*Note:* Height—over 75 m; Volume—over 1,000,000 cubic m. Dam types are identified by the following abbreviations: Earth TE; Rockfill ER; Gravity PG; Buttress CB; Arch VA; Multi-Arch MV. Purpose for which reservoir is used is indicated by the following abbreviations: Irrigation I; Hydroelectric H; Flood Control C; Navigation N; Water Supply S; Mine Tailings T; Recreational R. Under year of completion, C is under construction and P is planned.

**Table 11A.10 Modes and Causes of Earth Dam Failures**

| Form | General Characteristics | Causes | Preventive or Corrective Measures |
|---|---|---|---|
| | | **Hydraulic Failures (30% of all failures)** | |
| Overtopping | Flow over embankment, washing out dam | Inadequate spillway capacity | Spillway designed for maximum flood |
| | | Clogging of spillway with debris | Maintenance, trash booms, clean design |
| | | Insufficient freeboard due to settlement, skimpy design | Allowance for freeboard and settlement in design; increase crest height or add flood parapet |
| Wave erosion | Notching of upstream face by waves, currents | Lack of riprap, too small riprap | Property designed riprap |
| Toe erosion | Erosion of toe by outlet discharge | Spillway too close to dam | Training walls |
| | | Inadequate riprap | Properly designed riprap |
| Gullying | Rainfall erosion of dam face | Lack of sod or poor surface drainage | Sod, fine riprap; surface drains |
| | | **Seepage Failures (40% of all failures)** | |
| Loss of water | Excessive loss of water from reservoir and/or occasionally increased seepage or increased groundwater levels near reservoir | Previous reservoir rim or bottom | Blanket reservoir with compacted clay or chemical admix; grout seams, cavities |
| | | Previous dam foundation | Use foundation cutoff; grout; upstream blanket |
| | | Pervious dam | Impervious core |
| | | Leaking conduits | Watertight joints; waterstops; grouting |
| | | Settlement cracks in dam | Remove compressible foundation, avoid sharp changes in abutment slope, compact soils at high moisture |
| | | Shrinkage cracks in dam | Use low-plasticity clays for core, adequate compaction |

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 11A.10 (Continued)**

| Form | General Characteristics | Causes | Preventive or Corrective Measures |
|---|---|---|---|
| Seepage erosion or piping | Progressive internal erosion of soil from downstream side of dam or foundation backward toward the upstream side to form an open conduit or "pipe." Often leads to a washout of a section of the dam | Settlement cracks in dam | Remove compressible foundation, avoid sharp changes, internal drainage with protective filters |
| | | Shrinkage cracks in dam | Low-plasticity soil; adequate compaction; internal drainage with protective filters |
| | | Pervious seams in foundation | Foundation relief drain with filter; cutoff |
| | | Pervious seams, roots, etc. in dam | Construction control; core; internal drainage with protective filter |
| | | Concentration of seepage at face | Toe drain; internal drainage with filter |
| | | Boundary seepage along conduits, walls | Stub cutoff walls, collars; good soil compaction |
| | | Leaking conduits | Watertight joints; waterstops; materials |
| | | Animal burrows | Riprap, wire mesh |
| | **Structural Failures (30% of all failures)** | | |
| Foundation slide | Sliding of entire dam, one face, or both faces in opposite directions, with bulging of foundation in the direction of movement | Soft or weak foundation | Flatten slope; employ broad berms; remove weak material; stabilize soil |
| | | Excess water pressure in confined sand or silt seams | Drainage by deep drain trenches with protective filters; relief wells |
| Upstream slope | Slide in upstream face with little or no bulging in foundation below toe | Steep slope | Flatten slope or employ berm at toe |
| | | Weak embankment soil | Increased compaction; better soil |
| | | Sudden drawdown of pond | Flatten slope, rock berms; operating rules |
| Downstream slope | Slide in downstream face | Steel slope | Flatten slope or employ berm at toe |
| | | Weak soil | Increased compaction; better soil |
| | | Loss of soil strength by seepage pressure or saturation by seepage or rainfall | Core; internal drainage with protective filters; surface drainage |
| Flow slide | Collapse and flow of soil in either upstream or downstream direction | Loose embankment soil at low cohesion, triggered by shock, vibration, seepage, or foundation movements | Adequate compaction |

**Table 11A.12 Summary of Regional Statistics on Large Dams**

| | World[a] | Europe | Asia | North and Central America | South America | Africa | Austral-Asia |
|---|---|---|---|---|---|---|---|
| Total number of large dams | 25,420[a]–48,000[a] | 5,480 | 31,340 | 8,010 | 979 | 1,269 | 577 |
| Average height[b](m) | 31 | 33 | 33 | 28 | 37 | 28 | 33 |
| Average reservoir area[b] ($km^2$) | 23 | 7 | 44 | 13 | 30 | 43 | 17 |
| Avg. reservoir capacity[b] (million $m^3$) | 269 | 70 | 268 | 998 | 1,011 | 883 | 205 |
| Technically feasible hydroelectric potential[c] (TWh/yr) | 14,370 | 1,225 | 6,800 | 1,660 | 2,665 | 1,750 | 270 |
| Annual hydroelectric production[c] (TWh/yr) | 2,643 | 552 | 753 | 700 | 534 | 62 | 42 |
| Exploited technically feasible hydroelectric potential[c] (%) | >18% | >45% | >11% | >42% | >20% | >3.5% | |

[a] The primary source of data is ICOLD 1998, but the regional divisions in this Table and in Figure V.16 through Figure V.27 follow those described in Table V.3. The 1998 ICOLD Register has 25,420 dams registered. Reporting depends on the member countries. Table V.I indicates how the global estimate of neatly 48,000 large dams is arrived at, with the main issue being the number of dams in China.
[b] The ICOLD 1998 database was used to calculate the average dam height, reservoir capacity, and surface area by region.
[c] I/HD 2000. Technical Flexibility is based on the conversion of all river lead and flow in the major rivers in region into energy.

**Table 11A.13 Dam Incident Summary**

| NPDP ID | Dam Name | Incident Date | Incident Type | Dam Failure |
|---|---|---|---|---|
| CO00203 | Maple Grove | 2/1979 | Vandalism | Yes |
| DE00018 | Millsboro Pond | 2/1979 | Piping | Yes |
| DE00052 | Wiggins Mill Pond Dam | 2/1979 | Internal Erosion | Yes |
| FL00723 | Martin Plant Cooling Water Reservoir | 10/30/1979 | Piping | Yes |
| IDS00011 | Mud Creek Dam | 1/12/1979 | Inflow Flood—Hydrologic Event | Yes |
| KYS00004 | Samsel | 2/2/1979 | Seepage | No |
| MS00128 | Spring Lake | 9/1979 | Erosion | No |
| MS02734 | Pine Lake Dam | 4/1979 | Erosion | Unknown |
| MS01731 | Vance Lake | 4/13/1979 | Piping | Yes |
| MDS00002 | Big Millpond (Route 50) | 2/25/1979 | Undermining | Yes |
| IDS00013 | Dam on Pierce Park Gulch | 2/12/1979 | Inflow Flood—Hydrologic Event | Yes |
| IA01967 | Fertile Mill Dam | 8/22/1979 | Piping | Yes |
| NJ00235 | Gropps Lake Dam | 5/27/1979 | Sliding | Yes |
| NM00445 | United Nuclear Churchrock | 7/16/1979 | Cracking and Internal Erosion | Yes |
| NYS00007 | Swimming Poll Dam | 1979 | Inflow Flood—Hydrologic Event | Unknown |
| SC01458 | Huttos Lake Dam | 9/9/1979 | Inflow Flood—Hydrologic Event | Yes |
| UT00379 | Goshen | 2/14/1979 | Inflow Flood—Hydrologic Event | Yes |
| WI00160 | Pulcifer | 6/1979 | Deterioration | No |
| WI00053 | Little Falls | 4/1979 | Gate Structural Failure | Unknown |
| TN15712 | Edwards | 4/2/1979 | Piping | No |
| NYS00018 | Sherman Dam | 9/14/1979 | Inflow Flood—Hydrologic Event | Yes |
| NMS00006 | Phelps Dodge Corporation Tailings Dam No. 3 | 10/13/1980 | Structural Failure | Yes |
| SD00921 | East Lemmon | 6/5/1980 | Inflow Flood—Hydrologic Even | Yes |
| VTS00016 | Steward | 1980 | Piping | Yes |
| VT00122 | Fairfield Swamp Pond | 4/13/1980 | Piping | Yes |
| UTS00009 | Lower North Eden Reservoir | 4/20/1980 | Inflow Flood—Hydrologic Event | Yes |
| UTS00008 | South Eden Reservoir | 4/20/1980 | Inflow Flood—Hydrologic Event | Yes |
| SCS00004 | Tutens Mill Pond | 3/14/1980 | Inflow Flood—Hydrologic Event | Yes |
| NY13130 | Tannersville Reservoir #1 Dam | 3/22/1980 | Embankment Erosion | Yes |
| OR00185 | Crump Reservoir | 4/19/1980 | Piping | Yes |
| NY00561 | Snow BIrd Lake Dam | 9/1/1980 | Piping | Yes |
| WIS00005 | Kohlsville Dam | 4/1980 | Seepage | Yes |
| WI10607 | Lepper | 3/1980 | Gate Structural Failure | Unknown |
| WI00248 | Wyocena | 1/1/1980 | Abutment Erosion | Unknown |

**Table 11A.13 (Continued)**

| NPDP ID | Dam Name | Incident Date | Incident Type | Dam Failure |
|---|---|---|---|---|
| WI00468 | La Blonde | 7/1992 | Inflow Flood—Hydrologic Event; Debris-Reservoir | Yes |
| NV00024 | Bilk Creek Res | 1992 | Inflow Flood—Hydrologic | Yes |
| MDS00001 | Black Rock Estates Pond | 4/21/1992 | Inflow Flood—Hydrologic Event; Piping | Yes |
| MOS00015 | Unnamed Dam (MOS00015) | 6/5/1992 | Erosion | Yes |
| COS00007 | Greeley | 1/1993 | Animal Burrows | Yes |
| NE01419 | Krone Dam | 1993 | Inflow Flood—Hydrologic Event | Yes |
| ND00107 | Jund (Zeeland) Dam | 7/16/1993 | Inflow Flood—Hydrologic Event; Biological Attack (i.e. bush, tree growth); Embankment Erosion; Inadequate Spillway Capacity | Yes |
| MOS00002 | Norman Swinney's Dam | 5/26/1993 | Inadequate Compaction | Yes |
| MO32026 | Freddies Lake Dam | 9/26/1993 | Inflow Flood—Hydrologic Event | Yes |
| MO31996 | Boyd Lake Dam | 9/25/1993 | Embankment Slide | Yes |
| MO31526 | Bockelman Lake Dam | 7/1993 | Inflow Flood—Hydrologic Event | Yes |
| MO12370 | Harrison County Lake | 1/3/1993 | Inflow Flood—Hydrologic Event | Yes |
| MO10107 | Stevens Lake Dam | 6/1993 | Inflow Flood—Hydrologic Event | Yes |
| MD00330 | Annapolis Mall Swm Pond | 3/4/1993 | Inflow Flood—Hydrologic Event | Yes |
| OHS00002 | Middletown Hydraulic Dam | 5/13/1993 | Undermining | Yes |
| WI00112 | Rock | 6/20/1993 | Inflow Flood—Hydrologic Event | Yes |
| WI00158 | Briggsville | 3/23/1993 | Reconstruction | Yes |
| WI12788 | Hatfield Headrace | 7/20/1993 | Inflow Flood—Hydrologic Event | Yes |
| WI10130 | Lake Family | 4/23/1993 | Inflow Flood—Hydrologic Event | Yes |
| WI01073 | Fairchild | 6/1993 | Inflow Flood—Hydrologic Event | Yes |
| WI00154 | Partridge Lake | 1/1993 | Piping | Yes |
| WI00035 | Cambria | 6/26/1993 | Inflow Flood—Hydrologic Event; Gate Misoperation | Yes |
| OHS00005 | Unnamed Dam (OHS00005) | 1993 | Inflow Flood—Hydrologic Event | Unknown |
| OHS00004 | Unnamed Dam (OHS00004) | 1993 | Inflow Flood—Hydrologic Event | Unknown |
| WI00016 | Hatfiled | 6/18/1993 | Inflow Flood—Hydrologic Event; Seepage; Piping; Gate Structural Failure | Yes |
| WA00408 | Iowa Beef Processors Waste Pond No. 1 | 1/25/1993 | Inflow Flood—Hydrologic Event; Animal Attack; Seepage; Inadequate Spillway Capacity | Yes |
| OHS00003 | Unnamed Dam (OHS00003) | 1993 | Inflow Flood—Hydrologic Event | Unknown |
| NV10311 | Buckskin Tailings | 9/12/1994 | Earthquake | No |
| WI00791 | Ladysmith | 9/15/1994 | Inflow Flood—Hydrologic Event | Yes |
| WI00502 | Gomulak And Profit | 9/16/1994 | Inflow Flood—Hydrologic Event | Yes |
| WA00063 | Sherry Lake Dam | 1994 | Inflow Flood—Hydrologic Event | Yes |
| VT00035 | Newport No. 11 Diversion Dam | 5/1/1994 | Inflow Flood—Hydrologic Event; Embankment Erosion | Yes |
| TX04210 | Cade Lake Number 3 Dam | 1994 | Inadequate Spillway Capacity | Yes |
| TX03916 | Bearfoot Lake Dam | 1994 | Spillway Failure | No |
| TX03876 | Lake Tinkle Dam | 1994 | Spillway Failure | Yes |
| WI10532 | Eleva Roller Mill | 3/26/1994 | Piping; Biological Attack (i.e. bush, tree growth) | Yes |
| SC00167 | Lake Pauline Dam | 6/27/1994 | Inflow Flood—Upstream Dam Failure | Yes |
| SC00149 | Crystal Lake Dam | 6/27/1994 | Inflow Flood—Upstream Dam Failure | Yes |
| SC00142 | Saxe-Gotha Millpond Dam | 6/27/1994 | Inflow Flood—Hydrologic Event; Gate Misoperation | Yes |
| PA00899 | Fishpond | 4/28/1994 | Concrete Deterioration | Yes |
| PA00780 | Arrowhead Lake | 4/26/1994 | Piping | Yes |
| OH00355 | Invex of Ohio Upper Lake Dam | 8/13/1994 | Inflow Flood—Hydrologic Event | Yes |
| OH00088 | Chopper's Lake Dam | 4/10/1994 | Inflow Flood—Hydrologic Event | Yes |

**Table 11A.13 (Continued)**

| NPDP ID | Dam Name | Incident Date | Incident Type | Dam Failure |
|---|---|---|---|---|
| FLS00001 | IMC–AGRICO Hopewell Mine | 11/19/1994 | Inflow Flood—Hydrologic Event; Seepage; Piping | Yes |
| GA00211 | Gibson—Cary Development Corp Dam | 7/5/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA00238 | Houston Lake Dam | 7/6/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA00239 | Mossy Lake Dam | 7/6/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA00287 | Giles Lake Dam | 8/30/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA00831 | Grisp County (Warwick) | 7/9/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA02902 | Holoka Lake Dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA02899 | Mulkey Lake Dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA02746 | Whatley Lake Dam | 7/21/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA02744 | Rustins Pond Dam | 7/5/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA02743 | Hortmans Pond Dam | 7/21/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA02677 | Goose Lake Dam | 7/21/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA01679 | McGill Lake Dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA01419 | Philema Lake Dam | 7/6/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA01070 | Phillips Pond Dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA03574 | Lies Lake Dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA03572 | Coffin Lake Dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA03571 | Wolhwender Lake Dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA03568 | Shellhouse Lake Dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA03567 | Merritt Lake Dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA03540 | Lake Yohola Dam | 7/7/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA03527 | McKemie Lake North Dam | 9/12/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA03526 | McKemie Lake Dam | 9/12/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA03203 | Thomas Millpond Dam | 7/6/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00005 | Cordrays Pond Dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00004 | City of Senoia Dam | 7/5/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00003 | Birch Creek Farms | 7/6/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00002 | Baker/Austin Pond Dam | 7/6/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00001 | 6 acre lake on Forrest Road | 7/8/1994 | Inflow Flood—Hydrologic Event | Yes |
| GA04987 | Suggs Millpond | 7/5/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00086 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00085 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00084 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00083 | Unnamed small dam S of US 27 By-Pass & Webster St. | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00082 | Unnamed small dam 2 miles SW of Cuthbert | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00081 | Unnamed small dam 3 miles S of Cuthbert, u/s of US | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00080 | Unnamed small dam SE of County Rds. #134 & #152 | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00079 | Unnamed small dam SE of County Rds. #134 &152 | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00078 | Unnamed small dam on Collins Mill Creek | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00077 | Unnamed small dam north of Bethlehem Church | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00076 | Unnamed small dam | 9/12/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00075 | Unnamed small dam | 8/30/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00074 | Unnamed small dam | 8/30/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00073 | Unnamed small dam | 8/30/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00072 | Unnamed small dam | 8/30/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00071 | Unnamed small dam | 8/30/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00070 | Unnamed small dam | 8/30/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00069 | Unnamed dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00068 | Unnamed small dam 1 mile NW of Buena Vista Lake Dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00067 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |

**Table 11A.13 (Continued)**

| NPDP ID | Dam Name | Incident Date | Incident Type | Dam Failure |
|---|---|---|---|---|
| GAS00066 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00065 | Unnamed dam | 7/21/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00064 | Unnamed dam | 7/21/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00063 | Unnamed small dam west of SR 214, north of SR26 | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00062 | Unnamed small dam west of SR 128 | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00061 | Unnamed small dam at RR, SE of Montezuma | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00060 | Unnamed small dam on Meadow Creek | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00059 | Unnamed small dam 1 mile SW of Marshallville | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00058 | Unnamed small dam 1 mile E of Marshallville Lake Dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00057 | Unnamed small dam on Gin Creek, west of Flint River | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00056 | Unnamed dam | 7/29/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00055 | Unnamed dam | 7/29/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00054 | Unnamed dam | 7/29/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00053 | Unnamed small dam | 8/30/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00052 | Unnamed small dam | 8/30/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00051 | Unnamed small dam | 8/30/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00050 | Unnamed small dam | 8/30/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00049 | Unnamed small dam | 8/30/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00048 | Unnamed small dam | 8/30/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00047 | Unnamed small dam | 7/14/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00046 | Unnamed small dam 1 mile east of Felder Lake Dam | 9/12/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00045 | Unnamed small dam 1.5 miles NW of Sutton's Corner | 9/12/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00044 | Unnamed small dam 2 miles SE of Bluffton | 9/12/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00043 | Unnamed dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00042 | Unnamed dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00041 | Underwood Millpond Dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00040 | Thorton Place Pond Dam | 7/14/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00039 | Taylor's Mill Pond Dam | 7/5/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00038 | Swearingen Lake Dam | 7/21/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00037 | Small Rovoli Lake Dam | 7/5/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00036 | Small Lake above Double "O" Ranch | 7/5/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00035 | Shofill Lake Dam | 8/30/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00034 | Scout Lake Dam | 8/30/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00033 | Rockhill Lake Dam | 7/5/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00032 | Parish Lake Dam South | 9/12/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00031 | Owens Lake Dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00030 | Old Farm Dam | 7/5/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00029 | Minor's Millpond Lake Dam | 7/21/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00028 | McNeil Lake Dam | 9/12/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00027 | McMath Millpond Upper | 7/6/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00026 | McMath Millpond Lower | 7/6/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00025 | Lower Leisure Lake Dam | 7/5/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00024 | Loki Lake Dam | 7/6/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00023 | Levee @ Macon | 7/6/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00022 | Lamar County Reservoir Dam | 7/5/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00021 | Lake Jennifer Upper | 7/29/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00020 | Lake Jennifer Lower | 7/29/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00019 | Lake Corinth Dam | 7/6/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00018 | Iris "B" Lake Dam | 7/6/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00017 | Hutcheson Lake Dam | 7/6/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00016 | Housers Millpond Dam | 8/30/1994 | Inflow Flood—Hydrologic Event | Yes |

| NPDP ID | Dam Name | Incident Date | Incident Type | Dam Failure |
|---|---|---|---|---|
| GAS00015 | Harell Lake Dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00014 | Hancock | 7/6/1994 | Inflow Flood—Hydrologic Event | Yes |
| NE00419 | Waterman Dam | 8/1994 | Inflow Flood—Hydrologic Event | Yes |
| NE00212 | Morgan Dam | 1994 | Inflow Flood—Hydrologic Event | Yes |
| IL50330 | East Peoria Dredge Disposal Facility | 11/11/1994 | Seepage; Piping | Yes |
| GAS00210 | Unnamed Dam (GAS00210) | 1994 | Flood | Yes |
| GAS00183 | Williamson Downs Lake Dam | 7/5/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00182 | Wells Millpond Lake Dam | 7/29/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00181 | Wainwright Lake Dam (2) | 7/21/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00180 | Wainwright Lake Dam (1) | 7/21/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00179 | Vinny Mill Pond Dam | 7/6/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00178 | Upper & Lower Marimac | 7/8/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00177 | Upper Jackson north of County Road #152 | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00176 | Upper Iris “A” | 7/6/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00175 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00174 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00173 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00172 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00171 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00170 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00169 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00168 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00167 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00166 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00165 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00164 | Leverett Pond Dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00163 | Unnamed small dam within city limits of Weston | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00162 | Unnamed small dam 1.5 miles NE of Weston | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00161 | Unnamed small dam N of County Rd #18, E of PBS tower | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00160 | Unnamed small dam N of County Rd #18, E of PBS tower | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00159 | Unnamed small dam just upstream of Kennedy | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00158 | Unnamed small dam upstream of Holoka Lake Dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00157 | Unnamed small dam North of Bear Creek | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00156 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00155 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00154 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00153 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00152 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00151 | Unnamed small dam | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00150 | Unnamed small dam 1/2 mile U/S SR 45 on Mossy Creek | 8/17/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00149 | Unnamed small dam above Taylor Mill Pond Dam | 7/5/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00148 | Unnamed small dam above Taylor Mill Pond Dam | 7/5/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00147 | Unnamed small dam above Taylor Mill Pond Dam | 7/5/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00146 | Unnamed small dam above Taylor Mill Pond Dam | 7/5/1994 | Inflow Flood—Hydrologic Event | Yes |
| GAS00145 | Unnamed small dam, Bottsford quad in draw, E. of T | 7/29/1994 | Inflow Flood—Hydrologic Event | Yes |

## SECTION 11B RESERVOIRS

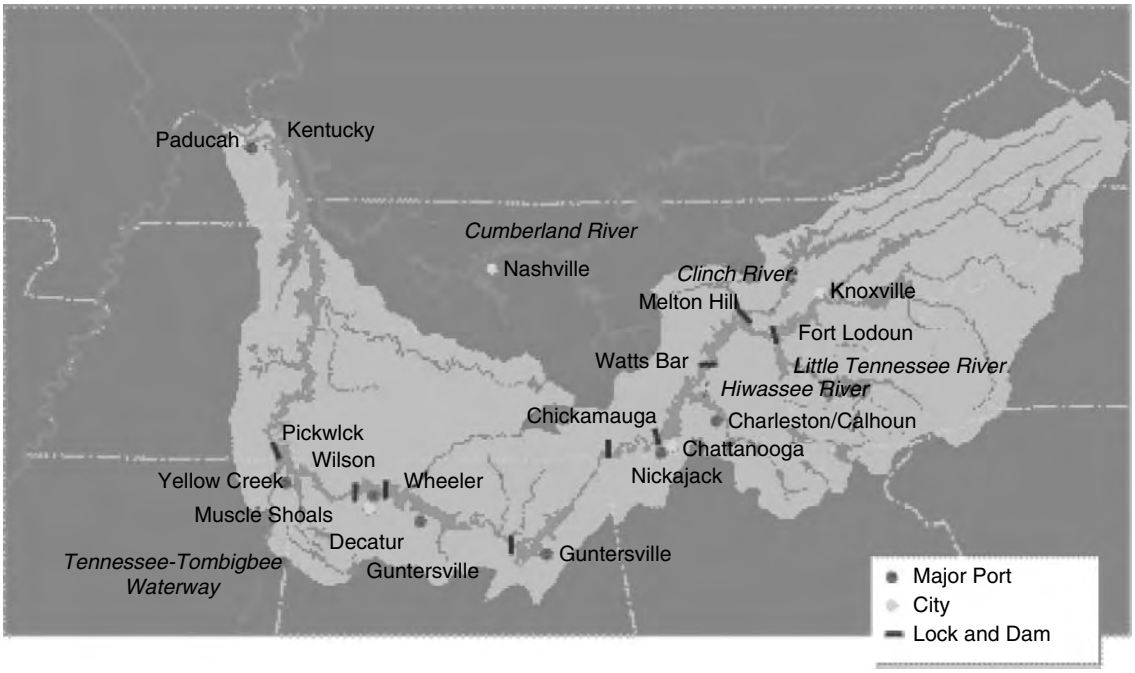

**Figure 11B.11** Route of the river. The Tennessee River's main navigable channel is 652 miles long. It officially begins a mile above Knoxville, Tennessee, and eventually empties into the Ohio River at Paducah, Kentucky. Commercial navigation also extends into three major tributaries: 61 miles up the Clinch River, 29 miles up the Little Tennessee River, and 21 miles up the Hiwassee River. Another 150 miles of channel—too shallow for commercial traffic—is marked for recreational use. (From www.tva.gov.)

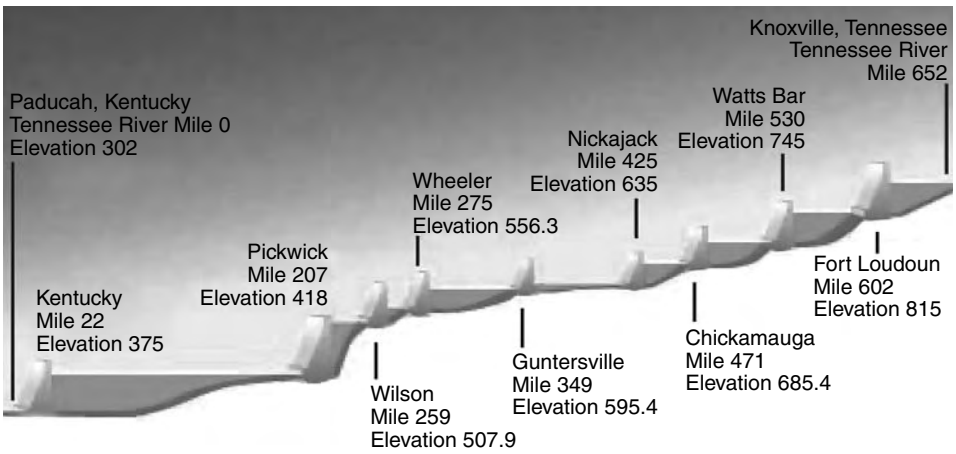

**Figure 11B.12** Tennessee river system. Nine main-river dams form a "staircase" of quiet, pooled water, and controlled current—a continuous series of reservoirs that stretches along the entire length of the Tennessee River. From its beginning just above Knoxville, the Tennessee drops a total of 513 ft in elevation before it empties into the Ohio River. (From www.tva.gov.)

**Table 11B.15 The Tennessee Valley Authority Multipurpose Reservoir System**

The TVA reservoir system was designed to provide for navigation, flood control, and the production of hydroelectricity. Today the reservoir system is also operated for such other purposes as providing municipal and industrial water supplies, regulating flows to minimize the effects of effluents including thermal discharges, fluctuating water levels for control of mosquitos and troublesome aquatic vegetation, and controlling flows and levels for various recreational uses

This reservoir system encompasses more than 11,000 miles of shoreline and 600,000 acres of water. The overall benefit of this system to the Nation and the region are incalculable, but some indication is provided by a consideration of the more quantifiable benefits: flood damages prevented, transportation savings, hydroelectric power production, and recreation visits

There are 39 dams operating in the Tennessee Valley's integrated water control system. They are:

35 TVA dams — Apalachia, Blue Ridge, Boone, Chatuge, Cherokee, Chickamauga, Douglas, Fontana, Fort Loudoun, Fort Patrick Henry, Guntersville, Hiwassee, Kentucky, Melton Hill, Nickajack, Normandy, Norris, Nottely, Ocoee No. 1, Ocoee No. 2, Ocoee No. 3, Pickwick Landing, South Holston, Tellico, Tims Ford, Watauga, Watts Bar, Wheeler, Wilson, Bear Creek, Little Bear Creek, Nolichucky, Upper Bear Creek, Cedar Creek, and Wilbur

4 Alcoa dams — Calderwood, Cheoah, Chilhowee, and Santeetlah

Raccoon Mountain Pumped Storage Project stores energy (generated elsewhere) to meet peak power demands.

There are 9 dams in the Cumberland River basin for which TVA distributes power generation. They include one TVA dam, Great Falls, and 8 Corps of Engineer dams — Barkley, Center Hill, Cheatham, Cordell Hull, Dale Hollow, J. Percy Priest, Old Hickory, and Wolf Creek

The 4 Bear Creek projects (Bear, Little Bear, and Upper Bear and Cedar), the 2 Duck River projects (Normandy and Columbia), and the Tims Ford dam were planned under Tributary Area Development programs but have been counted among those in the Integrated Water Control System because they were all partially justified as having system flood control value. Tims Ford also contributes power to the system

In the 1960's TVA built two systems of small dams in tributary watersheds:

Beech River Project — Beech, Cedar, Dogwood, Lost Creek, Pine, Pin Oak, Redbud, and Sycamore

Bristol Project — Beaver Creek and Clear

There are 12 dams owned by Alcoa in The Little Tennessee River Valley which are not included in TVA's integrated water control system

The Elk River Dam operated by the Air Force, the Burnett Dam operated by the city of Asheville, and the Walters Dam of the Carolina Power and Light Company are other structures in the Tennessee Valley, but are not controlled by TVA

**Table 11B.16 Tennessee Valley Authority Reservoirs**

| Main River Projects | Length of Lake (Miles) | Length of Lake Shoreline (Miles) | Area of Lake (Acres) | Lake Elevation (Feet above Sea Level) | | Lake Volume (Acre-Feet) at Top of Gates | Useful Controlled Storage in Reservoir (Acre-Feet) |
|---|---|---|---|---|---|---|---|
| | | | | Normal Minimum | Top of Gates | | |
| Kentucky | 184.3 | 2,380 | 160,300 | 354 | 375 | 6,129,000 | 4,008,000 |
| Pickwick Landing | 52.7 | 496 | 43,100 | 408 | 418 | 1,105,000 | 417,700 |

**Table 11B.18 Summary of Reservoir Storage, Including Controlled Natural Lakes, in the United States and Puerto Rico**

| Reservoir Storage (Range, in Acre-feet) | Number of Reservoirs | Total Reservoir Storage | |
|---|---|---|---|
| | | Acre-feet | Percentage of Total |
| Greater than 10,000,000 | 5 | 107,655,000 | 22.4 |
| 100,000–10,000,000 | 569 | 322,852,000 | 67.3 |
| 50,000–100,000 | 295 | 20,557,000 | 4.3 |
| 25,000–50,000 | 374 | 13,092,000 | 2.7 |
| 5,000–25,000 | 1,411 | 15,632,000 | 3.3 |
| Total[a] | 2,654 | 479,788,000 | 100.0 |

*Note*: Reservoir storage is expressed as normal capacity, which is the total storage space in a reservoir below the normal retention level, including dead storage and inactive storage, and excluding any flood control or surcharge storage.

[a] In addition, there are perhaps at least 50,000 reservoirs with capacities ranging from 50 to 5,000 acre-feet, and about 2 million smaller farm ponds used for storage.

**Table 11B.21 Advantages and Disadvantages of Subsurface and Surface Reservoirs**

| Subsurface Reservoirs | Surface Reservoirs |
|---|---|
| **Advantages** | **Disadvantages** |
| 1. Many large-capacity sites available | 1. Few new sites available |
| 2. Slight to no evaporation loss | 2. High evaporation loss even in humid climate |
| 3. Require little land area | 3. Require large land area |
| 4. Slight to no danger of catastrophic structural failure | 4. Ever-present danger of catastrophic failure |
| 5. Uniform water temperature | 5. Fluctuating water temperature |
| 6. High biological purity | 6. Easily contaminated |
| 7. Safe from immediate radioactive fallout | 7. Easily contaminated by radioactive material |
| 8. Serve as conveyance systems—canals or pipeline across lands of others unnecessary | 8. Water must be conveyed |
| **Disadvantages** | **Advantages** |
| 1. Water must be pumped | 1. Water may be available by gravity flow |
| 2. Storage and conveyance use only | 2. Multiple use |
| 3. Water may be mineralized | 3. Water generally of relatively low mineral content |
| 4. Minor flood control value | 4. Maximum flood control value |
| 5. Limited flow at any point | 5. Large flows |
| 6. Power head usually not available | 6. Power head available |
| 7. Difficult and costly to investigate, evaluate, and manage | 7. Relatively easy to evaluate, investigate, and manage |
| 8. Recharge opportunity usually dependent on surplus surface flows | 8. Recharge dependent on annual precipitation |
| 9. Recharge water may require expensive treatment | 9. No treatment required of recharge water |
| 10. Continuous expensive maintenance of recharge areas or wells | 10. Little maintenance required of facilities |

*Note*: As of September 30, 1986; total capacity of 500,000 acre-feet or more. Purpose, FW, fish wildlife; FC, flood control; I, irrigation; MI, municipal industrial; N, navigation; P, power; RR, river regulation; S, sediment. Capacity-active, storage available for project, usually the storage above the lowest point of release. Total, storage at highest controlled water surface. Reservoir area, water surface area at active conservation capacity. Year completed, date original construction completed except as indicated in footnote e. Operating agency, agency directly and officially responsible for operation and maintenance of feature. Does not include agencies that may administer recreational or other secondary function as a service to the primary operator. Category, A, constructed and operated by bureau of reclamation; B, constructed by others, operated by bureau of reclamation; C, under construction by bureau of reclamation; D, constructed by bureau of reclamation, operated by others; E, constructed and operated by others.

[a] The bureau of reclamation has responsibility for the proper care and management of five reservoirs by special agreement.
[b] Reregulating reservoir.
[c] Dead storage not evaluated.
[d] Not yet in operation.
[e] Date indicates bureau of reclamation rehabilitation work.
[f] Tiber dam modification completed in 1981.

*Note*: In operation September 30, 1986. Nomenclature for project functions: Fy, Fiscal year; D, debris control; F, flood control; I, irrigation; N, navigation; P, power; R, public recreation (annual attendance exceeding 5000); W, fish and wildlife (federal or state).

[a] Total of all storage functions, including inactive and dead storage to normal full pool level.
[b] G, gravel; R, rock; C, concrete; E, earth.
[c] Chief Joseph Additional Units and Operating Units 1–16.
[d] All units are synchronized-to-line and two units have passed the pumpback test. However, due to damaging effects to fish, no further pumping will be done for their testing or operation until a solution to the problem is found.
[e] Being operated for the Department of Interior by the Bureau of Reclamation.
[f] Being operated by the Alaska Power Administration.
[g] Crater Lake Unit.
[h] Weir for Long Lake.

*Note:* Federally owned, developed, under construction, and authorized January 1, 1984. R Capacity shown is in reversible equipment.

[a] U—Less than 1,000 acre-ft. NA—Data not available.
[b] Includes main generating units only.
[c] Operated by Rock island Army Arsenal. Nameplate rating is 3,440 kilowatts which cannot be obtained.
[d] Storage Capacity for ultimate development is 420,000 acre-ft.
[e] All water used for generation must be returned by pumping.
[f] Storage in Buffalo Bill Reservoir is used jointly for irrigation and power.
[g] Pipeline collects water form Big Creek and Cottonwood Creek, tributaries of Plateau Creek.
[h] Water to be stored in the enlarged Strawberry Reservoir which is located upstream.
[i] Used jointly for irrigation, power, and flood control.
[j] Used jointly for irrigation and power.
[k] Used jointly for irrigation, power, flood control, and navigation.
[l] Includes two of three 10,000 kilowatt station service units used to supply commercial power.
[m] Used jointly for power and flood control.
[n] Dam and reservoir were constructed by the Corps of Engineers.
[o] Includes one of two 2,000 kilowatt station service units used to supply commercial power.
[p] 222,000 kilowatts are allocated to the state of California under contact.
[q] Constructed by the Bureau of Reclamation.
[r] Constructed by the Corps of Engineers.

**Table 11C.32 Trends in Pumped Storage Capacity Development in the United States**

| | Installed Capacity in Reversible Units (millions of kilowatts) | | | | | |
|---|---|---|---|---|---|---|
| | Developed | | | Under Construction | | |
| Year as of January 1 | Pure | Combined | Total | Pure | Combined | Total |
| 1960 | 0 | 0.1 | 0.1 | 0 | 0.2 | 0.2 |
| 1964 | 0.4 | 0.3 | 0.7 | 0.7 | 0.5 | 1.2 |
| 1968 | 1.6 | 0.5 | 2.1 | 1.2 | 1.6 | 2.8 |
| 1972 | 2.6 | 1.3 | 3.9 | 6.0 | 1.4 | 7.4 |
| 1976 | 7.3 | 2.4 | 9.7 | 2.7 | 1.6 | 4.3 |
| 1980 | 9.3 | 3.6 | 12.9 | 3.2 | 1.5 | 4.7 |
| 1984 | 10.1 | 3.7 | 13.8 | 4.9 | 0.4 | 5.3 |

*Note:* A pure pumped storage project with a large peaking capacity can be developed at a site with two potential reservoirs of reasonable size in close proximity and with a relatively large difference in elevations. Projects are usually more economically developed at sites with high usable heads; consequently, the more favorable sites are normally located in mountainous terrain. However, consideration has been given to the construction of pumped storage projects in areas of level terrain by placing the lower reservoir in an underground cavern or excavated area. For any development, an assured supply of water at least sufficient to replace evaporation, seepage, and other losses is essential.

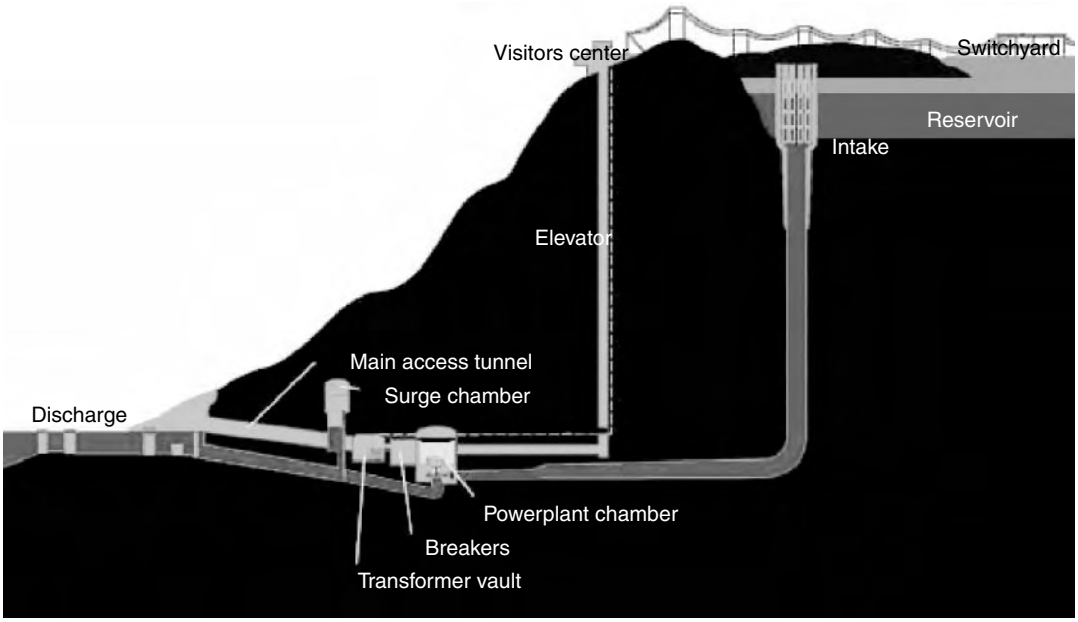

**Figure 11C.26** Pumped-storage plant. (From www.tva.gov.)

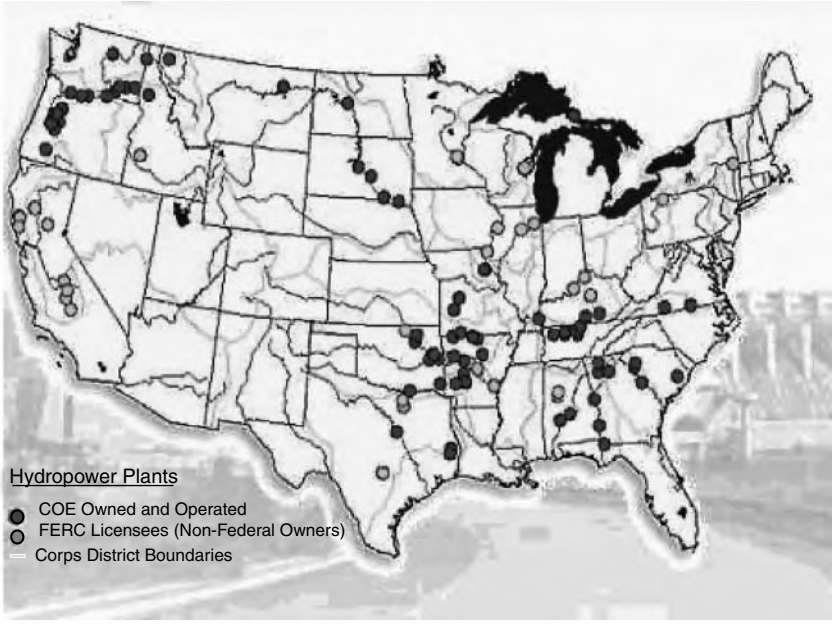

**Background**. The Corps of Engineers (Corps) is the single largest owner and operator of hydropower in the U.S., with 24% of the nation's hydropower generating capacity. The percentage is 16% for the Bureau of Reclamation and 6% for the Tennessee Valley Authority. Corps dams have a total nameplate capacity of close to 21,000 megawatts (MW) and produce an average of almost 100 million kilowatt-hours (kWh) of energy annually. Nonfederal power plants at Corps facilities add about another 2,000 MW of capacity.

[a] F, federally owned; I, industrially owned; M, nonfederal publicly owned; P, private utility owned; R, private non-utility owned.
[b] LA, License amendment pending; PO, Preliminary permit outstanding; MA, Major license applied for (>1.5 MW); MO, Major license outstanding (>1.5 MW).
[c] Existing plant is operating under a FERC license or exemption. Other plants are either federal or are not under FERC's jurisdiction because of their age.
[d] License expires December 31,1993.
[e] Pumped storage facility.

*Relicensing*: In addition to the development of new projects, decisions regarding the relicensing of existing projects will have an important effect on the character of hydropower in the UMRB. Hydro projects are typically licensed for a period of 30 to 50 years. Many projects under FERC's jurisdiction are due for relicensing in the next few years. Nationwide, the licenses for 227 projects will expire between 1990 and 1999. Twenty-two percent of these projects are in the five UMRB states, which is far greater than the region's proportion of hydro plants. Wisconsin has the highest relicensing workload of any state in the country between 1990 and 1999. (See Appendix C.)

**Table 11C.48 (Continued)**

| Project Number[a] | Plant Name | River | Owner | State | County | Project Status[b] | Capacity (kW) | Exp. Date (YYMMDD) |
|---|---|---|---|---|---|---|---|---|
| 10674 | Midtec | Fox R. | Midtec Paper Corp. | WI | Outagamie | MA | 2,700 | |
| 10805 | Hatfield | Black R. | Midwest Hydraulic Co. | WI | Jackson | PO | 4,800 | 920931 |

[a] Plants without project numbers are not under FERC jurisdiction and thus have no entries under the project status or license expiration columns.
[b] Project Status: FA, Federally authorized; LE, Exempted from licensing; MA, Major license applied for (>1.5 MW); MO, Major license outstanding or annual license during major relicensing proceeding (>1.5 MW); NO, Minor license outstanding or annual license during minor relicensing proceeding (≤1.5 MW); PO, Preliminary Permit Outstanding.
[c] Pumped storage.
[d] Reversible capacity could be used for conventional generation.

**Table 11C.50 Trends in Pumped Storage Capacity Development in the United States**

| | Installed Capacity in Reversible Units (Millions kW) | | | | | |
|---|---|---|---|---|---|---|
| | Developed | | | Under Construction | | |
| **Year as of January 1** | **Pure** | **Combined** | **Total** | **Pure** | **Combined** | **Total** |
| 1960 | 0 | 0.1 | 0.1 | 0 | 0.2 | 0.2 |
| 1964 | 0.4 | 0.3 | 0.7 | 0.7 | 0.5 | 1.2 |
| 1968 | 1.6 | 0.5 | 2.1 | 1.2 | 1.6 | 2.8 |
| 1972 | 2.6 | 1.3 | 3.9 | 6.0 | 1.4 | 7.4 |
| 1976 | 7.3 | 2.4 | 9.7 | 2.7 | 1.6 | 4.3 |
| 1980 | 9.3 | 3.6 | 12.9 | 3.2 | 1.5 | 4.7 |
| 1984 | 10.1 | 3.7 | 13.8 | 4.9 | 0.4 | 5.3 |

*Note*: A pure pumped storage project with a large peaking capacity can be developed at a site with two potential reservoirs of reasonable size in close proximity and with a relatively large difference in elevations. Projects are usually more economically developed at sites with high usable heads; consequently, the more favorable sites are normally located in mountainous terrain. However, consideration has been given to the construction of pumped storage projects in areas of level terrain by placing the lower reservoir in an underground cavern or excavated area. For any development, an assured supply of water at least sufficient to replace evaporation, seepage, and other losses is essential.

**Table 11E.62 Elements Comprising a Water Resources Project Investigation**

A. Purposes of a multiple-purpose project
1. Irrigation
2. Drainage
3. Domestic or industrial water supply
4. Flood control
5. Hydro-power generation
6. Navigation
7. Fish and wildlife conservation
8. Recreation
9. Water quality control
10. Salinity control
11. Watershed management
12. National defense
13. International relation

B. Land resources
1. Land classification
2. Land use and capabilities
3. Development
4. Settlement
5. Drainage

C. Water resources
1. Water supply, surface and groundwater and salvage
2. Water quality and treatment
3. Water requirements, all purposes
4. Water rights including international treaties
5. Flood studies
6. Sediment, including transport, erosion and aggradation

7. Project operation studies
8. Forecasting for operation
9. Hydraulic design requirements

D. Engineering and geology
1. Aerial photography, surveying and mapping
2. Geology, foundation and materials

3. Anticipated construction problems
4. Plans and cost estimates, physical plan formulation
5. Anticipated operation, maintenance and replacement problems and estimates of cost

E. Economics
1. Existing economy and resource use
2. Future economy without the project
3. Future economy with the project, and regional and national impact
4. Economic criteria for plan formulation
5. Economic justification

F. Financial considerations
1. Cost allocation to various purposes
2. Repayment of capital investment
3. Payment of annual operation, maintenance and replacement costs

G. Legal considerations
1. Right to use of water
2. International agreements and treaties
3. Land acquisition and rights-of-way

H. Public relations
1. Determination of public interest in contemplated development
2. Dissemination of factual information on progress and objectives of investigation
3. Establishment of government policy and enabling legislation

I. Reports
1. Reconnaissance reports
   (a) Basin plan
   (b) Preliminary project report
2. Special interim or progress reports
3. Feasibility
4. Definite plan

J. Administration
1. Organizational requirements for supervision of construction and operation of proposed projects
2. Program and budget requirements and control

**Table 11E.63 Purposes of a Water Resources Project**

| Purpose | Description | Type of Works and Measures |
|---|---|---|
| Flood control | Flood-damage prevention or reduction, protection of economic development, conservation storage, river regulation, recharging of groundwater, water supply, development of power, protection of life | Dams, storage reservoirs, levees, floodwalls, channel improvements, floodways, pumping stations, floodplain zoning, flood forecasting |
| Irrigation | Agricultural production | Dams, reservoirs, wells, canals, pumps and pumping plants, weed-control and desilting works, distribution systems, drainage facilities, farmland grading |
| Hydroelectric | Provision of power for economic development and improved living standards | Dams, reservoirs, penstocks, power plants, transmission lines |
| Navigation | Transportation of goods and passengers | Dams, reservoirs, canals, locks, open-channel improvements, harbor improvements |
| Domestic and industrial water supply | Provision of water for domestic, industrial, commercial, municipal, and other uses | Dams, reservoirs, wells, conduits, pumping plants, treatment plants, saline-water conversion, distribution systems |
| Watershed management | Conservation and improvement of the soil, sediment abatement, runoff retardation, forests and grassland improvement, and protection of water supply | Soil-conservation practices, forest and range management practices, debris-detention dams, small reservoirs, and farm ponds |
| Recreational use of water | Increased well-being and health of the people | Reservoirs, facilities for recreational use, works for pollution control, reservations of scenic and wilderness areas |
| Fish and wildlife | Improvement of habitat for fish and wildlife, reduction or prevention of fish or wildlife losses associated with man's works, enhancement of sports opportunities, provision for expansion of commercial fishing | Wildlife refuges, fish hatcheries, fish ladders and screens, reservoir storage, regulation of streamflows, stocking of streams and reservoirs with fish, pollution control, and land management |
| Pollution abatement | Protection or improvement of water supplies for municipal, domestic, industrial, and agricultural use and for aquatic life and recreation | Treatment facilities, reservoir storage for augmenting low flows, sewage-collection systems, legal control measures |
| Insect control | Public health, protection of recreational values, protection of forests and crops | Proper design and operation of reservoirs and associated works, drainage, and extermination measures |
| Drainage | Agricultural production, urban development, and protection of public health | Ditches, tile drains, levees, pumping stations, soil treatment |
| Sediment control | Reduction of control of slit load in streams and protection of reservoirs | Soil conservation, sound forest practices, proper highway and railroad construction, desilting works, channel and revetment works, bank stabilization, special dam construction and reservoir operations |
| Salinity control | Abatement or prevention of salt-water contamination of agricultural, industrial, and municipal water supplies | Reservoirs for augmenting low streamflow, barriers, groundwater recharge, coastal jetties |

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 11E.63 (Continued)**

| Purpose | Description | Type of Works and Measures |
|---|---|---|
| Artificial precipitation | Control of precipitation within meteorological limits | Portable cloud-seeding equipment, ground generators |
| Employment | Stimulation of employment and sources for increased income in depressed areas of unemployment and underdevelopment | Area Redevelopment Act and Area Redevelopment Administration |
| Public works acceleration | Acceleration of Federal, state, and local constructions of public works on cost-sharing basis | Public Law 87–658 |
| New water-resources policies | New policies to be used by Federal agencies, according to S. Document no. 97 (27), approved by the President May 15, 1962, affecting the economies of project justification as well as project formulation and composition | Senate Document no. 97 |

**Table 11E.64 Items to be Considered in Planning a Multiple-Purpose Water Resources Project**

A. Physical and Related Items

1. Project area
   a. Physical geography: location and size; physiography; climate; soils
   b. Settlement: history; population; cultural background, both rural and urban
   c. Development: industry; transportation; communication; commerce; power; land uses; water uses; minerals; undeveloped resources
   d. Economic conditions: general; relief problems; community needs; national needs
   e. Investigations and reports: previous investigations; history; scope
2. Hydrologic data
   a. Hydrologic records and networks: gaging and observation stations; data-collecting agencies
   b. Hydrometeorological data: precipitation; evaporation and evapotranspiration
   c. Surface water: low flows; normal flows; maximum floods; "design floods;" drought; quality
   d. Groundwater: aquifers; recharge; quality
3. Supply of water
   a. Sources of supply: surface-water supply; groundwater supply; reservoirs
   b. Variation of supply: variability; consumptive use; regulation; diversion requirements; return flow; evapotranspiration losses; seepage losses or gains
   c. Quality of water: physical, chemical, biological and radioactive qualities; quality requirements; pollution
   d. Legal rights: water rights; development of project rights; operation rights
4. General considerations for design and planning
   a. Geology: explorations; geological formations; foundation problems
   b. Design problems: design criteria; methods of analysis; project operation and maintenance
   c. Construction problems: accessibility to project site; rights of way and relocation; construction materials; construction period; flow diversion; manpower; equipment, accessibility
   d. Alternative plans: comparison of alternative plans; supplementary plans; possible alternative plans; relationships to areas to be served
   e. Estimates of costs
   f. Intrastate, interstate, and international problems
   g. Organizations involved: public and/or private; technical, social, and political
5. Flood control
   a. Flood characteristics of the project area: Historical floods; flood magnitude and frequency
   b. Design criteria: project design storms and floods; degree of protection
   c. Damage: survey of flooding areas and things affected by floods, nearby or quite a distance away, including commerce, good will, dates of delivery of goods, etc.
   d. Measure of control: reduction of peak flow by reservoirs; confinement of flow by levees, floodwalls, or a closed conduit; reduction of peak stage by channel improvement; diversion of floodwater through bypasses or floodways; flood-plain zoning and evacuation; floodproofing and flood insurance of specific properties; reduction of flood runoff by watershed management
   e. Existing remedial works
6. Agricultural use of water (irrigation and related drainage)
   a. Factors for land classification: soil texture; depth to sand, gravel, shale, raw soil, or penetrable lime zone; alkalinity; salinity; slopes; surface cover and profile; drainage; water logging
   b. Present and anticipated development: crops; livestock; financial resources; improvements; organizations; development period
   c. Water requirements, if any: total crop requirement; irrigation-water demand; farm-delivery losses; diversion amounts
   d. Available water: sources; quality; quantity; distribution
   e. Irrigation methods: flooding; furrow irrigation; sprinkling; subirrigation; supplemental irrigation
   f. Structural works: storage reservoirs; dams; spillways; diversion works; canals and distribution systems
7. Hydroelectric power
   a. Development: sources; present potential and future capacities
   b. Alternative sources of power: stream; oil; gas; nuclear power; interties

© 2006 by Taylor & Francis Group, LLC

c. Types of power plants: run-of-river; storage; pumped storage
d. Structural components: dams; canals; tunnels; penstock; forebay; powerhouse; tailrace
e. Power problems: load demand and distribution; interties (interconnections with other power transmission systems)
f. Markets; revenues; costs

8. Navigation
   a. Water traffic: present and future needs and savings in shipping costs, if any, on the basis of which the justifications are primarily judged at the present time
   b. Alternative means of transportation: air; land
   c. Navigation requirements: depth, width, and alignment of channels; locking time; current velocity; terminal facilities
   d. Methods of improving navigation: channel improvement by reservoir regulation; contraction works; bank stabilization, straightening, and snag removal; lock-and-dam construction; canalization; dredging
9. Domestic and industrial water supply
   a. Sources of supply: surface and/or groundwater; location and capacity; desalination
   b. Water demand: climate; population characteristics; industry and commerce; water rates and metering; size of project area; fluctuation
   c. Water requirements: quantity; pressure; quality (tastes, odors, color, turbidity, bacteria content, chemicals, temperature, etc.)
   d. Methods of purification: plain sedimentation; chemical sedimentation or coagulation; filtration; disinfection; aeration; water softening
   e. Treatment plant: location; design; purpose or purposes
   f. Distribution systems: reservoirs; pumping stations; elevated storage; layout and size of pipe systems; location of fire hydrants
   g. Waterworks organizations: maintenance and operation of supply, distribution, and treatment facilities
10. Recreational use of water
   a. Population tributary (population near enough to the project area to use it for recreational purposes)
   b. Facilities: boating; fishing; swimming; etc.
   c. Water requirements: depth of water; area of water surface; sanitation
11. Fish and wildlife
   a. Biological data: species; habits
   b. Facilities: reservoirs; fish ladders
   c. Water requirements: temperature; current velocity; biological qualities
12. Drainage
   a. Existing projects
   b. Drainage conditions: rainfall excess; soil condition; topography; disposal of water
   c. Drainage system: urban; farmland
13. Water-quality control
   a. Problems involved: sources; nature and degree of pollution; sediment; salinity; temperature; oxygen content; radioactive contamination
   b. Hydrologic information and measurement
   c. Methods of control

B. Economic Aspects of Project Formulation
1. Benefits and damages: identification and evaluation
2. Costs: identification and estimation
3. Financial feasibility
4. Allocation of costs
5. Reimbursement requirements and sharing of allocated costs
6. Methods and costs of financing the project, whether federal, state, or local, bringing all benefits and all costs to an annual basis and recognizing interest on the investment not only during construction, but throughout the entire proposed “life of the project”
7. Benefit-cost-ratio analysis: alternative plans

**Table 11E.65 Potential Benefits of Water Quality Improvements**

| | |
|---|---|
| In-Stream use | Commercial fisheries, shell fisheries, and aquaculture; navigation |
| | Recreation (e.g., fishing, hunting, boating, swimming) |
| | Subsistence fishing |
| | Human health risk reductions |
| Near-stream use | Water-enhanced noncontact recreation (e.g., picnicking, photography, jogging, biking, camping) |
| | Nonconsumptive use (e.g., wildlife viewing, hiking near water) |
| | Flood control (reduced property loss and risk to health and safety) |
| Diversionary use | Industry/commercial (process and cooling waters) |
| | Agriculture/irrigation |
| | Municipal drinking water (treatment cost savings, water storage dredging and construction savings, and human health risk reduction) |
| Aesthetic use | Residing, working, traveling, and owning property near water, etc. |
| Passive use | Existence (satisfaction gained from knowing the resources exist and knowing others enjoy the resources; ecologic value, including reduced mortality and morbidity, improved reproductive success, increased diversity of aquatic and piscivorous wildlife, improved habitat for threatened and endangered species, and improved integrity of aquatic and aquatic-dependent ecosystems) |
| | Bequest (intergenerational equity) |

*Note:* Previous analyses have included option value as a potential benefit of environmental improvement. For this analysis, EPA adopted Freeman's (1993) conclusion that option value does not exist as a separate benefit category.

**Table 11E.66 Some Examples of Water Management Purposes and the Need for Planning**

| Function | Primary Responsibility[a] | Capital Investment | Operating Plans |
|---|---|---|---|
| Irrigation | F, S, L, P | Best construction of systems | Best use of water and money |
| Municipal water supply | L | Cost effectiveness | Contingencies, best use of facilities |
| Industrial water supply | P | Cost effectiveness | Contingencies, best use of facilities |
| Energy cooling water | P | Development of supplies | Best use of facilities, meeting standards |
| Hydropower | F, P | Development of economic power | Maximization of energy production |
| Wastewater treatment | L | Cost effectiveness | Meeting standards, reducing costs |
| Navigation | F | National economic efficiency | Operation of facilities |
| Flood damage reduction | F, S, L | Optimum facilities | Optimum operation |
| Urban drainage | L | Plans for economical systems | Maintenance, warning, etc |
| Agricultural drainage | L | Plans for systems | Operation of systems |
| Recreation | F, S, L | Development of facilities | Effective operation |
| Fish and wildlife | F, S | Preservation and enhancement of species | Effective operation |
| Watershed management | L | Best plans | Maintenance and operation |
| Preservation of ecological systems | F, S | Preservation of systems | NA |
| Preservation of systems of unique value | F, S | Preservation of systems | NA |

[a] F = Federal
S = State
L = Local
P = Private

**Table 11E.67 Stages of Planning for Water Resources Management**

| Policy Planning Examples of Activities | Framework Planning Examples of Activities | General Appraisal Planning Examples of Activities | Implementation Planning Examples of Activities |
|---|---|---|---|
| Assess broad national needs | From viewpoint of broad regionwide totals and on "no-project" basis | On basis of local projects or measures, and over regional of watershed areas | For specific projects or measures |
| Hypothesize national goals and objectives | Inventory and evaluate available data | Estimate present and future water use and environmental needs | Evaluate specific water use and environmental needs |
| Identify problems and opportunities in achieving goals | Assess present and future water use and environmental needs | Estimate available water and related land resources | Evaluate available water and related land resources |
| Identify costs and benefits in achieving goals | Assess available water and related land resources | Make preliminary evaluations of alternative water quality management approaches | Evaluate regulation potential for different degrees of storage |
| Recommend policy choices | Evaluate general regulation potential and identify water quality management approaches | Make preliminary estimates of costs, benefits and consequences of specific alternative projects and measures | Evaluate degree of water quality control with different types of facility |
| Coordinate national priorities | Inventory present status of development | Compare alternative projects and measures | Prepare conceptual designs and cost estimates |
| Review programs for achievement of goals | Inventory general means available to satisfy needs | Devise alternative early action and future programs | Make economic analyses of benefits and consequences |
| | Assess general alternatives to meet different goals | Recommend specific early action and alternative future programs, including selection of projects or measures for implementation study | Make financial analyses to demonstrate payout |
| | Identify problem areas that need priority attention | | Compare alternatives on basis of costs, benefits and payout |
| | Recommend actions that can be taken at present and those that require further study | | Recommend an alternative to be selected |
| | | | Recommend concerning authorization |

© 2006 by Taylor & Francis Group, LLC

**Table 11E.68 Water Body Classification Categories**

| Description of Desired Use[a] | Guidelines for Desired Use[b] |
|---|---|
| *Category I*: Water bodies typically used for direct contact recreational activities, including swimming, scuba diving, snorkeling and waterskiing | Minimum summer Secchi disc depth of at least 1.0 meters; summer average of at least 1.4 meters. Total phosphorus concentrations less than 45 g/L. Chlorophyll-a concentrations less than 20 g/L. Carlson TSI index (Secchi disc based) no greater than 55 |
| *Category II*: Water bodies typically used for indirect contact recreational activities, including sail boating, motor boating, canoeing, and fishing. These activities involve incidental contact with lake water, but do not generally require the water clarity found in direct contact recreational waters. Algal blooms in mid- to late-summer may limit direct contact recreational activities such as swimming and waterskiing | Mean summer Secchi disc depth of at least 0.9 meters, but less than 1.4 meters Total phosphorus concentration of at least 45 g/L, but less than 75 g/L Chlorophyll-a concentration of at least 20 g/L, but less than 40 g/L Carlson TSI index (Secchi disc based) should be no greater than 60 |
| *Category III*: Water bodies that typically serve important functions such as wildlife habitat and aesthetics. May also provide opportunities for warm water fishing, provided winterkill does not occur. Generally accessible to the public for education, interpretation, and nature appreciation. | Of primary importance are guidelines related to aesthetic enjoyment and wildlife habitat to maintain/improve desired use of these water bodies — see Table 5.2 for a listing of aesthetic and habitat indicators. Of secondary importance are the following water quality guidelines: Mean summer Secchi disc depth of at least 0.7 meters Total phosphorus concentration of at least 75 g/L, but less than 105 g/L Chlorophyll-a concentration of at least 40 g/L, but less than 60 g/L Carlson TSI index (Secchi disc based) no greater than 65 |
| *Category IV — Nutrient Traps*: The intended use of these water bodies is to reduce downstream loading of phosphorus and other nutrients that contribute to water pollution. These ponds are generally artificially modified to improve their nutrient trapping capacity. These ponds may become hypereutrophic, and frequent summer algal blooms would be considered normal | Design for phosphorus removal efficiencies of at least 50%. Depth should be managed to prevent or reduce odors associated with algal blooms. No numeric standards for water quality parameters are defined for this category |
| *Category V — Sediment Traps*: These water bodies are similar to Category IV water bodies, but too small to effectively remove a significant fraction of nutrients | Generally have phosphorus removal efficiencies less than 50%. No numeric standards for water quality parameters are defined for this category |

[a] Categories I–III could also include ecologically or biologically unique resources, or water bodies that directly or indirectly affect such a resource.

[b] The water quality criteria for Categories I–III may not apply in the case of ecologically or biologically unique resource; resource-specific criteria may be required.

**Table 11E.69 Aesthetic and Habitat Indicators and Recommended City Actions**

| Indicator | Prevalence | Recommended Actions[a] |
|---|---|---|
| Localized shoreline erosion | 10% or less of shore | A (note # of sites), B |
| | 10% to 25% | A (note # of sites), B, C |
| | 25% or more | A (note # of sites), B, D |
| Shoreline erosion resulting from upstream activity | Present | E |
| Sedimentation/deltas | Present | E |
| | 10 cubic yards or more | F |
| Shoreline buffer/percent vegetated[b] | >75% | A |
| | 50% to 75% | A, B |
| | 25% to 50% | A, B, Computer |
| | <25% | A, B, D |
| Purple loosestrife, non-native invasive species | Present | A (note # of colonies), G, H |
| | Not present | A |
| Glossy and common buckthorn, non-native invasive species | Present | A, G, I |
| | Not present | A |
| Average density of shallow water aquatic plants[c] | <1.5 | A, B (to encourage growth of desirable plants), J |
| | 1.5 to 2.5 | A |
| | >2.5 | A, K |
| Non-native invasive shallow water aquatic plants[d] | Present | A, B (to encourage growth of desirable plants), L |
| | Not present | A |

[a] Key to recommended city actions: A, Monitor annually; B, Targeted education materials regarding the importance of lakescaping and buffers; C, Lakescaping demonstration project; D, Lakescaping incentive program (e.g. small grants to encourage residents to implement lakescaping techniques); E, Evaluate source of problem and develop methods to address problem; F, Excavate sediment; G, Targeted education materials regarding the detrimental impacts of the plants, the importance of removing them, methods to remove them, and replacement plantings; H, Recruit citizens to take part in the DNR's purple loosestrife (beetle) program to eradicate plants; I, Recruit citizens to remove/replace plants; J, Evaluation needed to determine why so few plants are present and if more are needed; K, Evaluate extent of plant growth and develop/implement aquatic plant management plan; L, Evaluate extent of plant growth and develop/implement aquatic plant management plan — may not include eradication of non-native invasive plants, especially if they are the only aquatic plants present.

[b] Percent vegetated — percent of shoreline that is vegetated, exclusive of landscaped lawns, with buffer at least 10 f in width.

[c] Based on density ratings given for numerous locations within the littoral zone of each water body; density of 1, low, 2, moderate, 3, high.

[d] Non-native invasive aquatic plants include Eurasian watermilfoil and curly leaf pondweed.

**Table 11E.70 Recommended Lake Water Quality Management Actions for Category I and II Lakes**

| | | Type(s) of Management Action Needed | | |
|---|---|---|---|---|
| **Most Recent Summer Average Lake Water Quality, as Compared to Management Action Level** | **5–10-Year Water Quality Trend** | **Watershed Management** | **Lake Monitoring** | **Runoff Monitoring or Equivalent** |
| Better than | No trend analysis available | No action | Continue existing water quality monitoring program: Survey Level—Category I Secchi Disc—Category II | None |
| | Improving | No action | Survey Level—Category I Secchi Disc—Category II | None |
| | Steady | No action | Survey Level—Category I Secchi Disc—Category II | None |
| | Degrading | No action | Management Level—Category I Survey Level—Category II | Watershed land use review |
| Worse than | No trend analysis available | No action | Management Level—Category I Survey Level—Category II | None |
| | Improving | Implementation of runoff BMPs assumed; no further action required | Management Level—Category I Survey Level—Category II | None |
| | Steady | Diagnostic study (e.g., P8 modeling) | Management Level—Category I Survey Level—Category II | Watershed land use review; And subsequent, focused runoff water quality monitoring in potential problem subwatersheds |
| | Degrading | Comprehensive lake/watershed diagnostic feasibility study | Intensive lake monitoring as part of diagnostic feasibility study | Detailed runoff water quality monitoring as part of diagnostic feasibility study |

**Table 11E.71 Detailed Listing of Possible Best Management Practices**

| Type of Practice | Area of Benefit | Storm Protection Benefit | Pollutants Controlled | Construction Requirements |
|---|---|---|---|---|
| **Institutional Source Controls** | | | | |
| Public education (billing inserts, news releases, radio public service announcements, school programs, and pamphlets) | Not applicable | Reduced pollutant load to storm drain system | Can reduce improper disposal of paints, varnishes, thinners, pesticides, fertilizers, and household cleansers, and chemicals, etc. | None |
| Litter control | Site dependent | Reduced potential for clogging and discharge | Household and restaurant paper, plastics, and glass | Increase number of trash receptacles and regularly service |
| Recycling programs | Site dependent | Reduction in potential for clogging and harmful discharge | Household paper, glass, aluminum, and plastics. Oil and grease from auto maintenance | Collection and sorting stations |
| "No Littering" ordinance | Storm drain system and receiving water | Prohibits littering and prevents litter from entering storm drains | Paper, plastics, glass, food wrappers, and containers | None |
| "Pooper Scooper" ordinance | Storm drain system and receiving water | Requires animal owners to clean up and properly dispose of animal wastes | Coliform bacteria and nitrogen/urea | None |
| Develop and enact spill response plan | Site dependent | Prevent pollutants from entering storm drain | Hazardous chemical, harmful chemicals, oil, and grease | None |
| Clean up vacant lots | Site dependent | Prevent debris from accumulating on lot. Prevent site from appearing as a "dump" for others to use for disposal. Eliminate sources of hazardous waste | Hazardous and/or harmful chemicals, wind blown for water borne debris | None |
| Prohibit illegal and illicit connections and dumping into storm drain system | Storm drain system and receiving water | Reduces pollutant load entering storm drains | Coliform bacteria, nitrogen, contaminants, and toxic or harmful chemicals | None |
| Identify, locate, and prohibit illegal or illicit discharge to storm drain system | Area-wide | Halt hazardous and harmful discharges, whether intentional or negligent | Sewage from cross connections, oil, grease, direct disposal of pesticides and fertilizers, contaminated water, paint, varnish, solvents, water from site dewatering, swimming pool and spa water, flushing water from radiators and cooling systems, and hazardous or harmful chemicals | Monitor storm drain system for flows and water quality |

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 11E.71 (Continued)**

| Type of Practice | Area of Benefit | Storm Protection Benefit | Pollutants Controlled | Construction Requirements |
|---|---|---|---|---|
| Require proper storage, use, and disposal of fertilizers, pesticides, solvents, paints and varnishes, and other household chemicals (oil, grease, and antifreeze, etc.) | Site dependent (city, state, or county-wide) | Reduce pollutant load to storm system | Household hazardous materials | None |
| Restrict paving and use of nonporous cover materials in recharge areas | Recharge area site | Promotes infiltration to groundwater and reduces runoff volume and velocity. Filters pollutants | | Establishment of vegetation or use of recharge/infiltration materials |
| **Nonstructural Source Controls** | | | | |
| Street sweeping | Street right-of-way | Reduction in potential for clogging storm drains with debris. Some oil and grease control possible | Paper and plastics, leaves and twigs, dust, and oil and grease | Acquire street sweeping equipment |
| Sidewalk cleaning | Sidewalk right-of-way in areas of heavy foot traffic | Reduction in pollutants entering storm drain | Oil and dirt | None |
| Clean and maintain storm drain channels annually | Channel capacity and receiving water. Upstream flood control benefits. Includes benefits to channel wildlife habitat and vegetation | Prevent erosion in channel. Improve capacity by removing silt and sedimentation. Remove debris that is habitat destroying or toxic to wildlife | Silt and sediment and the contaminants contained therein. Plastic, glass, paper, and metal thrown or washed in channel | None |
| Clean and inspect storm inlets and catch basins annually | Site dependent flood control benefits | Allows proper drainage to prevent flooding and continued proper operation of facilities | Silt and sediment and the contaminants contained therein. Plastic, glass, paper, and metal thrown or washed into facilities | None |
| Clean and inspect debris basins annually | Site dependent flood control benefits | Allows proper drainage to prevent flooding and continued proper operation of facilities | Silt and sediment and the contaminants contained therein. Plastic, glass, paper, and metal thrown or washed into facilities | None |
| Storm drains cleaned and maintained every 3 to 6 years | Flood control and water quality benefits | Allows proper drainage to prevent flooding and continued proper operation of facilities | Silt and sediment and the contaminants contained therein. Plastic, glass, paper, and metal thrown or washed into facilities | None |
| Storm system pump stations cleaned and maintained annually | Site dependent flood control and water quality benefits | Prevents flooding and allows continued proper operation of facilities | Silt and sediment and the contaminants contained therein. Plastic, glass, paper, and metal thrown or washed into facilities | None |

© 2006 by Taylor & Francis Group, LLC

| | | | | |
|---|---|---|---|---|
| Inspect and maintain sewer system | Storm drain system and receiving water | Prevents and eliminates sewer system surcharges | Contaminants, toxics, and coliform bacteria | None |
| **Minor Structural Source Controls** | | | | |
| Storm drain inlet protection | Storm drain drainage area | Prevent debris from entering storm drain | Dirt, leaves, twigs, paper, plastic, and other incidentals | Not available |
| Outlet protection | Storm drain receiving water | Prevent erosion at the outlet of pipes or paved channels and protect downstream water quality | Turbidity and sediment | Structural apron lining at the outlet location. Made of riprap, grouted riprap, concrete, or other structural materials |
| Slope stabilization and erosion control measures | Site and topography dependent | Reduce silt and sediment load to storm drains | Silt and sediment and the contaminants therein | None |
| Interceptor swale | Dependent on flow velocity. Max. velocity for earth channel is 6 fps. Max. velocity for vegetated or riprap channel is 8 fps | Shorten length of exposed slopes and intercept and divert storm runoff from erodible areas | Sediments and silt and the contaminants contained therein | Excavation drainageway across disturbed areas or rights-of-way |
| Improve and maintain natural channels | Channel capacity and receiving water. Upstream flood control benefits. Includes benefits to channel wildlife habitat and vegetation | Prevent erosion in channel. Improve capacity by removing silt and sedimentation. Remove debris that is habitat destroying or toxic to wildlife | Silt and sediment and the contaminants contained therein. Plastic, glass, paper, and metal thrown or washed in channel | None |
| Diversion channel | Dependent of flow velocity. Maximum velocities: 5 fps for vegetated channel and 8 fps for riprap channel. Not for use on slopes greater than 15%. Drainage area should be 5 acres of less | Intercept and convey runoff to outlets at nonerosive velocity | Sediment and erosion controls | Lined drainageway of trapezoidal cross section |
| Grass-lined channel | Site dependent but of larger capacity than interceptor or perimeter swales | Intercept runoff and convey runoff from site | Sediment and silt and the contaminants contained therein | Excavation of channel or improvements to natural channel. Stabilization with vegetation |
| Storm drain drop inlet protection | Areas less than 1 to 2 acres | Filters sediment from runoff before it enters inlet. Provides relatively good protection | Sediment and the contaminants contained therein | Barrier around storm drain inlet. Useful for areas where storm drain is operational before area runoff area is stabilized |
| Riprap | Site dependent | Provides stabilization and erosion control for stream banks and channels, outlet, and slopes | Erosion and sediment | Placement of rock on area to be stabilized. May also require use of filter fabric liner |

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 11E.71 (Continued)**

| Type of Practice | Area of Benefit | Storm Protection Benefit | Pollutants Controlled | Construction Requirements |
|---|---|---|---|---|
| Gabions | Site dependent | Provides stabilization and erosion control for stream banks, outlet, and slopes | Erosion and sediment | Placement of wire cage will with rocks over area to be stabilized. May also require use of filter fabric liner |
| Vegetative control | Applicable and effective for most sites | Provides stabilization and erosion control for streambanks, swales, channels, outlets, slopes, open disturbed areas. Can be up to 99% effective with established cover. Temporary seeding can be up to 90% effective | Erosion and sediment | Site preparation (can include land leveling and installation of irrigation system), seeding or planting, and netting or mulching to establish seed. Can also include other sodding, ground cover, shrubs, trees, and native plants |
| Filter strips | Site dependent | Receives overland flow slowing runoff and trapping particulates. Can be 30 to 50% effective for sediment control | Silt, sediment, trash, organic matter, and to an extent, soluble pollutants through infiltration | Grading and vegetative establishment. Should have a minimum width of 15 to 20 feet. Good performance is achieved with a 50- to 75-foot width |
| Fence open channels | Site dependent | Prevent windblown trash from entering channel. Prevents illegal dumping in channel | Trash and pollutants | Construction of fences |
| **Discharge Elimination Methods** | | | | |
| French drains and subsurface drains | Dependent on site topography and soil permeability | Provides drainage of "wet" soils to allow establishment of vegetation. Can reduce runoff | Sediment | Underground perforated pipe leading to a surface water outlet. Pipe size, bedding and depth is dependent on site conditions |
| Infiltration trench and dry well | Small drainage areas. Runoff from rooftops, parking lots, residential, etc. | Provides temporary storage of runoff and infiltration to soil. Not for use in areas where groundwater could become contaminated | Prevents 100% of pollutants from entering surface water. Oil, grease, floating organic matter, and settleable solids should be removed before water enters trench | Excavation of a shallow trench 2′ to 10′ deep. Backfilled with coarse stone aggregate |
| Exfiltration trench | Site dependent | Prevent silting on underlying filter gravel or rock bed. Retain first flush, reduce runoff volume and peak discharge rate and promote water quality improvement | Prevents pollutants from entering surface water. Oil, grease, floating organic matter, and settleable solids should be removed before water enters trench | Uses perforated pipe with suitable membrane filter material. Installed before receiving water outlet or in groundwater recharge area |

© 2006 by Taylor & Francis Group, LLC

| | | | | |
|---|---|---|---|---|
| Porous pavement | Site dependent. Requires relatively flat surface | Allow infiltration of surface runoff. Reduce runoff volume and pollutant loadings from low volume traffic areas | Oil and grease | Install porous pavement. May require twice as much paving materials as standard asphalt to achieve same strength |
| Retention basin | Best for sites of 5 to 50 acres | Promotes infiltration to groundwater and reduces runoff volume and velocity. Filters pollutants | Sediment, trace metals, nutrients, and oxygen-demanding substances | Excavation of a basin over permeable soils. Size is site dependent. Depth is 3 to 12 feet |
| **Floatables and Oil Removal** | | | | |
| Clarifies and oil and water separators on parking structures | Parking lot structure and receiving water | Collect debris before it can enter storm drain | Oil, grease, and antifreeze from vehicles and foods and food wrappers | Install grit and separators |
| Oil and grit separators | Site dependent. For heavy traffic areas or areas with high potential for oil spills | Remove pollutants | Sediments and hydrocarbons | Install oil and grit separators on storm drains |
| Sediment/grease trap | Installed on storm drain inlets | Intercept and trap sediment and grease from runoff | Sediment, oil, and grease | Install sediment and grease traps |
| **Solids Removal** | | | | |
| Detention basin | Four acres of drainage area for each acre/foot of storage provided to retain a permanent pool of water | Temporary storage of storm runoff until release. Can also improve water quality | Sediment, trace metals, hydrocarbons, nutrients, and pesticides | Excavation of a basin over soils which will cause excessive seepage. May require a liner. Can be used aesthetically as a small pond in landscaping |
| Extended detention basin | Size for a minimum detention time of 24 hours | Temporary storage of runoff for an extended period of time. Can improve water quality | Sediment, trace metals, hydrocarbons, nutrients, and pesticides | Excavation of a basin over soils which will cause excessive seepage. May require a liner. Can be used aesthetically as a small pond in landscaping |
| Bar screens | Site dependent | Restrict passage of objects which may obstruct pump station suction bays | Large debris | Install bar screens before pump station suction bays |
| Wetlands | Requires large area, 3% of the watershed area | Remove pollutants. Provide habitat and recreational area | Hydrocarbons, silt and sediment, oxygen-demanding substances, bacteria, and nutrients | Create a new wetlands area or use existing wetlands |
| **Microorganism Removal** | | | | |
| Conversion of wastewater treatment plants to wet weather facilities | Site dependent. Is abandoned treatment facility available? | Treats stormwater flows prior to discharge | Process dependent. Chlorination facilities may be added to remove microorganisms | Treatment conversion |

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 11E.71 (Continued)**

| Type of Practice | Area of Benefit | Storm Protection Benefit | Pollutants Controlled | Construction Requirements |
|---|---|---|---|---|
| Install treatment facilities on "Dirty" storm drains | Site and need dependent | Treats stormwater flows. Dry weather flows should be halted or routed to existing wastewater treatment facility if possible | Microorganisms | Site specific |
| Swirl concentrators and chlorination/dechlorination | Site and need dependent | Treats stormwater flows prior to discharge | Floatables, settleable solids, suspended solids, and coliform bacteria | Install concentrators |
| Chlorination/dechlorination facilities | Site and need dependent | Treats stormwater flows prior to discharge | Microorganisms | Install chlorination/ dechlorination facilities |
| Primary clarifiers | Site and need dependent | Treats stormwater flows prior to discharge | Floatables, settleable solids, suspended solids, and coliform bacteria | Install primary clarifiers |
| Primary clarifiers and filters | Site and need dependent | Treats stormwater flows prior to discharge | Suspended solids, nutrients and coliform bacteria | Construct sedimentation basins and filters |
| **Metals Removal** | | | | |
| Primary clarifiers and lime precipitation | Site and need dependent | Treats stormwater flows prior to discharge | Floatable, settleable solids, suspended solids, coliform bacteria, and metals | Install primary clarifiers and lime precipitation facilities |
| Detention basin and wetland treatment | Requires large area, 3% of the watershed area | Remove pollutants. Provide habitat and recreational area | Hydrocarbons, silt and sediment, oxygen-demanding substances, bacteria, metals, and nutrients | Create a new wetlands area or use existing wetland |

**Table 11E.72 Recommended Best Management Practices According to Watershed**

| | Watersheds Tributary to a Ponding Area that Treats Stormwater Runoff (Treated Watershed) | | | | Watersheds Receiving No Treatment | |
|---|---|---|---|---|---|---|
| **Best Management Practice** | **No Outlet[a]** | **NURP Detention[b]** | **Wet Detention[c]** | **Dry Detention[d]** | **No Detention[e]** | **Direct Discharge[f]** |
| Retrofit dry ponds to wet detention ponds | | | | X | | |
| Retrofit dry ponds to constructed water quality wetlands | | | | X | | |
| Retrofit dry ponds to extended detention basins | | | | X | | |
| Construct sedimentation (pretreatment) basins, when opportunity arises | | | X | | X | X |
| Create additional water quality storage to meet NURP standards | | | X | | | |
| Perform stormwater system maintenance in accordance with local plan | X | X | X | X | X | |
| Install "Stormceptors" or other precast stormwater treatment systems | | | | | X | |
| Prioritize street sweeping | X | X | X | X | X | X |
| Construct skimmers to prevent downstream discharge of oil and floatables | | X | X | X | | |
| Develop/implement lawn fertilizer ordinance | X | X | X | X | X | X |
| Construct filter strips/grassed swales | | | | | X | X |
| Increase opportunities for infiltration | X | X | X | X | X | X |
| Stabilize slopes and implement other permanent erosion/sediment controls | X | X | X | X | X | X |
| Develop and implement education program emphasizing good housekeeping practices[g] | X | X | X | X | X | X |
| Provide vegetative buffers around ponds and wetlands | X | X | X | X | X | X |

[a] No outlet watershed — area tributary to a landlocked basins (i.e., no outlet); receives highest level of treatment (i.e., 100% total phosphorus removal).
[b] NURP watershed — area tributary to a wet detention pond that provides treatment to NURP standards (i.e., 40%–60% total phosphorus removal).
[c] Wet detention watershed — area tributary to a wet detention pond that provides treatment to less than NURP standards (i.e., 5%–40% total phosphorus removal).
[d] Dry detention watershed — area tributary to a dry detention basin that provides for settlement of larger particles and traps floatables, but provides minimal water quality treatment (i.e., 0%–10% total phosphorus removal).
[e] No detention watershed — area tributary to a storm sewer system that does not receive any type of detention storage or treatment.
[f] Direct watershed — area that directly discharges as sheet flow into a major waterbody without any treatment.
[g] "Good housekeeping practices" include: fertilizer and chemical management, lawn and garden care guidelines, litter control, control of illegal dumping/illicit discharges, pet waste management, vacant lot cleanup, recycling programs, etc. See also Table 5.4.

**Table 11E.74 Table Annual Investments in Water Supply and Sanitation Indicating Proportional Disparity**

| Region | Water Supply (US$ Billion) | % | Sanitation (US$ Billion) | % |
|---|---|---|---|---|
| Africa | 4.091 | 88 | 0.542 | 12 |
| Asia | 6.063 | 85 | 1.104 | 15 |
| LA & C | 2.41 | 62 | 1.503 | 38 |
| Total | 12.564 | 80 | 3.148 | 20 |

*Note:* Investment figures indicate that a higher priority has been given over the 90s for water supply as opposed to sanitation, both through national governments and by the international community.

**Table 11F.80 Water Resources Research Categories**

I. Nature of Water

Category I deals with fundamental research on the water substance

A. *Properties of water*—Study of the physical and chemical properties of pure water and its thermodynamic behavior in its various states

B. *Aqueous solutions and suspensions*—Study of the effects of various solutes on the properties of water; surface interactions; colloidal suspensions

II Water Cycle

Category II covers generally research on the natural processes involving water. It is an essential supporting effort to applied problems in later categories

A. *General*—Studies involving two or more phases of the water cycle such as hydrologic models; rainfall-runoff relations; surface and groundwater relationships; watershed studies, etc.

B. *Precipitation*—Investigation of spatial and temporal variations of precipitation; physiographic effects; time trends; extremes; probable maximum precipitation; structure of storms, etc.

C. *Snow, ice, and frost*—Studies of the occurrence and thermodynamics of water in the solid state in nature; spatial variations of snow and frost; formation of ice and frost; breakup of river and lake ice; glaciers, permafrost, etc.

D. *Evaporation and transpiration*—Investigation of the process of evaporation from lakes, soil, and snow and of the transpiration process in plants; methods of estimating actual evapotranspiration; energy balance; etc.

E. *Streamflow*—Mechanics of flow in streams; flood routing; bank storage; space and time variations (includes high and low-flow frequency); droughts; floods, etc.

F. *Groundwater*—Study of the mechanics of groundwater movements; multiphase systems; sources of natural recharge; mechanics of flow to wells and drains; subsidence; properties of aquifers; etc.

G. *Water in soils*—Infiltration, movement and storage of water in the zone of aeration, including soil

H. *Lakes*—Hydrologic, hydrochemical, and thermal regimes of lakes; water level fluctuations; currents and waves

I. *Water and plants*—Role of plants in hydrologic cycle; water requirements of plants; interception

J. *Erosion and sedimentation*—Studies of the erosion process; prediction of sediment yield; sedimentation in lakes and reservoirs; stream erosion; sediment transport, etc.

K. *Chemical processes*—Chemical interactions between water and its natural environment; chemistry of precipitation

L. *Estuarine problems*—Special problems of the estuarine environment; effect of tides on flow and stage; deposition of sediments; sea water intrusion in estuaries

III Water Supply Augmentation and Conservation

As water use increases we must pay increasing attention to methods for augmenting and conserving available supplies. Research in Category III is largely applied research devoted to this problem area

A. *Saline water conversion*—Research and development related to methods of desalting sea water and brackish water

B. *Water yield improvement*—Increasing streamflow or improving its distribution through land management; water harvesting from impervious areas; phreatophyte control; reservoir evaporation suppression

C. *Use of water of impaired quality*—Research on methods of agricultural use of water of high salinity; use of poor quality water in industry; crop tolerance to salinity

D. *Conservation in domestic use*—Methods for reducing domestic water needs without impairment of service

E. *Conservation in industry*—Reduction in both consumption and diversion requirements for industry

F. *Conservation in agriculture*—More efficient irrigation practices. Chemical control of evaporation and transpiration; lower water use plants, etc.

IV Water Quantity Management and Control

Category IV includes research directed to the management of water, exclusive of conservation, and the effects of related activities on water

A. *Control of water on the land*—Effects of land management on runoff; land drainage, potholes; etc.

B. *Groundwater management*—Artificial recharge; conjunctive operation; relation to irrigation

C. *Effects of man's related activities on water*—Impact of urbanization, highways, logging, etc. on water yields and flow rates

D. *Watershed protection*—Methods of controlling erosion to reduce sediment load of streams and conserve soil

V Water Quality Management and Protection

An increasing population increases the wastes and other pollutants entering our water supplies. Category V deals with methods of identifying, describing and controlling this pollution

A. *Identification of pollutants*—Techniques of identification of physical, chemical and biological pollutants; rational measures of character and strength of wastes

B. *Sources and fate of pollution*—Determination of the sources of pollutants in water; the nature of the pollution from various sources; path of pollutant from source to stream of groundwater

C. *Effects of pollution*—Definition of the effect of pollutants, singly and in combination, on man, aquatic life, agriculture and industry under conditions of sustained use; eutrophication

D. *Waste treatment processes*—Research to improve conventional treatment methods to gain efficiency or reduce cost; processes to treat new types of waste; advanced treatment methods ofr more complete removal of pollutants including purification for direct reuse

E. *Ultimate disposal of wastes*—Disposal of residual material removed from water and sewage during the treatment process; disposal of waste brines

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 11F.80 (Continued)**

| | |
|---|---|
| | F. *Water treatment*—Development of more efficient and economical methods of making water suitable for domestic or industrial use |
| | G. *Water quality control*—Research on methods to control stream and reservoir water quality such as flow augmentation; stream and reservoir aeration; control of natural pollution; control of pollution from pesticides and agricultural chemicals; control of acid mine drainage; etc. |
| VI | Water Resources Planning |
| | The problems of achieving an optimal plan of water development are becoming increasingly complex. Category VI covers research devoted to determining the best way to plan, the appropriate criteria for planning and the nature of the economic, legal and institutional aspects of the planning process |
| | A. *Techniques of planning*—Application of systems analysis to project planning; treatment of uncertainty; probability studies |
| | B. *Evaluation process*—Development of methods, concepts and criteria for evaluating project benefits; discount rate; project life; methods for economic, social and technological projections; reliability of projections; research on the value of water in various uses |
| | C. *Cost allocation, cost sharing, pricing/repayment*—Research on methods of calculating repayment and establishing prices for vendible products; techniques of cost allocation; cost sharing, pricing and repayment policy |
| | D. *Water demand*—Research on the water quantity and quality requirements of various uses, both diversion and consumption |
| | E. *Water law and institutions*—A study of state and Federal water law looking to changes and additions which will encourage greater efficiency in use; investigation of institutional structures and constraints which influence decisions on water at all levels of government |
| | F. *Nonstructural alternatives*—Exploration of methods to achieve water development aims by nonstructural methods such as flood plain zoning |
| | G. *Ecologic impact of water development*—Effects of water management operations on overall ecology of the area. Excludes effect of pollution under V-C |
| VII | Resources Data |
| | Planning and management of our water resources require information. Category VII includes research oriented to data needs and the most efficiency method of meeting these needs |
| | A. *Network design*—Studies of data requirements and of the most effective methods of collecting the data |
| | B. *Data acquisition*—Research on new and improved instruments and techniques for collection of water resources data; telemetering equipment |
| | C. *Evaluation, processing and publication*—Studies of effective methods of processing data, form and nature of published data; maps of data |
| VIII | Engineering Works |
| | To implement water development plans requires engineering works. Category VIII describes research on design, materials and construction which is generally useful to all aspects of water management. Works relevant to a single specific goal, such as water treatment or desalination, are included elsewhere if an appropriate category exists |
| | A. *Design*—Research leading to improved design of dams, canals, pipelines, locks, fishways, and other works required for water resource development |
| | B. *Materials*—Research to improve existing structural materials and to develop new materials; subsurface exploration of foundations; corrosion; etc. |
| | C. *Construction and operation*—Research on efficient construction methods, operating systems, and maintenance procedures |
| IX | Manpower, Grants and Facilities |
| | Trained manpower is an essential ingredient of research on water resources and the planning and design of water development projects. Category IX describes plans for support of education and training. It also includes grant and contract programs for which advance distribution to specific categories is impossible |
| | A. *Education*—extramural—Support of education in water resources at universities (not including reaerch support under other categories) |
| | B. *Education*—in-house—Government employee training programs |
| | C. *Research facilities*—Laboratories, field stations, etc. |
| | D. *Grants, contracts and research and allotments*—Allotments to University Water Resources Research Institutes under P.L. 88–379; OWRR, HEW, NSF, CSRS, and other grants which cannot be distributed to categories in advance |

*Source*: From Committee on Water Resources Research, *Federal Council for Science and Technology*, 1966.

**Table 11F.81 Water Resources Research in the United States — Areas of Interest in 1989**

General Areas of Interest

1. Aspects of the hydrologic cycle
2. Supply and demand for water
3. Demineralization of saline and other impaired waters
4. Conservation and best use of available supplies of water and methods of increasing such supplies
5. Water reuse
6. Depletion and degradation of groundwater supplies
7. Improvements in the productivity of water when used for agricultural, municipal, and commercial purposes
8. The economic, legal, engineering, social, recreational, biological, geographic, ecological, and other aspects of water problems
9. Scientific information-dissemination activities, including identifying, assembling and interpreting the result of scientific and engineering research on water resources problems
10. Providing means for improved communications of research results, having due regard for the varying conditions and needs for the respective States and regions

*Specific Areas of Interest*

A. Groundwater quality

1. An improved understanding of the transport and fate of contaminants in groundwater and in the unsaturated zone, from both field and modeling studies. This will require attention to the physical, microbial, and chemical interactions encountered by dissolved, miscible, and immiscible substances in groundwater transport
2. Better equipment and methodology for monitoring and characterizing the chemical, physical, and biological conditions of the subsurface environment, including sampling strategies that lead to an approved understanding of groundwater contamination at scales larger than single contamination sources

B. Water quality management

1. An improved understanding of hazardous substances in water, including interactions of synthetic and natural organics, interactions of waterborne toxic materials with organisms, the binding of chemical species to waterborne sediments, and microbial alteration of organic compounds in aqueous environments
2. Improved methods for treatment or control of contaminants in natural water systems, emphasizing reduction, removal, or alteration to prevent further contamination or to increase potable supplies
3. Applications of biotechnology to water resources, including detection of specific pollutants using DNA probes and genetic engineering of microorganisms for water quality management
4. Use of waters of impaired quality, including improved physical and chemical methods for treatment of impaired waters and the cost-effective utilization of brackish waters

C. Institutional change in water resource management

1. Analysis of the social aspects and the distributive consequences of alternative institutional arrangements
2. Description and evaluation of institutions for consideration/compensation of third-party interests; i.e., those individuals or groups affected by, but external to, reallocation decisions
3. A description of the market structure that has evolved or is likely to evolve if institutional change involves development of water markets
4. Representative case studies providing estimates of economic efficiency gains and the distributive consequences from institutional changes

*Source*: From *U.S. Geological Survey*, 1988, Announcement 7442, Request for Applications Under the Water Resources Research Act of 1984 (Section 105).

**Funding Source Details and Contact Information**

Brownfields Cleanup Revolving Loan Fund Pilots: The objective of the Brownfields Cleanup Loan Fund grants is to capitalize loan funds that can make loans or grants to facilitate cleanup of brownfield sites contaminated with hazardous substances or petroleum products, as well as mine scarred land and 'drug labs.' Eligible organizations include businesses, nonprofit groups, local governments, state/territorial agencies, or tribal agencies. For more information see: www.epa.gov/brownfields

Chesapeake Bay Program Grants: Provides grant awards to reduce and prevent pollution and to improve the living resources of the Chesapeake Bay Watershed. Grants may be provided to state and local governments and nonprofit organizations for implementation projects, as well as monitoring and other related activities in the Chesapeake Bay Basin (Maryland, Pennsylvania, Virginia, and District of Columbia). For more information see: www.chesapeakebay.net

Clean Water State Revolving Fund Loans: Funds are used to make low interest loans to communities, individuals and others for water-quality improvement activities. Traditionally the funds have been used for wastewater treatment facilities, however loans are used increasingly for other water quality management activities including nonpoint source and estuary projects. The CWSRF is currently funding approximately $4 billion annually. For more information see: www.epa.gov/owm/cwfinance/cwsrf

Drinking Water State Revolving Fund Set-Asides: Up to 31% of the DWSRF capitalization grant may be used for set-aside activities including loans for the acquisition of land or easements for source water protection or for implementation of source water protection measures, or direct assistance for wellhead protection programs. For more information see; www.epa.gov/safewater/dwsrf.html

Great Lakes Program: EPA's Great Lakes Program issues awards to monitor Great Lakes ecosystem indicators; provide public access to Great Lakes data; help communities address contaminated sediments; support local protection and restoration activities; promote pollution prevention; and provide assistance to implement community-based Remedial Action Plans and for Lakewide Management Plans. For more information see: www.epa.gov/glnpo/fund/glf.html

Nonpoint (319) Source Implementation Grants: Provides grants to states and tribes to implement nonpoint source projects and programs. These include Best Management Practices (BMP) installation for animal wastes and sediment, pesticide and fertilizer control, stream bank restoration, lake protection/restoration, septic system restoration and management, etc. Al beneficiaries, except for tribes, are required to provide 40% of the total project or program costs. For more information see: www.epa.gov/owow/nps/cwact.html

Pollution Prevention Incentives for States: Provides grants focused on institutionalizing multimedia (air, water, land) pollution prevention techniques. Eligible entities include state and local agencies, universities, nonprofit organizations, and private business. Projects include technical assistance, data collection, education and outreach, training, environmental auditing, demonstration projects, and the integration of pollution prevention into state regulatory programs. For more information see: www.epa.gov/p2/grants/

Tribal Drinking Water Capacity Building/Source Water Protection Grants: Grants are intended to increase tribal capability to provide safe drinking water to consumers, and to prevent tribal sources of drinking water from being contaminated. Eligible projects might include source water assessments and the development and implementation of a source water protection program, and projects to improve a drinking water system's technical, financial and managerial capacity. For more information see: www.epa.gov/safewater/protect.html

Tribal Grants for Surface and Groundwater Protection, Pesticide Management Planning: Funds are available for tribes to develop Pesticide Management Plans (PMPs) and to address other pesticide-related groundwater concerns. The funding is intended for short term projects, stand alone components of larger projects, or projects that are expected to be self-sustaining once funding is used. For more information see: www.epa.gov/oppfead1/rstfield/

© 2006 by Taylor & Francis Group, LLC

Underground Injection Control Grants: Provides grant funds to states for such purposes as state regulation review, program plan developments, data management, inventory of injection facilities, identification of aquifers, public participation, technical assistance and review, permit approval and enforcement, and surveillance and investigation. For more information see: epa.gov/opwdw000/uic.html

Water Pollution Control (106) Program Support: Provides grants to states, tribes and interstate water pollution control agencies to support the prevention and abatement of surface and groundwater pollution from point and nonpoint sources. Eligible activities include water quality planning, monitoring, permitting, surveillance, enforcement, advice and assistance to local agencies, etc. for the purpose of establishing and maintaining water pollution control programs. For more information see: epa.gov/cwfinance/pollutioncontrol.htm

Water Quality Cooperative Agreements (104(b)(3) Grants): Provides grants to support innovative demonstration projects for addressing stormwater, combined sewer overflows, sludge, pretreatment, mining, animal feeding operations, and other sources relating to the National Pollutant Discharge Elimination System (NPDES) program. This includes research, investigations, experiments, training, surveys, and studies related to the causes, effects, and prevention of pollution. For more information see: epa.gov/owm/cwfinance/waterquality.htm

**Funding Source Details and Contact Information**

Watershed Assistance Grants (WAG): Builds cooperative agreements between nonprofits and other eligible to support watershed partnerships and long-term effectiveness. Funding then supports organizational development and capacity building for watershed partnerships with a diverse membership. Grants will be distributed to a pool of applicants, which are diverse in terms of geography, watershed issues, the type of partnership, and approaches. For more information see: rivernetwork.org/howwecanhelp/index.cfm?doc_id=94#wag

Wetlands Program Development Grants: Provides financial assistance to states, tribes and local governments to support development or enhancement of wetland protection, management or restoration programs. Projects must demonstrate a direct link to an increase in the states, tribes, or local governments ability to protect wetland resources. Funding may only be used to enhance and develop new and existing state wetlands programs, not for their operational support. For more information see: www.epa.gov/owow/wetlands/grantguidelines

Conservation Reserve Program: Voluntary program that offers long-term rental payments and cost-sharing assistance to establish protective covering on cropland and marginal pasture land. Protective covering reduces soil erosion, improves water quality, and enhances wildlife habitat. The land must be owned or operated by the applicant for at least 12 months, enrolled in the Water Bank Program (WBP), or contain other environmentally sensitive land. For more information see: www.nrcs.usda.gov/programs/crp

Conservation Security Program (CSP): Managed through the NRCS, the CSP will provide payments to farmers/producers who already are practicing good stewardship on agricultural lands and incentives for those who want to do more. Land enrolled in the Conservation Reserve Program, Wetlands Reserve Program, or Grassland Reserve Program are not eligible. Neither are those converted to cropland after 2002. For more information see: usda.gov/farmbill

Environmental Quality Incentives Program (NRCS): Voluntary locally-led conservation program that provides technical, education and financial assistance to farmers and ranchers who establish conservation practices and system that will address soil, water, and related natural resource problems. Cost-sharing and incentive payments are provided through five to ten year contracts to help producers in complying with environmental laws and regulations, including clean water. For more information see: www.nrcs.usda.gov/programs/eqip

Farmland Protection Program: Provides matching funds to existing farmland protection programs for the purchase of conservation easements. Eligible property includes farm or ranch lands that have prime, unique, statewide, or locally important soil and includes all cropland, rangeland, grassland, pasture land, incidental forest land, or wetlands. For more information see: usda.gov/farmbill

© 2006 by Taylor & Francis Group, LLC

Natural Resources Conservation Foundation: Funding for the Foundation will come from private donations or grants from individuals, corporations, businesses, and nonprofit organizations and agencies. The Foundation will have the authority to enter into cooperative agreements and contracts with federal, state, tribal, and local agencies and organizations and to grant monies for conservation activities to conserve natural resources on private lands. For more information see: usda.gov/farmbill/conservation_fb.html

Resource Conservation and Development Program: Provides technical assistance for planning and installation of approved projects in RC and D area plans, for land conservation, water management, community development, and environmental enhancement. Not a grant program, individuals work with local RC and D Councils to find funding. For more information see: www.nrcs.usda.gov/programs/rcd

Rural Utilities Service Water and Waste Disposal Loans and Grants: Provides assistance for water and waste disposal facilities to low income rural communities whose residents face significant health risks. Project grants and direct loans are available for local governments, Indian tribes, US Territories, nonprofit associations, state governments, and cooperations.For more information see: usda.gov/rus/water.programs.htm

Sustainable Agriculture Research and Education Program (SARE): Provides grants to advance farming systems that are more profitable and environmentally sound. SARE funds scientific investigation and education to reduce the use of chemical pesticides, to improve management of on-farm resources; to optimize conservation practices; and to promote partnership activities. Research and Education Projects are conducted by interdisciplinary research teams to include farmers as participants. For more information see:www.sare.org/htdocs/sare/cfp.html

Watershed Processes and Water Resources Program: Sponsors research that address two areas: 1) understanding fundamental processes controlling source areas, the flow pathways of water, and the fate of water, sediment, and organisms within forest, rangeland, and agricultural environments as influenced by watershed characteristics; and 2) developing appropriate technology and management practices for improving the effective sue of water and water quality for agricultural and forestry production. For more information see: reeusda.gov/

Watershed Protection and Flood Prevention Program: The 'Watershed,' or 'PL 566,' program provides technical and financial assistance for water resource challenges on a watershed basis. Projects related to flood mitigation, water supply, water quality, erosion and sediment control, wetland creation and restoration, fish and wildlife habitat enhancement, and public recreation are eligible for assistance. Technical and financial assistance is also available for planning new watershed surveys. For more information see: www.nrcs.usda.gov/programs/watershed/

**Funding Source Details and Contact Information**

Wetlands Reserve Program: Voluntary program to restore wetlands on private property. The program provides landowners with financial incentives and technical assistance to enhance, restore and protect wetlands in exchange for retiring marginal agricultural land. Participants must have owned the land for at least 12 months and it must be restorable and he suitable to provide wildlife benefits. For more information see: nrcs.usda/gov./programs/wrp

Wildlife Habitat Incentives Program (WHIP): WHIP is a voluntary program for people who want to develop and improve wildlife habitat primarily on private land. This program provides both technical assistance and up to 75% cost-share assistance to establish and improve fish and wildlife habitat. For more information see: www.nrcs.usda.gov/programs/whip

Abandoned Mine Land Reclamation Program: Provides grants to states and tribes to correct environmental damage caused primarily by coal mining that occurred prior to August 3, 1977. The program provides for the restoration of eligible lands and waters mined and abandoned or left inadequately restored after mining. The Appalachian Clean Streams Initiative (a subprogram) also provides funding as seed money to accelerate the clean up of water pollution related to acidity, metals, and toxicity. For more information see: www.osmre.gov/osmaml.htm

Acid Mine Drainage (AMD) Reclamation Program: Designed to support for efforts of local not-for-profit organizations, especially watershed groups, to complete construction projects designed to clean streams impacted by AMD. Eligible organizations include community watershed groups, nonprofit groups, and conservation districts. For more information see: www.osmre.gov/acsifunding.htm

Environmental Management on Indian Lands: The program provides funds to improve environmental management in Indian Country and at Bureau of Indian Affairs facilities, under all environmental statutes, including hazardous waste handling, drinking and wastewater systems, solid waste management and open dump closures, fuel storage in underground and above storage tanks, and management of PCBs, lead-based paint, and asbestos in schools. For more information see: www.doi.gov/bureau-indian-affairs.html

Land and Water Conservation Fund (LWCF): LwCF uses offshore oil leasing revenues to support grants to States, and through States, local units of government for the acquisition and development of state and local park and recreation areas that guarantee public use in perpetuity. All funded projects must be available for public recreational use. For more information see: www.nps.gov/lwef/

© 2006 by Taylor & Francis Group, LLC

Landowner Incentive Program (non-tribal): Provides matching grants to states, territories, and DC to establish or supplement landowner incentive programs. Programs can provide technical and financial assistance to landowners for projects that protect or restore habitats. Projects can involve the removal of exotic plants, changes in grazing practices, instream structural improvements, road closures, and conservation easements. Although not directly eligible, nonprofits may work directly with their states. For more information see: fws.gov

Partners for Fish and Wildlife Program: Since 1987, the program has partnered with more than 28,725 landowners to restore over 639,000 acres of wetlands; 1,070,000 acres of prairie, native grassland, and other upland habitats; and 4,740 miles of in-stream aquatic and riparian habitat. In addition, the program has reopened more than 300 miles of stream habitat for fish and other aquatic species by removing barriers to passage. For more information see: partners.fws.gov/

Water Resources on Indian Lands: This program assists Indian tribes with the management, planning, protection, and development of their water resources and related land resources. Previously funded projects have included geographic and hydrologic quantitative and qualitative analysis of water, groundwater and surface water quality and quantity monitoring, aquifer classification, and stream gauging. For more information see: www.doi.gov/bureau-indian-affairs.html

NOAA's Community-Based Restoration Program (CRP): Provides funds for small-scale, locally driven habitat restoration projects that foster natural resource stewardship within communities. The program seeks to bring together diverse partners to implement habitat restoration projects to benefit living marine resources. Partnerships are sought at the national and local level to contribute funding, land, technical assistance, workforce support, or other in-kind services. For more information see: www.nmfs.noaa.gov/habitat/restoration

HUD Community Development Block Grants: Provides grants to develop viable urban communities by providing housing and a suitable living environment. Activities include water, sewer and other facilities. Entitlement communities must be either a central city in a Metropolitan Statistical Area (MSA), a city with population above 50,000 in the MSA or an urban county of at least 200,000 people. Funds are also awarded to states for distribution to smaller (non-entitlement) communities. For more information see: www.hud.gov/progdesc/cdbg-st.cfm

Transportation Equity Act for the 21st Century Funding Programs (TEA-21): TEA-21 funds numerous programs such as the Surface Transportation Program (STP) ($5.9B) and the National Highway System ($5.06B). States may spend up to 20% of their STP dollars for restoration and pollution abatement projects. Each state may also set aside 10 percent of STP funds for transportation enhancement projects, including conservation easements, wetland mitigation, and pollution abatement. For more information see: thwa.dot.gov/tea21/

**Table 11F.86 United States Geological Survey Budget for Water-Resources Investigations for Fiscal Year 1986**

| Activity/Subactivity/Program Element | Fiscal Year 1986[a] Enacted |
|---|---|
| Water Resources Investigations | $1,34,802 |
| National Water Resources Research and Information System—Federal Program | 72,875 |
| Data Collection and Analysis | 19,492 |
| National Water Data and Information Access Program | 2,090 |
| Coordination of National Water Data Activities | 903 |
| Regional Aquifer System Analysis | 13,474 |
| Core Program Hydrologic Research | 8,082 |
| Improved Instrumentation | 1,888 |
| Water Resources Assessment | 1,287 |
| Toxic Substances Hydrology | 11,182 |
| Nuclear Waste Hydrology | 7,020 |
| Acid Rain | 2,998 |
| Scientific and Technical Publications | 2,081 |
| National Water Resources Research and Information System—Federal–State Cooperative Program | 49,774 |
| Data Collection and Analysis, Areal Appraisals, and Special Hydrological Studies | 41,956 |
| Water Use | 3,670 |
| Coal Hydrology | 4,148 |
| National Water Resources Research and Information System—State Research Institute and Information Grants Program | 12,153 |
| State Water Resources Research Institutes | 6,159 |
| National Water Resources Research Grants Program | 4,767 |
| Program Administration | 1,227 |

*Note:* By activity and program element; dollars in thousands.

[a] Funding shown represents appropriated dollars and does not include reimbursable funding from federal, state, and other non-federal sources.

**Table 11F.88 Water Pollution Abatement Expenditures in the United States, 1975–1984**

| | | Industrial | | Public Sewer Systems[c] | |
|---|---|---|---|---|---|
| Year | Total[b] | Facilities | Operations[a] | Facilities | Operations[a] |
| 1975 | 22,840 | 4200 | 2950 | 8,997 | 3428 |
| 1976 | 24,445 | 4625 | 3375 | 9,370 | 3713 |
| 1977 | 24,652 | 4415 | 3706 | 9,409 | 4055 |
| 1978 | 26,631 | 4277 | 3934 | 10,090 | 4392 |
| 1979 | 26,470 | 4013 | 4222 | 9,758 | 4583 |
| 1980 | 24,647 | 3725 | 4081 | 8,942 | 4694 |
| 1981 | 21,984 | 3259 | 4180 | 6,882 | 4880 |
| 1982 | 21,199 | 3080 | 4022 | 6,148 | 5156 |
| 1983 | 21,461 | 2813 | 4402 | 5,551 | 5475 |
| 1984, preliminary | 23,192 | 2902 | 4651 | 6,353 | 5773 |

*Note:* In millions of dollars.

[a] Operation of facilities.
[b] Includes nonpoint sources not shown separately.
[c] Includes expenditures for private connectors to sewer systems, by owners of feedlots, and by government enterprises.

*Source*: From U.S. Department of Commerce, 1987 Statistical Abstract of the United States.

**Table 11F.89 Proposed Cost Sharing for New Water Projects after 1983**

| Project Purpose | Up-front Nonfederal Share of Costs, % |
|---|---|
| Hydropower | 100 |
| Municipal and industrial supply | 100 |
| Flood control | 35 |
| Recreation | 50[a] |
| Commercial navigation | 75[b] |
| Irrigation | 35 |
| Beach erosion | 50 |

[a] Could be repayment instead of up-front payment.
[b] Twenty-five percent of federal financing is reimbursable; the rest must be an up-front cash contribution.

**Table 11F.94 Federal Water Pollution Control Laws**

| Title | Year of Enactment | Key Provisions |
|---|---|---|
| Water Pollution Control Act | 1948 | Authorized federal research |
| Water Pollution Control Act Amendments | 1956 | State responsibility to establish water quality criteria<br>Discretionary federal responsibility to convene enforcement conferences |
| Water Quality Act | 1965 | Ambient standards<br>State implementation and enforcement responsibility |
| Federal Water Pollution Control Act (Clean Water Act) | 1972 | Technology-based standards for conventional pollutants<br>Federal share of municipal treatment plant construction costs set at 75 percent<br>Federal implementation and enforcement responsibility |
| Coastal Zone Management Act | 1972 | Directed towards coastal water pollution problems |
| Clean Water Act Amendments | 1977 | Increased coverage to toxic pollutants |
| Municipal Wastewater Treatment Construction Grant Amendments | 1981 | Reduced federal share of municipal treatment plant financing to 55 percent |
| Clean Water Act Reauthorization | 1987 | Increased focus on nonpoint source pollution<br>Fedral support for municipal treatment plant construction converted from grant assistance to loans |

**Table 11G.125 Classification of Desalting Processes Based on Properties of Solids and Liquids**

| |
|---|
| A. Processes dependent on phase changes of water |
| 1. Evaporation |
| Multiple-effect distillation, in which the latent heat comes from a solid surface |
| Multiple stage flash distillation, in which the latent heat comes from cooling of the liquid being evaporated |
| Supercritical distillation, in which all evaporation occurs above the critical temperature of pure water |
| Solar distillation in which the latent heat is derived from direct solar radiation |
| Vapor compression distillation, in which the latent heat is obtained regeneratively |
| 2. Crystallization |
| Freeze-separation, in which the crystals involved are those of pure water |
| Hydrate-separation, in which the crystals contain molecules of the hydrating agent |
| B. Processes dependent on the surface properties of membranes in contact with water |
| 1. Electrodialysis, in which the unwanted ions are caused to migrate through membranes due to electrical forces |
| 2. Hyperfiltration or reverse osmosis, in which water is caused to migrate through membranes preferentially to the salt ions, due to pressure |
| C. Processes dependent on the properties of solids and liquids in contact with water |
| 1. Ion exchange, in which unwanted ions are exchanged for less offensive ions loosely bonded to certain double salts in solid form |
| 2. Solvent extraction, in which certain liquids dissolve water more readily than the salt ions contained in the saline water |

**Table 11H.146 Cooperative Water Conservation/Transfer Projects**

| Cooperative Water Conservation/Transfer Projects | Annual Yield (af) | Estimated Start Date |
|---|---|---|
| MWD/IID 1988 Water Conservation Program | 100,000–110,000[a] | Completed |
| SDCWA/IID Transfer and SDCWA/MWD exchange | 130,000–200,000[b] | 2002 |
| MWD/CVWD SWP Water Transfer/Colorado River water exchange | 35,000 | 2003 |
| Coachella Canal lining MWD/SLR[c] | 26,000 | 2005[d] |
| All American Canal lining MWD/SLR[c] | 67,700 | 2006[d] |
| IID/CVWD/MWD Conservation program | 100,000[e] | 2007 |

[a] Yield to MWD, except for 20,000 acre-ft yr to be made available to CVWD.
[b] Yield to SDCWA.
[c] Yield to MWD and San Luis Rey Indian Water Rights Settlement Parties.
[d] Date by which full conservation benefits will be achieved.
[e] Yield to CVWD, MWD has an option to acquire water CVWD does not need. MWD assumes responsibility for 50,000 acre-ft/yr to CVWD after year 45 of Quantification Agreement.

**Table 11H.154 Authorizations for Water Supply, Water Quality and Related Infrastructure Projects and Studies**

| Act Section | Provision | T, Traditional | NT, Non-traditional | New Federal $(000)[b] | State(s) |
|---|---|---|---|---|---|
| WRDA 1986, PL 99-662, 17 November 1986 | | | | | |
| 401(a) | Santa Ana River Mainstem, CA. Study to investigate the feasibility of including water supply and conservation storage at Prado Dam | T | | 0 | CA |
| 707 | Capital Investment Needs for Water Resources. Authorized the Assistant Secretary of the Army for Civil Works to estimate long-term capital investment needs for, among other things, municipal and industrial water supply | T | | 0 | Nationwide |
| 729 | Study of Water Resources Needs of River Basins and Regions. Requires the Assistant Secretary of the Army for Civil Works, in coordination with the Secretary of the Interior and in consultation with other governmental agencies, to study "water resources needs of river basins and regions of the United States." This section specifically requires consultation with "State, interstate, and local governments" | T | | 5,000 | Nationwide |
| 818 | Brazos River Basin, TX. Modifies Section 10 of the 1946 FCA to insert "or water supply" after "irrigation" | T | | 0 | TX |
| 834 | Curwensville Lake. Authorization to construct a water line with pumps in order to provide water for municipal use | | NT | 225 | PA |
| 838 | Denison Dam (Lake Texoma). Authorization to reallocate 300,000 acre-ft of hydropower storage to municipal and industrial water supply | T | | 0 | OK & TX |
| 843 | Beaver Lake. Authorization to study and undertake a project to preserve and enhance water quality of the lake | | NT | 3,825 | AR |
| 931 | Interim use of Water Supply for Irrigation. Authorizes the temporary use of unused municipal and industrial water supply storage for irrigation | T | | 0 | Nationwide |
| 1103 | Upper Mississippi River Plan. This is a major environmental restoration authorization for the Corps. This authorization recognized the Upper Mississippi River as a nationally significant ecosystem and a nationally significant commercial navigation system. It authorized the Secretary of the Army to enter into agreements with basin states and to transfer funds to the DOI as necessary to carry out the provisions of the section. In consultation with the DOI and the basin states the Secretary of the Army was also authorized to determine the need for river rehabilitation and environmental enhancement and protection based on the conditions of the environmental, project developments, and projected environmental impacts from implementing any proposal resulting from recommendations made under provisions of the section | T | | 188,000 over 10-years | IL, IA, MN, MO and WI, |

| 1121 | Ogallala Aquifer. To establish a comprehensive research and development program to assist those portions of the High Plains region dependent on water from the Ogallala Aquifer | | NT | 65,000 | CO, KS, NE, NM, OK, SD, TX, & WY |
| 1135 | Project Modifications for Improvement of Environment. Authorizes the review of water resources projects to determine the need for modifications in the structures and operations of such projects for the purpose improving the quality of the environment in the public interest | T | | 0 | Nationwide |
| 1141 | Groundwater Recharge. Authorization to plan, engineer and design a project for recharge of groundwater in the drainage basis of the Tucson and Scottsdale, AZ metropolitan areas | | NT | 250 | AZ |
| 1157 | Miami River Water Quality Commision. Authority to make a grant to establish a commission to develop a plan for improving the water quality of the Miami River and tributaries | | NT | 50 | FL |
| Total WRDA '86 | 13 Sections (4 of which apply nationwide); 8 sections traditional and 5 non-traditional | | | 262,350 | 18 |
| WRDA 1988, PL 101-676,17 November 1988 | | | | | |
| 23 | Louisiana Water Supply. Authorized to review the water supply problems related to drought at a water supply reservoir and to respond as appropriate | | NT | 0 | LA |
| Total WRDA '88 | 1 Section; non-traditional | | | 0 | 1 |
| WRDA 1990 PL 101-640, 28 November 1990 | | | | | |
| 116(d) | Southern California Infrastructure Restoration. Conduct a feasibility study, in consultation with FEMA, on the problems and alternative solutions of the infrastructure of the region | | NT | 1,500 | CA |
| 116(g) | Santa Rosa, CA. Authorize a study to evaluate storage facilities associated with wastewater reclamation and irrigation | | NT | 0 | CA |
| 116(p) | Water Supply, Minnesota and North Dakota. Conduct a study to determine alternate plans to augment flows in the Red River of the North including plans to supplement flows for municipal, industrial, agricultural, and fish and wildlife purposes | | NT | 0 | MN & ND |
| 116(w) | Buffalo, New York. To evaluate a city plan on flooding and associated water quality problems (including those associated with combined sewer over flow, sewer backups and riverside outfalls) | | NT | 0 | NY |
| 116(x) | Caesar's Creek Lake, Ohio. To conduct a study of the water supply needs of Clinton County, Ohio | | NT | 0 | OH |

© 2006 by Taylor & Francis Group, LLC

| | | | | |
|---|---|---|---|---|
| 116(y) | Liberty, Ohio. To conduct a study of the water supply needs of the city | NT | 0 | OH |
| 116(z) | Washingtonville, Ohio. To conduct a study of the water supply needs of the city | NT | 0 | OH |
| 116(dd) | Radium Removal. To study and provide technical assistance to small communities on methods of mitigating radium contamination in groundwater used as a source of public drinking water | NT | 0 | Nationwide |
| Total WRDA '90 | 8 Sections (including one nationwide); all non-traditional | | 1,500 | 5 |
| WRDA 1992, PL 102-580, 31 October 1992 | | | | |
| 114 | Brockton MA. Study of water supply needs and of water quality and quantity to meet future needs | NT | 0 | MA |
| 217 | Reuse of Wastewater. Authorizes assistance to non-Federal interests for planning and design of reuse systems | NT | 5,000 | CA |
| 218 | Demonstration of Waste Water Technology, Santa Clara Valley Water District and San Jose, CA. Authorized, in cooperation with EPA, to provide design and construction assistance to the Water District for demonstrating and field testing public use innovative processes which advance the technology of waste water reuse and treatment and which promote the use of treated waste water for critical water supply purposes | NT | 10,000 | CA |
| 219 | Environmental Infrastructure. Authorizes technical and planning and design assistance | NT | 5,000 * | Nationwide |
| 220 | Environmental Infrastructure Assistance. Authorizes assistance in design and construction of water transmission line | NT | 5,000 | AR |
| 221 | Environmental Infrastructure Assistance. Authorizes design and construction assistance for Combined Sewer System and storm water projects | NT | 7,000 | NY |
| 222 | Environmental Infrastructure Assistance. Authorizes design and construction assistance for storm water project | NT | 200 | PA |
| 304 | Broad Top Region of Pennsylvania. Authorizes a Watershed Reclamation and Wetlands Pilot Project along the Juniata River and its tributaries, PA | NT | 5,500 * | PA |
| 307 | Water Quality Projects. Authorizes design and construction of storm water projects | NT | 70,000 * | LA, ME, NY, & RI |
| 313 | South Central Pennsylvania Environmental Restoration Infrastructure and Resource Protection Development. Establishes a pilot program for design and construction of wastewater treatment facilities, water supply storage, treatment and distribution facilities and surface water development and protection | NT | 17,000 | PA |

| Act Section | Provision | T, Traditional | NT, Non-traditional | New Federal $(000)[b] | State(s) |
|---|---|---|---|---|---|
| 322 | Water Supply needs of Mahoning Valley Sanitary District, Ohio. Cooperate with the state in review of water supply needs | | NT | 0 | OH |
| 324 | Hackensack Meadowlands Area. Authorizes design and construction assistance for an environmental improvement program | | NT | 5,000 | NJ |
| 340 | Southern West Virginia Environmental Restoration and Infrastructure Resources Protection Development Project. Modified by Section 359 of WRDA '96 | | NT | 5,000 * | WV |
| 362 | Quonset Point-Davisville, Rhode Island. Authority to construct two water supply towers and relocate sewer lines | | NT | 1,875 | RI |
| Total WRDA '92 | 14 sections (including one nationwide); all non-traditional | | | 136,075 | 11 |
| WRDA 1996. Public Law 104-303, 12 October 1996 | | | | | |
| 359 | Southern West Virginia. Modifies cost sharing and increases funding levels of Section 340 of WRDA '92 | | NT | 15,000 * | VW |
| 401 | Rural Sanitation Projects. Authorize a study to report on the advisability and capability of the Corps to implement rural sanitation projects for rural and native villages in Alaska | | NT | 0 | AK |
| 503 | Watershed Management, Restoration and Development. Authority to provide technical, planning and design assistance to non-Federal interests for carrying out watershed management, restoration and development projects at specific locations | | NT | 15,000 | AZ, CA, GA, NE, WV |
| 504 | Environmental Infrastructure. Amend Section 219 of WRDA '92 by adding specific authorizations of appropriations for construction assistance for six specific environmental infrastructure projects | | NT | 73,000 * | DC & MD, GA, KY, MI, MS, NH |
| 522 | Jackson County, AL. Authority to provide technical, planning and design assistance for wastewater treatment and related facilities, remediation of point and non-point sources of pollution and contaminated riverbed sediments | | NT | 3,000 | AL |
| 531 | Southern and Eastern Kentucky. Authority to establish a program to provide environmental assistance to non-Federal interests to design and construct water related environmental infrastructure including wastewater treatment, water supply and surface water protection and development | | NT | 10,000 | KY |
| 552 | New York City Watershed. Authority to provide design and construction assistance for environmental infrastructure and resource protection and development projects in the watershed to protect and enhance the quality and quantity of the New York City water supply | | NT | 22,500 | NY |

| | | | | | |
|---|---|---|---|---|---|
| 566 | Southeastern Pennsylvania. Authority to establish a program to provide environmental assistance to non-Federal interests to design and construct water related environmental infrastructure including wastewater treatment, water supply, and surface water protection and development | | NT | 25,000 | PA |
| 585 | Overflow Management Facility. Authority to provide assistance to Narragansett Bay Commission for the construction of a combined river overflow management facility | | NT | 30,000 | RI |
| Total WRDA '96 | 9 Sections; all non-traditional | | | 188,500 | 15 |
| WRDA 1999, Public Law 106-53, 17 August 1999 | | | | | |
| 101(b)(4) | Success Dam, Tule River Basin, CA. Authorizes a project for flood damage reduction and water supply | T | | 11,635 | CA |
| 101(b)(15) | Howard Hanson Dam, WA. Authorizes a project for water supply and ecosystem restoration | | NT | 36,900 | WA |
| 211 | Watershed Management, Restoration and Development. Expands Section 503 of WRDA '96 to extend authorization assistance to sites in six additional states | | NT | 0 | FL, IL, NV, NC, OR |
| 212 | Flood Mitigation and Riverine Restoration Program. Authorizes a program for the purpose of conducting projects to reduce flood hazards and restore the natural functions and values of rivers throughout the United States | T | | 200,000 | AZ, CA, KY, MN, ND, NH, NJ, NM, NY, NC, OH, OR, PA, RI, SD, VA, WI |
| 331 | Jackson County Mississippi. Modifies Section 219(c)(5) of WRDA '92 to provide cost sharing credit | | NT | 0 | MS |
| 340 | New York City Watershed. Modifies Section 552 of WRDA '96 to change local cooperation wording. Increases $22.5 million to $42.5 million | | NT | 20,000 * | NY |
| 343 | Broken Bow Lake. Project modified to require a seasonal adjustment to the top of the conservation pool in the interest of water and related resources | T | | 0 | OK |
| 351 | South Central Pennsylvania. Modifies Section 313(g)(3) of WRDA '92 to increase appropriations and cost sharing (increases $80 million to $180 million) | | NT | 100,000 * | PA |
| 374 | White River Basin, AR and MO. Authorizes project operation modifications and storage reallocations in the interest of trout fisheries | | NT | 0 | AR & MO |
| 403 | Green Ferry Lake, AR. Conduct a study to determine the feasibility of constructing water intake facilities | | NT | 0 | AR |

| Act Section | Provision | T, Traditional | NT, Non-traditional | New Federal $(000)[b] | State(s) |
|---|---|---|---|---|---|
| 502 | Environmental Infrastructure. Modifies Section 219(e) of WRDA '92 to increase appropriations and to authorize additional assistance at 43 projects in 20 different states. The assistance to include, but not necessarily limited: to eliminate or control combined sewer overflows, or for water related infrastructure, or groundwater recharge, or wastewater infrastructure projects, or wastewater treatment, or to provide water supply facilities, or for a project for recycled water or for industrial water reuse project | | NT | 494,000 * | CA, CT, GA, IN, LA, MA, MI, MO, MS, NC, NH, NJ, NY, OR, OK, PA, SC, TN, UT & VA |
| 513 | Design and Construction Assistance. Modifies Section 507 of WRDA '96 to include "expansion and improvement of Long Pine Run Dam, PA and associated water infrastructure." | | NT | 5,000 | PA |
| 521 | Beaver Lake, AR. Reallocate storage in Beaver Lake at no cost to the local water districts | | NT | 0 | AR |
| 531 | Kanopolis Lake, KS. Offers the State of Kansas the right to purchase storage at certain prescribed costs. | | NT | 0 | KS |
| 532 | Southeastern and Eastern Kentucky. Modifies Section 531 of WRDA '96 to increase (from $10 to $25 million) funding and to expand to include "small stream flooding, local storm water drainage, and related problems | | NT | 15,000 * | KY |
| 545 | Sardis Reservoir, OK. Offers the State of Oklahoma the right to purchase storage a certain prescribed costs. | | NT | 0 | OK |
| 548 | Bradford and Sullivan Counties, PA. Authority to provide assistance for water-related infrastructure and resource protection and development projects | | NT | 0 | PA |
| 552 | Southeastern Pennsylvania. Modifies Section 566(b) of WRDA '96 to include "environmental restoration" as well as the originally authorized water supply and related facilities. | | NT | 0 | PA |
| 560 | Abandoned and Inactive Noncoal Mine Restoration. Authority to provide technical, planning and design assistance to Federal and non-Federal interests for carrying out projects to address water quality problems caused by drainage and related activities from abandoned and inactive noncoal mines | | NT | 5,000 | Nationwide |
| 569 | Northeastern Minnesota. Authorizes a pilot program to provide environmental infrastructure assistance to non-Federal interests to include design and construction for wastewater treatment and related facilities, water supply and related facilities, environmental restoration, and surface water resource protection and development | | NT | 40,000 | MN |

*Note:* As of July 1988; the Sole Source Aquifer (SSA) program allows individuals and organizations to petition the Environmental Protection Agency (EPA) to designate aquifers as the "sole or principal" source of drinking water for an area. The program was established under Section 1424(e) of the Safe Drinking Water Act (SDWA) of 1974. The primary purpose of the designation is to provide EPA review of Federal financially assisted projects planned for the area to determine their potential for contaminating the aquifer. Based on this review, no commitment of Federal financial assistance may be made for projects "which the Administrator (of EPA) determines may contaminate such (an) aquifer," although Federal funds may be used to modify projects to ensure that they will not contaminate the aquifer; for location of aquifers see Figure 8.17.

**Table 11I.165 Relative Evaluation of the Elements of the Biscayne Aquifer Protection Plan (Florida)**

| Category | Element Number | Description | Ease of Implementation | Effectiveness | Personnel Resources[a] | Cost[b] | Time to Implement[c] | Public Acceptability[d] |
|---|---|---|---|---|---|---|---|---|
| Regulation | 2 | Regulate land use within well field protection zones | Difficult | High | Moderate | Moderate | Moderate | Moderate |
| Regulation | 3 | Surveillance over small quantity generators | Moderately difficult | Moderate | Moderate | Low | Short | Moderate |
| Regulation | 4 | Regulate activities of small quantity generators | Difficult | High | High | Moderate | Long | Moderate |
| Regulation | 6 | Regulate storage tanks | Moderately difficult | High | Moderate | High | Moderate | Moderate |
| Regulation | 7 | Control handling/disposal by commercial haulers | Moderately difficult | High | Low | Low | Short | High |
| Regulation | 18 | Stormwater/ wastewater review | Easy | Moderate | Moderate | Moderate | Short | Moderate |
| Waste Management | 1 | Local waste storage/transfer facilities for small generators, individuals | Moderately difficult | High | Low | Moderate | Short | Moderate |
| Waste Management | 5 | Public awareness/ education program | Easy | High | Moderate | Moderate | Moderate | High |
| Waste Management | 9 | Spill prevention, control, and countermeasure program | Moderately difficult | High | Moderate | Moderate | Moderate | High |
| Waste Management | 12 | Adopt liability policy | Moderately difficult | High | Low | Low | Moderate | High |
| Waste Management | 13 | Emergency spill cleanup program | Difficult | Moderate | Low | High | Moderate | High |
| Waste Management | 15 | Control agricultural groundwater pollution | Difficult | Moderate | Moderate | Moderate | Moderate | Moderate |
| Waste Management | 16 | Collect/recycle automobile drain oils | Easy | Moderate | Low | Low | Short | High |
| Construction/Treatment | 8 | Construct leak-proof sewers | Difficult | Moderate | Low | High | Moderate | High |
| Construction/Treatment | 10 | Pretreat commercial/ industrial waste | Moderately difficult | Moderate | Moderate | Moderate | Short | High |

© 2006 by Taylor & Francis Group, LLC

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| Construction/Treatment | 11 | Control sewer exfiltration | Difficult | Moderate | Moderate | Moderate | Long | High |
| Information Needs | 14 | Public reporting program on improper disposal | Easy | Moderate | Low | Low | Short | High |
| Information Needs | 17 | Tri-county coordinating committee | Easy | Low | Low | Low | Short | High |
| Information Needs | 19 | Determine safe soil contamination levels | Difficult | Moderate | Moderate | Moderate | Long | Moderate |
| Information Needs | 20 | Monitor groundwater | Moderately difficult | Moderate | Moderate | High | Moderate | High |

[a] "Personnel Resources" refers to the manpower needed by each county to develop and implement each program. Low? 1 to 4 full-time persons from each county; Moderate? 5 to 10 ful-time persons; High? More than 10 full-time persons.
[b] Includes cost of development and implementation of the program by county agencies as well as costs incurred by the public or the industries.
[c] Short? 0 to 2 years; Moderate? 2 to 5 years; Long? Greater than 5 years.
[d] Public acceptability tended to be lower for a specific program if large numbers of people were directly affected.

| Series | Stratigraphic and hydrologic units | | Lithology and water-yielding characteristics | Thickness (ft) |
|---|---|---|---|---|
| Holocene | Organic soils<br>Lake Flirt marl | Confining Unit | Peat and muck; water has high color content. Almost impermeable, Lake Flirt is shelly, calcaroous mud | 0–18 |
| Pleistocene | Pamlico sand | Biscayne Aquifer | Quartz sand; water high in iron. Small yields to domestic wells | 0–40 |
| | Miami oolite | | Sandy, oolitic limestone. Large yields | 0–40 |
| | Fort Thompson formation | | Alternating marine shell beds and freshwater limestone. Generally high permeability. Large yields | 0–150 |
| | Anastesia formation | | Coquina, sand, sandy limestone, marl. Moderate to large yields. | 0–120 |
| | Key Largo limestone | | Coralline reef rock. Large yields | 0–60 |
| Pliocene | Caloosahatchee marl | | Sand, shell, silt, and marl. Moderate yields | 0–25 |
| | Tamiami formation | Confining Unit | Limestone, clay, and marl. Occasional moderate yields in upper few feet. Remainder forms upper part of basal confining unit. | 25–220 |

Stratigraphic Limits are equivalent in part. Order does not necessarily reflect relative age.

Modified from Klein and Causaraa, 1982

**Figure 11I.120** Several geologic units comprise the Biscayne aquifer. Most of these units are of Pleistocene age. (From www.capp.water.usgs.gov. With permission.)

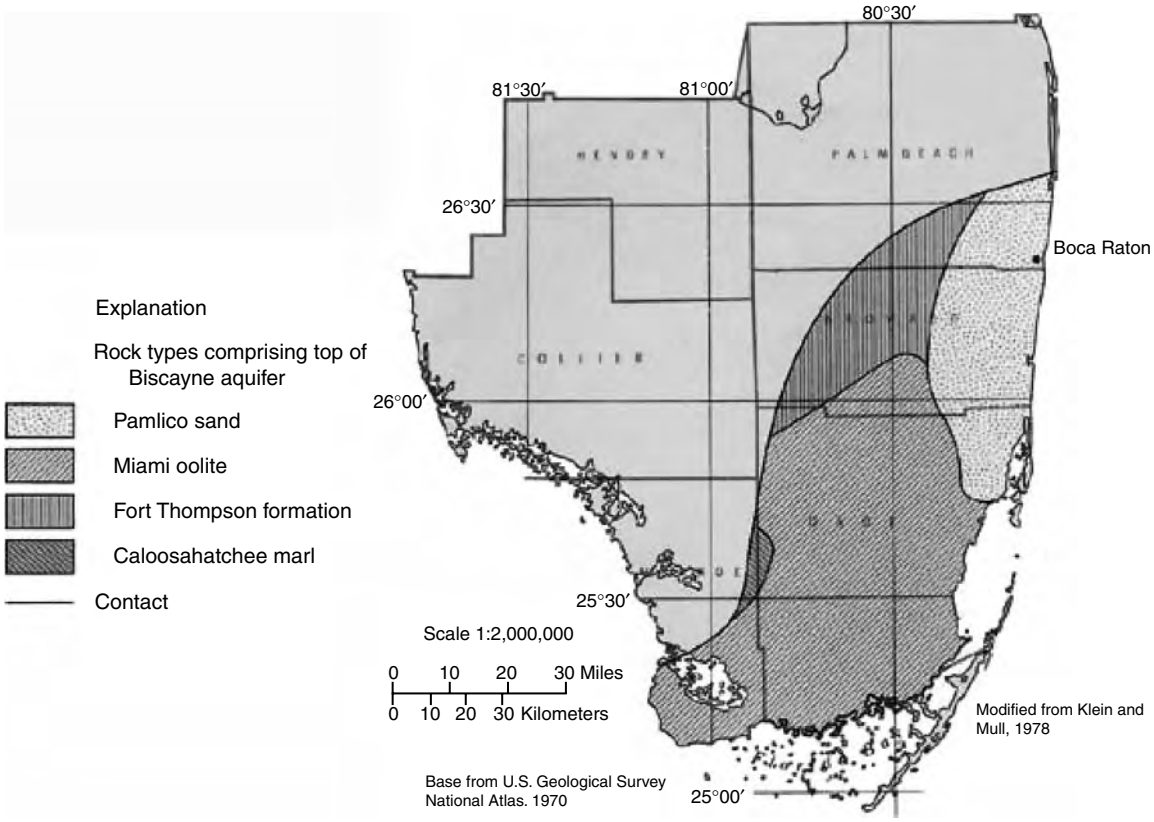

**Figure 11I.121** The rocks that comprise the top of the Biscayne aquifer vary in character. They are mostly limestone, but sand marks the top of the aquifer to the northeast. (From www.capp.water.usgs.gov. With permission.)

© 2006 by Taylor & Francis Group, LLC

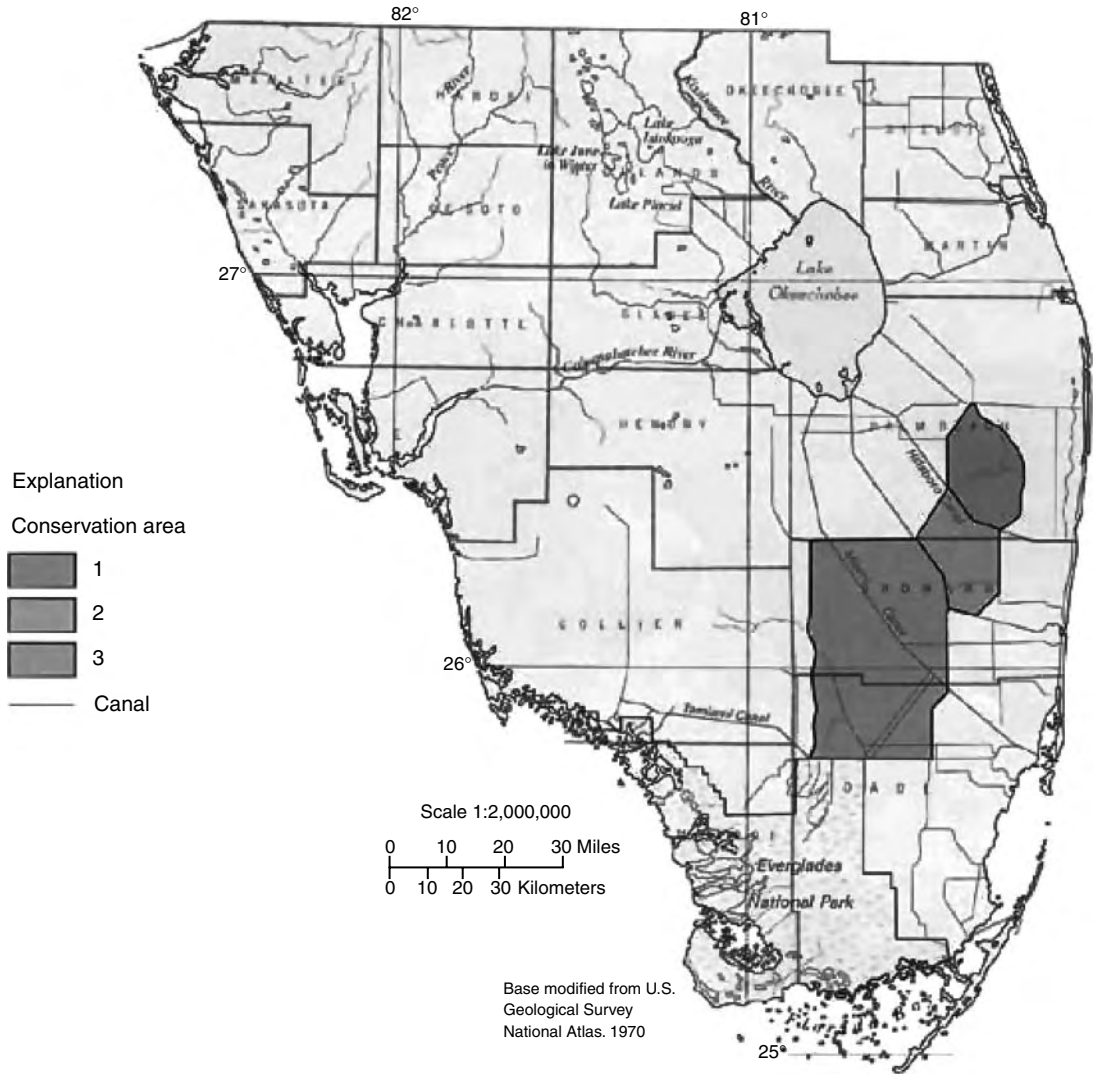

**Figure 11l.122** Lake Okeechobee, an extensive canal system, and three water-conservation areas are all linked as parts of a sophisticated water-management system. Dikes, pumps, and control structures on the canals are used to store stormwater and release it when and where it is later needed. (From www.capp.water.usgs.gov. With permission.)

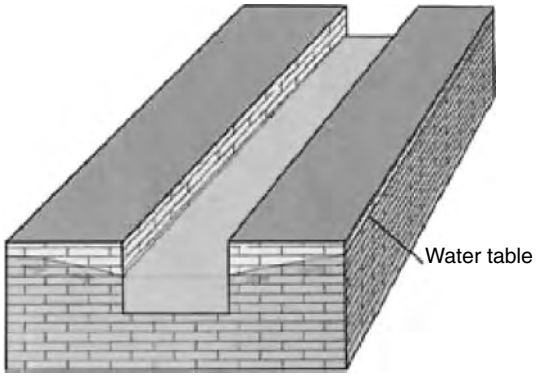
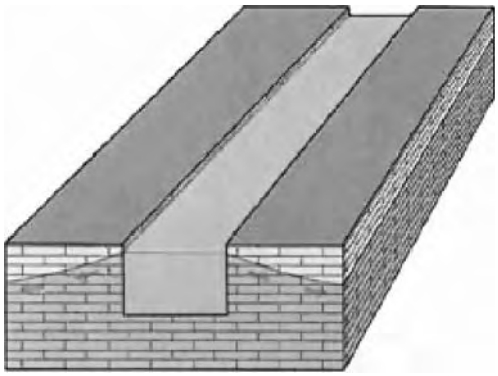
© 2006 by Taylor & Francis Group, LLC



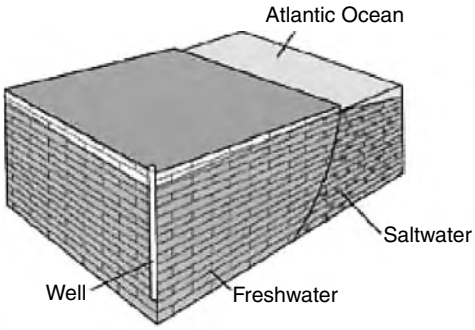
(a) When the water level in an aquifer is higher than that in a canal that penetrates it, water moves toward the canal.



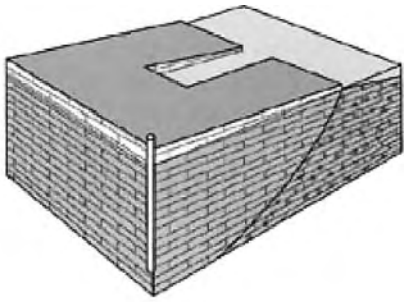
(b) When the water level in a canal is higher than that in the aquifer it penetrates, water moves into the aquifer.

Modified from Klein and others, 1975.

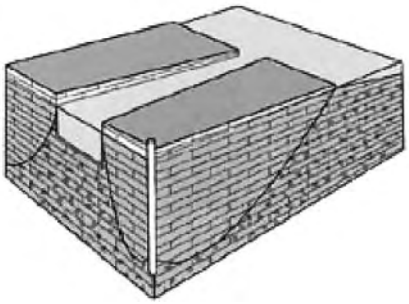
**Figure 11I.123** (a) During periods of less than normal precipitation, water passes freely from the aquifer into canals that are dug into it. (b) When storm runoff raises canal water levels, the movement of water is reversed. (From www.capp.water.usgs.gov. With permission.)



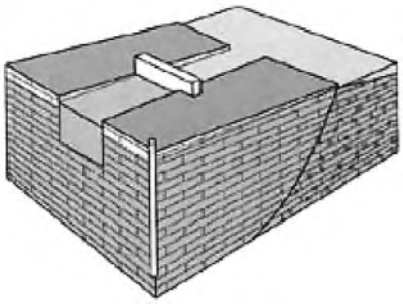
(a) The freshwater-saltwater interface was nearly stable before coastal canals were built.



(c) Uncontrolled tidal canals cause saltwater encroachment by lowering freshwater levels and providing open channels to the sea. The interface in the aquifer shifts inland adjacent to the canal.



(b) An uncontrolled canal that extends into an area of heavy pumping can convey saltwater inland to contaminate freshwater supplies.



(d) In contrast, a controlled canal can provide a perennial supply of freshwater to prevent saltwater encroachment and to recharge a well field by bringing in freshwater from upgradient areas.

**Figure 11I.124** The original, virtually stable freshwater–saltwater interface (a) was disturbed by construction of drainage canals (b). Uncontrolled canals (c) are open conduits, allowing saltwater to migrate inland, contaminating the aquifer, and in places, encroaching into pumped wells. A properly located control structure (d) prohibits the saltwater encroachment. (From www.capp.water.usgs.gov. With permission.)

© 2006 by Taylor & Francis Group, LLC

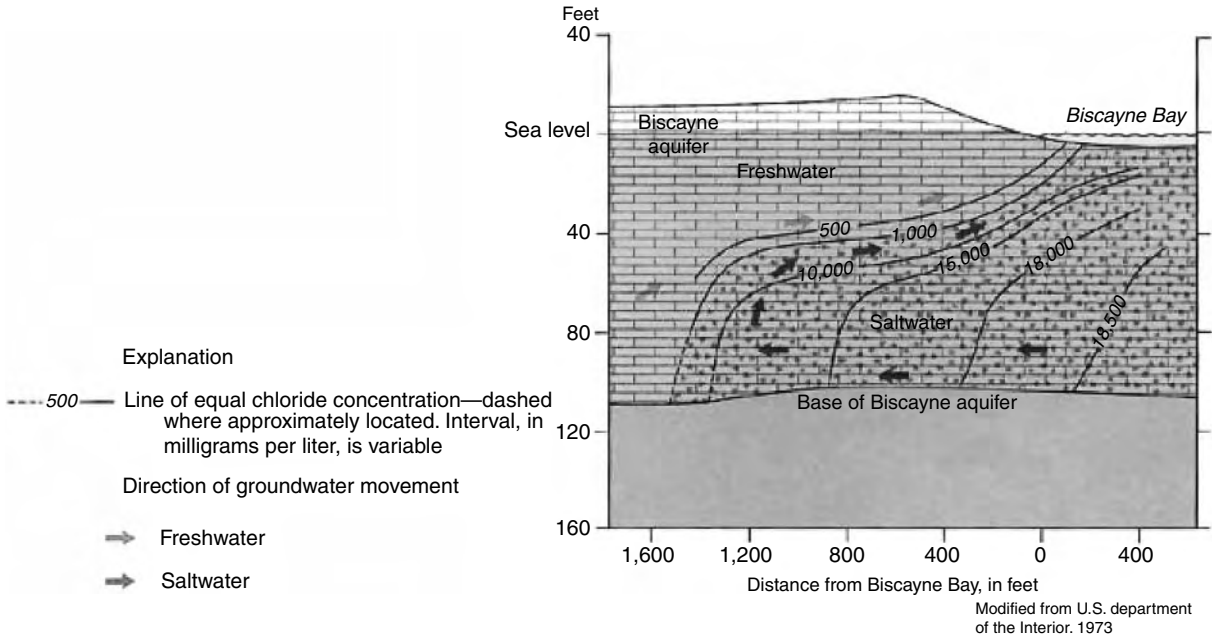


**Figure 11I.125** Saltwater extends farther inland near the base of the Biscayne aquifer rather than near the top of it. (From www.capp.water.usgs.gov. With permission.)

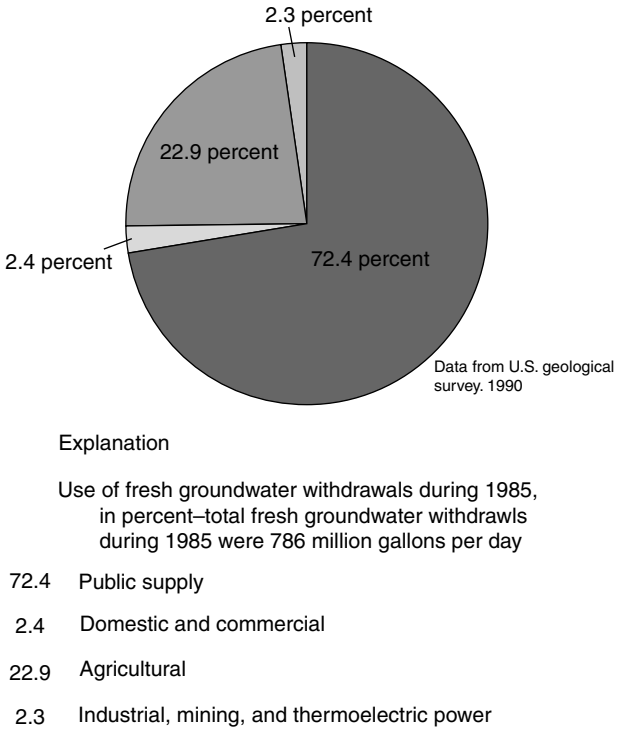

**Figure 11I.126** Most of the freshwater withdrawn from the Biscayne aquifer during 1985 was used for public supply and agricultural purposes. (From www.capp.water.usgs.gov. With permission.)

© 2006 by Taylor & Francis Group, LLC

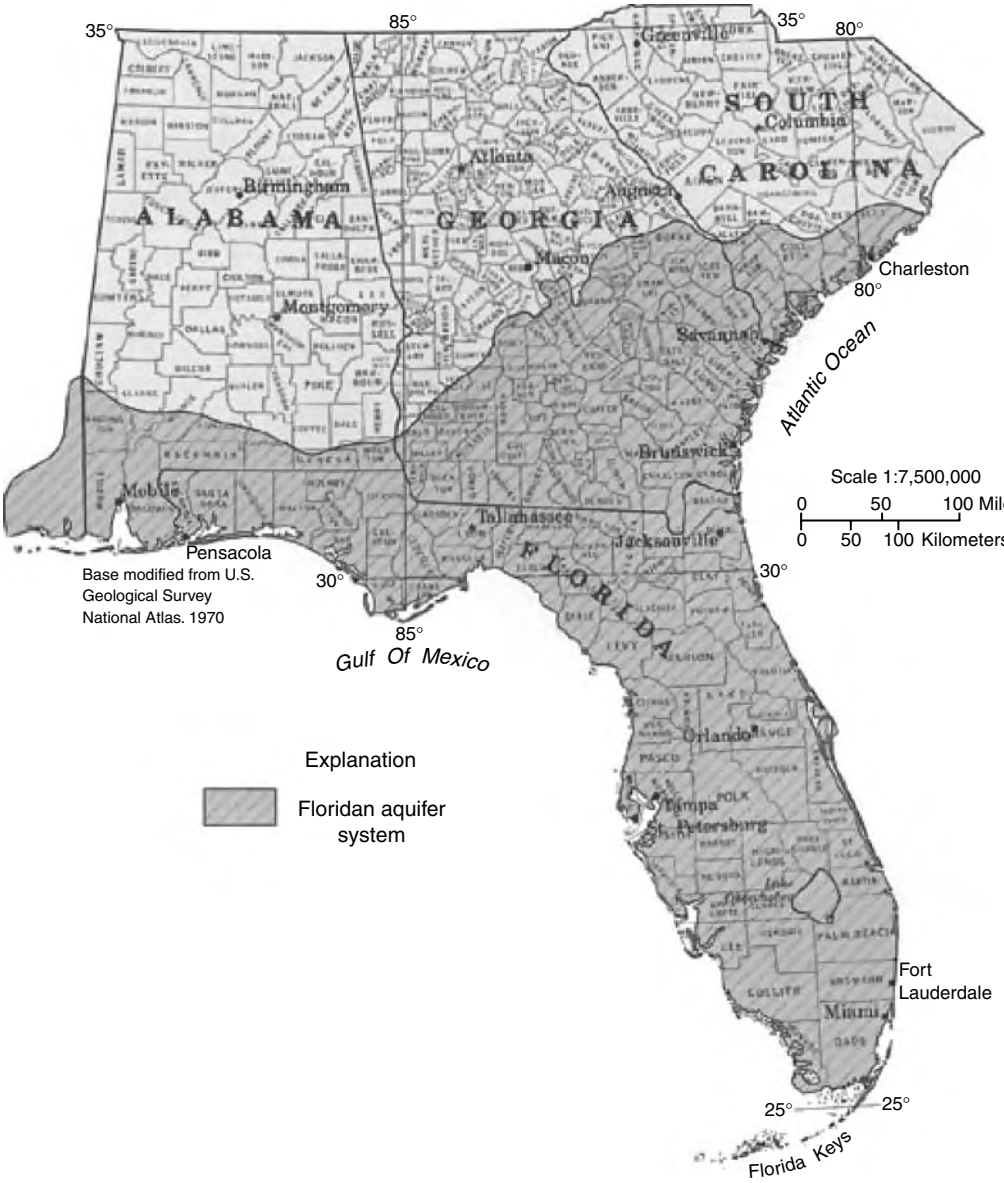

**Figure 11I.127** The carbonate rocks of the Floridan aquifer system underlie all of Florida, most of the coastal plain of Georgia, and extend for short distances into Alabama and South Carolina. (From www.capp.water.usgs.gov. With permission.)

© 2006 by Taylor & Francis Group, LLC

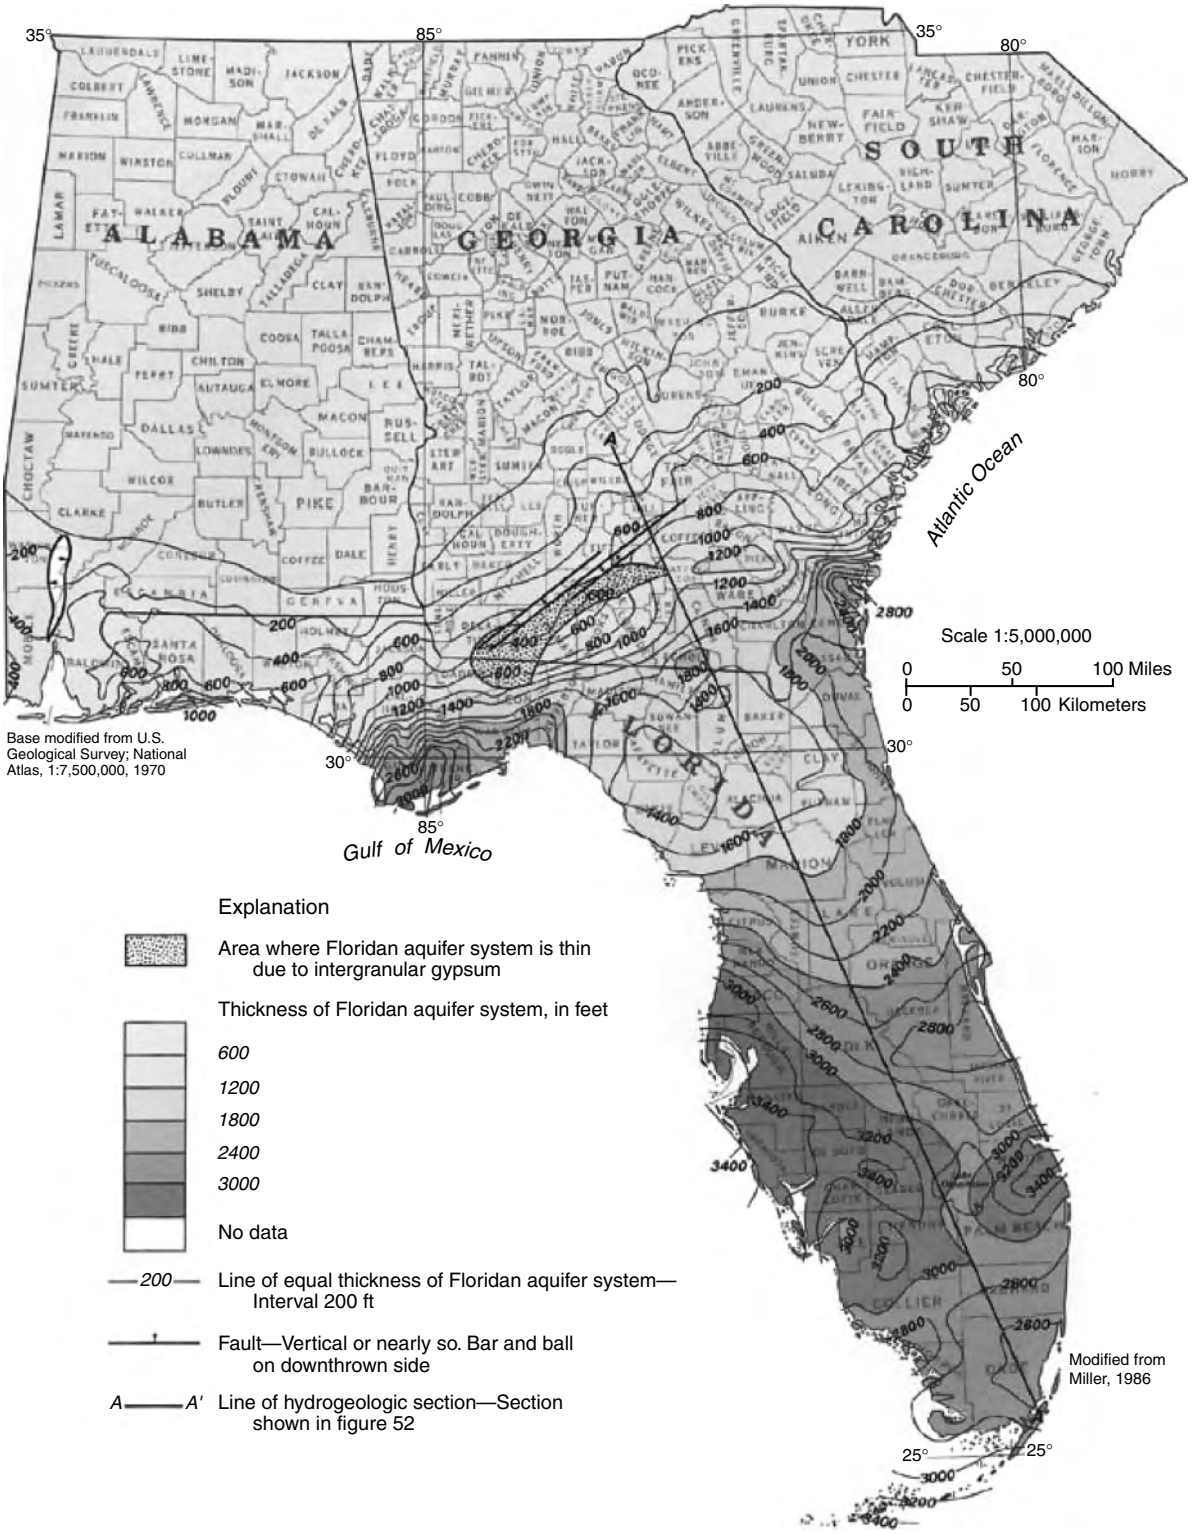

**Figure 11I.128** The thickness of the Floridan aquifer system varies considerably and reflects some major warping during deposition and fracturing following deposition. (From www.capp.water.usgs.gov. With permission.)

© 2006 by Taylor & Francis Group, LLC

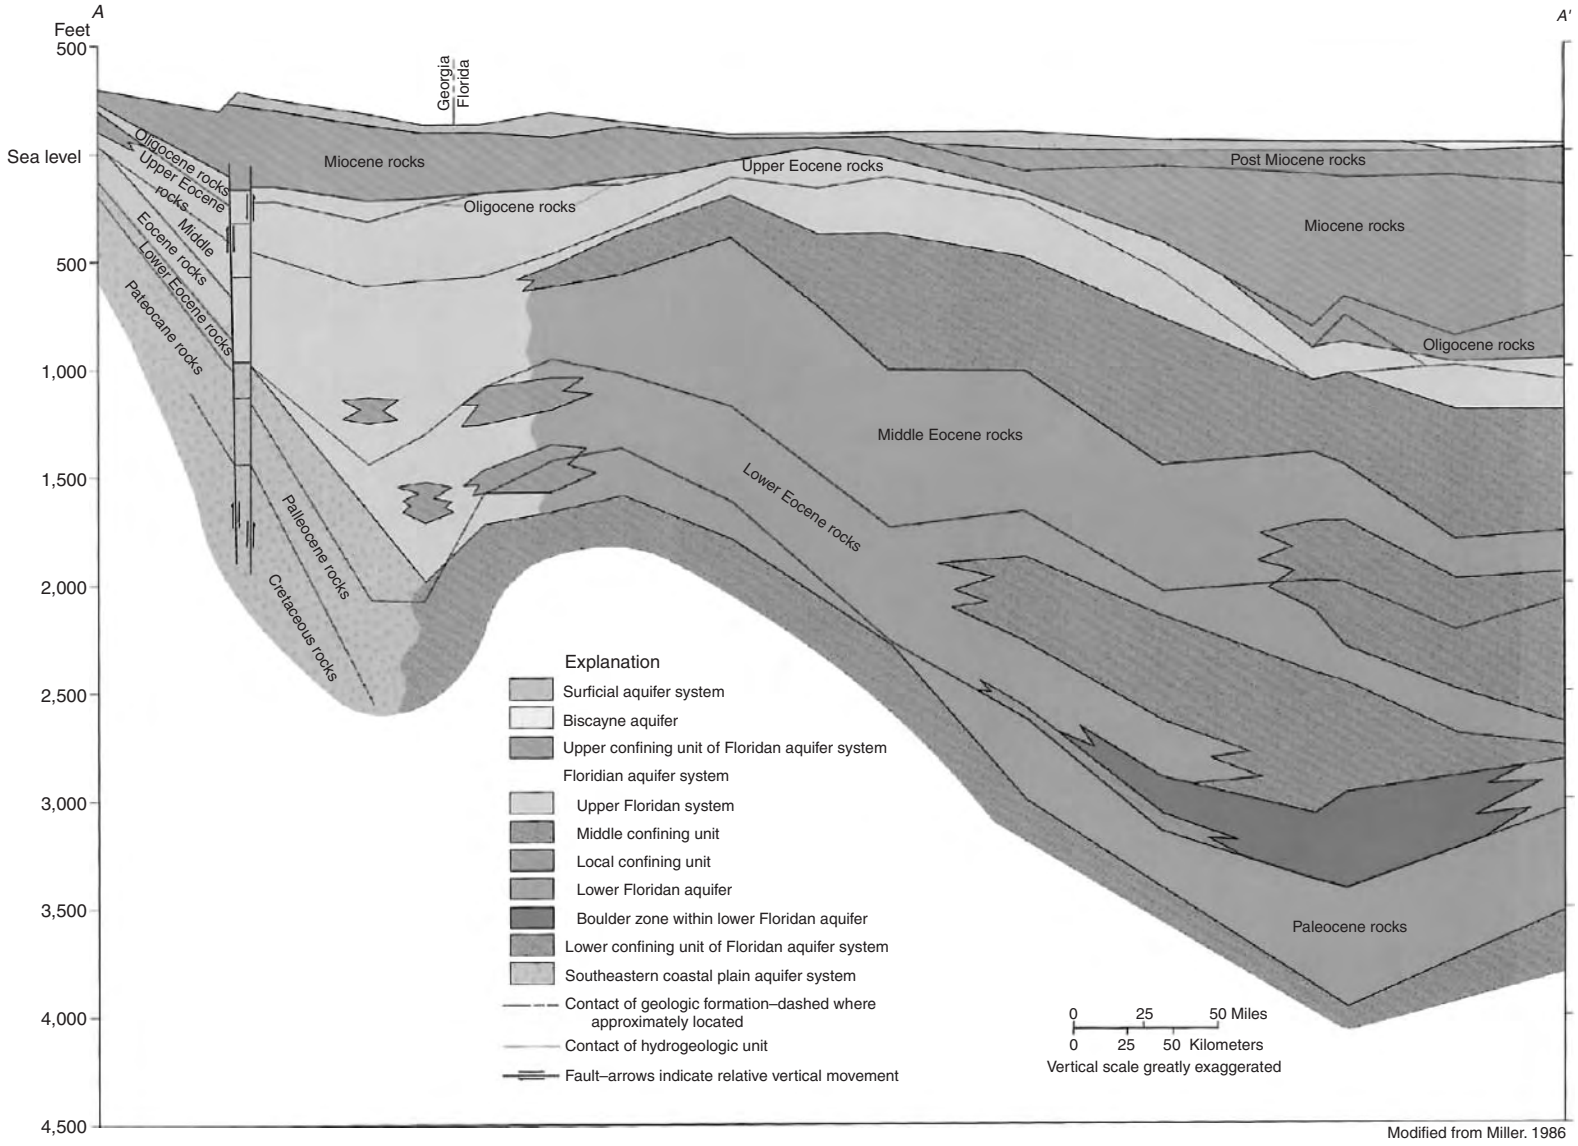

**Figure 11I.129** The Floridan aquifer system changes significantly from south-central Georgia to southern Florida. Aquifers and confining units in the system thicken and thin from well to well, and generally resemble complexly interlingering, lens-shaped bodies of rock. (From www.capp.water.usgs.gov. With permission.)

© 2006 by Taylor & Francis Group, LLC

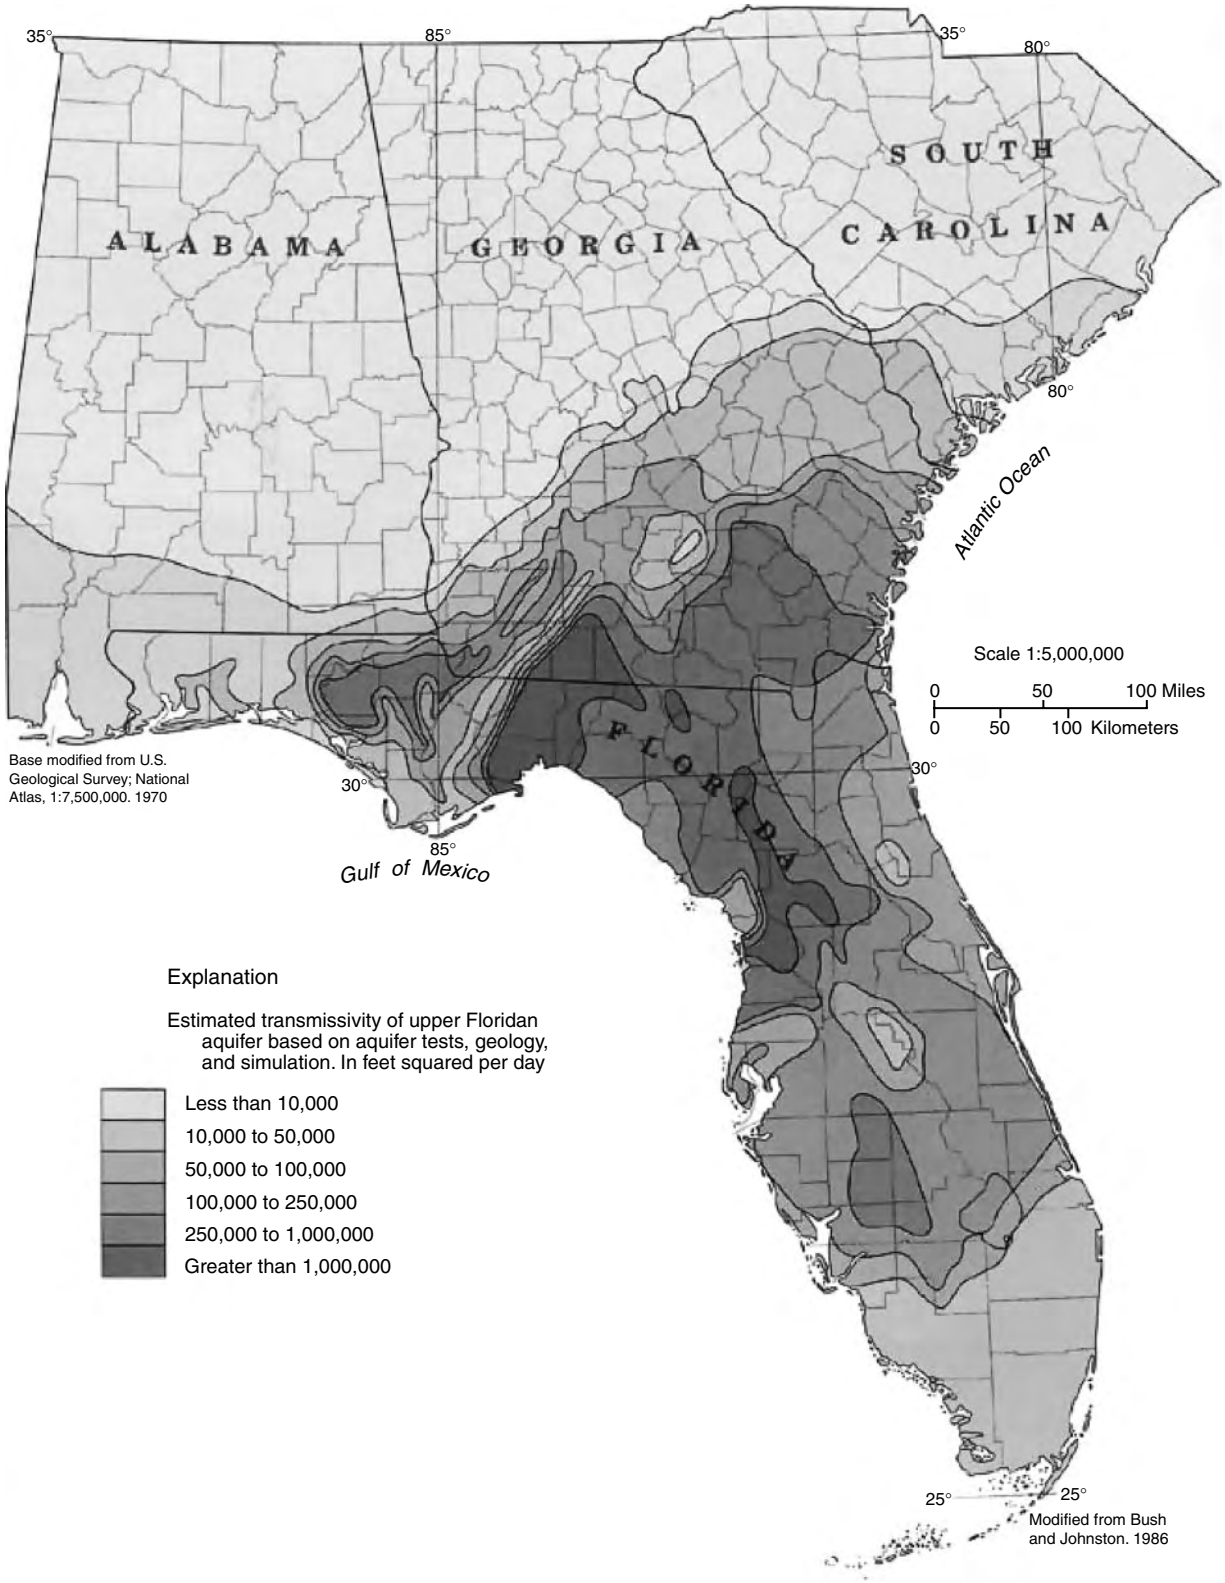

**Figure 11I.130** Transmissivity is a measure of the ease with which an aquifer transmits water. The most transmissive parts of the upper Floridan aquifer are located where many solution openings have formed. Such transmissivity not only means that water will move more easily, but also that wells will yield large volumes of water. (From www.capp.water.usgs.gov. With permission.)

© 2006 by Taylor & Francis Group, LLC

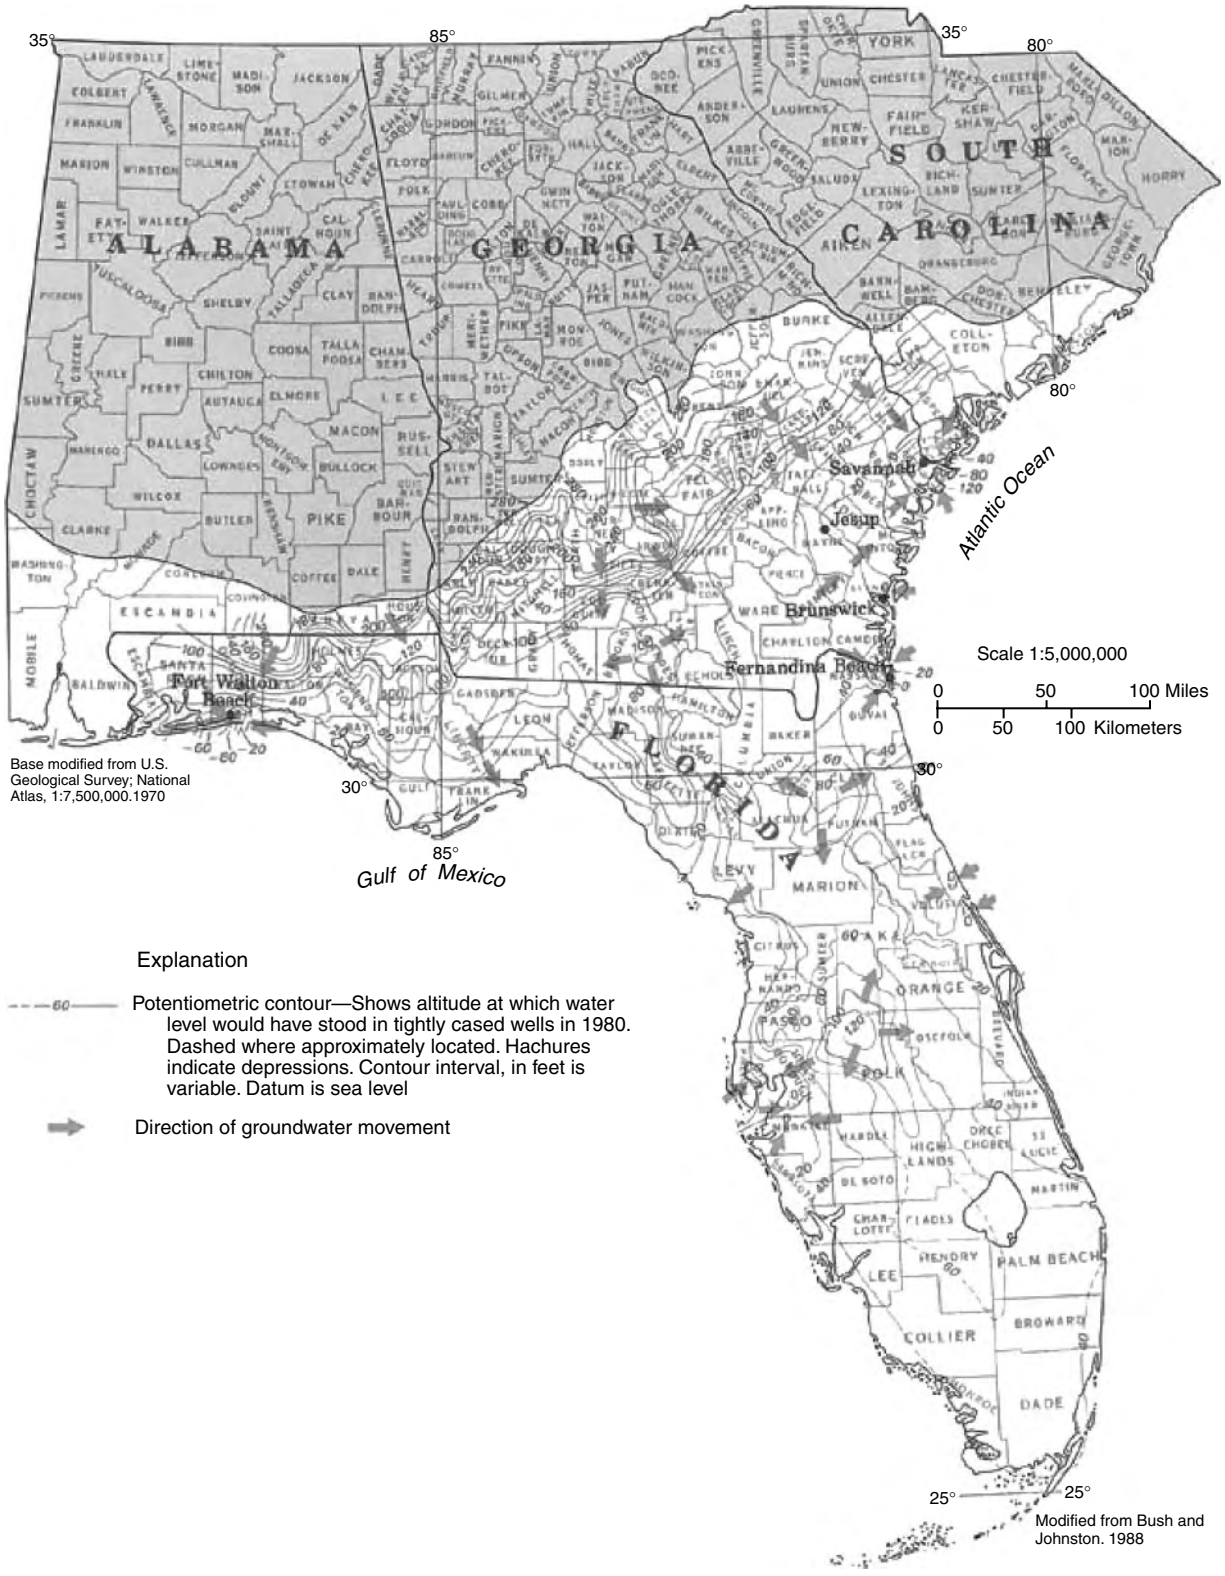

**Figure 11I.131** Withdrawals from the Floridan aquifer system had developed deep cones of depression in several places by 1980. The direction of groundwater flow was locally changed, even reversed in places, by the pumpage. (From www.capp.water.usgs.gov. With permission.)

**Table 11I.168 Criteria for Effective Groundwater Protection Programs**

| Criterion | Scope |
|---|---|
| Goals and objectives | Protection programs should clearly define goals and objectives, reflect understanding of groundwater problems, have adequate legal authority, and have criteria for evaluating program success and the need for modifications |
| Information | Programs should be based on information that permits resources and issues to be defined and preventive strategies to be evaluated |
| Technical basis | Effective programs require a sound technical basis with which to link actions to results |
| Source elimination and control | Long-term program goal should be to eliminate or reduce the sources of groundwater contamination |
| Intergovernmental and interagency linkages | Comprehensive protection program must link actions at every level of government into coherent, coordinated action |
| Effective implementation and adequate funding | Programs must have adequate legal authority, resources, and stable institutional structures to be effective |
| Economic, social, political, and environmental impacts | A preventive program assumes that groundwater protection is the least costly strategy in the long run. Protective actions should be evaluated in terms of their economic, social, political, and environmental effects |
| Public support and responsiveness | Programs must be responsive and credible to the public |

*Source*: From U.S. Geological Survey, *National Water Summary 1986;* modified from National Research Council, 1986.

© 2006 by Taylor & Francis Group, LLC

**Table 11I.169 Common Elements of "MATURE" Groundwater Protection Programs**

**Setting Goals and Documenting Progress**

- Groundwater protection goals which accounts for present and future uses of the resource
- Yearly action plan for achieving the goal, which includes a mechanism for evaluating progress toward accomplishing the goal and provides for periodic review

**Characterizing the Resource and Setting Priorities for Actions**

- Comprehensive assessment of aquifer systems and their associated recharge and discharge areas
- Procedure for inventorying and ranking potential sources of contamination that may cause an adverse effect on human health, or ecological systems
- Process used for setting priorities for actions taken to protect or remediate the resource, such as a use designation/classification scheme that considers use, value, vulnerability, yield, current quality, etc., including wellhead protection and cost benefit analyses

**Developing and Implementing Prevention and Control Programs**

- A Coordinated pollution prevention and source reduction program aimed at eliminating and reducing the amount of pollution that could potentially affect groundwater, including wellhead and recharge area protection programs, sitting criteria, improved management practices and technology standards, etc.
- Enforceable quality standards that are health based for drinking water supplies and ecologically based in areas where groundwater is closely hydrologocally connected to surface water (Note: For actions under State law that are independent of any Federally authorized program, it is the State's prerogitive to determine whether to establish its own standards or to use EPA's standard)
- Regulatory and nonregulatory authorities to control sources of contamination currently under State or local jurisdictions, e.g., permitting, sitting and zoning authorities on State and local level
- Monitoring, data collection, and data analysis activities to determine the extent of contamination, update control strategies and assess any needed changes in order to meet the groundwater protection goal
- Compliance and enforcement authorities given to the appropriate State and local officials through legislative or administrative processes
- Water well programs, including private drinking water wells, covering areas such as well testing, driller certification, well construction, and plugging abandoned wells
- Statement of how Federal, State and local resources will be used to adequately fund the program
- Public participation activities to involve the public in the development and implementation of the program

**Defining Roles Within the State and the Relationship to Federal Programs**

- Delineation of State agencies' responsibilities in the groundwater program covering areas such as planning, implementation, enforcement and coordination
- Statement indicating how the State will or does provide local governments with authorities to address local groundwater protection issues
- Statement of the State's role under groundwater related EPA statues, including RCRA, CERCLA SDWA, CWA, and FIFRA, e.g., EPA-approved program such as a RCRA authorization should be listed and integrated, as a part of the State's overall groundwater protection program yet continue operating as free-standing programs
- Mechanisms for dealing with other Federal agencies that affect State groundwater programs (e.g., MOUs or other arrangements with USDA, DOI, DOD)
- Statement indicating how the State intends to integrate water quantity and quality management
- Corodination of groundwater programs with other relevant natural resource protection programs, including surface water managment

## SECTION 11J WATER CONSERVATION

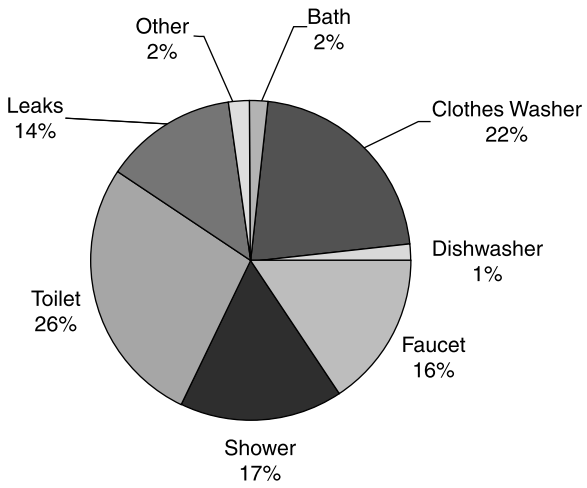

**Figure 11J.132** Indoor per capita use by fixture source. (From www.usagreen.org.)

**Table 11J.172 Federal Water Efficiency Standards for Plumbing Fixtures and Fixture Fittings Required by the U.S. Energy Policy Act of 1992**

| Product | Maximum Water Use | Compliance Date |
|---|---|---|
| Toilets[a] | | |
| Gravity tank-type | 1.6 gal/flush | 1/1/94 |
| Flushometer tank | 1.6 gal/flush | 1/1/94 |
| Electromechanical hydraulic | 1.6 gal/flush | 1/1/94 |
| Blowout[b] | 3.5 gal/flush | 1/1/94 |
| Commercial gravity tank-type, white two-piece[d] | 3.5 gal/flush | 1/1/94 to 12/31/96 |
| Commercial gravity tank-type, white two-piece[d] | 1.6 gal/flush | 1/1/97 |
| Flushometer valve[c] | 1.6 gal/flush | 1/1/97 |
| Uritials[b,c] | 1.0 gal/flush | 1/1/94 |
| Showerheads[d] | 2.5 gpm (80 psi) | 1/1/94 |
| Faucets[d] | | |
| Lavatory[d] | 2.5 gpm (80 psi) | 1/1/94 |
| Lavatory replacement aerators | 2.5 gpm (80 psi) | 1/1/94 |
| Kitchen | 2.5 gpm (80 psi) | 1/1/94 |
| Kitchen replacement aerators | 2.5 gpm (80 psi) | 1/1/94 |
| Metering | 0.25 gal/cycle (80 psi) | 1/1/94 |

[a] Compliance with ASME–ANSI Standards A 112.19.2M-1990 and A112.19.6–1990.
[b] No data on conversion to lower volume.
[c] Must bear conspicuous label that states “For Commercial Use Only.”
[d] Compliance with ASME–ANSI Standard A112.18.1M-1989.

**Table 11J.175 Water Conservation Techniques**

Inspect the plumbing system for leaks
Install flow control devices in showers
Turn off all water during vacations or long periods of absence
Check the frequency with which home water softening equipment regenerates and backwashes. It can use as much as 100 gallons of water each time it does this
Insulate hot water pipes to avoid having to clear the "hot" line of cold water during use
Check all faucets, inside and out, for drips. Make repairs promptly. These problems get worse—never better
Reduce the volume of water in the toilet flush tank with a quart plastic bottle filled with water (bricks lose particles, which can damage the valve)
Never use the toilet as a trash basket for facial tissues, etc. Each flush uses 5 to 7 gallons of water. Items carelessly thrown in could clog the sewage disposal system
Accumulate a full laundry load before washing, or use a lower water level setting
Take showers instead of baths
Turn off shower water while soaping body, lathering hair, and massaging scalp
Bottle and refrigerate water to avoid running excess water from the lines to get cold water for meals. Shake bottle before serving to incorporate air in the water so that it doesnot taste flat
To get warm water, turn hot water on first; then add cold water as needed. This is quicker this way and saves water, too
Wash only full loads of dishes. A dishwasher uses about 9 to 13 gallons to water per cycle
When washing dishes by hand, use one pan of soapy water for washing and a second pan of hot water for rinsing. Rinsing in a pan requires less water than rinsing under a running faucet
Use rinse water—"gray water"—saved from bathing or clothes washing to water indoor plants. Do not use soapy water on indoor plants. It could damage them
Vegetables requiring more water should be grouped together in the garden to make maximum use of water applications
Mulch shrubs and other plants to retain moisture in the soil longer
Spread leaves, lawn clippings, chopped bark or cobs, or plastic around the plants. Mulching also controls weeds that complete with garden plants for water
Mulches should permit water to soak into the soil
Try "trickle" or "drip" irrigation systems in outdoor gardens. These methods use 25 to 50 percent less water than hose or sprinkler methods. The tube for the trickle system has many tiny holes to water closely spaced plants. The drip system tubing contains holes or openings at strategic places for tomatoes and other plants that are more widely spaced
Less frequent but heavier lawn watering encourages a deeper root system to withstand dry weather better
Plan landscaping and gardening to minimize watering requirements
When building or remodeling, consider
— Installing smaller than standard bath tubs to save water
— Locating the water heater near where hottest water is needed
— usually in the kitchen/laundry area

**Table 11J.176 Means to Improve Effective Use of Water and Energy for Irrigation**

| | |
|---|---|
| Direct Means | More efficient irrigation |
| 1. Reduce water applied | More uniform irrigation |
| | Better use of natural rainfall |
| | Reduction of losses |
| | Compromise yield (Optimize yield ratio) |
| 2. Reduce operating pressures | Use different irrigation devices |
| | Use different irrigation practices |
| Indirect Means | |
| 1. Change irrigation practices to allow | Less tillage |
| | Fewer secondary operations |
| | Spraying |
| | Fertilizing |
| | Cultivating |
| 2. Change irrigation practices to prevent | Need for ripping |
| | Need for land preparation |
| | Loss of fertilizer and nutrients |
| 3. Substitute irrigation for other more energy consumptive operations | Environmental control |
| | Sprinkling for frost protection vs. wind machines or heaters |
| 4. Improve yields thereby reducing acreage needed | Control amount and timing of water application |
| | Irrigation scheduling |
| 5. Time irrigation to better use limited energy resource | Peak use avoidance (load management). Irrigation scheduling |

**Table 11J.178 A Selection of Drought-Tolerant Landscape Plants**

| | |
|---|---|
| **Shade Trees** | |
| Red Maple | (Acer rubrum) (wet or dry situations, and depends on seed source) |
| Green Ash | (Fraxinus pennsylvanica) |
| Ginkgo | (Ginkgo biloba) |
| Tupelo | (Nyssa sylvatica) |
| Red Oak | (Quercus rubra) |
| Pin Oak | (Quercus palustris) |
| Zelkova | (Zelkova serrata) |
| Japanese Pagodatree | (Sophora japonica) |
| Golden Raintree | (Kolreuteria paniculata) |
| Japanese Tree Lilac | (Syringa reticulata) |
| Crapemyrtle | (Lagerstroemia indica) |
| Tulip Poplar | (Liriodendron tulipfera) |
| **Evergreen Trees** | |
| Atlas Cedar | (Cedrus atlantica) |
| Colorado Blue Spruce | (Picea pungens glauca) |
| American Holly | (Ilex opaca) |
| Red Cedar | (Juniperus virginiana) |
| **Deciduous Shrubs** | |
| Red Chokeberry | (Aronia arbutifolia) |
| Smoketree | (Cotinus coggyria) |
| Pinxterbloom Azalea | (Rhododendron nudiflorum) |
| Flameleaf Sumac | (Rhus copallina) |
| Burning Bush | (Euonymus alatus) |
| Fragrant Wintersweet | (Chimonanthus praecox) |
| Japanese Barberry | (Berberis thunbergii) |
| **Evergreen Shrubs** | |
| Heavenly Bamboo | (Nandina domestica) |
| False-Holly | (Osmanthus heterophyllus) |
| Mugo Pine | (Pinus mugo) |
| Pyracantha | (Pyracantha coccinea) |
| Glossy Abelia | (Abelia x grandiflora) |
| Junipers | (Juniperus species) |
| **Herbaceous Plants** | |
| *May–June Blooming* | |
| Cushion Spurge | (Euphorbia sp) |
| Candy tuft | (Iberis sempervirens) |
| Dwarf Crested Iris | (Iris cristata) |
| Sea Pink | (Armeria maritima) |
| Perennial Bachelor's Button | (Centaurea montana) |
| Gas Plant | (Dictamnus albus) |
| Day Lily | (Hemerocallis) |
| Beaded Iris | (Iris sp.) |
| Iceland Poppy | (Papaver nudicaule) |
| *June–Sept Blooming* | |
| Black Eyed Susan | (Rudbeckia hirta) |
| Yarrow | (Achillea filipendulina) |
| Coreopsis | (Corepsis lanceolata) |
| Coreopsis | (Coreopsis verticillata) |
| Foxtail Lily | (Eremurus x isabellinus) |
| Blanket Flower | (Gaillardia x grandiflora) |
| Perennial Baby's Breath | (Gypsophila paniculata) |
| Red-Hot Poker | (Kniphofia uvaria) |
| Moneywort | (Lysimachia nummularia) |
| Perennial Salvia | (Salvia x superba) |
| Yucca | (Yucca filamentosa) |
| Blue Fescue | (Festuca glauca) |
| Hens and Chicks | (Sempervivum tectorum) |
| Goldenrod | Spp. (Solidago) |
| Lamb's Ear | (Stachys byzantina) |
| Pearly Everlasting | (Anaphalis margaritacea) |
| Silvermound | (Artemesia schmidtiana) |
| Liatris | (Liatris spicata) |
| Sedum | (Sedum spectabile) |

*Note:* The plants listed are some that generally survive well under dry, hot conditions that would normally harm most other plants. It must be kept in mind that even these plants will require regular watering during the first season they are planted. The frequency of watering of established landscapes will vary based on the plant species, its conditions and maturity and soil conditions of the site.

# SECTION 12A FEDERAL AGENCIES

**Table 12A.1 Federal Agencies Concerned with Water-Related Matters**

**Federal Citizen Information Center (http://www.firstgov.gov)**
Phone: (800) 333-4636
Since 1970, the Federal Citizen Information Center (FCIC) has provided information related to government services. Serves as the official gateway to all government information

**Bureau of Land Management (http://www.blm.gov)**
Office of Public Affairs, 1849 C Street, Room 406-LS, Washington, DC 20240, Phone: (202) 452-5125

**Bureau of Reclamation (http://www.usbr.gov)**
Commissioner, Bureau of Reclamation, 1849 C Street NW, Washington DC 20240-0001, Phone: (202) 513-0501

**Council on Environmental Quality (http://www.whitehouse.gov/ceq)**
722 Jackson Place, N.W., Washington, DC 20503, Phone: (202) 395-5750

**Extension Service, Department of Agriculture (reeusda.gov)**
1400 Independence Ave., SW, Washington, DC 20250-0003, Phone: (202) 720-7441

**Federal Emergency Management Agency (http://www.fema.gov)**
500 C Street, SW, Washington, DC 20472, Phone: (202) 566-1600

**Federal Highway Administration (FHWA) (http://www.fhwa.dot.gov)**
Federal Highway Administration, 400 Seventh Street, SW, Washington, DC 20590, FHWA Personnel Locator (202) 366-0537

**Forest Service, U.S. Department of Agriculture (http://www.fs.fed.us/)**
USDA Forest Service, 1400 Independence Ave., SW, Washington, DC 20250-0003, Phone: (202) 205-8333

**Minerals Management Service (http://www.mms.gov)**
Chief of Public Affairs, 1849 C Street, N. W., Washington, DC 20240, Phone: (202) 208-3985

**National Geodetic Survey (NGS) (http://www.ngs.noaa.gov)**
NGS Information Services, NOAA, N/NGS12, National Geodetic Survey, SSMC-3, #9202, 1315 East-West Highway, Silver Spring, MD 20910-3282, Phone: (301) 713-3242, Fax: (301) 713-4172

**National Marine Fisheries Service (http://www.nmfs.noaa.gov)**
NOAA Fisheries, 1315 East West Highway, SSMC3, Silver Spring, MD 20910, Phone: (301) 713-2239

**National Oceanic and Atmospheric Administration (NOAA) (http://www.noaa.gov)**

**Table 12A.2 U.S. Army Corps of Engineers**

The U.S. Army Corps of Engineers is the Federal government's largest water resources development and management agency. The Corps began its water resources (Civil Works) program in 1824 when Congress for the first time appropriated money for improving navigation. Since then, the Corps has been involved in improving river navigation and harbors, reducing flood damage and controlling beach erosion. At projects designed for these missions, the Corps also generates hydropower; supplies water for cities, industry and agriculture; and manages a recreation and natural resources program. The Corps also has a legal mandate to regulate development by others in the Nation's waterways and wet lands, and at sea and lakeshores.

The Civil Works Program is serviced by 40 district offices, along with the divisions that supervise the districts, and the Washington Headquarters (202-761-1878).

### EPA Headquarters

**Standard Mailing Address**

Environmental Protection Agency, Ariel Rios Building, 1200 Pennsylvania Avenue, N.W., Washington, DC 20460, Phone: (202) 272-0167

**Overnight Package Delivery Mailing Addresses**

Environmental Protection Agency, Ariel Rios Building, 1200 Pennsylvania Avenue N.W., Washington, DC 20004

Environmental Protection Agency, EPA East Building, 1201 Constitution Avenue N.W., Washington, DC 20004

Environmental Protection Agency, EPA West Building, 1301 Constitution Avenue N.W., Washington, DC 20004

Environmental Protection Agency, Ronald Reagan Building, 1300 Pennsylvania Avenue N.W., Washington, DC 20004

### EPA Regional Offices

**Region 1 (CT, MA, ME, NH, RI, VT)**

Environmental Protection Agency, 1 Congress St. Suite 1100, Boston, MA 02114-2023, http://www.epa.gov/region01/, Phone: (617) 918-1111, Fax: (617) 565-3660, Toll free within Region 1: (888) 372-7341

**Region 2 (NJ, NY, PR, VI)**

Environmental Protection Agency, 290 Broadway, New York, NY 10007-1866, http://www.epa.gov/region02/, Phone: (212) 637-3000, Fax: (212) 637-3526

**Region 3 (DC, DE, MD, PA, VA, WV)**

Environmental Protection Agency, 1650 Arch Street, Philadelphia, PA 19103-2029, http://www.epa.gov/region03/, Phone: (215) 814-5000, Fax: (215) 814-5103, Toll free: (800) 438-2474, Email: r3public@epa.gov

**Region 4 (AL, FL, GA, KY, MS, NC, SC, TN)**

Environmental Protection Agency, Atlanta Federal Center, 61 Forsyth Street, SW, Atlanta, GA 30303-3104, http://www.epa.gov/region04/, Phone: (404) 562-9900, Fax: (404) 562-8174, Toll free: (800) 241-1754

**Region 5 (IL, IN, MI, MN, OH, WI)**

Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, IL 60604-3507, http://www.epa.gov/region5/, Phone: (312) 353-2000, Fax: (312) 353-4135, Toll free within Region 5: (800) 621-8431

**Region 6 (AR, LA, NM, OK, TX)**

Environmental Protection Agency, Fountain Place 12th Floor, Suite 1200, 1445 Ross Avenue, Dallas, TX 75202-2733, http://www.epa.gov/region06/, Phone: (214) 665-2200, Fax: (214) 665-7113

**Region 7 (IA, KS, MO, NE)**

Environmental Protection Agency, 901 North 5th Street, Kansas City, KS 66101, http://www.epa.gov/region07/, Phone: (913) 551-7003, Toll free: (800) 223-0425

**Region 8 (CO, MT, ND, SD, UT, WY)**

Environmental Protection Agency, 999 18th Street Suite 500, Denver, CO 80202-2466, http://www.epa.gov/region08/, Phone: (303) 312-6312, Fax: (303) 312-6339, Toll free: (800) 227-8917, Email: r8eisc@epa.gov

**Region 9 (AZ, CA, HI, NV)**

Environmental Protection Agency, 75 Hawthorne Street, San Francisco, CA 94105, http://www.epa.gov/region09/, Phone: (415) 947-8000, (866) EPA-WEST (toll free in Region 9), Fax: (415) 947-3553, Email: r9.info@epa.gov

**Region 10 (AK, ID, OR, WA)**

Environmental Protection Agency, 1200 Sixth Avenue, Seattle, WA 98101, http:www.epa.gov/region10/, Phone: (206) 553-1200, Fax: (206) 553-0149, Toll free: (800) 424-4372

**Table 12A.5 EPA Libraries and Information Centers**

The U.S. Environmental Protection Agency {EPA) is comprised of a Headquarters Office in Washington, DC, 10 Regional offices, and 13 specialized, scientific laboratories located throughout the country. There are 28 EPA network libraries located in Headquarters and all Regional offices and laboratories to support this organizational structure.

The libraries contain a combined collection of over 122,422 books, 5,414 journals, 377,217 hard copy reports, 3,075,443 documents on microfilm and microfiche, 9,000 journal article reprints and 2,000 maps. Most of the EPA library network's holdings are cataloged on OCLC, a national cataloging system.

**Headquarters Library — Washington, D.C.**
Lucy Park, Library Manager, ASRC Aerospace Corp., contractor to U.S. EPA, 1200 Pennsylvania Ave, NW (3404T), Washington, DC 20460, Phone:(202) 566-0556, http://www.epa.gov/natlibra/hqirc/

**U.S. EPA Office of Congressional & Intergovernmental Relations**
ATTN: Craig Freer, 1200 Pennsylvania Avenue, NW, Mail Code 1301A, Washington, D.C. 20460, Phone: (202) 564-5200, Fax: (202) 501-1519, http://www.epa.gov/ocirpage/leglibrary/index.htm

**Office of General Counsel Law Library**
U.S. Environmental Protection Agency, Office of General Counsel Law Library, 1200 Pennsylvania Ave., N.W, Ariel Rios North Building, Room 1315, Washington, D.C. 20460, Phone: (202) 564-3971, http://www.epa.gov/natlibra/libraries/law.htm

**Prevention, Pesticides & Toxic Substances (OPPTS) Chemical Library**
EPA Headquarters, 1301 Constitution Avenue NW, 3231 EPA West, Washington, D.C. 20004, Phone: (202) 566-0800, http://www.epa.gov/opptintr/library/

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 Databases Used by EPA Libraries**

**Accidental Release Information Program (ARIP)**
The *Accidental Release Information Program (ARIP) database (July, 1999)* is contained in a zip file (around 1 MB) that contains the ARIP database file (DBF format) and supporting documentation. http://yosemite.epa.gov/oswer/ceppoweb.nsf/content/ds-epds.htm#arip

**Acid Rain Program**
Acid Rain Program quarterly reports use Electronic Data Reporting (EDR) format version 2.1 and are due 30 days following every calendar quarter. http://www.epa.gov/airmarkets/reporting/#arp

**Agricultural Pollution Prevention**
Shows how farmers can save money and reduce pollution by sensible use of fertilizers, pesticides and herbicides. agpp.html. http://www.epa.gov/seahome/agpp.html

**Air CHIEF CD-ROM, Version 11 April 2004 — Released June 2004**
The U. S. Environmental Protection Agency is working to provide current emissions data to federal, state, and local regulatory agencies, businesses, and the general public. The Air Clearing House For Inventories And Emission Factors (*Air CHIEF*) gives the public and private sector user's access to air emission data specific to estimating the types and quantities of pollutants that may be emitted from a wide variety of sources. Updated annually, *Air CHIEF* offers thousands of pages contained in some of EPA's most widely used and requested documents. Included are the U.S. EPA Emission Inventory Group's most popular emission estimation tools. http://www.epa.gov/ttn/chief/software/airchief/index.html

**Air Facility System (AFS)**
The Air Facility System (AFS) contains compliance and permit data for stationary sources regulated by the U.S. EPA and state and local air pollution agencies. http://www.epa.gov/Compliance/planning/data/air/afssystem.html

**Air Quality Index**
The Air Quality Index (AQI) is an index for reporting daily air quality. It tells you how clean or polluted your outdoor air is, and what associated health effects might be a concern for you. http://www.epa.gov/airnow/background.html

**AQS Web Home**
AQS has been migrated and deployed on the Web to eliminate the installation and updates of the AQS software on users' machines and to eliminate the need for the SecuRemote software. epa.gov/ttn/airs/airsaqs/aqsweb/aqswebhome.html

**AirData**
The site gives you access to air pollution data for the entire United States. AirData produces reports and maps of air pollution data based on criteria that you specify. http://www.epa.gov/air/data/index.html

**AIRS Executive Software**
A personal computer software and database that contains air pollution data extracted from the AIRS database. The Windows interface makes it easy to generate many different reports, charts, and maps. AIRS Executive for Windows provides ambient air quality data from monitoring sites across the U.S.A., and pollutant emissions estimates for stationary sources regulated by the EPA. AIRS Executive for Windows also includes ambient air quality data from about 50 nations that voluntarily provided data in the early 1990s to the GEMS/AIR Programme sponsored by the United Nations World Health Organization. http://www.epa.gov/airs/aexec.html

**Alternatives for Unsewered Communities**
This program is an extensive guide to the facilities planning process for small communities. Topics covered include needs documentation, development of alternative solutions and selection of the best response, as well as treatment management and implementation. An improved and expanded section on sludge is included as well. http://www.epa.gov/seahome/unsewer.html

**Applicability Determination Index**
EPA is committed to helping entities comply with regulatory requirements and improve environmental performance through compliance assistance (CA). Compliance assistance is defined by EPA to include activities, tools or technical assistance which provide clear and consistent information for helping the regulated community understand and meet its obligations under environmental laws and regulations. http://cfpub.epa.gov/adi/

**AQUATOX Model**
AQUATOX is a simulation model for aquatic systems that predicts the fate of various pollutants, such as nutrients and organic chemicals, and their effects on the ecosystem, including fish, invertebrates, and aquatic plants. AQUATOX is a valuable tool for ecologists, biologists, water quality modelers, and anyone involved in the performing ecological risk assessments for aquatic ecosystems. http://www.epa.gov/waterscience/models/aquatox/

**ArcHydro**
Redlands, California — ArcHydro: GIS for Water Resources, the latest title from ESRI Press, describes how a water resources data model, ArcHydro, is being applied within geographic information system (GIS) technology to provide a wide variety of hydrologic solutions. esri.com/news/releases/02_3qtr/archydro.html

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**ASSESS Software**
A computer-based tool for statistically assessing measurement errors in the collection of soil samples. http://www.epa.gov/nerlesd1/databases/assess/abstract.htm

**Assessment Database Software**
The Assessment Database (ADB) is a relational database application for tracking water quality assessment data, including use attainment, and causes and sources of impairment. States need to track this information and many other types of assessment data for thousands of waterbodies, and integrate it into meaningful reports. The ADB is designed to make this process accurate, straightforward and user-friendly for participating States, territories, tribes and basin commissions. http://www.epa.gov/waters/adb/

**BEACH Watch**
National Health Protection Survey of Beaches for the 2002 Swimming Seas. http://yosemite.epa.gov/water/beach2003.nsf

**Benchmark Dose Software (BMDS)**
Benchmark dose risk assessment software (BMDS) was designed by EPA to generate dose-response curves and facilitate the analysis, interpretation and synthesis of toxicological data. lhttp://cfpub2.epa.gov/ncea/cfm/recordisplay.cfm

**Best Management Practices for Soil Erosion**
This program uses graphics and hypertext to provide information about soil erosion. Information is provided about the severity of erosion worldwide, in the U.S. and in the Midwest in particular. The types of water erosion are described and illustrated along with detailed descriptions of management and structural practices to control erosion.erosion.html http://www.epa.gov/seahome/erosion.html

**Better Assessment Science Integrating Point & Nonpoint Sources (Basins)**
A multi-purpose environmental analysis system that integrates a geographical information system (GIS), national watershed data, and state-of-the-art environmental assessment and modeling tools into one convenient package. http://www.epa.gov/waterscience/basins/

**BIOPLUME III Software**
BIOPLUME III is a 2D, finite difference model for simulating the natural attenuation of organic contaminants in groundwater due to the processes of advection, dispersion, sorption, and biodegradation. Biotransformation processes are potentially important in the restoration of aquifers contaminated with organic pollutants. http://www.epa.gov/ada/csmos/models/bioplume3.html

**Biennial Reporting System (BRS)**
The Hazardous Waste Report (Biennial Report) collects data on the generation, management, and minimization of hazardous waste. This provides detailed data on the generation of hazardous waste from large quantity generators and data on waste management practices from treatment, storage, and disposal facilities. http://www.epa.gov/enviro/html/brs/

**Biogenic Emissions Inventory System (BEIS)**
BEIS estimates volatile organic compound (VOC) emissions from vegetation and nitric oxide (NO) emissions from soils. Non-air-quality model users may wish to consider GloBEIS. http://www.epa.gov/asmdnerl/biogen.html

**Building for Environmental and Economic Sustainability (BEES)**
BEES software provides a technique for selecting cost-effective, environmentally preferable building products. BEES reduces complex, science-based technical content (e.g. over 400 environmental flows from raw material acquisition through product disposal) to decision-enabling results and delivers them in a graphical format. http://www.epa.gov/oppt/epp/tools/bees.htm

**Catalog of Federal Funding Sources for Watershed Protection**
A searchable database of financial assistance sources (grants, loans, cost-sharing) available to fund a variety of watershed protection projects. http://cfpub.epa.gov/fedfund/

**Center for Exposure Assessment Modeling Software**
CEAM provides proven predictive exposure assessment techniques for aquatic, terrestrial, and multimedia pathways for organic chemicals and metals. http://www.epa.gov/ceampubl/

**Center for Subsurface Modeling Support (CSMoS)**
The Center for Subsurface Modeling Support (CSMoS) provides public domain groundwater and vadose zone modeling software and services to public agencies and private companies throughout the nation. The primary aims of CSMoS are to provide direct technical support to EPA and State decision makers in subsurface model applications and to manage and support the groundwater models and databases resulting from the research at NRMRL. http://www.epa.gov/ada/csmos.html

**Central Data Exchange**
The Central Data Exchange (CDX) enables fast, efficient, and more accurate environmental data submissions from state and local governments, industry and tribes to the Environmental Protection Agency (EPA) and participating program offices. EPA's CDX is the point of entry on the Environmental Information Exchange Network (Exchange Network) for environmental data submissions to the Agency. http://www.epa.gov/cdx/

*(Continued)*

**Table 12A.6 (Continued)**

**Certification and Fuel Economy Information System (CFEIS)**
Information about the process of entering data into the EPA's Certification and Fuel Economy Information System for light-duty vehicle and truck manufacturers. http://www.epa.gov/otaq/cfeis.htm

**CHEMFLO Software**
A program that enables users to simulate water movement and chemical transport in unsaturated soils by solving the Richards equation (water) and the convection-dispersion equation (chemicals). http://www.epa.gov/nerlesd1/databases/chemflo/access.htm

**Chemical Contamination in Fish**
A Windows based update of the original FISH program, it contains video clips illustrating concepts such as bioaccumulation, and risk reduction techniques (including cooking and filleting tips). Users can search a list of chemical contaminants and learn about their effects, or see photos and video of target species. Included are an updated list of contaminants from 1997 guidance, as well as references to an online database of fish advisories and state contacts. http://www.epa.gov/seahome/fish.html

**Chemical Hazard Information Profiles (CHIPS)**
CHIPS summarize readily available information on health and environmental effects and exposure relating to a specific chemical substance. The database contains information about chemical substances that have been referenced in these profiles. The Existing Chemicals Program currently managed by OPPT, has superseded these profiles. http://oaspub.epa.gov/srs/srs_proc_qry.navigate?P_REG_AUTH_ID=1&P_DATA_ID=11681&P_VERSION=1

**Chemical Screening Tool For Exposures & Environmental Releases (ChemSTEER)**
Estimates occupational inhalation and dermal exposure to a chemical during industrial and commercial manufacturing, processing, and use operations involving the chemical. Estimates releases of a chemical to air, water, and land that are associated with industrial and commercial manufacturing, processing, and use of the chemical. http://www.epa.gov/opptintr/exposure/docs/chemsteer.htm

**Children's Environmental Health & Safety Inventory of Research (CHESIR)**
Children's Environmental Health and Safety Inventory of Research is a publicly accessible database created and maintained to ensure that researchers and Federal research agencies have access to information on all research conducted or funded by the Federal Government that is related to adverse health risks in children resulting from exposure to environmental health risks or safety risks. http://oaspub.epa.gov/chehsir/chehsir.page

**Chemicals On Reporting Rules (CORR) Database**
The CORR database contains information on chemicals which are regulated under specific sections of the Toxic Substances Control Act (TSCA), or section 313 of the Emergency Planning and Community Right-to-Know Act (EPCRA). http://www.epa.gov/oppt/CORR/

**Clean Water State Revolving Fund National Information Management System**
The Clean Water State Revolving Fund (CWSRF) program is an innovative method of financing a wide range of projects related to water quality. The CWSRF National Information Management System produces annual reports that provide a record of progress and accountability for the program. http://www.epa.gov/r5water/cwsrf/

**Clean Watersheds Needs Survey**
The Office of Wastewater Management conducts the Clean Watersheds Needs Survey (CWNS) on a periodic basis. The CWNS, a joint effort between States and EPA, is conducted in response to Section 205(a) and 516 of the Clean Water Act. The CWNS has information on publicly-owned wastewater collection and treatment facilities, facilities for control of sanitary sewer overflows (SSOs), combined sewer overflows (CSOs), stormwater control activities, nonpoint sources, and programs designed to protect the nation's estuaries. http://www.epa.gov/owm/mtb/cwns/

**COMMUTER Model**
Reports and information that relate to the U.S. Department of Transportation's Congestion Mitigation and Air Quality Improvement Program, the environmental impacts of transportation, induced travel/induced demand, intelligent transportation systems, EPA's Commuter Model, and other transportation/air quality issues. http://www.epa.gov/otaq/transp/traqmodl.htm

**Comparative Risk Assessment Software**
Comparative risk assessment is a methodology which uses sound science, policy, economic analysis and stakeholder participation to identify and address the areas of greatest environmental risks and provide a framework for prioritizing environmental problems. http://www.epa.gov/seahome/comprisk.html

**Comply Software**
A computerized screening tool for evaluating radiation exposure from atmospheric releases of radionuclides. May be used for demonstrating compliance with some EPA and Nuclear Regulatory Commission regulations. http://www.epa.gov/radiation/assessment/comply.html

**Computational Toxicology**
Computational toxicology is the integration of modern computing and information technology with molecular biology and chemistry to improve EPA's prioritization of data requirements and risk assessments for toxic chemicals. http://www.epa.gov/comptox/

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**Computer Aided Management of Emergency Operations (CAMEO)**
CAMEO® is a system of software applications used widely to plan for and respond to chemical emergencies. CAMEO can be used to access, store, and evaluate information critical for developing emergency plans and support regulatory compliance by helping users meet the chemical inventory reporting requirements of the Emergency Planning and Community Right-to-Know Act (EPCRA, also known as SARA Title III). http://www.epa.gov/ceppo/cameo/

**Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)**
Superfund is a program administered by the EPA to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. http://www.epa.gov/enviro/html/cerclis/

**Confidence Interval Calculation for Source Partitioning Using Stable Isotopes**
ISOERROR1_04 is a Microsoft Excel 2000™ spreadsheet which calculates estimates and confidence intervals of source proportional contributions to a mixture, using stable isotope analyses. http://www.epa.gov/wed/pages/models/isotopes/isoerror1_04.htm

**Consolidated Human Activity Database (CHAD)**
Consolidated Human Activity Database (CHAD) contains data obtained from pre-existing human activity studies that were collected at city, state, and national levels. CHAD is intended to be an input file for exposure/intake dose modeling and/or statistical analysis. http://www.epa.gov/chadnet1/

**Cornell Mixing Zone Expert System (CORMIX)**
Cornell Mixing Zone Expert System (CORMIX) is no longer distributed or supported by the EPA Center for Exposure Assessment Modeling (CEAM). Information on a Windows version of CORMIX is available from the CORMIX Home Page. http://www.epa.gov/ceampubl/swater/cormix/index.htm

**Decentralized Onsite Management for Treatment of Domestic Wastes Software**
This program provides operation and maintenance information for on-site wastewater treatment systems, such as septic systems. http://www.epa.gov/seahome/decent.html

**DEFT Software**
A program that allows users to evaluate the financial feasibility of incorporating selected data quality objective (DQO) constrains into a statistical sampling design before developing a final plan — the program assists with the seven-step DQO process, which is used to develop statistical sampling design plans. http://www.epa.gov/nerlesd1/databases/deft/access.htm

**Delisting Risk Assessment Software (DRAS)**
The Delisting Risk Assessment Software (DRAS) is a Windows-based computer program that predicts risks to human health and the environment from the disposal of wastes to a landfill or surface impoundment. The DRAS is used to calculate potential chemical releases, fate and transport of the chemicals and to determine risk associated with exposure to the chemicals released. epa.gov/region6/6pd/rcra_c/pd-o/dras/dras.htm

**DFLOW Software**
DFLOW is a Windows-based tool developed to estimate user selected design stream flows for low flow analysis and water quality standards. http://epa.gov/waterscience/dflow/

**Dietary Exposure Potential Model**
A Model Using Extant Food Databases to Estimate Dietary Exposure to Chemical Residues. http://www.epa.gov/nerlcwww/depm.htm

**Drinking Water Contaminant Candidate List**
The drinking water Contaminant Candidate List (CCL) is the primary source of priority contaminants for evaluation by EPA's drinking water program. The Safe Drinking Water Act (SDWA), as amended in 1996, requires EPA to publish a list of contaminants every five years which, at the time of publication, are not subject to any proposed or promulgated national primary drinking water regulations. Contaminants on the CCL are known or anticipated to occur in public water systems and may require regulations under SDWA. http://www.epa.gov/safewater/ccl/cclfs.html

**Ecological Structure Activity Relationships (ECOSAR)**
ECOSAR (Ecological Structure Activity Relationships) is a personal computer software program that is used to estimate the toxicity of chemicals used in industry and discharged into water. The program predicts the toxicity of industrial chemicals to aquatic organisms such as fish, invertebrates, and algae by using Structure Activity Relationships (SARs). The program estimates a chemical's acute (short-term) toxicity and, when available, chronic (long-term or delayed) toxicity. http://www.epa.gov/opptintr/newchems/21ecosar.htm

**ECOTOX Database**
The ECOTOXicology database is a source for locating single chemical toxicity data for aquatic life, terrestrial plants and wildlife. ECOTOX integrates three toxicology effects databases: AQUIRE (aquatic life), PHYTOTOX (terrestrial plants), and TERRETOX (terrestrial wildlife). These databases were created by the U.S. EPA, Office of Research and Development (ORD), and the National Health and Environmental Effects Research Laboratory (NHEERL), Mid-Continent Ecology Division. http://www.epa.gov/ecotox/

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**8(e) TRIAGE Chemical Studies Database**
The primary purpose of this information product is to make TSCA 8(e) submission information accessible to the general public and organizations whose efforts are associated with protection of health and safety. http://www.epa.gov/opptintr/8e_triag/

**Electronic Wetlands Herbarium**
A detailed look at the plants typical of 11 different wetland types from bog to wet prairie. Each entry gives detailed botanical information as well as a photo of the plant. The outstanding photos are identification quality. Examples are taken from the U.S. Midwest region. http://www.epa.gov/seahome/wetherb.html

**Emergency Response Notification System**
The Emergency Response Notification System (ERNS) is a computer database containing information on release notifications of oil and hazardous substances that have occurred throughout the United States and have been reported to the National Response Center (NRC) and/or one of the 10 EPA Regions. http://www.epa.gov/region08/community_resources/ppt/pptemerge.html

**Emissions & Generation Resource Integrated Database (eGRID)**
eGRID is a database that provides information on the air quality attributes of almost all the electric power generated in the United States. eGRID provides you with many search options, including information for individual power plants, generating companies, states, and regions of the power grid. http://www.epa.gov/cleanenergy/egrid/index.html

**Endangered Species Protection Program Databases**
Provides the endangered species by county and the species information database. http://www.epa.gov/espp/database.htm

**Energy Star Software Tools**
Energy star is a government-backed program helping businesses and individuals protect the environment through superior energy efficiency. http://www.energystar.gov

**Enforcement & Compliance History Online (ECHO)**
Use ECHO to determine whether compliance inspections have been conducted by EPA or State/local governments; violations were detected; and enforcement actions were taken and penalties were assessed in response to environmental law violations. http://www.epa.gov/echo/

**Enforcement Economic Models — ABEL, BEN, CASHOUT, PROJECT, INDIPAY, MUNIPAY**
The economic enforcement models are used to analyze the financial aspects of enforcement actions. http://www.epa.gov/compliance/civil/programs/econmodels/index.html#models

**Enhanced Stream Water Quality Model, Windows (QUAL2E)**
The Enhanced Stream Water Quality Model (QUAL2E) is a steady state model for conventional pollutants in branching streams and well mixed lakes. The model can be used to study impact of waste loads on in-stream water quality and identify magnitude and quality characteristics of nonpoint waste loads. http://www.epa.gov/ceampubl/swater/qual2eu/index.htm

**Envirofacts**
Envirofacts, is a single point of access to select U.S. EPA environmental data. This website provides access to several EPA databases to provide information about environmental activities that may affect air, water, and land anywhere in the United States. http://www.epa.gov/enviro/index.html

**Environmental Assessment Case Study**
A companion to the 1992 Environmental Assessment Resource Guide, the program utilizes real-life examples of an environmental impact assessment and leads the user through the environmental assessment process. http://www.epa.gov/seahome/eacase.html

**Environmental Assessment Resource Guide**
EARG is a generic source of information to help assist in the conduct of environmental assessments of virtually any type of project. Topics covered include scoping, generation of alternatives, impact identification and analysis, mitigation, decision-making and post-decision analysis. http://www.epa.gov/seahome/earg.html

**Environmental Data Registry (EDR)**
The Environmental Data Registry (EDR) is a comprehensive, authoritative reference for information about the definition, source, and uses of environmental data. The EDR supports the creation and implementation of data standards that are designed to promote the efficient sharing of environmental information among EPA, states, tribes, and other information trading partners. The EDR also catalogs data elements in application systems. The EDR does not contain environmental data—it provides descriptive information to make the data more meaningful. http://www.epa.gov/edr/

**Environmental Financing Information Network (EFIN)**
The Environmental Financing Information Network (EFIN) provides information services needed by state, sub-state, municipal and EPA officials and small business owners involved in funding environmental programs and projects. These information services include maintaining the EFP Web site and the EFIN database, which are the main methods for disseminating information on environmental financing altermatives; an infoline that provides referrals and assistance with locating environmental financing information, and distribution of EPA publications on the topic of environmental finance. http://www.epa.gov/efinpage/efin.htm#desc

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**Environmental Information Management System (EIMS)**
EPA's Office of Research and Development (ORD) has developed a scientific environmental information management system (EIMS) that stores, manages, and delivers descriptive information (metadata) for data sets, databases, documents, models, multimedia, projects, and spatial information. The EIMS design also provides a repository for scientific documentation that can be easily accessed with standard Web browsers to place a virtual library on the desktop of EPA staff and others with Internet access. epa.gov/eims/

**Environmental Planning for Small Communities (TRILOGY)**
This program offers a complete one-stop introduction to a wide range of environmental issues and decisions that affect small to medium-sized communities. It offers communities the chance to judge their own needs and preferences, and to make informed decisions on their own. Major sections cover Environmental laws and regulations, Self-assessment, Planning and comparative risk analysis, Financial tools and financial self-analysis, Case studies, and Contact and information directory. http://www.epa.gov/seahome/trilogy.html

**Environmentally Preferable Purchasing (EPP) Database**
The Environmentally Preferable Purchasing (EPP) Database — a tool to make it easier to purchase products and services with reduced environmental impacts. Environmental information on over 600 products and services is included in this database. epa.gov/opptintr/epp/database.htm

**Environmental Radiation Ambient Monitoring System (ERAMS) Database**
The Environmental Radiation Ambient Monitoring System (ERAMS) is a national network of monitoring stations that regularly collect air, precipitation, drinking water, and milk samples for analysis of radioactivity. The ERAMS network has been used to track environmental releases resulting from nuclear emergencies and to provide baseline data during routine conditions. Data generated from ERAMS provides the information base for making decisions necessary to ensure the protection of public health. http://www.epa.gov/enviro/html/erams/

**Enviro$en$e Solvent Substitution Data Systems**
Enviro$en$e, part of the U.S. EPA's web site, provides a single repository for pollution prevention, compliance assurance, and enforcement information and data bases. The search engine searches multiple web sites (inside and outside the EPA), and offers assistance in preparing a search. http://es.epa.gov/ssds/ssds.html

**Enviro$en$e VendInfo**
Vendor Information (VendInfo) search page, a repository of more than 1200 listings of pollution prevention equipment, products, or services. This page provides listings using a free text method, or by selecting from the various equipment categories. http://es.epa.gov/vendors/

**EPANET Software**
EPANET is a Windows 95/98/NT program that performs extended period simulation of hydraulic and water-quality behavior within pressurized pipe networks. A network can consist of pipes, nodes (pipe junctions), pumps, valves and storage tanks or reservoirs. EPANET tracks the flow of water in each pipe, the pressure at each node, the height of water in each tank, and the concentration of a chemical species throughout the network during a simulation period comprised multiple time steps. In addition to chemical species, water age and source tracing can also be simulated. http://www.epa.gov/ORD/NRMRL/wswrd/epanet.html

**EPA REACH IT — Remediation and Characterization Innovative Technologies**
EPA REACH IT, sponsored by EPA's Office of Superfund Remediation and Technology Innovation (OSRTI), is a system that lets environmental professionals use the Internet to search, view, download, and print information about innovative remediation and characterization technologies. epareachit.org/

**Estimation Program Interface (EPI) Suite**
The EPI (Estimation Programs Interface) SuiteTM is a Windows® based suite of physical/chemical property and environmental fate estimation models developed by the EPA's Office of Pollution Prevention Toxics and Syracuse Research Corporation (SRC). EPI SuiteTM uses a single input to run the following estimation models: KOWWINTM, AOPWINTM, HENRYWINTM, MPBPWINTM, BIOWINTM, PCKOCWINTM, WSKOWWINTM, BCFWINTM, HYDROWINTM, and STPWINTM, WVOLWINTM, and LEV3EPITM. EPI SuiteTM was previously called EPIWIN. epa.gov/opptintr/exposure/docs/episuite.htm

**Exposure Analysis Modeling System (EXAMS)**
The Exposure Analysis Modeling System (EXAMS) is an interactive software application for formulating aquatic ecosystem models and rapidly evaluating the fate, transport, and exposure concentrations of synthetic organic chemicals including pesticides, industrial materials, and leachates from disposal sites. http://www.epa.gov/ceampubl/swater/exams/index.htm

**Exposure, Fate Assessment Screening Tool**
Provides screening-level estimates of the concentrations of chemicals released to air, surface water, landfills, and from consumer products. E-FAST Version 2 is being designed to support both new chemicals and existing chemical programs. Estimates provided are potential inhalation, dermal and ingestion dose rates resulting from these releases. Modeled estimates of concentrations and doses are designed to reasonably overestimate exposures, for use in screening level assessment. http://www.epa.gov/opptintr/exposure/docs/efast.htm

**Table 12A.6 (Continued)**

**Extremely Hazardous Substances (EHS) Chemical Profiles and Emergency First Aid Guides**

This is information about each of the 300+ EHS currently listed as part of Section 302 of the Emergency Planning and Community Right-to-Know Act. Each chemical profile includes physical/chemical properties, health hazards, fire and explosion hazards, reactivity data, precautions for safe handling and use, and protective equipment for emergency situations. The first aid guide provides signs and symptoms of poisoning and emergency treatment for first responders. The chemical profiles and first aid guides may be accessed from either the CAS No. or alphabetical list of EHS. http://yosemite.epa.gov/oswer/ceppoehs.nsf/EHS_Profile?openform

**Facility Registry System (FRS)**

The Facility Registry System (FRS) is a centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, data collected from EPA's Central Data Exchange registrations and data management personnel. The FRS provides Internet access to a single integrated source of comprehensive (air, water, and waste) environmental information about facilities, sites or places. http://www.epa.gov/enviro/html/fii/index.html

**Factor Information REtrieval (FIRE)**

The Factor Information REtrieval (FIRE) Data System is a database containing EPA's emission estimation factors for criteria and hazardous air pollutants in an easy to use Windows program. Users can browse through records in the database or select specific emission factors by source category, source classification code (SCC), pollutant name, CAS number, or control device. FIRE 6.25 contains emission factors from the Compilation of Air Pollutant Emission Factors (AP-42 Fifth Edition) for all AP42 sections posted by September 1, 2004, the Locating and Estimating (L&E) series of documents, and the retired AFSEF and XATEF documents. All EPA Source Classification Codes (SCC) through September 1, 2004 are in the FIRE database. http://www.epa.gov/ttn/chief/software/fire/index.html

**Federal Energy Management Program (FEMP) Software**

Analytical software tools are intended to help choose conservation measures that are most cost effective and environmentally friendly. Used at the facility evaluation and assessment stage of energy project development, the tools compare potential energy conservation measures by performing complex energy consumption analyses and modeling, as well as comparative life-cycle costing analyses. eere.energy.gov/femp/information/access_tools.cfm

**FEMWATER/LEWASTE Model**

Three-Dimensional Finite Element Model of Water Flow Through Saturated-Unsaturated Media (3DFEMWATER) and Three-Dimensional Lagrangian–Eulerian Finite Element Model of Waste Transport Through Saturated–Unsaturated Media (3DLEWASTE) are related and can be used together to model flow and transport in three-dimensional, variably-saturated porous media under transient conditions with multiple distributed and point sources/sinks. These models can be used to apply the assimilative capacity criterion to development of wellhead protection areas, as each U.S. state is required to do under the 1986 Amendments to the Safe Drinking Water Act. http://www.epa.gov/ceampubl/gwater/femwater/index.htm

**Fertilizer Storage and Handling Software**

This HTML program gives a general overview of fertilizer handling and storage, and features a risk assessment section, and recommendations for correcting fertilizer storage problems. http://www.epa.gov/seahome/farmfert.html

**FIFRA Section 18 Database**

The EPA FIFRA Section 18 Emergency Exemption database provides information about current and recent actions under Section 18. For detailed information about the tolerances associated with a particular action, the Federal Register can be accessed to locate the tolerance document according to the date it was published. This database is updated approximately every 2 weeks. http://www.epa.gov/opprd001/section18/#dbinfo

**FLOW-CALC Software**

FLOW-CALC is a software tool developed by EPA's Clean Air Markets Division for stack testers who perform flow RATAs for units under the Acid Rain Program, the OTC NOx Budget Program and the SIP Call NOx Budget Trading Program. The software is designed to improve data quality and facilitate the entry of flow RATA data into EDR v2.1 format. http://www.epa.gov/airmarkets/monitoring/mdc/flowcalc.html

**Food and Gill Exchange of Toxic Substances (FGETS) Software Model**

Food and Gill Exchange of Toxic Substances (FGETS) is a FORTRAN simulation model that predicts temporal dynamics of fish whole body concentration [ug chemical/(g live weight fish)] of non ionic, nonmetabolized, organic chemicals that are bioaccumulated from either: (a) water only — the predominant route of exchange during acute exposures, or (b) water and food jointly — characteristic of chronic exposures. http://www.epa.gov/ceampubl/fchain/fgets/index.htm

**Fuel Storage Practices on the Farm**

An overview of the importance and techniques of proper fuel storage. The risk assessment portion prompts the user to describe how petroleum products are stored and then evaluates the safety of these practices and provides detailed information about any problems discovered through the questionnaire. http://www.epa.gov/seahome/farmfuel.html

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**Fuels Models**
This Web page provides information on models estimating emissions impacts to changes in fuel properties and composition. http://www.epa.gov/otaq/fuelsmodel.htm

**GCSOLAR Model**
GCSOLAR program is a set of routines that computes direct photolysis rates and half-lives of pollutants in the aquatic environment. The half-lives are calculated as a function of season, latitude, time-of-day, depth in water bodies, and ozone layer thickness. This program operates in an interactive screen mode to facilitate data and program command entry by the user. Input values, with few restrictions, are format free. The user controls program flow by entering program execution commands. http://www.epa.gov/ceampubl/swater/gcsolar/index.htm

**Geo-EAS Software**
A collection of interactive software tools for performing two-dimensional geostatistical analyses of spatially distributed data. The principal functions of the package are the production of grids and contour maps of interpolated (kriged) estimates from sample data. Geo-EAS can produce data maps, univariate statistics, scatter plots/linear regression, and variogram computation and model fitting. http://www.epa.gov/nerlesd1/databases/geo-eas/access.htm

**GEOPACK Software**
A comprehensive geostatistical software package that allows both novice and advanced users to undertake geostatistical analyses of spatially correlated data. The program generates graphics (i.e. linear or logarithmic line plots, contour and block diagrams); computes basic statistics (i.e., mean, median, variance, standard deviation, skew, and kurtosis); runs programs for linear regression, polynomial regression, and Kolomogorov-Smirnov tests; calculates linear estimations and nonlinear estimations; and determines sample semivariograms and cross-semivariograms. http://www.epa.gov/nerlesd1/databases/geo-pack/access.htm

**Geophysics Advisor Software**
This program aids in the sampling and monitoring of hazardous waste sites. Utilizing an initial set of questions, the program develops an initial profile that is further refined by additional question based upon earlier answers. The program considers several geophysical methods: electromagnetic induction; resistivity; ground-penetrating radar; magnetic; seismic; soil gas; gravity; and radiometric. The program recommends the type(s) of geophysics that will most likely fit the site requirements for determining the location of contamination and providing site characterization. various methods is shown on screen, indicating the degree of superiority of one method over another. This version contains a database of the physical and chemical properties of 94 substances selected from EPA's first priority list. http://www.epa.gov/nerlesd1/databases/geophy-adv/geophysi.htm

**GEOS Software**
A public-domain software package developed by EPA to facilitate the collection and analysis of geoenvironmental data. The term "geoenvironmental" includes soil, geologic, and groundwater data collected to assess or monitor environmental conditions at a site. Major GEOS functions include easy data entry (standard database format allows the user to enter data in a spreadsheet format); simple data management and reporting (such as sorts and queries); preliminary site visualization (contouring of soil and groundwater chemical concentration isopleths, creation of actual and interpolated geologic cross sections, and viewing of well screen intervals in relation to subsurface geology); data exchange (existing GRITS/STAT facility data can be imported into GEOS for contouring of groundwater quality data using the PSV module); access to other geoenvironmental software (GEOS provides a convenient framework for moving between multiple programs). http://www.epa.gov/nerlesd1/databases/geos/abstract.htm

**Geospatial Data Clearinghouse**
The U.S. Environmental Protection Agency (EPA) Node of the National Geospatial Data Clearinghouse is a component of the *National Spatial Data Infrastructure (NSDI)*. This node provides a pathway to find information about geospatial data available from the EPA. Geospatial data is used in Geographic Information Systems (GIS) to identify the geographic location and characteristics of natural or man-made features and boundaries on the earth. http://www.epa.gov/nsdi/

**Global Endocrine Disruptor Research Inventory (GEDRI)**
This compilation of on going research projects related to endocrine disruptions was assembled following the recommendation of the Intergovernmental Forum on Chemical Safety (IFCS) and the 1997 Declaration of the Environment Leaders of the Eight on Children's Environmental Health. The initial goal was to bring together and update the existing United States Inventory with those of the Canadian government and the European Union. With this accomplished, the organization is now encouraging and accepting submission of research projects by other countries and private industry. http://oaspub.epa.gov/endocrine/pack_edri.All_Page

**EPA Grant Writing Tutorial Software**
This interactive software tool walks the user through the grant-writing process and helps them learn to write more competitive grants. The program includes: detailed information and tips on writing a grant proposal; how to complete a grant application package; program-specific sections on three EPA grant programs: (1) Environmental Justice, (2) Environmental Justice through Pollution Prevention; and (3) Environmental Education; examples of good, complete grant packages; references; a glossary of terms; resources and contacts; and a mock grant-writing activity where the user is able to compare their results to a successful grant application epa.gov/seahome/grants.html

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**Grants Information and Control System (GICS)**
EPA's management information system for grants programs is the Grants Information and Control System (GICS), which awards, administers, and monitors grants. Grants are regularly awarded to Federal, State, or local government agencies, universities, and other institutions that support EPA's environmental programs. Specific types of agreements include assistance agreements, grants, cooperative agreements, interagency agreements, and other types of program support agreements administered by Headquarters or EPA regions. These program support agreements provide for research, demonstration projects, training, fellowships, investigations, surveys, studies, and other types of program support activities. http://www.epa.gov/enviro/html/gics/

**Great Lakes Adventure Software**
This program (Teacher and Student versions) is aimed at a youth audience (grades 9–12) and will run on both Wintel and Mac computers. Investigate the natural history of the basin, the water cycle, stratification and turnover of the lakes. Explore six Hot Topics: (1) Habitat loss; (2) Beach closures; (3) Fish communities; (4) Toxics; (5) Exotic Species; and (6) Eutrophication

**Great Lakes Environmental Database**
The *Great Lakes National Program Office* (GLNPO) collects environmental data on a wide variety of constituents in water, biota, sediment, and air. Central to the data management effort is a computerized relational database system to house *Lake Michigan Mass Balance* and other project results. That system, the Great Lakes Environmental Database (GLENDA), was developed to provide data entry, storage, access and analysis capabilities to meet the needs of mass balance modelers and other potential users of Great Lakes data. http://www.epa.gov/glnpo/monitoring/data_proj/glenda/

**Green Chemistry Expert System**
Green chemistry is the design of chemical products and processes that reduce or eliminate the use or generation or hazardous waste. The Microsoft Access driven GCES software is a stand-alone version of the program designed to perform custom applications. http://www.epa.gov/greenchemistry/gces.html

**GRITS/STA Software**
A comprehensive database system for storing, analyzing, and reporting information from groundwater monitoring programs at RCRA, CERCLA, and other regulated facilities and sites. This software program integrates EPA's Groundwater Information Tracking System, a database of groundwater information, with STAT, a statistical analysis system. The package provides a nationally responsive system that incorporates data elements from appropriate EPA program offices. The system supports data entry, report generation, export of data to other software applications (e.g., modeling programs), and statistical analysis. http://www.epa.gov/nerlesd1/databases/grits-stat/abstract.htm

**Ground Water Primer**
This update of the original groundwater program educates users about the nature of groundwater and the principles of groundwater protection. It contains a detailed introduction to hydrogeology, information on numerous drinking water contaminants, and a section on what you can do to protect your groundwater. http://www.epa.gov/seahome/gwprimer.html

**Hazards Analysis for Toxics Analysis (HATS) Software**
EPA and NOAA developed this web site to facilitate the use of CAMEO and to offer online technical support. http://www.epa.gov/ceppo/cameo/

**Hazardous Waste Management on the Farm Software**
This tutorial is intended to serve as a guide towards proper hazardous waste management. Knowing the regulations, different methods of disposal of hazardous waste, and how to provide a safer environment are all part of proper hazardous waste management. A risk assessment included in this program will allow you to identify high risk practices on farms. http://www.epa.gov/seahome/farmhaz.html

**Health Effects Notebook for Hazardous Air Pollutants**
The fact sheets available on this Web page describe the effects on human health of substances that are *defined as hazardous* by the 1990 amendments of the *Clean Air Act*. These substances include certain volatile organic chemicals, pesticides, herbicides, and radionuclides that present tangible hazard, based on scientific studies of exposure to humans and other mammals. There is uncertainty in the precise degree of hazard, and readers are cautioned that the fact sheets may be revised as additional data become available. http://www.epa.gov/ttnatw01/hlthef/hapindex.html

**HELP Software**
A quasi-two-dimensional modeling program that simulates water movement into and out of landfills based on a waste management systems particular design. The user can conduct water-balance analyses of solid waste disposal and containment facilities. The program allows comparison of proposed landfill designs by estimating runoff, evapotranspiration, drainage, leachate collection, and liner leakage. Modeling incorporates information on cover soils, waste cells, lateral drain layers, low permeability barrier soils, synthetic geomembrane liners, and weather. Results are expressed as daily, monthly, annual, and long-term water budgets. Although applicable to most landfills, HELP was developed specifically for modeling hazardous and municipal solid waste landfills as required by RCRA. http://www.epa.gov/nerlesd1/databases/help/abstract.htm

**High Production Volume (HPV) Voluntary Challenge Chemical List**
Searchable database of the 1990 or 1994 list by CAS Number, Chemical Name, Indicator value, Chemical Sponsorship Status, or Sponsor Commitment Status. epa.gov/chemrtk/opptsrch.htm

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**The Hotelling/Williams Test for the Difference between Two Dependent Correlations**
The Hotelling/Williams procedure tests the null hypothesis of equality between two dependent product-moment correlations. Specifically, it tests whether the correlation between Z and X differs from the correlation between Z and Y, where X, Y and Z are three variables measured on the same set of observational units. http://www.epa.gov/wed/pages/models/correlations/correlations.htm

**Household Waste Management Software**
This HTML program teaches the user how to safely and efficiently manage waste, and particularly hazardous waste, in the home. Users can visit a 'virtual house' and choose extended discussions of the many products they might encounter there. Safe homemade alternatives are presented and evaluated. An enormous state-by-state database of mail, telephone, and Internet contacts puts users in touch with a wealth of free downloadable publications. Provides over 30 quizzes and activities for K-12 students, sorted by grade level. http://www.epa.gov/seahome/hwaste.html

**Human Exposure Database Software**
HEDS is the Human Exposure Database System. HEDS is an integrated database system that contains chemical measurements, questionnaire responses, documents, and other information related to EPA research studies of the exposure of people to Environmental contaminants. http://www.epa.gov/heds/index.htm

**Human Exposure Model (HEM)**
The Human Exposure Model (HEM) is used primarily for performing risk assessments for major point sources (usually producers or large users of specified chemicals) of air toxics. The HEM only addresses the inhalation pathway of exposure, and is designed to predict risks associated with emitted chemicals in the ambient air (i.e., in the vicinity of an emitting facility but beyond the facility's property boundary). The HEM provides ambient air concentrations, as surrogates for lifetime exposure, for use with unit risk estimates and inhalation reference concentrations to produce estimates of cancer risk and noncancer hazard, respectively, for the air toxics modeled. http://www.epa.gov/ttn/fera/human_hem.html

**Hydrodynamic, Sediment, and Contaminant Transport Model (HSCTM2D)**
The Hydrodynamic, Sediment, and Contaminant Transport Model (HSCTM2D) is a finite element modeling system for simulating two-dimensional, vertically-integrated, surface water flow (typically riverine or estuarine hydrodynamics), sediment transport, and contaminant transport. The modeling system consists of two modules, one for hydrodynamic modeling (HYDRO2D) and the other for sediment and contaminant transport modeling (CS2D). One example problem is included. The HSCTM2D modeling system may be used to simulate both short term (less than 1 year) and long term scour and/or sedimentation rates and contaminant transport and fate in vertically well mixed bodies of water. http://www.epa.gov/ceampubl/swater/hsctm2d/index.htm

**Hydrological Simulation Program — FORTRAN (HSPF)**
Hydrological Simulation Program — FORTRAN (HSPF) is a comprehensive package for simulation of watershed hydrology and water quality for both conventional and toxic organic pollutants. HSPF incorporates watershed-scale ARM and NPS models into a basin-scale analysis framework that includes fate and transport in one dimensional stream channels. It is the only comprehensive model of watershed hydrology and water quality that allows the integrated simulation of land and soil contaminant runoff processes with In-stream hydraulic and sediment-chemical interactions. The result of this simulation is a time history of the runoff flow rate, sediment load, and nutrient and pesticide concentrations, along with a time history of water quantity and quality at any point in a watershed. HSPF simulates three sediment types (sand, silt, and clay) in addition to a single organic chemical and transformation products of that chemical. http://www.epa.gov/ceampubl/swater/hspf/

**IMES Software**
A computer-based tool for matching a site's characteristics with the appropriate model or models. This integrated system for model evaluation has three elements: (1) A selection system for use in choosing an exposure assessment model (currently for air, groundwater, nonpoint source, and surface water media models); (2) A validation database that includes information on models for air, groundwater, nonpoint source, and surface water assessment; and (3) A model uncertainty database (currently only for six surface water models). Each IMES element can be used independently. Once a model(s) has been selected, information on model uncertainty can be accessed. http://www.epa.gov/nerlesd1/databases/imes/abstract.htm

**Improving Silage Storage on the Farm Software**
To prevent possible well contamination, silos should be located as far away from wells as practical. This program gives a general overview of silage storage, and features a risk assessment section, and recommendations for correcting silage storage problems. http://www.epa.gov/seahome/silage.html

**Indoor Air Quality Software**
Indoor air quality problems carry a high degree of human health risk. This program explores how the environment of a typical home or office affects indoor air quality. Colorful building cross-sections offer users self-guided home, office and pollutant tours. Sources of various indoor air pollutants are discussed, along with associated health risks for each pollutant, and how to reduce pollutant levels. http://www.epa.gov/seahome/indoor.html

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**Industrial Waste Air Model (IWAIR)**
EPA developed IWAIR to assist facility managers and regulatory agency staff in evaluating inhalation risks. Workers and residents in the vicinity of a unit may be exposed to volatile chemicals from the unit in the air they breathe. Exposure to some of these chemicals at sufficient concentrations may cause a variety of cancer and noncancer health effects (such as developmental effects in a fetus or neurological effects in an adult). With a limited amount of site-specific information, IWAIR can estimate whether specific wastes or waste management practices may pose an unacceptable risk to human health. http://www.epa.gov/epaoswer/non-hw/industd/iwair.htm

**Industrial Waste Management Evaluation Model (IWEM)**
The IWEM software is designed to assist in determining the most appropriate waste management unit design to minimize or avoid adverse groundwater impacts, by evaluating types of liners, the hydrogeologic conditions of the site, and the toxicity and expected leachate concentrations of the anticipated waste constituents. The software compares the groundwater protection afforded by various liner systems with the anticipated leachate concentrations to determine what minimum liner system is needed to be protective of human health and groundwater resources (or in the case of land application units (LAUs), determine whether or not land application is recommended). http://www.epa.gov/epaoswer/non-hw/industd/iwem.htm

**Integrated Compliance Information System (ICIS)**
The Integrated Compliance Information System (ICIS) supports the information needs of the National Enforcement and Compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program. ICIS will integrate data that is currently located in more than a dozen separate data systems. The Web-based system will eventually enable individuals from states, communities, facilities, and EPA to access integrated enforcement and compliance data from any desktop connected to the Internet. EPA's ability to target the most critical environmental problems will improve as the system integrates data from all media. epa.gov/Compliance/planning/data/modernization/index.html

**Integrated Data for Enforcement Analysis System (IDEA)**
The Integrated Data for Enforcement Analysis system (IDEA) is a comprehensive single-source of environmental performance data on regulated facilities within the EPA. IDEA provides a comprehensive historical profile of inspections, enforcement actions, penalties assessed, toxic chemicals released, and emergency hazardous spills for any EPA regulated facility. This single point of access provides information from the Agency's Air, Water, Hazardous Waste, Toxic Chemical Release Inventory, and Emergency Response Notification Systems. epa.gov/Compliance/planning/data/multimedia/idea/index.html

**Integrated Exposure Uptake Biokinetic Model for Lead in Children (IEUBK)**
Lead poisoning presents potentially significant risks to the health and welfare of children all over the world today. The Integrated Exposure Uptake Biokinetic Model for Lead in Children (IEUBK) attempts to predict blood-lead concentrations (PbBs) for children exposed to lead in their environment. http://www.epa.gov/superfund/programs/lead/ieubk.htm

**Integrated Risk Information System (IRIS)**
The Integrated Risk Information System (IRIS) is prepared and maintained by the U.S. Environmental Protection Agency (U.S. EPA), is an electronic database containing information on human health effects that may result from exposure to various chemicals in the environment. IRIS was initially developed for EPA staff in response to a growing demand for consistent information on chemical substances for use in risk assessments, decision-making and regulatory activities. The information in IRIS is intended for those without extensive training in toxicology, but with some knowledge of health sciences. http://www.epa.gov/iris/intro.htm

**Internet Geographical Exposure Modeling System (IGEMS)**
The IGEMS is a modernization of OPPT's older Graphical Exposure Modeling System and PCGEMS tools. IGEMS brings together in one system several EPA environmental fate and transport models and some of the environmental data needed to run them. IGEMS includes models and data for ambient air, surface water, soil, and groundwater, and makes the models much easier to use than their stand-alone counterparts. IGEMS will have graphics and Geographical Information System (GIS) capabilities for displaying environmental modeling results. http://www.epa.gov/opptintr/exposure/docs/gems.htm

**IsoConc: Concentration-Dependent Stable Isotope Mixing Model**
ISOCONC1_01.xls is a Microsoft Excel 2000™ spreadsheet which performs calculations for the concentration-weighted stable isotope mixing model outlined in Phillips DL & Koch PL (2002) Incorporating concentration dependence in stable isotope mixing models, Oecologia 130: 114–125. This dual-isotope model takes into account isotopic element concentration differences among the sources in determining the proportional contributions of sources to a mixture. epa.gov/wed/pages/models/isoconc/isoconc1_01.htm

**IsoConc: Confidence Interval Calculation for Source Partitioning Using Stable Isotopes**
ISOERROR1_04 is a Microsoft Excel 2000™ spreadsheet which calculates estimates and confidence intervals of source proportional contributions to a mixture, using stable isotope analyses. Examples include the proportions of different food sources in an animal's diet, C3 vs. C4 plant inputs to soil organic carbon, etc. Linear mixing models are used to partition two sources with a single isotopic signature (e.g., d13C) or three sources with a second isotopic signature (e.g., d15N). epa.gov/wed/pages/models/isotopes/isoerror1_04.htm

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**IsoSource: Stable Isotope Mixing Model for Partitioning an Excess Number of Sources**
IsoSource is a Microsoft Visual Basic™ software package which calculates ranges of source proportional contributions to a mixture based on stable isotope analyses when the number of sources is too large to permit a unique solution ($>$ number of isotope systems $+1$). Examples include partitioning of pollutant sources in a waste stream, food sources in an animal's diet, water sources for plant uptake, carbon sources in soil organic matter, and many others. epa.gov/wed/pages/models/isosource/isosource.htm

**Landfill Air Emissions Estimation Model**
The Landfill Air Emissions Model is PC-based software for estimating emissions of methane, carbon dioxide, nonmethane organic compounds, and hazardous air pollutants from municipal solid waste landfills. These emissions are generated by decomposition of refuse in landfills. The mathematical model used in Landfill is based on a first order decay equation that can be run using site-specific data supplied by the user for the parameters needed to estimate emissions or, if data are not available, using default value sets included in Landfill. epa.gov/oar/oaqps/landfill.html

**LandView® 5**
LandView 5 contains selected Census 2000 demographic data from Summary File 1 (SF1) and maps based on the Census 2000 TIGER/Line® files for all states, the District of Columbia and Puerto Rico. These maps show both streets and Census 2000 legal and statistical areas (including Census 2000 Urban/Rural delineations). LandView 5 also contains recent EPA and USGS Geographic Names Information System (GNIS) data and maps. http://www.census.gov/geo/landview/lv5/lv5.html

**LC50 (Lethal Concentration, 50%) Software Model**
LC50 (lethal concentration, 50%) estimates LC50 values using the Trimmed Spearman-Karber Method. This program originated at Montana State University and has been modified by data processing staffs at the Duluth and Athens National Exposure Research Laboratories. http://www.epa.gov/ceampubl/fchain/lc50/index.htm

**The Lead Contamination Information System (Lead in Drinking Water)**
The dangers of lead in drinking water are explained using graphics and hypertext. The program provides basic facts about this vital topic, answering common questions on the effects of lead in drinking water, and presenting techniques for reducing lead exposure. leaddw.html http://www.epa.gov/seahome/leaddw.html

**Lead in the Environment Software**
A detailed look at the health problems posed by lead. Learn about testing children for lead poisoning. This hypertext program presents sources of lead, health effects, and techniques for reducing lead exposure in and around the home. A quiz helps users review what they have learned, and the reference section points them to local, regional and national sources of information and help. http://www.epa.gov/seahome/leadenv.html

**List of Lists Database — Consolidated list of Chemicals Subject to the Emergency Planning and Community Right-to-Know Act (EPCRA and Section 112® of the Clean Air Act**
This is a searchable database of EPA's October 2001 Consolidated List of Chemicals Subject to the Emergency Planning and Community Right-to-Know Act (EPCRA) and Section 112(r) of the Clean Air Act. The entire database is available as a PDF file. epa.gov/ceppo/pubs/title3.pdf

**Local Emergency Planning Committee (LEPC) Database**
The Emergency Planning and Community Right-to-Know Act (EPCRA) of 1986 required each state's Governor to establish a state emergency response commission (SERC) which in turn resulted in the formation of local emergency planning committees. The database provides information related to data compiled by LEPCs nationwide. epa.gov/ceppo/lepclist.htm

**Livestock Manure Handling**
Similar in content to Livestock Manure Storage, this program gives an overview of manure types and proper management systems for different animals including cattle, swine, sheep, poultry, and horses. Users can evaluate their own risk through the interactive questionnaire, and receive suggestions for reducing the threat to their water supply. http://www.epa.gov/seahome/manure-handle.html

**Mean Similarity Analysis**
MEANSIM6 contains software for Mean Similarity Analysis, a method of assessing the strength of a classification of many objects (sites) into a relatively small number of groups. Classification strength is measured by the extent to which sites within the same groups are more similar to each other, on average, than they are to sites in different groups. Users supply a matrix of pairwise similarities (or dissimilarities) for all possible pairs of sites to a program (RNDTST6) that calculates mean between and within-group similarities. http://www.epa.gov/wed/pages/models/dendro/mean_similarity_analysis.htm

**Mercury in Medical Facilities**
This HTML program teaches health care professionals (and anyone else) about the hazards of mercury as commonly used in medical care facilities, especially hospitals and clinics. Mercury can pose a significant health problem for these professionals and also for patients and the environment in general. The program explains the impact of mercury on human health and the integrity of ecosystems, and a 'virtual hospital' allow users to see sources of mercury and their alternatives. http://www.epa.gov/seahome/mercury.html

**Meteorological Data**
The meteorological data files contain measurements taken at 237 weather stations located throughout the United States for a period extending from 1961 to 1990. Exact collection dates vary by weather station. http://www.epa.gov/ceampubl/tools/metdata/index.htm

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**Milking Center Wastewater Treatment**
Considers the special problems posed by milkhouse wastewater. Explores design of the milking facility for cleaning management, determining strength and volume of effluent flow, and devising facilities to receive, treat, and safely dispose of the wastewater. A risk assessment questionnaire evaluates the soundness of the user's situation and suggests improvements. http://www.epa.gov/seahome/milking.html

**MINTEQA2**
MINTEQA2 is a equilibrium speciation model that can be used to calculate the equilibrium composition of dilute aqueous solutions in the laboratory or in natural aqueous systems. The model is useful for calculating the equilibrium mass distribution among dissolved species, adsorbed species, and multiple solid phases under a variety of conditions including a gas phase with constant partial pressures. A comprehensive data base is included that is adequate for solving a broad range of problems without need for additional user-supplied equilibrium constants. http://www.epa.gov/ceampubl/mmedia/minteq/index.htm

**MOBILE Model (On-Road Vehicles)**
This web page contains information on the MOBILE vehicle emission factor model, which is a software tool for predicting gram per mile emissions of hydrocarbons (HC), carbon monoxide (CO), oxides of nitrogen (NOx), carbon dioxide ($CO_2$), particulate matter (PM) and air toxics from cars, trucks, and motorcycles under various conditions. http://www.epa.gov/otaq/mobile.htm

**Models-3 Air Quality Modeling System**
The primary goals for the Models-3/Community Multiscale Air Quality (CMAQ) modeling system are to improve 1) the environmental management community's ability to evaluate the impact of air quality management practices for multiple pollutants at multiple scales and 2) the scientist's ability to better probe, understand, and simulate chemical and physical interactions in the atmosphere. epa.gov/asmdnerl/models3/index.html

**MOFAT Software**
A two-dimensional, finite element model for simulating coupled multiphase flow and multicomponent transport in planar or radically symmetric vertical sections. MOFAT evaluates flow and transport for water, nonaqueous phase liquid (NAPL), and gas. The program also can be used when gas and/or NAPL phases are absent in part or all of the domain. The flow module can analyze either two-phase flow of water and NAPL in a system of constant gas pressure or explicit three-phase flow of water. The transport module can accommodate up to five components partitioning among water, NAPL, gas, and solid phases, assuming either local equilibrium interphase mass transfer or first-order kinetically controlled mass transfer. http://www.epa.gov/nerlesd1/databases/mofat/abstract.htm

**Most Probable Number of Microorganisms**
This program can be used to calculate Most Probable Number (MPN) values for the quantitation of microorganisms. http://www.epa.gov/nerlcwww/other.htm

**AIRMaster+**
AIRMaster+ provides comprehensive information on assessing compressed air systems, including modeling, existing and future system upgrades, and evaluating savings and effectiveness of energy efficiency measures. oit.doe.gov/bestpractices/software_tools.shtml

**MOVES (Motor Vehicle Emission Simulator)**
To keep pace with new analysis needs, modeling approaches, and data, the EPA's Office of Transportation and Air Quality (OTAQ) is developing a modeling system termed the MOtor Vehicle Emission Simulator (MOVES). This system will estimate emissions for on-road and nonroad sources, cover a broad range of pollutants, and allow multiple scale analysis, from fine-scale analysis to national inventory estimation. When fully implemented MOVES will serve as the replacement for MOBILE6 and NONROAD. http://www.epa.gov/otaq/ngm.htm

**Multi-Chamber Concentration and Exposure Model (MCCEM) Version 1.2**
Estimates average and peak indoor air concentrations of chemicals released from products or materials in houses, apartments, townhouses, or other residences. The data libraries contained in MCCEM are limited to residential settings. However, the model can be used to assess other indoor environments (e.g., schools, offices) if the user can supply the necessary inputs. Estimates inhalation exposures to these chemicals, calculated as single day doses, chronic average daily doses, or lifetime average daily doses. epa.gov/opptintr/exposure/docs/mccem.htm

**MULTIMED 2.0 BETA**
The Multimedia Exposure Assessment Model (MULTIMED) for exposure assessment simulates the movement of contaminants leaching from a waste disposal facility. The model consists of a number of modules which predict concentrations at a receptor due to transport in the subsurface, surface air, or air. http://www.epa.gov/ceampubl/mmedia/multim2/index.htm

**MULTIMED Daughter Process Model**
The Multimedia Exposure Assessment Model (MULTIMED) for exposure assessment simulates the movement of contaminants leaching from a waste disposal facility. The MULTIMED model has been modified (MULTIMDP) to simulate the transport and fate of first and second-generation transformation (daughter) products that migrate from a waste source through the unsaturated and saturated zones to a down gradient receptor well. http://www.epa.gov/ceampubl/mmedia/multidp/index.htm

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**The Multimedia Contaminant Fate, Transport, and Exposure Model (MMSOILS)**

The Multimedia Contaminant Fate, Transport, and Exposure Model (MMSOILS) estimates the human exposure and health risk associated with releases of contamination from hazardous waste sites. The methodology consists of a multimedia model that addresses the transport of a chemical in groundwater, surface water, soil erosion, the atmosphere, and accumulation in the food chain. The human exposure pathways considered in the methodology include: soil ingestion, air inhalation of volatiles and particulates, dermal contact, ingestion of drinking water, consumption of fish, consumption of plants grown in contaminated soil, and consumption of animals grazing on contaminated pasture. For multimedia exposures, the methodology provides estimates of human exposure through individual pathways and combined exposure through all pathways considered. The risk associated with the total exposure dose is calculated based on chemical-specific toxicity data. http://www.epa.gov/ceampubl/mmedia/mmsoils/index.htm

**Multimedia Exposure Assessment Model (MULTIMED)**

The Multimedia Exposure Assessment Model (MULTIMED) for exposure assessment simulates the movement of contaminants leaching from a waste disposal facility. The model consists of a number of modules which predict concentrations at a receptor due to transport in the subsurface, surface air, or air. http://www.epa.gov/ceampubl/mmedia/multim1/index.htm

**Multimedia Integrated Modeling System**

Numerical models are being developed in response to a growing interest in studying and addressing issues that have influences and effects that cross physical media, such as air, water, and soil. Numerical models provide an important tool in studying and addressing such issues. The models are used to test our understanding of ecosystems, diagnose causes of problems, and predict conditions given assumptions about future influences on the environment. EPA's Multimedia Integrated Modeling System (MIMS) project is researching and developing solutions for some of those challenges. epa.gov/AMD/mims/index.html

**Multimedia, Multi-Pathway, Multi-Receptor Exposure, and Risk Assessment (3MRA)**

The Multimedia, Multi-pathway, Multi-receptor Exposure and Risk Assessment (3MRA) technology provides the ability to conduct screening-level risk-based assessment of potential human and ecological health risks resulting from long term (chronic) exposure to HWIR chemicals released from land-based waste management units (WMUs) containing currently listed waste streams. The 3MRA system consists of a series of components within a system framework. The new modeling system, dubbed 3MRA technology, is envisioned as the foundation for eventually integrating other regulatory support decision tool needs anticipated in the future. http://www.epa.gov/ceampubl/mmedia/3mra/index.htm

**Municipal Pollution Prevention Diagnostic Planner Software**

This hypertext-based program serves as an early warning system for wastewater treatment plant operators. The user supplies information on influent loadings, discharge monitoring data, pretreatment, financial status, failures and upsets, and other aspects of plant operation and maintenance. http://www.epa.gov/seahome/cmar.html

**National Asbestos Registry System**

The National Asbestos Registry System (NARS) may be used by building owners to assist in evaluating which asbestos contractors should be hired, or by the general public to determine the compliance history of asbestos contractors working at a specific locale. NARS is also used by delegated agencies to assist in targeting inspections and by EPA managers as a general tool for evaluating the asbestos program. http://cfpub.epa.gov/nars/

**National Compliance Data Base System (NCDB)**

The National Compliance Data Base System (NCDB) tracks regional compliance and enforcement activity, and manages the Pesticides and Toxic Substances Compliance and Enforcement program at a national level. The system tracks all compliance monitoring and enforcement activities from the time an inspector conducts an inspection until the time the inspector closes the case or settles the enforcement action. epa.gov/Compliance/planning/data/toxics/ncdbsys.html

**National Contaminant Occurrence Database (NCOD)**

EPA has developed NCOD to satisfy the statutory requirements set by Congress in the 1996 amendments to the *Safe Drinking Water Act (SDWA)* to maintain a national drinking water contaminant occurrence database using occurrence data for both regulated and unregulated contaminants in public water systems. This site provides a library of water sample analytical data (or "samples data") that EPA is currently using and has used in the past for analysis, rulemaking, and rule evaluation. The drinking water sample data, collected at Public Water Systems, are for both regulated and unregulated contaminants. http://www.epa.gov/safewater/data/ncod.html

**National Emissions Inventory**

The U.S. EPA prepares a national emissions inventory with input from numerous State and local air agencies. These data are used for air dispersion modeling, regional strategy development, regulation setting, air toxics risk assessment, and tracking trends in emissions over time. http://www.epa.gov/ttn/chief/eiinformation.html

**National Hydrography Dataset**

The National Hydrography Dataset (NHD) is a comprehensive set of digital spatial data that contains information about surface water features such as lakes, ponds, streams, rivers, springs and wells. These linkages enable the analysis and display of these water-related data in upstream and downstream order. http://nhd.usgs.gov/

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**National Listing of Fish Consumption Advisories**
Fish may contain chemicals that could pose health risks. When contaminant levels are unsafe, consumption advisories may recommend that people limit or avoid eating certain species of fish caught in certain places. http://www.epa.gov/OST/fishadvice/

**National Water Quality Inventory**
Water Quality Reports, required by Section 305(b) of the Clean Water Act, contain information on the attainment of water quality standards. States, Tribes, and Territories classify assessed waters as either Fully Supporting, Threatened, or Not Supporting their designated use(s). http://www.epa.gov/waters/305b/

**NONROAD Model**
The Draft Nonroad Model is used for estimation of air pollution inventories by professional mobile source modelers, such as state air quality officials and consultants. The model is still draft, so some emission rates and activity levels predicted by the model may substantially change. http://www.epa.gov/otaq/nonrdmdl.htm

**NPS (Nonpoint Source) Modeling**
Nonpoint source assessment procedures and modeling techniques are reviewed and discussed for both urban and nonurban land areas. Detailed reviews of specific methodologies and models are presented, along with overview discussions focusing on urban methods and models, and on non-urban (primarily agricultural) methods and models. http://www.epa.gov/ceampubl/tools/nps/index.htm

**Nutrient Criteria Database**
EPA has developed a National Nutrient Database to store and analyze nutrient water quality data and to serve as an information resource for states, tribes, and others in establishing scientifically defensible numeric nutrient criteria. It contains ambient data from EPA's Legacy STOrage and RETrieval (STORET) data system, the U.S. Geological Survey's National Stream Quality Accounting Network (NASQAN) data and National Water Quality Assessment (NAWQA) data, and other relevant sources such as universities and states/tribes. The ultimate use of the data is to derive ecoregional waterbody-specific numeric nutrient criteria. http://www.epa.gov/waterscience/criteria/nutrient/database/index.html

**Oil Spill Exercise Generator**
This database-driven program can construct an oil spill exercise or response drill in a matter of hours, and fill out checklists for use in a final evaluation report. http://www.epa.gov/seahome/oilspill.html

**On-Site: The On-line Site Assessment Tool**
On-Site was developed to provide modelers and model reviewers with prepackaged tools ("calculators") for performing site assessment calculations. The philosophy behind On-Site is that the convenience of the prepackaged calculators helps provide consistency for simple calculations, and access to methods and data that are not commonly available. The latter include data on fuel composition and models for leaching from fuel lenses. http://www.epa.gov/athens/learn2model/part-two/onsite/index.html

**Online Tracking Information System (OTIS)**
The OnlineTracking Information System (OTIS) is a collection of search engines which enables EPA staff, state/local/tribal governments, and federal agencies to access a wide range of data relating to enforcement and compliance. OTIS is a web application that sends queries to the Integrated Data for Enforcement Analysis (IDEA) system. Only State and Federal agencies have access to the OTIS data system. http://www.epa.gov/Compliance/planning/data/multimedia/aboutotis.html

**Oxygen Requirements of Fishes (OXYREF) Model**
The Oxygen Requirements of Fishes (OXYREF) database contains test results reported in the published literature on the respiratory oxygen requirements of fishes. This file is based on results of a computerized literature search, over the time period 1969–1986, of three separate journal referencing services: Biological Sciences Information Service (BIOSIS PREVIEWS), Aquatic Sciences and Fisheries Abstracts (ASFA), and Canadian Water Resources References (AQUAREF). http://www.epa.gov/ceampubl/swater/oxyref/index.htm

**Ozone Depletion Software**
This program includes information and graphics depicting the ozone layer, how ozone is created, causes and effects of ozone depletion, the ozone hole, the greenhouse effect, and how an individual can help prevent ozone depletion. The program also examines applicable government legislation, including portions of the Clean Air Act Amendments of 1990. http://www.epa.gov/seahome/ozone.html

**Polychlorinated Biphenyls (PCBs)**
EPA provides various paths for the public to access information about PCBs. This website provides information on the health effects of PCBs, laws and regulations that govern PCBs, lists of approved companies that can handle PCB wastes including storage and disposal companies, alternative decontamination procedures and scrap metal recovery ovens. EPA also maintains two databases-PCB Activity Database (PADS) and Transformer Registration and applicable forms. http://www.epa.gov/opptintr/pcb/index.html

**Permit Application Software System (PASS) for NPDES**
The Permit Application Software System (PASS) is a software solution provided by the United States Environmental Protection Agency (U.S. EPA) to facilitate applications for National Pollutant Discharge Elimination System (NPDES) permits. http://cfpub2.epa.gov/npdes/permitissuance/pass.cfm

**Permit Compliance System (PCS)**
The Permit Compliance System (PCS) provides information on companies which have been issued permits to discharge waste water into rivers, when a permit was issued and expires, how much the company is permitted to discharge, and the actual monitoring data showing what the company has discharged. http://www.epa.gov/enviro/html/pcs/index.html

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**Personal Greenhouse Gas Calculator**
EPA has developed tools to help individuals reduce household greenhouse gas emissions. These tools are designed for individuals who want to take action and for businesses and organizations interested in reaching their employees and members about what they can do at home to help protect our climate. http://yosemite.epa.gov/oar/globalwarming.nsf/content/ResourceCenterToolsGHGCalculator.html

**PESTAN Software**
A model used to estimate the vertical migration of dissolved organic solutes through the vadose zone to groundwater. Estimates are based on a closed-form analytical solution of the advective–dispersive–reactive transport equation. The model is intended for use in conducting initial screening assessments of the potential for contamination of groundwater from currently registered pesticides and those submitted for registration. http://www.epa.gov/nerlesd1/databases/pestan/abstract.htm

**Pesticide Assessment Tool for Rating Investigations of Transport (PATRIOT)**
Pesticide Assessment Tool for Rating Investigations of Transport (PATRIOT) provides rapid analyses of groundwater vulnerability to pesticides on a regional, state, or local level. PATRIOT assesses groundwater vulnerability by quantifying pesticide leaching potential in terms of pesticide mass transported to the water table. PATRIOT is composed of: (1) a pesticide fate and transport model (PRZM2), (2) a comprehensive database, (3) an interface that facilitates database exploration, (4) a directed sequence of interactions that guide the user in providing necessary information to perform alternative model analyses, and (5) user-selected methods for summarizing and visualizing results. http://www.epa.gov/ceampubl/gwater/patriot/index.htm

**Pesticide Data Submitters List (PDSL)**
The Pesticide Data Submitters List is a compilation of names and addresses of registrants who wish to be notified and offered compensation for use of their data. It was developed to assist pesticide applicants in fulfilling their obligation as required by sections 3(c)(1)(f) and 3(c)(2)(D) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and 40 CFR Part 152 sub part E regarding ownership of data used to support registration. http://www.epa.gov/opppmsd1/DataSubmittersList/

**Pesticide Database Descriptions**
The Office of Pesticide Programs has five environmental databases that it uses to assess hazards to the environment and to wildlife, aquatic organisms, and plants. Some of these databases are in the initial phases of development, while others are fully operational. http://www.epa.gov/oppefed1/general/databasesdescription.htm

**Pesticide Product Information System (PPIS)**
The Pesticide Product Information System (PPIS) contains information concerning all pesticide products registered in the United States. http://www.epa.gov/opppmsd1/PPISdata/

**Pesticide Product Label System (PPLS)**
The Pesticide Product Label System is a collection of images of pesticide labels which have been approved by the Office of Pesticide Programs (OPP) under Section 3 of the Federal Insecticide, Fungicide, and Rodenticide Act. The collection contains the initially approved label for pesticide products registered under *FIFRA Section 3* as well as subsequent versions of labels which have changed via amendment or notification. http://www.epa.gov/pesticides/pestlabels/

**Pesticide Reregistration Status**
EPA is reviewing older pesticides (those initially registered prior to November 1984) under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) to ensure that they meet current scientific and regulatory standards. This process, called reregistration, considers the human health and ecological effects of pesticides and results in actions to reduce risks that are of concern. EPA also is reassessing tolerances (pesticide residue limits in food) to ensure that they met the safety standard established by the Food Quality Protection Act (FQPA) of 1996. http://cfpub.epa.gov/oppref/rereg/status.cfm?show=rereg

**Pesticide-Restricted Use Products Report (RUP)**
The Restricted Use Products Report is a compilation of both active and cancelled pesticide products classified as “Restricted Use”. The “Restricted Use” classification restricts a product, or its uses, to use by a certificated pesticide applicator or under the direct supervision of a certified applicator. http://www.epa.gov/opprd001/rup/index.htm

**Pesticide Storage and Handling Practices on the Farm**
Explains proper handling and storage of pesticides on farmsteads. Provides a general overview of pesticide handling and storage, a risk assessment section, and recommendations for correcting problems related to pesticide storage. http://www.epa.gov/seahome/farmpest.html

**Pesticide Water Models**
Scientists in the Office of Pesticide Programs (OPP) in the Environmental Protection Agency (EPA) frequently use simulation models to predict pesticide concentrations in surface and groundwater for use in both human health and aquatic ecological exposure assessments. http://www.epa.gov/oppefed1/models/water/index.htm

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**PLUMES Models**
PLUMES includes two initial dilution plume models (RSB and UM) and a model interface manager for preparing common input and running the models. Two farfield algorithms are automatically initiated beyond the zone of initial dilution. PLUMES also incorporates the flow classification scheme of the Cornell Mixing Zone Models (CORMIX) with recommendations for model usage, thereby providing a linkage between the systems. PLUMES models are intended for use with plumes discharged to marine and some freshwater bodies. Both buoyant and dense plumes, single sources, and many diffuser outfall configurations can be modeled. http://www.epa.gov/ceampubl/swater/plumes/index.htm

**PM (Particulate Matter) Calculator**
EPA has replaced the PM-10 Calculator program with new software that will estimate filterable PM2.5 emissions. PM Calculator is applicable to point sources only and requires the user to input uncontrolled emissions (either total filterable particulate or filterable PM10) for each source, the source category classification (SCC) and the control device, if any. The program will then calculate controlled emissions for filterable PM2.5 and filterable PM10 for each point source. http://www.epa.gov/ttn/chief/software/pmcalc/index.html

**Pollution Prevention Software**
The Pollution Prevention Act of 1990 established source reduction as the preferred approach to environmental protection. P2 can save money, reduce liability, and improve efficiency, worker safety, and competitiveness. This program outlines the relevant environmental legislation and addresses P2 in industry, agriculture, energy, government, and consumer sectors. Examples include more efficient manufacturing processes, alternative products and procedures that generate less or more benign end products, and ways to reduce the amount of raw materials used. http://www.epa.gov/seahome/prevent.html

**PRESTO Software**
PRESTO (Prediction of Radiological Effects Due to Shallow Trench Operations) is a computer model for evaluating radiation exposure from contaminated soil layers, including waste disposal, soil cleanup, agricultural land application, and land reclamation. http://www.epa.gov/radiation/assessment/presto.html

**Principles and Design of On-site Waste Disposal with Septic Systems Software**
The software teaches the basics of on-site treatment using diagrams and animations: septic tanks, drainfields, mounds, water conservation. It covers principles of treatment, design, and siting, as well as soil basics and water conservation. http://www.epa.gov/seahome/onsite.html

**Private Pesticide Applicator Training Software**
This is an interactive guide to the Federal regulatory requirements and user health concerns for pesticide handling and application. It includes an extended tutorial on pesticide laws and reglulations, a guide to safe handling and mixing, and a short course in reading and interpreting the labels and health warnings. http://www.epa.gov/seahome/privpest.html

**Private Water Systems**
A complete minicourse in design and construction of private drinking water systems (wells and piping) includes water quantities required, water pumps, systems controls, design considerations and piping. http://www.epa.gov/seahome/private.html

**Program to Assist in Tracking Critical Habitat (PATCH)**
PATCH is a spatially explicit, individual-based, life history simulator designed to project populations of territorial terrestrial vertebrate species through time. PATCH is ideal for investigations involving wildlife species that are mobile habitat specialists. PATCH's data requirements are minimal: provided with habitat maps, specifications for habitat use (territory size and habitat affinity), vital rates (survival and reproduction), and parameters for species' movement behavior, a simulation can be generated.PATCH's outputs fall into two general categories: pattern-based metrics and demographic analyses. http://www.epa.gov/wed/pages/models/patch/patchmain.htm

**Protecting Children's Health in Schools Software**
Intended for the decision-maker in a school system, the software aids in identification of potential hazards to assist in protecting the environment and the health of those who use the school. The guide will discuss what those hazards might be, how to test for them, and how to remedy problems found. http://www.epa.gov/seahome/child.html

**PRZM3 Model**
PRZM3 is the most recent version of a modeling system that links two subordinate models, PRZM and VADOFT, in order to predict pesticide transport and transformation down through the crop root and unsaturated zone. PRZM is a one-dimensional, finite-difference model that accounts for pesticide and nitrogen fate in the crop root zone. PRZM3 includes modeling capabilities for such phenomena as soil temperature simulation, volatilization and vapor phase transport in soils, irrigation simulation, microbial transformation, and a method of characteristics (MOC) algorithm to eliminate numerical dispersion. PRZM is capable of simulating transport and transformation of the parent compound and as many as two daughter species. VADOFT is a one-dimensional, finite-element code that solves Richard's equation for flow in the unsaturated zone. The user may make use of constitutive relationships between pressure, water content, and hydraulic conductivity to solve the flow equations. VADOFT may also simulate the fate of two parent and two daughter products. http://www.epa.gov/ceampubl/gwater/przm3/index.htm

**Table 12A.6 (Continued)**

**Radiation Risk Assessment Software: CAP88 PC**
CAP88-PC is a personal computer software system used for calculating dose and risk from annual average releases of radionuclides to the air. http://www.epa.gov/radiation/assessment/CAP88/index.html

**Radionuclide Carcinogenicity Slope Factors Software**
The source provides the latest information and guidance on using radionuclide slope factors from the Health Effects Assessment Summary Tables (HEAST) — Radionuclides Table (formerly Table 12A.4). EPA, other federal agencies, states and contractors who are responsible for the identification, characterization and remediation of sites contaminated with radioactive materials use radionuclide slope factors in risk assessments to calculate potential risks to the general public. http://www.epa.gov/radiation/heast/download.htm

**RCRA Boiler & Industrial Furnace Regulations**
In February 1991, the USEPA promulgated a final rule that expands controls on hazardous waste combustion by regulating the burning of hazardous waste in boilers and industrial furnaces (BIFs). The BIF rule sets levels of control for emissions of toxic organic compounds, toxic metals, HCl, chlorine gas and particulate matter. Owners and operators of BIFs are subject to permitting and other standards applicable to hazardous waste treatment, storage and disposal facilities. The site helps to understand the applicability, terms, definitions, technology and requirements associated with the BIF rule. http://www.epa.gov/seahome/bif.html

**RCRA Corrective Action Processs**
The Corrective Action Process aims to identify, develop, and implement appropriate corrective measures to protect human health and the environment at facilities where hazardous wastes or pollutants are handled or managed. The purpose of CAP is to guide facilities through the many governing authorities and laws while providing an easy to follow path to proper and legal corrective action. Menu items cover interim and stabilization measures, a detailed breakdown of the quality assurance plan, health and ecological assessment, remediation technologies, public participation, an extensive guide to statutory authorities, and a glossary and a bibliography of guidance documents. http://www.epa.gov/seahome/cap.html

**RCRAInfo**
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). RCRAInfo characterizes facility status, regulated activities, and compliance histories and captures detailed data on the generation of hazardous waste from large quantity generators and on waste management practices from treatment, storage, and disposal facilities. http://www.epa.gov/epaoswer/hazwaste/data/index.htm

**ReduceIt Companion Software to Source Reduction Program Potential Manual**
This companion software is designed to be used in connection with the *Source Reduction Program Potential Manual* to help solid waste managers plan for a source reduction program and determine the impact of various source reduction options on their community. The *Source Reduction Program Potential Manual and Software* estimate the program potential for six source reduction options: three residential (grasscycling, home composting, and clothing reuse) and three commercial and industrial (office paper reduction, converting to multi-use pallets, and paper towel reduction). http://www.epa.gov/epaoswer/non-hw/reduce/reduceit/index.htm

**Regional Air Pollutant Inventory Development System (RAPIDS)**
As the principle component of the Great Lakes Regional Air Toxic Emissions Inventory project, the Regional Air Pollutant Inventory Development System (RAPIDS) is the first ever multi-jurisdictional pollutant emissions inventory software that has been developed. The focus of the study was on the Commission defined list of 49 toxic pollutants, in addition to several other important nontoxic compounds. Now, RAPIDS is used by each Great Lakes state and Province of Ontario. The latest regional inventory for 1997 contains over 80 toxic pollutants for point, area, and mobile (onroad and nonroad source) emissions. http://www.glc.org/air/rapids/rpdsover.html

**Regional Vulnerability Assessment (ReVA) Program**
EPA's Regional Vulnerability Assessment (ReVA) program is an approach to regional scale, priority-setting assessment being developed by EPA's Office of Research and Development (ORD). ReVA will expand cooperation among the laboratories and centers of ORD, by integrating research on human and environmental health, ecorestoration, landscape analysis, regional exposure and process modeling, problem formulation, and ecological risk guidelines. http://www.epa.gov/reva/#

**Registry of EPA Applications and Databases**
The Registry of EPA Applications and Databases (READ) is an authoritative registry that uniquely identifies the Environmental Protection Agency's (EPA) diverse information resources including computer application systems, databases, and models. As a catalog of available EPA information, READ provides a single point of entry to identify, locate, and access Agency information resources. READ supports EPA's metadata vision to: create and store metadata in as few places as possible; improve the quality and consistency of metadata; and provide a central point of access to the complete collection of all Agency information resources metadata. http://www.epa.gov/read/

**Regulatory Air Models**
This website is a source of information on atmospheric dispersion (air quality) models that support regulatory programs required by the Clean Air Act. Documentation and guidance for these computerized models are a major feature of this website. The computer code, data and technical documents offered deal with mathematical modeling for the dispersion of air pollutants. http://www.epa.gov/scram001/

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**Remediation Annual Status Report**
The Annual Status Report (ASR) Remediation Database documents the status and achievements of 1,811 technology applications identified for Superfund remedial action sites, including 1,760 treatment applications for soil, other solid wastes, and groundwater and 51 applications of groundwater containment using vertical engineered barriers (VEB). http://cfpub.epa.gov/asr/index.cfm

**Reporting on Municipal Solid Waste: A Local Issue**
The "Reporter's Guide" is a software application that presents background information to assist print and broadcast media in understanding municipal solid waste (MSW) issues. Examines the role of federal, state, and local governments in MSW management; options for solid waste management (source reduction, recycling, incineration, and landfilling); and regulations for solid waste landfills. http://www.epa.gov/epaoswer/non-hw/muncpl/reporting.htm

**Residential Energy Efficiency**
This program shows effective ways to reduce home energy consumption. Topics include insulation, windows, doors, weather-stripping, and caulking. The expert system feature allows users to calculate how much they will save by making their homes more energy efficient. http://www.epa.gov/seahome/energy.html

**Residential Water Conservation Techniques Software**
With more than 100 color graphic screens and animation, this program shows effective ways to save water inside and outside the house. Topics include efficient toilets, showerheads, faucets; leak detection, water efficient lawn care and gardening; car washing and pool operation. http://www.epa.gov/grtlakes/seahome/watcon.html

**RETC Software**
A program for analyzing the hydraulic conductivity properties of unsaturated soils. The parametric models of Brooks-Corey and van Genuchten are used to represent the soil water retention curve, and the theoretical pore-size distribution models of Mualem and Burdine predict the unsaturated hydraulic conductivity function. http://www.epa.gov/nerlesd1/databases/retc/abstract.htm

**Risk Management Plans (via RTK–NET)**
These provides a searchable database of relevant information to assist in citizen participation during the preparation of risk management plans. http://www.rtknet.org/rmphelp.html

**RMP*Comp**
RMP*Comp is a free program you can use to complete the offsite consequence analyses (both worst case scenarios and alternative scenarios) required under the Risk Management Planning Rule. http://yosemite.epa.gov/oswer/ceppoweb.nsf/content/rmp-comp.htm

**RMP*Review**
RMP*Review is a free software program designed for reviewing and analyzing Risk Management Plans (RMPs) submitted under the Clean Air Act, Section 112(r). http://yosemite.epa.gov/oswer/ceppoweb.nsf/content/rmp_review.htm

**RMP*Submit**
RMP*Submit 2004 is the free, official EPA, personal computer software for facilities to use in submitting Risk Management Plans (RMP) required under the Risk Management Program. http://yosemite.epa.gov/oswer/ceppoweb.nsf/content/ap-rmsb.htm#rmpsub

**Safe Drinking Water Information System (SDWIS)**
The Safe Drinking Water Information System (SDWIS) contains information about public water systems and their violations of EPA's drinking water regulations, as reported to EPA by the states. These regulations establish maximum contaminant levels, treatment techniques, and monitoring and reporting requirements to ensure that water systems provide safe water to their customers. http://www.epa.gov/enviro/html/sdwis/sdwis_query.html

**Science Inventory**
The Science Inventory (SI) is a searchable database of EPA science activities and scientific/technical work products. The Science Inventory provides information about current or recently completed activities, providing a snapshot of what science EPA is conducting in its research laboratories and centers, program and regional offices, and through grants and other assistance agreements to universities and other institutions. The Science Inventory currently contains 5,646 records. http://cfpub.epa.gov/si/

**Scout Software**
A univariate and multivariate data analysis tool with several classical and robust procedures (e.g., outlier testing, interactive 2D/3D graphics), making it a useful package for environmental and ecological applications. Scout can transform data, assess variable normality, produce histograms and Q–Q plots of raw data and principal component scores (PCSs), and produce scatter plots of raw data, PCSs, and discriminant scores. http://www.epa.gov/nerlesd1/databases/scout/abstract.htm

**Section Seven Tracking System (SSTS)**
SSTS is one of the major systems that supports the Pesticide Program at EPA. SSTS is the only automated system that EPA uses to track pesticide producing establishments and the amount of pesticides they produce. SSTS records the registration of new establishments and records pesticide production at each establishment. http://www.epa.gov/Compliance/planning/data/toxics/sstsys.html

*(Continued)*

**Table 12A.6 (Continued)**

**Sector Facility Indexing Project (SFIP)**
The Sector Facility Indexing Project focused on compiling information on facilities within five industry categories (automobile assembly, pulp manufacturing, petroleum refining, iron and steel production, and the primary smelting and refining of aluminum, copper, lead, and zinc (nonferrous metals), and selected major federal facilities). SFIP contained records for 591 facilities from the five industry sectors, as well as 273 federal facilities. SFIP information related to compliance and inspection history, chemical releases and spills, and demographics of the surrounding population. http://www.epa.gov/sfipmtn1/access.html

**Simplified Method Program — Variable Complexity Stream Toxics Model (SMPTOX3)**
U.S. EPA regulatory programs have sponsored development of an interactive computer program for performing waste load allocations for toxics — Simplified Method Program — Variable Complexity Stream Toxics Model (SMPTOX3). SMPTOX3 provides user-friendly access to a technique for calculating water column and stream bed toxic substance concentrations resulting from point source discharges into streams and rivers. It predicts pollutant concentrations in dissolved and particulate phases for water column and bed sediments and total suspended solid. http://www.epa.gov/ceampubl/swater/smptox3/index.htm

**Smart Travel Resource Center**
EPA makes more than 100 information campaigns that focus on encouraging individuals to make travel decisions which have positive impacts on air quality, congestion, and quality of life. The goal being that the users can learn from one another in designing, implementing, and evaluating these innovative programs. http://yosemite.epa.gov/aa/strc.nsf

**Software for Environmental Awareness**
Resulting from a partnership between EPA Region 5 and the students and faculty at Purdue University, SEA has produced a number of software programs from simple linear tutorials to expert systems requiring the user to input data in order to receive a computer-calculated solution. The collection includes water-related topics, solid waste, air pollution, and environmental assessment. http://www.epa.gov/glnpo/seahome/

**Soil and Geologic Site Evaluation Software**
This software provides information about the roles that soils, geology and depth to groundwater play in the protection of groundwater. A risk assessment portion helps determine the potential for contamination at a site based on information supplied by the user. http://www.epa.gov/seahome/farmsite.html

**Source Ranking Database**
Performs a systematic screening-level review of over 12,000 potential indoor pollution sources to identify high-priority product and material categories for further evaluation. Can also identify the products that contain a specific chemical. epa.gov/opptintr/exposure/docs/srd.htm

**Spatial Grid Networks Software**
Software and documentation for generating regular grids of hexagons and other shaped cells for the earth as a whole, or for parts of it, as well as the existing grid for the USGS-BRD GAP program. These materials are for the geometric and cartographic components of such grids. http://www.epa.gov/wed/pages/staff/white/getgrid.htm

**SPECIATE Software**
SPECIATE is EPA's repository of Total Organic Compound (TOC) and Particulate Matter (PM) speciated profiles for a variety of sources for use in source apportionment studies. This release of SPECIATE no longer contains profiles assigned to SCC's. Instead, searching for profiles by keyword has been improved and of course the user can still browse through the profiles. http://www.epa.gov/ttn/chief/software/speciate/index.html

**STF Software**
A computer-based tool for selecting data on chemicals in the environment and for simulating their fate and transport in site-specific conditions is available. The software system consists of three components: (1) STF 2.0 (Soil Transport and Fate Database), which provides information on the behavior of chemicals in soil environments for use as input data on, for example, degradation rates and partition coefficients. (2) RITZ (Regulatory and Investigative Treatment Zone) and VIP 3.0 models. RITZ simulates hazardous chemical movement and fate during land treatment of oily wastes. VIP evaluates data using six different output options. (3) RITZ and VIP model editors that are directly interfaced with STF 2.0 and aid in the creation of input files for the RITZ and VIP models. http://www.epa.gov/nerlesd1/databases/stf/abstract.htm

**STORET**
The U.S. Environmental Protection Agency (EPA) maintains two data management systems containing water quality information for the nation's waters: the Legacy Data Center (LDC), and STORET. The LDC is a static, archived database and STORET is an operational system actively being populated with water quality data. http://www.epa.gov/STORET/about.html

**Storm Water Management Model (SWMM)**
The Storm Water Management Model (SWMM) is a comprehensive computer model for analysis of quantity and quality problems associated with urban runoff. Both single-event and continuous simulation can be performed on catchments having storm sewers, or combined sewers and natural drainage, for prediction of flows, stages and pollutant concentrations. http://www.epa.gov/ceampubl/swater/swmm/index.htm

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**Substance Registry System (SRS)**
The Substance Registry System (SRS) provides information on substances and how they are represented in the Environmental Protection Agency (EPA) regulations and information systems. http://www.epa.gov/srs/index.htm

**Subsurface Characterization and Monitoring Techniques**
An interactive, multimedia version of the two-volume, EPA reference entitled "Subsurface Characterization and Monitoring Techniques" by R. Boulding. The documents include 1- to 2-page descriptions of more than 280 site characterization and field monitoring methods for detecting groundwater contamination and other aspects of the subsurface at hazardous waste sites. Geological and hydrogeological characterization topics covered include surface and borehole approaches, geophysical methods, and solids sampling; drilling; aquifer tests and groundwater sampling; water-state measurement and monitoring; vadose zone hydraulic conductivity/flux measurement; vadose zone water budget characterization; vadose zone soil-solute sampling and gas monitoring; and field chemical analytical methods. http://www.epa.gov/nerlesd1/databases/subsurface/abstract.htm

**Superfund Chemical Data Matrix (SCDM)**
The Superfund Chemical Data Matrix (SCDM) is a source for factor values and benchmark values applied when evaluating potential National Priorities List (NPL) sites using the Hazard Ranking System (HRS). Factor values are part of the HRS mathematical equation for determining the relative threat posed by a hazardous waste site and reflect hazardous substance characteristics, such as toxicity and persistence in the environment, substance mobility, and potential for bioaccumulation. Benchmarks are environment- or health-based substance concentration limits developed by or used in other EPA regulatory programs. http://www.epa.gov/superfund/sites/npl/hrsres/tools/scdm.htm

**Superfund Information Systems**
Site provides links to the various Superfund-related information tracking systems that are maintained by the EPA. Included in the list are CERCLIS (general information about sites), Archived Sites (sites with completed site assessment and no further action required), Records of Decision (sites where remedial options have been selected), Five Year Reviews (sites that have been undergoing remediation for an extended time provide 5-year reviews of activities), Site Assessment Documentation (provides preliminary assessment of sites that have recently been identified), Site Spill IDs (tracks logistical issues at Superfund sites), Data Element Dictionary (lexicon of Superfund related terms), and Site Information Products (collection of Superfund Information reports and products). http://www.epa.gov/superfund/sites/siteinfo.htm

**Superfund Innovative Technologies**
A searchable database of treatment technology applications for soil, groundwater, and other media at Superfund sites. The information in this database was gathered from Superfund decision documents and project managers at Superfund remedial and removal sites. It contains information about source control technologies (addressing soil, sludge, sediment, and other solid-matrix wastes), innovative (*in situ*) groundwater treatment technologies, and subsurface barrier groundwater containment technologies (vertical engineered barriers). The database is searchable by site name, site identification number (CERCLIS ID), state, technology type, contaminant, and media. http://www.epa.gov/tio/databases/

**Surf Your Watershed**
Surf Your Watershed is a service to help you locate, use, and share environmental information about your state and watershed. http://www.epa.gov/surf/

**Surface Water Education System Software**
Topics include a general overview of the importance and quantity of surface water, a detailed look at this resource for Indiana, and a discussion of how surface water can become contaminated. Hypertext and numerous photos and graphics illustrate an extensive discussion of agricultural best management practices to protect surface water resources. http://www.epa.gov/seahome/surfwat.html

**TANKS Emission Estimation Software**
*TANKS* is a computer software program that estimates volatile organic compound (VOC) and hazardous air pollutant (HAP) emissions from fixed- and floating-roof storage tanks. *TANKS* is based on the emission estimation procedures from *Chapter 7* of EPA's *Compilation Of Air Pollutant Emission Factors (AP-42)*. http://www.epa.gov/ttn/chief/software/tanks/index.html

**Terminology Reference System (TRS)**
The Terminology Reference System (TRS) was created to provide a single source of Environmental Protection Agency (EPA) terminology. The TRS is part of the centralized System of Registries (SoR), which provides access to the Agency's core registry systems. http://www.epa.gov/trs/index.htm

**Three-Dimensional Numerical Model of Hydrodynamics and Sediment Transport in Lakes and Estuaries (SED3D)**
The Three-Dimensional Numerical Model of Hydrodynamics and Sediment Transport in Lakes and Estuaries (SED3D) simulates the flow and sediment transport in lakes, estuaries, harbors, and coastal waters. SED3D is a dynamic modeling system that can be used to simulate the flow and sediment transport in various water bodies under the forcing of winds, tides, freshwater inflows, and density gradients with the influence of the Coriolis acceleration, complex bathymetry, and shoreline geometry. http://www.epa.gov/ceampubl/swater/sed3d/index.htm

*(Continued)*

**Table 12A.6 (Continued)**

**Tier2 Submit Software**
EPA has developed Tier2 Submit 2004 to help facilities prepare an electronic chemical inventory report. Twenty-two states are accepting Tier2 Submit from facilities for the 2004 reporting year. http://yosemite.epa.gov/oswer/ceppoweb.nsf/content/tier2.htm#t2forms

**The Total Maximum Daily Load (TMDL) Universal Soil Loss Equation (USLE)**
The Total Maximum Daily Load (TMDL) Universal Soil Loss Equation (USLE) model is a software application for estimating diffuse sediment source loads within a watershed framework. The user interface is similar to a spreadsheet and allows users to easily select and enter parameters used to estimate sediment loading. http://www.epa.gov/ceampubl/swater/usle/index.htm

**Total Maximum Daily Loads (TMDL)**
TMDL or Total Maximum Daily Load is a calculation of the maximum amount of a pollutant that a waterbody can receive and still meet water quality standards, and an allocation of that amount to the pollutant's sources. Water quality standards are set by States, Territories, and Tribes. They identify the uses for each waterbody, for example, drinking water supply, contact recreation (swimming), and aquatic life support (fishing), and the scientific criteria to support that use. A TMDL is the sum of the allowable loads of a single pollutant from all contributing point and nonpoint sources. The calculation must include a margin of safety to ensure that the waterbody can be used for the purposes the State has designated. The calculation must also account for seasonal variation in water quality. http://www.epa.gov/owow/tmdl/intro.html#definition

**Total Risk Integrated Methodology (TRIM) Models**
The *TRIM design* includes three individual modules: The *Environmental Fate, Transport, and Ecological Exposure* module, *TRIM.FaTE*, accounts for movement of a chemical through a comprehensive system of discrete compartments (e.g. media and biota) that represent possible locations of the chemical in the physical and biological environments of the modeled ecosystem and provides an inventory, over time, of a chemical throughout the entire system. In addition to providing exposure estimates relevant to ecological risk assessment. The Exposure-Event module, *TRIM.Expo*. evaluates human exposures by tracking either randomly selected individuals that represent an area's population or population groups referred to as "cohorts" and their inhalation and ingestion through time and space. In the Risk Characterization module, *TRIM.Risk*, estimates of human exposures or doses are characterized with regard to potential risk using the corresponding exposure- or dose-response relationships. The *TRIM.Risk* module is also designed to characterize ecological risks from multimedia exposures. The output from TRIM.Risk is intended to include documentation of the input data, assumptions in the analysis, and measures of uncertainty, as well as the results of risk calculations and exposure analysis. http://www.epa.gov/ttn/fera/trim_gen.html

**Toxics Release Inventory (TRI) Program**
The Toxics Release Inventory (TRI) is a publicly available EPA database that contains information on toxic chemical releases and other waste management activities reported annually by certain covered industry groups as well as federal facilities. http://www.epa.gov/tri/

**Toxic Substances Control Act Chemical Substance Inventory**
EPA classifies chemical substances as either "existing" chemicals or "new" chemicals. The only way to determine if the substance is a new chemical is by consulting EPA's Toxic Substances Control Act Chemical Substance Inventory (commonly referred to as the TSCA Inventory or just the Inventory).There are approximately 75,000 chemical substances, as defined in Section 3 of the TSCA, on the Inventory at this time. epa.gov/opptintr/newchems/invntory.htm

**TRI-ME Toxics Release Inventory Made Easy Software**
The Toxics Release Inventory - Made Easy (TRI-ME) software is a tool to help facilities determine and complete their Emergency Planning and Community Right-to-Know Act (EPCRA) section 313 (TRI) reporting obligations. http://www.epa.gov/triinter/report/software/index.htm

**TSCATS Standard Reports (via RTK-NET)**
TSCATS (Toxic Substances Control Act Test Submissions) is an online index to unpublished, nonconfidential studies covering chemical testing results and adverse effects of chemicals on health and ecological systems. The studies are submitted by U.S. industry to EPA under several sections of the Toxic Substance Control Act (TSCA). There are four types of documents in the database: Section 4 chemical testing results, Section 8(d) health and safety studies, Section 8(e) substantial risk of injury to health or the environment notices, and voluntary documents submitted to EPA known as a For Your Information (FYI) notice. http://www.rtknet.org/tsc/

**UIC Class V Injection Wells Software**
USEPA's Underground Injection Control (UIC) program is explained in this hypertext-based software package, with a focus on Class V injection wells in particular. These wells inject wastewater directly into or above underground sources of drinking water, so it is important to understand why they exist, why they may pose a danger to the environment, and how they may be operated and maintained safely. http://www.epa.gov/seahome/inject.html

**Urban Airshed Model (UAM)**
The Atmospheric Sciences Modeling Division (ASMD) of NOAA's Air Resources Laboratory (ARL) collaborates with the U.S. Environmental Protection Agency (EPA) and its predecessor agencies in developing advanced air quality models that can simulate the transport and fate of pollutants in the atmosphere. http://www.epa.gov/asmdnerl/

**Vehicle and Engine Emissions Modeling Software**
Modeling is EPA's method for estimating emissions from on-road vehicles, nonroad sources, and fuels. Inventories are calculations of total emissions of a pollutant for a given area at a defined time and set of conditions. http://www.epa.gov/otaq/models.htm

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**Visual Plumes Model**
The Visual Plumes model system is a software application for simulating surface water jets and plumes. It also assists in the preparation of mixing zone analyses, Total Maximum Daily Loads (TMDLs), and other water quality applications. http://www.epa.gov/ceampubl/swater/vplume/index.htm

**VLEACH Software**
A one-dimensional, finite difference model for making preliminary assessments of the effects on groundwater from the leaching of volatile, sorbed contaminants through the vadose zone. The program models four main processes: liquid-phase advection, solid-phase sorption, vapor-phase diffusion, and three-phase equilibration. http://www.epa.gov/nerlesd1/databases/vleach/abstract.htm

**Wall Paint Exposure Assessment Model (WPEM)**
The Wall Paints Exposure Assessment Model (WPEM) estimates the potential exposure of consumers and workers to the chemicals emitted from wall paint which is applied using a roller or a brush. epa.gov/opptintr/exposure/docs/wpem.htm

**WAste Reduction Model**
EPA created the WAste Reduction Mode (WARM) to help solid waste planners and organizations track and voluntarily report greenhouse gas emissions reductions from several different waste management practices. WARM calculates and totals GHG emissions of baseline and alternative waste management practices — source reduction, recycling, combustion, composting, and landfilling. The model calculates emissions in metric tons of carbon equivalent (MTCE), metric tons of carbon dioxide equivalent ($MTCO_2E$), and energy units (million BTU) across a wide range of material types commonly found in municipal solid waste (MSW). http://yosemite.epa.gov/oar/globalwarming.nsf/content/ActionsWasteWARM.html

**Water-Effect Ratio of Metals**
This program is based on the EPA's 1994 "Interim Guidance on the Determination and Use of Water-Effect Ratios (WERs) for Metals." The WER procedure is one of three protocols which may be used to derive site-specific water quality criteria for the protection of aquatic life. http://www.epa.gov/seahome/wer.html

**Water Efficient Landscape Planner**
The Water Efficient Landscape Planner was developed to explain the advantages and principles of water efficient landscaping. The program covers the basics of landscape planning and provides guidelines and suggestions to help users select the most appropriate plants for their needs. It is intended for use by homeowners who are considering changes to residential landscaping. http://www.epa.gov/seahome/landscp.html

**Water Quality Analysis Simulation Program (WASP)**
WASP is a generalized framework for modeling contaminant fate and transport in surface waters. WASP has been used to answer questions regarding biochemical oxygen demand, dissolved oxygen dynamics, nutrients and eutrophication, bacterial contamination, and organic chemical and heavy metal contamination. http://www.epa.gov/athens/research/modeling/wasp.html

**Water Quality Standards and Criteria**
Water Quality Standards (WQS) provide a framework for maintenance and improvement of water quality when adopted by States, U.S. Territories, and Indian Tribes. This software presents the three components of State and Tribal WQS: waterbody uses (e.g., swimming, boating); water quality criteria or limits on chemical concentrations that may be present the waterbody; and antidegradation policy to protect existing water quality http://www.epa.gov/seahome/wqs.html

**WQS Database**
The WQSDB provides access to EPA and state WQS information in text, tables, and maps. This Web site provides access to several WQS reports with information about designated uses, waterbody names, state numeric water quality criteria, and EPA recommended numeric water quality criteria. http://www.epa.gov/wqsdatabase/

**Water Radioactivity Software Development Project (WRSDP)**
The EPA — Region 1, Radiation Unit has created a number of computer programs to help make necessary decisions regarding groundwater radioactivity, water radiation regulations, and radon mitigation in New England. These programs are specifically intended for the use of people in the water supply community working with water use, supply, and treatment. http://www.epa.gov/ne/eco/software/index.html

**WATERSHEDSS Documentation**
An Internet-based decision support and educational software system, WATERSHEDSS (WATER, Soil, and Hydro-Environmental Decision Support System) was developed to assist managers of predominantly agricultural watersheds in defining water-quality problems and selecting appropriate nonpoint source (NPS) pollution control measures. epa.gov/ceampubl/tools/watrshed/

**WATER9 Software**
WATER9, the wastewater treatment model, is a computer program and consists of analytical expressions for estimating air emissions of individual waste constituents in wastewater collection, storage, treatment, and disposal facilities; a database listing many of the organic compounds; and procedures for obtaining reports of constituent fates, including air emissions and treatment effectiveness. epa.gov/ttn/chief/software/water/index.html

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.6 (Continued)**

**Well Water Location and Condition on the Farm Software**
Well contamination may occur from farmstead activities near drinking water wells. The condition of your well and its proximity to pollution sources determine how much of a risk each source poses to the water you drink. This program contains information useful for identifying and correcting high-risk management and site conditions, and a water well risk assessment program. http://www.epa.gov/seahome/welloc.html

**WhAEM2000**
The U.S. EPA's Wellhead Analytic Element Model, WhAEM2000, is a groundwater geohydrology computer program. WhAEM2000 is a public domain, groundwater flow model designed to facilitate capture zone delineation and protection area mapping in support of the State's Wellhead Protection Programs (WHPP) and Source Water Assessment Planning (SWAP) for public water supplies in the United States. WhAEM2000 provides an interactive computer environment for design of protection areas based on radius methods, well in uniform flow solutions, and geohydrologic modeling methods. Protection areas are designed and overlaid upon U.S. Geological Survey Digital Line Graph (DLG) or other electronic base maps. Geohydrologic modeling for steady pumping wells, including the influence of hydrological boundaries, such as rivers, recharge, and no-flow contacts, is accomplished using the analytic element method. http://www.epa.gov/ceampubl/gwater/whaem/index.htm

**Wellhead Protection Software**
Hypertext and graphics explain protection of public water supplies as presented in the Safe Drinking Water Act Amendments of 1986. General concepts reviewed include building a planning team, delineating a wellhead protection area, conducting a contaminant source inventory, managing potential contaminant sources, and planning for the future. It is intended for local/Tribal officials, water supply managers and interested groups or citizens whose community relies on groundwater for its public water supply. Many of the concepts presented in this software may also be useful for protecting private wells. http://www.epa.gov/seahome/wellhead.html

**WhAEM Software**
A computer-based tool used in the wellhead protection decision-making process to delineate groundwater capture zones and isochrones of residence time — Unlike similar programs, WhAEM can accommodate fairly realistic boundary conditions, such as streams, lakes, and aquifer recharge due to precipitation. http://www.epa.gov/nerlesd1/databases/whaem/abstract.htm

**WHPA Software**
A semi-analytical groundwater flow simulation program used for delineating capture zones in a wellhead protection area. The program consists of four computational modules (RESSQC, MWCAP, GPTRAC, MONTEC). WHPA is applicable to homogeneous aquifers exhibiting two-dimensional, steady groundwater flow in an areal plane and appropriate for evaluating multiple aquifer types (i.e. confined, leaky-confined, and unconfined). The model is capable of simulating barrier or stream boundary conditions that exist over the entire depth of the aquifer. WHPA can account for multiple pumping and injection wells and can quantitatively assesses the effects of uncertain input parameters on a delineated capture zone(s). http://www.epa.gov/nerlesd1/databases/whpa/abstract.htm

**Window to My Environment**
"Window To My Environment" (WME) is a web-based tool that provides a wide range of federal, state, and local information about environmental conditions and features in selected areas. This application is provided by U.S. EPA in partnership with federal, state and local government and other organizations. http://www.epa.gov/enviro/wme/

**Table 12A.8 EPA Newsletters**

*Activities Update* (http://www.epa.gov/epahome/announce.htm) — a monthly publication of EPA highlights and activities including: summaries of press releases, upcoming public meetings, upcoming congressional hearings, EPA senior management statements and testimonies, reports and publications, enforcement actions, Federal Register notices and highlights of EPA rulemakings

*AIEO Update* (http://www.epa.gov/indian/1up.htm) — quarterly publication from the American Indian Environmental Office

*AMTIC News* (http://www.epa.gov/ttnamti1/improv2.html) — a quarterly publication of the ambient monitoring technology information center, which describes events, regulations, and technology relating to the measurement of air pollution

*Audit Policy Update* (http://www.epa.gov/Compliance/resources/newsletters/incentives/auditupdate/index.html) — published periodically for the assistant administrator for enforcement and compliance assurance by its office of regulatory enforcement. The Update is intended to provide information to the public and regulated communities regarding developments under the EPA Audit Policy

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.8 (Continued)**

*Chief Newsletter* (epa.gov/ttn/chief/newsletter.html) — quarterly publication of the emission factor and inventory group, which keeps the public informed about new emission estimation tools, conferences, and other information relating to emission factors and inventories

*CleanupNews* (http://www.epa.gov/compliance/resources/newsletters/cleanup/cleanupnews.html) — a quarterly published by the office of site remediation enforcement that highlights hazardous waste cleanup news, policy updates, court cases, technology, events, publications, and more

*Coastlines* (http://www.epa.gov/nep/coastlines) — information about estuaries and near coastal waters from the national estuary program

*Community Based Environmental Protection (CBEP) News Online Newsletter* (epa.gov/ecocommunity/news.htm) — a bi-weekly electronic newsletter about CBEP activities within and beyond EPA

*EIIP Update* (http://www.epa.gov/ttn/chief/eiip/update/index.html) — a newsletter designed to inform the emissions community about the emission inventory improvement program and its mission, goals, and benefits

*ENERGY STAR News* (www.energystar.gov/index.cfm?c = newsletter.nr_newsletter) — news concerning energy star labeled products

*Enforcement Alert* (http://www.epa.gov/compliance/resources/newsletters/civil/enfalert/index.html) — an electronic newsletter from the office of enforcement compliance and assurance intended to inform and educate the public and regulated community of important environmental enforcement issues, recent trends and significant enforcement actions

*EPA Journal* (epa.gov/history/collection/aid10.htm) — back issues of this agency publication on national and global environmental perspectives last published spring 1995

*FedFacs* (http://www.epa.gov/compliance/resources/newsletters/civil/fedfac/index.html) — an environmental bulletin for federal facilities from EPA's federal facilities enforcement office

*GMPO Newsletter* (epa.gov/gmpo/newsletters.html) — current activities related to the economic and environmental health of the gulf of Mexico published by the gulf of Mexico program

*Green Lights and Energy Star Buildings Update and Bulletin* (http://www.energystar.gov/index.cfm?c = bldrs_lenders_raters.pt_homes_newsletter) — a quarterly publication that provides in-depth information about participant accomplishments and program developments

*Ground Water Currents* http:// (www.clu-in.org/products/newsltrs/gwc/default.htm) — developments in innovative groundwater treatment from the Technology Innovation Office of the U.S. EPA office of solid waste

*Inside the Greenhouse* (epa.gov/globalwarming/greenhouse/index.html) — focuses on innovative state and local programs to reduce greenhouse gas emissions; Inside the greenhouse is a quarterly, electronic publication produced by the EPA's state and local climate change program

*National Small Flows Clearinghouse* (http://www.nesc.wvu.edu/nsfc/nsfc_index.htm) — offers two quarterly newsletters, small flows and pipeline, focusing on wastewater information for small communities

*Native American Network Newsletter* (epa.gov/epaoswer/non-hw/tribal/fednews.htm#nan) — provides information to help interested parties stay on top of municipal solid waste management issues affecting indian country

*NERL Research News* (http://www.epa.gov/nerl/publications/bulletins/index.html) — information about recent research from the national exposure research laboratory

*Nonpoint Source News-Notes* (http://www.epa.gov/OWOW/info/NewsNotes/) — is an occasional bulletin dealing with the condition of the water-related environment, the control of nonpoint sources of water pollution, and the ecosystem-driven management and restoration of watersheds

*Oil Spill Program Update* (http://www.epa.gov/oilspill/document.htm#update) — quarterly update of the activities of EPA's oil spill program

*OPPT Tribal News* (http://www.epa.gov/opptintr/tribal/pubs/index.html) — Environmental news for Indian tribes from the office of pollution prevention and toxics

*P2 News2* (epa.gov/p2/resources/p2news2.htm) — an electronic newsletter produced by the pollution prevention programs of the U.S. EPA Office of Pollution Prevention and Toxics (OPPT)

*PESP Update* (http://www.epa.gov/oppbppd1/PESP/publications.htm) — a periodical news brief on the pesticide environmental stewardship program

*RCRA/UST, Superfund & EPCRA Hotline Reports* http:// (www.epa.gov/epaoswer/hotline/mrqs.htm) — a monthly compilation of frequently asked regulatory questions for which EPA has provided answers and prepares them in a question and answer format

*Reusable News Newsletters* (http://www.epa.gov/epaoswer/non-hw/recycle/reuse.htm) — a collection of information from the U.S. EPA's office of solid waste

*(Continued)*

© 2006 by Taylor & Francis Group, LLC

**Table 12A.8 (Continued)**

*Science Advisory Board Newsletter* (http://www.epa.gov/science1/news.htm) — news and events pertaining to the activities of the science advisory board

*SRF's UP* (http://www.epa.gov/safewater/dwsrf.html?Facts) — a quarterly newsletter providing up-to-date information about the clean water and drinking water state revolving fund programs

*Tech Trends* (http://www.clu-in.org/pub1.cfm) — a newsletter that provides descriptions and performance data for innovative source control technologies that have been applied in the field

*Tribal Waste Journal* (http://www.epa.gov/epaoswer/non-hw/tribal/fednews.htm?twj) — from the waste management in Indian country program, each issue features a different topic and includes a kids section. Published annually, EPA's tribal waste journal replaces the native American network newsletter

*Volunteer Monitor* (http://www.epa.gov/OWOW/monitoring/volunteer/vm_index.html) — the national newsletter of volunteer water quality monitoring

*Water Quality Criteria and Standards Newsletter* (http://www.epa.gov/OST/pc/wqnews/) — a periodic newsletter about issues affecting water quality standards from the office of water's office of science and technology

*Water Talk* (yosemite.epa.gov/R10/WATER.NSF/webpage/WaterTalk?OpenDocument) — is published quarterly by the U.S. EPA, Region 10 and seeks to be a useful tool for those who protect water resources and ecosystems in communities of the Greater Pacific Northwest

*Waternews* (http://www.epa.gov/ow/waternews/) — a weekly on-line publication that announces publications, policies, and activities of the U.S. EPA's office of water

*Watershed Events* (http://www.epa.gov/OWOW/info/WaterEventsNews/index.html) — is intended to update interested parties on the development and use of watershed protection approaches

**Table 12A.11 USGS Programs**

**Biological Informatics — http://biology.usgs.gov/bio**
The Biological Informatics Program develops and applies innovative information technologies and practices to the management of biological data, information, and knowledge resulting from research, thereby increasing the value of that research to scientists, planners, policy makers, teachers, students, and private citizens

**Coastal and Marine Geology — http://marine.usgs.gov**
Provides information relative to marine science for making management decisions that affect all 35 coastal states and the island territories. Monitors changes within the coastal and marine environment, whether naturally occurring or human induced

**Contaminant Biology — http://biology.usgs.gov/pub_aff/cont-over.htm**
The Contaminants Program conducts research, assessments and monitoring to provide the nation and its natural resource managers with information on the exposure, effects and fate of deleterious substances in the environment

**Cooperative Research Units — Biology http://www.coopunits.org**
**Wildlife and Terrestrial Resources**
**Terrestrial, Freshwater, and Marine Ecosystems**
The Cooperative Research Units Program is a unique collaborative relationship between States, Universities, the Federal government and a non-profit organization. Coop Units conduct research on renewable natural resource questions, participate in the education of graduate students destined to join the natural resource profession, provide technical assistance and consultation to parties who have interests in natural resource issues, and provide various forms of continuing education for natural resource professionals

**Cooperative Topographic Mapping — http://nationalmap.usgs.gov**
The National Map is a consistent framework for geographic knowledge. It provides public access to high-quality, geospatial data and information from multiple partners to help support decision making by resource managers and the public. The National Map is the product of a consortium of Federal, State, and local partners who provide geospatial data to enhance America's ability to access, integrate, and apply geospatial data at global, national, and local scales

**Cooperative Water Program — http://water.usgs.gov/coop**
As the primary Federal science agency for water resource information, the USGS Cooperative Water Program provides reliable, impartial, and timely information needed to understand the Nation's water resources through a program of shared efforts and funding with State, Tribal, and local partners to enable decision makers to manage the Nation's water resources

**Earth Surface Dynamics — http://geochange.er.usgs.gov**
The USGS Global Change Research activities strive to achieve a whole-system understanding of the interrelationships among earth surface processes, ecological systems, and human activities. Activities of the program focus on documenting, analyzing, and modeling the character of past and present environments and the geological, biological, hydrological, and geochemical processes involved in environmental change so that future environmental changes and impacts can be anticipated

**Earthquake Hazards — http://earthquake.usgs.gov**
**Global Seismic Network http://earthquake.usgs.gov/networks/global.html**
This web site is provided by the USGS Earthquake Hazards Program as part of the effort to reduce earthquake hazard in the United States

**Energy Resources — http://energy.usgs.gov**
The USGS Energy Resources Program addresses the challenge of increasing demand for affordable energy from environmentally acceptable energy sources by conducting basic and applied research on geologic energy resources and on the environmental, economic, and human health impacts of their production and use. The Program provides reliable and impartial scientific information and comprehensive analyses of oil, natural gas, and coal resources of the Nation and the World

**Fisheries and Aquatic Resources — http://far.nbii.gov/**
To aid conservation and restoration efforts, the Fisheries and Aquatic Resources (FAR) node was established to provide an integrated, comprehensive web-based resource that will: 1) serve and access fishery and aquatic databases, 2) link to fishery and aquatic resource information sites, and 3) act as larger scale coordinating site for fisheries and aquatic resources standards

**Geographic Analysis and Monitoring — http://gam.usgs.gov**
Geographic Analysis and Monitoring Program conducts geographic assessments to improve the understanding of the rates, causes, and consequences of natural and human-induced processes that shape and change the landscape over time

**Geomagnetism — http://geomag.usgs.gov**
The USGS Geomagnetism Program monitors the field through a network of magnetic observatories and conducts scientific analysis on those data. The Program collects, transports, and can disseminate these data in near-real time, and it also has significant data-processing and management capacities

**Groundwater Resources — http://water.usgs.gov/ogw**
These pages are designed to provide useful information about groundwater resources of the Nation and groundwater activities of the USGS

*(Continued)*

**Table 12A.11 (Continued)**

**Hydrologic Networks and Analysis**

**Hydrologic Research and Development — http://water.usgs.gov/nrp**
The National Research Program (NRP) conducts basic and problem oriented hydrologic research in support of the U.S. Geological Survey (USGS)

**Invasive Species and Emerging Diseases — http://www.usgs.gov/invasive_species/plw**
Provides updates on invasive plants, exotic animals and microbes

**Land Remote Sensing — http://remotesensing.usgs.gov**
The fundamental goal of the LRS Program is to provide the Federal Government and the public with a primary source of remotely sensed data and applications and to be a leader in defining the future of land remote sensing, nationally, and internationally

**Landslide Hazards — http://landslides.usgs.gov/index.html**
The Landslides Hazards Group conducts research, gathers information, responds to emergencies and disasters, and produces scientific reports and other products for a broad-based user community. The group provides the results of investigations to private consultants in geology and geotechnical engineering, and to government planners and decision makers

**Mineral Resources — http://minerals.usgs.gov**
The Mineral Resources Program funds science to provide and communicate current, impartial information on the occurrence, quality, quantity, and availability of mineral resources

**National Cooperative Geologic Mapping — http://ncgmp.usgs.gov**
The program coordinates an expanded geologic mapping effort by the USGS, the State geological surveys, and universities. The primary goal of the program is to collect, process, analyze, translate, and disseminate earth-science information through geologic maps

**National Streamflow Information — http://water.usgs.gov/nsip**
Provides information on the quantity and timing of the streamflow in the Nation's rivers. The USGS operates and maintains approximately 7,000 streamgages which provide long-term, accurate, and unbiased information that meets the needs of many diverse users

**National Water Quality Assessment — http://water.usgs.gov/nawqa**
The NAWQA program has been collecting and analyzing data and information in more than 50 major river basins and aquifers across the Nation. The goal is to develop long-term consistent and comparable information on streams, groundwater, and aquatic ecosystems to support sound management and policy decisions

**State Water Resources Research Institute Program — http://water.usgs.gov/wrri**
The program cooperates with the USGS in establishing total programmatic direction, reporting on the activities of the Institutes, coordinating and facilitating regional research and information and technology transfer, and in operating the NIWR-USGS Student Internship Program

**Toxic Substances Hydrology — http://toxics.usgs.gov**
Provides objective scientific information to improve characterization and management of contaminated sites, to protect human and environmental health, and to reduce potential future contamination problems

**Volcano Hazards — http://volcanoes.usgs.gov**
Provides scientific information on volcanoes including current and historical volcanic activities and reducing associated risks

## SECTION 12B STATE WATER AGENCIES

**Table 12B.12 State Agency Contacts**

**Alabama**

Alabama Department of Environmental Management, http://www.adem.state.al.us/, 1400 Coliseum Blvd., Montgomery, AL 36110, Phone (334) 271-7700, Fax (334) 271-7950

Alabama Department of Conservation and Natural Resources, http://www.dcnr.state.al.us/, 64 N. Union Street, Suite 468, Montgomery, AL 36130, Phone: (334) 242-3486

**Alaska**

Department of Environmental Conservation, state.ak.us/dec/, Water Quality Standards Assessment & Reporting Program, Division of Water, 555 Cordova St., Anchorage, AK 99501-2617, Phone: (907) 269-7595, Fax: (907) 269-7649

**Arizona**

Arizona Department of Environmental Quality, http://www.azdeq.gov/, 1110 W. Washington St., Phoenix, AZ 85007, Phone (602) 771-2300, Fax: (602) 771-4426

Arizona Fish & Game Department, http://www.gf.state.az.us/, Main Office: Phoenix, 2221 W. Greenway Rd., Phoenix, AZ 85023-4399, Phone: (602) 942-3000

**Arkansas**

Arkansas Department of Environmental Quality, http://www.adeq.state.ar.us/, 8001 National Drive, Little Rock, AR 72209, P.O. Box 8913, Little Rock, AR 72219, Phone: (501) 682-0744

**California**

California Environmental Protection Agency, http://www.calepa.ca.gov/, 1001 I Street, P.O. Box 2815, Sacramento, CA 95812-2815, Phone: (916) 445-3846

California Department of Conservation, http://www.consrv.ca.gov/ index/, DOC Headquarters, 801 K Street, MS 24-01, Sacramento, CA 95814, Phone (916) 322-1080, Fax: (916) 445-0732

California Air Resources Board, http://www.arb.ca.gov/homepage.htm, 1001 "l" Street, P.O. Box 2815, Sacramento, CA 95812, Phone: (916) 322-2990, Fax: (916) 445-5025

Department of Water Resources, http://www.water.ca.gov/, 1416 9th Street, Sacramento, CA 95814, Mailing Address: P. O. Box 942836, Sacramento, CA 94236, Phone: (916) 653-5791

California Integrated Waste Management Board, http://www.ciwmb.ca.gov/, 1001 I Street, P.O. Box 4025, Sacramento, CA 95812-4025, Phone: (916) 341-6000

**Colorado**

Colorado Revised Statutes, aescon.com/iway/entry.htm, Suite 3175, 1660 Lincoln Street, Denver, CO 80264

Colorado Department of Public Health and Environment, http://www.cdphe.state.co.us/cdphehom.asp, 4300 Cherry Creek Drive South, Denver, CO 80246-1530, Phone: (303) 692-2000

**Connecticut**

Department of Environmental Protection, http://dep.state.ct.us/, 79 Elm Street, Hartford, CT 06106-5127, Phone (860) 424-3001, Fax (860) 424-4051

**Delaware**

Delaware Department of Natural Resources and Environmental Control, http://www.dnrec.state.de.us/dnrec2000/, 89 Kings Hwy, Dover, DE 19901, Phone (302) 739-5072

**District of Columbia**

Environmental Health Administration, http://dchealth.dc.gov/, 51 N Street, NE, Washington, DC 20002, Phone: (202) 535-2500

**Florida**

**Florida Department of Environmental Protection,** http://www.dep.state.fl.us/, 3900 Commonwealth Boulevard M.S. 49, Tallahassee, FL 32399, Phone: (850) 245-2118, Fax: (850) 245-2128

**Georgia**

Georgia Department of Natural Resources, http://www.gadnr.org/, 2 Martin Luther King, Jr. Drive, S. E., Suite 1252 East Tower, Atlanta, GA 30334, Phone: (404) 656-3500

Georgia Environmental Protection Division, http://www.ganet.org/dnr/environ/, 2 Martin Luther King, Jr. Drive, Suite 1152 East Tower, Atlanta, GA 30334, Phone: (404) 657-5947, Fax: (404) 651-5778

**Hawaii**

State of Hawaii, Department of Land and Natural Resources, http://www.hawaii.gov/dlnr/, Kalanimoku Bldg., 1151 Punchbowl St., Honolulu, HI 96813, Phone: (808) 587-0400, Fax: (808) 587-0390

**Idaho**

Idaho Bureau of Homeland Security, http://www.bhs.idaho.gov/, 4040 Guard Street, Building 600, Boise, ID 83705-5004, Phone: (208) 334-3460, Fax: (208) 334-2322

*(Continued)*

**Table 12B.12 (Continued)**

Idaho Department of Environmental Quality, http://www.deq.state.id.us/index.cfm, 1410 N. Hilton, Boise, ID 83706, Phone: (208) 373-0502, Fax: (208) 373-0417
Idaho Department of Water Resources, http://www.idwr.state.id.us/, 322 E. Front St, P.O. Box 83720, Boise, ID 83720-0098, Phone: (208) 287-4800, Fax: (208) 287-6700

**Illinois**
Illinois Environmental Protection Agency, http://www.epa.state.il.us/, 1021 North Grand Avenue East, P.O. Box 19276, Springfield, IL 62794-9276, Phone: (217) 782-3397
Illinois Pollution Control Board, http://www.ipcb.state.il.us/, 1021 North Grand Avenue East, P.O. Box 19274, Springfield, IL 62794-9274, Phone: (217) 524-8500

**Indiana**
Indiana Department of Environmental Management, http://www.ai.org/idem/, Indiana Government Center-North, 100 N. Senate Ave., Indianapolis, IN 46204, Phone: (317) 232-8603
Indiana Department of Natural Resources, http://www.in.gov/dnr/, Department of Natural Resources, 402 West Washington Street, Indianapolis, IN 46204, Phone: (317) 232-4699, Fax: (317) 233-2977

**Iowa**
Iowa Department of Natural Resources, http://www.iowadnr.com/, 502 E. 9th Street, Des Moines, IA 50319-0034, Phone: (515) 281-5918

**Kansas**
The Kansas Department of Health and Environment, http://www.kdhe.state.ks.us/, Curtis State Office Building, 1000 SW Jackson, Topeka, KS 66612, Phone: (785) 296-1500, Fax: (785) 368-6368

**Kentucky**
Kentucky Environmental Quality Commission, eqc.ky.gov/, 14 Reilly Road, Frankfort, KY 40601, Phone: (502) 564-2150, Fax: (502) 564-9729
Department for Natural Resources, naturalresources.ky.gov/, 663 Teton Trail, Frankfort, KY 40601, Phone: (502) 564-2184, Fax: (502) 564-6193

**Louisiana**
Louisiana Department of Environmental Quality, http://www.deq.state.la.us/, P.O. Box 4301, Baton Rouge, LA 70821-4301, Phone: (225) 219-3953, Fax: (225) 219-3971

**Maine**
Maine Department of Environmental Protection, http://www.state.me.us/dep/index.shtml, 17 State House Station, Augusta, ME 04333-0017, Phone: (207) 287-7688 • (800) 452-1942

**Maryland**
Maryland Department of the Environment, http://www.mde.state.md.us/, 1800 Washington Blvd, Baltimore, MD 21230, Phone: (410) 537-3000
Maryland Department of Natural Resources, dnr.state.md.us/, 580 Taylor Avenue, Annapolis, MD 21401, Phone: (877) 620-8367

**Massachusetts**
Massachusetts Department of Environmental Protection, http://www.mass.gov/dep/dephome.htm, One Winter Street, Boston, MA 02108-4746, Phone: (617) 292-5500

**Michigan**
Division of Water Supply, Michigan Department of Public Health, P.O. Box 30035, Lansing, MI 48909, Phone: (517) 335-8318

**Minnesota**
Minnesota Department of Natural Resources, http://www.dnr.state.mn.us/index.html, 500 Lafayette Road, St. Paul, MN 55155-4040, Phone: (651) 296-6157
Minnesota Pollution Control Agency, http://www.pca.state.mn.us/, 520 Lafayette Road, St. Paul, MN 55155-4194, Phone: (651) 296-6300

**Mississippi**
Mississippi Department of Environmental Quality, http://www.deq.state.ms.us/MDEQ.nsf/, P.O. Box 20305, Jackson, MS 39289-1305, Phone: (601) 961-5171

**Missouri**
Department of Natural Resources, dnr.state.mo.us/, P.O. Box 176, Jefferson City, MO 65102, Phone: (573) 751-3443
Missouri DNR, Air and Land Protection Division, dnr.state.mo.us/alpd/, Department of Natural Resources, P.O. Box 176, Jefferson City, MO 65102, Phone: (573) 751-3443
Missouri DNR, Water Protection and Soil and Conservation Division, dnr.state.mo.us/wpscd/, Department of Natural Resources, P.O. Box 176, Jefferson City, MO 65102, Phone: (573) 751-3443
Missouri Department of Conservation, http://www.conservation.state.mo.us/, P.O. Box 180 (zip 65102), 2901 W. Truman Blvd., Jefferson City, MO 65109, Phone: (573) 751-4115, Fax: (573) 751-4467

## SECTION 12C WATER RESOURCES RESEARCH

**Table 12C.13 Universities Council on Water Resources**
About 90 universities in the United States and throughout the world comprise the Universities Council on Water Resources (UCOWR) organization. Member institutions engage in education, research, public service, international activities, and information support for policy development related to water resources. Each member university appoints four faculty members as UCOWR lead delegates. Others may join as individual members. See history and goals for more information.

**Alabama**
Auburn University

**Alaska**
University of Alaska

**Arizona**
University of Arizona
Arizona State University

**Arkansas**
University of Arkansas

**California**
California State, Sacramento
University of California, Davis
University of California, Riverside
University of Southern California

**Colorado**
Colorado State University
National Technological University
University of Colorado

**Table 12C.14 Water Resources Research Institutes**

The Water Resources Research Act authorized by P.L. 101-397 provides for Water Resources Research Institutes in each of the 50 states, the trust territories, and the District of Columbia. Under the Act, these institutes are to:

1. plan, conduct, or otherwise arrange for competent research that fosters (A) the entry of new research scientists into the water resources fields, (B) the training and education of future scientists, engineers, and technicians, (C) the preliminary exploration of new ideas that address water problems or expand understanding of water and water-related phenomena, and (D) the dissemination of research results to water managers and the public.
2. cooperate closely with other colleges and universities in the State that have demonstrated capabilities for research, information dissemination, and graduate training in order to develop a statewide program designed to resolve State and regional water and related land problems.

Each institute shall also cooperate closely with other institutes and other organizations in the region to increase the effectiveness of the institutes and for the purpose of promoting regional coordination.

The state-based program promotes research, training, information dissemination, and other activities meeting the needs of the States and Nation, and encourages regional cooperation among institutes in research into areas of water management, development, and conservation that have a regional or national character.

**Alabama**

Dr. Upton Hatch, Director, Auburn University Environmental Institute, 101 Comer Hall, Auburn University, Auburn, AL 36849-5431, Phone: (334) 844-4132, Fax: (334) 844-4462, email: hatchlu@auburn.edu

**Alaska**

Dr. Douglas Kane, Water and Environmental Research Center, University of Alaska-Fairbanks, Fairbanks, AK 99775-5860, Phone: (907) 474-7808, Fax: (907) 474-7979, email: ffdlk@uaf.edu, http://www.uaf.edu/water/

**Arizona**

Dr. Sharon Megdal, Water Resources Research Center, 350 N. Campbell Ave., The University of Arizona, Tucson, AZ 85721, Phone: (520) 792-9591, Fax: (520) 792-8518, email: wrrc@ag.arizona.edu, http://ag.arizona.edu/AZWATER/

**Arkansas**

Dr. Ralph Davis, Arkansas Water Resources Center, 112 Ozark Hall, University of Arkansas, Fayetteville, AK 72701, Phone: (501) 575-4515, Fax: (501) 575-3177, email: ralphd@uark.edu, http://www.uark.edu/depts/awrc/

**California**

Dr. John Letey, Director, Center for Water Resources, Ruibidoux Hall -094, University of California, Riverside, CA 92521-0436, Phone: (909) 787-4327, Fax: (909) 787-5295, email: john.letey@ucr.edu, http://www.waterresources.ucr.edu/

**Colorado**

Dr. Robert C. Ward, Colorado Water Resources Research Institute, E-102 Engineering Building, Colorado State University, Fort Collins, CO 80523, Phone: (970) 491-6308, Fax: (970) 491-1636, email: robert.ward@colostate.edu, http://cwrri.colostate.edu/

**Connecticut**

Dr. Glenn Warner, Director, Connecicut Institute of Water Resources, WB Young Building, Room 308, 1376 Storrs Road Unit 4018, The University of Connecticut, Storrs, CT 06269-4018, Phone: (860) 486-2840, Fax: (860) 486-5408, email: gwarner@canrl.cag.uconn.edu, http://www.ctiwr.uconn.edu/

**Delaware**

Dr. J. Thomas Sims, Delaware Water Resources Center, 113 Townsend Hall, University of Delaware, Newark, DE 19716-2103, Phone: (302) 831-6757, Fax: (302) 831-6758, email: jtsims@udel.edu, http://ag.udel.edu/dwrc/

**District of Columbia**

Dr. William W. Hare, Director, D.C. Water Resource Research Institute, 4200 Connecticut Ave NW, Building 52, Suite 322D University of the District of Columbia, Washington, DC 20008, Phone: (202) 409-0319, Fax: (202) 274-7016, email: whare@udc.edu, http://www.udc.edu/WRRI/

**Florida**

Dr. Kirk Hatfield, Interim Director, Water Resources Research Center, Department of Civil Engineering, 124 Yon Hall, P.O. Box 116580, University of Florida, Gainesville, FL 32611-6580, Phone: (352) 392-9537, Fax: (352) 392-3394, email: khatf@ce.ufl.edu, http://www.ce.ufl.edu/~wrrc/

**Georgia**

Dr. Aris P. Georgakakos, Environmental Resources Center, School of Civil & Environmental Engineering, 790 Atlantic Drive, Georgia Institute of Technology, Atlanta, GA 30332-0335, Phone: (404) 894-2240, Fax: (404) 894-2677, email: ageorgak@ce.gatech.edu, http://www.gwri.org/

**Guam**

Dr. Leroy F. Heitz, Director, Water and Environmental Research Institute of the Western Pacific, University of Guam, 303 University Drive, Mangilao, Guam 96923, Phone: 011 671 7352685, Fax: 011 671 734-8890, email: lheitz@uog.edu, http://www.uog.edu/weri/index.html

# SECTION 13A PHYSICAL PROPERTIES OF WATER

**Table 13A.1 Variation of Properties of Pure Water with Temperature**

| Temperature (°C) | Temperature (°F) | Density at 1 Atmosphere ($gm/cm^3$) | Dynamic Viscosity, in Centipoises ($10^{-2}$ dyne-sec/$cm^2$) | Kinematic Viscosity, in Centistokes ($10^{-2}$ $cm^2$/sec) | Surface Tension Against Air (dyne/cm) | Vapor Pressure (mm Hg) |
|---|---|---|---|---|---|---|
| 5 | 41.0 | 0.999965 | 1.5188 | 1.5189 | 74.92 | 6.543 |
| 6 | 42.8 | 0.999941 | 1.4726 | 1.4727 | 74.78 | 7.013 |
| 7 | 44.6 | 0.999902 | 1.4288 | 1.4289 | 74.64 | 7.513 |
| 8 | 46.4 | 0.999849 | 1.3872 | 1.3874 | 74.50 | 8.045 |
| 9 | 48.2 | 0.999781 | 1.3476 | 1.3479 | 74.36 | 8.609 |
| 10 | 50.0 | 0.999700 | 1.3097 | 1.3101 | 74.22 | 9.209 |
| 11 | 51.8 | 0.999605 | 1.2735 | 1.2740 | 74.07 | 9.844 |
| 12 | 53.6 | 0.999498 | 1.2390 | 1.2396 | 73.93 | 10.518 |
| 13 | 55.4 | 0.999377 | 1.2061 | 1.2069 | 73.78 | 11.231 |
| 14 | 57.2 | 0.999244 | 1.1748 | 1.1757 | 73.64 | 11.987 |
| 15 | 59.0 | 0.999099 | 1.1447 | 1.1457 | 73.49 | 12.788 |
| 16 | 60.8 | 0.998943 | 1.1156 | 1.1168 | 73.34 | 13.634 |

## SECTION 13B WATER QUALITY

**Table 13B.10 Constants and Conversion Factors for Water Quality**

| To Convert | To | Multiply By |
|---|---|---|
| Grains per Imperial gallon | Parts per million | 14.3 |
| Grains per gallon | Parts per million | 17.12 |
| Parts per million | Grains per gallon | 0.05841 |
| Parts per million | Tons per acre-foot | 0.00136 |
| Parts per million | Tons per day | Second-feet $\times$ 0.0027 |
| $Ca^{+2}$ | $CaCO_3$ | 2.497 |
| $CaCl_2$ | $CaCO_3$ | 0.9018 |
| $HCO_3^{-1}$ | $CaCO_3$ | 0.8202 |
| $HCO_3^{-1}$ | $CO_3^{-2}$ | 0.4917 |
| $Mg^{+2}$ | $CaCO_3$ | 4.116 |
| $MgCl_2$ | $CaCO_3$ | 1.051 |
| $Na_2CO_3$ | $CaCO_3$ | 0.9442 |
| $Fe^{+3}$ | $H_2SO_4$ | 2.634 |
| $NO_3^{-1}$ | N | 0.2259 |
| N | $NO_3^{-1}$ | 4.4266 |

**Parts Per Million to Equivalent Per Million**

| Ion | Multiply By | Ion | Multiply By |
|---|---|---|---|
| Aluminum ($Al^{+3}$) | 0.11119 | Iron ($Fe^{+3}$) | 0.05372 |
| Barium ($Ba^{+2}$) | 0.01456 | Lead ($Pb^{+3}$) | 0.00965 |
| Bicarbonate ($HCO_3^{-1}$) | 0.01639 | Lithium ($Li^{+1}$) | 0.14409 |
| Bromide ($Br^{-1}$) | 0.01251 | Magnesium ($Mg^{+2}$) | 0.08224 |
| Calcium ($Ca^{+2}$) | 0.04990 | Manganese ($Mn^{+2}$) | 0.03640 |
| Carbonate ($CO_3^{-1}$) | 0.03333 | Manganese ($Mn^{+4}$) | 0.07281 |
| Chloride ($Cl^{-1}$) | 0.02820 | Nitrate ($NO_3^{-1}$) | 0.01613 |
| Chromium ($Cr^{+6}$) | 0.11536 | Phosphate ($PO_4^{-3}$) | 0.03159 |
| Copper ($Cu^{+2}$) | 0.03148 | Potassium ($K^{+1}$) | 0.02558 |
| Fluoride ($F^{-1}$) | 0.05263 | Sodium ($Na^{+1}$) | 0.04350 |
| Hydrogen ($H^{+1}$) | 0.99206 | Strontium ($Sr^{+2}$) | 0.02282 |
| Hydroxide ($OH^{-1}$) | 0.05880 | Sulfate ($SO_4^{-2}$) | 0.02082 |
| Iodide ($I^{-1}$) | 0.00788 | Sulfide($S^{-1}$) | 0.06237 |
| Iron ($Fe^{+2}$) | 0.03581 | Zinc ($Zn^{+2}$) | 0.03059 |

**Expressions of Hardness**

| | |
|---|---|
| 1 grain per gallon | = 1 grain $CaCO_3$ per U.S. gallon |
| 1 part per million | = 1 part $CaCO_3$ per 1,000,000 parts of water |
| 1 English, or Clark, degree | = 1 grain $CaCO_3$ per Imperial gallon |
| 1 French degree | = 1 part $CaCO_3$ per 100,000 parts of water |
| 1 German degree | = 1 part CaO per 100,000 parts of water |

**Conversions**

| | |
|---|---|
| 1 grain per U.S. gallon | = 17.1 ppm, as $CaCO_3$ |
| 1 English degree | = 14.3 ppm, as $CaCO_3$ |
| 1 French degree | = 10 ppm, as $CaCO_3$ |
| 1 German degree | = 17.9 ppm, as CaCO |

For most waters, 1 part per million = 1 mg/l. The U.S. Geological Survey has arbitrarily selected 7,000 ppm as the concentration above which a density correction must be made: the determined concentration of each constituent must be divided by the density to give the correct parts per million. The computation is made before rounding the results.

Parts per million are converted to equivalents per million by multiplying ppm by the reciprocals of combining weights of the appropriate ions (see table). The combining weight is equal to the molecular or ionic weight divided by the ionic charge, or valence.

**Specific Conductance Relations (Adapted from USGS Water Supply Paper 1454)**

For most natural waters of a mixed type, the specific conductance, in micromhos (1 micromho = $10^{-6}$ mho. The mho is unit of conductance; thus, a body has a conductance of one mho if one ampere of electric current flows when the potential difference is one volt. The conductance of a body in mhos is the reciprocal of the value of its resistance in ohms.), multiplied by 0.65 approximates the residue on evaporation in parts per million. This does not approach an exact relation, and usually increases as the total dissolved solids exceed 2000–3000 ppm. For waters containing appreciable concentrations of free acid, caustic alkalinity, or sodium chloride, the factor may be much less than 0.65. The relationship for any water becomes indefinite as saturation is approached.

With similar limitations, the specific conductance divided by 100 approximates the equivalents per million of cations or anions.

## SECTION 13J PERMEABILITY

**Table 13J.23 Units and Conversion Factors for Permeability**

| | |
|---|---|
| **Permeability Units**[a] | |
| Laboratory (standard) coefficient of permeability | $1K_s = \dfrac{1 \text{ gal. of water at } 60^\circ\text{F/day}}{(1 \text{ ft}^2)(1 \text{ ft/ft})}$ |
| Field coefficient of permeability | $1K_f = \dfrac{1 \text{ gal. of water at field temperature/day}}{(1 \text{ ft} \times 1 \text{ mi})(1 \text{ ft/mi})}$ |
| Specific (intrinsic) permeability | $1 \text{ darcy} = \dfrac{1 \text{ centipoise} \times 1 \text{ cm}^3/\text{sec})/1 \text{ cm}^2}{1 \text{ atmosphere}/1 \text{ cm}}$ |
| **Conversion Factors** | |
| *Permeability* | |
| 1 $K_s$ | $=4.72\times10^{-5}$ cm/sec |
| | $=0.0408$ m/day |
| | $=0.134$ ft/day |
| | $=1.43\times10^{-6}$ ft/sec |
| 1 Darcy | $=0.987\times10^{-8}$ cm$^2$ |
| | $=1.062\times10^{-11}$ ft$^2$ |
| | $=18.2$ $K_s$ for water at 60°F |
| | $=0.966\times10^{-3}$ cm/sec for water at 20°C |
| 1 Millidarcy | $=1.82\times10^{-2}$ $K_s$ for water at 60°F |
| 1 cm/sec | $=1.02\times10^{-5}$ cm$^2$ for water at 20°C |
| 1 m/sec | $=2.12\times10^{6}$ gpd/ft$^2$ |
| 1 m/day | $=24.5$ gpd/ft$^2$ |
| *Transmissivity* | |
| 1 m$^2$/sec | $=6.96\times10^{6}$ gpd/ft |
| 1 m$^2$/day | $=80.5$ gpd/ft |

[a] In groundwater investigations, the water-transmitting capability of an aquifer is commonly expressed in terms of a Coefficient of Transmissivity, which is the product of the Coefficient of Permeability of the aquifer material and the thickness of the aquifer.

## SECTION 13K POWER

**Table 13K.24 Conversion Factors for Power**

| | |
|---|---|
| 1 hp | = .746 kW or 746 W<br>= 33,000 ft lb/min<br>= 550 ft lb/sec<br>= 8760 hp-h/yr<br>= 6535 kWh/yr |
| H.P. Input | = Horsepower input to motor<br>= 1.34 × kilowatts input to motor |
| Water H.P. | = H.P. required to lift water at a definite rate to a given distance assuming 100% efficiency<br>$= \frac{\text{G.P.M.} \times \text{total head (in. ft)}}{3960}$ |
| Brake H.P. | = H.P. delivered by motor<br>= H.P. required by pump<br>= H.P. input motor × efficiency<br>= 1.34 × KW input × motor efficiency<br>$= \frac{\text{Water H.P.}}{\text{pump efficiency}}$<br>$= \frac{\text{G.P.M.} \times \text{total head(ft)}}{3960 \times \text{pump efficiency}}$<br>$= \frac{\text{G.P.H.} \times \text{total head(lb/sq in.)}}{103,000 \times \text{pump efficiency}}$ |
| 1 kilowatt | = 1.3405 Horsepower<br>= 8760 kWh/yr |
| Efficiency | $= \frac{\text{Power output}}{\text{Power input}}$ |
| Motor Efficiency | $= \frac{\text{H.P. output}}{\text{KW input} \times 1.34}$ |
| Pump Efficiency | $= \frac{\text{G.P.M.} \times \text{total head(ft)}}{3960 \times \text{B.H.P}}$ |
| Plant Efficiency | $= \frac{\text{G.P.M.} \times \text{total head(ft)}}{5300 \times \text{KW input}}$ |

**Table 13K.25 Horsepower Required to Pump Water**

| Gallons per Minute | Cubic Feet per Second | Horsepower Required for Elevations of | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | 10 ft | 20 ft | 30 ft | 40 ft | 50 ft | 60 ft | 70 ft | 80 ft |
| 100 | 0.22 | 0.5 | 1.0 | 1.5 | 2.0 | 2.5 | 3.0 | 3.5 | 4.0 |
| 150 | 0.33 | 0.8 | 1.5 | 2.3 | 3.0 | 3.8 | 4.6 | 5.3 | 6.1 |
