Bill Gates (b. 1955), the founder of Microsoft Corporation, currently is building a similar philanthropic legacy. By 1999, he had given a total of \$2.4 billion to MIT, Columbia University, the Global Fund for Children's Vaccines, and other charities. Currently, the Bill and Melinda Gates Foundation is the largest foundation in the world. Americans have great admiration for people who achieve vast wealth, but it is also clear that with this admiration comes expectations of extreme generosity. Gates's philanthropy should seal his extremized, positive, posthumous legacy. Other millionaires of the technology-driven boom of the 1990s, such as Steve Case of America Online and Steve Kirsch of Propel Software and Infoseek, are also making it a priority to bestow large philanthropic gifts on various foundations and charities.

Another intriguing example of highly effective legacy management can be seen in the life and death of Walt Disney. An examination of his career reveals a man who went to great lengths to project the cleanest and most wholesome of images to the public. To create a remarkable and enduring posthumous legacy, Disney painstakingly ensured that his body of work—both his cartoon motion pictures and his theme parks—reflected positive family values and a love for children. He also employed many public relations individuals whose primary job was to ensure that all of the United States and eventually the world would associate his name with morality, innocence, kindness, and family entertainment. Disney's efforts were eminently successful, and to this day the many dark sides to his personality and behavior remain largely unknown to the public.

THE ENDURING IMPORTANCE OF MORALITY

It is evident that a leader's legacy of morality is just as important, if not more important, than a legacy of competence. Because a leader's legacy and his or her organization's reputation appear to be intertwined, a leader's actions, especially on the morality dimension, may be far more significant than either the leader or her followers realize. The implication for leaders and their organizations is that they must unfailingly scrutinize the moral tenor of the leader's actions, particularly toward the twilight of his or her career. Even if a leader's actions demonstrate exceptional competence, the morality (or lack of morality) of those actions may be of more lasting consequence than the material gain they achieved, although the focus on morality may occur only after the leader's death.

LENIN, VLADIMIR (1870–1924)

Leader of the 1917 Russian Revolution

Among the world's great revolutionary leaders, Lenin is recognized for his efforts to put Marxism into practice and for creating the Union of Soviet Socialist Republics, which survived for over seventy

years. He was diligent, passionate, and original in his approach to achieving his objectives.

Born Vladimir Ilich Ulyanov in Simbirsk (now Ulyanovsk), Russia, he was much influenced by the fate of his elder brother, Sasha, who was caught in a conspiracy to kill the czar and sentenced to death. Vladimir later adopted Sasha's nickname, Lenin, and signed documents *Ulyanov (Lenin)*. Lenin was drawn to the social and economic theories of Karl Marx (1818–1883). In 1893, Lenin joined the revolutionary movement in St. Petersburg; in 1895, he was arrested and, in 1897, deported to Siberia for three years. After return from this exile in 1900, he led a life of material hardship but prolific literary output, in such cities as London, Munich, Geneva, Brussels, Paris, Stockholm, and Zurich. From 1903 he was the leader (from Europe) of the Bolshevik party. He published several revolutionary magazines through which he aimed to win factory workers over to his vision of a classless, worker-led society. Lenin accepted Marx's thought unaltered and was proud to be an orthodox Marxist. He opposed revisionism.

RISE OF THE BOLSHEVIKS

Lenin returned to Russia in April after the political revolution of March 1917 when the czar had abdicated. Once back in Russia, Lenin took up the leadership of the country's revolutionary movement. The March revolution had ushered in freedom of the press and amnesty for political prisoners in Siberia. It was the second phase of the revolution—the social revolution—that changed the very structure of society. It was this phase that was characterized by Lenin's strength of personality. His thought and will matched the revolutionary potential in Russia at that time. He opposed reform-minded groups categorically and refused to compromise on socialist principles. As a leader, the most important thing that he did was to create a team of dedicated followers who shared his dreams, ideas, and objectives. Among them were Leon Trotsky (1879–1940), Lev Kamenev (1883–1936), Grigory Zinovyev (1883–1936), Joseph Stalin (1879–1953), Vyacheslav Molotov (1890–1986), and Nikolay Bukharin (1888–1938).

Lenin did not believe in parliamentary republics or a bourgeois democracy. This was because in such a political system, it was the rich who were represented. Rather, he envisioned a republic of soviets (elected councils) of industrial and agricultural workers whereby such underclasses would have representation. He faced many obstacles in trying to realize this dream, however. First, his ideas were shared only by his fellow party members. Moreover, many thought his plan represented too hasty a rush from feudal to socialist society, as it skipped the intervening capitalist stage that Marx had postulated was necessary. At one stroke Lenin was trying to eliminate the historical stage of capitalism.

From "Power to the Soviets" to "Power to the Party"

When Lenin returned to Russia in April 1917 from Switzerland, he had two clear tasks: to organize the Bolsheviks and to see to it that the Bolsheviks represented the majority in local soviets throughout the country. These were daunting tasks, as the Bolsheviks were in the minority in the soviets that had formed during the March revolution, and many of the party's leaders were in exile or custody.

After his arrival, Lenin put forth his ideas clearly in his *April Thesis*. His ability to communicate well with his audience was one characteristic of his leadership. He came up with the slogan "Peace! Land! Bread!," and his idea that power should lie with the local soviets worked magic. People everywhere demanded peace for the soldiers, land for the peasants, and bread for the workers—thus radicalizing the discontented classes.

Having established his authority, Lenin convened the RSDLP (Russian Social Democratic Labour Party, also known as the Bolshevik Party) in April. Meanwhile, Trotsky organized the Red Guards. In April 1917, Lenin's slogan had been "All power to the soviets." By June, when he had consolidated his party, his slogan changed to "All power to the Party." The Bolsheviks were able to bring the peasants and the proletariat (industrial workers) together by providing a common platform against the bourgeoisie. Under Lenin's leadership, the centrality of the land question was emphasized. Because most of the sol-

diers were peasants, the issues of land rights and peace were linked.

Consolidating the Party

Lenin refused to compromise or work with other political parties, adopting a policy of total opposition to them. Consequently, while more powerful rival political groups became increasingly compromised by the unpopularity of the government, the Bolsheviks could claim to be more representative of people's wishes and also to have an independent program.

In July 1917, Lenin suffered a setback when a group of Bolsheviks tried to take control of the government by force—a move Lenin had opposed—and were unsuccessful. The Bolshevik leaders were arrested or had to go underground. Those who were opposed to Bolsheviks even claimed that the Bolsheviks were German agents. However, eventually the documents that led to the charges of being German agents were found to be forged, and the Bolshevik leaders were released without trial on nominal or no bail.

In July 1917, a military offensive launched by Russia's General Aleksey Brusilov (1853–1926) failed, and the army was faced with large-scale desertions. In August, Brusilov was replaced by General Lavr Kornilov (1870–1918), who subsequently attempted to overthrow Russia's provisional government. In this chaotic situation the provisional government appealed to Bolsheviks for defense of Petrograd (present-day St. Petersburg) and also gave arms to the Red Guards. At the end of September, when elections to the soviets were held, Bolsheviks won a majority in local soviets all over the country, as well as majorities in the Petrograd and the Moscow soviets for the first time. Once these majorities had been won, Lenin pressed for immediate action. He saw it as the right time for the Bolsheviks to seize power by force. Interestingly, he was opposed by his colleagues in this. They thought that while it might be possible to take over the twin capitals of Moscow and Petrograd, it would be difficult to hold on to power, given that they were unsure of their support in other regions. Lenin persuaded them with the reasoning that once he was in power, land would

be given to the peasants and consequently peasants would come to their support. Again it was a chance turn of events that helped Lenin's view prevail. The Petrograd garrison did not wish to be transferred to the war front, and consequently they sided with the Bolsheviks against the provisional government. The Red Guards were thus able to seize power for the Bolsheviks in a bloodless coup.

Thus, in a period of less than nine months, Lenin was able to organize his party, create a network of party workers, transform the party from a small underground organization to a legitimate power holder, and finally take control of Russia as a whole. Moreover, the Communist revolution demonstrated that revolution was a battle of ideologies—the guns came later. This small underground group was able to achieve ultimate power because Lenin outwitted his opponents in a battle of minds. He was, however, also favored by the poor judgment of his adversary, Aleksandr Kerensky (1881–1970), the head of the provisional government after the abdication of the czar, who made the same mistake the czar had made in continuing with the war. The failure of Russia in

World War I provided Lenin with opportunity to put his ideas to work.

AFTER THE REVOLUTION

Interestingly, while Lenin spurred the Bolsheviks to take control of the Congress of Soviets, they had only 300 out of 650 delegates in it, though the Council of People's Commissars was exclusively Bolshevik and headed by Lenin. Analogously, the first body was like the Parliament—one member representing roughly twenty-five thousand voters—while the latter was like the Council of Ministers but more powerful because it controlled the government. The Bolsheviks were also a minority in the Constituent Assembly that was elected on 25 November 1917. Consequently, when it assembled in January 1918, the Red Guards dispersed it, maintaining Bolshevik power by force. This was quite in line with Lenin's thinking, as he dismissed democracy as a creation of the bourgeoisie. He envisioned a communitarian socialist state that was centralized, run as a dictatorship of the proletariat. This dictatorship of the proletariat was to be a one-party rule of the Bolsheviks under the leadership of Lenin.

Lenin proceeded to destroy czarist Russia's class system, root and branch. The revolution did not go unchallenged, however; there was armed resistance from the dispossessed nobles, landed gentry, and others who opposed the Bolsheviks. In the ensuing civil war, thousands died and southern and eastern Russia were worst affected by it. The country's industrial infrastructure was almost destroyed. Anyone who resisted the new regime was dubbed a counterrevolutionary and enemy of the people, and was punished. All other political parties were disbanded—only the Bolsheviks remained. Freedom of press was abolished, and a revolutionary tribunal was set up to suppress opposition of any kind.

Because the Orthodox Church was, in Lenin's mind, simply another powerful organization that oppressed the proletariat, under Lenin's leadership, the Communists did all they could to discourage religious beliefs. In the field of economy, Lenin initiated full-scale collectivization. From 1918 to 1921 Lenin instituted what was known as war Communism. The

government seized property, nationalized industry, and prohibited private retail trade and the hiring of labor. The government instituted free transportation and replaced money wages with a commodity card. This extreme version of Communism meant no wages, no private trade, and food obtained for free, through rationing. The economy worsened dramatically, leading Lenin in 1921 to adopt what was known as the New Economic Policy. The New Economic Policy saw the reintroduction of some elements of a capitalist market system, rather as in a mixed economy in today's world. Such economic pragmatism indicates that Lenin had a clear idea of how to make things work. Unfortunately, in 1922 Lenin fell seriously ill (he died two years later) and was no longer able to work. His New Economic Policy was rescinded by his successors.

Many of the atrocities of the years following Lenin's rise to power were a consequence not solely of the Bolsheviks' single-minded determination to remain in power but of the prevailing anarchy. Russia had taken a beating in World War I, anarchy was rampant during the civil war, and the morale of the country was low—so radical measures were required to deal with the situation. As Lenin's wife Nadezhda K. Krupskaya (1869–1939) wrote in *Reminiscences of Lenin*, “The people were tired of the imperialist carnage and wanted a bloodless revolution, but the enemies compelled them to fight. Engrossed completely in the problems of socialist reconstruction of the entire social system, Ilyich was compelled to turn his attention to the defence of the cause of the revolution” (Krupskaya 1970). Lenin was the leader who had the vision and the ideas to rescue Russia from the ravages of war and feudal-

Comrades, the workmen's and peasants' revolution, the need of which the Bolsheviks have emphasized many times, has come to pass.

What is the significance of this revolution? Its significance is, in the first place, that we shall have a soviet government, without the participation of bourgeoisie of any kind. The oppressed masses will of themselves form a government. The old state machinery will be smashed into bits and in its place will be created a new machinery of government by the soviet organizations. From now on there is a new page in the history of Russia, and the present, third Russian revolution shall in its final result lead to the victory of Socialism.

One of our immediate tasks is to put an end to the war at once. But in order to end the war, which is closely bound up with the present capitalistic system, it is necessary to overthrow capitalism itself. In this work we shall have the aid of the world labor movement, which has already begun to develop in Italy, England, and Germany.

A just and immediate offer of peace by us to the international democracy will find everywhere a warm response among the international proletarian masses. In order to secure the confidence of the proletariat, it is necessary to publish at once all secret treaties.

In the interior of Russia a very large part of the peasantry has said: Enough playing with the capitalists; we will go with the workers. We shall secure the confidence of the peasants by one decree, which will wipe out the private property of the landowners. The peasants will understand that their only salvation is in union with the workers.

We will establish a real labor control on production.

We have now learned to work together in a friendly manner, as is evident from this revolution. We have the force of mass organization which has conquered all and which will lead the proletariat to world revolution.

We should now occupy ourselves in Russia in building up a proletarian socialist state.

Long live the world-wide socialistic revolution.

ism; he worked for Russia's reconstruction and for a society free from class distinctions. But he was limited by the strictures of his ideological thinking, by his tendency to make the ideology the absolute truth and the greatest good—a limitation and weakness shared by many visionary leaders.

LEWIS AND CLARK EXPEDITION

Named for its two intrepid leaders, Meriwether Lewis (1774–1809) and William Clark (1770–1838), the Lewis and Clark expedition is the most famous journey of exploration in American history. The brainchild of President Thomas Jefferson (1743–1826), the expedition was charged with many goals, but its primary objective was to discover and map a western river system that linked the Mississippi River to the Pacific Ocean. Jefferson's Corps of Discovery, which ultimately included thirty-one men, a woman, a baby, and a dog, began its exploration in May 1804 from a base camp near St. Louis, Missouri. After traveling an estimated 8,000 miles, the corps returned to St. Louis twenty-eight months later. Knowledge of the expedition and its lasting fame derives from the lengthy and descriptive journals maintained by Lewis, Clark, and four other expedition members.

From conceptualization to completion, the Lewis and Clark expedition evolved in four stages. From spring 1802 to spring 1804, Jefferson's vision of western expansion was realized in the extensive planning and preparation of the expedition. The Corps of Discovery first journeyed from the vicinity of St. Louis to present-day North Dakota, where the expedition camped among the Mandan Indians

through the winter of 1804 and 1805. In April 1805, the corps traveled west, over the Rocky Mountains to the Pacific Coast, where it camped during the subsequent winter. The fourth and final phase featured the expedition's return to St. Louis, and Lewis's reunion with Jefferson. The Lewis and Clark expedition stands as a remarkable and historic achievement, one rich with lessons for practitioners and students of the leadership process.

STRATEGY, PLANNING, AND PREPARATION

At the beginning of the nineteenth century, the United States, a prosperous but fledgling power, with the Mississippi River as its western boundary, was boxed in geopolitically—Great Britain dominated the seas and occupied Canada; Russia owned Alaska; Spain claimed not only Florida, but also the Louisiana Territory and lands further west and south; and France, under Napoleon Bonaparte, aimed to conquer continental Europe and to establish a North American empire.

When Jefferson became president in 1801, he put into action a plan for America's eventual western expansion, one designed to displace the Europeans from the continent. Fearing Spanish and French machinations in the Louisiana Territory, he began negotiations to acquire the crucial city-port of New Orleans. Further alarmed by British exploits in the Pacific Northwest, he also planned a U.S. exploration of the Northwest Territory and the vast Missouri River system, which cut through the upper Louisiana Territory.

On 18 January 1803, Jefferson submitted a secret message to Congress requesting \$2,500 to underwrite the western expedition. The president's objectives were many: discovery of an all-water route across the continent; expansion of American commerce and territory; maps and descriptions of western waterways and mountains, and scientific examination of flora, fauna, soils, and minerals; and peaceful relations with western tribes and promotion of peace among them. His explorers, moreover, were to engage in extensive tribal ethnography and to encourage chieftains to travel east.

In planning and preparing for the mission, Jeffer-

son relied heavily upon Captain Meriwether Lewis, his personal secretary. Lewis, the son of a wealthy planter, grew up on the Virginia Piedmont, where he gained an invaluable education in plantation management and wilderness survival. He enlisted in the militia at the age of twenty, and later joined the Regular Army. In 1801, Jefferson selected Lewis as his personal aide-de-camp, and eventually chose him to lead the Corps of Discovery.

In March 1803, Jefferson dispatched Lewis to Pennsylvania and Virginia to study with America's foremost scientists and to procure several thousand pounds of equipment and supplies. In June, Jefferson discussed with Lewis the government's successful acquisition of New Orleans and the entire Louisiana Territory, and he issued written instructions for the expedition. Lewis departed Washington, D.C., on 5 July, traveling to Harpers Ferry, Pittsburgh, and Wheeling, then in Virginia, to collect outstanding materials and equipment, including a 55-foot keelboat.

Floating down the Ohio River, Lewis and the well-packed boat reached the Clarksville-Louisville area in October. There, he joined William Clark, the second officer of the Corps of Discovery. Clark, the younger brother of war hero George Rogers Clark, had met Lewis a decade earlier while in the army. Clark was an experienced frontiersman, especially skilled in land surveying, mapmaking, and boating. Technically given a lieutenant's rank by the War Department, Clark was designated by Lewis as a full-fledged cocaptain of the expedition.

Together, the captains recruited the members of their corps. The first two, Clark's slave York and Lewis's dog Seaman, had little choice, yet each proved invaluable contributors. In Clarksville, nine others were enlisted and sworn into the Regular Army. Lewis also hired local frontiersman George Drouillard as the expedition's interpreter. The captains recruited additional men and commandeered extra gunpowder at the Kaskaskia army post. Eventually, four Tennessee soldiers also joined the permanent expedition. Lewis, Clark, and their party reached St. Louis in early December, and constructed a winter camp, "Camp Wood," north of the city.

During the next several months, Lewis and Clark

continued their preparations, and Lewis purchased food, whiskey, lard, shotguns, tools, and a small bronze cannon. He also inquired about Upper Louisiana's population, economy, and geography. Finally, on 22 May 1804, the Corps of Discovery abandoned Camp Wood and ventured up the Missouri River.

UP THE MISSOURI TO THE MANDANS

This phase of exploration involved cartography, scientific discovery, and contact with native tribes. While traveling, Clark and Lewis actively molded their recruits into a cohesive and formidable military outfit. The journey was often problematic, even perilous. Moving the large, heavily laden keelboat required skill, coordination, and considerable muscle. Sandbars and floating debris obstructed progress, and swift fluctuating currents threatened to overturn the boat and adjoining canoes. Gnat swarms and pesky ticks rendered the work more unpleasant. Worse, the men were made ill by tainted water and contaminated meat. They endured plagues of mosquitoes, and one man suffered snakebite. Sergeant Charles Floyd died suddenly from appendicitis.

Clark frequently worked at the boat's helm. Lewis, on the other hand, acted as the chief scientist, routinely exploring the riverbanks and the interior. With Clark's aid, he also made celestial observations

necessary for precise surveying and mapmaking. Lewis's scientific pursuits were wide ranging. He maintained a weather diary, analyzed soil quality, and made topographic observations. He collected, measured, weighed, and described a variety of animal, plant, and mineral specimens, and discovered many creatures previously unknown to Americans. This scholarly work was not without hazards. Once, Lewis nearly fell from a 300-foot cliff, and on another occasion, he became seriously ill after examining mineral samples that included arsenic.

Of the expedition's many purposes, none were more complex or potentially harrowing than those related to the native peoples of the West. From the perspective of the Indians, Jefferson's Corps of Discovery was both intriguing and threatening. The corps entreated with members of the Otoe, the Missouri, the Yankton Sioux, the Teton Sioux, and the Arikara. Lewis and Clark's approach to each tribe was systematic and ritualistic. Lewis gave long-winded paternalistic speeches containing both promises and threats. He and Clark marched the corps through parade drill, and demonstrated the outfit's startling rifle power. Most Indians proved receptive, even friendly, although many were ultimately disappointed by the apparent stinginess of their visitors when it came to sharing the unit's weaponry, whiskey, and sundry articles. The mission even faced disaster when some Teton Sioux demanded an entire canoe of presents. Only the calm intervention of Chief Black Buffalo averted a bloodbath.

By late October 1804, the Corps of Discovery reached the extensive Mandan and Hidatsa villages, located along the Missouri in present-day North Dakota. The travelers received a warm welcome, and Lewis, Clark, and the men established a winter camp, "Fort Mandan," which they occupied for five months. There, Lewis prepared a detailed and optimistic letter for Jefferson. In April 1805, several of the expedition's soldiers and boatmen transported this status report, a preliminary map, more than 150 botanical and mineral specimens, and several live animals to St. Louis aboard the keelboat. These items were then sent on to Jefferson.

FROM THE MANDANS TO THE PACIFIC OCEAN

The Corps of Discovery, traveling on two large and six smaller canoes, departed Fort Mandan for the Pacific on 7 April 1805. As before, the journey up the Missouri was arduous. There were forceful headwinds, falling riverbanks, protruding rocks, and sudden squalls. The men suffered from exhaustion, malnutrition, scurvy, dysentery, and lingering venereal disease. Yet, the thirty-three-member party, which now included the interpreter Toussaint Charbonneau, his teenage wife Sacagawea, and their infant son, proceeded on.

On 1 June, the corps came upon an unexpected fork in the Missouri River, but were uncertain which fork led to the Pacific. Scouting reports proved inconclusive. Pressure to make a decision intensified as the expedition needed to cross the Rockies before winter. Moreover, the group was situated in territory controlled by the Blackfeet, a powerful and potentially hostile tribe. Clark and Lewis determined that the south fork was the Missouri River. Everybody else in the corps disagreed. Still, there was no rebellion. After a year of service, the men trusted and respected their two leaders, and they dutifully ascended the south fork. According to Lewis's journal, "they said very cheerfully that they were ready to follow us any wher[e] we thought proper to direct but that they still thought that the other [fork] was the [Missouri] river" (Moulton 2003, 126).

By mid-June, Lewis discovered the Great Falls of the Missouri. The Rockies were in plain view. With further exploration came disappointing news; ahead lay a series of waterfalls and rapids. The canoes and all equipment and supplies were pulled from the river and transported sixteen miles over rough terrain. The difficult portage and Lewis's attempt to assemble an experimental boat resulted in weeks of delay. Finally, on 12 July, the canoe flotilla returned to water and headed for the snowcapped peaks.

Lewis and three men trekked overland ahead of the canoes. They sought the Shoshone Indians, who possessed horses and trail information. On 12 August, the search party discovered the mouth the Missouri near Lemhi Pass. They also realized there was no easy

waterway linking the Missouri and Columbia Rivers. The next day, they descended the pass, came upon several Shoshone, and were soon met by sixty warriors on horseback. Fortunately, the Indians, while cautious, were friendly. Some Shoshone agreed to travel east with Lewis's party, and providing thirty riders to locate Clark and bring the corps and its supplies through Lemhi Pass. At one point, the Shoshone grew suspicious of the strangers, fearing a trap. Desperate to prove their good intentions, Lewis and his men surrendered their rifles to the Indians. Clark was soon found and all returned safely to a Shoshone village.

After several weeks of rest and trading with the Shoshone, the corps set out to cross the Rockies. "Old Toby," an Indian guide, led them. The long and steep hike was treacherous. Fallen timber obstructed the route. It rained, snowed, and hailed. Nightfall brought freezing temperatures. Old Toby lost his way. On 18 September, running low on provisions, Clark and six men moved ahead of the main party. After a few days, Clark's group encountered members of the Nez Perce tribe. Clark traded for food and sent word to Lewis. The corps reunited at a Nez Perce village on 21 September.

The beleaguered corps recuperated among the Nez Perce for nearly three weeks. The men constructed new canoes and arranged for the Indians to care for their horses. On 10 October, the corps' small fleet entered the Clearwater River, which connected to the Snake and Columbia Rivers and the Pacific Ocean. While pleased to be traveling downstream, the expedition encountered numerous whitewater rapids. Eager to reach the coast, the expedition typically ran the rapids rather than endure portage delays. As the corps moved swiftly, it encountered Indian bands related to the Nez Perce. These contacts were warm and friendly. Subsequent encounters with the Chinook peoples, who lived further west and were rivals of the Nez Perce, proved problematic. Some Chinooks stole from the expedition, and this generally soured the corps' attitudes toward these Indians.

By 17 November, the expedition had finally reached the Pacific Ocean. The corps camped on the northern bank (present-day Washington State) where

they met the local Chinooks, who proved demanding trade partners. Ultimately, the corps voted to establish a winter base camp, "Fort Clatsop," on the south bank (present-day Oregon), where elk were more plentiful and the local Clatsop Indians seemed more hospitable.

FROM FORT CLATSOP TO ST. LOUIS, AND ON TO WASHINGTON, D.C.

After enduring three cold, wet months on the Pacific Coast, the expedition longed for home. The corps headed back upriver on 23 March 1806. At the Columbia's rapids, the men towed their canoes. At the waterfalls, they pulled the vessels ashore and hiked around. All along the lower river basin, half-starved Chinooks greeted the expedition. On several occasions, Indians stole from the travelers. Already short on supplies, members of the corps reacted angrily to the petty thefts. Lewis even threatened to set one village on fire.

The corps abandoned the river and their canoes after four weeks, deciding to march overland. It acquired horses from the Walla Walla and Yakima tribes, and, by early May, had established a camp with their Nez Perce friends at the base of the Rockies. Against the advice of the Nez Perce, the corps attempted to cross the mountains in early June. Lewis and Clark were forced to order a retreat after six days due to heavy snow pack. A second attempt made with the aid of Nez Perce guides began two weeks later. It was successful, with the expedition covering 156 miles in six days.

On 3 July, after crossing the Bitterroot Range, Lewis and Clark divided the corps for the purpose of exploring present-day Montana. One group was ordered to take the horses to Fort Mandan. The other squads were to reunite five or six weeks later at the junction of the Missouri and Yellowstone Rivers. Clark's group headed south, then east. He subdivided his party at the Three Forks of the Missouri, sending some men, led by Sergeant John Ordway, up the Missouri to the Great Falls. Clark and the remainder of his unit crossed through Bozeman Pass and traveled east and north via the Yellowstone River. Lewis's party traveled directly to the Great

Falls. He stationed some men at the falls to await Ordway's canoe group. Together, these men would portage around the falls, and descend the Missouri. Lewis, meanwhile, led three men north to explore the Marias River and its tributaries.

On 26 July, Lewis's party encountered eight Blackfeet. The Indians appeared friendly, and all agreed to camp together. In the early morning, the Blackfeet attempted to steal the corps' rifles. A fight ensued, leaving one Blackfoot stabbed to death and another shot in the stomach. The Indians retreated, and Lewis and his men rushed back to the Missouri River. Two days later, they joined Ordway's expanded canoe party east of the Great Falls. Shortly after, while on a hunting trip, Lewis was accidentally shot in the buttocks by one of his own men. He survived.

The Corps of Discovery reunited on 11 August, and it soon reached the Mandan villages. All were disappointed by the news that fighting had broken out between various plains tribes. The interpreter Charbonneau, his wife, Sacagawea, and the baby stayed with the Mandans. One other member of the corps, John Colter, received permission to return west with some adventuresome fur traders. The expedition departed the Mandans on 17 August. Five weeks later, the corps reached St. Louis, where it received a hero's welcome. In November, Clark traveled to visit friends in Virginia. Lewis, accompanied by several Osage and Mandan Indians, also traveled to Virginia, but by late December had reached Washington, D.C., where he briefed Jefferson on the expedition's adventures and successes.

SOME LEADERSHIP IMPLICATIONS

Jefferson, Lewis, and Clark were superior, if imperfect, leaders. Moreover, most members of their Corps of Discovery proved to be exemplary followers. Together, they accomplished many of the group's ambitious objectives. Given the duration and complexity of the expedition, the leadership lessons that can be extracted seem almost innumerable. Nevertheless, aspects of several key leadership components deserve some recognition: vision, planning, organizational climate, and decision making.

The importance of strategic leadership cannot be

overstated, and Jefferson serves as a role model extraordinaire. He formulated a grand vision for the United States, one that pivoted on western expansion. After assessing multiple external and internal variables, he proceeded to implement that vision. As president, he moved to acquire New Orleans, and this led to the entire Louisiana Purchase. To further American knowledge and control of the trans-Mississippi West, he also championed a momentous mission of exploration, the Lewis and Clark expedition.

The expedition featured extensive operational planning and preparation, and the careful cultivation of the corps' organizational climate. Jefferson's most significant planning decision was his selection of Lewis to lead the expedition. Lewis's understanding of the president and his own practical experience qualified him for the mission. Similarly, Lewis's most critical decision was his selection of the multi-talented Clark as cocaptain. Together, they organized and prepared a cohesive, elite unit capable of overcoming daunting and successive challenges. Seeking to maximize the group's effectiveness, Lewis and Clark consistently monitored and actively managed the corps' morale and performance. As a result, their leadership style and tactics varied significantly depending on circumstances. Early in the expedition, Clark and Lewis frequently used dictatorial and coercive tactics to establish a military and hierarchical organizational climate. By spring 1804, when the corps departed Fort Mandan, the leaders' tactics became increasingly consultative and compensative as the group had become tightly and permanently bound by mutual trust, respect, and dedication. Moreover, the Lewis and Clark expedition offers insightful examples of tactical decision making, and not all are favorable. For example, during the corps' return trip from Fort Clatsop, Lewis and Clark did not choose the safest, most expeditious route home. Rather than return to St. Louis posthaste, they divided their group into several small squads and engaged in risky explorations of land inhabited by a potentially hostile tribe. In fact, two of the parties lost half or all of their horses to Indian raids, and Lewis's squad battled with Blackfoot warriors, resulting in two Indian casualties. In other words, Jefferson's expedition, which had already covered

some six thousand miles and achieved many of its objectives, had narrowly averted disaster.

LIBRARIES

Leadership is central to the growth of service organizations such as libraries. A leader of a successful library must create a vision of the library's future, articulate a mission for the library, develop strategies for realizing that future, and earn trust from colleagues, among other challenges. Leadership of libraries requires an understanding of the principles of library services and how best to match these services to the needs of current and future users. Libraries range in size from the U.S. Library of Congress (the world's largest library with 122 million books, journals, musical scores, and other items, and more than four thousand employees) to the small storefront library in Beijing, China, with fewer than one thousand books and a staff of one person. The complexity of leadership issues varies with the size of the library; however, some issues (e.g., creativity) remain the same regardless of size. Leadership in a library is not limited to the library director.

The evolution of libraries dates back to the history of writing. For the past 5,200 years the human record has been preserved on various types of material (e.g., clay, metal, papyrus, parchment, paper, and electronic/magnetic tapes). Leadership in libraries has not been as prominent as that in other service organizations. Librarians in the United States and Canada become certified upon the completion of a master's degree in library/information science from an institution of higher education accredited by the American Library Association. Unfortunately, these accredited library/information science programs have been slow in offering leadership courses for their students. Consequently, librarians have to learn the principles of leadership through other means

(e.g., attending a leadership institute, engaging in a leadership mentoring program).

A fundamental thrust of library leadership is to create a more desirable future for the users of libraries. Essentially four types of libraries exist: academic, public, school, and special. Each type of library seeks leaders who can articulate a vision for the respective type of library and find ways to improve the research collections, reading programs, and reference services offered to users.

VISION AND MISSION

Creating a realistic and exciting vision for the library is certainly one of the first steps in the tenure of a successful library leader. "Where there is no vision, the people perish" (Proverbs 29:18, KJV). Without a thoughtful and credible vision, the leader will have a difficult time articulating the future of the library. Moreover, the vision must reflect the thoughts, concerns, and energy of the leader's library colleagues. Followers in the library must support the vision, and their energy must be obvious in the vision statement. Because the vision focuses on the future, the library's vision statement should read: "The library will become . . ." The use of past tense in a vision statement is not appropriate. Infusion of new values into the library's fabric should be reflected in the vision statement.

A library's mission statement delineates what the library is trying to achieve. The mission statement is shorter in length than the vision statement. Library leaders will include phrases such as "acquiring, organizing, preserving, and making readily available collections and other intellectual materials in all media and formats" in the mission statement. A library's mission statement addresses both the present and the future.

CREATIVITY

Owing to tradition, standards, rules and regulations, and bureaucracy, libraries are not known for their creativity, although creativity cannot be dismissed as an important responsibility of library leaders. One of the early U.S. library leaders was Melvil Dewey,

who invented the Dewey Decimal Classification System in 1873 and established the world's first school to train librarians (Columbia University, 1887). Ample opportunity exists in all types of libraries for greater creativity. Libraries offer many services, and these services can be modified slightly or radically. The leader can foster a climate that encourages the staff members to create, extend their imagination, and engage in calculated risk taking. Without encouragement of risk taking from the leader, the library could remain stagnant and fail to improve services for users. Engagement in "thinking outside the box" and "thinking upside-down" will encourage staff members to offer new ideas to make services more efficient and effective. Divergent thinking leads to creativity and innovation. The creative leader understands the importance of looking at practices and procedures and values from a different perspective. Notwithstanding financial constraints, the library's future may be limited only by the imagination of its leaders. Innovation and entrepreneurship in libraries follow creativity. All three are important components of library leadership and form an interdependent web of synergy (combined action or operation) where the three components realize greater benefits collectively than any one component would do independently.

LEADING STRATEGIC THINKING AND PLANNING

Libraries have undergone a metamorphosis during the past three decades. Technology has become an important tool in the daily operations of libraries. Library leaders are employing the principles and best practices of successful for-profit organizations in the management and leadership of libraries. Library leaders have migrated from thinking in isolation of internal and external factors to thinking strategically. In the placid world of traditional librarianship, strategic thinking was not necessary. This mind-set can no longer exist. Library leaders place a premium on thinking in strategic terms for the best future possible for their libraries. Strategic thinking, forethought, and anticipation are important factors in the repertoire of library leaders.

Strategic thinking is part of the strategic planning process. Planning is one of the more important responsibilities of a leader. The library director is the chief strategist of the library, and this responsibility should not be delegated. The future of a library depends on how well the library is planned and implemented. Unlike traditional planning, strategic planning includes finding courses of action to achieve goals. These strategies are formulated based on analysis and synthesis; they are established after careful thinking. Strategic planning is a live, ongoing process. It is not set in concrete, and a plan can be revised at any time. Strategy is the conceptual glue that holds together the complex components of the library. Strategies achieved during the course of a year are removed from the strategic plan, and new strategies are added. Questions such as "What went right?" and "What went wrong?" should be asked during the annual assessment of the strategic plan. Leaders are advised to merge some strategies and be aware that some strategies may emerge in a pattern of substrategies. Clustering of some strategies may be necessary.

To add greater credibility to the strategic planning process, departmental strategic plans should be developed. They support the library-wide strategic plan, but they lend greater focus to specific strategies (i.e., department-level initiatives). Furthermore, each departmental employee's annual evaluation should be connected to the departmental strategic plan. This connection will make the planning process more meaningful to the employee. Because people do not like planning, library leaders should be more creative in encouraging employees to enjoy the planning process and recognize evidence of its benefits.

A primary value of strategic planning is the thinking it promotes about the library and its components. In the truest sense, strategic planning does not emphasize ongoing operations; it emphasizes new initiatives. Creating a forum for the library staff to participate in planning the future (and formulating strategies to get there) is a major dividend of strategic planning.

TRANSFORMATIONAL LEADERSHIP

Until the late 1960s, libraries filled their traditional

role in making informational resources available, primarily in paper format. Little interdependence existed in library cooperation and resource sharing. In 1967, under the leadership of Frederick G. Kilgour of OCLC (initially called the "Ohio College Library Center," now called the "Online Computer Library Center") began offering a new approach for sharing resources and reducing costs for participating libraries. This nonprofit organization now serves 43,559 libraries in eighty-six countries throughout the world. Since the inception of OCLC, libraries have been changing at an unprecedented rate. Changes are made in the way services are delivered, collections are developed, resources are shared, and human resources are managed and led. The primary driving force behind the changes in libraries is technology, which has affected nearly all aspects of libraries and librarianship. It has enabled libraries to become more efficient and effective. The catalogs (formerly called "card catalogs") of the library collections are online; they can be accessed via the Internet from anywhere in the world. Journals are online; thus, users can access them without coming into the library. Rare and special collections are becoming available online. Boundaries limiting access to informational resources have been removed by technology.

The modifications in how libraries are developed and accessed have been accompanied by a change in how they are managed and led. Directors of libraries evolved from transactional (day-to-day) managers to transformational leaders. Transformational leaders set the stage and provide the direction for implementing changes in libraries. They engage employees more in the change process. Calculated risk taking and the entrepreneurial spirit are encouraged by transformational leaders.

DECISIONS AND TEAMS

A library has leaders other than the director. A department head may be a well-known authority and leader in a library specialty; this leader influences the work of others in the same specialty and may have a large number of employees. This leader should be given the authority to make relevant deci-

sions. Decision making in libraries tends to be centralized and based on levels of hierarchy. A transforming library leader prefers to have appropriate decisions made at the lowest possible level in the library. Sharing the decision-making process is more effective when the director has self-confidence and does not feel threatened by decisions of subordinates.

In lieu of having a library staff organized as departments, some libraries have specific teams. The team approach enables the staff to participate in choosing the viable course of action for specific endeavors. Serving as a team leader gives an employee an opportunity to develop leadership skills (e.g., consensus building). Team members bring different perspectives to library services, and their collective intelligence strengthens the decision-making process. Library tasks best suited for team leadership include cataloging materials, providing reference services, ordering new materials, and circulating materials to patrons. The success of leadership by a team depends on how well the team promotes and achieves the library's vision and mission.

TRUST

The design and implementation of the library of the future rely on the trust factor between leaders and followers. Integration of individual and group efforts requires trust. Without trust, leaders cannot effectively advance the library. The U.S. public has a history of distrusting its leaders during times of significant change or crisis. A strong, dynamic library leader runs the risk of losing the trust of followers, especially during revolutionary changes. Situational leadership can either promote or deter trust. If the library staff's morale is high, budgetary conditions are positive, and collaborative efforts are obvious, then leadership will likely enjoy a culture of trust. A primary responsibility of the library leader is to build and sustain a unifying culture of trust. Having a compelling vision of the library's future and having a conviction to promote its core values are examples of how a library leader can engender trust.

FUTURE DIRECTIONS

Even though scholars have done little research on and promotion of library leadership, libraries need transformational and visionary leadership now more than at any other time in our civilization. Due to the influence of technology, libraries are provided an uncommon opportunity to offer more and improved services. Under compelling leadership, libraries will play a dominant role in fulfilling expectations of a democratic society (e.g., free and equal access to information). Schools of library/information science and leadership institutes must become more active in the preparation of future library leaders.

LINCOLN, ABRAHAM (1809–1865)

U.S. president

Presidential scholars unanimously rank Abraham Lincoln as the greatest U.S. president. One sign of his enduring influence as a leader is the fact that more books (estimated at seventeen thousand), journals, newsletters, and organizations have been devoted to preserving his legacy than that of any other president. His leadership is one of the greatest gifts of U.S. democracy to the world. He began developing as a leader through experiences early in life and drew on these experiences to lead the nation during its most difficult time: the Civil War.

BACKGROUND

Lincoln was born in Hardin County, Kentucky, in a one-room log cabin. His parents, Thomas Lincoln and Nancy Hanks Lincoln, were simple farmers. He was the only son to survive. In 1816, the family moved to Indiana, where family members began to clear land and build their farm. Merely a year later, after the family was settled, Lincoln's mother fell sick and died on 5 October 1818. The family needed help, so Lincoln's father remarried. Lincoln's stepmother, Sarah (Bush) Johnston became an extremely important influence in Lincoln's life.

Lincoln had a happy childhood after his father remarried. He received minimal formal education as a child but learned to read and write. His outlook on life enlarged as a teenager in 1828, when he was hired to pilot a flatboat loaded with cargo 1,800 miles to New Orleans, Louisiana. As soon as he reached legal age at twenty-one, he left home to work in the new village of New Salem, Illinois. However, his professional direction remained open. In fact, he explored several directions.

POLITICAL LEADER

The sixteenth president is unique among the forty-two men who have served in the Oval Office: He ran for political office at a younger age than any other lawyer who became president, and he was one of the few who ran for office even before he became a lawyer. In 1833, Lincoln made his first effort to be elected a state legislator but lacked time to effectively campaign because he had become involved in the Black Hawk War as a volunteer, although he never actually fought during his ninety days of service. Although Lincoln lost his first electoral bid, finishing seventh among twelve candidates, the members of his militia unit had selected him to serve as

their captain, a tribute that he valued for life. Before running for the same seat in the next election, he bought two stores and combined them into one. He and his partner, W. F. Berry, operated the store for only a year before it “winked out” with a substantial debt. Nevertheless, Lincoln paid off what he called his “national debt.” Meanwhile Lincoln accepted two local offices: postmaster and assistant county surveyor. He was an energetic and ambitious person.

In 1834, Lincoln devoted more time to his electoral effort and was rewarded accordingly. He took his seat in the Illinois House of Representatives on 1 December 1834. He was reelected to an additional three terms. During this legislative period in his life, he met Stephen A. Douglas, a fellow legislator who would become his rival from the Democratic Party. Even more important, he realized that politics was his calling. In just a few years Lincoln rose to become leader of the Whigs—a party founded in

1834 to oppose the Democrats and “King Andrew” Jackson—in the legislature.

In 1839, Lincoln was named a presidential elector for the state of Illinois—he was renamed an elector in 1844, 1852, and 1856. In 1847, after eight years as a state legislator, Lincoln won a seat in Congress. He was a man on the move. As the only Whig from Illinois, he edged out the Democratic candidate by fifteen hundred votes. In 1849 he continued to lobby for the Whig Party but did not run for reelection. As a member of the party of senator and frequent Whig presidential candidate Henry Clay, he favored internal improvements, a national bank, and higher tariffs. In 1854, Congress passed the Kansas-Nebraska Act—an act that was introduced in the Senate by Stephen A. Douglas. The act permitted Kansas and Nebraska to decide if they would be free or slave states after they were admitted to the Union. Lincoln opposed the act but failed in his 1855 bid for the U.S. Senate. As a result, Lincoln decided join the new Republican Party, which held its first national convention in Philadelphia in 1856. There was an unsuccessful effort at the convention to select him as the Republican vice presidential nominee. The issue of extending slavery into the territories became the basis for the Lincoln-Douglas debates, which were held during Lincoln’s second unsuccessful campaign for the U.S. Senate in 1858.

LAWYER LEADER

Always ambitious, Lincoln became a lawyer during his budding political career. His legal career began in 1837 and eventually spanned twenty-four years until he assumed the presidency. His practice paid for his marriage to Mary Todd and their growing family.

Lincoln was more than an ordinary lawyer when he practiced on the Eighth Judicial Circuit. He handled more than five thousand cases and appeared in over three hundred cases before the Illinois Supreme Court. In managing his legal-political career he continued to use his important leadership trait—the ability to juggle more than one job at the same time. This trait later would prove vital during his presidency, which required him to manage multiple political roles: commander in chief, chief executive, chief

diplomat, party leader, legislative leader, and leader of the U.S. people.

PRESIDENTIAL LEADER

On 18 May 1860, Lincoln's popularity reached its apex when he was nominated for the presidency by the Republican Party. He was elected 6 November 1860, with only 39 percent of the votes. By the time of his inauguration on 4 March 1861, seven Southern states had already seceded from the Union. Those states formed the Confederate States of America, which subsequently selected Jefferson Davis as their chief executive.

Although Jefferson Davis had far more military, executive, and administrative experience than Lincoln, Lincoln was a natural leader. He relied on his finely tuned political instincts based on his legislative experience rather than on a narrow legalistic approach that one might expect from a lawyer. During his first year in office he was barraged by criticism. Yet, the bold, extraconstitutional executive steps he used to address the nation's internal crisis elevated him above a party hack. To the surprise of most, he developed a proactive leadership style. He did not depend upon Congress; he did not take his cues from the courts. He made the presidency, to a large extent, the dominant branch, certainly to a greater degree than had been the norm. In the eighty days that elapsed between his April 1861 call for troops after the surrender of Fort Sumter and the July meeting of Congress, Lincoln performed a series of important acts by sheer assumption of presidential power. He declared that the existence of "combinations too powerful to be suppressed in the ordinary course of judicial proceedings" (secession of seven states, seizure of federal forts and armories, failure to collect federal revenues, and otherwise disregarding the country's laws) required suppression (Basler 1953, 332). He ordered the militia to carry out his order to suppress the rebellion, reoccupy forts and other seized federal properties, and otherwise ensure compliance with the laws. His language was important because although Congress held the power to declare war, suppression of rebellion was recognized as a customary executive func-

The Gettysburg Address, 19 November 1863

Four score and seven years ago our fathers brought forth on this continent a new nation, conceived in liberty and dedicated to the proposition that all men are created equal. Now we are engaged in a great civil war, testing whether that nation or any nation so conceived and so dedicated can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field as a final resting-place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this. But in a larger sense, we cannot dedicate, we cannot consecrate, we cannot hallow this ground. The brave men, living and dead who struggled here have consecrated it far above our poor power to add or detract. The world will little note nor long remember what we say here, but it can never forget what they did here. It is for us the living rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain, that this nation under God shall have a new birth of freedom, and that government of the people, by the people, for the people shall not perish from the earth.

tion. He also proclaimed a blockade, increased the size of the regular army, and authorized expenditure of government money without congressional appropriation. His suspension of the precious right of habeas corpus—the law prohibiting arrest and detention without following the regular processes of law so that someone so held does not have an opportunity to contest arrest or imprisonment—was criticized, but he asked Congress and the U.S. people, "Are all the laws, but one, to go unexecuted, and the government itself to go to pieces, less that one be violated?" (Basler 1953, 430). Yet, despite these extraconstitutional actions, he fully recognized that after Congress reconvened, it had the duty to pass ultimate judgment on these actions.

*Nearly all men can stand adversity, but if you
 want to test a man's character, give him power.*

—Abraham Lincoln

As president during the Civil War, Lincoln had the task of leading the country during the most difficult period in its history. The burdens of the Civil War presidency included conducting major military strategy, recruiting hundreds of thousands of troops, and engaging in conflicts with Congress over emancipation of slaves and reconstruction of the South.

COMMANDER IN CHIEF

As commander in chief, Lincoln first issued a call for seventy-five thousand volunteers. The South won the first real victory of the war at the Battle of Bull Run. The war continued in favor of the South until Lincoln found a general who would win the war, Ulysses S. Grant. Lincoln became a successful commander in chief through his innovative bending of constitutional laws within the framework of his wise, honest, restrained, inspirational temperament. As chief magistrate and commander in chief, Lincoln alternately encouraged the U.S. people and ordered arms to fulfill the destiny of the Union: to achieve its promise as “the last best hope of the earth” (Basler 1953, 537).

CONTROVERSIAL DECISIONS

Lincoln made many controversial decisions—instating a blockade, suspending the writ of habeas corpus, enlarging the army and navy, and appropriating monies for the purchase of firearms—with Congressional authorization. In July 1862 Congress passed a law to allow slaves escaping from the South to enter the Northern army. On 22 September 1862, after the North won the Battle of Antietam, Lincoln issued the preliminary Emancipation Proclamation. He issued the final proclamation on 1 January 1863. It effectively declared free all slaves in those states still in rebellion. Because the Constitution protected slav-

ery, Lincoln issued the Emancipation Proclamation as a military order. The war continued, causing more casualties than the total of all other U.S. wars. On 19 November 1863, Lincoln made his most famous speech, the Gettysburg Address, at the dedication of Gettysburg, a battlefield-turned-national cemetery where many soldiers had died in July 1863. In a brief and eloquent speech, he brought the U.S. Constitution into harmony with the Declaration of Independence. Two years later, with Lincoln's support, Congress solidified his Gettysburg words with the Thirteenth Amendment to the Constitution, which barred slavery.

On 9 April 1865, the war ended when General Robert E. Lee, commanding general of the Army of Northern Virginia, surrendered to General Grant at Appomattox Court House. Five days later, Lincoln was assassinated in Ford's Theatre. He had gone to see a play with his wife, Mary Todd, when he was shot by John Wilkes Booth. Yet, the assassination furthered transformed Lincoln—once the most criticized U.S. president—into an icon of democracy both at home and abroad.

Lincoln's leadership style was both active and flexible. That unusual combination gave it an unexpected dimension. He treated leadership as a relationship involving individuals as well as large groups through his compassionate and nurturing practices, his resistance to petty quarreling, his freedom from malice, and his insistence upon remaining accessible to individuals. These qualities made possible a successful dialogue between him and his followers and in the end transformed both.

LITERATURE

“Information is endlessly available to us; where shall wisdom be found?” The question, posed by the famed literary scholar Harold Bloom at the beginning of *How to Read and Why* (2001, 19), may be read as a humanistic rebuke to the social scientific orientation of much of the modern academy. Bloom’s answer to his question, as applicable in leadership studies as elsewhere, is that wisdom is found in literature, and especially in great literature—enduring works of drama, fiction, and poetry, both ancient and modern. Reading literature, Bloom says, “returns you to otherness” (2001, 19) to connections with others’ lives and feelings. Oliver Williams, a scholar of religion and business ethics, argues more directly that literature can stimulate ethical reflection: “stories that ‘ring true’ bring us in touch with the fullness of our humanity” (1997, 7). Such a view may be traced back to Aristotle, who argued in the *Nicomachean Ethics* that the best education should not only impart information but also develop our capacity to feel and sympathize, for “to feel delight and pain rightly or wrongly has no small effect on our actions” (1962, Book 2, Chapter 2, 1104b, 1105a). The writer Salman Rushdie puts the case for why literature matters even more grandly: “Literature is where I go to explore the highest and lowest places in human society and the human spirit, where I hope to find not absolute truth but the truth of the tale, of the imagination and of the heart” (1989, 11).

“The truth of the tale,” as Rushdie calls it, holds a somewhat paradoxical place in the interdiscipli-

nary field of leadership studies. Only a handful of programs—chief among them Richmond University’s Jepson School of Leadership, Claremont McKenna College’s Leadership Studies Program, and Duke University’s Hart Leadership Program—build the study of literature into their curriculums. (Alburty in “A Cast of Leaders” [1999] provides a vivid glimpse of Duke’s course in Leadership and the Arts, which takes a group of undergraduates to New York for a semester of theater, art, and leadership studies.) At the level of individual leadership courses, a few schools, like Kentucky Wesleyan University, Birmingham-Southern University, and Rice University, offer a class or two that draws heavily on literature. (History and ethics are much more common elements of what might be thought of as “leadership humanities.”) But while literature only infrequently makes it into the leadership curriculum, a remarkable number of academics labor to explore literature for leadership lessons, and there are numerous studies of literary works published in the field.

EXPLORING LEADERSHIP THROUGH LITERATURE

Eugene Garaventa (1998), for instance, considers the morality of two dramatic protagonists, Dr. Stockmann in Ibsen’s *An Enemy of the People* and Willy Loman in Arthur Miller’s *Death of a Salesman*, as well as the corrupt environment of David Mamet’s *Glengarry Glen Ross*. Patrick McDonough (1998) explores how Marlowe and Goethe each treated the Faust legend. One of the more extensive and interesting recent literary studies is Robert Brawer’s 1998 book-length study of literary texts from Chaucer to Sloan Wilson’s *The Man in the Grey Flannel Suit*. Brawer, a former CEO as well as a literature professor, holds that “the values and insights we glean from serious literature sensitize us to ourselves and, by extension, to the problems inherent in managing people in an organization” (1998, 2). In a notable work, John Clemens and Douglas Mayer (1987) provide a broad sweep of literature “from Homer to Hemingway,” making numerous connections between classic texts and

Selection from Herman Melville's *Moby Dick*

Although not a success when it was first published in 1851, *Moby Dick* now stands as a classic of American literature—and a classic example of leadership skills as exemplified in the book's main character, Captain Ahab. The excerpt below from Chapter 133, "The Chase—First Day," describes Captain Ahab's adversary—the great white whale, *Moby Dick*.

And thus, through the serene tranquilities of the tropical sea, among waves whose hand-clappings were suspended by exceeding rapture, *Moby Dick* moved on, still withholding from sight the full terrors of his submerged trunk, entirely hiding the wrenched hideousness of his jaw. But soon the fore part of him slowly rose from the water; for an instant his whole marbled body formed a high arch, like Virginia's Natural Bridge, and warningly waving his bannered flukes in the air, the grand god revealed himself, sounded, and went out of sight. Hoveringly halting, and dipping on the wing, the white sea-fowls longingly lingered over the agitated pool that he left.

With oars apeak, and paddles down, the sheets of their sails adrift, the three boats now stilly floated, awaiting *Moby Dick*'s reappearance.

"An hour," said Ahab, standing rooted in his boat's stern; and he gazed beyond the whale's place, towards the dim blue spaces and wide wooing vacancies to leeward. It was only an instant; for again his eyes seemed whirling round in his head as he swept the watery circle. The breeze now freshened; the sea began to swell.

"The birds!—the birds!" cried Tashtego.

In long Indian file, as when herons take wing, the white birds were now all flying towards Ahab's boat; and when

within a few yards began fluttering over the water there, wheeling round and round, with joyous, expectant cries. Their vision was keener than man's; Ahab could discover no sign in the sea. But suddenly as he peered down and down into its depths, he profoundly saw a white living spot no bigger than a white weasel, with wonderful celerity uprising, and magnifying as it rose, till it turned, and then there were plainly revealed two long crooked rows of white, glistening teeth, floating up from the undiscoverable bottom. It was *Moby Dick*'s open mouth and scrolled jaw; his vast, shadowed bulk still half blending with the blue of the sea. The glittering mouth yawned beneath the boat like an open-doored marble tomb; and giving one side-long sweep with his steering oar, Ahab whirled the craft aside from this tremendous apparition. Then, calling upon Fedallah to change places with him, went forward to the bows, and seizing Perth's harpoon, commanded his crew to grasp their oars and stand by to stern.

Now, by reason of this timely spinning round the boat upon its axis, its bow, by anticipation, was made to face the whale's head while yet under water. But as if perceiving this strategem, *moby dick*, with that malicious intelligence ascribed to him, sidelingly transplanted himself, as it were, in an instant, shooting his pleated head lengthwise beneath the boat.

modern leadership concepts. They see in Sophocles' *Ajax*, for instance, a story of a man "unable, or unwilling, to adapt to a changing organization" (1987, 59). They draw a parallel between the "towering inflexibility" of Sophocles' Creon (in *Antigone*) and Henry Ford (1987, 66). And they consider how Hemingway's *For Whom the Bell Tolls* "scrutinizes two contrasting ways to lead" (1987, 193). Beyond this work, Clemens has made a significant contribution to the use of literature in leadership studies by developing an extensive library of more than fifty "classic leadership cases," published by the Hartwick Humanities in Management Institute, covering texts from the *Iliad* to Melville and Virginia Woolf.

SHAKESPEARE ON LEADERSHIP

Shakespeare's plays, above all, are the literary texts that have attracted the most attention from leadership scholars, because of their fame but also because of their subject matter—the personal and public lives of kings, queens, and princes, and the worlds they inhabit. In recent years, at least three books have been published on leadership lessons gleaned from Shakespeare's plays: Augustine and Adelman's *Shakespeare in Charge* (1999), Corrigan's *Shakespeare on Management* (1999), and Whitney and Packer's *Power Plays* (2001). These books all draw out of Shakespeare's plays examples and principles pertinent for modern readers, in particular executives. Augustine

and Adelman, for instance, present *The Taming of the Shrew*'s Petruccio as a case study in confronting change, and explicate *The Merchant of Venice* as an instance of risk management. Corrigan draws similar lessons from the plays—*Coriolanus* shows the pitfalls of “leading from the front,” and *Henry V* presents a lesson in “learning to be a heroic leader” (Corrigan 1999, 120–79). Whitney and Packer employ the same method, drawing lessons from Shakespeare's plays on topics like “the trusted lieutenant” (1999, chapter 3) or the need to understand power before using it (1999, chapter 1).

As insightful as these secondary works are—and at their best they illuminate difficult texts and humanize the study of leadership—they are not, by and large, works of substantial scholarship. Indeed it is rare for studies of literature that are written within the field of leadership studies (or sister fields like ethics, management, and organizational behavior) to achieve the status of real, original scholarship. Those works that represent substantial scholarship tend to be written outside of the field of leadership studies, and may often not explicitly market themselves as studies of leadership, even if they explore the same cluster of topics, like authority, ethics, or trust. One interesting example is Dennis Brown's thoughtful application of contemporary group theory to *King Lear*: “At the heart of *King Lear*,” Brown argues, “is less the spectacle of the king's madness . . . than the communitarian enactment of group ‘holding’ or ‘containment’ of that madness” (Brown 2001, 23). The most stimulating of such works—books like Paul Woodruff's *Reverence: Renewing a Forgotten Virtue* (2002), Harold Bloom's *Shakespeare: The Invention of the Human* (1998), or Allan Bloom's *Love and Friendship* (1993)—probe deeply into literary texts, going beyond simplifying explication. Woodruff, for instance, traces out the heritage of a seemingly simple concept, reverence, to show its importance in the past and to argue for its recovery in the present. Woodruff's scholarship ranges across classical philosophy and drama, Confucian thought, and modern poetry. While many leadership studies of literature often seem to treat texts instrumentally, as the occasion to illustrate a currently fashionable idea, more serious works like those of Woodruff, Harold Bloom,

and others accept and work with the complexities of great literature. Great literature by its nature, Bloom asserts, is beset by ironies; to read complex works flatly robs them of their power: “The loss of irony,” Bloom says, “is the death of reading” (2001, 20).

Broadly speaking, stories and storytelling have enjoyed a vogue in recent years in leadership studies. Scholars are increasingly inclined to see narratives and imagination as important parts of critical inquiry about human things. “Storytelling and literary imagining,” the philosopher Martha Nussbaum suggests, “are not opposed to rational argument, but can provide essential ingredients in a rational argument” (1995, xiii). Many scholars—for instance Gardner (1995), Teal (1996), Fleming (2001), and Ready (2002)—have argued that storytelling is a central part of the work of leaders. Stories make principles concrete, help followers understand. “Leaders achieve their effectiveness,” Howard Gardner asserts, “chiefly through the stories they relate” (1995, 9). If this is so, if stories are so central to how we make meanings and forge (common) understandings, then the humanistic impulse to approach leadership through literature, through Rushdie's “truth of the tale, of the imagination and of the heart,” may play a more significant role in leadership studies than is generally recognized.

LOMBARDI, VINCE (1913–1970)

Head coach of the Green Bay Packers football team

In his ten seasons as a head coach, Vince Lombardi's NFL teams had a 105-35-6 regular season record and won nine of ten playoff games. His success had an

enormous impact on football and the National Football League, and helped transform the game into the most popular professional sport in the United States. Lombardi exemplified professionalism and came to personify victory. One of his players, Jerry Kramer, acknowledged, "We knew that the only difference between being a good football team and a great football team was him and only him" (Phillips 2001, 1). The National Football League championship trophy, or Super Bowl trophy, bares his name, as does the award for the best offensive or defensive lineman in college football who also best exemplifies Lombardi's discipline. Lombardi's popularity as a leader has exceeded the sport itself: Schools, streets, arenas, and medical centers are named in his honor.

The eldest of five children in Brooklyn, New York, born to Italian immigrant parents, Lombardi grew up in a strict Catholic household. His domineering father demanded perfection from his three sons. "Before you can do what you want to do," Harry Lombardi lectured his sons, "before you can exist as an individual, the first thing you have to accept is duty, the second thing is respect for authority, and the third . . . is to develop a strong mental discipline" (Phillips 2001, 2). Vince lived by those beliefs.

Lombardi played several sports while growing up but loved football best. His football coach at St. Francis Prep School continually drilled the players on fundamentals and learning by repetition, measures that Lombardi employed later as a coach. After St. Francis, Lombardi enrolled at Fordham University, where he made the football team. His coach at Fordham, Jim Crowley, made a deep and immediate impact on him by advocating "no loafing, no half-hearted effort, no indifference either mental or physical, but hard, aggressive, brainy work from beginning to end." (Phillips 2001, 2). Lombardi played offensive guard as a member of the "Seven Blocks of Granite," one of the most famous offensive front lines in college football history.

After graduating from Fordham, Lombardi took a position as a teacher and coach at St. Cecilia High School in Englewood, New Jersey. For the next eight years, he coached both basketball and football until 1947, when he became an assistant coach at Ford-

ham and then moved on to the U.S. Military Academy as an assistant under Earl “Red” Blaik in 1949. Blaik became a mentor to Lombardi, who soon emulated his successful boss’s honesty, fairness, and fatherly approach to handling the players along with his insatiable drive to win at any cost. In 1954, the New York Giants hired Lombardi as offensive coordinator and he quickly helped turn a dismal franchise into a championship team. During Lombardi’s five years with the Giants, they won four division titles and one NFL championship.

The Green Bay Packers hired Lombardi as coach and general manager in 1959. He took over a team that had won only one game the year before and had suffered through eleven consecutive losing seasons. As general manager, he had complete say over building and running the team. He immediately began to examine game film to learn about his team and its individual players as well as the strengths and weaknesses of his future opponents. He took extensive notes and charted every play for both offense and defense. Then he organized everything into an orderly and easily accessible filing system. He graded every player, wrote a report on each of them, compared reports, and then decided on whether players would stay or go. When he finished evaluating the individual players, he began looking at the team in terms of strengths and weaknesses. Along with his work in the film room, Lombardi launched a personal marketing and public relations blitz. He traveled the state of Wisconsin to promote the Packers not just as Green Bay’s team but as Wisconsin’s team.

Only after all that work did he meet his players in person—one-on-one and in group meetings. He informed them he was getting rid of players with losing attitudes or who were unwilling to give 100 percent effort all the time. Believing his men were professionals just like businesspeople and doctors, he instituted one of the first dress codes in professional football: Everyone was required on trips and at meals to wear dress shirts, ties, and a green sports coat with the Packer emblem. He instilled a sense of teamwork and professionalism that few had seen before. He always credited teamwork as the reason for his success.

Leaders are not born. They are made. They are made just like anything else . . . through hard work. That’s the price we have to pay to achieve that goal or any goal.

—Vince Lombardi

Lombardi compiled a 7-5-0 record his first season. In his second season, the Packers won the Western Division title but lost to the Philadelphia Eagles, 17-13, in the league’s championship game. It was the last time a Lombardi team was beaten in postseason play. Under his direction, the Packers had nine winning seasons in a row and collected six Western Conference titles, five NFL titles (three of them in a row), including victories in the first two Super Bowls. Over a nine-year span as head coach, Lombardi went 98-30-4 (.758) and his winning percentage of .758 is one of the highest in the history of professional football. As a head football coach, he never had a losing season. In postseason play, he went 9-1 (.900), winning nine consecutive playoff games, a feat incomparable in professional sports.

Lombardi retired as coach in 1968 but remained as Green Bay’s general manager. That year the Packers finished 6-7 and did not make the playoffs. Not coaching that season made for one of the most miserable years of his life. He decided to return to coaching and became executive vice president, general manager, and head coach of the Washington Redskins, a team that had just been through fourteen consecutive losing seasons. Applying the same measures that had worked in Green Bay, he turned that team around, too, from a 5-9-0 record to 7-5-2 in his first year. But he developed cancer in the summer of 1970 and died shortly after Washington opened the season. He was inducted into the Football Hall of Fame the following year.

LONG MARCH

The Long March (October 1934–October 1935) was the epic 6,000-mile flight of the Chinese Communists from their beleaguered bases in southeast China to safety in northwest China. After breaking through Nationalist leader Jiang Jieshi's (Chiang Kai-shek's) encircling armies, the Communist units marched for almost a year, averaging twenty-seven miles per day across hostile terrain, including mountain ranges, rivers, grasslands, and swamps. During the march, Mao Zedong bested his party rivals to emerge as the leading figure in the Communist movement.

THE FALL OF THE JIANGXI SOVIET

In the early 1930s, Chinese Communist forces controlled base areas in parts of rural southeast China, the most important of which was the Jiangxi Soviet base area, founded by Mao Zedong and Zhu De (1886–1976). From 1930 to 1934, the Nationalist government of Jiang Jieshi launched five military “extermination” campaigns designed to annihilate Communist forces. The first four expeditions were repulsed by Mao's use of mobile warfare and guerrilla tactics.

Despite these military victories, Mao Zedong was in a losing struggle with the national leadership of the Chinese Communist Party, which had moved from its illegal underground headquarters in Shanghai to a safer location in Jiangxi. Dominated by the Moscow-oriented internationalist faction, headed by Bo Gu (1907–46) and Zhou Enlai (1898–1976), the Central Committee removed Mao from the party's Military Committee in 1932, but temporarily allowed him to retain other offices in recognition of his support among local activists. Mao's

opponents, condemning his reliance on guerrilla tactics, gave control of military policy to Zhou Enlai and Otto Braun, a German military advisor sent by Moscow.

During the fifth extermination campaign, from 1933 to 1934, Nationalist leader Jiang Jieshi took personal command and employed almost a million men, including his best German-trained units. This overwhelming force was backed by an air force of 400 planes and a new strategy of encircling the Jiangxi Soviet with concentric rings of fortifications and blockhouses, while units advanced forward in a slow, methodical fashion. Braun's adoption of conventional positional warfare against the more numerous and better-armed Nationalists led to military disaster.

In August 1934, the Communist leadership concluded that the Jiangxi Soviet had to be abandoned. On 15 October 1934, 85,000 troops and 15,000 administrative personnel broke through enemy lines. Left behind was a rearguard of 28,000 men (of whom 20,000 were wounded) and most of the wives and children. Mao's pregnant second wife, He Zizhen, joined the Long March, but his children and younger brother remained behind.

THE CUNYI CONFERENCE AND THE RISE OF MAO

Despite an auspicious start, the First Front Army columns—slowed down by the Central Committee's decision to bring along cumbersome baggage trains—suffered grievous losses from aerial bombardment and pursuing troops. Prevented from moving north to link up with He Long's (1896–1969) forces in the Sanzhi Soviet, the army instead swung westward into Guizhou province. At a Politburo meeting in Cunyi in January 1935, Mao emerged from political disgrace to begin his ascendancy as party leader. He convinced his colleagues that fundamental policy errors by the internationalist faction caused the fall of the Jiangxi Soviet and unnecessary military losses on the Long March. The Cunyi Conference gave Mao control over the military and endorsed his political policies as the correct approach to the Chinese revolution.

CONFLICT WITH ZHANG GUOTAO

From Cunyi the Long Marchers moved north, where Mao hoped to link up with Communist forces in Sichuan under the command of Zhang Guotao (1897–1979). Against near-impossible odds, the army evaded Jiang's Nationalist forces to cross the Yangtze River, secured the Luding River crossing by storming across a chain link bridge in the face of enemy fire, and then marched across the 14,000-foot Great Snowy Mountains. In June 1935, Mao's depleted forces joined with Zhang Guotao's Fourth Field Army—almost four times larger—in northern Sichuan. The two leaders clashed. Mao proposed to move northeast to Shaanxi province, where he would promote a united Chinese front against Japanese aggression. Zhang preferred moving to the sparsely populated areas of Xinjiang, close to the Soviet Union. Tensions were so high that for a time armed conflict seemed likely. In the end, the two armies merged and then subdivided. Zhang, accompanied by Zhu De, went west to Xinjiang. Mao's troops advanced through swampy grasslands, where men had to sleep standing up, crossed the Yellow River, and on 20 October reached the safety of a local Chinese Soviet in northern Shaanxi. Only 7,000 to 8,000 Long Marchers—one out of twenty—who had started out from Jiangxi with Mao survived.

In Shaanxi, the survivors gradually reconstituted their political and military strength. In December 1936, Mao moved his capital to the nearby city of Yan'an. As Mao had predicted, Zhang Guotao's units were unable to sustain themselves in the backward regions of Xinjiang. Survivors of Zhang's forces (including Zhu De) straggled into Yan'an in 1936. At Yan'an, the Communists resurrected themselves during the War of Resistance against Japan (1937–1945) and laid the foundations for their eventual conquest of power, resulting in the People's Republic of China, in 1949.

THE LEGACY OF THE LONG MARCH

By conventional measures, the Long March was a terrible military defeat, with the loss of almost 90 percent of those who started on the trek, but it did not

lead to the annihilation of the Communist movement. The Long Marchers' ability to endure unimaginable hardships and surmount overwhelming odds generated a myth of invincibility and a belief in the inevitability of ultimate success. It validated Mao's military-political judgment and his capacity to inspire fanatical dedication within the rank and file.

The Long March marked Mao's rise to a dominant position within the central leadership, although his power was not fully consolidated until the Rectification Campaigns of the early 1940s. Two powerful rivals, Bo Gu and Zhang Guotao, were discredited by their failures during the Long March; other rivals, such as Zhou Enlai, converted to Mao's side. From the Cunyi Conference onward, Mao's methods were defined as the correct path to ultimate victory. The horrific hardships of the Long March also created a lasting bond among the surviving veterans that helped create China's political and military inner circles. Until the 1970s, the top leadership of the People's Republic of China consisted of those revolutionaries who had participated in the Long March.

LUMUMBA, PATRICE (1925–1961)

Congolese politician

Had he not been assassinated, Patrice Lumumba, first prime minister of the Democratic Republic of the Congo, might have become one of the most astute national leaders and revolutionaries of the twentieth century. The life of Lumumba sheds light on the history of decolonization in Africa, and Lumumba serves as a symbol of national unity for many Congolese.

EARLY YEARS

Lumumba was born in Onalua in Kasai Province to the Otetela ethnic group, a Mongo subgroup. A product of both Catholic and Protestant missionary schools and deeply influenced by the writings of the French philosopher and author Jean-Jacques Rousseau, the French writer Voltaire, and the French writer Victor Hugo, Lumumba became politically active in 1951 while working as a clerk in the District Revenue Office of the Colonial Postal Service. He joined both the Association des evolves de Stanleyville, a prestigious club, and the Association des Postiers de la Province Orientale (Association of Postal Workers of the Eastern Province), where he served as secretary-general. In 1952, he began to direct Congolese cultural clubs, conduct research, and write for such journals as *La Voix du Congolais* and *La Croix du Congo* and local newspapers such as *Stanleyvillios*. Although they were within the limits of the Congo's Belgian colonial restrictions, Lumumba's writings emphasized Belgian racial, political, and socioeconomic selectivity. He later became involved in the Association du Personnel Indigene de la Colonie (Association of Indigenous Personnel of the Colony), a new Congolese labor party.

In July 1956, Lumumba was arrested and charged

with embezzlement of colonial funds, thus disrupting his political activity. After his acquittal, Lumumba became publicity director of the Polar Beer Brewery in the capital of Leopoldville (Kinshasa), an appointment that helped further his political ambitions. While in the capital he became president of the Association des Batelela (Batelela Association) and vice chairman of the Circle Liberal d'Etudes et d'Agreement. He also became a member of a Christian Democratic study group (a group that sensitized individuals to the rules of political engagement) and the Centre d'Etudes et de Recherches Sociales (Student Center of Social Research), an organization that featured prominent political figures such as Joseph Ileo, moderate nationalist and founder of the Movement National Congolais (MNC) (Congolese National Movement) party. In October 1958, Lumumba became formally involved in Congolese national politics, joining the then-moderate MNC.

FROM POLITICAL ACTIVIST TO NATIONALIST LEADER

As chairman of the MNC's Central Committee, Lumumba sought to broaden the basis of the organization by declaring in October 1958 the MNC to be a national movement dedicated to the national liberation of the Congolese people. Already a popular spokesperson of liberal ideas and an effective speaker in French and Swahili, Lumumba quickly became the Congo's nationalist leader.

Lumumba's early stance on independence was reformist rather than revolutionary because he sought to create a Belgian-Congolese community. However, his pro-Western stance slowly evolved during and after the All African People's Conference in Accra, Ghana, in December 1958. There Lumumba projected himself onto the international stage and became exposed to African nationalists from around the continent, such as Ghanaian politician Kwame Nkrumah, French West Indian psychologist Frantz Fanon, and Egypt's Gamal Abdel Nasser. The conference sensitized Lumumba to the ideology of Pan-Africanism (attempting to create political solidarity or unity among either African

nations or Africans on the continent and in the diaspora). In Accra, Lumumba spoke of the fundamental aims of the MNC, which were emancipation based on the United Nations Universal Declaration of Human Rights and the establishment of a democratic state that would “grant its citizens freedom, justice, social peace, tolerance, well-being, and equality, with no discrimination whatsoever” (Van Lierde 1972, 57). Lumumba, as other African anticolonialists would later do, proclaimed that the enemy was not the Belgian people, but rather colonialism and its consequences.

After his return to the Congo, Lumumba was ready to demand total independence from Belgium. At Leopoldville (Kinshasa) before ten thousand people, on 28 December 1958, Lumumba outlined the tactics for Congolese independence and African unity. “The objective of the MNC is to unite and organize the Congolese masses in the struggle to improve their lot and wipe out the colonialist regime and the exploitation of man by man” (Van Lierde 1972, 62). Lumumba further stated, “The notion of Belgian sovereignty in the Congo must disappear from the colonialist vocabulary. The Congo is not Belgian property; it is a country like any other, and it must enjoy sovereignty just as Belgium does” (Van Lierde 1972, 67). Lumumbism, as it was later known, was a political ideology based on national unity, economic independence, and Pan-African solidarity.

In the face of unequivocal demands for independence, Belgium announced that self-government was to become a reality for the Congolese people “without undue haste.” In April of 1959, the MNC demanded independence by 1961, but the Belgian minister for the Congo later announced that independence would come in 1960. After a move toward independence and the emergence of ideological differences between moderates and liberals, many MNC supporters withdrew support to form their own political parties. As a result, Lumumba vowed to rebuild the MNC and throughout 1959 continued to spread the idea of African unity and national independence by traveling throughout Africa and Europe, lecturing at institutions such as Ibadan University in Nigeria and the Free University of Brussels. ing seditious statements, in late 1959 Lumumba was sentenced to jail for a second time at Likasi prison. Despite loss of support and imprisonment, Lumumba remained the nationalist leader of the Congo.

NATIONAL LIBERATION

After serving only three months of his six-month sentence, Lumumba was released to attend the Brussels Roundtable Conference in January and February 1960. The purpose of the conference was to outline the details of unconditional independence and set a date for independence, which was to be 30 June 1960.

In the May 1960 parliamentary elections, the MNC emerged as the strongest party, claiming 40 of the 137 seats and the majority in the Provincial Assembly of Orientale and of Kasai and Kivu Provinces. Continuing to mobilize support in both urban and rural areas, Lumumba and the MNC organized a coalition of both major and minor political parties in April 1960, working with Parti Solidaire Africain (African Solidarity Party), the Balubakat party, and Centre de Regroupement Africain (CEREA) (Center of African Regroupment) party. After cutting across ethnic and regional affiliations, Lumumba proved to be a capable leader. With the coalition, Lumumba became prime minister of the Congo, while Joseph Kasavubu, leader of the

Patrice Lumumba's Last Letter

Just before his death on 17 January 1961, Patrice Lumumba wrote a moving, eloquent final letter to his wife. The text of the letter appears below.

My dear companion,

I write you these words without knowing if they will reach you, when they will reach you, or if I will still be living when you read them. All during the length of my fight for the independence of my country, I have never doubted for a single instant the final triumph of the sacred cause to which my companions and myself have consecrated our lives. But what we wish for our country, its right to an honorable life, to a spotless dignity, to an independence without restrictions, Belgian colonialism and its Western allies—who have found direct and indirect support, deliberate and not deliberate among certain high officials of the United Nations, this organization in which we placed all our confidence when we called for their assistance—have not wished it.

They have corrupted certain of our fellow countrymen, they have contributed to distorting the truth and our enemies, that they will rise up like a single person to say no to a degrading and shameful colonialism and to reassume their dignity under a pure sun.

We are not alone. Africa, Asia, and free and liberated people from every corner of the world will always be found at the side of the Congolese. They will not abandon the light until the day comes when there are no more col-

onizers and their mercenaries in our country. To my children whom I leave and whom perhaps I will see no more, I wish that they be told that the future of the Congo is beautiful and that it expects for each Congolese, to accomplish the sacred task of reconstruction of our independence and our sovereignty; for without dignity there is no liberty, without justice there is no dignity, and without independence there are no free men.

No brutality, mistreatment, or torture has ever forced me to ask for grace, for I prefer to die with my head high, my faith steadfast, and my confidence profound in the destiny of my country, rather than to live in submission and scorn of sacred principles. History will one day have its say, but it will not be the history that Brussels, Paris, Washington or the United Nations will teach, but that which they will teach in the countries emancipated from colonialism and its puppets. Africa will write its own history, and it will be, to the north and to the south of the Sahara, a history of glory and dignity.

Do not weep for me, my dear companion. I know that my country, which suffers so much, will know how to defend its independence and its liberty. Long live the Congo! Long live Africa!

Alliance des Bakongo (ABAKO), became president. From the beginning the relationship between Lumumba and Kasavubu was strained due to ideological and philosophical differences. Lumumba desired a strong centralized government that would withstand territorial balkanization (division of territories into small, often hostile units), whereas Kasavubu desired a federated independent Congo.

On independence day, both King Baudouin I of Belgium and Kasavubu praised Belgian colonial rule. Lumumba, on the other hand, denounced Belgium rule by stating, "The wounds that are the evidence of the fate we endured for eighty years under a colonialist regime are still too fresh and painful for us to be able to erase them from our memory . . . [because] we have been the victims of ironic taunts, of insults, of

blows that we were forced to endure morning, noon, and night because we were blacks" (Van Lierde 1972, 221). Lumumba continued to outline the future of the Congo and the liberation of the entire African continent in his proclamation speech. Amid applause, Lumumba ended by stating, "Long live African independence and African unity! Long live the independent and sovereign Congo" (Van Lierde 1972, 224). After he reminded Belgium of its unbridled rule of terror, Lumumba became seen as a threat and an impediment to Western neocolonial interests in the Congo.

THE ROAD TO MARTYRDOM

Shortly after independence, the government of Lumumba and Kasavubu faced widespread military

revolt and secessionist movements in Katanga and Kasai Provinces; the Congo was torn asunder. A mutiny within the armed forces began on 5 July 1960, intended to discredit Lumumba. In order to restore order, Lumumba Africanized the Force Publique (the colonial army), dismissed General Emile Janssen and other Belgian officials, renamed the armed forces the “Armée nationale congolaise” (ANC), and appointed Joseph Mobutu colonel and chief of staff of the ANC. Both Lumumba and Kasavubu also took several trips into the interior as part of the effort to restore a sense of calm to the newly independent Congo.

On 11 July 1960, Moïse Tshombe and Godefroid Munongo of the Confédération des Associations Tribales du Katanga (CONAKAT) (Confederation of Tribal Associations of Katanga) declared the secession of the mineral-rich province of Katanga. The Katanga secession was supported by Belgium, Britain, France, and segregated South Africa. Committed to the territorial integrity of the Congo, Lumumba, fearing a reinstatement of Belgium colonial rule, appealed to U.N. Secretary-General Dag Hammarskjöld for military assistance. Unfortunately, Lumumba interpreted the U.N. as a neutral instrument of international law and order, but the U.N. openly protected Western interests in the Congo. Although hesitant at first, Lumumba and the Congolese government turned to the Soviet Union and Ghana for help in quelling the civil unrest. In August 1960, Soviet military aid arrived. Quickly Lumumba was labeled by the west—and the United States in particular—a “Communist,” and a United States–Belgian initiative to assassinate Lumumba was ordered to prevent Soviet expansion. U.S. President Dwight D. Eisenhower and Central Intelligence Agency (CIA) director and chief Allen Dulles sent Sidney Gottlieb, a scientist, to Kinshasa to poison Lumumba.

The secessionist movement in south Kasai in August 1960 had a major impact on the political fate of Lumumba because unarmed civilians were massacred by ANC troops as they sought to halt the movement. This was considered an act of genocide and grounds for dismissing Lumumba. Charged with being a Communist and an agent of genocide,

Lumumba was dismissed as prime minister by Kasavubu on 5 September 1960. Parliament rejected Kasavubu’s dismissal of Lumumba, and Lumumba in turn dismissed Kasavubu, a dismissal that the parliament also rejected, thus creating a constitutional crisis.

With the support of the United States, Belgium, U.N. officials, and anti-Lumumba Congolese, Colonel Mobutu staged a military coup on 14 September 1960 to neutralize both Lumumba and Kasavubu. In the meantime, the assassination of Lumumba—Operation Barracuda—was planned by the United States, specifically the CIA. Lumumba was put under house arrest by Colonel Mobutu on 10 October 1960.

THE DEATH OF LUMUMBA

Realizing that the only way to regain control of the Congo was to set up a provincial government and wage an armed struggle, Lumumba escaped house arrest on 27 November 1960 and went to Stanleyville (Kisangani). However, Mobutu’s soldiers captured him and supporters on 1 December in Lodi, Congo, and tortured Lumumba.

While detained in the Thysville (Mbanza-Ngungu) military base on 13 January 1961, Lumumba organized soldiers into a garrison mutiny to demand higher wages. The next day the disaffected soldiers were given a pay increase. As Lumumba remained a prisoner, Lumumbists began to take control of the eastern Congo. Fearing a pro-Lumumba coup, Belgium senior officials and others ordered the execution of Lumumba, Youth and Sports Minister Maurice Mpolo, and Senate Vice President Joseph Okito. On 17 January, Lumumba, Mpolo, and Okito were delivered to Tshombe in Katanga.

After being beaten, Lumumba, Mpolo, and Okito were shot by a firing squad on 17 January 1961. For more than a month the whereabouts of Lumumba was questioned until Katanga radio announced that unknown Congolese had killed Lumumba and others. People had little doubt, however, about who the assassin was. To determine why Lumumba was so brutally killed is difficult, for we are just starting to get an idea of what really went on. However, it is safe

to say that the torture was indeed intended to intimidate and was the result of the hate that he engendered, especially among those in the Katanga province.

LUMUMBA AS A SYMBOL

Patrice Lumumba could have influenced the course of history in the Congo for the better. The dream of a unified nation and economy that would serve the needs of the Congolese people was not to be realized. However, Lumumba even after death inspired many political writers and activists because, as the French philosopher Jean-Paul Sartre once stated of Lumumba, he was “a meteor in the African firmament” (De Witte 2001, xxiv). As a staunch anti-imperialist, internationalist, and martyr of Congolese independence, Lumumba continues to serve as a symbol of struggle and freedom. Lumumba lives on as a leader for thousands of people who try to find a way out of the impasse of global oppression.

LUTHER, MARTIN

(1483–1546)

Protestant Reformation leader

Known for leadership in the Protestant Reformation, Martin Luther was an Augustinian monk who spent his mature years as a professor of biblical studies at the University of Wittenberg. Religious norms and impulses marked his approach to leadership. Non-religious leaders, therefore, find his claims that God guides leaders a limiting feature today. Yet how he used this vision of the sacred and its spin-offs and by-products does inform people in many disciplines and professions in the modern world.

MINGLING THE ACCIDENTAL AND THE THEOLOGICAL

Luther saw himself as an accidental leader who did not choose the role of Protestant Reformer. That was not part of job descriptions then and is not now. It is true that in many ways he was cast into that role by circumstances that were no part of his training as a member of a monastic community and that he did not seek.

Luther said of his most dramatic act, the assault on the papacy that helped split Western Christendom, that all he did was preach the Word of God. Then, he went on, while he and two friends, Philipp Melancthon and Nicholas von Amsdorf, sat and drank beer in Wittenberg, God dealt the papacy a mighty blow. Those who are not convinced that they can call upon God to blast earthly powers still find many things of value to observe about leadership, even from such jaunty summaries.

THREE DIMENSIONS OF RHETORICAL OR PERSUASIVE LEADERSHIP

First, Luther the leader had to persuade and therefore depended upon rhetoric. He saw himself opposing two coercive systems, rulers in each of which could take his life: the Holy Roman Empire, centered in territories that became Germany, and the Roman Catholic Church, headed by the pope. While he had the protection of a friendly prince, Elector Frederick

the Wise of Saxony, he could not call on armament or major funding for support. When in the 1520s he left the monastery and, seven years later, married an ex-nun, he was nearly penniless. His wife, Katherine von Bora, became an adept leader herself, raising living expenses as a housemother to boarding students, secretary and treasurer for the Luthers, plus farmer and brewer. Still, funds for her husband and for the priests who followed him into Evangelical (Protestant) ministry were few.

Luther depended on words, written and spoken. His collected writings make up over one hundred large and densely packed volumes in German. For thirty years he was publishing sizable tracts, pamphlets, and books on the average every fortnight. He exploited the recent invention of the printing press that depended on movable type and his followers dispersed his writings at a pace unmatched by his enemies.

Through all his years he taught and preached in Wittenberg and on the road, and spoke defenses against emperors, cardinals, and debating opponents. Just as most of his unsystematic publications reflected a stormy soul, so his verbal messages always called for commitment. In a German pun, he said that the Word of God was to be *geschrien*, shouted, more than *geschrieben*, written; that the church was a *Mundhaus*, a “mouth-house,” more than a *Federhaus*, a “writing-pen-house.”

Leaders who employed rhetoric the way Luther did formally depended on rhetoric, reflecting some themes of Aristotle, Cicero, and other ancients, whether they read them or not; they knew they needed much art to persuade publics.

First, in Aristotle’s terms, one had to be aware of pathos, the situation of hearers and readers. Here Luther fit the leadership pattern of those who discern ill-defined discontents among audiences, give names to these, name the enemy, and then summon response. Northern Europeans on whom he drew for support were chafing under the Roman Catholic Church’s system. They resented buying indulgences to aid in their salvation and to help pay for St. Peter’s Church in Rome. He gave the restless a voice, a motive, and legitimacy.

Second, in rhetorical leadership, the ethos or

character of the speaker or writer is decisive. Luther’s was a conflicted character who loved paradox and often embodied inconsistencies. Yet there was an inner continuity to his teachings, and he brought a compelling and alluring sense of risk to his work. Literary critics speak of the “hermeneutics of testimony” (coined by philosopher Paul Ricoeur), stressing the way audiences are drawn to interpret the words of someone at risk. Luther, despite the princely protection, was in danger of death from his excommunication in 1521 until the end. He did not invite others to take risks unless his own were more radical and daring.

Leaders in rhetorical modes, third, have to deal with *logos*, the word, the message. They have to have something to say. Here if nowhere else, Luther was a genius. His translation of the Greek and Hebrew Testaments of the Bible into vernacular, even colloquial German attracted scholars and common people alike, and shaped modern literary German in decisive ways. Leading congregations from Latin, which was unintelligible to most, into worship using colloquial speech and song was empowering.

As for the theological word, while ancient rhetoric depended upon the rational case the speaker or writer could make, Luther used as a warrant for argument a rhetoric based on faith and life in community. A modern bearer of his name, Martin Luther King, Jr., did precisely that when invoking sacred texts of the nation (e.g., the Declaration of Independence) and the Bible, in ways that resonated in the experience of a majority of citizens.

FRIENDSHIP AND COLLEGIALLY AS LEADERSHIP INSTRUMENTS

Another clue to Luther’s leadership was in the incident mentioned above, wherein he referred to two friends. While Luther was capable of dealing in isolation as well as making top-level enemies, he also inspired friendships. Superiors spotted the young monk as a leader and gave him titles and duties in the monastery and then the university. While some monks and scholars who got passed over resented this—old colleagues at his alma mater Erfurt were envious of his rapid rise—he also depended on and

Selection from *The Ninety-Five Theses*

From a zealous desire to bring to light the truth, the following theses will be maintained at Wittenberg, under the presidency of the Rvd. Fr. Martin Luther, Master of Arts, Master of Sacred Theology and official Reader therein. He therefore asks that all who are unable to be present and dispute with him verbally will do so in writing. In the name of our Lord Jesus Christ. Amen.

When our Lord and Master Jesus Christ said, "Repent" (Mt 4:17), he willed the entire life of believers to be one of repentance.

This word cannot be understood as referring to the sacrament of penance, that is, confession and satisfaction, as administered by the clergy.

Yet it does not mean solely inner repentance; such inner repentance is worthless unless it produces various outward mortification of the flesh.

The penalty of sin remains as long as the hatred of self (that is, true inner repentance), namely till our entrance into the kingdom of heaven.

The pope neither desires nor is able to remit any penalties except those imposed by his own authority or that of the canons.

The pope cannot remit any guilt, except by declaring and showing that it has been remitted by God; or, to be sure, by remitting guilt in cases reserved to his judgment. If his right to grant remission in these cases were disregarded, the guilt would certainly remain unforgiven.

God remits guilt to no one unless at the same time he humbles him in all things and makes him submissive to the vicar, the priest.

The penitential canons are imposed only on the living, and, according to the canons themselves, nothing should be imposed on the dying.

Therefore the Holy Spirit through the pope is kind to

us insofar as the pope in his decrees always makes exception of the article of death and of necessity.

Those priests act ignorantly and wickedly who, in the case of the dying, reserve canonical penalties for purgatory.

Those tares of changing the canonical penalty to the penalty of purgatory were evidently sown while the bishops slept (Mt 13:25).

In former times canonical penalties were imposed, not after, but before absolution, as tests of true contrition.

The dying are freed by death from all penalties, are already dead as far as the canon laws are concerned, and have a right to be released from them.

Imperfect piety or love on the part of the dying person necessarily brings with it great fear; and the smaller the love, the greater the fear.

This fear or horror is sufficient in itself, to say nothing of other things, to constitute the penalty of purgatory, since it is very near to the horror of despair.

Hell, purgatory, and heaven seem to differ the same as despair, fear, and assurance of salvation.

It seems as though for the souls in purgatory fear should necessarily decrease and love increase.

Furthermore, it does not seem proved, either by reason or by Scripture, that souls in purgatory are outside the state of merit, that is, unable to grow in love.

Nor does it seem proved that souls in purgatory, at least not all of them, are certain and assured of their own salvation, even if we ourselves may be entirely certain of it.

Therefore the pope, when he uses the words "plenary remission of all penalties," does not actually mean "all penalties," but only those imposed by himself.

Thus those indulgence preachers are in error who say that a man is absolved from every penalty and saved by papal indulgences.

empowered an impressive cast of loyal coworkers. Instinctively he encouraged their specializations.

Thus his closest colleague Melancthon was a more systematic theologian than he; Luther had him write the philosophical-sounding works. John Bugenhagen was more pastoral than the impatient Luther; he was a town pastor and confessor, including of parishioner Luther. More riskily, Luther trusted friends in secular government such as the prince Philip of Hesse, who led him into some

embarrassing and compromising situations. Friends and students, many of them strong characters and not sycophants or lackeys, gathered around the table at the Luther house, and produced volumes of his engaging conversations as *Table Talk*.

Luther was a less effective leader in matters of administration. He could not have conceived of working with an organizational chart, being patient with bureaucrats, or establishing coherent orders of church life. He violated the intellectual boundaries

of his university discipline, gave inconsistent and often-changing guidelines for congregational and supercongregational polities, was abrupt, too ready to advise others, and too ready to move on. When he died, the new Evangelical church, ruled more by princes than by clerics, inherited and contributed to church polities that veered from being incoherent on one hand to being too subservient to civil authorities on the other.

If effective leadership depends upon someone's ability to converse, to listen to and entertain the viewpoint of an opponent, to be able to say, "You may have a point," and then to engage in diplomacy, Luther was a bad example. He did learn much from various situations and encounters, and cited philosophers and theologians from the past to whom he gave credit. But he quickly turned what he learned into grist for his proclamations, which he ordinarily delivered in a style marked by cocksureness.

Similarly, his concept and expression of diplomacy styles, important in so many kinds of leadership, was undeveloped. He genuinely struggled, by his own account, toward a theological "breakthrough" between 1514 and 1518 or 1519. His central theme, his *logos*, became justification by faith, an affirmation, indeed a contention, that God declares sinners who have faith in Jesus Christ "just," not on account of any merits or works of their own. Once he was firm in this belief, he propagated it zealously and even in the 1540s, in a kind of spiritual last will and testament, wrote that it was the doctrine on which the whole of the church stood or fell. Such conviction gave him great strength among those who chose to follow but was alienating to potential allies who differed, they thought, only slightly.

DIVISIVE LEADERSHIP IN THREE CONTROVERSIES

The same ability to mingle conviction with alienating power in his leadership was evident in a controversy that, more than any other, divided the Evangelical or Protestant movement. This had to do with a debate among the Saxon (Lutheran) and Swiss reformers, the latter of whom were most influenced by Huldrych Zwingli, over the "presence" of Christ

in the sacrament of the Lord's Supper. Luther took the biblical word "is" seriously and insisted that that bread and wine "is" the body and blood of Christ, when connected with Christ's words. Zwingli stressed the memorial aspects of the ritual and said that the bread and the wine "represented" the body and blood. Civil and religious leaders who surrounded the two worked to move them toward some compromise. Luther, insisting that Zwingli and his company had "a different spirit," drove them off.

Another illustration of leadership based on conviction going wrong focuses on the single most blighting aspect of Luther's life and reputation: his anti-Jewish outbursts, which became vehement in his declining years. The sources of these were multiple and complex, not racial but religious, based less on millennium-old European Christian cultural prejudices than on his interpretation of the Bible. He had been convinced that his translation of the Bible and his preaching, because it gave Jews a more attractive and less legalistic version of Christian faith as an option, would lead Jews to mass conversion. Almost none accepted Evangelical Christianity, so with a vengeance he attacked the rabbis as false teachers. It is hard to measure how many people were led into anti-Judaism by his pamphlets, but he was a leader, and he was voicing it.

These illustrations out of dozens of possibilities reveal the strength and weaknesses of a courageous and convinced leader who saw life in terms of black and white and allowed for no subtleties, no shades of gray. His admirers say that had he been a leader who could empathize with those who could have been allies, he might have compromised away the very elements that attracted souls who were looking for leaders. His critics say that he arrogantly dismissed potential allies and led to fragmentation among Protestant Reformation movements.

LEADERSHIP THROUGH PIETY AND DEVOTION

Compensatory aspects of his approach to leadership show up in some of the quieter dimensions of his life. In the modern ecumenical movement, Roman Catholics, even on the official level, have come to

value some of his evangelical emphasis, his biblical witness, his stress on Christian liberty. Some “liberation theologians” have seen him as an inspiration, even if he did not carry the realization of individual and personal freedom into the political realm in any consistent way.

Similarly, his lifelong emphasis on prayer and the development of new styles of devotional leadership remain influential. Nowhere did this show up more than in Luther’s realization that music, especially song, was attractive to followers. Where Latin chanted by clerics had been the conventional form of worship music, leaving ordinary congregants at a distance, he praised song, provided hymns, and encouraged poets and composers to help him lead a singing movement.

Believing that the faith was to be passed on less by official coercion than by parental, pastoral, and pedagogical care for the young, he led in the development of religious and even public education. He did not trust lackadaisical or ignorant pastors and parents to do the transmitting, but he did trust the power of the words of faith transmitted, for example, through the *Small Catechism* that he wrote in 1529.

In that domestic sphere, he encouraged departing priests to marry and eventually married himself, contributing thus to the challenge to celibacy and the celebration of conjugal sexual life; these actions are an illustration of his leadership by word and by

example, which had immeasurable consequences for the church and in society.

THE PLUSES AND MINUSES OF SUCH LEADERSHIP

Luther’s leadership style demonstrates the power of the language of persuasion when in the hands of someone who is charismatic, who can exploit situations and depend upon friendly and popular support. Luther became one of the most influential European figures of his millennium. In company with other Reformers, he left a permanent schism in Christendom, even as he inspired large populations to make choices about their version of Christian faith. He also quickened curiosity among those who, through the centuries, have been engrossed in understanding how turmoil in the inner life of an individual can affect churchly and imperial powers alike.

 **MACHIAVELLI, NICCOLO**
(1469–1527)

Political philosopher and diplomat

Niccolo Machiavelli was probably the first great political philosopher of the Renaissance. His book *The Prince*, he said, was rooted not only in theory but also in historical fact. It was not so much a prescriptive book—a handy guide for dictators—as a book that revealed how the world actually worked and what leaders had to do to stay in power and to protect the state and its citizens. However, seldom has a single book provoked such outrage, then and now. It was “A handbook for gangsters,” according to the British philosopher Bertrand Russell, whereas the French emperor Napoleon Bonaparte regarded it as “The only book worth reading.” So which, if either, of these reviews is the most appropriate?

BACKGROUND

Machiavelli was born in Florence into a moderately well-off family (his father was a lawyer). At that time, what subsequently became Italy was divided between five rival “Italian” powers: the four city-states of Venice, Florence, Milan, and Naples and the papacy itself, all of whom vied with each other for political supremacy and with the external states (Spain and France) that constantly intervened politi-

cally and militarily. Florence was controlled by the Medici family during Machiavelli’s life except for a period of reform between 1494 and 1512. When the Medicis regained control, Machiavelli was briefly imprisoned and tortured for his role in facilitating the reforms and, on his release, retreated to his home at San Casciano just outside Florence. There he wrote his great work on realpolitik (politics based on practical and material factors rather than on theoretical or ethical objectives), *The Prince*, between 1513 and 1514, partly in an attempt to curry favor with the Medicis and to return to his favored job as a Florentine diplomat. Eventually he did achieve public employment, but it did not last long, and he died in June 1527, leaving his wife, Marietta Corsini, and six children to live in relative poverty.

THE PRINCE

The Prince, written as a guidebook for all political leaders, attempted to show political life as it actually was rather than how contemporary leaders professed it to be: The Christian principles that all the leaders articulated were fine in theory, but in Renaissance Italy they were seldom to be seen in practice—and for Machiavelli this was for good reasons. In fact, Machiavelli, although detested by the Catholic church, was not anti-Catholic, but he was bitterly opposed to the Catholic clergy and to the papacy. Yet,

The Prince was not only a book to ingratiate the favor of the Medicis but also a call to arms to defend Florence and—through Florentine domination—Italy from the “Barbarians,” by whom he meant the Spanish and French invaders. However, in this aim the book failed because in the year Machiavelli died, 1527, Rome was sacked, and most of Italy came under Spanish control.

Machiavelli had lived through the golden age of Florence but also through some of the excesses invoked by critics such as the Dominican preacher Girolamo Savonarola, who encouraged the Florentines to burn their worldly goods, their books, pictures, and jewels in a “pyre of vanities.” Eventually Savonarola was himself burned at the stake, but it taught Machiavelli a lesson about the vulnerability of the “unarmed prophet.” In 1498 Machiavelli was appointed to a senior position within the Florentine civil service as secretary to the Ten, the committee concerned with foreign and military policy, but his attempt to organize the recovery of Pisa (which had secured independence from Florence with French help) using mercenary troops failed miserably, and his antagonism to the mercenaries—and desire to replace them with a citizens’ army—played a significant part in regaining Pisa in 1509.

Also important was his next mission: to fend off Cesare Borgia, the illegitimate son of Rodrigo Borgia, who had become Pope Alexander VI in 1492. Cesare Borgia led the papal armies and threatened Florentine independence, but Machiavelli soon recognized a different category of leader in Cesare because here was a man who murdered his own lieutenant (Remirro Orco) when Orco appeared to be unnecessarily cruel in his control over the Romagna region in Italy. As Machiavelli recalled, “. . . one morning Remirro’s body was found cut in two pieces on the piazza at Cesena, with a block of wood and a bloody knife besides it. The brutality of this spectacle kept the people of the Romagna at once appeased and stupefied” (Ch. 7). Cesare subsequently invited those conspiring against him to dinner, only to have them all slaughtered as they ate. Machiavelli, then, used Cesare as a good example of the realpolitik of life because he believed Cesare had restored peace through the selective use of violence.

The alternative, as professed in public by most leaders at the time, was to act nobly and morally, but for Machiavelli the consequence of acting morally in an immoral world was simply to allow the most immoral to dominate. “The fact is,” he suggests in *The Prince*, “that a man who wants to act virtuously in every way necessarily comes to grief among so many who are not virtuous. Therefore if a prince wants to maintain his rule he must learn how not to be virtuous, and to make use of this or not according to need” (Ch. 15).

Cesare Borgia was accounted cruel; nevertheless, this cruelty of his reformed the Romagna, brought it unity and restored order and obedience. On reflection it will be seen that there was more compassion in Cesare than in the Florentine people who, to escape being called cruel, allowed Pistoia to be devastated. . . . (Ch. 17)

In effect, Machiavelli did not suggest that leaders should always act immorally but rather that to protect the interests of a community a prince has to do whatever is necessary—but only for the greater good. Thus, an act should be contextualized and not analyzed against some mythical moral world. The problem, of course, is defining “the greater good.”

As far as Machiavelli was concerned, his ideas amounted to no more than disclosing what was already happening rather than advocating something radically new, but he has usually been interpreted—and certainly was at the time—as suggesting that leaders should always act immorally and subordinate the means to the end because this would generate an advantage over others. However, he actually insists, more clearly in one of his other great works, *The Discourses*, that a leader’s action can be legitimated only by reference to the greater good of the community and not to the benefit of the individual. Of course, how this greater good is defined is a moot question, but in *The Discourses* Machiavelli sets himself firmly on the side of the republic and the populace (although he was not a democrat) and against princes and those who led for their own self-interest (especially the “idle” aristocracy). Nevertheless, he also suggests that there are times when the ruthlessness of a prince is necessary

CHAPTER XXIII

How Flatterers Should Be Avoided

I DO NOT wish to leave out an important branch of this subject, for it is a danger from which princes are with difficulty preserved, unless they are very careful and discriminating. It is that of flatterers, of whom courts are full, because men are so self-complacent in their own affairs, and in a way so deceived in them, that they are preserved with difficulty from this pest, and if they wish to defend themselves they run the danger of falling into contempt. Because there is no other way of guarding oneself from flatterers except letting men understand that to tell you the truth does not offend you; but when every one may tell you the truth, respect for you abates.

Therefore a wise prince ought to hold a third course by choosing the wise men in his state, and giving to them only the liberty of speaking the truth to him, and then only of those things of which he inquires, and of none others; but he ought to question them upon everything, and listen to their opinions, and afterwards form his own conclusions. With these councillors, separately and collectively, he ought to carry himself in such a way that each of them should know that, the more freely he shall speak, the more he shall be preferred; outside of these, he should listen to no one, pursue the thing resolved on, and be steadfast in his resolutions. He who does otherwise is either overthrown by flatterers, or is so often changed by varying opinions that he falls into contempt.

I wish on this subject to adduce a modern example. Fra Luca, the man of affairs to Maximilian, the present emperor, speaking of his majesty, said: He consulted with no one, yet never got his own way in anything. This arose because of his following a practice the opposite to the above; for the emperor is a secretive man—he does not communicate his designs to any one, nor does he receive

opinions on them. But as in carrying them into effect they become revealed and known, they are at once obstructed by those men whom he has around him, and he, being pliant, is diverted from them. Hence it follows that those things he does one day he undoes the next, and no one ever understands what he wishes or intends to do, and no one can rely on his resolutions.

A prince, therefore, ought always to take counsel, but only when he wishes and not when others wish; he ought rather to discourage every one from offering advice unless he asks it; but, however, he ought to be a constant inquirer, and afterwards a patient listener concerning the things of which he inquired; also, on learning that any one, on any consideration, has not told him the truth, he should let his anger be felt.

And if there are some who think that a prince who conveys an impression of his wisdom is not so through his own ability, but through the good advisers that he has around him, beyond doubt they are deceived, because this is an axiom which never fails: that a prince who is not wise himself will never take good advice, unless by chance he has yielded his affairs entirely to one person who happens to be a very prudent man. In this case indeed he may be well governed, but it would not be for long, because such a governor would in a short time take away his state from him.

But if a prince who is not experienced should take counsel from more than one he will never get united counsels, nor will he know how to unite them. Each of the counsellors will think of his own interests, and the prince will not know how to control them or to see through them. And they are not to be found otherwise, because men will always prove untrue to you unless they are kept honest by constraint. Therefore it must be inferred that good counsels, whencesoever they come, are born of the wisdom of the prince, and not the wisdom of the prince from good counsels.

to restore a society to health, something that republics find difficult to do. Thus, in the long term (and for Machiavelli the long term could exist only within an expansionist state) a republic is preferable, but an occasional prince may be a necessary evil. In fact, Machiavelli was not just distraught at the contemporary weakness of his beloved city-state and country but also fascinated by its imperial Roman

past, and his book *The Art of War* was explicitly concerned with learning from the Roman past, especially the use of conscript armies, not mercenaries, and how coercion must be tempered by a spiritual bond between citizens and between leaders and followers. Yet, coercion was essential—as shown by the answer to his own rhetorical question of “Whether it is better to be loved or feared, or the

reverse.” In *The Prince* Machiavelli unequivocally sides with the fear factor:

The answer is that one would like to be the one and the other; but because it is difficult to combine them, it is far better to be feared than loved if you cannot be both. One can make this generalization about men; they are ungrateful, fickle, liars and deceivers . . . when you are in danger they turn against you. Any prince who has come to depend entirely on promises and has taken no other precautions ensures his own ruin. . . . The bond of love is one which men . . . break when it is to their advantage to do so; but fear is strengthened by a dread of punishment which is always effective. The prince must nonetheless make himself feared in such a way that, if he is not loved, at least he escapes being hated. (Ch. 17)

Most certainly Machiavelli would have warned Margaret Thatcher, prime minister of Britain from 1979 to 1990, that although she was right to want to be effective rather than want to be loved (a common but often fatal error for leaders) and that although she need not fear the hatred of those she did not need (lifelong Labour Party supporters), she should have avoided the hatred of people she did need: Sir Geoffrey Howe for one, then the British deputy prime minister, whose resignation speech set in motion the events that led to her downfall.

On the other hand, Machiavelli also insisted that conflict within society between the rulers and the ruled is a necessary evil because from such conflict emerges the civic institutions that prevent the rulers from exploiting the ruled and simultaneously tie the ruled to the rulers. In effect, power is the essence of society, and organization has to be imposed upon it by leaders to prevent anarchy. The solution is an endless cycle of forms of organization, but they should all be judged by reference to the question that Machiavelli held to be the basis for political life: Under what circumstances would people commit themselves to the state?

That commitment is important because leaders cannot trust mercenaries whose loyalty is only to themselves and to money. The importance played by followers in the leadership situation seems to strengthen Machiavelli’s argument. Further, his works on leadership mirror many recent leadership

texts in that women are significant only by their absence. Finally, with Machiavelli one can detect the beginnings of the “modern” age. The religious values that allegedly endured throughout the medieval age were replaced by self-interest and greed. The self-interest and greed may be true because many people have probably experienced workplace leaders who “accomplished great deeds [but] who have cared little for keeping their promises and who have known how to manipulate the minds of men [sic] by shrewdness” (Ch. 25).

For all that Machiavelli committed himself to Florence, he acknowledged that this commitment was seldom sufficient because fate itself often intervened. Indeed, he was firmly of the belief that luck (*fortuna*) is a crucial element in life, although it can be “channeled.” However, Cesare Borgia remained his model prince because Machiavelli believed that Cesare embodied *virtù*, that combination of ruthlessness and courage that alone can master the vagaries of *fortuna*. In effect, fortune favors the brave, not the timid, and that means knowing when to be forceful, like a lion, and when to be cunning, like a fox.

MAJORITY AND MINORITY INFLUENCE

The existence and influence of majority and minority factions within small groups have been topics of interest since the 1950s and the seminal work of

Solomon E. Asch on conformity to group pressure with respect to perceptions. The effects of majority and minority influence on behavior and attitudes with consideration for a leader's role in managing the influence process are becoming more important as the diversity of groups within the workforce as well as within other contexts continues to increase.

MAJORITY INFLUENCE IN GROUPS

A wealth of evidence about majority influence in groups suggests that majorities tend to dominate group decision making. "Majority" in this context refers to an opinion majority, not to a group that is dominant as a result of demographic or personal characteristics. In general, a group likely will carry out the will of the majority of its members, as indicated in the common saying "majority rules."

Evidence indicates that a majority can influence a minority with respect to a judgment even when the majority's judgment is objectively wrong. In the classic studies conducted by Asch, groups were shown slides depicting lines of differing lengths. The groups were comprised entirely of the researcher's confederates, with the exception of one study subject. The confederates all provided inaccurate judgments about line length first, leaving the study subject to provide his response last. The subject's responses were generally consistent with the majority opinion, even though the subject could clearly see that the judgment provided by the majority was incorrect.

As illustrated in Asch's research, people have strong norms toward compliance with majority opinions in interacting groups. Group majorities are able to marshal resources to enforce compliance with majority-imposed rules and norms that minorities do not have available. Majorities can utilize approval and status as rewards for compliance. By the same token, the majority can also punish, in both obvious and subtle ways, deviant opinions and behavior. As an extreme measure, the majority can ostracize a member who persists in deviant behavior or opinions. If group membership is important to the member's social identity, compliance with the majority is the most likely result of group pressure.

The tendency to comply with majority opinion

may become so strong that it leads to a group dysfunction that Irving L. Janis termed *groupthink*. Groupthink, as Janis defined it, is pressure toward unanimity within a decision-making group that is so strong that the group ignores evidence indicating that it has chosen a poor (or even disastrous) course of action. When the pressure for unanimity grows to this point, any dissenter is ostracized from the group, first by ignoring the warnings that the dissenter might provide and eventually by simply cutting off all communication with the dissenter. The removal of the dissenting opinion from the group ensures that the group will not be disturbed by the necessity of incorporating minority suggestions into its decisions. Unfortunately, because the group also isolates itself from feedback regarding the course of action taken, poor decisions cannot be recognized and corrected in time to avoid negative consequences. Groups suffering from groupthink also hold an illusion of invulnerability that prevents acknowledgment of failure, and, as a result, any individual willing to point out shortcomings is either brought into compliance with the group opinion or removed from the group.

Janis provided a number of examples of groupthink from the political and business spheres, including the decision by U.S. President John F. Kennedy to invade Cuba (the Bay of Pigs decision) and the Ford Motor Company's willingness to continue to produce the Edsel model for two and one-half years despite its complete failure to capture a market. A contemporary example might be decisions made by Enron corporate executives with respect to engaging in questionable accounting practices. More important than identifying examples, however, is suggesting ways that groups can avoid excessive pressure toward conforming to a majority opinion, even when such pressure is not so strong as to merit the label "groupthink."

A leader can implement a number of techniques to counterbalance majority pressures. Janis suggests, first of all, that the group leader avoid expressing his or her preference with respect to the decision at hand until after all of the other group members have been able to offer opinions and after discussion has taken place. In this way the leader can help the group to avoid pressure toward agreement with the higher

status members, including himself or herself. In addition, the leader may institutionalize a “devil’s advocate” role to ensure that the potential drawbacks to the group’s proposed course of action are considered. Leaders, then, can be responsible for providing the opportunity for minority views to be aired, but the leader cannot ensure that the minority can successfully influence the majority’s position.

Given the strong pressures for compliance with the majority, the notion of minority influence may seem unlikely or nearly impossible. However, anecdotal evidence, particularly in the context of jury decisions, suggests that minority influence can and does take place. Due to its counterintuitive nature, experts have done a great deal of theorizing and research on the process of minority influence within groups.

MINORITY INFLUENCE IN GROUPS

The dominant paradigm (framework) for studying influence within groups until the 1970s was the study of majority influence on smaller group factions. Ironically, the study of how and when minorities influence the larger group was itself an example of minority influence when Serge Moscovici proposed the dual process theory. Dual process theory, also called “conversion theory,” suggested a mechanism by which minorities can exert influence on a group majority.

DUAL PROCESS THEORY

According to Moscovici, majorities and minorities exert influence within groups through different processes. The process through which a majority influences members is comparison. That is, when a group member realizes that his or her position differs from that of the majority, the member compares his or her position to that of the majority and usually brings it into compliance with that of the majority. Through compliance with the majority, the member avoids the sanctions that groups can impose on deviant members. This compliance need not be internalized, however, because the majority concern is only with the group member’s overt behavior, not with internalized attitudes or beliefs.

The cognitive processing that takes place during the comparison process is relatively superficial. The member uses the simple heuristic (aid in learning) that the majority is right and brings his or her viewpoint at least superficially in line with the majority viewpoint. In-depth inquiry into the reasons for the majority viewpoint is absent in this comparison process. The group member accepts the influence with a minimum of cognitive effort, and the group continues to function smoothly.

The process is different when a group member realizes that his or her opinion differs from that of a minority faction of fellow group members. If this minority faction states its position consistently and with confidence, the majority group members will need to understand why the minority would take this deviant position. Rather than use simple heuristics, the majority will engage in deep cognitive processing of the minority position in an attempt to make sense of it. As a result of this sense-making process, the majority validates the minority position. Thus, the mechanism through which a minority exerts influence within a group is a validation process.

The validation process does not result in an immediate change in the majority opinion. The majority still can use sanctions against those with deviant positions, and because the cognitive processing has taken place internally, the publicly espoused position is still that of the majority. Attitude change has taken place internally, however. This change can be noted in measures taken privately, later in time, or with respect to related attitudes. This change is termed *conversion* rather than *compliance* because it is internalized. A minority can over time influence a majority to accept its position through conversion.

TESTING THE DUAL PROCESS THEORY

The original studies conducted by Moscovici and his colleagues to test the dual process theory involved the perception of color slides. Individuals participated in the studies in groups, and as in the Asch studies, all of the group members except one were research confederates. Study participants were presented with color slides that were known to be blue,

but a small minority of individuals (two out of six) consistently gave their response as “green.” The level of direct compliance with the minority opinion was quite small—about 8 percent of the participants indicated a green, rather than a blue, slide.

Dual process theory predicts that minority influence will be private rather than public and indirect rather than direct. Thus, the researchers also collected data on perceptions of after-images of the slides, and these responses were made privately. A blue slide should result in an orange or yellow after-image, whereas a green slide should result in a red or purple after-image. Consistent with the predictions of dual process theory, minority opinion influenced the judgment of the after-image toward red/purple (as if a green slide had been viewed), despite the fact that the direct responses with regard to the slide color were unaffected by the minority’s perception.

Following Moscovici’s groundbreaking work, studies were conducted with respect to decision-making tasks as well as perceptual tasks. Following the logic of dual process theory, if a member of a decision-making group discovers that his or her position differs from that of a majority, a comparison process focusing only on the two discrepant positions will be initiated. If a group member discovers that his or her position differs from that of a minority, there is little pressure to conform to that particular position. However, consideration of the discrepant position initiates a more complete review of alternatives, including others in addition to the minority position. Minority influence in decision-making groups, then, should produce more divergent thinking than majority influence would.

This prediction was tested in several studies. In one such study participants were asked to form a three-letter word from a string of six letters. The string suggested an obvious choice—for example, the string “brTONc” suggests the three-letter word *ton*. Participants were given feedback that either a majority or a minority of other group members had identified a different word—for example, *not*. In subsequent trials participants were willing to adopt a differing strategy, such as backward reading, which was utilized by a majority. When a minority adopted a differing approach from the participants, however,

participants utilized a variety of strategies in subsequent trials, not just the one suggested by the minority. This result suggests a more complete consideration of alternative procedures rather than a simple switch to the minority strategy.

LEADER EFFECTS IN DUAL PROCESS THEORY

The research on dual process theory, although extensive, has been silent with respect to the effect of leader behavior on minority influence. As indicated earlier, leaders have an important role to play in preserving a place for minority opinion within the group. Minority dissent will not only protect the group from the dysfunctions of overconformity, but also can lead the group to greater creativity and innovation. As indicated in the research on minority influence in decision-making groups, minority opinion with respect to group decisions can lead to the identification of a greater range of alternatives and perhaps to novel solutions that might not otherwise surface. The research on brainstorming confirms that the generation of a greater number of alternative solutions to a problem situation will result in a higher quality decision.

Dual process theory suggests that one important aspect of leader behavior is the leader’s willingness and ability to prevent the group from reaching premature closure on a particular course of action. To the extent that the leader can skillfully lead group discussion so that both minority and majority opinion can be fully and effectively presented, the group should benefit in terms of enhanced performance. The leader must ensure that the minority has the opportunity for full expression because the impact of minority influence will be greatest when the minority can advocate its position consistently and confidently. If minority group members hesitate to explain their position due to concern about pressure to conform to the majority opinion, the opportunity for the development of innovative solutions may be lost. Leaders who adopt a more participative style of leadership are more likely to see the benefits of minority influence.

Additional benefits that may accrue to the group as a result of minority influence include increased indi-

vidual satisfaction and greater group cohesion. Individuals who are permitted a full expression of their views, even when they are unsuccessful with respect to direct influence on the majority opinion, are likely to be more satisfied with their membership in the group. Further, individuals who feel that the group values their contributions are more likely to support the group in its activities and to desire to remain as members of the group. Leader behavior that promotes expression of minority views, then, has the potential to provide a number of benefits to the group.

To this point majority and minority groups have been defined on the basis of opinions or judgments, with little consideration of minority or majority status based on demographic or personal characteristics, yet these characteristics can have a great deal of influence on group interaction.

DEMOGRAPHY AND MINORITY STATUS

Individuals with certain demographic characteristics often find themselves in the minority within a group. Demographic characteristics such as age, gender, and ethnicity are readily observable, so individuals who differ from the majority of group members with respect to such obvious characteristics can be immediately identified as a “minority” within the group. The field of relational demography proposes that diversity on demographic characteristics within groups will have an effect on group functioning.

The research on demographic diversity within groups, and particularly on demographic minorities within groups, is consistent in suggesting that the phenomenon of relational demography does make a difference. The presence of a demographic minority within a group generally leads to a less positive experience for all of the members of the group. The research suggests that demographically diverse groups are less cohesive and are less effective at task performance. Group members are less likely to identify with the group, are less satisfied with the group experience, and tend to communicate with one another less frequently. Members who are demographically different (in the minority) are more likely to leave the group.

Members who are demographically different from

other group members frequently find that they have less influence on the group. Demographic minorities frequently find that they are in the position of being, in conversion theory terms, a “double deviant.” That is, the individual is a minority in terms of some demographic characteristic and also expresses an opinion that is a minority opinion within the group. Although a member of a minority group with respect to opinion can have an influence on the group if that member expresses the minority opinion consistently and confidently, it is not so clear that a “double deviant” (both an opinion minority and a demographic minority) can exert influence in the same way.

A demographic minority group member is an “out-group” member with respect to the social identity of the majority of the group. If the out-group member attempts to influence the majority of the group to a minority attitudinal position, the influence attempt likely will be unsuccessful. The majority of the group does not feel a social identification with the demographic minority group member in any case and thus feels no obligation to attempt to understand the position taken by the out-group member. Any attempt at influence will likely result in the opposite outcome—movement away from the position advocated by the minority group member.

The result of the coupling of demographic minority status with opinion minority status is that often demographic minorities will not be able to exercise much influence within their group. This situation is most unfortunate because sometimes a demographically different member has been invited to join the group in order to bring diverse perspectives to the group. If the individual is unable to get a fair hearing for his or her viewpoint, then the goal of a greater diversity of opinion has not been achieved, and there may be detrimental consequences to group functioning as well. Further, the minority individual will be socially isolated, will often be treated in rather stereotyped ways, and will feel powerless with respect to influencing the group. Under these circumstances it is not too surprising to find that demographic minorities are the most likely to leave a group.

Leaders must exercise some direction for the group in order to ensure that demographic minority group members are effectively integrated into the

group. Limiting the diversity within the group is simply not possible. Limiting diversity is unethical and in many cases would be illegal. The leader must ensure that the group manages its diversity effectively.

One approach to helping the group to manage its diversity effectively is actually to increase representation of demographically different individuals. The leader may actively encourage demographically different individuals to join the group. As the size of the minority group increases, the majority is less likely to stereotype the minority group members. With greater minority representation, the group can see individual differences within the group, rather than respond to minority group members in stereotyped ways. Group members are then free to focus on task-related variation, rather than on demographic differences.

Another option for the leader is to emphasize the similarities—rather than differences—among the group members. We can see social identity as fluid and subject to contextual effects. If the group leader stresses those aspects of identity that are common within the group, then demographic effects may be less pronounced in the group situation. A leader can highlight deep-level similarity (similarity with respect to values, attitudes, and personality) so that such similarity can overwhelm the surface-level effects of demographic diversity. With the proper direction from the group leader, the effects of surface-level differences should diminish over time.

A LOOK AT THE FUTURE

In a pluralistic society, we cannot avoid conflicts of majority and minority rights. Group leaders walk a fine line as they try to protect the rights of the minority and ensure that the minority viewpoint is heard while not at the same time alienating the majority. Given the delayed and indirect type of influence that opinion minorities exert, minority input has the potential to enhance creativity and innovation within groups. Demographic minorities, in particular, may have to battle effects of “double deviance,” but with skilled leadership that allows for full participation and emphasizes similarity rather than dissimilarity, the rewards can be great.

MALCOLM X (1925–1965)

African-American ideological and religious leader

Malcolm X was born Malcolm Little in Omaha, Nebraska. His father, an itinerant preacher, was a fol-

lower of the black nationalist movement of Marcus Garvey (1887–1940). After the death of his father, and his mother’s subsequent psychiatric hospitalization, Malcolm X lived in various foster homes until moving to Boston to live with his sister. In Boston, he became involved in the zootsuit-wearing subculture, took up petty crime, and eventually spent six years in jail for burglary. During his time in jail, he joined the Nation of Islam, the black nationalist interpretation of Islam championed by Elijah Muhammad (1897–1975). After his release from prison in 1952, he adopted X as his surname and became a minister for the Nation of Islam, in this capacity providing a powerful voice for black dignity and black nationalism. He was assassinated by other members of the Nation of Islam after a split with the Nation of Islam over the integrity of the Nation’s leadership.

IDEOLOGICAL LEADERSHIP

Ideological leadership is a form of vision-based leadership. Like visionary leaders, ideological leaders influence others by articulating a vision, describing how people or social systems should act and interact. Malcolm X may be viewed as an ideological leader, in the company of Vladimir Lenin, the architect of Russian Communism; John L. Lewis, the U.S. labor leader; and Margaret Thatcher, the United Kingdom’s Conservative prime minister in the 1980s.

Like other ideological leaders, Malcolm X defined his vision in opposition to the status quo of his day. This oppositional theme is apparent in the core principle upon which Malcolm X built his vision: the notion that the white race, in particular white America, was “the devil.” The notion that the white race was the devil should not be taken literally, however. Rather, it should be viewed as a metaphor. In Malcolm X’s view, a view consistent with the teachings of the Nation of Islam, whites would never work to alleviate the suffering of black America but would continue a historic pattern of exploitation—exploitation that had robbed blacks of their dignity and was systematically destroying blacks through poverty, family disruption, and drug addiction.

Given these assumptions, it is unsurprising that Malcolm X was unresponsive to the call for integration voiced by Martin Luther King, Jr. (1929–1968), and the Southern Christian Leadership Conference. In Malcolm X’s eyes, that vision was futile. Instead, what was required was a separation of black and white America, resulting in a black community that could pursue its own future through black economic and social development and recognition of the unique value of black culture.

Malcolm X’s vision had little impact in the South and among middle-class blacks. In the North, however, where black migration and discrimination had led to ghettoization and the disruption of black culture, his vision proved more attractive; indeed, it continues to influence inner-city blacks today, remaining a viable force shaping inner-city black politics while serving as a plank in the black nationalist platform, emphasizing as it does the need to strengthen the black business community.

THE ORIGINS OF MALCOLM X’S VISION

Malcolm X’s vision did not arise in a vacuum. As noted earlier, Malcolm X’s father was a follower of Marcus Garvey, who advocated a return to Africa and the creation of a black empire capable of standing on equal terms with the then dominant European imperial empires. His father’s advocacy of this view brought unending trouble to Malcolm X’s family, and may have resulted in the father’s murder, although the evidence is unclear. What is clear is that Malcolm’s father instilled in his children nationalist principles, a point underscored by the fact that many of Malcolm X’s siblings joined the Nation of Islam.

Although the tenets of the Nation of Islam are complex, basically they hold that, for eons, black civilization was the one true civilization. The “local” dominance of whites in the present historical period is attributed to a dissident angel, or scientist, who created whites from degenerate black genes. However, in the near future, blacks will be delivered through Allah’s destruction of the whites. Although many of the Nation’s beliefs diverge from traditional Islamic teachings, particularly with regard to the relationships between blacks and whites, the accept-

ance of Allah as God's true prophet led followers of the Nation of Islam to adopt a number of other fundamental Islamic beliefs, such as abstinence and a focus on family. It seems likely that Malcolm X's upbringing prepared him to accept these teachings of the Nation of Islam, which later provided a foundation for his vision.

However, Malcolm X's commitment to those teachings was based also on personal experience. Malcolm X turned to the Nation of Islam and its leader, Elijah Muhammad, as a result of a personal crisis. This crisis had begun to take shape when he moved to Boston in 1940. In Boston, Malcolm X held a series of low-level jobs, using his income to adopt the "zoot suit" lifestyle, which took its name from the characteristic suit (long, oversized jacket, baggy trousers with a sharp crease) that young participants adopted. The zoot suit was the emblem of a lower-class counterculture that stressed hedonism as an alternative to the anomie of workaday life. This lifestyle led Malcolm X to drugs, prostitution, burglary, and, eventually, imprisonment.

In prison, Malcolm X read, apparently seeking to understand the problems in his life, and through his readings he encountered the teachings of Elijah Muhammad and the Nation of Islam. Here he found the mental model, or worldview, that provided personal meaning in his life; it was a model that stressed dignity, probity, the value of black culture, and black defiance. After leaving prison and becoming a minister of the Nation of Islam, Malcolm X began articulating this vision, which provided the basis for his exercise of influence.

THE POWER OF MALCOLM X

Why did Malcolm X, as opposed to some other black nationalist leader, emerge as the preeminent spokesman for the Nation of Islam? One answer may be found in Malcolm X's commitment to the principles of the Nation of Islam and black identity. Another answer to the question may be found in the conditions that led to his conversion. Malcolm X had lived the life of the streets during the "zoot suit" years and therefore understood life in the ghetto better than other black leaders, such as the leaders of the South-

ern Christian Leadership Conference who came from middle-class backgrounds. This understanding of the problems confronting inner-city blacks, combined with his substantial persuasive skills and impressive intelligence, made Malcolm X a compelling speaker. Moreover, his message, a message of distrust and confrontation, came at a time when inner-city residents were about to explode with anger over being excluded from the rising prosperity experienced by the rest of the United States. Not only have crisis conditions been linked to the emergence of visionary leadership, but when positive future-oriented change is seen as impossible, as it was by many members of the black community, the conditions are right for the emergence of ideological leaders.

Effective ideological leadership also depends on

Tribute to Malcolm X

This tribute to the murdered Malcolm X was published by the Young Socialist Alliance, the youth group of the Socialist Workers Party, which was one of the first youth groups to support the ideas of Malcolm X.

Fidel Castro's dedication to political independence and to economic development for Cuba led him eventually to opposition to capitalism. So also Malcolm's uncompromising stand against racism brought him to identify with the revolutions of the colonial people who were turning against capitalism, and finally to conclude that the elimination of capitalism in this country was necessary for freedom. Just as Fidel Castro discovered that there can be no political independence and economic development in a colonial country without breaking from capitalism, so Malcolm had come to the conclusion that capitalism and racism were so entangled in the United States that you had to uproot the system in order to eliminate racism.

Malcolm's black nationalism was aimed at preparing black people to struggle for their freedom. "The greatest mistake of the movement," he said in an interview in the February 25 *Village Voice*, "has been trying to organize sleeping people around specific goals. You have to wake the people up first, then you'll get action." "Wake them up to their exploitation?" the interviewer asked. "No, to their humanity, to their own worth, and to their heritage," he answered.

All he said to the black people was designed to raise their confidence, to organize them independently of those who oppressed them, to teach them who their enemies were, who was responsible for their condition; who were their allies. He explained that they were part of the great majority—the non-whites and the oppressed of the world. He taught that freedom could be won only by fighting for it; it has never been given to anyone. He explained that it could only be won by making a real revolution that uproots and changes the entire economic, social and polit-

ical structure of this society.

Thus it is not surprising that many who considered themselves socialists, radicals and even Marxists could not recognize and identify with Malcolm's revolutionary character. They could not recognize the revolutionary content in this great leader clothed in the new forms, language, and dark colors of the American proletarian ghetto.

Even with all his uniqueness and greatness as an individual, he could not have reached this understanding unless the conditions in this country were such that it was possible. Even though no one can fill his shoes, the fact that he did what he did, developed as the revolutionary leader he was, is the proof of more Malcolms to come.

He was a proof like Fidel was a proof. Fidel stood up ninety miles away from the most powerful imperialism in the world and thumbed his nose and showed us, "See, it can be done. They can't go on controlling the world forever."

Malcolm went even further than Fidel. Because Malcolm challenged American capitalism from right inside. He was the living proof from our generation of revolutionists that it can and will happen here.

Our job, the job of the YSA, is to teach the revolutionary youth of this country to tell the difference between the nationalism of the oppressed and the nationalism of the oppressor, to teach them to differentiate the forces of liberation from the forces of the exploiters; to teach them to hear the voices of the revolution regardless of the forms they take; to teach them to differentiate between the self-defense of the victim and the violence of the aggressor; to teach them to refuse to give an inch to white liberalism and to reach out to Malcolm's heirs, the vanguard of the ghetto, as brothers and comrades.

the leader's personal commitment to the values and standards being articulated. Malcolm X's commitment both to his vision and to the black community is aptly illustrated in a quote found in Peter Goldman's biography of Malcolm X, describing Malcolm X's social service work: "His work with the addicts became the envy of Harlem's social service community. 'I've seen him do it,' one black worker said in those days. 'He asks the guy, 'Are you an addict?'

The guy says yeah. 'Where do you get your stuff from.' 'Well—from a guy downtown.' Malcolm would trace this back until he showed the addict that narcotics is a multi-million dollar business controlled by the whites and then he asks the guy, 'Do you want to give money to the white man who's putting you down?' This shakes the guy up" (Goldman 1979, 85). The credibility resulting from this commitment, self-sacrifice, and concern for followers'

well-being allows ideological leaders to exert a particularly powerful form of influence.

By the same token, however, the rigid commitment of ideological leaders may prove problematic when they must work with other leaders in institutional settings. In fact, in the case of Malcolm X, it was his commitment that led to his death. Beginning in the early 1960s, Malcolm X became troubled by the behavior of other Nation of Islam leaders. Essentially, he saw the leaders of the Nation as living on easy street rather than living with the people in the streets. The initial break was exacerbated when word came to Malcolm X that Elijah Muhammad was having extramarital affairs. Shortly after confronting Elijah Mohammed over this issue, a serious issue in a faith stressing probity and family, Malcolm X was silenced; he was not allowed to preach or lecture, as a result of comments he made following the Kennedy assassination. This rejection led Malcolm X to withdraw from the Nation of Islam and, after a period visiting Africa and the Middle East, to found his own mosque in 1964. The threat implied by Malcolm X's defection and his founding of a splinter group led to his assassination by members of the Nation of Islam in 1965. True to his ideology to the end, when the police, whom he saw as agents of the repressive white establishment, warned him of an impending threat to his life, he rejected their offer of police protection in the weeks leading up to his final speech.

FINAL ANALYSIS

Malcolm X's career illustrates both the strengths and limitations of ideological leaders. Articulation of, and adherence to, a timely ideology is a potentially powerful tool for the exercise of influence. Indeed, ideological ideas—for example Malcolm X's ideas about black dignity and the economic conditions that might advance black life in the inner cities—take on a life of their own, often outlasting the ideological leader who articulated them. Indeed, it often falls to others to implement those ideas, because ideological leaders find it difficult to adapt their values, standards, and ideas to extant institutions and cooperation with other leaders, who may hold different views. In this sense, ideological leadership may rep-

resent a less effective form of leadership than charismatic and transformational leadership. The tragedy of Malcolm X is that he died at a time when he was groping toward a more inclusive, proactive, vision. While his impact was not insignificant, particularly with regard to the ideas he articulated, it is interesting to ask what his impact might have been if he had been granted the time to transition to a more charismatic, or transformational, style.

MANAGEMENT

The uncertainty and public cynicism that characterize modern times have led many observers to doubt whether the art of management or leadership can effectively be studied, much less taught. The terms *management* and *leadership* are often used interchangeably, but the latter connotes a person who innovates rather than copies, keeps an eye on the horizon rather than merely on the bottom line, inspires trust rather than merely relying on control, and is able to lead meaningful organizational change.

One may reasonably ask whether people have or even need a current theory of organizational change. A variety of researchers and consultants have done much good work on leading organizational change, on major interventions of change management, yet there is no solid consensus regarding the major strategic variables that can lead to sustainable organizational change.

However, leadership matters. The past hundred years have been shaped, more than by anything else

(and for better or worse), by six leaders: Russian leader Vladimir Lenin, U.S. President Franklin Roosevelt, English leader Winston Churchill, German leader Adolf Hitler, Soviet leader Joseph Stalin, and Chinese leader Mao Zedong. The caliber of leadership makes a dramatic difference in the bottom line of businesses that shape the life of the economy. The stock price of companies perceived to lack good leadership rose only 74 percent over a recent decade, according to the Institute for Strategic Change; however, the stock price of companies perceived to be “well led” rose more than 900 percent. These are a few of many signals that the destiny of organizations is not left to fate.

THREE DIMENSIONS OF LEADERSHIP

How then can one begin to study good management and good leadership? Three dimensions of leadership come into play. The first is that which is inside a leader, primarily the leader's character. The second is that which is outside a leader, the particular environmental context in which the leader finds himself or herself. For leaders in this post-September 11th, globalized world, this dimension involves working in an age of vulnerability. The third is the interaction between the leader and the led within their environmental context. This dimension involves a number of leadership competencies if the interaction is to be meaningful.

Looking inside the Leader: Character Counts

The U.S. psychologist and philosopher William James wrote:

I have often thought that the best way to define a man's character would be to seek out the particular mental or moral attitude in which, when it came upon him, he felt himself most deeply and intensively active and alive. At such moments, there is a voice inside which speaks and says, “This is the real me” (Bennis 1989).

In the book *On Becoming a Leader*, Warren Bennis began to articulate a central finding of decades of study, which is that, in the final analysis, “leadership is about character. The process of becoming a

leader is much the same as the process of becoming an integrated human being. Life itself is the career” (Bennis 1989).

The exemplary organizational leader—modeled over the centuries by Thomas Jefferson, the biblical King David, U.S. reformer Susan B. Anthony, Indian nationalist Mohandas Gandhi, former South African President Nelson Mandela, U.S. civil rights leader Martin Luther King Jr., and many others—tends to have a number of essential traits, but a foundational trait is a strong understanding of oneself. That understanding translates into a meaningful deployment of self and others.

How does one go about finding this understanding of self—or to put it better, how does one find one’s voice? Exemplary leaders have typically found their voice through “crucible experiences”—they were tested by the searing heat of life’s disappointments, challenges, and tragedies and found such events to be “meaning-making” moments. U.S. television journalist Mike Wallace was devastated by the loss of his son, but it was the turning point in his journalistic career, convincing him to take more risks and follow his passions. Some people are defeated by the temperatures of the crucible, whereas others, such as Wallace, come through transformed into significant leaders. Think of the manner in which alchemists used crucibles in hopes of turning ordinary things to gold; great leaders *are* that gold.

The process of finding one’s voice can frequently be a lengthy, if not lifetime, process. Although his early life in South Africa was highly formative, Gandhi’s voice as the champion of the Indian people was not found until he was close to the age of fifty.

*The Outside Context:
A High-Speed Age of Vulnerability*

Today’s established leaders and aspiring leaders do not have the advantage of walking on solid ground, and those who cannot adjust to this reality will not succeed. *New York Times* columnist Thomas Friedman, in his 1991 book *The Lexus and the Olive Tree*, wrote that the world is “only 10 years old.” He meant that the Berlin Wall fell in November of 1989, mark-

Most of what we call management consists of making it difficult for people to get their jobs done.

—Peter Drucker

ing the end of the Cold War and ushering in a new era of freedom and ambiguity. The symbol of the Cold War, he wrote, was the Berlin Wall; the symbol of today’s “important age” is the World Wide Web; the former was an armed fortress, the latter is a boundariless world. In the Cold War world people feared destruction at the hands of an enemy they knew all too well; but Friedman presciently noted a few years before 11 September 2001, that today people would fear economic and political forces that they can’t see, touch, or feel—forces that can change their lives at any moment.

Much has been said about how the world was altered after the terrorist strikes against the United States in 2001. The essence of that alteration is that ambiguity and suspense multiplied exponentially.

Further, U.S. citizens have always lived on the fast track, but today’s hyperturbulent, spastic, volatile technological environment is qualitatively different, more “chasmatic,” to coin a word, more consequential, affecting more of their life space than have other great changes they’ve experienced, even electricity or the turbine engine.

Take, for example, the proliferation of the Internet, which less than a decade ago was the peculiar domain of a few tech junkies. The Internet took just four years to reach an audience of 50 million users; television, by contrast, needed thirteen years, and radio needed thirty-eight. Whereas electricity needed a half-century to attain 25 percent of the market share of U.S. homes, the Internet needed only seven. Only its contemporaries—cellular phones and personal computers—come anywhere near this achievement. In short, the communication revolution is churning consumers faster than all of the past revolutions combined.

Given the dizzying, churning pace of society, it is small wonder that the concept of the long-term chief executive officer (CEO) is becoming a thing

of the past. This fact is borne out by a few important statistics:

- CEOs appointed after 1985 are three times more likely to be fired than CEOs who were appointed before that date.
- Nearly half of all current CEOs have held their job for less than three years. In the past five years alone close to two-thirds of all companies have installed a new CEO.
- CEO turnover occurred at nearly the same rate in companies throughout the world, regardless of country or industry. (The average number of CEOs per company: 1.9 in ten years.)
- Thirty-four percent of Fortune 100 companies have replaced their CEOs since 1995.
- A Harvard Business School study shows that boards of directors are 30 percent more likely to oust a CEO than they were a decade earlier.
- In recent years many high-profile companies—including Lucent, Coca-Cola, Procter & Gamble, Gillette, and Xerox—pushed out CEOs in only their second or third year on the job.

Organizations will need to keep their eyes and ears open to new and potentially disruptive inflection points. Does luck play a part, or are executives just not up to the warp speed nature of change, and if so, why? If the tsunami (tidal wave) of senior executive churning is attributable to other factors, these must be explored.

Interaction between Leader and Constituents

The West, and the United States in particular, clings to the Lone Ranger myth that great things are accomplished by a larger-than-life individual shouting commands, giving direction, inspiring the troops, decreeing the compelling vision, leading the way, and changing frameworks with vigor. However, this myth neither captures important aspects of the past accurately nor prepares leaders for coming challenges.

Traditional leadership—which could be called “topdown”—is based on the myth of the triumphant individual. It is a myth deeply ingrained in the West-

ern psyche and unfortunately fostered and celebrated in the daily media, business magazines, and much of academic and popular writing. Most people who study leadership have been guilty of this deification of the icons of U.S. business: the Jack Welch (former General Electric CEO), the Percy Barneviks (former CEO of ABB, the Swedish-Swiss engineering conglomerate), the Bill Gateses, and so on. Whether the hero is midnight rider Paul Revere or basketball player Michael Jordan, the United States is a nation enamored of heroes—rugged self-starters who meet challenges and overcome adversity. Contemporary views of leadership are entwined with notions of heroism, so much so that the distinction between the words leader and hero (or *celebrity*, for that matter) often becomes blurred.

Could one imagine a magazine entitled *Systems* becoming as popular as a magazine entitled *People*? Yet, people do understand the significance of systems. After all, systems encourage collaboration, and systems make change not only possible but also effective.

Leadership scholar Ronald Heifetz’s research (1994) has found that, with relatively simple, “technical problems,” leadership is relatively “easy.” In other words, topdown leadership can solve them. However, with “adaptive” problems, complex and messy problems such as dealing with a seriously ill cancer patient or cleaning up an ecological hazard, many stakeholders (those who have an interest in an outcome) must be involved. Adaptive problems require complex and diverse alliances. Decrees and orders often may accomplish little.

FIVE COMPETENCIES FOR LEADERS

Where does all of this lead in the current organizational context? The post-bureaucratic organization requires a new kind of alliance between leaders and the led. Today’s organizations are evolving into federations, networks, clusters, cross-functional teams, temporary systems, ad hoc task forces, lattices, modules, matrices—almost anything but pyramids and their obsolete topdown leadership. Within this environment five competencies in leader-constituent interaction determine success.

Exemplary Leaders Provide Purpose, Passion, and Meaning

In an interview with the *Wall Street Journal* in January 2000, a young business leader, Kim Polese, CEO of Marimba, Inc., observed that “I think there will be a backlash against all the greed. I have so many friends worth \$50 million and more and they are depressed. What really attracts them is connecting with other people. It is the team. It’s creating something. It’s having a mission. That’s what turns people on. That’s what life is about” (Petzinger 2000).

Organizations drift into entropy (disorder) and the bureaucratization of imagination when they forget what’s important. Simple to say, but that one sentence is one of the few pieces of advice that Bennis offers to leaders: Remind employees of what’s important. Even in education, occasionally a teacher will say, usually in half-jest, that the university would be a great place to work if only there weren’t students around. What else is there but helping students to become successful at life? What can be more ennobling?

A vision that is powerful enough can transform what would otherwise be routine and drudgery into collectively focused energy, even sacrifice. Witness the Manhattan Project, which was the U.S. project to develop a nuclear bomb during World War II. The scientists on the project were willing to put their careers on hold and to undertake what was, in essence, a massive engineering feat because they believed the free world depended on their doing so.

Reminiscing about the work at Los Alamos, New Mexico, Richard Feynman, the irreverent future Nobel laureate, told a story that illustrates how “reminding people of what’s important” can give meaning and value to work. The U.S. Army had recruited talented engineers from all over the United States for special duty on the project. They were assigned to work on the primitive computers of the period (1943–1945), doing energy calculations and other tedious jobs. However, the army, obsessed with security, refused to tell them anything specific about the project. They didn’t know that they were building a weapon that could end the

Leadership is the capacity to translate vision into reality.

—Warren G. Bennis

war or even what their calculations meant. They were simply expected to do the work, which they did, slowly and not very well.

Feynman, who supervised the engineers, prevailed on his superiors to tell the recruits what they were doing and why. Permission was granted to lift the veil of secrecy, and physicist Robert Oppenheimer gave them a special lecture on the nature of the project and their own contribution.

“*Complete* transformation,” Feynman recalled. “They began to invent ways of doing it better. They improved the scheme. They worked at night. They didn’t need supervising in the night; they didn’t need anything. They understood everything; they invented several of the programs we used” (“Scientists in Uniform” n.d., http://www.lanl.gov/worldview/welcome/history/23_engineers.html). Ever the scientist, Feynman calculated that the work was done “nearly ten times as fast” after it had meaning.

Exemplary Leaders Model Organizational and Personal Integrity

Modeling organizational and personal integrity is most decidedly a stumbling block in today’s post-Watergate, post-Enron world. Yet, given how the terms of the social contract of work have changed, trust becomes the emotional glue that can bond people to an organization. *Trust* is a small word with powerful connotations and is a complex factor. The ingredients of trust are competence, constancy, caring, fairness, candor, and authenticity—most of all the latter. Authenticity is achieved by exemplary leaders when they can balance successfully the tripod of forces working on and in most people: ambition, competence, and integrity. Authenticity, as the U.S. comedian Groucho Marx joked, cannot be faked. To be redundant, it’s real. The current cliché is “walk your talk.” However, authenticity is far more than that.

Exemplary Leaders Practice the Power of Appreciation

All people pay lip service to acknowledgment and appreciation. To generalize just a tad, most organizations are woefully neglectful of bestowing either. Acknowledgment and appreciation are among the most powerful motivators, especially for knowledge workers.

Exemplary leaders are connoisseurs of talent, more curators than creators. They have a smell for talent, an imaginative Rolodex, unafraid of hiring people better than they are. In the book *Organizing Genius*, Bennis looked at the leadership of great groups, and in most cases, the leader was rarely the cleverest or the sharpest. Bob Taylor, former head of the Palo Alto Research Center, where the first commercial personal computer was invented, wasn't a computer scientist. Oppenheimer, although a brilliant physicist, never matched the accomplishments of the future Nobel laureates working for him at Los Alamos. However, they and other successful leaders could, as business executive and leadership theorist Max DePree puts it, "abandon their ego to the talents of others."

Exemplary Leaders Have an "Adaptive Capacity"

Exemplary leaders have an "adaptive capacity"—what could be described as "applied creativity." They are hardy, resourceful, and inventive, and followers respond to those traits powerfully. What the English poet John Keats saw as being essential to the genius of Shakespeare was adaptive capacity, an ability to tolerate ambiguity and thrive amid chaos.

Good leaders don't simply observe and act; they learn, they adapt. One theory of management involves a continuous loop known as "OODA": observing, orienting, deciding, and acting. However, the leaders whom Bennis interviewed used a loop known as an "AILA" loop: acting, inventing, learning, and adapting. They moved according to the prompts of their internal compasses, taking risks along the way; they stumbled; they learned and adapted accordingly. However, they didn't learn simply because life forced lessons upon them; they were *active* learners. In other words, they made indeterminacy work for them.

Exemplary Leaders Have a Bias toward Action, Risk Taking, and Courage

Springing forth from adaptive capacity is exemplary leaders' readiness to walk the high wire in their realm of influence. Such leaders demonstrate a peculiar combination of vision, persistence, consistency, and self-confidence that Bennis has called "the Wallenda factor." Like the late aerialist, who said that "the only time I feel truly alive is when I walk the tight-rope," they throw themselves into their vocation with a sense of play, not dwelling extensively on the risks. (Strikingly, after Wallenda fell to his death in 1978, his widow observed that he had seemed to uncharacteristically shift his attention to the perils rather than the attendant joys of his work.)

The opportunity to define the future belongs to exemplary leaders, not to the topdown leaders. The "future" is a word that embraces a number of notions. It involves an exercise in imagination that allows people to compete with and try to outwit events that lie ahead. The attempt to control what is to come is a social invention that legitimizes the process of planning in order to resist the "tyranny of blind forces." Yet, as was argued earlier, only exemplary leaders will be able to stand in the midst of the swirling complexities of today, hold their ground, and move their organizations forward with confidence. People can say that they have seen the end of leadership as they once knew it, and they can be glad that a powerful new manner of leadership is rising up to replace it.

MANAGEMENT, BUSINESS

Leadership theories and practices in business management have changed dramatically since the 1950s, from hierarchical command and control within single organizations to participative, consultative, and collaborative styles within and among organizational networks. Changes were driven by the increasing complexity of modern business organizations, the emergence of interdependent supply chains, relentless technological innovation, and the shift from manual-labor-based to knowledge-based productivity. Changes were later accelerated by increasing international business transactions and growth in the size and number of international mergers, acquisitions, and alliances. Leadership is now seen less as the function of a single chief executive and more as

the responsibility of inter- and intraorganizational teams, which must decide on a corporate vision, make decisions, solve problems, and implement strategy. Accompanying these changes have been new perceptions about the ideal behaviors, traits, and roles of successful executives.

COMMAND-AND-CONTROL LEADERSHIP STYLES

Until the 1960s, business management was generally understood in one of two ways: either as analogous to military leadership, or as amenable to so-called scientific management—the application to business of principles from engineering, physics, and so on. In both ways of thinking of business management, good business management was primarily directive; it was believed that decision making should be centralized in the hands of top executives and that strategies were best implemented through a strong organizational hierarchy.

The Military Analogy

The analogy to military leadership implied that the role of corporation presidents, board chairmen, managing directors, and senior executives was to control organizations through a descending chain of command. That chain of command ran down the corporate hierarchy from the board of directors to the president, through his staff, to vice presidents in charge of various functions or divisions, and then through middle management to supervisors and employees. When Thomas J. Watson, Jr., succeeded his father as chief executive of IBM in 1956, he was dismayed to learn that “by the mid-1950s just about every big corporation had adopted this so called scientific management—the application to business especially of engineering principles. It was modeled on the military organization going back to the Prussian army in Napoleonic times” (Watson 1998, 429). Watson noted that “in this sort of arrangement, line managers are like field commanders, their duties are to hit production targets, beat sales quotas, and capture market share” (ibid).

The chief executive's role was to set strategic

goals and ensure their effective implementation. As Chester Barnard (1886–1961), president of New Jersey Bell Telephone and the Rockefeller Foundation, argued in his influential book *The Functions of the Executive*, the business leader's role, like the military general's, was to identify those strategic factors "whose control, in the right form, at the right place and time, will establish a system or set of conditions which meet the purpose" (Barnard 1938, 9). The dominance of the directive leadership style was reinforced by the fact that many of the largest U.S. corporations had been founded by bold entrepreneurs such as Henry Ford, Andrew Carnegie, A. Montgomery Ward, Thomas Edison, William Randolph Hearst, and David Sarnoff, whose powerful personalities and obsessions with controlling the fate of their companies easily accommodated a command-and-control approach.

Scientific Management

The other influential stream of thinking during the first half of the twentieth century was scientific management. The U.S. efficiency engineer Frederick W. Taylor (1856–1915) believed that management was largely a matter of improving worker productivity by applying clearly defined and tested engineering principles. His ideas were first embodied in the widespread adoption of standard operating procedures during the 1930s and 1940s, and later in operations research and systems analysis. Herbert Simon (1915–2001), winner of the 1978 Nobel Prize in Economics, saw the decision-making process in industrial organizations as one of gathering information, structuring options based on assessment of production systems, and selecting optimal solutions based on statistical analysis, a process that he called "intelligence, design and choice" (Simon 1960, 14).

Both the military and scientific analogies for business management were based, as Peter Drucker, a scholar in the field of management, pointed out, on two underlying assumptions that dominated management thinking from the 1930s to the 1970s: that there is or must be one right organizational structure and that there is or must be one right way to manage people. Business management theory and practice,

Drucker contends, were also shaped by the assumptions that "1) technologies, markets, and end uses are given; 2) management's scope is legally defined; 3) management is internally focused; and 4) the economy defined by national boundaries is the 'ecology' of enterprise and management" (Drucker 2001, 70).

CHALLENGES TO CONVENTIONAL BUSINESS MANAGEMENT THEORIES AND PRACTICES

The effectiveness of a command-and-control style of business management had always been questioned by some scholars and practitioners, but came under increasing scrutiny in the 1970s. Convinced that his father's leadership style and structure no longer suited IBM, Thomas Watson, Jr., reorganized the company in the 1960s, decentralizing authority and increasing participation in decision making.

David Packard and William Hewlett consciously avoided the military style and structure of leadership at Hewlett-Packard (HP) in the 1950s. Working on innovative products at HP, Packard also rejected the notion that management was simply an engineering process controlled by top executives. Leadership in rapidly expanding high-technology industries involved problem solving and creativity that required the widespread participation of the organization's many highly skilled and highly specialized workers (so-called knowledge workers). In Packard's own words, "The close relationship among HP people encouraged a form of participatory management that supported individual freedom and initiative while emphasizing commonness of purpose and teamwork. In the early years we were all working on the same problems. We solicited and used ideas from wherever we could get them" (Packard 1995, 128).

Increasing complexity in business during the 1970s and 1980s led management scholars to question all the assumptions underlying conventional approaches to leadership. As early as the 1940s, the psychologist Abraham Maslow (1908–1970) had concluded that people's needs differed at different times in their lives and careers, and that managing them effectively required diverse incentives and leadership styles. Maslow laid the foundation for human-relations theorists who later attacked the

assumption that there was only one right way to manage people. In the 1950s, the studies of the leadership scholar Ralph M. Stogdill (1904–1978) began to shift the role of good business leadership from one of setting goals and implementing them through command and control to one of “influencing the activities of an organized group in its efforts toward goal setting and achievement” (Stogdill 1950, 3). He and others noted that because leadership depends on the willingness of members of an organization to follow, successful executives had to learn to persuade and not just command.

These conclusions were further reinforced by research on business organizations. In the early 1960s, the scholar Douglas McGregor (1906–1964) proposed a distinction between what he called Theory X management—the traditional form of directive, centralized leadership—and what he termed Theory Y management, in which the essential task “is to arrange organizational conditions and methods of operation so that people can achieve their own goals best by directing their own efforts toward organizational objectives” (McGregor 1960, 315). Distinguishing between “boss-centered” and “subordinate-centered” leadership, the scholars Robert Tannenbaum and Warren Schmidt wrote in 1973 of the importance of delegating authority and engaging employees in identifying solutions to problems. Fred E. Fiedler concluded that the most effective style of leadership changed depending on specific situations and conditions; the relationship between leaders and members was shaped by group atmosphere, task structure, and position power.

BUSINESS LEADERSHIP IN AN ERA OF ORGANIZATIONAL COMPLEXITY

Scholars of business and management have continued to enrich our understanding of successful management practices. Observing executives at work, Henry Mintzberg and others cast further doubts on the validity of the assumption that there was just one correct way to manage businesses and only one correct structure for businesses to take. Mintzberg found that executives play a variety of roles in complex organizations—they represent the firm to the

outside world, liaise with external networks, monitor information about organizational performance, disseminate information throughout the organization, initiate change, handle disturbances and settle conflicts, allocate resources, and carry on negotiations, among other tasks. Bernard M. Bass and his associates documented at least five styles of business management—directive, negotiative, consultative, participative, and delegative—all of which were effective in certain situations and less effective in others.

In a series of research studies during the 1980s, Gary A. Yukl identified nineteen categories of leadership behaviors that he considered essential to good management. Focusing on the management of innovative companies, Rosabeth Moss Kanter found little value in a purely directive style of leadership. She noted that leadership in creative companies required entrepreneurship, coalition building, and bargaining and negotiation to accumulate the information, support, and resources needed to proceed with innovation. Flat, lean organizational structures were preferable to hierarchies and, in such organizations, networking and communicating were far more valued leadership traits than commanding and controlling. Charles Handy observed that leaders whose organizations were enmeshed in complex networks of relationships required influence more than authority. In such circumstances, he argued, “a leader shapes and shares a vision which gives point to the work of others” (Handy 1992, 10).

The shifts from manufacturing to services and from manual-labor-driven to knowledge-driven productivity and the need for agility in responding to global customer needs all led to wider acceptance of empowerment as an essential leadership role. Fred Smith, the founder and CEO of Federal Express and a pioneer in a new service industry, emphasized that “empowered people have the necessary information to make decisions and act; they don’t have to wait for multiple levels of approval. Empowered people identify problems and fix them” (Smith 1998, 212).

John F. (Jack) Welch, Jr., the legendary CEO of General Electric during the 1980s and 1990s, recognized early in his tenure that to survive and grow, GE and similar companies would have to compete in

rapidly changing high-tech global markets. Successful executives would have to lead their corporations in dominating the market in a boundaryless world by making product quality and customer satisfaction their highest priorities. Welch argued, despite his own reputation as a tough, directive-style executive, that leaders of boundless corporations could not succeed, in his metaphor, as someone on a horse commanding the troops. He proclaimed that good corporate leaders succeeded through other people's success. Welch believed executives had to shape a vision, set goals, empower managers to innovate and act, and hold them responsible for performance if they were to improve product quality and maximize productivity.

GLOBAL BUSINESS LEADERS IN THE TWENTY-FIRST CENTURY

Globalization of business during the 1980s and 1990s further undermined most of those assumptions that had buttressed conventional business management theories. After years of observing corporate executives, Warren Bennis declared the end of the "great man" as leader. Technology, complexity, networking, knowledge-based productivity, orientation toward customers, and globalization made it virtually impossible for any single executive to know enough to direct a corporation through command and control. In the high-tech, fast-changing, global markets of the twenty-first century, Bennis argued, important work would have to be done and organizations had to be led by "great teams." Leaders of teams would need more subtle and sophisticated traits; the ability to integrate, coordinate, empower, and collaborate would become far more effective than commanding and controlling. Nancy Adler concluded through research on international executives that global corporations would have to recruit and develop leaders who, in addition to other collaborative leadership traits, possessed cultural sensitivity, could learn to use diplomatic means of achieving goals, forged relationships that created respect for all parties, communicated clearly, solved cultural problems, and synergistically negotiated across cultures.

Others extended the argument that successful

business leaders in the twenty-first century would require much more than technical expertise, intelligence, or command presence. Daniel Goleman's studies of international executives in the United States, Japan, Europe, and Latin America found many cases of failed leaders who were highly intelligent or experts in their field. He and his colleagues attributed their failure to the lack of emotional intelligence—the self-awareness, self-regulation, empathy, and social skills that are essential for leading teams effectively in complex organizations. They concluded that diverse leadership styles are needed to lead teams well under variable circumstances. Commanding styles may be appropriate in crises, but visionary, coaching, affiliative, democratic, and pace-setting styles can, in other circumstances, more effectively motivate, connect, empower, harmonize, and excite teams to achieve corporate goals.

Debates continue over whether, as John Kotter argues, there are significant differences between managers, who seek to stabilize organizations and operations, and leaders, who seek change. Similar arguments have yet to be resolved over whether business leaders are born or made; the former implying the need for careful recruitment, the latter for extensive training and development.

MANDELA, NELSON (b. 1918)

South African resistance leader and president

Nelson Mandela is recognized as a key figure in ending white minority rule in South Africa, and as a great statesman who set an example of reconciliation for his countrymen. From his early years as an angry, radical resistance fighter, Mandela was transformed into a leader of exceptional stature. Upon his 1990 release from prison after twenty-seven years, he led the African National Congress's negotiations with the ruling National Party, winning the 1993 Nobel Peace Prize for his reconciliatory efforts. He

became the nation's president in 1994 after its first all-race elections.

Born in 1918 in the Transkei, Mandela was raised by his uncle, the Thembu regent, after his father's death. Mandela credits his leadership style of compromise and conciliation to African traditions that were practiced at court, which he witnessed firsthand as a boy. At tribal meetings all were free to voice their opinions, and meetings continued until some kind of consensus was reached. Trained to be the advisor to the regent, Mandela was educated at Healdtown and at Fort Hare. Suspended from Fort Hare in 1940, Mandela found his way to Johannesburg, where he earned a bachelor's degree from the University of South Africa in 1941 and continued his education in law at the University of Witwatersrand. With Oliver Tambo he opened the country's first black-owned law firm in 1952.

BECOMING A FREEDOM FIGHTER

In Johannesburg Mandela was exposed to the African National Congress (ANC), a group formed in 1912 to advocate for the political rights of black South Africans under white minority rule. He joined the ANC in 1944 and was elected to its National Executive Committee in 1949. In 1951, he was elected president of the ANC Youth League, which was dedicated to pushing the organization in a more militant direction.

The Youth Leaguers were highly suspicious of whites, feeling they would try to control the movement. At the time the Youth League was formed, Mandela was firmly opposed to joining forces with other races: "While I was not prepared to hurl the white man into the sea, I would have been perfectly happy if he had climbed aboard his steamships and left the continent of his own volition" (Meredith 1998, 66–67).

The Youth League drafted a Program of Action calling for peaceful but nevertheless illegal boycotts, strikes, stay-at-home protests, and demonstrations to replace the polite and fruitless deputations and petitions the ANC typically employed. By 1950, Mandela was finding it more difficult to justify his prejudice against the mainly white members of the

Communist Party of South Africa. Not only were there communists whom he admired, but also his reading of Marx, Engels, and Lenin convinced him that a classless society would have much in common with traditional African culture, which cared for the needs of all.

It took a while longer for Mandela to alter his view on Indians; many African supporters viewed them as a merchant class of exploiters of black labor. When the ANC decided to embark on a Defiance Campaign against unjust laws in 1952, Mandela was opposed to allowing the Indians to join it—but he was voted down by the other members of the ANC executive committee. Mandela biographer Martin Meredith notes his personal transformation as a result of the Defiance Campaign: “For practical reasons, Mandela had come to accept that a multiracial strategy was necessary in dealing with the government, abandoning the Africanist notions that he had held for so long. In time, his support for a multiracial strategy developed into a unshakeable conviction about the importance of a multiracial approach in striving for non-racial democracy which never wavered, even under the greatest pressure the government could inflict.” (Meredith 1998, 98).

Shortly after serving as national volunteer-in-chief of the Defiance Campaign, Mandela became president of the Transvaal ANC, and later one of the ANC’s four deputy presidents. By 1953, Mandela was at odds with the ANC’s strict policy of nonviolence. Later he wrote, “Nonviolent passive resistance is effective as long as your opposition adheres to the same rules as you do. But if peaceful protest is met with violence, its efficacy is at an end. For me, nonviolence was not a moral principle but a strategy; there is no moral goodness in using an ineffective weapon” (Mandela 1994, 137).

The ANC joined with other groups in a Congress of the People in 1955 to adopt the Freedom Charter, which affirmed that “South Africa belongs to all who live in it, black and white . . . and no government can justly claim authority unless it is based on the will of the people.” Mandela was among 156 defendants in the Treason Trial of 1956, which focused on the period from the Defiance Campaign through the Congress of the People. The prosecutor insisted that

the defendants advocated the violent overthrow of the state—since the Freedom Charter’s goals could be met only by overthrowing the state, so unwilling would whites be to share political power. Although personally Mandela had come to accept the necessity for violence in the struggle for African rights, this was not the official position of the ANC, and all defendants were, in time, acquitted. The ruling, by three white judges who rose above “their prejudices, their education, and their background,” proved to Mandela that “there is a streak of goodness in men that can be buried or hidden and then emerge unexpectedly” (Mandela 1994, 226). Incidents like this one, although few in number, nevertheless encouraged Mandela’s basic optimism about human nature and confirmed his belief in the capacity of whites to change.

A group of young Africanists broke away from the ANC in 1960 to form the Pan Africanist Congress (PAC). These militants objected to the Freedom Charter’s inclusiveness. “Africa for Africans” became their credo, and they objected to the participation of whites and Indians in the Congress alliance. Mandela has admitted that while he too had felt this way at an earlier stage in his life, his thinking had evolved. “While I sympathized with the views of the Africanists and once shared many of them, I believed that the freedom struggle required one to make compromises and accept the kind of discipline that one resisted as a younger, more impulsive man” (Mandela 1994, 199). It was this break-away organization that called for a pass campaign in March 1960 to protest against the law that required Africans to carry an identity document, or “pass,” at all times. During the resulting Sharpeville Massacre, police fired on unarmed protesters turning in their passes in that township. The PAC and ANC were declared illegal organizations the following month. Shortly afterwards the ANC, along with the Communist Party—the Communist Party of South Africa had reorganized itself in 1953 as the South African Communist Party—established a military organization known as Umkhonto we Sizwe (MK), or “Spear of the Nation,” to fight the government, beginning with acts of sabotage against government installations. Mandela’s explanation was that violence

would begin whether the ANC initiated it or not. “Would it not be better to guide this violence ourselves, according to principles where we save lives by attacking symbols of oppression and not people?” he asked (Mandela 1994, 237). Mandela justified the strategy: “Because it did not involve the loss of life it offered the best hope for reconciliation among the races afterward” (Mandela 1994, 246). The ANC agreed and modified its half-century commitment to nonviolence.

While serving a five-year prison sentence for inciting people to strike and for leaving the country without a passport, Mandela—along with the entire high command of MK—was charged with sabotage in 1963, when documents highlighting MK’s underground activities were found at a farm in Rivonia. At the conclusion of his trial, Mandela read from a prepared statement: “I have cherished the ideal of a democratic and free society in which all persons live together in harmony and with equal opportunities. It is an ideal which I hope to live for and to achieve. But if need be, it is an ideal for which I am prepared to die” (Mandela 1994, 322). The verdict: life imprisonment.

LEARNING AT ROBBER “UNIVERSITY”

Mandela’s journey had only begun. He later recounted, “We regarded the struggle in prison as a microcosm of the struggle as a whole. We would fight inside as we had fought outside. The racism and repression were the same; I would simply have to fight on different terms” (Mandela 1994, 341). The everyday struggles for practical needs—sunglasses, long trousers, study privileges, and fairly distributed food—were corollaries to the struggle on the outside.

Mandela was clear in his mind that the enemy was the system; he saw beyond race to one’s commitment to the struggle, realizing that some whites, especially the communists, were as committed as black Africans were to the cause of liberation. But Mandela’s commitment to nonracialism would be sorely tested in prison. Some of the guards, known as warders, were cruel and vindictive. He saw his jail time as an opportunity to convert to the cause not only the nonpolitical African inmates but also the white warders. “I always tried to be decent to the

warders in my section; hostility was self-defeating. There was no point in having a permanent enemy among the warders. It was ANC policy to educate all people, even our enemies; we believed that all men, even prison service warders, were capable of change, and we did our utmost to try to sway them” (Mandela 1994, 365). When a particularly unpleasant warder was to be transferred to another prison, Mandela was called to his office. The warder told him, “I just want to wish you people good luck.” Mandela wished him luck in his endeavors as well. Later he wrote, “I thought about this moment for a long time afterward. Badenhorst had perhaps been the most callous and barbaric commanding officer we had had on Robben Island. But that day in the office he had revealed that there was another side to his nature, a side that had been obscured but that still existed. It was a useful reminder that all men, even the most seemingly cold-blooded, have a core of decency, and that if their heart is touched, they are capable of changing. Ultimately, Badenhorst was not evil; his inhumanity had been foisted upon him by an inhuman system. He behaved like a brute because he was rewarded for brutish behavior” (Mandela 1994, 402–403).

During his time at Robben Island (from 1964 to 1982), Mandela developed an appreciation for the importance of compromise. For instance, when informed that his wife, Winnie, could visit him only if she carried a pass—clearly an attempt to humiliate both of them, since the ANC had been protesting passes for years—he advised her to consent. “I thought it was more important that we see each other than to resist the petty machinations of the authorities” (Mandela 1994, 370). Mandela demonstrated that he knew when to compromise and when not to. In 1976, Jimmy Kruger, the minister of police, offered Mandela a reduced sentence if he would recognize the legitimacy of the Transkei government; the South African government had established an independent Xhosa “nation” to demonstrate to the world that black South Africans had political rights in their own “homelands.” (These homelands were, of course, unrecognized by any other government.) The decision was simple: “It was an offer only a turncoat could accept” (Mandela 1994, 420). Periodically, proposals came from the government offering

Statement by Nelson Mandela on Building a Global Partnership for Children (Johannesburg, 6 May 2000)

Ladies and Gentlemen:

Graca and I are proud to be here today with our esteemed friend Carol Bellamy, the Executive Director of the United Nations Children Fund, to announce our commitment to work closely with her and her respected organization on a cause we hold most dear to our hearts—the rights of the children and adolescents of this world to live safe from violence and exploitation, free of poverty and discrimination, and to grow healthy and strong.

Here in my beloved country where people once divided by apartheid now work together in the name of justice Graca and I pledge our energies to building a global partnership for children of leaders from every sector and every calling who share a dogged determination to change the way the world sees our children and the way the world treats our children.

Our purpose is to get specific commitments from these leaders and specific results.

We will be insistent gracious yes but unyielding as we make phone calls, write letters, provide consultations, and make speeches on behalf of children—pressing a wide circle of leaders from business civil society and governments to rethink what they do every day to better the lives of children. And whatever it is they do today we will coax them to do more tomorrow.

We will urge these leaders to take their turn in reaching out to a wider circle still inviting, cajoling, carrying each other along in an unprecedented international movement a collective global force that will herald the rights of children and act to ensure them.

This global partnership will be guided in its work by the Convention on the Rights of the Child, that luminous living document that enshrines the rights of every child without

exception to a life of dignity and self-fulfillment.

We are not seeking nor will we accept vague promises. We will challenge enlightened government leaders to join us and turn their words into deeds, enforce the laws, enact the policies and search out the excluded children—the girl child the poor child the one little one with disabilities the one from the wrong tribe wrong caste—and find the ways to embrace them.

We will ask innovators in the business world to put their unique abilities to work for children. Use distribution networks that deliver cola drinks to the most remote towns and get textbooks and vaccines there first. Share profits, share talent, share advertising space—all in the name of children.

We will call upon leaders in academia the media and other sectors to join with us to ensure that the world honours its obligation to children. Be ever vigilant, hold governments accountable, struggle for peace and justice. Do not let up for a moment for there is no circumstance in which the neglect or abuse of children can ever be tolerated.

And to all who would be leaders we will issue the challenge that if met will speak louder than any document, reach out to children and adolescents themselves, involve them, engage them and listen to what they have to say. Make certain that the global partnership for children includes children.

This new partnership for children builds on the promises made nearly a decade ago at the World Summit for Children when national leaders from every part of the world made a solemn commitment to ensure the well-being of all societies by giving high priority to the rights of children to their survival and to their development. Those leaders pledged to act together in international cooperation as well as in their respective countries to enhance child health and pre-natal

release in exchange for renouncing violence as a political instrument. Mandela's loyalty to the ANC was beyond question, and he refused to renounce unconditionally the use of violence, which had been ANC policy since 1961 when it set up its military wing, MK. However, he was open to negotiations with the government. Africans had been engaged in armed struggle for over two decades with little success. "We had right on our side, but not yet might. It was clear to me that a military victory was a distant if not impossible dream. It simply did not make

sense for both sides to lose thousands if not millions of lives in a conflict that was unnecessary. . . . It was time to talk" (Mandela 1994, 457).

Prisoners including Mandela continued their education in prison, working on degrees through correspondence courses and running political seminars for the inmates. Mandela even learned Afrikaans in prison and encouraged others to do the same. To those who argued that it was the language of the oppressor, Mandela replied that it was a means of understanding the oppressor's mind—useful in the

care to promote optimal child growth and development's to work toward strengthening the role and status of women's and to mount a global attack on poverty.

In the ensuing years some objectives—but far from all—of that noble agenda have come to pass.

Now at the dawn of the 21st Century we have a unique opportunity to fulfill the remaining commitments of the World Summit for Children—while simultaneously tackling new and emerging problems including poverty, HIV/AIDS and the scourge of armed conflict.

In this world in which we have the means to cure many of the cancers that only a decade ago were considered lethal, surely we are able to vaccinate all children against child killing diseases. In this world of such abundance surely we can find the means to assure that no child will go hungry, no pregnant woman will be too weak to survive childbirth, and that every one of the nearly 6 million children who will die next year because of malnutrition will be saved.

Surely in a world where communication technologies let some children exchange messages across oceans in seconds, we can provide every child with a basic education of the very best quality. In this world of such invention there can be no excuse for not ensuring that all our children will have the knowledge and skills for success and the capabilities to work with others reach their full potential and transform their society.

Surely when children and adolescents in every part of the world can name their favourite soft drink, running shoe, or sports we are able to ensure that they will have access to the information they need to stay healthy. In a world that so often decries the apathy of its youth we can open our arms for the millions of adolescents eager to contribute their new ideas and bounding enthusiasm. And surely we can stand by the commitments that nearly every government in the world has made to children in signing the Convention on the Rights of the Child.

Governments remain the primary actors in addressing such challenges—and indeed in playing a leading role in all development cooperation while involving the poor and the young themselves as full participants.

But now amid growing economic interdependence among nations we see a new global reality with additional protagonists including non-governmental organisations, grassroots groups, private enterprise, the business community and other diverse elements of civil society.

These new actors possess both the knowledge and the resources to make a difference. Thus their involvement in a global partnership for children is not only desirable—it is vital. The task before us is to bring them together.

But time is short—for if we do not act now in concert, the brushfire crises that are proliferating around the world may yet become an uncontrollable conflagration.

Graca and I hope that we can act as catalysts helping to persuade leaders of government and civil society at every level to recognise that if we want a more just, equitable and thriving world we need to invest in children now.

This must include efforts that take full account of the immense peril that HIV/AIDS and armed conflict pose to every aspect of child survival—and the recognition that global poverty which has already consigned some 3 billion people to living on less than \$2 a day, half of them children—is not only a moral outrage but a profound political and economic threat to the whole world. The knowledge, the resources and the strategies all exist to make this a better world for all children—and Graca and I are convinced that if we start now we can build a truly global alliance to bring it about.

To dear Ms. Bellamy, to UNICEF and to the children of the world we say, you have our word to help.

To our friends and colleagues we say, expect our call. To you here today who have afforded us your kind attention, thank you.

longer term as well as in prison. “It was long-term possibilities that Mandela always managed to keep in sight,” notes Meredith (Meredith 1998, 297). Even before his imprisonment, Mandela sensed that he would one day be South Africa's president. This is perhaps the key to Mandela's strength of character. He was willing to compromise and to forgive because he knew that he would need the goodwill of whites to support the new democracy. Thus, his sense of his historical destiny sustained him and fostered his magnanimity toward his enemies.

Mandela's experiences on Robben Island, at Poorsmoor Prison (from 1982 to 1988,) and at Victor Verster (from 1989 to 1990) were the perfect training for leadership. His positive encounters with white warders enabled him later to see National Party leader F. W. de Klerk as a person capable of change. He learned the importance of compromise. So while Mandela would not renounce violence to gain release, once free he was willing to temporarily suspend the armed struggle to help de Klerk with his constituency as long as the government was negoti-

ating in good faith. On the ANC alliance with the South African Communist Party, he would not compromise: "Which man of honour will desert a life-long friend at the insistence of a common opponent and still retain a measure of credibility with the people?" (Mandela 1994, 476). Upon his release in 1990, he called his former enemy de Klerk "a man of integrity," words that went far in placating white fears (Mandela 1994, 494). Relations between the two were often strained, and Mandela publicly criticized de Klerk for not stopping the violence in Natal in the early 1990s. But when asked how he could accept the Nobel Peace Prize jointly with de Klerk in 1993, Mandela insisted that de Klerk had made a genuine and indispensable contribution to the peace process. Ever the pragmatist, Mandela explained: "To make peace with an enemy one must work with the enemy, and that enemy becomes one's partner" (Mandela 1994, 533). During negotiations with the National Party, the ANC was willing to make concessions by accepting amnesty for security officials, honoring contracts of civil servants for five years, and agreeing to share power for five years—as determined by the parties' percentages of the national vote.

RECONCILING THE NATION

When the ANC won South Africa's first democratic election in 1994, Mandela saw his mission as "one of preaching reconciliation, of binding the wounds of the country, of engendering trust and confidence" (Mandela 1994, 540). Meredith notes that during those four years after his prison release, Mandela attained such stature thanks to his lack of bitterness, his insistence on reconciliation, and his willingness to compromise. While the white community would not vote for him, they would accept a government under his presidency. When criticized for bending over backwards to placate whites, Mandela argued that reassuring whites involved no cost. Without reassuring them, the transition to democracy would have been problematic, and civil war might have broken out. Commented one of his colleagues: "You never quite know whether he's a saint or a Machiavelli" (Sampson 1999, 515).

For whatever reasons—moral or pragmatic—reconciliation was the hallmark of his presidency and remains the hallmark of his leadership. People have marveled at his lack of bitterness. He simply has none. "In prison, my anger toward whites decreased, but my hatred for the system grew. I wanted South Africa to see that I loved even my enemies while I hated the system that turned us against one another," he wrote (Mandela 1994, 495). Mac Maharaj has observed: "In his political life in the early years he gave vent to the anger he felt. In prison he got his anger almost totally under control. That control has come about through a deliberate effort by Mandela, for political reasons as well as personal" (Frost 1998, 4). Mandela explains his transformation in prison this way: "It was during those long and lonely years that my hunger for the freedom of my own people became a hunger for the freedom of all people, white and black. I knew as I knew anything that the oppressor must be liberated just as surely as the oppressed, for all had been robbed of humanity. When I walked out of prison, that was my mission, to liberate the oppressed and the oppressor both" (Frost 1998, 6).

Analysts look in vain for the key to this personality trait, expecting to find it perhaps in some religious conviction. Mandela admits he is "not particularly spiritual" (Frost 1998, 14), though he admires the faith community's anti-apartheid contributions. Even as a young man he believed he would be president, and he knew that he simply did not have the luxury of succumbing to hate and revenge. He was aware of the larger-than-life expectations thrust upon him to exemplify moral leadership. Overcoming whites' fears of a nonracial democracy was crucial, and earning their trust and confidence made the political settlement possible. How did the man who left prison differ from the man who had entered it? His simple answer: "I came out mature" (Meredith 1998, 407).

In varied settings and through symbolic gestures, Mandela used his leadership to model forgiveness and to set an example of reconciliation between the races. Who would have expected him to invite former adversaries to his inauguration as president? Yet three of his former warders were invited to sit in the VIP section at his inauguration on May 10, 1994.

The warders, along with the entire nation, were mesmerized by Mandela's inaugural address in which he set the tone for the incoming government: "Let us stretch out our hands to those who have beaten us and say to them that we are all South Africans. Now is the time to heal the old wounds and to build a new South Africa." His address was full of words of conciliation, forgiveness, and hope.

At a luncheon he held for the wives of former South African prime ministers, presidents, and liberation movement leaders, Mandela again played the role of reconciler. Along with the expected invitations to Albertina Sisulu and Adelaide Tambo—wives of ANC luminaries Walter Sisulu and Oliver Tambo—Mandela included Tiene Vorster and Elize Botha, wives of former prime ministers John Vorster and P.W. Botha, to help them feel comfortable in the new dispensation.

Even more remarkable was his invitation to Percy Yutar to join him for lunch. Yutar had been the prosecutor in the Rivonia trial who had argued unsuccessfully for the death sentence for Mandela, and expressed regret when he received a life sentence instead. Yutar was struck by this gesture: "I wonder in what other country in the world you would have the head of government inviting someone to lunch who prosecuted him thirty years ago" (Meredith 1998, 529).

A more public example of Mandela's willingness to reconcile with former enemies was seen in his handling of the 1995 Rugby World Cup games, the first significant international event to take place in post-apartheid South Africa. Rugby in South Africa had been considered a white man's sport and a symbol of white Afrikaner pride dating back to the Boer War. Like most black South Africans, Mandela had always supported any team opposing the South African Springboks. Yet when the president presented the South African and New Zealand teams, who had made it to the finals, he did so wearing the number six rugby jersey of the once despised Springboks, referring to them as "my sons." The mostly white crowd went wild at this magnanimous gesture on the part of their new president. Black Africans, too, accepted this reidentification of the team, and the day after the Springboks beat the All

Blacks in overtime, *The Sowetan*, a popular black newspaper, ran the headline "Amabokoboko"—Zulu for "Our Springboks." By example, Mandela was able to teach a new way of thinking and behaving to his people.

Mandela also encouraged his countrymen to follow his lead and embrace the work of the Truth and Reconciliation Commission (TRC), which held hearings from 1996 to 1998 to investigate human rights abuses committed during the apartheid era. The TRC thoroughly embodied the notion of reconciliation: Perpetrators were offered forgiveness through amnesty in exchange for disclosure of past offenses against victims, who were encouraged to turn the other cheek. If this man could endure twenty-seven years of captivity and remain forgiving, how could others who had suffered less do otherwise?

Hailed an "icon of forgiveness" by Archbishop Desmond Tutu, Mandela has been praised worldwide. Remarkd U.S. President Bill Clinton: "Every time Nelson Mandela walks into a room we all feel a little bigger, we all want to stand up, we all want to cheer, because we'd like to be him on our best day" (Sampson 1999, 557). Retired from the government in 1999, Mandela continues to exert moral leadership, urging other nations to solve their differences through mutual understanding and conciliation.

MANHATTAN PROJECT

The Manhattan Project was a secret U.S. military engineering project undertaken during World War II to develop the world's first atomic bomb. Lasting from 1942 to 1946, it was carried out under the tight supervision of the U.S. military and government and combined thorough scientific research and industrial engineering. The project was conducted so secretly that Vice President Harry Truman was unaware of it until after he was sworn in as president upon the death of President Franklin D. Roosevelt in 1945. The man in charge of the project was Gen. Leslie Groves. Groves, born 17 August 1896, was the deputy chief of construction of the U.S. Army Corps of Engineers. His engineering and military background gave him the necessary experience to head the project. Groves would oversee the project throughout, proving to be a capable and determined leader. His leadership was best exemplified by his obsession with completing the task. His primary concern with the Manhattan Project was to get fast and effective results without jeopardizing the secrecy of the project, and his aggressive and assertive leadership style was exemplified by his relentless pursuit to create the atomic bomb. Although many of the scientists who worked under Groves found him to be offensive and intimidating, the greatest secret military project in modern history would be a success, with its scientists and engineers able to develop the first atomic bomb under immense pressures.

At the beginning of the Manhattan Project, research was being conducted at many universities throughout the country, but under Groves's attention, research would be condensed to three main sites. The most famous of these sites was Los Alamos, New

Mexico, where under the supervision of its director, scientist J. Robert Oppenheimer (1904–1967), the bomb was designed and constructed. At the project's peak, more than 130,000 people were working on the project. The Manhattan Project marked the first time that the fields of industry and science had worked together with government on a major project. Thus, the interaction between the military officials and the scientists was crucial to success. At Los Alamos, the developers and researchers worked together in a tight-knit community while remaining isolated from the outside world because secrecy was a top priority. Under such arduous conditions, strong leadership and organization were vital. Both Oppenheimer and Groves would prove to be men capable of handling the most difficult of tasks under the most stressful times.

THE BIRTH OF THE MANHATTAN PROJECT

The first indications of the possibility of atomic energy became evident in 1938 in Berlin, with the splitting of the first uranium atom. On 11 October 1939, U.S. physicist Albert Einstein wrote to President Roosevelt to tell him that the Germans were probably attempting to construct an atomic bomb. A receptive Roosevelt ordered the formation of a committee whose purpose was to finance U.S. universities in uranium research. By December 1941 research had begun on the properties of fissile materials, which were crucial for the explosion of the atomic bomb. Much of the research was done at the Metallurgical Laboratory at the University of Chicago.

This research was handed over to the U.S. Army Corps of Engineers in June 1942. On 17 September 1942, General Groves was placed in charge of the project and promptly named the project the "Manhattan Engineering District," which would become more commonly referred to as the "Manhattan Project." His main task was to carry out the project as quickly and as secretly as possible so that other countries would remain unaware of it. This was a difficult task because the project was spread out across the country and because to complete the project's objective Groves had to ensure that the people working on the project were unaware that their

research was intended to produce an atomic bomb. His plan was to carry out the project in an industrial format, with the military, rather than the scientists, governing. This format was alien to the scientists, who believed that at all times they should be the authoritative figures of their research.

Groves's organizational strategy was known as "military compartmentalization." The scientists were assigned to individual groups with separate tasks. A military advisor would oversee each group, ensuring that the scientists could communicate information only to this advisor. This strategy eliminated the free flow of information that was commonplace during scientific research. As a result, the scientists were unable to determine that their individual assignments were part of the grand scheme of building the bomb. Compartmentalization was successful in that it kept the project a secret; however, under such conditions the scientists found work difficult.

In his labs at the University of California at Berkeley, Oppenheimer was placed in charge of the theoretical design project in the spring of 1942. During the summer of 1942 he supervised a group of theorists, including Edward Teller, whose purpose was to decide how to create an atomic bomb. Scientists had many uncertainties regarding how to cause the most effective and powerful atomic explosion. They determined that although achieving results would take a tremendous effort, it was possible, and they proposed a few hypothetical methods to create the necessary explosion. These methods would be the basis of the research at Los Alamos, which is significant in that the entire project was based on untested theories.

THE TEST SITES

One of Groves's greatest leadership assets as overseer of the project was his ability to recognize problems and make adjustments. He was aware that their being spread across the country made progress difficult for the workers. To alleviate this difficulty, one of his first decisions was to purchase land in Oak Ridge, Tennessee, which would be used for uranium research. Oppenheimer was also aware of the problem, especially for the scientists who could not work effectively without being able to access information

from one another. In their isolated groups, Oppenheimer believed, the scientists were wasting valuable time trying to relay information to one another. Under these circumstances, the decision to create a private site solely for the scientists was approved. Groves chose Oppenheimer to be the scientific director of the project in November of 1942. Some people wondered if Oppenheimer would be a successful leader. Groves and Oppenheimer nevertheless agreed to use an isolated boys' ranch at Los Alamos, New Mexico, as the site for scientific research. By April 1943, the ranch was ready for the scientists, whose sole objective was to create an atomic bomb.

On 2 December 1942, the project received a major breakthrough. After three years of research, Enrico Fermi (1901–1954), a renowned scientist at the metallurgical labs in Chicago, produced the first sustaining uranium chain reaction. The significance was that both uranium and plutonium could be potential materials for the atomic bomb. Based on Fermi's discovery, the Manhattan Project directed its attention to creating large amounts of both materials. A third test site was built at Hanford, Washington, where the engineers' task was to produce large amounts of plutonium.

The idea to create three test sites was a major boost for the project. The solution for the scientists was simple: consolidate all of the scientists into one isolated location where they could work among their peers and freely exchange information yet remain in secrecy from the rest of the world. In February 1943 construction began at Oak Ridge, where the scientists faced the daunting task of separating the uranium isotope U-235 from natural uranium. The workers remained unaware that they were contributing to construction of the atomic bomb. Two months later, construction began at Hanford. Groves chose to have the Hanford site supervised by both his army engineers and the du Pont corporation, which was responsible for assembling the plant at Hanford where research would be conducted. Groves chose du Pont because of its ability to construct a functioning plant in a short period of time. When he approached du Pont with his proposition, Groves never disclosed the fact that du Pont would be helping to create a bomb to be used to end the war.

Einstein Warns Roosevelt

Deeply concerned about the possibility that the Nazis would take the lead in atomic energy research (and the making of an atomic bomb), physicist Leo Szilard prevailed upon Albert Einstein to warn President Franklin D. Roosevelt that the United States needed to accelerate its own work in atomic energy. Below is the text of the letter Einstein sent to Roosevelt in August 1939.

Sir:

Some recent work by E. Fermi and L. Szilard, which has been communicated to me in manuscript, leads me to expect that the element uranium may be turned into a new and important source of energy in the immediate future. Certain aspects of the situation which has arisen seem to call for watchfulness and, if necessary, quick action on the part of the Administration. I believe therefore that it is my duty to bring to your attention the following facts and recommendations:

In the course of the last four months it has been made probable—through the work of Joliot in France as well as Fermi and Szilard in America—that it may become possible to set up a nuclear chain reaction in a large mass of uranium, by which vast amounts of power and large quantities of new radium-like elements would be generated. Now it appears almost certain that this would be achieved in the immediate future.

This new phenomenon would also lead to the construction of bombs, and it is conceivable—though much less certain—that extremely powerful bombs of a new type may thus be constructed. A single bomb of this type, carried by boat and exploded in a port, might very well destroy the whole port together with some of the surrounding territory. However, such bombs might very well prove to be too heavy for transportation by air.

The United States has only very poor ores of uranium in moderate quantities. There is some good ore in Canada and the former Czechoslovakia, while the most important source of uranium is Belgian Congo.

In view of this situation you may think it desirable to have some permanent contact maintained between the Administration and the group of physicists working on chain reactions in America, one possible way of achieving this might be for you to entrust with this task a person who has your confidence and who could perhaps serve in an unofficial capacity. His task might comprise the following:

to approach Government Departments, keep them informed of the further development, and put forward recommendations for Government action, giving particular attention to the problem of securing a supply of uranium ore for the United States.

to speed up the experimental work, which is at present being carried on within the limits of the budget of University laboratories, by providing funds, if such funds be required, through his contacts with private persons who are willing to make contributions to this cause, and perhaps also by obtaining the co-operation of industrial laboratories which have the necessary equipment.

I understand that Germany has actually stopped the sale of uranium from the Czechoslovakian mines which she has taken over. That she would have taken such early action might perhaps be understood on the ground that the son of the German Under-Secretary of State, von Weizsacker, is attached to the Kaiser-Wilhelm-Institut in Berlin where some of the American work on uranium is now being repeated.

Yours very truly,
Albert Einstein

Rather, he gave du Pont only information relative to its assignment, which was consistent with his belief that with few exceptions, the workers needed to know only what their task was, leaving the overall objective to himself and his advisors to oversee.

LOS ALAMOS

The assignment at Los Alamos was named “Project Y,” and its task was to develop the bomb. The men

and women at Los Alamos were scientists, civilian engineers, metallurgists, and military officials. Many different backgrounds and personalities had to be blended as one team for the project to produce quick and effective results. The University of California was contracted by Groves on 15 April 1943 to conduct the research under Oppenheimer’s supervision. Oppenheimer’s task was to supervise the technical and scientific work. All information would pass to him, and then he would report back to Groves. The

decision to allow the scientists to work together in an isolated camp addressed two important purposes. First, it produced an environment conducive for scientific work because scientists could exchange important information easier. Second, the scientists remained isolated from the general public, thus preserving the project's secrecy.

In April 1943, Oppenheimer briefed his first group of scientists at Los Alamos, telling them that their task was to construct an atomic bomb. He told them of the recent discoveries in fast-fission research, and by the end of the briefings the scientists were up to date with the project. To most of the scientists, the enormous task of creating an atomic bomb brought a much-needed enthusiasm to the work, an enthusiasm that had been suffocated by military compartmentalization. Ensuring that the scientists were excited and intrigued by the challenges of their work was important to Oppenheimer. The scientists were informed of the various potential experiments relating to their work, which was mostly based on theories rather than fact. Their work would be unprecedented, and the scientists readily accepted the challenges.

EARLY PROBLEMS IN NEW MEXICO

In an effort to make the workers more comfortable, their families were allowed to live with them for the duration of the project. However, problems at Los Alamos surfaced early because on-site housing facilities were not ready for everyone. Alternative living areas were provided at ranches in Santa Fe, but these proved to be overcrowded and poorly equipped. Transportation to and from the test site was equally as burdensome, with too few vehicles to transport everyone. Because of the need to begin the project quickly, the workers had to endure dismal conditions and focus on their tasks.

To counteract the housing problems, Oppenheimer was determined to make the working environment as conducive to scientific research as he could. Under his supervision the laboratory and its two hundred scientists were broken into five groups, each with its own set of tasks. However, unlike in military compartmentalization, each group had a better outlet for the transfer of information between the other groups.

Oppenheimer needed to keep the scientists focused on their individual research tasks because their work was the most challenging. Many of the scientists were working with plutonium, which was relatively new to the scientific field and whose properties remained unknown. In addition, acquiring the proper equipment immediately was often difficult, and thus scientists were often handicapped in their research.

Through all of these problems, Groves was relentless about the scientists pressing on. Groves expected problems to arise, but rather than wait for the problems to be resolved, he fiercely pressed the scientists to not only continue their work, but also to make positive findings in their work, no matter how disadvantaged they were. He refused to let the project slow down in fear that the Germans would produce a bomb first. Under such conditions, Oppenheimer was an effective leader. He was not an aggressive or intimidating leader, and as a scientist he was able to relate to the problems the other scientists faced. He made sure that Los Alamos was organized as a civilian laboratory, as opposed to Groves's initial plan to organize Los Alamos as a strict military-run laboratory. One of Oppenheimer's greatest virtues was his ability to have a good relationship with both Groves and the other scientists, thus allowing him to bridge their differences. A more aggressive director would have only added to the problems that the scientists already faced. Oppenheimer embodied the leadership skills necessary for the situation that he faced. His greatest gift as a leader was his ability to meet the situational demands that he encountered at Los Alamos.

RESEARCH AT PROJECT Y

The main research problem confronting the scientists was finding a way to sustain a neutron chain reaction. The more neutrons released during a chain reaction, the greater the explosion of the bomb. The difficulty lay in trying to release the most neutrons before the bomb exploded. As neutrons were released, the energy that they produced could cause the bomb to explode prematurely. The scientists had to find ways to prolong the time before the bomb exploded to enable more neutrons to be released.

By the spring of 1944, small amounts of plutonium had arrived at Los Alamos for experiments. The properties of plutonium continued to confuse and frustrate the scientists. Its unpredictability caused the scientists to have to rethink part of their research. Previously the scientists had concluded that the best type of bomb would use the gun-assembly method, which worked by shooting one fissionable material into another. This would produce the explosion needed to explode the bomb. With regards to plutonium, the scientists were skeptical that the gun-assembly method would cause an explosion. They needed a new way to cause the plutonium to explode, and so they focused their attentions to the idea of implosion.

The theory behind implosion was that instead of shooting the particles into one another, implosion directed the blast inward, where large amounts of fissionable materials would squeeze themselves together until they caused an explosion. The problem with implosion was that, unlike the gun-assembly method, it had never previously been attempted. By July 1944, finding a way to use implosion became the top priority at Los Alamos. However, even with much attention being put into plutonium implosion, results were slow.

ALAMOGORDO AND THE TRINITY TEST

Groves and Oppenheimer had first begun discussing the notion of a test in the spring of 1944. Both men were confident that the gun-assembly bomb would work, but doubts lingered over the plutonium implosion-type bomb. The uranium bomb was constructed in May 1945 and needed only enough uranium. On 13 July, the implosion-type bomb was built, although no one knew whether it would work. By testing the plutonium bomb, the scientists could see if their design had faults.

Scientists had two concerns over the test. The first involved simply whether the bomb would explode. The second involved the weather and the potential radioactive fallout if the bomb did explode. The test was conducted in the desert to be far from human population, but because the after-effects of the bomb were unknown, Groves had vehicles ready in case he

needed to evacuate civilians who were unaware of the test. At 5:30 A.M. on 16 July 1945, the first atomic bomb, named "Gadget," was detonated in the deserts of New Mexico. Scientist Kenneth Bainbridge was given the role of test director and spent over seven months preparing for the test.

When the bomb was detonated, its explosion filled the sky. The test proved that the implosion bomb would work. Witnessing the explosion, both Oppenheimer and Groves knew that they had effectively helped to win the war. Although the explosion was greater than expected, there was no danger of radioactive fallout. The test symbolized the triumph of the most organized and important national project of the century. Twelve months earlier the idea of creating an implosion-type bomb was thought impossible. The Manhattan Project had proved this assumption wrong.

SIGNIFICANCE

The creation and detonation of the atomic bomb led to the end of World War II. A uranium bomb, Little Boy, and a plutonium bomb, Fat Man, were dropped on Japan on 6 August and 9 August 1945, respectively. On 2 September 1945, Japan formally surrendered aboard the USS *Missouri*.

Although Oppenheimer has been called "father of the atomic bomb," General Groves deserves the primary credit. The Manhattan Project was not simply a scientific operation, but rather was foremost an engineering operation that combined science and engineering to create the atomic bomb. Groves was the man who oversaw every aspect of the project, and his determination to develop the bomb was the driving force. He died on 13 July 1970.

The success of the Manhattan Project was a vindication of the effective leadership of both Groves and Oppenheimer. Each man was a capable leader in his own right, and although they differed in their leadership styles, they proved to be an effective team. Groves's relentless pursuit of excellence kept the project focused. Oppenheimer's understanding of the circumstances that the scientists faced allowed him to create an atmosphere most suitable for scientific research.

MAO ZEDONG (1893–1976)

Leader of China’s Communist revolution

Mao Zedong was the military-political architect of the Communist victory in the Chinese civil war, the

leading Marxist proponent of guerrilla war and continuous revolution, and the supreme ruler of the Chinese People’s Republic from 1949 to 1976. Throughout his career, he sought to use Marxism to transform China while retaining Chinese characteristics. In his early years of heading a Marxist-led rural insurrection, his utopian impulses were balanced by a meticulous concern for detail and an awareness of rural realities. Long years fighting in rural areas and the persistence of traditional Chinese modes of thinking shaped his understanding of socialism and technological modernization. Once Mao obtained power, he became the center of a cult of personality that transformed him into an infallible supreme leader. His self-confidence in the correctness of his own ideas and disdain for the caution of experts and administrators grew more pronounced and contributed to catastrophic policy initiatives such as the Great Leap Forward (1958–1962) and the Cultural Revolution (1966–1976).

YOUTH AND EDUCATION

Mao Zedong was born in the small rural village of Shaoshan in Hunan province in southeastern China. The son of an upwardly mobile peasant who rose from poverty to become a rich grain merchant, Mao’s clashes with his domineering father taught him “that when I defended my rights by open rebellion my father relented, but when I remained meek and submissive he only cursed and beat me more” (Snow 1938, 115). It is simplistic to treat Mao’s subsequent career as a simple act of rebellion against paternal authority, but his attitudes toward authority were conditioned by his childhood experiences and stories of martial heroes in popular novels who struggled against injustice.

Forced to quit school at thirteen to work full time in the fields and keep the family accounts, Mao aspired to greater things. Three years later he ran away from home until his father agreed to send him back to school in a nearby city. He joined the pro-Republican army at the outbreak of the Revolution of 1911 but did not see combat. He left the army to attend the First Provincial Normal School in Changsha, where he learned about China’s classical tradition as well as the

new reformist thought sweeping the country. From the outset, he believed strong leaders with martial spirits (and strong bodies) were the answers to China's problems. Even when he advocated democracy and science, he never believed Western culture should completely displace Chinese culture.

CONVERSION TO MARXISM

In the winter of 1918–1919, Mao moved to Beijing, where he was first exposed to Marxist ideas. Mao returned to Changsha in the spring of 1919. He edited radical journals, served as a school principal, and organized radical study groups. In late 1920, he concluded that a Leninist dictatorship was most appropriate for China, but he always valued Marxism primarily as a weapon against oppression rather than as scientific dogma. In 1921 he served as a delegate to the first Congress of the Chinese Communist Party (CCP); he also established the Hunan branch of the party and worked as a labor organizer. In between, he found time to marry Yang Kaihui, the daughter of his former professor.

From 1924 to 1927, the Communist Party worked together with the Nationalist Party, or Guomindang (GMD), and Mao helped run the Guomindang's propaganda department and its Peasant Movement Training Center. His orientation took a dramatic shift in the winter of 1926–1927, when he visited his home province of Hunan. He was astounded by the sight of local peasant unions seizing power from landlords. In "A Report on an Investigation of the Peasant Movement in Hunan" (March 1927), he argued that in China, contrary to Marx's prediction, it would be peasants, not workers, who would decide the fate of the revolution: "several million peasants will rise like a hurricane, a force so swift and violent no power, however how great, will be able to hold it back" (Mao 1969, Vol. 1, 23). Liberating the peasants also would require attacks on superstition, clan authority, and paternal authority because those comprised the cultural basis for landlord power.

The optimistic visions of a revolutionary high tide ended in the spring of 1927 when Jiang Jieshi (also known as Chiang Kai-shek, 1887–1975), head of the GMD, turned on the Communists. In the aftermath of the bloody wave of terror, Mao and his surviving peasant forces fled to the inaccessible Jinggang Mountains and subsequently to south central Jiangxi Province. Mao quickly realized that survival of the movement depended on building a trained military force, not on mass movements. He devised a strategy of "people's" warfare that emphasized guerrilla tactics, strict disciplinary standards, political indoctrination, and a close rapport between soldiers and peasants. In contrast to doctrinaire urban-oriented party leaders in Shanghai, he saw the value of rural base areas within which he could mobilize men and resources.

His forces and those of other regional Communist leaders, operating independently, carved out small territorial bases that they called soviets. Mao's base in Jiangxi was the most successful; Mao combined an adroit use of guerrilla tactics with local participation in implementing land reform. His Agrarian Land Law of February 1930 called for confiscation of all landlord holdings but allowed middle and rich peasants to retain the land they worked with their own labor. Mao's "mass line"—usually summarized

as “from the people to the center and then back to the people”—combined active local participation with guidance from above. Local activists whipped up class antagonism against local tyrants; associations of poor peasants, backed by outside organizers, then carried out the redistribution of land. Both land reform and the military struggle against government forces were conducted with extreme violence and brutality on all sides. Among the victims was Mao’s first wife, although by then he had left her and was living with a young activist, He Zizhen.

Mao’s most valuable assets remained his remarkable understanding of the realities of rural-based revolution and his great flexibility in adapting Marxist doctrine to those realities. The pro-Russian “Internationalist” faction that controlled the party, however, regarded Mao’s preference for guerrilla tactics and rural bases as deviations from dogma. In 1931, the party leadership moved to Jiangxi, where with support from Russian advisers they pushed Mao aside and revised his policies. Adoption of their inflexible forward defense strategy contributed to the fall of the Jiangxi soviet in 1934. Communist forces managed to escape encircling Guomindang forces and began the Long March (1934–1935), a 10,000-kilometer trek to northwestern China. During the Long March, Mao wrested control of the party from his opponents, whose position had been discredited by constant military defeats. Only 15,000 survivors of the original 100,000-person strong force reached safety in the remote and poverty-stricken mountains of Shaanxi Province.

WARTIME COMMUNISM (1937–1945)

Japanese military aggression (1937–1945) transformed the fortunes of the Chinese Communists by allowing Mao to assume the mantle of nationalism in the struggle against Japan. During the war, the CCP established itself as the main resistance force in northern China, and Mao further consolidated his grip over rivals in the Communist Party.

At various times in his career, Mao’s nationalist orientation led him to view the entire Chinese people as oppressed by imperialism; at other times, he stressed the importance of class struggle and social

revolution. Both nationalistic concerns about Japanese aggression and an opportunistic desire to end GMD attacks on his forces led Mao to suggest joining with the GMD to fight the Japanese. The result was the second United Front.

In his wartime capital in Yan’an, Mao envisioned a war that would both unite the entire people in patriotic resistance while simultaneously addressing the people’s desire for a better life: In “On Protracted War (May 1938), Mao stated: “the political aim of the war [is] to drive out Japanese imperialism and build a new China of freedom and equality. . . . Any tendency among the anti-Japanese armed forces to belittle politics by isolating war from it and advocating the idea of war as an absolute is wrong and should be corrected” (Mao 1969, Vol. 2, 152–153).

Many of the elements of post-1949 Maoist China have their roots in the spirit of the Yan’an period: utopian egalitarianism, the cult of Mao, and the idea of a party dictatorship. While in Yan’an, Mao began to write about Marxist-Leninist theory in order to bring Marxism to a Chinese audience and enhance his position as party leader. The Seventh Party Congress (1945) formally endorsed “Mao Zedong Thought.” By now Mao was head of the party; his person had been elevated above all other leaders and his thought became the basis of doctrine.

During the dark days following the 1941–1942 Japanese counteroffensive, Mao required all officials to engage in manual labor, sent down thousands of government personnel from the towns to the countryside, and called on people to sacrifice for the common good. These programs were realistic responses to wartime stringencies, but in time they also came to symbolize such quintessential Maoist ideals as self-sufficiency, self-reliance, anti-bureaucratism, and grassroots participatory “democracy.” In Mao’s eyes, Yan’an Communism represented the epitome of the revolutionary spirit, when all shared a commitment to serve the people, and confirmed that human will, when politically inspired, could overcome all obstacles.

Mao’s wartime writings contain hints of a utopian vision. Convinced that struggle and contradiction were the natural conditions of man and nature, Mao, like the ancient Daoist philosophers, interpreted

dialectic contradiction as meaning that things that oppose each other complement each other. Perpetual change, not incremental development, became both means and ends in the political process. In a similar fashion, Mao's theory of the unity of knowledge and practice made action the ultimate purpose of knowledge, echoing a traditional Confucian belief that the ultimate goal of the sage was to transform the real world.

Despite the existence of democratic and populist impulses in wartime Communism, Mao always intended that the Communist Party would remain the ultimate repository of correct thought and proper policy. In the Rectification Campaign of 1942–1944, he reasserted centralized control over the party apparatus while concurrently making Maoist doctrine the official ideology of the party. His targets included Soviet-oriented dogmatic ideologues, liberal intellectuals, writers, and artists. Small-group thought reform pressured individuals to evaluate their own behavior against the idealized norms of party life. Others were sent to the countryside to learn from the masses.

THE MAOIST VISION

Mao Zedong and his thought evolved in a violent, unforgiving revolutionary environment. His first wife and all three of his brothers and sisters were executed during the revolution, as were countless comrades. Waging war in backward rural regions against superior forces reinforced utopian strains in Mao's thought and personality: the idea of struggle and contradictions, the centrality of human will, and the elimination of elitism. Many countries advocate a Spartan egalitarianism in wartime, but as the Yan'an tradition assumed mythic proportions, it reinforced Mao's belief that the proper values for the new Communist man and woman could be forged even in backward conditions. Mao never discounted the importance of technological development and expertise, but he often gave greater weight to culture and ideas.

At the same time, as Mao's power expanded he became more comfortable dominating those around him and expected to be treated with appropriate deference. His personal life also changed with the

departure of his second wife to Moscow for medical treatment. Mao soon took up with and then married a Shanghai actress named Jiang Qing (1914–1991).

THE MAOIST PATH TO SOCIALISM

The Chinese Civil War (1946–1949) that followed Japan's surrender ended with a stunning Communist victory that further vindicated Mao's leadership. In 1949, on the eve of victory, he confidently anticipated that the next stage would be a Leninist-style people's democratic dictatorship and the transition to a Soviet-style industrialized socialist society. That spring he also proclaimed that the cities would lead the country and that several years must pass before moving to socialism. As Mao so aptly predicted in "On The People's Democratic Dictatorship" (30 June 1949), "The serious task of economic reconstruction lies before us. We shall soon put aside some things we do well and be compelled to do things we don't know well. This means difficulties" (Mao 1969, Vol. 4, 322).

The first four years of the People's Republic of China were devoted to completing land reform, economic recovery, building a state apparatus, and instituting a new marriage law. Despite resentment over Stalin's failure to back his rise to power, in 1950 Mao aligned China with the Soviet Union through a treaty of mutual assistance. When American troops approached China's borders in the Korean War (1950–1953), Mao overrode the objections of his senior colleagues to order Chinese troops into Korea. This was the start of over two decades of unrelenting Sino-U.S. hostility.

In 1953, Mao announced China would emulate the Soviet Union's model for developing a modern, socialist nation. He authorized an orthodox five-year plan approach emphasizing urban-based industrialization, creation of a centralized profession bureaucracy, and collectivization of agriculture. It was not long, however, before his impatience led him to disregard orthodoxy and seek shortcuts. Whereas previously he had argued that several five-year plans were needed to prepare China for collectivization, in July 1955 Mao urged fast-track collectivization. Many experts did not agree with his assessment that a radical social transformation could make possible technological modern-

Communists the world over are wiser than the bourgeoisie, they understand the laws governing the existence and development of things, they understand dialectics and they can see farther. The bourgeoisie does not welcome this truth because it does not want to be overthrown.

[. . .]

The Russians made the October Revolution and created the world's first socialist state. Under the leadership of Lenin and Stalin, the revolutionary energy of the great proletariat and labouring people of Russia, hitherto latent and unseen by foreigners, suddenly erupted like a volcano, and the Chinese and all mankind began to see the Russians in a new light. Then, and only then, did the Chinese enter an entirely new era in their thinking and their life. They found Marxism-Leninism, the universally applicable truth, and the face of China began to change.

There are bourgeois republics in foreign lands, but China cannot have a bourgeois republic because she is a country suffering under imperialist oppression. The only way is through a people's republic led by the working class.

[. . .]

"Who are the people?" At the present stage in China, they are the working class, the peasantry, the urban petty bourgeoisie and the national bourgeoisie. These classes, led by the working class and the Communist Party, unite to form their own state and elect their own government. They enforce their dictatorship over the running dogs of imperialism—the landlord class and bureaucrat-bourgeoisie, as well as the representatives of those classes, the Kuomintang reactionaries and their accomplices—suppress them, allow them only to behave themselves and not to be unruly in word or deed. If they speak or act in an unruly way, they will be promptly stopped and punished.

[. . .]

Here, the method we employ is democratic, the method of persuasion, not of compulsion. When anyone among the people breaks the law, he too should be punished, imprisoned or even sentenced to death; but this is a matter of a few individual cases, and it differs in principle from the

dictatorship exercised over the reactionaries as a class.

As for the members of the reactionary classes and individual reactionaries, so long as they do not rebel, sabotage or create trouble after their political power has been overthrown, land and work will be given to them as well in order to allow them to live and remould themselves through labour into new people. If they are not willing to work, the people's state will compel them to work.

[. . .]

The people's democratic dictatorship is based on the alliance of the working class, the peasantry and the urban petty bourgeoisie, and mainly on the alliance of the workers and the peasants, because these two classes comprise 80 to 90 per cent of China's population. These two classes are the main force in overthrowing imperialism and the Kuomintang reactionaries. The transition from New Democracy to socialism also depends mainly upon their alliance.

The people's democratic dictatorship needs the leadership of the working class. For it is only the working class that is most farsighted, most selfless and most thoroughly revolutionary. The entire history of revolution proves that without the leadership of the working class revolution triumphs. In the epoch of imperialism, in no country can any other class lead any genuine revolution to victory. This is clearly proved by the fact that the many revolutions led by China's petty bourgeoisie and national bourgeoisie all failed. . . .

To sum up our experience and concentrate it into one point, it is: the people's democratic dictatorship under the leadership of the working class (through the Communist Party) and based upon the alliance of workers and peasants. This dictatorship must unite as one with the international revolutionary forces. This is our formula, our principal experience, our main programme. . . .

The Communist Party of the Soviet Union is our best teacher and we must learn from it. The situation both at home and abroad is in our favour [if] we can rely fully on the weapon of the people's democratic dictatorship, unite the people throughout the country, the reactionaries excepted, and advance steadily to our goal.

ization, but Mao's personal prestige made his position unchallengeable. When the speed-up campaign concluded without significant resistance, Mao concluded that the experts always underestimated the capacity of the Chinese people to overcome objective limitations.

Within a few years, Mao discerned deficiencies and "contradictions" in the orthodox Soviet model that could alienate the people from socialism. The persistence of inequality within China and the abuses of the entrenched bureaucracy were undermining the

vitality of the revolution. His proposed solution was to return to the mass line approach, whereby unity resulted from subjecting party cadres to criticism by the masses. In 1957, Mao overrode the opposition of senior colleagues to launch the so-called “Hundred Flowers” campaign. He called upon intellectuals and others to criticize party abuses. When criticism got out of hand, Mao concluded that intellectuals were unreliable naysayers and authorized a campaign against them.

The peak of Mao’s ventures into utopianism came in 1958 with the Great Leap Forward, an unattainable vision that proposed to accelerate industrialization, double rural production, reduce urban-rural inequalities, and move China from socialism to pure Communism within a period of three years. Although there were other contributing factors, more than anything else it was Mao’s utopian belief in shortcuts to Communism and worries that technocratic paths to development were compromising the egalitarian tradition of the movement that drove the decision. Senior colleagues were accustomed to deferring to Mao; provincial leaders vied to demonstrate their loyalty by exceeding target goals. Overnight the small agricultural collectives created in 1955–1957 were merged into massive people’s communes with tens of thousands of members. They were to double farm production, create rural industries, and provide social services previously available only to the urban population. In fact, the result was economic disaster and the Great Famine of 1959–1962.

Mao’s response to the failures of the Great Leap suggests that he now regarded his person and his thought as above criticism. He recognized that the Great Leap was creating chaos but refused to entertain criticism of the program. In 1959, when Peng Dehuai (1898–1974), the minister of defense who had been with Mao since 1928, submitted a private letter critical of the Great Leap, Mao published the letter, purged Peng, and then renewed his commitment to the program. After that no other leader dared to criticize Mao openly.

Mao retired as chairman of the People’s Republic in 1959, turning the day-to-day administration over to his chosen successor, Liu Shaoqi (1898–1969). However, he prudently retained the more important

position of party chairman and the right to decide major issues. Only after the Great Leap had degenerated into a full-scale famine (eventually claiming the lives of 20–30 million people) did Mao allow Liu to decentralize the communes and restore material incentives for production. This backpedalling was enough to cause top party members to lose faith in Maoist-style mobilization campaigns and the exaggerated claims made for Mao Thought, although they remained personally loyal to him.

Meanwhile, Mao’s irregular work habits and lifestyle further isolated him from his colleagues. He spent most of his time in his private residence in Zhongnanhai, attended by a bevy of young female attendants and security guards. There, far from the day-to-day concerns of administrators responsible for the consequences of their actions, Mao brooded on international and domestic trends. He became more sensitive to real and imagined slights from senior colleagues, who he felt no longer believed in his vision and aspired to a status equal to his own. Mao feared that China, like the Soviet Union, was becoming a “revisionist” country. As he saw it, the problem was the emergence of a “new bourgeois” elite within the party and state.

Mao’s unexpected calls in 1962 to renew mass mobilization and revive class struggle divided the leadership. The commander of the People’s Liberation Army, Lin Biao (1907–1971), transformed the armed forces into the standard bearer of Maoist ideology; he also allied with radical intellectuals, including Mao’s wife, Jiang Qing, to push the cult of Mao to unprecedented heights. In contrast, party officials led by Liu Shaoqi and Deng Xiaoping (1904–1997) were more interested in preserving bureaucratic continuity and orderly production. They interpreted Mao’s directives so as to insure tight party control of mass movements. In 1965, a frustrated Mao concluded that so-called “capitalist roaders” existed in the very highest echelons of the Communist Party.

THE CULTURAL REVOLUTION

In one sense, the Great Proletarian Cultural Revolution was Mao’s response to the genuine problems posed by revisionism, urban stratification, and

bureaucratism; it also was a campaign to dislodge party leaders and party structures that impeded his desires. At the Eleventh Plenum of the Eighth Party Congress (1966), Mao demoted Liu Shaoqi and other capitalist roaders. Having proclaimed the start of Great Proletarian Cultural Revolution, Mao closed the schools and called upon student Red Guards to struggle against old ways of thought and oppose capitalist roaders. Having been educated to believe that all truth derived from thoughts of the great leader, the students exploded in a paroxysm of revolutionary violence against anyone suspected of bourgeois tendencies. Mao expected that Red Guards, with surreptitious support from the army, would purify the party and rekindle revolutionary élan. Instead the movement splintered into a bewildering array of hostile factions, each claiming to represent correct Maoist thought and advancing their own interests. It probably would have been impossible for anyone to provide coherent direction, but Mao never made the effort. Instead he expressed his views through vague aphorisms and cryptic statements that were impossible to interpret definitively.

Throughout 1967 and 1968, China descended into near anarchism as Mao switched his support from one faction to another and then back again. In 1968, Mao finally conceded the necessity of rebuilding party and state structures. Most Red Guard groups were disbanded and millions sent into the countryside to be reeducated.

The final years of Mao's life were spent in ill health amidst intense factional infighting between coalitions of veteran cadres and supporters of the Cultural Revolution. Mao died on 9 September 1976, at the age of 83. One month later, a coalition of veteran cadres and military leaders arrested the radical Gang of Four (champion supporters of the Cultural Revolution), thereby bringing to an end the Maoist era.

MAO THE LEADER

Mao Zedong's leadership made possible the Communist victory of 1949 and laid the foundations for a powerful, independent, and unified nation-state after a half century of disunity and war. During his rise to power, Mao blended a disciplined organization with

techniques of grassroots participation. He was a master of tactical-strategic flexibility, fully attuned to rural realities and able to adapt dogma. By contrast, his leadership style and policy orientation after the summer of 1957 were characterized by impatience, indifference to practical problems of implementation, and the absolute conviction in the correctness of his own views. Always believing that China required a strong leader, his self-image as an omniscient ruler fed upon the sycophancy of those around him. The charismatic leader now stood supreme, towering above party and state.

Mao's temperament was less suited to the requirements of the day once the Chinese revolution progressed to the stage of socialist transformation and economic development. A charismatic leader who enjoyed stirring up things, he disliked the wearisome details of routine administration and was unwilling to see his chosen successors strike out on their own. His insights about the need to combat bureaucratism, to accelerate production, to promote egalitarian values, and to maintain the spirit of the revolution all spoke to genuine issues within China. In addition, calls for continuous revolution served as an invaluable weapon to be wielded against opponents. The paradoxical and contradictory elements of Mao's thought and leadership make a final assessment difficult. The imposition of a dictatorship, and the chaos and hardships of the Great Leap Forward and the Cultural Revolution, must be balanced against his contributions in reunifying the nation, speaking on behalf of those at the bottom, and helping to catapult China into the modern age.

MARX, KARL (1818–1883)

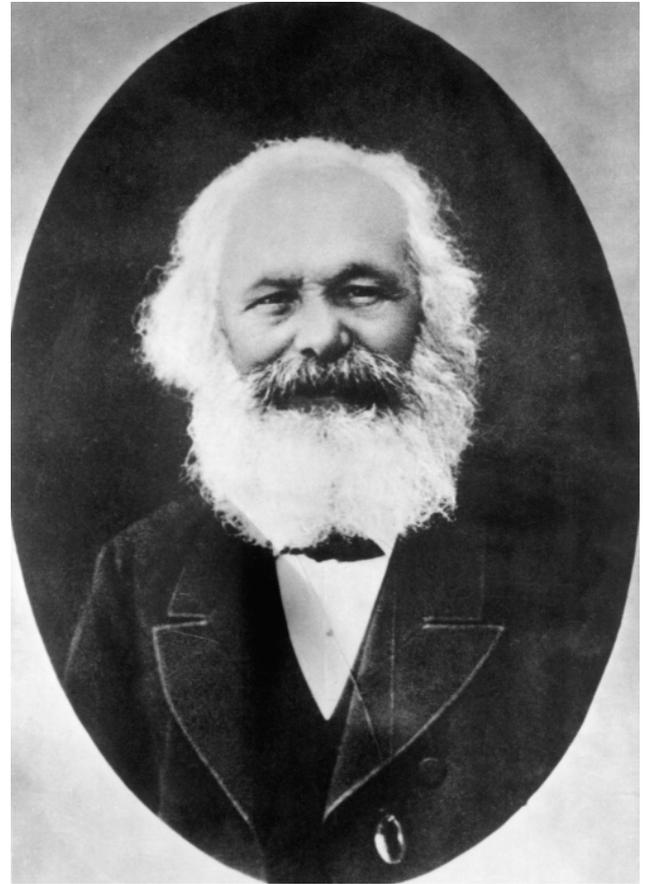

German political philosopher

It has been said that the three most important ideas that shaped the twentieth century came from Charles Darwin, Sigmund Freud, and Karl Marx. How and why do certain thinkers significantly influence their times, and even launch new eras? Darwin's theory of evolution and Freudian psychoanalysis both fundamentally altered humanity's understanding of itself. But Marx, his ideas, and what his followers did with his ideas were among the most important factors shaping the political and economic course of the twentieth century. How and why did the ideas of Marx have so much influence as to shape the world? And how might they continue to shape it? While some pundits have pronounced Marxism a flawed analysis and a failed ideology, the proclamation of the death of Marxism may be a bit premature—as witnessed by such current activism as the anti-globalization movement and even the massive protests against the 2003 U.S. invasion of Iraq.

Marx's ideas influenced not only the rise of unionized labor and of the welfare state (with its leveling mechanisms such as income tax and universal education) but also the Russian Revolution, communism, socialism, and Zionism; even the ethic of the kibbutz owes a debt to Marx. The political consequences have been immense. Fascism arose as a reaction to communism; some 100 million people died in World War II. Following the war, the geopolitical competition between capitalism and socialism (roughly divided east and west), defined the contours of world politics—always with the potential for a nuclear Armageddon. (In 1962, the Cuban missile crisis almost triggered it.) The formation of the state of Israel in 1947 has shaped the politics of the Middle East to this day. The Chinese Communist Revolution of 1949 still shapes the lives of over a billion people. Worldwide, the postwar anti-colonial struggles for independence were often cast in the Marxist rhetoric of imperialism, class analysis, and socialist revolution. But in 1989, the failures of the Soviet Union either to deliver goods or to fulfill Marx's vision of a humanistic society led to its implosion. Still, Soviet Communists had managed to transform a backward, rural society into a major industrial power, despite external pressures that strained its budgets and sustained dictatorships.

THE MAKING OF A RADICAL

Marx was born in 1818 in Trier, Germany, and educated in Prussia. After studying law in Bonn, he attended the University of Berlin and earned his doctorate in philosophy at Jena in 1843. Like most philosophy students at that time, he was much influenced by Georg Wilhelm Friedrich Hegel (1770–1831), the German idealist philosopher. Following Immanuel Kant (1724–1804), Hegel stressed the primacy of ideas—that consciousness precedes the objects of consciousness. Through reason, Hegel claimed, people could overcome domination and find freedom; he argued that religion was a human invention that served to keep them subdued. Hegel's radical ideas encompassed theories of alienation, domination, and historical change. Ludwig Feuerbach (1804–1872), Marx's teacher, argued for a more materialistic

interpretation of Hegel, rooted in human sensory experience.

Marx became a member of a group of radical students, the antireligious Young Hegelians. As a radical, Marx was unable to find a teaching position so, turning to journalism, he became editor of the radical *Rheinische Zeitung*. At about this time, he met the political philosopher Friedrich Engels (1820–1895) who became his lifelong companion, colleague, and often patron.

Marx's early work consisted of his critiques of Hegel's idealist philosophy as removed from actual people's lives, and of his theses on the materialism of Feuerbach's elaborations of Hegel. Marx offered commentaries on religion, politics, and indeed, one of his most important early writings was concerned with how labor under capitalism led to alienation—

how the person became estranged from his or her work and the products of that work, estranged from others and indeed, estranged from one's very humanity. He or she was rendered powerless and meaningless. The worker was little more than an animal. His work proceeded to offer materialist interpretations of history and of then contemporary French politics, such as its civil wars and the coup d'état of Louis Bonaparte; he also served as a correspondent for the *New York Tribune*. Most important, he began his studies of capitalist political economy. In 1848, he penned the *Communist Manifesto*, which would become the foundational document for communist parties. In it Marx offered a critique of capitalism: While he praised its power to liberate people from feudalism, he pointed to the inherent injustices of its class system and called for workers to revolt and overthrow the forces of capital. He soon moved to London where he wrote on French history, class struggle, and political economy, arguing that the eighteenth- and nineteenth-century theories of Adam Smith and David Ricardo, among others, were in fact ideologies that merely served to legitimate the activities of the bourgeoisie.

In 1864, socialists and communists formed the International Working Men's Association. Its world congress in Geneva was the first *Internationale*. Marx assumed leadership of the organization and devoted a great deal of effort on behalf of workers. Marx proceeded to research and write his magnum opus, *Das Kapital (Capital)*, a book that is still widely studied and debated. While he did not live to see the political fruits of his efforts, he would influence generations of radical activists from Lenin and Trotsky to Mao Zedong to Ho Chi Minh, as well as Tito, Castro, and Che Guevara.

If Marx had become a professor of philosophy who approached debate academically, he might have been regarded as merely the most important post-Hegelian philosopher. (In much the same way, had Freud remained a neurologist and not become a psychiatrist, he might have ranked with the nineteenth-century neurologist Paul Broca and had a region of the brain named after him.) But the power of Marx's intellect, the passion of his politics, and his compelling vision of overcoming capitalism and its

adversities, would attract many followers who would forever change the politics of the world. Let us consider why. Whether in the world of ideas, politics, or business, key leaders must have a powerful message, a reasoned analysis, and a desirable vision that appeals to large numbers of followers and wins their devotion. Marx's critique of capitalism struck a powerful chord among the rapidly growing work forces of industrial societies. At the same time, the profundity of his intellect, spanning history, economics, and philosophy, has inspired generations of progressive scholars to this very day. Timing, too, may play a role. At certain moments social conditions enable certain ideas to flourish, and a leader's influence is greatly magnified. Such was the case with Marx.

MARXISM AS THEORY AND PRAXIS

Marx began writing as industrialization was rapidly changing the social fabric of Europe. The last remnants of feudalism were fading. While new forms of production, transportation, and finance created enormous wealth for the owners of capital (such as factories, banks, railroads, and steamships), and profited other such as wholesalers, for the great masses of peasants who came to cities in search of jobs, the working and living conditions were harsh and inhumane. Their jobs paid little; their hours were long; tenement conditions were unhealthy and dangerous—indeed, brutal. It was in this context that Marx began to criticize capitalism as not only economically exploitative but also morally bankrupt, dehumanizing and alienating workers. When people sell their labor on the market, said Marx, labor becomes a commodity. When people sell themselves as commodities, when they own neither the tools nor the raw materials nor the fruits of their labor, they become powerless, devoid of their humanity and shorn of community. Such people often turn to prayer, which Marx saw as the expression of “real suffering.” But religion, controlled by elites, cannot ameliorate the economic basis of that suffering, said Marx; rather, it acts as the “opiate of the people,” promising relief in the next life and sustaining class-based oppression in this one (Marx 1972). In his

most accessible work, *The Communist Manifesto*, he presented his theory of history as class conflict, his critique of domination under capital, his analysis of why capitalism should and will be overcome, and the concrete measures that would be instated upon the overthrow. The agents of history are classes and class interests, Marx argued, not individual kings, generals, or presidents, and surely not religion, political ideas, or cultural factors—all of which merely disguise ruling class interests. He claimed that communism represents the “real interests” of the working classes whose labor creates the wealth of the bourgeoisie. Capitalists prosper while workers are exploited and alienated. Furthermore, capital creates a *lumpenproletariat*, a surplus population of the jobless—beggars, thieves, and prostitutes.

Marx was not the first person to criticize capitalism and suggest alternatives. Indeed, nineteenth-century romanticism, with its quest for emotionally gratifying authenticity and meaning, could be understood as seeking an alternative world apart from the cold, gritty, grimy realities of commercial urban factory life. But this option was limited to a wealthy few.

Three main influences on Marx were Hegel, as noted; the French socialists of the eighteenth and nineteenth centuries; and the British political economists. The French socialists had deplored the living conditions of the workers and argued for communal ownership. Comte St. Simon had sketched out a materialist theory of history while Charles Fourier suggested a vision in which work and play were joined and human dignity realized. Pierre-Joseph Proudhon would declare that property was theft and the basis of modern misery. As a system builder like Hegel, Marx absorbed these ideas and developed a comprehensive, materialist explanation of power and ideology.

For Marx, history as commonly understood was obscured by ideologies that masked the economic and political motives of the elites. He provided a way of comprehending the general misery of the poor in a broader context. In the nineteenth century the poor were commonly seen as lazy, impulsive, and morally deficient and thereby *they*, and not the class system, were deemed responsible for their adverse conditions. In *Das Kapital* Marx demonstrated the nature of exchange value (goods produced for the market to

Karl Marx on the Ruling Class

The ideas of the ruling class are in every epoch the ruling ideas: i.e. the class which is the ruling *material* force of society, is at the same time its ruling *intellectual* force. The class which has the means of material production at its disposal, has control at the same time over the means of mental production, so that thereby, generally speaking, the ideas of those who lack the means of mental production are subject to it. The ruling ideas are nothing more than the ideal expression of the dominant material relationships, the dominant material relationships grasped as ideas; hence of the relationships which make the one class the ruling one, therefore, the ideas of its dominance. The individuals composing the ruling class possess among other things consciousness and therefore think. Insofar, therefore, as they rule as a class and determine the extent and compass of an epoch, it is self-evident that they do this in its whole range, hence among other things rule also as thinkers, as producers of ideas, and regulate the production and distribution of the ideas of their age: thus their ideas are the ruling ideas of the epoch.

be exchanged for money as opposed to being used by the producer and/or traded for other goods), the valorization process (profit based on exploitation), and “commodity fetishism”—the way in which goods produced and sold for the market were embodiments of social relations. In so doing, Marx transformed the way people understood the world thereafter.

But perhaps the most politically salient and influential part of his work was his analysis of capitalism’s inherent contradictions, which would lead inevitably to its overthrow. Business cycles and crises of overproduction would create unemployment, forging workers into a revolutionary class, whose eventual victory would overturn the economic order and abolish private property. Communism would usher in an era of freedom, an order that acknowledged all people’s needs, allowing them to realize their full creative potential and find meaning, recognition, community, and empowerment.

Comprehensive and sophisticated, Marx’s analysis “put it all together” and offered a meliorative

vision that held enormous allure. For the growing masses of impoverished workers and those sympathetic with workers' struggles, Marx provided a rationale and agenda for the revolutionary change that he said was inevitable. Like many great leaders he gave people hope. The *Internationale*, the anthem of the Communist Party, promised that a "better world was in sight."

THE POLITICAL INFLUENCE OF MARX

To temper the lure of communism, Europe's bourgeois and monarchist governments initiated a variety of reforms—in the wake of the 1848 revolutions and the brief rule of the Paris Commune in 1871. Indeed, the first social security legislation laws, unemployment compensation, and pensions were passed in Germany in 1872. Marx's own analyses hinted at ways in which workers could be pacified by socialist reforms providing them some material benefits. But as wage laborers, they would remain dehumanized, alienated, and dominated—even if less harshly. The very threat of communism disposed the capitalist classes first to initiate reforms, unions, and entitlements (such as pensions and unemployment insurance) that would benefit the workers, and second, to promulgate ideologies such as consumerism and nationalism that would mask the class interests of the bourgeoisie as the "general good" and secure their hegemony by obscuring the operations of class. Thus owner and worker might both do patriotic service in armies, and might both own cars. But it was the rich citizens who sent poor citizens to die in their wars—their service cloaked as the national interest and celebrated in rituals of national greatness. Germany was the first country to establish social security benefits. Since that time, workers have been ever less than enthusiastic about toppling governments that provided unemployment benefits and pensions. (In the twentieth century, consumerism would further dull revolutionary impulses.) But Marx's ideas and theories of revolution would be widely embraced by revolutionaries in pre-industrial societies struggling against either colonial rule or wealthy elites.

Like Moses, Marx did not live to see his prom-

ised land. But also like the biblical leader, his mantle was picked up by others who would lead subsequent generations. Among the most important of his successors would be Nikolai Lenin (1870–1924) and Leon Trotsky (1879–1940), who would lead impoverished masses of Russian people and the disaffected czarist armies in a communist revolution. From the storming of the Winter Palace to the conflicts with the Mensheviks, with desperate masses and determined leadership came victory and the first major communist government. In the wake of World War II, Marxism inspired a number of "peasant revolutions," the most important of which was the Chinese revolution led by Mao Zedong in which the Communists eventually defeated Chiang Kai-shek's nationalists. There were a number of other societies in the second half of the twentieth century whose Marxist revolutionaries were armed not only with guns, but with faith in the inevitability of success and a vision of a humane society. Consider only Josip Tito in Yugoslavia, Jomo Kenyatta in Kenya, José Eduardo dos Santos and the Popular Movement for the Liberation of Angola, Fidel Castro in Cuba, Cheddi Jagan in Guyana, Ho Chi Minh in Vietnam, the Khmer Rouge in Cambodia, or the Sandinistas led by Daniel Ortega in Nicaragua. Each movement blended Marxism, nationalism, and peasant struggles into liberation movements seeking autonomy from colonial rule and/or capitalist domination. This is not to say all such movements were successful. With strong military and financial aid from the United States, Suharto in Indonesia and Ferdinand Marcos in the Philippines defeated communist insurgencies, at the cost of millions of lives.

Communism as practiced in the USSR bore little relation to Marx's humanistic vision of a just society. For a number of reasons—partly due to the totalitarian leaders who claimed the mantle of Marx in an attempt to legitimate their tyranny, partly due to pressures from the West, by 1989—the USSR had collapsed. China had meanwhile embraced capitalist business practices to become one of the most powerful countries in the world. Bourgeois leaders attempted to see the demise of communism as a vindication of capitalism and the death of Marxism. Bourgeois intellectuals celebrated their "victory"

and announced the “end of history.” But Marx should not be blamed for the totalitarian nature of formerly existing socialism. Rather, he was a humanist who defended freedom, democracy, and self-fulfillment. Marx was no more responsible for the gulags, secret police, and political murders of these dictatorial regimes than Christ was responsible for the Inquisition. For many contemporary Marxists, the humanistic side of Marx, and his critiques of alienation, exploitation, and domination, remain a salient warning of the dysfunctions of global capitalism. Further evidence of these dysfunctions can be seen in the planet-threatening environmental pollution due to capitalist modes of production and consumption.

THE INTELLECTUAL INFLUENCE OF MARX

For decades, Marx’s ideas had little or no direct impact on the Western academy, dominated as it was by bourgeois ideologies. Such ideologies generally proclaimed “value neutrality” but occasionally allowed some reformist impulses—which nevertheless often blamed the victims for their hardships. While a few theorists might have footnoted the influence of Marx on Max Weber (1864–1920), more often than not, it was to counterpoise Weber’s emphasis on values and motives as an alternative to Marx’s historical materialism—but without a political agenda. Moreover, Weber’s view on stratification by status and power served to obscure the role of class dynamics. Further, during the Cold War, and especially during the paranoia of the McCarthy era, any reference to Marx might cost one a job.

Following the demise of McCarthyism, America witnessed the rise of civil rights struggles, the mobilization against involvement in Vietnam, and the feminist movement. The irrelevance of American social theory, then dominated by the twentieth-century sociologist Talcott Parsons, became evident. Parsons’s theory not only ignored domination, social conflict, and struggles by workers, the poor, and racial minorities, but further, avoided any critique of American capitalism, its patriarchy, or its imperialism. In the search for more comprehensive understandings, many social scientists began to rediscover the writings of Marx and some of the intellectual tra-

Karl Marx on the State

The Commune—the reabsorption of the state power by society as its own living forces instead of as forces controlling and subduing it, by the popular masses themselves, forming their own force instead of the organized force of their suppression, the political form of their social emancipation instead of the artificial force—appropriated by their oppressors (their own force opposed to an organized force against them)—of society wielded for their oppression by their enemies. The form was simple like all great thing. The general suffrage, till now abused either for the parliamentary sanction of the Holy State Power, or a play in the hands of the ruling classes, only employed by the people to choose the instruments of parliamentary class rule once in so many years, now adapted to its real purposes: to choose by the communes delusion as if administration and political governing were mysteries, transcendent functions only to be trusted to the hands of a trained caste—state parasites, richly paid sycophants and sinecurists, in the higher posts, absorbing the intelligence of the masses and turning them against themselves in the lower places of the hierarchy. Doing away with the state hierarchy altogether and replacing the haughty masters of the people with always removable servants, a mock responsibility by a real responsibility, as they act continuously under public supervision.

ditions rooted in Marx such as that of György Lukács; the Frankfurt School integrations of Marx, Weber, and Freud; Antonio Gramsci’s notions of hegemony, and British Marxist thought. A number of feminist theorists began to see gender stratification in terms of class and ideologies of dominance—in this case, patriarchies. Similarly, while the field of economics today is dominated by neoliberals, some contemporary economists have been much influenced by Marx; for example, this influence can be seen in the work of Joan Robinson and Richard Wolff, with respect to the value they place on equality and redistribution. Today, class analysis, the economic basis of power, and the roles of ideology, alienation, reification, and commodity fetishism are fundamental

concepts for a number of disciplines in the social sciences, arts, and literature.

MARX AND THE FUTURE

The power of Marx as an intellectual leader has often been said to be on the wane. But Marxism has been pronounced dead a number of times—even as throughout the world growing numbers of people suffer from the adverse consequences of neoliberal globalization. Marx suggested that the use of machines and overproduction of goods would lead to economic crises; indeed, this does seem to be happening. Millions have mobilized to challenge and contest contemporary capitalism. While these movements represent the diverse interests of progressive workers, feminists, environmentalists, gay activists, and so on, one of the common themes heard across this wide spectrum is concern for the onerous consequences of global capitalism—often articulated in Marx’s language of class analysis and colored by his humanistic vision. The vast numbers of writings critical of globalized capital, the massive anti-globalization demonstrations, and the World Social Forum under whose banner 100,000 activists and intellectuals gather regularly, all affirm the continued influence of Marx as one of the greatest intellectual leaders in history. Perhaps the power of Marx has yet to be fully realized.

MAU MAU REBELLION

The Mau Mau rebellion in Kenya, Africa, which began in 1952, led the British colonial government to declare a state of emergency. The rebellion by the Mau Mau insurgent organization was eventually crushed with heavy loss of life among Mau Mau, but until late 1954 many people in the government believed that the Mau Mau rebels were winning. The rebellion was largely confined to one tribe, the Kikuyu, and the Mau Mau (Kikuyu for “burning spear”) rebels were poorly armed because they had no outside source of weapons or financial support. Still, twenty-one thousand paramilitary police, thousands of armed “loyalist” Africans, and the equivalent of a full division of British government troops, supported by the Royal Air Force, needed more than four years to control the Mau Mau threat, and the state of emergency did not officially end until 1960.

The Mau Mau rebellion fascinated the world press with its mystery and menace. U.S. newspapers gave prominent coverage to the rebellion, and magazines contributed frequent photographic essays. Interest was also great throughout western Europe and the Soviet bloc countries, as well as in newly independent countries such as Egypt and India. The colonial government of Kenya steadfastly refused to admit

that Mau Mau were fighting for land and freedom. Instead, the colonial government convinced the world press that the rebellion was a “crime wave” and that Mau Mau rebels were bestial “gangsters” who, crazed by ghastly oaths—primitive ceremonies involving cannibalism, the drinking of menstrual blood, and sexual orgies—indiscriminately terrorized white settlers, especially women and children. In fact, some Mau Mau attacks were brutal by any standard, and the Kenya government released photographs and even newsreels showing mutilated victims—hamstrung cattle, burned children, decapitated men, and disemboweled women.

Ever since Kenya had been opened to British colonization shortly after the beginning of the twentieth century, colonists had referred to it as a “white man’s country.” In 1952, Kenya’s more than forty thousand whites were determined that they would never relinquish control over “their” beautiful and prosperous country to the 6 million Africans who also resided there. The white settlers’ prosperity was not shared by Kenya’s Africans, most of whom remained desperately poor. White settlers not only exploited these Africans economically, but also imposed a color bar more extreme than the one that existed in the U.S. South.

In 1961, Sir Charles Eliot, commissioner of the East African Protectorate, as Kenya was then known, made clear his plan to confine natives to “reserves” and exploit them as cheap labor on white farms. Britons flocked to this paradise of cool rolling highlands with fertile soil. Many of these Britons were so upper class that their first hotel in Nairobi was known as “the House of Lords.” Their leader, Lord Delamere, declared that he would re-create the Virginia plutocracy where white men of wealth and “breeding” would rule blacks and earn fortunes. Delamere soon owned 71,000 hectares, and others did nearly as well. Most Africans were treated as

slaves had been in Virginia. Called “niggers,” “baboons,” and “vermin,” they were worked hard, paid little, abused physically, and denied the right to own land. These Africans had, as the British said, “not been down from the trees” long enough to live as anything but indentured servants. Yet, during World War I, 165,000 Kenyans served in the British Army, and 42,000 of them died. They also served bravely and died in World War II. As the years passed, Kenya’s colonial policy of white supremacy grew ever stronger.

THE LAND AND FREEDOM ARMY

By 1952, the year that the rebellion erupted, fifteen thousand Europeans lived in Nairobi, with another twenty-five thousand living in the surrounding countryside. Also in Nairobi were 100,000 impoverished Kikuyu, many of whom had nowhere to sleep and were lucky to eat one meal a day. Evidence of their hunger can be seen from British Army attempts to recruit Kikuyu as soldiers during World War II. Over 90 percent were rejected due to their malnutrition. Some Kikuyu men who did serve in the British

Army, such as Bildad Kaggia and Fred Kubai from Kenya's trade union movement, joined to form the Mau Mau central committee. The ten men who made up the central committee called themselves "the Land and Freedom Army," but the white settlers did not want this movement known in these plaintive terms; they preferred the sinister sound of "Mau Mau." They also preferred to believe that the leader of this dangerous movement was the Kikuyu politician Jomo Kenyatta. In reality Kenyatta had no involvement in the creation of Mau Mau.

Mau Mau central committee leaders took an oath to serve their organization in all ways required and never to betray another member or else "die of this oath." White settlers immediately portrayed this oath as bestial and primitive, something that only savages could engage in, and they did all that they could not only to arouse white passion against Mau Mau but also to arm and pay African loyalists, especially Kikuyu, who would defend white supremacy and fight against Mau Mau. Meanwhile, the leaders of Mau Mau were doing all that they could to obtain firearms, paying persons willing to sell them, asking prostitutes to demand bullets rather than money from their clients, and stealing guns in any way they could. With no support from any other nation, the leaders of Mau Mau were desperate, and many followers were commissioned to produce homemade pistols.

While the search for firearms went on, the central committee rapidly lost control of the movement. Some men betrayed it to the government, others advocated open violence, and still others used it to enrich themselves, often extorting money from Kikuyu farmers. The few Kikuyu who owned land quickly sided with the white settlers, becoming known as "loyalists." Instead of quietly arming themselves and preparing for a coordinated attack, the leaders of Mau Mau allowed their movement to become highly visible long before they were ready. By October 1952, government officials had identified 187 leaders of Mau Mau, and on the night of 20 October a state of emergency was declared, and police burst in upon them, arrested all 187, including Jomo Kenyatta. British troops also began arriving on 20 October, something the Mau Mau leaders had not

reckoned on. By arresting the senior leadership of the Land and Freedom Army, the government left the movement's leadership in the hands of younger and more violent men who promptly took action, killing several defenseless whites, including a six-year old boy, on their farms, then moving into the dense forests of the Aberdane Mountains.

Governor Sir Evelyn Baring, an imperious man known as "Over-Baring," ordered that all Kikuyu who were not living in the Kikuyu "reserve" be rounded up and, forced to leave behind all of their cattle, clothing, and other valuables, taken at gun point to the reserve. There they became homeless people who quickly gave their support to Mau Mau and focused their hatred on the Kikuyu loyalist Home Guard, a kind of landed gentry who had been enriched by government patronage. British Commanding Gen. W. R. N. Hinde was outraged by Baring's action. Although Hinde's nickname was "Loony," he saw the situation much more clearly than Baring did.

FIGHTING FLARES

Fighting flared, with Mau Mau bands attacking Kikuyu loyalists and even raiding army and Home Guard positions. With his troops scattered widely to protect settlers and the Home Guard, General Hinde could not mount a coordinated offensive. Distraught settlers were joined by Governor Baring in urging Hinde's replacement, and in May 1953, command was given to General Sir George Erskine, a friend of British Prime Minister Winston Churchill. Hinde would serve as Erskine's deputy. The settlers immediately tried to dominate Erskine, but he would have none of it, expressing open contempt for all white Kenyans. He also concluded that the "rotten administration" had caused Mau Mau. He also clashed with Governor Baring. While Erskine gathered more troops, he unleashed his four-engined Lincoln heavy bombers on the Mau Mau forest camps. Dropping 453-kilogram bombs on the forest and strafing with machine guns, Erskine's planes eventually dropped more than 22 metric tons of bombs and fired 2 million rounds from machine guns. Some Mau Mau were killed, and many were terrified, but most of the vic-

The African View of Mau Mau

Below are excerpts from a speech Jomo Kenyetta delivered at the Kenya African Union (KAU) Meeting at Nyeri on 26 July 1952.

I want you to know the purpose of K.A.U. It is the biggest purpose the African has. It involves every African in Kenya and it is their mouthpiece which asks for freedom. K.A.U. is you and you are the K.A.U. If we united now, each and every one of us, and each tribe to another, we will cause the implementation in this country of that which the European calls democracy. True democracy has no colour distinction. It does not choose between black and white. We are here in this tremendous gathering under the K.A.U. flag to find which road leads us from darkness into democracy. In order to find it we Africans must first achieve the right to elect our own representatives. That is surely the first principle of democracy. We are the only race in Kenya which does not elect its own representatives in the Legislature and we are going to set about to rectify this situation. We feel we are dominated by a handful of others who refuse to be just. God said this is our land. Land in which we are to flourish as a people. We are not worried that other races are here with us in our country, but we insist that we are the leaders here, and what we want we insist we get. We want our cattle to get fat on our land so that our children grow up in prosperity; we do not want that fat removed to feed others. He who has ears should now hear that K.A.U. claims this land as its own gift from God and I wish those who are black, white or brown at this meeting to know this. K.A.U. speaks in daylight. He who calls us the Mau Mau is not truthful. We do not know this thing Mau Mau. We want to prosper as a nation, and as a nation we demand equality, that is equal pay for equal work. Whether it is a chief, headman or labourer he needs in these days increased salary. He needs a salary that compares with a salary of a European who does equal work.

We will never get our freedom unless we succeed in this issue. We do not want equal pay for equal work tomorrow—we want it right now. Those who profess to be just must realize that this is the foundation of justice. It has never been known in history that a country prospers without equality. We despise bribery and corruption, those two words that the European repeatedly refers to. Bribery and corruption is prevalent in this country, but I am not surprised. As long as a people are held down, corruption is sure to rise and the only answer to this is a policy of equality. If we work together as one, we must succeed.

Our country today is in a bad state for its land is full of fools—and fools in a country delay the independence of its people. K.A.U. seeks to remedy this situation and I tell you now it despises thieving, robbery and murder for these practices ruin our country. I say this because if one man steals, or two men steal, there are people sitting close by lapping up information, who say the whole tribe is bad because a theft has been committed. Those people are wrecking our chances of advancement. They will prevent us getting freedom. If I have my own way, let me tell you I would butcher the criminal, and there are more criminals than one, in more senses than one. The policeman must arrest an offender, a man who is purely an offender, but he must not go about picking up people with a small horn of liquor in their hands and march them in procession with his fellow policemen to Government and say he has got a Mau Mau amongst the Kikuyu people. The plain clothes man who hides in the hedges must, I demand, get the truth of our words before he flies to the Government to present them with false information. I ask this of them who are in the meeting to take heed of my words and do their work properly and justly. . . .

tims were the forests' monkeys, antelope, and other animals.

While this slaughter was taking place, the thousands of Kikuyu in Nairobi attacked whites; in one especially horrendous incident, a four-year-old boy was decapitated with a *panga* (machete) as he rode his tricycle outside of his house while his parents were inside making breakfast. Infuriated, Erskine organized what he called "Operation Anvil," in which his troops and police were to sweep the city clean of Mau Mau suspects. Operation Anvil arrested

so many Kikuyu that detention camps were filled. A few days before Operation Anvil, British troops had captured a Mau Mau commander named "General China." Under interrogation, he revealed few secrets but decided that if Erskine and Baring agreed to offer safe passage and amnesty to Mau Mau fighters, he would urge Mau Mau to surrender. With assurances of safe passage and amnesty, he wrote twenty-six letters to Mau Mau commanders asking them to surrender. The letters were left in secret tree mailboxes in the forest that General China identified.

So many Mau Mau leaders were receptive to the offer that a cease-fire was declared and a meeting was arranged to discuss a mass surrender. However, as several thousand Mau Mau converged on the meeting place, they encountered a battalion of King's African Rifles, African soldiers led by British Brig. Gen. John R. Orr, who opened fire, killing twenty-five and capturing others. Mau Mau members were convinced that a trap had been laid, and the fighting resumed. Seven large battles followed, and the Mau Mau forces inflicted many casualties on their opponents. Moreover, recruits joined Mau Mau, many of them from the Kikuyu's neighboring tribe, the Kamba.

Late in 1954, Churchill urged the leaders of Kenya's government to come to terms with Mau Mau, arguing that the Kikuyu had proven not to be the primitive, cowardly people described by white settlers, but rather people of courage and ability who deserved just treatment. In an attempt to achieve a position of strength from which to begin such negotiations, Erskine sent ten thousand British troops into the forest after Mau Mau. Only ninety-nine Mau Mau were killed and ninety-two captured. A few weeks later the same British force attacked again with similarly inconclusive results. Some Mau Mau now sought surrender with amnesty, and it was granted to many. However, Mau Mau units remained active in the forest. In October 1956 their most senior leader, "Field Marshal" Dedan Kimathi, was captured. Sentenced to death, Kimathi converted to Christianity but was hanged on 18 February 1957. Some Mau Mau units, led by men with self-proclaimed names such as "General Highclass," "Major King Kong," and "General Hitler," continued to maintain their discipline and carried on the fight, sometimes brutally.

KENYA COWBOYS

However, the brutality of Mau Mau was more than matched by the white settlers. Known to the British as "Kenya Cowboys," some of the white settlers killed indiscriminately, sometimes dragging victims to their deaths behind their Land Rovers. The Kenya police and Home Guard were even more brutal, tor-

turing captives to produce confessions or simply, it seemed, to punish. Electric shock and fire were widely used. Sir Michael Blundell, a political leader of the white settlers, received a letter from a twelve-year-old boy in Texas requesting a Mau Mau "sword with blood on it." Blundell happily sent the boy a blood stained sword. As atrocities mounted, even British troops who ordinarily refrained from brutality began to lose control. General Erskine appealed to his troops to behave with "honor." The army responded well, but the K.A.R. Home Guards, the Kenya police, and the white settlers continued their barbarous behavior.

Similar horrors took place in the detention camp "pipeline" system, where captives or suspects were tortured to confess, then sent to detention camps where every means was used to force them to denounce the oath they were suspected of having taken. A few of these camps were directed by honorable men who forbade torture, but most were directed by men who openly encouraged torture. Prisoners were abused in every way. Many prisoners refused to work, claiming that Geneva Convention rules forbidding forced labor applied to them; however, in Hola camp, a fiercely hot desert prison, an officer in charge, G. M. Sullivan, used armed guards to force men to work. They resisted, and eleven were killed and another twenty so badly injured that they had to be hospitalized. Pressed for an explanation by the provincial commissioner who happened to be visiting, Sullivan lied, saying that the prisoners had died from drinking contaminated water. However, another officer from Hola told the truth in 1959, and news of the "massacre" evoked outrage in Britain. The result was public outcry to end the detention system, and in a short time the Mau Mau detainees, whether they had confessed or not, were released.

The political leader of the new Kenya, now abandoned by most of the white settlers, was Jomo Kenyatta. He spoke openly against Mau Mau, urging those fighters still holding out in the forests to give up their weapons in return for amnesty. In 1963, as he stood on a stage to accept his election as Kenya's president, scores of Mau Mau handed him their weapons. In turn, Kenyatta told them to turn their efforts toward peaceful tasks, but these were poor,

landless people who could not easily support themselves. When they asked for land Kenyatta refused, saying “we all fought for freedom,” then sent troops to crush their rebellion. As the years passed and the former land and freedom fighters struggled to stay alive, Kenyatta continued to ignore their pleas for land and government aid.

MAYER, LOUIS B. (1885–1957)

U.S. film executive

As the head of Metro-Goldwyn-Mayer (MGM), which, under him, became the one of the world's largest and most prestigious film studio, Louis Mayer created the star system and had under contract the outstanding screen personalities of the day. Under his leadership as vice-president of production, MGM gained the reputation for entertaining films of consistently high quality. Elaborate sets, gorgeous costumes, and morally uplifting stories characterized the studio's productions. Mayer emphasized glamorous stars, many of whom, such as Greta Garbo, Joan Crawford, Rudolph Valentino, and Clark Gable, Mayer discovered. Mayer also formed the Academy of Motion Picture Arts and Sciences (1927), which hands out the Academy Awards for achievements in film annually. In 1951, Mayer was forced out of MGM, and he died before he could gain control of another studio.

EARLY YEARS

Born Lazar Meir in Dymmer in the Ukraine, he immigrated to Canada with his family as a young child. After graduating from high school, he moved to Boston and then Brooklyn. There he became a successful junk dealer, like his father. Bored by the business and interested in the new pastime of nickelodeons and movies, he borrowed money in 1907 for a down payment on a rundown burlesque theater in nearby Haverhill and converted it to a movie theater. Building on that success, he began to assemble a chain of movie theaters.

In 1914, Mayer joined two other men to form Alco Film Company to produce and distribute films to the theaters the three owned. When that company faltered a year later, Mayer formed Metro Pictures. Mayer made his initial fortune as sole distributor in New England of the film *The Birth of a Nation* (1915), by the

director D. W. Griffith (1875–1948). Mayer received returns of at least \$500,000 on his \$20,000 investment, which gave him the economic freedom to bring stars, directors, and stories together to make films that reflected his high morals. In 1917, Mayer left Metro to form a production company, Louis B. Mayer Pictures, and moved its operations to Hollywood, California in 1918. In 1923 Metro was on the brink of collapse when its owner, Marcus Loew (1870–1927), combined it with Goldwyn Pictures and bought out Mayer's production company. Impressed by Mayer and his production studio, Loew appointed Mayer vice-president in charge of all production for Metro-Goldwyn in 1924. In his speech at the gala opening of the new studio, Mayer added his name to that of Metro-Goldwyn when he declared that the company would soon be known not by "three long words, but three short letters: M-G-M." He also vowed to make it "the foremost movie studio in the world" (Altman 1992, 105).

MAYER AND HIS STARS

One of Mayer's innovations was the creation of the contract system, which bound actors legally to the studio for years. Instead of taking established Broadway or vaudeville stars and making them movie stars, as other studios were doing, Mayer hired inexperienced performers for no particular role, generated publicity about them, and turned them into stars. The actors were introduced to the public in movie magazines and on personal tours while the studio tried to find the right vehicle for them; they were beholden to Mayer for their success and bound to him by the long-term contracts he required them to sign. Other studios followed suit, placing actors and directors under long-term contracts. MGM and Mayer differed from the other major studios by first choosing its stars and then finding them the right film vehicle; other studios acquired the films first and found the stars for them later.

To Mayer, the studio was a factory, and his employees were part of a team effort to turn out the best product. Filmmaking at MGM was an assembly line of departments, each answerable to a producer, each producer answerable to the head of production, and each head responsible to Mayer. Employees who

did not abide by his methods were fired and, not infrequently, blackballed and unable to work anywhere else in town. As a leader, Mayer was paternalistic. He treated his actors like he treated his own daughters; he was dominating and dictatorial, yet kind and generous. If an actor approached him for a raise, he would talk about how box office revenue was down, begin to cry and plead while explaining that if actors continued to work hard and respect their elders, they would get a raise in due time. If such blatant manipulation did not work, he did not hesitate to blackmail stars to keep them in line. In 1931, when Clark Gable demanded a salary increase, Mayer refused to pay him what he was worth. Gable did not push the issue because Mayer knew of Gable's adulterous affair with Joan Crawford, and Gable settled for \$2,000 a week instead of the \$10,000 that he could have commanded.

Mayer micromanaged the lives of his actors, dictating what certain stars could eat at each meal to control their weight and ordering them placed on drugs if necessary. He told them whom they could marry, whether it was time to have a baby or not, and even how to obtain an abortion if a film was at stake. Yet he also coddled and pampered them. His actors traveled everywhere in first class and stayed in good hotels. If they ran short of money, it was advanced to them and then deducted from their paychecks. He protected them from the press and even prison: Twice he covered up acts of manslaughter by actors. He also gave homosexual performers similar protection to aid their careers. Until the blacklist era following World War II, he tolerated Communists and fascists alike on his payroll, as long as they did a good job. They feared and respected him because he held so much power yet willingly wielded it to protect their careers. Despite Mayer's overbearing and heavy-handed managerial style, morale at the studio remained high through much of his tenure. Employees knew they were at the top studio, and benefited from its high production values, good salaries, and outstanding publicity machine.

MAYER'S DOWNFALL

In 1936, Mayer became the highest-paid executive in the United States, making well over a million dollars

a year. Despite his power and control over production, Mayer was an employee who had to answer to his boss, Nicholas Schenck (1881–1969), in New York, just as his actors did. Mayer was forced by the New York office to take a company man as his assistant in 1936, but Mayer replaced him with writer-producer Dore Schary (1905–1980) as his supervisor of production in 1943. Schary left shortly thereafter, only to be brought back by Schenck in 1948. Between 1936 and 1948, despite clashes with Schenck, Mayer remained in charge at MGM because he kept the studio profitable and maintained its reputation. With the end of World War II and the development of television, Mayer's style of movies became less popular and the studio began losing money. His insubordinate attitude irritated his superiors, who compelled him in 1948 to accept Schary as his supervisor of production. Schary wanted to produce more realistic fare than had been typical of Mayer. During Schary's tenure as supervisor of production from 1948 to 1951, the studio had begun making a profit again. When Schary clashed with Mayer in 1951, their boss, Schenck, had to make a choice of who to keep. Schenck had long believed that Mayer was too powerful and that he had grown out of touch with the movie-going public. To the astonishment of no one but Mayer, Schenck picked Schary. After twenty-seven years of nearly uncontested power, Mayer was dismissed as head of production, though he remained on the board of directors for Loew's Inc., the parent company of MGM.

Immediately after his dismissal, Mayer tried to buy RKO Pictures, a smaller rival of MGM. When that deal failed to materialize, he tried to engineer a takeover of Loew's by joining forces with fellow board member Joseph Tomlinson, the majority stockholder, but that bid was successfully fought off by other board members. In the midst of this fight, Mayer found out he had late-stage leukemia. Nearly three weeks after his ouster from the board in October 1957, he died.

MEAD, MARGARET (1901–1978)

U.S. anthropologist

The most famous anthropologist of her time, Margaret Mead was perhaps the most famous anthropologist of all time. She was born in Philadelphia, Pennsylvania, and died in New York City. The force of her personality and the pioneering nature of her work made her an outstanding leader. She took anthropology to the general public, demonstrating its usefulness in understanding problems of modern complex societies as well as those technologically simpler ones. She pioneered the study of gender, anthropological feminism, the use of film in anthropological studies, the influence of culture on human development—especially adolescence—the generation gap, and numerous other topics of widespread interest and importance.

EARLY LIFE AND EDUCATION

Margaret Mead came from a line of strong-willed females and from time to time was educated at home by her grandmother. Both of her parents were social scientists, and it is not surprising that she majored in sociology as an undergraduate and earned an M.A. in psychology before turning to anthropology. In 1919, she was a freshman at De Paul University, later transferring to Barnard College. At Columbia University, she came under the influence of anthropologists Franz Boas and Ruth Benedict.

She received her Ph.D. in 1929 for her work on Samoa, based mainly on her 1925 field trip there. That trip also resulted in the first of her twenty-three books, *Coming of Age in Samoa* ([1928] 1968). The

As the traveler who has once been from home is wiser than he who has never left his own doorstep, so a knowledge of one other culture should sharpen our ability to scrutinize more steadily, to appreciate more lovingly, our own.

—Margaret Mead

book is still in print and sells well. It also demonstrates her use of observation to draw conclusions as well as her skill in using traditional societies to shed light on modern problems.

Her editors asked her to write a final chapter that looked at adolescence in the United States. It was that chapter that caught the attention of the general public. In the nature versus nurture controversy that was raging in the 1920s and continues into the present day, Mead was basically on the side of nurture or environment or, as it is sometimes termed, cultural determinism. However, she did not ignore biology as Derek Freeman, a late-twentieth-century anthropologist and others believed. She was simply interested in what culture does to shape or work on biology.

It is a point she sought to make clear in a number of her writings and books, but which some other anthropologists chose to ignore, seeking to make a name for themselves through using her as a straw person. While she was alive, Mead was perfectly capable of taking care of herself and as helpful as she could be to students who sought her help; she could also be a bitter opponent in a debate. And Mead loved to debate.

She wrote many other influential works over her career, including *Growing Up in New Guinea*, *Sex and Temperament in Three Primitive Societies*, *Balinese Character: A Photographic Analysis*, *Continuities in Cultural Evolution*, and *A Rap on Race* (1971, with James Baldwin). In addition to books, Mead wrote a regular column in *Redbook*, appeared on television numerous times, wrote popular articles for many magazines, testified at Congressional Hearings, gave numerous lectures, and taught from time to time.

She never held a permanent teaching position, although she was a brilliant teacher. She chose to work at the American Museum of Natural History in

New York City because she did not want to get involved in the politics of academic life at a time when women were openly discriminated against in favor of less qualified men. She saw how badly her former teacher and lifetime friend Ruth Benedict was treated at Columbia, where she passed over for promotions in favor of less qualified men. Mead felt that she could better use her energies to help other people if she did not have to waste time on fighting for her own position. She did teach at an impressive number of schools either as an adjunct or on temporary assignments, including Columbia University, Yale, Emory, and others. Later in her career, in 1968, she founded the Department of Anthropology at Fordham University and chaired its social science division until 1974.

The museum offered her a great deal of autonomy. She served there as assistant curator (1926–1942), associate curator (1942–1964), curator of ethnology (1964–1969), and curator emeritus (1969–1978). From that location she was able to carry on numerous field trips, stay in contact with colleagues all over the world, and promote causes important to her. She was also able to make numerous scientific contributions, staying close to the solid world that artifacts created.

Mead received numerous honors during her lifetime. She was president of the American Anthropological Association, the first president of the American Association for the Advancement of Science elected by its membership, president of the Anthropological Film Institute, president of the Scientists' Institute for Public Information, president of the Society for Applied Anthropology, holder of twenty-eight honorary doctorates, and she posthumously received the Presidential Medal of Freedom in 1979.

CONTRIBUTIONS

Mead made numerous contributions to anthropology and to the promotion of causes in general. For her there was no distinction to be made between these two areas, for the purpose of anthropology is to aid those who need help. It is an applied science whose theory should aid parishioners, in her mind, to solve the problems of the world. In the battle

between weak and strong, Mead stood firmly on the side of the underprivileged and was never afraid to speak her mind.

Her anthropological work, largely conducted among the peoples of Oceania, looked at the inter-relationship between culture and psychological development. She was concerned with the cultural conditioning of sexual behavior, national character, and culture change. After World War II, she became intensely interested in culture change and how to ease its effects on a population.

Mead was both a celebrated anthropologist and a celebrity. She was deeply concerned with the issues of women's rights, population control, childrearing, sexual morality, nuclear proliferation, race relations, drug abuse, population control, environmental pollution, and world hunger, poverty, human rights, peace, and the just society, among others. Mead's work in New Guinea with Reo Fortune, a brilliant anthropologist and her second husband, was set up to test yet another hypothesis. Her first work on Samoa tested the universality or lack of it of the "storm and stress" nature of adolescence. The work on New Guinea tested the "childlike" nature of traditional peoples. Mead demonstrated that "primitive" people were no more childlike than any "modern" people, and that stages of human development had to be studied in specific cultural contexts. Each one of her works tested some basic concept. She was truly the first person to study human development in cross-cultural perspective.

Mead looked at other issues from a cross-cultural perspective. She noted that gender roles differ from society to society. In Bali, with Gregory Bateson, her third husband, she documented the connection between childrearing and adult behavior. They also explored the symbolic connection between childrearing, adult personality, and symbols.

On a more personal note, she and Bateson had a daughter, Mary Catherine Bateson, like her parents a significant anthropologist in her own right. Mead's pediatrician was Benjamin Spock, who has acknowledged his debt to "Maggie" for his approach to child-rearing and development.

Much of Mead's ability to address so many issues came from her conviction, rooted in anthro-

Never doubt that a small group of thoughtful, concerned citizens can change the world. Indeed it is the only thing that ever has.

—Margaret Mead

pology's holistic approach, that everything is interconnected. Ritual, for example, is related to food production. Thus, along with Ruth Benedict and others, during World War II, Mead founded the Institute for Intercultural Studies, an institute that led the way in applying anthropological techniques to the study of modern and technologically complex cultures.

After the war, Mead went back to Manus Island in 1953 to study the spectacular changes resulting from World War II and modernization. In *New Lives for Old*, she argued that there are many possible futures. A society can choose the one best suited to it. Mead held that racism, warfare, and environmental exploitation are learned. Traditions that condition these behaviors can be changed. New institutions can replace old ones.

Mead drew a great deal of criticism as well as praise in her lifetime. Some attacked her as being too radical for arguing for the legalization of marijuana or for advocating trial marriages. She loved to stir up controversy. However, she did help shape the American family with her writing and teachings. She was a feminist, mother, grandmother, and three-time divorcée.

Although she said she was not a feminist but a woman who was feminine, Margaret Mead was named to the list of American's Leading Feminists two years after her death in 1978. Advocating issues that have come to be termed as feminist ones was but one of many of her outstanding contributions in which she took the lead. She promoted many causes, each of them trying to help the underdog achieve a better life in what her colleague and friend Ruth Benedict termed a synergistic way.

MENTAL MODELS

Effective organizational leadership requires frequent problem solving. One way of understanding how leaders solve problems is through the concept of mental models. Mental models are effective tools for organizing information so that creative solutions can be generated quickly and effectively. They are cognitive in nature and, although they are naturally occurring in all individuals, the nature of their occurrence and how they affect problem solving is particularly important to the study of leadership. As applied to leadership, they are organized knowledge structures that contain information about complex systems, whether pertaining to the organization (such as its overall structure, various divisions, teams, and so forth) or in the larger world (for example, industries, conglomerates, and so on). Mental models include as information about how a system works, as well as information on cause-and-effect connections within a system. Mental models also include temporal or categorical linkages, and they organize information about the environmental elements and contingencies that can influence a system's operations.

For example, a senior manager might have as a mental model an organized understanding of his or her department that includes mental representations of subunits and members of the department; the roles, resources, and tasks of the department; the connection of the department to other key organizational units; and how all these elements interact to carry out departmental actions. The mental model would also include the environmental demands that the manager's department faces and how those demands or contingencies relate to department members' responses and actions.

Mental models serve three functions: description, explanation, and prediction. By giving individuals a framework that describes and organizes phenomena, mental models give people a sense of control over their environment and a starting point from which to

begin to tackle problems. Mental models help people make sense of their surroundings, and when that happens, people can form expectations; they can begin to make predictions about future events and behaviors. In addition, mental models make it easier for people to incorporate new information into pre-existing categories. They make it possible to navigate novel problem situations more quickly.

HOW MENTAL MODELS FORM AND DEVELOP

A person will begin to develop a mental model of a system as soon as he or she is exposed to it. Initially, the mental model will include just factual information about the elements and parts of the system, as well as basic information about how these elements are related. Such information is called declarative knowledge. Thus, when an organization gets a new chief executive officer, for example, that new CEO will quickly begin to form an understanding of the company's organizational units and the members within these units. This newly forming model will also include knowledge about how units and members relate to one another and will contain the most detailed information about those people and processes with which the CEO interacts most frequently.

As the CEO gains experience, he or she enriches the mental model with knowledge about how to get things done within the system—how units and members act to accomplish specified actions, what the key steps are in particular action sequences, and how certain routine goals are met.

Mental models are adaptable; they can change to accommodate new information. They evolve during the course of people's interactions and experiences within, and with, the system. As people experience more variations in systems operations, their understanding of the system becomes more complex, and their mental models come to include a greater number of elements and to account for how linkages among elements change as a function of other system properties. Mental models begin to change as individuals, relying on environmental cues, determine that their current understandings do not conform to actual events and system operations.

Mental models become more extensively developed if an individual has repeated experiences within a specific domain or with a particular system, if the individual has repeated experiences with related domains or systems, and if the individual has the cognitive ability to make generalizations about system elements and operations. Thus, the complexity of one's mental model depends upon experience and the capacity to generalize from that experience.

Hierarchy, Breadth, and Depth

Mental models, then, are characterized by hierarchy, breadth, and depth. Breadth refers to the variety of concepts, events, and elements that compose the knowledge structure. Depth refers to the degree of abstraction that the model contains. More abstract elements will subsume concrete ones. For example, a leader's mental model may include information about dealing with emergency situations within the organization. The conceptualization of an emergency may be very abstract, described in terms of angry stakeholders (employees, customers, shareholders) time urgency, or generalized financial risk or loss. However, if the leader's mental model is sufficiently developed, it will also contain information on more-specific kinds of emergencies (for example, resource shortages or broken equipment) that call for more-specific responses.

How Experts' Mental Models Differ from Novices' Mental Models

The mental models of experts (individuals with more experience) and novices (individuals with less experience) differ in a number of important ways that determine how each group approaches problem solving. Compared with those of novices, experts' mental models:

- include more categories of information;
- contain more information within categories;
- have finer distinction among concepts and system elements; and
- are more accurate representations of system operations.

Experts' mental models also organize concepts differently from novices' mental models. Experts tend to have a greater number of linkages among distinct concepts; their models tend to combine and integrate information about different problems, possible solutions, and their consequences. They are able to distinguish the elements of different problem scenarios while at the same time noting the higher-order similarities. Therefore, experts are able to come up with more fine-grained solutions to problems, and to do so more quickly. Novices tend to form separate mental models for each problem and often do not perceive problems' similarities and differences. Consequently, their problem solving tends to be more effortful and inefficient.

MENTAL MODELS AND PROBLEM SOLVING

Problem solving typically proceeds through several stages (although not necessarily in a linear fashion). These include defining the parameters of the problem, generating potential solutions, evaluating and selecting solutions, implementing selected solutions, and monitoring the effects of implemented solutions. Mental models improve problem solving at several of these stages. For example, existing mental models can contribute to the definition and interpretation of particular problems. Once problems are categorized, mental models facilitate the search for and selection of potential solutions. They are especially useful if the problem is one that has been experienced frequently. Even with novel problems, mental models can facilitate the process of defining the problem by providing potentially useful analogies and metaphors. Likewise, the solutions generated for novel problems can be evaluated using preexisting mental models.

Mental models influence how people process information. For example, people are more likely to attend to information that is consistent with the contents of a mental model, and ignore or misperceive inconsistent information. Likewise, individuals hold on to their mental models even as these cognitive representations become obsolete. These can result in a failure to evaluate information correctly and to misread important elements of problems and possible solutions.

THE MENTAL MODELS OF LEADERS

Accurate mental models account to a large degree for the effectiveness of a leader's problem solving. Highly elaborated models can accommodate a wide range of problems and facilitate rapid and effective responses to organizational problems.

A leader's mental models can range from the very generic to the very specific. At the most general level, leaders have mental models that organize information about how to be a leader—they have an understanding of what leadership is and how they are to accomplish their role. This most general of mental models may have broad influence across most problem-solving situations, but its very generality ensures that its concrete effects on any given problem are likely to be small.

Researchers have identified several more-specific mental models of leaders. These models have significantly applicability for a variety of organizational problems. They encode and represent knowledge about (a) the leader's team or unit, (b) the leader's organization and operating environment, and (c) the leader's strategic plan and vision.

Mental Models of the Team

Researchers have identified several types of mental models of teams, some that the leader forms, some that members of the team form, and some that they share. Typically, a team mental model contains information about the resources and equipment available to the leader and the team. It includes knowledge of what, concretely speaking, is available to the team and how the team should use its resources. In technology-intensive teams, such as military units, aircrews, factory production teams, and power plant units, such mental models play a central role in helping leaders derive solutions to organizational problems. For example, the U.S. Army is introducing a full, individual combat system ensemble, the "Objective Force Warrior," that incorporates defensive and offensive weaponry, as well as advanced communication networks. Army leaders need to develop accurate mental models of the new capabilities of

each of their troops and integrate these to solve problems during combat.

In deriving such solutions, leaders will integrate information on material resources with information on the task and personnel resources. Task models, which are components of team mental models, contain what the leader and the team need to know about team tasks and missions, including the desired outcomes of team tasks, the goals and purposes of the tasks, and the actions that are required to complete the tasks. The leader uses task models together with another subset of team mental models, team characteristic models, to develop an action plan. Team characteristic models contain information about the properties of the group (such as its size, degree of cohesion, and morale), and information about the members of the team (their level of knowledge, skills, attitudes, and so forth). Team characteristic models tell the leader the strengths and weaknesses of the team and its individual members. They allow the leader to weight the input of team members differentially, especially in hierarchical teams with distributed expertise. They also give the leader a framework for assigning tasks for maximum effectiveness and successful problem solving.

Team mental models help make both the leader and the team more effective. They outline the roles of each team member in collective action and explain how to fulfill those roles in a group context. The model may include many possible contingency scenarios to equip the team to deal with varied environmental situations.

At a general level, leaders may have a broad understanding of how teams work, and how different team properties relate to different team outcomes. However, as leaders work more frequently within specific teams, they will develop models that are specific to those teams. Those specific models will cover the material and personnel resources of the teams in question, how those teams are organized, and how the members of those teams interact to accomplish team tasks. General team mental models will have applicability in a variety of organizational situations; specific models will have particular utility for specific teams.

Mental Models of the Organization and Environment

Leaders also develop models of their organization and its operating environment. Organization mental models contain information about the key components and characteristics of the organization. They include role and communication structures, administrative structures, and company organization. They also contain information about the climate and culture of the organization, as well as its fundamental values and ways of doing business.

Leaders will also encode in their mental models an understanding of power dynamics within the organization, as well as the political, personnel, economic, and material resources that comprise the organization. They also form models of the operating environment that include the external constituents and stakeholders of the organization. Models of the organization's operating environment will take into account the legal, financial, economic, social, and political constraints that define the boundaries of potential organizational actions and decisions. It is within the framework of these models that the organizational leader makes strategic decisions.

Mental Models Relating to Strategic Vision

Leaders use team, organization, and environment mental models to construct operational plans for their organization. They form a mental image of where they want to take their organization. For example, the leader of a medium-sized organization may have a mental model for how the company will operate after it evolves into a larger organization. The model will include ideas about what will be the basis for new goals, how the company will affect and be affected by its competition, and what economic issues are likely to emerge in the near and far future. Sometimes the models can be broad and idealistic. In his 1992 work, Burt Nanus, a scholar in the field of business and management, defined a leader's vision as, "a mental model of a future state of a process, a group, or an organization. It deals with a world that exists only in the imagination, a world built upon what we hope are reasonable assumptions about the future, and it is heavily influenced by the leader's

judgments of what is possible and worthwhile" (Nanus 1992, 25–26).

The vision and strategic mental models of leaders can be quite complex because the models encode (a) representations of the organization as it exists at the present moment, (b) the organization's operating environment at the present moment, (c) assumptions about how both the organization and environment may change in the future, and (d) consequent future states of both the organization and its environment. The leader links these elements to short- and long-term action plans for the organization. Leaders can use the value components of a vision mental model to inspire their staff and prepare them for anticipated problems. They can also create a common understanding of the direction in which the organization is moving so that all members have the same expectations and goals.

Vision and strategic mental models not only provide explanations of where the organization is to go, they also cue particular classes of responses to environmental events. That is, they offer certain responses and exclude others when leaders reach strategic decision points. For example, initially the main products of Amazon.com were books. The website's breadth of products has increased tremendously in response to the availability of books on other competitive websites. Jeff Bezos, the founder and CEO of Amazon.com, now envisions the corporation becoming the premier place for consumers to buy *anything* online. Research has also shown that vision and strategic mental models provide the basis for deriving more specific action models at different organizational levels. Thus, a corporationwide mental model will lead to more specific subunit mental models, which in turn generate lower-order team tactical mental models.

HIERARCHY, MENTAL MODELS, AND LEADERSHIP

Organizational leadership is typically embedded in a hierarchical structure, with a wide range of problem-solving tasks at each level. Leaders at higher levels of the organization are faced with greater organizational and environmental complexity, and, as a con-

sequence, must deal with more complex problems. Their mental models reflect that complexity.

At higher organizational levels, leaders' mental models incorporate more dimensions, reflecting the wider range of constituencies with which they deal. Systems dynamics and causal factors, both within and outside the organization, multiply considerably at higher levels—so the mental models that encode and represent this information are also more complex. At lower levels of leadership (the division, the function, or the unit, for example), leaders' mental models are more narrow and focused.

Regardless of level, the nature and quality of a leader's mental models will greatly influence how successfully he or she solves problems. High-quality, elaborate mental models help define the parameters of organizational problems and help leaders derive the most appropriate solutions. Such mental models also elicit better performance in situations of uncertainty and complexity, which demand novel and creative solutions. Accurate mental models predict effective leadership, and therefore helping leaders to develop good mental models should be one focus of leader development and training efforts.

MENTORING

Mentoring serves an important role in the career and psychosocial development of junior-level employees. Often, the immediate supervisor serves as the mentor, making mentoring a personal leader-follower relationship and therefore an important topic for leadership research. A mentor is defined as an individual with advanced experience in a particular field and knowledge of a specific organization who provides career-oriented guidance and social support to a less-experienced employee. A mentor may also serve as a role model to a junior employee. In addition, mentoring is a powerful mechanism for learning on the job, and favorable experiences in a mentoring relationship have been associated with lower employee turnover. While much attention has been placed on the benefits protégés derive from mentoring, benefits to mentors and to the organization have received less research attention.

Mentoring and its impact on individuals became a focus of organizational research beginning with the 1985 publication of *Mentoring at Work*, a landmark study by Kathy Kram, a scholar in the field of organizational research. Kram described the mentoring exchange as a developmental relationship, whereby older individuals enable younger individuals to manage the challenges they encounter as they move through adulthood and establish their organizational

careers. Using in-depth qualitative interviews, she identified two main functions that mentors provide: those related to career support and those related to psychosocial support. Career functions include providing sponsorship, exposure and visibility, coaching, protection, and challenging assignments, while psychosocial functions include role modeling, providing acceptance and confirmation, counseling, and friendship. Kram noted that mentoring represents “an interpersonal relationship that fosters mutual trust and increasing intimacy” (Kram 1985, 23). In leader-follower relationships, mutual trust and intimacy are essential for the development of high-quality leader-member exchange (LMX) (Graen and Uhl-Biwn 1995). Mentoring thus enhances the leader-follower relationship (Scandura and Schriesheim 1994).

THE FOUR PHASES OF MENTORING RELATIONSHIPS

Kram described mentoring relationships as evolving in four phases. During the first six months to a year, the relationship begins and becomes important for both parties. During this initiation phase, the mentor coaches the protégé and helps him or her receive visibility within the organization. In turn, the protégé demonstrates respect for the mentor and a desire to be coached. The second phase, cultivation, can span two to five years and is characterized by an emotional bond between the mentor and protégé, as well as increased intimacy. Interaction evolves from a focus on work to a focus on more meaningful subjects. Separation, the third phase, typically results from a significant change in the structural role relationship between the two parties. For example, the junior colleague may no longer require the same level of guidance, or promotions and job rotations may limit opportunities for continued interaction. Finally, in the redefinition phase, the relationship either ends or takes on significantly different form, sometimes evolving into a friendship between peers. The factors that influence the development of the peer-friendship phase are mutual support, sponsorship from a distance, counseling, and coaching (on a more infrequent basis) (Kram 1985).

FORMING THE MENTORING RELATIONSHIP

Management scholars Daniel Turban and Thomas Dougherty suggest that the focus of much of the literature on mentoring is on the mentor’s efforts to form a relationship, rather than the protégé’s input into the process. The authors examined the role of three personality characteristics (locus of control, self-monitoring, and emotional stability) in the initiation of mentoring relationships in the organizational setting. Their results support the notion that people can influence the amount of mentoring they receive at work. Turban and Dougherty concluded that “individuals with internal loci of control and high self-monitoring and emotional stability were more likely to initiate and therefore to receive mentoring. Individuals who engage in proactive behaviors to initiate mentoring report receiving more mentoring” (Turban and Dougherty 1994, 198). Also, respondents who actively initiated a mentoring relationship reported a higher level of perceived career success. Some research has compared formal and informal mentoring relationships and found that both mentors and protégés appear to prefer informal mentoring. Both mentor and protégé prefer the ability to choose to participate in the relationship, and also to have a way to exit if the relationship is not working out. Many organizations have implemented formal programs and they may be useful during the initial socialization process. However, a study by Belle Rose Ragins, John L. Cotton, and Janice S. Miller (2000) found that having no mentor may be better than having a formal mentor that is not fully engaged in the process, which they termed “marginal mentoring.” Despite practitioner interest in formal mentoring programs and articles in the popular press on the efficacy of such programs, the research on formal mentoring had indicated that implementing a successful mentoring program is challenging.

RESEARCH ON MENTORING

As mentioned earlier, mentoring serves both psychosocial and career functions. Studies conducted in the 1990s developed measures for those functions and related them to protégés’ career outcomes. For

The growth and development of people is the highest calling of leadership.

—Harvey S. Firestone

example, in 1997 the organizational psychologists Tammy Allen, Joyce Russell, and Sabine Maetzke published the results of a study of psychosocial and career-related needs in mentoring relationships among first-year M.B.A. students with an average of 3.63 years of full-time work experience. They found that satisfaction of psychosocial and career-related needs played an important role in protégés' overall satisfaction with their mentoring interactions. The subjects in the study were first-year MBA students and their mentors were second-year MBA students.

In the late 1990s and early 2000s, research on mentoring also began to examine the effects of multiple mentoring relationships. There is little research on how common multiple mentoring is in organizations. Typically, multiple mentoring emerges as an informal process; however, some scholars have discussed the emergence of “group” or “team” mentoring (Eby 1997). Researchers S. Gayle Baugh and Terri Scandura examined job satisfaction and work role ambiguity among protégés with multiple mentors. Their survey research suggested that protégés who maintain one or more mentoring relationships were likely to experience greater job satisfaction and lower levels of ambiguity about assigned tasks. In 2001, Monica Higgins and Kathy Kram developed a network theory of mentoring, which suggests that protégés may employ different mentors for different developmental needs. It appears that research on mentoring is evolving to examine more complex social systems beyond the mentoring dyad.

NEGATIVE OUTCOMES: WHEN MENTORING RELATIONSHIPS TURN SOUR

Much of the literature reviewed thus far advances the notion that mentoring relationships provide varying degrees of positive outcomes for protégés. However, the current body of research pays little attention to the potentially detrimental effects of negative men-

toring relationships in the organizational setting. In 1999 the scholars Lillian Eby, Stacy McManus, Shana Simon, and Joyce Russell developed a taxonomy of negative mentoring experiences through surveys and content analysis. Negative mentoring experiences were defined as problems with the mentor-protégé match, distancing behavior, manipulative behavior, lack of mentor expertise, and general dysfunctionality. The authors found one-half of the protégés sampled reported experiencing at least one negative mentoring relationship during their careers. Poorly matched mentors and protégés, distancing behavior, manipulative behavior, and lack of expertise on the part of the mentor were identified as causes of negative mentoring experiences. In 1998 Scandura developed a model of dysfunctional mentoring that identified several manifestations of negative mentor-protégé interactions, including power struggles, submissiveness, sabotage, deception, and harassment. The model includes termination of the relationship. However, the relationship may persist to the detriment of both parties. Dysfunctional mentoring relationships may result in protégés experiencing lower self-esteem, lack of initiative, dissatisfaction, and stress. These poor-quality relationships may even result in absenteeism and turnover. Scandura's research, while it focuses on negative outcomes, begins to address the organizational implications of mentoring relationships in the workplace.

ORGANIZATIONAL IMPLICATIONS OF MENTORING

The extensive body of literature on mentoring provides insight into protégé personality characteristics, the psychosocial and career functions of mentors, levels of job satisfaction and career advancement among protégés, the effects of gender composition on relationship outcomes, and the dysfunctional nature of some mentoring interactions. However, few studies have addressed how mentoring relationships affect organizations. James Wilson and Nancy Elman state, “The subject of ‘mentoring’ has often been discussed, along with the benefits that accrue to the mentee and the mentor; however, the benefits that accrue to the organization that encourages men-

toring within its ranks are referred to far less often” (Wilson and Elman 1990, 88). More research is needed to link mentoring with organizational effectiveness. For example, the efficacy of formal mentoring programs is an area in need of investigation.

Finally, more research into the implications of mentoring for leadership is needed. Research might examine both leaders as mentors and also the effect of mentoring on creating leaders. Leaders are increasingly called upon to play a coaching and mentoring role with the implementation of self-managed teams and empowerment in organizations. The field would benefit from increased integration of mentoring research with models of leadership.

METHODOLOGIES OF LEADERSHIP RESEARCH

The idea of a research “methodology,” including a leadership research methodology, refers to a broad strategy of social inquiry. In the absence of universal scholarly agreement on a preferred methodology within the social sciences and humanities, there exists a plurality of contending methodological approaches. These different methodologies are anchored in sets of assumptions about ontology (i.e., what is real, what is the nature of reality and what are its constituent properties?) and epistemology (i.e., what is knowledge, what can be known and how can it be known?). While ontological and epistemological questions and issues are normally the subject matter of ongoing scholarly debate among philoso-

phers, especially in the philosophy of science, these kinds of assumptions are also espoused by social theorists with varying degrees of theoretical explicitness, coherence, and logical consistency in the framing of their research. In this regard, a commitment to a particular combination of ontological and epistemological assumptions may inform a researcher's conceptualization, design of research, instrumentation, process of investigation, data analysis and interpretation, and theorizing of a range of social problems and phenomena. When taken together, in the case of individual researchers, these underpinning claims about research and inquiry are known as a scholarly outlook, worldview, or theory of the world. In the case of sets of scholars of like mind or commensurable outlooks, who either position themselves contiguously or are so positioned by their peers, these jointly adhered to methodological claims are generally referred to as a theoretical perspective, standpoint, school of thought, or, most recently, a paradigm.

Disputation about methodology, driven for the most part by conflicting ontologies and epistemologies, has been a prominent feature of scholarly writing across the social sciences over the past two to three decades. These disputes, sometimes labeled "the paradigm wars," have encompassed a breadth and depth of theoretical issues. Two especially, which are dealt with in more detail below, have concerned the relationship between language and those features of reality which a particular body of discourse purports to represent, along with the question of the legitimacy of the unit of analysis and nomination of the methods appropriate to the procurement of unit-level data (i.e., data about a phenomenon). Both issues are significant for advancing understanding of the phenomenon of leadership. However, compared with their peers in the intellectual realms most closely associated with leadership, administrative, and managerial studies—where, for instance, entire issues of the leading refereed journals have been devoted to discussions of alternative inquiry modes (e.g., Van Maanen 1979; Fineman & Mangham 1983)—leadership scholars have, for the most part, accorded them only sporadic attention. With some exceptions (e.g., Alvesson & Sveningsson

2003), leadership researchers have mostly confined themselves to ascertaining what can be known about leaders and leadership, and to alternative ways of synthesizing an accumulating knowledge base (compare Bass 1990 and Hunt 1991), rather than questioning the aspects of the veracity and validity of that knowledge. That is, leadership commentators have given pragmatic voice to a predilection for "useable" knowledge, rather than according priority to asking critical questions about the status and justification for leadership knowledge. In doing so, they can be seen as "taking," as opposed to "making," problems. To "take" a problem or phenomenon means to accept its meaning at face value or as it stands, whereas as to "make" it is to question its status and meaning. This characteristic of taking for granted the self-evident existence of "leadership," rather than querying the label and construing the status of the phenomenon as problematic, has resulted in a domain of inquiry typified by a mainstream research emphasis on empirical studies of leadership behavior (i.e., various measurements of its presumed incidence and frequency) which coexists with a body of popular, normative leadership literature mostly intended by its authors to engineer desired behavioral changes among practitioners.

Notwithstanding this behavioral knowledge orientation in the field, leadership may be more fruitfully considered in terms of "action," with action meaning intentional and motivated acts explicable by appeal to reasons (Bhaskar 1998, 82), in which the key issues confronting leadership researchers are primarily ontological. In particular, there are four such issues, considered in the following sequence of questions: First, what is the activity engaged in by agents? Second, who are the agents? Third, what is the context or are the contexts in which the activities of agents occur? Fourth, what is the nature and extent of the agency attributable to the agents?

THE ACTIVITY OF LEADERSHIP

An initial issue to be confronted by researchers concerns the justification for the description of the focus of their analyses as "leadership," rather than an alternative candidate. As was implied earlier, the pre-

understandings about knowledge of researchers shape their perceptions of the realities they encounter. One corollary is that researchers may well be inclined to see what they want to see. As members of a scholarly community with its own discursive norms, however, their freedom to engage in such random, arbitrary acts of solipsistic labeling may necessarily be constrained. On the other hand, safety in numbers may be no defense, for any grouping of scholars is, potentially, equally capable of constructing its own elaborate collective fiction or hoax.

Within leadership studies there has been a robust and persistent (albeit a minority) strand of “antileadership” thinking which, in its questioning since the mid-1970s of the intellectual legitimacy of the entire field, has maintained that leadership amounts to just such a fictive or bogus enterprise (see Gronn, 2003c). Alvesson and Sveningsson, for example, whose critique is but the most recent manifestation of this line of reasoning, plead for leadership agnosticism, in which case “it cannot be taken for granted that the normal or typical situation is that leadership is something that is exercised in organizations” (2003, 377). If these authors are correct, then the crucial methodological questions for researchers become: (1) what evidence is there which justifies positioning leadership as a real phenomenon worthy of inquiry?, and (2) why does the phenomenon count as leadership and not something else? As is now increasingly acknowledged by leadership commentators, those of their number who bother to define “leadership” at all (and by no means everyone does) view it as either synonymous with “influence” or as a version of the latter. The significance of that connection, however, is that while leadership may require an additional concept to give it definitional shape, the reverse does not apply, for definitions of influence very rarely (if ever) make mention of leadership. This conceptual dependence, as Alvesson and Sveningsson (2003, 376) note, suggests perhaps that the more appropriate phenomenon under investigation may be influence, rather than leadership. And if “influence” turns out to be the researcher’s quarry, then that switch in focus in turn raises a number of subsidiary questions to do with the conceptual and empirical points of connection between influence and the closely related

idea of power, which have been the subject of a long-standing debate amongst political scientists, rather than leadership theorists (Gronn 2003a, 62).

THE AGENTS OF LEADERSHIP

On the assumption that the phenomenon in focus is, indeed, an instance of leadership, rather than of influence, power or something else, the next methodological issue concerns the explication of the concept and the identification of those parties engaged in leadership. The principal generic candidates here are “agents” and “actors.” There are two main reasons for preferring the former term ahead of the latter. First, there is a logical ground. “Actor” refers specifically to occupancy of a role, whereas “agent” designates social membership. From the perspective of human socialization and development, for example, it is clear that we all “become Agents *before* we become Actors” (Archer 1995, 277, original emphasis). Second, there is also a more practical consideration. Agency status is more advantageous because it widens the universe of potential leaders and/or leadership in particular contexts, whereas the designation “actors” increases the likelihood of their restriction to formal organizational role incumbents.

Commentators’ decisions about agents tend to be informed by their mental maps of the activity in hand. There have been two broad approaches. First, there are those theorists (by far the majority) who, either implicitly or explicitly, construe leadership as a form of exchange or a transaction, and as akin thereby to market relations. In this perspective, their discourse of representation constructs two classes of agents, “leaders” and “followers,” whose relations form a binary set. That is, the agents’ exchange is focused around two contrasting alternative roles, leadership or followership, each of which is believed to automatically entail or require the other. In some writings, binary category membership is taken to be invariant (in which case an agent is *either* a leader *or* a follower), although in other texts allowance is made for category switching (except that the border crossing criteria between “follower” and “leader” tend not to be stipulated). Another representational feature is that leadership is mostly conceptualized as focused (i.e., as man-

ifest in the behavior of an individual agent) rather than distributed (i.e., shared by a number of individuals or collective agents). Finally, while markets and hierarchies, as alternative modes of governance relations, have generated separate binary agency discourses (i.e., “leaders-followers” and “superiors-subordinates,” respectively), category license has seen some commentators conflate relations between the two domains of governance through resort to such synonymous equivalences as “leaders” = “superiors” and “followers” = “subordinates.”

A second, less instrumental or means-ends understanding of leadership has been to construe it as a process in which agency relations are accepted as much more fluid, open-ended and emergent (see Hunt and Dodge 2001, 448). Whereas an exchange or transactional leadership approach tends to be grounded in a momentary view of time, which yields survey-derived, one-off snapshots of sets of agents’ relations, process theorists work with a longer-term conception of time in mind. Here, the argument is that influence flows are reciprocal and multidirectional, and that both the design of research and one’s choice of instruments should be driven by a preparedness to “go with the flow” of the real world by accommodating unanticipated events. This stance results in the privileging of such direct modes of engagement with agents as in-depth reflective dialogue and in-situ observations. One prototype of a process approach may be recent work on “communities of practice,” which has documented patterns of shared role space, role interdependency, and agent coordination in the conjoint accomplishment of work, as part of an evolving, as opposed to a presumed binary, division of workplace labor (Gronn, 2003b).

THE CONTEXT(S) OF LEADERSHIP

As should be evident to this point in the discussion, two broadly contrasting ways of construing leadership as a unit of analysis are detectable amongst scholars, with “unit” being understood technically as the constituent properties of a phenomenon that afford it some degree of status as an entity (Gronn 2002, 444). That is, leadership is understood as hav-

ing either a self-evident or a contestable ontological status. These contrasts are intended to illustrate endpoints on a continuum of possibilities, rather than to be a strict either/or methodological dualism, each of which gives rise to different sets of assumptions about contexts for leadership activity.

Osborn, Hunt, and Jauch (2002, 797) note how context represents “a neglected side of leadership.” The question of what counts as a “context,” in the former of the two views just elucidated, tends to be answered by the claim that particular contexts amount to relatively discrete cultural and historical, and time-, space-, and place-bound settings, the definitional attributes of which, to all intents and purpose, are either nonproblematic or can be set aside for the purposes of data collection and analysis. An extreme version of this viewpoint, in effect, would be inclined to minimize any point of contact between agency and context, and reduce the latter to the conceptual equivalent of a scenic backdrop. This view corresponds roughly to “stability,” the first of Osborn, Hunt, and Jauch’s (2002, 800–801) four proposed models of context. By contrast, because it conceives of the actions of agents, and their activities through time, as multilayered, and embedded in and informed by wider webs of activity, the second of these two views interprets the notion of context for activity-based conduct as more contested. Here, as part of the negotiation of the dynamics of leadership in a particular research site, agents are understood to be informed by both locally derived and more universalistic sets of understandings about appropriate performance (e.g., in respect of the purposes of, justifications for, and outcomes of, their endeavors). Depending on the degrees of dynamism and complexity evident in a particular instance, this conception of context may go some way to instantiating combinations of attributes from Osborn, Hunt, and Jauch’s three remaining contexts of crisis, dynamic equilibrium and chaos.

THE AGENCY OF LEADERSHIP AGENTS

One of the obvious ways in which context and leadership activity co-relate is that contextual factors give leadership its distinctive texture of meaning and provide the source for particularized leadership attri-

butions (i.e., for any particular research site: Is there any evidence of leadership?, and, if there is, which agent is or agents are perceived by informants as doing the leading?). These contextual considerations, in turn, open up the question of what, if anything, the agent or agents attributed with leader status accomplish by virtue of that attributed agency, and what factors might impede or facilitate this possibility. That is, what determines the potency of leaders and their capacity to make a difference?

There have been few explicit attempts within the scholarly leadership community to conceptualize the ontological possibilities for leadership agency. Arguably, although it is written from within a discourse of management, rather than leadership, Stewart's (1989) model of role demands, constraints and opportunities is currently the most influential approach to understanding agency. (See, for example, the "Leadership Classics" symposium on Stewart's work in the April 2003 [14(2)] issue of *Leadership Quarterly*.) Stewart's terminology, which captures, respectively, the position description duties expected of managers (and leaders), those factors which circumscribe or limit managers' scope for initiative and those factors which create openings for initiative, provides a useful entry point for an exploration of the wider ontological issues of agency. The abridged version here of what is a considerably longer story (on which see Archer 1995) is that human agents generally, including those agents specifically attributed with leadership, inhabit social structures. In much the same way that leadership activity and context are inextricably bound up in the mutual shaping and reinforcement of perceptions and attributions of leaders, so agency and social structure interact as part of a duality in the constitution of action. Agency and structure comprise constituent elements of social reality, with neither element being reducible to the other. While "structure" captures the ideas of determination or constraint, "agency" expresses human volition and choice, while also expressing the real possibility of alteration to the very circumstances that shape (i.e., "structure") and make that agency possible in the first place. This means that while a social structure and its components (e.g., its institutionalized practices and

rule-bound sets of relations) may circumscribe the potential actions of agents, that structure, through time, may also be determined and re-shaped due to the effects, both intended and unintended, of the deeds of agents. From this perspective of social realism, therefore, ontological adequacy necessitates due theoretical acknowledgement of the likelihood of both social change and social reproduction as possible outcomes of action. Two important methodological consequences of this interplay of structure and agency, especially for those theorists who position agents at the causal forefront of their organizational analyses (as numerous behaviorists do), is to temper promises of potentially grandiose scope for leadership agency by allowing for the possibility of *both* constraint and enablement in their theorizing, and evaluating the respective contribution of each to organizational outcomes.

IMPLICATIONS

Although leadership scholars may draw on a variety of theoretical approaches in framing their research and explaining their findings, they all confront a common set of methodological issues. This entry has crystallized a mere handful of those issues, concerned mainly with aspects of action and agency, which are common to every field of social inquiry, but which, for the most part, tend not to have not been the focus of scholarly debate within the leadership field. With the passage of time, leadership, for the general public, has acquired the kind of symbolic flash and dash that, unlike influence and power, its immediate conceptual neighbors, befits the belief of that public in leadership's presumed elixir status. This hugely popular recognition, however, has produced a heavy burden of expectations, and is simultaneously a point of vulnerability for leadership. The dilemma with which scholarly commentators wrestle is this: Do they continue to take for granted and work within leadership's well-rehearsed discursive categories, so deeply entrenched in the popular mind, in the legitimate pursuit of scholarly impact and effectiveness, but at the cost of eliding or glossing the kinds of issues raised in this chapter, or do they pursue methodological openness, thereby risking a chal-

lence to some rather sacred leadership cows in which they may have a vested interest?

MILITARY

Leadership in the military is unique in that military leaders routinely ask followers to risk their lives to

achieve organizational goals. Moreover, the will to act derives not from financial gain but from an instilled sense of duty and often from deep bonds of affection. Of necessity, those who ask for such extreme sacrifice must be transformational leaders who inspire followers to do what may be against their self-interest.

The nature of war generates ethical imperatives, such as personal integrity and unit loyalty, that must be honored or the leader may fail in a number of ways. Failure to live up to these ethical imperatives may result in minimal effort from followers, by receiving an outright refusal of orders by subordinates, or even by physical attacks on the leader by the followers, though the latter two have been rare in American military history. Moral failure by military leaders can even lead to long-term psychological injury to those who are subject to unsound leadership. Most important, however, is the obligation of military leaders to be worthy stewards of the special trust and confidence given them by the nation and its people. Violating this charter undermines the national security and endangers the hopes and freedoms of its citizens. Military leaders also operate within a code of justice separate from that of the general public. Known as the Uniform Code of Military Justice, armed forces personnel are governed by this unique and binding code of conduct that gives military leaders tremendous legal power over subordinates. This further deepens their obligation to be leaders of character and to use this influence ethically.

Military leadership has distinct requirements and features during the different stages of war: organizing; equipping and training; battle; and recovery and homecoming. Leadership shortfalls in any of these stages can have catastrophic consequences. Because of the importance of leadership in the extreme conditions of warfare, all the armed services devote great effort to the systematic development of leaders through a carefully orchestrated interplay of leadership education and experience in leadership roles of increasing responsibilities. The army has codified many of these concepts in an official publication on *Leader Development for America's Army* (1994).

The military also recognizes the need to develop effective followers in ways that leaders in other

domains are only beginning to acknowledge. Military followers are not merely subordinates: They are expected to be independent, critical thinkers who give their best effort to achieve the assigned goals. This may include undertaking creative initiatives that are consistent with higher-level organizational intent when obstacles unexpectedly arise to the original plan of action. Subordinates are counted on to act like leaders when the appointed leaders are not present or are unable to lead because of injury or death. Military followers are also expected to recognize potentially unethical or unlawful requests, question them, and, if necessary, to resist them. Of course, military leaders are expected to avoid issuing immoral directives in the first place. Since following orders is not an acceptable justification for moral failure, both leaders and followers receive frequent education in the legal and moral dimensions of warfare.

The military offers a formidable context to consider leadership issues because geopolitical, technological, and national defense threats are changing and emerging so rapidly that the military must rapidly evolve as well. In practice, the similarities between the military and other formal organizations are far greater than the differences, with the exception of the unlimited claims the military may make on the lives of its members. Therefore, military leadership is also relevant for the practice of leadership in other organizations and arenas.

FACTORS THAT DISTINGUISH MILITARY LEADERSHIP

A number of traits distinguish military leadership from other leadership contexts. First, military leadership is expressly developed for armed combat where the stakes for the combatants are life and death. Yet many concepts from military leadership can be applied in other, noncombatant settings. The grounding construct of the American military is to defend the nation and, within Constitutional limits, serve the will of nationally elected leaders. One of the enduring features of leadership development in the American military is the inculcation of the values of loyalty to the Constitution and acceptance of the

supremacy of civilian authority over the military. The United States Military Academy at West Point has a required course in constitutional law to help cadets learn and internalize the structure of the American government and the values embedded in the U.S. Constitution. Officers in all of the armed services swear an oath to “support and defend the Constitution of the United States,” not loyalty to a person or a position.

Many new roles for the military have emerged during the post–Cold War period. American armed forces have served as peace keepers in Somalia, peace makers in Bosnia, war fighters in the Persian Gulf, domestic natural disaster relief providers, homeland security forces, and as security and social service agents in humanitarian missions both at home and abroad. These missions in culturally and linguistically diverse parts of the world create new demands on leaders for leadership skills beyond those required for war fighting alone. Indeed, the military today views adaptability and self-awareness as leadership meta-competencies that drive the development of other leadership skills.

A second distinguishing characteristic of leadership in the American military is the unique focus on followers. Contrary to the popular misconception that military leadership is about coercion and control, a marine corps drill sergeant revealed the importance of military followers when he told leadership researchers that “you do realize, sir, that leadership is all about caring” (Townsend and Gebhardt 1997, 26). General Eric Shinseki (2003), a former army chief of staff put it more emphatically:

You must love those you lead before you can be an effective leader. You can certainly command without that sense of commitment, but you cannot lead without it. And without leadership, command is a hollow experience, a vacuum often filled with mistrust and arrogance.

This ethic that highlights the critical importance of subordinates permeates the military and makes military leadership servant leadership (Greenleaf 1977). The focus in the military is on the followers, their well-being, and their continued professional development. Leaders at all levels are taught to be

rigorously attentive to the needs of their subordinates. A continuous challenge in the military is striking a balance between mission accomplishment and the welfare of subordinates. Rather than one need taking priority over another, the two are generally thought to exist in tandem, as expressed in the contemporary military credo: "Mission first, soldiers always." This tension can create intense demands on military leaders in battle and is the distinguishing requirement for military leaders.

A third element that makes military leadership unique is that the stakes for which the leadership is exercised can be enormous. When reduced to its simplest and most fundamental mission, the role of the military is to guarantee the security of the nation by engaging in battle and defeating an enemy or, without going to battle, by deterring threats to national interests. General of the Army Douglas MacArthur expressed this idea simply and eloquently in a speech at West Point on 12 May 1962:

And through all this welter of change and development, your mission remains fixed, determined, inviolable—it is to win our wars. Everything else in your professional career is but corollary to this vital dedication. All other public purposes, all other public projects, all other public needs, great or small, will find others for their accomplishment; but you are the ones who are trained to fight: yours is the profession of arms—the will to win, the sure knowledge that in war there is no substitute for victory; that if you lose, the nation will be destroyed; that the very obsession of your public service must be Duty—Honor—Country (MacArthur 1962a, 29).

Engaging in combat is inherently dangerous and potentially both life threatening and life altering. As a result, leadership under the rigors of combat is challenging and stressful. But these conditions have given rise to heroism that has no peacetime equivalent except occasionally in emergency situations involving first responders such as the fire and police services. It is the stress of physical danger that creates the necessity for transformational military leaders. According to James MacGregor Burns, transforming leadership "occurs when one or more persons engage with others in such a way that leaders and followers raise one and another to

higher levels of motivation and morality" (1978, 20). Contrasting the more common transactional leadership with transforming leadership, Burns (1978, 4) also argues:

The transforming leader looks for potential motives in followers, seeks to satisfy higher needs, and engages the full person of the follower. The result of transforming leadership is a relationship of mutual stimulation and elevation that converts followers into leaders and may convert leaders into moral agents.

Though Burns was primarily interested in leaders who advocate social and political change, his theory and definitions fit perfectly with the realities of military leadership during war preparations, on the battlefield, and in the critical homecoming and healing phase after war. Burns witnessed the effects of combat and military leadership in combat during World War II in the Pacific theater when he served as a member of a research team led by Brigadier General S. L. A. Marshall that produced the influential book *Men Against Fire*. Many of the concepts in Marshall's book are consistent with Burns's later formulation of the concept of transforming leadership and had a major impact after World War II on military leadership and training, especially in the army.

According to Burns, both the motivation and the morality of followers, and sometimes of leaders, are influenced by transforming leaders. The transforming military leader must change the motivation of fighting men and women from the urge for self-preservation to the willingness to give up their life in combat, if necessary. The military leader must also help individuals channel personal goals into teamwork and mutually supportive actions that lead to greater group cohesion and the attainment of unit goals.

The transformational military leader must also help individual warriors tame primal urges for self-preservation and defense of comrades using the moral frameworks established by international and domestic laws, national and institutional values, and other ethical frameworks such as religion and societal norms. Although human beings have strong inhibitions against killing other humans, military training is designed to successfully overcome these inhibitions (Grossman 1995). While attempting to

meet their objective, military leaders must ensure that soldiers kill only other armed combatants and keep noncombatant casualties and collateral damage to a minimum. This is not always easy when strong emotions such as fear and rage threaten self-control and the exercise of reason and moral judgment.

Though effective military leaders and their followers have long known the importance of transforming leadership, modern leadership researchers have demonstrated empirically the effects of transforming leadership in comparison to transactional leadership, which is fundamentally based on rewards and punishment (Bass, Avolio, Jung, and Berson 2003). Transformational leadership more often leads to mission accomplishment and follower development than other leadership styles. According to three former air force officers who have written a popular leadership textbook, a transforming leader:

Instills pride in others, displays power and confidence, makes personal sacrifices or champions new possibilities, considers the ethical or moral consequences of actions, articulates a compelling vision of the future, sets challenging standards, treats followers as individuals, and helps followers understand the problems they face (Hughes, Ginnett, and Curphy 2002, 417).

Leaders can learn to engage in this kind of behavior and thus have a more favorable impact on followers than they would if they used other forms of leadership.

In some elite military units made up of older, experienced, and highly trained soldiers, such as special operations units, leadership is often shared by all members of the unit despite the formal, rank-based hierarchy. Such units are examples of what situational leadership theory calls a *mature* group (Hersey and Blanchard 1982). With such groups, formal leaders use a *delegating* leadership style and the leader's presence may appear superfluous when, in fact, they have developed the group to an acceptable level of maturity over the group's history and may take on a different leadership role when the task or the membership of the group changes.

In these mature groups, teamwork is often the glue that binds members together. Special operations forces, an example of a mature group, are identified

—U.S. Army manual on military leadership

by their consummate professionalism and commitment to individual and collective excellence. Their culture and motivation is captured by anthropologist Anna Simons (1997, 9–10):

What drives, sustains, and commits these men? Ultimately, it is the company they keep. Special Forces soldiers are their own harshest critics. Teams roil with peer pressure. The challenge lies within—within individual soldiers, within teams, within the company, and within the unit. Ego plays a part. But ego usually has to be subordinated. To be good means being good on a team. And being part of a team is—for these soldiers—as good as it gets.

Echoing this idea, it is common to hear special forces soldiers commenting that there is no experience equivalent to being on a great military team, an experience that imprints lasting memories of camaraderie and esprit. For many, the team becomes their identity.

Some of the most significant American heroes have emerged on battlefields. A number of these heroes, from George Washington to Dwight D. Eisenhower to John F. Kennedy, returned from battle to lead the nation as presidents of the United States. But an even larger number of heroes laid down their arms at the end of battle and returned to family, friends, and loved ones to resume lives that were put on hold during wartime; many of these individuals became leaders on smaller stages at home, work, and in their community.

HISTORY OF LEADERSHIP DOCTRINE IN THE AMERICAN MILITARY

In examining broad trends in military leadership doctrine and theory, one of the crispest and most coherent descriptions comes from Faris Kirkland (1998). Although his article is geared to the army,

The Charge of the Light Brigade, by Alfred, Lord Tennyson

This classic poem written in 1864 memorializes a suicide charge by British forces during the Crimean War in 1854.

Half a league, half a league, Half a league onward, All in the valley of Death Rode the six hundred. 'Forward, the Light Brigade! Charge for the guns!' he said: Into the valley of Death Rode the six hundred.	Cannon in front of them Volley'd and thunder'd; Storm'd at with shot and shell, Boldly they rode and well, Into the jaws of Death, Into the mouth of Hell Rode the six hundred.	Cannon to right of them, Cannon to left of them, Cannon behind them Volley'd and thunder'd; Storm'd at with shot and shell, While horse and hero fell, They that had fought so well Came thro' the jaws of Death, Back from the mouth of Hell, All that was left of them, Left of six hundred.
'Forward, the Light Brigade! Was there a man dismay'd ? Not tho' the soldier knew Some one had blunder'd: Their's not to make reply, Their's not to reason why, Their's but to do and die: Into the valley of Death Rode the six hundred.	Flash'd all their sabres bare, Flash'd as they turn'd in air Sabring the gunners there, Charging an army, while All the world wonder'd: Plunged in the battery—smoke Right thro' the line they broke; Cossack and Russian Reel'd from the sabre—stroke Shatter'd and sunder'd.	When can their glory fade? O the wild charge they made! All the world wonder'd. Honour the charge they made! Honour the Light Brigade, Noble six hundred!
Cannon to right of them, Cannon to left of them,	Then they rode back, but not Not the six hundred.	

the categorization of leadership doctrine can be generalized to the other branches of the armed forces (i.e., the marines, navy, and air force). Kirkland (1998) chronicles three distinct periods in the evolution of American military leadership doctrine: The paternalism era from 1778 to 1940, the confusion era 1940 to 1979, and the renaissance era from 1979 to the present.

The era of paternalism featured a continual evolution of caring and respect for subordinates. Leaders were expected to tend to follower needs and welfare, while fostering cohesion, as well as generating adherence to the military principles of good order and discipline, core values from the beginning of the American military. Leaders during this period were likely seen as transforming leaders. In some cases, officers were even elected by their soldiers. After World War I, then Brigadier General Douglas MacArthur was appointed to be superintendent of the U. S. Military Academy at West Point.

MacArthur had been a member of the corps of engineers for most of his career, the branch of the army that played a vital role in the nation's westward expansion between the founding of West Point in 1802 and the end of World War I in 1918. MacArthur saw that the role of West Point needed to change as the nation's westward push came to an end. He tried unsuccessfully to reorient the programs of the academy to prepare leaders for the nation, as opposed to engineers, but his initiatives opened a debate that continued until 1947.

The confusion era was a particularly challenging time for the American military. The tremendous expansion of the military for World War II had residual effects that were felt for many years following the surrender of Germany, Italy, and Japan. This expansion, combined with battlefield attrition, caused many officers, noncommissioned officers, and soldiers to be promoted extremely rapidly, often advancing them well beyond their training and expe-

rience. The situation was exacerbated by a lack of experience at the lowest levels of the military, as draftees and volunteers were also shipped off to combat with minimal training. What occurred in many cases is that leaders who had advanced far beyond their training and capabilities were leading service members who also possessed little or no training and experience.

As a way to cope with this situation, a culture of authoritarianism and transactional leadership began to creep into the military. Authoritarian leaders tend to rule with an iron fist, stress a strict adherence to rules and regulations, and accentuate the negative consequences for noncompliance. This type of leadership can have a detrimental influence on morale and stifle innovation among subordinates—both of these results occurred between the end of World War II and the beginning of the 1980s.

To counter the trend toward authoritarian and transactional leadership, in 1947 General Dwight D. Eisenhower, then the chief of staff of the army, directed West Point to design a formal program of leadership instruction and urged creation of a department of leadership study. This became the first leadership education program in the history of the United States. It was not, however, until 1978 that a contentious debate over the merits of a formal leadership program at West Point were decided in favor of the value of a systematic program of courses in leadership and the behavioral sciences as part of the core curriculum, combined with powerful experiential leadership learning opportunities and an environment saturated with professional models of effective military leadership.

Both general conditions and specific leadership principles continued to deteriorate as authoritarianism permeated the military throughout the Korean and Vietnam wars. The socially unpopular conflict in Vietnam exacerbated the leadership frustrations in the armed forces. Many scholars and historians agree that the post-Vietnam 1970s marked the low point in the history of the U.S. military.

Following the Vietnam War and the switch from a draft to a volunteer system in 1973, the need for new forms of leadership gradually became more apparent. A paradigm shift occurred in military leadership doc-

trine during the mid- to late 1970s, as sweeping structural changes in the armed forces began to counterbalance low morale and rigid, authoritarian leadership practices. This change ushered in the renaissance era, which continues today. More selective screening mechanisms and better incentives were put in place to recruit and enlist educated, capable men and women who were motivated to join the service. In addition, greater emphasis was placed on realistic, challenging training. Quality-of-life issues such as pay and housing also were significantly improved. But it was the perseverance of leaders who endured the era of confusion that significantly turned the tide and brought forth the emergence of a professional, all volunteer, and highly regarded military. It is generally agreed that this renaissance-era American military is the best-trained, best-equipped, best-led, and most highly regarded military in modern history. The commitment to a systematic approach to developing leaders was vital to the institutional reforms in all the armed services after the shift to an all-volunteer force in 1973. Finally, although this section was framed using Kirkland's (1998) schema, there are many sources that detail the history of the American military.

CORE TENETS OF MILITARY LEADERSHIP

Perhaps the most significant tenet of military leadership is that it is developmental in nature and grounded in systematic training and education for all service members. The American military recognized and embraced the idea that leaders are made rather than born long before the "Great Man" theory of leadership fell out of favor in the larger society. All military personnel—officer and enlisted—receive formal leadership training and education throughout their careers. Of note: Most of this training is not simply skills based; many branches of service have traditional educational requirements for their officers. For example, all officers must have four-year college degrees and many career officers hold graduate degrees. The military, as an institution, embraces the idea of lifelong learning, both in the war fighting profession and through civilian academic institutions. The armed services operate corporate universities that provide progressive and sequential leadership educa-

tion and training throughout a career of service. Because of this, the American military tends to be both highly trained and educated, which has resulted in the emergence of both a professional commissioned officer corps and a professional enlisted non-commissioned officer corps. The development of a professional noncommissioned officers corps that is educated and trained in both technical areas of specialization and leadership is one of the keys to the success of the American military since the transition to the all-volunteer system.

A second tenet of military leadership is that ethics are inextricably tied into leadership doctrine and training. Indeed, there are certain functional ethical imperatives that spring from the very nature of the military institution. As former air force officer Malham Wakin has noted, these imperatives include “subordination of the good of the self to the good of the nation and the military unit, courage, obedience, loyalty, and integrity” (1984, 56). Because of the lethality of warfare and the potential consequences for the nation, professional competence is also an ethical obligation for military leaders who bind themselves morally to their followers and to the American people by swearing an oath that is taken “freely and without any mental reservation or purpose of evasion.”

Military leadership training has a heavy focus on developing ethical leaders. Such training provides leaders with the cognitive frameworks required to make difficult decisions in an environment where issues are complex, multidimensional, and often have tremendous ramifications. The ability of the news media to instantly transmit combat video images, combined with conflicts that are increasingly fought far from home, and the commingling of civilians and combatants on the battlefield have all made it essential that military leaders are well grounded in ethical thought, training, and character.

A third pillar of military leadership is illustrated in the army infantry’s credo: “Follow Me!” Leadership by example has been a cornerstone of the American military since the American Revolution, although its practice has become more subtle and complex as the education level of military personnel has steadily increased. It is no longer a call for blind

obedience. Rather it is a challenge for all levels in the military to lead. Leaders are dynamic participants in the activities of their units and passive, manipulative leadership is both broadly discouraged and seldom practiced. Instead, throughout the ranks leadership is reinforced and leaders are developed. The designated leader’s demonstration of integrity is the central factor in shaping the ethical reasoning and conduct of others in military units.

MILITARY LEADERSHIP IN COMBAT

The ultimate role of the military is to engage in and be victorious in combat, although the military has been used throughout history in a wide variety of roles. Combat is a uniquely challenging situation that places enormous stress and strain on the individual combatant and on the larger organization. To better understand the leadership principles and practices in combat, it is helpful to consider what happens before combat, during combat, and after the fighting is over.

Before combat, individuals and units undergo mission-based training and routine human interactions (such as working, socializing, and celebrating together) that serve to build and develop the unit. It is during this time that critical linkages among organizational members are created. In the best scenario, mutual trust and respect are established, cohesion is generated, and the unit is readied for the impending challenges of combat. These linkages help reduce some of the burdens associated with combat, although it is not possible—or desired—to ameliorate all the stressful effects of combat. A crucial element in building the capacity to fight in military units is training that is both challenging and realistic in which leaders participate, that is followed by reflection and critiques after every training exercise. Military units spend a preponderance of their time in the pre-combat phase, preparing and remaining vigilant for possible combat deployment. Many of the military leader actions during this time are identical to what leaders in civilian organizations might do, such as developing subordinates, counseling, handling administrative matters, and maintaining equipment. This is one reason why military leader-

General Carl von Clausewitz (1780–1831) on Courage and Chance in War

War is the province of danger, and therefore courage above all things is the first quality of a warrior.

Courage is of two kinds; first, physical courage, or courage in presence of danger to the person: and next, moral courage, or courage before responsibility; whether it be before the judgment-seat of external authority, or of the inner power, the conscience. We only speak here of the first.

Courage before danger to the person, again, is of two kinds. First, it may be indifference to danger, whether proceeding from the organism of the individual, contempt of death, or habit: in any of these cases it is to be regarded as a permanent condition.

Secondly, courage may proceed from positive motives; such as personal pride, patriotism, enthusiasm of any kind. In this case courage is not so much a normal condition as an impulse.

We may conceive that the two kinds act differently. The first kind is more certain, because it has become a second nature, never forsakes the man: the second often leads him further. In the first there is more of firmness, in the second of boldness. The first leaves the judgment cooler, the second raises its power at times, but often bewilders it. The two combined make up the most perfect kind of courage.

War is the province of physical exertion and suffering. In order not to be completely overcome by them, a certain strength of body and mind is required, which, either natural or acquired, produces indifference to them. With these qualifications under the guidance of simply a sound understanding, a man is at once a proper instrument for war; and these are the qualifications so generally to be met with amongst wild and half-civilised tribes. If we go further in the demands which war makes on its votaries, then we find the powers of the understanding predominating. War is the province of uncertainty: three-fourths of those things upon which action in war must be calculated,

are hidden more or less in the clouds of great uncertainty. Here, then, above all a fine and penetrating mind is called for, to grope out the truth by the tact of its judgment.

A common understanding may, at one time, perhaps hit upon this truth by accident: an extraordinary courage, at another time, may compensate for the want of this tact: but in the majority of cases the average result will always bring to light the deficient understanding.

War is the province of chance. In no sphere of human activity is such a margin to be left for this intruder, because none is so much in constant contact with him on all sides. He increases the uncertainty of every circumstance, and deranges the course of events.

From this uncertainty of all intelligence and suppositions, this continual interposition of chance, the actor in war constantly finds things different to his expectations; and this cannot fail to have an influence on his plans, or at least on the presumptions connected with these plans. If this influence is so great as to render the pre-determined plan completely nugatory, then, as a rule, a new one must be substituted in its place; but at the moment the necessary data are often wanting for this, because in the course of action circumstances press for immediate decision, and allow no time to look about for fresh data, often not enough for mature consideration. But it much more often happens that the correction of one premise, and the knowledge of chance events which have arisen, are not quite sufficient to overthrow our plans completely, but only suffice to produce hesitation. Our knowledge of circumstances has increased, but our uncertainty, instead of having diminished, has only increased. The reason of this is, that we do not gain all our experience at once, but by degrees; so our determinations continue to be assailed incessantly by fresh experience; and the mind, if we may use the expression, must always be under arms.

ship is seen as directly transferable to many other organizations.

During combat, individuals have to overcome strong emotions, such as fear, anxiety, rage, and guilt, and be willing to both risk their lives and, when necessary, take the lives of others. Fear is an inherent, normal reaction to combat; its absence, in fact, would be a marker for psychological imbalance. Soldiers, sailors, marines, and aviators learn to contain their fear, not remove it, and continue to perform the

mission. No one is exempt from fear and the example of a leader effectively coping with fear is a powerful influence on others during battle. Leaders must share the dangers of the battlefield on land, at sea, and in the air. During battle, military and political leaders must never violate the trust placed in them by those who must risk their lives. Leaders at all levels must be able to honestly and persuasively portray the just nature of the cause for which they are fighting.

After combat, the war fighters must be returned

home and assisted in their reintegration into society as healthy, well-adjusted individuals. Having experienced the horrors of death, destruction, and the loss of close comrades, warriors are vulnerable to long-term effects of combat that can endure a lifetime if not successfully addressed in the immediate aftermath of battle. The experience of trauma coupled with very strong emotions can lead to the inability to form normal human attachments and can impair the veteran's ability to form stable friendships, romantic relationships, and can strain family relationships.

Some combat survivors experience guilt that they are alive while their buddy is dead, leaders may feel guilty because they sent their followers to their deaths, and all feel guilty over the destruction that they have caused. The antidote is for both military and civilian leaders to create communities of trust among veterans that allow integration, reconciliation, and psychological healing (Shay 1995). America's track record with this healing and reintegration process is generally positive, although the reassimilation of veterans into society during and after the Vietnam War left much to be desired in terms of combatant rehabilitation. Returning soldiers need the opportunity to integrate their combat experiences, and they need to be given the opportunity to engage in individual sense-making processes. The armed services have taken positive steps to promote psychological healing after wars since the Vietnam era. Mandatory reintegration and debriefing programs have been instituted to help soldiers come home and recover emotionally from the effects of war. Since the end of the Vietnam War, most returning service members have received a hero's welcome that has been helpful. It takes the nation's gratitude along with leadership and the support of their buddies to make the healing process work most effectively.

FUTURE DIRECTIONS

The terrorist attacks of 11 September 2001 were a catalyst that accelerated the transformation of the American military; a transformation that had already begun following the collapse of the Soviet Union in 1990. A new era of fighting smaller and more elusive

enemies arose suddenly and dramatically. As a result of geopolitical changes, the military institution will also be forced to change and adapt to the new global and political landscape. Now, the development of ethical leaders and followers may be more important than ever because of the complexity, ambiguity, and transparency of future military operations. Former naval captain D. Michael Abrashoff expressed this eloquently:

Crisis spawns leaders, as we saw during those weeks in September when death rained from flawless autumn skies and ordinary people became extraordinary. We may now face a series of crises throughout the world, and the need for steady leaders may be as relentless as the crises themselves (2002, 4).

Ethical leadership is a fundamental requirement for leaders in the American military. The nature of modern warfare and the role of the military in a democratic society will place great demands on military leaders and followers. Transformational leadership remains vital to mastering the challenges facing military units in the twenty-first century because of the very nature of warfare, which makes unprecedented demands on soldiers to risk their lives and well-being in the service of others. The American military has created the most sophisticated leader development systems in the world that continue to produce leaders of character who contribute to their nation both in uniform and after they return as civilians into society.

The impact of future global systemic changes on military leadership is difficult to fully and precisely predict. But, it seems reasonable to assume that military leaders will increasingly need to become more skillful in dealing with ill-defined and rapidly changing threat environments. Future military operations will feature smaller units operating with greater speeds and mobility, putting a greater importance on young leaders and increasing the necessity of leading by direct interpersonal influence. Leaders will operate over longer distances with greater responsibility and independence, connected by powerful information technology. Finally, leaders will operate in distant regions of the world in non-western cultures and potentially unstable societies. Leadership

dispersed throughout military units will remain a fundamental requirement of military effectiveness in years to come, as it has been throughout the history of the United States military.

MODELING AND LEADING BY EXAMPLE

While leading his countryfolk in India's independence movement, Mohandas Gandhi conveyed his message of nonviolence in both words and deeds. Although many people admire him and hold him up as an example, or model, of leadership, not all agree. For example, someone who views nonviolent strategies as weakness will probably not be inclined to model his behavior. This example illustrates that modeling (or leadership by example), while something that leaders can endeavor to practice, is also somewhat dependent upon the observer's perceptions, goals, expectations, values, and beliefs.

WHAT IS MODELING?

Albert Bandura (b. 1925), the father of social cognitive (formerly social learning) theory, defined modeling as the acquisition (or modification) of a complex behavior pattern through observing another. Bandura explains that modeling, or learning from example, involves the adaptation and generalization of an observed behavior pattern to new situations. It is not imitation, in which people copy the exact behavior they have seen others use. For instance, suppose a supervisor responds to a problem brought by an employee by asking, "What do you think should be done?" In imitation, the employee would later use those words when someone asks for a solu-

tion to a problem; in modeling, the employee would adapt and widely generalize that pattern of helping others take initiative in finding their own solutions and making their own decisions.

Bandura emphasized the importance of the observer's thinking processes, or cognitions (for example, the observer's values, goals, perceptions, and expectations) in modeling and other learning. Modeling is not a passive process, in which another's behavior imprints on the brain of an observer; rather, it is a form of vicarious learning, in which people have some influence (or choice) in what they learn from another's experiences. In the example above, if the employee feels valued and appreciates being asked for an opinion, he or she is more likely to model the behavior. If, however, the experience is unpleasant—for example, because it makes the employee feel put on the spot—then the employee is less likely to model it, unless he or she wishes to put someone else on the spot. But in any case, the employee's perceptions, goals, motivation, and expectations have influenced what was learned from the supervisor's behavior.

As for the question of who acts as a model, field and laboratory experiments reveal that observers pay attention to others who are higher in status, powerful, admired, or seen as similar; they are likely to model behaviors for which the model had been reinforced or which brought consequences to the model that they valued for themselves. For example, in organizations leaders who are perceived as having more access to organizational rewards are more likely to be modeled than less resourced leaders.

THE FOUR STEPS IN MODELING

The first step in modeling is paying attention to the model. It is not enough that the leader should behave in a certain way; many things compete for human attention at any given moment, and the observer's attention must be both available and motivated. For instance, people with attention difficulties either because of temporary distraction or because of cognitive styles may observe a model but have trouble learning from observation alone.

The second step is retention of (or remembering)

the complex behavioral pattern observed. Retention is influenced by an observer's memory skill and by the length of time he or she is exposed to the behavior. Frequently repeated behaviors and those of long duration are more likely to be remembered. This may partially account for the generational transmission of parenting patterns, in that children usually observe parents for many years and most parents repeat their behavior many times over.

Reproduction (practice) of the observed behavioral pattern is the third step in modeling. The observer must be capable of accurately replicating the behavior. For instance, a basketball coach may model a defensive play for his or her players, but though they may remember it well, they may initially lack the skill to duplicate it. At this point rehearsal and feedback are helpful. Practice is necessary but not sufficient for successful replication; the learner also requires feedback if he or she is going to perform the behavior well.

Motivation to demonstrate the behavior is the final step in modeling. The observer needs some incentive to try out the modeled behavioral pattern—the situation must seem relevant, the likelihood of success worth the risk of failing, or the goal valued. If the observer has seen the leader rewarded for performing the behavior, this vicarious reinforcement can provide an incentive. Self-efficacy, the confidence that one has the ability to perform a specific task, is another important incentive; high leadership or task self-efficacy increases motivation to demonstrate learned behaviors, while low self-efficacy reduces a follower's tendency to attempt to model or demonstrate a learned behavior pattern.

HOW LEADERSHIP LEARNING OCCURS THROUGH MODELING

In 1992, the researchers Henry P. Sims and Peter Lorenzi, applying social cognitive theory to leadership, presented evidence that modeling has a powerful influence on leadership learning. This is so whether the models are live (as when, for example, a child watches a parent's behavior or an employee watches a manager's behavior), media-presented (as when we observe a model in a movie or taped simu-

Strengthening Role Modeling in Leadership

Can you influence whether others see you as a model? Research indicates that there are several ways to strengthen leadership role modeling. Developing characteristics that others admire in leaders (chief among them honesty, a forward-looking outlook, an inspiring stance, and competence) is one way. Others include helping a group reach important leadership goals, behaving congruently with advocated values in literal and symbolic ways, and deliberate role modeling when you recognize that others are taking their cues from your actions. In their 1995 book *How To Keep Getting Extraordinary Things Done in Organizations* (published by Jossey-Bass), the researchers James Kouzes and Barry Posner report that "leaders, when at their best, recognize . . . that intentional modeling is essential to focusing people's attention, energy, and effort on the expected behaviors until such actions became standard operating procedures—part of the daily stream of activity" (220). Effective leadership role models also explain why they do what they do, using critical incidents as "teachable moments."

lation) or covert (as when we have thoughts or images of leadership behavior). Managers, describing how they learned leadership, most frequently cited two modeling approaches: emulation of a mentor and role modeling. In emulation of a mentor, the manager intentionally learned leadership by observing a specific admired person, while role modeling involved imagining how an ideal leader would behave in this situation.

Theories of charismatic or transformational leadership emphasize role modeling as an important means by which leaders empower group members to achieve extraordinary results, high work satisfaction, and leadership development. In the scholar Bernard Bass's framework, leaders' idealized influence and inspirational motivation help constituents to buy into the leader's challenging vision. Idealized influence is the influence a leader has on group members after earning their respect by virtue of his or her ethical, value-consistent, and group-centered behavior; inspirational motivation is the motivation a leader pro-

vides a group by his dedicated support of a credible and important organizational vision. Each highlights an aspect of role modeling: Idealized influence focuses on when and how the leader gains the status of role model; inspirational motivation describes the resultant influence the leader has on the group or individual as a role model.

Studying best practices of leaders across many fields, the researchers James Kouzes and Barry Posner identified modeling as one of five key transformational leadership practices. Leaders set the example for desired behavior (through words, actions, symbolism, and organizational priority setting) while building group momentum working toward valued goals.

In acting as models, leaders affect observers in three ways. First, they influence the leadership styles or behaviors that observers adopt. Numerous studies have found significant correlation between leaders' and group members' leadership styles, particularly in the case of transformational leadership based on role modeling. When employees rated their direct superiors as more transformational, it turned out the superiors' supervisors were more transformational too; studies on parents' and children's leadership styles have produced similar results. For example, when parents modeled transformational leadership to their high school athlete daughters and sons, those adolescents were more likely to be seen as transformational leaders by their peers. Parents model other leadership styles as well: College students, particularly males, were similar to their parents in their leadership emphasis on either getting the task/job done or how group members were feeling. Across studies, there is little or no evidence for counter-role modeling—that is, of learning to do the opposite of a supervisor's or parent's modeled leadership style. While people may react strongly to disliked leadership styles employed by parents or bosses, their dislike does not result in their learning to act differently.

Role model leaders also affect observers by their deft management of emotions. Much of the impact that transformational leaders have upon group achievement stems from the emotional responses the leaders evoke in their group members. When leaders (whether formal or informal) help others identify and develop constructive emotional responses (such as optimism or determination) in a difficult, complex, or confusing situation, they are usually seen as role models. Winston Churchill's ability to engender hope and to challenge his people to resistance in besieged Britain during World War II exemplifies this ability.

Finally, leaders acting as models affect followers by empowering them. Leadership role modeling can have a powerful impact on observers' job-specific self-efficacy and leadership self-efficacy. Coaches often help teams achieve more than the players' individual skill levels would predict by building their collective and individual self-efficacy in the face of an important goal. Leadership role modeling can also increase observers' willingness to take risks, to make changes, and to go beyond their role descriptions to help the organization reach important goals. Eleanor Roosevelt changed from an inhibited and painfully shy young woman into a confident, adventurous, and independent thinker and champion of social causes thanks to the mentoring and role modeling of her secondary school headmistress.

HOW LEADERSHIP ROLE MODELING CAN STRENGTHEN ORGANIZATIONS

Role modeling has been used to develop technical competencies and leadership style, skills, and attitudes. Leadership-specific behavioral modeling programs often feature observation of a taped or live model, followed by rehearsal of the modeled behavior in a simulated setting and then by constructive feedback and social reinforcement. The final step is transfer of training, which occurs when the learner successfully uses the modeled skill in a leadership situation.

Modeling, or learning by example, is also a component of formal and informal mentoring programs in business, education, the sciences, and other fields.

Formal programs partner those identified as masters in the field with newer employees or with those identified as having high potential in the organization. E-learning (which features virtual simulations, a wider range of models, and online training possibilities) will only increase organizations' ability to use role modeling to increase employees' leadership skills.

MODERN OLYMPICS MOVEMENT

Although a number of nineteenth-century Europeans endeavored to revive the ancient Olympics, none succeeded. W. P. Brookes inaugurated a series of annual “Olympian Games” in Shropshire in 1849. They were purely local affairs in which rural folk participated in traditional pastimes. In 1859, the Greeks made the first of several attempts to revive the Olympics, but their games, local and limited to

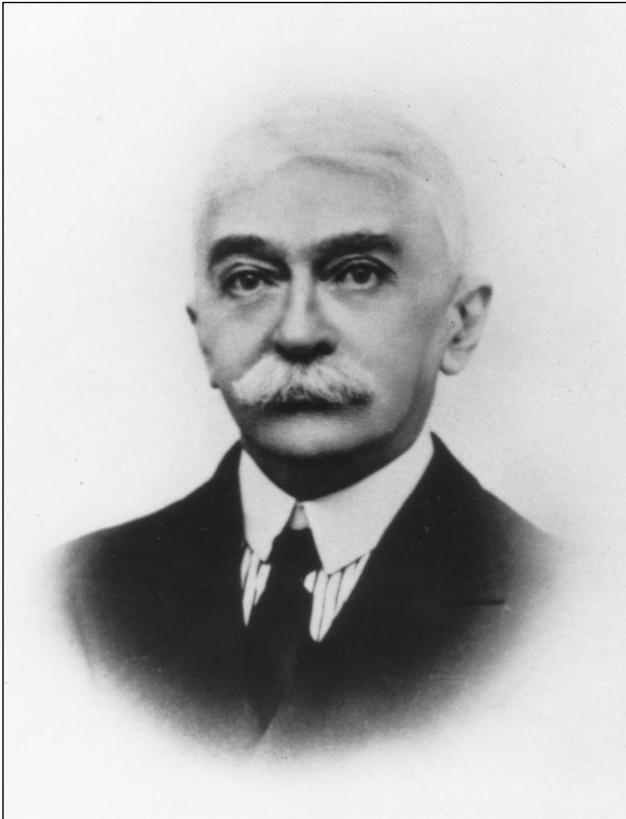

ethnic Greeks, were unnoticed by the rest of the world. In 1891, John Astley Cooper boldly proposed a grand Pan-Britannic and Anglo-Saxon Festival, but it was not until 1930 that his dream was partially realized in the form of the British Empire Games (retitled the Commonwealth Games).

THE MODERN OLYMPIC REVIVAL

Pierre de Coubertin, who possessed a more inclusively cosmopolitan vision and greater organizational skills than his predecessors, succeeded where they had failed. Schooled in the classics like every educated European, he exploited the aura of antiquity in order to achieve an avowedly political goal—international peace and reconciliation. His motivation was more than political. He was obsessed with a vision of the Olympics as a secular religion. “The first essential characteristic of ancient as of modern Olympism,” he proclaimed, “is that it is a religion.”

In 1894, Coubertin convened an international conference at the Sorbonne, ostensibly to discuss amateurism in sports. Seated in a grand auditorium whose walls were decorated with classical murals by Pierre Puvis de Chavannes, the delegates were aurally seduced by the ancient “Hymn to Apollo,” discovered the previous year at Delphi, set to music by Gabriel Fauré, and sung by Jeanne Remade and the chorus of the Opéra Français. In this carefully constructed milieu, Coubertin suggested that an International Olympic Committee (IOC) be organized to revive the ancient games. The delegates agreed and Coubertin selected the members. Some of them, like the American William Milligan Sloane and the Czech Jiri Guth-Jarkovvsky, were energetic and able men; others were titled aristocrats whom Coubertin chose for their prestige. To this day, the IOC selects its own members, all of whom are supposed to represent the Olympic movement rather than their country.

Athens was chosen as the most appropriate site for the revived games and a Greek man of letters, Demetrios Bikelas, was chosen as the first IOC president. (He served, rather ineffectually, until 1896, after which Coubertin took the office and served until 1925.) Coubertin controlled the program for the

games and created a clever mix of ancient and modern sports. He included the javelin and the discus, events that had not been a part of modern track-and-field contests. His friend Michel Breal donated a trophy to be given to the winner of a twenty-two-mile race from the site of the battle of Marathon to the Olympic stadium. (The marathon's present distance—26.2 miles—was set in 1908 when the race began at Windsor palace and ended in the stadium at Shepherd's Field.) The throwers and the runners were joined by fencers, gymnasts, swimmers, and wrestlers; none of those events were a part of the ancient games. In other contests, oarsmen, cyclists, sharpshooters, and tennis players used modern sports equipment unknown before the nineteenth century.

Ironically, the success of the 1896 games threatened Coubertin's leadership. The Greek royal family took full credit for games and announced their intention to host all future quadrennial celebrations. Coubertin was adamant, insisting that the games had to

be nomadic in order to demonstrate the universality of his ideal. Coubertin prevailed, but he had to compromise and allow the second and third Olympics to be embedded in the world's fairs that took place in Paris (1900) and St. Louis (1904). The athletic program for 1900 was designed by Daniel Merillon and it was very nearly a disaster. The sports events stretched over a period of two months and were so poorly publicized that few people knew that the Exposition Universelle included them. There were, of course, wonderful moments, but Coubertin was extremely disappointed. He was so distressed by the prospect of the 1904 games that he convened the IOC in London rather than in St. Louis (and very few European athletes crossed the Atlantic to compete in what many of them considered to be a wilderness).

Coubertin found solace in a series of Olympic Congresses, the most important of which took place in Brussels in 1905. These conclaves gave him a platform from which he articulated his dream of Olympism enriched by contests in art, literature, and music.

The games celebrated in London in 1908 were a source of great satisfaction to Coubertin because they were well organized and because the European and North American press took notice of them, which had not been the case for the earlier games. One grave problem did, however, emerge. All the officials were chosen by the British hosts. James Sullivan, the Irish-American head of the American team, complained bitterly that the officials were biased against Irish-American athletes. Sullivan had a point. When the Italian marathoner Dorando Pietri collapsed the officials dragged him across the finish line and proclaimed him—rather than Johnny Hayes—the winner. The IOC overturned the decision and Coubertin saw to it that the officials for future games were as international as the athletes.

Those celebrated in Stockholm in 1912 were the first with which he was fully satisfied—except that his colleagues on the IOC had voted to allow women to compete as swimmers and divers. Coubertin was too much a child of his century to welcome them.

Although Coubertin was a patriotic Frenchman, he wanted the Olympic movement to be neutral during World War I. He moved the IOC's headquarters from Paris to Lausanne, Switzerland, where it

remains. When the Olympics resumed, in Antwerp in 1920, Coubertin proudly displayed the five-ring Olympic flag that he had designed to symbolize the unity of the globe's five continents. He noted that the colors of the rings represented those of all the world's national flags.

In 1925, Coubertin turned the presidency of the IOC to a Belgian count, Henri de Baillet-Latour, a capable administrator who lacked his predecessor's charisma. Baillet-Latour was fortunate to have the support of an executive board, formed in 1921.

The greatest crisis of the Belgian's presidency came in 1933 when Adolf Hitler became chancellor of Nazi Germany. Berlin had been chosen as the site of the 1936 games, but Hitler's racism was clearly at odds with the universalism of the Olympic Charter. The British and American members of the IOC successfully insisted that their German colleagues obtain a written guarantee that Jewish athletes would be allowed to compete for Germany. When the Nazi regime broke its promises and excluded Jews from the team, Baillet-Latour's response was to have the IOC expel the only member who called for a boycott of the 1936 games. In his place, the IOC elected Avery Brundage, the crusty, opinionated, obdurate Chicago businessman whose fanatical commitment to the Olympics had motivated him to block the boycott movement in the United States.

Baillet-Latour died in 1942, in the midst of World War II, and leadership of the IOC was assumed by IOC Vice President Sigfrid Edström, a Swedish industrialist. He was a willful man. When the IOC members from Belgium and the Netherlands sought, after the war, to prevent the return of the committee's Fascist and Nazi members, Edström brushed aside their objections: "These are old friends whom we receive today."

Recognizing Brundage's administrative ability and his devotion to "Olympism," Edström nominated him for IOC vice president and then, in 1952, for president. Brundage won the IOC's first truly contested presidential election.

That the IOC became a truly international organization in the postwar years was due largely to Brundage's efforts. As vice president, he had sought, found, and brought into the IOC a number of Latin

American sportsmen. His ecumenism was strong enough to overcome his lifelong hostility to Communism. He made it part of his mission to convert the followers of Marx, Lenin, and Mao to the tenets of Coubertin. To accomplish this, he closed his eyes to the Soviet Union's egregious violations of the amateur rule. Disingenuously explaining to doubters that the Russians had assured him of their faithful adherence to the Olympic Charter, Brundage—joined by all but three of the IOC's members—voted in 1951 to recognize the USSR's National Olympic Committee (NOC). Brundage was asked to swallow a harder pill when the Kremlin demanded the right to name its own representatives to the IOC. He and Edström complained bitterly about this violation of the rules, but they eventually acquiesced in the infraction and Konstantin Andrianov took his seat among the princes, the generals, and the millionaires of the IOC.

As vice president and president, Brundage also managed, after years of difficult negotiations, to bring the German Democratic Republic into the Olympic movement. He tried vainly to persuade the leaders of the People's Republic of China to follow the German example. (The PRC's unacceptable precondition was that the IOC expel the Taiwan-based non-Communist Republic of China.)

After his election to the presidency, Brundage—aided by such influential members as the Marquess of Exeter (UK), Jean de Beaumont (France), and Giulio Onesti (Italy)—recruited IOC members from sub-Saharan Africa. In 1963, Adetokunbo Ademola, a British-educated Nigerian jurist, became the committee's first black member. Nine years later, when Brundage retired as president, there were four black Africans on the IOC (and four new members from North Africa). Brundage hoped to include the newly independent states of Africa in the Olympic movement without excluding white-ruled South Africa, but the stubborn refusal of the South African NOC to take a stand against apartheid gave Brundage no choice. South Africa was expelled in 1970.

CHALLENGES TO AUTOCRATIC LEADERSHIP

The enlargement of the IOC had some unanticipated consequences. Many European and North American

Coubertin Chooses His Olympic Committee

The extract below from Pierre de Coubertin's *Olympic Memoirs* graphically illustrates the complete control Coubertin had in organizing the International Olympic Committee (IOC).

I was allowed a free hand in the choice of members of the IOC. Those proposed were all elected without any amendment; the list comprised: Bikelas for Greece; Callot and myself for France; General de Bouowsky for Russia; Colonel Baick for Sweden; Professor Sloane for the United States; Jiri Guth (Bohemia); Fr. Kemeny (Hungary); C. Herbert and Lord Ampthill for England; Professor Zubiaur for Argentina and L. A. Cuff for New Zealand; finally Count Lucchesi Palli accepted provisionally for Italy and soon afterwards Count [Maxime] de Bousies for Belgium. Nobody seemed to have noticed that I had chosen almost exclusively absentee members. As their names figured on the long list of honorary members of the Congress; people were accustomed to seeing their names and readily assumed that they were staunch members always at their tasks. I needed elbow room at the start, for many conflicts were bound to arise. Some at any rate would want to seize the helm, either to benefit from the success of the venture or to modify the direction. Such is human nature.

nations had two or three representatives on the IOC while many Third World states had none at all. Andrianov and his Communist colleagues were determined to rectify the imbalance. They moved that every NOC and each of the twenty-five international sports federations have representation on the IOC. Brundage was vehemently opposed. When the question came to a vote, in 1961, the reformers were defeated thirty-five votes to seven.

As soon as the USSR's initiative was defeated, Brundage faced another challenge to his autocratic leadership. Italy's resourceful Onesti invited representatives of every NOC to meet with him to consider whether or not to form a permanent organiza-

tion. Representatives from sixty-eight committees caucused in 1965 and established an exploratory committee that evolved, three years later, into the Permanent General Assembly of National Olympic Committees (PGA). Brundage fought this initiative because he was vehemently opposed to any reform that institutionalized one-country-one-vote rule. To him, it seemed absurd that Dahomey, Mongolia, and Panama should have the same weight in Olympic affairs as the United States, Great Britain, and the Soviet Union. Brundage's opposition failed to thwart Onesti, whose proposals had widespread support among Europeans as well as Asians, Africans, and Latin Americans. The PGA, renamed the Association of National Olympic Committees (ANOC), gradually achieved legitimacy as an integral part of the Olympic movement.

Still another challenge to autocratic leadership came in 1967 in the form of the General Assembly of the International Federations (GAIF). Unlike the PGA, the GAIF was not formed to give greater voice to the Communist bloc and the Third World. It was led by Australia's Berge Phillips (representing the *Federation Internationale de Natation Amateur* [International Federation of Amateur Swimming]) and France's Roger Coulon (representing the *Federation Internationale de Lutte Amateur* [International Federation of Amateur Wrestling]). Like the PGA, the GAIF was able to survive Brundage's opposition and to become a recognized IOC partner.

The last challenge came in Munich in 1972 when Palestinian terrorists infiltrated the Olympic Village and murdered eleven Israeli athletes. Should the remaining events be cancelled? Backed by the entire IOC (and by Israel's Prime Minister Golda Meir), Brundage announced to the world: "The games must go on."

This was the last act of his twenty-year-long presidency. The restive members chose Michael Morris, Lord Killanin of Ireland, an amiable bumbler, as his successor. Brundage said scornfully, "We need a leader, and Michael isn't a leader," but Killanin understood the mood of the IOC. "One thing I can tell you," he remarked, "I am not Avery Brundage."

Unfortunately, Killanin had to face crises at least as grave as his predecessor's. At the first games of

his presidency, Montreal's, Killanin watched helplessly as the Canadian government refused to issue visas to the team from the Republic of China. He was equally helpless to prevent the departure of twenty-eight African teams whose governments were angered by the IOC's refusal to expel New Zealand for playing rugby with South Africa. Even worse was the crisis of 1980. President Jimmy Carter demanded an Olympic boycott to punish the USSR for its invasion of Afghanistan. Killanin was unable to block him. Although most European nations sent teams to Moscow, Germany, Japan, and a number of Islamic nations did not.

Killanin's eight years were not a complete failure. He managed skillfully to formalize the IOC's relationships with the PGA and the GAIF. He began the process that eliminated the anachronistic amateur rule (which Brundage had fanatically defended). And Killanin secured solvency for the IOC—thanks to a series of increasingly lucrative television contracts.

In assessing the leadership of Lord Killanin, Richard Kevan Gosper of Australia remarked, "We were lucky to survive his presidency." When Gosper and his colleagues on the IOC made Juan Antonio Samaranch their president, they hoped for stronger and more imaginative leadership than they had had from his limited and indecisive predecessor. Their hopes were fulfilled. At the time of Samaranch's election, in 1980, he was Spain's ambassador to the USSR. Prizing his diplomatic skills, the Socialist government had sent him to Moscow three years earlier, despite the fact that he had served as Spain's Minister of Sports during the dictatorship of Francisco Franco.

Whatever Samaranch's politics might have been before Brundage brought him into the IOC in 1966, he worked during his presidency to democratize the Olympic movement. He brought many Africans into the IOC, including Jean-Claude Ganga, one of the foremost critics of racial segregation. The end of apartheid in South Africa, in 1991, was clearly something to which the IOC had contributed (through its 1970 expulsion of the South African NOC). Greeting Nelson Mandela at the IOC's Lausanne headquarters, Samaranch exclaimed, "We've been waiting for you for a long time."

Although Samaranch cannot claim all the credit for solving the "two Chinas" problem that baffled Brundage and Killanin, it is nonetheless true that it was during his presidency, in 1984, that the People's Republic of China finally entered the Olympic movement. (These games, celebrated in Los Angeles, were diminished but not crippled by a USSR-led boycott that Samaranch was unable to prevent.)

Under Samaranch, there was a transformation of women's roles within the Olympic movement. At the Moscow games of 1980, 18 percent of the athletes were female; at the "Centennial Games" in Atlanta in 1996, more than 36 percent were female. Women now compete in a number of sports, like soccer, ice hockey, and weightlifting, that in 1980 were still considered exclusively "masculine preserves."

At an Olympic Congress convened in Baden-Baden in 1981, the IOC elected its first female members. Flor Isava Fonseca (Venezuela) and Pirjo Haggman (Finland) broke the eighty-six-year-old male monopoly. Before Samaranch's retirement, seven more women were brought into the committee. In 1996, the IOC resolved that by 31 December 2005, every NOC and international sports federation must reserve at least 20 percent of its legislative and executive positions for women.

Under Samaranch the IOC's economic situation was transformed by a contract signed, in 1985, with Lausanne-based International Sports, Culture, and Leisure Marketing (ISL). By the end of 1988, TOP I ("The Olympic Program I") brought the IOC \$95 million in the form of corporate sponsorships. The nine multinational corporations who participated in TOP I grew to twelve for TOP III and hundreds of other corporations paid smaller amounts to become sponsors of the winter games. TOP II raised some \$175 million. TOP III brought in some \$350 million and TOP IV, which concluded in 2000, did even better.

One result of this aggressive marketing program was the achievement of one of Samaranch's most important goals: a reduction of the IOC's previous near-total dependence on the sale of television rights. This goal was achieved despite the fact that income from these rights has continued to escalate. Richard Pound of Canada, the IOC member to whom Samaranch entrusted media negotiations, was extremely

effective. The rights to televise the summer games at Barcelona and Atlanta were sold for \$636 million and \$900 million. After securing the American rights to the summer games in Sydney (2000) and the winter games in Salt Lake City (2002) for \$1.2 billion, NBC contracted in December 1996 for the rights to the Olympic games of 2004, 2006, and 2008. The cost? Another \$2.3 billion. Despite these huge increases, TV accounted for only 47 percent of the IOC's 1993–1996 income. In the course of these often protracted negotiations over TV rights, the IOC achieved another goal: an increase in the income from the European and Japanese networks and a proportionate decrease in the relative importance of money from the United States. For the rights to the games of 2004, 2006, and 2008, the Europeans and Japanese agreed to pay nearly \$2 billion.

SCANDALS AND CONTROVERSIES

The economic success of the IOC has motivated cities to bid frantically for a chance to host the games. They courted IOC members and showered them with costly inducements, including—according to the IOC's critics—the nocturnal company of some of the world's most compliant women. The outcome of the scramble was the worst bribery scandal in Olympic history. On 16 June 1995, Salt Lake City, Utah, won the bid to hold the 2002 Winter Olympics by a vote of fifty-four to thirty-five. On 24 November 1998, Salt Lake City television station KTVX began what the *New York Times* later referred to as a “cascade of disclosures.” In addition to “scholarships” that amounted to nearly \$400,000, various IOC members or their relatives had received lavish vacations, costly medical treatments, expensive gifts, and direct cash payments.

While insisting that there was “no possibility” that the 2002 games might be taken away from Salt Lake City, Samaranch promised an prompt investigation and a purge of those found guilty. He formed an ad hoc commission chaired by Richard Pound. Eventually, five IOC members resigned and six were expelled. Nine others received warnings.

Noting that two-thirds of those who lost their seats were Africans or Pacific islanders, critics

charged the IOC with racist scapegoating. They alleged that many others, including executive board member Kim Un-yong of South Korea, were equally guilty. Critics, demanding that Samaranch accept responsibility for corruption, called for his resignation. He refused and received a nearly unanimous vote of confidence from the committee.

The IOC's policy toward performance-enhancing drugs is another cause for contention. Samaranch's critics acknowledged that Samaranch spoke against drugs and “the creation of artificial athletes,” but they cited the epidemic of drug use as proof positive of his insincerity. There is no doubt about the prevalence of drugs, but neither is there evidence that the IOC encouraged the epidemic of drug use. The IOC sponsored a number of international conferences on banned substances, the most important of which took place in Ottawa in 1987. IOC-accredited laboratories analyze approximately 100,000 urine samples a year, of which about 1.25 percent test positive. The IOC has taken action against many of the world's most famous athletes, including the Canadian sprinter Ben Johnson (Seoul, 1988), and the Irish swimmer Michelle Smith (Atlanta, 1996). Although the IOC's efforts to eliminate drugs were unsuccessful, there is no reason to doubt Samaranch's sincerity or to accuse him of subterfuge and disingenuousness.

Of all the charges brought against Samaranch, the most difficult to assess is the claim that he sought constantly to consolidate and increase his personal power within the world of international sports. Behind the scenes, Samaranch worked with group of powerful men, including Horst Dassler, the German owner of Adidas (who also owned half the shares of ISL), Primo Nebiolo, the Italian head of the International Amateur Athletic Federation, Joao Havelange, the Brazilian head of the Fédération Internationale de Football (International Football [Soccer] Federation), Mario Vázquez Raña, the Mexican president of ANOC, and Kim Un-yong, the Korean president of the GAIF.

That Samaranch worked closely with these men is no secret, but there is as yet no persuasive evidence that he violated the Olympic Charter or conspired to control the IOC by morally questionable means. If a

coterie of insiders controlled the IOC during Samaranch's presidency, it is hard to see why Sydney was chosen for the summer games of 2000 when Beijing had the support of Havelange, Nebiolo, and Vazquez Rana. Future historians may characterize Samaranch as a Machiavellian figure who survived in power by means of bribery and corruption, but it is premature to conclude that on the basis of rumor and innuendo.

In December of 1999, in the wake of the Salt Lake City scandals, the IOC voted that sites of future games are to be evaluated by a special committee and that members not serving on the committee are to be prohibited from site visitations. After the Sydney games, future Olympics are to have no more than 280 events and every National Olympic Committee will have the right to send at least six athletes to the games. The IOC will be limited to a maximum of 115 members, 70 of whom are to be "individual" members. The other 45 will consist of 15 National Olympic Committee presidents, 15 international sports federation presidents, and 15 athletes who participated in the games within four years of their election to the IOC. Except for the athletes, who are to serve four-year terms, members are to be elected to eight-year terms. The IOC president will serve a single eight-year term (with the possibility of reelection to a four-year term). It is difficult to see how Samaranch's successor, Belgium's Jacques Rogge, can control the IOC and the Olympic movement as tightly as did Coubertin, Brundage, and Samaranch.

MORAL IMAGINATION

Moral imagination provides leaders with insight into others and the world and helps them make moral decisions and form visions. Leaders need imagination to determine the values they embrace and the feelings that these values engender in themselves and others. Leaders use imagination to animate values, apply moral principles to particular situations, and understand the moral aspects of situations. Imagination and moral values are the fundamental components of a vision.

BACKGROUND OF THE IDEA

One can find discussions about moral imagination in twentieth-century philosophy, anthropology, and literature, but eighteenth-century philosophers also realized its importance. Immanuel Kant (1724–1804) thought that imagination had to play a role in ethics because pure (a priori) moral principles such as “do not lie” cannot be sensibly applied in the variety of situations that confront people in everyday life. Morality is not simply a set of rules or values. It requires a means of knowing when certain moral principles are relevant and how to apply them. David Hume (1711–1776) thought morality was a mixture of emotion—or passion—and reason. He said that reason had insight but no agency, while passion had agency but no insight. Hume concluded, “reason is and ought only to be the slave of the passions” (Hume 1988, 415). Hume believed that imagination transforms our moral feelings, knowledge, and experiences into moral obligation to others through sympathy or empathy; without moral imagination, one would not have empathy. For example, without moral imagination one would not have empathy. Without empathy it would be impossible to apply a moral principle like the golden rule—do unto others as you would have others do unto you.

In the twentieth century, the anthropologist Clifford Geertz defined moral imagination as the ability of people to share emotions across cultures. After reading a Western anthropologist's description of a Balinese ritual in which the concubines of a raja throw themselves into the raja's funeral pyre, Geertz

asked, “How it is that people’s creations can be so utterly their own and so deeply a part of us?” (Geertz 1983, 54). While the ceremony itself is barbaric to the Western mind, the art and drama of it also moves people from the West. According to Geertz, moral imagination is a conglomeration of morality, emotion, and art: “Life is translation and we are all lost in it” (Geertz 1983, 55).

Morality also depends on a person’s willingness to open up his or her world to include a variety of others. Imagination is not just about creating something new, but about having a broad perspective. As the philosopher and novelist Iris Murdoch noted, “moral people are not necessarily more creative, but rather they possess a larger picture of life, which allows them to see right and wrong clearly and with less doubt” (Murdoch 1993, 325). A broad perspective can come either from the cultivation of imagination or from an expansive use of experience in life. Another philosopher, Sabina Lovibond, noted, “The use of moral concepts by individual speakers over time is grounded in an increasingly diversified capacity for participation in a variety of social practices” (Lovibond 1983, 32).

Philosophers such as Murdoch and Mary Warnock recognized the role that emotions played in morality and intelligence before research on emotional intelligence had even begun. As Mary Warnock observed, “Children cannot be taught to feel deeply, but they can be taught to look and listen in such a way that the imaginative emotion follows. Imagination helps us to see the familiar at a different level, and sporadically, we may also use it to render our experience unfamiliar and mysterious” (Warnock 1976, 206–207). In an essay on teaching the novelist Jane Austen, the literary critic Lionel Trilling argued that books written by authors who possess moral imagination stimulate moral feelings in the reader. He says that when we read these books, “We undertake an activity which humanism holds to be precious, in that it redeems the individual from moral torpor” (Trilling 1979, 212).

MORAL IMAGINATION AND COGNITIVE SCIENCE

The philosopher Mark Johnson’s book *Moral Imagination* offers the most comprehensive treatment of

the subject. Drawing from anthropology, linguistics, philosophy, and psychology, Johnson gives a detailed account of moral imagination based on insights from the cognitive sciences. First, he discusses the role of prototypes in ethics. (Prototypes are models that convey the essential characteristics of a type. For example, a role model, a proverb, or a story may help one understand what constitutes kindness and classify behavior as kind and unkind.) People do not understand categories by making lists of things, but rather through prototypes of them. Johnson says that the fact that people understand moral principles by prototypes explains why people learn moral principles from their experiences and from things like art, literature, and case studies.

Johnson then uses the literature on frame semantics to talk about the larger contexts in which people see the world. In ethics, any situation can be framed in a variety of ways with a variety of consequences, but there are limits to the number of ways that people can frame things. Metaphor is also part of moral reasoning, according to Johnson. Linguists and psychologists have shown that our conceptual system is largely formed by systemic metaphorical mappings. People understand abstract and unstructured domains of ideas via more concrete, highly structured mappings that come from experience. Johnson says that without metaphorical understanding, we could not make moral judgments. Metaphor allows people to conceptualize situations in different ways, provides different ways of understanding morality, and allows for analogizing and moving beyond prototypes to new cases. Base-level experiences such as pain, pleasure, harm, and well-being also help people apply moral principles such as human rights to a variety of different individuals in different cultures. Baseline experiences help people empathize with others and apply moral principles using analogical reasoning.

Lastly, Johnson emphasizes the importance of narrative as the fundamental way that people understand the world. Johnson says, “Narrative is not just an explanatory device, but it is actually constitutive of the way we experience things. No moral theory can be adequate if it does not take into account the narrative character of our experience” (Johnson 1993, 11). Using insights gained from the cognitive

scientist Howard Gardner's book *Leading Minds*, Johnson defines moral imagination as "an ability to imaginatively discern various possibilities for acting within a given situation and to envision the potential help and harm that that are likely to result from a given action" (Johnson 1993, 202).

APPLICATION TO LEADERSHIP DEVELOPMENT

The philosopher and leadership scholar Joanne B. Ciulla wrote about the implications of moral imagination for teaching business ethics in 1991 and for leadership development in 1996. According to Ciulla, an ethics course should use subjects such as art and literature to stimulate the imagination, touch students' moral sentiments, give students the opportunity to practice problem solving, and broaden their perspective on the world. She argues that there are creative and prescriptive elements to moral imagination. The creative function of moral imagination concerns *imagining how*, that is, how people think about putting their values and moral principles into action. This encompasses fulfilling moral duties and obligations and upholding principles and values through creative solutions and creative ways of solving problems and working with others. The prescriptive element of moral imagination is *imagining that*, which encompasses empathy and the ability to disengage from a particular mind-set to identify and foresee moral problems or obligations. It often takes imagination to see that something is a real or potential ethical problem. Ciulla says, "Empathy, like moral imagination, is about getting the moral and factual parts of the story right (*seeing that*), otherwise we are putting ourselves in the wrong person's shoes" (Ciulla 1998, 101).

Part of a leader's job is to help others imagine morally better ways of living and doing things. Ciulla says the element that connects *imagining how* with *imagining that* is the drive to seek truth and a passion to do what is morally right. She argues that developing critical thinking skills for assessing truth, cultivating moral feelings, and stimulating moral imagination are the most important aspects of leadership development. Ciulla believes that without

critical skills and moral imagination leaders cannot create visions, understand their moral obligations to others, or implement their beliefs and values in the ways that they lead and in the initiatives that they take for change or transformation.

CONTRIBUTION TO LEADERSHIP RESEARCH

Work on moral imagination has the potential to contribute two things to leadership studies. First, it offers insight into how to teach ethics in leadership development programs. Second, the concept offers a multilevel and interdisciplinary way to analyze how leaders lead, make ethical decisions, and form visions. The philosophic literature on moral imagination is still new to leadership studies, but it is slowly working its way into the literature. It has the potential for enriching our understanding of the moral and intellectual dimensions of vision, motivation, followership, and change.

 **MORGAN, ARTHUR E. (1878–1975)**
*American engineer, college president,
 and social reformer*

Arthur E. Morgan was a dynamic and controversial leader in flood control, rural development, and community planning, and he saw himself as an innovative social engineer. Widely known as a writer on education and social issues, he served as the first chairman of the Tennessee Valley Authority (TVA), a public works project initiated during the presidency of Franklin Delano Roosevelt. Morgan founded towns and intentional communities, wrote prolifically, and started a small organization called Community Service Inc., which is still based at Antioch College in Yellow Springs, Ohio, where Morgan served as president during a contentious but financially successful decade. He is still considered by many an inspiring leader and moral reformer, but the story of his life also demonstrates the risks of imposing a moral vision on others.

Morgan was born in Cincinnati, Ohio, in 1878, and raised in northern Minnesota. He had only three years of high school and dropped out of college in 1900, after two attempts to attend classes in Colorado, where he is also thought to have worked as a ranch hand, miner, typesetter, and beekeeper. He returned to Minnesota and began to learn engineering by working with his father, constructing drainage and levee systems for flood controls and preparing plans for the reclamation of peat marshes. By 1910, he owned his own company and was developing a national reputation as a flood control engineer. Although in later life he complained of his health and attributed some of his difficulties to a physiological problem, a kind of brain damage, as a young man he was six foot two inches tall and strikingly vital.

In 1913, he was appointed chief engineer for a new dam project in Dayton, Ohio. Dayton had suffered a historic and devastating flood earlier in the year, in which three hundred people had died, and leading businessmen had raised \$2 million to help

fund a solution. Morgan set to work with characteristic determination. After extensive research collecting and analyzing data on floods in Europe and the United States, he offered a number of unorthodox flood control solutions, included creating “conservancy districts” and building large earthen “dry dams” (they look like huge Indian mounds) that served as reservoirs in case of emergency and as public parks the rest of the time.

SOCIAL AND EDUCATIONAL REFORMS

But Morgan was interested in more than dams. His second wife, Lucy Morgan, whom he married in 1911, was a Quaker and an ardent reformer, who believed in “a proper diet and efficient, moral living” (Talbert 1987, 28). The Morgans committed themselves to the ideal of small town life and organic communities. These ideas had been in vogue during the progressive period and Morgan had also been strongly influenced by the utopian novelist Edward Bellamy. But it was his wife’s interest in social reform, particularly her practical proposals for improving workers’ lives, that influenced him most.

He showed skill, creativity, and an absolute determination in all his projects, and at that stage in his life he was particularly adept at engaging others—including those with considerable financial and publicity resources—in his efforts. He created model workers’ settlements, schools for children and new immigrants, recreational programs, workers’ insurance schemes, and town meetings. Supported by various Dayton business leaders, he was instrumental in founding the Moraine Park School in 1917. Like the famous educator John Dewey, Morgan believed education should not be separated from real life experience, and Moraine Park stressed student self-governance and participation in teaching. Growing national recognition led to an invitation from the *Atlantic Monthly* to write an article about his views on education. He was to write for the magazine regularly for the next two decades.

In 1920 he was elected to the board of trustees of Antioch College, a small Ohio school that was in dire financial straits. Morgan devised a plan for saving the college and overhauling its educational program. He

became its president in 1921 and was given a free hand to reinvent the college. Lucy Morgan wrote that they planned to “[dedicate] our lives to embodying our dreams at Antioch College” (L. G. Morgan 1928, 100). Morgan’s efforts, which included removing almost all the existing faculty and administrators, were successful. Enrollment quadrupled within a year, and the “Antioch Plan” got widespread attention from writers and educators. Morgan’s monthly newsletter, *Antioch Notes*, was widely read.

But Morgan, who aimed at more than educational reform, saw his efforts at Antioch as the beginning of the moral regeneration of America. He used *Antioch Notes* as a pulpit, and his preaching would have been appreciated by the most fundamentalist of Christians. He was adamantly opposed to drinking, smoking, and gambling, immoral theater, sexual activity that wasn’t intended for home-building or procreation, and even, it seemed, recreation in general. It is not surprising that this perspective led to some difficulties with the faculty, and even less surprising that it put him in conflict with the students. What is surprising is the wide appeal Morgan had; he was for decades a popular and well-known writer.

While in Europe in 1931, he reflected on his ten years at Antioch: “I know I am and have been inadequate for such leadership. Lacking educational and cultural background, with unstable temperament and bad judgment, I did not expect that I should for long be leader of the enterprise” (Morgan 1931). Faculty members, in response, asked whether Morgan’s strict moral code did not conflict with other values he advocated, such as open enquiry. They also contended that the imposition of Morgan’s stringent moral standards, on students and faculty alike, was sometimes in conflict with democratic principles.

Even today, Morgan remains a much-admired figure at Antioch, and writings about him do not mention these considerable problems. The innovative programs that developed, or matured, during his tenure as president are still considered important developments in educational philosophy. They included entrepreneurial training (training for proprietorship and management rather than simply for employment); the cooperative method of education known as work-study; and on-campus industries to

THE TENNESSEE VALLEY AUTHORITY

In 1933, President Franklin Delano Roosevelt asked Morgan to direct the Tennessee Valley Authority (TVA), which was perhaps the most ambitious public works project ever conceived. The invitation was fortuitous, since Morgan was faced with a revolt of Antioch faculty and students, who were not willing to give him the absolute allegiance he demanded. He continued to hold the title of college president until 1936, but his focus from 1933 to 1938 was the integrated development of the Tennessee River Valley, an area of 41,000 square miles and a population of 3 million.

For Morgan, taking on the TVA was a matter of vision—moral vision. He believed Roosevelt’s promise to him that the TVA would be entirely free from politics and that it was a social experiment, not just an economic enterprise. In his memoirs, Morgan quotes Roosevelt as saying, “Haven’t I been reading *Antioch Notes* all these years? I like your vision” (Morgan 1957). Fifty-five by this time, dignified, highly responsible, and humorless, Morgan was made the TVA’s chairman, and his codirectors—appointed with his support—were Harcourt A. Morgan, an agriculturalist and president of the University

Arthur E. Morgan on Decision Making

Late in life (he died at 96), Morgan described himself as a "coordinator," not a leader. In saying this, Morgan doubtless meant that he believed coordinator to be a high calling. He was engrossed by the idea of community, and his idealism about how groups and communities should make decisions is striking when compared to his autocratic behavior when he was in a position of power, at Antioch College and then at the TVA. Here is his description of the ideal decision-making process:

Decision by Consensus

In the ancient community, voting as we know it was largely unknown. As voting emerged it was looked on as a refined form of conflict, sometimes as alternative to war. Over most of the world the very ancient community had a fairly well defined method of resolving issues and determining the responsibilities for crimes or misdemeanors. The village elders grew into their places by general recognition of their weight of personality and judgment, or by tradition, as when the eldest in each family was considered qualified. When an issue was to be considered the elders would meet, in good weather sitting in a circle of stone seats around the village tree. The other villagers would gather around in a larger circle. As the issue would be discussed, most of the talking would be by the elders, though any person in the village might express an opinion, or offer evidence. This process would continue, in very important cases at intervals for perhaps weeks or months, until the matter was so thoroughly threshed out that there was but one opinion in the village. So long as there was marked division the matter was considered undecided. In case of trial for crime or misdemeanor it was the general result that by the time the hearing was concluded there remained no doubt as to the facts, and the accused, if guilty, had confessed his guilt. This process sometimes was time-consuming, but the absence

of remaining rancor, resentment and other stresses was a very great social asset.

This practice of decisions by consensus has existed in the Society of Friends (the Quakers) for more than three hundred years. I believe that the "London Yearly Meeting of Friends" has conducted its business for that length of time without taking a vote. It is far from being an obsolete practice. In many boards of directors, often of important organizations, a division by vote is a rare occurrence. Important matters commonly are discussed until there is substantial unanimity. Where there is general agreement it is customary for the one or few with divergent opinions to defer informally to the group. However, if a single respected member has a strong feeling of divergence the matter may be carried over until the division of opinion has been resolved. Perhaps a lone member has sound reason for his position, and may change the opinion of the others.

A man who was for long years member of the Oxford, England, City Council, and at one time mayor of the city, stated it to be his observation that whenever there was a nearly equal division in a vote, it was strong evidence that the decision had been prematurely made, and that further consideration would have been wise. Local community government is the best field for the developing of this spirit.

of Tennessee, and David Lilienthal, a successful Chicago lawyer and a member of the Wisconsin Public Service Commission. Lilienthal and others referred to Morgan as "the old man," and it wasn't long before Morgan's autocratic ways led to pitched battles—often reported in newspapers supporting the different directors—and accusations that ranged from interference with operations to political corruption.

In 1938, Morgan's conflict with his colleagues erupted into a much-publicized battle that was embarrassing for Roosevelt, who was at the time facing a difficult election. According to James MacGregor Burns, author of the Pulitzer-Prize-winning

biography of FDR, *The Lion and the Fox*, FDR recognized that Morgan, in spite of his brilliance, was an immensely difficult person to get along with (personal communication, 25 June 2003). Morgan accused his codirectors of dishonesty, while they accused him of obstructing the work of the board. According to Lilienthal's journals, President Roosevelt gave considerable thought to how he could get rid of Arthur Morgan with the least bad press. He decided to try an approach that had worked with James J. (Jimmy) Walker, the flamboyant and corrupt former mayor of New York. He would call the three directors into his office and hold a formal hearing. He would question them himself, forcing them—or

rather forcing Morgan—to explain themselves in detail. He would force Morgan to stick to the facts only. With Walker, this type of questioning over several days had led to his resignation. Roosevelt was not so lucky with the chairman of the TVA.

Morgan characteristically refused to answer the president's questions and demanded a congressional inquiry. He walked out of the disciplinary hearing and took the train home to Yellow Springs, Ohio, where he was, it is said, greeted by a crowd of a thousand people. Roosevelt fired him two days later. Morgan was not friendless: In these disputes, he had the support of the *New York Times* and other papers, and was himself an active journalist. The story was at times an almost daily news item across the country. Morgan did get a congressional hearing in the end, which lasted from May to December 1938. Morgan failed to produce documentary proof of his claims of dishonesty, for reasons that remain a mystery to historians. The final report was critical of Morgan and supportive of his codirectors, who remained with the TVA for many years.

Lilienthal became chairman of the TVA in 1941, and five years later President Harry S. Truman tapped him to head up the newly formed Atomic Energy Commission, but in spite of his success he never quite got over his battle with Morgan. In his book *TVA: Democracy on the March*, first published in 1944, he does not once refer to Morgan and there is no reference to Morgan in the index. The book's dedication is to "the memory of pioneers of the TVA. . . . They built for the People of The United States." In the dedicatory list of ten, Arthur E. Morgan is notably absent, in spite of the fact that his ideas are distinctly evident in Lilienthal's story. These sentences, for example, seem to echo Morgan's thinking: "*The people and the experts: the relation between them is of the greatest importance in the development of the new democracy. . . . First of all, the experts and the people must be brought together. The technicians should live where the people they serve live*" (Lilienthal, 121).

Morgan wanted to change the world, and he wanted to do it from a position of authority. But time and time again his grand plans were disrupted by personal disputes, often with those who ought to

have been his allies and friends. He tolerated no difference of opinion. He considered anyone who disagreed with him as not simply wrong or misguided but corrupt or immoral.

THE FOUNDING OF CELO

When he was ninety, Morgan told an interviewer about the vision of an ideal community that had come to him when he was sixteen. Enthralled by Edward Bellamy's immensely popular utopian novel, *Looking Backwards*, Morgan had written a biography of Bellamy, *Nowhere Was Somewhere*, and later a book about Bellamy's philosophy. In 1937, while working on the TVA (and battling with his codirectors), Morgan obtained enough financial backing to found an intentional community in North Carolina. Designed to be a practical demonstration of Bellamy's vision and intended as an alternative to government-run programs, Celo (pronounced "See-lo") was subsidized by W. H. Regnery, a wealthy conservative businessman who shared Morgan's belief that self-sufficient farming rather than urban public housing and industrial jobs would revive the pioneer spirit of the United States. Celo was intended to be a model community, an example of how a group of families could live and prosper in rural self-sufficiency. Morgan's relationship with the community was distant; he never lived there and rarely visited it. But he did spend the rest of his life—more than thirty-five years—in a small town, Yellow Springs, Ohio, where he founded Community Service Inc., an organization that continues to promote his ideal of the small community.

A MAN AT THE MARGINS

Like many utopian thinkers, Morgan was a man of considerable and varied talents, who managed to influence others through both personal authority and public writings. He effectively marginalized himself, however, by his absolute conviction in his own beliefs on issues ranging from national politics to intimate relationships. Morgan's intense need to be regarded as the ultimate and absolute authority in any organization he was involved in made it impos-

sible for him to operate on a scale worthy of his talents. His self-righteousness in effect pushed him to the margins, and his ideas are, as a result, of far less influence than one might have expected during the early stages of his career.

MORITA, AKIO (1921–1999) *Cofounder of Sony*

Former Japanese Prime Minister Keizo Obuchi once described Akio Morita, one of the most influential marketing and management personalities of the modern era, as “an engine that pulled the Japanese economy” (“The Father of Sony” 1999). Morita was a cofounder of Sony Corporation, a leading producer of consumer electronics and media entertainment. In 1958 Morita helped to create the Sony trademark, which through his promotion became one of the most widely recognized brand names in the world. Under Morita’s leadership Sony pioneered such innovative products as the transistor radio, Trinitron color TV, the portable video recorder, the compact disc, and the Walkman stereo player. More than any other individual, Morita was responsible for turning

the phrase “Made in Japan” from its 1950s image of shoddy imitation to its current image of quality and design. Western government and business leaders often said that Morita was one of the few Japanese leaders with whom they maintained a comfortable and trusting relationship. He was the only Japanese to make *Time* magazine’s list of the one hundred most influential people of the twentieth century.

Akio Morita was born into a wealthy family in the Nagoya area of central Japan. His ancestors had brewed sake since the early seventeenth century, and Morita, as the eldest son of the company’s president, was raised from the age of four to be the future head of the company. Although he assumed the mantle of the fifteenth Kyuzaemon (original founder of the Morita family business whose name is adopted by each successive president), Morita was destined to follow a different path from that of his fourteen predecessors. The first character in his given name (Aki) can be read as either “enlightened” or “uncommon.” Morita was both. However, the appropriateness of the name was not so obvious in his early school years. With the exceptions of math and physics, Morita was a mediocre student. He credited determination for his admittance to Osaka Imperial University one year after high school. The knowledge of physics acquired at this elite university allowed Morita to avoid hazardous duty during World War II. Through Morita’s work as a naval liaison officer, he met his lifelong friend and business partner, Masaru Ibuka. On 7 May 1946, amid the despair of war-ravaged Tokyo, they established Tokyo Tsushin Kogyo (Tokyo Telecommunications Engineering Corporation), the forerunner of Sony Corporation.

The bond between Morita and Ibuka was so strong and enduring that close friends and relatives characterized it as love. Ibuka, who was thirteen years senior, was Morita’s alter ego. Throughout their long partnership, Morita and Ibuka shared adjoining offices and common goals. Trained as an electrical engineer, Ibuka was an idealistic and impulsive visionary. His capacity for grandiose dreams endeared him to Morita and Sony engineers. Fulfilling Ibuka’s dreams, however, required more than technological skill. Financial, political, and social capital—social skills, networking talent, and

social connections usually associated with the highly educated upper class—were needed on a vast scale. The acquisition of this capital called for a pragmatic and dynamic leader with superb business and political instincts. Akio Morita fit the bill. The partnership resulted from a strategic division of labor. Ibuka specialized in technological research and product development. Morita handled marketing, finance, and personnel management.

Always in the limelight, Morita was the more visible of the duo. He was a complex man. To the world outside Japan, Morita was a progressive internationalist. He was a lobbyist for freer trade and a vocal critic of many Japanese business and government practices. He and his wife, Yoshiko, were prominent socialites, mixing with international celebrities from business, academia, government, and the arts. Morita had a passion for music, art, and sports. With his gray hair, bluish eyes, and engaging personality, he stood out from other Japanese leaders. Interviews conducted by scholar John Nathan (1999) reveal the more traditional side of Morita's character. Son Hideo Morita claims that his father's public persona was mostly the result of skilled acting. As a husband and father, Morita was domineering and insensitive. In the household his word was law. In 1989, during a period of intense trade frictions between the United States and Japan, the nationalistic side of Morita's character briefly surfaced when he coauthored the book *The Japan That Can Say No* with Shintaro Ishihara. Although Morita's contribution to the book was balanced and reasoned, his internationalist credentials were temporarily sullied by association with Ishihara, the popular novelist-turned-firebrand politician.

AT THE FRONT

Unlike traditional Japanese leaders who prefer to operate from the shadows, Akio Morita believed in leading from the front. There was no mistaking who was in charge of Sony. Morita led by example. He would not think of asking anyone to do something he wouldn't do himself. He was ruthless in the pursuit of high standards, but he was not a micromanager (one who manages with excessive control and atten-

tion to details). Morita was a big-concept man. He believed in setting firm targets and leaving the execution up to subordinates. Morita did not tolerate "yes men." He wanted employees who had the courage of their convictions. Many people have good ideas; few have the courage and determination to see them through to fruition. Throughout his career Morita surrounded himself with brilliant and ambitious people who could help him achieve his goals. He never worried about being upstaged.

Taking ideas from East and West, Morita developed a unique management and marketing style that bridged the cultural divide. Morita took the popular environmental slogan, "Think globally, act locally," as a description of his own agenda. Morita wanted products with a global appeal. He believed in creating the market as well as the product. He took pride in the fact that Sony products inspired new lifestyles and cultures. In its global operations Sony was to be a good neighbor. Sony employees abroad were encouraged to learn the local language and socialize with members of the local community. In 1963, Morita moved his young family to New York, where they immersed themselves in the local culture. However, Morita wanted more than the appearance of internationalization. Under his guidance, Sony hired local managers for its subsidiaries. In 1970, Sony became the first Japanese corporation listed on the New York Stock Exchange. In 1989, it was the first major Japanese corporation to include foreigners on its board of directors.

From his study of physics, Morita believed that important decisions should be firmly grounded in fundamental principles (*kihon gensoku*). Morita kept Sony focused on the target population of urbane, affluent consumers. High-quality products and service were a given, not something to be traded off for higher sales. Another bedrock principle was never to compromise the Sony brand name. An early test came in 1955 when Bulova Watch Corporation agreed to purchase one hundred thousand units of Sony's new transistor radio under condition that the product be marketed under the Bulova trademark. For a company struggling to get off the ground, this enormous order seemed a godsend. Morita was later to assert that turning down Bulova's offer was the

smartest decision of his business career. Smart decisions, he believed, follow from solid principles.

THE ART OF MOTIVATING

Morita believed that leadership is the art of motivating others to achieve common goals. The primary mission of the manager is to “develop a healthy relationship with his employees” (Morita 1986, 30). Morita had strong ideas on how to promote such a relationship.

The presumption in postwar Japan is that employees work for the same company for life. This presumption is often criticized by U.S. economists and businesspeople, who view it as inflexible and a source of moral hazard. Morita, who didn't hesitate to speak out against Japanese business practices that he found distasteful or inefficient, was a firm proponent of the lifetime employment system. Like other Japanese businesspeople, he often used the family as a model for the company. In Morita's view employees and their families should be treated as members of a corporate family. In return for their loyal service, employees would be nurtured and supported for their entire lives. To Morita layoffs rarely made ethical or business sense. His rationale was similar to that behind the traditional marriage contract: A credible commitment to permanence builds the trust and loyalty necessary for productive growth. Under Morita's guidance Sony developed a flexible and efficient internal labor market. Twice a year, employees are given the option of changing jobs within the Sony company. To prevent a brain drain, section managers must create a stimulating work environment.

In Japan's seniority-based wage system, pecuniary compensation plays a smaller role in motivating performance than it does in the Anglo-American system. People, Morita argued, work for a variety of reasons besides pay. A successful manager instills in his subordinates a sense of ownership in the company. Through cooperation, worker-owners share in the benefits of future growth. Such a manager can just as easily be a union official as the holder of an M.B.A. degree.

Morita was a critic of the Anglo-American system of executive compensation. He believed that U.S.

executives are greatly overcompensated. Large compensation differentials, he argued, have a negative effect on corporate morale and productivity. At Sony, Morita sought to create a working environment where everyone feels part of the same team, where all employees have a share in the company's successes and failures. At Sony, there are no separate dining rooms for executives and ordinary workers. Everyone wears the same uniform and shares essentially the same working conditions.

In the Anglo-American form of capitalism, the shareholder is king. The mission of chief executive officers (CEOs) is to maximize shareholder value. Because management compensation and survival are tied to the mission of maximizing shareholder value, Morita believed that the resulting incentive structure biases managerial decisions toward the short run. Wage cuts and layoffs may temporarily boost measured profitability, but the adverse effects on morale undermine long-run performance. Morita argued that sustainable prosperity requires management to pay close attention to all of its stakeholders (people having an interest in an outcome). Effective managers, in Morita's view, convince stakeholders to look beyond short-term conflicts to the potential gains from long-term cooperation. Besides shareholders, Sony's stakeholders included employees and their families, customers, business partners, local communities, and, in some cases, rival companies.

Japan's traditional employment system places emphasis on educational credentials (*gakureki*) and seniority. Graduating from a top university or a prestigious professional school confers a lifelong benefit on an individual. This benefit extends to the workplace, where employment, assignment, and future promotion decisions depend on collegiate and professional standings. Morita was a critic of this system. In 1966, he wrote a book entitled *Never Mind School Records*, which argued that school grades and credentials are inadequate predictors of on-the-job performance. He was similarly critical of assignment and promotion on the basis of seniority. Under Morita's leadership, personnel decisions at Sony were based primarily on the creative potential and motivation of employees. Sony recruited talented people at all stages of their careers. Recruits

were integrated immediately into the company as full partners.

Japanese managers often stress concepts such as cooperation and consensus. Morita looked behind the veil and detected a desire to crush dissent and individual initiative. Throughout his career Morita advanced his own views and encouraged employees to do the same. He sought to create an atmosphere of freedom and openness where individual creativity and initiative would flourish.

Morita suffered a debilitating stroke in 1993 just as he was scheduled to take over as chairman of Keidanren, Japan's powerful business association. Coincidentally, the "bubble economy" and the postwar economic model are considered to have ended around this time. People are left wondering what might have been if this powerful locomotive were still around to pull the Japanese economy out of its rut.

MOSES (c. 13th century BCE)

Hebrew prophet and leader

Moses, a Hebrew prophet, lawgiver, and ruler, is an iconic leader in Western culture. Moses delivered the Hebrews from Egyptian slavery, led them to the promised land, and gave them an enduring identity as the religious community of Israel. Scholarly opinion

is divided on whether a historical Moses actually lived, for there is no evidence of his life outside of four Old Testament books (Exodus, Leviticus, Numbers, and Deuteronomy). The most common conjecture is that Moses may have lived about the thirteenth century BCE, but how much the life of a "real" Moses might correspond to the biblical story is unknown and probably unknowable. Leaving aside such historiographic questions (including the complex textual status of the Bible), this entry treats significant leadership concepts in the life of Moses.

BIRTH AND UPBRINGING

Moses's infancy is wondrous. To save her son from Pharaoh's decree that all male Hebrew infants be killed, Moses's mother floats him in a basket of reeds on the Nile River. Moses's sister points out the basket to Pharaoh's daughter, who adopts him and unknowingly makes his mother his nurse. Thus Moses grows up close to power in Pharaoh's palace, but aware of his heritage and identity. As a young man, he kills an Egyptian whom he sees mistreating a Hebrew. The next day, he tries to quell a fight between two Hebrews, but their defiance signals one of the story's major themes: "Who made you a prince and a judge over us?" (Exodus 2:14, RSV). After killing the Egyptian, Moses flees to the neighboring land of Midian, where he marries, fathers two sons, and lives for years as a shepherd. Thus the first two-thirds of Moses's life take place apart from the people he will eventually lead and transform.

CHARISMATIC AUTHORITY

Moses's life turns when God appears to him in a burning bush and calls him to return to Egypt and liberate the Israelites. Moses is flabbergasted: "Who am I that I should go unto Pharaoh, and that I should bring forth the children of Israel out of Egypt?" (Exodus 3:11). He doubts his ability to speak and the people's willingness to be led. God promises to aid him, invests him with divine powers, and makes his brother Aaron his mouthpiece. Moses reluctantly agrees, but his skepticism—at least about the Israelites—will prove justified. Returning to Egypt,

Moses wins the Israelites' release after a long contest with Pharaoh. When Pharaoh changes his mind and pursues the departing Israelites, Moses, with God's help, first parts the waters to allow the Israelites to flee and then returns the waters, destroying the Egyptian army. Moses leads the Hebrews to Mount Sinai, where he communes with God for forty days and nights while the people wait below. He descends from the mountain with a new covenant between God and the Israelites and a new conception of their religion, embodied in the Ten Commandments. But in his absence, the people have lost faith and fashioned a new idol, the golden calf. (The role of Aaron, Moses's brother and deputy, in this debacle bears scrutiny, as do his blame-avoiding verbal gymnastics [Exodus 32:1–5 and 21–24].) Moses forcefully sup-

presses the revolt, killing about three thousand people (Machiavelli, in chapter 6 of *The Prince*, famously seizes on this episode as a key to understanding the nature of leadership). Moses must also pacify an angry God who considers blotting out the Israelites and starting over—a classic instance of “managing up,” or understanding and exploiting your superior's character, constraints, and goals to obtain the desired results (Exodus 32:9–14; see Gabarro and Kotter 1993). Here as so often, Moses's perseverance stands out: alone in the story, his vision never fades. The Israelites follow Moses through the desert for forty years, suffering hardships, meeting and fighting other peoples, and eventually making their way to the land of Canaan. Again and again during their journey, they doubt Moses's leadership and challenge his authority. His charisma, derived from his unique relationship to God, at first might seem to exempt him from the ordinary troubles of leadership, but a very modern tension lurks in the ancient text. Moses, in many ways an outsider, was imposed on the Israelites by God (or by Moses's own will, as many of the Israelites seem often to fear and suspect). The people's lack of consent repeatedly flares into opposition: “You have gone too far!” Korah tells Moses and Aaron during one of the most serious rebellions: “For all the congregation are holy, every one of them, and the LORD is among them; why then do you exalt yourselves above the assembly of the LORD?” (Numbers 16:3). Korah's egalitarian challenge, so palatable in other contexts to modern ears, cannot be tolerated in this story, and Korah and his followers are destroyed by God.

INSTITUTIONALIZING POWER

Charisma, as Weber pointed out (with Moses in mind), is an unstable basis for authority. Early on, Moses learns that if he wishes to fulfill his charge it is necessary to create lasting institutions. A critical early lesson comes during a visit from his father-in-law, Jethro, who sees at once that Moses's heroic approach to leadership is not sustainable: “Why do you sit alone, and all the people stand about you from morning till evening? . . . You and the people with you will wear yourselves out” (Exodus

18:14–18). Moses is wise enough—and humble enough—to accept Jethro’s advice and delegate power to “rulers of thousands, of hundreds, of fifties, and of tens.” But establishing a bureaucracy, while it addresses one of the limitations of charismatic leadership, poses the new danger of corruption. Moses must choose “men who are trustworthy and who hate a bribe” (Exodus 18:21). Moses takes other steps to establish lasting institutions, including reinforcing the Israelites’ existing tribal identities and conducting two censuses to help organize an effective fighting force. But Moses’s greatest institutions are the teachings and laws he brings the Israelites. The Mosaic Law—hundreds of rules, proscriptions, and procedures governing worship, ritual, commerce, family relations, and every aspect of daily life—becomes the permanent foundation for how the Israelites live and define themselves. Much of the Law is casuistic and detailed. Leviticus 13, for instance, specifies how priests should diagnose and treat a person suffering from open sores. The point, obviously, is to provide guidance for a prescientific people on how to deal with infectious diseases like leprosy. Many of these laws and proscriptions seem archaic to most (though not all) modern readers. But one central part of Moses’s teaching today retains as much power as it had thirty centuries ago: the Ten Commandments. These absolute moral rules—“You shall not kill. . . . You shall not steal. You shall not bear false witness against thy neighbor” (Exodus 20:13, 15–16)—provide an arguably universal ethical framework for civil society. As laconic and lapidary as the rest of the law is prolix, the Ten Commandments’ style and symbolism (carved in stone) assert their timelessness and ineradicable authority. Not many things from three thousand years ago shape modern daily life.

The Ten Commandments (Exodus 34)

1. I am the Lord thy God, who brought thee out of the land of Egypt, out of the house of slavery.
2. Thou shalt have no other gods before Me. Thou shalt not make unto thee a graven image, nor any manner of likeness, of any thing that is in heaven above, or that is in the earth beneath, or that is in the water under the earth; Thou shalt not bow down unto them, nor serve them; for I the Lord thy God am a jealous God, visiting the iniquity of the fathers upon the children unto the third and fourth generation of them that hate Me; And showing mercy unto the thousandth generation of them that love Me and keep My commandments.
3. Thou shalt not take the name of the Lord thy God in vain; for the Lord will not hold him guiltless that taketh His name in vain.
4. Remember the sabbath day to keep it holy. Six days shalt thou labour, and do all thy work. But the seventh day is the sabbath in honour of the Lord thy God; on it thou shalt not do any work, neither thou, nor thy son, nor thy daughter, thy manservant nor thy maidservant, nor thy cattle, nor thy stranger that is within thy gates; For in six days the Lord made the heavens and the earth, the sea, and all that is in them, and rested on the seventh day; therefore the Lord blessed the sabbath day, and hallowed it.
5. Honour thy father and thy mother; in order that thy days may be prolonged upon the land which the Lord thy God giveth thee.
6. Thou shalt not kill.
7. Thou shalt not commit adultery.
8. Thou shalt not steal.
9. Thou shalt not bear false witness against thy neighbor.
10. Thou shalt not covet thy neighbour’s house; thou shalt not covet thy neighbour’s wife, nor his manservant, nor his maidservant, nor his ox, nor his ass, nor any thing that is thy neighbour’s.

The enduring power of these words represents perhaps Moses’s greatest achievement as a leader.

MOSES’S END

Until the end of his 120 years, Moses remains a vital and powerful leader. His last leadership task is succession planning. Interestingly, he does not choose one of his sons to succeed him, but Joshua, a dynamic younger man who has demonstrated loyalty and mettle. Moses publicly anoints Joshua his successor and promises that God will be with him and ensure his success (Deuteronomy 31:7–8). In his last days, Moses writes his laws, blesses and exhorts the twelve tribes, and dies within sight of the promised land. By the end, as he had foretold, he has outlived

all the doubters and is genuinely mourned by a new generation of Israelites too young to remember their parents' doubts. But despite the emotional bonds he has forged with his people, he dies alone—fittingly, because despite God's assistance he was so often alone in his leadership, let down time after time by the people whom he towered over in faith, endurance, and vision. "I am not able to carry all this people alone," he laments to God more than once, "the burden is too heavy for me" (Numbers 11:14). The psychic burden of leadership is one of the most interesting aspects of the story of Moses. He is a man fallible and self-doubting, meek and irritable, who ends up achieving extraordinary things. Moses shows awesome strength, performs heroic and magical deeds, speaks face-to-face with God, and changes the destiny of his people—but he remains a very human leader.

MOTHER TERESA (1910–1997)

Humanitarian

Mother Teresa was the recipient of the Nobel Peace Prize in 1979, for her extensive, extraordinary service among the poorest of the poor. She was the founder of the Missionaries of Charity, which are now present in almost every country in the world. Her most remarkable projects included care homes for the abandoned dying, which she called "Nirmal Hriday" (home of the pure heart); a basic public edu-

cation system that primarily targeted children in slum areas with elementary lessons in hygiene, manners, matters of faith, math, and reading, which she called "Shishu Bhaven" (the children's home in Calcutta for the Sisters of Charity); centers and mobile clinics that ministered to the needs of people with leprosy and AIDS; shelters for single mothers; homes for handicapped children; soup kitchens for the homeless; visits and ministry of love to prisoners; and many others.

EARLY YEARS

Mother Teresa was born in 1910 in Skopje, Albania. Her father was a successful businessman. He was poisoned in 1919 due to his high profile as a nationalist and a councilman of the city government after Albania gained its independence from the Turkish occupation in 1912. Her mother was a religious, loving housewife. She worked as a dressmaker and weaver in order to provide for her family after her deceased husband's business partner took over their business.

At the age of twelve, young Gonxha (Mother Teresa's original name) started to have a strong desire to pursue a religious vocation, but she was advised by the pastor of her church, the Parish Church of the Sacred Heart, to wait, pray, and ask for light. Six years later, in one of her long, frequent meditation visits to the nearby shrine of Our Lady of Lentic, she heard the divine call and consecrated herself forever to God and his service. She shared her heart with her mother who, in spite of her concerns about her daughter's departure and her weak health condition, fully supported her and encouraged her to take the necessary steps to put her decision into practice.

THE JOURNEY

In a long conversation with the pastor, Gonxha revealed her desire to serve the poor in India. The congregation that worked in India didn't have houses of formation in Albania, so she had to enroll in Ireland. In 1928, Gonxha went to Ireland, became part of the Sisters of Our Lady of Loreto, spent two

months learning English, and was sent to Darjeeling, India, for two years of training and formation. In 1931, she made her first vows and chose the name Teresa, after Saint Thérèse of Lisieux. After one year, she made her final vows, and was assigned to a teaching position at Saint Mary's High School, which served the wealthy girls of Calcutta.

However, going through the Gandhian struggle for independence in the mid-forties, Sister Teresa experienced a "vocational crisis," and felt that God was calling her toward something different, "to total self-surrender to the service of the poor . . . to a mission of charity" (Gonzalez-Balado 1997, 37). She left the Sisters of Loreto, where she had been content and happy for nearly twenty years, and pursued her passionate call. In order to best serve the poor, she went to Patna and studied at the school for nurses of the Medical Mission Sisters. Several months later, she returned to Calcutta, and lived with the Little Sisters of the Poor at Saint Joseph's Asylum for the Elderly. Every day she relentlessly worked in the slums among the abandoned. Meanwhile, she started looking for her own lodging, which was eventually furnished by the father of one of her former students. This humble place was the beginning of the Missionaries of Charity. In two years, the community grew to twenty-eight women, many of whom were Sister Teresa's former students, and all of whom adopted her modest lifestyle, distinguished by their blue-and-white saris. Eventually, the priests provided a larger place for Mother Teresa and her followers. This place later became the headquarters of the Missionaries of Charity, which are now present in almost every country in the world, in some cases at the request of government leaders in countries where religious organizations were illegal, such as Cuba, the former Soviet Union, and Albania, Mother Teresa's home country!

MAJOR CONTRIBUTIONS

The first and most remarkable project that Mother Teresa embarked on was an attempt to assist the

abandoned dying in the streets of Calcutta. By that time, Mother Teresa had received Indian citizenship. She met with the mayor and was granted a location to serve the dying homeless of all religions, which she called "Nirmal Hriday." There, the sisters showed the dying (whom they usually picked from the streets, half eaten by rats) that they are valued and respected, giving testimony to their faith through their love and their actions, and respecting all beliefs and non-beliefs. This place is now a popular tourist attraction, included in the city's official guidebooks. It also attracts a lot of volunteers and medical student trainees, many females of whom decide to join.

Another field where Mother Teresa served the poor was teaching the children in the district of Motijhil, a slum near the high school where she used to teach. She taught basic lessons in hygiene, usually holding her classes outdoors, under a tree. Then, she gradually integrated instructions on manners, matters of faith, math, and reading. Later on, she used a donation that she received to rent a shack and purchase a blackboard. As the number of children grew, she acquired a building and surrounding acreage, which she called "Shishu Bhaven," through which she expanded her small system of public education. Today, such centers operate in many countries.

As the number of sisters grew to more than fifty, another group of the poor was added to their scope of

services, people with leprosy. Mother Teresa started her “mobile clinics,” which were basically a few sisters carrying small medicine kits and traveling by public transportation into the areas where people with leprosy dwelled. With time, Mother Teresa was able to establish centers that ministered to the specific needs of people with leprosy. The first center was constructed with the money collected from a public raffle of a limousine that was given to Mother Teresa by Pope Paul VI when he visited India in 1964, supposedly to facilitate her tough journeys. Later, Mother Teresa used the money from the Nobel Peace Prize she won in 1979 to construct a self-governing village in Titagarh, India, for the rehabilitation of people with leprosy.

In the mid-1980s, AIDS patients became another area of focus for Mother Teresa and her sisters. Mother Teresa started where ostracism against AIDS patients was strongest, in New York City, asking the mayor for a local site where she and her sisters could serve AIDS patients, despite the severe opposition of local residents. A year later, she was asked by President Ronald Reagan to open an AIDS home in Washington, D.C.

As time went by, Mother Teresa’s service expanded in many diversified areas. As unusual as it may sound, Mother Teresa’s congregation gave birth to a male congregation, the “Missionaries of Charity Brothers,” in 1963. Most of the first members were the biological brothers of some of the sisters. She started looking for a male leader who could handle the responsibilities of this new congregation, and found Father Travers, a young Australian Jesuit priest, who chose to renounce being a Jesuit, and became the well-known preacher, Brother Andrew. Now, the Missionaries of Charity Brothers are spread all over the world.

WORLDWIDE REPUTATION AND PUBLICITY

Some activities made Mother Teresa known worldwide, and consequently opened doors for her ministry outside India. For example, in 1960, Mother Teresa gave her first presentation at the annual convention of the National Council of Catholic Women of the United States in Las Vegas. In addition to the

large, exclusive audience that attended this presentation, Mother Teresa made a lot of contacts during her visit to the United States, and met with numerous well-known religious and political figures on her several stops. Many of these contacts proved important for her future work.

Around the same time, Mother Teresa was also publicly interviewed for the first time on the British Broadcasting Corporation radio program by the British journalist Malcolm Muggeridge, who proposed and facilitated the production of the first ever television documentary about Mother Teresa, and whose biography of Mother Teresa was translated into more than twenty languages. In 1982, Malcolm Muggeridge and his wife became Catholic.

Moreover, Mother Teresa courageously held to her beliefs, publicly advised politicians to spend more time on their knees in prayer in order to recognize the pain and injustice in their own systems, took the initiative of rebuking them when she felt that they made ungodly decisions, and was outspoken against abortion as the greatest of crimes against children, women, and life. She even took part in marches and demonstrations against the legislation of abortion in Spain and Italy. She met and had conversations and pictures with many distinguished public figures, and was invited to address the world’s political elite in remarkable occasions. However, she always showed up as a little Indian woman with her modest white-and-blue sari and sandals, packing her travel necessities in cardboard boxes tied with string, and holding her cloth bag. Even when she was awarded the Nobel Prize in 1979, Mother Teresa requested that the cost of the customary gala dinner celebration for hundreds of dignitaries from around the world go to the poor. Fifteen thousand people enjoyed a special meal that day!

Due to her failing health, which was aggravated by her hectic lifestyle, Mother Teresa resigned in 1996 as superior general of the Missionaries of Charity. However, she left an army of around four thousand missionaries, from all over the world, many of whom were college students or well-paid professionals, all of whom still wear the white-and-blue sari, live the same life as the poorest of the poor, and absolutely refuse any kind of salary or

fixed income that gives them any sense of security, preferring to be completely dependent on divine providence.

MOTHER TERESA'S LEADERSHIP

Mother Teresa had most of the characteristics of charismatic leaders found in Weber's *Theory of Social Organizations*. She was highly esteemed and confident, displayed exemplary qualities, had a strong sense of purpose, articulated the goals and ideas for which her followers were psychologically prepared, secured her followers' unquestioning cognitive and emotional commitment, and had extraordinary moral inspiration, attraction, and influence over her followers. Mother Teresa owned extraordinary gifts. She devoted herself to the service of the poorest of the poor, totally dependent on divine providence, which meant being constantly in a crisis-management situation. She always developed (or rather received) radical solutions to crises. She had followers who were attracted to her because they believed they were linked through her to transcendent powers. She continuously validated her gifts and transcendence in repeated experiences of success. She was expressive, self-determined, insightful, free from internal conflict, eloquent, and active, even when her followers were not exactly the optimum type of followers that would be easily led by her charisma. A closer look at some of her followers can clarify this point.

Many of Mother Teresa's first followers were her former students from Saint Mary's High School, that is, the wealthy girls of Calcutta. Probably most of these girls' parents and relatives had a high profile politically. At that time, there was much more going on, both in politics and religion, to attract these girls' attention and energies than this unknown nun, living like the poorest of the poor. Moreover, many affluent, successful people participated as coworkers in Mother Teresa's ministry on a part-time basis. Later, the coworkers became an organization, with its own official identity. So, what attracted, and still attracts, rich, well-educated people to Mother Teresa and her life of poverty? The answer is that most of those people did not only identify with Mother Teresa as a per-

son, but also with her vision, her mission, and her goals. She was able to address a higher level of need inside them, beyond just the need for a personified charismatic leader. Her humility, strong conviction, and worthwhile cause challenged them. She "conceive[d] and articulate[d] goals that lift[ed] people out of their petty occupations, carr[ied] them above the conflicts that tear a society apart, and unite[d] them in the pursuit of objectives worthy of their best efforts," as Gardner and his colleagues described inspirational leaders (cited in Bass 1990, 207). Mother Teresa was truly a transformational leader. She combined charismatic leadership, inspirational leadership, intellectual stimulation, and individualized consideration.

According to Choi and Dalton, followers attribute charisma and legitimacy to self-sacrificial leaders, and tend to reciprocate such leaders' behaviors. This presents a further explanation for the faithful followership style of Mother Teresa's sisters, their complete devotion to self-sacrificial causes, and their adoption of a self-sacrificial lifestyle of the poorest of the poor. Due to her exemplary self-sacrificial leadership style, Mother Teresa's followers perceived her as charismatic, even though she lacked the "glamour" that usually accompanies many charismatic leaders. In other words, her charisma was in the eyes of her beholders, and in her cause, rather than just in her own personal attractiveness. This made her followers attribute legitimacy to her, although she hardly had any legitimate power to use in accomplishing her goals. Mother Teresa had nothing to give or to promise her followers, except a tough life of poverty and hard work. She was completely dependent on divine providence. Before she resigned, this Nobel Prize winner suffered from anemia and malnutrition, the diseases of the poorest of the poor.

In their article, "Transformational Leadership and Attachment," Popper and his colleagues introduced an interesting expansion of the attachment theory to the area of leadership, showing a relationship between transformational leadership and secure attachment. Reflecting on Mother Teresa's early years of life, one cannot fail to observe a very secure attachment style, with her parents, her close family that lived for one another, and the pastor of her

church. Does Mother Teresa's strong transformational leadership style relate to her secure attachments? Her biographers, as well as she herself, would full-heartedly testify that it indeed did.

MOTIVATION, INTRINSIC AND EXTRINSIC

The study of leadership deals with the behaviors and processes through which superiors in a hierarchy manage, empower, supervise, inspire, and relate to their subordinates. It concerns the ways they determine future directions for individuals, groups, or organizations and then catalyze their subordinates' actions in accord with the specified directions. Leadership is, in a very real sense, the means through which leaders *motivate* their followers to engage the tasks and activities necessary to actualize a decision or vision.

Self-determination theory (SDT), formulated by motivational psychologists Edward L. Deci and Richard M. Ryan, maintains that to promote optimal outcomes, leaders need to appeal to different types of motivation. SDT sees autonomous motivation and controlled motivation as the two most important types of motivation. *Autonomous* describes the motivation of people who experience a sense of volition, willingness, and choice. In contrast, *controlled* describes the motivation of people who feel coerced or seduced. The concepts of *autonomy-supportive* leadership and *controlling* leadership are used to distinguish the ways leaders relate to subordinates and thus affect their performance.

INTRINSIC AND EXTRINSIC MOTIVATION

The distinction now made in organizational psychology and management between *intrinsic* and *extrinsic* motivation dates back more than four decades (e.g., Porter & Lawler, 1968). Intrinsic motivation is evident when people engage in an activity because they find it interesting and derive spontaneous satisfaction from doing it (Deci, 1975). When people are intrinsically motivated they behave with a full sense of volition and choice; they experience an activity as satisfying in its own right. Intrinsic motivation is a type of autonomous motivation. Competence and autonomy are fundamental psychological needs that must be satisfied if people are to be psychologically healthy and function effectively, and people will be intrinsically motivated only to the extent that they feel competent and autonomous.

In contrast, extrinsic motivation is most often evident when an activity is uninteresting and satisfaction comes not from the activity itself but rather from the extrinsic consequences to which the activity leads. Extrinsic motivation can be either autonomous or controlled. The clearest examples of extrinsic motivation are rewards and punishments. In other words, when people are extrinsically motivated the desirable consequences derive not from the activity's being interesting or personally important to them but rather from its being instrumental to some extraneous consequences they desire.

DO INTRINSIC AND EXTRINSIC MOTIVATION ACT TOGETHER?

Nearly four decades ago, Porter and Lawler advocated structuring the work environment so effective performance would lead to both intrinsic and extrinsic rewards. They believed that to accomplish that would entail enlarging jobs to make them more intrinsically interesting and providing extrinsic rewards contingent upon effective performance such as raises and promotions. The result, they theorized, would be maximal motivation and job satisfaction. Implicit in this approach was the assumption that intrinsic and extrinsic rewards would act together to increase motivation and job satisfaction. However, studies by Deci as early as 1971 that tested the additivity assumption found that giving people monetary rewards contingent upon completing an interesting activity decreased their intrinsic motivation for the activity. Other studies showed that deadlines, threats, and surveillance also decreased intrinsic motivation. Intrinsic and extrinsic motivation seemed definitely not additive.

Deci argued that extrinsic motivators undermine intrinsic ones because they tend to thwart people's need for autonomy. In support of this theory was the finding that providing people with choice and acknowledging their perspectives enhanced intrinsic motivation. Other studies found that positive feedback enhanced intrinsic motivation by satisfying people's need to feel competent, whereas negative feedback decreased intrinsic motivation by thwarting that need. A review of the experiments on intrinsic and extrinsic motivation can be found in a 1985 book by Deci and Ryan.

The undermining of intrinsic motivation by many of the extrinsic factors that are typically relied on as motivators is a critical issue for leaders because studies have shown that conceptual understanding, problem solving, and creativity are enhanced by intrinsic motivation. Thus, these results emphasized the importance of formulating a meaningful prescription for enhancing rather than undermining intrinsic motivation and performance. It turns out, however, that formulating such a prescription requires moving beyond the simple dichotomy

between intrinsic and extrinsic motivation. It entails differentiating among different kinds of extrinsic motivation and using the concept of internalization and a control-to-autonomy continuum.

EXTRINSIC MOTIVATION AND THE RELATIVE AUTONOMY CONTINUUM

Intrinsic motivation, which means engaging in an activity out of interest in the activity itself, is invariably autonomous. That is, when people are intrinsically motivated, they initiate the activity and are of necessity experience a sense of freedom. However, extrinsic motivation, which pertains to activities that are not interesting and thus require a motivating contingency, can vary in the degree to which it is autonomous. The prototype of extrinsic motivation, which is what has been discussed so far, involves behaving to attain a tangible reward or to avoid a punishment. It is the most controlled, least autonomous type of motivation. Behavior motivated this way is said to be *externally regulated*—that is, initiated and maintained by contingencies external to the person. However, there are also more autonomous types of extrinsic motivation. For instance, an external regulation and the value associated with it can be internalized to differing degrees. Self-determination theory posits a controlled-to-autonomy continuum to describe the degree to which an extrinsic motivation has been internalized and is thus the basis for autonomous behavior.

A regulation that has been only partially internalized, that has been taken in by a person but has not been accepted as his or her own, is said to be introjected. Introjected regulations, including contingent self-esteem, ego involvement, and avoidance of guilt, pressure people to behave in order to feel worthy or to buttress their fragile egos. Introjected regulations are particularly interesting because the regulation is within the person but is still relatively controlled externally. They are internal but do not represent autonomy.

The most mature form of extrinsic motivation requires people to identify with the value of a behavior for their own self-selected goals and then integrate that identification with their sense of self. When this

has occurred, people feel greater freedom and volition because the behavior is congruent with who they are. If a person wanted to be accepted as part of a work group, he or she might identify with the importance of doing tasks that are necessary for the group to function smoothly even though the tasks are not interesting. For example, by identifying with the value of attending group meetings and keeping the minutes of the meetings and then integrating that identification with his or her other values, goals, and identifications, the person would be fully autonomous while doing the note taking. Motivation that was initially external would have been internalized. Internalized extrinsic motivation shares many qualities with intrinsic motivation, but it is still considered extrinsic (as opposed to intrinsic) because the motivation is not characterized by a person's interest in an activity but rather by an activity becoming instrumentally important for personal goals.

Intrinsic motivation and integrated extrinsic motivation represent the two types of autonomous motivation, while external and introjected regulation represent the two types of controlled motivation. This autonomy-control distinction has been shown to have greater heuristic value for predicting positive outcomes than does the intrinsic-extrinsic distinction. Optimal leader behaviors are those that prompt autonomous motivation among followers.

SATISFACTION AND AUTONOMOUS MOTIVATION

Intrinsic motivation and internalization are natural processes that require the satisfaction of basic psychological needs to function optimally. As already mentioned, the satisfaction of people's needs for competence and autonomy is particularly important for maintaining intrinsic motivation, and the satisfaction of these needs is also necessary for internalization to operate effectively. However, a third need—the need for relatedness, for having satisfying relationships with others in the workplace—is also crucial for the successful internalization of work values and behaviors. Satisfaction of the need for competence, relatedness, and autonomy allows people to internalize extrinsic motivation and to maintain

intrinsic motivation; in this way, it allows volitional, autonomous behavior whether or not people find the work itself interesting.

In organizational or management theories, psychological needs have typically been viewed as individual differences; that is, individuals have been viewed as differing in the strength of particular needs. For example, some people might be said to need a high level of affiliation and relatedness, while other people need far less. When needs are conceptualized in this way, the strength of a need is assessed and used either directly or matched with job characteristics to predict motivation, job satisfaction, and work outcomes. However, more recent studies have indicated that the concept of needs is more usefully defined in terms of nutrients that are universally essential to effective performance and psychological health. Because the needs for competence, autonomy, and relatedness are now considered important for *all* individuals, current research now focuses not on the strength of individuals' needs but rather on the extent to which social environments allow individuals to satisfy these needs. In other words, need satisfaction rather than need strength has become the important variable for making predictions about work performance, job satisfaction, and adjustment. This is very important with respect to leadership because it means that leader behaviors that allow the satisfaction of people's psychological needs are the most effective way to optimize performance and promote well-being.

How Leaders Can Promote Autonomous Motivation

A useful starting point for thinking about leaders' concerns is to focus on how they create interpersonal climates that support the satisfaction of their employees' needs for competence, autonomy, and relatedness, because only if these needs are satisfied will employees be optimally engaged, persistent, and effective at work-related activities, particularly ones requiring creativity, cognitive flexibility, and conceptual understanding. In a 2001 study conducted in Bulgaria and the United States, Deci and his colleagues assessed the satisfaction of employees' needs for competence, autonomy, and relatedness at

work and found direct positive relations in both countries between the satisfaction of these needs and the strength of work engagement and well-being on the job. A recent study performed by Paul Baard with Deci and Ryan (in press) also found that the satisfaction of these needs and the quality of work performance were related. In both studies researchers assessed the degree to which managers supported autonomy rather than control in their orientations toward their employees. Managers supported autonomy by acknowledging an employee's perspective, offering choices, encouraging initiative, and providing informational feedback. In contrast, controlling managers used pressure and employee evaluations to ensure compliance with their own agendas. These two studies and a number of others have shown that when managers were supportive rather than controlling, employees experienced greater satisfaction of basic needs and in turn performed better and reported better adjustments.

In a field experiment, Deci and Ryan, together with fellow psychologist James Connell, did an organizational development intervention in which they taught leaders in a major American corporation how to be more supportive of their employees' autonomy. The training consisted of a "change agent" spending a total of about six days with the leaders over a two-to-three month period. The agent focused on three themes: maximizing opportunities for employees to take the initiative (make choices and solve problems), giving noncontrolling informational feedback, and recognizing and accepting their subordinates' perspectives (their needs and feelings). In addition, the change agent accompanied each manager to one of his or her work-group meetings to observe the process and provide feedback. The researchers found that the level of support for autonomy increased in the intervention sites relative to the control-group sites, and that these positive effects radiated out to subordinates, who reported greater trust in the organization and more job-related satisfaction.

The results of a laboratory experiment published in 1994 by Deci and his colleagues identified specific leader behaviors that satisfy employees' needs and facilitate the internalization of extrinsic motivation.

The researchers found that providing a meaningful rationale when making an assignment or request, acknowledging a subordinates' thoughts and feelings about the requested activity, and emphasizing choice rather than control promoted internalization. Further, the researchers found that when two or three of these facilitating factors were present, thus allowing greater satisfaction of employee needs, the internalization that occurred was integrated, whereas, when none or one was present, the internalization that occurred was merely introjected. Thus, supporting autonomy and satisfying needs not only increased the internalization of extrinsic motivation but also ensured that the internalization was integrated rather than introjected.

To summarize, autonomy-supportive work climates, as well as specific leader behaviors such as providing choice and acknowledging subordinates' perspectives, promote both intrinsic motivation and fully internalized extrinsic motivation. The most notable differences between the factors necessary for the maintenance of intrinsic motivation and those that facilitate the internalization of extrinsic motivation are that internalization requires the presence of the ambient structures, limits, values, or contingencies that are to be internalized and that it is facilitated by the explicit or implicit endorsement of the behaviors by significant others.

Approaches to Management

Management theorists such as Douglas McGregor, Frederick Herzberg, and W. Edwards Deming have long recommended the use of organizational structures and leader behaviors that are expected to promote what SDT refers to as autonomous motivation. Central to these approaches have been concepts such as participation, empowerment, and job enrichment. These concepts advocate allowing employees to set goals, make decisions, plan, and solve problems, although management theorists Victor Vroom and Art Jago have emphasized that some situations warrant the use of participative decision making whereas others do not. Such empowering strategies recognize that all leader functions—from decision making to implementation, from goal setting to performance

evaluations—can be done in ways that are consistent with either a relatively autonomy-supportive approach or a relatively controlling approach. Autonomy-supportive leaders seek inputs from group members, encouraging them to feel ownership of the decisions and activities, whereas controlling leaders impose their own visions on their followers, allowing little initiative or choice. Leaders who take a more autonomy-supportive approach are more successful for they are effective in promoting satisfaction of their followers' psychological needs for competence, autonomy, and relatedness, needs that have been recognized as important since the work of organizational theorists Daniel Katz and Robert Kahn decades ago. In this period of rapid change and upheaval, many commentators such as Noel Tichy and Mary Anne Devanna have argued that organizations are in grave need of leaders with vision, leaders who can transform their organization as we move toward the challenges of the future. Indeed, although such visionary leaders are critically important, equally important is the ability of such leaders to motivate their followers, to inspire their followers with their visions, and to allow followers to feel a sense of vitality, engagement, and identification with their ideas and agendas. Visions that are not fully endorsed and implemented by followers will not improve an organization's effectiveness, and there is increasing evidence that the means through which endorsement and engagement will occur is the support of leaders for their followers' autonomy.

A recent study by Joyce Bono and Timothy Judge showed that transformational or visionary leaders do in fact tend to promote autonomous motivation in their followers. Specifically, the researchers found that followers of transformational leaders were more likely to adopt autonomous goals rather than controlled goals in the workplace. These followers were also more satisfied with their jobs and more committed to the organization. It appears, then, that transformational or visionary leadership works to motivate followers by supporting the followers' autonomy. Further work linking autonomy-supportive leadership to organizational outcomes would thus seem warranted.

MOTIVATIONAL CONTAGION

Motivational contagion is the spread of motivation throughout a group, person by person. One can feel the spread of motivation on a team. Imagine that it was halftime and that a basketball team was down by three points. Individuals had been playing decently, scoring a number of points, but as a whole, the team just could not seem to get it together. The players had been herded into the locker room for the coach's halftime pep talk. One player recalls:

Our first game of the season was against a much larger, favored school. In the locker room . . . our coach spoke to us with confidence and told us that we could play with and beat this team, despite their superior record the year before and the preseason rankings. His belief in us made each of us believe in ourselves and we came out for battle. We jumped to an early lead, shocking both our opponents and their home fans . . . the coach again spoke to us with confidence . . . sensing that we could upset this team and set the tone for the season . . . we held strong and upset our heavily favored opponents (Morrell 2002, 1).

The coach's encouraging pep talk struck a chord with each player one by one, and his motivation spread throughout the group. However, this effect is not confined to sports teams, nor it is always in the positive direction. Groups can also experience a spread of negative motivation, leading to a different result:

[Each] year, [my orchestra] work[s] on a piece of large scope which is usually composed by our conductor. I know of few people who look forward to this rehearsal time, because we all know the conductor turns into an extremely disagreeable, easily angered person who is generally unpleasant to listen to . . . [he] gets extremely

angry when people miss any of the rehearsals for his piece. Productivity during rehearsal goes down, as everyone talks with their neighbor about how annoyed they are with the conductor . . . and this combined with our aversion to his attitude creates a general apathy during rehearsal. It truly feels like no one wants to be there. The end result is a concert we all don't really look forward to, a less than enthusiastic attitude towards the piece we're playing, and in general ending the year on a bad note. I know of many people who in fact have quit the orchestra due to the end of year attitude of the conductor (Morrell 2002, 2).

WHAT IS THIS PHENOMENON?

The spread of motivation throughout a group is influenced by both verbal and nonverbal cues that are continually transmitted through both verbal and nonverbal feedback. The feedback provides the group members with knowledge of their progress and contributes to the spread of motivation. Motivational contagion can be either positive or negative, and group leaders play an important factor in its perpetuation.

Contagions can be understood through a simplified analogy of "leading by example." Research (Hatfield, Cacioppo, & Rapson, 1994) has shown that people mimic and synchronize their movements quickly and virtually automatically with the facial expressions, voices, postures, movements, and instrumental behaviors (e.g., blinking, yawning, moving, talking, and fidgeting) of others. Though continuous feedback, which provides the group members a constant knowledge of results, the group members are poised for a high level of internal work motivation. Either the group's leader (e.g., coach or conductor) or other group members (e.g., basketball player or violinist) can provide feedback through verbal comments or nonverbal gestures. Given the ideas of mimicry and continuous feedback, an individual's motivational experience can be affected moment to moment, and therefore one can "catch" the motivations of others. This is motivational contagion.

APPLYING KNOWLEDGE

In both the basketball team and the orchestra examples, one individual's motivation spread to the group,

person by person. Individuals either lost or intensified their focus, attention, and motivation one by one. For example, after the coach's halftime pep talk, one team member decided to focus more on the game. His attitude, posturing, vocal commands, and gestures indicated that he was highly motivated to win. His team members saw his increased motivation and found themselves focusing more on their shots. The first player's motivation was caught by the other team members one by one, leading to motivational contagion.

A LEADER'S ROLE

The group leader plays a seminal role in the continuation or termination of motivational contagion. He or she can encourage the spread of motivation, as in the basketball team example, by reinforcing the behavior and providing continuous positive feedback to the group. The coach can offer encouraging commands and positive words of advice and can carry himself in such a way as to showcase his internal motivation. The leader may choose to encourage the spread of motivation if it is having a positive impact on the group's overall motivation.

Alternatively, the group leader can intervene and stop the spread of motivation if it is having a negative impact on the group's overall motivation. In the orchestra example, the group leader could have chosen to stop the spread of a negative motivation that seemed to pervade the orchestra by verbally telling the musicians to pay attention or by nonverbally trying to focus them. Research has shown that the degree of aggressiveness in the group leader's intervention is an important factor in the degree of success of containing a negative motivation. More aggressive, overt types of interventions, such as yelling, are more effective at stopping a negative motivational contagion than are less aggressive types of interventions, such as simply saying "shh" or not doing anything at all.

Group leaders should be aware that their own internal motivation can have a significant influence on the motivation of the group as a whole.

RESEARCH DIRECTIONS

Motivational contagion is a sustainable phenom-

non. Further quantitative research is needed to determine how leaders can most effectively deal with it.

MOZART, WOLFGANG AMADEUS (1756–1791)

Austrian composer

Several artists have attracted the label *genius*, a term that is offered more as an apology for what is viewed as inexplicable rather than as an explanation for what is truly great. What is perhaps unique in the almost universal description of Mozart as a genius is the assumption that, among great artists, his was the most natural, unconstrained and, therefore, godlike genius. The image of Mozart as effortless genius, whether as musical infant-prodigy, graceful adolescent, or mature composer, has had an immense appeal across the ages, not least as portrayed in Peter Shaffer's play *Amadeus* (1979). In contrast to the permanently struggling figure of Beethoven (1770–1827) or the religiously animated spirit of Bach (1685–1750), Mozart is viewed as the composer who composed for music's sake, acting almost as a conduit for the divine. His music, frequently described as sublime, light, graceful, and charming, profoundly influenced later composers, including Wagner (1813–1883), who described him famously as "music's genius of light and love" (Einstein 1946, 13).

Mozart's relatively short life coincides with the death pangs of France's old regime and the onslaught of the French Revolution. Coming between the two other great Viennese masters, Haydn (1732–1809)

and Beethoven, he was never able to enjoy the comforts of aristocratic patronage like the former or the adulation of a bourgeois citizenry like the latter. Instead, much of his life was plagued by financial difficulties, constant scheming by his inferior musical rivals, and mostly unsuccessful attempts to translate his universally recognized musical genius into artistic and social success, either by obtaining a well-paying court position or by having his music performed in front of a wide audience.

CHILDHOOD

Success had come to him easily in his childhood, when the European royalty and nobility embraced him as their musical child-wonder. From the age of three he could play the keyboard, and at five he was producing his first compositions. He received his musical education from his father, Leopold Mozart (1719–1787), a musician of some reputation as a violinist, composer, and author of a book on violin technique. Leopold was in the service of the archbishop of Salzburg, and early recognized the musical gifts of his son. Mozart's relation to his father, whose approval and affection he craved but never won in an unqualified way, was very important to him throughout his life.

In 1762, Leopold Mozart took Wolfgang and his scarcely less talented sister, Nannerl (1751–1829) on a musical tour, during which they performed in front of the emperor of Austria and many of the sovereigns of Germany. Subsequently they toured throughout Europe performing for Louis XV at Versailles and for George III in London. There are numerous reliable testimonies as well as endless anecdotes dating from this period confirming his outstanding musical abilities, his charm, and his impact on the nobility of his day. At the age of fourteen, Mozart toured in Italy and visited Rome, where he heard the famous *Miserere* for double choir of Gregorio Allegri (1582–1652) performed in the Sistine Chapel and, it is recorded, proceeded to write it down from memory. This caused consternation and amazement to all who witnessed the feat, for the piece was regarded as a mystery and the singers were forbidden from committing their parts to paper. At this point he was

already composing his early symphonies as well as his first operas and was already being called the greatest genius in all music.

MATURITY

Between 1769 and 1781, Mozart served as orchestral director to the archbishop of Salzburg, an honorary position with a modest stipend that allowed him to travel and work on commission for various noblemen and opera houses at home and abroad. Unfortunately for Mozart, the position of archbishop was assumed in 1772 by Count Colloredo, a man of limited musical interests whose relationship with Mozart became increasingly fraught. During this period, Mozart continued his extensive travels, composing operas, masses, symphonies, and chamber music of ever increasing beauty and maturity. However, Mozart discovered that young musicians had far less appeal for the aristocracy than infant prodigies, generally assuming an inferior position among the servants in household hierarchies. In 1781, his opera *Idomeneo*, the first to be regarded as an unqualified masterpiece, premiered in Munich, and that same year a climactic argument with his employer led to Mozart's moving to Vienna, where he lived for the remaining ten years of his life. It was in Vienna that Mozart composed his mature operas, including *Die Entführung*, the three sublime operas to libretti by Lorenzo da Ponte (*Le Nozze di Figaro*, *Don Giovanni*, and *Così fan tutte*), the highly successful *Die Zauberflöte* and *La Clemenza di Tito*, the great concertos for piano, the mature symphonies, and a wealth of chamber and church music. Virtually all the works of Mozart's maturity are acknowledged as supreme masterpieces.

In 1782, Mozart married Konstanze Weber, much to his father's disapproval. His marriage has been the topic of wide speculation and Konstanze the object of much vilification, probably on account of Leopold's dislike of her. However, Mozart's numerous letters to her reveal him to be a dedicated and loving husband, just as his letters to his father reveal the son's ceaseless struggle to earn his father's approval and respect. Mozart's marriage undoubtedly suffered from his constant financial worries,

the death of several children, his increasing alienation from his father, and successive disappointments occasioned by either lukewarm or unappreciative reception of some of his greatest masterpieces, which were almost invariably overshadowed by the successes of works by lesser composers. One composer who appreciated fully Mozart's genius and was inspired by him was Haydn, generally regarded as Europe's leading composer at the time, who in 1785, famously told Leopold Mozart, "Before God, and as an honest man, I tell you that your son is the greatest composer known to me in person or by name. He has taste, and, what is more, the greatest knowledge of composition" (Einstein 1946, 25).

Although Leopold was proud of his son's undoubted genius, he never accorded him the respect that Mozart craved. Leopold's letter to Baroness Waldstadten dated 23 August 1782, when Mozart was twenty-six, is indicative of the father-son relation: "On the whole, I should feel quite easy in my mind, were it not that I have detected in my son an outstanding fault, which is, that he is far too patient or rather easy-going, too indolent, perhaps even too proud, in short, that he has the sum total of all those traits, which render a man inactive; on the other hand, he is too impatient, too hasty, and will not abide his time. Two opposing elements rule his nature, I mean, there is either too much or too little, never the golden mean. If he is not actually in want, then he is immediately satisfied and becomes indolent and lazy. If he has to bestir himself, then he realizes his worth and wants to make his fortune at once. Nothing must stand in his way; yet it is unfortunately the most capable people and those who possess outstanding genius who have the greatest obstacles to face" (Einstein 1946, 42).

Leopold's death in 1787 profoundly affected Mozart, who transferred many of his filial affections to "papa Haydn." In his last letter to his father he wrote, "As death . . . is the true goal of existence, I have formed during the last few years such close relations with this best and truest friend of mankind that his image is no longer terrifying to me but very soothing and consoling" (Einstein 1946, 92). Mozart's works in the final years of his life acquire a

deep though never sentimental quality of melancholy, without ever losing their astounding melodic beauty or harmonic invention. Despite popular conceptions, there is little evidence that Mozart had premonitions of death, and the melodrama surrounding the commission and composition of his unfinished final work, the *Requiem*, is almost entirely invention. The subsequent story that he had been poisoned by the court composer Salieri (1750–1825), which became the topic of an opera by Rimsky-Korsakov, is total fiction. "Posterity will not see such a talent again in 100 years," said Haydn on hearing news of his death (Robbins Landon 1989b, 171).

MOZART ON LEADERSHIP AND POWER

What can Mozart, whose compositions together represent one of the ultimate summits of European culture, teach us about leadership and power? As an individual, Mozart was no leader, he had no followers, nor did he seek to lead others into new paths. As a matter of fact, although he was undoubtedly a proud man, absolutely confident of his unique gift and capable of rebellion against his employer, Mozart was a follower rather than a leader. His relationship to his father was one of almost total dedication and subordination. Although he viewed Haydn as his artistic equal, he consistently deferred to him. In music too, Mozart can hardly be seen as a leader. Although we can safely say that he was revered above any other composer by subsequent generations of musicians, he was not as great an innovator in matters of musical form, expression, or style as Beethoven or Haydn. Although his operas remain peerless among all artistic creations, they did not find many imitators, nor did they establish new artistic conventions. For many composers, Mozart was a source of inspiration whose accomplishments were forever out of reach rather than a fellow artist to be imitated.

Nor does Mozart's music easily lend itself to political or ideological causes in the manner of the music of Bach, Beethoven, Verdi (1813–1901), and Wagner—it generally stands clear of nonmusical associations. To be sure, in Mozart's operas we do get rich and times idealized portraits of leadership, such as

those of magnanimous Titus, duty-torn Idomeneus, sage Sarastro, or generous Pasha Selim (a speaking part). Most of these portraits suggest enlightened rulers with strong paternalistic qualities—benevolent father figures. It is the love, recognition, and respect that this idealized father figure bestows on his followers that Mozart craved from his father and only conditionally received. Yet none of these portraits reaches the psychological or dramatic complexities achieved by Verdi in *Simon Boccanegra*, *Don Carlos*, and *Otello*, Mussorgsky (1839–1881) in *Boris Godunov*, or Wagner in the *Ring*. In depicting persons of enormous power and carrying immense responsibility, Mozart remains within the convention of his pre-Revolutionary social milieu.

It would be entirely wrong, however, to view Mozart as an apolitical composer, concerned either with the minutiae of domestic life or with issues on a metaphysical scale and unaware of the political dimensions of social relations. Where Mozart remains almost unequalled is in his dramatic portraits of ordinary people, such as the protagonists of virtually all his mature operas. This is especially so in the case of his female characters, such as his Countess, his Susanna, his Donna Elvira, and his Fiordiligi, whose psychological complexities and richness make them both perfect critics of male power and eloquent advocates of female equality. All these characters are fully developed individuals participating in relations that involve both love and power, harmony and conflict. They change their minds, think, feel, and breathe in ways that we recognize as supremely modern. And all of this is brought to the fore through music that communicates emotion eloquently but without histrionics, which expresses doubt, ambiguity, irony, and ambivalence in ways that few if any composers have ever managed to equal.

Mozart's life and work stands as potent testimony that the greatest human geniuses are by no means the greatest leaders. What Mozart undoubtedly possessed, in common with the supreme artists of his and all generations, was the ability to make us look at the world, with all its power relations, its inequalities, its confusion, and its rationalizations, in a new and uniquely illuminating light. An immortal mas-

terpiece such as *Le Nozze di Figaro*, no less than Shakespeare's *Macbeth* or Sophocles' *Antigone*, teaches us more than most treatises on leadership the different ways in which power operates, asserts itself, legitimates itself, generates resistance, and eventually dissipates.

🌐 MUHAMMAD (c. 570–632 CE)

Prophet and founder of Islam

Muhammad was the founder of the religion of Islam and the most important and influential Arab who has ever lived. His achievements include the original formulation of many core Muslim doctrines, the political unification of the Arabian Peninsula, which eventually resulted in the great Muslim conquests (634–732), the linguistic establishment of the Qur'anic version of classical Arabic as the dominant language of the Arab peoples (and eventually the lingua franca of all Muslims), and the foundation of an Islamic social order that has persisted until the present day and continues to attract converts on a large scale.

Abu al-Qasim Muhammad ibn 'Abd Allah ibn 'Abd al-Muttalib ibn Hashim belonged to the tribe of Quraysh in the small town of Mecca (located on the western side of the Arabian Peninsula). For most of his life until approximately the age of forty Muham-

mad was virtually anonymous, having married a wealthy widow named Khadijah in his middle twenties. During the first decade of the seventh century Muhammad was in the habit of retiring to an isolated local mountain in order to perform rites of purification and asceticism. At one particular time, approximately during the year 610, he was visited by an apparition, later identified as the angel Gabriel, who instructed him to read (or recite); upon the negative response of Muhammad, the following revelation was given: "Read in the name of your Lord, Who created: He created man from a clot. Read, by your Most Generous Lord, who taught by the Pen. He taught man what he did not know" (Fakhry, Qur'an 96:1–5).

Muhammad's response was self-doubt and fear that the revelation might be the work of a demon. This anxiety was calmed by the support of a Christian relative of his wife Khadijah, who told him that this revelation was the work of God. Gradually over the next few years Muhammad proclaimed the message of the absolute unity of God, rejecting the dominant paganism of the Quraysh, together with additional revelations that spoke of the coming end of the world. This period of proclamation was not a successful one for the most part. A few close relatives and some slaves and other social outcasts became

Muslims, but overall the tribe of Quraysh rejected Muhammad's message and eventually began to persecute his small group and to threaten his life. However, following the year 620, Muhammad made converts among the tribesmen of Yathrib (Medina) to the north of Mecca, and in 622 emigrated there together with the other Muslims.

During the Meccan period of Muhammad's ministry, the Prophet demonstrated comparatively minor leadership qualities. He managed to keep his following together, to attract converts, and to win concessions from the pagan Quraysh occasionally.

The *hijra* (emigration) in 622 marks the de facto foundation of the Muslim community. This was the date chosen for the beginning of the Muslim calendar (notably *not* the year in which the first revelations were received), and marks the beginnings of Muslim historical memory (accounts of events previous to this time are clouded). The Muslim community in Medina was initially a small minority and badly placed from a geographical point of view (in the lowest section of the oasis, with semi-hostile Jewish tribes occupying the high ground, and a pass to the north from which enemies could attack the oasis). Attempts to win the Jews of Medina (the Banu Qaynuqa, the Banu al-Nadir, and the Banu Qurayza tribes) were a failure, and the Muslims were divided between those who were exclusively loyal to the Prophet and those who were Muslims but refused to break their relations with the Jews (the so-called Hypocrites). However, Muhammad quickly managed to establish himself as the dominant power in Medina, and within five years most of its inhabitants were Muslim; the Jewish tribes had been converted, expelled, or massacred; and there was no further Muslim opposition to him. This community of Muslims in Medina was the seed from which Islam grew, and was characterized by a high degree of inter-Muslim loyalty, manifested primarily by Muhammad as we read in Qur'an 33:6:

“The Prophet is closer to the believers than their own selves and his wives are like their mothers.” This community was called an *umma*, a community bound together by a common faith irrespective of previous commitments.

The difficult position of the Muslim community during the years immediately following the *hijra* was Muhammad’s first concern. To a large degree this problem were resolved by a very aggressive attitude toward the Muslim community’s many foes (the Quraysh, the Jewish tribes of Medina, the Bedouin tribes surrounding the oasis, and eventually the Byzantine Empire toward the end of the Prophet Muhammad’s life). This aggressive attitude appears in the Qur’an: “Permission is given to those who fight because they have been wronged. Surely Allah is capable of giving them victory. Those who were driven out of their homes unjustly, merely for their saying: ‘Our Lord is Allah’” (22:39–40). To a large degree the success of the early Muslim community was the result of Muhammad’s ability to lead and consolidate his gains or at least cut his losses politically after each event. During the first eight years in Medina this effort was focused upon the isolation and defeat of the Quraysh, and can be easily divided into the battles that accomplished this goal.

EARLY TRIUMPH: BADR

During the first two years of their stay in Medina, the Muslims did not wage war at all. In 624, however, a Qurayshi caravan led by Abu Sufyan was to pass between Medina and the Red Sea, and the Muslims had a good chance to intercept it. If they were to accomplish this, then effectively the trade between Mecca and Syria, which was the basis for the Meccan economy, would be cut off. Abu Sufyan was well aware of this, and sent a messenger to Mecca for help. Muhammad and the Muslims came across the troops sent from Mecca (while the caravan itself managed to get away), which was led by most of the most ardent opponents of the Muslims. During the ensuing battle, the Muslims were victorious and managed to kill off a large number of the Meccan leaders. Muhammad’s leadership in this case was demonstrated by leading the battle, initiating the vic-

torious strategy, and maintaining control over the Muslim forces (to prevent a slaughter, which would have been a political disaster) afterward. The battle of Badr was one of the few battles of which it might be said that had the Muslims lost, Islam probably would have disappeared.

The advantages for the Muslims from this battle were considerable: massive gain in prestige and acquisition of precious material items from the attacking force (many of which were necessities for the poorer Muslims). However, no strategic advantage was gained in the long term, since the Muslims lacked the numbers to follow up on the victory. Additionally, there were several other disadvantages for the Muslims: by killing off most of the (incompetent) Meccan leadership they inadvertently anointed Abu Sufyan the leader of Mecca. This man was a cunning and careful leader, who (like Winston Churchill in 1940) had the advantage of being forced to take his enemy seriously early on. Another disadvantage for the Muslims was the fact that the victory at Badr had bred overconfidence and a sense that victory was ordained by God for the community that was to prove devastating after future defeats. Immediately after this victory Muhammad began the process of consolidating his position in Medina, which was precariously balanced between the Muslims who followed him exclusively, the “Hypocrites,” and the Jews.

A DEFEAT: UHUD

The year after Badr, in 625, Abu Sufyan and the Meccans proved that they now took the Muslims seriously by assembling a large force to attack Medina directly. They advanced to the north of Medina (which is an oasis enclosed by two arms of lava beds difficult for foot soldiers and impassable for cavalry), and Muhammad leading the Muslims foolishly went out to meet them. There were differences of opinion in the Muslim camp, as a number of fighters felt that the Muslim force should not leave Medina at all, and a group led by ‘Abdallah ibn Ubayy (the “Hypocrites”) abandoned Muhammad altogether and went back to the oasis (in full view of the Meccan force).

The Muslims took position at the foot of Mount Uhud (a small butte), with the Meccan force below

them slightly, and *between* them and Medina. The Meccans used the feigned retreat to lure their enemy forward, and the Muslims plunged down into their front. Abu Sufyan, however, had a reserve of cavalry that doubled back behind the Muslims, almost cutting them off from their base on Mount Uhud. While this was happening, some Muslims thought that Muhammad had been killed, and began a pell-mell retreat back up the mountain. While the Prophet was not actually killed, a large number of the Muslims (including Muhammad's uncle, Hamza, who was a champion for Islam) were.

At this point, the Muslims were in their most dangerous position ever. The Meccan force was between them and their unprotected families in the oasis of Medina. If Abu Sufyan had wanted to destroy Islam entirely he would have only had to march upon Medina. Instead, he chose to see this victory as adequate payback for Badr. For the Muslims, therefore, this was the one major defeat they suffered during the eight-year war. Muhammad once again demonstrated superior skills in leadership at this low point in his fortunes. He gathered the Muslims together and used their combined power to subordinate and then expel the weakest of the Jewish tribes, the Banu Qaynuqa. This victory at a crucial moment consolidated the geographical position of the Muslims and isolated the "Hypocrites" under 'Abdallah ibn Ubayy, who emerged in a weakened position after this event as a result of his desertion.

A STANDOFF: KHANDAQ

Both the Muslims and the Meccans were more cautious the next time they faced off two years later, in 627. The Meccans had finally come to the conclusion that they had to totally destroy the Muslim community in Medina. Mecca relied entirely upon trade with Syria-Palestine to survive (unlike Medina, which was an agricultural oasis), and with the hostile Muslims to their north, the Meccans had to find a way either to neutralize them or to eliminate them. To the latter end, Abu Sufyan gathered a large coalition of tribes to attack Medina. The Muslims were aware of the danger, but lacked the means to take the offensive. Muhammad's response to the Meccans'

attack was to build a series of fortifications to the north of Medina (which, given the fact that Medina is surrounded on three sides by lava beds, is the only vulnerable entrance to the oasis), and to hold a defensive position. This was ultimately successful, and together with some judicious negotiations with some of the Meccans' tribal allies, resulted in the Meccans being forced to retreat after running out of supplies.

Although the battle itself was inconclusive, Muhammad once again took the opportunity to consolidate his position in Medina. In the immediate aftermath of the Meccans' retreat, he led the Muslims against the Jewish tribe of Banu Qurayza, which still controlled the high ground in the oasis. After a fairly short siege, this tribe capitulated and the males of the tribe were massacred. Destruction of this last Jewish tribe of Medina also meant that the "Hypocrites" were isolated and thereafter collapsed as a political alternative to Muhammad's rule. Muhammad's leadership within five years had turned a refugee community of Muslims into the dominant factor in the oasis, and later in the entire region. This was despite the fact that this selfsame period had not witnessed spectacular military successes on the part of the Muslims (with the exception of Badr).

The Battle of the Khandaq marks the turning point for the Muslims in the campaign to conquer Mecca. From this point forward the initiative passed into the hands of the Muslims, who concluded a treaty of non-aggression with the Meccans during the following year (the Treaty of Hudaibiyya). This treaty enabled Muhammad and the Muslims to conquer a series of Jewish-dominated oases located along the trade routes up to the settled regions of the Byzantine Empire, and gave the Muslims the freedom to fight on only one front at a time. Muhammad's foresight was demonstrated by the signing of the Treaty of Hudaibiyya, which was opposed by many of his strongest supporters. However, not only did the treaty win the strategic conquests mentioned above, but it also persuaded the pagan Meccans to convert to Islam in larger numbers. By 630 the Muslims were in control of the territory between Medina and the Byzantine frontier (approximately in the

region of today's Hashemite Kingdom of Jordan). Only the towns of Mecca and al-Ta'if remained outside their sphere of influence.

THE TAKING OF MECCA

The taking of Mecca in 630 was the high point of Muhammad's career, and for all practical purposes made him (after the following battle) the dominant figure in the Arabian Peninsula. Disputes between allied tribes were used as an excuse to break the Treaty of Hudaibiyya (which was supposed to last for ten years), and Muhammad assembled an overwhelming force to subdue the Meccans. There was no resistance and the night before the occupation of the town Abu Sufyan came out to the Muslim camp and converted to Islam. Muhammad issued an amnesty to most of those who had opposed him, and almost all converted to Islam and many were granted positions of leadership in the Muslim community. Once again Muhammad's leadership was clearly demonstrated at this moment of victory. The general amnesty was opposed by many of the veteran Muslims who had been persecuted by the pagan Meccans. But Muhammad demonstrated a capacity for reconciling his former opponents and turning them into supporters that was to be demonstrated in a dramatic way at the last of his major battles.

FINAL BATTLE: HUNAYN

Although strictly speaking Hunayn in 630 was not Muhammad's final battle, it was the final battle in the series designed to conquer Mecca and the Hijaz (the coastal, western region of the Arabian peninsula). Immediately after the taking of Mecca, Muhammad and the Muslims (including the newly converted Meccans) went to the neighboring town of al-Ta'if, dominated by the tribe of Thaqif. This town and its

"The Prophet's Mission" from the *Biography of the Messenger of God*

Muhammad ibn Ishaq ibn Yasar's Biography of the Messenger of God written in the eighth century CE was the first attempt to provide a full history of the life of the Prophet Muhammad.

When Muhammad the apostle of God reached the age of forty God sent him in compassion to mankind, "as an evangelist to all men." Now God had made a covenant with every prophet whom he had sent before him that he should believe in him, testify to his truth and help him against his adversaries, and he required of them that they should transmit that to everyone who believed in them, and they carried out their obligations in that respect. God said to Muhammad, "When God made a covenant with the prophets (He said) this is the scripture and wisdom which I have given you, afterwards an apostle will come confirming what you know that you may believe in him and help him." He said, "Do you accept this and take up my burden?" i.e. the burden of my agreement which I have laid upon you. They said, "We accept it." He answered, "Then bear witness and I am a witness with you." Thus God made a covenant with all the prophets that they should testify to his truth and help him against his adversaries and they transmitted that obligation to those who believed in them among the two monotheistic religions.

tribe had been major supporters of the Meccans, and it was imperative to subdue them. Hunayn was a ravine in which a Bedouin tribe, the Hawazin (allied with Thaqif) ambushed the Muslims, and very nearly defeated them as many of the latter fled. Muhammad's foresight in reconciling the new Meccan converts, including Abu Sufyan, was demonstrated when they were steadfast in the face of near-defeat. The Qur'an says: "Allah gave you victory in numerous places and on the day of Hunayn when you were pleased with your large number; but it availed you nothing and the land became too strait for you, despite its breadth, whereupon you turned back and fled" (9:25). Eventually the Muslims were able to defeat the Hawazin and bombarded al-Ta'if, causing it to capitulate.

After these thematic battles Muhammad began initiating attacks against the Byzantine Empire in the region of Syria and Palestine. Although these attacks were all failures, they pointed the way to the success

that the Muslim armies were to have in this region shortly after the death of Muhammad, and demonstrated the latter's vision of the conquests and the global spread of Islam. After the taking of Mecca in 630, the Muslim community expanded rapidly and came to dominate the Arabian Peninsula. Missionaries were sent out to the east and to the south (Yemen) in order to convert pagan, Jewish, and Christian tribes. Many of these tribes did indeed convert to Islam nominally (though they revolted and apostasized after the death of the Prophet in 632), and sent delegations to Medina during 631 and 632 in order to declare their loyalty. Muhammad died on 8 June 632 in Medina and was buried in the Prophet's Mosque there.

During the process of the formation of the community in Medina, Muhammad revealed a surprising sense of compromise (for a person whose commitment to monotheism and the message he had received was unswerving) when the overall goal of the mission was not in any danger (for example, at the Treaty of Hudaibiyya in 628). He did not, for example, seem to be overly concerned by affronts to his personal dignity, but concentrated more upon larger strategic goals. Despite the fact that the military record of the early Muslim community was mixed at best, Muhammad displayed his most remarkable leadership in that he was able to make the most of successes and half-victories, as well as to consolidate his position and recover in the wake of defeats. He forced his fellow tribesmen of Quraysh to take him seriously, which they clearly did not do until they were defeated at Badr in 624.

After the taking of Mecca in 630, Muhammad demonstrated magnanimity toward those who until that time had fought him bitterly, and accepted them into the Muslim community (to the distress of those Muslims who had lost friends or family during the years of warfare). All throughout the Prophet Muhammad's career, but most especially in Medina, he displayed the ability to reconcile enemies and to make opposing factions work together. No doubt this ability constituted one of the bases of his charismatic power. Muhammad also possessed an eloquence and a command of the Arabic language that stood out dramatically among his peers. Many of his followers

were won over by his personality and the eloquence of his message as well as the convincing manner in which it was presented. At a deeper level, it is clear that the message was attractive because of the intense belief that the Prophet Muhammad manifested in his message. Although there were some times during his life when he was willing to compromise, the critical doctrine of the unity of God was a constant throughout his ministry.

After his death, Muhammad's life and sayings were collected into large-scale collections called Hadith. For Muslims, especially Sunni Muslims (approximately 85 percent of the total number of Muslims world wide), the Hadith constitute the basis for the divine law (the *shari'a*) by which traditionally Islamic societies have been governed. (Western scholars see the Hadith literature as reflecting the development of Muslim law and social attitudes retrojected to the time of the Prophet and do not accept it as a historical record of Muhammad's teachings.) The Hadith is the literary source for the Sunna, the Way of the Prophet, and demonstrates how he lived his life. Hence the name Sunni, which means "those who follow the Way of the Prophet Muhammad." For Sunni Muslims, therefore, the life of the Prophet Muhammad is of critical concern and the general ideal is to emulate it as closely as possible. Shi'ites (most of the remainder of Muslims) also revere the Prophet Muhammad strongly, although their lives are not governed solely by prophetic Hadith, but by the interpretation and guidance left by the descendants of Muhammad.

Muhammad's influence and leadership makes him one of the most important people in history, and his example has been and continues to be inspirational for Muslims worldwide.

MUSIC

Music is present in all societies and omnipresent in all postindustrial societies. It pours out of alarm clocks, televisions, and car stereos. It is an essential element at sports events, parades, and most religious services. It is even played in supermarkets and restaurants. According to the U.S. Department of Labor, the United States had approximately 240,000 jobs for musicians (defined as instrumentalists, singers, music directors, composers, and arrangers) in 2000. This number, however, does not reveal the enormous economic, social, and cultural impact of music. According to the Recording Industry Association of America, the value of audio and music video products shipped by U.S. manufacturers exceeded \$12.6 billion in 2002 (this is down from a high of \$14.6 billion in 1999). Recent studies have also shown that approximately 45 percent of U.S. households have at least one member who plays a musical instrument and that the average teenager or adult in the United States listens to almost twenty-five hours of radio per week.

Given the endless ways in which music is used, one should not be surprised that a wide variety of leadership roles exists in the music world. Leaders in the music world include executives of multinational corporations, engineers who design the latest gadgets, musicians who lead religious rituals, elementary school music teachers, disk jockeys who have the ability to sway public taste, directors of such agencies as the National Endowment for the Arts and Parent's Music Resource Center, and philanthropists.

Despite this variety, all leaders in the music world—like leaders in any other field—face the same two challenges. First, they must develop a clear vision; they must understand *what* they are trying to

do and *why* they are trying to do what they're doing. Second, they must develop an appropriate strategy for their vision; in other words, they need to know *how* they will achieve their vision. We will examine four case studies; each examines a specific leadership role in the world of music.

THE ORCHESTRAL CONDUCTOR: MUSICIAN AS CEO

A symphony orchestra consists of dozens of musicians playing a variety of instruments and parts. How do these musicians produce performances that are coherent and aesthetically satisfying? Since the early nineteenth century most orchestras have relied on conductors. Orchestral conductors have two primary tasks. First, they study the music that they conduct and come up with ideal interpretations. Second, they train the orchestra so that it can bring their interpretations to life.

Since the mid-twentieth century, conductors have taken two main approaches in developing ideal interpretations. Significantly, proponents of both approaches claim that they are faithful to the composers' intentions. One approach, represented by the German conductor Wilhelm Furtwängler (1886–1954), is based on the notion that conducting is an interpretive craft that goes well beyond the notes on the printed page and involves the study of philosophy, the other arts, and culture at large. Advocates of this approach argue that the task of the performer is to seek the meanings behind the notes. The other approach, represented by the Italian conductor Arturo Toscanini (1867–1957), is based on the notion that fidelity to a composer's intentions is dependent upon a literal interpretation of the printed page.

In preparing orchestras for performances, conductors have developed a wide variety of techniques and strategies. Whereas some conductors are ill-tempered tyrants, others aim to create a communal atmosphere. At the same time, some conductors prefer to play a piece from beginning to end before they correct mistakes and work on details, whereas others prefer to teach the details to the orchestra before they run through a piece.

In addition to their rehearsal and performance duties, conductors often have significant administrative tasks. In many orchestras the principal conductor is also the music director. In this capacity, the conductor plays a large role in personnel decisions and programming. During the past few decades many orchestras have gradually scaled back the amount of power that the music director possesses.

THE PRIVATE TEACHER: MUSICIAN AS EDUCATOR

One of the most important leadership positions in music is that of the private teacher. In numerous musical cultures the training for professional musicians includes extended apprenticeships with one or more private teachers. Although teachers share the vision of educating their students, their strategies differ greatly from culture to culture and from teacher to teacher.

In Western classical music, the central component of a musician's training is the lesson. A typical lesson begins with the student performing a work or a section of a work that he or she has prepared. The teacher carefully listens to this performance and then makes technical and interpretive comments that are aimed at helping the student improve. This approach reflects the fact that Western classical music has for several centuries been a written tradition. The student can learn a piece of music by reading the score, and the teacher's task is to help the student understand the nuances of the score.

In traditions that are more oral in nature, a large part of a musician's training involves learning pieces by rote directly from the teacher. In north Indian classical music, for example, a disciple (*sisya*) first learns a system of mnemonic syllables that represents rhythms, drum strokes, and pitches. After this, a master (*guru*) teaches compositions with the help of these syllables. A renowned U.S. tabla (north Indian drum) player describes his training with master tabla player Ustad alla Rakha in the following way: "These lessons were not formal. He never wrote anything down for me. In fact I never sat in front of him with drums. He only would recite compositions to me, and then I was expected to remem-

ber them, and at a later time write them down" (Hast, Cowdery, and Scott 1999, 89).

MUSICIAN AS SOCIAL-POLITICAL LEADER

Music has the ability to move people both physically and emotionally. Catchy rhythms can make members of large groups of people move in unison. This is demonstrated at rock concerts and military parades. At the same time, music's capacity to transform listeners' emotions can help bind communities together, alleviate (at least temporarily) divisions among groups, and spur people to action.

Given this power, one should not be surprised that music has been a powerful transmitter of social and political messages—both conformist and subversive—throughout recorded history. Whereas bards in ancient Greece promoted the ideals of the societies in which they lived by celebrating the virtues and warning of the flaws of past heroes and leaders, songs about Robin Hood delivered a subversive political message in medieval Europe. In Nazi Germany, the music of the German composer Ludwig van Beethoven was used to support the government's doctrine of Aryan superiority. In the 1960s, civil rights activists in the United States sang songs that challenged the social order.

Among the Mande people of West Africa is a group of hereditary musicians and wordsmiths whose members are known as *jalis*. They sing songs while accompanying themselves on such instruments as the *kora* (an instrument that is a cross between a lute and a harp) and the *balafon* (a xylophone-like instrument). Because *jalis* are the historians, genealogists, and praise singers of Mande society, they play a major role in shaping the identity of the communities in which they live. For this reason, they are considered significant social leaders in Mande culture. As ethnomusicologist (a person who studies music in a sociocultural context) Roderic Knight writes, "The *jalis* held important positions next to various leaders and influential people of the state because of their exclusive knowledge and ability in the verbal arts. They were essentially the personal court musicians of these people and they were highly respected and well paid for their important contributions" (Knight 1976, 5).

During the 1980s, a group of “underground” rock musicians appeared on the music scene in China. Initially, the government tried to marginalize the activities of these musicians, but they quickly gained a following, especially among university students. The majority of Chinese rock songs appears to be about the lives and personal emotions of the performing musicians. However, many contain deliberately opaque and ambiguous lyrics. This technique has, for two reasons, allowed many Chinese rock songs to become anthems in Chinese dissident circles. First, the ambiguity of the lyrics makes government censorship difficult. Second, the vague language allows the songs to be appealing to dissidents with vastly different political objectives. During the Tiananmen Square demonstrations of 1989, many Chinese rock musicians became leaders of the dissident movements when they performed for the demonstrators.

THE MUSIC CRITIC: LEADER OF TASTE AND OPINION

Music criticism is a rather ambiguous term that can include everything from graphic analyses that are found in academic journals to informal conversations between members of a concert audience. We can define *music criticism* as “a genre of professional writing, aimed at a non-specialist readership, which evaluates music, musicians, or some other aspect of musical life.” By this definition the most common types of music criticism are profiles of musicians and reviews of concerts and recordings that are published in newspapers and music magazines.

A central issue in music criticism is the authority of the critic. In many societies around the world, evaluations of music are based largely on subjective experiences. Given this situation, how can critics legitimize their opinions? To put it another way, how can critics lead readers to believe that their opinions are valid for others?

Through the years critics have tried to address these questions in two main ways. First, many critics, such as Eduard Hanslick (1825–1904), maintain that their critical judgments are based not on personal feelings, but rather on universal observations. This

line of legitimization can be traced to the writings of the German philosopher Immanuel Kant. In *The Critique of Judgment* (1790), Kant argues that, by examining the characteristics of an object or an art work itself, “disinterested” observers will produce the same evaluation of its beauty.

Meanwhile, other music critics, such as Vladimir Stasov (1824–1906), seek legitimization by arguing that they possess access to musicians and special knowledge, particularly in the areas of music theory and music history, that are not generally shared by their readership. They argue that this access and this knowledge allow them to evaluate musical works and performances in more accurate or profound ways.

By whatever way music critics legitimize their authority, they tend to see themselves as educators and leaders in musical taste. Specifically, they strive to introduce “good music” to their readers and to discuss social, historical, and aesthetic issues that can affect their readers’ listening experiences.

 **NADER, RALPH**
(b. 1934)

*American consumer advocate
and political activist*

Ralph Nader, the father of the modern consumer rights movement in the United States, was born in 1934 in Winsted, Connecticut, to public-spirited immigrant parents from Lebanon who distrusted powerful people and big business. A bookish child in a tight-knit family, he was very close to his older brother and two sisters, and to his parents, who ran a small, modestly successful restaurant. Nader promised his father that he would never register as a partisan of either major party, and he never did. He ran for president in the 1992, 1996, and 2000 elections as a third-party candidate.

Nader's work as an advocate, lobbyist, and litigant in the 1960s and 1970s sparked the passage of important federal legislation in product, traffic, and workplace safety, government openness, corporate regulation, and many other fields. He founded many of the "good government" groups, both in Washington, D.C., and the states, that work on behalf of consumers, monitor government agencies, and support the expansion of government regulation over corporations. At the height of his power in the late 1960s and early 1970s, Ralph Nader was a visionary leader who resuscitated the sleepy issues of consumer

rights, corporate responsibility, and government accountability and propelled them to the top of the nation's domestic agenda.

Since the 1980s, however, Nader has been a victim of his own success. His legislative victories were partially responsible for a countermobilization by corporations to check the agenda of the social forces he had awakened. However, the opposition has energized him to find a firmer political base to promote, in his words, "the sovereignty of the people" against the "corporate takeover" of democracy. As the tenor of Washington politics has shifted to the right, he has sought to expand his reach, running for president as a third-party challenger in the last three elections. His move into electoral politics has drawn a new generation of followers to his cause, but also many critics, who argue that Nader's inability to reach workable compromises with centrist Democrats splintered the progressive coalition, leaving the conservatives and corporations that Nader rails against triumphant. Whatever the controversies that surround Nader's evolving leadership tactics, he has maintained a consistent Brandeisian vision, fearful that the concentration of power in corporations or government will threaten democratic institutions. A consistent theme in his work has been a distrust of commercialism and market values, wedded to the idea that democratic life must promote noneconomic values such as liberty, equality, safety, and democratic participation.

Selection from the Testimony of Ralph Nader before the U.S. House of Representatives

On 30 June 1999, Ralph Nader testified before the Committee on the Budget, U.S. House of Representatives giving his views on "corporate welfare." Below is an extract from the testimony.

Chairman Kasich and Members of the House Budget Committee, thank you for the opportunity to testify today on the vast subject of corporate welfare.

Today's hearing is long overdue. A significant percentage of the business of Washington, D.C. revolves around corporate welfare—with lobbyists, trade associations and business executives lobbying to obtain or protect special, favorable treatment from the federal government—but curiously, notwithstanding our efforts since 1970, there has never been a Congressional hearing devoted to a comprehensive assessment of the issue. Government agencies and research offices have conducted only a handful of Joint Economic Committee-type studies in recent decades which tried just to inventory the long list of mechanisms by which the government distributes tax revenues and other public assets to private business.

Mr. Chairman, you deserve major credit for issuing a clarion call for Congressional attention to corporate welfare, and for leading various legislative efforts over the years to end egregious corporate welfare programs that benefit narrow business interests at the expense of the taxpayer, and often, one should add, at the expense of other important concerns, such as environmental protection, economic competition, fair consumer prices, national security, job creation and a well-functioning democracy.

As you know well, Mr. Chairman, the myriad of corporate welfare programs generally do not persist on the merits. Rather, they remain entrenched and continue to grow because strong and well-organized business interests, with huge monetary concerns at stake, aggressively work to defend and expand them—often hand in hand with powerful Members of Congress with whom they maintain mutually advantageous relationships. Cleaning the corporate welfare slate will not be easy.

There is only one change that will counteract the entrenched interests which create, shield and rationalize corporate welfare programs: an informed and mobilized citizenry. Absent organized and focused public outrage, legislative efforts will yield minimal success as compared to the overall scale of the corporate welfare budget. To make this claim is not to belittle such efforts. Legislative initiatives directed toward particular programs and abuses can achieve reforms that are important in their own right, and legislative proposals can and should be part of the very process of generating citizen interest and focused attention.

But innovative legislative proposals will not, by themselves, be sufficient to create an informed public opinion that translates into the action needed to create a countervailing force to the business lobby for corporate entitlements.

NADER'S STUDENT YEARS

Nader was a standout student. Academic achievement was strongly encouraged in his tight-knit family, and his high school record won him admission to Princeton University. Majoring in Far Eastern studies and economics, Nader wrote his senior thesis on economic development in Lebanon, where he had spent many summers as a child. His Princeton years were quiet as far as civic activism goes. He did launch an informal investigation when he noticed an alarming number of squirrel carcasses on the grounds of the campus. Although the editors at the student newspaper dismissed Nader's concerns, it

was later revealed that the squirrels were poisoned by DDT pesticide spray.

After graduation, Nader entered Harvard Law School. He quickly became disenchanted with the experience (although he stayed on and graduated with honors). Nader felt that his fellow students were narrow-minded and that the curriculum was too professionally oriented. In Nader's estimation, Harvard ignored the value of law as an agent of social change and reform. The philosophical foundations of his later work were set at Harvard, however, though many of the books that influenced him he read outside of class. Nader was taken with sociological approaches to law, such as those elucidated by the

legal theorist Roscoe Pound and found in the work of one of Harvard's most famous graduates, Supreme Court Justice Louis Brandeis.

NADER'S LEADERSHIP AND THE CONSUMER MOVEMENT

Although Nader came of age at the height of the civil rights movement, he remained disengaged from the liberal agenda that captivated many of his contemporaries, particularly young, progressive lawyers. Instead, Nader developed an interest in the more prosaic issue of automotive safety, publishing on the subject while still at Harvard. Nader believed that people had "body rights"—rights related to protection against maiming and killing—that were not addressed when it came to cars. Nader practiced law with a small Connecticut firm until he moved to Washington to work with Assistant Secretary of Labor Patrick Moynihan as a part-time researcher on traffic safety issues. He wrote a long report that led to a book contract for the now-classic work published in 1965, *Unsafe at Any Speed*. In the book, Nader raised questions about the objectivity and integrity of the automobile industry's safety tests and studies. The industry, Nader argued, favored slick marketing for their products at the expense of safety. Nader's ire was most sharply aimed at the alleged safety problems of General Motors' Corvair.

Nader's research caught the attention of Senator Abraham Ribicoff. At congressional hearings on the subject of automotive safety, Nader's cause was popularized when it was revealed that General Motors' detectives had researched his background and habits in an effort to collect material suitable for use as blackmail. The hearings generated pressure that led to the creation of the federal National Highway Safety Bureau in 1966. Federal regulators began instituting safety requirements in cars, and perhaps more important, the disdain of the industry toward safety as an issue that could sell cars diminished as the public responded enthusiastically to the new federal regulations and the new approach.

Nader's lobbying and activism in the late 1960s led to the passage of several other important pieces of legislation, including the Wholesale Meat Act of

1967, a measure that imposed health regulations on the interstate sale of meat, and bills that improved gas-pipeline and hospital-radiation safety.

Nader profited from good relationships with congressional staff. Liberal activists, anxious to make their mark, relied on Nader to point them in the right direction. Nader also cultivated and carefully guarded a reputation as an indefatigable and virtuous crusader. A Nader trademark was to make late night phone calls to members of Congress and their staffs to leave the impression—which was quite accurate—of a zealot keeping a crushing work schedule. Nader's mystique and hard work won him media attention, which, in turn, became a powerful instrument for advancing his agenda in Congress.

Nader devoted considerable energies to institution building in order to create countervailing forces to check the power of corporations. His first was the Center for Responsive Politics, founded in 1968 and staffed with bright young law students. One of the initial projects of the Center was a careful examination of the Federal Trade Commission. An incisive report catalogued mismanagement at the agency as well as lax enforcement. Nader would go on to play a role in founding dozens of consumer advocacy groups. Among the most important are the Public Interest Research Group, which is active in state capitols and on college campuses, and Public Citizen, a Washington-based advocacy organization. Nader was particularly adept at inspiring talented young people to join his crusade; they were dubbed "Nader's Raiders" for their hard-driving tactics.

Some prominent people who worked for Nader's organizations include Mark Green, New York City Democratic nominee for mayor in 2001; Jill Claybrook, chair of the National Transportation Safety Board in the Carter Administration; and Michael Kinsley, editor and writer for *The New Republic* and *Slate*. By the early 1970s, Nader's prestige was such that his name was often mentioned as a potential presidential candidate. George McGovern asked Nader to serve as the vice presidential nominee on his 1972 Democratic ticket. Nader refused to get involved in electoral politics, arguing that he had more power working as an outsider.

During the Carter administration, the weaknesses

The function of leadership is to produce more leaders, not more followers.

—Ralph Nader

in Nader's leadership approach became evident. The crusading outsider had difficulty forging compromises or settling for anything less than his vision of the common good. Nader expected open-ended access to the White House, but administration officials, while courting him during the 1976 presidential campaign, held him at arm's length after Carter won. Nader was disillusioned by Carter's centrist politics. In Congress, Nader turned on his former allies among the liberal Democratic ranks in the House and Senate, burning bridges with many of the elected officials and staff who were responsible for passing his agenda in the 1960s and early 1970s. One of his biggest missteps was the Congress Project, an exposé about congressional behavior that denounced logrolling, campaign contributions, and many traditional legislative practices. In 1978, Nader refused to back compromises adopted to build support for his most treasured legislative goal, the creation of a consumer protection agency. The measure, which died in the Senate, represented the high water mark of Nader's influence in Washington.

NADER IN EXILE

With the election of Ronald Reagan in 1980 and a revitalized business lobby that had the administration's ear, according to Nader, "a whole culture of defense set in" for the consumer movement and liberal advocacy groups in Washington. The White House's Task Force on Regulatory Relief, headed by Vice President George Bush, rolled back many of the reforms advanced by Nader and like-minded groups in the 1960s and 1970s. Nader devoted much of his energies in the 1980s to working at the grassroots. He found some success in taking the consumer advocacy agenda to the states, campaigning successfully, for example, for consumer-friendly car insurance reforms in California. Nader also tried to reach out to a group with whom he always had special kinship

because of their energy and idealism—college students—by doing tremendous amounts of public speaking on campuses.

Throughout his long career, although Nader remained deeply dissatisfied with the health of American democratic institutions, his focus remained squarely on issues that fit under the broad umbrella of consumer rights. His emphasis began to change in the late 1980s, however, as the ideology of the Washington establishment shifted to the right. Nader concluded that few differences remained between the Democratic and Republican parties because both parties were in the pocket of corporate America. True reform on the issues that Nader held dear could only be sustained through a takeover of the political system by a social movement powered by citizen activists. Hoping to lead the charge, as well as attract attention to his issues, Nader tentatively entered the 1992 New Hampshire Democratic primary, urging voters to select him as a write-in candidate. He campaigned for procedural reforms that he termed the "toolbox of democracy," including campaign finance reform and a proposal to give voters the choice of "none of the above" if they disliked their candidate choices on Election Day. Nader's entrance into electoral politics was intended as an offensive strike against conservatives and corporations, at a time when he had wearied of playing defense for more than two decades.

NADER'S MOVE INTO PRESIDENTIAL POLITICS

In 1996, Nader's efforts at running for president became more serious when he allied with Green Party advocates, securing ballot access in the November general election in twenty-one states. Although running under the Green banner and serving as the public face of the party, Nader remained deeply ambivalent about party practices, maintaining an instinctive distaste for the compromises needed to hold party coalitions together. He refused to actually become an enrolled member of the party, and refused to support the entire Green slate of policy positions.

Nader's decision to run for president in 2000 stirred interest, in part because his third foray into

presidential politics was his most serious. He kept a promise to visit all fifty states in the campaign and drew support from liberals dissatisfied with the centrist politics of the Democratic nominee, Al Gore. As with most third-party challengers, Nader was never a serious threat to win the election. But many feared he would play the role of the spoiler, pulling votes from Gore and handing the election to the conservative Republican candidate, George Bush. Among Nader's most vocal critics were a group of his former volunteer interns and paid staff—who called themselves “Raiders for Gore.” They argued that Nader's claim that there were no real differences between the two parties was patently false. They insisted that Nader had overlooked Gore's progressive record on environmental and consumer issues.

The fears of Raiders for Gore proved to be prophetic. Votes for Nader in Florida would have given Gore the necessary margin to win the state's electoral votes and thus the entire election. Nader's critics were particularly bitter about his campaign tactics in the final days of the campaign. Nader campaigned in the “hot states” where polls showed that Bush and Gore were running neck-and-neck. Nader's explanation for his strategy was that media attention was concentrated in the competitive states. (In contrast, third-party candidate Patrick Buchanan campaigned in states where his party's pull of the vote would not have tipped the election.) After the election proved to be so close, Nader defiantly argued that he was not the spoiler. Nader said that Gore's own miscues were responsible for his loss, rather than any action on Nader's part, and that the election of the pure conservative candidate, George Bush, would eventually spark a backlash against both parties and accelerate the development of truly progressive politics.

NADER'S CONTRIBUTIONS TO CONSUMER CONSCIOUSNESS

Ralph Nader is a visionary leader who almost single-handedly invented the consumer movement in the United States. He transformed citizen consciousness. Under Nader's tutelage and prodding, people began taking their rights as consumers seriously, and they

demanded that their government do the same. But his visionary leadership did not age well. While his relentless dissenting voice prodded the liberal Congress of the 1960s and 1970s, the conservative Washington establishment of the Reagan era and beyond successfully shut him out. His unrelenting purist style of leadership did not serve him well in his attempts to become a party leader and presidential candidate. Still, Nader remains one of the most important leaders of twentieth century America and an important voice in the dialogue about the nature and meaning of American democracy today.

NAPOLEON (1769–1821) *General and emperor of France*

As a French general, leader of France as first consul, and then emperor, Napoleon consolidated and promoted many ideals of the French Revolution, especially equality, and brought political, social, and financial stability to France. Over the objection of many, he promoted equality for the Jews, while reinstating the Catholic Church as a part of France's social fabric. He reformed education and, in his most famous and lasting legacy, he brought the chaotic civil code of France into one unified body of law that eventually become known as the Code Napoléon. Napoleon brought those same reforms to countries that came under his control. Often considered the

father of modern Europe, Napoleon sounded the death knell for the last remnants of feudalism.

ELEMENTS OF NAPOLEON'S RISE TO POWER AND LEADERSHIP

Napoleon's career developed during the chaos of the French Revolution, while France was at war with its neighbors, and amid the instability of the Directory government that followed. His rise was due to an absence of good military leadership, to assistance rendered him by various important people early in his career, and to his considerable talent. He was a natural leader of men and was able to dominate them with the sheer force of his personality and will.

Napoleon excelled in both political and military leadership. His genius of intellect, his ability to seize opportunity and exploit it to the fullest, and his eye for detail and the grand picture were essential to his success as was his ability to communicate and to promote

favorable information and imagery. The latter is seen most notably in the *Bulletins* of his military campaigns, which were carefully written for the consumption of his men, the French public, and his enemies.

Napoleon's leadership style was innovative; people perceived him as a leader who would bring positive social, political, and military change to France. Indeed, Napoleon's domestic reforms alone would have made him a successful leader. His inventive military tactics and organization were advanced beyond those of his opponents. His soldiers recognized his original skills and their benefits as much as the general citizenry; both rallied to his cause.

Using Max Weber's ideal typology as a model, we can regard Napoleon as a charismatic leader since he exhibits many of the model's signal characteristics. His appeal largely was based on his image as a hero, as an exemplary person who could accomplish more than anyone else. Leadership based on heroic charisma, however, depends on victory. Napoleon recognized that, pointing out numerous times that his power rested not on his right to govern but on his accomplishments, especially on the battlefield.

Weber's model of charismatic leadership requires that the leader is aware of his special qualities, believes that he has a "calling," and that others recognize this quality. It is unclear when Napoleon developed this image of himself, but it seems clear by the end of his career that he had this self-image as did his contemporaries. The devotion of Napoleon's soldiers to him is legend; the civilian population was equally willing to follow him anywhere.

EARLY CAREER

Napoleon was born in Ajaccio, capital of Corsica, which had recently come under French control. His father, Carlo, was a lawyer, politician, and minor noble. Napoleon received a royal scholarship to military schools at Brienne in northeastern France and Paris, and graduated at the age of sixteen as a lieutenant in the artillery two years before his peers. He impressed his instructors with his intellect and his ability to grasp and promote new ideas in warfare, such as the use of light mobile artillery.

Napoleon found people who would be useful to

his own advancement. His pro-revolutionary writing had attracted the attention of powerful politicians of the day who were happy to sponsor the young revolutionary who had more talent than anyone else they had seen in the military.

Napoleon first exercised leadership in 1793 at the French port city of Toulon. That city had sided with royalist supporters and invited the British to occupy its port. This treason did not go unanswered, but the military leadership sent to remove the British was incompetent. Good fortune put Napoleon in charge of the artillery, a promotion due in large part to the political connections that he had cultivated. He devised a unique plan of attack, but the commanding general was unimpressed. Napoleon wrote to Paris demanding a new general. Perhaps even then he saw himself on a Weberian mission. His letter is a classic example of risk taking, given that the guillotine was always a possibility for those who fell out of favor:

I have had to struggle against ignorance, and the passions it gives rise to. . . . [S]end to command the artillery an artillery general who can, if only by his rank, demand respect and deal with a crowd of fools on the staff with whom one has constantly to argue and lay down the law in order to overcome their prejudices and make them take action which theory and practice alike have shown to be axiomatic to any trained officer of this corps. (Napoleon I, Correspondence, 25 October 1793, no. 1, I, 1–2).

Napoleon got his new general and forced the British to leave Toulon. For that he was promoted to the rank of brigadier-general at the age of twenty-four.

On 5 October 1795, royalist forces were gathering in Paris and preparing to storm the government. Napoleon took charge of the defense of the Directory, fired his famous “whiff of grapeshot,” and dispersed the royalist forces. The government promoted him to general of division with command of the French army in Italy. Before he left, he married Joséphine de Beauharnais.

ITALY

It was in Italy that Napoleon truly came into his own. The French, who were fighting the Austrians and their Italian allies, were demoralized and unsuccess-

ful. Senior officers were furious that this young upstart had been given the command. Napoleon’s charismatic personality overcame their scruples.

Napoleon had a great impact on his soldiers. From Italy on, they would follow him anywhere. In part, this was due to ability, but he gave speeches that mesmerized them and inspired them to more success than they ever thought possible.

After a relatively minor action at Lodi on 10 May 1796, his writings suggest he may have begun to see himself as a man of destiny, with a “calling.” Napoleon defeated the Austrians, took charge of the negotiation process, and formed the Cisalpine Republic out of part of northern Italy. This was a risky maneuver. The government in Paris was not willing to challenge him on it, though, and his already substantial legend continued to grow.

In 1798, the Directory sent Napoleon to Egypt, where he saw himself as the successor to Alexander the Great. He had far less military success there than Alexander, but when he left Egypt after a year he was seen as a great hero. French prospects in Egypt were short-lived, but the world learned far more about Egypt than it had learned for a millennium because of the many scholars, artists, and cartographers who accompanied Napoleon. The discovery of the Rosetta Stone laid the foundation for the modern study of Egyptology, one of Napoleon’s enduring legacies.

FIRST CONSUL

In 1799, the Directory was seen as corrupt and ineffective and there were numerous plots for its overthrow. Some top political leaders of France were involved in a plot to gain control of the government. Napoleon, a national hero who would bring legitimacy to their coup, was to be their tool, but his polit-

TITLE I.

Of the Enjoyment and Privation of Civil Rights.

CHAPTER I.

Of the Enjoyment of Civil Rights.

[The first six points are preliminary articles to the code.]

7. The exercise of civil rights is independent of the quality of citizen, which is only acquired and preserved conformably to the constitutional law.
8. Every Frenchman shall enjoy civil rights.
9. Every individual born in France of a foreigner, may, during the year which shall succeed the period of his majority, claim the quality of Frenchman; provided, that if he shall reside in France he declares his intention to fix his domicile in that country, and that in case he shall reside in a foreign country, he give security to become domiciled in France and establish himself there within a year, to be computed from the date of that undertaking.
10. Every child born of a Frenchman in a foreign country is French. Every child born in a foreign country of a Frenchman who shall have lost the quality of a Frenchman, may at any time recover this quality by complying with the formalities prescribed in the ninth article.
11. A foreigner shall enjoy in France the same civil rights as are or shall be accorded to Frenchmen by the treaties of that nation to which such foreigner shall belong.

12. The foreigner who shall have married a Frenchman, shall follow the condition of her husband.
13. The foreigner who shall have been permitted by the government to establish his domicile in France, shall enjoy in that country all civil rights so long as he shall continue to reside there.
14. A foreigner, although not resident in France, may be cited before the French courts, to enforce the execution of engagements contracted by him in France with a Frenchman; he may be summoned before the tribunals of France, on account of engagements entered into by him with Frenchmen in a foreign country.
15. A Frenchman may be summoned before a French court, for engagements contracted by him in a foreign country, though with a foreigner.
16. In all causes, except commercial ones, in which a foreigner shall be plaintiff, he shall be required to give security for the payment of the costs and damages incident to the suit, unless he possess in France immoveable property of value sufficient to guarantee such payment.

CHAPTER II.

Of the Privation of Civil Rights.

SECTION I.

Of the Privation of Civil Rights by the Loss of the Quality of Frenchman.

The quality of Frenchman shall be lost, 1st, by naturalization in a foreign country; 2d, by accepting, without the authority of government, public employments bestowed by a foreign power; 3dly, by adoption into any foreign corporation which shall require distinctions of birth; 4thly,

ical skills trumped those of the other conspirators. At thirty he became, as first consul (of three), the ruler of France. One of the conspirators, Emmanuel Sieyès, summed up Napoleon's image by noting, "Gentlemen, you have got a master! This man knows every thing, wants every thing, and can do every thing" (*Las Casas*, I, 142).

Had Napoleon been permitted to peacefully rule France, he would be most noted for his domestic political leadership, rather than for his military leadership. He negotiated a peace treaty with Britain,

known as the Peace of Amiens, but it would not last. The old regimes, especially Great Britain, would not allow France to exist in peace; Napoleon's most dominant image was to be that of a military leader. Throughout his career, Napoleon was forced to carry the fight to those coalitions. For most of his career, he had great success and left the world an example of military leadership matched by few in history. British-sponsored attempts on his life occurred, and Napoleon finally sought to ensure the continuation of his legacy through the establishment of a heredi-

Commercial establishments shall never be considered as having been made without intention of return.

A Frenchman, who shall have lost his quality of Frenchman, may at any time recover it by returning to France with the sanction of government, declaring at the same time his intention to settle there, and his renunciation of every distinction inconsistent with the law of France.

A Frenchwoman, who shall espouse a foreigner, shall follow the condition of her husband. If she become a widow, she shall recover the quality of Frenchwoman, provided she already reside in France, or that she return thither under the sanction of government, and declare at the same time her intention to fix there.

The individuals who shall recover the quality of Frenchman or Frenchwoman in the cases provided for by Articles 10, 18, and 19, shall not be permitted to avail themselves of it until they have fulfilled the conditions imposed upon them by those articles, and only for the exercise of rights open to their advantage after that period.

The Frenchman who, without the authority of the government, shall engage in military service with a foreign power, or shall enroll himself in any foreign military association, shall lose his quality of Frenchman.

He shall not be permitted to re-enter France without the permission of the government, nor to recover the quality of Frenchman except by complying with the conditions required of a foreigner in order to become a citizen; and this without affecting the punishments denounced by the criminal law against Frenchmen who have borne or shall bear arms against their country.

tary monarchy. On 2 December 1804, he became Napoleon I, Emperor of the French.

EMPEROR

As emperor, Napoleon's dual legacy and leadership continued, but the military components of his career became far more prominent. The battles of Austerlitz (1805), Friedland (1807), and Wagram (1809) are but a few examples of his successes. The height of Napoleon's power was the period

1810 to 1812, but even by then the empire was beginning to show cracks.

To isolate Great Britain, Napoleon instituted an economic blockade known as the Continental System. This proved as damaging to continental economies as to Britain's. Napoleon's attempt to control Spain by putting his brother Joseph on the throne seemed a reasonable idea and would have led to a far more enlightened Spanish government, but the Spanish peasant class rebelled. When the British invaded Spain under Arthur Wellesley, the future Duke of Wellington, French forces eventually withdrew toward France.

Napoleon's final decline began with his 1812 invasion of Russia. Czar Alexander had withdrawn from the Continental System and made demands regarding Poland that the French could not accept. War was inevitable, and Napoleon took it to the heart of Russia. There he won numerous skirmishes, defeated the Russians at Borodino and captured Moscow. Unprepared to spend the winter in a Moscow largely burned by its citizens, Napoleon withdrew from Russia. The campaign was a disaster, and Napoleon lost 90 percent of his army. The Russians continued pursuit into Saxony in 1813, and a growing coalition of forces defeated Napoleon at the Battle of Leipzig.

In 1814, Napoleon was forced to defend France from invading coalition forces. It was his most brilliant campaign, but he ultimately abdicated as his enemies surrounded Paris. He was sent into exile as the emperor of Elba, a tiny island off the coast of Italy. There he spent less than one year before returning to France to reclaim his throne. He pleaded for peace, but his old enemies mobilized and he was defeated at the Battle of Waterloo in June 1815.

Abdicating a second time, Napoleon was sent with a small entourage to the remote island of St. Helena, where he spent much of his time dictating his memoirs and feuding with his British captors. On 5 May 1821, Napoleon died either of stomach cancer

NARCISSISTIC LEADERSHIP

Narcissism is one of those ideas that, like repression and projection, has moved so far from its psychoanalytic roots into common parlance that its origins have been forgotten. But common speech is not noted for precision, and precision may be necessary for an adequate delineation of the meaning of the concept. Such is the case with narcissism as that term is implicated in the concept of narcissistic leadership.

Specifically, there are two rather different types of narcissism that need to be kept apart, while their common elements are recognized. We may call them healthy narcissism and pathological narcissism. Getting a sense of their similarities and differences with regard to leadership requires a brief excursion into psychoanalytic theory.

A PSYCHOANALYTIC EXPLANATION OF NARCISSISM

In the beginning of psychological life, according to psychoanalytic theory, the child is open to the mother, who is the world to the child. The child loves her and she loves the child, so the child feels mother's love as being part of him- or herself. The child may thus be said to feel as if he or she is the center of a loving world. Freud gives this experience the name *primary narcissism*.

As children move out of the mother's orbit, they come to find that the outside world is indifferent to them and uninterested in them. They find themselves helpless, isolated, and filled with anxiety. They defend against this anxiety with a fantasy of the return to the state of primary narcissism, a fantasy Freud called the *ego ideal*. The ego ideal is our

image of what we could be such that, if we were, the world would revolve around us with love and admiration as our mothers did early in life.

The ego ideal is what gives our lives a sense of direction. When we think about “getting someplace in life,” the ego ideal lies behind the appeal of wherever we are thinking of getting. On the individual level, it lies behind our idea of success. That is why we can agree on the importance of being a success, even though we may differ greatly on what being a success means. On the collective level, it gives the appeal to ideas that represent the perfect social order, whether that order is to be obtained through revolution, submission, or something else. What all of these images have in common is that they picture our being able to do what we want and being loved for it. In this way, we defend ourselves against the anxiety of being forced to do what we don’t want to do, without any assurance that we will be able to accomplish what we want or any knowledge that it will be appreciated if we do. Thus, the ideal of success helps us to defend against the anxiety of failure. Just as we can never reach the horizon, we can never reach the ego ideal—the world is not our mother—yet we can have the feeling of moving toward it. This keeps the fantasy alive and is what we need if we are to have a sense of hope.

In the classic story, the first model of the ego ideal is that the father has the mother’s love as the child would like to have it. This idealization gives the father leverage to teach the child about the systems of exchange through which the world operates, in its indifference. Then the child can move toward the ego ideal by becoming like the father, performing the adult functions that the systems of exchange reward. But as the systems of exchange can never bring us to the ego ideal, they need to be continually revised to improve their workings, and the promise of their connection to the ego ideal must be continually revived. Within an organization, the function of adaptive reformulation is what we call management, while the renewal of the promise of the ego ideal is called leadership.

The function of leadership, then, is to make behavior meaningful by connecting it to the ego ideal. Since the ego ideal is a fantasy, that means

that leadership always involves the formation or reformulation of fantasy. It therefore calls for an act of the imagination. That brings us to a point where we can understand the place of narcissism in leadership, both with regard to its healthy and its pathological form.

Narcissism is self-love. It means experiencing oneself as lovable and therefore anticipating love from others. It means accepting one’s impulses as being good and, most important for our purposes, valuing one’s imagination and taking it as a good guide to reality. This gives people the sense that what they are doing and what they want to do are part of the ego ideal. That is, it gives people the sense that they may do what they are inclined to do and will be loved for it. People may be said to idealize themselves and their behavior.

For Freud, taking someone as a leader means placing that person in the place of our ego ideal. For most of us, the gap between who we think we are and who we would most like to be, between the ego and the ego ideal, is quite considerable. The connection between them, through which our behavior would be made meaningful, is murky. We can understand that a person who believes he or she is the ego ideal may be taken in that way by others and become a model for their behavior. The person people take for a model in this way is likely to be, by virtue of his or her own self-idealization, narcissistic.

The attachment between leaders and followers is emotional, not cognitive, but it has a certain kind of functionality. An individual who is followed in this way will be able to mobilize a joint effort and, through that, accomplish something. This will be true whether the individual is correct in his belief that he knows what to do or not. The reason is that there is more of a possibility of success from a group effort than there is from scattered, disparate efforts. Indeed, even failure may have lessons to teach that may be useful on the next attempt, when success will be more likely. This is one reason why narcissistic leaders can be valued for their leadership potential alone, even when it amounts to nothing more than narcissism. Having their leadership potential recognized will, of course, reinforce these individuals’ sense of their importance.

HEALTHY AND PATHOLOGICAL NARCISSISM

The distinction between healthy and pathological narcissism is important to note, because there are two quite different sources for self-idealization. Healthy narcissism requires a history of having been loved by those whom we have loved, most importantly our mothers. An individual who has been loved retains that love for himself by having internalized the loving people. Psychoanalysis calls those loving people good objects. This healthy narcissism is, in effect, self-esteem.

In the case of pathological narcissism, an individual does not feel deeply loved. The person's psyche is built up without good objects. Rather, his or her objects are bad objects, whose rejection, lack of interest, or even hatred affect the way the person feels about himself. Hence, the person's self-esteem is quite poor. However, as a defense against this low level of self-esteem, a fantasy of the ego ideal is employed. Consciously, then, they experience themselves as the ego ideal, believing themselves to be perfect and therefore, as with the healthy narcissist, crediting their impulses and their imagination and being confident in their behavior. They also, therefore, may easily be put in the place of the ego ideal by followers.

The person with healthy narcissism feels he is lovable and expects to be loved, but since he has an ample quotient of self-love he does not need or demand to be loved. Pathological narcissists, having deep feelings of being unlovable, require that others love them because that is what they need to keep their own fantasized sense of lovability from collapsing.

NARCISSISM AND LEADERSHIP

This difference leads to quite different styles of leadership. The person with healthy narcissism is not threatened by a loss of love and therefore can have relations with other persons on equal terms. He can relate to others as others with respect and affection. Having the capacity for empathy, he can understand that others are interested in achieving their own goals, and he can support them.

The pathological narcissist requires that others

serve his purpose of being loved, and therefore cannot recognize others as others. His relationships will therefore be shallow, untrusting, exploitative, and devoid of empathy. Even those who are instrumental in supporting his success will ultimately find that they have no place within it. Indeed, they may be expelled from the circle of success because the pathological narcissist experiences them as threatening his absolute grandiosity. They may even be regarded as enemies and destroyed.

It is not always easy to tell the difference between the two types, but one principle is at least as good as any other. It is to look for the subject that is of interest to the individual. What does the person talk about when he or she is free to direct the conversation to his or her own concerns? The healthy narcissist maintains a lively interest in the world and will talk with enthusiasm about matters external to himself. The pathological narcissist wants to talk only about him- or herself and may lose interest when anything else comes up.

The difference between the two types is also likely to show up in the type of ideas they offer that are taken by others as routes to their ego ideal. Both the person with healthy narcissism and the pathological narcissist can offer the ego ideal in the form of a collectivity, which can be the focus of social organization. But the collective ideas they offer are likely to be quite different.

The pathological narcissist's ideas, although often appealing on the surface, are ultimately built around an ego ideal that is his alone. The result must be that the ideas he offers will be expressions of narcissism at the collective level. The pathological narcissist can identify with the state, for example, and can offer a glorified image of it. But since he is empty, these ideas are going to be empty. The collectivities they define can thus gain their meaning only in terms of their purported superiority to other collectivities, understood as the right to dominate and destroy the others.

The person with healthy narcissism is in a position to be able to imagine ideas that are richer than these. The person with healthy narcissism, paradoxically, has the capacity to limit his or her narcissism, and to develop a sense of limitation. From this may

follow a redefinition of the self and hence of the ego ideal that represents the fruition of the self. Elements of this may include a sense of historical causation, an understanding of the origins and importance of legitimacy, of the social mechanisms that enhance reciprocity, of the way mutualistic social institutions can be held by all of us in common, and many other things besides. Any or all of these can lead to a passionate attachment to an ego ideal that will have the same validity for others that it has for the leader. Enhanced by healthy narcissism, the leader can bring the ideal to them as an offering. This may be the dynamic that underlies what the historian James MacGregor Burns calls transformational leadership.

One can see the difference between the two forms of narcissism, and the attendant collective ideas, in the contrast between Franklin D. Roosevelt and Joseph Stalin. Roosevelt, a man with both undeniable self-esteem and a profound understanding of human limitation, valued strong subordinates and encouraged their independence. His government led the United States through very difficult times while preserving and developing its best qualities. Stalin, by contrast, was deeply suspicious of anyone who maintained an independent self, and he acted on his suspicions in the most lethal manner. The state that developed in his image was expansionist abroad and behaved with horrific brutality toward its own citizens.

It is a mistake to draw an impermeable boundary between the two forms of narcissism and the resulting styles of leadership. Growth can result in a person developing a more loving image of himself, and in that way moving from pathological to healthy narcissism. But an individual can also move from healthy to pathological narcissism. This is sometimes a function of the power and status than a person gains from the very leadership activity that his healthy narcissism made possible.

The problem is that the self-esteem that real love provides is always limited, and cannot be separated from the sense of finitude that is cause for anxiety in everyone. Yet the fantasy of the ego ideal as the pathological narcissist conceives of it knows no such limitation. For that reason, it stands as a temptation for all of us. When an individual with the power that goes with a position of leadership uses that power to

demand that his narcissism be fed, his leadership deteriorates into the manipulative, barren, and destructive style of the pathological narcissist. This is what the nineteenth-century historian Lord Acton had in mind when he said “Power corrupts, and absolute power corrupts absolutely.”

NARRATIVES

Narratives (stories) are an explicit part of some leadership theories, an implicit part of others, and an important part of analyzing leadership as well as exercising it.

THE STORYTELLING ANIMALS

Narratives form an important part of the conduct and analysis of human leadership because storytelling has an almost innate human appeal. Social psychiatrist Robert Coles distinguishes ordinary stories from the abstract theories of social science by their immediacy in making meaning. For example, when a teacher interrupts a class with the statement, “Let me tell you a story that illustrates this,” attention in the room doubles. The prospect of sharing someone’s immediate experience suggests an opportunity for real learning. Author Joseph Campbell has spent a great deal of time explaining myth and its importance for human beings in making sense of their

world and purpose. Myths and other stories have a truth to them greater than fact. The story of a fabled storyteller of the U.S. South illustrates this point. She finished one story with the affirmation, “Now that’s the absolute truth. I may not have all the facts exactly right but that’s the absolute truth.” Stories appeal to people because their truth may help people understand the world around them through the experience of others.

The philosopher Alasdair MacIntyre calls humans the storytelling animals and asserts that narratives enable people to glimpse possible shared futures. Not only do humans tell narratives of their own, but also they continue narratives that others started before them and tell their narratives in competition with others. Thus, people come upon a page of a human narrative and have a chance to continue or alter a story but not to begin a new one. Nor can people shape their narratives without concern for an audience with whom they share a past. In this sense, humans, including leaders, have agency—the capacity to shape history—but they also have a shared history that has shaped them. MacIntyre suggests,

I can only answer the question “What am I to do?” if I can answer the prior question “Of what story or stories do I find myself a part?” We enter human society, that is, with one or more imputed characters—roles into which we have been drafted—and we have to learn what they are in order to be able to understand how others respond to us and how our responses to them are apt to be construed. (MacIntyre 1981, 216)

LEADERSHIP AS STORYTELLING

The questions “What am I to do?” and “Of what story am I a part?” capture the essence of leadership—to take action, which may exceed one’s authority, in the face of doubt. However, these questions miss the essence of leadership because they focus on the individual. Leaders ask and answer, “What are we to do?” Effective leadership asks implicitly or explicitly, “Of what story are we a part?” Leadership imparts an immediacy of the shared past of many people and a possible future that influences people to build a link of action between the shared past and a possible future.

Developmental psychologist Howard Gardner’s recent work brought narrative to the forefront of leadership theory and practice. In this sense he combined theory and story, which Robert Coles contrasted, and developed a theory of leadership around stories. Gardner views leadership as significant influence over the thoughts, behaviors, and feelings of others. He suggests that leadership occurs over a spectrum. The spectrum stretches from the domain of those people who intentionally attempt to exert leadership—direct leaders such as the British leader Winston Churchill, the U.S. First Lady Eleanor Roosevelt, and the U.S. civil rights leader Martin Luther King Jr.—to the domain of those people who exert influence because of excellence of achievement in a particular field—indirect leaders such as the U.S. physicist Albert Einstein, the U.S. athlete Jesse Owens, or the U.S. choreographer Martha Graham. Direct leaders attempt to speak to—that is, tell stories to—large and diffuse groups, such as the citizens of a city or people who use mass transit. Indirect leaders speak to—that is, tell stories to—primarily small and highly specialized groups, such as theoretical physicists and professional dancers.

Between these domains lies a domain with organizations of people with shared values and experiences. Einstein was a leader among theoretical physicists but not a leader of an organization or a movement of a diffuse public. His narrative of genius and theoretical physics reached other groups of people because journalists and others told his story. Martin Luther King Jr., on the other hand, was a leader of a local church in Montgomery who moved into the domain of organizations with the Montgomery bus boycott and eventually into the domain of broad social change among a diffuse and general public. This deliberate movement across domains distinguishes direct from indirect leadership and focuses Gardner’s attention on narrative.

As leaders cross domains from the highly specialized to the general and diffuse, Gardner asserts, they must leave the realm of specialized knowledge and search for more basic and fundamental stories common to diffuse groups. Einstein could not lead Princeton University on the basis of his knowledge of theoretical physics. He would have had to appeal to

some knowledge that he shared with members of a board of trustees, administrators, faculty, students, staff, and alumni. In the broadest efforts of social change with the largest group of people in a diffuse public—the civil rights movement, for example—leaders must appeal to the “unschooled mind” of people.

This unschooled mind has well-established theories about the world, social relationships, and values that people develop by the age of five years and before school. Adults, Gardner contends, continue to theorize about the world with simple truths they developed as children. Leaders working with a broad and diverse array of people and working to change some fundamental aspect of human relations and conduct have to appeal to this unschooled mind-set or try to change it. Storytelling provides the primary method to reach the unschooled mind and fundamental, childlike beliefs of followers. Moving from specialized domains, such as that of leadership scholars, to diffuse domains, such as that of leadership students or the general public, requires revising stories of leadership to the less specialized knowledge of the increasingly unschooled mind.

MacIntyre’s two questions remain central, but in reverse order, in order to influence people about “What are we to do?” People must first share a story of which they are all a part and relate their course of action to that story. Theoretical physicists have a story of which they are a part, in the sense of a field of inquiry with shared outstanding achievements, terms, and remaining questions. It is too specialized, however, to use to convince people about, for example, whether to support a bond issue for public schools. To exercise influence—leadership—on a school bond issue, the theoretical physicist has to explain “What are we to do?” in terms of shared stories of parents and community members.

LEADERSHIP AS COMMUNICATION

Far more common than Gardner’s explicit use of narrative is the implicit use of narrative in a wide array of leadership theories. One could scarcely discuss leadership without attention to communication and vision. Leaders with authority may take some short-

cuts in the narrative they tell of “What are we to do?” but only because a narrative of hierarchy, control, and a system of sanctions and rewards is a subtext of the narrative “Of what story are we a part?” Leadership without authority—a reliance on influence more than power—spends time telling the story of what people are a part. Organizational culture is part of that story, and leadership takes time to develop a culture that makes its members feel a part of a domain with shared symbols and terms, which tell a unique story that explains why an organization may decide on one course of action rather than another.

Typical of the implicit treatments of narrative in leadership studies is management and leadership scholar Warren Bennis’s discussion of communication, meaning making, and vision. He and his coauthor, Burt Nanus, interviewed ninety people in positions of authority with a reputation for good leadership. The first and perhaps most important generalization they drew from their interviews “is that *all* organizations depend on the existence of shared meanings and interpretations of reality, which facilitate coordinated action. . . . In short, an *essential* factor in leadership is the capacity to influence and *organize meaning* for the members of the organization” (Bennis & Nanus 1997, 2nd ed., 37).

Bennis and Nanus promote the role of the leader in meaning making. They claim that “leadership creates a new audience for its ideas because it alters the shape of understanding by transmitting information in such a way that it ‘fixes’ and secures tradition. Leadership, by communicating meaning, creates a *commonwealth of learning*, and that, in turn, is what effective organizations are” (Bennis & Nanus 1997, 2nd ed., 40). This idea brings one closer to the fifth discipline of management and system analyst Peter Senge and his ideas on a learning organization but takes one away from the partnership that leaders and followers have in making meaning. Leadership cannot make meaning without the proto-theories of the unschooled mind of the most diffuse publics, with which Gardner made us familiar, or the highly specialized knowledge of a small domain. Gardner makes clear that effective leaders shape their narratives to what the people they hope to influence know. Bennis and Nanus suggest that leaders can create

meanings for others without completely acknowledging that leadership requires leaders and followers to participate in creating the commonwealth of learning.

Ronald A. Heifetz and Marty Linsky, both Harvard faculty members, employ many of Gardner's ideas on narrative in their work on leadership. They explain that leadership resembles music that "is about moving people, striking chords that resonate deeply in the hearts of listeners." Like music, leadership expresses people's "yearning for connection with other people" (Heifetz & Linsky 2002, 4, 209). They explain that leaders embody issues and challenges for the adaptive work of a group just as Gardner explained leadership as embodied narrative. In moving leadership beyond communication, Heifetz and Linsky suggest the important role of narrative in the conduct of leadership.

NARRATIVE AND THE STORY OF CHANGE

Gardner's work permits one to distinguish among leaders by the stories they relate by words and example. Ordinary leaders, for Gardner, relate "the traditional story of his or her group as effectively as possible." Their stories repeat the taken-for-granted assumption of the unschooled mind and the unbroken connection of the child-adult theoretical realm—it's a dog eat dog world out there; it's better to give than to receive, and so forth. Ordinary leaders reinforce the familiar. They do not suggest an inkling of how a group will or must change.

Innovative and visionary leaders, however, do suggest change. Innovative leaders may bring new attention or a "fresh twist" to a familiar-but-ignored story, reassert traditional and familiar values, and institute change on behalf of those values. British leader Margaret Thatcher and U.S. President Ronald Reagan, for example, did much to reinvigorate the values of market economics, personal responsibility, limited government, and military buildup in the 1980s. Other innovative leaders might do the same thing on behalf of an opposite set of values—to mitigate the failures of market economies, to promote social responsibility, and to advocate expanded government programs of social welfare, as U.S. President Franklin Delano Roosevelt did during the New

Deal. A visionary leader tells a new story or a story that is familiar to only a few and relates it effectively so that people reassemble the embedded stories of the schooled and unschooled minds. Innovative and visionary leaders permit people to build new theories about fundamental values and beliefs.

Visionary leadership that transforms society occurs rarely. It occurs more frequently within a domain, such as community health, and in specific organizations, such as a community health program, because the range of truth and values is narrower, more developed, and shared. Leaders can access values and stories of people within a domain more easily than values and stories of people from a wide array of domains—professions, countries, socioeconomic backgrounds. Visionary leadership is beyond most ordinary people, but innovative leadership is not.

The explicit attention to narratives in leadership permits people to deepen their understanding of leaders and followers in all contexts. It allows people to deepen their understanding of communication, values, and meaning making in all contexts, including for-profit and not-for-profit organizations. As useful as these insights may be, the full dimensions of narrative and change come into full view only when people examine narrative's role in efforts to organize for social change.

NARRATIVES AND THE VOICE OF SOCIAL CHANGE

Narratives may support a range of changes. Ordinary narratives may support the status quo or incremental change. Innovative narratives may support major change—for example, Eleanor Roosevelt's work on the United Nations' Universal Declaration of the Rights of Man. Infrequently, visionary narratives of transforming change—Christ, Buddha, Indian nationalist Mohandas Gandhi—call for a change in human relations that removes the caste-like restrictions from some group of people.

Scholarship in several fields helps relate innovative and visionary narrative to social movements. The economist Albert O. Hirschman, for example, discusses voice as an instrument of change and organization renewal. Voice attempts to change an

Developing Leaders in Government through Stories

The Council for Excellence in Government works to build the leadership skills of career government employees. One way they do this is by posting the stories of excellent leadership in government. Below is one such story from the council's website.

In 1997, Patricia Pittarelli was promoted to Chief of Work/Life Programs in the Department of State's Human Resources bureau. Her division's mission was to improve employee effectiveness on the job by developing and promoting use of flexible personnel policies and programs that help employees balance their work and personal responsibilities. Early in her tenure she was approached by a Foreign Service Officer who had known her when she ran the Department's Presidential Management Intern program and knew her reputation in HR as an expert in helping employees with child-care problems.

This officer, a high performer and new mother of a third child, had just returned to Washington from an overseas assignment. She was feeling overwhelmed by her work and family obligations, and wanted to work part-time for a while in a job-share position. She had done her homework and identified another officer willing to job-share. But there was no precedent for use of this flexibility for Foreign Service employees, even though State's Civil Service employees had had success with job sharing.

Patty realized that there was authority for such an arrangement, and she saw the practice could enhance the Department's options for retaining valuable Foreign Service employees. The interested employee had an excellent performance record and was a credible candidate for trying something new. Patty provided guidance on planning for a job-share assignment and encouraged her and

her job-share partner to draw up a proposal that would address the concerns of their supervisors, while meeting their own personal needs.

Patty took the women's proposal to management and convinced HR leaders to look seriously at the idea. She formed and headed a cross-bureau working group that considered institutional obstacles and barriers, including, for example, concerns that a part-time employee might be overlooked for promotion or might be disadvantaged in a Reduction-In-Force situation. The HR front office decided to undertake a pilot Foreign Service job-share. Patty set it up, working with the employees, a bureau willing to offer them a specific job, and other interested Department offices, including payroll. The first-ever Foreign Service part-time assignment/job-share that followed was commended by the Undersecretary for Management in a report to the Secretary of State. The undersecretary at that time was a professional with extensive private-sector experience who recognized the advantage of adding a new tool to the Department's assignment flexibilities.

By championing a policy the Department had never tried, Patty had identified an opportunity that promoted the interests of both the Department, which was able to retain valued employees, and the employees themselves. When one of the job share partners was promoted even though she worked part time, that always desirable but ever-elusive win-win outcome had been achieved.

objectionable state of affairs, unlike exit, which provides individual escape from them, but does not change them. Exit provides individual benefit, but voice attempts to benefit others in addition to the person using it. Hirschman applies this to a wide range of conditions, personal relationships, the black power movement in the United States, and rail transport in Nigeria and concludes that voice combined with exit and loyalty best safeguards organizational renewal.

Hirschman's observation is true of societies, as historian Sara Evans and policy analyst Harry Boyte explain in their examination of voice and free spaces. Tracing several social movements over the past cen-

tury, they find that groups restricted by race, gender, and class discrimination regularly develop and express voice in free spaces. Free spaces are "environments in which people are able to learn a new self-respect, a deeper and more assertive group identity, public skills, and values of cooperation and civic virtue" (Evans & Boyte 1986, 17). Sociologist Aldon Morris portrayed a set of free spaces in his discussion of "halfway houses" of the civil rights movement, where voice survived. Another sociologist, Doug McAdam, interprets the civil rights movement as an insurgency of African-American "cognitive liberation" (McAdam 1982, 108-112), which continued uninterrupted because organizations permitted

African-Americans to maintain the narratives that explained their condition and its roots in oppression.

In a similar fashion, James C. Scott, a political scientist, suggests that groups maintain “hidden transcripts,” their own narratives to explain their condition and its origins, and an infrastructure of political resistance even when oppressed. Scott describes domination and resistance as matters of degree. When resistance is manifest, as in a social movement, hidden transcripts become public. When domination prevails, voice is expressed further and further from public view and within safe and free spaces of the oppressed. At the height of repression, these spaces may be restricted to the memory of an individual or perhaps the family. Scott thus suggests that free spaces preserve the voice of narrative even when no social movements overtly resist domination. If people accept Scott’s conclusion, they may look at the family and other realms as spaces with a leadership function to create and preserve narrative.

Sociologist Robert Bellah and his associates combine narrative and free spaces in their concept of the community of memory, which nurtures individuals by carrying on a moral tradition that reinforces the aspirations and dignity of their group. The test of this community is its sense of a common past. The telling and retelling of stories establish that past and offer “examples of the men and women who have embodied and exemplified the meaning of the community” (Bellah 1985 et al., 153). In addition, there are stories of suffering, which “sometimes creates deeper identities than success.” These stories approximate a moral tradition and turn members of a community of memory “toward the future as communities of hope” (et al. 153). Such communities of hope sponsor transforming social movements, exemplified for Bellah and his associates and many others in the civil rights movement.

Bellah and his associates borrow heavily from Alasdair MacIntyre’s views on tradition and virtue to develop their own idea of the community of memory. One may infer from MacIntyre’s work that narratives shared within free spaces make two contributions to social movements.

First, they transmit and continue a belief in the virtue of the oppressed. This virtue is “the kind of

capacity for judgment which the agent possesses in knowing how to select among the relevant stack of maxims and how to apply them in particular situations” (MacIntyre 1981, 207). Virtue is illustrated in narratives, the continuation of which is virtuous. Virtue enables its possessors “to pursue both their own good and the good of the tradition of which they are bearers even in situations defined by the necessity of tragic, dilemmatic choice” (MacIntyre 1981, 207–208).

Second, narratives may support social movements because they assert a social life or at least a better understanding of a marginal group’s social conditions and their origins than the understanding that prevails in the dominant culture’s stories about them. For example, the sweat lodges of Native Americans have different stories about Native Americans than any John Wayne movie. When the values and human worth of social groups are marginal to the larger and dominant culture of which they are a part, then MacIntyre’s concept of virtue becomes more central for these groups. Without their own narratives within their own free space, marginal groups become the virtueless groups of the dominant culture. The awareness of economic subordination and political repression of a group by its members reminds them constantly of the inaccuracies of the prevailing explanations of these inequalities and explanations of other parts of U.S. life. The continuation of virtue among such marginal groups helps them preserve self-esteem. It also helps group members to explain the dominant assumptions of their society in terms of power relations rather than the shortcomings and inferiority of their group.

NARRATIVES AND THE STUDY OF LEADERSHIP

For leadership scholars, narratives have theoretical significance as a means and a measure of social movements and other forms of change. Narratives mobilize a group to attempt political or organizational change. They do not mobilize people to take action directly, as a speech might inspire a crowd. Rather, narratives provide deep and lasting insights into the need for and methods of change to individu-

als who lead or support social movements and more modest forms of change.

Thus, effective leadership exceeds mere communication. To influence people, leadership must express a vision in terms and symbols of the narratives—their shared culture—embedded in the minds and hearts of those people. As with so many other aspects of leadership, narrative underscores that leaders and followers must share an understanding of “What are we to do?” and “Of what story are we a part?” Narrative complements the emphasis on communication in the study and practice of leadership. At the same time, communication studies make us aware that narrative has many sources—family, school, work, religion, community, culture, ethnicity, voluntary organizations—and many forms, onstage and offstage, hidden and visible. These sources are powerful forces to support resistance to subordination and thus to transform leadership. They are also powerful forces to support change in narrow domains of small groups or specialized groups and in broad domains of diffuse publics. Achieving effective influence with people—that is, leadership—requires understanding the embedded narratives of other people and invoking them as part of communicating vision and courses of action.

NASSER, GAMAL ABDEL (1918–1970)

Egyptian leader

In ostensibly denying that Egypt played a leadership role in the postcolonial Middle East or that there even was such a role to play, Gamal Abdel Nasser's *The Philosophy of the Revolution*, published a year after Egypt's 1952 Free Officers' coup, attests to a richly ironic intertwining of his personal charisma with Egypt's national identity and Egypt's responsibility to Arab nations in a postcolonial world.

I do not know why I always imagine that in this region there is a role wandering aimlessly about in search of an actor to play it. And I do not know why this role, tired of roaming about in this vast region, should at last settle down, exhausted and weary, on our frontiers beckoning us to assume it as nobody else can do so. Let me hasten to say that this is not a role of leadership.

(Nasser 1953, 48)

Born into a poor family, Nasser attended military college and joined the Egyptian army in 1938. During the 1940s, he began to think about revolution, and in 1952 he led the Free Officers' coup, which deposed Egypt's royal family and established General Mohammad Naguib as head of state. Nasser subsequently deposed Naguib and took the title of

prime minister in 1954. In 1956, he declared himself president, and in 1958, he witnessed the partial fulfillment of his dream of Arab unity with the creation of the United Arab Republic, formed by the union of Syria and Egypt. (The Republic lasted until 1961.)

For insight into the style and effect of Nasser's leadership, it is useful to consider the crowds that attended three major events in his career: his 1956 nationalization of the Suez Canal, his 1967 resignation following defeat in the war with Israel, and his unanticipated death in 1971. The historian George Rudé observed that large public gatherings can be categorized by their aims, purposes, and goals. In these terms, the crowd that assembled to hear Nasser speak in Alexandria that summer evening in 1956, was an "audience" crowd. This group affirmed Nasser's leadership of Egypt. The mob that collected shortly after learning of Nasser's departure from the presidency—even before many had even learned the extent of Egypt's military losses in the 1967 war—Rudé would classify as an "escape" or "panic" crowd, the actions of which are the topic of social history. The third horde, which mourned Nasser's death, Rudé would classify as an "expressive" crowd; their grieving affirmed the role of the departed among postcolonial leaders.

THE NATIONALIZATION OF THE SUEZ CANAL

Nasser changed the way that Egyptians were governed, by aligning leaders' goals for the nation with the goals of the people. He created a modern state that provided for the nation's defense (as well as laying the basis for a social services network in Egypt). His 1956 speech in Alexandria, which contained encoded instructions to the individuals who were to seize the Suez Canal Company headquarters, intermingled direction with commemoration of that which had already been accomplished, leadership with popular expectation. That June evening, Nasser proclaimed: "The Suez Canal belongs to us. The income will be ours in the future. The Canal was built by Egyptians, one hundred and twenty thousand Egyptians died digging it. A new Suez Canal company will be formed. From now on we will rely on our own strength, our own muscle. The Canal will

be run by Egyptians, Egyptians, Egyptians! Do you hear me? Egyptians!” (St. John 1960, 247). In recordings of that speech, Nasser’s amplified voice is drowned out by the gathering’s collective enthusiasm; the crowd went wild. To foreign observers, Nasser’s previously sedate public addresses were becoming hostile attacks on the nation’s enemies; to Egyptians, however, whether villagers, city dwellers, Muslims, Coptic Christians, or socialist agnostics, Nasser’s public speeches voiced their own anger at global inequalities.

Nasser’s seizure of Suez Canal assets tripped an Israeli, French, and British invasion of Egypt that brought significant changes to the Arab world: The historian Rashid Khalidi sees the Suez War as leading to the militarization of the modern Arab world (including the transfer of Syria’s administration from civilians to military officers), to Israel’s success in pushing the Palestinian conflict onto the territory of neighboring Arab states, and to the domestic conditions that led to Lebanon’s first civil war. And in terms of Nasser’s leadership legacy, his takeover of the Suez Canal made Nasser extremely popular throughout the developing and nonaligned world.

The Suez War also brought the Cold War from Europe to the global South. Mark Kramer, a historian of the Soviet Union, describes the tripartite invasion of Egypt as one impetus for the USSR’s seeking a speedy solution to unrest in Hungary, which was distracting the Soviet Union from pursuing its aims in the postcolonial world. Eventually the USSR not only came to be Egypt’s leading source of weapons but also supported Egypt’s economic development goals with both loans and technical assistance.

NASSER’S 1967 RESIGNATION

Thirteen years after Suez, Gamal Abdel Nasser placed Egypt at the head of several Arab states’ resistance to international recognition of Israel’s legal status and its increasing militarization. The 1967 Six-Day War represented the most significant challenge Nasser’s leadership had ever faced, as unexpected military reverses forced him to accept a cease-fire humiliating for Egypt. In 1956, in telling the public of the Suez Canal’s nationalization,

In a demonstration of Nasser’s popularity beyond Egypt, men in Beirut, Lebanon, participate in a pro-Nasser demonstration during the Six-Day War with Israel in June 1967.

Nasser had received a mandate for nation-building and capital investment from his audience. In 1967, the residents of Cairo called Nasser back into office but protested his emphasis on industrial development and military modernization at the expense of consumer goods.

During the evening of 9 June 1967, Nasser appeared on Egyptian television, announcing that he resigned the presidency and that the nation’s leadership would be turned over to Zakhariya Mohieddin, who was the head of military intelligence and the minister of the interior. Within a short period of time, Cairo’s citizens poured forth from their houses, apartments, and cafés, commandeered buses, taxis, private cars, and anything else on wheels and descended into the streets by the millions, running aimlessly, weeping, or shouting and eventually amassing in public squares near major government buildings or by Nasser’s house near Heliopolis to call on him to stay in office and lead them.

The months immediately following this collective outburst were among Nasser’s darkest; his health failed, and his associates abandoned what they described as his wishful thinking and resistance to information and advice that might have avoided the military disaster of the Six-Day War. Speaking against the charge of wishful thinking, Nasser described the strategic calculations that had led him to war. In a speech to students at Cairo University on

23 July 1967, he tried to explain the decisions that led to war, quantifying the narrowing odds of maintaining the peace while in the face of such political changes in Israel as the appointment of Moshe Dayan as Israel's minister of defense. Nasser's transparency during 1967 has been widely seized upon by those external observers who have sought to classify Nasser's richly ironic leadership as either manipulation of the crowd or capitulation to its desires. The Israeli political scientist Ben Mor (1991) draws attention to Nasser's strategic calculation. According to Mor, Nasser's escalatory moves were calculated to achieve the maximum revision of the status quo short of war. Similarly, the U. S. author Miles Copeland (1969) has described Nasser's calculated appeal to the excited crowd, which could not be trusted to ascertain its own best interests. Copeland even identified Nasser as the unpredictable element in the rational calculus of industrialized nations' leaders: His sophisticated communication with postcolonial crowds removed him from the community of neo-colonial leaders.

The 1967 defeat required Nasser not only to accept the destruction of Egypt's military prestige, but eventually to give up the prioritization of capital investment over consumer goods. The crowds that called for Nasser's return to office rejected the priority he assigned to military defense and economic development over consumption and entertainment. Imports of passenger cars increased 47 percent between 1962 and 1969 with only a marginal increase in gross national product. Imports of television sets and their parts increased 433 percent during an era when Egyptian state television broadcast on only two channels.

NASSER'S DEATH

While Egyptians did not choose to sustain the economic austerity that Nasser's presidency prescribed for them, the frenzied emotions exhibited by the crowd at Nasser's passing attested to his personal charisma. Following his unexpected and fatal heart attack during the autumn of 1970, Nasser's successors planned an orderly public funeral. As the president's bier passed through Cairo toward its final rest-

ing place, the sheer numbers of the grief-stricken disrupted the procession. Men, women, and children wept and wailed unashamedly in the streets as thousands upon thousands pressed upon the procession, straining to get a last view of the coffin.

The authorities' struggle with the crowd for Nasser's legacy began even before his body was in the ground. As the coffin crossed Qasr El-Nil Bridge, soldiers were simply overwhelmed by the communal sorrow, as hysterical mourners attempted to bear their beloved leader's coffin themselves. In the ensuing pandemonium, soldiers brought their rifle butts and batons down into the crowd. The crowd forced the funeral cortege to abandon its route, and the coffin was transferred to a military vehicle. Authorities sped the it to its designated resting place at Manshiet-el-Bakry mosque and completed the burial ceremony three hours ahead of schedule.

Authorities continue to police the crowds that respond to Nasser, even in today's Egypt. The release of a feature film, *Nasser 56* (1996), set box-office records in theaters throughout Egypt's cities. For many of the Nile valley's current residents, actor Ahmad Zaki's portrayal of Nasser refreshed memories not only of Gamal Abdel Nasser as a historical figure, but also of Egypt's regional leadership, and even introduced a history largely slighted in the nation's school curriculum. Egyptians lined up around theaters to recall—or even learn—that Gamal Abdel Nasser had led the Egyptian nation, the Arab region, and the nonaligned postcolonial states.

“Israeli occupation and American dominance is what Nasser always warned against,” said Umm Mustafa, a fifty-year old Egyptian woman and domestic worker. ‘When Nasser made the revolution in 1952, it was not just for Egypt, it was for all of the Arab world. Palestine is part of the Arab world, and we have to defend it,’ she said” (Ezzat 2002, para. 3).

“He was a true leader. Look at the picture. Look at his eyes. He must have been very strong. I heard that when he used to make a speech the entire country would listen to him. My grandmother tells me that she used to think her radio would fall off the table when Nasser started a speech,’ said Ashraf Mounir, a thirteen-year-old schoolboy” (Ezzat 2002, para. 11).

Nasser's leadership presents a challenging legacy

for Egypt's contemporary leaders. The historian Joel Gordon recounts that current government officials kept *Nasser 56* from being screened for a year, allegedly dreading the comparison between current leaders' inadequacy and the leader whom many Egyptians find compelling and attractive more than thirty years after his death.

NEGATIVE CAPABILITY

The poet John Keats (1795–1821) conceived the idea of negative capability in 1817. In a letter to his brothers, he described it as a state in which a person “is

capable of being in uncertainties, Mysteries, doubts, without any irritable reaching after fact & reason” (Keats 1970, 43). In his view, the defining characteristic of high-achieving individuals in all fields was this ability to remain “content with half knowledge” and to cope with anxiety-provoking situations without being thrown off course. As a leadership capacity, negative capability is of particular relevance in today's social and organizational context, which is knowledge-driven but also characterized by ambiguity, paradox, uncertainty, and change. Hence the comment by Warren Bennis, an authority on leadership, that there is “probably no better definition of a contemporary leader” than Keats's description of a person possessed of negative capability. (Bennis 1998, 148).

UNDERSTANDING NEGATIVE CAPABILITY

At first sight, the word *negative* may seem inappropriate for defining a leader, especially as *leader* has such overwhelmingly positive connotations. In this context, however, *negative* does not imply a judgment, either moral or practical. Think rather of negative and positive poles in an electric or magnetic field: The effective force is generated in the flow of energy between the two. Leadership tends to be thought of in terms of the positive pole only—the attributes and abilities that allow the leader to promote decisive action even in the face of uncertainty. Negative capability names the other pole, that is, the capacity to sustain reflective inaction. In certain situations, a resolution can be achieved through the exercise of what we might call active, or positive, capabilities, such as the application of knowledge from previous experience and the ability to transfer resources from elsewhere or to influence others to trust. At other times, however, the better response is to wait until insights come, resources become available, or relationships develop. This requires a capability that manifests itself in behaviors such as waiting, observing, and listening—behaviors that are the complementary opposites of active, interventionist behaviors.

This capability is, therefore, negative in three senses. First, it is negative in that it represents the opposite of such positive capabilities as action and

intervention. As mentioned above, the metaphor of the magnetic field applies here. Second, it is negative because the situations in which it is most useful are themselves negative; that is, they are characterized by a lack: A leader may not know what to do, may not have adequate resources, or may not trust or be trusted. Here an appropriate metaphor is of negative space in painting: Negative space is the space that surrounds the positive forms of defined objects. An artist can reveal an object's shapes and relationships by ignoring the object itself and drawing instead the negative spaces around it. Third, this capacity can be termed negative because the behaviors that support it are generally viewed negatively. In the discourse of organizations, they tend to be accorded only low status; they include such activities as waiting, observing, withdrawing, listening, adapting, patience, and passivity. This suggests the metaphor of a photographic negative, which can reveal details that might be overlooked in the positive image because they seem so familiar.

Thus, the positive and negative attributes of leadership belong together. The importance of waiting, for example, is reflected in such everyday advice as "count to ten" or "look before you leap." The pause, or negative moment, created by such techniques can allow a person and those around him or her the space for thought. A knee-jerk reaction, by contrast, can appear to be a decisive leadership act when in reality it is the outcome of an inability to wait. Whether momentary or extended, this intermediate space—the space for thinking—permits new learning and insight; it can create the conditions for more effective action. Thus, negative capability has been described as "precisely the ability to tolerate anxiety and fear, to stay in the place of uncertainty in order to allow for the emergence of new thoughts or perceptions" (Eisold 2000, 65).

NEGATIVE CAPABILITY VERSUS DISPERSAL

Negative capability describes the capacity to contain or to tolerate the uncertainties of half knowledge, as well as frustration, contradiction, and lack. The failure of negative capability leads to what the contemporary U.S. philosopher Jacob Needleman called

dispersal. Dispersal describes the opposite state of mind to negative capability; it is a flight from overwhelming emotion. Individuals—or groups, teams, or organizations—respond to uncertainty and doubt by dispersing their energies into actions that are defensive rather than relevant to the task. Needleman suggests that task avoidance can lead to three forms of dispersal: emotionality (whether overt or reflected in such phenomena as stress-related illness), explanation (attempting to rationalize the often irrational), and activity (action for its own sake, a substitute for thought). Dispersal, therefore, is the diversion of energy away from engagement with the task into recognizable patterns of distraction. It is precisely when one experiences the impulse to avoid or to disperse that negative capability is required. The pressure on leaders to be the ones who know, to achieve results at all costs, means that dispersal into activity is likely to be their automatic default mode—above all they must be seen to do something.

Negative capability is relevant both to how leaders respond to change and to situations when they deliberately seek change. Engaging with risk is an obvious example. Because risk taking involves raising the threshold of uncertainty, it sets up precisely the conditions in which negative capability may be demanded. Avoiding the problems of escalation or, worse still, the possibility of cataclysmic error certainly requires more than improvements to the technologies of risk assessment, important though these are. Effective approaches to risk also demand the capacity to slow down rather than to be rushed—often at precisely the moment when quick decisions and decisive actions may be called for—and to remain open and reflective, rather than reaching a fixed and perhaps premature judgment.

Negative capability in action is illustrated in a 2002 study conducted by Peter Simpson, Robert French, and Charles Harvey of Bristol Business School at the University of the West of England. Simpson, French, and Harvey examined negotiations over a multibillion dollar international joint venture that involved three nation states and a global corporation, which in the study went under the pseudonym Megacom. A critical moment for the leader of the Megacom negotiating team came when

he recognized that, despite his own knowledge and experience and the wide expertise of his team, he no longer knew what to do. Because he could see clearly that he was “missing the point,” but did not know what the point was, he was forced to listen carefully and to wait for a pattern to emerge—and so to learn. The familiar ground for his usual stance—that is, determined decision making based on knowledge and expertise, combined with the influence of reputation and the power of the check-book—had become unstable. Rather than continuing to assert themselves, his team “became what was needed in the situation” (Simpson, French, and Harvey 2002, 1219). In the face of their shared ignorance, they were forced to switch from familiar attitudes and behaviors to inaction and withdrawal, reflection, and learning. The leader described how he and his team had to learn to wait, to listen, and to take a back seat; how to be available, to follow other people’s agendas, and to become smaller both by reducing the team from eight to three and by the way they held back. The impact of taking this stance was remarkable. It was a stance that was indeed negative, in the sense that it negated all Megacom’s normal assumptions, but in the words of the leader, “It was very powerful, very powerful to us, it was a very motivating thing to do, but very different to what we’ve all been taught to do” (Simpson, French, and Harvey 2002, 1219).

WHAT NEGATIVE CAPABILITY TEACHES LEADERS

The Megacom example emphasizes two important dimensions of negative capability in relation to leadership. The first is its relevance to learning. The darkest moment for the chief negotiator was when he recognized both that he (and Megacom) did not understand and that he was not being listened to. What enabled him to learn in that situation was precisely that instead of dispersing into emotion, explanations, or action, he and his colleagues learned to exercise negative capability. Those who were unable to do this were removed from the team. In a graphic phrase—reminiscent of characteristics of negative capability identified by Keats, “humility and the capability of

submission” (Keats 1970)—he described his team’s new attitude as one of subjugation.

The second dimension relates to staying in touch with the realities of the present moment. Dispersal takes one away from the task, because experience in the instant seems intolerable. Negative capability, by contrast, makes the experience tolerable. In this respect, it stands in the tradition which sees philosophy not primarily as a set of dogmas, but as “a way of life” (Hadot 1995), and whose prime focus is on learning and living in the present. Future-oriented, strategic activities, such as the articulation and constant re-presentation of the vision, are a key element of leadership. At the other extreme, however, effective leadership also involves seeing day by day, even moment by moment, what is actually going on, in contrast with what was planned or hoped for, intended or expected. To assess the impact of events in this way, and to adapt, shift, and adjust as necessary, leaders must have the capacity to wait and *not* to act—and must have a negative space within, which allows them to tolerate the inevitable anxieties such a stance evokes—in order to allow their minds to be changed.

NELSON, HORATIO LORD (1758–1805)

British admiral

For British schoolchildren, and more particularly English schoolchildren, Horatio Nelson remains amongst the foremost of heroic leaders. He ranked ninth in the “Great Britons” competition held by the BBC in December 2002 with 49,000 votes (3 percent of the total), with his leadership and bravery his most popular aspects; indeed only Winston Churchill—the eventual winner—outshone Nelson in the voters’ eyes when it came to leadership. But Nelson’s heroic leadership was not due simply to innate bravery or strategic skill, nor was it simply the result of being at the right place at the right time. On the contrary, his case demonstrates the complexity of leadership—and thus shows how difficult heroic leadership is to reproduce or emulate.

Horace (the name evolved into Horatio gradually during childhood) Nelson, one of eight children, was born to Edmund Nelson, a Cambridge-educated rector at Burnham Thorpe, Norfolk, and Catherine (née Suckling), who was distantly related to Robert Walpole (1676–1745), Great Britain’s first prime minister; she died when Horace was nine. Horace Nelson’s main claim to fame through these years was his growing reputation for bravery. He stole his teacher’s pears “because every other boy was afraid” and, late home one day, he was scolded by his grandmother and asked why fear didn’t drive him home. “Fear?” he is alleged to have replied, “I never saw fear. What is it? It never came near me” (Grint 2001, 239).

Nelson used this astonishing personal bravery to

great effect in achieving his two early aims; first, to go to sea—which he did at the age of twelve—and second, to become the greatest naval hero Britain had ever seen. Only later in his life did a third (unachieved) aim enter this vision: to marry his mistress Emma Hamilton (c. 1761–1815). Without doubt, Nelson has emerged as an extraordinary military leader, perhaps Great Britain’s—and almost certainly England’s—greatest hero, but the question is, why?

In myth, Nelson stopped the French invasion of Great Britain at battle of Trafalgar, where he died from musket wounds on 21 October 1805; but in fact, the French army had already left the embarkation ports two months before Trafalgar. In myth, Nelson destroyed the French navy and set it back two hundred years; but in fact, within nine years the French navy was once again larger than the British. Clearly, the invented myth has more resonance than the reality.

A great part of Nelson’s leadership skill was in recognizing and aligning the particular skills and competences of his followers with organizational tactics that made the most of those skills and competences. For example, his battle tactics were grounded in British ships taking on one or more enemy ships in individual contests, and the success of the former depended upon the superior sailing and gunnery skills of the British sailors who were far more experienced than their enemies. In contrast, although the French and Spanish fleet tactics required great discipline and cohesion, there was significant disunity amongst the commanders, and in fact most of their ships had been blockaded in port for several years so their sailors were ill prepared. Moreover, as the senior British military service, the Royal Navy attracted the best officers, whereas in Europe the army was regarded as the more illustrious wing of the armed forces.

Nelson was undoubtedly obsessed by his strategic visions, and there are few, if any, examples of leaders of repute who have achieved much by being anything but fanatical in their pursuits. However, many fanatical leaders fail to achieve the iconic status that Nelson secured, and much of Nelson’s success, as is so often the case with leaders, was due to the errors

Dispatches of Horatio Nelson during the Trafalgar Campaign

TO THE RESPECTIVE CAPTAINS.
Victory, off Cadiz, 10th October, 1805.
Mem.

As frequent and very serious mistakes happen on receiving provisions, it is my particular directions, that when any of His Majesty's Ships or Vessels under my command go into Port, to complete their provisions and necessaries, on their coming on board, the Masters take a regular account of each species, &c., which they are to compare with the Bills of Lading sent with such provisions from the Agent Victualler, or Contractor, previous to their entering them in the Log-Book (which is to be done immediately); and afterwards such Bills of Lading, or final Receipts, are to be compared with the Log-Book, before the Captain and signing Officers put their signatures to them, in order that every particle of the provisions so signed for may be actually on board, that Government may not, either from the neglect or mistake of individuals, be defrauded, or the Ships, Companies in want of those species, considered to be bonafide on board.

It is also my particular directions, that every pound of fresh beef, whether received from Agent Victuallers or Contractors, is weighed on its coming on board, in the presence of a Lieutenant, the Master (or one of his Mates, in his absence on duty), that it is immediately after entered in the Log-Book, and the above instructions duly attended to, before the final Receipts are signed for it accordingly.

The same strict regard to be had to the receipt of fresh beef, or any species of provisions which may be purchased for the use of the Ships, Companies under my command; and on no account whatever to sign Vouchers for such provisions till they are authenticated, and found correct, as the Officers above mentioned will be held answerable for any neglect in the due execution of these instructions.

NELSON AND BRONTE.

TO CAPTAIN THE HON. HENRY BLACKWOOD,
H.M. SHIP, EURYALUS.
Victory, October 10th, 1805. Cadiz, East, 13 Leagues.

My dear Blackwood, Keep your five Frigates, Weazle and Pickle, and let me know every movement. I rely on you, that we can't miss getting hold of them, and I will give them such a shaking as they never yet experienced; at least I will lay down my life in the attempt. We are a very powerful Fleet, and not to be held cheap. I have told Parker, and do you direct Ships bringing information of their coming out, to fire guns every three minutes by the watch, and in the night to fire off rockets, if they have them, from the mast-head. I have nothing more to say, than I hope they will sail to-night.

Ever yours most faithfully, NELSON AND BRONTE.

of his competitors or enemies. Some of these errors he was able to induce, while others were the product of Machiavelli's *fortuna*, or luck. Either way, Nelson's actions could have led to personal, naval, and national disaster on several occasions. But, as Napoleon (1769–1821) was fond of saying, "The greatest general is he who makes the fewest mistakes . . ." Nelson got away with his mistakes; his enemies often did not. In a rule-bound environment, an opportunist cannot operate without breaking the regulations—and this is precisely what Nelson did: He took advantage of the opportunities proffered by fortune where others held back; he embodied the principle *carpe diem* ("seize the day"). This ability was facilitated by his apparent lack of fear. Like a Japan-

ese samurai, Nelson apparently accepted that death was likely but did not worry about it; indeed, ironically, his quest for immortality was feasible only if he died engaged in its pursuit.

NELSON AS PERFORMER

But there is more to Nelson's leadership than just being better resourced and luckier than his rivals and enemies. Much of the time we need to remember the power of Nelson as a manipulator of reality, for in many ways he was foremost in promoting his own career, his own version of events, his own successes, and his own heroic death. Thus the hero of Trafalgar who allegedly saved Britain from an imminent

French invasion probably did less for the country's direct security than Admiral Charles Cornwallis (1738–1805), who was both Nelson's superior officer and responsible for maintaining the blockade of the Franco-Spanish fleets. But Cornwallis was involved in a mundane activity that held little interest for the media or the general population, and he made little attempt to ingratiate himself to a generally unaware and uninterested country. In contrast, Nelson was a professional in every sense of the word, a spin-doctor, a miracle-worker, a "man of the world," and a man beyond this world.

Like many heroic leaders, Nelson believed himself to be driven by destiny: At the age of fifteen, off the West African coast, he contracted malaria and experienced a vision that induced him to dedicate his life to the British monarchy, and at twenty-one, while captain of the frigate *Hinchinbroke* in Jamaica, he appears to have had his fortune told by a freed slave, Cuba Cornwallis, who foresaw a glorious future—but only until 1805, which turned out indeed to be the year of his death. Undoubtedly, the combination of his personal courage and heroic fatalism instilled in Nelson a confidence that others lacked, and a taste for risk taking that others avoided. Yet that certainty of mission was never left to chance, for Nelson used his network of influential supporters, including his uncle, his mentors in the navy, and Prince William, the future William IV of Great Britain and Northern Ireland (1765–1837; reigned 1830–1837).

While Nelson was often heralded as the darling of the British people, he was never really accepted by the British aristocracy, the political establishment, or indeed the Admiralty. Partly this was because his background was insufficiently influential—his father was an impoverished vicar, not an aristocrat—but it was also because he remained a rather gauche figure: He was a poor public speaker and retained a broad Norfolk accent (perceived as vulgar by the landed gentry); more important, perhaps, he appeared deaf to the subtleties of the changing cultures of the time. Before the French Revolution (which began c. 1789), the British aristocracy had mimicked their cross-channel cousins: They spoke French at court, wore French fashions, and reflected what the French revolutionaries regarded as the decadent and hedonistic

morals of Paris. However, the guillotining of French aristocrats rapidly persuaded the British aristocrats that the best way to stave off a British equivalent might be to speak English, to wear British military uniforms, and to abandon their no-longer-fashionable immorality. Nelson, however, insisted on wearing a uniform so bespangled with decorations that he appeared to his social superiors as determined to mock their sudden conversion to military uniforms. Moreover, his insistence on parading around with his mistress, Emma Hamilton, the wife of Sir William Hamilton (1730–1803), while both were still married to their respective spouses, greatly embarrassed a social elite that was trying to distance itself from this "French habit."

NELSON'S NAVAL RECORD

Nelson, then, was not everyone's hero, but his public standing was so great—and the fear of a French invasion so high—that the British Admiralty had little choice but to place him in command of several fleets in times of crisis. He was also overly fond, as far as the Admiralty was concerned, of breaking the rules at will, taking inordinate risks with their ships, and of putting his own career in front of theirs. But—and this is critical—he was also extraordinarily successful. Sometimes he was just lucky, but often he was sufficiently resourceful and aggressive to disorient his enemies. More often than not, he surrounded himself with a set of fellow officers in the rest of the fleet who came to be his "band of brothers," as he called them, and using their collective knowledge and individual initiative, this group achieved a series of remarkable victories at the Cape St. Vincent (1797), the Nile (1798), and finally Trafalgar (1805). For example, the Battle of the Nile, which effectively destroyed the French Mediterranean fleet and marooned Napoleon in Egypt, was a remarkable British success: Thirteen of the seventeen French ships were captured or destroyed in the battle and the French suffered between 2,000 and 5,000 dead, 1,500 wounded, and had 3,000 taken prisoner. It was, according to a British sailor: "An awful sight . . . the whole bay was covered with dead bodies, mangled, wounded and scorched, not a bit of

clothes on them but their trousers” (Grint 2001, 252). The British, in contrast, suffered 218 dead and 617 wounded but no lost ships. This outcome was the result of two actions. First, Nelson’s fleet attacked the French fleet, then at anchor, without hesitation even though the light was already fading and night battles were very unusual—thus taking the French by surprise. Second, as a consequence of anchoring as close to the land as possible, the French assumed their landward side was safe and thus had no guns run out on that side. But Nelson’s band of brothers was astute enough to recognize this potential weak spot, and once several British ships had navigated down the landward side, they were able to attack their French opponents from both sides. In short, the aggressive and risk-taking leadership of Nelson was reproduced in the rest of the fleet.

In each of the above battles, Nelson ensured that his personal action would be remembered by his adoring public, for he was a master of media relations. Even when his adventures were disastrous (Tenerife 1797, Boulogne 1801), unnecessary (Copenhagen, 1801), or just plain grotesque (Naples, 1799), his image usually remained unsullied in the eyes of the British public.

The historian Alan Schom considers Nelson’s character, and thus presumably his leadership skill and style, to have been based on loyalty: “Perhaps the most important principle or precept of his life he appears never to have articulated. That one had to be honourable, do one’s duty, give one’s life if necessary to protect Britain, be loyal to fellow officers . . . above all . . . that every responsible person had to think for himself” (Schom 1992, 248). But there is a clear tension here between the absolute loyalty owed to one’s country and peers and the duty to think independently. Independence of thought and action is surely one of Nelson’s characteristics, but it was often articulated and executed at the expense of loyalty to his superior officers and to the Admiralty. He frequently disobeyed direct orders *because* of his independence of thought and action. For the film producer and director Phil Grabsky, who produced a series of documentaries on military commanders, Nelson “was vain, ambitious, disfigured by battle, adulterous, and almost wrecked by a life at sea. He disobeyed orders,

made up his own rules and was pensioned off for five years. Nevertheless, every 21 October, on British naval bases and warships throughout the world, glasses are raised to ‘the immortal memory’ of Horatio Nelson” (Grabsky 1993, 75). That, surely, is the most important learning point: Leadership is a warts-and-all phenomenon that does not follow predictable patterns and in which leaders actively manipulate their own image and followers actively attribute to their leaders all manner of deserving and undeserving affects and effects.

NETWORKS AND NETWORKED ORGANIZATIONS

Consider the Internet, one of the most powerful communication tools in the history of human civilization. Can we identify a single person with the knowledge and power necessary to order a sudden or drastic change in it? There is no such person to be found. What if the Internet, governed loosely by a broad range of persons, is a harbinger of organizations and institutions to come? Can current models of leadership be applied to networks of people, linked by technology, which inherently cannot be managed? What does leadership look like in a networked world?

A major shift is occurring in the world, and it is having a significant effect on how we work together, influence change, and lead our organizations. The shift is from a world of fragmentation to one of connectivity and integrated networks. This shift is fueled by the trend toward a global economy and by the

increased use of technology and mass communications in our everyday lives.

THE DYNAMICS OF NETWORKS

A networked world operates differently than one built on hierarchies and fragmentation. The Internet is a wonderful example of a network. The Internet has a basic structure within which individuals and organizations can create and operate. That structure is one of nodes, each of which is a center for a web of connections. Each of these nodes is linked with other nodes. This structure is simple, yet it allows for great flexibility and has permitted the evolution of the World Wide Web, the graphical information-exchange service that, with e-mail, is the way that most people make use of the Internet. Individuals who are connected to the Web can initiate change from anywhere within the system: They may set up a new website, for example, or they may enter topical chat rooms or initiate conversations on new topics. The ease with which new websites can be created is evident from the fact that in the United States alone their numbers grew from 50 in 1992 to 50 billion by 2000.

The Internet is highly dynamic: Websites, users, and content are constantly changing, and the opportunities for individual initiative and creation are endless. It is active participants who shape the system, gradually and in an ongoing manner, based on their own knowledge and interests.

The dynamics in networked organizations are different from the dynamics in fragmented, hierarchical organizations in that they are linked both formally and informally by many different connections and directions. Unlike a traditional hierarchy, which has vertical linkages and tends to limit connections across departments or the larger organization, a networked organization often has ways to communicate across the entire organization (mass e-mail messages) and allows many formal and informal directions of communication and relationships often disregarding formal position. While networked organizations retain certain hierarchical aspects, they significantly increase hierarchy-challenging links among network members. A networked world

blurs organizational boundaries, creates connections, and influences the way we work.

A number of rules and observations apply when examining networked organizations. First, networks can only be understood from the perspective of the whole system. Rather than trying to analyze each connection in the web of connections that make up the network, it is more useful to step back and examine the whole system from a distance of time or space.

Networked systems are always more than the sum of their parts. When five members of a basketball team work together and transcend their individual skills, we know that an effective team has been developed. This team is the synergistic result of the unique composition of each member as well as their ability to work together and heighten each other's play.

Second, due to their high degree of connectivity, networks blur boundaries in organizations, and indeed, between work and home. Many of us check e-mail away from the office or access our work computers from home, adding to the complexity and connectivity of our work environment. Links and connections span traditional boundaries and make it challenging to hold distinct boundaries even when it might be appropriate to do so. The problems of inappropriate influence, as when the consulting units of accounting firms influence accounting practices or financial contributions from special-interest groups influence politicians' decisions, existed before advances in information technology made connectivity so easy; in today's networked organizations, the risk of inappropriately blurring boundaries is even greater.

In the global economy, transnational companies are unhindered by national boundaries. The euro has done more than replace national currencies; it has blurred the boundaries between distinctive cultures, countries, and business practices. Similarly, e-mail has eliminated many communications boundaries. An employee or customer can e-mail others in an organization without going through a secretary or a chain of command.

Third, networks behave in nonlinear ways, as the vast number of connections in a network creates

Networks and Immigration

The following account of a Lebanese immigrant settlement in Canada indicates the importance of kinship and ethnic networks.

It took Joseph's Italian liner thirteen days to reach New York. When he got off the ship, a member of the Faour family met him and told him that he should go to Halifax, which was where his brother lived. Before he left New York, Joseph was given the name of Butros Alamy, a friend of the Faour family, who also lived in Halifax. Butros would lead Joseph to his brother. When Joseph arrived in Halifax, Butros Alamy received him kindly, and directed him to his brother.

At the time Joseph arrived in Halifax, the Lebanese community formed a close-knit network of friends and relatives. They lived close to each other and helped each other out. Naturally, Joseph became a member of this network. He obtained his first job through a Lebanese who worked on the street car tracks. He did not like the job because the sun bothered him. He quit, and found a job in a sugar factory in Halifax through another Lebanese acquaintance.

In the 1920s, Joseph's brother, Antoun, left Halifax for

the United States to seek his fortune there. Influenced by his brother, Joseph left Halifax and settled in Vermont. There he met several Lebanese who told him that independent business, not employment, was the only way to become rich. Joseph followed their advice and opened a general store. He did very well. He returned to Halifax to marry a girl he met through his Lebanese friends in Halifax, and brought her back to help him in his business in Vermont. Times became hard for Joseph and his wife during the Depression. His father-in-law visited them and persuaded them to return to Halifax. This was in 1933.

Joseph failed to find a job in Halifax, for the Depression was taking its toll there, too. Finally, remembering his lesson in the rewards of business, and encouraged by his friends and relatives, he opened a little dry-goods store in the North End. With hard work and determination, he made his business thrive. He worked in his store from 1938 until 1956, when he sold the business and retired with a small fortune.

opportunities for discontinuous change. Discontinuous and nonlinear jumps make it hard to assign causality; the connectivity of the system makes it possible for many variables from both near and far to create ripple effects that influence the whole system. Information spreads at light speed through cell phones and e-mail.

Fourth, networks are always in dynamic flux. When many highly connected variables are in play, high speeds and high degrees of movement are natural. We notice this in number of new problems that arise and the speed with which they mutate. The dynamic flux of networks also means that organizational rules have a shorter shelf life. As the number of variables in the system increases, we experience an accelerating sense of speed and movement in the system. People who use networked computer systems, e-mail, voice mail, cellular phones, and fax machines have an altered perception of time and urgency: The more easily and quickly we can be reached, the greater our sense of urgency and speed,

which in turn creates the sense of living in a world of constant movement.

Fifth, the complexity of network systems grows geometrically. This creates a serious challenge to the way we handle strategic planning and decision making. A networked system is never closed off from outside influences. It is always affected by variables that exist outside departmental or organizational boundaries. This means that it is impossible to understand all the variables when we make decisions or solve problems; we must be constantly learning to adapt to these challenges.

Geometrical complexity also challenges micro-management: To focus on the parts denies the complexity of a networked system. Rather, we must focus on the relationships between variables and keep an eye on the whole system. If seeing the system is like standing on the balcony watching the dancers on the floor below, micromanaging is like being on the floor, telling people how to dance. When you are on the floor, you can't see the system

patterns, and making small changes in the movements of the dancers doesn't have much impact on the performance of the system as a whole. The presence of geometrical complexity means that people must become comfortable with ambiguity and probabilities instead of certainty.

Sixth, networks can be influenced but they cannot be controlled. In a 1998 obituary for the Internet pioneer Jon Postel, the *Financial Times* noted that Postel helped influence the development of the Internet, realizing that no single person or entity could control it:

The Internet works because computer scientists all over the world are prepared to reach agreement on the best standards to adopt. The process of reaching that agreement is managed by a relatively small number of people, of whom Postel was one. Their power stems not from official status or governmental nomination, but from their ability to create a consensus. The consensus, in turn, stems from a shared purpose. (*Financial Times* 1998, 20)

Were one person to try to force his or her will on the overall Internet— even a giant such as Microsoft's Bill Gates—he or she would surely fail. Due to the dynamic movement and high degree of connectivity, networks do not respond to force; in fact, they naturally resist it. Wet sand makes a good analogy in this regard: It resists the imprint of our foot when we slap our foot down on it hard; however, when we place our foot on it and wait, the wet sand allows our foot to sink into it. Often supervisors are called upon to drive change through an organization. This forceful “make it happen at all costs” attitude often results in more resistance.

The dynamics of networks have become increasingly familiar to us. Over the last decade, we have felt the increased rapidity of change and the lessening effectiveness of control strategies. The boundaries between our daily work and the outside community have become blurred. Global, economic, political, and societal issues affect our organizations and our work. Effectiveness used to be measured in part by a person's ability to be autonomous and maintain his or her boundaries. Now, effectiveness is measured by a person's ability to develop and maintain cross-boundary rela-

tionships and see the whole system. The old rule that said “everything will become clear when I grow up” has been replaced by the need for constant learning and unlearning.

IMPLICATIONS FOR LEADERSHIP

Networked organizations require us to develop and practice two new ways of working. First, members of networked organizations must relate to one another in new ways. They must build and maintain effective cooperative relationships across the boundaries of an organization and between the organization and the community. In a networked world, one's value is measured by one's connection to that world. Our relationships need to model and keep pace with the nature of the system. If the system is full of connections, then we need to be in connection as well. We must also think relationally. Since networks have many variables in play, and because linear causality does not work in open systems, a new way of thinking is needed. This new way of thinking—relational thinking— requires us to learn how different variables relate to and affect one another. Furthermore, we must develop emotional intelligence on both individual and group levels. Emotional intelligence entails personal emotional competence in the areas of self-awareness, self-regulation, and motivation.

Emotional intelligence also entails empathy and social skills. The reason why emotional intelligence becomes more important in a networked world is that the flow of emotions as well as information is increased within a networked system. If the members of a networked organization have low emotional intelligence, rumor, fear, and amplification of all emotions will occur. This results in an organizational drain of energy and resources as staff members respond to the emotional content of communications instead of the informational content.

The second new way of working regards how we influence change. We must use more organic strategies that take into account the nonlinear nature of connected systems and their negative response to force. Hierarchies have traditionally used force and power to move people, but networks resist force. If we continue to use traditional change strategies in a

networked world, we are likely to be unsuccessful. As part of our new approach to influencing change, we must also develop an understanding of how the dynamics of a network operate and what the key points of leverage within the system are. When we learn to spot these points of influence, we can use the dynamics of the system to bring it to health.

There are obviously some interesting implications and challenges for leadership that result from this expansion of networks. While human networks have always existed, the huge growth in information technology and the Internet has extended the connections between people and within organizations and has fundamentally changed the way we lead.

NICHIREN (1222–1282) *Leader of Japanese Buddhism*

Nichiren, one of the most famous figures of Japanese Buddhism, is a remarkable example of spiritual and charismatic leadership, whose influence reached far beyond his lifetime. A forceful personality whose behavior often seemed to be in conflict with Japanese ideal of social harmony or with the compassion preached by Buddhism, Nichiren initiated a new religious movement that would be named after him and which propagated exclusive faith in the Lotus Sutra, one of the major scriptures of East Asian Buddhism. He did not hesitate to criticize other Buddhist traditions and the political leaders of his time, and perhaps as a consequence of his critical attitude spent much of his life in exile. He presented himself as a martyr and a prophet, and as the only one who, on the basis of the knowledge he had achieved through his understanding of Buddhism and his life of persecution, could indicate the way of salvation to the entire country of Japan. Thus he described his mission: “I shall be the pillar of Japan. I shall be the eyes of Japan. I shall be the great vessel of Japan. This is my vow, and I will never forsake it” (Nichiren 1990, 138).

ESTABLISHING HIMSELF AS THE TRUE “PRACTITIONER OF THE LOTUS”

There are no contemporary records about Nichiren, and information on his life has to be gleaned from his own writings, which abound in biographical details. In these works, he seemingly attempts over the years to construct his own identity as the only true interpreter of the Lotus Sutra.

Nichiren was born in Awa Province (Chiba), at that time a remote area of eastern Japan, in the year 1222, a crucial moment in Japanese history, when the military government had consolidated its power at the expense of the imperial court. In spite of the hagiographic narratives that stress his poor origins, his father may have been an official of the local manor, and Nichiren was in close contact with the military class from a young age. Among his followers would be many lower- and medium-rank samurai.

In 1233, Nichiren entered Kiyosumidera, a temple

close to his home village, where he was ordained at the age of sixteen. He spent the next twenty years traveling, to study at major Buddhist centers, first in Kamakura and then in the area of the capital Kyoto, at the temples of the Tendai school and of esoteric Buddhism.

Returning to his home temple in 1253, Nichiren supposedly proclaimed his belief in the exclusive superiority of the Lotus Sutra by invoking the title of this scripture, *namu myohorengekyo*, a practice that would become distinctive of his school and of all other movements inspired by him. This is considered the starting point of his “sect.” In fact, he continued to be interested in other forms of Buddhism, the esoteric traditions in particular, which were extremely popular in those times and which would color his distinctive interpretation of the Lotus Sutra. Yet in his autobiographical writings, he discounted this interest in order to draw the focus more sharply on his mission as the “practitioner of the Lotus” par excellence.

THE RIGHT TEACHING FOR THE PEACE OF THE COUNTRY

Nichiren’s tribulations began early in his career. In 1254, he was forced to leave his home temple because of a conflict with a local landlord. He established his residence in Kamakura, where in his preaching he attacked the practitioners of Pure Land Buddhism.

There Nichiren started his search for political support. In 1260, he submitted the *Treatise on Keeping the Country at Peace by Establishing the Right Teaching* to the most powerful man in the government, the retired shogunal regent. He warned that fateful calamities, including internal revolts and invasions from foreign countries, would afflict Japan if its rulers would not support the right form of Buddhism, that is, the kind he himself was teaching. His discourse on the relation between religion and political power drew on the traditional notion of the mutual dependence of the “law of the king” and the “law of the Buddha,” and presented the authority of the Lotus Sutra as a principle to which rulers were to subordinate themselves. Some years later, when the Mongols threatened to attack Japan if it would not

become a tributary of their empire, Nichiren sent this memorial once again to the government and to major temples, reinterpreting his words as prophetic utterances in which the Mongol invasions had been foreseen. Nichiren’s concern for the country of Japan is also owed to his belief that the truth of the Lotus Sutra needed concrete actualization in society and that salvation was not only a matter of the individual, but a concern of the entire nation.

A LIFE OF EXILE

In 1261, Nichiren was arrested and exiled to Izu. It is not clear whether this was a direct consequence of his memorial to the state or was a result of conflicts with other sects, namely those of the Pure Land believers. Nichiren remained in Izu for two years, and there wrote the *Essay on Doctrine, Capacity, Time, and Country*, which outlines the criteria according to which the Lotus Sutra occupies the unique position of the perfect teaching.

In 1264, in his native village of Komatsubara, Nichiren again ran into trouble and was wounded in an ambush, together with some of his followers.

In 1271, Nichiren was arrested, probably because of accusations from hostile monks, and his followers in Kamakura were persecuted. Nearly executed at Tatsunokuchi, he was once again sent into exile, to the island of Sado in the Sea of Japan. There he spent a winter of great hardship in a desolated hut in the middle of a graveyard, after which he was moved to the home of a local landowner. Yet the Sado period is probably the most significant for the doctrinal formulation of his teaching as distinct from that of the religious tradition he sprang from, the Tendai school of Buddhism. He established the recitation of the title of the Lotus Sutra as a new practice for both monks and laymen and the only practice that would afford direct and immediate access to Buddhahood and grant worldly benefits; at the same time, he condemned all other Buddhist practices as useless heresies that “slandered the dharma.” In Sado, Nichiren also devised the icon that would become the object of worship of his movement and at the same time a powerful instrument of sectarian legitimation: a calligraphic mandala said to visualize the world of the Lotus Sutra, which

included the title of the sutra, the major Buddhas of his Buddhism, and protective deities and gods of Japan, as well as the patriarchs of his tradition.

Released from exile in 1274, he returned to Kamakura. The government seemed interested in the prophecies he had made a few years earlier, but did not withdraw its support to other schools. Perhaps disappointed, Nichiren left again for a mountainous area near Mount Fuji, Minobu, where he would remain for the rest of his life, continuing to write and providing leadership to his growing community of believers. In 1282, Nichiren was persuaded to leave Minobu to cure his illness at a hot spring, but he was forced to stop at the residence of a follower, Ikegami Munenaka, in today's southwest Tokyo. There he died on the thirteenth day of the tenth lunar month, after having designated six main disciples to head his community.

TIME, COUNTRY, TEACHER: NICHIREN AS A MILLENARIAN PROPHET

During the periods of exile, Nichiren gradually achieved an awareness of being the spiritual leader that Japan needed. In Izu, he had already proposed an original interpretation of the relation between the supreme teaching, the right time to propagate it, the country that upholds it, and the teacher who propagates it. He presented Japan as being in the final ages of the dharma, when destruction and decline are inevitable, and yet as the country destined to protect the Lotus Sutra qua teaching that would offer ultimate Buddhahood to everyone in this period. In a later essay compiled during the Sado exile, *On the Buddha's Prophecy*, he explicitly designated Japan as the place from where the Buddhist truth would spread to other countries, a new "center" of the Buddhist world.

While the doctrinal foundation of his ideas lay within the tradition he had received, Nichiren's notions of time and space represent a new development. In this respect, Nichiren reveals the characteristics of a millenarian prophet, who sees in the final ages the moment for the institution of a new religious world, centered on his interpretation of the truth, while condemning other leaders as corrupt and degenerate. This vision was part of a process of self-

legitimation, as Nichiren believed that he was destined to be the one who could guide Japan toward this renovation: "The destiny of Japan depends solely on me. A house without pillars collapses and a person without soul is dead. I am the soul of the people of Japan" (Nichiren 1990, 333).

FROM BUDDHIST LEADER TO PARAGON OF NATIONALISM AND SOCIAL REFORMISM: NICHIREN AS A "MODEL"

Although Nichiren himself wrote that he was not the founder of any school nor of a branch of an existing school, and although he failed to win official support from the highest political authorities during his life, he constructed his identity as that of a spiritual leader for rulers and clerics alike, and he was convinced that his mission would be carried on by his disciples. A large body of correspondence with his followers shows that they recognized his charismatic leadership, trusted his understanding of the scriptures, and had recourse to him for guidance with their problems, whether religious or not. His innovative reading of his canonical tradition created a new hermeneutic tradition and eventually a new sectarian movement, which turned out to be extremely successful: In a few decades, it established itself throughout Japan and acquired the support of the court.

Today there are nearly forty religious bodies that claim Nichiren as their founder, including traditional Buddhist denominations and new religious movements. But he inspired not only religious and lay movements, but also political and social ideologies of modern times. A term, Nichirenism (*nichiren-shugi*), has even been coined to indicate currents of thought that are indebted to him. Interestingly, these include both ultranationalists and socialist thinkers. Tanaka Chigaku (1861–1939), for instance, who founded the Nation's Pillar Society, an organization named after Nichiren's saying "I will be the pillar of Japan," saw Nichiren as the "Supreme Commander of the world-unifying armed forces of Japan" who would spiritually guide the military enterprises of Japan as a mission to accomplish the pacification of all nations, Nichiren's ideal extended to the entire universe. On the other hand, Seno Giro (1890–1961),

Nichiren's "The Swords of Good and Evil"

Nichiren created a number of goshos (honorable writings). Below is one known as "The Swords of Good and Evil."

Nichiren is the most perverse person in Japan. The reason is this: Nichiren proclaims that because the people revere Amida, Dainichi, Yakushi and other Buddhas even more than their own parents and lords, the three calamities and seven disasters are occurring in greater magnitude than in any previous age, and natural disasters are now more terrible than ever. I am forever reminding them that they will not only ruin themselves and destroy the country in this lifetime, but will fall into the depths of hell in the next. Hence I have suffered this persecution. I might be compared to a moth that flies into a flame or a mouse that dashes in front of a cat. I am like an animal that knows it is in danger and yet pays no heed. But I risk my life as a matter of conscious choice; therefore I, Nichiren, am a perverse person.

It is also true that stones are split open for their hidden gems, deer are slain for their hides and meat, fish are caught for their flavor, the kingfisher is killed for its gorgeous feathers, and a beautiful woman is envied for her beauty. This is the case with Nichiren. Because he is the votary of the Lotus Sutra, he has suffered all manner of persecution at the hands of the three powerful enemies. How wondrous that you have, nonetheless, become a disciple of such a person! There must be some profound reason for our relationship. Make every possible effort to deepen your faith and reach the pure land of Eagle Peak.

I have received the two swords—a long and a short one—to be offered in prayer. The long sword must have been made by a renowned swordsmith. It is fully equal to the celebrated swords Amakuni, Onikiri and Yatsurugi, or to those famous Chinese swords Kan-chiang and Mo-yeh. You have offered this sword to the Lotus Sutra. While you wore it at your side, it was an evil sword, but now that it has been offered to the Buddha, it has become a sword for good, just like a demon who professes Buddhism. How mystic!

In the next life you should use this sword as your walking stick. The Lotus Sutra is the staff which helps all

Buddhas of the three existences as they enter upon the path to enlightenment. However, you should rely upon Nichiren as your staff. When one uses a staff, he will not fall on treacherous mountain paths or rough roads, and when led by the hand, he will never stumble. Nam-myoho-enge-kyo will be your unbreakable staff to take you safely over the mountains of death. Shakyamuni and Taho Buddhas as well as the Four Bodhisattvas headed by Jogyo will lead you by the hand on your journey. Should Nichiren die before you, I will come to meet you at the moment of your death. If you should die before I do, I will be sure to tell King Enma everything about you. All that I tell you is true. According to the Lotus Sutra, Nichiren is the guide on the difficult road to enlightenment. Devote yourself singlemindedly to faith with the aim of reaching Eagle Peak.

Money serves various purposes according to our needs. The same is true of the Lotus Sutra. It will be a lantern in the dark or a boat at a crossing. At times it will be water, and at other times, fire. This being so, the Lotus Sutra assures us of "peace and security in this life and good circumstances in the next."

Of all the many places in Japan, Nichiren was born in the province of Awa. It is said that when the Sun Goddess discovered the land of Japan, she first dwelt in Awa Province. The shrine of the Sun Goddess stands in Awa. This goddess is the merciful parent of the entire nation, so this province must be of great significance. What destiny caused Nichiren to be born in this same province? No reward could be greater. That is not the main point of this letter, so I will not go into further detail. But you should think about what I mean.

I will pray to the gods with all my heart. Hold fast to your faith so that your wish will be fulfilled. Tell your wife all that I have said.

With my deep respect, Nichiren

a socialist activist, regarded Nichiren as a model of pacifism and democratic ideals based on Buddhist principles and advocated the unification of all Buddhists on the basis of Nichiren's ideas, in order to construct a society based on mutual trust. Takayama Chogyu (1871–1902), an influential literary figure,

saw Nichiren's historical significance in his refusal to submit to political authority in the face of persecution, holding fast to his belief in the Lotus Sutra, and Takayama regarded his message as transcending national boundaries. Nichiren's charisma affected even a Christian intellectual, Uchimura Kanzo

(1861–1930), who looked up to him as a religious reformer comparable to Martin Luther or Ignatius of Loyola and regarded him as one of the five representative men of Japan: “a remarkable figure, one of the greatest of his kind in the world. Indeed, he by his independence and originality made Buddhism a Japanese religion” (Uchimura, 292).

While these examples betray a certain misunderstanding of Nichiren as a thirteenth-century monk, they undeniably attest the lasting impact that his leadership had on diverse aspects of the intellectual and spiritual life of Japan through the centuries.

NIETZSCHE, FRIEDRICH (1844–1900)

Writer and philosopher

Friedrich Wilhelm Nietzsche led others not directly but through his thoughts on leadership. Nietzsche was an isolated, nomadic German classicist turned

philosopher who had important if controversial ideas about society and morality. He wrote witty, biting, brilliant books in which he celebrated leadership by example and encouraged social ideas that cultivated “great men.” He rejected those pervasive popular social ideas that catered to the interests of those he disdainfully referred to as “the herd.” Thus he emerged as an unabashed elitist who sharply criticized socialism, democracy, morality, and the entire Judeo-Christian tradition, all institutions and systems that emphasized equality and the rights and obligations of the common man. In such books as *Beyond Good and Evil* (1886) and *On the Genealogy of Morals* (1887), Nietzsche anticipated the rise of “higher men” who, as figures of inspiration, would lead by example by virtue of their aesthetic sensibility and creativity and raise modern society to the exalted level of the great societies of the past, such as the (predemocratic) society of ancient Greece. One of his favorite themes is the “will to power” in all human motivation. But what Nietzsche wanted to defend and further was not cruelty and political ambition but creativity, high culture, and the arts. Nevertheless, his brutal warrior metaphors were often far more suggestive and more memorable than his subtle aesthetic observations and pronouncements. This, combined with his posthumous adoption first by the Kaiser’s troops in World War I and then by the Nazis, gave his philosophy an unsavory image, and he was dismissed with vengeance as a proto-fascist outside of Germany until the latter half of the twentieth century.

NIETZSCHE’S LIFE

Nietzsche’s life, unlike that of some other great theorists of leadership, was not only unusually isolated and lonely but apparently devoid of any sort of political or social ambitions for himself. He was briefly an academic dean at the University of Basel, but that is the full extent of his personal experience as a leader. He envisioned no role for himself in the new society he imagined, other, perhaps, than as its philosophical patron saint. And although he wrote enthusiastically about warriors and heroes, most of Nietzsche’s existence was as a sickly exile and an

The New Idol

SOMEWHERE there are still peoples and herds, but not with us, my brethren: here there are states.

A state? What is that? Well! open now your ears unto me, for now will I say unto you my word concerning the death of peoples.

A state, is called the coldest of all cold monsters. Coldly lieth it also; and this lie creepeth from its mouth: "I, the state, am the people."

It is a lie! Creators were they who created peoples, and hung a faith and a love over them: thus they served life.

Destroyers, are they who lay snares for many, and call it the state: they hang a sword and a hundred cravings over them.

Where there is still a people, there the state is not understood, but hated as the evil eye, and as sin against laws and customs.

This sign I give unto you: every people speaketh its language of good and evil: this its neighbour understandeth not. Its language hath it devised for itself in laws and customs.

But the state lieth in all languages of good and evil; and whatever it saith it lieth; and whatever it hath it hath stolen.

False is everything in it; with stolen teeth it biteth, the biting one. False are even its bowels.

Confusion of language of good and evil; this sign I give unto you as the sign of the state. Verily, the will to death, indicateth this sign! Verily, it beckoneth unto the preachers of death!

Many too many are born: for the superfluous ones was the state devised!

See just how it enticeth them to it, the many-too-many! How it swalloweth and cheweth and recheweth them!

"On earth there is nothing greater than I: it is I who am the regulating finger of God."—thus roareth the monster. And not only the long-eared and short-sighted fall upon their knees!

Ah! even in your ears, ye great souls, it whispereth its gloomy lies! Ah! it findeth out the rich hearts which willingly lavish themselves!

Yea, it findeth you out too, ye conquerors of the old God! Weary ye became of the conflict, and now your weariness serveth the new idol!

Heroes and honourable ones, it would fain set up around it, the new idol! Gladly it basketh in the sunshine of good consciences—the cold monster!

Everything will it give you, if ye worship it, the new idol: thus it purchaseth the lustre of your virtue, and the glance of your proud eyes.

It seeketh to allure by means of you, the many-too-many! Yea, a hellish artifice hath here been devised, a death-horse jingling with the trappings of divine honours!

Yea, a dying for many hath here been devised, which glorifieth itself as life: verily, a hearty service unto all preachers of death!

The state, I call it, where all are poison-drinkers, the good and the bad: the state, where all lose themselves, the good and the bad: the state, where the slow suicide of all— is called "life."

Just see these superfluous ones! They steal the works of the inventors and the treasures of the wise. Culture, they call their theft—and everything becometh sickness and trouble unto them!

Just see these superfluous ones! Sick are they always; they vomit their bile and call it a newspaper. They devour

intellectual vagabond, continuously worried about his fragile health.

Despite the enthusiasm he demonstrates in his writings, he had an unhappy life. Nietzsche was born in the small German town of Röcken, where his father, a Lutheran minister, died when he was only four years old. He was raised by his mother, grandmother, and two religious maiden aunts. As a student, Nietzsche displayed obvious brilliance. He was made a professor of classical philology at Basel University in Switzerland, at twenty-four. He served

briefly as a medical orderly in the Franco-Prussian War in 1870 and resigned his university post after little more than a decade because of poor health. He never married and spent the rest of his life largely alone, perched in some of the more spectacular landscapes in Europe.

Nietzsche suffered from excruciating headaches and chronic insomnia. Nevertheless, he started writing and publishing his remarkable books in the early 1870s, and despite his infirmities reached a veritable writing frenzy by the 1880s, finishing several books

one another, and cannot even digest themselves.

Just see these superfluous ones! Wealth they acquire and become poorer thereby. Power they seek for, and above all, the lever of power, much money—these impotent ones!

See them clamber, these nimble apes! They clamber over one another, and thus scuffle into the mud and the abyss.

Towards the throne they all strive: it is their madness—as if happiness sat on the throne! Ofttimes sitteth filth on the throne—and ofttimes also the throne on filth.

Madmen they all seem to me, and clambering apes, and too eager. Badly smelleth their idol to me, the cold monster: badly they all smell to me, these idolaters.

My brethren, will ye suffocate in the fumes of their maws and appetites! Better break the windows and jump into the open air!

Do go out of the way of the bad odour! Withdraw from the idolatry of the superfluous!

Do go out of the way of the bad odour! Withdraw from the steam of these human sacrifices!

Open still remaineth the earth for great souls. Empty are still many sites for lone ones and twain ones, around which floateth the odour of tranquil seas.

Open still remaineth a free life for great souls. Verily, he who possesseth little is so much the less possessed: blessed be moderate poverty!

There, where the state ceaseth—there only commenceth the man who is not superfluous: there commenceth the song of the necessary ones, the single and irreplaceable melody.

There, where the state ceaseth—pray look thither, my brethren! Do ye not see it, the rainbow and the bridges of the Superman?

Thus spake Zarathustra.

in his last productive year. In 1889, while in Italy, he collapsed on the street in a deranged mental state and suffered the first of a debilitating series of seizures and strokes. This ended his writing career. He lived another ten years, at first under the tender care of his mother, but later subject to the manipulative management of his proto-Nazi sister, Elisabeth. It was his sister who, after his death, made the connection with Hitler and consequently ruined Nietzsche's reputation. (It was at his sister's behest that Hitler was photographed looking admiringly at a bust of Nietzsche,

but the association with the Nazis was both unfortunate and unjust, as Nietzsche had sharply condemned such Nazi principles as anti-Semitism, militarism, and German chauvinism.) Nietzsche died in the first summer of the new century, 1900.

Accordingly, a biography of the events of Nietzsche would tell us little of his views on leadership. All of this must come from an understanding of his works. What we find in his works is an enduring fascination with the singular importance of great leaders and constant reference to great leaders in the ancient world (as well as to a few contemporary leaders). But the great leaders Nietzsche celebrates were not for the most part political leaders or for that matter even very self-conscious leaders; rather, they were masters of the arts who went their own way and "created themselves" out of the materials of their times. It is worth noting that the great German poet and philosopher Goethe (1749–1832) appears in this role more than any other single figure.

NIETZSCHE'S IDEAS

Among Nietzsche's most radical ideas are the revaluation of all values, the death of God, the specter of nihilism in modern society, and the loss of European confidence, combined with a growing sense of meaninglessness and foreboding that would find a home in twentieth century existentialism and elsewhere. By the revaluation of all values, Nietzsche meant to initiate an examination of the hierarchies of value, given that human beings are in their very essence value-making creatures. Nietzsche discussed in great detail the revaluation of values that he believed took place with the invention of Judeo-Christian morality in the first millennium B.C.E. According to Nietzsche, the ancient Hebrews, in their unhappy exile and, before that, under slavery, invented a set of values diametrically opposed to the ancient warrior values of their captors and oppressors. The early Christians built on this invention and, like the Hebrews, coupled it with a powerful monotheistic religion. Whereas the older values of the ancient warriors and aristocrats celebrated the privileged superiority of their adherents, the new values of the Hebrews and Christians shifted privilege

to the common man and emphasized an egalitarian morality which (unlike the morals of the ancient warriors and aristocrats) was available to any good person, regardless of his or her wealth, health, or place in society. Accordingly, it was a set of values that served the interests and self-respect of the “weak” and “mediocre” as opposed to a set of values that served the interests of the “strong” and “superior” specimens of humanity. What Nietzsche sought was a new revaluation of values that would reverse this older one and once again serve the interests of “the best,” “the higher men,” those who are most talented, those rare individuals who make a society great rather than simply comfortable.

The timing of Nietzsche’s campaign was crucial. That older revaluation, the one that shifted the emphasis and the privileges of society from the strong to the weak, depended on the powerful religions of Judaism and Christianity to maintain order, because (Nietzsche assumed) most people would be good only so long as there was a threat of divine punishment for wrongdoing or loss of faith. But Nietzsche saw clearly, as most of his contemporaries did not, that the rise of modern science and the new movements in society had undermined traditional belief in God, a sociological observation that Nietzsche captured in the memorable slogan, “God is dead.” With the death of God, the threat of punishment was gone. But most people need such a figure of authority, and Nietzsche warned that they would do almost anything to find one, including, he suggests, looking to new “Führers” of all kinds. He foresaw the coming of nihilism, the recognition that the values invented and fostered two millennia ago have lost their meaning and now have as their price only an antipathy to life, not a promise of hope or redemption. With this perspective comes a loss of European confidence and a growing sense of meaninglessness, and it is in the face of this void that Nietzsche believed his prescriptions could be of considerable significance.

What followed, we now know, were two world wars, a worldwide depression, fascism, and the Holocaust. But in Nietzsche’s philosophy, the anticipated horrors of the future were always tempered by a powerful sense of fatalistic hope and a concrete

and creative love of life, which Nietzsche believed would be the two most important elements in any future leader. Nietzsche’s sense of fatalism should not be confused with the “what’s the point?” lassitude and irresponsibility of some modern thinking; rather, it was of the same family as the assurance of the ancient warriors of Homer’s *Iliad*, who went into battle with full confidence that either the fates had it in for them or they did not. Nietzsche believed that leaders must in similar style throw themselves into their work, into their fate, confident that their gifts and their talents will either manifest themselves or they will not. Thus Nietzsche defended a buoyant optimism about the future and the ability of cultivated people to surmount any horrors. He rejected the pessimism of his early mentor, Schopenhauer (1788–1860), who saw no good coming of modern society or human life in general and saw the arts as only a temporary respite from the pain and turmoil of life rather than as society’s salvation. He also rejects the impersonal optimism of G. W. F. Hegel (1770–1831), another important predecessor, who utterly minimized the role of individual leaders in the transformation of society. (Even Napoleon, Hegel wrote, was far more a pawn of the fates than a true leader who changed society through his personal will.) For Nietzsche, the individual leader is instrumental and definitive, leading by artistic and aesthetic example, setting the new style and taste of his era.

An important example of leadership for Nietzsche is his one-time hero and friend Richard Wagner (1813–1883), the great operatic composer. As a young man, Nietzsche got to know Wagner and his music and celebrated Wagner as a cultural leader of the most profound kind. Wagner not only perfected an art form but also set in motion the new mythology that would make Germany and all of Europe the equal of the ancients in artistic glory and nobility. But Wagner displayed some vulgar and despicable traits. Foremost among his despicable traits was his anti-Semitism. The vulgarity was not at first so obvious, but Nietzsche soon saw that his celebrated friend was far more concerned with popular success than with the values of great art, and in his shift away from a noble Teutonic mythology toward a popular

Christianity, Wagner showed Nietzsche that he was a hypocrite as well. Although he sometimes called himself an “immoralist,” Nietzsche was moralistic in the extreme. His lessons on leadership are uncompromising in their insistence on integrity, both artistic and personal.

NKRUMAH, KWAME (1909–1972)

African nationalist and leader of Ghana

Sometimes a leader’s claim to history is in being the first. In perspective, Nkrumah’s performance in seeking and attaining power inspired many others in black African countries, while in governance, his record foreshadowed similar declines elsewhere in Africa. In retrospect, Nkrumah’s reputation gained by keeping company—as their sole black African counterpart—with the giants of other continents, such as Marshal Tito (Yugoslavia), Nehru (India), and Mao Zedong (People’s Republic of China). Independence for the former British colony of Gold Coast (renamed Ghana, after the ancient West African kingdom) in 1957 electrified the fledgling anticolonial movements across black Africa. Nkrumah seized the moment to establish an African world presence, through numerous embassies, a shipping line, an airline, and sponsorship of inter-African and transcontinental meetings. Within a few

years, however, Nkrumah’s leadership moved forward into a more definitive authoritarian rule: In 1960, he became chairman for life of the ruling Convention Peoples’ Party; a plebiscite in 1960 declared Ghana a republic, with Nkrumah as president; in 1964, Ghana officially became a one-party state, with “Nkrumahism” taught in party schools. But in 1966, Nkrumah’s government fell to a military coup while he was visiting China. He spent his remaining years in exile in Guinea, furiously writing tracts about capitalist-imperialist domination of Africa and the Third World.

LEADERSHIP RESOURCES

Despite widespread contemporary debasement of the term, “charismatic” attaches to Nkrumah (Apter 1972) as much as to any other political leader of the mid-twentieth century. To that must be added fierce dedication to the tasks at hand—initially, to his education, later to party organization—en route to gaining and exercising power.

After baptism as a Roman Catholic, Nkrumah went through school and teacher training, toyed with the idea of becoming a priest, and then set forth for the

United States in 1935. There he acquired several degrees: a bachelor of arts (1939) and a bachelor of theology (1942) from Lincoln University, Pennsylvania, and a master of science in education and master of arts in philosophy from the University of Pennsylvania (1943); he also completed requirements for a doctorate except for the dissertation. Nkrumah went to London in 1945, where he registered for law studies at Gray's Inn and went to classes at the London School of Economics. Despite food rationing and economic reconstruction, postwar political London plunged him into the brave new world of Fabian socialism and anti-imperialism. Nkrumah, who read, by his own admission, Hegel, Marx, Lenin, Mussolini, Garvey, and Gandhi (Nkrumah 1959), secured an appointment as secretary of the Organizing Committee of the Fifth Pan-African Congress (instigated in part by W. E. B. Du Bois) in London. Appointed general secretary of the Working Committee of the congress and, later, secretary of the West African National Secretariat, he rubbed shoulders with several of Africa's future heads of governments: Nnamdi Azikiwe (Nigeria), Jomo Kenyatta (Kenya), Felix Houphouët-Boigny (Côte d'Ivoire), and Leopold Senghor (Senegal).

Nkrumah's organizing abilities attracted an invitation from the leading anticolonial movement back home, the United Gold Coast Convention (UGCC), to assume the post of general secretary, which he did in December 1947. Differences over strategy and ideology led to a break, and Nkrumah founded the Convention Peoples' Party (CPP) in January 1949. CPP slogans tell the story: the demand for "self-government now" via campaigns of "positive action" and "forward ever, backward never." Nkrumah's proverb, "Seek ye first the political kingdom [and all else will be added unto you]" (Jackson and Rosberg 1982, 200), energized the lower classes—"the verandah boys," as he termed them. (Casual laborers slept under verandahs.) In addition, Nkrumah trumpeted his socialist commitment, as opposed to the bourgeois accommodationism of the UGCC.

In 1951, Nkrumah was jailed for inciting violence during a mass rally in the run-up to an election that would institute constitutional changes permitting greater African participation in the legislative assembly and executive council of the colony. Nkrumah continued the campaign from prison and in February 1951 won a spectacular victory, emerging as the new leader of government business, the first black African to assume such a position in the British Empire. After a motion for independence passed the assembly in 1952, it required another confirming election before actual independence arrived in March 1957.

LEADERSHIP EFFECTS

Nkrumah's ascent to prime minister of Ghana transformed the debate over whether Africans were ready to rule themselves. In 1958, France had departed from Guinea (with less goodwill than in Ghana), and by 1960, Congo and many of France's African colonies had secured independence. The years in between saw Ghana pushing ahead with its own version of a planned economy, a welfare state, and rapid industrialization. Despite radical rhetoric, Nkrumah attracted the support of the World Bank, the Kaiser Aluminum Company, and the U.S. government in financing a giant dam for the Volta River, a hydroelectric power plant, a bauxite processing facility, and an enlarged seaport—a monster project that symbolized the new, dynamic Africa. At the same time, Nkrumah pursued the goal of a United States of Africa, agreeing to a Ghana-Guinea-Mali Union that existed in name only, but was even willing to subvert moves toward the more conventional association of states, the Organization of African Unity (founded in 1963).

Nkrumah's economic policies bankrupted the country, cronyism and corruption decimated a respected civil service, and political paranoia suppressed or exiled dissenters. By 1960, Nkrumah began turning to the Soviet Union and Eastern Europe for trade deals, loans, and advisors. He got himself declared Osagyefo (Redeemer) and won a Lenin Peace Prize. With an economy in ruins and a government dependent on personal whim, it took only a handful of military officers to depose

Nkrumah. During his exile years in Guinea, he produced several short books reinterpreting the past. Perhaps partially forgiven, and clearly respected for his visionary role, he returned home in death in 1972 to a ceremonial burial and to a gradual, historical resuscitation as the founder of his country.

NONPROFIT ORGANIZATIONS

Modern economies include a business sector, a government sector, and a so-called third sector, which embraces nonprofit organizations. Nonprofits range from large, complex organizations such as private universities, the Catholic Church, and the Salvation Army to neighborhood community centers, condominium associations, and civic clubs. The third sector provides a vehicle for addressing societal needs and concerns that are neither financially attractive to the for-profit sector nor politically feasible for government. Because nonprofits traditionally have a tax-exempt status and limited reporting requirements, the third sector is large—including millions of employees and dispersing hundreds of billions of dollars annually in the United States alone—but poorly understood.

Because nonprofits pursue widely varying agendas, leadership in the third sector takes many different forms. Even if one considers structural leadership alone (that is, the leadership provided by the nonprofit's board of directors and its hired leader), one finds the roles evolve with the growing maturity of the nonprofit. The roles of board members in for-profit organizations are largely focused on hiring and evaluating the CEO. In nonprofits, board members may actually be expected to do work and supervision not done by for-profit boards. The degree of this involvement generally lessens as the organization and its board matures, and paid staff members take on these tasks. The evolutionary growth process of nonprofits affects leadership issues of governance, succession, relationships, roles, and processes. Understanding the frameworks in which nonprofit leaders operate can help make the leadership of nonprofits more understandable.

LEADERSHIP FRAMEWORKS

Conceptually, nonprofit leaders must develop a strategic framework in which to operate. They need a clear understanding of their organization's vision, mission, and strategy. Consider the case of a community food bank. The leader's vision for the organization is to end hunger in the community by pursuing the mission of feeding the hungry. As in industry or government, the vision may be defined as a well articulated, ennobling goal toward which the leader directs the organization. It answers the question, "Why does the organization exist?" The nonprofit's mission answers the question, "What does the organization actually do to make its vision a reality?" Finally, the nonprofit's strategy defines how the organization pursues its mission. For example, the strategy of a food bank might be to have a central location in a poor part of town, or it may use a mobile van that travels around to help people in different parts of the community. Though business and governments also need a clear vision, mission, and strategy, they gain access to resources by selling goods and services or by the power of taxation. Nonprofits often must rely on their vision, mission, and strategies to gain support among clients, staff, and

particularly those who voluntarily aid the nonprofit with funds or other resources.

Operationally, the day-to-day running of nonprofits relies on the organization's structure. The leader (chief executive) of a nonprofit is typically called the executive director or president. The chief executive reports to a board of directors (sometimes called a board of trustees) and is responsible for pursuing the organization's mission. In all but the smallest nonprofits, the executive director has a staff, typically comprising a chief financial officer, a chief human resources officer, and a chief developmental officer (fund-raiser). Depending on the mission of the nonprofit, other senior positions may include a chief medical officer (in a nonprofit hospital or clinic, for example), an artistic director (in a dance, drama, or other arts-oriented nonprofit), or some other title related to the mission. In addition, there are often marketing, public relations, and operations managers and supporting assistants. With the exception of the fund-raising dimension typically associated with nonprofits, this "businesslike" structure differs little from the private or public sectors.

THE EVOLUTION OF LEADERSHIP AND GOVERNANCE

For governance, a nonprofit also relies on a board of directors, who are collectively responsible for hiring, evaluating, and compensating the executive director. The board also may reserve to itself any other duties and responsibilities it deems appropriate. Typically, boards will serve a policy review function, evaluating the recommendations of the executive director, particularly in the areas of large financial outlays and strategic undertakings. Other governance duties and activities of the board vary widely from nonprofit to nonprofit. The pattern is generally that the boards of newly established nonprofits are very involved in day-to-day activities of the organization, while the boards of established organizations restrict themselves to managerial oversight and the boards of mature, well-funded, and well-staffed nonprofits tend to take an advisory role.

Hands-on involvement is expected of board members in start-ups because resources are usually insuf-

ficient to allow the organization to pursue its mission *and* hire a staff. Though this hands-on involvement may include such mundane chores as stuffing envelopes or cleaning up after an event, it also entails formulating the organization's vision, mission, and strategies, raising funds, and, when funds permit, hiring an executive director. Since many nonprofits pursue visions and missions that exceed their initial resources, fund-raising is often a dominant concern. Returning to the food bank example, the nonprofit may discover that more people are seeking meals than the nonprofit's resources can feed. The success of nonprofits depends on their ability to generate the funds needed to meet their mission and related expenses. Though fund-raising is the lifeblood of nonprofits, other activities also must take place if the organization is to function. Here again, the new nonprofit confronts a lack of other resources. The leadership solution is to organize the board into a series of standing committees, with the chair of the board assuming the role of unpaid leader. The involvement of board members on these committees typically declines as the organization matures, with paid staff assuming the committees' responsibilities.

The typical committee structure of the board parallels that of a well-staffed nonprofit. That is, there will almost certainly be a developmental committee, charged with raising funds for the nonprofit. There may also be a finance committee and an operations committee. Particularly during start-up, these will be working committees, which means that board members on these committees will actually do the work that would be done by staff members in better-funded nonprofits.

As the nonprofit moves into the growth phase, resources will be used to hire paid staff members. At this point, the roles of board members will slowly evolve from hands-on to managerial. The main leadership challenge for the executive director becomes guiding board members through the transition from doers to overseers. (Some board members, just as some managers, find it difficult to let go of day-to-day activities in favor of supervisory responsibilities.) The professional staff members will often serve on the board committee that corresponds with their professional expertise. (For example, in a large

nonprofit, the chief human resources executive will be an *ex-officio* member of the board's human resources committee, serving as an adviser to the board committee and as a liaison between the organization and the board.) The degree to which a nonprofit moves its committees from hands-on activities to managerial activities depends on the size and quality of the professional staff. Because of the crucial nature of fund-raising, for example, board members on the development committee may continue to play a hands-on role even after the appearance of professional staff members, because committee members can help with introductions to likely donors.

With continued success, funding, and leadership, the nonprofit's staff should become more able and more sophisticated; there will likely be a managerial hierarchy within the nonprofit. At this point, professional managers assume the managerial duties previously carried out by the board, whose role shifts from managerial oversight to an advisory capacity, with staff members proposing major policies and activities and the board approving or disapproving.

LEADERSHIP SUCCESSION AND SELF-PERPETUATION

Continuity of leadership is critical to the long-term success of any organization. In the case of nonprofits, the succession of both the executive director and the board are important. The limited resources on which many nonprofits operate mean that staffing levels are minimal. Nevertheless, the board (often through the human resources committee) exhibits its leadership by compelling the executive director to develop succession plans. Should key staff members such as the chief financial officer or the chief operations officer leave, who will replace them? Given the limited bench strength found in all but the largest and best-endowed nonprofits, successors may have to be recruited from outside the nonprofit. Nevertheless, to help ensure continuity of operations, boards often take a leadership role by requiring the executive director to design a developmental plan for grooming current employees as potential replacements for key positions.

Perhaps even more crucial is succession planning for board leadership. Since the board is often critical

to the viability of the nonprofit, its leaders must create mechanisms to perpetuate it. Perpetuation of the board is driven by the nonprofit's bylaws, which typically require board members to be replaced after their term on the board has expired. Staggered three-year terms, with an opportunity to serve a second term, are common.

Most nonprofits solve the challenge of board continuity by creating a position of "chair-elect" that runs concurrently with the chair's tenure. The person in this position (often called vice chair) shadows the chair, learning about the leadership challenges that exist and using this apprenticeship period to ready him- or herself to assume the chair's duties in an emergency or as part of the succession process. After the start-up phase, the chair, committee chairs, and other board leaders typically serve in leadership positions for single one-year term. At the end of that time, they are replaced, perhaps moving to other committee or leadership positions during the remainder of their elected term. Keeping the immediate past chair on the board of directors for an additional year, even if it means extending the person's term, also helps provide leadership continuity at the board level.

Typically, rejuvenation of the board is managed through a nominating committee, which identifies potential talent that might be asked to join the board as openings occur. This committee is commonly led by the immediate past chair and will often include the current chair, the chair-elect, and the executive director. Well-run nonprofits rely on the staff to evaluate prospective and current board members against pre-established criteria to help decide who should be invited to stand for election or reelection when the board votes on the new slate of candidates.

NONPROFIT LEADERSHIP CHALLENGES: RELATIONSHIPS AND PROCESSES

Successful nonprofit leaders must master the relationships and processes that surround three major and often interconnected areas: funding, role complexity, and constituency management. The problems in these areas are exacerbated or mitigated by how well the strategic direction of the nonprofit is understood and accepted by the nonprofit's con-

stituents. Unlike for-profit organizations, which have a primary focus on increasing the wealth of the owners, or government, which has a primary focus on voter approval, nonprofit leaders seldom have a single, overarching constituency. To create a strong focus among staff, board, and other constituent groups, nonprofit leaders must continually reinforce their organization's vision and mission in their relationships and management processes.

Funding

Most nonprofit leaders believe their central problem is obtaining funding, because funding is often the deciding factor in the nonprofit's success or failure. More funding is equated with greater mission success; the more successful the mission, the closer the nonprofit comes to achieving its vision. Though a common concern of nonprofits at any stage of development, funding is most crucial in the start-up phase. Often the leadership challenge is whether the nonprofit will survive, not how well it can accomplish its mission with the available funding. With survival in question, plans, leadership theories, staffing needs, client demands, and the concerns of the board recede in importance compared with raising money.

If the nonprofit survives and prospers, leaders begin to move from opportunistic to more-planned funding models, usually relying heavily on the contacts and efforts of the board members. Maturity is signified by the identification of dedicated and repetitive sources of funding, which may range from long-term government or foundation grants to annual fund-raisers.

Leaders at some nonprofits may find themselves facing a funding trap, in which lack of money drives virtually all their activities, reducing time and effort devoted to mission performance and internal development. With limited mission success and limited

resources to build internal competencies, questions can arise about the value of the nonprofit. As burnout among the leadership (particularly the executive director and key fund-raisers) grows, the limited funding wanes, furthering the downward spiral of the organization.

Role Complexity

Nonprofit leaders must balance three overlapping roles, defined here as executive, managerial, and administrative. The executive role is to create a vision that holds broad appeal for multiple constituents, especially current and prospective board members, donors, clients, and staff. When it comes to building a consensus about needed activities or seeking outside support for the organization, the glue that binds together the organization and its supporters is the vision. While for-profit and government organizations often have the good of the public as a goal at some level, they also have ulterior motives—making money or seeking votes. In the case of nonprofit organizations, by contrast, there are rarely ulterior motives to tarnish the vision, which is generally based on doing social good. Though the executive role may take up a minority of the leader's time, it is crucial that the leader build a consensus about the nonprofit's contribution and the future in which that contribution will take place. Through speeches, informal conversations, brochures, position papers, editorials, grant requests, and other communications, the leader must strive to build a general consensus among internal and external constituents about the nonprofit's vision and its importance. Ultimately, funders and other constituents are driven by their understanding and perceptions of the vision.

Crucial as the executive perspective is to the leader's success, most time and effort will be spent in the roles of manager and administrator. As a manager, the leader identifies and prioritizes objectives, then marshals the available time, money, people, and other resources needed to attain those objectives. As an administrator, the leader seeks solutions that balance the often-conflicting claims of multiple constituents. Restated, managers focus primarily on the

optimal outcome given the resources available; administrators focus on finding outcomes that meet the needs of (or at least do not upset) different claimants. Sometimes these two orientations conflict: A leader assuming a managerial role, for example, might take up a board recommendation to get more visibility for the nonprofit by cutting back on service delivery and spending the saved monies on public relations, focusing on the objective (more visibility) and not the other constituents (such as clients or staff) who might be affected. An administrative mindset would seek solutions that avoid triggering negative reactions from clients but still meet the board's request for greater visibility, perhaps by writing an editorial in the local newspaper. Central to the leader's success is the ability to shift between executive, managerial, and administrative mind-sets as needed.

Constituency Management

In for-profit and government organizations, mismanagement can often be overlooked or forgiven if growing profits or voter support validates overall performance. In nonprofits, however, outcome measures are seldom as clear or dominant. If clients, staff, donors, or board members oppose the leader—even when performance is otherwise appropriate—then the result can be termination of the leader. Therefore, the leader's goals and activities must be balanced by a keen administrative sensitivity to the needs and demands of various claimants.

At a very fundamental level, the leader's success depends on managing the staff-board relationship. On the one hand, the executive director reports to the board, which has the power to reward or punish—even discharge—the executive director. On the other hand, the effectiveness of the executive director depends heavily on the performance of the nonprofit's staff, which may be hard to replace, given their common combination of specialized skills and willingness to work for relatively low pay (in comparison with the business and government sectors). Compounding this potential conflict is the expectation that the leader will achieve objectives (the managerial role) in ways that strengthen the staff's performance and morale (the administrative role).

Constituency management is critical to the nonprofit leader's success, tilting the leadership playing field toward a more administrative than managerial mind-set. Expanding constituency management concerns to a still broader audience, the effectiveness of the leader depends on the perceptions of clients and donors, both of whom are influenced by the perceptions of the community at large. Though this aspect of nonprofit leadership may be similar to leadership in the government sector, nonprofit leaders operate in a unique environment, with unique measures. Their success is not determined by profits or votes, but by the actual and perceived benefits the nonprofit delivers to its varied constituents of staff, clients, and supporters.

LEVERAGE POINTS FOR NONPROFIT LEADERS

Leadership is central to the success of all nonprofits. Nonprofit leaders understand that the viability of the organization depends on both the executive director and the board members being strong leaders. Thus, a key leverage point for all nonprofits is the systematic identification of potential board members and the evaluation of current members. The management scholar Peter Drucker argues that nonprofit leaders are among the best leaders anywhere. They have to be, because they face a complex leadership challenge, often with limited resources. Lacking the sales income of a business or the tax revenue of a government, nonprofit leaders rely heavily on the goodwill of others in the form of financial contributions and other types of voluntary assistance. Not only must they manage a staff, but they must also balance the conflicting demands of clients, donors, volunteers, and board members. They must leverage the vision and mission of the organization and the passionate energies their noble causes evoke.

NYERERE, JULIUS (1922–1999)

African nationalist and founding president of Tanzania

On a continent of political leaders who regularly leave office suddenly and violently, Julius Nyerere fits into a small group who acquired and relinquished power peacefully, garnering popular esteem and gratitude. Perhaps his greatest achievement was to build a nation after independence out of some 120 tribal groupings that had been tenuously joined first as the colony of German East Africa and later as the British-administered League of Nations Mandate, then finally as a United Nations Trust Territory, of Tanganyika. Capitalizing on a stable government and a strong ruling party organization after decolonization in 1961, Nyerere provided rhetorical and practical assistance to pan-African efforts toward the liberation of neighboring territories and in the struggle to overthrow apartheid in South Africa.

In attempting to promote internal economic development, Nyerere also inveighed against North-South global inequality and the structural obstacles to development in poorer countries around the world. Yet economic development proved his greatest failure. His ideology of African socialism—neither Marxist nor Fabian—stressed consensus decision making and egalitarianism, and above all, the cooperation, hard work, and self-reliance of the vast majority of peasants. When voluntary cooperation failed to produce communitarian (*ujamaa*) villages, coercion was applied—with disastrous results. By the time of Nyerere's retirement from the presidency

in 1986, Tanzania was poorer and more dependent on outside aid than in 1961.

EARLY EMERGENCE AS A LEADER

Julius Nyerere was born in 1922 to the fifth wife of a chief of the small Zanaki tribe in a village near Lake Victoria in the northern periphery of Tanganyika, now the mainland segment (with offshore) Zanzibar of the United Republic of Tanzania. His recognized talents during early schooling at a nearby Roman Catholic mission got him sent to the Tabora Government School, which drew from the whole territory. In common with the best students in 1943 in the three British East African dependencies, Nyerere pursued a teaching diploma at the University College of East Africa (now Makerere University) in Uganda. At college, Nyerere founded the Tanganyika African Welfare Association (TAWA) to supplement the education of fellow students. TAWA folded into an organization of civil servants, the Tanganyika African Association (TAA), which Nyerere joined as a teacher in St. Mary's Roman Catholic Mission Boys School, back in Tabora in 1945. In 1948, Nyerere won a scholarship to Edinburgh University. After studying economics and history, Nyerere received an M.A. in 1952, the first Tanganyikan to graduate from a British university. Although Nyerere returned to teaching school, at St. Francis in Pugu (near Dar es Salaam, capital of the territory), he swiftly resumed his political and organizational interests, gaining election to the presidency of TAA. In 1954, with TAA as a base, Nyerere and others founded the Tanganyika African National Union (TANU). By 1955, Nyerere left teaching for full-time politics, although through his lifetime he retained the title Mwalimu ("teacher"), indeed eschewing more grandiose honorifics.

LEADERSHIP STYLE

Nyerere exhibited great skill in his efforts to achieve independence for Tanganyika in 1961 before the country's more economically advanced neighbors of Kenya and Uganda. To achieve this goal, he had to convince masses of Africans to support TANU, a sufficient number of whites and Asians in 1959 to

run TANU in legislative elections as the nonracial party, and then finally the British government that he was sufficiently moderate to take his country to independence. His considerable skills of persuasion were still evident in April 1996, when he served as chief mediator in the Burundi civil war.

Although striving for a genuine transformation of political, economic, and social relationships, Nyerere preached progress by cooperation and consensus. Early in his political career in 1957, Nyerere faced a choice between going to jail (where he would be joining other nationalist “prison graduates”) and paying a fine after conviction for libel due to an article he wrote in the TANU magazine. Significantly, Nyerere chose to avoid a political martyrdom. His planned economic and political trajectory took him between Marxist revolutionary action and free enterprise capitalist multi-party democracy. Tanzania’s one-party democracy supposedly reflected traditional African values of community consensus; the country’s ideology of African socialism built upon supposedly pre-existing peasant cooperation; and pan-African collaboration started with concrete agreements, first with the two British East African neighbors, and then actual unification with Zanzibar in 1964.

Yet Nyerere could act on his own initiative and court violence when he decided that vital interests or principles were at stake. After a revolution overthrew the newly independent government of Zanzibar in early 1964, Nyerere pushed for unity with Zanzibar later that year. This bold move occurred after a mutiny of Tanganyikan troops outside the capital threatened a coup d’état, which required Nyerere to call in British troops to restore civilian rule. In 1967, chafing at the slow pace of social change, Nyerere announced the Arusha Declaration, arguably an African version of a Maoist “great leap forward.” Although the country progressed respectably in expanding literacy and providing clean water to rural areas, Nyerere and his TANU colleagues demanded increased agricultural production and manufacturing to satisfy ambitious home needs, as well as spurring

President Julius Nyerere speaking at a rally on 16 January 1968. The purpose of the gathering was to bring before the people the former Minister Kassim Hanga, who was accused of leading a failed coup.

equalization of services and even of incomes. The government attempted to accelerate modernization by nationalizing existing enterprises, directing the establishment of new enterprise via “para-statal” (state-owned) organizations and finally, collectivizing agriculture. Politicians and bureaucrats were held to a new Leadership Code of Conduct that dictated an austere non-capitalist style of life, in keeping with the status of workers and peasants.

Since scattered peasant homesteads remained the dominant organization of production (including about 80 percent of the population) over a country the size of France and Germany combined, a campaign to collectivize them into *ujamaa* villages inexorably led by 1976 to the abolition of independent entrepreneurs and cooperatives and the coerced relocation of 13 million people. This massive reorganization of economy and society in less than a decade led to a huge external debt, a decline in social services, an increase in corruption, and the souring of relations with even steadfast foreign donors. Stressing adverse world economic conditions, Nyerere resisted international pressure toward austerity and restoration of markets into 1985. By 1991, however,

Nyerere—out of office since 1986—admitted that nationalization and collectivization were policies that could have been implemented differently.

INTERVENTIONISM IN CONTINENTAL AFRICAN AFFAIRS

In matters of foreign affairs, Nyerere occupied a world stage for some forty years, a reliable Third World critic of an imbalanced and unjust global economic order. While supporting the Organization of African Unity, which he helped found in 1961, he could defy inter-African opinion and convention about the sanctity of existing boundaries. Thus he supported Biafra's secession in the Nigerian civil war (1967–1970). Despite an early emphasis on peaceful dispute settlement—he once suggested that there was no need for a standing army for his country at independence—Nyerere sent troops to several neighboring countries in the 1970s and 1980s. Most spectacularly, he ordered an invasion of Uganda to overthrow the murderously erratic Idi Amin in 1979, which culminated in the reinstatement of Nyerere's old friend Milton Obote.

Unlike most political leaders, Nyerere often acted on his principles, despite material costs. In 1965, he severed relations with two European aid donors: Britain, over its Rhodesia policy, and West Germany, over relations with East Germany. Finally, he rose above the standard rhetoric in providing bases for liberationist parties and armed militias in efforts to decolonize the neighbors of the states "in the front line" in the struggle to overthrow apartheid in South Africa.

NYERERE'S LEGACY

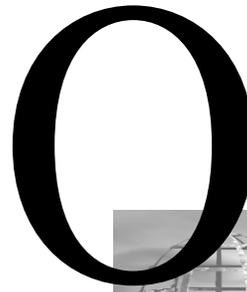

An influential interpretation of rulership in black Africa in the era of Nyerere divides African leaders

into "prince, autocrat, prophet, tyrant" (Jackson and Rosberg 1982, iii). Nyerere is labeled a prophet. He not only prophesied; he marshaled his people toward the independence of his country, the forging of a nation, and the planting of the roots of legitimate state authority. His vision of socialist equality and cooperative modernization in an underdeveloped corner of Africa may continue to inspire, yet its implementation materialized as a detour on the long, hard road to development.

OBEDIENCE

Obedience can be extremely functional—particularly in emergencies and high-stress crisis situations (e.g., a battle, a police raid, a space shuttle, a hospital emergency room). Under these circumstances, it really helps to have someone in authority take the lead and issue commands that are unquestioningly obeyed. Consider what might happen in a battle if the troops decided to mull over every command given by their commander before deciding whether or not to obey. For this reason, obedience is highly valued in groups that need to make decisions and take action very swiftly under life-or-death conditions. However, obedience is also enshrined in more enduring groups that expect members to simply do as they are told and to unquestioningly follow specific orders and more general rules and principles. Such groups are often thought of as being orthodox and as having a strong leadership structure based on power—for example, the military in general, many religions, cults, gangs, and some societies.

Although obedience can be valuable, it can also be destructive if the commands that one is obeying specify actions that have harmful consequences. The classic example of this is the plea “I was only obeying orders,” which has repeatedly been made by people accused of crimes against humanity. The key question is, what is the psychology of blind obedi-

ence that causes people to simply obey a leader irrespective of what the orders ask one to do?

This entry focuses primarily on the social psychology of blind and destructive obedience to outline the conditions that enhance or weaken obedience that has harmful consequences. Much of what is known about obedience rests on the classic and controversial research of Stanley Milgram during the 1960s.

CONFORMITY, COMPLIANCE, AND OBEDIENCE

Research on social influence makes a distinction between conformity and compliance. Conformity is not based on power or obedience to authority; rather, it is a process through which people internalize group norms as guides for their own actions, often because they identify strongly with the group that defines the norm. Conformity involves genuine and enduring attitudinal change that underpins behavior. Conformity does not require surveillance—people conform because they feel they belong.

In contrast, compliance is a superficial and transient change in behavior and expressed attitudes in order to satisfy a request or order from someone else. There is no genuine underlying change in attitudes and behavioral intentions. Compliance requires surveillance, because if no one is watching, one reverts to one’s true attitudes and behavior. Compliance

describes what happens when we agree to do someone a favor or accede to a request. But compliance also describes what happens when we obey a command or an order.

Although obedience is a form of compliance, it can be differentiated from compliance with a request. Compliance with a request is based on factors such as liking for the person making the request and the desire to reciprocate some small favor received from the person making the request. In contrast, obedience is based on the fact that the person issuing the orders has power over you—what Bertram Raven has called reward power, coercive power, and legitimate power based on authority.

LEADERSHIP AND OBEDIENCE

The relationship between leadership and obedience is a complex one. Most organizational science definitions of leadership view it as operating within the context of conformity. Leadership is a process of influence that enlists and mobilizes others in the attainment of collective goals—it imbues people with the group's attitudes and goals, and inspires them to work towards achieving them. Effective leadership changes people's attitudes and practices and transforms individual behavior into group behavior. Although organizational leaders have authority, power, and legitimacy (and sometimes charisma), leadership is not a process that requires people to exercise power over others in order to gain compliance or, more extremely, in order to coerce or force people. Leaders tend more often to influence by example and persuasion than by issuing orders that cannot be debated. Leadership is more closely associated with conformity processes than power processes. However, leadership in some organizations does rest on obeying orders—for example, in the military, the police, and so forth.

The key point is that leadership can sometimes involve issuing orders that followers obey, but the orders are ones that describe courses of action that are consistent with the followers' own attitudes; they are normatively consistent orders, and obedience is here simply part and parcel of the wider conformity process. This we might call normative obedience.

However, sometimes orders require us to do something that is inconsistent with our attitudes or values—as when we know that what is being commanded is wrong because it will produce harmful consequences. This is usually called destructive obedience. For most of us, obeying an order from our boss to work late to get a particular shipment out is very different from obeying an order to pull a lever that delivers a painful electric shock to another human being. It is this latter form of obedience, destructive obedience, that is the focus of the remainder of this entry.

STANLEY MILGRAM'S OBEDIENCE EXPERIMENTS

In 1963, Stanley Milgram published the results of what has become a classic series of experiments on obedience. A number of factors encouraged Milgram to do these experiments. Perhaps the most significant factor was what was emerging from the ongoing trials of Nazi war criminals, in particular the trial of Adolf Eichmann, the Nazi official most directly responsible for the logistics of Hitler's "final solution," in which six million Jews were systematically slaughtered. In her 1963 book *Eichmann in Jerusalem*, Hannah Arendt reported on his trial. The subtitle of this book, *A Report on the Banality of Evil*, captures one of the most disturbing findings that emerged from Eichmann's trial, and indeed from the trials of other war criminals. These "monsters" did not appear to be monsters at all. They were often mild-mannered, soft-spoken, well-educated, cultured, and courteous people, who repeatedly and politely explained that they did what they did not because they hated Jews, but because they were ordered to do it—they were simply obeying orders.

The Experiments

Participants, who had responded to a local advertisement placed by Milgram, reported to a laboratory at Yale University to participate in a study of the effect of punishment on human learning. They arrived in pairs, and drew lots to determine their roles for the study (one was the "learner," and the other the

Corporations as Cults

DALLAS (ANS)—Outbreaks of murderous rage in the workplace are extreme symptoms of the way the work environment often dominates modern life, says Dave Arnott, author of *Corporate Cults: The Insidious Lure of the All-Consuming Organization*.

Analyzing incidents of beserk behavior in the workplace—sometimes called “going postal” because of the frequency of such incidents at one time within the U.S. Postal Service—Arnott says: “The shootings were by people for whom work had consumed their family and community life. People who ‘go postal’ have allowed their corporation to become their cult. When work falls apart, they have no place else to turn for support.”

In his book, Arnott suggests the workplace is taking the place of family, friends and the community. To achieve employee loyalty and devotion, he says, corporations adopt values strikingly similar to methods cults have always used to attract and keep members: devotion, charismatic leadership and separation from community. He notes that *Fortune* magazine’s “Best Places to Work” lists uncannily similar values: a sense of purpose, inspiring leadership and great facilities.

Arnott says even seemingly benign company perks—such as a company cafeteria, a company gym and a company lounge where employees hang out with colleagues—can have an insidious effect. “This is the way organizations go about getting physical, emotional and psychological control over the employee.”

While workplace violence is an extreme example of what can happen when an unstable individual is totally

immersed in a corporation, Arnott warns that when an employee comes to rely on the workplace for emotional support, love and self-esteem, the relationship becomes imbalanced because the organization makes a smaller commitment to the worker. “It is wrong to hug an organization because it won’t hug you back,” Arnott said.

Just as it is hard to get out of a traditional cult, it is equally hard to get out of a corporate cult, he says. “The reason is people in cults feel happy.” But corporate cults, like any kind of cult, leave destroyed family and community life in its wake.

Arnott said the reason he wrote the book was to warn people about corporate cults before the economy dips again and companies can be more selective about employees. “When there are less jobs available, there will be more pressure on employees to become overcommitted to an organization,” he said. “My warning is for individuals to stay away from these corporations. They are insidious and can take over your life.”

How does a person know if he or she is in a corporate cult? “Look at your family and community relationships. See if you still have these,” Arnott said. Another telltale test is to take a piece of paper and draw a line down the middle. On one half list what you do. On the other write who you are. “People in corporate cults cannot do this test because they cannot make a distinction between what they do and who they are.”

Last, keep your company at arm’s length. “Take overt measures to keep them from becoming everything in your life,” he said.

“teacher”). The learner’s role was to learn a list of paired associates, and the teacher’s role was to administer an electric shock to the learner every time the learner gave a wrong associate to the cue word. The teacher saw the learner being strapped to a chair and having electrode paste and electrodes attached to his arm, and overheard the experimenter explain that the paste was to prevent blistering and burning. The experimenter also explained that although the shocks might be painful, they would cause no permanent tissue damage.

The teacher was now taken into a separate room housing a shock generator. He was told to administer progressively larger shocks to the learner every time

the learner made a mistake—15 V (volts) for the first mistake, 30 V for the next mistake, 45 V for the next, and so on. An important feature of the shock generator was the descriptive labels attached to the scale of increasing voltage (from 15 volts to 450 V)—slight, moderate, strong, very strong, intense, extreme intensity, and at 375–420 V “Danger: severe shock,” and thereafter simply “X X X.” The teacher was given a sample shock of 45 V (slight), and then the experiment commenced. The learner got some pairs correct but also made some errors, and very soon the teacher had reached 75 V (moderate), at which point the learner grunted in pain. At 120 V (moderate), the learner shouted out to the experimenter that the

shocks were becoming painful. At 150 V (strong), the learner, or now more accurately the “victim,” demanded to be released from the experiment, and at 180 V (strong), he cried out that he could not stand it any longer. The victim continued to cry out in pain at each shock, rising to an “agonized scream” at 250 V (very strong). At 300 V (intense), the victim ceased responding to the cue words; the teacher was told to treat this as a “wrong answer.”

Throughout the experiment, the teacher was agitated and tense, and often asked to break off. To such requests, the experimenter responded with an ordered sequence of replies proceeding from a mild “please continue,” through “the experiment requires that you continue” and “it is absolutely essential that you continue,” to the ultimate “you have no other choice, you *must* go on.”

A panel of 110 experts on human behavior, including 39 psychiatrists, were asked to predict how far a normal, psychologically balanced human being would go in this experiment. These experts believed that only about 10 percent would exceed 180 V (strong), and no one would obey to the end. What happened in the actual experiment—which used a slight variant in which the victim, who had reported a slight heart complaint at the outset, could not be seen or heard but pounded on the wall at 300 V and 315 V and then went silent—was quite different. Almost everyone continued to 255 V (intense), and 65 percent continued to the very end—administering massive electric shocks to someone who was not responding, and who had previously reported having a heart complaint!

The participants in this experiment were quite normal people: forty men ages twenty to fifty, from a range of occupations. Unknown to them, however, the entire experiment involved an elaborate deception in which they were always the teachers, and the learner/victim was actually an experimental stooge (an avuncular-looking middle-aged man) who had been carefully briefed on how to react. No electric shocks were actually administered apart from the 45 V sample shock to the teacher.

Milgram had shown that destructive obedience might be not a pathological abnormality but rather a normal human response to extraordinary condi-

tions. He thus opened the door for social psychological as opposed to clinical research on destructive obedience.

Factors Influencing Obedience

Milgram conducted eighteen experiments overall, in which he varied different parameters to investigate influences on obedience. In all but one experiment, the participants were twenty- to fifty-year-old men (recruited through a newspaper ad) from a range of occupations and socioeconomic levels. In one study in which women were the participants, exactly the same level of obedience was obtained as with male participants. Milgram’s experiment has been replicated in many different countries, including Italy, Germany, Australia, Britain, Jordan, Spain, Austria and The Netherlands. Complete obedience ranged from over 90 percent in Spain and The Netherlands, through over 80 percent in Italy, Germany and Austria, to a low of 40 percent among Australian men and only 16 percent among Australian women. Some studies have also used slightly different settings, such as an administrative obedience setting.

Destructive obedience appears to be a widespread human characteristic—people tend to obey orders even when the consequences of what is being ordered are harmful. One reason why people continued administering electric shocks in the Milgram paradigm may be that the experiment started very innocuously with quite trivial electric shocks. Once they committed themselves to a course of action (i.e., to give shocks), it might have been difficult subsequently to change their minds. Research in social psychology shows that once people commit themselves, they find it very difficult to withdraw from that commitment. This human characteristic relates to what is called “sunk costs” in which a person or group that has made, for example, investment losses continues with the same behavior rather than stopping and changing strategy. It is also exploited by salespeople who get you to agree to a small commitment (e.g., to purchase an inexpensive item) but then persuade you to buy a much more expensive variant with lots of additional features. This is called the “foot-in-the-door” technique.

Although obedience is widespread, we all know that people certainly do not always blindly obey orders, particularly if the orders specify actions that have harmful consequences. A number of factors influence the extent to which people are obedient.

Immediacy

One important factor is *immediacy*, which refers to how close the victim is in space and time, how available the victim is in memory, or how close a social relationship you have with the victim. Milgram varied the level of immediacy across a number of experiments. We have seen above that 65 percent of people “shocked to the limit” of 450 V when the victim was unseen and unheard except for pounding on the wall. In an even less immediate condition in which the victim was neither seen nor heard at all, 100 percent of people went to the end. The baseline condition (the one described in detail above) yielded 62.5 percent obedience. As immediacy increased from this baseline, obedience decreased: When the victim was visible in the same room, 40 percent obeyed to the limit; and when the teacher had to actually hold the victim’s hand down onto the electrode to receive the shock, obedience dropped to a still frighteningly high 30 percent.

Immediacy may make it easier to view a victim as a living and breathing person like oneself and thus to empathize with his or her thoughts and feelings. Hence, pregnant women express greater commitment to their pregnancy after having seen an ultrasound that clearly reveals body parts, and it is easier to press a button to wipe out a village from 30,000 feet than it is to shoot an individual enemy from close range.

The immediacy/proximity of the person issuing the orders also affects obedience. Obedience was reduced to 20.5 percent when the experimenter was absent from the room and relayed directions by telephone. When the experimenter gave no orders at all, and the participant was entirely free to choose when to stop, 2.5 percent still persisted to the end.

Group Influence

Perhaps the most dramatic influence on obedience is group pressure. The presence of two disobedient

peers (i.e., others who appeared to revolt and refused to continue after giving shocks in the 150 V to 210 V range) reduced complete obedience to 10 percent, while two obedient peers raised complete obedience to 92.5 percent. Group pressure probably has its effects because the actions of others help to confirm that it is either legitimate or illegitimate to continue administering the shocks. The actions of others may also communicate the relevant group norm that one will subscribe to if one identifies with the group defining the norm.

Legitimacy of the Source of Influence

Another very important factor is the legitimacy of the authority figure, which allows people to abdicate personal responsibility for their actions. For example, in one study published in 1988 by psychologist Brad J. Bushman, a confederate of the experimenter was dressed in a uniform, neat attire, or a shabby outfit and stood next to someone fumbling for change for a parking meter. The confederate stopped passersby and “ordered” them to give the person change for the meter. Over 70 percent obeyed the uniformed confederate (giving “because they had been told to” as the reason) and about 50 percent obeyed the non-uniformed confederate (generally giving altruism as a reason). These studies suggest that merely the emblems of authority can create unquestioning obedience.

Milgram’s original experiments were conducted by lab-coated scientists at prestigious Yale University, and the purpose of the research was quite clearly be the pursuit of scientific knowledge. What would happen if these trappings of legitimate authority were removed? Milgram ran one experiment in a rundown inner-city office building. The research was ostensibly sponsored by a private commercial research firm. Obedience dropped, but to a still remarkably high 48 percent.

Some Implications of Milgram’s Obedience Research

One enduring legacy of Milgram’s experiments is the heated debate it stirred up over research ethics. The original ethical attack came from psychologist Diana Baumrind (1964). After all, Milgram’s participants

really believed they were administering severe electric shocks that were causing extreme pain to another human being. Milgram was careful to interview and, with the assistance of a psychiatrist, to follow up the more than 1,000 participants in his experiments. There was no evidence of psychopathology, and 83.7 percent of those who had taken part indicated that they were glad, or very glad, to have been in the experiment (Milgram, 1992, 186). Only 1.3 percent were sorry or very sorry to have participated.

Milgram's research addresses one of humanity's great failings—the tendency for people to obey orders without first thinking about (a) what they are being asked to do and (b) the consequences of their obedience for other living beings. Obedience can of course sometimes be beneficial—for example, many organizations would grind to a halt or would be catastrophically dysfunctional if their members continually and painstakingly negotiated orders (think about an emergency surgery team, a flight crew, a commando unit). However, the pitfalls of blind obedience, contingent on immediacy, group pressure, group norms, legitimacy and so forth, are many. For example, research in the United States has shown that medication errors in hospitals are significantly attributable to the fact that nurses overwhelmingly defer to doctors' orders, even when all sorts of alarm bells are, metaphorically, ringing (Lesar, Briceland, and Stein 1997). In another study focusing on organizational obedience, 77 percent of participants who were role playing board members of a pharmaceutical company advocated continued marketing of a hazardous drug, merely because they felt that the chair of the board favored this decision (Brief, Dukerich, and Doran 1991).

COMBATING BLIND OBEDIENCE

Destructive obedience is not merely a feature of the black-and-white world of mid-twentieth century Europe. It has played a role in Pol Pot's killing fields of the 1970s and 1980s in Cambodia, in the Balkan Yugoslavian conflicts of recent years, and no doubt in Saddam Hussein's Iraq. More generally, unquestioning obedience to authority figures may compromise the quality of decisions made in organizations

and all manner of small decision-making groups. For example, research on "groupthink" by Irvin Janis has shown that a powerful and legitimate leader in a highly cohesive decision-making group can be enormously influential because the members of the group simply want to obey in order to construct a comforting consensual framework. Under these circumstances, pretty much whatever the leader suggests is agreed to.

These types of highly cohesive groups that people identify strongly with and that have a legitimate and highly group-representative (group prototypical) leader are also prone to group polarization in which somewhat extreme group decisions are made. Under these circumstances, an influential leader is well able to steer the group towards decisions about courses of action that can be very extreme in their consequences.

The movie *The Conspiracy*, which is a dramatization of the meeting in Nazi Germany in which Hitler's "final solution" of the "Jewish question" was mapped out, captures the power of leadership in a group context to produce, through obedience, a decision that had truly destructive consequences.

How can destructive obedience be combated? Research on destructive obedience suggests that blind destructive obedience can best be combated by constructing strong group norms that encourage and value debate within a group, as well as questioning of authority figures. These norms need to be internalized by people as features of who they are, their self-concept as members of the group that is defined by the norm. However, even under these circumstances, a powerful authority figure who is considered legitimate and who has overwhelming power to punish and reward can readily secure obedience from people. Leadership power needs to be limited to combat blind obedience.

OPTIMISM

Fortune favors the bold, Machiavelli argued. But the study of leadership appears to demonstrate that, even more, fortune favors the optimistic. Indeed, an *unwarranted optimism* about the future is a trait seen over and over in the best leaders from any era.

While optimism is not native to every leader or would-be leader, it is a trait that can be acquired or even lost. In his groundbreaking research, psychologist Martin Seligman observed that both laboratory animals and humans have a capacity to “learn helplessness”—to react to adversity by losing faith in their ability to control or improve circumstances. “Learned helplessness is the giving-up reaction, the quitting response that follows from the belief that whatever you do doesn’t matter,” Seligman (1990) notes. In contrast, those animals or humans who retain a belief in their ability to control events can

overcome significant obstacles. Seligman contends, remarkably, that this has less to do with filling the mind with positive messages than with subduing its tendency to transmit negative, despairing messages.

Psychologist Shelley Taylor goes farther, finding that “positive, self-enhancing illusions” are necessary to buffer negative experiences and impressions and are in fact a normal ingredient in human mental health. “In order to maintain a positive yet adaptive view of the self, it is necessary to be self-deceptive,” Taylor writes. “Negative information must be recognized for what it is and simultaneously kept from awareness as much as possible” (1989).

OPTIMISM AND THE WALLEDA FACTOR

One of the most impressive and memorable qualities of successful leaders is the way they respond to failure. Like Karl Wallenda (1905–1978), the great tightrope aerialist who once remarked that “the only time I feel truly alive is when I walk the tight-rope,” these leaders put all their energies into their task. Not only do they not think about failure, they do not even use the word, relying on synonyms such as *mistake* or *glitch* or *bungle* or countless others, such as *false start*, *mess*, *hash*, *bollix*, or *error*. Never *failure*. One of them said during the course of an interview that “a mistake is just another way of doing things.” Another said that “I try to make as many mistakes as quickly as I can in order to learn.”

Shortly after Wallenda fell to his death in 1978 while traversing a 23-meter-high tightrope in Puerto Rico, his wife, also an aerialist, discussed that fateful walk—perhaps his most dangerous: “All Karl thought about for three straight months prior to it was falling. It was the first time he’d ever thought about that, and it seemed to me he put all his energy into not falling, *not* into walking the tight-rope.” Mrs. Wallenda went on to say that her husband even went so far as to personally supervise the installation of the tightrope, making certain that the guy-wires were secure—“something he’d never even thought of before.” When Karl Wallenda put all of his energies into *not falling* rather than walking the tightrope, his characteristic success ended.

We refer to the peculiar combination of vision,

Lead and inspire people. Don't try to manage and manipulate people. Inventories can be managed but people must be led.

—Ross Perot

persistence, and optimism necessary for successful tightrope walking—the combination found in so many leaders—as the “Wallenda factor.” An example of the Wallenda factor comes from Fletcher Byrom, who retired several years ago as president of the Koppers Company, a diversified engineering construction and chemicals company. When asked about the hardest decision he ever had to make, he said, “I don’t know what a hard decision is. I may be a strange animal, but I don’t worry. Whenever I make a decision to start recognizing there’s a strong likelihood to I’m going to be wrong. All I can do is the best I can. To worry puts obstacles in the way of clear thinking.”

Another example is that of Ray Meyer, at one point during his career the winning head coach in college basketball, who led DePaul University to forty straight years of winning seasons. Asked how he felt after his team dropped its first home game after twenty-nine straight home court victories, his response was vintage Wallenda: “Great! Now we can concentrate on winning, *not* on not losing.”

Effective leaders tap into their optimism to overlook error and constantly embrace positive goals. They pour their energies into the task, not into looking behind and dredging up excuses for past events. For many people, failure carries with it a finality, the absence of movement characteristic of a dead thing, to which the automatic human reaction is helpless discouragement—the “learned helplessness” identified by Seligman. But for the successful leader, failure is a beginning, the springboard of hope.

OPTIMISM AS A HEALTHY ADDICTION

Because they are confident about where they are going, optimistic leaders inspire the people who work for them so that they too can handle precarious situations. That is one of the reasons why organizations run by such leaders often are so productive.

Although good leaders are handsomely paid, what they truly value is a sense of adventure and play. They describe work in ways that scientists and other creative types do: “exploring a new space,” “solving a problem,” or “designing or discovering something new.” Like explorers, scientists, and artists, leaders appear to focus their attention on their task, forget personal problems, lose their sense of time, and feel competent and in control. When these elements are present, leaders truly enjoy what they are doing and stop worrying about whether an activity will be productive or not, whether their activities will be rewarded or not, whether what they are doing will work or not. They are walking the tightrope.

This fusion of work and play—“love and need are one” (Robert Frost, “Two Tramps In Mudtime”)—may well be a positive addiction. As such, it appears to be a healthy addiction, not only for individuals but for society. Effective, optimistic leaders are like the Zen archer who develops his or her skills to the point where the desire to hit the target becomes extinguished and the archer, arrow, and target become indivisible components of the same process. This is good for the leaders. And when this style of influence works to attract and empower people to join these leaders on the tightrope, that is good for organizations and for society.

ORGANIZATIONAL CLIMATE AND CULTURE

The concept of *culture* is to the group or organization what character or personality is to the individual. Climate is to the group or organization what “presence” is to the individual. A person’s presence, how he or she comes across in any given situation is, of course, a result of the underlying personality and character. In the same way, an organization’s climate—how it is perceived by the newcomer or visitor—is the result of that organization’s culture. Climate is the immediate

manifestation of the culture, but it is only its manifestation. If one is to understand a person's "presence," one must understand that person's character or personality. In the same way, if one is to understand a group's "climate," one must look to the deeper layers, that is, the culture.

The main reason for making this distinction is practical. It is obvious that work groups have different climates that are immediately felt when one enters them. Climate is embedded in the physical look of the place, the emotions exhibited by employees, in the experiences of the visitor or new employee upon entry, and in a myriad of other "artifacts" that are seen, heard, and felt. It is equally obvious that climate does not explain itself. We need other variables to explain why different groups feel different. To fully understand climate, one must dig deeper and examine the more stable values, norms, and assumptions operating in the group. In other words, to fully understand what goes on in groups and *why it happens in the way it does* one needs *both* concepts—climate and culture. If each is carefully defined, they become two crucial building blocks for organizational description and analysis (Ashkanasy et al. 2000).

DEFINITION OF CULTURE

Defining culture is comparable to the problem of defining character or personality. Should one think of culture as a "state" or static property of a given group, or should one think of it as a process of perpetual construction and reconstruction? Just as individuals have more or less stable elements in their personality, so groups have more or less stable shared perceptions, beliefs, norms and values. But just as an individual continues to grow and shape the personality through new encounters, so groups continue to shape their culture through new encounters. The answer, then, is that one must think of culture as both stable and in flux because any living system has a history of learning that creates some stability in the system and, at the same time, is perpetually continuing to learn as it interacts with its environment and other living systems.

The key is to link culture as a concept to the process and products of learning. Just as the core of

the individual personality and character can best be thought of as a product of the person's accumulated learning, so a group's culture can be thought of as a product of that group's accumulated learning.

What we learn has more or less stable residues. The things that consistently work out and provide us solutions to getting along in our environment become very stable structures. But as we continue to encounter new situations and challenges we evolve surface characteristics that are more malleable. If a group has a history—that is, if the same group of people have encountered a series of challenges together—they will develop ways of perceiving, thinking, and feeling that enable them to meet those challenges and, if successful, they will gradually stabilize those ways as being "correct," and will teach them to newcomers to the group. Those stable elements will create on the surface a "climate" that newcomers and visitors will experience, but the climate is only a manifestation of the underlying culture.

A formal definition of culture would therefore be: a pattern of shared basic assumptions that the group has learned as it solved its problems of external adaptation and internal integration, that has worked well enough to be considered valid and, therefore, to be taught to new members as the correct way to perceive, think, and feel in relation to those problems (Schein 1985, 1992, 1999).

The definition emphasizes "basic assumptions," rather than values, norms, or rules of behavior, because, over time, values, norms, and rules come to be taken for granted and, thereby, metamorphose into "basic assumptions" that are no longer negotiable. During the time that the group is learning what works and what does not work, beliefs and values are negotiable. But as certain ways of perceiving, thinking, and feeling continue to solve problems of adaptation and internal integration, as they provide "meaning" to the daily events that the group encounters, they become taken for granted, drop out of awareness, and, therefore, begin to operate more as assumptions. The group members come to take it for granted that their way of perceiving, thinking, and feeling is the correct way. Outsiders who do not accept those assumptions are viewed either as "crazy," or "from another planet," facetiously. The

power of culture to influence group members comes from the fact that it operates unconsciously.

From a functionalist point of view, culture provides for the group both meaning and stability. Culture change is, therefore, immediately anxiety arousing and will be resisted. As humans, we do not want unpredictable or meaningless environments, hence we develop cultures to provide meaning and some measure of predictability. We want things to “make sense,” and we do not want to feel that what we are doing is “senseless” (Weick 1995).

Given these human characteristics, it then becomes clear that culture is both a process and a state. In new situations, shared meanings must be constructed through a social learning process. As these meanings help the participants to make sense of their world they become stabilized and can be viewed as “states.” At the same time, as the members of a group interact, they not only recreate and ratify prior meanings but also construct new meanings as new situations arise.

WHAT IS CULTURE ABOUT? EXTERNAL SURVIVAL AND INTERNAL INTEGRATION

Every group has the task of managing its relationship to its external environments that involves the development of consensus on the following: (1) basic mission or task that justifies the existence of the group; (2) basic means to be used in accomplishing its mission; and (3) measurement and feedback systems to be used to assess progress and make corrections as needed. Some of the deepest cultural elements are the taken-for-granted processes of “how we do things around here” that become embedded in rituals and traditions.

Every group also has the task of managing its internal relationships that involves the development of consensus on the following: 1) language and basic concepts, 2) group boundaries and identity, 3) authority and relationships, and 4) allocation of rewards and status. Most of the formal rituals that groups develop concern the symbolic awarding of status and power and thus become very stable elements of the culture.

Underlying these dimensions are deeper ones hav-

ing to do with the nature of these factors: (1) human relationships to nature, (2) reality and truth, (3) human nature, (4) human relationships, and (5) time and space. Fundamental here are dimensions like “individualism versus groupism”; whether human nature is viewed as “good or bad,” “fixed or malleable”; whether reality and truth are determined pragmatically or formally announced by authority; whether humans should subordinate themselves to nature, blend in, or conquer nature; and whether time orientation is toward the past, present, or future.

Every group will develop some consensus in each of these areas, hence culture is extensive and covers all aspects of group functioning (Schein 1999).

CULTURE AND SUBCULTURE

Any group that has a shared history will have developed a culture. The “strength” of that culture—the degree of consensus within the group on the shared tacit assumptions—will depend on the stability of the membership of that group, the intensity of the group’s experiences, and the clarity of the beliefs and values of the founders and leaders of the group. As a group grows, it inevitably develops subgroups and these subgroups have their own learning experiences, their own stable membership, their own leaders, and, therefore, will evolve their own cultures (Schein 2003). A large organization will, therefore, have a total organizational culture and many subcultures. When one talks of a group’s climate or culture, it is therefore essential to specify precisely what group or subgroup one is talking about.

LEADERSHIP AND CULTURE

Leadership has many functions. One of the unique functions differentiating leadership from management or administration is the creation and “management” of culture. When groups first are formed, founders function as the creators of culture. It is the founder’s beliefs and values that determine how the group will operate, and, if the group is successful, the founder’s beliefs and values gradually come to be adopted as the group’s shared beliefs and values, eventually metamorphosing into shared tacit assumptions.

Once a group has a culture, that culture will determine to a degree which individual gets into formal positions of power. In that sense, in a mature group it is the culture that determines the nature of leadership in the sense of assumptions about what is or is not appropriate behavior for a leader. In a mature group, leadership in the sense of culture management then becomes a function of who can be “marginal” enough to “see” the existing culture and assess how it can best be evolved. What elements of the culture are strengths that need to be preserved and enhanced and what elements of the culture are barriers to fulfilling the group’s primary task? This ability to “see” and assess the culture will most likely be present in those positions that are at the boundaries of the organization—the CEO, the sales department, the purchasing function, R & D. People in formal power positions will tend to reproduce the culture, so leadership in the sense of seeing and evolving the culture comes to be more of a distributed function throughout the organization.

As organizations evolve and grow, it is the interplay of subcultures and the relationship of subcultures to the total culture that is the central organizational dynamic. The leaders of subgroups come to function as representatives and protectors of their group, creating potential intergroup conflicts and suboptimization. A special role of corporate leadership then becomes the management of the potential intergroup conflict that will inevitably arise. Because subcultures will evolve, in the subgroups the role of leadership is to create intercultural dialogues that permit the subgroups to become aligned in the interests of the larger group task.

ASSESSMENT AND DESCRIPTION OF CULTURE AND CLIMATE

Culture manifests itself at three different levels:

Artifacts—organizational structures and processes that can be seen and experienced. Climate would be one of those artifacts, being the palpable result of many other artifacts and observable processes. Artifacts are hard to decipher and the danger is that we project our own assumptions on the artifacts. To avoid this one must talk to people, preferably in small

groups, and ask them to identify their artifacts and the assumptions that lie behind them. When this is done, one first elicits the next cultural level.

Espoused values—the official values and espoused norms of the organization, ideologies, and justifications that purport to explain the artifacts, but, in practice, often conflict with observed behavior. These conflicts and inconsistencies imply that there is a deeper level which actually drives behavior, perception, thoughts, and emotions.

Shared tacit assumptions—what the group has actually learned as the correct way to perceive, think, and feel. This level operates out of awareness but is available if a group works on explaining its artifacts.

To elicit this deeper level in a group context, an “outsider” must focus on the observed artifacts and help the group to articulate the deeper assumptions that are driving the behavior. The role of the outsider is to help the group to make explicit what it is they take for granted and may not have articulated for themselves.

CAN CULTURES BE CATEGORIZED OR PROFILED?

All culture and climate researchers start with some mental models of what they are looking for, based on their own education and empirical predilections. So we should not believe that we can go into an organization as a tabula rasa and just let the culture “speak” to us. Even how we experience the artifactual level, what we see and hear as we enter an organization, is biased by the perceptual and conceptual filters we bring to the situation. The issue, then, is not whether we will start with a priori dimensions in studying the organization but what kind of theoretical model we will use.

Formal assessment instruments such as questionnaires can “measure” climate, but they cannot “measure” the underlying culture because one would not know a priori what dimensions to build into the questionnaire; individual respondents without the stimulation of the group would not be able to articulate their own views; and one would not know how to combine individually idiosyncratic responses into a coherent picture of a group phenomenon, that is,

In dwelling, live close to the ground.

In thinking, keep to the simple.

In conflict, be fair and generous.

In governing, don't try to control.

In work, do what you enjoy.

In family life, be completely present.

–Tao Te Ching

culture. Inasmuch as culture is a group phenomenon, it is best assessed in a group context where degree of consensus and mutual understanding is immediately evident.

The problem with questionnaires as research tools for the study of culture is that they cast the theoretical net too narrowly. In deciding what to ask about, the researcher is imposing his or her categories on a culture that may not categorize the world in that way at all. Even the extensive international studies of Hofstede (1980, 1991) reduce all of cultural variation to just five dimensions that are clearly of interest but not necessarily relevant to a particular organization that one is trying to understand. The advantage of the ethnographic or clinical research method is that we can consciously train ourselves to minimize the impact of our own models and to maximize staying open to new experiences and concepts we may encounter (Schein 1985, 1993a, 1999). Especially if we are to understand a particular culture, the issue of salience is very important, because not all the elements of a culture are equally potent in the degree to which they determine behavior. The more open group-oriented inquiry not only reveals how the group views the elements of the culture, but, more importantly, tells us immediately which things are more salient and, therefore, more important as determinants.

CAN THE CULTURE AND CLIMATE CONCEPTS BE USEFUL TO THE PRACTITIONER?

Climate can be changed only to the degree that the desired climate is congruent with the underlying assumptions. One cannot create, for example, a “climate of teamwork and cooperation” if the underly-

ing assumptions in the culture are individual and competitive, because those assumptions will have created a reward and control system that encourages individual competitiveness. One cannot create a “climate of participation and empowerment” if the underlying assumptions in the culture are that subordinates should do what they are told and should expect their bosses to know what they are doing. One cannot create a “climate of openness” if the history of the company has been to punish the “messenger” for bringing bad news. All too often, change programs fail because they do not consider what the underlying culture is. In other words, surveying climate, and specifying a desired climate is not enough. One must analyze the underlying cultural assumptions to see what is possible and what is desirable given the existing culture.

If culture and climate are to become practical usable concepts, the practitioner will have to learn how to do culture assessments as part of any change program, using a “clinical approach” (Schein 1987, 1993a). Articulating new visions and new values is a waste of time if they are not calibrated against the existing assumptions and values. If such assessments are done, it is usually found that there are elements in the culture that can be used positively to create new ways of working that are more effective, and that is far preferable to “changing” the culture. It is better to use the concepts and methods of “appreciative inquiry” (Cooperrider 1987, 1990). It is better to build on what is working than to obsess about what is not working. It is easier to evolve the culture than to change it. When such assessment is done it inevitably reveals subcultures that do not understand each other creating a need for a process of cross-cultural communication.

CROSS-CULTURAL COMMUNICATION: THE ROLE OF DIALOGUE

Cultures exist at the regional and national level, we have cultures at the industry or institutional level, we have cultures at the organizational level, and we have occupational cultures and subcultures within organizations based on functions and tasks. Part of the reason that organizations do not work well, part

of the reason we have wars, and part of the reason we have difficulties reaching consensus on major global problems, such as maintaining a healthy environment, is that we cannot communicate very well across cultural boundaries. We have excellent data that show how differently different groups perceive their environments based on different shared tacit assumptions, but we have very few tools for helping people to improve their communication across those boundaries.

The emphasis on “dialogue” (Isaacs 1993, 1999; Schein 1993b) may help in that dialogue is focused on getting acquainted with one’s own assumptions. We cannot appreciate another culture if we are not aware of our own cultural “filters.” For example, in the United States, people tend to see everything in terms of egalitarian, democratic, individualistic competition and, therefore, have no mental models that allow for understanding a more “groupist” society based on hierarchy and traditions of absolute obedience to formal authority. Dialogue theory assumes that each human has his or her own set of assumptions from which he or she operates, and when such assumptions are shared across a group with shared experience we have not only the presence of the assumptions as filters but the motivation to hold on to those assumptions as a way of expressing our membership in the group. If we are to gain any understanding of another group’s assumptions, we must get into a communication mode that legitimizes self-examination and acknowledges that perception and thought are anything but objective.

It would therefore be highly instructive for both researchers and practitioners to form dialogue groups and begin to examine in a group context what their own assumptions are. Not only will this reveal the subtle operation of cultural forces but will make visible where different assumptions lead to different behaviors and often conflicts. Once assumptions are surfaced and stated, mutual understanding increases and the basis exists for finding common ground.

ORGANIZATIONAL DYNAMICS

Almost half a century after systems theorist Ludwig von Bertalanffy initiated the publication of the *General Systems* series, formally bringing the biology-based open systems perspective to organization studies and, by extension, to leadership studies, the majority of academic studies of leadership still fail to give adequate consideration to the dynamic aspects of organizations. The reasons for this failure are many and have been repeatedly documented:

lack of accepted methodologies for temporal studies (i.e., those that occur across time), the demands of the academic tenure system, researcher familiarity with cross-sectional research methods (i.e., traditional statistical correlation), shortages of research funding, difficulties in conceptualization, lack of sympathy on the part of editors and reviewers, and numerous others.

The validity of any of these reasons in the past is not disputed. However, in the twenty-first century they are no longer excuses for failing to consider the dynamic aspects of organizations and leadership. Four waves of leadership studies have swept the field of leadership in the past one hundred years or so: “great man” theories (that rely on inborn leadership qualities), behavioral theories, situational theories, and, most recently, theories of transformational/charismatic leadership. The next generation of leadership studies will center on organizational dynamics. Meaningful models of leadership in the future will explicitly consider the changing, temporal nature of leadership, as only a few do now.

Organizational dynamics result from system structure. Organizations engage in such basic dynamic behaviors as growth and goal seeking due to their structures and due to their interaction with their environments. Organizational dynamics are the behaviors of the physical and institutional systems and human agents that vary over time. Within the context of any system that has humans as decision makers, leadership cannot be understood without recognizing changes over time, feedback processes, and the inevitable nonlinearities of human behavior (that is, those whose relationship would not graph as a straight line), even of life itself.

The key leadership impact of dynamic systems comes from the recognition of two types of complexity: detail complexity and dynamic complexity. Detail complexity is the complexity of many parts or variables. Dynamic complexity is the complexity that occurs when cause and effect in a system are far apart in time, and changes made based on standard linear attributions of causality (relationships that would graph as a straight line) do not result in the outcomes that people expect. Dynamic complexity results when systems are dynamic, tightly coupled,

governed by feedback, nonlinear, history-dependent, self-organizing, adaptive, counterintuitive, policy resistant, and characterized by trade-offs. Under these circumstances, traditional thinking about leadership cannot keep pace with the demands of leadership in dynamic organizations.

DYNAMIC ORGANIZATIONS

Dynamic organizations demand concise definitions. “The complexity of a system is the amount of information needed in order to describe it” (Bar-Yam 1997, 12). Organizational theorist Russ Marion (1999, 115) summarized the forces of what he called “complex natural teleology” that bear directly on leadership—“the dynamic that causes networks of interactive units to form.” These forces are autocatalysis, need, physics, and natural selection.

Autocatalysis is “a state of organization in which different units (people, departments, et. cetera) interact with one another within broad networks of interdependent behaviors” (Marion and Uhl-Bien 2001, 398). A key example of autocatalysis is the “tag.” In the leadership context one may think of a tag as anything that speeds up (catalyzes) social behaviors.

Need provides the drive behind emergence (i.e., the development of system attributes that are not part of the system’s components). This definition of *need* is congruent with conventional psychological definitions of *need*. In a dynamic organizational situation, individual efforts to satisfy individual needs drive organizational changes. In this regard, economist Adam Smith’s economic theory of the “invisible hand” provides the appropriate metaphor.

“*Physics* refers to the external and internal demands and restrictions that limit or enable system behaviors” (Marion and Uhl-Bien 2001, 399). These demands and restrictions may vary widely and include physical restrictions, conflicting needs, and socially constructed demands. A metaphor for these demands and restrictions might be the impact of the frontier in U.S. history, which both enabled and restricted settlement of the country.

Natural selection occurs among possible organizational forms that may occur. In the context of business strategy the concept of a “first mover advan-

tage,” that is, the first significant firm to move into a new market has a long-term advantage, has application. Within the dynamic context of leadership, “first mover” advantages may be key in eventual natural selection. For example, Chrysler’s early lead in marketing the minivan proved profitable and drove much of the eventual direction of the minivan market.

Many organization members will have roles as both leaders and followers. Effectiveness in both roles requires an integration of both roles. Integrating these dual roles involves both microdynamics and macrodynamics. Microdynamics are “the bottom-up behaviors (arising from the lower levels of the organization) that occur when individuals interact, leading to both coordinated behavior and random behavior” (Marion and Uhl-Bien 2001, 392). Key aspects of this definition for the study of leadership include interaction, coordination, and randomness. Each will be considered in turn.

Effective leadership requires that leaders take advantage of interactions among followers. In fact, leaders cannot control or predict the future; they must instead manage the conditions of follower interactions toward the desired future. Specifically, this management requires the complex leader to focus on higher-level interactions, setting the stage for lower-level interactions to develop within the higher-level constraints. A manager might choose to give objective-type directions, which specify the “what” as much as possible and the “how” as little as possible, in a frank recognition that the leader cannot control everything.

Effective leadership requires coordination to allow the emergence of predictable outcomes. One may think of standardized traffic signals. Individual drivers stop, start, merge, yield, and so forth in response to those coordination measures without any “master driver” directing them when to do so. Effective leadership provides similar coordination.

Randomness leads to unpredictability in complex systems. Surprises will occur. Outcomes are not determinate. Complex leaders must enable productive surprises. In the U.S. Army, surprise is one of the nine principles of war. The effective leader will take advantage of the (literal) chaos of the battlefield to surprise the enemy. Likewise, the principle of war of

security is the mirror of surprise. The commander achieves security by preventing the enemy from achieving surprise.

As noted, integrating the leader role and follower role involves macrodynamics. Macrodynamics are “the emergence of the larger systems from the interactions at the microlevel” (Marion and Uhl-Bien 2001, 392). One may note the hierarchy: Interactions at the microlevel—themselves not controllable—lead to further interactions at higher levels. In this context what hope does the leader have of controlling outcomes? The Scriptures define faith as “the substance of things hoped for, the evidence of things not seen” (Hebrews 11:1, KJV). The concept of macrodynamics gives the leader more than faith to go on as order and stability develop from the interactions at the microlevel. Yet, complex organizational systems are dynamic enough to have routine minor changes while being stable enough to have major changes only occasionally.

These changes result from emergence: the aggregation of parts of a system. Emergence begins as small groups are created from individuals. These small groups are “aggregates” and themselves are aggregated into “meta-aggregates.” Meta-aggregates develop from the interaction of aggregates and make up the larger system. The critical issue is that, for the large, complex organization, one simply cannot coordinate individuals. Although not quite “interchangeable parts” as one might think of them in a manufacturing sense, these aggregates of individuals function in interaction to create parts of the larger whole.

Systems thinker Peter Senge (1990) identifies the DC-3 aircraft as an example of emergence. Five separate subsystems—the variable-pitch propeller, retractable landing gear, monocoque (stress-bearing) body construction, the radial air-cooled engine, and wing flaps—emerged over many years of development. Each of these subsystems (meta-aggregates) was essential to the success of the DC-3. Without any one of them, the aircraft would not have been the success that it was. Yet, each subsystem was complex enough to require years of development. Had any one of them required, say, another ten years to develop, the final aircraft could not have emerged in

its time. Certainly no designer could have designed such a complex machine “from scratch.” Development from individual-level components was flatly impossible. “Sudden” development of the personal computer is another example, as is the collapse of the Soviet Union in 1989.

Marion and leadership theorist Mary Uhl-Bien identified five ways in which complex leadership can be exercised. Complex leaders (1) foster network construction, (2) catalyze bottom-up network construction, (3) become leadership “tags,” (4) drop seeds of emergence, and (5) think systematically. These behaviors allow complex leaders to spend less time trying to control organizations and more time influencing the organization in ways that better lead to the ideal future.

Complex leaders foster network construction. Effective leaders not only “work their network” but also design and build networks both within and outside of the organization. Networks are structures that allow innovation to grow and emerge. Systems in a network support each other. Further, networks provide strength to their members.

Complex leaders catalyze bottom-up network construction. That is, they speed up and indirectly drive network construction. Complex leaders accomplish these two tasks by delegating, by providing resources to subordinates, by not interfering in network construction by others, by trusting subordinates, by enabling interactions among followers, by creating myths and ceremonies, by demanding that subordinates solve their own problems, by getting personal conflicts resolved, and, ultimately, by encouraging communications among individuals, groups (aggregates), and subsystems (meta-aggregates).

Complex leaders become leadership “tags.” “A tag symbolizes the aggregate and it separates an aggregate from other aggregates” (Marion and Uhl-Bien 2001, 405). Key in this definition are the words *symbolize* and *separate*. An effective tag must do both. Consider the flag of the United States. In representing the nation, it symbolizes the nation—one can think of the flag flying above an Olympic champion—or of the flag being burned by protestors at home and abroad. Raising or burning the flag, just as the television camera arrives, recognizes the sym-

bolic value of the flag. Likewise, the flag separates the United States from other nations (which have other flags). One can think of the United Nations.

Complex leaders drop seeds of emergence. How can leaders encourage the idealized future organization to emerge without coercing followers or creating passive subordinates? Leaders can establish centers of knowledge in the organization, get those centers of knowledge involved in creative activities, and, again, get them in communication with one another. This fact means that complex leaders aren’t really controlling results; they are engaged in creating “organized disorder” through which all aspects of organizational dynamics are occurring at multiple levels. This fact means creating conditions for follower success.

Complex leaders think systematically. They understand dynamic behavior and encourage it. People tend to think linearly, and people tend to think of things being directly caused, without the rich awareness of feedbacks, stocks, flows, and interactions described earlier. Complex leaders see the bigger picture and are aware of patterns of systemic behavior.

Thus, complex leaders, although desirable at all levels of an organization, are more important where they are making decisions for “the long haul.” This notion implies that complex leaders are needed more for strategic leadership of organizations, than for direct or tactical leadership in organizations. U.S. Army doctrine identifies operational-level leadership—leadership at the level in between the strategic and tactical levels. Operational-level leadership—leadership at the level of a military campaign or of an organization competing in a specific business or industry—inevitably will require more complexity than will tactical leadership and less than strategic leadership and may be thought of as leadership within organizations.

Likewise, the environment for organizational leadership influences the requirement for complex leadership. Here systems theorists F. E. Emery and E. L. Trist’s conception of “the causal texture of organizational environments” (Emery and Trist 1965, 21) finds a leadership parallel. When the environment of the organization is itself a “turbulent field,” more complex leadership will be required

(Osborn, Hunt, and Jauch 1980). As Emery and Trist describe the situation, “the ‘ground’ is in motion” (Emery and Trist 1965, 26). This situation will tend to demand more of the leader than will those involving simpler organizational environments.

Marion and Uhl-Bien identified five theoretical implications of complex leadership for leadership theory. Complex leadership (1) links social capital, social exchange, and relational leadership theories; (2) links self-leadership and empowerment theories; (3) links followership theories; (4) links transformational theories; and (5) links theories of charisma. Complex leadership can be related to the major emerging trends in the field of leadership.

Complex leadership links theories of social capital, social exchange, and relational leadership. Each of these theories has experienced growing interest among leadership scholars in the past decade. Together, these theories take into account networks and individual linkages. Complexity theory considers interactions within networks. Microlevel issues of social exchange and relational leadership and macrolevel social capital considerations parallel complex leadership arguments.

Complex leadership links self-leadership and empowerment theories. These theories are similar to the bottom-up or microlevel aspects of complexity theory and emphasize lower- and intermediate-level interactions that cannot be controlled “from the top.” At least one model of leader training fits here. The “three pillars” of leader training are (1) formal (institutional) education, (2) on-the-job (operational) training, and (3) self-development. One should think meta-aggregate levels, aggregate levels, and the individual level of interaction.

Complex leadership links followership theories. These theories, although far from preeminent in the study of leadership, are gaining adherents. Again, the bottom-up principle of microdynamics suggests a critical role for followers. Leadership theorist Gary Yukl emphasizes that followers can make a contribution to effective leadership and lists ten specific “Guidelines for Followers” for the “courageous” follower to apply to the leadership situation. The majority of these guidelines, such as “Take the initiative to deal with problems” or “Provide upward coaching

and counseling when appropriate” (Yukl 2002, 129–134) are bottom-up-type behaviors that are entirely consistent with complexity theory.

Complex leadership links transformational theories of leadership. “Complexity theory suggests that transformation (emergence) occurs bottom-up and is enhanced by moderately coupled interaction patterns” (Marion and Uhl-Bien 2001, 409). Transforming leadership, as described by James MacGregor Burns (1978), emerges from the relationship between a leader and followers. It cannot be imposed on followers without their participation and consent. Most importantly, it changes both followers and their leader in ways they will not change on their own—the definition of *interaction*.

Complex leadership links theories of charisma. In particular, the charismatic leader can function as the previously mentioned leadership tag. Charisma—attributed to the leader by followers, part of the self-concept of the leader, or built into the social situation of the leader, followers, the vision, a crisis, and a solution—matches both microlevel and macrolevel aspects of complexity theory. As a tag the charismatic leader both provides a symbol for the followers and separates them from the ordinary situation of those who are unfortunate enough not have a charismatic leader to follow. Psychologist Howard Gardner’s (1996) concept of the leader’s “story” fits well with the concept of leadership as the tag. From another perspective, Marion and Uhl-Bien (2003) identify the al-Qaeda terrorist leader Osama bin Laden as a charismatic leader who functions as a leadership tag.

APPLICATIONS FOR PRACTITIONERS

What does all of this mean for the practitioner of leadership today? One should consider three applications for the leadership practitioner.

First, how does complex leadership fit the dynamic processes of self-organization? If leadership has any practical meaning, the leader must do something. At the same time, the dynamic processes of self-organization take place in their own fashion. The practitioner of complex leadership must adjust what he or she does to the reality of self-organization, recognizing the interdependencies between the

two. Burns has stated “no single discipline . . . alone can deal adequately with the phenomenon of causation because the subject lies outside as well as inside every discipline” (Burns 2003, 21). An understanding of the dynamics of complex leadership provides a perspective from which to address the difficulties of leadership and causation.

Second, how does complex leadership influence international organizations? A practical application of the influence of complex leadership in international organizations is interfirm coordination. When mergers or acquisitions are not desirable at the international level, interfirm coordination is necessary to interact with other organizations. This coordination “includes such things as co-optation, trade associations, cartels, and informal agreements” (Marion 1999, 121). Especially in times of rapid, dynamic change, interfirm coordination may be the preferred interaction with international peers and competitors. “Command and control” approaches to leadership are doomed to fail in this environment. The complex leader, aware of the leadership context, will best navigate these troubled seas. It takes little imagination to think of the actions within and of the United Nations as an example of the dynamic complexity of behaviors in international organizations.

Third, how does the use of simulation inform complex leadership in organizations? The systems dynamics methodology developed by engineer Jay Forrester (1961) is appropriate for the study of complex leadership in organizations. Systems theorist Chanoch Jacobsen and his colleagues have demonstrated the use of system dynamics approaches in the study of sociological theory in the study of complex leadership itself. Experienced developers and users of system dynamics models find that the dynamic processes of model development are themselves key learning devices, incorporating many of the mentioned concepts. Modeling leadership problems exposes leader mental models and decision-making approaches. The simulation is a practical way to begin to develop a learning organization and is extremely flexible in the data upon which it draws.

Sterman describes system dynamics as both “a set of conceptual tools that enable us to understand the structure and dynamics of complex systems” and “a

rigorous modeling method that enables us to build formal computer simulations of complex systems and use them to design more effective policies and organizations” (Sterman 2000, vii). Simulation serves as a “third scientific discipline” (Hulin and Ilgen 2000, 7) that can go beyond the traditional research methods of experimental and correlational methods while still providing scientifically valid methodological rigor. The idea of system dynamics as a “set of conceptual tools” provides the layperson with a way to make applications to complex leadership situations. The leader’s recognition of the organizational structures that result in growth, goal seeking, and oscillation provides a place for the practitioner to make use of this methodology. For example, a better understanding of the limits to growth might have enabled leaders of e-commerce firms to have avoided the pitfalls of the “get big fast” strategy that led to the failure of so many such firms (Oliva, Sterman, and Giese 2003, 83).

OUTLOOK IN THE TWENTY-FIRST CENTURY

People can think of organizational dynamics in the future in at least ten ways. These ways are of interest because they are both research strategies and topics of study. The unique aspect of research into leading-edge dynamic processes of leadership and organization is that they can be applied as they are studied, creating opportunities for researchers to develop theory on the fly as they apply it.

Leaders and leadership researchers can do the following:

1. structure interactions through well-designed communication strategies and technologies;
2. stimulate interdependencies by fostering collaborative projects, creating service centers in which one or more network agents provide services such as computer modeling or qualitative analysis for one or more projects, and supporting separate but coordinated research projects in which one project is conceptually dependent upon the findings of the other;
3. foster adaptive tensions by creating heterogeneous teams, setting up moderately pressuring time constraints, and stimulating healthy competition;

4. stimulate creativity by motivating followers to go beyond their comfort zones in the books and journals they read, the trainings they pursue, and the conferences they attend and by providing adequate budgets for these creative outlets;
5. foster meaning (commitment, trust, follower leadership) though persistent communication, articulating the goals of the project to outside agents and engaging in activities that build social bonds and personal relationships;
6. enable bottom-up behavior by avoiding centralized goals and structures, soliciting input from all team members, consistently interjecting new ideas, and encouraging new internal and external collaborations and alliances;
7. garner resources and manage structure and organizational patterns to enable interaction by understanding the needs of individual team members, vesting expenditure decisions to team members, allocating travel funds for external collaborations, and decentralizing decision-making processes;
8. foster external relationships with formal agencies, professional development groups, and members of allied fields;
9. manage co-evolutionary (“evolving together”) dynamics by negotiating adaptations with professional bureaucracies at various institutions and by adjusting to the exigencies of collaborating parties and fostering collateral changes from them in return; and
10. use the notion of the dynamic complexity of leadership as a tool in the development of leadership as a new “master discipline” (Burns 2003, 9) alongside the traditional academic disciplines.

ORGANIZATIONAL JUSTICE

Employees respond strongly to unfair treatment in the workplace. Thus, in addition to their many other responsibilities, leaders must ensure a just workplace in which employees are treated fairly. Doing so leads to positive employee and organizational outcomes like higher levels of job satisfaction and commitment, lower levels of theft, absenteeism, and turnover, and higher organizational performance.

THE THREE FACES OF JUSTICE

Research on the impact of justice in the workplace has centered around three distinct fairness types. *Distributive* justice refers to the fairness with which pay, promotions, perks, and other outcomes are allocated. *Procedural* justice emphasizes the process and procedures by which these outcome allocations are determined. *Interactional* justice involves whether leaders provide those around them with fair interpersonal treatment. Each represents an important dimension of employee fairness perceptions, and each may be tied to particular aspects of leadership. In the following sections, we provide a brief history and background, and summarize key antecedents and consequences, of each justice type.

DISTRIBUTIVE JUSTICE

In the 1950s, social psychologists proposed that individuals make judgments about situations and outcomes in relative rather than absolute terms. They do so by comparing their own situation and outcomes to the situations and outcomes of individuals around them. This theory of relative deprivation suggests that people may feel dissatisfied about an outcome even though in objective terms it may be favorable. Conversely, people may feel satisfied with an outcome even though it is objectively unfavorable. This theory was a precursor to a theory of distributive justice in that it proposed that individuals' comparisons with others are dependent on their understanding of what is right and wrong, what is fair, and what is "just."

Today's understanding of distributive justice is rooted in the work of George Homans and J. Stacy Adams. Homans's conceptualization of distributive justice is grounded in a theory of social exchange. He noted that in the course of normal activities, individuals engage in two types of exchanges: those involving things of a social nature (e.g., favors, friendships), and those involving things of an economic nature (e.g., money, work). He explained that parties involved in such exchanges will perceive the exchanges to be fair as long as the rewards each receives are proportional to the cost each bears.

Adams extended Homans's conceptualization by introducing equity theory. He proposed that individuals' social behavior and attitudes are affected by beliefs that the allocation of costs and benefits within a particular group of individuals needs to be equitable. That is, the outcomes one receives should be proportional to contributions one makes. Under equity theory, a reward distribution is perceived to be fair to the extent that the ratio of one's contributions (e.g., hours of work and effort) to one's outcomes (e.g., pay or promotion) is equal to the same input–output ratio of a comparison other (e.g., a coworker). Adams explained that when inequity occurs, individuals will experience distress, a motivational state that prompts them to engage in actions to restore equity. Considerable research supports the predictions of equity theory that underpaid employees

Worker Benefits Linked to Company Leadership

(ANS)—The type and level of benefits a company's workers receive may depend on who is sitting in the executive's chair, according to a study by the Families and Work Institute.

Companies with women or minority executives at the helm are more likely to offer their workers flexible schedules and childcare than those with no women or minorities in key positions, according to the 1998 Business Work-Life Study.

The study found that 82 percent of companies where women occupy at least half the top-level positions, and 80 percent of companies with minorities in at least 25 percent of top executive positions, offer traditional flextime, compared with 56 percent and 64 percent, respectively, in companies with no women or minorities in key positions.

Companies with women in at least half of the executive positions were found to be six times more likely to provide on- or near-site childcare than those with no female executives. Companies with minorities in at least half of their executive positions were found to be four times more likely to provide on-site or near-site child care than those with no minority executives.

Results of the study came from a survey taken by employers at 1,057 companies that have 100 or more employees. Both for-profit and not-for-profit companies were surveyed.

Proportions of top executive positions filled by women and minorities are the third and fourth most frequent predictors of work-life support benefits, after industry and company size, according to the study.

The type of industry was identified as the number one

predictor. The "most generous" industries, according to the study, are finance, insurance and real estate, while the "least generous" are the wholesale and retail trades.

The study also looked at the breadth of company benefits, programs and policies designed to help workers achieve job satisfaction while maintaining a healthy life at home.

Among the findings:

- 90 percent of companies offer individual retirement plans
- 88 percent allow workers time off to attend their children's school or day care activities
- 56 percent provide employee assistance programs designed to help employees with work-related or personal problems
- 49 percent allow workers paid time off to take care of their children when they become mildly ill
- 33 percent offer part-time employees full or pro-rated health care benefits
- 22 percent have special career or leadership programs for women
- 9 percent offer long-term care insurance for employees' family members
- 0.3 percent sponsor summer programs for teen-age children of employees

will lower their performance, and overpaid employees will increase their performance. More generally, individuals react to perceived inequity by making behavioral or psychological changes in an effort to restore equity.

Equity theory is based on the assumption that the perceived fairness of outcomes depends on an equitable—but not necessarily equal—distribution of rewards. However, other possible allocation rules exist as well. In addition to allocating rewards equitably (allocating outcomes based on relative contribution—I am paid what I am worth), leaders may allocate them equally (allocating outcomes based on equal rank or status—I am paid the same as my

coworker), or based on needs (allocating outcomes based on a Marxist notion of reward distribution—I am paid more because I have a larger family). Different allocation rules are generally the result of different contextual factors (e.g., personal vs. organizational), personal motives (e.g., self-esteem), and organizational goals (e.g., productivity vs. harmony).

ANTECEDENTS AND CONSEQUENCES OF DISTRIBUTIVE JUSTICE

Antecedents to perceptions of distributive justice include organizational outcomes such as benefits, job security, and punishment, as well as reward allo-

cations like pay, rewards intrinsic to the job, seniority benefits, fringe benefits, job status, and status symbols. Consequences of distributive justice include cognitive, emotional, and behavioral reaction toward these specific outcomes. For example, studies show that when outcomes are perceived to be unfair, it affects cognitions like distorted impressions of one's inputs and outcomes, emotions like anger, happiness, pride, and guilt, and behaviors like job performance.

PROCEDURAL JUSTICE

In the 1970s, researchers began to explore the impact of fair procedures on individuals' justice judgments. This gave rise to the concept of procedural justice. In studying the dispute resolution process, researchers found that disputants were more satisfied with the outcomes they received when they believed the process by which those outcomes were determined was a fair one. Interestingly, this increased satisfaction was present irrespective of whether the outcomes received were favorable or not.

Today's understanding of procedural justice in organizations is grounded in four distinct conceptualizations of how individuals make assessments of the fairness of procedures and why these judgments matter. These include the self-interest model, justice judgment theory, the relational or group value model, and the fairness-as-virtue theory.

John Thibaut and Laurens Walker introduced the self-interest model of procedural justice, which suggests that people seek control over decisions and procedures because they are concerned with maximizing the fairness and favorability of their own outcomes. The need for control over organizational processes increases when individuals recognize that they cannot control all outcomes during decision making or social exchanges. Therefore, being allowed to participate in the process helps to maximize the outcome favorability of a self-interested individual.

The justice judgment model, crafted by Gerald Leventhal, asserts that procedures are perceived to be fair when people adhere to a set of rules that indicates a fair process. Leventhal identified six rules for fair procedures:

1. *Consistency* indicates that fair procedures need to be consistent across persons and time.
2. *Bias suppression* means that procedures are considered unfair if the decision maker has a direct interest in any specific decision or the decision maker is influenced by his or her beliefs and may not consider each point of view adequate and equally important.
3. *Accuracy* requires that fair procedures are based on accurate information.
4. *Correctability* indicates that procedural fairness is enhanced if a process contains provisions for correcting flawed decisions.
5. *Representativeness* necessitates that fair procedures reflect the concerns, values, and outlook of individuals who are affected by the process.
6. *Ethicality* involves assurance that fair procedures conform to standards of ethics and morality. In the justice judgment model, the importance and weight of each of these rules is situation specific and depends on the goals of the individual making the procedural fairness assessment.

The group value or relational model, developed by Tom Tyler and Allan Lind, explains that individuals are strongly affected by identification with groups. Group membership provides them with an identity and permits them to validate their beliefs and behaviors. Members support group procedures because procedures specify authority relations, define norms regarding decision making, and define fair treatment within the group. As a result, when group procedures agree with the values of the group and its members, the members will have a greater sense of procedural justice.

More recent thinking on procedural fairness is suggested by fairness-as-virtue theory, crafted by Robert Folger. Folger's framework recognizes the role of principled conduct in seeking to safeguard human dignity. Thus, procedural justice is viewed as a moral principle about the right way to treat people. Procedures are not viewed as a means for accomplishing equity in distributive justice. Rather, fair procedures are valuable in and of themselves; the value of procedural justice lies in its value to preserve the fairness of the system. This is important to the organization because it forms part of a system of

checks and balances for maintaining a level playing field for all the members, preventing unfair exploitation by others.

ANTECEDENTS AND CONSEQUENCES OF PROCEDURAL JUSTICE

Antecedents of procedural justice include having control over the decision-making process and the opportunity to voice opinions and values. In addition, the six principles of fairness from the justice judgment model are predictive of the perceived fairness of procedures. Other predictors of procedural justice include organizational outcomes and systems like pay-by-performance, affirmative action hiring, and availability of procedural explanations of organizational decisions.

Consequences of procedural justice include especially strong effects on cognitive, affective, and behavioral reactions toward institutions or authorities. When a process leading to a certain outcome is perceived to be unfair, individuals' reactions are typically directed at the entire organization, rather than at one's job or at the specific outcome in question. For example, studies show that employees' assessments of procedural justice are related to subsequent organizational commitment and trust in management.

INTERACTIONAL JUSTICE

In the 1980s, a third form of justice, interactional, emerged from the work of Robert Bies and Joseph Moag, who conceptualized it as distinct from distributive and procedural justice. Interactional justice suggests that fairness perceptions are directly linked to the quality of the interpersonal treatment people receive as procedures and decisions are enacted. The concept is grounded in social exchange theory and involves two types of interpersonal treatments. The first, interpersonal justice, encompasses the degree to which people are treated with dignity, politeness, and respect during the implementation of procedures and the distribution of outcomes. The second, informational justice, includes the quality of explanations people receive about the implementation of procedures, decisions, and specific outcomes.

ANTECEDENTS AND CONSEQUENCES OF INTERACTIONAL JUSTICE

Antecedents to interactional justice perceptions overlap with the antecedents of procedural justice and include structural criteria like explanations, consistency, and voice. However, unlike procedural justice, the consequences of interactional fairness tend to be directed at specific agents of the system, such as commitment to one's supervisor, and the quality of the relationship between an individual and his or her leader.

LEADERSHIP AND JUSTICE: INTEGRATION AND NEEDED RESEARCH

Leadership plays a central role in the creation and maintenance of a fair workplace. Some researchers have begun to explore the relationship between the two tasks, even integrating questions about team structure and workflow into the mix. For example, we know that justice motives are important when leaders make allocation decisions, as they are faced with choices of different distributive rules like need, equity or equality. Research (Pillai, Schriesheim, & Williams, 1999) has shown that leadership style may play a role in this decision, as task-oriented leaders are more likely than relationship-oriented leaders to use equity principles when coworkers are relatively autonomous. Conversely, equality rules seem to be more appropriate in tightly coupled team-based work.

In spite of some promising initial efforts, however, relatively little research has explicitly targeted the relationship between leaders and their leadership style, and perceived justice in organizations. One promising opportunity for better understanding these relationships may lie in social exchange theory. As noted in the sections on distributive, procedural, and interactional justice, social exchange theory plays a role in several prominent theories of justice. Similarly, a number of important leadership theories (e.g., Leader Member Exchange (LMX), transformational leadership, and charismatic leadership) rely heavily on social exchange arguments as well. As a result, social exchange perspectives may provide a natural bridge for scholars interested in better under-

standing the relationship between leadership and employee justice judgments.

Consider LMX approaches to leadership. LMX theory suggests that leadership is a relational phenomenon, that leaders can and do establish unique working relationships with each individual on their team. The quality of these individual relationships influences important outcomes for the employee and the team, including fairness perceptions. Studies have indicated that employees who have high-quality relationships with their immediate supervisors view the workplace as being fairer. Considerably more work is needed to discern whether, for example, justice is an outcome of high-quality LMX, or whether a fair workplace is a key ingredient to high-quality LMX.

Transformational and transactional perspectives on leadership have also exhibited a relationship with organizational justice perceptions. Transformational leaders are those who engage in large-scale leadership, changing an organization's strategy and culture. Transactional leaders are more typically viewed as managers, focusing on day-to-day efficiency concerns. Research (Podsakoff, MacKenzie, & Bommer, 1996) has shown that employee perceptions of fairness and trust can be influenced by whether a leader utilizes a transformational or transactional style. Transformational leadership has been shown to influence employee behavior through increased perceptions of trust and procedural fairness. In contrast, transactional leadership has been linked more strongly with issues related to distributive fairness. Although it appears that different leadership styles induce different justice perceptions in employees, further investigation is needed to understand how these relationships work and whether they are stable across various contexts.

JUSTICE MATTERS, LEADERSHIP MATTERS

Employee perceptions of justice matter. Justice perceptions—procedural, distributive, or interactional—play an important role in determining how people feel about their work, their leaders, and their organizations. Leaders play a key role in determining the fairness of their organizations' procedures, outcomes, and interactions. Thus, leaders play a key

role in determining employee justice perceptions. Recent research has begun to explore the linkages between the two, but much more work is needed to understand these relationships fully.

ORGANIZATIONAL THEORY

Leaders today face unprecedented levels of environmental complexity (“Complexity refers to the number and diversity of the elements in an environment” [Hatch 1997,89, emphasis in original].) Social forces and organizations have multiplied and diversified at an astonishing rate between the eighteenth and twentieth centuries (Huntington 1968), through the industrial age to the information age. Our communities, as a result, have become more complex; any one community member may simultaneously belong to a number of diverse organizations. At the most intimate level, individual organizations are populated by diverse and complex people, creating complex, adaptive systems that attempt to cope with the uncertainty of functioning in a more complex society.

If our organizations are complex, understanding and exercising leadership within them must also be more complex. The organizational problems and challenges that leaders face are not always as easily definable and resolvable as in less complex times; understanding organizational theory will help frame leadership decisions. However, Bolman and Deal (1997) note that framing problems and decisions with only one theory will be “incomplete and oversimplified” because surprises, complexities, and ambiguities of organizational life require more powerful and more comprehensive approaches. Determining what is really going on requires more sophisticated lenses than many managers currently possess. It also requires the flexibility to look at organizations from more than one angle (33).

Although our individual and organizational behavior is guided by theory, it is often implicit. By making our underlying assumptions or our theories-in-use explicit, we will be better able to understand

our behavior. And, applying these multiple theories (or “lenses”) helps us to look at organizations from different perspectives and thereby tackle the types of problems facing leaders in such complex organizations.

This entry explains adaptive leadership through the lens of organization theory. Ronald Heifetz (1994) uses the term *adaptive work* to describe the leadership required to resolve problems in complex situations. Heifetz’s delineation of the types of problems that exist in complex organizations is briefly explained. (The typology provided is found in Heifetz’s [1994] *Leadership without Easy Answers*. Similar typologies can be found in the writings of Talcott Parsons and James Thompson [see Shafritz and Ott 2001]).

TYPES OF PROBLEMS IN COMPLEX ORGANIZATIONS

According to Heifetz (1994), there are three types of problems that occur in complex organizations. Type I, routine, problems are definable, recurring, and solvable. The issue in Type I situations is clear and unambiguous and therefore, existing mental models can be used to solve Type I problems. For example, if you are a professor who catches a student cheating on an exam, you can take the exam away and apply the proper punishment as determined by the school’s cheating policy.

Type II problems are those which are definable but for which no apparent solution is available. Type II problems may be broken down into Type I problems, but frequently there exists no adequate response or solution; one needs to be created. For example, if you are a professor and you catch a student cheating on an exam but your school has no policy, you may create your own solution and/or direct the university’s attention to the issue and help to create a university policy.

Type III problems are the most complex. They are nondefinable (the problem is not clear) and thus using existing mental models to solve them is impossible; “technical fixes are not available” (Heifetz 1994, 75). In order to successfully tackle Type III situations, “leadership that induces learning” is neces-

sary “both to define the problems and implement the solutions” (Heifetz 1994, 75). Largely, Type III problems arise out of a gap between the values of an organization and its members and the reality that the organization is facing. In Type III situations, there may be Type I and Type II components (as seen above), but they are viewed as symptoms of an underlying issue, one which is not easily defined. Type III problems exist when there is a gap between values and reality, and possibly a gap between conflicting values. (Heifetz’s [1994] notion of “gap” is similar to Senge’s notion of “creative tension,” as found in his writings on learning organizations [see Senge 1990]).

It is the closing of this gap which is the adaptive work of leaders, Heifetz (1994) maintains. To do this, the organization has to first define the problem, decide how to tackle it, and then work for adaption of either values, reality or both. Tackling Type III problems requires learning and adaption on the part of all members of the organization. Those with formal authority positions cannot do this work alone. Members throughout the organization must use their informal or formal authority to exercise leadership—they must help raise the issues, direct members’ attention to the underlying issues, manage stress levels, protect conflicting voices, and help the members do their own work (Heifetz 1994).

Because Type III problems are difficult to identify, the majority are misdiagnosed as Type I or II problems, and known solutions or “technical formulation[s]” are applied to “nontechnical problem[s]” (Heifetz 1994, 75). In other words, Type III problems are oversimplified as Type I or Type II problems. Generally, oversimplification is caused by looking at problems through a single lens, coming to one of three common conclusions: the problem is caused by a specific person or people (usually those in authority positions); the problem is caused by the structure of the organization; the problem is caused by a thirst for power (Bolman and Deal 1997). Of course, some problems are caused by structure, systems, people, power, and culture; “much of the time, though, faulting people gives us simplistic answers that block us from seeing systems and offer little help, even if they are partly right” (Bolman and Deal

1997, 32). “[A] better alternative is to probe more deeply to pinpoint what is *really* going on” (Bolman and Deal 1997, 29).

LEADERSHIP FOR COMPLEX PROBLEMS: THROUGH THE ORGANIZATIONAL LENS

There have always been myriad types of organizations (e.g., factories, universities, symphonies, nation-states, etc.), but the industrial revolution has borne witness to an increase in the variety and diversity of such organizations that has no historical precedent. Concomitantly, since at least the eighteenth century, researchers have studied organizations and developed theories that would then help to explain concerted group effort. Organizations have continued to change and adapt during the last two centuries and as a consequence, there are nearly as many theories about organizations as there are organizations and the people who study them. Shafritz and Ott suggest a taxonomy of theoretical approaches that connect to, and help explain, Heifetz’s adaptive leadership. These are structure, systems, human resources, power, and culture.

Structure

Those who see organizations through the lens of the structural perspective have a mechanistic view of organizations, focusing on production, structure, division of labor, and rational decision-making processes (Shafritz and Ott 2001). This lens views organizations as rational institutions designed and structured to achieve established goals, with control and coordination maintained by rules and formal authority (Shafritz and Ott 2001). Most problems are perceived to result from flaws in the structure of the organization and therefore, can be resolved by changing the structure. Organizational challenges are perceived as predominantly engineering problems.

The connection to adaptive leadership is that formal, positional, authority and structural features of organizations are important for directing, ordering, protecting, and controlling the organization and its members in order to solve problems. Leaders should always try to look at Type III situations for

the possible structural, Type I problems, which are contributing to the situation.

Systems

Systems theory also describes organizations as rational, goal oriented, and structural, but makes the distinction between closed (as in the structural theories) and open systems. In open systems, there is a constant exchange between the organization and the external environment, thus any organizational problems must be considered within the context of the organization and its surrounding environment. Systems theory “is basically concerned with problems of relationships, of structure, and of interdependence” (Katz and Kahn 1966, 259). In this view, “organizations are not static, but rather are in constantly shifting states of dynamic equilibrium. They are adaptive systems that are integral parts of their environments” (Shafritz and Ott 2001, 243). Thus, the organization is viewed as a problem-facing and problem-solving phenomenon with a focus on “organizational processes related to choice of courses of action, in an environment which does not fully disclose the alternatives available or the consequences of those alternatives” (Thompson 1967, 270).

In his discussion of systems thinking, Senge distinguishes between detail and dynamic complexity. Detail complexity, involving accounting for as many *distinct* variables as possible, is the more commonly considered of the two. Dynamic complexity, by contrast, involves examining the variables not as distinct, but as closely interrelated and correlated with one another. Senge writes:

Unfortunately, most “systems analysis” focus[es] on detail complexity not dynamic complexity. Simulations with thousands of variables and complex arrays of details can actually distract us from seeing patterns and major interrelationships. In fact, sadly, for most people “systems thinking” means “fighting complexity with complexity,” devising increasingly “complex” (we should really say “detailed”) solutions to increasingly “complex” problems. In fact, this is the antithesis of real systems thinking. (Senge 1990, 72).

Organizations are still engineering problems for the systems perspective, but instead of many small,

independent problems, the problems (and solutions) involve much greater interdependence and interaction among them.

The connection to adaptive leadership is this. Leaders need to sense the interconnections, within and outside the organization, in order to anticipate and adapt the organization to changes. They need to be able to see the bigger picture, the Type III problem, in order to identify the “ripe” issues and possible alternatives. Leadership involves directing the organization’s attention to those issues, rather than to the detailed technical issues that can mask dynamic problems.

Human Resource Theory

In both the structural and systems theories, “the personal preferences of organizational members are restrained by systems of formal rules, authority, and norms of rational behavior” (Shafritz and Ott 2001, 298). Contrary to such “engineering” approaches, human resource theory focuses on “people, groups, and the relationships among them and the organizational environment” (Shafritz and Ott 2001, 145). From this perspective, the organization both shapes, and is shaped by, the behavior of its organizational members. Bolman and Deal (1997) note four assumptions about the human resources perspective: (1) organizations exist to serve human needs; (2) there is a codependent relationship between an organization and its members; (3) a poor fit between members and the organization can lead to problems for both; and 4) a good fit between members and the organization can benefit both. In addition to the engineering aspects, organizational leadership involves attention to the human, non-mechanistic aspects of group interaction.

The connection to adaptive leadership is that leadership involves all members of the organization in problem solving at the Type II and III levels. Participatory and situational (exercised differently depending on the people and situation involved) leadership is necessary to direct and hold people’s attention to the issues.

Power

Another outcome of leading people rather than machines is the fact that people have different—

Organizational Lenses

Organizational theorists Jay M. Shafritz and J. Steven Ott suggest that there are a number of theoretical approaches or “lenses” through which one can view an organizational problem. The examples below illustrate how one problem—students cheating on exams—can be seen through different lenses.

Viewed through the Structure Lens

“Students cheat on exams because there are no rules or structures for punishing dishonest acts. Administrators need to engineer rules and mechanisms for punishing offenders. If these rules and structures are in place, students will stop cheating.”

Viewed through the Power Lens

“Students cheat because universities do not value students’ interests, beliefs, values, perspectives and perceptions. When students cheat, they feel that they are using the only power they have within the university. Therefore, if we want students to stop cheating, we need to hand the power over to them. Perhaps allowing students to create and enforce the academic dishonesty rules and policies would serve this purpose.”

Viewed through the Systems Lens

“Students cheat on exams because they are external forces pushing for high grades (e.g. graduate schools) which interact with our lack of processes for handling cheating cases. We need to create rational organizational processes to mediate the actions of our students in the face of these external pressures.”

Viewed through the Culture Lens

“Students cheat because there is an underlying peer culture that supports (or at least does not condemn) cheating. If we want to stop students from cheating, we need to create a new culture. For example, we can have the students develop an honor code and other symbols to represent the valuing of academic honesty.”

often conflicting—values and goals. As such, organizations are characterized by power and politics. The Power and Politics lens views organizations as “complex systems of individuals and coalitions, each having its own interests, beliefs, values, preferences, perspectives, and perceptions” (Shafritz and Ott 2001, 298). This perspective makes clear the distinction between “legitimate” or “positional” authority (that determined by hierarchy) and the power that is available to others in the organization even without such formal authority. Since power and perspectives are abundant and diverse with such complex organizations, conflict is inevitable, and therefore

organizational life is about using power, politics and influence to resolve conflict.

The connections to adaptive leadership are the following. Any member of the organization can exercise leadership, using the power and authority they have (from whatever source) to influence others to act on “ripe” issues. Those leading from positions of authority must protect the voices of the dissenting and less powerful, to ensure that their voices are heard in the organization. Those in positions of authority must resist the pull from organization members to do all of the work. They must use the power they have to give the work back to the organization members at a pace that they can handle.

Culture

Finally, the organizational culture theory sees organizations as made up of unconscious patterns of assumptions that influence behaviors within the organization. Personal preferences of organizational members are controlled not by rules, authority or norms of rationality, but by “cultural norms, values,

beliefs, and assumptions” (Shafritz and Ott 2001, 362). Thus, to understand an organization, you must examine its culture. Bolman and Deal (1997) state that there are three main tenets of the culture theory. First, the interpretation of what is going on in the organization is more important than what is actually going on. Second, ambiguity and uncertainty preclude decision-making. And, third, people use symbols to make sense of things that do not make sense.

The connections to adaptive leadership are the following. Leaders both create and are the products of organizational culture. Leading means under-

standing and deciphering the culture (which usually speaks to the underlying issues) to help the organization adapt its values or its reality in order to close the gap that exists between values and reality or conflicting values. Leaders must have an understanding of the culture in order to identify ripe versus unripe issues.

LEADERSHIP LESSONS

Viewing a complex problem through one lens only gives leaders a partial picture of the issue. Therefore, in complex organizations, leaders need to develop the ability to view a problem or issue through more than one lens. One important way to do this, of course, is to bring organizational members into the problem-solving process. Using the typology of organizational problems, we can see that authority figures can easily solve simple, structural, problems on their own. Ensuring multiple voices and lenses may be more detrimental than helpful since this can over complicate the problem and delay the restoring of the organization's equilibrium.

However, in Type II and III situations, significant learning and adaptation on the part of organizational members is required in order to restore equilibrium. All five lenses (and any number of others) should be applied to the situation in order to define the problem, identify the underlying issues, and point to possible solutions. In these situations, formal authority can be used as a resource for leadership, for mobilizing adaptive work on the part of the organization's members. However, all members of the organization can exercise leadership by becoming involved in the tackling of the adaptive challenges. To facilitate this, authority figures must resist the temptation to view problems through one organizational lens, solving them by applying technical solutions. Instead, authority figures exercising leadership will use all five organizational lenses to break the complex problem down into Type I, II, or III problems, thereby directing attention to the issues (rather than dictating solutions) that can elicit stakeholder interventions. Stakeholders should also be involved in Type II and III problems, because even "when authority has some clear ideas about what needs to be done, implementing change often requires

adjustments in people's lives . . . systems must learn their way forward" (Heifetz 1994, 87).

IMPLICATIONS

Exercising leadership in this way is not easy. Mobilizing stakeholders to tackle the challenge themselves will frustrate expectations and turn authority figures into "lighting rods," attracting all the frustrations and anxieties. Social distress within the organization will be high. However, Heifetz (1994) claims that if authority can resist a pull into action and, instead, direct disciplined attention to the underlying issue, give the work back to the stakeholders, and protect voices of those who are speaking to the issue, than the community will work to resolve the challenge where it lies.

Leading in a complex organization requires a different kind of leadership, one that cannot be explained through the view of only one organizational lens. Applying several organizational lenses to the problems that exist in our organizations, can help more accurately define the various issues underlying the complex problem. However, any reliance on one individual or a team of authority figures to lead an organization through problem-solving or change, will most likely fail to restore equilibrium or at the most, temporarily restore equilibrium in a veil of success.

ORGANIZING

The democratic promise of equity, inclusion, and accountability requires an organized citizenry with the power to articulate and assert its interests effectively. In the United States, the concerns of many citizens remain muted because of unequal and declining citizen participation. Elsewhere in the world, many new democracies struggle to create institutions to make effective citizen participation possible. Organizing confronts these challenges by revitalizing old democratic institutions and creating new ones; it involves learning how to mobilize people for effective collective action.

For people to turn shared values into action, they must learn how to identify, recruit, and develop leadership; they must learn to build community around that leadership; and they must learn to draw power from that community. Organizers challenge people to act on behalf of shared values and interests. They draw people together into new relationships that enable people to gain new understanding of their interests, and they help people develop new resources and new capacity to use these resources for the collective benefit. These relationship-building activities lead to new networks of relationship wide and deep enough to provide a foundation for a new community in action. A second result is a new story about who this community is, where it has been, where it is going, and how it will get there. A third result is action, as the community mobilizes and deploys its resources on behalf of its interests.

THE WORK OF ORGANIZERS

Organizers are people developers in every possible way. They help people come to see why they should act to change their world—that is, they help people find motivation for change—and they also help people figure out how they can change their world (they help people formulate their strategy). To arrive at

motivation, organizers help people get a deeper understanding of who they are, what they want, and why; they mobilize people's feelings of anger, hope, self-worth, solidarity, and urgency while challenging feelings of fear, apathy, self-doubt, isolation, and inertia. People's motivation, once developed, is articulated as a shared story of the challenges they face, why they must face them, and why others should help them.

When it comes to understanding how people can act, organizers help by creating opportunities for people to deliberate about their circumstances, reinterpret them in ways that open up new opportunities, and strategize to make creative use of their resources. They challenge people to take the responsibility to act. For an individual, empowerment begins with taking responsibility; for an organization, empowerment begins with its members' commitment to it, that is, with the responsibility its members take for it. Responsibility, in turn, begins with choosing to act. Organizers challenge people not only to understand, but also to commit, and to act.

The primary vehicle for action is the campaign, a highly energized, intensely focused, concentrated stream of activity with specific goals and deadlines. People are recruited, programs launched, battles fought, and organizations built through campaigns. One dilemma inherent in campaigning is how to depolarize campaigns when inevitable conflicts rear their heads. Another dilemma is how to balance campaigns with the ongoing work of organizational growth and development.

Then there is the connection between organizing and leadership. Organizers build community by developing leadership. They help leaders enhance their skills, articulate their values, and formulate their commitments, and then they work to develop a relationship of mutual responsibility and accountability between a constituency and its leaders.

LEARNING TO ORGANIZE

Part of organizing is a practice, and therefore can only be learned from the experience of taking action. Taking action means accepting risks—risks of failure, of making mistakes, of losing face, of rejection,

and so on. Because organizing is relational (done in interaction with others), the more one can distinguish between one's own goals and the goals of others and can understand the interaction between the two, the easier it becomes to take the risks that learning requires. The more deeply committed one is to one's cause, the more one will learn, because the motivation to take the risks that result in learning will be very strong.

There is also a theoretical side to organizing, but unlike in some academic disciplines, one does not learn the theory first and then apply it. The theory is no more than a way to simplify reality for specific purposes, such as predicting a likely outcome.

Learning to organize means learning about the two notions of time that the evolutionary biologist Stephen Jay Gould described as time as a cycle and time as an arrow. Thinking of time as a cycle helps us to maintain our routines, our normal procedures, our annual budget, and so forth, while thinking of time as an arrow focuses us on making change, on achieving specific outcomes, on narrowing our efforts. While conducting a campaign, time is experienced as an arrow. There is an intense stream of activity that begins with a foundational period, which builds to a kick-off that is followed by periodic peaks and culminates in a final peak, followed by a resolution. As the campaign gains momentum, it gathers more and more resources, much as a snowball pushed through the snow collects more and more snow. Campaigners' motivation increases in the same fashion, with early successes making later successes more achievable.

When it comes to organizing, interaction with others is not an extra; rather, it is at the core of the learning process. Learning how to challenge, support, and motivate those with whom one works—and learning to be challenged, supported, and motivated by them—can be one of the most useful lessons in organizing.

LEADERSHIP IN ORGANIZING

Although we associate leaders with certain attributes (such as power), another way to look at leadership is as a relationship. The historian James MacGregor Burns argues that one sort of leadership can be

understood as a relationship that emerges from repeated exchanges or transactions between leaders and followers or constituents. Leaders provide resources constituents need to address their interests, and constituents provide resources leaders need to address theirs. Constituents may get help solving a problem, a sense of empowerment, access to resources, and so forth. Leaders may get the same things, but they also get something that makes them willing to accept the responsibilities that go with leadership. The key factor in understanding leadership as a relationship is the notion that one cannot be a leader without followers. No matter how fine one's speeches or how numerous one's awards, without a constituency, one is not a leader.

Because relationship building is central to the craft of organizing, it is central to the exercise of leadership in organizing. If the interaction between leader and followers yields a deeper understanding of values and how to translate them into action, it becomes what Burns calls moral leadership. And although identifying, recruiting, and developing leadership is critical to the capacity of most organizations, it is the particular focus of organizers, whose work is to be leaders of leaders. The primary responsibility of an organizer is to develop the leadership capacities of others and, in this way, of the organizations through which their constituents act on their common interests.

How Does Leadership Work?

The voluntary associations that are developed in the course of organizing only work when people are willing to accept both roles of leadership and followership. Leading and following are not expressions of who members are but of what they do in a specific meeting, committee, project, organization, or institution. A person may play a leadership role in one project and a followership role in another.

What are the differences in those roles? Leaders accept responsibility for very specific pieces of work a group must do to work together successfully. As the feminist scholar Jo Freeman argues, organization (or collaboration of any kind) simply doesn't work if people don't have ways to assign clear responsibili-

ties and hold members accountable for fulfilling them. A most important responsibility is that of seeing to the needs of the group as a whole: This is the responsibility of the leader. Although leadership can be exercised by individuals working in a team (and indeed, a leadership team can bring complementary strengths to bear on solving a problem) the responsibility of seeing to the team itself still has to rest somewhere.

One should also distinguish authority from leadership. Authority is a legitimacy of command usually attached to specific social positions, offices, or roles—legitimacy supported by cultural beliefs as well as coercive resources. An organization is a way to formalize authority relations among the participants. Bureaucracies structure authority as a set of rules according to which managers direct subordinates. Markets structure authority as a set of rules according to which entrepreneurs can design incentives for persons to make enforceable choices based on their individual economic resources. Civic associations—the type of structure developed by organizers—usually structure authority democratically: Leaders are accountable to the constituents whom they serve. Exercising leadership in a civic context can require more skill than it does in the other settings because it depends more on persuasion than on command.

Cultures' institutionalized beliefs about who is authorized to lead and who is not can bar certain people from the opportunity to earn the title of leader. Leaders who develop under these conditions constitute a challenge to conventional ideas of authority. Authority can also be a resource a person draws upon to earn their leadership, and conversely, leaders sometimes find authority has been conferred upon them as a result of their having earned their leadership. But leadership and authority are not the same thing.

Finally, leaders should be distinguished from activists. Hard-working activists show up every day to staff the phone bank, pass out leaflets, and put up posters; they make critical contributions to the work of any volunteer organization. This is not the same, however, as engaging others in doing the work of the organization. Leadership is exercised through relational work.

What Do Leaders Do?

Perhaps one way to understand what leaders do in the context of organizing is to compare successful civic associations with unsuccessful ones. The unsuccessful ones might well be called “disorganizations.” They are:

Divided. Factions and divisions fragment the organization and sap its resources.

Confused. Each person has a different understanding of what's going on. There is a lot of gossip, but not very much information.

Passive. Most “members” do very little; one or two people do most of the work.

Reactive. They are always trying to respond to some unanticipated new development.

Inactive. No one comes to meetings. No one shows up for activities.

Prone to drifting. There is little purposefulness to meetings, actions, or decisions, and things drift from one meeting to the next.

Successful organizations, on the other hand, really work. In successful organizations, people

are united. They have learned to manage their differences well enough that they can unite to accomplish the purposes for which the organization formed. Differences are openly debated, discussed, and resolved.

share understanding. There is a widely shared understanding of what's going on, what the challenges are, what the program is, and why the current course of action was adopted.

participate. Lots of people in the organization are active; they not only go to meetings but also get the work of the organization done.

take initiative. Rather than reacting to whatever happens in their environment, they are proactive, and act upon their environment.

act. People do the work they must to make things happen.

share a sense of purpose. There is purposefulness about meetings, actions, and decisions and sense of forward momentum as work gets done.

It is the quality of the work leaders do within them that makes groups work. A good leader steers

the group away from the bad characteristics of the “disorganization” and toward the characteristics of a good organization. Leaders turn division into solidarity by building, maintaining, and developing relationships among those who form the organization. Leaders turn confusion into understanding by facilitating interpretation of what is going on with the work of the organization. They turn passivity into participation by inspiring people to commit to the action required if the group’s goals are to be accomplished, and they turn reaction into initiative by strategizing—thinking through how the organization can use its resources to achieve its goals. Inaction becomes action when leaders mobilize people to turn their resources into the specific actions that will lead to the achievement of their goals, and drift becomes shared purpose when leaders accept responsibility for overseeing the group and challenge others to accept their responsibility as well.

ORGANIZERS AND THE ART OF INTERPRETATION

In the context of organizing, the art of interpretation is the art of figuring out what the group should do and why it should do it. We reinterpret our world and our roles within it even as we change it. Our understanding of ourselves and the world around us is based not on raw data but on interpretation of the data. In examining the data, we ask, Is this good for us? Is it bad for us? Is it irrelevant for us? We interpret data by contextualizing it within schemata, or frames, that we have learned. Frames are patterns of understanding that influence what we remember, what we pay attention to, and what we expect that give meaning to the discrete pieces of information we encounter. Frames are emotionally anchored, derive from our direct experience, and give us our grip on the world.

Two Ways of Knowing: Why and How

We can distinguish between two ways in which we interpret the world: narrative and analytic. We construct a narrative understanding of who we are, where we are going, and how we hope to get there that is

rooted more in how we feel about things (affect) than in what we think about them (cognition). A narrative understanding is inductive; it is “true” insofar as it moves us, and it dominates the fields of religion, literature, poetry, and politics. The psychologist Jerome Bruner argues that the power of narrative understanding to engage comes from the wisdom it promises to reveal to us about coping with uncertainty. Its power to move us grows out of the extent to which we can identify with the protagonists.

Analytic understanding is based on our application of critical reason to data about the world. It is rooted more in what we think about things than in how we feel about them. It is deductive, governed by rules of logic, and often constructed in the form of syllogism. It dominates in the fields of economics, policy analysis, and much scientific research. Although its persuasive power ultimately rests on evidence (experience) that supports or fails to support its hypotheses, it is based on our acceptance of the assumptions on which the logic is based or the authority of those who invoke this logic.

Mobilizing Motivation: Storytelling

As indicated above, leaders motivate followers to transform a passive “disorganization” into an active “organization.” Strategy turns reaction into initiative by mobilizing thinking, but motivation turns passivity into participation by mobilizing feelings.

Organizers mobilize people’s feelings in ways that help people overcome their inhibitions about taking action. Many people have conflicting feelings on various subjects; mobilizing one set of feelings to challenge another produces an emotional dissonance, a tension that can only be resolved through action. This process is sometimes called “agitation.” Anger can be mobilized to challenge fear; hope can challenge apathy; belief in one’s ability to make a difference can challenge self-doubt; solidarity can challenge isolation, and urgency can challenge inertia.

One useful tool is the motivational conversation, a form of storytelling. Henry V (1387–1422) motivated the English troops in France before the battle of Agincourt by telling them a story—not a story about what once was, but a story about what could

be. Stories of what could be, stories of hope, are one of the main ways organizers translate values into action.

In listening—or in telling—a story, we experience the tale’s events as events in our own lives. We become part of the story; we respond, call up our own stories, and tell one in response. Stories engage because they teach us how to deal with the unexpected. Although we often tell stories set “once upon a time,” what moves us to tell stories is concern not with the past but with the future. Through stories we can draw on the past to meet a current challenge, to shape a desired future. That is what Henry V did: He drew on his men’s understanding of their past, their identities, to face a current challenge in a way that would make a new, better future possible for them.

When we start a new organization, we not only build new relationships and mobilize new resources, but we begin a new story—a story that, if it is successful, will weave together many individual tales in an encompassing story of the community within which we live. Organizers learn to tell a story of hope that answers the questions Why now? Why us? and, for those whom one hopes to mobilize, Why you?

If deliberative work occurs in meetings, storytelling occurs in celebrations. Meetings are about thinking; celebrations are about feeling. But a celebration is not a party; it is a way members of a community come together to honor who they are, what they have done, and where they are going—often symbolically. Celebrations can be formal or informal; they include rallies, fiestas, victory parties, shared meals, mass meetings, and religious services. Small celebratory acts can be introduced into many aspects of an organization’s life. Amnesty International, for example, ends its meetings with a short letter-writing session on behalf of one of the prisoners for whom it is advocating. More important than the number of letters written is the affirmation of what the organization is all about.

STRATEGY AND POWER

Strategy is how we turn what we have into what we need to get what we want; that is, strategy is how we turn resources into power. If we think of power as the

influence one actor can have upon another because of an imbalance in interests and resources, one way to correct the imbalance is to find more resources. But more resources aren’t always available. So another way to correct the imbalance is to move the fulcrum on which the balance rests to get more leverage out of the same resources. This is what good strategists learn to do: They learn to get more leverage from the resources that are available. Power, then, is not only a matter of material resources, but also of imagination.

What Is Power?

Power works in at least two different ways. Traditionally we think of it as “power over,” or dependency and domination. I gain power over others by making them dependent on me for resources they need. That power then gives me access to their resources on terms that meet my interests at their expense. An employer, for example, who controls most of the opportunities for income in a company town can exercise power over individual workers who need the income, thus gaining access to their labor at low wages. The employer can exploit the worker because the worker depends on the employer. The employer’s interests get addressed, but at the expense of workers’ interests, which do not.

But there is a second way to look at power—as “power to,” or interdependency. When I have resources you need and you have resources I need, an opportunity exists for an exchange that can enhance our combined power. In this setting, mobilizing power is not a zero-sum game. New immigrants, for example, may pool their savings in a credit union to make low-interest loans available to members, increasing their financial power. “Power to” is a result of social cooperation and our capacity to accomplish together what we cannot accomplish alone.

Organizing based on collaboration requires finding ways to generate power to achieve common interests. On the other hand, organizing based on claims making requires finding ways to generate enough power to alter relations of dependency and domination that are due to preexisting conflicts of interest. If workers combine their resources in a

Advice for Activists

Randy Battle, musician and activist, was involved in the civil rights movement of the 1960s. Below, he offers advice for community organizers and activists.

I have found that it's better to go into a community if you are planning on staying for a while, and first getting to know people and letting people get to know you. Now you can become known and get to know people in many ways. You can first start by going to the churches, cafes, school dances, community club meetings, if there are such. And at all of these, whatever you go to, you should talk to people, and try to get them to either let you come around to their homes or you ask them to yours.

If you are young, like most of us are, then you must be careful about how you go about talking to older people. The best way to get to the older people is to have something to offer. If you have ever been in the field, often it is found that older people like to talk about jobs, bad streets, no street lights, bad housing, and how the white school is so much better than their own. People talk about these because most of the time they don't know enough about any of the other things that affect them to talk about them. So the thing for you to do is to kind of ask questions and answer them at the same time. To do this will, or would, give people other things to think about.

After you have made yourself known you are then able to ask things of the people. You can ask them why they are living in such a bad house and get an answer without offending the person whom you are talking to. But without being known you just can't talk truthfully with a man or woman who only makes \$10 a week in Miss Ann's kitchen, or who toms for Mr. Charles for \$25 or \$30 a week, and look for an answer. I have found that now they will tell why they don't do anything or go along with the things The Movement does. I find mostly people will say that M. L. King won't give me a job when I lost the one I have, nor will he give me any food for my hungry children. So I am going to keep away from them Movement people like my boss told me, because she is the one who is going to help me.

What I will say is that the first thing you do when you go into a community is to get to know as many people as you can, not as a leader or anything of that kind, but as a person tired of living in bad houses on bad streets without

lights, no place for your child to go after school, and not a very good school.

I don't think you should worry about making contact when you go into a community, because if you do the things I have stated heretofore then you have made your contacts. Also, by this time you should know who the key people are, whatever that means. Maybe I should ask what kind of people are considered as key people. Then maybe I could speak to that. I don't know how to get people into a leadership position. But there are ways, I know. Sometimes you just kind of force them one way or another by asking them to do little things, whatever may be the situation where you are or maybe where he's working. All people are not the same; it takes more to get some people going than others.

But to me there is something in your letter of which I have read, that has some real meaning to me. And that is how do you overcome fear, apathy, and suspicion—not only in the hard-core areas, but everywhere there is a movement under way. I don't believe anyone knows how to overcome these. One can only say what he or she feels is the best way to overcome fear, apathy, suspicion.

Before I say what I feel, I would like to go back to what Sherrod would say when he asked people to go down in a march or sit-in. He would look at you a while, then slowly he would say, "If you can free a person's mind, then he or she is able to think." In so many words he would say if you can give a blind man 20-20 vision, then he will be able to see when he comes to a corner. How do you free one mind? In my own mind I would say somewhat in the same way you overcome apathy, fear, and suspicion.

But there is just one thing that I worry about most; and that is fear; for I believe if you can overcome fear then all of the others you can easily overcome. There are many ways to overcome fear, and for some people a few or one of the ways will help them to overcome fear. And for others it may take all of them. The way to overcome fear could be for some people registering to vote, or going downtown in a march or sit-in, or going to the police station to go someone's bond.

union, they may be able to balance their individual dependency on their employer with his dependency on their labor as a whole. This way a dependent

“power over” relationship can be turned into an interdependent “power to” relationship.

A key to successful organizing is understanding

that getting the power to challenge relations of dependency and domination (“power over”) may require creating lots of interdependency (“power to”) first. Many unions, for example, began with death benefit societies, sickness funds, credit unions—in other words, by creating “power to” based on interdependency among members of the constituency.

We can distinguish three faces of power. The first is the visible face, which can be detected by observing who wins among decision makers faced with choices as to how to allocate resources. But who decides what gets on the agenda in the first place? And who decides who sits at the table making decisions? Deciding what gets on the agenda and who sits at the table is the second face of power—the gatekeeper face. In the years of apparent “racial harmony” before the civil-rights movement, African-Americans ran up against that face of power as they saw their issues repeatedly left off the national agenda.

The third face of power is harder to detect. Some power relations that shape our world are so deeply embedded that we take them for granted. Before the women’s movement, for example, many people claimed that job discrimination against women was

not an issue. Women’s interests were not being voted down in Congress (there were almost no women in Congress) and women’s groups were not picketing outside, unable to place their issue on the agenda. Yet women occupied subordinate positions in most spheres of public life. Was that because they were content with their lot? Perhaps. But sometimes people would like things to be different but simply can’t imagine how they could be—not clearly enough, at least, to take the risks to make them so. To detect the power relations at work in a situation like this, one has to look beyond the question of who decides or who puts issues on the agenda and focus on identifying who benefits and who loses in the allocation

of valued resources. If one then asks why the losers generally lose and the winners generally win, one may discover a power disparity at work. (This can be tricky because the winners always claim they deserve to win and that the losers deserve to lose, and sometimes they convince the losers).

Strategy and Tactics

Strategic action is a way of acting, not an alternative to action. It is acting with intentionality, with mindfulness of one’s goals, as opposed to acting out of habit or emotional reaction. So devising strategy is an ongoing activity, not simply a matter of making a strategic plan at the beginning of a campaign and then sticking to it. Planning helps organizers arrive at a common vision of where they want to go and how they hope to get there, but the real action in strategy is, as the organizer Saul Alinsky put it, in the reaction of other actors, of the opposition, of chance events.

Although strategic action is taken with reference to the future, it occurs in the present. When we strategize, we give a voice to the future in the present. When we don’t strategize it is often not because we don’t know how, but because strategizing can be

very difficult. When we must make choices about how to invest scarce resources, voices of present constituencies speak most loudly; the voice of future constituencies is silent. Strategy is a leadership task in part because it requires real courage: leaders must be willing to say no to current demands and find the faith to commit to an uncertain future. Our choices may result in the hoped-for outcome, but then again, they may not. Trying to shape the future may require choices that involve substantial risk in the present.

We can understand strategy by breaking it down into three elements: targeting, timing, and tactics. Targeting is figuring out how to focus limited resources on doing what is likely to yield the greatest result, especially in terms of constituency, issues, and opposition.

Timing is about sequencing activities to take the initiative and keep it, build momentum, and take advantage of opportunities as they arise. You are wise to use initial tactics that yield resources that can give you a greater capacity to succeed at your next steps. Another timing question is when to confront the opposition, or, if the campaign is collaborative, when to face the most difficult challenge. Alinsky wrote that it was important never to seek a confrontation you could not win.

Tactics are specific activities with which you implement your strategy. They are consistent with your resources, but expose your opposition's lack of resources. They build on your strength and your opposition's weakness. They fall within the experience of your constituency, but outside the experience of your opposition. They unify your constituency, but divide the opposition. They are consistent with your goals. Violent tactics in pursuit of peaceful goals are dissonant, as are goals of empowering people that rely on mobilizing money.

Good strategy is a creative process that involves learning how to achieve one's goals by behaving adaptively in the face of constantly changing circumstances. It relies on inputs from people with diverse experiences, people who know the nitty-gritty detail of the situation, but who also have learned that there is more than one way to look at things. Good strategists have learned what there is to know about the trees, but can also picture the whole

forest. In civic associations a key element in developing good strategy is the deliberative process by which it is devised. The more people are involved in making strategy, the more committed they will be to making it work. Although good strategy can be the fruit of a strategic genius, it is more often the result of a good strategy team.

Action, Planning, and Strategy

One explanation of the way things get accomplished is that we evaluate our environment, we make a plan, we take action, we evaluate our action, we modify our plan, and so forth. In reality, the process is far less methodical than this. Sometimes it is only by taking action that we gain the understanding we need to develop a meaningful plan. The students who conducted the first sit-ins in Greensboro, North Carolina, in 1960 in protest of segregation had no elaborate strategic plan about how their action would give rise to a whole student movement. By taking action they focused the issue, inspired others to act, and sparked a movement that made all sorts of plans possible that would have been inconceivable had they not acted. The nineteenth-century social reformer Jane Addams warned against being caught in the "snare of preparation"—a common academic affliction—in which one believes that with just one more survey, just one more data point, or just one more regression, the course of action will be clear. Sometimes it is only by doing that we come to know what is possible, especially in the work of making change.

A complete organizing strategy answers three questions: How do we build relationships, how do we interpret what we are doing, and how do we do it? The account of one of the labor organizer César Chávez's first house meetings offers a glimpse of an action program in the making. Chávez clearly brought with him a vision of where the organization could go. The conversation unfolded, however, in terms of the interests of those who came to the meeting—burial and credit. Chávez led them into a reflection on how establishing a death benefit and a credit union would help them. And how could these goals be achieved? Each person could begin that very

evening by filling out a census card or agreeing to host a meeting of his or her friends. In this way, the goals of an action program evolve from the interests of a constituency, and the steps to be taken are based on the resources available to it. What went on at that house meeting also shows how narrow individual interests can be translated into the basis for broader community action.

Whether an organization pursues a collaborative or a claims-making strategy, its action program usually begins with collaborative tactics, which can help build a broad base of support to develop as much organizational capacity, or “power to,” as possible. These tactics can be used to achieve collaborative goals such as a credit union, a death benefit, or cooperative day care. On the other hand, if the organization has a claims-making intent, a foundation built in this way can be the first step in challenging someone else’s “power over” the community. It might, for example, eventually lead to getting the city to allocate funds, an employer to raise wages, or Congress to pass a law, though those goals may also require direct action, political action, or economic mobilization. In any case, collaborative work lays the foundation by creating enough “power to” to begin to challenge “power over.” Social service programs are usually collaborative, whereas social action programs usually involve claims making. Mobilizing community resources for an after-school tutoring program is an example of collaborative action or “power to.” Mobilizing to require a university to establish an ethnic studies program is an example of claims-making action that challenges “power over.”

RESOURCE MOBILIZATION AND EFFECTIVE ACTION

If you draw all your resources from within your constituency, then you are accountable for how you deploy those resources only to the constituency. Resources gained from outside the constituency, on the other hand, often entail accountability to those who contribute them, which places limits on how they can be used.

Similarly, devising tactics that require lots of money, if what you have is lots of people, can

impose severe constraints on what you do. Basing your action program on tactics that require mobilizing people, on the other hand, can most directly empower your constituency, but it can constrain you to find tactics in which your people are willing to take part.

Finally, action programs that generate resources must be distinguished from action programs that drain resources. In union organizing, for example, the more successful the union, the more members it gets, the larger the dues base, the more leadership it has developed, and the greater its human and financial resources. Similarly, as some community organizations conduct parish renewal work among member churches, their human and financial capacity grows. Grant-based action programs, in contrast, often fail to generate new resources from the work they do, and keep themselves in a state of perpetual dependency.

The beauty of a tactic such as the grape boycott of the 1960s and 1970s is that it was an action in which everyone could play a part, whether by simply boycotting grapes at the supermarket, or, as in the case of one student, by dropping out of school to work full-time for the United Farm Workers. At one point in 1975, pollster Lou Harris found that 12 percent of the American public—at that time some 17 million people—were boycotting grapes. The wider the opportunity to act, the wider the participation and the responsibility.

Action entails cost in the form of time, effort, risk, and hard work. Sacrifice can also be widely shared. The more widely it is shared, the more people have a stake in the outcome. The boycott is a good example of this as well. When one or two people do all the sacrificing, they quickly become burned out, while everyone else blames them for whatever goes wrong.

The flip side of shared sacrifice is shared success. When many people have an opportunity to contribute to the effort, they also share in its success. It is their victory, not someone else’s. This, in turn, creates motivation and a sense of entitlement that facilitates accountability.

There is no right or wrong answer to what an appropriate relationship between resources and action should be. Understanding the relationship is

essential, however, if one is to make conscious choices about how to set up an organization so it has a chance to accomplish its purposes.

LEADERSHIP DEVELOPMENT

Given that leaders are so important to organizing, it helps to develop a “leadership-rich” organization, which means that organizers need to learn to delegate. Letting others take responsibility is easier if one thinks about it in terms of the following seven factors:

1. *Risk*: Risk small failures early in the life of a project in order to avoid *big failures later on*.
2. *Selection*: We develop good judgment about people by taking risks, making choices, experiencing success and failures, and learning from this experience. The more experience one has in selecting people, the better one’s judgment becomes.
3. *Motivation*: When looking for someone to take responsibility, don’t make the responsibility easier, and easier, and easier . . . until there’s nothing left. The challenge is in learning to motivate people to *accept the level of responsibility needed to get the job done*.
4. *Responsibility*: Delegation is not about assigning tasks, but offering responsibility.
5. *Support*: Once a person accepts responsibility, it is in the organizer’s interest to offer him or her as much support as is needed to ensure his or her success. The challenge is learning to offer support without taking back the responsibility.
6. *Accountability*: Delegation is real only if the person is clearly accountable for the responsibility he or she accepted. Accountability should be regular, specific, and timely. The point of accountability is not to catch people to punish them, but to learn what kind of results they are getting so everyone can learn from them.
7. *Authority*: You cannot expect a person to take responsibility without authority.

Developing a leadership-rich organization also requires a conscious strategy for identifying leaders (opportunities for leaders to emerge), recruiting leaders (opportunities for leadership to be earned),

and developing leaders (opportunities for leaders to grow).

Identifying leaders requires looking for them. Who are people with followers? Who brings others to the meetings? Who encourages others to participate? Who attracts others to working with him or her? Whom do other people tell you to “look for?” Alinsky writes about community networks knit together by “native” leaders—people who take the responsibility for helping a community do its work out of their homes, small businesses, neighborhood hangouts, and so on. They can be found coaching athletic teams, serving in their churches, and surfacing in other informal schools of leadership.

Recruiting leaders requires giving people an opportunity to earn leadership. Since followers create leaders, they can’t appoint themselves or be appointed. But one can create opportunities for people to accept the responsibilities of leadership and support them in learning how to fulfill these responsibilities.

Developing leaders requires structuring the work of the organization so it affords as many people as possible the opportunity to learn to lead.

LEADERSHIP TEAM OR LONE RANGER

The most successful organizers are those who form a leadership team with whom to work early on in their campaign. Although it can be a mistake to recruit people to act as an organizing committee too early—especially if you are not careful to recruit people whom the constituency views as leaders or at least potential leaders—organizers more often err in delaying too long. The sooner you have a team of people with whom to work, the sooner the “I” of the organizer becomes the “we” of the new organization. One you have formed a leadership team you can more easily establish a rhythm of regular meetings, clear decisions, and visible accountability that will help make things actually happen.

P

PANAMA CANAL, BUILDING OF

For four hundred years, European nations that wanted faster access to the land and riches of the Pacific Ocean dreamed of building a passage through Central America to unite the two great oceans. As early as 1529, Spanish conqueror Hernando Cortés made a proposal to Charles V for the construction of an isthmian passage through Panama. Other proposals by countries as diverse as England and Russia followed, but it was not until the early twentieth century that the dream became a reality. This was the result of the leadership of a number of powerful, self-confident men, from the visionary French promoter who built the Suez Canal to a slippery Wall Street lawyer, an ambitious U.S. president, a patient and imperturbable doctor, and a handful of talented engineers.

THE FRENCH FAILURE

Before his disastrous attempt to construct a canal through Panama helped bring down the French Republic, Ferdinand de Lesseps, a powerful and convincing promoter, had successfully used the new power of the machine to accomplish what many had regarded as impossible, to build a canal that united the Mediterranean Sea with the Indian Ocean through the strait of Suez. He saw himself as a prophet of biblical proportions, and even stated that what he was doing was nothing less than undoing the work of

Moses. As Moses had separated the oceans with one sweep of his hand, he had united them. When the Suez Canal was completed, de Lesseps, already in his late sixties and the most famous citizen of France, felt he was destined to build the great interoceanic passageway in Central America that people had been dreaming of for centuries. In 1872, he assembled a technical committee and called for a universal congress to study the feasibility of building such a canal. Studies were presented analyzing various routes, including one through Nicaragua. De Lesseps chose Panama because it had the narrowest strait.

In 1879, de Lesseps chartered the *Compagnie Universelle Pour le Canal Interoceanic*; its stated purpose was to build the Panama Canal, *la grande entreprise*. It was the biggest human undertaking ever attempted. The cost was calculated at \$240 million, twice the cost of Suez, and the time for construction was estimated at twelve years, also twice as long as Suez. Most of the money was raised by issuing shares of the company, which were purchased by thousands of small investors who gave their life savings to de Lesseps. Immediately, the tragic work on the French canal in Panama began.

DE LESSEPS'S MISTAKES

The work was expected to be finished by 1882, but by that date, because of crucial mistakes, only one quarter of the excavation had been completed. First,

de Lesseps had failed to appreciate the differences between Panama and Egypt. The weather in Egypt was dry, whereas in Panama it was humid and torrential, which caused landslides and increased the need for excavations. Second, de Lesseps insisted on a sea-level canal without locks similar to the canal he built in Suez, but the elevation of the continental divide in Panama meant that the digging required for such an enterprise was nearly impossible, even by today's standards. Third, the administrative costs were excessive. De Lesseps, already an old man, did not supervise the work, which fell into the hands of his younger son, Charles, and others, who wasted as much as one-third of the investors' money in matters unrelated to the construction. Finally, yellow fever, malaria, and other tropical diseases took an immense toll on the workers. When it became clear that the company was insolvent, de Lesseps made several attempts to raise more money, but failed. In December 1889, the French government appointed a liquidator, and the work was stopped.

The bankruptcy of the *Compagnie Universelle* was a failure of massive proportions. Hundreds of thousands of peasants throughout the country who had invested their life savings in the company's stock saw their money evaporate. Investigations by French tribunals were instituted to seek out the reasons for the largest insolvency in history. The scandal contributed to the downfall of the French Republic and

destroyed France's cherished image of itself as the technological leader of mankind.

In Panama, all that remained of the original company were a few rusting dredges, and most of the excavation had disappeared under tropical mudslides. The only valuable asset was the concession to build the canal granted by Colombia, of which Panama was a province, but even this was set to expire in a few years. France's only real hope of recouping some of its investment was to sell the rights to build a canal through Panama to the United States.

THE U.S. CHOOSES PANAMA

Since the 1840s, the United States had wanted to build an isthmian route to facilitate the massive migration spurred by the California Gold Rush. However, because of the French failure in Panama, public sentiment in the United States supported a plan to build a canal through Nicaragua, using its two lakes, Lake Managua and Lake Nicaragua, rather than through Panama. For France, however, such a choice would mean the loss of its \$250 million investment in the attempted construction of the Panama Canal. Desperate, they set out to sway American opinion by any means. For that purpose, they went to New York and hired the professional services of a wily Wall Street lawyer named William Nelson Cromwell.

William Nelson Cromwell's Lobby

A little man with wavy white hair, a brilliant mind, and a slippery reputation, Cromwell offered more than a law firm. He had press agents, accountants, and politicians who helped him lobby his cases in Washington, D.C. After he accepted the French offer, he put together a lobby of financiers and politicians to convince President William McKinley and Congress to build the canal through Panama. However, he soon found himself up against an entrenched Nicaragua lobby. Democratic Louisiana senator John Tyler Morgan, president of the Inter-oceanic Affairs Committee, had introduced a bill dedicating U.S. funds to the construction of the Nicaragua Canal.

Not a man who was easily discouraged, Cromwell

used his influence and money to convince the powerful chairman of the Republican Party, Senator Mark “Dollar” Hanna, to block Morgan’s bill and to appropriate money for a new study of all possible routes, including Panama. However, in spite of his great campaign, in January 1902 the House of Representatives passed a bill approving the construction of the canal in Nicaragua. Later that month, the United States and Nicaragua signed a formal treaty for the construction of the canal. The death bells for Panama had begun to toll.

Theodore Roosevelt Decides on Panama

That fall, however, Theodore Roosevelt was rushed into office when President McKinley was assassinated by an anarchist in Buffalo, New York. A powerful, impetuous, and determined leader, Roosevelt immediately sought to put an end to the isolationism of nineteenth-century America and to turn the United States into the most powerful nation in the world. Having fought in the Spanish War in Cuba, Roosevelt knew that in order to protect its vast territory, the United States needed a fast route across Central America to get its fleet from one ocean to the other. Unlike his predecessor, he did not let Congress make the important decisions of his presidency. He opposed the choice of Nicaragua and supported Panama because he believed the latter to be the fastest route. He got his friend Senator Spooner to propose a bill in the Senate for the construction of a canal through Panama, not Nicaragua. A bitter debate in the Senate followed his decision to support Panama. Senator Morgan and other Nicaragua supporters made a vitriolic attack on the defenders of Panama, and the debate raged on.

The Persuasiveness of Phillipe Bunau-Varilla

The major French stockholders of the Compagnie Nouvelle sent the brilliant and flamboyant former head engineer for de Lesseps, Philippe Bunau-Varilla, to help lobby Congress and the press. During the debates, he and Cromwell wrote the report that Senator Hanna presented in favor of Panama. Bunau-Varilla began to preach the dangers of volcanic erup-

tions in Nicaragua. A few days before the final vote, he sent every senator postage stamps of Nicaragua showing a volcano erupting near one of the lakes where the canal was to be built. Many senators who had been ambivalent were won over to the side of Panama. As a result of the lobby’s whirlwind activity, Congress adopted the Panama route.

CROMWELL DEFEATS COLOMBIA’S DEMANDS

The Spooner Bill required the Roosevelt government to negotiate a favorable treaty with Colombia. For this purpose, Secretary of State John Hay, a scholarly man with great experience in international relations, called upon Cromwell to negotiate the treaty with Colombian ambassador Tomás Herran. Cromwell negotiated a \$40 million payment for the bankrupt French Compagnie Nouvelle and a \$10 million payment for Colombia. The Hay-Herran treaty was signed in January 1903, and the U.S. Senate approved it a month later. However, after the treaty was ratified, Colombia demanded part of the \$40 million dollars that the Compagnie Nouvelle was going to receive from the United States for the concessions. Cromwell convinced Roosevelt and Hay that Colombia was acting in bad faith and got them to oppose the demand. This prompted the Colombian Congress to reject the Hay-Herran treaty.

Roosevelt was now faced with the following choices: first, to continue to negotiate with Colombia until it changed its mind; second, to construct the canal in Nicaragua; or third, to support the secession of Panama from Colombia and sign the treaty directly with Panama. Roosevelt chose the third option.

U.S. BANKROLLS THE REVOLUTION IN PANAMA

For more than fifty years, Panamanians had tried to secede from Colombia but they did not have the military power to battle the much stronger Bogotá government. All this changed in September 1903, when the seventy-year-old doctor of the American-owned Panama Railroad Company, Manuel Amador

Guerrero, traveled to New York to procure U.S. military support and Wall Street money for a new rebellion. He planned the independence of Panama with Cromwell and Bunau-Varilla over the course of several meetings in the Waldorf Astoria hotel. During this time, Bunau-Varilla acted as a go-between for the Panamanians and Washington.

Having procured the support that he sought, Amador returned to Panama, and on 3 November he led a local rebellion that declared Panama independent, propelling the Colombians to send troops to regain the territory. Roosevelt sent a warship, the *Nashville*, to Colón on the Atlantic coast to prevent the landing of the Colombian troops. During the revolution, the Panamanian patriots relied on their unlimited supply of Wall Street dollars to bribe Colombian troops to go home without fighting. As a result of the support of Washington and New York, Panama became an independent country without bloodshed. The United States could now negotiate the Panama Canal treaty directly with the new Panamanian government.

Bunau-Varilla's creativity and aggressiveness thrust him to the forefront of the negotiations between Panama and the United States for the treaty. He was instrumental in getting the U.S. government to grant recognition and its continuing protection to the new Panamanian government. In exchange, however, he demanded the right to negotiate and sign the Panama Canal treaty on behalf of the new country. Panamanians did not want to give Bunau-Varilla such authority, but instead wanted Amador, who had departed for Washington, to do so. However, under pressure, the Panamanians bulged to Bunau-Varilla's demands, and in a matter of days he swiftly negotiated and signed the treaty on behalf of the Panamanian government with Secretary Hay before the Panamanian delegation arrived in Washington.

According to the treaty, Panama transferred sovereignty to the United States for perpetuity over an area ten miles wide on each side of the canal. Despite some hesitations from Secretary Hay to sign such a one-sided treaty, on 18 November, he and Bunau-Varilla dipped their pens into an inkwell that had belonged to Abraham Lincoln and signed the Hay-Bunau-Varilla treaty. The Hay-Bunau-Varilla

was ratified by the Panamanian Junta only three days after it was signed, and by the U.S. Senate a few months later.

Despite the initial criticism of Roosevelt for the means he used to obtain the rights to build the Canal, the debate over his methods ended when he exclaimed, "Let the dirt fly!" to start the Herculean task of building the Panama Canal. From that moment, the medical, administrative, and engineering challenges of splitting two continents occupied center stage.

THE CONSTRUCTION CHALLENGES

The first main challenge was to eradicate malaria and yellow fever from the Isthmus. The American builders realized that unless they eradicated these diseases, they would face the same fate as the French canal builders, who lost more than ten thousand people and sealed their project's doom. They drafted Dr. William Gorgas for the job.

Dr. William Gorgas Cleans Up the Isthmus

Gorgas was a military doctor whose disciplined approach to conquering yellow fever in Cuba by eradicating the mosquitoes that carried the disease landed him the dangerous job of replicating the miracle in Panama. He was a charming and likable man who had spent most of his life at frontier outposts facing extreme hardships that would have defeated other men, including catching yellow fever, which almost killed him. Instead of succumbing to the hardships, the imperturbable Dr. Gorgas learned discipline and devotion to duty.

Even though he had played no part in discovering their cause, he believed that the most effective way to eradicate both yellow fever and malaria was to reduce the number of mosquitoes by preventing them from hatching eggs, and also to keep them from getting near anyone who had been infected with the disease. But Gorgas faced many obstacles. First, the entire isthmus was a mosquito paradise; during the rainy season, the innumerable pockets of water that collected everywhere were perfect for mosquito breeding. Second, since the mosquito the-

ory of disease was a matter of much debate, he faced opposition by his superiors to his campaign and was not given the supplies or manpower that he requested.

Despite official skepticism and lack of support, the stubborn Dr. Gorgas launched his campaign with only seven paid men, and he used his charm to convince locals to volunteer with some of the more menial tasks. He divided the Isthmus into zones and assigned people to them; within each zone, doors and windows to infected people's rooms were sealed off with newspapers; people with disease were kept underneath mosquito nets; water jars, cisterns, stray buckets, and barrels with rainfall were turned over; footprints of cattle, or any puddles in which water might collect, were dried. Once the campaign was fully organized and took effect, the mosquito population diminished significantly and epidemics became a thing of the past. It was a laborious, tedious task, but one that saved thousands of lives and made possible the massive engineering work.

John C. Stevens Brings Order

Before the engineering work could be undertaken, it was necessary to determine the strategy for doing so and to organize the labor force for the largest construction project in history. This required an enthusiastic leader with personal charisma, a top strategic thinker, and a great planner. The railroad engineer and executive John C. Stevens was chosen by Roosevelt to be this man. A free spirit with no formal education who had risen himself from poverty to become head of railroad companies, Stevens stressed planning, familiarity with details at every level, and organization. "If I have five minutes in which to save my life, I would take three to think about it and two to do it," he used to remark. When he took over in July 1905, he stopped the digging of the canal that his predecessor, John F. Wallace, had commenced, and spent the following year thinking how best to approach the majestic task ahead of him. He interviewed people, asked thousands of questions, sought advice, became familiar with details, and built consensus before making a decision. Borrowing from the strategy he used to build the great

Northern Railroad across the Rockies, he gave the "best-fitted" men tremendous responsibility and then held them strictly accountable and ensured that important decisions were made in the field and not in Washington, D.C.

Unlike his predecessor, Stevens gave Gorgas all the men and supplies that he needed to free Panama of disease and to improve the moral of workers. He personally spent much effort organizing the labor force to boost worker productivity, ensuring that every one of the 24,000 employees that came to Panama from all over the world to build the canal had adequate housing, food, and the tools and training that they needed to perform an optimal job. He also established clear guidelines to control the supply of inventory and to ensure that constructors were not overcharging. As a result of his actions, he turned a chaotic process riddled with inefficiencies, fraud, and waste—that had partly caused the downfall of the French—into a manageable project.

Stevens came up with the idea of using the railroad cars to carry the gravel and stones that were dug from the canal out to landfills on the sea. This not only prevented the accumulation of earth that had created landslides during the French period, but also sped up the process of digging. Perhaps Stevens's greatest contribution was to convince Roosevelt and the U.S. Congress that a sea-level canal was not possible. He advocated a canal with locks on the Pacific and the Atlantic Oceans that would raise and lower a ship by as much as 240 feet from sea level. Instead of cutting through the mountainous continental divide, he decided to build several dams to create an artificial lake to flood approximately two thirds of the Isthmus and cut down on digging; this lake would also provide the water that the canal needed to operate the locks.

With the plan of attack for building the canal set, what lay ahead was a complex organizational task requiring masterful engineering that would extend for half a decade. Stevens, a free spirit, was not well suited for this mission, and quit in early 1907. Roosevelt replaced him with someone who had the experience needed for the job and the determination to stay the course, Army Corps of Engineer Lieutenant Colonel George Goethals.

GEORGE GOETHALS'S ENGINEERING FEATS

An official all of his life, Goethals was a model officer and an extremely capable engineer since graduating second in his class from West Point. He had proven his technical skills building bridges and locks for the Army Corps, and he possessed the patience, dignity, determination, and discipline of the soldier, which were needed to accomplish the long, arduous, uphill mission ahead.

Everything that Goethals did was on a colossal scale. The dam that he built to create the Gatun lake was the largest in the world. He built three locks on the Atlantic side which would raise the ships 240 feet vertically to the level of the lake, and another set of two locks on the Pacific side. Each of the five locks required four walls, each 1,200 feet long; each such wall required more cement than the tallest building in the world; and the tunnels to channel the water through the locks to raise and lower the ships were several times the height of a person and wider than the tunnels that connect New Jersey with New York. The giant electrical generators that moved the gates of the locks were undreamed of even a few years earlier.

Goethals's greatest challenge was excavating the Culebra Cut, a ten-mile-long area of bedrock in the steepest part of the cordillera. The French had failed miserably there because they had attempted to maintain a steep angle that became impossible to hold due to landslides. After facing several heart-breaking mudslides that wiped out a few months of work, with military discipline, Goethals decided to cut at a wider angle. To do so, he filled the Cut with water and continued the work with dredges. The result was four times the amount of excavation planned by the French which created a spectacular canyon that took half a decade to dig. In total, 19 million pounds of dynamite were used to remove 96 million cubic yards of dirt, enough to build a road to the moon or to build the Great Wall of China from San Francisco to New York.

A CONTINENT SPLIT

In August 1914, only a few months after World War I exploded in Europe, the steamer *Cristobal* became the first ship to travel from the Atlantic to the Pacific Ocean through the Isthmus of Panama, quietly mark-

ing the end of the greatest engineering project in history. Instead of the sea-level canal that de Lesseps had dreamed about, the Americans had built an intricate and complex waterway consisting of a huge dam to create and hold the largest artificial lake in the world 240 feet above sea level, a series of five locks, three in the Atlantic and two on the Pacific side, which would raise the ship from one ocean to the lake level and lower them again to the level of the other ocean. Instead of using their own power, ships would be pulled through the locks by railroad-type cars.

The story of the construction of the Panama Canal spans half a century. Few events in world history have led to so much conflict and pain. Its construction brought down a French republic, created a new republic, turned the United States into the technological leader of the world, and cost tens of thousands of lives. Ultimately, however, all the conflict and pain were forgotten when the dream of centuries became a reality and a new path connected the two great oceans.

PANAMA CANAL TREATIES

On 7 September 1977, at a ceremony held at the Organization of American States (OAS) in Washington, D.C., United States President Jimmy Carter and Panama's military leader Omar Torrijos signed the Panama Canal Treaty. The agreement provided for the transfer of the waterway from U.S. to Panamanian

jurisdiction over a twenty-year period, concluding on 31 December 1999. Concurrently, the two leaders signed the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal (known as the Neutrality Treaty), which established the waterway's neutrality under joint U.S. and Panamanian protection.

Hailed as a momentous event in the history of hemispheric affairs, the agreements stipulated an end to U.S. administration of the Panama Canal and the 553-square-mile Panama Canal Zone as well as to Washington's military operations by 1999, after nearly one century of statutory U.S. presence on the isthmus. But a controversial condition attached to the Neutrality Treaty by the United States Senate authorized the use of armed force by the United States, at its sole discretion, to guarantee the security of the waterway against any threat on the isthmus, at any time in the future. This amendment and other unilateral conditions adopted by the United States undermined the Panama Canal Treaties' main objective from the Panamanian and Latin American perspective: recovering the exercise of sovereignty, the principal attribute of modern nation-states, over the national territory.

The complex negotiations whereby the Panama Canal Treaties were approved illustrate the tensions between idealism and pragmatism in domestic and international politics and how these tensions influence the decisions of political leaders. The treaty that was finally to end U.S. involvement in the administration of the Panama Canal was achieved as a culmination of a long effort at a juncture in which Panamanian and U.S. interests, as articulated by Torrijos and Carter, overlapped. Although at the termination of the process the national aspirations of Panamanians for possession of their territory were realized, the many concessions to conflicting interests created injuries and imbalances, whose high cost set back the development of Panama as an independent democratic nation and tarnished the image of the United States as a friend to the legitimate aspirations of other peoples.

TREATY NEGOTIATION: A HISTORICAL BACKGROUND

Panama had for decades demanded a revision of the 1903 Isthmian Canal Convention, whereby the

United States secured the right to build, operate, and defend the Panama Canal. For these purposes, Panama had allowed the United States to administer the territory adjacent to the waterway, in perpetuity, as if it were sovereign in the area. Panama also gave the United States the right to reestablish public order, were it perturbed, in the cities of Panama and Colon, located at the opposite ends of the canal. Subsequently, the Isthmian republic acceded to Washington's request to fortify the canal through the militarization of the Canal Zone and the establishment of U.S. military sites outside the transit area.

Panama, a fledgling republic founded with U.S. assistance in November 1903, awarded Washington these rights out of necessity to protect its independence and from a position of debility vis-à-vis the United States. The Isthmian republic's demands for national affirmation were usually dismissed by Washington, whose policymakers counted on ensuring stability and responsiveness through the exercise of U.S. hegemony and cooperation with Panamanian dominant sectors (including an increasingly assertive armed force). Throughout the half century following the canal's inauguration in 1914, progress toward Panama's goal of affirming its sovereignty was only possible when aspects of Panamanian nationalistic aspirations and U.S. hegemonic interests coincided.

For instance, in 1936 President Harmodio Arias of Panama, one of the leaders of the country's nationalist movement, found an ally in U.S. President Franklin D. Roosevelt, whose Good Neighbor Policy sought to conciliate Latin American animosity over U.S. interventions in the region. As a result, Presidents Arias and Roosevelt signed the General Treaty of Friendship and Cooperation, which abrogated the public order clause of the 1903 convention, one of the most hotly contested issues. The 1936 treaty also affirmed Panama's sovereignty over its airspace.

THE 1964 RIOTS AND THE OVERHAUL OF U.S.-PANAMANIAN RELATIONS

The incident most significantly determining the beginning of negotiations toward the 1977 treaties occurred in 1964, on the canal's fiftieth anniversary. On this occasion, decisions taken by Presidents

Article I

Abrogation of Prior Treaties and Establishment of a New Relationship

1. Upon its entry into force, this Treaty terminates and supersedes:
 - (a) The Isthmian Canal Convention between the United States of America and the Republic of Panama, signed at Washington, November 18, 1903;
 - (b) The Treaty of Friendship and Cooperation signed at Washington, March 2, 1936, and the Treaty of Mutual Understanding and Cooperation and the related Memorandum of Understandings Reached, signed at Panama, January 25, 1955, between the United States of America and the Republic of Panama;
 - (c) All other treaties, conventions, agreements, and exchanges of notes between the United States of America and the Republic of Panama concerning the Panama Canal, which were in force prior to the entry into force of this Treaty; and
 - (d) Provisions concerning the Panama Canal, which appear in other treaties, conventions, agreements, and exchanges of notes between the United States of America and the Republic of Panama, which were in force prior to the entry into force of this Treaty.
2. In accordance with the terms of this Treaty and related agreements, the Republic of Panama, as territorial sovereign, grants to the United States of America, for the duration of this Treaty, the rights necessary to regulate the transit of ships through the Panama Canal, and to manage, operate, maintain, improve, protect and defend the Canal. The Republic of Panama guarantees to the United States of America the peaceful use of the land and water areas which it has been granted the rights to use for such purposes pursuant to this Treaty and related agreements.
3. The Republic of Panama shall participate increasingly in the management and protection and defense of the Canal, as provided in this Treaty.
4. In view of the special relationship established by this Treaty, the United States of America and the Republic of Panama shall cooperate to assure the uninterrupted and efficient operation of the Panama Canal.

Roberto F. Chiari of Panama and Lyndon B. Johnson of the United States were instrumental in initiating the process. Influenced by the force of events and heightened pressures for nationalist assertion in Panama, Presidents Chiari and Johnson provided the leadership required to initiate a significant revamping of U.S.-Panamanian relations.

Since 1903, the fact that Panama's flag was not flown in the Canal Zone had become emblematic of the country's subordination to the United States, the unfair cession of Panamanian land to Washington in

perpetuity by the Isthmian Canal Convention, and the U.S. "colonial" presence in the Canal Zone. All were attributed to U.S. hegemony and the complicity between Washington and Panama's dominant sectors.

The Panamanian flag became the symbol of the country's struggle to recover the exercise of sovereignty over the Canal Zone and obtain control of the Panama Canal. In November 1958 and 1959, demonstrations attempting to "plant" Panamanian flags in the Canal Zone ended in clashes between U.S. security forces and Panamanian demonstrators. Endeavoring to deflate rising tensions, in 1960, U.S. President Dwight D. Eisenhower ordered that the Panamanian flag fly alongside the Stars and Stripes at certain locations. In 1962, after meeting with President Chiari in Washington, U.S. President John F. Kennedy added fifteen more locations where Panama's standard should fly.

But on 9 January 1964, when a crowd of residents of the Canal Zone (colloquially called "Zonians") prevented a group of Panamanian students from raising their flag at Balboa High School, under U.S. administration, the Panamanian

banner was torn. As news of the altercation spread throughout Panama City and Colon, thousands of Panamanian protestors took to the streets adjacent to the Canal Zone, where they were fired upon by U.S. soldiers stationed there as part of the U.S. Southern Command. Violence escalated with Panamanian radios transmitting details to an incensed population throughout the entire country.

For several days, the areas bordering the Canal Zone were the scene of bloodshed, fires, and looting. The tragic balance of the riots was twenty-three

Panamanians and four U.S. soldiers dead, plus scores of injured and widespread property destruction. Accusing the United States of unwarranted aggression, in an unprecedented act in the history of hemispheric affairs, President Chiari broke off diplomatic relations with the United States.

Broadcast around the world, the dramatic events of January 1964 sparked widespread sympathy for Panama as the underdog and condemnation for the United States. It was President Lyndon B. Johnson's first international crisis since assuming office after the Kennedy assassination. Fearing a Communist takeover in Panama, he determined to engage in a significant overhaul of U.S. relations with Panama. Through the good offices of the OAS, diplomatic relations were restored on 3 April 1964 and treaty negotiations commenced.

Satisfying the main interests of both Panama and Washington through a negotiated agreement initially seemed possible once the United States agreed to renounce its claim to perpetuity and to resign control of the waterway to Panama after a transition period. By 1967, bilateral talks had advanced to the point of producing three texts concerning the Panama Canal, U.S. military bases on the isthmus, and the possible construction of a sea-level canal. The treaties contemplated an orderly handover of the canal to Panama culminating in 1999 and the legalization of a U.S. military presence on the isthmus. The "three-in-one" treaties had been initialed by representatives of both countries and were ready for formal signing and submission to the respective legislative branches, but the proximity of elections in Panama and vocal Panamanian opposition to the texts suspended the process.

The primary objection of Panamanian nationalists focused on the legalization of U.S. military facilities, which had not been formally contemplated in any of the preceding canal treaties. Panama had consented to the U.S. military presence only for purposes of canal defense, not as a vital part of worldwide U.S. security arrangements, as Washington was now proposing. Notwithstanding these disagreements, the Johnson administration was hoping for a treaty approval in Panama after the May 1968 elections, as part of the agenda of a new Panamanian president.

When the popular, charismatic, but unpredictable Arnulfo Arias (Harmodio's brother) was elected as Panama's president, representatives of the U.S. government began to lobby with him for swift approval of the "three-in-one" treaties.

In tandem, the United States was pursuing another strategy through its support for Panama's armed force, the National Guard. Visualizing the Guard as a deterrent to nationalist and Communist agitation on the isthmus (a role played by U.S.-backed constabularies elsewhere in the region), U.S. assistance levels mounted after the 1964 riots to include training, equipment, and payment of part of the armed force's payroll. From the School of the Americas, situated off the Atlantic entrance to the canal, the United States gave counterinsurgency and civic action instruction to Panama's military, stimulating their encroachment into the political arena.

Almost immediately after his inauguration, President Arias took steps to reduce the power of the National Guard. Middle-level Guard officers retaliated by staging a military coup on 11 October 1968. Although Panamanian democracy suffered a significant setback, the United States could rest assured that well-known, predictable friends now controlled Panama.

TREATY COMPLETION UNDER THE MILITARY REGIME

Panama's National Guard took power not to promote any specific ideology or political program, but to prevent the removal of its corporate privileges and benefits, which U.S. assistance had helped build. With CIA support, in December 1969 Omar Torrijos (1929–1981) consolidated his role as leader of the Panamanian military government. Subsequently, the regime began to implement a legitimizing strategy based on Panama's historic struggle for nationalist affirmation to offset the military dictatorship's repression of its opponents and *de facto* rule. The strategy consisted of promoting Torrijos as a populist and nationalist leader both at home and abroad, especially in Latin America but, more broadly, in the Third World as well.

Facilitated by the elimination of freedom of

expression and the curtailment of other constitutional rights as well as the suppression of democratic institutions, the regime's propaganda efforts reaped significant benefits. Directly following President Arias's overthrow, the new regime suspended the constitution, dissolved the National Assembly, and placed the press under censorship. The military expropriated opposition media, including *Editora Panamá América*, which published three major dailies and was owned by the family of Presidents Harmodio and Arnulfo Arias. At the hands of regime security personnel, known opponents suffered imprisonment, torture, exile, assassination, or simply "disappeared." Casting the country's military leader into a nationalistic role was easier with the opposition out of the way.

Torrijos's government declared the 1967 draft treaties "worthless" and in 1971 requested the reinstatement of the negotiating process. When the Nixon administration procrastinated, Torrijos played the nationalist card. He emphasized his broadening international connections, a tactic reverberating in Washington circles embedded in a Cold War mentality and still fearful of a replay of the 1959 Cuban revolution elsewhere in the hemisphere.

An astute strategist who knew well how to deal with the United States, the Panamanian military leader applied sufficient pressure to alarm but not antagonize Washington policymakers. At the same time, he was ready to cooperate with Washington and international capital to promote U.S. strategic and economic interests in Panama and in the region. A long association with the U.S. army as a paid informant of U.S. military intelligence (1955–1970) and as a recipient of U.S. military training helped him develop leadership skills, as did advice provided by a team of shrewd Panamanian negotiators as well as regional and Third World leaders.

In 1973, Torrijos achieved a resounding victory when the United Nations approved his proposal to hold a meeting of the Security Council in Panama for the purpose of considering Panama's demands for treaty revision. A resolution in support of these demands, discussed on 20 March 1973, was only

defeated by the U.S. veto, which caused Washington added embarrassment on top of the 1964 incident. Negotiations reinitiated in November 1973 and on 7 February 1974, Secretary of State Henry Kissinger and Panamanian Foreign Minister Juan Tack signed a joint declaration listing eight guiding points for continuing talks. However, President Richard Nixon's resignation a few months later, on 9 August 1974, brought the talks to a virtual standstill.

Negotiations gained momentum once Jimmy Carter assumed the presidency on 20 January 1977. Intent on repairing what he saw as unfair treatment of Panama by the United States, President Carter waged a determined and prolonged battle to convince the people of the United States that the canal should be transferred to Panama. The objective coincided with Panama's nationalistic aspirations, whose main exponent at the time was Torrijos. This posed even more difficulties for Carter because, contrary to his ideals of promoting and preserving human rights, he had to negotiate and sign an important agreement with a military dictator.

A government that championed human rights as no other U.S. administration had previously advocated found itself discussing arrangements of far-reaching effects with a military regime that denied those same rights to its population and whose claim to represent the nation lacked democratic credentials. After the September 1977 signing ceremony, Torrijos agreed to submit the treaties to a referendum, without, however, allowing a free and informed discussion of the texts. In an attempt to secure an impressive share of the vote, the military government also manipulated the voting process. As an indication of the regime's repressive quality, on the eve of President Carter's visit to Panama, on 15 June 1978, paramilitary squads shot two treaty opponents to death and severely beat several hundred others.

Subsequent to Panama's approval in the referendum of 23 October 1977, in early 1978 President Carter sent the treaties to the Senate for its advice and consent. Thus began one of the most controversial debates in the upper chamber of the U.S. Congress, eliciting strong reactions from conservative sectors that, in the immediate aftermath of Vietnam,

saw treaty approval as the equivalent to giving away U.S. property to the enemies of the United States. These claims were met by inspired argumentation focusing on notions of fairness deeply embedded in the tradition of the U.S. founding.

President Carter succeeded in putting together a broad coalition of civic, religious, and business leaders and eventually obtained the support of sixty-seven senators, the minimum required to pass the treaties. But faced with strong opposition in the U.S. Congress, both Carter and Torrijos were obliged to compromise. Despite the administration's strenuous efforts, approval came only after the Senate added a number of reservations and conditions to the treaties, the principal of which was the DeConcini Condition, named for its proponent, Senator Dennis DeConcini (R-Arizona).

The condition stipulates that if the waterway were closed or its operations interfered with, Panama and the United States would "have the right to take such steps as each deems necessary . . . including the use of military force in the Republic of Panama, to reopen the canal or restore the operations of the canal." The addition of conditions and reservations to the original texts approved by Panama posed an international law problem, for these additions were not submitted to constitutional approval in the Isthmian Republic, one of the treaties' contracting parties. Still, the military government, exercising sovereign powers on behalf of the people of Panama, decided to abide by them.

SOME CONSEQUENCES OF THE 1977 TREATIES

The Panama Canal Treaties entered into force on 1 October 1979. Pursuant to their stipulations, the Canal Zone ceased to exist and land and property under U.S. jurisdiction was progressively transferred to Panama up to 31 December 1999. On that date, Panama achieved full responsibility for operating as well as protecting the Panama Canal, and U.S. military forces left Panama definitively. This was no doubt a major accomplishment in the history of U.S.-Latin American affairs, contributing to more balanced and egalitarian relations between the

United States and Panama. Its principal authors were Harmodio Arias and Franklin D. Roosevelt in 1936, Roberto F. Chiari and Lyndon B. Johnson in 1964, and Omar Torrijos and Jimmy Carter in 1977.

But the fact that the treaties remedying an unfair and unequal relationship came to fruition under a military regime in Panama also had important, albeit less publicized consequences. In the hands of the military government, much property transferred by the United States was assigned to nonproductive uses, such as facilities for an expanding bureaucracy and National Guard or housing and recreational services for regime favorites. Under military control, the sustainable development of these areas and their integration into the Panamanian economy, after being prevented by the United States for several decades, were further postponed.

As a result of treaty provisions, the National Guard received additional assistance from the United States. Between 1969 and 1978, Washington provided \$10.6 million to Panama in total military assistance (loans and grants, in current U.S. dollars). Between 1979 and 1987, military assistance increased fourfold to \$48.8 million. Additionally, in 1985-1986, the Reagan Administration provided Security Supporting Assistance for a total of \$63.2 million. The rationale behind the U.S.-abetted military buildup, which further strengthened the grip of the military on Isthmian politics, was the Panamanian armed force's expanding role, alongside the U.S. military, in defending the Panama Canal, pursuant to the 1977 agreements.

As the Panamanian military regime lost value for U.S. policy in Central America in the mid- to late 1980s under military leader Manuel Noriega (Torrijos's successor), it entered a collision path with the Reagan and Bush administrations, leading to the U.S. invasion of 20 December 1989. President George Bush justified the military operation "to safeguard the lives of Americans, to defend democracy in Panama, to combat drug trafficking, and to protect the integrity of the Panama Canal Treaty." Historically, U.S. intervention in Panama's affairs was one of the major complaints of Panama's nationalist sectors, and the text of the 1977 treaties reaffirmed Panama's territorial integrity. But the amendments

attached by the U.S. Senate, accepted by Panama's military government, served to provide a justification, at least to Washington, for military intervention on the isthmus.

Although, as recognized by President Carter, Panamanian demands for national self-determination were justified, the fact that they were recognized through negotiation with a military regime had deleterious consequences for Panama. The process served to curtail democratic development, preventing Panamanians from freely discussing the most consequential political issue of the century. More broadly, it provided some legitimacy to a military dictatorship whose permanence delayed Panama's transformation into a mature, independent, and democratic state, a central goal of its nationalist political movement for decades.

Through open, democratic debate, Panamanians would have been better prepared to discern solutions to future disclosures, such as the contamination of defense sites operated by the U.S. armed forces, or later needs, such as the expansion of the waterway and the shape of relations with the United States in the twenty-first century, pending issues on the country's foreign agenda. A democratic decision-making process might well have rejected the strengthening of the National Guard, which had such harmful effects on Panama's national development and ultimately led to a destructive confrontation with the United States. These objectives were not achieved mainly because of the decisions made by President Jimmy Carter and military leader Omar Torrijos, who—when confronted with the choice and the risks attached to the decision-making process—opted for securing U.S. interests and Panamanian regime stability over ensuring that ideals of national justice and democracy were implemented in Panama.

PARLIAMENT, BRITISH

The British Parliament is the most powerful governing institution in the United Kingdom of Great Britain and Northern Ireland. Parliament consists of two chambers, the more powerful House of Commons, elected by the British people, and the House of Lords, which includes both hereditary and appointed peers and leaders of the established Church of England. Parliament is a legislative body which debates the issues of the day and enacts law. While the hereditary monarch, currently Queen Elizabeth II, serves as titular head of state and appoints the executive, led by the Cabinet chaired by the Prime Minister, she is guided in her appointments by the political realities in the House of Commons. There is no separation of powers as in the United States because Cabinet members are also Members of Parliament, most with seats in the House of Commons. A Cabinet gains and is sustained in office by its ability to command a majority in Commons.

Since there is no written British constitution, Parliament is the supreme organ of governmental power and leadership in the nation. In the absence of a judicial body to review parliamentary legislation, there are no legal restraints on Parliament's actions. It can make or change law, ignore customs and traditions, and even extend its life beyond the legislated five-year limit without consulting the electorate (as it did during World Wars I and II). In practice, however, Parliament rarely violates convention, customary practices, or the common law. Ultimately, of course, Commons is answerable to the electorate, which has the power to defeat members and end a party's majority. Britain is a functional democracy, but one without a written constitution or comprehensive bill of rights. The elected House of Commons is the central institution in that democracy, reflecting the will of the electorate and wielding power over both the legislative and executive functions of government.

EARLY HISTORY

The British Parliament is among the world's oldest surviving governing bodies. Its origins lie in the *witans* of medieval England, councils of secular and

ecclesiastical magnates summoned by Anglo-Saxon kings in the ninth century to provide counsel and sanction laws. These early consultations, irregular and not required by law, arose from the practical need for advice and consent. The term "Parliament," from Latin and French words meaning to talk, speak, or parley, came into wide usage in the early thirteenth century to describe larger gatherings of the king and the great magnates. Kings convened such meetings primarily to gain additional monies to handle emergencies, especially the waging of warfare. In order to maximize revenue possibilities, they included not only the great landed barons, but also church leaders and representatives of the counties, or shires, and towns, or boroughs.

By the late fourteenth century, these groups began to divide into two distinct bodies—the religious leaders (lords spiritual) and landed magnates (lords temporal) eventually came to be known as the "House of Lords" and the knights and burgesses, from shires and boroughs respectively, as representatives of their communities acquired the appellation "House of Commons." Late medieval parliaments met frequently, although often for short periods, to provide counsel to the king, authorize taxation, pass legislation, and provide justice. By the early fifteenth century, it was generally accepted that the more broadly representative Commons should have a special role in the raising of revenues.

Parliament's self-awareness and confidence, and the general recognition of it as an integral part of the English government, grew in the Tudor period (1485–1603). Tudor monarchs, including Henry VIII (1509–1547) and Elizabeth I (1558–1603), actually convened Parliament less frequently than many of their predecessors had, but sought its approval for the monumental religious changes of the English Reformation as well as for social and economic regulations (for instance, the Statute of Artificers in 1563, and the Poor Law in 1601). Many of Parliament's procedures, customs, and privileges, including the committee system and free speech, developed in this period. Parliament also grew in size with the incorporation of Welsh representatives after the union of England and Wales in 1536, and the granting of charters of incorporation and thus the right of representa-

tion to more boroughs. The landed gentry came to monopolize both shire and borough seats and thus the House of Commons. Meanwhile, the temporal lords gained a majority in the House of Lords following the removal of abbots and priors as a consequence of the dissolution of the monasteries in the late 1530s.

In the seventeenth century, this larger, more self-assured Parliament dominated by landed interests clashed with the early Stuart kings, James I (1603–1625) and Charles I (1625–1649), who came to the throne from Scotland as champions of royal prerogative. Friction developed between these monarchs and their Parliaments, especially the Commons, which in particular resented Charles's attempt at personal rule by refusing to convene Parliament for eleven years, from 1629 to 1640. Faced with an empty treasury and war with Scotland, arising from his religious policies, Charles was forced to convene Parliament in 1640. Its testy mood after eleven years of exclusion led to clashes with the king and his ministers that erupted in civil war in 1642 between royalist and parliamentary factions. The latter prevailed, leading to the execution of Charles in 1649 and an experiment with republican forms of government in which Parliament in altered form continued to play a key role.

In time the experiment failed, which led to the Restoration in 1660 of traditional institutions of government, including the monarchy, Lords, and Commons. The new king, Charles II (1660–1685), was obliged to accept an enhanced role for Parliament and a weakened royal prerogative, but the relative balance of power was still not clearly defined. Charles's successor, James II (1685–1688), sought to expand the royal prerogative, which led to clashes with Parliament over religion, foreign policy, appointments, and other issues. Leaders of Parliament engineered the "Glorious Revolution" (1688–1689), which replaced James with William (1689–1702) and Mary (1689–1694) and secured the agreement of the monarchs to a series of laws (for instance, the Bill of Rights and the Mutiny Act of 1689 and the Act of Settlement of 1701) that clearly established the ascendancy of Parliament.

The Bill of Rights limited royal authority by

requiring parliamentary consent for the making or suspending of laws, the levying of taxes, and the maintenance of a standing army. This, combined with the Mutiny Act, which authorized for a limited time only the trial of soldiers by courts-martial, assured regular meetings of Parliament. In fact, Parliament has met annually since 1689. In the Act of Settlement, Parliament provided judges with security of tenure and defined the line of succession for the throne, excluding the Catholic descendants of James II and providing for the Hanoverian succession of 1714. Parliament's assumption of the power to determine who could and could not occupy the throne symbolized its victory in the struggle against royal prerogative.

MODERN HISTORY

Parliament grew in size and became more truly British in the eighteenth century with the political merger of Scotland with England and Wales in the 1707 Act of Union. Fifty-five Scottish members were added to Commons, raising the total membership to 558, and 16 elected representatives of the larger Scottish peerage were included in the Lords. Parliament was further enlarged and diversified in 1801 as a result of the union of Ireland with Britain. Commons grew to number 658 with the addition of 100 Irish seats. The Lords included 28 representatives of the Irish peerage and 4 bishops of the established Church of Ireland (Anglican). The electoral system changed little between the Restoration in 1660 and 1832. A limited franchise, restricted mostly to property owners, enabled the landed elite to dominate political life during the eighteenth century.

Although the "Glorious Revolution" and subsequent legislation demonstrated the superior power of Parliament, that power was still largely negative. In a contest between Parliament and the crown, the former could prevail by denying the monarch funds to carry on a government or by impeaching the monarch's ministers. Over the next century and a half, Parliament was able to develop more positive and systematic control over the executive. The key to this was the development of political parties, whose roots lay in the Whig and Tory groupings of the late

seventeenth century. By the Victorian period (1837–1901), better organized parties could establish majorities in Commons and through these majorities determine the shape and policies of the executive. Members of the Cabinet were still appointed by the crown, but they were servants of and answerable to Parliament of which they were also members.

Changes in British society in the late eighteenth and nineteenth centuries, including a rapidly increasing population, the growth of industry and cities, an expanding middle class, and increased literacy, led to a demand for electoral reform. The political establishment resisted these demands for a generation or more, but the Whig administration (1830–1834) of Lord Grey (1764–1845), sympathetic to modest reform and concerned about the possibility of revolution, enacted the Reform Bill of 1832. This act redistributed seats away from the worst rotten and pocket boroughs—those whose population had dwindled over time and those “in the pocket” of a patron—to the more populous cities and expanded the franchise to include middle class voters. Overall the electorate was increased by 50 percent with approximately one in five males now eligible to vote. In one sense, the 1832 reform was modest, leaving political power in the hands of a property-owning elite, but in another sense it was profound in that it established the precedent for electoral reform by legislation.

Within a generation, the 1832 precedent was followed by the Reform Act of 1867, which increased the electorate by some 80 percent by enfranchising male heads of urban households. A third Reform Bill, enacted in 1884, enfranchised male rural householders, again increasing the electorate by almost 80 percent. An accompanying reapportionment act established single-member constituencies of roughly equal population as the standard. The 1918 Representation of the People Act eliminated property and household qualifications for all males over the age of twenty-one. The principle of individual suffrage replaced the concept of household suffrage. The 1918 act also extended the franchise to women for the first time, but only to those over age thirty. A decade later, the age at which women were eligible to vote was reduced to twenty-one. An act in 1948

ended plural voting by persons who could qualify in more than one constituency and terminated the separate representation for graduates of Oxford and Cambridge. In 1970, the voting age was reduced to eighteen.

Thus, within less than a century and a half, Britain moved gradually and peacefully from government by a small landed oligarchy to a participatory democracy. This transition had important implications for political parties. Following the second Reform Act, qualified voters numbered over 5.7 million. This mass electorate stimulated the development of modern political parties to appeal to those voters. The more organized and rigid party system restricted the freedom of action of members of Parliament who were obliged to answer to the Whips of the party under whose auspices they had campaigned.

COMMONS AND LORDS

In the spirit of the developing British democracy, the balance of power between Commons and Lords continued to change in favor of the chamber that represented increasing numbers of the British populace. The process of passing the 1832 reform was important in establishing the supremacy of Commons over Lords. The latter gave its consent to the bill only after being threatened by the king, William IV (1830–1837), with the creation of enough new peers to ensure a majority. However, the power of the Lords to veto legislation led to occasional conflicts with Commons. This became especially acute in the early twentieth century when the Conservative-dominated Lords frustrated the legislative agenda of Liberal governments. The result was the Parliament Act of 1911, which limited the legislative powers of the Lords. It provided that money bills, including budgets, passed by Commons would become law within one month with or without the Lords' assent, and other public bills would become law if passed by Commons in three successive sessions over two or more years.

In 1949, the potential of Lords to delay public bills was reduced to two sessions and one year. The composition of the Lords also evolved. Nineteenth- and early twentieth-century monarchs continued to

Choosing a Member of Parliament in the Highlands of Scotland

The political heirs of the Land League are the Labour Party in Scotland and the Scottish National Party. This apparent contradiction is highlighted in the Western Isles where the labour movement, historically and conceptually, has been involved in nationalist ideology and the middle class is often symbolised not as “capitalists” but as “Englishmen.” The Western Isles constituency was the first electoral success for the Scottish National Party in a general election. Prior to this the islands had returned a Labour MP to parliament for thirty-five years. One of the underlying issues in the changeover is admitted by many islanders to be that of personality. It was more an expression of dissatisfaction with a particular Labour MP than with the tenets of socialism.

Personality is a vital component in this small constituency. At this level even national politics work on a face-to-face basis. The character, family and history of the Member of Parliament were well known by acquaintance and gossip to his 29,000 constituents. He was a familiar figure in the islands and had worked his way up in local-government politics before standing for parliament. Many people in Stornoway can remember him from school and recall his work in a local mill. His reputation as an honest local man is possibly the highest political card he holds. There is an acceptance in the islands that they have only a single voice in the corridors of Westminster and they wish it to be a Hebridean voice.

create new hereditary peerages. The Appellate Jurisdiction Act of 1876 authorized the crown to appoint special Law Lords, legal experts, to fulfill the body’s traditional function as the supreme court of appeal. In 1958, the Life Peerages Act sanctioned the creation of non-hereditary peerages for life. These could be awarded to persons of either sex, thus allowing for the first women in the chamber. A 1963 act granted all Scottish peers seats in the Lords.

The future of the House of Lords, a body seen by many as an anathema in a representative democracy, continues to be an issue in early twenty-first-century Britain. The House of Lords Act in 1999 removed the right of most hereditary peers to sit and vote and created a Royal Commission to consider the composition, role, and functions of the second legislative chamber. Ninety-two hereditary peers were allowed to remain in the Lords until it was fully reformed. Current proposals call for a chamber partly elected and partly appointed but with no hereditary peers.

The contemporary House of Commons consists

of 659 elected Members of Parliament (MPs), 529 representing English constituencies, 40 Welsh, 72 Scottish, and 18 Northern Irish. A Parliament’s legal life is five years, although it may be dissolved early by the monarch upon the request of the Prime Minister. Most early dissolutions occur because Parliament is near the end of its term and the Prime Minister thinks an early election may be advantageous for the government party. Others occur when the government lacks a working majority. A Parliament’s life is divided into annual sessions usually running from November to the following October. Each session begins with the State Opening in which the queen, in regal dress and seated on the throne in the House of Lords, presents a speech to the assembled Lords and Commons outlining the government’s policies and program for the coming year.

Parliament typically sits or meets about 150 days during a session, with extended adjournment periods around various holidays. Parliamentary procedure is based heavily on precedent and is set down by each House in its “Standing Orders.”

FUNCTIONS OF PARLIAMENT

Only Parliament can enact statute law for the United Kingdom. Draft laws move through the legislative process as parliamentary bills. Most are proposed by the government as part of its legislative program and are known as “Government Bills.” They are introduced in a “First Reading” in one house (usually Commons), printed, explained, and debated in a “Second Reading,” referred to a standing committee where they are examined clause by clause with possible amendments, reported out to the whole house for further consideration, and finally voted on in a “Third Reading.” Having passed one house, bills are then sent to the other chamber to undergo a similar

process, then reported back to the originating body to consider any amendments made by the second chamber. When the two houses have agreed on a bill, it is sent to the monarch for royal assent, which has not been refused since 1707.

In addition to its legislative function, the other central responsibility of Parliament is to oversee and scrutinize the work of the executive. Its select committees shadow the work of various Cabinet offices, examining policies, expenditures, and administration, and questioning ministers and civil servants. Through hearings and reports, the committees enlighten Parliament and the general public on the workings of government. Supplementary to the scrutiny of the select committees, both houses of Parliament provide opportunities for the Opposition and government backbenchers to examine policy in “question time.” For approximately an hour at the opening of each Monday, Tuesday, Wednesday, and Thursday, sitting ministers are subjected to questioning by fellow MPs. The Prime Minister submits to questions for half an hour on Wednesdays when the Commons is sitting. Also, hundreds of questions are submitted each day to the government for written answers. Parliament’s oversight function contributes to governmental transparency and helps inform and educate the electorate.

MEMBERS OF PARLIAMENT

Members of Parliament are commonly drawn from professional and business backgrounds. MPs have a variety of responsibilities, including looking after the interests of their constituents by taking up the latter’s concerns with relevant ministers, considering proposed legislation, participating in debates on public policy, and holding the government accountable for its actions. In all but the first of these responsibilities their actions occur within the context of the political party to which they belong. MPs are expected to support the party line and vote as instructed by their party’s Whips, MPs responsible for party management.

The majority of MPs are backbenchers, those not serving in ministerial positions or in the leadership of the Opposition. Most MPs who enter Commons probably aspire to leadership positions. Only about

25 percent ever attain any kind of ministerial appointment and two-thirds of those never move beyond junior positions. Fewer than 8 percent ever become Cabinet-level ministers. The competition is stiff for advancement, requiring a long and successful performance as a backbencher and junior minister. Studies have shown that the average length of service in Commons before the first Cabinet appointment is fourteen years. Even fewer rise to the most eminent offices of Foreign Secretary, Chancellor of the Exchequer, and First Lord of the Treasury (the official title of the Prime Minister). Reaching these exalted offices requires ambition, self-assurance, intelligence, demonstrated skill in parliamentary debate and questioning, administrative ability, and, of course, a certain amount of luck.

PAST LEADERS OF DISTINCTION

Parliament has produced many outstanding leaders during its long history. Among these are Sir Robert Walpole (later Earl of Orford) in the eighteenth century, William E. Gladstone in the nineteenth century, and Sir Winston Churchill in the twentieth century. Walpole (1676–1745), usually seen by historians as the first Prime Minister although he did not like or use the title, held the offices of First Lord of the Treasury and Chancellor of the Exchequer from 1721 to 1742, longer than any of his successors. He entered Commons in 1701 and was appointed to his first ministerial position in 1708. Able and ambitious, he was aided by luck in his rise to the ministerial leadership as two of his chief rivals died. He sustained himself in the highest offices because he understood better than most contemporaries the evolving political system of his day, in particular the critical importance of both royal favor and parliamentary support. He cultivated royal good will by attending to crown interests and managed Parliament by the skillful use of patronage, by cultivating a rustic, folksy style designed to appeal to independent backbench gentry, by understanding and practicing the art of compromise, and by pursuing sound and popular commercial, fiscal, and foreign policies. He fell from power in 1742 only when his foreign policy grew to be at odds with parliamentary and public opinion.

Excerpt from *Phineas Finn* by Anthony Trollope

Anthony Trollope's novel Phineas Finn: The Irish Member (1869) is the story of a young Irish barrister who comes to London to take his family's set in Parliament. The excerpt below offers a vivid glimpse of how a new member of Parliament might have felt in Victorian times.

There was a slight pause, and as some other urgent member did not repeat himself, Phineas heard the president of that august assembly call upon himself to address the House. The thing was now to be done. There he was with the House of Commons at his feet,—a crowded House, bound to be his auditors as long as he should think fit to address them, and reporters by tens and twenties in the gallery ready and eager to let the country know what the young member for Loughshane would say in this his maiden speech.

Phineas Finn had sundry gifts, a powerful and pleasant voice, which he had learned to modulate, a handsome presence, and a certain natural mixture of modesty and self-reliance, which would certainly protect him from the faults of arrogance and pomposity, and which, perhaps, might carry him through the perils of his new position. And he had also the great advantage of friends in the House who were anxious that he should do well. But he had not that gift of slow blood which on the former occasion would have enabled him to remember his prepared speech, and which would now have placed all his own resources within his own reach. He began with the expression of an opinion that every true reformer ought to accept Mr. Mildmay's bill, even if it were accepted only as an instalment,—but before he had got through these sentences, he became painfully conscious that he was repeating his own words.

He was cheered almost from the outset, and yet he knew as he went on that he was failing. He had certain arguments at his fingers' ends,—points with which he was,

in truth, so familiar that he need hardly have troubled himself to arrange them for special use,—and he forgot even these. He found that he was going on with one platitude after another as to the benefit of reform, in a manner that would have shamed him six or seven years ago at a debating club. He pressed on, fearing that words would fail him altogether if he paused;—but he did in truth speak very much too fast, knocking his words together so that no reporter could properly catch them. But he had nothing to say for the bill except what hundreds had said before, and hundreds would say again. Still he was cheered, and still he went on; and as he became more and more conscious of his failure there grew upon him the idea,—the dangerous hope, that he might still save himself from ignominy by the eloquence of his invective against the police.

He tried it, and succeeded thoroughly in making the House understand that he was very angry,—but he succeeded in nothing else. He could not catch the words to express the thoughts of his mind. He could not explain his idea that the people out of the House had as much right to express their opinion in favour of the ballot as members in the House had to express theirs against it; and that animosity had been shown to the people by the authorities because they had so expressed their opinion. Then he attempted to tell the story of Mr. Bunce in a light and airy way, failed, and sat down in the middle of it. Again he was cheered by all around him,—cheered as a new member is usually cheered,—and in the midst of the cheer would have blown out his brains had there been a pistol there ready for such an operation.

Gladstone (1809–1898) operated in an era when royal power was waning and the significance of parties increasing. He served in Parliament for a remarkable sixty-two consecutive years, from 1832 to 1894, entering as a Tory, breaking with the party in the 1840s and becoming a third-party Peelite, and in the 1860s leading the Peelites to join with Whigs and radicals to form the Liberal Party. Gladstone was appointed to his first cabinet-level position as President of the Board of Trade in 1843, achieved great prominence as Chancellor of the Exchequer in the

1850s, and was four times Prime Minister (1868–1874, 1880–1885, 1886, and 1892–1894). The colossus of Victorian politics, Gladstone possessed a powerful intellect, splendid education, strong religious and moral convictions, prodigious energy, and great rhetorical skills. He came to epitomize Victorian liberalism, which condemned privilege, injustice, and inhumanity. Inclined to see issues in moral terms, he became the conscience of his supporters, of whom there were many, especially among the general populace. His great ego, moralistic tone, and larger-than-

life aura were unsettling to many associates and complicated relations with his colleagues and the Queen. Although he made grievous political mistakes, not the least being the splintering of his party over Irish Home Rule, he was a man of vision who often placed principle over practicality.

Churchill (1874–1965), born into an aristocratic family with a long record of public service, was, like Gladstone, an MP for sixty-two years, from 1900 to 1922 and 1924 to 1964. His leadership qualities—ambition, confidence, intelligence, energy, and oratorical skills—were soon recognized and he was appointed to a junior office in 1906 and to the Cabinet in 1908 as President of the Board of Trade. He subsequently held a broad range of ministerial offices, Home Secretary, First Lord of the Admiralty, Minister of Munitions, Secretary of State for War and Air, Colonial Secretary, and Chancellor of the Exchequer, before heading his first government as Prime Minister in 1940 at the age of sixty-five. Churchill was viewed with suspicion by many of his contemporaries because of his arrogance and lack of party constancy. He entered Parliament as a Conservative, switched to the Liberals in 1904, held his first offices as a Liberal, switched back to the Conservatives in 1924 after the Liberals split and were reduced to third-party status, broke with the Conservative leadership in 1931 over its India policy, and was critical of the appeasement policies of the Conservative-dominated national governments of the 1930s. Becoming Prime Minister as Axis armies spread across continental Europe, Churchill provided his nation determined, courageous, charismatic, and inspirational leadership. His powerful rhetorical skills challenged the British people to persevere in the face of adversity. Both Churchill and Gladstone demonstrated the qualities of transformational leadership as defined by James MacGregor Burns.

PERSPECTIVE

Critics suggest that Parliament has declined in power and significance with the rise of disciplined political parties. A well-led, cohesive party with a comfortable majority in Commons can form a government, routinely secure parliamentary approval of its legislative

program, and deflect the criticism of the Opposition party. But these parties and governments are creatures of Parliament. The electorate determines in a general election which party wins a majority, but the election occurs in individual constituencies to decide who occupies the seats in Commons and it is the composition of Commons that determines which party forms a government. Also, government ministers achieve high office because they have distinguished themselves in parliamentary debate. Parliament, then, is the nursery and training ground for all leaders of the British national government.

PATH-GOAL ANALYSIS

“Leaders, to be effective, engage in behaviors that complement subordinates’ environments and abilities in a manner that compensates for deficiencies and is instrumental to subordinate satisfaction and individual and work unit performance” (House 1996, 324). Management scholar Robert J. House’s remark about leadership concisely captures the essence of the path-goal theory of leadership. According to this theory, followers consciously consider alternative courses of action and assess the likelihood that each course of action will yield desirable as well as undesirable outcomes. After consciously considering these alternative actions, proponents of the theory propose that followers act in a manner they believe will maximize the attainment of positive outcomes while minimizing the attainment of negative outcomes. Using this conceptualization of motivated behavior, path-goal leadership theory suggests that an effective leader directs followers’ behavior by changing followers’ perceptions of the relationship between behaviors and outcomes.

HISTORIC CONTEXT FOR PATH-GOAL THEORY

During the 1950s and 1960s, leadership researchers primarily focused on identifying the behaviors of effective leaders. Although many specific behaviors were identified by researchers at the University of Michigan and the Ohio State University, they independently classified these behaviors into two general

categories: initiating structure and consideration. Initiating structure, encompassing production-centered leader behaviors, refers to leader behaviors that clarify performance expectations for subordinates. Examples of initiating structure would be the leader implementing a formal performance appraisal system or the leader setting specific production goals. On the other hand, consideration covers more employee-centered behaviors and refers to leader behaviors that communicate concern for followers’ welfare. Examples of consideration behavior would be the leader publicly defending the interests of followers or publicly expressing appreciation for followers’ work.

Unfortunately, although the research on leader behavior initially appeared to eliminate the ambiguity of prior findings, it soon became apparent that a singular focus on behavior is also insufficient for identifying when a leader would be effective. For example, some behavioral studies found that initiating structure enhanced follower performance, whereas other studies showed no effect or even a negative effect on follower performance. Clearly, factors other than leader behavior (e.g., situational conditions, leader personality, follower beliefs) have to be considered to understand when leader behaviors will produce effective follower performance.

In 1970, Martin G. Evans published a paper that considered some of these additional factors by connecting the leader behavior research to the most popular motivation theory of the time: Victor H. Vroom’s (1964) VIE (valence, instrumentality, and expectancy) theory. VIE theory states that the motivation to act in a certain way depends on the valence, instrumentality, and expectancy beliefs of individuals. Valence refers to an individual’s assessment of the desirability of the outcome. Instrumentality refers to an individual’s belief in the likelihood that a particular performance outcome leads to particular outcomes/rewards. Lastly, expectancy refers to an individual’s belief in the likelihood that a particular behavior results in various performance outcomes. VIE theory states that these three beliefs interact in determining motivated behavior. Specifically, if only one of the aforementioned beliefs is low for a particular action, then it is predicted that the individual will be less motivated to take that action.

To link the leader behavior literature with VIE theory, Evans emphasized the connection between the leader's behavior and the follower's beliefs and behavior. He argued that initiating structure and consideration behaviors would lead to leadership effectiveness when these behaviors strategically change followers' beliefs about the outcomes that result from various actions. In 1971, Robert J. House extended Evans's ideas when he articulated the role of contingencies in Evans's model. This elaboration by House is called the "path-goal theory of leader effectiveness."

FUNDAMENTAL ASSUMPTIONS AND PROPOSITIONS OF PATH-GOAL LEADERSHIP THEORY

The first complete description of path-goal leadership theory was provided by House in 1971. In this paper, House made three assumptions about human behavior. First, consistent with VIE theory, subordinates are assumed to behave in a rational, self-serving manner. Second, House assumed that people are uncomfortable and experience stress in ambiguous situations. More specifically, House believed that people would seek ways to minimize role ambiguity, which refers to confusion about how certain tasks should be conducted or confusion about how role performance will be evaluated. Finally, House assumed that a reduction in role ambiguity would lead to increased subordinate satisfaction and performance enhancement.

Based on these three assumptions, House structured path-goal theory around two categories of leader behavior: path-goal clarifying behavior and subordinate need fulfilling behavior. In terms of path-goal clarifying behavior, which parallels initiating structure, House argued that leaders will be effective when they do two things. First, leaders need to act in ways that increase the valence of outcomes associated with subordinates' work-goal attainment. This can be accomplished when leaders use their reward power to affect the desirability of outcomes associated with attaining and not attaining work goals. It was predicted that this type of leader behavior would greatly reduce subordinate role ambiguity.

Second, House predicted that leaders would be effective if they behaved in ways that clarified and strengthened subordinates' path-instrumentality beliefs. Leaders can do this by sending clear messages about which outcomes result from the attainment and non-attainment of work goals. One way of sending these clear messages is for the leader to consistently deliver rewards and punishments as a function of subordinate performance.

Although the strengthening of path-instrumentalities can increase the likelihood of the leader being effective, House noted that it does not always lead to effective behavior. According to House, initiating structure behaviors are only necessary in highly ambiguous task situations. In the absence of task ambiguity, House predicted that initiating structure on the part of the leader would reduce follower satisfaction, due to subordinates perceiving the leader as exercising unnecessary levels of control.

In terms of subordinate need fulfilling behavior, which is conceptually similar to leader consideration behaviors, House proposed that subordinate performance can be enhanced by leader behaviors that fulfill subordinate personal needs. When need fulfillment is, in the follower's mind, contingent on goal-directed behavior, it can increase the positive valence of goal-directed effort.

Thus, the basic tenets of path-goal leadership theory are that leaders will effectively motivate followers by making the outcomes associated with work-goal achievement desirable and by helping followers understand the behaviors and strategies that will lead to these desirable outcomes.

REFINEMENT OF PATH-GOAL LEADERSHIP THEORY

Since its initial formulation, there have been two major refinements of path-goal theory. The first refinement, in 1974, was primarily concerned with issues of leader behavior measurement. The second refinement, in 1996, was focused on contemporizing the theory.

In 1974, House and Mitchell elaborated path-goal theory by increasing the specificity of the two general types of leader behaviors. To facilitate measurement,

they proposed four distinct types of behavior: directive path-goal clarifying behavior, supportive leader behavior, participative leader behavior, and achievement-oriented behavior.

Directive path-goal clarifying leader behavior is generally aimed at reducing role ambiguity, clarifying the link between follower effort and goal attainment, and linking follower goal attainment to extrinsic rewards. Again, it is very similar to the original "initiating structure leader behavior" discussed earlier. In deciding how much directive behavior is necessary, a leader must consider both the characteristics of the task and the needs of the follower. When tasks are relatively unstructured, directive behavior can help reduce ambiguity. Similarly, more directive behavior can be effective with certain followers who have a greater individual need for role clarity.

Supportive leader behavior focuses on the personal needs of followers. It is very similar to the original "consideration leader behavior" discussed earlier. Specific supportive leader behaviors include making the work environment an enjoyable place and expressing concern for the personal welfare of followers. As stressed in House's initial theory, fulfillment of followers' personal needs can, when tied to goal-directed effort, enhance follower motivation and performance. This performance boost is due to the reduction of stress and frustration. Reducing such negative affect is posited to result in an increased net positive valence for work-related activities. House and Mitchell suggested that supportive leader behavior would be most effective when work-related activities were not intrinsically satisfying. In such a way, leader behaviors can serve to complement task characteristics.

The third type of behavior specified by House and Mitchell in 1974 is participative leader behavior. Participative leader behavior involves considering followers' input and valuing their opinions when making decisions that affect them. This type of leader behavior is essentially a combination of directive and supportive leader behavior. House and Mitchell claimed that the impact of this type of behavior is highly contingent on follower personality. Specifically, they argued that the extent to which subordinates prefer external control, as opposed to

independence, moderates the effect of participative leadership. House and Mitchell suggested that participative leader behaviors would be most effective when directed toward followers who prefer independence.

Finally, achievement-oriented behavior, which is also a combination of directive and supportive leader behavior, is concerned with enhancing follower performance in an almost inspirational manner. Leaders engaging in such behavior express confidence in the capability of followers to reach their goals and encourage followers to set high goals and elevate standards of excellence. The net result is an overall increase in follower performance and satisfaction. Yet again, the impact of such behavior is contingent on situational and follower characteristics. House and Mitchell posited that achievement-oriented behavior would be most effective for unstructured, ambiguous tasks because follower confidence in such situations is likely to be low.

In summary, by elaborating the categories of leader behaviors, House and Mitchell stressed the importance of follower dispositional characteristics as well as situational characteristics to identify leader behaviors that result in effective behavior. It should be noted that subsequent revisions of path-goal theory have expanded the number of leader behavior categories to ten. Like the elaboration discussed above, this new expansion of leader behavior explicates the conditions under which these various types of leader behaviors would enhance motivation, abilities, performance, and satisfaction of subordinates. The primary reason for this additional refinement of leader behaviors was to enhance the accuracy of measurement. Interested readers should consult House's 1996 paper for a detailed description of these behaviors.

In 1996, House attempted to contemporize path-goal theory by expanding the theory's predictions about how leader behavior can enhance follower ability. House claimed that by intentionally working to develop follower abilities, and by acting as role models of effective task behaviors, leaders can facilitate the growth of follower task abilities. Leaders clarify how followers should complete tasks by modeling appropriate role behaviors. Further, lead-

ers can affect the development of followers' abilities by individually attending to the capabilities of each follower. House believed that follower ability improvement should result in enhanced follower performance.

A second change to path-goal theory made in 1996 was the inclusion of predictions regarding the effect of leader behavior on work-unit performance. All prior versions of the theory focused on the individual relationship between a leader and a follower. In the 1996 version, however, House recognized the importance of work group leadership and expanded path-goal theory to incorporate how a leader can enhance the performance of an entire work group. Specifically, he predicted that group performance should improve when the leader acts in ways that enable meaningful interactions among work group members as well as develop quality relationships between the work group and the rest of the organization. Additionally, the leader can augment group performance by facilitating access to necessary resources for the group. Thus, this new version of path-goal theory not only discusses the role of the leader in motivating an individual, but also extends this theory to explain how a leader can affect a group as an aggregate.

EMPIRICAL SUPPORT FOR PATH-GOAL THEORY

While path-goal leadership theory has generated a considerable amount of research since it was first proposed, empirical validation of the theory as a whole has proved difficult. Some hypotheses of the theory have been well supported, while others have not. For instance, hypothesized relationships between leader behavior and follower performance are more consistently found than are the hypothesized relationships between leader behavior and follower satisfaction. Further, whereas the theory discusses the hypothesized relationships in causal terms, the majority of empirical evidence is correlational in nature, allowing possible alternative interpretations for the results.

Despite many empirical studies, most leadership scholars agree that path-goal theory has not been

adequately tested. One of the most frequently noted deficiencies in path-goal research is that of improper measurement. Most research on path-goal theory has relied on various versions of the leader behavior description questionnaire (LBDQ) to measure leader behaviors. Yet, scholars have repeatedly noted the inappropriateness of this instrument in investigating the relationships posited by path-goal theory, arguing that the scale does not adequately tap the proposed constructs. In light of such findings, much of the early research on path-goal theory is in need of reassessment.

A second criticism of path-goal research is that it tends to be relatively simplistic, despite the complex nature of the theory. The majority of research on path-goal theory has focused on determining how task structure moderates the relationship between leader behavior and follower performance and satisfaction. Investigations of directive leader behavior and supportive leader behavior have dominated the literature, while research has generally neglected the other types of leader behavior about which the theory makes predictions. In order to comprehensively evaluate path-goal theory, all of the hypothesized relationships must be tested.

A third criticism of the research on path-goal theory is that it has not examined the basic motivational assumptions of the theory. Seminal reviews of the VIE research all noted some empirical support, but have also identified several problems. These problems have ranged from mismeasurement of the three key constructs (valence, instrumentality, and expectancy) to the use of inappropriate research designs to assess the validity of the theory. A late-twentieth-century meta-analysis found that despite these problems, there is evidence that the three VIE components predict job performance. Finally, while rationale theories like VIE have received less attention from social scientists over the years, recent work by Lord, Hanges, and Godfrey (2003) has integrated the original VIE conceptualization into a framework more consistent with current models of human information processing.

In sum, while research on path-goal leadership theory has generally been supportive of its assertions, the theory as a whole has not been adequately

tested. Some scholars have suggested that path-goal research has been hindered by flawed methodology and incomplete, simplistic testing of the theory. Furthermore, some have suggested that the basic assumptions of the theory could be flawed.

IMPACT OF PATH-GOAL THEORY ON THE FIELD

Aside from contributing to our understanding of leadership through empirical tests, path-goal leadership theory has been instrumental in the development of new perspectives in the leadership field. The substitutes for leadership theory is one such example.

Substitutes for leadership theory, developed by Steve Kerr and John Jermier in 1978, was inspired by the path-goal leadership theory prediction that followers with certain characteristics in unambiguous situations do not need leaders to clarify their jobs. Substitutes theory suggests that certain alternatives for leadership can exist, such as organizational formalization, that make leader behaviors redundant. In both path-goal leadership theory and substitutes for leadership theory, such redundancy is hypothesized to decrease follower satisfaction. In addition to making predictions about leaders occasionally being redundant, substitutes theory claims that some contextual variables can also have a direct effect on employee outcomes.

Substitutes theory is conceptually distinct from path-goal theory in that the latter does not argue for the complete irrelevancy of leader behaviors to employee outcomes. However, the theoretical roots of substitutes theory are clearly in the contingent nature of path-goal theory. Although the evidence for substitutes theory is mixed, it is widely cited in organizational behavior texts and has an extensive following in the field.

A second theoretical outgrowth of path-goal leadership theory is the 1976 theory of charismatic leadership, also developed by House. While House's path-goal theory stresses the importance of leader adjustment to and fulfillment of follower needs, charismatic leadership theory posits that arousing, changing, and overall enhancing follower needs and desires is an important facet of leadership. Follower

motives for achievement, affiliation, and power can all be aroused to increase intrinsic motivation and outcome valence. The theory's focus on leader-initiated change in followers' needs is symmetrically opposed to path-goal theory's tenets of leader adjustment to such needs and thus is an expansion of path-goal theory. Stated differently, path-goal theory defined the gap that charismatic theory filled. Decades after its development, the theory of charismatic leadership continues to exert strong influence in the leadership field due to generally supportive research findings.

CURRENT STATUS OF PATH-GOAL LEADERSHIP THEORY

Methodological limitations and incomplete empirical support have led to a decline in research on path-goal theory. While the theory generated a great deal of research throughout the 1970s and early 1980s, work on path-goal theory has since tapered off. Scholars have asserted that the theory must be further developed if it is to continue to inspire empirical research. House's 1996 revision addressed some of these concerns. To date, few empirical investigations of the 1996 reformulation have been conducted.

Despite difficulty in empirically validating path-goal theory, it has proven to be quite valuable to broader leadership and organizational theory. In the early 1970s, a time of simplistic behavioral conceptualizations of leadership, the theory forced leadership scholars to consider more complex relationships between leader behaviors and subordinate outcomes. Specifically, the theory forced the incorporation of situational and dispositional contingencies into leadership models. In recognizing the complexity of the phenomenon, path-goal theory paved the way for more intricate theories of leadership. Some of these theories, such as substitutes for leadership and charismatic leadership theory, grew directly out of path-goal theory. Thus, while currently not a hotbed for empirical research, path-goal theory is an important part of the development of contemporary theories of leadership and, therefore, has secured a place in the history of organizational theory.

PATRIARCHY

The word *patriarchy* means, literally, “rule of the father.” In this narrowest definition, *patriarchy* means a social system controlled by men, in which lineage is traced through males (patrilineal descent), inheritance is passed from father to son, and family members are dependent and subservient to the male head of household. In its most precise meaning, *patriarchy* refers to the system, historically derived from Greek and Roman law, in which the male head of household had absolute legal and economic power over his dependent female and male family members.

The word *patriarchy* acquired a more general usage, especially in some feminist theories, when it came to mean “male domination in general.” This concept was systematically set out in broader feminist terms in the early 1970s by such writers as Kate Millett in her groundbreaking *Sexual Politics*, in which she posited that patriarchal power is all-encompassing and ubiquitous, and Shulmath Firestone, who, in her landmark *The Dialectic of Sex*, grounded the universal oppression of women in sex and the control of women’s reproduction.

In this wider definition of the concept, patriarchy is a system in which men dominate, oppress, and exploit women and in which the institutionalization of male dominance over women and children in the family extends to male dominance over women in society in general. From this perspective, males control the economy and occupy positions of power and status. Women are denied access to power and deprived of rights, influence, and resources. Patriarchal ideologies are employed to explain and justify male dominance in major cultural institutions, such as religion, education, and the media.

Dominance and control are perceived to be at the heart of patriarchy. The German sociologist Max Weber spoke of patriarchal power’s structures of

domination enforced by virtue of authority, that is, the power to command and duty to obey. Continuing the themes of patriarchal dominance, contemporary writer Alan Johnson argues in his *Unraveling the Gender Knot* that patriarchy is based on control as a core principle and that, as a system, is driven by a relationship between control and fear. In order to control fear and each other, patriarchy depends upon dominance of men over women (and over other men, it might be added) and by definition, therefore, involves a hierarchy of power with women on the bottom. This hierarchical structuring is modeled throughout the system with lower, less-valued tiers being dominated by those on top.

Today, many people use the word *patriarchy* as shorthand for “male-dominated society” with deep social structures that are male dominated, male identified, and male centered. Understanding these characteristics holds important implications for the study of leadership. In that structures are male dominated, positions of authority and power, such as formal leadership in political, economic, religious, and military institutions, are generally reserved for men. In that they are male identified, core cultural ideas about what is considered desirable, preferable, or normal are likened to what a culture thinks about men and masculinity, such as the accepted notion of a “good” leader as being one who is decisive and in control. To the degree that structures and practices are male centered, the focus of attention is on the actions and thoughts of men, and male experience comes to represent the human experience, such as in the “great man” approach to history.

PATRIARCHY’S STORY

People have debated the roots of patriarchy for decades. A common response to the question “Where did patriarchy come from?” is simply, “That’s the way it’s always been. Men are stronger and, therefore, in power.” The assumption behind this response is that patriarchy is some sort of biological destiny, a natural order. However, in the 1970s, with the explosion of the “second wave” of feminism (as it is commonly called), vibrant feminist scholarship took issue with the “natural order”

approach. Archaeological research, for example, began to point out the male-biased interpretations of Old World relics and revealed pre-patriarchal societies based on female gods and matrilineal social organizations and kinship structures. In the 1987 book, *The Chalice and the Blade*, Riane Eisler argues that these societies were not just mirror images of patriarchal society with women oppressing men but, in fact, were less hierarchically designed and that women’s power was equated more with responsibility and love than with fear, control, and privilege. Although such arguments are difficult to make definitively, the fact that such interpretations found public airing in the final decades of the past century demonstrates challenges to patriarchal biases in history, anthropology, and many other fields and disciplines. Instead of seeing patriarchy as a “natural order,” these studies and interpretations of matriarchal societies showed that patriarchy was a choice.

In her landmark book *The Creation of Patriarchy* (1986), author Gerda Lerner offers a theoretical framework for understanding patriarchy’s historical creation in the ancient Near East and Greece in the period 3100–400 BCE. These were essentially patriarchal cultures, asserts Lerner, and the control of women’s sexuality (reproduction) was an essential element of the patriarchal order. She argues that the subordination of women and their reproductive roles preceded the development of private property and served as a model for the subsequent subordination of other humans by dominant ruling classes.

Through the years, scholars have debated patriarchy’s trajectory. Some have argued that patriarchy is transhistorical and that the oppression of women is a constant through time and place. Critics caution that overgeneralizations that suggest that all women through all time experienced the same oppression and victimization and that all men through all time experienced the same role as oppressor need to be tempered. Such overgeneralizations simply aren’t true. This does not mean that patriarchy is not a valuable descriptor and tool of analysis, but rather only that we must take care to account for variances because of race, class, educational level, ethnicity,

The Prerogatives of Patriarchy in the Arab World

The prerogatives of patriarchy are reflected in the differential pressures placed on male and female Muslims when they are contemplating a religious intermarriage. Should a Muslim woman wish to marry a non-Muslim, the prospective husband must convert to Islam. In contrast, a Muslim male may marry a non-Muslim woman without the requirement that she convert to his religion. The underlying rationale for this practice is that husbands not only have more power than wives to enforce a particular religious environment within the home, but also, in the event of a divorce, since children traditionally remain with the husband's lineage, the children of a non-Muslim father would be lost to the faith.

The virginity of the unmarried female is highly valued and there are often extreme negative sanctions invoked against women who engage in premarital sexual relations. Negative sanctions regarding extramarital relations are also very strong. The concept of family honour is closely tied to the chastity of its female members. Family honour can be tarnished, not only by verbal or physical attacks from outsiders, but by the unmarried woman's loss of virginity or the married woman's extramarital sexual transgressions. Similar prohibitions do not apply as strongly to the male members of the family. However, males are expected to be the protectors of family honour. In this role, fathers, brothers and husbands are frequently expected both to restrict and to judge the behaviour of daughters, sisters and wives. The concept of family honour, somewhat alien to the Canadian scene, plays an important role in the Arab world, as in many Mediterranean countries. Violence (sometimes against the women in the family) and protracted feuds with outsiders can arise in defence of the family's honour.

Children (particularly sons) are highly valued. The birth of the first son signals a name change for his parents. If,

for example, the first son is named Ramsey, the father becomes known as "Abu Ramsey" (the father of Ramsey) and the mother as "Im Ramsey" (the mother of Ramsey). This change in names is important to traditional couples and is generally a cherished transition in adulthood. Similarly, children are often identified by their father's name (for example, as "Ibn Khalid" or the son of Khalid). The high value placed on parenthood, together with the traditional aversion towards contraceptive techniques, means that the average family size in the Arab world is greater than in Canada. However, differences in family size among Arabs are associated with the same factors as in the West. Thus, there is a negative relationship between education and family size and between socio-economic status and family size.

Religion is also related to fertility, with Muslims tending to have more children than Christians.

Thus, the traditional family in the Arab world is male dominant, monogamous, and sexually conservative with particularly heavy restrictions on female conduct. Arabs tend to value children highly and emphasize a broad sense of familism which encompasses obligations, reciprocities and privileges for individual family members. Although precise statistics are lacking, it appears that in the Arab world as elsewhere the functions and obligations of the extended family unit are becoming more circumscribed as the conjugal family unit gains prominence. Further, the self-sufficiency of the larger family system has weakened as it has become more dependent on the larger economy. There have been significant changes in the position of women, in particular in the past three decades as they have had access to formal education. Like other institutions in the Arab world, the family has been experiencing changes, both in its structure and functioning. Familism, however, continues to be a distinctive feature of the region.

religion, a nation's stage of economic development, and the like.

Recent discussions of the concept of patriarchy posit the importance of using the word in ways that recognize difference and complexity in the world. Using the word *patriarchy* does not require that it be seen as making claims for primacy above all dominant relationships, be they class or race, nor as equivalent to all other forms of inequality. Using the word

does, however, offer a way to understand certain dimensions of social structures and gender relations and to discern the coexistences of progress and backlash in different spheres.

As one example, in *Theorizing Patriarchy* (1997), author Sylvia Walby suggests six patriarchal structures or sites that are in process at any one time—sexuality, the household, employment, culture, the state, and male violence. In each of these sites,

different sets of practices are relatively autonomous yet interconnected in complex ways. The degree and form of male dominance in each of these sites change over time and place, and the relationships between them are what give patriarchy's character in a particular culture.

Such an approach has implications for understanding the relationship of patriarchy and leadership. Forms of patriarchal practices in the paid labor world, for example, limit women's access to leadership positions, exclude women from better forms of work, segregate women into worse jobs, and create obstacles to women's fullest realization in the workplace. State structures may legislate equal pay while opposing family leave legislation that would increase women's ability to achieve fullest employment opportunities. While all of that is going on, patriarchal orientations in the media lead to images of sexual objectification while presenting images of the "new" superwoman leader. As these examples show, the interplay of structures is complex and diverse and sometimes contradictory. To understand the degree and form of patriarchy at any one historical time and place, one needs to look at these structures and the interplay within and between them. This multitiered analysis allows for an understanding of change, of improvements in one site, for example, while allowing intensification of patriarchy in another and the variances determined by other factors, such as age and ethnicity.

PATRIARCHY AND LEADERSHIP

Leadership is embedded in deeply ingrained patriarchal systems and structures, for example, in women's access to and distribution of resources, in genderized perceptions of effective leadership traits and qualities, and in expectations of who can lead, where leadership takes place, and for what purposes. Certainly in the United States we are distanced from the absolute "rule of the father" in all spheres of public and private life. Even the term *head of household* is more gender neutral, given the radical shifts in modern family arrangements.

The last quarter of a century has brought expanding research on leadership and gender and on the

relationship between the two. One substantial emphasis of this research has been on issues of opportunities and excluding practices, such as the glass ceiling and unequal access, practices that keep women from leadership positions. Another substantial emphasis has been on the actual exercise of leadership and gender differences in style, effectiveness, priorities, and expectations. Still another emphasis has been on the very redefinition of leadership itself, seeing it as empowering rather than overpowering, and finding it occurring in informal and relational ways.

During most of recorded history, women have been largely excluded from formal leadership positions. We may understand this exclusion in many ways, provide statistical portraits of the phenomenon, and describe the consequences. Even in just one of the patriarchal structures identified earlier—employment—the practices are complex and varied. Women typically earn less than men, engage in more unpaid work than men, and hold different and usually lower-status jobs. Although the percentage of women joining the paid work force has risen steadily since World War II, men and women typically do not work in the same occupations. Occupational segregation is an international phenomenon. Even in the upper echelons of work, the professions, patriarchal practices frame the ways in which professions themselves are sex segregated and gender coded, with those professions that are most male segregated—such as the practice of medicine—having more status, wealth, and power, and those professions that are more female identified—such as nursing and social work—having less status.

The invisibility of women as leaders and their exclusion from formal leadership positions—whether in industry or in the state—have much to do with the practices of patriarchy. The "glass ceiling" is not the entire story. Patriarchy sinks deep into cultural values and concepts, and the expectations of leader/leadership are perfect examples. Leadership studies actually started off with the "great man" theory, a phrase whose male biases couldn't be more self-evident. The next stage of leadership studies identified traits, and, given underlying patriarchal premises, we should not be surprised that the pre-

dominant cultural expectation of leaders asserts that they are decisive, in control, and heroic, typically characteristics associated with males in power. More female-associated characteristics, such as being relational and compassionate and demonstrating a willingness to negotiate, are often viewed as weaknesses in leaders. Feminist organizational scholar Amanda Sinclair proposes “a close but obscured connection between constructs of leadership, traditional assumptions of masculinity, and a particular expression of male heterosexual identity” (Sinclair 1998, 1).

Rethinking patriarchy and its practices has implications for rethinking what leadership is and isn't. Take, for example, notions of leaders' exercise of power and control—the heart of patriarchy. In his landmark book, *Leadership*, James MacGregor Burns defines power “not as property or entity or possession but *as a relationship*” (Burns 1978, 15). Although not articulating his position in order to dethrone patriarchy, Burns believes that those who hold *power over* others are not leaders, rather they are simply power wielders. Leaders, on the other hand, hold power differently. They share power, and they empower their followers. If this definition were to become truly accepted and practiced, women might be more likely to be recognized as leaders and to engage in leading.

We could argue that the “power as control” approach to leadership is rooted in a decidedly male disposition expressed through the hierarchal distribution of resources, influences, and position. Instead of simply seeing the exercise of power over employees, for example, as an archaic style that is no longer useful in contemporary workplaces, the dominance and hierarchal model could be seen as patriarchal structures and practices.

IS PATRIARCHY OVER?

We might be tempted to imagine, given all the progress in women's lives and rights in the United States today, that patriarchy is over. However, we must recognize that its degrees and forms evolve through time and in differentiated ways in the structures and spheres of modern life. Women, for example, remain dramatically underrepresented in formal

leadership positions in the major institutions of the United States. Although more women are now elected officials holding public office, the percentages are nowhere representative of the population as a whole and are far below those of many other highly industrialized democracies in the world. Although few women lead corporations, more women have reached the ranks of senior management, although women still hold less than 5 percent of the upper management and executive positions. Although the absolute exclusion of women from paid work is diminishing, their segregation into low-paying industries and occupations and part-time work has declined only a little. Women are gaining access to the public sphere of paid employment but are subordinated to men within it.

As feminist scholar Cynthia Cockburn states:

“Patriarchy” is not merely a colourful term used by feminists to rebuke men. It is not a thing of bygone days, nor a rhetorical flourish. It is an important dimension of the structures of modern societies, whether capitalist or state socialist. It is a living reality, a system that quite observably shapes the lives and differentiates the chances of women and of men. The struggle for sex equality . . . is an attempt to contradict, to undo, patriarchy. (cited in Bryson 1999, 322)

Similarly, the efforts to rethink and redefine who is a leader and what is leadership challenge patriarchal practices and, in that way, move society that much closer to gender equality.

PATTON, GEORGE S. (1885–1945)

United States general

The German military theorist Carl von Clausewitz (1780–1831) wrote that “a distinguished commander without boldness is unthinkable” (Clausewitz [1832] 1976, 198). In World War II, George Smith Patton, Jr., was the epitome of a bold commander in campaigns in North Africa, Sicily, and northern Europe. He became one of the greatest generals in U.S. military history.

Patton was an effective and passionate leader of troops, but was also a man whose emotions could get the better of him and either cloud or completely

—George S. Patton

obscure his judgment. He was by many accounts an enigmatic or even strange man, given to historical disquisitions about battles from the remote past and equally prone to passionate and profane tirades about victory, duty, and soldierly obligations. As controversial as some of his actions were, however, they did little to lessen the overall quality of his leadership.

PATTON'S PAST

Although Patton himself was born in San Gabriel, California, his family had its roots in Virginia and traced its line back to the 1760s. Many of Patton's ancestors attended the Virginia Military Institute, and several fought in the Civil War, including a great uncle who died at Gettysburg and a grandfather who was killed in battle in 1864. He revered these men for their exploits, and most of the tales he heard at his father's knee involved bravery, boldness, and duty. His father also read *The Iliad* and other classics of military history to the impressionable young boy. His afternoons were spent camping, fishing, and learning to ride horses and shoot rifles.

For years, the family resisted sending him to school, preferring to encourage his reading and study at home. Not until he was eleven did he enter a private academy in Pasadena, California. In the early years of this more formal education, his essays were peppered with references to Alexander the Great, Epaminondas (a Theban tactician of the fourth century BCE), and Julius Caesar, and comments on their leadership and effectiveness. He wrote about the Athenian tactics at the 490 BCE Battle of Marathon and the Athenian Sicilian expedition in 415 BCE. By the time he was seventeen, he had decided that he wanted to be an officer in the U.S. Army.

He transferred from the private school he was attending to the Virginia Military Institute in the hope that it would prepare him for an appointment to the U.S. Military Academy at West Point, something his father worked tirelessly to secure for the boy. When, on being fitted for his VMI uniform, he found that his measurements were exactly those of his father and grandfather, Patton was even more certain of his military destiny. After a year at VMI, he transferred to West Point.

PATTON'S IMAGE

One element of Patton's character that became clear at West Point was his burning desire to succeed. He pushed himself to live up to the examples of his ancestors and to more remote but no less vivid examples from history. Along with his determination, though, came a lifelong difficulty sympathizing with those who fell short of success. As a cadet in charge of underclassmen, Patton gained notoriety for reporting every minor infraction of discipline or deportment. He even spent hours in front of a mirror, practicing a stern, intimidating expression.

As amusing as this image may be, it is indicative of an element of leadership that he understood instinctively. Whether as a hard-driving cadet scaring freshmen with his scowl or as an immaculately dressed tank commander brandishing ivory-handled pistols, Patton understood that a certain image and a measure of theatrics were necessary to capture the attention of those whom he led. Years later, he would also insist that his soldiers wear proper uniforms at all times. When he assumed command of the U.S. Army's II Corps in North Africa in March 1943, after the disappointing U.S. defeat at Kasserine Pass in Tunisia, he was disgusted by the poor dress and lack of discipline he found among the Corps' soldiers. He knew that if men did not look and act like soldiers, there was little chance they would fight like soldiers. His attention to detail both reinforced and projected his self-confidence. "Self-confidence and leadership are twin brothers," he wrote, and believed that his "claim to greatness hangs on an ability to lead and inspire" (Blumenson 1974, 625, 98).

PATTON'S ACTIONS

Appearance was only half of leadership. Patton believed that direct action was every bit as important as image, and that a leader who insisted upon remaining in the rear was not a leader at all. During World War I, Patton accompanied his tanks into battle either atop them or on foot. At the outset of his first big battle, he was ordered to hold back to the rear as his tanks went forward. On a rainy September morning, Patton watched his tankers advance across a valley

toward the German lines. The waiting and watching quickly grew unbearable. After two hours, it was all he could stand. He rounded up a handful of aides and took out on foot to catch his tanks. Soon he caught the vanguard of the attack and hitched a ride on top of a tank into a town through which German forces were retreating. The infantry followed behind. In the subsequent Meuse-Argonne battle, he found himself so far out in front of his tanks that he came under direct German fire and was seriously wounded.

PATTON'S PLACE IN HISTORY

Patton remains a controversial figure. Some believe his faults outweighed his abilities. The notorious instance in which he threatened and slapped two soldiers during the Sicilian campaign nearly ended his career and damaged his reputation beyond repair. Nevertheless, he led thousands of men to victory in Europe and North Africa and contributed to the ruin

of Nazi Germany in World War II by racing his army across France as fast as German forces could retreat. He felt deeply responsible for the very same men he pushed and slapped, and, despite his affinity for war, he knew that the fastest way to get his boys home was to keep pushing hard until the enemy's forces collapsed.

PAUL, ST. (10–67? CE)

Early Christian theologian

St. Paul became an important figure to the Christian church and theology after his conversion to the Christian faith. Converted only a few years after the death of Jesus Christ, he became the leading apostle of the new faith and played a decisive part in delineating it from Judaism to become a worldwide religion. His surviving letters are the earliest existing Christian writings that have continued to influence the religion to the present.

The sources for information about Paul's life are found in the New Testament of the Bible, specifically the Acts of the Apostles, in which he is the dominant figure, and the Pauline Epistles. The value of the latter depends on the extent to which they are accepted as genuinely written by Paul. The authorship of Romans, 1 and 2 Corinthians, Galatians, Philippians, Colossians, 1 Thessalonians, and Philemon is undisputed; the others, although initially attributed to Paul, are of debated authorship. They include Ephesians, 2 Thessalonians, 1 and 2 Timothy, Titus, and Hebrews. The majority of those letters frequently echo his philosophy and thus are of great importance to Christian theology in spite of their radical departure in style from Paul's epistles.

PAUL'S EARLY LIFE AND CONVERSION

Paul was born with the name "Saul" in Tarsus (now in modern Turkey) and had a strict Jewish upbringing. Little is known about Paul's early life, including the year of his birth. Like many of the Jews there, Paul inherited Roman citizenship. This explains his two names. He used his Jewish name, "Saul," within the Jewish community and his Roman surname, "Paul," when speaking his native tongue of Greek, the lingua franca of the Middle East at that time. Growing up in a cosmopolitan city prepared him for his special vocation of converting Gentiles.

At some point Paul became a fervent member of the Pharisees, a Jewish sect that promoted purity and strict fidelity to the law of Moses. He drew on his knowledge of the law and of rabbinic methods of interpreting repeatedly in his missionary work. He never met Jesus while in Jerusalem, but he learned enough about Jesus and his followers to regard the Christian movement as a threat to the Pharisaic Judaism that he had embraced so eagerly. It was during his travels to persecute members of the newly founded Christian movement that he underwent conversion.

The Hellenists (Greek-speaking Jews) in Jerusalem were the first to come under persecution by fellow Jews. They not only had proclaimed Jesus as the messiah, but also had claimed that Mosaic law could be disregarded because the sacrificial death of Jesus

superseded the teachings of the Jewish temple and its ritual sacrifices. Paul joined in the effort to eradicate the Christian movement. The Hellenist converts fled to foreign cities, while the original Aramaic-speaking group in Jerusalem kept a low profile to avoid further trouble. Paul received a commission from the chief priest to go to Damascus to help suppress Christianity. As he approached Damascus, Paul experienced a spiritual revelation and conversion. He was left convinced that Jesus was risen from the dead and exalted as Lord in heaven and that, just as the Christians claimed, his death could be understood as a sacrifice on behalf of others.

To Paul, his own conversion had universal significance and application. He, like many Jews of his time, believed that God's final Judgment Day, on which God would come to free the world from evil and to establish lasting peace and righteousness, was imminent. In agreement with the earliest apostolic preaching, though, Paul believed that Jesus, having died for the sins of humankind, was now to serve in heaven as God's representative for the judgment. On Judgment Day, Jesus would deliver those who believed in him and acknowledged him as Lord. This faith in Christ became the foundation of Paul's preaching and theology. Paul then saw as his responsibility the spread of this message to people of every nation to prepare them for God's coming.

Paul retreated for a brief period of reflection to the solitude of Arabia, where he worked to reconcile the contradictions stemming from his vision of Jesus with his beliefs as a Pharisee. The implications of his revelation would take nearly three years to sink in. During that time he lived in Damascus, where he presumably contacted Christians, learned about Jesus and his teachings, and started his first missionary work. It is noteworthy that after his conversion he did

not immediately go to Jerusalem to meet with the founders of the Church but rather worked with the Christians he had originally intended to persecute.

His three years in Damascus ended abruptly with his escape from government authorities before they could kill him. He traveled to Jerusalem, where he met the apostle Peter and James, the brother of Jesus. The meeting proved critical because it established Paul as a recognized apostle alongside the founders of the Church at Jerusalem. After a stay of about two weeks, Paul had to flee from danger, this time from the Pharisees, who regarded him as a dangerous traitor. He moved on to Cilicia and Syria and then to Tarsus. No information about this mission exists. He then moved on to Antioch, the capital of Syria, to join the apostolic father Barnabas in his work with the Gentiles.

EARLY CONTROVERSY

The controversy that emerged regarding the Gentiles led to Paul's most important contribution to Christian theology. His defense of the Gentiles defined Christianity as a universal religion, not just a Jewish

sect. Early Christianity was a close association between followers centering around the common meal and the Eucharist. The Jewish adherence to Mosaic law made many Jews reluctant to eat with “unclean” Gentiles for fear of violating the law, which orthodox Jews believed must be strictly followed to prepare for salvation. Some of the converted Pharisees held the belief even that Gentile converts should be required to accept circumcision and other obligations of the law. Although Jesus taught that purity of heart is more important than adherence to rules, many of his followers did not abandon their old ways.

The conversion of Gentiles in Antioch had created a mixed congregation in which Jewish and Gentile Christians ate together for the sake of fellowship. However, in Jerusalem Christians had gone to great pains not to offend Jews; their mission was struggling as a result of their trying to be faithful to the law. After a meeting in Antioch with Peter, in which Paul publicly rebuked Peter and argued against the forced Judaizing of the Gentiles (including circumcision), Paul continued preaching the gospel of faith. Paul argued that because faith in God preceded the law of Moses and because the law has no authority over a dead person (including Jesus, who died and became free from the law), belief in Christ means freedom from the law. However, freedom from the law does not grant one a license to sin, Paul added; it means an obligation to live a righteous life according to the Holy Spirit. Peter, James, and the other Church leaders cautiously supported this position but still had to act cautiously while in Jerusalem.

Paul later laid out these arguments in his first letter to the Galatians, the Christians living in the Roman province of Galatia in Asia Minor (in modern Turkey). Paul invented a new literary form, the epistle, which was new in its length as a letter, in the theological character of its contents, and conversational in tone, to help bolster the flagging morale of the far-flung churches of the Mediterranean world or to clarify points about belief. His epistles, combined with his travels throughout the Mediterranean world to establish churches, quickly placed him at the fore of the movement’s leaders.

THREE MISSIONS AND HIS DEATH

From Antioch, Paul set out on his first missionary journey, accompanied by Barnabas and, for part of the trip, Barnabas’s cousin John Mark. In general they went from city to city preaching in synagogues and in marketplaces to tell people of the impending Judgment Day. Churches were set up, and as soon as the little Christian groups seemed strong enough, the men moved on. They went to Cyprus and then to Asia Minor. At this point John Mark returned to Jerusalem, and Paul and Barnabas continued through the southern part of the Roman province of Galatia. After several other stops, they made their way back to Antioch.

While they were there, word from Jerusalem reached Paul that Gentiles were indeed to be circumcised. Paul traveled to Jerusalem with Barnabas and Titus, a Gentile whom Paul had converted. Paul and Barnabas met with James, Peter, and John, compared the content of their missionary messages, and decided they were in basic agreement. This confirmed for Paul that the Gentiles did not have to undergo circumcision or eat kosher food. In other words, Gentiles did not have to live like Jews. The men then held a larger conference to inform all regarding the position on the Gentiles. Still, some time passed before the Christian Jews would accept Paul’s position. The Jerusalem faction persisted in pushing for strict dietary rules and other pure habits as a way to segregate the Gentile converts.

On his second mission (50–53 CE), Paul refused to allow John Mark to accompany Barnabas and him because of John Mark’s earlier desertion during the first mission. Silas, a fellow Roman citizen, instead accompanied Paul, and Barnabas traveled with John Mark. Given that Paul was already angry with Barnabas for his support for Judaizing the Gentiles, the two men decided to go their separate ways. During visits to Philippi and Corinth, Paul and Silas founded two churches, but Paul’s attempt to found one in Athens failed. During his long stay at Corinth, which became a major center of early Christianity, he wrote 1 Thessalonians (52 CE). This letter to the Gentile converts of the city of Thessalonica (modern Thessaloníki, Greece) assured them

that dead Christians would be resurrected to join the living at the time of the Second Coming. Also while in Corinth, Paul met a Jewish couple, Aquila and Priscilla, who became his lifelong friends. Together they went to Ephesus before Paul sailed alone to Caesarea in Palestine, visited Jerusalem again, and returned to Antioch.

The third mission took Paul to Galatia, then Phrygia, and then over to Ephesus. His two-and-a-half-year stay in Ephesus was one of the most fruitful periods of his life; he wrote his two letters to the Corinthians (c. 56 CE). In the first letter he gave the account of the Last Supper in its oldest form. He also wrote his letter to the Galatians in which he tried to quell the problems over Judaizing the Gentiles. He went to Corinth to help the Christians there who were struggling with their faith, and he probably wrote the epistle to the Romans there. He then returned to Ephesus and finally to Jerusalem. This was his last visit to that city (57–59 CE). Soon after he arrived, he was arrested for provoking a riot.

After being held prisoner for two years and after hearings before a number of authorities, Paul appealed to Rome on his citizen's right and was sent to Rome under guard. On the way, the group was shipwrecked on Malta but finally made it to Rome, where Paul was imprisoned (60 CE). Tradition states that he died a martyr's death, either beheaded south of the city or burned on a cross. However, some scholars have argued that Paul was released after his imprisonment and that he went perhaps to Spain to minister and died there.

PAUL'S LEGACY

Paul is the most dominant figure of the early Christian age, and his epistles have left a tremendous mark on Christianity. His writings carry weight and influence far greater than those of James or Peter. The first Christian theological writing, filled with more spiritual fervor than systematic analysis, is found in his epistles. Subsequent Christian doctrine is rooted in his writings, and countless interpretations have been given of his teachings. Roman Catholic theology relies heavily upon him. The German religious reformer Martin Luther derived from the Epistle to

the Romans his principle of justification by faith alone, and later theologians also drew upon him. Paul's interpretation of the life, death, and resurrection of Jesus, his doctrine of the Church as the mystical body of Christ, his teaching on law and grace, and his view of justification have been decisive in the formation of the Christian faith.

A charismatic individual, Paul was also a natural leader of men who harbored little self-doubt. He believed his mission was not only to bring the word of Christ to the Gentiles, but also to organize the church so that it would develop and flourish, even in his absence. To do so, he created an organization that would one day become modern Christianity and trained its leaders. One of Paul's followers, Luke, whom Paul met during the time of his second and third missions, wrote one of the Gospels as well as the Book of Acts. Ultimately, Paul made Christianity a "universal" church both physically through his travels and theologically through his writings.

PEARL HARBOR

Perhaps once or twice in a century, a nation undergoes an event so unexpected, so shocking, so traumatic that the event becomes a turning point in history. One such event was the Japanese bombing of Pearl Harbor on 7 December 1941. In the perspective of history, the span of sixty-plus years is only a flash, but it is a long time in the life of an individual. Those people who remember Pearl Harbor as a direct experience have reached senior-citizen status, yet the subject continues to fascinate them and their descendants. Why?

No doubt one reason is the irrational but undeniable glamour of defeat; the people of the United States are winners, but they remember and sympathize with their losers. Another reason is the puzzle aspect. The merciful years have erased much of the pain and anger, but the subject remains an eternal doublecross puzzle in which the clues help fill in the story, and the story helps provide the clues. However, instead of clarifying the subject, the years have compounded it.

How could it have happened? How could the Japanese have sailed more than 4,800 kilometers across the Pacific without being seen? How could they have developed a torpedo that would not sink in the mud of Pearl Harbor (which was less than 10 meters deep)? How could they have developed a bomb weighing 780 kilograms that would penetrate the deck of a battleship? How could they have refueled three times in the cold northern Pacific on the way to their target? How could they have avoided air detection when they came within 400 kilometers of their target? How could the Japanese have caught the U.S. fleet napping at Pearl Harbor, the Gibraltar of Asia, and sink or damage 8 battleships, kill more than 2,400 men, wound 1,178, destroy almost 300 aircraft and damage another 128 but not get caught? Their losses were only 29 aircraft, 129 men, 1 major submarine, and 5 midget submarines.

Where were the U.S. carriers? What about radar? How much did President Franklin D. Roosevelt know? What about the Japanese submarines caught in the harbor? Was there a third wave? Why did the Japanese not finish off the U.S. fleet when they could have? How about the breaking of the Japanese code? Could it happen again? These and other questions are still being asked and studied more than six decades later.

The myth that still exists today sprang from these questions: that the Japanese could not have bombed Pearl Harbor without outside help; that leaders in Washington had access to the Japanese secret code and, led by President Roosevelt, knew about the impending attack but allowed it to happen because they needed an excuse to get the United States into World War II.

However, none of that myth has ever been proven,

and the debate continues. After more than sixty years, most historians have concluded that Japan's success was due to its excellent leadership and that the U.S. failures were due to poor leadership. The Japanese were simply better at the operational level.

Japanese Comdr. Isoroku Yamamoto had to report only to the naval minister, Vice Adm. Shigetaro Shimada, and to Prime Minister Hideki Tojo. Shimada, Yamamoto's friend and colleague, had just been promoted to his position, and Yamamoto had just replaced him as commander of the Japanese Navy. The prime minister usually allowed Yamamoto to do what he wanted. Yamamoto was responsible to no one else, nor did he have to coordinate any of his operational activities with the Japanese army.

On the other hand, the two U.S. commanders at Pearl Harbor, Lt. Gen. Walter Short and Adm. Husband Kimmel, had to coordinate their activities between themselves and their two separate staffs. They then had to answer in Washington to the chief of naval operations, Admiral Harold R. Stark, and to the Army chief of staff, Gen. George C. Marshall, who in turn had to report to the secretary of war, Henry Stimson, and the secretary of the navy, Frank Knox. If one includes the leaders of both houses of Congress and President Roosevelt, plus the free U.S. press, it becomes clear that it was much harder for Short and Kimmel to make decisions and to coordinate their functions. After an operation began, Yamamoto could make his decisions with his own staffs and effect change. The United States had to work together at all levels, and this became its Achilles heel.

DEFINITION OF LEADERSHIP

There is no shortage of books on leadership and definitions of leadership. Leaders and the characteristics of leadership are constantly being defined and redefined. These definitions and characteristics have crossed over into many disciplines, creating an absence of consensus. In the field of military science, people debate leadership and the role of the leader. These debates include the leader versus the manager, whether leadership is an art or a science, and whether leadership is inherited or can be taught.

Perhaps Omar Bradley, a famous U.S. general in World War II, said it best when he wrote that leadership for the military is intangible and no weapon invented can replace it. He felt that it is most common and least understood, that it may be directed or undirected. Searching the literature of the field, the most common definition for military leadership is that a good leader is one who is able to motivate others to do things they normally would not do. In the military context, leadership is motivating soldiers and sailors to accomplish their mission.

CHARACTERISTICS OF LEADERSHIP

The literature also contains a spate of characteristics of good leadership. Among them are intelligence, self-awareness, self-regulation, motivation, empathy, integrity, knowledge of job, ability to delegate, vision, communication skills, social awareness, self-confidence, ability to adapt to change, coordination, initiative, will, values, decision-making ethic, motivation, trust, ability to take charge, direction, clear idea, self-discipline, willingness to sacrifice, physical fitness, knowledge of their followers, knowledge of the enemy, character, courage, and competence. Four of these will be used to depict the variation among the commanders involved with Pearl Harbor and to analyze why the Japanese were more successful. The four characteristics are vision, knowledge of job (understanding the mission), ability to delegate (choice of staff), and communication skills.

In the military, the commander is in charge and is responsible for what happens—the good and the bad. When one wins, one gets the credit, and when one loses, one takes the blame. Although many men can be praised and blamed for the Pearl Harbor fiasco, Yamamoto more than any other man was responsible for the Japanese success at Pearl Harbor. Husband Kimmel and Walter Short have to bear the blame for the U.S. failure. These three men were the major actors on that day that Roosevelt dubbed “a day of infamy.”

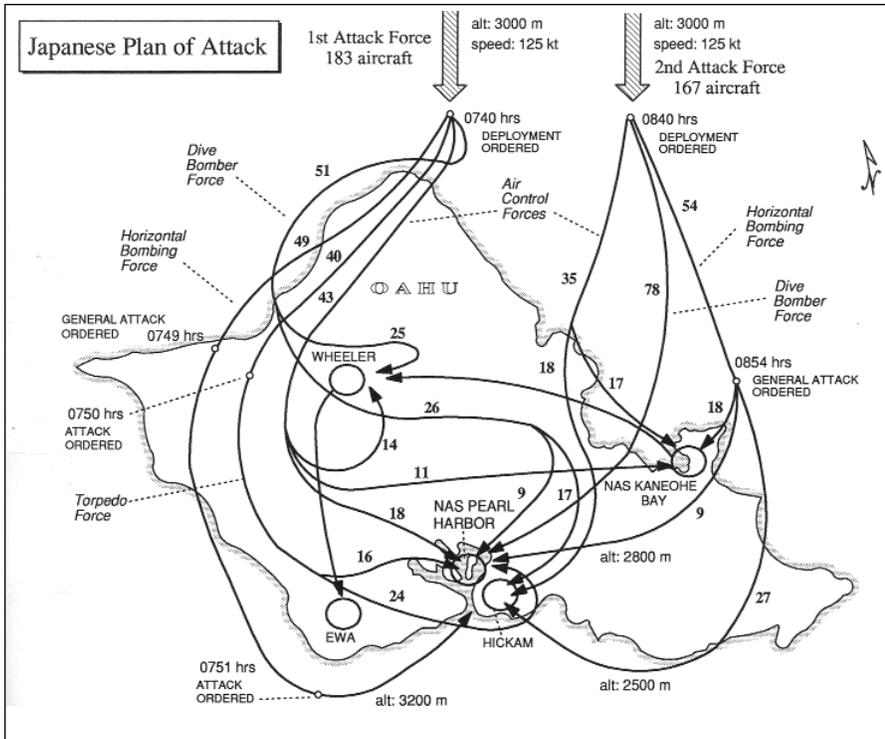

YAMAMOTO: BACKGROUND AND VISION

Isoroku Yamamoto was born in 1880 and graduated from the Japanese Naval Academy in 1904, just in

time to take part in the Russian-Japanese War and the great Japanese naval victory at Tsushima Straits in 1905. He was educated at Harvard and served as a naval attaché in both London and Washington. Probably no man in Japan wanted to avoid war with the United States more than Yamamoto. He had seen firsthand the power of the United States, and he understood that in a protracted war there was little hope of victory because the United States vastly outstripped Japan in science, technology, and especially natural resources. During his naval career, he quickly climbed the ladder of promotions until he was commander-in-chief of the Japanese Navy. At the time that the attack on Pearl Harbor was planned, his vision was to destroy the U.S. Navy in an all-out, one-time battle. The plan was to push on to southeast Asia, including the Dutch East Indies, and win the natural resources that Japan so desperately needed to be a world power. He realized that in order for Japan to conquer China and become the hegemonic power in Asia, he had to destroy the U.S. fleet, which was located at Pearl Harbor in Oahu, Hawaii.

The British and the French, having taken their hits in 1940 from the Germans, were no longer viable foes. Many of Yamamoto’s colleagues believed that his plan was impossible, but he pursued it to its conclusion and several times threatened to resign if he did not get his way. Although not a pilot, he had been closely associated with naval aviation and had realized its great potential for years. He became an advocate of naval air power through the positions to which he was successively appointed, including commander of the First Carrier Division and director of the Aeronautical Department of the Japanese Navy.

When he became commander of the Japanese Navy in 1940, Yamamoto fought for two essential points: a heavy emphasis on air warfare and the advancement of the battle line toward Hawaii so that he could fight the great all-out battle. His plan was simple: destroy the U.S. fleet at Pearl Harbor, then move south and either sue for peace (wishfully hoping that the United States would have no stomach to fight a war against him) or, if the United States chose to fight, use the resources he then would have at his

disposal to engage in a protracted war, which he knew would be almost impossible to win. Thus, he set out to implement his plan.

Yamamoto specified that his fleet would have carriers, cruisers, destroyers, and submarines, but no battleships to slow him down. His plan was predicated on the maximum use of air power: His fleet would have the greatest concentration of air power ever assembled. His plan called for six aircraft carriers with over 360 airplanes. He appointed an excellent staff led by Comdr. Minoru Genda and Comdr. Mitsuo Fuchida. Yamamoto was a charismatic leader who was determined to get his way, and when he put his plan into motion, he never looked back.

HUSBAND KIMMEL: BACKGROUND AND VISION

Husband Kimmel was born in 1882 in Henderson, Kentucky. In 1900, he entered the U.S. Naval Academy at Annapolis, Maryland, where he excelled in navigation, seamanship, ordnance, and languages.

He was rated second in his class in efficiency. Throughout his naval career, his insistence on order, routine, and efficiency was his hallmark. He graduated thirteenth in his class of sixty-two in 1904.

Nothing in his early career indicated the bad luck that he was to have by being at Pearl Harbor at the wrong time. In fact, his career up to Pearl Harbor was highly successful. In 1933 he realized the dream of every naval officer: command of a battleship, the *New York*. Later he went on to command a battle force of several battleships. Three elements stood out in his early career before he obtained flag rank: an excellent record in gunnery, important staff assignments, and a solid background in battleships.

In 1939, Kimmel was assigned as a budget officer to the Navy Department, where he became known as an excellent administrator. After several assignments in that department, he was assigned late in 1939 aboard the *Honolulu* as commander of a cruiser battle force where he did an outstanding job, demonstrating a keen knowledge of naval history, tactics, and strategy. By 1941, just prior to Pearl Harbor, his fitness reports bulged with high ratings and predictions of great things to come. When he was appointed commander-in-chief of the U.S. fleet, he was selected over many men who were his senior. Although he had some creative imagination, he was not a big advocate of air power, and he assumed his new command as a highly regarded, intelligent man who demanded and got the respect of his subordinates but who lacked a genuine sense of humor.

Although equal in rank in the command structure to Yamamoto, Kimmel did not have the free rein that his adversary had, and he had constantly to confer with Washington on most important matters. He was mainly a battleship advocate, and his vision of the

role of aircraft carriers and the role of the U.S. fleet in Hawaii was completely different from the Japanese commander's.

WALTER SHORT: BACKGROUND AND VISION

Kimmel's counterpart for the army was Lt. Gen. Walter Short. Born in Fillmore, Illinois, in 1880, Short graduated from the University of Illinois in 1902. In March of that year, he received a direct commission, and for almost forty years his personal history exemplified a typical infantry officer of his generation. He spent his early career in various stateside positions, mainly in charge of training. Just prior to World War I, he accompanied the Sixteenth Infantry Division to Mexico to fight Pancho Villa under Gen. George Pershing. In 1917, during World War I, he racked up a respectable record performing duty with the French and the British forces. Short was an excellent weapons officer, and he helped train officers in machine gun training. He stayed on after the armistice until 1919 as officer in charge of the Third Army's training unit.

Between the world wars, Short was an old-line army officer who attended the Army Command and General Staff College and the Army War College. He did several tours of duty in Washington and in the field and in 1937 was promoted to the rank of brigadier general. With the outbreak of World War II, he received assignments to command Fort Hamilton in New York and Camp Jackson in Columbia, South Carolina, both training bases. Finally, he was sent to Pearl Harbor. There was no controversy about his assignment, unlike Kimmel's. He was not promoted over others, and this was to be his final assignment before retirement.

In summarizing Short's career, one gets the picture of a confident, capable, conscientious officer, neither brilliant nor overly aggressive but competent and honest enough to do a good job. The one drawback might be that he had too many assignments involving training missions. Such a background could suggest that he might mistake the shadow for substance and regard training as an end in itself. Ultimately, in fact, he never understood that his mission was to defend the fleet. He thought that it would be to defend Hawaii from ground attack and sabotage.

His failure to recognize this became one of the major causes of the catastrophe at Pearl Harbor—the unclearness of the commanders' understanding of their mission. Both Kimmel and Short would have major problems in their interpretation and vision about what to do on 7 December, and both in essence would pursue their own ends without meaningful coordination. Yamamoto and his staff would not.

KNOWLEDGE OF JOB (UNDERSTANDING THE MISSION): YAMAMOTO

Yamamoto understood his mission and certainly planned well for it, but even he had a blind spot. He failed to realize the strategic necessity of destroying the oil and fuel storage tanks and the dry docks at Pearl Harbor. Had he done so, this catastrophic damage to the United States would have set it back for six months because most refueling and repairs would have had to be done at San Diego, California, and other stateside bases nearly 4,800 kilometers away. His not destroying the dry docks and fuel storage tanks allowed the U.S. fleet to refuel and repair at Pearl Harbor, greatly reducing the logistic, supply, and maintenance problems.

In all other aspects, Yamamoto's plan was almost flawless, and the technological advances in dive bombing, torpedo bombing, refueling, and using air power were brilliant. He and his staff expected to lose at least two aircraft carriers, and they lost none. The final outcome was successful beyond his wildest dream.

KNOWLEDGE OF JOB (UNDERSTANDING THE MISSION): KIMMEL

Kimmel was dedicated. He was obsessed with the physical part of his job, and he seemed to feel guilty if he were not on the job every minute of the day. As one staff officer commented, Kimmel spent more time and money on paint and polish than the Japanese spent on fuel. He devoted so much of his time to details that he left himself little time to think, to analyze relationships of events, or to see the bigger picture and grasp broad meanings. He left little room for the intangibles of command—intuition, flair—such

things that separate great leaders from merely competent ones.

When he received a warning message on 27 November that indicated that the Japanese were moving toward southeast Asia and that war might be imminent, he continued training. He failed to initiate long-range patrols; he failed to put up his submarine nets; he failed to take into account that the Japanese just might attack his ships in port. He suffered from the defects of his virtues. The very qualities that could have made him a real fighting admiral—physical courage, effectiveness, and offensive mind-set—worked against him in this situation, which called for dynamic defensive action.

KNOWLEDGE OF JOB (UNDERSTANDING THE MISSION): SHORT

Short did not understand that his mission was to defend the fleet—not Pearl Harbor—from attack, and he did not think much of air power. He frittered away some of his resources by using many pilots in non-flying jobs such as personnel, logistics, and communications. Because he was worried about sabotage, he sought to protect his airplanes by lining them up bumper-to-bumper, thus making them easy targets for the Japanese pilots. The planes were so vulnerable during the attack that most were destroyed before they could get off the ground—like bowling pins hit by a bowling ball. His understanding of radar was even worse. He failed to communicate with his men at the radar sites or to have his staff explain radar's proper use.

The first wave of Japanese planes was picked up on the radar screen approximately one hour before the attack at about 212 kilometers from Pearl Harbor. This sighting was reported to Short's operation center but never passed on to him. Failure to understand the mission and failure to understand the new technology were two of his most grievous errors.

ABILITY TO DELEGATE (CHOICE OF STAFF): YAMAMOTO

Although Yamamoto was the one person most responsible for conceiving the plan to attack Pearl

Harbor and using his dynamic personality and incontestable prestige to push it through to acceptance, its success depended upon the workings of his staff and the efforts of dozens of other people. Here Yamamoto was at his best. Choosing his people carefully, he assembled the cream of the Japanese Navy, and he delegated to this group the operation and minute planning of the whole operation. One cannot say that without this excellent staff he would have failed, but without them it would not have been the same. The best and brightest were assigned to the mission: the best brains and the best equipment, the *crème de la crème* of Japan. To these men Yamamoto gave his trust. He delegated and trusted them to come up with the plan and its implementation. Although he was consulted and made some input, they did the spade work.

Comdr. Minoru Genda was the foremost planner and Comdr. Mitsuo Fuchida the flight leader. Under them were superb staffs who led and were never micromanaged. They alone did the planning, organizing, and coordination of the attack. They worked in close harmony, spent hours rehearsing, took nothing for granted, and were readily accessible to each other. They were the major reason the attack was so successful.

ABILITY TO DELEGATE (CHOICE OF STAFF): SHORT

When Short assumed command, he waved aside a report prepared for him by his predecessor, Maj. Gen. Charles D. Heron, who later testified before the congressional committee investigating the attack that Short touched base with him over the defense plans but never asked him his opinion about the true threat. Short took the position that his job was to defend the island and that the fleet would take care of itself; he fell into the old rut as a training officer and worried more about disrupting his training than coordinating the defense of the island. His staff was afraid of him, and he often went into angry tirades when he was not happy. His staff was not of the caliber of Yamamoto's or even Kimmel's. Short seldom delegated and very seldom informed his staff of war plan changes. He used his staff daily to train. His intelligence officer

was a poor choice and did not even have a security clearance. In his office he had information, found after the attack, that, had he processed it properly, would have helped Short and perhaps even tipped him off that something was going to happen. This intelligence officer, Lt. Col. Kendall J. Fielder, was given the position not because he was good but solely because he was a friend of Short.

Instead of taking his chief of staff, Col. Walter C. Phillips, to meetings with him, Short took other friends. He seldom attended departmental meetings and did not have a good grasp of what his intelligence and operations officers were doing. He assumed that they were coordinating and getting the information from each other, but this was not the case, and they were often frustrated. There was little exchange of information among his staff members, and he dealt with each on a one-on-one basis. He attended staff meetings only when he thought that there were important matters to discuss and then did not stay long. Hence, there was a breakdown in communications between the staff and the commanding general that would prove costly.

ABILITY TO DELEGATE (CHOICE OF STAFF): KIMMEL

Kimmel acted just the opposite of Short. He conferred almost daily with his staff members, who never hesitated to tell him what they thought, although he did not listen to them at key times. For instance, a joint report by Rear Adm. Patrick N. L. Bellinger, commander of the naval air arm, and Maj. Gen. Frederik L. Martin, commander of the army air forces in Hawaii, predicted the attack and how the Japanese would execute it. A later report by Col. William E. Farthing, commander of Hickam Air Force Base, also predicted the attack and how it would possibly take place. Both reports placed the attack on a Sunday morning.

Kimmel's intelligence officers also warned him several times of the impending attack, but he ignored them. In addition to warnings that relations between Japan and the United States were about to break off, U.S. newspapers, some as early as 1931, had predicted war between the two countries and

discussed problems between them. The *Honolulu Star Bulletin News* predicted an attack one week before it actually happened.

Coordination between Kimmel's staff and Short's staff was almost nonexistent, and Kimmel failed to pass on to Short more than a dozen important messages that contained information that Short should have received. Kimmel never briefed and seldom talked to Adm. Claude Bloch, commander of the Fourteenth Naval District, who was responsible for the fleet's defense. The lines of communication between his air arm commander, Rear Adm. Patrick Bellinger, and Bloch, as well as between Martin and Bloch, were nonexistent. Short and Kimmel played golf together, but there was little coordination between the two. Yamamoto had none of these problems.

COMMUNICATION SKILLS: YAMAMOTO

When the charismatic Yamamoto spoke, the navy and the country listened. He and his staff were friendly and approachable. After the plan was formulated, it was clear and concise. All aspects, from maintenance to operations to logistics, were coordinated. Each group pilot and team practiced and knew what to do; in fact, if anything they practiced too long and too much and maybe underestimated potential outcomes and what they could do. The lines of command went from Yamamoto to Vice Adm. Chuichi Nagumo, the task force commander, to Fuchida, the leader of the attack, through Genda and the staff. The navy department in Tokyo and the ships at sea had no problem communicating, even though the ships maintained radio silence and their equipment was sealed so that they could not broadcast in the open. They communicated by means of searchlights and flags.

The planning, training, and logistics before the attack and the communications among the participants during the attack proceeded with few problems.

COMMUNICATION SKILLS: KIMMEL AND SHORT

Many of the problems for the U.S. fleet at Pearl Harbor revolved around communications coordination

and the failure of the leaders to communicate with and understand each other. The commanders failed to confer not only with each other but also with their senior officers. For example, the army had one code alert system, which went from one to three, “one” being full alert and “three” being sabotage alert. The navy had a system set up just the opposite, where “code one” meant sabotage and “code three” meant combat or full alert. The two arms were supposed to have the same codes, so people in Washington thought that when Short went on code three he was on full alert, not sabotage alert.

The leaders and staff in Washington assumed that Kimmel had all the information that they themselves had, and he, in turn, assumed that the leaders and staff in Washington knew what he was doing. In reality, neither was sure what the other intended or was doing.

Hence, Pearl Harbor for the United States was full of examples of failure to communicate: interpreting messages incorrectly, making incorrect assumptions about what the field commanders and staff knew, failing to follow up on orders, issuing too many classified messages, which then had to be declassified, having rigid procedures such as locking up ordnance on alert so that it would take a command order to get to the ammunition, being too complacent when on alert, fostering jealousy between the naval and air forces and between the army and navy, and failing to define authority and responsibility. Of all the characteristics of good leadership and command not exhibited at Pearl Harbor, failure to communicate, coordinate, and understand orders and procedures probably was the major reason for the U.S. failure.

THE VERDICT OF HISTORY

“Pearl Harbor never dies and no living person has seen the end of it.” So Admiral Kimmel’s lawyer told this writer some forty years ago. Never has anyone made a truer statement about Pearl Harbor. The arguments about who, what, when, and where at Pearl Harbor will probably go on ad infinitum. Yamamoto and his staff were extremely well organized. They planned, coordinated, managed, directed, and used the principles of war, such as concentration, objec-

tive, security, and surprise, better than their U.S. counterparts. Much of their success had to do with the nature of their government. In Japan’s monarchical system of government, Yamamoto had to answer only to two people: Prime Minister Hideki Tojo and Emperor Hirohito. Neither one ever challenged him: Tojo was afraid of him, and the emperor respected him. Yamamoto did not have to worry, as Kimmel and Short did, about the constraints of a democratic society. Perhaps it is not fair to judge them as equals, but among the characteristics and factors of leadership such as vision, communications, decision making, and general application of the principles of war, Japan was far ahead of the United States.

Yamamoto’s plan had one major flaw—it did not go far enough. Had he planned to destroy the dry docks and fuel dumps, he would have done far more damage. Nevertheless, from a tactical point of view it was still a huge success. From a strategic point of view, however, it was another story. He made a fatal miscalculation in attacking the United States because he awoke a sleeping giant. He had studied and lived in the United States, and he knew that he could not win a protracted war against a country so endowed in resources and technology, but he did it anyway. He gambled and lost. The tactics drove the strategy, and hence, although Pearl Harbor was a tactical victory for the Japanese, it was a strategic mistake. Despite this mistake, Yamamoto displayed all the characteristics that make a leader great; even though he lost in the end, he will go down in history as a winner because he was a great charismatic leader.

Kimmel and Short were good men but not good leaders. They lacked vision, charisma, and the ability to plan, coordinate, direct, and control. They made errors of omission and commission, and although they were not solely responsible for the failure to be ready for the attack on Pearl Harbor, they were unfortunately there. In the military the old axiom always holds true: The man in charge is the one who gets either the credit or the blame. Kimmel and Short were in charge, and they failed to produce. They and their staffs made mistake after mistake, from using reconnaissance poorly to lifting the protective submarine nets in the harbor, from misinterpreting messages to implementing a confusing alert system,

from keeping ammunition locked up in the armories to lining the planes up bumper to bumper and shooting down their own fighters and bombers. In the final analysis, on that Sunday morning of 7 December 1941, at dawn they slept.

PERSONALITY AND GROUP ROLES

One way that leaders shape the organizational, societal, or political climate of their group is through their style of communication and interaction with other group members. The effectiveness of leaders has been determined by analyzing both the dispositional qualities of leaders and the situational factors that contribute to the creation of a great leader. The tendency of most research is to underestimate the extent to which specific situations promote evaluations of exceptional leadership. Instead, much of the research focuses on what is often termed the “great person” approach, that is, analyzing whether successful leaders share any personality characteristics. Therefore, any discussion of leadership warrants a discussion of personality.

Generally, personality refers to a person’s consistent temperament and interaction style, but not always. While personality is generally discussed in terms of traits (stable predispositions in behavior) there is a growing literature that discusses people’s motives (contextual drives) in relation to personality. Although the history of personality assessment focuses on fixed traits, in order to describe and explain human personality accurately, it is necessary to include a discussion of situational motives for behavior also.

Why is the discussion of personality motives as important as traits? Personality research reveals that although “great” leaders share similar personal characteristics, the findings are not as powerful as the great person approach might lead one to suspect. Leaders have been found to be more intelligent, more outgoing, and more dominant than followers, but the situation the leader confronts seems to be as important as his or her personal characteristics. Favorable situations for leadership occur when the leader has

considerable authority and a clear-cut task while simultaneously being situated in contexts where group members communicate well both with one another and with the leader.

Leaders are assigned a particular role in groups based on the formality of the situation. Formal leadership roles (for example, CEO of a corporation) are often designated prior to any group interaction. Therefore, persons in formal leadership positions systematically maintain power and status despite fluctuations in situational demands. Situational demands are more significant for small, leaderless groups convening in more informal settings. It is in these settings that individual personality characteristics can play a role in whether certain people emerge as the group leader. People may bid for the leadership role based on whether or not they were previously group leader, or group members may assign the leadership role to a person exhibiting personality characteristics, such as flexibility or fairness, deemed suitable for an informal leader who must adapt to the ever-changing climate of small-group decision making.

EARLY PERSONALITY RESEARCH

Psychologists are not the only ones to look at the puzzle of personality; in fact, personality differences have interested people across time. Both ancient philosophers and modern-day psychologists have attempted to formalize their conjectures into reliable and comprehensive systems predicting human behavior. Perhaps the earliest personality psychologists in the West were ancient Greek physicians such as Hippocrates and Galen, who distinguished between four different types of temperament. They linked these temperaments to the four elements—air, earth, fire, and water—and saw different fluids within the body as representative of the various temperaments. As science progressed, so did personality theories.

It was in 1930s that personality psychology defined itself as a separate field. At that time the psychologist Gordon Allport published his landmark text *Personality: A Psychological Interpretation*. Allport distinguished between levels of personality traits (that is, between surface characteristics and

core personality tendencies) in attempting to explain variations in personality.

Following in Allport's tradition, early personality theorists attempted to generate a taxonomy of personality based on adjectives describing human behavior. One of the first personality theories, Raymond Cattell's sixteen-factor theory (1950), focused on clusters of sixteen adjectives describing general surface characteristics. Believing that Cattell's theory was overly complex, later researchers pared down the taxonomy to as few as three to five traits. For example, in 1952, Hans Eysenck developed a three-factor theory that focused on paired oppositional central traits (for example, introversion and extroversion) and was similar in ways to the ancient four-factor model of Hippocrates and Galen.

Prompted by Walter Mischel in the late 1960s, researchers began to question the view of personality as a collection of inherent and stable traits. A new theoretical structure emerged that focused on situations as the determinants of behavior. A classic example of how situations can determine personality is the Stanford Prison Experiment. In 1971, Philip Zimbardo and his colleagues constructed a mock prison environment and arbitrarily assigned research participants to be either guards or inmates. What happened was astonishing. In a matter of days the guards assumed a sadistic, authoritarian demeanor, while the inmates succumbed to anger and depression. Although planned as a two-week experiment, it was cancelled after only 6 days. The prison experiment clearly illustrates the power that situational forces can have on one's disposition.

CONTEMPORARY PERSONALITY RESEARCH

In the 1960s and 1970s, the field of personality shifted its focus from research on discrete and unchanging personality types to incorporate perspectives that acknowledged the influence of culture and environment upon the individual. This development was achieved in part by focusing more prominently on personality in terms of group roles.

One result of this shift was socioanalytic theory, which integrates themes of psychoanalysis, sociological role theory, and evolutionary psychology.

Socioanalytic theory argues that people have come to survive more efficiently by living in small, hierarchical groups, and that within these groups, they seek fulfillment of two main goals, acceptance and status. In addition, socioanalytic research suggests that people's behaviors are influenced by the necessity to manage one's reputation in the service of these goals, which ultimately are rooted in the desire for reproductive success.

Another current area of research is known as social cognitive theory. It provides a sophisticated discussion of the integration of research on personality and group roles. The social cognitive approach to personality emphasizes the importance of cognitive processes in determining personality and behavior patterns. Sociocognitive theorists are interested in how a person's expectations, goals, and feelings of competence determine personality and behavior. Following in the tradition of Mischel, the social element of sociocognitive theory links person to environmental context.

From the late 1980s, personality research has increasingly relied on these interactionist perspectives. Although there is still a substantial reliance on trait taxonomies, the interactionist framework can be applied specifically to the study of groups and the individual roles that exist within them. One of the most well-known taxonomies, referred to as the "Big Five," considers personality as a confluence of five traits: extroversion, agreeableness, conscientiousness, openness to experience, and neuroticism. Researchers often use the Big Five taxonomy to study how a particular trait functions within a specific group role. Although the Big Five model is sometimes criticized for its neglect of social and cultural influences, it has achieved wide recognition because of its cross-cultural applicability and similarity to the early personality models.

TWO APPROACHES TO STUDYING PERSONALITY IN GROUPS

Research on personality and group roles has led to examination of the ways that individuals operate within the social realm. There are two distinct approaches to studying personality in terms of group

roles. One approach examines whether certain personality types (for example, the extrovert) are suitable for certain group roles. The second approach examines how one's role in a group affects how others perceive one's personality.

Relation of Personality Types to Group Role

Psychologists have examined the relationship between individual personality and relationships within groups in three main ways—through an examination of the distinction between authoritarian and authoritative personality traits, through exploration of the Type A personality, and through examination of the bimodal types described in the Big Five taxonomy for particular group roles.

Authoritarian Personality Types

Research on the authoritarian personality began in 1941, when Erich Fromm composed the California F (*F* standing for fascist) scale to describe characteristics of the authoritarian personality. Later researchers refined descriptions of the authoritarian personality. With the authoritative personality at the opposite end of the spectrum, authoritarian personality types are described as having a behavioral tendency toward dominance and leadership, a preoccupation with achievement, and a tendency toward interpersonal conflict and verbal hostility. These personality characteristics drive authoritarian individuals to seek the leadership position within a group. Authoritarian personality types tend to be ethnocentric and to find self-esteem through loyalty to a cohesive "in-group." These types tend to seek membership in groups in which their personality characteristics are either prototypical or sought after, which results in their gaining power.

Type A Personality

Although research on the Type A personality was originally conducted to examine the increased risk of coronary heart disease incurred by people with that personality type, this line of research is also relevant for studies of organizational behavior. The Type A personality is described as being extremely competitive, achievement oriented, hostile, aggressive, and as exhibiting a sense of urgency through the use of

Personality and Group Roles

<i>Common Big Five Label</i>	<i>Common descriptions</i>
Extroversion (vs. Introversion)	gregarious assertive outgoing energetic dominant
Agreeableness (vs. Antagonism)	trustworthy straightforward compliant modest appreciative generous cooperative
Conscientiousness (vs. Lack of Direction)	competent orderly dutiful achievement-oriented self-disciplined organized efficient responsible
Neuroticism (vs. Emotional Stability)	anxious self-conscious impulsive temperamental tense
Openness (vs. Closedness) to Experience	active feeling imaginative clever ingenious intelligent

emphatic speech and certain psychomotor mannerisms. People with Type A personalities tend to be inclined to seek out highly active and competitive roles within a group setting (for example, they may choose to be stock brokers or corporate managers). People with Type A personalities tend to experience stress when lacking mental stimulation or physical activity. To relieve this stress and to construct a constant state of stimulation, they may attempt to elicit competitive reactions from others.

The Big Five Taxonomy

While often cited as more of a research taxonomy than an organizational tool, nonetheless an abun-

dance of research has been conducted on the Big Five personality traits within organizational or group settings. Of the five major personality traits, extroversion is the one most pertinent to leadership roles. Similar to the Type A personality, extroverted people tend to seek out situations of high activity and a great deal of interpersonal interaction. The core characteristics of extroverts (outgoingness, assertiveness) emerge during interpersonal interactions and group relationships. Dan McAdams describes extroverts involved in leaderless, task-oriented groups as more likely to initiate and engage in conversation and more often chosen for leadership roles by the other group members. It is not surprising that extroverted personality types are often successful in sales, management, and other leadership positions.

Other Big Five personality traits have also been correlated with predictable ways in which individuals interact in group settings. For example, conscientiousness has emerged as an indicator of competence and strong job performance. People who score high on openness tend to change careers more often in adulthood and perform better in job training programs. These trait-by-situation interactions may help researchers develop a nuanced understanding of the ways in which core personality traits relate to performance in various environments.

Effect of One's Role in the Group on Outward Manifestations of Personality

The structure of an organization often determines the roles played by its various members. For that reason, another line of personality research examines the group dynamic as the determining force in the outward manifestation of personality. It suggests that one's placement within a group contributes to one's attitude and subsequent behavior. The scholar Rosabeth Kanter has delineated three structural factors: opportunity, proportion, and power, which work to determine an individual's role within a group structure.

Opportunity refers to one's possibility for mobility and growth within a particular group. People high in opportunity have the potential to rise upward through the organizational ranks of a group. Upward

mobility is marked by an increase in personal status and facilitates access to the group's limited resources. People who find themselves in positions that offer a good amount of opportunity may adopt attitudes of competitiveness, openness to learning, and commitment to the group. In other words, one's level of opportunity affects the expression of core personality traits, and to observers also implies possession of a particular personality.

Proportion is the ratio of different types of people within a group—for example, between a minority group and the majority group—and the relationships among those types. The dynamic created by skewed group ratios has a powerful influence on an individual's personality within the group setting. Those who find themselves in a minority or token position often experience considerable pressure to conform to the stereotype that the majority, or dominant group, has created. Kanter describes role encapsulation, a process through which minorities are encouraged to limit shows of competence and resist challenging prevailing norms. Many people respond to such pressures with conservative behaviors, which might inhibit their upward mobility within the group. In such a case, one can imagine how a person who was rated as a stable personality type might be perceived as neurotic (or unstable) when put in the position of a token.

Finally, power is an obvious determinant of behavior within a group structure. People possessing more power have greater access to resources, perform less-routine tasks, and are perceived as more important to the group. Power can influence personality in a variety of ways. It can have a negative effect (for example, leading a person to become condescending, paternalistic, or overly controlling), but can also lead to feelings of security and high self-esteem.

PERSONALITY ASSESSMENT IN ORGANIZATIONAL SETTINGS

Of the different approaches to leadership, the trait perspective or personality approach is most commonly associated with determining one's advancement within an organization. Personality measures have been widely used in the selection and develop-

ment of employees, although their use has waned since the 1960s and 1970s when it was asserted that personality measures are not always predictive of employee success.

The Myers-Briggs type indicator (MBTI) is the most widely used personality assessment tool in North American society. According to the Center for the Applications of Psychological Type, the company that holds rights to the MBTI, it is administered to nearly 2 million people in the United States each year. Since 1975, the instrument has been used by many organizations searching for the best candidates for advancement or admission.

The MBTI groups people into sixteen different personality types along four bipolar dimensions: extroversion-introversion, sensate-intuitive, thinking-feeling, and judging-perceiving. A person arrives at his or her type by translating his or her score on the questionnaire into one of the sixteen types describing their "conscious orientation." For example, a person scoring high on extroversion, intuitiveness, thinking, and judging (ENTJ) would be described as "assertive, outspoken, and driven to lead." Persons scored as ISTJ, ISFJ, ESFP, and ESFJ are described as cooperative and loyal group members, while persons scored as INTJ, ENFJ, and ENTJ are described as excellent leaders.

Although research often describes certain personalities as being more successful in the leader or follower role, some researchers assert that each job probably requires a mix of different traits specific to that particular job. Therefore, it is better for organizations to compile a composite of traits optimal for each job rather than relying on generalized descriptions of what makes a great leader.

It has been argued that leadership should not be determined exclusively on the basis of productive outcomes, but group processes as well. If leadership was contingent upon outcomes alone, personality might be a suitable measure of leadership potential. But leaders also strive to demonstrate competence, accept accountability for their actions, and satisfy other group members' expectations within group interactions. In fact, in his description of three general leadership styles (autocratic, which is task oriented; democratic, which is both task oriented and

socially focused; and laissez-faire, which offers little direction), Kurt Lewin determined that a democratic leadership style procured the most successful results in terms of both task accomplishment and group member satisfaction.

NEW DIRECTIONS

Contemporary personality research acknowledges that people's personalities are multifaceted, richly contextualized, and not reducible to a few static descriptive categories. The research to date highlights the importance of the ongoing interaction between personality traits and the context in which they are expressed. Group communication is a bidirectional, dynamic process: An individual's personality both affects and is affected by the group.

How can organizations and leaders learn from personality research? It is important to note that people sometimes vary in personality typology across different personality instruments and across time and context. If organizations and institutions use personality tests in their search for the best job candidate or leader, the dynamic aspect of personality should also be taken into consideration. Universal personality measures have yet to capture the context-specific nature of personality, so organizations will benefit from using a variety of criteria to assess leadership potential. If organizations seek the best leader for the specific task rather than clinging to assumptions that people with particular traits always make the best leaders, they are likely to experience improved productivity, satisfaction, and group commitment.

PHILLIPS, SAM (1923–2003)

U.S. record producer

Sam Phillips was one of the leaders of twentieth-century cultural change in the United States. Phillips was the founder of Memphis Recording Service in 1950. That service produced Sun Records, which included the first records of some of the legendary figures in rock-and-roll history. Among the recording artists discovered by Sam Phillips were Howlin' Wolf, B. B. King, Johnny Cash, Roy Orbison, Carl

Perkins, Jerry Lee Lewis, Charlie Rich, and, most notably perhaps, Elvis Presley. For many years people interested in the history of rock and roll and the rise of Elvis Presley called Phillips to talk about Presley. In recent years people realized the tremendous influence of Phillips in developing not only Presley but also many other artists. Then the calls were about Phillips, not Presley.

Samuel Cornelius Phillips was born in Florence, Alabama. He was the youngest of eight children. His father's farm failed during the Depression, and Sam picked cotton and worked in a grocery store and funeral parlor to help the family survive. From his earliest years Sam loved music, the music he heard in nearby black churches and the music he heard in the cotton fields. Much of it was the music of the poor. "There were two types of downtrodden people back then . . . black field hands and white sharecroppers" (Guralnick 2000). As a child Sam listened to their blues, their gospel, and their country music. As he grew older, his interest in music grew deeper. He played the sousaphone, trombone, and drums in high school and led a seventy-two-piece marching band. During those years he developed an interest in sharing the music he felt so privileged to hear. The result was radio. "I was in love with sound, and in love with radio" (Guralnick 2000). While still in high school he worked as a disc jockey in a small 250-watt station in nearby Muscle Shoals, Alabama. Shortly after high school, in 1942, he married Rebecca Burns. They had two sons. To support his family, Phillips struck out to work for radio stations in Nashville and other southern towns until, at age twenty-three, at the end of World War II, he moved to Memphis. There he became an announcer on radio station WREC, where he worked for more than six years.

His interest in broadcasting music shifted toward an interest in producing music. He felt that the undiscovered music of his early years should be recorded and shared. He also developed the distinctive vision that marked his entire career. That vision was to have people of different races hear and appreciate each other's music. In particular Phillips wanted the majority white culture to hear and integrate the music of African-Americans, the music of his youth, heard years before in black churches and cotton fields. "It

was a secret assault on a racist system—the realization of a true sense of democracy, something very much against the mores of the time and place they lived" (Guralnick, cited in Halbfinger 2003, A10). In 1949, with a performer at WREC, Buck Turner, Phillips leased a small storefront at 706 Union Avenue and installed recording equipment. In 1950, at the age of twenty-seven, Phillips opened the Memphis Recording Service there. Its motto was "We record anything—anywhere—anytime." Because the new studio was clearly a financial risk, Phillips held on to his job at WREC. The stress of the two jobs took a toll on Phillips. He suffered a nervous breakdown and was treated with electroshock therapy. Shortly thereafter he bet his future on the recording service and left WREC. He put all his considerable drive into producing music.

"ROCKET 88"

The first artists whom Phillips recorded were black. Initially he produced the records at the Memphis studio and then sold the rights to larger companies such as Chess and RPM. One of the songs that Phillips produced in Memphis and sold to Chess is regarded by many as the first rock-and-roll hit record, Jackie Brenston's "Rocket 88." It became number one on rhythm-and-blues charts. After some time and a few rights disputes with the larger labels, Sam Phillips decided to create his own label, and in 1952 he began Sun Records. He didn't want to be the farm team for the major league record companies and let them profit from his creations. In the early Sun years, Phillips recorded some influential artists, including B. B. King, and he arranged to have a group called "the Prisonaires" transported from a penitentiary in Nashville to record a haunting song called "Walking in the Rain," which became a big hit a few years later for a white singer, Johnny Ray. Although Phillips had some modest successes, he was not making the financial or cultural breakthrough that he envisioned. What he did do was develop a distinctive Sun style. He took firm control in the studio and produced records that had rhythm, a strong bass line, and sensual vocals. At some point, Phillips began to imagine that perhaps the best way to integrate rhythm and

blues, country and western, and what came to be known as “rockabilly” was to find a white artist who could convey a black sound.

In 1953, Elvis Presley had just graduated from high school and came by Memphis Recording Service during the summer to make, he said, a birthday record for his mother. Because his mother’s birthday wasn’t until the spring, it’s likely that Presley wanted to hear himself on record and maybe attract some attention at Sun. When Presley came by, Phillips was out of the office, and the recording was handled by his secretary, Marian Kiesker. She noted Presley’s name on an index card and jotted “good ballad singer.” Presley came by the studio several more times in the next year, asking if there was anything he might perform. In the summer of 1954, Sam Phillips was looking for someone who might record some songs with a local guitarist, Scotty Moore, and a bass player, Bill Black. Marian Kiesker asked Phillips, “How about the kid with the sideburns?” Phillips took her advice and invited Presley to an evening recording session with Moore and Black. During a break Presley picked up his rhythm guitar and started singing a fast and energetic version of Arthur Crudup’s blues song, “That’s All Right.” Moore and Black quickly joined in. When Phillips asked the trio what were doing, they said they didn’t know. He told them to keep doing it. In short order, they had made what they were sure was a hit record.

Because records had to have a song on each side, the trio needed to find a number for the “B side.” Phillips chose a country-and-western song written by Bill Monroe, “Blue Moon of Kentucky.” Presley, Moore, and Black recorded the song in a distinctive upbeat “rockabilly” style that complemented the feel of “That’s All Right.” Phillips was aware that a record with rhythm and blues on one side and country and western on the other would break new ground. That was precisely his vision. Phillips liked to say, “If you’re not doing anything different, you’re not doing anything.” Now young people, looking for something new, and something uniquely their own, would get a record that clearly had black roots on one side and white roots on the other, both performed in the manner that helped define rock and roll. Sam signed Elvis to a Sun Records contract

almost immediately, but in late 1955 he sold the contract to RCA records for \$35,000. Although many people have said that this was a bad deal for Phillips, he consistently defended the sale as the right move at the time. He would have been unable to properly market and distribute Presley’s records, and he needed the cash. Interestingly, with the cash Phillips attempted to further break the boundaries of traditional music and traditional radio. He tried to establish an all-black, twenty-four-hour radio station in Memphis but was blocked by the political establishment. However, he did manage to create the first all-female radio station in Memphis, WHER.

“THE MILLION DOLLAR QUARTET”

At the same time, Phillips began recording other artists while trying to contribute to the new music that Sun Records and other studios were creating. Phillips was interested in having these artists sound like themselves but also perform in the distinctive Sun style. The songs they produced for Phillips and Sun were legendary: “I Walk the Line” and “Folsom Prison Blues” by Johnny Cash, “Blue Suede Shoes” by Carl Perkins, and “Whole Lotta Shakin’ Going On” and “Great Balls of Fire” by Jerry Lee Lewis. One of the most memorable records produced at Sun involved those three artists and Presley. In late 1956, after Presley had sold more than 30 million singles and made his first movie, *Love Me Tender*, he drove by the Sun studio when Carl Perkins was working on some songs to follow “Blue Suede Shoes.” Presley, Perkins, and Jerry Lee Lewis started playing around, spontaneously singing songs from their common southern background, mostly gospel numbers. Phillips knew that this was a rare moment that should be captured on tape. He turned on the recording equipment and made the album “The Million Dollar Quartet.” (Johnny Cash is pictured on the album cover with the others but was not actually present when the others sang.) The album is a compelling mixture of talk and song, with music from several traditions.

Phillips left 706 Union Avenue in the early 1960s and set up a new studio. It never produced the likes of the early Sun records. Fortunately, the Union

Avenue building was rescued and restored as a national historic landmark. Phillips continued to pioneer new sounds, and although he never made a great deal of money in the recording business, as one of the first investors in the Memphis-based Holiday Inn hotel chain, he was financially secure.

Sam Phillips died at his home in Memphis in 2003. He had a driving vision of reaching a wide segment of the U.S. population with a kind of music that expresses life's basic emotions, a kind of music that appeals to youth, and a kind of music that acknowledges, brings together, and celebrates the many strands of music that a diverse country has developed. He remained true to that vision not only in identifying artists but also in trying to produce their sounds as freshly and authentically as he could. The music that Sam Phillips helped create changed the world. Rock and roll is here to stay. Perhaps rock and roll and Elvis Presley might have happened without Sam Phillips, but he was one of the most central figures in their development.

PHILOSOPHY

The word *philosophy*, from the Greek *filosophia*, means “love of wisdom” and, in Hellenistic (Greek) Judaism and Gnosticism (the early Christian view that knowledge is necessary for salvation), “love of the spirit of wisdom, Sophia.” As an academic discipline, philosophy is the pursuit of any of several

main areas of study: metaphysics, epistemology, logic, aesthetics, and ethics. Metaphysics considers the nature of reality; epistemology, the nature of truth and knowledge; logic, the nature of reasoning; aesthetics, the nature of beauty; and ethics, the nature of the good and the right. Philosophy also encompasses topics of inquiry both within and across these areas, including philosophy of mind, philosophy of science, philosophy of language, the history of philosophy, and social, political, and legal philosophy.

Although each of the main areas of study and their related topics come to bear on the study and exercise of leadership (not least of all epistemology, ethics, and logic or critical thinking), perhaps none is more relevant for an understanding of both leadership and the influence of philosophers on leaders than historical work in social and political philosophy. Categorized within the main area of ethics, social and political philosophy wrestles with questions about the proper organization of the collective. Given that leadership is a social or political relationship between people, one can trace the origins of the philosophical study of this relationship to social and political philosophy. Both philosophers and leadership scholars ask what kinds of relationships between people best meet their needs for security and cooperation or, more strongly, help them to lead good lives.

Historically, philosophers preoccupied with answering this question have thus had ample occasion to address leadership issues. For example, in his dialogue *Republic*, the Greek philosopher Plato (428–348 BCE) defends a strict division of the labor of leadership, arguing that only an elite class of philosophers is fit to rule. In many ways, then, the social and political philosophy found in the *Republic* assumes an integration of all the main areas of philosophy for the study and exercise of leadership. Leadership essentially requires coming to terms with the nature of reality, appreciating people's sometimes limited access to it, exercising good reason, and grasping ideals such as beauty and justice.

PHILOSOPHERS AND LEADERS

Many social and political philosophers have influenced—or, more accurately, attempted to influence—

leaders. Plato visited the tyrant Dionysius I of Syracuse in 388–387 BCE, and at the request of Dionysius' cousin Dion, Plato returned to Sicily in 367 BCE to instruct Dionysius II. Neither trip was at all successful. Plato nevertheless established his academy as “a training-ground for rulers, not only maintaining a particular political theory, but also furnishing practical guidance to such of its members who had attained to political power” (Wormell as cited in Plato 1987, xx). The Greek philosopher Aristotle (384–322 BCE), Plato's most famous student, was likewise tutor to the Macedonian king Alexander the Great, but scholars have little knowledge of any real impact the philosopher might have had on Alexander's leadership.

During the Renaissance, the Italian political philosopher Niccolò Machiavelli's (1469–1527) motivation for writing his book *The Prince*, in part at least, was to endear himself to the Medici regime, which had come to power after the dissolution of the republic of Florence in 1512. Machiavelli, who had been secretary of the second *cancellaria* (chancery) of the city for fourteen years, puts it this way in his “Letter to Francesco Vettori”: “I have made notes of what seem to me the most important things I have learned . . . and written a little book *On principdoms* . . . [A] ruler, especially a new ruler, ought to be delighted by it” (Machiavelli 2001b, 420). During the seventeenth century, the English philosopher Thomas Hobbes (1588–1679) wrote his book *Leviathan* as a defense of absolute sovereignty in the “hope that the arguments in the book might have some effect upon the outcome” of the English Civil War (Hobbes 1991, xi). Yet, the book's more liberal elements, specifically the grounding of political legitimacy in the consent of the governed, led to Hobbes's exclusion from the court of King Charles II upon the publication of this work in 1651.

For better and sometimes for worse, philosophers are not always ineffectual political advisors. This is especially true when one considers their influence over time. One should not, for instance, underestimate the influence of Aristotle on the Catholic church, primarily through the work of the Italian philosopher Thomas Aquinas (1224?–1274), or ignore the fact that, in the eighteenth century, the

English philosopher John Locke's (1632–1704) words of a hundred years prior made prominent appearance in the Declaration of Independence of the United States. Nor should one overlook the negative influence that philosophers have had on political leadership. During the twentieth century, for example, the German Nazis followed the German philosopher Friedrich Nietzsche (1844–1900) in rejecting a morality of compassion and created their own version of the Nietzschean *Übermensch* (superman), a leader who would help the German people transcend the values of what Nietzsche called “slave morality.”

Fortunately, this more dangerous kind of philosophical influence has been relatively uncommon, in large part because dictators rarely have much patience for abstract ideas. According to philosopher Jonathan Glover, the Soviet leader Joseph Stalin (1879–1953)

appointed the philosopher Jan Sten to be his tutor. Sten must have thought that he had a chance of influence not given to any philosopher since Aristotle taught Alexander the Great. He drew up a programme to teach Stalin about [the philosophers] Kant, Hegel, Fichte, Schelling, Feuerbach, Plekhanov, Kautsky and F. H. Bradley. In the tutorials, Stalin sometimes asked questions like “What's all this got to do with the class struggle?” or “Who uses all this rubbish in practice?” (Glover 1999, 279)

Martin Heidegger (1889–1976), who joined the Nazi Party in 1933, was even less successful than was Sten. Heidegger had wanted “to lead the Leader” but, despite being perhaps the most famous philosopher in Germany, he was unable get a single meeting with German Nazi leader Adolf Hitler (1889–1945) (Glover 1999, 368). One can only speculate, of course, as to whether a little more philosophy would have done both Stalin and Hitler some good.

PHILOSOPHICAL PRECEDENTS TO LEADERSHIP THEORY: TRAITS AND CONTINGENCY

The trait approach to leadership, which was popular in leadership studies until the mid-twentieth century, holds that “leaders are not like other people” (Kirkpatrick and Locke 1991, 59). Like other contemporary

approaches to leadership, this approach can be understood as an intellectual descendent of standard views in social and political philosophy. For example, on the basis of Plato's claim that the philosopher-king is "fitted by nature both to engage in philosophy and to rule in a city, while the rest are naturally fitted to leave philosophy alone and follow their leader" (Plato 1992, 149 [474c]), the *Republic* has traditionally been read as a clear endorsement of the trait approach. On this reading, the justification for leadership turns on the fact that leaders—unlike followers—are "by nature good at remembering, quick to learn, high-minded, graceful, and a friend and relative of truth, justice, courage, and moderation" (Plato 1992, 161 [487a]).

Despite the common identification of trait approaches with the "great man" view of leadership—the idea that leadership should be reserved for great men—Plato's argument does not imply that men, but not women, should be leaders. In fact, in Plato's discussion of the role of women in the republic, he concludes that "if it's apparent that they differ only in this respect, that the females bear children while the males beget them, we'll say that there has been no kind of proof that women are different from men with respect to what we're talking about, and we'll continue to believe that our guardians and their wives must have the same way of life" (Plato 1992, 128 [454d]). In other words, because only some natural differences are relevant to the exercise of leadership, women should not be excluded from these positions simply on the grounds that they differ from men in other, irrelevant respects.

Recognition of the contingencies of leadership eventually undermined the ascendancy of the trait approach to leadership. As one leadership scholar puts it, "The persistence of individual patterns of human behavior in the face of constant situational change appears to be a primary obstacle encountered not only in the practice of leadership, but in the selection and placement of leaders" (Stogdill 1948, 65). However, the contingency approach to leadership finds much earlier philosophical expression in Aristotle's *Politics*. Although Aristotle shows some commitment to the trait approach, suggesting that "when there happens to be someone who is superior

He who knows not and knows not he knows not: he is a fool—shun him.

He who knows not and knows he knows not: he is simple—teach him.

He who knows and knows not he knows: he is asleep—wake him.

He who knows and knows he knows: he is wise—follow him.

—Arabian proverb

in virtue . . . everyone [should] obey such a person gladly" (Aristotle 2001, 331 [1284b28–33]), he concedes that the appropriate constitution for a city-state will depend upon whether there are individuals who can make this kind of contribution for the common benefit. In the end, the appropriateness of kingship, as well as the other "correct" constitutions (aristocracy and polity), is contingent upon the makeup of the city-state itself.

In Machiavelli's *The Prince* and especially in his *Discourses on the First Ten Books of Titius Livius*, one finds even greater appreciation for the contingencies of leadership. Some of the behavioral contingency he advocates for leaders in *The Prince*, however, is straightforward "moral" contingency. Machiavelli writes,

And it must be understood that a ruler, and especially a new ruler, cannot always act in ways that are considered good because, in order to maintain his power, he is often forced to act treacherously, ruthlessly or inhumanely. . . . Hence, he must be prepared to vary his conduct as the winds of fortune and changing circumstances constrain him and . . . not deviate from right conduct if possible, but be capable of entering upon the path of wrongdoing when this becomes necessary. (Machiavelli 1988, 62)

For princes, though, even the form of "bestly" behavior required will depend on the situation: "One needs, then, to be a fox to recognise traps, and a lion to frighten away wolves. Those who rely merely upon a lion's strength do not understand matters" (Machiavelli 1988, 61).

Machiavelli further defends behavioral contingency

with respect to leadership styles in his *Discourses*, arguing that “whether men have good or bad fortune depends on whether they adjust their style of behavior to suit the times” (Machiavelli 2001a, 486). However, in this work he is certainly less optimistic about the behavioral flexibility of leaders than are many contemporary leadership scholars, excluding contingency theorists such as Fred Feidler. Machiavelli claims that “someone who is used to proceeding in a particular way will never change . . . , so it is inevitable that when the times change and become unsuitable for his particular style, he will be ruined” (Machiavelli 2001a, 486–487). Leaders are unable to change their styles, he thinks, because they are largely constrained by their own natures and inclined to adhere strictly to styles that were successful in the past. For this reason, Machiavelli prefers republics to monarchies, the former being made up of people with a variety of characters.

PHILOSOPHICAL PRECEDENTS TO LEADERSHIP THEORY: TRANSACTION, TRANSFORMATION, AND PARTICIPATION

From organizational psychologist E. P. Hollander in the 1950s to current advocates of leader-member exchange theory, many contemporary leadership scholars understand the relationship between leaders and followers in terms of a series of transactions or bargains. In social and political philosophy, this approach to leadership is well represented in the social contract tradition. For instance, according to Hobbes and Locke, leadership is based on the consent of the governed, which is offered in exchange for goods such as peace and security or the preservation of property, respectively. Political leadership is justified, then, only when it secures these goods for followers. As Hobbes puts it in a section of *Leviathan* called “Of the Liberty of Subjects,” “The Obligation of Subjects to the Sovereign, is understood to last as long, and no longer, than the power lasteth, by which he is able to protect them” (Hobbes 1991, 153), and Locke puts forward the stricter condition in his *Two Treatises of Government* that “the power of the Society, or *Legislative* constituted by them, *can never be suppos’d to extend farther than the common good*” (Locke 1988, 353).

In his 1978 book *Leadership*, James MacGregor Burns criticizes transactional approaches to leadership on the grounds that they do not go beyond the individual purposes that people bring to the bargaining process and the collective effort needed to meet these purposes. In place of transactional approaches, Burns advocates a transformational approach to leadership, one that draws on genuine collective purposes in an effort to raise leaders and followers “to higher levels of motivation and morality” (Burns 1978, 20). Here, Burns is certainly in good philosophical company. Aristotle’s *Politics* similarly defends the view that social and political life should not only “facilitate exchange and mutual assistance” (Aristotle 2001, 326), but also help people to live good lives. In the work of the Swiss philosopher Jean-Jacques Rousseau (1712–1778), however, one finds an explicit appeal to the notion of transformation. Rousseau writes of the legislator,

He who dares to undertake the making of a people’s institutions ought to feel himself capable, so to speak, of changing human nature, of transforming each individual, who is by himself a complete and solitary whole, into part of a greater whole from which he in a manner receives his life and being; of altering man’s constitution for the purpose of strengthening it; and of substituting a partial and moral existence for the physical and independent existence nature has conferred on us all. (Rousseau 1973, 214)

For Rousseau, this transformation ultimately demands the active participation of citizens in government. Through direct involvement in the decision-making process, they attain a kind of moral liberty in the civil state, “which alone makes [them] truly master of [themselves]” (Rousseau 1973, 196). Such an understanding of the value of participation implies that “sovereignty . . . cannot be represented; it lies essentially in the general will” (Rousseau 1973, 266). In marked contrast, contemporary participatory approaches to leadership focus on the instrumental value of follower participation, specifically, on using it as a means to “higher decision quality . . . and more development of follower decision skills” (Yukl 2002, 83). In this respect, their understanding of the value of participation is much closer to the English philoso-

pher John Stuart Mill's (1806–1873) argument that leaders cannot “be at all times informed correctly, in considerable detail” and that excluding followers from the decision-making process impedes “development [of] . . . their thinking or active faculties” (Mill 1991, 56–57). Most contemporary accounts, however, stop well short of advocating the more robust Millian claim that when followers are denied participation, “their moral capacities are equally stunted” (Mill 1991, 58).

GENERAL ASSESSMENT

One should be careful not to overestimate the impact of the discipline of philosophy on the study of leadership. As compared to social scientific disciplines such as psychology, its direct influence has been quite limited. Indeed, one might more accurately say that the immediate effect of philosophy on leadership studies has been about as great as that of philosophers on leaders. The literature rarely makes explicit even relatively straightforward conceptual connections between social and political philosophy and leadership theory. These omissions are partly due to the fact that much of philosophy works at a high level of abstraction, which precludes easy application of the discipline to concrete organizational problems. Still, the philosophical approach to leadership, especially in its many historical incarnations, arguably has much to contribute to the understanding and exercise of leadership. By giving precise, well-reasoned articulations of the basic alternatives for social and political organization, philosophy lays the groundwork for the way people think about leaders and leadership.

PICASSO, PABLO (1881–1973)

Spanish artist

In 1916, at thirty-five years old, Pablo Ruiz Picasso compared himself with a tenor who reaches a note

higher than the one written in the score (Podoksik 1996, 19). His self-assessment, while unabashedly boastful, serves as a fitting metaphor for the magnitude of his influence on both modern and contemporary art. Picasso felt constrained by the aesthetic conventions of the classical tradition, and he eventually rebelled against them, creating highly original styles and techniques that better captured the confusion and alienation we now associate with the twentieth century. Through his multifaceted contributions in the media of painting, sculpture, graphics, and collage, Picasso is largely responsible for forming our visual perceptions of our modern, technologically advanced world.

Born 25 October 1881 in Málaga, Spain, Picasso was a prodigy who could draw before he could speak. “My first drawings could never have been shown at an exhibition of children’s drawings,” he

wrote. “I lacked the clumsiness of a child, his naivety. I made academic drawings at the age of seven, the minute precision of which frightened me” (Walther 1993, 8). His parents recognized their son’s talents and encouraged him in his artistic ambitions. He received his formal training first from his father, who was an art teacher at the School of Fine Arts in La Coruña (1892–1895), and later at “La Lonja” school of art in Barcelona (1895–1897) and the Academy of San Fernando in Madrid (1897–1898). During these formative years he rapidly mastered the painting techniques of the ancient and Spanish masters, astonishing his teachers with phenomenal accuracy. Picasso would soon cast off the traditional painting techniques he perfected during these early years, but he would later return to them, rearranging and mixing traditional techniques with his own aesthetic innovations.

The young painter first traveled to Paris in 1900 where he admired and studied works by the Impressionists, most notably Paul Cézanne, Henri de Toulouse-Lautrec, and Pierre Bonnard. While living there, he frequented Parisian cafés and clubs, scenes of which frequently became the subject matter of his works. For a brief time, he painted decorative, lively representations of Paris night life. But after the suicide of painter and close friend Carlos Casagemas, a fellow Spaniard with whom he had shared his studio, Picasso’s paintings shifted in mood from gaiety to melancholy. “The Absinthe Drinker” (1901), which portrays a lonely woman sitting in a café with her glass of green absinth, marks the beginning of this shift. While still honoring the Impressionist fascination with bright, festive color, the absinth drinker is strikingly somber, underscoring life’s more tragic dimensions. “The Burial of Casagemas,” painted the same year, marks Picasso’s entrance into the Blue Period (1901–1904), a time in which poverty, death, and suffering became central themes. The figures represented are desperate and often pathetic, and were painted almost exclusively in varying shades of blue and green.

Picasso would return to Spain for brief spells when his money ran out, but he never stayed away from Paris for long. The city was, at the time, the most cosmopolitan art center in Europe. Here,

Picasso had the freedom to forge his identity as a painter. In May 1904, he moved to a dilapidated tenement in the Montmartre district of Paris known as the Bateau-Lavoir. It was here that Picasso met his first long-term mistress, Fernande Olivier, whose companionship improved his mental state considerably and who served as a catalyst for his stylistic shift into the Rose Period (1904–1906). During this time, he became fascinated with acrobats, harlequins, and other circus folk, and portrayed these enchanting, marginal figures in rose-colored shades and with remarkable classical perfection.

The Rose Period marked Picasso's first commercial successes, and it was also a time in which he became an integral part of bohemian café life, participating regularly in stimulating intellectual discussions with fellow artists and writers. He soon began hosting these groups on a daily basis in his atelier, where creative figures from other fields, such as the poets Guillaume Apollinaire, André Salmon, and Max Jakob, and the mathematician Maurice Princet, discussed literature, art, and politics, and related these subjects to the current developments in science and technology. The group, known as *la bande à Picasso*, became the core of the French avant-garde, and served as inspiration for Picasso's revolutionary methods in painting, sculpture, and collage.

During the summer of 1907, Picasso seriously offended the sensitivities of the Parisian art world with "Les Femmes d'Alger (O. J.)," a work that, once accepted, drastically altered the direction of twentieth-century painting. The painting represents five prostitutes in a bordello, each of whom is composed of thoroughly diverse elements. Far from beautiful, these figures are represented through the use of geometrical planes and angles that superimpose their own laws onto the women's natural proportions. While united by a general geometrical principle, the figures obey contradictory aesthetic principles that give the effect of visual dissonance. One woman's face, for example, is comprised of red and green parallel lines, whereas another face is represented by a distorted mask reminiscent of African art. Some of the bodies and heads are deformed, and in one case, the observer views the front and backside of a woman simultaneously. The women's forms meld into the

painting's background, which is also full of angular, crag-like shapes, an effect that suggests spatial disorientation. With this painting, Picasso flouted the traditional idealizations of feminine beauty, and simultaneously rejected the aesthetic values upon which the entire tradition of Western Art had been based. *Les Femmes d'Alger (O. J.)* is considered to be the first cubist painting created before Cubism as a movement was established.

Late in 1907, Picasso met the artist Georges Braque. Their discussions and experimentation gave way to Cubism, a movement that revolutionized painting by marking the end of a continuous development in Western art. By representing three-dimensional objects through fragmented planes and overlapping, interpenetrating forms, the Cubists were able to depict objects from different vantage points. This was a revolutionary break from the traditional Renaissance perspective in which the viewer is offered one vantage point. Picasso continued to develop the Cubist technique for ten years, creating landscapes, still life paintings, and portraits, and often combining these forms. His most famous Cubist paintings are his portraits of women, often representations of a beloved wife or mistress, in which the front and profile can be viewed simultaneously. Picasso's introduction of Cubism into the vocabulary of the twentieth century was a radical break from the classical tradition. Later, the painter reintroduced classicism into his painting repertoire, allowing for an even broader, more dramatic scope of expression.

Between 1937 and 1945, Picasso again astounded the art world by creating powerful works that captured on an abstract level the suffering and horror of war. His most famous painting of this period is *Guernica*, painted in 1937, a massive black and white oil on canvas dedicated to the small village that was bombed by German and Spanish fascists. In this work the painter expresses his own personal horror at the events of the attack, as opposed to giving a precise, eyewitness account. While Picasso continued to paint war paintings and commentaries about fascism following *Guernica*, this work, in particular, has become part of the collective consciousness of the twentieth century.

By the end of World War II, Picasso had become world renowned and tremendously successful. Until

his death in 1973, he continued to create works of a personal and political nature, many of which chronicle in abstract fashion his relationships with the most important women in his life. The most versatile of twentieth-century artists, Picasso has left behind an immense body of work that also includes sculpture, collage, ceramics, drawing, and printmaking. His aesthetic innovations and expressive power are evident in all these media, and have greatly influenced our visual perceptions of the twentieth century.

PLATO (c. 428–c. 348 BCE) *Greek philosopher*

While volumes have been written about Plato's politics, little research has focused on his views of leadership and the education of leaders. Yet Plato's work is important to leadership studies because his observations of leaders provide scholars with some of the timeless themes and questions that inform the field today, such as: What are the qualities of good leaders? What is the best way to develop competent and moral leaders? And what is the best kind of leadership? Moreover, when Plato wrote about leadership, he drew on his own experiences with leaders, and his dialogues and letters reflect those experiences.

EARLY YEARS

Plato was born in 428/427 BCE to one of the most distinguished political families in Athens. The family of

his father, Ariston, extended back to the old kings of Athens and, according to myth, to the god Poseidon. Plato's father died when he was young and his mother married her uncle Pyrilampes, who was a key political figure in Athens. Less is known about Plato's mother Perictione's side of the family; however, her family appears to be equally distinguished. Plato's maternal grandfather, Dropides, was archon (chief magistrate) of Athens in 644 BCE and a close friend of the great lawmaker Solon. Plato's family grew up under the traditions of Solon, which emphasized public service. While Plato believed that philosophers' greatest happiness came from a serene life contemplating truth, he said that philosophers had an obligation to sacrifice this reclusive life to serve others as statesmen or legislators. It is likely that Plato, like all young men in his time, served in the military, but he never held a political position in Athens. Plato lived to be eighty-one; he never married. He died in 348/347 BCE.

Plato was strongly influenced by Socrates, who had met Plato's maternal uncle Charmides when Plato was a child of three. Plato probably became a good friend of Socrates when he was in his teens; he was about thirty-one when Socrates was executed. After the execution, Plato journeyed to the nearby city of Megara and then to Egypt, Italy, Cyrene, and Sicily. When he returned to Athens from his travels, he started his school of philosophy, the Academy. While the exact year is uncertain, historians assume that Plato was in his forties at the time. The school brought together some of the great scientists and scholars of the day; the philosopher Aristotle was a student at the Academy.

PLATO'S INSIGHTS INTO LEADERSHIP

Plato's most important insights into leadership are in the *Republic*, the *Statesman*, and to some extent, the *Laws*. His *Letter VII* is central to understanding how Plato's own experiences with leaders shaped his ideas about leadership.

Letter VII

Plato wrote *Letter VII* late in life, and it is his most autobiographical work. The letter is written to the

friends of the Syracusan philosopher and politician Dion, who was also the brother-in-law of that city's tyrant Dionysius I. Plato begins the letter telling the reader that in his youth he had cherished the hope of a political career. But there was a revolution in Athens and an oligarchy of thirty, some of whom were his relatives, was established there. The members of the oligarchy were corrupt and were soon overthrown. Although Plato's letter notes his disillusionment, he still thought that he might enter politics. But he was again discouraged when the new government that came into power put Socrates on trial on trumped-up charges of impiety. Plato writes that he was dissuaded from politics after seeing the sort of men it attracted, and the growing corruption of laws and customs. He writes, "the human race will not see better days until . . . the stock of those who rightly and genuinely follow philosophy acquire political authority" (*Letter VII* 326–326b, Hamilton & Cairns 1971, 1576).

This view of politics was reinforced after his first trip to Syracuse around 390 BCE when the tyrant Dionysius I ruled the city. Plato was disgusted by his rule by force and dismayed by the decadent life of the court—large banquets twice a day, sexual promiscuity, and all manner of self-gratification. He notes, "In such an environment no man under heaven, brought up in self-indulgence, could ever grow to be wise" (*Letter VII*, 226c1–c3, Hamilton & Cairnes 1971, 1576). During his time in Syracuse, Plato met Dion and as Plutarch tells us, "of all the scholars that attended Plato he [Dion] was the quickest and aptest to learn, and the most prompt and eager to practice, the lessons of virtue" (Plutarch 1910, 248). When Plato returned from this visit, he started the Academy as a school to train young men for public life, and he wrote the *Republic*.

Twenty years later, after the death of Dionysius I in 366/365 BCE, Dion, who was now the strong man of Syracuse, invited Plato back. Dion was a thorough believer in Plato's concept of developing leaders by teaching them about virtue and science. He wanted Plato to educate Dionysius's son and put some of his educational ideas in the *Republic* into practice. In the letter, Plato recalled his strong misgivings about doing this, but since Syracuse was under threat from

Carthage at the time, Plato felt obliged to try to bring the poorly educated Dionysius II up to the task of defending Syracuse. Plato also says that it would dishonor the academy if he did not go and attempt to put his educational theories into practice.

Dionysius II was not a good student, but he admired Plato. During Plato's time with him Dionysius II became jealous of Dion's power and had Dion banished. Plato then returned to Athens, but maintained a correspondence with Dionysius II and Dion, trying in vain to patch things up between them. He then returned to Syracuse in 361–360 BCE and spent a year working on a draft of a constitution for a proposed federation of Greek cities. But the old tyrannical regime was still too strong: Because of political tensions, Plato left Syracuse, never to return.

The Republic

Plato wrote the *Republic* after his first visit to Syracuse. The *Republic* is a book about ethics, politics, and leadership, not as separate subjects, but as an integrated whole. Political scientists focus on the idea of the philosopher-king and the organization of Plato's ideal society. For leadership scholars, Books I, II, and VII of the *Republic* are of particular interest. The Book I dialogue concerns justice and power: Plato argues that leadership is in the interests of the followers, not the leader, and because of this, the only reason a just man becomes a leader is out of fear that someone worse will lead. Plato demonstrates why justice is in the self-interest of everyone, including rulers.

In Book II, Plato addresses questions of power and morality. Glaucon, the protagonist in this part of the dialogue, asserts that the only reason people are just is that they do not have the power to be unjust. He illustrates his point with the story called "The Ring of Gyges," in which a shepherd finds a ring that makes him invisible. This tale challenges readers to think about what they would do if they had the power to do unethical things when no one was watching. Plato tells us that just people are those who are ethical even when they have the power to be unethical. The story offers a way to think about the ethical challenges of power for leaders.

Selection from Plato's *Apology*

Plato's Apology is an account (thought to be largely accurate) of the trial and conviction of Socrates in 399 BCE. The following extract sets forth Socrates' ideas about virtue and conscience.

And so he proposes death as the penalty. And what shall I propose on my part, O men of Athens? Clearly that which is my due. And what is my due? What ought I to have done to me, or to pay—a man who has never had the wit to keep quiet during his whole life; but has been careless of what the many care for—wealth, and family interests, and military offices, and speaking in the assembly, and magistracies, and plots, and parties. Reflecting that I was really too honest a man to be a politician and live, I did not go where I could do no good to you or to myself; but where I could do privately the greatest good (as I affirm it to be) to everyone of you, thither I went, and sought to persuade every man among you that he must look to himself, and seek virtue and wisdom before he looks to his private interests, and look to the state before he looks to the interests of the state; and that this should be the order which he observes in all his actions. What shall be done to such an one? Doubtless some good thing, O men of Athens, if he has his reward; and the good should be of a kind suitable to him. What would be a reward suitable to a poor man who is your benefactor, and who desires leisure that he may instruct you? There can be no reward so fitting as maintenance in the Prytaneum, O men of Athens, a reward which he deserves far more than the citizen who has won the prize at Olympia in the horse or chariot race, whether the chariots were drawn by two horses or by many. For I am in want, and he has enough; and he only gives you the appearance of happiness, and I give you the reality. And if I am to estimate the penalty fairly, I should say that maintenance in the Prytaneum is the just return.

Book VII interests leadership scholars because it contains the allegory of the cave, which is about the obligations that come with knowledge and the difficulties of change. In the allegory, Plato depicts the inhabitants of a cave seated facing the cave's back wall, their necks chained. All they see of the world are shadows on the wall of things passing by outside of the cave. Plato describes the fate of those who take the journey out of the cave and see the light of reality and reason. When these people return to the cave (as Plato believes that they must), the inhabitants there ridicule them. This story sums up three of Plato's basic beliefs about leadership: first, that leaders must take the difficult path to truth and knowledge; second, that knowledge carries with it social

responsibility; and third, that conveying a different reality to others is a challenge.

Plato is best known for his discussion of the philosopher-king in the *Republic*. The word *philosopher* had a different connotation then than it does today. A philosopher was anyone who was a lover of wisdom. Plato was not a fan of democracy, so his vision of leadership was based on rule by an elite group of the wisest and most capable people. According to Plato, leaders were both born and made. Potential philosopher-kings would be selected from the best and the brightest people who had admirably performed military service. As A. E. Taylor argues, philosopher-kings would be educated as scientists and saints, as “the authority whose personal insight into good creates the public tradition by which the rest of society is to live” (Taylor 1936, 282). Plato thought that the study of science—which included mathematics and geometry in particular—was essential for leaders because it developed character as well as intellect. Plato believed that the intellectual

discipline of the sciences led to a vision of the good. For Plato, the ideal leader was a seamless combination of strength, courage, intellect, and moral virtue in the service of good for society.

The Statesman

His adventures in Syracuse with Dion and Dionysius II changed Plato's idealistic view of the philosopher-king in the *Republic* and set the stage for his more pragmatic book, the *Statesman*, which was written after the second visit to Syracuse in 366–365 BCE. In the *Statesman*, Plato seems more sympathetic to the human side of leadership and the human frailties of leaders. Plato criticizes his own earlier view of lead-

ership; in the *Republic* he had depicted guardians ruling like shepherds over their flock—and shepherds are naturally superior to sheep. In the *Statesman*, Plato observes that in the current age, kings or statesmen are men ruling over men. Rulers are the same as their followers. They are not naturally superior.

The ruler in the *Statesman* is not a philosopher-king; instead, statesmanship is a practical art that is practiced by a skilled expert. In this dialogue, Plato introduces a new metaphor for leadership. Leaders are weavers, says Plato; their job is to weave together the vigorous and aggressive with the moderate and quiet into the fabric of a society. This cloth, like the clothes that we wear, protects society from outside elements. The art of the statesman is to produce a fabric that links all kinds of citizens together so that they share the same ultimate values and ideals.

In the *Republic*, Plato expresses confidence in the ability of education to perfect the intellect and character of leaders. One still finds that faith in the *Statesman*, but Plato takes a more modest view of the potential of educating for leadership. Plato's visits to Syracuse had put him in touch with the hard work of leading and developing leaders. Reflecting on his experiences in *Letter VII* he writes, "the more I advanced in years, the harder it appeared to me to administer the government correctly. For one thing, nothing could be done without friends and loyal companions, and such men were not easy to find. . . . Neither could such men be created afresh with any faculty" (*Letter VII*, 325 c6–c11, Hamilton & Cairnes 1971, 1575).

In the *Statesman*, Plato concludes that because it is so difficult to find good leaders, no ruler—no matter how just—should be allowed to lead without being subject to the law. The rule of one under the law is monarchy, while the rule of one without law is tyranny. Plato suggests (although not in these terms) that in the absence of competent leaders, the law is a leader substitute.

The Laws

The *Laws* were written after Plato's third visit to Syracuse, during which he was engaged in writing a constitution for a federation of Greek cities. Scholars

estimate that Plato was in his seventies at the time. The first three books of the *Laws* examine the underlying principles of law. The next two books concern the scheme for the organization of a new city in Crete, and the last seven books describe a constitution and system of law for the new city. The *Laws* is Plato's longest and most practical work in political philosophy. It can be tedious reading; when Plato discusses law (*nomos*), he is talking about social norms, morality, and religious practices as well as regulations—and he therefore details every aspect of a citizen's life.

Plato believed that good leadership was a matter of knowledge. He argued that people should be ruled by knowledge; however, leaders frequently have imperfect knowledge or suffer from weakness of the will (*akrasia*) and fail to control their passions. When they fail to control their passions, they do not act on the basis of knowledge and reason. Since people are not gods, Plato argues, they need checks and balances on their leaders. The law should restrict their power and act as the ultimate sovereign.

Plato depicts laws as a gift from the gods. Laws represent the cumulative knowledge of society and are therefore better than the knowledge of one ruler. People come closest to being ruled by the gods when they are ruled by just laws. The key moral virtue Plato discusses in the *Laws* is self-control (*sophrosune*), not in the sense of restraining or overcoming the passions, but as a means of producing harmony between reasoned judgments and the passions.

CONTEMPORARY VIEWS OF PLATO

Like all great works, Plato's writing is open to interpretation and criticism. In *The Open Society and Its Enemies*, the twentieth-century philosopher of science Sir Karl Popper offers one of the most savage criticisms of Plato's politics. He accuses the *Republic* of advocating dictatorship that could only be imposed on a society by violence. Popper characterizes this society as a racist caste system. He argues that the *Laws* represents a blueprint for a closed collectivist society whose laws are unchanging and regulate every detail of life. R. F. Stalley has responded to Popper's criticism by emphasizing Plato's contri-

bution to political theory. He points out that Plato's most enduring contribution to politics is his emphasis on the sovereignty of law and the theory of checks and balances. Stalley argues that Plato realized that laws would change as society changed. Plato's defenders also argue that the ideal state that Plato describes in the *Republic* is meant to be a metaphor for society, not a real model of it.

While Plato does not endorse democracy in his later works, he understands the folly of leading by force and without the consent of the people. Critics of the *Republic* and *Laws* are right in pointing out one of the ironies of Plato's philosophy. While Plato seems to have sharp insights into leaders and leadership, few people today would want to live in the societies described in these two books.

Joanne B. Ciulla has written that in his early work, Plato makes the same mistake some contemporary leadership scholars do. He establishes an ideal model of leadership, and then through his life experiences comes to appreciate why human frailty and fallibility makes this model almost impossible to attain. Plato helps us see why it is important to understand the ethical challenges faced by imperfect humans who take on the responsibilities of leadership, so that we can develop morally better leaders, followers, institutions, and organizations.

POLITICAL SCIENCE

Political science is the study of the institutions, people, ideas, and processes of government and the public uses of power directed toward collective goals. The study of leadership is both old and new to political science. The study of leadership is as old as the Greek philosopher Socrates addressing a crowd in the marketplace on the meaning of justice or the Greek philosopher Plato asking people to consider the efficacy of the "Philosopher King" in his dialogue *Republic*. The study of leadership can be seen in the Italian political philosopher Niccolò Machiavelli's advice to a prospective sponsor in his book *The Prince* or the Dutch scholar Erasmus's countering of Machiavelli's worldly concern on the accumulation and use of power with a moralistic concern for leadership in *The Education of the Christian Prince*.

Perhaps surprisingly, given the centrality of leadership to the study and exercise of political power, the political science of today does not devote itself to the study of leadership as much as one might expect. The primary journal of the discipline, *The American Political Science Review*, has published only forty-two articles (less than 1 percent of its

4,856 articles published) on leadership since it began publishing in 1906.

Political scientist Betty Glad argues that the discipline's neglect of leadership as a topic of inquiry stems from a desire "to find general laws of political behavior that are not time bound" (Valenty & Feldman 2002, 10). Thus, political scientists are more concerned with institutional structure and patterns that lead to theory building. The study of individual leaders is seen as too idiosyncratic and less significant than other forces. Better to be less comprehensive and more theoretical; better to reduce political reality to a few manageable variables—the better to build theories with—than to account for everything; better to capture the essence than the entirety. The discipline should, in Stanford University political scientist Terry Moe's words, "move toward a methodology that values simplicity and parsimony rather than complexity and comprehensiveness" (Moe 1993, 388). All of this activity is directed toward building a theory of politics. Glad notes that

the attraction of the textbook scientific model is based on two assumptions—that any research that aspires to be scientific must be directed toward general laws which are applicable everywhere and that decision makers and political actors are rational in their behavior. Like the laws of classical physics, general laws cannot include the local, the particular, the idiopathic. So individual leaders need not be considered. Any discussion of the non-rational and emotional aspects of their behavior is particularly beyond the bounds of scientific inquiry. (Valenty & Feldman 2002, 10)

There is, then, a controversy over how (or even whether) to study leadership in political science, with those who stress the "hard" science side of the discipline dismissing the study of individual leaders or leadership in general as being not sufficiently scientific to be legitimate, but others seeing the study of leaders and leadership as indispensable for an understanding of how political systems operate.

Political scientists use a variety of methods to study leadership. From the more traditional methods such as philosophy, ethics, biography, history, and constitutional and institutional studies to more "sci-

entific" methods, political scientists have no one agreed-upon "best" way to study leadership.

POWER AND LEADERSHIP

Political scientists sometimes confuse power with leadership. Power is the ability to use law or force to compel compliance. Leadership is a process that involves choice on the part of followers and persuasion and/or influence on the part of the leader.

The sources of power are position, force, tradition or custom, law, and money or other valuable resources. The sources of leadership are relational (interpersonal and reciprocal) and involve a connection between leader and follower based on persuasion, personal qualities, skill, vision, and group dynamics.

In the modern era, political scientists have applied both qualitative and quantitative approaches to the study of leadership. In the 1930s Harold Lasswell advocated the study of motivations of political leaders, later suggesting that leaders are of two types: "democratic" and "power-seeking" personalities. Although Lasswell opened a door of inquiry, not until 1972 with James David Barber's *The Presidential Character* did political scientists really begin to explore leadership from a psychological perspective.

Barber's pioneering work of political psychology identified five factors that shape presidential behavior. Two of these factors (the power situation and the public's climate of expectations) are contextual variables that influence a president's power position; the three remaining factors (style, character, and worldview) relate to the inner person of the president.

Barber focuses on style and character. By "style," Barber means the public manner in which a leader carries out his or her duties; by "character," he means a leader's self-image and security.

Barber then establishes a framework of understanding the inner life of a president by combining style (active or passive) with character (positive or negative) to create four types: active-positive (Barber's ideal type), active-negative (a dangerous personality type), passive-positive, and passive-negative. Although Barber's work drew a tremendous amount of scholarly as well as public attention, through the years subsequent studies have found his

taxonomy (system of classification) of marginal use in either understanding or predicting the behavior of political leaders.

Another qualitative work is Richard Neustadt's book *Presidential Power* (1960). Prior to Neustadt, political scientists focused on constitutional and/or institutional aspects of power. However, Neustadt, although acknowledging the institutional restraints and powers of a leader (the formal aspects), argues that the key to gaining and using power can be found in the informal aspects of leadership: prestige, bargaining, and persuasion. This focus on the formal and informal aspects of power greatly advanced people's ability to understand both the constraints and opportunities of leaders to exercise political power and influence.

One of the key theoretical contributions of political science to the study of leadership is James M. Burns's distinction between transactional leadership and transforming leadership. Transactional leadership is based on an incremental exchange model. Citizens give support to a leader in exchange for goods and services. It is a minimalist model of the use of authority: It asks little of citizens and leaders and produces incremental change.

Transformational leadership implies "real" change based on the relationship between leader and follower as they pursue common goals for the public good. There is, to Burns, a moral as well as a political dimension to a transforming leadership that truly seeks to transform the political system. Transformational leadership implies significant change based on a bond between leader and citizens. Citizens empower the leader, whose policies empower citizens.

OFFICEHOLDERS

Another key theoretical distinction made by most political scientists is the difference between leaders and officeholders. Officeholders can exercise the power or authority of position. Leaders move beyond the mere power of position to exert influence over others. Leaders need not hold office to gain influence. Their influence is not based on position but rather on their ability to draw followers, influence their behavior, and persuade others.

Political scientists also draw a distinction between

skills and context. Leaders have variable levels of skills such as intellect, persuasive ability, managerial insight, analytical skill, creativity, emotional intelligence, and so forth, and political scientists believe that skills are important in determining success. However, skills are not enough; leadership is largely contextual. Leadership is based on context or circumstance—forces generally beyond the control of the leader. The word *context* refers to, for example, the margin of victory at the last election, the number of partisans of a leader's party in the legislature, public demand for action, state of the economy, and so forth. This context makes up a leader's "level of political opportunity" (Lammers & Genovese 2001, 3–6). Effective leaders maximize, through their use of skills, their opportunities presented by context.

As one looks to the future of leadership studies, political science seems especially important. Given the link between politics and the exercise of political leadership, political science likely will remain the key discipline in the study of leadership. Several areas of study seem especially promising. First, as more women rise to positions of political authority, scholars will have more opportunities for the study of gender and leadership. Second, as the world becomes more interdependent and interconnected, studies in international leadership and globalization should provide insights and challenges. Third, as globalization continues, studies of the link between justice and leadership should be especially germane. Fourth, in a post-Cold War age, with one superpower, aspects of hegemonic leadership should become more important.

Political science promises to remain at the center of the study of leadership. Although the discipline is mired in controversy over how to study leadership, the diversity of approaches used to examine leadership offers the potential for a rewarding set of results that could advance understanding of the art of political leadership.

POLITICS

The term *politics* derives from the ancient Greek term *polis*, meaning “city-state,” which was the typical form of political community in ancient Greece. We continue to use the term *politics* even though with the exception of Singapore and perhaps the Vatican, there are no city-states in the contemporary world. Instead, the world is divided into states, which are organized according to variables that include ethnicity (e.g., Japan, Israel), liberal democratic political principles (e.g., United States), communist political principles (e.g., China), religion (e.g., Iran), or some combination of ethnicity and political principle (e.g., most European states). The umbrella term for these organizing principles is the *nation-state*, which differs from other political forms including empire (e.g., the Roman Empire) or tribe (e.g., Blood, Navajo, Tutsi). Despite these numerous

possibilities of political organization, and despite the fact that the state, and not the polis, is the dominant form of political organization in the world today, we continue to use the term *politics* to signify what it is that these units do.

THE ACTIVITY OF POLITICS

It is helpful to think of politics as what the polis (or any other state form) does, just as athletics is what athletes do. Both *politics* and *athletics* are generic terms, for there are diverse types of athletics (e.g., track and field, hockey, golf, etc.) just as there are diverse types of political societies. As a result, the type of athletics depends on the form it takes, just as the type of politics depends on the form it takes place in, whether it be in a democracy, communist society, theocracy (run by clerics), or an oligarchy run by the wealthy.

The form of the political community influences political leadership. For example, it would be difficult (though not impossible) for an Adolph Hitler, who was called, “*der Führer* [Leader],” to succeed in a political system like the United States with its numerous checks and balances that are intended precisely to prevent a despot from succeeding. The American president differs substantially from *der Führer*. Thus, understanding leadership in politics requires one to consider the institutional and political setting in which leadership operates, because that setting will influence the way leadership is practiced. As James MacGregor Burns has argued, “Political leadership is a product of personal drives, social influences, political motivations, job skills, the structure of career possibilities. Thus the need for esteem from others motivates the tyro to run for office, but the office and the career possibilities in turn shape the esteem received. Leadership is fired in the forge of ambition and opportunity” (Burns 1978, 126). The study of politics illuminates not only the offices that provide for leadership opportunities, but also the means by which leaders seek esteem, which enables them to lead and to conduct political activity.

As with the term *politics*, many of our words for leader and leadership derive from the past. For instance, many of the terms we use to signify power

The first method for estimating the intelligence of a ruler is to look at the men he has around him.

—Niccolo Machiavelli

and authority (which are attributes of leaders) derive from ancient Rome (Minogue 1995, 22). Authority derives from *auctoritas*, the founder of a city; the term also gives us our term *author*. The Romans distinguished “official” political leadership (e.g., Emperor) as *potestas*, from unofficial or moral leadership (*potentia*). The moral connotation of *potentia* can be seen when we consider that it gives us our term *potential*. While the Romans gave us many of our terms for leadership, they also gave us many of our words for citizenship. Indeed, from the Latin term for city, *civitas*, we have citizen (*civis*); a related term is *civilization*.

Politics has been defined in numerous ways. For example, the philosopher Plato (427–347 BCE) once defined it as the art of caring for souls, by which he thought that the primary role for political leadership is to cultivate the virtue or moral excellence of citizens (Plato 1988, 650b). Focusing on power or wealth is a sign of bad leadership, as is building public monuments or empires, for which Plato’s teacher, Socrates (469–399 BCE) criticized the Athenian statesman Pericles.

Contemporary social scientists tend to deemphasize the place of moral excellence as part of politics. Recent definitions instead tend to emphasize the use of power and the distribution of goods within a community. For example, the French writer Bertrand de Jouvenal considered politics as the activity of gathering and maintaining support for human projects: “we should regard as ‘political’ every systematic effort, performed at any place in the social field, to move other men in pursuit of some design cherished by the mover” (Jouvenal 1963, 30). Alan Ball’s definition emphasizes conflict. “[Politics] involves disagreements and the reconciliation of those disagreements, and therefore can occur at any level. Two children in a nursery with one toy which they both want at the same time present a political situation” (Ball 1971, p. 20). Harold Lasswell’s definition of

politics, which emphasizes distribution, is reflected in the subtitle of his book, *Who Gets What, When, and How*.

While these definitions have their benefits, they tend to neglect what makes politics an activity separate from, for example, distributing toys among children. Bernard Crick offers a more encompassing definition: “the activity by which different interests within a given unit of rule are conciliated by giving them a share in power in proportion to their importance to the welfare and the survival of the whole community” (Crick 1972, 22). This definition clarifies how politics requires the harmonious and cooperative coexistence of groups with divergent interests and goals, and that entails the promotion and protection of a community’s goods as well as survival. As the activity of the polis, then, politics is conducted by a political community that itself is relatively autonomous (more so than, for example, a family that depends on outsiders for numerous goods) and organized around a certain set of goals and principles (Dickerson and Flanagan 2002, 21–23).

The activity of the polis depends on the form that political community takes. Politics in Nazi Germany, which was based on a personality cult of Hitler as well as a utopian dream for a “Third Reich,” differs from the politics of a liberal democracy in which coalitions of interests form and dissolve within a law-based electoral system. An ideological dictator like Hitler leads by the force of his personality, propaganda, and a quasi-religious utopian vision based on the superiority of the Aryan race. Conversely, a democratic politician in the United States tends to appeal to voters with shorter-term and more mundane proposals on health-care or taxes, while proclaiming his own good “character” and the bad “character” of his opponent. The Nazi leader shares the tendency of other utopians (including communist) of promising an end to the activity of politics because his ideal community requires the elimination of diverse interests and political viewpoints (either through the expected necessary unfolding of the historical process or by mass murder, or both). Conversely, the Constitution induces the liberal democratic politician to treat politics as a never-ending activity of negotiation and bargaining because liberal

democracy assumes that the diversity of interests and political viewpoints is permanent and that politics can never “end” in an ideal and “final” community. However, in both liberal democratic and utopian systems, politicians will portray themselves as friends of the people.

TYPES OF POLITICAL COMMUNITY AND THE CONCERN FOR JUSTICE

Political scientists since Plato have categorized the forms of political communities according to several criteria. In Plato’s *Republic*, Socrates speaks of five separate forms that a political community can take, depending on the type of goods that it seeks. The best type of community is one guided by the wisdom of the philosopher-kings. The only way a polis can be just is to be ruled by those who know what justice is. Since justice is so complex and requires an excellent moral character to discern, he proposed that only philosophers have the energy, wisdom, and love of truth to be able to rule with justice. Everyone else tends to equate justice with his own interest. Thus, he called the second best regime timocracy, which is ruled by warriors who love honor. The third best he called oligarchy, which is ruled by lovers of wealth who think that their wealth gives them the right to rule. (Consider the claim by leaders of business who seek political office on the basis of their success in business.) Socrates thought that democracy is the third best regime because, by loving freedom, democrats seek to gratify all their desires, which leads to anarchy. The worst regime is tyranny, which is dominated by a single tyrant who dominates over subjects by force and by a cult of personality.

Central to these different political forms is the “anthropological principle,” according to which the political form depends on the predominant personalities, moral values, and goals and objects of love that a people pursue. As leaders and citizens devote themselves to seeking wisdom, and better their goals and objects of love, then the regime improves and the closer its government approximates justice. Ironically, despite arguing for the superiority of rule by philosopher-kings, Socrates did not think that philosophers would wish to rule or lead because it

interfered with their favorite activity, which is to seek wisdom. Socrates thus teaches us that politics and political leadership are not the highest goods, and can conflict with our deepest yearnings for self-knowledge, which, paradoxically, is the precondition of good leadership.

Plato’s student, Aristotle (384–322 BCE), provides a different typology of political forms (Aristotle 1984). Moral excellence also guides his inquiry, but he thought rule of law, not rule of philosopher-kings, served as the best guarantee for good politics. His typologies are guided by two basic questions: Who rules? and For whom? If a ruler or ruling group rules for their own interest, then the political form is corrupt; if they rule for the common good and according to law, then the political form is good. He identified three possible types of rulers, which he further subdivided into six: rule by a single person, by a few, and by many. A single constitutional monarch is good; a single tyrant who serves only himself is corrupt. Rule by a committee of elders or wise people is good; rule by a few wealthy oligarchs who wish to exploit the many poor is corrupt. Rule by the people under laws is good; lawless mob rule is corrupt. Aristotle called the rule by the people under the laws a “polity,” which approximates what we today call a liberal democracy because both restrict majoritarian power by means of a constitution and a system of institutional checks and balances. In fact, Aristotle praised polity as the best practical regime because it combines the wisdom of the laws with the equal participation of all citizens. It also promotes moral excellence equally for all citizens because, by sharing political offices, they learn the habits of cooperation in ruling and in being ruled by their fellow citizens.

Plato and Aristotle provided our civilization with its basic categories of politics. They also taught us about political leadership. One of Plato’s most famous images of leadership is that of a captain of a ship (Plato 1991, 488a–490a). Comparing the polis to a ship, the statesman must be wise about political matters in the same way that a ship captain understands the tides, the stars, and the winds. The image has an antidemocratic element, of course, because Socrates in the *Republic* also states that the ship’s

crew, who compare with the people whom the philosopher-king rules, lack knowledge to guide the ship and so must obey the ship's captain. If they presume to possess political wisdom and mutiny against the captain, then the ship of state will falter and sink. Aristotle's notion of rotating offices is more hopeful about the capability of non-philosophers to rule, which is due, in part, to his view that philosophic wisdom does not necessarily translate into political wisdom. Knowledge of essences, forms, and even virtue does not necessarily translate into knowledge of fiscal, economic, or military prudence that is the hallmark of a political ruler. But that begs the question: How does or can one reconcile leadership in maintaining the survival of the polis with cultivating moral virtue?

One answer to this comes from a medieval follower of Aristotle, St. Thomas Aquinas (1224–1274). In “On Princely Government,” he begins by drawing a Platonic image (in Fuller 2000, 83–87). God's loving government over creation is the model for good political government. God cares for the good of creation, just as a good parent cares for her family, and just as a good ruler must care for the good of his society. He then distinguishes the activity of political leadership from other activities that people in his day and ours propose as identical to political leadership. He distinguishes political leadership from the activity of a doctor, whose activity is to safeguard health, from an economist, whose activity is to safeguard wealth, from that of a professor (and philosopher) who seeks truth, and from a moralist and priest whose activity is to preserve moral and religious virtue. The activity of the political leader is to safeguard all of these things because life in a political community encompasses safeguarding bodily health, wealth, truth, and virtue. Aquinas does not claim that a political leader should perform all the activities of a doctor, economist, philosopher, or priest. Rather, the political leader synthesizes these activities and the people who perform them for the welfare of the community as a whole. After distinguishing these separate activities from political leadership, he concludes, “The object for which a community is gathered is to live a virtuous life. For men to consort together that they may thus attain a fullness of life which would

not be possible to each living singly: and the full life is one which is lived according to virtue” (in Fuller 2000, p. 85). Political leadership for Aquinas, as for Plato, for Aristotle, and for us, consists in bringing together disparate elements, interests, and values into a harmonious whole. They emphasized virtue as the purpose of politics and political leadership, while today the emphasis lies in freedom and security.

THE MODERN STATE AND THE CONCERN FOR FREEDOM AND SECURITY

Around the fifteenth-century, beginning in Italy but soon spreading throughout Europe, a new political vocabulary entered into play. The French king Charles VIII invaded the Italian peninsula in 1494, which ended the prominence of city-states there, and forced Italians, and then the rest of Europe, to abandon the political forms that had dominated Europe since the collapse of the Roman Empire a millennium earlier. Medieval Europe had been characterized by kingly realms, the Christian Church that symbolized a universal Christian realm, and the numerous city-states in Italy and the Baltic. By the fifteenth-century, these forms could no longer endure and political communities reconstituted themselves as “states,” the term we use to this day.

The term *state* is ambiguous. It derives from the Latin term *status*, which meant “state of affairs.” During this time, however, its meaning transformed into an “institutionalized ‘situation’” (Bobbitt 2002, 87). Instead of basing political rule on dynasty or having the realm consist of a series of overlapping political, feudal, and ecclesiastical orders that characterized politics in the Middle Ages, the modern state became characterized by an “institutionalized ‘situation’” of permanent government structures (e.g., bureaucracy, military, tax revenues) under a single sovereign. The state is not identified with a particular monarch or family line. Rather, it gains its legitimacy by effective government over territory and population. Thus, the preeminent early theorist of the modern state, Niccolò Machiavelli (1469–1527), could describe the state as having its own ethics or “reason of state [*ragione di stato*],” as it became known. The significance of this change

The Headman of the Kapauka

A form of political leadership not generally found in modern nations, but common in societies classified by anthropologists as tribes, is the headman or the bigman. The individuals are usually part-time leaders of the community who serve for life and whose role and status is determined by a set of personal characteristics that mesh well with group needs and expectations. The following example details the selection criteria used by the Kapauka people of Papua New Guinea.

The leadership in the household coincides with ownership of the house; the authorities in polygynous and nuclear families are defined on the basis of kin and marital bonds (father, husband). However, such formal criteria of authority are absent in the rest of the Kapauka groups. In all these there is only one type of authority, which the natives call *tonowi*, the rich man. Since he is an informal authority with limited power, we may label him headman. The Kapauka headman's status is defined by two sets of criteria of different order. First, the personal criteria refer to the attributes of the headman as an individual; second, the societal criteria determine his status in the society according to his membership in the particular subgroups of the society. The former criteria determine an individual as leader; the latter designate his rank in the hierarchy of headmen.

Following is a listing of the personal criteria of a headman. Numbers 1 through 3 may be considered basic; 4, conditioned; 5 and 6, nonessential but power-enhancing.

1. *Wealth.* The Kapauka are capitalistically minded and place high value on wealth, from which they derive most of prestige. Thus it is not surprising that wealth is a pre-requisite for attaining political leadership. The importance of wealth in the political field becomes even more apparent when the economic inducement is recalled: extension of credit is a primary factor of social control. People follow the decisions of a wealthy man; they do so either because they are his debtors and afraid of being asked to repay, or out of gratitude for past financial aid, or because they expect some future financial favor. To comply with the requests and decisions of a wealthy man means economic security. Wealth depends on successful pig breeding as well as upon a man's age; the political structure of a group may therefore change rather rapidly. New individuals succeed to leadership to lose their position some years later to more successful pig breeders.
2. *Generosity.* Hoarding of wealth does not itself carry prestige and fails to attract followers. It is the distribution of wealth, the extension of credit, which performs this function. Wealthy creditors not only become leaders, but are also regarded as most moral individuals.
3. *Eloquence and verbal courage.* In the village of Botukebo lives a wealthy and most generous creditor. He failed, however, to attain leadership because of his shy personality. Despite his wealth and generosity, a man who is afraid to argue publicly and pass judgments has hardly a chance of becoming a headman.
4. *Physical fitness.* Since lack of health and old age preclude economic efficiency and gathering and retaining of wealth, a native headman is as a rule healthy and middle-aged.
5. *Bravery.* Only brave men can become war leaders. Although nonessential to political leadership, bravery enhances the prestige and power of the native headman.
6. *Shamanism.* The supernatural power of a shaman provides a headman with additional means of social control. Like bravery, it is not a necessary attribute.

can be seen in Machiavelli's advice to princes to treat his friends in the same way as he treats his subjects and enemies (Machiavelli 1998, ch. 15). Following what Thomas Hobbes (1588–1682) in *Leviathan* called "policy," political leaders brought with the state a way of understanding political ethics and community far different from that of Plato and Aristotle, for whom justice was central.

Machiavelli's and Hobbes's observations were not borne simply out of cynicism. They observed that people desire to protect and perpetuate their own freedom. If the ancient Greeks and Romans bestowed to us our language of citizenship and leadership, medieval Europe bestowed to us a lasting legacy of freedom, articulated most prominently in Christianity. The Greeks and Romans, of course, defended lib-

erty, but not for all individuals. Christianity articulated a relationship between the individual and God that went beyond any political identity as Greek or Roman, which meant that politics became understood as an activity that serves the good of the individual instead of the other way around. It took the Reformation, the Renaissance, as well as the Enlightenment, to transform this religious idea into a political one. Even so, the “policy” of the modern state, and its new political forms, corresponds to the individual who seeks to maximize his freedom.

Determining a way to govern the often tumultuous ambitions of individuals seeking to maximize their freedoms has since become the primary concern of political leaders and thinkers of the modern state. Even so, it is strange that its characteristics and forms are actually simpler than those of the ancient Greek polis or of Rome. Stranger still is that the modern state, which derives from European political experience, has become the dominant form throughout the world among non-European peoples, due to the attractiveness of the freedoms secured by the modern state, but also due to the ability of the state to manage technology and military power (Bobbitt 2002).

S. E. Finer identifies six basic characteristics of the modern state (Finer 1999, 1473-1484):

1. Since the French Revolution (1789), *nationality* has been the basis for territorial organization, as contrasted to “traditional” bases including dynasty, kinship, or religion. This is seen in the demand of nations to have their own states (e.g., Palestinians), the designation of the United Nations in terms of nationhood instead of statehood, and by the fact that non-Europeans invoked the principle of nationalism to combat against their colonial oppressors (e.g., India, African societies, and pan-Arabism, which is a secular nationalism based on Arabic ethnicity instead of on the Islamic religion).

2. *Popular sovereignty* requires that “the people” confer legitimacy upon their government. Divine right, noble birth, or caste are no longer viewed as legitimate. However, this does not mean that the people govern. Rather, the people can place themselves under a liberal democratic constitution and representative government (e.g., United States, Canada, and

European countries) or they can delegate rulership upon non-democratic rulers (e.g., the dictatorships of the French Revolution, Napoleon, Hitler, Mussolini). Today, even political Islam, which often demands rule by clerics as in Iran, is said to reflect the will of the people.

3. *Secular principle* separates political from religious activities. Liberal democracies, which separate church and state, present the obvious example of separating the activity of saving souls from political activities. However, the above example of St. Thomas Aquinas indicates that one need not be a modern liberal to accept the distinction between church and state. Even so, it is difficult to view Iran or Saudi Arabia as secular, or even the former Soviet Union, for which communism served as a political religion intended to redeem the world. Secular principle might better be understood to signify a “this-worldly” political attitude, in contrast to the “other-worldly” and apolitical attitude that characterized the Middle Ages. Machiavelli and Jean-Jacques Rousseau (1712–1778) criticized the other-worldliness of Christianity because they thought it led to political weakness. “This-worldliness” characterizes the religiosity of various ideologies including Soviet communism, as well as political Islam in Saudi Arabia and Iran, where leaders view submission to Islamic law as securing political and worldly success (Ruthven 1997).

4. Popular sovereignty entails *social purposiveness*. Since the people must be consulted, then politics is no longer a matter of following the rules of traditions and obedience to and reverence of authority. It becomes an active process by which support is obtained for policies and coalitions are formed, with an eye toward the future instead of to the past. Politics is seen to be the art of making anew, instead of inheriting the wisdom of the past.

5. States require *economic independence*, not in the sense of absolute self-sufficiency, but as the construction of an independent and nationally sovereign basis for health, wealth, and power. This requires technological and industrial infrastructure instead of a traditional rural economy. The legitimacy of the state depends upon its ability to ensure sufficient

material and social welfare for its people. The second part of the twentieth century saw a competition between capitalism and communism for the title for having the legitimate means of securing economic independence. With capitalism prevailing for the time being, the early twenty-first century will likely be characterized by challenges to its ability to provide for the welfare of all people across the globe. A corollary to industrialization is the ability of the state to administer its population, which includes its ability to control it. The scope of the state's activity in people's daily lives has dramatically increased over the past fifty years and this poses an acute problem for leadership.

6. *Citizenship* stipulates not only that people have political and civil rights that they actively protect, and which distinguishes them from the status of "subject." The state, in order to maintain its legitimacy, must further be able to ensure economic and social rights, including the right to education and to social-welfare benefits. The complexity of modern society means that decisions by corporations can leave thousands out of work, who, without economic protection, might suffer inordinate economic hardship (as well as being unable to exercise their civil rights like hiring a lawyer) and might also constitute a drain on the state's functioning. The history of the liberal democratic state involves the expansion of citizenship and civic rights for racial minorities, women, those without property, the poor, and others. Political leadership needs to balance the state's role in protecting citizens while avoiding protecting them too much so that they become passive citizens or dependents incapable of exercising their rights (Oakeshott 1991).

Military power can of course be added to this list of characteristics of the modern state. Along with economic activity, it is the primary material means by which the model of the modern state has been exported to non-European people (Finer 1999, 1481–1484). In the words of the old couplet: "Whatever happens, we have got The Gatling gun, and they have not." Only the modern state has the capability of directing industrial and technology output to produce aircraft carriers, fighter jets, and the host of

conventional and non-conventional weaponry that overwhelm those who lack them.

Even so, the technological innovation that drives industrial society presupposes a culture that allows for free scientific inquiry and free political debate that challenges traditions that have outlived their utility. Thus, while Western guns have carried Western ideas of rights and freedoms into non-European nations, many of which are more hierarchical and paternalistic, those nations adapted those ideas for their own cultures and moral principles. For instance, Western concepts of freedom (both political and personal) have been adapted to analogous Asian concepts including *tu do* in Vietnam, *kemerdekaan* in Indonesia, and *lut-myauk-ye* (meaning "detached from affairs") in Burma (Kelly and Reid 1998, 15). Such adaptations suggest that freedom, which the modern state is meant to secure, contains an inner attractiveness, meaning more than simply crass self-interest and egoism, and that speaks to a multiplicity of cultures (Walsh 2000). However, without a proper philosophical understanding of freedom, justice, and moral virtue that people from different cultures can debate, the modern state can only justify itself to outsiders by simple military might, and to its own citizens simply as a benefactor of material well-being accompanied by charismatic appeals to keep the citizenry sufficiently enthralled, entertained and distracted.

DILEMMAS OF POLITICS IN LIBERAL DEMOCRACY

The modern state both upholds and restrains freedom, which means that it simultaneously enables and disables people's attempts to secure their freedoms and well-being. As statesmen including George Washington (1732–1799) and Abraham Lincoln (1809–1865) have noted, echoing Machiavelli and Hobbes, the endeavor to maximize freedoms in the modern world poses a challenge to political leadership, because it makes the activity of politics—of crafting a harmonious whole out of diverse parts—that much more difficult.

Washington, in his 1796 "Farewell Address to Americans," argues that, while the primary purpose of the Constitution is to preserve liberty, its bad

—Winston Churchill

effects include factional strife that threaten to rip apart the new republic (in Fuller 2000, 144–145). The spirit of freedom has thus to be balanced and preserved by the sacred character of the Constitution. Liberty depends not on the personal rule of guardians (Washington refers to his government as “administration,” which is a more democratic term than “ruler,” for example), but on respect for the laws of the state.

Lincoln, in his 1838 “Address before the Young Man’s Lyceum of Springfield, Illinois,” points to a deeper challenge for constitutional democracy. He observes that numerous great individuals have crossed the stage of politics: Alexander the Great, Julius Caesar, Napoleon, and George Washington. Such great individuals can be creative because they found new societies and champion just causes, but they are often destructive because they can also make wars, champion unjust causes, and destroy societies. Lincoln observes that Americans are fortunate because their great individuals, the Founding Fathers, channeled their enormous ambitions and love of fame into creating a new society. However, the founders will not be the last great individuals to arise in the United States. How will society channel future great individuals, those towering geniuses “who disdain the beaten path” and those who belong to the “family of the lion or the tribe of the eagle” (Lincoln 1992, 17)? Lincoln reiterates Washington’s defense of the Constitution as the best guarantee to channel ambitions: “Reason, cold, calculating, unimpassioned reason, must furnish the materials for our future support and defense. Let those materials be molded into general intelligence, sound morality, and, in particular, a reverence for the constitution and laws” (Lincoln 1992, 19).

The American founders established a system of institutional checks and balances that are meant to cultivate good leaders and to restrain bad ones. The

American system of government includes numerous branches such as the President, Congress (upper and lower chambers), judiciary, as well as federal and state governments, with each checking the powers of the other. In the words of James Madison in *Federalist Papers No. 51*, “ambition must be made to counteract ambition” (Hamilton et al. 2001, 268). The basic idea of checks and balances informs other liberal democracies including those of Great Britain and other European states.

The modern state simultaneously undermines and protects ambitions. By doing so, it is fair to ask whether the modern democratic state goes too far in undermining ambitions, not merely the destructive ones, but also the ones that enable citizens to be active in securing their well being. This was the concern of Alexis de Tocqueville (1805–1859), as well as contemporary scholars including Ronald Glassman, who worries that a technologically oriented and bureaucratic culture depreciates the need for leadership.

Tocqueville, a French scholar and politician, wrote, in *Democracy in America*, that equality and democracy are great achievements. However, they come at the cost of a general lowering of intellectual and moral pursuits that can turn citizens into big children who focus on their private lives at the expense of the common good. They focus exclusively on their immediate economic and family affairs, as well as on frivolous entertainments (today this would include television), which leads them to neglect local, state, national, and international affairs. They end up requiring a paternal state to exercise their freedoms for them because they lack sufficient political wisdom and constructive ambition for self-government. The danger to democracy is lack of leadership, which is the problem opposite of that feared by Washington and Lincoln. Tocqueville observes that “there are so many men of ambition in the United States but so few with lofty ambition,” and that “they are much more in love with success than with glory” (Tocqueville 1999, 603). The frustrations of living in mass society, composed of numerous people and talents, make distinguishing oneself in a variety of pursuits extremely difficult, which leads people finally to give up trying to dis-

tinguish themselves as citizens: “What frightens me most is the danger that, amid all the constant trivial preoccupations of private life, ambition may lose both its force and greatness, that human passions may grow gentler and at the same time baser, with the result that the progress of the body social may become daily quieter and less aspiring” (Tocqueville 1999, 604).

Glassman updates Tocqueville’s insights when he worries how modern technological society and bureaucracy corrodes citizenship. He identifies two modes of leadership in modern society: bureaucracy and charisma. Bureaucracy “represents the total institutionalization of task leadership. . . . [It] gains legitimacy simply because people accept the fact that complex tasks need to be done in large-scale societies” (in Fuller 2000, 209). Bureaucracy is about process and routine. In the words of sociologist Max Weber (1864–1921), it is legal authority, and is justified by its effectiveness instead of by the purpose or justice of its functions. According to Weber, charisma refers to “a certain quality of an individual personality by virtue of which he is set apart from ordinary men and treated as endowed with supernatural, superhuman, or at least specifically exceptional powers or qualities” (in Fuller 2000, 204). For Glassman, widespread charismatic appeals to mass society legitimate bureaucracy because charisma appeals to political purposes. However, charisma appeals primarily to people’s emotions and not to their reason. This means that political debate in the modern state cannot really exist. Instead, “debate” and leadership are always in danger of flitting back and forth between unquestioning bureaucratic process (effectiveness) and a demagoguery that whips up public emotions. Media images, including those on television and on the Internet, play a crucial role in political affairs because it constructs and shapes charisma. These dangers pose acute problems for practicing justice in the modern state.

The modern state in its liberal democratic form, the predominant form in the world today, fosters greatness as well as undermines its own order. Fostering leadership and citizenship require the cultivation of intellectual and moral faculties. Plato’s definition of politics as the care of souls holds true

twenty-five centuries later. The definition of politics as the art of harmonizing diverse parts (i.e., interests, morals, factions, etc.) into a unified whole holds true, even though modern notions of liberties, rights, and technology complicate this art. The key to understanding politics is to understand the following: (1) the laws and institutions that form it and in which it operates (called “elemental representation”); (2) the morals and principles that guide it (“existential representation”); and (3) whether or not those morals and principles are indeed just (“transcendental representation”) (Voegelin 1987, 27–75). In our time, as in the time of Socrates, the understanding of politics begins with self-knowledge.

. . . [gives] to economic studies their chief and their highest interest” (Marshall 1920, introduction). Alongside economists and sociologists, scholars of leadership have dedicated attention to poverty and inequality. James MacGregor Burns, a towering figure in leadership studies, has recently called for the “biggest, boldest kind of leadership [in order to] confront the largest, most intractable problem facing humanity in the twenty-first century: the basic wants of the world’s poor” (Burns 2003, 230).

How and whether societies should attack deprivation is a perennial issue facing leaders, policymakers, and citizens. The optimism of the Progressive Era (c. 1890–1925) and the economic growth of the post–World War II period ushered in the possibility that poverty could be virtually eliminated by modernity’s advances. Although neither poverty nor excessive inequality has been removed altogether from any society, the degree and quality of public commitment to these issues has made a significant difference in how much deprivation plagues a society’s citizens.

DEFINITIONS

Poverty and inequality are interrelated but distinguishable concepts. Poverty entails the lack of certain requisites for a decent standard of living. How to define what goods or circumstances constitute poverty is a matter of heated academic and practical debate. Definitions of poverty depend upon a prior understanding of what persons need to live within their society. A bare-minimum conception of poverty is the lack of what is required in order simply to stay alive. Starvation is one severe result of undernutrition and/or hunger, which are forms of poverty. Hunger-focused definitions depend upon nutritional minimums—that is, those nutritional inputs (in terms of calories, proteins, vitamins, etc.) that allow a person to subsist.

Beyond sheer survival, the question of what persons really need in order merely to escape poverty is by no means a settled one. Healthy food and potable water are widely agreed upon as requisites, but also important are decent housing, clothing appropriate for one’s climate, and basic medical care. Many

POVERTY AND INEQUALITY

The neoclassical economist Alfred Marshall wrote that “the question of whether it is really impossible that all should start in the world with a fair chance of leading a cultured life, free from the pains of poverty

social scientists assert (explicitly or implicitly) some “hierarchy” of needs, such as Abraham Maslow’s (1954) pyramid of needs, conceptions that place so-called subsistence needs as more fundamental than “higher-order” needs, such as self-actualization. Similarly, most basic definitions of poverty focus on material goods that address physical needs. In the standard, neoclassical model of economics, income becomes the basic currency of analysis; income is seen as a reasonable indicator of utility or welfare. As will be discussed, however, income can be a very imprecise indicator of one’s standard of living.

While poverty reflects persons’ unfavorable condition vis-à-vis some societal standard, inequality is a concept that has to do with the interrelationships among all segments of a group—the well-off, the poor, and those in between. That is, for any particular good, poverty is a reality of those at the bottom of that good’s distribution, whereas inequality is a phenomenon of the distribution as a whole. Even as poverty and inequality often exist together, societies can have relatively high poverty and low inequality (e.g., India), or relatively low poverty (by international standards) and high inequality (e.g., the United Kingdom).

RELATIVE OR ABSOLUTE DEPRIVATION?

The relationship between poverty and inequality becomes more complicated as one explores more closely the nature of human need. By accounts of “absolute” need, poverty is determined by setting a fixed threshold for caloric intake, basic health indicators, or income. To the degree that need is a function of a person’s social surroundings, however—not only because of what he or she perceives to be a social standard, but also because of the actual forms of exclusion that arise from relative deprivation—then poverty takes on relational characteristics.

Adam Smith, the moral philosopher and founder of classical economics, addressed this issue, asserting that “by necessities I understand not only the commodities which are indispensably necessary for the support of life, but what ever the custom of the country renders it indecent for creditable people, even of the lowest order, to be without” (Smith 1976

[1776], 869–870). Nearly a century later, Karl Marx (1977 [1867]) also argued that the understanding of “subsistence” was a product one’s social context.

In most current-day societies, the use of a telephone—along with, increasingly, access to the Internet—is necessary for full social participation. Contemporary research by sociologists and economists, including Richard Easterlin (1995) and Richard Wilkinson (1996), supports the view that, at levels beyond the struggle for survival, happiness and well-being are largely determined not by absolute holdings of goods but, rather, by one’s relative position within a social or economic distribution. Such findings underscore the value of attending to relative poverty and inequality, even if some minimal, absolute measures are employed as well.

THE UNITED STATES: TRENDS AND PROGRAMS

The contemporary analysis of poverty and inequality in the United States begins with the public responses to the desperate conditions of the Great Depression, which began in 1929. Franklin Delano Roosevelt’s domestic initiative known as the New Deal (1933–1939) introduced a social security program and public works projects that offered employment for many Americans. The New Deal thus laid the groundwork for broad and sustained government social initiatives to fight poverty. At the end of the World War II, poverty remained high. The twin engine of private sector expansion and government programs such as the G.I. Bill coincided with a period of increasing prosperity and the reduction of poverty and inequality.

In 1959 (the first year of comparable Census Bureau data), poverty for the U.S. population stood above 22 percent. Lyndon B. Johnson’s Great Society domestic initiative (1965–1969) included the president’s declaration of a “war on poverty,” and he established programs such as Head Start, the Job Corps, Medicare, and Medicaid. These programs had the most success in the targeted initiatives; in particular, the medical insurance programs disproportionately aided the elderly, whose poverty rate was cut in half in less than two decades.

In the postwar period, poverty and inequality both steadily reduced from the late 1940s to about 1970. The lowest official poverty rate for U.S. individuals in the postwar period, based on the official income measure, was obtained in 1973 (11.1%). Since the early 1970s, the rate has fluctuated closely with business cycles. The 2001 rate was 11.3 percent. The lowest level of income inequality for households (measured by the Gini coefficient, a standard indicator of inequality) occurred in 1968. Inequality increased for the next two and a half decades, beginning to level off in the late 1990s at the highest levels in the postwar period (Census Bureau data). Inequality remained on the public agenda in the early George W. Bush administration, as critics asserted that his domestic program, especially a series of tax cuts, was designed to benefit wealthy Americans disproportionately and thus to increase income inequality.

GLOBAL POVERTY AND INEQUALITY

World Bank figures from 2000 to 2001 estimate that 2.8 billion persons in the world, or about 45 percent of the world's population, live on less than \$2 dollars per day. Within that group, 1.2 billion, or about 20 percent of all humans, receive less than \$1 per day, the generally accepted international level of absolute poverty. Other indicators of extreme deprivation include the estimate by the World Health Organization (WHO) and UNICEF that 1.1 billion persons live without access to safe drinking water, and the Food and Agricultural Organization's figure that 840 million adults and children are severely undernourished (FAO 2002).

The global inequality levels are as staggering as the poverty figures. Milanovic (2002) estimates that, in 1993, the richest 1 percent of the world population received more income than the poorest 57 percent (p. 88), and the top 10 percent of the population accounted for over half of total world income (p. 73). The complex causes and trends of global inequality are under intense dispute. Although there is no broad consensus on whether global inequality increased from 1970 to the 1990s, it is clear that the current level of global income inequality is at least as high as

income inequality in the most unequal nations of the world (e.g., South Africa, Guatemala, etc.).

The discussion continues over which aspects of globalization are contributing to greater levels of inequality and which aspects are helping to alleviate it. While debate about the relationship between economic growth and poverty is fiery, a growing consensus of development scholars see that private-sector growth and government social support systems should be seen as complementary and mutually reinforcing for sustained and equitable growth (see Sen 1999; UNDP 1999). It is clear that inequality is impacted by social policy and philosophies of public leadership. As one significant example of contrasts, the social welfare states of Europe, and particularly Scandinavian countries, experience far less inequality (measured in various ways) than the more *laissez-faire* economic and political approaches of the United States and the United Kingdom.

In September 2000, a United Nations summit approved the Millennium Development Goals (MDGs), a series of international commitments to fight destitution. Most prominent of these targets is the effort to cut in half, by 2015, the number of persons who earned less than \$1 per day in 1990. The eight overarching Millennium Development Goals aim to do the following: "eradicate extreme poverty and hunger; achieve universal primary education; promote gender equality and empower women; reduce child mortality; improve maternal health; combat HIV/AIDS, malaria and other diseases; ensure environmental sustainability; and develop a global partnership for development" (United Nations Development Programme 2003).

GENDER, POVERTY, AND INEQUALITY

Women and children make up a disproportionate number of the poor. In every society in the world, women lag behind men in basic income, health care, and education measures (UNDP 2003). The biological advantage of women in terms of life expectancy is severely attenuated in many countries. Amartya Sen has calculated that if girls and boys, and men and women, received roughly equivalent social, medical, and educational advantages, over 100 more million

females would be alive in the world than are presently alive today (Sen 1999). The causes of gender-based poverty and inequality require analysis not only of the formal economic sphere—from which women are often excluded—but also of the social and political conditions of a society as well as of family and religious structures (see Nussbaum 2000; Tinker 1990; UNDP 1995).

MEASUREMENT ISSUES: POVERTY

When one determines a poverty “threshold” through absolute or relative means, basic indicators of poverty divide a population into “poor” (i.e., below the threshold) and “non-poor” (i.e., above the threshold). This type of indicator can be communicated in either the number of poor people or as a proportion of a total population. Such “head-count” measures have certain limitations. One of the most significant is that they do not measure *depth* of poverty, counting a person just under the poverty threshold in the same way as someone who is completely destitute. Similarly, these measures do not indicate how many persons are just above the threshold, and thus just one catastrophe away from poverty. Depth of poverty measures, including one proposed by Sen (1976), have helped to address these problems.

Assessing changes in the poverty level over time creates a host of conceptual and practical issues. First, while a poverty rate can be traced over the years, threshold-based measures do not indicate how permanent or temporary any specific person’s poverty is. A society might have a different degree of concern about poverty if persons were able to move in and out of poverty readily than it would if, say, one-seventh of the population were permanently stuck in the condition.

Indigenous or Government Control?

A central issue in efforts to alleviate poverty in developing nations is the clash over power and control between the government and local people who are often members of indigenous minority groups. The following text provides an example of an effort by the Aymara of Peru to control their own future.

Peasants rejected ideologies that associated their ethnic identity with monolingualism, poverty, and ignorance. In building schools and adopting the Spanish language and Western dress, they did not reject their indigenous heritage per se, but denied that it should prevent them from functioning as full citizens of the republic. In a letter to President Leguía, a representative of sixteen communities from Huancané, Carlos Condorena Yu-jura, explained the rationale behind the actions taken by the Aymara at Wancho Lima. . . . Yujra continues:

As a hard-working people, we have this right [to establish schools, industrial centers, and markets and expositions], and believe that our initiatives toward well-being and progress are neither evil nor harm anyone; to the contrary they open a new and grandiose era of National Industrialization to the honor of Peru and all of America. These are our uprisings: to think about educating ourselves and to work peacefully and thus save our race, with thousands of schools, Federated Workshops and Rural Settlements, which are legally recognized by the Ministry of Development. . . . I ask for a special commission from the capital, issuing from the three legal powers, because in Huancané and all the provinces of the department of Puno, there is no justice for the Indian. . . . We ask the immediate removal of the subprefect . . . and reparation for the harms caused the indigenous population.

The issue of whether the threshold should be fixed, or if and how it should be adjusted over time, is another problem. The official poverty threshold in the United States, developed by Mollie Orshansky in 1965 and adopted by the Social Security Administration, is determined by pricing an “economy” food basket and multiplying by three, on the view that food expenditures comprise about one-third of a vulnerable person’s budget. The Orshansky index has been widely criticized but is still employed as the official U.S. measure. Since 1965, in addition to problems of how best to adjust for inflation, the cost of housing vis-à-vis food has risen, and thus some analysts have called for multiplying by a factor greater than three times the food budget in order to

maintain a comparable poverty threshold. Others call the food basket inadequate except in emergency periods. These and related issues have led to alternative poverty measures, now calculated by the federal government as “experimental measures.” No political leader, however, has been willing to adopt a new index that would suggest that poverty had increased during his or her term of office. These issues serve as a reminder that measuring and addressing poverty are issues of political leadership as much as they are economic questions.

CONCEPTUAL AND MEASUREMENT ISSUES: INEQUALITY

Evaluating inequality depends upon a number of conceptual choices. The first question is one of scope: inequality among which people or which groups of people? Standard approaches to inequality examine all individuals of a population; they reflect inequality among all U.S. citizens or among all residents of Boston. It is also possible, through a “differential” analysis, to examine the distance between the respective average of two groups of persons—for example, the differential between the average wage of working men and that of working women.

It is also necessary to ask what good or circumstance is being assessed: inequality of income, or of years of schooling, or of food intake, and so forth. As will be discussed in the following section, inequality measures yield different results in various spheres, so context and values will determine what good or condition should be the object of inequality evaluation. Leaders in one context have good reason to focus on inequalities of income, while persons in another situation might focus on inequality of educational training. It is possible, of course, to attend to multiple forms of inequality, but the point is that these exercises are a question of priorities.

Even after one chooses to focus, say, on income alone, measures of inequality have varying properties. One simple way in which to assess inequality is by comparing income “classes,” which requires ranking the individuals (or households, etc.) in terms of income within the distribution. It is then possible to provide, for example, the share of total income

received by the bottom quintile (i.e., the lowest 20%), or the ratio of the top quintile to the bottom quintile. This approach has certain advantages, including its intuitive appeal. More complex calculations like the Gini coefficient, Theil-class measures which allow analysts to give special weight to changes at either the top or bottom end of a distribution), and Atkinson-class measures (which enable attention to the degree of a society’s overall aversion to inequality) incorporate information about the entire distribution, and each measure has distinctive virtues and limitations. The Gini coefficient is readily calculated from information about the shares of income held by different persons, is easily expressed in geometric terms, and has many desirable properties when the requisite data is available. The latter two measures may be preferable in situations in which inequality among the entire group is to be compared to that of subgroups. The technical issues are discussed in Sen (1997), Litchfield (1999), and Hicks (2000, 247–256).

MORAL, SOCIAL, AND POLITICAL DEBATES

The methodological and empirical issues fuel sharp debates among economists and statisticians; they also inform the wider discussions of deprivation as a contemporary issue. The economic analyses have tended to focus on income—and sometimes wealth (see Wolff 2002)—as the “space” or “currency” in which inequality and poverty should be measured. The moral, social, and political debates, however, easily expand to discuss ends that are more intrinsically valuable than money alone. For instance, equality (or inequality) of opportunity broadens the focus on deprivation of various sorts. The concept of equality of opportunity, itself a contested term, has proponents on all parts of the U.S. political spectrum, and to the extent that it can be made specific, it serves as a common ground for moral and political debates about inequality.

The political and moral philosopher John Rawls, in his seminal book *A Theory of Justice* (1971), suggests that a set of “primary goods”—wealth and income, liberties, powers, and opportunities, and the social bases of self respect—gives a broader view of

well-being and its lack. Moving further toward a focus on intrinsically valuable ends, Amartya Sen and Martha Nussbaum suggest that inequality and poverty should be analyzed in terms of human capability, or what persons are able to be and to achieve within their own social contexts (Sen 1999; Nussbaum 2000). By their accounts, it is more significant to discuss not inequalities in means such as income, years of schooling, or even Rawls's all-purpose "primary goods." Rather, inequalities in ends, such as being well nourished or being able to appear in public without shame, deserve our fundamental attention and merit effort that expands human capability.

LEADERSHIP TO COMBAT POVERTY AND INEQUALITY

The philosophically centered question of the "space" of analysis of poverty and inequality challenges leaders and citizens to ask why and how deprivation is a moral or social problem. What forms of inequality are acceptable for common life? How much effort will be made to reduce poverty so that only temporary or transitional forms of deprivation occur? The measurement of poverty and inequality cannot be done adequately without an answer to the prior question of how deprivation is understood within any given social context. Similarly, any leadership efforts to combat poverty or disparity need to make choices about which forms of deprivation should be attacked.

On the international level, various explicit leadership efforts presently are taking place, with unclear success to date. Progress toward the Millennium Development Goals has been mixed, but the very fact that these goals have gained public attention is significant. Some leaders in the fight against international terrorism have acknowledged that the despair of living in poverty is one contributing factor in the turn to violence, and thus Western leaders are showing signs of deepening the resolve to fight poverty.

Yet, official development assistance by wealthy nations, as a percentage of their national income, remains below the United Nations' target of 0.7 percent, except for a handful of exemplary nations. The United States, which provides a large amount of aid in absolute terms, stands near the bottom of the pack

The Clan Chief in Scotland

Once the clan system was established, there were few individuals without allegiance to some chief. The individual's status and protection depended on clan membership. An individual who could not name his chief had no dignity. Thus, under the Law of Arms of Scotland the clan is described as an aggregate of families actually descended, or accepting themselves as descended, from a common ancestor.

The Clan Chief. At the head of the clan stood the *ceann-cinnidh* (literally the head of the kin), the living representative of the common ancestor and the group. While giving the clan coherence and endurance, he served as the military leader, protector, lawgiver, arbiter, judge, and administrator of the community of fate. His power and position, backed by a resolute body of supporters, was almost independent of royal authority. He did not, however, enjoy absolute power. The obligation to consult the leading men of the clan on communal affairs tempered his rule. He was a patriarch who governed by custom and general consent. Always, in a general sense, he was the father of his people. His government rested on reciprocal relations. The chief and the clan brotherhood mutually owed and received devotion. Right or wrong the clansmen were sheltered and defended in quarrels by their chief.

in relative terms, with a figure of less than 0.1 percent of gross domestic product.

Analysts contend, however, that even at current levels of assistance by developed nations, the careful coordination of efforts will produce steady progress in meeting the MDGs. Burns's call for new linkages between "freedom leaders" from developed countries and local leaders in developing countries is an innovative proposal in leadership studies that can contribute to the policy debates (Burns 2003). Burns's work also supports the view that addressing deprivation will be most effectively (and ethically) accomplished when influential persons from developed and host countries find ways to share their power with the poor, and impoverished persons find ways to exercise their own agency in the process.

The domestic picture in the United States remains

problematic. One in eight Americans, just as thirty years earlier, live below the official poverty line, even as real, average, per capita income has gone from about \$13,000 to \$23,000 over that period (Census Bureau data). In addition, inequality has significantly widened since 1970. Putting and keeping up a fight against poverty and excessive inequality on the domestic, as well as the international, agenda is a matter of public leadership.

POWER DISTANCE

Leadership is found as an important function in human groups all over the world. Everywhere, the leadership role is associated with power and status. Most cultures have symbols that convey power and status. For example, in some cultures leaders may be recognizable by objects or clothing they alone are allowed to carry or wear by virtue of their position.

Such symbols are also found in the business world. Examples from that sphere are company cars, job titles, or office location and size.

Status and power differentials are found everywhere, although they are more visible or stronger in some cultures than in others. Geert Hofstede, a cofounder of the Institute for Research on Intercultural Cooperation, refers to culture as the collective programming of the mind. Power distance is one of the four dimensions of cultural variability that Hofstede discussed in his well-known 1980 study of IBM employees in forty countries. The other dimensions he discussed were individualism-collectivism, masculinity-femininity, and uncertainty avoidance. In later research a fifth dimension emerged, labeled Confucian dynamism (or a long versus short term orientation). This entry focuses on the impact of power distance on leadership.

Hofstede defines power distance as the extent to which a society accepts the fact that power in institutions and organizations is distributed unequally. Research has shown that power distance has a strong impact on organizational as well as personal functioning. For example, in a 1998 study, the researchers Randall Schuler and Nikolai Rogovsky found that the greater the power distance in society (that is, the more acceptance there is for unequal distribution of power in society), the less likely that companies in that society will have employee stock ownership plans. In the same year, the researcher Chet Robie and his colleagues reported that the relationship between job satisfaction and job level was weaker in low power distance cultures than in high power distance cultures.

Hofstede is not the only one to have studied power differentials as an important element of culture. All societies must find ways of eliciting responsible behavior from their members, but there are many different ways of doing so. Hierarchical cultures emphasize the chain of authority and rely on hierarchically structured roles. An unequal distribution of power and status is legitimate and expected. Employees are expected to comply with management's directives without questioning them. In contrast, egalitarian cultures encourage people to view each other as moral equals. Leaders motivate employees in a more partic-

ipative manner and appeal to them to act on behalf of all. Employees typically have input into decisions and share in goal-setting activities.

In cultures with large differences in power between individuals, organizations will typically have more layers and the chain of command is felt to be more important. There is clearly a connection between power distance and leadership. For example, compared with their counterparts in low power distance countries, subordinates in high power distance countries are typically more reluctant to challenge their supervisors and more fearful of expressing disagreement with their managers. Not only are people in high power distance countries less likely to provide negative feedback to superiors spontaneously, the very idea that subordinates would be allowed to provide feedback is more likely to be rejected in high power distance countries, because such upward feedback may be perceived as threatening status positions.

Thus, power distance has an impact on subordinates' expectations and preferences (people want and expect more guidance in societies with more power distance) as well as on acceptable or typical patterns of leader behavior (autocratic leadership is more acceptable and effective in high power distance societies).

BEING SEEN AS A LEADER: THE GLOBE STUDY

To be successful in a leadership role, leaders need to show characteristics or behave in ways that others equate with leadership. The vastly different types of leaders one can find in the media worldwide illustrate that people from different cultures associate different characteristics and behaviors with the leadership role. Power distance is one of the factors shaping cultural perceptions of effective leadership. For instance, some cultures expect their leaders to be bold, directive, and decisive heroes, whereas elsewhere a good leader may be someone who is calm, involves others in decision making, and seeks consensus before acting.

The GLOBE (Global Leadership and Organizational Behavior Effectiveness) Project is one of the

largest studies of leadership and culture carried out to date. The project involves researchers from some sixty countries working together to collect different kinds of data on leadership and culture. A large portion of the study involves a survey among middle managers in three different industries. In total, more than sixteen thousand managers in more than sixty countries have participated in the survey.

One of the results of the GLOBE study was a report that lists which leadership attributes are universally endorsed as contributing to outstanding leadership, which are universally seen as undesirable, and which are culturally contingent. In all participating countries, an outstanding leader is expected to be encouraging, motivational, dynamic, and to have foresight. Universally, a leader is also expected to be oriented toward excellence, decisive, trustworthy, and intelligent. Several other attributes were universally viewed as impediments to outstanding leadership—for example, being noncooperative, ruthless, and dictatorial. The term *autocratic leadership* is often used to refer to leaders who do not allow subordinates to have any say in decision making. Dictatorial leadership can go even further, and depicts a situation in which leaders become feared tyrants. Although neither of these is seen as positive, the latter universally has the most negative connotations.

The importance of other attributes was found to vary across cultures. For example, being autonomous, unique, and independent were found to contribute to outstanding leadership in some cultures, but to be undesirable in others. People within a given culture tend to agree that a particular characteristic is desirable or undesirable, but vast differences exist between cultures. Culturally contingent attributes that contributed to outstanding leadership in some cultures while being seen as detrimental in others included being enthusiastic, subdued, indirect, intuitive, and compassionate.

Several of the culturally contingent attributes varied in accordance with whether there was a cultural preference for high power distance or egalitarianism. For example, in high power distance cultures, people tend to react more favorably to leaders who were status conscious, class conscious, elitist, and

domineering, whereas in low power distance cultures people tend to react negatively to leaders with those traits.

The GLOBE study combined leadership items into several dimensions of leadership characteristics, one of which was participative leadership—that is, leadership that is not autocratic and allows participation in decision making. Of the leadership dimensions, participative leadership is most directly related to power distance. The GLOBE study found that endorsement of participative leadership varied in different parts of the worlds, with regional clusters of cultures reacting similarly. For example, the Anglo cluster (which includes the United Kingdom, the United States, Canada, and Australia), the Nordic cluster (which comprises the Scandinavian countries), and the Germanic cluster (which includes Germany, Austria, Switzerland and the Netherlands) all were particularly attuned to participative leadership. By contrast, the Middle Eastern, Eastern European, Confucian Asian, and Southern Asian clusters did not endorse participative leadership as strongly.

LEADER BEHAVIOR: AUTHORITARIAN LEADERSHIP

Authoritarian leaders and autocratic decision-making procedures are likely to be more accepted and expected in high power distance cultures. For example, research showed that Dutch managers had a more negative attitude toward autocratic leader behavior and status consciousness than did Polish managers, which is probably related to the much more egalitarian values found in the Netherlands.

According to Hofstede, subordinates in high power distance countries see their managers primarily as well-meaning autocrats, whereas subordinates in low power distance countries prefer to see them primarily as resourceful democrats. In low power distance cultures, employees expect more say in decisions affecting their work. Hofstede describes some studies that compared the role of managers in France (which has a high power distance culture) and Denmark (which has a low power distance culture). The French respondents felt that their supervisor always had to be consulted simply because he or

she was the boss, whereas the Danish indicated supervisors had to be consulted only when they were likely to know the answer to the problem. In France, managers were highly respected by virtue of their position, whereas in Denmark respect was much less dependent on position. Danish firms were also characterized by more delegation of authority and fewer layers of authority.

Other research highlighting the role of power distance focuses on employees' willingness to accept supervisory direction and their emphasis on gaining support from those in positions of authority. A 2001 study conducted by the researchers Nailin Bu and colleagues compared these characteristics among Chinese, Taiwanese, and U.S. employees by examining their responses to several vignettes. Overall, the Chinese employees in their sample demonstrated the strongest tendency to accept direction and the U.S. employees the least. Peer consensus had more influence on the tendency to accept in the United States than in Taiwan or mainland China. Also, Chinese employees were most sensitive to the consistency between the supervisory direction and company policies, and were less responsive to their own assessment of the merit of the directions they were given. The differences again seem to reflect differences in power distance. A 1995 study conducted by Scott Shane and colleagues focused on innovation in different countries. Their study showed that support from superiors is more important in high power distance countries than in low power distance countries. The greater the power distance in a society, the more people focused on gaining the support of those in authority before taking other action on an innovation. In societies with less power distance, the focus is on building a broad base of support for new ideas among organization members rather than on gaining support from above.

How managers handle day-to-day matters is also influenced by power distance in society. The social psychologist Peter B. Smith has headed several studies that examined managerial styles; those studies show that formal rules and procedures set by the top managers are more important in high power distance cultures. The studies also indicate that managers in high power distance cultures rely less on subordinates and their own experience in dealing with

everyday events than do managers from low power distance countries. The results suggest that in high power distance countries a more strict hierarchy is found in which employees and managers alike are more likely to follow directives, rules, and policies set by higher levels.

PARTICIPATIVE LEADERSHIP

Participative leadership is typically found in low power distance countries. A 1997 study by Peter Dorfman and his colleagues compared leader behavior in the United States, Mexico, Japan, Taiwan, and South Korea. They found that leader supportiveness, contingent reward leadership, and charismatic leadership were consistently endorsed in all five cultures, whereas participative leadership, directive leadership, and contingent punishment behaviors were culturally contingent, in different ways. Contingent punishment had positive effects in the United States but undesirable effects in the other countries. Directive leadership behaviors had positive effects in terms of increased satisfaction and commitment in Taiwan and Mexico, while participative leadership behaviors had similar positive effects in the United States and South Korea. The differences they found reflect relative differences in power distance between these countries, as the countries involved in this study—Mexico and Taiwan—are cultures relatively high on power distance and the United States and South Korea are cultures relatively low on power distance. In Mexico (high power distance) and the United States (high power distance), the researchers were also able to collect job performance data. In the United States, only participative leadership (and not the other five measured leader behaviors) had a direct and positive relationship with performance. In contrast, in Mexico, only directive and supportive leadership were directly and positively related to performance.

PATERNALISTIC LEADERSHIP

In the study by Dorfman and colleagues described above, the combination of directive and supportive leadership was found to be highly effective, especially in many developing nations. Cultures of devel-

oping countries tend to be somewhat higher on power distance. In many developing countries, an effective leadership style is highly status oriented, requires a high level of involvement in subordinates' non-work lives, and is highly directive. Such a style is often called paternalistic.

When leadership is paternalistic, the superior assumes the role of the benevolent father who provides for subordinates, guides them, and protects their interests. In return, they comply with the superior's wishes and show high levels of loyalty. The guiding role of the leader can go beyond the work sphere and include issues that are not work related; for example, a paternalistic leader typically shows a strong concern for the well-being not only of the subordinate but also of the subordinate's family. Paternalistic behaviors may include attending the weddings or funerals of subordinates or their family members, providing financial assistance (donations or loans) to employees for expenses such as housing, health care, and children's education, and acting as mediator in interpersonal conflicts among employees. In return, employees display high levels of loyalty and deference and a willingness to perform personal favors for superiors. If a paternalistic leader is perceived to treat some workers better than others, rivalry and jealousy may develop among subordinates.

EGALITARIANISM AND TRANSFORMATIONAL LEADERSHIP

Transformational leadership has received increased attention in the last decades of the twentieth century and into the twenty-first. Transformational leadership entails inspiring others to transcend their own self-interest for the sake of the collective. This is done through articulating an attractive, exciting, and shared vision and inspiring trust and faith that the vision can be reached through collective effort. Followers become highly committed to the goal and perform beyond expectations. Transformational leadership also entails developing followers to their full potential and challenging them to take risks and view problems in new ways.

A preference for transformational leadership is found in many different cultures and has positive

effects in most cultures. However, transformational leadership is enacted in different ways. For example, the psychologist Bernard Bass states that "Indonesian inspirational leaders need to persuade their followers about the leaders' own competence, a behavior that would appear unseemly in Japan" (Bass 1997, 132).

Power distance is one factor that determines culturally appropriate enactment of transformational leadership. In the Netherlands (a low power distance culture), for instance, transformational leaders tend to encourage participation in decision making. The same has also been found in Australia, another egalitarian country. Thus, in highly egalitarian societies transformational leaders may need to be more participative to be effective. In contrast, in high power distance societies, transformational leadership is likely to take a more directive form.

- reputation in the eyes of others. The notion that power is a basic goal in human social life, and that individuals differ in the extent to which they seek power, is rooted in such classical Greek concepts as Empedocles' dualism of strife (versus love), Thucydides' conclusion in the "Melian Dialogue" (*A History of the Peloponnesian Wars*) that "the strong do what they have the power to do and the weak accept what they have to accept," and Plato's account of the decline of the ideal state and the rise of the despot. Modern cognate psychological concepts include Alfred Adler's "striving for superiority" and Henry Murray's "need dominance."
- Whereas people who want power usually attempt to get it by various means and often succeed, power as a motive must be distinguished from other power-related concepts such as social roles that permit (or encourage) power behaviors, skill in using power, the feeling of being powerful, and positive or negative values about the exercise of power (such as authoritarianism, Machiavellianism, or Gandhi's nonviolent "truth force").
- The power motive is conceptualized as a stable disposition or potential. It is aroused by various situations and stimuli involving power, which create anticipations and lead the person to take appropriate instrumental activity. Thus the overall power motive reflects individual differences in the kinds and range of experiences that arouse the motive, and how quickly and to what level it is aroused as well as in the refractory period or time it takes for the motive to "recover" after engaging in power behavior (this last is analogous to how soon a person feels hunger after eating).

POWER MOTIVATION

Power motivation is the operationally defined psychological term for what is often called the desire for power, the will to power (Nietzsche) or even the aggressive drive (Freud). People with high levels of power motivation want to have impact on other people or the world at large, or to acquire prestige and

MEASURING POWER MOTIVATION

Power motivation is usually measured by content analysis of spoken or written text for images portraying one person or group having impact on the behavior or emotions of another, or being concerned for prestige and reputation as potential for such impact. Such images may be taken as the core of power motivation. Observer ratings of motivation are problematic because they are based on external behavior (especially outcomes of that behavior) and

not on inner wishes. Depending on circumstances, the same behavior might result from many different motives, and the same motive might lead to many quite different behaviors. Furthermore, people are often unable (or unwilling) to report directly on their own motives, and, since “power” is a word fraught with negative connotations, this is especially likely to be the case with the desire for power. Thus the content analysis measure is usually uncorrelated with direct questionnaires, which may reflect people’s conscious values or preferred ideal self-concepts with respect to power.

For ordinary people, stories written to the Thematic Apperception Test or other imaginative texts are scored; for political leaders or historical figures, transcripts of speeches or press conferences can be used. Power motivation can even be scored from such diverse sources as popular fiction, diplomatic documents, or corporate annual reports (Winter 1992).

POWER MOTIVATION AND BEHAVIOR

Men and women scoring high in power motivation tend to make themselves visible, and are active in defining group agendas and encouraging participation. They seek and use the symbols of prestige. They are adept at building alliances, especially with lower-status or less well-known others, who thereby can constitute a loyal base of support. By high school, they tend to emerge as student leaders of the “academic” (rather than “social”) variety. In ways consistent with traditional sex roles, they are generative. They are drawn to occupations (such as business executive, journalist, professor or teacher, and psychologist) that involve exercising institutionally legitimized positive and negative sanctions to direct the behavior of individual others in accordance with some preconceived plan. They are active in voluntary organizations, as members and officers. They are capable of verbal and physical aggression when provoked, according to McClelland’s studies (*Power: The Inner Experience* 1975; *Human Motivation* 1985) and Winter’s work (*The Power Motive* 1973). However, McClelland also suggested that when activity inhibition (measured by frequency of

the word “not”) is high, power motivation is expressed in more socially productive ways.

On the other hand, if combined with low activity inhibition, a lack of responsibility or self-control, power motivation is also associated with a variety of “profligate” impulsive (and ultimately self-destructive) behaviors such as taking extreme risks, drinking and drug use, and sexual exploitation. Control, responsibility, and/or inhibition, then, moderates or directs the expression of power motivation in prosocial or anti-social channels.

CORPORATE AND POLITICAL LEADERSHIP

For all these reasons, it is not surprising that power motivation (especially when combined with a sense of responsibility or impulse control) is associated with successful leadership, both in corporate and political settings. This confirms Max Weber’s ([1919] 1948) prescription for political leadership, given in his lecture on “Politics as a Vocation”:

[The political leader] works with the striving for power as an unavoidable means. Therefore, “power instinct,” as is usually said, belongs indeed to his normal qualities. The sin against the lofty spirit of his vocation, however, begins where this striving for power ceases to be *objective* and becomes purely personal self-intoxication, instead of exclusively entering the service of “the cause.” (115–116)

Corporate leaders high in controlled power motivation are able to create high morale among their subordinates—that is, a climate that emphasizes organizational clarity, team spirit, responsibility, and (interestingly enough) *low* conformity. Doubtless as a result, over time subordinates rise more rapidly in the corporate hierarchy. In a military setting, they draw higher performance ratings from their supervising officers.

Power motivation plays a major role in political leadership, both by itself and as a balance to achievement motivation, according to David G. Winter’s studies (2002b). United States presidents whose inaugural addresses scored high in power motivation are rated high by historians and observers of the presidency on overall greatness, as well as on mak-

ing “great decisions,” communicating effectively with the public, combative skill, and humor. (Their sense of humor and overall capacity to get pleasure from the exercise of power probably acts as a buffer or counterpoise to the inherent problems and stresses of politics: making compromises, trimming programs to fit budgets, and getting other people to carry out their duties on behalf of the leader.) Analysis of subordinates’ memoirs shows that these presidents act in charismatic ways and elicit charismatic reactions from followers. Power motivation, then, may be one psychological basis or component of charisma, according to the study by R. J. House and colleagues (1991).

However, power motivation by itself is not consistently related to electoral success, at least in the U.S. political system, although power-motivated candidates are more attractive to authoritarian voters generally and to all voters in times of threat. Overall, however, election performance (measured by vote percentage or vote margin) is related to the degree of congruence between a candidate’s overall motive profile (achievement-affiliation-power) with that of the society. (There is some evidence for a different kind of motive-profile congruence in the former Soviet Union. There the profile of the Communist Party General Secretary preceded that of Soviet society.)

In the light of all these findings, it is not surprising that power motivation is strongly associated with the political scientist James David Barber’s classification of “active positive”—that is, active presidents who enjoy the office. This relationship is further demonstrated in a study of President John F. Kennedy’s motives over time: When Kennedy’s level of power motivation was higher, he arrived at the office earlier and worked longer days, while maintaining a more flexible schedule.

THREAT, STRESS, AND AGGRESSION

Kennedy’s speeches during times of domestic or international crisis and threat were relatively higher in power motivation, which is consistent with laboratory studies of the effects of threat on power motive arousal. In fact, power motivation appears to be linked to activity of the sympathetic nervous sys-

tem, which drives the “fight-or-flight” patterns of behavior in response to challenge. (As a result, people scoring high in power motivation are more vulnerable to challenge-related stress, cardiovascular problems, and impaired immune system functioning.) Further, for power-motivated people, successful exercise of power appears to set off a “testosterone high.”

Consistent with these results, power-motivated presidents are relatively more likely to involve the United States in war (as well as near-war crises). Even within the same presidential administration, different power motive levels predict corresponding different results: For example, in President James Polk’s 1845–1846 speeches and diary, passages relating to Mexico show increasing levels of power motivation up to the outbreak of the United States–Mexican War in May 1846, whereas passages relevant to the Oregon Boundary dispute with Great Britain show decreasing levels as the dispute was peacefully resolved by treaty in June 1846. Along these same lines, leaders from southern Africa in the late 1970s whose speeches and press conferences scored high in power motivation were rated by experts in African affairs as relatively more “likely to support the initiation, escalation, continuation, or escalation of armed conflict” (Winter 1980). In archival and laboratory studies of crisis diplomacy, power motivation levels were negatively associated with the likelihood of making concessions.

NEGATIVE ASPECTS OF POWER MOTIVATION

The findings about power motivation and aggression may be an illustration of Lord Acton’s pronouncement that “all power tends to corrupt, and absolute power corrupts absolutely.” Other negative or self-defeating aspects of power motivation especially relevant to leadership theory and practice include the following: a lack of “strategic” cognitive style (that is, not realizing and attending to the long-term consequences of policies framed in the light of current goals and in the heat of current rhetoric), vulnerability to flattery, a propensity to evaluate others in terms of status-related social labels rather than their own

direct impressions, proneness to ignore moral considerations, and inability to learn from past mistakes and failures. Further, if opportunities for actual power are blocked, power-motivated people may seek the feelings (if not the reality) of power in alcohol consumption, drug use, or sexual exploitation. In negotiations, power-motivated people tend to be confrontational and exploitative, rather than rational and cooperative, especially when they perceive an advantage.

Some other recent research suggests that high levels of power motivation are related to *negative* emotions, such as boredom and a general anhedonia (inability to feel pleasure). It seems paradoxical to suggest that people may not really enjoy the exercise of power. However, such a notion would explain why (for men, at least) power so often fuses with sexuality to become sexual exploitation; or why power can become an addiction, leading people to seek ever-larger “doses” in a futile quest to extract pleasure from power.

ORIGINS OF POWER MOTIVATION

There are two theories about how people develop high power motivation. One notion, often associated with the psychologist Alfred Adler and political scientists Harold Lasswell and Alexander George, holds that power-striving originates as (over)compensation for early perceived weakness, lack of power, or being the target of others’ power. On this view, playground bullies and brutal dictators alike are responding to experiences of early power deprivation. Another perspective suggests that power motivation results from direct early reinforcement of power behaviors, especially aggressive behaviors. There is currently some research support for each perspective, so that there is no clear consensus on the origins and developmental trajectory of power motivation.

CAN POWER BE TEMPERED OR CONTROLLED?

Thus the motive for power has a dual nature, corresponding to power itself: It can inspire and build via successful charismatic leadership, but it can also

mislead, exploit, and destroy. Can power and the striving for power be tamed? Although it is easy to recall examples where love, religion, or reason have tempered power, it is also possible to think of cases where power striving has been able to evade or even “hijack” these restraints and turn them to its own purposes. In some conflict situations (particularly international crises), even responsibility can become a force leading toward conflict escalation. (Probably the key issue is *for whom* the leader feels “responsible”—for example, the people of one’s own faction or group, or all humankind.)

In the end, therefore, power and power motivation may require structural controls (for example, the separation of powers) as well as restraints of individual psychology. Like fire, power has immense potential for good and ill. Thus in dealing with the necessity and problems of power, leadership theory and practice may find it useful to turn to concepts drawn from fire protection, borrowing specifically analogies of confinement (power places), barriers (power proofing), prevention, and extinguishing (power fighters).

POWER OF IDEAS

There is a bewildering variety of ideas—great and small ideas, scientific and moral ideas, realistic and fantastic ideas, actionable and idle ideas, complex and simple ideas, to say nothing about ideas specific to different fields, such as politics, economics, and religion. Ideas, as abstractions or as elementary units of thought or meaning, feature in numerous discourses, including many different branches of philosophy, as well as the history of ideas. In relation to power and leadership, however, ideas are most closely examined through the related concepts of knowledge, vision, and, especially, ideology.

IDEOLOGY AND MARX

Ideology refers to groups of interrelated ideas, beliefs, and values. The term *ideology* was coined by the French philosopher Destutt de Tracy (1801). The emancipatory power of ideas was a crucial feature of the European Enlightenment, and ideology was seen as the science of ideas that would eventually dispel prejudices and superstitions. In this context, ideas such as the ideals of the French Revolution (liberty, equality, and fraternity) and, more generally, ideas rooted in rational discourses were viewed as driving away not merely the obsolete ideas of the ancient regime, but also its economic, political and social structures. Eugene Delacroix's famous painting ("La Liberté guidant le peuple" ("Liberty Leads the People," 1831) gives eloquent artistic expression to this view of people led by ideas.

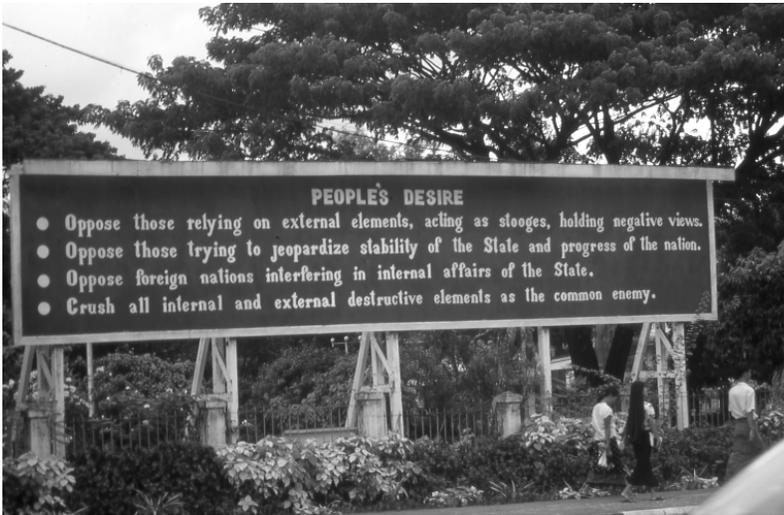

Marx's intervention in the discussion of ideology was decisive. Ideologies, he claimed in the preface to *A Contribution to the Critique of Political Economy*

(1859), were part of the social superstructure—it is not "the consciousness of men that determines their existence, but their existence that determines their consciousness" (Marx [1844] 1972, 4). Far from initiating social change and transformation, ideas substantially reflect the material conditions of production, and especially the interests of ruling classes. Ideas do not evolve by themselves, nor are they the product of some abstract cognitive processes. Still less are ideas manifestations of a sovereign reason or subjectivity. Instead they emerge, come into conflict with each other, prevail or decline broadly in line with changing social, economic, and political conditions. Furthermore, ideologies (like the superstitions of old) are systematically distorted forms of consciousness, which allow for domination to go unnoticed or be regarded as natural. Nowhere is this more evident than in Marx's well-known description of religion as "the opium of the people" and in "the sigh of the oppressed creature, the sentiment of a heartless world, the soul of soulless conditions" (Marx 1956). Far from dismissing religion and other ideologies as irrelevant or redundant, Marx saw them as decisive weapons in class conflict.

With Marx, the concept of ideology acquires a deprecatory quality: at best, as unscientific bundles of ideas; at worst, as false consciousness. Ideas are correspondingly stripped of any independent power they might have had as generalized vehicles of social emancipation. Science, on the other hand, is seen as objective, yet unavailable to classes whose material interests it threatens. The distinction between science and ideology has been a constant focus of debate, not least within Marxism itself. The chronic difficulty in drawing a hard and fast line between the two has made Marxism itself subject to its own critique, as the ideological expression of a particular class interest and a specific form of false consciousness.

WEBER AND MANHEIM

Max Weber, in his *The Protestant Ethic and the Spirit of Capitalism* (originally published in 1904–1905), made a radical qualification of Marx's approach. While linked to material interests, Weber viewed ideas not merely as reflections of these interests, but

A public notice posted by the SLORC government of Myanmar (Burma) in Rangoon in 1996 seeks to win popular support for the government's ideology.

as involving and even initiating social dynamics of their own. Thus, in the early phases of social or revolutionary movements, various groups and classes may espouse ideas of charismatic leaders, which are discordant with their material interests, at least in the short term. Gradually, with routinization setting in, followers tend to retain those elements of revolutionary ideas with which they continue to identify and which serve their interests, discarding those which are economically or psychologically disadvantageous. Thus Weber saw early capitalism as emerging from the ideas associated with the *Protestant Ethic*, which included hard work, frugality, community orientation, and resistance to sensuous pleasures. These ideas encouraged instrumental rationality, calculation, and accumulation of capital; they consistently devalued what is present, sensuous, and material in the interest of the future, the spiritual, and the rational. Yet, victorious capitalism, with its materialism and hedonism, no longer needed the Protestant ethic to sustain it and substantially discarded its ascetic heritage. Weber himself, as he became increasingly disenchanted with German politics, tended to move more towards the Marxist position, where material interests overshadow even the loftiest ideas. "Not ideas, but material and ideal interests, directly govern men's conduct. Yet very frequently the 'world

images' that have been created by 'ideas' have, like switchmen, determined the tracks along which action has been pushed along by the dynamic of interest" (Weber 1946, p. 281).

Weber used the concept of ideology sparingly (though he used *ideas* frequently). The concept of ideology was extensively developed in the twentieth century in the work of Karl Mannheim, whose *Ideology and Utopia* (1929) sought to initiate a new field of "sociology of knowledge." Mannheim tried, not altogether successfully, to proclaim intellectuals as a free-floating social group which alone is capable of creating disinterested, objective knowledge. All other ideas, he argued, are intimately linked to social position of different

groups and classes and their truth claims derive from styles of thought or worldviews specific to their interests. This applies to Marxist ideas too. Yet, Mannheim, like many before him, was not able to defend a clear distinction between scientific and nonscientific (ideological) ideas. This has continued to prove evasive, and most postmodern thinkers have sought to abolish the distinction altogether.

END OF IDEOLOGY AND POWER/KNOWLEDGE

Another contribution to the study of ideology in the twentieth century originated in a group of American social theorists including Daniel Bell, Edward Shils, Seymour Martin Lipset, and Philip Rieff, who in the 1950s and 1960s viewed ideology as a secular form of religion, an all-encompassing worldview with strong normative content. Ideologies not only divided up the world into good and evil but also offered recipes of universal salvation from suffering and addressed deep existential anxieties. These thinkers argued that we were witnessing the end of ideology. Apocalyptic communal visions of universal salvation through religion and politics were in terminal decline, replaced by an ethic of well-being guided by enlightened self-interest and market values. Margaret Thatcher's claim

that “there is no such thing as society, only individuals and their families” sums up well this approach. Thatcher’s and Ronald Reagan’s policies of replacing the “nanny state” with sovereign consumer/citizens who determine how to spend their money was an onslaught not only on social democratic ideology but on all ideology. Yet, in a curious way, it was ideological in its own right, representing a consumerist and individualist ethos. This ethos has undoubtedly come to dominate business organizations with their emphasis on customer service, quality, and consumer choice. Increasingly the same values are to be found in the public sector, where they assumed an institutional form in Citizens’ Charters aimed at providing a protection for citizens equivalent to legislation aimed at protecting consumers.

Since the 1970s, the concept of ideology has rather gone out of fashion, being reduced to its pejorative sense, used to denigrate “everything that is doctrinaire, abstract, opinionated, rigid, and unrealistic” (Burns 1978, 249). The discussion of ideas and their ability to influence social, economic, and political development, however, has continued unabated, usually associated with the terms culture, discourse, or knowledge, all of which seem to evade the strict requirement that truth claims should be substantiated by external criteria. Instead “regimes of truth” are seen as residing within a culture, a discourse, or a body of knowledge itself. Following the work of Foucault, numerous theorists (many of whom accept the labels postmodern or post-structuralist) view these regimes of truth (according to which, for example, some ideas are viewed as common sense, others as aberrant and others as politically incorrect) as inextricably linked to the operation of power in society and have adopted Foucault’s term “power/knowledge” to denote the impossibility of dissociating knowledge from power. Viewed this way, ideas are thoroughly entrenched in social and political practices. Practices do not follow ideas, but are coextensive with them. And ideas are most pervasive when invisible and unobtrusive.

LEADERSHIP, VISION, AND IDEAS

It is interesting then that in many leadership and management discourses, ideas have been restored to a

quasi-independent, autonomous, and dominant position. An entrepreneur, for example, is one who can see the commercial or other potential of an idea, can sell the idea to investors and can then turn the idea into a marketable proposition. Ideas, in this sense, become the core currency of information-led economies, where value resides not on the exploitation of labor but the exploitation of ideas. More generally, management practices are seen as following the changing fashions of management beliefs and ideas. Business schools and MBA programs have thus emerged as agencies for the diffusion of management ideas, exercising a profound influence on the way that companies and other organizations are run. Many of these ideas are associated with high-profile management consultants or academics, commonly referred to as gurus. Management gurus are, therefore, sometimes seen as intellectual leaders, whose influence crosses national boundaries and influences the lives of millions of people. Thus, for example, the ideas of Thomas Peters and Robert Waterman, whose *In Search of Excellence* (1982) sold millions worldwide, became the starting point of innumerable programs of cultural change, while Hammer and Champy’s (1993) advocacy of business process reengineering signaled the onslaught of a wave of downsizing that saw millions of middle managers worldwide being laid off. Such management ideas have proliferated in the past twenty years and it can be argued that they are following the well-known dynamics of imitation and differentiation that characterize fads and fashions. An idea is launched by a guru, adopted by various trendsetters, exorbitant claims are made for its success, and numerous others jump on the bandwagon, only to realize that the trendsetters have moved on to a new panacea for organizational ills. Under this dynamic of fashion, old ideas often reemerge in new guises and new packages, reinvented with some new magic ingredient.

Leadership scholarship has looked at the power of ideas to drive action through the concept of vision. For example, Bennis and Nanus, in *Leaders*, argue that “vision animates, inspires, transforms purpose into action” (1985, 30). Rediscovering a core feature of Weber’s charisma, such theorists propose that leaders with visions can initiate processes of social

transformation and achieve collective purpose which goes beyond rational planning and promotion of material interests. Instead, such visions or ideas unleash enormous amounts of emotional energy and unlock possibilities that would remain forever inaccessible to the rational mind. What makes such visions or ideas so powerful? In *Leadership*, Burns has argued convincingly that what transforming leaders do is “make conscious what lies unconscious among followers” (Burns 1978, 40). In order to achieve this, leaders must understand their followers and their deeper needs better than the followers understand their own needs. The power of the vision, the idea, or even the single word is that it opens up the unconscious, allowing repressed desires and needs to find expression, to turn into conscious desires and collective action. Ideas then can unleash conflict, acting as catalysts for social or political change, every bit as effectively as material interests, something well understood by leaders, martyrs, demagogues, and many of those referred to as terrorists.

LEADERS AND TYRANTS

Is there a difference between ideas as used by genuine leaders and as deployed by demagogues and other opportunists? This is a vital issue which divides leadership theorists, with Burns (1978) arguing that the relation of genuine elevation and transformation engendered by true leaders precludes the types of sham, deception, and manipulation practiced by demagogues and tyrants. Bass (1985), on the other hand, refuses to acknowledge a difference between tyrants and leaders; transforming leaders, he argues, may deploy similar skills both in reading the unconscious needs of their followers and in channeling their emotional energies. This is supported by numerous reports of the effects of Hitler’s oratory on his followers. Otto Strasser, one of Hitler’s bitterest enemies from within his milieu, described thus Hitler’s effect on his followers:

Hitler responds to the vibration of the human heart with the delicacy of a seismograph, or perhaps of a wireless receiving set, enabling him to act as a loudspeaker proclaiming the most secret desires, the least admissible instincts, the sufferings, and personal revolts of a whole

nation. . . . Adolf Hitler enters a hall. He sniffs the air. For a minute he gropes, feels his way, senses the atmosphere. Suddenly he bursts forth. His words go like an arrow to their target, he touches each private wound on the raw, liberating the mass unconscious, expressing its innermost aspirations, telling it what it most wants to hear. (Bullock 1962, 373–374)

IDEAS, MYTHS, RATIONALITY, AND ILLUSIONS

What are the characteristics of ideas that can generate the tremendous emotional surge necessary to bring about deep-reaching social transformation? In an influential argument, Georges Sorel (1847–1922) described such ideas as “social myths,” gripping and inspiring in their effect, rather than rational plans or scientific ideas. To Sorel as a revolutionary socialist, it was not Marx’s *Kapital* and its scientific claims that would galvanize the working class to world revolution, but rather the myth of the general strike. According to this, social transformation would come from the belief that if workers refuse to work en masse the capitalist system would grind to a halt, and no army or police force would be able to reverse its demise. The myth is not something which will ever be realized, but the belief in it drives transforming social action. Such irrationalist approaches to the power of ideas have been criticized on both political and intellectual grounds. On political grounds, they are viewed as ineffectual, perhaps generating paroxysms of violence, but no long-term social change or achievement of collective purpose. On intellectual grounds, they are seen as replacing one set of illusions with a different one, whose result, as Freud pointed out in *The Future of an Illusion* (1927), is to accentuate the very discontents for which they purport to offer solutions and consolations.

Yet, transforming ideas do not have to be grand or sweeping. At times, the simplest platitudes or clichés uttered by leaders can be viewed as momentous utterances by adoring followers, stimulating desire and unleashing forces of social transformation. This is not altogether surprising. The vast majority of influential and powerful political, economic, and military leaders were men and, less commonly, women of action rather than men or women of ideas.

By contrast, genuinely innovative individuals, in science, philosophy, and the arts, whose ideas have created lasting legacies, were too preoccupied with their work to lead others. In conclusion then, it would be fair to say that those ideas in themselves have little transforming power until they are embraced, interpreted, communicated, and put to work by leaders who can see their potential given the requirements of the times.

POWER SHARING

Power sharing is a process designed to eliminate the concentration of power. Most theories about power sharing arise from the findings of research projects that are working actively to change power structures, whether in corporations, unions, social movements, or schools. The research methods are most often adapted from psychology, sociology, ethnography, and action research.

HOW POWER STRUCTURES WORK

Power is possession of control, authority, or influence over others; it presupposes culturally organized social relationships that are usually hierarchical. A power structure depends on internal coherence and external recognition. Three factors often define a power structure: its functions, the strength of its internal social control and its capacity to defend its domain, and the norms that determine who belongs and who is excluded.

Power sharing needs a foundation, which is constructed by triangulating the personal, the social, and the subjects of the power structure—which is to say, all the people who participate in the power structure. The parties' different attitudes, knowledge, and experiences must be acknowledged. The rights and duties associated with different positions in the power structure are all potential targets for change. The goal of power sharing is to have all the parties participate in all phases of the process: the initial brainstorming, the planning and decision making, the division of work, and the evaluation of both product and process.

All people in a power structure, although operat-

ing on unequal terms, take part in the process of transforming the power structure or maintaining the status quo. Although both position in the hierarchy and personal capabilities influence a person's degree of authority and strength to preserve or change the domain, power holders control resources and have the right to make and execute decisions, as well as the privilege of delegating and sharing influence.

Interaction between people in different hierarchical positions unfolds in many ways, but certain generalizations are often made: Lower-ranked subjects tend to express indifference or resistance—both bodily and verbally, both individually and collectively. Power holders, for their part, tend to express the opinion—both speaking as individuals and as managers—that their subordinates are not fully responsible, engaged, or concerned about the organization. Power sharing can change those conceptions. Participants in power-sharing arrangements move from corporate behavior to cooperative behavior.

PRELIMINARIES TO POWER SHARING

Before the process of power sharing begins, the parties must agree on the issues they will address and what the parameters for action will be. In some cases, the urge for democratization may cause problems at this point. Research and scholarship have not addressed this problem very extensively, but it becomes a crucial issue when power sharing becomes the dominant policy in public services: Self-governance in public services can only occur insofar as the services are able to meet the standards expected by governing agencies.

Having agreed on issues and parameters, and having established that decision-making processes will be transparent and open for participation, the parties next must decide upon the different procedures and methods that will be used for dealing with distinct, different interests. People in the lowest-ranking relevant position make the decisions; participants are obliged to suggest workable options, conditions, and goals. Subordinates have the ability both to exercise increasing influence over the reorganization of power and privilege systems and to improve their

personal situations, increasing personal satisfaction and improving the social climate.

In investigating the power structure of an organization, more subtle questions also arise, such as how relations between different layers of power work and how changes in policy affect relations between subordinates and managers as well as relations among subordinates. Social relations are embedded in an exchange of goods conditioned by economy, policy, and culture, but social relations are neither static nor unidirectional. People perform against a background of strongly managed and enforced norms and embedded strategies; they are impressionable and express reflected views.

HIERARCHICAL UNITS, PROBLEM SOLVING, AND AGREEMENTS

To understand how people on different levels in a hierarchy come to solve problems and reach agreements together, we must first understand the nature of hierarchies. Hierarchies are culturally organized forms of social relations in a certain context (for example, a school, a company, or a nation). Hierarchies are vulnerable when different positions have different interests and differing degrees of access to resources and when these differences lead them into conflict.

The power in a hierarchy is limited; it depends on internal coherence and external recognition. Different layers in a hierarchy are differentiated by legal, economic, or personnel policy means. The power to make decisions and the decisions themselves—whether related to routine business, strategic planning, or personnel matters—are important at any level, although the way they affect people depends on where people are in the hierarchy. People react to the power to make decisions and to decisions themselves in a number of ways that become standardized behaviors, such as innovating, ignoring, living with, or leaving the situation.

One goal of power sharing is to give all units the power to make decisions and to distribute that power as equally as possible. This is one of the more fragile moments in the process: If things go awry, then subordinates in the power structure are likely to lose

enthusiasm for the process, becoming at best apathetic and at worst resistant. It is at this moment, too, that misinterpretations of organizations arise, because researchers may fail to recognize that subordinates have shifted the focus of their social and cultural relations to outside their hierarchical unit. In the hierarchy, they do what they have to do, but their real focus is on their families, their neighborhoods, and so forth.

Problem Solving

Depending on circumstances, problem solving can involve struggle, negotiations, persuasion, behavior control, or organized structure. Sometimes problem solving requires institutional collective action, such as a strike or a demonstration; other times it is possible to reach a cease-fire, consensus, or even agreement on the contested matter. The more that an organization's internal social relations have depended on domination, the more important it is to give space to dissenting interests and hitherto unrecognized personal resources. Although any analysis must take contrasts (for example, between lower and upper positions in a hierarchy, between democratic decision making and authoritarian orders and instructions, or between academic knowledge and knowledge gained from life experience) into account, it is not enough to think in terms of contrasts. Very often one is forced to acknowledge that apparently polar opposites are only interesting when they are taken as coexisting, complementary phenomena. If one side ceases to exist or be important, then the phenomenon ceases to be interesting. Therefore, the goal is generally not to eliminate one pole or the other, but to let differences thrive as much as possible without the total collapse of fellowship between the various partners.

Agreements

An organization's rules and procedures are often difficult to break or reform, but agreements that are created through power sharing have proved otherwise. If an agreement turns out to be unsuited to the actual conditions under which a group operates, then it can be renegotiated. Rules for social interaction are

—Andrew Carnegie

important, but agreements are a valuable tool for discovering new possibilities. There are many difficulties in social intercourse that cannot be managed through the application of rules; those difficulties can be handled better through negotiation-based agreements, which are based on dialogue and exchange.

FOUR TOPICS FOR ANALYSIS

In analyzing the foundations of power sharing, four topics are of special concern: interests, access, resources, and actions. Data collected from different hierarchical layers will reveal both the potential for power sharing and the willingness of the parties to use it.

Interests

It is fairly easy to find out the interests of parties at different levels in a hierarchy: One has only to ask them. In academic reports, interests are often categorized as technical (that is, concerned with construction, instruction, and production), practical (that is, with a focus on society and social relations; for example, being interested in fairness), or liberating (for example, an interest in democratization). Information on participants' interests is combined with other data, such as income level, socio-economic background, working conditions, and so on. All this information has to be accessible to all participants, as openness is a prerequisite for reaching agreements about relevant and substantial actions. The power-sharing process gives people freedom of speech, but also obligates them to express their views in the public forum formed by the venture. It is possible to ask empathetic questions to get more clear and complete answers as soon as participants have expressed themselves—seldom before. The dialogue forms the basis and the agenda for cooperation. It also shows the

fragility of the venture: Everyone can say no. Getting everyone to express their interests is the first step in power sharing. Participants' interests—both managers' interests and subordinates' interests—must be well described, easy to understand, and shared publicly.

Access

The analysis of the distribution of privileges, rights, and duties is the second step in power sharing. It is important to know who actually wants to participate in a venture. On the one hand, participants must overcome their stereotyped notions of others' positions and abilities; on the other, participants must create and acknowledge one another's rights to participate and capacity to handle the responsibility. For some people, access seems often to be blocked by a huge—sometimes only imaginary—wall. But walls can be torn down, and access to power can be granted where before it was denied. Power sharing requires participants to grant other participants access to power, step by step. This is the main area for development of the individual and the group as well. Through careful analysis, the participants can learn what knowledge each layer in the power hierarchy possesses, as well as what rights and status. Participants also learn one another's competence and capacity to influence or master the system and the situation. Decisions must be delegated to the lowest possible layer in the hierarchy, which if possible should be self governing. Management positions must be filled by election and for limited periods of time.

Resources

Resources refers to the time, knowledge, and further qualifications the single participant or group of participants possesses and is willing to invest in the power-sharing process. An investigation of resources helps in two ways: It makes participants aware of needs, and, if they discover that they or others are not inclined to invest all their potential into the project, it keeps them from being too disappointed by failure. A declaration of shared interest is

worthless if participants are unwilling to put their resources into implementing change based on that shared interest. On the other hand, a group may be willing to commit resources but the resources may be insufficient. The investigation of resources reveals the potential to act on the group's interests successfully. In addition, an investigation of resources can stimulate participants to expand the resources themselves; they may become more resourceful, autonomous, and self-reliant. One of the more powerful ways to expand resources is for individuals to come together in a group to organize and coordinate the use of what resources they have. This represents the third step toward power sharing: Participants must examine their resources and find a means (or several means) to solve the problems that their statement of interests revealed.

Actions

Once a plan has been decided upon, participants' actions—or lack of them—can be observed. Having descriptions of the participants' interests, access, and resources in mind, and keeping in mind also the fact that the participants have other obligations and interests outside the organization, an evaluation of activity becomes more meaningful and sympathetic. It is quite seldom that the process generates only one possible solution; on the contrary, quite often there are several paths toward the goal. If participants do not seem to be following through with actions, it may be that the group needs to choose another path. Doing so often energizes formerly nonparticipative members.

DIFFERENT ACTIONS AND COMMON GOALS

Taken together, interest, access, resources, and actions reveal how well power sharing is likely to succeed. Findings in schools, for example, show that working with the combination of education and social matters makes more solutions possible. Schools are better off allowing competing solutions to develop rather than insisting on only one solution, quite simply because more people are actively involved with multiple solutions, and administration

avoids needing to discipline the staff. In other contexts, too, factions, coalitions, and alliances within and between power layers will emerge and demonstrate that different actions can successfully advance common goals.

POWER, SIX BASES OF

Though there have been many formal definitions of leadership that did not include social influence and power, any discussion of leadership must inevitably deal with the means by which a leader gets the members of a group or organization to act and move in a particular direction. One of the most widely cited analyses of social power is that proposed by John R. P. French and Bertram H. Raven in 1959. They defined social influence as a change in the belief, attitude, or behavior of a person (the target of influence) which results from the action of another person (an influencing agent), and they defined social power as the potential for such influence, that is, the ability of the agent to bring about such a change using available resources. French and Raven identified five bases of power: coercive, reward, legitimate, expert, and referent. To this was later added a sixth: information power.

DEFINING THE BASES OF POWER

The bases of power differ according to the manner in which social changes are implemented, the perma-

nence of such changes, and the ways in which each basis of power is established and maintained. To illustrate these distinctions, we will examine a leadership situation involving the power of a supervisor who attempts to influence the behavior of a subordinate in a work situation.

Power That Leads to Socially Independent Change

One basis of power the supervisor might use is information power. The supervisor carefully explains to the subordinate how the job should be done differently, using persuasive reasons to explain why that would be a better and more effective procedure. The subordinate understands and accepts the reasons and changes his behavior. Information influence, then, brings about a cognitive change in and acceptance by the target. It is thus called “socially independent change” in that the target now continues the changed behavior without necessarily referring to, or even remembering, the supervisor as the agent of change.

Power That Results in Socially Dependent Change with Surveillance Necessary

Reward power stems from the ability of the agent to offer a positive incentive for the target to comply (for example, a raise in pay, a promotion, or special work privileges). An agent who uses coercive power brings about change by threatening a target who does not comply with undesirable consequences (for example, demotion, termination, or undesirable work assignments). In both reward power and coercive power, the influence is clearly socially dependent, since the target relates compliance to the actions of the agent (for example, “I did it because my supervisor offered me a reward if I complied”). Reward power and coercive power both from other bases of power in that not only are they socially dependent, but also because their effectiveness requires surveillance by the influencing agent: If reward and coercion are the only bases of power used by influencing agents, targets will comply only if they believe that the agents will be able to determine whether or not they complied. However, coercive power differs from reward power

in the ease by which an agent may maintain surveillance. With reward power, it is to the advantage of targets to let agents know that they have complied; with coercive power, there may be a tendency for targets to hide the extent of their noncompliance, so that agents may require targets to demonstrate their compliance. There is also a tendency for the targets of coercive power to resent the threat of punishment, to resent feeling forced, and to have ill feelings toward the agent, as well as toward the behavior which they feel forced to accept. This is less likely to be true for reward power; indeed, the positive feelings associated with the reward may lead to a greater acceptance of the change and a greater liking for the influencing agent.

Power That Leads to Socially Dependent Change with Surveillance Unnecessary

The remaining three bases of power result in change which, initially, is dependent upon the influencing agent, but where surveillance is not necessary for the influence to occur: Legitimate power stems from the target's accepting the right of the agent to require the change in behavior (for example, "After all, I should do what my supervisor requests of me"). Terms such as "obliged" "should," "ought to," and "required" may signal the use of legitimate power. Expert power results from the target's faith that the agent has some superior insight or knowledge about what behavior is best under the circumstances. (For example, "My supervisor has had a lot of experience with this sort of thing and so is probably right, even though I don't really understand the reason.") "Understanding the reason," then, is what distinguishes informational power from expert power. Referent power stems from the identification of a target with an agent. (For example, "I really admire my supervisor, and wish to be like her. Doing things the way my supervisor believes they should be done gives me some special satisfaction.")

FURTHER DIFFERENTIATION

The six bases of power have been further differentiated based on additional research.

Coercive Power and Reward Power: Personal versus Impersonal Forms

In our original statement, coercive power and reward power were presented in terms of tangible rewards and real threats—for example, the promise of a bonus or promotion or the threat of being fired or fined. However, the personal approval of someone we respect can also be a very powerful reward, and a threat of rejection or disapproval from someone we value highly can serve as a source of coercive power.

Legitimate Power: Position, Reciprocity, Equity, Responsibility

Legitimate power stems from social norms requiring that the target of influence comply with the request or order of the influencing agent. Legitimate position power, the most obvious form of legitimate power, stems from a social norm that requires that we obey people who are in a superior position in a formal or informal social structure, such as a supervisor or a higher ranking military officer. Other examples include the right of parents to influence children, of older people to influence younger ones, and of teachers to influence students.

Other, more subtle forms of legitimate power based on social norms include legitimate power of reciprocity, legitimate power of equity, and legitimate power of responsibility. The reciprocity norm states that if someone does something beneficial for us then we should feel obliged to reciprocate. Legitimate power of equity, also called a "compensatory norm," would be something like "I have worked hard and suffered and therefore I have a right to ask you to do something to make up for it." Finally, the norm of legitimate power of responsibility, also called the "power of the powerless," suggests that we have some obligation to help others who cannot help themselves or who depend on us. A supervisor could conceivably say, "Look, I am not about to force you to follow my method, but it is absolutely essential to me that you do so in order to get the job done this way. I really depend upon you to do this for me."

The Power/Interaction Model of Interpersonal Influence

The bases of power are included within a larger context through the development of a power/interaction model of interpersonal influence designed in 1988 by Bertram H. Raven. The model begins with a consideration of the motivation for influence and the use of power, and goes on to explore the factors which lead to an agent's choice of a power strategy, the preparatory devices for implementing the bases of power, the manner in which a power strategy is utilized, the effective changes or lack of change in the target of influence, the aftereffects, and the agent's readjusted perceptions and choices of future strategies.

MOTIVATION FOR CHOOSING A BASIS OF POWER

Typically, an agent's motivation for influence will be very obvious, the purpose being to attain some goal or desirable outcome, and the agent will then use the basis of power that will accomplish that end most expeditiously and effectively. Often the situation will affect what bases of power will be selected. For example, different power strategies will be chosen by a supervisor in a supermarket, a warden in a prison, the leader of a boy scout troop, a parent influencing a child, and a teacher in a classroom.

In addition, the selection of power strategies will depend on how an agent views a target and even more, on how an agent believes that a target views him. In an analysis in 1960, social psychologist Douglas McGregor distinguished between "Theory X" supervisors and "Theory Y" supervisors. The former believe that workers cannot be trusted, that they do not really like their work, and that they try to do as little as they can. In this model, Theory X supervisors rely on coercive power and legitimate position power and surveillance. By contrast, Theory Y supervisors, who have a more positive view of workers, are more likely rely on informational and expert power, and also perhaps on legitimate power of dependence, and to place less emphasis on surveillance. The basic point is that influencing agents, motivated to achieve the most positive outcome, will select bases of power

based on their perception of what would work best with a specific target.

The choice of power strategies may also depend on more subtle motivations. David McClelland, David Winter, and their colleagues found three important but subtle motives: the need for power, the need for affiliation, and the need for achievement. A leader or supervisor with a high need for power will be more likely to select impersonal coercive power and legitimate position power. Those with strong affiliation needs and a concern that their subordinates will like them will more likely prefer referent power and reward power, especially personal reward power. A need for achievement might result in more use of informational and expert power. Other personality characteristics might also affect the choice of a power strategy, including an agent's having high or low self-esteem. One reason for this might be that successful influence from informational power tends to be attributed to the target (for instance, "I gave him good reasons, but he decided to do it"), while successful influence from coercive power tends to be attributed to the influencing agent (for example, "She did so because I influenced her to do so"). Influencing agents who have low self-esteem find it satisfying to know that they are calling the shots and they would be more likely to select a basis of power like coercion.

Another sort of motivation which might affect the choice of power strategies is the attitude of the influencing agent toward the target of influence. It is, of course, the agent's perception of the target which helps determine what basis of power would be effective or ineffective, but, in addition, a strong negative feeling toward the target might lead to a choice of a harsh basis of power, such as impersonal coercion, even when that power strategy might not be the most efficient or effective. Similarly, a strong positive feeling toward the target might preclude the use of a harsh basis of power even when, objectively, it might seem most appropriate.

ASSESSMENT OF THE COSTS AND BENEFITS OF DIFFERENT POWER STRATEGIES

The agent might also go through a cost-benefit analysis of the influence strategy. Informational

influence or persuasion would ordinarily be highly desirable, but may require more time and effort than is available. Coercion, as we had indicated, may result in more rapid compliance, but carries with it the costs of having to maintain surveillance, the hostility of an unhappy subordinate, and sometimes the violation of one's personal value system or generally accepted social norms. The legitimacy of dependence ("I need your help") may lead to loss of respect and perhaps may imply an obligation to return the favor. Referent power, which emphasizes similarity, may undermine the target's respect for the agent's superiority in expertise and legitimacy of position. In addition, as we have noted, powerholders, because of their personalities, experiences, and values, or force of habit, may tend to prefer some bases of power over others.

PREPARATORY DEVICES FOR IMPLEMENTING BASES OF POWER

Though influencing agents may often have immediate access to their bases of power, it is often the case that some preparation or stage-setting is necessary. To use coercion, it is sometimes necessary to first make the target realize that the agent has both the means and the will to follow through on the threat. Edward Jones and Thane Pittman in 1982 and Erving Goffman in 1959 described a number of "self-presentational strategies" and "impression management" techniques by which an influencing agent or leader may set the stage for the use of a particular power strategy.

Establishing Information Power

Agents might carefully rehearse their speeches, examine the logic, and practice the delivery. Or they may first give a target some background information, which would build a basis for the subsequent persuasion.

Intimidation

To use coercion effectively, it may be important to demonstrate to the target not only that the means are

available for coercion, but also that the agent is ready and willing to pay the costs that coercion implies. Workers will not be influenced by a threat of dismissal if they do not really feel that their supervisor is ready to implement the threat. A supervisor, attempting to establish the credibility of coercive power, may launch into an emotional tirade, or even fire a worker, just to set an example.

Ingratiation

In order to utilize personal reward or coercion, or referent power, the agent may first attempt to ingratiate her- or himself with the target, with well-placed compliments, flattery, and so on.

Emphasizing Communality

To establish referent power, the agent must also develop a sense of communality with the target. ("Look," the supervisor may say, "we are really all one team, trying to get this job done.")

Self-Promotion

For expert power, a few choice demonstrations of one's superior knowledge would be useful. The supervisor might tell the worker of the amount of training and experience he or she has had on this and similar jobs. (Physicians, attorneys, professors, and other professionals go through elaborate stage-setting devices for expertise—for example, displaying diplomas and extensive libraries or using impressive language.)

Authorization for Legitimate Position Power

To establish his/her formal legitimate position power, the supervisor might subtly mention that he or she is, after all, the supervisor who is responsible for this job. Similar preparatory devices may be seen in the cases of the usurper who seizes the throne and then presents evidence that actually heredity justifies his or her ascendance, or the dictatorial modern ruler who establishes a legitimate position power through rigged elections.

Doing Favors to Establish Legitimate Reciprocity

To establish this form of legitimacy, the agent may first do a favor for the target, or emphasize the various favors that he or she has done in the past.

Guilt Induction for Legitimacy of Equity

An agent may induce guilt in order to establish his or her legitimacy of equity. Somehow the agent may convince the target that the target has caused harm or pain, for which the agent is entitled to compensation in the form of unhesitating compliance.

Demonstrating Effective Surveillance

Since both coercive power and reward power require surveillance, influencing agents who expect to use these bases of power may find it necessary to establish their ability to determine whether a target has complied. They may do this by confronting a subordinate regarding an infraction that the subordinate thought had been done in private.

Implementing the Power Strategy and Assessing Its Effects

Following the influence attempt, the agent will want to assess the effects. Was it successful? Is there evidence that the target has actually accepted the influence, has actually altered his or her behavior in accordance with the outcome desired by the influencing agent? Does the target really accept the change personally, or is the change socially dependent? Is surveillance important for the change to continue—will the target revert to earlier behavior patterns as soon as the agent cannot continue to check on the degree of compliance? Will the target subsequently internalize the changes in his/her behavior?

How about secondary effects? How has the influence attempt, successful or not, affected the target's perception and evaluation of the agent? Has respect for the agent diminished? Is there greater personal liking or disliking? Have the power bases previously available to the agent increased or decreased in their potency? Agents may attempt to repair the damage

and reassess their relationship with a target. If influence attempts are unsuccessful, then it is likely that agents will try again. But this time their motivations may change: Whereas previously they had merely wanted to achieve the extrinsic goal, they now may have developed some hostility toward the target, which in turn will affect their choice of an influence strategy the second time around. An agent's success or failure will also lead to a reassessment of the available bases of power and the development of a very different strategy.

METAMORPHIC EFFECTS OF POWER

David Kipnis and his colleagues have pointed out that the very process of surveillance that goes with coercive power contributes to the distrust of the influencing agent and further demeans the target of influence. Demeaning the target allows the agent to feel more powerful and then to use even harsher power strategies—typically, the use of informational power may diminish, and the use of coercive power and legitimate position power will increase. In 1976, Kipnis referred to this escalation process as the “metamorphic effects of power.” There are many examples of forthright leaders who have been transformed into tyrants, leading Lord John Acton (1834–1902) to observe that “power tends to corrupt and absolute power corrupts absolutely.”

Power/Interaction from the Perspective of the Target

We have thus far examined the power/action model from the perspective of the influencing agent, but it can also be profitably examined from the perspective of the target of influence. Following an essentially similar pattern, the target may have various motives to either accept or reject influence from the agent, some of which may involve personal factors, such as a need for independence, for power, and for self-esteem, and positive or negative personal feelings toward the influencing agent. Also, like agents, targets may be concerned about how they would look to third parties if they complied or did not comply. Thus, just as agents or leaders may operate less effectively because of inappropriate motives, targets

may sometimes resist influence inappropriately. For example, workers might marshal their personal resources in preparation for a verbal assault. They might have tried to anticipate what bases of power the influencing agent might attempt to use and have prepared to counter these one by one. Targets might even invoke the powers of third parties to assist in their resistance or to organize other potential targets so as to resist influence collectively.

Subsequent Relations Between Agent and Target

The influence attempt, successful or unsuccessful, has very likely changed both the influencing agent and the target, changed their perceptions of themselves and changed their perceptions of the other. An unsuccessful influence attempt may result from a misperception of the available effective power bases, as perceived by the influencing agent and by the target. Indeed, unsuccessful influencing agents may alter their strategies as the result of a failed first attempt, adopting new strategies which might now be effective—except for the fact that the target has also changed. The target may now be amenable to influence strategies which would not have worked the first time round, or be more resistant to strategies which might earlier have been effective. The issues become even more complex as the two participants attempt to influence one another, each serving as both influencing agent and target with respect to the other. Interpersonal or intergroup conflict can be examined in terms of mutual influence attempts, using various bases of power and strategies by both parties to the conflict and analyzing the effects which these have on one another.

MEASURING THE BASES OF POWER

Several investigators have developed questionnaires to measure the bases of power, as perceived both by the influencing agent and by the target of influence. In most cases, these questionnaires have measured only the original six bases of power. The Interpersonal Power Inventory, introduced by Bertram Raven, Joseph Schwarzwald, and Meni Koslowsky in 1998, measures the eleven power strategies in a

model they call “the power/interaction model”: coercion (personal and impersonal); reward (personal and impersonal); legitimate (position, reciprocity, equity, and dependence or responsibility); referent; expert; and informational. The thirty-three-item scale includes three items that measure the likelihood or effectiveness of each of these strategies. Factor analyses have indicated that for some situations, these power strategies can be differentiated into two major components, a “soft” group consisting of Expert, Information, Referent, and Legitimate Dependence, and a “harsh” group comprised of the other seven strategies. Job satisfaction was found to be more positive when supervisors used the “soft” strategies and more negative when “harsh” strategies were used. Power/interaction profiles for individual respondents illustrate the ways in which leaders may differ in their choice of strategies and show how their influence may be made more effective.

THE EFFECTIVENESS OF VARIOUS BASES OF POWER

It is of particular practical interest to know what bases of power or which power strategies are most likely to be effective, but it is clear that there is no simple answer. For example, a power strategy that works immediately but relies on surveillance (for example, reward power or coercive power) may not last once surveillance ends. One organizational study found that reward power tended to lead to greater satisfaction on the part of employees, which means that it might increase influence in a broad range of situations. Coercive power was more effective in influencing a subordinate who jeopardized the success of the overall organization or threatened the leader’s authority, even though in the short term it also led to resentment on the part of the target. A power strategy that ultimately leads to private acceptance and long-lasting change (for example, information power) may be difficult to implement, and consume considerable time and energy. In the short term, complete reliance on information power might even be dangerous (for example, telling a small child not to run into the street unattended). A military officer leading his troops into combat might

be severely handicapped if he had to give complete explanations for each move. Instead, he would want to rely on unquestioned legitimate position power, backed up by coercive power. Power resources which may be effective for one leader, dealing with one target or follower, may not work for a different leader and follower. The manner in which the power strategy is utilized will also affect its success or failure. Where coercion is deemed necessary, a leader might soften its negative effects with a touch of humor. There have been studies indicating that cultural factors may determine the effectiveness of power strategies.

As long as humans have had to interact with one another, they have utilized power strategies, and in various degrees the strategies have been effective even when an agent has had no formal knowledge of a power/interaction model or of the bases of social power. The model is simply an attempt to understand how this process operates and the conditions under which social influence is more or less effective. It is reasonable to conclude that a leader who is more aware, either formally or informally, of the various options in social power strategies will be more successful and effective.

POWER: OVERVIEW

Power is a concept that philosophers, politicians, and scholars have discussed and tried to define for thousands of years. In the early seventh century BCE, Pit-tacus, a Greek statesman and military leader, noted that, “The measure of man is what he does with power.” Although most people believe that they know power when they see it or feel its effects, it is still useful to create a working definition of power and, more importantly, to explore its relevance to those who manage organizations today. After reviewing common definitions of power, highlighting the types of power typically seen in organizational settings, we will discuss the sources of that power and reactions to it, and make some suggestions for using that power effectively.

DEFINITIONS OF POWER

What is power? It seems almost synonymous with the idea of influence, because people with power can influence others to do what they ask. However, while power is almost always linked to influence, the term itself has been defined in various ways. A politician has power when he is able to influence the direction of public policy. Parents have power when they determine what a teenager can and cannot do on weekends. A manager has power when she is able to hire, fire, and/or reward employees. One reasonable way to define power is the potential ability for one

individual to exert influence over the attitudes and behavior of others. Such power might derive from a variety of sources. These include a person's position in a hierarchical organization (whether as leader or as subordinate), an interpersonal relationship, or even an individual's unique characteristics or attributes.

TYPES OF POWER

In general, the many types of power fall into two very broad categories, which could be termed interpersonal and structural.

Interpersonal

Most research on types of power utilizes a categorization scheme developed in 1959 by social scientists John R. P. French and Bertram Raven. This taxonomy involves the following five principal interpersonal types:

Reward Power

With this type of power, an individual dangles rewards (“carrots”) to influence the behavior or attitudes of another. Obviously, the types of rewards necessary for compliance vary greatly because they depend on individual needs and characteristics. For example, one employee will work extra hours without pay for the reward of receiving some form of recognition from the manager. Another employee may expect his manager to promise him a reward before will do anything over and above his normal job duties.

Coercive Power

One way to think of coercive power is to view it as the opposite of reward power (“the stick”). When a manager uses coercive power, an employee complies due to fear of punishment. The threat may be imaginary or quite real. For example, an employee who works for a company which has recently gone through major downsizing or restructuring efforts may take on added duties and/or work excessive unpaid overtime, fearing that her manager will put her on the next downsizing list if she does not do so.

Legitimate Power

Another type of power is based on an individual's right (legitimacy) to influence the behavior or attitudes of another and the other's obligation to comply with requests that are deemed appropriate. When a parent tells a ten-year-old to go to her room for poor behavior, the child will comply (usually) because the child believes that the parent has the legitimate right to tell her what to do. Similarly, when a manager assigns an employee a project that is clearly within the employee's job scope, the employee will most likely comply with the request.

Expert Power

Individuals who are perceived as being highly skilled or knowledgeable in particular areas may be able to use their power to influence the behavior and/or attitudes of others. For example, if Bill Gates came to you and told you how to more efficiently operate a Microsoft computer program, you would probably pay close attention and do what he suggests because you believe that his knowledge is greater than yours in this area.

Referent Power

Sometimes individuals are successful in utilizing power because others admire or identify with them, and this can be called "referent power." Not only does Bill Gates have expert power, he is also greatly admired for his accomplishments. Thus, some individuals might be influenced by him in areas outside of his field of expertise, simply because they want to gain his approval or emulate him.

Although the taxonomy developed by French and Raven is widely used and intuitively appealing, there have been a number of conceptual and measurement problems in the research on all these bases of power. One problem is that the scheme may be overly simplistic. Another complicating fact is that most managers use more than one base of power in trying to get their way with others.

Structural

How much power people have depends to a great extent on the context. Three types of structural vari-

ables play a role in this determination. First, an obvious and important variable is a person's position in an organizational hierarchy. Looking at any organizational chart, it is apparent that the CEO has more power than a line manager and, for that matter, more power than a vice president. Perhaps the only damper on a CEO's power, which derives from the position itself, is the Board of Directors. Another structural variable is the control of resources, particularly those that may be scarce. Resources can, of course, be very broadly defined. One important resource in an organization, for example, may be access to information before others receive it. Information is power in this case. When units within an organization are dependent on an individual or department to provide them with the resources necessary to fulfill their goals, the individual or department possessing the resources is clearly the more powerful.

A third type of structural variable arises from the unique ties or connections that a person may have with others. Such ties might make a person indispensable, and thus, powerful within a particular system. A marketing executive who has been extremely successful in increasing a company's market share because of his close relationships with customers clearly has power in the system. If this manager also happens to play golf with a number of board members and is well liked by other department heads, his or her power may even exceed the CEO's.

SOURCES OF POWER

Theorists have mentioned such an incredible array of sources of power in an organization that it is impossible to cover them all here. However, despite the plethora of power sources, power often simply comes from being in the right place at the right time. In other words, an individual's position in an organization can be a key source of influence. Position may determine how much reward power, coercive power, resource discretion, information accessibility, and even the amount of legitimate power a manager possesses. Thus, one of the key sources of power in organizations derives directly from a person's organizational position.

Another key source of power is an individual's personal characteristics. These include charisma, task expertise, emotional intelligence and the ability to maneuver politically within an organizational system. Such characteristics most likely impact referent power as well as expert power. They also help people to accumulate power by increasing their ability to build strong ties throughout the organization.

One concise way to classify the different types and sources of a person's power is to define it as either primarily personal or primarily organizational. Thus, in the French and Raven framework, a manager's reward power, coercive power, and legitimate power would be more strongly derived from the organization, while expert and referent power would be more personally based. This, of course, does not mean that reward power, coercive power, and legitimate power cannot be derived from personal sources or that expert and referent power cannot have organizational origins in addition to personal ones. For example, a personal source of reward power might involve a manager providing mentoring to a subordinate on their personal time, after the subordinate does some activity at work particularly well. Similarly, an organizational source of expert power might derive from a manager's access to a particular set of information due to his or her position in the organizational hierarchy.

REACTIONS TO POWER

Given that there are different types and sources of power, it is not surprising that people react differently to the use of power. A number of frameworks have been proposed to classify these various reactions. One such framework was suggested in 2002 by Gary A. Yukl of SUNY at Albany (2002), who distinguishes between commitment, compliance, and resistance.

Commitment occurs when a person internally agrees with a request or a decision made by another and tries hard to implement or execute the decision or request. Viewed from the perspective of the person using power, this is the most desirable outcome since the target person enthusiastically does what is asked because he or she wants to do it. The French

and Raven bases of power that are most closely associated with this outcome are referent power and expert power.

Compliance occurs when the target is willing to do what is asked but "is apathetic rather than enthusiastic about it" (Yukl 2002, 143) and exerts less effort than if commitment had occurred. For simple and/or routine activities, compliance may be satisfactory to meet the power user's objectives. However, for more complex tasks or tasks that require some degree of judgment, discretion, or initiative, compliance may not yield the desired results. Reward power and legitimate power commonly evoke compliance.

Resistance describes what happens when a target is opposed to a decision or request and tries (actively or passively) to avoid executing the request. Resistance may involve such responses as making excuses, pretending to comply (but not complying), or asking a higher authority to override the request. Obviously, from the viewpoint of the power holder this is the least favorable response to the use of power, and the base of power most commonly associated with resistance is coercive power.

Another way of looking at reactions to the use of power in organizational settings is to examine the job satisfaction and job performance of those upon whom power is exercised. They largely mirror those reported above for commitment, compliance, and resistance. In general, the strongest and most positive effects are produced by referent power and expert power, with reward power and legitimate power having slightly less positive effects. Coercive power has the most deleterious effect on job satisfaction and performance.

HOW POWER IS ENACTED

Power is what social scientists call a "construct" in that it cannot be directly seen or measured. It is a variable that we construct to explain certain phenomena and we can only infer it from such things as the behavior of the person exercising the power or from the response of the power target. A person (agent) wishing to exert power over another (target) does so by using tactics such as bargaining and pre-

senting logical arguments or data. Thus, power underlies the use of influence tactics but power requires the use of influence tactics to affect behavior. For example, an agent must have either reward power or coercive power in order to barter with a target (“if you do this for me, I’ll do that for you”). Similarly, an agent needs expert power to successfully use logical arguments to sway a target.

Additionally, just as the various types of power are likely to be intertwined or overlap in actual usage, it appears that at least some influence tactics involve more than one type of power. For example, the use of logic would seem to require the use of expert power alone but bargaining can involve reward power and/or coercive power. Such influence tactics as the use of appeals to higher authority may involve not only legitimate power as a base but also have some base in other powers as well (such as coercive power and/or expert power).

HOW TO USE POWER EFFECTIVELY

There are six important ways for leaders to increase their power in an organization. First, they can supplement organizational power with personal power as much as possible; this will provide a broader and stronger basis for influence attempts. Second, they can use personal power more than organizational power; people are advised to use expert power and referent power because they provide a competitive advantage against peers since everyone at the same hierarchical level has about the same amount of organizational power (but different amounts of personal power).

Third, effective leaders should use coercive power only as a last resort; this is the least effective way to get people to act in a desired way and it can sometimes produce negative side effects (such as theft or vandalism). Fourth, leaders should be aware that influence tactics have stronger and weaker forms; for example, to argue a position based on pro forma financial statements is a stronger use of expert power than to simply assert, “Trust me, you know I’m an expert.”

Fifth, effective leaders should also be aware that the sequence in which power and influence tactics

are used matters; for example, the use of coercive power or threats should generally not occur the first time a request is made; one of the other powers should be tried first. Finally, some leaders employ a strategy of “ready, fire, aim” instead of “ready, aim, fire,” but much better results will be obtained in the use of power and influence if a leader develops a good strategy before acting and takes into account the research and suggestions summarized above.

 **PRESIDENTIAL LEADERSHIP, U.S.**

The presidents of the United States are often labeled as the most powerful individuals in the world because of the impressive military, diplomatic, and economic power they command. Yet the office they hold is also one that is checked and balanced within the American constitutional system to the point that some presidents have complained about the constraints on their capacity to get things done. One president after another has noted how difficult it is to persuade their fellow citizens to take a wise and prudent course of action for the betterment of the nation.

Over the more than two centuries that the presidency has existed, the forty-two men who have held office have developed a variety of leadership styles to master the demands of leading the nation. Some men, such as Franklin Pierce (1853–1857) and James Buchanan (1857–1861), have come down in history as examples of how not to wield the executive power. Their failures to deal with the sectional crisis over slavery in the 1850s helped to bring on the Civil War. Other chief executives—George Washington (1789–1797), Abraham Lincoln (1861–1865), and Franklin D. Roosevelt (1933–1945)—are esteemed for their ability to rise to the occasion and keep the nation as a going concern for future generations.

A clear definition of the criteria for assessing the success or failure of presidents as national leaders has been difficult to find. Winning war is usually seen as a good sign of successful leadership but not always. William McKinley led the United States to victory over Spain in 1898, but his imperial adventure in the Philippines clouded his reputation. George H. W. Bush directed the victorious first Gulf War in 1991, and the voters turned him out of his presidency a year later. For most presidents who fought wars to victory—Lincoln, Woodrow Wilson, and Franklin D. Roosevelt—these triumphs provided realistic claims to executive greatness.

For the presidents who were not identified with military victory, assessments of their leadership skills have varied, often depending on the political affiliation or partisan leanings of those who write about them. Activists fare better than more passive

chief executives. Democrats, especially during the twentieth century, more often rate higher than do Republican presidents because of the tendency to value innovation over conservatism.

THE NINETEENTH-CENTURY PRESIDENCY

An important distinction in presidential leadership exists between those who held the office in the first one hundred years of the republic and those who served after 1897. The presidency was a small institution that directed a small government for most of the nineteenth century. A single secretary and a few clerks could handle the routine business of being a president. The White House itself was not closely guarded and any citizen with legitimate business could usually get to see the incumbent. Regular public receptions kept the presidency close to the people at a time when Washington was more like a small town than a world capital.

In the age of slower communications before mass media, presidents exercised leadership through written documents and personal influence within the government. Presidential travel was limited, speaking tours to push legislation were not done, and incumbents by tradition did not campaign for reelection. It was still possible under these conditions to be bold in the White House, as Thomas Jefferson demonstrated with the Louisiana Purchase in 1803 and Andrew Jackson did with his “war” against the Second Bank of the United States in the 1830s. Nonetheless, the presidency was a more passive, reactive institution in the first half of the nation’s existence.

A sense of how the presidency might operate in foreign affairs came with the administration of James K. Polk (1845–1849). The president’s personal resolve to subdue Mexico and to settle the Oregon Boundary dispute with Great Britain resulted in both aims being achieved. The acquisition of extensive new territory in the Southwest helped trigger further sectional tensions between North and South during the 1850s, but Polk had shown what a determined chief executive could accomplish. His example faded rapidly as a succession of weak presidents ensued.

THE CIVIL WAR AND AFTER

The Civil War tested the presidency in unexpected ways as Abraham Lincoln pushed the institution to its limits to preserve the Union and in the end abolish slavery. Lincoln's use of the war power to suspend habeas corpus, issue the Emancipation Proclamation, and direct the strategy of the Union armies illustrated what a strong president could do in a time of national crisis. Lincoln accomplished all these feats with a small staff and no large bureaucracy to carry out his directives. His speeches and messages were masterful examples of how a president could articulate the national agenda.

For three decades after Lincoln's murder in April 1865, the presidency shrank in importance. Congress asserted itself during the Reconstruction battles with Lincoln's successor, Andrew Johnson (1865–1869). The supremacy of the legislative branch persisted under the Republican chief executives who followed Johnson. Democrat Grover Cleveland (1885–1889, 1893–1897) wielded presidential power with a strong hand during the economic crisis of the 1890s, but his unpopular policies and reclusive style boomeranged. The presidency seemed a shrunken institution in a ramshackle White House as Cleveland's tenure as president came to an end in March 1897.

ORIGINS OF THE MODERN PRESIDENCY

A revival of the presidency and the emergence of the modern form of leadership in the White House arrived with William McKinley (1897–1901). The new president improved relations with the press and traveled more than his predecessors had. Having served in the House of Representatives, he spent a good deal of time courting the legislative branch. The outbreak of the war with Spain, however, was what set McKinley on the road toward becoming the first modern president. He directed the strategy of the United States from the "War Room" in the White House. Once an armistice with Spain had been reached, he recruited senators to serve on the delegation that negotiated a treaty in Paris in the fall of 1898. Meanwhile, McKinley went out on the stump

to prepare the way for the acquisition of the Philippine Islands as one of the fruits of the conflict.

In the years that followed, McKinley relied on the war power of the presidency to govern its new overseas empire and to conduct a conflict against the nationalists in the Philippines. He also created a civil government to administer the new American possession. The president sent troops into China without congressional authorization during the Boxer Rebellion of 1900. A key participant in these developments was McKinley's secretary, George B. Cortelyou, who put in place the institutional arrangements to enable the president to function effectively. As the United States took on a world role, the size of the White House staff expanded to meet the new respon-

sibilities. By the time McKinley was assassinated in September 1901, the presidency was on its way toward the more bureaucratic, organized, and coherent policymaking instrument of the twentieth century.

McKinley had not been a charismatic president, but his successor, Theodore Roosevelt, fulfilled that role as a chief executive and then some. The youngest man to become the nation's leader, Roosevelt brought energy and excitement to his duties in the White House. Within weeks of taking office, he began stamping his personality on how the president operated in the public sphere. Roosevelt later styled the presidency as "a bully pulpit," and he missed few opportunities to preach lessons of responsibility, world power, and an expanded government to his fellow citizens. From busting trusts to sending the White Fleet around the world as a show of American power, Roosevelt demonstrated what an activist chief executive could do to broaden the scope of government and personalize the office as well.

After his election in 1904, Roosevelt used the credibility he gained from his landslide victory to put the government into the business of regulating an industrial society. The Hepburn Act to oversee the railroads, the Pure Food and Drugs Act, and the Meat Inspection legislation of 1906 attested to his belief that the president should push Congress to make society more equitable and just for all citizens. Roosevelt's push for expanded power produced backlash from conservatives in his own Republican party, and his last years in office were filled with political discord against his program of regulation. His efforts to involve the United States more directly in world affairs also came up against the limits of popular willingness to depart from traditional non-involvement overseas.

Overall, Roosevelt built on McKinley's precedents to establish the modern presidency as the institution to which the American people looked for agenda-setting in national affairs. That the president could campaign for legislation, launch speaking tours to rouse popular support for his programs, and grapple in public with entrenched congressional leaders gave the people a sense of how a strong president could lead. In that sense, Roosevelt provided

an instructive road map for his successors during the remainder of the century.

William Howard Taft, Roosevelt's hand-picked successor, did not share Roosevelt's broad view of presidential authority or his faith in legislation to achieve social justice. As a result, the model of leadership that Taft provided was more constricted than what Roosevelt had advanced. Taft's style in the White House eventually alienated his predecessor and led to their personal struggle over the Republican nomination in 1912. In that election, the voters opted to give the Democrats and Woodrow Wilson a chance to show how they would implement presidential policy.

WOODROW WILSON AND PRESIDENTIAL LEADERSHIP

Though he did little to change the bureaucratic workings of the presidency, Wilson did make significant shifts in how the chief executive operated. He restored the custom, which Thomas Jefferson had abandoned, of addressing Congress in person. That innovation made the president a more visible figure in the nation, especially once the news media were able to cover these occasions with film and later television. Wilson was also more ready than even Roosevelt had been to make speaking trips to seek support for his legislative and foreign policies. Most of all, Wilson infused a moralistic style into the presidency that broadened the nation's role in the world through his unsuccessful quest for a League of Nations between 1919 and 1920. Though Wilson left office at a low ebb of popularity with the American people, his example of presidential leadership would be a large influence on the next Democratic president, Franklin D. Roosevelt.

Before Franklin Roosevelt came on the scene, however, more subdued presidents held office in the persons of Warren G. Harding and Calvin Coolidge. After the reform campaigns of Theodore Roosevelt and Wilson, the public wanted a rest from presidential activism, which Harding and Coolidge certainly provided. The decline in the economy that led to the Great Depression of the 1930s found Herbert Hoover in office when the crisis began. He was much more

involved in trying to bring about recovery than previous presidents had been in similar downturns. Unfortunately for Hoover, he was reluctant to embrace activism to the full, and he came across as an insensitive and uncaring chief executive as misery mounted. In 1932, the voters rejected his bid for a second term and looked to Franklin D. Roosevelt for answers.

FRANKLIN D. ROOSEVELT AND THE NEW DEAL

Roosevelt had promised “bold, persistent experimentation” to address the economic woes of the country. His approach to the presidency was to build on the achievements of his cousin Theodore, and to infuse the White House with a determination to use all the weapons at the command of the chief executive to pursue good times once again. The New Deal that followed depended heavily on Roosevelt’s ability to stir the public through speeches, his radio addresses that became known as “fireside chats,” and his willingness to try diverse approaches to the issues of relief, recovery, and reform. In the process, Roosevelt’s way of handling national issues became a model for all future presidents to accept or reject.

Under Franklin D. Roosevelt, the presidency slowly expanded to meet its enhanced responsibilities. That process began during the second term and accelerated during World War II. The creation of the Executive Office of the President put in place bureaucratic structures that allocated responsibilities on a more rational basis. Roosevelt retained his own loose administrative style amid these innovations, but his successors would expand on what he had done.

Despite his personal disability from infantile paralysis, Roosevelt traveled extensively, and his overseas trips during the war laid the basis for greater presidential travel during the rest of the twentieth century. The ability of the presidents to conduct

business outside the country meant that chief executives could enhance their popular standing with the trappings of world leadership at conferences with foreign leaders. Public opinion polls showed the positive results for the president from such tours and missions. As the power of the United States grew after World War II, the image of the president as the world leader with vast resources at his command became fixed in the popular mind.

THE COLD WAR PRESIDENCY

The defeat of Germany and Japan in 1945 soon led to the Cold War with the Soviet Union that defined America’s role in the world for the next half-century. Roosevelt’s sudden death in April 1945 brought his vice president, Harry S. Truman, to the Oval Office. Though Truman was not as charismatic as Roosevelt had been, his no-nonsense style of leadership, derived from his years in Missouri politics and the United States Senate, proved effective in establishing the structure for how the United States government would conduct foreign and domestic policy in the

Cold War setting. Truman articulated the policy of containment toward the Soviet Union through the Marshall Plan, the North Atlantic Treaty Organization (NATO), and the various national security agencies such as the Central Intelligence Agency that evolved out of the postwar crises.

Truman's accomplishments in foreign policy and the mistakes of his Republican opponent, Thomas E. Dewey, enabled the incumbent to win a surprise election victory in 1948. After that triumph, however, Truman's administration encountered a host of problems at home and abroad. The victory of the Communists in China, the rise of McCarthyism, and the Korean War emboldened the Republicans and cast doubt on Truman's ability to lead. By the time he decided not to run for another term during the spring of 1952, Truman's standing with the American people had eroded. Only in the retrospect of several decades would Truman come to seem the embodiment of effective executive power in the White House.

The election of Dwight D. Eisenhower in 1952 proved an important step in the evolution of modern presidential leadership. Eisenhower was not an activist in advancing programs or providing new initiatives. What he did that was important was to create the modern chief-of-staff form of presidential organization within the White House, create a system of managing congressional relations, and improve the capacity of the presidency to shape media images of the office. Televised press conferences, though not yet done live, gave the president a significant forum for advancing his administration's agenda. Behind the scenes, Eisenhower operated on what one scholar of his presidency has called "the hidden-hand" principle of pursuing his goals. The approach was not spectacular in its public manifestations but it proved effective for much of Eisenhower's presidency.

By the late 1950s, however, a sense emerged that the nation was adrift amidst the Cold War, and Democrats criticized Eisenhower for not being forceful enough in setting the priorities for the government. John F. Kennedy made getting the nation moving again one of the themes of his bid for the White House. That enabled the Democratic candi-

date to achieve a narrow victory over his Republican rival, Richard M. Nixon. Kennedy's administration brought heavy doses of public relations and stardom to the White House as the new president proved to be a media idol. Press conferences were now televised live in prime time. Kennedy was a master in these settings, and the American people's fascination with him mounted. The substantive record of the administration was less impressive as Kennedy struggled to enact his legislative priorities and to succeed in foreign policy. To a large degree, substance did not matter as much as style. As long as the president could appear to be in charge, leadership became an issue of how the presidency was presented to the public.

THE TROUBLES OF PRESIDENTIAL LEADERSHIP IN THE 1960s AND 1970s

Kennedy's assassination in November 1963 created a presidential martyr and stamped his brand of leadership as a mythic force that would have solved all society's problems had he but lived to serve a second term. The burden of Kennedy's expectations was not a large one for Lyndon B. Johnson in the first year of his own presidency. Johnson used the Kennedy legacy as a guide for enacting a tax cut and a major civil rights bill in 1964. The Texan's mastery of the legislative process, an area where Kennedy had been weak, enabled him to forge a record of accomplishment that took the presidency to new heights of influence.

However, the success of Johnson in this area proved to be short-lived. The escalation of the American involvement in Vietnam in 1965, and the social turmoil that resulted from that decision, started the decline in the president's standing. Protest at home and stalemate abroad led to an erosion of support for the administration. By 1968, Johnson faced challenges to reelection and he withdrew from politics. A president had essentially been driven from office because of the way he had failed to exercise persuasive and effective leadership in foreign policy. In the process, the innate public respect for the presidential office had been compromised.

Johnson's successor, Richard M. Nixon, wanted to

restore presidential prestige by ending the involvement in Vietnam and establishing domestic order at home once again. In the public face of his first term, Nixon succeeded in demoralizing the Democrats and persuading the public that he was winding down the war. Behind the scenes, however, the steps that Nixon took to thwart the Democrats and ensure his own reelection led to the Watergate break-in in June 1972. That scandal did not prevent Nixon from winning a massive reelection victory, but within months of that success the unraveling of Watergate put his presidency on a course toward his resignation in disgrace. Nixon's departure from office in August 1974 further reduced the power of the presidency relative to Congress and hampered the ability of his successors to conduct policy with as much freedom and discretion as had been the case just a decade or so earlier.

The resulting problems constrained the administrations of Gerald Ford and Jimmy Carter that followed during the remainder of the 1970s. Ford's pardon of Richard Nixon, which the president believed was necessary to restore his ability to lead, cast a shadow over his days in the White House and was largely responsible for his defeat in the 1976 election. With Congress ascendant, the scope of what the president could do had been circumscribed.

Jimmy Carter learned of the reduced power of the presidency in his single-term administration from 1977 to 1981. Not an adroit politician, Carter found that his capacity to manage Congress, rouse the American people, and conduct foreign policy was restricted and diminished. The hostage crisis in Iran dominated the latter part of Carter's presidency, and his inability either to rescue the imprisoned Americans or to end the problem diplomatically contributed to a sense that he was not an effective leader. Pundits speculated that after a series of failed presidencies the office had been so crippled that future chief executives might be less effective than their predecessors had been in moments of national crisis.

THE IMPACT OF RONALD REAGAN

The election of Ronald Reagan in 1980 began an apparent restoration of presidential leadership. Reagan's team proved adept at passing a large tax cut

and funding a large increase in defense spending in his first term. Once the economy perked up between 1983 and 1984, Reagan easily won a substantial reelection victory in 1984. Reagan's success did not depend on making hard choices about the choices that the nation faced in foreign and domestic policy. Instead, with his background in movies, Reagan was a master of presenting himself in situations where he seemed to be a national leader. Effectiveness in stagecraft, which had been growing among presidents since the start of the twentieth century, now became the essence of the president's ability to set priorities. Achieving the popularity that Reagan enjoyed for most of his two terms emerged as a main goal of subsequent presidents. As a result, pundits proclaimed that confidence in the presidency had been restored.

The two men who followed Reagan might have disagreed. George H. W. Bush found that success in winning the first Gulf War did not translate into an ability to enact his domestic program. In fact, his failure to deal with the recession of 1991 and 1992 helped to ensure his electoral defeat at the hands of Bill Clinton in the 1992 election. At the 1988 Republican Convention, Bush had promised "no new taxes" during his presidency. When such an increase seemed necessary in 1990, the president could not carry his own party with him on the change. Nor could Bush use his postwar popularity to set the national agenda. After rising with Reagan, presidential leadership receded again during the first Bush presidency.

Leadership proved even more problematic for Bill Clinton during his two terms in office. Elected as a minority president over the elder Bush and Ross Perot in 1992, Clinton lacked legitimacy in the eyes of many Republicans. They accorded him only minimal respect as a chief executive. Opposition to Clinton's policies often went beyond partisan limits and became an end in itself for his foes. Despite these obstacles, Clinton achieved some notable results in domestic economic affairs and foreign policy. Of

course, he undercut his own effectiveness with his sexual indiscretions, which contributed to the effort to impeach him between 1998 and 1999. Clinton's experience showed that exercising presidential leadership in the twenty-first century would require mastery of the intensely partisan political environment and the instruments of celebrity to have any chance at enacting a program.

President George W. Bush's presidential leadership is still in the process of formation, and any assessment would have to be a tentative one. The terrorist attacks of 11 September 2001 produced a crisis that persuaded Congress and the American people to grant the president wide new powers to lead the country. More than any of its immediate predecessors, the Bush administration has shown itself to be masterful in packaging the president and remaining on its message every day. The result has been impressive short-run success for the president as a national leader. The military victory in Iraq in 2003, for example, attested to Bush's ability to harness the nation's striking power. Whether the American occupation of Iraq, a test of day-to-day presidential leadership, will be as rewarding is not yet known. Tax cutting has become Bush's domestic trademark where his leadership again has worked. When hard choices come about funding Social Security and Medicare for the baby-boom generation at the end of the first decade of the new century, presidential leadership may be tested.

PRESIDENTIAL LEADERSHIP IN PERSPECTIVE

The ways in which presidential power should be exercised and the capacity of various chief executives to use their authority well has thus evolved and shifted as American history has unfolded. The traditional statecraft of the nineteenth and early twentieth centuries in which presidents functioned much like national leaders in other countries has faded away. Now presidents operate as a combination of world statesmen and media personalities whose every move is scripted for transmission to a waiting audience. Presidential leadership has become an arm of show business whose triviality often overshadows its serious consequences for the United States and the world.

PSYCHOANALYTIC THEORY

Through the years there has been considerable debate among industrial and organizational psychologists about whether psychoanalytic theory has a role in understanding the dynamics of the workplace. The Tavistock approach to leadership and institutional thought (so named because it was first developed at the Tavistock Institute in London) seeks to use psychoanalytic theory to identify and resolve issues in organizations. The work of Melanie Klein on child and family psychology forms an important foundation for the Tavistock approach. Indeed, the basis of the approach comes fundamentally from theorists in the Kleinian tradition—Armstrong (1997), Bion (1952, 1959, 1961), Gosling (1978, 1981; Gosling and Turquet 1967), Jaques (1970, 1996), Lawrence (1999, 2000), Menzies Lyth (1988, 1989), Miller (1993), Obholzer and Roberts (1994), Rice (1969), Turquet (1975), and others—who stress that leadership is being in touch with external reality and with unconscious processes. That relationship between external reality and unconscious processes is summed up by Ehrenzweig (1967): “Unconscious vision has proven capable of gathering more information than a conscious scrutiny lasting a hundred times longer . . . the undifferentiated structure of unconscious vision . . . displays scanning powers that are superior to conscious vision.”

Generally, conscious leadership works rationally and linearly with cause-and-effect relationships, focusing on targeted visions and behavior, undeterred by anything unconscious. Cause-and-effect relationships are designed to get rid of their complexities. However, Wilfred Bion (1961), in his work with groups, showed the group mind (the collective mindset in an organization) as working at two levels and having two perspectives at the same time: being consciously aware of what is being talked about and

also listening to what is unconsciously being represented in subtexts.

Listening to and thinking about subtexts define the idea of leadership as container. Put simply, leadership has to contain the task and other people, and in doing so, it also contains the unconscious. Containment implies notions of inside and outside, and leadership is always on the boundary between the two. Organizational leadership has to be aware of the environment on the outside and simultaneously present environment conditions to the people inside. In this way leadership serves to bring disparate parts together in order to deal with challenges of forging relationships between parts.

Leadership means the ability of leaders to “read” their own experiences of feeling, thinking, and imagining within the organization. Those experiences within the role of leadership are a source of information and intelligence about the dynamics of the organization in relation to its task, its structure, and its context, and to use that information is a way of informing decision and action at every level. The Tavistock approach moves from focusing solely on the inner world of the leader to focusing on the inner world of the leader insofar as it reflects, picks up, elaborates, and conveys information about the world of the organization within which the leader is implicated and the external environment of the organization that is influencing all the things that are happening within it in order that the leader may arrive at decisions and identify challenges that need to be managed. It is not good enough to enable leadership to interpret its situations. Leadership also must work through the implications of its interpretations in terms of decisions about vision, strategy, structure, and operations.

One tends to think of unconscious processes as potentially conveying meaning. Good leadership is concerned with organizational meaning by finding ways of working with the unconscious undertones in the organization, those images, blockages, and disconnected stories that are offshoots of some unconscious undertow of meaning. Bringing them to the surface is a function of leadership, that is, making the undertow of unconscious life in organizations available for reflection and thinking.

LEADERSHIP AND THE UNCONSCIOUS

In helping others to manage themselves, leaders are the recipient of both good feelings and bad feelings. Because leadership represents the existence of the unconscious, it cannot be good all the time. Leadership functions by reminding its members of the importance of the unconscious in organizational life. Usually, the unconscious gets watered down and converted into the personal unconscious, seldom the social unconscious. Leadership can more easily deal with the personal unconscious than with the collective unconscious because in the collective unconscious (Hopper, 2003), one really is in the unknown, and one can believe that the personal unconscious is ultimately knowable. Playing in the unconscious gives leaders opportunities to be innovative. Ideas come from several sources—for example, from other people or from experience. Ideas might come from memory or from history, and then be put together in novel ways to produce something new, for good or bad. We claim a link between leadership and the unconscious source of ideas.

Leadership is remaining in touch with the unconscious in order to produce new developments, new ideas, new decisions, new products. Leaders oscillate between reveling in the unconscious and having to force it to fit in with external reality. That oscillation is the hallmark of good leadership. Leadership is making the unconscious valid and valuing what lies below the surface. Baum (1992) asserted that everything we see around us started with an idea, a thought. Thought processes, no matter how small or primitive, germinate and grow. How did people think to plant seeds? It all started with somebody thinking. Organizational leadership and social leadership are helping people and processes along by combining thinking and action. Leadership must produce a result at the end, but the goal, the direction, the processes, and the technology all require thinking.

LEADERSHIP AND ANXIETY

Leadership is the capacity to withstand the onslaught of anxiety, to retain the capacity to think ahead strategically with certainty while one is under pres-

sure either from within oneself or from outside, such as the pressure of domestic (i.e., family) issues. The leadership drive, instead of being consciously directed to tackle a task, may get transmuted into subversion, into defeating the system. Leadership itself may subvert the system rather than work with the difficulties of standing on the boundary between the organization and environment. Leadership may manage itself well in the role it defines for itself, without recourse to organizational and environmental process, and develop the fantasy that its self-defined role and the work of the organization are synonymous. The two elements get separated out so that the work of the organization is suppressed, and the self-defined role becomes the primary task. In one sense, therefore, leadership may manage itself well in its role, but it does not manage itself in its institutional and systemic roles, nor does it help others to manage themselves in their systemic roles.

LEADERSHIP AND THE PARANOID-SCHIZOID AND DEPRESSIVE POSITIONS

Leadership can be explained by relying on concepts such as the depressive position (akin to an infant fearing the loss of a treasured object and trying to hold onto it) and the paranoid-schizoid position (a young child's vacillation between a loving orientation and a hateful orientation) (Klein, 1957). Leadership is striving toward the depressive position, although elements of the paranoid-schizoid position are essential adjuncts to leadership issues. In other words, leadership has to have the capacity to be sufficiently, but not too, paranoid and be sufficiently delinquent to work its way around systems, and it has to be able to summon sufficient fight. A workable theory of leadership allows for sufficient delusion that enables leadership to know what is going on and sufficient containment of anxiety to enable thinking to occur, followed by appropriate intervention. The type of leadership used does not matter, provided it allows for space and uncertainty. We sometimes think of leadership and organizational processes as telling people what to do and then tricking them into followership, which can be effective in the short term, particularly in charismatic leadership,

but in the long term does not work. In general, leaders are selected on the basis of promising to deliver certainty. In promising certainty, leaders are really delivering the people within the organization from being paranoid about the outside. “Don’t worry. If you do this, we will be all right.”

In benign forms of leadership, consideration for others is manifest. Those forms of leadership are called “depressive position leadership,” and they are different from paranoid-schizoid leadership. The striking character of depressive position leadership is the capacity to listen and note others’ points of view. In other words, a leader might look at a situation from a variety of perspectives. Some of these perspectives would emanate from within, and some would come from outside. Depressive position leadership in this regard means the capacity to listen to, and, in fact, to expect and elicit other perspectives and to respect them adequately while not allowing them to necessarily sweep one away from one’s chosen path. In paranoid-schizoid position leadership, one is not prepared to listen to any other perspective. Paranoid-schizoid leadership is forced upon other people. Other people’s perspectives immediately evoke the fight (aggressive) mode. Depressive position leadership conducts surveys, listens to opinions, notes them, and then tactically finds its way through them in order to achieve an objective, taking into account that some of the opinions that come up might, necessarily, modify leadership’s goal or plan of action.

In political life, not much evidence indicates that depressive position leadership does better than paranoid-schizoid position leadership. Life for a paranoid-schizoid leader can be pretty rocky, and it can go up and down and can switch from good to bad in public opinion quickly. However, war leaders, such as former British Prime Minister Margaret Thatcher during the Falklands War, gain enormously from cultivating a paranoid-schizoid way of leading the nation. When British Prime Minister Tony Blair came to power, he was seen as someone who could stand ambivalence and ambiguity—“tough on crime, tough on the causes of crime.” He was not simplifying facts by saying criminals are bad and the rest of us are good; he could capture some sense

of responsibility and reparation. On the other hand, paranoid-schizoid position leadership tends to do a much better job. It can dramatically capture the immediate attention, interest, and allegiance of facts that the tabloid press lives off, creating and presenting a sensation of good or bad outrage. One would only with difficulty say that depressive position leadership is good and paranoid-schizoid position leadership is bad.

LEADERSHIP AND CONTAINMENT

The idea of containment is an important part of leadership, but it may sound rather passive and maternal. Containment has to be matched by sufficient lack of containment, so that people are encouraged to do a bit of containing themselves. They need to have a bit of ingenuity themselves because otherwise, if the leader solely performs “good containment,” people will keep a low profile. Too much containment can create dependency, which can have advantages, but dependency also can have disadvantages. The container needs to be a semipermeable osmotic membrane where movement in both directions is allowed but where leadership influences the size of the particles that are allowed through the organizational membrane. If too much is allowed in, the organization may get swamped; if too much is allowed out, the organization’s public image may be damaged. Therefore, leadership, boundaries, and containment can be said to form a finely balanced process of osmosis through which projective and introjective processes are managed.

Traditionally the idea of containment has been concerned with the ability of leadership to enable people to contain some of the anxieties that are built into work or into the context of work. Leadership has been thought of as able both to help people contain anxiety and also to help process it. That idea is based on Bion’s (1961) original model of container contained. However, this idea neglects two aspects linked to containment. The first aspect has to do with the paternal function rather than the maternal function, which Bion (1961) sometimes neglects. The paternal function is concerned with setting boundaries, sometimes calling a halt, indicating purpose

and direction, maintaining and standing for certain qualities of discipline and professionalism, and so forth. This paternal function of leadership can often get split off from the maternal function in an unhelpful way. The second aspect is the idea that the function of the mother is not simply to contain the infant's distress; it may also be to offer to the infant a lively, stimulating sense of the presence of the object, basically the presence of the mother. Similarly, leadership involves the capacity to "make present" a kind of lively, stimulating, vital sense of the practice of the organization. Some leaders find that difficult to do, and that difficulty may be worsened by the tendency to appoint to leadership positions people who may have little experience of the primary process that the organization engages in. For example, in the health service field, people who have no real experience of the business of working with patients may be appointed as chief executives, and that appointment presents a real challenge if those people are not able to feel inside themselves the deep sense of the nature of the work that the organization is carrying out. This "making present" is another aspect of containment.

LEADERSHIP AND PROJECTIVE AND INTROJECTIVE PROCESSES

Leadership-followership dynamics must involve some redistribution of identity. Some people identify themselves as leaders, and other people identify themselves as followers. The quality of everyone's personal identity that relies on projective and introjective processes fluctuates. A leader acquires certain types of personality characteristics for his or her identity, and others relinquish theirs. If projective processes that compose the leadership-followership dynamics are rigid and cannot be relinquished, then a bad form of leadership results: a rigid institution and a permanent distortion of identity. One criterion for good leadership is the ability to identify, when necessary, with the qualities that are required and to relinquish them when not absolutely needed. Leadership must be able to allow other people to take leadership roles and to follow those other people because leadership must be able to use the skills of

others that it does not have. We must make a distinction between the flexibility of projective-introjective processes and the rigidity by which personalities are permanently or semi-permanently distorted or damaged.

Leadership does not always mean being a container. The organization needs to be the container. Leadership has to ensure that the organization is able to contain the anxiety of the task. Leaders have some responsibility for ensuring that the levels of anxiety are not so great that they interfere with people's capacity to pursue the task, but leaders must notice the interpersonal and intergroup relations within the organization rather than personally take on the anxiety themselves.

Through projective processes, leadership gains information from which it can discern what is happening within the organization. Leadership must be open to projective processes and able to "read" what is happening and what people are experiencing, not only in terms of what those experiences mean personally to people but also what those experiences mean to the organizational situation that they are involved with. Leaders must be able to distinguish between what they are feeling that is simply information about themselves and what they are aware of in themselves that may represent something that is projected into them from the organization. The ability of leaders to acknowledge and work with projective processes is important. Leaders are always likely to be given fantasies by members of the organization; for example, the head teacher of a school is always seen as larger than life by pupils and staff. The same is true in most organizations. We need to understand projected processes in terms of something that is happening in the organization here and now, not just in terms of endemic features of organizational life. Even if the features are endemic, at some point one becomes acutely aware of them, and they point to something happening within the organization that is triggering uncertainty or anxiety.

Introjection is a different matter. For example, in the relationship between the teacher and the pupil, people talk about the transference relationship, which, through introjective processes, is a critical element in learning. However, the relationship

among the teacher, the subject, and the pupil, not the relationship between the teacher and the pupil as such, is a critical element. If the pupil is simply aware of the teacher as a “person” or “authority figure,” although that awareness may encourage learning, that awareness will not lead to a real love of the subject or to real, sustained learning. Similarly, people, not leadership, must introject leadership’s concept of the organization, and insofar as that concept is lively and vital, it will release both learning and initiative, innovation and authority. The key is the transference process that followers develop to leadership’s relation to the organizational task.

LEADERSHIP AND KNOWLEDGE

Leadership in organizations relies on a number of methods to gain information and find out what is going on. Leaders work with a series of constructs that are helpful to them but that have to become operationalized as they go about their work. Leaders can operationalize constructs with a light touch or with a firm touch, as if to convince themselves that they know what is going on and what they are doing. However, that behavior may be a defense against being and feeling lost, and leaders actually may not know what is going on, but to make themselves feel more comfortable, they may turn concepts into dogma. Leaders need to make allowances for unforeseen issues. This form of leadership does not tell others what to do; rather, it conveys that tasks can be performed, that one can traverse areas of uncertainty, that one can wade through the challenges and keep thinking and not get bogged down too deeply. Role modeling, in this sense, is an integral part of leadership.

LEADERSHIP AND THE EGO IDEAL

Leadership stems from two sources: (1) structural sources; that is, people take on the position, and other people say the people who took on the position are in charge, and (2) charismatic sources; that is, people take leadership for themselves on their internal authority. What about a personality enables or compels somebody to emerge as a leader? The Austrian neurologist Sigmund Freud (1921) said people

cohere into a group because they all adopt the same sort of ego ideal, that is, they all see themselves as in some way aligned or identified with some particular principle, idea, task, or person. A leader is somebody who has in his or her own personality some intuitive and largely unconscious capacity to be able to capture the allegiance of other people toward the ego ideal. People have difficulty determining what enables leaders to capture the ideal in themselves or to capture the allegiance of others toward the ego ideal. The ego ideal has to do with creating a vision for people. Leadership represents the popular vision that begs the question, “What is visionary other than something that captures a lot of people’s imagination?” Leadership is a capacity to form an intuitive understanding of what a vision is. During political rallies Adolf Hitler shouted, and the crowds chanted. Charisma is the process of being between Hitler and the crowds, where each was exciting the other. Thus, leadership must be situational, that is, extremely stage managed, but people’s personal ideals and principles get submerged just by the mere act of people being in a crowd.

Can a leader draw on specific ego qualities, perhaps more so than other people? In psychoanalytic terms it would be the ability to sublimate id (relating to the division of the psyche that is unconscious and is the source of psychic energy) impulses and to capture the allegiances of other people’s egos, to sublimate their ids to achieve a common kind of sublimation. The psychoanalytic model is specific to the individual, but we also need models that explain collective and interpersonal processes. People must have ego functions that are personal, but people must also have a capacity to sublimate passions into what we have called a “vision”: a strong intuitive capacity to be in touch with where other people are as a group, intuitive of a group atmosphere, and able to play on that atmosphere or to mold a group atmosphere. We do not know much about some particular quality of intuition. The capacity to intuitively know the mood of a group is located less in the rational ego and more in the id process, in the deep underlying sweep of emotion in the crowd.

Leadership is also concerned with the capacity to get people to follow with a real sense of internal owner-

ship and conviction. All people have that capacity but are not always able to tap into or release it. Leadership stretches the cognitive competence of others to handle increasingly complex and varied information.

LEADERSHIP AND PERSONALITY

Identifying what gets mobilized in a person within a group is fairly fundamental to the Tavistock understanding of groups. Understanding leadership traits calls for that same type of identification. Something specific is mobilized for a person to become a leader.

Bion's work on leaderless groups for the British War Office Selection Board addressed what gets mobilized in people who emerge as leaders or followers or who take up other roles. His arguments are less concerned with leaders' personalities, their psychopathology, and their early experience with their parents, and more concerned with how groups become groups and get on with their tasks and the emergence of elemental roles that are required to fulfill those tasks.

Leadership, however, must have something to do with individual personality and how a person becomes a good leader or a bad leader, a poor leader, or morally good or morally bad. Is that something personality, or is it behavior? Or identity? What sort of identity a leader feels comfortable adopting is determined by the group being able to mobilize that identity inside the leader. Leaders who listen and understand and do not present much of themselves may have to take a stronger, more determined stance and tackle some issues head on. Leaders have to feel comfortable with what is mobilized in them by the group. All of that is difficult to predict. The best way to appoint the right leaders is to place them in a group and see if they are any good at leading it. Trying to analyze the personality characteristics of an individual to predict outcome is tricky. One can easily be misled by one dimension of an organization when, in fact, the role demands another dimension.

LEADERSHIP AND COMPETENCE

Leadership and competence are linked. If people's competence is acknowledged, their sense of contain-

ment is increased. Good leaders remember the people who work in the organization and have an idea of what is happening with them and are able to say something about it when they bump into people in a corridor. Being able to remember and value people is a remarkable capacity. Good leaders remember people as people as well as remembering people as roles and which job they are doing. That kind of leadership may be part of containment, or it may be a different kind of leadership—the idea that a leader leads for the task and that a leader makes everyone feel good. All people have a narcissistic aspect that needs to be fed—either by a sense that they have done a good job and that they can see the product or by someone who comes along and strokes their narcissistic ego. However, who strokes the ego of the person who is stroking everyone's ego? If leaders are looking for confirmation from their subordinates, an upside-down system results in which burdensome responsibility is redistributed in maladaptive ways.

IMPLICATIONS

One might think that what leaders say or do relates to their personality or pathology or factors that go back to their earlier experience with authority figures, but those elements in their inner world are being elicited by something within the organization, here and now, not just being enacted organizationally. This idea is different from that of Jaques (1970) that people simply enact pathology in an organizational setting as a social defense. Experts now think that defenses emerge because something within the organizational situation triggers early anxiety and then elicits responses from an internal structure that in other circumstances may be less significant, as if the organization rereleases something. That is why we must identify the releasing element in the organization that accounts for what otherwise may appear to be an individual piece of pathology.

Consequently, we should not construe leadership in personal terms, for example, in terms of charisma or personality or style. That approach to leadership is not constructive. Instead, we best define leadership in terms of the relationships between the roles that

leaders play in an organization and the functioning of that organization in context. Good leadership combines cognitive capability (Jaques 1970) and the ability to be psychologically present (Miller 1993), that is, the ability to draw and scan and access the whole variety of one's thoughts, feelings, and imagination, regardless of whether at first sight that variety has anything to do with the organization one is heading. Leaders value their history and experience and passions that lie right outside the immediate organizational context in which they work. Leadership is the ability of people to use every aspect of experience for thinking through or offering new insights into the situations they are in.

PSYCHOLOGICAL SUBSTRUCTURES

“I wonder how far Moses would have gone if he had taken a poll in Egypt.” This often-quoted phrase is how President Harry S. Truman summed up his view of leadership (McCullough 1995, 52)—a leader serving as a compass. At times, the course of history would in all probability have developed differently were it not for the direction set by the leaders. This was manifestly the case with Nelson Mandela, whose personal decisions and policies saved South Africa from a bloodbath of revenge (Sampson 1999). Such was the case with Ben-Gurion, whose totally personal decision to declare the state was, in the opinion of historians, decisive in the establishment of the State of Israel (Bar-Zohar 1968). It is no easy matter to make decisions such as those that affect human lives, certainly it is not easy to make decisions that are sometimes in conflict with the opinions of the closest supporters, and it is not at all easy to turn such a decision into an act of leadership, that is

to say, to harness large numbers of people to the implementation of these decisions, especially when they are painful.

Leadership, therefore, especially when it serves as a “compass” in the sense portrayed, requires certain specific characteristics in order to reach fruition. These characteristics form what is known as the psychological substructure.

MAJOR PSYCHOLOGICAL CHARACTERISTICS OF LEADERS

An analysis of leaders’ influence indicates that the basis of their influence is a leader’s clear conception of his/her mission. This theme appears prominently in the biographies and historical analyses of leaders who “made a difference.” For example, Nelson Mandela visualized the future of South Africa using the metaphor of a rainbow—a society tolerant of the color of others. This belief enabled him to survive twenty-seven years of imprisonment (Sampson 1999). Theodor Herzl was quite obsessive in his belief that a Jewish state was the only solution to anti-Semitism; this belief sustained him throughout years of loneliness, sickness, and loss of all his personal property (Elon 1975). The foundations of Gandhi’s faith, the power of truth (*satyagraha*), and the power of the spirit (*brhamcharia*)—expressed, among other things, in nonviolent resistance—were a constant source of tenacity in conditions of humiliation, incarceration, and loneliness (Chadha 1997).

This quality emerges as a major characteristic of leaders who have influenced people—having a clear message, idea, or vision, and adhering to it. But such a message or vision could characterize its bearers as prophets or philosophers and not necessarily as leaders if they did not possess the basic psychological elements that are necessary in order to turn the vision into acts of leadership. The first of these basic elements, self-confidence, is illustrated in a passage quoted by historian Doris Goodwin regarding President Franklin Roosevelt.

“I’ll tell you,” Franklin Roosevelt once told a friend during the toughest years of his presidency, “at night when I lay my head on my pillow, and I think of the

things that have come before me during the day and the decisions that I have made, I say to myself—well I have done the best I could and turn over and go to sleep.” With this simple story, Roosevelt provides the key to understanding his presidency, for no factor was more important to his leadership than his absolute confidence in himself. (Goodwin 1995, 13)

Psychological research on leadership refers to self-confidence as a major aspect (Bass 1985; Smith and Foti 1998). In the context of leadership, the more important components of self-confidence are internal locus of control and a high level of self-efficacy. Each of these is discussed below.

LOCUS OF CONTROL

The concept *locus of control* was first defined by Rotter (1966), and relates to the way in which people perceive their ability to control events. While those with an internal locus of control believe that they have the ability to control and influence events, those with an external locus of control believe that events are controlled by external factors (e.g., luck, fate).

Studies that examined this concept found it to be a personality variable rather than a situational one (Lefcourt 1966; Phares 1976). Individuals with an external locus of control were found to be characterized by conservatism, passivity, a lower level of personal responsibility, difficulty in coping with the environment, and a tendency to be defensive. Those with an internal locus of control, on the other hand, reveal independence, achievement orientation, diligence, resourcefulness, nonconformity, political awareness and involvement, and a high personal level of commitment and responsibility. In addition, they show more self-confidence in their ability to influence their environment, are better able to cope with stressful situations, tend to adopt more innovative and daring strategies, and in the end achieve higher performance than those with an external locus of control (Anderson 1977; Miller, Kets de Vries, and Toulouse 1982; Miller and Toulouse 1986; Howell and Avolio 1993).

Since leadership is active, resourceful functioning that aims to change the status quo, leaders clearly have to be imbued with unyielding belief

that it is possible to change direction and circumstances. Such belief does not exist without an internal locus of control.

SELF-EFFICACY

The concept of self-efficacy was developed at the end of the 1970s by Bandura, who defined it as the individual's belief in his/her ability to successfully perform the behaviors required in order to achieve an anticipated goal (Bandura 1977, 1995). This self-concept of the individual is formed in the context of behaviors, and develops gradually in an ongoing learning process, during which individuals acquire knowledge concerning their abilities, mainly from previous experiences and feedback from others. Gibbons (1986), for example, analyzed leaders' development from childhood to maturity through a series of personal interviews. It emerges from these studies that one of the significant factors in the development of the individual's leadership ability is his/her self-efficacy, which develops and evolves in the course of his/her lifetime through experiences of success. The importance of self-efficacy among leaders also stands out in a series of studies dealing with self-efficacy, intelligence, and leadership (Kotter 1990, 1996; Chan 1999; Smith & Foti 1998; Chemers 2002; Chemers, Watson, and May 2000; Chan and Drasgow 2001; Murphy 2002). The findings of these studies indicate not only the importance of individuals' belief in their own leadership ability, but also the relation between this belief and their growth as leaders.

It should be noted that although locus of control and self-efficacy may appear to be largely similar, they are associated with different psychological capacities. Locus of control relates to one's general expectations with regard to the source of causes and results in the world, while self-efficacy relates directly to behavior (Peterson and Stunkard 1992). However, both belong to the family of concepts dealing with self-control and self-confidence. Self-confidence in the sense described above is indeed vital for a leader, but it does not follow that people with self-confidence want to be leaders. The ambition to lead, change, and influence people and events

is therefore also a necessary condition for leadership. However, this, too, is not enough; leadership, unlike many other occupations, involves social interaction. Leaders need to have psychological capacities that are manifested in the quality of the relationships that they maintain with followers and colleagues, the trust they inspire, and the belief in the future that they radiate. In this context many characteristics are relevant, but the most important of them, in my opinion, are optimism and care for others. The reasons for the central importance of these characteristics are discussed below.

OPTIMISM

As mentioned, one of the major characteristics of leaders is their ability to present a vision, a future goal, or a new direction, and to inspire others to share the vision (Berson et al. 2001; Mumford and Strange 2002). In order to possess a consistent future orientation and formulate it in terms of a vision that people can pursue with faith and enthusiasm, a person must be optimistic in terms of positive expectations for the self, for others, and for society in general. A large body of research pertains to the association between an optimistic outlook and the capacity to present a vision and be enthusiastic about it (see Gillham 2000; Chang 2001). For example, a comparative study of optimists and pessimists conducted by Scheier and Carver (1985), which examined leaders' approach and behavior in connection with the achievement of desired aims, reported that optimists make much greater efforts to achieve their aims than do pessimists, who tend to display a higher degree of relinquishment and avoidance. In particular, Chemers, Watson, and May (2000) reported a positive association between optimism and leadership potential of cadets as rated by their military instructors.

Thus, optimism which is ingrained in the leaders' personality is not only a source of energy for themselves, but is also projected to the followers through the picture they present (e.g., "I have a dream"—Martin Luther King Jr.) and through the enthusiastic and persistent way in which they present it. However, history shows that the promise of a better future and sweeping optimism were presented not only by moral

leaders such as Gandhi but also by destructive ones such as Hitler. Therefore, this dimension does not discriminate with regard to the direction of leadership. In order to generalize it, we need to relate to another psychological-personality aspect—care for others.

CARE FOR OTHERS

The literature distinguishes between personalized and socialized charismatic leaders (House and Howell 1992). An analysis of the differences between these types of leaders indicates that the two types have different developmental biographies, which create different “life scenarios.” These life scenarios, which developmental psychologists call “internal working models” (see Berne 1972; Bowlby 1988; Popper 2000), affect the leader’s characteristic approach and behavior throughout his/her life. Personalized leaders, of whom an extreme example is Hitler, are characterized by an attitude toward others that springs from narcissism (House and Howell 1992; Popper 2001, 2002), that is to say, they use others as a source of self-aggrandizement. In contrast, socialized leaders, exemplified by Gandhi, are characterized by a developmental approach and moral values (Burns 1978; Bass 1985).

The unique quality of socialized leaders is thus summed up in the variable “care for others,” which is bound up with seeing the best in one’s fellow humans. Nelson Mandela’s forgivingness and acceptance of others (including those who threw him into jail) was part of his worldview. Although he thought that horrendous acts had been committed against blacks, and although he was aware of his supporters’ feelings of anger and desire for revenge, he insisted that they must “remember but forgive” (Sampson 1999, 528). This approach was manifested in terms of leadership in the establishment of the Truth and Reconciliation Commission, headed by Archbishop Tutu. This step created a psychological mechanism of public confession, of catharsis, which both gave the people a sense of justice being done and helped to contain the desire for revenge, thus freeing them from the past and enabling them to devote their efforts to the future. Acceptance and care for others was also the basis for the conception

of nonviolence shaped by Gandhi in the struggle to free his country. Psychological research indicates that empathy—the ability to enter into the feelings of others—is the foundation of moral and prosocial behaviors (Hoffman 2000). According to much psychological evidence, this capacity is formed when the early affective development includes elements of love, giving, and security. Indeed, this theme appears in the biographies of most of the outstanding socialized leaders in history and is absent from the account of the development of most of the destructive leaders (Popper 2000, 2001, 2002). Leadership literature mostly tends to describe outstanding leaders as a rare mixture of a “visionary” and a superb “doer”—a felicitous combination of “what and how.” However, scrutiny of the functioning of famous leaders shows that their uniqueness is not necessarily in their specific ability to implement ideas. What is unique to leaders, certainly to the most outstanding of them, is their creation of a spirit that binds their message to the daily performance of the many people influenced by it. This is how Sam Rosenman, one of Roosevelt’s aides, described the American leaders coming out of the president’s office after discussions during the troubled times of World War II: “And I always remember their calm, determined faces, and I always felt certain that a great deal of that calm confidence and firm determination were reflections of the spirit of the man whom they had just left” (Goodwin 1995, 16–17).

The spirit radiated by such leaders both points toward a better future and brings out people’s talents and skills to perform at the highest level. The leaders do not always do this consciously, but their presence causes the people to do their best and demonstrate the more optimistic sides of their personality. They make people want not only to do more but in some cases also to be more. This emotional effect cannot be created without certain psychological substructures, of which the major ones (though not the only ones) were discussed in this article.

PUBLIC HEALTH

In 1988, the U.S. Institute of Medicine defined public health as what society does collectively to assure the conditions in which people can be healthy. Public health is the science of promoting good physical and mental health and preventing disease, injury, and disability, with the goal being healthy populations living in healthy communities. The system of communities, government agencies, nonprofit organizations, and other bodies that work toward that goal is a complex network of private and public entities with competing priorities, interests, and motivations. It is much broader than a health care system that treats individuals with illness or injuries. Public health systems must protect whole populations from disease and injury and must promote the behaviors

and environmental conditions that make communities most healthy.

Sometime after the Institute of Medicine came up with the core functions of governmental public health, ten “essential public health services” were developed and adopted by Fall 1994 to further delineate the actual activities that are conducted by an effective public health system. An effective public health system:

- Monitors the community’s health status to identify community health problems
- Diagnoses and investigates community health problems and health hazards
- Informs and educates people about health issues, thereby empowering them
- Mobilizes community partnerships that can identify and solve health problems
- Develops policies and plans that support individual and community health efforts
- Enforces laws and regulations that protect health and ensure safety
- Links people to needed health services and assures the provision of health care when it might otherwise be unavailable
- Ensures a competent workforce in both public health and personal health care
- Evaluates the effectiveness, accessibility, and quality of personal and population-based health services
- Searches for new insights and innovative solutions to health problems

The 1988 Institute of Medicine report also noted that public health systems in the United States lacked evidence of planning for public health leadership to meet the demands of the future. The report suggested that the public health leaders of the future would need to possess a wide range of characteristics and skills to meet increasingly complex challenges in public health.

NEW WAYS OF WORKING IN PUBLIC

Ensuring the health of the public is more complex at the beginning of the twenty-first century than it was

at the beginning of the twentieth, when the leading causes of disease and death were infectious agents and when improvements could be brought about by improving sanitation and developing vaccines. In 1900, global travel of humans and, therefore, of the bacteria that make them sick was slower and more limited. In those days, leadership in public health often came in the form of scientists who specialized in microbiology and vaccine development or in containing the spread of disease to a single neighborhood or community.

In the early 2000s, by contrast, the leading causes of death and disease in the United States are not infectious agents but are chronic diseases rooted in poverty, environmental degradation, and unhealthy lifestyles. Promoting healthy communities in the twenty-first century requires the ability to respond to complex challenges that cross the boundaries of science, medicine, religion, community development, politics, and the environment. Consider, for example, the challenge of addressing the problem of obesity in the United States, where it is considered to be at epidemic levels and is of particular concern among children. This is not a health issue that can be addressed with an injection or a regulation. Public health researchers have found obesity to be related to factors of poverty, race and ethnicity, lifestyle, occupation, environment, advertising, and genetics. Reducing obesity, therefore, requires a broad look at what needs to be changed and who needs to participate to ensure the change happens. Participation from among the broad groups of people and agencies that can impact these factors requires collaboration.

To take another example of a current public health problem, asthma is a chronic medical condition that has a strong relationship to housing, air quality, genetics, lifestyle, and access to treatment services. It affects certain population groups more adversely than others. Today incidence of asthma is greatly increasing. As a result, public health leaders and communities choosing to focus their efforts on stopping this increase in disease and reducing its burden on specific populations have to consider the many factors that relate to high rates of asthma. Creating a change requires involvement from a wide variety of people and agencies that understand and

can advocate for conditions that will improve people's health.

It is through the collaboration of a wide variety of people and agencies that true, long-term change can be made that will address the twenty-first century's complex public health problems. Effectively leading collaborations to bring about change is an entirely different kind of leadership than that which solves a problem through the direct application of an individual's expertise.

A DEFINITION OF COLLABORATIVE LEADERSHIP

A collaborative form of leadership is different from more traditional styles of leadership, in which an expert leads and others follow. While there are a variety of types of leadership, in most cases leadership styles describe how one addresses an issue or follows a process for decision making and for achieving change. The most common leadership approaches describe how leaders work with others. Do they approach decision making from a command-and-control perspective, focusing power in a few (or one) individuals and then dictating change? Are they more comfortable with "soft" leadership, which allows different groups to take the lead and initiate change depending on the circumstances? A critical step in understanding leadership, particularly collaborative leadership, is focusing on how individuals or organizations work together for a common goal. A better understanding of collaboration helps to distinguish the elements that must be present in leaders to make a collaborative leadership approach.

Arthur T. Himmelman, a group facilitation and leadership consultant, believes that all individuals and groups interact on a developmental continuum. The first stage of interaction is called networking; at this stage people exchange information for mutual benefit. The information from these meetings may be interesting; however, the interaction does not require specific follow-up action. Individuals and groups may also interact according to the next stage of the continuum, coordinating, which adds to the basic networking definition the notion of altering activities to achieve a common purpose. At this stage an organization may take information gleaned in the net-

working stage and make decisions about their participation or approach to solving a problem. Still, at this stage all decisions about what an individual organization remain internal and are not shared with other groups. If individuals and groups begin to share resources, they have moved on to the cooperating stage. At that point, organizations may choose to pool resources to accomplish a shared goal. The final stage of interaction is collaboration. Very few groups achieve this level of interaction, which is characterized by the exchange of information, alteration of activities, sharing of resources, and enhancement of others for mutual benefit and to achieve a common purpose. When groups are truly collaborating, they share information about internal priorities, they pool resources, and they think first of the common good as opposed to their own interests.

The benefit of collaboration is greater input throughout the decision-making process. The greater the number of people or organizations that have input in decision-making, the greater the number that become committed to the outcome and results. Furthermore, an initial experience in effective collaboration within a community or group theoretically makes future collaborative activities easier.

It takes special skills to shepherd a group through the developmental continuum to collaborative action. Collaborative leadership is apparent in those who inspire commitment and action, lead as peer problem solvers, build broad-based involvement, and sustain hope and participation. Based on the research of leadership experts and the public health practice community, the Turning Point Leadership Development National Excellence Collaborative identified a number of core collaborative leadership capacities in 2001. This National Excellence Collaborative, funded by the Robert Wood Johnson Foundation and made up of public health practitioners from around the country, has worked to define, describe, and build the skills of collaborative leadership among those who participate in public health work.

ELEMENTS OF COLLABORATIVE LEADERSHIP

Clearly there are a number of critical skills and capacities collaborative leaders should possess.

Many are not necessarily unique to a collaborative form of leadership and have already been described in the literature and developed into training curricula. The work of the Turning Point Leadership Development National Excellence Collaborative, however, has identified six key elements that are unique to the practice of leading a collaborative process. The key elements were identified through an exhaustive literature review; convening two panels of experts from academia, foundations, as well as federal, state, and local representatives; and a series of key informant interviews with a diverse group of practitioners. The six key elements are the following:

- *Developing clarity.* This is the visioning and mobilizing element; it includes defining shared values and engaging people in positive action.
- *Developing trust and creating safety.* This element includes the creation of safe places for developing shared purpose and action.
- *Sharing power and influence.* This element focuses on developing the synergy of people, organizations, and communities to accomplish more.
- *Assessing the environment for collaboration.* This element requires that one understand the context for change before acting.
- *Engaging in self-reflection and personal continuous quality improvement.* This element entails understanding your own leadership, and engaging others in providing feedback on your leadership style.
- *Developing people.* This is the mentoring and coaching element, which involves committing to the development of people as your key asset.

Each one of these elements is important for the collaborative process; each enhances and supports the others. Together, the elements provide a comprehensive picture of the essential skills of a collaborative leader. Having clarity of values is a quality that characterizes collaborative leaders. Collaborative leaders seem to exhibit clarity of purpose, whether it derives from commitment to a cause that transcends the self, from the recognition of a spiritual reality or imperative, or from ethical and moral standards that provide guidance. “Visioning and mobilizing”

describes the process, or the way of doing things. Often *mobilizing* refers specifically to helping people develop the confidence to take action and sustain their energies through difficult times.

The capacity to promote and sustain trust is often overlooked in the collaborative process. Leaders sometimes believe that once individuals or groups are gathered together, then a plan can naturally be made and commitment obtained. If a collaborative leader fails to engender trust among participants, however, their involvement will wane and the best ideas and innovative approaches will not be shared.

The capacity to share power and influence is an uncommon trait among leaders. U.S. society traditionally rewards individual achievement, but collaboration is often what is required to solve complex problems. In a successful, visible response to a public health problem, it is sometimes just the head of an organization who receives the public accolades, but an effective response will have likely involved a large team of people with a wide range of experience who have shared in the decision making and brought their influence and expertise to bear on the problem.

Collaborative leadership also requires assessing the environment. The capacity to recognize common interests and the capacity to recognize and understand other perspectives are fundamental for collaborative leadership. When people bring different points of views to an issue or problem, a collaborative leader attempts to facilitate connections and encourage group thinking that identifies clear, beneficial change for all participants.

Collaborative leaders must be personally mature. In order to be successful leading a collaborative process, individuals need to engage in self-reflection. At critical junctures in the collaborative process, it is essential for members to consider their behavior, attitudes, and verbal or nonverbal communication. Collaborative leaders need to assess the impact their actions and words have on the group's progress. The ability to recognize one's impact and adjust one's behavior accordingly separates good collaborative leaders from great ones.

A genuine concern for developing people, bringing out the best in others, maximizing the use of other people's talents and resources, building power

through sharing power, and giving up ownership or control are themes that relate to realizing and promoting the potential present in others, which is the final element in collaborative leadership.

WHEN COLLABORATIVE LEADERSHIP IS THE BEST STYLE OF LEADERSHIP

The scholars Ronald Heifetz and Riley Sinder examined and categorized various types of problems that decision makers face. Type I problems are the least complex in terms of the varied systems involved: Both the problem and the solution are clear in Type I problems. Heifetz and Sinder theorize that these sorts of problems can be adequately solved by "expert leaders." In the field of public health, an example of a Type I problem might be responding to a communicable disease outbreak in a community. In this instance, the leader charged with handling the problem will likely be a specialist in infectious diseases. His or her role might be to communicate the necessity for treatment and immunity and to design a process to deliver vaccinations. Type II problems are more complicated: While the problem is clear, the solution is not. Such problems, contend Heifetz and Sinder, benefit when a group or multiple stakeholders work on them; the leader diagnoses the problem and facilitates the group's work. An example of a Type II problem in public health includes a leaking hazardous waste site. It might pose a clear problem, but the potential solutions may involve additional risks or prohibitive costs. With Type III problems, neither the root of the problem nor the solution is clear. Heifetz and Sinder indicate that such problems are best solved by a group or by multiple stakeholders; the leader plays a supportive role. He or she catalyzes the group, manages the pace of the group's work, helps the group maintain focus, builds working relationships and trust, and strives for consensus whenever possible. Typical Type III problems in public health include AIDS, teenage pregnancy, and violence. No one individual, agency, or organizational sector can address these problems on their own, but diverse perspectives working together can identify and implement creative, effective, and acceptable change.

PRACTICING PUBLIC HEALTH COLLABORATIVELY

The 1988 Institute of Medicine report described earlier stressed that public health leadership needed to be actively cultivated and nurtured. As a result of its findings, leadership programs related to public health developed across the United States and are teaching principles of public health leadership. A specific Leadership Competency Framework for public health has also been delineated and described in the literature. This framework, described in *Public Health Leadership: Putting Principles into Practice* (2000), by Louis Rowitz, broadly delineates the competencies an effective public health leader must have, many of which relate to the ability to collaborate. The framework is used as a guide for training new and emerging leaders in public health; it assumes that leadership can be taught and grown.

The qualities of collaborative leadership need not be considered inherent characteristics found only in a rare few. Rather, collaborative leadership can be shared and taught through mentorship and training. The Turning Point Leadership Development National Excellence Collaborative, for example, has developed curricula and training materials designed to nurture collaborative skills in emerging leaders. This group and others like it have taken on the challenge of developing the qualities needed in the new millennium for working together to solve complex problems and create healthier communities.

PUEBLO REVOLT

The Pueblo Revolt of 1680 was a successful endeavor by Pueblo Indians, who were organized and led by Popé (c. 1630–c. 1690), in New Mexico to expel the Spaniards from northern New Mexico. The Pueblo Indians not only disposed of the Spaniards, they also rid themselves of Spanish culture and religion. When the Spaniards did retake the colony in 1692 to 1693, the missionaries, government officials, and civil settlers treated the Pueblo Indians less harshly for the remainder of the colonial period.

EARLY SPANISH-PUEBLO CONTACTS

Early Spanish interest in New Mexico was centered upon finding gold and riches in the area. Some of the earliest Spanish encounters with Pueblo Indians in New Mexico occurred in 1539 when the Franciscan missionary Fray Marcos de Niza (?–c. 1558) led an expedition in which Esteban or Estevánico (c. 1503–1539), a black man who had survived a shipwreck and wandered through Texas with Alvar Nuñez Cabeza de Vaca (c. 1490–1557), moved ahead of the group and sent back messages concerning his findings. Esteban told of wonderful riches in the lands of the Pueblos, but the Zuni people of Hawikuh killed him. Fray Marcos then had to turn back after seeing the Zuni pueblo from a distance. His reports prompted Francisco Vásquez de Coronado (c. 1510–1554) in 1540 to lead an expedition

into New Mexico and other areas north of present-day Mexico. The Coronado expedition took by force the supplies they needed from Pueblo Indians, fostering some resentment that would influence later contacts with the Indians. In 1581, Fray Agustín Rodríguez (?–1582) and Captain Francisco Sánchez Chamuscado (c. 1512–1582) ventured into New Mexico, where some Pueblo Indians fled upon hearing of the approach of the Spaniards. The early Spanish expeditions into Pueblo lands did not yield riches and led to Indian mistrust of the Spaniards.

THE EARLY SPANISH SETTLEMENTS IN NEW MEXICO

In 1598, Juan de Oñate (c. 1552–1626) traveled to New Mexico with settlers to found the colony of New Mexico for Spain. They settled in towns already inhabited by Pueblo Indians. Spaniards referred to the Indians as Pueblo Indians because they lived in sedentary towns or pueblos. These Pueblo Indians were quite diverse, speaking different languages and dialects. The Franciscan missionaries worked to convert the Pueblos to Christianity and to eliminate native religion. They required Indians to attend Catholic mass every morning, and punished those who did not. The missionaries also collected and destroyed native religious articles. They whipped those who continued to practice native religion. Some Indians continued to practice their own religion and were somewhat protected by their outnumbering of the Spaniards in New Mexico during the seventeenth century. Also, communication problems developed as missionaries did not learn the native languages.

Spanish settlers and officials forced the Indians to labor and to pay tribute in both food and clothing as part of the *encomienda* system. The tribute of maize was especially difficult for the Indians who lived in an arid environment where periodic droughts occurred. The Pueblos had developed a system of storing maize to help them to survive these droughts, but the Spanish demands destroyed their surplus. This increased Pueblo reliance on the Spanish for food.

Though some small-scale revolts and individual acts of defiance occurred, the Pueblos lived with the Spanish settlers for almost a century. The Spanish

presence in New Mexico divided the Pueblo Indians over issues such as accepting Spanish religion and culture. Additionally, the Indians knew that rebellion would be met with horrible punishments as in the past. For example, when the people of the Acoma pueblo attacked several Spanish soldiers, Juan de Oñate reacted by attacking the pueblo, killing around eight hundred Indians, and amputating the right foot of every man over twenty-five years of age. Also, the Spanish helped the Pueblo Indians defend against nomadic, raiding Indians such as the Apaches and Navajos. Some Pueblo Indians chose to resist by fleeing to outlying pueblos such as Jémez that were located on the edges of the Spanish colonies or joining nomadic Indian groups such as the Apaches.

The Spaniards were not a united group throughout the seventeenth century as religious and government officials quarreled for power and control over Indian labor. These disputes led members of the Franciscan Catholic religious order to order four governors arrested and three excommunicated during the seventeenth century. In these cases, the missionaries needed the support of the local settlers to successfully oppose the government leaders. This allowed the Pueblo Indians to play one Spanish power off of another and to receive concessions such as being allowed to practice native dances or lessening tribute requirements.

THE PUEBLO REVOLT AND POPÉ

In the late 1600s, the pueblos faced many problems besides the labor and spiritual demands that the Spaniards placed upon the Indians. Decades of drought in the 1660s and 1670s caused crop failure, loss of livestock, and famine. Apache and Navajo Indians, also harmed by the drought, increased their raiding on Pueblos to procure food and resources. Before the arrival of the Spaniards, Apaches and Navajos had traded with the Pueblos, but tribute to the Spanish had reduced the items that Pueblos had available for trade, exacerbating relations between the Pueblos and Apaches and Navajos. Also, the Spanish brought horses and livestock that became targets for raids. By converting to Christianity and living with the Spanish, some Pueblo Indians became hated by

Selection from the Letter of the Governor and Captain-General, Don Antonio de Otermin, from New Mexico Concerning the Pueblo Revolt of 1680

MY VERY REVEREND FATHER, Sir, and friend, most beloved Fray Francisco de Ayeta: The time has come when, with tears in my eyes and deep sorrow in my heart, I commence to give an account of the lamentable tragedy, such as has never before happened in the world, which has occurred in this miserable kingdom and holy custodia, His divine Majesty having thus permitted it because of my grievous sins. Before beginning my narration, I desire, as one obligated and grateful, to give your reverence the thanks due for the demonstrations of affection and kindness which you have given in your solicitude in ascertaining and inquiring for definite notices about both my life and those of the rest in this miserable kingdom, in the midst of persistent reports which had been circulated of the deaths of myself and the others, and for sparing neither any kind of effort nor large expenditures. For this, only Heaven can reward your reverence, though I do not doubt that his Majesty (may God keep him) will do so.

After I sent my last letter to your reverence by the *maese de campo*, Pedro de Leiva, while the necessary things were being made ready alike for the escort and in the way of provisions, for the most expeditious dispatch of the returning wagons and their guards, as your reverence had enjoined me, I received information that a plot for a general uprising of the Christian Indians was being formed and was spreading rapidly. This was wholly contrary to the existing peace and tranquility in this miserable kingdom, not only among the Spaniards and natives, but even on the part of the heathen enemy, for it had been a long time since they

had done us any considerable damage. It was my misfortune that I learned of it on the eve of the day set for the beginning of the said uprising, and though I immediately, at that instant, notified the lieutenant general on the lower river and all the other *alcaldes mayores*—so that they could take every care and precaution against whatever might occur, and so that they could make every effort to guard and protect the religious ministers and the temples—the cunning and cleverness of the rebels were such, and so great, that my efforts were of little avail. To this was added a certain degree of negligence by reason of the report of the uprising not having been given entire credence, as is apparent from the ease with which they captured and killed both those who were escorting some of the religious, as well as some citizens in their houses, and, particularly, in the efforts that they made to prevent my orders to the lieutenant general passing through. This was the place where most of the forces of the kingdom were, and from which I could expect some help, but of three orders which I sent to the said lieutenant general, not one reached his hands. The first messenger was killed and the others did not pass beyond Santo Domingo, because of their having encountered on the road the certain notice of the deaths of the religious who were in that convent, and of the *alcalde mayor*, some other guards, and six more Spaniards whom they captured on that road. Added to this is the situation of this kingdom which, as your reverence is aware, makes it so easy for the said [Indian] rebels to carry out their evil designs, for it is entirely composed of *estancias*, quite distant from one another.

the Apaches and Navajos who rejected the Spaniards and their ways. The Pueblos had viewed military protection by the Spanish from Apaches and Navajos as a major reason to work with the Spanish and convert to Christianity, but this reason disappeared, as the Spanish were no longer capable of protecting the Pueblos from the raiding Indians. In 1670, the Spanish could put forth only 170 soldiers to defend New Mexico, and the Indian allies' numbers were weak from disease and famine. Since the arrival of the Spaniards, diseases had decimated the Pueblos,

adding to their problems. By 1675, Indians had abandoned six pueblos. The new governor Juan Francisco Treviño, who was in office from 1675 to 1677, forbade gatherings in *kivas* (Pueblo religious underground rooms) and ordered many of them destroyed. This was probably the worst religious persecution yet seen by the Pueblos. By 1680, many of the Pueblo Indians had given up on Christianity since it had failed to remedy their problems, and returned to their native religion. They were primed for revolt.

A San Juan Pueblo Indian and medicine man

named Popé coordinated most of the Pueblos, who had their own leaders, in the attack. Popé had lived at San Juan pueblo, but moved to Taos pueblo after he had been whipped for practicing his native religion. Stories claiming that Popé talked with several Pueblo gods, who urged him to lead a revolt against the Spaniards, began to reach other pueblos. Popé had excellent organizational skills and was a charismatic leader, and he espoused a form of millenarianism that appealed to the suffering Pueblo Indians at the time. He promised that ousting and killing the Spaniards, and returning to their native Pueblo religion would bring the Indians wonderful crops and end their tribulations. This message mixed some of the teachings of Christianity with native Pueblo religion. Popé met several times with the Indian leaders of the pueblos of Taos, Picuris, San Lorenzo, Santo Domingo, Jémez, and Pecos. Also included were mestizo (people of Spanish-Indian ancestry) leaders from the Santa Clara, San Ildefonso, and Tesuque pueblos. Popé organized this revolt with the utmost secrecy. When Popé met with these leaders, they did so on saints' feast days so that their gatherings would not be noticed.

Popé's plan had runners delivering strings containing several knots to each of the participating Pueblos on 9 August 1680. Each day one knot was to be untied until the final knot was undone on 11 August 1680, which was the planned day of the offensive. Popé chose this day because he wanted to attack the Spanish before their supply caravan arrived, when they would be at their weakest. The revolt actually began on the previous day, 10 August 1680, because several leaders from San Marcos, San Cristóbal, and La Ciénega decided not to participate in the revolt and divulged the plan to the Spaniards, so Popé and the rebels moved up the date of the attack. The revolt was so well organized that beginning the assault early did not cause a major problem for the Indians. In the first stage of the attack, Pueblo Indians stole or destroyed the Spaniards' horses so they could not fight on horseback or communicate quickly with other settlers. Then, the Pueblos cut off the northern settlements from the southern ones. Pueblo Indians were aided in the revolt by some Apaches who fought with them against the Spanish. Popé's organi-

zational skills not only helped to coordinate most of the Pueblos, but also extended to recruiting allies among other Indian groups.

The Indians attacked both settlers and missionaries, but the Pueblos largely directed their anger towards the religious people and objects. The Indians destroyed churches and religious items and killed twenty-one of the thirty-three missionaries in New Mexico. About 400 of 2,500 settlers lost their lives as well. The Indians gave up Spanish clothing, language, and names in a rejection of Spanish ways. Spanish survivors fled to Isleta pueblo, which did not join the revolt, and Santa Fe. On 14 September 1680, the Spaniards and many Indians continued to flee to El Paso, while those in Santa Fe stayed to fight. After a nine-day siege where the Pueblo Indians cut off food and water supplies to the Spanish, the Spaniards made one last attack, which momentarily stunned the Indians and allowed the Spanish to flee Santa Fe for El Paso on 21 September 1680. The Indian rebels had succeeded in ridding their Pueblos of Spaniards and their religion and culture.

LEGACY OF THE REVOLT

The Spanish did not immediately plan a reconquest of New Mexico; in fact, they still felt vulnerable in El Paso where they feared that the Manso, Jano, and Suma Pueblos might revolt as well. In November 1681, the Spanish reentered New Mexico where they were welcomed at Isleta pueblo, but faced opposition elsewhere, leading to the withdrawal of the Spanish force. The residents of the Isleta pueblo returned to El Paso with the Spaniards because they felt vulnerable to attacks by other Indians for having cooperated with the Spanish. Captives related that the Pueblos had rejected Christianity and Spanish ways by not speaking Spanish and giving up Christian spouses. The Pueblos' unity fell apart for various reasons. For one, Popé lost favor as he began to demand heavy tributes and forbade the planting of any seeds brought by the Spanish. By late 1681, Popé had been ousted in a coup. Disease and raiding by Apaches and Navajos continued to cause hardships for the Pueblos as well. The Pueblos maintained control of northern New Mexico for about a decade before

Diego de Vargas (1643–1704) led the reconquest from El Paso in 1692 to 1693. De Vargas realized that Pueblo unity had disintegrated, and he took advantage of the conflicts. De Vargas did face resistance, but by 30 December 1693, the Spanish had retaken Santa Fe. Though there were some small revolts in the following years, the Spaniards remained in New Mexico, but did improve their treatment of the Pueblo Indians. They lessened tribute requirements, and the missionaries allowed the Indians more religious freedom and lessened punishments. The Pueblo Revolt was one of a string of revolts among Native Americans in northern New Spain from Coahuila to Sonora, but it was the largest and most successful, changing the ways that the Spaniards and Indians lived together in the colony of New Mexico throughout the rest of Spain's rule.

QUALITATIVE METHODS

Leadership scholars seeking to answer questions about culture and meaning have found experimental and quantitative methods to be insufficient to explain the phenomena the scholars wish to study. As a result, qualitative methods have gained momentum as a mode of inquiry. These methods have roots in the development of one of the latest waves of leadership scholarship, the New Leadership school (Conger, 1999; Hunt, 1999), in the recent emergence of an approach to leadership that views leadership as a relational phenomenon (Fletcher, 2002), and in the increased recognition of the strengths of qualitative methods generally.

Educational psychologist Gary Shank defines *qualitative research* as “a form of systematic empirical inquiry into meaning” (Shank 2002, 5). By “systematic,” he means “planned, ordered and public,” following rules agreed upon by members of the qualitative research community. By “empirical” he means that this type of inquiry is grounded in the world of experience. By “inquiry into meaning” he means researchers try to understand how others make sense of their experience. Sociologist Norman Denzin and educational philosopher Yvonna Lincoln, editors of the *Handbook of Qualitative Research*, claim that qualitative research involves an *interpretive and naturalistic* approach: “This means

that qualitative researchers study things in their natural settings, attempting to make sense of, or to interpret, phenomena in terms of the meanings people bring to them” (Denzin and Lincoln 2000, 3).

The advantages of using qualitative methods in leadership research include the following (Conger, 1998; Bryman and associates, 1988; Alvesson, 1996):

- Flexibility to follow unexpected ideas during research and to explore processes effectively
- Sensitivity to contextual factors
- Ability to study symbolic dimensions and social meaning
- Increased opportunities (a) to develop empirically supported new ideas and theories; (b) for explorations of leadership phenomena that are in-depth and conducted over time; (c) for more relevance and interest for practitioners

THE CONTRIBUTION OF QUALITATIVE DESIGNS

Scholars studying leaders who produce significant change (transformational leadership scholars) attend to the management of meaning as an important dimension of leadership (Calás and Smircich, 1991; Yukl, 1994, 1999; Meindl and associates, 1986). Contemporary leadership scholars interested in charisma (neocharismatic scholars) view it as a

Empirical Research Practices in Leadership Research

Empirical research practices on leadership studies can be categorized by how researchers combine, at the methods level, qualitative and quantitative data with qualitative and quantitative analysis (Parry, 1998). Practices fall within the following categories:

1. *Quantitative analysis of quantitative data.* This is the traditional practice in leadership research, with surveys and experiments as the most favored methods. Quantitative practices usually reflect a positivist stance to inquiry.
2. *Quantitative analysis of qualitative data.* This is the preferred qualitative practice in leadership research, with content analysis of text as the most favored method. This practice may reflect a positivist or a post-positivist stance to inquiry.
3. *Qualitative analysis of quantitative data.* This practice is not used in the leadership field but has potential (e.g., using ethno-statistics or discourse analysis to deconstruct quantitative leadership studies). This practice would reflect an interpretivist and postmodernist stance to inquiry.
4. *Qualitative analysis of qualitative data.* In this practice qualitative research stands on its own. This “pure” type has taken many different forms in leadership research. This practice may include both a post-positivist stance (grounded theory, traditional ethnography, and case studies) and an interpretivist stance (phenomenological life stories, narrative inquiry, and action research) to inquiry.
5. *Qualitative and quantitative data and analysis.* While not used consistently, some efforts to mix methods have developed in the leadership literature. Because the quantitative component drives the research, this practice reflects a post-positivist stance.

social phenomenon that requires in-depth examination of context and actors over time. Leadership expert Jay Conger argues that quantitative methods alone cannot produce a good understanding of leadership, given “the extreme and enduring complexity of the leadership phenomenon itself” (Conger 1998, 108). Leadership involves multiple levels of phenomena, possesses a dynamic character, and has a symbolic component, elements better addressed with qualitative methods, he argues. Likewise, favoring a method to generate theory from the analysis of raw data (grounded theory), management expert Ken Parry (1998) claims that quantitative methods are insufficient to theorize successfully about the nature

of leadership, understood as a social influence process.

The high sensitivity of leadership to context is well established in the literature. Quantitative researchers include in their models variables that explore the impact of context, but these are so abstract (i.e., “task structure” or “position power”) that it is difficult to understand how they operate in the world. Qualitative researchers are well positioned to open this “black box.” Qualitative studies about circumstances associated with organizational types or occupational settings have provided new insights into the dynamics of leadership (Bryman and associates, 1996). Some New Leadership scholars have also used a mixed approach to understand contextual variables such as culture. For example, in their international research program, professor of organizational studies and management Robert J. House and his associates use both methods to study leadership in 170 countries (House and associates, 1999). Others argue for process-focused studies to better understand the *hows* and *whys* of transformational and charismatic leadership (Bass, 1995;

Lowe and Gardner, 2001).

Sociologist Alan Bryman (1986), associate editor for qualitative research in the *Leadership Quarterly*, identifies two forms of qualitative research in the New Leadership literature. One form distills lessons from portraits of successful leaders to illustrate particular ideas. The other form, more “academic,” explores several research designs: case studies using participant observation, semistructured interviewing, and document analysis; multiple case study design, adding comparative analysis; and interview studies asking leaders about their practices and orientations or inviting individuals to discuss other leaders or leadership practices (Bryman and associates, 1996). Other qual-

itative designs found in the literature include ethnography (cultural studies), narrative inquiry (collection and analysis of stories), action research, and grounded theory (Tierney, 1996; Huxham and Vangen, 2000; Parry, 1998).

Contemporary emergent approaches view leadership as a meaning-making process in communities of practice (Drath, 2001) or as a set of functions and relationships distributed rather than concentrated around a single individual (Pearce and Conger, 2002). These new theoretical approaches call for qualitative designs. For example, education scholar Peter Gronn's (1999) study of a famous school in the mountains of Australia explored the relational dynamics between two leaders credited for this school's success. Analyzing correspondence, school council records, alumni files, archival material, and newspapers, he shifted the unit of analysis away from individual leaders to consider collective forms of leadership.

THE NATURE OF QUALITATIVE METHODS

Although quantitative methods and qualitative methods represent two legitimate ways to investigate leadership, researchers using one or the other tackle empirical research differently. Management experts Roger Evered and Meryl Reiss Louis (1981) clarify the assumptions that ground each type by distinguishing two research stances: "inquiry from the outside," often implemented via quantitative studies, and "inquiry from the inside," implemented via qualitative studies.

These stances differ in the degree of the researcher's immersion in terms of experiential engagement, direct contact with the subjects, and physical involvement in the setting. In the "inside" or qualitative approach, the researcher aims for a holistic picture from historically unique situations, where idiosyncrasies are important for meaning. The researcher uses an inductive mode (building theory from observations), letting the data speak. In contrast, traditional "outside" or quantitative researchers aim to isolate the phenomenon, to reduce the level of complexity in the analysis, and to test hypotheses derived previously.

Shank uses two metaphors to differentiate these two ways of "seeing" in research. One metaphor is the "window" to look through to get an accurate view of a subject. Microscopes are windows that help to do inquiry from the outside. The researcher tries to correct for smudges (to avoid bias) or to clarify in what ways the window is flawed (to identify error). This metaphor corresponds to mainstream leadership research and requires simplification and standardization of complex observations. In contrast to the window, the "lantern" metaphor helps "shed light in dark corners" (Shank 2002, 11). This metaphor characterizes qualitative researchers as "discoverers and reconcilers of meaning where no meaning has been clearly understood before" (Shank 2002, 11).

The approaches to inquiry described as the window—inquiry from the outside and, by extension, quantitative research—are best known as "logical positivism" and "postpositivism." The approaches to inquiry described as the lantern—inquiry from the inside and qualitative research—represent an approach known as "interpretivism" (Crotty, 1998; Denzin and Lincoln, 2000). Historically, the strong hold of quantitative methodologies in leadership studies can be explained by the dominance of the fields of social psychology and organizational behavior, which have been highly influenced by positivism (House and Aditya, 1977, 1996; Parry, 1998; Podsakoff, 1994).

A VARIETY OF INTERPRETIVE COMMUNITIES

All qualitative researchers aspire to illuminate social meaning. However, some use qualitative methods exclusively, others use them to complement or better interpret numerical data, and others use them to generate hypotheses to be tested in future quantitative studies. Choices and practices fall along a continuum, on which some researchers are closer to positivism and others are distanced radically from it. Between the poles is a continuum of qualitative traditions that stands on its own. Different traditions represent different "interpretive communities" (Denzin and Lincoln, 2000).

Close to positivists, postpositivists accept the limits of positivism, talk about probability rather than cer-

Reasons to Use Qualitative Research

1. To explore a phenomenon that has not been studied before (and that may be subsequently developed quantitatively).
2. To add rich detail and nuance that illustrates or documents existing knowledge of a phenomenon, generated quantitatively.
3. To better understand a topic by studying it simultaneously (triangulation) or concurrently with both methods (mixing quantitative and qualitative methods at the same time or in cycles, depending on the problem).
4. To advance a novel perspective of a phenomenon well studied quantitatively but not well understood because of the narrow perspectives used before.
5. To try to “understand” any social phenomenon from the perspective of the actors involved, rather than explaining it (unsuccessfully) from the outside.
6. To understand complex phenomena that are difficult or impossible to approach or to capture quantitatively.
7. To understand any phenomenon in its complexity, or one that has been dismissed by mainstream research because of the difficulties to study it, or that has been discarded as irrelevant, or that has been studied as if only one point of view about it was real.

Scholars inclined toward the postpositivist side of the qualitative continuum favor the first four reasons. They see qualitative research as an inductive approach to develop theories that then must be tested deductively via quantitative models. Scholars inclined toward the postmodernist side favor the last four reasons. They see qualitative research as an approach to inquiry that stands on its own and best allows a researcher to attain, in a manner of speaking, “a glimpse of the world.”

tainty, and consider the limits of objectivity (Crotty, 1998). For them, qualitative methods become an important complement to quantitative methods when numbers are not sufficient to understand what is being studied. At the opposite pole of the continuum is postmodernism, seeking to replace positivism with inquiry stances that capture multiple voices and per-

spectives in local contexts. Postmodernists assume that theories provide only partial views of their objects and that every representation of the world is filtered through history and language and thus cannot be neutral (Best and Kellner, 1991). In contrast to the realism of postpositivists, postmodernists explore how language, power, and history shape human views of reality, truth, and knowledge, aiming to uncover multiple realities. Postmodernists favor critical methods that are intrinsically qualitative.

New Leadership qualitative scholars tend to embrace postpositivism and use qualitative methods to complement or extend quantitative findings. Scholars from emergent perspectives of leadership, often characterized by postmodernist sensibilities, view qualitative inquiry as the way to frame and address questions that cannot be answered by quantification.

Examples of qualitative studies anchored in postpositivism abound. Conger (1992) studied leadership development programs in the United States by joining training programs as an actual participant, supplementing participant observation with extensive interviewing. He found four instructional frameworks and explored how each influenced participant and program outcomes as well as the implications for training. He argued that had he used a traditional survey, he would have missed differences entirely.

Bryman and his colleagues (1996) studied transformational leadership in the British police service. They conducted semistructured interviews with police officers and chief inspectors (middle managers), exploring the concept of transformational leadership. Highlighting context and the actors’ perspectives in research, they attributed the unexpected finding that charisma was less prominent than instrumental leadership (managing and solving problems) to conditions of public service in the United Kingdom at the time of the study.

A postmodernist approach to leadership research is in its early stages. Rejecting the search for a “grand” theory of leadership, management scholar Mats Alvesson (1996) invites researchers to take seriously the ambiguity of “leadership” itself. Knowledge about leadership cannot emerge through fixed procedures organized to arrive at abstract conclu-

sions, he argues. Researchers must create more open forms of inquiry, focus on local patterns, and acknowledge that meaning is jointly constructed with participants. Likewise, education scholar William G. Tierney (1996) discusses five tenets of postmodernism (culture and difference, language and meaning, individual constraints and possibilities, power and politics, and subjectivity and objectivity) and their implications for research on leadership.

Located in the middle of the qualitative continuum, public management researchers Chris Huxham and Siv Vangen (2000) used an action-research project about community-based partnerships in Scotland to explore the role that leadership plays in collaboration. Drawing from work interventions with practitioners involved in partnerships, they used grounded theory principles and phenomenology (a research method that gives primacy to lived experience) to develop themes about collaboration. They defined leadership as “making things happen” in the collaboration and found that the context of leadership—structures, processes, and participants—is not entirely within the control of participants, highlighting the paradox that collaboration requires resource-intensive individual efforts.

If multiple stances toward inquiry along the continuum produce different forms of qualitative research, sometimes researchers combine assumptions from various approaches. For example, in their design sociologist and public management scholar Sonia Ospina and her colleagues (2003) drew from three interpretive communities: critical theory, constructionism, and participatory inquiry. Considering leadership as meaning making in communities of practice, they invited a selected team of community leaders in the United States to do participatory, action-oriented research. The team used narrative inquiry, cooperative inquiry, and ethnography to explore how leadership happens in communities engaged in social change.

THE STATE OF QUALITATIVE RESEARCH ON LEADERSHIP

Mirroring the diversity within interpretive communities, the work of qualitative researchers studying lead-

ership covers the continuum from postpositivism to postmodernism. However, no consensus exists about whether qualitative methods are yet sufficiently valued within the more academic leadership literature. Bernard M. Bass, editor of the *Handbook of Leadership* published every decade, says that more and more “there are efforts to ‘triangulate’ quantitative and qualitative research for increasing confidence in both” (personal communication, 2003). Parry (1998) agrees that there is a growing appreciation of the need for both methods in leadership research. However, he also reports that so far, “pure” qualitative research has received little attention in the field. Conger (1998) and Bryman believe that qualitative research continues to be underutilized in the field.

So far, most work on leadership falls along the more traditional side of the qualitative continuum. Management scholars Kevin B. Lowe and William L. Gardner’s content analysis of the 188 articles published in *The Leadership Quarterly* until 1999 reports what they call a “healthy mix” (Lowe and Gardner 2001, 484) of quantitative methods (71 percent) and qualitative methods (39 percent) and a small subset of mixed studies. In terms of analytical methods, about one-half of the studies used content analysis, a little less than one-half used case studies, and about one-fifth used grounded theory. These methodologies are favored within the postpositivist interpretive community. Nevertheless, interest in other forms of qualitative research to study leadership keeps growing, and they are slowly gaining currency in the field.

RACE TO THE SOUTH POLE

The contest to become the first human to set foot on the geographic South Pole is an exciting and controversial chapter in the history of leadership under adversity. Set in the most hostile environment on Earth, the race to the South Pole shows how leadership style, personality, strategy, and openness to innovation interact to determine success or failure. This historic quest demonstrates how the best leaders are able to extend their reach by bringing out the best in others. Finally, it illustrates that perceptions of leadership are altered by the changing lenses of culture and popular sentiment.

THE COURSE

It is difficult to understand the nature of the competition to reach the South Pole without some knowledge of the extreme conditions of Antarctica. For most of the year, central Antarctica is enveloped in total darkness or total daylight. Ice—up to 4,500 meters thick—covers more than 99 percent of the continent's land mass. But the most formidable obstacles are neither darkness nor ice. Those who dream of reaching the Pole must contend with bitter cold, relentless wind and snow, and high altitude.

The coldest temperature ever measured on Earth's surface—minus 89.2 degrees C—was recorded in

Antarctica. Even during the warmest months, temperatures in the interior can reach minus 70 degrees C, and the mean annual temperature at the South Pole is minus 49 degrees C.

In addition to the frigid temperatures, there is the wind. Dense cold air rushing down from the polar plateau can achieve speeds of almost 320 kilometers per hour. And then there are the storms. The ferocious Antarctic winds blow snow across the surface, resulting in blizzards that make travel nearly impossible. In these blinding conditions, explorers have died only a few yards from their shelters.

Finally, there is the altitude. The South Pole is located at an elevation of over 2,700 meters above the sea, and the pressure altitude that affects human physiology is even higher. Because of Earth's rotation, the air is denser over the Equator and thinner over the Pole. As a result, the effective altitude of the Pole is almost 4,200 meters. Taken together, the elements of cold, wind, snow, and altitude played a crucial role in the race to the South Pole.

PREPARING FOR THE RACE

In 1820, Fabian von Bellingshausen (1778–1852), a captain in the Russian Imperial Navy, was the first to sight the continent of Antarctica. A year later, sealers from the United States and Britain landed on the Antarctic Peninsula. Other expeditions designed to

explore the unknown continent soon followed. Each effort increased the understanding of Antarctica and helped in the development of strategies for dealing with the harsh polar environment.

In March 1898, a Belgian expedition led by Adrian de Gerlache (1866–1934) became trapped by the pack ice near the Antarctic Peninsula. Imprisoned aboard the *Belgica* for more than a year, the crew members suffered from depression, disease, and disorientation resulting from living in total darkness. But they were the first to winter south of the Antarctic Circle, and a young Norwegian named Roald Amundsen (1872–1928)—one of the ship’s officers—absorbed the lessons of this experience.

The same year, Carsten Borchgrevink (1864–1934) sailed on the *Southern Cross* as a leader of what was called the British Antarctic expedition. The expedition, funded by a wealthy British publisher, was hardly British: Twenty-eight of the thirty-one members were Norwegian, and the *Southern Cross* was a converted Norwegian sealer. Landing at Cape Adare, ten of the explorers erected two wooden huts and set out to prove that humans could survive ashore in the cold, dark, Antarctic winter. The expedition also produced maps of the Ross Sea region, and it expanded the store of knowledge and skills needed to survive in the extreme Antarctic environment.

THE BRITISH CONTESTANTS

At the International Geographical Congress held in London in 1895, the English geographer Clements Markham (1830–1916) called for further scientific and geographical exploration of Antarctica. Markham later helped organize the British National Antarctic Expedition, in 1899 choosing the explorer Robert Falcon Scott (1868–1912) as its leader.

Markham believed in youth over experience. He thought older men lacked not only energy and a capacity to deal with emergencies, but also openness to new ideas. “How can novel forms of effort,” he wrote, “be expected from still old organisms hampered by experience” (Thomson 2002, 10). Scott had no prior experience in polar exploration, but Markham had been impressed by Scott’s intelligence and charm. Markham believed the thirty-one-year-

old naval officer to be the right age and temperament to lead an Antarctic expedition.

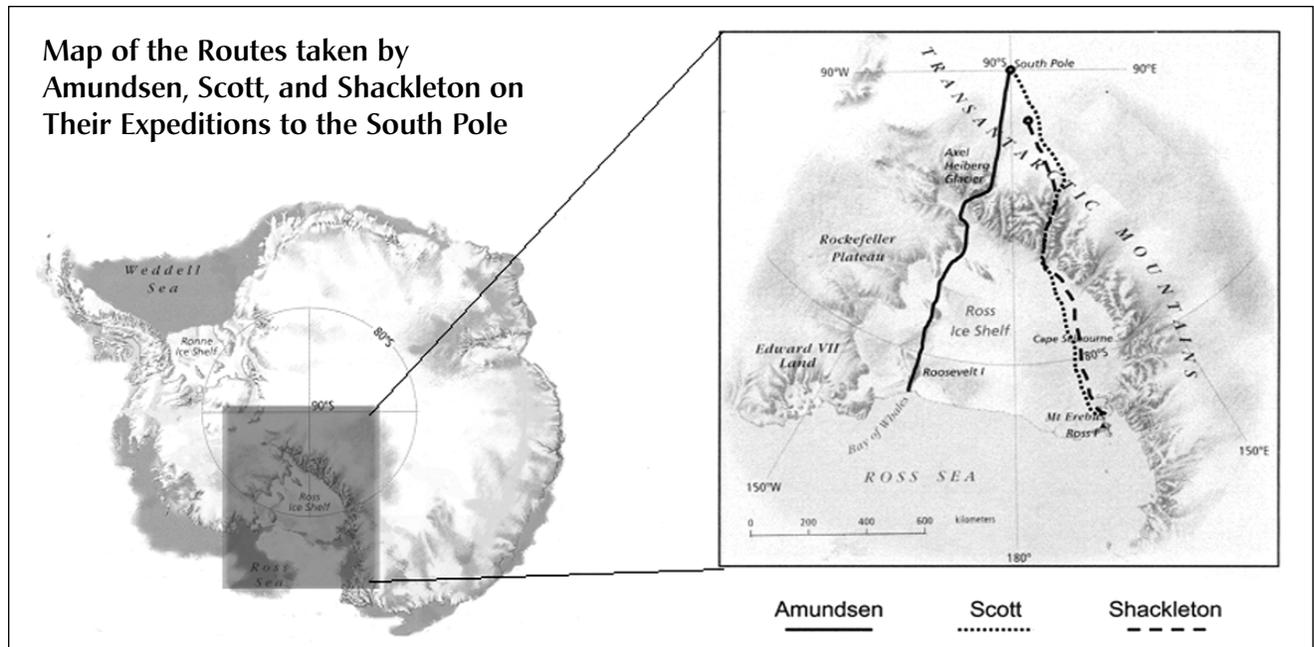

On the recommendation of an expedition benefactor, Markham also selected an officer of the Merchant Navy—Ernest Henry Shackleton (1874–1922)—as one of Scott’s sub-lieutenants. The two officers, both of whom became important figures in the race to the South Pole, had sharply contrasting backgrounds and personalities.

Scott was born to a well-to-do family in Plymouth, England. At the age of thirteen, he entered the Royal Navy as a cadet aboard the training ship *Britannia*. Although Scott could be charming, he could also be detached and temperamental. With his reserved and shy personality, Scott had trouble mixing with others. He was most comfortable in the traditional, regulated, and hierarchical caste system of the Royal Navy. These personal characteristics limited his effectiveness as a leader, but Scott brought strengths as well. He genuinely appreciated science and possessed the physical stamina essential for polar exploration. In addition, his skill at vivid, descriptive writing provided a clear account of his expeditions and his role in the race.

Ernest Shackleton, by contrast, was an Anglo-Irishman born in County Kildare, Ireland. Shackleton’s father, unable to afford the cost of the Royal Navy’s *Britannia*, sent Ernest to sea on a ship of the Merchant Navy. Aboard the *Hoghton Tower* Shackleton “learned the ropes,” and he also learned the value of developing relationships. Although status distinctions in the Mercantile Marine were less rigid than they were in the Royal Navy, sanctions still existed against mixing with social inferiors. But Shackleton’s outgoing personality and lack of pretension enabled him to make friends at all levels—with officers, engineers, and apprentices alike. This ability served him well in his journeys to the Antarctic.

THE FIRST RUN TOWARD THE POLE

In August 1901, Scott and Shackleton sailed for Antarctica aboard the *Discovery*, the first ship designed and built in Britain specifically for polar exploration. By mid-February of 1902, the expedition had established winter quarters ashore. In

November, Scott finally set out to explore the route to the Pole with Shackleton and scientific officer Edward A. Wilson (1872–1912).

Scott and his team were ill prepared for their first southern foray. They were poor skiers and inept at handling dogs. The dogs were underfed and the sleds were overloaded. Suffering from scurvy and lack of food, the party turned back more than 800 kilometers from the South Pole.

On the journey home, the three tied their remaining dogs behind the sleds, which they “man hauled” back to their camp at Hut Point. Strangely, Scott seemed drawn to this grueling practice of man hauling. He wrote that “no journey ever made with dogs can approach the height realized . . . when a party of men go forth to face hardships, dangers, and difficulties with their own unaided efforts” (McGonigal and Woodworth 2001, 428).

The strain of the trip, combined with clashes between Scott and Shackleton, undermined the cohesion of the southern party. At one point, Scott referred to Shackleton as a “bloody fool.” This clash—and the underlying competition between the two men—created a rift that was never closed.

When the party reached Hut Point, all three men were suffering from scurvy. Scott, with medical

advice, declared Shackleton unfit for duty and sent him home on a relief ship. Shackleton reportedly wept as he sailed away.

SHACKLETON'S SECOND ATTEMPT

Although Shackleton had been ordered home from the *Discovery* expedition, he returned to England a hero of the expedition. He began organizing another attempt, and in 1907 sailed for Antarctica aboard the *Nimrod* as the leader of a second British Antarctic expedition.

At the end of October 1908, Shackleton and three companions set out for the South Pole. Shackleton brought no dogs for the final assault, relying instead on Siberian ponies for transport. The ponies were ill suited for the terrain, and once more the British resorted to man hauling. By 9 January 1909, they were 179 kilometers shy of the South Pole and desperately short of rations. In a typical act of generosity, Shackleton gave one of his last biscuits to a companion, Frank Wild, and then made the painful decision to turn around. He later explained to his wife: “I thought you’d prefer a live donkey to a dead lion” (Rubin 2000, 39).

They had failed to reach the South Pole, but the British Antarctic expedition had accomplished other

goals. They had uncovered coal and other fossils. They had discovered a new mountain range and traversed the high polar plateau, and they held the record for penetrating the farthest south. In addition, they pioneered a path up the Beardmore Glacier, the same route that Scott would take on his next expedition.

The expedition also gave Shackleton a chance to demonstrate his exceptional leadership skills. He had faced danger with humor and good cheer, developing a reputation for being cool in a crisis. Although called “the Boss” by his men, Shackleton established the norm of discussing problems openly and valuing the opinions of others, regardless of their position in the formal hierarchy.

THE NORWEGIAN CHALLENGER

Roald Amundsen, born before Norway separated from Sweden, learned to ski as a schoolboy and had a keen interest in adventure. As a teenager, Amundsen read the account of Sir John Franklin (1786–1847), a British explorer who died mysteriously in the Arctic. Enamored of polar exploration, Amundsen honed his skills in long-distance skiing as he prepared for his “great adventure.”

Despite the challenges he encountered as a member of the Belgian Antarctic expedition in 1898, Amundsen continued his polar exploration. He was

the first to navigate the Northwest Passage aboard one vessel, and he spent three winters in the Arctic. He lived with the Eskimos, learning about cold-weather clothing, dog handling, and travel—the foundational skills of polar exploration. Among explorers, he developed a reputation as a meticulous planner who was expert at traveling over snow and ice.

Amundsen had always dreamed of being the first to the North Pole. In 1909, as he was planning his northbound expedition, Amundsen received word that the Americans Frederick A. Cook (1865–1940), a shipmate from *Belgica*, and Robert E. Peary (1856–1920) had both claimed that prize. Amundsen quickly changed his goal from north to south. After his expedition had departed from Norway—ostensibly for the Arctic—Amundsen sent Scott a terse telegram: “Beg leave to inform you . . . proceeding Antarctic” (Rubin 2000, 40).

Meanwhile, Scott, who had sailed aboard the *Terra Nova* on 10 June 1910, had left London with the expectation that the South Pole was his prize to claim. When the *Terra Nova* reached Melbourne in October 1910, the news of Amundsen’s altered goal came as a shock to Scott. The race was on.

THE LAST LAP

Scott reached Ross Island on 4 January 1911 and was soon laying depots south from his base at Cape Evans. Amundsen arrived in Antarctica shortly thereafter and established his camp on the ice shelf at the Bay of Whales.

Amundsen departed for the Pole on 8 September but was forced to retreat in disarray by the bitter cold. On 19 October, Amundsen set out once more for the Pole with four companions and four sleds, each pulled by thirteen dogs. With their exceptional skiing and dog-handling ability, the Norwegians moved across the terrain with relative ease. They traveled only six hours a day, reserving the remainder for sleep and rest. Thanks to their carefully planned diet and well-marked depots, food was never an issue.

Amundsen and his men arrived at the South Pole on 14 December 1911. Because all five had risked their lives on this adventure as a team, Amundsen insisted that they plant the Norwegian flag together.

The men erected a tent with a Norwegian flag on top. Expecting that Scott was still to reach the Pole, they left him a letter and another to deliver to King Haakon in case they failed to return.

By 25 January 1912, Amundsen and his party had returned to base camp with eleven remaining dogs, only ninety-nine days after their departure. They were as well-nourished and fit as when they had left. Because of their meticulous planning and efficient travel, the Norwegians had made it look easy.

While Amundsen basked in the warmth of his victory, Scott and his party still struggled southward, unaware that they had already lost the race. Scott had begun his journey almost 112 kilometers farther from the Pole than Amundsen had, and his decision to use ponies as well as dogs had created a further delay. As a result, they established their last food depot, "One Ton Camp," approximately 66 kilometers short of their goal. This shortfall, along with poor weather and a number of errors and miscalculations, was to prove fatal for Scott and his polar party.

On 3 January 1912, Scott made a late decision. Although plans for the polar assault had been based on a team of four, Scott inexplicably announced that he would take one extra man on the final leg of the journey. The sleds were only equipped with supplies for four men and the tents were designed to accommodate four, so this change complicated their movement. They had also brought only four sets of skis, so the entire polar party was restricted to a walking pace.

Scott and his men arrived at the South Pole on 17 January 1912—thirty-five days after Amundsen. Finding the Norwegian tent, Scott wrote: "Great God! This is an awful place, and terrible enough for us to have labored to it without the reward of priority. . . . Now for the run home and a desperate struggle. I wonder if we can do it" (Neider 2000, 288).

They could not. One member died a month later after sinking into a coma. The next month, a second man—Titus Oates—stepped out into a blizzard never to return. Suffering from severe frostbite, Oates apparently sacrificed his life rather than continue to delay his comrades.

On 19 March a blizzard again enveloped the surviving three members of the polar party. Imprisoned just over 19 kilometers from One Ton Depot, they

had only enough food for two days. Scott's last entry, on 29 March, reads: "We shall stick it out to the end . . . and the end cannot be far. . . . For God's sake look after our people" (Neider 2000, 267).

Eight months later, expedition survivors came upon the tent of the polar party. When Scott and his two companions were eventually found, their sledge had included 14 kilograms of geological specimens. The weight of these specimens, confirming Scott's dedication to science, was not the main cause of his tragic death. But the stones, although of scientific importance, symbolize the inherent contradiction of trying to finish a race while carrying rocks.

Back in Britain, Scott was hailed as a hero who had died for his country, while Shackleton, who had turned back on his attempt at the Pole, was criticized by some as being unpatriotic: His failure to sacrifice his life and the lives of his men enabled a foreigner to win the race.

LEADERSHIP LESSONS FROM THE RACE TO THE POLE

Fascination with the race continues to the present day. For most of the twentieth century, Scott was considered a heroic figure. Toward the end of the century, some historians began to question his leadership. Instead of a hero, Scott was cast as a bungler whose errors in judgment had cost him not only the conquest of the Pole but also the lives of his men. Today, another contrarian view has emerged. His failure was simply bad luck: unusually cold weather was a major contributor to Scott's tragic end. And Amundsen, the winner of the race, has been criticized for his single-minded determination and perceived duplicity in "stealing the prize."

In view of Scott's flawed record as a leader, it is difficult to attribute his failure simply to an unexpected cold snap. But debating Scott's culpability is less important than understanding the broader leadership lessons provided by the race to the South Pole.

Effective Leadership Requires a Clear Strategic Focus

Amundsen's ambition was to stand first at the North Pole. When Cook and Peary claimed that prize,

Excerpts from Robert Falcon Scott's Journal, 1912

Thurs, Jan. 18

We have just arrived at this tent, 2 miles from our camp, therefore about 1½ miles from the Pole. In the tent we find a record of five Norwegians having been here, as follows:

Roald Amundsen
Olav Olavson Bjaaland
Hilmer Hanssen
Sverre H. Hassel
Oscar Wisting.

16. Dec. 1911

Well, we have turned our back now on the goal of our ambition and must face our 800 miles of dragging—and good-bye to most of the day-dreams!

Thurs, March 29

Since the 21st we have had a continuous gale from W.S.W. and S.W. We had fuel to make two cups of tea apiece and bare food for two days on the 20th. Every day we have been ready to start for our depot 11 miles away, but outside the door of the tent it remains a scene of whirling drift. I do not think we can hope for any better things now. We shall stick it out to the end, but we are getting weaker, of course, and the end cannot be far. It seems a pity, but I do not think I can write more.

Amundsen immediately shifted his attention to winning the race to the South Pole. This new goal became the sole focus of his expedition. With single-minded determination, Amundsen set his plans and priorities. This uncompromising clarity contributed to his success in reaching the Pole and to his ability to bring his men safely home.

Scott, in contrast, lacked such focus. To support his scientific goals, he assembled the most capable scientists and the best-equipped expedition ever to explore Antarctica. Yet he had also stated that one of the major objects of the expedition was to reach the

South Pole, securing the honor of that achievement for the British empire. Striving for both goals, Scott failed to win the race, and his grueling march to an arbitrary geographic point was inconsistent with the pursuit of scientific research.

Successful Leaders Are Open to New Ideas

A second lesson from the race concerns the leader's critical role in fostering innovation. The process of innovation depends on an openness to new ideas, coupled with the ability to learn from experience. On this dimension of leadership, there were striking differences between Amundsen and both Scott and Shackleton.

The Norwegians owed much of their success to the use of sophisticated technology for polar travel—skis, dogs, clothing, and diet. It is true that skiing was an integral part of their culture, while the British knew relatively little of the art. But Amundsen continued to refine his skills throughout his life. He learned from his earliest experiences on the *Belgica*, he imported ideas from the Eskimos, and he systematically developed an integrated set of competencies for polar life and travel. Consequently, his trip to the pole was remarkably routine, and he was able to avoid the extreme weather that Scott had to endure.

Scott and Shackleton, by contrast, were surprisingly resistant to the use of these superior methods. It is easy to understand their failure to use the best technology on their first journey toward the Pole in 1902—although Scott's admission that none of their equipment had been tested is still surprising. In later expeditions, however, their persistent reliance on unproven or inferior methods is difficult to understand.

Scott believed that he had learned from earlier mistakes, but the evidence suggests otherwise. On later expeditions, both Shackleton and Scott experimented unsuccessfully with motor sledges and ponies, but neither made effective use of dogs and skis. Ultimately, both relied on the slow, exhausting technique of man hauling.

In the end, Scott proved Markham wrong. Though he possessed youth and inexperience, Scott often failed to display either openness to new ideas

or the ability to learn from mistakes. In his final “Message to the Public,” Scott attributes the cause of the tragedy simply to “misfortune.” Scott’s lengthy journey did subject his party to the misfortune of particularly cold weather—conditions that Amundsen escaped through a rapid assault on the Pole.

Leaders Need to Draw on the Collective Wisdom of the Team

As a leader, Scott believed it was his unique responsibility to analyze situations and draw conclusions. His decisions were closely held and sometimes revealed at the last minute—witness his decision to take a fifth man to the Pole. One consequence of Scott’s decision-making style was that he often failed to use the opinions of others to find the best possible course of action. In addition, because they were not involved in the process, members of his expedition had only a limited understanding of the rationale behind his decisions.

In sharp contrast to Scott, both Amundsen and Shackleton made a point of soliciting the ideas of their team members. As a result, their actions were better informed, and the process itself—because it gave people a sense of control—resulted in greater ownership and commitment.

The Best Leaders Forge Strong Team Bonds

The contest to be first at the Pole shows that teams under the best leaders form cohesive bonds that enable everyone to work together in the face of daunting adversity. On this point, Scott again stands apart from Shackleton and Amundsen. Scott did inspire loyalty among some key members of his team, and his doomed polar party stayed together until the very end. But Scott’s detachment, his emphasis on hierarchy, and his unilateral decision-making style created barriers to team cohesion.

Neither Shackleton nor Amundsen led perfectly harmonious expeditions, but both leaders demonstrated the crucial skills needed to maintain a unified team. Although their personalities were different, the leadership practices of the ebullient Shackleton and the understated Amundsen were remarkably

similar. They were both acutely sensitive to the emotions of their men and consciously intervened when morale dropped. They were skilled at managing conflict and winning over potential troublemakers. They placed greater emphasis on individual ability than on rank or social status. And they participated in the most menial camp chores, never isolating themselves from other members of the expedition. These behaviors, both practical and symbolic, reinforced the message of unity.

Reflecting on the abilities of these three leaders, Apsley Cherry-Garrard, a member of Scott’s second expedition, made the following observation: “For a joint scientific and geographical piece of organisation, give me Scott . . . for a dash to the Pole and nothing else, Amundsen; if I am in the devil of a hole and want to get out of it, give me Shackleton every time” (Wheeler 1999, 87).

Looking back over the history of the race, these words ring true. And yet, despite their differences, Amundsen, Scott, and Shackleton did share some important characteristics. All were able to endure extraordinary hardship through exceptional perseverance, determination, and courage. Those qualities are crucial for any leader—no matter what race must be run.

RACIAL MINORITIES

Racial minority leadership in the United States differs from (white) majority leadership in a number of fundamental ways. First, minority leaders generally operate in a context controlled by others. This relates to a second defining feature of American minority leadership: On virtually every indicator of well-being, minorities fall below the white majority. Third, these disparities typically motivate the agendas of minority leaders, as their concerns tend to center on the least advantaged members of our society. Finally, following from the first three points, while minority leaders do not routinely set the terms of debate or outcome, they often have a way of placing a mirror before us to see more clearly the fault lines in American democracy. While our point of reference in these matters has long been rooted in the white-black dynamic, of late, the nation has undergone—and is undergoing—a demographic transformation of unparalleled scope, fueled by immigration. New immigrants coming from Latin America and Asia have created millions of new minorities (Skrentny 2002).

IMMIGRATION AS A LEADERSHIP ISSUE

The 1965 Immigration and Nationality Act ended patent favoritism toward Europeans in immigration policy. Through the act, “family reunification” sup-

planted “country of origin” as the primary criteria for visa approval. Although regarded as a technicality by legislators in 1965, ultimately, this provision of the act would introduce a new term into the American political lexicon: chain migration. Defying intentions and expectations, the Immigration Act upended the ethnic balance that its sponsors had all intention of preserving (Graham 2002). In turn, immigration rates have climbed steadily over the past few decades. By 2000, the Census Bureau reported that immigrants constituted more than 10 percent of the American population; the highest proportion since 1930. Furthermore, one-half of the foreign-born population in 2000 came from Latin America and one-fourth came from Asia. As a result, the Latino population has increased by more than 50 percent since 1990 and the Asian population increased by at least 48 percent. Anything of this scope is bound to be interdisciplinary. Demographers give us a sense of the range of contemporary immigration; political scientists and sociologists explore the power dynamics involved in this transformation. Economists tend to focus on the ways in which this influx of immigrants affects the American economy. Clearly and deeply, immigration also triggers new leadership questions spanning all of these fields.

As Joel Perlmann and Mary Waters put it, “if one met a nonwhite American before 1970, he or she was very likely to have been black; today the chances are better than ever that the nonwhite American will not be black.” In fact, Perlmann and Waters continue, “the percentage of black among all nonwhites stood at 66 percent in 1970, 48 percent in 1990, and 43 percent in 2000 and can be expected to continue declining in coming decades” (2002, 6). While the overall proportion of American minorities is on the rise—making up approximately 25 percent of the entire U.S. population in 2000 (National Research Council 2001)—clearly, blacks are not fueling this growth. Rather, it is non-black immigrants and their children who account for the increase in the minority population. Furthermore, since most contemporary immigrants tend to settle in urban areas, they “emerge as new actors in political arenas where other minorities, notably African Americans, are already established players” (Jones-

Correa 2001, 9). Thus, the potential for interethnic rivalry is high, and the actions, standpoint, and tone of minority leaders toward navigating and mediating such tension is critical.

COALITIONS AND MINORITY LEADERSHIP

If the shifting demographic landscape is bringing with it a succession of new minority leadership challenges, at the top of the list is the management of relations across minority groups. Under what circumstances are cross-racial coalitions successful? Alternately, what are the factors likely to undermine the formation and maintenance of coalitions across minority groups (Jones-Correa 2001; McClain 1998; Jennings 1994)? The following are four areas of utmost relevance to these questions of growing importance.

THE INSTITUTIONAL DILEMMA

American inner cities—where many minorities live and thus where minority leaders spend a disproportionate amount of political capital—have been profoundly impacted by a series of sweeping structural changes over the past thirty to forty years. The first of these trends is immigration. Second is the impact of white and increasingly middle-class minority flight to the suburbs, the result being a greater concentration of poor people in cities as well as a shrinking tax base from which to provide a variety of municipal services. Third is the relationship between the federal government and cities; the trend of late has been for the federal government to withdraw financial support for urban areas. Finally, the transition from a manufacturing to a service-based economy has left fewer well-paying jobs in cities, and in some cases, sharper competition for even low-wage employment. Combined, the climate is such that competition between minority groups is at least as plausible as is cooperation.

THE PARTICIPATION DILEMMA

Among the most robust findings in the social sciences is that political participation rises with income

and education. Asians represent an exception to the rule: Asian political participation lags far behind what one would otherwise expect. Alongside the widely publicized successes of Asian-Americans stand troubling and often overlooked disparities. Although Asians were more likely than non-Hispanic whites to have earned a college degree in 1999, they were also more likely than non-Hispanic whites to have less than a ninth-grade education. Similarly, while a higher percentage of Asians (33 percent) than non-Hispanic whites (29 percent) in 1998 had incomes of \$75,000 and higher, in that year, 20 percent of all Asians had incomes of less than \$25,000. Citizenship (again, linked to immigration) helps to contextualize these inconsistencies. In 2000, only “2 percent of White non-Hispanics were not citizens, compared with 6 percent of blacks, 41 percent of Asians and Pacific Islanders, and 39 percent of Hispanics” (U.S. Bureau of the Census 2002b). In turn, depressed participation (whether linked to citizenship status, poverty, education, or some combination of these factors) raises urgent questions about the leadership of minority populations.

The alarmingly high proportion of noncitizen minorities, for instance, helps to explain why Latino and Asian constituencies, in particular, are so severely underdeveloped. In turn, lack of participation contributes to a dampened community focus on leaders' actions. Thinking about this in a different way, the political engagement deficit in minority communities that afflicts all minority groups to varying degrees sets in motion many disturbing patterns: for example, this lack of engagement implies little input or involvement on the part of non-elite minorities toward the actions of the people who claim to lead them. This also calls for coalition building across minority groups no less urgent but obviously shaky; such exhortations tend to reflect elite politics and to prioritize electoral outcomes.

THE ELECTORAL/NON-ELECTORAL DILEMMA

Speaking of black political fortunes specifically, Robert C. Smith contends that the tremendous concentration on the part of black leaders to get blacks elected in the post-civil rights era ultimately comes

Leadership in an Ethnic Community in Detroit

In this excerpt from a 1983 study of the Arab-American community in Detroit, it is clear that the problems facing Arab immigrants are those shared by most ethnic groups with a sizable population of immigrants settling into the United States.

Three local organizations have emerged over the past decade in an attempt to merge resources and energies, and meet the needs of the community as a whole. These organizations include: ACCESS (the Arab Community Center for Economic and Social Services), ACSSC (the Arab-Chaldean Social Services Council), and ADC (the American-Arab Anti-Discrimination Committee). As their names suggest, both ACCESS and ACSSC are social service organizations dedicated to providing assistance to needy community members and newly arrived immigrants and their families. Both organizations have received community-wide acceptance and make their services available to all sectors of the Arab-American population throughout the metropolitan area. In each case, support and recognition has also been forthcoming from the larger society. Owing to the nature of their missions, these organizations have been able to transcend national, religious, and provincial differences between Arab sub-communities. The ADC has followed a similar pattern of development, although it is dedicated solely to defending the rights of Arab-Americans and combating the negative and often derogatory stereotypes and prejudice directed at Arabs and their cultural heritage. What all three organizations share in common is their concern for all Arab-Americans and the common interests which bind them together. In a real sense, these three organizations can be considered supra-organizations (or pan-community organizations) which tend to give expression to the larger identity and interests of the community as a whole. As these organizations have developed over the years, a complementary development has occurred at the level of community leadership. While each subcommunity has its own leaders (e.g., religious, business, political), there is a growing tendency for these and other leaders to play a wider role in coping with events and problems which affect the larger community. And although no single leader or leadership is readily identifiable, the fact is that a number of leaders are widely recognized as spokesmen for the community and its interests.

at the expense of organization and mobilization in non-electoral arenas (Smith 1996). The lion's share of minority political capital in the post-civil rights era has been directed toward electoral politics, especially toward increasing the number of minority elected officials. This strategy has been widely heralded as one of the most conclusive successes of the civil rights era, given that the number of minority

elected officials—particularly black legislators—has grown exponentially over the past forty years.

However, this shift in priorities has not been without cost (and differential payoffs for different minority groups). Furthermore, as Paula McClain and Steven C. Tauber note, electoral coalitions represent a particularly difficult starting point for cross-racial collaboration.

Socioeconomic outcomes are limitless: success for one group does not necessarily preclude the potential for increased socioeconomic fortunes for other groups. Conversely, however, political outcomes are finite. Each city has only one mayor and from three to fifty council seats; thus winning these positions is a zero-sum game (that is, a victory for one group necessarily comes at the expense of another group). (Jones-Correa 2001, 118–119)

The implication is that cross-racial coalitions, if to succeed, are more likely to do so beyond the narrow, singularly competitive confines of elections.

THE DESCRIPTIVE/ SUBSTANTIVE DILEMMA

Never far from the surface in the measure of a minority leader is his or her relationship to dispossessed

groups. Arguably, the presence of minorities in visible positions of institutional influence—as elected or appointed officials, for example—is substantively meaningful only if these people are inclined to act in the interests of minorities. Obviously, this action involves some controversy itself, as the determination of “objective” group interests rests ultimately on subjective judgment. Nonetheless, unemployment,

poor school quality, language barriers, racial profiling and a variety of other problems disproportionately affect minorities. "Because these difficulties are to some extent objectively measurable, and because there is little doubt that conditions are indeed bad, we can identify objective interest in change in these areas" (Swain 1995, 9).

One finds substantially greater consensus on the relative disadvantage of minorities than on the appropriate remedies for it. Although the connection may not be readily apparent, growing racial diversity (fueled by immigration) also brings an additional twist to the long-standing debate about remedies: Should new Americans be eligible for programs designed to address historic discrimination (Graham 2002)? Even substantive representatives do not always agree on that.

THE CHALLENGE OF LEADING NEW AND OLD MINORITIES

Minority leaders are deeply implicated in whatever happens next, but again, they will not necessarily determine it. Although their numbers are growing, the political weight of minority groups is not running apace. Substantive minority leaders are concerned with filling that gap, and cross-racial coalition building seems a practical strategy through which the discrepancy between numbers and power can be reduced. Yet the distressing extent to which so many minorities are not even eligible to vote points to the urgency of political engagement beyond electoral politics. Seventy percent of all Latinos—now the nation's largest minority group—live in five states: California (20 percent statewide non-citizen voting age population), Florida (13 percent), New York (13 percent), Texas (11 percent), and Illinois (8 percent) (U.S. Bureau of the Census 2001b). Such widespread disenfranchisement indicates that the citizenship gap and the racial gap are the coexisting and overlapping civil rights issues of our time.

REAGAN, RONALD (b. 1911)

U.S. president

Ronald Reagan left the presidency in January 1989 with a Gallup Poll approval rating of 63 percent, making him the highest-rated departing chief executive since Franklin Roosevelt's death in 1945 during his fourth term. In contrast, his initial post-presidential rankings from commentators and historians were mixed until a decade later, as seen in the view of Roosevelt's biographer, James MacGregor Burns, who concluded that Reagan, along with Roosevelt, would likely be viewed as one of the two most consequential presidents of the twentieth century. Despite Reagan's absence from the public scene, his post-presidential popularity has continued to rise among the general public, exemplified in a subsequent Gallup Poll taken from 9–11 February 2001, which placed him at the top of the nation's "greatest presidents."

The diversity of views of Reagan's significance might be expected given that his life's trajectory was highly unconventional. Following a successful career in radio, motion pictures, and television, Reagan first sought elective office at the age of fifty-five. A strong advocate of traditional family values, Reagan was the first divorced president, breaking a long-standing expectation that many Americans held for their president. The first president who was not only an active union member but also a union leader (President, Screen Actors Guild, 1947–1952, 1959–1960) Reagan altered the course of labor-management relations early in his first year in office, firing air traffic controllers who defied his order to honor their contractual no-strike commitment. A staunch and uncompromising anticommunist throughout his public life, Reagan began his presidency with an unprecedented arms buildup focused on the Soviet Union. He closed his presidency strolling across Red Square with his Russian counterpart, concluding landmark arms reduction treaties.

His administration's economic policies resulted in dramatic economic expansion, simultaneously increasing the federal budget deficit he had long decried. A conservative who represented the "movement" that first found failed national expression in the failed 1969 presidential candidacy of Republican Senator Barry Goldwater, Reagan's first inaugural address urged that "government was the problem, not the solution" at home—yet his administration garnered much increased public confidence in the capacity of the federal government which had declined through the social and political turbulence of the late 1960s and 1970s. Ideologically resolute on matters of policy, Reagan was personally generous in response to individuals' pleas for assistance, including sending checks from the Oval Office to citizens writing for help. Though he evoked nostalgia for the virtues of a simpler, small-town America, his policies (most notably fiscal reforms) accelerated the pace of economic, social, and political change.

BIRTH AND EARLY YEARS

Among the presidents most associated with support for the free enterprise system—and, his critics urge, succor for the privileged—Ronald Reagan was born in a working-class family on 6 February 1911 in Tampico, Illinois. Such a background was an uncommon characteristic for the nation's chief executive. His father, John Edward "Jack" Reagan, is remembered as a salesman and gifted storyteller, who suffered from alcoholism. His mother, Nelle Wilson Reagan, was a powerful influence on young "Dutch," bequeathing to him a powerful religious sensibility.

Reagan was student body president at Dixon High School, and later at Eureka College; he also proudly asserted that he saved seventy-seven lives as a life-guard on the Rock River. Following his graduation from Eureka in 1932, at the height of the Great Depression, Reagan obtained several jobs as an announcer in radio.

CALIFORNIA, HERE I COME

In 1937, while attending spring training with the Chicago Cubs, he obtained a screen test for the

Warner Brothers studio. According to his autobiographical writings, Reagan's entry into Hollywood furthered a longstanding but largely private ambition. Against the wishes of the studio, Reagan departed for home before his test was evaluated: "[T]he horrified feeling came over me that maybe I had blown the whole thing. . . . (Actually I had done, through ignorance, the smartest thing it was possible to do. Hollywood just loves people who don't need Hollywood)" (Reagan 1965, 67–68). Nonetheless he was signed to a contract and moved to a privileged position in the immense Midwestern migration to the Golden State.

Reagan took great pride in his acting career. Though he called himself "the Errol Flynn of the B-Movies," he also played in several "A" films, including *Knute Rockne: All American*, and *King's Row*, his most acclaimed performance. In 1940, he married another famous actor, Jane Wyman, with whom he had a daughter, Maureen, and an adopted son, Michael.

EARLY STIRRINGS IN POLITICS

A reflection of his family background, Reagan entered adulthood as a conventional New Deal Democrat, voting for Franklin D. Roosevelt in each of his four presidential contests. Though blocked from combat duty because of extreme nearsightedness, Reagan was called up from the Army Reserve to make hundreds of training films during World War II. His political views changed in the aftermath of the war, reflecting his personal experience confronting an alleged communist influence in the Screen Actors Guild, along with his frustration with the steep federal income taxes that neared 80 percent for top earners.

At the same time, he faced career challenges from a changing postwar audience mood less inclined to the light fare of the 1930s, as well as the transition to middle age that affects the prospects of performing artists who attained fame in their youth. Further, his marriage to Wyman was becoming unmoored. Their daughter, Christine, was born prematurely, in June 1947, and died within a day of her birth. Adding to their problems, it was widely thought that Reagan's intensifying interest in politics had not been wel-

comed by Wyman. The divorced in 1948. In 1952, Reagan married fellow actor Nancy Davis, with whom he had a daughter, Patricia, and a son, Ronald.

REAGAN'S CONSERVATIVE MOVEMENT

As Reagan's motion picture career slowed, he found a national audience in the new medium of television, hosting the popular General Electric Theatre from 1954 to 1962. He traveled the nation for General Electric, speaking at plants, meeting thousands of employees, refining his increasingly conservative political opinions, and sharpening presentation skills in a context not dissimilar from that of an elective politician.

For years Reagan had campaigned for political candidates—first Democrats (including Harry S. Truman), increasingly Republicans, including Dwight D. Eisenhower)—and his work for the corporate giant General Electric placed him squarely in the conservative camp. In 1962, he registered as a Republican. On 27 October 1964, in a televised presentation his supporters would later call "The Speech," Reagan appealed for support for the flagging Goldwater presidential campaign, which was successfully marginalized as "extremist" by incumbent President Lyndon B. Johnson. Notable amid the electoral disaster visited upon Goldwater, Reagan's speech elicited an unprecedented outpouring of support, unexpectedly thrusting Reagan to the top rank of the public leaders of the emerging conservative movement.

MR. REAGAN GOES TO SACRAMENTO

Initially, the prospect of Reagan as a politician was greeted with skepticism in many quarters, reflected in columnist Jack Warner's widely quoted quip: "Reagan for Governor? No, Jimmy Stewart for Governor, Ronnie Reagan for best friend" (Campaign

Rally for Vice President George Bush, 1988). Nonetheless, the man, the emerging conservative movement, and the moment came together in Reagan's first run for elective office, for governor of California, in 1966.

Overwhelming the two-term Democratic governor Edmund G. "Pat" Brown, Reagan took office in January 1967. His first-term performance was estimable but not extraordinary, in part because of his lack of political experience. Nonetheless, he decisively won a second term over another strong Democratic opponent, Jesse M. Unruh, going on to achieve tax relief and reform, as well as landmark welfare reform legislation intended to restore work incentives and personal accountability.

THE LONG MARCH TO THE WHITE HOUSE

Just over a year after becoming governor, Reagan launched a premature bid for the 1968 Republican presidential nomination. As he left the governorship in 1975, many conservative Republicans encouraged him to try again. Reagan's prospects were uncertain. The Republican Party had sustained historic defeats in midterm elections in November 1974, following the Watergate scandal that culminated in President Richard M. Nixon's resignation three months earlier. Nixon's hand-picked successor, Gerald R. Ford, would be the Republicans' presumptive choice, reflecting both custom and presidential influence over the nomination process.

Reagan nonetheless challenged Ford for the 1976 nomination. Holding on despite a string of defeats in early primaries, Reagan finished strongly, entering the Kansas City convention that summer in the striking range of victory. Though Ford managed to prevail, Reagan displayed widely remarked grace and eloquence in defeat.

Following Democrat Jimmy Carter's victory over Ford in the national election, Reagan maintained his public presence through articles, speeches and, most interestingly, a nationally syndicated radio program in which Reagan presented more than a thousand commentaries on issues of the day, prefiguring the later emergence of "talk radio."

In 1980, President Carter, facing an electorate dis-

enchanted by a deteriorating economy and intensifying provocations from the Soviet Union, Iran, and other countries, attracted a significant intraparty challenge from Senator Edward M. Kennedy as well as a full complement of Republican nomination candidates. Reagan prevailed in his own party and handily defeated Carter in November, simultaneously bringing in the first Republican majority into the U.S. Senate since the Eisenhower years.

REAGAN ENTERS THE "BIG LEAGUES"

As official Washington braced for change, House Speaker Thomas P. "Tip" O'Neill, Jr., an icon of Democratic liberalism, warned the new president that he was now in the "big leagues."

Reagan's inaugural, on 20 January 1981, consciously set a new tone. The ceremony was held, for the first time, on the West Front of the Capitol, as the most powerful elected official in the world declared "In this present crisis, government is not the solution to our problem." Reagan continued his advocacy of an unmistakably clear program of change, based on cutting federal government taxes and regulations on the private sector; increasing spending on defense against what he viewed as a militarily ascendant but economically debilitated Soviet Union; advancing traditional family values; and balancing the federal budget. The break from the recent past was accentuated moments after the new president's swearing-in at noon, with the announcement of the release of American hostages held for more than a year in revolutionary Iran.

President Reagan was shot by would-be assassin John Hinckley, Jr. on 30 March 1981. Near death, he exhibited courage and sang-froid of such magnitude that his authority with the public and the Congress was tangibly heightened. His subsequent appearance at Notre Dame University's commencement several months later was emblematic of the evolving perception that Reagan's screen performance as the courageous Fighting Irish George Gipp of *Knute Rockne, All American* had fused with his real-life role as U.S. president.

That summer, Reagan followed in the footsteps of one of his declared political heroes, Calvin

Coolidge (U.S. president 1923–1929), firing illegally striking public employees, the federal air traffic controllers. In so doing, he undertook the risk of public outcry should subsequent accidents be blamed on their absence; he also broke one of the few unions whose leadership had publicly endorsed his election. This single action recast American labor-management relations and caused many foreign governments to assess him as decisive, risk taking, and formidable.

Reagan was successful in achieving major income tax reform—cutting rates by a third—but unemployment remained high, accentuated by tight money policies of the Federal Reserve seeking to wring out inflation. A reflection of his anemic poll ratings in the 1982 recession, Reagan was sometimes called the “Teflon President,” as his Sacramento opponents earlier termed him the “Great Deflector,” and his decreasing popularity was a factor in major Republican losses in the November congressional elections.

SECOND WHITE HOUSE TERM

By 1984, however, a buoyant economy propelled a Reagan reelection landslide. Uncannily like his role model Franklin D. Roosevelt, his second term was initially complicated by several conspicuous missteps and setbacks. He acceded to a staff shakeup that lowered the quality of his White House team; his party lost its majority control of the Senate in the 1986 midterm elections; and he initially stumbled in his response to the “Iran-Contra” scandal. The latter resulted from revelations of White House complicity in the illegal diversion of profits from arms-for-hostages deals with Iran (contrary to the administration’s expressed policy of non-negotiation with hostage takers) to U.S.-backed rightist “contra” guerrillas resisting the leftist Sandinista government (such assistance being provided in the face of congressional opposition and proscription). Public opinion turned against Reagan following his speech to the nation of 13 November 1986, in which he unconvincingly sought to reconcile the policy contradictions; his popularity was largely restored following a subsequent address on 4 March 1987, in which he

was contrite and committed to significant management and personnel changes.

Reagan’s public support remained high, and his accomplishments were significant. His administration worked successfully with a bipartisan group of legislators to achieve significant tax reform and simplification in 1986. When Reagan entered the White House in 1981, the top marginal tax rate was seventy percent, with fourteen tax brackets; when he left office the top rate was 28 percent, with three brackets.

Like other second-term presidents in the post–World War II era, Reagan focused increasingly on foreign policy. His administration asserted American power forcefully from the start—using the “bully pulpit” to characterize communism as “evil,” resuming naval maneuvers in the Gulf of Sidra, deploying intermediate range nuclear missiles in Europe, freeing Grenada from a Marxist coup, providing aid “freedom fighters” in Central America and Afghanistan, and bombing the living quarters of Libyan terrorist Muammar Qaddafi.

Most important, the Reagan administration rejected the détente policies of its most recent predecessors, directly confronting the Soviet Union through an arms buildup, direct and indirect economic pressure, public and “quiet” diplomacy. Reagan’s approach of building up nuclear arms in order to negotiate arms reduction was highly controversial. His second term coincided with the emergence of Mikhail S. Gorbachev, with whom he developed a historic relationship. Withstanding tremendous public pressure, Reagan refused significant Soviet arms control concessions conditioned on U.S. abandonment of its Strategic Defense “Star Wars” Initiative. Ultimately Reagan and Gorbachev concluded the first treaties to dismantle nuclear weapons, rather than accepting an apparently endless “balance of terror.”

THE LONG FAREWELL

Leaving office, Reagan acknowledged his reputation as the “Great Communicator,” but asserted that he had rather “communicated great things” (Farewell Address, 1989)—consigning the Soviet Union to the “ash heap of history” (Address to British Parliament,

1982), paying tribute to the “boys of Pointe du Hoc” (Remarks at the U.S. Ranger Monument, 1984) on the anniversary of the 1944 Normandy invasion, exalting the heroes of the doomed space shuttle *Challenger*; and in Berlin challenging “Mr. Gorbachev, tear down this wall!” (Remarks at the Brandenburg Gate, 1987). His influence reverberated in the election of Vice President George Bush as his successor in 1988, as well as in the disintegration of the Soviet Union shortly thereafter.

Though he would eventually become the longest-living of all persons to have served in the presidency, Reagan’s voice was stilled in 1994 by Alzheimer’s disease. Nonetheless, perhaps more than any president since Franklin D. Roosevelt, Reagan’s legacy is durable, nowhere more than in setting the terms of the political debate of his successors in both major political parties. As the distance of time makes his significance increasingly apparent, Reagan’s leadership is acknowledged by many of his political opponents as well as extolled by his supporters.

RECONSTRUCTIVE LEADERSHIP

All leaders aim to change things, but the changes they propose are not all of a piece. Variety is especially pronounced in organized or institutional settings where leaders must, as a first order of business, establish a particular relationship between their efforts to change things and the practices and priorities they receive from the past. For some, the past may be lauded as a clear and reliable guide to future action, in which case change might mean completing the unfinished work left behind by predecessors. For others, the recent work of the past may be accepted as a more or less problematic fait accompli, and change is promised to rehabilitate received priorities or to nudge things wherever possible in a different direction. For still others, received practices may be repudiated forthrightly as failed, bankrupt, or otherwise unacceptable solutions to the problems at hand, and change is undertaken with an eye to establishing entirely new standards of legitimate action. This last,

when it succeeds, is “reconstructive leadership” (Skowronek 1997).

To claim a particular warrant for change is to bid for a certain kind of authority and to set up certain kinds of challenges in sustaining it. But leaders do not choose freely from a list of possible dispositions toward change. If they have any savvy at all, they will present themselves and their ambitions in a way that resonates with the circumstances of their rise to power. Someone carried into a position of leadership as the hand-picked successor or heir apparent to a well-regarded predecessor would be hard-pressed to sustain a course of repudiation and reconstruction; so too would someone carried into a position of leadership from the ranks of the opposition by virtue of the defection of one or another faction of establishment support. Reconstructive leadership is associated with a special set of circumstances. Not only would we expect such a leader to come from the ranks of the opposition to established power, and thus to come unhampered by any affiliation with what exists, but we might also expect the reconstructive leader to arise when a crisis of legitimacy is already deeply felt and broadly perceived.

Though reconstructive leadership is a distinctive, even peculiar, type or style, reconstructive leaders are often considered paragons, exemplars of the very essence of leadership itself. The reason for this is to be found in the anatomy of leadership, for while the same constituent components of action are arrayed in all types, an especially felicitous arrangement of these components is operative in the reconstructive type. First, leadership in organized settings always carries an *order-shattering* component, which stems directly from efforts of all leaders to innovate, to create something new in the presence of a system that is up and running. Even if the innovation is something anticipated or promised by the received course of action, it cannot help but disrupt previously established arrangements. Second, there is always an *order-affirming* component to leadership in organized settings. This stems from the leader’s connection to the organized community or the community values that all its leaders, even those who propose to purge it of present corruptions or degradations, are expected to uphold and elaborate. Finally, there is an

order-creating component to leadership, in which the innovations offered and the values affirmed are joined together in a new amalgam that bids for acceptance as the new working standard of action for the future.

It will be seen that reconstructive leadership arrays these three components in a mutually reinforcing and powerfully transformative fashion. The order-shattering component is supported by the depth of the current crisis of legitimacy. The order-affirming component is supported by an appeal to the values lost or squandered in recent practice, to a community that needs to be redeemed from its current course and reestablished on principles emblematic of its true identity. The order-creating component joins the sweeping innovations ushered in by a sharp break with received practices to the invocation of a restoration of fundamental principles, putting in place something that is both radically new and secure in its authenticity. In contrast, leaders affiliated with the commitments and arrangements of the immediate past are likely to find it difficult to justify the very real changes their actions set in motion; the rationale for the order-shattering effects of their actions is weak, and the more they change things, the more vulnerable their authority is likely to become. Even those unaffiliated with the commitments and arrangements of the immediate past will have a hard time in the absence of a serious crisis of legitimacy, for though they have the advantages of independence, they are limited in their authority to propose a clear and robust alternative. Thus, if the reconstructive type tends to include the outstanding leaders in history, it is not necessarily because they are more talented at doing what all leaders do. What is different is their opportunity to make leadership work for them, to use its essential components to bolster the claims that brought them to leadership in the first place, to secure their own legitimacy in the very process of negotiating thoroughgoing changes.

In principle, reconstructive leadership may be found in any organized setting. Lee Iacocca’s transformation of the Chrysler Corporation in the early 1980s exhibited many of the trappings of the type, though corporate leadership generally is far less dependent on mobilizing followers around shared

community values than other organizational forms. At the other extreme is organized religion; indeed, by combining themes of degradation, redemption, and the promise of a new order, the reconstructive trope draws heavily on religious iconography—Moses at Mount Sinai, Jesus at the Temple, Martin Luther at Whittenberg. Politics, however, is the forum in which reconstructive leadership comes into its own most fully; in political cultures with strong republican traditions, which lend themselves to jeremiads and cyclic themes, it may be especially pronounced. Such is certainly the case in the United States. Abraham Lincoln's rise to power was marked by emblematic reconstructive response to the repeal of the restrictions on the spread of slavery:

Our republican robe is soiled and trailed in the dust. Let us repurify it and wash it white in the spirit, if not the blood of the Revolution. Let us readopt the Declaration of Independence, and with it, the practices and policies which harmonize with it. . . . If we do this, we shall not only have saved the Union; but we shall have so saved it, as to make and keep it, forever worthy of the saving. (Lincoln 1953a, 276)

Franklin Roosevelt's first inaugural message, given in the depths of the Great Depression and in the aftermath of his political rout of long-established Republican majorities, put the reconstructive trope in an explicitly Christlike frame:

Rulers of the exchange of mankind's good have failed through their own stubbornness and their own incompetence, have admitted their failure, and have abdicated. Practices of the unscrupulous money changers stand indicted in the court of public opinion, rejected by the hearts and minds of men. . . . The money changers have fled from their high seats in the temple of our civilization. We may now restore that temple to the ancient truths. (Roosevelt 1938, 12)

Similarly, in 1980, Ronald Reagan cast his campaign for the presidency as a crusade not against a single administration but against a way of governing that had become entrenched over the decades:

Isn't our choice really not one of left or right, but of up or down? Down through the welfare state to statism, to more and more government largesse accompanied always by more governmental authority, less individual

liberty, ultimately totalitarianism, always advanced as for our own good. The alternative is the dream conceived by our Founding Fathers, up to the ultimate in individual freedom consistent with an orderly society. (Reagan 1984, 834)

As each of these rhetorical flourishes suggests, reconstruction leadership derives much of its authority from its repudiative thrust, or more precisely from its equation of a repudiation of what exists with an affirmation of fundamentals. Though very different in their personal background and professional training, Lincoln, Roosevelt, and Reagan stand out among U.S. presidents as great communicators. It is the clarity of standing apart from and against a long-established state of affairs, while at the same time appealing to emblematic or historic values, that supports independent action on the part of the leader on behalf of a sweeping new vision. But reconstructive leadership is not simply a matter of words reinforcing authority in a particular context. A leader may wield reconstructive authority on a rhetorical plane without creating a new order in practice. In fact, though these leaders are uniquely positioned to recreate order in the course of innovation, their success will be measured in degrees, by the extent to which the residual institutional supports for previous commitments of ideology and interest are actually dislodged and new supports capable of sustaining an alternative organization put in their place.

At a practical level, failure to dislodge and replace previously established arrangements is likely to lead to a resurgence of old priorities and ways of doing things once the reconstructive leader departs the scene: Recall the situation that awaited Moses upon his return to the people from Mount Sinai. The irony of reconstructive leadership is that its most effective and significant actions tend to be negative and explosively controversial. These are actions that deploy the repudiative authority of the reconstructive stance as a battering ram to forcibly destroy, or at least force the acquiescence of, the defenders of the old order, and they characteristically provoke charges of usurpation and one-person rule. In this sense, the emblematic reconstructive achievement of the presidency of Andrew Jackson was the destruction of the national bank; of Lin-

coln's presidency, the destruction of slavery; of FDR's presidency, forcing the capitulation of the Supreme Court to the mores and priorities of New Deal legislation. By comparison, the "Reagan Revolution" was a rather shallow affair, its frontal assaults on the institutional supports for liberal priorities stymied within a year of his inauguration. Notwithstanding Reagan's reputation as a political leader, the slower, less direct chipping away at the legacy of liberalism that ensued after his first year has left the shape of the new political order less certain, its priorities and commitments more inchoate.

The flip side of the problem of dislodging supports for the old order is the problem of building durable supports for the new one, and here the independent appeal of the reconstructive leader is especially critical. Though reconstructive leaders characteristically come from the ranks of the organized opposition, it will not suffice simply to transfer power to the traditional opponents of the established order. In practice the effort to dislodge institutional support for past practice is likely to implicate all those who found their place within the old order and to open the door to a more systematic rearrangement of alliances. Thus, in first announcing his commitment to a "New Deal" for the American people, Franklin Roosevelt warned his fellow partisans that his administration would part company with "nominal Democrats who squint at the future with their faces turned to the past, and who feel no responsibility to the demands of a new time" (Roosevelt 1932, 648). In this same sense, Lincoln cast reconstruction as reorientation of action for the entire nation: "As our case is new, so we must think anew and act anew. We must disenthrall ourselves, and then we shall save our country" (Lincoln 1953b 537). In effect, reconstructive leaders will seek to create new parties, largely personal parties, capable of supporting a configuration of interests and commitments unanticipated in previous conceptions of the alternatives. Here, too, results are highly variable: Ronald Reagan built a more ideologically homogeneous and conservative Republican Party; Franklin Roosevelt left a Democratic Party bifurcated between its new northern liberal wing and its old conservative southern wing.

Perhaps the greatest irony is that by establishing new standards of legitimacy and recasting the organizational foundations of action, reconstructive leaders limit the authority of their successors and constrain their leadership. These paragons of independence and creativity leave in their wake a newly circumscribed universe of action. Leadership authority may be claimed on behalf of continuing or redirecting the work of the past, but these warrants are vulnerable to charges of betraying or threatening the new understanding of fundamentals. Reconstructive leadership is an important source of regeneration for any organized system, but it is implicated as well in its subsequent limitations and eventual degradation.

RELATIONAL LEADERSHIP APPROACHES

Does the quality of the relationships leaders have with their followers matter for the leaders' success? Are some types of relationships more beneficial for leadership than others? If I have a bad relationship with my leader, what does that mean for my future as a follower?

These are the kinds of questions asked in relational leadership approaches. Relational approaches study the quality of the relationships that leaders have with their followers and how these relationships influence behavior and effectiveness. According to these approaches, relationships are an integral part of leadership because of their effect on a key aspect of leadership: the ability to influence others to get things done.

RELATIONSHIPS AS A SITUATIONAL FACTOR IN EARLY LEADERSHIP RESEARCH

The study of leadership does not consist merely of examining leader behaviors or studying leaders and followers. Leadership is a complex phenomenon that involves the interaction of leaders, followers, and situational variables.

The earliest work to explore these leadership and situational variables began in the 1950s, with studies conducted at Ohio State and the University of Michigan. This research identified two main categories of behavior: consideration, or relations-oriented behavior, and initiating structure, or task-oriented behavior. The first category addressed leaders' interpersonal role in interacting with followers (for example, their role in managing relational and emotional issues), and the second category recognized the importance of getting things done (accomplishment of tasks and objectives). Relations-oriented behavior included being supportive and helpful, showing trust and confidence in subordinates, being understanding of subordinates' problems, helping to develop subordinates and further their personal objectives, and showing appreciation for subordinates' ideas and accomplishments. Task-oriented behavior included planning, focusing on meeting deadlines, maintain-

ing standards of performance, offering new approaches to solving problems, and coordinating followers' activities.

Subsequent studies of these behaviors found that the success of either approach in increasing leader effectiveness depended on the situation. In general, findings showed that highly relational leaders were more effective in situations in which followers desired leader support and consideration, while highly task-oriented leaders were more effective in situations in which subordinates needed direction and structure.

THE EMERGENCE OF RELATIONAL APPROACHES TO LEADERSHIP

While these early models recognized the importance of relational issues, however, they did not explicitly consider how relationships influenced the leadership process. Instead, the focus was on the leader. This changed with the emergence of new theories from around 1970 onward that brought attention to leadership relationships.

Hollander's Idiosyncrasy Credit Model

One of the first leadership theories focusing specifically on relational issues was the psychologist Edwin Hollander's idiosyncrasy credit model dating from 1958. According to this model, leaders gain influence through their ability to earn psychological credit with followers. Leaders who build credits by earning the approval, respect, esteem, and affection of their followers are given more leeway by followers to deviate from nonessential group norms. One can think of this like a bank account. Leaders can make withdrawals—that is, they can display certain idiosyncrasies—as long as they have enough deposits in their account (credits earned through previous interactions with followers) so that their withdrawals do not exceed their reserves. This model was important because it recognized leadership as an influence process and acknowledged that followers play an active part in granting leaders influence. It also examined leadership in situations other than the workplace and described how leaders can emerge

(and “submerge”) in groups based on the extent to which they have followers’ support.

Vertical Dyad Linkage Model

A second theory focusing on relationships, developed in the 1970s by the organizational psychologist George Graen and his colleagues, was the vertical dyad linkage (VDL) model. This model documented the value of a dyadic approach (an approach that recognized the significance of the relationship between a leader and each follower) to studying managerial leadership. In a series of studies, researchers asked managers and subordinates to describe their work and working relationships. They found that subordinates of the same managers described their relationships with the manager very differently. Some subordinates reported high-quality, or “in-group,” exchanges, and others reported low-quality, or “out-group,” exchanges. Those who reported in-group exchanges appeared to have special privileges with the leader, acting as trusted assistants, while the followers in out-group exchanges were treated more like hired hands who did only what was required in their job descriptions.

The differences in treatment were explained as caused by time and resource constraints that forced managers to solicit help from the subordinates they deemed reliable and trustworthy. These subordinates became trusted assistants whom the leader spent more time developing and who in return assisted in the functioning of the work unit. Since development of trusted assistants required greater investment of personal attention, these relationships had to be limited to a select few. The remainder of the followers were relegated to the out-group.

Leader-Member Exchange Theory

In the late 1970s and early 1980s, the VDL model developed into a full-fledged relational approach to leadership. The name of the model was changed to leader-member exchange (LMX) theory to recognize the importance of dyadic exchange relationships between leaders and followers. Researchers began in earnest to explore key questions associated with rela-

tional leadership. They asked: What are the components of good-quality (and poor-quality) leadership relationships? How are these relationships developed? What are the outcomes (or consequences) of having a higher- or lower-quality relationship?

What Are Good Relationships?

Good relationships were identified as those characterized by high levels of mutual trust, respect, and loyalty. Individuals in high-quality exchanges respect one another’s capabilities and competence. They have high levels of trust and can count on one another for support and loyalty when needed. More important, they are willing to communicate openly and honestly with one another. As a result, these relationships generate the mutual influence necessary for effective leadership. Conversely, poor-quality relationships have low levels of these characteristics. In low-quality exchanges, individuals do not trust one another or respect one another’s capabilities. Communication is restricted to formal exchanges. Individuals have little mutual understanding, limited support and commitment for one another, and no loyalty. Therefore, individuals do not share information freely and do not have the mutual influence that allows leadership to develop (superiors in these relationships manage, rather than lead, their subordinates).

How Are Relationships Developed?

The process through which LMX relationships develop is described as “role making” as opposed to “role taking.” In role making, individuals actively negotiate how their roles in the relationship and organization will be defined. In contrast, role taking involves no negotiation, but rather acceptance of formally defined roles as the basis of the relationship (hence, role taking). Successful role making begins when either individual makes an offer to go beyond the formally defined roles (that is, putting forth discretionary effort) and then continues if the offer is accepted and another one is made. This sparks a series of testing processes to determine the capabilities, motivations, and obligations of the other. Based on the outcomes of role making, individuals may decide to remain within formally prescribed organi-

zational roles (accepting no enhanced obligation), or to expand their relational behaviors and roles beyond the formal contractual obligations of the job (extra-role behavior).

The testing processes that build relationships are of two types: active developmental testing, which occurs while the relationship is still developing, and maintenance evaluation, or monitoring for relational violations, after the relationship is already established. In developmental testing, one party does something and then watches to see how the other party responds. If the response is favorable, the second person “earns a point” from the first, and the first will continue the exchange. If the response is unfavorable, the first party will take a point away, and after a number of unfavorable responses will stop exchanging or restrict exchanges to those that are formally required. In maintenance evaluation, individuals stop keeping score and only notice the action of the other if it is in violation of relational norms, or if the relationship becomes overly unbalanced. This is like the children’s game of Chutes and Ladders: The relationship will continue to progress or be maintained unless a violation (such as a betrayal of trust or loyalty, or a display of serious incompetence) occurs that makes the relationship slide back down the ladder (with the length of the slide proportionate to the level of violation).

Why Do Relationships Matter?

Perhaps most important, LMX research shows that the quality of relationships matter because of their effect on outcomes (for the leader, the follower, and the organization). Studies show that high-quality relationships are associated with many benefits, including greater job satisfaction, higher organizational commitment, enhanced career progress, lower turnover, higher perceptions of justice, and in some cases higher performance. Low-quality relationships are negatively associated with the variables just described. Followers in low-quality relationships have less access to information and beneficial career assignments, less access to the leader’s network of relationships, and receive less respect and consideration from the leader. Leaders in low-quality relationships often find that these relationships are very dif-

ficult to manage, with subordinates who are more disgruntled and with whom they have little influence, and thus with whom they need to rely on the use of authority rather more positive forms of influence.

WHAT DOES ALL THIS MEAN FOR LEADERSHIP?

Relational approaches advanced leadership studies by moving away from a sole emphasis on leader (or follower) behavior and examining the interplay between leaders and followers. According to relational approaches, it is the interplay, the relational exchange, that generates the influence that produces beneficial leadership outcomes.

As LMX theory progressed, it moved away from discussions of in-groups and out-groups and the inherent status differences that these separations create. Instead, many LMX theorists now argue that successful leadership lies in building effective relationships throughout the organization. Leadership relationships should not be restricted to a select few subordinates, nor should the relationships be considered only as manager-subordinate dyads. Consistent with social capital perspectives, which argue that organizational value results from the networks of interpersonal relationships generated by organizational members, modern-day relational approaches suggest that leadership be viewed as a process that occurs when individuals develop relationships and generate influence to create change.

THE FUTURE OF RELATIONAL LEADERSHIP APPROACHES

Over the past decade, the importance of relational approaches in leadership and organizational behavior has been increasingly recognized. Prominent leadership theories, including theories of charismatic and transformational leadership, are beginning to explore how relationships affect these types of leadership. Work on social capital is drawing considerable attention to the value of “who you know”—that is, the value that interpersonal relationships embedded in networks of mutual acquaintance and recognition bring to organizations. Similarly, there is a

strong trend in organizational behavior theories in general toward social exchange models, the frameworks of which are at the heart of relational leadership approaches.

Beyond these trends, as relational approaches advance into the future they likely will develop into a more fully articulated relational leadership theory. Such a focus would move away from a limited view grounded in hierarchical leadership to a broader investigation of leadership as an influence process that occurs between any two or more people to create change. The management scholars Jerry Hunt and George Dodge define this broadened relational focus as one that can move “beyond unidirectional or even reciprocal leader/follower relationships to one that recognizes leadership wherever it occurs, is not restricted to a single or even small set of formal or informal leaders, and in its strongest form, functions as a dynamic system embedding leadership, environmental, and organizational aspects” (Hunt and Dodge 2001, 448). In this way, relational perspectives may allow for more inclusive and more dynamic views of leadership than those offered in traditional approaches that have restricted focus primarily to the formal leader and to supervisory behavior.

RELIGION

Leadership is claimed, exercised, and contested in religious groups in many of the same ways that it is in other social situations. But religious leadership

also has distinctive features, particularly its appeal to supernatural forces for unsurpassable legitimization. Religious leaders draw legitimacy from diverse resources, including direct interaction with what they identify and others acknowledge as the sacred, possession and interpretation of authoritative collections of traditions in either oral or written form, specific ritual competencies, formation and interpretation of religious law, and communication of moral insight. Religious leaders achieve and maintain their status through a variety of interactions with specific audiences. But individuals or groups, often themselves acting on religious convictions, can challenge religious leadership, diminish the status of individual leaders, limit their effectiveness, and even provoke or effect their overthrow. Insurgent leaders can claim intimacy with the divine, the correct interpretation of tradition, greater ritual efficacy, more accurate legal interpretation, or superior moral vision. Claims to leadership and counterclaims against them are evaluated by audiences who themselves may be well versed in the specific issues of contention because of their personal experiences, familiarity with tradition, or intellectual and moral acuity. Religious leadership, then, is always embedded in an array of social processes that can sustain, augment, or decrease its power, even when it appears to have the support of stable, long-standing institutions. Like other leaders, religious leaders are made, remade, and unmade in their interactions with those whom they recruit and retain as followers.

CHARISMATIC RELIGIOUS LEADERSHIP

Perhaps the most striking form of religious leadership is that which is presented as being thrust suddenly upon an unsuspecting individual in a dramatic encounter with the sacred. In his classic and still influential analysis, the sociologist Max Weber (1864–1920) included such leadership under the heading of charismatic authority. Despite misunderstandings of his position, it is clear that Weber viewed charisma not as a static quality of individual personality, but as a product of social interaction, of claims and their rejection or recognition. He emphasized that charisma needs to be authenticated for it to

have significant effects. Weber gave as one of his primary examples Jesus, as depicted in the gospel according to Matthew. In a series of parallel statements in the Sermon on the Mount, Jesus describes several laws of Judaism and then asserts as a modification or to the contrary: “but I say to you” (Matthew 5: 21–45, RSV). Jesus’ authority to transform or overthrow established legal precedents is based not on his superior training or insight, nor on his particular bureaucratic responsibility, but rather on his extraordinary status as descendant of David and son of God. Similar claimants to charismatic authority abound in the history of religions and often play significant roles in the founding of new religious traditions or the transformation of established ones. Examples of both founders and prophets reveal with particular clarity the dynamics of the formation of charismatic religious leadership.

Though he was notable for his industry, sense of fairness, and contemplative nature, little in the first forty years in the life of the prophet Muhammad (c. 570–632) indicated that he would become the founder of Islam. But during a time when he withdrew to the solitude of the mountains near his Meccan home, he was summoned to begin proclaiming God’s will to humans by a stark imperative: “recite, recite in the name of God” (Qur’an 95:1). The call of the Israelite prophet Amos in the eighth century BCE was similarly abrupt; Amos relates simply that “the Lord took me from following the flock, and the Lord said to me, ‘Go, prophesy to my people Israel’” (Amos 7:15, RSV). In the 1820s in upper New York state, a teenaged Joseph Smith (1805–1844) received a series of visions that led him to reveal the Book of Mormon to the world and to found the Church of Jesus Christ of Latter-day Saints (the Mormon Church). Similarly, between 1918 and 1921 in what was then the Belgian Congo, Simon Kimbangu (c. 1889–1951) experienced a series of visions that inaugurated his work among the BaKongo people and eventually led to the formation of the largest independent Christian church in Africa. In those cases, the prophet’s claim to leadership is reinforced by the character and content of the message proclaimed. The Qur’an, for example, makes frequent reference to the incomparable superiority of the

lucid and beautiful divine message that Muhammad preached. Virtually devoid of narrative, the biblical book of Amos relies for its rhetorical and religious power on the repeated formula, “Thus says the Lord.” Taken by the Mormons as another testament of Jesus Christ, the Book of Mormon presents itself as the culmination of Christian religious revelation. Identified as the message of the Comforter promised in the gospel according to John, Kimbangu’s revelation brought his people a Christian message unmediated by white missionaries. In each of those cases, the willingness of individuals to accept and act upon the proclaimed message established authoritative leadership. The focus on a specific message also provided a counterbalance to the individual charismatic figure and made possible a continuation of his influence after his death or departure.

Claims to charismatic leadership may also be based on the ability to perform miracles (as in the case of Moses before Pharaoh or in Jesus’ healing ministry), to have a unique religious experience (as with the Buddha’s experience of enlightenment), or to have an unprecedented spiritual insight (such as experienced by Helena Petrovna Blavatsky, 1831–1891, who helped found the Theosophical Society in 1875). Reliance on such extraordinary experiences provides only an unstable platform for religious leadership, however; charismatic leadership is always in the process either of evaporating or of being transformed into authority that is more stable, broadly based, and easily maintained. For example, Moses’ charismatic displays were complemented and eventually eclipsed by his status as lawgiver, and the gospels embedded Jesus’ miraculous healings and exorcisms into his teaching career. Similarly, the Buddha’s experience quickly became codified in canonical teachings (such as the Four Noble Truths and the Eightfold Path) and integrated into institutional forms (such as the *sangha*—the Buddhist monastic community). Madame Blavatsky recorded her insights in a series of books that attained canonical status in the Theosophical Society.

Wherever and however charismatic authority is claimed, it faces the task of maintaining its hold on an audience. Although charismatic leaders may identify structure and tradition as inimical to their own author-

ity, they can quickly come to appreciate how the transmutation of charisma into more institutional forms of authority can serve to maintain their precarious positions. Further, an appreciation of institutionalized authority is often pressed upon groups when they confront the death of a charismatic leader. For example, Mother Ann Lee (1736–1784), the founder of the Shakers, made incomplete plans for succession as she neared her death. One of her closest English followers, James Whittaker, assumed the task of systematizing and extending her theological insights, while an early American follower, Joseph Meachem, developed an organizational structure for what had been a very fluid movement. Although they may have altered both the context and the content of Mother Ann’s insights, Whittaker and Meachem created structures in which her message could continue to attract followers. Their activities illustrate both the perils and possibilities of the transformation of charismatically legitimated authority into other forms.

RELIGIOUS LEADERSHIP IN ESTABLISHED STRUCTURES

Although charismatic claimants to authority punctuate the history of many religious traditions, other forms of leadership are much more frequently encountered and often exist in tension with leader-

The Religious Communicator as Religious Leader

Throughout history and across cultures in the contemporary world, many people believe that gods, spirits, and other supernatural forces can and do regularly affect the lives of living. People who believe this often select as their religious leaders men and women who are able to communicate with the supernatural world on the behalf of the human world. The following example from the Guarani people of Paraguay indicates just how important this ability can be.

The position of a *tamoí* is neither hereditary nor formally appointed. Consequently, the position exists only to the extent that members affiliate with a particular leader to constitute a cohesive social group.

The power of religious leadership derives from the *tamoí's* ability to mediate between a group and the supernatural. As noted in the previous chapter, all kin elders exhibit *marandú*, knowledge of the supernatural. This gives them a privileged position to understand *tekó marangatú*, the proper mode of being *Chiripá*. *Marandú* is acquired through chanting, and the most powerful *poraéa* often assumes the position of *tamoí*.

A *tamoí* exercises his influence by counsel, example, and religious ritual. He does not retain control over the productive resources of the nuclear families and therefore does not coerce the fealty of members. Leadership is exercised in being *tenonderá*, literally, "to be out in front." The *tamoí* is physically out in front of the community during religious gatherings and, figuratively speaking, presents his behavior as an example for the entire community. Just as an elder

kinsman will obliquely counsel his juniors on the dangers of violence and anger, the *tamoí* is expected to act out the ideals of serenity and composure in front of his congregants.

The process by which power is acquired was evident in *Itanaramí* in 1981, when the *tamoí*, *Avarijú*, was relatively new and sought to assert himself as the community's most influential member. *Avarijú*, a small man of about fifty years, was filled with seemingly boundless energy. His sharp wit, quick laugh, and repertory of stories made him an asset around any hearth. He had been born in *Mboí Jaguá* and had come to *Itanaramí* to join his wife. Before asserting himself as a *tamoí*, he had been known for his fortitude in the face of the larger society. He had once confronted a general during an official visit and could carry himself with dignity past the prostitutes and truck drivers of *Igatimí*. *Avarijú* was not given much respect for his religious powers when he asserted himself as a leader, but he developed his reputation with hard work, asserting kin relations and developing religious knowledge to attain the principal leadership of the *tekoá* of *Itanarami*.

ship based on charisma. In Weber's formulation, leaders can base their claims to authority on traditional or bureaucratic grounds, but specific examples will often present a mixture of claims. Prominent among those often claiming traditionally sanctioned leadership roles are various priestly classes. For example, ancient Israelite priests had to be members of the tribe of Levi, with some tracing their descent to Aaron, the brother of Moses. Other forms of hereditary, traditional leadership include the Brahman class in India, which traces its origins and authority to the Vedas (compiled c. 1500–1200 BCE). The Roman Catholic papacy also depends on claims to traditional authority. In the Catholic view, the institution of the papacy can be traced to Jesus' promise to Peter in Matthew 16:18–19, when Peter is designated the rock on which the church will be built and is given the keys to the kingdom of heaven.

Peter's successors as bishop of Rome trace their authority back to that encounter between Peter and Jesus. In some cases, the reliance on tradition is combined with other forms of legitimation. The Roman Catholic pope, who oversees a large bureaucracy, is selected by the College of Cardinals. In Japanese Shinto, although the priesthood is open to anyone with the proper training, many continue a family tradition of serving as priests.

In many instances kings, who held their positions because of lineage, either exercised significant religious authority or were viewed as divine. In the Japanese imperial cult that developed in the seventh and eighth centuries CE, continued in full form into the thirteenth century, and was revived in the 1868 Meiji restoration, the emperor was viewed as the descendant of the goddess *Amaterasu* and functioned as the chief priest, sacred king, and a living

embodiment of the sacred. One strand of creation stories among the Yoruba of Nigeria recounts that, after creating the world, the god Odudua became the first king and established the institution of the kingship in the city of Ile-Ife; through his sons he established sixteen other kingdoms in Yorubaland. A rich Yoruba iconography links the power of the traditional king with the power of the gods; sacred Yoruba kings did not have substantial ritual responsibilities but they represented moral authority to the people and through the exercise of political power and manipulation of symbols were responsible for maintaining Yoruba civilization.

When formal rituals accompany the assumption of a leadership role and when those rituals are repeated on a regular basis for multiple individuals, leadership is being established at least in part on Weber's bureaucratic or rational-legal grounds. Religious leaders who depend on bureaucratic legitimation for their authority are the products of systematic processes of initiation and training. For example, while Pope Paul VI's 1965 decree *Optatam Totius* (On Priestly Training) uses the familiar Christian language of a vocation or calling to the priesthood, it also devotes extensive and detailed attention to the training or formation of priests. In many other contemporary Christian denominations, as well as in contemporary Judaism, the professionalization of religious leadership has put the emphasis on the education and training of priests, ministers, and rabbis, which has diminished the role of charismatic or traditional claims to religious authority. Where bureaucratic forms of leadership training predominate, insurgent leaders are faced with the dilemma of either seeking a place within, and accepting the constraints of, the formal processes and institutions that produce leaders or forming their own, separate groups with the uncertainties and challenges that attend such ventures. Contemporary controversies over women or gays and lesbians assuming religious leadership in various Christian and Jewish denominations provide cases in point. When groups decide to accept certain kinds of leadership and reject others, they inevitably make very consequential statements about their communal identity, values, and commitments. Acceptance or rejection of a contro-

versial form of religious leadership can lead to schisms within established religious groups, or it can lead to the migration of disgruntled minority members to other forms of religious life outside their parent group. For example, frustration with the male Roman Catholic hierarchy's refusal to admit women into the priesthood has led some women to form dissident groups within the church and others to become religiously disaffected or to embrace elements of the contemporary feminist spirituality movement, including worship of "the goddess."

Even where the professionalization of religious leadership has not made significant inroads, as in most forms of contemporary Islam outside the United States, aspirants to leadership frequently appeal to their superior religious education to support their claims. Specific educational institutions or practices may exert far-reaching authorizing influence over religious leadership. For example, the prestige of al-Azhar University in Cairo, founded in the late tenth century, is widely recognized in the Muslim world, and those who have studied there with acknowledged masters of Islamic scholarship can assert the superiority of their training. Study at Benares has a similar cachet for Brahmins, who can use it to assert their superior authority.

DEMONSTRATING AND MAINTAINING RELIGIOUS LEADERSHIP

Having achieved leadership status in a religious group does not guarantee one's ability to exercise leadership effectively or indefinitely. Leaders call upon a distinctive set of resources to demonstrate, maintain, defend, and extend their authority. For example, Mary Baker Eddy (1821–1910) owed her status as the founder of Christian Science to her seminal experience of self-healing through reading the New Testament. But she maintained her leadership by codifying her religious insights into a scriptural text, *Science and Health with Key to the Scriptures* (1875), consolidating organizational authority within what she designated the Mother Church in Boston, and establishing herself as the primary arbiter of correct belief and practice within the movement. Repeated demonstration of ritual competency can

also reinforce religious leadership. Within the system of Ifa divination practiced by the Yoruba and also in the Afro-Cuban system of Santeria, diviners match the patterns of thrown palm nuts and cowrie shells with a corpus of mythological stories in order to address a client's query. The more familiar with the traditional stories a diviner is, the more he is able to present his client with a range of options for understanding his situation. The more options, the more likely it is that the client will be satisfied. The more satisfied clients, the greater the authority of the diviner.

Facility with language, whether in sermons, study and interpretation of texts, or other settings, can also demonstrate and maintain religious leadership. The swift rise of Malcolm X (1925–1965) in the black nationalist Nation of Islam was in part a result of his eloquence. His speeches gave form, force, and focus to the deep and turbulent anger and anxiety of his audiences; through his oratorical skills their yearnings were reflected back to them as concrete programs of racial pride and self-betterment. Similarly, the rhetorical abilities of the Rev. Martin Luther King, Jr. (1929–1968) not only communicated his moral vision for civil rights in the twentieth-century United States, they elevated his leadership above that exercised by his peers and galvanized his audiences into action. In all instances, the formation of religious leadership is a dynamic process, whether the primary appeal is to charismatic, traditional, or bureaucratic legitimation. Religious leadership always exists in contexts where it is asserted, evaluated, challenged, and supported or rejected by specific audiences. The difficulty of achieving religious leadership may be matched, and even surpassed, by the difficulty of maintaining it.

CHALLENGES TO RELIGIOUS LEADERSHIP

Demonstration and maintenance of religious leadership become more important when its authority is challenged. Individual failings of character or performance, for example, can undermine a leader's status. Revelations of financial or sexual malfeasance have discredited many a religious leader. The Roman Catholic church in the United States was shaken in

the first years of the twenty-first century by revelations of sexual abuse that led to the removal of offending priests from the active ministry, the resignations of important figures within the Church hierarchy, and widespread loss of confidence in Church leadership. An activist group, Voice of the Faithful, was formed in 2002 to advocate from within the Church substantial changes that would make such crimes less likely in the future and establish more effective ways of responding. Depicted by its members as offering concerned support to the ministry of the Church, the group was viewed by opponents as attempting to usurp the rightful powers of the hierarchy and as distorting the role of the Roman Catholic laity. Though it has yet to provoke any substantial changes, the crisis has raised profound questions about leadership within the church, including eligibility for the Roman Catholic priesthood and the practices of the Roman Catholic hierarchy.

The dissonance created by leaders' profession of moral and religious values that they themselves do not put into practice can have profound repercussions for themselves and their religious groups. The furtive womanizing of Elijah Muhammad (1897–1975), the leader of the Nation of Islam, created a rift between him and Malcolm X, his leading disciple. The break led to Malcolm's departure from the Nation of Islam, Malcolm's subsequent assassination, and the eventual fragmentation of the Nation of Islam. Similarly, in the later twentieth century, both mainline churches and television ministries were rocked by financial scandals, often involving millions of dollars. One of the more spectacular examples concerned the Rev. Jim Bakker (b. 1939), the host of the PTL (Praise The Lord) Club television program and founder of the PTL network, who engaged in bribery, embezzlement, and fraud, among other illegal acts. Some individuals involved in moral scandals have managed a measure of rehabilitation (as has Bakker), but it is rare to find tarnished leaders completely erasing the taint of their immoral acts.

Religious leadership can also be challenged by outside forces. Two stories from the Hebrew Bible indicate the possibilities. In I Kings 22, the kings of Judah and Israel are trying to decide whether to go

into battle. Jehoshaphat, the king of Judah, asks for a confirmation of their plans from the Lord. Ahab, the king of Israel, summons his four hundred court prophets and receives a resounding confirmation. But Jehoshaphat hesitates and asks for another opinion. The other king reluctantly summons one Micaiah, who promptly prophesies disaster. The kings ignore him, and Ahab pays with his life. The story clearly decries political attempts to fabricate or unduly influence religious leadership and endorses the leadership of the prophet who answers only to his god. The challenge for Micaiah was to avoid the state's attempt to co-opt religious leadership, while the challenge for the Israelite king was to blunt religiously grounded criticism of his own legitimacy. In the second example, the challenge comes from a different religious system. In I Kings 18, King Ahab has "forsaken the commandments of the Lord and followed the Ba'als" (I Kings 18:18, RSV). To prove the superiority of the Lord, the prophet Elijah challenges the prophets of Ba'al to a contest on Mount Carmel. A bull is prepared on a sacrificial pyre for the 450 prophets of Ba'al and another for Elijah. Despite extraordinary ritual exertions, the prophets of Ba'al are unable to have their deity put fire to the sacrifice. Elijah, by comparison, constructs an altar out of twelve stones and offers a simple prayer: His sacrificial pyre is miraculously lit, revealing the incomparable power of his god and securing his prophetic status.

Challenges to religious leadership do not always come in such dramatic form, but the tasks of assessing the value of cooperating with the state and responding to external challenges frequently occupy religious leaders. When political institutions attempt to centralize power, religious leaders can be inexorably drawn into the orbit of the state; as states seek to regulate the lives of their citizens, they may come into conflict with religious attempts to define the ways in which people should behave. More than a few religious leaders in the United States, the Rev. Billy Graham (b. 1918) prominent among them, have supported U.S. presidents' appeals to the symbols of U.S. "civil religion" as legitimating not just the office of the presidency but also particular political courses of action. On the other hand, religiously motivated

And if not now, when?

—Rabbi Hillel, twelfth century

critics have often challenged the wisdom and legitimacy of political actions and decisions. For example, in 2002 the U.S. Conference of Catholic Bishops formally questioned the moral legitimacy of President George W. Bush's plans for a unilateral war against Iraq. Religious leaders have always been active in antiwar movements, as well as in other social causes that have brought them into direct conflict with the government. Because religions and governments both attempt to establish an ideal social order and to mobilize individuals in support of it, there are multiple opportunities for both cooperation and conflict between religious and political leaders.

Conflicts between different religious systems also provide opportunities for leadership. The task of apologetics, or defense of the faith, has often occupied intellectuals within a tradition. As the early Christian movement spread through the Mediterranean world in the first centuries of the common era, for example, some of its most capable thinkers, including Tertullian (c. 155–after 220), Origen (c. 185–c. 254), and Augustine (354–430), directed treatises against external opponents of the new religious system. Today, many evangelical Christian leaders work to defend their faith against the challenges posed by "cults" and other alien religions. In the nineteenth century, the Mormon hierarchy struggled to provide a firm footing for a developing religion that was subject to mob actions, including murder, vitriolic popular criticism, and indirect and direct governmental intervention. Successive presidents of the Mormon church strove to preserve the essentials of their religious tradition while mitigating the tension between Mormons and the rest of society. Only with the church's official abandonment of polygamy in 1890 did tensions substantially decrease. More recently, after the terrorist attacks on the United States on September 11, 2001, individual Muslims and prominent religious thinkers within the

Islamic tradition were drawn into a variety of conversations, often very heated, in which they were challenged to defend their religious tradition from blanket assertions that it supported and even advocated terrorism. Although intellectual leadership within a religion is often concentrated in an elite, in times of crisis regular members may be called upon to defend their religious world against external opponents.

THE DYNAMIC NATURE OF RELIGIOUS LEADERSHIP

Religious leadership is always constituted within a field of competing influences. When religious authority is challenged, leaders can call upon a full array of sources of legitimacy that support the status quo, even as those who would replace them employ their own resources to justify the changes they advocate. In the process, the strength of institutions as well as the strengths of individuals are tested. Whatever the outcome of specific challenges to religious leadership, situations of conflict reveal with particular clarity the mechanisms by which leadership is claimed, constructed, defended, disputed and reconstituted. Religions, like other human institutions, are dynamic entities. Even the most securely established bureaucracy is not immune to the erosion of its traditional sources of support, the damaging impact of the human frailties of its members, the subversive effects of internal dissent, or the destructive potential of collisions with other religious systems. Institutional religious leadership thus constantly needs to be demonstrated and defended in order for it to be maintained. On the other hand, insurgent religious leadership, justified most frequently on a charismatic basis, faces its own dilemmas. Often concentrated in a single individual who may have few other qualifications for leadership, charisma also needs to be maintained through repeated demonstration, but it may lack the supporting structures that regularize institutional leadership. Moreover, charismatic leadership translates poorly into lasting structures. Charismatically led movements always face a crisis at the departure or demise of their leader. Only when it blends with or

mutates into other forms of authority does charisma become sufficiently stable to promote the development of enduring institutions.

Every form of religious leadership has its benefits and drawbacks. While it can contribute powerfully to the meaningful patterning of life, leadership embedded in institutions risks the ossification and devolution into irrelevancy that comes with the rote repetition of traditional gestures. While charismatic authority has the potential to mobilize fully the energies of those it inspires, it may provide only fragile and temporary structures into which those energies can be channeled. Like religions themselves, religious leadership is a dynamic entity. Even when the processes by which it is made, unmade, and remade are not readily apparent, it is always subject to them.

RELIGIOUS STUDIES

Understood broadly, religious beliefs and actions have always been a shaping force in every human society. Leaders influence religious beliefs and actions, even as religious beliefs and actions influence leaders and their followers. Leadership of various forms takes place within religious organizations. Conversely, aspects of religion affect leadership processes, not only within religious bodies, but also within corporations, civic organizations, and the political sphere. Yet, much like leadership studies, systemic, sustained religious studies found a place in academic circles long after the subject had pervaded human society.

In the West, Christian beliefs and practices have largely defined not only private and public life, but

also intellectual categories. Throughout the medieval period in Europe and into the modern period, Christian theology was the “queen of the sciences,” the overarching frame of reference for all of the academic disciplines. Non-Christian traditions have been evaluated and understood in terms of Christian categories. The development of the modern discipline of religious studies offered an approach free from explicit theological assumptions.

Studies such as the English orientalist and jurist Sir William Jones’s works on the languages and laws of south Asian societies at the end of the eighteenth century were precursors of more systemic comparative philological and historical studies. Into the nineteenth century, Friedrich Schleiermacher, a leading Christian theologian in Germany, articulated a Romantic vision of religious progress toward a perfect and universal expression of Christian faith and practice. Such Christian hegemony in the study of religion was eclipsed by the development of rigorous comparative examinations of religious traditions around the world in the latter half of the nineteenth century. This early period of the modern study of religion is exemplified by the English orientalist Max Müller’s edited series *The Sacred Books of the East*, with fifty volumes published between 1875 and 1900. This type of systemic scholarly attention to a multitude of textual (and non-textual) religious traditions around the world coincided with the development of critical-textual and social scientific methodologies.

Like the study of leadership, the contemporary study of religion is an interdisciplinary field. The phenomena of religion—including ideas and beliefs, ritual practices, communal structures and organizations, and moral and political systems—are studied via anthropological, historical, sociological, philosophical, theological, literary-critical, and other methodologies. Given that their approaches vary widely within the study of religion, scholars do not agree on what motivates a person to be religious. The field includes psychosocial models (religion as rooted in human needs and insecurities—for example, Freud 1928), human projection models (the divine as a collection of human attributes writ large—Feuerbach 1841; Marx 1844), experiential or existential models

(religion understood through human experiences—James, 1902; Otto, 1958), and sociological models (religion understood within complex social systems—Durkheim, 1912; Weber, 1922; Geertz, 1973).

LEADERSHIP BY RELIGIOUS FIGURES

One archetype of a leader is the founder of a religious tradition. In popular discourse, and often in leadership studies, parallels are drawn among Gautama Buddha as founder of Buddhism, Jesus as founder of Christianity, Muhammad as founder of Islam, and so forth. Scholars of religious studies, however, warn against drawing any simplistic parallels among such figures in terms of their leadership roles, messages, and actions. In addition, emphasizing the founder of a tradition can fall prey to the weaknesses of “great man” theories of leadership: isolating an individual from his or her context, overlooking historical precedents and ties to other cultural and religious strands, and downplaying the role of “followers.”

The saint is another important type of religious leader. In his *The Varieties of Religious Experience* (1902), the U.S. psychologist and philosopher William James poses a famous dichotomy between the saint and the leader, portraying saintliness as “the collective name for the ripe fruits of religion in a character” (James 1902, 220); in his view saints are able to embrace ideals such as harmony, peace, purity, and charity. The leader, in contrast, is “the chief of the tribe . . . [who] is the potential, if not the actual tyrant, the masterful, overpowering man of prey” (James 1902, 293). James challenges any simple rendering of this contrast, though, arguing that even the most saintly figures in history were able to stand up and show “some worldly temper” (James 1902, 296). However, James goes on to suggest that, to the extent that people can draw a legitimate distinction between saints and power-mongering leaders, the former are not only the more true, but also the more valuable—in empirically verifiable ways—for the improvement of human well-being. Thus, although James acknowledges that “strong-men” leaders may sometimes be necessary, he makes the case that more enlightened and less self-serving individuals are, in general terms, superior leaders.

The German sociologist Max Weber’s classic sociological account of religion emphasizes the charismatic elements of religious prophets. He asserts, for example, that “the entire basis of Jesus’ own legitimation . . . was the magical charisma he felt within himself” (Weber 1922, 47). *Charisma*, from the Greek root *charis* (grace or favor), was a Christian theological term for a special gift or talent bestowed by God that set a person (or community) apart from others. Weber sees charismatic religious leaders as having “extraordinary powers” to which their followers respond. Prophets announce a new order and can usher in social, cultural, and religious change. The prophet might be personally pious, but the emphasis of the prophet is on his or her charismatic ability to influence followers for change (despite possible personal flaws). This archetypal charismatic figure has become an important part of leadership studies; Weber himself applied the notion of charisma to leaders in his works on modern political and economic systems. Modern bureaucracy, in Weber’s analysis, embodies a form of authority derived through the “routinization of charisma.”

In tension with understandings that focus on the qualities of individual religious leaders as founders, saints, or prophets are alternative understandings of religious traditions that emphasize their communal and historical dimensions. Some traditions, such as Hinduism or various Native American traditions, have no obvious founder. Other traditions, such as Quakerism, deemphasize the role of the individual leader while emphasizing spirit-led leadership as a communal practice. New Age and personal spirituality movements emphasize neither leaders nor communal practices; rather, they are grounded upon individual religious experience.

The category of religious leaders must encompass ascetic leaders (who practice strict self-denial as a measure of spiritual discipline) such as Theravada Buddhist monks and charismatic Pentecostal Christian preachers and local leaders of folk religions, as well as holders of world-recognized, institutionally defined positions, such as the pope of the Roman Catholic Church. Types such as founder, saint, and prophet are helpful, but contextual and historical fac-

tors, along with relations with various types of followers, are also components of the analysis.

LEADERSHIP AND RELIGIOUS ORGANIZATIONS

Within religious settings, the leadership process as a whole is as diverse as the leadership process is within political or corporate settings. In addition to the variety of individual religious leaders just noted, there are multiple types of religious followers, contexts, and goals. Studies of various religious groups and traditions analyze organizational practices—how a *sangha* (Buddhist community or congregation) is structured, a pilgrimage is organized, or a ritual is completed—but religion scholars seldom explicitly label these processes as “leadership.”

In the U.S. context, few in-depth comparative studies exist of leadership within religious communities. A number of current initiatives—such as the Pulpit and Pew Project: Research on Pastoral Leadership at Duke University; the Academy of Religious Leadership and its affiliated journal, *The Journal of Religious Leadership*; and a project on Jewish religious leadership at the Jewish Theological Seminary in New York City—have as their goal to understand the leadership process in contemporary U.S. religious congregations. Within Christian and Jewish theological schools, administrators and scholars debate whether “leadership” should be seen as its own field or merely as a topic of theology, congregational studies, religious administration, religious education, or some other area.

RELIGION AND POLITICAL LEADERSHIP IN THE MODERN WEST

Political, civil society, and military leaders have often invoked religious language and imagery to further their ends—whether personalized or socialized. Some scholars have shown that religious frameworks, such as “exodus” and “messianism,” inform leaders and followers in political and social movements. Leaders in similar historical times and places have employed common religious texts and related traditions to different ends—such as justifying or

opposing the civil rights movement. These efforts in religious studies are parallel to, and sometimes overlap, important work on narrative in leadership studies (Couto, 1993; Gardner, 1995).

The relationship between religious commitment and political society is a perennial one; in the modern Western tradition, that relationship concerns the balancing of tolerance for different religious perspectives among the population with political order and legitimacy. The English political philosopher John Locke’s *A Letter Concerning Toleration* (1689) provided a classic case for protecting the freedom of conscience of every person to exercise his or her religion (within certain limited constraints) without penalty. His approach for guaranteeing extensive religious liberty, however, fit within a frame that increasingly viewed religion as a private matter. Yet, as the French writer and philosopher Jean-Jacques

Religious Leadership among the Hopi of Arizona

While the ceremonial leaderships or priesthoods nominally belong to certain clans, each really belongs to a certain lineage within the clan. When a man who holds an office dies, the office goes to his next youngest brother. Should he have no brother, the office would be inherited by the son of one of his sisters, who, because of matrilineal descent would belong to the clan of the priest. The position would not go to the priest's son, for that form of succession would carry the office into a different clan. If no near relative were available within the clan, the office would still remain within the clan even if it were to go to a clansman who could not trace blood relationship to the preceding official.

The succession in priesthoods is not inflexible, for some allowance is made for individual desires and for personal fitness. These ceremonial leaders hold positions of great responsibility. No one is forced to take the position if he feels that he should not, or if he does not desire it, although he might be urged to do so. Someone who is stupid, or who is too lazy to perform the arduous tasks, would be passed over in the succession. Similarly, one who is quarrelsome with neighbors or who is having difficulties with his wife, would be disqualified for the succession, for a ceremonial leader must be of untroubled mind.

The ceremonial positions entail duties rather than rewards. They bring no economic returns whatsoever, and while they bring respect, they bring no authority or power.

These positions are the only positions which in any way give a Hopi a social role different from that played by his fellows. Aside from ceremonial office and society membership, there is no differentiation of social roles among the Hopi. At Hotavila there is no election of civil officers. Although a secular village council has been fostered in other villages by the Indian Bureau, Hotavila has thus far refused to introduce a formal mode of self-government. There are no courts, no policemen, no fines and no penalties, except those imposed by the Indian Bureau. There is no native machinery for settling disagreements, whether concerning property rights or personal injury.

The town council is entirely a religious council, which, in order to maintain its purity of mind, should not meddle in quarrels. The native system of government is, in effect, a practical form of anarchy.

Rousseau highlighted in his *The Social Contract* (1762), political leaders still look to religion as a source of community ritual and commitment by citizens. Rousseau's answer for protecting religious conviction but also guaranteeing citizen loyalty was the cultivation, by the political leadership, of a "civil religion" that all citizens would have to endorse. Some interpreters read Rousseau's formula as a viable way in which religious identity can be employed to undergird morality and the building of

political community. Other interpreters have criticized Rousseau's framework for its intentional prioritizing of political over religious commitments when conflicting loyalties arise for religious adherents.

The degree to which religion has shaped U.S. political leadership was addressed by the French aristocrat Alexis de Tocqueville (1835–1840) during his two visits to the United States in the 1830s. Tocqueville called religion the "first of America's political institutions," arguing that in contrast to the French context, in which religion and democracy were in conflict, in the U.S. context religious communities were a fertile training ground for democracy. Clearly Tocqueville understood religion to encompass the broad umbrella of Christendom. His enthusiasm about the important, indirect role of religion—specifically, Protestantism—in politics would face significant challenges by increasing religious diversity.

Questions of diversity, civil religion, and U.S. democracy continue to preoccupy scholars of religion and society. Robert Bellah's account of U.S. civil religion (1967) sparked a voluminous literature on the religious faith and religiously influenced pronouncements of U.S. presidents. Bellah was much more sanguine than

Rousseau had been that religion can have a prophetic (i.e., critical and visionary) role as well as a priestly (i.e., order-creating and power-consolidating) role in presidential politics and civic life more broadly. Bellah's coauthored book *Habits of the Heart* (1985) explored the prospects of biblical and republican traditions to counter U.S. individualism. Many scholars of religion and society, particularly but not exclusively in conservative circles, continue to grapple with the role of religious and moral traditions in U.S. public life.

RELIGION, SPIRITUALITY, AND BUSINESS LEADERSHIP

Since the 1980s, a number of scholars—in management and leadership more than in religion—have explored themes of religion and spirituality in business. Religious studies have taken more interest in religion within the political sphere than in religion within the business sphere. To be sure, Max Weber's work *The Protestant Ethics and the Spirit of Capitalism* (1904–1905) and his accompanying essays on the ethics of world religions are a notable exception that spawned its own critical literature in ethics and the sociology of religion. However, until recently scholars little studied the analysis of other aspects of the interrelationships among religious beliefs, symbols, myths, and rituals on the one hand and the practices of corporate management on the other hand. Many authors, with varying degrees of analytical rigor, have illuminated the importance of faith or spirituality in the beliefs and actions of managers (Conger, 1994; Nash, 1994; Mitroff and Denton, 1999). Many conceptual and practical complexities of interrelating religion and the workplace arise from the significant religious diversity of employees. More analysis can be fruitfully undertaken to understand business leadership as religiously influenced practice.

PLURALISM AND THE PROBLEM OF GLOBALIZATION

The multifaceted phenomenon of globalization has led to questions of interreligious encounter at international, national, and local levels. Diana Eck (2001–2002) argues that the United States is now the most religiously diverse nation in the world, with a significant presence of every major religious tradition (and many “minor” ones). Ever greater ease of travel, coupled with ongoing innovation in technology and communication, makes multireligious interaction a fact of life for persons in many cultures and locales.

In response to recent terrorism, the study of religion in politics has taken on a renewed public prominence. Scholars have emphasized that disparate forms

of religion are a resource for many persons seeking consolation and a sense of community, even as scholars in religious studies, political science, and other fields have analyzed the extent to which religiously shaped worldviews have influenced terrorists to act. Samuel Huntington's 1993 article “The Clash of Civilizations?” set off a firestorm of debate. Although it predates the current U.S. preoccupation with terrorism, his argument that the post-Cold War world will be marked by violent confrontations between cultural blocs—particularly among the “West,” China, and Islam—has been taken up by those who want U.S. citizens to fear non-Western religious and cultural ideologies. Many scholars of religion have rejected Huntington's monolithic account of “culture”—especially but not exclusively his unnuanced portrayal of “bloody” Islam—as simply untrue to the facts. Islam and China are as diverse, culturally and politically, as Christianity and the United States.

Advocates of religious pluralism have explored ways in which leaders and citizens could build common political ground despite religious differences. Religion is as present in the U.S. political process as it has ever been. In a post-September 11 context, scholars debate the degree to which U.S. civil religion can expand to incorporate religious differences of the population that reach far beyond the so-called Judeo-Christian tradition. Consistent with the dilemma noted by Bellah nearly forty years ago, they also debate whether civil religion's prophetic strands are capable of confronting the contemporary international conflicts.

Religious studies have been (and could increasingly become) a source of methodological and substantive insights for the study of leadership—and its myths, symbols, practices, and ethics—in various spheres. In turn, leadership studies can inform analyses of religious phenomena, both within communities that understand themselves as religious and elsewhere.

RESILIENCY

Resiliency has not been systematically researched or analyzed in the field of leadership. Yet, at the turn of the twenty-first century, with the extremely turbulent geopolitical, social, and economic environment facing leaders, their positive psychological capacity for resiliency becomes critical.

RESILIENCY DEFINED

Resiliency has a long history in child and adolescent psychotherapy and numerous definitions. As part of the positive psychology movement, however, resiliency has been defined as “a class of phenomena characterized by patterns of positive adaptation in the context of significant adversity or risk” (Masten and Reed 2002, 75). Applied to organizational leadership, resiliency can be defined as “the positive psychological capacity to rebound, to bounce back from adversity, uncertainty, conflict, failure or even positive change, progress and increased responsibility” (Luthans 2002, 702).

Although resiliency can be viewed as a fixed trait, as part of “positive organizational behavior” (Luthans 2002) and “authentic leadership” (Luthans and Avolio 2003), the case has been made for leaders’ resiliency as being state-like, and thus open for change and development.

THE ANTECEDENTS OF RESILIENCY

Three recognized antecedents for resiliency emerge from the relevant theoretical and research literature. These are assets, risks, and values. In relation to resiliency, an asset is “a measurable characteristic in

a group of individuals or their situation that predicts positive outcome in the future on a specific outcome criterion,” while risk is an “elevated probability of an undesirable outcome” (Masten and Reed 2002, p. 76). Traditional research emphasizes the necessity for reducing or avoiding risks. However, in the context of leadership, risk should be thought of as inevitable, not necessarily to be avoided, but rather controlled and managed as a part of the process toward attaining resiliency.

The values and beliefs component of resiliency makes a sometimes overwhelmingly difficult current situation more manageable, and these values also make a link to a more fulfilling future. Resilient people develop hardiness in the face of adversity by elevating themselves over their painful present. Their values play a salient role in presenting different approaches for interpreting and shaping events. In other words, the role of values in enhancing resiliency is based on the stability of those values as a source of meaning, and for values to serve a survival function, they must be strong enough to warrant this stable source of meaning even in bad times.

THE ROLE OF THE LEADER'S ASSETS FOR RESILIENCY

Although it is simpler to perceive assets, risks, and values as externally determined by contextual factors, the individual leader's assets, risks, and values are also salient antecedents for developing and maintaining his/her resiliency. Leaders bring into their situations various aspects of themselves, both positive and negative, including their personal characteristics, backgrounds, strengths, vulnerabilities, insights, and perceptual biases. The trait theories of leadership emphasize these individual differences and uphold them as antecedent assets for leadership success and effectiveness. The positive psychology and positive organizational scholarship literature also recognize assets such as dispositional traits and virtues that, if present in one's life, enrich the depth and breadth for success and satisfaction, and, if absent can hold people back from achieving life's full potential. These assets or traits include general efficacy, dispositional

hope, trait optimism, positive/negative affectivity, and many others.

The human capital movement also emphasizes assets the uniqueness and strategic importance of educational background and experience, and the resulting knowledge, skills, and abilities. Moreover, in addition to human capital, the salient role of social capital, that is, relationships and networking that leads to value creation and action facilitation, is a recognized asset. Other important assets such as emotional intelligence are also emerging.

In clinical research, various personal assets that act as antecedents for resiliency have been identified. Those particularly applicable to leadership include cognitive abilities, temperament, positive self-perceptions (self-efficacy), faith, a positive outlook on life, emotional stability and self-regulation, a sense of humor, and general appeal or attractiveness. Identified relationship-based assets for resiliency applicable to leadership include caring support and mentoring, prosocial and rule-abiding peers, and collective efficacy in the group, organization, and community. These clinically derived personal and relationship-based assets combined with recognized individual differences, dispositional positive psychology traits, and human and social capital are important antecedents to effective resilient leaders. Importantly, these assets can be enhanced and thus help in the development of resilient leaders.

THE ROLE OF THE LEADER'S VALUES FOR RESILIENCY

Some assets and risk factors are harder to change than others. On the other hand, research shows that individual values are possible to alter through varying perceptions of contextual factors, such as the magnitude of consequences, interests of group members, and role responsibility. Although positive moral values are not included in most definitions of resiliency, a stable, meaning-providing set of values is recognized to be an important antecedent to resilient leaders. In particular, transformational and authentic leaders both demonstrate values that define the process and decisions necessary for enhancing resiliency. For example, a key component of trans-

formational leadership is the development of leadership abilities within followers. Moreover, in the positive organizational behavior context, Luthans and Avolio's authentic leadership model contains resiliency as a part of its core, and proposes the significance of positive organizational behavior belief states of hope, optimism, and self-efficacy for leader self-awareness. As with assets, these types of values are open to change and thus can help in the development of resilient leaders.

THE SALIENCE OF THE ENVIRONMENTAL CONTEXT

Although the assets, risk factors, and values that leaders possess can strongly influence their resiliency, the role of the context within which leaders' resiliency is created, developed, and maintained should not be overlooked. Assets, risks, and values in the larger context within which leadership takes place can play a significant role in enhancing or thwarting resilient leadership.

Resiliency comprises the structural and processual dynamics that allow a nation, community, or organization to absorb strain and retain coherence and the capacity to bounce back, thus enabling the ongoing engagement of risk. The possession of valuable natural or physical resources (assets), financial and human capital, knowledge management systems, communication channels, social cohesion, and political stability can contribute to the resiliency of a nation, community or organization, as well as to its leaders' resiliency.

Moreover, the absence or appropriate management of risk factors such as economic downturns, political turmoil, health problems and epidemics, divorce, and the like can also enhance the resiliency of a country, community or organization. In addition, based on the model proposed by Luthans and Avolio, in the positive organizational context that is an antecedent for authentic leadership, the cultural values associated with resiliency become normative, replacing negative values such as cynicism and political maneuvering, and thus contribute to a resilient organizational environment and in turn authentic leaders.

THE ROLE OF MEDIATING BUFFERING PROCESSES

Several processes can act as buffering mediators that can enhance the potential impact of assets and values, and lessen the potential harm of risk factors, thus enhancing leaders' resiliency. A buffer acts as a protection or immunization that decreases the probability of a negative or undesirable outcome despite risks. In other words, buffering processes can help shape leaders' perceptions of assets, risks and values, in the same way that "medical immunizations . . . expose individuals to small doses of the disease agent and help them develop the means to fight off illness" (Cowan et al. 1996, 15).

Buffering processes proposed in the theoretical resiliency literature include "strengthening," "replenishing," and "limbering" (Worline et al. 2002). With the systematic application and dynamic combination of these three buffering processes, they act as mediators to the antecedents (assets, risks, and values), resulting in the creation and release of resiliency. The way that strengthening, replenishing, and limbering build resiliency is analogous to how muscle mass is created in the body through various resistance exercises such as weightlifting. As the weight (risk) is gradually and specifically increased in combination with nutrition (strengthening), proper rest (replenishing) and stretching (limbering), more muscle mass (resiliency) is created. In the proper combination, layers of buffering are created, and with development over time, increased strength and balance are gained. Consequently, a nation, community or organization is less likely to stumble or fail, and its leaders are able to recover from setbacks more quickly.

The utilization of assets, risks, and values through the dynamic interaction of the buffering mechanisms is ongoing. The buffers that are created affect leaders in multiple domains, aiming the physical, mental and emotional responses in a positive trajectory toward situations involving change and risk. A new approach to risk taking and change is created where unknown outcomes and lack of precedent are recognized and calculated but engaged in with confidence. In this paradigm,

uncertain and risky situations are embraced with two new perspectives. The first is that the effort will initially be successful, and the second is that any setbacks are simply additional learning steps toward the success of that effort.

Buffering is not a “magic bullet” or singular effort that ricochets around and resolves all resiliency issues at any one given point in time. It is not a layering designed to repel risk or to steer the effort away from risk but rather to incorporate risk as an input toward discovery, innovation, and sustainability. Additionally, buffering will help countries, communities, and organizations avoid the distraction caused by the negative and reactive nature of risk. Moreover, buffering processes are, in a sense, “values in action” that operationalize the synergy between assets, risks and values in a practical, applicable manner. Values can be reduced to ink on paper, unless buffering processes bring them to life, through the resiliency of the leader.

THE FUTURE

There is no doubt that developing resilient leaders is a difficult, but possible, journey that takes a lot of active emphasis and focus on the part of the individual leader, as well as the country, community or organization that he/she leads. The macrolevel of resiliency development is necessary to ensure that contextual assets, risks, and values are managed toward providing the necessary buffering processes, which in turn pave the long road, the context, for the journey in developing resilient leaders. However, without an active developmental role being played by the developing leaders themselves, in terms of drawing from this positive environmental context, as well as proactively operating on their assets, risks, and values, as well as their hope, optimism and self-efficacy, a resilient nation, community or organization may not necessarily have resilient leaders. In other words, although resiliency cascades from top to bottom, blockages may exist at the leader’s level that may prevent his/her resiliency from being effectively developed and effectively carried out. Examples include self-serving biases, perceptual/attributional errors, and self-defeating beliefs, to name a few. For

this reason, both contextual factors and individual-level leader resiliency needs to be proactively developed.

The complexity of the resiliency construct necessitates such a multidimensional approach. For leader resiliency to be appropriately explained, developed, and applied, a multilevel, multivariate approach is necessary. Moreover, in order for such a complex outcome to be fully realized, each of the steps of the journey needs to be researched and tested. One thing is certain, the resiliency input into the understanding and development of effective leadership is becoming increasingly important and should be even more so in the foreseeable future.

RESISTANCE

Change is almost always challenging. “It’s changes in the level or rate of change that throw us into transition. We talk as if change was not a problem in the past, but of course it was” (Bridges 1991, 72). Because of global competition in slowing world markets, in recent decades the changes brought by mergers, downsizing, and rightsizing have accelerated. This acceleration has had an impact on everyone. While change that is self-initiated has less impact on an individual, imposed change is almost always met with resistance, or a natural opposition to the unknown. In recent years, employees have been faced with challenges they never expected, and the leaders who must guide them through the process of change are learning to view their resistance in sometimes controversial new ways.

THE CHANGE PROCESS

Change is a process that involves ending the status quo, moving through a neutral zone, and then forming a new beginning. The ending is one of the most difficult parts of the change process: This is where people are asked to let go of the past. Why do employees resist change? Resistance is sometimes caused by indignation, but it is frequently caused by fear: fear of the unknown, fear of the loss of responsibilities, or fear of inadequacy. How do people resist

change? Some individuals exhibit disbelief, some display annoyance, and others demonstrate disappointment in their company and its leadership. Some people become despondent, while others perform hostile acts, up to and including sabotage. However, the reactions that leaders look for and embrace are resolve, acceptance, and optimism.

Change and Leadership

“Change is the game today, and organizations that can’t deal with it effectively aren’t around long” (Bridges 1991, ix). The key becomes helping employees distinguish between necessary change and “change for the sake of change.” Effective leadership requires using the four “P’s”: a purpose, a picture, a plan, and a part to play (Bridges 1991, 52). Communicating the purpose, or building a strong case for why the change is necessary, is a primary leadership function when initiating a change process.

Resistance as a Liability

Many managers would like their employees to comply with company changes without question because their resistance can become a liability to successful organizational change. In the best-selling book *Who Moved My Cheese?*, the cheese is used as a metaphor for our perceptions of ourselves, our goals in life, and what we see as our pathways to success. When the cheese is moved, that perception is disrupted, which creates resistance, and those who resist change are called “blockers.” But for the mice in the book, the cheese is just that: cheese. For them, change means revamping their pathway to success as a matter of necessity and not of ego. If humans could apply this same practical view of the movement of cheese as a metaphor for changes in the pathway to success in the workplace, then they would find themselves more confident and less resistant to necessary change.

Resistance as an Asset

On the other hand, some leaders argue that individuals who resist change are merely trying to protect

themselves against the unknown. Resistance is natural; it heightens awareness and protects people from perceived harm. Karp, in his book *The Change Leader*, describes using the Gestalt psychological approach, rather than a traditional organizational approach, to deal with resistance to change. The Gestalt approach views people as individuals who need help to choose a course of action, and not as burdens to the change process. “When individuals resist change they are trying to give a clear message about who they are and what is important to them. The leader has to help identify the issues and help the employee work through them.” Karp adds,

Just as resistance is advantageous to individuals, it is beneficial to organizations. It differentiates talent; it provides new information; it produces energy; and it makes the work environment safe. The tricky part is for the leader to confront the resisting employee and find out what they really want to do. The Gestalt approach to human development says that behind every no there is a yes. (Karp 1996, 112–113)

This positive approach advocates openly discussing resistance and reinforcing an employee’s right to resist. This clears the air and allows for more meaningful communication.

FINDING A BALANCE BETWEEN ASSET AND LIABILITY

Perhaps the best approach is the recognition that resistance to change is both an asset and a liability. Thus, a leader should have a strong hand when a change is inevitable while at the same time seriously considering the ideas of his or her subordinates. David Cooperrider asserts that all organizations breed life and are bubbling with energy. “Appreciative Inquiry,” a process developed by Cooperrider, tries to examine the positive aspects of an organization and build on those positives in the face of change. “To sponsor successful change you need an attitude, one that we don’t see often enough. This attitude can be described in terms of four values: a new level of honesty, a new level of courage, a new respect for diversity, and sensitivity to all stakeholders” (Price Waterhouse 1995, vii). Leaders need to face reality; they

cannot avoid confrontation, and they need to stay open-minded and honest in their dealings with employees. They need to have the courage to establish an atmosphere for turning resistance into innovation and creativity. This can only happen when a leader is open to diverse ideas and to freedom of thought. There needs to be a new sensitivity to all stakeholders, a genuine culture of trust and respect.

Some leaders have a tendency to shy away from the social aspect of change management; however, the truth is that interpersonal skills are necessary to lead change in any organization. “You simply cannot get the results you need without getting into the soft stuff” (Bridges 1991, x). “Relationship power, not position power, creates the appropriate environment for change. Management based on relationship power requires employee involvement rather than blind acceptance. Managers who use relationship power will build a committed work force” (Galpin 1996, 68–69).

PERSONAL CASE STUDIES: DRIVING RESISTANCE UNDERGROUND

The first case looks at a newly appointed leader who believes change is good for organizational vitality. He outlines many initiatives, but those who will need to carry out the changes have little or no input. Some of the changes are discussed at meetings, but subordinates are cautious about offering input because some have already been told that they are perceived as blockers to change. To avoid this perception, employees say little or nothing in the meetings; the supervisor moves on as if no overt resistance means agreement. This style leads to many rumors outside meetings and a general avoidance of the supervisor by the subordinates. Morale goes down, and infighting ensues as individual employees attempt to survive changing demands. In this case it appears that power and influence are driving the leadership decision-making process. There is no clear purpose around the change initiatives, no picture of the future, no defined plan, and no subordinate input: All is dictated or micromanaged. This scenario breeds a lack of trust in, and a lack of respect for, the organization.

PERSONAL CASE STUDIES: SURFACING RESISTANCE

This case looks at a rust belt manufacturing company that needed to make several organizational and strategic changes and hired a new leader for this purpose. The culture was traditionally autocratic, and the employees were heavily unionized. The relationships were adversarial, and change had not occurred in some time. The new leader was faced with poor quality, poor delivery performance, a shaky safety record, and low morale, and thus found it necessary to make changes to move the organization to the next level. The leader recognized that the direction or sponsorship of the change had to come from the bottom up because of the firm's history. He used a form of the Gestalt approach (though this was not realized at the time) to flush out the resistance that had built up after years of oppression and top-down management styles. To create a new environment and culture, the leader employed a form of the four P's: identify a purpose, paint a picture of the future, layout a plan, and give the employees a part to play. The cultural change took shape around a common interest: food. Morning meetings with coffee and doughnuts, in addition to lunches brought in by the leader, led to fun gatherings between the leadership and middle managers. The relaxed atmosphere finally enabled everyone to discuss old issues and frustrations. Once all the old frustrations were resolved, the group got down to serious work-related issues. It appeared that most of the changes being introduced by top management raised the same issues that had troubled the employees for years. As the issues were verbalized in the morning and noon meetings, the work force started suggesting plans for improvement in the areas of quality, delivery, productivity, safety, and morale. There was no need for the leader to sponsor the changes because the targets of the changes were crafting the entire initiative. The workers identified the issues, crafted a plan, and assigned themselves the accountability to accomplish the objectives. The greatest drawbacks to this approach were that the leader sometimes resisted actually letting go and letting his workers take charge. (Perhaps he should

have embraced the last of the four P's.) Another drawback is that surfacing resistance slows down the pace of change.

PERSONAL CASE STUDIES: BALANCE

In this case, that of a college campus, change was commanded from the highest powers and was inevitable. The chief vehicle of change was a massive and very expensive technology project. In this case, the leader chose a moderating system: He established an intermediary faculty committee to field faculty members' concerns and ideas while at the same time tying promotion and tenure directly to training in, and using, the new technology. Faculty members and students were assigned laptop computers, and classrooms were wired. Older faculty members retired and others accepted the new technology, some with a great deal of energy. The results were mixed, though the overall long-term effect was positive in several ways. First, the campus gained nationwide recognition for innovation regarding technology. Second, the sense of camaraderie developed by the "we're all in this together" attitude lasted for years. Third, the campus's most recent hires have been drawn to the school because of its reputation for respecting creativity, and that has continued to improve the quality of the faculty as a whole.

IMPLICATIONS

To accommodate change, organizations as well as individuals need to continually reinvent themselves. This process is not easy for most people, and resistance is common. Resistance has to be understood as part of human nature when faced with the unknown, the part that helps us to confront the potentially harmful and to survive the unknown. Leaders need to understand this human side of change and to remain open to discussing these concerns and fears with their subordinates. Resistance can be an asset and help breathe life and energy into an organization. However, resistance can also be a liability in that it can block change in the workplace, and even surfacing resistance slows down the pace of change in a competitive marketplace. Resistance can be used to

open meaningful dialogue and fine-tune even the best-thought-out change initiative, but surfacing resistance can also lead to negative communication and employee frustration.

RHETORIC

Toward the end of his illustrious career as a statesman, Daniel Webster (1782–1852) reflected upon his life's professional accomplishments. Webster is purported to have mused, "Were I to lose everything I had, save one, I would hold onto my ability to speak in public for with that I could regain all I had lost." Oratory, eloquence, persuasion, public speaking, public discourse, rhetoric—regardless of which term is used, the ability for individuals to articulately shape and express their ideas through oral communication has been and continues to be a critical tool to

enhance leadership. Social and political change in the United States has been intertwined with oratory: the sermons of Jonathan Edwards, patriotic fervor of Patrick Henry, debates between Stephen Douglas and Abraham Lincoln, bully pulpit of Theodore Roosevelt, equality calls from Susan Anthony and Frederick Douglass, “chats” from Franklin D. Roosevelt, and “dreams” from Martin Luther King Jr. Understanding this tool for leadership requires an examination of, first, the nature and study of rhetoric; second, an audience-centered approach to the practice of rhetoric; third, a view of rhetorical tools that enhance memorability; and, finally, a discussion of implications for the use of this powerful form of influence and inspiration.

THE NATURE AND STUDY OF RHETORIC

Aristotle (384–322 BCE), in his classic text *Rhetoric*, defined rhetoric as the “discovery of the available means of persuasion” (Welldon 1886, 10). While simple enough, these seven words have engaged academics from as early as the fourteenth century when courses in rhetoric were offered at Oxford University, through the opening of Harvard in 1636 (where rhetoric was a required subject) until contemporary times. A particular question for debate: Is the study of rhetoric an art or a science? As the study of rhetoric draws from the areas of philosophy, linguistics, history, and more recently from psychology, political science and sociology, the answer to “art or science” has become both—rhetorical study is truly interdisciplinary. Aristotle provided insight to the vastness of rhetoric in his classical definition through his plural use of the word *means*, thus suggesting that a multiplicity of approaches could be employed. Rhetoric implies *choices* and the individual skilled in rhetoric is well versed in a wide lexicon of options that may be employed in any given situation.

Historically, the study of rhetoric has been viewed as a humanistic/artistic venture where students examined a host of linguistic devices known as schemes and tropes. Roman rhetorical scholar Quintilian (c. 40–95 CE) noted that students would best learn the art of discourse by carefully studying

“good men [*sic*] speaking well” so that they might have models of excellence upon which to improve. Equally important to this pedagogical value in studying “great speeches” was the intentional notion of “good men [*sic*] speaking.” From the earliest of Greek and Roman classical writings, a clear sense of “good” character and an ethical standard were considered critical to the study of discourse, lest it be corrupted. To demonstrate this, Plato’s (c. 427–437 BCE) *Gorgias* pitted the virtuous Socrates against the self-serving sophist Gorgias. Aristotle maintained that of all the means of persuasion, character (*ethos*) was the most effective. To better codify the educational process and inherent understanding of rhetoric, theorists began to generate models to explain the rhetorical act itself.

MODELS OF COMMUNICATION: FROM SPEAKER-CENTERED TO AUDIENCE-CENTERED COMMUNICATION

Early models of communication presented by Aristotle, Cicero, Quintilian, Augustine, and those who followed until the early 1900s were both linear and speaker centered. In these views, an individual (the speaker) crafted a message and delivered it to an audience. All the power and responsibility rested on the speaker, who was required to use the right organizational pattern, select the appropriate amount of evidence, and execute the most effective delivery to give the message the greatest impact. The audience in this model was passive and simply absorbed the content of what was sent. This understanding, however, spawned a host of outstanding speakers, culminating in the “Golden Age of Oratory” in the United States in the late nineteenth century. In the presidential campaign of 1896, for example, Democratic candidate William Jennings Bryan covered 18,000 miles, delivered between 60,000 and 100,000 words per day—many of which came from the oft-repeated economic policy stump speech “The Cross of Gold”—to an audience of nearly 4.8 million. All Bryan’s work was done without support from mass media or electronic amplification.

In the 1930s, the proliferation of the radio—and

more specifically the tuning dial—forever altered the way the oral communication process was conceptualized. With the turn of a dial, the all-powerful speaker could now simply be tuned out, or (even more devastating to the speaker) turned off. The locus of rhetorical power thus began to shift from the speaker to the audience. To succeed, a speaker needed to attend to the message's organization, support, and delivery, but even more important, to the needs of the audience. The rhetor thus had to work to build a relationship with his or her hearers. Audience-centered communication was born. Communication scholars (Hart and Burks 1972) have focused on how the speaker demonstrates concern for an audience, identified as *rhetorical sensitivity*. Relationships are created and maintained through an awareness of four strategies.

First, speakers recognize that they play multiple roles. The challenge to communication comes when an individual engages another in a manner that is outside the norms of the expected role. If a husband (who is also a father and a son) communicates to his wife in the same way he would to his eight-year-old daughter or his eighty-year-old mother, the likelihood of communication breakdown is increased. The leader who shares experiences drawn from multiple roles with diverse audiences expands the possibility of connecting with them.

Second, speakers strive to avoid stylized behavior. Repeated behavior can lead to a humorous response as it did in the popular 1970s situation comedy *All in the Family*. Central to the Bunker household was Archie's chair, and weekly audiences were entertained with Archie's predictable lines and actions designed to prevent guests from sitting in his chair. Patterned response, the use of the repeated phrase, a worn cliché, or the same "pick-up line" denies the uniqueness of each communication act, and therefore undermines trust.

Third, speakers distinguish between what *can be said* and what *needs to be said*. Audience-centered speakers carefully consider the content of their message before it is spoken and realize that communication cannot be retracted. Once a message is sent it is part of the record, and while audiences forgive they seldom forget.

Finally, speakers are flexible in all aspects of their communication, realizing that unusual contexts may demand a change in role or rhetorical strategy.

The power of rhetorical sensitivity is illustrated in Senator Robert Kennedy's 4 April 1968 speech to citizens of Indianapolis upon the death of the Reverend Dr. Martin Luther King Jr. En route to deliver a campaign speech designed to garner votes for his presidential bid, Kennedy learned of King's assassination just hours before he was to address a predominantly African-American audience that had been waiting in a cold rain. The *Indianapolis Star* reported that the audience was filled with anger and tension. Furthermore, Kennedy was warned by the Indianapolis police not to speak at the event because they could not guarantee his safety. Sensing that the mood of the audience and context for his speech had dramatically shifted, Kennedy opted to address the crowd but dispensed with his previously crafted remarks. Instead, he offered brief words of sympathy, identifying with those present. "I feel in my own heart the same kind of feeling. I had a member of my family killed . . . killed by a white man." He then urged the audience to peacefully disperse and "Say a prayer for our country and for our people." Unlike other midwestern cities, where instances of racial violence occurred in response to King's death, none were reported in Indianapolis after Kennedy's speech.

THE TOOLS OF RHETORIC

Just as the antiquated notion that "leaders are born not made" has been dispelled, so has the supposition that "great speakers are natural." From Demosthenes to Churchill, individuals who were considered inarticulate and ineffective communicators consistently demonstrate that through diligent study and practice, they may become proficient, memorable speakers. The true mark of a speaker's success is to be memorable not merely at the moment but throughout time. Communication research has addressed factors that enable message content to be retained. In addition to audience-centered communication, the successful speaker makes choices that increase the prospect that their messages will be remembered. Three basic

strategies that assist in this regard include organization, support, and delivery.

Organization

A message's structure, or organization, is essential to memory and clarity. An outline provides a logical progression of ideas on paper whether it is an hour-long oration or brief extemporaneous remarks. Outlines include an introduction, thesis, preview, major points to be addressed and relevant transitions between these major points, summary, and conclusion. A thesis is a one-sentence statement of the central point of the message. Research affirms such clarity enhances understanding. Research further indicates that limiting the number of major points in a speech increases the likelihood of memorability. In 1951, Republican presidential candidate Dwight D. Eisenhower delivered an address that provided seventeen reasons why he should be president. The event was considered a major flop, but sitting in the audience was advertising specialist Rosser Reeves. Through detailed audience survey and data analysis Reeves was able to "package the general" by developing a central theme. The slogan "It's Time for a Change" became the central thesis for all future campaign communication. In future speaking events, Eisenhower's message centered around three subsequent audience-driven concerns that had been identified through careful audience analysis: potential war in Korea, high taxes, and graft in Washington. As audience polls demonstrated, these three issues were named repeatedly as the reasons voters said they supported a "Time for a Change" at the ballot box.

Support

Support is the evidence or proof of the claims being forwarded. Aristotle noted that effective speakers use both logical and emotional appeals in which a speaker must present enough details of an issue to prove the stated case to the audience. Psychologist Isabel Briggs Myers (1962) theorized that people make decisions through a series of logical proofs (thinkers) or concrete imagery with which they can

identify (feelers). Recognizing and adapting rhetoric to these diverse approaches for decision making, speakers are enabled with greater opportunities to identify with and thus persuade their listeners. For example, the Eisenhower campaign of 1952 crafted two distinctively different television advertisement campaigns. The first, "Eisenhower Answers America" was a series of fact-driven questions and answers between Eisenhower and ordinary citizens. Eisenhower's direct responses to prerecorded questions portrayed a focused, active, task-driven leader, traits highly resonant with thinkers. Alternatively, the Disney-produced "I Like Ike" commercial depicted a cartoon parade where a host of diverse individuals from across America marched joyfully behind an elephant to the up-beat tune of "I Like Ike, You Like Ike, Everybody Likes Ike for President." Responding to audience concerns that "the general" might be aloof and insensitive, this advertisement portrayed Eisenhower as being likeable and human.

With the advance of the television age, it became more important to include illustrations and visual images into discourse. Charged with misusing funds from his senatorial campaign, vice presidential candidate Richard M. Nixon purchased thirty minutes of airtime on 23 September 1952 to plead his case to the American people on national television. Embedded in an extensive and complex listing of his personal finances was the disclaimer, "One thing I probably should tell you because if I don't they'll probably be saying this about me too. We did get something—a gift—after the election." Nixon went on to describe how a spotted cocker spaniel puppy had come in a wooden crate as a present to his six-year-old daughter Trisha, who had then named the dog "Checkers." The story captured the hearts of listeners and saved Nixon's political career. The master of this technique was President Ronald Reagan (1980–1988), dubbed "the Great Communicator" not because he used memorable phrases like Franklin D. Roosevelt ("We Have Nothing to Fear but Fear Itself") or John Kennedy ("Ask Not What Your Country Can Do for You") but rather because Reagan shared vivid stories of everyday Americans who became points of identification for individual audience members. On 28 January 1986, following

the explosion of the *Challenger* space shuttle, Reagan addressed the nation. With one sentence, he gave the American people and the national news media an image to dispel the horror of the exploding spacecraft when he said, “We will never forget them, nor the last time we saw them, this morning, as they prepared for their journey and waved goodbye.” The common and positive memory of astronauts waving and smiling as they entered their craft gave Americans an image of peace and dignity amid tragedy. Following his address, every major televised news program ended with the image of waving astronauts.

Delivery

Delivery, the physical and vocal presentation of a message, is regularly attributed as a critical element of a speaker’s success or failure. The Greek orator Demosthenes (384–322 BCE) was renowned for his powers of delivery, supposedly mastered by diligent practice in which he placed pebbles in his mouth and spoke over the surf to improve his articulation and projection. Benjamin Franklin reported the spell-binding delivery of British preacher George Whitefield, who was said to be able to bring an audience to tears by simply saying the word *Mesopotamia*. Indeed, Franklin remarked of Whitefield, “I silently resolved he should get nothing from me . . . he finish’d so admirably that I empty’d my pocket wholly into the collector’s dish, gold and all” (Franklin 1909, part 5).

The study of delivery intensified in the academy during the early 1900s through the elocution movement. Championed by Jonathan Barber of Harvard, students were trained to mimic in posture and tone an elaborate array of stylized movements, stances, gestures, and vocal patterns believed to reflect a collection of varied emotions. Professional elocutionists would tour the country’s lecture halls delivering public addresses and presenting public readings. Key organizations such as the Lyceum and Chautauqua movements encouraged such events, which soon became standard practice across America. By 1900, Chautauqua events took place in over 10,000 communities and drew in over 4 million people. Russell Conwell was one of the most notable speakers of this

period, delivering his hallmark speech “Acres of Diamonds” more than 5,000 times between 1861 and 1915. As amplification systems developed that allowed public presenters to be more easily heard, and as radio brought communication from the lecture hall into the living room, a new style of more conversational discourse was required. Franklin Roosevelt was perhaps the first political figure to realize this critical change and he capitalized on its use through his fireside chats.

Today students of public speaking are taught physical and vocal delivery approaches that strengthen the speaker’s relationship with an audience. Physical delivery—the use of the body—has four essential components. First is proxemics, the distance between a speaker and audience. Research supports the general rule that effective speakers position themselves as close as possible to the audience without violating personal space. Rules of proxemics are derived from studies in psychology concerning friendships. We are influenced most by those with whom we share an emotional bond and with those whom we allow close to us physically. General conversation with friends takes place at distances of three to five feet; thus speakers who approximate such distances are likely to enhance persuasibility. Candidate Bill Clinton perfected this skill in the 1992 town meeting debates with President George Bush. Bush remained seated throughout the event and maintained a distance that was substantially greater than five feet from the audience as he responded to their questions. Bush’s formal stance contrasted with Clinton’s more personable style. At one point, Clinton rose from his seat and walked toward a woman who asked a question, giving the impression Clinton was reaching out to her as a friend while Bush, seated in his chair, appeared distant and aloof. Second is stance, the speaker’s posture, position, and body movement. Posture sends a nonverbal message of a speaker’s confidence (or lack thereof) to an audience. Research suggests that effective speakers maintain erect posture and when they move, they do so to illustrate transitions. Such movement then functions as a nonverbal clue to the audience that the speaker is shifting ideas. Third are gestures, the purposeful movements of the arms and

Patrick Henry's "Give Me Liberty or Give Me Death" Speech

Patrick Henry—a Virginia legislator in colonial times, then a member of the Continental Congress, and later governor of the state of Virginia—was a master orator. Below is the speech he delivered on 23 March 1775 to rally his fellow Virginians to arm in self-defense.

No man thinks more highly than I do of the patriotism, as well as abilities, of the very worthy gentlemen who have just addressed the House. But different men often see the same subject in different lights; and, therefore, I hope it will not be thought disrespectful to those gentlemen if, entertaining as I do opinions of a character very opposite to theirs, I shall speak forth my sentiments freely and without reserve. This is no time for ceremony. The question before the House is one of awful moment to this country. For my own part, I consider it as nothing less than a question of freedom or slavery; and in proportion to the magnitude of the subject ought to be the freedom of the debate. It is only in this way that we can hope to arrive at truth, and fulfill the great responsibility which we hold to God and our country. Should I keep back my opinions at such a time, through fear of giving offense, I should consider myself as guilty of treason towards my country, and of an act of disloyalty toward the Majesty of Heaven, which I revere above all earthly kings.

Mr. President, it is natural to man to indulge in the illusions of hope. We are apt to shut our eyes against a painful truth, and listen to the song of that siren till she transforms us into beasts. Is this the part of wise men, engaged in a great and arduous struggle for liberty? Are we disposed to be of the number of those who, having eyes, see not, and, having ears, hear not, the things which so nearly concern their temporal salvation? For my part, whatever anguish of spirit it may cost, I am willing to know the whole truth; to know the worst, and to provide for it.

I have but one lamp by which my feet are guided, and that is the lamp of experience. I know of no way of judging of the future but by the past. And judging by the past, I wish to know what there has been in the conduct of the British ministry for the last ten years to justify those hopes with which gentlemen have been pleased to solace themselves and the House. Is it that insidious smile with which our petition

has been lately received? Trust it not, sir; it will prove a snare to your feet. Suffer not yourselves to be betrayed with a kiss. Ask yourselves how this gracious reception of our petition comports with those warlike preparations which cover our waters and darken our land. Are fleets and armies necessary to a work of love and reconciliation? Have we shown ourselves so unwilling to be reconciled that force must be called in to win back our love? Let us not deceive ourselves, sir. These are the implements of war and subjugation; the last arguments to which kings resort. I ask gentlemen, sir, what means this martial array, if its purpose be not to force us to submission? Can gentlemen assign any other possible motive for it? Has Great Britain any enemy, in this quarter of the world, to call for all this accumulation of navies and armies? No, sir, she has none. They are meant for us: they can be meant for no other. They are sent over to bind and rivet upon us those chains which the British ministry have been so long forging. And what have we to oppose to them? Shall we try argument? Sir, we have been trying that for the last ten years. Have we anything new to offer upon the subject? Nothing. We have held the subject up in every light of which it is capable; but it has been all in vain. Shall we resort to entreaty and humble supplication? What terms shall we find which have not been already exhausted? Let us not, I beseech you, sir, deceive ourselves. Sir, we have done everything that could be done to avert the storm which is now coming on. We have petitioned; we have remonstrated; we have supplicated; we have prostrated ourselves before the throne, and have implored its interposition to arrest the tyrannical hands of the ministry and Parliament. Our petitions have been slighted; our remonstrances have produced additional violence and insult; our supplications have been disregarded; and we have been spurned, with contempt, from the foot of the throne! In vain, after these things, may we indulge the fond hope of peace and reconciliation. There is no longer any

hands. In 1806, Gilbert Austin wrote *Chironomia: Or a Treatise on Rhetorical Delivery*, and for over a century it remained the quintessential text on oral presentation, reinforcing the elocutionary movement. Austin's work, made popular in this country by Harvard's Jonathan Barber, consisted of an elaborate set of instructions for proper gesturing that included details as specific as the angle of the little

finger and the tilt of the wrist. Barber devised a bamboo cage in which he would place students and instruct them to extend their arms through a series of holes to ensure the proper angle for the various positions that they were required to assume. (This ornately stylistic method of presentation was finally dispelled as students, in a move of revolt, ran the bamboo sphere on the top of a flagpole in Harvard

room for hope. If we wish to be free—if we mean to preserve inviolate those inestimable privileges for which we have been so long contending—if we mean not basely to abandon the noble struggle in which we have been so long engaged, and which we have pledged ourselves never to abandon until the glorious object of our contest shall be obtained—we must fight! I repeat it, sir, we must fight! An appeal to arms and to the God of hosts is all that is left us!

They tell us, sir, that we are weak; unable to cope with so formidable an adversary. But when shall we be stronger? Will it be the next week, or the next year? Will it be when we are totally disarmed, and when a British guard shall be stationed in every house? Shall we gather strength by irresolution and inaction? Shall we acquire the means of effectual resistance by lying supinely on our backs and hugging the delusive phantom of hope, until our enemies shall have bound us hand and foot? Sir, we are not weak if we make a proper use of those means which the God of nature hath placed in our power. The millions of people, armed in the holy cause of liberty, and in such a country as that which we possess, are invincible by any force which our enemy can send against us. Besides, sir, we shall not fight our battles alone. There is a just God who presides over the destinies of nations, and who will raise up friends to fight our battles for us. The battle, sir, is not to the strong alone; it is to the vigilant, the active, the brave. Besides, sir, we have no election. If we were base enough to desire it, it is now too late to retire from the contest. There is no retreat but in submission and slavery! Our chains are forged! Their clanking may be heard on the plains of Boston! The war is inevitable—and let it come! I repeat it, sir, let it come.

It is in vain, sir, to extenuate the matter. Gentlemen may cry, Peace, Peace—but there is no peace. The war is actually begun! The next gale that sweeps from the north will bring to our ears the clash of resounding arms! Our brethren are already in the field! Why stand we here idle? What is it that gentlemen wish? What would they have? Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, Almighty God! I know not what course others may take; but as for me, give me liberty or give me death!

Square!) At their best, gestures reinforce images, add emphasis, heighten awareness, and decrease the physical space between speaker and audience, thus increasing the possibility for an atmosphere conducive to relationship development. Fourth is eye contact, the ability of a speaker to directly engage the audience visually. Substantial study has been conducted on the nonverbal power of eye contact to

instill trust, heighten credibility, and focus attention. Speakers who engage their audiences with direct eye contact are much more likely to sustain interest than speakers who scan the room or become tied to a manuscript. Delivering one complete thought to one person and then moving on to another individual approximates the eye contact that exists in one-to-one communication and thus reinforces the relational aspect of exchange.

Beyond physical delivery, effective delivery also depends on a rhetor's vocal quality. A loud voice was almost a prerequisite to effective speaking prior to the advent of electronic amplification systems. Indeed, there have been numerous accounts reporting disappointment by many at hearing the rather high-pitched voice of President Abraham Lincoln during his brief remarks on 19 November 1863 in his Gettysburg Address. Guests attending the Gettysburg Cemetery dedication much preferred the lusty voice of the day's featured speaker, Edward Everett. Yet loud, forceful delivery style does not translate easily to television in an age when most speakers are not heard in open fields or in non-amplified auditoriums, but in the family living room. Rather than "giving a speech," research suggests that effective speakers convey the impression of "having a conversation." Former First Lady Barbara Bush in her 1 June 1990 commencement address at Wellesley College accurately called her remarks a "conversation." Even the decried "wooden" vice presidential candidate Albert Gore achieved acclaim during his acceptance speech at the 1992 democratic convention, when he shifted from his statements of political policy to share his personal commitment to family by recounting a near fatal auto accident involving his son. With soft volume, slow pace, and reflective tone, Gore commanded the attention of the arena filled with previously boisterous conventioners.

IMPLICATIONS FOR THE POWER OF RHETORIC

Rhetoric as a tool of leadership will undoubtedly continue to be explored and refined. Current practice emphasizes an audience-centered approach to message construction and delivery and the utilization of

organization, support and physical and vocal delivery to forge a relationship between the speaker and audience and to improve a message's memorability. Two issues merit further investigation. First, while scholars have recognized for some time that meaning is in people not in words, the words that people choose to use can nonetheless uplift or destroy. Research also supports the realization that most cultures have invective language. As forces of globalization draw the world ever closer and leaders utilize phrases such as *evil empire*, *rogue nation*, and *axis of evil*, it will be more critical than ever for successful leaders to extend rhetorical sensitivity to diverse cultures and not just to diverse audiences. Second, while the transactional model of communication places greater emphasis on the role of the audience, scholars still locate influence in the speaker. More focus needs to be given to the mutual role of sender/receiver. Frequently, as individuals listen to others, they are simultaneously engaged in conversations with themselves. Realizing that good leaders are also good listeners, more attention is needed on how to listen with a critical yet open mind to the other.

RISK TAKING

Risk taking is the possibility that the choices one makes may bring suffering, harm, loss, or danger to the risk takers. A course of community action involving taking a chance on uncertain danger, incurring known loss, or endangering others typically involves assessment strategies between leaders and followers. Leaders take risks, and they define for or with their followers the situations they face, the choices available to them, and the risks involved. The leader's

relationship with followers is based on their trust that the leader will do what is best for them. This trust is often developed through the leader's willingness to make personal sacrifices for the people. In taking risks, leaders necessarily rise above their followers, thereby expanding the followers' capacity to envision the greater future that will result from risk taking. Even so, community risk taking requires respect among all parties.

Risk taking is necessary for leaders to rise above followers, thereby expanding the followers' capacity to envision greater things. Leaders excite followers about going where they have not yet gone, and they provide a plan to get there. The plan always requires change. Change is frightening for many people because it may make their lives worse, not better: It involves risk.

UNDERSTANDING RISK TAKING IN SUCCESSFUL LEADERSHIP CASES

The risk-taking personality of leaders is linked to altruism. The willingness to be altruistic requires "a spirit of adventurousness" and "a willingness to try anything once" (Piliavin & Charng 1990, 33). Leaders who are willing to take risks on behalf of others have highly developed personalities and moral capacities that respond with empathy to the needs of others and not to the potential for personal suffering. Whether or not they were leaders before, people who respond to the needs of others know something about the situation or the people involved; for example, gentle rescuers of Jews in World War II tended to be people who knew other Jews.

RISK TAKING AND INNOVATION

The modern West is distinguished from the East not so much by "efficient allocation of available inputs among known production processes . . . but the development of formally untried processes and the production of formally unknown products. . . . Put another way, the west leapt ahead . . . by taking unknown risks on novelty" (Goldstone 1987, 119). The modern West has responded to crises, sociologist Jack Goldstone argues, by making innovation a "folk activity" (Gold-

stone 1987, 120). At the same time, the West has had an agitated elite class whose members have wanted change. Western innovation has required risk, and its cultures have developed a tolerance for frequent failure as product improvement has been assumed. From 1750 to 1830, Great Britain produced two-thirds of Europe's industrial growth. During the same period in the United States, one-half of economists Zorina Khan and Kenneth Sokoloff's sample of inventors had little or no formal education, and only one-quarter of them had attended college; those with little education produced more patents. Higher risk taking and lower education are historically correlated.

GENDER, ETHNICITY, AND CLASS IN ANTISOCIAL AND PROSOCIAL LEADERSHIP

The *Just Every Mother's Angel* research study conducted by Karen Joe and Meda Chesney-Lind in the early 1990s teaches us about indigenous leadership as it brings together gender, ethnicity, and class variables in its examination of Hawaiian youth gangs. Gangs provide gendered leadership for kids on the street, teaching the membership how to take risks with other gangs and law enforcement. Poor males who suffer from status frustration—the inability to succeed by societal standards—find that the solidarity of the gang provides opportunity risk taking that will lead to leadership status, and therein, respect, success, and autonomy. Gangs provide an array of leadership development activities that the young know they need for a successful adult life. The book *Cocaine Kids* (1989) by the sociologist Terry Williams examines the positive morality, although misdirected, in the "hard work" of the gang members' commitment to each other and the work ethic applied to the high-risk gang culture.

However, gender, ethnicity, and class most often combine in positive ways, as African-American studies expert Audrey McCluskey shows in "We Specialize in the Wholly Impossible: Black Women School Founders and Their Mission." Her study of post-slavery educated black women school founders Lucy Craft Laney, Mary McLeod Bethune, Nannie Helen Burroughs, and Charlotte Hawkins Brown attributed

The trouble is, if you don't risk anything, you risk even more.

—Erica Jong

their success to “. . . strong religious convictions, belief in the leadership of black women as a key to racial progress, and maternal love for the schools they founded” (McCluskey 1997, 403). Educational skills and class status supported successful risk taking as these women challenged and protested dominant societal understandings of the black community; raised investment monies for their schools; adopted moral crusades; and started national movements. Perhaps the biggest risk their communities trusted them to take was the shaping of a new identity for young blacks who deserved education, power, and influence. Minority women often found themselves resisting dominant culture and their own community's internal sensibilities as they took the greatest risk of all: simply creating the authority they needed to act on behalf of the community.

Educator Amie Revere finds that, even given a history of stellar leadership, black women school superintendents in 1984–1985 faced uphill battles on the race and gender fronts. Even so, such superintendents attribute their success to “competence, careful diligence, self confidence, tenacious strength, interpersonal skills, and productivity generated out of a willingness to exercise authority and enhance power” (Revere 1987, 518). Contemporary leadership owes its success to nineteenth-century race and twentieth-century civil rights role models who took risks and set a standard for leadership excellence; this was especially true for women:

. . . despite discrimination, a privileged class of blacks, educated and self-assured, inserted itself into the life of the city. The women of this class acknowledged a special calling to “set the standard” for the race in the struggle for equality. They believed that the fate of the race rested upon the shoulders of its “best women.” (McCluskey 1999, 48)

Regardless of class, ethnicity, or gender, a leader is evaluated by his or her ability to provide access to

power. To do that, women and leaders of cultural minorities must themselves have access to power, and by the very nature of being uncommon, they often become high-profile public leaders who must balance risk taking with the excitement of their newly empowered constituencies and the ever present resistive systemic realities.

TRUST AND THE CAPACITY FOR CHANGE

Trust is the belief that others will put self-interest aside and hold what sociologists call a “collectivity orientation” (Rabinowitz 1992, 517). For sociologists there can be no social order without trust. Emotions that react to risk challenge emotions that maintain trust. Risk is reduced where trusting relationships exist, making known what is unknown. Where no trust exists, trust must be established. Israeli sociologist Dan Rabinowitz's study of Arabs and Jews found that, for example, an Arab doctor was successful with Jewish patients and a Arab basketball coach was successful with Jewish team members when the doctor and the coach spoke with professional authority, restricting the interaction to professional exchange and negotiated improvement. As doctor and patients and coach and team members gained knowledge of each other, they gained trust and the ability to take risks with one another that healed patients and won games.

COMMITMENT AND AGENCY

Collective solidarity—the movement from the self-centered “I” to the other-centered “we”—develops only in a trusting relationship of commitment to the “we.” There are times when a collective's members will be wary of one another: women of men, whites of blacks, Jews of Arabs, the rich of the poor. In these times, a commitment to the collective and its goals bridges those moments when trust is challenged by historical memory or current actions. Collective risk taking builds collective agency—the ability of a group of people to assess their lives, make good decisions, and empower themselves to achieve a self-determined and independent livelihood. Sharing risk in order to build a better life

strengthens the whole collective identity. What people are learning about the staying power of democratic collectivities is that in surviving across time such collectivities make an impact on longitudinal change, that is, the capacity for long-term and systematic transformation. Asian studies scholar Scott Kennedy's (1997) study of the Stone Group Corporation, China's premier electronics company before the 1989 Tiananmen Square uprising, examines Stone's decline and recovery as Stone suffered under Communist Party threats to close it for suspected support of the rebellious students. The Stone Group was in fact an economic rebel. Registered as a collective, the Stone Group shocked observers by challenging state-society relations through its outspoken intellectuals who had, in reality, created a private, non-state economic entity that called for pluralization and democratization both inside the company and outside—in Chinese society at large. Stone's economic success widened the desire for a civil society. Stone had successfully created a new identity, a new corporate culture. Stone's market power threatened to collapse China's socialist market economy. Not surprisingly, economists and sociologists attribute Stone's resilience to its "entrepreneurial spirit, corporate culture, technological achievements, and risk taking strategy" (Kennedy 1997, 749).

Risk requires connections. Stone created connections. "Horizontal links within its profession and with society at large point to the emergence of a civil society that is neither directed by nor narrowly serves the interests of the state" (Kennedy 1997, 750). Over time in democratic societies, most people have a high tolerance for risky decisions made by others if issues of fairness, competence, responsibility, and equitable distribution of benefits have been addressed. The internal solidarity of Stone modeled a possible external solidarity of a civil society and threatened the national Communist leadership with its visible political statement by outperforming state-run businesses. Stone's relationships with banks, scientists, and a range of market actors created a broad-based and empowered agency that delighted in Stone's success. A democratic China is a long way off; in the interim, Stone models a potential intermediary meeting ground between the state and the spirit

The guy who takes a chance . . . who walks the line between the known and unknown . . . who is unafraid of failure, will succeed.

—Gordon Parks

of a civil society. The possibility of other alternative leadership groups arising is dependent on yet other functions such as leadership recruitment.

RECRUITMENT AND EVALUATION OF RISK

How are leaders recruited to high-risk ventures when the human inclination is low- or no-risk action? People weigh social and personal costs and most often choose safe levels of action. Recruitment to risky actions with high levels of personal costs requires integration of people into a peer group of like-minded actors, resocialization into this identity, and a "deepening ideological socialization" (McAdam 1986, 69). Interestingly, sociologist Doug McAdam finds that the ability to take high risks in community activism is not connected to one's experience in a particular form of action, but rather to one's social contacts with other risk takers, one's experience in risk taking in general, and one's understanding of how to evaluate the context and its constraints.

The study of risk is new in the social and behavioral sciences; the sociology of risk is producing its first integrated theories. Yet, people know that patterns exist. Successful leaders estimate risk with a clear understanding of the followers whom they are asking to take risk and their capacity for goal achievement. Disturbingly, social psychologist Carol Heimer concludes that "We care more about risks faced by those close to us or similar to us than by people who are unrelated and dissimilar" (Heimer 1988, 500). When assessing the appropriateness of any risk-taking activity, it is important to name the people and institutions who are responsible for assessing and managing the activity. A prime example is the category of youth called "at-risk teenagers." The teenagers and their peer group, unlike parents, police, and public health officials, may not see drug and alcohol consumption as at-risk

behavior. At other times, peer groups are critical to assessing risk. Neighborhood nonprofit organizations often depend on each other to assess risk; they serve those at risk; they are then risk-taking organizations whose successful leaders are role models in risk taking—in seizing the moment for community and member benefit.

SPIRITUALITY AS RESOURCE FOR RISK TAKING

The U.S. civil rights leader Martin Luther King Jr., Catholic nun Mother Teresa, Catholic social activist Dorothy Day, South African leader Nelson Mandela, Episcopal Bishop Desmond Tutu, Indian nationalist Mohandas Gandhi, Protestant missionary John Mott, U.S. women's suffrage leader Elizabeth Cady Stanton, and freed slave orator Sojourner Truth are just a few risk takers who built new social infrastructure that could bear the weight of dreams for inclusive community. Risk takers tend to have deep spiritual reservoirs from which they draw the strength they need to stand firm in the social storms generated by change. Their capacity to take responsibility for shaping the direction of thinking and acting, and to stand alone even among a devoted constituency, is an ancient personality trait noted across cultures and found in great leaders such as the Islamic prophet Muhammad and the Buddha. Religious culture provides people with courage, a sense of historical purpose, enduring values, and a community base from which to act ethically and responsibly.

The spirituality of a risk taker helps him or her to take great care to help followers provide a social commentary that moves them forward. Through educational processes (sermons, prayers, meditations, etc.) leaders empower followers to act courageously, and followers pass on their values to the young. The risk-taking leader creates in followers a positive group identification with anchoring values that encourages them to take yet more risks and to reach for still higher levels of oneness and solidarity.

ROBINSON, JACKIE (1919–1972)

African-American baseball player, civil rights advocate, and businessman

The grandson of a slave and the youngest of five children, Jackie Roosevelt Robinson was born to Mallie and Jerry Robinson in Cairo, Georgia, in 1919. On 15 April 1947, he became the first black man in modern times to play white major league baseball. He went on to earn a Most Valuable Player award in 1949, to play on six all-star teams, to compile a lifetime average of .311, and to help the previously all-white Brooklyn Dodgers win six National League pennants and the 1955 World Series. Robinson later worked with the civil rights movement to transform the moral consciousness of the United States. For his pioneering role in sports, Robinson received the Spingarn Medal from the NAACP (National Association for Colored People) in 1956. In 1962 he was elected to National League Baseball's Hall of Fame and to the SCLC (Southern Christian Leadership Conference) Hall of Fame. His widow, Rachel Robinson, felt it was important to remind people of his achievements as a civil rights leader:

To the average man in the average American community, Jackie Robinson was just what the sports pages said he was, no more, no less. He was the first Negro to play baseball in the major leagues and in remembering him, I tend to de-emphasize him as a ball player and

emphasize him as an informal civil rights leader. That's the part that drops out, that people forget. (U.S. National Archives, n.d.)

If leaders achieve their effectiveness in the stories they embody, Jackie Robinson's effectiveness arises from the story of his unrelenting adherence to the principles of personal dignity.

Always a superb athlete, Robinson played football, basketball, and baseball and went out for track at Pasadena Junior College and then at the University of California at Los Angeles (UCLA). He became the first four-letter athlete at UCLA, where he met his future wife, Rachel Isum. As soon as he completed his two remaining years of eligibility at UCLA (due to his transfer from Junior College), he left the university, convinced that no amount of education could help a black man get a job and that there was no real future for him to make a good living as a black professional athlete. Following a brief stint as an assistant athletic director at a federal youth work camp, Robinson took a job in construction and joined his first professional team, the Honolulu Bears. He found the team experience unsatisfying and left Hawaii at the end of the first season to return to California, enlisting in the army after the bombing of Pearl Harbor.

In 1942, Robinson was assigned to Fort Riley, Kansas, for basic training, and the following year he completed Officer's Candidate School (OCS). As a second lieutenant in the 761st tank battalion, his sense of humor helped him earn the respect of both his enlisted men and his commanding officer. "Men," he once recalled saying, "I know nothing about tanks, nothing at all. I am asking you to help me out of this unusual situation" (Rampersad 1997, 100). However, Robinson ultimately found his experience in a segregated army frustrating. He was never allowed to reach his full potential as an officer, and he often got into trouble because of his advocacy for equal treatment. At Fort Hood, Texas, he was court-martialed for charges associated with his refusal to sit in the rear of a bus. He was eventually acquitted, and in 1944 he was honorably discharged. Returning to civilian life, Robinson accepted a basketball coaching position at Sam Houston College for Negroes in Austin, Texas. Seeking a better job, when he met a former member

of the Kansas City Monarchs, a Negro league baseball team, he requested a tryout. He joined the Monarchs in the spring of 1945.

BLACK BASEBALL

In spite of the great success enjoyed by the Kansas City Monarchs, Robinson disliked the Negro leagues. He particularly disliked the informality of ownership—he didn't feel that the owners of the Negro League were organized, disciplined, or professional—and the grueling travel schedule. He barely tolerated the segregation and other limits imposed upon the players by segregated society. Professional baseball hadn't always been this way for African-Americans. In 1872, Bud Fowler, a black player, had joined a white professional club, and Moses Fleetwood Walker, the first black player to make it to the majors, joined the Toledo Blue Stockings in 1884. But in 1887 the owners of all major league ball clubs entered into a gentleman's agreement to sign no more black players and by 1899 African-Americans had been completely shut out of organized baseball. However, black baseball players had continued to play. In 1920 Rube Foster, a black pitcher of considerable skill, formed the Negro National League, and five other Negro major leagues and over fifty minor leagues were formed in swift succession. "The Negro leagues were founded with the aim, ultimately, of integrating the

game" (Rogosin 1983, 180). At the time, this meant integrating all-white leagues with intact black teams, and no one even imagined that just a couple of decades later, a black player would join an all-white team. The momentum for change that carried Jackie Robinson across the color line in 1946 was fueled by several factors including the death in 1944 of conservative baseball commissioner Kenesaw Mountain Landis, the admiration of Negro league talent by the best white ballplayers, a vocal black press, and the economic lure of black fans. It was also fueled by the discontent of returning black veterans.

THE NOBLE EXPERIMENT

The prejudice faced by many African-American veterans like Jackie Robinson stood in stark contrast to the democratic ideals advanced by their political leaders. Disillusioned and diminished by segregation, black Americans began to seek new role models and new leaders, and in Jackie Robinson, they found what they were seeking.

On 29 August 1945, Branch Rickey, owner of the Brooklyn Dodgers, invited Robinson to join the team. But there was a catch—Robinson had to promise not to respond to the racial taunts and slurs he was sure to encounter from baseball fans and players, both teammates and opponents. Robinson and Rickey agreed that a period of three years should be enough to make their point—that a black man could play professional baseball with civility and tolerance and still excel. To reduce the resistance of other major league clubs, Rickey decided to bring Robinson in through the minor league system, and the spring of 1947 saw Jackie Robinson's entrance into modern major league baseball. Robinson's aggressive Negro League style of play led to his selection as Rookie of the Year, and his personality transformed the stereotype of the black athlete from that of brute to multifaceted player. Roger Wilkins, attorney general during the Johnson administration, described the importance of Jackie Robinson to him as a child in 1947: "This man, in a very personal sense, became a permanent part of my spirit of the spirit of a generation of black kids like me because of the way he faced his ordeal" (Rampersad 1997, 179).

LIFE AFTER BASEBALL

Robinson's relationship with the Dodgers became increasingly antagonistic after Rickey was forced out in 1950. Many team members and journalists accused Robinson of being too outspoken, and when the Dodgers traded him to the Giants at the end of the 1956 season, he decided to retire from baseball. He accepted a position as vice president of community affairs for the Chock full o' Nuts restaurant chain and used his new position to continue his fight for civil rights. As national chairman of the NAACP's Freedom Fund Drive, he appealed to President Dwight D. Eisenhower to enforce the Supreme Court decision in *Brown v. Board of Education*: "Seventeen million Negroes cannot do as you suggest and wait for the hearts of men to change" (U.S. National Archives, n.d.). This was not the first, nor would it be the last, time he expressed his opinions on civil rights to a president of the United States.

In 1964, he moved directly into politics as a deputy national director for Governor Nelson Rockefeller's campaign for the Republican nomination. Although as a conservative Republican, he differed with many progressive black leaders, he shared their concern about the status of African-Americans. Having shifted from the indirect leadership symbolized by his performance on the baseball field to direct leadership in the arena of civil rights, Robinson quickly became an important spokesperson on such topics as poverty, urban development, and youth concerns.

Robinson believed that the two keys to black advancement were the ballot and the buck. He served as chairman of the Freedom National Bank and vice president for Reverend Jesse L. Jackson's Operation PUSH. Still seeking new ways to change racial attitudes and behaviors in the United States, he formed the Jackie Robinson Construction Company to facilitate community housing and economic opportunity. In another example of his growing activism, Robinson wrote the following warning to President Richard M. Nixon: "We older blacks, unfortunately, were willing to wait. Today's young blacks are ready to explode! We had better take some definitive action or I am afraid the conse-

quences could be nation shattering" (U.S. National Archives, 2003).

On 24 October 1972, a few months after the twenty-fifth anniversary of his entry into baseball and the retirement of his number 42 jersey, Robinson died from the complications of diabetes. He was fifty-three years old. The Reverend Jesse Jackson gave the eulogy at his huge funeral. Reverend Jackson said, "Progress does not roll in on wheels of inevitability. In order for an ideal to become a reality, there must be a person, a personality to translate it" (Tygiel 1997, 277). Jackie Robinson was that person, and his leadership helped to bring the ideal of equality closer to reality. He derived his authority in the civil rights arena from his historic integration of baseball. He forged his legitimacy as a leader through his unflinching commitment to human dignity and by his willingness to listen to new voices.

ROCKEFELLER, JOHN D. (1839–1937)

U.S. industrialist and philanthropist

One of the most influential leaders in history, John Davison Rockefeller pioneered the corporate organizational form that characterizes modern big business. His Standard Oil Company, unrivaled in economic power, not only fostered American global economic preeminence—and his personal fortune as the wealthiest American ever—but demanded a reassessment in the relationship between American business and elective government. A devoutly religious man, Rockefeller also set an unmatched standard in philanthropy, his peerless generosity balancing a reputation as the quintessential ruthless “robber baron” industrialist, or depending upon one’s view, the exemplary capitalist statesman. This dichotomy creates a cultural icon transcending the man and his time.

THE STANDARD DICHOTOMY

Trying to comprehend John D. Rockefeller is an exercise in polarities. He was born 8 July 1839, the son of an absentee, bigamist father—literally, a “snake oil” salesman—an opportunist interested in making fast cash regardless of legitimacy, who appeared in his son’s life only intermittently but flamboyantly; and a pious Baptist mother devoted to her church and to training her children in biblical principles, by necessity committed to austere living, strict discipline, and frugality. Such polarity profoundly defined Rockefeller, characterizing his leadership. On the one hand, he was a devout, exemplary Baptist, on the other a seeming tyrant lacking in fair play, openness, and honesty. Having a compulsion for secrecy, he was a wizard at keeping his Standard Oil empire hidden from the public and competitors; nevertheless, he became notorious at the hands of muckraker journalists and renowned for his great philanthropy. He avoided the press, yet advanced the

nascent public relations industry in an effort to recreate his unfavorable image. Reflecting the thrift and strictness of his mother, he relentlessly focused on the smallest details of his business, making endless improvements to cut waste, personally overseeing every step of the production process; yet he had the capacity to see the “big picture,” to envision and develop the massive corporate organization that would change business history.

Critics might denounce his Christian piety as hypocrisy and a veil for greed, but a fair appraisal must acknowledge his faith was genuine—he once considered the ministry as his vocation, dissuaded only by his family’s dire financial condition. Still, he devoted much money, time, and energy to his church. Indeed, Rockefeller saw God as an ally and his justification. For him, big business could be reconciled with Christianity; his company could even be seen in missionary terms, for as he put it, the Standard, built on the rocks of “faith and work,” was “the salvation of the oil business,” the “Moses” who set the captives free, the ally of the consumer. His portrayal as a social Darwinist is imprecise; rather, in Rockefeller’s eyes, Standard Oil was the remedy to social Darwinism’s amoral and ruinous competition: “The struggle for the survival of the fittest,” he wrote, would be replaced by Standard’s “doctrines of cooperation” (Chernow 1998, 154).

REFINING LEADERSHIP

Rockefeller’s story is divisible into five periods, each refining his remarkable leadership. In the first (1855–1865), the young and characteristically energetic Rockefeller, armed with a bookkeeping education from a Cleveland business college, went door-to-door until he landed a job with Hewitt & Tuttle, commission merchants and produce shippers, as an assistant bookkeeper on 26 September 1855—a day he would thereafter celebrate as “Job Day.” A scrupulously honest and hard worker, he bought a nickel ledger with his first paycheck, which he called “Ledger A,” in which he dutifully recorded every penny earned, each one spent, each given to charity. He utilized his experience at Hewitt & Tuttle to venture into a partnership in 1859 with Maurice

Clark as agricultural produce wholesalers. Rockefeller traveled extensively, aggressively drumming up business throughout Ohio. His success encouraged romance; in 1864 he married Laura “Cete” Spelman, the daughter of deeply religious abolitionists active in the Underground Railroad.

Rockefeller’s visionary acumen allowed him to see the investment opportunity coinciding with the 1859 Pennsylvania oil boom. Prudent and cautious, he was not attracted to the high-risk oil-drilling business, but the prospect of extracting kerosene from the oil—kerosene being the fuel of promise to replace expensive whale oil for indoor illumination. Rockefeller invested in kerosene extracting as a side business in 1865, marking the second period of his career (1865–1870). By 1867, he abandoned his produce business and concentrated entirely on petroleum refining in a new partnership: Rockefeller, Andrews & Flagler, the largest refinery in Cleveland. Rockefeller honed his demonstrated leadership qualities: hard work, competitiveness, prudence, precision and resolve, which combined effectively with his gifts as a business strategist and visionary. These traits were enhanced by his ability to pick remarkably talented people and work with them effectively. With such men, Rockefeller created the Standard Oil Company in 1870, at the time the largest corporation in America, capitalized at one million dollars. Already a multimillionaire, he controlled 10 percent of petroleum refining in the United States.

THE STANDARD IN LEADERSHIP

The formation of Standard Oil Company marks Rockefeller’s third phase (1870–1882). Despite a devotion to prudence, his visionary ability allowed him to be a colossal gambler, such as his move to acquire oil from Ohio and Indiana fields, “inferior” oil much higher in sulfur content than Pennsylvania crude. Then, hiring chemist Herman Frasch to solve the problem of cleansing the stench and corrosiveness of this oil, Rockefeller pioneered the use of chemistry in the oil refining industry. In such ways, creating Standard Oil depended upon Rockefeller’s gift for delegating authority and for motivating and managing his associates. As he put it, “It is chiefly to

my confidence in men and my ability to inspire their confidence in me that I owe my success in life” (Chernow 1998, 223).

Rockefeller’s vision for Standard Oil was to control the problems that plagued the oil industry: chaos, inefficiency, waste, overproduction, and ruinous competition. Ultimately, his solution pioneered a corporate organization that would characterize American (and global) big business: an oligopolistic market dominated by a few—if not one—vertically integrated firms. In other words, the invention of what would popularly be known as “the trust.” Rockefeller’s initial strategy was creating a super-company

through horizontal combination of nearly all the refineries then existing in the country; that is, buying out or eliminating competitors. Later, Rockefeller's organizational model incorporated vertical integration; that is, fusing together the varied stages of production, from raw materials to final product, even distribution, and thus eliminating "middlemen" while driving down costs.

Nonetheless, even while overseeing this corporate enterprise, Rockefeller devoted himself to every production detail, laboring to increase efficiency—resulting in such legendary actions as his order to reduce from forty to thirty-nine the number of solder drops used to seal a kerosene can. To impel efficiency, Rockefeller utilized the latest refining technologies, manufactured oak barrels for oil storage, owned massive warehouses, holding tanks, and distribution stations, as well as wagons, horses, boats, railroad tank cars, and eventually pipelines and ocean-going tankers for transportation. Aggressive marketing made the distinctive red five-gallon Standard kerosene can nationally familiar. Furthermore, Rockefeller utilized the "waste" products resulting from the kerosene refining process, which in turn became businesses in their own right: lubricating oil, gasoline, Benzene and Naphtha, paraffin, and petroleum jelly ointment.

Because Standard Oil was the largest purchaser of crude, Rockefeller could dictate prices. His leadership in this regard proved especially controversial. He coerced special rebates on railroads that transported his oil in his own fleet of tank cars, lowering his transportation costs below his competitors. He gained control of oil pipelines, lowering shipping costs and reducing railroad dependence. His aggressive price-cutting campaigns were designed to undersell competitors, even forcing bankruptcy if they refused his "doctrines of cooperation." His nationwide distribution system serviced some 80 percent of American towns, allowing him to coerce local stores to sell only Standard kerosene and lubricants. So successful were these methods that by 1880, Rockefeller's Standard Oil controlled 90 percent of refining capacity in the United States—an astounding accomplishment achieved in only a decade! Perhaps as remarkable, the reclusive Rock-

efeller remained relatively unknown, though numbered among the nation's twenty richest men.

Because of its uniqueness, the creation of Standard Oil Trust in 1882 as an organizational device marks a separate phase of Rockefeller's career (1882–1897). Headquartered at 26 Broadway in New York City, the trust united Rockefeller's forty companies devoted to refining, extracting, trading, and retailing into one organization managed by nine men. Though outlawed in 1892 by the Ohio State Supreme Court, the trust device was then utilized under New Jersey incorporation laws as a "holding company." Significantly, this revolutionary corporate model inspired the creation of nearly two hundred trusts in coal, sugar, tobacco, and other industries, resulting in great public concern.

CRITICISM OF THE STANDARD

Questions about Rockefeller's business leadership arose in 1871 over his "South Improvement Company" scheme, through which he had achieved domination of Cleveland's refineries, and increased in 1881 with Henry Demarest Lloyd's criticism in the *Atlantic Monthly*. The scope, power, and impact of Standard Oil Trust brought a New York State Senate investigation in 1888, the passing of the (initially ineffective) Sherman Anti-trust Act by Congress in 1890, and by the turn of the century, criticism by Progressive reformers, culminating in Ida Tarbell's acerbic exposé on the history of the Standard Oil Company, published in *McClure's Magazine* and issued in book form in 1904.

Just why Rockefeller and Standard Oil—which Tarbell, and therefore the public, equated as one—came to be so hated is puzzling. From a cultural point of view, Rockefeller embodies the "rags-to-riches" phenomenon so venerated in America. From a consumer point of view, Rockefeller significantly lowered the price of kerosene from 30 cents per gallon in 1866 to only 5 cents by 1894, as Americans quickly abandoned whale and coal oil illumination. Even as Edison's electric light increasingly competed with kerosene, consumers bought Rockefeller's affordable gasoline to fuel the new American obsession, the automobile. Public outrage is further perplexing in

that, unlike the Vanderbilts and others who lived grossly ostentatious lifestyles, Rockefeller sought to live relatively simply, even biblically, being generous with his money. One could argue he practiced a family life worthy of emulation. Moreover, Rockefeller, who had suffered a partial nervous breakdown from overwork in 1887, decided to retire gradually but secretly, which proved a mistake. By 1897, unbeknownst to the public, he no longer participated in management activity—five years before Tarbell's account was published.

Nonetheless, the public reaction is understandable given Rockefeller's historical tactics, which, though revolutionary and strategic, provoked fear among Americans used to local or regional ways of doing business—especially as other industries adopted the trust model. Moreover, his penchant for secrecy caused alarm to a public historically given to fears of conspiracy and subterfuge. In this sense, Rockefeller's enemy was cultural, not economic or political. In May 1911, the Supreme Court ordered the Standard Oil Trust dismantled. Even this made the "Titan" wealthier than ever as his shares in the thirty-three subsidiaries created by the decision multiplied in value.

A NEW STANDARD IN PHILANTHROPY

The final stage of Rockefeller's remarkable life roughly corresponds to his health problems leading to his decision to retire and devote himself to philanthropy (1891–1937). Rockefeller had been an energetic giver from his youth; his philanthropy paralleled his business life. It was not, as popular myth would have it, a veiled attempt to atone for a lifetime of greed. As he put it, "I have always regarded it as a religious duty to get all I could honorably and to give all I could" (Chernow 1998, 19).

Ida Tarbell on John D. Rockefeller's Character

In addition to her influential book The History of the Standard Oil Company, Ida M. Tarbell also wrote a more personal and unflattering character analysis of Rockefeller, although she had never actually met him. The following extract shows just how personal and critical it was.

When the late Senator Hanna said of John D. Rockefeller, "Money mad, money mad, sane in every other respect but money mad," he gave the true biographic clue to the man's character. No candid study of his career can lead to the conclusion that he is a victim of perhaps the ugliest, the least reasonable of all passions, that for money, money as an end—a victim, for the passion has mastered all other ambitions and cravings—has made itself supreme and is in his eyes worthy of what it has cost him.

It is not a pleasant picture that such a reflection arouses—not the portrait of a gentleman one would like to know—this money-maniac secretly, patiently, eternally plotting how he may add to his wealth. Nor is the man himself pleasanter to look upon. Study the photograph on page 388; the last taken of Mr. Rockefeller, study George Varian's powerful sketch from life made in 1903 and say if it be worth the while to be the richest man in the world at the cost these portraits show. Concentration; craftiness, cruelty, and something indefinably repulsive are in them. The photograph reveals nothing more. Mr. Varian's sketch is vastly more interesting for it suggests, besides, both power and pathos and no one can look long on Mr. Rockefeller without feeling these qualities.

Practicing his talent for attracting gifted associates, in 1891 he hired Frederick T. Gates to manage his fortune and advise his philanthropy, joined by his son, John D. Rockefeller Jr., in 1910. Rockefeller's fortune peaked in 1912 at nearly \$900 million—approximately \$269 billion to equate the same percentage of Gross Domestic Product in 2002—by which time he had already given away hundreds of millions of dollars. Among the causes Rockefeller funded are Baptist education and missionary efforts; the University of Chicago; the Rockefeller Institute for Medical Research (now Rockefeller University); Atlanta's Spelman College for black women; the General Education Board promoting education and school funding; the Rockefeller Sanitary Commission eradicating hookworm in the South; and the flagship, the Rockefeller Foundation. His gifts eventually totaled about \$540 million.

A LEADERSHIP LEGACY

For all the emphasis on monopolization, it is often overlooked that Rockefeller was perhaps the nineteenth century's most able competitor. Even the oil industry learned his leadership was the better alternative than the chaos, wastefulness, and destruction that preceded the "Standard." Nevertheless, for all the monopolizing power of Standard Oil, there were those who successfully resisted him. Even the Standard was unable to stop the renewed competitiveness, particularly brought by Texas and Russian oil booms, which characterized the industry at the turn of the twentieth century. Indeed, it was as much this as the government's successful suit in 1911 that ended the dominance of America's first great trust. Ironically, by the 1930s, the government itself stepped in to help the oil industry during the Great Depression, essentially replacing Rockefeller's role. Rockefeller's vision has carried forward to the present, as various moves to "restore competition" (notably in the 1970s oil shortage years) failed to materialize.

All this gives credibility to John D. Rockefeller's visionary leadership, the seeming moral grayness of his actions mitigated by his larger role in history. His innovations changed business forever and his products and philanthropy have helped Americans lead happier and more productive lives. Rockefeller's own summation may be self-serving (quoted here from the PBS documentary *American Experience Online: The Rockefellers*), but it bears the unmistakable voice of his authority and influence: "The Standard Oil Co. has been one of the greatest, if not the greatest, of upbuilders we ever had in this country—or in any country . . . a force that reorganized business, and everything else followed it—all business, even the Government itself, which legislated against it."

ROMANCE OF LEADERSHIP

Organized activity comes in many shapes and forms: a neighborhood association, a government agency, a political interest group, a business organization, a sorority, a hospital, a PTA, a terrorist cell, an inner-city gang, an army platoon, a baseball team. Issues of leadership are fundamental to the way we understand these entities and how we communicate that understanding to others. Sooner or later discussions of successes and failures, right and wrong, past, present, and future focus on leaders: their strengths and their shortcomings, what they did or did not do, should or should not have done, who they are, who we need them to be. However, can a president of a country really have control over its economy? Can we reasonably expect that our leaders will protect us from terrorist attacks? Do generals win our wars? Do CEOs cause accounting scandals and the bankruptcies of companies? Can we always blame the coach for our losing seasons?

Meindl, Ehrlich, and Dukerich coined the phrase “romance of leadership,” writing:

It appears that as observers of and participants in organizations, we may have developed highly romanticized, heroic views of leadership—what leaders do, what they are able to accomplish, and the general effects they have on our lives. One of the principal elements in this romanticized conception is the view that leadership is a central organizational process and the premier force in the scheme of organizational events and activities. It amounts to what might be considered a faith in the potential if not actual efficacy of those individuals who occupy elite positions of formal organizational authority. (Meindl, Ehrlich, and Dukerich 1985, 79)

Initially, the romance of leadership notion provided a commentary on a generalized, widespread tendency to understand organized activity in terms of leadership. In the face of many possible ways to make sense of why organizations perform the way they do and why collective activities achieve their aims or not, leadership represents a psychologically attractive, if biased, account of success and failure. Since its introduction in the mid-1980s, the romance of leadership notion has developed into a unique the-

oretical perspective, providing novel insights on well-studied leadership phenomena, and raises new issues for future study.

AN ANTICONVENTIONAL VIEW

The romance of leadership (ROL) theory focuses on the tremendous investments that we as followers and observers, individually and collectively, have in the concept of leadership and explores the implications of those investments. This focus has led to a rather unconventional view of leadership: as an academic discipline, as an area of practice, and importantly, as a cultural phenomenon. Indeed, ROL theory sees the study and practice of leadership as culturally embedded, that is, relying on deeply held assumptions and core values that are broadly shared, although often not articulated. This theory was developed as a counterweight to conventional leadership theories. This anticonventional view is based on a “follower-centric” definition of leadership and is grounded in a social constructionist tradition.

FOLLOWER-CENTRIC APPROACHES

Leadership exists at the intersection of leaders, followers, and contexts. Nevertheless, the history of conventional leadership theory and practice has tended to be “leader-centric,” that is, focusing attention mostly on leaders—their personas and behaviors. In contrast, people can develop more follower-centric approaches by shifting the spotlight away from the figure of the leader, recognizing that the reactions of followers to their contexts will, at the end of the day, determine the success or failure of all leaders. ROL theory is consistent with a follower-centric approach but takes things to a more radical extreme. It suggests that new insights can be gained by focusing attention squarely on processes connected to followers and their contexts, independently of what leaders are actually doing. ROL theory asserts that the romanticized views that followers and observers have of leaders and leadership work to ultimately define what leadership is and where and when it exists.

Can we generate a credible theory of leadership that does not highlight leaders as the most important

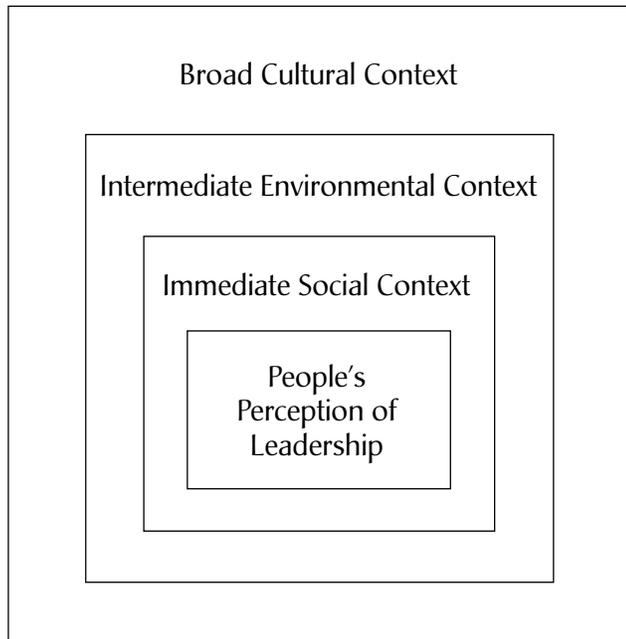

Figure 1. Focus on Perceptions of Leadership Embedded within Three Layers of Contextual Influences

object of study? That is exactly what ROL theory attempts to do. It pursues this radical agenda by concentrating on the interplay of four key elements: perceptions and three layers of contextual influences. At its core, the theory seeks to explore leadership from the vantage point of follower perceptions. Interest in this first element is then embedded within three layers of contextual influences: the immediate social structure, the intermediate context, and the broader cultural environment. (See Figure 1.)

FOCUS ON THE PERCEPTIONS OF FOLLOWERS

ROL theory defines leadership not as something that is practiced by leaders, as in more conventional theories, but rather as something that is construed by followers. In other words, the interpretations, reactions, and attributions of followers and observers, not the behaviors, actions, or activities of a leader, define leadership. This is a cognitive definition of leadership, including (1) the mental representations that followers (not leaders) carry in their

heads about the centrality of leadership to organizational activities, (2) implicit theories about what good leadership is, and (3) views about the characteristics of specific leaders.

A GUIDING METAPHOR

ROL theory suggests that the task of understanding leadership is similar to the famous Rorschach test in psychology—also known as the “inkblot” test. In this test people are asked to tell about what they see in a series of inkblot pictures. The idea behind the test is that presenting people with something as ambiguous as the shape of an inkblot stain on a sheet of paper provides maximum flexibility to “see” whatever a person wants. Obviously, psychologists are not interested in learning about inkblots but rather in learning something about the person who is looking at the inkblots. Metaphorically speaking, ROL theory casts the figure and/or behavior of leaders into the role of the inkblot; followers and observers interpret these leadership inkblots and, in doing so, reveal themselves. Such revelations are treated as the heart and soul of leadership. For example, when a follower is asked to rate a leader’s behavior on some survey questionnaire, more conventional approaches would use that rating as revealing something important about the leader being rated. ROL theory would view that same rating as more revealing about the psychology of the follower who makes that rating. This turns the conventional, leader-centric approaches on their heads!

A SOCIAL CONSTRUCTIONIST APPROACH

Although this topsy-turvy view of leadership may at first blush seem a bit wild, it is firmly grounded in a well-established intellectual tradition in the social sciences known as “social constructionism.” This tradition emphasizes that our understanding of the world around us is not given to us by some preconstituted, objective reality but rather is actively constructed, shaped, and conditioned by psychological, sociological, and cultural forces. Drawing on a social constructionist stance, ROL theory emphasizes that we have a lot more subjectivity and uncertainty when

we define leadership and evaluate leaders than are typically assumed and that leadership itself must be created and realized in the minds of followers. Leadership, then, according to ROL theory, is very much an “in-the-eye-of-the-beholder” phenomenon. Whereas more conventional approaches might say about leadership that “you see what you get” (implying that what’s most important is what the leader is actually doing), ROL theory might say instead that “you get what you see” (implying that followers’ interpretations are the most important aspect).

FOCUS ON THE IMMEDIATE SOCIAL CONTEXT

Although ROL theory accounts for leadership by giving preeminence to the idea that followers and observers define its reality and existence (leadership is constructed), it also gives equal prominence to the idea that these leadership realities are not simply created in isolation, but rather are shaped and conditioned by social contexts and processes (leadership is socially constructed). Conventional wisdom is that leadership can be understood as a direct result of what transpires between a leader and follower. However, followers are not just connected to their leaders, they are also connected to other followers. According to ROL theory, what transpires between a leader and a follower is constructed and given meaning via the influence and participation of other followers who are connected to one another in a system of relationships. What we see in a leader—the images of leadership that we hold to be true—are social constructions: a product of intersubjectively (beliefs are not individually constructed, but taken over from others and used by a number of persons) shared sense making among members of a group of people interacting with one another.

A SOCIAL NETWORK DIFFUSION APPROACH

The defining characteristics of a leader—as perceived by followers—reflect the workings of the social system whose output—the image of a leader—comes to have the status of a social fact, a

reality (the leader is good or bad, charismatic or not, etc.). The actual conduits of this construction process are the naturally occurring structures and patterns of social interactions that occur among followers. Views of leadership are tested, established, and revised through the mutual influences that take place within these conduits. ROL theory is interested in understanding how various opinions and attitudes regarding leaders and leadership are transmitted and diffused within a network of followers.

A SOCIAL CONTAGION VIEW OF CHARISMATIC LEADERSHIP

This social network approach has been taken to examine charismatic leadership, a form of leadership that is usually studied from a strongly leader-centric perspective. Many studies have examined the effects that charismatic leaders have on the thoughts, feelings, and behavior of followers—the so-called charismatic effects. Whereas these effects on followers are conventionally thought to be the result of the actions and behaviors of the leader, ROL theory proposes that charismatic leadership can be modeled as a social contagion process. In this social contagion view of charismatic leadership, the focus of research changes from the more typically studied charismatic expressions of the leaders to the contagious expressions and displays of followers themselves. Social contagion is a type of influence process whereby contagious emotions and behaviors can be transmitted from one person to the next. ROL theory suggests that people “get charismatic leadership” in a way that is analogous to people catching a cold: by coming into contact with others who have it. For example, people at a large political rally may display evidence of charismatic effects because they come into contact with other followers and are witness to their behaviors (emotional, excited, etc.); for example, “the guy delivering that speech up at the podium must really be charismatic if these people are acting this way.” In general, the contagion of charismatic effects is enabled by, and travels through, the structure of social networks that exist among followers. The end result is that what may start out as relatively unor-

ganized and idiosyncratic views of the charismatic qualities of a leader will gradually converge into patterns that are correlated with the underlying structure of communication and influence relationships that produce them.

FOCUS ON THE INTERMEDIATE CONTEXT

Beyond the immediate network of social relationships, other contextual factors have an impact on the way we define and romanticize leadership (Pillai and Meindl, 1998). One of the most important of these is the presence or absence of a crisis. Conventional leadership theories recognize the importance of crisis to the emergence of special leadership processes. For example, experts often theorize that crisis is a precondition for the emergence of charismatic leadership. After the terrorist attacks of 11 September 2001, Rudy Giuliani, the mayor of New York City, and President George W. Bush seemed to emerge as more appealing leadership figures. More conventional analyses would tend to focus on the persona and behavior—that is, the charisma—of the leaders who are operating during times of crisis. In contrast, ROL theory focuses more attention on what followers who are exposed to a crisis are thinking and feeling and how the crisis changes what they see and/or want to see from their leaders. Indeed, the romanticized tendency to dwell on the charismatic appeal of leaders during times of crisis is illustrated in an analysis of the public's and the media's responses to President Bush's rhetoric before and after the terrorist attacks of 11 September 2001.

THE BROAD CULTURAL MILIEU OF LEADERSHIP

Beyond the immediate and intermediate contextual factors, ROL theory is interested in the broader cultural milieu within which followers develop their relationships with their leaders. Go to the business or management section of your favorite bookstore, and you will find a dizzying array of leadership-oriented books, spanning the spectrum from the mundane to the bizarre. ROL theory views the broader culture as a kind of ecological system sup-

porting a diversity of leadership ideas, constructions, images, and practices.

MASS MEDIA AND LEADERSHIP CONSTRUCTIONS

The mass media are an important part of the broader cultural milieu, shaping views about leadership in general and leaders in particular, although conventional leadership theories have all but ignored the media. Consistent with its social constructionist underpinnings, ROL theory sees a marketplace of buyers and sellers who traffic in various leadership products. It seeks to understand the production and consumption of leadership, exploring the meanings and implications. The mass media, particularly the business-oriented press (newspapers such as the *Wall Street Journal* and magazines such as *Fortune* and *Business Week*), produce hard and soft news reports about companies and their ups and downs. In writing about the performance sagas of companies, the popular press often celebrates leadership and helps to produce celebrity leaders (most often CEOs) with images that have widespread cultural appeal. The mass media function both as a mirror and a shaper of popular leadership constructions within a culture. Media companies are essentially commercial enterprises, subject to organizational and professional routines and norms. The leadership images constructed in the popular press are romanticized in ways that represent the needs and values of these organizations and those of their reading publics.

ROMANCING LEADERSHIP IN THE FUTURE

The romance of leadership theory provides a controversial and deliberately provocative view. The very notion of "romanticized" seems to imply that leadership itself is not as important as we typically think. Moreover, it represents a critique of conventional, leader-centric approaches, and it has itself been criticized for its single-minded pursuit of such a radical, social constructionist, and follower-centric agenda. However, the extremist position it adopts is also its greatest attraction: shedding light on issues that are difficult to see through the lens of more conventional

perspectives and spurring others to feature followers and contexts more prominently in their models.

Whatever its place within the pantheon of all leadership theories, the romance of leadership theory is also an observation on a paradoxical aspect of the human condition as it relates to organized activity. On the one hand, it reminds us that we are perhaps too eager to see and to seek the hand of leadership in our fates. It highlights the possibilities for dependence and powerlessness and needful rescue by savior leaders. On the other hand, the great faith we have in leaders and in the process of leadership itself has more empowering possibilities, perhaps entailing an underlying commitment to what are essentially collective solutions to difficult problems that we face together. It is a celebration of human agency and determination, providing a basis for a more hopeful and motivating vision: that through our organizations and our leaders we do indeed have the potential to control the future and our common destinies in an otherwise dangerous and capricious world.

ROOSEVELT, ELEANOR (1884–1962)

Humanitarian and political leader

Anna Eleanor Roosevelt (she did not use her first name, perhaps to avoid confusion with her mother) was born in New York City, the oldest child of Elliott and Anna Hall Roosevelt. During her twelve years as first lady and seven years as a United States delegate to the United Nations, Eleanor Roosevelt manifested leadership on behalf of the disadvantaged in a variety of public and private ways. Her style of leadership, which embraced the ability to communicate ideas of compassion and caring to a mass audience, was

instrumental in making her the single most admired American woman for decades. The niece of one president of the United States, Theodore Roosevelt, and the wife of another, Franklin D. Roosevelt, Eleanor Roosevelt charted a new activist course for presidential spouses during her White House years from 1933 to 1945. She was also the guiding spirit, in 1948, behind United Nations' adoption of the Universal Declaration of Human Rights, one of the world's most important statements of human equality.

Overcoming the constraints that surrounded women's roles in the late nineteenth and early twentieth centuries, Roosevelt became the most prominent woman of her day by breaking through the bounds of her patrician social class. As a political wife she played an important role in Democratic politics, becoming known for her advocacy of better treatment for women, African-Americans, youth, and underprivileged segments of society. As the widow of a president, she displayed remarkable diplomatic and political skills. She represented the United States at the United Nations from 1945 to 1952 during a time of Cold War tensions, and she spoke up for civil rights and free expression at home. Through her writings, public speaking, and broadcasting, she stood out as a strong voice for peace and justice; she saw herself as a spokesperson for the liberal ideals of her husband and his New Deal administration.

Understanding Eleanor Roosevelt's influence requires an examination of her life in the context of family influences, personal relationships, and involvement in the events that marked the twentieth century. Her emergence as a leader dramatized the sweeping changes that had taken place in women's roles—from the nineteenth century ideal of Victorian noblesse oblige to the modern concept of women as full participants in society.

EARLY LIFE

Both of Eleanor Roosevelt's parents had inherited wealth and were socially prominent descendants of influential families. Her paternal grandfather, Theodore Roosevelt Sr., known as "Greatheart," helped found the Metropolitan Museum of Art and

the Newsboys' Lodging House for homeless youth. Her maternal grandmother was a Livingston, whose great-great grandfather, Philip Livingston, had signed the Declaration of Independence. Elliott's elder brother, Theodore, was President of the United States from 1901 until 1908.

Eleanor Roosevelt endured a troubled childhood. Her mother, known for her beauty, rejected Eleanor because she considered her plain, but her father, noted for his charming personality, adored her and she, in turn, worshipped him. He introduced her to charitable endeavor by taking her with him to serve Thanksgiving dinner at the newsboys' home. Experience of this sort, however, was rare for young Eleanor because her parents' marriage crumbled. Elliott Roosevelt suffered from mental instability. Depressed and addicted to alcohol and drugs, he was unfaithful to his wife and sent away from the family, leaving his daughter, a shy, solemn child, to grieve his absence.

Before she was ten years old, both her parents had died, resulting in Eleanor and Hall, her younger brother, being reared by their maternal grandmother, Mary Ludlow Hall, a stern widow who lived both in Manhattan and at Tivoli, the family estate in the Hudson River Valley. In the Hall household, Eleanor Roosevelt watched her two aunts and two uncles indulge in the lifestyle of the leisure class. Yet her upbringing did have a moral dimension. Mrs. Hall believed upper-class women had a duty to aid the less fortunate as well as to keep up social appearances. In later years, Eleanor Roosevelt wrote that her grandmother had taught her important lessons of self-discipline and conscientious performance that remained with her, even though she had moved far outside her grandmother's narrow world.

The happiest period of Eleanor's girlhood came at Allenswood, an English boarding school for wealthy girls, where she studied from 1899 to 1902. Her quick mind and concern for others made her a favorite of the headmistress, Maria Souvestre, a liberal Frenchwoman. In 1902 Eleanor returned home to make her formal debut into society. Spurred by Souvestre's ideas of social conscience, she joined the Junior League, a social service organization for debutantes, and volunteered at the Rivington Street

Preamble to the Universal Declaration of Human Rights, Adopted and Proclaimed by General Assembly Resolution 217 A (III) of 10 December 1948

Whereas recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the world,

Whereas disregard and contempt for human rights have resulted in barbarous acts which have outraged the conscience of mankind, and the advent of a world in which human beings shall enjoy freedom of speech and belief and freedom from fear and want has been proclaimed as the highest aspiration of the common people,

Whereas it is essential, if man is not to be compelled to have recourse, as a last resort, to rebellion against tyranny and oppression, that human rights should be protected by the rule of law,

Whereas it is essential to promote the development of friendly relations between nations,

Whereas the peoples of the United Nations have in the Charter reaffirmed their faith in fundamental human rights, in the dignity and worth of the human person and in the equal rights of men and women and have determined to

promote social progress and better standards of life in larger freedom,

Whereas Member States have pledged themselves to achieve, in co-operation with the United Nations, the promotion of universal respect for and observance of human rights and fundamental freedoms,

Whereas a common understanding of these rights and freedoms is of the greatest importance for the full realization of this pledge,

Now, Therefore THE GENERAL ASSEMBLY proclaims THIS UNIVERSAL DECLARATION OF HUMAN RIGHTS as a common standard of achievement for all peoples and all nations, to the end that every individual and every organ of society, keeping this Declaration constantly in mind, shall strive by teaching and education to promote respect for these rights and freedoms and by progressive measures, national and international, to secure their universal and effective recognition and observance, both among the peoples of Member States themselves and among the peoples of territories under their jurisdiction.

Settlement House. She also helped investigate sweatshops for the National Consumers League.

MARRIAGE

In 1903, Eleanor became secretly engaged to her fifth cousin, once removed, the handsome Franklin D. Roosevelt, a Harvard student, who lived on a Hudson River estate at Hyde Park, New York. After overcoming initial objections from his widowed mother, Sara Delano Roosevelt, the young couple was married on 17 March 1905 in New York City. While Franklin pursued a political career, his wife was occupied with motherhood, bearing six children, one of whom died in infancy, between the years 1906 and 1916. Uncertain of herself, she tried to please her mother-in-law, who controlled the family finances. For instance, she gave up working at the settlement house because of family fears that she might bring home germs, and she settled into the restricted life of an upper-class matron. After serving in the New York

legislature, Franklin Roosevelt became Assistant Secretary of the Navy and the Roosevelts moved to Washington, D.C., in 1913, where they remained until 1920.

In the capital, Eleanor Roosevelt began to mature, slowly and painfully, into a self-confident individual. At first, she took part in the activities expected of the wives of political figures, making routine calls on other women and organizing successful social events. The entry of the United States into World War I in 1917 provided scope for more fulfilling pursuits as a volunteer for the American Red Cross and the Navy Relief Society. She improved conditions at St. Elizabeth's Hospital, a federal mental hospital, by persuading a friend, Secretary of the Interior Franklin P. Lane, to set up a Congressional investigating committee that increased funds for the institution.

Eleanor's world shattered in 1918 when she discovered that Franklin had been carrying on a long-term romance with Lucy Mercer, her social secretary. Although the couple decided to stay married for the

sake of their children and Franklin's political career and they continued to function as political partners, they no longer lived together as man and wife. After the family's return to New York, Eleanor nursed Franklin when he contracted polio in 1921, and she worked under the direction of Louis Howe, Franklin's political mentor, to salvage his political career while he recuperated from the disease.

WOMEN'S NETWORKING

In the 1920s, Eleanor Roosevelt threw off her mother-in-law's domination and widened her circle to include women's organizations. Although she had initially opposed women's suffrage, after they won the right to vote in 1920, she pushed for a greater role for women in politics. She involved herself in the League of Women Voters and the Women's Trade Union League, which brought her in contact with Jewish and immigrant women. She became a leader in the Women's Division of the New York State Democratic Party, edited the *Women's Democratic News*, and began to write on women's issues for national magazines.

In charge of women's activities for the Democratic National Committee in 1928, she was forced to resign for fear of conflict of interest when her husband was elected governor of New York that year. Yet she kept on writing articles such as "Women Must Learn to Play the [Political] Game as Men Do" (*Redbook*, April 1928). She became part owner of Todhunter, an exclusive girls' school in New York City, and also taught there. While she campaigned for Franklin's election as President in 1932, when the country was experiencing the Great Depression, she expressed reservations about becoming first lady to her intimate friend, journalist Lorena Hickok. Eleanor was afraid that the conventional social demands of the position would impede her career interests.

FIRST LADY

Once in the White House, however, Eleanor Roosevelt redefined the traditional role played by the President's wife. Using skills developed in her work with women's organizations, she reached out to the public, unlike her predecessors. She held press conferences for women reporters, providing news of special interest to women. Traveling widely, she went on paid lecture tours and gave sponsored radio broadcasts, giving the proceeds to charity. While she stopped teaching, she continued writing magazine articles and advice columns for women's magazines. In 1935, she started a daily newspaper column, "My Day," a diary-like account of her activities that continued until the year of her death. Although her public communication generally was not billed as political—a sample lecture topic, for example, was "Problems of Youth"—it had political overtones that obviously benefited the Roosevelt administration. In 1937 she published the first volume of her well-received autobiography, *This Is My Story*, one of two dozen books she wrote on subjects related to her travels, life experience, and political views.

Eleanor played a major behind-the-scenes role in a variety of New Deal programs. She backed the establishment of the National Youth Administration to help Depression-stricken young people and championed the resettlement of unemployed coal miners in West Virginia. As war loomed in Europe, she pressed for passage of legislation to admit refugee children but Congress did not act. Unlike her husband, who feared Southern conservatives in Congress, she spoke up for the rights of African-Americans, unsuccessfully urging her husband to support anti-lynching legislation. When Marian Anderson, an African-American singer, was denied the use of a hall owned by the Daughters of the American Revolution because of her race, Eleanor resigned from that organization. Surprisingly, she did not make a public protest about placing Japanese-Americans in concentration camps, although she did disagree with the policy.

Sometimes she endured intense hostility—for her looks, for not staying home, for her friendships with those of different races and ethnic groups. Newspaper criticism forced her to resign as the unpaid assis-

tant director of the Office of Civil Defense in 1942, but she publicized the World War II war effort by visiting service personnel in England, the South Pacific, and Latin America.

THE UNITED NATIONS

Following Franklin Roosevelt's unexpected death in 1945, President Harry S. Truman appointed Eleanor Roosevelt as U. S. representative to the United Nations where she served until Eisenhower became President in 1953. Her unsurpassed devotion to the organization, which she saw as essential to maintaining world peace, and her work as chair of the Human Rights Commission, which drafted the Universal Declaration of Human Rights, added to her international reputation.

After she left her official position, she continued to work as a volunteer on behalf of the United Nations. As a leading liberal in the Democratic party, she attacked McCarthyism, pressed for civil liberties, backed the civil rights campaign, and was a strong supporter of the new state of Israel.

Although she did not support the Equal Rights Amendment for most of her political life, on the grounds that it would negate protective legislation for working women, her last public service was to chair President John F. Kennedy's Commission on the Status of Women. Commission activities set the stage for the women's movement of the 1960s and 1970s.

She died in New York City in 1962. Among the outpourings of sympathy were the words of U Thant, acting secretary-general of the United Nations, who called her the "First Lady of the World."

IMPLICATIONS FOR THE TWENTY-FIRST CENTURY

Eleanor Roosevelt's leadership at the United Nations laid the foundation for contemporary attempts to establish the legal concept of basic human rights. Her career continues to inspire both men and women because she transformed the circumstances of her privileged life into help for humanity. She took Victorian concepts of charity and duty and turned them into modern statements of hope for all people.

ROOSEVELT, FRANKLIN DELANO (1882–1945)

U.S. president

Franklin Delano Roosevelt (FDR) was president of the United States from 1933 to 1945. In the poll of historians and other academic experts conducted in 1948 by historian Arthur Schlesinger Sr. and in similar polls thereafter, Roosevelt is consistently ranked

Selections from Franklin Delano Roosevelt's First Inaugural Address, 4 March 1933

I am certain that my fellow Americans expect that on my induction into the Presidency I will address them with a candor and a decision which the present situation of our Nation impels. This is preeminently the time to speak the truth, the whole truth, frankly and boldly. Nor need we shrink from honestly facing conditions in our country today. This great Nation will endure as it has endured, will revive and will prosper. So, first of all, let me assert my firm belief that the only thing we have to fear is fear itself—nameless, unreasoning, unjustified terror which paralyzes needed efforts to convert retreat into advance. In every dark hour of our national life a leadership of frankness and vigor has met with that understanding and support of the people themselves which is essential to victory. I am convinced that you will again give that support to leadership in these critical days.

In such a spirit on my part and on yours we face our common difficulties. They concern, thank God, only material things. Values have shrunken to fantastic levels; taxes have risen; our ability to pay has fallen; government of all kinds is faced by serious curtailment of income; the means of exchange are frozen in the currents of trade; the withered leaves of industrial enterprise lie on every side; farmers find no markets for their produce; the savings of many years in thousands of families are gone.

More important, a host of unemployed citizens face the grim problem of existence, and an equally great number toil with little return. Only a foolish optimist can deny the dark realities of the moment.

Yet our distress comes from no failure of substance. We are stricken by no plague of locusts. Compared with

the perils which our forefathers conquered because they believed and were not afraid, we have still much to be thankful for. Nature still offers her bounty and human efforts have multiplied it. Plenty is at our doorstep, but a generous use of it languishes in the very sight of the supply. Primarily this is because the rulers of the exchange of mankind's goods have failed, through their own stubbornness and their own incompetence, have admitted their failure, and abdicated. Practices of the unscrupulous money changers stand indicted in the court of public opinion, rejected by the hearts and minds of men.

[. . .]

But it is not enough to achieve these purposes alone. It is not enough to clothe and feed the body of this Nation, and instruct and inform its mind. For there is also the spirit. And of the three, the greatest is the spirit.

Without the body and the mind, as all men know, the Nation could not live.

But if the spirit of America were killed, even though the Nation's body and mind, constricted in an alien world, lived on, the America we know would have perished.

That spirit—that faith—speaks to us in our daily lives in ways often unnoticed, because they seem so obvious. It speaks to us here in the Capital of the Nation. It speaks to us through the processes of governing in the sovereignties of 48 States. It speaks to us in our counties, in our cities, in our towns, and in our villages. It speaks to us from the other nations of the hemisphere, and from those across the seas—the enslaved, as well as the free. Sometimes we fail to hear or heed these voices of freedom because to us the privilege of our freedom is such an old, old story.

with George Washington and Abraham Lincoln among the most highly regarded presidents. Tested in crisis, Roosevelt led the United States through the Great Depression and World War II. Roosevelt also established the modern U.S. presidency and welfare state and brought to power the New Deal voting coalition that shaped national politics to the end of the twentieth century. Students of leadership generally regard Roosevelt as the paragon of democratic statesmanship. Powerful enough to expand government and shape the political agenda during a time of political unrest, Roosevelt battled populist dema-

gogues on the left and right to uphold policies and values consistent with the U.S. Constitution and the U.S. democratic tradition.

THE EARLY ROOSEVELT

Franklin Delano Roosevelt, son of Sara and James Roosevelt, was born to a well-to-do family, a clan of Dutch ancestry who was part of New York's Hudson River gentry in Dutchess County. Franklin's early life, typical of the U.S. upper class, was filled by private tutoring, trips abroad, and the pursuit of hobbies,
