, USA. 2002

If [the Riemann Hypothesis is] not true, then the world is a very different place. The whole structure of integers and prime numbers would be very different to what we could imagine. In a way, it would be more interesting if it were false, but it would be a disaster because we've built so much round assuming its truth.

In K. Sabbagh
The Riemann Hypothesis: The Greatest Unsolved Problem in Mathematics
Chapter 2 (p. 37)

RIGHTS OF ANIMALS

Twain, Mark (Samuel Langhorne Clemens) 1835–1910
American author and humorist

I believe I am not interested to know whether Vivisection produces results that are profitable to the human race or doesn't. To know that the results are profitable to the race would not remove my hostility to it. The pains which it inflicts upon unconsenting animals is the basis of my enmity towards it, and it is to me sufficient justification

of the enmity without looking further. It is so distinctly a matter of feeling with me, and is so strong and so deeply-rooted in my make and constitution, that I am sure I could not even see a vivisector vivisected with anything more than a sort of qualified satisfaction. I do not say I should not go and look on; I only mean that I should almost surely fail to get out of it the degree of contentment which it ought, of course, to be expected to furnish.

Letter, London Anti-Vivisection Society, May 26, 1899

RIGOR

Poincaré, Henri 1854–1912
French mathematician and theoretical astronomer

In mathematics rigor is not everything, but without it there would be nothing; a demonstration which is not rigorous is void.

Annual Report of the Board of Regents of the Smithsonian Institution, 1909

The Future of Mathematics (p. 127)
Government Printing Office. Washington, D.C. 1910

Chinese philosopher and reformer

Men of practical knowledge find their gratification among rivers.

In Lionel Giles (ed.)

The Analects of Confucius

Chinese University Press. Hong Kong. 1983

Dyer, John 1700?–58

Welsh clergyman and poet

And see the rivers how they run
Through woods and meads, in shade and sun,
Sometimes swift, sometimes slow, —
Wave succeeding wave, they go
A various journey to the deep,
Like human life to endless sleep!

In Thomas Campbell

Specimens of the British Poets

Granger Hill, l. 93

John Murray. London, England. 1841

Eliot, T. S. (Thomas Stearns) 1888–1965

American expatriate poet and playwright

I do not know much about gods; but I think that the river
Is a strong brown god — sullen, untamed and intractable

Patient to some degree, at first recognized as a frontier;
Useful, untrustworthy as a conveyor of commerce;
Then only a problem confronting the builder of bridges.
The problem once solved, the brown god is almost forgotten

By the dwellers in cities — ever, however, implacable,
Keeping his seasons and rages, destroyer, reminder

Of what men choose to forget.

Unhonoured, unpropitiated

By worshippers of the machine.

The Collected Poems and Plays 1909–1950

The Dry Salvages (p. 130)

Harcourt, Brace & World, Inc. New York, New York, USA. 1952

Emerson, Ralph Waldo 1803–82

American lecturer, poet, and essayist

The river knows the way to the sea:

Without a pilot it runs and falls,

Blessing all lands with its charity.

The Complete Works of Ralph Waldo Emerson (Volume 9)

Woodnotes

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Playfair, John 1748–1819
Scottish geologist, physicist, and mathematician

A river, of which the course is both serpentine and deeply excavated in the rock, is among the phenomena by which the slow waste of the land, and also the cause of that waste, are most directly pointed out.

Illustrations of the Huttonian Theory of the Earth
Section 101 (p. 104)
Dover Publications, Inc. New York, New York, USA. 1964

Twain, Mark (Samuel Langhorne Clemens) 1835–1910
American author and humorist

The face of the water, in time, became a wonderful book...which told its mind to me without reserve, delivering its most cherished secrets as clearly as if it uttered them with a voice. And it was not a book to be read once and thrown aside, for it had a new story to tell every day.

Life on the Mississippi
Chapter IX (p. 77)
Harper & Row, Publishers. New York, New York, USA. 1951

Wallace, Alfred Russel 1823–1913
English humanist, naturalist, and geographer

These various-coloured waters may, we believe, readily be accounted for by the nature of the country the stream flows through. The fact that the most purely black-water rivers flow through districts of dense forest, and have granite beds, seems to show that it is the percolation of the water through decaying vegetable matter which gives it its peculiar colour. Should the stream, however, flow through any extent of alluvial country, or through any districts where it can gather much light-coloured sedimentary matter, it will change its aspect, and we shall have the phenomenon of alternating white and black water rivers. The Rio Branco and most of its tributaries rise in an open, rocky country, and the water there is pure and uncoloured; it must, therefore, be in the lower

part of its course that it obtains the sediment that gives it so remarkably light a colour; and it is worthy of note, that all the other white-water tributaries of the Rio Negro run parallel to the Rio Branco, and, therefore, probably obtain their sediment from a continuation of the same deposits; only as they flow entirely through a forest district producing brown water, the result is not such a strikingly light tint as in the case of that river.

Journal of the Royal Geographical Society, Volume 23, 1853 (p. 213)

ROBOT

Hey, Nigel S. 1936–
American science writer

The craft is a space robot that is invested with the equivalents of eyes, ears, voice, and muscle. Each spacecraft takes with it the hopes and dreams of thousands of scientists and engineers and, most importantly, the special sense of wonder and imagination that is so great a part of human nature.

Solar System

French aviator and writer

A rock pile ceases to be a rock pile the moment a single man contemplates it, bearing within him the image of a

cathedral.
Translated by Bernard Lamotte
Flight to Arras
Chapter XXII (p. 219)
Reynal & Hitchcock. New York, New York, USA. 1942

Fort, Charles 1874–1932
American writer

"I shall be scientific about it." Said Sir Isaac Newton — or virtually said he — "If there is no change in the direction of a moving body, the direction of a moving body is not changed." "But," continued he, "if something be changed, it is changed as much as it is changed." How do geologists determine the age of rocks? By the fossils in them. And how do they determine the age of fossils? By the rocks they're in. Having started with the logic of Euclid, I go on to the wisdom of Newton.

The Books of Charles Fort
Lo! (pp. 547–548)
Henry Holt & Company. New York, New York, USA. 1941

Le Guin, Ursula K. 1929–
American writer of science fiction and fantasy

The first thing about rocks is, they're old.... Rocks are in time in a different way than living things are, even the ancient trees. But then, the other thing about rocks is that they are place. Rocks are what a place is made of to start with and after all.... The stone is at the center.

Buffalo Gals and Other Animal Presences
Capra Press. Santa Barbara, California, USA. 1987

LeConte, John 1818–91
American physician and physicist

Here, then, we have the oldest known rocks. Are they, then, absolutely the oldest — the primitive rocks, as some imagine? By no means. They are stratified rocks, and therefore consolidated sediments, and therefore, also, the debris of still older rocks, of which we know nothing. Thus, we seek in vain for the absolutely oldest, the primitive crust.

A Compend of Geology
Part III, Chapter II (pp. 263–264)
American Book Company. New York, New York, USA. 1884

Levenson, Thomas
No biographical data available

Rock is the ultimate historian — what it is, and what remnants it contain are the only records of what the earth was like through virtually its entire lifetime.

Liquids and gases forget, but rocks remember.

In G. Brent Dalrymple

The Age of the Earth

Chapter 7 (p. 305)

Stanford University Press. Stanford, California, USA. 1991

Read, Herbert Harold 1899–1970

English geologist

Watson, Janet

No biographical data available

...the best geologist is the one who has seen the most rocks.

Beginning Geology

Preface

Macmillan & Company Ltd. London, England. 1966

Seward, A. C. 1863–41

No biographical data available

Rocks are the source-books of geological history...

Plant Life Through the Ages

Chapter II (p. 5)

Hafner Publishing Company. New York, New York, USA. 1959

von Bubnoff, S.

No biographical data available

The materials from which the geologist draws his conclusions are rocks.

Fundamentals of Geology

Chapter II (p. 12)

Oliver & Boyd. Edinburgh, Scotland. 1963

Wells, H. G. (Herbert George) 1866–1946

English novelist, historian, and sociologist

The Record of the Rocks is like a great book that has been carelessly misused. All its pages are torn, worn, and defaced, and many are altogether missing.

The Outline of History (Volume 1)

Book I, Chapter III, Section 3 (p. 29)

Garden City Books. Garden City, New York, USA. 1961

White, Bailey 1950–

American writer

My Aunt Belle loves rocks. Her whole house used to be filled with rocks. Every flat surface was covered with slabs of amethyst crystal, piles of rainbow-colored labradorite, bowls full of fossilized sharks' teeth as big as a child's hand, and agate geodes lined with quartz crystals.... Every afternoon my Aunt Belle takes a bagful of rocks down to Shoney's Restaurant where she spreads them out on the Formica tabletop and says incantations over them while she drinks iced tea.

Sleeping at the Starlite Motel and Other Adventures on the Way Back Home

Rocks (p. 63)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA.

1995

ROCKET

Goddard, Robert H. 1882–1945

American physicist

...I still seem to be alone in my enthusiasm for liquid-fueled rockets, but have a hunch that the time is coming when a good many will want to get aboard the bandwagon...

The Papers of Robert H. Goddard (Volume 3)

R.H. Goddard to T.E. Thompson

March 7, 1941 (p. 1386)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1970

Woolley, Richard 1906–1986

Astronomer Royal of England

The whole procedure [of shooting rockets into space]... presents difficulties of so fundamental a nature, that we are forced to dismiss the notion as essentially impracticable, in spite of the author's insistent appeal to put aside prejudice and to recollect the supposed impossibility of heavier-than-air flight before it was actually accomplished.

Reviewing P.E. Cleator's "Rockets in Space"

Nature, March 14, 1936

ROCKFALL

Muir, John 1838–1914

American naturalist

The sound was inconceivably deep and broad and earnest, as if the whole earth, like a living creature, had at last found a voice and were calling to her sister planets.

Our National Parks

Chapter VIII (p. 263)

Houghton Mifflin Company, Boston, Massachusetts, USA. 1901

ROTATION OF EARTH

Archimedes of Syracuse 287 BCE–212 BCE

Sicilian mathematician

But Aristarchus of Samos brought out a book consisting of certain hypotheses, in which the premises lead to the conclusion that the universe is many times greater than that now so called. His hypotheses are that the fixed stars and the sun remain motionless, that the earth revolves about the sun in the circumference of a circle, the sun lying in the middle of the orbit, and that the sphere of the fixed stars, situated about the same center as the sun, is so great that the circle in which he supposes the earth to revolve bears such a proportion to the distance of the fixed stars as the center of the sphere bears to its surface.

In *Great Books of the Western World* (Volume 11)

The Sand-Reckoner (p. 520)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Bacon, Sir Francis 1561–1626

English lawyer, statesman, and essayist

Nevertheless, in the system of Copernicus there are found many and great inconveniences; for both the loading of the earth with a triple motion is very incommodious, and the separation of the sun from the company of the planets, with which it has so many passions in common, is likewise a difficulty, and the introduction of so much immobility in nature, by representing the sun and stars as immoveable, especially being of all bodies the highest and most radiant, and making the moon revolve about the earth in an epicycle, and some other assumptions of his, are the speculations of one who cares not what fictions he introduces into nature, provided his calculations answer.

Descriptio Globi Intellectualis

Source undetermined

Blundeville, Thomas fl. 1561

English author

Some also deny that the earth is in the midst of the world, and some affirm that it is movable, as also Copernicus by way of supposition, and not for that he thought so in deede: who affirmeth that the earth turneth about, and that the sunne standeth still in the midst of the heauens, by help of which false supposition he hath made truer demonstrations of the motions and revolutions of the celestiall Sphaeres, than euer were made before...

M. Blundeville His Exercises

Source undetermined

Brahe, Tycho 1546–1601

Danish astronomer

If Nicolaus Copernicus, the distinguished and incomparable master, in this work had not been deprived of exquisite and faultless instruments, he would have left us this science far more well-established. For he, if anybody, was outstanding and had the most perfect understanding of the geometrical and arithmetical requisites for building up this discipline. Nor was he in any respect inferior to Ptolemy; on the contrary, he surpassed him greatly in certain fields, particularly as far as the device of fitness and compendious harmony in hypotheses is concerned. And his apparently absurd opinion that the Earth revolves does not obstruct this estimate, because a circular motion designed to go on uniformly about another point than the very center of the circle, as actually found in the Ptolemaic hypotheses of all the planets except that of the Sun, offends against the very basic principles of our discipline in a far more absurd and intolerable way than does the attributing to the Earth one motion or another which, being a natural motion, turns out to be imperceptible. There does not at all arise from this assumption so many unsuitable consequences as most people think.

Letter to Christopher Rothman, January 20, 1587

Source undetermined

Plutarch 46–119

Greek biographer and author

Some think that the earth remains at rest. But Philolaus the Pythagorean believes that, like the sun and moon, it revolves around the fire in an oblique circle. Heraclides of Pontus and Ephantus the Pythagorean make the earth move, not in a progressive motion, but like a wheel in rotation from west to east around its own center.

In Nicholas Copernicus

On the Revolutions of the Heavenly Spheres

Preface (p. 508)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

RUIN

Macaulay, Rose 1881–1958

English writer

Of all ruins, possibly the most moving are those of long-deserted cities, fallen century by century into deeper decay, their forsaken streets grown over by forest and shrubs, their decadent buildings quarried and plundered down the years, gaping ruinous, the haunts of lizards and owls...the marble and gold of palaces, the laurel and jasmine of gardens, are now brambles and lagoons; the house built for Caesar is now dwelt in by lizards...

Pleasure of Ruins

Chapter III (p. 255)

Walker & Company, New York, New York, USA. 1953

RULE

Arnheim, Rudolf 1904–
German-born author, film theorist, and psychologist

An orgy of self-expression is no more productive than blind obedience to rules.

Art and Visual Perception

Oxford University Press, Inc. London, England. 1953

S

SAGACITY

Diderot, Denis 1713–84

French encyclopedist and philosopher of materialism

I picture the vast realm of the sciences as an immense landscape scattered with patches of dark and light. The goal towards which we must work is either to extend the boundaries of the patches of light, or to increase their number. One of these tasks falls to the creative genius; the other requires a sort of sagacity combined with perfectionism.

In D. Adams (ed.)

Thoughts on the Interpretation of Nature and Other Philosophical Works
Section XIV (p. 42)

Clinamen Press. Manchester, England. 1999

Locke, John 1632–1704

English philosopher and political theorist

Those intervening ideas, which serve to show the agreement of any two others, are called proofs; and where the agreement or disagreement is by this means plainly and clearly perceived, it is called demonstration; it being shown to the understanding, and the mind made to see that it is so. A quickness in the mind to find out these intermediate ideas, (that shall discover the agreement or disagreement of any other) and to apply them right, is, I suppose, that which is called sagacity.

In *Great Books of the Western World* (Volume 35)

An Essay Concerning Human Understanding

Book VI, Chapter II, Section 3 (p. 310)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Whewell, William 1794–1866

English philosopher and historian

The Conceptions by which Facts are bound together, are suggested by the sagacity of discoverers. This sagacity cannot be taught. It commonly succeeds by guessing; and this success seems to consist in framing several tentative hypotheses and selecting the right one. But a supply of appropriate hypotheses cannot be constructed by rules, nor without inventive talent.

The Philosophy of the Inductive Sciences Founded Upon Their History
(Volume 2)

Aphorisms, Aphorisms Concerning Science, VIII (pp. 467–468)

John W. Parker. London, England. 1847

SAMPLE

Bloch, Arthur 1948–

American humorist

After painstaking and careful analysis of a sample, you are always told that it is the wrong sample and doesn't apply to the problem.

Murphy's Law

Fourth Law of Revision (p. 48)

Price/Stern/Sloan, Publishers. Los Angeles, California, USA. 1981

Cochran, William G. 1909–80

Scottish-born American statistician

Our knowledge, our attitudes, and our actions are based to a very large extent on samples.

Sampling Techniques (p. 1)

John Wiley & Sons. New York, New York, USA. 1953

A person's opinion of an institution that conducts thousands of transactions every day is often determined by the one or two encounters which he has had with the institution in the course of several years.

Sampling Techniques (p. 1)

John Wiley & Sons. New York, New York, USA. 1953

Cochran, William G. 1909–80

Scottish-born American statistician

Mosteller, Frederick 1916–2006

American statistician

In 1905, a physicist measuring the thermal conductivity of copper would have faced, unknowingly, a very small systematic error due to the heating of his equipment and sample by the absorption of cosmic rays, then unknown to physics. In early 1946, an opinion poller, studying Japanese opinion as to who won the war, would have faced a very small systematic error due to the neglect of the 17 Japanese holdouts, who were discovered later north of Saipan. These cases are entirely parallel. Social, biological and physical scientists all need to remember that they have the same problem, the main difference being the decimal place in which they appear.

Principles of Sampling

Journal of the American Statistical Association, Volume 49, 1954 (p. 31)

Deming, William Edwards 1900–93

American statistician, educator, and consultant

Sampling is the science and art of controlling and measuring the reliability of useful statistical information through the theory of probability.

Some Theory of Sampling (p. 3)

John Wiley & Sons. New York, New York, USA. 1950

If the cost of classifying a sampling unit were zero, one could always safely recommend fantastic plans of stratified sampling, with no worry about costs. The fact is, though, that there is always a price to pay...

Sample Design in Business Research (p. 320)

John Wiley & Sons. New York, New York, USA. 1960

A good sample-design is lost if it is not carried out according to plans.

Some Theory of Sampling (p. 241)

John Wiley & Sons. New York, New York, USA. 1950

Diconis, Persi 1945–

American mathematician

Mosteller, Frederick 1916–2006

American statistician

The law of truly large numbers states: With a large enough sample, any outrageous thing is likely to happen.

Methods for Studying Coincidences

Journal of the American Statistical Association, Volume 84, 1989 (p. 859)

Gilbert, Sir William Schwenck 1836–1911

English playwright and poet

Sullivan, Arthur 1842–1900

English composer

I've got a little list — I've got a little list...

I've got him on the list...

They never would be missed — they never would be missed!

The Complete Plays of Gilbert and Sullivan

The Mikado

Act I

The Modern Library. New York, New York, USA. 1936

Gissing, George 1857–1903

English novelist

He pointed to a heap of five or six hundred letters, and laughed consumedly.

“Impossible to read them all, you know. It seemed to me that the fairest thing would be to shake them together, stick my hand in, and take our one by chance. If it didn't seem very promising, I would try a second time.”

New Grub Street

The Way Hither (p. 62)

The Modern Library. New York, New York, USA. 1926

McNemar, Quinn 1900–86

American statistician

One does not have to read much of the current research literature in psychology, particularly in individual and social psychology, to realize that there exists a great deal of confusion in the minds of investigators as to the necessity of obtaining a truly representative sample, describing carefully how the sample was secured, and restricting generalizations to the universe, often ill-defined, from which the sample was drawn.

Psychological Bulletin

Sampling in Psychological Research

Journal of the American Statistical Association, Volume 37, Number 6, June 1940 (p. 33)

Mosteller, Frederick 1916–2006

American statistician

...weighing a sample appropriately is no more fudging the data than is correcting a gas volume for barometric pressure.

Principles of Sampling

Journal of the American Statistical Association, Volume 49, Number 265, 1964 (p. 33)

Slonim, Morris James

No biographical data available

Everyone who has poured a highball into the nearest potted plant after taking one sip has had some experience in sampling.

Sampling in a Nutshell (p. 1)

Simon & Schuster. New York, New York, USA. 1960

Sampling is only one component, but undoubtedly the most important one, of that broad based field of scientific method known as statistics.

Sampling in a Nutshell (p. 7)

Simon & Schuster. New York, New York, USA. 1960

SAND**Carson, Rachel** 1907–64

American marine biologist and author

Sand is a substance that is beautiful, mysterious, and infinitely variable; each grain on a beach is the result of processes that go back into the shadowy beginnings of life, or of the earth itself.

The Edge of the Sea

Chapter IV (p. 125)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1955

Charlie Chan

Fictional character

Earthquake may shatter the rock, but sand upon which rock stood, in same old place.

Dark Alibi

Film (1946)

McCord, David 1897–1997

American poet

A handful of sand is an anthology of the universe...

Once and For All

Once and For All (p. 1)

Coward-McCann. New York, New York, USA. 1929

Simon, Anne W.

No biographical data available

The end product, rock's irreducible minimum, is sand. Hold it in your hands and you are in touch with the planet's essence. Each grain has been part of the Earth's solid crust at one time or another, eventually to be freed from rock to exist as a grain again, its particular structure intact.

The Thin Edge: Coast and Man in Crisis

Chapter 2 (pp. 17–18)

Harper & Row, Publishers. New York, New York, USA. 1978

SAVANT

Richet, Charles 1850–1935
French physiologist

For the savant, Science must be a religion. Everything that is discovered, be it great or small, has its origin in this faith.

Translated by Sir Oliver Lodge
The Natural History of a Savant
Chapter VI (p. 47)
J.M. Dent & Sons Ltd. London, England. 1927

SCATTERING

Rutherford, Ernest 1871–1937
English physicist

It was quite the most incredible event that has ever happened to me in my life. It was almost as incredible as if you fired a 15-inch shell at a piece of tissue paper and it came back and hit you. On consideration, I realized that this scattering backward must be the result of a single collision, and when I made calculations I saw that it was impossible to get anything of that order of magnitude unless you took a system in which the greater part of the mass of the atom was concentrated in a minute nucleus. It was then that I had the idea of an atom with a minute massive center carrying a charge.

In Joseph Needham and W. Pagel (ed.)
Background to Modern Science
From Aristotle to Galileo
The Development of the Theory of Atomic Structure (p. 68)
The Macmillan Company. New York, New York, USA. 1938

SCAVENGER

Austin, Mary Hunter 1868–1934
American novelist and essayist

Once at Red Rock, in a year of green pasture, which is a bad time for the scavengers, we saw two buzzards, five ravens, and a coyote feeding on the same carrion, and only the coyote seemed ashamed of the company.

The Land of Little Rain
The Scavengers (pp. 53–54)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1903

SCENERY

Muir, John 1838–1914
American naturalist

The scenery is mostly of a comfortable, assuring kind, grand and inspiring without too much of that dreadful overpowering sublimity and exuberance which tend to discourage effort and cast people into inaction and superstition.

Steep Trails
Chapter XXI (p. 272)
Norman S. Berg, Publisher. Dunwoody, Georgia, USA. 1970

SCIATICA

Shakespeare, William 1564–1616
English poet, playwright, and actor

Thou cold sciatica,
Cripple our senators, that their limbs may halt
As lamely as their manners!

Swiss philosopher, poet, and critic

Society lives by faith, develops by science.

Translated by Mrs. Humphrey Ward

Amiel's Journal

May 7, 1870 (p. 216)

A.L. Burt Company, Publishers. New York, New York, USA. 1897

Appleyard, Bryan 1951–

English author and journalist

Science is not a neutral or innocent commodity which can be employed as a convenience.... Rather it is spiritually corrosive, burning away at ancient authorities and traditions. It has shown itself unable to coexist with anything.

Understanding the Present: Science and the Soul of Modern Man

Chapter 1 (p. 9)

Doubleday. New York, New York, USA. 1992

Arabic Proverb

Science is a plant whose roots indeed are at Mecca, but its fruit ripens at Herat.

In Robert Christy

Proverbs, Maxims and Phrases of All Ages (p. 236)

G.P. Putnam's Sons. New York, New York, USA. 1888

Asimov, Isaac 1920–92

American author and biochemist

Science does not promise absolute truth, nor does it consider that such a thing necessarily exists. Science does not even promise that everything in the Universe is amenable to the scientific process.

"X" Stands for Unknown

Introduction (p. 10)

Doubleday & Company, Inc. Garden City, New York, USA. 1984

The process of science...involves a slow forward movement through the reachable portions of the Universe — a gradual unfolding of parts of the mystery.

"X" Stands for Unknown

Introduction (p. 10)

Doubleday & Company, Inc. Garden City, New York, USA. 1984

Astbury, William Thomas 1898–1961

English crystallographer and molecular biologist

...science is truly one of the highest expressions of human culture — dignified and intellectually honest, and withal a never-ending adventure. Personally, I feel much the same with regard to the more ecstatic moments in science as I do with regard to music. I see little difference between the thrill of scientific discovery and what one experiences when listening to the opening bars of the Ninth Symphony.

Science in Relation to the Community

School Science Review, Number 109, 1948 (p. 279)

Author undetermined

Science has no fear for dissent or for heresy. She collects facts eagerly, steadily, from generation to generation, the labors of one investigator being added to those of another, the speculations of one coalescing with those of another, in virtue of a necessary and admirable solidarity. Then, from these facts patiently observed, brought together, coordinated, classified, science deduces a law, a positive law, which is the expression of reality, of truth itself.

Scientific Miscellany

The Galaxy, Volume 17, January 1874 (p. 130)

The wonders of the heavens seem inexhaustible; each new adventure of science tasks the imagination and almost staggers the reason.

Scientific Miscellany
The Galaxy, Volume 11, February 1871 (p. 297)

...science has given us a new reading of nature, has opened the higher questions of life and human relations, has furnished a new method to the mind, and is fast becoming a new power in literature.

Scientific Miscellany
The Galaxy, Volume 11, January 1871 (p. 135)

Bacon, Sir Francis 1561–1626

English lawyer, statesman, and essayist

Those who have treated of the sciences have been either empirics or dogmatical. The former like ants only heap up and use their store, the latter like spiders spin out their own webs. The bee, a mean between both, extracts matter from the flower of the garden and the field, but works and fashions it by its own efforts.

In *Great Books of the Western World* (Volume 30)
Novum Organum
 First Book, Aphorism 95 (p. 126)
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

The divisions of the sciences are not like different lines that meet in one angle, but rather like the branches of trees that join in one trunk.

In J.A. Thomson
Introduction to Science
 Chapter IV (p. 92)
 Williams & Norgate Ltd. London, England. 1916

Science, being the wonder of the ignorant and unskillful, may be not absurdly called a monster. In figure and aspect it is represented as many-shaped, in allusion to the immense variety of matter with which it deals. It is said to have the face and voice of a woman, in respect of its beauty and facility of utterance. Wings are added because the sciences and the discoveries of science appeared and fly-aboard in an instant; the communication of knowledge being like that of one candle with another, which lights up at once. Claws, sharp and hooked, are ascribed to it with great elegance, because the axioms and arguments of science penetrate and hold fast the mind, so that it has no means of evasion or escape.

In Hugh Dick (Ed(ed.)
Selected Writings of Francis Bacon
 Sphinx on Science (pp. 418–419)
 Random House, Inc. New York, New York, USA. 1955

Even the effects already discovered are due to chance and experiment, rather than to the sciences; for our present sciences are nothing more than peculiar arrangements of matters already discovered, and not methods for discovery or plans for new operations.

In *Great Books of the Western World* (Volume 30)
Novum Organum
 First Book, Aphorism 8 (p. 107)
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

...the real and legitimate goal of the sciences is the endowment of human life with new inventions and riches.

In *Great Books of the Western World* (Volume 30)
Novum Organum
 First Book, Aphorism 81 (p. 120)
 Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Balard, Antoine-Jérôme 1802–76

French chemist

Science appears to have as its mission not merely the satisfaction of man's need of learning and understanding everything, which characterizes the noblest of our faculties; it has another aim, doubtless less brilliant but perhaps more moral, I would almost say more sacred, which consists in coordinating the forces of nature to increase production and make men more nearly equal by the universality of comfort.

In Mary Elvira Weeks
The Discovery of the Elements (p. 438)
 Journal of Chemical Education. Easton Pennsylvania, USA. 1956

Barnett, Lincoln 1909–79

American science writer

The quick harvest of applied science is the useable process, the medicine, the machine. The shy fruit of pure science is Understanding.

Life, January 9, 1950

Baruch, Bernard M. 1870–1965

American presidential advisor

Science has taught us how to put the atom to work. But to make it work for good instead of evil lies in the domain dealing with the principles of human duty. We are now facing a problem more of ethics than physics.

The Baruch Plan for Banning the Atom Bomb
Life, 24 June, 1946 (p. 35)

Barzun, Jacques 1907–

French-born American educator, historian, and educator

It is not clear to anyone, least of all the practitioners, how science and technology in their headlong course do or should influence ethics and law, education and government, art and social philosophy, religion and life of the affections. Yet science is an all-pervasive energy, for it is at once a mode of thought, a source of strong emotion, and a faith as fanatical as any in history.

Science: The Glorious Entertainment
 To the Reader (p. 3)
 Harper & Row, Publishers. New York, New York, USA. 1964

Baskerville, Charles

No biographical data available

I like to fancy scientific endeavor as the sea — calm and serene, supporting and mirroring that which is below it, bearing that which is upon it, reaching to and reflecting

that which is above it, moving all the while; yet, torn and rent at times by conflict from without and contest within, it runs; it beats against the shores of the unknown, making rapid progress here, meeting stubborn resistance there, compassing it, to destroy but to rebuild elsewhere; and the existence of those within it!

The Elements: Verified and Unverified

Science, New Series, Volume 19, Number 472, 15 January 1904 (p. 100)

Bass, William M.

American forensic anthropologist

Always think of the consequences of your actions both in the field and in the laboratory.

Human Osteology: A Laboratory and Field Manual of the Human Skeleton (3rd edition)

Missouri Archaeological Society. Columbia, Missouri, USA. 1987

Bates, Marston 1906–74

American zoologist

Science has put man in his place; one among the millions of kinds of living things crawling around on the surface of a minor planet circling a trivial star.

The Forest and the Sea: A Look at the Economy of Nature and the Ecology of Man

Chapter 1 (p. 5)

Random House, Inc. New York, New York, USA. 1960

Baudrillard, Jean 1929–

French cultural theorist

We can no longer say things appear unintelligible because science does not know enough about them. It seems that the more we know about them, the more unintelligible they become.

Translated by Chris Turner

Cool Memories

October 1983 (p. 144)

Verso. London, England. 1990

Bauer, Henry H. 1931–

American chemist

Quite in general, it is not the case that, because science has changed its mind in the past, therefore it might change its mind again in any direction and by any amount.

Scientific Literacy and the Myth of the Scientific Method

Chapter 4 (p. 66)

University of Illinois Press. Urbana, Illinois, USA. 1992

That science is inescapably a human activity does not mean that it is only or just a human activity, essentially similar to all other human activities.

Scientific Literacy and the Myth of the Scientific Method

Chapter 7 (p. 141)

University of Illinois Press. Urbana, Illinois, USA. 1992

That science is not everything should not blind us to the fact that it is the very best of what we do have. Just as those who benefit from individual therapy can take pride

from the persistent acts of will they exerted along the way, so humankind can take collective pride from the persistent determination to submit to reality therapy that has produced not only the science we now know but also an understanding of how to go about learning more.

Scientific Literacy and the Myth of the Scientific Method

Chapter 7 (p. 150)

University of Illinois Press. Urbana, Illinois, USA. 1992

Beard, Charles A. 1874–1948

American historian

A revolution in thought is at hand, a revolution as significant as the Renaissance: the subjection of science to ethical and esthetic purpose. Hence the next great survey undertaken in the name of the social sciences may begin boldly with a statement of values agreed upon, and then utilize science to discover the conditions, limitations, and methods involved in realization.

Limitations to the Application of Social Science Implied in Recent Social Trends

Social Forces, Volume 11, Number 4, May 1933 (p. 510)

Beattie, James 1735–1803

Scottish poet and essayist

‘Twas thus by the glare of false science betray’d,
That leads, to bewilder; and dazzles, to blind...

The Complete Poetical Works of Gray, Beattie, Blair, Collins, Thomson, and Kirke White

The Hermit, Stanza 5

J. Blackwood. London, England. 1800

Beebe, William 1877–1962

American ornithologist

Thus was the ending still unfinished, the finale buried in the future — and in this we find the fascination of Nature and of Science. Who can be bored for a moment in the short existence vouchsafed us here; with dramatic beginnings barely hidden in the dust, with the excitement of every moment of the present, and with all of cosmic possibility lying just concealed in the future, whether of Betelgeuze, of Amoeba or — of ourselves?

Edge of the Jungle

Chapter XII (p. 294)

Garden City Publishing Company, Inc. Garden City, New York, USA. 1925

Bennett, William Cox 1820–95

American poet

To what new realms of marvel, say,
Will conquering science war its way?

Poems

To a Boy

Stanza 1

Chapman & Hall. London, England. 1850

Bernal, John Desmond 1901–71

Irish-born physicist and x-ray crystallographer

Science is one of the most absorbing and satisfying pastimes, and as such it appeals in different ways to different types of personality. To some it is a game against the unknown where one wins and no one loses; to others, more humanly minded, it is a race between different investigators as to who should first wrest the prize from nature. It has all the qualities which make millions of people addicts of the crossword puzzle or the detective story, the only difference being that the problem has been set by nature or chance and not by man, that the answer cannot be got with certainty, and when they are found often raise far more questions than the original problem.

The Social Function of Science (p. 97)

The Macmillan Company. New York, New York, USA. 1939

...it is not possible in any published book to speak freely and precisely about the way science is run. The law of liable, reasons of State, and still more the unwritten code of the scientific fraternity itself forbid particular examples being held up alike for praise or blame.

The Social Function of Science (p. xv)

The Macmillan Company. New York, New York, USA. 1939

Bernard, Claude 1813–78

French physiologist

...my idea of the science of life...it is a superb and dramatically lighted hall which may be reached only by passing through a long and ghastly kitchen.

Translated by Henry Copley Greene

An Introduction to the Study of Experimental Medicine

Part One, Chapter III, Section iii (p. 15)

Henry Schuman, Inc. New York, New York, USA. 1927

Berthelot, Marcellin 1827–1907

French chemist

Science is essentially a collective work, pursued during the course of time by the efforts of a multitude of workers of every age and of every nation, succeeding themselves and associating by virtue of a tacit understanding for the search for pure truth and for the applications of that truth to the continuous betterment of the condition of all mankind.

In Camille Matignon

Annual Report of the Board of Regents of the Smithsonian Institution, 1907

Marcellin Berthelot (p. 684)

Government Printing Office. Washington, D.C. 1908

Birch, Arthur J. 1915–95

Australian chemist

Some people derive satisfaction from accumulating data, whereas others are content to dream and leave experiments to colleagues. Still others flit from flower to flower rather than learning more and more about one situation. The difference in approach is a matter of temperament, and we all must understand our own strengths. All workers ultimately contribute to the matrix of facts, ideas,

understandings, techniques, and visions that we know as science.

To See the Obvious

Random Conversations with the Editor (p. 195)

American Chemical Society. Washington, D.C. 1995

Black, Hugh

No biographical data available

The limits of science are not limits of its methods, but limits of its spheres.

Our Made-Over World

Everybody's Magazine, November 1914 (p. 710)

Black, Joseph 1728–99

Scottish chemist and physician

...if science be the discovery of the laws of nature, the knowledge of these laws will enable us to foresee what will be the result of any process, and must point out to us, in all cases, the means, and the best means, for producing any desired chemical effect: and here does our science repay, with a liberality unparalleled in any other science, all her former obligations to the arts of life. From them did she borrow the many facts which excited her to speculate; and her occupation has at last enabled her to repay her debts with large interest, while she has grown rich in knowledge almost beyond hope.

Science is essentially a public and social activity.
Science, Order, and Creativity
Chapter Two (p. 67)
Bantam Books. New York, New York, USA. 1987

Science is an attempt to understand the universe and humanity's relationship to nature.
Science, Order, and Creativity
Chapter One (p. 16)
Bantam Books. New York, New York, USA. 1987

Science is, however, at least in principle, dedicated to seeing any fact as it is, and to being open to free communication with regard not only to the fact itself, but also to the point of view from which it is interpreted.
Science, Order, and Creativity
Chapter Six (pp. 241–242)
Bantam Books. New York, New York, USA. 1987

Although science literally means “knowledge,” the scientific attitude is concerned much more with rational perception through the mind and with testing such perceptions against actual fact, in the form of experiments and observations.
Science, Order, and Creativity
Chapter Six (p. 260)
Bantam Books. New York, New York, USA. 1987

Bohr, Niels Henrik David 1886–1962
Danish physicist

The importance of physical science for the development of general philosophical thinking rests not only on its contributions to our steadily increasing knowledge of that nature of which we ourselves are part, but also on the opportunities which time and again it has offered for examination and refinement of our conceptual tools.
Atomic Physics and Human Knowledge
Introduction (p. 1)
John Wiley & Sons, Inc. New York, New York, USA. 1958

The task of science is both to extend the range of our experience and reduce it to order.
Atomic Theory and the Description of Nature
Introductory Survey (p. 1)
Cambridge University Press. Cambridge, England. 1934

It is, indeed, perhaps the greatest prospect of humanistic studies to contribute through an increasing knowledge of the history of cultural development to that gradual removal of prejudices which is the common aim of all science.

Atomic Physics and Human Knowledge
Natural Philosophy and Human Cultures (p. 31)
John Wiley & Sons, Inc. New York, New York, USA. 1958

Bolton, Henry Carrington 1843–1903
American chemist, bibliographer, and historian

So rapid are the strides made by science in this progressive age and so boundless is its range, that those who view its career from without find great difficulty in following its diverse and intricate pathways, while those who have secured a footing within the same road are often quite unable to keep pace with its fleet movements and would fain retire from the unequal contest. It is not surprising, then, that those actually contributing to the advancement of science, pressing eagerly upward and onward, should neglect to look back upon the labors of those who precede them and should sometimes lose sight of the obligations which science owes to forgotten generations.
Notes on the Early Literature of Chemistry
Reprinted from *The American Chemist*, November 1875

Bonaparte, Napoleon 1769–1821
French soldier and emperor of France

The sciences, which have revealed so many secrets and destroyed so many prejudices, are destined to render us yet greater service. New truths, new discoveries will unveil secrets still more essential to the happiness of men — but only if we give our esteem to the scientists and our protection to the sciences.
In J. Christopher Herold (ed.)
The Mind of Napoleon
Science and the Arts (p. 135)
Columbia University Press. New York, New York, USA. 1955

Bondi, Sir Hermann 1919–2005
English mathematician and cosmologist

Throughout science there is a constant alternation between periods when a particular subject is in a state of order, with all known data falling neatly into their places, and a state of puzzlement and confusion, when new observations throw all neatly arranged ideas into disarray.
In Robert M. Hutchins and Mortimer J. Adler (eds.)
The Great Ideas Today, 1966
Astronomy and the Physical Sciences (p. 245)
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1966

Born, Max 1882–1970
German-born English physicist

The satisfaction of the noble curiosity of the scholar is only one aspect of research. Science is also — and many say predominantly — a collective effort to obtain power over the forces of nature in the interest of human life.

The Restless Universe

Postscript (p. 297)

Dover Publications, Inc. New York, New York, USA. 1951

I now regard my former belief in the superiority of science over other forms of human thought and behavior as a self-deception due to youthful enthusiasm over the clarity of scientific thinking as compared with the vagueness of metaphysical systems.

Still, change of fundamental concepts and the failure to improve the moral standards of human society are no demonstration of the uselessness of science in the search for truth and for a better life.

Physics in My Generation

Preface (p. v)

Springer-Verlag New York, Inc. New York, New York, USA. 1969

Bosler, Jean

No biographical data available

As science advances, new questions appear before indeed the older ones, often badly put, are solved. But the latter often lose their interest, and as we proceed many untenable hypotheses which darkened our path are destroyed. And so, little by little, the knowledge we have of things progresses with a tidal motion which will doubtless end only with humanity.

Annual Report of the Board of Regents of the Smithsonian Institution, 1914

Modern Theories of the Sun (p. 160)

Government Printing Office. Washington, D.C. 1915

Bradbury, Ray 1920–

American writer

At base, science is no more than an investigation of a miracle we can never explain, and art is an interpretation of that miracle.

Ray Bradbury: 100 of His Most Celebrated Tales

June 2001: And the Moon Still Be as Bright (p. 421)

HarperCollins Publishers, Inc. New York, New York, USA. 2003

Bradley, Jr., John Hodgdon 1898–1962

American geologist

Thus along many battle fronts, the army of science advances on the strongholds of ignorance in the heart of earth. Speculations bristle like bayonets and collapse like papier-mâché. But though mistakes retard and darkness confuses, the army presses on.

How to Think About Weird Things

Chapter 7 (p. 164)

The McGraw-Hill Companies. New York, New York, USA. 2002

Broad, William 1951–

Science writer

Wade, Nicholas

British-born scientific writer

In the acquisition of new knowledge, scientists are not guided by logic and objectivity alone, but also by such nonrational factors as rhetoric, propaganda, and personal prejudice. Scientists do not depend solely on rational thought, and have no monopoly on it. Science should not be considered the guardian of rationality in society, but merely one major form of its cultural expression.

Betrayers of the Truth (p. 9)

Simon & Schuster. New York, New York, USA. 1982

Science is not an abstract body of knowledge, but man's understanding of nature. It is not an idealized interrogation of nature by dedicated servants of truth, but a human

process governed by the ordinary human passions of ambition, pride, and greed, as well as by all the well-hymned virtues attributed to men of science.

Betrayers of the Truth (p. 223)

Simon & Schuster. New York, New York, USA. 1982

Bronowski, Jacob 1908–74

Polish-born British mathematician and polymath

Science has nothing to be ashamed of even in the ruins of Nagasaki. The shame is theirs who appeal to other values than the human imaginative value which science has evolved.

Science and Human Values

The Sense of Human Dignity (p. 73)

Harper & Row, Publishers. New York, New York, USA. 1965

The world today is made, it is powered by science; and for any man to abdicate an interest in science is to walk with open eyes towards slavery.

Science and Human Values

The Creative Mind (p. 6)

Harper & Row, Publishers. New York, New York, USA. 1965

The discoveries of Science, the works of art are explorations — more, are explosions, of a hidden likeness.

Science and Human Values

The Creative Mind (p. 19)

Harper & Row, Publishers. New York, New York, USA. 1965

The values of science derive neither from the virtues of its members, nor from the finger-wagging codes of conduct by which every profession reminds itself to be good. They have grown out of the practice of science, because they are the inescapable conditions for its practice.

Science and Human Values

The Sense of Human Dignity (p. 60)

Harper & Row, Publishers. New York, New York, USA. 1965

Like the voyages of the Spaniards into the fabulous West, Science even at its boldest does the will of history, and in turn helps to determine its movement.

The Common Sense of Science

Chapter VII, Section 1 (p. 97)

Harvard University Press. Cambridge, Massachusetts, USA. 1953

[Science] does not watch the world, it tackles it.

The Common Sense of Science

Chapter VII, Section 4 (p. 104)

Harvard University Press. Cambridge, Massachusetts, USA. 1953

All science is the search for unity in hidden likenesses.

Science and Human Values

The Creative Mind (p. 13)

Harper & Row, Publishers. New York, New York, USA. 1965

[This] is the essence of science: ask an impertinent question, and you are on the way to a pertinent answer.

The Ascent of Man

Chapter 4 (p. 153)

Little, Brown & Company. Boston, Massachusetts, USA. 1973

Bryan, William Jennings 1860–1925

American lawyer, orator, and politician

Evolution seems to close the heart to some of the plainest spiritual truths while it opens the mind to the wildest guesses advanced in the name of science.

The New York Times, Letter, 22 February 1922

Christians desire that their children shall be taught all the sciences, but they do not want them to lose sight of the Rock of Ages while they study the age of rocks...

Speech

Prepared for the Scopes Trial, 1925

Bryson, Bill 1951–

American author

The remarkable position in which we find ourselves is that we don't actually know what we actually know.

A Short History of Nearly Everything

Chapter 23 (p. 362)

Broadway Books. New York, New York, USA. 2003

Buchner, Ludwig 1824–99

German physician and philosopher

Science has gradually taken all the positions of the childish belief of the peoples; it has snatched thunder and lightning from the hands of the gods; the eclipse of the stars, and the stupendous powers of the Titans of the olden time have been grasped by the fingers of man.

Force and Matter

Chapter VI (p. 34)

Trubner & Company. London, England. 1864

Buckham, John Wright

No biographical data available

...the mind that has been trained simply or predominantly in Science is an unconsciously meager and ill-furnished mind. The range of its interests is mainly technical and specialized. To look into a mind of this type is like looking into a laboratory. It is excellent as a workshop, but there are no pictures on the walls, no books, no flowers. ... What are the resources of such a mind, its points of contact with human-kind?

The Passing of the Scientific Era

The Century Illustrated Monthly Magazine, August 1929 (p. 435)

Meredith, Owen (Edward Robert

Bulwer-Lytton, 1st Earl Lytton) 1831–91

English statesman and poet

...science is not a club, it is an ocean; it is open to the cockpit as the frigate. One man carries across it a freightage of ingots, another may fish there for herrings. Who can exhaust the sea? who say to intellect, "the deeps of philosophy are preoccupied?"

The Caxtons

Book IV, III

G. Routledge & Company. London, England. 1848

Bunge, Mario 1919–
Argentine philosopher and physicist

The motto of science is not just *Pauca* but rather *Plurima ex paucissimis* — the most out of the least.

The Myth of Simplicity: Problems of Scientific Philosophy
Chapter 5, Section 4 (p. 82)
Prentice-Hall, Englewood Cliffs, New Jersey, USA. 1963

Bunting, Basil 1900–85
English modernist poet

I hate Science. It denies a man's responsibility for his own deeds, abolishes the brotherhood that springs from God's fatherhood. It is a hectoring, dictating expertise, which makes the least lovable of the Church Fathers seem liberal by contrast. It is far easier for a Hitler or a Stalin to find a mock-scientific excuse for persecution than it was for Dominic to find a mock-Christian one.

In Victoria Forde
The Poetry of Basil Bunting
Chapter 6, Letter of 1 January 1947 to Louis Zukofsky (p. 156)
Bloodaxe Books, Newcastle upon Tyne, England. 1991

Burroughs, John 1837–1921
American naturalist and writer

Science has made or is making the world over for us. It has builded us a new house — builded it over our heads while we were yet living in the old, and the confusion and disruption and the wiping-out of the old features and the old associations, have been, and still are, a sore trial — a much finer, more spacious and commodious house...but new, new, all bright and hard and unfamiliar. . . .

In the Noon of Science
The Atlantic Monthly, Volume 110, Number 3, September 1912 (p. 327)

Science is a capital or fund perpetually reinvested; it accumulates, rolls up, is carried forward by every new man. Every man of science has all the science before him to go upon, to set himself up in business with. What an enormous sum Darwin availed himself of and reinvested! Not so in literature; to every poet, to every artist, it is still the first day of creation, so far as the essentials of his task are concerned. Literature is not so much a fund to be reinvested as it is a crop to be ever new-grown.

The Writings of John Burroughs (Volume 17)
The Summit of the Years
In the Noon of Science (p. 64)
Houghton Mifflin Company, New York, New York, USA. 1913

Science enables us to understand our own ignorance and limitations, and so puts us at our ease amid the splendors and mysteries of creation.

The Writings of John Burroughs (Volume 17)
The Summit of the Years
In the Noon of Science (pp. 65–66)
Houghton Mifflin Company, New York, New York, USA. 1913

Science puts great weapons in men's hands for good or for evil, for war or for peace, for beauty or for ugliness, for life or for death, and how these weapons are used depends upon the motives that actuate us.

The Writings of John Burroughs (Volume 17)
The Summit of the Years
In the Noon of Science (p. 67)
Houghton Mifflin Company, New York, New York, USA. 1913

Bury, John Bagnell 1861–1927
English historian and classical scholar

Science has been advancing without interruption during the last three or four hundred years; every new discovery has led to new problems and new methods of solution, and opened up new fields for exploration. Hitherto men of science have not been compelled to halt, they have always found means to advance further. But what assurance have we that they will not come up against impassable barriers?

The Idea of Progress: An Inquiry into Its Origin and Growth
Introduction (p. 3)
Dover Publications, New York, New York, USA. 1955

Bush, Vannevar 1890–1974
American electrical engineer and physicist

Science has a simple faith, which transcends utility. Nearly all men of science, all men of learning for that matter, and men of simple ways too, have it in some form and in some degree. It is the faith that it is the privilege of man to learn to understand, and that this is his mission. If we abandon that mission under stress we shall abandon it forever, for stress will not cease. Knowledge for the sake of understanding, not merely to prevail, that is the essence of our being. None can define its limits, or set its ultimate boundaries.

Science Is Not Enough
Chapter X (p. 191)
William Morrow & Company, Inc. New York, New York, USA. 1967

Science does not exclude faith. . . . Science does not teach a harsh materialism. It does not teach anything beyond its boundaries, and those boundaries have been severely limited by science itself.

Modern Arms and Free Men
Threat and Bulwark (p. 183)
The MIT Press, Cambridge, Massachusetts, USA. 1968

Butler, Samuel 1612–80
English novelist, essayist, and critic

Science is being daily more and more personified and anthropomorphized into a god. By and by they will say that science took our nature upon him, and sent down his only begotten son, Charles Darwin, or Huxley, into the world so that those who believe in him, etc.; and they will burn people for saying that science, after all, is only an expression for our ignorance of our own ignorance.

In Geoffrey Keynes and Brian Hill (eds.)
Samuel Butler's Notebooks

Science (p. 233)

Jonathan Cape. London, England. 1951

If [science] tends to thicken the crust of ice on which, as it were, we are skating, it is all right. If it tries to find, or professes to have found, the solid ground at the bottom of the water it is all wrong.

In Geoffrey Keynes and Brian Hill (eds.)

Samuel Butler's Notebooks

Science (p. 110)

Jonathan Cape. London, England. 1951

Buttimer, Anne

Geographer

Strange indeed sounds the language of poets and philosophers; stranger still the refusal of science to read and hear its message.

Grasping the Dynamism of Lifeworld

Annals of the Association of American Geographers, Volume 66, 1976 (p. 277)

Buzzati-Traverso, Adriano 1913–83

Italian genetic scientist

Science is a game: it can be exhilarating, it can be useful, it can be frightfully dangerous. It is a play prompted by man's irrepressible curiosity to discover the universe and himself, and to increase his awareness of the world in which he lives and operates.

The Scientific Enterprise, Today and Tomorrow

Part I, Chapter 1 (p. 3)

UNES Company. Paris, France. 1977

Calder, Ritchie 1906–82

Scottish journalist

Science is a river which the explorer may encounter at any point along its course. He can follow it either to its source or to its delta or both.

Profile of Science

Introduction (p. 13)

George Allen & Unwin Ltd. London, England. 1951

Calvin, Melvin 1911–97

American biochemist

There is not a "pure" science. By this I mean that physics impinges on astronomy, on the one hand, and chemistry and biology on the other. And not only does each support neighbors, but derives sustenance from them. The same can be said of chemistry. Biology is, perhaps, the example par excellence today of an "impure" Science.

In Shirley Thomas

Men of Space. Profiles of the Scientists Who Probe for Life in Space (Volume 6)

Melvin Calvin (p. 35)

Chilton Books. Philadelphia, Pennsylvania, USA. 1963

Campbell, Norman R. 1880–1949

English physicist and philosopher

...science [is] the study of those judgments concerning which universal agreement can be obtained.

What Is Science?

Chapter II (p. 32)

Dover Publications. New York, New York, USA. 1952

An audience of children of all ages gapes amazedly while the lecturer discourses glibly of times reckoned in millions of years and distances in thousands of millions of miles. But science has something better to offer than sensational journalism; nothing could be less characteristic of its spirit. The mere fact that the interest of the uninitiated can thus be easily stimulated with serious training suggests doubts of the value of the stimulus; nothing worth having in this world is to be had without effort.

Physics: The Elements

Chapter VIII (p. 226)

At The University Press. Cambridge, England. 1920

Campbell, Thomas 1777–1844

Scottish poet

When Science from Creation's face
Enchantment's veil withdraws,
What lovely visions yield their place
To cold material laws!

The Complete Poetical Works

To the Rainbow, l. 13–16

Chadwyck-Healey. Cambridge, England. 1992

Oh! star-eyed Science, hast thou wandered there,
To waft us home the message of despair?

The Complete Poetical Works

Pleasures of Hope, Part II, l. 325

Chadwyck-Healey. Cambridge, England. 1992

Camus, Albert 1913–60

Algerian-French novelist, author, essayist, and philosopher

At the final stage you teach me that this wondrous and multicolored universe can be reduced to the atom and that the atom itself can be reduced to the electron. All this is good and I wait for you to continue. But you tell me of an invisible planetary system in which electrons gravitate around a nucleus. You explain this world to me with an image. I realize then that you have been reduced to poetry: I shall never know. Have I the time to become indignant? You have already changed theories. So that science that was to teach me everything ends up in a hypothesis, that lucidity founders in metaphor, that uncertainty is resolved in a work of art.

Translated by Justin O'Brien

The Myth of Sisyphus and Other Essays

An Absurd Reasoning (pp. 19–20)

Alfred A. Knopf. New York, New York, USA. 1961

Carlyle, Thomas 1795–1881

English historian and essayist

This world, after all our science and sciences, is still a miracle; wonderful, inscrutable, magical and more, to whosoever will think of it.

On Heroes and Hero Worship

Lecture I (p. 12)

John B. Alden, Publisher. New York, New York, USA. 1887

Carrel, Alexis 1873–1944

French surgeon and biologist

There is a strange disparity between the sciences of inert matter and those of life. Astronomy, mechanics, and physics are based on concepts which can be expressed, tersely and elegantly, in mathematical language. They have built up a universe as harmonious as the monuments of ancient Greece. They weave about it a magnificent texture of calculations and hypotheses. They search for reality beyond the realm of common thought up to unutterable abstractions consisting only of equations of symbols.

Man the Unknown

Chapter 1, Section 1 (p. 1)

Harper & Brothers. New York, New York, USA. 1939

Carson, Rachel 1907–64

American marine biologist and author

There is one quality that characterizes all of us who deal with the science of the earth and its life — we are never bored.

In Paul Brooks

The House of Life: Rachel Carson at Work

The Closing Journey (p. 324)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1972

We live in a scientific age, yet we assume that knowledge of science is the prerogative of only a small number of human beings, isolated and priestlike in their laboratories. This is not true. The materials of science are the materials of life itself. Science is part of the reality of living; It is the what, the how and the why of everything in our experience.

In Paul Brooks

The House of Life: Rachel Carson at Work

Fame (p. 128)

Houghton Mifflin. Boston, Massachusetts, USA. 1972

The winds, the sea, and the moving tides are what they are. If there is wonder and beauty and majesty in them, science will discover these qualities. If they are not there, science cannot create them.

Acceptance Speech

1952 National Book Award

Chandrasekhar, Subrahmanyan 1910–95

Indian-born American astrophysicist

The pursuit of science has often been compared to the scaling of mountains, high and not so high. But who amongst us can hope, even in imagination, to scale the Everest and reach its summit when the sky is blue and

the air is still, and in the stillness of the air survey the entire Himalayan range in the dazzling white of the snow stretching to infinity? None of us can hope for a comparable vision of nature and of the universe around us. But there is nothing mean or lowly in standing in the valley below and awaiting the sun to rise over Kinchinjunga.

Truth and Beauty: Aesthetics and Motivation in Science

Chapter 2, Section X (pp. 26–27)

The University of Chicago Press. Chicago, Illinois, USA. 1987

I am convinced that one's knowledge of the Physical Sciences is incomplete without a study of the Principia in the same way that one's knowledge of Literature is incomplete without a study of Shakespeare.

On Reading Newton's Principia at Age Apat Eighty

Current Science, Volume 67, Number 7, 10 October 1994 (p. 499)

Chargaff, Erwin 1905–2002

Austrian biochemist

To be a pioneer in science has lost much of its attraction: significant scientific facts and, even more, fruitful scientific concepts pale into oblivion long before their potential value has been utilized. New facts, new concepts keep crowding in and are in turn, within a year or two, displaced by even newer ones.... Now, however, in our miserable scientific mass society, nearly all discoveries are born dead; papers are tokens in a power game, evanescent reflections on the screen of a spectator sport, news items that do not outlive the day on which they appeared.

Heraclitean Fire: Sketches from a Life Before Nature

Part II

A Bouquet of Mortelles (p. 78, 81)

Rockefeller University Press. New York, New York, USA. 1978

To the scientist nature is like a mirror that breaks every thirty years; and who cares about the broken glass of past times?

Voices in the Labyrinth: Nature, Man and Science

Chapter 3 (p. 24)

The Seabury Press. New York, New York, USA. 1977

What counts, however, in science is to be not so much the first as the last.

Preface to a Grammar of Biology

Science, Volume 172, Number 3984, May 1971 (p. 639)

The sciences are extremely pedigree-conscious, and the road to the top of Mount Olympus is paved with letters of recommendation, friendly whispers at meetings, telephone calls at night.

Heraclitean Fire: Sketches from a Life Before Nature

Part I

No Hercules, No Crossroads (p. 32)

Rockefeller University Press. New York, New York, USA. 1978

In science you don't ask why, you ask how much.

Voices in the Labyrinth: Nature, Man and Science

Ouroboros (p. 128)

The Seabury Press. New York, New York, USA. 1977

Science cannot be a mass occupation, any more than the composing of music or the painting of pictures.

In Praise of Smallness — How Can We Return to Small Science
Perspectives in Biology and Medicine, Volume 23, Number 3, Spring 1980 (p. 373)

Science has become an eye without a head, a desperate attempt to fill holes with gaps. It came up to a lock, so it looked for the key; but it was a lock without a keyhole. The priests of truth are soiled with blood; their discoveries have become inventions, their pledges far from eternal. In a science in which one can say: "this is no longer true," nothing is true.

Voices in the Labyrinth: Nature, Man and Science
Chimaera (p. 151)
The Seabury Press. New York, New York, USA. 1977

The so-called exact sciences often are not as exact as is commonly believed. How often they infer the existence of a hat from the emergence of a rabbit!

Voices in the Labyrinth: Nature, Man and Science
Chapter 3 (p. 20)
The Seabury Press. New York, New York, USA. 1977

In science we always know much less than we believe we do.

Uncertainties Great, Is the Gain Worth the Risk?
Chemical and Engineering News, May 30, 1977

...in most sciences the question Why? is forbidden and the answer is actually to the question, How? Science is much better in explaining than in understanding, but it likes to mistake one for the other.

Voices in the Labyrinth
Perspectives in Biology and Medicine, Volume 18, Spring 1975 (p. 322)

...never before has science become so alienated from the common man, and he, in turn, so suspicious of science.

Heraclitean Fire: Sketches from a Life Before Nature
Part III
The Great Dilemma of the Life Sciences (p. 158)
Rockefeller University Press. New York, New York, USA. 1978

Chekhov, Anton Pavlovich 1860–1904

Russian author and playwright

Science is the most important, the most magnificent, and the most necessary element of life.

Compiled by V.V. Vorontsov
Words of the Wise: A Book of Russian Quotations
Translated by Vic Schneierson
Progress Publishers. Moscow, Russia. 1979

Chernin, Kim

No biographical data available

Science is not neutral in its judgments, not dispassionate, nor detached....

The Obsession: Reflections on the Tyranny of Slenderness
Chapter 3 (p. 37)
Harper & Row, Publishers. New York, New York, USA. 1981

Chernyshevsky, Nikolai Gavrilovich 1828–89

Russian socialist reformer

Science is the repository of the experience and thinking of the human race. It is mainly through science that the ideas, and then the morals and life of people, are improved.

Compiled by V.V. Vorontsov
Words of the Wise: A Book of Russian Quotations
Translated by Vic Schneierson
Progress Publishers. Moscow, Russia. 1979

Chesterton, G. K. (Gilbert Keith) 1874–1936

English author

When once one believes in a creed, one is proud of its complexity, as scientists are proud in the complexity of science. It shows how right it is in its discoveries. If it is right at all, it is a compliment to say that it is elaborately right. A stick might fit a hole or a stone a hollow by accident. But a key and a lock are both complex. And if a key fits a lock, you know it is the right key.

Orthodoxy
Chapter VI (p. 152)
John Lane Company. New York, New York, USA. 1918

Science, that nameless being, declared that the weakest must go to the wall; especially in Wall Street.

The Well and the Shallows
The Return to Religion (p. 74)
Sheed & Ward, Inc., New York, New York, USA. 1935

Science in the modern world has many uses; its chief use, however, is to provide long words to cover the errors of the rich.

Heretics
Cells and Celtophiles (p. 171)
Books for Libraries Press. Freeport, New York, USA. 1970

...physical science is like simple addition: it is either infallible or it is false.

All Things Considered
Science and Religion (p. 187)
John Lane Company. New York, New York, USA. 1908

...modern science cares far less for pure logic than a dancing Dervish.

Orthodoxy
Chapter II (p. 36)
John Lane Company. New York, New York, USA. 1918

[Modern science moves] toward the supernatural with the rapidity of a railway train.

Orthodoxy
Chapter IX (p. 277)
John Lane Company. New York, New York, USA. 1918

Churchill, Winston Spencer 1882–1965

British prime minister, statesman, soldier, and author

The latest refinements of science are linked with the cruelties of the Stone Age.

Speech
26 March 1942

Science bestowed immense new powers on man and at the same time created conditions which were largely beyond his comprehension and still more beyond his control.

Speech
March 31, 1949

Science has given to this generation the means of unlimited disaster or of unlimited progress. There will remain the greater task of directing knowledge lastingly towards the purpose of peace and human good.

Speech
New Delhi, January 3, 1944

My experience — and it is somewhat considerable — is that in these matters when the need is clearly explained by military and political authorities, science is always able to provide something. “Seek and ye shall find” has been borne out.

In F.B. Czarnomski
The Wisdom of Winston Churchill
Speech, Commons, June 7, 1935 (p. 327)
George Allen & Unwin Ltd. London, England. 1956

I have seldom seen a precise demand made upon science by the military which has not been met.

In F.B. Czarnomski
The Wisdom of Winston Churchill
Speech, Commons, March 16, 1950 (p. 327)
George Allen & Unwin Ltd. London, England. 1956

In the fires of science, burning with increasing heat every year, all the most dearly loved conventions are being melted down; and this is a process which is going continually to spread. In view of the inventions and discoveries which are being made for us, one might almost say every month, a unified direction of the war efforts of the three services would be highly beneficial.

In F.B. Czarnomski
The Wisdom of Winston Churchill
Speech, Commons, March 21, 1934 (p. 327)
George Allen & Unwin Ltd. London, England. 1956

It is arguable whether the human race have been gainers by the march of science beyond the steam engine. Electricity opens a field of infinite conveniences to ever greater numbers, but they may well have to pay dearly for them. But anyhow in my thought I stop short of the internal combustion engine which has made the world so much smaller. Still more must we fear the consequences of entrusting to a human race so little different from their predecessors of the so-called barbarous ages such awful agencies as the atomic bomb. Give me the horse.

In F.B. Czarnomski
The Wisdom of Winston Churchill
Speech, Royal College of Physicians, July 10, 1951 (p. 327)
George Allen & Unwin Ltd. London, England. 1956

Cobbe, Frances P. 1822–1904
English author

Then the Sorcerer Science entered, and where e'er he waved his wand

Fresh wonders and fresh mysteries rose on every hand.
The Pageant of Time, Stanza 1
Source undetermined

Coggan, Donald 1909–2000
101st archbishop of Canterbury

My ignorance of science is such that if anyone mentioned copper nitrate I should think he was talking about policeman's overtime.

New York Journal–American, September 20, 1961

Cohen, I. Bernard 1914–2003
American physicist and science historian

...all revolutionary advances in science may consist less of sudden and dramatic revelations than a series of transformations, of which the revolutionary significance may not be seen (except afterwards, by historians) until the last great step. In many cases the full potentiality and force of a most radical step in such a sequence of transformations may not even be manifest to its author.

The Newtonian Revolution: With Illustrations of the Transformation of Scientific Ideas
Chapter 4 (p. 162)
Cambridge University Press. Cambridge, England. 1980

Colbert, Edwin H. 1905–2001
American vertebrate paleontologist

It is too easy to think of science as something large and impersonal, as something outside the understanding of most of us, as something rather distant, and removed from the affairs of the average person. Even in this day, when the lives of all of us are touched every hour, and almost every minute, by the products of technology, the handmaiden of science, we are still inclined to accept the impersonal view of science. Science is so manifestly complex, so compartmentalized by specialization, and to all but those who are initiated into the priesthoods of these specializations, so largely incomprehensible, that we can hardly think of it in other than impersonal terms.

Men and Dinosaurs
Preface (p. v)
E.P. Dutton & Company, Inc. New York, New York, USA. 1968

Coles, Abraham 1813–91
American physician, hymnist, and poet

I value science — none can prize it more —
It gives ten thousand motives to adore.
Be it religious, as it ought to be,
The heart it humbles, and it bows the knee.

The Microcosm: And Other Poems

Christian Science

D. Appleton & Company, New York, New York, USA. 1880

Commoner, Barry 1917–

American biologist, ecologist, and educator

Science is triumphant with far-ranging success, but its triumph is somehow clouded by growing difficulties in providing for the simple necessities of human life on the earth.

Science and Survival

Chapter 2 (p. 9)

The Viking Press, New York, New York, USA. 1966

We seem to be entering a new world of technology, but the vehicle which is carrying us — science — shows dangerous signs of inadequacy for the voyage ahead.

Science and Survival

Chapter 4 (p. 63)

The Viking Press, New York, New York, USA. 1966

Compton, Karl Taylor 1887–1954

American educator and physicist

Fundamentally, science means simply knowledge of our environment. Combined with ingenuity, science becomes power.

A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton

During the Years 1930–1949 (p. 2)

Undergraduate Association, MIT, Cambridge, Massachusetts, USA. 1955

I believe that the advent of modern science is the most important social event in all history.

A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton

During the Years 1930–1949 (p. 2)

Undergraduate Association, MIT, Cambridge, Massachusetts, USA. 1955

Conant, James Bryant 1893–1978

American educator and scientist

There is only one proved method of assisting the advancement of pure science — that of picking men of genius, backing them heavily, and leaving them to direct themselves.

Letter

New York Times, August 13, 1945

Science is an interconnected series of concepts and schemes that have developed as a result of experimentation and observation and are fruitful of further experimentation and observation.

Science and Common Sense

Chapter Two (p. 25)

Yale University Press, New Haven, Connecticut, USA. 1951

Science is a dynamic undertaking directed to lowering the degree of the empiricism involved in solving problems.

Modern Science and Modern Man

Science and Human Conduct (p. 62)

Columbia University Press, New York, New York, USA. 1952

[Science is] the activity of people who work in laboratories and whose discoveries have made possible modern industry and medicine.

Science and Common Sense

Chapter Two (p. 23)

Yale University Press, New Haven, Connecticut, USA. 1951

Condon, Edward Uhler 1902–74

American physicist

Society is at this moment at the threshold of an undreamed-of mastery of our material environment, for science, which provides that mastery, is in its Golden Age.

Selected Popular Writings of E.U. Condon

Science and the National Welfare (p. 145)

Springer-Verlag, New York, New York, USA. 1991

The sciences, like those other truth-seeking activities of man, require a free environment, an environment, above all, free from fear, petty arbitrariness, and tyranny.

Selected Popular Writings of E.U. Condon

Science and the National Welfare (p. 155)

Springer-Verlag, New York, New York, USA. 1991

Condorcet, Marie Jean 1749–1827

French mathematician, astronomer, and physicist

This adventure of the physical sciences...could not be observed without enlightened men seeking to follow it up in the other sciences; at each step it held out to them the model to be followed.

In K.M. Baker

Condorcet: From Natural Philosophy to Social Mathematics

Chapter 2 (p. 85)

The University of Chicago Press, Chicago, Illinois, USA. 1975

In every century Princes have been found to love the sciences and even to cultivate them, to attract Savants to their palaces and to reward by their favors and their amity men who afforded them a sure and constant refuge from world-weariness, a sort of disease to which supreme power seems particularly prone.

Eloge des académiciens de l'Académie royal des sciences

Constitution of the United States

The Congress shall have the Power...to promote the Progress of Science and useful Arts...

United States Constitution

Article I, Section 8

Cooper, Bernard 1951–

Physicist

At the rate science proceeds, rockets and missiles will one day seem like buffalo — slow, endangered grazers in the black pasture of outer space.

Harper's, January 1990

Cooper, Leon 1930–
American physicist

To say that science is logical is like saying that a painting is paint...

In George Johnson

In the Palaces of Memory: How We Build the Worlds Inside Our Heads

The Memory Machine (p. 194)

Alfred A. Knopf. New York, New York, USA. 1991

Cossons, Sir Neil 1939–
Chairman of English Heritage

Science's function is to describe how things work, not what they mean. That is a role for philosophers, artists, and writers.

Lancet, Volume 339, 1992

Crichton, Michael 1942–
American novelist

Finally, I would remind you to notice where the claim of consensus is invoked. Consensus is invoked only in situations where the science is not solid enough. Nobody says the consensus of scientists agrees that $E = mc^2$. Nobody says the consensus is that the sun is 93 million miles away. It would never occur to anyone to speak that way.

Lecture

Aliens Cause Global Warming, California Institute of Technology, January 17, 2003

I expected science to be, in Carl Sagan's memorable phrase, "a candle in a demon haunted world." And here, I am not so pleased with the impact of science. Rather than serving as a cleansing force, science has in some instances been seduced by the more ancient lures of politics and publicity. Some of the demons that haunt our world in recent years are invented by scientists.

Lecture

Aliens Cause Global Warming, California Institute of Technology, January 17, 2003

In recent years, much has been said about the post-modernist claims about science to the effect that science is just another form of raw power, tricked out in special claims for truth-seeking and objectivity that really have no basis in fact. Science, we are told, is no better than any other undertaking. These ideas anger many scientists, and they anger me. But recent events have made me wonder if they are correct.

Lecture

Aliens Cause Global Warming, California Institute of Technology, January 17, 2003

Crick, Francis Harry Compton 1916–2004
English biochemist

One of the striking characteristics of modern science is that it often moves so fast that a research worker can see

rather clearly whether his earlier ideas, or those of his contemporaries, were correct or incorrect.

What Mad Pursuit: A Personal View of Scientific Discovery

Introduction (p. 3)

Basic Books, Inc. New York, New York, USA. 1988

Cromer, Alan 1935–
American physicist and educator

Science is the search for a consensus of rational opinion among all competent researchers.

Uncommon Sense: The Heretical Nature of Science

Chapter 8 (pp. 143–144)

Oxford University Press, Inc. New York, New York, USA. 1993

Science is the heretical belief that the truth about the real nature of things is to be found by studying the things themselves.

Uncommon Sense: The Heretical Nature of Science

Chapter 1 (p. 18)

Oxford University Press, Inc. New York, New York, USA. 1993

Science is overwhelmingly cumulative, not revolutionary, in its structure. This means that most of its established results — even those established recently — will be around forever. A particular result may be found to be an instance of a more general result, but its factualness, as far as it goes, will never change.

Uncommon Sense: The Heretical Nature of Science

Chapter 1 (p. 6)

Oxford University Press, Inc. New York, New York, USA. 1993

The notion that science and objective thinking are unnatural human activities seems quite radical at first. But when you think about it, monogamy, honesty, and democratic government are unnatural human behaviors as well. We are truly a species that has invented itself out of rather unpromising material. Our only claim to greatness is that we have at times gone against the grain of our own egocentrism to forge a higher vision of the world.

Uncommon Sense: The Heretical Nature of Science

Preface (p. ix)

Oxford University Press, Inc. New York, New York, USA. 1993

Cromie, William J. 1930–
American journalist and writer

Science is not a mere "lump" of knowledge. It is disciplined thought, it is curiosity, it is creativity, it is the scientists themselves and the methods they use. It is the hope — the religion — that there is order in the universe; that man shall find that order; that someday he will be able to control the environment to which he is now little more than a slave. All this and more make up the dynamic, ever-changing whole called "science."

Exploring the Secrets of the Sea

Conclusion (p. 280)

Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1962

Crothers, Samuel McChord 1857–1927
American clergyman and writer

On the coasts of the Dark Continent of Ignorance the several sciences have gained a foothold. In each case there is a well-defined country carefully surveyed and guarded. Within its frontiers the laws are obeyed, and all affairs are carried on in an orderly fashion. Beyond it is a vague "sphere of influence," a Hinter-land over which ambitious claims of suzerainty [foreign authority] are made; but the native tribes have not yet been exterminated, and life goes on very much as in the olden time.

The Gentle Reader

The Hinter-Land of Science (p. 231)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1903

Science will not tolerate half knowledge nor pleasant imaginings, nor sympathetic appreciations; it must have definite demonstrations. The knowledge of the best that has been said and thought may be consoling, but it implies an unscientific principle of selection. It can be proved by statistics that the best things are exceptional.

The Gentle Reader

The Hinter-Land of Science (p. 228)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1903

Crowley, Aleister 1875–1947

Poet and author

...science is always discovering odd scraps of magical wisdom and making a tremendous fuss about its cleverness!

The Confessions of Aleister Crowley: An Autobiography

Part Four, Chapter 64 (p. 593)

Arkana. 1989

Cudmore, Lorraine Lee

American cell biologist

Almost anyone can do science; almost no one can do good science.

The Center of Life: A Natural History of the Cell

Biochemical Evolution (p. 35)

New York Times Book Company. New York, New York, USA. 1977

...good science is almost always so very simple. After it has been done by someone else, of course.

The Center of Life: A Natural History of the Cell

Biochemical Evolution (p. 36)

New York Times Book Company. New York, New York, USA. 1977

Curie, Eve 1904–

French concert pianist and journalist

What does it matter to Science if her passionate servants are rich or poor, happy or unhappy, healthy or ill? She knows that they have been created to seek and to discover, and that they will seek and find until their strength dries up at its source. It is not in a scientist's power to struggle against his vocation: even on his days of disgust or rebellion his steps lead him inevitably back to his laboratory apparatus.

Madame Curie

Chapter XV (p. 193)

The Literary Guild of America, Inc. New York, New York, USA. 1937

Curie, Marie Skłodowska 1867–1934

Polish-born French physicist and chemist

In science we must be interested in things, not in persons.

In Eve Curie

Madame Curie

Chapter XVI (p. 222)

The Literary Guild of America, Inc. New York, New York, USA. 1937

After all, science is essentially international, and it is only through lack of the historical sense that national qualities have been attributed to it.

Memorandum

Intellectual Cooperation, June 16, 1926

da Vinci, Leonardo 1452–1519

Italian High Renaissance painter and inventor

Science is the captain, practice the soldiers.

Leonardo da Vinci's Note Books (p. 54)

Duckworth & Company. London, England. 1906

All science which end in words are dead the moment they come to life, except for their manual part, that is to say, the writing, which is the mechanical part.

The Literary Works of Leonardo da Vinci (Volume 1)

7a1148 (p. 35)

University of California Press. Berkeley, California, USA. 1977

d'Abro, Abraham

No biographical data available

Practically the whole of physical science is thus one mass of inference based ultimately, but not immediately, on direct knowledge.

The Rise of the New Physics (Volume 1)

Chapter II (p. 15)

Dover Publications, Inc. New York, New York, USA. 1951

Darwin, Charles Robert 1809–82

English naturalist

As for myself, I believe that I have acted rightly in steadily following, and devoting my life to Science. I feel no remorse from having committed any great sin, but have often and often regretted that I have not done more direct good to my fellow creatures.

In Francis Darwin (ed.)

The Life and Letters of Charles Darwin (Volume 2)

Chapter XVI (p. 530)

D. Appleton & Company. New York, New York, USA. 1896

Darwin, Sir Francis 1848–1925

English botanist

Forgive me for suggesting one caution; as Demosthenes said, "Action, action, action," was the soul of eloquence, so is caution almost the soul of science.

In Francis Darwin (ed.)

More Letters of Charles Darwin (Volume 2)
To Dohrn, January 4, 1870 (p. 444)
D. Appleton & Company. New York, New York, USA. 1903

But in science the credit goes to the man who convinces the world, not to the man to whom the idea first occurs.
First Galton Lecture Before the Eugenics Society
Eugenics Review, Volume 6, Number 1, 1914

How grand is the onward rush of science; it is enough to console us for the many errors which we have committed, and for our efforts being overlaid and forgotten in the mass of new facts and new views which are daily turning up.
In Francis Darwin (ed.)
The Life and Letters of Charles Darwin (Volume 2)
Darwin to Wallace, August 28, 1872 (p. 348)
D. Appleton & Company. New York, New York, USA. 1896

Fictional character

Captain, the most elementary and valuable statement in science: "The beginning of wisdom is 'I do not know.'" *Star Trek: The Next Generation*
Where Silence Has Lease
Television program
Season 2, 1988

Davies, Paul Charles William 1946–
British-born physicist, writer, and broadcaster

There is a popular misconception that science is an impersonal, dispassionate, and thoroughly objective enterprise. Whereas most other human activities are dominated by fashions, fads, and personalities, science is supposed to be constrained by agreed rules of procedure and rigorous tests. It is the results that count, not the people who produce them.

This is, of course, manifest nonsense.
In Richard Feynman
Six Easy Pieces: Essentials of Physics Explained by Its Most Brilliant Teacher
Preface (p. ix)
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

Science may explain all the processes whereby the universe evolves its own destiny, but that still leaves room for there to be a meaning behind it all.
The Cosmic Blueprint: New Discoveries in Nature's Creative Ability to Order the Universe
Chapter 14 (p. 203)
Simon & Schuster. New York, New York, USA. 1988

Science remains a sort of witchcraft, its practitioners regarded with a mixture of awe and suspicion...
God and the New Physics
Chapter 1 (p. 3)
Simon & Schuster. New York, New York, USA. 1983

Conventional science attempts to explain things exactly, in terms of general principles. Any sort of explanation

for the shape of a snowflake or a coastline could not be of this sort.

The Cosmic Blueprint: New Discoveries in Nature's Creative Ability to Order the Universe
Chapter 3 (p. 22)
Simon & Schuster. New York, New York, USA. 1988

...it is the job of science to solve mysteries without recourse to divine intervention.
The Fifth Miracle: The Search for the Origin of Life
Chapter 1 (p. 31)
Simon & Schuster. New York, New York, USA. 1996

Davies, Robertson 1913–95
Canadian novelist

Science, during the past hundred and fifty years, has gained formidable new authority, and it is to Science that we owe the increased longevity of the race, and the control of many of the terrible ills that afflict mankind. Science may cure disease, but can it confer health? Like all powerful gods, Science seeks to be the One True God, and as it writhes about the staff of Hermes it seeks to diminish and perhaps drive out the other god, the god of Humanism.
The Merry Heart
Chapter 5 (p. 98)
McClelland & Stewart. Toronto, Ontario, Canada. 1996

Davis, Kenneth S. 1912–99
American historian

In our time it has become all too easy to regard science as a vast impersonal force — a kind of Frankenstein's monster that, escaping human control, has forcibly seized us and carries us at terrifying speeds in directions we have not chosen towards ends unknown.
The Cautionary Scientists: Priestley, Lavoisier, and the Founding of Modern Chemistry
Introduction (p. 7)
Putnam. New York, New York, USA. 1966

Davis, Watson 1896–1967
No biographical data available

Science is a grand procession through the ages. Blaring trumpets, waving flags, and pomp are not its accompaniment. It travels the quieter roads of the intellect.
The Advance of Science
Chapter 32 (p. 375)
Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1934

Davis, William Morris 1850–1934
American geomorphologist

Science is therefore not final any more than it is infallible.
In H. Shapley, H. Wright, and S. Rappaport (eds.)
Readings in the Physical Sciences
The Reasonableness of Science (p. 25)
Appleton-Century-Crofts. New York, New York, USA. 1948

Davy, Sir Humphry 1778–1829
English chemist

There is now before us a boundless prospect of novelty in science; a country unexplored, but noble and fertile in aspect; a land of promise in philosophy.

The Collected Works of Sir Humphry Davy (Volume 1)

Memories of the Life of Sir Humphry Davy

Chapter III (p. 117)

Smith, Elder & Company. London, England. 1839–1840

There are very few persons who pursue science with true dignity.

Consolations in Travel, or the Last Days of a Philosopher

Dialogue V (p. 226)

J. Murray. London, England. 1830

Science has done much for man, but it is capable of doing still more; its sources of improvement are not yet exhausted; the benefits that it has conferred ought to excite our hopes of its capability of conferring new benefits; and, in considering the progressiveness of our nature, we may reasonably look forwards to a state of greater cultivation and happiness than that which we at present enjoy.

A Discourse, Introductory to a Course of Lectures on Chemistry (p. 17)

Press of the Royal Institution of Great Britain. London. 1802

Dawkins, Richard 1941–

British ethologist, evolutionary biologist, and popular science writer

Science, like proper literary studies, can be hard and challenging but science is — also like proper literary studies — wonderful.

Unweaving the Rainbow: Science, Delusion and the Appetite for Wonder Chapter 2 (p. 25)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1998

Far from science not being useful, my worry is that it is so useful as to overshadow and distract from its inspirational and cultural value. Usually even its sternest critics concede the usefulness of science, while completely missing the wonder. Science is often said to undermine our humanity, or destroy the mystery on which poetry is thought to thrive.

Science, Delusion and the Appetite for Wonder

Richard Dimpleby Lecture, BBC1 Television, November 12th, 1996

de Balzac, Honoré 1799–1850

French novelist

Science is the language of the temporal world; love is that of the spiritual world. Man, indeed, describes more than he explains; while the angelic spirit sees and understands. Science saddens man; love enraptures the angel; science is still seeking, love has found. Man judges of nature in relation to itself; the angelic spirit judges of it in relation to heaven. In short to the spirits everything speaks.

The Works of Honoré Balzac (Volume 2)

Seraphita

Part II (p. 58)

Nottingham Society. New York, New York, USA. 1901

de Bono, Edward 1933–

Maltese psychologist and writer

When you have got somewhere interesting, that is the time to look back and pick out the surest way of getting there again. Sometimes it is very much easier to see the surest route to a place only after you have arrived. You may have to be at the top of a mountain to find the easiest way up.

New Think: The Use of Lateral Thinking in the Generation of New Ideas (p. 132)

Avon Books. New York, New York, USA. 1971

de Gourmont, Rémy 1858–1915

French critic and novelist

Science is the only truth and it is the great lie. It knows nothing, and people think it knows everything. It is misrepresented. People think that science is electricity, automobilism, and dirigible balloons. It is something very different. It is life devouring itself. It is the sensibility transformed into intelligence. It is the need to know stifling the need to live. It is the genius of knowledge vivisectioning the vital genius.

Translated by Glenn S. Burne

Selected Writings

Art and Science (p. 172)

The University of Michigan Press, Ann Arbor, Michigan, USA. 1966

Science is the food of the intelligence.

Translated by Glenn S. Burne

Selected Writings

Art and Science (p. 171)

The University of Michigan Press, Ann Arbor, Michigan, USA. 1966

de Unamuno, Miguel 1864–1936

Spanish philosopher and writer

True science teaches, above all, to doubt and be ignorant.

Translated by J.E. Crawford Fritch

The Tragic Sense of Life in Men and in Peoples

Chapter V (p. 93)

Macmillan & Company Ltd. London, England. 1921

Science is a cemetery of dead ideas, even though life may issue from them.

Translated by J.E. Crawford Fritch

The Tragic Sense of Life in Men and in Peoples

Chapter V (p. 90)

Macmillan & Company Ltd. London, England. 1921

Science exists only in personal consciousness and thanks to it; astronomy, mathematics, have no other reality than that which they possess as knowledge in the minds of those who study and cultivate them.

Translated by J.E. Crawford Fritch

The Tragic Sense of Life in Men and in Peoples

The Starting-Point (pp. 30–31)

Macmillan & Company Ltd. London, England. 1921

del Rio, A. M.

No biographical data available

It is impossible that he who has once imbibed a taste for science can ever abandon it.

Analysis of an Alloy of Gold and Rhodium from the Parting House at Mexico
Annals of Philosophy, Volume 10, Number 2, October 1825

Delbrück, Max 1906–81
 German-born American biologist

With science we can transcend our intuitions, just as with electronics we can transcend our eyes and ears. To the question of how such transcendence can have arisen in the course of biological evolution I have no satisfactory answer.

Mind from Matter

Twenty (p. 280)

Blackwell Scientific Publications, Inc. Palo Alto, California, USA. 1986

Descartes, René 1596–1650

French philosopher, scientist, and mathematician

Science is like a woman: if she stays faithful to her husband she is respected; if she becomes common property she grows to be despised.

In William R. Shea

The Magic of Numbers and Motion: The Scientific Career of René Descartes

Chapter Five (p. 114)

Science History Publications. Canton, Massachusetts, USA. 1991

The sciences are now masked, but when the masks are lifted, they will be seen in their beauty. Upon inspecting the chain of the sciences, it will not appear more difficult to remember them than a series of numbers.

In William R. Shea

The Magic of Numbers and Motion: The Scientific Career of René Descartes

Chapter Five (p. 101)

Science History Publications Canton, Massachusetts, USA. 1991

Dewar, James 1842–1923

English physicist and chemist

To serve in the scientific army, to have shown some initiative, and to be rewarded by the consciousness that in the eyes of his comrades he bears the accredited accolade of successful endeavor, is enough to satisfy the legitimate ambition of every earnest student of nature.

Annual Report of the Board of Regents of the Smithsonian Institution, 1902

History of Cold and the Absolute Zero (p. 240)

Government Printing Office. Washington, D.C. 1903

Dickinson, Emily 1830–86

American lyric poet

I climb the "Hill of Science,"
 I view the landscape o'er;
 such transcendental prospects,
 I ne'er beheld before!

The Complete Poems of Emily Dickinson

No. 3 (p. 5)

Little, Brown & Company. Boston, Massachusetts, USA. 1960

Dickinson, G. Lowes 1862–1932

English historian and political activist

Science hangs in a void of nescience, a planet turning in the dark.

A Modern Symposium (p. 159)

Doubleday, Page & Company. Garden City, New York, USA. 1920

Disraeli, Benjamin, 1st Earl of Beaconsfield 1804–81

English prime minister, founder of Conservative Party, and novelist

What Art was to the ancient world, Science is to the modern...

Coningsby

Book IV, Chapter I (p. 126)

J.M. Dent & Sons Ltd. London, England. 1911

...the pursuit of science leads only to the insoluble.

Lothair

Chapter XVII (p. 70)

Longmans, Green & Company London, England. 1920

Dobie, J. Frank 1888–1964

American folklorist

Putting on the spectacles of science in expectation of finding the answer to everything looked at signifies inner blindness.

The Voice of the Coyote

Introduction (p. xvi)

Little, Brown & Company. Boston, Massachusetts, USA. 1949

Dobzhansky, Theodosius 1900–75

Russian-American scientist

Science has been called "the endless frontier." The more we know, the better we realize that our knowledge is a little island in the midst of an ocean of ignorance.

In Robert M. Hutchins and Mortimer J. Adler (eds.)

The Great Ideas Today, 1974

Advancement and Obsolescence in Science (p. 61)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1974

Science does more than collect facts; it makes sense of them. Great scientists are virtuosi of the art of discovering the meaning of what otherwise might seem barren observations.

In Robert M. Hutchins and Mortimer J. Adler (eds.)

The Great Ideas Today, 1974

Advancement and Obsolescence in Science (p. 56)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1974

Science is cumulative knowledge. Each generation of scientists works to add to the treasury assembled by its predecessors. A discovery made today may not be significant or even comprehensible by itself, but it will make sense in conjunction with what was known before. Indeed this will usually have been necessary to its achievement.

In Robert M. Hutchins and Mortimer J. Adler (eds.)

The Great Ideas Today, 1974

Advancement and Obsolescence in Science (p. 52)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1974

Dott, Jr., Robert H.

No biographical data available

Batten, Henry L.

No biographical data available

Science consists simply of the formulation and testing of hypotheses based on observational evidence; experiments are important where applicable, but their function is merely to simplify observation by imposing controlled conditions.

Evolution of the Earth (2nd edition)

Chapter 3 (p. 40)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1976

Douglas, Mary 1921–

No biographical data available

Wildavsky, A.

No biographical data available

In our modern world people are supposed to live and die subject to known, measurable natural forces, not subject to mysterious moral agencies. That mode of reasoning, indeed, is what makes modern man modern. Science wrought this change between us and nonmoderns. It is hardly true, however, that their universe is more unknown than ours. For anyone disposed to worry about the unknown, science has actually expanded the universe about which we cannot speak with confidence. . . . This is the double-edge thrust of science, generating new ignorance with new knowledge. The same ability to detect causes and connections or parts per trillion can leave more unexplained than was left by cruder measuring instruments.

Risk and Culture: An Essay on the Selection of Technical and Environmental Dangers

Chapter III (p. 49)

University of California Press. Berkeley, California, USA. 1982

Doyle, Sir Arthur Conan 1859–1930

Scottish writer

Science seeks knowledge. Let the knowledge lead us where it will, we still must seek it. To know once for all what we are, why we are, where we are, is that not in itself the greatest of all human aspirations?

The Land of Mist; The Maracot Deep; and Other Stories

When the World Screamed (p. 430)

Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1930

Dryden, John 1631–1700

English poet, dramatist, and literary critic

Science distinguishes a Man of Honour from one of those Athletick Brutes whom undeservedly we call Heroes.

Fables Ancient and Modern

Dedication

Printed for Jacob Tonson. London, England. 1700

du Noüy, Pierre Lecomte 1883–1947

French scientist

Science is very young when compared to the moral, spiritual, and religious ideas of humanity. It enjoys the prestige

of a new toy. But we must not be misled. In spite of its youth and imperfections, it constitutes the best means of convincing us of the immensity and harmonious beauty of the universe, revealed by the infinite complexity of the apparently most simple phenomena. It is an orderly and confounding complexity which is a thousand times better qualified than ignorance to make us feel the omnipotence of the Creator.

Between Knowing and Believing

The Future of Spirit 1941 (p. 216)

McKay. New York, New York, USA. 1967

Either we have absolute confidence in our science and in the mathematical and other reasonings which enable us to give a satisfactory explanation of the phenomena surrounding us — in which case we are forced to recognize that certain fundamental problems escape us and that their explanation amounts to admitting a miracle — or else we doubt the universality of our science and the possibility of explaining all natural phenomena by chance alone; and we fall back on a miracle or a hyperscientific intervention.

Human Destiny

Chapter 3 (p. 36)

Longmans, Green & Company. London, England. 1947

Dubos, René Jules 1901–82

French-born American microbiologist and environmentalist

Science is not the product of lofty meditations and genteel behavior, it is fertilized by heartbreaking toil and long vigils — even if, only too often, those who harvest the fruit are but the laborers of the eleventh hour.

Louis Pasteur: Free Lance of Science

Chapter XIV (p. 389)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

Science shows us what exists but not what to do about it.

The Dreams of Reason: The Computer and the Rise of the Sciences of Complexity

Chapter 14 (p. 325)

Simon & Schuster. New York, New York, USA. 1988

Science is still the versatile, unpredictable hero of the play, creating endless new situations, opening romantic vistas and challenging accepted concepts.

Louis Pasteur: Free Lance of Science

Chapter I (p. 15)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

Science knows no country, because knowledge belongs to humanity, and is the torch which illuminates the world. Science is the highest personification of the nation because that nation will remain the first which carries the furthest the works of thought and intelligence.

Louis Pasteur: Free Lance of Science

Chapter III (p. 85)

Little, Brown & Company. Boston, Massachusetts, USA. 1950

Dyson, Freeman J. 1923–

American physicist and educator

Science is even more unpredictable than history. Every important discovery in science is by definition unpredictable. If it were predictable, it would not be an important discovery. The purpose of science is to create opportunities for unpredictable things to happen. When nature does something unexpected, we learn something about how nature works.

From Eros to Gaia

Chapter 6 (p. 68)

Pantheon Books. New York, New York, USA. 1992

It used to be said, before the recent era of revolutionary discoveries, that science was organized common sense. In the modern era it would be more accurate to define science as organized unpredictability.

From Eros to Gaia

Chapter 6 (p. 68)

Pantheon Books. New York, New York, USA. 1992

Eakin, Richard M.

American zoologist

If I had any advice to [give] you it is just this: love science but do not worship it. Put science in its proper place, ranking it along with philosophy and history, music and religion, literature and art. If I had my life to live again (Darwin says), I would make it a rule to read some poetry and listen to some music at least once every week.

Great Scientists Speak Again

Chapter 6 (p. 107)

University of California Press, Berkeley, California, USA, 1975

Eben, Aubrey

No biographical data available

Science is not a sacred cow. Science is a horse. Don't worship it. Feed it.

Reader's Digest, March 1963 (p. 67)

Eddington, Sir Arthur Stanley 1882–1944

English astronomer, physicist, and mathematician

To imagine that Newton's great scientific reputation is tossing up and down in these latter-day revolutions is to confuse science with omniscience.

The Nature of the Physical World

Chapter X (p. 202)

The Macmillan Company. New York, New York, USA. 1930

Science has its showrooms and its workshops. The public today, I think rightly, is not content to wander round the showrooms where the tested products are exhibited; they demand to see what is going on in the workshops. You are welcome to enter; but do not judge what you see by the standards of the showroom. We have been going round a workshop in the basement of the building of science. The light is dim, and we stumble sometimes. About us is confusion and mess which there hasn't been time to sweep away. The workers and their machines are enveloped in murkiness. But I think that something is being shaped here — perhaps

something rather big. I do not quite know what twill be when it is completed and polished for the showroom.

The Expanding Universe

Chapter IV, Section VII (p. 126)

The University Press. Cambridge, England. 1933

...unless science is to degenerate into idle guessing, the test of value of any theory must be whether it expresses with as little redundancy as possible the facts which it intended to cover.

Space, Time and Gravitation: An Outline of the General Relativity Theory

Chapter I (p. 29)

At The University Press. Cambridge, England. 1921

Edelman, Gerald M. 1929–

American biochemist and neuroscientist

Science is imagination in the service of the verifiable truth and that service is indeed communal. It cannot be rigidly planned. Rather, it requires freedom and courage and the plural contributions of many different kinds of people who must maintain their individuality while giving to the group.

Les Prix Nobel. The Nobel Prizes in 1972

Nobel banquet speech for award received in 1972

Nobel Foundation. Stockholm, Sweden. 1973

Egler, Frank E. 1911–96

American botanist and ecologist

Science is a product of man, of his mind; and science creates the real world in its own image.

The Way of Science

Science Concepts (p. 22)

Hafner Publishing Company. New York, New York, USA. 1970

...science...ever [reflects] a faith in the intelligibility of nature.

The Way of Science

The Nature of Science (p. 2)

Hafner Publishing Company. New York, New York, USA. 1970

Einstein, Albert 1879–1955

German-born physicist

One thing I have learned in a long life: that all our science, measured against reality, is primitive and childlike — and yet it is the most precious thing we have.

In Banesh Hoffman

Albert Einstein: Creator and Rebel

Preface (p. v)

The Viking Press. New York, New York, USA. 1972

Science as something existing and complete is the most objective thing known to man. But science in the making, science as an end to be pursued, is as subjective and psychologically conditioned as any other branch of human endeavor — so much so, that the question “what is the purpose and meaning of science?” receives quite different answers at different times and from different sorts of people.

The World as I See It

Address at Columbia University, New York (p. 137)
Philosophical Library. New York, New York, USA. 1949

Strange that science, which in the old days seemed harmless, should have evolved into a nightmare that causes everyone to tremble.

In G.J. Whitrow

Einstein: The Man and His Achievement

Chapter III (p. 89)

BBC. London, England. 1967

Science will stagnate if it is made to serve practical goals.

In Otto Nathan and Heinz Norden

Einstein on Peace

Chapter Thirteen (p. 402)

Simon & Schuster. New York, New York, USA. 1960

The whole of science is nothing more than a refinement of everyday thinking.

Out of My Later Years

Physics and Reality, I (p. 59)

Thames & Hudson. London, England. 1950

...science can only ascertain what is, but not what should be, and outside of its domain value judgments of all kinds remain necessary.

Out of My Later Years

Science and Religion, II (p. 25)

Thames & Hudson. London, England. 1950

...the fact that in science we have to be content with an incomplete picture of the physical universe is not due to the nature of the universe itself but rather to us.

In Max Planck

Where Is Science Going?

Prologue (p. 10)

W.W. Norton & Company, Inc. New York, New York, USA. 1932

Science is a wonderful thing if one does not have to earn one's living at it.

In Helen Dukas and Banesh Hoffman

Albert Einstein: The Human Side: New Glimpses from His Archives

Letter to a California student March 24, 1951 (p. 57)

Princeton University Press. Princeton, New Jersey, USA. 1979

Einstein, Albert 1879–1955

German-born physicist

Infeld, Leopold 1898–1968

Polish physicist

Science is not just a collection of laws, a catalogue of unrelated facts. It is a creation of the human mind, with its freely invented ideas and concepts.

The Evolution of Physics

Physics and Reality (p. 294)

Simon & Schuster. New York, New York, USA. 1961

Eisenschiml, Otto 1880–1963

Austrian-American chemist and historian

Science seeks to build, not to destroy; to aid, not to hinder.

The Art of Worldly Wisdom: Three Hundred Precepts for Success Based on the Original Work of Baltasar Gracian

Part One (p. 8)

Duell, Sloan & Pearce. New York, New York, USA. 1947

Emelyanov, A. S.

No biographical data available

Science provides mankind with a great tool of cognition which makes it possible to reach unprecedented heights of abundance and equality. This determines the most important and most fruitful aspect of the social role of science, and as a result the social responsibility of scientists is growing.

In E.H.S. Burhop In Maurice Goldsmith and Alan Mackay (eds.)

Society and Science

Scientist and Public Affairs (p. 31)

Simon & Schuster. New York, New York, USA. 1965

Emerson, Ralph Waldo 1803–82

American lecturer, poet, and essayist

All science has one aim, namely, to find a theory of nature.

Ralph Waldo Emerson: Essays and Lectures

Nature: Addresses, and Lectures

Introduction (p. 7)

The Library of America. New York, New York, USA. 1983

You must have eyes of science to see in the seed its nodes. . . .

The Complete Works of Ralph Waldo Emerson (Volume 8)

Science is cold.

The Complete Works of Ralph Waldo Emerson (Volume 1)

Nature: Addresses and Lectures

An Address (p. 143)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Science is a search after identity, and the scientific whim is lurking in all corners.

Ralph Waldo Emerson: Essays and Lectures

The Conduct of Life

Beauty (p. 1108)

The Library of America. New York, New York, USA. 1983

Science surpasses the old miracles of mythology....

The Complete Works of Ralph Waldo Emerson (Volume 8)

Letters and Social Aims

Chapter VII (p. 207)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Empirical science is apt to cloud the sight, and, by the very knowledge of functions and processes, to bereave the student of the manly contemplation of the whole. The savant becomes unpoetic.

Ralph Waldo Emerson: Essays and Lectures

Nature: Addresses, and Lectures

Prospects (p. 43)

The Library of America. New York, New York, USA. 1983

The motive of science was the extension of man, on all sides, into Nature, till his hands should touch the stars, his eyes see through the earth, his ears understand the language of beast and bird, and the sense of the wind; and, through his sympathy, heaven and earth should talk with him. But that is not our science.

Ralph Waldo Emerson: Essays and Lectures

The Conduct of Life

Beauty (p. 1100)

The Library of America. New York, New York, USA. 1983

Intellectual science has been observed to beget invariably a doubt of the existence of matter.

The Complete Works of Ralph Waldo Emerson (Volume 1)

Nature: Addresses and Lectures

Nature (p. 56)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

It is the last lesson of modern science that the highest simplicity of structure is produced, not by few elements, but by the highest complexity.

The Complete Works of Ralph Waldo Emerson (Volume 4)

Representative Men

Goethe; or, The Writer (p. 290)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

...the path of science and of letters is not the way into nature. The idiot, the Indian, the child, and unschooled farmer's boy, stand nearer to the light by which nature is to be read, than the dissector or the antiquary.

Ralph Waldo Emerson: Essays and Lectures

Essays: First Series

History (p. 256)

The Library of America. New York, New York, USA. 1983

...as the power or genius of nature is ecstatic, so must its science or the description of it be.

The Complete Works of Ralph Waldo Emerson (Volume 1)

Nature: Addresses and Lectures

The Method of Nature (p. 213)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

It is this domineering temper of the sensual world that creates the extreme need of the priests of science....

The Complete Works of Ralph Waldo Emerson (Volume 1)

Nature: Addresses and Lectures

Literary Ethics (p. 186)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Emmeche, Claus 1956–

Danish theoretical biologist

It has been said that science demystifies the world. It is closer to the truth to say that science, when it is at its best, opens the world up for us, bringing daily realities under a kind of magic spell and providing the means to see the limits of what we think we know, and the scope of what we do not at all understand.

Translated by Steven Sampson

The Garden in the Machine: The Emerging Science of Artificial Life

Chapter One (p. 13)

Princeton University Press. Princeton, New Jersey, USA. 1994

Everett, Edward 1794–1865

American statesman, educator, and orator

It usually happens in scientific progress, that when a great fact is at length discovered, it approves itself at once to all competent judges. It furnishes a solution to so many problems, and harmonizes with so many other facts, — that all the other data as it were crystallize at once about it.

The Uses of Astronomy

An Oration Delivered at Albany on the 28th of July, 1856 (p. 30)

Ross & Tousey. New York, New York, USA. 1856

Feigl, H.

No biographical data available

...science, properly interpreted, is not dependent on any sort of metaphysics. It merely attempts to cover a maximum of facts by a minimum of laws.

Naturalism and Humanism

American Quarterly, Volume 1, Number 2, Summer 1949 (p. 148)

Ferré, Nels F. S. 1908–71

Swedish-American theologian

Science is supposed by many to have banished every realm of the sacred; and behold, science becomes the sacred cow.

Faith and Reason

Chapter II (p. 43)

Harper & Brothers. New York, New York, USA. 1946

It is a sad experience to hear someone denounce science as the cause of modern chaos and destruction. Our technological advance may be abused and make of what could be a near heaven a near hell, but that is surely not the fault of science as such. Science has not failed man, but man has failed science.

Faith and Reason

Chapter II (p. 38)

Harper & Brothers. New York, New York, USA. 1946

Ferris, Timothy 1944–

American science writer

Far too many students accept the easy belief that they need not bother learning much science, since a revolution will soon disprove all that is currently accepted anyway. In such a climate it may be worth affirming that science really is progressive and cumulative, and that well-established theories, though they may turn out to be subsets of larger and farther-reaching ones — as happened when Newtonian mechanics was incorporated by Einstein into general relativity — are seldom proved wrong....

The Whole Shebang: A State-of-the Universe's Report

Preface (p. 13)

Simon & Schuster. New York, New York, USA. 1996

Science is not perfect, but neither is it just one more sounding board for human folly.

The Whole Shebang: A State-of-the Universe's Report

Preface (p. 13)

Simon & Schuster. New York, New York, USA. 1996

Feyerabend, Paul K. 1924–94

Austrian-born American philosopher of science

Science is neither a single tradition, nor the best tradition there is, except for people who have become accustomed to its presence, its benefits and its disadvantages. In a democracy it should be separated from the state just as churches are now separated from the state.

Against Method: Outline of an Anarchistic Theory of Knowledge

(p. 238)

Verso. London, England. 1978

Science is an essentially anarchistic enterprise....

Against Method: Outline of an Anarchistic Theory of Knowledge

Analytical Index (p. 10)

Verso. London, England. 1978

Science is not a closed book that is understood only after years of training. It is an intellectual discipline that can be examined and criticised by anyone who is interested, and that looks difficult and profound only because of a systematic campaign of obfuscation carried out by many scientists...

In E.D. Klemke, Robert Hollinger and A. David Kline

Introductory Reading in the Philosophy of Science

How to Defend Society Against Science (p. 62)

Prometheus Books. Buffalo, New York, USA. 1980

Feynman, Richard P. 1918–88

American theoretical physicist

We must, incidentally, make it clear from the beginning that if a thing is not a science, it is not necessarily bad. For example, love is not a science. So, if something is said not to be a science, it does not mean that there is something wrong with it; it just means that it is not a science.

Six Easy Pieces: Essentials of Physics Explained by Its Most Brilliant Teacher

The Relation of Physics to Other Sciences (p. 47)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1995

All science is intelligent inference; excessive literalism is a delusion, not a humble bowing to evidence.

Dinosaur in a Haystack: Reflections in Natural History

Part Three, Chapter 12 (p. 156)

Random House, Inc. New York, New York, USA. 1995

[An] aspect of science is its contents, the things that have been found out. This is the yield. This is the gold. This is the excitement, the pay you get for all the disciplined thinking and hard work. The work is not done for the sake of an application. It is done for the excitement of what is found out. ...it is almost impossible for me to convey in a lecture this important aspect, this exciting part, the real reason for science. And without understanding this you miss the whole point.

The Meaning of It All: Thoughts of a Citizen Scientist

Chapter I (p. 9)

Perseus Books. Reading, Massachusetts, USA. 1998

You cannot understand science and its relation to anything else unless you understand and appreciate [it as] the great adventure of our time. You do not live in your time unless you understand that this is... a wild and exciting thing.

The Meaning of It All: Thoughts of a Citizen Scientist

Chapter I (p. 9)

Perseus Books. Reading, Massachusetts, USA. 1998

Science can be defined as a method for, and a body of information obtained by, trying to answer only questions which can be put into the form: If I do this, what will happen?

Engineering and Science, Volume 19, 1956 (p. 23)

Science is a way to teach how something gets to be known, what is not known, to what extent things are known (for nothing is known absolutely), how to handle doubt and uncertainty, what the rules of evidence are, how to think about things so that judgments can be made, how to distinguish truth from fraud, and from show.

The Problem of Teaching Physics in Latin America
Engineering and Science, November 1963

Science alone of all the subjects contains within itself the lesson of the danger of belief in the infallibility of the greatest teachers in the preceding generation.... As a matter of fact, I can also define science another way: Science is the belief in the ignorance of experts.

In Jeffrey Robbins (ed.)

The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman

Chapter 8 (p. 188)

Perseus Books. Cambridge, Massachusetts, USA. 1999

Although it is uncertain, it is necessary to make science useful. Science is only useful if it tells you about some experiment that has not been done; it is not good if it only tells you what just went on.

The Character of Physical Law

Chapter 7 (p. 164)

BBC. London, England. 1965

And so it is with Science. In a way it is key to the gates of heaven, and the same key opens the gates of hell, and we do not have any instructions as to which is which gate. Shall we throw away the key and never have a way to enter the gates of heaven? Or shall we struggle with the problem of which is the best way to use the key? That is, of course, a very serious question, but I think that we cannot deny the value of the key to the gates of heaven.

The Meaning of It All: Thoughts of a Citizen Scientist

Chapter I (p. 6–7)

Perseus Books. Reading, Massachusetts, USA. 1998

Is science of any value?

I think a power to do something is of value. Whether the result is a good thing or a bad thing depends on how it is used, but the power is a value.

Once in Hawaii I was asked to see a Buddhist temple. In the temple a man said, "I am going to tell you something that you will never forget." And then he said, "To every man is given the key to the gates of heaven. The same key opens the gates of hell."

The Meaning of It All: Thoughts of a Citizen Scientist

Chapter I (p. 6)

Perseus Books. Reading, Massachusetts, USA. 1998

It is necessary to teach both to accept and to reject the past with a kind of balance that takes considerable skill. Science alone of all the subjects contains within itself the

lesson of the danger of belief in the infallibility of the greatest teachers of the preceding generation.

In Jeffrey Robbins (ed.)

The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman

Chapter 8 (p. 188)

Perseus Books. Cambridge, Massachusetts, USA. 1999

If you thought before that science was certain — well, that is just an error on your part.

The Character of Physical Law

Chapter 3 (p. 77)

BBC. London, England. 1965

...it is imperative in science to doubt; it is absolutely necessary, for progress of science, to have uncertainty as a fundamental part of your inner nature.

Engineering and Science, Volume 19, 1956 (p. 21)

...science is of value because it can produce something.

What Do You Care What Other People Think?

The Value of Science (p. 241)

W.W. Norton & Company, Inc. New York, New York, USA. 1988

Fischer, Emil 1852–1919

German chemist

The sciences are not abstract constructions, but rather the result of human endeavor; they are closely connected with the personalities and the fates of the dedicated researchers who developed them.

In Rolf Huisgen

Adolf von Baeyer's Scientific Achievements — A Legacy

Angewandte Chemie International Edition in English, Volume 25, Number 4, April 1986 (p. 297)

...science is and remains international.

In Albert Einstein

The World as I See It

The International Science (p. 50)

Philosophical Library. New York, New York, USA. 1949

Fiske, John 1842–1901

American philosopher and historian

...all human science is but the increment of the power of the eye....

The Destiny of Man Viewed in the Light of His Origin

Chapter VII (p. 60)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1912

...there are moments when one passionately feels that this cannot be all. On warm June mornings in green country lanes, with sweet pine-odours, wafted in the breeze which sighs through the branches, and cloud-shadows flitting over far-off blue mountains, while little birds sing their love-songs, and golden-haired children weave garlands of wild roses; or when in the solemn twilight we listen to wondrous harmonies of Beethoven and Chopin that stir the heart like voices from an unseen world; at such times one feels that the profoundest answer which

science can give to our questionings is but a superficial answer after all.

The Unseen World, and Other Essays

I. The Unseen World, Part II (p. 56)

Houghton Mifflin Company. New York, New York, USA. 1876

Flaubert, Gustave 1821–90

French novelist

My kingdom is as wide as the world, and my desire has no limit. I go forward always, freeing spirits and weighing worlds, without fear, without compassion, without love, and without God. Men call me science.

The Temptation of Saint Anthony (p. 161)

The Modern Library. New York, New York, USA. 2001

Forbes, Edward 1815–54

English naturalist

People without independence have no business to meddle with science. It should never be linked with lucre.

In George Wilson and Archibald Geikie

Memoir of Edward Forbes, F.R.S.

Chapter XII (p. 392)

Macmillan & Company Ltd. Cambridge, England. 1861

Fort, Charles 1874–1932

American writer

Every science is a mutilated octopus. If its tentacles were not clipped to stumps, it would feel its way into disturbing contacts.

In Damon Knight

Charles Fort: Prophet of the Unexplained

A Charles Fort Sampler (p. vi)

Gollancz. London, England. 1971

Fox, Robin 1934–

English anthropologist, poet, and essayist

The conduct of science can lead to boring triviality. Even great results can be used to evil ends.

In Paul R. Gross, Norman Levitt, and Martin W. Lewis (eds.)

The Flight from Science and Reason

State of the Art/Science in Anthropology (p. 329)

New York Academy of Sciences. New York, New York, USA. 1996

Since science has no value agenda of its own it is always subject to hijacking by fanaticism and idealism.

In Paul R. Gross, Norman Levitt, and Martin W. Lewis (eds.)

The Flight from Science and Reason

State of the Art/Science in Anthropology (p. 329)

New York Academy of Sciences. New York, New York, USA. 1996

The point that science can be used for evil purposes is beside the point. Art and music can be used for evil purposes, but no one proposes abandoning either. Anything can be used for evil purposes. I am not going to stop listening to Wagner just because Hitler liked him.

In Paul R. Gross, Norman Levitt, and Martin W. Lewis (eds.)

The Flight from Science and Reason

State of the Art/Science in Anthropology (p. 332)

New York Academy of Sciences. New York, New York, USA. 1996

Franck, Georg 1946–

No biographical data available

Success in science is rewarded with attention. You gain full membership in the scientific community only by receiving the attention of your fellow scientists. Earning this attention “income” is a prime motive for becoming a scientist and for practicing science. In order to maximize this income, you have to employ your own attention in the most productive way. It does not pay to find things out anew that have been discovered already. Nor is reinvention rewarding in terms of the attention paid. It pays no pay attention to the work done by others.

Scientific Communication — A Vanity Fair?

Science, Volume 286, Number 5437, 1 October 1999 (p. 53)

Franklin, Benjamin 1706–90

American printer, scientist, and diplomat

The rapid progress true Science now makes occasions my regretting sometimes that I was born so soon. It is impossible to imagine the heights to which may be carried, in a thousand years, the power of man over matter. O that moral Science were in as fair a way of improvement, that men would cease to be wolves to one another, and that human beings would at length learn what they now improperly call humanity.

In Linus Pauling

College Chemistry

Letter to Joseph Priestley, 8 February 1780

Chapter 1 (p. 3)

W.H. Freeman & Company. San Francisco, California, USA. 1964

Freud, Sigmund 1856–1939

Austrian neurologist and co-founder of psychoanalysis

No, our science is no illusion. But an illusion it would be to suppose that what science cannot give us we can get elsewhere.

The Future of an Illusion

Chapter X (p. 56)

W.W. Norton & Company, Inc. New York, New York, USA. 1961

Science in her perpetual incompleteness and insufficiency is driven to hope for her salvation in new discoveries and new ways of regarding things. She does well, in order not to be deceived, to arm herself with skepticism and to accept nothing new unless it has withstood the strictest examination.

Collected Papers

The Resistance to Psycho-Analysis (p. 4121)

The Hogarth Press. London, England. 1953

Freund, Ida 1863–1914

Austrian-born chemist

The object of all the Natural Sciences is the acquisition of knowledge concerning the natural objects surrounding us, as we apprehend them by our senses; of the changes occurring in these objects, together with the laws govern-

ing these changes; and of the more proximate or more ultimate causes to the operation of which are due the individual phenomena and the general laws comprising these.

The Study of Chemical Composition

Introduction (p. 1)

At The University Press. Cambridge, England. 1904

Friend, Julius W.

European historian

Feibleman, James K. 1904–87

American philosopher

The modern world, which has lost faith in so many causes, still accepts science nearly unchallenged. Science today occupies the position held by the Roman Church in the Middle Ages: as the single great authority in a world divided on almost every object of loyalty.

What Science Really Means

Chapter I (p. 11)

George Allen & Unwin Ltd. London, England. 1937

French Apothegm

Le scepticisme est le vrai flambeau de la science.

Doubt is the true torch of science.

In John Epps

The Life of Dr. Walker

Chapter IV (p. 101)

Whittaker, Treacher. London, England. 1831

Fromm, Erich 1900–80

German psychoanalyst

The pace of science forces the pace of the technique. Theoretical physics forces atomic energy on us; the successful production of the fission bomb forces upon us the manufacture of the hydrogen bomb. We do not choose our problems, we do not choose our products; we are pushed, we are forced — by what? By a system which has no purpose and goal transcending it, and which makes man its appendix.

The Sane Society

Chapter Five, Nineteenth-Century Capitalism (p. 83)

Fawcett Publications. Greenwich, Connecticut, USA. 1955

Frost, Robert 1874–1963

American poet

And how much longer a story has science
Before she must put out the light on the children
And tell them the rest of the story is dreaming?

Complete Poems of Robert Frost

Too Anxious for Rivers

Henry Holt & Company. New York, New York, USA. 1949

Where have those flowers and butterflies all gone
That science may have staked the future on?

He seems to say the reason why so much

Should come to nothing must be fairly faced....

Complete Poems of Robert Frost

Pod of the Milkweed

Henry Holt & Company. New York, New York, USA. 1949

Sarcastic Science, she would like to know,
In her complacent ministry of fear,
How we propose to get away from here
When she has made things so we have to go
Or be wiped out.

Complete Poems of Robert Frost

Why Wait for Science

Henry Holt & Company. New York, New York, USA. 1949

Fulbright, James William 1905–95

American politician

What a curious picture it is to find man, *Homo sapiens*, of divine origin, we are told, seriously considering going underground to escape the consequences of his own folly. With a little wisdom and foresight, surely it is not yet necessary to forsake life in the fresh air and in the warmth of the sunlight. What a paradox if our own cleverness in science should force us to live underground with the moles.

The Effect of the Atomic Bomb on American Foreign Policy

Congressional Record, November 2, 1945, Volume 91, Appendix (p. A4654)

Science has radically changed the conditions of human life on earth. It has expanded our knowledge and our power but not our capacity to use them with wisdom.

Old Myths and New Realities

Conclusion (p. 142)

Random House, Inc. New York, New York, USA. 1964

Gäbor, Dennis 1900–79

Hungarian-English physicist

Science has never quite given man what he desired, not even in applied science. Man dreamt of wings; science gave him an easy chair which flies through the air.

Inventing the Future

The Future of the Uncommon Man (p. 162)

Secker & Warburg. London, England. 1963

Galbraith, John Kenneth 1908–2006

Canadian-American economist

The real accomplishment of modern science and technology consists in taking ordinary men, informing them narrowly and deeply, and then, through appropriate organization, arranging to have their knowledge combined with that of other specialized but equally ordinary men. This dispenses with the need for genius. The resulting performance, though less inspiring, is far more predictable.

The New Industrial State

Chapter VI, Section 2 (p. 62)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1967

Gardner, Martin 1914–
American writer and mathematics games editor

...modern science should indeed arouse in all of us a humility before the immensity of the explored and a tolerance for crazy hypotheses.

Science: Good, Bad and Bogus
Chapter 22 (p. 246)
Prometheus Books. Buffalo, New York, USA. 1981

Garrod, Archibald 1857–1936
English physician

Science is not, as so many seem to think, something apart, which has to do with telescopes, retorts, and test tubes, and especially with nasty smells, but it is a way of searching out by observation, trial, and classification; whether the phenomenon investigated be the outcome of human activities, or of the more direct workings of nature's laws. Its methods admit of nothing untidy or slipshod, its keynote is accuracy and its goal is truth.

In Alexander G. Bearn
Archibald Garrod and the Individuality of Man
Chapter 8 (p. 97)
Clarendon Press. Oxford, England. 1993

Gerould, Katherine Fullerton 1879–1944
American writer

The great danger of the scientific obsession is not the destruction of all things that are not science, but the slow infection of those things.

Modes and Morals
The Extirpation of Culture (p. 87)
Charles Scribner's Sons. New York, New York, USA. 1920

Science has done great things for us; it has also pushed us hopelessly back. For, not content with filling its own place, it has tried to supersede everything else. It has challenged the super-eminence of religion; it has turned all philosophy out of doors except that which clings to its skirts; it has thrown contempt on all learning that does not depend on it; and it has bribed the skeptics by giving us immense material comforts.

Modes and Morals
The Extirpation of Culture (p. 85)
Charles Scribner's Sons. New York, New York, USA. 1920

The insidiousness of science lies in its claim to be not a subject, but a method. You could ignore a subject; no subject is all-inclusive. But a method can plausibly be applied to anything within the field of consciousness.

Modes and Morals
The Extirpation of Culture (p. 86)
Charles Scribner's Sons. New York, New York, USA. 1920

Gideonse, H. D.
No biographical data available

Science, as usually taught to liberal arts students, emphasizes results rather than method, and tries to teach technique rather than to give insight into and understanding of the scientific habit of thought. What is needed, however, is not a dose of metaphysics but a truly humanistic teaching of science.

In Lloyd William Taylor
Physics: The Pioneer Science (Volume 2)
Chapter 36 (p. 529)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

Gill, Eric 1882–1940
English sculptor

Science is analytical, descriptive, informative. Man does not live by bread alone, but by science he attempts to do so. Hence the deadliness of all that is purely scientific.

It All Goes Together: Selected Essays (p. 117)
The Devin-Adair Company. New York, New York, USA. 1944

Ginger, Ray 1924–75
American historian

Science has explained everything it could explain, and it will continue to do so. Every effort to bar science from some areas on the ground that they were not susceptible to empirical investigation has had the effect of inhibiting science in other areas also. Man has progressed by exercising a humble confidence in the might of his own mind, not by throwing up his hands and shrugging his shoulders.

Six Days or Forever: Tennessee v. John Thomas Scopes
Chapter 11, Section III (p. 231)
Quadrangle Books. Chicago, Illinois, USA. 1958

Glass, H. Bentley 1906–2005
American geneticist

Science is not only to know, it is to do, and in the doing it has found its soul.

Science and Ethical Values
Chapter 3 (p. 101)
University of North Carolina Press. Chapel Hill, North Carolina, USA. 1965

...the general citizen of his country, the man in the street, must learn what science is, not just what it can bring about. Surely this is our primary task. If we fail in this, then within a brief period of years we may expect either nuclear devastation or worldwide tyranny. It is not safe for apes to play with atoms. Neither can men who have relinquished their birthright of scientific knowledge expect to rule themselves.

In Hilary J. Deason
A Guide to Science Reading
Revolution in Biology (pp. 25–26)
The New American Library. New York, New York, USA. 1966

Gluckman, Max 1911–75
English anthropologist

Science is cumulative. The apprentice in this generation can outdo his master of the last.

Politics, Law & Ritual

Chapter VII (p. 303)

Aldine Publishing Company, Chicago, Illinois, USA. 1965

Goddard, Robert H. 1882–1945

American physicist

Each must remember that no one can predict to what heights of wealth, fame, or usefulness he may rise until he has honestly endeavored, and he should derive courage from the fact that all sciences have been, at some time, in the same condition as he, and that it has often proved true that the dream of yesterday is the hope of today and the reality of tomorrow.

The Papers of Robert H. Goddard (Volume 1)

On Taking Things for Granted

Graduation oration (p. 66)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1970

Gorky, Maxim 1868–1938

Russian writer

Science is becoming the nervous system of our time.

Compiled by V.V. Vorontsov

Words of the Wise: A Book of Russian Quotations

Translated by Vic Schneiereson

Progress Publishers. Moscow, Russia. 1979

Science is humanity's superior reason, the sun which man has created of his own flesh and blood and has lit to illuminate the darkness of his hard life and to show the way to freedom, justice, and beauty.

Compiled by V.V. Vorontsov

Words of the Wise: A Book of Russian Quotations

Translated by Vic Schneiereson

Progress Publishers. Moscow, Russia. 1979

For us natural science is the Archimedes' screw that alone can turn the world to face the sun of reason.

Compiled by V.V. Vorontsov

Words of the Wise: A Book of Russian Quotations

Translated by Vic Schneiereson

Progress Publishers. Moscow, Russia. 1979

Humanity has no force more powerful and victorious than science.

Compiled by V.V. Vorontsov

Words of the Wise: A Book of Russian Quotations

Translated by Vic Schneiereson

Progress Publishers. Moscow, Russia. 1979

Gortner, Ross Aiken

No biographical data available

Science will stagnate only when all will agree that only one interpretation can be drawn from a given series of data.

Selected Topics in Colloid Chemistry with Especial Reference to Biochemical Problems

Preface (p. vii)

Cornell University Press. Ithaca, New York, USA. 1937

Gould, Laurence M. 1896–1995

American polar explorer and geologist

Today, there is no other influence comparable with science in changing the foundations, indeed the very character of our lives. Science and its products determine our economy, dominate our industry, affect our health and welfare, alter our relations to all other nations, and determine the conditions of war and peace. Everyone who breathes is affected, and cannot remain impervious to them.

Science and the Culture of Our Times

UNESCO Courier, February 1968 (p. 4)

Gould, Stephen Jay 1941–2002

American paleontologist and evolutionary biologist

No factual discovery of science (statements about how nature "is") can, in principle, lead us to ethical conclusions (how we "ought" to behave) or to convictions about intrinsic meaning (the "purpose" of our lives).

Dorothy, It's Really Oz

Time, August 23, 1999 (p. 59)

Science is an integral part of culture. It's not this foreign thing, done by an arcane priesthood. It's one of the glories of the human intellectual tradition.

Independent (London), January 24, 1990

Science does progress toward more adequate understanding of the empirical world, but no pristine, objective reality lies "out there" for us to capture as our technologies improve and our concepts mature.

Dinosaur in a Haystack: Reflections in Natural History

Part Four, Chapter 16 (p. 214)

Random House, Inc. New York, New York, USA. 1995

Creative science is always a mixture of facts and ideas. Great thinkers are not those who can free their minds from cultural baggage and think or observe objectively (for such a thing is impossible), but people who use their milieu creatively rather than as a constraint.

An Urchin in the Storm: Essays About Books and Ideas

Chapter 6 (p. 103)

W.W. Norton & Company, Inc. New York, New York, USA. 1987

The net of science covers the empirical universe: What is it made of (fact) and why does it work this way (theory).

Non Overlapping Magisteria

Natural History, Volume 106, Number 2, March 1997 (p. 61)

Humanity has in course of time had to endure from the hand of science two great outrages upon its naive self-love. The first was when it realized that our earth was not the center of the universe, but only a speck in a world-system of a magnitude hardly conceivable.... The second was when biological research robbed man of his particular privilege of having been specially created and relegated him to a descent from the animal world.

Time's Arrow, Time's Cycle: Myth and Metaphor in the Discovery of Geological Time
Chapter 1 (p. 1)
Harvard University Press. Cambridge, Massachusetts, USA. 1987

Grassé, Pierre P. 1895–1985
French zoologist

There is no law against day dreaming, but science must not indulge in it.

Evolution of Living Organisms: Evidence for a New Theory of Transformation
Chapter IV (p. 104)
Academic Press. New York, New York, USA. 1977

Gray, Thomas 1716–71
English poet

Here rests his head upon the lap of Earth,
A youth to fortune and to fame unknown.
Fair Science frown's not on his humble birth,
And Melancholy mark's him for her own.

The Complete Poetical Works of Gray, Beattie, Blair, Collins, Thomson, and Kirke White
Elegy Written in a Country Churchyard, The Epitaph, Stanza 1
J. Blackwood. London, England. 1800

Gregory, Sir Richard Arman 1864–1952
British science writer and journalist

Science advances by opening completely new fields of knowledge upon which the literary man or investigator may exercise their intellectual activities, and the directions in which these domains are to be found are rarely indicated with success in romantic or in scientific literature.

Discovery; or, The Spirit and Service of Science
Chapter VI (p. 164)
Macmillan & Company Ltd. London, England. 1918

...I hope that my children, at least, if not I myself, will see the day, when ignorance of the primary laws and facts of science will be looked on as a defect, only second to ignorance of the primary laws of religion and morality.

Discovery; or, The Spirit and Service of Science
Chapter V (p. 92)
Macmillan & Company Ltd. London, England. 1918

...science is not to be measured by practical service alone, though it may contribute to material prosperity: it is an intellectual outlook, a standard of truth and a gospel of light.

Discovery; or, The Spirit and Service of Science
Preface (p. vi)
Macmillan & Company Ltd. London, England. 1918

Grove, Sir William 1811–96
English chemist

For my part I must say that science to me generally ceases to be interesting as it becomes useful.

In H.B.G. Casimir
Haphazard Reality: Half a Century of Science
Chapter 8 (p. 226)
Harper & Row, Publishers. New York, New York, USA. 1983

It would be vain to attempt specifically to predict what may be the effect of Photography on future generations. A Process by which the most transient actions are rendered permanent, by which facts write their own annals in a language that can never be obsolete, forming documents which prove themselves, — must interweave itself not only with science but with history and legislature.

Lecture
Progress of Physical Science Since the Opening of the London Institution, (19 January 1842)

Gruber, Howard E. 1922–2005
American psychology scholar and professor

The power and the beauty of science do not rest upon infallibility, which it has not, but on corrigibility, without which it is nothing.

The Origin of "The Origin of Species"
The New York Times Book Review, 22 July, 1979 (p. 7)

Gruenberg, Benjamin C.
No biographical data available

To vast numbers of men and women science appears as something altogether too remote from their interests or capacities to justify even a glance or a hope of grasping. It is something for the "highbrows" or wizards.

Science and the Public Mind
Chapter XIV (p. 152)
McGraw-Hill Book Company, Inc. New York, New York, USA. 1935

Guth, Alan 1947–
American physicist

...science is not merely a collection of facts, but is instead an ongoing detective story, in which scientists passionately search for clues in the hope of unraveling the mysteries of the universe.

The Inflationary Universe; the Quest for a New Theory of Cosmic Origins
Chapter 3 (p. 34)
Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1997

Guye, Charles Eugene
Swiss scientist

It is because we do not possess "science" that we have "sciences."

Physico-Chemical Evolution (p. 8)
Methuen & Company Ltd. London, England. 1925

Haggard, Howard W.
Physician

There is another class of explorers whose exploits are rarely heralded by the waving of flags, to whom few monuments are erected, and whose names find small place in world history. They are the explorers in science. They change no maps, but they change our ways of living.

In Bernard Jaffe

New World of Chemistry

Chapter 10 (p. 113)

Silver, Burdett & Company. New York, New York, USA. 1935

Hall, A. D.

No biographical data available

The true aim of science is the enrichment of life.

Nature, Volume 138, 1936 (p. 576)

Hall, Alfred Rupert 1920–

English historian of science

Hall, Marie Boas 1919–

English historian of science

It is hardly too much to say that the Middle Ages studied science as though it were theology and Aristotle's Physics as though it were the Bible.

A Brief History of Science

Chapter 6 (p. 78)

Iowa State University Press. Ames, Iowa, USA. 1988

Handler, Philip 1917–81

No biographical data available

My own belief is that science remains the most powerful tool we have yet generated to apply leverage for our future. It is the instrument which is most useful for guiding our own destinies, for assuring the condition of man in the years to come. I have much to hope that we will not abandon that tool, leaving us to our own brute devices.

Hearings

1971 National Science Foundation Authorization, Subcommittee on Science, Research and Development, House Committee on Science and Astronautics, 91st Congress, 2nd Session 1970 (p. 16)

Harari, Josué V.

No biographical data available

Bell, David F.

No biographical data available

Science is the totality of the world's legends. The world is the space of their inscription. To read and to journey are one and the same act.

In Michel Serres

Hermes: Literature, Science, Philosophy

Introduction (p. xxi)

The Johns Hopkins University Press. Baltimore, Maryland, USA. 1982

Hardy, Thomas 1840–1928

English poet and regional novelist

Well: what we gain by science is, after all, sadness, as the Preacher saith. The more we know of the laws & nature of the Universe the more ghastly a business we perceive it all to be — & the non-necessity of it.

In Richard Little Purdy and Michael Millgate (eds.)

The Collected Letters of Thomas Hardy (Volume 3)

Letter, February 27, 1902

Clarendon Press. Oxford, England. 1978

Harman, Willis

No biographical data available

Science is all about cause. That's why you have science; you're trying to find the explanation, the causes, for the phenomena. Now, if really everything is connected to everything, if there really is only a oneness, everything then affects everything, and everything is the cause of everything in a certain sense, so that the whole idea of causality has to be revised.

Thinking Allowed: Conversations on the Leading Edge of Knowledge and Discovery

Metaphysics and Modern Science, Part I: Consciousness and Science
Thinking Allowed Productions. Berkeley, California, USA.

Harrington, John W.

American geologist

Science is the progressive discovery of the nature of nature.

Dance of the Continents

The Lure of the Hunt (p. 30)

J.P. Tarcher. Los Angeles, California, USA. 1983

Harris, Errol E.

No biographical data available

Accordingly there are two main types of science, exact science...and empirical science...seeking laws which are generalizations from particular experiences and are verifiable (or, more strictly, "probabilities") only by observation and experiment.

Hypothesis and Perception: The Roots of Scientific Method

Prevalent Views of Science (p. 25)

George Allen & Unwin Ltd. London, England. 1970

Harrison, Jane 1850–1928

English classical scholar

Science has given us back something strangely like a World-Soul...

Ancient Art and Ritual

Chapter VII (p. 238)

Henry H. Holt. New York, New York, USA. 2002

Harvey, William 1578–1657

English physician

Although there is but one road to science, that, to wit, in which we proceed from things more known to things less known, from matters more manifest to matters more obscure; and universals are principally known to us, science bringing by reasoning from universals to particulars; still the comprehension of universals by the understanding is based upon the perception of individual things by the senses.

In *Great Books of the Western World* (Volume 28)

Anatomical Exercises on the Generation of Animals

Of the Manner and Order of Acquiring Knowledge (p. 332)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Hauge, Philip 1913–2004

American scientist, editor, and administrator

Part of the strength of science is that it has tended to attract individuals who love knowledge and the creation of it. Just as important to the integrity of science have been the unwritten rules of the game. These provide recognition and approbation for work which is imaginative and accurate, and apathy or criticism for the trivial or inaccurate. ... Thus, it is the communication process which is at the core of the vitality and integrity of science. ... The system of rewards and punishments tends to make honest, vigorous, conscientious, hardworking scholars out of people who have human tendencies of slothfulness and no more rectitude than the law requires.

The Roots of Scientific Integrity
Science, Volume 139, 1963 (p. 3561)

Havel, Václav 1936–
Czech dramatist and essayist

Modern science abolishes as mere fiction the innermost foundations of our natural world: it kills God and takes his place on the vacant throne so henceforth it would be science that would hold the order of being in its hand as its sole legitimate guardian and so be the legitimate arbiter of all relevant truth. People thought they could explain and conquer nature — yet the outcome is that they destroyed it and disinherited themselves from it.

In L. Wolpert
The Unnatural Nature of Science
Introduction (p. ix)
Harvard University Press. Cambridge, Massachusetts, USA. 1992

Hawking, Stephen William 1942–
English theoretical physicist

The whole history of science has been the gradual realization that events do not happen in an arbitrary manner, but that they reflect a certain underlying order, which may or may not be divinely inspired.

A Brief History of Time: From the Big Bang to Black Holes
Chapter 8 (p. 122)
Bantam Books. Toronto, Ontario, Canada. 1988

In effect, we have redefined the task of science to be the discovery of laws that will enable us to predict events up to the limits set by the uncertainty principle.

A Brief History of Time: From the Big Bang to Black Holes
Chapter 11 (p. 173)
Bantam Books. Toronto, Ontario, Canada. 1988

Hayward, Jeremy
American physicist

Like Christianity, modern science teaches that these things of the world of senses are not really real, but that there is a more real reality, in Nature, behind these appearances, a permanent, unchanging reality in comparison to which the world of appearance is ever changing and is an accidental product of our sense organs. Unlike the “other world” of Christianity, which is world of spirit or mind,

altogether without body, this “other world” of science is a world of matter, altogether without spirit, life, or mind. This ultimately real world is the world of particles (little bits of dead stuff), of space and time and of forces (gravitational, electromagnetic, and more recently the strong and weak nuclear forces).

Shifting Worlds, Changing Minds: Where the Sciences and Buddhism Meet
Chapter 1 (p. 14)
New Science Library Shambhala Publications, Inc. Boston, Massachusetts, USA. 1987

Hazlitt, William Carew 1834–1913
English bibliographer

The origin of all science is in the desire to know causes; and the origin of all false science and imposture is in the desire to accept false causes rather than none; or, which is the same thing, in the unwillingness to acknowledge our own ignorance.

The Atlas
February 15, 1829
Burke and the Edinburgh Phrenologists
This article is unsigned in the atlas but appears in P.P. Howe’s *New Writings* by William Hazlitt, 1925

Heidel, W. A.
No biographical data available

It is an unwarranted assumption that ancient science differed in principle at any point from that of today.

In Julius W. Friend and James Feibleman
What Science Really Means
Chapter II (p. 26)
George Allen & Unwin Ltd. London, England. 1937

Heinlein, Robert A. 1907–88
American science fiction writer

The difference between science and the fuzzy subjects is that science requires reasoning, while those other subjects merely require scholarship.

Time Enough for Love
Second Intermission (p. 366)
G.P. Putnam’s Sons. New York, New York, USA. 1973

If it can’t be expressed in figures, it is not science; it is opinion.

Time Enough for Love
Intermission (p. 257)
G.P. Putnam’s Sons. New York, New York, USA. 1973

Heisenberg, Werner Karl 1901–76
German physicist and philosopher

The assumption [is] that in the end it will always be possible to understand nature, even in every new field of experience, but that we may make no a priori assumptions about the meaning of the word “understand.”

In Heinrich O. Proskauer
The Rediscovery of Color: Goethe versus Newton Today
Preface (p. ix)
Anthroposophic Press. Spring Valley, New York, USA. 1986

Science no longer confronts nature as an objective observer, but sees itself as an actor in this interplay between man and nature. The scientific method of analysing, explaining, and classifying has become conscious of its limitations.... Method and object can no longer be separated.

The Physicist's Conception of Nature

Chapter I (p. 29)

Greenwood Press, Publishers. Westport, Connecticut, USA. 1958

Almost every progress in science has been paid by a sacrifice, for almost every new intellectual achievement previous positions and conceptions had to be given up. Thus, in a way, the increase of knowledge and insight diminishes continually the scientist's claim to "understand" nature.

In A. Sarlemijn and M.J. Sparnaay (eds.)

Physics in the Making: Essays on Developments in 20th Century Physics:

In Honour of H.B.G. Casimir on the Occasion of His 80th Birthday

Chapter I (p. 9)

North-Holland Publishing Company. Amsterdam, Netherlands. 1989

In science... it is impossible to open up new territory unless one is prepared to leave the safe anchorage of established doctrine and run the risk of a hazardous leap forward. With his relativity theory, Einstein had abandoned the concept of simultaneity, which was part of the solid ground of traditional physics, and, in so doing, outraged many leading physicists and philosophers and turned them into bitter opponents. In general, scientific progress calls for no more than the absorption and elaboration of new ideas — and this is a call most scientists are happy to heed.

Physics and Beyond: Encounters and Conversations

Chapter 6 (p. 70)

Harper & Row, Publishers. New York, New York, USA. 1971

Henderson, Lawrence 1878–1942

American biochemist

Science has finally put the old teleology to death. Its dismembered spirit, freed from vitalism and all material ties, immortal, alone lives on, and from such a ghost, science has nothing to fear.

The Fitness of the Environment: An Inquiry into the Biological Significance of the Properties of Matter

Chapter VIII, Section III, B (p. 311)

The Macmillan Company. New York, New York, USA. 1913

Henry, Joseph 1797–1878

Scottish-born American scientist

...science is the pursuit above all which impresses us with the capacity of man for intellectual and moral progress and awakens the human intellect to aspiration for a higher condition of humanity.

Inscription on the National Museum of American History, Washington, D.C.

...narrow minds think nothing of importance but their own favorite pursuit, but liberal views exclude no branch of science or literature...

Inscription on the National Museum of American History, Washington, D.C.

Herschel, Sir John Frederick William 1792–1871

English astronomer and chemist

Science is the knowledge of many, orderly and methodically digested and arranged, so as to become attainable to one.

The Cabinet of Natural Philosophy

Part I, Chapter II, Section 13 (p. 18)

Longman, Rees, Orme, Brown & Green. London, England. 1831

Science is of no party. Under the government, whether of Whig or Tory, she has often had to complain of the difficulty of making herself heard in recommendation of her objects; but those objects once recognized by a British government, are taken up in a spirit and with a liberality which ensures success, if success be possible.

Essays from the Edinburgh and Quarterly Reviews with Addresses and Other Pieces

Terrestrial Magnetism (pp. 112–113)

Longman, Brown, Green, Longmans & Roberts. London, England. 1857

Every student who enters upon a scientific pursuit, especially if at a somewhat advanced period of life, will find not only that he has much to learn, but much also to unlearn.

Outlines of Astronomy (2nd edition)

Part I, Introduction (p. 1)

Longman, Brown, Green & Longmans. London, England. 1849

...if science may be vilified by representing it as opposed to religion, or trammelled by mistaken notions of the danger of free enquiry, there is yet another mode by which it may be degraded from its native dignity, and that is by placing it in the light of a mere appendage to and caterer for our pampered appetites.

A Preliminary Discourse on the Study of Natural Philosophy

Part I, Chapter I, Section 7 (p. 10)

Printed for Longman, Rees, Orme, Brown & Green. London, England. 1831

Hertz, Heinrich 1857–94

German physicist

The rigor of science requires that we distinguish well the undraped figure of nature itself from the gay-coloured vesture with which we clothe it at our pleasure.

Letters to the Editor

In Ludwig Boltzmann

On Certain Question of the Theory of Gases

Nature, Volume 51, Number 1322, 28 February 1895 (p. 413)

Herzen, Aleksandr 1812–70

Russian political author

Superficial dilettantism and the narrow specialization of the scientists ex officio are the two banks of science which prevent the fertilizing waters of this Nile from overflowing.

Selected Philosophical Works
Dilettantism in Science (p. 52)
Foreign Languages Publishing House. Moscow, Russia. 1956

Science is a table abundantly laid for every man whose hunger is great enough, whose craving for spiritual nourishment has grown sufficiently insistent.

Selected Philosophical Works
Dilettantism in Science (p. 58)
Foreign Languages Publishing House. Moscow, Russia. 1956

Science, in the best sense of the word, shall come to be accessible to the people, and when it does it shall claim a voice in all practical matters.

Selected Philosophical Works
Dilettantism in Science (p. 69)
Foreign Languages Publishing House. Moscow, Russia. 1956

Science is strength; it shows the relations of things, their laws and interactions.

Compiled by V.V. Vorontsov
Words of the Wise: A Book of Russian Quotations
Translated by Vic Schneerson
Progress Publishers. Moscow, Russia. 1979

Hilts, Philip

No biographical data available

In all human activities, it is not ideas of machines that dominate; it is people. I have heard people speak of "the effect of personality on science." But this is a backward thought. Rather, we should talk about the effect of science on personalities. Science is not the dispassionate analysis of impartial data. It is the human, and thus passionate, exercise of skill and sense on such data.

Scientific Temperaments: Three Lives in Contemporary Science
Preface (pp. 11–12)
Simon & Schuster. New York, New York, USA. 1982

Science is not an exercise in which objectivity is prized.

Scientific Temperaments: Three Lives in Contemporary Science
Preface (pp. 11–12)
Simon & Schuster. New York, New York, USA. 1982

Hinshelwood, Sir Cyril 1897–1967

English chemist

Science is not the mere collection of facts, which are infinitely numerous and mostly uninteresting, but the attempt by the human mind to order these facts into satisfying patterns.

On the Structure of Physical Chemistry
Clarendon Press. Oxford, England. 1951

Hippocrates 460 BCE–377 BCE

Greek physician

There are, indeed, two things, knowledge and opinion, of which the one makes its possessor really to know, the other to be ignorant.

In *Great Books of the Western World* (Volume 10)
Hippocratic Writings

The Law, 4 (p. 144)
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Hitler, Adolf 1889–1945

Chancellor of Germany

Science is a social phenomenon, and like every other social phenomenon is limited by the injury or benefit it confers on the community.... The idea of free and unfettered science... is absurd.

In Hermann Rauschning
Hitler Speaks: A Series of Political Conversations with Adolf Hitler on His Real Aims (pp. 220–221)
Butterworth. London, England. 1939

Hoagland, Hudson 1899–1982

American physiologist

The fictions — that is, the hypotheses and theories — of science are not sacrosanct.

Science and the New Humanism
Science, Volume 143, Number 3062, 10 January 1964 (p. 112)

Hocking, R.

No biographical data available

It is an oversimplification to compare the impersonal aspect of science with the impersonal aspects of industrial society, and to deplore both in one breath. The former is an achievement of self-forgetful concentration upon truths about nature. The latter are deplorable to the extent that they exhibit crude power of men over men. By contrast, the selflessness of the scientific calling does silent honor to personal existence.

In T.J.J. Altizer, William A. Beardslee, and J. Harvey Young (eds.)
Truth, Myth, and Symbol
The Problem of Truth (p. 5)
Prentice-Hall, Inc. Englewood Cliffs, New Jersey, USA. 1962

Hodgson, Leonard 1889–1969

English theologian

...science can only deal with what is, and can say nothing about what ought to be, which is the concern of ethics; science can tell us about means to ends, but not about what the ends should be.

Theology in an Age of Science
An Inaugural Lecture, November 3, 1944 (p. 9)

Holmes, Oliver Wendell 1809–94

American physician, poet, and humorist

Science is the topography of ignorance.

The Writings of Oliver Wendell Holmes
Volume IX, Border Lines in Medical Science (p. 211)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1891–1906

Go on, fair science; soon to thee
Shall nature yield he idle boast;
He vulgar fingers formed a tree,
But thou hast trained it to a post.

The Complete Poetical Works of Oliver Wendell Holmes

The Meeting of the Dryads (p. 412)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1899

Research professor of physics and science history

Roller, Duane H. D. ?–1994

Science historian

Science is an ever-unfinished quest to discover facts and establish relationships between them.

Foundations of Modern Physical Science

Chapter 13 (p. 214)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1950

...science has grown almost more by what it has learned to ignore than by what it has had to take into account.

Foundations of Modern Physical Science

Chapter 2 (p. 25)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1950

Horgan, J.

No biographical data available

...to pursue science in a speculative, postempirical mode: that I call ironic science. Ironic science resembles literary criticism in that it offers points of view, opinions, which are, at best, interesting, which provoke further comment. But it does not converge on the truth. It cannot achieve empirically verifiable surprises that force scientists to make substantial revisions in their basic description of reality.

The End of Science: Facing the Limits of Knowledge in the Twilight of the Scientific Age

Introduction (p. 7)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

Hoyle, Sir Fred 1915–2001

English mathematician and astronomer

Science progresses by extending the territory over which its theories hold good...

Ten Faces of the Universe

The Origin of the Universe (p. 105)

W.H. Freeman & Company. San Francisco, California, USA. 1977

Hoyle, Sir Fred 1915–2001

English mathematician and astronomer

Hoyle, Geoffrey 1942–

English science fiction writer

The fragmentation of science is a source of difficulty to all teachers and to all students — the connection of one research area to another is not always apparent. This is because science is rather like a vast and subtle jig-saw puzzle, and the usual way to attack a jig-saw puzzle is to work simultaneously on several parts of it. Only at the end do we seek to fit the different parts of it together into a coherent whole.

In Eugene H. Kone and Helene J. Jordan (eds.)

The Greatest Adventure: Basic Research that Shapes Our Lives
Cosmology and Its Relation to the Earth (p. 22)

Rockefeller University Press. New York, New York, USA. 1974

Hubbard, Elbert 1856–1915

American editor, publisher, and author

SCIENCE: 1. The knowledge of the common people classified and carried one step further. 2. Accurate organized knowledge grounded on fact. 3. Classified superstition.

The Roycroft Dictionary Concocted by Ali Baba and the Bunch on Rainy Days (p. 134)

Relations of Air and Water to Temperature and Life (p. 265)

Government Printing Office. Washington, D.C. 1894

Hubbard, Ruth 1924–

American biologist

To overturn orthodoxy is no easier in science than in philosophy, religion, economics, or any of the other disciplines through which we try to comprehend the world and the society in which we live.

Women Look at Biology Looking at Women

Have Only Men Evolved? (p. 10)

Schenkman Publishing Company. Cambridge, USA. 1979

Hubble, Edwin Powell 1889–1953

American astronomer

There is a unity in science, connecting all its various fields. Men attempt to understand the universe, and they will follow clues which excite their curiosity wherever the clues may lead.

The Nature of Science and Other Lectures

Part I. The Nature of Science (p. 6)

The Huntington Library. San Marino, California, USA. 1954

Hugo, Victor 1802–85

French author, lyric poet, and dramatist

Science says the first word on everything, and the last word on nothing.

Victor Hugo's Intellectual Autobiography

Things of the Infinite

Funk & Wagnalls. New York, New York, USA. 1907

Huizinga, Johan 1872–1945

Dutch historian

Science, unguided by a higher abstract principle, freely hands over its secrets to a vastly developed and commercially inspired technology, and the latter, even less restrained by a supreme culture saving principle, with

the means of science creates all the instruments of power demanded from it by the organization of Might.

Translated by J.H. Huizinga

In the Shadow of Tomorrow

Chapter 9 (p. 93)

W.W. Norton & Company, Inc. New York, New York, USA. 1936

...that all science is merely a game can be easily discarded as a piece of wisdom too easily come by. But it is legitimate to enquire whether science is not liable to indulge in play within the closed precincts of its own method. Thus, for instance, the scientist's continuous penchant for systems tends in the direction of play.

Homo Ludens

Chapter XI (p. 203)

Roy Publishers. New York, New York, USA. 1950

Hume, David 1711–76

Scottish philosopher and historian

The sweetest and most inoffensive path of life leads through the avenues of science and learning; and whoever can either remove any obstructions in this way, or open up any new prospect, ought so far to be esteemed a benefactor to mankind.

In *Great Books of the Western World* (Volume 35)

An Enquiry Concerning Human Understanding

Enquiries Concerning the Human Understanding and Concerning the Principles of Morals

Section 1

Of the Different Species of Philosophy (p. 453)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Huxley, Aldous 1894–1963

English writer and critic

To the twentieth century man of letters science offers a treasure of newly discovered facts and tentative hypotheses. If he accepts this gift and if, above all, he is sufficiently talented and resourceful to be able to transform the new materials into works of literary art, the twentieth century man of letters will be able to treat the age-old, and perennially relevant, theme of human destiny with a depth of understanding, a width of reference of which, before the rise of science, his predecessors (through no fault of their own, no defect of genius) were incapable.

Literature and Science

Chapter 29 (p. 87)

Harper & Row, Publishers. New York, New York, USA. 1963

We are living now, not in the delicious intoxication induced by the early successes of science, but in a rather grisly morning-after, when it has become apparent that what triumphant science has done hitherto is to improve the means for achieving unimproved or actually deteriorated ends.

Ends and Means

Chapter XIV (p. 268)

Chatto & Windus. London, England. 1938

Science is dangerous; we have to keep it most carefully chained and muzzled.

Brave New World

Chapter Sixteen (p. 270)

Harper & Brothers. New York, New York, USA. 1950

Science is a matter of disinterested observation, patient ratiocination within some system of logically correlated concepts. In real-life conflicts between reason and passion the issue is uncertain. Passion and prejudice are always able to mobilize their forces more rapidly and press the attack with greater fury; but in the long run (and often, of course, too late) enlightened self-interest may rouse itself, launch a counterattack and win the day for reason.

Literature and Science

Chapter 23 (p. 68)

Harper & Row, Publishers. New York, New York, USA. 1963

Science sometimes builds new bridges between universes of discourse and experience hitherto regarded as separate and heterogeneous. But science also breaks down old bridges and opens gulfs between universes that, traditionally, had been connected.

Literature and Science

Chapter 37 (p. 111)

Harper & Row, Publishers. New York, New York, USA. 1963

For Science in its totality, the ultimate goal is the creation of a monistic system in which — on the symbolic level and in terms of the inferred components of invisibility and intangibly fine structure — the world's enormous multiplicity is reduced to something like unity, and the endless successions of unique events of a great many different kinds get tidied and simplified into a single rational order. Whether this goal will ever be reached remains to be seen. Meanwhile we have the various sciences, each with its own system coordinating concepts, its own criterion of explanation.

Literature and Science

Chapter 3 (p. 9)

Harper & Row, Publishers. New York, New York, USA. 1963

...science has "explained" nothing; the more we know the more fantastic the world becomes and the profounder the surrounding darkness.

Along the Road

Part II. Views of Holland (p. 108)

Nan'-do. Tokyo, Japan. 1954

All science is based upon an act of faith — faith in the validity of the mind's logical processes, faith in the ultimate explicability of the world, faith that the laws of thought are laws of things.

Ends and Means

Chapter XIV (p. 258)

Chatto & Windus. London, England. 1938

Huxley, Julian 1887–1975

English biologist, philosopher, and author

Science...has not only turned her face outwards from man, but stripped him of all the robes of his divinity, turned him out of the palace that he had so laboriously built in the center of the world, and left him in rags, pitifully insignificant and suddenly transported to an outlying corner of the cosmos.

Harper's Monthly Magazine

Will Science Destroy Religion, April 1926 (p. 535)

Science, like Empires, have their rise and their time of flourishing, though not their decay.

What Dare I Think?: The Challenge of Modern Science to Human Action and Belief, Including the Henry La Barre Jayne Foundation Lectures

Chapter I (p. 1)

Harper & Brothers. New York, New York, USA. 1931

Huxley, Thomas Henry 1825–95

English biologist

Science in England does everything — but pay. You may earn praise but not pudding.

In Leonard Huxley

Life and Letters of Thomas Henry Huxley (Volume 1)

Chapter VII

Letter to his sister, April 17, 1852 (p. 108)

D. Appleton & Company. New York, New York, USA. 1901

Whatever happens, science may bide her time in patience and in confidence.

Collected Essays (Volume 5)

Science and Christian Traditions

An Episcopal Trilogy (p. 143)

Macmillan & Company Ltd. London, England. 1904

What men of science want is only a fair day's wages for more than a fair day's work...

Collected Essays (Volume 1)

Method and Result

Administrative Nihilism (p. 287)

Macmillan & Company Ltd. London, England. 1904

You have no idea of the intrigues that go on in this blessed world of science. Science is, I fear, no purer than any other region of human activity; though it should be. Merit alone is very little good; it must be backed by tact and knowledge of the world to do very much.

In Leonard Huxley

Life and Letters of Thomas Henry Huxley (Volume 1)

Chapter VII

Letter to his sister, March 5, 1852 (p. 105)

D. Appleton & Company. New York, New York, USA. 1901

The generalizations of science sweep on in ever-widening circles, and more aspiring flights, through limitless creation.

Letter

London Times, December 26, 1859

Nothing great in science has ever been done by men, whatever their powers, in whom the divine afflatus [inspiration] of the truth-seeker was wanting.

Collected Essays (Volume 1)

Method and Result

The Progress of Science (p. 56)

Macmillan & Company Ltd. London, England. 1904

Of the affliction caused by persons who think that what they have picked up from popular exposition qualifies them for discussing the great problems of science, it may be said, as the Radical toast said of the power of the Crown in bygone days, that it "has increased, is increasing, and ought to be diminished." The oddities of "English as she is spoke" might be abundantly paralleled by those of "science as she is misunderstood" in the sermon, the novel, and the leading article; and a collection of the grotesque travesties of scientific conceptions in the shape of essays on such trifles as "the Nature of Life" and the "Origin of All Things," which reach me, from time to time, might well be bound up with them.

Collected Essays (Volume 8)

Discourses, Biological and Geological

Preface (p. viii)

Macmillan & Company Ltd. London, England. 1904

No delusion is greater than the notion that method and industry can make up for lack of motherwit, either in science or in practical life.

Collected Essays (Volume 1)

Method and Result

The Progress of Science (p. 46)

Macmillan & Company Ltd. London, England. 1904

Science reckons many prophets, but there is not even a promise of a Messiah.

In Leonard Huxley

Life and Letters of Thomas Henry Huxley (Volume 2)

Letter dated March 1894 (p. 396)

D. Appleton and Company. New York, New York, USA. 1901

Posterity will cry shame on us if we do not remedy this deplorable state of things. Nay, if we live twenty years longer, our own consciences will cry shame on us.

It is my firm conviction that the only way to remedy it is to make the elements of physical science an integral part of primary education. I have endeavored to show you how that may be done for that branch of science which it is my business to pursue; and I can but add, that I should look upon the day when every schoolmaster throughout this land was a centre of genuine, however rudimentary, scientific knowledge as an epoch in the history of the country.

But let me entreat you to remember my last words. Addressing myself to you, as teachers, I would say, mere book learning in physical science is a sham and a delusion-what you teach, unless you wish to be impostors, that you must first know; and real knowledge in science means personal acquaintance with the facts, be they few or many.

Collected Essays (Volume 8)

Discourses, Biological and Geological

A Lobster; or, The Study of Zoology (p. 227)
Macmillan & Company Ltd. London, England. 1904

Science commits suicide when it adopts a creed.

Collected Essays (Volume 2)

Darwiniana

The Darwin Memorial (p. 252)

Macmillan & Company Ltd. London, England. 1904

So, the vast results obtained by Science are won by no mystical faculties, by no mental processes, other than those which are practised by every one of us, in the humblest and meanest affairs of life. A detective policeman discovers a burglar from the marks made by his shoe, by a mental process identical with that by which Cuvier restored the extinct animals of Montmartre from fragments of their bones.

Collected Essays (Volume 3)

Science and Education

On the Educational Value of the Natural History Sciences (p. 46)

Macmillan & Company Ltd. London, England. 1904

Extinguished theologians lie about the cradle of every science as the strangled snakes beside that of Hercules...

Collected Essays (Volume 2)

Darwiniana

The Origin of Species (p. 52)

Macmillan & Company Ltd. London, England. 1904

The whole of modern thought is steeped in science; it has made its way into the works of our best poets, and even the mere man of letters, who affects to ignore and despise science, is unconsciously impregnated with her spirit, and indebted for his best products to her methods.

Collected Essays (Volume 8)

Discourses, Biological and Geological

A Lobster; or, The Study of Zoology (p. 226)

Macmillan & Company Ltd. London, England. 1904

I believe that the greatest intellectual revolution mankind has yet seen is now slowly taking place by her agency. She is teaching the world that the ultimate court of appeal is observation and experiment, and not authority; she is teaching it to estimate the value of evidence; she is creating a firm and living faith in the existence of immutable moral and physical laws, perfect obedience to which is the highest possible aim of an intelligent being.

Collected Essays (Volume 8)

Discourses, Biological and Geological

A Lobster; or, The Study of Zoology (p. 226)

Macmillan & Company Ltd. London, England. 1904

Physical science, its methods, its problems, and its difficulties, will meet the poorest boy at every turn, and yet we educate him in such a manner that he shall enter the world as ignorant of the existence of the methods and facts of science as the day he was born. The modern world is full of artillery; and we turn out our children to do battle in it, equipped with the shield and sword of an ancient gladiator.

Collected Essays (Volume 8)

Discourses, Biological and Geological

A Lobster; or, The Study of Zoology (p. 226)

Macmillan & Company Ltd. London, England. 1904

The vast results obtained by Science are won by no mystical faculties, by no mental processes, other than those which are practiced by every one of us, in the humblest and meanest affairs of life. A detective policeman discovers a burglar from the marks made by his shoe, by a mental process identical with that by which Cuvier restored the extinct animals of Montmartre from fragments of their bones.

Collected Essays (Volume 3)

Science and Education

On the Educational Value of the National History Sciences (p. 45)

Macmillan & Company Ltd. London, England. 1904

Books are the money of Literature, but only the counters of Science.

Collected Essays (Volume 3)

Science and Education

Universities: Actual and Ideal (p. 213)

Macmillan & Company Ltd. London, England. 1904

Anybody who knows his business in science can make anything subservient to that purpose. You know it was said of Dean Swift that he could write an admirable poem upon a broomstick, and the man who has a real knowledge of science can make the commonest object in the world subservient to an introduction to the principles and greater truths of natural knowledge.

Collected Essays (Volume 3)

Science and Education

Address on Behalf of the National Association for the Promotion of Technical Education (p. 432)

Macmillan & Company Ltd. London, England. 1904

In science, as in art, and, as I believe, in every other sphere of human activity, there may be wisdom in a multitude of counselors, but it is only [obvious] in one or two of them.

Collected Essays (Volume 1)

Method and Result

The Progress of Science (p. 57)

Macmillan & Company Ltd. London, England. 1904

...the man of science, who, forgetting the limits of philosophical inquiry, slides from these formulae and symbols into what is commonly understood by materialism, seems to me to place himself on a level with the mathematician, who should mistake the x's and y's with which he works his problems for real entities — and with this further disadvantage, as compared with the mathematician, that the blunders of the latter are of no practical consequence, while the errors of systematic materialism may paralyse the energies and destroy the beauty of a life.

Collected Essays (Volume 1)

Method and Result

On the Physical Basis of Life (p. 165)

Macmillan & Company Ltd. London, England. 1904

... whatever evil voices may rage, Science, secure among the powers that are eternal, will do her work and be blessed.

Collected Essays (Volume 1)

Method and Result

Descartes' Discourse on Method (p. 198)

Macmillan & Company Ltd. London, England. 1904

Addressing myself to you, as teachers, I would say, mere book learning in physical science is a sham and a delusion — what you teach, unless you wish to be impostors, that you must first know; and real knowledge in science means personal acquaintance with the facts, be they few or many.

Collected Essays (Volume 8)

Discourses, Biological and Geological

A Lobster; or, The Study of Zoology (p. 227)

Macmillan & Company Ltd. London, England. 1904

Ingersoll, Robert G. 1833–99

American orator and lawyer

Reason, Observation, and Experience — the Holy Trinity of Science.

On the Gods and Other Essays

The Gods (p. 54)

Prometheus Books. Buffalo, New York, USA. 1990

Jacks, L. P. 1860–1955

English educator, philosopher, and Unitarian minister

Science is never static, never stagnant, never content with the boundary it has reached. It is always dynamic, always breaking bounds. ... Science...abhors a limitation. ...

Is There a Foolproof Science?

The Atlantic Monthly, February 1924 (p. 231)

Science is the pursuer, life is the pursued....

Is There a Foolproof Science?

The Atlantic Monthly, February 1924 (p. 238)

Jacob, François 1920–

French biologist

Science advances metaphorically. It does not proceed in an orthogenic fashion moving inexorably forward in a straight line. It does not radiate along many branches like a growing tree. It moves from one view to another by a large leap, preceded by a radical shift in the scientist's mode of thought.

Translated by Betty E. Spillmann

The Logic of Life: A History of Heredity

Pantheon Books. New York, New York, USA. 1974

For science, there are many possible worlds; but the interesting one is the world that exists and has already shown itself to be at work for a long time. Science attempts to confront the possible with the actual.

The Possible and the Actual

Myth and Science (p. 12)

Pantheon Books. New York, New York, USA. 1982

Jacobi, Karl Gustav Jacob 1804–51

German mathematician

... Monsieur Fourier was of the opinion that the principal aim of Mathematics is to serve mankind and to explain natural phenomena; but a philosopher such as he ought to have known that the sole aim of science is the fulfillment of the human spirit, and that, accordingly, a question about numbers has as much significance as a question about the workings of the world.

Gesammelte Werke (Volume 1)

Letter to Legendre

July 2, 1830 (p. 454)

Publisher undetermined

James, William 1842–1910

American philosopher and psychologist

The aim of "science" is to attain conceptions so adequate and exact that we shall never need to change them.

The Principles of Psychology

The Perception of Things (p. 109)

Dover Publications, Inc. New York, New York, USA. 1950

Science herself consults her heart when she lays it down that the infinite ascertainment of fact and correction of false belief are the supreme goods for man.

The Will to Believe and Other Essays in Popular Philosophy

The Will to Believe

Section IX (p. 22)

Dover Publications, Inc. New York, New York, USA. 1956

Science as such assuredly has no authority, for she can only say what is, not what is not.

The Will to Believe and Other Essays in Popular Philosophy

Is Life Worth Living? (p. 56)

Dover Publications, Inc. New York, New York, USA. 1956

Science like life feeds on its own decay. New facts burst old rules; then newly developed concepts bind old and new together into a reconciling law.

The Will to Believe and Other Essays in Popular Philosophy

Psychical Research (p. 320)

Dover Publications, Inc. New York, New York, USA. 1956

Jastrow, Joseph 1863–1944

Polish-born psychologist

Theories rise and fall as better, truer theories replace them; yet it is unwarranted to conclude that science is truth for a day.

In Joseph Jastrow (ed.)

The Story of Human Error

Introduction (p. 34)

D. Appleton-Century Company, Inc. New York, New York, USA. 1936

Science, unlike the Bible, has no explanation for the occurrence of that extraordinary event. The universe, and everything that has happened in it since the beginning of time, are a grand effect without a known cause.

Until the Sun Dies

Chapter 2 (p. 21)

W.W. Norton & Company, Inc. New York, New York, USA. 1977

Jeans, Sir James Hopwood 1877–1946

English physicist and mathematician

To this present-day science adds that, at the farthest point she has so far reached, much, and possibly all, that was not mental has disappeared, and nothing new has come in that is not mental. Yet who shall say what we may find awaiting us round the next corner?

The New Background of Science

Chapter VIII (p. 307)

The University of Michigan Press. Ann Arbor, Michigan, USA. 1959

The infinitely great is never very far from the infinitely small in science...

Annual Report of the Board of Regents of the Smithsonian Institution, 1928

The Wider Aspect of Cosmogony (p. 170)

Government Printing Office. Washington, D.C. 1929

Jeffers, Robinson 1887–1962

American poet

Science is not to serve but to know. Science is for itself its own value, it is not for man...

In Tim Hunt (ed.)

The Collected Poetry of Robinson Jeffers (Volume 3)

The Double Axe: The Inhumanist (p. 291)

Stanford University Press. Stanford, California, USA. 1988

Science is an adoration; a kind of worship.

In Tim Hunt (ed.)

The Collected Poetry of Robinson Jeffers (Volume 3)

The Double Axe: The Inhumanist (p. 292)

Stanford University Press. Stanford, California, USA. 1988

Jefferson, Thomas 1743–18263rd president of the United States

The main objects of all science, the freedom and happiness of man...[are] the sole objects of all legitimate government.

In Andrew A. Lipscomb (ed.)

The Writings of Thomas Jefferson (Volume 12) (p. 369)

G. Putnam's Sons. New York, New York, USA. 1892–99

Jevons, William Stanley 1835–82

English economist and logician

Science arises from the discovery of Identity amidst Diversity.

The Principles of Science: A Treatise on Logic and Scientific Method

Book I, Chapter I (p. 1)

Macmillan & Company. London, England. 1887

Joad, Cyril Edwin Mitchinson 1891–1953

English philosopher and broadcasting personality

Man by the light of science can see his hands, and can catch a glimpse of himself, his past, and the patch upon which he stands; but around him in place of that known comfort and beauty he had anticipated, and in the first few moments falsely thought that he saw, is darkness still.

Philosophical Aspects of Modern Science

Chapter XI (p. 342)

George Allen & Unwin Ltd. London, England. 1939

Joffe, A. F.

No biographical data available

Science with its strict analysis of the facts, its persevering search for new, more consummate truths, and its relentless struggle against discovered mistakes and prejudices — science must saturate all or technics, our culture, and everyday life.

Compiled by V.V. Vorontsov

Words of the Wise: A Book of Russian Quotations

Translated by Vic Schneiersson

Progress Publishers. Moscow, Russia. 1979

Johnson, Samuel 1696–1772

English critic, biographer, and essayist

The Sciences having long seen their votaries labouring for the benefit of mankind without reward, put up their petitions to Jupiter for a more equitable distribution of riches and honor... A synod of the celestials was therefore convened, in which it was resolved that Patronage should descend to the assistance of the Sciences.

The Rambler (Volume 2)

No. 91, January 29, 1751 (p. 231)

Edward Earle. Philadelphia, Pennsylvania, USA. 1812

In science, which, being fixed and limited, admits of no other variety than such as arises from new methods of distribution, or new arts of illustration, the necessity of following the traces of our predecessors is indisputably evident; but there appears no reason why imagination should be subject to the same restraint... The roads of science are narrow, so that they who travel them, must either follow or meet one another; but in the boundless regions of possibility, which fiction claims for her dominion, there are surely a thousand recesses unexplored, a thousand flowers unplucked, a thousand fountains unexhausted, combinations of imagery yet unobserved, and races of ideal inhabitants not hitherto described.

The Rambler (Volume 3)

No. 121, May 14, 1751 (pp. 89–90)

Edward Earle. Philadelphia, Pennsylvania, USA. 1812

Jones, Rufus M. 1863–1948

American writer and journal editor

Science has not closed, and will never close the soul's east window of divine surprise.

A Preface to Christian Faith in a New Age

Chapter II, Section IV (pp. 55–56)

The Macmillan Company. New York, New York, USA. 1932

Jones, Steve

No biographical data available

This is the essence of science. Even though I do not understand quantum mechanics or the nerve cell membrane, I trust those who do. Most scientists are quite ignorant about most sciences but all use a shared grammar that allows them to recognize their craft when they see it. The motto of the Royal Society of London is “*Nul-lius in verba*”: trust not in words.

Review of *How the Mind Works* by Steve Pinker
The New York Review of Books, November 6, 1997 (p. 13)

Jordan, David Starr 1851–1931

American scientist and educator

Science must stop where the facts stop, or thereabout, the limit of “thereabout” covering all legitimate diversions and excursions of philosophy.

In Frances Mason

Creation by Evolution

Evolution — Its Meaning (p. 4)

The Macmillan Company. New York, New York, USA. 1928

Jung, Carl G. 1875–1961

Swiss psychiatrist and founder of analytical psychology

Science is the tool of the Western mind... It is part and parcel of our understanding, and it obscures our insight only when it claims that the understanding it conveys is the only kind there is.

Translated by R.F.C. Hull

Alchemical Studies

Difficulties Encountered by a European in Trying to Understand the East (pp. 6–7)

Princeton University Press. Princeton, New Jersey, USA. 1967

Science is not indeed a perfect instrument, but it is a superb and invaluable tool that works harm only when it is taken as an end in itself.

Translated by R.F.C. Hull

Alchemical Studies

Difficulties Encountered by a European in Trying to Understand the East (p. 6)

Princeton University Press. Princeton, New Jersey, USA. 1967

Kaczynski, Theodore 1942–

American anarchist

Science marches on blindly...without regard to the real welfare of the human race or to any other standard, obedient only to the psychological needs of the scientists and of the government officials and corporate executives who provide the funds for research.

In Anne Eisenberg

The Unabomber and the Bland Decade

Scientific American, Volume 274, Number 4, April, 1998 (p. 35)

Kafka, Franz 1883–1924

German-language novelist

All science is methodology with regard to the Absolute. Therefore, there need be no fear of the unequivocally methodological. It is a husk, but not more than everything except the One.

Dearest Father: Stories and Other Writings

The Blue Octavo Notebooks

The Third Notebook

October 18, 1917

Kapitza, Pyetr Leonidovich 1894–1984

Russian physicist

The year that Rutherford died there disappeared for ever the happy days of free scientific work which gave us such delight in our youth. Science has lost her freedom. Science has become a productive force. She has become rich but she has become enslaved and part of her is veiled in secrecy.

Address to the Royal Society in Honour of Lord Rutherford

Nature, Volume 210, Number 5038, 17 May 1966 (p. 783)

Keller, Evelyn Fox 1936–

American scientist

To know the history of science is to recognize the mortality of any claim to universal truth.

Reflections on Gender and Science

Epilogue (pp. 178–179)

Yale University Press. New Haven, Connecticut, USA. 1985

A healthy science is one that allows for the productive survival of diverse conceptions of mind and nature and correspondingly diverse strategies.

Reflections on Gender and Science

Epilogue (p. 178)

Yale University Press. New Haven, Connecticut, USA. 1985

Keller, Helen 1880–1968

American author and lecturer

Science may have found a cure for most evils; but it has found no remedy for the worst of them all — the apathy of human beings.

My Religion

Part 1, Chapter 6

Swedenborg & Foundation, Inc. New York, New York, USA. 1927

Kellogg, Vernon L. 1867–1937

American zoologist

Science does not assume that it knows — despite the great deal that it does know — more than a very small part of the order of nature.

Some Things Science Doesn't Know

The World's Work, March 1926 (p. 528)

Kelvin, Lord William Thomson 1824–1907

Scottish engineer, mathematician, and physicist

Science is bound by the everlasting law of honour, to face fearlessly every problem which can fairly be presented to it. If a probable solution, consistent with the ordinary course of nature, can be found, we must not involve the abnormal act of Creative Power.

Popular Lectures and Addresses (Volume 2)

Presidential Address to the British Association, Edinburgh, 1871
(pp. 199–200)
Macmillan & Company Ltd. London, England. 1894

Kennedy, John F. 1917–63
35th president of the United States

Science contributes to our culture in many ways, as a creative intellectual activity in its own right, as the light which has served to illuminate man's place in the universe, and as the source of understanding of man's own nature.

Address to the National Academy of Sciences
Washington, D.C., 22 October, 1963

Let both sides seek to invoke the wonders of science instead of its terrors. Together let us explore the stars, conquer the deserts, eradicate disease, tap the ocean depths and encourage the arts and commerce.

Inaugural Address, January 20, 1961

In the years since man unlocked the power stored up within the atom, the world has made progress, halting but effective, toward bringing that power under human control. The challenge may be our salvation. As we begin to master the destructive potentialities of modern science, we move toward a new era in which science can fulfill its creative promise and help bring into existence the happiest society the world has ever known.

Address
National Academy of Sciences
Washington, D.C., October 22, 1963

Kettering, Charles Franklin 1876–1958
American engineer and inventor

So that we might kill one another more expertly, science found wonderful ways to live more comfortably, richly, to communicate more rapidly. So that we might exterminate one another more successfully, science showed us how we might all live longer and stronger...

In Paul de Kruif
America Comes Through a Crisis
Saturday Evening Post, 13 May 1933 (p. 3)

Keyser, Cassius Jackson 1862–1947
American mathematician

Science is destined to appear as the child and the parent of freedom blessing the earth without design. Not in the ground of need, not in bent and painful toil, but in the deep-centered play-instinct of the world, in the joyous mood of the eternal Being, her spirit, which is always young, Science has her origin and root; and her spirit, which is the spirit of genius in moments of elevation, is but a sublimated form of play, the austere and lofty analogue of the kitten playing with the entangled skein...

Mathematics (p. 44)
Columbia University Press. New York, New York, USA. 1907

King, Jr., Martin Luther 1929–68
American civil rights leader and clergyman

We have genuflected before the god of science only to find that it has given us the atomic bomb, producing fears and anxieties that science can never mitigate.

Strength to Love
Chapter XIII (p. 106)
Harper & Row, Publishers. New York, New York, USA. 1963

Kingsley, Charles 1819–75
English clergyman and author

For science is, I verily believe, like virtue, its own exceeding great reward.

Health and Education
Science (p. 289)
W. Isbister & Company. London, England. 1874

For from blind fear of the unknown, science does certainly deliver man. She does by man as he does by an unbroken colt. The colt sees by the road side some quite new object — a cast-away boot, an old kettle, or what not. What a fearful monster! What unknown terrific powers may it not possess! And the colt shies across the road, runs up the bank, rears on end; putting itself thereby, as many a man does, in real danger. What cure is there? But one, experience. So science takes us, as we should take the colt, gently by the halter; and makes us simply smell at the new monster; till after a few trembling sniffs, we discover, like the colt, that it is not a monster, but a kettle.

Health and Education
Science (p. 284)
W. Isbister & Company London, England. 1874

...it is the childlike, simple, patient, reverent heart, which science at once demands and cultivates. To prejudice or haste, to self-conceit or ambition, she proudly shuts her treasuries — to open them to men of humble heart, whom this world thinks simple dreamers — her Newtons, and Owens, and Faradays.

Alton Locke, Taylor and Poet
Chapter XVIII (p. 141)
Macmillan & Company Ltd. London, England. 1911

...Science was the child of Courage, and Courage the child of Knowledge.

Health and Education
Science (p. 259)
W. Isbister & Company London, England. 1874

Kipling, Rudyard 1865–1936
British writer and poet

There are times when Science does not satisfy.

With the Night Mail (p. 24)
Doubleday, Page & Company. New York, New York, USA. 1909

Kirby, William 1759–1850
Clergyman and entomologist

Mankind in general, not excepting even philosophers, are prone to magnify, often beyond its just merit, the science or pursuit to which they have addicted themselves, and to depreciate any that seems to stand in competition with their favorite: like the redoubted champions of romance, each thinks himself bound to take the field against every one that will not subscribe to the peerless beauty and accomplishments of his own Dulcinea.

An Introduction to Entomology; or, Elements of the Natural History of Insects

Letter I (p. 1)

Longman, Green, Longman & Roberts. London, England. 1860

Kirkpatrick, Clifford 1898–1970

American sociologist

Science recognizes no personal powers in the universe responsive to the prayers and needs of men.

Religion in Human Affairs

Chapter XVI (p. 470)

John Wiley & Sons, Inc. New York, New York, USA. 1929

Kline, Morris 1908–92

American mathematics professor and writer

Theoretical Science is a game of mathematical make-believe.

Mathematics: The Loss of Certainty

Chapter XIV (p. 325)

Oxford University Press, Inc. New York, New York, USA. 1980

Kliuchevsky, V. O. 1841–1911

Russian historian

Science is often identified with knowledge. This is a gross misunderstanding. Science is not merely knowledge, but also consciousness, that is, the skill of properly using knowledge.

Compiled by V.V. Vorontsov

Words of the Wise: A Book of Russian Quotations

Translated by Vic Schneiereson

Progress Publishers. Moscow, Russia. 1979

Knight, David

No biographical data available

Most science is a very ordinary human activity not so very far removed from painting by numbers.

Ideas in Chemistry: A History of the Science

Introduction (p. 6)

Athlone. London, England. 1992

Knuth, Donald E. 1938–

Creator of TeX

Science is what we understand well enough to explain to a computer, Art is all the rest.

In Marko Petkovsek, Herbert S. Wilf and Doron Zeilberger

A=B

Foreword

A.K. Peters. Wellesley, Massachusetts, USA. 1996

Kofahl, R. E.

No biographical data available

Science is human experience systematically extended (by intent, methodology and instrumentation) for the purpose of learning more about the natural world and for the critical empirical testing and possible falsification of all ideas about the natural world. Scientific hypotheses may incorporate only elements of the natural empirical world, and thus may contain no element of the supernatural.

Correctly Redefining Distorted Science; A Most Essential Task

Creation Research Society Quarterly, Volume 23, 1986 (p. 112)

Köhler, Wolfgang 1887–1967

American psychologist

It would be interesting to inquire how many times essential advances in science have first been made possible by the fact that the boundaries of special disciplines are not respected. ...at the present time it is of course quite customary for physicists to trespass on chemical ground, for mathematicians to do excellent work in physics, and for physicists to develop new mathematical procedures...trespassing is one of the most successful techniques in science.

Dynamics in Psychology

Retention and Recall (pp. 115–116)

Liveright Publishing Corporation. New York, New York, USA. 1940

Kolb, Edward W. (Rocky) 1951–

American cosmologist

Science does not proceed like a cookbook recipe in the making of a hypothesis, comparing its prediction with observations and either accepting or rejecting the hypothesis. There is always confusion at the leading edge of research, and there are always a few discrepant and contradictory pieces of information that can't be explained.

Blind Watchers of the Sky

Chapter Seven (pp. 193–194)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

The process of science involves heroic ideas as well as its share of stupidity.

Blind Watchers of the Sky

Preface (p. x)

Addison-Wesley Publishing Company. Reading, Massachusetts,

USA. 1996

More often than not, the way science goes from point A to point B is by a random lurch through points X, Y, and Z. Even when great leaps of progress do occur, they only rarely come “out of the blue.” Advances are nearly always preceded by years, decades, or even centuries of patient accumulation of facts and data and ideas.

Blind Watchers of the Sky

Chapter Two (p. 25)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

Koshland, Jr., Daniel E. 1920–
American biochemist

Science is not impressed with a conglomeration of data. It likes carefully constructed analysis of each problem.

Editorial

Science, Volume 263, Number 5144, 14 January 1994 (p. 155)

Krauss, Lawrence M. 1954–
American theoretical physicist

There are times, such as when the state school board in Kansas in 1999 removed evolution from its science curriculum, when I am reminded of Lavoisier, and shudder at the damage that can be done by ignorance combined with power. Even the magnificent modern edifice called science, built up over half a millennium of small increments toward the truth, is not safe from the vicissitudes of the political world. If, as Carl Sagan claimed, science is a “candle in the dark,” banishing demons that haunted the benighted eras of mankind, it burns tenuously at best. One generation of ignorance, steeped in myth and mysticism, is all that may be needed to snuff it out.

Atom: An Odyssey from the Big Bang to Life on Earth...and Beyond
Chapter 13 (p. 172)

Little, Brown & Company. Boston, Massachusetts, USA. 2001

Science is based on limits: It proceeds by progressively finding out what is not possible, through experiment and theory, in order to determine how the universe might really function. It is worth recalling Sherlock Holmes’s adage that when you have eliminated all other possibilities, whatever remains, no matter how improbable, is the truth. Because of this, the universe is a pretty remarkable place even without all the extras. The greatest gift science has bestowed upon humanity, in my opinion, is the knowledge that whether we like it or not, the universe is the way it is.

Beyond Star Trek: Physics from Alien Invasions to the End of Time
Epilogue (p. 173)

Basic Books, Inc. New York, New York, USA. 1997

Kroeber, Alfred Louis 1876–1960
American anthropologist

...it appears that the total work of science must be done on a series of levels which the experience of science gradually discovers.

The Nature of Culture (p. 121)

The University of Chicago Press. Chicago, Illinois, USA. 1952

Science has always promised two things not necessarily related — an increase first in our powers, second in our happiness or wisdom, and we have come to realize that it is the first and less important of the two promises which it has kept most abundantly.

The Modern Temper

Chapter Three (p. 43)

Harcourt, Brace & Company. New York, New York, USA. 1929

...the most important part of our lives — our sensations, emotions, desires, and aspirations — takes place in a universe of illusions which science can attenuate or destroy, but which it is powerless to enrich.

The Modern Temper

Chapter Three (p. 50)

Harcourt, Brace & Company. New York, New York, USA. 1929

Kubie, L. S.
No biographical data available

The primary achievement of science is the humility and honesty with which it constantly corrects its own errors. It is this that makes science the greatest of the humanities.

The Fostering of Creative Scientific Productivity

Daedalus, Volume 91, 1962 (p. 305)

Kuhn, Thomas S. 1922–96
American historian of science

To understand why science develops as it does, one need not unravel the details of biography and personality that lead each individual to a particular choice, though that topic has vast fascination. What one must understand, however, is the manner in which a particular set of shared values interacts with the particular experiences shared by a community of specialists to ensure that most members of the group will ultimately find one set of arguments rather than another decisive.

The Structure of Scientific Revolutions

Postscript–1969 (p. 200)

The University of Chicago Press. Chicago, Illinois, USA. 1970

Normal science...is predicated on the assumption that the scientific community knows what the world is like. Much of the success of the enterprise derives from the community’s willingness to defend that assumption, if necessary at considerable cost.

The Structure of Scientific Revolutions

Chapter I (p. 5)

The University of Chicago Press. Chicago, Illinois, USA. 1970

The practice of normal science depends on the ability, acquired from exemplars, to group objects and situations into similarity sets which are primitive in the sense that the grouping is done without an answer to the question, “similar with respect to what?”

The Structure of Scientific Revolutions

Postscript–1969 (p. 200)

The University of Chicago Press. Chicago, Illinois, USA. 1970

...science...often suppresses fundamental novelties because they are necessarily subversive of its basic commitments.

The Structure of Scientific Revolutions

Chapter I (p. 5)

The University of Chicago Press. Chicago, Illinois, USA. 1970

Kusch, Polykarp 1911–93
German-American physicist

Science is the greatest creative impulse of our time. It dominates the intellectual scene and forms our lives, not only in the material things which it has given us, but also in that it guides our spirit. Science shows us truth and beauty and fills each day with a fresh wonder of the exquisite order which governs our world.

Address to University Students
December 10, 1955

Lamb, Charles 1775–1834

English essayist and critic

Science has succeeded to poetry, no less in the little walks of children than with men. Is there no possibility of averting this sore evil?

In Thoas Noon Talfourd

The Works of Charles Lamb: To which are Prefixed His Letters, and a Sketch of His Life (Volume 1)

Letter to S.T. Coleridge, October 23, 1802 (p. 118)

Harper & Brothers, Publishers. New York, New York, USA. 1838

Can we unlearn the arts that pretend to civilize, and then burn the world? There is a march of science; but who shall beat the drums for its retreat?

In Thoas Noon Talfourd

The Works of Charles Lamb: To which are Prefixed His Letters, and a Sketch of His Life (Volume 1)

Letter to George Dyer, December 20, 1830 (p. 292)

Harper & Brothers, Publishers. New York, New York, USA. 1838

In everything that relates to science, I am a whole Encyclopaedia behind the rest of the world.

Essays of Elia

The Old and the New Schoolmaster (p. 88)

Little, Brown & Company. Boston, Massachusetts. USA. 1896

Landsberg, Peter Theodore 1922–

No biographical data available

Everybody who takes up science has the ambition to become a successful scientist and make some discoveries. Most of us are disappointed because we do not make the really big and interesting discoveries. Or, if we do make them, we do not realize they are interesting, because other discoveries seem more important.

Mathematics Today, October 1902 (p. 135)

Lang, Andrew 1844–1912

Scottish scholar and man of letters

But science, like the spear of Achilles, can cure the wounds which herself inflicts.

The Disentanglers

Adventure of the Canadian Heiress (p. 399)

Longmans, Green Publishers. New York, New York, USA. 1902

Lapp, Ralph E. 1917–2004

American nuclear physicist

No one — not even the most brilliant scientist alive today — really knows where science is taking us. We are aboard a train which is gathering speed, racing down

a track on which are an unknown number of switches leading to unknown destinations. No single scientist is in the cab, and there may be demons at the switch. Most of society is in the caboose looking backward. Some passengers, fearful that they have boarded an express train to hell, want to jump off before it is too late

The New Priesthood: The Scientific Elite and the Uses of Power

Chapter 2 (p. 29)

Harper & Row, Publishers. New York, New York, USA. 1965

Larrabee, Eric 1922–90

Historian

Science is a — what? a method, a faith, a body of facts, a structure of theories, an institution, a way of life, a finite number of duly qualified individuals, an infinity of relevance and possibility. For a large number of scientists, science is indescribable, but indisputably a thing: it is knowable, palpable, reliable, usable. They live with it and by it; it is simply and unequivocally there.

Commentary

Science and the Common Reader, June 1966 (p. 43)

Laudan, Larry 1945–

American philosopher of science

The aim of science is merely to secure theories with a high problem-solving effectiveness.

New Scientist, 1 August 1892 (p. 26)

Lavoisier, Antoine Laurent 1743–94

French chemist

When we begin the study of any science, we are in a situation, respecting that science, similar to that of children; and the course by which we have to advance is precisely the same which nature follow in the formation of their ideas.

In *Great Books of the Western World* (Volume 45)

Elements of Chemistry

Preface (p. 1)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Science still has many chasms, which interrupt the series of facts and often render it extremely difficult to reconcile them with each other...

In *Great Books of the Western World* (Volume 45)

Elements of Chemistry

Preface (p. 2)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Le Guin, Ursula K. 1929–

American writer of science fiction and fantasy

...it is only when science asks why, instead of simply describing how, that it becomes more than technology. When it asks why, it discovers Relativity. When it only shows how, it invents the atomic bomb and then puts its hands over its eyes and says, My God what have I done?...

Language of the Night

The Stalin in the Soul (p. 219)
Putnam. New York, New York, USA. 1979

Leary, Timothy 1920–96
American psychologist and educator

Science is all metaphor.
Contemporary Authors, Volume 107

Lebowitz, Fran 1951–
American comedian

Science is not a pretty thing. It is unpleasantly proportioned, outlandishly attired and often over-eager. What then is the appeal of science? What accounts for its popularity? And who gives it its start?

Metropolitan Life
Science (p. 104)
Fawcett Crest. New York, New York, USA. 1978

...modern science was largely conceived of as an answer to the servant problem and...is generally practiced by those who lack the flair for conversation.

Metropolitan Life
Science (p. 104)
Fawcett Crest. New York, New York, USA. 1978

Leclerc, Georges-Louis, Comte de Buffon 1707–88
French naturalist

The only good science is the knowledge of facts, and mathematical truths are only truths of definition, and completely arbitrary, quite unlike physical truths.

In L. Ducros
Les Encyclopedistes (p. 326)
Publisher undetermined

Lerner, Max 1902–92
American educator and author

It is not science that has destroyed the world, despite all the gloomy forebodings of the earlier prophets. It is man who has destroyed man.

Actions and Passions: Notes on the Multiple Revolution of Our Time
The Human Heart and Human Will (p. 3)
Simon & Schuster. New York, New York, USA. 1949

Lewis, Gilbert Newton 1875–1946
American chemist

The strength of science lies in its naiveté.
The Anatomy of Science
Chapter I (p. 1)
Yale University Press. New Haven, Connecticut, USA. 1926

Lewis, Wyndham 1882–1957
English author and painter

When we say “science” we can either mean any manipulation of the inventive and organizing power of the human intellect: or we can mean such an extremely

different thing as the religion of science, the vulgarized derivative from this pure activity manipulated by a sort of priestcraft into a great religious and political weapon.

The Art of Being Ruled
Revolution and Progress, Chapter 1 (pp. 3–4)
Chatto & Windus. London, England. 1926

The puritanic potentialities of science have never been forecast. If it evolves a body of organized rites, and is established as a religion, hierarchically organized, things more than anything else will be done in the name of “decency.” The coarse fumes of tobacco and liquors, the consequent tainting of the breath and staining of white fingers and teeth, which is so offensive to many women, will be the first things attended to.

The Art of Being Ruled
Chapter 7 (p. 210)
Chatto & Windus. London, England. 1926

Lichtenberg, Georg Christoph 1742–99
German physicist and satirical writer

There is no greater impediment to progress in the sciences than the desire to see it take place too quickly.

Translated by R.J. Hollingdale
Aphorisms
Notebook K, Aphorism 72
Penguin Classics. New York, New York, USA. 1990

The most heated defenders of a science, who can not endure the slightest sneer at it, are commonly those who have not made very much progress in it and are secretly aware of this defect.

Translated by R.J. Hollingdale
Aphorisms
Notebook F, aphorism 8
Penguin Classics. New York, New York, USA. 1990

Lindley, David 1956–
English astrophysicist and author

When scientists begin to wonder...how science is possible at all, which is ultimately what their questioning of the mathematical basis of science is about, they are searching for reassurance, for some proof that there really is a fundamental theory out there in the dark waiting to be hunted down.

The End of Physics: The Myth of a Unified Theory
Prologue (p. 4)
Basic Books, Inc. New York, New York, USA. 1993

Locke, John 1632–1704
English philosopher and political theorist

Nobody is under an obligation to know every thing. Knowledge and science in general is the business only of those who are at ease and leisure.

An Essay Concerning Human Understanding and a Treatise on the Conduct of the Understanding
A Treatise on the Conduct of the Understanding

Section 7 (p. 494)

James Kay, June & Company. Philadelphia, Pennsylvania, USA. ca.1850

Lorenz, Konrad 1903–89

Austrian zoologist

Truth, in science, can be defined as the working hypothesis best fitted to open the way to the next better one.

Translated by Marjorie Kerr Wilson

On Aggression

Chapter Fourteen (p. 288)

Harcourt, Brace & World, Inc. New York, New York, USA. 1963

Lowell, Percival 1855–1916

American astronomer

Now in science there exists two classes of workers. There are men who spend their days in amassing material, in gathering facts. They are the collectors of specimens in natural history, the industrious takers of routine measurements in physics and astronomy or the mechanical accumulators of photographic plates. Very valuable such collections are. They may not require much brains to get, but they enable other brains to get a great deal out of them later.... The rarer they are the better. For the less mind enters into them the more they are worth. When destitute altogether of informing intelligence, they become priceless, as they then convey nature's meaning unmeddled of man.... The second class of scientists are the architects of the profession. They are the men to whom the building up of science is due. In their hands, the acquired facts are put together to that synthesizing of knowledge from which new conceptions spring.... Though the gathering of material is good, without the informing mind to combine the facts they had forever remained barren of fruit.

In William Graves Hoyt

Lowell and Mars

Chapter 2 (p. 22)

University of Arizona Press. Tucson, Arizona, USA. 1976

Lubbock, Sir John 1834–1913

English banker, author, and scientist

Science, our Fairy Godmother, will, unless we perversely reject her help, and refuse her gifts, so richly endow us, that fewer hours of labour will serve to supply us with the material necessities of life, leaving us more time to ourselves, more leisure to enjoy all that makes life best worth living.

The Beauties of Nature and the Wonders of the World We Live In

Introduction (p. 37)

Macmillan & Company New York, New York, USA. 1893

Lundberg, G. A.

No biographical data available

...no science tells us what to do with the knowledge that constitutes the science. Science only provides a car and a chauffeur for us. It does not directly, as science, tell us where to drive. The car and the chauffeur will take us into the ditch,

over the precipice, against a stone wall, or into the highlands of age-long human aspirations with equal efficiency. If we agree as to where we want to go and tell the driver our goal, he should be able to take us there by one of a number of possible routes the costs and conditions of each of which the scientist should be able to explain to us.

Can Science Save Us?

Social Problems (p. 31)

Longmans, Green & Company New York, New York, USA. 1947

Lynch, Gary

No biographical data available

What you really need to do the best science is a tremendous tolerance for ambiguity. You have to be able to tolerate ambiguity. Because we as creatures are set up for some reason to see cause-and-effect. And what you really wind up doing is tolerating the fact that you have all these assumptions and all these uncertainties, and living with them. And when you really go into a novel area, what do you have to guide you? The more novel it is, the fewer the constraints. For a human being that is a very uncomfortable feeling.

In George Johnson

In the Palaces of Memory: How We Build the Worlds Inside Our Heads

Mucking Around in the Wetware (pp. 91–92)

Alfred A. Knopf. New York, New York, USA. 1991

Lysaght, Sidney R. 1860–1941

Irish writer

Science is the lamp which man has himself kindled. It has built him lighthouses on the dark shores of the unknown; but his dreams, his quests for truth, lead him beyond the waters which his little lamp of knowledge illuminates.

A Reading of Life

Chapter II (p. 54)

Macmillan & Company Ltd. London, England. 1936

Lyttleton, R. A.

English astronomer

...many very serious-minded, solid, and knowledgeable people work hard in science all their lives and produce nothing of the smallest importance, while others, few by comparison and perhaps seemingly carefree and not highly erudite, exhibit a serendipity of mind that enables them to have valuable ideas in any subject they may choose to take up.

In R. Duncan and M. Weston-Smith (eds.)

The Encyclopaedia of Ignorance: Everything You Ever Wanted to Know

About the Unknown

The Nature of Knowledge (p. 10)

Pergamon Press. Oxford, England. 1977

MacArthur, Robert H. 1930–72

American ecologist

[N]ot all naturalists want to do science; many take refuge in nature's complexity as a justification to oppose any

search for patterns... Doing science is not such a barrier to feeling or such a dehumanizing influence as is often made out. It does not take the beauty from nature.

Geographical Ecology

Introduction (p. 1)

Harper & Row, Publishers, New York, New York, USA. 1972

Macfie, Ronald Campbell 1867–1931

Poet and physician

The God of Science speaks in the thunder and smiles in the sunshine. He is so great that the stars eddy round his feet not ankle-high, yet so loving that He makes roses and sunsets for the human heart.

Science, Matter and Immortality

Chapter XVII (p. 207)

William & Norgate. London, England. 1909

Conceived aright, science must always lead to belief in the unseen and to hope of immortality; but Science must learn to recognize her own limitations — must learn to recognize that her logic is not conclusive when her postulates are dubious — and that she can only become a ruler of men's souls and a brightener of men's lives if she takes Poetry and Philosophy by the hand, and dwells with them in the temple of Beauty and Reverence.

Science, Matter and Immortality

Chapter XXIII (p. 300)

William & Norgate. London, England. 1909

It is time that men knew that Science does not write with the cold finger of a starfish; it is time that men realized that true science is not a mere compilation of dead facts; it is time that men understood that Science is flamboyant and alive.

Science, Matter and Immortality

Chapter XXIII (p. 297)

William & Norgate. London, England. 1909

Mach, Ernst 1838–1916

Austrian physicist and philosopher

All science has its origin in the needs of life.

The Science of Mechanics (5th edition)

Chapter V, Part II, Section 1 (p. 610)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Every one who busies himself with science recognizes how unsettled and indefinite the notions are which he has brought with him from common life, and how, on a minute examination of things, old differences are effaced and new ones introduced.

Popular Scientific Lectures

The Forms of Liquids (pp. 1–2)

The Open Court Publishing Company. Chicago, Illinois, USA. 1898

...the entire course of the development of science will, as a matter of course, judge more freely and more correctly of the significance of any present scientific movement than they who, limited in their views to the age in which their own lives have been spent, contemplate merely the

momentary trend that the course of intellectual events takes at the present moment.

The Science of Mechanics (5th edition)

Introduction (p. 8)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

The great results achieved by physical science in modern times — results not restricted to its own sphere but embracing that of other sciences which employ its help — have brought it about that physical ways of thinking and physical modes of procedure enjoy on all hands unwonted prominence, and that the greatest expectations are associated with their application.

The Analysis of Sensations and the Relation of the Physical to the Psychological

Chapter I (p. 1)

The Open Court Publishing Company. Chicago, Illinois, USA. 1914

The function of science, as we take it, is to replace experience. Thus, on the one hand, science must remain in the province of experience, but, on the other, must hasten beyond it, constantly expecting confirmation, constantly expecting the reverse. Where neither confirmation nor refutation is possible, science is not concerned...

The Science of Mechanics (5th edition)

Chapter IV, Part IV, Section 7 (p. 587)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Physical science does not pretend to be a complete view of the world; it simply claims that it is working toward such a complete view in the future.

The Science of Mechanics (5th edition)

Chapter IV, Part II, Section 9 (p. 560)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Science always has its origin in the adaptation of thought to some definite field of experience.

The Analysis of Sensations and the Relation of the Physical to the Psychological

Chapter I (p. 31)

The Open Court Publishing Company. Chicago, Illinois, USA. 1914

Science throws her treasures, not like a capricious fairy into the laps of a favored few, but into the laps of all humanity, with a lavish extravagance that no legend ever dreamt of!

Popular Scientific Lectures

The Economical Nature of Physical Inquiry (p. 189)

The Open Court Publishing Company. Chicago, Illinois, USA. 1898

Economy of communication and of apprehension is of the very essence of science. Herein lies its pacificatory, its enlightening, its refining element.

The Science of Mechanics (5th edition)

Introduction (p. 7)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Is science itself anything more than — a business? Is not its task to acquire with the least possible work, in the least possible time, with the least possible thoughts, the greatest possible part of eternal truth?

Popular Scientific Lectures

The Forms of Liquids (p. 16)

The Open Court Publishing Company, Chicago, Illinois, USA. 1898

Maffei, Paolo 1926–
Italian astronomer

We are now moving beyond those concepts and the knowledge familiar to us in the first half of this century, and we are entering a world in which science and fantasy intertwine...

Translated by D.J.K. O'Connell

Beyond the Moon

Chapter 10 (p. 301)

The MIT Press, Cambridge, Massachusetts, USA. 1978

Magendie, Francois 1783–1855
French physiologist

I am a mere street scavenger of science. With hook in hand and basket on my back, I go about the streets of science collecting whatever I find.

In Rene Dubos

Louis Pasteur: Free Lance of Science

Chapter XIII (p. 363)

Little, Brown & Company, Boston, Massachusetts, USA. 1950

Mandelbrot, Benoit 1924–
French mathematician

I started looking in the trash cans of science...because I suspected that what I was observing was...perhaps very widespread. I attended lectures and looked in unfashionable periodicals...once in a while finding some interesting things. In a way it was a naturalist's approach, not a theoretician's approach. But my gamble paid off.

In James Gleick

Chaos: Making a New Science

A Geometry of Nature (p. 110)

The Viking Press, New York, New York, USA. 1987

Fictional character

Science is science, but a girl must get her hair done.

Tarantula

Film (1955)

March, Robert H. 1937–
American professor of physics

Science is more than a mere attempt to describe nature as accurately as possible. Frequently the real message is well hidden, and a law that gives a poor approximation to nature has more significance than one which works fairly well but is poisoned at the root.

Physics for Poets

Chapter I (p. 17)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1996

Margenau, Henry 1901–97
American physicist

It is in fact obvious that science should be pressed to say all it can about any problem which is at all susceptible to scientific treatment.

The Nature of Physical Reality: A Philosophy of Modern Physics

Chapter 2 (p. 12)

McGraw-Hill Book Company, Inc. New York, New York, USA. 1950

Margulis, Lynn 1938–
American cell biologist and evolutionist**Sagan, Dorion** 1959–

American science writer

Science has become a social method of inquiring into natural phenomena, making intuitive and systematic explorations of laws which are formulated by observing nature, and then rigorously testing their accuracy in the form of predictions. The results are then stored as written or mathematical records which are copied and disseminated to others, both within and beyond any given generation. As a sort of synergetic, rigorously regulated group perception, the collective enterprise of science far transcends the activity within an individual brain.

Microcosmos

Chapter 12 (p. 233)

Summit Books, New York, New York, USA. 1986

Maritain, Jacques 1882–1973
French philosopher

Since science's competence extends to observable and measurable phenomena, not to the inner being of things, and to the means, not to the ends of human life, it would be nonsense to expect that the progress of science will provide men with a new type of metaphysics, ethics, or religion.

Science and Ontology

Bulletin of the Atomic Scientists, 1944, Volume 5 (p. 200)**Marshall, Alfred** 1842–1924
English economist

...the mathematico-physical group of sciences...have this point in common, that their subject-matter is constant and unchanged in all countries and in all ages. ...if the subject-matter of a science passes through different stages of development, the laws which apply to one stage will seldom apply without modification to others; the laws of science must have a development corresponding to that of the things of which they treat.

In A.C. Pigou (ed.)

Memorials of Alfred Marshall

Chapter VI (p. 154)

Macmillan & Company Ltd. London, England. 1925

Mason, James 1909–84
English actor

Don't you see what's at stake here? The ultimate aim of all science — to penetrate the unknown. Do you realize we know less about the earth we live on than about

the stars and the galaxies of outer space? The greatest mystery is right here, right under our feet.

A Journey to the Center of the Earth
Film (1959)

Letters of Marshall McLuhan
Letter to Ezra Pound
January 1951
Oxford University Press, Inc. New York, New York, USA. 1987

Mead, Margaret 1901–78

American anthropologist

...the negative cautions of science are never popular. If the experimentalist would not commit himself, the social philosopher, the preacher and the pedagogue tried the harder to give a short-cut answer.

Coming of Age in Samoa
Chapter 1 (p. 3)
The Modern Library. New York, New York, USA. 1953

Medawar, Sir Peter Brian 1915–87

Brazilian-born English zoologist

Science is no more a classified inventory of factual information than history a chronology of dates. The equation of science with facts and of the humane arts with ideas is one of the shabby genteelisms that bolster up the humanist's self-esteem.

Two Conceptions of Science
Encounter, 143, August 1965

Science can only proceed on a basis of confidence, so that scientists do not suspect each other of dishonesty or sharp practice, and believe each other unless there is very good reason to do otherwise.

The Limits of Science
An Essay on Scians [Science] (p. 6)
Harper & Row, Publishers. New York, New York, USA. 1984

Science will persevere just as long as we retain a faculty we show no signs of losing: the ability to conceive — in no matter how imperfect or rudimentary a form — what the truth might be and retain also the inclination to ascertain whether our imaginings correspond to real life or not.

The Limits of Science
Chapter 4 (pp. 86–87)
Harper & Row, Publishers. New York, New York, USA. 1984

It is a layman's illusion that in science we caper from pinnacle to pinnacle of achievement and that we exercise a Method which preserves us from error. Indeed we do not; our way of going about things takes it for granted that we guess less often right than wrong, but at the same time ensures that we need not persist in error if we earnestly and honestly endeavor not to do so.

The Limits of Science
Notes, 3 (p. 101)
Harper & Row, Publishers. New York, New York, USA. 1984

...science is a great and glorious enterprise — the most successful, I argue, that human beings have ever engaged in. To reproach it for its inability to answer all the questions we should like to put to it is no more sensible than to reproach a railway locomotive for not flying or, in general, not performing any other operation for which it was not designed.

The Limits of Science
Preface (p. xiii)
Harper & Row, Publishers. New York, New York, USA. 1984

If we accept, as I fear we must, that science cannot answer questions about first and last things or about purposes, there is yet no known or conceivable limit to its power to answer questions of the kind science can answer... Science will dry up only if scientists lose or fail to exercise the power or incentive to imagine what the truth might be.

Advice to a Young Scientist
Chapter 11 (p. 90)
Basic Books, Inc. New York, New York, USA. 1979

...the factual burden of a science varies inversely with its degree of maturity. As a science advances, particular

facts are comprehended within, and therefore in a sense annihilated by, general statements of steadily increasing explanatory powers and compass. In all sciences we are being progressively relieved of the burden of singular instances, the tyranny of the particular. We need no longer record the fall of every apple.

The Art of the Soluble

Two Conceptions of Science (p. 114)

Methuen & Company Ltd. London, England. 1967

...nowadays we all give too much thought to the material blessings or evils that science has brought with it, and too little to its power to liberate us from the confinements of ignorance and superstition. The greatest liberation of thought achieved by the scientific revolution was to have given human beings a sense of future in this world.

The Art of the Soluble

Introduction (p. 15)

Methuen & Company Ltd. London, England. 1967

One can envisage an end of science no more readily than one can envisage an end of imaginative literature or the fine arts.

Advice to a Young Scientist

Chapter 11 (p. 90)

Basic Books, Inc. New York, New York, USA. 1979

Melville, Herman 1819–91

American novelist

...however baby man may brag of his science and skill, and however much, in a flattering future, that science and skill may augment; yet for ever and for ever, to the crack of doom, the sea will insult and murder him, and pulverize the stateliest, stiffest frigate he can make; nevertheless, by the continual repetition of these very impressions, man has lost that sense of the full awfulness of the sea which aboriginally belongs to it.

In *Great Books of the Western World* (Volume 48)

Moby Dick

Chapter 58 (p. 204)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

After science comes sentiment.

Typee, Omoo, Mardi

Mardi

Chapter 38 (p. 785)

The Library of America. New York, New York, USA. 1982

Mencken, H. L. (Henry Louis) 1880–1956

American journalist and literary critic

There is, in fact, no reason to believe that any given natural phenomenon, however marvelous it may seem today, will remain forever inexplicable. Soon or late the laws governing the production of life itself will be discovered in the laboratory, and man may set up business as a creator on his own account. The thing, indeed, is not only conceivable; it is even highly probable.

Treatise on the Gods

Chapter 5 (p. 241)

Vintage Books. New York, New York, USA. 1963

The notion that science does not concern itself with first causes — that it leaves the field to theology or metaphysics, and confines itself to mere effects — this notion has no support in the plain facts. If it could, science would explain the origin of life on earth at once — and there is every reason to believe that it will do so on some not too remote tomorrow. To argue that gaps in knowledge which will confront the seeker must be filled, not by patient inquiry, but by intuition or revelation, is simply to give ignorance a gratuitous and preposterous dignity.

Treatise on the Gods

Chapter 5 (p. 239)

Vintage Books. New York, New York, USA. 1963

Mendeleev, Dmitry 1834–1907

Russian chemist

What has been sown for the field of science will grow up for the people's welfare.

Translated by George Kamensky

Principles of Chemistry (Volume 1)

Introduction

Longmans, Green & Company. London, England. 1891

While science is pursuing a steady onward movement, it is convenient from time to time to cast a glance back on the route already traversed, and especially to consider the new conceptions which aim at discovering the general meaning of the stock of facts accumulated from day to day in our laboratories.

The Periodic Law of the Chemical Elements

Journal of the Chemical Society, Volume 55, 1889 (p. 634)

The edifice of science not only requires material but also a plan, and necessitates the work of preparing the materials, putting them together, working out the plans and the symmetrical proportions of the various parts. To conceive, understand, and grasp the whole symmetry of the scientific edifice, including its unfinished portions, is equivalent to tasting that enjoyment only conveyed by the highest forms of beauty and truth.

Principles of Chemistry (Volume 1)

Preface (p. ix, fn 1)

Longmans, Green & Company. London, England. 1891

Science plays an auxiliary part in our lives, for it is merely a means to the attainment of wellbeing.

Compiled by V.V. Vorontsov

Words of the Wise: A Book of Russian Quotations

Translated by Vic Schneierson

Progress Publishers. Moscow, Russia. 1979

Knowing how contented, free and joyful is life in the realms of science, one fervently wishes that many would enter their portals.

Principles of Chemistry (Volume 1)

Preface (p. ix, fn 1)

Longmans, Green & Company. London, England. 1891

Meredith, George 1828–1909
English novelist and poet

Science is notoriously of slow movement.

The Ordeal of Richard Feverel
Chapter XLIV (p. 518)
The Modern Library. New York, New York, USA. 1927

Meyer, Agnes 1887–1970
American author and journalist

From the nineteenth century view of science as a god, the twentieth century has begun to see it as a devil. It behooves us now to understand that science is neither the one nor the other.

Education for a New Morality
Chapter 2 (p. 11)
The Macmillan Company. New York, New York, USA. 1957

Mill, John Stuart 1806–73
English political philosopher and economist

It is a common notion, or at least it is implied in many common modes of speech, that thoughts, feelings, and actions of sentient beings are not a subject of science.... This notion seems to involve some confusion of ideas, which it is necessary to begin by clearing up. Any facts are fitted, in themselves, to be a subject of science, which follows one another according to constant laws; although those laws may not have been discovered, nor even to be discoverable by our existing resources.

A System of Logic, Rationative and Inductive (Volume 2)
Book VI, Chapter 3, Section 1 (p. 426)
Longmans, Green, Reader & Dyer. London, England. 1868

Millikan, Robert Andrews 1868–1953
American physicist

We need science in education, and much more of it than we now have, not primarily to train technicians for the industries, which demand them, though that may be important, but much more to give everybody a little glimpse of the scientific mode of approach to life's problems, to give everyone some familiarity with at least one field in which the distinction between right and wrong is not always blurred and uncertain, to let him see that it is not true that "one opinion is as good as another"...

The Relationship of Science to Industry
Science, Volume 69, Number 1776, January 11, 1929 (p. 30)

The distinguishing feature of modern scientific thought lies in the fact that it begins by discarding all a priori conceptions about the nature of reality — or about the ultimate nature of the universe — such as had characterized practically all Greek philosophy and all medieval thinking as well, and takes instead, as its starting point, well-authenticated, carefully tested experimental facts, no matter whether these facts seen at the moment to fit into any general philosophical scheme or not — that is, no matter whether they seem at the moment to be reasonable or not.

Professor Einstein at the California Institute of Technology
Science, Volume 73, Number 1893, April 10, 1931 (p. 376)

It is to lighten man's understanding, to illuminate his path through life, and not merely to make it easy, that science exists.

In Frederick Houk Law
Science in Literature
Modern Physics (p. 318)
Harper & Brothers. New York, New York, USA. 1929

...Science walks forward on two feet, namely theory and experiment... Sometimes it is one foot which is put forward first, sometimes the other, but continuous progress is only made by the use of both — by theorizing and then testing, or by finding new relations in the process of experimenting and then bringing the theoretical foot up and pushing it beyond, and so on in unending alternation.

Nobel Lectures, Physics 1922–1941
Nobel lecture for award received in 1923
The Electron and the Light-Quant from the Experimental Point of View (p. 55)
Elsevier Publishing Company. Amsterdam, Netherlands. 1965

Milne, Edward Arthur 1896–1950
English astrophysicist and cosmologist

The Christmas message — which is also the Christian message — is "*Gloria in excelsis Deo*"... Glory to God in the highest and on earth peace among men of goodwill.... This is not a bad definition of the aim of all true science: the aim of rejoicing in the splendid mysteries of the world and universe we live in, and of attempting so to understand those mysteries that we can improve our command over nature, improve our conditions of life and so ensure peace...

Modern Cosmology and the Christian Idea of God
Chapter I (p. 1)
At The Clarendon Press. Oxford, England. 1952

Mitchell, Maria 1818–89
American astronomer and educator

The phrase "popular science" has in itself a touch of absurdity. That knowledge which is popular is not scientific.

In Phebe Mitchell Kendall
Maria Mitchell: Life, Letters, and Journals
Chapter VII (p. 138)
Lee & Shepard. Boston, Massachusetts, USA. 1896

Monod, Jacques 1910–76
French biochemist

In science, self-satisfaction is death. Personal self-satisfaction is the death of the scientist. Collective self-satisfaction is the death of the research. It is restlessness, anxiety, dissatisfaction, agony of mind that nourish science.

Obituary
News Science, Volume 109, June 5, 1976 (p. 359)

Montagu, Ashley 1905–99
English-born American anthropologist

As the god of contemporary man's idolatry, science is a two-handed engine, and as such science is too important a human activity to leave to the scientist.

Advertisement of Jacques Barzun's "Science: The Glorious Entertainment"

New York Times Book Review, April 26, 1964

More, Louis Trenchard 1870–1944

English physicist and biographer of Isaac Newton

Science has so many dazzling achievements to its credit; we have done so many things which seemed to be impossible, that the popular mind is apt to conclude that, if an explanation is given in the name of science, it must be true whether it be understood or not.

The Dogma of Evolution

Chapter Seven (p. 241)

Princeton University Press. Princeton, New Jersey, USA. 1925

Morgan, Lloyd 1852–1936

English psychologist

Science...deals exclusively with changes of configuration, and traces the accelerations which are observed to occur, leaving to metaphysics to deal with the underlying agency, if it exists.

The Interpretation of Nature

Chapter V (p. 62)

The Knickerbocher Press. New York, New York, USA. 1906

Morrow, James 1947–

American novelist

Everybody thinks he's being oh-so-deep when he says science doesn't have all the answers.... Science *does* have all the answers.... The problem is that we don't have all the science.

Only Begotten Daughter (p. 90)

Harcourt Incorporated. Orlando, Florida, USA. 1990

Moscovici, S. 1925–

Romanian-born French psychologist

Science has become involved in this adventure, our adventure, in order to renew everything it touches and warm all that it penetrates — the earth on which we live and the truths which enable us to live. At each turn it is not the echo of a demise, a bell tolling for a passing away that is heard, but the voice of rebirth and beginning, ever afresh, of mankind and materiality, fixed for an instant in their ephemeral permanence. That is why the great discoveries are not revealed on a deathbed like that of Copernicus, but offered like Kepler's on the road of dreams and passion.

Social Influence and Social Change (pp. 297–298)

Academic Press. London, England. 1980

Motto

Science Finds — Industry Applies — Man Conforms
Chicago World's Fair, 1933

Muller, Herbert J. 1905–80

American historian and educator

Although science is no doubt the Jehovah of the modern world, there is considerable doubt about the glory of its handiwork.

Science and Criticism: The Humanistic Tradition in Contemporary Thought
Chapter III (p. 59)

G. Braziller. New York, New York, USA. 1943

...men of science, men given to "realism," are likely to make a clean sweep of old interests and sentiments as so much rubbish. They regard religion as superstition, metaphysics as moonshine, art as primitive pastime, and all ritual as monkey-business.

Science and Criticism: The Humanistic Tradition in Contemporary Thought

Chapter I (p. 6)

G. Braziller. New York, New York, USA. 1943

Mumford, Lewis 1895–1990

American social philosopher

...however far modern science and technics have fallen short of their inherent possibilities, they have taught mankind at least one lesson: Nothing is impossible.

Technics and Civilization

Chapter VIII, Section 13 (p. 435)

Routledge & Kegan Paul Ltd. London, England, 1934

Munger, Theodore 1830–1910

American clergyman

Science cannot determine origin, and so cannot determine destiny. As it presents only a sectional view of creation, it gives only a sectional view of everything in creation.

In Jefferson Hane Weaver

The World of Physics (Volume 3)

U.1 (p. 212)

Simon & Schuster. New York, New York, USA. 1987

Needham, Joseph 1900–95

English biochemist and sinologist

...our proper conclusion seems to me to be that the conceptual framework of Chinese associative or coordinative thinking was essentially something different from that of European causal and "legal" or nomothetic thinking. That it did not give rise to 17th-century theoretical science is no justification for calling it primitive.

Science and Civilisation in China (Volume 2) (p. 286)

At The University Press. Cambridge, England. 1954

Nekrasov, Nikolai 1821–78

Russian poet

There is no science for the sake of science, no art for the sake of art — they exist for the sake of society, for the ennoblement and exaltation of man, to enrich his knowledge and provide his material comforts.

Compiled by V.V. Vorontsov

Words of the Wise: A Book of Russian Quotations

Translated by Vic Schneierson
Progress Publishers. Moscow, Russia. 1979

Newell, A.

No biographical data available

Scientific fields emerge as the concerns of scientists congeal around various phenomena. Sciences are not defined, they are recognized.

In R.C. Shank and K.M. Colby (eds.)
Computer Models of Thought and Language
Artificial Intelligence and the Concept of Mind (p. 1)
W.H. Freeman. San Francisco, California, USA. 1973

Newton, Roger G.

Physics professor and author

Science is not holy scripture, nor do its practitioners consider themselves priests protecting a glittering grail, forever unchanging and pure. What drives scientists on is the thirst to understand more and to use nature, to build rather than to exploit a comprehensible universe.

What Makes Nature Tick?
Epilogue (p. 234)
Harvard University Press. Cambridge, Massachusetts, USA. 1993

Science is, in fact, an intricate edifice erected from complex, imaginative designs in which esthetics is a more powerful incentive than utility. Beauty, finally, comprises its greatest intellectual appeal.

What Makes Nature Tick?
Epilogue (p. 236)
Harvard University Press. Cambridge, Massachusetts, USA. 1993

Nietzsche, Friedrich 1844–1900

German philosopher

To the man who works and searches in it, science gives much pleasure; to the man who learns its results, very little.

Translated by Marion Faber
Human, All Too Human: A Book for Free Spirits
Section Five, Number 251
Aphorism 205 (p. 153)
University of Nebraska Press. Lincoln, Nebraska, USA. 1984

Oh, how much is today hidden by science! Oh, how much it is expected to hide!

Translated by William A. Haussmann
The Genealogy of Morals
What Do Ascetic Ideals Mean?
Aphorism 23
Macmillan Publishing Company. New York, New York, USA. 1907

Science offends the modesty of all real women. It makes them feel as though it were an attempt to peek under their skin — or, worse yet, under their dress and ornamentation!

Beyond Good and Evil
Chapter IV, 127 (p. 83)
The Modern Library. New York, New York, USA. 1917

Science rushes headlong, without selectivity, without “taste,” at whatever is knowable, in the blind desire to know all at any cost.

Translated by Marianne Cowan
Philosophy in the Tragic Age of the Greeks
Section 3 (p. 43)
A Gateway Edition. Chicago, Illinois, USA. 1962

The old God was seized by mortal terror. Man himself had been his greatest blunder; he had created a rival to himself; science makes men godlike — it is all up with priests and gods when man becomes scientific — Moral: science is the forbidden per se; it alone is forbidden. Science is the first of sins, the germ of all sins, the original sin. This is all there is of morality. — “Thou shalt not know”: the rest follows from that.

Translated by H.L. Mencken
The Anti-Christ
Aphorism 48
Macmillan Publishing Company. New York, New York, USA. 1911

Nobel Prize Medal

Inventas vitam iuvat excoluisse per artes.
Let us improve life through science and art.
Inscribed on Nobel Prize Medal

Oberth, Hermann 1894–1989

German mathematician and physicist

The present state of science and of technological knowledge permits the building of machines that can rise beyond the limits of the atmosphere of the earth. After further development these machines will be capable of attaining such velocities that they — left undisturbed in the void of ether space — will not fall back to earth; furthermore, they will even be able to leave the zone of terrestrial attraction.

The Rocket to the Interplanetary Spaces

American playwright

DARRELL: Happiness hates the timid! So does Science!

Strange Interlude
Act Four (p. 152)
Boni & Liveright. New York, New York, USA. 1928

Oppenheimer, J. Robert 1904–67

American theoretical physicist

We live today in a world in which poets and historians and men of affairs are proud that they wouldn’t even begin to consider thinking about learning anything of science, regarding it as the far end of a tunnel too long for any wise man to put his head into.

The Open Mind
Chapter VII (p. 128)
Simon & Schuster. New York, New York, USA. 1955

A subject is much harder to understand when no one understands it. The world is really an open place, but we start with such crude and limited experience, and our minds

are so determined by that experience, that when science carries us into new domains we are not always prepared for what we encounter, and we are floored by it.

In Edward Lueders

Writing on Life: Sixteen Close-Ups

Physicist Oppenheimer (p. 358)

William Sloane Associates, Publishers. New York, New York, USA. 1951

O'Rourke, P. J. 1947–

American political satirist

...to mistrust science and deny the validity of the scientific method is to resign your job as a human. You'd better go look for work as a plant or wild animal.

Parliament of Whores: A Lone Humorist Attempts to Explain the Entire U.S. Government

Dirt of the Earth (p. 1 97)

Vintage Books. New York, New York, USA. 1992

Orr, Louis

American Medical Association president

Science will never be able to reduce the value of a sunset to arithmetic. Nor can it reduce friendship or statesmanship to a formula. Laughter and love, pain and loneliness, the challenge of accomplishment in living, and the depth of insight into beauty and truth; these will always surpass the scientific mastery of nature.

Commencement Address, Emory University, June 6, 1960

Osler, Sir William 1849–1919

Canadian physician and professor of medicine

To the physician particularly, a scientific discipline is an incalculable gift, which leavens his whole life, giving exactness to habits of thought and tempering the mind with that judicious faculty of distrust which can alone, amid the uncertainties of practice, make him wise unto salvation. For perdition inevitably awaits the mind of the practitioner who has never had the full inoculation with the leaven, who has never grasped clearly the relations of science to his art, and who knows nothing and perhaps cares less, for the limitations of either.

Aequanimitas, with Other Addresses to Medical Students, Nurses, and Practitioners of Medicine

The Leaven of Science (p. 92)

The Blakiston Company. Philadelphia, Pennsylvania, USA. 1932

The future belongs to science. More and more she will control the destinies of the nations. Already she has them in her crucible and on her balances.

In Harvey Cushing

The Life of Sir William Osler (Volume 2) (p. 262)

Clarendon Press. Oxford, England. 1925

Ostwald, Friedrich Wilhelm 1853–1932

Latvian-born German chemist

The more perfect the theoretical evolution of the sciences becomes, the greater will be the scope of their

explanations and at the same time the greater their practical importance.

On Chemical Energy

The Journal of the American Chemical Society, Volume 15, Number 8, August 1893 (p. 430)

Pagels, Heinz R. 1939–88

American physicist and science writer

This sense of the unfathomable beautiful ocean of existence drew me into science. I am awed by the universe, puzzled by it and sometimes angry at a natural order that brings such pain and suffering, Yet an emotion or feeling I have toward the cosmos seems to be reciprocated by neither benevolence nor hostility but just by silence. The universe appears to be a perfectly neutral screen unto which I can project any passion or attitude, and it supports them all.

Perfect Symmetry: The Search for the Beginning of Time

Part Four, Chapter 2 (p. 370)

Simon & Schuster. New York, New York, USA. 1985

Science is not the enemy of humanity but one of the deepest expressions of the human desire to realize that vision of infinite knowledge.

The Cosmic Code: Quantum Physics as the Language of Nature

Part III, Chapter 2 (p. 348)

Simon & Schuster. New York, New York, USA. 1982

Paglia, Camille 1947–

American social critic, intellectual, and writer

Modern bodybuilding is ritual, religion, sport, art, and science, awash in Western chemistry and mathematics. Defying nature, it surpasses it.

Sex, Art, and American Culture

Alice in Muscle Land (p. 82)

Vintage Books. New York, New York, USA. 1992

Pallister, William Hales 1877–1946

Canadian physician

You are the sum of what we know,

You are our might and main;

You are the whole of what is so,

The little we retain:

Our fond beliefs all come and go,

And you alone remain.

Poems of Science

Science (p. 39)

Playford Press. New York, New York, USA. 1931

Science works by the slow method of the classification of data, arranging the detail patiently in a periodic system into groups of facts, in series like the strata of the rocks. For each series there must be a vocabulary of special words which do not always make good sense when used in another series. But the laws of periodicity seem to hold throughout, among the elements and in every sphere of thought, and we must learn to co-ordinate the whole through our new conception of the reign of relativity.

Poems of Science

Men and the Stars (p. 88)
Playford Press. New York, New York, USA. 1931

Panunzio, Constantine 1884–1964
Italian sociologist

Science...involves active, purposeful search; it discovers, accumulates, sifts, orders, and tests data; it is a slow, painstaking, laborious activity; it is a search after bodies of knowledge sufficiently comprehensive to lead to the discovery of uniformities, sequential orders or so-called "laws"; it may be carried on by an individual, but it gains relevance only as it produces data which can be added to and tested by the findings of others.

Major Social Institutions
Chapter 20 (p. 322)
The Macmillan Company. New York, New York, USA. 1945

If science is to subserve human needs, it will continue to discover and catalogue "all the islands of the universe 300,000,000 or more light years distant," but it will not fiddle while Rome burns...

Major Social Institutions
Chapter 21 (p. 338)
The Macmillan Company. New York, New York, USA. 1945

Parin, V. V.
No biographical data available

Science breathes but one air — the oxygen of facts. New methods of research are the trees that clear its atmosphere of the carbon dioxide of inaccurate conclusions and saturate it with the oxygen of first discovered, seen and apprehended phenomena.

Compiled by V.V. Vorontsov
Words of the Wise: A Book of Russian Quotations

Pasteur, Louis 1822–95
French chemist

You bring me the deepest joy that can be felt by a man whose invincible belief is that Science and Peace will triumph over Ignorance and War, that nations will unite, not to destroy, but to build, and that the future will belong to those who will have done most for suffering humanity.

In Rene Vallery-Radot
The Life of Pasteur
Chapter XIV (pp. 450–451)
Doubleday, Doran & Company, Inc. Garden City, New York, USA. 1928

I am imbued with two deep impressions; the first, that science knows no country; the second, which seems to contradict the first, although it is in reality a direct consequence of it, that science is the highest personification of the nation. Science knows no country, because knowledge belongs to humanity, and is the torch which illuminates the world. Science is the highest personification of the nation

because that nation will remain the first which carries the furthest the works of thought and intelligence.

In Rene Dubos
Pasteur and Modern Science
Chapter 15. A Dedicated Life (p. 146)
Science Tech Publishers. Madison, Wisconsin, USA. 1988

I could never work for money, but I would always work for science.

In Sir Richard Arman Gregory
Discovery; or, The Spirit and Service of Science
Chapter I (p. 6)
Macmillan & Company Ltd. London, England. 1918

Pavlov, Ivan Petrovich 1849–1936
Russian physiologist

Only science, exact science about human nature itself, and the most sincere approach to it by the aid of the omnipotent scientific method, will deliver man from his present gloom, and will purge him from his contemporary shame in the sphere of interhuman relations.

Translated by Stephen G. Brush
Lectures on Conditioned Reflexes
Preface to the First Russian Edition (p. 41)
University of California Press. Berkeley, California, USA. 1964

Science moves in fits and starts, depending on the progress in methods of research. Every step forward in method takes us a step higher, affording a broader view of the horizon and of objects that were invisible before.

Compiled by V.V. Vorontsov
Words of the Wise: A Book of Russian Quotations
Translated by Vic Schneiereson
Progress Publishers. Moscow, Russia. 1979

Remember that science demands from a man all his life. If you had two lives that would be not enough for you. Be passionate in your work and your searchings. Bequest of Pavlov to the Academic Youth of his Country
Science, Volume 83, Number 2155, April 17, 1936 (p. 369)

Learn the ABC of science before you try to ascend to its summit. Never begin the subsequent without mastering the preceding. Never attempt to screen an insufficiency of knowledge even by the most audacious surmise and hypothesis.

Bequest of Pavlov to the Academic Youth of His Country
Science, Volume 83, Number 2155, April 17, 1936 (p. 369)

Here I now simply uphold and assert the absolute and incontestable right of natural science to operate wherever and whenever it is able to display its power. And who knows the limits to this!

Experimental Psychology and Other Essays
Natural Science and the Brain (p. 218)
Philosophical Library. New York, New York, USA. 1957

Peacock, Thomas Love 1785–1866
English writer

Science is one thing and wisdom is another. Science is an edged tool with which men play like children and cut

their own fingers. If you look at the results which science has brought in its train, you will find them to consist almost wholly in elements of mischief... The day would fail if I should attempt to enumerate the evils which science has inflicted on mankind. *Gryll Grange*

Chapter 19 (p. 127)

Penguin Books. Harmondsworth, England. 1949

I almost think it is the ultimate destiny of science to exterminate the human race.

Gryll Grange

Chapter 19 (p. 127)

Penguin Books. Harmondsworth, England. 1949

Pearson, Karl 1857–1936

English mathematician

When every fact, every present or past phenomenon of that universe, every phase or present or past life therein, has been examined, classified, and co-ordinated with the rest, then the mission of science will be completed. What is this but saying that the task of science can never end till man ceases to be, till history is no longer made, and development itself ceases?

The Grammar of Science

Introductory, Section 5 (p. 15)

Charles Scribner's Sons. London, England. 1892

Science for the past is a description, for the future a belief...

The Grammar of Science

Chapter IV, Section 1 (p. 136)

Charles Scribner's Sons. London, England. 1892

Every great advance of science opens our eyes to facts which we have failed before to observe, and makes new demands on our powers of interpretation. This extension of the material of science into regions where our great-grandfathers could see nothing at all, or where they would have declared human knowledge impossible, is one of the most remarkable features of modern progress. Where they interpreted the motion of the planets of our own system, we discuss the chemical constitution of stars, many of which did not exist for them, for the telescopes could not reach them. Where they discovered the circulation of the blood, we see the physical conflict of living poisons within the blood, whose battles would have been absurdities for them.

The Grammar of Science

Introductory, Section 5 (p. 17)

Charles Scribner's Sons. London, England. 1892

Does science leave no mystery? On the contrary it proclaims mystery where others profess knowledge. There is mystery enough in the universe of sensation and in its capacity for containing those little corners of consciousness which project their own products, or order and law and reason, into an unknown and unknowable world. There is mystery enough here, only let us clearly distinguish it from ignorance within the field of possible knowledge. The one is impenetrable, the other we are daily subduing.

The Grammar of Science

Chapter III, Conclusion (p. 134)

Charles Scribner's Sons. London, England. 1892

Modern Science, as training the mind to an exact and impartial analysis of facts, is an education specifically fitted to promote sound citizenship.

The Grammar of Science

Introductory, Section 3 (p. 11)

Charles Scribner's Sons. London, England. 1892

Peattie, Donald Culrose 1896–1964

American botanist, naturalist, and author

Of our windows on the universe, science is set with the clearest pane; it is not warped or waved to make the images appear to support any dogma; the glass is not rose-tinted, neither is it leaded with a picture that shuts out the sun and, coming between the light of day and you, enforces the credence of the past upon the young present.

Flowering Earth

Chapter 18 (p. 244)

G.P. Putnam's Sons. New York, New York, USA. 1939

Peirce, Charles Sanders 1839–1914

American scientist, logician, and philosopher

Science, when it comes to understand itself, regards facts as merely the vehicle of eternal truth, while for Practice they remain the obstacles which it has to turn, the enemy of which it is determined to get the better.

The Essential Peirce: Selected Philosophical Writings (Volume 2)

The First Rule of Logic (p. 55)

Indiana University Press. Bloomington, Indiana, USA. 1998

It is a common observation that a science first begins to be exact when it is quantitatively treated. What are called the exact sciences are no other than the mathematical ones.

Chance, Love and Logic: Philosophical Essays

The Doctrine of Chances (p. 61)

Harcourt, Brace & Company, Inc. New York, New York, USA. 1923

Perl, Martin 1927–

American physicist

I was following an old idea in science: "If you can't understand a phenomenon, look for more examples of that phenomenon..."

Electron, Muon, and Tau Heavy Lepton — Are These the Truly Elementary Particles?

The Science Teacher, Volume 47, Number 9, December 1980 (pp. 18–19)

Perutz, Max F. 1914–2002

Austrian-born English biochemist

It seems to me that, just as the Church did in former times, science offers a safe niche where you can spend a quiet life classifying spiders, away from what E.M. Forster called the world of telegrams and anger.

Is Science Necessary?

How to Become a Scientist (p. 193)

E.P. Dutton & Company. New York, New York, USA. 1989

Pirsig, Robert M. 1928–
American writer

Science values static patterns.

Lila: An Inquiry Into Morals
Chapter 11 (p. 142)
Bantam Books. New York, New York, USA. 1991

Planck, Max 1858–1947
German physicist

That we do not construct the external world to suit our own ends in the pursuit of science, but that vice versa the external world forces itself upon our recognition with its own elemental power, is a point which ought to be categorically asserted again and again in these positivistic times. From the fact that in studying the happenings of nature we strive to eliminate the contingent and accidental and to come finally to what is essential and necessary, it is clear that we always look for the basic thing behind the dependent thing, for what is absolute behind what is relative, for the reality behind the appearance and for what abides behind what is transitory. In my opinion, this is characteristic not only of physical science but all of science.

Where Is Science Going?
Chapter VI (pp. 198–199)
W.W. Norton & Company, Inc. New York, New York, USA. 1932

Science...means unrelenting endeavor and continually progressing development toward an aim which the poetic intuition may apprehend but which the intellect can never fully grasp.

Continuum, Volume 20, Number 5, February 1980 (p. 42)

Science cannot solve the ultimate mystery of nature. And that is because, in the last analysis, we ourselves are part of nature and therefore part of the mystery that we are trying to solve.

Where Is Science Going?
Epilogue (p. 217)
W.W. Norton & Company, Inc. New York, New York, USA. 1932

Science does not mean an idle resting upon a body of certain knowledge; it means unrelenting endeavor and continually progressing development towards an aim, which the poetic intuition may apprehend, but which the intellect can never fully grasp.

Translated by W. H. Johnston
The Philosophy of Physics
Chapter II (p. 83)
W.W. Norton & Company, Inc. New York, New York, USA. 1936

Exact science — what wealth of connotation these two words have! They conjure up a vision of a lofty structure, of imperishable slabs of stone firmly joined together, treasure-house of all wisdom, symbol and promise of the coveted goal for a human race thirsting for knowledge, longing for the final revelation of truth.

Scientific Autobiography and Other Papers

The Meaning and Limits of Exact Science (p. 80)
Philosophical Library. New York, New York, USA. 1949

The roots of exact science feed in the soil of human life.

Scientific Autobiography and Other Papers
The Meaning and Limits of Exact Science, Part IV (p. 112)
Philosophical Library. New York, New York, USA. 1949

...I had always looked upon the search for the absolute as the noblest and most worth while task of science.

Scientific Autobiography and Other Papers
A Scientific Autobiography (p. 46)
Philosophical Library. New York, New York, USA. 1949

...science is not contemplative repose amidst knowledge already gained, but is indefatigable work and an ever progressive development.

Scientific Autobiography and Other Papers
The Concept of Causality in Physics (p. 150)
Philosophical Library. New York, New York, USA. 1949

Plato 428 BCE–347 BCE
Greek philosopher

As being is to becoming, so is pure intellect to opinion. And as intellect is to opinion, so is science to belief...

In *Great Books of the Western World* (Volume 7)
The Republic
Book VII, Section 534 (p. 398)
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Podolsky, Boris 1896–1966
American physicist

In recent years the power of Science has received such popular recognition that the adjective scientific attached to merchandise or statement is known to give to such merchandise or to a statement prestige having definite advertising value. As a consequence the words science and scientific are frequently abused by those who find it profitable to borrow reputation instead of earning it. What Is Science?

The Physics Teacher, Volume 3, Number 2, February 1965 (p. 71)

Poe, Edgar Allan 1809–49
American short story writer

Science! true daughter of old Time thou art
Who alterest all things with thy peering eyes!
Why prey'st thou thus upon the poet's heart,
Vulture! whose wings are dull realities!

The Raven and Other Poems
Sonnet — To Science
Columbia University Press. New York, New York, USA. 1942

Poincaré, Henri 1854–1912
French mathematician and theoretical astronomer

The advance of science is not comparable to the changes of a city, where old edifices are pitilessly torn down to give place to new, but to the continuous evolution of zoologic types which develop ceaselessly and end by becoming

unrecognizable to the common sight, but where an expert eye finds always traces of the prior work of the past centuries.

The Foundations of Science

The Value of Science, Introduction (p. 208)

The Science Press. New York, New York, USA. 1913

Man, then, can not be happy through science, but to-day he can be much less be happy without it.

The Foundations of Science

The Value of Science, Introduction (p. 206)

The Science Press. New York, New York, USA. 1913

There is no science other than disinterested science.

In Stefan Amsterdamski

Between History and Method

Chapter V Crisis of the Modern Ideal (p. 94)

Kluwer Academic Publishers. Dordrecht, Netherlands. 1992

As science progress, it becomes more and more difficult to fit in the new facts when they will not fit in spontaneously. The older theories depend upon the coincidences of so many numerical results which can not be attributed to chance. We should not separate what has been joined together.

Annual Report of the Board of Regents of the Smithsonian Institution, 1912

The Ether and Matter (pp. 209–210)

Government Printing Office. Washington, D.C. 1913

...science is a rule of action which is successful...

The Foundations of Science

The Value of Science, Part III, Chapter X (p. 324)

The Science Press. New York, New York, USA. 1913

Polanyi, Michael 1891–1976

Hungarian-born English scientist, philosopher, and social scientist

This coherence of valuation throughout the whole range of science underlies the unity of science. It means that any statement recognized as valid in one part of science can, in general, be considered as underwritten by all scientists. It also results in a general homogeneity of and a mutual respect between all kinds of scientists, by virtue of which science forms an organic unity.

Science, Faith and Society

Authority and Conscience (p. 49)

The University of Chicago Press. Chicago, Illinois. 1964

The morsels of science which [the young scientist] picks up — even though often dry or else speciously varnished — instill in him the intimation of intellectual treasures and creative joys far beyond his ken. His intuitive realization of a great system of valid thought and of an endless path of discovery sustain him in laboriously accumulating knowledge and urge him on to penetrate into intricate brain-racking theories. Sometimes he will also find a master whose work he admires and whose manner and outlook he accepts for his guidance. Thus his mind will become assimilated to the premise of science. The scientific institution of reality henceforth shapes his perception. He learns the methods of scientific investigation and accepts the standards of scientific value.

Science, Faith and Society

Authority and Conscience (p. 44)

The University of Chicago Press. Chicago, Illinois. 1964

Pope, Alexander 1688–1744

English poet

Trace Science then, with Modesty thy guide;
First strip off all her equipage of Pride.

The Complete Poetical Works (Volume 2)

An Essay on Man

Epistle II, l. 43–44

Houghton Mifflin Company. New York, New York, USA. 1903

One science only will one genius fit,
So vast is art, so narrow human wit...

The Complete Poetical Works (Volume 2)

Essay on Criticism, Part I, l. 60–61

Houghton Mifflin Company. New York, New York, USA. 1903

Far eastward cast thine eye, from whence the Sun
And orient Science their brite course begun.

The Complete Poetical Works (Volume 4)

Duncaid, Book III, l. 73–74

Houghton Mifflin Company. New York, New York, USA. 1903

How Index-learning turns no student pale,
Yet holds the eel of science by the tail...

The Complete Poetical Works (Volume 4)

Duncaid, Book I, l. 279–80

Houghton Mifflin Company. New York, New York, USA. 1903

Popper, Karl R. 1902–94

Austrian/British philosopher of science

The empirical basis of objective science has thus nothing “absolute” about it. Science does not rest upon solid bed-rock. The bold structure of its theories rises, as it were, above a swamp. It is like a building erected on piles. The piles are driven down from above into the swamp, but not down to any natural or “given” base; and when we cease our attempts to drive our piles into a deeper layer, it is not because we have reached firm ground. We simply stop when we are satisfied that they are firm enough to carry the structure, at least for the time being.

The Logic of Scientific Discovery

Part II, Chapter V, Section 30 (p. 111)

Basic Books, Inc. New York, New York, USA. 1959

Science is not a system of certain, or well-established statements, nor is it a system which steadily advances towards a state of finality... Like Bacon we might describe our own contemporary science...as consisting of “anticipations, rash and premature,” and as “prejudices.”

The Logic of Scientific Discovery

Part II, Chapter X, Section 85 (p. 278)

Basic Books, Inc. New York, New York, USA. 1959

Science may be described as the art of systematic oversimplification.

The Observer; London, 1 August 1982

Science does not aim, primarily, at high probabilities. It aims at a high informative content, well backed by

experience. But a hypothesis may be very probable simply because it tells us nothing, or very little.

The Logic of Scientific Discovery

Appendix ix (p. 399)

Basic Books, Inc. New York, New York, USA. 1959

...science is most significant as one of the greatest spiritual adventures that man has yet known...

The Poverty of Historicism

Chapter III, Section 19 (p. 56)

The Beacon Press. Boston, Massachusetts, USA. 1957

...it is the aim of science to find satisfactory explanations, of whatever strikes us as being in need of explanation.

Objective Knowledge: An Evolutionary Approach

Chapter 5 (p. 191)

Clarendon Press. Oxford, England. 1972

Porterfield, Austin L.

No biographical data available

Science, in the broadest sense, is the entire body of the most accurately tested, critically established, systematized knowledge available about that part of the universe which has come under human observation. For the most part this knowledge concerns the forces impinging upon human beings in the serious business of living and thus affecting man's adjustment to and of the physical and the social world.... Pure science is more interested in understanding, and applied science is more interested in control...

Creative Factors in Scientific Research

Chapter II (p. 11)

Duke University Press. Durham, North Carolina, USA. 1941

Poteat, William Louis 1856–1938

American educator

Science confers power, not purpose. It is a blessing, therefore, if the purpose which it serves is good; it is a curse, if the purpose is bad.

Can a Man Be a Christian Today?

Part I, Section 2 (p. 27)

The University of North Carolina Press. Chapel Hill, North Carolina, USA. 1925

Powers, Richard 1957–

American novelist

Science is not about control. It is about cultivating a perpetual condition of wonder in the face of something that forever grows one step richer and subtler than our latest theory about it. It is about reverence, not mastery.

The Gold Bug Variations

Dialog

William Morrow & Company, Inc. New York, New York, USA. 1991

Praed, Winthrop 1802–39

English poet

Of science and logic he chatters,
As fine and as fast as he can;

Though I am no judge of such matters,
I'm sure he's a talented man.

The Poems of Winthrop Mackworth Praed

The Talented Man

Houghton Mifflin Company. Boston, Massachusetts, USA. 1909

Pratt, C. C.

No biographical data available

Science is a vast and impressive tautology.

The Logic of Modern Psychology

Chapter VI (p. 154)

The Macmillan Company. New York, New York, USA. 1939

Prescott, William Hickling 1796–1859

American historian

It is the characteristic of true science, to discern the impassable, but not very obvious, limits which divide the province of reason from that of speculation. Such knowledge comes tardily. How many ages have rolled away in which powers, that, rightly directed, might have revealed the great laws of nature, have been wasted in brilliant, but barren reveries on alchemy and astrology.

History of the Conquest of Mexico (Volume 1)

Book I, Chapter IV (p. 102)

J.B. Lippincott Company. Philadelphia, Pennsylvania, USA. 1891

Pribram, Karl 1919–

Austrian neurosurgeon

For the first time in three hundred years science is admitting spiritual values into its explorations.

In Pamela Weintraub (ed.)

The Omni Interviews

Holographic Brain (p. 133)

Ticknor & Fields. New York, New York, USA. 1984

Priestley, Joseph 1733–1804

English theologian and scientist

A successful pursuit of science makes a man the benefactor of all mankind and of every age.

Experiments and Observations on Different Kinds of Air (Volume 1)

The Preface (p. xxvii)

Thomas Pearson. Birmingham, England. 1790

Prigogine, Ilya 1917–2003

Russian-born Belgian physical chemist

Stengers, I. 1949–

Belgian philosopher

Science is part of the Darwinian struggle for life. It helps us to organize our experience. It leads us to economy of thought. Mathematical laws are nothing more than conventions useful for summarizing the results of possible experiments.

Order Out of Chaos

Chapter III 5. Ignoramus, Ignoramibus (p. 97)

Bantam Books. New York, New York, USA. 1984

Prior, Matthew 1664–1721

English poet and diplomat

Forc'd by reflective Reason I confess,
That human Science is uncertain guess.

In John Aikin

Select Works of the British Poets

Solomon, Book 1, l. 740

Longman, Hurst, Reese, Orme & Brown. London, England. 1820

Pritchett, V. S. 1900–97

English writer

A touch of science, even bogus science, gives an edge to
the superstitious tale.

The Living Novel and Later Appreciations

An Irish Ghost (p. 123)

Random House, Inc. New York, New York, USA. 1964

Prout, Curtis

No biographical data available

The study of science suggests the need for humility.

*Demand and Get the Best Health Care for You: An Eminent Doctor's
Practical Advice* (p. 148)

Faber & Faber. Boston, Massachusetts, USA. 1997

Quetelet, Adolphe 1794–1874

Belgian mathematician, astronomer, and statistician

The more progress physical sciences makes, the more
they tend to enter the domain of mathematics, which is a
kind of center to which they all converge. We may even
judge of the degree of perfection to which a science has
arrived by the facility with which it may be submitted to
calculation.

In E. Mailly

*Annual Report of the Board of Regents of the Smithsonian Institution,
1874*

Eulogy of Quetelet (p. 173)

Government Printing Office. Washington, D.C. 1875

Quine, Willard Van Orman 1908–2000

American logician and philosopher

Science is like a boat, which we rebuild plank by plank
while staying afloat in it. The philosopher and the scient-
ist are in the same boat.

In George Johnson

In the Palaces of Memory: How We Build the World Inside Our Heads

The End of Philosophy (p. 222)

Alfred A. Knopf. New York, New York, USA. 1991

Quinet, Edgar 1803–75

French historian

Science is Christian, not when it condemns itself to the
letter of things, but when, in the infinitely little, it discov-
ers as many mysteries and as much depth and power as
in the infinitely great.

Ultramontanism, or the Roman Church and Modern Society

The Roman Church and Science-Galileo

Lecture, May 7, 1844

Rabi, Isidor Isaac 1898–1988

Austrian-born American physicist

Science is a great game. It is inspiring and refreshing.
The playing field is the universe itself.

New York Times, October 28, 1964 (p. 38)**Ramsay, Sir William** 1852–1916

English chemist

No process is so perfect that there is not plenty of room
for improvement. There is no finality in science. And
that which today is a scientific toy may be to-morrow the
essential part of an important industry.

Essays Biological and Chemical

The Great London Chemists

Section I (p. 19)

Archibald Constable & Company Ltd. London, England. 1908

Randall, J. H.

No biographical data available

[Science] swept man out of his proud position as the cen-
tral figure and end of the universe, and made him a tiny
speck on a third-rate planet revolving about a tenth-rate
sun drifting in an endless cosmic ocean.

*The Making of the Modern Mind: A Survey of the Intellectual Back-
ground of the Present Age*

Chapter X (p. 226)

The Riverside Press. Cambridge, Massachusetts, USA. 1940

Randi, James 1928–

Canadian magician and scientific skeptic

I believe that science is best defined as a careful, dis-
ciplined, logical search for knowledge about any and
all aspects of the universe, obtained by examination of
the best available evidence and always subject to cor-
rection and improvement upon the discovery of better
evidence.

What's left is magic, and it doesn't work.

The Mask of Nostradamus

Chapter Five (p. 66)

Prometheus Books. Buffalo, New York, USA. 1993

Ravetz, J. R.

No biographical data available

The obsolescence of the conception of science as the pur-
suit of truth results from several changes in the social
activity of science. First, the heavy warfare with “theol-
ogy and metaphysics” is over. Although a few sharp skir-
mishes still occur, the attacks on the freedom of science
from this quarter are no longer significant. This is not so
much because of the undoubted victory of science over
its ancient contenders as for the deeper reason that the
conclusions of natural science are no longer ideologically
sensitive. What people, either the masses or the educated,
believe about the inanimate universe or the biological

aspects of humanity is not relevant to the stability of society as it was once thought to be.

Scientific Knowledge and Its Social Problems
Chapter I (pp. 200–201)
Clarendon Press. Oxford, England. 1971

Raymo, Chet 1936–

American physicist and science writer

Science cannot be a repository of ultimate faith: It is a fulcrum upon which we can hope to balance the treasure of our knowledge against the claims of ignorance.

The Virgin and the Mousetrap: Essays in Search of the Soul of Science
Chapter 21 (p. 199)
The Viking Press. New York, New York, USA. 1991

...science is a spider's web. Confidence in any one strand of the web is maintained by the tension and resiliency of the entire web.

The Virgin and the Mousetrap: Essays in Search of the Soul of Science
Chapter 16 (p. 144)
The Viking Press. New York, New York, USA. 1991

Science, like the play of children, satisfies a deep-seated need for escape from the boredom of fixity and the trauma of chaos.

Focal Point
Sky and Telescope, Volume 81, Number 5, May 1991 (p. 460)

Renan, Ernest 1823–92

French philosopher and Orientalist

The lofty serenity of science becomes possible only on the condition of impartial criticism, which without regard for the beliefs of a certain portion of humanity, handles its imperturbable instrument with the inflexibility of the geometrician, without anger and without pity. The critic never insults.

The Future of Science
Chapter XV (p. 257)
Roberts Brothers. Boston, Massachusetts, USA. 1893

...science is a religion, science alone will henceforth make the creeds, science alone can solve for men the eternal problems, the solutions of which his nature imperatively demands.

The Future of Science
Chapter V (p. 97)
Roberts Brothers. Boston, Massachusetts, USA. 1893

...science must pursue its road without minding with whom it comes in collision. Let the others get out of the way. If it appears to raise objections against received dogmas, it is not for science but the received dogmas to be on the defensive and to reply to the objections. Science should behave as if the world were free from preconceived opinions, and not heed the difficulties it starts.

The Future of Science
Chapter V (p. 83)
Roberts Brothers. Boston, Massachusetts, USA. 1893

A little true science is better than a great deal of bad science. One is less liable to error by confessing one's ignorance than by fancying that one knows a great many things one does not.

The Future of Science
Preface (p. xix)
Roberts Brothers. Boston, Massachusetts, USA. 1893

Reynolds, William C. 1933–2004

American mechanical engineer

Perkins, Harry C.

No biographical data available

Concepts form the basis for any science. These are ideas, usually somewhat vague (especially when first encountered), which often defy really adequate definition. The meaning of a new concept can seldom be grasped from reading a one-paragraph discussion. There must be time to become accustomed to the concept, to investigate it with prior knowledge, and to associate it with personal experience. Inability to work with details of a new subject can often be traced to inadequate understanding of its basic concepts.

Engineering Thermodynamics
Chapter 1 (p. 4)
McGraw-Hill Book Company, Inc. New York, New York, USA. 1977

Richards, Ivor Armstrong 1893–1979

English literary critic

For science, which is simply our most elaborate way of pointing to things systematically, tells us and can tell us nothing about the nature of things in any ultimate sense. It can never answer any question of the form: What is so and so? [I]t can only tell us how so and so behaves. And it does not attempt to do more than this.

Science and Poetry
Chapter V (pp. 52–53)
Kegan Paul, Trench, Trubner & Company Ltd. London, England. 1926

Richards, Theodore William 1868–1928

American chemist

Every student of Science, even if he cannot start his journey where his predecessors left off, can at least travel their beaten track more quickly than they could while they were clearing the way: and so before his race is run he comes to virgin forest and becomes himself a pioneer.

Nobel Lectures, Chemistry 1901–1921
Nobel lecture for award received in 1914
Atomic Weights (p. 280)
Elsevier Publishing Company. Amsterdam, Netherlands. 1966

Richardson, Samuel 1689–1761

English novelist

Vast is the field of Science. The more a man knows, the more he will find he has to know.

Sir Charles Grandison (Volume 1)

Letter 11

Oxford University Press, Inc. Oxford, England. 1972

Richet, Charles 1850–1935

French physiologist

To neglect science is to exclude fair hope, to condemn ourselves to live in a uniform monotonous existence.

The Natural History of a Savant

Chapter XIII (p. 147)

J.M. Dent & Sons Ltd. London, England. 1927

The future and the happiness of humanity depend on science.

The Natural History of a Savant

Chapter XIII (p. 155)

J.M. Dent & Sons Ltd. London, England. 1927

No one has the right to encumber science with premature assertions.

The Natural History of a Savant

Chapter X (p. 122)

J.M. Dent & Sons Ltd. London, England. 1927

All...believe in the sovereignty of science; which like the grammar of Martine, rules even over kings, and imperiously subjects them to its laws.

The Natural History of a Savant

Chapter II (p. 13)

J.M. Dent & Sons Ltd. London, England. 1927

Ridley, Matt 1958–

English science writer

The fuel on which science runs is ignorance. Science is like a hungry furnace that must be fed logs from the forests of ignorance that surround us. In the process, the clearing we call knowledge expands, but the more it expands, the longer its perimeter and the more ignorance comes into view.... A true scientist is bored by knowledge; it is the assault on ignorance that motivates him — the mysteries that previous discoveries have revealed.

The forest is more interesting than the clearing.

Genome: The Autobiography of a Species in 23 Chapters

Chapter 20 (p. 271)

HarperCollins Publishers. New York, New York, USA. 2000

Robinson, Sir Robert 1886–1975

English chemist

Science cannot be based on dogma or authority of any kind, nor on any institution or revelation, unless indeed it be of the Book of Nature that lies open before our eyes. We need not dwell on the processes of acquiring knowledge by observation, experiment, and inductive and deductive reasoning. The study of scientific method both in theory and practice is of great importance. It is inherent in the philosophy that the record may be imperfect and the conceptions erroneous; the potential fallibility of our science is not only acknowledged but also insisted upon.

Science and the Scientist

Nature, Volume 176, Number 4479, September 3, 1955 (p. 434)

Romanoff, Alexis Lawrence 1892–1980

Russian soldier and scientist

Pure science has no part in politics.

Ross, Sir Ronald 1857–1932

English bacteriologist

We must not accept any speculations merely because they now appear pleasant, flattering, or ennobling to us. We must be content to creep upwards step by step, planting each foot on the firmest finding of the moment, using the compass and such other instruments as we many have, observing without either despair or contempt the clouds and precipices above and beneath us. Especially our duty at present is to better our present foothold; to investigate; to comprehend the forces of nature, to set our State rationally in order; to stamp down disease in body, mind, and government; to lighten the monstrous misery of our fellows, not by windy dogmas, but by calm science.

In Sir Richard Arman Gregory

Discovery; or, The Spirit and Service of Science

Chapter VIII (p. 233)

Macmillan & Company Ltd. London, England. 1918

Roszak, Theodore 1933–

American social critic

Science *uses* the senses but does not *enjoy* them; finally buries them under theory, abstraction, mathematical generalization

Where the Wasteland Ends

Chapter 9 (p. 280)

Doubleday & Company. Garden City, New York, USA. 1973

...one of the great pitfalls of science is the fallacy of misplaced concreteness. Scientists seem to prefer questionable explanations to no explanation at all.

Does Somatic Mutation Cause Most Cancers?

Journal of the National Cancer Institute, Volume 64, Number 5. May 1980 (p. 999)

Ruse, Michael 1940–

English historian and philosopher of science

Science, like most human cultural phenomena, has evolved. What was allowable in the early nineteenth century is not necessarily allowable in the late twentieth century. Specifically, science today does not break with law. And this is what counts for us. We want criteria of science for today, not for yesterday.

Response to the Commentary: Pro Justice

Science, Technology and Human Values, Volume 7, Number 41, Fall 1982 (p. 21)

Ruskin, John 1819–1900

English writer, art critic, and social reformer

Science does its duty, not in telling us the causes of spots in the sun, but in explaining to us the laws of our own life, and the consequences of their violation.

In Henry Attwell

Thoughts from Ruskin

33 (p. 29)

Longmans, Green & Company, New York, New York, USA; 1901

Russell, Bertrand Arthur William 1872–1970

English philosopher, logician, and social reformer

Science, ever since the time of the Arabs, has had two functions: (1) to enable us to know things, and (2) to enable us to do things.

The Impact of Science on Society

Chapter II (p. 18)

Simon & Schuster. New York, New York, USA. 1938

Science has always prided itself on being empirical and believing only what could be verified.

In Robert E. Egner and Lester E. Denonn (eds.)

The Basic Writings of Bertrand Russell

Limitations on the Scientific Method (p. 623–24)

Simon & Schuster. New York, New York, USA. 1961

Even if the open windows of science at first make us shiver after the cozy indoor warmth of traditional humanizing myths, in the end the fresh air brings vigor, and the great spaces have a splendor of their own.

What I Believe

Chapter I (p. 14)

E.P. Dutton & Company. New York, New York, USA. 1925

In science men have discovered an activity of the very highest value in which they are no longer, as in art, dependent for progress upon the appearance of continually greater genius, for in science the successors stand upon the shoulders of their predecessors; where one man of supreme genius has invented a method, a thousand lesser men can apply it.

A Free Man's Worship and Other Essays

Chapter 3 (first published as "The Free Man's Worship" in December 1903)

George Allen & Unwin Ltd. London, England. 1917

A life devoted to science is therefore a happy life, and its happiness is derived from the very best sources that are open to dwellers on this troubled and passionate planet.

Mysticism and Logic and Other Essays

Chapter II, Section II (p. 45)

Longmans, Green & Company London, England. 1925

Sagan, Carl 1934–96

American astronomer and author

There is no other species on Earth that does science. It is, so far, entirely a human invention, evolved by natural selection in the cerebral cortex for one simple reason: it works. It is not perfect. It can be misused. It is only a tool. But it is by far the best tool we have, self-correcting, ongoing, applicable to everything.

Cosmos

Chapter XIII (p. 333)

Random House, Inc. New York, New York, USA. 1980

One of the great commandments of science is, "Mistrust arguments from authority."

The Demon-Haunted World: Science as a Candle in the Dark

Chapter 2 (p. 28)

Random House, Inc. New York, New York, USA. 1995

Science is an attempt, largely successful, to understand the world, to get a grip on things, to get hold of ourselves,

to steer a safe course. Microbiology and meteorology now explain what only a few centuries ago was considered sufficient cause to burn women to death.

The Demon-Haunted World: Science as a Candle in the Dark
Chapter 2 (p. 26)

Random House, Inc. New York, New York, USA. 1995

Science involves a seemingly self-contradictory mix of attitudes: On the one hand, it requires an almost complete openness to all ideas, no matter how bizarre and weird they sound, a propensity to wonder... But at the same time, science requires the most vigorous and uncompromising skepticism, because the vast majority of ideas are simply wrong, and the only way you can distinguish the right from the wrong, the wheat from the chaff, is by critical experiment and analysis.

Wonder and Skepticism

Skeptical Inquirer, Jan/Feb 1995 (p. 24)

[Science is not popular] is...the fault of the educational system. We do not teach how to think. This is a very serious failure that may even, in a world rigged with 60,000 nuclear weapons, compromise the human future.

The Burden of Skepticism

Skeptical Inquirer, Fall 1987

Science demands a tolerance for ambiguity. Where we are ignorant, we withhold belief. Whatever annoyance the uncertainty engenders serves a higher purpose: It drives us to accumulate better data. This attitude is the difference between science and so much else. Science offers little in the way of cheap thrills. The standards of evidence are strict. But when followed they allow us to see far, illuminating even a great darkness.

Pale Blue Dot: A Vision of the Human Future in Space
Chapter 20 (p. 365)

Random House, Inc. New York, New York, USA. 1994

Reasoned disputation is the lifeblood of science — as is, sadly, infrequently the case in the intellectually more anemic arena of politics.

The Cosmic Connection: An Extraterrestrial Perspective
Preface (p. ix)

Dell Publishing, Inc. New York, New York, USA. 1975

Science — pure science, science not for any practical application but for its own sake — is a deeply emotional matter for those who practice it, as well as for those non-scientists who every now and then dip in to see what's been discovered lately.

The Demon-Haunted World: Science as a Candle in the Dark
Chapter 19 (p. 330)

Random House, Inc. New York, New York, USA. 1995

Cutting off fundamental, curiosity-driven science is like eating the seed corn. We may have a little more to eat next winter, but what will we plant so we and our children will have enough to get through the winters to come?

The Demon-Haunted World: Science as a Candle in the Dark
Chapter 23 (p. 400)

Random House, Inc. New York, New York, USA. 1995

It is a supreme challenge for the popularizer of science to make clear the actual, tortuous history of its great discoveries and the misapprehensions and occasional stubborn refusal by its practitioners to change course.

The Demon-Haunted World: Science as a Candle in the Dark
Chapter 1 (p. 22)

Random House, Inc. New York, New York, USA. 1995

Science is far from a perfect instrument of knowledge. It's just the best we have.

The Demon-Haunted World: Science as a Candle in the Dark
Chapter 2 (p. 27)

Random House, Inc. New York, New York, USA. 1995

Sandage, Allan 1926–

American astronomer

Science is the only self-correcting human institution, but it also is a process that progresses only by showing itself to be wrong.

In Alan Lightman and Roberta Brawer

Origins: The Lives and Worlds of Modern Cosmologists
Allan Sandage (p. 82)

Harvard University Press. Cambridge, Massachusetts, USA. 1990

Santayana, George (Jorge Augustín Nicolás Ruiz de Santillana) 1863–1952

Spanish-born American philosopher

Science is a half-way house between private sensation and universal vision.

The Life of Reason; or The Phases of Human Progress

Part V, Chapter I (p. 385)

Charles Scribner's Sons. New York, New York, USA. 1953

Sarnoff, David 1891–1971

Russian-born American broadcasting executive

At their best, at their most creative, science and engineering are attributes of liberty — noble expressions of man's God-given right to investigate and explore the universe without fear of social or political or religious reprisals.

In Emily Davie (ed.)

Profile of America: An Autobiography of the U.S.A.

Electronics — Today and Tomorrow

Crowell. New York, New York, USA. 1954

Scatchard, George 1892–1973

American physical chemist

Since science progresses by building block upon block, it is important to examine the structure from time to time to make sure that there are no badly fitted blocks, none which are being made to carry more than their proper capacity and none which might be made more useful.

Equilibrium Thermodynamics and Biological Chemistry

Science, Volume 95, Number 2454, January 9, 1942 (p. 27)

Schiebinger, Londa 1952–

Science historian

Only recently have we begun to appreciate that who does science affects the kind of science that gets done. How, then, has our knowledge of nature been influenced by struggles determining who is included in science and who is excluded, which projects are pursued and which ignored, whose experiences are validated and whose are not, and who stands to gain in terms of wealth or well-being and who does not?

Nature's Body: Gender in the Making of Modern Science

Introduction (p. 3)

Beacon Press. Boston, Massachusetts, USA. 1993

Schiller, Ferdinand Canning Scott 1864–1937

English philosopher

To Archimedes once came a youth, who for knowledge was thirsting,

Saying, "Initiate me into the science divine,

Which for my country has borne forth fruit of such wonderful value,

And which the walls of the town 'gainst the Sambuca protects.

"Calls't thou the science divine? It is so," the wise man responded;

"But it was so, my son, ere it avail'd for the town.

Wouldst thou have fruit from her only, e'en mortals wit that can provide thee;

Wouldst thou the goddess obtain, seek not the woman in Her!"

In Edgar Alfred Bower

The Poems of Schiller

Archimedes and the Student (p. 262)

John W. Parker & Son. London, England. 1851

Science: To one, she is the exalted and heavenly Goddess; to another she is a capable cow which keeps him supplied with butter.

In Folke Doving

Knowledge and Ignorance: Essays on Lights and Shadows

Chapter Ten (p. 141)

Praeger. Westport, Connecticut, USA. 1998

Schneer, Cecil J. 1923–

American science historian and mineralogist

The primary importance of science and the characteristic that distinguished it from other philosophies and arts is its usefulness. The remarkable thing about science is the extent to which nature and the world appear to adhere to the rules and constructions of science.

The Evolution of Physical Science

Grove Press, Inc. New York, New York, USA. 1960

Schrödinger, Erwin 1887–1961

Austrian theoretical physicist

...there is a tendency to forget that all science is bound up with human culture in general, and that scientific findings, even those which at the moment appear the most advanced and esoteric and difficult to grasp, are meaningless outside their cultural context.

Are There Quantum Jumps?

The British Journal for the Philosophy of Science, Volume 3, 1952 (p. 109)

A theoretical science unaware that those of its constructs considered relevant and momentous are destined eventually to be framed in concepts and words that have a grip on the educated community and become part and parcel of the general world picture — a theoretical science, I say, where this is forgotten, and where the initiated continue musing to each other in terms that are, at best, understood by a small group of close fellow travelers, will necessarily be cut off from the rest of cultural mankind; in the long run it is bound to atrophy and ossify however virulently esoteric chat may continue within its joyfully isolated groups of experts.

Are There Quantum Jumps?

The British Journal for the Philosophy of Science, Volume 3, 1952 (p. 110)

...the scientific picture of the real world around me is very deficient. It gives a lot of factual information, puts all our experience in a magnificently consistent order, but it is ghastly silent about all and sundry that is really near to our heart, that really matters to us. It cannot tell us a word about red and blue, bitter and sweet, physical pain and physical delight; it knows nothing of beautiful and ugly, good or bad, God and eternity. Science sometimes pretends to answer questions in these domains, but the answers are very often so silly that we are not inclined to take them seriously.

Nature and the Greeks

Chapter VII (p. 93)

At The University Press. Cambridge, England. 1954

Schwartz, John 1941–

American theoretical physicist

Science is a long movie, and the news media generally take mere snapshots.

If You Seek the Truth, Don't Trash the Science

Washington Post, 21 February, 1999 (p. B-1)

Seifriz, William

No biographical data available

Let me give full credit to the young and enthusiastic research workers, full of high-energy phosphate bonds. What I deplore is their attitude of mind. Science has become tough and students learn to accept it that way.

A New University

Science, Volume 120, Number 3107, 16 July 1954 (p. 89)

Shapiro, Harry L. 1902–90

American physical anthropologist

Science, like organic life, has ramified by expanding into unoccupied areas and then adapting itself to the special requirements encountered there.

Symposium on the History of Anthropology, the History and Development of Physical Anthropology

American Anthropologist, Volume 61, Number 3, 1959 (p. 371)

...as the diversified forms of animals, plants, and insects make evident by their morphology and their function the characteristics of ecological niches whose very existence might otherwise escape notice, so the diversity of techniques and concepts of scientific specialties by their very formulation reveal aspects of nature we would not have suspected. Anthropology, like other branches of science, has also embodied in its structure whole new worlds rich in insights into the development and nature of man.

Symposium on the History of Anthropology, the History and Development of Physical Anthropology
American Anthropologist, Volume 61, Number 3, 1959 (p. 371)

Shapiro, Robert 1935–

American DNA researcher and author

Science is not a given set of answers but a system for obtaining answers. The method by which the search is conducted is more important than the nature of the solution. Questions need not be answered at all, or answers may be provided and then changed. It does not matter how often or how profoundly our view of the universe alters, as long as these changes take place in a way appropriate to science. For the practice of science, like the game of baseball, is covered by definite rules.

Origins: A Skeptic's Guide to the Creation of Life on Earth
Chapter One (p. 33)
Summit Books. New York, New York, USA. 1986

Science is not the place for those who want certainty, who wish the truths they learned in childhood to reassure them in their old age. Surprises occur, and alter our perception of reality — for example, the discovery of radioactivity or the genetic role of DNA.... When we treat each new observation and theory with skepticism, retaining our doubt until it has passed the test of experience, and then place it alongside our other acquisitions with the care of a collector who has acquired a valued object after a long search, then we can experience the joy of science. It is this joy, rather than an insistence on an immediate answer, that is likely to be our reward as we continue to search for the origin of life. But even in this conclusion, let us exercise some caution. We may be closer to the answer than we think.

Origins: A Skeptic's Guide to the Creation of Life on Earth
Chapter Thirteen (p. 312)
Summit Books. New York, New York, USA. 1986

Shaw, George Bernard 1856–1950

Irish comic dramatist and literary critic

Science becomes dangerous only when it imagines that it has reached its goal.

The Doctor's Dilemma

Preface on Doctors

The Latest Theories (p. xc)

Brentano's. New York, New York, USA. 1920

Science is always simple and always profound. It is only the half-truths that are dangerous.

The Doctor's Dilemma

Act I (p. 24)

Brentano's. New York, New York, USA. 1920

Shelley, Mary 1797–1851

English Romantic writer

You seek for knowledge and wisdom, as I once did; and I ardently hope that the gratification of your wishes may not be a serpent to sting you, as mine has been.

Frankenstein

Letter 4 (p. 27)

Running Press. Philadelphia, Pennsylvania, USA. 1990

The ambition of the enquirer seemed to limit itself to the annihilation of those visions on which my interest in science was chiefly founded. I was required to exchange chimeras of boundless grandeur for realities of little worth.

Frankenstein

Chapter 3 (p. 38)

Running Press. Philadelphia, Pennsylvania, USA. 1990

Life and death appeared to me ideal bounds, which I should first break through, and pour a torrent of light into our dark world.

Frankenstein

Chapter 4 (p. 43)

Running Press. Philadelphia, Pennsylvania, USA. 1990

“Man,” I cried, “how ignorant art thou in thy pride of wisdom!”

Frankenstein

Chapter 23 (p. 141)

Running Press. Philadelphia, Pennsylvania, USA. 1990

Shelley, Percy Bysshe 1792–1822

English poet

The cultivation of those sciences which have enlarged the limits of the empire of man over the external world, has, for want of the poetical faculty, proportionally circumscribed those of the internal world; and man, having enslaved the elements, remains himself a slave.

In Fanny Delisle

A Study of Shelley's "A Defence of Poetry" (Volume 1)

Line 1223 (p. 138)

Institute für Englische Sprache und Literatur. Salzburg, Austria. 1974

Shermer, Michael 1954–

American science writer

What separates science from all other human activities (and morality has never been successfully placed on a scientific basis) is its commitment to the tentative nature of all its conclusions. There are no final answers in science, only varying degrees of probability. Even scientific “facts” are just conclusions confirmed to such an extent that it would be reasonable to offer temporary agreement, but that assent is never final.

Why People Believe Weird Things: Pseudoscience, Superstition, and Other Confusions of Our Time

Part 2, Chapter 8 (p. 124)
Henry H. Holt. New York, New York, USA. 2002

Science is not the affirmation of a set of beliefs but a process of inquiry aimed at building a testable body of knowledge constantly open to rejection or confirmation. In science, knowledge is fluid and certainty fleeting. That is at the heart of its limitations. It is also its greatest strength.

Why People Believe Weird Things: Pseudoscience, Superstition, and Other Confusions of Our Time
Part 2, Chapter 8 (p. 124)
Henry H. Holt. New York, New York, USA. 2002

Shu, Frank H.

American theoretical astrophysicist

Science has a beauty and uplifting spirit which rivals any of the other cultural attainments of humanity. This aesthetic response arose in a recent congressional hearing. When asked how particle physics contributes to the defense of our country, Robert Wilson replied that it makes the country worth defending.

The Physical Universe: An Introduction to Astronomy (p. 101)
University Science Books. Mill Valley, California, USA. 1982

Siegel, Eli 1902–78

American philosopher, poet, critic, and founder of Aesthetic Realism

Science comes from the knowing that you want to know.
Damned Welcome

Aesthetic Realism, Maxims, Part One, #298 (p. 68)
Definition Press. New York, New York, USA. 1972

Silver, Brian L.

Israeli professor of physical chemistry

One point is incontestable: the “truth” of science must always remain open to critical scrutiny and will sometimes have the status of a beauty queen: looks good today, but next year she’ll be dethroned. That is because the real test of a scientific theory is not whether it is “true.” The real test is whether it works.

The Ascent of Science
Part I, Chapter 2 (p. 24)
Solomon Press Book. New York, New York, USA. 1998

Science is not a harmless intellectual pastime. In the last two centuries we have moved from being simply observers of nature to being, in a modest but growing way, its controller. Concomitantly, we have occasionally disturbed the balance of nature in ways that we did not always understand. Science has to be watched. The layman can no longer afford to stand to one side, ignorant of the meaning of advances that will determine the kind of world that his children will inhabit—and the kind of children that he will have. Science has become part of the human race’s way of conceiving of and manipulating its future. The manipulation of the future is not a question to be left to philosophers. The answers can affect the

national budget, the health of your next child, and the long-term prospects for life on this planet.

The Ascent of Science
Preface (p. xiv)
Solomon Press Book. New York, New York, USA. 1998

Science, man’s greatest intellectual adventure, has rocked his faith and engendered dreams of a material Utopia. At its most abstract, science shades into philosophy; at its most practical, it cures disease. It has eased our lives and threatened our existence. It aspires, but in some very basic ways fails, to understand the ant and the Creation, the infinitesimal atom and the mind-bludgeoning immensity of the cosmos. It has laid its hand on the shoulders of poets and politicians, philosophers and charlatans. Its beauty is often apparent only to the initiated, its perils are generally misunderstood, its importance has been both over- and underestimated, and its fallibility, and that of those who create it, is often glossed over or malevolently exaggerated.

The Ascent of Science
Preface (p. xiii)
Solomon Press Book. New York, New York, USA. 1998

...the history of science may be a trail littered with broken theories and discarded concepts, science is also a triumph of reason, luck, and above all imagination. There are few more successful, exciting, or strange journeys.

The Ascent of Science
Preface (p. xiv)
Solomon Press Book. New York, New York, USA. 1998

Simon, Herbert Alexander 1916–2001

American social scientist

The central task of a natural science is to make the wonderful commonplace: to show that complexity, correctly viewed, is only a mask for simplicity; to find pattern hidden in apparent chaos.

The Sciences of the Artificial
Chapter I (p. 1)
The MIT Press. Cambridge, Massachusetts, USA. 1969

Simpson, George Gaylord 1902–84

American paleontologist

The important distinction between science and those other systematizations [*i.e.*, art, philosophy, and theology] is that science is self-testing and self-correcting. Here the essential point of science is respect for objective fact. What is correctly observed must be believed...the competent scientist does quite the opposite of the popular stereotype of setting out to prove a theory; he seeks to disprove it.

Notes on the Nature of Science
Notes on the Nature of Science by a Biologist (p. 9)
Harcourt, Brace & World, Inc. New York, New York, USA. 1962

As for the scope of science, it includes everything known to exist or to happen in the material universe. Since the

arts, philosophy, and theology do exist in the material universe, they too are within the scope of science and can properly be studied as psychological, anthropological, and biological phenomena.

Notes on the Nature of Science

Notes on the Nature of Science by a Biologist (pp. 11–12)

Harcourt, Brace & World, Inc. New York, New York, USA. 1962

Singer, Charles 1876–1960

Historian of science and medicine

To succeed in science it is necessary to receive the tradition of those who have gone before us. In science, more perhaps than in any other study, the dead and the living are one.

In Lloyd William Taylor

Physics: the Pioneer Science (Volume 1)

Chapter 15 (p. 182)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

Slosson, Edwin E. 1865–1929

American chemist and journalist

Science consists in learning from nature how to surpass nature.

Spun Logs

The Scientific Monthly, December 1925

Most people think of science as a serious and solemn thing, a strain upon the strongest intellect.

So it is for the pioneers of scientific progress, but not for those who merely follow along behind.

Chats on Science

Introduction (p. 1)

G. Bell & Sons Ltd. London, England. 1924

Smith, Adam 1723–1790

Scottish moral philosopher and founder of modern economic theory

Science is the great antidote to the poison of enthusiasm and superstition.

An Inquiry into the Nature and Causes of the Wealth of Nations

Book V, Chapter I, part III, Section III (p. 748)

The Modern Library. New York, New York, USA. 1937

Smith, Henry Preserved 1847–1927

American Biblical scholar

More and more, science has become not only increasingly necessary as a foundation for professional skill, but has come to be regarded as the most valuable instrument of culture.

In Lloyd William Taylor

Physics: The Pioneer Science (Volume 1)

Chapter 28 (p. 395)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

...whether as the new salvation or the new superstition, science has modeled the whole life of the modern world.... All modern production of wealth, all contemporary life, depend on the knowledge of nature acquired by science. But more than that, religion, politics,

philosophy, art and literature have capitulated to science, or at least receded before her. There is no department of human activity today untouched with the spirit of experiment and of mathematics.

A History of Modern Culture (Volume 1)

Epilogue (p. 606)

Peter Smith. Gloucester, Massachusetts, USA. 1957

Smith, Sydney 1771–1845

English clergyman, writer, and wit

Science is his forte, and omniscience his foible.

To recognize with science that beyond our horizon lies impenetrable mystery will serve but to increase our reverence for the glory of the whole.

Through Science to God

Chapter I (p. 5)

The Macmillan Company. New York, New York, USA. 1936

Snow, Charles Percy 1905–80

English novelist and scientist

But after the idyllic years of science, we passed into a tempest of history; and by an unfortunate coincidence, we passed into a technological tempest, too.

In Paul C. Opler and Herman A. Estrin (eds.)

The New Scientist: Essays on the Methods and Value of Modern Science

The Moral Un-Neutrality of Science (p. 135)

Soddy, Frederick 1877–1956

English chemist

As science advances and most of the more accessible fields of knowledge have been gleaned of their harvest, the need for more and more powerful and elaborate appliances and more and more costly materials ever grows.

Science and Life

Science and the State (p. 60)

E.P. Dutton & Company, Inc. New York, New York, USA. 1920

Somerville, Mary 1780–1872

English mathematician

Science, regarded as the pursuit of truth, which can only be attained by patient and unprejudiced investigation,

wherein nothing is too great to be attempted, nothing so minute as to be justly disregarded, must ever afford occupation of consummate interest and subject of elevated meditation.

On the Connexion of the Physical Sciences
Section I (p. 2)
John Murray. London, England. 1834

Sorokin, Pitirim A. 1889–1968
Russian-born American sociologist

Any science, at any moment of its historical existence, contains not only truth but also much that is half-truth, sham-truth, and plain error.

Fads and Foibles in Modern Sociology
Preface (p. v)
Henry Regnery. Chicago, Illinois, USA. 1956

Spark, Muriel 1918–2006
Scottish novelist

Art and religion first; then philosophy; lastly science. That is the order of the great subjects of life, that's their order of importance.

The Prime of Miss Jean Brodie
Chapter 2 (p. 39)
Macmillan & Company Ltd. London, England. 1961

Spencer, Herbert 1820–1903
English social philosopher

What knowledge is of most worth? — the uniform reply is — Science. This is the verdict on all counts.

Education: Intellectual, Moral, and Physical
Chapter I (p. 84)
A.L. Fowle. New York, New York, USA. 1860

For direct self-preservation, or the maintenance of life and health, the all-important knowledge is — Science. For the indirect self-preservation which we call gaining a livelihood, the knowledge of greatest value is — Science. For that interpretation of national life, past and present, without which the citizen cannot rightly regulate his conduct, the indispensable key is — Science. Alike for the most perfect production and highest enjoyment of art in all its forms, the needful preparation is still — Science. And for the purposes of discipline — intellectual, moral, religious — the most efficient study is, once more — Science.

Education: Intellectual, Moral, and Physical
Chapter I (pp. 84–85)
A.L. Fowle. New York, New York, USA. 1860

Only when Genius is married to Science, can the highest results be produced.

Education: Intellectual, Moral, and Physical
Chapter I (p. 70)
A.L. Fowle. New York, New York, USA. 1860

Devotion to science is a tacit worship — a tacit recognition of worth in the things one studies; and by implication

in their cause. It is not a mere lip-homage, but a homage expressed in actions — not a mere professed respect, but a respect proved by the sacrifice of time, thought, and labour.

In Sir Richard Arman Gregory
Discovery; or, The Spirit and Service of Science
Chapter III (p. 41)
Macmillan & Company Ltd. London, England. 1918

Spencer-Brown, George 1923–
English mathematician and polymath

Left to itself, the world of science slowly diminishes as each result classed as scientific has to be reclassified as anecdotal or historical... Science is a continuous living process; it is made up of activities rather than records; and if the activities cease it dies.

Probability and Scientific Inference
Chapter XV (p. 107)
Longmans, Green & Company. London, England. 1957

Stanislaus, Leszczynski (Stanislaus I) 1677–1766
King of Poland

Science when well digested is nothing but good sense and reason.

Maxims
No. 43
Publisher undetermined

Stansfield, William D. 1930–
American biologist

Most scientific theories, however, are ephemeral. Exceptions will likely be found that invalidate a theory in one or more of its tenets. These can then stimulate a new round of research leading either to a more comprehensive theory or perhaps to a more restrictive (*i.e.*, more precisely defined) theory. Nothing is ever completely finished in science; the search for better theories is endless. The interpretation of a scientific experiment should not be extended beyond the limits of the available data. In the building of theories, however, scientists propose general principles by extrapolation beyond available data. When former theories have been shown to be inadequate, scientists should be prepared to relinquish the old and embrace the new in their never-ending search for better solutions. It is unscientific, therefore, to claim to have “proof of the truth” when all that scientific methodology can provide is evidence in support of a theory.

The Science of Evolution
Introduction (p. 8)
Macmillan Publishing Company. New York, New York, USA. 1977

Stenger, Victor J. 1935–
American physicist

No one ever said science was easy, and nobody, scientist or not, should be expected to fall over and play dead when a challenge to existing knowledge is made. If a new

idea has sufficient merit, it should ultimately overcome any resistance, no matter how strong.... Resistance to new ideas is part of the process of science. A worthy new idea must overcome barriers of doubt and skepticism, and even occasional irrational objections. But if an idea has merit, it will eventually climb over these barriers.

Physics and Psychics: The Search for a World Beyond the Senses
Chapter 3 (p. 65)

Prometheus Books. Buffalo, New York, USA. 1990

Sterne, Laurence 1713–68

English novelist and humorist

Sciences may be learned by rote, but Wisdom not.

The Life and Opinions of Tristram Shandy, Gentleman and A Sentimental Journey Through France and Italy (Volume 1)

Book V, Chapter XXXII (p. 356)

Macmillan & Company Ltd. London, England. 1900

Stevenson, Robert Louis 1850–94

Scottish essayist and poet

Science writes of the world as if with the cold finger of a starfish; it is all true; but what is it when compared to the reality of which it discourses, where hearts beat high in April, and death strikes, and hills totter in the earthquake, and there is a glamour over all the objects of sight, and a thrill in all noises for the ear, and Romance herself has made her dwelling among men? So we come back to the old myth, and hear the goat-footed piper making the music which is itself the charm and terror of things; and when a glen invites our visiting footsteps, fancy that Pan leads us thither with a gracious tremolo; or when our hearts quail at the thunder of the cataract, tell ourselves that he has stamped his hoof in the nigh thicket.

Virginibus Puerisque and Familiar Studies of Men and Books

Pan's Pipe (p. 108)

J.M. Dent & Sons Ltd. London, England. No date

Steward, J. H.

No biographical data available

It is the unhappy lot of science that it must clear the ground of flimsy and fanciful structures built upon false premises and errors of fact before it can build anew.

Annual Report of the Board of Regents of the Smithsonian Institution, 1936

Petroglyphs of the United States (p. 407)

Government Printing Office. Washington, D.C. 1937

Stewart, Ian 1945–

English mathematician and science writer

Science is a collective activity, and the actions of each individual resonate and interact with those of the others in a pattern so gigantic that we can no more comprehend the whole than a blood cell can comprehend how its host feels when it mashes a finger in a car door.

The Problems of Mathematics

Chapter 20 (p. 234)

Oxford University Press, Inc. Oxford, England. 1987

Stoker, Bram 1847–1912

English writer

There are mysteries which men can only guess at, which age by age they may solve only in part.

Dracula

Chapter XV (p. 217)

Ameron House. Mattituck, New York, USA. No date

Strutt, John William (Lord Rayleigh) 1842–1919

English physicist

There are some great men of science whose charm consists in having said the first word on a subject, in having introduced some new idea which has proved fruitful; there are others whose charm consists perhaps in having said the last word on the subject, and who have reduced the subject to logical consistency and clearness.

Life of John William Strutt: Third Baron Rayleigh

Chapter XVII (p. 310)

University of Wisconsin Press. Madison, Wisconsin, USA. 1968

Sullivan, John William Navin 1886–1937

Irish mathematician

Science, like everything else that man has created, exists, of course, to gratify certain human needs and desires. The fact that it has been steadily pursued for so many centuries, that it has attracted an ever-wider extent of attention, and that it is now the dominant intellectual interest of mankind, shows that it appeals to a very powerful and persistent group of appetites.

The Limitations of Science

Introduction (p. 7)

New American Library. New York, New York, USA. 1956

...science deals with but a partial aspect of reality, and there is no faintest reason for supposing that everything science ignores is less real than what it accepts... Why is it that science forms a closed system? Why is it that the elements of reality it ignores never come in to disturb it? The reason is that all the terms of physics are defined in terms of one another. The abstractions with which physics begins are all it ever has to do with.

The Limitations of Science

Chapter 6, Section IV (p. 147)

New American Library. New York, New York, USA. 1956

Swann, William Francis Gray 1884–1962

Anglo-American physicist

The forerunners in the march of science do not often come heralded by much ceremony suggestive of the power that lies behind them. Often in apparent trivialities do they reveal themselves — trivialities so void of spectacular content that but few can be found who deem it worth while to listen to their story.

Annual Report of the Board of Regents of the Smithsonian Institution, 1928

Three Centuries of Natural Philosophy (p. 237)

Government Printing Office. Washington, D.C. 1929

Swenson, Jr., Lloyd S.

No biographical data available

The interplay of thought and action, theory and experiment, individuals and institutions in science is both comic and tragic, despite the actors' common belief that their lines are delivered as if for a triumphal pageant rather than a tragicomic play.

Genesis of Relativity: Einstein in Context

Preface (p. xiii)

Burt Franklin & Company, Inc. New York, New York, USA. 1979

Tatishchev, Vasili Nikitich 1686–1750

Russian historian and geographer

Freedom is not an essential and basic condition for the growth of science; the care and diligence of government authorities are the most important conditions for this development.

USA

OMNI Magazine, Volume 3, Number 1, October 1980 (p. 41)

Teall, J. J. Harris 1849–1924

British geologist

The chief glory of science is, not that it produces an amelioration of the conditions under which we live, but that it continually enlarges our view, introduces new ideas, new ways of looking at things, and thus contributes in no small degree to the intellectual development of the human race.

Annual Report of the Board of Regents of the Smithsonian Institution, 1902

The Evolution of Petrological Ideas (p. 288)

Government Printing Office. Washington, D.C. 1903

Teller, Edward 1908–2003

Hungarian-born American nuclear physicist

Science introduces consistency and simplicity into a world that without them appears confused and random.

Better a Shield than a Sword: Perspectives in Defense and Technology

Chapter 29 (p. 215)

The Free Press. New York, New York, USA. 1987

Science, like music or art, is not something that can or should be practiced by everybody. But we want all children to be able to enjoy music, to be able to tell good music from poor music, so we teach them to appreciate music in a discriminating manner. That should be the aim in science education for the nonscientist.

Better a Shield than a Sword: Perspectives in Defense and Technology

Chapter 28 (p. 208)

The Free Press. New York, New York, USA. 1987

Teller, Edward 1908–2003

Hungarian-born American nuclear physicist

Teller, Wendy

No biographical data available

If there ever was a misnomer, it is "exact science." Science has always been full of mistakes. The present day is

no exception. And our mistakes are good mistakes; they require a genius to correct them. Of course, we do not see our own mistakes.

Conversations on the Dark Secrets of Physics

Chapter 3 (p. 37)

Plenum Press. New York, New York, USA. 1991

Temple, Frederick 1821–1902

Anglican prelate and archbishop of Canterbury

The regularity of nature is the first postulate of Science; but it requires the very slightest observation to show us that, along with this regularity, there exists a vast irregularity which Science can only deal with by exclusion from its province.

The Relations Between Religion and Science (p. 99)

Macmillan & Company. New York, New York, USA. 1884

Temple, G.

No biographical data available

...any serious examination of the basic concepts of any science is far more difficult than the elaboration of their ultimate consequences.

Turning Points in Physics: A Series of Lectures Given at Oxford

University in Trinity Term, 1958 (p. 68)

Interscience Publishers. New York, New York, USA. 1959

Tennyson, Alfred (Lord) 1809–92

English poet

Science moves, but slowly, slowly, creeping on from point to point.

Alfred Tennyson's Poetical Works

Locksey Hall, Stanza 60

Oxford University Press, Inc. London, England. 1953

...nourishing a youth sublime

With the fairy tales of science, and the long result of time.

Alfred Tennyson's Poetical Works

Locksley Hall, Stanza 6

Oxford University Press, Inc. London, England. 1953

Thom, René 1923–2002

French mathematician

If we admit a priori that science is just acquisition of knowledge, that is, building an inventory of all observable phenomena in a given disciplinary domain — then, obviously, any science is empirical.

In J. Casti and A. Karlqvist (eds.)

Newton to Aristotle: Toward a Theory of Models for Living Systems

Causality and Finality in Theoretical Biology

Thomas, Lewis 1913–93

American physician and biologist

You either have science or you don't, and if you have it you are obliged to accept the surprising and disturbing pieces of information, even the overwhelming and upheaving ones, along with the neat and promptly useful bits. It is like that.

The Medusa and the Snail: More Notes of a Biology Watcher
The Hazard of Science (p. 73)
The Viking Press. New York, New York, USA. 1979

The central task of science is to arrive, stage by stage, at a clearer comprehension of nature, but this does not mean, as it is sometimes claimed to mean, a search for mastery over nature.

Late Night Thoughts on Listening to Mahler's Ninth Symphony
Humanities and Science (p. 153)
Viking Press. New York, New York, USA. 1983

The essential wildness of science as a manifestation of human behavior is not generally perceived. As we extract new things of value from it, we also keep discovering parts of the activity that seem in need of better control, more efficiency, less unpredictability.

The Lives of a Cell: Notes of a Biology Watcher
Natural Science (p. 100)
The Viking Press. New York, New York, USA. 1974

Science began by fumbling. It works because the people involved in it work, and work together. They become excited and exasperated, they exchange their bits of information at a full shout, and, the most wonderful thing of all, they keep at one another.

Late Night Thoughts on Listening to Mahler's Ninth Symphony
Alchemy
The Viking Press. New York, New York, USA. 1983

Thompson, A. R.

No biographical data available

...science has not only helped to destroy popular traditions that might have nourished a modern spirit of admiration, but has fostered a wintry skepticism, making man appear not an imperfect angel, but a super-educated monkey.

In R. Foerster (ed.)
Humanism and America: Essays on the Outlook of Modern Civilization
The Dilemma of Modern Tragedy (p. 129)
Farrar & Rinehart Inc. New York, New York, USA. 1930

Thomson, J. Arthur 1861–1933

Scottish biologist

When science makes minor mysteries disappear, greater mysteries stand confessed. For one object of delight whose emotional value science has inevitably lessened — as Newton damaged the rainbow for Keats — science gives back double.

The Outline of Science (Volume 4)
Chapter XXXVIII (p. 1176)
G.P. Putnam's Sons. New York, New York, USA. 1937

To the grand primary impression of the world power, the immensities, the pervading order, and the universal flux, with which the man of feeling has been nurtured from the old, modern science has added thrilling impressions of manifoldedness, intricacy, uniformity, inter-relatedness, and evolution. Science widens and clears the emotional

window. There are great vistas to which science alone can lead, and they make for elevation of mind.

The Outline of Science (Volume 4)
Chapter XXXVIII (pp. 1176–1177)
G.P. Putnam's Sons. New York, New York, USA. 1937

The opposition between science and feeling is largely a misunderstanding. As one of our philosophers has remarked, Science is in a true sense “one of the humanities.”

The Outline of Science (Volume 4)
Chapter XXXVIII (p. 1177)
G.P. Putnam's Sons. New York, New York, USA. 1937

Science expresses a quite specific endeavor to get phenomena under intellectual control, so that we can think of them economically and clearly in relation to the rest of our science, and so that we can use them as a basis for secure prediction and effective action.

The System of Animate Nature (Volume 1)
Lecture I (p. 8)
William & Norgate. London, England. 1920

Science as science never asks the question Why? That is to say, it never inquires into the meaning, or significance, or purpose of this manifold Being, Becoming, and Having Been.... Thus science does not pretend to be a bedrock of truth.

In Bertrand Russell
Religion and Science
Mysticism (p. 175)
Henry Holt & Company. New York, New York, USA. 1935

Science makes so many permanent discoveries, which are never contradicted though often transcended, that she acquires an assured confidence which has only been equaled by that of Theology.

The System of Animate Nature (Volume 1)
Lecture I (p. 13)
William & Norgate. London, England. 1920

Science is one of the pathways toward the truth, but there are other pathways.

The New World of Science
The Atlantic Monthly, June 1930

Science is not wrapped up with any particular body of facts; it is characterized as an intellectual attitude. It is not tied down to any peculiar methods of inquiry; it is simply sincere critical thought, which admits conclusions only when these are based on evidence.

Introduction to Science
Chapter I (p. 27)
Williams & Norgate Ltd. London, England. 1916

Science is always setting forth on Columbus voyages, discovering new worlds and conquering them by understanding.

The Outline of Science (Volume 1)
Introduction (p. 3)
G.P. Putnam's Sons. New York, New York, USA. 1937

Science is frankly empirical in method and aim; it seeks to discover the laws of concrete being and becoming,

and to formulate these in the simplest terms, which are either immediate data of experience or verifiably derived therefrom.

The System of Animate Nature (Volume 1)
Lecture I (p. 39)
William & Norgate. London, England. 1920

Science is a particular way of looking at the world, but it is not the only way.

The New World of Science
The Atlantic Monthly, June 1930

Great stores of wealth are awaiting the scientific “Open Sesame”; a great heightening of the standard of health will be attainable in a few generation if men of good-will take science as their torch.

The Outline of Science (Volume 4)
Chapter XXXVIII (p. 1180)
G.P. Putnam’s Sons. New York, New York, USA. 1937

Is it science that satisfies man’s soul, or is it the attendant feeling and imagining which the study of Nature evokes?

The System of Animate Nature (Volume 1)
Lecture I (p. 27)
William & Norgate. London, England. 1920

...science gives Man from time to time a greatly increased mastery over Nature; science, with its analytical triumphs, ever tends to diminish, in the shallowminded, the saving grace of wonder; and science is ever dispelling the darkness that oppresses the mind.

The System of Animate Nature (Volume 1)
Lecture I (pp. 41–42)
William & Norgate. London, England. 1920

...science aims at description in terms of the lowest common denominators available; while religion and philosophy aim at interpretation in terms of the greatest common measure.

The New World of Science
The Atlantic Monthly, June 1930

Thomson, Sir George 1892–1975
English physicist

The influence of science on men’s lives comes in two rather different ways — one through the ideas themselves, and the other through their material consequences.

The New Industrial Revolution
Bulletin of the Atomic Scientists, Volume 13, Number 1, January 1957 (p. 9)

[The method of science is] a collection of pieces of advice, some general, some rather special, which may help to guide the explorer in his passage through the jungle of apparently arbitrary facts.... In fact, the sciences differ so greatly that it is not easy to find any sort of rule which applies to all without exception.

The Inspiration of Science
Chapter II (p. 7)
Oxford University Press, Inc. London, England. 1961

Thoreau, Henry David 1817–62
American essayist, poet, and practical philosopher

There is a chasm between knowledge and ignorance which the arches of science can never span.

The Writings of Henry David Thoreau (Volume 1)
A Week on the Concord and Merrimack Rivers
Sunday (p. 125)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

What an admirable training is science for the more active warfare of life! Indeed, the unchallenged bravery which these studies imply, is far more impressive than the trumpeted valor of the warrior.

The Writings of Henry David Thoreau (Volume 9)
Natural History of Massachusetts (p. 131)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Science with its retorts would have put me to sleep; it was the opportunity to be ignorant that I improved. It suggested to me that there was something to be seen if one had eyes. It made a believer of me more than before. I believed that the woods were not tenantless, but choke-full of honest spirits as good as myself any day, — not an empty chamber, in which chemistry was left to work alone, but an inhabited house, — and for a few moments I enjoyed fellowship with them.

The Writings of Henry David Thoreau (Volume 3)
The Maine Woods, the Allegash and East Branch (pp. 247–248)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Let us consider under what disadvantages Science has hitherto labored before we pronounce thus confidently on her progress.

The Writings of Henry David Thoreau (Volume 4)
Paradise (to Be) Regained (p. 301)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Already nature is serving all those uses which science slowly derives on a much higher and grander scale to him that will be served by her. When the sunshine falls on the path of the poet, he enjoys all those pure benefits and pleasures which the arts slowly and partially realize from age to age. The winds which fan his cheek waft him the sum of that profit and happiness which their lagging inventions supply.

The Writings of Henry David Thoreau (Volume 4)
Paradise (to Be) Regained (p. 302)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Thorne, Kip S. 1940–
American theoretical physicist

Science is a community enterprise. The insights that shape our view of the Universe come not from a single person or a small handful, but from the combined efforts of many.

Black Holes and Time Warps: Einstein’s Outrageous Legacy
Preface (p. 18)
W.W. Norton & Company, Inc. New York, New York, USA. 1994

Thurber, James 1894–1961
American writer and cartoonist

Science has zipped the atom open in a dozen places, it can read the scrawling on the Rosetta stone as glibly as a literary critic explains Hart Crane, but it doesn't know anything about playwrights.

Collecting Himself: James Thurber on Writing and Writers, Humor and Himself
Roaming in the Gloaming (p. 194)
Harper & Row, Publishers. New York, New York, USA. 1989

Tolstoy, Leo 1828–1910
Russian writer

What is called science today consists of a haphazard heap of information, united by nothing, often utterly unnecessary, and not only failing to present one unquestionable truth, but as often as not containing the grossest errors, today put forward as truths, and tomorrow overthrown.

What Is Religion?
Chapter I (p. 3)
T.Y. Crowell. New York, New York, USA. 1899

The highest wisdom has but one science — the science of the whole — the science explaining the whole creation and man's place in it.

In Great Books of the Western World (Volume 51)
War and Peace
Book Five, Chapter II (p. 197)
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Toynbee, Arnold J. 1852–83
English historian

There have been many definitions of the word "science." Perhaps the most generally accepted one is that science is a form of study in which there can be an exact knowledge of the present and the past and, through this, an infallible prediction of the future. If this is what science means, then no study made by a human mind can be completely scientific.

Occasional Paper, The Institute for the Study of Science in Human Affairs
Science in Human Affairs: An Historian's View

Tucker, Wilson 1914–2006
American mystery and science fiction writer

...Science tends to frighten those who are infrequently exposed to it, while the practitioners of science are often the most misunderstood people in the world....

The Year of the Quiet Sun (p. 78)
Ace. New York, New York, USA. 1970

Tudge, Colin 1943–
English science writer

The true role of science is not to change the universe but more fully to appreciate it.

The Engineer in the Garden: Genes and Genetics (p. 361)
Hill & Wang. New York, New York, USA. 1993

Twain, Mark (Samuel Langhorne Clemens) 1835–1910
American author and humorist

Science is as sorry as you are that this year's science is no more like last year's science than last year's was like the science of twenty years gone by. But science cannot help it. Science is full of change. Science is progressive and eternal. The scientists of twenty years ago laughed at the ignorant men who had groped in the intellectual darkness of twenty years before. We derive pleasure from laughing at them.

Collected Tales, Sketches, Speeches, and Essays 1852–1890 (Volume 1)
A Brace of Brief Lectures on Science (p. 538)
The Library of America. New York, New York, USA. 1992

[W]hat we most admire is the vast capacity of that intellect which, without effort, takes in at once all the domains of science — all the past, the present and the future, all the errors of two thousand years, all the encouraging signs of the passing times, all the bright hopes of the coming age.

Is Shakespeare Dead?
Chapter X (p. 124)
Oxford University Press, Inc. London, England. 1996

Union Carbide and Carbon

More Jobs Through Science
Advertising slogan

Urey, Harold Clayton 1893–1981
American chemist

To those of us who spend our lives working on scientific problems, science is a great intellectual adventure of such interest that nothing else we ever do can compare with it. We are attempting to understand the order of a physical universe, vast in extent in space and time, and most complicated and beautiful in its details.

In Shirley Thomas
Men of Space. Profiles of the Scientists Who Probe for Life in Space (Volume 6)
Harold C. Urey (p. 212)
Chilton Books. Philadelphia, Pennsylvania, USA. 1963

Valéry, Paul 1871–1945
French poet and critic

Science is feasible when the variables are few and can be enumerated; when their combinations are distinct and clear. We are tending toward the condition of science and aspiring to do it. The artist works out his own formulas; the interests of science lies in the art of making science.

In Jackson Mathews (ed.)
The Collected Works of Paul Valéry (Volume 14)
Analects (p. 191)
Princeton University Press. Princeton, New Jersey, USA. 1971

Science means simply the aggregate of all the recipes that are always successful. All the rest is literature.

In J. Matthews (ed.)

Collected Works (Volume 14)

Analects

Princeton University Press. Princeton, New Jersey, USA. 1971

Bulletin of the New York Academy of Medicine, Volume 4, 1928 (p. 995)

Voltaire (François-Marie Arouet) 1694–1778

French writer

True science necessarily carries tolerance with it.

Letter to Madame d'Épinay

Correspondance de Voltaire, 1881 edition, Volume 12, July 6, 1766 (p. 329)

von Baer, Carl Ernst 1792–1876

Prussian-Estonian biologist

Science...is, in its source, eternal; in its operation, not limited by time and space; in its scope, immeasurable; in its problem, endless; in its goal, unattainable.

In Sir Richard Arman Gregory

Discovery; or, The Spirit and Service of Science

Chapter III (p. 53)

Macmillan & Company Ltd. London, England. 1918

von Frisch, Karl 1886–1982

Austrian ethnologist

Science advances but slowly, with halting steps. But does not therein lie her eternal fascination? And would we not soon tire of her if she were to reveal her ultimate truths too easily?

A Biologist Remembers

To Munich for the Fifth Time (p. 178)

Pergamon Press. Oxford, England. 1967

von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

Sciences destroy themselves in two ways: by the breadth they reach and by the depth they plumb.

Scientific Studies (Volume 12)

Chapter VIII (p. 305)

Suhrkamp. New York, New York, USA. 1988

Four epochs of science:

childlike,

poetic, superstitious;

empirical,

searching, curious;

dogmatic,

didactic, pedantic;

ideal,

methodical, mystical.

Scientific Studies (Volume 12)

Chapter VIII (pp. 304–305)

Suhrkamp. New York, New York, USA. 1988

Germans — and they are not alone in this — have a knack of making the sciences unapproachable.

Scientific Studies (Volume 12)

Chapter VIII (p. 306)
Suhrkamp. New York, New York, USA. 1988

In general the sciences put some distance between themselves and life, and make their way back to it only by a roundabout path.

Scientific Studies (Volume 12)
Chapter VIII (p. 306)
Suhrkamp. New York, New York, USA. 1988

A crisis must necessarily arise when a field of knowledge matures enough to become a science, for those who focus on details and treat them as separate will be set against those who have their eye on the universal and try to fit the particular into it.

Scientific Studies (Volume 12)
Chapter VIII (p. 305)
Suhrkamp. New York, New York, USA. 1988

von Humboldt, Alexander 1769–1859
German naturalist and explorer

Science is the labor of mind applied to nature...

Cosmos: A Sketch of a Physical Description of the Universe (Volume 1)
Introduction (p. 76)
Harper & Brothers. New York, New York, USA. 1869

Waddington, Conrad Hal 1905–75
British biologist and paleontologist

Science is the organized attempt of mankind to discover how things work as causal systems.

The Scientific Attitude
Forward (p. 9)
Penguin Books. Middlesex, England. 1941

Science as a whole certainly cannot allow its judgment about facts to be distorted by ideas of what ought to be true, or what one may hope to be true.

The Scientific Attitude
Science Is Not Neutral (p. 25)
Penguin Books, Middlesex, England. 1941

...science, if given its head, is not just cold efficiency; its attitude is tolerant, friendly and humane. It has already become the dominant inspiration of human culture, so that modern poetry, painting and architecture derive their most constructive ideas from scientific thought.

The Scientific Attitude
The Scientific Attitude (p. 1)
Penguin Books, Middlesex, England. 1941

Wald, George 1906–97
American biologist and biochemist

Science goes from question to question; big questions, and little, tentative answers. The questions as they age grow ever broader, the answers are seen to be more limited.

Les Prix Nobel. the Nobel Prizes in 1967
Nobel banquet speech for award received in 1967
Nobel Foundation. Stockholm, Sweden. 1968

The trouble with most of the things that people want is that they get them. No scientist needs to worry on that score. For him there is always the further horizon. Science goes from question to question; big questions, and little, tentative answers. The questions as they age grow ever broader, the answers are seen to be more limited.

Les Prix Nobel. the Nobel Prizes in 1967
Nobel banquet speech for award received in 1967
Nobel Foundation. Stockholm, Sweden. 1968

Waterman, Alan T. 1892–1967
American physicist

Science, in its pure form, is not concerned with where discoveries may lead; its disciples are interested only in discovering the truth.

Imagination of Science and Society
American Behavioral Scientist, Volume VI, Number 4, December 1962 (p. 3)

Watson, David Lindsay 1901–73
No biographical data available

The main vehicle of science is not the published formulations of laws and experiments in books and periodicals. This vehicle is, first and foremost, men who are worthy of them, who can understand and use the laws. But more than this: the vehicle is also the pattern of the society that can produce such men.

Scientists Are Human
Chapter I (p. 3)
Watts. London, England. 1938

Science sprawls over all the horizons of the modern mind like some vast cloudbank. The outlook and method of science penetrate relentlessly the strata of daily custom into the caverns of the unconscious mind itself. Science is by far the most powerful intellectual phenomenon of modern times, inexorably laying down the law in regions far from the laboratory, and subtly governing, by its techniques and devices, our modes of life and ways of thinking.

Scientists Are Human
Chapter I (p. 1)
Watts. London, England. 1938

Watson, James D. 1928–
American geneticist and biophysicist

...good science as a way of life is sometimes difficult. It often is hard to have confidence that you really know where the future lies. We must thus believe strongly in our ideas, often to point where they may seem tiresome and bothersome and even arrogant to our colleagues.

Les Prix Nobel. The Nobel Prizes in 1962
Nobel banquet speech for award received in 1962
Nobel Foundation. Stockholm, Sweden. 1963

Weaver, Warren 1894–1978
American mathematician

The desirable adjuncts of modern living, although in many instances made possible by science, certainly do not constitute science.

Science and Imagination: Selected Papers

Chapter 1

Basic Books, Inc. New York, New York, USA. 1967

Science is not technology, it is not gadgetry, it is not some mysterious cult, it is not a great mechanical monster! Science is an adventure of the human spirit. It is essentially an artistic enterprise, stimulated largely by the universe, served largely by disciplined imagination, and based largely on faith in the reasonableness, order, and beauty of the universe of which man is part.

In Walter Orr Robek

Science, a Well Spring of our Discontent

American Scientist, Volume 55, Number 1, March 1957 (p. 3)

It is hardly necessary to argue, these days, that science is essential to the public. It is becoming equally true, as the support of science moves more and more to state and national sources, that the public is essential to science. The lack of general comprehension of science is thus dangerous both to science and the public, these being interlocked aspects of the common danger that scientists will not be given the freedom, the understanding, and the support that are necessary for vigorous and imaginative development.

In Hilary J. Deason

A Guide to Science Reading

Science and People (p. 38)

The New American Library. New York, New York, USA. 1966

Weber, Max 1864–1920

German founder of modern sociology and economic thinker

Science today is a “vocation” organized in special disciplines in the service of self-clarification and knowledge of interrelated facts. It is not the gift of grace of seers and prophets dispensing sacred values and revelations, nor does it partake of the contemplation of sages and philosophers about the meaning of the Universe.

In H.H. Gerth and C. Wright Mills (eds.)

From Max Weber: Essays in Sociology

Science as a Vocation (p. 152)

Oxford University Press, Inc. New York, New York, USA. 1970

Weil, Simone 1909–43

French philosopher and mystic

To us, men of the West, a very strange thing happened at the turn of the century; without noticing it, we lost science, or at least the thing that had been called by that name for the last four centuries. What we now have in place of it is something different, radically different, and we don't know what it is. Nobody knows what it is.

Translated by Richard Rees

On Science, Necessity, and the Love of God

Classical Science and After, Chapter I (p. 3)

Oxford University Press, Inc. London, England. 1968

Science is voiceless; it is the scientist who talks.

On Science, Necessity, and the Love of God

Reflections on Quantum Theory (p. 57)

Oxford University Press, Inc. London, England. 1968

Science today will either have to seek a source of inspiration higher than itself or perish.

Gravity and Grace

Intelligence and Grace (p. 119)

Routledge & Kegan Paul. London, England. 1952

Science only offers three kinds of interest: 1. Technical applications. 2. A game of chess. 3. A road to God. (Attractions are added to the game of chess in the shape of competitions, prizes, and medals.)

Gravity and Grace

Intelligence and Grace (p. 119)

Routledge & Kegan Paul. London, England. 1952

Science is today regarded by some as a mere catalogue of technical recipes, and others as a body of pure intellectual speculations which are sufficient unto themselves; the former set too little value on the intellect, the latter on the world.

Translated by Arthur Wills and John Petrie

Oppression and Liberty

Theoretical Picture of a Free Society (pp. 104–105)

Routledge & Kegan Paul Ltd. London, England. 1958

Weinberg, Steven 1933–

American nuclear physicist

...there is an essential element in science that is cold, objective, and nonhuman...the laws of nature are as impersonal and free of human values as the rules of arithmetic.... Nowhere do we see human value or human meaning.

Reflections of a Working Scientist

Daedalus, Volume 103, 1974 (p. 3)

Weiss, Paul A. 1898–1985

Chemist

Science, to some, is Lady Bountiful, to others is the Villain of the Century. Some years ago, a book called it our “Sacred Cow,” and certainly to many it has at least the glitter of the “Golden Calf.” Glorification at one extreme, vituperation at the other...

Within the Gates of Science and Beyond

Science Looks at Itself (p. 25)

Hafner Publishing Company. New York, New York, USA. 1971

Weisskopf, Victor Frederick 1908–2002

Austrian-American physicist

Science cannot develop unless it is pursued for the sake of pure knowledge and insight. It will not survive unless it is used intensely and wisely for the betterment of humanity and not as an instrument of domination by one group over another.

Physics in the Twentieth Century: Selected Essays

The Significance of Science (p. 364)
The MIT Press. Cambridge, Massachusetts, USA. 1972

Science is curiosity, discovering things and asking why.

The Privilege of Being a Physicist

Chapter 4 (p. 31)

W.H. Freeman & Company. New York, New York, USA. 1989

Wells, H. G. (Herbert George) 1866–1946
English novelist, historian, and sociologist

The science hangs like a gathering fog in a valley, a fog which begins nowhere and goes nowhere, an incidental, unmeaning inconvenience to passers-by.

The Works of H.G. Wells (Volume 9)

A Modern Utopia

Chapter 3, Section 3

Charles Scribner's Sons. London, England. 1924–27

Science is a match that man has just got alight. He thought he was in a room — in moments of devotion, a temple — and that his light would be reflected from and display walls inscribed with wonderful secrets and pillars carved with philosophical systems wrought into harmony. It is a curious sensation, now that the preliminary splutter is over and the flame burns up clear, to see his hands and just a glimpse of himself and the patch he stands on visible, and around him, in place of all that human comfort and beauty he anticipated — darkness still.

The Rediscovery of the Unique

The Fortnightly Review, New Series 50, July 1891

Weyl, Hermann 1885–1955
German mathematician

Modern science, insofar as I am familiar with it through my own scientific work, mathematics and physics make the world appear more and more an open one.... Science finds itself compelled, at once by the epistemological, the physical and the constructive-mathematical aspect of its own methods and results, to recognize this situation. It remains to be added that science can do no more than show us this open horizon; we must not by including the transcendental sphere attempt to establish anew a closed (though more comprehensive) world.

The Open World: Three Lectures in the Metaphysical Implications of Science

Preface (p. v)

Yale University Press. New Haven, Connecticut, USA. 1932

We must await the further development of science, perhaps for centuries, before we can design a true and detailed picture of the interwoven texture of Matter, Life and Soul. But the old classical determinism of Hobbes, and Laplace need not oppress us any longer.

The Open World: Three Lectures in the Metaphysical Implications of Science

Lecture II (p. 55)

Yale University Press. New Haven, Connecticut, USA. 1932

Modern science in so far as I am familiar with it through my own scientific work, mathematics and physics, make the world appear more and more as an open one, as a world not closed but pointing beyond itself...science finds itself compelled, at once by the epistemological, the physical and the constructive-mathematical aspect of its own methods and results, to recognize this situation. It remains to be added that science can do no more than show us this open horizon; we must not by including the transcendental sphere attempt to establish anew a closed (though more comprehensive) world.

In A.S. Eddington

New Pathways in Science

Chapter XIV (p. 309)

...science would perish without the continuous interplay between its facts and constructions on the one hand and the imagery of ideas on the other.

Philosophy of Mathematics and Natural Science

Preface (p. vi)

Princeton University Press. Princeton, New Jersey, USA. 1949

Wheeler, John Archibald 1911–
American physicist and educator

...the pursuit of science is more than the pursuit of understanding. It is driven by the creative urge, the urge to construct a vision, a map, a picture of the world that gives the world a little more beauty and coherence than it had before.

Geons, Black Holes, and Quantum Foam: A Life in Physics

Chapter 3 (p. 84)

W.W. Norton & Company, Inc. New York, New York, USA. 1998

...the human activity that we call science is not science unless it is the uncovering or discovery of something new.

At Home in the Universe

Be the Best to Give the Most (p. 76)

The American Institute of Physics. Woodbury, New York, USA. 1994

Whetham, Sir William Cecil Dampier 1867–1952
English scientific writer

But beyond the bright searchlights of science,

Out of sight of the windows of sense,

Old riddles still bid us defiance,

Old questions of Why and of Whence.

Recent Development of Physical Science (p. 10)

John Murray. London, England. 1927

Whewell, William 1794–1866
English philosopher and historian

Science begins with common observation of facts; but even at this stage, requires that the observations be precise. Hence the sciences which depend upon space and number were the earliest formed. After common observation, comes Scientific Observation and Experiment.

The Philosophy of the Inductive Sciences Founded upon Their History (Volume 2)

Aphorisms, Aphorisms Concerning Science, VII (p. 467)
John W. Parker. London, England. 1847

The tendency of the sciences has long been an increasing proclivity of separation and dismemberment. The mathematician turns away from the chemist; the chemist from the naturalist; between the mathematician and the chemist is to be interpolated a “physician” (we have no English name for him), who studies heat, moisture and the like.

Quarterly Review, Volume 51, 1834 (p. 59)

The principles which constituted the triumph of preceding stages of science may appear to be subverted and ejected by later discoveries, but in fact they are (so far as they are true) taken up into the subsequent doctrines and included in them. They continue to be an essential part of the science. The earlier truths are not expelled but absorbed, not contradicted but extended; and the history of each science which may thus appear like a succession of revolutions is, in reality, a series of developments.

History of the Inductive Sciences, from the Earliest to the Present Time
(Volume the First)

Introduction (p. 10)
John W. Parker. London, England. 1837

...two things are requisite to science — facts and ideas...

History of the Inductive Sciences, from the Earliest to the Present Time
(Volume 1)

Book I, Chapter III, Section 2 (p. 79)
John W. Parker. London, England. 1837

Man is the interpreter of Nature, Science is the right interpretation.

The Philosophy of the Inductive Sciences Founded upon Their History
(Volume 2)

Aphorisms Concerning Ideas, Aphorism I (p. 443)
John W. Parker. London, England. 1847

White, Leslie Alvin 1900–75

American anthropologist

Science is sciencing.

Science Is Sciencing
Philosophy of Science, Volume 5, 1938

Whitehead, Alfred North 1861–1947

English mathematician and philosopher

Science is the organisation of thought.

The Organisation of Thought
Chapter VI (p. 106)
Greenwood Press Publishers. Westport, Connecticut, USA. 1974

Science is in the minds of men, but men sleep and forget, and at their best in any one moment of insight entertain but scanty thoughts. Science therefore is nothing but a confident expectation that relevant thoughts will occasionally occur.

An Enquiry Concerning the Principles of Natural Knowledge
Part I, Chapter I (p. 10)
At The University Press. Cambridge, England. 1919

Science is either an important statement of systematic theory correlating observations of a common world or is the daydream of a solitary intelligence with a taste for the daydream of publication.

Process and Reality: An Essay in Cosmology
Part IV, Chapter V, Section IV (p. 502)
The Macmillan Company. New York, New York, USA. 1929

Science has always suffered from the vice of overstatement. In this way conclusions true within strict limitations have been generalized dogmatically into a fallacious universality.

The Function of Reason
Chapter I (p. 22)
Beacon Press. Boston, Massachusetts, USA. 1929

Science is even more changeable than theology.

Science and the Modern World
Chapter XII (p. 183)
The Macmillan Company. New York, New York, USA. 1929

Aristotle discovered all the half-truths which were necessary to the creation of science.

In Lucien Price
Dialogues of Alfred North Whitehead
Dialogue XLII September 11, 1945 (p. 344)
Little Brown. Boston, Massachusetts, USA. 1954

Science is a river with two sources, the practical source and the theoretical source. The practical source is the desire to direct our actions to achieve predetermined ends.... The theoretical source is the desire to understand.

The Organisation of Thought
Chapter VI (p. 106)
Greenwood Press Publishers. Westport, Connecticut, USA. 1974

A science which hesitates to forget its founders is lost.

The Organisation of Thought
Chapter VI (p. 115)
Greenwood Press Publishers. Westport, Connecticut, USA. 1974

Whyte, Lancelot Law 1896–1972

Scottish physicist

Science starts with an assumption which is always present, though it may be unconscious, may be forgotten, and may sometimes even be denied.

Accent on Form: An Anticipation of the Science of Tomorrow
Chapter IV (p. 59)
Harper & Brothers. New York, New York, USA. 1954

Wigner, Eugene Paul 1902–95

Hungarian-born American physicist

There is no natural phenomenon that is comparable with the sudden and apparently accidentally timed development of science, except perhaps the condensation of a super-saturated gas or the explosion of some unpredictable explosives. Will the fate of science show some similarity to one of these phenomena?

Proceedings of the American Philosophical Society, Volume 94, Number 5, 1950

Wilde, Oscar 1854–1900
Irish wit, poet, and dramatist

The advantage of the emotions is that they lead us astray,
and the advantage of Science is that it is not emotional.

The Picture of Dorian Gray
Chapter 3 (p. 45)

The Modern Library. New York, New York, USA. 1992

Science can never grapple with the irrational. That is why
there is no future before it, in this world.

The Plays of Oscar Wilde
An Ideal Husband

Act I (p. 9)

The Modern Library. New York, New York, USA. No date

Science is out of the reach of morals, for her eyes are
fixed upon eternal truths.

The Works of Oscar Wilde (Volume 10)
Intentions

The Critic as Artist, Part 2 (p. 394)

AMS Press. New York, New York, USA. 1909

Wilson, Edward O. 1929–
American biologist and author

To a considerable degree science consists in originating
the maximum amount of information with the minimum
expenditure of energy. Beauty is the cleanness of line in
such formulations along with symmetry, surprise, and
congruence with other prevailing beliefs.

Biophilia

The Poetic Species (p. 60)

Harvard University Press. Cambridge, Massachusetts. 1984

Important science is not just any similarity glimpsed for
the first time. It offers analogues that map the gateways
to unexplored terrain.

Biophilia

The Poetic Species (p. 67)

Harvard University Press. Cambridge, Massachusetts. 1984

Wittgenstein, Ludwig Josef Johann 1889–1951
Austrian-born English philosopher

Man has to awaken to wonder — and so perhaps do peo-
ples. Science is a way of sending him to sleep again.

Translated by Peter Winch

Culture and Value (p. 5e)

The University of Chicago Press. Chicago, Illinois, USA. 1980

Wolpert, Lewis 1929–
British embryologist

When we come to face the problems before us — poverty,
pollution, overpopulation, illness — it is to science that
we must turn, not to gurus. The arrogance of scientists is
not nearly as dangerous as the arrogance that comes from
ignorance.

In Mary Midgley

Can Science Save Its Soul?

New Scientist, Volume 135, Number 1832, 1 August 1992 (p. 24)

Wordsworth, William 1770–1850
English poet

Science appears but what in truth she is,
Not as our glory and our absolute boast,
But as a succedaneum and a prop
To our infirmity. No officious slave
Art thou of that false secondary power
By which we multiply distinctions, then
Deem that our puny boundaries are things
That we perceive, and not that we have made.

The Complete Poetical Works of William Wordsworth

The Prelude, Book II, l. 212–219

Crowell. New York, New York, USA. 1888

Wright, Chauncey 1830–75
American philosopher of science

The accidental causes of science are only “accidents”
relatively to the intelligence of a man.

The Philosophical Writings of Chauncey Wright

The Genesis of Species (p. 37)

The Liberal Arts Press. New York, New York, USA. 1958

Wright, Frank Lloyd 1869–1959
American architect

I have seemed to belittle the nature of our time and the
great achievements of science, but I have intended to do
neither because I believe human nature still sound, and
recognize that science has done a grand job as well; but
well I know that Science cannot save us.

An Organice Architecture, Speech

London, England, May 1939

Yates, Frances 1899–1981
English historian

Is not all science a gnosis, an insight into the nature of the
All, which proceeds by successive revelations?

Giordano Bruno and the Hermetic Tradition

Chapter XXII (p. 452)

The University of Chicago Press. Chicago, Illinois, USA. 1964

Ziman, John M. 1925–2005
British physicist

Penicillin is not Science, any more than a cathedral is
Religion or a witness box is Law.

In E.D. Klemke, Robert Hollinger and A. David Kline

Introductory Readings in the Philosophy of Science

What Is Science? (p. 36)

Prometheus Books. Buffalo, New York, USA. 1980

In science, to echo Beethoven’s dictum about music,
“Everything should be both surprising and expected.”

Reliable Knowledge

Chapter 3 (fn 17, p. 71)

Cambridge University Press. Cambridge, England. 1978

Zinkernagel, Rolf M. 1944–
Swiss immunologist and pathologist

...in science there are collectors, classifiers, compulsory tidiers-up and permanent contesters, detectives, some artists and many artisans, there are poet-scientists and philosophers and even a few mystics.

Les Prix Nobel. The Nobel Prizes in 1996
Nobel banquet speech for award received in 1996
Nobel Foundation. Stockholm, Sweden. 1997

Zinsser, Hans 1878–1940
American bacteriologist

Science is but a method. Whatever its material, an observation accurately made and free of compromise to bias and desire, and undeterred by consequence, is science.

Untheological Reflections
The Atlantic Monthly, July 1929 (p. 91)

SCIENCE, AGE OF

Compton, Karl Taylor 1887–1954
American educator and physicist

We live in an age of science. I do not say “an age of technology” for every age has been an age of technology. We recognize this when we describe past civilizations as the Stone Age, the Bronze Age, and the Age of Steam or of Steel, thus implicitly admitting that the stage of civilization is determined by the tools at man’s disposal — in other words, by his technology....

A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949 (p. 1)
Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

Kronenberger, Louis 1904–80
American author and critic

Nominally a great age of scientific inquiry, ours has actually become an age of superstition about the infallibility of science; of almost mystical faith in its nonmystical methods; above all...of external verities; of traffic-cop morality and rabbit-test truth.

Company Manners: A Cultural Inquiry into American Life
Chapter 4 (p. 94)
The Bobbs-Merrill Company, Inc. Indianapolis, Indiana, USA. 1954

Russell, Bertrand Arthur William 1872–1970
English philosopher, logician, and social reformer

To say that we live in an age of science is a common place, but like most common places, it is only partially true. From the point of view of our predecessors, if they could view our society, we should, no doubt, appear to be very scientific, but from the point of view of our successors, it is probable that the exactly opposite would seem to be the cause.

The Scientific Outlook
Introduction (p. 9)
George Allen & Unwin Ltd. London, England. 1931

[T]heoretical science...is an attempt to understand the world. Practical science, which is an attempt to change the world, has been important from the first, and has continually increased in importance, until it has almost ousted theoretical science from men’s thoughts....

A History of Western Philosophy
Book Three, Part I, Chapter I (p. 492–493, 493)
Simon & Schuster. New York, New York, USA. 1945

The triumph of science has been mainly due to its practical utility, and there has been an attempt to divorce this aspect from that of theory, thus making science more and more a technique, and less and less a doctrine as to the nature of the world. The penetration of this point of view to philosophers is very recent.

A History of Western Philosophy
Book Three, Part I, Chapter I (p. 492–493, 493)
Simon & Schuster. New York, New York, USA. 1945

SCIENCE, APPLIED

Bacon, Sir Francis 1561–1626
English lawyer, statesman, and essayist

Even when men build any science and theory upon experiment, yet they almost always turn with premature and hasty zeal to practise, not merely on account of the advantage and benefit to be derived from it, but in order to seize upon some security in a new undertaking of their not employing the remainder of their labor unprofitably, and by making themselves conspicuous, to acquire a greater name for their pursuit.

In *Great Books of the Western World* (Volume 30)
Novum Organum
First Book, Aphorism 70 (p. 116)
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Compton, Karl Taylor 1887–1954
American educator and physicist

Applied science is not an end in itself, but it is the most powerful means ever discovered for supplying the opportunity to secure the finest things of life.

A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949 (p. 9)
Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

Einstein, Albert 1879–1955
German-born physicist

Why does this magnificent applied science which saves work and makes life easier bring us so little happiness? The simple answer runs: Because we have not yet learned to make sensible use of it.

Einstein Seeks Lack in Applying Science
The New York Times, February 17, 1931 (p. 6)

It is not enough that you should understand about applied science in order that your work may increase man’s

blessings. Concern for the man himself and his fate must always form the chief interest of all technical endeavors; concern for the great unsolved problems of the organization of labor and the distribution of our mind shall be a blessing and not a curse to mankind. Never forget this in the midst of your diagrams and equations.

Einstein Seeks Lack in Applying Science
The New York Times, February 17, 1931 (p. 6)

Huxley, Aldous 1894–1963

English writer and critic

Applied Science is a conjurer, whose bottomless hat yields impartially the softest of Angora rabbits and the most petrifying of Medusas.

Tomorrow and Tomorrow and Tomorrow and Other Essays
The Desert (p. 82)
Harper & Brothers. New York, New York, USA. 1956

Huxley, Thomas Henry 1825–95

English biologist

I often wish that this phrase “applied science,” had never been invented. For it suggests that there is a sort of scientific knowledge of direct practical use, which can be studied apart from another sort of scientific knowledge, which is of no practical utility, and which is termed “pure science.” But there is no more complete fallacy than this.

Collected Essays (Volume 3)
Science and Education
Science and Culture (p. 137)
Macmillan & Company Ltd. London, England. 1904

Pasteur, Louis 1822–95

French chemist

There does not exist a category of science to which one can give the name applied science. There are science and the applications of science, bound together as the fruit of the tree which bears it.

Revue Scientifique
Pourquoi la France n’a pas trouvé hommes supérieurs au montent du péril (1871)

Porter, George 1920–2002

English chemist

To feed applied science by starving basic science is like economising on the foundations of a building so that it may be built higher.

Lest the Edifice of Science Crumble
New Scientist, Volume 111, Number 1524, September 1986 (p. 16)

Wheeler, Edgar C.

No biographical data available

...[researchers] cannot remain indefinitely in any field of pure research. For every time they come upon a new bit of knowledge, almost instantly they discover some practical application. Thus the dividing line between pure science and applied science becomes thin.

Makers of Lightning
The World’s Work, January 1927 (p. 271)

SCIENCE, COMMUNICATION OF

Casimir, Hendrik B. G. 1909–2000

Dutch physicist

There exists today a universal language that is spoken and understood almost everywhere: it is Broken English. [It] is used by the waiters in Hawaii, prostitutes in Paris and ambassadors in Washington, by businessmen from Buenos Aires, by scientists at international meetings and by dirty-postcard peddlers in Greece — in short, by honorable people like myself all over the world.

Haphazard Reality: Half a Century of Science
Chapter 4 (p. 122)
Harper & Row, Publishers. New York, New York, USA. 1983

Chargaff, Erwin 1905–2002

Austrian biochemist

There is no real popularization [of science] possible, only vulgarization that in most instances distorts the discoveries beyond recognition.

Bitter Fruits from the Tree of Knowledge
Perspectives in Biology and Medicine, Volume 16, Summer, 1973 (p. 491)

...Scientists, like little fishes, swim in schools. When we open one of our scientific journals these days, we find a very uneven distribution of topics. Some important fields are almost entirely neglected, others seem to explode into bursts of unbelievable mediocrity. Really valuable contributions in the fields most in vogue at present probably are just as scarce as those dealing with the stepchildren of present-day biochemistry. But not all disciplines make it so easy to call each mush a “homogenate”, each soup a “partially purified extract”, and so to speak — when you have nothing whatever — of a “system.” There is a real danger that our science may suffocate in its own excrements.

Essays on Nucleic Acids
Chapter 10 (p. 162)
Elsevier Publishing Company. Amsterdam, Netherlands. 1963

Chesterton, G. K. (Gilbert Keith) 1874–1936

English author

Scientific phrases are used like scientific wheels and piston-rods to make swifter and smoother yet the path of the comfortable.

Orthodoxy
Chapter VIII (p. 230)
John Lane Company. New York, New York, USA. 1918

Dancoff, S. M.

American physicist

When you set out in a new field and choose a terminology you have the choice of using old, familiar words in new meanings or else you can make up new words for

the new meanings. If you use old words you make the theory look homey and inviting, but you run the risk of confusing the issue every time the old word is used. If you use new words you make the thing look excessively highbrow and frighten off any who might be interested.

Does the Neutrino Really Exist?

Bulletin of the Atomic Scientists, Volume 8, Number 5, June 1952 (p. 139)

Dornan, Christopher 1957–

American journalism professor

Science is seen as an avenue of access to assured findings, and scientists — in the dissemination of these findings — as the initial sources. The members of the laity are understood purely as recipients of this information. Journalists and public relations personnel are viewed as intermediaries through which the scientific findings filter. The task for science communication is to transmit as much information as possible with maximum fidelity.

Some Problems of Conceptualizing the Issues of “Science and the Media” *Critical Studies in Mass Communication*, Volume 7, Number 1, March 1990 (p. 51)

Feynman, Richard P. 1918–88

American theoretical physicist

We have a habit in writing articles published in scientific journals to make the work as finished as possible, to cover all the tracks, to not worry about the blind alleys or describe how you had the wrong idea first, and so on. So there isn’t any place to publish, in a dignified manner what you actually did in order to do the work....

Nobel Lectures, Physics 1963–1970

Nobel lecture for award received in 1965

The Development of the Space-Time View of Quantum Electrodynamics (p. 155)

Elsevier Publishing Company. Amsterdam, Netherlands. 1972

Fischer, Martin H. 1879–1962

German-American physician

You must learn to talk clearly. The jargon of scientific terminology which rolls off your tongues is mental garbage.

In Howard Fabing and Ray Marr

Fischerisms

C.C. Thomas. Springfield, Illinois, USA. 1944

Gibbs, J. Willard 1839–1903

American mathematician

...science is, above all, communication.

University of Otago Press. Dunedin, New Zealand. 1972

Huxley, Thomas Henry 1825–95

English biologist

...there is assuredly no more effectual method of clearing up one’s own mind on any subject than by talking it over

so to speak, with men of real power and grasp, who have considered it from a totally different point of view.

Collected Essays (Volume 1)

Method and Result

Animal Automatism (p. 202)

Macmillan & Company Ltd. London, England. 1904

Large, E. C.

American author

[I]t was contended that...compartments labeled Chemistry, Mycology, Bacteriology...were never really fish-tanks for myopic specialists to swim about in, but merely convenient departments in one splendid and sunlit edifice of science, separated at the most by glass walls, decorated with the flags of all nations, and provided with innumerable intercommunicating doors. If so many stacks of old scientific papers got piled up on each side of the glass partitions that in the end no one could see through them, that was certainly regrettable; and if some of the doors were locked for periods ranging from a decade to a century, well, that also was a pity — but who wanted to work in a draught?

The Advance of the Fungi

Chapter XXIII (p. 317)

Henry Holt & Company. New York, New York, USA. 1940

Lemke, J.

No biographical data available

True Dialogue occurs when teachers ask questions to which they do not presume to already know the “correct answer.”

Talking Science: Language, Learning and Values

Chapter 3 (p. 55)

Ablex Publishing Corporation. Norwood, New Jersey, USA. 1990

Loomis, Frederic Brewster 1873–1937

American geologist

Everyone, who is alert as he wanders about this world, wants to know what he is seeing and what it is all about. Here and there with the aid of capable guides a few have been introduced into the sphere that wide and fascinating knowledge of Nature which has been so rapidly accumulated during this and the latter part of the last century. It is a full treasure house constantly being enriched, but unfortunately the few who have been initiated have soon acquired technical language and habit, so that their knowledge and new acquisitions are communicated to but a few.

Field Book of Common Rocks and Minerals

Preface (p. vii)

Macdonald, Sharon

No biographical data available

...science communication involves selection and definition, not just of which “facts” are presented to the public,

but of what is to count as science and of what kind of entity or enterprise science is to be. That is, science communicators act as authors of science for the public. They may also, however, by dint of their own institutional status, give implicit stamps of approval or disapproval to particular visions or versions of science. That is, they may act as authors with special authority on science — as authorisers of science.

In Alan Irwin and Brian Wynne (eds.)

Misunderstanding Science? The Public Reconstruction of Science and Technology

Authorizing Science: Public Understanding of Science in Museums (p. 152)
Cambridge University Press. Cambridge, England. 1996

Mach, Ernst 1838–1916

Austrian physicist and philosopher

Science is communicated by instruction, in order that one man may profit by the experience of another and be spared the trouble of accumulating it for himself; and thus, to spare posterity, the experiences of whole generations are stored up in libraries.

The Science of Mechanics (5th edition)

Chapter IV, Part IV, Section 1 (p. 578)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Michelson, Albert Abraham 1852–1931

German-American physicist

Science, when it has to communicate the results of its labor, is under the disadvantage that its language is but little understood. Hence it is that circumlocution is inevitable and repetitions are difficult to avoid.

Light Waves and Their Uses

Lecture I (p. 1)

The University of Chicago Press. Chicago, Illinois, USA. 1903

Moore, John A.

American writer and professor of genetics and biology

... recall some of the lectures you may have heard recently. Did you always know why the research had been done? Was it clear what problem was being illuminated by the data presented?

Science as a Way of Knowing

American Zoologist, Volume 24, Number 2, 1984 (p. 471)

Moravcsik, M. J.

No biographical data available

New theories, when first proposed, may appear on the first page of the New York Times, but their demise, a few years later, never makes even page 68.

Research Policy, Volume 17, 1988 (p. 293)

Neal, Patricia 1926–

American actress

Gort, *Klaatu berada nikto!*

The Day the Earth Stood Still

Film (1951)

Oppenheimer, J. Robert 1904–67

American theoretical physicist

The true responsibility of a scientist, as we all know, is to the integrity and vigor of his science. And because most scientists, like all men of learning, tend in part also to be teachers, they have a responsibility for the communication of the truths they have found. This is at least a collective, if not an individual responsibility. That we should see in this any insurance that the fruits of science will be used for man's benefit, or denied to man when they make for his distress or destruction, would be a tragic naïveté.

The Open Mind

Chapter V (p. 91)

Simon & Schuster. New York, New York, USA. 1955

Often the very fact that the words of science are the same as those of our common life and tongues can be more misleading than enlightening, more frustrating to understanding than recognizably technical jargon.

Science and the Common Understanding

Chapter 1 (p. 5)

Simon & Schuster. New York, New York, USA. 1954

It is proper to the role of the scientist that he not merely find new truth and communicate it to his fellows, but that he teach, that he try to bring the most honest and intelligible account of new knowledge to all who will try to learn.

The Open Mind: Lectures

Prospects in the Arts and Sciences (p. 138)

Simon & Schuster. New York, New York, USA. 1955

Parton, H. N.

No biographical data available

Scientists have the duty to communicate, firstly with each other, that is with those who are interested in the same or allied problems, and secondly with laymen: by layman I mean anyone not familiar with their special science, for specialization has raised the level of scientific achievement so much, that chemists, for example, are usually laymen in say, biology; we may hope, intelligent laymen.

Science Is Human

Science and the Liberal Arts (p. 12)

University of Otago Press. Dunedin. 1972

Aldous Huxley, in a lecture on his grandfather, said that all communication is literature, and even in scientific writing there is wide room for the exercise of art.

Science Is Human

Science and the Liberal Arts (p. 14)

University of Otago Press. Dunedin. 1972

Pool, Ithiel de Sola 1917–84

No biographical data available

Computing and communication are becoming one...

Technologies Without Boundaries: On Telecommunications in a Global Age

Part I, Chapter I (p. 8)

Harvard University Press. Cambridge, Massachusetts, USA. 1990

Priestley, Joseph 1733–1804
English theologian and scientist

When for the sake of a little more reputation, men can keep brooding over a new fact, in the discovery of which they might, possibly, have very little real merit, till they think they can astonish the world with a system as complete as it is new, and give mankind a high idea of their judgment and penetration; they are justly punished for their ingratitude to the fountain of all knowledge, and for their want of a genuine love of science and of mankind, in finding their boasted discoveries anticipated, and the field of honest fame pre-occupied, by men, who, from a natural ardour of mind engage in philosophical pursuits, with an ingenious simplicity immediately communicate to others whatever occurs to them in their inquiries.

Experiment and Observations on Different Kinds of Air (Volume 1)
The Preface (pp. xvii–cviii)
Printed by Thomas Pearson. Birmingham, England. 1740

Roe, Anne 1904–1991
American psychologist

Nothing in science has any value to society if it is not communicated. . . .

The Making of a Scientist
Chapter I (p. 17)
Greenwood Press, Publishers. Westport, Connecticut, USA. 1973

Schrödinger, Erwin 1887–1961
Austrian theoretical physicist

Bohr's . . . approach to atomic problems . . . is really remarkable. He is completely convinced that any understanding in the usual sense of the word is impossible. Therefore the conversation is almost immediately driven into philosophical questions, and soon you no longer know whether you really take the position he is attacking, or whether you really must attack the position that he is defending.

In W. Moore
Schrodinger: Life and Thoughts
Chapter 6, Letter to W. Wein 1926 (p. 228)
Cambridge University Press. Cambridge, England. 1989

If you cannot — in the long run — tell everyone what you have been doing, your doing has been worthless.

Science and Humanism: Physics in Our Time
The Spiritual Bearing of Science on Life (pp. 8–9)
At The University Press. Cambridge, England. 1952

von Goethe, Johann Wolfgang 1749–1832
German poet, novelist, playwright, and natural philosopher

The present age has a bad habit of being abstruse in the sciences. We remove ourselves from common sense without opening up a higher one; we become transcendent, fantastic, fearful of intuitive perception in the real world, and when we wish to enter the practical realm, or need to, we suddenly turn atomistic and mechanical.

Scientific Studies (Volume 12)

Chapter VIII (pp. 308–309)
Suhrkamp. New York, New York, USA. 1988

Whitehead, Alfred North 1861–1947
English mathematician and philosopher

Nobody has a right to speak more clearly than he thinks.
Washingtonian, Volume 15, Number 143, November 1979

Wiener, Norbert 1894–1964
American mathematician

[T]he more probable the message, the less information it gives. Clichés, for example, are less illuminating than great poems.

The Human Use of Human Beings
Chapter I (p. 21)
Da Capo Press. New York, New York, USA. 1988

Ziman, John M. 1925–2005
British physicist

The cliché of scientific prose betrays itself “Hence we arrive at the conclusion that. . . .” The audience to which scientific publications are addressed is not passive; by its cheering or booing, its bouquets or brickbats, it actively controls the substance of the communications that it receives.

Public Knowledge: An Essay Concerning the Social Dimension of Science
Chapter 1 (p. 9)
Cambridge University Press. Cambridge, England. 1968

It is not enough to observe, experiment, theorize, calculate and communicate; we must also argue, criticize, debate, expound, summarize, and otherwise transform the information that we have obtained individually into reliable, well established, public knowledge.

Information, Communication, Knowledge
Nature, Volume 224, Number 5217, October 25, 1969 (p. 324)

SCIENCE, HISTORY OF

Appleton, Sir Edward 1892–1965
English physicist

. . . the history of science has proved that fundamental research is the lifeblood of individual progress and that the ideas which lead to spectacular advances spring from it.

In J. Edwin Holmstrom
Records and Research in Engineering and Industrial Science
Chapter One (p. 7)
Chapman & Hall. London, England. 1956

Asimov, Isaac 1920–92
American author and biochemist

A number of years ago, when I was a freshly-appointed instructor, I met, for the first time, a certain eminent historian of science. At the time I could only regard him with tolerant condescension. I was sorry for a man who, it seemed to me, was forced to hover about the edges of

science.... In a lifetime of being wrong at many a point, I was never more wrong. It was I, not he, who was wandering in the periphery. It was he, not I, who lived in the blaze. I had fallen victim to the fallacy of the "growing edge"; the belief that only the very frontier of scientific advance counted; that everything that had been left behind by that advance was faded and dead.

Adding a Dimension

Introduction (p. 7)

Lancer Books, New York, New York, USA. 1969

Bernal, John Desmond 1901–71

Irish-born physicist and x-ray crystallographer

The whole history of modern science, has been that of a struggle between ideas derived from observation and practice, and pre-conceptions derived from religious training. It was not...that Science had to fight an external enemy, the Church; it was that the Church itself — its dogmas, its whole way of conceiving the universe — was within the scientists themselves.... After Newton, God ruled the visible world by means of Immutable Laws of Nature, set in action by one creative impulse, but He ruled the moral world by means of absolute intimations of moral sanctions, implanted in each individual soul, reinforced and illuminated by Revelation and the Church....

In W.H. Waddington

Science and Ethics

A Marxist Critique (pp. 115–116)

George Allen & Unwin Ltd. London, England. 1942

The role of God in the material world has been reduced stage by stage with the advance of Science, so much so that He only survives in the vaguest mathematical form in the minds of older physicists and biologists.

In W.H. Waddington

Science and Ethics

A Marxist Critique (pp. 115–116)

George Allen & Unwin Ltd. London, England. 1942

Butterfield, Herbert 1900–79

English historian and philosopher of history

The greatest obstacle to the understanding of the history of science is our inability to unload our minds of modern views about the nature of the universe.

The History of Science, Origins and Results of the Scientific Revolution: A Symposium

Dante's View of the Universe (p. 15)

Free Press, Glencoe, Illinois, USA. 1953

One of the safest speculations that we could make...[is] that very soon the history of science is going to acquire an importance...incommensurate with anything that it has hitherto possessed. It...is no longer merely an account of one of many human activities like the history of music or...of cricket.... Because it deals with one of the main constituents of the modern world and the modern mind, we cannot construct a respectable history of Europe or

a tolerable survey of western civilization without it. It is going to be as important for us for the understanding of ourselves as Graeco-Roman antiquity was for Europe during a period of over a thousand years.

The History of Science and the Study of History

Harvard Library Bulletin, Volume 13, 1959 (pp. 330–331)

Free Press, Glencoe, Illinois, USA. 1953

[The scientific revolution] outshines everything since the rise of Christianity and reduces the Renaissance and Reformation to the ranks of mere episodes, mere internal displacements, within the system of medieval Christendom...it looms so large as the real origin of the modern world and the modern mentality that our customary periodization of European history has become an anachronism and an encumbrance.

The Origins of Modern Science

Introduction (pp. vii–viii)

The Macmillan Company, New York, New York, USA. 1961

Chamberlain, Owen 1920–2006

American physicist

The most that any scientist can ask is that he help to lay a few stones of a partially-built edifice that we call scientific knowledge. To him this edifice is a beautiful structure, although it will never be finished.

Les Prix Nobel. the Nobel Prizes in 1959

Nobel banquet speech for award received in 1959

Nobel Foundation, Stockholm, Sweden. 1960

Cohen, I. Bernard 1914–2003

American physicist and science historian

History with the history of science, to alter slightly an apothegm of Lord Bacon, resembles a statue of Polyphemus without his eye — that very feature being left out which most marks the spirit and life of the person. My own thesis is complementary: science taught...without a sense of history is robbed of those very qualities that make it worth teaching to the student of the humanities and the social sciences.

In I. Bernard Cohen and Fletcher G. Watson (eds.)

General Education in Science (p. 71)

The History of Science and the Teaching of Science (p. 71)

Harvard University Press, Cambridge, Massachusetts, USA. 1952

Conant, James Bryant 1893–1978

American educator and scientist

We can put it down as one of the principles learned from the history of science that a theory is only overthrown by a better theory, never merely by contradictory facts.

On Understanding Science

Chapter II (p. 36)

Yale University Press, New Haven, Connecticut, USA. 1947

The history of science demonstrates beyond doubt that the really revolutionary and significant advances come not from empiricism but from new theories.

Modern Science and Modern Man

Science and Technology (p. 30)

Columbia University Press. New York, New York, USA. 1952

Darwin, Charles Robert 1809–82

English naturalist

Great is the power of steady misrepresentation — but the history of science shows how, fortunately, this power does not long endure.

In *Great Books of the Western World* (Volume 49)

The Origin of Species by Means of Natural Selection

Chapter XV (p. 239)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Draper, John William 1811–82

American scientist, philosopher, and historian

The history of science is not a mere record of isolated discoveries; it is a narrative of the conflict of two contending powers, the expansive force of the human intellect on one side, and the compression arising from traditionary faith and human interest on the other.

History of the Conflict Between Religion and Science

Preface (p. vi)

D. Appleton and Company. New York, New York, USA. 1898

Duhem, Pierre-Maurice-Marie 1861–1916

French physicist and mathematician

...the history of science alone can keep the physicist from the mad ambitions of dogmatism as well as the despair of Pyrrhonian skepticism.

The Aim and Structure of Physical Theory

Part II, Chapter VII (p. 270)

Princeton University Press. Princeton, New Jersey, USA. 1954

Feyerabend, Paul K. 1924–94

Austrian-born American philosopher of science

The history of science, after all, does not just consist of facts and conclusions drawn from facts. It also contains ideas, interpretations of facts, problems created by conflicting interpretations, mistakes, and so on. On closer analysis we even find that science knows no “bare facts” at all but that the “facts” that enter our knowledge are already viewed in a certain way and are, therefore, essentially ideational.

Against Method: Outline of an Anarchistic Theory of Knowledge

Introduction (p. 19)

Verso. London, England. 1978

...the history of science will be as complex, chaotic, full of mistakes, and entertaining as the ideas it contains, and these ideas in turn will be as complex, chaotic, full of mistakes, and entertaining as are the minds of those who invented them.

Against Method: Outline of an Anarchistic Theory of Knowledge

Introduction (p. 19)

Verso. London, England. 1978

Fisher, Sir Ronald Aylmer 1890–1962

English statistician and geneticist

More attention to the History of Science is needed, as much by scientists as by historians, and especially by biologists, and this should mean a deliberate attempt to understand the thoughts of the great masters of the past, to see in what circumstances or intellectual milieu their ideas were formed, where they took the wrong turning or stopped short on the right track.

Natural Selection from the Genetical Standpoint

Australian Journal of Science, Volume 22, 1959

Foster, Sir Michael 1836–1907

English physiologist and educator

When we look into the past of science and trace our the first buddings of what afterwards grow to be umbrageous branches, it sometimes seems as if every time, and almost every year, marked an epoch.

Annual Report of the Board of Regents of the Smithsonian Institution, 1898

Recent Advances in Science, and Their Bearing on Medicine and Surgery (p. 345)

Government Printing Office. Washington, D.C. 1899

It is one of the lessons of the history of science that each age steps on the shoulders of the ages which have gone before.

In Lloyd William Taylor

Physics: The Pioneer Science (Volume 1)

Chapter 5 (p. 51)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1941

Geikie, Sir Archibald 1835–1924

English geologist

In science, as in all other departments of inquiry, no thorough grasp of a subject can be gained unless the history of its development is clearly appreciated.

The Founders of Geology

Lecture I (p. 1)

Macmillan & Company Ltd. London, England. 1897

Hall, Alfred Rupert 1920–

English historian of science

The difficulty [in understanding science history] is the greater because the history of science is not, and cannot be, a tight unity. The different branches of science are themselves unlike in complexity, in techniques, and in their philosophy. They are not all affected equally, or at the same time, by the same historical factors, whether internal or external. It is not even possible to trace the development of a single scientific method, some formulation of principles and rules of operating which might be imagined as applicable to every scientific inquiry, for there is no such thing.

The Scientific Revolution, 1500–1800

Introduction (p. xiv)

Longmans, Green & Company. London, England. 1954

Hall, Marie Boas 1919–

English historian of science

For the...student whose chief interest does lie in science, for whom history as a course of study so often seems to deal solely with subjects remote from his intellectual turn of mind, the history of science provides a valid and useful point of contact with history, through which he may learn to develop wider humanistic interests. For the non-scientist, bored and baffled by the technical problems of science, the history of science may provide some insight into the scientific point of view and prevent the feeling of isolation which too often makes the scientist and the humanist appear to move in separate worlds.

History of Science (p. 1)

American Historical Association. Washington, D.C. 1958

Holton, Gerald 1922–

Research professor of physics and science history

And yet, on looking into the history of science, one is overwhelmed by evidence that all too often there is no regular procedure, no logical system of discovery, no simple, continuous development. The process of discovery has been as varied as the temperament of the scientist.

Thematic Origins of Scientific Thought: Kepler to Einstein

Chapter 11 (pp. 384–385)

Harvard University Press. Cambridge, Massachusetts, USA. 1973

Huxley, Thomas Henry 1825–95

English biologist

...any one acquainted with the history of science will admit that its progress has meant, in all ages and now more than ever, the extension of the province of matter and causation, and the gradual banishment from human thought of what we call spirit and spontaneity.

Collected Essays (Volume 1)

Method and Result

On the Physical Basis of Life (p. 159)

Macmillan & Company Ltd. London, England. 1904

Knickerbocker, William Skinkle 1892–1972

American professor of English and author

...the history of science is as inspiring in its human values as are the legends of the saints. Contemplate the heroism of a Galileo, the patience of a Darwin, the humility of a Pasteur; a modern eleventh chapter of Hebrews might be written listing the names of all those men of faith who by quiet work, unremitting in their zeal, one by one discovered facts which made man's lot easier and happier in what was otherwise to him a hostile and unhappy universe.

Classics of Modern Science

Preface

Alfred A Knopf. New York, New York, USA. 1927

Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Kuhn, Thomas S. 1922–96

American historian of science

Though the gap seems small, there is no chasm that more needs bridging than that between the historian of ideas and the historian of science.

International Encyclopedia of the Social Sciences

Volume 14, History of Science (p. 78)

The Macmillan Company. New York, New York, USA. 1968

Lakatos, Imre 1922–74

Hungarian-born philosopher

Philosophy of science without history of science is empty; history of science without philosophy of science is blind.

In R. Buck and R. Cohen (eds.)

Boston Studies in the Philosophy of Science (Volume 8)

History of Science and Rational Reconstructions (p. 91)

D. Reidel Publishing Company. Dordrecht, Netherlands.

Lavoisier, Antoine Laurent 1743–94

French chemist

...if I had allowed myself to enter into long dissertations on the history of the science, and the works of those who have studied it, I must have lost sight of the true object I had in view, and produced a work, the reading of which must have been extremely tiresome to beginners. It is not to the history of the science, or of the human mind, that we are to attend in an elementary treatise: Our only aim ought to be ease and perspicuity, and with the utmost care to keep every thing out of view which might draw aside the attention of the student; it is a road which we should be continually rendering more smooth, and from which we should endeavor to remove every obstacle which can occasion delay.

Elements of Chemistry in a New Systematic Order

Preface of the Author (pp. xxxii–xxxiii)

Printed for William Creech. Edinburgh, Scotland. 1790

Lévi-Strauss, Claude 1908–

French social anthropologist and structuralist

...scientific knowledge advances haltingly and is stimulated by contention and doubt.

Translated by John and Doreen Weightman

The Raw and the Cooked

Overture (p. 7)

Harper & Row, Publishers. New York, New York, USA. 1975

Libby, Walter 1867–1955

American science historian

The history of science has something to offer to the humblest intelligence. It is a means of imparting a knowledge of scientific facts and principles to unschooled minds.

An Introduction to the History of Science

Preface (p. v)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1917

The history of science is an aid in scientific research. It places the student in the current of scientific thought, and gives him a clue to the purpose and necessity of the theories he is required to master. It presents science as the constant pursuit of truth rather than the formulation of truth long since revealed; it shows science as progressive

rather than fixed; dynamic rather than static, a growth to which each may contribute.

An Introduction to the History of Science

Preface (p. v)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1917

The history of science is hostile to the spirit of caste. It shows the sciences rising from daily needs and occupations, formulated by philosophy, enriching philosophy, giving rise to new industries, which react in turn upon the sciences.

An Introduction to the History of Science

Preface (p. vi)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1917

The history of science studies the past for the sake of the future. It is a story of continuous progress. It is rich in biographical material. It shows the sciences in their interrelations, and saves the student from narrowness and premature specialization.

An Introduction to the History of Science

Preface (p. vi)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1917

Mach, Ernst 1838–1916

Austrian physicist and philosopher

[N]ot only a knowledge of the ideas that have been accepted and cultivated by subsequent teachers is necessary for the historical understanding of a science, but also that the rejected and transient thoughts of the inquirers, may even apparently erroneous notions, may be very important and very instructive. The historical investigation of the development of a science is most needful, lest the principles treasured up in it become a system of half-understood prescripts, or worse, a system of prejudices.

The Science of Mechanics (5th edition)

Chapter II, Part VIII, Section 7 (p. 316)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Historical investigation not only promotes the understanding of that which now is, but also brings new possibilities before us, by showing that which exists to be in great measure conventional and accidental. From the higher point of view at which different paths of thought converge we may look about us with freer vision and discover routes before unknown.

The Science of Mechanics (5th edition)

Chapter II, Part VIII, Section 7 (p. 316)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

The knowledge of the development of a science rests on the study of writings in their historical sequence and in their historical connection.

The Science of Mechanics (5th edition)

Chapter I, Part V, Section 9 (p. 97)

The Open Court Publishing Company. La Salle, Illinois, USA. 1942

Macquer, Pierre Joseph 1718–84

French chemist

As the History of any Science ought to relate the labours, the discoveries, and the errors of the cultivators of that Science; and to shew the obstacles which they have been obliged to surmount, and the mistaken paths into which they have sometimes been misled; it cannot therefore fail of being very useful to persons engaged in the same pursuits.

A Dictionary of Chemistry (Volume 1)

A Preliminary Discourse Concerning the Origin and Progress of Chemistry (p. 1)

Printed for T. Caldwell & R.F. Elmsly. London, England. 1771

Popper, Karl R. 1902–94

Austrian/British philosopher of science

The history of science, like the history of all human ideas, is a history of irresponsible dreams, of obstinacy, and of error.

Conjectures and Refutations: The Growth of Scientific Knowledge

Chapter 10, Section I (p. 216)

Harper & Row, Publishers. New York, New York, USA. 1963

Richet, Charles 1850–1935

French physiologist

In the history of science, nobody has left his mark on the world unless he has been, in this sense, an innovator.

The Natural History of a Savant

Chapter VI (p. 38)

J.M. Dent & Sons Ltd. London, England. 1927

Rostand, Jean 1894–1972

French biologist and philosopher

By showing us the extreme diversity of the factors involved in scientific creativity, the history of science teaches us that we should open the doors of our laboratories more widely. If we put that lesson into practice, our reflection on the past will have had a beneficial effect on the future.

Humanly Possible: A Biologist's Note on the Future of Mankind

On the History of Science (p. 182)

Saturday Review Press. New York, New York, USA. 1970

If there is one notion that clearly emerges from the history of science, and from which we can learn something, it is, I believe, the extreme diversity of the personal qualities and abilities that have contributed to the advancement of our knowledge.

Humanly Possible: A Biologist's Note on the Future of Mankind

On the History of Science (p. 180)

Saturday Review Press. New York, New York, USA. 1970

Sarton, George 1884–1956

Belgian-born American scholar and writer

From the point of view of the history of science, transmission is as essential as discovery.

Introduction to the History of Science (Volume 2)

Introductory Chapter (p. 15)

The Williams & Wilkins Company. Baltimore, Maryland, USA. 1927

The study of history, and especially of the history of science, may thus be regarded, not only as a source of

wisdom and humanism, but also as a regulator for our consciences: it helps us not to be complacent, arrogant, too sanguine of success, and yet remain grateful and hopeful, and never to cease working quietly for the accomplishment of our own task.

The History of Science and the New Humanism

Chapter IV (p. 191)

Indiana University Press. Bloomington, Indiana, USA. 1962

Schweizer, Karl W.

American professor of history

One of the obstructions to a genuine appreciation of history is the existence of a vague unformulated assumption that historical research merely seeks to disinter a fossilized past — merely digs into the memory to recover things which the human race once knew before. On the basis of such an assumption it is possible for people to have the feeling that history can never produce anything which is fundamentally novel, but merely fills our minds with the lumber of bygone ages.

Herbert Butterfield: Essays on the History of Science

Chapter II (p. 19)

Edwin Mellon Press. Lewiston, New York, USA. 1998

Silver, Brian L.

Israeli professor of physical chemistry

The essence of scientific history has been conflict.

The Ascent of Science

Preface (p. xiii)

Solomon Press Book. New York, New York, USA. 1998

Tannery, Paul 1843–1904

French mathematician and historian of science

The scientist in so far as he is a scientist is only drawn to the history of the particular science that he studies himself; he will demand that this history be written with every possible technical detail, for it is only thus that it can supply him with materials of any possible utility. But what he will particularly require is the study of the thread of ideas and the linking together of discoveries. His chief object is to rediscover in its original form the expression of his predecessors' actual thoughts, in order to compare them with his own; and to unravel the methods that served in the construction of current theories, in order to discover at what point and towards what goal an effort towards innovation may be made.

In A. Rupert Hall

Can the History of Science Be History?

The British Journal for the History of Science, Volume 4, Part III, Number 15, June 1969 (p. 212)

Turner, H. H.

No biographical data available

It is a familiar fact that there are epochs in the history of a science when it acquires new vigor; when new branches are put forth and old branches bud afresh or blossom

more plenteously. The vivifying cause is generally to be found either in the majestic form of the discovery of a new law of nature or in the humbler guise of the invention of a new instrument of research.

Annual Report of the Board of Regents of the Smithsonian Institution, 1904

Some Reflections Suggested by the Application of Photography to Astronomical Research (p. 171)

Government Printing Office. Washington, D.C. 1905

Weisskopf, Victor Frederick 1908–2002

Austrian-American physicist

It was a heroic period [about 1922–1930] without any parallel in the history of science, the most fruitful and interesting one of modern physics.... In this great period of physics, Bohr and his associates touched the nerve of the universe. The intellectual eye of man was opened to the inner workings of nature.

Niels Bohr, the Quantum, and the World (p. 22)

Harvard University Press. Cambridge, Massachusetts, USA. 1985

Wells, H. G. (Herbert George) 1866–1946

English novelist, historian, and sociologist

History is no exception amongst the sciences; as the gaps fill in, the outline simplifies; as the outlook broadens, the clustering multitude of details dissolve into general laws.

The Outline of History

Introduction (p. vi)

The Macmillan Company. New York, New York, USA. 1921

Whewell, William 1794–1866

English philosopher and historian

We may best hope to understand the nature and conditions of real knowledge by studying the nature and conditions of the most certain and stable portions of knowledge which we already possess: and we are most likely to learn the best methods of discovering truth by examining how truths, now universally recognized, have really been discovered. *The Philosophy of the Inductive Sciences Founded upon Their History* (Volume 1)

Book I, Chapter I (p. 1)

John W. Parker. London, England. 1847

[T]here do exist among us doctrines of solid and acknowledged certainty, and truths of which the discovery has been received with universal applause. These constitute what we commonly term Sciences; and of these bodies of exact and enduring knowledge, we have within our reach so large and varied a collection, that we may examine them, and the history of their formation, with good prospect of deriving from the study such instruction as we seek.

The Philosophy of the Inductive Sciences Founded upon Their History (Volume 1)

Book I, Chapter I (p. 2)

John W. Parker. London, England. 1847

It will be universally expected that a history of Inductive Science should...afford us some indication of the most promising mode of directing our future efforts to add to its extent and completeness.

History of the Inductive Sciences, from the Earliest to the Present Time (Volume the First)

Introduction (p. 5)

John W. Parker. London, England. 1837

[T]he progress of knowledge is the main action of our drama; and all the events which do not bear upon this, though they may relate to the cultivation and the cultivators of philosophy, are not a necessary part of our theme.

History of the Inductive Sciences, from the Earliest to the Present Time (Volume the First)

Introduction (pp. 9, 12)

John W. Parker. London, England. 1837

Whitehead, Alfred North 1861–1947

English mathematician and philosopher

Science is concerned with the facts of bygone transition. History relates the aim at ideals. And between Science and History, lies the operation of the Deistic impulse of energy. It is the religious impulse in the world which transforms the dead facts of Science into the living drama of History. For this reason Science can never foretell the perpetual novelty of History.

Modes of Thought

Chapter II, Lecture Five (p. 142)

The Macmillan Company. New York, New York, USA. 1938

Williams, L. Pearce

American historian of science

...the history of science is a professional and rigorous discipline demanding the same level of skills and scholarship as any other scholarly field. It is time for the scientists to realize that he studies nature and others study him. He is no more nor no less competent to comment on his own activities and the activities of his fellow scientist than is the politician. Critical political history is rarely written by the politician and the same is true of the history of science.

Letter to the Editor

Scientific American, Volume 214, Number 6, June 1966 (p. 8)

Willstätter, Richard 1872–1942

German chemist

I consider the teaching and study of the historical development of science as indispensable.... Our textbooks fail in this respect.

Lectures and Essays (Volume 2)
 Body and Mind (p. 32)
 Macmillan & Company. London, England. 1879

Darwin, Charles Robert 1809–82
 English naturalist

Children are one's greatest happiness, but often and often a still greater misery. A man of science ought to have none — perhaps not a wife; for then there would be nothing in this wide world worth caring for, and a man might (whether he could is another question) work away like a Trojan.

In Francis Darwin (ed.)
More Letters of Charles Darwin (Volume 1)
 Letter 139, Darwin Asa Gray, July 11, 1862 (p. 202)
 D. Appleton & Company. New York, New York, USA. 1903

...my success as a man of science, whatever this may have amounted to, has been determined, as far as I can judge, by complex and diversified mental qualities and conditions. Of these, the most important have been — the love of science, unbounded patience in long reflecting over any subject, industry in observing and collecting facts, and a fair share of invention as well as of common-sense. With such moderate abilities as I possess,

it is truly surprising that I should have influenced to a considerable extent the belief of scientific men on some important points.

The Life and Letters of Charles Darwin (Volume 1)
 Chapter II (p. 85)
 D. Appleton & Company. New York, New York, USA. 1896

Dumas, Jean Baptiste-Andre 1800–84
 French biochemist

The recollection of an already long life has permitted me to become acquainted with a great variety of personages. And if I call on memory to picture to me how the type of true happiness is realized on earth I do not see it under the form of the powerful man clothed in high authority, nor under that of the rich man to whom the splendors of luxury and the delicacies of well-being are granted, but under that of the man of science, who consecrates his life to penetrating the secrets of Nature and to the discovery of new truths.

In Sir Richard Arman Gregory
Discovery; or, The Spirit and Service of Science
 Chapter I (p. 18)
 Macmillan & Company Ltd. London, England. 1918

Eddington, Sir Arthur Stanley 1882–1944
 English astronomer, physicist, and mathematician

Verily, it is easier for a camel to pass through the eye of a needle than for a scientific man to pass through a door. And whether the door be barn door or church door it might be wiser that he should consent to be an ordinary man and walk in rather than wait till all the difficulties involved in a really scientific ingress are resolved.

The Nature of the Physical World
 Chapter XV (p. 342)
 The Macmillan Company. New York, New York, USA. 1930

Einstein, Albert 1879–1955
 German-born physicist

It has often been said, and certainly not without justification, that the man of science is a poor philosopher. Why then should it not be the right thing for the physicist to let the philosopher do the philosophizing? ...At a time like the present, when experience forces us to seek a newer and more solid foundation, the physicist cannot simply surrender to the philosopher the critical contemplation of the theoretical foundations; for, he himself knows best, and feels more surely where the shoe pinches. In looking for a new foundation, he must try to make clear in his own mind just how far the concepts which he uses are justified, and are necessities.

Chapter IV (p. 170)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1904

Froude, James Anthony 1818–94

English historian and biographer

The secrets of nature have been opened out to us on a thousand lines; and men of science of all creeds can pursue side by side their common investigations.

Short Studies on Great Subjects (Volume 1)
Times of Erasmus, Desiderius and Luther, Lecture I (p. 41)
Longmans, Green & Company. London, England. 1879

Gregory, Sir Richard Arman 1864–1952

British science writer and journalist

The scientific man has to work for truth so far as her ways can be comprehended by him, but he is never more than a trustee for posterity, and has no authority to define the functions or limit the freedom of those who follow him.

Discovery; or The Spirit and Service of Science
Chapter II (p. 30)
Macmillan & Company Ltd. London, England. 1918

The man of science, by virtue of his training, is alone capable of realising the difficulties — often enormous — of obtaining accurate data upon which just judgment may be based.

Discovery; or, The Spirit and Service of Science
Chapter III (p. 40)
Macmillan & Company Ltd. London, England. 1918

To the popular mind, a man of science is a callous necromancer who has cut himself off from communion with his fellows, and has thereby lost the throbbing and compassionate heart of a full life: he is a Faust who has not yet made a bargain with Mephistopheles, and is therefore without human interest.

Discovery; or, The Spirit and Service of Science
Preface (p. v)
Macmillan & Company Ltd. London, England. 1918

Hall, Asaph 1829–1907

American astronomer

When men are striving for the discovery of truth in its various manifestations, they learn that it is by correcting the mistakes of preceding investigators that progress is made, and they have charity for criticism. Hence persecution for difference of opinion becomes an absurdity. The labours of scientific men are forming a great body of doctrine that can be appealed to with confidence in all countries. Such labours bring people together, and tend to break down national barriers and restrictions.

In Sir Richard Arman Gregory
Discovery; or, The Spirit and Service of Science

Chapter II (pp. 30–31)
Macmillan & Company Ltd. London, England. 1918

Huxley, Thomas Henry 1825–95

English biologist

The man of science has learned to believe in justification, not by faith, but by verification.

Collected Essays (Volume 1)
Method and Result
On Improving Natural Knowledge (p. 41)
Macmillan & Company Ltd. London, England. 1904

Laplace, Pierre Simon 1749–1827

French mathematician, astronomer, and physicist

The isolated man of science can dedicate himself without fear to dogmatism; he hears only from afar contradictions of his ideas. But in a scientific society the impact of dogmatic ideas soon results in their destruction, and the desire to win one another over to their point of view establishes necessarily among members the convention of admitting only the results of observations and calculation.

Robinson, James Harvey 1863–1936

American historian

Beard, Charles A. 1874–1948

American historian

It may well be that men of science, not kings, or warriors, or even statesmen are to be the heroes of the future.

The Development of Modern Europe: An Introduction to the Study of Current History (Volume 2)
Chapter XXXI (p. 421)
Ginn & Company. Boston, Massachusetts, USA. 1908

Ross, Sir Ronald 1857–1932

English bacteriologist

A witty friend of mine once remarked that the world thinks of the man of science as one who pulls out his watch and exclaims, "Ha! half an hour to spare before dinner: I will just step down to my laboratory and make a discovery."

Who but men of science themselves are to blame for such a misconception? Out of the many memoirs...[o]ur books of science are records of results rather than of that sacred passion for discovery which leads to them. Yet many discoveries have really been the climax of an intense drama... in which the protagonists are man and nature, and the issue a decision for all the ages.

Memoirs
Preface (pp. v–vi)
Publisher undetermined

Russell, Bertrand Arthur William 1872–1970

English philosopher, logician, and social reformer

The man of science looks for facts that are significant, in the sense of leading to general laws; and such facts are frequently quite devoid of intrinsic interest.

The Scientific Outlook
Chapter I (p. 49)
George Allen & Unwin Ltd. London, England. 1931

All the conditions of happiness are realized in the life of the man of science.

The Conquest of Happiness
Chapter X (p. 146)
Liverwright Publishing Corporation. New York, New York, USA. 1930

Spencer, Herbert 1820–1903

English social philosopher

Only the sincere man of science (and by this title we do not mean the mere calculator of distances, or analyser of compounds, or labeler of species; but him who through lower truths seeks higher, and eventually the highest) — only the genuine man of science, we say, can truly know how utterly beyond, not only human knowledge, but human conception, is the Universal Power of which Nature, and Life, and Thought are manifestations.

Education: Intellectual, Moral, and Physical
Chapter I (p. 84)
A.L. Fowle. New York, New York, USA. 1860

Suits, C. G.

American physicist

I've never met that "coldly calculating man of science" whom the novelists extol.... I doubt that he exists; and if he did exist I greatly fear that he would never make a startling discovery or invention.

In Frederic Brownell
Heed that Hunch
The American Magazine, December 1945 (p. 142)

Sullivan, John William Navin 1886–1937

Irish mathematician

...outside their views on purely scientific matters there is nothing characteristic of men of science.

Aspects of Science
Scientific Citizen (p. 120)
J. Cape & H. Smith. New York, New York, USA. 1927

Thoreau, Henry David 1817–62

American essayist, poet, and practical philosopher

He is not a true man of science who does not bring some sympathy to his studies, and expect to learn something by behavior as well as by application. It is childish to rest in the discovery of mere coincidences, or of partial and extraneous laws. The study of geometry is a petty and idle exercise of the mind if it is applied to no larger system than the starry one.

The Writings of Henry David Thoreau (Volume 1)
A Week on the Concord and Merrimack Rivers
Friday (p. 477)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

The true man of science will know nature better by his finer organization; he will smell, taste, see, hear, feel, better than other men. His will be a deeper and finer experience. We do not learn by inference and deduction and the application of mathematics to philosophy, but by direct intercourse and sympathy. It is with science as with ethics, — we cannot know truth by contrivance and method; the Baconian is as false as any other, and with all the helps of machinery and the arts, the most scientific will still be the healthiest and friendliest man, and possess a more perfect Indian wisdom.

The Writings of Henry David Thoreau (Volume 9)
Natural History of Massachusetts (pp. 161–162)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Twain, Mark (Samuel Langhorne Clemens) 1835–1910
American author and humorist

The surest way for a nation's scientific men to prove that they were proud and ignorant was to claim to have found out something fresh in the course of a thousand years or so. Evidently the peoples of this book's day regarded themselves as children, and their remote ancestors as the only grown-up people that had existed. Consider the contrast:... our own scientific men may and do regard themselves as grown people and their grandfathers as children. The change... is probably the most sweeping that has ever come over mankind in the history of the race. It is the utter reversal, in a couple of generations, of an attitude which had been maintained without challenge or interruption from the earliest antiquity.... The change from reptile to bird was not more tremendous, and it took longer.

A Majestic Literary Fossil (p. 534)
Hanover House. Garden City, New York, USA. 1961

von Goethe, Johann Wolfgang 1749–1832
German poet, novelist, playwright, and natural philosopher

Scientific man is supposed to limit himself to his immediate surroundings. However if he should occasionally want to step forth as a poet, he certainly should not be prevented from doing so.

In Karl J. Fink
Goethe's History of Science
Chapter 9 (p. 125)
Cambridge University Press. Cambridge, England. 1991

von Helmholtz, Hermann 1821–94
German scientist and philosopher

In fact, men of science form, as it were, an organised army, labouring on behalf of the whole nation, and gen-

erally under its direction and at its expense, to augment the stock of such knowledge as may serve to promote industrial enterprises, to increase wealth, to adorn life, to improve political and social relations, and to further the moral development of individual citizens.

Popular Lectures on Scientific Subjects
Lecture I
Volume 2, 1846 (p. 28)
D. Appleton & Company. New York, New York, USA. 1885

Wells, H. G. (Herbert George) 1866–1946
English novelist, historian, and sociologist

The training of a scientific man is a training in what an illiterate lout would despise as a weakness, it is a training in blabbing, in blurring things out, in telling just as plainly as possible and as soon as possible what it is he has found.

New Worlds for Old
Chapter II (p. 23)
The Macmillan Company. New York, New York, USA. 1918

Whitehead, Alfred North 1861–1947
English mathematician and philosopher

No man of science wants merely to know. He acquires knowledge to appease his passion for discovery. He does not discover in order to know, he knows in order to discover.

The Orginsation of Thought
Chapter II (p. 37)
Greenwood Press Publishers. Westport, Connecticut, USA. 1974

Whitney, Willis Rodney 1868–1958
American chemical and electrical engineer

For the engineer "safety first" is a good slogan, but "safety last" is better for the man of research.

The Stimulation of Research in Pure Science Which Has Resulted from the Needs of Engineers and of Industry
Science, Volume 65, Number 1862, March 25, 1927 (p. 289)

Wordsworth, William 1770–1850
English poet

If the labours of men of Science should ever create any material revolution, direct or indirect, in our condition, and in the impressions which we habitually receive, the Poet will sleep then no more than at present, but he will be ready to follow the steps of the Man of Science, not only in those general indirect effects, but he will be at his side, carrying sensation into the midst of the objects of the Science itself. The remotest discoveries of the Chemist, the Botanist, or Mineralogist will be as proper objects of the Poet's art as any upon which I can be employed, if the time should ever come when these things shall be familiar to us... In R.L. Brett and A.R. Jones (eds.)

Lyrical Ballads
Preface (pp. 259–260)
Methuen & Company Ltd. London, England. 1963

SCIENCE, PROGRESS OF**Abernethy, John** 1680–1740

Irish Presbyterian minister, theologian, and dissenter

Although knowledge has at times appeared to exhibit something of uniformity in its advances, yet it can not have escaped the least observant that, as a whole, the Progress of Science has been marked by very variable activity. At once time marvelously rapid; at another, indefinitely slow; now merged in darkness or obscurity, and not blazing forth with meridian splendor.

Memoirs of John Abernethy

Chapter I (p. 1)

Harper & Brothers. New York, New York, USA. 1853

Ardrey, Robert 1908–80

American anthropologist

The contemporary revolution in the natural sciences has proceeded in something more striking than silence. It has proceeded in secret. Like our tiny, furry, squirrel-like, earliest primate ancestors, seventy million years ago, the revolution has found obscurity its best defence and modesty the key to its survival. For it has challenged larger orthodoxies than just those of science, and its enemies exist beyond counting. From seashore and jungle, from ant-heap and travertine cave have been collected the inflammable materials that must some day explode our most precious intellectual movement seeking light under darkest cover.

African Genesis

Chapter I, Section 2 (p. 13)

Athenaeum. New York, New York, USA. 1968

Bernard, Claude 1813–78

French physiologist

The progress of experimental method consists in this, — that the sum of truths grows larger in proportion as the sum of errors grows less. But each one of these particular truths is added to the rest to establish more general truths. In this fusion, the names of promoters of science disappear little by little, and the further science advances, the more it takes an impersonal form and detaches itself from the past.

An Introduction to the Study of Experimental Medicine

Part I, Chapter II, Section iv (p. 42)

Henry Schuman, Inc. New York, New York, USA. 1927

Bronowski, Jacob 1908–74

Polish-born British mathematician and polymath

The progress of science is the discovery at each step of a new order which gives unity to what had long seemed unlike.

Science and Human Value

The Creative Mind (p. 26)

Harper & Row, Publishers. New York, New York, USA. 1965

Cohen, Morris Raphael 1880–1947

American philosopher

...the progress of science always depends upon our questioning the plausible, the respectably accepted, and the seemingly self-evident.

Reason and Nature

Book III

Chapter One, Section II (p. 348)

Free Press. Glencoe, Georgia, USA. 1953

Coles, Abraham 1813–91

American physician, hymnist, and poet

Believing needless ignorance a crime,
You strive to reach the summit of your time;
To old age learning up from early youth
Your life one long apprenticeship to truth.
Wisely suspicious sometimes of the new,
Ye give alert acceptance to the true:
Even though it make old science obsolete,
It with a thousand welcomes still you greet...
Each Year adds something — many things ye know
Your sires knew not a Hundred Years ago.

The Microcosm and Other Poems

The Microcosm

Physician's Character and Aims — Science Progressive

D. Appleton & Company. New York, New York, USA. 1881

Daly, Reginald Aldworth 1871–1957

Canadian-American geologist

Inasmuch as cosmogony and geology are both young sciences, consensus of opinions about the earth's origin and history is still reserved for the future. Meantime these sciences are advancing through the erection and testing of competing hypotheses; in other words, through speculation, controlled by all the available facts. Science progresses through systematic guessing in the good sense of the world.

Our Mobile Earth

Introduction (p. xx)

Charles Scribner's Sons. New York, New York, USA. 1926

Dewar, James 1842–1923

English physicist and chemist

In a legitimate sense all genuine scientific workers feel that they are "inheritors of unfulfilled renown." The battlefields of science are the centers of a perpetual warfare, in which there is no hope of final victory, although partial conquest is ever triumphantly encouraging the continuance of the disciplined and strenuous attack on the seemingly impregnable fortress of nature.

Annual Report of the Board of Regents of the Smithsonian Institution, 1902

History of Cold and the Absolute Zero (p. 240)

Government Printing Office. Washington, D.C. 1903

Dryden, John 1631–1700

English poet, dramatist, and literary critic

Is it not evident, in these last hundred years (when the Study of Philosophy has been the business of all the Virtuosi in Christendom) that almost a new Nature has been reveal'd to us? that more errors of the School have been detected, more useful Experiments in Philosophy have been made, more Noble Secrets in Opticks, Medicine, Anatomy, Astronomy, discover'd, than in all those credulous and doting Ages from Aristotle to us? so true it is that nothing spreads more fast than Science, when rightly and generally cultivated.

Of Dramatick Poesie: An Essay (Volume 1) (p. 12)
Printed for Henry Herringman. London, England. 1684

Duclaux, Pierre Émile 1840–1904
French biochemist

It is because science is sure of nothing that it is always advancing.

In William Osler
Evolution of Modern Medicine
Chapter VI (p. 219)
Yale University Press. New Haven, Connecticut, USA. 1921

A series of judgments, revised without ceasing, goes to make up the incontestable progress of science.

In W. Mansfield Clark
The Determination of Hydrogen Ions
Chapter VIII (p. 177)
The Williams & Wilkins Company. Baltimore, Maryland, USA. 1928

Einstein, Albert 1879–1955
German-born physicist

Infeld, Leopold 1898–1968
Polish physicist

Science forces us to create new ideas, new theories. Their aim is to break down the wall of contradictions which frequently blocks the way of scientific progress. All the essential ideas in science were born in a dramatic conflict between reality and our attempts at understanding.

The Evolution of Physics
Quanta (p. 280)
Simon & Schuster. New York, New York, USA. 1934

Enriques, Federigo 1871–1946
Italian mathematician

[T]he progress of science is dependent upon science itself, it is an extension and not a creation.

Problems of Science
Chapter 3, Section 37 (p. 165)
The Open Court Publishing Company. Chicago, Illinois, USA. 1914

Foster, Sir Michael 1836–1907
English physiologist and educator

The path [of progress in science] may not always be in a straight line; there may be swerving to this side and to that; ideas may seem to return again and again to the same point of the intellectual compass; but it will always

be found that they have reached a higher level.... Moreover, science is not fashioned as is a house, by putting brick to brick, that which is once put remaining as it was put to the end. The growth of science is that of a living being. As is the embryo, phases follows phase, and each member or body puts on in succession different appearances, though all the while the same member, so a scientific conception of one age seems to differ from that of a following age...

Annual Report of the Smithsonian Institution For 1899
The Growth of Science in the Nineteenth Century
Government Printing Office. Washington, D.C. 1900

France, Anatole (Jean Jacques Brousson) 1844–1924
French writer

The progress of science renders useless the very books which have been the greatest aid to that progress. As those works are no longer useful, modern youth is naturally inclined to believe they never had any value; it despises them, and ridicules them if they happen to contain any superannuated opinion whatever.

Translated by Lafcadio Hern
The Crime of Sylvester Bonnard
June 4 (p. 168)
Harper & Brothers. New York, New York, USA. 1890

Free, E. E.
No biographical data available

Like a man on a bicycle science cannot stop; [science] must progress or collapse.

The Electric Brains in the Telephone
The World's Work, Volume LIII, Number 4, February 1927 (p. 429)

Garrod, Archibald 1857–1936
English physician

In these days of rapid scientific progress there is a tendency to accept the facts of nature, as at present known, without glancing back at the slow and difficult stages by which the knowledge of these facts has been arrived at. Yet such a retrospect is by no means unprofitable, since it warns us that hasty generalizations upon insufficient data retard rather than advance the progress of knowledge, and that the theories of the day must not be accepted as necessarily expressing absolute truths.

In Alexander G. Bearn
Archibald Garrod and the Individuality of Man
Chapter 3 (p. 25)
Clarendon Press. Oxford, England. 1993

Greene, Brian 1963–
American physicist

Progress in science proceeds in fits and starts. Some periods are filled with great breakthroughs, in other times researchers experience dry spells. Scientists put forward results, both theoretical and experimental. The results are debated by the community, sometimes they are discarded,

sometimes they are modified, and sometimes they provide inspirational jumping-off points for new and more accurate ways of understanding the physical universe. In other words, science proceeds along a zigzag path toward what we hope will be ultimate truth, a path that began with humanity's earliest attempts to fathom the cosmos and whose end we cannot predict.

The Elegant Universe

Chapter 1 (p. 20)

W.W. Norton & Company, Inc. New York, New York, USA.2003

Heisenberg, Werner Karl 1901–76

German physicist and philosopher

Science progresses not only because it helps to explain newly discovered facts, but also because it teaches us over and over again what the word “understanding” may mean.

Physics and Beyond

Chapter 10 (p. 124)

Harper & Row, Publishers. New York, New York, USA. 1971

Kuhn, Thomas S. 1922–96

American historian of science

... we must explain why science — our surest example of sound knowledge — progresses as it does, and we first must find out how, in fact, it does progress.

In Imre Lakatos and Alan Musgrave (eds.)

Criticism and the Growth of Knowledge

Logic of Discovery or Psychology of Research (p. 20)

Cambridge University Press. Cambridge, England. 1970

Does a field make progress because it is a science, or is it a science because it makes progress?

The Structure of Scientific Revolutions (2nd edition)

Chapter XIII (p. 162)

The University of Chicago Press. Chicago, Illinois, USA. 1970

Lee, Tsung Dao 1926–

Chinese-born American nuclear physicist

The progress of science has always been the result of a close interplay between our concepts of the universe and our observations on nature. The former can only evolve out of the latter and yet the latter is also conditioned greatly by the former. Thus, in our exploration of nature, the interplay between our concepts and our observations may sometimes lead to totally unexpected aspects among already familiar phenomena.

Nobel Lectures, Physics 1942–1962

Nobel lecture for award received in 1957

Weak Interactions and Nonconservation of Parity (p. 417)

Elsevier Publishing Company. Amsterdam, Netherlands. 1964

Lindley, David 1956–

English astrophysicist and author

Progress in science is a matter of jumping to conclusions. The trick is to jump to useful and interesting conclusions. Generalizing from small scraps of evidence may lead one astray, but sticking strictly to what limited evidence

one has, and refusing to countenance anything that is not directly provable, leads nowhere at all. The scientist has to generate new ideas and hypotheses, then act upon them.

Where Does the Weirdness Go? Why Quantum Mechanics Is Strange, but Not as Strange as You Think

An Engineer, a Physicist, and a Philosopher... (p. 157)

Basic Books, Inc. New York, New York, USA. 1996

Lowie, Robert H. 1883–1957

Austrian-born American anthropologist

The clarification of concepts...directly gauges scientific progress.

The History of Ethnological Theory

Chapter XIV (p. 281)

Rinehart & Company, Inc. New York, New York, USA. 1937

Mayr, Ernst 1904–2005

German-born American biologist

Any scientific revolution has to accept all sorts of black boxes, for if one had to wait until all black boxes are opened, one would never have any conceptual advances.

One Long Argument: Charles Darwin and the Genesis of Modern Evolutionary Thought

Chapter Ten (p. 146)

Harvard University Press. Cambridge, Massachusetts, USA. 1991

Medawar, Sir Peter Brian 1915–87

Brazilian-born English zoologist

It can be said that Science progresses only by peeling away, one after another, all the covering of apparent stability in the world; disclosing beneath the immobility of the infinitely small, movement of extra rapidity, and beneath the immobility of the Immense, movement of extra slowness.

The Future of Man

Some Reflections on Progress (p. 62)

Methuen & Company Ltd. London, England. 1960

Planck, Max 1858–1947

German physicist

It is a rather zigzag pattern than the curve of scientific progress follows; indeed I might say that the forward movement is of an explosive type, where the rebound is an attendant characteristic of the advance. Every applied hypothesis which succeeds in throwing the searchlight of a new vision across the field of physical science represents a plunge into the darkness; because we cannot at first reduce the vision to a logical statement. Then follows the birth-struggle of a new theory. Once this has seen the light of day it has to go forward willy-nilly until the stamp of its destiny is put on it when the test of the research measurements is applied.

Where Is Science Going?

Nature's Image in Science (pp. 90–91)

W.W. Norton & Company, Inc. New York, New York, USA.1932

An important scientific innovation rarely makes its way by gradually winning over and converting its opponents:

it rarely happens that Saul becomes Paul. What does happen is that its opponents gradually die out and that the growing generation is familiarized with the idea from the beginning...

The Philosophy of Physics

Chapter III (p. 97)

W.W. Norton & Company, Inc. New York, New York, USA. 1936

Popper, Karl R. 1902–94

Austrian/British philosopher of science

In science it would be a tremendous loss if we were to say: “We are not making very much progress. Let us sweep away all science and start afresh.” The rational procedure is to correct it and to revolutionize it, but not to sweep it away. You may create a new theory, but the new theory is created in order to solve those problems which the old theory did not solve.

Conjectures and Refutations

Chapter 4 (p. 132)

Harper & Row, Publishers. New York, New York, USA. 1963

...in order that a new theory should constitute a discovery or a step forward it should conflict with its predecessor...it should contradict its predecessor; it should overthrow it. In this sense, progress in science — or at least a striking progress — is always revolutionary.

In Rom Harré

Problems of Scientific Revolution

The Rationality of Scientific Revolutions (pp. 82–83)

The Clarendon Press. Oxford, England. 1975

Price, Don K. 1910–1995

American presidential advisor and educator

...most scientists are prepared to work most of the time within the framework of ideas developed by their acknowledged leaders. In that sense...science is ruled by oligarchs who hold influence as long as their concepts and systems are accepted as the most successful strategy.... Once in a great while, a rival system is proposed; then there can usually be no settlement of the issue by majority opinion. The metaphor of “scientific revolution” suggests the way in which the losing party is displaced from authority, discredited and its doctrines eliminated from textbooks.

The Scientific Estate

Chapter 6 (p. 172)

Harvard University Press. Cambridge, Massachusetts, USA. 1965

Priestley, Joseph 1733–1804

English theologian and scientist

If the progress continues the same in another period, of equal length, what a glorious science shall we see unfold, what a fund of entertainment is there in store for us, and what important benefits must derive mankind.

Quoted by John G. McEvoy

Electricity, Knowledge, and the Nature of Progress in Priestley’s

Thought *The British Journal for the History of Science*, Volume 12,

Number 40, 1979 (p. 76)

Richet, Charles 1850–1935

French physiologist

One can only progress in the sciences — with the exception of Mathematics — at the price of great pecuniary sacrifice.

Translated by Sir Oliver Lodge

The Natural History of a Savant

Chapter II (p. 21)

J.M. Dent & Sons Ltd. London, England. 1927

All progress in science is progress in civilization, and consequently contributes to the welfare of man.

Translated by Sir Oliver Lodge

The Natural History of a Savant

Chapter XIII (p. 145)

J.M. Dent & Sons Ltd. London, England. 1927

Rindos, David 1947–96

American educator

Progress in science depends not only upon new data but also upon the careful elaboration of new approaches to old data as well as new.

In Michael B. Schiffer (ed.)

Archaeological Method and Theory (Volume 1)

Chapter I (p. 1)

University of Arizona Press. Tucson, Arizona, USA. 1989

Romanoff, Alexis Lawrence 1892–1980

Russian soldier and scientist

Science is the key to the progress of the world.

Encyclopedia of Thoughts

Aphorism 20

Ithaca Heritage Books. Ithaca, New York, USA. 1975

Thomson, Sir George 1892–1975

English physicist

...the progress of science is a little like making a jig-saw puzzle. One makes collections of pieces which certainly fit together, though at first it is not clear where each group should come in the picture as a whole, and if at first one makes a mistake in placing it, this can be corrected later without dismantling the whole group.

The Inspiration of Science

Introduction (pp. 5–6)

Oxford University Press, Inc. London, England. 1961

von Bertalanffy, Ludwig 1901–72

Austrian biologist

The evolution of science is not a movement in an intellectual vacuum; rather it is both an expression and a driving force of the historical process.

Problems of Life: An Evaluation of Modern Biological Thought

Chapter Six (p. 202)

Watts & Company, London, England. 1952

von Goethe, Johann Wolfgang 1749–1832

German poet, novelist, playwright, and natural philosopher

...we might well mention from our perspective, that there are advantages to entering a field of science which is in a state of crisis, and in which we also find an active, extraordinary person. We are young with young methods, our beginnings reach into a new epoch.

In Karl J. Fink

Goethe's History of Science

Chapter 6 (p. 88)

Cambridge University Press. Cambridge, England. 1991

von Liebig, Justus 1803–73

German organic chemist

Thus the progress of science is, like the development of nature's works, gradual and expansive. After the buds and branches spring forth the leaves and blossoms, after that blossoms the fruit.

Familiar Letters on Chemistry

Letter I (p. 10)

Taylor & Walton. London, England. 1843

von Neumann, John 1903–57

Hungarian-American mathematician

Morgenstern, Oskar 1902–77

German-born American economist

The great progress in every science came when, in the study of problems which were modern as compared with ultimate aims, methods were developed which could be extended further and further. The free fall is a very trivial physical phenomenon, but it was the study of this exceedingly simple fact and its comparison with the astronomical material, which brought forth mechanics.

Theory of Games and Economic Behavior

Chapter 1.3.2 (p. 6)

Princeton University Press. Princeton, New Jersey, USA. 1947

Whitehead, Alfred North 1861–1947

English mathematician and philosopher

The progress of Science consists in observing interconnections and in showing with a patient ingenuity that the events of this ever-shifting world are but examples of a few general relations, called laws. To see what is general in what is particular, and what is permanent in what is transitory, is the aim of scientific thought.

An Introduction to Mathematics

Chapter 1 (p. 4)

Oxford University Press, Inc. New York, New York, USA. 1958

[S]cience started its modern career by taking over ideas derived from the weakest side of the philosophies of Aristotle's successors. In some respects it was a happy choice. It enabled the knowledge of the seventeenth century to be formulated so far as physics and chemistry were concerned, with a completeness which lasted to the present time. But the progress of biology and psychology has probably been checked by the uncritical assumption of half-truths.

Science and the Modern World

Chapter I (pp. 16–17)

The Macmillan Company. New York, New York, USA. 1929

In the conditions of modern life the rule is absolute, the race which does not value trained intelligence is doomed. Not all your heroism, not all your social charm, not all your wit, not all your victories on land or at sea, can move back the finger of fate. Today we maintain ourselves. Tomorrow science will have moved forward yet one more step, and there will be no appeal from the judgment which will then be pronounced on the uneducated.

The Organisation of Thought

Chapter I (p. 28)

Greenwood Press Publishers. Westport, Connecticut, USA. 1974

SCIENCE AND ART

Asimov, Isaac 1920–92

American author and biochemist

How often people speak of art and science as though they were two entirely different things, with no interconnection. An artist is emotional, they think, and uses only his intuition; he sees all at once and has no need of reason. A scientist is cold, they think, and uses only his reason; he argues carefully step by step, and needs no imagination. That is all wrong. The true artist is quite rational as well as imaginative and knows what he is doing; if he does not, his art suffers. The true scientist is quite imaginative as well as rational, and sometimes leaps to solutions where reason can follow only slowly; if he does not, his science suffers.

The Roving Mind

Chapter 25 (p. 116)

Prometheus Books. Buffalo, New York, New York, USA. 1983

Author undetermined

Art is personal and science is universal.

In Lecomte du Nouy

The Road to Reason

Chapter 1 (p. 31)

Longmans, Green & Company. London, England. 1949

Blake, William 1757–1827

English poet, painter, and engraver

He who would do good to another must

do it in Minute Particulars:

General Good is the plea of the scoundrel,

hypocrite and flatterer;

For art and science cannot exist but in

minutely organized Particulars.

The Complete Poetry and Prose of William Blake

Jerusalem

The Holiness of Minute Particulars, 3, Section 55 (p. 399)

University of California Press. Berkeley, California, USA. 1982

Brecht, Bertolt 1898–1956

German writer

But science and art meet on this ground, that both are there to make man's life easier, the one setting out to maintain, the other to entertain us. In the age to come art will create entertainment from that new productivity which can so greatly improve our maintenance, and in itself, if only it is left unshackled, may prove to be the greatest pleasure of all.

Translated by John Willett

Brecht on Theatre: The Development of an Aesthetic

A Short Organon for the Theater, 20 (p. 185)

Hill & Wang. New York, New York, USA. 1964

Campbell, Norman R. 1880–1949

English physicist and philosopher

Science is the noblest of the arts and men of science the most artistic of all artists.

Physics: The Elements

Chapter VIII (p. 227–228)

At The University Press. Cambridge, England. 1920

Science, like art, should not be something extraneous, added as a decoration to other activities of existence; it should be part of them, inspiring our most trivial actions as well as our noblest thoughts.

What Is Science?

Chapter VIII (p. 183)

Dover Publications. New York, New York, USA. 1952

Cassidy, Harold Gomes

No biographical data available

If humans understood science and would effectively make their voices heard, they could, with the aid of scientists, control the forces of cultural change in the process of their actual generation, directing them in the ways that lead toward the morally and ethically just ends that arise from the union of art and science. This union, when it is a union of whole science and whole art, supports and illuminates anew a noble image of man.

The Sciences and the Arts: A New Alliance

Chapter 11 (p. 165)

Harper & Brothers. New York, New York, USA. 1962

Cassirer, Ernst 1874–1945

German philosopher

Since art and science move in entirely different planes, they cannot contradict or thwart one another.

An Essay on Man: An Introduction to a Philosophy of Human Culture

Chapter IX (p. 170)

Yale University Press. New Haven, Connecticut, USA. 1944

Cohen, I. Bernard 1914–2003

American physicist and science historian

Great creations whether of science or art — can never be viewed dispassionately.

In the 1952 printing

Optics

Preface (p. ix)

Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Connolly, Cyril 1903–74

English critic and editor

Today the function of the artist is to bring imagination to science and science to imagination, where they meet, in the myth.

The Unquiet Grave

Part III (p. 86)

Hamish Hamilton. London, England. 1945

Crick, Francis Harry Compton 1916–2004

English biochemist

People with training in the arts still feel that in spite of the alterations made in their life by technology — by the internal combustion engine, by penicillin, by the Bomb — modern science has little to do with what concerns them most deeply. As far as today's science is concerned this is partly true, but tomorrow's science is going to knock their culture right out from under them.

Of Molecules and Men

The Prospect Before Us (p. 95)

University of Washington Press. Seattle, Washington, USA. 1966

De Gourmont, Rémy 1858–1915

French critic and novelist

Art includes everything that stimulates the desire to live; science, everything that sharpens the desire to know. Art, even the most disinterested, the most disembodied, is the auxiliary of life. Born of the sensibility, it sows and creates it in its turn. It is the flower of life and, as seed, it gives back life. Science, or to use a broader term, knowledge, has its end in itself, apart from any idea of life and propagation of the species.

Translated by Glenn S. Burne

Selected Writings

Art and Science (p. 170)

The University of Michigan Press. Ann Arbor, Michigan, USA. 1966

Delbrück, Max 1906–81

German-born American biologist

The books of the great scientists are gathering dust on the shelves of learned libraries. And rightly so. The scientist addresses an infinitesimal audience of fellow composers. His message is not devoid of universality but its universality is disembodied and anonymous. While the artist's communication is linked forever with its original form, that of the scientist is modified, amplified, fused with the ideas and results of others, and melts into the stream of knowledge and ideas which forms our culture.

A Physicist's Renewed Look at Biology: Twenty Years Later

Science, Volume 168, Number 3937, June 12, 1970 (p. 1314)

The scientist has in common with the artist only this: that he can find no better retreat from the world than his work and also no stronger link with the world than his work.

A Physicist's Renewed Look at Biology: Twenty Years Later
Science, Volume 168, Number 3937, June 12, 1970 (p. 1314)

Dubos, René Jules 1901–82
French-born American microbiologist and environmentalist

Directly or indirectly, the various forms of art reflect the strivings, the struggles, and the sufferings of mankind. The state of health and the ills of a society are recorded not only in the writings of its physicians and scholars but also in the themes and moods of its artists and poets.

Mirage of Health
Chapter VII (p. 215)
Harper & Brothers Publishers. New York, New York, USA. 1959

Durant, William James 1885–1981
American historian and essayist

Every science begins as philosophy and ends as art; it arises in hypothesis and flows into achievement.

The Story of Philosophy
Introduction (p. 2)
Simon & Schuster. New York, New York, USA. 1953

Einstein, Albert 1879–1955
German-born physicist

Science exists for Science's sake, like Art for Art's sake, and does not go in for special pleading or for the demonstration of absurdities.

Cosmic Religion, with Other Opinions and Aphorisms
On Science (p. 100)
Covici-Fiede. New York, New York, USA. 1931

...one of the strongest motives that lead men to art and science is escape from everyday life with its painful crudity and hopeless dreariness, from the fetters of one's own ever shifting desires. A finely tempered nature longs to escape from personal life into the world of objective perception and thought... Man tries to make for himself in the fashion that suits him best a simplified and intelligible picture of the world; he then tries to some extent to substitute this cosmos of his for the world of experience, and thus to overcome it. This is what the painter, the poet, the speculative philosopher, and the natural scientist do, each in his own way.

The World as I See It
Principles of Research (pp. 20–21)
Philosophical Library. New York, New York, USA. 1949

Einstein, Albert 1879–1955
German-born physicist

After a certain high level of technical skill is achieved, science and art tend to coalesce in esthetics, plasticity, and form. The greatest scientists are always artists as well.

In Alice Calaprice (ed.)
The Quotable Einstein (p. 171)
Princeton University Press. Princeton, New Jersey, USA. 1996

Escher, M. C. 1898–1972
Dutch graphic artist

...science and art sometimes can touch one another, like two pieces of the jigsaw puzzle which is our human life, and that contact may be made across the borderline between the two respective domains.

In Doris Schattschneider
Visions of Symmetry: Notebooks, Periodic Drawings, and Related Works of M.C. Escher
Chapter 2 (p. 104)
W.H. Freeman & Company. New York, New York, USA. 1990

Feynman, Richard P.

I've always been very one-sided about science and when I was younger I concentrated almost all my effort on it. I didn't have time to learn and I didn't have much patience with what's called the humanities, even though in the university there were humanities that you had to take. I tried my best to avoid somehow learning anything and working at it. It was only afterwards, when I got older, that I got more relaxed, that I've spread out a little bit. I've learned to draw and I read a little bit, but I'm really still a very one-sided person and I don't know a great deal. I have a limited intelligence and I use it in a particular direction.

In Jeffrey Robbins (ed.)
The Pleasure of Finding Things Out: The Best Short Works of Richard P. Feynman
Chapter 1 (p. 2)
Perseus Books. Cambridge, Massachusetts, USA. 1999

Harvey, William 1578–1657
English physician

On the same terms, therefore, as art is attained to, is all knowledge and science acquired; for as art is a habit with reference to things to be done, so is science a habit in respect to things to be known; as that proceeds from the imitation of types or forms so this proceeds from the knowledge of natural things.

Anatomical Exercises on the Generation of Animals
Of the Manner and Order of acquiring Knowledge (p. 333)
Encyclopædia Britannica, Inc. Chicago, Illinois, USA. 1952

Heisenberg, Werner Karl 1901–76
German physicist and philosopher

Both science and art form in the course of the centuries a human language by which we can speak about the more remote parts of reality, and the coherent sets of concepts as well as the different styles of art are different words or groups of words in this language.

Physics and Philosophy: The Revolution in Modern Science
Chapter VI (p. 109)
Harper & Row, Publishers. New York, New York, USA. 1958

Huxley, Aldous 1894–1963
English writer and critic

Unlike art, science is genuinely progressive. Achievement in the fields of research and technology is cumulative;

each generation begins at the point where its predecessor left off.

Science, Liberty and Peace

Chapter I (p. 30)

William Morrow & Company, Inc. New York, New York, USA. 1967

Science and art are only too often a superior kind of dope, possessing this advantage over booze and morphia: that they can be indulged in with a good conscience and with the conviction that, in the process of indulging, one is leading the “higher life.”

Ends and Means

Chapter XIV (p. 276)

Chatto & Windus. London, England. 1938

Karanikas, Alexander 1916–2006

Greek-American professor of English

...science pierces reality like a dagger in search of fact and truth while art caresses reality looking for pleasure, grace and beauty.

Tillers of a Myth

Science, the False Messiah (p. 127)

The University of Wisconsin Press. Madison, Wisconsin, USA. 1969

Kepes, Gyorgy 1906–2001

Hungarian-born American artist and theorist

The essential vision of reality presents us not with fugitive appearances but with felt patterns of order which have coherence and meaning for the eye and for the mind. Symmetry, balance and rhythmic sequences express characteristics of natural phenomena: the connectedness of nature — the order, the logic, the living process. Here art and science meet on common ground.

The New Landscape

In Art and Science

Chapter I (p. 24)

Paul Theobald & Company Chicago, Illinois, USA. 1956

Mathematicians who build new spaces and physicists who find them in the universe can profit from the study of pictorial and architectural spaces conceived and built by men of art.

Clarendon Press. Oxford, England. 1995

Medawar, Sir Peter Brian 1915–87

Brazilian-born English zoologist

There is no spiritual copyright in scientific discoveries, unless they should happen to be quite mistaken. Only in making a blunder does a scientist do something which, conceivably, no one else might ever do again. Artists are not troubled by matters of priority, but Wagner would certainly not have spent twenty years on The Ring if he had thought it at all possible for someone else to nip in ahead of him with Götterdämmerung.

The Act of Creation

New Statesman, 19 June 1964

Melville, Herman 1819–91

American novelist

One can envisage an end of science no more readily than one can envisage an end of imaginative literature or the fine arts.

Advice to a Young Scientist

Chapter 11 (p. 90)

Basic Books, Inc. New York, New York, USA. 1979

Oppenheimer, J. Robert 1904–67

American theoretical physicist

Both the man of science and the man of art live always at the edge of mystery, surrounded by it; both always,

as to the measure of their creation, have had to do with the harmonization of what is new with what is familiar, with the balance between novelty and synthesis, with the struggle to make partial order in total chaos.

Prospects in the Arts and Sciences

Speech, 26 December 1954, Columbia University Bicentennial

The frontiers of science are separated now by long years of study, by specialized vocabularies, arts, techniques, and knowledge from the common heritage even of a most civilized society; and anyone working at the frontier of such science is in that sense a very long way from home, a long way too from the practical arts that were its matrix and origin, as indeed they were of what we today call art.

Prospects in the Arts and Sciences

Speech, 26 December 1954, Columbia University Bicentennial

Reynolds, Osborne 1842–1912

English fluid dynamics engineer

I have to deal with facts, and I shall try to deal with nothing but facts. Many of these facts, or the conclusions to be immediately drawn from them, may appear to bear on the possibilities — or, rather, the impossibilities — of art. But in the Society of Arts I need not point out that art knows no limit; where one way is found to be closed, it is the function of art to find another. Science teaches us the results that will follow from a known condition of things; but there is always the unknown condition, the future effect of which no science can predict.

Papers on Mechanical and Physical Subjects (Volume 2)

Lecture to the Society of Arts

At The University Press. Cambridge, England. 1900=03

Sagan, Carl 1934–96

American astronomer and author

It is sometimes said that scientists are unromantic, that their passion to figure out robs the world of beauty and mystery. But is it not stirring to understand how the world actually works — that white light is made of colors, that color is the way we perceive the wavelengths of light, that transparent air reflects light, that in so doing it discriminates among the waves, and that the sky is blue for the same reason that the sunset is red? It does no harm to the romance of the sunset to know a little bit about it.

Pale Blue Dot: A Vision of the Human Future in Space

Chapter 10 (pp. 159–160)

Random House, Inc. New York, New York, USA. 1994

Santayana, George (Jorge Agustín Nicolás Ruiz de Santillana) 1863–1952

Spanish-born American philosopher

Science is the response to the demand for information. . . .

Art is the response to the demand for entertainment.

The Sense of Beauty

Part I, Section 2 (p. 22)

Transaction Publishers. New Brunswick, New Jersey, USA. 2000

Shlain, Leonard

American surgeon and author

Both art and physics are unique forms of language. Each has a specialized lexicon of symbols that is used in a distinctive syntax. Their very different and specific contexts obscure their connection to everyday language as well as to each other. Nevertheless, it is noteworthy just how often the terms of one can be applied to the concepts of the other. “Volume,” “space,” “mass,” “force,” “light,” “color,” “tension,” “relationship,” and “density” are descriptive words that are heard repeatedly if you trail along with a museum docent. They also appear on the blackboards of freshman college physics lectures.

Quoted by Gerald Noltan

Art and Physics: Parallel Visions in Space, Time and Light

Chapter 1

William Morrow & Company, Inc. New York, New York,

USA. 1991

The proponents of these two diverse endeavors [art and physics] wax poetic about elegance, symmetry, beauty, and aesthetics. While physicists demonstrate that A equals B or that X is the same as Y , artists often choose signs, symbols, and allegories to equate a painterly image with a feature of experience. Both of these techniques reveal previously hidden relationships.

Quoted by Gerald Noltan

Art and Physics: Parallel Visions in Space, Time and Light

Chapter 1

William Morrow & Company, Inc. New York, New York, USA. 1991

Silver, Brian L.

Israeli professor of physical chemistry

Whatever the Sun may be, said D. H. Lawrence, it is certainly not a ball of flaming gas. Helios, the sun god, has more sex appeal than a cloud of gas, however hot.

The Ascent of Science

Part IX, Chapter 36 (p. 485)

Solomon Press Book. New York, New York, USA. 1998

[D. H.] Lawrence [saw] science systematically chipping away at the mysterious, but generally benign, unknown and arrogantly replacing it with the dull, prosaic, down-to-earth known. . . . The scientist’s rainbow is the result of the different refractive indices of the various frequencies of light that make up solar radiation. But man evidently prefers mystery to math, and the intrusion of science into the movements of the planets and the stars, into the living cell and into that final sanctuary of the spirit, the mind, has undoubtedly cast a chill over that warm, blurred garden, the theocentric universe. The scientist, ruthlessly buying up desirable property, appears to many people to be building an automated factory in the middle of the garden.

The Ascent of Science

Part IX, Chapter 36 (p. 485)

Solomon Press Book. New York, New York, USA. 1998

Smyth, H. D.

No biographical data available

We have a paradox in the method of science. The research man may often think and work like an artist, but he has to talk like a bookkeeper in terms of facts, figures and logical sequence of thought.

Quoted by Gerald Nolton

On the Duality and Growth of Physical Science
American Scientist, Volume 41, 1953 (p. 93)

Spencer, Herbert 1820–1903

English social philosopher

...Science is necessary not only for the most successful production, but also for the full appreciation of the fine arts.

Education: Intellectual, Moral, and Physical
Chapter I (p. 70)

A.L. Fowle. New York, New York, USA. 1860

Sullivan, John William Navin 1886–1937

Irish mathematician

The measure in which science falls short of art is the measure in which it is incomplete as science.

The Justification of the Scientific Method
The Athenaeum, May 1919 (p. 275)

Valéry, Paul 1871–1945

French poet and critic

There is a science of simple things, an art of complicated ones. Science is feasible when the variables are few and can be enumerated; when their combinations are distinct and clear. We are tending toward the condition of science and aspiring to it. The artist works out his own formulas; the interest of science lies in the art of making science.

In Jackson Mathews (ed.)

The Collected Works of Paul Valéry (Volume 14)

Moralités

Analects (p. 64)

Princeton University Press. Princeton, New Jersey, USA. 1971

Waddington, Conrad Hal 1905–75

British biologist and paleontologist

The best of modern art is compatible only with true science, and the bogus science requires a fake art to keep it company.

The Scientific Attitude

Science Is Not Neutral (p. 27)

Penguin Books, Middlesex, England. 1941

Whewell, William 1794–1866

English philosopher and historian

Art and Science differ. The object of Science is Knowledge; the objects of Art are Works. In Art, truth is a means to an end; in Science, it is the only end. Hence the Practical Arts are not to be classed among the Sciences.

The Philosophy of the Inductive Sciences Founded Upon Their History
(Volume 2)

Aphorisms Concerning Science, Aphorism XXV (p. 471)

John W. Parker. London, England. 1847

Wordsworth, William 1770–1850

English poet

Enough of Science and of Art;

Close up these barren leaves;

Come forth, and bring with you a heart

That watches and receives.

The Complete Poetical Works of William Wordsworth

The Tables Turned, Stanza 8

Crowell. New York, New York, USA. 1888

SCIENCE AND CIVILIZATION**Ackerman, Diane** 1948–

American writer

When we think of science, we often picture arcane quests after minutiae, or efforts to explain underlying principles. But it's amazing that in a civilization as complex as ours, we are still engaged in Adam's task, the naming of animals.

The Rarest of the Rare: Vanishing Animals, Timeless Worlds

Insect Love (p. 160)

Vintage Books. New York, New York, USA. 1997

Compton, Arthur H. 1892–1962

American physicist

I verily believe that in the advancement of science lies the hope of our civilization.

Les Prix Nobel. The Nobel Prizes in 1927

Nobel banquet speech for award received in 1927

Nobel Foundation. Stockholm, Sweden. 1928

Huxley, Julian 1887–1975

English biologist, philosopher, and author

Without the impersonal guidance and the efficient control provided by science civilization will either stagnate or collapse, and human nature cannot make progress towards realizing its possible evolutionary destiny.

What Dare I Think?: The Challenge of Modern Science to Human Action and Belief, Including the Henry La Barre Jayne Foundation Lectures

Chapter V (p. 177)

Harper & Brothers. New York, New York, USA. 1931

Science has two main functions in civilization. One is to give man a picture of the world phenomena, the most accurate and complete picture possible. The other is to provide him with the means of controlling his environment and his destiny.

What Dare I Think?: The Challenge of Modern Science to Human Action and Belief, Including the Henry La Barre Jayne Foundation Lectures

Chapter IV (pp. 127–128)

Harper & Brothers. New York, New York, USA. 1931

Modern civilisation rests upon physical science; take away her gifts to our own country, and our position among the leading nations of the world is gone to-morrow; for it is physical science only that makes intelligence and moral energy stronger than brute force.

Collected Essays (Volume 8)

Discourses, Biological and Geological

A Lobster; or, The Study of Zoology (p. 226)

Macmillan & Company Ltd. London, England. 1904

Lovell, Sir Alfred Charles Bernard 1913–

English physicist, radio astronomer, and author

The pursuit of the good and evil are now linked in astronomy as in almost all science.... The fate of human civilization will depend on whether the rockets of the future carry the astronomer's telescope or a hydrogen bomb.

The Individual and the Universe (p. 72)

Oxford University Press. London, England. 1959

Mathematician

Science is the locomotive that drives our civilization.

In Sigfried S. Hecker and Gian-Carlo Rota (eds.)

Essays on the Future: In Honor of Nick Metropolis

Belated Thoughts (p. xv)

Birkhäuser. Boston, Massachusetts, USA. 2000

Ortega y Gasset, José 1883–1955

Spanish philosopher

...experimental science has progressed thanks in great part to the work of men astoundingly mediocre, and even less than mediocre. That is to say, modern science, the root and symbol of our actual civilisation, finds a place for the intellectually commonplace man and allows him to work therein with success.... A fair amount of the things that have to be done in physics or in biology is mechanical work of the mind which can be done by anyone or almost anyone. For the purpose of innumerable investigations it is possible to divide science into small sections, to enclose oneself in one of these, and leave out of consideration all the rest.

The Revolt of the Masses

Chapter 12 (p. 110, 111)

W.W. Norton & Company, Inc. New York, New York, USA. 1960

Parson, H. N.

No biographical data available

A successful blending of the sciences and the humanities is necessary for the health of our civilization.

Science Is Human

Science Is Human (p. 31)

University of Otago Press. Dunedin, New Zealand. 1972

Sagan, Carl 1934–96

American astronomer and science writer

The very method of mathematical reasoning that Isaac Newton introduced to explain the motion of the planets

around the Sun has led to most of the technology of our modern world. The Industrial Revolution, for all its shortcomings, is still the global model of how an agricultural nation can emerge from poverty. These debates have bread-and-butter consequences.

Pale Blue Dot: A Vision of the Human Future in Space

Chapter 4 (p. 56)

Random House, Inc. New York, New York, USA. 1994

SCIENCE AND MORALS

Bronowski, Jacob 1908–74

Polish-born British mathematician and polymath

It is not the business of science to inherit the earth, but to inherit the moral imagination; because without that man and beliefs and science will perish together.

The Ascent of Man

Chapter 13 (p. 432)

Little, Brown & Company. Boston, Massachusetts, USA. 1973

Chesterton, G. K. (Gilbert Keith) 1874–1936

English author

...when any part of the general public is drawn into a debate on physical science, we may be certain that it has already become a debate on moral science.

All Is Grist: A Book of Essays

On Gossip about Heredity (p. 96)

Methuen & Company Ltd. London, England. 1931

Compton, Karl Taylor 1887–1954

American educator and physicist

I would emphasize the fact that scientific discovery is, per se, neither good nor bad. It simply produces knowledge and with knowledge, opportunity and responsibility. I think it fair to say that the advance of science carries with it powerful demands on morality if the results are to be beneficial rather than harmful.

A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton

During the Years 1930–1949 (p. 5)

Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

Dewey, John 1859–1952

American philosopher and educator

Science through its physical technological consequences is now determining the relations which human beings, severally and in groups, sustain to one another. If it is incapable of developing moral techniques which will also determine these relations, the split in modern culture goes so deep that not only democracy but all civilized values are doomed.

Freedom and Culture

Chapter Six (p. 118)

Prometheus Books. Buffalo, New York, USA. 1989

Diderot, Denis 1713–84

French encyclopedist and philosopher of materialism

The moral universe is so closely linked to the physical universe that it is scarcely likely that they are not one and the same machine.

Éléments de Physiologie (pp. xiii–xiv)
Librairie M. Didier. Paris, France. 1964

Ferré, Nels F. S. 1908–71
Swedish-American theologian

Science can be and is being made into an escapist philosophy — into a dodge of moral disciplines and spiritual responsibilities.

Faith and Reason
Chapter II (p. 83)
Harper & Brothers. New York, New York, USA. 1946

Friedenberg, Edgar Z. 1921–2001
Educator, education critic, and sociologist

...only science can hope to keep technology in some sort of moral order.

The Vanishing Adolescent
The Impact of the School, the Clarification of Experience (p. 50)
Beacon Press. Boston, Massachusetts. 1964

Gould, Stephen Jay 1941–2002
American paleontologist, evolutionary biologist, and historian of science

I do not know when the technical and popular prose of science became separated, although I accept the inevitability of such a division as knowledge became increasingly more precise, detailed, and specialized. We have now reached the point where most technical literature not only falls outside the possibility of public comprehension but also (as we would all admit in honest moments) outside our own competence in scientific disciplines far removed from our personal expertise. I trust that we all regard this situation as saddening, even though we accept its necessity.

Take Another Look
Science, Volume 286, Number 5441, October 29, 1999 (p. 899)

Jefferson, Thomas 1743–1826
3rd president of the United States

...if science produces no better fruits than tyranny, murder, rapine and destitution of national morality, I would rather wish our country to be ignorant, honest and estimable, as our neighboring savages are.

The Writings of Thomas Jefferson (Volume 6)
Letter to John Adams, 1812 (p. 37)
Deby & Jackson. New York, New York, USA. 1859

Kruyt, Hugo Rudolph 1882–1959
Dutch colloid chemist

Clearer than ever we understand that knowledge is not all, that we need morals and brotherhood to avoid science becoming a curse.

In John P. Dickinson

International Council of Scientific Unions
First General Assembly Following the Second World War, Science and Scientific Researchers in Modern Society (p. 165)

Lerner, Max 1902–92
American educator and author

Science itself is a humanist in the sense that it doesn't discriminate between human beings, but it is also morally neutral. It is no better or worse than the ethos with and for which it is used.

Manipulating Life
New York Post, January 24, 1968

Masters, William H. 1915–2001
American gynecologist and researcher

Science by itself has no moral dimension. But it does seek to establish truth. And upon this truth morality can be built.

Two Sex Researchers on the Firing Line
Life, 24 June 1966 (p. 49)

Oppenheimer, J. Robert 1904–67
American theoretical physicist

Scientists aren't responsible for the facts that are in nature. It's their job to find the facts. There's no sin connected with it — no morals. If anyone should have a sense of sin, it's God. He put the facts there.

In Lincoln Barnett
J. Robert Oppenheimer
Life, October 10, 1949 (p. 133)

Poincaré, Henri 1854–1912
French mathematician and theoretical astronomer

There can no more be immoral science than there can be scientific morals.

The Foundations of Science
The Values of Science, Introduction (p. 206)
The Science Press. New York, New York, USA. 1913

Snow, Charles Percy 1905–80
English novelist and scientist

...there is a moral component right in the grain of science itself...

The Two Cultures: And a Second Look
Chapter I (p. 13)
At The University Press. Cambridge, England. 1964

Toynbee, Arnold J. 1852–83
English historian

Our western science is a child of moral virtues; and it must now become the father of further moral virtues if its extraordinary material triumphs in our time are not to bring human history to an abrupt, unpleasant and discreditable end.

A Turning Point in Man's Destiny
The New York Times Magazine, December 26, 1954 (p. 5)

Wallace, Henry A. 1888–1935
33rd vice-president of the United States

I can understand the impulse which prompts scientists to defend science against the attacks of the uninformed. Science has achieved so many miracles for society, saved so many lives, made possible so extraordinary an advance in material living standards for so many millions of people, that it is disquieting to think that all the consequences of science can ever be other than good. Yet I don't see what basis we have for assuming that science can and does have only beneficial consequences. Is the product of man's curiosity inevitably good?...It may be disturbing to realize it, but the truth seems to be that science proceeds without moral obligations; it is neither moral nor immoral, but in essence amoral.

Scientists in an Unscientific Society
Scientific Monthly, Volume 150, 1934 (p. 285)

SCIENCE AND PHILOSOPHY

Bacon, Sir Francis 1561–1626
English lawyer, statesman, and essayist

The great and radical difference of capacities, as to philosophy and the sciences, lies here: that some are stronger and fitter to observe the differences of things; others their correspondencies: for a steady and sharp genius can fix it's contemplations, and dwell and fasten upon all the subtlety of differences, while a sublime and ready genius perceives and compares the smallest and most general agreements of things; but both kinds easily fall into excess, by grasping either at the dividing scale, or shadows of things. The former is so taken up with the particles of things, as almost to neglect their structure, whilst the other views their fabrication with such astonishment, as not to enter into the simplicity of nature.

In George Adams
Lectures on Natural and Experimental Philosophy (Volume 1)
Lecture IV (p. 127)
Printed by R. Hindmarsh. London, England. 1794

Burroughs, John 1837–1921
American naturalist and writer

Science displeases literature when it dehumanizes nature and shows us irrefragable laws when we had looked for humanistic divinities.

The Breath of Life
Chapter X (p. 243)
Houghton Mifflin Company. Boston, Massachusetts, USA. 1915

Chesterton, G. K. (Gilbert Keith) 1874–1936
English author

To mix science up with philosophy is only to produce a philosophy that has lost all its ideal value and a science that has lost all its practical value.

All Things Considered
Science and Religion (p. 187)
John Lane Company. New York, New York, USA. 1908

Compton, Karl Taylor 1887–1954
American educator and physicist

Science is not a technique or a body of knowledge, though it uses both. It is rather an attitude of inquiry, or observation and reasoning, with respect to the world. It can be developed, not by memorizing facts or juggling formulas to get an answer, but only by actual practice of scientific observation and reasoning.

A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949 (p. 44)
Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

de Casseres, Benjamin 1873–1945
American journalist and author

My studies in speculative philosophy, metaphysics, and science are all summed up in the image of a mouse called man, running in and out of every hole in the cosmos hunting for the absolute cheese.

Harper's Weekly, Volume 19, Number 3164, June 28, 1976

Durant, William James 1885–1981
American historian and essayist

Philosophy...is the front trench in the siege of truth. Science is the captured territory.

The Story of Philosophy
Introduction (p. 2)
Simon & Schuster. New York, New York, USA. 1953

Science without philosophy, facts without perspective and valuation, cannot save us from havoc and despair. Science gives us knowledge, but only philosophy can give us wisdom.

The Story of Philosophy
Introduction (p. 3)
Simon & Schuster. New York, New York, USA. 1953

Science is analytical description, philosophy is synthetic interpretation. Science wishes to resolve the whole into the known.

The Story of Philosophy
Introduction (p. 2)
Simon & Schuster. New York, New York, USA. 1953

Eddy, Mary Baker 1821–1910
American religious writer

Jesus of Nazareth was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found the spiritual cause.

Science and Health with Key to the Scriptures
Chapter X (p. 313)
Joseph Armstrong. Boston, Massachusetts, USA. 1906

Fischer, Martin H. 1879–1962
German-American physician

Not fact-finding, but attainment to philosophy, is the aim of science.

Fischerisms (p. 7)

C.C. Thomas. Springfield, Illinois, USA. 1944

Gornick, Vivian

American essayist

Science — like art, religion, political theory, or psychoanalysis — is work that holds out the promise of philosophical understanding, excites in us the belief that we can “make sense of it all.”

Women in Science: Portraits from a World in Transition

Part One (p. 66)

Simon & Schuster. New York, New York, USA. 1983

Huxley, Julian 1887–1975

English biologist, philosopher, and author

The attempt to understand this universe, including the nature of man, is the task of science; and as she makes progress with this task, so will she become more and more an indispensable part of philosophy and religion — imagination’s touchstone, thought’s background, action’s base.

Searching for the Elixir of Life

The Century Illustrated Monthly Magazine, Volume 103, Number 4, February 1922

Jeans, Sir James Hopwood 1877–1946

English physicist and mathematician

The philosophy of any period is always largely interwoven with the science of the period, so that any fundamental change in science must produce reactions in philosophy.

Physics and Philosophy

Chapter I (p. 2)

Dover Publications, Inc. New York, New York, USA. 1981

In whatever ways we define science and philosophy their territories are contiguous; wherever science leaves off — and in many places its boundary is ill-defined — there philosophy begins.

Physics and Philosophy

Chapter I (p. 17)

Dover Publications, Inc. New York, New York, USA. 1981

Jones, Steve 1944–

English genetics professor

...philosophy is to science as pornography is to sex.

In Mary Midgley

Can Science Save Its Soul?

New Scientist, 1 August 1992 (p. 25)

Keats, John 1795–1821

English Romantic lyric poet

Do not all charms fly

At the mere touch of cold philosophy?

There was an awful rainbow once in heaven:

We know her woof, her texture; she is given

In the dull catalogue of common things.

Philosophy will clip an Angel’s wings,

Conquer all mysteries by rule and line,

Empty the haunted air, and gnom’ed mine —

Unweave a rainbow...

The Complete Poetical Works and Letters of John Keats

Lamia, Part II, l. 229–237

Houghton Mifflin Company. Boston, Massachusetts, USA. 1890

Mercier, André 1913–99

Swiss physicist

Philosophy does not “solve problems”, whereas science does. Philosophy, in its relations to science, gathers up the problems of science, which are no longer problems since they have found solutions, and seeks to order them in such a way that the structure of knowledge does, in fact, appear.

Fifty Years of the Theory of Relativity

Nature, Volume 175, Number 4465, May 28, 1955 (p. 919)

Pope Pius XII 1876–1958

Bishop of Rome

Science descends ever more deeply into the hidden recesses of things, but it must halt at a certain point when questions arise which cannot be settled by means of sense observations. At that point the scientist needs a light which is capable of revealing to him truth which entirely escapes his senses. This light is philosophy.

In Philip G. Fothergill

Life and Its Origin

Pontifical Academy of Science, Meeting 1955 (p. 12)

Popper, Karl R. 1902–94

Austrian/British philosopher of science

All science and all philosophy are enlightened common sense.

Objective Knowledge: An Evolutionary Approach

Chapter 2 (p. 34)

Clarendon Press. Oxford, England. 1972

Renan, Ernest 1823–92

French philosopher and Orientalist

Socrates founded philosophy, and Aristotle science. There was philosophy before Socrates, and science before Aristotle; and since Socrates and since Aristotle, philosophy and science have made immense progress: but all has all been built upon the foundations they laid.

The Life of Jesus

Chapter 28 (p. 383)

Modern Library. New York, New York, USA. 1955

Ritchie, Arthur David 1891–1967

Scottish philosopher and science history writer

Philosophers who write about Science and scientists who write about Philosophy are too often preoccupied

with the scientific theories and discoveries of the moment to the detriment of both their Science and their Philosophy.

Scientific Method: An Inquiry into the Character and Validity of Natural Laws

Preface (p. v)

Kegan Paul, Trench, Trubner & Company Ltd. London, England. 1923

Russell, Bertrand Arthur William 1872–1970

English philosopher, logician, and social reformer

The man who has no tincture of philosophy goes through life imprisoned in the prejudices.... To such a man the world tends to become definite, finite, obvious; common objects rouse no questions, and unfamiliar possibilities are contemptuously rejected.

The Problems of Philosophy

Chapter XV (pp. 156–157)

Oxford University Press, Inc. London, England. 1959

It seems to me that science has a much greater likelihood of being true in the main than any philosophy hitherto advanced (I do not, of course, except my own). In science there are many matters about which people are agreed; in philosophy there are none. Therefore, although each proposition in a science may be false, and it is practically certain that there are some that are false, yet we shall be wise to build our philosophy upon science, because the risk of error in philosophy is pretty sure to be greater than in science. If we could hope for certainty in philosophy, the matter would be otherwise, but so far as I can see such a hope would be a chimerical.

The Philosophy of Logical Atomism

Logical Atomism

University of Minnesota Press. Minneapolis, Minnesota, USA. 1959

Thoreau, Henry David 1817–62

American essayist, poet, and practical philosopher

In our science and philosophy, even, there is commonly no true and absolute account of things. The spirit of sect and bigotry has planted its hoof amid the stars. You have only to discuss the problem, whether the stars are inhabited or not, in order to discover it.

The Writings of Henry David Thoreau (Volume 4)

Life Without Principle (p. 469)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Weyl, Hermann 1885–1955

German mathematician

A scientist who writes on philosophy faces conflicts of conscience from which he will seldom extricate himself whole and unscathed; the open horizon and depth of philosophical thoughts are not easily reconciled with that objective clarity and determinacy for which he has been trained in the school of science.

Philosophy of Mathematics and Natural Science

Preface (p. v)

Princeton University Press. Princeton, New Jersey, USA. 1949

SCIENCE AND POETRY

Beston, Henry 1888–1968

American writer

Poetry is as necessary to comprehension as science. It is as impossible to live without reverence as it is without joy.

The Outermost House

Chapter X (p. 221)

Rinehart & Company. New York, New York, USA. 1928

Clifford, William Kingdon 1845–79

English philosopher and mathematician

It is an open secret to the few who know it, but a mystery and a stumbling-block to the many, that Science and Poetry are own sisters; inasmuch that in those branches of scientific inquiry which are most abstract, most formal, and most remote from the grasp of the ordinary sensible imagination, a higher power of imagination akin to the creative insight of the poet is most needed and most fruitful of lasting work.

In Leslie Stephen and Frederick Pollock (eds.)

Lectures and Essays (Volume 1)

Introduction (p. 1)

Macmillan & Company. London, England. 1886

Davis, Joel 1948–

No biographical data available

Poetry and science are closer than most people realize. Many poets and scientists already know this, of course. Most of the rest of us are still trapped in dismal stereotypes about both fields of human endeavor. The deep link between the two is vision.

Alternate Realities

In a Grain of Sand (p. 3)

Plenum Trade. New York, New York, USA. 1997

Day-Lewis, C. (Cecil) 1904–72

Irish-born English author and poet

Science is concerned with finding out and stating the facts: poetry's task is to give you the look, the smell, the taste, the "feel" of those facts.

Poetry for You

Chapter I (p. 10)

Basil Blackwell & Mott Ltd. Oxford, England. 1959

Every good poem, in fact, is a bridge built from the known, familiar side of life over into the unknown. Science, too, is always making expeditions into the unknown. But this does not mean that science can supersede poetry. For poetry enlightens us in a different way from science: it speaks directly to our feelings or imagination. The findings of poetry are no more and no less true than science.

Poetry for You

Chapter VIII (p. 92)

Basil Blackwell & Mott Ltd. Oxford, England. 1959

Holton, Gerald 1922–

Research professor of physics and science history

Poets rush in where scientists fear to tread.

Einstein, History, and Other Passions: The Rebellion Against Science at the End of the Twentieth Century

Part One, Chapter 6 (p. 132)

Addison-Wesley Publishing Company. Reading, Massachusetts, USA. 1996

Jones, Frederick Wood 1879–1954

Physician

Whoever wins to a great scientific truth will find a poet before him in the quest.

Medical Journal of Australia, 29 August 1931

Lysaght, Sidney R. 1860–1941

Irish writer

Science in the first place looks for information, poetry for beauty; and, taking different paths, they meet on the borderland of discovery.

A Reading of Life

Chapter II (p. 35)

Macmillan & Company Ltd. London, England. 1936

Melandri, E.

No biographical data available

The existence of poetics of science is undeniable.... Barring poetics from science is the same as barring use of the hypothesis.

In Fernand Hallyn

The Poetic Structure of the World: Copernicus and Kepler

Introduction (p. 7)

Zone Books. New York, New York, USA. 1990

Miller, Hugh 1802–56

Scottish geologist and theologian

Because science flourishes, must poesy decline? The complaint serves but to betray the weakness of the class who urge it.

Sketch-Book of Popular Geology

Lecture Second (p. 80)

William P. Nimmo & Company. Edinburgh, Scotland. 1880

Spencer, Herbert 1820–1903

English social philosopher

...those who have never entered upon scientific pursuits know not a tithe of the poetry by which they are surrounded.

Education: Intellectual, Moral and Physical

A.L. Fowle. New York, New York, USA. 1860

Thoreau, Henry David 1817–62

American essayist, poet, and practical philosopher

The poet uses the results of science and philosophy, and generalizes their widest deductions.

The Writings of Henry David Thoreau (Volume 1)

A Week on the Concord and Merrimac Rivers

Friday (p. 478)

Houghton Mifflin Company. Boston, Massachusetts, USA. 1893

Tillyard, E. M. W. 1889–1962

English classical scholar

Lewis, C. S. (Clive Staples) 1898–1963

British author, scholar, and popular theologian

Only science can tell you where and when you are likely to meet an elm: only poetry can tell you what meeting an elm is like.

The Personal Heresy: A Controversy

Chapter V (p. 110)

Oxford University Press, Inc. London, England. 1939

von Schlegel, Friedrich 1772–1829

German philosopher, critic, and writer

Strictly speaking, the idea of a scientific poem is probably as nonsensical as that of a poetic science.

Dialogue on Poetry and Literary Aphorisms

Selected Aphorisms from the Lyceum

Aphorism 61 (p. 127)

The Pennsylvania State University Press, University Park. Pennsylvania, USA. 1968

Wheelock, John Hall 1886–1978

American poet

The statements of science are hearsay, reports from a world outside the world we know. What the poet tells us has long been known to us all, and forgotten. His knowledge is of our world, the world we are both doomed and privileged to live in, and it is a knowledge of ourselves, of the human condition, the human predicament.

What Is Poetry?

Chapter 6

Charles Scribner's Sons. New York, New York, USA. 1963

Whitman, Walt 1819–92

American poet, journalist, and essayist

Exact science and its practical movements are no checks on the greatest poet but always his encouragement and support. ...there the arms that lifted him first and brace him best...there he returns after all his goings and comings. The sailor and traveller...the anatomist chemist astronomer geologist phrenologist spiritualist mathematician historian and lexicographer are not poets, but they are the lawgivers of poets and their construction underlies the structure of every perfect poem.

Leaves of Grass

Preface to the 1855 edition of "Leaves of Grass" (p. 304)

Doubleday, Doran & Company, Inc. New York, New York, USA. 1940

If there shall be love and content between the father and the son and if the greatness of the son is the exuding of the greatness of the father, there shall be love between the poet and the man of demonstrable science. In the beauty of poems are the tuft and final applause of science.

Leaves of Grass

Preface to the 1855 edition of "Leaves of Grass" (p.304)
 Doubleday, Doran & Company, Inc. New York, New York, USA. 1940

Zee, Anthony

American physicist

In science, one tries to say what no one else has ever said before. In poetry, one tries to say what everyone else has already said, but better. This explains, in essence, why good poetry is as rare as good science.

Fearful Symmetry

Chapter 7 (p. 103)
 Macmillan Publishing Company, New York, New York, USA. 1986

SCIENCE AND POLITICS**Born, Max** 1882–1970

German-born English physicist

...the subordination of fundamental research to political and military authorities is detrimental. The scientists themselves have learned by now that the period of unrestricted individualism in research has come to an end. They know that even the most abstract and remote ideas may one day become of great practical importance — like Einstein's law of equivalence of mass and energy. They have begun to organize themselves and to discuss the problem of their responsibility to human society. It should be left to these organizations to find a way to harmonize the security of the nations with the freedom of research and publication without which science must stagnate.

The Restless Universe

Postscript (p. 308)
 Dover Publications, Inc. New York, New York, USA. 1951

Budworth, D.

No biographical data available

Science policy is essentially about the allocation of scarce resources, and is therefore a part of politics.... The scarce resource with which science policy should concern itself in the short term is not money, but that portion of the scientific population which is capable of initiating and leading significant work. Such people are always in short supply, even when the total population itself is greater than the available jobs.

Science Policy Should Be About People
New Scientist, Volume 69, Number 993, 25 March 1976 (pp. 684–685)

Clarke, Arthur C. 1917–

English science and science fiction writer

The menace of interplanetary imperialism can be overcome only by world-wide technical and political agreements well in advance of the actual event, and these will require continual pressure and guidance from the organizations which have studied the subject.

The Challenge of the Spaceship

The Challenge of the Spaceship (p. 8)
 Harper & Brothers. New York, New York, USA. 1959

de Maupertuis, Pierre-Louis Moreau 1698–1759

French mathematician and astronomer

There are sciences over which the will of kings has no immediate influence; it can procure advancement there only in so far as the advantages which it attaches to their study can multiply the number and the efforts of those who apply themselves to them. But there are other sciences which for their progress urgently need the power of sovereigns; they are all those which require greater expenditure than individuals can make or experiments which would not ordinarily be practicable.

Lettres su le progrès des sciences, Oeuvres de Maupertuis

Dresden (pp. 6–7)
 Publisher undetermined

Johnson, Harry G. 1923–1979

American economist

Basic science, per se, contributes to culture; it contributes to our social well-being, including national defence and public health; to our economic well-being; and it is an essential element of the education not only of scientists but also of the population as a whole. In deciding how much science the society needs, one must decide how the support of science bears on these other, politically defined, goals of the society.

In National Academy of Sciences

Basic Research and National Goals: A Report to the Committee on Science and Astronautics

Federal Support of Basic Research: Some Economic Issues, Summary (p. 5)

U.S. Government Printing Office. Washington, D.C. 1965

Koestler, Arthur 1905–83

Hungarian-born English writer

No scientist is admired for failing in the attempt to solve problems that lie beyond his competence. The most he can hope for is the kindly contempt earned by the Utopian politician. If politics is the art of the possible, research is surely the art of the soluble. Both are immensely practical-minded affairs.

The Act of Creation

New Statesman, Volume 19, June 1964

Price, Don K. 1910–1995

American presidential advisor and educator

...all sciences are considered by their professors as equally significant; by the politicians, as equally incomprehensible; and by the military as equally expensive.

The Scientific Estate

Chapter 1 (p. 12)

Harvard University Press. Cambridge, Massachusetts, USA. 1965

...it has begun to seem evident to a great many administrators and politicians that science had become something very close to an establishment, in the old and proper sense of that word: a set of institutions supported by tax funds but largely on faith and without direct responsibility to political control.

The Scientific Estate

Chapter 1 (p. 12)

Harvard University Press. Cambridge, Massachusetts, USA. 1965

Rabinowitch, Eugene 1901–73

Russian-born American biophysicist

Science has assumed such an important role in determining the parameters of national and international life, that participation in national decisions by people whose world picture has been affected by the study and practice of science (even if this picture has its own bias), is indispensable for many major political decisions — to correct the bias of the more traditional molders of national decisions, such as men with legal training.

Open Season on Scientists

The New Republic, January 1, 1966 (p. 21)

SCIENCE AND RELIGION

Adams, George 1750–95

English instrument maker

The two kingdoms of nature and grace, as two parallel lines, correspond to each other, follow a like course, but can never be made to touch. An adequate understanding of this distinction in all its branches, would be the consummation of human knowledge.

Lectures on Natural and Experimental Philosophy (Volume 1)

Lecture VI (p. 242)

Printed by R. Hindmarsh. London, England. 1794

Adams, Henry Brooks 1838–1918

American man of letters

The preacher then went on to criticise the attitude of religion towards science. “If there is still a feeling of hostility between them...it is no longer the fault of religion. There have been times when the church seemed afraid, but she is so no longer. Analyze, dissect, use your microscope or your spectrum till the last atom of matter is reached; reflect and refine till the last element of thought is made clear; the church now knows with the certainty of science what she once knew only by the certainty of faith, that you will find enthroned behind all thought and matter only one central idea, — that idea which the church has never ceased to embody, — I AM!

Democracy, and Esther: Two Novels by Henry Adams

Esther (p. 212)

Peter Smith. Gloucester, Massachusetts, USA. 1965

Allport, Gordon 1897–1967

American psychologist

A narrowly conceived science can never do business with a narrowly conceived religion.

The Individual and His Religion: A Psychological Interpretation

Preface (p. vi)

The Macmillan Company. New York, New York, USA. 1956

Alpher, Ralph Asher 1921–

American physicist

I...reject the argument put forth by many fundamentalists that science has nothing to do with religion because God is not among the things making up the universe in which we live. Surely if a necessity for a god-concept in the universe ever turns up, that necessity will become evident to the scientist.

Theology of the Big Bang

Religious Humanism, Volume 17, Number 1, Winter 1983 (p. 12)

Appleyard, Bryan 1951–

English author and journalist

Science was the lethally dispassionate search for truth in the world whatever its meaning might be; religion was the passionate search for meaning whatever the truth might be. Science can lay a claim to a meaning in the sense of establishing causality, and religion could claim truth in the sense of a transcendent order. But science’s meaning does not answer the question Why? And religion’s truth had no scientific relevance.

Understanding the Present: Science and the Soul of Modern Man

Chapter 4 (p. 79)

Doubleday. New York, New York, USA. 1992

Berger, Peter L. 1929–

American sociologist

Protestant theologians have been increasingly engaged in playing a game whose rules have been dictated by their cognitive antagonists.

A Rumor of Angels: Modern Society and the Rediscovery

of the Supernatural

Chapter 1 (p. 10)

Doubleday & Company, Inc. Garden City, New York, USA. 1970

Bernal, John Desmond 1901–71

Irish-born physicist and x-ray crystallographer

Now the history of scientific advance has shown us clearly that any appeal to Divine Purpose or any supernatural agency, to explain any phenomenon, is in fact only a concealed confession of ignorance, and a bar to genuine research.

Science and Ethics

A Marxist Critique (p. 116)

George Allen & Unwin Ltd. London, England. 1942

The role of God in the material world has been reduced stage by stage with the advance of science, so much so that He only survives in the vaguest mathematical form in the minds of older physicists and biologists.

In C.H. Waddington (ed.)

Science and Ethics

A Marxist Critique (p. 116)

George Allen & Unwin Ltd. London, England. 1942

Boutroux, Émile 1845–1921

French philosopher

In spite of their relations, science and religion remain, and must remain, distinct. If there were no other way of establishing a rational order between things than that of reducing the many to the one, either by assimilation or by elimination, the destiny of religion would appear doubtful.

Translated by Jonathan Nield

Science and Religion in Contemporary Philosophy

Conclusion (pp. 399–400)

Duckworth & Company. London, England. 1912

Buck, Pearl S. 1892–1973

American author

Science and religion, religion and science, put it as I may they are two sides of the same glass, through which we see darkly until these two, focusing together, reveal the truth.

A Bridge for Passing

Chapter III (p. 255)

John Day Company. New York, New York, USA. 1962

Bultmann, R.

No biographical data available

...the New Testament provides a world picture which belongs entirely to Jewish or Gnostic mythology and is incredible or even meaningless in a scientific age.

In H.J. Paton

The Modern Predicament: A Study in the Philosophy of Religion

Chapter XV, Section 3 (p. 228)

Collier Books. New York, New York, USA. 1962

Burroughs, John 1837–1921

American naturalist and writer

The mysteries of religion are of a different order from those of science; they are parts of an arbitrary system of man's own creation; they contradict our reason and our experience, while the mysteries of science are revealed by our reason, and transcend our experience.

Scientific Faith

The Atlantic Monthly, July 1915 (p. 33)

The miracles of religion are to be discredited, not because we cannot conceive of them, but because they run counter to all the rest of our knowledge; while the mysteries of science, such as chemical affinity, the conservation of energy, the indivisibility of the atom, the change of the non-living into the living...extend the boundaries of our knowledge, though the modus operandi of the changes remains hidden.

Scientific Faith

The Atlantic Monthly, July 1915 (p. 33)**Bush, Vannevar** 1890–1974

American electrical engineer and physicist

To pursue science is not to disparage the things of the spirit. In fact, to pursue science rightly is to furnish a framework on which the spirit may rise.

Speech, MIT, October 5, 1953

Bushnell, Horace 1802–76

American Congregational minister

As the science of nature goes toward completion, religion, having all the while been watching for it in close company, will have gotten immense breadth and solidity, from the ideas and facts unfolded in its discoveries, and will be as much enlarged in its confidence and the sentiment of worship, as beholding God's deep system in the world signifies more than looking on its surfaces.

Science and Religion

Putnam's Magazine, Volume 1, 1868 (p. 267)**Butler, Samuel** 1612–80

English novelist, essayist, and critic

Science and religion are reconciled in amiable and sensible people but nowhere else.

The Note-Books of Samuel Butler (Volume 1)

1874–1883 (p. 118)

University Press of America, Inc. Lanham, Maryland, USA. 1984

Chadwick, Owen 1916–

English historian and Christian scholar

Science versus Religion — the antithesis conjures two hypostatized entities of the later nineteenth century: Huxley St. George slaying Samuel smoothest of dragons; a mysterious undefined ghost called Science against a mysterious indefinable ghost called Religion; until by 1900 schoolboys decided not to have faith because Science, whatever that was, disproved Religion, whatever that was.

The Secularisation of the European Mind in the Nineteenth Century

Part II, Chapter 7 (p. 161)

Cambridge University Press. Cambridge, England. 1990

Clark, W. C.

No biographical data available

Majone, G.

No biographical data available

The social uses of science have always had something in common with the social uses of religion. And in the two decades following the Second World War, modern science took on a most religious-looking numinous legitimacy as an unquestioned source of authority on all manner of policy problems.

Report of the International Institute of Applied Systems Analysis

The Critical Appraisal of Scientific Inquiries with Policy Implications, Laxenburg, Austria, 1984 (p. 35)

Compton, Karl Taylor 1887–1954

American educator and physicist

Science has contributed to the making of religion into a developing dynamic spiritual force.

A Scientist Speaks: Excerpts from Addresses by Karl Taylor Compton During the Years 1930–1949 (p. 19)
Undergraduate Association, MIT. Cambridge, Massachusetts, USA. 1955

Conklin, Edwin Grant 1863–1952

American zoologist

Science cannot solve the great mysteries of our existence, — why we are, whither we are bound, and what it all means. Faith alone assures us that there is definite purpose in all experience. This knowledge makes life worth living and service a privilege.

In Edward H. Cotton

Has Science Discovered God?

A Biologist's Religion (p. 89)

Thomas Y. Crowell Company. New York, New York, USA. 1931

Coulson, Charles Alfred 1910–74

English theoretical chemist

...science is one aspect of God's presence, and scientists therefore part of the company of His heralds.

Science and Christian Belief

Scientific Method (p. 30)

The University of North Carolina Press. Chapel Hill, North Carolina, USA. 1955

Davies, Paul Charles William 1946–

British-born physicist, writer, and broadcaster

If the Church is largely ignored today it is not because science has finally won its age-old battle with religion, but because it has so radically reoriented our society that the biblical perspective of the world now seems largely irrelevant. As one television cynic recently remarked, few of our neighbors possess an ass for us to covet.

God and the New Physics

Chapter 1 (p. 2)

Simon & Schuster. New York, New York, USA. 1983

Those who invoke God as an explanation of cosmic organization usually have in mind a supernatural agency, acting on the world in defiance of natural laws. But it is perfectly possible for much, if not all of what we encounter in the universe to be the product of intelligent manipulation of a purely natural kind: within the laws of physics. For example, our galaxy could have been made by a powerful mind who rearranged the primeval gases using carefully placed gravitating bodies, controlled explosions and all the other paraphernalia of a space age astro-engineer.

God and the New Physics

Chapter 15 (p. 208)

Simon & Schuster. New York, New York, USA. 1983

In spite of the fact that religion looks backward to revealed truth while science looks forward to new vistas and discoveries, both activities produce a sense of awe and a curious mixture of humility and arrogance in their

practitioners. All great scientists are inspired by the subtlety and beauty of the natural world that they are seeking to understand. Each new subatomic particle, every unexpected object, produces delight and wonderment. In constructing their theories, physicists are frequently guided by arcane concepts of elegance in the belief that the universe is intrinsically beautiful.

God and the New Physics

Chapter 17 (p. 220)

Simon & Schuster. New York, New York, USA. 1983

Dembski, William A. 1960–

Mathematician and philosopher

Any view of the sciences that leaves Christ out of the picture must be seen as fundamentally deficient.

Intelligent Design: The Bridge Between Science and Theology

Part 3, Chapter 7, Section 7.6 (p. 206)

InterVarsity Press. Downers Grove, Illinois, USA. 1999

Dobzhansky, Theodosius 1900–75

Russian-American scientist

There are still many people who are happy and comfortable adhering to fundamentalist creeds. This should cause no surprise, since a large majority of these believers are as unfamiliar with scientific findings as were people who lived centuries ago.

The Biology of Ultimate Concern

Chapter 5 (p. 95)

The New American Library, Inc. New York, New York, USA. 1967

Science and religion deal with different aspects of existence...[T]hese are the aspect of facts and the aspect of meaning. But there is one stupendous fact...the meaning of which they have ceaselessly tried to discover. This fact is Man.

The Biology of Ultimate Concern

Chapter 5 (p. 96)

The New American Library, Inc. New York, New York, USA. 1967

...nothing gives more pleasure to a rather common type of religious person than to point out that science cannot explain this or cannot account for that!

The Biology of Ultimate Concern

Chapter 5 (p. 97)

The New American Library, Inc. New York, New York, USA. 1967

Draper, John William 1811–82

American scientist, philosopher, and historian

As to Science, she has never sought to ally herself to civil power. She has never attempted to throw odium or inflict social ruin on any human being. She has never subjected any one to mental torment, physical torture, least of all to death, for the purpose of upholding or promoting her ideas. She presents herself unstained by cruelties and crimes. But in the Vatican — we have only to recall the Inquisition — the hands that are now raised in appeals to the Most Merciful are crimsoned.

History of the Conflict between Religion and Science

Preface (p. xi)

D. Appleton and Company. New York, New York, USA. 1898

du Noüy, Pierre Lecomte 1883–1947

French scientist

Any man who believes in God must realize that no scientific fact, as long as it is true, can contradict God. Otherwise, it would not be true. Therefore, any man who is afraid of science does not possess a strong faith.

Human Destiny

Chapter 16 (p. 243)

Longmans, Green & Company. London, England. 1947

Dubos, René Jules 1901–82

French-born American microbiologist and environmentalist

Religion and science...constitute deep-rooted and ancient efforts to find richer experience and deeper meaning than are found in the ordinary biological and social satisfactions. As pointed out by Whitehead, religion and science have similar origins and are evolving toward similar goals.

A God Within

Chapter 12. On Being Human (p. 255)

Charles Scribner's Sons. New York, New York, USA. 1972

Both [religion and science] started from crude observations and fanciful concepts, meaningful only within a narrow range of conditions for the people who formulated them of their limited tribal experience. But progressively, continuously, and almost simultaneously, religious and scientific concepts are ridding themselves of their coarse and local components, reaching higher and higher levels of abstraction and purity.

A God Within

Chapter 12. On Being Human (p. 255)

Charles Scribner's Sons. New York, New York, USA. 1972

Both the myths of religion and the laws of science, it is now becoming apparent, are not so much descriptions of facts as symbolic expressions of cosmic truths.

A God Within

Chapter 12. On Being Human (p. 255)

Charles Scribner's Sons. New York, New York, USA. 1972

Durant, William James 1885–1981

American historian and essayist

Those of you who specialize in science will find it hard to understand religion, unless you feel, as Voltaire did, that the harmony of the spheres reveals a cosmic mind, and unless you realize, as Rousseau did, that man does not live by intellect alone.

Commencement Address

Webb School of Claremont, California, June 7, 1958

We are such microscopic particles in so immense a universe that none of us is in a position to understand the world, much less to dogmatize about it. Pascal trembled at the thought of man's bewildered minuteness between

the immensity of the whole and the complexity of each part; "these infinite spaces," he said, "frighten me!" Let us be careful how we pit our pitiful generalizations against the infinite variety, scope, and subtlety of the world.

Commencement Address

Webb School of Claremont, California, June 7, 1958

Dyson, Freeman J. 1923–

American physicist and educator

Professional scientists today live under a taboo against mixing science and religion.

Disturbing the Universe

Chapter 23 (p. 245)

Basic Books, Inc. New York, New York, USA. 1979

Eddington, Sir Arthur Stanley 1882–1944

English astronomer, physicist, and mathematician

The starting-point of belief in mystical religion is a conviction of significance or, as I have called it earlier, the sanction of a striving in the consciousness. This must be emphasized because appeal to intuitive conviction of this kind has been the foundation of religion through all ages, and I do not wish to give the impression that we have now found something new and more scientific to substitute. I repudiate the idea of proving the distinctive beliefs of religion either from the data of physical science or by the methods of physical science.

The Nature of the Physical World

Chapter XV (p. 333)

The Macmillan Company. New York, New York, USA. 1930

It is curious that the doctrine of the running down of the physical universe is so often looked upon as pessimistic and contrary to the aspirations of religion. Since when has the teaching that "heaven and earth shall pass away" become ecclesiastically unorthodox?

New Pathways in Science

Chapter III, Section III (p. 59)

The Macmillan Company. New York, New York, USA. 1935

It is probably true that the recent changes of scientific thought remove some of the obstacles to a reconciliation of religion with science; but this must be carefully distinguished from any proposal to base religion on scientific discovery. For my own part I am wholly opposed to any such attempt.

Science and the Unseen World

Chapter VII (pp. 72–73)

The Macmillan Company. New York, New York, USA. 1929

Einstein, Albert 1879–1955

German-born physicist

All religions, arts and sciences are branches of the same tree.

Out of My Later Years (p. 7)

Thames & Hudson. London, England. 1950

Everyone who is seriously involved in the pursuit of science becomes convinced that a spirit is manifest in the laws of the Universe — a spirit vastly superior to that of man, and one in the face of which we with our modest powers must feel humble. In this way the pursuit of science leads to a religious feeling of a special sort, which is indeed quite different of the religiosity of someone more naive.

In Helen Dukas and Banesh Hoffman

Albert Einstein: The Human Side — New Glimpses from His Archives

Letter dated 20 December, 1935 (p. 33)

Princeton University Press. Princeton, New Jersey, USA. 1979

Scientific research is based on the idea that everything that takes place is determined by laws of nature, and therefore this holds for the actions of people. For this reason, a research scientist will hardly be inclined to believe that events could be influenced by a prayer, i.e., by a wish addressed to a supernatural Being. However, it must be admitted that our actual knowledge of these laws is only imperfect and fragmentary, so that, actually, the belief in the existence of basic all-embracing laws in Nature also rests on a sort of faith. [Belief in basic laws of Nature] has been largely justified so far by the success of scientific research.

In Helen Dukas and Banesh Hoffman

Albert Einstein: The Human Side: New Glimpses from His Archives

Letter dated 24 January 1936 (pp. 32–34)

Princeton University Press. Princeton, New Jersey, USA. 1979

The basis of all scientific work is the conviction that the world is an ordered and comprehensive entity, which is a religious sentiment. My religious feeling is a humble amazement at the order revealed in the small patch of reality to which our feeble intelligence is equal.

Cosmic Religion, With Other Opinions and Aphorisms

On Science (p. 98)

Covici-Fiede. New York, New York, USA. 1931

[E]very one who is seriously involved in the pursuit of science becomes convinced that a spirit is manifest in the laws of the Universe — a spirit vastly superior to that of man, and one in the face of which we with our modest powers must feel humble. In this way the pursuit of science leads to a religious feeling of a special sort, which is indeed quite different from the religiosity of someone more naive.

In Helen Dukas and Banesh Hoffman

Albert Einstein: The Human Side: New Glimpses from His Archives

Letter dated 24 January 1936 (pp. 32–34)

Princeton University Press. Princeton, New Jersey, USA. 1979

[T]he cosmic religious experience is the strongest and the noblest driving force behind scientific research. No one who does not appreciate the terrific assertions, and, above all, the devotion without which pioneer creations in scientific thought cannot come into being, can judge the strength of the feeling out of which alone such work, turned away as it is from immediate practical life, can

grow. What a deep faith in the rationality of the structure of the world and what a longing to understand even a small glimpse of the reason revealed in the world there must have been in Kepler and Newton to enable them to unravel the mechanism of the heavens in long years of lonely study.

The New York Times Magazine, 9 November 1930

Certain it is that a conviction, akin to religious feeling, of the rationality or intelligibility of the world lies behind all scientific work of a higher order... This firm belief, a belief bound up with deep feeling, in a superior mind that reveals itself in the world of experience, represents my conception of God.

Ideas and Opinions

On Scientific Truth (p. 261)

Crown Publishers, Inc. New York, New York, USA. 1954

I have never found a better expression than “religious” for this trust in the rational nature of reality and of its peculiar accessibility to the human mind. Where this trust is lacking science degenerates into an uninspired procedure. Let the devil care if the priests make capital out of this. There is no remedy for that.

Lettres a Maurice Solovine (pp. 102–103)

Gauthier-Villars. Paris, France. 1956

I am of the opinion that all the finer speculations in the realm of science spring from a deep religious feeling, and that without such feeling they would not be fruitful.

Science and God: A Dialog

Forum, Volume 83, June 1930 (p. 373)

Science without religion is lame, religion without science is blind.

Out of My Later Years

Science and Religion, II (p. 26)
